2012-2016 Honda CR-V

GENERAL INFORMATION

Commonly Used Abbreviations

* PLEASE READ THIS FIRST *

NOTE: **This article is intended for general information purposes only. This information may not apply to all makes and models. Not all abbreviations are covered as manufacturers add new ones every day.**

"A"

A

Amperes

ABS

Anti-Lock Brakes

ABRS

Air Bag Restraint System

AC

Alternating Current

A/C

Air Conditioning

ACCS

A/C Cycling Switch

ACCUM

Accumulator

ACCY

Accessory

ACT

Air Charge Temperature Sensor

ADJ

Adjust or Adjustable

ADV

Advance

AFS

Airflow Sensor

AI

Air Injection

AIR or A.I.R.

Air Injection Reactor

AIS

Air Injection System

Alt.

Alternator or Altitude

Amp./amp/amps

Ampere

ASCS

Air Suction Control Solenoid

ASD

Auto Shutdown

ASDM

Air Bag System Diagnostic Module

ASV

Air Suction Valve

A/T

Automatic Transmission/Transaxle

ATC

Automatic Temperature Control

ATDC

After Top Dead Center

ATF

Automatic Transmission Fluid

ATS

Air Temperature Sensor

Aux.

Auxiliary

Avg.

Average

AXOD

Automatic Transaxle Overdrive (Ford Models Only)

"B"

BAC

By-Pass Air Control

BAP

Barometric Absolute Pressure Sensor

BARO

Barometric

Batt.

Battery

Bbl.

Barrel (Example: 4-Bbl.)

BCM

Body Control Module

BHP

Brake Horsepower

BMAP

Barometric and Manifold Absolute Pressure Sensor

BOO

Brake On-Off Switch

B/P

Backpressure

BPS

Barometric Pressure Sensor

BPT

Backpressure Transducer

BTDC

Before Top Dead Center

BTSI

Brake Transmission Shift Interlock

BTU

British Thermal Unit

BVSV

Bimetallic Vacuum Switching Valve

"C"

° C

Celsius (Degrees)

Calif.

California

CANP

Canister Purge

CARB

California Air Resources Board

CAT

Catalytic Converter

CB

Circuit Breaker

CBD

Closed Bowl Distributor

cc

cubic centimeter

CCC

Close Coupled Catalyst

CCC

Computer Command Control

CCD

Computer Controlled Dwell

CCOT

Cycling Clutch Orifice Tube

CCW

Counterclockwise

CDI

Capacitor Discharge Ignition

CEC

Computerized Engine Control

CID

Cubic Inch Displacement

cm

Centimeter

CMP

Camshaft Position Sensor

CO

Carbon Monoxide

CO_2

Carbon Dioxide

Cont.

Continued

CONV

Convertible

CP

Canister Purge

CKP

Crankshaft Position Sensor

CTS

Coolant Temperature Sensor

Cu. In.

Cubic Inch

CVC

Constant Vacuum Control

CV

Check Valve or Constant Velocity

CW

Clockwise

CYL or Cyl.

Cylinder

C^3 I

Computer Controlled Coil Ignition

C^4

Computer Controlled Catalytic Converter

"D"

"D"

Drive

DC

Direct Current Or Discharge

DDD

Dual Diaphragm Distributor

Def.

Defrost

Defog.

Defogger

DERM

Diagnostic Energy Reserve Module

DFI

Digital Fuel Injection

Diag.

Diagnostic

DTC

Diagnostic Trouble Code

DIC

Driver Information Center

DIS

Distributorless Ignition System

DIST

Distribution

DLC

Data Link Connector

DOC

Diesel Oxidation Catalyst

DOHC

Double Overhead Cam

DOT

Department of Transportation

DPF

Diesel Particulate Filter

DRB-II

Diagnostic Readout Box

DVOM

Digital Volt-Ohmmeter

"E"

EACV

Electric Air Control Valve

EATX

Electronic Automatic Transaxle

EBCM

Electronic Brake Control Module

EBL

Electronic Back Light

ECM

Engine Control Module

ECT

Engine Coolant Temperature Sensor

EDIS

Electronic Distributorless Ignition System

EEC

Electronic Engine Control

EECS

Evaporative Emission Control System

EEPROM

Electronically Erasable PROM

EFE

Early Fuel Evaporation

EGO

Exhaust Gas Oxygen Sensor

EGR

Exhaust Gas Recirculation

EOT

Engine Oil Temperature

ESA

Electronic Spark Advance

ESC

Electronic Spark Control

EST

Electronic Spark Timing

EVAP

Fuel Evaporative System

EVIC

Electronic Vehicle Information Center

EVP

EGR Valve Position Sensor

EWMA

Exponentially Weighted Moving Average (MODE 6)

Exc.

Except

"F"

° F

Fahrenheit (Degrees)

F/B

Fuse Block

Fed.

Federal

FI

Fuel Injection

FICU

Fuel Injection Control Unit

FIPL

Fuel Injector Pump Lever

FLI

Fuel Level Indicator

FPR-VSV

Fuel Pressure Regulator Vacuum Switching Valve

Ft. Lbs.

Foot Pounds

FWD

Front Wheel Drive

"G"

g

grams

Gals.

gallons

GND or GRND

Ground

"H"

HAC

High Altitude Compensation

HC

Hydrocarbons

H/D

Heavy Duty

HO2S

Heated Exhaust Gas Oxygen Sensor

Hg

Mercury

Hgt.

Height

HLDT

Headlight

HO

High Output

HO2S

Heated Oxygen Sensor

HP

High Performance

HSC

High Swirl Combustion

HSO

High Specific Output

HTR

Heater

Hz

Hertz (Cycles Per Second)

"I"

IAC

Idle Air Control

IACV

Idle Air Control Valve

IAT

Intake Air Temperature

IC

Integrated Circuit

ID

Identification

I.D.

Inside Diameter

IFS

Independant Front Suspension

IFS

Inertia Fuel Shutoff (Ford)

Ign.

Ignition

IMRC

Intake Manifold Runner Control

In.

Inches

INCH Lbs.

Inch Pounds

in. Hg

Inches of Mercury

Inj.

Injector

IP

Instrument Panel

IRS

Independant Rear Suspension

ISC

Idle Speed Control

IVD

Interactive Vehicle Dynamics (Ford)

IVSV

Idle Vacuum Switching Valve

"J"

J/B

Junction Block

"K"

KAPWR

Keep Alive Power

k/ohms

kilo-ohms (1000 ohms)

kg

Kilograms (weight)

kg/cm^2

Kilograms Per Square Centimeter

KM/H

Kilometers Per Hour

KOEO

Key On, Engine Off

KOER

Key On, Engine Running

KS

Knock Sensor

kW

Kilowatt

kV

Kilovolt

"L"

L

Liter

lbs. (Lbs. when used in table)

Pounds

LCD

Liquid Crystal Display

L/D

Light Duty

LDP

Leak Detection Pump (Part of EVAP system.)

LED

Light Emitting Diode

LH

Left Hand

"M"

mA

Milliamps

MA or MAF

Mass Airflow

MAFS

Mass Airflow Sensor

MAP

Manifold Absolute Pressure

MAT

Manifold Air Temperature

Mem.

Memory

MEM-CAL

Memory Calibration Chip

mfd.

Microfarads

MFI

Multiport Fuel Injection

MICU

Multiplex Integrated Control Unit (Acura/Honda)

MIL

Malfunction Indicator Light

MPI

Multi-Point (Fuel) Injection

mm

Millimeters

MPH

Miles Per Hour

mV

Millivolts

"N"

NA

Not Available

NAC

NOx Adsorber Catalyst

NCA

No Color Available (Wiring Diagrams)

NGS

New Generation Star

N.m

Newton Meter

No.

Number

Nos.

Numbers

NOx

Oxides of Nitrogen

"O"

O_2

Oxygen

OBD

On-Board Diagnostics

OC

Oxidation Catalyst

OD

Overdrive

O.D.

Outside Diameter

OHC

Overhead Camshaft

OSS

Output Speed Sensor

O/S

Oversize

oz.

Ounce

ozs.

Ounces

"P"

"P"

Park

P/C

Printed Circuit

PCM

Powertrain Control Module

PCS

Purge Control Solenoid

PC-SOL

Purge Control Solenoid

PCV

Positive Crankcase Ventilation

PFI

Port Fuel Injection

PGM-FI

Programmed Fuel Injection

PID

Parameter Identification

PIP

Profile Ignition Pick-up

PNP

Park Neutral Position Switch

P/N

Park/Neutral

PRNDL

Park Reverse Neutral Drive Low

PROM

Programmable Read-Only Memory

psi

Pounds Per Square Inch

P/S

Power Steering

PSPS

Power Steering Pressure Switch

PTC

Positive Temperature Coefficient

PTO

Power Take-Off

Pts.

Pints

Pwr.

Power

"Q"

Qts.

Quarts

"R"

RABS

Rear Anti-Lock Brake System

RECIRC

Recirculation

RH

Right Hand

RPM

Revolutions Per Minute

RWAL

Rear Wheel Anti-Lock Brake

RWD

Rear Wheel Drive

"S"

SAS

Steering Angle Sensor

SBC

Single Bed Converter

SBEC

Single Board Engine Controller

SDARS

Satellite Digital Audio Radio Service

SES

Service Engine Soon

SFI

Sequential (Port) Fuel Injection

SIL

Shift Indicator Light

SIR

Supplemental Inflatable Restraint

SOHC

Single Overhead Cam

SOL or Sol.

Solenoid

SPFI

Sequential Port Fuel Injection

SPK

Spark Control

SPOUT

Spark Output

SRI

Service Reminder Indicator

SRS

Supplemental Restraint System (Air Bag)

STAR

Self-Test Automatic Readout

STO

Self-Test Output

SUB-O_2

Sub Oxygen Sensor

Sw.

Switch

Sys.

System

"T"

TAB

Thermactor Air By-Pass

TAC

Throttle Actuator Module

TAD

Thermactor Air Diverter

TBC

Body Control Module (General Motors)

TBI

Throttle Body Injection

TCC

Torque Converter Clutch

TDC

Top Dead Center

Temp.

Temperature

TFI

Thick Film Ignition

THERMAC

Thermostatic Air Cleaner

TPM

Tire Pressure Monitor

TPMS

Tire Pressure Monitor System

TPS

Throttle Position Sensor/Switch

TS

Temperature Sensor

TV

Thermovalve

TWC

Three-Way Catalyst

"V"

V

Valve

Vac.

Vacuum

VAF

Vane Airflow

VAPS

Variable Assist Power Steering

VCC

Viscous Converter Clutch

VCRM

Variable Control Relay Module

VIN

Vehicle Identification Number

VM

Vacuum Modulator

Volt.

Voltage

VOM

Volt-Ohmmeter (Analog)

VRV

Vacuum Regulator Valve

VSS

Vehicle Speed Sensor

VSV

Vacuum Switching Valve

"W"

W/

With

W/O

Without

WAC

Wide Open Throttle A/C Switch

WOT

Wide Open Throttle

EMISSION CONTROL ABBREVIATIONS

Gasoline & Diesel

"A"

A/C

Air Conditioning

A/C-ISUS

A/C Idle Speed-Up Solenoid

A/F

Air/Fuel

AAI

Air Assist Injector

ACL

Air Cleaner (Thermostatic Air Cleaner)

ACL-BMS

ACL Bimetallic Sensor

ACL-CKV

ACL Check Valve

ACL-DV

ACL Delay Valve

ACL-PVS

ACL Ported Vacuum Switch

ACL-RDV

ACL Reverse Delay Valve

ACL-RDVS

ACL Reverse Delay Valve (Single)

ACL-TCV

ACL Thermal Control Valve

ACL-TS

ACL Temperature Sensor

ACL-TSOV

ACL Temperature Sensor Override Valve

ACL-TVS

ACL Thermal Vacuum Switch

ACL-TVV

ACL Thermal Vacuum Valve

ACL-VCDV

ACL Vacuum Control Delay Valve

ACL-VCV

ACL Vacuum Control Valve

ACL-VM

ACL Vacuum Motor

ACL-WP

ACL Wax Pellet Type Motor

ADS

Anti-Dieseling Solenoid

AFR

Air/Fuel Ratio Sensor

AFS

Air/Fuel Ratio Sensor

AIH

Air Intake Heaters

AIH-TS

AIH Temperature Sensor

AIR

Air Injection System

AIS

Air Injection System

AIS-ACV

AIS Air Control Valve

AIS-AMV

AIS Air Management Valve

AIS-ASV

AIS Air Switching Valve

AIS-BPV

AIS By-Pass Valve

AIS-CC

AIS Computer Controlled

AIS-CKV

AIS Check Valve

AIS-CSV

AIS Control Solenoid Valve

AIS-CV

AIS Combination Valve

AIS-DV

AIS Diverter Valve

AIS-IMCV

AIS Intake Manifold Change-Over Valve

AIS-MCV

AIS Manifold Change-Over Valve

AIS-PAF

AIS Pulse Air Feeder

AIS-PM

AIS Pump Motor

AIS-PV

AIS Pneumatic Valve

AIS-RV

AIS Relief Valve

AIS-SAV

AIS Secondary Air Valve

AIS-SOL

AIS Solenoid

AIS-SV

AIS Solenoid Valve

AIS-VCV

AIS Vacuum Control Valve

AIS-VSV

AIS Vacuum Switching Valve

AIS-VT

AIS Vacuum Tank

AIS-VCV

AIS Vacuum Control Valve

AIS-VSV

AIS Vacuum Switching Valve

AIV

Air Injection Valve

AIV-SOL

Air Injection Valve Solenoid

ALVW

Adjusted Loaded Vehicle Weight

AMV

Air Management Valve

AP

Air Pump Injection System

AP-ACV

AP Air Control Valve

AP-AMV

AP Air Management Valve

AP-ASRV

AP Air Switching Relief Valve

AP-ASS

AP Air Switching Solenoid

AP-ASV

AP Air Switching Valve

AP-BPV

AP By-Pass Valve

AP-CKV

AP Check Valve

AP-CS

AP Control Solenoid

AP-DCTO

AP Dual Coolant Temperature Override

AP-DLY

AP Delay Valve

AP-DV

AP Diverter Valve

AP-EADV

AP Electric Air Control Diverter Valve

AP-EAMR

AP Electric Air Management Relay

AP-EAMS

AP Electric Air Management Solenoid

AP-EAP

AP Electric Air Pump

AP-EC

AP Electromagnetic Clutch

AP-ERLY

AP Electric Air Pump Relay

AP-RDV

AP Reed Valve

AP-RV

AP Relief Valve

AP-SOL

AP Solenoid

AP-SOV

AP Shut-Off Valve

AP-SV

AP Solenoid Valve

AP-SWV

AP Switchover Valve

AP-TV

AP Transmitting Valve

AP-VCS

AP Vacuum Control Solenoid

AP-VCSV

AP Vacuum Controlled Air Shut-Off Valve

AP-VCV

AP Vacuum Control Valve

AP-VSV

AP Vacuum Switching Valve

A/T

Automatic Transmission

ATCV

Air Temperature Control Valve

"B"

BP/EGR

Backpressure EGR System

BP/EGR-BPS

BP/EGR Backpressure Sensor

BP/EGR-BPT

BP/EGR Backpressure Transducer

BP/EGR-BPV

BP/EGR Backpressure Valve

BP/EGR-BS

BP/EGR Bleed Solenoid

BP/EGR-BVSV

BP/EGR Bimetallic Vacuum Switching Valve

BP/EGR-C

BP/EGR Controller

BP/EGR-CLR

BP/EGR Cooler

BP/EGR-CS

BP/EGR Control Solenoid

BP/EGR-CTO

BP/EGR Coolant Temperature Override

BP/EGR-CV

BP/EGR Control Valve

BP/EGR-DCTO

BP/EGR Dual Coolant Temperature Override

BP/EGR-DS

BP/EGR Diagnostic Solenoid

BP/EGR-DSOL

BP/EGR Duty Solenoid

BP/EGR-DTVSW

BP/EGR Distributor Thermal Vacuum Switch

BP/EGR-DV

BP/EGR Delay Valve

BP/EGR-EET

BP/EGR Electric Transducer

BP/EGR-EPV

BP/EGR External Pressure Valve

BP/EGR-FDV

BP/EGR Forward Delay Valve

BP/EGR-LC

BP/EGR Load Control Valve

BP/EGR-PS

BP/EGR Position Sensor

BP/EGR-PT

BP/EGR Pressure Tranducer

BP/EGR-PVS

BP/EGR Ported Vacuum Switch

BP/EGR-RES

BP/EGR Reservoir

BP/EGR-RST

BP/EGR Restrictor

BP/EGR-SOL

BP/EGR Solenoid

BP/EGR-TCTVS

BP/EGR Torque Converter Thermal Vacuum Switch

BP/EGR-TCV

BP/EGR Thermal Control Valve

BP/EGR-TCVLV

BP/EGR Temperature Control Valve

BP/EGR-TS

BP/EGR Temperature Sensor

BP/EGR-TVS

BP/EGR Thermal Vacuum Switch

BP/EGR-TVV

BP/EGR Thermal Vacuum Valve

BP/EGR-VCV

BP/EGR Vacuum Control Valve

BP/EGR-VM

BP/EGR Vacuum Modulator

BP/EGR-VRV

BP/EGR Vacuum Regulator Valve

BP/EGR-VS

BP/EGR Vacuum Switch

BP/EGR-VSOL

BP/EGR Vent Solenoid

BP/EGR-VSV

BP/EGR Vacuum Switching Valve

"C"

C-4

Computer Controlled Catalytic Converter

CAC

Charge Air Cooler

CAS

Clean Air System

CB

Crankcase Breather

CB-VC

Crankcase Breather-Vapor Canister

CBPS

Coasting By-Pass System

CBVC

Crankcase Breather Vapor Canister

CCIEV

Coolant Controlled Idle Enrichment Valve

CCS

Controlled Combustion System

CCV

Closed Crankcase Ventilation

CD-REGVLV

Crankcase Depression Regulator Valve

CDRV

Crankcase Depression Relief Valve

CEAB

Cold Engine Air Bleed

CEAB-TVS

CEAB Thermal Vacuum Switch

CEAB-TVV

CEAB Thermal Vacuum Valve

CEC

Computerized Engine Controls

CESS

Cold Engine Sensor Switch

CETS

Cold Engine Temperature Switch

CFI

Continuous Fuel Injection

CMH

Cold Mixture Heater

CNG

Compressed Natural Gas

CO

Carbon Monoxide

CO2

Carbon Dioxide

CPI

Central Port Injection

CRV

Coasting Richer Valve

CSI

Central Sequential Injection

CTAVS

Cold Temperature Activated Vacuum System

CTOX

Continous Trap Oxidizer

"D"

DCLV

Deceleration Valve

DCS

Deceleration Control System

DDI

Direct Diesel Injection

DFI

Direct Diesel Injection

DI

Direct Injection

DKV

Deceleration Kick Valve

DMCV

Deceleration Mixture Control Valve

DMS

Dual Manifold System

DOC

Diesel Oxidation Catalyst

DOHC

Dual Overhead Cam

DPF

Diesel Particulate Filter

DPFE

Differential Pressure Feedback EGR Valve

DPFEGR

Differential Pressure Feedback EGR Valve

DTM

Deceleration Throttle Modulator

"E"

EAIR

Electric Air Injection System

EAIR-DV

EAIR Diverter Valve

ECM

Electronic Control Module

ECU

Electronic Control Unit

EDC

Electronic Diesel Control

EDS

Electronic Diesel System

EEC

Electronic Engine Control

EFE

Early Fuel Evaporation

EFE-CKV

EFE Check Valve

EFE-CV

EFE Control Valve

EFE-DTVS

EFE Delay Thermal Vacuum Switch

EFE-HTR

EFE Heater

EFE-HCV

EFE Heat Control Valve

EFE-OTS

EFE Oil Temperature Switch

EFE-PTC

EFE Positive Temperature Coefficient (Intake Heater Grid)

EFE-PVS

EFE Ported Vacuum Switch

EFE-SOL

EFE Solenoid

EFE-TVS

EFE Thermal Vacuum Switch

EFE-TVV

EFE Thermal Vacuum Valve

EFE-VSV

EFE Vacuum Switching Valve

EFI

Electronic Fuel Injection

EFI-MA

EFI Mass Airflow Sensor

EFI-MAF

EFI Mass Airflow Sensor

EGR

Exhaust Gas Recirculation System

EGR-BCS

EGR Boost Check Solenoid

EGR-BPBV

EGR By-Pass Backpressure Valve

EGR-BPT

EGR Backpressure Transducer

EGR-BPV

EGR By-Pass Valve

EGR-BS

EGR Bleed Solenoid

EGR-BSSV

EGR Boost Sensor Solenoid Valve

EGR-BVSV

EGR Bimetallic Vacuum Switching Valve

EGR-C

EGR Controller

EGR-CC

EGR Coolant Controlled

EGR-CLR

EGR Cooler

EGR-VSOL

EGR Vacuum Solenoid

EGR-CKV

EGR Check Valve

EGR-CS

EGR Control Solenoid

EGR-CSOL

EGR Cut-Off Solenoid

EGR-CSV

EGR Control Solenoid

EGR-CTO

EGR Coolant Temperature Override

EGR-CTS

EGR Charge Temperature Sensor

EGR-CTSW

EGR Charge Temperature Switch

EGR-CTTS

EGR Coolant Temperature Thermoswitch

EGR-CV

EGR Control Valve

EGR-CVCV

EGR Constant Vacuum Control Valve

EGR-CVS

EGR Control Vent Solenoid

EGR-DC

EGR Digital Control

EGR-DCTO

EGR Dual Coolant Temperature Override

EGR-DPFE

Differential Pressure Feedback EGR Sensor

EGR-DPFS

EGR Differential Pressure Feedback Sensor

EGR-DS

EGR Diagnostic Solenoid

EGR-DSOL

EGR Duty Solenoid

EGR-DTVS

EGR Delay Thermal Vacuum Switch

EGR-DTVSW

EGR Distributor Thermal Vacuum Switch

EGR-DV

EGR Delay Valve

EGR-EPRS

EGR Exhaust Pressure Regulator Solenoid

EGR-EPRV

EGR Exhaust Pressure Regulator Valve

EGR-EPV

EGR External Pressure Valve

EGR/EVAP-CSV

EGR/EVAP Control Solenoid Valve

EGR-EVR

EGR Vacuum Regulator

EGR-EVRV

EGR Electronic Vacuum Regulator Valve

EGR-FDV

EGR Forward Delay Valve

EGR-FJS

EGR Floor Jet System

EGR-FPS

EGR Feedback Pressure Sensor

EGR-LCV

EGR Load Control Valve

EGR-MAP

EGR Manifold Absolute Pressure Sensor

EGR-PFE

EGR-PFE Sensor

EGR-PS

EGR Position Sensor

EGR-PSW

EGR Pulse Switch

EGR-PVS

EGR Ported Vacuum Switch

EGR-REG

EGR Regulator

EGR-RES

EGR Reservoir

EGR-RST

EGR Restrictor

EGR-SC

EGR Signal Converter

EGR-SEC

EGR, Secondary

EGR-SEN

EGR Sensor

EGR-SOL

EGR Solenoid

EGR-SU

EGR Switchover Valve

EGR-SUB

Sub-EGR Valve

EGR-SVV

EGR Solenoid Vacuum Valve

EGR-T

EGR Temperature Sensor

EGR-TC

EGR Transmission Controlled

EGR-TCTVS

EGR Torque Converter Thermal Vacuum Switch

EGR-TCV

EGR Thermal Control Valve

EGR-TCVLV

EGR Temperature Control Valve

EGR-TRANS

EGR Transducer

EGR-TS

EGR Temperature Sensor

EGR-TSW

EGR Temperature Switch

EGR-TVD

EGR Throttle Valve Diaphragm

EGR-TVS

EGR Thermal Vacuum Switch

EGR-TVSOL

EGR Throttle Valve Solenoid

EGR-TVV

EGR Thermal Vacuum Valve

EGR-VA

EGR Vacuum Amplifier

EGR-VCV

EGR Vacuum Control Valve

EGR-VM

EGR Vacuum Modulator

EGR-VR

EGR Vacuum Regulator

EGR-VRS

EGR Vacuum Regulator Solenoid

EGR-VRSV

EGR Vacuum Regulator Solenoid Valve

EGR-VRV

EGR Vacuum Regulator Valve

EGR-VS

EGR Vacuum Switch

EGR-VSDV

EGR Vacuum Switch Dump Valve

EGR-VSEN

EGR Vacuum Sensor

EGR-VSOL

EGR Vent Solenoid

EGR-VSS

EGR Vacuum Switching Solenoid

EGR-VST

EGR Vacuum Surge Tank

EGR-VSV

EGR Vacuum Switching Valve

EGR-VVCS

EGR Venturi Vacuum Control System

EGRB

EGR Boost Sensor

EGRC

EGR Control Solenoid

EGRC-BPT

EGR Control Backpressure Transducer

EGRC-SV

EGR Control Solenoid Valve

EHOC

Electronically Heated Oxidation Catalyst

EHTWC

Electronically Heated Three-Way Catalyst

EI

Electronic Ignition System

EIS

Electronic Ignition System

ELB

Electronic Lean Burn

EPR

Exhaust Pressure Regulator

EPR-SOL

EPR Solenoid

ESA

Electronic Spark Advance

EVAP

Fuel Evaporative System

EVAP-AAC

EVAP Auxiliary Air Control

EVAP-BPSV

EVAP By-Pass Solenoid Valve

EVAP-BVSV

EVAP Bimetallic Vacuum Switching Valve

EVAP-CAV

EVAP Canister Air Valve

EVAP-CCV

EVAP Control Canister Close Valve

EVAP-CCVSV

EVAP Control Canister Vent Shut Valve

EVAP-CCVVSV

EVAP Closed Canister Valve Vacuum Switching Valve

EVAP-CDCV

EVAP Canister Drain Cut Valve

EVAP-CKV

EVAP Check Valve

EVAP-CPCS

EVAP Canister Purge Control Solenoid

EVAP-CPCSV

EVAP Canister Purge Control Solenoid Valve

EVAP-CPCV

EVAP Canister Purge Control Valve

EVAP-CPRV

EVAP Canister Purge Regulator Valve

EVAP-CPSV

EVAP Canister Vent Shut Valve

EVAP-CPT

EVAP Canister Purge Timer

EVAP-CPTVS

EVAP Canister Purge Thermal Vacuum Switch

EVAP-CPV

EVAP Canister Vent Valve

EVAP-CPVCSV

EVAP Canister Purge Volume Control

EVAP-CPVCV

EVAP Canister Purge Volume Control Valve

EVAP-CPVDV

EVAP Canister Purge Vacuum Delay Valve

EVAP-CPVR

EVAP Canister Purge Valve Resonator

EVAP-CS

EVAP Control Solenoid

EVAP-CSPS

EVAP Control System Pressure Sensor

EVAP-CST

EVAP Canister Surge Tank

EVAP-CT

EVAP Catch Tank

EVAP-CVCS

EVAP Canister Vent Control Solenoid

EVAP-CVCV

EVAP Canister Vent Control Valve

EVAP-CVS

EVAP Canister Vent Solenoid

EVAP-CVSV

EVAP Carburetor Vent Switching Valve

EVAP-CVV

EVAP Canister Vent Valve

EVAP-DCTO

EVAP Dual Coolant Temperature Override

EVAP-DF

EVAP Drain Filter

EVAP-DPS

EVAP Differential Pressure Sensor

EVAP-DV

EVAP-Drain Valve

EVAP-EV

EVAP Emission Valve

EVAP-FBVV

EVAP Fuel Bowl Vent Valve

EVAP-FBVS

EVAP Fuel Bowl Vent Solenoid

EVAP-FCV

EVAP Fuel Cut Valve

EVAP-FLS

EVAP Fuel Level Sensor

EVAP-FOLV

EVAP Fuel Overflow Limiter Valve

EVAP-FS

EVAP Flow Switch

EVAP-FSV

EVAP Flow Switchover Valve<

EVAP-FTEV

EVAP Fuel Tank EVAP Valve

EVAP-FTPCSV

EVAP Fuel Tank Pressure Control Solenoid Valve

EVAP-FTPS

EVAP Fuel Tank Pressure Sensor

EVAP-FTS

EVAP Fuel Temperature Sensor

EVAP-FVCV

EVAP Fuel Vapor Control Valve

EVAP-FVS

EVAP Fuel Vapor Separator

EVAP-FVTS

EVAP Fuel Vapor Temperature Sensor

EVAP-FVV

EVAP Fuel Vent Valve

EVAP-FVVV

EVAP Fuel Vapor Vent Valve

EVAP-IVS

EVAP Inner Vent Solenoid

EVAP-LDP

EVAP Leak Detection Pump

EVAP-LDPAF

EVAP Leak Detection Pump Air Filter

EVAP-LDPF

EVAP Leak Detection Pump Filter

EVAP-LDPVV

EVAP Leak Detection Pump Vent Valve

EVAP-LSEP

EVAP Liquid Separator

EVAP-NVLD

EVAP Natural Vacuum Leak Detection

EVAP-ORVR

Evaporative On-Board Refueling Vapor Recovery System

EVAP-ORVRCV

Evaporative On-Board Refueling Vapor Recovery Check Valve

EVAP-ORVRFTVRV

EVAP-ORVR Fuel Tank Vapor Recirculation

EVAP-OVCV

EVAP Outer Vent Control Valve

EVAP-OWV

EVAP One-Way Valve

EVAP-PCDV

EVAP Purge Control Diaphram Valve

EVAP-PCSV

EVAP Purge Cut-Off Solenoid Valve

EVAP-PFS

EVAP Purge Flow Sensor

EVAP-PFSVVSV

EVAP Purge Flow Switching Valve Vacuum Switching Valve

EVAP-PRRV

EVAP Pressure Relief Rollover Valve

EVAP-PSVVSV

EVAP Pressure Switching Valve Vacuum Switching Valve

EVAP-PSOL

EVAP Purge Solenoid

EVAP-PSSV

EVAP Pressure Switching Solenoid

EVAP-PSVVSV

EVAP Pressure Switching Valve Vacuum Switching Valve

EVAP-PV

EVAP Purge (Frequency) Valve

EVAP-PVS

EVAP Ported Vacuum Switch

EVAP-RV

EVAP Rollover Valve

EVAP-RV/FTPS

EVAP Rollover Valve/Fuel Tank

EVAP-RVSV

EVAP Rollover Vapor Separator Valve

EVAP-SNR

EVAP Canister Sensor

EVAP-SOL

EVAP Solenoid

EVAP-SOV

EVAP Shutoff Valve

EVAP-SSV

EVAP Shut-Off Solenoid Valve

EVAP-SV

EVAP Solenoid Valve

EVAP-TC

EVAP Trap Canister

EVAP-TS

EVAP Temperature Switch

EVAP-TPBPV

EVAP Tank Pressure By-Pass Valve

EVAP-TPCS

EVAP Tank Pressure Control Solenoid

EVAP-TPCV

EVAP Tank Pressure Control Valve

EVAP-TRWV

EVAP Tree-Way Valve

EVAP-TV

EVAP Thermal Valve

EVAP-TVS

EVAP Thermal Vacuum Switch

EVAP-TVV

EVAP Thermal Vacuum Valve

EVAP-TWV

EVAP Two-Way Valve

EVAP-VC

EVAP Vapor Canister

EVAP-VCAT

EVAP Vapor Canister Air Tank

EVAP-VCF

EVAP Vapor Canister Filter

EVAP-VCSV

EVAP Vapor Canister Shut-off Valve

EVAP-VCTV

EVAP Vacuum Control Valve

EVAP-VCV

EVAP Vacuum Canister Valve

EVAP-VCVS

EVAP Vapor Canister Vent Solenoid

EVAP-VM

EVAP Vacuum Motor

EVAP-VPS

EVAP Vapor Pressure Sensor

EVAP-VPSVSV

EVAP Vapor Pressure Sensor Vacuum Switching Valve

EVAP-VS

EVAP Vacuum Sensor

EVAP-VSOL

EVAP Ventilation Solenoid

EVAP-VSOL/LDP

EVAP Ventilation Solenoid/Leak Detection Pump

EVAP-VST

EVAP Vacuum Surge Tank

EVAP-VSV

EVAP Vacuum Switching Valve

EVAP-VV

EVAP Ventilation Valve

EVRS

EGR Vacuum Regulator Solenoid

"F"

FBC

Feedback Carburetor

FCOV

Fuel Change Over Valve

FF

Flex Fuel

FF-CKV

Fuel Fill Check Valve

FF-FCV

Fuel Tank Fuel Cut-Off Valve

FF-FLVV

Fuel Tank Fill Limit Vent Valve

FGOV

ACCESSORY POWER SOCKETS COMPONENT LOCATION INDEX

Fig. 1: Identifying Accessory Power Sockets Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

	Removal and Installation See **CONSOLE ACCESSORY POWER SOCKET REMOVAL AND INSTALLATION** or **FRONT**

CONSOLE ACCESSORY POWER SOCKET	**ACCESSORY POWER SOCKET REMOVAL AND INSTALLATION**
	Test See **CONSOLE ACCESSORY POWER SOCKET TEST** or **FRONT ACCESSORY POWER SOCKET TEST**
CONSOLE ACCESSORY POWER SOCKET RELAY (4P)	**TEST**
FRONT ACCESSORY POWER SOCKET	**Removal and Installation** See **CONSOLE ACCESSORY POWER SOCKET REMOVAL AND INSTALLATION** or **FRONT ACCESSORY POWER SOCKET REMOVAL AND INSTALLATION**
	Test See **CONSOLE ACCESSORY POWER SOCKET TEST** or **FRONT ACCESSORY POWER SOCKET TEST**
FRONT ACCESSORY POWER SOCKET RELAY (4P)	**TEST**

CONSOLE ACCESSORY POWER SOCKET TEST

NOTE: **If the front and console accessory power sockets do not work, check the No. B19 (7.5 A) fuse in the under-dash fuse/relay box first.**

1. Disconnect the 2P connector from the console accessory power socket.

Fig. 2: Identifying Console Accessory Power Socket 2P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Inspect the connector terminals to be sure they are making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary and recheck the system.
   - If the terminals are OK, go to step 4.
3. Turn the ignition switch to ACCESSORY (I).
4. Measure the voltage between under-dash relay holder A terminal No. 8 and body ground. There should be less than 0.2 V.
   - If there is less than 0.2 V, go to step **5** .
   - If there is more than 0.2 V, check for:
   - An open or high resistance in the ground wire between under-dash relay holder A terminal No. 8 and ground (G501).

- Poor ground (G501).

5. Measure the voltage between console accessory power socket 2P connector terminal No. 2 and body ground. There should be battery voltage.
   - If there is battery voltage, go to step **6** .
   - If there is no voltage, check for:
   - Blown No. B12 (15 A) fuse in the under-dash fuse/relay box.
   - Faulty console accessory power socket relay.
   - Faulty under-dash fuse/relay box.
   - An open or high resistance in the wire between console accessory power socket 2P connector terminal No. 2 and under-dash fuse/relay box connector S (10P) terminal No. 7.
6. Check for continuity between console accessory power socket 2P connector No. 1 and body ground. There should be continuity.

- If there is continuity, replace the console accessory power socket.
- If there is no continuity, check for:

- Poor ground (G503).
- An open or high resistance in the ground wire between console accessory power socket 2P connector terminal No. 1 and ground (G503).

FRONT ACCESSORY POWER SOCKET TEST

NOTE: If the front and console accessory power sockets do not work, check the No. B19 (7.5 A) fuse in the under-dash fuse/relay box first.

1. Disconnect the 2P connector from the front accessory power socket.

Fig. 3: Identifying Front Accessory Power Socket 2P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Inspect the connector terminals to be sure they are making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary and recheck the system.
   - If the terminals are OK, go to step 4.
3. Turn the ignition switch to ACCESSORY (I).
4. Measure the voltage between under-dash fuse/relay box connector R (8P) terminal No. 7 and body

ground. There should be less than 0.2 V.

- If there is less than 0.2 V, go to step **5** .
- If there is more than 0.2 V, check for:
  - An open or high resistance in the ground wire between under-dash fuse/relay box connector R (8P) No. 7 and ground (G501).
  - Poor ground (G501).

5. Measure the voltage between front accessory power socket 2P connector terminal No. 2 and body ground. There should be battery voltage.
   - If there is battery voltage, go to step **6** .
   - If there is no voltage, check for:
     - Blown No. B27 (15 A) fuse in the under-dash fuse/relay box.
     - Faulty front accessory power socket relay.
     - Faulty under-dash fuse/relay box.
     - An open or high resistance in the wire between front accessory power socket 2P connector terminal No. 2 and under-dash fuse/relay box connector N (13P) terminal No. 2.
6. Check for continuity between front accessory power socket 2P connector terminal No. 1 and body ground. There should be continuity.
   - If there is continuity, replace the front accessory power socket.
   - If there is no continuity, check for:
     - Poor ground (G503).
     - An open or high resistance in the ground wire between front accessory power socket 2P connector terminal No. 1 and ground (G503).

ACCESSORY POWER SOCKET TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Front Console Cover - Both Sides

   Left side

Fig. 4: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 5: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the clips (A).
2. Detach the clips (B), then remove the front console covers (C).

2. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

<u>Fig. 6: Identifying Console Rear Trim, Clips And Hooks</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 7: Identifying Center Lower Cover, Clips And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 8: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 9: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 10: Identifying Connectors And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 11: Identifying Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Auxiliary Jack Assembly
   1. Carefully pull out the auxiliary jack assembly (A).

Fig. 12: Identifying Auxiliary Jack Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Accessory Power Socket Trim
   1. Disconnect the connectors (A), then remove the screws (B).

Fig. 13: Identifying Accessory Power Socket Trim Connectors And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the accessory power socket trim (A).

Fig. 14: Identifying Accessory Power Socket Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Accessory Power Socket Trim
    1. Install the accessory power socket trim (A).

Fig. 15: Identifying Accessory Power Socket Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the screws (A), then connect the connectors (B).

Fig. 16: Identifying Accessory Power Socket Trim Connectors And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Auxiliary Jack Assembly
    1. Install the auxiliary jack assembly (A).

Fig. 17: Identifying Auxiliary Jack Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console
    1. Install the center console (A).

Fig. 18: Identifying Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

Fig. 19: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 20: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 21: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 22: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 23: Identifying Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Console Cover - Both Sides

Left side

Fig. 24: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Fig. 25: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CONSOLE ACCESSORY POWER SOCKET REMOVAL AND INSTALLATION

REMOVAL

1. Console Accessory Power Socket
    1. Gently press the tabs (A) and remove the front accessory power socket (B).
    2. Disconnect the connector.

Fig. 26: Identifying Front Accessory Power Socket And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently press the tabs (A), then remove the housing (B) from the cover. Note the location of the

indexing tabs (C).

Fig. 27: Identifying Housing And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Console Accessory Power Socket
    1. Install the housing (A) in position on the cover.

Fig. 28: Identifying Console Accessory Power Socket Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connector.
    3. Install the front accessory power socket (A) to the housing (B).

Fig. 29: Identifying Front Accessory Power Socket And Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT ACCESSORY POWER SOCKET REMOVAL AND INSTALLATION

REMOVAL

1. Front Accessory Power Socket
    1. Gently press the tabs (A) and remove the front accessory power socket (B).
    2. Disconnect the connector.

Fig. 30: Identifying Front Accessory Power Socket And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently press the tabs (A), then remove the housing (B) from the cover. Note the location of the indexing tabs (C).

Fig. 31: Identifying Housing And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Accessory Power Socket
    1. Install the housing (A) in position on the cover.

Fig. 32: Identifying Front Accessory Power Socket Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connector.
    3. Install the front accessory power socket (A) to the housing (B).

Fig. 33: Identifying Front Accessory Power Socket And Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC P0705: TRANSMISSION RANGE SWITCH (MULTIPLE SHIFT - POSITION INPUT)

Fig. 1: DTC Troubleshooting Flow Chart (P0705)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See**

HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0705 Transmission Range Switch (Multiple Shift - Position Input)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Compare the A/T P Switch, A/T R Switch, A/T N Switch, A/T D Switch, A/T 2 Switch, A/T 1 Switch, Forward Switch(ATPFWD), and Reverse Switch(ATPRVS) inputs with the HDS to the following table, in each shift lever position.

	A/T P Switch	A/T R Switch	A/T N Switch	A/T D Switch	A/T 2 Switch	A/T 1 Switch	Forward Switch (ATPFW	Reverse Switch (ATPRV
P	o	x	x	x	x	x	x	x
R	x	o	x	x	x	x	x	o
N	x	x	o	x	x	x	x	x
D	x	x	x	o	x	x	o	x
2	x	x	x	x	o	x	o	x
1	x	x	x	x	x	o	o	x
o: ON/x: OFF								

Signal	Current conditions	
	Values	Unit
A/T P Switch		
A/T R Switch		
A/T N Switch		
A/T D Switch		
A/T 2 Switch		
A/T 1 Switch		
Forward Switch(ATPFWD)		
Reverse Switch(ATPRVS)		

Do the transmission range switch signals match?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Transmission range switch signal check:
   - 1. Compare the A/T P Switch, A/T R Switch, A/T N Switch, A/T D Switch, A/T 2 Switch, A/T 1 Switch, Forward Switch(ATPFWD), and Reverse Switch(ATPRVS) inputs with the HDS to the following table, in each shift lever position.

	A/T P Switch	A/T R Switch	A/T N Switch	A/T D Switch	A/T 2 Switch	A/T 1 Switch	Forward Switch (ATPFW	Reverse Switch (ATPRV
P	o	x	x	x	x	x	x	x
R	x	o	x	x	x	x	x	o
N	x	x	o	x	x	x	x	x
D	x	x	x	o	x	x	o	x
2	x	x	x	x	o	x	o	x
1	x	x	x	x	x	o	o	x
o: ON/x: OFF								

Signal	Current conditions	
	Values	Unit
A/T P Switch		
A/T R Switch		
A/T N Switch		
A/T D Switch		
A/T 2 Switch		
A/T 1 Switch		
Forward Switch(ATPFWD)		
Reverse Switch(ATPRVS)		

Are any transmission range switch signals ON in all shift lever positions?

YES : Go to step 4.

NO : Record the abnormal circuit, then go to step 3.

3. Transmission range switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission range switch 10P connector

   - 3. Connect the transmission range switch connector terminal that incorrectly indicates ON in step 2 to ground with a jumper wire.
   - 4. Turn the ignition switch to ON (II).
   - 5. Compare the A/T P Switch, A/T R Switch, A/T N Switch, A/T D Switch, A/T 2 Switch, A/T 1

Switch, Forward Switch(ATPFWD), and Reverse Switch(ATPRVS) inputs with the HDS to the following table.

	A/T P Switch	A/T R Switch	A/T N Switch	A/T D Switch	A/T 2 Switch	A/T 1 Switch	Forward Switch (ATPFW	Reverse Switch (ATPRV
P	o	x	x	x	x	x	x	x
R	x	o	x	x	x	x	x	o
N	x	x	o	x	x	x	x	x
D	x	x	x	o	x	x	o	x
2	x	x	x	x	o	x	o	x
1	x	x	x	x	x	o	o	x
o: ON/x: OFF								

Signal	Current conditions	
	Values	Unit
A/T P Switch		
A/T R Switch		
A/T N Switch		
A/T D Switch		
A/T 2 Switch		
A/T 1 Switch		
Forward Switch(ATPFWD)		
Reverse Switch(ATPRVS)		

Do multiple transmission range switch signals indicate ON?

YES : The transmission range switch is OK. Repair a short in the wires between the corresponding transmission range switch connector terminal and the PCM. Refer to the following table.

	ATP-P	ATP-R	ATP-N	ATP-D	ATP-D3	ATP-1	ATPFWD	ATPRVS
PCM	B24	B25	B23	B35	B27	B26	B39	B45
Transmission range switch	10	9	4	8	3	7	1	5

NO : **<u>REPLACE THE TRANSMISSION RANGE SWITCH</u>** .

4. Transmission range switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission range switch 10P connector

   - 3. Turn the ignition switch to ON (II).

- 4. Check the transmission range switch signal input that remained ON with the HDS to the following table.

	A/T P Switch	A/T R Switch	A/T N Switch	A/T D Switch	A/T 2 Switch	A/T 1 Switch	Forward Switch (ATPFW	Reverse Switch (ATPRV
P	o	x	x	x	x	x	x	x
R	x	o	x	x	x	x	x	o
N	x	x	o	x	x	x	x	x
D	x	x	x	o	x	x	o	x
2	x	x	x	x	o	x	o	x
1	x	x	x	x	x	o	o	x
o: ON/x: OFF								

Signal	Current conditions	
	Values	Unit
A/T P Switch		
A/T R Switch		
A/T N Switch		
A/T D Switch		
A/T 2 Switch		
A/T 1 Switch		
Forward Switch(ATPFWD)		
Reverse Switch(ATPRVS)		

Do any transmission range switch signals remain ON?

YES : The transmission range switch is OK. Go to step 5.

NO : **REPLACE THE TRANSMISSION RANGE SWITCH** .

5. Shorted wire check (ATP-P, ATP-R, ATP-N, ATP-D, ATP-D3, ATP-1, ATP-FWD, ATP-RVS line):
   - 1. Check for continuity to ground in the circuit that remained ON in step 4.

Does the circuit that indicated ON have continuity to ground?

YES : Repair a short to ground in the wire between the corresponding transmission range switch connector terminal and the PCM.

NO : The wires are OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If the PCM was updated, **replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

DTC P0706: TRANSMISSION RANGE SWITCH (OPEN)

DTC Troubleshooting: P0706

Fig. 2: DTC Troubleshooting Flow Chart (P0706)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0706 Transmission Range Switch (Open)			

1. Problem verification:
   - 1. Make sure the shift cable is properly adjusted.
   - 2. Turn the ignition switch to ON (II).
   - 3. Compare the A/T P Switch, A/T R Switch, A/T N Switch, A/T D Switch, A/T 2 Switch, A/T 1 Switch, Forward Switch(ATPFWD), and Reverse Switch(ATPRVS) inputs with the HDS to the following table, in each shift lever position.

	A/T P Switch	A/T R Switch	A/T N Switch	A/T D Switch	A/T 2 Switch	A/T 1 Switch	Forward Switch (ATPFWD)	Reverse Switch (ATPRVS)
P	o	x	x	x	x	x	x	x
R	x	o	x	x	x	x	x	o
N	x	x	o	x	x	x	x	x
D	x	x	x	o	x	x	o	x
2	x	x	x	x	o	x	o	x
1	x	x	x	x	x	o	o	x
o: ON/x: OFF								

Signal	Current conditions	
	Values	Unit
A/T P Switch		
A/T R Switch		
A/T N Switch		
A/T D Switch		
A/T 2 Switch		
A/T 1 Switch		
Forward Switch(ATPFWD)		
Reverse Switch(ATPRVS)		

Do the transmission range switch signals match?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Transmission range switch signal check:
   - 1. Compare the A/T P Switch, A/T R Switch, A/T N Switch, A/T D Switch, A/T 2 Switch, A/T 1 Switch, Forward Switch(ATPFWD), and Reverse Switch(ATPRVS) inputs with the HDS to the following table, in each shift lever position.

	A/T P Switch	A/T R Switch	A/T N Switch	A/T D Switch	A/T 2 Switch	A/T 1 Switch	Forward Switch (ATPFWD)	Reverse Switch (ATPRVS)
P	o	x	x	x	x	x	x	x
R	x	o	x	x	x	x	x	o
N	x	x	o	x	x	x	x	x
D	x	x	x	o	x	x	o	x
2	x	x	x	x	o	x	o	x
1	x	x	x	x	x	o	o	x
o: ON/x: OFF								

Signal	Current conditions	
	Values	Unit
A/T P Switch		
A/T R Switch		
A/T N Switch		
A/T D Switch		
A/T 2 Switch		
A/T 1 Switch		
Forward Switch(ATPFWD)		
Reverse Switch(ATPRVS)		

Do all signals remain OFF?

YES : Go to step 5.

NO : Record the abnormal circuit, then go to step 3.

3. Transmission range switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission range switch 10P connector

   - 3. Connect the transmission range switch connector terminal that did not indicate ON in step 2 to ground with a jumper wire.
   - 4. Turn the ignition switch to ON (II).
   - 5. Check the transmission range switch signal that did not indicate ON with the HDS.

Does the transmission range switch indicate ON?

YES : **REPLACE THE TRANSMISSION RANGE SWITCH** .

NO : The transmission range switch is OK. Go to step 4.

4. Open wire check (ATP-P, ATP-R, ATP-N, ATP-D, ATP-D3, ATP-1, ATP-FWD, ATP-RVS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between the transmission range switch connector terminal and the PCM terminal of the input which indicated OFF. Refer to the following table.

	ATP-P	**ATP-R**	**ATP-N**	**ATP-D**	**ATP-D3**	**ATP-1**	**ATPFWD**	**ATPRVS**
PCM	B24	B25	B23	B35	B27	B26	B39	B45
Transmission range switch	10	9	4	8	3	7	1	5

Is there continuity?

YES : The wire(s) is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . If the PCM was updated, **replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Repair an open in the wire between the corresponding transmission range switch connector terminal and the PCM.

5. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission range switch 10P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Transmission range switch 10P connector: disconnected

     Test circuit GND

     Test point 1 Transmission range switch 10P connector No. 6 (BLK)

     Test point 2 Body ground

Fig. 3: Checking Continuity Between Transmission Range Switch 10P Connector No. 6 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK, **REPLACE THE TRANSMISSION RANGE SWITCH** .

NO : Repair an open in the GND wire between the transmission range switch and ground (G101), or repair poor ground (G101).

DTC P0711: ATF TEMPERATURE SENSOR (RANGE/PERFORMANCE)

Fig. 4: DTC Troubleshooting Flow Chart (P0711)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0711 ATF Temperature Sensor (Range/Performance)			

1. Current ATF temperature check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temperature	Less than 14	°F		
	Less than - 10	°C		

Do the current condition(s) match the threshold?

YES : Go to step 2.

NO : Go to step 3.

2. ATF temperature sensor check (after warm up):
   - 1. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temperature	Less than 14	°F		
	Less than - 10	°C		

Do the current condition(s) match the threshold?

14 °F (-10 °C) or below **REPLACE THE ATF TEMPERATURE SENSOR** , then **do the repair verification** .

Abnormal temperature rise If there is an abnormal temperature rise in temperature of the ATF temperature sensor, **update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then do the **do the repair verification** .

14 °F (-10 °C) or higher The ATF temperature sensor is OK. Intermittent failure, the system is OK at this

time.

3. Problem verification:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temperature	More than 230	°F		
	More than 110	°C		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 4.

NO : Intermittent failure, the system is OK at this time.

4. ATF temperature sensor check (after cool down):
   - 1. Let the engine cool until the Engine Coolant Temperature reads 122 °F (50 °C) or below with the HDS in the A/T Data List.

Signal	Current conditions	
	Values	Unit
Engine Coolant Temperature		

   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temperature	More than 230	°F		
	More than 110	°C		

Do the current condition(s) match the threshold?

