(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

33. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

34. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

Fig. 372: Measuring Turning Angle Of Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 373: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: **See the HDS Help menu for specific instructions.**

37. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: **See the HDS Help menu for specific instructions.**

STEERING RACK GUIDE ADJUSTMENT

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Locknut Wrench, 40 mm 07AAA-TL2A100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 374: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Steering Rack Guide Adjustment
    1. Set the front wheels in the straight ahead position.
    2. Loosen the locknut (A) with the locknut wrench.
    3. Remove the rack guide screw (B).

Fig. 375: Removing Rack Guide Screw And Locknut Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the old sealant from the rack guide screw (A).
5. Apply new sealant (Three Bond 1215 or Loctite 5699) to the middle of the threads (B).

NOTE: **If the rack guide screw is not installed within five minutes after applying the sealant, remove the sealant and residue, and reapply new sealant.**

6. Loosely install the rack guide screw on the steering gearbox.

Fig. 376: Identifying Rack Guide Screw Sealant Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tighten the rack guide screw (A) to 25 N.m (2.5 kgf.m, 18 lbf.ft), then loosen it.
8. Retighten the rack guide screw to 3.9 N.m (0.40 kgf.m, 2.9 lbf.ft), then back it off to the specified angle.

Specified return angle: 12 1 °

9. Hold the rack guide screw stationary with a wrench, and tighten the locknut (B) by hand until it's fully seated.
10. Install the locknut wrench on the locknut, and hold the rack guide screw stationary with a wrench. Tighten the locknut to the specified torque.
11. Check for unusual steering effort through the complete turning range.

Fig. 377: Identifying Locknut Tightening Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 378: Identifying Front Floor Undercover, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Steering Wheel Rotational Play Check
    1. Set the front wheels in the straight ahead position.
    2. Measure how far you can turn the steering wheel left and right without moving the front wheels.
        - If the play is within the limit, the steering gearbox and the steering linkage are OK.
        - If the play exceeds the limit, adjust the rack guide. If the play is still excessive after rack guide adjustment, inspect the steering linkage and the steering gearbox.

        Rotational play: 0-10 mm (0-0.39 in)

Fig. 379: Identifying Steering Wheel Rotational Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Power Steering Assist Check

NOTE: **This test should be done with original equipment tires and wheels at the correct tire pressure.**

1. Start the engine, and let it idle.
2. Attach a commercially available spring scale (A) to the steering wheel. With the engine idling and the vehicle on a clean, dry floor, pull the scale as shown, and read it as soon as the tires begin to turn.

   Initial turning load: 34 N (3.5 kgf, 7.6 lbf)

3. If the scale reads no more than the specification, the power assist is OK. If it reads more, check these items:
   - Steering linkage
   - Rack guide adjustment
   - EPS system

Fig. 380: Checking Power Steering Initial Turning Load Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING TIE-ROD END BALL JOINT BOOT REPLACEMENT

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Ball Joint Remover, 28 mm 07MAC-SL00202

	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100
	Bearing Driver Attachment, 42 mm 07QAD-P0A0100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 381: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 382: Identifying Hex Nut Or Ball Joint Thread Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply grease to the ball joint remover on the areas shown (A).

Fig. 383: Identifying Grease Applying Areas On Ball Joint Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

Fig. 384: Fastening Safety Tie On Suspension Arm Or Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tie-Rod End Ball Joint - Disconnection
    1. Remove the cotter pin (A).
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

Fig. 385: Identifying Cotter Pin And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tie-Rod End
    1. Loosen the locknut (A).
    2. Remove the tie-rod end (B), then remove the locknut.

Fig. 386: Identifying Tie-Rod End And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tie-Rod End Ball Joint Boot
    1. Remove the ball joint boot (A) from the tie-rod end, and wipe the old grease off the ball pin.

Fig. 387: Identifying Ball Joint Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tie-Rod End Ball Joint Boot
    1. Pack the lower area of the ball pin (A) with fresh multipurpose grease.
    2. Pack the interior of the new ball joint boot (B) and the lip (C) with fresh multipurpose grease.

    Note these items when installing new grease:

    - Keep grease off the boot mounting area (D) and the tapered section (E) of the ball pin.
    - Do not allow dust, dirt, or other foreign materials to enter the boot.

Fig. 388: Identifying Boot Mounting Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint boot (A) using the bearing driver attachment.
4. The ball joint boot must not have a gap at the ball joint boot installation sections (B).
5. After installing the ball joint boot, check the ball pin tapered section for grease contamination.
6. Wipe the ball pin tapered section if necessary.

Fig. 389: Installing Ball Joint Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tie-Rod End
    1. Install the locknut (A).
    2. Install the tie-rod end (B), then tighten the locknut.

Fig. 390: Identifying Tie-Rod End And Locknut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tie-Rod End Ball Joint - Reconnection
    1. Connect the tie-rod end ball joint.
    2. Install the nut (A).
    3. Install the cotter pin (B) as shown.

Fig. 391: Identifying Cotter Pin And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Wheel
    1. Install the front wheel.

NOTE: Before installing the wheel, clean the mating surfaces between the

brake disc and the inside of the wheel.

Fig. 392: Identifying Front Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
6. Front Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Set the steering column to the middle tilt position and telescopic positions.
   2. Center the steering wheel spokes, and install a steering wheel holder tool.
   3. Check the toe with the wheels pointed straight ahead.

      Front toe-in: 0±2 mm (0±0.08 in)

      - If adjustment is required, go to the front toe adjustment.
      - If no adjustment is required, remove the alignment equipment.

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 393: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

9. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING WHEEL DISASSEMBLY AND REASSEMBLY

EXPLODED VIEW

1. STEERING WHEEL EXPLODED VIEW

    EXPLODED VIEW

Fig. 394: Exploded View Of Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DISASSEMBLY

1. Steering Wheel Rear Cover
    1. Remove the steering wheel rear cover (A).

Fig. 395: Identifying Steering Wheel Rear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. HFL-Voice Control Switch
    1. Remove the switch cover (A).
    2. Remove the HFL-voice control switch (B).

Fig. 396: Identifying Switch Cover And Voice Control Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Harness
    1. Remove the cable reel subharness (A).

Fig. 397: Identifying Cable Reel Subharness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Wheel Trim
    1. Remove the steering wheel trim (A).

Fig. 398: Identifying Steering Wheel Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Audio Remote/Multi-Information Switch
    1. Remove the audio remote/multi-information switch (A).

Fig. 399: Identifying Audio Remote/Multi-Information Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Cruise Control Combination Switch
    1. Remove the cruise control combination switch (A).

Fig. 400: Identifying Cruise Control Combination Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Cruise Control Combination Switch
    1. Install the cruise control combination switch (A).

Fig. 401: Identifying Cruise Control Combination Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio Remote Switch
    1. Install the audio remote/multi-information switch (A).

Fig. 402: Identifying Audio Remote/Multi-Information Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Trim Assembly
    1. Install the steering wheel trim (A).

Fig. 403: Identifying Steering Wheel Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Wheel Harness
    1. Install the cable reel subharness (A).

Fig. 404: Identifying Cable Reel Subharness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HFL-Voice Control Switch
    1. Install the HFL-voice control switch (A).
    2. Install the switch cover (B).

Fig. 405: Identifying Voice Control Switch And Switch Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Steering Wheel Rear Cover
    1. Install the steering wheel rear cover (A).

Fig. 406: Identifying Steering Wheel Rear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING WHEEL REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).

2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 407: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 408: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the TORX bolts using a TORX T30 bit.
5. Remove the driver's airbag (A).

Fig. 409: Identifying Driver's Airbag And Torx Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).

3. Loosen the steering wheel bolt (B) three turns.

Fig. 410: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 411: Turning Steering Wheel Pressure Bolt Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 412: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.

2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 413: Identifying Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.
5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 414: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 415: Identifying Steering Wheel Bolt And Connector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 416: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 417: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 418: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 419: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Wheel Spoke Angle - Check
    1. Check the steering wheel spoke angle.
    2. If steering spoke angles to the right and left are not equal (steering wheel is not centered), correct the engagement of the wheel/column shaft splines.
5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 420: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

7. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING WHEEL ROTATIONAL PLAY CHECK

CHECK

1. Steering Wheel Rotational Play Check
    1. Set the front wheels in the straight ahead position.
    2. Measure how far you can turn the steering wheel left and right without moving the front wheels.
        - If the play is within the limit, the steering gearbox and the steering linkage are OK.
        - If the play exceeds the limit, adjust the rack guide. If the play is still excessive after rack guide adjustment, inspect the steering linkage and the steering gearbox.

    Rotational play: 0-10 mm (0-0.39 in)

Fig. 421: Checking Steering Wheel Rotational Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR GLASS ADJUSTMENT

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 1: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 2: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 3: Removing Front Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 4: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 5: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 6: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: **If the plastic cover is damaged or torn, replace it.**

Fig. 7: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Front Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the center lower channel (C), then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 8: Moving Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 9: Checking Gap Between Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Plastic Cover As Needed

1. Install the plastic cover (A), then install the plug caps (B).
2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 10: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 11: Installing Inner Handle To Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 12: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 13: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 14: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 15: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 16: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Power Window Control Unit - Reset

1. **DO THE POWER WINDOW CONTROL UNIT RESETTING PROCEDURE**.

FRONT DOOR GLASS REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 17: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 18: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 19: Removing Front Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 20: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 21: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 22: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: **If the plastic cover is damaged or torn, replace it with a new one.**

<u>Fig. 23: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Glass
    1. Carefully lower the glass (A) until you can see the glass mounting bolts (B), then remove them. Carefully pull out the glass through the window slot. Take care not to drop the glass inside the door.

Fig. 24: Removing Front Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Glass Run Channel
    1. Remove the front door glass run channel (A).

Fig. 25: Removing Front Door Glass Run Channel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Door Center Lower Channel
    1. Remove the bolt (A), then remove the center lower channel (B).

Fig. 26: Removing Center Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Door Mirror
    1. Disconnect the connector.
    2. Detach the harness clip (A).
    3. While holding the power mirror (B), remove the nuts (C) securing the mirror.

Fig. 27: Identifying Power Mirror And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the power mirror (A) and carefully pull out the harness (B).

Fig. 28: Identifying Power Mirror And Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Door Glass Outer Weatherstrip
    1. Remove the screw (A) securing the front door glass outer weatherstrip.
    2. Slide the front door glass outer weatherstrip clips (B) forward to release it from the door.

Fig. 29: Sliding Front Door Glass Outer Weatherstrip Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front door glass outer weatherstrip (A).

Fig. 30: Removing Front Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Door Front Lower Channel
    1. Remove the nuts (A) and the bolt (B), then remove the front lower channel (C).

Fig. 31: Identifying Front Lower Channel, Nuts And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Front Lower Channel

1. Install the front lower channel (A), then install the nuts (B) and the bolt (C).

Fig. 32: Identifying Front Lower Channel, Nuts And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Glass Outer Weatherstrip
   1. Install the front door glass outer weatherstrip (A).

Fig. 33: Identifying Front Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Slide the front door glass outer weatherstrip clips (A) securely onto the flanges, then install the screw (B).

Fig. 34: Sliding Front Door Glass Outer Weatherstrip Clips Onto Flanges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Door Mirror
    1. Insert the harness (A) into the hole in the door, then install the power mirror (B).

Fig. 35: Identifying Power Door Mirror And Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the nuts (A).
    3. Attach the harness clip (B).
    4. Connect the connector.

Fig. 36: Identifying Door Mirror Harness Clip And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Center Lower Channel
    1. Install the center lower channel (A), then install the bolt (B).

Fig. 37: Installing Center Lower Channel And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Glass Run Channel
    1. Align the notch (A) of the glass run channel with the alignment mark (B) on the body, then install the run channel all the way around.

Fig. 38: Installing Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Glass
    1. Install the glass (A) through the window slot, then install the glass mounting bolts (B). Take care not to drop the glass inside the door.

Fig. 39: Installing Front Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the center lower channel (C), then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 40: Moving Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 41: Checking Gap Between Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Door Plastic Cover
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).

3. Connect the connector (E), then install the harness clips (F).

Fig. 42: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 43: Installing Inner Handle To Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 44: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 45: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 46: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 47: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 48: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Power Window Control Unit - Reset

1. **DO THE POWER WINDOW CONTROL UNIT RESETTING PROCEDURE**.

FRONT PASSENGER'S POWER WINDOW SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Power Window Switch Panel - Passenger's Side
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 49: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch - Passenger's Side
    1. Remove the front passenger's power window switch (A).

Fig. 50: Identifying Front Passenger's Power Window Switch And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Power Window Switch - Passenger's Side
    1. Install the front passenger's power window switch (A).

Fig. 51: Identifying Front Passenger's Power Window Switch And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel - Passenger's Side
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 52: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT PASSENGER'S POWER WINDOW SWITCH TEST

REMOVAL

1. Front Door Power Window Switch Panel - Passenger's Side
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 53: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Front Passenger's Power Window Switch - Test
    1. Check for continuity between the terminals in each position according to the table.
    2. If the continuity is not as specified, replace the front passenger's power window switch (A).

Fig. 54: Identifying Front Passenger's Power Window Switch And Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	6	7	8	9	10
OFF	○	○	○		○
UP	○		○	○	○
DOWN		○	○	○	○

Fig. 55: Front Passenger's Power Window Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Power Window Switch Panel - Passenger's Side
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 56: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT POWER WINDOW MOTOR REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 57: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 58: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel

1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 59: Removing Front Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 60: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 61: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 62: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).

Fig. 63: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: If the plastic cover is damaged or torn, replace it with a new one.

5. Front Door Glass Support
    1. Carefully lower the glass (A) until you can see the glass mounting bolts (B), then remove them.

Fig. 64: Removing Front Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Raise the glass (A), then secure the glass with tape (B). Take care not to drop the glass inside the door.

Fig. 65: Securing Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Regulator
    1. Disconnect the connector (A) from the regulator (B).
    2. Remove the nuts (C).
    3. Remove the bolts (D), and loosen the bolts (E), then remove the regulator through the hole in the door.

Fig. 66: Identifying Door Regulator, Connector, Nuts And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Power Window Motor
    1. Remove the power window motor (A).

Fig. 67: Identifying Power Window Motor And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Power Window Motor

NOTE: **Screw threads are not tapped into the new power window motor. Install the new motor as follows, using the self-tapping screws (A) provided.**

1. Position the power window motor (B) under the regulator (C) as shown, and tighten the self-tapping screws until the screw heads just make contact with the linkage.

NOTE:
- **Keep the screws perfectly straight while screwing them in.**
- **Do not use an air tool or impact wrench to install the screws.**
- **Use only the self-tapping bolts provided with the motor.**

2. Loosen the screws, then retighten them to the specified torque.

Fig. 68: Identifying Power Window Motor, Regulator And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Regulator
    1. Apply multipurpose grease to the sliding surfaces of the regulator (A) where as shown.

Fig. 69: Identifying Multipurpose Grease Applying Area On Sliding Surfaces Of Regulator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the regulator (A) through the hole in the door, then install the nuts (B) and the bolts (C, D).
    3. Connect the connector (E) to the regulator.

Fig. 70: Identifying Door Regulator, Connector, Nuts And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Glass Support
    1. While holding the glass (A), remove the tape (B), then carefully lower the glass. Take care not to drop the glass inside the door.

Fig. 71: Holding Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the glass mounting bolts (A).

Fig. 72: Identifying Glass Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Glass - Adjustment
    1. Do the **Front Door Glass Adjustment**
5. Front Door Plastic Cover
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).
    3. Connect the connector (E), then install the harness clips (F).

Fig. 73: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 74: Installing Inner Handle To Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 75: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 76: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 77: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 78: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 79: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Power Window Control Unit - Reset

1. **DO THE POWER WINDOW CONTROL UNIT RESETTING PROCEDURE**.

AUTO REVERSE POWER WINDOW OPERATION MALFUNCTION

Power Windows Symptom Troubleshooting - Auto reverse power window operation malfunction

Fig. 87: Power Windows Symptom Troubleshooting Flow Chart (Auto Reverse Power Window Operation Malfunction)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Refer to the power windows system description in the construction and function guide.**

Incorrect actuation of the power window may occur in the following situations:

- AUTO UP/AUTO DOWN operation while the vehicle is driving over bad roads.
- AUTO UP/AUTO DOWN operation while the door is opening or closing.

1. Problem verification 1:

- 1. Start the engine.
- 2. Fully open the door glass using the power window AUTO DOWN switch.
- 3. Fully close the door glass using the power window AUTO UP switch.

Does the door glass reverse as it is closing?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification 2:
   - 1. Fully open the door glass using the power window AUTO DOWN switch.
   - 2. Fully close the door glass using the power window AUTO UP switch.

   Does the door glass reverse at once, after it has closed completely?

   YES : Go to **RESETTING THE POWER WINDOW CONTROL UNIT**.

   NO : Intermittent failure, the power window is OK at this time.

3. Power window motor test:
   - 1. **Check the power window motor** See **DRIVER'S POWER WINDOW MOTOR TEST**, **FRONT PASSENGER'S POWER WINDOW MOTOR TEST** or **REAR POWER WINDOW MOTOR TEST**.

   Is the power window motor OK?

   YES : Go to step 4.

   NO : **REPLACE THE POWER WINDOW MOTOR**.

4. Door glass/door glass outer weatherstrip/door sash/door regulator check:
   - 1. Remove the door panel and plastic cover, then remove the bolts holding the window glass to the regulator. See **Front Door Glass Adjustment**, **Rear Door Glass Adjustment**, **Front Door Regulator Removal and Installation** or **Rear Door Regulator Removal and Installation**
   - 2. Slide the window glass up and down in the run channel by hand and feel for any binding.

   Does the window glass bind as it is moving up and down in the run channel?

   YES : Repair or replace any parts necessary, then go to step 5.

   NO : Go to **RESETTING THE POWER WINDOW CONTROL UNIT**, then recheck.

5. Power window operation check:
   - 1. **RESETTING THE POWER WINDOW CONTROL UNIT**.

- 2. Fully open the door glass using the power window AUTO DOWN switch.
- 3. Fully close the door glass using the power window AUTO UP switch.

Does the door glass reverse as it is closing?

YES : Troubleshooting is not complete; go to step 4 and recheck.

NO : Troubleshooting is complete; go to **RESETTING THE POWER WINDOW CONTROL UNIT**.

QUARTER GLASS REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 88: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Opening Seal As Needed
    1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

Fig. 89: Removing Rear Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 90: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 91: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 92: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 93: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 94: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Carpet Trim
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

Left side

Fig. 95: Removing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 96: Removing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trim (C) by hand to detach the clips (D), then remove the rear carpet trims.

Left side

Fig. 97: Identifying Rear Side Trim Panel, Rear Carpet Trim, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 98: Identifying Rear Side Trim Panel, Rear Carpet Trim, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Seat Foot Cover
    1. Pull up the rear seat foot cover (A) by hand to detach the clips (B).

2. Detach the hooks (C), then remove the rear seat foot cover.

Left Side

Fig. 99: Identifying Rear Seat Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 100: Identifying Rear Seat Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Seat Belt Lower Anchor Bolt
    1. Remove the rear seat belt lower anchor bolt (A).

Fig. 101: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Side Trim Panel
    1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.
    2. Remove the screws (C).

Fig. 102: Removing Rear Seat Release Lever Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 103: Identifying Trunk Hook And Center Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 104: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 105: Identifying Quarter Pillar Trim, Rear Side Trim Panel, Tabs, Hooks And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 106: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 107: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Quarter Pillar Trim
    1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
    2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

Fig. 108: Identifying Quarter Pillar Trim, Rear Seat Belt Lower Anchor And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Quarter Glass
    1. Remove the front seal (A) from the front edge of the quarter glass (B). If necessary, cut the seal with a utility knife.

Fig. 109: Removing Front Seal From Quarter Glass Front Edge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. If the original quarter glass (A) will be reinstalled, make alignment marks (B) across the glass and the body with a grease pencil over the quarter glass molding (C).

Fig. 110: Identifying Alignment Marks On Quarter Glass Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Apply protective tape along the inside and outside edges of the body. From the pillar side of the vehicle, to cut the adhesive (A) with a utility knife (B).

Fig. 111: Applying Protective Tape On Inside And Outside Edges Of Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Make a hole with an awl through the adhesive from inside of the vehicle at the front corner of the quarter glass. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
5. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the quarter glass (B) as possible to prevent damage to the body, and carefully cut through the adhesive (C) in the straight areas and the front corner, but not the rear corner.

Fig. 112: Making Hole On Quarter Glass Using Awl
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Cutting positions

Fig. 113: Identifying Cutting Positions On Quarter Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From inside of the vehicle, cut through the adhesive (A) of quarter glass rear corner with a utility knife (B).
7. Carefully remove the quarter glass.

Fig. 114: Cutting Adhesive Of Quarter Glass Rear Corner Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If a new quarter glass will be installed, remove clips (A) from the body.

Fig. 115: Identifying Quarter Glass Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Quarter Glass
    1. Scrape smooth the original adhesive with a knife until there is a thickness of about 1 - 2 mm (0.04 - 0.08 in) on the bonding surface around the entire quarter glass opening flange.

        NOTE: Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.

    2. Clean the body bonding surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
    3. If you are reinstalling the original quarter glass, scrape off the original adhesive from the quarter

glass with a putty knife. Clean the bonding surfaces on the inside face and the edge of the quarter glass with isopropyl alcohol. Make sure the bonding surface is kept free of water, oil, and grease.

Fig. 116: Installing Front Seal And Adhesive Tape To Inside Face Of Quarter Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Attach the front seal (A) with adhesive tape to the inside face of the quarter glass (B) as shown. Before installing the front seal, apply primer to the inside face of the quarter glass.

NOTE: Be careful not to touch the quarter glass where the adhesive will be applied.

5. If you are installing a new quarter glass, set the quarter glass (A) in the opening, and make alignment marks (B) across the quarter glass and the body with a grease pencil at the three points shown. Make sure the pins (C) of the clips (D) contact with the edge of the body holes.

NOTE: Be careful not to touch the quarter glass where the adhesive will be applied.

6. Remove the quarter glass.

Fig. 117: Locating Alignment Marks On Quarter Glass And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Apply a light coat of primer along the edge of the quarter glass (A) and the front seal (B) as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply the primer to the rear corner, upper corner, and lower corner areas of the quarter glass using the printed dots (C) on the quarter glass as a guide.
    - Do not apply body primer to the quarter glass, and do not mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands. If you do, adhesive may not bond to the quarter glass properly, causing a leak after the quarter glass is installed.
    - Keep water, dust, and abrasive materials away from the primed surfaces.

Fig. 118: Identifying Light Coat Of Primer Applying Area On Edge Of Quarter Glass And Front Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Carefully apply a light coat of body primer to any exposed paint or metal around the flange where new adhesive will be applied. Let the body primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Do not mix up the body applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands.

Fig. 119: Identifying Light Coat Of Body Primer Applying Area On Exposed Paint Or Metal Around Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

Fig. 120: Identifying Cut End Of Nozzle On Adhesive Cartridge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Put the cartridge in a caulking gun, and run a continuous bead of the adhesive (A) around the edge of the quarter glass (B) and along the front seal (C) as shown:
    - Use the printed dots (D) on the quarter glass as a guide, apply adhesive to the rear corner, upper corner and the lower corner areas of the quarter glass.
    - Apply adhesive within 30 minutes after applying the primer.
    - Make a slightly thicker bead at each corner.

Fig. 121: Identifying Continuous Bead Of Adhesive Applying Area On Edge Of Quarter Glass And Front Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If the original quarter glass will be reinstalled, apply adhesive (A) to the rear clip area as shown.

Fig. 122: Identifying Adhesive Applying Area On Rear Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Hold the quarter glass (A) with suction cups (B) over the opening, align it with the clips (C) and alignment marks (D), and set it down on the adhesive. Lightly push on the quarter glass until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the adhesive is dry.

13. Remove the excess adhesive with a putty knife or a shop towel dampened with isopropyl alcohol.
14. Wait at least an hour for the adhesive to dry, then spray water over the quarter glass and check for leaks. Mark the leaking areas, let the quarter glass dry, then seal with sealant. Let the vehicle stand for at least 4 hours after quarter glass installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
15. Advise the customer not to do the following things for 2 to 3 days:
    - Slam the doors with all the windows rolled up.
    - Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).

Fig. 123: Removing Excess Adhesive From Quarter Glass Using Putty Knife Or Shop Towel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)

- After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
- If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 124: Identifying Quarter Pillar Trim, Clip And Seating Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

Fig. 125: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 126: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 127: Removing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 128: Cutting Headliner Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Quarter Pillar Trim
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 129: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 130: Identifying Rear Seat Belt Lower Anchor, Quarter Pillar Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Side Trim Panel
    1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 131: Installing Rear Seat Release Cable To Rear Side Trim Panel Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 132: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 133: Identifying Rear Side Trim Panel, Hooks, Tabs And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 134: Identifying Tie-Down Hook And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 135: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 136: Identifying Rear Seat Release Lever Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Seat Belt Lower Anchor Bolt
    1. Install the rear seat belt lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 137: Identifying Rear Seat Belt Lower Anchor Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left Side

Fig. 138: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 139: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Carpet Trim
    1. Install the rear carpet trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left side

Fig. 140: Identifying Rear Carpet Trim, Clips And Hooks (Left Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 141: Identifying Rear Carpet Trim, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 142: Identifying Rear Seat-Back Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 143: Identifying Rear Seat-Back Cover, Clips And Hooks (Right Side)

9. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 144: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 145: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 146: Identifying Alignment Mark On Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 147: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 148: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Door Opening Seal As Needed
    1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 149: Installing Rear Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 150: Installing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Water Leak Test

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 151: Checking Water Leakage On Roof Sealing Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR GLASS ADJUSTMENT

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 152: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 153: Removing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 154: Removing Rear Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 155: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 156: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 157: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the door pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: **If the plastic cover is damaged or torn, replace it.**

Fig. 158: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Rear Door Glass - Adjustment

NOTE:
- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the front side channel, then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 159: Moving Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 160: Checking Gap Between Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Plastic Cover As Needed

1. Install the plastic cover (A), then install the plug caps (B).
2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 161: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 162: Installing Inner Handle To Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 163: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 164: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 165: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 166: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 167: Installing Power Window Switch Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR GLASS REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 168: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 169: Removing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 170: Removing Rear Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 171: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 172: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 173: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Plastic Cover
    1. Disconnect the connector (A), then remove the harness clips (B).
    2. Remove the screws (C), then remove the door pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 174: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Glass
    1. Carefully move the glass (A) until you can see the glass mounting bolts (B), then remove them. Carefully lower the glass into the door. Take care not to drop the glass inside the door.

Fig. 175: Identifying Door Glass And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the nut (A) and the bolt (B) securing the rear door rear lower channel.
3. Carefully pull out the glass (C) through the window slot. Take care not to drop the glass inside the door.

Fig. 176: Pulling Out Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Glass Run Channel
    1. Remove the rear door glass run channel (A).

Fig. 177: Removing Rear Door Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Rear Lower Channel

1. Remove the rear door rear lower channel (A).

Fig. 178: Identifying Rear Door Rear Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Rear Lower Channel
    1. Install the rear door rear lower channel (A).

Fig. 179: Identifying Rear Door Rear Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Glass Run Channel
    1. Install the rear door glass run channel (A) all the way around.

Fig. 180: Installing Rear Door Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Glass
    1. Install the glass (A) through the window slot.
    2. Install the nut (B) and the bolt (C) securing the rear door rear lower channel.

Fig. 181: Installing Door Glass With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the glass mounting bolts (A) securing the rear door glass (B).

Fig. 182: Installing Door Glass Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the front side channel, then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 183: Moving Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 184: Checking Gap Between Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Plastic Cover
    1. Install the plastic cover (A), then install the plug caps (B).

2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 185: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 186: Installing Inner Handle To Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 187: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 188: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 189: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 190: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 191: Installing Power Window Switch Panel

REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 192: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Power Window Switch
    1. Remove the rear power window switch (A).

Fig. 193: Identifying Rear Power Window Switch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Power Window Switch
    1. Install the rear power window switch (A).

Fig. 194: Identifying Rear Power Window Switch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C)

and the hooks (D) snap into place securely.

Fig. 195: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR POWER WINDOW SWITCH TEST

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 196: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Rear Power Window Switch - Test
    1. Check for continuity between the terminals in each position according to the table.
    2. If the continuity is not as specified, replace the rear power window switch (A).

Fig. 197: Identifying Rear Passenger's Power Window Switch And Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Position \ Terminal	1	3	4	5	8
OFF	○	○	○	○	
UP	○	○	○		○
DOWN	○	○		○	○

Fig. 198: Rear Passenger's Power Window Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 199: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate

upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 200: Identifying Tailgate Upper Trim, Panel, Hooks, Notch And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 201: Identifying Tailgate Lower Trim, Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 202: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the

tailgate lower trim panel.

Fig. 203: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear License Trim
    1. Remove the bolts (A).

Fig. 204: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the lower edge of the rear license trim (B) with a utility knife while separating the trim

from the tailgate (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 205: Applying Protective Tape On Rear License Trim Cutting Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the rear license trim (A) with the appropriate trim tool to release the clip pins (B) of the clips (C) from the clip grommets (D) on the tailgate, and detach the clips (E), then remove the rear license trim from the tailgate.