230 °F (110 °C) or higher **Replace the ATF temperature sensor** See **ATF TEMPERATURE SENSOR REMOVAL AND INSTALLATION** , then do the **do the repair verification** .

Abnormal temperature decrease If there is an abnormal temperature decrease in temperature of the ATF temperature sensor, **update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then do the **do the repair verification** .

230 °F (110 °C) or below The ATF temperature sensor is OK. Intermittent failure, the system is OK at this time.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3.

  Start the engine, and warm the engine up to normal operating temperature (the radiator fan comes on).

- 4. Turn the ignition switch to LOCK (0), and allow the engine coolant to cool down to the outside air temperature.
- 5. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
- 6. Turn the ignition switch to ON (II), and wait for 20 seconds, then start the engine. Warm the engine up to normal operating temperature (the radiator fan comes on). Start off in D, accelerate with the throttle opened at least 4 degrees, and run the vehicle at speeds over 19 mph (30 km/h) for at least 5 minutes. Or test-drive the vehicle for at least 20 seconds while the ATF temperature reads 14 °F to 230 °F (-10 °C to 110 °C) by monitoring with the HDS. Slow down, and stop the wheels.

  PGM-FI SYSTEM

Signal	Current conditions	
	Values	Unit
REL TP SENSOR		

  A/T SYSTEM

Signal	Current conditions	
	Values	Unit
ATF Temperature		

- 7. Monitor the OBD STATUS for P0711 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0711 ATF Temperature Sensor (Range/Performance)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0712: ATF TEMPERATURE SENSOR (SHORT)

DTC Troubleshooting: P0712

Fig. 5: DTC Troubleshooting Flow Chart (P0712)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0712 ATF Temperature Sensor (Short)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temp Sensor (V)	Less than 0.07	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for an intermittent short to ground in the TATF wire between the ATF temperature sensor and the PCM.

2. ATF temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temp Sensor (V)	Less than 0.07	V		

Do the current condition(s) match the threshold?

YES : The ATF temperature sensor is OK. Go to step 3.

NO : **REPLACE THE ATF TEMPERATURE SENSOR** , then do the **do the repair verification** .

3. Shorted wire check (TATF line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.

- 3. Disconnect the following connector.

  PCM connector B (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Shift solenoid wire harness 8P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit TATF

  Test point 1 Shift solenoid wire harness 8P connector No. 7 (RED)

  Test point 2 Body ground

Fig. 6: Checking For Continuity Between Shift Solenoid Wire Harness 8P Connector No. 7 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the TATF wire between the shift solenoid wire harness and the PCM, then do the **do the repair verification** .

NO : The TATF wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then do the **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 20 seconds.
- 5. Monitor the OBD STATUS for P0712 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0712 ATF Temperature Sensor (Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the ATF temperature sensor and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0713: ATF TEMPERATURE SENSOR (OPEN)

DTC Troubleshooting: P0713

<u>Fig. 7: DTC Troubleshooting Flow Chart (P0713)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0713 ATF Temperature Sensor (Open)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temp Sensor (V)	More than 4.93	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between the ATF temperature sensor and the PCM.

2. Determine possible failure area (TATF line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Shift solenoid wire harness 8P connector No. 7 (RED)

     Terminal B Body ground

Fig. 8: Identifying Shift Solenoid Wire Harness 8P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temp Sensor (V)	Less than 0.07	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Go to step 4.

3. ATF temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Shift solenoid wire harness 8P connector No. 6 (GRY)

     Terminal B Shift solenoid wire harness 8P connector No. 7 (RED)

Fig. 9: Identifying Identifying Shift Solenoid Wire Harness 8P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ATF Temp Sensor (V)	Less than 0.07	V		

Does the ATF Temp Sensor (V) remain 0.07 V or below?

YES : **Replace the ATF temperature sensor** See **ATF TEMPERATURE SENSOR REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : The ATF temperature sensor is OK. Repair an open in the SG2 wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

4. Open wire check (TATF line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Jump the SCS line with the HDS.
   - 4. Disconnect the following connector.

     PCM connector B (49P)

   - 5. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Shift solenoid wire harness 8P connector: disconnected

PCM connector B (49P): disconnected

Test circuit TATF

Test point 1 Shift solenoid wire harness 8P connector No. 7 (RED)

Test point 2 PCM connector B (49P) No. 38 (RED)

Fig. 10: Checking Continuity Between Shift Solenoid Wire Harness 8P Connector No. 7 (RED) And PCM Connector B (49P) No. 38 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TATF wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the TATF wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 20 seconds.

- 5. Monitor the OBD STATUS for P0713 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0713 ATF Temperature Sensor (Open)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the ATF temperature sensor and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0714: ATF TEMPERATURE SENSOR (INTERMITTENT FAILURE)

Fig. 11: DTC Troubleshooting Flow Chart (P0714)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**
- **An engine block heater must not be used.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0714 ATF Temperature Sensor (Intermittent Failure)			

1. Current ATF temperature check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

A/T SYSTEM

Signal	Current conditions	
	Values	Unit
ATF Temperature		

PGM-FI SYSTEM

Signal	Current conditions	
	Values	Unit
ECT SENSOR 2		

Are the ATF Temperature and ECT SENSOR 2 equal to the ambient air temperature?

YES : Record the values of the ATF Temperature and ECT SENSOR 2 with the HDS, then go to step 3.

NO : Record the value of the ATF Temperature with the HDS, then go to step 2.

2. ATF temperature difference check:
   - 1. Turn the ignition switch to LOCK (0), and wait for at least 30 minutes.
   - 2. Turn the ignition switch to ON (II).
   - 3. Compare the current ATF Temperature to the ATF Temperature recorded in step 1.

Signal	Current conditions	
	Values	Unit
ATF Temperature		

Does the ATF Temperature change?

YES : Leave the engine off for at least 6 hours, then go to step 3.

NO : **REPLACE THE ATF TEMPERATURE SENSOR** .

3. ATF temperature sensor check:
   - 1. Compare the values of the ATF Temperature Sensor and ECT SENSOR 2.

A/T SYSTEM

Signal	Current conditions	
	Values	Unit
ATF Temperature		

PGM-FI SYSTEM

Signal	Current conditions	
	Values	Unit
ECT SENSOR 2		

Is the value of the ATF Temperature Sensor higher than the value of ECT SENSOR 2 by 58 °F (32 °C), or is the value of the ATF Temperature Sensor lower than the value of ECT SENSOR 2 by 43 °F (24 °C)?

YES : **REPLACE THE ATF TEMPERATURE SENSOR** .

NO : The ATF temperature sensor is OK. Intermittent failure, the system is OK at this time.

DTC P0716: INPUT SHAFT (MAINSHAFT) SPEED SENSOR (RANGE/PERFORMANCE)

DTC Troubleshooting: P0716

Fig. 12: DTC Troubleshooting Flow Chart (P0716)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0716 Input Shaft (Mainshaft) Speed Sensor			

(Range/Performance)			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle speed at speeds over 12 mph (20 km/h) for at least 10 seconds. Slow down, and stop the wheels.
   - 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0718 Input Shaft (Mainshaft) Speed Sensor (Intermittent Failure)			

Is DTC P0718 indicated?

YES : **DO THE TROUBLESHOOTING FOR DTC P0718**.

NO : Go to step 2.

2. Problem verification:
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0716 Input Shaft (Mainshaft) Speed Sensor (Range/Performance)			

Is DTC P0716 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Input shaft (mainshaft) speed sensor connection check:

Are the connection and installation OK?

YES : The connection and installation are OK. **REPLACE THE INPUT SHAFT (MAINSHAFT) SPEED SENSOR** , then **do the repair verification** .

NO : Repair faulty connection or installation, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle speed at speeds over 12 mph (20 km/h) for at least 10 seconds. Slow down, and stop the wheels.
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0716 Input Shaft (Mainshaft) Speed Sensor (Range/Performance)			

Is DTC P0716 indicated?

YES : Troubleshooting is incomplete. Go to step 1.

NO : Troubleshooting is complete.

DTC P0717: INPUT SHAFT (MAINSHAFT) SPEED SENSOR (NO SIGNAL INPUT)

DTC Troubleshooting: P0717

Fig. 13: DTC Troubleshooting Flow Chart (P0717)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0717 Input Shaft (Mainshaft) Speed Sensor (No Signal Input)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Open wire check (VCC2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Input shaft (mainshaft) speed sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

Input shaft (mainshaft) speed sensor 3P connector: disconnected

Test circuit VCC2

Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 3 (PNK)

Test point 2 Body ground

Fig. 14: Measuring Voltage Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 3 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : The VCC2 wire is OK. Go to step 3.

NO : Repair an open in the VCC2 wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

3. Determine possible failure area (NM line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Input shaft (mainshaft) speed sensor 3P connector: disconnected

     Test circuit NM

     Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 2 (WHT)

     Test point 2 Body ground

Fig. 15: Measuring Voltage Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Go to step 4.

NO : Go to step 5.

4. Open wire check (SG2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   Input shaft (mainshaft) speed sensor 3P connector: disconnected

   Test circuit SG2

   Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 1 (GRY)

   Test point 2 Body ground

Fig. 16: Checking Continuity Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 1 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG2 wire is OK. **REPLACE THE INPUT SHAFT (MAINSHAFT) SPEED SENSOR** , then **do the repair verification** .

NO : Repair an open in the SG2 wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

5. Shorted wire check (NM line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Input shaft (mainshaft) speed sensor 3P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit NM

     Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 2 (WHT)

     Test point 2 Body ground

Fig. 17: Checking Continuity Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the NM wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

NO : The NM wire is not shorted. Repair an open in the NM wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Troubleshooting is complete.

NO : **Replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

DTC P0718: INPUT SHAFT (MAINSHAFT) SPEED SENSOR (INTERMITTENT FAILURE)

DTC Troubleshooting: P0718

Fig. 18: DTC Troubleshooting Flow Chart (P0718)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0718 Input Shaft (Mainshaft) Speed Sensor (Intermittent Failure)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Intermittent failure, the system is OK at this time. Check for poor connection or loose terminals in the imput shaft (mainshaft) speed sensor circuit.

NO : The failure is duplicated. Go to step 2.

2. Open wire check (VCC2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Input shaft (mainshaft) speed sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Input shaft (mainshaft) speed sensor 3P connector: disconnected

Test circuit VCC2

Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 3 (PNK)

Test point 2 Body ground

Fig. 19: Measuring Voltage Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 3 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : The VCC2 wire is OK. Go to step 3.

NO : Repair an open in the VCC2 wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

3. Determine possible failure area (NM line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Input shaft (mainshaft) speed sensor 3P connector: disconnected

     Test circuit NM

     Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 2 (WHT)

     Test point 2 Body ground

Fig. 20: Measuring Voltage Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Go to step 4.

NO : Go to step 5.

4. Open wire check (SG2 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   Input shaft (mainshaft) speed sensor 3P connector: disconnected

   Test circuit SG2

   Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 1 (GRY)

   Test point 2 Body ground

Fig. 21: Checking Continuity Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 1 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG2 wire is OK. **REPLACE THE INPUT SHAFT (MAINSHAFT) SPEED SENSOR** , then **do the repair verification** .

NO : Repair an open in the SG2 wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

5. Shorted wire check (NM line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Input shaft (mainshaft) speed sensor 3P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit NM

     Test point 1 Input shaft (mainshaft) speed sensor 3P connector No. 2 (WHT)

     Test point 2 Body ground

Fig. 22: Checking Continuity Between Input Shaft (Mainshaft) Speed Sensor 3P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the NM wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

NO : The NM wire is not shorted. Repair an open in the NM wire between the input shaft (mainshaft) speed sensor and the PCM, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Troubleshooting is complete.

NO : **Replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

DTC P0721: OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR (RANGE/PERFORMANCE)

Fig. 23: DTC Troubleshooting Flow Chart (P0721)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0721 Output Shaft (Countershaft) Speed Sensor (Range/Performance)			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle speed at speeds over 12 mph (20 km/h) for at least 10 seconds. Slow down, and stop the wheels.
   - 5. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0723 Output Shaft (Countershaft) Speed Sensor (Intermittent Failure)			

Is DTC P0723 indicated?

YES : **DO THE TROUBLESHOOTING FOR DTC P0723**.

NO : Go to step 2.

2. Problem verification:
   - 1. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0721 Output Shaft (Countershaft) Speed Sensor (Range/Performance)			

Is DTC P0721 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Output shaft (countershaft) speed sensor connection check:

Are the connection and installation OK?

YES : The connection and installation are OK. **REPLACE THE OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR** , then **do the repair verification** .

NO : Repair faulty connection or installation, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle speed at speeds over 12 mph (20 km/h) for at least 10 seconds. Slow down, and stop the wheels.
- 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0721 Output Shaft (Countershaft) Speed Sensor (Range/Performance)			

Is DTC P0721 indicated?

YES : Troubleshooting is incomplete. Go to step 1.

NO : Troubleshooting is complete.

DTC P0722: OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR (NO SIGNAL INPUT)

DTC Troubleshooting: P0722

Fig. 24: DTC Troubleshooting Flow Chart (P0722)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0722 Output Shaft (Countershaft) Speed Sensor (No Signal Input)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Open wire check (VCC1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Output shaft (countershaft) speed sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

Output shaft (countershaft) speed sensor 3P connector: disconnected

Test circuit VCC1

Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 3 (PNK)

Test point 2 Body ground

Fig. 25: Measuring Voltage Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 3 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : The VCC1 wire is OK. Go to step 3.

NO : Repair an open in the VCC1 wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

3. Determine possible failure area (NC line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Output shaft (countershaft) speed sensor 3P connector: disconnected

     Test circuit NC

     Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 2 (LT GRN)

     Test point 2 Body ground

Fig. 26: Measuring Voltage Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 2 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Go to step 4.

NO : Go to step 5.

4. Open wire check (SG1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   Output shaft (countershaft) speed sensor 3P connector: disconnected

   Test circuit SG1

   Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 1 (GRY)

   Test point 2 Body ground

Fig. 27: Checking Continuity Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 1 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG1 wire is OK. **REPLACE THE OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR** , then **do the repair verification** .

NO : Repair an open in the SG1 wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

5. Shorted wire check (NC line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Output shaft (countershaft) speed sensor 3P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit NC

     Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 2 (LT GRN)

     Test point 2 Body ground

Fig. 28: Checking Continuity Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 1 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the NC wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

NO : The NC wire is not shorted. Repair an open in the NC wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Troubleshooting is complete.

NO : **Replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

DTC P0723: OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR (INTERMITTENT FAILURE)

DTC Troubleshooting: P0723

Fig. 29: DTC Troubleshooting Flow Chart (P0723)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0723 Output Shaft (Countershaft) Speed Sensor (Intermittent Failure)			

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Intermittent failure, the system is OK at this time. Check for poor connection or loose terminals in the input shaft (mainshaft) speed sensor circuit.

NO : The failure is duplicated. Go to step 2.

2. Open wire check (VCC1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Output shaft (countershaft) speed sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Output shaft (countershaft) speed sensor 3P connector: disconnected

Test circuit VCC1

Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 3 (PNK)

Test point 2 Body ground

Fig. 30: Measuring Voltage Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 3 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : The VCC1 wire is OK. Go to step 3.

NO : Repair an open in the VCC1 wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

3. Determine possible failure area (NC line, others):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Output shaft (countershaft) speed sensor 3P connector: disconnected

     Test circuit NC

     Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 2 (LT GRN)

     Test point 2 Body ground

Fig. 31: Measuring Voltage Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 2 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Go to step 4.

NO : Go to step 5.

4. Open wire check (SG1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   Output shaft (countershaft) speed sensor 3P connector: disconnected

   Test circuit SG1

   Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 1 (GRY)

   Test point 2 Body ground

Fig. 32: Checking Continuity Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 1 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SG1 wire is OK. **REPLACE THE OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR** , then **do the repair verification** .

NO : Repair an open in the SG1 wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

5. Shorted wire check (NC line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Output shaft (countershaft) speed sensor 3P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit NC

     Test point 1 Output shaft (countershaft) speed sensor 3P connector No. 2 (LT GRN)

     Test point 2 Body ground

Fig. 33: Checking Continuity Between Output Shaft (Countershaft) Speed Sensor 3P Connector No. 2 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the NC wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

NO : The NC wire is not shorted. Repair an open in the NC wire between the output shaft (countershaft) speed sensor and the PCM, then **do the repair verification** .

REPAIR VERIFICATION

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, disable the VSA by pressing the VSA OFF button, run the vehicle with the shift lever in D, and keep the vehicle at speeds over 12 mph (20 km/h). Compare the Input Shaft (Mainshaft) Speed (rpm) and the Output Shaft (Countershaft) Speed (rpm) with the HDS in the A/T Data List. Slow down, and stop the wheels.

Signal	Current conditions	
	Values	Unit
Input Shaft (Mainshaft) Speed (rpm)		
Output Shaft (Countershaft) Speed (rpm)		

Are the speeds about the same?

YES : Troubleshooting is complete.

NO : **Replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

DTC P0731: 1ST GEAR INCORRECT RATIO

Fig. 34: DTC Troubleshooting Flow Chart (P0731)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0731 1st Gear Incorrect Ratio			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Stall speed check:
   - 1. **TEST THE STALL SPEED IN D** .

   Is the stall speed rpm within the service limits?

   YES : The stall speed rpm is OK. Go to step 3.

   NO : Shift valves A and D are stuck. Repair the hydraulic system related with shift valves A and D, or replace the main valve body (shift valve A), the servo body (shift valve D), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

3. Line pressure check:
   - 1. **MEASURE THE LINE PRESSURE** .

   Is the line pressure within the service limit?

   YES : The line pressure is OK. Go to step 4.

   NO : Faulty ATF pump and regulator valve. Replace the main valve body (ATF pump), the regulator valve body (regulator valve), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

4. 1st clutch pressure check:
   - 1. **MEASURE THE 1ST CLUTCH PRESSURE** .

   Is the 1st clutch pressure within the service limits?

   YES : The 1st clutch pressure is OK. Go to step 5.

   NO : Shift valves B and C are stuck. Repair the hydraulic system related with shift valves B and C, or replace the main valve body (shift valves B and C) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

5. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 1st gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
   - 4. Monitor the OBD STATUS for P0731 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0731 1st Gear Incorrect Ratio	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Replace the 1st/3rd clutch or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle in 1st gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
- 4. Monitor the OBD STATUS for P0731 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0731 1st Gear Incorrect Ratio	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the input shaft (mainshaft) speed sensor, the output shaft (countershaft) speed sensor, and the PCM, then go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0732: 2ND GEAR INCORRECT RATIO

DTC Troubleshooting: P0732

Fig. 35: DTC Troubleshooting Flow Chart (P0732)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO**

TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0732 2nd Gear Incorrect Ratio			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Stall speed check:
   - 1. **TEST THE STALL SPEED IN D** .

   Is the stall speed rpm within the service limits?

   YES : The stall speed rpm is OK. Go to step 3.

   NO : Shift valve C is stuck. Repair the hydraulic system related with shift valve C, or replace the main valve body (shift valve C) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

3. Line pressure check:
   - 1. **MEASURE THE LINE PRESSURE** .

   Is the line pressure within the service limit?

   YES : The line pressure is OK. Go to step 4.

   NO : Faulty ATF pump and regulator valve. Replace the main valve body (ATF pump), the regulator valve body (regulator valve), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

4. 2nd clutch pressure check:

- 1. **MEASURE THE 2ND CLUTCH PRESSURE** .

Is the 2nd clutch pressure within the service limits?

YES : The 2nd clutch pressure is OK. Go to step 5.

NO : Shift valves A and B are stuck. Repair the hydraulic system related with shift valves A and B, or replace the main valve body (shift valves A and B) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

5. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 2nd gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
   - 4. Monitor the OBD STATUS for P0732 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0732 2nd Gear Incorrect Ratio	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Replace the 2nd clutch or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle in 2nd gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
- 4. Monitor the OBD STATUS for P0732 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0732 2nd Gear Incorrect Ratio	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or

Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the input shaft (mainshaft) speed sensor, the output shaft (countershaft) speed sensor, and the PCM, then go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0733: 3RD GEAR INCORRECT RATIO

DTC Troubleshooting: P0733

Fig. 36: DTC Troubleshooting Flow Chart (P0733)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

P0733 3rd Gear Incorrect Ratio			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Line pressure check:
   - 1. **MEASURE THE LINE PRESSURE** .

   Is the line pressure within the service limit?

   YES : The line pressure is OK. Go to step 3.

   NO : Faulty ATF pump and regulator valve. Replace the main valve body (ATF pump), the regulator valve body (regulator valve), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

3. 3rd clutch pressure check:
   - 1. **MEASURE THE 3RD CLUTCH PRESSURE** .

   Is the 3rd clutch pressure within the service limits?

   YES : The 3rd clutch pressure is OK. Go to step 4.

   NO : Shift valves A and D are stuck. Repair the hydraulic system related with shift valves A and D, or replace the main valve body (shift valve A), the servo body (shift valve D), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

4. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 3rd gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.

- 4. Monitor the OBD STATUS for P0733 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0733 3rd Gear Incorrect Ratio	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Replace the 1st/3rd clutch or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle in 3rd gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
- 4. Monitor the OBD STATUS for P0733 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0733 3rd Gear Incorrect Ratio	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the input shaft (mainshaft) speed sensor, the output shaft (countershaft) speed sensor, and the PCM, then go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0734: 4TH GEAR INCORRECT RATIO

DTC Troubleshooting: P0734

Fig. 37: DTC Troubleshooting Flow Chart (P0734)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

P0734 4th Gear Incorrect Ratio			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Line pressure check:
   - 1. **MEASURE THE LINE PRESSURE** .

   Is the line pressure within the service limit?

   YES : The line pressure is OK. Go to step 3.

   NO : Faulty ATF pump and regulator valve. Replace the main valve body (ATF pump), the regulator valve body (regulator valve), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

3. 4th clutch pressure check:
   - 1. **MEASURE THE 4TH CLUTCH PRESSURE** .

   Is the 4th clutch pressure within the service limits?

   YES : The 4th clutch pressure is OK. Go to step 4.

   NO : Shift valves B and C are stuck. Repair the hydraulic system related with shift valves B and C, or replace the main valve body (shift valves B and C) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

4. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 4th gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.

- 4. Monitor the OBD STATUS for P0734 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0734 4th Gear Incorrect Ratio	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Replace the 4th/5th clutch or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle in 4th gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
- 4. Monitor the OBD STATUS for P0734 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0734 4th Gear Incorrect Ratio	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the input shaft (mainshaft) speed sensor, the output shaft (countershaft) speed sensor, and the PCM, then go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0735: 5TH GEAR INCORRECT RATIO

DTC Troubleshooting: P0735

Fig. 38: DTC Troubleshooting Flow Chart (P0735)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0735 5th Gear Incorrect Ratio			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Line pressure check:
   - 1. **MEASURE THE LINE PRESSURE** .

   Is the line pressure within the service limit?

   YES : The line pressure is OK. Go to step 3.

   NO : Faulty ATF pump and regulator valve. Replace the main valve body (ATF pump), the regulator valve body (regulator valve), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

3. 5th clutch pressure check:
   - 1. **MEASURE THE 5TH CLUTCH PRESSURE** .

   Is the 5th clutch pressure within the service limits?

   YES : The 5th clutch pressure is OK. Go to step 4.

   NO : Shift valves A, B, and/or D are stuck. Repair the hydraulic system related with shift valves A, B, and D, or replace the main valve body (shift valves A and B), the servo body (shift valve D), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

4. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.

- 3. Test-drive the vehicle in 5th gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
- 4. Monitor the OBD STATUS for P0735 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0735 5th Gear Incorrect Ratio	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Replace the 4th/5th clutch or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle in 5th gear, with the shift lever in D, at speeds over 7 mph (12 km/h), and with the engine speed above 1, 000 rpm for at least 12 seconds.
- 4. Monitor the OBD STATUS for P0735 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0735 5th Gear Incorrect Ratio	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the input shaft (mainshaft) speed sensor, the output shaft (countershaft) speed sensor, and the PCM, then go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0741: TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF

DTC Troubleshooting: P0741

Fig. 39: DTC Troubleshooting Flow Chart (P0741)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0741 Torque Converter Clutch Circuit Performance or Stuck OFF			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Shift solenoid valve E operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Select Shift Solenoid Valve E in the Miscellaneous Test Menu, and check that shift solenoid valve E operates with the HDS.

   Is a clicking sound heard?

   YES : Shift solenoid valve E is OK. Go to step 3.

   NO : **REPLACE SHIFT SOLENOID VALVE E** , then **do the repair verification** .

3. A/T clutch pressure control solenoid valve A operation check:
   - 1. Run the engine until the Engine Coolant Temperature reaches 176 °F (80 °C) with the HDS in the A/T Data List.

Signal	Current conditions	
	Values	Unit
Engine Coolant Temperature		

   - 2. Select Clutch Pressure Control (Linear) Solenoid Valve A in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve A with the HDS.

   Does the HDS indicate NORMAL?

NORMAL A/T clutch pressure control solenoid valve A is OK. Go to step 4.

FAILURE Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

4. Problem verification (OBD STATUS check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle on a level road with a steady speed at 60 mph (96 km/h) for at least 20 seconds.
   - 4. Monitor the OBD STATUS for P0741 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0741 Torque Converter Clutch Circuit Performance or Stuck OFF	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Faulty torque converter clutch mechanism, lock-up control valve, or lock-up shift valve. Repair the hydraulic system related with these parts, or replace the torque converter, the main valve body (lock-up control valve), the regulator valve body (lock-up shift valve), or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle on a level road with a steady speed at 60 mph (96 km/h) for at least 20 seconds, or test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data.
- 4. Monitor the OBD STATUS for P0741 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0741 Torque Converter Clutch Circuit Performance or Stuck OFF	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0747: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A STUCK ON

DTC Troubleshooting: P0747

Fig. 40: DTC Troubleshooting Flow Chart (P0747)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0747 A/T Clutch Pressure Control Solenoid Valve A Stuck ON			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P0747 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0747 A/T Clutch Pressure Control Solenoid Valve A Stuck ON	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. A/T clutch pressure control solenoid valve A operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Clutch Pressure Control (Linear) Solenoid Valve A in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve A with the HDS.

   Does the HDS indicate NORMAL?

   NORMAL Intermittent failure, the system is OK at this time.

   FAILURE (HDS has not determined cause) Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 4.

   FAILURE (HDS has determined cause) Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

4. A/T clutch pressure control solenoid valve A check:
   - 1. **Inspect A/T clutch pressure control solenoid valve A** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

   Does A/T clutch pressure control solenoid valve A work properly?

   YES : A/T clutch pressure control solenoid valve A is OK. Repair the hydraulic system related with shift valves B and E, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0747 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0747 A/T Clutch Pressure Control Solenoid Valve A Stuck ON	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0752: SHIFT SOLENOID VALVE A STUCK ON

Fig. 41: DTC Troubleshooting Flow Chart (P0752)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0752 Shift Solenoid Valve A Stuck ON			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Shift solenoid valve A operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Select Shift Solenoid Valve A in the Miscellaneous Test Menu, and check it operates with the HDS.

   Is a clicking sound heard?

   YES : Shift solenoid valve A is OK. Go to step 3.

   NO : **REPLACE SHIFT SOLENOID VALVE A** , then **do the repair verification** .

3. Problem verification:
   - 1. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 2. Monitor the OBD STATUS for P0752 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0752 Shift Solenoid Valve A Stuck ON	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Faulty shift valve A, replace the main valve body (shift valve A) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0752 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0752 Shift Solenoid Valve A Stuck ON	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0756: SHIFT SOLENOID VALVE B STUCK OFF

DTC Troubleshooting: P0756

Fig. 42: DTC Troubleshooting Flow Chart (P0756)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0756 Shift Solenoid Valve B Stuck OFF			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).

- 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
- 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

Does the strainer have metal debris or excessive clutch material?

YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE THE ATF** , then go to step 2.

2. Shift solenoid valve B operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and check it operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve B is OK. Go to step 3.

NO : **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

3. Problem verification:
   - 1. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 2. Monitor the OBD STATUS for P0756 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0756 Shift Solenoid Valve B Stuck OFF	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Faulty shift valve B, replace the main valve body (shift valve B) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).

- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0756 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0756 Shift Solenoid Valve B Stuck OFF	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0757: SHIFT SOLENOID VALVE B STUCK ON

DTC Troubleshooting: P0757

Fig. 43: DTC Troubleshooting Flow Chart (P0757)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0757 Shift Solenoid Valve B Stuck ON			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).

- 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
- 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

Does the strainer have metal debris or excessive clutch material?

YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE THE ATF** , then go to step 2.

2. Shift solenoid valve B operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and check it operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve B is OK. Go to step 3.

NO : **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

3. Problem verification:
   - 1. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 2. Monitor the OBD STATUS for P0757 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0757 Shift Solenoid Valve B Stuck ON	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Faulty shift valve B, replace the main valve body (shift valve B) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).

- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0757 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0757 Shift Solenoid Valve B Stuck ON	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0761: SHIFT SOLENOID VALVE C STUCK OFF

Fig. 44: DTC Troubleshooting Flow Chart (P0761)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0761 Shift Solenoid Valve C Stuck OFF			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).

- 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
- 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

Does the strainer have metal debris or excessive clutch material?

YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE THE ATF** , then go to step 2.

2. Shift solenoid valve C operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Select Shift Solenoid Valve C in the Miscellaneous Test Menu, and check it operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve C is OK. Go to step 3.

NO : **REPLACE SHIFT SOLENOID VALVE C** , then **do the repair verification** .

3. Problem verification:
   - 1. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 2. Monitor the OBD STATUS for P0761 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0761 Shift Solenoid Valve C Stuck OFF	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Faulty shift valve C, replace the main valve body (shift valve C) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).

- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0761 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0761 Shift Solenoid Valve C Stuck OFF	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0771: SHIFT SOLENOID VALVE E STUCK OFF

DTC Troubleshooting: P0771

Fig. 45: DTC Troubleshooting Flow Chart (P0771)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and REVIEW THE GENERAL TROUBLESHOOTING INFORMATION or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0771 Shift Solenoid Valve E Stuck OFF			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.

- 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

Does the strainer have metal debris or excessive clutch material?

YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **REPLACE THE ATF** , then go to step 2.

2. Shift solenoid valve E operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Select Shift Solenoid Valve E in the Miscellaneous Test Menu, and check it operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve E is OK. Go to step 3.

NO : **REPLACE SHIFT SOLENOID VALVE E** , then **do the repair verification** .

3. Problem verification:
   - 1. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 2. Monitor the OBD STATUS for P0771 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0771 Shift Solenoid Valve E Stuck OFF	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Faulty shift valve E, replace the main valve body (shift valve E) or **the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.

- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears at speeds over 19 mph (30 km/h) for at least 20 seconds.
- 4. Monitor the OBD STATUS for P0771 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0771 Shift Solenoid Valve E Stuck OFF	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 2 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0776: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B STUCK OFF

DTC Troubleshooting: P0776

Fig. 46: DTC Troubleshooting Flow Chart (P0776)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0776 A/T Clutch Pressure Control Solenoid Valve B Stuck OFF			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P0776 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0776 A/T Clutch Pressure Control Solenoid Valve B Stuck OFF	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. A/T clutch pressure control solenoid valve B operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Clutch Pressure Control (Linear) Solenoid Valve B in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve B with the HDS.

   Does the HDS indicate NORMAL?

   NORMAL A/T clutch pressure control solenoid valve B is OK. Intermittent failure, the system is OK at this time.

   FAILURE (HDS has not determined cause) Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 4.

   FAILURE (HDS has determined cause) Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

4. A/T clutch pressure control solenoid valve B check:
   - 1. **Inspect A/T clutch pressure control solenoid valve B** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

   Does A/T clutch pressure control solenoid valve B work properly?

   YES : A/T clutch pressure control solenoid valve B is OK. Repair the hydraulic system related with shift valve B, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0776 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0776 A/T Clutch Pressure Control Solenoid Valve B Stuck OFF	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0777: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B STUCK ON

DTC Troubleshooting: P0777

Fig. 47: DTC Troubleshooting Flow Chart (P0777)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0777 A/T Clutch Pressure Control Solenoid Valve B Stuck ON			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P0777 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0777 A/T Clutch Pressure Control Solenoid Valve B Stuck ON	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. A/T clutch pressure control solenoid valve B operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Clutch Pressure Control (Linear) Solenoid Valve B in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve B with the HDS.

   Does the HDS indicate NORMAL?

   NORMAL A/T clutch pressure control solenoid valve B is OK. Intermittent failure, the system is OK at this time.

   FAILURE (HDS has not determined cause) Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 4.

   FAILURE (HDS has determined cause) Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

4. A/T clutch pressure control solenoid valve B check:
   - 1. **Inspect A/T clutch pressure control solenoid valve B** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

   Does A/T clutch pressure control solenoid valve B work properly?

   YES : A/T clutch pressure control solenoid valve B is OK. Repair the hydraulic system related with shift valve B, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0777 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0777 A/T Clutch Pressure Control Solenoid Valve B Stuck ON	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0780: SHIFT ERROR

Fig. 48: DTC Troubleshooting Flow Chart (P0780)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is stored whenever DTCs P1730, P1731, P1732, P1733, and P1734 are detected.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0780 Shift Error			

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Check for other Pending or Confirmed DTCs indicated along with DTC P0780.

NOTE: **DTC P0780 means there is one or more A/T DTCs regarding the shiftcontrol system.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

Are there other DTCs?

YES : Go to the indicated DTC's troubleshooting.

NO : There are no DTCs along with DTC P0780. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 2. Monitor the OBD STATUS for P0780 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0780 Shift Error	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS

again.

DTC P0796: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C STUCK OFF

DTC Troubleshooting: P0796

Fig. 49: DTC Troubleshooting Flow Chart (P0796)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0796 A/T Clutch Pressure Control Solenoid Valve C Stuck OFF			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P0796 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0796 A/T Clutch Pressure Control Solenoid Valve C Stuck OFF	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. A/T clutch pressure control solenoid valve C operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Clutch Pressure Control (Linear) Solenoid Valve C in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve C with the HDS.

   Does the HDS indicate NORMAL?

   NORMAL A/T clutch pressure control solenoid valve C is OK. Intermittent failure, the system is OK at this time.

   FAILURE (HDS has not determined cause) Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 4.

   FAILURE (HDS has determined cause) Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

4. A/T clutch pressure control solenoid valve C check:
   - 1. **Inspect A/T clutch pressure control solenoid valve C** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

   Does A/T clutch pressure control solenoid valve C work properly?

   YES : A/T clutch pressure control solenoid valve C is OK. Repair the hydraulic system related with shift valves B and C, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0796 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0796 A/T Clutch Pressure Control Solenoid Valve C Stuck OFF	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0797: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C STUCK ON

DTC Troubleshooting: P0797

Fig. 50: DTC Troubleshooting Flow Chart (P0797)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0797 A/T Clutch Pressure Control Solenoid Valve C Stuck ON			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P0797 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0797 A/T Clutch Pressure Control Solenoid Valve C Stuck ON	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. A/T clutch pressure control solenoid valve C operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Clutch Pressure Control (Linear) Solenoid Valve C in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve C with the HDS.

   Does the HDS indicate NORMAL?

   NORMAL A/T clutch pressure control solenoid valve C is OK. Intermittent failure, the system is OK at this time.

   FAILURE (HDS has not determined cause) Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 4.

   FAILURE (HDS has determined cause) Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

4. A/T clutch pressure control solenoid valve C check:
   - 1. **Inspect A/T clutch pressure control solenoid valve C** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

   Does A/T clutch pressure control solenoid valve C work properly?

   YES : A/T clutch pressure control solenoid valve C is OK. Repair the hydraulic system related with shift valves B and C, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P0797 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0797 A/T Clutch Pressure Control Solenoid Valve C Stuck ON	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0842: TRANSMISSION FLUID PRESSURE SWITCH A (2ND CLUTCH) CIRCUIT LOW

DTC Troubleshooting: P0842

Fig. 51: DTC Troubleshooting Flow Chart (P0842)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0842 Transmission Fluid Pressure Switch A (2nd Clutch) Circuit Low			

1. 2nd Pressure Switch signal check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Check the parameter(s) below with the HDS when the transmission is not in 2nd gear.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
2nd Pressure Switch	OFF			

Do the current condition(s) match the threshold?

YES : The 2nd Pressure Switch signal is OK. Go to step 2.

NO : Go to step 3.

2. Problem verification:
   - 1. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 2. Test-drive the vehicle in 4th gear for at least 2 seconds.
   - 3. Monitor the OBD STATUS for P0842 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0842 Transmission Fluid Pressure Switch A (2nd Clutch) Circuit Low	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an

intermittent short to ground in the wire between transmission fluid pressure switch A (2nd clutch) and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

3. Transmission fluid pressure switch A (2nd clutch) check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission fluid pressure switch A (2nd clutch) 1P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
2nd Pressure Switch	OFF			

Do the current condition(s) match the threshold?

YES : **<u>REPLACE TRANSMISSION FLUID PRESSURE SWITCH A (2ND CLUTCH)</u>** , then **do the repair verification** .

NO : Transmission fluid pressure switch A (2nd clutch) is OK. Go to step 4.

4. Shorted wire check (OP 2 SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Transmission fluid pressure switch A (2nd clutch) 1P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit OP 2 SW

     Test point 1 Transmission fluid pressure switch A (2nd clutch) 1P connector No. 1 (RED)

     Test point 2 Body ground

Fig. 52: Checking Continuity Between Transmission Fluid Pressure Switch A (2nd Clutch) 1P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the OP 2 SW wire between transmission fluid pressure switch A (2nd clutch) and the PCM, then **do the repair verification** .

NO : The OP 2 SW wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
- 5. Test-drive the vehicle in 2nd gear for at least 2 seconds, then drive in 4th gear for at least 2 seconds.
- 6. Monitor the OBD STATUS for P0842 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0842 Transmission Fluid Pressure Switch A (2nd Clutch) Circuit Low	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between transmission

fluid pressure switch A (2nd clutch) and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0843: TRANSMISSION FLUID PRESSURE SWITCH A (2ND CLUTCH) CIRCUIT HIGH

DTC Troubleshooting: P0843

Fig. 53: DTC Troubleshooting Flow Chart (P0843)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0843 Transmission Fluid Pressure Switch A (2nd Clutch) Circuit High			

1. 2nd Pressure Switch signal check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 4. Shift the transmission to 2nd gear while pressing the brake pedal, and check if the Shift Control indicates 2 with the HDS in the A/T Data List.

Signal	Current conditions	
	Values	Unit
Shift Control		

   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
2nd Pressure Switch	ON			

Do the current condition(s) match the threshold?

YES : The 2nd Pressure Switch signal is OK. Go to step 2.

NO : Go to step 3.

2. Problem verification:
   - 1. Test-drive the vehicle in 2nd gear for at least 2 seconds.
   - 2. Monitor the OBD STATUS for P0843 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0843 Transmission Fluid Pressure Switch A (2nd Clutch) Circuit High	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between transmission fluid pressure switch A (2nd clutch) and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

3. Transmission fluid pressure switch A (2nd clutch) check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission fluid pressure switch A (2nd clutch) 1P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Transmission fluid pressure switch A (2nd clutch) 1P connector: disconnected

     Test circuit OP 2 SW

     Test point 1 Transmission fluid pressure switch A (2nd clutch) 1P connector No. 1 (RED)

     Test point 2 Body ground

Fig. 54: Measuring Voltage Between Transmission Fluid Pressure Switch A (2nd Clutch) 1P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : **Replace transmission fluid pressure switch A (2nd clutch)** , then **do the repair verification** .

NO : Go to step 4.

4. Open wire check (OP 2 SW line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector B (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Transmission fluid pressure switch A (2nd clutch) 1P connector: disconnected

      PCM connector B (49P): disconnected

      Test circuit OP 2 SW

      Test point 1 Transmission fluid pressure switch A (2nd clutch) 1P connector No. 1 (RED)

      Test point 2 PCM connector B (49P) No. 19 (RED)

Fig. 55: Checking Continuity Between Transmission Fluid Pressure Switch A (2nd Clutch) 1P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The OP 2 SW wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the OP 2 SW wire between transmission fluid pressure switch A (2nd clutch) and the PCM, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
- 5. Test-drive the vehicle in 2nd gear for at least 2 seconds, then drive in 4th gear for at least 2 seconds.
- 6. Monitor the OBD STATUS for P0843 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0843 Transmission Fluid Pressure Switch A (2nd Clutch) Circuit High	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between transmission fluid pressure switch A (2nd clutch) and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0847: TRANSMISSION FLUID PRESSURE SWITCH B (3RD CLUTCH) CIRCUIT LOW

DTC Troubleshooting: P0847

Fig. 56: DTC Troubleshooting Flow Chart (P0847)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0847 Transmission Fluid Pressure Switch B (3rd Clutch) Circuit Low			

1. 3rd Pressure Switch signal check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Check the parameter(s) below with the HDS when the transmission is not in 3rd gear.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
3rd Pressure Switch	OFF			

Do the current condition(s) match the threshold?

YES : The 3rd Pressure Switch signal is OK. Go to step 2.

NO : Go to step 3.

2. Problem verification:
   - 1. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 2. Test-drive the vehicle in 4th gear for at least 2 seconds.
   - 3. Monitor the OBD STATUS for P0847 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0847 Transmission Fluid Pressure Switch B (3rd Clutch) Circuit Low	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an

intermittent short to ground in the wire between transmission fluid pressure switch B (3rd clutch) and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

3. Transmission fluid pressure switch B (3rd clutch) check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Transmission fluid pressure switch B (3rd clutch) 1P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
3rd Pressure Switch	OFF			

Do the current condition(s) match the threshold?

YES : **<u>REPLACE TRANSMISSION FLUID PRESSURE SWITCH B (3RD CLUTCH)</u>** , then **do the repair verification** .

NO : Transmission fluid pressure switch B (3rd clutch) is OK. Go to step 4.

4. Shorted wire check (OP 3 SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Transmission fluid pressure switch B (3rd clutch) 1P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit OP 3 SW

     Test point 1 Transmission fluid pressure switch B (3rd clutch) 1P connector terminal

     No. 1 (BLU)

     Test point 2 Body ground

Fig. 57: Checking Continuity Between Transmission Fluid Pressure Switch B (3rd Clutch) 1P Connector Terminal No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the OP 3 SW wire between transmission fluid pressure switch B (3rd clutch) and the PCM, then **do the repair verification** .

NO : The OP 3 SW wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
- 5. Test-drive the vehicle in 3rd gear for at least 2 seconds, then drive in 4th gear for at least 2 seconds.
- 6. Monitor the OBD STATUS for P0847 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0847 Transmission Fluid Pressure Switch B (3rd Clutch) Circuit Low	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between transmission

fluid pressure switch B (3rd clutch) and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0848: TRANSMISSION FLUID PRESSURE SWITCH B (3RD CLUTCH) CIRCUIT HIGH

DTC Troubleshooting: P0848

Fig. 58: DTC Troubleshooting Flow Chart (P0848)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0848 Transmission Fluid Pressure Switch B (3rd Clutch) Circuit High			

1. 3rd Pressure Switch signal check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Raise the vehicle on a lift. Make sure it is securely supported, and allow the front wheels to rotate freely.
   - 4. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 5. Start the engine, disable the VSA by pressing the VSA OFF button (if equipped). Run the vehicle in 3rd gear, and check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
3rd Pressure Switch	OFF			

Is the 3rd Pressure Switch ON in 3rd gear?

YES : The 3rd Pressure Switch signal is OK. Go to step 2.

NO : Go to step 3.

2. Problem verification:
   - 1. Test-drive the vehicle in 3rd gear for at least 2 seconds.
   - 2. Monitor the OBD STATUS for P0848 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0848 Transmission Fluid Pressure Switch B (3rd Clutch) Circuit High	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 3.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between transmission fluid pressure switch B (3rd clutch) and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

3. Transmission fluid pressure switch B (3rd clutch) check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Transmission fluid pressure switch B (3rd clutch) 1P connector

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Transmission fluid pressure switch B (3rd clutch) 1P connector: disconnected

      Test circuit OP 3 SW

      Test point 1 Transmission fluid pressure switch B (3rd clutch) 1P connector No. 1 (BLU)

      Test point 2 Body ground

Fig. 59: Measuring Voltage Between Transmission Fluid Pressure Switch B (3rd Clutch) 1P Connector No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : **REPLACE TRANSMISSION FLUID PRESSURE SWITCH B (3RD CLUTCH)** , then **do the repair verification** .

NO : Go to step 4.

4. Open wire check (OP 3 SW line):
    - 1. Turn the ignition switch to LOCK (0).

- 2. Jump the SCS line with the HDS.
- 3. Disconnect the following connector.

  PCM connector B (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Transmission fluid pressure switch B (3rd clutch) 1P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit OP 3 SW

  Test point 1 Transmission fluid pressure switch B (3rd clutch) 1P connector No. 1 (BLU)

  Test point 2 PCM connector B (49P) No. 9 (BLU)

Fig. 60: Checking Continuity Between Transmission Fluid Pressure Switch B (3rd Clutch) 1P Connector No. 1 (BLU) And PCM Connector B (49P) No. 9 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The OP 3 SW wire is OK. **Update the PCM if it does not have the latest software** See **PCM**

REMOVAL AND INSTALLATION or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the OP 3 SW wire between transmission fluid pressure switch B (3rd clutch) and the PCM, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
- 5. Test-drive the vehicle in 3rd gear for at least 2 seconds, then drive in 4th gear for at least 2 seconds.
- 6. Monitor the OBD STATUS for P0848 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0848 Transmission Fluid Pressure Switch B (3rd Clutch) Circuit High	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between transmission fluid pressure switch B (3rd clutch) and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

Fig. 61: DTC Troubleshooting Flow Chart (P0962)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC P0962: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A

(OPEN OR SHORT)

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0962 A/T Clutch Pressure Control Solenoid Valve A (Open or Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0962 A/T Clutch Pressure Control Solenoid Valve A (Open or Short)			

Is DTC P0962 indicated?

YES : The failure is duplicated. Go to step 5.

NO : Go to step 2.

2. IG1 FI-ECU line check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

PCM connector A (49P): disconnected

Test circuit IG1 FI-ECU

Test point 1 PCM connector A (49P) No. 1 (BLU)

Test point 2 Body ground

Fig. 62: Measuring Voltage Between PCM Connector A (49P) No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 FI-ECU wire is OK. Go to step 3.

NO : Check for a blown No. B7 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is blown, replace it. If the fuse blows again, repair a short in the No. B7 (7.5 A) fuse circuit. If the fuse is OK, repair an open in the IG1 FI-ECU wire between the PCM and the under-dash fuse/relay box. Then **do the repair verification** .

3. A/T clutch pressure control solenoid valve A operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect PCM connector A (49P).
   - 3. Turn the ignition switch to ON (II).
   - 4. Select Clutch Pressure Control (Linear) Solenoid Valve A in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve A with the HDS.

Does the HDS indicate NORMAL?

YES : The A/T clutch pressure control solenoid valve A operation is OK. Go to step 4.

NO : Go to step 5.

4. Problem verification (OBD STATUS check):
   - 1. In the Clutch Pressure Control Solenoid Valve Control MENU, set A/T clutch pressure control solenoid valve A at 1.0 A with the HDS.
   - 2. Monitor the OBD STATUS for P0962 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0962 A/T Clutch Pressure Control Solenoid Valve A (Open or Short)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 5.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve A and the PCM. If the HDS indicates NOT COMPLETED, do the function test again.

5. A/T clutch pressure control solenoid valve A internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/T clutch pressure control solenoid valve A 2P connector

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve A 2P connector: disconnected

     Test circuit LINEAR A+, PG2

     Test point 1 A/T clutch pressure control solenoid valve A 2P connector No. 1

     Test point 2 A/T clutch pressure control solenoid valve A 2P connector No. 2

Fig. 63: Measuring Resistance Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 4.8-6.0 ohms?

YES : A/T clutch pressure control solenoid valve A is OK. Go to step 6.

NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A** , then **do the repair verification** .

6. Open wire check (PG2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve A 2P connector: disconnected

     Test circuit PG2

     Test point 1 A/T clutch pressure control solenoid valve A 2P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 64: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG2 wire is OK. Go to step 7.

NO : Repair an open in the PG2 wire between A/T clutch pressure control solenoid valve A and ground (G101) or repair poor ground (G101), then **do the repair verification** .

7. Shorted wire check (LINEAR A+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve A 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit LINEAR A+

     Test point 1 A/T clutch pressure control solenoid valve A 2P connector No. 2 (LT BLU)

     Test point 2 Body ground

Fig. 65: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 2 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the LINEAR A+ wire between A/T clutch pressure control solenoid valve A and the PCM, then **do the repair verification** .

NO : The LINEAR A+ wire is not shorted. Go to step 8.

8. Open wire check (LINEAR A+ line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve A 2P connector: disconnected

     PCM connector B (49P): disconnected

     Test circuit LINEAR A+

     Test point 1 A/T clutch pressure control solenoid valve A 2P connector No. 2 (LT BLU)

     Test point 2 PCM connector B (49P) No. 8 (LT BLU)

Fig. 66: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 1 (BLK) And PCM Connector B (49P) No. 8 (LT BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LINEAR A+ wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the LINEAR A+ wire between A/T clutch pressure control solenoid valve A and the PCM, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0962 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0962 A/T Clutch Pressure Control Solenoid Valve A (Open or Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve A and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0963: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A

DTC Troubleshooting: P0963

Fig. 67: DTC Troubleshooting Flow Chart (P0963)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0963 A/T Clutch Pressure Control Solenoid Valve A			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0963 A/T Clutch Pressure Control Solenoid Valve A			

Is DTC P0963 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. A/T clutch pressure control solenoid valve A operation check:
   - 1. Select Clutch Pressure Control (Linear) Solenoid Valve A in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve A with the HDS.

Does the HDS indicate NORMAL?

YES : The A/T clutch pressure control solenoid valve A operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. In the Clutch Pressure Control Solenoid Valve Control MENU, set A/T clutch pressure control solenoid valve A at 0.2 A with the HDS.
   - 2. Monitor the OBD STATUS for P0963 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0963 A/T Clutch Pressure Control Solenoid Valve A	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve A and the PCM. If the HDS indicates NOT COMPLETED, do the function test again.

4. A/T clutch pressure control solenoid valve A internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/T clutch pressure control solenoid valve A 2P connector

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve A 2P connector: disconnected

     Test circuit LINEAR A+, PG2

     Test point 1 A/T clutch pressure control solenoid valve A 2P connector No. 1

     Test point 2 A/T clutch pressure control solenoid valve A 2P connector No. 2

Fig. 68: Measuring Resistance Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 4.8-6.0 ohms?

YES : A/T clutch pressure control solenoid valve A is OK. Go to step 5.

NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A** , then **do the repair verification** .

5. Open wire check (PG2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve A 2P connector: disconnected

     Test circuit PG2

     Test point 1 A/T clutch pressure control solenoid valve A 2P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 69: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG2 wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the PG2 wire between A/T clutch pressure control solenoid valve A and ground (G101) or repair poor ground (G101), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).

- 3. Clear the DTC with the HDS.
- 4. Start the engine, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0963 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0963 A/T Clutch Pressure Control Solenoid Valve A	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve A and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0966: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B (OPEN OR SHORT)

Fig. 70: DTC Troubleshooting Flow Chart (P0966)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0966 A/T Clutch Pressure Control Solenoid Valve B (Open or Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0966 A/T Clutch Pressure Control Solenoid Valve B (Open or Short)			

Is DTC P0966 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. A/T clutch pressure control solenoid valve B operation check:
   - 1. Select Clutch Pressure Control (Linear) Solenoid Valve B in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve B with the HDS.

Does the HDS indicate NORMAL?

YES : The A/T clutch pressure control solenoid valve B operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. In the Clutch Pressure Control Solenoid Valve Control MENU, set A/T clutch pressure control solenoid valve B at 1.0 A with the HDS.
   - 2. Monitor the OBD STATUS for P0966 in the DTCs MENU with the HDS.

DTC Description	OBD Status

P0966 A/T Clutch Pressure Control Solenoid Valve B (Open or Short)

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve B and the PCM. If the HDS indicates NOT COMPLETED, do the function test again.

4. A/T clutch pressure control solenoid valve B internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/T clutch pressure control solenoid valve B 2P connector

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve B 2P connector: disconnected

     Test circuit LINEAR B+, PG2

     Test point 1 A/T clutch pressure control solenoid valve B 2P connector No. 1

     Test point 2 A/T clutch pressure control solenoid valve B 2P connector No. 2

Fig. 71: Measuring Resistance Between A/T Clutch Pressure Control Solenoid Valve B 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 4.9-6.4 ohms?

YES : A/T clutch pressure control solenoid valve B is OK. Go to step 5.

NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B** , then **do the repair verification** .

5. Open wire check (PG2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve B 2P connector: disconnected

     Test circuit PG2

     Test point 1 A/T clutch pressure control solenoid valve B 2P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 72: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve B 2P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG2 wire is OK. Go to step 6.

NO : Repair an open in the PG2 wire between A/T clutch pressure control solenoid valve B and ground (G101) or repair poor ground (G101), then **do the repair verification** .

6. Shorted wire check (LINEAR B+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

PCM connector B (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  A/T clutch pressure control solenoid valve B 2P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit LINEAR B+

  Test point 1 A/T clutch pressure control solenoid valve B 2P connector No. 2 (PUR)

  Test point 2 Body ground

Fig. 73: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 2 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the LINEAR B+ wire between A/T clutch pressure control solenoid valve B and the PCM, then **do the repair verification** .

NO : The LINEAR B+ wire is not shorted. Go to step 7.

7. Open wire check (LINEAR B+ line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve B 2P connector: disconnected

PCM connector B (49P): disconnected

Test circuit LINEAR B+

Test point 1 A/T clutch pressure control solenoid valve B 2P connector No. 2 (PUR)

Test point 2 PCM connector B (49P) No. 11 (PUR)

Fig. 74: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve B 2P Connector No. 2 (PUR) And PCM Connector B (49P) No. 11 (PUR)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LINEAR B+ wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the LINEAR B+ wire between A/T clutch pressure control solenoid valve B and the PCM, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).

- 3. Clear the DTC with the HDS.
- 4. Start the engine, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0966 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0966 A/T Clutch Pressure Control Solenoid Valve B (Open or Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve B and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0967: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B

DTC Troubleshooting: P0967

Fig. 75: DTC Troubleshooting Flow Chart (P0967)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0967 A/T Clutch Pressure Control Solenoid Valve B			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0967 A/T Clutch Pressure Control Solenoid Valve B			

Is DTC P0967 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. A/T clutch pressure control solenoid valve B operation check:
   - 1. Select Clutch Pressure Control (Linear) Solenoid Valve B in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve B with the HDS.

Does the HDS indicate NORMAL?

YES : The A/T clutch pressure control solenoid valve B operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. In the Clutch Pressure Control Solenoid Valve Control MENU, set A/T clutch pressure control solenoid valve B at 0.2 A with the HDS.
   - 2. Monitor the OBD STATUS for P0967 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0967 A/T Clutch Pressure Control Solenoid Valve B	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve B and the PCM. If the HDS indicates NOT COMPLETED, do the function test again.

4. A/T clutch pressure control solenoid valve B internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/T clutch pressure control solenoid valve B 2P connector

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve B 2P connector: disconnected

     Test circuit LINEAR B+, PG2

     Test point 1 A/T clutch pressure control solenoid valve B 2P connector No. 1

     Test point 2 A/T clutch pressure control solenoid valve B 2P connector No. 2

Fig. 76: Measuring Resistance Between A/T Clutch Pressure Control Solenoid Valve B 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 4.9-6.4 ohms?

YES : A/T clutch pressure control solenoid valve B is OK. Go to step 5.

NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B** , then **do the repair verification** .

5. Open wire check (PG2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve B 2P connector: disconnected

     Test circuit PG2

     Test point 1 A/T clutch pressure control solenoid valve B 2P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 77: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve B 2P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG2 wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the PG2 wire between A/T clutch pressure control solenoid valve B and ground (G101) or repair poor ground (G101), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).

- 3. Clear the DTC with the HDS.
- 4. Start the engine, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0967 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0967 A/T Clutch Pressure Control Solenoid Valve B	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve B and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0970: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C (OPEN OR SHORT)

Fig. 78: DTC Troubleshooting Flow Chart (P0970)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0970 A/T Clutch Pressure Control Solenoid Valve C (Open or Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0970 A/T Clutch Pressure Control Solenoid Valve C (Open or Short)			

Is DTC P0970 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. A/T clutch pressure control solenoid valve C operation check:
   - 1. Select Clutch Pressure (Linear) Control Solenoid Valve C in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve C with the HDS.

Does the HDS indicate NORMAL?

YES : The A/T clutch pressure control solenoid valve C operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. In the Clutch Pressure Control Solenoid Valve Control MENU, set A/T clutch pressure control solenoid valve C at 1.0 A with the HDS.
   - 2. Monitor the OBD STATUS for P0970 in the DTCs MENU with the HDS.

DTC Description	OBD Status

P0970 A/T Clutch Pressure Control Solenoid Valve C (Open or Short)

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve C and the PCM. If the HDS indicates NOT COMPLETED, do the function test again.

4. A/T clutch pressure control solenoid valve C internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/T clutch pressure control solenoid valve C 2P connector

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve C 2P connector: disconnected

     Test circuit LINEAR C+, PG2

     Test point 1 A/T clutch pressure control solenoid valve C 2P connector No. 1

     Test point 2 A/T clutch pressure control solenoid valve C 2P connector No. 2

Fig. 79: Measuring Resistance Between A/T Clutch Pressure Control Solenoid Valve C 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 4.9-6.4 ohms?

YES : A/T clutch pressure control solenoid valve C is OK. Go to step 5.

NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C** , then **do the repair verification** .

5. Open wire check (PG2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve C 2P connector: disconnected

     Test circuit PG2

     Test point 1 A/T clutch pressure control solenoid valve C 2P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 80: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve C 2P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG2 wire is OK. Go to step 6.

NO : Repair an open in the PG2 wire between A/T clutch pressure control solenoid valve C and ground (G101) or repair poor ground (G101), then **do the repair verification** .

6. Shorted wire check (LINEAR C+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

PCM connector B (49P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  A/T clutch pressure control solenoid valve C 2P connector: disconnected

  PCM connector B (49P): disconnected

  Test circuit LINEAR C+

  Test point 1 A/T clutch pressure control solenoid valve C 2P connector No. 2 (BLU)

  Test point 2 Body ground

Fig. 81: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve C 2P Connector No. 2 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the LINEAR C+ wire between A/T clutch pressure control solenoid valve C and the PCM, then **do the repair verification** .

NO : The LINEAR C+ wire is not shorted. Go to step 7.

7. Open wire check (LINEAR C+ line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve C 2P connector: disconnected

PCM connector B (49P): disconnected

Test circuit LINEAR C+

Test point 1 A/T clutch pressure control solenoid valve C 2P connector No. 2 (BLU)

Test point 2 PCM connector B (49P) No. 36 (BLU)

Fig. 82: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve A 2P Connector No. 2 (BLK) And PCM Connector B (49P) No. 36 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The LINEAR C+ wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the LINEAR C+ wire between A/T clutch pressure control solenoid valve C and the PCM, then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.

- 4. Start the engine, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0970 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0970 A/T Clutch Pressure Control Solenoid Valve C (Open or Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve C and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0971: A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C

DTC Troubleshooting: P0971

Fig. 83: DTC Troubleshooting Flow Chart (P0971)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0971 A/T Clutch Pressure Control Solenoid Valve C			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0971 A/T Clutch Pressure Control Solenoid Valve C			

Is DTC P0971 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. A/T clutch pressure control solenoid valve C operation check:
   - 1. Select Clutch Pressure Control (Linear) Solenoid Valve C in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve C with the HDS.

Does the HDS indicate NORMAL?

YES : The A/T clutch pressure control solenoid valve C operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. In the Clutch Pressure Control Solenoid Valve Control MENU, set A/T clutch pressure control solenoid valve C at 0.2 A with the HDS.
   - 2. Monitor the OBD STATUS for P0971 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0971 A/T Clutch Pressure Control Solenoid Valve C	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve C and the PCM. If the HDS indicates NOT COMPLETED, do the function test again.

4. A/T clutch pressure control solenoid valve C internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/T clutch pressure control solenoid valve C 2P connector

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve C 2P connector: disconnected

     Test circuit LINEAR C+, PG2

     Test point 1 A/T clutch pressure control solenoid valve C 2P connector No. 1

     Test point 2 A/T clutch pressure control solenoid valve C 2P connector No. 2

Fig. 84: Measuring Resistance Between A/T Clutch Pressure Control Solenoid Valve C 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 4.9-6.4 ohms?

YES : A/T clutch pressure control solenoid valve C is OK. Go to step 5.

NO : **REPLACE A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C** , then **do the repair verification** .

5. Open wire check (PG2 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     A/T clutch pressure control solenoid valve C 2P connector: disconnected

     Test circuit PG2

     Test point 1 A/T clutch pressure control solenoid valve C 2P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 85: Checking Continuity Between A/T Clutch Pressure Control Solenoid Valve C 2P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG2 wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Repair an open in the PG2 wire between A/T clutch pressure control solenoid valve C and ground (G101) or repair poor ground (G101), then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).

- 3. Clear the DTC with the HDS.
- 4. Start the engine, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0971 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0971 A/T Clutch Pressure Control Solenoid Valve C	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between A/T clutch pressure control solenoid valve C and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0973: SHIFT SOLENOID VALVE A (SHORT)

DTC Troubleshooting: P0973

Fig. 86: DTC Troubleshooting Flow Chart (P0973)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0973 Shift Solenoid Valve A (Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 1st gear for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0973 Shift Solenoid Valve A (Short)			

Is DTC P0973 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve A operation check:
   - 1. Select Shift Solenoid Valve A in the Miscellaneous Test Menu, and test shift solenoid valve A with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve A operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Test-drive the vehicle in 1st gear for at least 1 second.
   - 2. Monitor the OBD STATUS for P0973 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0973 Shift Solenoid Valve A (Short)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an intermittent short to ground in the wire between shift solenoid valve A and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve A internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Test circuit SHA

     Test point 1 PCM connector B (49P) No. 21 (PUR)

     Test point 2 Body ground

<u>Fig. 87: Measuring Resistance Between PCM Connector B (49P) No. 21 (PUR) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 13.8 ohms?

YES : Go to step 5.

NO : Shift solenoid valve A is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Shorted wire check (SHA line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHA

     Test point 1 PCM connector B (49P) No. 21 (PUR)

     Test point 2 Body ground

Fig. 88: Checking Continuity Between PCM Connector B (49P) No. 21 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SHA wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

NO : The SHA wire is OK. Go to step 6.

6. Shift solenoid valve A check:
   - 1. **TEST SHIFT SOLENOID VALVE A** .

Is shift solenoid valve A OK?

YES : Shift solenoid valve A is OK. **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

NO : **REPLACE SHIFT SOLENOID VALVE A** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then test-drive the vehicle in 1st gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0973 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0973 Shift Solenoid Valve A (Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve A and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0974: SHIFT SOLENOID VALVE A (OPEN)

DTC Troubleshooting: P0974

Fig. 89: DTC Troubleshooting Flow Chart (P0974)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0974 Shift Solenoid Valve A (Open)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0974 Shift Solenoid Valve A (Open)			

Is DTC P0974 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve A operation check:
   - 1. Select Shift Solenoid Valve A in the Miscellaneous Test Menu, and test shift solenoid valve A with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve A operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 2. Monitor the OBD STATUS for P0974 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0974 Shift Solenoid Valve A (Open)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between shift solenoid valve A and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve A internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Test circuit SHA

     Test point 1 PCM connector B (49P) No. 21 (PUR)

     Test point 2 Body ground

<u>Fig. 90: Measuring Resistance Between PCM Connector B (49P) No. 21 (PUR) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 13.8-17.1 ohms?

YES : Shift solenoid valve A is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (SHA line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHA

     Test point 1 Shift solenoid wire harness 8P connector No. 8 (PUR)

     Test point 2 PCM connector B (49P) No. 21 (PUR)

Fig. 91: Checking Continuity Between PCM Connector B (49P) No. 21 (PUR) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SHA wire is OK. Go to step 6.

NO : Repair an open in the SHA wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

6. Shift solenoid wire harness check:
   - 1. **REMOVE THE SHIFT SOLENOID WIRE HARNESS** .
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Shift solenoid valve A 1P connector: disconnected

     Test circuit SHA

     Test point 1 Shift solenoid valve A 1P connector No. 1 (BLU)

     Test point 2 Shift solenoid wire harness 7P connector No. 7 (BLU)

Fig. 92: Checking Continuity Between Shift Solenoid Valve A 1P Connector No. 1 (BLU) And Shift Solenoid Wire Harness 7P Connector No. 7 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The shift solenoid wire harness is OK. **REPLACE SHIFT SOLENOID VALVE A** , then **do the repair verification** .

NO : **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then test-drive the vehicle in 1st gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0974 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0974 Shift Solenoid Valve A (Open)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve A and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0976: SHIFT SOLENOID VALVE B (SHORT)

DTC Troubleshooting: P0976

Fig. 93: DTC Troubleshooting Flow Chart (P0976)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0976 Shift Solenoid Valve B (Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0976 Shift Solenoid Valve B (Short)			

Is DTC P0976 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve B operation check:
   - 1. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and test shift solenoid valve B with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve B operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 2. Monitor the OBD STATUS for P0976 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0976 Shift Solenoid Valve B (Short)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an intermittent short to ground in the wire between shift solenoid valve B and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve B internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Test circuit SHB

     Test point 1 PCM connector B (49P) No. 32 (WHT)

     Test point 2 Body ground

Fig. 94: Measuring Resistance Between PCM Connector B (49P) No. 32 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 13.8 ohms?

YES : Go to step 5.

NO : Shift solenoid valve B is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Shorted wire check (SHB line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHB

     Test point 1 PCM connector B (49P) No. 32 (WHT)

     Test point 2 Body ground

Fig. 95: Checking Continuity Between PCM Connector B (49P) No. 32 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SHB wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

NO : The SHB wire is OK. Go to step 6.

6. Shift solenoid valve B check:
   - 1. **TEST SHIFT SOLENOID VALVE B** .

Is shift solenoid valve B OK?

YES : Shift solenoid valve B is OK. **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

NO : **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Test-drive the vehicle through 1st to 3rd gears, then drive in 3rd gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0976 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0976 Shift Solenoid Valve B (Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve B and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0977: SHIFT SOLENOID VALVE B (OPEN)

DTC Troubleshooting: P0977

Fig. 96: DTC Troubleshooting Flow Chart (P0977)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0977 Shift Solenoid Valve B (Open)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle through 1st to 3rd gears, then drive in 3rd gear for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0977 Shift Solenoid Valve B (Open)			

Is DTC P0977 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve B operation check:
   - 1. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and test shift solenoid valve B with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve B operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Test-drive the vehicle through 1st to 3rd gears, then drive in 3rd gear for at least 1 second.
   - 2. Monitor the OBD STATUS for P0977 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0977 Shift Solenoid Valve B (Open)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between shift solenoid valve B and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve B internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Test circuit SHB

     Test point 1 PCM connector B (49P) No. 32 (WHT)

     Test point 2 Body ground

<u>Fig. 97: Measuring Resistance Between PCM Connector B (49P) No. 32 (WHT) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 13.8-17.1 ohms?

YES : Shift solenoid valve B is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (SHB line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHB

     Test point 1 Shift solenoid wire harness 8P connector No. 3 (WHT)

     Test point 2 PCM connector B (49P) No. 32 (WHT)

Fig. 98: Checking Continuity Between Shift Solenoid Wire Harness 8P Connector No. 3

<u>(WHT) And PCM Connector B (49P) No. 32 (WHT)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SHB wire is OK. Go to step 6.

NO : Repair an open in the SHB wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

6. Shift solenoid wire harness check:
   - 1. **<u>REMOVE THE SHIFT SOLENOID WIRE HARNESS</u>** .
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Shift solenoid valve B 1P connector: disconnected

     Test circuit SHB

     Test point 1 Shift solenoid valve B 1P connector No. 1 (ORN)

     Test point 2 Shift solenoid wire harness 7P connector No. 2 (ORN)

Fig. 99: Checking Continuity Between Shift Solenoid Valve B 1P Connector No. 1 (ORN) And No. 2 (ORN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The shift solenoid wire harness is OK. **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

NO : **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Test-drive the vehicle through 1st to 3rd gears, then drive in 3rd gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0977 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0977 Shift Solenoid Valve B (Open)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve B and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0979: SHIFT SOLENOID VALVE C (SHORT)

DTC Troubleshooting: P0979

Fig. 100: DTC Troubleshooting Flow Chart (P0979)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0979 Shift Solenoid Valve C (Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 1st gear for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0979 Shift Solenoid Valve C (Short)			

Is DTC P0979 indicated?

YES : The failure is duplicated. Go to step 4

NO : Go to step 2.

2. Shift solenoid valve C operation check:
   - 1. Select Shift Solenoid Valve C in the Miscellaneous Test Menu, and test shift solenoid valve C with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve C operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Test-drive the vehicle in 1st gear for at least 1 second.
   - 2. Monitor the OBD STATUS for P0979 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0979 Shift Solenoid Valve C (Short)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an intermittent short to ground in the wire between shift solenoid valve C and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve C internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Test circuit SHC

     Test point 1 PCM connector C (49P) No. 21 (GRN)

     Test point 2 Body ground

Fig. 101: Measuring Resistance Between PCM Connector C (49P) No. 21 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 13.8 ohms?

YES : Go to step 5.

NO : Shift solenoid valve C is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Shorted wire check (SHC line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHC

     Test point 1 PCM connector C (49P) No. 21 (GRN)

     Test point 2 Body ground

Fig. 102: Checking Continuity Between PCM Connector C (49P) No. 21 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SHC wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

NO : The SHC wire is OK. Go to step 6.

6. Shift solenoid valve C check:
   - 1. **TEST SHIFT SOLENOID VALVE C** .

Is shift solenoid valve C OK?

YES : Shift solenoid valve C is OK. **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

NO : **REPLACE SHIFT SOLENOID VALVE C** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then test-drive the vehicle in 1st gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0979 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0979 Shift Solenoid Valve C (Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve C and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0980: SHIFT SOLENOID VALVE C (OPEN)

DTC Troubleshooting: P0980

Fig. 103: DTC Troubleshooting Flow Chart (P0980)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0980 Shift Solenoid Valve C (Open)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0980 Shift Solenoid Valve C (Open)			

Is DTC P0980 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve C operation check:
   - 1. Select Shift Solenoid Valve C in the Miscellaneous Test Menu, and test shift solenoid valve C with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve C operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 2. Monitor the OBD STATUS for P0980 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0980 Shift Solenoid Valve C (Open)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between shift solenoid valve C and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve C internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Test circuit SHC

     Test point 1 PCM connector C (49P) No. 21 (GRN)

     Test point 2 Body ground

<u>Fig. 104: Measuring Resistance Between PCM Connector C (49P) No. 21 (GRN) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 13.8-17.1 ohms?

YES : Shift solenoid valve C is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (SHC line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHC

     Test point 1 Shift solenoid wire harness 8P connector No. 4 (GRN)

     Test point 2 PCM connector C (49P) No. 21 (GRN)

Fig. 105: Checking Continuity Between Shift Solenoid Wire Harness 8P Connector No. 4

<u>(GRN) And PCM Connector C (49P) No. 21 (GRN)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SHC wire is OK. Go to step 6.

NO : Repair an open in the SHC wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

6. Shift solenoid wire harness check:
   - 1. **<u>REMOVE THE SHIFT SOLENOID WIRE HARNESS</u>** .
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Shift solenoid valve C 1P connector: disconnected

     Test circuit SHC

     Test point 1 Shift solenoid valve C 1P connector No. 1 (GRN)

     Test point 2 Shift solenoid wire harness 7P connector No. 3 (GRN)

Fig. 106: Checking Continuity Between Shift Solenoid Valve C 1P Connector No. 1 (GRN) And Shift Solenoid Wire Harness 7P Connector No. 3 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The shift solenoid wire harness is OK. **REPLACE SHIFT SOLENOID VALVE C** , then **do the repair verification** .

NO : **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then test-drive the vehicle in 1st gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0980 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0980 Shift Solenoid Valve C (Open)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve C and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0982: SHIFT SOLENOID VALVE D (SHORT)

DTC Troubleshooting: P0982

Fig. 107: DTC Troubleshooting Flow Chart (P0982)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0982 Shift Solenoid Valve D (Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle in 2nd gear for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0982 Shift Solenoid Valve D (Short)			

Is DTC P0982 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve D operation check:
   - 1. Select Shift Solenoid Valve D in the Miscellaneous Test Menu, and test shift solenoid valve D with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve D operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Test-drive the vehicle in 2nd gear for at least 1 second.
   - 2. Monitor the OBD STATUS for P0982 in the DTCs MENU with the HDS.

DTC Description	OBD Status

P0982 Shift Solenoid Valve D (Short)

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an intermittent short to ground in the wire between shift solenoid valve D and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve D internal resistance check:

   Turn the ignition switch to LOCK (0).

   - 1.
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Test circuit SHD

     Test point 1 PCM connector C (49P) No. 32 (PNK)

     Test point 2 Body ground

Fig. 108: Measuring Resistance Between PCM Connector C (49P) No. 32 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 13.8 ohms?

YES : Go to step 5.

NO : Shift solenoid valve D is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Shorted wire check (SHD line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHD

     Test point 1 PCM connector C (49P) No. 32 (PNK)

     Test point 2 Body ground

Fig. 109: Checking Continuity Between PCM Connector C (49P) No. 32 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SHD wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

NO : The SHD wire is OK. Go to step 6.

6. Shift solenoid valve D check:
   - 1. **TEST SHIFT SOLENOID VALVE D** .

Is shift solenoid valve D OK?

YES : Shift solenoid valve D is OK. **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

NO : **REPLACE SHIFT SOLENOID VALVE D** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then test-drive the vehicle in 2nd gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0982 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0982 Shift Solenoid Valve D (Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve D and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0983: SHIFT SOLENOID VALVE D (OPEN)

Fig. 110: DTC Troubleshooting Flow Chart (P0983)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0983 Shift Solenoid Valve D (Open)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0983 Shift Solenoid Valve D (Open)			

Is DTC P0983 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve D operation check:
   - 1. Select Shift Solenoid Valve D in the Miscellaneous Test Menu, and test shift solenoid valve D with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve D operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 2. Monitor the OBD STATUS for P0983 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0983 Shift Solenoid Valve D (Open)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between shift solenoid valve D and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve D internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector C (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Test circuit SHD

     Test point 1 PCM connector C (49P) No. 32 (PNK)

     Test point 2 Body ground

Fig. 111: Measuring Resistance Between PCM Connector C (49P) No. 32 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 13.8-17.1 ohms?

YES : Shift solenoid valve D is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (SHD line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHD

     Test point 1 Shift solenoid wire harness 8P connector No. 5 (PNK)

     Test point 2 PCM connector C (49P) No. 32 (PNK)

Fig. 112: Checking Continuity Between Shift Solenoid Wire Harness 8P Connector No. 5 (PNK) And PCM Connector C (49P) No. 32 (PNK)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SHD wire is OK. Go to step 6.

NO : Repair an open in the SHD wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

6. Shift solenoid wire harness check:
   - 1. **REMOVE THE SHIFT SOLENOID WIRE HARNESS** .
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector C (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Shift solenoid valve D 1P connector: disconnected

     Test circuit SHD

     Test point 1 Shift solenoid valve D 1P connector No. 1 (YEL)

     Test point 2 Shift solenoid wire harness 7P connector No. 4 (YEL)

Fig. 113: Checking Continuity Between Shift Solenoid Valve D 1P Connector No. 1 (YEL)

And Wire Harness 7P Connector No. 4 (YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The shift solenoid wire harness is OK. **REPLACE SHIFT SOLENOID VALVE D** , then **do the repair verification** .

NO : **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then test-drive the vehicle in 2nd gear for at least 1 second.
- 5. Monitor the OBD STATUS for P0983 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0983 Shift Solenoid Valve D (Open)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve D and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0985: SHIFT SOLENOID VALVE E (SHORT)

DTC Troubleshooting: P0985

Fig. 114: DTC Troubleshooting Flow Chart (P0985)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0985 Shift Solenoid Valve E (Short)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0985 Shift Solenoid Valve E (Short)			

Is DTC P0985 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve E operation check:
   - 1. Select Shift Solenoid Valve E in the Miscellaneous Test Menu, and test shift solenoid valve E with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve E operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Start the engine with the shift lever in P, and wait for at least 1 second.
   - 2. Monitor the OBD STATUS for P0985 in the DTCs MENU with the HDS.

DTC Description	OBD Status

P0985 Shift Solenoid Valve E (Short)

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for an intermittent short to ground in the wire between shift solenoid valve E and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve E internal resistance check:

   Turn the ignition switch to LOCK (0).

   - 1.
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Test circuit SHE

     Test point 1 PCM connector B (49P) No. 40 (YEL)

     Test point 2 Body ground

Fig. 115: Measuring Resistance Between PCM Connector B (49P) No. 40 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 13.8 ohms?

YES : Go to step 5.

NO : Shift solenoid valve E is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

5. Shorted wire check (SHE line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHE

     Test point 1 PCM connector B (49P) No. 40 (YEL)

     Test point 2 Body ground

Fig. 116: Checking Continuity Between PCM Connector B (49P) No. 40 (YEL) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SHE wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

NO : The SHE wire is OK. Go to step 6.

6. Shift solenoid valve E check:
   - 1. **TEST SHIFT SOLENOID VALVE E** .

Is shift solenoid valve E OK?

YES : Shift solenoid valve E is OK. **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

NO : **REPLACE SHIFT SOLENOID VALVE E** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then shift to N, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0985 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0985 Shift Solenoid Valve E (Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve E and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P0986: SHIFT SOLENOID VALVE E (OPEN)

DTC Troubleshooting: P0986

Fig. 117: DTC Troubleshooting Flow Chart (P0986)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot**

with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0986 Shift Solenoid Valve E (Open)			

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine with the shift lever in N, and wait for at least 1 second.
   - 4. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P0986 Shift Solenoid Valve E (Open)			

Is DTC P0986 indicated?

YES : The failure is duplicated. Go to step 4.

NO : Go to step 2.

2. Shift solenoid valve E operation check:
   - 1. Select Shift Solenoid Valve E in the Miscellaneous Test Menu, and test shift solenoid valve E with the HDS.

Is a clicking sound heard?

YES : The shift solenoid valve E operation is OK. Go to step 3.

NO : Go to step 4.

3. Problem verification (OBD STATUS check):
   - 1. Start the engine with the shift lever in N, and wait for at least 1 second.
   - 2. Monitor the OBD STATUS for P0986 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0986 Shift Solenoid Valve E (Open)	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Go to step 4.

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals between shift solenoid valve E and the PCM. If the HDS indicates NOT COMPLETED, test-drive again.

4. Shift solenoid valve E internal resistance check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector B (49P)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Test circuit SHE

     Test point 1 PCM connector B (49P) No. 40 (YEL)

     Test point 2 Body ground

Fig. 118: Measuring Resistance Between PCM Connector B (49P) No. 40 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 13.8-17.1 ohms?

YES : Shift solenoid valve E is OK. **Update the PCM if it does not have the latest software** See **PCM**

REMOVAL AND INSTALLATION or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : Go to step 5.

5. Open wire check (SHE line):
   - 1. Disconnect the following connector.

     Shift solenoid wire harness 8P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Test circuit SHE

     Test point 1 Shift solenoid wire harness 8P connector No. 2 (YEL)

     Test point 2 PCM connector B (49P) No. 40 (YEL)

Fig. 119: Checking Continuity Between Shift Solenoid Wire Harness 8P Connector No. 2 (YEL) And PCM Connector B (49P) No. 40 (YEL)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SHE wire is OK. Go to step 6.

NO : Repair an open in the SHE wire between the shift solenoid wire harness and the PCM, then **do the repair verification** .

6. Shift solenoid wire harness check:
   - 1. **REMOVE THE SHIFT SOLENOID WIRE HARNESS** .
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Shift solenoid wire harness 8P connector: disconnected

     Shift solenoid valve E 1P connector: disconnected

     Test circuit SHE

     Test point 1 Shift solenoid valve E 1P connector No. 1 (RED)

     Test point 2 Shift solenoid wire harness 7P connector No. 1 (RED)

Fig. 120: Checking Continuity Between Shift Solenoid Valve E 1P Connector No. 1 (RED) And Shift Solenoid Wire Harness 7P Connector No. 1 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The shift solenoid wire harness is OK. **REPLACE SHIFT SOLENOID VALVE E** , then **do the repair verification** .

NO : **REPLACE THE SHIFT SOLENOID WIRE HARNESS** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P, and wait for at least 1 second. Then shift to N, and wait for at least 1 second.
- 5. Monitor the OBD STATUS for P0986 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P0986 Shift Solenoid Valve E (Open)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between shift solenoid valve E and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P1717: TRANSMISSION RANGE SWITCH ATP RVS SWITCH (OPEN OR SHORT)

DTC Troubleshooting: P1717

Fig. 121: DTC Troubleshooting Flow Chart (P1717)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO**

TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

- **This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1717 Transmission Range Switch ATP RVS Switch (Open or Short)			

1. A/T R Switch signal check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS with the shift lever in R.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/T R Switch	ON			

Do the current condition(s) match the threshold?

YES : The A/T R Switch signal is OK. Go to step 2.

NO : Check for proper transmission range switch installation, **adjust the shift cable** See **A/T SHIFT CABLE ADJUSTMENT** or **A/T SHIFT CABLE REMOVAL AND INSTALLATION** , then recheck. If the transmission range switch and the shift cable are OK, go to step 3.

2. Reverse Switch(ATPRVS) signal check:
   - 1. Check the parameter(s) below with the HDS with the shift lever in R.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Reverse Switch(ATPRVS)	ON			

Do the current condition(s) match the threshold?

YES : The Reverse Switch(ATPRVS) signal is OK. Intermittent failure, the system is OK at this time.

NO : Go to step 3.

3. Open wire check (ATP RVS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

   Transmission range switch 10P connector

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Transmission range switch 10P connector: disconnected

  Test circuit ATP RVS

  Test point 1 Transmission range switch 10P connector No. 5 (WHT/RED)

  Test point 2 Body ground

Fig. 122: Measuring Voltage Between Transmission Range Switch 10P Connector No. 5 (WHT/RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ATP RVS wire is OK. Go to step 4.

NO : Repair an open in the ATP RVS wire between the transmission range switch and the PCM, then **do the repair verification** .

4. Transmission range switch check:
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Transmission range switch 10P connector: disconnected

     Test circuit ATP RVS, GND

Test point 1 Transmission range switch 10P connector No. 5

Test point 2 Transmission range switch 10P connector No. 6

Fig. 123: Checking Continuity Between Transmission Range Switch 10P Connector No. 5 And No. 6
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity when the shift lever is in R, and no continuity when the shift lever is shifted to any other position?

YES : The transmission range switch is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then **do the repair verification** .

NO : **REPLACE THE TRANSMISSION RANGE SWITCH** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Reconnect all connectors.
- 2. Turn the ignition switch to ON (II).
- 3. Clear the DTC with the HDS.
- 4. Start the engine with the shift lever in P. With the brake pedal pressed, shift the shift lever to R, shift to N, then shift to R and wait for at least 2 seconds.
- 5. Monitor the OBD STATUS for P1717 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1717 Transmission Range Switch ATP RVS Switch (Open or Short)	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** . Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Check for poor connections or loose terminals between the transmission range switch and the PCM, then go to step 1 and recheck. If the PCM was updated, **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and check the OBD STATUS again.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P1730: SHIFT ERROR B

DTC Troubleshooting: P1730

Fig. 124: DTC Troubleshooting Flow Chart (P1730)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1730 Shift Error B			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification (test-drive):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1730 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1730 Shift Error B	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. Shift solenoid valve A operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Shift Solenoid Valve A in the Miscellaneous Test Menu, and check that shift solenoid

valve A operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve A is OK. Go to step 4.

NO : **REPLACE SHIFT SOLENOID VALVE A** , then **do the repair verification** .

4. Shift solenoid valve B operation check:
   - 1. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and check that shift solenoid valve B operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve B is OK. Go to step 5.

NO : **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

5. Shift solenoid valve D operation check:
   - 1. Select Shift Solenoid Valve D in the Miscellaneous Test Menu, and check that shift solenoid valve D operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve D is OK. Go to step 6.

NO : **REPLACE SHIFT SOLENOID VALVE D** , then **do the repair verification** .

6. Problem verification (OBD STATUS check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1730 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1730 Shift Error B	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Repair the hydraulic system related with shift valves A, B, and D, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P1730 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1730 Shift Error B	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P1731: SHIFT ERROR C

DTC Troubleshooting: P1731

Fig. 125: DTC Troubleshooting Flow Chart (P1731)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1731 Shift Error C			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1731 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1731 Shift Error C	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. Shift solenoid valve E operation check:
   - 1. Clear the DTC with the HDS.

- 2. Select Shift Solenoid Valve E in the Miscellaneous Test Menu, and check that shift solenoid valve E operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve E is OK. Go to step 4.

NO : **REPLACE SHIFT SOLENOID VALVE E** , then **do the repair verification** .

4. A/T clutch pressure control solenoid valve A operation check:
   - 1. Select Clutch Pressure Control (Linear) Solenoid Valve A in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve A with the HDS.

Does the HDS indicate NORMAL?

NORMAL A/T clutch pressure control solenoid valve A is OK. Intermittent failure, the system is OK at this time.

FAILURE Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 5.

FAILURE Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

5. A/T clutch pressure control solenoid valve A check:
   - 1. **Inspect A/T clutch pressure control solenoid valve A** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

Does A/T clutch pressure control solenoid valve A work properly?

YES : A/T clutch pressure control solenoid valve A is OK. Repair the hydraulic system related with shift valve E, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **Replace A/T clutch pressure control solenoid valve A** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A REMOVAL AND INSTALLATION** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C REMOVAL AND INSTALLATION** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.

- 4. Monitor the OBD STATUS for P1731 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1731 Shift Error C	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P1732: SHIFT ERROR D

DTC Troubleshooting: P1732

Fig. 126: DTC Troubleshooting Flow Chart (P1732)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO**

TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1732 Shift Error D			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification (test-drive):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1732 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1732 Shift Error D	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. Shift solenoid valve B operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and check that shift solenoid valve B operates with the HDS.

   Is a clicking sound heard?

YES : Shift solenoid valve B is OK. Go to step 4.

NO : **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

4. Shift solenoid valve C operation check:
   - 1. Select Shift Solenoid Valve C in the Miscellaneous Test Menu, and check that shift solenoid valve C operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve C is OK. Go to step 5.

NO : **REPLACE SHIFT SOLENOID VALVE C** , then **do the repair verification** .

5. Problem verification (OBD STATUS check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1732 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1732 Shift Error D	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Repair the hydraulic system related with shift valves B and C, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P1732 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1732 Shift Error D	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P1733: SHIFT ERROR E

DTC Troubleshooting: P1733

Fig. 127: DTC Troubleshooting Flow Chart (P1733)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1733 Shift Error E			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1733 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1733 Shift Error E	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. Shift solenoid valve D operation check:
   - 1. Clear the DTC with the HDS.

- 2. Select Shift Solenoid Valve D in the Miscellaneous Test Menu, and check that shift solenoid valve D operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve D is OK. Go to step 4.

NO : **REPLACE SHIFT SOLENOID VALVE D** , then **do the repair verification** .

4. A/T clutch pressure control solenoid valve C operation check:
   - 1. Select Clutch Pressure Control (Linear) Solenoid Valve C in the Miscellaneous Test Menu, and test A/T clutch pressure control solenoid valve C with the HDS.

Does the HDS indicate NORMAL?

NORMAL A/T clutch pressure control solenoid valve C is OK. Intermittent failure, the system is OK at this time.

FAILURE (HDS has not determined cause) Follow the instructions indicated on the HDS according to the test result. If the HDS has not determined the cause of the failure, go to step 5.

FAILURE (HDS has determined cause) Follow the instructions indicated on the HDS according to the test result. If a part is replaced, **do the repair verification** .

5. A/T clutch pressure control solenoid valve C check:
   - 1. **Inspect A/T clutch pressure control solenoid valve C** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST** .

Does A/T clutch pressure control solenoid valve C work properly?

YES : A/T clutch pressure control solenoid valve C is OK. Repair the hydraulic system related with shift valve D, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : **Replace A/T clutch pressure control solenoid valve C** See **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A REMOVAL AND INSTALLATION** or **A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C REMOVAL AND INSTALLATION** , then **do the repair verification** .

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.

- 4. Monitor the OBD STATUS for P1733 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1733 Shift Error E	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

DTC P1734: SHIFT ERROR F

DTC Troubleshooting: P1734

Fig. 128: DTC Troubleshooting Flow Chart (P1734)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and review the General Troubleshooting Information See HOW TO**

TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame
P1734 Shift Error F			

1. ATF check:
   - 1. Warm up the engine to normal operating temperature (the radiator fan comes on).
   - 2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
   - 3. **DRAIN THE ATF** through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer have metal debris or excessive clutch material?

   YES : **Replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

   NO : **REPLACE THE ATF** , then go to step 2.

2. Problem verification (test-drive):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1734 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1734 Shift Error F	

   Does the HDS indicate FAILED?

   YES : The failure is duplicated. Go to step 3.

   NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

3. Shift solenoid valve B operation check:
   - 1. Clear the DTC with the HDS.
   - 2. Select Shift Solenoid Valve B in the Miscellaneous Test Menu, and check that shift solenoid valve B operates with the HDS.

   Is a clicking sound heard?

YES : Shift solenoid valve B is OK. Go to step 4.

NO : **REPLACE SHIFT SOLENOID VALVE B** , then **do the repair verification** .

4. Shift solenoid valve C operation check:
   - 1. Select Shift Solenoid Valve C in the Miscellaneous Test Menu, and check that shift solenoid valve C operates with the HDS.

Is a clicking sound heard?

YES : Shift solenoid valve C is OK. Go to step 5.

NO : **REPLACE SHIFT SOLENOID VALVE C** , then **do the repair verification** .

5. Problem verification (OBD STATUS check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
   - 4. Monitor the OBD STATUS for P1734 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1734 Shift Error F	

Does the HDS indicate FAILED?

YES : The failure is duplicated. Repair the hydraulic system related with shift valves B and C, or **replace the transmission** See **AUTOMATIC TRANSMISSION DISASSEMBLY AND REASSEMBLY** or **AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION** , then **do the repair verification** .

NO : If the HDS indicates PASSED, intermittent failure, the system is OK at this time. If the HDS indicates NOT COMPLETED, test-drive again.

REPAIR VERIFICATION (OBD STATUS CHECK)

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle with the shift lever in D, and let the transmission shift through all five gears.
- 4. Monitor the OBD STATUS for P1734 in the DTCs MENU with the HDS.

DTC Description	OBD Status
P1734 Shift Error F	

Does the HDS indicate PASSED, FAILED, or NOT COMPLETED?

PASSED Troubleshooting is complete. Check for other DTC after this troubleshooting. If any other Pending or Confirmed DTCs were indicated, go to the indicated DTC's troubleshooting.

FAILED Troubleshooting is incomplete. Go to step 3 and recheck.

NOT COMPLETED Repair verification is incomplete. Meet the test condition, and check the OBD STATUS again.

A/T GEAR POSITION INDICATOR PANEL ASSEMBLY REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 3: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 4: Identifying Center Maintenance Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 5: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 6: Identifying D3 Switch Harness, Harness Guide And Shift Lever Knob/Shift Lever Knob Ring Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Gear Position Indicator Panel Assembly
    1. Remove the A/T gear position indicator panel light socket (A) from the A/T gear position indicator panel assembly (B).
    2. Unhook the A/T gear position indicator panel light harness (C) from the harness guide (D).
    3. Remove the A/T gear position indicator panel assembly by expanding the four lock tabs (E).

Fig. 7: Removing A/T Gear Position Indicator Panel Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the lever cover (A) from the A/T gear position indicator panel (B).
5. Check the lever cover for wear and damage, and replace it if necessary.

Fig. 8: Identifying Lever Cover And A/T Gear Position Indicator Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Gear Position Indicator Panel Assembly
    1. Install the lever cover (A) to the A/T gear position indicator panel (B).

Fig. 9: Identifying Lever Cover And A/T Gear Position Indicator Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the A/T gear position indicator panel assembly (A) by aligning the four lock tabs (B).
3. Hook the A/T gear position indicator panel light harness (C) to the harness guide (D).
4. Install the A/T gear position indicator panel light socket (E).

Fig. 10: Installing A/T Gear Position Indicator Panel Light Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 11: Identifying D3 Switch Harness, Shift Lever Knob/Shift Lever Knob Ring Assembly, Harness Guide And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 12: Identifying D3 Switch Harness, D3 Switch Connector, Harness Wire Tie And Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 13: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 14: Identifying Shift Lever Panel, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T GEAR POSITION INDICATOR PANEL LIGHT REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 15: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Gear Position Indicator Panel Light
    1. Remove the A/T gear position indicator panel light socket (A).
    2. Remove the A/T gear position indicator panel light bulb (B).

Fig. 16: Identifying A/T Gear Position Indicator Panel Light Bulb And Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Gear Position Indicator Panel Light
    1. Install the A/T gear position indicator panel light bulb (A).
    2. Install the A/T gear position indicator panel light socket (B).

Fig. 17: Identifying A/T Gear Position Indicator Panel Light Socket And Bulb
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 18: Identifying Shift Lever Panel, Clips And Hooks

SHIFT LOCK SYSTEM CIRCUIT TROUBLESHOOTING

NOTE: **Check for PGM-FI DTCs and A/T DTCs. If any DTCs are present, troubleshoot those first.**

DTC DESCRIPTION - PGM-FI SYSTEM

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

DTC DESCRIPTION - A/T SYSTEM

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

1. Shift lock solenoid operation check:
   - 1. Connect the HDS to the DLC (A) located under the driver's side of the dashboard.

Fig. 3: Identifying DLC Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Turn the ignition switch to ON (II).
   - 3. Make sure the HDS communicates with the PCM. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
   - 4. Select Shift Lock Solenoid Test in the Miscellaneous Test Menu, and check that the shift lock solenoid operates with the HDS.

Does the shift lock solenoid work properly?

YES : The shift lock solenoid is OK. Go to step 9.

NO : Go to step 2.

2. Fuse check:
   - 1. Check the following fuse.

Fuse No. B5 (10 A)

Location Under-dash fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Go to step 3.

NO : Replace the No. B5 (10 A) fuse, and recheck. If the fuse blows again, repair a short to ground in the No. B5 (10 A) fuse circuit.

3. Open wire check (IG1 METER line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Remove the center console** See **CENTER CONSOLE DISASSEMBLY AND REASSEMBLY** or **CENTER CONSOLE REMOVAL AND INSTALLATION** .
   - 3. Disconnect the following connector.

     Shift lever 12P connector

   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Shift lever 12P connector: disconnected

     Test circuit IG1 METER

     Test point 1 Shift lever 12P connector No. 12 (LT GRN)

     Test point 2 Body ground

Fig. 4: Measuring Voltage Between Shift Lever 12P Connector No. 12 (LT GRN) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 4.

NO : Repair an open in the IG1 METER wire between the shift lever 12P connector and the under-dash fuse/relay box.

4. Determine possible failure area (open in SHIFT LOCK SOL line, others):
   - 1. With the shift lever in P, press the brake pedal.

     NOTE: Do not press the accelerator pedal.

   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Shift lever 12P connector: disconnected

     Test circuit SHIFT LOCK SOL, IG1 METER

     Test point 1 Shift lever 12P connector No. 11 (WHT)

     Test point 2 Shift lever 12P connector No. 12 (LT GRN)

Fig. 5: Measuring Voltage Between Shift Lever 12P Connector No. 11 (WHT) And Shift Lever 12P Connector No. 12 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 5.

NO : Go to step 8.

5. Shorted wire check (SHIFT LOCK SOL line):
    - 1. Release the brake pedal.

      NOTE: The shift lever must be in P.

    - 2. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Shift lever 12P connector: disconnected

      Test circuit SHIFT LOCK SOL, IG1 METER

      Test point 1 Shift lever 12P connector No. 11 (WHT)

      Test point 2 Shift lever 12P connector No. 12 (LT GRN)

Fig. 6: Measuring Voltage Between Shift Lever 12P Connector No. 11 (WHT) And Shift Lever 12P Connector No. 12 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to ground in the SHIFT LOCK SOL wire between the shift lock solenoid and the PCM.

NO : The SHIFT LOCK SOL wire is OK. Go to step 6.

6. Shorted wire check (UNIT(-) line to IG1(+) line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **REMOVE THE SHIFT LEVER ASSEMBLY** .
    - 3. **DISCONNECT THE SHIFT LOCK SOLENOID 2P CONNECTOR**.
    - 4. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Shift lever 12P connector: disconnected

Shift lock solenoid 2P connector: disconnected

Test circuit UNIT(-), IG1(+)

Test point 1 Shift lever 12P connector No. 11 (BLK)

Test point 2 Shift lever 12P connector No. 12 (RED)

Fig. 7: Checking For Continuity Between Shift Lever 12P Connector No. 11 (BLK) And Shift Lever 12P Connector No. 12 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the UNIT(-) wire to the IG1(+) wire between the shift lock solenoid 2P connector and the shift lever 12P connector.

NO : The UNIT(-) and IG1(+) wires are not shorted. Go to step 7.

7. Open wire check (UNIT(-) line, IG1(+) line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Shift lever 12P connector: disconnected

     Shift lock solenoid 2P connector: disconnected

     Test circuit UNIT(-)

     Test point 1 Shift lock solenoid 2P connector No. 1 (BLK)

Test point 2 Shift lever 12P connector No. 11 (BLK)

Test circuit IG1(+)

Test point 1 Shift lock solenoid 2P connector No. 2 (RED)

Test point 2 Shift lever 12P connector No. 12 (RED)

Fig. 8: Checking For Continuity Between Shift Lock Solenoid 2P Connector No. 1 (BLK) And Shift Lever 12P Connector No. 11 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 9: Checking For Continuity Between Shift Lock Solenoid 2P Connector No. 2 (RED) And Shift Lever 12P Connector No. 12 (RED)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The UNIT(-) and IG1(+) wires are OK. Check the shift lock mechanism. If the mechanism is OK, **REPLACE THE SHIFT LOCK SOLENOID**.

NO Repair an open in the UNIT(-) and/or IG1(+) wire between the shift lock solenoid 2P **connector** : and the shift lever 12P connector.

8. Open wire check (SHIFT LOCK SOL line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Shift lever 12P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit SHIFT LOCK SOL

     Test point 1 Shift lever 12P connector No. 11 (WHT)

     Test point 2 PCM connector A (49P) No. 21 (WHT)

Fig. 10: Checking For Continuity Between Shift Lever 12P Connector No. 11 (WHT) And PCM Connector A (49P) No. 21 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SHIFT LOCK SOL wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck. If the symptom goes away with a known-good PCM, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Repair an open in the SHIFT LOCK SOL wire between the shift lever 12P connector and the PCM.

9. Brake pedal position switch operation check:
   - 1. Check the parameter(s) below with the HDS while pressing the brake pedal.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Brake Switch	ON			unit

Do the current condition(s) match the threshold?

YES : The brake pedal position switch is OK. Go to step 11.

NO : If the brake lights come on, go to step 10. If the brake lights do not work, repair faulty brake light circuit.

10. Open wire check (STOP SW line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector A (49P)

    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector A (49P): disconnected

      Test circuit STOP SW

      Test point 1 PCM connector A (49P) No. 13 (BLU)

      Test point 2 Body ground

Fig. 11: Measuring Voltage Between PCM Connector A (49P) No. 13 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage while pressing the brake pedal and about 0 V when the pedal is released?

YES : The STOP SW wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck. If the symptom goes away with a known-good PCM, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Repair an open in the STOP SW wire between the PCM and the brake pedal position switch.

11. Transmission range switch operation check:
    - 1. Check the parameter(s) below with the HDS with the shift lever in P.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/T P Switch	ON			

Do the current condition(s) match the threshold?

YES : The transmission range switch is OK. Go to step 14.

NO : Go to step 12.

12. A/T P Switch signal check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Transmission range switch 10P connector

    - 3. Connect terminals A and B with a jumper wire.

      Terminal A Transmission range switch 10P connector No. 10 (BLK/BLU)

      Terminal B Body ground

Fig. 12: Connecting Terminal Transmission Range Switch 10P Connector No. 10 (BLK/BLU) And Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 4. Turn the ignition switch to ON (II).
    - 5. Check the parameter(s) below with the HDS.

	Threshold		Current conditions	

Signal	Values	Unit	Values	Unit
A/T P Switch	ON			

Do the current condition(s) match the threshold?

YES : The A/T P Switch signal is OK. **REPLACE THE TRANSMISSION RANGE SWITCH** .

NO : Go to step 13.

13. Open wire check (ATP P/ATP-P line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector B (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Transmission range switch 10P connector: disconnected PCM connector B (49P): disconnected

      Test circuit ATP P/ATP-P

      Test point 1 Transmission range switch 10P connector No. 10 (BLK/BLU)

      Test point 2 PCM connector B (49P) No. 24 (PUR)

Fig. 13: Checking Continuity Between Transmission Range Switch 10P Connector No. 10 (BLK/BLU) And PCM Connector B (49P) No. 24 (PUR)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ATP P/ATP-P wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck. If the symptom goes away with a known-good PCM, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Repair an open in the ATP P/ATP-P wire between the transmission range switch and the PCM.