NOTE: The clip grommets will stay on the tailgate.

Fig. 206: Identifying Rear License Trim Clips And Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clip grommets (A) from the tailgate.
5. Install the clip grommets into the clip pins on the rear license trim.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

Fig. 207: Removing Clip Grommets From Tailgate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Window Wiper Arm Assembly
    1. Raise the wiper arm (A) off the rear window, then remove the cover (B), the nut (C), and the wiper arm.

Fig. 208: Identifying Rear Window Wiper Arm, Cover And Nut With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Window Wiper Motor
    1. Disconnect the connector.
    2. Remove the rear window wiper motor (A).

Fig. 209: Identifying Rear Window Wiper Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Window
    1. Remove the rubber dams (A, B) from the edges of the rear window (C). If necessary, cut the rubber dams with a utility knife.

Fig. 210: Removing Rubber Dams From Rear Window Edges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A).

Fig. 211: Identifying Rear Window Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the original rear window will be reinstalled, make alignment marks (A) across the glass and the body with a grease pencil.

Fig. 212: Identifying Alignment Marks On Glass And Body Using Grease Pencil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply protective tape along the inside and the outside edges of the tailgate. Make a hole with an awl through the adhesive from inside of the vehicle at the corner portion of the rear window. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
5. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the rear window (B) as possible to prevent damage to the tailgate, and carefully cut through the adhesive (C) around the entire rear window.

Fig. 213: Cutting Adhesive From Rear Window Corner Portion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Carefully remove the rear window.

Cutting positions

Fig. 214: Identifying Rear Window Adhesive Cutting Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Window
    1. Scrape smooth the original adhesive with a knife until there is a thickness of about 1~2 mm (0.04~0.08 in) on the bonding surface around the entire rear window opening flange:
        - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
        - Remove the fasteners or spacers from the tailgate.
    2. Clean the body bonding surface with a shop towel dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
    3. If you are reinstalling the original rear window, scrape off all of the original adhesive, the fasteners, the spacers (Sayama products), and the rubber dams from the rear window with a putty knife. Clean the bonding surface on the inside face and the edge of the rear window with isopropyl alcohol. Make sure the bonding surface is kept free of water, oil, and grease
    4. Except '14 Mexico factory model: Cut the rubber dam (A) to correct length according to the table.

Rubber dam	Length	QTY
A	900 mm (35.43 in)	1

Except '14 Mexico Factory Model

Fig. 215: Identifying Rear Window Corner Molding, Rubber Dam And Fasteners (Except '14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. '14 Mexico factory model: Cut the rubber dams (A, C) to correct length according to the table.

Rubber dam	Length	QTY
A	900 mm (35.43 in)	1
C	190 mm (7.48 in)	2

6. Apply a primer to the fasteners and the rubber dams mounting areas on the rear window, and let it dry. Attach rubber dam (A), the corner molding (B) (except '14 Mexico factory model), rubber dams (C), rubber dam (D), and the fasteners (E, F) with the adhesive tape to the inside face of the rear window (G) as shown.
   - Be sure the fasteners line up with alignment marks (H).
   - Be careful not to touch the rear window where the adhesive will be applied.
   - Except '14 Mexico factory model: First attach the corner molding (B), then attach rubber dam (A) and rubber dams (C) around the edge of the rear window. Make sure edges of rubber dam (A) contact with the edges of the corner molding (B). If necessary, cut rubber dam (A) with a

utility knife.

- '14 Mexico factory model: Make sure that there is no clearance between rubber dam (A) and rubber dams (C)
- Cut the excess rubber dams (C) along both beveled edges of the rear window.

'14 Mexico Factory Model

Fig. 216: Identifying Rear Window Corner Molding, Rubber Dam And Fasteners ('14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Attach the fasteners (A, B) with adhesive tape to the tailgate as shown.

Fig. 217: Identifying Tailgate Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If you are installing a new rear window, set the rear window (A) in the opening, and center it. Make alignment marks (B) across the rear window and the body with a grease pencil at the four points shown. Make sure the pins (C) of both clips (D) contact with the holes of the tailgate corner. Be careful not to touch the rear window where the adhesive will be applied.
9. Remove the rear window.

Fig. 218: Making Alignment Marks On Rear Window And Body Using Grease Pencil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Apply a light coat of primer to the rear window (A) along the edge of the rubber dams (B) and the corner molding as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply the primer to the corner portions of the rear window using the printed dots (C) on the rear window as a guide.
    - Do not apply body primer to the rear window, and do not mix up the body primer applicator and the glass primer applicator.

    Except '14 Mexico Factory Model

Fig. 219: Identifying Primer Applying Area On Rear Window (Except '14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the rear window properly, causing a leak after the rear window is installed.
- Keep water, dust, and abrasive materials away from the primed surface.

'14 Mexico Factory Model

Fig. 220: Identifying Primer Applying Area On Rear Window ('14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Carefully apply a light coat of body primer to any exposed paint or metal around the flange where the adhesive will be applied. Let the body primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Do not mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands.

Fig. 221: Identifying Light Coat Of Body Primer Applying Area On Exposed Paint Or Metal Around Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

Fig. 222: Identifying Cut End Of Nozzle On Adhesive Cartridge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Put the cartridge in a caulking gun, and run a continuous bead of the adhesive (A) around the rear window (B) along the edge of the rubber dams (C) as shown:
    - Use the printed dots (D) as a guide when you apply the adhesive to the corners of the rear window.
    - Apply the adhesive within 30 minutes after applying the primer. Make a slightly thicker bead at each corner.
14. Hold the rear window with suction cups over the opening, align it with the alignment marks, and set it down on the adhesive. Lightly push on the rear window until its edges are fully seated on the adhesive all the way around.

NOTE: **Do not open or close any of the doors for about an hour until the adhesive is dry.**

15. Remove the excess adhesive with a putty knife or a shop towel dampened with isopropyl alcohol.
16. Wait at least an hour for the adhesive to dry, then spray water over the rear window and check for leaks. Mark the leaking areas, let the rear window dry, then seal with sealant. Let the vehicle stand for at least 4 hours after rear window installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
17. Advise the customer not to do the following things for 2 to 3 days:
    - Slam the doors with all the windows rolled up.
    - Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).

Except '14 Mexico Factory Model

Fig. 223: Identifying Continuous Bead Of Adhesive Applying Area On Rear Window And Edge Of Rubber Dams (Except '14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

'14 Mexico Factory Model

Fig. 224: Identifying Continuous Bead Of Adhesive Applying Area On Rear Window And Edge Of Rubber Dams ('14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Connect the connectors (A).

Fig. 225: Identifying Rear Window Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Window Wiper Motor
    1. Align the position marks when installing the seal (A), then install the washer (B) and rear window motor (C).
    2. Connect the connector.

NOTE: **Before reinstalling the rear wiper arm, turn the rear window wiper switch ON, then OFF to return the wiper shaft to the park position.**

Fig. 226: Exploded View Of Rear Window Wiper Motor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Window Wiper Arm Assembly
    1. Install the wiper arm (A), the nut (B), and the cover (C).

Fig. 227: Identifying Rear Window Wiper Arm, Cover And Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear License Trim
    1. If you are reusing the original rear license trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 3 mm (0.12 in)

       Width 4 mm (0.16 in)

       Length 255 mm (10.04 in)

       Adhesive tape (C): Thickness 2 mm (0.08 in)

       Width 5 mm (0.20 in)

       Length 177 mm (6.97 in)

Fig. 228: Identifying Adhesive Tape Applying Area On Rear License Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
3. Hold up the rear license trim (A), and fit the clips (B, C) into the holes in the tailgate. Push on the trim until the clips snap into place securely.

Fig. 229: Identifying Rear License Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 230: Identifying Rear License Trim Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 231: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 232: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 233: Identifying Tailgate Side Trim, Hook, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 234: Identifying Tailgate Upper Trim Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Window Wiper Arm/Nozzle - Adjustment

NOTE:

- **Adjust the washer nozzle by gently gripping, and then moving, the outside of the nozzle (A).**
- **Do not insert tools into the nozzle hole (B), as it may cause the washer fluid to spray incorrectly.**

Wiper Arm Park Position

1. Turn the ignition switch to ON (II), then turn the wiper switch ON, and then back OFF.

Fig. 235: Identifying Wiper Arm Park Position From Rear Window Center Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. When the wiper arm stops at the auto-stop position, make sure that it is at the correct position:
   a. Wiper arm stop position on the rear window defogger.

Washer Nozzle Position

3. When you turn on the washer, make sure 50% or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzle:

   b: Position at about 108.5 mm (4.27 in) from the rear window center line (C).

   c: Position at about 21.2 mm (0.83 in) from the top of the black ceramic area (D).

   d: Position at about 21.9 mm (0.86 in) from the position (c).

9. Water Leak Test

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 236: Checking Water Leakage On Roof Sealing Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING THE POWER WINDOW CONTROL UNIT

PROCEDURE

1. Power Window Control Unit - Reset

   Resetting the power window is required when any of the following have occurred:

   - Power window regulator replacement or repair
   - Power window motor replacement or repair
   - Glass run channel replacement
   - Driver's door glass replacement
   - Power window master switch replacement

1. Turn the ignition switch to ON (II).
2. Move the driver's window all the way down with the driver's window DOWN switch.
3. Open the driver's door.

NOTE: Steps 4-7 must be done within 5 seconds of each other.

Fig. 237: Ignition Switch And Driver's Window Down Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the ignition switch to LOCK (0).
5. Push and hold the driver's window DOWN switch.
6. Turn the ignition switch to ON (II).
7. Release the driver's window DOWN switch.
8. Repeat steps 4-7 three more times.
9. Confirm that AUTO UP and AUTO DOWN do not work. If AUTO UP and DOWN work, go back to step 1.
10. Pull up and hold the driver's window UP switch until the window reaches the fully closed position, then continue to hold the switch for at least 1 second.
11. Confirm that the power window control unit is reset by using the driver's window AUTO UP and AUTO DOWN functions:
    - If the window still does not work in AUTO, repeat the procedure several times, paying close attention to the 5 second time limit between steps.
    - If the window still does not work, refer to the **MASTER SWITCH INPUT TEST**.

WINDSHIELD REMOVAL AND INSTALLATION

REMOVAL

1. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before removal.

1. Remove the caps (A) and nuts (B).
2. Remove the wiper arms (C).

Fig. 238: Identifying Wiper Arms, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 239: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 240: Identifying Hood Rear Seal, Cowl Top Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

Fig. 241: Removing Front Fender Cowl Cover Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

Fig. 242: Identifying Center Cowl Cover, Hook And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 243: Pulling Out Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 244: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 245: Inserting Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: **The upper clip will stay in the body.**

Fig. 246: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 247: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rearview Mirror

Without auto dimming mirror

1. Using a plastic trim tool, press down on the tab, slide the mirror base (A) rearward, then remove the rearview mirror.

Fig. 248: Sliding Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With auto dimming mirror

1. Carefully pry out the rearview mirror harness cover (A) to release the hooks (B), then slide the cover rearward.
2. Release the rearview mirror harness cover from the hooks (C) of the rearview mirror harness cover base (D).

Fig. 249: Identifying Rearview Mirror Harness Cover, Base And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the rearview mirror connector (A).

Fig. 250: Identifying Rearview Mirror Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the screw (A) with a TORX T20 bit, then slide the rearview mirror (B) rearward and off the mount (C).

Fig. 251: Identifying Rearview Mirror, Mount And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: **Make sure the tab is unlocked.**

Fig. 252: Pushing Sunvisor Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: **Make sure the tab slides into the bracket cover as you rotate the sunvisor.**

Fig. 253: Removing Sunvisor From Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 254: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Sunvisor Holder - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

Fig. 255: Turning Sunvisor Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the holder grommet (A).

Fig. 256: Identifying Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

Fig. 257: Identifying Roof Console Assembly, Connectors And Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Headliner As Needed - Front Side
    1. Detach the front area of the headliner (A) as needed.

Fig. 258: Disconnecting Front Area Of Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Roof Molding - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully insert the large trim tool (A) under the molding next to the lower clip (B).
2. While pulling up the clip area of the molding by hand, push each of the six small hooks (C) to release the clip from the retainer (D) on the A-pillar. Do not pry up the clip if it is hard to release it from the clip on the A-pillar.
3. Gradually work your way up to release each of the upper clips (E, F, G).

<u>Fig. 259: Inserting Large Trim Tool Under Molding</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start from the front to the rear, carefully insert a trim tool in under the roof molding (A) next to each of the retainers (B, C). Slide and pry up the retainers to release it with the clips from the stud bolts (D) and the pins (E) on the body.

Fig. 260: Removing Roof Molding From Body Using Trim Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the rear end of the roof molding (A) forward to release it from the body, then remove the roof molding from the body.

Fig. 261: Removing Roof Molding From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pry up the middle hooks (A) with a flat-tip screw driver to release the retainer (B) from the roof molding (C).

Fig. 262: Releasing Retainer From Roof Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Roof Rail - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the caps (A). (4 Places)

Fig. 263: Identifying Roof Rail Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the roof rail (A).

Fig. 264: Identifying Roof Rail Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Side Windshield Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully insert the large trim tool (A) under the trim next to the lower clip (B).
2. While pulling up the clip area of the trim by hand, push each of the six small hooks (C) to release the clip from the retainer (D) on the A-pillar. Do not pry up the clip if it is hard to release it from the clip on the A-pillar.
3. Gradually work your way up to release each of the upper clips (E, F, G).

Fig. 265: Inserting Large Trim Tool Under Side Windshield Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Windshield
    1. Remove the windshield molding (A) from the upper edge of the windshield (B). If necessary, cut the windshield molding with a utility knife.

Fig. 266: Removing Windshield Molding From Upper Edge Of Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the original windshield will be reinstalled, make alignment marks (A) across the glass and the body with a grease pencil.
3. Apply protective tape along the edge of the dashboard and the body. Make a hole with an awl through the rubber dam, the adhesive, and the dashboard seal from inside of the vehicle at a corner portion of the windshield. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.

Fig. 267: Identifying Alignment Marks On Windshield Glass And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the windshield (B) as possible to prevent damage to the body and the dashboard. Carefully cut through the rubber dam and the adhesive (C) around the entire windshield.
5. Carefully remove the windshield.

Fig. 268: Removing Windshield Using Piano Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Cutting positions

Fig. 269: Identifying Windshield Cutting Positions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Windshield
    1. Scrape smooth the original adhesive with a knife until there is a thickness of about 1~2 mm (0.04~0.08 in) on the bonding surface around the entire windshield opening flange:
        - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
        - Remove the rubber dam and the fasteners from the body.
    2. Clean the body bonding surface with a shop towel dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the clean surface.
    3. If you are reinstalling the original windshield, scrape off all of the original adhesive, the clips, the dashboard seal, and the rubber dam from the windshield with a putty knife. Clean the boning surface on the inside face and the edge of the windshield with isopropyl alcohol. Make sure the

bonding surface is kept free of water, oil, and grease.

4. Cut the side rubber dams (B) to correct length according to the table.

Length	QTY
970 mm (38.19 in)	3

5. Apply primer to the upper clip and the rubber dams mounting areas on the windshield (A), and let it dry. Remove the adhesive backing, and attach the side rubber dams (B) and the upper clips (C) to the inside face of the windshield as shown:

Fig. 270: Identifying Primer Applying Areas On Upper Clip And Rubber Dams Mounting Areas Of Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Be sure the rubber dams and the clips line up with the alignment marks (D, E, and F).
- Be careful not to touch the windshield where the adhesive will be applied.

6. Cut the dashboard seal (A) to correct length according to the table.

Length	QTY
1350 mm (53.15 in)	1

7. Attach the dashboard seal (A) with adhesive tape to the inside surface of the windshield (B) as shown, using the edge of the black ceramic-coated area (C) as shown:
   - Make sure the dashboard seal lines up with the alignment marks (D).
   - Be careful not to touch the windshield where the adhesive will be applied.

Fig. 271: Identifying Dashboard Seal And Black Ceramic-Coating Applying Areas On Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Attach the windshield molding (A) with adhesive tape (B) to the upper edge of the windshield (C).

NOTE: **Be careful not to touch the windshield where the adhesive will be applied.**

Fig. 272: Connecting Windshield Molding And Adhesive Tape On Upper Edge Of Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Set the windshield (A) in the opening, and center it. Make alignment marks (B) across the windshield and the body with a grease pencil at the four points shown:
    - Make sure both clips (C) contact with the edge of the body holes.
    - Be careful not to touch the windshield where the adhesive will be applied.
10. Remove the windshield.

Fig. 273: Identifying Alignment Marks On Windshield Glass And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Apply a light coat of primer along the edge of the windshield (A) between the rubber dam (B) and the windshield molding (C) as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply the primer to around edge of the windshield using the printed dots (D) on the windshield as a guide.
    - Do not apply body primer to the windshield, and do not mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the windshield properly, causing a leak after the windshield is installed.
    - Keep water, dust, and abrasive materials away from primed surfaces.

Fig. 274: Identifying Primer Applying Areas On Windshield Between Rubber Dam And Windshield Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Carefully apply a light coat of the body primer to any exposed paint or metal on the windshield mounting flange. Let the body primer dry for at least 10 minutes:
    - Do not apply the glass primer to any remaining original adhesive on the flange.
    - Cover on the dashboard before applying the body primer.
    - Do not to mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands.

Fig. 275: Identifying Body Primer Applying Areas On Windshield Mounting Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

Fig. 276: Identifying Adhesive Cartridge Cutting Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Put the cartridge in a caulking gun, and run a continuous bead of the adhesive (A) around the edge of the windshield (B) along the edge of the rubber dam (C) and the windshield molding (D) as shown:
    - Use the printed dots (E) as a guide when you apply the adhesive to the windshield.
    - Apply the adhesive within 30 minutes after applying the primer.
    - Make a slightly thicker bead at each corner.
15. Hold the windshield with suction cups over the opening, align it with the alignment marks and set it down on the adhesive. Lightly push on the windshield until its edges are fully seated on the adhesive all the way around.

NOTE: **Do not open or close any of the doors for about an hour until the adhesive is dry.**

16. Remove the excess adhesive with a putty knife or a shop towel dampened with isopropyl alcohol.
17. Wait at least an hour for the adhesive to dry, then spray water over the windshield and check for leaks. Mark the leaking areas, let the windshield dry, then seal with sealant: Let the vehicle stand for at least 4 hours after windshield installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.

Fig. 277: Identifying Adhesive Applying Areas On Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Advise the customer not to do the following things for 2 to 3 days:
    - Slam the doors with all the windows rolled up.
    - Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).

2. Side Windshield Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the side windshield trim (A).

Fig. 278: Installing Side Windshield Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Roof Rail - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the roof rail (A), then install the nuts (B).

Fig. 279: Identifying Roof Rail And Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the caps (A). (4 Places)

Fig. 280: Identifying Roof Rail Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Roof Molding - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the retainers (A) to the pins (B) on the body. (4 places)

Fig. 281: Installing Retainers And Pins On Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the rear end of the roof molding (A) rearward to install it to the body.

Fig. 282: Installing Roof Molding On Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push on the clip areas (A) of the roof molding (B) until the clips lock into the retainers (C) securely, and the retainer (D) into the stud bolts (E).
4. Make sure the roof molding is installed securely.

Fig. 283: Installing Roof Molding, Clips, Retainers And Stud Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Headliner As Needed - Front Side

1. Install the headliner (A).

Fig. 284: Installing Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Roof Console Assembly
    1. Connect the connectors (A), then install the roof console assembly (B).
    2. Install the screws (C, D), then install the lenses (E).

Fig. 285: Identifying Roof Console Assembly, Connectors, Lenses And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Sunvisor Holder

1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 286: Identifying Sunvisor Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 287: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 288: Rotating Sunvisor Into Bracket Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rearview Mirror

Without auto dimming mirror

1. Fit the mirror base (A) over the mount (B), and secure the rearview mirror.

Fig. 289: Fitting Mirror Base Over Mount
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With auto dimming mirror

1. Slide the rearview mirror (A) forward to the mount (B), then tighten the screw (C) with the TORX T20 bit.

NOTE: **Before installing the mirror, remove the screw, and apply medium strength liquid thread lock to it.**

Fig. 290: Identifying Rearview Mirror, Mount And Screw With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the rearview mirror connector (A).

Fig. 291: Identifying Rearview Mirror Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rearview mirror harness cover (A). Make sure the hooks (B, C) snap into place securely.

Fig. 292: Identifying Rearview Mirror Harness Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 293: Installing Upper Clip Into Clip Seating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

Fig. 294: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 295: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 296: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

- Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
- Remove the tape, and install the pillar trim.

Fig. 297: Trimming Headliner Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

12. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 298: Installing Upper Clip Into A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then

lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 299: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 300: Identifying Front Door Opening Seal Applying Areas On Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 301: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Side Cowl Cover - Both Sides

NOTE: **Repeat on the opposite side.**

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

Fig. 302: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Cowl Top Cover - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

Fig. 303: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

Fig. 304: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 305: Identifying Wiper Arms, Nut And Caps With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Water Leak Test

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 306: Checking Roof And Sealing Areas For Water Leaks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM/NOZZLE ADJUSTMENT** or **WIPER ARM REMOVAL AND INSTALLATION** .

DRIVER'S POWER WINDOW MOTOR TEST

MOTOR TEST

1. **REMOVE THE POWER WINDOW MASTER SWITCH**.
2. Test the motor in each direction by connecting battery power and ground to the power window master switch 26P connector according to the table.

Direction \ Terminal	14	19
UP	⊖	⊕
DOWN	⊕	⊖

Fig. 307: Driver's Power Window Motor Switch Condition Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 308: Identifying Power Window Master Switch 26P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the motor does not run or fails to run smoothly, go to step **4** .
4. **REMOVE THE DOOR PANEL** .
5. Disconnect the 6P connector from the driver's power window motor.
6. Check for continuity between the power window master switch 26P connector terminals and driver's power window motor 6P connector terminals as shown. There should be continuity.

Power window master switch 26P connector	Driver's power window motor 6P connector
14 (GRY)	1 (GRY)
19 (PNK)	2 (PNK)

Fig. 309: Checking Continuity Between Power Window Master Switch 26P Connector And Driver's Power Window Motor 6P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If there is no continuity, repair an open or high resistance in the wire(s). If the wire harness is OK,

REPLACE THE DRIVER'S DOOR POWER WINDOW MOTOR.

Hall IC Unit (Pulser) Test

8. Do the power window master switch input test for terminals No. 9, No. 10, No. 11, and No. 12.

FRONT PASSENGER'S POWER WINDOW MOTOR TEST

MOTOR TEST

1. **Remove the front passenger's power window switch** See **REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION** or **FRONT PASSENGER'S POWER WINDOW SWITCH REMOVAL AND INSTALLATION**.
2. Test the motor in each direction by connecting battery power and ground to the front passenger's power window switch 10P connector according to the table.

Terminal / Direction	8	10
UP	⊕	⊖
DOWN	⊖	⊕

Fig. 310: Front Passenger's Power Window Motor Switch Condition Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 311: Identifying Front Passenger's Power Window Switch 10P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the motor does not run or fails to run smoothly, go to step **4** .
4. **REMOVE THE DOOR PANEL** .
5. Disconnect the 2P connector from the front passenger's power window motor.
6. Check for continuity between the front passenger's power window switch 10P connector terminals and front passenger's power window motor 2P connector terminals as shown. There should be continuity.

Front passenger's power window switch 10P connector	Front passenger's power window motor 2P connector
10 (PNK)	1 (PNK)
8 (BLU)	2 (BLU)

Fig. 312: Checking Continuity Between Front Passenger's Power Window Switch 10P And 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If there is no continuity, repair an open or high resistance in the wire(s). If the wire harness is OK, **REPLACE THE FRONT PASSENGER'S POWER WINDOW MOTOR**.

POWER WINDOW MASTER SWITCH INPUT TEST

NOTE: **Before testing, make sure the No. B42 (20 A), No. B43 (20 A), No. B44 (20 A), and No. B45 (20 A) fuses in the under-dash fuse/relay box are OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT THE POWER WINDOW MASTER SWITCH 26P CONNECTOR**.

Fig. 313: Identifying Power Window Master Switch 26P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK; go to step 5.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
19 14	PNK GRY	Connect terminals No. 19 (or No. 14) and No. 15, and terminals No. 14 (or No. 19) and No. 13 with jumper wires	Check driver's power window motor operation: The driver's power window should close (or open).	• Faulty driver's power window motor • An open or high resistance in the wire
24 25	ORN BRN	Connect terminals No. 24 (or No. 25) and No. 26, and terminals No. 25 (or No. 24) and No. 16 with jumper wires	Check front passenger's power window motor operation: The front passenger's power window should close (or open).	• Faulty front passenger's power window motor • Faulty front passenger's power window switch • An open or high resistance in the wire
			Check left rear power	• Faulty left rear power window motor

23 22	BLK PUR	Connect terminals No. 23 (or No. 22) and No. 21, and terminals No. 22 (or No. 23) and No. 16 with jumper wires	window motor operation: The left rear power window should close (or open).	• Faulty left rear power window switch • An open or high resistance in the wire
18 17	LT BLU RED	Connect terminals No. 18 (or No. 17) and No. 20, and terminals No. 17 (or No. 18) and No. 16 with jumper wires	Check right rear power window motor operation: The right rear power window should close (or open).	• Faulty right rear power window motor • Faulty right rear power window switch • An open or high resistance in the wire

5. Reconnect the connector to the power window master switch, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK; **REPLACE THE POWER WINDOW MASTER SWITCH**.

NOTE: **After replacing the power window master switch, DO THE RESETTING THE POWER WINDOW CONTROL UNIT.**

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
15	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. B42 (20 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
26	GRN	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B44 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay • An open or high resistance in the wire
21	BLU	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B45 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay

				• An open or high resistance in the wire
20	PUR	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B43 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay • An open or high resistance in the wire
13	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
16	BLK	Window lock switch ON	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • An open or high resistance in the ground wire
12	BRN	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Faulty power window master switch • A short to ground in the wire
9	LT BLU	Ignition switch ON (II)	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G501) • Faulty power window master switch • An open or high resistance in the ground wire
11	PNK	Ignition switch ON (II), and power window master switch moving up or down.	Measure the voltage between terminals No. 11 and No. 13: An analog meter should alternate between 0 V and 5 V (a digital voltmeter should read about 2.5 V while the window moves).	• Faulty driver's power window motor • An open or high resistance in the wire • A short to ground in the wire
10	ORN	Ignition switch ON (II), and power window master switch moving up or down.	Measure the voltage between terminals No. 10 and No. 13: An analog meter should alternate between 0 V and 5 V (a digital voltmeter should read about 2.5 V while the window moves).	• Faulty driver's power window motor • An open or high resistance in the wire • A short to ground in the wire

REAR POWER WINDOW MOTOR TEST

MOTOR TEST

1. **Remove the rear power window switch** See **REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION** or **FRONT PASSENGER'S POWER WINDOW SWITCH REMOVAL AND INSTALLATION**.
2. Test the motor in each direction by connecting battery power and ground to the rear power window switch 8P connector according to the table.

Direction \ Terminal	1	3
UP	⊕	⊖
DOWN	⊖	⊕

Fig. 314: Rear Power Window Motor Switch Condition Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 315: Identifying Rear Power Window Switch 8P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the motor does not run or fails to run smoothly, go to step **4** .
4. **REMOVE THE DOOR PANEL** .
5. Disconnect the 2P connector from the rear power window motor.
6. Check for continuity between the rear power window switch 8P connector terminals and rear power window motor 2P connector terminals as shown. There should be continuity.

Left side

Left rear power window switch 8P connector	Left rear power window motor 2P connector
1 (YEL)	1 (YEL)
3 (BRN)	2 (BRN)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If there is no continuity, repair an open or high resistance in the wire(s). If the wire harness is OK, faulty rear power window motor; replace the rear door regulator. See **Rear Door Regulator Removal and Installation**

DTC C1840-12: DIFFERENTIAL FLUID PRESSURE SENSOR CIRCUIT HIGH VOLTAGE

Fig. 1: DTC Troubleshooting Flow Chart (C1840-12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL**

TIME AWD SYSTEM .

DTC Description	DTC	Freeze Frame
C1840-12 Differential Fluid Pressure Sensor Circuit High Voltage		

1. Determine possible failure area (electrical circuit problem, hydraulic circuit problem):
   - 1. Start the engine.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	More than 3.67	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST WITH THE HDS** .

Is the test result OK?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. **FOLLOW THE INSTRUCTIONS INDICATED ON THE HDS ACCORDING TO THE TEST RESULT** .

3. Determine possible failure area (short to power in PS1 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

Test circuit PS1, SG

Test point 1 Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Test point 2 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Fig. 2: Measuring Voltage Between Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And No. 2 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.67 V or more?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (PS1 line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit PS1

     Test point 1 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Test point 2 Body ground

Fig. 3: Measuring Voltage Between Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.5 V or more?