14. APP Sensor A signal check:
    - 1. Check the parameter(s) below with the HDS.

NOTE: Do not press the accelerator pedal.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
APP Sensor	More than 5	%		
APP Sensor A	Higher than 1.16	V		

Do the current condition(s) match the threshold?

YES : **CHECK THE APP SENSOR** .

NO : The APP Sensor A signal is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck. If the symptom goes away with a known-good PCM, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

SHIFT LOCK RELEASE AND RELEASE SPRING REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 17: Identifying Shift Lever Panel Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 18: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 19: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips

(B) and the hooks (C), then remove the center console rear trim.

Fig. 20: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 21: Identifying Center Lower Cover, Clips And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 22: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 23: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 24: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 25: Removing Center Console

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 26: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

    NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 27: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 28: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 29: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 30: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 31: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 32: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 33: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 34: Identifying D3 Switch Harness, Harness Guide And Shift Lever Knob/Shift Lever

Knob Ring Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Gear Position Indicator Panel Assembly
    1. Remove the A/T gear position indicator panel light socket (A) from the A/T gear position indicator panel assembly (B).
    2. Unhook the A/T gear position indicator panel light harness (C) from the harness guide (D).
    3. Remove the A/T gear position indicator panel assembly by expanding the four lock tabs (E).

Fig. 35: Removing A/T Gear Position Indicator Panel Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Lock Release
    1. Remove the shift lock release (A) and the release spring (B) by pressing the lock tab (C).

Fig. 36: Pressing Lock Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lock Release
    1. Install the shift lock release (A) and the release spring (B).

Fig. 37: Installing Shift Lock Release And Release Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Gear Position Indicator Panel Assembly
    1. Install the A/T gear position indicator panel assembly (A) by aligning the four lock tabs (B).
    2. Hook the A/T gear position indicator panel light harness (C) to the harness guide (D).

Fig. 38: Installing A/T Gear Position Indicator Panel Light Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the A/T gear position indicator panel light socket (E).

3. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 39: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness, Harness Guide And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 40: Identifying D3 Switch Connector, D3 Switch Harness, Guide (C) And Harness Wire Tie

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 41: Identifying Shift Lever Assembly And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the shift lever connector.

Fig. 42: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the

shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 43: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 44: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

Fig. 45: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 46: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 47: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 48: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 49: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

    Properly installed:

    Cable end rides on the bottom of the mounting stud.

Fig. 50: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Improperly installed:

Cable end out of position with the mounting stud.

Improperly installed:

Cable end out of alignment with the mounting stud.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

Fig. 51: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 52: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Center Console

1. Install the center console (A).

Fig. 53: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 54: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 55: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 56: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 57: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 58: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 59: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 60: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 61: Identifying Shift Lever Panel, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SHIFT LOCK SOLENOID REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 62: Identifying Shift Lever Panel Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 63: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 64: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips

(B) and the hooks (C), then remove the center console rear trim.

Fig. 65: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 66: Identifying Center Lower Cover, Clips And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 67: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 68: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 69: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 70: Removing Center Console

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 71: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

    NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 72: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 73: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 74: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 75: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 76: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 77: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Lock Solenoid

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Pull the shift lock solenoid (A) out by releasing the lock tab (B) using a screwdriver.

Fig. 78: Releasing Lock Tab Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lock solenoid (A).

NOTE: **The shift lock solenoid consists of the solenoid (B), the solenoid plunger (C), and the plunger spring (D).**

3. Disconnect the shift lock solenoid connector (E).

Fig. 79: Identifying Solenoid, Shift Lock Solenoid, Plunger Spring And Shift Lock Solenoid Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lock Solenoid

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Connect the shift lock solenoid connector (A).
2. Install the shift lock solenoid (B) by aligning the joint of the shift lock solenoid plunger (C) with the tip of the shift lock stop (D).

NOTE: The shift lock solenoid consists of the solenoid (E), the solenoid plunger (F), and the plunger spring (G).

Fig. 80: Identifying Shift Lock Solenoid, Shift Lock Solenoid Connector, Solenoid, Solenoid Plunger And Plunger Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 81: Identifying Shift Lever Assembly And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the shift lever connector.

Fig. 82: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 83: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 84: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

Fig. 85: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 86: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 87: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 88: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 89: Pushing Retainer Lock

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

    Properly installed:

    Cable end rides on the bottom of the mounting stud.

    
    Fig. 90: Identifying Shift Cable End Proper And Improper Installation
    Courtesy of AMERICAN HONDA MOTOR CO., INC.

    Improperly installed:

    Cable end out of position with the mounting stud.

    Improperly installed:

    Cable end out of alignment with the mounting stud.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.

Fig. 91: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

4. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 92: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Console
    1. Install the center console (A).

Fig. 93: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

Fig. 94: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 95: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 96: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 97: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 98: Identifying Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 99: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 100: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 101: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SHIFT LOCK SOLENOID TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 102: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lock Solenoid - Test
    1. Select the Shift Lock Solenoid Test in the Miscellaneous Test Menu, and check that the shift lock solenoid operates with the HDS.
    2. Check that the shift lever can be moved out of P when the Shift Lock Solenoid is ON. Move the shift lever back to P, and check that it locks when the Shift Lock Solenoid is OFF.
    3. Check that the shift lock releases when the shift lock release is pushed, and check that it locks when the shift lock release is released.
    4. If the shift lock solenoid does not work properly, troubleshoot the shift lock system circuit.

SHIFT LOCK STOP/SHIFT LOCK STOP CUSHION REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)

1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 103: Identifying Shift Lever Panel Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

    Left side

Fig. 104: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 105: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips

(B) and the hooks (C), then remove the center console rear trim.

Fig. 106: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 107: Identifying Center Lower Cover, Clips And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 108: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 109: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 110: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 111: Removing Center Console

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 112: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

    NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 113: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 114: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 115: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 116: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 117: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 118: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 119: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 120: Identifying D3 Switch Harness, Harness Guide And Shift Lever Knob/Shift Lever

Knob Ring Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Gear Position Indicator Panel Assembly
    1. Remove the A/T gear position indicator panel light socket (A) from the A/T gear position indicator panel assembly (B).
    2. Unhook the A/T gear position indicator panel light harness (C) from the harness guide (D).
    3. Remove the A/T gear position indicator panel assembly by expanding the four lock tabs (E).

Fig. 121: Removing A/T Gear Position Indicator Panel Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Lock Release
    1. Remove the shift lock release (A) and the release spring (B) by pressing the lock tab (C).

Fig. 122: Pressing Lock Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Shift Lock Solenoid

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Pull the shift lock solenoid (A) out by releasing the lock tab (B) using a screwdriver.

Fig. 123: Releasing Lock Tab Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lock solenoid (A).

NOTE: **The shift lock solenoid consists of the solenoid (B), the solenoid plunger (C), and the plunger spring (D).**

3. Disconnect the shift lock solenoid connector (E).

Fig. 124: Identifying Solenoid, Shift Lock Solenoid, Plunger Spring And Shift Lock Solenoid Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Shift Lock Stop

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Remove the shift lock stop/shift lock stop cushion (A).

Fig. 125: Identifying Shift Lock Stop/Shift Lock Stop Cushion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lock Stop

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lock stop/shift lock stop cushion (A).

Fig. 126: Identifying Shift Lock Stop/Shift Lock Stop Cushion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lock Solenoid

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Connect the shift lock solenoid connector (A).
2. Install the shift lock solenoid (B) by aligning the joint of the shift lock solenoid plunger (C) with the tip of the shift lock stop (D).

NOTE: The shift lock solenoid consists of the solenoid (E), the solenoid plunger (F), and the plunger spring (G).

Fig. 127: Identifying Shift Lock Solenoid, Shift Lock Solenoid Connector, Solenoid, Solenoid Plunger And Plunger Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lock Release
   1. Install the shift lock release (A) and the release spring (B).

Fig. 128: Installing Shift Lock Release And Release Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/T Gear Position Indicator Panel Assembly
    1. Install the A/T gear position indicator panel assembly (A) by aligning the four lock tabs (B).
    2. Hook the A/T gear position indicator panel light harness (C) to the harness guide (D).
    3. Install the A/T gear position indicator panel light socket (E).

Fig. 129: Identifying A/T Gear Position Indicator Panel Assembly, Light Socket, Harness And Lock Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 130: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness, Harness Guide And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 131: Identifying D3 Switch Connector, D3 Switch Harness, Guide (C) And Harness Wire Tie

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 132: Identifying Shift Lever Assembly And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the shift lever connector.

Fig. 133: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the

shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 134: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 135: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

Fig. 136: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 137: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 138: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 139: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 140: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

    Properly installed:

    Cable end rides on the bottom of the mounting stud.

Fig. 141: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    Improperly installed:

    Cable end out of position with the mounting stud.

    Improperly installed:

    Cable end out of alignment with the mounting stud.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.

Fig. 142: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

9. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 143: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Center Console
    1. Install the center console (A).

Fig. 144: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

Fig. 145: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 146: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 147: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 148: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 149: Identifying Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 150: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 151: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 152: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T CLUTCH CLEARANCE INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

	Snap Ring Pliers 07LGC-0010100
	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 78 x 80 mm 07NAD-PX40100

	Bearing Driver Attachment, 52 x 55 mm 07746-0010400
	Clutch Compressor Attachment 07ZAE-PRP0100
	Bearing Driver Attachment, 42 mm 07QAD-P0A0100

	
	Driver Handle, 40 mm I.D. 07746-0030100

	Bearing Driver Attachment, 30 mm I.D. 07746-0030300

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 1: Identifying Transmission Range Switch Cover With Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 2: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 3: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 4: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 5: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).

2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 6: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 7: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 8: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 9: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 10: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube

1. Remove the ATF dipstick guide tube (A).
2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 11: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 12: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 13: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 14: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 15: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 16: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 17: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 18: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 19: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 20: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

Fig. 21: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 22: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Reverse Idler Gear
    1. Remove the bolt (A) securing the reverse idler gear shaft holder (B).
    2. Install a 5 x 0.8 mm bolt (C) in the reverse gear shaft, and pull it to remove the reverse idler gear shaft (D) and the reverse idler gear shaft holder together.

Fig. 23: Identifying Reverse Idler Gear Shaft, Holder And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the reverse idler gear (A).

Fig. 24: Removing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear shaft/idler gear assembly (D).

Fig. 25: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission Housing Mainshaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the mainshaft bearing out using the driver handle and the 78 x 80 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the grooves in the transmission housing.**

Fig. 26: Removing Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Transmission Housing Secondary Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the secondary shaft bearing out using the driver handle and the 52 x 55 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the groove in the transmission housing.**

Fig. 27: Driving Secondary Shaft Bearing Out Using Driver Handle And 52 X 55 mm Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 28: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 29: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Selector Control Lever (Except 2WD of USA Produced Models)

Fig. 30: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

24. Selector Control Shaft

1. Unhook the detent arm spring (A).

Fig. 31: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 32: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the selector control shaft (A).

Fig. 33: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 34: Turning Detent Arm From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 35: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. A/T Mainshaft
    1. Remove the thrust needle bearing (A), 4th gear (B), the needle bearing (C), the thrust needle bearing (D), the 4th gear collar (E), and the 4th/5th clutch (F).

NOTE: **The needle bearing contains the no-roller cavities (G); this is normal.**

Fig. 36: Identifying No-Roller Cavities, Thrust Needle Bearing, 4th Gear, Needle Bearing And 4th Gear Collar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the O-rings (A), the 41 x 68 mm thrust washer (B), the thrust needle bearing (C), the needle bearing (D), 5th gear (E), and the thrust needle bearing (F).

NOTE: The needle bearing contains the no-roller cavity (G); this is normal.

Fig. 37: Identifying O-Rings, Thrust Washer, Thrust Needle Bearing, Needle Bearing, 5th Gear, Thrust Needle Bearing And No-Roller Cavity
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the set ring (A), the needle bearing (B), and the sealing rings (C).

Fig. 38: Identifying Set Ring, Needle Bearing And Sealing Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. A/T Secondary Shaft
    1. Place a spacer (A) on the secondary shaft (B), and set a puller (C) under the idler gear (D).
    2. Remove the idler gear.

Fig. 39: Identifying Spacer, Secondary Shaft, Puller And Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the thrust needle bearing (A), 3rd gear (B), the needle bearing (C), the thrust needle bearing (D), the 3rd gear collar (E), and the 1st/3rd clutch (F).

Fig. 40: Identifying Thrust Needle Bearing, 3rd Gear, Needle Bearing, Thrust Needle Bearing, 3rd Gear Collar And 1st/3rd Clutch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the O-rings (A), the 40 x 51.5 mm thrust washer (B), the thrust needle bearing (C), 1st gear (D), the needle bearing (E), and the thrust needle bearing (F).

Fig. 41: Identifying O-Rings, Thrust Washer, Thrust Needle Bearing, 1st Gear, Needle Bearing And Thrust Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the sealing rings (A), the snap ring (B), the 2nd clutch (C), the O-rings (D), the 37 x 58 mm thrust washer (E), the thrust needle bearing (F), 2nd gear (G), the needle bearing (H), and the thrust needle bearing (I).

Fig. 42: Identifying Sealing Rings, Snap Ring, 2nd Clutch, O-Rings, Thrust Washer, Thrust Needle Bearing And 2nd Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Clutch Clearance - Inspection
    1. Set a dial indicator (A) on the clutch end-plate (B).
    2. Zero the dial indicator with the clutch end-plate lifted up to the snap ring (C).

Fig. 43: Setting Dial Indicator On Clutch End-Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the clutch end-plate to lower it, then put the clutch compressor attachment on the end-plate (A).

Fig. 44: Putting Clutch Compressor Attachment On End-Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the clutch compressor attachment down with 147.1 N (15.00 kgf, 33.07 lbf) (B) using a force gauge or equivalent, and read the dial indicator (C).
5. The dial indicator reads the clearance (D) between the clutch end-plate and the top disc (E). Take measurements in at least three places, and use the average as the actual clearance.

Clearance Between Clutch End-Plate and Top Disc

Standard:

1st Clutch: 1.38-1.58 mm (0.0543-0.0622 in)

2nd Clutch: 1.50-1.70 mm (0.0591-0.0669 in)

3rd Clutch: 1.54-1.74 mm (0.0606-0.0685 in)

4th Clutch: 0.93-1.13 mm (0.0366-0.0445 in)

5th Clutch: 0.93-1.13 mm (0.0366-0.0445 in)

6. If the measurement is out of the standard, replace faulty clutch assembly.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Secondary Shaft - Inspection
    1. Inspect the thrust needle bearings and the needle bearings for galling and rough movement.
    2. Inspect the splines for excessive wear and damage.
    3. Check the shaft bearing surface for scoring and excessive wear.
2. Secondary Shaft 1st Gear Axial Clearance - Inspection
    1. Install the thrust needle bearing (A), the needle bearing (B), 1st gear (C), the thrust needle bearing (D), the 40 x 51.5 mm thrust washer (E), the 1st/3rd clutch (F), and the 3rd gear collar (G).

        NOTE: Do not install the O-rings during inspection.

    2. Install the idler gear (H), then install the transmission housing bearing (I) using the 42 mm bearing driver attachment and a press.
    3. Install the conical spring washer (J) and the locknut (K).

Fig. 45: Identifying Secondary Shaft 1st Gear Axial Related Components With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 46: Installing Idler Gear And Transmission Housing Bearing Using Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the secondary shaft assembly upside down, and set a dial indicator (A) on 1st gear (B).

Fig. 47: Setting Dial Indicator On 1st Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lift 1st gear (A) up while holding the secondary shaft, and use the dial indicator (B) to read the 1st gear axial clearance.
6. Measure the 1st gear axial clearance in at least three places while moving 1st gear. Use the average as the actual clearance.

Standard: 0.04-0.12 mm (0.0016-0.0047 in)

7. If the clearance is out of the standard, remove the 40 x 51.5 mm thrust washer and measure its thickness.
8. Select and install a new thrust washer, then recheck.

Fig. 48: Measuring 1st Gear Axial Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

THRUST WASHER SPECIFICATION (40 X 51.5 MM)

No.	Thickness
1	4.80 mm (0.1890 in)
2	4.85 mm (0.1909 in)
3	4.90 mm (0.1929 in)
4	4.95 mm (0.1949 in)
5	5.00 mm (0.1969 in)
6	5.05 mm (0.1988 in)

9. After replacing the thrust washer, make sure the clearance is within the standard.
10. Disassemble the installed parts from the secondary shaft.

3. Secondary Shaft 2nd Gear Axial Clearance - Inspection
   1. Install the thrust needle bearing (A), the needle bearing (B), 2nd gear (C), the thrust needle bearing (D), the 37 x 58 mm thrust washer (E), and the 2nd clutch (F), then secure them with the set ring (G).

NOTE: **Do not install the O-rings during inspection.**

Fig. 49: Identifying Thrust Needle Bearing, 2nd Gear, Thrust Washer, 2nd Clutch And Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the clearance between the set ring (A) and the 2nd clutch guide (B) using a feeler gauge (C), in at least three places. Use the average as the actual clearance.

   Standard: 0.04-0.12 mm (0.002-0.004 in)

Fig. 50: Measuring Clearance Between Set Ring And 2nd Clutch Guide Using Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the clearance is out of the standard, remove the 37 x 58 mm thrust washer, and measure its thickness.
4. Select and install a new thrust washer, then recheck.

No.	Thickness
1	3.900 mm (0.15354 in)
2	3.925 mm (0.15453 in)
3	3.950 mm (0.15551 in)
4	3.975 mm (0.15650 in)
5	4.000 mm (0.15748 in)
6	4.025 mm (0.15846 in)
7	4.050 mm (0.15944 in)
8	4.075 mm (0.16043 in)
9	4.100 mm (0.16142 in)
10	4.125 mm (0.16240 in)
11	4.150 mm (0.16339 in)
12	4.175 mm (0.16437 in)
13	4.200 mm (0.16535 in)
14	4.225 mm (0.16634 in)
15	4.250 mm (0.16732 in)
16	4.275 mm (0.16831 in)
17	4.300 mm (0.16929 in)
18	4.325 mm (0.17028 in)
19	4.350 mm (0.17126 in)
20	4.375 mm (0.17224 in)

Fig. 51: Measuring Clearance Between Set Ring And 2nd Clutch Guide Using Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. After replacing the thrust washer, make sure the clearance is within the standard.
6. Disassemble the installed parts from the secondary shaft.

4. A/T Secondary Shaft
    1. Install the thrust needle bearing (A), the needle bearing (B), 2nd gear (C), the thrust needle bearing (D), the selected 37 x 58 mm thrust washer (E), new O-rings (F), the 2nd clutch (G), a new snap ring (H), and new 29 mm sealing rings (I).

Fig. 52: Identifying Thrust Needle Bearing, 2nd Gear, Thrust Washer, O-Rings, 2nd Clutch, Snap Ring And Sealing Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the thrust needle bearing (A), the needle bearing (B), 1st gear (C), the thrust needle bearing (D), the selected 40 x 51.5 mm thrust washer (E), and new O-rings (F).

Fig. 53: Identifying Thrust Needle Bearing, 1st Gear, Thrust Washer And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the 1st/3rd clutch (A), the 3rd gear collar (B), the thrust needle bearing (C), the needle bearing (D), 3rd gear (E), and the thrust needle bearing (F).

Fig. 54: Identifying 1st/3rd Clutch, 3rd Gear Collar, Thrust Needle Bearing, 3rd Gear And Thrust Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the idler gear (A) in the direction shown on the secondary shaft (B) using the 40 mm I.D. driver handle, the 30 mm I.D. bearing driver attachment, and the press.

Fig. 55: Installing Idler Gear On Secondary Shaft Using. Driver Handle And I.D. Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Mainshaft - Inspection
    1. Inspect the thrust needle bearings and the needle bearings for galling and rough movement.
    2. Inspect the splines for excessive wear and damage.
    3. Check the shaft bearing surface for scoring and excessive wear.
6. 5th Gear Axial Clearance - Inspection
    1. Install the thrust needle bearing (A), 5th gear (B), the needle bearing (C), the thrust needle bearing (D), the 41 x 68 mm thrust washer (E), the 4th/5th clutch (F), the 4th gear collar (G), and the transmission housing bearing (H).

    NOTE:
    - **Do not install the O-rings during inspection.**
    - **The needle bearing contains the no-roller cavity (I); this is normal.**

    2. Install the idler gear (J) on the mainshaft using a press, then install the conical spring washer (K) and the locknut (L).

Fig. 56: Identifying 5th Gear Axial Related Components With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set a dial indicator (A) on 5th gear (B).

Fig. 57: Setting Dial Indicator On 5th Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lift 5th gear (A) up while holding the mainshaft, and use the dial indicator (B) to read the 5th gear axial clearance.
5. Measure the 5th gear axial clearance in at least three places while moving 5th gear. Use the average as the actual clearance.

Standard: 0.04-0.10 mm (0.0016-0.0039 in)

Fig. 58: Measuring 5th Gear Axial Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the clearance is out of the standard, remove the 41 x 68 mm thrust washer and measure its height.
7. Select and install a new thrust washer, then recheck.

THRUST WASHER SPECIFICATION (41 x 68 MM)

No.	Height
1	4.450 mm (0.17520 in)
2	4.475 mm (0.17618 in)
3	4.500 mm (0.17717 in)
4	4.525 mm (0.17815 in)
5	4.550 mm (0.17913 in)
6	4.575 mm (0.18012 in)
7	4.600 mm (0.18110 in)
8	4.625 mm (0.18209 in)
9	4.650 mm (0.18307 in)
10	4.675 mm (0.18405 in)
11	4.700 mm (0.18504 in)
12	4.725 mm (0.18602 in)
13	4.750 mm (0.18701 in)
14	4.775 mm (0.18799 in)
15	4.800 mm (0.18900 in)

8. After replacing the thrust washer, make sure the clearance is within the standard.
9. Disassemble the installed parts from the mainshaft.

Fig. 59: Identifying Thrust Washer Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Mainshaft
    1. Install new sealing rings (A), the needle bearing (B), and the set ring (C).

Fig. 60: Identifying Sealing Rings, Needle Bearing And Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the thrust needle bearing (A), 5th gear (B), the needle bearing (C), the thrust needle bearing (D), the selected 41 x 68 mm thrust washer (E), and new O-rings (F).

NOTE: The needle bearing contains the no-roller cavity (G); this is normal.

Fig. 61: Identifying Thrust Needle Bearing, 5th Gear, Needle Bearing, Thrust Washer And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the 4th/5th clutch (A), the 4th gear collar (B), the thrust needle bearing (C), the needle bearing (D), 4th gear (E), and the thrust needle bearing (F).

NOTE: The needle bearing contains the no-roller cavities (G); this is normal.

Fig. 62: Identifying 4th/5th Clutch, 4th Gear Collar, Thrust Needle Bearing And 4th Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

NOTE: Do not bump the countershaft on the baffle plate (D).

3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 63: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 64: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual valve (C).

Fig. 65: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 66: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 67: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 68: Prying Up Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 69: Identifying Needle Bearing And Countershaft Reverse Gear

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Transmission Housing Secondary Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install the secondary shaft bearing (A) part-way into the housing using the driver handle and the 52 x 55 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 70: Expanding Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 71: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Transmission Housing Mainshaft Bearing

1. Expand the snap ring using the snap ring pliers.
2. Install the mainshaft bearing (A) part-way into the housing using the driver handle and the 78 x 80 mm bearing driver attachment.
3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 72: Expanding Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 73: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Install the idler gear shaft/idler gear assembly (A).

2. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 74: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Reverse Idler Gear
    1. Install the reverse idler gear (A).

Fig. 75: Installing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lightly coat the reverse idler gear shaft (A), the needle bearing (B), and new O-rings (C) with lithium grease.
3. Assemble new O-rings and the needle bearing on the reverse idler gear shaft, then install the reverse idler gear shaft in the reverse idler gear shaft holder (D). Align the D-shaped (E) cut out of the shaft with the D-shaped area (F) of the holder.

Fig. 76: Identifying Lithium Grease Applying Area On Reverse Idler Gear Shaft, Needle Bearing And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the reverse idler gear shaft/holder assembly (A).

Fig. 77: Identifying Reverse Idler Gear Shaft/Holder Assembly And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

    NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
    6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 78: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 79: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 80: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 81: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 82: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: Do not bend the lock tab of the lock washer until inspect the park

lever stop.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 83: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 84: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 85: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 86: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 87: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 88: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 89: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 90: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 91: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 92: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 93: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 94: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 95: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 96: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 97: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 98: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 99: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 100: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 101: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 102: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 103: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 104: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 105: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A REMOVAL AND INSTALLATION

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 106: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Intake Air Duct
    1. Remove the intake air duct.

Fig. 107: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).
    3. Check the fluid passage for contamination.

Fig. 108: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with its blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.
    5. Check the connector (F) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 109: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Intake Air Duct
    1. Install the intake air duct.

Fig. 110: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 111: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 112: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (A), the O-rings (D), and the gasket (E).

3. Check the fluid passage for contamination.

Fig. 113: Identifying A/T Clutch Pressure Control Solenoid Valves, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with its blue side toward the transmission housing, and install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C.
    5. Check the connectors (F) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connectors securely.

Fig. 114: Identifying A/T Clutch Pressure Control Solenoid Valves, O-Rings, Gasket, ATF Joint Pipes, Connectors And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 115: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T COUNTERSHAFT DISASSEMBLY, REASSEMBLY, AND INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101

	Housing Puller 07HAC-PK40102
	Driver Handle, 40 mm I.D. 07746-0030100

EXPLODED VIEW

1. A/T Countershaft Exploded View

   Exploded View

DISASSEMBLY

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 117: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 118: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 119: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 120: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 121: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 122: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 123: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 124: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 125: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 126: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 127: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 128: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 129: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 130: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 131: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 132: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

Fig. 133: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the mainshaft holder.
6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).

8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 134: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 135: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).

15. Remove the mainshaft idler gear.

Fig. 136: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 137: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 138: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 139: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 140: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 141: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 142: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 143: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the selector control shaft (A).

Fig. 144: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 145: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 146: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. A/T Countershaft
    1. Install a commercially available bearing separator (A) on 4th gear (B).

2. Place the countershaft (C) on a press, and set a spacer (D) between the press and the countershaft to prevent damaging the countershaft.

NOTE: Some reverse selector hubs are not press-fitted, and can be removed without using a press.

3. Support the bottom of the countershaft with one hand, then press the countershaft out of the press-fitted reverse selector hub (E) with 4th gear, and remove the countershaft while holding the underside the countershaft. The countershaft will drop down after pressing it out of the press-fitted reverse selector hub.

Fig. 147: Installing Commercially Available Bearing Separator On 4th Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the needle bearing (A), the snap ring (B), the 35 x 47 x 7.8 mm collar (C), and the 31 mm cotters (D).

Fig. 148: Identifying Needle Bearing, Snap Ring, Collar And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Place the countershaft (A) on the press, and set the spacer (B) between the press and the countershaft to prevent damaging the countershaft.

Fig. 149: Pressing Countershaft Out Of 3rd Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Support the bottom of the countershaft with one hand, then press the countershaft out of 3rd gear (C), and remove the countershaft while holding the underside the countershaft. The countershaft will drop down after pressing it out of 3rd gear.
7. Remove the 37 x 41 x 54.3 mm collar (A), 5th gear (B), 1st gear (C), and 2nd gear (D).

Fig. 150: Identifying Collar, 5th Gear, 1st Gear And 2nd Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. A/T Countershaft - Inspection
    1. Inspect the needle bearing for galling and rough movement.
    2. Inspect the splines for excessive wear and damage.
    3. Check the shaft bearing surface for scoring and excessive wear.

REASSEMBLY

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. A/T Countershaft
    1. Install 2nd gear (A), 1st gear (B), 5th gear (C), and the 37 x 41 x 54.3 mm collar (D).

Fig. 151: Identifying 2nd Gear, 1st Gear, 5th Gear And Collar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide 3rd gear (A) over the countershaft, and press it in place using the 40 mm I.D. driver handle and a press.

Fig. 152: Sliding 3rd Gear Over Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the 31 mm cotters (A), the 35 x 47 x 7.8 mm collar (B), the snap ring (C), the needle bearing (D), and 4th gear (E).

Fig. 153: Identifying Cotters, Collar, Snap Ring, Needle Bearing And 4th Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the press-fitted reverse selector hub (A) over the countershaft, then press it in place using the 40 mm I.D. driver handle and the press.

NOTE: **Some reverse selector hubs are not press-fitted, and can be installed without using a press.**

Fig. 154: Sliding Press-Fitted Reverse Selector Hub Over Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 155: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 156: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 157: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 158: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 159: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 160: Prying Up Lock Tab Of Lock Washer Against Bolt Head

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 161: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 162: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 163: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 164: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 165: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 166: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 167: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 168: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 169: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 170: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

Fig. 171: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 172: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 173: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.

- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

Fig. 174: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 175: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 176: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 177: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 178: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 179: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 180: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the input shaft (countershaft) spped and the senser washer(C).

Fig. 181: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 182: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 183: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 184: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 185: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 186: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 187: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 188: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 189: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T DIFFERENTIAL BACKLASH INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 190: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 191: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 192: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 193: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 194: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 195: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 196: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 197: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 198: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 199: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 200: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 201: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 202: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 203: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 204: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 205: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 206: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 207: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 208: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 209: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 210: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 211: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 212: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 213: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 214: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 215: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 216: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the selector control shaft (A).

Fig. 217: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 218: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 219: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).

2. Remove the differential assembly (B).

Fig. 220: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Differential Backlash - Inspection
    1. Install both axles into the A/T differential, then place the axles on V-blocks (A).
    2. Check the backlash of the pinion gears (B) using a dial indicator (C).

       Standard: 0.05-0.15 mm (0.0020-0.0059 in)

    3. If the backlash is out of the standard, replace the differential carrier.

Fig. 221: Checking Backlash Of Pinion Gears Using Dial Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 222: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 223: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 224: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 225: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 226: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 227: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 228: Prying Up Lock Tab Of Lock Washer Against Bolt Head

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 229: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 230: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 231: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 232: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 233: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.

Fig. 234: Identifying Park Gear, Conical Spring Washer And Old Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 235: Identifying Park Pawl Spring, Park Lever Spring, Park Lever, Lock Bolt, Lock Washer, Stop Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 236: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 237: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 238: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 239: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 240: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 241: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.

- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

Fig. 242: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 243: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 244: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 245: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 246: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 247: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 248: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and senser washer (C).

Fig. 249: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 250: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 251: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 252: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 253: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 254: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 255: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 256: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 257: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T DIFFERENTIAL CARRIER AND FINAL DRIVEN GEAR REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 258: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 259: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 260: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 261: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 262: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 263: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 264: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 265: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 266: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 267: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 268: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 269: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 270: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).

3. Remove the 8 x 220 mm ATF pipe (C).
4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 271: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 272: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 273: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 274: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 275: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 276: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 277: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play**

between the selector control shaft and the transmission range switch.

2. Remove the transmission housing mounting bolts (D) (19 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 278: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 279: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 280: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 281: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 282: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 283: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 284: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 285: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 286: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 287: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 288: Identifying Differential Assembly And Baffle Plate

Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Differential Final Driven Gear
    1. Remove the final driven gear (A).

NOTE: Differential carrier bolts have left-hand threads.

Fig. 289: Identifying Final Driven Gear And Differential Carrier Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before installation.

1. Differential Final Driven Gear
    1. Install the final driven gear (A) in the direction shown.
    2. Tighten the bolts to the specified torque in a crisscross pattern in at least two steps.

NOTE: Differential carrier bolts have left-hand threads.

Fig. 290: Identifying Final Driven Gear And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 291: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 292: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 293: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual valve (C).

Fig. 294: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 295: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).

3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 296: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 297: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 298: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

        NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

        NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
    6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (19 bolts) in at least two steps, in a crisscross pattern.

Fig. 299: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 300: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 301: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.

- Splines of the mainshaft idler gear.
- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 302: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 303: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 304: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

Fig. 305: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 306: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 307: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 308: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 309: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 310: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:

- BLU wire to shift solenoid valve A.
- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

Fig. 311: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 312: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 313: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 314: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 315: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 316: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 317: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 318: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 319: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

<u>Fig. 320: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 321: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 322: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.

Fig. 323: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 324: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 325: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 326: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T DIFFERENTIAL CARRIER BEARING AND BEARING OUTER RACE REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101

	Housing Puller 07HAC-PK40102
	Installer Attachment 40 mm 07LAD-PW50601

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 72 x 75 mm 07746-0010600
	Bearing Driver Attachment, 78 x 80 mm 07NAD-PX40100

	Preload Inspection Tool 07HAJ-PK40201

REMOVAL

NOTE:

- **The bearing and the bearing outer race should be replaced as a set.**
- **Adjust bearing preload after replacing the bearing and the outer race.**
- **The illustration shows AWD/4WD transmission.**

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 327: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 328: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 329: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 330: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 331: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).

2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 332: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 333: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 334: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 335: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 336: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube

1. Remove the ATF dipstick guide tube (A).
2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 337: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 338: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 339: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 340: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 341: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 342: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 343: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 344: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 345: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 346: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 347: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 348: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 349: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 350: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Except 2WD of USA Produced Models

Fig. 351: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 352: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 353: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 354: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 355: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 356: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 357: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Differential Carrier Bearing and Bearing Outer Race - Transmission Housing Side
    1. Remove the bearing outer race (A), the 76.2 mm spacer (B), and the 76 mm thrust shim (C) by heating the transmission housing to about 100 °C (212 °F) using a heat gun (D).

NOTE:

- **Do not heat the transmission housing more than 100 °C (212 °F).**
- **Let the transmission housing cool to room temperature before installing the bearing outer race.**

Fig. 358: Removing Bearing Outer Race, Spacer And Thrust Shim By Heating Transmission Housing Using Heat Gun
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2WD

    2. 2WD: Remove the final driven gear (A).

NOTE: **Differential carrier bolts have left-hand threads.**

Fig. 359: Identifying Final Driven Gear And Differential Carrier Bolts (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

3. AWD/4WD: Remove the final driven gear (A) and the transfer drive gear (B).

Fig. 360: Identifying Final Driven Gear And Transfer Drive Gear With Mounting Bolts (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the carrier bearing (A) using a commercially available puller (B) and a spacer (C).

Fig. 361: Removing Carrier Bearing Using Commercially Available Puller And Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Differential Carrier Bearing and Bearing Outer Race - Torque Converter Housing Side
    1. Remove the bearing outer race (A) and the 80 mm spacer (B).

Fig. 362: Identifying Bearing Outer Race And Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the carrier bearing (A) using a commercially available puller (B) and a spacer (C).

Fig. 363: Removing Carrier Bearing Using Commercially Available Puller And Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **The bearing and the bearing outer race should be replaced as a set.**
- **Inspect and adjust the carrier bearing preload whenever bearing is replaced.**
- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Differential Carrier Bearing and Bearing Outer Race - Torque Converter Housing Side
    1. Install a new carrier bearing (A) using the 40 mm installer attachment with the small end and a press. Press the carrier bearing on securely so there is no clearance between the carrier bearing and the differential carrier.

Fig. 364: Installing Carrier Bearing Using Installer Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the 80 mm spacer (A) and a new bearing outer race (B).

Fig. 365: Identifying Spacer And Bearing Outer Race
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bearing outer race securely in the torque converter housing using the driver handle and the 78 x 80 mm bearing driver attachment.

Fig. 366: Installing Bearing Outer Race Securely In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Differential Carrier Bearing and Bearing Outer Race - Transmission Housing Side
    1. Install a new carrier bearing (A) using the 40 mm installer attachment with the small end and a press. Press the carrier bearing on securely so there is no clearance between the carrier bearing and the differential carrier.

Fig. 367: Installing Carrier Bearing Using Installer Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2WD

2. 2WD: Install the final driven gear (A) in the direction shown.
3. 2WD: Tighten the bolts to the specified torque in a crisscross pattern in at least two steps.

NOTE: **Differential carrier bolts have left-hand threads.**

Fig. 368: Identifying Final Driven Gear And Differential Carrier Bolts With Torque Specification (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

4. AWD/4WD: Install the final driven gear (A) and the transfer drive gear (B) in the direction shown.
5. AWD/4WD: Tighten the bolts to the specified torque in a crisscross pattern in at least two steps.

Fig. 369: Identifying Final Driven Gear Or Transfer Drive Gear And Mounting Bolts With Torque Specification (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the 76 mm thrust shim (A) in the transmission housing (B). If you replace the 76 mm thrust shim with a new one, use the same thickness shim as the old one.
7. Install the 76.2 mm spacer (C) and a new bearing outer race (D) in the transmission housing.

NOTE: **Be sure to install the 76.2 mm spacer with the engraved mark facing downward.**

Fig. 370: Identifying Thrust Shim, Transmission Housing, Spacer And Bearing Outer Race
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the bearing outer race securely so there is no clearance between the bearing outer race, the 76.2 mm spacer, the 76 mm thrust shim, and the transmission housing, using the driver handle and the 72 x 75 mm bearing driver attachment.

Fig. 371: Installing Bearing Outer Race Securely In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carrier Bearing Preload - Inspection
    1. Make sure that the carrier bearings and bearing outer races are installed securely.
    2. Install the differential assembly (A), and install a new gasket (B) and the dowel pins (C).

3. Install the transmission housing (D) with the transmission hanger (E), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.
4. Rotate the differential assembly in both directions to seat the bearings.

Fig. 372: Identifying Differential Assembly, Gasket, Dowel Pins, Transmission Housing, Transmission Hanger And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the starting torque of the differential assembly in both directions using the preload inspection tool, a torque wrench (A), and a socket (B) at normal room temperature.

Standard

New Bearing:

2.7-3.9 N.m (28-40 kgf.cm, 24-35 lbf.in)

Reused Bearing:

2.5-3.6 N.m (25-37 kgf.cm, 22-32 lbf.in)

6. If the starting torque is out of the standard, remove the 76 mm thrust shim to adjust the starting torque.

Fig. 373: Measuring Starting Torque Of Differential Assembly Using Torque Wrench And Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the bearing outer race (A), the 76.2 mm spacer (B), and the 76 mm thrust shim (C) by heating the transmission housing to about 212 °F (100 °C) using a heat gun (D).

NOTE:

- **Do not heat the transmission housing more than 212 °F (100 °C).**
- **Let the transmission housing cool to room temperature before installing the bearing outer race.**

8. Measure the 76 mm thrust shim thickness, and select a 76 mm thrust shim from the table. To increase the starting torque, increase the thickness of the 76 mm thrust shim. To decrease the starting torque, decrease the thickness of the 76 mm thrust shim. Changing the 76 mm thrust shim to the next size will increase or decrease starting torque about 0.3-0.4 N.m (3-4 kgf.cm, 2-3 lbf.in).

Fig. 374: Removing Bearing Outer Race, Spacer And Thrust Shim By Heating Transmission Housing Using Heat Gun
Courtesy of AMERICAN HONDA MOTOR CO., INC.

THRUST SHIM SPECIFICATION (76 MM) - TYPE A

No.	Thickness
S	2.05 mm (0.0807 in)
T	2.10 mm (0.0827 in)
U	2.15 mm (0.0846 in)
A	2.20 mm (0.0866 in)
B	2.25 mm (0.0886 in)
C	2.30 mm (0.0906 in)
D	2.35 mm (0.0925 in)
E	2.40 mm (0.0945 in)
F	2.45 mm (0.0965 in)
G	2.50 mm (0.0984 in)
H	2.55 mm (0.1004 in)
I	2.60 mm (0.1024 in)

F	1.825 mm (0.07185 in)
G	1.875 mm (0.07382 in)
H	1.925 mm (0.07579 in)
I	1.975 mm (0.07776 in)
J	2.025 mm (0.07972 in)
K	2.075 mm (0.08169 in)
L	2.125 mm (0.08366 in)
M	2.175 mm (0.08563 in)
N	2.225 mm (0.08760 in)
O	2.275 mm (0.08957 in)
P	2.325 mm (0.09154 in)
Q	2.375 mm (0.09350 in)
R	2.425 mm (0.09547 in)
S	2.475 mm (0.09744 in)
T	2.525 mm (0.09941 in)
U	2.575 mm (0.10138 in)
V	2.625 mm (0.10335 in)
W	2.675 mm (0.10531 in)
X	2.725 mm (0.10728 in)

Y	2.775 mm (0.10925 in)
Z	2.825 mm (0.11122 in)
0A	2.875 mm (0.11319 in)
0B	2.925 mm (0.11516 in)
0C	2.975 mm (0.11713 in)
0D	3.025 mm (0.11909 in)

9. Install a new 76 mm thrust shim (A) in the transmission housing (B).
10. Install the 76.2 mm spacer (C) and the bearing outer race (D) in the transmission housing.

NOTE: **Be sure to install the 76.2 mm thrust washer with the engraved mark facing downward.**

Fig. 375: Identifying Thrust Shim, Transmission Housing, Spacer And Bearing Outer Race
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the bearing outer race securely so there is no clearance between the bearing outer race, the 76.2 mm spacer, the 76 mm thrust shim, and the transmission housing, using the driver handle and the 72 x 75 mm bearing driver attachment.
12. Recheck the starting torque.

Fig. 376: Installing Bearing Outer Race Securely In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 377: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Mainshaft and Countershaft and Secondary Shaft Assembly

1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

NOTE: Do not bump the countershaft on the baffle plate (D).

3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 378: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Selector Control Shaft
   1. Install the selector control shaft (A).

Fig. 379: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual valve (C).

Fig. 380: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 381: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 382: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Reverse Shift fork
   1. Install the reverse shift fork (A) and the reverse selector (B) together.

2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 383: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 384: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

       NOTE: Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.

    3. Place the transmission housing (F) on the torque converter housing (G).

       NOTE: Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
    6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 385: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 386: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 387: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 388: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 389: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: Do not bend the lock tab of the lock washer until inspect the park

lever stop.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 390: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:

Fig. 391: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
- New conical spring washers and new locknuts.
- Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 392: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 393: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 394: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 395: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 396: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 397: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 398: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 399: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 400: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 401: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 402: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 403: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 404: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 405: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 406: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 407: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 408: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 409: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 410: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 411: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 412: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T DIFFERENTIAL CARRIER BEARING PRELOAD INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Preload Inspection Tool 07HAJ-PK40201

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 72 x 75 mm 07746-0010600

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 413: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 414: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 415: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 416: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 417: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 418: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 419: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 420: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 421: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 422: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 423: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 424: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 425: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 426: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 427: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 428: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 429: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 430: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 431: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 432: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 433: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 434: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 435: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 436: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 437: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 438: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 439: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the selector control shaft (A).

Fig. 440: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 441: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 442: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).

2. Remove the differential assembly (B).

Fig. 443: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

NOTE:

- **If the transmission housing, the torque converter housing, the differential carrier, the carrier bearing and the outer race, or the thrust shim were replaced, the bearing preload must be adjusted.**
- **Coat all parts with ATF during installation.**
- **Do not use the thrust shim on the torque converter housing.**
- **The illustration shows AWD/4WD transmission.**

1. Carrier Bearing Preload - Inspection
    1. Make sure that the carrier bearings and bearing outer races are installed securely.
    2. Install the differential assembly (A), and install a new gasket (B) and the dowel pins (C).
    3. Install the transmission housing (D) with the transmission hanger (E), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.
    4. Rotate the differential assembly in both directions to seat the bearings.

Fig. 444: Identifying Differential Assembly, Gasket, Dowel Pins, Transmission Housing, Transmission Hanger And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the starting torque of the differential assembly in both directions using the preload inspection tool, a torque wrench (A), and a socket (B) at normal room temperature.

   Standard

   New Bearing:

   2.7-3.9 N.m (28-40 kgf.cm, 24-35 lbf.in)

   Reused Bearing:

   2.5-3.6 N.m (25-37 kgf.cm, 22-32 lbf.in)

6. If the starting torque is out of the standard, remove the 76 mm thrust shim to adjust the starting torque.

Fig. 445: Measuring Starting Torque Of Differential Assembly Using Torque Wrench And Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the bearing outer race (A), the 76.2 mm spacer (B), and the 76 mm thrust shim (C) by heating the transmission housing to about 212 °F (100 °C) using a heat gun (D).

NOTE:

- **Do not heat the transmission housing more than 212 °F (100 °C).**
- **Let the transmission housing cool to room temperature before installing the bearing outer race.**

8. Measure the 76 mm thrust shim thickness, and select a 76 mm thrust shim from the table. To increase the starting torque, increase the thickness of the 76 mm thrust shim. To decrease the starting torque, decrease the thickness of the 76 mm thrust shim. Changing the 76 mm thrust shim to the next size will increase or decrease starting torque about 0.3-0.4 N.m (3-4 kgf.cm, 2-3 lbf.in).

THRUST SHIM SPECIFICATION (76 MM) - TYPE A

No.	Thickness
S	2.05 mm (0.0807 in)
T	2.10 mm (0.0827 in)
U	2.15 mm (0.0846 in)
A	2.20 mm (0.0866 in)

G	1.875 mm (0.07382 in)
H	1.925 mm (0.07579 in)
I	1.975 mm (0.07776 in)
J	2.025 mm (0.07972 in)
K	2.075 mm (0.08169 in)
L	2.125 mm (0.08366 in)
M	2.175 mm (0.08563 in)
N	2.225 mm (0.08760 in)
O	2.275 mm (0.08957 in)
P	2.325 mm (0.09154 in)
Q	2.375 mm (0.09350 in)
R	2.425 mm (0.09547 in)
S	2.475 mm (0.09744 in)
T	2.525 mm (0.09941 in)
U	2.575 mm (0.10138 in)
V	2.625 mm (0.10335 in)
W	2.675 mm (0.10531 in)
X	2.725 mm (0.10728 in)
Y	2.775 mm (0.10925 in)
Z	2.825 mm (0.11122 in)
0A	2.875 mm (0.11319 in)
0B	2.925 mm (0.11516 in)
0C	2.975 mm (0.11713 in)
0D	3.025 mm (0.11909 in)

9. Install a new 76 mm thrust shim (A) in the transmission housing (B).
10. Install the 76.2 mm spacer (C) and the bearing outer race (D) in the transmission housing.

NOTE: **Be sure to install the 76.2 mm thrust washer with the engraved mark facing downward.**

Fig. 447: Identifying Thrust Shim, Transmission Housing, Spacer And Bearing Outer Race
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the bearing outer race securely so there is no clearance between the bearing outer race, the 76.2 mm spacer, the 76 mm thrust shim, and the transmission housing, using the driver handle and the 72 x 75 mm bearing driver attachment.
12. Recheck the starting torque.

Fig. 448: Installing Bearing Outer Race Securely In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**

- **The illustration shows AWD/4WD transmission.**

1. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 449: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 450: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 451: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 452: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 453: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 454: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 455: Prying Up Lock Tab Of Lock Washer Against Bolt Head

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 456: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 457: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 458: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 459: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 460: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 461: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 462: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:

Fig. 463: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
- New conical spring washers and new locknuts.

- Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 464: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 465: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 466: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 467: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 468: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.

- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

Fig. 469: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 470: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 471: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 472: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 473: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 474: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 475: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the senser washer (C).

Fig. 476: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 477: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 478: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 479: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 480: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 481: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 482: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 483: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 484: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T DIFFERENTIAL CARRIER, FINAL DRIVEN GEAR, AND TRANSFER DRIVE GEAR REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 485: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 486: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 487: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 488: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 489: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 490: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 491: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 492: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 493: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 494: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 495: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 496: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 497: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 498: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 499: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 500: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 501: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 502: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 503: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 504: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 505: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 506: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 507: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 508: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 509: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 510: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 511: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the selector control shaft (A).

Fig. 512: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 513: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 514: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).

2. Remove the differential assembly (B).

Fig. 515: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Differential Final Driven Gear and Transfer Drive Gear
    1. Remove the final driven gear (A) and the transfer drive gear (B).

Fig. 516: Identifying Final Driven Gear And Transfer Drive Gear With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before installation.

1. Differential Final Driven Gear and Transfer Drive Gear
    1. Install the final driven gear (A) and the transfer drive gear (B) in the direction shown.
    2. Tighten the bolts to the specified torque in a crisscross pattern in at least two steps.

Fig. 517: Identifying Final Driven Gear Or Transfer Drive Gear And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 518: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 519: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 520: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 521: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 522: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 523: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 524: Prying Up Lock Tab Of Lock Washer Against Bolt Head

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 525: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (20 bolts) in at least two steps, in a crisscross pattern.

Fig. 526: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 527: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 528: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 529: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

Fig. 530: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 531: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

Fig. 532: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 533: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 534: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 535: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 536: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 537: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 538: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 539: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 540: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 541: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 542: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 543: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 544: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 545: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 546: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 547: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 548: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 549: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 550: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 551: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 552: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 553: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

	
	Snap Ring Pliers 07LGC-0010100
	Driver Handle, 15 x 135L 07749-0010000

	Bearing Driver Attachment, 78 x 80 mm 07NAD-PX40100

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 556: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 557: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 558: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 559: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 560: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).

2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 561: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 562: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 563: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 564: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 565: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube

1. Remove the ATF dipstick guide tube (A).
2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 566: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 567: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 568: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 569: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 570: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 571: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 572: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 573: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 574: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 575: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).

Fig. 576: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 577: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Housing Countershaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the countershaft bearing (A) out using the driver handle and the 78 x 80 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the groove in the transmission housing.**

Fig. 578: Expanding Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:
- **Apply a light coat of clean ATF on all moving parts before installation.**

- **The illustration shows AWD/4WD transmission.**

1. Transmission Housing Countershaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install a new countershaft bearing (A) part-way into the housing using the driver handle and the 78 x 80 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 579: Installing Countershaft Bearing Part-Way Into Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 580: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Automatic Transmission Housing

1. Install the three dowel pins (A) and a new gasket (B).
2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 581: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 582: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 583: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 584: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
    - Splines and threads of the countershaft.
    - Splines of the park gear.
    - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

Fig. 585: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 586: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 587: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 588: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 589: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 590: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 591: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 592: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 593: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 594: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 595: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 596: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 597: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 598: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 599: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 600: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 601: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 602: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 603: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 604: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 605: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 606: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 607: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 608: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T HOUSING IDLER GEAR SHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Snap Ring Pliers 07LGC-0010100

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 42 x 47 mm 07746-0010300

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 609: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 610: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 611: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 612: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 613: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 614: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 615: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 616: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 617: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 618: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 619: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 620: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 621: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 622: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 623: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 624: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 625: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 626: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 627: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 628: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 629: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 630: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear shaft/idler gear assembly (D).

Fig. 631: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Transmission Housing Idler Gear Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the idler gear shaft bearing (A) out using the driver handle and the 42 x 47 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the grooves in the transmission housing.**

Fig. 632: Expanding Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Transmission Housing Idler Gear Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install a new idler gear shaft bearing (A) part-way into the housing using the driver handle and the 42 x 47 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 633: Installing Idler Gear Shaft Bearing Part-Way Into Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 634: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Install the idler gear shaft/idler gear assembly (A).
    2. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 635: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

    NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.

5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 636: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 637: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 638: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 639: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

Fig. 640: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 641: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 642: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 643: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 644: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 645: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 646: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 647: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 648: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 649: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 650: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 651: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 652: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 653: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 654: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 655: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 656: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 657: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 658: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 659: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 660: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 661: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 662: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 663: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T HOUSING MAINSHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Snap Ring Pliers 07LGC-0010100

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 78 x 80 mm 07NAD-PX40100

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 664: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 665: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 666: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 667: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 668: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 669: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 670: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 671: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 672: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 673: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 674: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 675: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 676: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 677: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 678: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 679: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 680: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 681: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 682: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 683: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 684: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 685: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Reverse Idler Gear
    1. Remove the bolt (A) securing the reverse idler gear shaft holder (B).
    2. Install a 5 x 0.8 mm bolt (C) in the reverse gear shaft, and pull it to remove the reverse idler gear

shaft (D) and the reverse idler gear shaft holder together.

Fig. 686: Identifying Reverse Idler Gear Shaft, Holder And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the reverse idler gear (A).

Fig. 687: Removing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear shaft/idler gear assembly (D).

Fig. 688: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission Housing Mainshaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the mainshaft bearing out using the driver handle and the 78 x 80 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the grooves in the transmission housing.**

Fig. 689: Removing Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Transmission Housing Mainshaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install the mainshaft bearing (A) part-way into the housing using the driver handle and the 78 x 80 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 690: Installing Mainshaft Bearing Part-Way Into Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 691: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Install the idler gear shaft/idler gear assembly (A).
    2. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 692: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reverse Idler Gear
    1. Install the reverse idler gear (A).

Fig. 693: Installing Reverse Idler Gear

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lightly coat the reverse idler gear shaft (A), the needle bearing (B), and new O-rings (C) with lithium grease.
3. Assemble new O-rings and the needle bearing on the reverse idler gear shaft, then install the reverse idler gear shaft in the reverse idler gear shaft holder (D). Align the D-shaped (E) cut out of the shaft with the D-shaped area (F) of the holder.

Fig. 694: Identifying Lithium Grease Applying Area On Reverse Idler Gear Shaft, Needle Bearing And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the reverse idler gear shaft/holder assembly (A).

Fig. 695: Identifying Reverse Idler Gear Shaft/Holder Assembly And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

        NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

        NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
    6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 696: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 697: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 698: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 699: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 700: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: Do not bend the lock tab of the lock washer until inspect the park

lever stop.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 701: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 702: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 703: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 704: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 705: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 706: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 707: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 708: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 709: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 710: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 711: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 712: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 713: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 714: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 715: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 716: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 717: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 718: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 719: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 720: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 721: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 722: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 723: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T HOUSING REVERSE IDLER GEAR REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 724: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 725: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 726: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 727: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 728: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 729: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 730: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 731: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 732: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 733: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 734: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 735: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 736: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 737: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 738: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 739: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 740: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 741: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 742: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 743: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 744: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 745: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Reverse Idler Gear
    1. Remove the bolt (A) securing the reverse idler gear shaft holder (B).
    2. Install a 5 x 0.8 mm bolt (C) in the reverse gear shaft, and pull it to remove the reverse idler gear

shaft (D) and the reverse idler gear shaft holder together.

Fig. 746: Identifying Reverse Idler Gear Shaft, Holder And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the reverse idler gear (A).

Fig. 747: Removing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Reverse Idler Gear
    1. Install the reverse idler gear (A).

Fig. 748: Installing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lightly coat the reverse idler gear shaft (A), the needle bearing (B), and new O-rings (C) with lithium grease.
3. Assemble new O-rings and the needle bearing on the reverse idler gear shaft, then install the reverse idler gear shaft in the reverse idler gear shaft holder (D). Align the D-shaped (E) cut out of the shaft with the D-shaped area (F) of the holder.

Fig. 749: Identifying Lithium Grease Applying Area On Reverse Idler Gear Shaft, Needle Bearing And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the reverse idler gear shaft/holder assembly (A).

Fig. 750: Identifying Reverse Idler Gear Shaft/Holder Assembly And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

    NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
    6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 751: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 752: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 753: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 754: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

Fig. 755: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 756: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.

- Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 757: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 758: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 759: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 760: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 761: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 762: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 763: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 764: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 765: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 766: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 767: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 768: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 769: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 770: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 771: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 772: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 773: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 774: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 775: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 776: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 777: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 778: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T HOUSING SECONDARY SHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Snap Ring Pliers 07LGC-0010100

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 52 x 55 mm 07746-0010400

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 779: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 780: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 781: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 782: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 783: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 784: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 785: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 786: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 787: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 788: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 789: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 790: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 791: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 792: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 793: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 794: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 795: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 796: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 797: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 798: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 799: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 800: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear shaft/idler gear assembly (D).

Fig. 801: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Transmission Housing Secondary Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the secondary shaft bearing out using the driver handle and the 52 x 55 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the groove in the transmission housing.**

Fig. 802: Driving Secondary Shaft Bearing Out Using Driver Handle And 52 X 55 mm Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Transmission Housing Secondary Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install the secondary shaft bearing (A) part-way into the housing using the driver handle and the 52 x 55 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 803: Expanding Snap Ring Using Snap Ring Pliers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 804: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Install the idler gear shaft/idler gear assembly (A).
    2. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 805: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

    NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.

5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 806: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 807: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 808: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
    - Splines and threads of the countershaft.
    - Splines of the park gear.
    - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

Fig. 809: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 810: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

Fig. 811: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 812: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 813: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 814: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 815: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 816: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.

- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

Fig. 817: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 818: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 819: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 820: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 821: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 822: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 823: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 824: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 825: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 826: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 827: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 828: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 829: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 830: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 831: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 832: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T IDLER GEAR/IDLER GEAR SHAFT REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Driver Handle, 15 x 135L 07749-0010000

	
	Bearing Driver Attachment, 32 x 35 mm 07746-0010100

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 833: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 834: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 835: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 836: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 837: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 838: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 839: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 840: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 841: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 842: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 843: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 844: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 845: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 846: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 847: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 848: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 849: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 850: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 851: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 852: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 853: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 854: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Idler Gear/Idler Gear Shaft
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear/idler gear shaft assembly (D).

Fig. 855: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the snap ring (A).

Fig. 856: Identifying Snap Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the idler gear shaft (A) using the driver handle, the 32 x 35 mm bearing driver attachment, and a press.

Fig. 857: Removing Idler Gear Shaft Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. A/T Idler Gear/Idler Gear Shaft
    1. Install the idler gear shaft (A) using the driver handle, the 32 x 35 mm bearing driver attachment, and a press.

Fig. 858: Installing Idler Gear Shaft Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new snap ring (A).

Fig. 859: Identifying Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the idler gear/idler gear shaft assembly (A).
4. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 860: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

    NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.

5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

Fig. 861: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 862: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 863: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

Fig. 864: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the park gear to install.**

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 865: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft

locknut (D).

Fig. 866: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 867: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 868: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 869: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 870: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 871: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 872: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 873: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 874: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 875: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 876: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 877: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 878: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 879: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 880: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 881: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 882: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 883: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 884: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 885: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 886: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 887: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T MAINSHAFT DISASSEMBLY, REASSEMBLY, AND INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Snap Ring Pliers 07LGC-0010100

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 78 x 80 mm 07NAD-PX40100

EXPLODED VIEW

DISASSEMBLY

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 889: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 890: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 891: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 892: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 893: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 894: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 895: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 896: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 897: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 898: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 899: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 900: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 901: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 902: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 903: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 904: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 905: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 906: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 907: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 908: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 909: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 910: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Reverse Idler Gear
    1. Remove the bolt (A) securing the reverse idler gear shaft holder (B).
    2. Install a 5 x 0.8 mm bolt (C) in the reverse gear shaft, and pull it to remove the reverse idler gear

shaft (D) and the reverse idler gear shaft holder together.

Fig. 911: Identifying Reverse Idler Gear Shaft, Holder And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the reverse idler gear (A).

Fig. 912: Removing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear shaft/idler gear assembly (D).

Fig. 913: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Transmission Housing Mainshaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the mainshaft bearing out using the driver handle and the 78 x 80 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the grooves in the transmission housing.**

Fig. 914: Removing Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 915: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 916: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 917: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 918: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 919: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 920: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 921: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 922: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. A/T Mainshaft
    1. Remove the thrust needle bearing (A), 4th gear (B), the needle bearing (C), the thrust needle bearing (D), the 4th gear collar (E), and the 4th/5th clutch (F).

NOTE: **The needle bearing contains the no-roller cavities (G); this is normal.**

Fig. 923: Identifying No-Roller Cavities, Thrust Needle Bearing, 4th Gear, Needle Bearing And 4th Gear Collar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the O-rings (A), the 41 x 68 mm thrust washer (B), the thrust needle bearing (C), the needle bearing (D), 5th gear (E), and the thrust needle bearing (F).

NOTE: The needle bearing contains the no-roller cavity (G); this is normal.

Fig. 924: Identifying O-Rings, Thrust Washer, Thrust Needle Bearing, Needle Bearing, 5th Gear, Thrust Needle Bearing And No-Roller Cavity
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the set ring (A), the needle bearing (B), and the sealing rings (C).

Fig. 925: Identifying Set Ring, Needle Bearing And Sealing Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Mainshaft - Inspection
    1. Inspect the thrust needle bearings and the needle bearings for galling and rough movement.
    2. Inspect the splines for excessive wear and damage.
    3. Check the shaft bearing surface for scoring and excessive wear.
2. 5th Gear Axial Clearance - Inspection
    1. Install the thrust needle bearing (A), 5th gear (B), the needle bearing (C), the thrust needle bearing (D), the 41 x 68 mm thrust washer (E), the 4th/5th clutch (F), the 4th gear collar (G), and the transmission housing bearing (H).

    NOTE:
    - **Do not install the O-rings during inspection.**
    - **The needle bearing contains the no-roller cavity (I); this is normal.**

    2. Install the idler gear (J) on the mainshaft using a press, then install the conical spring washer (K) and the locknut (L).

Fig. 926: Identifying 5th Gear Axial Related Components With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set a dial indicator (A) on 5th gear (B).

Fig. 927: Setting Dial Indicator On 5th Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lift 5th gear (A) up while holding the mainshaft, and use the dial indicator (B) to read the 5th gear axial clearance.
5. Measure the 5th gear axial clearance in at least three places while moving 5th gear. Use the average as the actual clearance.

Standard: 0.04-0.10 mm (0.0016-0.0039 in)

Fig. 928: Measuring 5th Gear Axial Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the clearance is out of the standard, remove the 41 x 68 mm thrust washer and measure its height.
7. Select and install a new thrust washer, then recheck.

Fig. 929: Identifying Thrust Washer Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

THRUST WASHER SPECIFICATION (41 x 68 MM)

No.	Height
1	4.450 mm (0.17520 in)
2	4.475 mm (0.17618 in)
3	4.500 mm (0.17717 in)
4	4.525 mm (0.17815 in)
5	4.550 mm (0.17913 in)
6	4.575 mm (0.18012 in)
7	4.600 mm (0.18110 in)
8	4.625 mm (0.18209 in)
9	4.650 mm (0.18307 in)
10	4.675 mm (0.18405 in)
11	4.700 mm (0.18504 in)
12	4.725 mm (0.18602 in)
13	4.750 mm (0.18701 in)
14	4.775 mm (0.18799 in)
15	4.800 mm (0.18900 in)

8. After replacing the thrust washer, make sure the clearance is within the standard.
9. Disassemble the installed parts from the mainshaft.

REASSEMBLY

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. A/T Mainshaft
    1. Install new sealing rings (A), the needle bearing (B), and the set ring (C).

Fig. 930: Identifying Sealing Rings, Needle Bearing And Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the thrust needle bearing (A), 5th gear (B), the needle bearing (C), the thrust needle bearing (D), the selected 41 x 68 mm thrust washer (E), and new O-rings (F).

NOTE: The needle bearing contains the no-roller cavity (G); this is normal.

Fig. 931: Identifying Thrust Needle Bearing, 5th Gear, Needle Bearing, Thrust Washer And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the 4th/5th clutch (A), the 4th gear collar (B), the thrust needle bearing (C), the needle bearing (D), 4th gear (E), and the thrust needle bearing (F).

NOTE: The needle bearing contains the no-roller cavities (G); this is normal.

Fig. 932: Identifying 4th/5th Clutch, 4th Gear Collar, Thrust Needle Bearing And 4th Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

NOTE: Do not bump the countershaft on the baffle plate (D).

3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 933: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 934: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual valve (C).

Fig. 935: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 936: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 937: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 938: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 939: Identifying Needle Bearing And Countershaft Reverse Gear

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Transmission Housing Mainshaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install the mainshaft bearing (A) part-way into the housing using the driver handle and the 78 x 80 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 940: Expanding Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 941: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Install the idler gear shaft/idler gear assembly (A).
    2. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 942: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Reverse Idler Gear
    1. Install the reverse idler gear (A).

Fig. 943: Installing Reverse Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lightly coat the reverse idler gear shaft (A), the needle bearing (B), and new O-rings (C) with lithium grease.
3. Assemble new O-rings and the needle bearing on the reverse idler gear shaft, then install the reverse idler gear shaft in the reverse idler gear shaft holder (D). Align the D-shaped (E) cut out of the shaft with the D-shaped area (F) of the holder.

Fig. 944: Identifying Lithium Grease Applying Area On Reverse Idler Gear Shaft, Needle Bearing And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the reverse idler gear shaft/holder assembly (A).

Fig. 945: Identifying Reverse Idler Gear Shaft/Holder Assembly And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

       NOTE: Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.

    3. Place the transmission housing (F) on the torque converter housing (G).

       NOTE: Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.
    6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 946: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 947: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 948: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 949: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
    - Splines and threads of the countershaft.
    - Splines of the park gear.
    - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

Fig. 950: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 951: Identifying Park Lever Spring, Lever Stop, Park Pawl Shaft, Park Pawl Spring, Park Pawl And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.

Fig. 952: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 953: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 954: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 955: Identifying Park Lever Stop Dimension

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 956: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 957: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 958: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 959: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 960: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 961: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 962: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 963: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 964: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 965: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 966: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 967: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 968: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 969: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 970: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 971: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 972: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 973: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SECONDARY SHAFT DISASSEMBLY, REASSEMBLY, AND INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102
	Snap Ring Pliers 07LGC-0010100

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 52 x 55 mm 07746-0010400
	Bearing Driver Attachment, 42 mm 07QAD-P0A0100

	
	Driver Handle, 40 mm I.D. 07746-0030100

	Bearing Driver Attachment, 30 mm I.D. 07746-0030300

EXPLODED VIEW

DISASSEMBLY

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 975: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 976: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 977: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 978: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 979: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 980: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 981: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 982: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 983: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 984: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 985: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 986: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 987: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 988: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 989: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 990: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 991: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 992: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 993: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 994: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
    3. Install the housing puller over the mainshaft.
    4. Remove the transmission housing (E) using the housing puller.
    5. Remove the dowel pins (F) and the gasket (G).

Fig. 995: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 996: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Remove the snap ring (A), the cotter retainer (B), and the cotters (C).
    2. Remove the idler gear shaft/idler gear assembly (D).

Fig. 997: Identifying Idler Gear Shaft/Idler Gear Assembly, Snap Ring, Cotter Retainer And Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Transmission Housing Secondary Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Drive the secondary shaft bearing out using the driver handle and the 52 x 55 mm bearing driver attachment.

NOTE: **Do not remove the snap ring unless it is necessary to clean the groove in the transmission housing.**

Fig. 998: Driving Secondary Shaft Bearing Out Using Driver Handle And 52 X 55 mm Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 999: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 1000: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 1001: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 1002: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 1003: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 1004: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 1005: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 1006: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. A/T Secondary Shaft
    1. Place a spacer (A) on the secondary shaft (B), and set a puller (C) under the idler gear (D).
    2. Remove the idler gear.

Fig. 1007: Identifying Spacer, Secondary Shaft, Puller And Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the thrust needle bearing (A), 3rd gear (B), the needle bearing (C), the thrust needle bearing (D), the 3rd gear collar (E), and the 1st/3rd clutch (F).

Fig. 1008: Identifying Thrust Needle Bearing, 3rd Gear, Needle Bearing, Thrust Needle Bearing, 3rd Gear Collar And 1st/3rd Clutch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the O-rings (A), the 40 x 51.5 mm thrust washer (B), the thrust needle bearing (C), 1st gear (D), the needle bearing (E), and the thrust needle bearing (F).

Fig. 1009: Identifying O-Rings, Thrust Washer, Thrust Needle Bearing, 1st Gear, Needle Bearing And Thrust Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the sealing rings (A), the snap ring (B), the 2nd clutch (C), the O-rings (D), the 37 x 58 mm thrust washer (E), the thrust needle bearing (F), 2nd gear (G), the needle bearing (H), and the thrust needle bearing (I).

Fig. 1010: Identifying Sealing Rings, Snap Ring, 2nd Clutch, O-Rings, Thrust Washer, Thrust Needle Bearing And 2nd Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Secondary Shaft - Inspection
    1. Inspect the thrust needle bearings and the needle bearings for galling and rough movement.
    2. Inspect the splines for excessive wear and damage.
    3. Check the shaft bearing surface for scoring and excessive wear.
2. Secondary Shaft 1st Gear Axial Clearance - Inspection
    1. Install the thrust needle bearing (A), the needle bearing (B), 1st gear (C), the thrust needle bearing (D), the 40 x 51.5 mm thrust washer (E), the 1st/3rd clutch (F), and the 3rd gear collar (G).

        NOTE: Do not install the O-rings during inspection.

    2. Install the idler gear (H), then install the transmission housing bearing (I) using the 42 mm bearing driver attachment and a press.
    3. Install the conical spring washer (J) and the locknut (K).

Fig. 1011: Identifying Secondary Shaft 1st Gear Axial Related Components With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1012: Installing Idler Gear And Transmission Housing Bearing Using Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the secondary shaft assembly upside down, and set a dial indicator (A) on 1st gear (B).

Fig. 1013: Setting Dial Indicator On 1st Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lift 1st gear (A) up while holding the secondary shaft, and use the dial indicator (B) to read the 1st gear axial clearance.
6. Measure the 1st gear axial clearance in at least three places while moving 1st gear. Use the average as the actual clearance.

Standard: 0.04-0.12 mm (0.0016-0.0047 in)

7. If the clearance is out of the standard, remove the 40 x 51.5 mm thrust washer and measure its thickness.
8. Select and install a new thrust washer, then recheck.

THRUST WASHER SPECIFICATION (40 X 51.5 MM)

No.	Thickness
1	4.80 mm (0.1890 in)
2	4.85 mm (0.1909 in)
3	4.90 mm (0.1929 in)
4	4.95 mm (0.1949 in)
5	5.00 mm (0.1969 in)
6	5.05 mm (0.1988 in)

9. After replacing the thrust washer, make sure the clearance is within the standard.
10. Disassemble the installed parts from the secondary shaft.

Fig. 1014: Measuring 1st Gear Axial Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Secondary Shaft 2nd Gear Axial Clearance - Inspection
   1. Install the thrust needle bearing (A), the needle bearing (B), 2nd gear (C), the thrust needle bearing (D), the 37 x 58 mm thrust washer (E), and the 2nd clutch (F), then secure them with the set ring (G).

NOTE: **Do not install the O-rings during inspection.**

Fig. 1015: Identifying Thrust Needle Bearing, 2nd Gear, Thrust Washer, 2nd Clutch And Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the clearance between the set ring (A) and the 2nd clutch guide (B) using a feeler gauge (C), in at least three places. Use the average as the actual clearance.

   Standard: 0.04-0.12 mm (0.002-0.004 in)

3. If the clearance is out of the standard, remove the 37 x 58 mm thrust washer, and measure its thickness.
4. Select and install a new thrust washer, then recheck.

Fig. 1016: Measuring Clearance Between Set Ring And 2nd Clutch Guide Using Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

No.	Thickness
1	3.900 mm (0.15354 in)
2	3.925 mm (0.15453 in)
3	3.950 mm (0.15551 in)
4	3.975 mm (0.15650 in)
5	4.000 mm (0.15748 in)
6	4.025 mm (0.15846 in)
7	4.050 mm (0.15944 in)
8	4.075 mm (0.16043 in)
9	4.100 mm (0.16142 in)
10	4.125 mm (0.16240 in)
11	4.150 mm (0.16339 in)
12	4.175 mm (0.16437 in)
13	4.200 mm (0.16535 in)
14	4.225 mm (0.16634 in)
15	4.250 mm (0.16732 in)
16	4.275 mm (0.16831 in)
17	4.300 mm (0.16929 in)
18	4.325 mm (0.17028 in)
19	4.350 mm (0.17126 in)
20	4.375 mm (0.17224 in)

Fig. 1017: Measuring Clearance Between Set Ring And 2nd Clutch Guide Using Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. After replacing the thrust washer, make sure the clearance is within the standard.
6. Disassemble the installed parts from the secondary shaft.

REASSEMBLY

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. A/T Secondary Shaft
    1. Install the thrust needle bearing (A), the needle bearing (B), 2nd gear (C), the thrust needle bearing (D), the selected 37 x 58 mm thrust washer (E), new O-rings (F), the 2nd clutch (G), a new snap ring (H), and new 29 mm sealing rings (I).

Fig. 1018: Identifying Thrust Needle Bearing, 2nd Gear, Thrust Washer, O-Rings, 2nd Clutch, Snap Ring And Sealing Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the thrust needle bearing (A), the needle bearing (B), 1st gear (C), the thrust needle bearing (D), the selected 40 x 51.5 mm thrust washer (E), and new O-rings (F).

Fig. 1019: Identifying Thrust Needle Bearing, 1st Gear, Thrust Washer And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the 1st/3rd clutch (A), the 3rd gear collar (B), the thrust needle bearing (C), the needle bearing (D), 3rd gear (E), and the thrust needle bearing (F).

Fig. 1020: Identifying 1st/3rd Clutch, 3rd Gear Collar, Thrust Needle Bearing, 3rd Gear And Thrust Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the idler gear (A) in the direction shown on the secondary shaft (B) using the 40 mm I.D. driver handle, the 30 mm I.D. bearing driver attachment, and the press.

Fig. 1021: Installing Idler Gear On Secondary Shaft Using. Driver Handle And I.D. Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 1022: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 1023: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 1024: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 1025: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1026: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1027: Prying Up Lock Tab Of Lock Washer Against Bolt Head

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 1028: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Transmission Housing Secondary Shaft Bearing
    1. Expand the snap ring using the snap ring pliers.
    2. Install the secondary shaft bearing (A) part-way into the housing using the driver handle and the 52 x 55 mm bearing driver attachment.
    3. Release the snap ring pliers, then push the bearing down into the transmission housing until the snap ring snaps in place around it.

Fig. 1029: Expanding Snap Ring Using Snap Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After installing the bearing check that the snap ring (A) is seated in the bearing and the transmission housing groove, and that the snap ring end gap (B) is correct.

Fig. 1030: Checking Snap Ring End Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Idler Gear/Idler Gear Shaft Assembly
    1. Install the idler gear shaft/idler gear assembly (A).
    2. Install the cotters (B), the cotter retainer (C), and a new snap ring (D) as shown.

Fig. 1031: Identifying Idler Gear Shaft/Idler Gear Assembly, Cotters, Cotter Retainer And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

    NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.

5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

Fig. 1032: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 1033: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 1034: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 1035: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 1036: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft

locknut (D).

Fig. 1037: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 1038: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 1039: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 1040: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 1041: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 1042: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 1043: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1044: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 1045: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 1046: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 1047: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 1048: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 1049: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 1050: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 1051: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 1052: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 1053: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 1054: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 1055: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 1056: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1057: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 1058: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT CABLE ADJUSTMENT

REMOVAL

1. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

<u>Fig. 1059: Identifying Front Console Covers And Clips (Left Side)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1060: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 1061: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 1062: Identifying Center Lower Cover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 1063: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 1064: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 1065: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 1066: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1067: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 1068: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 1069: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 1070: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 1071: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: **Do not hold the shift cable guide (B) to adjust the shift cable.**

Fig. 1072: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 1073: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Unlock the retainer lock (A).

Fig. 1074: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C) between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 1075: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing

the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 1076: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 1077: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

Fig. 1078: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the shift cable end nut (A).
11. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
12. Turn the ignition switch to ON (II).
13. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
14. Shift the shift lever to P.
15. Check that the shift lock works properly.
16. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.

Fig. 1079: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1080: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Console
    1. Install the center console (A).

Fig. 1081: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

Fig. 1082: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 1083: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 1084: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 1085: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 1086: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 1087: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1088: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT CABLE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 1089: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1090: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 1091: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 1092: Identifying Center Lower Cover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the bolts (A).

Fig. 1093: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 1094: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 1095: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 1096: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover

1. Remove the maintenance cover (A).

Fig. 1097: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

    NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 1098: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 1099: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 1100: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 1101: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1102: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 1103: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Shift Cable Cover
    1. Remove the shift cable cover (A).

2WD

Fig. 1104: Identifying Shift Cable Cover With Mounting Bolts (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1105: Identifying Shift Cable Cover With Mounting Bolts (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Shift Cable - Disconnection A/T Side (Except 2WD of USA Produced Models)
    1. Remove the spring clip (A) and the control pin (B).
    2. Separate the shift cable (C) from the selector control lever (D).

    NOTE: Do not bend the shift cable excessively.

    3. Remove the shift cable bracket(s) (E).
    4. Check the bushing (F) in the shift cable end for proper fit and wear. If the bushing is loose or worn, replace the shift cable.

    Except 2WD of USA Produced Models

Fig. 1106: Identifying Bushing, Shift Cable Bracket, Shift Cable, Selector Control Lever, Spring Clip And Control Pin (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1107: Identifying Bushing, Shift Cable Bracket, Shift Cable, Selector Control Lever, Spring Clip And Control Pin (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Cable - Disconnection A/T Side (2WD of USA Produced Models)

2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Separate the shift cable (D) from the selector control shaft (E).

NOTE: Do not bend the shift cable excessively.

4. Remove the shift cable bracket (F).

Fig. 1108: Identifying Shift Cable Bracket, Selector Control Shaft, Lock Tab, Lock Washer, Lock Bolt And Shift Cable (2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Shift Cable
    1. Remove the shift cable grommet (A), and pull out the shift cable (B).

NOTE: Do not bend the shift cable excessively.

Fig. 1109: Identifying Shift Cable Grommet And Shift Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Cable
    1. Insert the shift cable (A) through the grommet hole (B), and install the shift cable grommet (C) in its hole.

NOTE: Do not bend the shift cable excessively.

Fig. 1110: Identifying Shift Cable, Grommet Hole, Shift Cable Grommet And Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Cable - Reconnection A/T Side (2WD of USA Produced Models)

2WD of USA Produced Models

1. Install the shift cable bracket (A).
2. Install the control lever (B) over the selector control shaft (C).

NOTE: Do not bend the shift cable excessively.

3. Install the lock bolt (D) using a new lock washer (E).
4. Pry up the lock tab (F) of the lock washer against the bolt head.

Fig. 1111: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Cable - Reconnection A/T Side (Except 2WD of USA Produced Models)
   1. Apply molybdenum grease to the hole in the bushing (A) in the shift cable end (B).
   2. Install the shift cable bracket(s) (C).
   3. Attach the shift cable end to the selector control lever (D), then insert the control pin (E) into the control lever hole through the shift cable end.

   NOTE: Do not bend the shift cable excessively.

   4. Secure the control pin with the spring clip (F).

   Except 2WD of USA Produced Models

Fig. 1112: Identifying Molybdenum Grease Applying Area To Hole In Shift Cable End Bushing (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1113: Identifying Molybdenum Grease Applying Area To Hole In Shift Cable End Bushing (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Cable Cover
    1. Install the shift cable cover (A).

2WD

Fig. 1114: Identifying Shift Cable Cover And Mounting Bolts With Torque Specification (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1115: Identifying Shift Cable Cover And Mounting Bolts With Torque Specification (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

<u>Fig. 1116: Identifying Front Floor Undercover, Bolts And Clips With Torque Specification</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1117: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 1118: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 1119: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Unlock the retainer lock (A).

Fig. 1120: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C) between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 1121: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 1122: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 1123: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

    Properly installed:

    Cable end rides on the bottom of the mounting stud.

<u>Fig. 1124: Identifying Shift Cable End Proper And Improper Installation</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the shift cable end nut (A).
11. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
12. Turn the ignition switch to ON (II).
13. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
14. Shift the shift lever to P.
15. Check that the shift lock works properly.
16. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.

Fig. 1125: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1126: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Center Console
    1. Install the center console (A).

Fig. 1127: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 1128: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 1129: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 1130: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place

securely.

Fig. 1131: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 1132: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 1133: Identifying Front Console Covers And Clips (Left Side)

A/T SHIFT LEVER BRACKET BASE REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1135: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 1136: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1137: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips

(B) and the hooks (C), then remove the center console rear trim.

Fig. 1138: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 1139: Identifying Center Lower Cover, Clips And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 1140: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 1141: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 1142: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 1143: Removing Center Console

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1144: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

    NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 1145: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 1146: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 1147: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 1148: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 1149: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 1150: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Lever Bracket Base
    1. Remove the shift lever bracket base (A).

Fig. 1151: Identifying Shift Lever Bracket Base With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lever Bracket Base
    1. Install the shift lever bracket base (A).
    2. Tighten the bolts and the nut in the sequence shown.

Fig. 1152: Identifying Shift Lever Bracket Base And Mounting Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 1153: Identifying Shift Lever Assembly And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the shift lever connector.

Fig. 1154: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Cable - Adjustment
   1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 1155: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 1156: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

Fig. 1157: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 1158: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 1159: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 1160: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 1161: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

Fig. 1162: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

Fig. 1163: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1164: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Console

1. Install the center console (A).

Fig. 1165: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 1166: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 1167: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 1168: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 1169: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 1170: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 1171: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1172: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1173: Identifying Shift Lever Panel, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT LEVER KNOB COVER REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Knob Cover, Both Sides

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Wrap the end of a flat-tip screwdriver (A) with tape, remove the shift lever knob cover (B) using the screwdriver.

Driver's Side

Fig. 1174: Removing Shift Lever Knob Cover Using Screwdriver (Driver's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's Side

Fig. 1175: Removing Shift Lever Knob Cover Using Screwdriver (Passenger's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lever Knob Cover, Both Sides

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob cover (A).

Driver's Side

Fig. 1176: Identifying Shift Lever Knob Cover (Driver's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's Side

Fig. 1177: Identifying Shift Lever Knob Cover (Passenger's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT LEVER KNOB REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1178: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1179: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 1180: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 1181: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness And Harness Guide With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Knob Ring

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Remove the shift lever ring (A).

Fig. 1182: Identifying Shift Lever Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Lever Knob Cover - Passenger's Side

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Wrap the end of a flat-tip screwdriver (A) with tape, remove the shift lever knob cover (B) using the screwdriver.

Fig. 1183: Removing Shift Lever Knob Cover Using Screwdriver (Passenger's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Shift Lever Knob Cover - Driver's Side

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Wrap the end of a flat-tip screwdriver (A) with tape, remove the shift lever knob cover (B) using the screwdriver.
2. Remove the shift lever button (C) and the spring (D).

Fig. 1184: Removing Shift Lever Knob Cover Using Screwdriver (Driver's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Lever Knob

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Remove the D3 switch (A) by expanding the lock tabs (B).

Fig. 1185: Removing D3 Switch By Expanding Lock Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lever Knob

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the D3 switch (A).

Fig. 1186: Identifying D3 Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Knob Cover - Driver's Side

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the spring (A) and the shift lever button (B).
2. Install the shift lever knob cover (C).

Fig. 1187: Identifying Shift Lever Knob Cover, Spring And Shift Lever Button

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Knob Cover - Passenger's Side

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob cover (A).

Fig. 1188: Identifying Shift Lever Knob Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Knob Ring

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever ring (A).

Fig. 1189: Identifying Shift Lever Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 1190: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness, Harness Guide And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. D3 Switch Harness - Reconnection
   1. Connect the D3 switch connector (A).
   2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 1191: Identifying D3 Switch Harness, Connector, Guide And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1192: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1193: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT LEVER REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1194: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 1195: Identifying Front Console Covers And Clips (Left Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1196: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 1197: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 1198: Identifying Center Lower Cover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 1199: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 1200: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 1201: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 1202: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1203: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 1204: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 1205: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 1206: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 1207: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 1208: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 1209: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 1210: Identifying Shift Lever Assembly And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the shift lever connector.

Fig. 1211: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 1212: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 1213: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

Fig. 1214: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 1215: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 1216: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 1217: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 1218: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

Fig. 1219: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

Fig. 1220: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1221: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console

1. Install the center console (A).

Fig. 1222: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 1223: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 1224: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 1225: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 1226: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 1227: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 1228: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1229: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1230: Identifying Shift Lever Panel, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT LEVER RING REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1231: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1232: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 1233: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 1234: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness And Harness Guide With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Knob Ring

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Remove the shift lever ring (A).

Fig. 1235: Identifying Shift Lever Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lever Knob Ring

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever ring (A).

Fig. 1236: Identifying Shift Lever Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 1237: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness, Harness Guide And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 1238: Identifying D3 Switch Harness, Connector, Guide And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1239: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1240: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T SHIFT LEVER/SHIFT CABLE BRACKET ASSEMBLY REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1241: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 1242: Identifying Front Console Covers And Clips (Left Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1243: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 1244: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 1245: Identifying Center Lower Cover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 1246: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 1247: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 1248: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 1249: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1250: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 1251: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 1252: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 1253: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 1254: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 1255: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 1256: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 1257: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 1258: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness

And Harness Guide With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Gear Position Indicator Panel Assembly
    1. Remove the A/T gear position indicator panel light socket (A) from the A/T gear position indicator panel assembly (B).
    2. Unhook the A/T gear position indicator panel light harness (C) from the harness guide (D).
    3. Remove the A/T gear position indicator panel assembly by expanding the four lock tabs (E).

Fig. 1259: Removing A/T Gear Position Indicator Panel Assembly By Expanding Lock Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Lever/Shift Cable Bracket Assembly

NOTE:

- **The park pin switch (A) and the A/T gear position indicator panel light/D3 switch/shift lock solenoid harness (B) are not available separately from the shift lever/shift cable bracket (C); replace the park pin switch, the A/T gear position indicator panel light/D3 switch/shift lock solenoid harness, and the shift lever/shift cable bracket as an assembly.**
- **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble**

it.

1. Pull the shift lock solenoid (D) out by releasing the lock tab (E) using a screwdriver.

Fig. 1260: Pulling Out Shift Lock Solenoid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lock solenoid (A).

NOTE: **The shift lock solenoid consists of the solenoid (B), the solenoid plunger (C), and the plunger spring (D).**

3. Disconnect the shift lock solenoid connector (E).

Fig. 1261: Identifying Shift Lock Solenoid, Connector, Solenoid Plunger And Plunger Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lever/Shift Cable Bracket Assembly

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Connect the shift lock solenoid connector (A).
2. Install the shift lock solenoid (B) by aligning the joint of the shift lock solenoid plunger (C) with the tip of the shift lock stop (D).

NOTE: The shift lock solenoid consists of the solenoid (E), the solenoid plunger (F), and the plunger spring (G).

Fig. 1262: Identifying Shift Lock Solenoid, Connector, Solenoid Plunger, Solenoid And Plunger Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Gear Position Indicator Panel Assembly
    1. Install the A/T gear position indicator panel assembly (A) by aligning the four lock tabs (B).
    2. Hook the A/T gear position indicator panel light harness (C) to the harness guide (D).
    3. Install the A/T gear position indicator panel light socket (E).

Fig. 1263: Installing A/T Gear Position Indicator Panel Light Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 1264: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness, Harness Guide And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 1265: Identifying D3 Switch Harness, Connector, Guide And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 1266: Identifying Shift Lever Assembly And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the shift lever connector.

Fig. 1267: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: **Do not hold the shift cable guide (B) to adjust the shift cable.**

Fig. 1268: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 1269: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: **Use only a 6.0 mm (0.236 in) pin with no burrs.**

Fig. 1270: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 1271: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 1272: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide(J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 1273: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 1274: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

Fig. 1275: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

Fig. 1276: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1277: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Center Console

1. Install the center console (A).

Fig. 1278: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 1279: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 1280: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 1281: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 1282: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 1283: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 1284: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1285: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1286: Identifying Shift Lever Panel, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

ATF FILTER REMOVAL AND INSTALLATION

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 1287: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ATF Filter
    1. Raise the vehicle on the lift.
    2. Disconnect the ATF hose (A).
    3. Turn the end of the ATF hose up to prevent ATF from flowing out, then plug the hose.

Fig. 1288: Identifying ATF Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lower the vehicle on the lift.
5. Disconnect the ATF hose (A).
6. Turn the end of the ATF hose up to prevent ATF from flowing out, then plug the hose and line.
7. Remove the ATF filter holder (B).
8. Remove the ATF filter (C).

Fig. 1289: Identifying ATF Hose, ATF Filter And ATF Filter Holder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. ATF Filter
    1. Connect the ATF hose (A) until the hose end contacts the ATF filter (B).
    2. Secure the hose with the clip (C) at 6-8 mm (0.24-0.31 in) (D) from the hose end. Keep the tabs of the clip clear of other parts.
    3. Install the ATF filter.
    4. Install the ATF filter holder (E).

Fig. 1290: Identifying ATF Filter, ATF Filter Holder, Clip, ATF Hose And Mounting Bolts

With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1291: Identifying Hose And Clip Installation Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the vehicle on the lift.
6. Connect the ATF hose (A) until the hose end contacts the ATF filter (B).
7. Secure the hose with the clip (C) at 6-8 mm (0.24-0.31 in) (D) from the hose end. Keep the tabs of the clip clear of other parts.
8. Lower the vehicle on the lift

2. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 1292: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
4. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1293: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

Fig. 1294: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1295: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ATF LEVEL CHECK

CHECK

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
2. ATF Level Check
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
    2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1296: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark,**

one or more of these symptoms may occur:

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 1297: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1298: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ATF PUMP INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 1299: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch

1. Remove the transmission range switch (A).

Fig. 1300: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 1301: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 1302: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 1303: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).

2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 1304: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 1305: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 1306: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 1307: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 1308: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube

1. Remove the ATF dipstick guide tube (A).
2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 1309: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1310: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 1311: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 1312: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 1313: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 1314: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 1315: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 1316: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 1317: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 1318: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 1319: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1320: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 1321: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 1322: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the selector control lever (D).

Except 2WD of USA Produced Models

Fig. 1323: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 1324: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 1325: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 1326: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 1327: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 1328: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 1329: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Regulator Valve Body
    1. Remove ATF joint pipe A.
    2. Remove ATF joint pipe B.

Fig. 1330: Identifying ATF Joint Pipes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the regulator valve body (A).

Fig. 1331: Identifying Regulator Valve Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the stator shaft (A).
5. Remove the O-ring (B) from the stator shaft.
6. Remove the stator shaft stop (C).

Fig. 1332: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the regulator separator plate (A) and the dowel pins (B).

Fig. 1333: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. ATF Strainer
    1. Remove the ATF strainer (A) and the O-ring (B).

Fig. 1334: Identifying ATF Strainer And O-Ring With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Clean the inlet opening (A) of the ATF strainer (B) thoroughly with compressed air, then check that it is in good condition and that the inlet opening is not clogged.

3. Test the ATF strainer by pouring clean ATF through the inlet opening, and replace it if it is clogged or damaged.

Fig. 1335: Identifying Inlet Opening Of ATF Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Servo Body
    1. Remove the servo body (A).

Fig. 1336: Identifying Servo Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the servo separator plate (A) and the dowel pins (B).

Fig. 1337: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Main Valve Body
    1. Remove the cooler check valve spring (A) and the cooler check valve (B).
    2. Remove the main valve body (C).

NOTE: **Do not let the check balls (D) fall out, and do not use a magnet to remove the check balls, it may magnetize them.**

Fig. 1338: Identifying Cooler Check Valve, Spring, Main Valve Body And Check Balls
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the ATF pump driven gear shaft (A).

4. Remove the ATF pump drive gear (B) and the ATF pump driven gear (C).

Fig. 1339: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the main separator plate (A) and the dowel pins (B).

Fig. 1340: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. ATF Pump - Inspection
    1. Install the ATF pump drive gear (A), the driven gear (B), and the ATF pump driven gear shaft (C) in the main valve body (D). Lubricate all parts with ATF, and install the ATF pump driven gear with its grooved and chamfered side facing up.

Fig. 1341: Identifying ATF Pump Drive Gear, Driven Gear, ATF Pump Driven Gear Shaft And Main Valve Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the side clearance of the ATF pump drive gear (A) and the ATF pump driven gear (B).

   ATF Pump Gears Side (Radial) Clearance:

   Standard (New)

   ATF Pump Drive Gear: 0.210-0.265 mm (0.009-0.010 in)

   ATF Pump Driven Gear: 0.070-0.125 mm (0.003-0.004 in)

Fig. 1342: Measuring Side Clearance Of ATF Pump Drive Gear And ATF Pump Driven Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the ATF pump driven gear shaft.

Fig. 1343: Measuring Thrust Clearance Between ATF Pump Drive Gear And Main Valve Body Using Straight Edge And Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the thrust clearance between the ATF pump drive gear (A) and the main valve body (B), and between the ATF pump driven gear (C) and the main valve body using a straight edge (D) and a feeler gauge (E).

   ATF Pump Drive/Driven Gear Thrust (Axial) Clearance:

   Standard (New): 0.03-0.06 mm (0.002-0.002 in)

   Service Limit: 0.07 mm (0.002 in)

5. If the measurements are out of the standards, replace the main valve body assembly.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Main Valve Body
   1. Install the main separator plate (A) and the dowel pins (B).

Fig. 1344: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the ATF pump drive gear (A) and the ATF pump driven gear (B).

NOTE: **Install the ATF pump driven gear with its grooved and chamfered side facing down.**

3. Install the ATF pump driven gear shaft (C).

Fig. 1345: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1346: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the main valve body (A).

NOTE: **Make sure that the check balls (B) are in the main valve body.**

5. Make sure the ATF pump drive gear (C) rotates smoothly in the normal operating direction, and the ATF pump driven gear shaft (D) moves smoothly in the axial and normal operating direction.
6. If the ATF pump drive gear and the ATF pump driven gear shaft do not move smoothly, loosen the main valve body bolts. Realign the ATF pump driven gear shaft, and retighten the bolts to the specified torque, then recheck.

NOTE: **Failure to align the ATF pump driven gear shaft correctly will result in a seized ATF pump drive gear or ATF pump driven gear shaft.**

7. Install the cooler check valve (E) and the cooler check valve spring (F).

Fig. 1347: Identifying Main Valve Body, Check Balls, Cooler Check Valve And Cooler Check Valve Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1348: Rotating ATF Pump Drive Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Servo Body
    1. Install the servo separator plate (A) and the dowel pins (B).

Fig. 1349: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the servo body (A).

NOTE: **Do not install the servo body mounting bolts to the baffle plate bolt holes (B) and the ATF strainer bolt holes (C) in this step.**

Fig. 1350: Identifying Servo Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1351: Identifying Baffle Plate Bolt Holes And ATF Strainer Bolt Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ATF Strainer
    1. Install the ATF strainer (A) using a new O-ring (B).

Fig. 1352: Identifying ATF Strainer, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Regulator Valve Body
    1. Install the regulator separator plate (A) and the dowel pins (B).

Fig. 1353: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new O-ring (A) on the stator shaft (B).
3. Install the stator shaft.
4. Install the stator shaft stop (C).

Fig. 1354: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the regulator valve body (A).

Fig. 1355: Identifying Regulator Valve Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install ATF joint pipe B.
7. Install ATF joint pipe A.

Fig. 1356: Identifying ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 1357: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 1358: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 1359: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 1360: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 1361: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Selector Control Lever (Except 2WD of USA Produced Models)
    1. Install the control lever (A) over the selector control shaft (B).
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Except 2WD of USA Produced Models

Fig. 1362: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1363: Prying Up Lock Tab Of Lock Washer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 1364: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 1365: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission

Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 1366: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 1367: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
    - Splines and threads of the countershaft.
    - Splines of the park gear.
    - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

Fig. 1368: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 1369: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.

Fig. 1370: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 1371: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 1372: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 1373: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 1374: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 1375: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.

- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

Fig. 1376: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1377: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 1378: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 1379: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 1380: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 1381: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 1382: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 1383: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 1384: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 1385: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 1386: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 1387: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 1388: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 1389: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1390: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 1391: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ATF REPLACEMENT

DRAIN

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
3. ATF Drain Cover
    1. Remove the ATF drain cover (A).

Fig. 1392: Identifying ATF Drain Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1393: Identifying Drain Plug And Sealing Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REFILL

1. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1394: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

    Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 1395: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1396: Identifying Dipstick, Notch And Guide Tab

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1397: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ATF Drain Lid
    1. Install the ATF drain lid.

Fig. 1398: Identifying ATF Drain Lid And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
4. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1399: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 1400: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1401: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC

circuit troubleshooting.

Fig. 1402: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

ATF TEMPERATURE SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1403: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1404: Identifying Drain Plug And Sealing Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Dipstick Guide Tube
    1. Remove the ATF dipstick (yellow loop) (A).
    2. Remove the harness clamp (B).
    3. Remove the ATF dipstick guide tube (C).
    4. Remove the O-ring (D) from the ATF dipstick guide tube.

Fig. 1405: Identifying Harness Clamp, ATF Dipstick Guide Tube, O-Ring And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1406: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. ATF Temperature Sensor
    1. Disconnect the connectors (A).
    2. Remove the shift solenoid wire harness (B).

    NOTE: The ATF temperature sensor is not available separately from the shift solenoid wire harness.

    3. Remove the O-ring (C) from the shift solenoid wire harness.

Fig. 1407: Identifying Shift Solenoid Wire Harness, Connectors And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. ATF Temperature Sensor
    1. Install a new O-ring (F) on the shift solenoid wire harness (G).
    2. Install the shift solenoid wire harness.
    3. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.
    4. Check the connector (H) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1408: Identifying O-Ring, Connector, Shift Solenoid Wire Harness And Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1409: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.
    3. Install the harness clamp (C).
    4. Install the ATF dipstick (D).

Fig. 1410: Identifying O-Ring, ATF Dipstick Guide Tube, Harness Clamp, ATF Dipstick And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1411: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1412: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF

DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 1413: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1414: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1415: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan

comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

7. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1416: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**

- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 1417: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1418: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1419: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

ATF WARMER HOSE REPLACEMENT

REPLACEMENT

NOTE: **When installing the clips, make sure the tabs of the clip do not interfere with the surrounding parts.**

1. ATF Warmer Hose
    1. Install the ATF hoses over the ATF lines with the clips at appropriate points in reference to the following list. Align the green paint marks (F) and the white paint mark (G) pointing up.

Point	Distance from Hose End to Clip (E)	Hose End Contact Point
A	6-8 mm (0.24-0.31 in)	ATF Filter
B	6-8 mm (0.24-0.31 in)	Bracket
C	2-4 mm (0.08-0.16 in)	Bulge
D	6-8 mm (0.24-0.31 in)	Bulge

Fig. 1420: Identifying Distance Between Hose End To Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the AWD/4WD transmission.

2. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
3. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1421: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark,**

one or more of these symptoms may occur:

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 1422: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1423: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ATF WARMER REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Radiator Cap
    1. Wait until the engine is cool, then carefully remove the radiator cap.
3. Radiator Coolant - Replacement
    1. Loosen the drain plug (A), and drain the coolant.
    2. After the coolant has drained, tighten the drain plug securely.

Fig. 1424: Loosening Drain Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 1425: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF Warmer
    1. Disconnect the water bypass hoses (A).

        NOTE: Be careful not to damage the lines when disconnecting the hoses.

    2. Disconnect the ATF hoses (B).

        NOTE: Be careful not to damage the lines when disconnecting the hoses.

    3. Turn the end of the ATF hoses up to prevent ATF from flowing out, then plug the hoses and lines.
    4. Remove the ATF warmer (C).

Fig. 1426: Identifying Water Bypass Hoses, ATF Hoses And ATF Warmer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. ATF Warmer
    1. Install the ATF warmer (A).
    2. Connect the ATF hoses (B) until the hose end contacts the bulge. Align the green paint marks (C) pointing up.

    NOTE: Be careful not to damage the lines when connecting the hoses.

    3. Secure the hoses with the clips (D) at 2-4 mm (0.08-0.16 in) (E) from the hose ends. Keep the tabs of the clips clear of other parts.
    4. Connect the water bypass hoses (F) until the hose end contacts the bulge.

    NOTE: Be careful not to damage the lines when connecting the hoses.

    5. Secure the water bypass hoses with the clips. Keep the tabs of the clips clear of other parts.

Fig. 1427: Identifying Water Bypass Hoses, ATF Warmer, ATF Hoses, Clips And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 1428: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Radiator Coolant - Replacement
    1. Follow the chart and pour coolant into the radiator up to the base of the filler neck.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2 or Honda Extreme Cold Weather Antifreeze/Coolant Type 2. Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Honda Extreme Cold Weather Antifreeze/Coolant Type 2 is a 100% concentration coolant. Do not add water to either coolant.**
- **If the vehicle is regularly used in very low temperatures (under -22 °F (-30 °C)) a 60% concentration of coolant should be used.**

Operation	Vehicle Usage (Desired Mixture)	Current Mixture	Coolant Drain	Add Amount of Honda Extreme Cold Weather Antifreeze/Coolant Type 2 (100% concentrate)	Then add Honda Long Life Antifreeze/Coolant Type 2 (50/50)
	Normal Area	50/50 60/40	Drain	None	

Coolant Change	(50/50)	unknown	radiator and reservoir		Top off the cooling system
	Very Cold Area (60/40)	50/50 unknown		About 1.5 L (51 fl oz)	
		60/40		About 1.3L (44 fl oz)	
Engine Overhaul	Normal Area (50/50)	-	-	None	
	Very Cold Area (60/40)	-	-	About 1.5 L (51 fl oz)	
Coolant Winterizing	Very Cold Area (60/40)	50/50	Drain about 2.0 L (68 fl oz) from radiator	About 1.5 L (51 fl oz)	
		unknown (1)	Drain radiator and reservoir		
(1) When you want to winterize the coolant with the minimum amount of coolant change but the current coolant concentration in the vehicle is unknown, you must drain all coolant from the cooling system.					

Engine Coolant Capacities (Including the coolant reservoir capacity of 0.62 L (0.164 US gal))	
At Coolant Change:	6.23 L (1.646 US gal)
After Engine Overhaul:	7.44 L (1.966 US gal)

Fig. 1429: Filling Coolant Into Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the radiator cap.
3. Start the engine and let it run until the radiator fan comes on at least twice. Do not operate the air

conditioning system.

4. Turn off the engine. Check the level in the radiator and add Honda Long Life Antifreeze/Coolant Type 2 if needed.
5. Put the radiator cap securely, then start the engine again, and check for leaks.
6. Clean up any spilled engine coolant.
7. Fill the coolant reservoir to the MAX mark (A) with Honda Long Life Antifreeze/Coolant Type 2.

Fig. 1430: Identifying Coolant Reservoir MAX Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Warm Up The Engine
   1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
   2. Park the vehicle on level ground.
   3. Turn the ignition switch to LOCK (0).
5. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

   1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
   2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1431: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 1432: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1433: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1434: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

DISASSEMBLY

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 1440: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 1441: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 1442: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission Fluid Pressure Switch B (3rd Clutch)
    1. Remove transmission fluid pressure switch B (3rd clutch) and the sealing washer (A).