YES : Repair a short to power in the PS1 wire between the rear differential fluid pressure sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

5. Determine possible failure area (open in PS1 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

     Terminal B Body ground

Fig. 4: Connecting Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : Go to step 7.

NO : Go to step 6.

6. Open wire check (PS1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit PS1

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

Test point 1 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Test point 2 Real time AWD control unit 24P connector No. 21 (PNK)

Fig. 5: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Real Time AWD Control Unit 24P Connector No. 21 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the PS1 wire between the rear differential fluid pressure sensor and the real time AWD control unit.

7. Rear differential fluid pressure sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Connect terminals A and B with a jumper wire.

   Terminal A Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Terminal B Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Fig. 6: Connecting Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And No. 2 (PNK) Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : **REPLACE THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR** .

NO : The rear differential fluid pressure sensor is OK. Go to step 8.

8. Open wire check (SG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

Test circuit SG

Test point 1 Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Test point 2 Real time AWD control unit 24P connector No. 11 (GRN)

Fig. 7: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And Real Time AWD Control Unit 24P Connector No. 11 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the SG wire between the rear differential fluid pressure sensor and the real time AWD control unit.

DTC C1840-14: DIFFERENTIAL FLUID PRESSURE SENSOR CIRCUIT LOW VOLTAGE

Fig. 8: DTC Troubleshooting Flow Chart (C1840-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1840-14 Differential Fluid Pressure Sensor Circuit Low Voltage		

1. Problem verification:

- 1. Start the engine.
- 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	Less than 0.34	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (PS1 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	About 5 V			

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Go to step 3.

3. Shorted wire check (PS1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

Real time AWD control unit 24P connector: disconnected

Test circuit PS1

Test point 1 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Test point 2 Body ground

Fig. 9: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the PS1 wire between the rear differential fluid pressure sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

4. Determine possible failure area (Rear differential fluid pressure sensor, SVCC line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Test circuit SVCC, SG

Test point 1 Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Test point 2 Rear differential fluid pressure sensor 3P connector No. 3 (TAN)

Fig. 10: Measuring Voltage Between Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And No. 3 (TAN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : **REPLACE THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR** .

NO : Go to step 5.

5. Open wire check (SVCC line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit SVCC

     Test point 1 Rear differential fluid pressure sensor 3P connector No. 3 (TAN)

     Test point 2 Real time AWD control unit 24P connector No. 20 (WHT)

Fig. 11: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 3 (TAN) And Real Time AWD Control Unit 24P Connector No. 20 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the SVCC wire between the rear differential fluid pressure sensor and the real time AWD control unit.

DTC C1841-11: DIFFERENTIAL FLUID TEMPERATURE SENSOR CIRCUIT LOW VOLTAGE

Fig. 12: DTC Troubleshooting Flow Chart (C1841-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1841-11 Differential Fluid Temperature Sensor Circuit Low Voltage		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	Less than 0.08	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Rear differential fluid temperature sensor check:

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Rear differential fluid temperature sensor 2P connector

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	About 5	V		

Do the current condition(s) match the threshold?

YES : **REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR** .

NO : The rear differential fluid temperature sensor is OK. Go to step 3.

3. Shorted wire check (TOH line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit TOH

     Test point 1 Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Test point 2 Body ground

Fig. 13: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TOH wire between the rear differential fluid temperature sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

Fig. 14: DTC Troubleshooting Flow Chart (C1841-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1841-13 Differential Fluid Temperature		
Sensor Circuit High Voltage		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	More than 4.9	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (short to power in TOH line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid temperature sensor 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Test circuit TOH

     Test point 1 Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Test point 2 Body ground

Fig. 15: Measuring Voltage Between Rear Differential Fluid Temperature Sensor 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4.9 V or more?

YES : Go to step 7.

NO : Go to step 3.

3. Determine possible failure area (open in TOH line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Terminal B Body ground

Fig. 16: Identifying Rear Differential Fluid Temperature Sensor 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : Go to step 5.

NO : Go to step 4.

4. Open wire check (TOH line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit TOH

     Test point 1 Real time AWD control unit 24P connector No. 18 (ORN)

     Test point 2 Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

Fig. 17: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 18 (ORN) And Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the TOH wire between the rear differential fluid temperature sensor and the real time AWD control unit.

5. Rear differential fluid temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Terminal B Rear differential fluid temperature sensor 2P connector No. 2 (WHT)

Fig. 18: Connecting Rear Differential Fluid Temperature Sensor 2P Connector No. 1 (YEL) No. 2 (WHT) Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).
   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : **<u>REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR</u>** .

NO : The rear differential fluid temperature sensor is OK. Go to step 6.

6. Open wire check (TOL line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit TOL

     Test point 1 Real time AWD control unit 24P connector No. 22 (LT BLU)

     Test point 2 Rear differential fluid temperature sensor 2P connector No. 2 (WHT)

Fig. 19: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 22 (LT BLU) And Rear Differential Fluid Temperature Sensor 2P Connector No. 2 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the TOL wire between the rear differential fluid temperature sensor and the real time AWD control unit.

7. Shorted wire check (TOH line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit TOH

     Test point 1 Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Test point 2 Body ground

Fig. 20: Measuring Voltage Between Rear Differential Fluid Temperature Sensor 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.5 V or more?

YES : Repair a short to power in the TOH wire between the rear differential fluid temperature sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

DTC C1841-27: DIFFERENTIAL FLUID TEMPERATURE SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

Fig. 21: DTC Troubleshooting Flow Chart (C1841-27)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1841-27 Differential Fluid Temperature Sensor Circuit Range/Performance Problem		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1841-11 Differential Fluid Temperature Sensor Circuit Low Voltage		
C1841-13 Differential Fluid Temperature Sensor Circuit High Voltage		

Is DTC C1841-11, C1841-13, or C1841-27 indicated?

DTC C1841-11 is indicated Go to **DTC C1841-11 TROUBLESHOOTING**.

DTC C1841-13 is indicated Go to **DTC C1841-13 TROUBLESHOOTING**.

DTC C1841-27 is indicated Go to step 2.

2. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Start the engine, and let it idle for 1 minute.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1841-27 Differential Fluid Temperature Sensor Circuit Range/Performance Problem		

Is DTC C1841-27 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Rear differential fluid temperature sensor check:
   - Check the parameter(s) below with the HDS. Make note of this value as it will be needed in the following steps.

Signal	Current conditions	
	Values	Unit
Voltage of the oil temperature sensor for rear differential		

   - Turn the ignition switch to LOCK (0).
   - Turn the ignition switch to ON (II).
   - Check the parameter(s) below with the HDS then compare with the value checked in step 1.

Signal	Current conditions	
	Values	Unit
Voltage of the oil temperature sensor for rear differential		

Did the sensor value change?

YES : Check for an intermittent open or short in the TOH and TOL wires between the rear differential fluid temperature sensor and the real time AWD control unit, and recheck.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR** .

DTC C1850-12: FAIL SAFE RELAY STUCK ON

Fig. 22: DTC Troubleshooting Flow Chart (C1850-12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1850-12 Fail Safe Relay Stuck ON		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of Battery	More than 8.3	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Real time AWD relay check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **REMOVE THE REAL TIME AWD RELAY** , then **TEST IT** .

Is the real time AWD relay OK?

YES : The real time AWD relay is OK. Go to step 3.

NO : **REPLACE THE REAL TIME AWD RELAY** .

3. Shorted wire check (E-DPS COIL- line):
    - 1. Disconnect the following connector.

      Real time AWD control unit 24P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Real time AWD relay: disconnected

      Real time AWD control unit 24P connector: disconnected

      Test circuit E-DPS COIL-

      Test point 1 Real time AWD relay 4P socket No. 4 (PUR)

      Test point 2 Body ground

Fig. 23: Checking Continuity Between Real Time AWD Relay 4P Socket No. 4 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the E-DPS COIL- wire between the real time AWD relay and the real time AWD control unit.

NO : The E-DPS COIL- wire is OK. Go to step 4.

4. Shorted wire check (E-DPS PWR line to power):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS PWR

     Test point 1 Real time AWD relay 4P socket No. 2 (WHT)

     Test point 2 Body ground

Fig. 24: Measuring Voltage Between Real Time AWD Relay 4P Socket No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair a short to power in the E-DPS PWR wire between the real time AWD relay and the real time AWD control unit.

DTC C1850-14: FAIL SAFE RELAY STUCK OFF

Fig. 25: DTC Troubleshooting Flow Chart (C1850-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1850-14 Fail Safe Relay Stuck OFF		

1. Problem verification:
   - 1. Start the engine.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of Battery	Less than 3.0	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A1-5 (30 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Reinstall the fuses, then go to step 3.

NO : Replace the fuse, and recheck. If the fuse blows again, repair a short in the No. A1-5 (30 A) fuse circuit.

3. Real time AWD relay check:
   - 1. **REMOVE THE REAL TIME AWD RELAY** , then **TEST IT** .

Is the real time AWD relay OK?

YES : The real time AWD relay is OK. Go to step 4.

NO : **REPLACE THE REAL TIME AWD RELAY** .

4. Open wire check (+B E-DPS line):
   - 1. Measure the voltage between test points 1 and 2.

Test condition IG LOCK (0)

Real time AWD relay: disconnected

Test circuit +B E-DPS

Test point 1 Real time AWD relay 4P socket No. 1 (BLU)

Test point 2 Body ground

Fig. 26: Measuring Voltage Between Real Time AWD Relay 4P Socket No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B E-DPS wire is OK. Go to step 5.

NO : Repair an open in the +B E-DPS wire between the real time AWD relay and the No. A1-5 (30 A) fuse in the under-hood fuse/relay box.

5. Open wire check (IG1 P/W line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Real time AWD relay: disconnected

   Test circuit IG1 P/W

Test point 1 Real time AWD relay 4P socket No. 3 (RED)

Test point 2 Body ground

Fig. 27: Measuring Voltage Between Real Time AWD Relay 4P Socket No. 3 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 P/W wire is OK. Go to step 6.

NO : Repair an open in the IG1 P/W wire between the real time AWD relay and the ignition switch.

6. Shorted wire check (E-DPS COIL- line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS COIL-

Test point 1 Real time AWD control unit 24P connector No. 6 (PUR)

Test point 2 Body ground

Fig. 28: Measuring Voltage Between Real Time AWD Control Unit 24P Connector No. 6 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : The E-DPS COIL- wire is not shorted to power. Go to step 7.

NO : Repair a short to power in the E-DPS COIL- wire between the real time AWD relay and the real time AWD control unit, then **replace the real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

7. Open wire check (E-DPS COIL- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS COIL-

     Test point 1 Real time AWD relay 4P socket No. 4 (PUR)

     Test point 2 Real time AWD control unit 24P connector No. 6 (PUR)

Fig. 29: Checking Continuity Between Real Time AWD Relay 4P Socket No. 4 (PUR) And Real Time AWD Control Unit 24P Connector No. 6 (PUR)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The E-DPS COIL- wire is OK. Go to step 8.

NO : Repair an open in the E-DPS COIL- wire between the real time AWD relay and the real time AWD control unit.

8. Open wire check (E-DPS PWR line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS PWR

     Test point 1 Real time AWD relay 4P socket No. 2 (WHT)

     Test point 2 Real time AWD control unit 24P connector No. 2 (WHT)

Fig. 30: Checking Continuity Between Real Time AWD Relay 4P Socket No. 2 (WHT) And Real Time AWD Control Unit 24P Connector No. 2 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the E-DPS PWR wire between the real time AWD relay and the real time AWD control unit.

DTC C1851-18: MOTOR CIRCUIT LOW CURRENT

DTC C1851-18
1. Problem verification (with idling)
Failure is duplicated
Go to step 3
Failure is not duplicated
2. Problem verification (motor running)
Failure is not duplicated
Intermittent failure
END
Failure is duplicated
3. Open wire check (GND line)
NG
Open in GND wire
END
OK
4. Determine possible failure area (short in MH, ML lines, open in MH, ML lines)
Short in MH, ML lines

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1851-18 Motor Circuit Low Current		

1. Problem verification (with idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-18 Motor Circuit Low Current		

Is DTC C1851-18 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Go to step 2.

2. Problem verification (motor running):
   - 1. Clear the DTC with the HDS.
   - 2. With the engine running, **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-18 Motor Circuit Low Current		

Is DTC C1851-18 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

Real time AWD control unit 24P connector

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Real time AWD control unit 24P connector: disconnected

  Test circuit GND

  Test point 1 Real time AWD control unit 24P connector No. 4 (BLK)

  Test point 2 Body ground

Fig. 32: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 4 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 4.

NO : Check for poor connections or loose terminals between the real time AWD control unit and ground (G603). If the connections are OK, repair an open in the GND wire between the real time AWD control unit and ground (G603).

4. Determine possible failure area (short in MH, ML lines, open in MH, ML lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Test circuit MH

Test point 1 Real time AWD control unit 24P connector No. 1 (RED)

Test point 2 Body ground

Fig. 33: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 7.

NO : Go to step 5.

5. Determine possible failure area (MH, ML lines, real time AWD control unit):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0), At normal air temperature

     Real time AWD control unit 24P connector: disconnected

     Test circuit MH, ML

     Test point 1 Real time AWD control unit 24P connector No. 1 (RED)

     Test point 2 Real time AWD control unit 24P connector No. 3 (BLK)

Fig. 34: Measuring Resistance Between Real Time AWD Control Unit 24P Connector No. 1 (RED) And No. 3 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 10 ohms or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Go to step 6.

6. Rear differential pump motor internal open check:
   - 1. Disconnect the following connector.

     Rear differential pump motor 2P connector

   - 2. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Rear differential pump motor 2P connector: disconnected

     Test circuit MH, ML

     Test point 1 Rear differential pump motor 2P connector No. 1

Test point 2 Rear differential pump motor 2P connector No. 2

Fig. 35: Measuring Resistance Between Rear Differential Pump Motor 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 10 ohms or less?

YES : Repair an open in the MH and/or ML wires between the rear differential pump motor and the real time AWD control unit.

NO : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

7. Rear differential pump motor internal shorted check:
   - 1. Disconnect the following connector.

     Rear differential pump motor 2P connector

   - 2. Check for continuity between the following test points and the rear differential pump motor body individually.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Rear differential pump motor 2P connector: disconnected

Connector	Test circuit	Terminal
Rear differential pump motor 2P	ML	No. 1
	MH	No. 2

Fig. 36: Checking Continuity Between Test Points And Rear Differential Pump Motor Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Are there continuity?

YES : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

NO : Repair a short in the MH and/or ML wires between the rear differential pump motor and the real time AWD control unit.

DTC C1851-19: CONTROL MODULE INTERNAL CONTROL MODULE MALFUNCTION

Fig. 37: DTC Troubleshooting Flow Chart (C1851-19)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1851-19 Control Module Internal Control Module Malfunction		

1. Problem verification (with idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-19 Control Module Internal Control Module Malfunction		

Is DTC C1851-19 indicated?

YES : The failure is duplicated. **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Go to step 2.

2. Problem verification (motor running):
   - 1. Clear the DTC with the HDS.
   - 2. With the engine running, **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-19 Control Module Internal Control Module Malfunction		

Is DTC C1851-19 indicated?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME**

AWD CONTROL UNIT REMOVAL AND INSTALLATION or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time.

DTC C1851-1E: MOTOR CIRCUIT HIGH CURRENT

Fig. 38: DTC Troubleshooting Flow Chart (C1851-1E)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1851-1E Motor Circuit High Current		

1. Problem verification (with idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-1E Motor Circuit High Current		

Is DTC C1851-1E indicated?

YES : The failure is duplicated. Go to step 3.

NO : Go to step 2.

2. Problem verification (motor running):
   - 1. Clear the DTC with the HDS.
   - 2. With the engine running, **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-1E Motor Circuit High Current		

Is DTC C1851-1E indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Determine possible failure area (short in MH, ML lines to power, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential pump motor 2P connector

   - 3. Turn the ignition switch to ON (II).

- 4. Wait for 10 seconds.
- 5. Measure the voltage between the following test points and body ground individually.

  Test condition IG ON (II)

  Rear differential pump motor 2P connector: disconnected

Connector	Test circuit	Terminal
Rear differential pump motor 2P	ML	No. 1 (BLK)
	MH	No. 2 (RED)

Fig. 39: Measuring Voltage Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : Go to step 5.

NO : Go to step 4.

4. Shorted wire check (MH line to power, ML line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between the following test points and body ground individually.

     Test condition IG ON (II)

     Rear differential pump motor 2P connector: disconnected

Real time AWD control unit 24P connector: disconnected

Connector	Test circuit	Terminal
Rear differential pump motor 2P	ML	No. 1 (BLK)
	MH	No. 2 (RED)

Fig. 40: Measuring Voltage Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair short to power in the MH and/or ML wires between the rear differential pump motor and the real time AWD control unit.

5. Shorted wire check (MH line to ML line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

Rear differential pump motor 2P connector: disconnected

Real time AWD control unit 24P connector: disconnected

Test circuit MH, ML

Test point 1 Rear differential pump motor 2P connector No. 1 (BLK)

Test point 2 Rear differential pump motor 2P connector No. 2 (RED)

Fig. 41: Checking Continuity Between Rear Differential Pump Motor 2P Connector No. 1 (BLK) And No. 2 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the MH wire to the ML wire between rear differential pump motor connectors No. 1 and No. 2.

NO : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

Fig. 42: DTC Troubleshooting Flow Chart (C1852-18)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC C1852-18: SOLENOID VALVE CIRCUIT LOW CURRENT

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1852-18 Solenoid Valve Circuit Low Current		

1. Problem verification (with idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1852-18 Solenoid Valve Circuit Low Current		

Is DTC C1852-18 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Go to step 2.

2. Problem verification (motor running):
   - 1. Clear the DTC with the HDS.
   - 2. With the engine running, **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1852-18 Solenoid Valve Circuit Low Current		

Is DTC C1852-18 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Determine possible failure area (GND line, others):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG ON (II)

     Test point 1 Rear differential body

Test point 2 Body ground

Is there continuity?

YES : Go to step 6.

NO : Go to step 4.

4. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between the following test points and body ground.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

Connector	Test circuit	Terminal
Real time AWD control unit 24P	GND	No. 4 (BLK)
	GND	No. 8 (BLK)

Fig. 43: Checking Continuity Between Rear Differential Body And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wires are OK. Go to step 5.

NO : Repair an open in the GND wires between the real time AWD control unit and ground (G603).

5. Open wire check (DG line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Real time AWD control unit 24P connector: disconnected

      Test circuit DG

      Test point 1 Real time AWD control unit 24P connector No. 5 (BLK)

      Test point 2 Real time AWD control unit 24P connector No. 5 (BLK)

Fig. 44: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 5 (BLK) And Rear Differential Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Check for poor connections or loose terminals between the real time AWD control unit and the rear differential body ground (T7). If the connections are OK, repair an open in the DG wire between the rear differential body and the real time AWD control unit.

6. Determine possible failure area (DTYH1 line, others):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Rear differential solenoid valve 1P connector

- 3. Turn the ignition switch to ON (II).
- 4. Wait for 10 seconds.
- 5. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Rear differential solenoid valve 1P connector: disconnected

  Test circuit DTYH1

  Test point 1 Rear differential solenoid valve 1P connector No. 1 (BLU)

  Test point 2 Body ground

Fig. 45: Measuring Voltage Between Rear Differential Solenoid Valve 1P Connector No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : Go to step 8.

NO : Go to step 7.

7. Shorted wire check (DTYH1 line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Rear differential solenoid valve 1P connector: disconnected

Real time AWD control unit 24P connector: disconnected

Test circuit DTYH1

Test point 1 Rear differential solenoid valve 1P connector No. 1 (BLU)

Test point 2 Body ground

Fig. 46: Measuring Voltage Between Rear Differential Solenoid Valve 1P Connector No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair a short to power in the DTYH1 wire between the rear differential solenoid valve and the real time AWD control unit.

8. Rear differential solenoid valve check:

- 1. Measure the resistance between test points 1 and 2.

  Test condition IG ON (II)

  Rear differential solenoid valve 1P connector: disconnected

  Test circuit DTYH1

  Test point 1 Rear differential solenoid valve 1P connector No. 1

  Test point 2 Rear differential solenoid valve body

Fig. 47: Measuring Resistance Between Rear Differential Solenoid Valve 1P Connector No. 1 And Rear Differential Solenoid Valve Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 100 ohms or less?

YES : The rear differential solenoid valve is OK. Go to step 9.

NO : Replace the rear differential solenoid valve **Rear Differential Solenoid Valve Test**

9. Shorted wire check (DUTY1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential solenoid valve 1P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

Test circuit DUTY1

Test point 1 Real time AWD control unit 24P connector No. 15 (RED)

Test point 2 Body ground

Fig. 48: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 15 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the DUTY1 wire between the rear differential solenoid valve and the real time AWD control unit.

NO : The DUTY1 wire is not shorted. Go to step 10.

10. Open wire check (DUTY1/DTYH1 line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Rear differential solenoid valve 1P connector: disconnected

      Real time AWD control unit 24P connector: disconnected

      Test circuit DUTY1/DTYH1

      Test point 1 Rear differential solenoid valve 1P connector No. 1 (BLU)

      Test point 2 Real time AWD control unit 24P connector No. 15 (RED)

Fig. 49: Checking Continuity Between Rear Differential Solenoid Valve 1P Connector No. 1 (BLU) And Real Time AWD Control Unit 24P Connector No. 15 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the DUTY1/DTYH1 wire between the rear differential solenoid valve and the real time AWD control unit.

DTC C1852-19: SOLENOID VALVE CIRCUIT HIGH CURRENT

Fig. 50: DTC Troubleshooting Flow Chart (C1852-19)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1852-19 Solenoid Valve Circuit High Current		

1. Problem verification (with idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1852-19 Solenoid Valve Circuit High Current		

Is DTC C1852-19 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Go to step 2.

2. Problem verification (motor running):
   - 1. With the engine running, **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1852-19 Solenoid Valve Circuit High Current		

Is DTC C1852-19 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Shorted wire check (DUTY1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Rear differential solenoid valve 1P connector

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential solenoid valve 1P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit DUTY1

     Test point 1 Real time AWD control unit 24P connector No. 15 (RED)

     Test point 2 Body ground

Fig. 51: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 15 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the DUTY1 wire between the rear differential solenoid valve and the real time AWD control unit.

NO : The DUTY1 wire is OK. Go to step 4.

4. Rear differential solenoid valve check:
   - 1. Check the parameter(s) below with the HDS.

NOTE: **The rear differential fluid temperature should be 50 °F (10 °C)-86 °F (30 °C). If the value is not within the enable temperature, warm up the rear differential fluid temperature by raising the vehicle on a lift and run the vehicle at speeds 13 mph (20 km/h) for 5 seconds then slow down, and stop the wheels.**

Signal	Current conditions	
	Values	Unit
Oil temperature for rear differential		

   - 2. Turn the ignition switch to LOCK (0).
   - 3. Measure the resistance between test points 1 and 2.

Test condition IG LOCK (0)

Rear differential solenoid valve 1P connector: disconnected

Real time AWD control unit 24P connector: disconnected

Test circuit DTYH1

Test point 1 Rear differential solenoid valve 1P connector No. 1

Test point 2 Body ground

Fig. 52: Measuring Resistance Between Rear Differential Solenoid Valve 1P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 10 ohms or more?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Replace the rear differential solenoid valve **Rear Differential Solenoid Valve Test** .

DTC C1858-72: DIFFERENTIAL FLUID PRESSURE DEVIATION LOW

Fig. 53: DTC Troubleshooting Flow Chart (C1858-72)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL**

TIME AWD SYSTEM .

DTC Description	DTC	Freeze Frame
C1858-72 Differential Fluid Pressure Deviation Low		

1. Rear differential fluid level check:
   - 1. **CHECK THE REAR DIFFERENTIAL FLUID LEVEL** , and check for rear differential fluid leakage.

   Is the check result OK?

   YES : Go to step 2.

   NO : Find and repair the source of the fluid leak then **ADD RECOMMENDED FLUID** .

2. Problem verification (function test with HDS):
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   Fault code is not indicated Intermittent failure, the system is OK at this time.

   Fault code 2-1 or 5-1 is indicated Go to step 3.

   Fault code 3-1 is indicated Go to step 4.

   Fault code except 2-1, 3-1, and 5-1 is indicated Go to step 5.

3. Hydraulic system check 1:
   - 1. **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   YES : System is OK at this time.

   NO : **REPLACE THE REAR DIFFERENTIAL FLUID** then **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** and **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST** . If they are OK, replace the rear differential assembly.

4. Hydraulic system check 2:
   - 1. **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .

- 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

Is the test result OK?

YES : System is OK at this time.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID** , then **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST** . If it is OK, replace the rear differential assembly.

5. DTC check:
   - 1. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** three times.
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Are there any DTCs?

YES : Go to the indicated DTC's troubleshooting.

NO : System is OK at this time.

DTC C1858-73: DIFFERENTIAL FLUID PRESSURE DEVIATION HIGH

Fig. 54: DTC Troubleshooting Flow Chart (C1858-73)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1858-73 Differential Fluid Pressure Deviation High		

1. Problem verification (function test with HDS):
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   Fault code is not indicated Intermittent failure, the system is OK at this time.

   Fault code 4-1 or 6-1 is indicated **REPLACE THE REAR DIFFERENTIAL FLUID** , then **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST** . If it is OK, replace the rear differential assembly.

   Fault code except 4 -1 and 6 -1 is indicated Go to step 2.

2. DTC check:
   - 1. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** three times.
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

   Are there any DTCs?

   YES : Go to the indicated DTC's troubleshooting.

   NO : System is OK at this time.

DTC C1860-98: DIFFERENTIAL FLUID OVERHEATED

Fig. 55: DTC Troubleshooting Flow Chart (C1860-98)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**
- **When the clutch is presumed to be overheated, DTC C1860-98 is set and the system turns off the clutch engagement to protect the clutch. This DTC may also set under the following conditions.**
  - **When spinning the rear wheels while the vehicle is stuck in sand, mud, snow, etc**
  - **When the VSA system is OFF**

DTC Description	DTC	Freeze Frame

C1860-98 Differential Fluid Overheated		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1860-98 Differential Fluid Overheated		
C1861-9A Vehicle Spin Detected		
Other DTC		

Is DTC C1860-98, C1861-9A, or other DTC indicated?

DTC C1860-98 is indicated Go to step 2.

DTC C1861-9A is indicated Go to step 2.

Other DTC is indicated Go to the indicated DTC's troubleshooting.

2. Tire size check:
   - 1. Check the tire size of the four wheels.

Is the tire size same?

YES : Go to step 3.

NO : Replace the tire with the standard size.

3. Rear brake drag check:
   - 1. **Check for rear brake drag** .

Are the rear brakes OK?

YES : Go to step 4.

NO : **Inspect and repair the rear brakes** .

4. Brake system indicator check:
   - 1. Press the parking brake pedal.

Does the brake system indicator come on?

YES : Go to step 5.

NO : **INSPECT AND REPAIR THE BRAKE SYSTEM** .

5. Rear differential fluid temperature sensor check:
   - Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Oil temperature for rear differential		

   - Check the temperature of the rear differential fluid then compare it with the value checked in step 1.

Is the difference small?

YES : Go to step 6.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR** .

6. Rear differential fluid pressure sensor test:
   - 1. **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** .

Is the test result OK?

YES : System is OK at this time.

NO : **DO THE REPAIR DEPENDING ON THE TEST RESULT** .

DTC C1861-9A: VEHICLE SPIN DETECTED

Fig. 56: DTC Troubleshooting Flow Chart (C1861-9A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**
- **When a vehicle spin is detected, DTC C1861-9A is set for the purpose of protecting the real time AWD system. When this condition occurs, the system will temporarily stop the real time AWD function. This DTC may also set under these conditions.**
  - **When spinning the rear wheels while stuck in sand, mud, snow, etc**
  - **When the VSA system is OFF**

DTC Description	DTC	Freeze Frame
C1861-9A Vehicle Spin Detected		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC C1860-98, C1861-9A, or other DTCs indicated?

DTC C1860-98 is indicated Go to step 2.

DTC C1861-9A is indicated Go to step 2.

Other DTC is indicated Go to the indicated DTC's troubleshooting.

2. Tire size check:
    - 1. Check the tire size of the four wheels.

Is the tire size same?

YES : Go to step 3.

NO : Replace the tire with the standard size.

3. Rear brake drag check:
    - 1. **Check for rear brake drag** .

Are the rear brakes OK?

YES : Go to step 4.

NO : **Inspect and repair the rear brakes** .

4. Brake system indicator check:
    - 1. Press the parking brake pedal.

Does the brake system indicator come on?

YES : System is OK at this time.

NO : **INSPECT AND REPAIR THE BRAKE SYSTEM** .