Fig. 1443: Identifying Transmission Fluid Pressure Switch (3rd Clutch) And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 1444: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Harness Cover Clamp Bracket
    1. Remove the harness cover clamp bracket (A).

Fig. 1445: Identifying Harness Cover Clamp Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 1446: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 1447: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 1448: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 1449: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 1450: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 1451: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 1452: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1453: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Shift Solenoid Wire Harness
    1. Disconnect the connectors (A).
    2. Remove the shift solenoid wire harness (B).
    3. Remove the O-ring (C) from the shift solenoid wire harness.

Fig. 1454: Identifying Shift Solenoid Wire Harness, Connectors And O-Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 1455: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 1456: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 1457: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 1458: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 1459: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 1460: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 1461: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 1462: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1463: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 1464: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 1465: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Selector Control Lever (Except 2WD of USA Produced Models)
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the selector control lever (D).

Except 2WD of USA Produced Models

Fig. 1466: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 1467: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 1468: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 1469: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 1470: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 1471: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 1472: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Regulator Valve Body
    1. Remove ATF joint pipe A.
    2. Remove ATF joint pipe B.

Fig. 1473: Identifying ATF Joint Pipes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the regulator valve body (A).

Fig. 1474: Identifying Regulator Valve Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the stator shaft (A).
5. Remove the O-ring (B) from the stator shaft.
6. Remove the stator shaft stop (C).

Fig. 1475: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the regulator separator plate (A) and the dowel pins (B).

Fig. 1476: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Shift Solenoid Valve

NOTE: **Do not hold the shift solenoid valve connector to remove the shift solenoid valves. Be sure to hold the shift solenoid valve body.**

1. Remove shift solenoid valve A.
2. Remove shift solenoid valve B.
3. Remove shift solenoid valve C.
4. Remove the O-rings (D) from the shift solenoid valves.

Fig. 1477: Identifying Shift Solenoid Valves And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove shift solenoid valve D.
6. Remove shift solenoid valve E.
7. Remove the O-rings (A) from the shift solenoid valves.

Fig. 1478: Identifying Shift Solenoid Valves And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. ATF Strainer
    1. Remove the ATF strainer (A) and the O-ring (B).

Fig. 1479: Identifying ATF Strainer And O-Ring With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the inlet opening (A) of the ATF strainer (B) thoroughly with compressed air, then check that it is in good condition and that the inlet opening is not clogged.
3. Test the ATF strainer by pouring clean ATF through the inlet opening, and replace it if it is clogged or damaged.

Fig. 1480: Identifying Inlet Opening Of ATF Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Detent Arm
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.

3. Remove the detent arm (D) and the arm collar (E).

Fig. 1481: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Servo Body
    1. Remove the servo body (A).

Fig. 1482: Identifying Servo Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the servo separator plate (A) and the dowel pins (B).

Fig. 1483: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Main Valve Body
    1. Remove the cooler check valve spring (A) and the cooler check valve (B).
    2. Remove the main valve body (C).

NOTE: **Do not let the check balls (D) fall out, and do not use a magnet to remove the check balls, it may magnetize them.**

Fig. 1484: Identifying Cooler Check Valve, Spring, Main Valve Body And Check Balls
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the ATF pump driven gear shaft (A).
4. Remove the ATF pump drive gear (B) and the ATF pump driven gear (C).

Fig. 1485: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the main separator plate (A) and the dowel pins (B).

Fig. 1486: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Torque Converter Housing
    1. Remove transmission fluid pressure switch A (2nd clutch) and the sealing washer (B).
    2. Remove the magnet (C).
    3. Remove the drain plug (D) and the sealing washer (E).

Fig. 1487: Identifying Transmission Fluid Pressure Switch (2nd Clutch), Magnet, Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

NOTE:

- **Apply a light coat of clean ATF on all tubes, O-rings, and moving parts before reassembly.**
- **The illustration shows AWD/4WD transmission.**

1. Torque Converter Housing
    1. Install transmission fluid pressure switch A (2nd clutch) using a new sealing washer (B).
    2. Clean the magnet (C), then install it.
    3. Install the drain plug (D) using a new sealing washer (E).

Fig. 1488: Identifying Transmission Fluid Pressure Switch (2nd Clutch), Magnet, Drain Plug And Sealing Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Main Valve Body
    1. Install the main separator plate (A) and the dowel pins (B).

Fig. 1489: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the ATF pump drive gear (A) and the ATF pump driven gear (B).

NOTE: **Install the ATF pump driven gear with its grooved and chamfered side facing down.**

3. Install the ATF pump driven gear shaft (C).

Fig. 1490: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1491: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the main valve body (A).

NOTE: Make sure that the check balls (B) are in the main valve body.

5. Make sure the ATF pump drive gear (C) rotates smoothly in the normal operating direction, and the ATF pump driven gear shaft (D) moves smoothly in the axial and normal operating direction.
6. If the ATF pump drive gear and the ATF pump driven gear shaft do not move smoothly, loosen the main valve body bolts. Realign the ATF pump driven gear shaft, and retighten the bolts to the specified torque, then recheck.

NOTE: **Failure to align the ATF pump driven gear shaft correctly will result in a seized ATF pump drive gear or ATF pump driven gear shaft.**

7. Install the cooler check valve (E) and the cooler check valve spring (F).

Fig. 1492: Identifying Main Valve Body, Check Balls, Cooler Check Valve And Cooler Check Valve Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1493: Rotating ATF Pump Drive Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Servo Body
    1. Install the servo separator plate (A) and the dowel pins (B).

Fig. 1494: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the servo body (A).

NOTE: **Do not install the servo body mounting bolts to the baffle plate bolt holes (B) and the ATF strainer bolt holes (C) in this step.**

Fig. 1495: Identifying Servo Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1496: Identifying Baffle Plate Bolt Holes And ATF Strainer Bolt Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detent Arm
    1. Install the detent arm (A) and the arm collar (B).
    2. Install a new lock washer (C) by aligning its cutout (D) with the projection (E).
    3. Install and tighten the bolt, then pry up the lock tab (F) of the lock washer against the bolt head.

Fig. 1497: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF Strainer
    1. Install the ATF strainer (A) using a new O-ring (B).

Fig. 1498: Identifying ATF Strainer, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Solenoid Valve

NOTE:

- **Do not hold the shift solenoid valve connector to install the shift solenoid valves. Be sure to hold the shift solenoid valve body.**
- **Do not install shift solenoid valve A before installing shift solenoid valve D, and do not install shift solenoid valve B before installing shift solenoid valve E. If shift solenoid valves A and B are installed before shift solenoid valves D and E, it may damage the hydraulic control system.**
- **A new shift solenoid valve comes with new O-rings. If you install a new solenoid valve, use the O-rings provided on it.**

1. Install shift solenoid valve D (black connector) using new O-rings (A) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the servo body.
2. Install shift solenoid valve E (black connector) using new O-rings (B) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the servo body.

Fig. 1499: Identifying Shift Solenoid Valves And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install shift solenoid valve A (brown connector) using new O-rings (D) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the bracket of shift solenoid valve D.
4. Install shift solenoid valve B (brown connector) using new O-rings (E) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the bracket of shift solenoid valve E.
5. Install shift solenoid valve C (brown connector) using new O-rings (F) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the servo body.

Fig. 1500: Identifying Shift Solenoid Valves, O-Rings And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Regulator Valve Body
    1. Install the regulator separator plate (A) and the dowel pins (B).

Fig. 1501: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install a new O-ring (A) on the stator shaft (B).
    3. Install the stator shaft.
    4. Install the stator shaft stop (C).

Fig. 1502: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the regulator valve body (A).

Fig. 1503: Identifying Regulator Valve Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install ATF joint pipe B.
7. Install ATF joint pipe A.

Fig. 1504: Identifying ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 1505: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 1506: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 1507: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 1508: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 1509: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1510: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1511: Prying Up Lock Tab Of Lock Washer Against Bolt Head

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 1512: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 1513: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission

Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 1514: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.
        - The old conical spring washer and the old locknut.
    3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:
- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 1515: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).

Fig. 1516: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: Do not bend the lock tab of the lock washer until inspect the park

lever stop.

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 1517: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.

Fig. 1518: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 1519: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 1520: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

20. After replacing the park lever stop, make sure the distance is within the tolerance.

Fig. 1521: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 1522: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 1523: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Shift Solenoid Wire Harness
    1. Install the shift solenoid wire harness (F) using a new O-ring (G).
    2. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 1524: Identifying Shift Solenoid Valves, Shift Solenoid Wire Harness And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1525: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts

With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 1526: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 1527: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 1528: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 1529: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 1530: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 1531: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 1532: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Harness Cover Clamp Bracket
    1. Install the harness cover clamp bracket (A).

Fig. 1533: Identifying Harness Cover Clamp Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 1534: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Transmission Fluid Pressure Switch B (3rd Clutch)
    1. Install transmission fluid pressure switch B (3rd clutch) using a new sealing washer (A) by turning the metal part, not the plastic part.

Fig. 1535: Identifying Transmission Fluid Pressure Switch (3rd Clutch) And Sealing Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 1536: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 1537: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.

Fig. 1538: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 1539: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1540: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 1541: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUTOMATIC TRANSMISSION REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Hood Prop Bar 07AAZ-T0AA100
	Engine Support Hanger, A and Reds AAR-

	T1256(1)
	Universal Lifting Eyelet 07AAK-SNAA120
	Subframe Adapter VSB02C000016(1)

	Ball Joint Remover, 28 mm 07MAC-SL0A202
	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100

	Subframe Alignment Pin 070AG-SJAA10S
(1) Available through the Honda Tool and Equipment Program 888-424-6857	

REMOVAL

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **Special tool Reds engine support hanger AAR-T1256 must be used with the side engine mount installed.**

1. Wide - Hood Open Position
    1. Remove the clips (A, B).
    2. Pull up the left front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 1542: Identifying Left Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Open the hood, and secure it with hood prop bar in the wide-open position (A).

NOTE: Install the hood prop bar in the wide-open bracket correctly.

Fig. 1543: Installing Hood Prop Bar In Wide-Open Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal - Disconnection

1. Make sure the ignition switch is in LOCK (0).
2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.

Fig. 1544: Identifying Negative And Positive Cable Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery
    1. Remove the battery setting plate (A) and the battery (B).

Fig. 1545: Identifying Battery And Battery Setting Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 1546: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Intake Air Duct
    1. Remove the intake air duct.

Fig. 1547: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Intake Air Pipe
    1. Remove the intake air pipe.

Fig. 1548: Identifying Intake Air Pipe And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Battery Base Assembly
    1. Remove the battery base and the harness clamps.

Fig. 1549: Identifying Battery Base And Harness Clamps With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 1550: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

Fig. 1551: Identifying Lower Slide Shaft, Wire And Joint Yoke
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Steering Wheel Hold
    1. Center the steering wheel spoke angle.
    2. Install a commercially available steering wheel holder tool (A).

Fig. 1552: Identifying Commercially Available Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.

NOTE:

- **If the center guide (C) is in place and has not moved, leave it in place.**
- **If the center guide has come off, discard it.**

Fig. 1553: Identifying Steering Joint, Bolt And Center Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Automatic Transmission Peripheral Assembly, Upper Side

1. Remove the ATF dipstick (yellow loop) (A).

Fig. 1554: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A).
3. Remove the harness clamps (B).

Fig. 1555: Identifying Harness Clamps And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the ATF warmer hose (A).
5. Turn the end of the ATF hose up to prevent ATF from flowing out, then plug the hose and line.

Fig. 1556: Identifying ATF Warmer Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the bolts (A) securing the ATF warmer bracket (B).

Fig. 1557: Identifying ATF Warmer Bracket And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 1558: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Engine Support Hanger
    1. Install the universal lifting eyelet to the special nut (A) with a spacer (B) and an 8 x 1.25 mm bolt (C).

NOTE: **Select a spacer that is long enough that the universal lifting eyelet does not interfere with the harness holder (D).**

Fig. 1559: Installing Universal Lifting Eyelet To Special Nut With Spacer And 8 X 1.25 mm Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the engine support hanger as shown.
3. Attach the hook to the slotted hole in the universal lifting eyelet.
4. Tighten the wing nut (A) by hand, and lift and support the engine/transmission.

NOTE: Be careful when working around the windshield.

Fig. 1560: Installing Engine Support Hanger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Upper Transmission Mounting Bolt
    1. Remove the upper transmission assembly mounting bolts.

Fig. 1561: Identifying Upper Transmission Assembly Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transmission Mount Bracket
    1. Remove the ground cable terminal (A).
    2. Remove the transmission mount bracket (B).

Fig. 1562: Identifying Transmission Mount Bracket And Ground Cable Terminal With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Raise The Vehicle On The Lift
    1. Raise the vehicle on the lift.
18. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 1563: Identifying Front Wheels With Studs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1564: Identifying Front Splash Shield, Front Bumper, Bolts And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1565: Identifying Drain Plug And Sealing Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Lower Arm Joint - Disconnection, Both Knuckle Side
    1. Remove the flange bolt and the self-locking nuts on both sides.
    2. Separate the lower arm using a pry bar on both sides.

Fig. 1566: Identifying Flange Bolt And Self-Locking Nuts Of Lower Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 1567: Identifying Hex Nut Installation Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply grease to the ball joint remover on the areas shown (A).

Fig. 1568: Identifying Grease Applying To Ball Joint Remover Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

Fig. 1569: Installing Ball Joint Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

23. Tie-Rod End Ball Joint - Disconnection, Both Side
    1. Remove the cotter pin (A) from the tie-rod end ball joint.
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

NOTE: **Be careful not to damage the ball joint boot when installing the remover.**

Fig. 1570: Disconnecting Tie-Rod End Ball Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Front Stabilizer Link Stabilizer Bar Side - Disconnection, Both Side
    1. Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect both sides of the stabilizer link (D) from the front stabilizer bar (E).

Fig. 1571: Removing Flange Nuts While Holding Respective Joint Pin With Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Shift Cable Cover
    1. Remove the shift cable cover (A).

2WD

Fig. 1572: Identifying Shift Cable Cover With Mounting Bolts (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1573: Identifying Shift Cable Cover With Mounting Bolts (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Shift Cable - Disconnection A/T Side (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Remove the spring clip (A) and the control pin (B).
2. Separate the shift cable (C) from the selector control lever (D).

NOTE: Do not bend the shift cable excessively.

3. Remove the shift cable bracket(s) (E).
4. Check the bushing (F) in the shift cable end for proper fit and wear. If the bushing is loose or worn, replace the shift cable.

Fig. 1574: Identifying Bushing, Shift Cable Bracket, Shift Cable, Selector Control Lever, Spring Clip And Control Pin (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1575: Identifying Bushing, Shift Cable Bracket, Shift Cable, Selector Control Lever, Spring Clip And Control Pin (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Shift Cable - Disconnection A/T Side (2WD of USA Produced Models)

2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Separate the shift cable (D) from the selector control shaft (E).

NOTE: Do not bend the shift cable excessively.

4. Remove the shift cable bracket (F).

Fig. 1576: Identifying Shift Cable Bracket, Selector Control Shaft, Lock Tab, Lock Washer, Lock Bolt And Shift Cable (2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. A/T Shift Cable Cover Bracket
    1. Remove the shift cable cover bracket (A).

2WD

Fig. 1577: Identifying Shift Cable Cover Bracket With Mounting Bolts (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1578: Identifying Shift Cable Cover Bracket With Mounting Bolts (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 1579: Identifying Front Floor Undercover, Bolts And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Left Middle Floor Undercover (AWD/4WD)
    1. Remove the bolts (A) and clips (B, C), then remove the left middle floor undercover (D).

Fig. 1580: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Remove the No. 1 propeller shaft protector (A).

Fig. 1581: Identifying No. 1 Propeller Shaft Protector With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Remove the No. 2 propeller shaft protector (A).

Fig. 1582: Identifying No. 2 Propeller Shaft Protector With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Propeller Shaft Transmission Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Remove the No. 1 propeller shaft flange bolts (D).

Fig. 1583: Identifying No. 1 Propeller Shaft, Flange Bolts, Reference Mark And Transfer Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Propeller Shaft Differential Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).

Fig. 1584: Identifying No. 2 Propeller Shaft, Flange Bolts, Reference Mark And Rear Differential Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Propeller Shaft Assembly (AWD/4WD)
    1. Remove the center support bearing mounting bolts (A), then remove the propeller shaft assembly (B).

Fig. 1585: Identifying Center Support Bearing Mounting Bolts And Propeller Shaft Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 1586: Identifying Under-Floor TWC Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Transfer Assembly (AWD/4WD)
    1. Remove the transfer assembly (A) and the dowel pin (B).
    2. Remove the O-ring (C) from the transfer assembly.

Fig. 1587: Identifying Transfer Assembly, Dowel Pin And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Lower Torque Rod - Disconnection
    1. Remove the lower torque rod mounting bolts.

Fig. 1588: Identifying Lower Torque Rod Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Front Engine Mount - Disconnection/Reconnection
    1. Remove the front engine mount mounting bolt.

Fig. 1589: Identifying Front Engine Mount Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. EPS Motor Connector - Disconnection/Reconnection

NOTE: **Wrap the connectors with vinyl tape to avoid contamination from grease or water.**

1. Disconnect the EPS motor 3P connector (A) by pushing the lock (B) and pulling up the lever (C).
2. Disconnect the connectors (D).
3. Remove the harness clip (E).

Fig. 1590: Pushing Lock And Pulling Up Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. Subframe Support
    1. Attach the subframe adapter (A) to the front subframe by looping the belt (B) over the front of the front subframe (C), then secure the belt with its stop (D).
    2. Raise the jack and line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts.

Fig. 1591: Attaching Subframe Adapter To Front Subframe By Looping Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Front Subframe Assembly
    1. Remove the front subframe mid bolts.

Fig. 1592: Identifying Front Subframe Mid Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the front subframe mounting bolts.
    3. Lower the front subframe.

Fig. 1593: Identifying Front Subframe Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Transmission Jack Support
    1. Support the transmission with a transmission jack.
44. A/T Peripheral Assembly, Lower Side
    1. Disconnect the connectors (A).
    2. Remove the harness clamps (B).

Fig. 1594: Identifying Harness Clamps And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Disconnect the ATF warmer hose (A).
    4. Turn the end of the ATF hose up to prevent ATF from flowing out, then plug the hose and line.

Fig. 1595: Identifying ATF Warmer Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A).

Fig. 1596: Identifying ATF Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Torque Converter - Disconnection
    1. Remove the torque converter cover (A).
    2. Remove eight drive plate bolts (B) while rotating the crankshaft pulley.

Fig. 1597: Identifying Torque Converter Cover And Drive Plate Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. Driveshaft Front Both, Inboard Side - Disconnection

Left Driveshaft

1. Left driveshaft: Pry the inboard joint (A) from the differential using a pry bar (B).

NOTE:

- **Do not pull on the driveshaft (C), or the inboard joint may come apart. Pull the inboard joint straight out to avoid damaging the oil seal.**
- **Be careful not to damage the oil seal or the end of the inboard joint using the pry bar.**

Fig. 1598: Prying Inboard Joint From Differential Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left Driveshaft

2. Left driveshaft: Remove the set ring (A) from the inboard joint.

Fig. 1599: Identifying Set Ring Of Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Driveshaft

3. Right driveshaft: Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a

hammer.

NOTE: Do not pull on the driveshaft (B), or the inboard joint may come apart.

Fig. 1600: Driving Inboard Joint Of Intermediate Shaft Using Drift Punch And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Right driveshaft: Remove the set ring (A) from the intermediate shaft.

Fig. 1601: Identifying Set Ring Of Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. A/T Intermediate Shaft Assembly
    1. Remove the flange bolt (A) and the two dowel bolts (B).

Fig. 1602: Identifying Flange Bolt And Dowel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the oil seal (B).

Fig. 1603: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. CKP Sensor Cover
    1. Remove the CKP sensor cover (A).

Fig. 1604: Identifying CKP Sensor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

49. A/T Assembly
    1. Lower the transmission by loosening the wing nut of the engine support hanger, and tilt the engine just enough for the transmission to clear its end from the side frame.
    2. Remove the lower transmission assembly mounting bolts.

Fig. 1605: Identifying Lower Transmission Assembly Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the front transmission assembly mounting bolts.

Fig. 1606: Identifying Front Transmission Assembly Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear transmission assembly mounting bolts.
5. Check once again that the transmission is free of hoses and electrical wiring.
6. Slide the transmission away from the engine by holding the torque converter in the transmission, then remove it from the vehicle.

NOTE: Be careful not to drop the torque converter.

Fig. 1607: Identifying Rear Transmission Assembly Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

50. Torque Converter
    1. Remove the torque converter (A), the O-ring (B), and the dowel pins (C).
    2. Inspect the drive plate, and replace it if it is damaged.

This illustration shows the AWD/4WD transmission.

Fig. 1608: Identifying Torque Converter, O-Ring And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Torque Converter
    1. Install the torque converter (A) using a new O-ring (B).

        NOTE: Make sure the torque converter is fully engaged on the mainshaft, the stator shaft, and the ATF pump drive gear. Failure to do so will result in severe transmission or engine damage.

    2. Install the dowel pins (C).

This illustration shows the AWD/4WD transmission.

Fig. 1609: Identifying Torque Converter, O-Ring And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Assembly
    1. Place the transmission on a jack, and raise the transmission to the engine level.
    2. Attach the transmission to the engine.
    3. Install the front transmission assembly mounting bolts.

Fig. 1610: Identifying Front Transmission Assembly Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear transmission assembly mounting bolts.

Fig. 1611: Identifying Rear Transmission Assembly Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the lower transmission assembly mounting bolts.

Fig. 1612: Identifying Lower Transmission Assembly Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. CKP Sensor Cover
    1. Install the CKP sensor cover (A).

Fig. 1613: Identifying CKP Sensor Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/T Intermediate Shaft Assembly
    1. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent, and dry them with compressed air.

    NOTE: Do not wash the rubber parts with solvent.

    2. Insert the intermediate shaft (A) into the differential correctly.

    NOTE: Insert the intermediate shaft carefully to prevent damaging the oil seal (B).

Fig. 1614: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the two dowel bolts (A) and the flange bolt (B).

Fig. 1615: Identifying Dowel Bolts And Flange Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driveshaft Front Both, Inboard Side - Reconnection

Left Driveshaft

1. Left driveshaft: Install a new set ring (A) into the set ring groove (B) of the driveshaft.

Fig. 1616: Identifying Set Ring And Set Ring Groove Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left Driveshaft

2. Left driveshaft: Clean the areas where the driveshaft contacts the differential thoroughly with solvent, then dry them with compressed air.

NOTE: Do not wash the rubber parts with solvent.

3. Left driveshaft: Insert the inboard end (A) of the driveshaft into the differential (B) until the set ring (C) locks in the groove (D).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seal.

Fig. 1617: Inserting Inboard End Of Driveshaft Into Differential Until Set Ring Locks In Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Right driveshaft: Install a new set ring (A) into the set ring groove (B) of the intermediate shaft.

Fig. 1618: Identifying Set Ring And Set Ring Groove Of Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Driveshaft

5. Right driveshaft: Apply 0.5-1.0 g (0.018-0.035 oz) of molybdenum grease to the whole splined surface (A) of the right driveshaft.
6. Right driveshaft: After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

Fig. 1619: Identifying Molybdenum Grease Applying Area To Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Driveshaft

7. Right driveshaft: Clean the areas where the driveshaft contacts the intermediate shaft thoroughly with solvent, then dry them with compressed air.

NOTE: Do not wash the rubber parts with solvent.

8. Right driveshaft: Insert the inboard end (A) of the driveshaft into the intermediate shaft (B) until the set ring (C) locks in the groove (D).

Fig. 1620: Inserting Inboard End Of Driveshaft Into Intermediate Shaft Until Set Ring Locks In Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Torque Converter - Reconnection
    1. Attach the torque converter to the drive plate (A) with eight drive plate bolts (B). Rotate the

crankshaft pulley as necessary to tighten the bolt to half of the specified torque, then to the final torque, in a crisscross pattern. After tightening the last bolt, check that the crankshaft rotates freely.

2. Install the torque converter cover (C).

Fig. 1621: Identifying Torque Converter Cover, Drive Plate And Drive Plate Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Peripheral Assembly, Lower Side
    1. Connect the connectors (A).

Fig. 1622: Identifying A/T Peripheral Assembly Connectors (Lower Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the ATF warmer hose (A) until the hose end contacts the bracket.
3. Secure the hose with the clip (B) at 6-8 mm (0.24-0.31 in) (C) from the hose end. Keep the tabs of the clip clear of other parts.

Fig. 1623: Identifying ATF Warmer Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the harness clamps (A).
5. Connect the connectors (B).

Fig. 1624: Identifying Harness Clamps And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Subframe Support
    1. Attach the subframe adapter to the front subframe by looping the belt (A) over the front of the front subframe (B), then secure the belt with its stop (C).

Fig. 1625: Attaching Subframe Adapter To Front Subframe By Looping Belt Over Front Of Front Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Subframe - Alignment

NOTE:

- **Align the front subframe in the following sequence.**
- **When Installing, align both installation reference holes in the subframe with both reference holes in the body using the subframe alignment pin as a guide.**

1. Lift the front subframe (A) up to the body, and loosely install new subframe mounting bolts (B, C).

Fig. 1626: Identifying Front Subframe Related Components With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install new mid mounting bolts (D).
3. Insert the subframe alignment pin (E) through the positioning hole (F) on the right rear subframe, and into the positioning hole (G) on the body, then loosely tighten the subframe right rear mounting bolt.
4. Insert the subframe alignment pin through the positioning hole on the left rear subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolt.
5. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
6. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

7. Tighten the mid mounting bolts to the specified torque.
8. After reinstalling all remaining parts, check and adjust the front wheel alignment.

10. EPS Motor Connector - Disconnection/Reconnection
    1. Install the harness clip (A).
    2. Pull down the lever (B) of the EPS motor 3P connector (C), then confirm the connector is fully seated.
    3. Connect the Connectors (D).

Fig. 1627: Pulling Down Lever Of EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Engine Mount - Disconnection/Reconnection
    1. Loosely install the front engine mount mounting bolt.

Fig. 1628: Identifying Front Engine Mount Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Lower Torque Rod - Reconnection
    1. Loosely install the new lower torque rod mounting bolts.

Fig. 1629: Identifying Lower Torque Rod Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Stabilizer Link Stabilizer Bar Side - Reconnection, Both Side
    1. Connect both sides of the stabilizer link (A) to the front stabilizer bar (B).
    2. Install the flange nuts (C), and tighten them to the specified torque while holding the respective joint pin (D) with a hex wrench (E).

Fig. 1630: Installing Flange Nuts While Holding Respective Joint Pin With Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tie-Rod End Ball Joint - Connection, Both Side
    1. Wipe off any grease contamination from the ball joint tapered section and threads.
    2. Connect the tie-rod ball joint (A) to the knuckle.
    3. Install the nut (B) and tighten to the specified torque.
    4. Install a new cotter pin (C).

NOTE: Bend the cotter pin as shown.

Fig. 1631: Identifying Tie-Rod Ball Joint, Nut And Cotter Pin With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Lower Arm Joint - Reconnection, Both Knuckle Side
    1. Connect the lower arm to the knuckle on both sides using new flange bolt and new self-locking nuts.
    2. After lightly tightening all three fasteners, tighten them to the specified torque in the following order; the nut on the front (B), the nut on the rear (C), then the bolt (D).

Fig. 1632: Identifying Lower Arm Front Nuts And Rear Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Transfer Assembly (AWD/4WD)
    1. Install a new O-ring (A) on the transfer assembly (B).
    2. Install the transfer assembly and the dowel pin (C).

Fig. 1633: Identifying Transfer Assembly, Dowel Pin, O-Ring And Mounting Bolts With

Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 1634: Identifying Under Floor TWC Assembly With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Propeller Shaft Assembly (AWD/4WD)
    1. Install the propeller shaft assembly (A), then Install new center support bearing mounting bolts (B).

Fig. 1635: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Propeller Shaft Differential Side - Reconnection (AWD/4WD)
    1. Set the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 2 propeller shaft flange bolts (D) to the specified torque.

Fig. 1636: Identifying No. 2 Propeller Shaft, Rear Differential Companion Flange, Reference Mark And Flange Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Propeller Shaft Transmission Side - Reconnection (AWD/4WD)
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 1 propeller shaft flange bolts (D) to the specified torque.

Fig. 1637: Identifying No. 1 Propeller Shaft, Transfer Companion Flange, Reference Mark And Flange Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Install the No. 2 propeller shaft protector (A).

Fig. 1638: Identifying No. 2 Propeller Shaft Protector And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Install the No. 1 propeller shaft protector (A).

Fig. 1639: Identifying No. 1 Propeller Shaft Protector And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Left Middle Floor Undercover (AWD/4WD)
    1. Install the left middle floor undercover (A), then install the bolts (B) and the clips (C, D). The clips snap into place securely.

Fig. 1640: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1641: Identifying Front Floor Undercover, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. A/T Shift Cable Cover Bracket
    1. Install the shift cable cover bracket (A).

2WD

Fig. 1642: Identifying Shift Cable Cover Bracket And Mounting Bolts With Torque Specification (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1643: Identifying Shift Cable Cover Bracket And Mounting Bolts With Torque Specification (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Shift Cable - Reconnection A/T Side (2WD of USA Produced Models)

2WD of USA Produced Models

1. Install the shift cable bracket (A).
2. Install the control lever (B) over the selector control shaft (C).

NOTE: Do not bend the shift cable excessively.

3. Install the lock bolt (D) using a new lock washer (E).
4. Pry up the lock tab (F) of the lock washer against the bolt head.

Fig. 1644: Prying Up Lock Tab Of Lock Washer Against Bolt Head (2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Shift Cable - Reconnection A/T Side (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Apply molybdenum grease to the hole in the bushing (A) in the shift cable end (B).
2. Install the shift cable bracket(s) (C).
3. Attach the shift cable end to the selector control lever (D), then insert the control pin (E) into the control lever hole through the shift cable end.

NOTE: Do not bend the shift cable excessively.

4. Secure the control pin with the spring clip (F).

Fig. 1645: Identifying Molybdenum Grease Applying Area To Hole In Shift Cable End Bushing (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1646: Identifying Molybdenum Grease Applying Area To Hole In Shift Cable End Bushing (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Shift Cable Cover

1. Install the shift cable cover (A).

2WD

Fig. 1647: Identifying Shift Cable Cover And Mounting Bolts With Torque Specification (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 1648: Identifying Shift Cable Cover And Mounting Bolts With Torque Specification

(AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Lower The Vehicle On The Lift
    1. Lower the vehicle on the lift.
30. Upper Torque Rod Mounting Bolt - Loosen
    1. Loosen the upper torque rod mounting bolt (A).

Fig. 1649: Identifying Upper Torque Rod Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Transmission Mount Bracket
    1. Loosely install new transmission mount bracket mounting bolt and nuts (A).
    2. Tighten a new transmission mount mounting bolt (B).
    3. Tighten the transmission mount bracket mounting bolt and nuts.
    4. Install the ground cable terminal (C).

Fig. 1650: Identifying Ground Cable Terminal, Transmission Mount Bracket Mounting Bolt And Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Raise The Vehicle On The Lift
    1. Raise the vehicle on the lift.
33. Lower Torque Rod Mounting Bolt - Tighten
    1. Loosen the lower torque mount mounting bolt.
    2. Tighten the lower torque rod mount mounting bolts in the numbered sequence shown.

Fig. 1651: Identifying Lower Torque Rod Mount Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Lower The Vehicle On The Lift
    1. Lower the vehicle on the lift.
35. Upper Torque Rod - Tighten
    1. Tighten the upper torque rod mounting bolt.

Fig. 1652: Identifying Upper Torque Rod Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Raise The Vehicle On The Lift

1. Raise the vehicle on the lift.

37. Front Engine Mount Mounting Bolt - Tighten
    1. Tighten the front engine mount mounting bolt.

Fig. 1653: Identifying Front Engine Mount Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Lower The Vehicle On The Lift
    1. Lower the vehicle on the lift.
39. Upper Transmission Mounting Bolt
    1. Install the upper transmission assembly mounting bolts.

Fig. 1654: Identifying Upper Transmission Assembly Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Engine Support Hanger
    1. Remove the engine support hanger.
    2. Remove the universal lifting eyelet and the spacer (A).

Fig. 1655: Identifying Universal Lifting Eyelet And Spacer With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

Fig. 1656: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Automatic Transmission Peripheral Assembly, Upper Side
    1. Install the ATF warmer bracket.

Fig. 1657: Identifying ATF Warmer Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the ATF warmer hose (A) until the hose end contacts the bulge. Align the green paint mark (B) pointing up.
3. Secure the hose with the clip (C) at 6-8 mm (0.24-0.31 in) (D) from the hose end. Keep the tabs of the clip clear of other parts.

Fig. 1658: Identifying ATF Warmer Hose And Green Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the harness clamps (A).
5. Connect the connectors (B).

Fig. 1659: Identifying Harness Clamps And Connectors

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1660: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1661: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 1662: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1663: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1664: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

44. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 1665: Identifying Steering Column Lower Slide Shaft Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Steering Wheel Release
    1. Remove the steering wheel holder tool (A).

Fig. 1666: Identifying Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE: Position the steering column by aligning the gap (C) within the angle.

Fig. 1667: Identifying Steering Joint And Pinion Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
4. Loosely install the steering joint bolt (C).
5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
6. Pull on the steering joint to make sure that the steering joint is fully seated.
7. Tighten the steering joint bolt to the specified torque.

Fig. 1668: Identifying Bolt Hole, Groove And Steering Joint Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. Steering Joint Cover

1. Install the steering joint cover (A).

Fig. 1669: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Battery Base Assembly
    1. Remove the battery base and install the clamps.

Fig. 1670: Identifying Battery Base, Clamps And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

49. Intake Air Pipe

1. Install the intake air pipe.

Fig. 1671: Identifying Intake Air Pipe And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

50. Intake Air Duct
    1. Install the intake air duct.

Fig. 1672: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

51. Air Cleaner Assembly

1. Install the air cleaner (A).
2. Connect the intake air pipe (B) and the intake air duct (C).
3. Install the harness clamp (D).
4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 1673: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

52. Battery
    1. Install the battery (A) and the battery setting plate (B).

NOTE: **Do not deform the battery setting plate by over-tightening the nuts.**

Fig. 1674: Identifying Battery And Battery Setting Plate With Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

53. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 1675: Identifying Multipurpose Grease Applying Area Into Battery Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

54. Wide - Hood Open Position
    1. Remove the hood prop bar.
    2. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

Fig. 1676: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

55. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1677: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

56. Front Wheel - Both Side
    1. Install both front wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 1678: Identifying Front Wheels And Studs With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

57. A/T After Install Check
    1. Set the parking brake. Start the engine, and shift the transmission through all positions three times.
    2. Check the shift lever operation, the A/T gear position indicator operation, and the shift cable adjustment.
58. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
59. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

       Caster angle:

       2WD:

With 16 inch wheel: 2 ° 44 '±30 '

Without 16 inch wheel: 2 ° 50 '±30 '

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

60. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

61. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

   Front toe-in: 0±2 mm (0±0.08 in)

   - If adjustment is required, go to the front toe adjustment.
   - If no adjustment is required, remove the alignment equipment.

62. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

Fig. 1679: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

63. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.

3. Turn the ignition switch to LOCK (0).

64. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1680: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**

- **Engine vibrates at idle.**

Fig. 1681: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1682: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

65. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1683: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

66. Automatic Transmission Road - Test
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine.
    3. Shift to D while pressing the brake pedal. Press the accelerator pedal, and release it suddenly. The engine should not stall.
    4. Repeat step 3 in all shift lever positions.
    5. Prepare the HDS and the MVCI to take a SNAPSHOT (refer to the user's guide for more details if needed):
        - Set the Trigger Type to Parameter.
        - Adjust the Parameter setting to APP Sensor A (V) above 1.2 V.
        - Set the recording time to 60 seconds.
        - Set the trigger point to (Negative) -30 seconds.
    6. Find a suitable level road.
    7. When you are ready to do the test, press OK on the HDS.
    8. Accelerate quickly until APP Sensor A reads 1.3 V. Maintain a steady throttle until the

transmission shifts to 5th gear, then slow the vehicle and come to a stop.

9. Save the snapshot if the entire event was recorded or increase the recording time setting as necessary, and repeat step 8.
10. Adjust the APP Sensor A parameter setting to 2.4 V.
11. Test-drive the vehicle again. Accelerate quickly until APP Sensor A reads 2.5 V. Maintain a steady throttle until the transmission shifts to 5th gear (or a reasonable speed), then slow the vehicle and come to a stop.
12. Save the snapshot if the entire event was recorded or increase the recording time setting as necessary, and repeat step 11.
13. Adjust the APP Sensor A parameter setting to 4.5 V.
14. Accelerate quickly until the accelerator pedal is to the floor. Maintain a steady pedal until the transmission shifts to 4th gear, then slow to a stop, and save the snapshot.
15. Review each snapshot individually, and compare the Shift Control, APP Sensor A (V), and the Vehicle Speed to the following table.

VEHICLE SPEED SPECIFICATION - KA (2WD), KC (2WD)

Upshift: D Position	**APP Sensor A (V): 1.3 V**	
	1st-->2nd	9-11 mph (14-18 km/h)
	2nd-->3rd	18-22 mph (29-35 km/h)
	3rd-->4th	26-31 mph (42-50 km/h)
	4th-->5th	38-44 mph (61-71 km/h)
	Lock-up ON	34-39 mph (54-62 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	24-27 mph (38-44 km/h)
	2nd-->3rd	44-50 mph (70-80 km/h)
	3rd-->4th	65-73 mph (105-117 km/h)
	4th-->5th	109-119 mph (175-191 km/h)
	Lock-up ON	83-91 mph (133-147 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	44-50 mph (71-81 km/h)
	2nd-->3rd	76-85 mph (122-136 km/h)
	3rd-->4th	113-123 mph (182-198 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	33-38 mph (53-61 km/h)
	5th-->4th	33-39 mph (53-63 km/h)
	4th-->3rd	24-29 mph (38-46 km/h)
	3rd-->1st	4-8 mph (7-13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	62-69 mph (99-111 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112-122 mph (181-197 km/h)
	5th-->4th	113-123 mph (182-198 km/h)

	4th-->3rd	89-98 mph (143-157 km/h)
	3rd-->2nd	54-62 mph (87-99 km/h)
	2nd-->1st	25-31 mph (40-50 km/h)

VEHICLE SPEED SPECIFICATION - KA (AWD), KC (AWD)

Upshift: D Position	**APP Sensor A (V): 1.3 V**	
	1st-->2nd	9-11 mph (14-18 km/h)
	2nd-->3rd	17-21 mph (27-33 km/h)
	3rd-->4th	26-31 mph (42-50 km/h)
	4th-->5th	37-43 mph (59-69 km/h)
	Lock-up ON	31-36 mph (50-58 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	23-27 mph (37-43 km/h)
	2nd-->3rd	42-48 mph (67-77 km/h)
	3rd-->4th	64-71 mph (103-115 km/h)
	4th-->5th	106-116 mph (170-186 km/h)
	Lock-up ON	83-92 mph (134-148 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	42-48 mph (68-78 km/h)
	2nd-->3rd	71-80 mph (115-129 km/h)
	3rd-->4th	109-119 mph (175-191 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	30-35 mph (49-57 km/h)
	5th-->4th	30-37 mph (49-59 km/h)
	4th-->3rd	22-25 mph (35-41 km/h)
	3rd-->1st	4-8 mph (7-13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	62-70 mph (100-112 km/h)
	APP-->Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112-122 mph (181-197 km/h)
	5th-->4th	113-123 mph (182-198 km/h)
	4th-->3rd	89-98 mph (143-157 km/h)
	3rd-->2nd	54-62 mph (87-99 km/h)
	2nd-->1st	25-31 mph (40-50 km/h)

VEHICLE SPEED SPECIFICATION - KX (2WD)

	APP Sensor A (V): 1.3 V	
	1st-->2nd	9-11 mph (14-18 km/h)
	2nd-->3rd	18-22 mph (29-35 km/h)
	3rd-->4th	26-31 mph (42-50 km/h)
	4th-->5th	38-44 mph (61-71 km/h)

Upshift: D Position	Lock-up ON	34-39 mph (54-62 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	24-27 mph (38-44 km/h)
	2nd-->3rd	44-50 mph (70-80 km/h)
	3rd-->4th	65-73 mph (105-117 km/h)
	4th-->5th	109-119 mph (175-191 km/h)
	Lock-up ON	83-91 mph (133-147 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	41-47 mph (66-76 km/h)
	2nd-->3rd	69-76 mph (111-123 km/h)
	3rd-->4th	107-117 mph (172-188 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	33-38 mph (53-61 km/h)
	5th-->4th	33-39 mph (53-63 km/h)
	4th-->3rd	24-29 mph (38-46 km/h)
	3rd-->1st	4-8 mph (7-13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	62-69 mph (99-111 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112-122 mph (181-197 km/h)
	5th-->4th	113-123 mph (182-198 km/h)
	4th-->3rd	83-91 mph (133-147 km/h)
	3rd-->2nd	51-58 mph (82-94 km/h)
	2nd-->1st	25-31 mph (40-50 km/h)

VEHICLE SPEED SPECIFICATION - KX (4WD)

Upshift: D Position	**APP Sensor A (V): 1.3 V**	
	1st-->2nd	9-11 mph (14-18 km/h)
	2nd-->3rd	17-21 mph (27-33 km/h)
	3rd-->4th	26-31 mph (42-50 km/h)
	4th-->5th	37-43 mph (59-69 km/h)

	4th-->5th	106-116 mph (170-186 km/h)
	Lock-up ON	83-92 mph (134-148 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	39-45 mph (63-73 km/h)
	2nd-->3rd	65-72 mph (104-116 km/h)

	3rd-->4th	103-112 mph (165-181 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	30-35 mph (49-57 km/h)
	5th-->4th	30-37 mph (49-59 km/h)
	4th-->3rd	22-25 mph (35-41 km/h)
	3rd-->1st	4-8 mph (7-13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	60-67 mph (96-108 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112-122 mph (181-197 km/h)
	5th-->4th	113-123 mph (182-198 km/h)
	4th-->3rd	83-91 mph (133-147 km/h)
	3rd-->2nd	51-58 mph (82-94 km/h)
	2nd-->1st	25-31 mph (40-50 km/h)

16. Drive the vehicle in 4th or 5th gear, then shift to 2nd gear. The vehicle should immediately begin to slow down from engine braking.
17. Shift to 1, accelerate from a stop at full throttle, and check for abnormal noise and clutch slippage. Upshifts should not occur in this position.
18. Shift to 2, accelerate from a stop at full throttle, and check for abnormal noise and clutch slippage. Upshifts and downshifts should not occur in this position.
19. Shift to R, accelerate from a stop at to full throttle momentarily, and check for abnormal noise and clutch slippage.
20. Park the vehicle on an upward slope (about 16 degrees), apply the parking brake, and shift into P. Release the brake; the vehicle should not move.

NOTE: **Always use the parking brake to hold the vehicle when stopped on an incline in gear. Depending on the grade of the incline, the vehicle could roll if the brake is released.**

67. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: **See the HDS Help menu for specific instructions.**

68. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: **See the HDS Help menu for specific instructions.**

69. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

DRIVE PLATE REMOVAL AND INSTALLATION

REMOVAL

1. Drive Plate Assembly
    1. Remove the drive plate (A) and the washer (B).

Fig. 1684: Identifying Drive Plate And Washer With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Drive Plate Assembly
    1. Install the drive plate (A) and the washer (B), and tighten the eight bolts in a crisscross pattern in at least two steps.

Fig. 1685: Identifying Drive Plate, Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INPUT SHAFT (MAINSHAFT) SPEED SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 1686: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 1687: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.
    3. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1688: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 1689: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT DISASSEMBLY AND REASSEMBLY

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Bearing Driver Attachment, 35 mm I.D. 07746-0030400

	
	Driver Handle, 15 x 135L 07749-0010000

	Oil Seal Driver, 44.5 mm 07947-SB0A100

	Oil Seal Driver, 65 mm 07JAD-PL9A100
	Oil Seal Driver Attachment 07NAD-P20A100

	
	Half Shaft Base 07NAF-SR3A101

DISASSEMBLY

1. Intermediate Shaft Bearing
    1. Remove the heat shield (A).

Fig. 1690: Identifying Heat Shield With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the outer seal (A).
    3. Remove the external snap ring (B).

Fig. 1691: Identifying External Snap Ring And Outer Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Press the intermediate shaft (A) out of the intermediate shaft bearing (B) using the half shaft base and a press.

NOTE: Be careful not to damage the bearing support ring (C) on the

intermediate shaft during disassembly.

Fig. 1692: Pressing Intermediate Shaft Out Of Intermediate Shaft Bearing Using Half Shaft Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the internal snap ring (A).

Fig. 1693: Identifying Internal Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the intermediate shaft bearing (A) out of the bearing support (B) using the 44.5 mm oil seal

driver, the half shaft base, and a press.

Fig. 1694: Pressing Intermediate Shaft Bearing Out Of Bearing Support Using Oil Seal Driver And Half Shaft Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXPLODED VIEW

1. Intermediate Shaft Exploded View

   Exploded View

Fig. 1695: Exploded View Of Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Intermediate Shaft Bearing
    1. Clean the disassembled parts with solvent.

        NOTE: Do not wash the rubber parts with solvent.

    2. Dry the disassembled parts with compressed air.
    3. Press a new intermediate shaft bearing (A) into the bearing support (B) using the 15 x 135L driver handle, oil seal driver attachment, and a press.

Fig. 1696: Pressing Intermediate Shaft Bearing Into Bearing Support Using Driver Handle And Oil Seal Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the internal snap ring (A).

Fig. 1697: Identifying Internal Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Press the intermediate shaft (A) into the shaft bearing (B) using the 35 mm I.D. bearing driver attachment and a press.

Fig. 1698: Pressing Intermediate Shaft Into Shaft Bearing Using Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the external snap ring (A).

Fig. 1699: Identifying External Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install a new outer seal (A) into the bearing support (B) using the 65 mm oil seal driver, the half shaft base, and a press. Press in the seal until it is even with the surface of the bearing support.

Fig. 1700: Installing Outer Seal Into Bearing Support Using Oil Seal Driver And Half Shaft Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the heat shield (A).

Fig. 1701: Identifying Heat Shield And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

<u>Fig. 1702: Identifying Front Splash Shield, Front Bumper, Bolts And Clips</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1703: Identifying Drain Plug And Sealing Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Right Front Wheel
    1. Remove the right front wheel.

Fig. 1704: Identifying Right Front Wheel With Studs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Right Lower Ball Joint Lower Arm Side Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).

3. Disconnect the lower ball joint (C) from the lower arm.

Fig. 1705: Identifying Lower Ball Joint, Flange Bolt And Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Right Front Driveshaft Inboard Side - Disconnection
   1. Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a hammer.

NOTE: Do not pull on the driveshaft or the inboard joint may come apart.

Fig. 1706: Driving Inboard Joint Of Intermediate Shaft Using Drift Punch And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the set ring (A).

Fig. 1707: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Intermediate Shaft Assembly
    1. Remove the flange bolt (A) and the two dowel bolts (B).

Fig. 1708: Identifying Flange Bolt And Dowel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the oil seal (B).

Fig. 1709: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Intermediate Shaft Assembly
    1. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent, and dry them with compressed air.

        NOTE: Do not wash the rubber parts with solvent.

    2. Insert the intermediate shaft (A) into the differential correctly.

        NOTE: Insert the intermediate shaft carefully to prevent damaging the oil seal (B).

Fig. 1710: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the two dowel bolts (A) and the flange bolt (B).

Fig. 1711: Identifying Dowel Bolts And Flange Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Right Front Driveshaft Inboard Side - Reconnection
    1. Install a new set ring (A).

Fig. 1712: Identifying Set Ring Of Right Front Driveshaft Inboard Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply 0.5-1.0 g (0.018-0.035 oz) of super high temp urea grease (P/N 08798-9002) to the whole splined surface (A) of the right driveshaft.

3. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

Fig. 1713: Identifying Super High Temp Urea Grease Applying Area On Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the inboard end (A) of the driveshaft onto the intermediate shaft (B) until the set ring (C) lock in the groove (D).

Fig. 1714: Inserting Inboard End Of Driveshaft Onto Intermediate Shaft Until Set Ring Lock In Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Right Lower Ball Joint Lower Arm Side Reconnection
    1. Connect the lower ball joint (A) to the lower arm.
    2. Install new flange nuts and a new flange bolt in the sequence shown.

Fig. 1715: Identifying Lower Ball Joint, Flange Nuts And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Right Front Wheel
    1. Install the right front wheel.

Fig. 1716: Identifying Right Front Wheel And Studs With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1717: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Fig. 1718: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1719: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1720: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1721: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
8. Caster - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Check the caster angle.

      Caster angle:

      2WD:

      With 16 inch wheel: 2 ° 44 '±30 '

      Without 16 inch wheel: 2 ° 50 '±30 '

      AWD/4WD:

      With 16 inch wheel: 2 ° 38 '±30 '

      Without 16 inch wheel: 2 ° 44 '±30 '

      - If the measurement is within specifications, measure the front camber angle.
      - If the measurement is not within specifications, check for bent or damaged suspension components.
9. Camber - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Check the camber angle.

      Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

10. Front Toe - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

   Front toe-in: 0±2 mm (0±0.08 in)

   - If adjustment is required, go to the front toe adjustment.
   - If no adjustment is required, remove the alignment equipment.

11. Turning Angle - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

       Turning angle:

       2WD:

       Inward:

       With 16 inch wheel: 36 ° 29 '±2 °

       Without 16 inch wheel: 36 ° 13 '±2 °

       Outward (reference):

       With 16 inch wheel: 31 ° 13 '

       Without 16 inch wheel: 31 ° 02 '

       AWD/4WD:

       Inward:

       With 16 inch wheel: 36 ° 48 '±2 °

       Without 16 inch wheel: 36 ° 30 '±2 °

       Outward (reference):

       With 16 inch wheel: 31 ° 18 '

       Without 16 inch wheel: 31 ° 12 '

Fig. 1722: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

12. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
13. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1723: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 1724: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1725: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Test Drive
    1. Test-drive the vehicle.
15. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the

dashboard.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1726: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

17. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

18. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

LEFT A/T DIFFERENTIAL OIL SEAL REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number

	Driver Handle, 15 x 135L 07749-0010000
	Oil Seal Driver Attachment 07GAD-PG40100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Left Front Wheel
    1. Remove the left front wheel.

Fig. 1727: Identifying Left Front Wheel With Studs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1728: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1729: Identifying Drain Plug And Sealing Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lower Ball Joint Lower Arm Side - Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Disconnect the lower arm (C) from the front lower ball joint (D).

Fig. 1730: Identifying Lower Arm, Front Lower Ball Joint, Flange Nuts And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Front Driveshaft, Inboard Side - Disconnection
    1. Pry the inboard joint (A) using a pry bar (B).

NOTE:

- **Do not pull on the driveshaft (C), or the inboard joint may come apart.**
- **Be careful not to damage the inboard joint using the pry bar.**

Fig. 1731: Prying Inboard Joint Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A).