DTC C1870-00: FUEL AND EMISSIONS RELATED MALFUNCTION; DTC C1871-00: AUTOMATIC TRANSMISSION RELATED MALFUNCTION; DTC C1872-00: VSA MODULATOR-CONTROL UNIT RELATED MALFUNCTION

Fig. 57: DTC Troubleshooting Flow Chart (C1870-00, C1871-00, C1872-00)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1870-00 Fuel and Emissions Related Malfunction		
C1871-00 Automatic Transmission Related Malfunction		
C1872-00 VSA Modulator-Control Unit Related Malfunction		

1. Problem verification (DTC check):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

NOTE: **These codes are stored whenever the following systems DTCs are detected.**

- When DTC C1870-00 is indicated, check the PGM-FI system DTC.
- When DTC C1871-00 is indicated, check the A/T system DTC.
- When DTC C1872-00 is indicated, check the VSA system DTC.

DTC Description	DTC	Freeze Frame
C1870-00 Fuel and Emissions Related Malfunction		
C1871-00 Automatic Transmission Related Malfunction		

C1872-00 VSA Modulator-Control Unit Related Malfunction		

Is DTC C1870-00, C1871-00, or C1872-00 indicated?

DTC C1870-00 is indicated **Check the PGM-FI system DTC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

DTC C1871-00 is indicated **Check the A/T system DTC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

DTC C1872-00 is indicated **CHECK THE VSA SYSTEM DTC** .

DTC is not indicated Intermittent failure, the system is OK at this time.

DTC C1873-00: STEERING ANGLE SENSOR MALFUNCTION

Fig. 58: DTC Troubleshooting Flow Chart (C1873-00)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1873-00 Steering Angle Sensor Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

C1873-00 Steering Angle Sensor Malfunction		

Is DTC C1873-00 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. VSA system DTC check:
   - 1. Check for DTCs in the VSA system with the HDS.

DTC Description	Confirmed DTC	Freeze Frame

Are any DTCs stored?

YES : **GO TO THE INDICATED DTC'S TROUBLESHOOTING IN THE VSA SYSTEM** .

NO : Intermittent failure, the system is OK at this time.

HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEMS

AWD SYSTEM INDICATOR

The AWD system indicator will come on under certain conditions even if the real time AWD system is working normally. Here are some examples:

- When you use high-powered wireless equipment such as a CB or Ham radio in the vehicle.
- When you keep spinning the rear wheels while the vehicle is stuck in sand, mud, snow, etc.
- When the battery voltage suddenly drops below 8 volts.

After the AWD system indicator comes on, it stays on until you turn the ignition switch to LOCK (0).

DIAGNOSTIC TROUBLE CODE (DTC)

- The real time AWD control unit can memorize up to eight different DTCs. The system displays the DTCs by blinking the AWD system indicator. Multiple DTCs are displayed in the order they occurred, beginning with the most recent.
- If the same DTC is detected more than once, the most recent DTC is written over the earlier one. Therefore, when the same problem is detected more than once, it is memorized as a single DTC.
- The DTCs are memorized in the real time AWD control units EEPROM (non-volatile memory). Therefore, the memorized DTCs are not cleared when the battery is disconnected or when the real time AWD control unit is disconnected.
- If there is a problem in the central processing unit (CPU) of the real time AWD control unit, the AWD system indicator comes on, but no DTC is memorized. Refer to the symptom troubleshooting.

SELF-DIAGNOSIS

When a problem is detected during self-diagnosis, the system does the following:

- Turns the AWD system indicator on.
- Memorizes the DTC if possible.
- Stops AWD control and puts the vehicle back into two-wheel drive (front wheel only).

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

1. With the ignition switch in LOCK (0) connect the Honda Diagnostic System (HDS) to the DLC (A) located under the driver's side of the dashboard.

Fig. 1: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the real time AWD control unit. If it does not, go to the symptom troubleshooting for **HDS does not communicate**.
4. Check the diagnostic trouble code (DTC) and the freeze data, for all systems in the vehicle, troubleshoot the powertrain DTCs first and note them. Then refer to the indicated DTC's troubleshooting, and do the appropriate troubleshooting procedure.

NOTE:

- **The HDS can read the DTC, the freeze data, the current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**
- **It is best do an ALL DTC CHECK to look for other systems DTCs that are related to the problem.**

HOW TO CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

When the real time AWD control unit senses an abnormality in the input or output systems, the AWD system indicator in the gauge control module will usually come on, and the malfunction indicator lamp (MIL), the D indicator, the VSA indicator, and/or the ABS indicator may also come on.

NOTE: **Check the vehicle battery condition and charging system before troubleshooting.**

1. With the ignition switch in LOCK (0) connect the HDS to the DLC (A) located under the driver's side of the dashboard.

Fig. 2: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II). Make sure the HDS communicates with the vehicle and the real time AWD control unit. If it does not, go to the symptom troubleshooting for **HDS does not communicate**. Follow the prompts on the HDS to display the DTC(s) on the screen. Check the DTC and the freeze data for all systems. After determining the DTC(s), refer to the DTC Troubleshooting.

NOTE: See the HDS help menu for specific instructions.

3. If there are PGM-FI system DTCs and other system DTCs at the same time, troubleshoot the PGM-FI system DTCs first, otherwise the real time AWD DTC may return.
4. After recording the DTCs, clear all DTCs.
5. Test-drive the vehicle for several minutes in AWD mode, and check for DTCs. If the DTC returns, refer to the DTC Troubleshooting. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all connectors and terminals in the circuit are tight.

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0) connect the HDS to the DLC (A) located under the driver's side of the dashboard.

Fig. 3: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).

   Make sure the HDS communicates with the vehicle and the real time AWD control unit. If it does not,

3. go to the symptom troubleshooting for **HDS does not communicate**.
4. Clear the DTC(s) by following the screen prompts on the HDS in the Real Time AWD Data List.
5. Turn the ignition switch to LOCK (0).

NOTE: **If the DTC that was cleared is related to another system, that system's DTC must be repaired, or the real time AWD DTC will return.**

HOW TO TROUBLESHOOT CIRCUITS AT THE REAL TIME AWD CONTROL UNIT

Special Tools Required

Backprobe Set 07SAZ-001000A

1. Remove the left rear side trim panel.
2. Inspect the circuit on the real time AWD control unit according to the DTC Troubleshooting using the backprobe set and a digital multimeter or an analog circuit tester.
3. Connect the backprobe adapters (A) to the stacking patch cords (B), and connect the cords to a digital multimeter or an analog circuit tester (C). Using the wire insulator as a guide for the contoured-tip of the backprobe adapter, gently slide the tip into the connector from the wire side until it comes in contact with the terminal end of the wires.

Fig. 4: Connecting Backprobe Adapters To Stacking Patch Cords
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PRECAUTIONS FOR REAL-TIME AWD (ALL-WHEEL DRIVE)

Under normal conditions, the AWD vehicle is in 2WD (front-wheel drive). However, the system will instantly transmit appropriate driving force to the rear wheels (depending on the driving force of the front wheels and the road conditions).

The Real-time AWD System does not have a manual switch to disable the AWD system. Whenever service work requires spinning the front or rear wheels with the engine, always lift and support the vehicle so all four wheels are off the ground.

REAL TIME AWD SYSTEM SYMPTOM TROUBLESHOOTING INDEX

Symptom	Probable Cause	Remedy
Rear differential overheats	• Fluid level too low • Incorrect fluid type	• Add recommended fluid • Drain and fill the differential with the recommended fluid
Rear differential leaks fluid	• Fluid level too high • Clogged breather hose • Worn or damaged oil seal • Damaged sealing washer • Loose mounting bolts or inadequate sealing	• Lower to proper level • Clean or replace • Replace the oil seal • Replace the sealing washer • Recheck torque or apply sealant
HDS does not communicate with vehicle		**TROUBLESHOOTING THE DLC CIRCUIT**
HDS does not communicate with real time AWD control unit		Do the symptom troubleshooting for **HDS does not communicate**

AWD system indicator does not come on		Do the symptom troubleshooting for **AWD system indicator does not come on**
AWD system indicator does not go off, and no DTCs are stored		Do the symptom troubleshooting for **AWD system indicator does not go off, and no DTCs are stored**
Will not go into 4WD mode, Poor traction, Poor acceleration (at start), Poor climbing ability		Do the symptom troubleshooting for **Will not go into 4WD mode, Poor traction, Poor acceleration (at start), Poor climbing ability**
Real Time AWD System is stuck in 4WD mode		Do the symptom troubleshooting for **Real Time AWD System is stuck in 4WD mode**

Abnormal noise	• Gear noise
	  ○ Poor meshing hypoid gear (ring gear and drive pinion)
	  ○ Hypoid gear (wear or damage)
	  ○ Poor pre-road (drive pinion)
	  ○ Dust got into hypoid gear area
	  ○ Fluid level too low
	  ○ Distortion of the differential carrier case
	• Bearing noise
	  ○ Bearing (wear or damage)
	  ○ Drive pinion taper bearing (wear)
	  ○ Dust got into bearing
	• Pump noise (at lubrication)
	  ○ Dust got into pump
	  ○ Rotor (wear or damage)
	• Torque shortage	

	• Gear noise ○ Poor meshing hypoid gear (ring gear and drive	

Abnormal noise (at start)	pinion) ○ Hypoid gear (wear or damage) ○ Poor pre-road (drive pinion) ○ Dust got into hypoid gear area ○ Fluid level too low ○ Distortion of the differential carrier case ○ Excessive backlash (hypoid gear) ○ Excessive backlash (differential gear) ○ Differential side gear spline (wear) • Bearing noise ○ Bearing (wear or damage) ○ Drive pinion taper bearing (wear) ○ Dust got into bearing • Pump noise (at lubrication) ○ Dust got into pump ○ Rotor (wear or damage) • Rear differential pump motor noise ○ Bearing (wear or damage) ○ Dust got into rear differential pump motor • Pump noise (at control) ○ Dust got into pump ○ Rotor (wear or damage) • Rear differential solenoid valve noise ○ Dust got into rear	

	differential solenoid valve ○ Plunger area or shaft area (wear) ○ Rear differential solenoid valve (wear or damage) • Clutch chatter ○ Fluid deterioration ○ Clutch facing (burnt or deterioration) ○ Clutch plate (deterioration) • Torque shortage	
	• Gear noise ○ Poor meshing hypoid gear (ring gear and drive pinion) ○ Hypoid gear (wear or damage) ○ Poor pre-road (drive pinion) ○ Dust got into hypoid gear area ○ Fluid level too low ○ Distortion of the differential carrier case ○ Excessive backlash (hypoid gear) ○ Excessive backlash (differential gear) ○ Differential side gear spline (wear) • Bearing noise ○ Bearing (wear or damage) ○ Drive pinion taper bearing (wear) ○ Dust got into bearing • Pump noise (at lubrication)	

accelerate)	○ Dust got into pump ○ Rotor (wear or damage) • Rear differential pump motor noise ○ Bearing (wear or damage) ○ Dust got into rear differential pump motor • Pump noise (at control) ○ Dust got into pump ○ Rotor (wear or damage) • Rear differential solenoid valve noise ○ Dust got into rear differential solenoid valve ○ Plunger area or shaft area (wear) ○ Rear differential solenoid valve (wear or damage) • Clutch chatter ○ Fluid deterioration ○ Clutch facing (burnt or deterioration) ○ Clutch plate (deterioration) • Torque shortage	
	• Gear noise ○ Poor meshing hypoid gear (ring gear and drive pinion) ○ Hypoid gear (wear or damage) ○ Poor pre-road (drive pinion) ○ Dust got into hypoid gear area	

Abnormal noise (at turning)	○ Fluid level too low ○ Distortion of the differential carrier case • Bearing noise ○ Bearing (wear or damage) ○ Drive pinion taper bearing (wear) ○ Dust got into bearing • Differential gear noise ○ Side gear and pinion gear (wear or damage) ○ Pinion shaft (damage) ○ Dust got into differential gear area • Clutch chatter ○ Fluid deterioration ○ Clutch facing (burnt or deterioration) ○ Clutch plate (deterioration) • Torque shortage	Do the symptom troubleshooting for **Abnormal noise**
	• Gear noise ○ Poor meshing hypoid gear (ring gear and drive pinion) ○ Hypoid gear (wear or damage) ○ Poor pre-road (drive pinion) ○ Dust got into hypoid gear area ○ Fluid level too low ○ Distortion of the differential carrier case ○ Excessive backlash	

Abnormal noise (at turning and accelerate)	(hypoid gear) ○ Excessive backlash (differential gear) ○ Differential side gear spline (wear) • Bearing noise ○ Bearing (wear or damage) ○ Drive pinion taper bearing (wear) ○ Dust got into bearing • Differential gear noise ○ Side gear and pinion gear (wear or damage) ○ Pinion shaft (damage) ○ Dust got into differential gear area • Pump noise (at lubrication) ○ Dust got into pump ○ Rotor (wear or damage) • Rear differential pump motor noise ○ Bearing (wear or damage) ○ Dust got into rear differential pump motor • Pump noise (at control) ○ Dust got into pump ○ Rotor (wear or damage) • Rear differential solenoid valve noise ○ Dust got into rear differential solenoid valve ○ Plunger area or shaft area (wear)	

	○ Rear differential solenoid valve (wear or damage) • Clutch chatter ○ Fluid deterioration ○ Clutch facing (burnt or deterioration) ○ Clutch plate (deterioration) • Torque shortage	

REAL TIME AWD CONTROL UNIT CONNECTOR FOR INPUTS AND OUTPUTS

REAL TIME AWD CONTROL UNIT INPUTS AND OUTPUTS FOR 24P CONNECTOR (CONNECTOR DISCONNECTED)

20	WHT	SVCC	Power supply for differential fluid pressure sensor	With ignition switch ON (II): about 5.0 V
21	PNK	PS	Detects differential fluid pressure sensor signal (positive)	With ignition switch ON (II): about 0.4 V to 4.1 V (Depending on rear differential fluid pressure)
22	LTBLU	TOL	Detects differential fluid temperature sensor (negative)	With ignition switch ON (II): about 0 V
23	Not used	Not used	---------	---------
24	RED	F_CAN-L	F-CAN communication circuit	With ignition switch ON (II): pulses

REAL TIME AWD CONTROL UNIT INITIALIZATION

PROCEDURE

NOTE:

- **Whenever the real time AWD control unit is replaced, it must be initialized.**
- **Park the vehicle on a flat and level surface.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 6: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Real Time AWD Control Unit Initialization
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the ECU REPLACEMENT in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION

REMOVAL

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 7: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 8: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Door Sill Trim
    1. Fold down the left rear seat, then lift-up and latch the left rear seat back in the up right position.
    2. Detach the hooks (A) and the tab (B) from the left B-pillar lower trim (C) and the left rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 9: Removing Left Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Opening Seal As Needed
    1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

Fig. 10: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Rear Damper Maintenance Cover
    1. Fold down the left rear seat back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 11: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Rear Carpet Trim
    1. Detach the clips (A), then detach the left rear seat-back cover (B).

2. Detach the hooks (C) from the left rear side trim panel (D), and pull up the left rear carpet trims (E) by hand to detach the clips, then remove the left rear carpet trim.

Fig. 12: Removing Left Rear Carpet Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 13: Identifying Left Rear Carpet Trims, Left Rear Side Trim Panel, Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 14: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 15: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Left Rear Side Trim Panel
    1. Remove the rear seat release lever cap (A), then remove the screws.

Fig. 16: Removing Rear Seat Release Lever Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Push in on the center pin (A), then remove the trunk hook (B).

Fig. 17: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolt, then remove the tie-down hook (A).

Fig. 18: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clips (A, B).
5. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the left rear side trim panel (F) by hand to detach the clips (G, H).
6. Carefully move the left rear side trim panel aside.

<u>Fig. 19: Identifying Left Rear Side Trim Panel Fasteners Location</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Real Time AWD Control Unit
    1. Disconnect the connector (A) by pushing the lock (B) and Pull down the lever (C); the connector disconnects itself.
    2. Loosen the real time AWD control unit mounting bolts (D), then remove the real time AWD control unit (E).

Fig. 20: Pulling Down Connector Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Real Time AWD Control Unit
    1. Install the real time AWD control unit (A).
    2. Align the connecting surface of the connector (B).
    3. pulling up the lever (C) of the connector, then confirm the connector is fully seated.

Fig. 21: Identifying Real Time AWD Control Unit, Connector And Lever With Torque

Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Left Rear Side Trim Panel
    1. Install the left rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
    2. Install the clips (F, G).

Fig. 22: Identifying Left Rear Side Trim Panel, Tab, Hook And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tie-down hook (A).

Fig. 23: Identifying Tie-Down Hook With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trunk hook (A).

Fig. 24: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws, then install the left rear seat release lever cap (A).

Fig. 25: Identifying Left Rear Seat Lever Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 26: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 27: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Rear Carpet Trim
    1. Install the left rear carpet trim (A). Make sure the clips and the hooks (B) snap into place securely.
    2. Install the rear seat-back cover (C). Make sure the clips (D) snap into place securely.

Fig. 28: Identifying Left Rear Carpet Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 29: Installing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Rear Damper Maintenance Cover
    1. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 30: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Door Opening Seal As Needed
    1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 31: Identifying Rear Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Left Rear Door Sill Trim
    1. Lift up and latch the left rear seat back in the up right position.
    2. Install the left rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 32: Installing Left Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 33: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 34: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 35: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Real Time AWD Control Unit Initialization
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the ECU REPLACEMENT in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

REAL TIME AWD CONTROL UNIT UPDATE

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	MVCI unit with the latest control module (CM) update software installed

Any one of the above updating tools can be used.

PROCEDURE

1. Real Time AWD Control Unit Update

NOTE: **Check any official Honda service website for more service information about updating the MVCI and control units.**

REAL TIME AWD RELAY REMOVAL AND INSTALLATION

REMOVAL

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

<u>Fig. 36: Removing Tonneau Cover</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

<u>Fig. 37: Removing Cargo Floor Cover</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Door Sill Trim
    1. Fold down the left rear seat, then lift-up and latch the left rear seat back in the up right position.
    2. Detach the hooks (A) and the tab (B) from the left B-pillar lower trim (C) and the left rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 38: Removing Left Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Opening Seal As Needed
    1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

Fig. 39: Identifying Rear Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Rear Damper Maintenance Cover
    1. Fold down the left rear seat back.

2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 40: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Rear Carpet Trim
   1. Detach the clips (A), then detach the left rear seat-back cover (B).
   2. Detach the hooks (C) from the left rear side trim panel (D), and pull up the left rear carpet trims (E) by hand to detach the clips, then remove the left rear carpet trim.

Fig. 41: Removing Left Rear Carpet Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 42: Identifying Left Rear Carpet Trims, Left Rear Side Trim Panel, Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 43: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 44: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Left Rear Side Trim Panel
    1. Remove the rear seat release lever cap (A), then remove the screws.

Fig. 45: Identifying Rear Seat Release Lever Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Push in on the center pin (A), then remove the trunk hook (B).

Fig. 46: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolt, then remove the tie-down hook (A).

Fig. 47: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clips (A, B).
5. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the left rear side trim panel (F) by hand to detach the clips (G, H).
6. Carefully move the left rear side trim panel aside.

Fig. 48: Identifying Quarter Pillar Trim, Left Rear Side Trim Panel, Hooks, Tabs And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Real Time AWD Relay
    1. Remove the real time AWD relay (A).

Fig. 49: Identifying Real Time AWD Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Real Time AWD Relay
    1. Install the real time AWD relay (A).

Fig. 50: Identifying Real Time AWD Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Left Rear Side Trim Panel
    1. Install the left rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
    2. Install the clips (F, G).

Fig. 51: Identifying Left Rear Side Trim Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tie-down hook (A).

Fig. 52: Identifying Tie-Down Hook With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trunk hook (A).

Fig. 53: Identifying Trunk Hook With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws, then install the left rear seat release lever cap (A).

Fig. 54: Identifying Left Rear Seat Release Lever Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 55: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 56: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Rear Carpet Trim
    1. Install the left rear carpet trim (A). Make sure the clips and the hooks (B) snap into place securely.
    2. Install the rear seat-back cover (C). Make sure the clips (D) snap into place securely.

Fig. 57: Identifying Left Rear Carpet Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 58: Installing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Rear Damper Maintenance Cover
    1. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 59: Identifying Rear Damper Maintenance Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Door Opening Seal As Needed
    1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 60: Identifying Rear Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Left Rear Door Sill Trim
    1. Lift up and latch the left rear seat back in the up right position.
    2. Install the left rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 61: Installing Left Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 62: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 63: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAL TIME AWD SYSTEM BLEEDING

PROCEDURE

NOTE: **Whenever the rear differential assembly is disassembly, its real time AWD system must be bled.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 64: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

REAL TIME AWD SYSTEM DTC TROUBLESHOOTING INDEX

DTC	AWD System Indicator	Detection Item
C1840-12 (47)	ON	Differential Fluid Pressure Sensor Circuit High Voltage
C1840-14 (47)	ON	Differential Fluid Pressure Sensor Circuit Low Voltage
C1841-11 (42)	ON	Differential Fluid Temperature Sensor Circuit Low Voltage
C1841-13 (42)	ON	Differential Fluid Temperature Sensor Circuit High Voltage
C1841-27 (43)	ON	Differential Fluid Temperature Sensor Circuit Range/Performance Problem
C1850-12 (44)	ON	Fail Safe Relay Stuck ON
C1850-14 (44)	ON	Fail Safe Relay Stuck OFF
C1851-18 (63)	ON	Motor Circuit Low Current
C1851-19 (63)	ON	Control Module Internal Control Module Malfunction
C1851-1E (63)	ON	Motor Circuit High Current
C1852-18 (62)	ON	Solenoid Valve Circuit Low Current
C1852-19 (62)	ON	Solenoid Valve Circuit High Current
C1858-72 (71)	ON	Differential Fluid Pressure Deviation Low
C1858-73 (71)	ON	Differential Fluid Pressure Deviation High
C1860-98 (76)	ON	Differential Fluid Overheated
C1861-9A (76)	ON	Vehicle Spin Detected

C1870-00 (77)	ON	Fuel and Emissions Related Malfunction
C1871-00 (77)	ON	Automatic Transmission Related Malfunction
C1872-00 (77)	ON	VSA Modulator-Control Unit Related Malfunction
C1873-00 (16)	ON	Steering Angle Sensor Malfunction
U0100-00 (41)	ON	F-CAN Malfunction (Lost Communication with Powertrain Control Module (PCM))
U0101-00 (41)	ON	F-CAN Malfunction (Lost Communication with A/T Control System)
U0122-00 (41)	ON	F-CAN Malfunction (Lost Communication with VSA Modulator-Control Unit)
U0126-00 (41)	ON	F-CAN Malfunction (Lost Communication with Steering Angle Sensor)
U3000-49 (78)	ON	Control Module Internal Control Module Malfunction
U3000-51 (91)	ON	Control Module Programming Error

ABNORMAL NOISE

Fig. 65: Real Time AWD System Symptom Troubleshooting Chart (Abnormal Noise)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, <u>REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM</u>.**
- **If necessary, comparison the noise with a know-good vehicle of the same type, if the noise is remarkably abnormal, do the following troubleshooting.**

1. Problem verification 1 (abnormal noise check):
   - 1. Test-drive the vehicle and check for abnormal noise.

   Did abnormal noise reappear?

   YES : Go to step 2.

   NO : Check the following items.

   - Check the rear differential fluid level and the fluid condition.
   - Check for rear differential fluid leaks.
   - Check for interference with items such as the harness.
   - Rotate either rear wheel by hand, and check that the other wheel rotates.
   - **<u>DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS</u>** .
   - **<u>DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST</u>** .
2. Rear differential visual check:
   - 1. Check the following items.
     - Check the rear differential fluid level and the fluid condition.
     - Check for rear differential fluid leaks.
     - Check the interference such as the harness.

   Is the check result OK?

   YES : Go to step 3.

   NO : **<u>REPLACE THE REAR DIFFERENTIAL FLUID OR ADD RECOMMENDED FLUID</u>** .

3. Problem verification (rear differential companion flange rotate check):
   - 1. Release the parking brake.
   - 2. Shift the transmission to N.
   - 3. Raise the vehicle on a lift.
   - 4. Make a reference mark (A) across the propeller shaft and the rear companion flange.

Fig. 66: Identifying Propeller Shaft Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Remove the propeller shaft mounting bolts from the rear differential companion flange.
- 6. Rotate the companion flange by hand.

Can the rear differential companion flange be rotated smoothly by hand?

YES : Go to step 4.

NO : Replace the **Rear Differential Housing Assembly Removal and Installation**

4. Rear differential operation check:
   - 1. Rotate either rear wheel by hand, and check that the other wheel rotates.

Does the other wheel rotate?

YES : Go to step 5.

NO : Replace the **Rear Differential Housing Assembly Removal and Installation**

5. Torque control differential (TCD) assembly check:
   - 1. Realign the reference mark (A) on the propeller shaft and the rear differential companion flange, then install new flange bolts (B).

Fig. 67: Identifying Propeller Shaft Reference Mark With Flange Bolt And Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Remove the following fuse.

  Fuse No. A1-5 (30 A)

  Location Under-food fuse/relay box

- 3. Test-drive the vehicle on the lift.

Is the abnormal noise still present?

YES : Replace the **Rear Differential Housing Assembly Removal and Installation** .

NO : Go to step 6.

6. Rear differential solenoid valve check:
   - 1. Do the SOLENOID TEST LEVEL 7, and then do SOLENOID TEST LEVEL 1 with the HDS.

Did abnormal noise happen when testing LEVEL 7 to LEVEL 1?

YES : Replace the rear differential solenoid valve. Go to **Rear Differential Solenoid Valve**

NO : Go to step 7.

7. Rear differential pump motor check:
   - 1. Do the Air Bleeding in the Adjustment Menu with the HDS.
   - 2. Listen for any abnormal noise coming from the rear differential pump motor.

Did abnormal noise happen while doing Air Bleeding?

YES : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

NO : Go to step 8.

8. Problem verification 2 (abnormal noise check):
   - 1. **REPLACE THE REAR DIFFERENTIAL FLUID** .
   - 2. Do the Air Bleeding in the Adjustment Menu with the HDS.
   - 3. Test-drive the vehicle on the lift.

YES : Replace the **Rear Differential Housing Assembly Removal and Installation**

NO : Intermittent failure, the system is OK at this time.

AWD SYSTEM INDICATOR DOES NOT COME ON

Fig. 68: Real Time AWD System Symptom Troubleshooting (AWD System Indicator Not Come On)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. Problem verification:

- 1. Turn the ignition switch to ON (II).

Does the AWD system indicator come on?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Gauge control module operation check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the AWD system indicator blink?

YES : Go to step 3.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

3. Real time AWD control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the following fuse.

     Fuse No. B6 (7.5 A)

     Location Under-dash fuse/relay box

   - 3. Turn the ignition switch to ON (II).

Does the AWD system indicator come on?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

AWD SYSTEM INDICATOR DOES NOT GO OFF, AND NO DTCS ARE

STORED

Fig. 69: Real Time AWD System Symptom Troubleshooting (AWD System Indicator Not Go Off)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, <u>REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM</u>.**
- **Do not jump the SCS line.**

1. Problem verification:
   - 1. Test the battery. Charge or replace the battery if necessary.
   - 2. Turn the ignition switch to ON (II).

   Does the AWD system indicator come on?

   YES : The failure is duplicated. Go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. HDS communication check:
   - 1. Check that the HDS communicates with the vehicle.

   Does the HDS communicate with the vehicle?

   YES : Go to step 3.

   NO : **<u>GO TO THE DLC CIRCUIT TROUBLESHOOTING</u>** .

3. Real time AWD system communication check:
   - 1. Check the Main Menu of the real time AWD system with the HDS.

   Does the HDS show the Main Menu of the real time AWD system?

   YES : Go to step 4.

   NO : Go to the real time AWD symptom troubleshooting for **<u>HDS does not communicate</u>**.

4. Real time AWD control unit status check 1:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Longitudinal G sensor learning	Complete			
Air purge for rear differential	Complete			
AWD operation check	Complete			

   Do the current condition(s) match the threshold?

   YES : Go to step 5.

NO : Go to step 7.

5. Gauge control module operation check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the AWD system indicator blink?

YES : Go to step 6.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

6. Gauge control module DTC check:
   - 1. Check for DTCs in the METER system with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC indicated?

YES : Go to the indicated DTC's troubleshooting in the gauge control module.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**.

7. Real time AWD control unit status check 2:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Longitudinal G sensor learning	Incomplete			
Air purge for rear differential	Incomplete			
AWD operation check	Incomplete			

Do the current condition(s) match the threshold?

Longitudinal G sensor learning is incomplete

Do the G Sensor Learning in the Adjustment MENU with the HDS.

Air purge for rear differential is incomplete

Do the ECU Replacement in the Adjustment MENU with the HDS.

AWD operation check is incomplete

Do the ECU Replacement in the Adjustment MENU with the HDS.

HDS DOES NOT COMMUNICATE

HDS does not communicate

Fig. 70: Real Time AWD System Symptom Troubleshooting (HDS Not Communicate)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. HDS communication check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check that the HDS communicates with the vehicle.

   Does the HDS communicate with the vehicle?

   YES : Go to step 2.

   NO : **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .

2. Real time AWD system communication check:
   - 1. Check the Main Menu of the real time AWD system with the HDS.

   Does the HDS show the Main Menu of the real time AWD system?

   YES : The real time AWD system communication is OK. Intermittent failure, the system is OK at this time.

   NO : Go to step 3.

3. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B6 (7.5 A)

     Location Under-dash fuse/relay box

   Is the fuse OK?

   YES : The fuse is OK. Reinstall the fuse, then go to step 4.

   NO : Repair a short in the No. B6 (7.5 A) fuse circuit.

4. Rear differential pump motor operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the operation sound of the rear differential pump motor on the rear differential with a stethoscope or a flat-tip screwdriver (at the rear differential pump motor) when the engine is started.

NOTE: **The rear differential pump motor operates within several seconds after the engine is started.**

Rear differential pump motor operation sound heard?

YES : Repair an open in the F CAN-H and/or F can-L wires.

NO : Go to step 5.

5. Rear differential fluid pressure sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the Main Menu of the real time AWD system with the HDS.

Does the HDS show the Main Menu of the real time AWD system?

YES : Go to step 6.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR** .

6. Open wire check (IG1 P/W line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Start the engine.
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit IG1 P/W

     Test point 1 Real time AWD control unit 24P connector No. 12 (RED)

     Test point 2 Body ground

Fig. 71: Measuring Voltage Between Real Time AWD Control Unit 24P Connector No. 12 (Red) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 P/W wire is OK. Go to step 7.

NO : Repair an open in the IG1 P/W wire between the real time AWD control unit and the No. B6 (7.5 A) fuse in the under-dash fuse/relay box.

7. Open wire check (GND line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check for continuity between test points 1 and 2.

    Test condition IG LOCK (0)

    Rear differential fluid pressure sensor 3P connector: disconnected

    Real time AWD control unit 24P connector: disconnected

    Test circuit GND

    Test point 1 Real time AWD control unit 24P connector No. 8 (BLK)

    Test point 2 Body ground

Fig. 72: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 8 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 8.

NO : Repair an open in the GND wire between the real time AWD control unit and ground (G603).

8. Shorted wire check (SVCC line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit SVCC

     Test point 1 Real time AWD control unit 24P connector No. 20 (WHT)

     Test point 2 Body ground

Fig. 73: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 20 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SVCC wire between the real time AWD control unit and body ground.

NO : The SVCC wire is OK. Go to step 9.

9. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit F CAN-H

     Test point 1 Real time AWD control unit 24P connector No. 14 (WHT)

     Test point 2 DLC (16P) No. 6 (WHT)

     Test circuit F CAN-L

     Test point 1 Real time AWD control unit 24P connector No. 24 (RED)

     Test point 2 DLC (16P) No. 14 (RED)

Fig. 74: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 14 (WHT) And DLC (16P) No. 6 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**.

NO : Repair an open in the F CAN-H and/or F CAN-L wires between the real time AWD control unit and the DLC.

REAL TIME AWD SYSTEM IS STUCK IN 4WD MODE

Fig. 75: Real Time AWD System Symptom Troubleshooting (Real Time AWD System Stuck In 4WD Mode)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. Problem verification (clutch test):
   - 1. **DO THE CLUTCH TEST** .

   Is the test result OK?

   YES : Go to step 2.

   NO : The failure is duplicated. **DO THE REPAIR DEPENDING ON THE TEST RESULT** .

2. Oil Pressure Control Test:
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   YES : Check the following items.

   - Check the rear differential fluid level and the fluid condition.
   - Check for rear differential fluid leaks.
   - **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** .

NO : The failure is duplicated. **FOLLOW THE INSTRUCTIONS INDICATED ON THE HDS ACCORDING TO THE TEST RESULT** .

WILL NOT GO INTO 4WD MODE, POOR TRACTION, POOR ACCELERATION (AT START), POOR CLIMBING ABILITY

Fig. 76: Real Time AWD System Symptom Troubleshooting (Poor Traction)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. Clutch test:
   - 1. **DO THE CLUTCH TEST** .

Is the test result OK?

YES : Check the following items.

- Check the rear differential fluid level and the fluid condition.
- Check for rear differential fluid leaks.
- **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .
- **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** .

NO : The failure is duplicated. **DO THE REPAIR DEPENDING ON THE TEST RESULT** .

REAR DIFFERENTIAL BREATHER BOX AND HOSE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Breather Box And Hose
    1. Disconnect the breather hose (A) from the rear differential breather pipe (B).
    2. Remove the breather hoses from the clamps (C) on the sensor cover.

Fig. 1: Identifying Breather Hose, Rear Differential Breather Pipe And Clamp

3. Disconnect the breather hose (A) from the pump motor breather pipe (B) and clamp (C).

Fig. 2: Identifying Breather Hose, Pump Motor Breather Pipe And Clamp

4. Remove the breather hose (A) from the clamp (C) on the right rear differential mount bracket B.

Fig. 3: Identifying Breather Hose And Clamp

5. Disconnect the breather hoses (A) from the breather box (B).
6. Remove the breather box from the body.

Fig. 4: Identifying Breather Hoses And Breather Box

INSTALLATION

1. Rear Differential Breather Box And Hose
    1. Install the breather box (A) to the body.
    2. Connect the breather hoses (B) to the breather box at the paint marks (C).

Fig. 5: Identifying Breather Box, Hoses And Paint Marks

    3. Install the breather hoses (A) to the clamps (B) at the paint marks (C).
    4. Connect the breather hose to the rear differential breather pipe (D) at the paint marks (E).

Fig. 6: Identifying Breather Hoses, Pipe, Clamps And Paint Marks

5. Connect the breather hose (A) to the pump motor breather pipe (B) and clamp (C) at the paint marks (D).

Fig. 7: Identifying Breather Hose, Pump Motor Breather Pipe, Clamp And Paint Marks

6. Install the breather hose (A) to the clamp (B) at the paint mark (C).

Fig. 8: Identifying Breather Hose, Clamp And Paint Mark

REAR DIFFERENTIAL CLUTCH TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 9: Identifying Data Link Connector

2. Rear Differential Clutch Test

1. Block the front wheels (A), raise the left rear wheel, and support it with a safety stand (B) as shown.
2. Release the parking brake.

Fig. 10: Letting Rear Wheel

3. Hold the left rear tire, and turn it counterclockwise continuously for more than one rotation.
   - If the wheel rotates, go to step 4.
   - If the wheel does not rotate, replace the rear differential fluid, and retest. If the result is the same, replace the rear differential assembly.
4. Select the FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
5. Select the SOLENOID TEST in the FUNCTIONAL TEST with the HDS.
6. Do LEVEL 7 of the SOLENOID TEST with the HDS.

Fig. 11: Turning Left Rear Tire Counterclockwise

7. Hold the left rear tire, and turn it counterclockwise continuously for more than one rotation.
   - If the wheel rotates, go to step 8.
   - If the wheel does not rotate, the system is OK at this time and the test is complete.
8. **CHECK THE CONDITION OF THE REAR DIFFERENTIAL FLUID**.

- If the fluid is dirty or burnt, replace the rear differential fluid.
- If the fluid is normal, go to step 9.

Fig. 12: Checking Condition Of Rear Differential Fluid

9. **MAKE SURE THE REAR DIFFERENTIAL FLUID IS AT THE PROPER LEVEL**.
   - If the level is below the proper level, check for rear differential fluid leaks at the differential assembly.
   - If the level is normal, go to step 10.
10. Check peripheral the rear differential for deformed or damaged.
    - If the deformed or damaged peripheral the rear differential, replace the defective part.
    - If the rear differential. is normal, go to step 11.
11. **DO THE REAR DIFFERENTIAL PRESSURE TEST WITH THE HDS**. If the Normal is displayed, go to step 12.
12. **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST**. If the rear differential fluid pressure sensor is OK, replace the rear differential fluid, and retest. If the result is the same, replace the rear differential assembly.

	Companion Flange Holder 07RAB-TB4010B

EXPLODED VIEW

1. Rear Differential Exploded View (Real Time AWD System)

   Exploded View

Fig. 14: Exploded View Of Rear Differential (Real Time AWD System) With Torque Specifications

DISASSEMBLY

1. Rear Differential Harness Bracket
    1. Remove the harness clip (A) and the harness bracket (B).

Fig. 15: Identifying Harness Clip And Harness Bracket

2. Rear Differential Motor Connector
    1. Disconnect the connector (A).

Fig. 16: Identifying Rear Differential Motor Connector

3. Rear Differential Motor Assembly
    1. Remove the rear differential pump motor (A) and the O-ring (B).

Fig. 17: Identifying Rear Differential Pump Motor And O-Ring

4. Rear Differential Sensor Cover
    1. Remove the rear differential sensor cover (A).

Fig. 18: Identifying Rear Differential Sensor Cover

5. Rear Differential Fluid Temperature Sensor Connector
    1. Disconnect the connector (A).

Fig. 19: Identifying Rear Differential Fluid Temperature Sensor Connector

6. Rear Differential Fluid Temperature Sensor
    1. Remove the rear differential fluid temperature sensor (A) and the O-ring (B).

Fig. 20: Identifying Rear Differential Fluid Temperature Sensor And O-Ring

7. Rear Differential Fluid Pressure Sensor Connector
    1. Disconnect the connector (A).

Fig. 21: Identifying Rear Differential Fluid Pressure Sensor Connector

8. Rear Differential Fluid Pressure Sensor
    1. Remove the rear differential fluid pressure sensor (A) and the O-ring (B).

Fig. 22: Identifying Rear Differential Fluid Pressure Sensor And O-Ring

9. Rear Differential Solenoid Valve Connector
    1. Disconnect the connector (A).

Fig. 23: Identifying Rear Differential Solenoid Valve Connector

2. Remove the rear differential solenoid valve connector (A).

Fig. 24: Identifying Rear Differential Solenoid Valve Connector

10. Oil Filler Plug And Drain Plug
    1. Remove the drain plug (A) and the oil filler plug (B) with sealing washers (C).

Fig. 25: Identifying Oil Filler Plug, Drain Plug And Sealing Washer

11. Rear Differential Subharness
    1. Disconnect the ground terminal (A).
    2. Remove the rear differential subharness (B).

Except 13M, canada-built models

Fig. 26: Identifying Rear Differential Subharness And Ground Terminal (Except 13M, Canada-Built Models)

Fig. 27: Identifying Rear Differential Subharness And Ground Terminal (13M, Canada-Built Models)

13M, canada-built models

Fig. 28: Identifying Rear Differential Subharness And Ground Terminal (13M, Canada-Built Models)

3. 13M canada-built models: Remove the hose bracket (A) from the rear differential.

Fig. 29: Identifying Hose Bracket (13M Canada-Built Models)

12. Rear Differential Companion Flange
    1. Pry up the stake on the locknut (A) from the groove of the clutch guide, making sure the tab completely clears the groove to prevent damaging the clutch guide.

Fig. 30: Prying Up Stake On Locknut Clutch Groove

    2. Install the companion flange holder (A) and holder handle (B) on the companion flange.

Fig. 31: Installing Companion Flange Holder And Holder Handle With Torque Specifications

3. Loosen the locknut (A) counterclockwise so its tab (B) comes out from the groove (C) in the clutch guide.

Fig. 32: Identifying Locknut, Tab, Clutch Guide Groove

4. Tighten the locknut (A) until its tab (B) aligns with the groove (C).
5. Clean any dirt from inside the groove in the clutch guide, then loosen the locknut.

Fig. 33: Identifying Locknut, Tab, Clutch Guide Groove

6. Remove the locknut (A), the spring washer (B), the back-up ring (C), and the O-ring (D).

Fig. 34: Identifying Locknut, Spring Washer, Back-Up Ring And O-Ring

7. Remove the companion flange (A) with a commercially available puller.

Fig. 35: Removing Companion Flange Using Puller

13. Oil Pump Cover
    1. Remove the oil pump cover (A) and oil pump cover seal (B).
    2. Remove the inner rotor (C) and the outer rotor (D).
    3. Remove the fluid strainer (E) and the dowel pins (F).

Fig. 36: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

14. Oil Pump Case
    1. Remove the oil pump case (A).
    2. Remove the dowel pins (B).

Fig. 37: Identifying Oil Pump Case And Dowel Pins

15. Rear Differential Clutch Assembly

1. Remove the baffle cover (A).
2. Remove the differential clutch assembly (B).

Fig. 38: Identifying Differential Clutch Assembly And Baffle Cover

16. Oil Pump Body Assembly
    1. Remove the 32.3 mm shim (A).
    2. Remove the 94.6 mm shim (B).

Fig. 39: Identifying Oil Pump Body Shim

3. Remove the oil pump body assembly (A).
4. Remove the dowel pins (B) and the O-ring (C).

Fig. 40: Identifying Oil Pump Body Assembly, Dowel Pins And O-Ring

17. Rear Differential Solenoid Valve
    1. Remove the rear differential solenoid valve (A), the O-ring (B), and the square washer (C) from the oil pump body assembly (D).

Fig. 41: Identifying Oil Pump Body Assembly, Rear Differential Solenoid Valve, O-Ring, Square Washer

REASSEMBLY

1. Rear Differential Solenoid Valve
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential solenoid valve (B) with the O-ring, and the square washer (C).

Fig. 42: Identifying Rear Differential Solenoid Valve, O-Ring And Square Washer

2. Oil Pump Body Assembly
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the dowel pins (B) with the O-ring.
    3. Install the oil pump body assembly (C).

Fig. 43: Identifying Oil Pump Body Assembly, Dowel Pins And O-Ring

4. Install the 32.3 mm shim (A).
5. Install the 94.6 mm shim (B).

Fig. 44: Identifying Oil Pump Body Assembly Shim

3. Rear Differential Clutch Assembly
    1. Install the differential clutch assembly (A).
    2. Install the baffle cover (B).

Fig. 45: Identifying Differential Clutch Assembly And Baffle Cover

4. Oil Pump Case
    1. Remove the dirt and oil from the sealing surfaces.
    2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) evenly to the sealing surface.
    3. Install the component within 5 minutes of applying the liquid gasket. Make sure you seal the entire circumference of the bolt holes to prevent fluid leakage.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**
- **Allow it to cure at least 30 minutes after assembly before filling the differential with the recommended fluid.**

Fig. 46: Identifying Liquid Gasket Applying Area

4. Install the dowel pins (A).
5. Install the oil pump case (B).
6. Torque the eight mounting bolts in a crisscross pattern in several steps.

Fig. 47: Identifying Oil Pump Case, Dowel Pins With Torque Specifications

5. Oil Pump Cover
    1. Install the fluid strainer (A) and the dowel pins (B).
    2. Install the inner rotor (C) and the outer rotor (D) with the "." marks (E) facing the oil pump case side.
    3. Install the oil pump cover (F) with a new oil pump cover seal (G).
    4. Torque the six mounting bolts in a crisscross pattern in several steps.

Fig. 48: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

6. Rear Differential Companion Flange
    1. Set the companion flange (A) to the clutch guide shaft.
    2. Drive on the companion flange using the 41.8 mm oil seal driver.

Fig. 49: Driving On Companion Flange Using Oil Seal Driver

3. Check the length of clutch guide shaft as shown.

NOTE: **Make sure to drive on the companion flange until 2 to 3 thread pitches of the clutch guide shaft appears.**

Fig. 50: Checking Length Of Clutch Guide Shaft Using Gauge

4. Apply Dual Pump Fluid II to the used locknut.
5. Set the used locknut to the clutch guide shaft.
6. Install the companion flange holder (A) and holder handle (B) on the companion flange.

Fig. 51: Removing Used Locknut And Companion Holder

7. Tighten the used locknut.
8. Remove the used locknut and the companion holder.
9. Check the companion flange has been set to the bottom.
10. Apply Dual Pump Fluid II to a new O-ring (A).
11. Install the O-ring, a new back-up ring (B), the spring washer (C), and a new locknut (D).

Fig. 52: Identifying O-Ring, Back-Up Ring, Spring Washer And Locknut

12. Install the companion flange holder (A) and holder handle (B) on the companion flange.
13. Tighten the locknut to the specified torque.

Specified Torque:

107.8 N.m (11.0 kgf.m, 80 lbf.ft)

Fig. 53: Tightening Locknut

14. Stake the locknut tab (A) into the groove in the clutch guide.

Fig. 54: Staking Locknut Tab Into Clutch Guide Groove

7. Rear Differential Subharness
    1. 13M canada-built models: Install the hose bracket (A) to the rear differential.

Fig. 55: Identifying Hose Bracket And Mounting Bolts With Torque Specification (13M Canada-Built Models)

Except 13M, canada-built models

Fig. 56: Identifying Rear Differential Subharness And Ground Terminal With Torque Specifications (Except 13M, Canada-Built Models)

13M, canada-built models

Fig. 57: Identifying Rear Differential Subharness And Ground Terminal With Torque Specifications (Except 13M, Canada-Built Models)

13M, canada-built models

Fig. 58: Identifying Rear Differential Subharness And Ground Terminal With Torque Specifications (13M, Canada-Built Models)

2. Install the rear differential subharness (A).
3. Connect the ground terminal (B).

8. Oil Filler Plug And Drain Plug
   1. Install the drain plug (A) and the oil filler plug (B) with new sealing washers (C).

Fig. 59: Identifying Drain Plug, Oil Filler Plug And Sealing Washers With Torque Specifications

9. Rear Differential Solenoid Valve Connector
    1. Install the rear differential solenoid valve connector (A).

Fig. 60: Identifying Rear Differential Solenoid Valve Connector With Mounting Bolts Torque Specifications

    2. Connect the connector (A).

Fig. 61: Identifying Rear Differential Solenoid Valve Connector

10. Rear Differential Fluid Pressure Sensor
    1. Install the rear differential fluid pressure sensor (A) with a new O-ring (B).

Fig. 62: Identifying Rear Differential Fluid Pressure Sensor With O-Ring

11. Rear Differential Fluid Pressure Sensor Connector
    1. Connect the connector (A).

Fig. 63: Identifying Rear Differential Fluid Pressure Sensor Connector With Torque Specifications

12. Rear Differential Fluid Temperature Sensor
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential fluid temperature sensor (B) with the O-ring.

Fig. 64: Identifying Rear Differential Fluid Temperature Sensor With O-Ring

13. Rear Differential Fluid Temperature Sensor Connector
    1. Connect the connector (A).

Fig. 65: Identifying Rear Differential Fluid Temperature Sensor Connector With Torque Specification

14. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

Fig. 66: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps

15. Rear Differential Motor Assembly
    1. Install the rear differential pump motor (A) with a new O-ring (B).

Fig. 67: Identifying Rear Differential Pump Motor And O-Ring

16. Rear Differential Motor Connector
    1. Connect the connector (A).

Fig. 68: Identifying Rear Differential Motor Connector

17. Rear Differential Harness Bracket
    1. Install the harness bracket (A) and the harness clip (B).

Fig. 69: Identifying Harness Bracket And Harness Clip With Torque Specifications

REAR DIFFERENTIAL FLUID INSPECTION

INSPECTION

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Inspection
    1. Use solvent and a brush to wash any oil and dirt off the oil filler plug, and dry them with compressed air.
    2. Remove the oil filler plug (A) and the sealing washer (B).
    3. Check the condition of the rear differential fluid, if the fluid is dirty or burnt, replace it.
    4. Make sure the rear differential fluid is at the proper level (C).
        - If the level is below the proper level, check for rear differential fluid leaks at the differential.
        - If a problem is found, fix it before filling the differential with fluid.

Fig. 70: Identifying Rear Differential Fluid Level

5. The fluid level must reach up to the bottom of the oil filler plug hole.
6. If necessary, add the rear differential fluid until it runs out, then reinstall the oil filler plug with a new sealing washer.

REAR DIFFERENTIAL FLUID PRESSURE SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 71: Identifying Oil Filler Plug And Sealing Washer With Torque Specifications (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 72: Identifying Drain Plug And Sealing Washer With Torque Specifications (Real Time AWD System)

3. Rear Differential Sensor Cover
    1. Remove the rear differential sensor cover (A).

Fig. 73: Identifying Rear Differential Sensor Cover

4. Rear Differential Fluid Pressure Sensor Connector
    1. Disconnect the connector (A).

Fig. 74: Identifying Rear Differential Fluid Pressure Sensor Connector

5. Rear Differential Fluid Pressure Sensor
    1. Remove the rear differential fluid pressure sensor (A) and the O-ring (B).

Fig. 75: Identifying Rear Differential Fluid Pressure Sensor And O-Ring With Torque Specifications

INSTALLATION

1. Rear Differential Fluid Pressure Sensor
    1. Install the rear differential fluid pressure sensor (A) with a new O-ring (B).

Fig. 76: Identifying Rear Differential Fluid Pressure Sensor With O-Ring With Torque Specification

2. Rear Differential Fluid Pressure Sensor Connector
    1. Connect the connector (A).

Fig. 77: Identifying Rear Differential Fluid Pressure Sensor Connector

3. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

Fig. 78: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 79: Identifying Drain Plug Sealing Washer With Torque Specifications (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 80: Identifying Oil Filler Plug With Sealing Washer With Torque Specifications (Real Time AWD System)

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD

system DTC's.

6. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 81: Identifying Data Link Connector

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	A/T Low Pressure Gauge w/Panel 07406-0070301

	
	A/T Pressure Test Hose 07AAJ-PY4A100
	A/T Pressure Adapter 07MAJ-PY40120

	
	Pressure Gauge Adapter 07NAJ-P07010A
	Oil Pressure Hose 07ZAJ-S5AA200

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Sensor Cover
    1. Remove the rear differential sensor cover (A).

Fig. 82: Identifying Rear Differential Sensor Cover

3. Rear Differential Fluid Pressure Sensor Connector
    1. Disconnect the connector (A).

Fig. 83: Identifying Rear Differential Fluid Pressure Sensor Connector

4. Rear Differential Fluid Pressure Sensor
    1. Remove the rear differential fluid pressure sensor (A) and the O-ring (B).

Fig. 84: Identifying Rear Differential Fluid Pressure Sensor And O-Ring

TEST

NOTE: **Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 85: Identifying Data Link Connector

2. Rear Differential Fluid Pressure Sensor - Test
    1. Turn the ignition switch to LOCK (0).
    2. Reconnect the rear differential fluid pressure sensor connector (A) to the rear differential pressure sensor (B).
    3. Turn the ignition switch to ON (II).
    4. Select the DATA LIST in the REAL TIME AWD SYSTEM with the HDS.
    5. Check the ACTUAL OIL PRESSURE OF THE OIL PRESSURE SENSOR FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.

Fig. 86: Identifying Rear Differential Fluid Pressure Sensor Connector And Sensor

- If the fluid pressure is higher than 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), replace the rear differential fluid pressure sensor.
- If the fluid pressure is within the range of 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), go to step 6.

    6. Turn the ignition switch to LOCK (0).
    7. Attach the A/T pressure test hose, the A/T pressure adapter, the pressure gauge adapter, and the oil pressure hose as shown, then attach the rear differential fluid pressure sensor (A) to the pressure gauge adapter (B).
    8. Place the end of the A/T pressure test hose into a drain pan (C).
    9. Start the engine, the real time AWD pump will do a brief low pressure purge of the system, this will cause air and fluid to flow out of the test hose.
    10. Turn the ignition switch to LOCK (0).
    11. Repeat step 9 again to assure the A/T pressure test hose is full of fluid without air bubbles
    12. Turn the ignition switch to LOCK (0).

Fig. 87: Performing A/T Pressure Test Hose Using Adapter

13. Attach the A/T low pressure gauge w/panel (A) onto the end of the A/T pressure test hose (B).
14. Turn the ignition switch to ON (II).
15. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
16. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

17. Select the FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.

Fig. 88: Checking Differential Fluid Pressure Value

18. Select the SOLENOID TEST in the FUNCTIONAL TEST with the HDS.
19. Do LEVEL 7 of the SOLENOID TEST with the HDS.

20. Check the differential fluid pressure value of the pressure gauge.
    - If the fluid pressure is not within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), replace the rear differential pump motor.
    - If the fluid pressure is within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), go to step 21.
21. Check the ACTUAL OIL PRESSURE OF THE OIL PRESSURE SENSOR FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.
    - If the fluid pressure is not within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), replace the rear differential fluid pressure sensor.
    - If the fluid pressure is within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), differential fluid pressure sensor is OK, and the test is complete.

INSTALLATION

1. Rear Differential Fluid Pressure Sensor
    1. Install the rear differential fluid pressure sensor (A) with a new O-ring (B).

Fig. 89: Identifying Rear Differential Fluid Pressure Sensor With O-Ring With Torque Specification

2. Rear Differential Fluid Pressure Sensor Connector
    1. Connect the connector (A).

Fig. 90: Identifying Rear Differential Fluid Pressure Sensor Connector

3. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

Fig. 91: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps With Torque Specifications

4. Rear Differential Fluid - Inspection
    1. Use solvent and a brush to wash any oil and dirt off the oil filler plug, and dry them with compressed air.
    2. Remove the oil filler plug (A) and the sealing washer (B).
    3. Check the condition of the rear differential fluid, if the fluid is dirty or burnt, replace it.

4. Make sure the rear differential fluid is at the proper level (C).
    - If the level is below the proper level, check for rear differential fluid leaks at the differential.
    - If a problem is found, fix it before filling the differential with fluid.

Fig. 92: Identifying Rear Differential Fluid Level

5. The fluid level must reach up to the bottom of the oil filler plug hole.
6. If necessary, add the rear differential fluid until it runs out, then reinstall the oil filler plug with a new sealing washer.

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
6. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL FLUID REPLACEMENT

DRAIN

NOTE: Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 93: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 94: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

REFILL

1. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 95: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 96: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.

    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 97: Identifying Data Link Connector

4. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 98: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 99: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Rear Differential Sensor Cover
    1. Remove the rear differential sensor cover (A).

Fig. 100: Identifying Rear Differential Sensor Cover

4. Rear Differential Fluid Temperature Sensor Connector
    1. Disconnect the connector (A).

Fig. 101: Identifying Rear Differential Fluid Temperature Sensor Connector

5. Rear Differential Fluid Temperature Sensor
    1. Remove the rear differential fluid temperature sensor (A) and the O-ring (B).

Fig. 102: Identifying Rear Differential Fluid Temperature Sensor And O-Ring

INSTALLATION

1. Rear Differential Fluid Temperature Sensor
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential fluid temperature sensor (B) with the O-ring.

Fig. 103: Identifying Rear Differential Fluid Temperature Sensor With O-Ring

2. Rear Differential Fluid Temperature Sensor Connector
    1. Connect the connector (A).

Fig. 104: Identifying Rear Differential Fluid Temperature Sensor Connector

3. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

Fig. 105: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps With Torque Specifications

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if**

necessary.

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 106: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 107: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
6. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 108: Identifying Data Link Connector

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL HOUSING ASSEMBLY REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

	Driver Handle, 40 mm I.D. 07746-0030100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 109: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 110: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 111: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).

2. Disconnect the connectors (B).

Fig. 112: Identifying Connector Cover And Connectors

3. Release the harness clips (A).

Fig. 113: Identifying Rear Differential Connector Harness Clips

5. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 114: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 115: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 116: Identifying Breather Hose And Clamp

6. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
7. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 117: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

Fig. 118: Identifying Mounting Bolts And Plates

8. Rear Driveshaft Inboard Side Both - Disconnection
    1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 119: Pulling Both Rear Driveshaft Inboard Joints Out Of Rear Differential Assembly

2. Remove the set ring (A) from inboard joint.

Fig. 120: Identifying Inboard Joint Set Ring

9. Rear Differential Assembly
    1. Remove the rear differential mount assembly A from the rear differential assembly (B).

Fig. 121: Identifying Rear Differential Mount Assembly And Rear Differential Assembly

10. Rear Differential Housing Assembly
    1. Remove the mounting bolts (A) in a crisscross pattern in several steps.
    2. Remove the differential housing assembly (B) and the oil seals (C).

Fig. 122: Identifying Differential Housing Assembly, Oil Seals And Mounting Bolts

INSTALLATION

1. Rear Differential Housing Assembly
    1. Remove the dirt and oil from the sealing surfaces.

2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) evenly to the sealing surface.
3. Install the component within 5 minutes of applying the liquid gasket. Make sure you seal the entire circumference of the bolt holes to prevent fluid leakage.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**
- **Allow it to cure at least 30 minutes after assembly before filling the differential with the recommended fluid.**

Fig. 123: Identifying Liquid Gasket Applying Area

4. Install the differential housing assembly (A).
5. Torque the mounting bolts (B) in a crisscross pattern in several steps.