Fig. 1732: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Left Differential Oil Seal
    1. Remove the oil seal (A) using the pry bar (B).

NOTE: **Be careful not to damage the transmission housing while removing the oil seal.**

Fig. 1733: Removing Oil Seal Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Left Differential Oil Seal
    1. Install a new oil seal (A) flush with the transmission housing using the driver handle and the oil seal driver attachment.

NOTE: **Apply a light coat of clean ATF on oil seal before installation.**

Fig. 1734: Installing Oil Seal Flush With Transmission Housing Using Driver Handle And Oil Seal Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Left Front Driveshaft, Inboard Side - Reconnection
    1. Install a new set ring (A) into the set ring groove (B) of the driveshaft.

Fig. 1735: Identifying Set Ring And Set Ring Groove Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Clean the areas where the driveshaft contacts the differential thoroughly with solvent, and dry them with compressed air.

NOTE: **Do not wash the rubber parts with solvent.**

3. Insert the inboard end (A) of the driveshaft into the differential (B) until the set ring (C) locks in the groove (D).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seal.

Fig. 1736: Inserting Inboard End Of Driveshaft Into Differential Until Set Ring Locks In Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Lower Ball Joint Lower Arm Side - Reconnection
   1. Connect the front lower ball joint (A) to the lower arm.
   2. Install the new flange nuts and the new flange bolt in the sequence shown.

Fig. 1737: Identifying Front Lower Ball Joint, Flange Nuts And Bolt Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield

1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1738: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Front Wheel
    1. Install the left front wheel.

Fig. 1739: Identifying Left Front Wheel And Studs With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
7. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1740: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF

DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 1741: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1742: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1743: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

9. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1744: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).

Fig. 1745: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1746: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
11. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

       Caster angle:

       2WD:

       With 16 inch wheel: 2 ° 44 '±30 '

       Without 16 inch wheel: 2 ° 50 '±30 '

       AWD/4WD:

       With 16 inch wheel: 2 ° 38 '±30 '

       Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

12. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

       Camber angle:

       2WD:

       Front:

       With 16 inch wheel: -0 ° 01 '±1 ° 00 '

       Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

       (Maximum difference between the front right and left side: 1 °00 ')

       Rear:

       With 16 inch wheel: -1 ° 06 '±45 '

       Without 16 inch wheel: -1 ° 12 '±45 '

       (Maximum difference between the front right and left side: 0 °45 ')

       AWD/4WD:

       Front:

       With 16 inch wheel: -0 ° 08 '±1 ° 00 '

       Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

       (Maximum difference between the front right and left side: 1 °00 ')

       Rear:

       With 16 inch wheel: -0 ° 50 '±45 '

       Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

13. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

14. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

Fig. 1747: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

15. Test Drive
    1. Test-drive the vehicle.
16. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1748: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 1749: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ATF Warmer - Move
    1. Remove the bolts (A) securing the ATF warmer (B), and move it out of the way.

NOTE: **Be careful not to damage the lines and fin part of the ATF warmer when moving ATF warmer.**

Fig. 1750: Removing ATF Warmer With bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 1751: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).
    3. Check the connector (D) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1752: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ATF Warmer - Move
    1. Install the ATF warmer (A).

Fig. 1753: Identifying ATF Warmer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 1754: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARK PIN SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1755: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 1756: Identifying Front Console Covers And Clips (Left Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1757: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 1758: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 1759: Identifying Center Lower Cover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 1760: Identifying Center Console Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 1761: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 1762: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 1763: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 1764: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 1765: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 1766: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 1767: Rotating Socket Holder Retainer Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 1768: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Shift Lever Assembly
    1. Disconnect the shift lever connector.

Fig. 1769: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lever assembly.

Fig. 1770: Identifying Shift Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).
    2. Disconnect the D3 switch connector (B).

Fig. 1771: Identifying D3 Switch Connector And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 1772: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness

And Harness Guide With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T Gear Position Indicator Panel Assembly
    1. Remove the A/T gear position indicator panel light socket (A) from the A/T gear position indicator panel assembly (B).
    2. Unhook the A/T gear position indicator panel light harness (C) from the harness guide (D).
    3. Remove the A/T gear position indicator panel assembly by expanding the four lock tabs (E).

Fig. 1773: Removing A/T Gear Position Indicator Panel Assembly By Expanding Lock Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Park Pin Switch

NOTE:

- **The park pin switch (A) and the A/T gear position indicator panel light/D3 switch/shift lock solenoid harness (B) are not available separately from the shift lever/shift cable bracket (C); replace the park pin switch, the A/T gear position indicator panel light/D3 switch/shift lock solenoid harness, and the shift lever/shift cable bracket as an assembly.**
- **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble**

it.

1. Pull the shift lock solenoid (D) out by releasing the lock tab (E) using a screwdriver.

Fig. 1774: Pulling Out Shift Lock Solenoid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the shift lock solenoid (A).

NOTE: **The shift lock solenoid consists of the solenoid (B), the solenoid plunger (C), and the plunger spring (D).**

3. Disconnect the shift lock solenoid connector (E).

Fig. 1775: Identifying Shift Lock Solenoid, Connector, Solenoid Plunger And Plunger Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Park Pin Switch

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Connect the shift lock solenoid connector (A).
2. Install the shift lock solenoid (B) by aligning the joint of the shift lock solenoid plunger (C) with the tip of the shift lock stop (D).

NOTE: **The shift lock solenoid consists of the solenoid (E), the solenoid plunger (F), and the plunger spring (G).**

Fig. 1776: Identifying Shift Lock Solenoid, Connector, Solenoid Plunger, Solenoid And Plunger Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Gear Position Indicator Panel Assembly
    1. Install the A/T gear position indicator panel assembly (A) by aligning the four lock tabs (B).
    2. Hook the A/T gear position indicator panel light harness (C) to the harness guide (D).
    3. Install the A/T gear position indicator panel light socket (E).

Fig. 1777: Installing A/T Gear Position Indicator Panel Light Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 1778: Identifying Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness, Harness Guide And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 1779: Identifying D3 Switch Harness, Connector, Guide And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Lever Assembly
    1. Install the shift lever assembly.

Fig. 1780: Identifying Shift Lever Assembly And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the shift lever connector.

Fig. 1781: Identifying Shift Lever Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: **Do not hold the shift cable guide (B) to adjust the shift cable.**

Fig. 1782: Identifying Shift Cable And Shift Cable Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 1783: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift the shift lever to R.
6. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: **Use only a 6.0 mm (0.236 in) pin with no burrs.**

Fig. 1784: Inserting Pin Into Positioning Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Unlock the retainer lock (A).

Fig. 1785: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C)

between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 1786: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 1787: Aligning Shift Cable Slot Between Socket Holder And Socket Holder Retainer With Opening In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 1788: Pushing Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).

Fig. 1789: Identifying Shift Cable End Proper And Improper Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
- If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

12. Install the shift cable end nut (A).
13. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
14. Turn the ignition switch to ON (II).
15. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
16. Shift the shift lever to P.
17. Check that the shift lock works properly.
18. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.
19. Turn the ignition switch to LOCK (0).

Fig. 1790: Identifying Pin And Shift Cable End Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 1791: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Center Console

1. Install the center console (A).

Fig. 1792: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 1793: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 1794: Identifying Console Box Mat And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 1795: Identifying Center Console Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 1796: Identifying Center Lower Cover, Clips And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 1797: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 1798: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 1799: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1800: Identifying Shift Lever Panel, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

RIGHT A/T DIFFERENTIAL OIL SEAL REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Oil Seal Driver, 65 mm 07JAD-PL9A100

REMOVAL

1. Vehicle Lift

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Right Front Wheel
    1. Remove the right front wheel.

Fig. 1801: Identifying Right Front Wheel With Studs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1802: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1803: Identifying Drain Plug And Sealing Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Right Lower Ball Joint Lower Arm Side Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Disconnect the lower ball joint (C) from the lower arm.

Fig. 1804: Identifying Lower Ball Joint, Flange Bolt And Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driveshaft Front Right, Inboard Side - Disconnection
    1. Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a hammer.

NOTE: Do not pull on the driveshaft (B), or the inboard joint may come apart.

Fig. 1805: Driving Inboard Joint Of Intermediate Shaft Using Drift Punch And Hammer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A) from the intermediate shaft.

Fig. 1806: Identifying Set Ring Of Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Intermediate Shaft Assembly
   1. Remove the flange bolt (A) and the two dowel bolts (B).

Fig. 1807: Identifying Flange Bolt And Dowel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the oil seal (B).

Fig. 1808: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Warm Up TWC Bracket
    1. Remove the warm up TWC bracket (A).

Fig. 1809: Identifying Warm Up TWC Bracket With Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Engine Oil Filter and Filter Base
    1. Remove the engine oil filter base (A) and O-rings (B).

Fig. 1810: Identifying Engine Oil Filter Base And O-Rings With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Right Differential Oil Seal
    1. Remove the oil seal (A) using the pry bar (B).

NOTE: **Be careful not to damage the torque converter housing while removing the oil seal.**

This illustration shows AWD/4WD transmission.

Fig. 1811: Removing Oil Seal Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows AWD/4WD transmission .

INSTALLATION

1. Right Differential Oil Seal
    1. Install a new oil seal (A) flush with the torque converter housing using the 65 mm oil seal driver.

NOTE: Apply a light coat of clean ATF on oil seal before installation.

This illustration shows AWD/4WD transmission.

Fig. 1812: Installing Oil Seal Flush With Torque Converter Housing Using Oil Seal Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows AWD/4WD transmission .

2. Engine Oil Filter and Filter Base
    1. Install the engine oil filter base (A) using new O-rings (B).

Fig. 1813: Identifying Engine Oil Filter Base, O-Rings And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Warm Up TWC Bracket
    1. Install the warm up TWC bracket (A).

Fig. 1814: Identifying Warm Up TWC Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/T Intermediate Shaft Assembly
    1. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent, and dry them with compressed air.

        NOTE: Do not wash the rubber parts with solvent.

    2. Insert the intermediate shaft (A) into the differential correctly.

        NOTE: Insert the intermediate shaft carefully to prevent damaging the oil seal (B).

Fig. 1815: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Install the two dowel bolts (A) and the flange bolt (B).

Fig. 1816: Identifying Dowel Bolts And Flange Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driveshaft Front Right, Inboard Side - Reconnection
    1. Install a new set ring (A) into the set ring groove (B) of the intermediate shaft.

Fig. 1817: Identifying Set Ring And Set Ring Groove Of Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Apply 0.5-1.0 g (0.018-0.035 oz) of molybdenum grease to the whole splined surface (A) of the right driveshaft.
    3. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

Fig. 1818: Identifying Molybdenum Grease Applying Area On Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Clean the areas where the driveshaft contacts the intermediate shaft thoroughly with solvent, then dry them with compressed air.

NOTE: Do not wash the rubber parts with solvent.

5. Insert the inboard end (A) of the driveshaft into the intermediate shaft (B) until the set ring (C) locks in the groove (D).

Fig. 1819: Inserting Inboard End Of Driveshaft Into Intermediate Shaft Until Set Ring Locks In Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Right Lower Ball Joint Lower Arm Side Reconnection
    1. Connect the lower ball joint (A) to the lower arm.
    2. Install new flange nuts and a new flange bolt in the sequence shown.

Fig. 1820: Identifying Lower Ball Joint, Flange Nuts And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1821: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Right Front Wheel
    1. Install the right front wheel.

Fig. 1822: Identifying Right Front Wheel And Studs With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
10. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1823: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF

DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 1824: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1825: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1826: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan

comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

12. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1827: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

Fig. 1828: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Transmission damage.
- Vehicle does not move in any gear.
- Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.
- Engine vibrates at idle.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1829: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Engine Oil Level - Check
    1. Remove the dipstick, and wipe off the dipstick, then reinstall the dipstick.
    2. Remove the dipstick.
    3. Check the engine oil level. It should be between the upper mark (A) and the lower mark (B).
    4. If the engine oil level is near or below the lower mark check for oil leakage, and add the engine oil to bring it to the upper mark.

Fig. 1830: Checking Engine Oil Level
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

15. Caster - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

   Caster angle:

   2WD:

   With 16 inch wheel: 2 ° 44 '±30 '

   Without 16 inch wheel: 2 ° 50 '±30 '

   AWD/4WD:

   With 16 inch wheel: 2 ° 38 '±30 '

   Without 16 inch wheel: 2 ° 44 '±30 '

   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

16. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

   Camber angle:

   2WD:

   Front:

   With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

17. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

18. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

Fig. 1831: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

19. Test Drive
    1. Test-drive the vehicle.
20. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1832: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

SHIFT LEVER PANEL REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 1833: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 1834: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SHIFT SOLENOID VALVE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1835: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1836: Identifying Drain Plug And Sealing Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Dipstick Guide Tube
    1. Remove the ATF dipstick (yellow loop) (A).
    2. Remove the harness clamp (B).
    3. Remove the ATF dipstick guide tube (C).
    4. Remove the O-ring (D) from the ATF dipstick guide tube.

Fig. 1837: Identifying Harness Clamp, ATF Dipstick Guide Tube, O-Ring And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1838: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Solenoid Valve

NOTE: **Do not hold the shift solenoid valve connector to remove the shift solenoid valves. Be sure to hold the shift solenoid valve body.**

1. Disconnect the shift solenoid valve connectors:
   - BLU wire from shift solenoid valve A.
   - ORN wire from shift solenoid valve B.
   - GRN wire from shift solenoid valve C.
   - YEL, WHT, and WHT wires from shift solenoid valve D.
   - RED wire from shift solenoid valve E.
2. Remove shift solenoid valves A, B, C, D, and E by holding the shift solenoid valve body.
3. Remove the O-rings (F) from the shift solenoid valves.

Fig. 1839: Identifying Shift Solenoid Valves And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Solenoid Valve

NOTE: **Do not hold the shift solenoid valve connector to install the shift solenoid valves. Be sure to hold the shift solenoid valve body.**

1. Install new O-rings (two O-rings per solenoid valve) (F) on the shift solenoid valve.

NOTE: **A new solenoid valve comes with new O-rings. If you install a new solenoid valve, use the O-rings provided on it.**

2. Install shift solenoid valve D (black connector) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the servo body.
3. Install shift solenoid valve A (brown connector) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the bracket of shift solenoid valve D.

Fig. 1840: Identifying Shift Solenoid Valves And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do not install shift solenoid valve A before installing shift solenoid valve D. If shift solenoid valve A is installed before installing shift solenoid valve D, it may damage to hydraulic control system.**

4. Install shift solenoid valve E (black connector) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the servo body.
5. Install shift solenoid valve B (brown connector) by holding the shift solenoid valve body; be sure that the mounting bracket contacts to the bracket of shift solenoid valve E.

NOTE: **Do not install shift solenoid valve B before installing shift solenoid valve E. If shift solenoid valve B is installed before installing shift solenoid valve E, it may damage to hydraulic control system.**

6. Install shift solenoid valve C (brown connector) by holding the shift solenoid valve body; be sure

that the mounting bracket contacts to the servo body.

7. Connect the shift solenoid valve connectors:
    - BLU wire to shift solenoid valve A.
    - ORN wire to shift solenoid valve B.
    - GRN wire to shift solenoid valve C.
    - YEL, WHT, and WHT wires to shift solenoid valve D.
    - RED wire to shift solenoid valve E.

2. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1841: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.
    3. Install the harness clamp (C).
    4. Install the ATF dipstick (D).

Fig. 1842: Identifying O-Ring, ATF Dipstick Guide Tube, Harness Clamp, ATF Dipstick And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1843: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1844: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF

DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 1845: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1846: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1847: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan

comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

7. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1848: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**

- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

Fig. 1849: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1850: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1851: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

SHIFT SOLENOID WIRE HARNESS REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1852: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 1853: Identifying Drain Plug And Sealing Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Dipstick Guide Tube
    1. Remove the ATF dipstick (yellow loop) (A).
    2. Remove the harness clamp (B).
    3. Remove the ATF dipstick guide tube (C).
    4. Remove the O-ring (D) from the ATF dipstick guide tube.

Fig. 1854: Identifying Harness Clamp, ATF Dipstick Guide Tube, O-Ring And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1855: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Solenoid Wire Harness
    1. Disconnect the connectors (A).
    2. Remove the shift solenoid wire harness (B).
    3. Remove the O-ring (C) from the shift solenoid wire harness.

Fig. 1856: Identifying Shift Solenoid Wire Harness, Connectors And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Shift Solenoid Wire Harness
    1. Install a new O-ring (F) on the shift solenoid wire harness (G).
    2. Install the shift solenoid wire harness.
    3. Connect the shift solenoid valve connectors:

Fig. 1857: Identifying O-Ring, Connector, Shift Solenoid Wire Harness And Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- BLU wire to shift solenoid valve A.
- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- YEL, WHT, and WHT wires to shift solenoid valve D.
- RED wire to shift solenoid valve E.

    4. Check the connector (H) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.
2. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1858: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.
    3. Install the harness clamp (C).
    4. Install the ATF dipstick (D).

Fig. 1859: Identifying O-Ring, ATF Dipstick Guide Tube, Harness Clamp, ATF Dipstick And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 1860: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 1861: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF

DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Fig. 1862: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1863: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1864: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan

comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

7. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 1865: Identifying Notch, Tab And ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**

- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

Fig. 1866: Identifying Upper And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 1867: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 1868: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

TORQUE CONVERTER HOUSING COUNTERSHAFT BEARING

REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

	Adjustable Bearing Puller, 25-40 mm 07736-A01000B(1)
	Driver Handle, 15 x 135L 07749-0010000

	
	Bearing Driver Attachment, 62 x 68 mm 07746-0010500
(1) Must be used with commercially available 3/8"-16 slide hammer	

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 1869: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 1870: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 1871: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 1872: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 1873: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 1874: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 1875: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 1876: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF

Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 1877: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 1878: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 1879: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover

1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1880: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 1881: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 1882: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 1883: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: Keep all of the chiseled particles out of the transmission.

Fig. 1884: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 1885: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).

7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 1886: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 1887: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).

14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 1888: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

    NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).

Fig. 1889: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 1890: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 1891: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 1892: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 1893: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 1894: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 1895: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 1896: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 1897: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 1898: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 1899: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Regulator Valve Body
    1. Remove ATF joint pipe A.
    2. Remove ATF joint pipe B.

Fig. 1900: Identifying ATF Joint Pipes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the regulator valve body (A).

Fig. 1901: Identifying Regulator Valve Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the stator shaft (A).
5. Remove the O-ring (B) from the stator shaft.
6. Remove the stator shaft stop (C).

Fig. 1902: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the regulator separator plate (A) and the dowel pins (B).

Fig. 1903: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. ATF Strainer
    1. Remove the ATF strainer (A) and the O-ring (B).

Fig. 1904: Identifying ATF Strainer And O-Ring With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Clean the inlet opening (A) of the ATF strainer (B) thoroughly with compressed air, then check that it is in good condition and that the inlet opening is not clogged.

3. Test the ATF strainer by pouring clean ATF through the inlet opening, and replace it if it is clogged or damaged.

Fig. 1905: Identifying Inlet Opening Of ATF Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Servo Body
    1. Remove the servo body (A).

Fig. 1906: Identifying Servo Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the servo separator plate (A) and the dowel pins (B).

Fig. 1907: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Main Valve Body
    1. Remove the cooler check valve spring (A) and the cooler check valve (B).
    2. Remove the main valve body (C).

NOTE: **Do not let the check balls (D) fall out, and do not use a magnet to remove the check balls, it may magnetize them.**

Fig. 1908: Identifying Cooler Check Valve, Spring, Main Valve Body And Check Balls
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the ATF pump driven gear shaft (A).

4. Remove the ATF pump drive gear (B) and the ATF pump driven gear (C).

Fig. 1909: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the main separator plate (A) and the dowel pins (B).

Fig. 1910: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Torque Converter Housing Countershaft Bearing
    1. Remove the countershaft bearing (A) using the 25-40 mm adjustable bearing puller and a commercially available 3/8"-16 slide hammer (B).
    2. Remove the ATF guide plate (C), and check it for wear and damage. If the guide plate is worn or damaged, replace it.

Fig. 1911: Removing Countershaft Bearing Using Adjustable Bearing Puller And Commercially Available Slide Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1912: Identifying ATF Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Torque Converter Housing Countershaft Bearing
    1. Install the ATF guide plate (A) and a new countershaft bearing (B).

Fig. 1913: Identifying ATF Guide Plate And Countershaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the countershaft bearing securely in the torque converter housing using the driver handle and the 62 x 68 mm bearing driver attachment.

Fig. 1914: Installing Countershaft Bearing Securely In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make sure that the bearing outer race notch-cut (A) is installed at a height of 0-0.05 mm (0-0.0020 in) (B) above the torque converter housing surface (C).

NOTE: **Do not install the countershaft bearing higher than 0.05 mm (0.002 in) above the torque converter housing surface.**

Fig. 1915: Identifying Bearing Outer Race Notch-Cut Installation Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Main Valve Body
    1. Install the main separator plate (A) and the dowel pins (B).

Fig. 1916: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the ATF pump drive gear (A) and the ATF pump driven gear (B).

NOTE: **Install the ATF pump driven gear with its grooved and chamfered side facing down.**

    3. Install the ATF pump driven gear shaft (C).

Fig. 1917: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1918: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the main valve body (A).

NOTE: Make sure that the check balls (B) are in the main valve body.

5. Make sure the ATF pump drive gear (C) rotates smoothly in the normal operating direction, and the ATF pump driven gear shaft (D) moves smoothly in the axial and normal operating direction.
6. If the ATF pump drive gear and the ATF pump driven gear shaft do not move smoothly, loosen the main valve body bolts. Realign the ATF pump driven gear shaft, and retighten the bolts to the specified torque, then recheck.

NOTE: Failure to align the ATF pump driven gear shaft correctly will result in a seized ATF pump drive gear or ATF pump driven gear shaft.

7. Install the cooler check valve (E) and the cooler check valve spring (F).

Fig. 1919: Identifying Main Valve Body, Check Balls, Cooler Check Valve And Cooler Check Valve Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1920: Rotating ATF Pump Drive Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Servo Body
    1. Install the servo separator plate (A) and the dowel pins (B).

Fig. 1921: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the servo body (A).

NOTE: **Do not install the servo body mounting bolts to the baffle plate bolt holes (B) and the ATF strainer bolt holes (C) in this step.**

Fig. 1922: Identifying Servo Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1923: Identifying Baffle Plate Bolt Holes And ATF Strainer Bolt Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF Strainer
    1. Install the ATF strainer (A) using a new O-ring (B).

Fig. 1924: Identifying ATF Strainer, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Regulator Valve Body
    1. Install the regulator separator plate (A) and the dowel pins (B).

Fig. 1925: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new O-ring (A) on the stator shaft (B).
3. Install the stator shaft.
4. Install the stator shaft stop (C).

Fig. 1926: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the regulator valve body (A).

Fig. 1927: Identifying Regulator Valve Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install ATF joint pipe B.
7. Install ATF joint pipe A.

Fig. 1928: Identifying ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 1929: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 1930: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 1931: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 1932: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 1933: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1934: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 1935: Prying Up Lock Tab Of Lock Washer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 1936: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 1937: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1938: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 1939: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 1940: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

Fig. 1941: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 1942: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop,

Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.

Fig. 1943: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).
14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 1944: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 1945: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 1946: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 1947: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 1948: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 1949: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 1950: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 1951: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 1952: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 1953: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 1954: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 1955: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 1956: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 1957: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 1958: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 1959: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 1960: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 1961: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 1962: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 1963: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 1964: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TORQUE CONVERTER HOUSING MAINSHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101
	Housing Puller 07HAC-PK40102

	Adjustable Bearing Puller, 25-40 mm 07736-A01000B(1)
	Driver Handle, 15 x 135L 07749-0010000

	
	Bearing Driver Attachment, 62 x 68 mm 07746-0010500
	Bearing Driver Attachment, 72 x 75 mm 07746-0010600

(1) Must be used with commercially available 3/8"-16 slide hammer

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 1965: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 1966: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 1967: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 1968: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 1969: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).
    2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 1970: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-

Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 1971: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 1972: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 1973: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 1974: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube
    1. Remove the ATF dipstick guide tube (A).
    2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 1975: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 1976: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 1977: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 1978: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 1979: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 1980: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 1981: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 1982: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 1983: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 1984: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

Fig. 1985: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 1986: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 1987: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 1988: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 1989: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 1990: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 1991: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 1992: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 1993: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 1994: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 1995: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Regulator Valve Body
    1. Remove ATF joint pipe A.
    2. Remove ATF joint pipe B.

Fig. 1996: Identifying ATF Joint Pipes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the regulator valve body (A).

Fig. 1997: Identifying Regulator Valve Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the stator shaft (A).
5. Remove the O-ring (B) from the stator shaft.
6. Remove the stator shaft stop (C).

Fig. 1998: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the regulator separator plate (A) and the dowel pins (B).

Fig. 1999: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. ATF Strainer
    1. Remove the ATF strainer (A) and the O-ring (B).

Fig. 2000: Identifying ATF Strainer And O-Ring With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Clean the inlet opening (A) of the ATF strainer (B) thoroughly with compressed air, then check that it is in good condition and that the inlet opening is not clogged.

3. Test the ATF strainer by pouring clean ATF through the inlet opening, and replace it if it is clogged or damaged.

Fig. 2001: Identifying Inlet Opening Of ATF Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Servo Body
    1. Remove the servo body (A).

Fig. 2002: Identifying Servo Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the servo separator plate (A) and the dowel pins (B).

Fig. 2003: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Main Valve Body
    1. Remove the cooler check valve spring (A) and the cooler check valve (B).
    2. Remove the main valve body (C).

NOTE: **Do not let the check balls (D) fall out, and do not use a magnet to remove the check balls, it may magnetize them.**

Fig. 2004: Identifying Cooler Check Valve, Spring, Main Valve Body And Check Balls
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the ATF pump driven gear shaft (A).

4. Remove the ATF pump drive gear (B) and the ATF pump driven gear (C).

Fig. 2005: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the main separator plate (A) and the dowel pins (B).

Fig. 2006: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Mainshaft Oil Seal
    1. Remove the mainshaft oil seal (A).

Fig. 2007: Identifying Mainshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Torque Converter Housing Mainshaft Bearing
    1. Remove the mainshaft bearing (A) using the 25-40 mm adjustable bearing puller and a commercially available 3/8"-16 slide hammer (B).

Fig. 2008: Removing Mainshaft Bearing Using Adjustable Bearing Puller And Commercially Available Slide Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Torque Converter Housing Mainshaft Bearing
    1. Install a new mainshaft bearing (A) until it bottoms in the torque converter housing using the driver handle and the 62 x 68 mm bearing driver attachment.

Fig. 2009: Installing Mainshaft Bearing Until It Bottoms In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mainshaft Oil Seal
    1. Install a new mainshaft oil seal (A) flush with the torque converter housing using the driver handle and the 72 x 75 mm bearing driver attachment.

NOTE: **Do not drive the oil seal into the torque converter housing until it bottoms out; it will block the fluid return passage and cause transmission damage.**

Fig. 2010: Installing Mainshaft Oil Seal Flush With Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Main Valve Body
    1. Install the main separator plate (A) and the dowel pins (B).

Fig. 2011: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the ATF pump drive gear (A) and the ATF pump driven gear (B).

NOTE: **Install the ATF pump driven gear with its grooved and chamfered side facing down.**

3. Install the ATF pump driven gear shaft (C).

Fig. 2012: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2013: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the main valve body (A).

NOTE: **Make sure that the check balls (B) are in the main valve body.**

5. Make sure the ATF pump drive gear (C) rotates smoothly in the normal operating direction, and the ATF pump driven gear shaft (D) moves smoothly in the axial and normal operating direction.
6. If the ATF pump drive gear and the ATF pump driven gear shaft do not move smoothly, loosen the

main valve body bolts. Realign the ATF pump driven gear shaft, and retighten the bolts to the specified torque, then recheck.

NOTE: **Failure to align the ATF pump driven gear shaft correctly will result in a seized ATF pump drive gear or ATF pump driven gear shaft.**

7. Install the cooler check valve (E) and the cooler check valve spring (F).

Fig. 2014: Identifying Main Valve Body, Check Balls, Cooler Check Valve And Cooler Check Valve Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2015: Rotating ATF Pump Drive Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Servo Body
    1. Install the servo separator plate (A) and the dowel pins (B).

Fig. 2016: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the servo body (A).

NOTE: **Do not install the servo body mounting bolts to the baffle plate bolt holes (B) and the ATF strainer bolt holes (C) in this step.**

Fig. 2017: Identifying Servo Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2018: Identifying Baffle Plate Bolt Holes And ATF Strainer Bolt Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF Strainer
    1. Install the ATF strainer (A) using a new O-ring (B).

Fig. 2019: Identifying ATF Strainer, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Regulator Valve Body
    1. Install the regulator separator plate (A) and the dowel pins (B).

Fig. 2020: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install a new O-ring (A) on the stator shaft (B).
    3. Install the stator shaft.
    4. Install the stator shaft stop (C).

Fig. 2021: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the regulator valve body (A).

Fig. 2022: Identifying Regulator Valve Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install ATF joint pipe B.
7. Install ATF joint pipe A.

Fig. 2023: Identifying ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 2024: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 2025: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 2026: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 2027: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 2028: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 2029: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 2030: Prying Up Lock Tab Of Lock Washer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 2031: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 2032: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2033: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 2034: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

Fig. 2035: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.

Fig. 2036: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 2037: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).

Fig. 2038: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:

- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 2039: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 2040: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 2041: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 2042: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 2043: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 2044: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 2045: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 2046: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 2047: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 2048: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 2049: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 2050: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 2051: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 2052: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 2053: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 2054: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2055: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 2056: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2057: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2058: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 2059: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TORQUE CONVERTER HOUSING MAINSHAFT OIL SEAL REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Oil Seal Driver C 070AD-RJC0130

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Mainshaft Oil Seal
    1. Remove the mainshaft oil seal (A) using a commercially available oil seal remover.

NOTE: Be careful not to damage the torque converter housing and mainshaft when removing the oil seal.

Fig. 2060: Removing Mainshaft Oil Seal Using Commercially Available Oil Seal Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: The illustration shows AWD/4WD transmission.

1. Mainshaft Oil Seal
    1. Install a new mainshaft oil seal (A) flush with the torque converter housing using oil seal driver C.

NOTE: Do not drive the oil seal into the torque converter housing until it bottoms out; it will block the fluid return passage and cause transmission damage.

Fig. 2061: Installing Mainshaft Oil Seal Flush With Torque Converter Housing Using Oil Seal Driver C
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TORQUE CONVERTER HOUSING SECONDARY SHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Mainshaft Holder 07GAB-PF50101

	Housing Puller 07HAC-PK40102
	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 62 x 68 mm 07746-0010500

REMOVAL

NOTE: The illustration shows AWD/4WD transmission.

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2062: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 2063: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 2064: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 2065: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Input Shaft (Mainshaft) Speed Sensor
    1. Remove the input shaft (mainshaft) speed sensor (A).
    2. Remove the O-ring (B) from the input shaft (mainshaft) speed sensor.

Fig. 2066: Identifying Input Shaft (Mainshaft) Speed Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Output Shaft (Countershaft) Speed Sensor
    1. Remove the output shaft (countershaft) speed sensor (A) and the sensor washer (B).

2. Remove the O-ring (C) from the output shaft (countershaft) speed sensor.

Fig. 2067: Identifying Output Shaft (Countershaft) Speed Sensor, Sensor Washer And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).

Fig. 2068: Identifying A/T Clutch Pressure Control Solenoid Valve, ATF Pipe, ATF Joint Pipes, O-Rings And Gasket With Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove the clamp bracket (A) and A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (D), the O-rings (E), and the gasket (F).

Fig. 2069: Identifying A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. ATF Inlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF inlet line (C).

Fig. 2070: Identifying ATF Inlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF Outlet Line
    1. Remove the banjo bolt (A) and the sealing washers (B).
    2. Remove the ATF outlet line (C).

Fig. 2071: Identifying ATF Outlet Line, Banjo Bolt And Sealing Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dipstick Guide Tube

1. Remove the ATF dipstick guide tube (A).
2. Remove the O-ring (B) from the ATF dipstick guide tube.

Fig. 2072: Identifying ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 2073: Identifying Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/T Shift Solenoid Wire Harness - Disconnection
    1. Disconnect the connectors.

Fig. 2074: Identifying A/T Shift Solenoid Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Remove the 6 x 201 mm ATF pipe (A).
    2. Remove the ATF lubrication pipe (B).
    3. Remove the 8 x 220 mm ATF pipe (C).
    4. Remove the 8 x 198 mm ATF pipes (D).

Fig. 2075: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.
    2. Engage the park pawl with the park gear.

Fig. 2076: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a chisel, cut the lock tab (A) of the locknut (B).

NOTE: **Keep all of the chiseled particles out of the transmission.**

Fig. 2077: Cutting Lock Tab Of Locknut Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the locknuts (A) and the conical spring washers (B) from each shaft.

NOTE:

- **The countershaft and secondary shaft locknuts have left-hand threads.**
- **Keep all of the chiseled particles out of the transmission.**
- **Clean the old locknuts; they are used to install the press fit idler gears and park gear.**

5. Remove the mainshaft holder.

Fig. 2078: Identifying Locknuts And Conical Spring Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
7. Pry down the lock tab (E) of the lock washer (F).
8. Remove the lock bolt (G) and the lock washer.
9. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 2079: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a spacer (A) on the countershaft (B).
11. Set a commercially available bearing puller (C) on the park gear (D).
12. Remove the park gear.

Fig. 2080: Setting Commercially Available Bearing Puller On Park Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install a puller (A) with two 6 x 1.0 mm bolts (B) on the mainshaft idler gear (C).
14. Set a spacer (D) between the puller and the mainshaft (E).
15. Remove the mainshaft idler gear.

Fig. 2081: Installing Puller With 6 X 1.0 mm Bolts On Mainshaft Idler Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Automatic Transmission Housing
    1. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the control shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

2. Remove the transmission housing mounting bolts (D) (2WD: 19 bolts, AWD/4WD: 20 bolts).
3. Install the housing puller over the mainshaft.
4. Remove the transmission housing (E) using the housing puller.
5. Remove the dowel pins (F) and the gasket (G).

Fig. 2082: Identifying Spring Pin, Selector Control Shaft, Transmission Housing Groove, Transmission Housing, Mounting Bolts And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2083: Installing Housing Puller Over Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. A/T Countershaft Reverse Gear
    1. Remove the countershaft reverse gear (A).
    2. Remove the needle bearing (B).

Fig. 2084: Identifying Countershaft Reverse Gear And Needle Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reverse Shift fork
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the reverse shift fork (D) and the reverse selector (E) together.

Fig. 2085: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Pry down the lock tab (A) of the lock washer (B).
2. Remove the lock bolt (C) and the lock washer.
3. Remove the selector control lever (D).

Fig. 2086: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Selector Control Shaft
    1. Unhook the detent arm spring (A).

Fig. 2087: Unhooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Separate the manual valve lever pin (A) on the selector control shaft (B) from the guide of the manual valve (C).

Fig. 2088: Separating Manual Valve Lever Pin On Selector Control Shaft From Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the selector control shaft (A).

Fig. 2089: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Turn the detent arm (A) away from the countershaft (B).

Fig. 2090: Turning Detent Arm Away From Countershaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together.

NOTE: Do not bump the countershaft on the baffle plate (D).

Fig. 2091: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Differential Assembly
    1. Remove the baffle plate (A).
    2. Remove the differential assembly (B).

Fig. 2092: Identifying Differential Assembly And Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Regulator Valve Body
    1. Remove ATF joint pipe A.
    2. Remove ATF joint pipe B.

Fig. 2093: Identifying ATF Joint Pipes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the regulator valve body (A).

Fig. 2094: Identifying Regulator Valve Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the stator shaft (A).
5. Remove the O-ring (B) from the stator shaft.
6. Remove the stator shaft stop (C).

Fig. 2095: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the regulator separator plate (A) and the dowel pins (B).

Fig. 2096: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. ATF Strainer
    1. Remove the ATF strainer (A) and the O-ring (B).

Fig. 2097: Identifying ATF Strainer And O-Ring With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Clean the inlet opening (A) of the ATF strainer (B) thoroughly with compressed air, then check that it is in good condition and that the inlet opening is not clogged.

3. Test the ATF strainer by pouring clean ATF through the inlet opening, and replace it if it is clogged or damaged.

Fig. 2098: Identifying Inlet Opening Of ATF Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Servo Body
    1. Remove the servo body (A).

Fig. 2099: Identifying Servo Body With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the servo separator plate (A) and the dowel pins (B).

Fig. 2100: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Main Valve Body
    1. Remove the cooler check valve spring (A) and the cooler check valve (B).
    2. Remove the main valve body (C).

NOTE: **Do not let the check balls (D) fall out, and do not use a magnet to remove the check balls, it may magnetize them.**

Fig. 2101: Identifying Cooler Check Valve, Spring, Main Valve Body And Check Balls
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the ATF pump driven gear shaft (A).

4. Remove the ATF pump drive gear (B) and the ATF pump driven gear (C).

Fig. 2102: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the main separator plate (A) and the dowel pins (B).

Fig. 2103: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Torque Converter Housing Secondary Shaft Bearing
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the set plate bolt (C), the lock washer, and the bearing set plate (D).

Fig. 2104: Prying Down Lock Tab Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the secondary shaft bearing (A) by heating the torque converter housing to about 212 °F (100 °C) using a heat gun (B).

NOTE:

- **Do not heat the torque converter housing more than 212 °F (100 °C).**
- **Let the torque converter housing cool to normal temperature before installing the secondary shaft bearing.**

4. Remove the ATF guide collar (C) with the O-rings (D).
5. Clean and dry the ATF guide collar surfaces and the torque converter housing if necessary.

Fig. 2105: Removing Secondary Shaft Bearing By Heating Torque Converter Housing Using Heat Gun
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Apply a light coat of clean ATF on all moving parts before installation.**
- **The illustration shows AWD/4WD transmission.**

1. Torque Converter Housing Secondary Shaft Bearing
    1. Apply a light coat of clean ATF on new O-rings (A).
    2. Install the O-rings on the ATF guide collar (B).
    3. Install the ATF guide collar by aligning the tabs (C) with the grooves (D).
    4. Install a new secondary shaft bearing (E) in the direction shown.

Fig. 2106: Identifying ATF Guide Collar, O-Rings, Tabs, Grooves And Secondary Shaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the secondary shaft bearing securely in the torque converter housing using the driver handle and the 62 x 68 mm bearing driver attachment.

Fig. 2107: Installing Secondary Shaft Bearing Securely In Torque Converter Housing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check that the bearing groove aligns with the torque converter housing surface, then install the bearing set plate (A) with aligning the bearing groove.
7. Install the set plate bolt (B) using a new lock washer (C).
8. Pry up the lock tab (D) of the lock washer against the bolt head.

Fig. 2108: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Main Valve Body
    1. Install the main separator plate (A) and the dowel pins (B).

Fig. 2109: Identifying Main Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the ATF pump drive gear (A) and the ATF pump driven gear (B).

NOTE: **Install the ATF pump driven gear with its grooved and chamfered side facing down.**

3. Install the ATF pump driven gear shaft (C).

Fig. 2110: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2111: Identifying ATF Pump Driven Gear Shaft, ATF Pump Drive And Driven Gear (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the main valve body (A).

NOTE: **Make sure that the check balls (B) are in the main valve body.**

5. Make sure the ATF pump drive gear (C) rotates smoothly in the normal operating direction, and the ATF pump driven gear shaft (D) moves smoothly in the axial and normal operating direction.
6. If the ATF pump drive gear and the ATF pump driven gear shaft do not move smoothly, loosen the

main valve body bolts. Realign the ATF pump driven gear shaft, and retighten the bolts to the specified torque, then recheck.

NOTE: **Failure to align the ATF pump driven gear shaft correctly will result in a seized ATF pump drive gear or ATF pump driven gear shaft.**

7. Install the cooler check valve (E) and the cooler check valve spring (F).

Fig. 2112: Identifying Main Valve Body, Check Balls, Cooler Check Valve And Cooler Check Valve Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2113: Rotating ATF Pump Drive Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Servo Body
    1. Install the servo separator plate (A) and the dowel pins (B).

Fig. 2114: Identifying Servo Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the servo body (A).

NOTE: **Do not install the servo body mounting bolts to the baffle plate bolt holes (B) and the ATF strainer bolt holes (C) in this step.**

Fig. 2115: Identifying Servo Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2116: Identifying Baffle Plate Bolt Holes And ATF Strainer Bolt Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF Strainer
    1. Install the ATF strainer (A) using a new O-ring (B).

Fig. 2117: Identifying ATF Strainer, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Regulator Valve Body
    1. Install the regulator separator plate (A) and the dowel pins (B).

Fig. 2118: Identifying Regulator Separator Plate And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install a new O-ring (A) on the stator shaft (B).
    3. Install the stator shaft.
    4. Install the stator shaft stop (C).

Fig. 2119: Identifying Stator Shaft, O-Ring And Stator Shaft Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the regulator valve body (A).

Fig. 2120: Identifying Regulator Valve Body And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install ATF joint pipe B.
7. Install ATF joint pipe A.

Fig. 2121: Identifying ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Differential Assembly
    1. Install the differential assembly (A).
    2. Install the baffle plate (B).

Fig. 2122: Identifying Differential Assembly, Baffle Plate And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Mainshaft and Countershaft and Secondary Shaft Assembly
    1. Be sure that each shaft is assembled. Also be sure that new sealing rings are installed on the mainshaft and the secondary shaft.
    2. Join the mainshaft subassembly (A), the countershaft subassembly (B), and the secondary shaft subassembly (C) together, and install them.

    NOTE: Do not bump the countershaft on the baffle plate (D).

    3. Make sure the countershaft subassembly and the differential assembly (E) are clear of the baffle plate.

Fig. 2123: Identifying Mainshaft Subassembly, Countershaft Subassembly, Secondary Shaft Subassembly, Baffle Plate And Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Selector Control Shaft
    1. Install the selector control shaft (A).

Fig. 2124: Identifying Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the manual valve lever pin (A) on the selector control shaft (B) with the guide of the manual

valve (C).

Fig. 2125: Aligning Manual Valve Lever Pin On Selector Control Shaft With Guide Of Manual Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hook the detent arm spring (A).

Fig. 2126: Hooking Detent Arm Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 2127: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Reverse Shift fork
    1. Install the reverse shift fork (A) and the reverse selector (B) together.
    2. Install the lock bolt (C) using a new lock washer (D).
    3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 2128: Prying Up Lock Tab Of Lock Washer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T Countershaft Reverse Gear
    1. Install the needle bearing (A).
    2. Install the countershaft reverse gear (B).

Fig. 2129: Identifying Needle Bearing And Countershaft Reverse Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Automatic Transmission Housing
    1. Install the three dowel pins (A) and a new gasket (B).
    2. Align the spring pin (C) of the selector control shaft (D) with the transmission housing groove (E).

NOTE: **Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the selector control shaft and the transmission range switch.**

    3. Place the transmission housing (F) on the torque converter housing (G).

NOTE: **Do not install the input shaft (mainshaft) speed sensor and the output shaft (countershaft) speed sensor before installing the transmission housing.**

    4. Wrap the tip of a screwdriver with tape so the reverse idler gear teeth do not get damaged. Engage the reverse idler gear (H) with the reverse gears (I) by rotating the idler gear using the screwdriver.
    5. Make sure the transmission housing is securely seated so there is no clearance between the transmission housing and the torque converter housing.

6. Install the transmission hanger (J), and tighten the transmission housing mounting bolts (2WD: 19 bolts, AWD/4WD: 20 bolts) in at least two steps, in a crisscross pattern.

Fig. 2130: Identifying Dowel Pins, Gasket, Spring Pin, Selector Control Shaft, Transmission Housing Groove And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2131: Engaging Reverse Idler Gear With Reverse Gears By Rotating Idler Gear Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. End Cover Idler Gear Assembly
    1. Install the mainshaft holder onto the mainshaft.

Fig. 2132: Installing Mainshaft Holder Onto Mainshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lubricate the following parts with ATF:
        - Splines and threads of the mainshaft.
        - Splines of the mainshaft idler gear.

- The old conical spring washer and the old locknut.

3. Install the mainshaft idler gear (A), the old conical spring washer (B), and the old locknut (C), and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the mainshaft idler gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**

Fig. 2133: Identifying Mainshaft Idler Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lubricate the following parts with ATF:
   - Splines and threads of the countershaft.
   - Splines of the park gear.
   - The old conical spring washer and the old locknut.
5. Install the park gear (A), the old conical spring washer (B), and the old locknut (C).
6. Install the park lever spring (D), the park lever (E), and the park lever stop (F).
7. Install the lock bolt (G) using a new lock washer (H).

Fig. 2134: Identifying Park Gear, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do not bend the lock tab of the lock washer until inspect the park lever stop.**

8. Install the park pawl shaft (I), the park pawl spring (J), the park pawl (K), and the stop shaft (L).
9. Lift the park pawl up, and engage it with the park gear, and tighten the locknut to 225 N.m (23.0 kgf.m, 166 lbf.ft).

NOTE:

- **Do not tap the park gear to install.**
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **Countershaft locknut has left-hand threads.**

Fig. 2135: Identifying Park Pawl Shaft, Park Lever Spring, Park Lever, Park Lever Stop, Lock Bolt, Lock Washer With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the old locknuts and the old conical spring washers from the mainshaft and the countershaft.
11. Lubricate the following parts with ATF:
    - Splines and threads of the mainshaft, the countershaft, and the secondary shaft.
    - New conical spring washers and new locknuts.
    - Areas where the conical spring washers contact the mainshaft idler gear and the park gear.
12. Install new conical spring washers (A) in the direction shown.
13. Install a new mainshaft locknut (B), a new countershaft locknut (C), and a new secondary shaft locknut (D).

Fig. 2136: Identifying Conical Spring Washers, Mainshaft Locknut, Countershaft Locknut And Secondary Shaft Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tighten the locknuts to 167 N.m (17.0 kgf.m, 123 lbf.ft).

NOTE:
- **Use a torque wrench to tighten the locknut. Do not use an impact wrench.**
- **The countershaft and secondary shaft locknuts have left-hand threads.**

15. Remove the mainshaft holder.
16. Stake the locknuts into the shafts to a depth (A) of 0.7-1.3 mm (0.027-0.051 in) using a 3.5 mm punch (B).

Fig. 2137: Staking Locknuts Into Shafts Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set the park lever in the P position.
18. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

    Standard: 57.7-58.7 mm (2.272-2.311 in)

Fig. 2138: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the measurement is out of the standard, select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)

2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 2139: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. After replacing the park lever stop, make sure the distance is within the tolerance.
21. Pry up the lock tab (A) of the lock washer against the bolt head.

Fig. 2140: Prying Up Lock Tab Of Lock Washer Against Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. ATF Feed Pipe/Lubrication Pipe
    1. Install the 6 x 201 mm ATF pipe (A).
    2. Install the ATF lubrication pipe (B).
    3. Install the 8 x 220 mm ATF pipe (C).
    4. Install the 8 x 198 mm ATF pipes (D).

Fig. 2141: Identifying ATF Feed Pipes And Lubrication Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T Shift Solenoid Wire Harness - Reconnection
    1. Connect the shift solenoid valve connectors:
        - BLU wire to shift solenoid valve A.
        - ORN wire to shift solenoid valve B.
        - GRN wire to shift solenoid valve C.
        - YEL, WHT, and WHT wires to shift solenoid valve D.
        - RED wire to shift solenoid valve E.

Fig. 2142: Identifying Shift Solenoid Valves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 2143: Identifying Shift Solenoid Valve Cover, Dowel Pins, Gasket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.

Fig. 2144: Identifying ATF Dipstick Guide Tube, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. ATF Outlet Line
    1. Install the ATF outlet line (A) using new sealing washers (B).

Fig. 2145: Identifying ATF Outlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. ATF Inlet Line
    1. Install the ATF inlet line (A) using new sealing washers (B).

Fig. 2146: Identifying ATF Inlet Line, Sealing Washers And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with the blue side toward the transmission housing, and Install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C with the clamp bracket (F).

Fig. 2147: Identifying Gasket, ATF Joint Pipes, O-Rings, A/T Clutch Pressure Control Solenoid Valves, Clamp Bracket And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with the blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.

Fig. 2148: Identifying A/T Clutch Pressure Control Solenoid Valve, Gasket, ATF Pipe, ATF Joint Pipes And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Output Shaft (Countershaft) Speed Sensor
    1. Install a new O-ring (A) on the output shaft (countershaft) speed sensor (B).
    2. Install the output shaft (countershaft) speed sensor and the sensor washer (C).

Fig. 2149: Identifying Output Shaft (Countershaft) Speed Sensor, O-Ring, Sensor Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Input Shaft (Mainshaft) Speed Sensor
    1. Install a new O-ring (A) on the input shaft (mainshaft) speed sensor (B).
    2. Install the input shaft (mainshaft) speed sensor.

Fig. 2150: Identifying Input Shaft (Mainshaft) Speed Sensor, O-Ring And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 2151: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 2152: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2153: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 2154: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2155: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2156: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 2157: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TORQUE CONVERTER HOUSING SELECTOR CONTROL SHAFT OIL SEAL REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Attachment, 22 x 24 mm 07746-001A800

REMOVAL

Except 2WD of USA Produced Models

1. Selector Control Lever (Except 2WD of USA Produced Models)
    1. Pry down the lock tab (A) of the lock washer (B).
    2. Remove the lock bolt (C) and the lock washer.
    3. Remove the selector control lever (D).

Fig. 2158: Prying Down Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Torque Converter Selector Control Shaft Oil Seal
    1. Remove the selector control shaft oil seal (A).

NOTE: **Be careful not to damage the selector control shaft and the torque converter housing when removing the oil seal.**

This illustration shows the AWD/4WD transmission.

Fig. 2159: Identifying Selector Control Shaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Torque Converter Selector Control Shaft Oil Seal
    1. Install a new selector control shaft oil seal (A) to a depth (B) of 0.5-1.5 mm (0.020-0.059 in) below the torque converter housing surface using the 22 x 24 mm attachment.

This illustration shows the AWD/4WD transmission.

Fig. 2160: Installing Selector Control Shaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Selector Control Lever (Except 2WD of USA Produced Models)

Except 2WD of USA Produced Models

1. Install the control lever (A) over the selector control shaft (B).
2. Install the lock bolt (C) using a new lock washer (D).
3. Pry up the lock tab (E) of the lock washer against the bolt head.

Fig. 2161: Prying Up Lock Tab Of Lock Washer (Except 2WD Of USA Produced Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION END COVER ATF FEED PIPE INSPECTION

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2162: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 2163: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 2164: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 2165: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF Feed Pipe
    1. Remove the snap ring (A).
    2. Remove the 3rd clutch feed pipe (B), the feed pipe flange (C), and the O-rings (D).

    NOTE: Replace the end cover, if the 1st clutch ATF feed pipe (E) replacement is required.