Fig. 124: Identifying Differential Housing Assembly With Mounting Bolts

2. Rear Differential Right Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 125: Installing Rear Differential Right Side Oil Seal

3. Rear Differential Left Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 126: Installing Rear Differential Right Side Oil Seal

4. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

Fig. 127: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

5. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 128: Identifying Rear Driveshaft Inboard Side Ring And Groove

    2. Lift the rear differential assembly (A) up into position.
    3. Insert the inboard end (B) of the rear driveshafts (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

Fig. 129: Lifting Rear Differential Assembly

Fig. 130: Installing Inboard End Of Rear Driveshafts Into Differential

6. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 131: Identifying Left And Right Rear Differential Mount Brackets With Bolts

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 132: Identifying Mounting Bolts And Plates

7. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
8. Rear Differential Breather Hoses
    1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).

Differential upper side

Fig. 133: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 134: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Connect the breather hose (A) to the clamp (B).

Fig. 135: Identifying Breather Hose And Clamp

9. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 136: Identifying Rear Differential Connector Harness Clips

2. Connect the connectors (A).
3. Install the connector cover (B).

Fig. 137: Identifying Connector Cover And Connectors

10. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.

2. Install new flange bolts (D) to the specified torque.

Fig. 138: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

11. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 139: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 140: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

12. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 141: Identifying Data Link Connector

13. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

14. Test Drive
    1. Test-drive the vehicle.
15. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL MOUNT REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 142: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

3. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
4. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 143: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

Fig. 144: Identifying Mounting Bolts And Plates

5. Rear Differential Mount Rubber
    1. Remove the rear differential mount rubber (A).

Fig. 145: Identifying Rear Differential Mount Rubber

6. Rear Differential Mount Assembly A
    1. Slightly lower the rear differential on the transmission jack.

NOTE: **Make sure you do not over extend the wire harness and the breather hose.**

2. Remove the rear differential mount assembly A stopper (B).
3. Remove the rear differential mount assembly A.

Fig. 146: Identifying Rear Differential Mount Assembly And Stopper

INSTALLATION

1. Rear Differential Mount Assembly A
    1. Install the differential mount assembly A stopper (B).
    2. Install the rear differential mount assembly A.
    3. Raise the rear differential to the mounting level.

Fig. 147: Identifying Rear Differential Mount Assembly And Stopper With Torque Specifications

2. Rear Differential Mount Rubber
    1. Install the rear differential mount rubber (A).

Fig. 148: Identifying Rear Differential Mount Rubber

3. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).

2. Install the rear differential mounting bolts (E).

Fig. 149: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 150: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

4. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
5. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 151: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

REAR DIFFERENTIAL OIL SEAL REPLACEMENT - DRIVESHAFT SIDE

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Driver Handle, 40 mm I.D. 07746-0030100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)

1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 152: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 153: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 154: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 155: Identifying Connector Cover And Connectors

    3. Release the harness clips (A).

Fig. 156: Identifying Rear Differential Connector Harness Clips

5. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 157: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 158: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 159: Identifying Breather Hose And Clamp

6. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
7. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 160: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

Fig. 161: Identifying Mounting Bolts And Plates

8. Rear Driveshaft Inboard Side Both - Disconnection

1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 162: Pulling Both Rear Driveshaft Inboard Joints Out Of Rear Differential Assembly

2. Remove the set ring (A) from inboard joint.

Fig. 163: Identifying Inboard Joint Set Ring

9. Rear Differential Assembly
   1. Remove the rear differential mount assembly A from the rear differential assembly (B).

Fig. 164: Identifying Rear Differential Mount Assembly And Rear Differential Assembly

10. Rear Differential Left Side Oil Seal (Real Time AWD System)
    1. Remove the rear differential left side oil seal (A) from the differential housing.

Fig. 165: Installing Rear Differential Right Side Oil Seal

11. Rear Differential Right Side Oil Seal (Real Time AWD System)
    1. Remove the rear differential right side oil seal (A) from the differential housing.

Fig. 166: Removing Rear Differential Right Side Oil Seal

INSTALLATION

1. Rear Differential Right Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 167: Installing Rear Differential Right Side Oil Seal

2. Rear Differential Left Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 168: Installing Rear Differential Right Side Oil Seal

3. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

Fig. 169: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

4. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 170: Identifying Rear Driveshaft Inboard Side Ring And Groove

    2. Lift the rear differential assembly (A) up into position.
    3. Insert the inboard end (B) of the rear driveshafts (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

Fig. 171: Lifting Rear Differential Assembly

Fig. 172: Installing Inboard End Of Rear Driveshafts Into Differential

5. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 173: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 174: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

6. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
7. Rear Differential Breather Hoses
    1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).

Differential upper side

Fig. 175: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 176: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Connect the breather hose (A) to the clamp (B).

Fig. 177: Identifying Breather Hose And Clamp

8. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 178: Identifying Rear Differential Connector Harness Clips

2. Connect the connectors (A).
3. Install the connector cover (B).

Fig. 179: Identifying Connector Cover And Connectors

9. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.

2. Install new flange bolts (D) to the specified torque.

Fig. 180: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

10. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 181: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 182: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

11. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 183: Identifying Data Link Connector

12. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

13. Test Drive
    1. Test-drive the vehicle.
14. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL OIL SEAL REPLACEMENT - PROPELLER SHAFT SIDE ON VEHICLE

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Driver Handle, 40 mm I.D. 07746-0030100

	
	Oil Seal Driver, 41.8 mm 07947-6890100

	Holder Handle 07JAB-001020B
	Companion Flange Holder 07RAB-TB4010B

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 184: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 185: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 186: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Companion Flange
    1. Pry up the stake on the locknut (A) from the groove of the clutch guide, making sure the tab completely clears the groove to prevent damaging the clutch guide.

Fig. 187: Prying Up Stake On Locknut Clutch Groove

    2. Install the companion flange holder (A) and holder handle (B) on the companion flange.

Fig. 188: Installing Companion Flange Holder And Holder Handle With Torque Specifications

3. Loosen the locknut (A) counterclockwise so its tab (B) comes out from the groove (C) in the clutch guide.

Fig. 189: Identifying Locknut, Tab, Clutch Guide Groove

4. Tighten the locknut (A) until its tab (B) aligns with the groove (C).
5. Clean any dirt from inside the groove in the clutch guide, then loosen the locknut.

Fig. 190: Identifying Locknut, Tab, Clutch Guide Groove

6. Remove the locknut (A), the spring washer (B), the back-up ring (C), and the O-ring (D).

Fig. 191: Identifying Locknut, Spring Washer, Back-Up Ring And O-Ring

7. Remove the companion flange (A) with a commercially available puller.

Fig. 192: Removing Companion Flange Using Puller

5. Rear Differential Oil Seal Propeller Shaft Side (Real Time AWD System)
    1. Remove the rear differential propeller shaft side oil seal (A).

Fig. 193: Removing Rear Differential Oil Seal Propeller Shaft Side (Real Time AWD System)

INSTALLATION

1. Rear Differential Oil Seal Propeller Shaft Side (Real Time AWD System)
    1. Install a new rear differential propeller shaft side oil seal (A) even and flush with the rear differential oil pump cover using the 40 mm driver handle (B).

Fig. 194: Installing Rear Differential Propeller Shaft Side Oil Seal

2. Rear Differential Companion Flange
    1. Set the companion flange (A) to the clutch guide shaft.

2. Drive on the companion flange using the 41.8 mm oil seal driver.

Fig. 195: Driving On Companion Flange Using Oil Seal Driver

3. Check the length of clutch guide shaft as shown.

NOTE: **Make sure to drive on the companion flange until 2 to 3 thread pitches of the clutch guide shaft appears.**

Fig. 196: Checking Length Of Clutch Guide Shaft Using Gauge

4. Apply Dual Pump Fluid II to the used locknut.
5. Set the used locknut to the clutch guide shaft.
6. Install the companion flange holder (A) and holder handle (B) on the companion flange.

7. Tighten the used locknut.
8. Remove the used locknut and the companion holder.
9. Check the companion flange has been set to the bottom.

Fig. 197: Installing Companion Flange Holder And Holder Handle On Companion Flange With Torque Specification

10. Apply Dual Pump Fluid II to a new O-ring (A).
11. Install the O-ring, a new back-up ring (B), the spring washer (C), and a new locknut (D).

Fig. 198: Identifying O-Ring, Back-Up Ring, Spring Washer And Locknut

12. Install the companion flange holder (A) and holder handle (B) on the companion flange.
13. Tighten the locknut to the specified torque.

Specified Torque:

107.8 N.m (11.0 kgf.m, 80 lbf.ft)

Fig. 199: Installing Companion Flange Holder And Holder Handle On Companion Flange

14. Stake the locknut tab (A) into the groove in the clutch guide.

Fig. 200: Staking Locknut Tab Into Clutch Guide Groove

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 201: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 202: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 203: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
6. HDS DLC - Connection

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 204: Identifying Data Link Connector

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL PRESSURE TEST

TEST

NOTE: Before doing the Pressure Test, check the following conditions.

- Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
- Check the rear differential fluid level.
- Check for rear differential fluid leaks at the rear differential assembly.

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 205: Identifying Data Link Connector

2. Pressure Test
    1. Select DATA LIST in the REAL TIME AWD SYSTEM with the HDS.
    2. Select OIL TEMPERATURE FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.
        - If the temperature is above 68 °F (20 °C), go to step 3.
        - If the temperature is below 68 °F (20 °C), drive the vehicle to warm up the rear differential until the fluid temperature reaches at least 68 °F (20 °C), then go to step 3.
    3. Start the engine.
    4. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
    5. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
    6. Look at the results displayed on the HDS.
        - If Normal is displayed, test is completed.
        - If 1-1 is displayed, go to step 7.
        - If 2-1 and 5-1 is displayed: Go to step 21.
        - If 3-1 is displayed: Go to step 35.
        - If 4-1 and 6-1 is displayed: Go to step 49.
    7. Turn the ignition switch to LOCK (0).
    8. Disconnect the rear differential fluid pressure sensor connector.
    9. Remove the rear differential fluid pressure sensor.
    10. Reconnect the rear differential fluid pressure sensor connector.
    11. Turn the ignition switch to ON (II).
    12. Select the DATA LIST in the REAL TIME AWD SYSTEM with the HDS.
    13. Check the ACTUAL OIL PRESSURE OF THE OIL PRESSURE SENSOR FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.
        - If the fluid pressure is higher than 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), replace the rear differential fluid pressure sensor.

- If the fluid pressure is within the range of 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), go to step 14.

14. Replace the rear differential fluid.
15. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
16. Start the engine.
17. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
18. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
19. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 1-1 is displayed: Go to step 20.
20. **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST WITH THE HDS**. If the rear differential fluid pressure sensor test is OK, replace the rear differential assembly.
21. Turn the ignition switch to LOCK (0).
22. Turn the ignition switch to ON (II).
23. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
24. Start the engine.
25. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
26. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
27. Look at the results displayed on the HDS.
    - If Normal is displayed, intermittent failure, the system is OK at this time, test is completed.
    - If 2-1 and 5-1 is displayed: Go to step 28.
28. Replace the rear differential fluid.
29. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
30. Start the engine.
31. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
32. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
33. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 2-1 and 5-1 is displayed: Go to step 34.
34. Do **THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** and **THE REAR DIFFERENTIAL SOLENOID VALVE TEST** with the HDS. If the rear differential fluid pressure sensor test and the rear differential solenoid valve test is OK, replace the rear differential assembly.
35. Turn the ignition switch to LOCK (0).
36. Turn the ignition switch to ON (II).
37. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
38. Start the engine.
39. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.

40. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
41. Look at the results displayed on the HDS.
    - If Normal is displayed, intermittent failure, the system is OK at this time, test is completed.
    - If 3-1 is displayed: Go to step 42.
42. Replace the rear differential fluid.
43. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
44. Start the engine.
45. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
46. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
47. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 3-1 is displayed: Go to step 48.
48. **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST WITH THE HDS**. If the rear differential solenoid valve test is OK, replace the rear differential assembly.
49. Turn the ignition switch to LOCK (0).
50. Replace the rear differential fluid.
51. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
52. Start the engine.
53. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
54. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
55. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 4-1 and 6-1 is displayed: Go to step 56.
56. **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST WITH THE HDS**. If the rear differential solenoid valve test is OK, replace the rear differential assembly.

REAR DIFFERENTIAL PUMP MOTOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Harness Bracket
    1. Disconnect the breather hose (A) from the pump motor breather pipe (B).
    2. Remove the harness clip (C) and the harness bracket (D).

Fig. 206: Identifying Breather Hose, Pump Motor Breather Pipe, Clip And Harness Bracket

3. Rear Differential Motor Connector
    1. Disconnect the connector (A).

Fig. 207: Identifying Rear Differential Motor Connector

4. Rear Differential Motor Assembly
    1. Remove the rear differential pump motor (A) and the O-ring (B).

Fig. 208: Identifying Rear Differential Pump Motor And O-Ring

INSTALLATION

1. Rear Differential Motor Assembly
    1. Install the rear differential pump motor (A) with a new O-ring (B).

Fig. 209: Identifying Rear Differential Pump Motor And O-Ring

2. Rear Differential Motor Connector

1. Connect the connector (A).

Fig. 210: Identifying Rear Differential Motor Connector

3. Rear Differential Harness Bracket
    1. Install the harness bracket (A) and the harness clip (B).
    2. Connect the breather hose (C) to the pump motor breather pipe (D).

Fig. 211: Identifying Harness Bracket, Harness Clip, Breather Hose, Pump Motor Breather Pipe

REAR DIFFERENTIAL REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 212: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

    2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 213: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: **Suspend the propeller shaft with an appropriate size nylon strap.**

Fig. 214: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 215: Identifying Connector Cover And Connectors

    3. Release the harness clips (A).

Fig. 216: Identifying Rear Differential Connector Harness Clips

5. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 217: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 218: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 219: Identifying Breather Hose And Clamp

6. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
7. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 220: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

Fig. 221: Identifying Mounting Bolts And Plates

8. Rear Driveshaft Inboard Side Both - Disconnection

1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 222: Pulling Both Rear Driveshaft Inboard Joints Out Of Rear Differential Assembly

2. Remove the set ring (A) from inboard joint.

Fig. 223: Identifying Inboard Joint Set Ring

9. Rear Differential Assembly
    1. Remove the rear differential mount assembly A from the rear differential assembly (B).

Fig. 224: Identifying Rear Differential Mount Assembly And Rear Differential Assembly

INSTALLATION

1. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

Fig. 225: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

2. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 226: Identifying Rear Driveshaft Inboard Side Ring And Groove

2. Lift the rear differential assembly (A) up into position.
3. Insert the inboard end (B) of the rear driveshafts (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seals (G).

Fig. 227: Lifting Rear Differential Assembly

Fig. 228: Installing Inboard End Of Rear Driveshafts Into Differential

3. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 229: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

    3. Install the left and right rear differential mount brackets B.
    4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.

5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 230: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

4. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
5. Rear Differential Breather Hoses
    1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).

Differential upper side

Fig. 231: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 232: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Connect the breather hose (A) to the clamp (B).

Fig. 233: Identifying Breather Hose And Clamp

6. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 234: Identifying Rear Differential Connector Harness Clips

    2. Connect the connectors (A).
    3. Install the connector cover (B).

Fig. 235: Identifying Connector Cover And Connectors

7. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 236: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

8. Rear Differential Fluid - Replacement (Real Time AWD System)

1. Clean the drain plug (A), then install it with a new sealing washer (B).
2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 237: Identifying Drain And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 238: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

9. HDS DLC - Connection

Fig. 239: Identifying Data Link Connector

   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.
10. Real Time AWD System Bleeding
   1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
   2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

11. Test Drive
    1. Test-drive the vehicle.
12. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL SOLENOID VALVE TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Oil Seal Driver, 41.8 mm 07947-6890100

	Holder Handle 07JAB-001020B
	Companion Flange Holder 07RAB-TB4010B

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 240: Identifying Data Link Connector

2. Rear Differential Solenoid Valve - Test (With The HDS)
    1. Start the engine.
    2. Select the FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
    3. Select the SOLENOID TEST in the FUNCTIONAL TEST with the HDS.
    4. Do LEVEL 1, then do LEVEL 7 of the SOLENOID TEST in that order with the HDS.
    5. Check for rear differential solenoid valve operation with the HDS. A clicking sound should be heard.
        - If no clicking sound is heard, replace the rear differential solenoid valve.
        - If a clicking sound is heard, go to next procedure.

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 241: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 242: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 243: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 244: Identifying Connector Cover And Connectors

    3. Release the harness clips (A).

Fig. 245: Identifying Rear Differential Connector Harness Clips

5. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 246: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 247: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 248: Identifying Breather Hose And Clamp

6. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
7. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 249: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

Fig. 250: Identifying Mounting Bolts And Plates

8. Rear Driveshaft Inboard Side Both - Disconnection

1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 251: Pulling Both Rear Driveshaft Inboard Joints Out Of Rear Differential Assembly

2. Remove the set ring (A) from inboard joint.

Fig. 252: Identifying Inboard Joint Set Ring

9. Rear Differential Assembly
   1. Remove the rear differential mount assembly A from the rear differential assembly (B).

Fig. 253: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

10. Rear Differential Harness Bracket
    1. Remove the harness clip (A) and the harness bracket (B).

Fig. 254: Identifying Harness Clip And Harness Bracket

11. Rear Differential Motor Connector
    1. Disconnect the connector (A).

Fig. 255: Identifying Rear Differential Motor Connector

12. Rear Differential Motor Assembly
    1. Remove the rear differential pump motor (A) and the O-ring (B).

Fig. 256: Identifying Rear Differential Pump Motor And O-Ring

13. Rear Differential Sensor Cover
    1. Remove the rear differential sensor cover (A).

Fig. 257: Identifying Rear Differential Sensor Cover

14. Rear Differential Fluid Temperature Sensor Connector
    1. Disconnect the connector (A).

Fig. 258: Identifying Rear Differential Fluid Temperature Sensor Connector

15. Rear Differential Fluid Temperature Sensor
    1. Remove the rear differential fluid temperature sensor (A) and the O-ring (B).

Fig. 259: Identifying Rear Differential Fluid Temperature Sensor And O-Ring

16. Rear Differential Fluid Pressure Sensor Connector
    1. Disconnect the connector (A).

Fig. 260: Identifying Rear Differential Fluid Pressure Sensor Connector

17. Rear Differential Fluid Pressure Sensor
    1. Remove the rear differential fluid pressure sensor (A) and the O-ring (B).

Fig. 261: Identifying Rear Differential Fluid Pressure Sensor And O-Ring

18. Rear Differential Solenoid Valve Connector
    1. Disconnect the connector (A).

Fig. 262: Identifying Rear Differential Solenoid Valve Connector

    2. Remove the rear differential solenoid valve connector (A).

Fig. 263: Identifying Rear Differential Solenoid Valve Connector

19. Rear Differential Subharness
    1. Disconnect the ground terminal (A).
    2. Remove the rear differential subharness (B).

Except 13M, canada-built models

Fig. 264: Identifying Rear Differential Subharness And Ground Terminal (Except 13M, Canada-Built Models)

13M, canada-built models

Fig. 265: Identifying Ground Terminal (13M, Canada-Built Models)

13M, canada-built models

Fig. 266: Identifying Ground Terminal (13M, Canada-Built Models)

3. 13M canada-built models: Remove the hose bracket (A) from the rear differential.

Fig. 267: Identifying Hose Bracket

20. Rear Differential Companion Flange
    1. Pry up the stake on the locknut (A) from the groove of the clutch guide, making sure the tab completely clears the groove to prevent damaging the clutch guide.

Fig. 268: Prying Up Stake On Locknut Clutch Groove

    2. Install the companion flange holder (A) and holder handle (B) on the companion flange.

Fig. 269: Installing Companion Flange Holder And Holder Handle With Torque Specifications

3. Loosen the locknut (A) counterclockwise so its tab (B) comes out from the groove (C) in the clutch guide.

Fig. 270: Identifying Locknut, Tab, Clutch Guide Groove

4. Tighten the locknut (A) until its tab (B) aligns with the groove (C).
5. Clean any dirt from inside the groove in the clutch guide, then loosen the locknut.

Fig. 271: Identifying Locknut, Tab, Clutch Guide Groove

6. Remove the locknut (A), the spring washer (B), the back-up ring (C), and the O-ring (D).

Fig. 272: Identifying Locknut, Spring Washer, Back-Up Ring And O-Ring

7. Remove the companion flange (A) with a commercially available puller.

Fig. 273: Removing Companion Flange Using Puller

21. Oil Pump Cover
    1. Remove the oil pump cover (A) and oil pump cover seal (B).
    2. Remove the inner rotor (C) and the outer rotor (D).
    3. Remove the fluid strainer (E) and the dowel pins (F).

Fig. 274: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

22. Oil Pump Case
    1. Remove the oil pump case (A).
    2. Remove the dowel pins (B).

Fig. 275: Identifying Oil Pump Case And Dowel Pins

23. Rear Differential Clutch Assembly

1. Remove the baffle cover (A).
2. Remove the differential clutch assembly (B).

Fig. 276: Identifying Differential Clutch Assembly And Baffle Cover

24. Oil Pump Body Assembly
    1. Remove the 32.3 mm shim (A).
    2. Remove the 94.6 mm shim (B).

Fig. 277: Identifying Oil Pump Body Assembly Shim

3. Remove the oil pump body assembly (A).
4. Remove the dowel pins (B) and the O-ring (C).

Fig. 278: Identifying Oil Pump Body Assembly, Dowel Pins And O-Ring

25. Rear Differential Solenoid Valve
    1. Remove the rear differential solenoid valve (A), the O-ring (B), and the square washer (C) from the oil pump body assembly (D).

Fig. 279: Identifying Oil Pump Body Assembly, Rear Differential Solenoid Valve, O-Ring, Square Washer

TEST

1. Rear Differential Solenoid Valve - Test
    1. Connect the tube (A) to the rear differential solenoid valve (B).
    2. Blown the air to the tube.
        - If the air flows out of the port, go to step 3.
        - If the air does not flow out of the port, replace the rear differential solenoid valve.

Fig. 280: Connecting Tube To Rear Differential Solenoid Valve

    3. Connect a jumper wire from the negative battery terminal to the rear differential solenoid valve body, and connect another jumper wire from the positive battery terminal to connector terminal No. 1.
    4. Blown the air to the tube.

- If the air flows out of the port, replace the rear differential solenoid valve.
- If the air does not flow out of the port, the rear differential solenoid valve is OK, and the test is complete.

Fig. 281: Blowing Air To Tube

INSTALLATION

1. Rear Differential Solenoid Valve
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential solenoid valve (B) with the O-ring, and the square washer (C).

Fig. 282: Identifying Rear Differential Solenoid Valve, O-Ring And Square Washer

2. Oil Pump Body Assembly
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the dowel pins (B) with the O-ring.
    3. Install the oil pump body assembly (C).

Fig. 283: Identifying Oil Pump Body Assembly, Dowel Pins With O-Ring

4. Install the 32.3 mm shim (A).
5. Install the 94.6 mm shim (B).

Fig. 284: Identifying Oil Pump Body Assembly Shim

3. Rear Differential Clutch Assembly
    1. Install the differential clutch assembly (A).
    2. Install the baffle cover (B).

Fig. 285: Identifying Differential Clutch Assembly And Baffle Cover

4. Oil Pump Case
    1. Remove the dirt and oil from the sealing surfaces.
    2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) evenly to the sealing surface.
    3. Install the component within 5 minutes of applying the liquid gasket. Make sure you seal the entire circumference of the bolt holes to prevent fluid leakage.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**
- **Allow it to cure at least 30 minutes after assembly before filling the differential with the recommended fluid.**

Fig. 286: Identifying Liquid Gasket Applying Area

4. Install the dowel pins (A).
5. Install the oil pump case (B).
6. Torque the eight mounting bolts in a crisscross pattern in several steps.

Fig. 287: Identifying Oil Pump Case, Dowel Pins With Torque Specifications

5. Oil Pump Cover
    1. Install the fluid strainer (A) and the dowel pins (B).
    2. Install the inner rotor (C) and the outer rotor (D) with the "." marks (E) facing the oil pump case side.
    3. Install the oil pump cover (F) with a new oil pump cover seal (G).
    4. Torque the six mounting bolts in a crisscross pattern in several steps.

Fig. 288: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

6. Rear Differential Companion Flange
    1. Set the companion flange (A) to the clutch guide shaft.
    2. Drive on the companion flange using the 41.8 mm oil seal driver.

Fig. 289: Driving On Companion Flange Using Oil Seal Driver

3. Check the length of clutch guide shaft as shown.

NOTE: Make sure to drive on the companion flange until 2 to 3 thread pitches of the clutch guide shaft appears.

Fig. 290: Checking Length Of Clutch Guide Shaft Using Gauge

4. Apply Dual Pump Fluid II to the used locknut.
5. Set the used locknut to the clutch guide shaft.
6. Install the companion flange holder (A) and holder handle (B) on the companion flange.
7. Tighten the used locknut.
8. Remove the used locknut and the companion holder.

9. Check the companion flange has been set to the bottom.

Fig. 291: Installing Companion Flange Holder And Holder Handle On Companion Flange

10. Apply Dual Pump Fluid II to a new O-ring (A).
11. Install the O-ring, a new back-up ring (B), the spring washer (C), and a new locknut (D).

Fig. 292: Identifying O-Ring, Back-Up Ring, Spring Washer And Locknut

12. Install the companion flange holder (A) and holder handle (B) on the companion flange.
13. Tighten the locknut to the specified torque.

Specified Torque:

107.8 N.m (11.0 kgf.m, 80 lbf.ft)

Fig. 293: Installing Companion Flange Holder And Holder Handle On Companion Flange

14. Stake the locknut tab (A) into the groove in the clutch guide.

Fig. 294: Staking Locknut Tab Into Clutch Guide Groove

7. Rear Differential Subharness
    1. 13M canada-built models: Install the hose bracket (A) to the rear differential.

Fig. 295: Identifying Hose Bracket With Torque Specification (13M Canada-Built Models)

2. Install the rear differential subharness (A).
3. Connect the ground terminal (B).

Except 13M, canada-built models

Fig. 296: Identifying Rear Differential Subharness And Ground Terminal

13M, canada-built models

Fig. 297: Identifying Rear Differential Subharness With Torque Specification

13M, canada-built models

Fig. 298: Identifying Ground Terminal With Torque Specification

8. Rear Differential Solenoid Valve Connector
    1. Install the rear differential solenoid valve connector (A).

Fig. 299: Identifying Rear Differential Solenoid Valve Connector With Torque Specification

2. Connect the connector (A).

Fig. 300: Identifying Rear Differential Solenoid Valve Connector

9. Rear Differential Fluid Pressure Sensor
    1. Install the rear differential fluid pressure sensor (A) with a new O-ring (B).

Fig. 301: Identifying Rear Differential Fluid Pressure Sensor With O-Ring And Torque Specification

10. Rear Differential Fluid Pressure Sensor Connector
    1. Connect the connector (A).

Fig. 302: Identifying Rear Differential Fluid Pressure Sensor Connector

11. Rear Differential Fluid Temperature Sensor
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential fluid temperature sensor (B) with the O-ring.

Fig. 303: Identifying Rear Differential Fluid Temperature Sensor And O-Ring

12. Rear Differential Fluid Temperature Sensor Connector
    1. Connect the connector (A).

Fig. 304: Identifying Rear Differential Fluid Temperature Sensor Connector

13. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

Fig. 305: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps With Torque Specifications

14. Rear Differential Motor Assembly
    1. Install the rear differential pump motor (A) with a new O-ring (B).

Fig. 306: Identifying Rear Differential Pump Motor And O-Ring

15. Rear Differential Motor Connector
    1. Connect the connector (A).

Fig. 307: Identifying Rear Differential Motor Connector

16. Rear Differential Harness Bracket
    1. Install the harness bracket (A) and the harness clip (B).

Fig. 308: Identifying Harness Bracket And Harness Clip With Torque Specification

17. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

Fig. 309: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

18. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 310: Identifying Rear Driveshaft Inboard Side Ring And Groove

    2. Lift the rear differential assembly (A) up into position.
    3. Insert the inboard end (B) of the rear driveshafts (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

Fig. 311: Lifting Rear Differential Assembly

Fig. 312: Installing Inboard End Of Rear Driveshafts Into Differential

19. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 313: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 314: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

20. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
21. Rear Differential Breather Hoses
    1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).

Differential upper side

Fig. 315: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 316: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Connect the breather hose (A) to the clamp (B).

Fig. 317: Identifying Breather Hose And Clamp

22. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 318: Identifying Rear Differential Connector Harness Clips

2. Connect the connectors (A).
3. Install the connector cover (B).

Fig. 319: Identifying Connector Cover And Connectors

23. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.

2. Install new flange bolts (D) to the specified torque.

Fig. 320: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

24. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 321: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 322: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

25. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

26. Test Drive
    1. Test-drive the vehicle.
27. Maintenance Minder Reset

1. **RESET THE MAINTENANCE MINDER** .

REAR CONTROLLER AND SCREEN REMOVAL AND INSTALLATION

LON > 0101D7

REMOVAL

1. Rear Display Cover
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

Fig. 1: Identifying Ceiling Light And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear display cover (A).

Fig. 2: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Controller and Screen
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 3: Identifying Rear Controller And Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Controller and Screen
    1. Install the rear controller and screen (A).
    2. Connect the connector.

Fig. 4: Identifying Rear Controller And Screen With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Display Cover
    1. Install the rear display cover (A).

Fig. 5: Installing Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connector.
3. Install the ceiling light (B).
4. Carefully install the lenses (C).

Fig. 6: Identifying Ceiling Light And Lenses

REAR ENTERTAINMENT DVD PLAYER UNIT CONNECTOR FOR INPUTS AND OUTPUTS

DVD PLAYER UNIT CONNECTOR FOR INPUTS AND OUTPUTS

Fig. 7: Identifying DVD Player Unit Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 8: Identifying DVD Player Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DVD PLAYER UNIT 24P CONNECTOR

Cavity	Wire Color	Terminal Name	Description
1	PNK	RES_SYS_ACC	Detects DVD player unit switching ON/OFF
2	GRY	ILLUMI+	Detects parking light on signal
3	LT GRN	AUX_GND	Ground for AUX sound signal
4	GRY(1)	SH _AUX	Shield for terminals No. 5, No. 16, and No. 17
5	BLK	AUX_SGND	Ground for sound signal from DVD player unit
6	GRY(1)	SH_HP_LR	Shield for terminals No. 7, No. 18, and No. 19
7	WHT	HP_LR_GND	Ground for sound signal
8	YEL	RES_VIDEO_GND	Ground for video signal
9	BLU	SCTY_DVD	Security signal from DVD player unit
10	RED	RES_BUS+	RES (GA-Net) bus communication signal
11	LT GRN	ACC	Power source for accessories
12	GRN	+B_BACK_UP	Continuous power source

13	BLK	GND	Ground for DVD player unit (G503)
14	GRN	ILL-(LED)	Detects illumination control signal
15	LT BLU	AUX_DET	Detects connection signal for DVD player unit
16	RED	AUX_R_CH	Outputs AUX sound signal to audio unit
17	WHT	AUX_L_CH	Outputs AUX sound signal to audio unit
18	RED	HP_R_SIG	Outputs video signal from rear controller and screen
19	BLK	HP_L_SIG	Outputs video signal from rear controller and screen
20	GRY(1)	SH_RES_VIDEO	Shield for terminals No. 8 and No. 21
21	BRN	RES_VIDEO_SIG	Outputs RES video signal
22	WHT	SCTY_RADIO_SW	Security signal to audio unit
23	GRN	RES_BUS-	RES (GA-Net) bus communication signal
24	GRY(1)	SH_RES_BUS	Shield for terminals No. 10 and No. 23

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

DVD PLAYER UNIT BUTTON ILLUMINATION DOES NOT WORK

Rear Entertainment System Symptom Troubleshooting - DVD player unit button illumination does not work

Fig. 14: Rear Entertainment System Symptom Troubleshooting Flow Chart (DVD Player Unit Button Illumination Not Working)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn the combination lighting switch to the parking light position.
    - 3. Check if the DVD player unit buttons are illuminated.

Are the buttons illuminated?

YES : Intermittent failure, the audio unit is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (interior lights circuit, others):
    - 1. Check if several other buttons that are not related to the rear entertainment system are illuminated.

    Are the buttons illuminated?

    YES : Go to step 3.

    NO : Troubleshoot the interior lights.

3. Determine possible failure area (DVD player unit, others):
    - 1. **Do the RES self-diagnostic function to check the DVD INFO diagnosis** See **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** or **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** .

    Are the ILL+ and the ILL-LED value OK?

    YES : REPLACE THE DVD PLAYER UNIT .

    NO : Go to step 4.

4. Open wire check (ILLUMI+ line):
    - 1. Turn the combination lighting switch off.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connector.

      DVD player unit 24P connector

    - 4. Turn the ignition switch to ON (II).
    - 5. Turn the combination lighting switch to the parking light position.
    - 6. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      DVD player unit 24P connector: disconnected

      Test circuit ILLUMI+

      Test point 1 DVD player unit 24P connector No. 2 (GRY)

      Test point 2 Body ground

<u>Fig. 15: Measuring Voltage Between DVD Player Unit 24P Connector No. 2 (GRY) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ILLUMI+ wire is OK. Go to step 5.

NO : Repair an open in the wire between the No. B35 (7.5 A) fuse in the under-dash fuse/relay box and the DVD player unit.

5. Open wire check (ILLUMI-(LED) line):
   - 1. Turn the combination lighting switch off.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connector.

     Gauge control module 32P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit ILLUMI-(LED)

     Test point 1 DVD player unit 24P connector No. 14 (GRN)

     Test point 2 Gauge control module 32P connector No. 15 (GRN)

Fig. 16: Checking Continuity Between DVD Player Unit 24P Connector No. 14 (GRN) And Gauge Control Module 32P Connector No. 15 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE DVD PLAYER UNIT .

NO : Repair an open in the wire between the DVD player unit and the gauge control module.

NO RES SOUND IS HEARD FROM THE SPEAKER(S) (REAR DISPLAY IS NORMAL)

Rear Entertainment System Symptom Troubleshooting - No RES sound is heard from the speaker(s) (rear display is normal)

Fig. 17: Rear Entertainment System Symptom Troubleshooting Flow Chart (No RES Sound Heard From Speaker 1 Of 2)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 18: Rear Entertainment System Symptom Troubleshooting Flow Chart (No RES Sound Heard From Speaker 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **DVD-R/RWs will not work in the DVD player unit.**
- **Damaged or contaminated discs may not always play properly.**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Open the rear screen.
    - 3. Play a known-good disc to see if the symptom can be duplicated.

Is the symptom duplicated?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (AUX GND line, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Audio unit connector B (20P)

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Audio unit connector B (20P): disconnected

      Test circuit AUX GND

      Test point 1 Audio unit connector B (20P) No. 6 (LT GRN)

      Test point 2 Body ground

Fig. 19: Measuring Voltage Between Audio Unit Connector B (20P) No. 6 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : The AUX GND wire is OK. Go to step 4.

NO : Go to step 3.

3. Open wire check (AUX GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Audio unit connector B (20P): disconnected

      Test circuit AUX GND

      Test point 1 DVD player unit 24P connector No. 3 (LT GRN)

      Test point 2 Body ground

Fig. 20: Measuring Voltage Between DVD Player Unit 24P Connector No. 3 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Repair an open in the wire between the DVD player unit and the audio unit.

NO : REPLACE THE DVD PLAYER UNIT .

4. Determine possible failure area (audio unit, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect audio unit connector B (20P).
    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit AUX GND

      Test point 1 Audio unit connector B (20P) No. 6 (LT GRN)

Test point 2 Body ground

Fig. 21: Measuring Voltage Between Audio Unit Connector B (20P) No. 6 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : Go to step 5.

NO : REPLACE THE AUDIO UNIT .

5. Determine possible failure area (AUX DET line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     DVD player unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     DVD player unit 24P connector: disconnected

     Test circuit AUX DET

     Test point 1 DVD player unit 24P connector No. 15 (LT BLU)

     Test point 2 Body ground

Fig. 22: Measuring Voltage Between DVD Player Unit 24P Connector No. 15 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : The AUX DET wire is OK. Go to step 7.

NO : Go to step 6.

6. Open wire check (AUX DET line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     DVD player unit 24P connector: disconnected

     Test circuit AUX DET

     Test point 1 Audio unit connector B (20P) No. 16 (LT BLU)

     Test point 2 Body ground

Fig. 23: Measuring Voltage Between Audio Unit Connector B (20P) No. 16 (LT BLU) And

Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Repair an open in the wire between the DVD player unit and the audio unit.

NO : REPLACE THE AUDIO UNIT .

7. Determine possible failure area (DVD player unit, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the DVD player unit 24P connector.
   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Test circuit AUX DET

   Test point 1 DVD player unit 24P connector No. 15 (LT BLU)

   Test point 2 Body ground

Fig. 24: Measuring Voltage Between DVD Player Unit 24P Connector No. 15 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : Go to step 8.

NO : REPLACE THE DVD PLAYER UNIT .

8. Shorted wire check (AUX L CH line, AUX R CH line):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connectors.

  Audio unit connector B (20P)

  DVD player unit 24P connector

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Audio unit connector B (20P): disconnected

  DVD player unit 24P connector: disconnected

  Test circuit AUX L CH

  Test point 1 Audio unit connector B (20P) No. 18 (WHT)

  Test point 2 Body ground

  Test circuit AUX R CH

  Test point 1 Audio unit connector B (20P) No. 17 (RED)

  Test point 2 Body ground

Fig. 25: Checking Continuity Between Audio Unit Connector B (20P) No. 17 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the DVD player unit. Replace the affected shielded harness.

NO : The AUX R CH and the AUX L CH wires are not shorted to ground. Go to step 9.

9. Shorted wire check (SH AUX line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     DVD player unit 24P connector: disconnected

     Test circuit AUX R CH, SH AUX

     Test point 1 Audio unit connector B (20P) No. 17 (RED)

     Test point 2 Audio unit connector B (20P) No. 7 (GRY)

     Test circuit AUX L CH, SH AUX

     Test point 1 Audio unit connector B (20P) No. 18 (WHT)

     Test point 2 Audio unit connector B (20P) No. 7 (GRY)

Fig. 26: Checking Continuity Between Audio Unit Connector B (20P) No. 17 (RED) And No. 7 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the DVD player unit. Replace the affected shielded harness.

NO : The SH AUX wire is OK. Go to step 10.

10. Shorted wire check (AUX SGND line to another lines):
    - 1. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Audio unit connector B (20P): disconnected

DVD player unit 24P connector: disconnected

Test circuit AUX R CH, AUX SGND

Test point 1 Audio unit connector B (20P) No. 17 (RED)

Test point 2 Audio unit connector B (20P) No. 8 (BLK)

Test circuit AUX L CH, AUX SGND

Test point 1 Audio unit connector B (20P) No. 18 (WHT)

Test point 2 Audio unit connector B (20P) No. 8 (BLK)

Fig. 27: Checking Continuity Between Audio Unit Connector B (20P) No. 17 (RED) And No. 8 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the DVD player unit. Replace the affected shielded harness.

NO : The AUX SGND wire is not shorted. Go to step 11.

11. Open wire check (AUX line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      DVD player unit 24P connector: disconnected

Test circuit	Test point 1: Audio unit connector B (20P)	Test point 2: DVD player unit 24P connector
AUX SGND	No. 8 (BLK)	No. 5 (BLK)
AUX R CH	No. 17 (RED)	No. 16 (RED)
AUX L CH	No. 18 (WHT)	No. 17 (WHT)

Fig. 28: Checking Continuity Between Audio Unit Connector B (20P) And DVD Player Unit 24P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 29: Identifying DVD Player Unit 24P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AUX wires are OK. Go to step 12.

NO : There is an open in the wire(s) between the audio unit and the auxiliary jack assembly. Replace the affected harness.

12. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD DVD PLAYER UNIT, AND RECHECK .

Does the symptom go away?

YES : Replace the original DVD player unit.

NO : REPLACE THE AUDIO UNIT .

NO SOUND/NO DISPLAY WITH AUXILIARY VIDEO UNIT INPUTS ONLY

Rear Entertainment System Symptom Troubleshooting - No sound/no display with auxiliary video unit inputs only

Fig. 30: Rear Entertainment System Symptom Troubleshooting Flow Chart (No Sound/No Display With Auxiliary Video Unit Inputs Only)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check that the auxiliary device is properly connected, and has fresh batteries or power source connected.**
- **Do not connect an RCA type shorting plug with the RES auxiliary jack connected, or system damage may occur.**
- **You need to switch the DVD player unit REAR POWER button on for the rear display, remote controls, and sound to operate.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (RES auxiliary jack, others):
    - 1. Turn the ignition switch to ON (II).

- 2. Open the rear screen.
- 3. Press the REAR POWER button, then press the SOURCE button to select the AUX mode.

Does the rear screen change to the AUX mode?

YES : Go to step 2.

NO : Go to **RES POWER WILL NOT TURN ON (NO INFORMATION DISPLAY) TROUBLESHOOTING**.

2. Problem verification:
   - 1. Connect an auxiliary video source to the RES auxiliary jack on the DVD player unit, and check the volume/display operation.

Does the display operate properly and does the audio sound normal?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 3

3. Determine possible failure area (auxiliary video accessory, others):
   - 1. Substitute a known-good auxiliary video accessory and/or auxiliary stereo cable, and recheck.

Does the auxiliary video accessory operate properly?

YES : Original auxiliary video accessory or auxiliary stereo cable is faulty.

NO : **No RES sound is heard from the speaker(s) (rear display is normal)**.

NO : **No video display appears on the rear screen**.

NO : REPLACE THE DVD PLAYER UNIT .

NO VIDEO DISPLAY APPEARS ON THE REAR SCREEN

Rear Entertainment System Symptom Troubleshooting - No video display appears on the rear screen

Fig. 31: Rear Entertainment System Symptom Troubleshooting Flow Chart (No Video Display Appears On Rear Screen)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **DVD-R/RWs will not work in the DVD player unit.**
- **Damaged or contaminated discs may not always play properly.**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Open the rear screen.
    - 3. Play a known-good disc to see if the symptom can be duplicated.

Is the symptom duplicated?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (RES VIDEO SIG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     DVD player unit 24P connector

     Rear controller and screen 16P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Rear controller and screen 16P connector: disconnected

     Test circuit RES VIDEO SIG

     Test point 1 DVD player unit 24P connector No. 21 (BRN)

     Test point 2 Body ground

Fig. 32: Checking Continuity Between DVD Player Unit 24P Connector No. 21 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire between the DVD player unit and the rear controller

and screen. Replace the affected shielded harness.

NO : The RES VIDEO SIG wire is not shorted to ground. Go to step 3.

3. Shorted wire check (RES VIDEO SIG line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Rear controller and screen 16P connector: disconnected

     Test circuit RES VIDEO SIG, RES VIDEO GND

     Test point 1 DVD player unit 24P connector No. 21 (BRN)

     Test point 2 DVD player unit 24P connector No. 8 (YEL)

     Test circuit RES VIDEO SIG, SH RES VIDEO

     Test point 1 DVD player unit 24P connector No. 21 (BRN)

     Test point 2 DVD player unit 24P connector No. 20 (GRY)

Fig. 33: Checking Continuity Between DVD Player Unit 24P Connector No. 21 (BRN) And No. 20 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The RES VIDEO SIG wire is OK. Go to step 4.

4. Open wire check (RES VIDEO SIG line, RES VIDEO GND line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES VIDEO SIG

      Test point 1 Rear controller and screen 16P connector No. 11 (BRN)

      Test point 2 DVD player unit 24P connector No. 21 (BRN)

      Test circuit RES VIDEO GND

      Test point 1 Rear controller and screen 16P connector No. 4 (YEL)

      Test point 2 DVD player unit 24P connector No. 8 (YEL)

Fig. 34: Checking Continuity Between Rear Controller And Screen 16P Connector No. 4 (YEL) And No. 8 (YEL)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RES VIDEO SIG and the RES VIDEO GND wires are OK. Go to step 5.

NO : There is an open in the wire(s) between the DVD player unit and the rear controller and screen.

Replace the affected shielded harness.

5. Rear controller and screen check:
    - 1. SUBSTITUTE A KNOWN-GOOD DVD PLAYER UNIT, AND RECHECK .

Does the symptom go away?

YES : Replace the original DVD player unit.

NO : **REPLACE THE REAR CONTROLLER AND SCREEN**.

REAR SCREEN BACKLIGHT DOES NOT DIM/REMAINS DIM

Fig. 35: Rear Entertainment System Symptom Troubleshooting Flow Chart (Rear Screen Backlight Does Not Dim/Remains Dim)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn the combination lighting switch to the parking light position.
    - 3. Rotate the dashlights brightness controller knob several times.

Does the rear screen brightness change?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (DVD player unit, others):
    - 1. Rotate the dashlights brightness controller knob several times.

Does the DVD player unit buttons brightness change?

YES : Go to step 3.

NO : Go to **DVD PLAYER UNIT BUTTON ILLUMINATION DOES NOT WORK TROUBLESHOOTING**.

3. Open wire check (ILLUMI+ line):
    - 1. Turn the combination lighting switch off.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connector.

      Rear controller and screen 16P connector

    - 4. Turn the ignition switch to ON (II).
    - 5. Turn the combination lighting switch to the parking light position.
    - 6. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Rear controller and screen 16P connector: disconnected

      Test circuit ILLUMI+

      Test point 1 Rear controller and screen 16P connector No. 3 (GRY)

      Test point 2 Body ground

REAR CONTROLLER AND SCREEN 16P CONNECTOR

Wire side of female terminals

Fig. 36: Measuring Voltage Between Rear Controller And Screen 16P Connector No. 3 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : **REPLACE THE REAR CONTROLLER AND SCREEN**.

NO : Repair an open in the wire between the No. B35 (7.5 A) fuse in the under-dash fuse/relay box and the rear controller and screen.

RES DISC DOES NOT EJECT

Fig. 37: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Not Eject)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check to see if the disc ejects correctly with no binding by pushing the EJECT button.

Does the disc eject normally?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, but the disc can be ejected, go to step 2.

NO : REPLACE THE DVD PLAYER UNIT .

2. DVD player unit check:
   - 1. Insert another disc.

Does the disc eject normally?

YES : The original disc is faulty.

NO : REPLACE THE DVD PLAYER UNIT .

RES DISC DOES NOT LOAD

Fig. 38: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Not Load)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (disc loading system, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Press the REAR POWER button, and check if the REAR POWER button LED comes on.

    Is the REAR POWER button LED come on?

    YES : Go to step 2.

    NO : Go to **RES POWER WILL NOT TURN ON (NO INFORMATION DISPLAY) TROUBLESHOOTING**.

2. Problem verification:
    - 1. Try loading a disc.

    Does the disc load?

    YES : Intermittent failure, the system is OK at this time. If the disc loads normally, but will not play, go to **RES DISC DOES NOT PLAY TROUBLESHOOTING**.

    NO : The failure is duplicated, go to step 3.

3. DVD player unit check:
    - 1. Insert another disc.

    Does the disc load?

    YES : The original disc is faulty.

    NO : REPLACE THE DVD PLAYER UNIT .

RES DISC DOES NOT PLAY

Fig. 39: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Not Play)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **DVD-R/RWs will not work in the DVD player unit.**
- **Damaged or contaminated discs may not always play properly.**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **You need to switch the DVD player unit REAR POWER button on for the rear screen, remote controls, and sound to operate.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Insert a disc to see if the symptom can be duplicated.

   Does the disc play?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. DVD player unit check:
   - 1. Insert a known-good disc.

   Does the DVD play (display properly and sound normal)?

   YES : The original disc is faulty, or has an unreadable format.

   NO : REPLACE THE DVD PLAYER UNIT .

RES DISC SKIPS

Fig. 40: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Skips)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Copy protected material on a CD-R/RW or a DVD-R/RW disc will skip or not play.**
- **Check for scratches, smudges, and fingerprints on the disc.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Try playing a disc.

   Does the disc skip?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (disc, others):
   - 1. Eject the original disc, and insert a known-good disc, and recheck.

   Does the disc play properly?

   YES : The original disc is dirty or the wrong type.

   NO : Go to step 3.

3. DVD player unit check:
    - 1. Compare the disc skipping to a known-good vehicle under the same conditions.

    Does the known-good vehicle's disc skip under the same conditions (over the same bumps and on the same rough roads)?

    YES : Operation is normal.

    NO : REPLACE THE DVD PLAYER UNIT .

Rear Entertainment System Symptom Troubleshooting - RES power will not turn on (No information display)

Fig. 42: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Power Will Not Turn On 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Before you troubleshoot, make sure to follow the How to Troubleshoot the Rear Entertainment System See HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM or REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the Rear Power button on.
   - 3. Open the rear screen, and check if the rear screen turns on.

   Does the rear screen turns on (displays the opening screen)?

   YES : Go to step 3.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (DVD player unit power and ground circuit, others):
   - 1. Press the REAR POWER button on the DVD player unit, and check if the REAR POWER button LED comes on.

   Does the REAR POWER button LED come on?

   YES : Go to step 8.

   NO : Go to step 4.

3. Rear controller and screen check:
   - 1. **Do the RES self-diagnostic function with the DVD player unit** See **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** or **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** .

   Does the self-diagnosis start, and is the CONNECT diagnosis OK?

   YES : Intermittent failure, the system is OK at this time.

   NO : **REPLACE THE REAR CONTROLLER AND SCREEN**.

4. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. Check the following fuse.

  Fuse No. B19 (7.5 A)

  Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 5.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. B19 (7.5 A) fuse circuit.

5. Open wire check (+B BACK UP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B BACK UP

     Test point 1 DVD player unit 24P connector No. 12 (GRN)

     Test point 2 Body ground

Fig. 43: Measuring Voltage Between DVD Player Unit 24P Connector No. 12 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 6.

NO : Repair an open or high resistance in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the DVD player unit.

6. Open wire check (ACC line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit ACC

    Test point 1 DVD player unit 24P connector No. 11 (LT GRN)

    Test point 2 Body ground

Fig. 44: Measuring Voltage Between DVD Player Unit 24P Connector No. 11 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ACC wire is OK. Go to step 7.

NO : Repair an open or high resistance in the wire between the No. B19 (7.5 A) fuse in the under-dash fuse/relay box and the DVD player unit.

7. Open wire check (GND line):
    - 1. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit GND

    Test point 1 DVD player unit 24P connector No. 13 (BLK)

    Test point 2 Body ground

Fig. 45: Measuring Voltage Between DVD Player Unit 24P Connector No. 13 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : REPLACE THE DVD PLAYER UNIT .

NO : Repair an open or high resistance in the wire between the DVD player unit and body ground (G503).

8. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A29 (10 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 9.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A29 (10 A) fuse circuit.

9. Open wire check (+B BACK UP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B BACK UP

     Test point 1 Rear controller and screen 16P connector No. 1 (RED)

Test point 2 Body ground

Fig. 46: Measuring Voltage Between Rear Controller And Screen 16P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 10.

NO : Repair an open or high resistance in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the rear controller and screen.

10. Open wire check (GND line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit GND

    Test point 1 Rear controller and screen 16P connector No. 16 (BLK)

    Test point 2 Body ground

Fig. 47: Measuring Voltage Between Rear Controller And Screen 16P Connector No. 16 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 11.

NO : Repair an open or high resistance in the wire between the rear controller and screen and body ground (G501).

11. Shorted wire check (RES SYS ACC line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      DVD player unit 24P connector

      Rear controller and screen 16P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES SYS ACC

      Test point 1 Rear controller and screen 16P connector No. 8 (PNK)

      Test point 2 Body ground

Fig. 48: Checking Continuity Between Rear Controller And Screen 16P Connector No. 8 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the DVD player unit and the rear controller and screen.

NO : The RES SYS ACC wire is not shorted to ground. Go to step 12.

12. Open wire check (RES SYS ACC line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES SYS ACC

      Test point 1 Rear controller and screen 16P connector No. 8 (PNK)

      Test point 2 DVD player unit 24P connector No. 1 (PNK)

Fig. 49: Checking Continuity Between Rear Controller And Screen 16P Connector No. 8 (PNK) And DVD Player Unit 24P Connector No. 1 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RES SYS ACC wire is OK. Go to step 13.

NO : Repair an open in the wire between the DVD player unit and the rear controller and screen.

13. Shorted wire check (RES BUS+ line, RES BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES BUS+

      Test point 1 DVD player unit 24P connector No. 10 (RED)

      Test point 2 Body ground

      Test circuit RES BUS-

      Test point 1 DVD player unit 24P connector No. 23 (GRN)

      Test point 2 Body ground

Fig. 50: Checking Continuity Between DVD Player Unit 24P Connector No. 10 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The RES BUS+ and the RES BUS- wires are not shorted to ground. Go to step 14.

14. Shorted wire check (RES BUS+ line to RES BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES BUS+, RES BUS-

      Test point 1 DVD player unit 24P connector No. 10 (RED)

      Test point 2 DVD player unit 24P connector No. 23 (GRN)

Fig. 51: Checking Continuity Between DVD Player Unit 24P Connector No. 10 (RED) And DVD Player Unit 24P Connector No. 23 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The RES BUS+ and the RES BUS- wires are not shorted. Go to step 15.

15. Shorted wire check (SH RES BUS line to another lines):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit SH RES BUS, RES BUS+

      Test point 1 DVD player unit 24P connector No. 24 (GRY)

      Test point 2 DVD player unit 24P connector No. 10 (RED)

      Test circuit SH RES BUS, RES BUS-

      Test point 1 DVD player unit 24P connector No. 24 (GRY)

      Test point 2 DVD player unit 24P connector No. 23 (GRN)

Fig. 52: Checking Continuity Between DVD Player Unit 24P Connector No. 24 (GRY) And No. 10 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The SH RES BUS wire is OK. Go to step 16.

16. Open wire check (RES BUS+ line, RES BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit GA BUS+

      Test point 1 Rear controller and screen 16P connector No. 2 (RED)

      Test point 2 DVD player unit 24P connector No. 10 (RED)

      Test circuit GA BUS-

      Test point 1 Rear controller and screen 16P connector No. 10 (GRN)

      Test point 2 DVD player unit 24P connector No. 23 (GRN)

Fig. 53: Checking Continuity Between Rear Controller And Screen 16P Connector No. 10 (GRN) And DVD Player Unit 24P Connector No. 23 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RES BUS+ and the RES BUS- wires are OK. Go to step 17.

NO : There is an open in the wire(s) between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

17. DVD player unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD REAR CONTROLLER AND SCREEN, AND RECHECK**.

Does the symptom go away?

YES : Replace the original rear controller and screen.

NO : REPLACE THE DVD PLAYER UNIT .

WIRELESS HEADPHONE SOUND IS WEAK, SOUND IS DISTORTED, THERE IS STATIC, VOLUME DOES NOT CHANGE, OR THERE IS NO SOUND IN ALL MODES

Rear Entertainment System Symptom Troubleshooting - Wireless headphone sound is weak, sound is distorted, there is static, volume does not change, or there is no sound in all modes

Fig. 54: Rear Entertainment System Symptom Troubleshooting Flow Chart (Wireless Headphone Weak Sound)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the wireless headphone battery condition.**
- **Check the lens on the rear edge of the rear screen for dirt or damage.**
- **You may use known-good headphones from a factory installed or accessory RES, but it must be a similar vehicle.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Play a known-good disc to see if the symptom can be duplicated.

    Is the symptom duplicated?

    YES : The failure is duplicated, go to step 2.

    NO : Intermittent failure, the system is OK at this time.

2. Check the batteries in the wireless headphone:
    - 1. Replace the batteries in the wireless headphone.

    Does the symptom go away?

    YES : Weak or poor batteries. The headphones are OK.

    NO : Go to step 3.

3. Determine possible failure area (wireless headphone, others):
    - 1. Substitute a known-good wireless headphone, and recheck.

    Does the symptom go away?

    YES : Replace the original wireless headphone.

    NO : Go to step 4.

4. Shorted wire check (HP L SIG line, HP R SIG line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      DVD player unit 24P connector

      Rear controller and screen 16P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit HP L SIG

Test point 1 DVD player unit 24P connector No. 19 (BLK)

Test point 2 Body ground

Test circuit HP R SIG

Test point 1 DVD player unit 24P connector No. 18 (RED)

Test point 2 Body ground

Fig. 55: Checking Continuity Between DVD Player Unit 24P Connector No. 18 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The HP L SIG and the HP R SIG wires are not shorted to ground. Go to step 5.

5. Shorted wire check (SH HP LR line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Rear controller and screen 16P connector: disconnected

     Test circuit HP L SIG, SH HP LR

     Test point 1 DVD player unit 24P connector No. 19 (BLK)

     Test point 2 DVD player unit 24P connector No. 6 (GRY)

Test circuit HP R SIG, SH HP LR

Test point 1 DVD player unit 24P connector No. 18 (RED)

Test point 2 DVD player unit 24P connector No. 6 (GRY)

Fig. 56: Checking Continuity Between DVD Player Unit 24P Connector No. 18 (RED) And No. 6 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The SH HP LR wire is OK. Go to step 6.

6. Shorted wire check (HP RL GND line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Rear controller and screen 16P connector: disconnected

     Test circuit HP L SIG, HP RL GND

     Test point 1 DVD player unit 24P connector No. 19 (BLK)

     Test point 2 DVD player unit 24P connector No. 7 (WHT)

     Test circuit HP R SIG, HP RL GND

     Test point 1 DVD player unit 24P connector No. 18 (RED)

Test point 2 DVD player unit 24P connector No. 7 (WHT)

Fig. 57: Checking Continuity Between DVD Player Unit 24P Connector No. 18 (RED) And DVD Player Unit 24P Connector No. 7 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The HP RL GND wire is not shorted. Go to step 7.