    3. Remove the snap ring (F).
    4. Remove the 5th clutch feed pipe (G), the feed pipe flange (H), and the O-rings (I).

Fig. 2166: Identifying 5th Clutch Feed Pipe, Feed Pipe Flange, O-Rings, Snap Ring, 3rd Clutch Feed Pipe And 1st Clutch ATF Feed Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. ATF Feed Pipe - Inspection
    1. Clean the fluid passage of the end cover, then check that it is not clogged.
    2. Check the 1st clutch ATF feed pipe, the 3rd clutch ATF feed pipe, the 5th clutch ATF feed pipe, and the feed pipe flanges for wear or damage. If the feed pipes and feed pipe flange are worn or damaged, replace the end cover.

    NOTE: The feed pipes, the feed pipe flange, and the end cover are supplied

as an assembly.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before installation.

1. ATF Feed Pipe
    1. Install a new O-ring (A) over the 3rd clutch feed pipe (B).
    2. Install the 3rd clutch feed pipe by aligning the feed pipe tabs (C) with the indentations in the end cover.
    3. Install a new O-ring (D), then install the feed pipe flange (E) over the 3rd clutch feed pipe.
    4. Secure the 3rd clutch feed pipe and the feed pipe flange with the snap ring (F).
    5. Install a new O-ring (G) over the 5th clutch feed pipe (H).
    6. Install the 5th clutch feed pipe by aligning the feed pipe tabs (I) with the indentations in the end cover.
    7. Install a new O-ring (J), then install the feed pipe flange (K) over the 5th clutch feed pipe.
    8. Secure the 5th clutch feed pipe and the feed pipe flange with the snap ring (L).

Fig. 2167: Identifying ATF Feed Pipe Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).

2. Install new O-rings (C) over the ATF pipes.
3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

<u>Fig. 2168: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 2169: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2170: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.

Fig. 2171: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2172: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the

bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2173: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Transmission Range Switch Cover
   1. Install the transmission range switch cover (A).

Fig. 2174: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque

Specification

TRANSMISSION END COVER IDLER GEAR SHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Adjustable Bearing Puller, 25-40 mm 07736-A01000B(1)

	Driver Handle, 15 x 135L 07749-0010000
	Bearing Driver Attachment, 52 x 55 mm 07746-0010400
(1) Must be used with commercially available 3/8"-16 slide hammer	

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2175: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 2176: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 2177: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 2178: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Transmission End Cover Idler Gear Shaft Bearing
    1. Remove the idler gear shaft bearing (A) using the 25-40 mm adjustable bearing puller and a commercially available 3/8"-16 slide hammer (B).

Fig. 2179: Removing Idler Gear Shaft Bearing Using Adjustable Bearing Puller And Commercially Available Slide Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before installation.

1. Transmission End Cover Idler Gear Shaft Bearing
    1. Install a new idler gear shaft bearing (A) using the driver handle and the 52 x 55 mm bearing driver attachment.

Fig. 2180: Installing Idler Gear Shaft Bearing Using Driver Handle And Bearing Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission End Cover

1. Install the dowel pins (A) and a new gasket (B).
2. Install new O-rings (C) over the ATF pipes.
3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 2181: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
   1. Install the clamp brackets (A).
   2. Install the transmission range switch subharness (B).

Fig. 2182: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2183: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.

Fig. 2184: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2185: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2186: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Transmission Range Switch Cover
   1. Install the transmission range switch cover (A).

Fig. 2187: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION END COVER PARK LEVER STOP INSPECTION AND ADJUSTMENT

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2188: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 2189: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 2190: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover

1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 2191: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

NOTE: Apply a light coat of clean ATF on all moving parts before installation.

1. Park Lever Stop - Inspection and Adjustment
    1. Set the park lever in the P position.
    2. Measure the distance (A) between the center of the park pawl shaft (B) and the center of the park lever roller pin (C) as shown.

       Standard: 57.7-58.7 mm (2.272-2.311 in)

    3. If the measurement is out of the standard, remove the park lever stop to adjust the distance.

Fig. 2192: Measuring Distance Between Center Of Park Pawl Shaft And Center Of Park Lever Roller Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the park pawl (A), the park pawl spring (B), the park pawl shaft (C), and the stop shaft (D).
5. Pry down the lock tap (E) of the lock washer (F).
6. Remove the lock bolt (G) and the lock washer.
7. Remove the park lever (H), the park lever stop (I), and the park lever spring (J).

Fig. 2193: Prying Down Lock Tap Of Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Select and install the appropriate park lever stop (A) from the table.

PARK LEVER STOP SPECIFICATION

Mark	B	C
1	11.00 mm (0.4331 in)	11.00 mm (0.4331 in)
2	10.80 mm (0.4252 in)	10.65 mm (0.4193 in)
3	10.60 mm (0.4173 in)	10.30 mm (0.4055 in)

Fig. 2194: Identifying Park Lever Stop Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. After replacing the park lever stop, make sure the distance is within the tolerance.

INSTALLATION

1. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 2195: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 2196: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2197: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.

Fig. 2198: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2199: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2200: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission Range Switch Cover
   1. Install the transmission range switch cover (A).

Fig. 2201: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION END COVER SELECTOR CONTROL SHAFT BEARING REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Remover Handle 07936-3710100

	Bearing Remover, 10 mm 07936-GE0A000
	Slide Hammer 07936-371020A
	Driver Handle, 15 x 135L 07749-0010000

	
	Attachment, 22 x 24 mm 07746-001A800

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2202: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Remove the transmission range switch (A).

Fig. 2203: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Remove the transmission range switch subharness (A).
    2. Remove the clamp brackets (B).

Fig. 2204: Identifying Transmission Range Switch Subharness And Clamp Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission End Cover
    1. Remove the end cover (A), the dowel pins (B), the O-rings (C), and the gasket (D).

Fig. 2205: Identifying Transmission End Cover, Dowel Pins, O-Rings And Gasket With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Selector Control Shaft Bearing
    1. Remove the selector control shaft bearing (A) using the 10 mm bearing remover, the remover handle, and the slide hammer.

NOTE: Be careful not to damage the selector control shaft oil seal when

removing the bearing.

Fig. 2206: Removing Selector Control Shaft Bearing Using Bearing Remover, Remover Handle And Slide Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before installation.

1. Selector Control Shaft Bearing
    1. Install a new selector control shaft bearing (A) flush with the end cover using the driver handle and the 22 x 24 mm attachment.

Fig. 2207: Installing Selector Control Shaft Bearing Flush With End Cover Using Driver Handle And Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission End Cover
    1. Install the dowel pins (A) and a new gasket (B).
    2. Install new O-rings (C) over the ATF pipes.
    3. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (F) (12 bolts).

Fig. 2208: Identifying Dowel Pins, Gasket, O-Rings, End Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Subharness
    1. Install the clamp brackets (A).
    2. Install the transmission range switch subharness (B).

Fig. 2209: Identifying Transmission Range Switch Subharness, Clamp Brackets And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2210: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.

Fig. 2211: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2212: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: Do not move the transmission range switch when tightening the

bolts.

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2213: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Transmission Range Switch Cover
   1. Install the transmission range switch cover (A).

TRANSMISSION END COVER SELECTOR CONTROL SHAFT OIL SEAL REPLACEMENT

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Attachment, 22 x 24 mm 07746-001A800

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2215: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Shift the shift lever to N.
    2. Remove the transmission range switch (A).

Fig. 2216: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission End Cover Selector Control Shaft Oil Seal
    1. Remove the selector control shaft oil seal (A).

NOTE: **Be careful not to damage the selector control shaft and the end cover when removing the oil seal.**

Fig. 2217: Identifying Selector Control Shaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transmission End Cover Selector Control Shaft Oil Seal
    1. Install a new selector control shaft oil seal (A) flush with the end cover using the 22 x 24 mm attachment.

Fig. 2218: Installing Selector Control Shaft Oil Seal Flush With End Cover Using Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2219: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 2220: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in

the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2221: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2222: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 2223: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After Installing Transmission Range Switch - Check
    1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
    2. Move the shift lever through all positions, and check the transmission range switch synchronization with the A/T gear position indicator.
    3. Check that the engine will start with the shift lever in P and N, and will not start in any other shift lever position.
    4. Check that the back-up lights come on when the shift lever is in R.
    5. Raise the vehicle on a lift, and make sure it is securely supported.
    6. Start the engine, and check the shift lever operation.

TRANSMISSION END CRANKSHAFT OIL SEAL REPLACEMENT - IN CAR

SPECIAL TOOL REQUIRED

Image	Description/Tool Number

	Driver Handle, 15 x 135L 07749-0010000
	Oil Seal Driver Attachment, 96 mm 07ZAD-PNAA100

REMOVAL

1. Drive Plate Assembly
    1. Remove the drive plate (A) and the washer (B).

Fig. 2224: Identifying Drive Plate And Washer With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Crankshaft Oil Seal Transmission Side
    1. Remove the transmission end crankshaft oil seal.

Fig. 2225: Identifying Transmission End Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Crankshaft Oil Seal Transmission Side
    1. Clean and dry the crankshaft oil seal housing.

2. Apply a light coat of new engine oil to the lip of the crankshaft oil seal.
3. Use the driver handle, 15 x 135L and the oil seal driver attachment, 96 mm to drive a new crankshaft oil seal (A) squarely into the engine block to the specified installed height.
4. Clean the excess oil off the crankshaft, and check that the oil seal lip is not distorted.

Fig. 2226: Driving Crankshaft Oil Seal Squarely Into Engine Block Using Driver Handle And Oil Seal Driver Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the distance between the engine block (A) and the crankshaft oil seal (B).

Oil Seal Installed Height: 0.2-1.2 mm (0.008-0.047 in)

Fig. 2227: Identifying Distance Between Engine Block And Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Drive Plate Assembly
    1. Install the drive plate (A) and the washer (B), and tighten the eight bolts in a crisscross pattern in at least two steps.

Fig. 2228: Identifying Drive Plate, Washer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION FLUID PRESSURE SWITCH A (2ND CLUTCH) REMOVAL AND INSTALLATION

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 2229: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Fluid Pressure Switch A (2nd Clutch)
    1. Remove transmission fluid pressure switch A (2nd clutch) and the sealing washer (B).

Fig. 2230: Identifying Transmission Fluid Pressure Switch (2nd Clutch) And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transmission Fluid Pressure Switch A (2nd Clutch)
    1. Install transmission fluid pressure switch A (2nd clutch) using a new sealing washer (B) by turning the metal part, not the plastic part.
    2. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2231: Identifying Transmission Fluid Pressure Switch (2nd Clutch), Sealing Washer And Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 2232: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION FLUID PRESSURE SWITCH B (3RD CLUTCH) REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 2233: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transmission Fluid Pressure Switch B (3rd Clutch)
    1. Remove transmission fluid pressure switch B (3rd clutch) and the sealing washer (A).

Fig. 2234: Identifying Transmission Fluid Pressure Switch (3rd Clutch) And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transmission Fluid Pressure Switch B (3rd Clutch)

1. Install transmission fluid pressure switch B (3rd clutch) using a new sealing washer (A) by turning the metal part, not the plastic part.
2. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2235: Identifying Transmission Fluid Pressure Switch (3rd Clutch), Sealing Washer, Connector And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 2236: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION MOUNT REMOVAL AND INSTALLATION

REMOVAL

1. Upper Torque Rod Mounting Bolt - Loosen
    1. Loosen the upper torque rod mounting bolt (A).

Fig. 2237: Identifying Upper Torque Rod Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 2238: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct,

Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Intake Air Duct
    1. Remove the intake air duct.

Fig. 2239: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

Fig. 2240: Identifying Negative And Positive Cable Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery
    1. Remove the battery setting plate (A) and the battery (B).

Fig. 2241: Identifying Battery And Battery Setting Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Battery Base Assembly
    1. Remove the battery base and the harness clamps.

Fig. 2242: Identifying Battery Base And Harness Clamps With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. PCM Assembly
    1. Remove the PCM cover (D).
    2. Disconnect PCM connectors A, B, and C.

    NOTE: PCM connectors A, B, and C have symbols (A=[], B= delta C=o) embossed on them for identification.

    3. Remove the PCM (E).

Fig. 2243: Identifying PCM, PCM Cover And PCM Connectors

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
9. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 2244: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Lower Torque Rod Mounting Bolt - Loosen
    1. Loosen the lower torque rod mounting bolt (A).

Fig. 2245: Identifying Lower Torque Rod Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Engine Mount Mounting Bolt - Loosen
    1. Loosen the front engine mount mounting bolt (A).

Fig. 2246: Identifying Front Engine Mount Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Transmission Jack Support
    1. Lift and support the engine with a jack and a wood block under the transmission.
13. Transmission Mount
    1. Remove the ground cable (A).
    2. Remove the transmission mount bracket (B).

Fig. 2247: Identifying Transmission Mount Bracket And Ground Cable With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the transmission mount.

Fig. 2248: Identifying Transmission Mount Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transmission Mount
    1. Install the transmission mount.

Fig. 2249: Identifying Transmission Mount Bolts With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the new transmission mount bracket mounting bolt and nuts (A).
3. Tighten the new transmission mount mounting bolt (B).
4. Install the ground cable.

Fig. 2250: Identifying Transmission Mount Mounting Bolt, Transmission Mount Bracket Mounting Bolt And Nuts With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Jack Support
    1. Remove the jack from under the transmission.
3. Transmission Mount - Tighten
    1. Tighten the transmission mount bracket mounting bolt and nuts.

Fig. 2251: Identifying Transmission Mount Bracket Mounting Bolt And Nuts With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lower Torque Rod Bolt - Tighten
    1. Tighten the lower torque rod mounting bolt (A).

Fig. 2252: Identifying Lower Torque Rod Mounting Bolt With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Upper Torque Rod - Tighten
    1. Tighten the upper torque rod mounting bolt.

Fig. 2253: Identifying Upper Torque Rod Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Engine Mount Mounting Bolt - Tighten
    1. Tighten the front engine mount mounting bolt.

Fig. 2254: Identifying Front Engine Mount Mounting Bolt With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 2255: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Battery Base Assembly
    1. Remove the battery base and install the clamps.

Fig. 2256: Identifying Battery Base, Clamps And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Intake Air Duct
    1. Install the intake air duct.

Fig. 2257: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. PCM Assembly

1. Install the PCM (D).
2. Connect PCM connectors A, B, and C.

NOTE: **PCM connectors A, B, and C have symbols (A=[], B= delta C=o) embossed on them for identification.**

3. Install the PCM cover (E).

Fig. 2258: Identifying PCM, PCM Cover, PCM Connectors And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 2259: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Air Cleaner, Intake Air Pipe And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Battery
    1. Install the battery (A) and the battery setting plate (B).

NOTE: **Do not deform the battery setting plate by over-tightening the nuts.**

Fig. 2260: Identifying Battery And Battery Setting Plate With Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 2261: Identifying Multipurpose Grease Applying Area Into Battery Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION RANGE SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 2262: Identifying Transmission Range Switch Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch
    1. Shift the shift lever to N.
    2. Remove the transmission range switch (A).

Fig. 2263: Identifying Transmission Range Switch With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 2264: Moving Selector Control Shaft To N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 2265: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 2266: Identifying Transmission Range Switch, Selector Control Shaft And Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 2267: Identifying Transmission Range Switch, Connector, Feeler Gauge And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch Cover

1. Install the transmission range switch cover (A).

Fig. 2268: Identifying Transmission Range Switch Cover And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. After Installing Transmission Range Switch - Check
    1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
    2. Move the shift lever through all positions, and check the transmission range switch synchronization with the A/T gear position indicator.
    3. Check that the engine will start with the shift lever in P and N, and will not start in any other shift lever position.
    4. Check that the back-up lights come on when the shift lever is in R.
    5. Raise the vehicle on a lift, and make sure it is securely supported.
    6. Start the engine, and check the shift lever operation.

HOW TO TROUBLESHOOT THE A/T SYSTEM

HOW TO CHECK FOR DTCS WITH THE HONDA DIAGNOSTIC SYSTEM (HDS)

When the powertrain control module (PCM) senses an abnormality in the input or output system, the D indicator (A) in the gauge control module (B) will usually blink.

Fig. 1: Identifying D Indicator And Gauge Control Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When the Honda Diagnostic System (HDS) is connected to the data link connector (DLC) (A) located under the driver's side of the dashboard, and when the ignition switch is turned to ON (II), and the appropriate menu is selected, it will indicate the diagnostic trouble code (DTC).

Fig. 2: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If the D indicator or the malfunction indicator lamp (MIL) has been reported on, or if a driveability problem is suspected, follow this procedure:

1. Connect the HDS to the DLC. (See the HDS user's manual for specific instructions.)
2. Turn the ignition switch to ON (II). Make sure the HDS communicates with the PCM. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING.**
3. Check for Pending or Confirmed DTCs with the HDS.
4. Record the freeze data and the on-board snapshots for all fuel and emissions DTCs and A/T DTCs.
5. If there is a fuel and emissions DTC, first check the fuel and emissions system as indicated by the DTC.
6. Clear the DTC.
7. Drive the vehicle for several minutes under the same conditions as those indicated by the freeze data or the on-board snapshot, and then recheck for the DTC. If the A/T DTC returns, go to the indicated DTC's troubleshooting. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all pins and terminals in the circuit are tight.

SYMPTOM TROUBLESHOOTING VERSUS DTC TROUBLESHOOTING

Some symptoms will not set DTCs or cause the D indicator to blink. If the MIL was reported ON or the D indicator has been blinking, check for DTCs. If the vehicle has an abnormal symptom, and there are no DTCs stored, do the symptom troubleshooting. Check the list of probable cause (s) for the symptom, in the sequence listed, until you find the problem.

HOW TO CHECK FOR DTCS WITH THE SCS MODE (RETRIEVING THE FLASH CODES)

NOTE: The preferred method is to use the HDS to retrieve the DTCs.

When the PCM senses an abnormality in the input or output system, the D indicator (A) in the gauge control module (B) will usually blink.

Fig. 3: Identifying D Indicator And Gauge Control Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When the D indicator has been reported on, connect the HDS to the DLC (A) located under the driver's side of the dashboard. Turn the ignition switch to ON (II), select SCS mode, then the D indicator will indicate (blink) the DTC.

Fig. 4: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If the D indicator and the MIL come on at the same time, or if a driveability problem is suspected, follow this procedure:

1. Connect the HDS to the DLC. (See the HDS user's manual for specific instructions.)
2. Turn the ignition switch to ON (II). Make sure the HDS communicates with the PCM. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING.**

3. Select SCS mode, then observe the D indicator in the gauge control module. Codes 1 through 9 are indicated by individual short blinks. Code 10 and above are indicated by a series of long and short blinks. One long blink equals 10 short blinks. Add the long and short blinks together to determine the code.

Fig. 5: Identifying D Indicator Long And Short Blinks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Record all fuel and emissions DTCs and A/T DTCs.
5. If there is a fuel and emissions DTC, first check the fuel and emissions system as indicated by the DTC.
6. Clear the DTC.
7. If the freeze data is available, drive the vehicle for several minutes with periods of wide open throttle, steady cruise, and stop and go, and then recheck for DTCs. If the A/T DTC returns, go to the indicated DTC's troubleshooting. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all pins and terminals in the circuit are tight.

HOW TO TROUBLESHOOT CIRCUITS AT THE PCM CONNECTORS

NOTE: **The PCM stays on about an hour after the ignition switch is turned to LOCK (0). Jumping the SCS line after turning the ignition switch to LOCK (0) cancels this function. Disconnecting the PCM during this function, without jumping the SCS line first, can damage the PCM.**

1. Jump the SCS line with the HDS.
2. Remove the cover (A).

Fig. 6: Identifying PCM Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect PCM connectors A, B, and C.

NOTE: **PCM connectors A, B, and C have symbols (A=[], B=[], C=o) embossed on them for identification.**

Fig. 7: Disconnecting PCM Connectors A, B, And C
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When diagnosis/troubleshooting is done at the PCM connector, use the terminal test port (A) above the terminal you need to check.

Fig. 8: Identifying Terminal Test Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect one side of the patch cord terminals (A) to a commercially available digital multimeter (B), and connect the other side of the terminals (C) to a commercially available banana jack (Pomona Electronics Tool No. 3563 or equivalent) (D).

Fig. 9: Connecting Other Side Of Terminals To Commercially Available Banana Jack (Pomona Electronics Tool No. 3563 Or Equivalent)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Gently contact the pin probe (male) at the terminal test port from the terminal side. Do not force the tips into the terminals.

NOTE:

- **For accurate results, always use the pin probe (male).**
- **To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.**
- **Do not puncture the insulation on a wire. Punctures can cause or eventually lead to poor or intermittent electrical connections.**

CLEAR A/T DTCS PROCEDURE

1. Connect the HDS to the DLC (A) located under the driver's side of the dashboard.

Fig. 10: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the PCM. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING.**
4. Clear the DTC(s) on the HDS screen.

OBD STATUS

The OBD STATUS shows the current system status of each DTC and all of the parameters. This function is used to see if the repair was successfully completed. The results of diagnostic tests for the DTC are displayed as:

- PASSED: The on-board diagnosis is successfully completed.
- FAILED: The on-board diagnosis has completed but failed.
- NOT COMPLETED: The on-board diagnosis was running but is out of the enable conditions of the DTC.

HOW TO END A TROUBLESHOOTING SESSION (REQUIRED AFTER ANY TROUBLESHOOTING)

NOTE: Reset the PCM/TCM with the HDS while the engine is stopped.

1. Turn the ignition switch to LOCK (0).
2. Turn the ignition switch to ON (II), and wait for 30 seconds, then disconnect the HDS from the DLC.
3. Start the engine with the shift lever in P or N, and warm it up to normal operating temperature (the radiator fan comes on).

4. To verify that the problem is repaired, test-drive the vehicle for several minutes at speeds over 31 mph (50 km/h) or under the same conditions as those indicated by the freeze data.

PCM/TCM RESET

NOTE: To reset the PCM/TCM, initialize only the automatic transmission memory stored in the PCM or the TCM.

1. Select the A/T system with the HDS.
2. Reset the PCM/TCM with the HDS while the engine is stopped.
3. Turn the ignition switch to LOCK (0).
4. Turn the ignition switch to ON (II), and wait for 30 seconds, then disconnect the HDS from the DLC.

FAILURE REPRODUCTION TECHNIQUE

NOTE: Make sure to follow these points while the vehicle is raised on a lift for the test-drive.

- Disable the VSA (if equipped) by pressing the VSA OFF button.
- ABS or VSA DTC(s) may come on when test-driving on a lift. If the ABS or VSA DTC(s) come on, clear the DTC(s) with the HDS.

SELF-DIAGNOSIS

If the PCM detects the failure of a signal from a sensor, a switch, a solenoid valve, or from another control unit, it stores a Pending or Confirmed DTC. Depending on the failure, a DTC is stored in either the first or second drive cycle. When a Confirmed DTC is stored, the PCM blinks the D indicator and/or turns on the MIL by a signal sent to the gauge control module via F-CAN.

- One Drive Cycle Detection Method:

  When an abnormality occurs in the signal from a sensor, a switch, a solenoid valve, or from another control unit, the PCM stores a Pending or Confirmed DTC for the failure and blinks the D indicator and/or turns on the MIL immediately.

- Two Drive Cycle Detection Method:

  When an abnormality occurs in the signal from a sensor, a switch, a solenoid valve, or from another control unit in the first drive cycle, the PCM stores a Pending DTC. The D indicator and the MIL do not turn on at this time. If the failure continues in the second drive cycle, the PCM stores a Confirmed DTC and blinks the D indicator and/or turns on the MIL.

FAIL-SAFE FUNCTION

When an abnormality occurs in the signal from a sensor, a switch, a solenoid valve, or from another control

unit, the PCM ignores that signal and substitutes a pre-programmed value for that signal to allow the automatic transmission to continue operating. This causes a DTC to be stored and the D indicator to blink and/or the MIL to come on. The transmission may not shift normally during fail-safe operation. Do not run the test-driving diagnosis when the MIL is ON, or the D indicator is blinking.

AUTOMATIC TRANSMISSION SYMPTOM TROUBLESHOOTING INDEX

NOTE: Do an all DTC check with the HDS and troubleshoot those first before following the repair procedures listed in the index.

Symptom	Probable cause(s)	Notes
When you turn the ignition switch to ON (II), the D indicator comes on and stays on in all shift lever positions, or it never comes on at all	• F-CAN communication line error • Gauge control module defective • PCM defective	• **CHECK THE F-CAN COMMUNICATION LINE.** • **CHECK THE A/T GEAR POSITION INDICATOR DRIVE CIRCUIT IN THE GAUGE CONTROL MODULE BY USING THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION.**
A/T gear position indicator does not come on with the shift lever in that position	• F-CAN communication line error • Gauge control module defective • PCM defective • Transmission range switch defective or out of adjustment	• **CHECK THE F-CAN COMMUNICATION LINE.** • **CHECK THE A/T GEAR POSITION INDICATOR DRIVE CIRCUIT IN THE GAUGE CONTROL MODULE BY USING THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION.** • **INSPECT THE TRANSMISSION RANGE SWITCH.**
Shift lever cannot be moved from P while	• Accelerator pedal position sensor circuit • Accelerator pedal position sensor defective • Brake pedal position switch circuit • Brake pedal position switch defective • Shift lock solenoid defective • Shift lock solenoid control circuit	• **INSPECT THE APP SENSOR SIGNAL.** • **TROUBLESHOOT THE SHIFT LOCK SYSTEM CIRCUIT.** • **TEST THE SHIFT LOCK SOLENOID.** • **INSPECT THE TRANSMISSION RANGE**

pressing on the brake pedal	• Shift lock mechanism defective • Throttle body defective • Transmission range switch ATP P switch stuck OFF • Transmission range switch ATP P switch circuit opened • PCM defective • Relative throttle position sensor value too high	**SWITCH.** • **Reset the PCM** . See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS**
Ignition switch cannot be moved from ACCESSORY (I) to LOCK (0) (key is pushed in, the shift lever in P)	• Interlock control system circuit • Key interlock solenoid stuck ON • Park pin switch stuck OFF • Transmission range switch defective or out of adjustment	• **TROUBLESHOOT THE KEY INTERLOCK SYSTEM CIRCUIT.** • **INSPECT THE TRANSMISSION RANGE SWITCH.**
Transmission still shifts into 4th or 5th gear in D even though D3 button is pressed	• D3 switch defective • D3 switch circuit defective • Transmission range switch defective or out of adjustment	• **CHECK THE D3 SWITCH CIRCUIT.** • **CHECK THE D3 SWITCH.** • **INSPECT THE TRANSMISSION RANGE SWITCH.**
When you turn ignition switch to ON (II), D3 indicator comes on and stays on in all shift lever positions, or it never comes on at all	• F-CAN communication line error • Gauge control module (tach) defective • PCM defective	• **CHECK THE F-CAN COMMUNICATION LINE.** • **CHECK THE A/T GEAR POSITION INDICATOR DRIVE CIRCUIT IN THE GAUGE CONTROL MODULE BY USING THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION.**
D3 indicator does not	• F-CAN communication line error • Gauge control	• **CHECK THE F-CAN COMMUNICATION LINE.** • **CHECK THE A/T GEAR POSITION INDICATOR DRIVE CIRCUIT IN THE**

come on in D3 driving mode	module (tach) defective • D3 switch defective • D3 switch circuit defective • PCM defective	**GAUGE CONTROL MODULE BY USING THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION.** • **CHECK THE D3 SWITCH CIRCUIT.** • **CHECK THE D3 SWITCH.**
Speedometer and odometer do not work	Output shaft (countershaft) speed sensor defective	Check the output shaft (countershaft) speed sensor installation. Inspect the sensor O-ring for wear and damage.
HDS does not communicate with the PCM	DLC circuit error	**TROUBLESHOOT THE DLC CIRCUIT.**
Engine runs, but vehicle does not move in any gear	• Low ATF level • Shift cable broken or out of adjustment • Connection between shift cable and transmission or body is worn • ATF pump worn or binding • Regulator valve stuck or spring worn • ATF strainer clogged • Mainshaft worn or damaged • Final gears worn or damaged	• Check the ATF level, and check the ATF lines for leakage and loose connections. If necessary, clean the ATF lines. • Check for a loose shift cable at the shift lever and the selector control shaft. • **CHECK THE LINE PRESSURE.** • Improper alignment of the ATF pump and the torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Be careful not to damage the torque converter housing when replacing the main ball bearing. You may also damage the ATF pump when you torque down the main valve body. This will cause ATF pump seizure. • Install the main seal flush with the torque converter housing when replacing the main seal. If you push it into the torque converter housing until it bottoms out, it will block the fluid return passage and result in damage. • Check the regulator valve in the regulator valve body. • Check the ATF strainer for debris. If the strainer is clogged, find the damaged components that caused the debris. • Inspect the mainshaft for wear and damage. • Inspect the final drive gear and the final driven gear for wear and damage. • Check the axles.
		• Check the 1st accumulator in the regulator valve body.

Vehicle does not move in 1st	• 1st accumulator defective • 1st gears worn or damaged • 1st clutch defective	• Inspect the countershaft 1st gear and the secondary shaft 1st gear for wear and damage. • **CHECK THE 1ST CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 1st clutch. • Inspect the 1st clutch feed pipe. If the 1st clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 1st clutch feed pipe is loose or damaged.
Vehicle does not move in 2nd	• 2nd accumulator defective • 2nd gears worn or damaged • 2nd clutch defective	• Check the 2nd accumulator in the servo body. • Inspect the countershaft 2nd gear and the secondary shaft 2nd gear for wear and damage. • **CHECK THE 2ND CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 2nd clutch.
Vehicle does not move in R	• Shift solenoid valve E defective • Shift fork shaft stuck • Shift valve E defective • 4th/reverse accumulator defective • 4th clutch defective • Reverse gears worn or damaged	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Check for a missing shift fork bolt on the shift fork shaft. • Check the shift fork shaft detent for wear and damage. • Check shift valve E in the main valve body. • Check the 4th accumulator in the servo body. • **CHECK THE 4TH CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 4th clutch. • Inspect the reverse selector gear teeth chamfers, and inspect the engagement teeth chamfers of the countershaft 4th gear and the reverse gear. Replace the reverse gears and the reverse selector if they are worn or damaged. If the transmission makes clicking, grinding, whirring noise, also replace the mainshaft 4th gear, the reverse idler gear, and the countershaft 4th gear.
		• Check the ATF level, and check the ATF lines for leakage and loose connections. If necessary, clean the ATF lines. • Check for a loose shift cable at the shift lever

Poor acceleration; engine revs up abnormally high when starting off in all shift lever positions; stall speed high in 1st and 2nd	• Low ATF level • Shift cable broken or out of adjustment • ATF pump worn or binding • Regulator valve stuck or spring worn • ATF strainer clogged • Torque converter check valve defective	and the selector control shaft. • **CHECK THE LINE PRESSURE.** • Improper alignment of the ATF pump and the torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Be careful not to damage the torque converter housing when replacing the main ball bearing. You may also damage the ATF pump when you torque down the main valve body. This will cause ATF pump seizure. • Install the main seal flush with the torque converter housing when replacing the main seal. If you push it into the torque converter housing until it bottoms out, it will block the fluid return passage and result in damage. • Check the regulator valve in the regulator valve body. • Check the ATF strainer for debris. If the strainer is clogged, find the damaged components that caused the debris. • Check the torque converter check valve in the regulator valve body.
Poor acceleration; engine revs up abnormally high when starting off in all shift lever positions; stall speed high when starting off in 2nd	2nd clutch defective	• **CHECK THE 2ND CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 2nd clutch.
Poor acceleration; engine revs up abnormally high when starting off in all shift lever positions; stall speed high in R	• Shift cable broken or out of adjustment • 4th clutch defective	• Check for a loose shift cable at the shift lever and the selector control shaft. • **CHECK THE 4TH CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 4th clutch.
Poor acceleration; stall speed low in 1st and 2nd	• Shift solenoid valve E defective • Torque converter one-way clutch defective • Engine output low • Torque converter	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Replace the torque converter. • Check the engine control system.

	clutch piston defective • Lock-up shift valve defective	• Check the lock-up shift valve in the regulator valve body.
Poor acceleration; stall speed low in R	• Torque converter one-way clutch defective • Engine output low • Torque converter clutch piston defective • Lock-up shift valve defective	• Replace the torque converter. • Check the engine control system. • Check the lock-up shift valve in the regulator valve body.
Engine idle vibration	• Low ATF level • Shift solenoid valve E defective • Drive plate defective or transmission misassembled • Engine output low • Torque converter clutch piston defective • ATF pump worn or damaged • Lock-up shift valve defective	• Check the ATF level, and check the ATF lines for leakage and loose connections. If necessary, clean the ATF lines. • Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Check the transmission and drive plate installation. • Check the drive plate for wear and damage, if the drive plate is worn or damaged, replace the drive plate. • Adjust the transmission and engine mounts by loosening and retightening the mount bolts. • Check the engine control system. • Replace the torque converter. • **CHECK THE LINE PRESSURE.** • Improper alignment of the ATF pump and the torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Be careful not to damage the torque converter housing when replacing the main ball bearing. You may also damage the ATF pump when you torque down the main valve body. This will cause ATF pump seizure. • Install the main seal flush with the torque converter housing when replacing the main seal. If you push it into the torque converter housing until it bottoms out, it will block the fluid return passage and result in damage.

		• Check the lock-up shift valve in the regulator valve body.
Vehicle moves in N	• Excessive ATF • Foreign material in separator plate orifice • Relief valve defective • 1st clutch defective • 2nd clutch defective • 3rd clutch defective • 4th clutch defective • 5th clutch defective • Clearance between clutch end-plate and top disc incorrect • Needle bearing seized, worn, or damaged • Thrust washer seized, worn, or damaged	• Check the ATF level, and drain the ATF if it is overfilled. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Check the relief valve in the main valve body. • **CHECK THE ALL CLUTCH PRESSURES.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace faulty clutch. • Inspect the 1st clutch feed pipe. If the 1st clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 1st clutch feed pipe is loose or damaged. • Inspect the 3rd clutch feed pipe. If the 3rd clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 3rd clutch feed pipe is loose or damaged. • Inspect the 5th clutch feed pipe. If the 5th clutch feed pipe is scored, replace the end cover. • Replace the mainshaft if the bushing for the 5th clutch feed pipe is loose or damaged. • Check the needle bearings on the mainshaft, the countershaft, and the secondary shaft for wear and damage. • Inspect the thrust washers on the mainshaft and the secondary shaft.
	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • A/T clutch pressure control solenoid valve B defective	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings, for wear and damage. • Check for a loose shift cable at the shift lever

Delayed engagement after shifting from N to D or excessive shock when shifted into D	• A/T clutch pressure control solenoid valve C defective • Shift cable broken or out of adjustment • Connection between shift cable and transmission or body is worn • Input shaft (mainshaft) speed sensor defective • Output shaft (countershaft) speed sensor defective • ATF temperature sensor defective • Foreign material in separator plate orifice • Servo control valve defective • 1st accumulator defective • 1st check ball stuck • Lock-up shift valve defective • 1st clutch defective	and the selector control shaft. • Check the input shaft (mainshaft) speed sensor and output shaft (countershaft) speed sensor installation. Inspect the sensor O-rings for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Check the servo control valve in the main valve body. • Check the 1st accumulator in the regulator valve body. • Check that the 1st check ball is not stuck in the main valve body. • Check the lock-up shift valve in the regulator valve body. • **CHECK THE 1ST CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 1st clutch. • Inspect the 1st clutch feed pipe. If the 1st clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 1st clutch feed pipe is loose or damaged.
	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • Shift cable broken or out of adjustment • Connection between shift cable and transmission or body is worn • Input shaft	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings, for wear and damage. • Check for a loose shift cable at the shift lever and the selector control shaft. • Check the input shaft (mainshaft) speed sensor and output shaft (countershaft) speed sensor installation. Inspect the sensor O-rings for wear and damage.

Delayed engagement after shifting from N to R, or excessive shock when shifted into R	(mainshaft) speed sensor defective • Output shaft (countershaft) speed sensor defective • ATF temperature sensor defective • Shift fork shaft stuck • Foreign material in separator plate orifice • Shift valve E defective • 4th/reverse accumulator defective • Lock-up shift valve defective • 4th clutch defective	• Check for a missing shift fork bolt on the shift fork shaft. • Check the shift fork shaft detent for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Check shift valve E in the main valve body. • Check the 4th accumulator in the servo body. • Check the lock-up shift valve in the regulator valve body. • **CHECK THE 4TH CLUTCH PRESSURE.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace the 4th clutch.
Transmission does not shift	• Input shaft (mainshaft) speed sensor defective • Output shaft (countershaft) speed sensor defective	Check the input shaft (mainshaft) speed sensor and output shaft (countershaft) speed sensor installation. Inspect the sensor O-rings for wear and damage.
Excessive shock or engine revs up abnormally high on all upshifts and downshifts	• A/T clutch pressure control solenoid valve B defective • A/T clutch pressure control solenoid valve C defective • Input shaft (mainshaft) speed sensor defective • Output shaft (countershaft) speed sensor defective • ATF temperature sensor defective	• Test the solenoid valve function with the HDS. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Check the input shaft (mainshaft) speed sensor and output shaft (countershaft) speed sensor installation. Inspect the sensor O-rings for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK,

	• Foreign material in separator plate orifice	find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter.
Excessive shock or engine revs up abnormally high on 1-2 upshift or 2-1 downshift	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • A/T clutch pressure control solenoid valve B defective • A/T clutch pressure control solenoid valve C defective • Transmission fluid pressure switch A (2nd clutch) defective • Foreign material in separator plate orifice • 1st accumulator defective • 2nd accumulator defective • 1st check ball stuck • 2nd check ball stuck • Lock-up shift valve defective • 1st clutch defective • 2nd clutch defective	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Inspect the 1st accumulator in the regulator valve body. • Inspect the 2nd accumulator in the servo body. • Check that the 1st and 2nd check balls are not stuck in the main valve body. • **CHECK THE 1ST AND 2ND CLUTCH PRESSURES.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace faulty clutch. • Inspect the 1st clutch feed pipe. If the 1st clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 1st clutch feed pipe is loose or damaged.
	• A/T clutch pressure control solenoid valve B defective • A/T clutch pressure control solenoid valve C defective • Transmission fluid	• Test the solenoid valve function with the HDS. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK,

Excessive shock or engine revs up abnormally high on 2-3 upshift or 3-2 downshift	pressure switch B (3rd clutch) defective • Foreign material in separator plate orifice • 2nd accumulator defective • 3rd accumulator defective • 2nd check ball stuck • 2nd clutch defective • 3rd clutch defective	find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Check the 2nd accumulator in the servo body. • Check the 3rd accumulator in the regulator valve body. • Check that the 2nd check ball is not stuck in the main valve body. • **CHECK THE 2ND AND 3RD CLUTCH PRESSURES.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace faulty clutch. • Inspect the 3rd clutch feed pipe. If the 3rd clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 3rd clutch feed pipe is loose or damaged.
Excessive shock or engine revs up abnormally high on 3-4 upshift or 4-3 downshift	• A/T clutch pressure control solenoid valve B defective • A/T clutch pressure control solenoid valve C defective • Foreign material in separator plate orifice • 3rd accumulator defective • 4th accumulator defective • 3rd clutch defective • 4th clutch defective	• Test the solenoid valve function with the HDS. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Check the 3rd accumulator in the regulator valve body. • Check the 4th accumulator in the servo body. • **CHECK THE 3RD AND 4TH CLUTCH PRESSURES.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace faulty clutch. • Inspect the 3rd clutch feed pipe. If the 3rd clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 3rd clutch feed pipe is loose or damaged.
		• Test the solenoid valve function with the HDS.

Excessive shock or engine revs up abnormally high on 4-5 upshift or 5-4 downshift	• A/T clutch pressure control solenoid valve B defective • A/T clutch pressure control solenoid valve C defective • Foreign material in separator plate orifice • 4th accumulator defective • 5th accumulator defective • 4th clutch defective • 5th clutch defective	• Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Check for a clogged orifice in the separator plate. If the orifice is clogged, remove it, and clean the separator plate orifice. • Check the ATF strainer for debris. If the strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Check the 4th and 5th accumulators in the servo body. • **CHECK THE 4TH AND 5TH CLUTCH PRESSURES.** • Inspect the clearance between the clutch end-plate and the top disc. If the clearance is out of tolerance, replace faulty clutch. • Inspect the 5th clutch feed pipe. If the 5th clutch feed pipe is scored, replace the end cover. • Replace the mainshaft if the bushing for the 5th clutch feed pipe is loose or damaged.
Noise from transmission in all shift lever positions	• ATF pump worn or damaged • Mainshaft bearing, countershaft bearing, or secondary shaft bearing defective	• **CHECK THE LINE PRESSURE.** • Improper alignment of the ATF pump and the torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Be careful not to damage the torque converter housing when replacing the main ball bearing. You may also damage the ATF pump when you torque down the main valve body. This will cause ATF pump seizure. • Install the main seal flush with the torque converter housing when replacing the main seal. If you push it into the torque converter housing until it bottoms out, it will block the fluid return passage and result in damage. • Inspect the mainshaft, countershaft, and secondary shaft bearing for wear and damage.
Vehicle does not accelerate above 31 mph (50 km/h)	Torque converter one-way clutch defective	Replace the torque converter.

Vibration in all shift lever positions	Drive plate defective or transmission misassembled	• Check the transmission and drive plate installation. • Check the drive plate for wear and damage, if the drive plate is worn or damaged, replace the drive plate. • Adjust the transmission and engine mounts by loosening and retightening the mount bolts.
Shift lever does not operate smoothly	• Transmission range switch defective or out of adjustment • Shift cable broken or out of adjustment • Connection between shift cable and transmission or body is worn	• Inspect the transmission range switch. If the transmission range switch is faulty, replace it. If the transmission range switch is out of adjustment, adjust it and the shift cable. • Check for a loose shift cable at the shift lever and the selector control shaft.
Transmission does not shift into P	• Shift cable broken or out of adjustment • Connection between shift cable and transmission or body is worn • Park mechanism defective	• Check for a loose shift cable at the shift lever and the selector control lever. • Check the park pawl spring installation and the park lever spring installation. If installation is incorrect, install the spring correctly. Make sure that the park lever stop is not installed upside down. Check the distance between the park pawl shaft and the park lever pin. If the distance is out of tolerance, adjust the distance with the park lever stop.
Torque converter clutch does not disengage; engine stalls easily	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • Torque converter clutch piston defective • Lock-up shift valve defective • Lock-up control valve defective	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Replace the torque converter. • Check the lock-up shift valve in the regulator valve body. • Check the lock-up control valve in the main valve body.
	• Shift solenoid valve E defective • A/T clutch pressure control solenoid	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage.

Torque converter clutch does not disengage; no power at low to medium speed	valve A defective • Torque converter clutch piston defective • Lock-up shift valve defective • Lock-up control valve defective	• Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Replace the torque converter. • Check the lock-up shift valve in the regulator valve body. • Check the lock-up control valve in the main valve body.
Torque converter clutch does not disengage; booming noise or vibration at low to medium speed	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • Torque converter clutch piston defective • Lock-up shift valve defective • Lock-up control valve defective	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Replace the torque converter. • Check the lock-up shift valve in the regulator valve body. • Check the lock-up control valve in the main valve body.
Torque converter clutch does not disengage; excessive shift shock	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • Torque converter clutch piston defective • Lock-up shift valve defective • Lock-up control valve defective	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Replace the torque converter. • Check the lock-up shift valve in the regulator valve body. • Check the lock-up control valve in the main valve body.
Torque converter clutch does not operate smoothly	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • Torque converter clutch piston defective • Torque converter check valve	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Replace the torque converter. • Check the torque converter check valve in the regulator valve body.

	defective • Lock-up shift valve defective • Lock-up control valve defective	• Check the lock-up shift valve in the regulator valve body. • Check the lock-up control valve in the main valve body.
Torque converter clutch does not engage	• Shift solenoid valve E defective • A/T clutch pressure control solenoid valve A defective • Input shaft (mainshaft) speed sensor defective • Output shaft (countershaft) speed sensor defective • Torque converter clutch piston defective • Torque converter check valve defective • Lock-up shift valve defective • Lock-up control valve defective	• Test the solenoid valve function with the HDS. • Inspect shift solenoid valve E for seizure, and the O-rings for wear and damage. • Inspect the A/T clutch pressure control solenoid valve body gasket, the ATF feed pipes, and the O-rings for wear and damage. • Check the input shaft (mainshaft) speed sensor and output shaft (countershaft) speed sensor installation. Inspect the sensor O-rings for wear and damage. • Replace the torque converter. • Check the torque converter check valve in the regulator valve body. • Check the lock-up shift valve in the regulator valve body. • Check the lock-up control valve in the main valve body.
A/T gear position indicator does not indicate shift lever positions	• Transmission range switch defective or out of adjustment • Shift cable broken or out of adjustment • Connection between shift cable and transmission or body is worn	• Inspect the transmission range switch. If the transmission range switch is faulty, replace it. If the transmission range switch is out of adjustment, adjust it and the shift cable. • Check for a loose shift cable at the shift lever and the selector control lever.
Engine does not rev to high rpm, and the transmission upshifts at low rpm (engine at normal operating temperature)	• Engine rocker arm defective • Low fuel pressure • Engine low on power	• CHECK THE ENGINE ROCKER ARMS • Monitor fuel pressure when problem occurs • Check compression • Check for a restricted exhaust

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 11: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Clutch Pressure Control Solenoid Valve A - HDS Test
    1. Select Clutch Pressure Control (Linear) Solenoid Valve A in the Miscellaneous Test Menu with the HDS.
    2. Test A/T clutch pressure control solenoid valve A with the HDS.
        - If the valve tests OK, the test is complete. Disconnect the HDS.
        - If the valve does not test OK, follow the instructions on the HDS.
        - If the valve does not test OK, and the HDS does not determine the cause, go to the next procedure.

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).

4. Remove the air cleaner (E).

Fig. 12: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Intake Air Duct
    1. Remove the intake air duct.

Fig. 13: Identifying Intake Air Duct

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. A/T Clutch Pressure Control Solenoid Valve A - Resistance Test
    1. Disconnect the connector.
    2. Measure the resistance between terminals No. 1 and No. 2 for A/T clutch pressure control solenoid valve A.

       Standard: 4.8 - 6.0 ohms

       - If the resistance is out of the standard, replace A/T clutch pressure control solenoid valve A.
       - If the resistance is within the standard, go to the next step.
    3. Connect a jumper wire from the negative battery terminal to A/T clutch pressure control solenoid valve A 2P connector terminal No. 1, and connect another jumper wire from the positive battery terminal to connector terminal No. 2.
       - If a clicking sound is heard, the solenoid valve is OK, and the test is complete.
       - If no clicking sound is heard, go to the next procedure and check the valve movement.

Fig. 14: Identifying A/T Clutch Pressure Control Solenoid Valve A 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. A/T Clutch Pressure Control Solenoid Valve A
    1. Remove A/T clutch pressure control solenoid valve A.
    2. Remove the 35 mm ATF pipe (B), the ATF joint pipes (C), the O-rings (D), and the gasket (E).
    3. Check the fluid passage for contamination.

Fig. 15: Locating A/T Clutch Pressure Control Solenoid Valve A, 35 mm ATF Pipe, ATF Joint Pipes, O-Rings And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. A/T Clutch Pressure Control Solenoid Valve A - Test
    1. Connect a jumper wire from the negative battery terminal to A/T clutch pressure control solenoid valve A 2P connector terminal No. 1, and connect another jumper wire from the positive battery terminal to connector terminal No. 2. Make sure A/T clutch pressure control solenoid valve A moves.
    2. Disconnect one of the jumper wires, and check the valve movement (B) at the fluid passage. If the valve binds or moves sluggishly, or if the solenoid valve does not operate, replace A/T clutch pressure control solenoid valve A.

Fig. 16: Checking Valve Movement At Fluid Passage

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Clutch Pressure Control Solenoid Valve A
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (B) with its blue side toward the transmission housing, and install the 35 mm ATF pipe (C) and the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valve A.
    5. Check the connector (F) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

<u>Fig. 17: Locating A/T Clutch Pressure Control Solenoid Valve A, 35 mm ATF Pipe, ATF Joint Pipes, O-Rings And Gasket</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Intake Air Duct
    1. Install the intake air duct.

Fig. 18: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 19: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B AND C TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 20: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T Clutch Pressure Control Solenoid Valve B and C - HDS Test
    1. Select Clutch Pressure Control (Linear) Solenoid Valve B and C individually in the Miscellaneous Test Menu with the HDS.
    2. Test A/T clutch pressure control solenoid valve B and C individually with the HDS.
        - If the valve tests OK, the test is complete. Disconnect the HDS.
        - If any of the valves does not test OK, follow the instructions on the HDS.
        - If any of the valves does not test OK, and the HDS does not determine the cause, go to the next procedure.

REMOVAL

1. Vehicle Lift

    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

TEST

1. A/T Clutch Pressure Control Solenoid Valve B and C - Resistance Test
    1. Disconnect the connectors.
    2. Measure the resistance between terminals No. 1 and No. 2 for each A/T clutch pressure control solenoid valve B and C.

        Standard: 4.9 - 6.4 ohms

        - If the resistance is out of the standard, replace A/T clutch pressure control solenoid valves B and C.
        - If the resistance is within the standard, go to the next step.
    3. Connect a jumper wire from the negative battery terminal to A/T clutch pressure control solenoid

valve B or C 2P connector terminal No. 1, and connect another jumper wire from the positive battery terminal to connector terminal No. 2.

- If a clicking sound is heard, the valve is OK, and the test is complete.
- If no clicking sound is heard, go to the next procedure and check the valve movement.

REMOVAL

1. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Remove A/T clutch pressure control solenoid valves B and C.
    2. Remove the ATF joint pipes (A), the O-rings (D), and the gasket (E).
    3. Check the fluid passage for contamination.

TEST

1. A/T Clutch Pressure Control Solenoid Valve B and C - Test
    1. Connect a jumper wire from the negative battery terminal to A/T clutch pressure control solenoid valve B or C 2P connector terminal No. 1, and connect another jumper wire from the positive battery terminal to connector terminal No. 2. Make sure A/T clutch pressure control solenoid valve B or C moves.
    2. Disconnect one of the jumper wires, and check the valve movement (A and D) at the fluid passage. If the valve binds or moves sluggishly, or if the solenoid valve does not operate, replace A/T clutch pressure control solenoid valves B and C.

INSTALLATION

1. A/T Clutch Pressure Control Solenoid Valve B and C
    1. Clean the mounting surfaces and the fluid passages of the solenoid valve body and the transmission housing.
    2. Install a new gasket (A) with its blue side toward the transmission housing, and install the ATF joint pipes (D).
    3. Install new O-rings (E) over the ATF joint pipes.
    4. Install A/T clutch pressure control solenoid valves B and C.
    5. Check the connectors (F) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connectors securely.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

A/T PRESSURE TEST

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	A/T Oil Pressure Gauge Set 07406-0020401 or 07406-0020400

	A/T Pressure Test Hose 07AAJ-PY4A100
	A/T Pressure Adapter 07MAJ-PY40120

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
3. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60 - 90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 28: Inserting Dipstick Into Guide Tube Aligning Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine rpm abnormally rises when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

Fig. 29: Locating ATF Level Upper Mark And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.