7. Open wire check (HP lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Rear controller and screen 16P connector: disconnected

Test circuit	Test point 1: DVD player unit 24P connector	Test point 2: Rear controller and screen 16P connector
HP RL GND	No. 7 (WHT)	No. 5 (WHT)
HP R SIG	No. 18 (RED)	No. 14 (RED)
HP L SIG	No. 19 (BLK)	No. 13 (BLK)

Fig. 58: Checking Continuity Between DVD Player Unit 24P Connector And Rear Controller And Screen 16P Connector (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 59: Checking Continuity Between DVD Player Unit 24P Connector And Rear Controller And Screen 16P Connector (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The HP wires are OK. Go to step 8.

NO : There is an open in the wire(s) between the DVD player unit and the rear controller and screen. Replace the affected harness.

8. Rear controller and screen check:
   - 1. SUBSTITUTE A KNOWN-GOOD DVD PLAYER UNIT, AND RECHECK .

Does the symptom go away?

YES : Replace the original DVD player unit.

NO : **REPLACE THE REAR CONTROLLER AND SCREEN**.

WIRELESS REMOTE CONTROL DOES NOT WORK

Fig. 60: Rear Entertainment System Symptom Troubleshooting Flow Chart (Wireless Remote Control Not Working)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the lens on the rear edge of the rear screen for dirt or damage.**
- **The DVD player unit REAR PWR button must be ON, and the REAR CTRL OFF button must be OFF before the wireless remote control power button will operate.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the wireless remote control operation.

Does the wireless remote control operate normally?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2

2. Determine possible failure area (wireless control, others):
    - 1. **Do the RES self-diagnostic function with the DVD player unit** See **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** or **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** .

Does the self-diagnosis start?

YES : Go to step 3.

NO : Go to **RES POWER WILL NOT TURN ON (NO INFORMATION DISPLAY) TROUBLESHOOTING**.

3. Wireless remote control check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **Do the RES self-diagnostic function with the wireless remote control** See **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** or **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** .

Does the self-diagnosis start?

YES : **REPLACE THE REAR CONTROLLER AND SCREEN**.

NO : Go to step.4

4. Wireless remote control battery check:
    - 1. Replace the wireless remote control batteries.
    - 2. **Do the RES self-diagnostic function with the wireless remote control** See **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** or **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** .

Does the self-diagnosis start?

YES : The remote control is OK.

NO : Choose appropiate troubleshooting **Rear Controller and Screen Removal and Installation**

SUSPENSION

Rear Suspension System - CR-V

REAR DAMPER/SPRING DISASSEMBLY, REASSEMBLY, AND INSPECTION

EXPLODED VIEW

1. Rear Damper/Spring Exploded View

Exploded View

Fig. 1: Exploded View Of Rear Damper/Spring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DISASSEMBLY

NOTE:

- **When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.**
- **Refer to the Exploded View as needed during the following procedure.**

1. Rear Damper
    1. Remove the rubber type damper hook (A) (if equipped).

    NOTE: **If a metal type damper hook is installed, discard it. The metal type damper hook is for factory assembly only.**

Fig. 2: Identifying Rubber Type Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Compress the damper spring.

    NOTE: **Do not compress the spring more than necessary to remove the nut.**

    3. Remove the self-locking nut (A) while holding the damper shaft with a hex wrench (B).
    4. Release the pressure from the strut spring compressor.
    5. Disassemble the damper as shown in the Exploded View.

Fig. 3: Compressing Damper Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Rear Damper - Inspection
    1. Reassemble all the parts, except the spring mounting cushion, the dust cover, the bump stop, and the damper spring.
    2. Compress the damper assembly by hand, and check for smooth operation through a full stroke, both compression and extension. The damper should extend smoothly and constantly when compression is released. If it does not, the gas is leaking and the damper should be replaced.
    3. Check for oil leaks, abnormal noises, or binding during these tests.

Fig. 4: Checking For Oil Leaks, Abnormal Noises And Binding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

NOTE:

- **When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.**
- **Refer to the Exploded View as needed during the following procedure.**

1. Rear Damper
    1. Install all the parts except the self-locking nut and the cap onto the damper unit (A) by referring to the **EXPLODED VIEW**.
    2. Compress the damper spring.

        NOTE: Do not compress the spring excessively.

    3. Align the bottom of the damper spring (B) with the stepped part (C) of the lower spring seat.

Fig. 5: Compressing Damper Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Align the angle of the stud (A) on the damper mounting base (B) with the bolt hole (C) on the bottom of the damper unit as shown.

Fig. 6: Aligning Angle Of Stud On Damper Mounting Base With Bolt Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the damper mounting washer (A).
6. Install the new self-locking nut (B).

7. Hold the damper shaft using a hex wrench (C), and tighten the self-locking nut.
8. Remove the damper/spring from the strut spring compressor.

Fig. 7: Removing Damper/Spring From Strut Spring Compressor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the rubber type damper hook (A) (if equipped).

Fig. 8: Identifying Rubber Type Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DAMPER/SPRING REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Rear Wheel
    1. Remove the rear wheel.

Fig. 9: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 10: Identifying Trailing Arm And Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.

2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 11: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Damper Upper Side
    1. Remove the flange nuts (A) from the top of damper.

Fig. 12: Identifying Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Stabilizer Link Trailing Arm Side - Disconnection
    1. Remove the flange nut (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect the stabilizer link (D) from the trailing arm.

Fig. 13: Disconnecting Stabilizer Link From Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Brake Hose - Disconnection
    1. Remove the brake hose (A) from the brake hose mounting bracket (B).

Fig. 14: Identifying Brake Hose And Brake Hose Mounting Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Trailing Arm Front Side - Disconnection
    1. Remove the flange bolt (A), then remove the parking brake cable (B).
    2. Remove the trailing arm mounting bolts (C).

Fig. 15: Identifying Flange Bolt, Parking Brake Cable And Trailing Arm Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Damper Lower Side - Disconnection
    1. Remove the damper mounting bolt (A).

NOTE: Install the damper mounting bolt to the same direction as removal.

Fig. 16: Identifying Damper Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Damper/Spring
    1. Lower the rear suspension, then remove the damper/spring (A) from the vehicle.

NOTE: Be careful not to damage the body.

Fig. 17: Removing Damper/Spring From Vehicle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Damper/Spring
    1. Position the damper/spring (A) between the body and the trailing arm.

NOTE: Be careful not to damage the body.

    2. Note the direction of the stepped part (B) of the lower spring seat on it is toward the inside of the vehicle.

Fig. 18: Positioning Damper/Spring Between Body And Trailing Arm

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 19: Identifying Trailing Arm And Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Lower Side - Reconnection
    1. Loosely install the new damper mounting bolt (A).

NOTE: Install the damper mounting bolt to the same direction as removal.

Fig. 20: Identifying Damper Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Trailing Arm Front Side - Reconnection
    1. Loosely install new trailing arm mounting bolts (A).
    2. Install the parking brake cable (B).

Fig. 21: Identifying Parking Brake Cable And Trailing Arm Mounting Bolts With Torque

Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Hose - Reconnection
    1. Install the parking brake cable mounting bolt (A).

Fig. 22: Identifying Parking Brake Cable Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Stabilizer Link Trailing Arm Side - Reconnection
    1. Connect the stabilizer link (A) to the trailing arm.
    2. Install the new flange nut (B), and tighten them to the specified torque while holding the respective joint pin (C) with a hex wrench (D).

Fig. 23: Connecting Stabilizer Link To Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Damper Upper Side
    1. Loosely install new flange nuts (A) to the top of the damper.

Fig. 24: Identifying Rear Damper Flange Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Damper Lower Side - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with the jack until the vehicle just lifts off of the safety stands.
    2. Tighten the damper mounting bolt and the flange nuts to the specified torque.
9. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 25: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 26: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
12. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

       Camber angle:

       2WD:

       Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

13. Rear Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Release the parking brake to avoid an incorrect measurement.
2. Check the toe.

Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

- If adjustment is required, go to the rear toe adjustment.
- If no adjustment is required, go to front toe inspection.

14. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 27: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

16. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

REAR HUB BEARING UNIT REPLACEMENT

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 28: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 29: Identifying Stake And Spindle Nut With Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).

2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 30: Identifying Brake Hose Mounting Bolt And Caliper Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Disc
   1. Remove the brake disc/drum flathead screws (A).
   2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 31: Removing Brake Disc/Drum Flathead Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Hub Bearing Unit
    1. 2WD: Remove the hub bearing unit (A).

NOTE: **Keep the wheel bearing/encoder away from any magnetic field. Encoder can be damaged or erased.**

2WD

Fig. 32: Identifying Hub Bearing Unit And Driveshaft End (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 33: Identifying Hub Bearing Unit And Driveshaft End (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. AWD/4WD: Remove the hub bearing unit (A) by tapping the driveshaft end (B) with a soft face hammer while drawing the hub bearing unit outward.

NOTE: Keep the wheel bearing/encoder away from any magnetic field. Encoder can be damaged or erased.

INSTALLATION

1. Rear Hub Bearing Unit
    1. Install the hub bearing unit (A).

NOTE: Keep the wheel bearing/encoder away from any magnetic field. Encoder can be damaged or erased.

2WD

Fig. 34: Identifying Rear Hub Bearing Unit And Bolts With Torque Specifications (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 35: Identifying Rear Hub Bearing Unit And Bolts With Torque Specifications (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 36: Identifying Rear Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 37: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Driveshaft Spindle Nut
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 38: Identifying Spindle Nut And Spindle Nut Shoulder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 39: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR KNUCKLE REMOVAL AND INSTALLATION

EXPLODED VIEW

1. Rear Knuckle/Hub Bearing Unit Exploded View

Exploded View

Fig. 40: Exploded View Of Rear Knuckle/Hub Bearing With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 41: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 42: Identifying Stake And Spindle Nut With Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable**

excessively.

Fig. 43: Identifying Brake Hose Mounting Bolt And Caliper Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 44: Removing Brake Disc/Drum Flathead Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Hub Bearing Unit
    1. 2WD: Remove the hub bearing unit (A).

NOTE: **Keep the wheel bearing/encoder away from any magnetic field. Encoder can be damaged or erased.**

2WD

Fig. 45: Identifying Rear Hub Bearing Unit (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. AWD/4WD: Remove the hub bearing unit (A) by tapping the driveshaft end (B) with a soft face hammer while drawing the hub bearing unit outward.

NOTE: **Keep the wheel bearing/encoder away from any magnetic field. Encoder can be damaged or erased.**

AWD/4WD

Fig. 46: Identifying Rear Hub Bearing Unit (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Parking Brake Assembly
    1. Remove the parking brake assembly (A).

NOTE: **To prevent damage to the backing plate or parking brake shoes assembly and cable, use a short piece of wire to hang the backing plate from the undercarriage. Do not twist the parking brake cable excessively.**

Fig. 47: Identifying Rear Parking Brake Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Wheel Speed Sensor

1. Remove the wheel speed sensor (A).

NOTE: Do not disconnect the wheel speed sensor connector.

Fig. 48: Identifying Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Trailing Arm - Jack Support
    1. Place a floor jack under the trailing arm to support it.

NOTE: Do not place the jack against the plate section of the lower arm. Be careful not to damage any suspension components.

10. Rear Upper Arm Knuckle Side - Disconnection
    1. Remove the flange bolt (A).
    2. Disconnect the upper arm (B) from the knuckle (C).

Fig. 49: Identifying Upper Arm, Knuckle And Flange Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Trailing Arm Knuckle Side - Disconnection
    1. Mark the cam positions of the adjusting bolt (A) with the frame.
    2. Mark the cam positions of the adjusting cam plate (B) with the frame.
    3. Remove the self-locking nut (C), the adjusting cam plate, and the adjusting bolt.
    4. Remove the flange bolt (D).
    5. Disconnect the knuckle from the trailing arm (E).

Fig. 50: Identifying Adjusting Bolt, Adjusting Cam Plate, Self-Locking Nut, Flange Bolt, Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Brake Hose Mounting Bracket
    1. Remove the brake hose mounting bracket (A).

Fig. 51: Identifying Brake Hose Mounting Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Brake Hose Mounting Bracket
    1. the brake hose mounting bracket (A).

Fig. 52: Identifying Brake Hose Mounting Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Trailing Arm Knuckle Side - Reconnection
    1. Connect the knuckle to the trailing arm.
    2. Loosely install the new flange bolt (A).
    3. Loosely install the new self-locking nut (B), the adjusting cam plate (C), and the new adjusting bolt (D).

NOTE: **Align the cam positions of the adjusting bolt and the adjusting cam plate with the marked positions when tightening the self-locking nut.**

Fig. 53: Identifying Self-Locking Nut, Adjusting Cam Plate And Adjusting Bolt With Torque

Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Upper Arm Knuckle Side - Reconnection
    1. Connect the upper arm (A) to the knuckle (B).
    2. Loosely install the new flange bolt (C).

Fig. 54: Identifying Upper Arm, Knuckle And Flange Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Suspension All Mounting - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with a floor jack to load the vehicle weight.
    2. Tighten all mounting hardware to the specified torque.
5. Rear Wheel Speed Sensor
    1. the wheel speed sensor (A).

NOTE: Do not disconnect the wheel speed sensor connector.

Fig. 55: Identifying Rear Wheel Speed Sensor And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Parking Brake Assembly
    1. Install the parking brake assembly (A).

Fig. 56: Identifying Rear Parking Brake Assembly With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Hub Bearing Unit
    1. Install the hub bearing unit (A).

NOTE: **Keep the wheel bearing/encoder away from any magnetic field. Encoder can be damaged or erased.**

2WD

Fig. 57: Identifying Rear Hub Bearing Unit (2WD)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 58: Identifying Rear Hub Bearing Unit (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 59: Identifying Rear Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 60: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Driveshaft Spindle Nut
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 61: Identifying Spindle Nut And Spindle Nut Shoulder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 62: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
13. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

14. Rear Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment

(caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Release the parking brake to avoid an incorrect measurement.
2. Check the toe.

   Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

   - If adjustment is required, go to the rear toe adjustment.
   - If no adjustment is required, go to front toe inspection.

15. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 63: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

17. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: **See the HDS Help menu for specific instructions.**

REAR STABILIZER BAR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 64: Identifying Rear Wheels
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Stabilizer Link Stabilizer Bar Side - Disconnection
    1. Remove the self-locking nut (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect stabilizer link (D) from the stabilizer bar (E).

Fig. 65: Removing Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Stabilizer Bar

Dual pump system

1. Remove the bushing holders (A).
2. Remove the bushings (B).
3. Remove the stabilizer bar (C).

Fig. 66: Identifying Stabilizer Bar, Bushing Holders, Bushings With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Real time AWD system

1. Remove the harness clip (A) from the bushing holders (B).
2. Remove the bushings (C).
3. Remove the stabilizer bar (D).

Fig. 67: Identifying Harness Clip, Bushing Holders, Bushings And Stabilizer Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Stabilizer Bar

   Dual pump system

   1. Install the stabilizer bar (A).
   2. Install the bushing (B).

      NOTE:

      - **Note the direction of installation for the bushing.**
      - **Align the paint mark (C) on the stabilizer bar with the side of the bushing.**

   3. Install the bushing holder (D).

Fig. 68: Identifying Stabilizer Bar, Bushing Holders, Bushings With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Real time AWD system

1. Install the stabilizer bar (A).
2. Install the bushing (B).

NOTE:

- **Note the direction of installation for the bushing.**
- **Align the paint mark (C) on the stabilizer bar with the side of the bushing.**

3. Install the bushing holder (D).
4. Install the harness clip (E) to the bushing holder.

Fig. 69: Identifying Harness Clip, Bushing Holders, Bushing Holder, Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Stabilizer Link Stabilizer Bar Side - Reconnection
    1. Connect both stabilizer link (A) to the stabilizer bar (B).
    2. Install the new self-locking nut (C) while holding the respective joint pin (D) with a hex wrench (E).

Fig. 70: Installing Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: Before installing the wheel, clean the mating surfaces between the

brake disc/drum and the inside of the wheel.

Fig. 71: Identifying Rear Wheels
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Test Drive
    1. Test-drive the vehicle.
5. Rear Stabilizer Link - Tighten
    1. After 5 minutes of driving, torque the self-locking nut again to the specified torque.

REAR STABILIZER LINK REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 72: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Stabilizer Link
    1. Remove the self-locking nut (A) and the flange nut (B) while holding the respective joint pin (C) with a hex wrench (D).
    2. Remove the stabilizer link (E).

Fig. 73: Identifying Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Stabilizer Link
    1. Install the stabilizer link (A).

        NOTE: The stabilizer link has a paint mark (B). Align the paint mark on the stabilizer link facing rearward.

    2. Install the new self-locking nut (C) and the new flange nut (D), and tighten them to the specified

torque while holding the respective joint pin (E) with a hex wrench (F).

Fig. 74: Installing Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 75: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test Drive
    1. Test-drive the vehicle.

4. Rear Stabilizer Link - Tighten
    1. After 5 minutes of driving, torque the self-locking nut again to the specified torque.

REAR STRAKE REMOVAL AND INSTALLATION

REMOVAL

1. Rear Strake
    1. Remove the screws (A, B).

Fig. 76: Identifying Rear Strake Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the clip (A), then remove the rear strake (B).

Fig. 77: Identifying Rear Strake With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Strake
    1. Install the rear strake (A), then install the clip (B).

Fig. 78: Identifying Rear Strake With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the screws (A, B).

Fig. 79: Identifying Rear Strake With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR TRAILING ARM REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 80: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 81: Identifying Trailing Arm And Knuckle

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Damper Lower Side - Disconnection
    1. Remove the damper mounting bolt (A).

NOTE: Install the damper mounting bolt to the same direction as removal.

Fig. 82: Identifying Damper Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Trailing Arm Knuckle Side - Disconnection
    1. Mark the cam positions of the adjusting bolt (A) with the frame.
    2. Mark the cam positions of the adjusting cam plate (B) with the frame.
    3. Remove the self-locking nut (C), the adjusting cam plate, and the adjusting bolt.
    4. Remove the flange bolt (D).
    5. Disconnect the knuckle from the trailing arm (E).

Fig. 83: Identifying Adjusting Bolt, Adjusting Cam Plate, Trailing Arm And Flange Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Stabilizer Link Trailing Arm Side - Disconnection
    1. Remove the flange nut (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect the stabilizer link (D) from the trailing arm.

Fig. 84: Removing Flange Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Trailing Arm
    1. Remove the trailing arm front mounting bolts (A).

Fig. 85: Identifying Trailing Arm Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the trailing arm rear mounting bolt (A).
3. Lower the jack, and remove the trailing arm (B).

Fig. 86: Identifying Trailing Arm Rear Mounting Bolt And Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Trailing Arm
    1. Install the trailing arm (A).
    2. Loosely install the new trailing arm rear mounting bolt (B).

Fig. 87: Identifying Trailing Arm Rear Mounting Bolt And Trailing Arm With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosely install the new trailing arm front mounting bolt (A).

Fig. 88: Identifying Trailing Arm Front Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Stabilizer Link Trailing Arm Side - Reconnection
    1. Connect the stabilizer link (A) to the trailing arm.
    2. Install the new flange nut (B), and tighten them to the specified torque while holding the respective joint pin (C) with a hex wrench (D).

Fig. 89: Tightening Flange Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Trailing Arm Knuckle Side - Reconnection
    1. Connect the knuckle to the trailing arm.
    2. Loosely install the new flange bolt (A).
    3. Loosely install the new self-locking nut (B), the adjusting cam plate (C), and the new adjusting bolt (D).

NOTE: **Align the cam positions of the adjusting bolt and the adjusting cam plate with the marked positions when tightening the self-locking nut.**

Fig. 90: Identifying Self-Locking Nut, Adjusting Cam Plate And Adjusting Bolt With Torque

Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Damper Lower Side - Reconnection
    1. Loosely install the new damper mounting bolt (A).

NOTE: **Install the damper mounting bolt to the same direction as removal.**

Fig. 91: Identifying Damper Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Suspension All Mounting - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with a floor jack to load the vehicle weight.
    2. Tighten all mounting hardware to the specified torque.
6. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 92: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
8. Camber - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Check the camber angle.

      Camber angle:

      2WD:

      Front:

      With 16 inch wheel: -0 ° 01 '±1 ° 00 '

      Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

9. Rear Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Release the parking brake to avoid an incorrect measurement.
   2. Check the toe.

      Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

      - If adjustment is required, go to the rear toe adjustment.
      - If no adjustment is required, go to front toe inspection.

10. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 93: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

12. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

13. Test Drive
    1. Test-drive the vehicle.
14. Rear Stabilizer Link - Tighten
    1. After 5 minutes of driving, torque the self-locking nut again to the specified torque.

REAR UPPER ARM REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 94: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 95: Identifying Trailing Arm And Knuckle

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Upper Arm
    1. Remove the wheel speed sensor harness bracket (A).

Fig. 96: Identifying Wheel Speed Sensor Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the flange bolts (A), and remove the upper arm (B).

Fig. 97: Identifying Flange Bolts And Upper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Upper Arm
    1. Install the upper arm (A).

Fig. 98: Identifying Rear Upper Arm And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the wheel speed sensor harness bracket (A).

Fig. 99: Identifying Wheel Speed Sensor Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Suspension All Mounting - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with a floor jack to load the vehicle weight.
    2. Tighten all mounting hardware to the specified torque.
3. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 100: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
5. Camber - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Check the camber angle.

      Camber angle:

      2WD:

      Front:

      With 16 inch wheel: -0 ° 01 '±1 ° 00 '

      Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

6. Rear Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Release the parking brake to avoid an incorrect measurement.
   2. Check the toe.

      Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

      - If adjustment is required, go to the rear toe adjustment.
      - If no adjustment is required, go to front toe inspection.

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 101: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

9. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

REAR WHEEL BOLT REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

	Ball Joint Remover, 28 mm 07MAC-SL00202

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 102: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 103: Identifying Brake Hose Mounting Bolt And Caliper Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 104: Removing Brake Disc/Drum Flathead Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Wheel Bolt

NOTE:

- **Do not use a hammer or impact tools (pneumatic or electric).**
- **Be careful not to damage the threads of the wheel bolts.**

1. Separate the wheel bolt (A) from the hub (B).

NOTE: **If the angle of the remover against the wheel bolt is not vertical, readjust the ball joint remover by turning the head (C) of the adjusting bolt (D).**

Fig. 105: Separating Wheel Bolt From Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Wheel Bolt

NOTE:

- **Do not use a hammer or impact tools (pneumatic or electric).**
- **Be careful not to damage the threads of the wheel bolts.**

1. Insert the new wheel bolt (A) into the hub (B).

NOTE:

Fig. 106: Installing Rear Wheel Bolt To Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- **Before installing the new wheel bolt, clean the mating surfaces on the bolt and the hub.**
- **Degrease the area around the wheel bolt and the threaded section of the nut.**

2. Adjust the measurement (C) with the washers (P/N 94101-12800 or equivalent) (D).
3. Install a nut (P/N 90304-SC2-000 or equivalent) (E) hand-tight.

NOTE:

- **Make sure the wheel bolt is installed vertically to the hub disc surface.**
- **Do not install the nut and the washers that have been used as tools on a vehicle.**

4. Tighten the nut.

NOTE:

- **Do not exceed the maximum torque limit.**
- **Make sure there is no gap (F) between the bolt and the hub.**

Limited torque: 108 N.m (11.0 kgf.m, 80 lbf.ft) max .

NOTE: **If you cannot tighten the wheel nut to the specified torque when installing the wheel, replace the rear hub bearing unit as an assembly.**

2. Rear Brake Disc
   1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 107: Identifying Rear Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper - Reattach

1. Install the caliper assembly (A).
2. Install the brake hose mounting bolt (B).

Fig. 108: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 109: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ACCESSORIES & EQUIPMENT

Rear Window Defogger - CR-V

REAR WINDOW DEFOGGER COMPONENT LOCATION INDEX

Fig. 1: Rear Window Defogger Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW DEFOGGER	**DEFOGGER WIRE REPAIR**
	FUNCTION TEST
REAR WINDOW DEFOGGER RELAY (4P)	**TEST**

REAR WINDOW DEFOGGER WIRE REPAIR

RECONDITIONING

1. Defogger Wire - Repair

NOTE: **To make an effective repair, the broken section must be no longer than 25 mm (1.0 in).**

1. Lightly rub the area around the broken section (A) with fine steel wool, then clean it with isopropyl alcohol.
2. Carefully mask above and below the broken area of the rear window defogger wire (B) with cellophane tape (C).

Fig. 2: Identifying Defogger Wire Broken Section And Cellophane Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a small brush, apply a heavy coat of silver conductive paint (commercially available) (A) extending about 3.0 mm (0.12 in) on both sides of the break. Allow 25 minutes to dry.
4. Do the function test to confirm that the wire is repaired.
5. Apply a second coat of paint in the same way. Let it dry 3 hours before removing the tape.

Fig. 3: Applying Heavy Coat Of Silver Conductive Paint Using Small Brush
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW DEFOGGER FUNCTION TEST

NOTE:

- **Before testing, make sure the No. A2-6 (30 A) fuse in the under-hood fuse/relay box, and the No. B22 (7.5 A) fuse in the under-dash fuse/relay**

box are OK.

- **Aftermarket window tinting should be removed before testing.**
- **With the defogger ON, holding a cup of hot water to the rear window will form steam that can assist in diagnosing a broken or under-performing grid line or section.**
- **Be careful not to scratch or damage the defogger wires with the tester probe. To avoid damaging the defogger grid, wrap a single strand of bare copper wire or aluminum foil around the voltmeter probe. Use the foil or wire as a contact brush when moving across the defogger grid.**

Fig. 4: Testing Rear Window Defogger Function Using Tester Probe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Turn the ignition switch to ON (II), then turn the rear window defogger switch ON.
2. Measure the voltage between the rear window defogger A (1P) positive terminal and body ground. There should be battery voltage.
   - If there is no voltage, check for:
     - Faulty rear window defogger relay.
     - Faulty climate control unit or HVAC control unit.
     - An open or high resistance in the GRN wire to the positive terminal.
   - If there is battery voltage, go to step 3.

Fig. 5: Identifying Rear Window Defogger Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the voltage between the rear window defogger B (1P) negative terminal and body ground. There should be less than 0.2 V.

   If there is more than 0.2 V, check for an open in the ground (BLK) wire or poor ground (G603). If there is 0.2 V or less, go to step 4.

4. Touch the voltmeter positive probe along each defogger wire, and the negative probe to the negative terminal.
   - If the voltage is as specified, the defogger wire up to that point is OK.
   - If the voltage is not as specified, repair the defogger wire.
     - If voltage is more than specified at one of the points, there is a break or high resistance toward the negative half of the wire.
     - If voltage is less than specified at one of the points, there is a break or high resistance toward the positive half of the wire.

REARVIEW CAMERA CONNECTOR FOR INPUTS AND OUTPUTS

REARVIEW CAMERA CONNECTOR FOR INPUTS AND OUTPUTS (12P CONNECTOR TYPE)

REARVIEW CAMERA REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 5: Identifying Upper Trim Panel Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 6: Identifying Tailgate Side Trim Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
   1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 7: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 8: Identifying Tailgate Lower Trim Panel Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear License Trim
    1. Remove the bolts (A).

Fig. 9: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the lower edge of the rear license trim (B) with a utility knife while separating the trim from the tailgate (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 10: Applying Protective Tape Upon Cutting Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the rear license trim (A) with the appropriate trim tool to release the clip pins (B) of the clips (C) from the clip grommets (D) on the tailgate, and detach the clips (E), then remove the rear license trim from the tailgate.

NOTE: **The clip grommets will stay on the tailgate.**

Fig. 11: Identifying Rear License Trim Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clip grommets (A) from the tailgate.
5. Install the clip grommets into the clip pins on the rear license trim.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

Fig. 12: Identifying Tailgate Clip Grommets

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rearview Camera
    1. Disconnect the connector, then push the tab (A).

Fig. 13: Identifying Rearview Camera Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the rearview camera (A).

Fig. 14: Removing Rearview Camera
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rearview Camera
    1. Install the rearview camera (A).

Fig. 15: Installing Rearview Camera
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connector.

Fig. 16: Identifying Rearview Camera Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear License Trim
    1. If you are reusing the original rear license trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 3 mm (0.12 in)

       Width 4 mm (0.16 in)

Length 255 mm (10.04 in)

Adhesive tape (C): Thickness 2 mm (0.08 in)

Width 5 mm (0.20 in)

Length 177 mm (6.97 in)

Fig. 17: Identifying Rear License Trim With Adhesive Tapes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
3. Hold up the rear license trim (A), and fit the clips (B, C) into the holes in the tailgate. Push on the trim until the clips snap into place securely.

Fig. 18: Identifying Rear License Trim Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 19: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 20: Identifying Rear License Trim Fastener And Clip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 21: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 22: Identifying Tailgate Side Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 23: Identifying Tailgate Upper Trim Panel With Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT BELT BUCKLE REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 1: Pulling Front Seat Belt Lower Anchor Bolt Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 2: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 3: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 4: Pulling Out Head Restraint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Assembly
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

<u>Fig. 5: Removing Rear Inner And Outer Seat Track End Cover</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the seat mounting bolts (A) from the front side of the front seat.

Fig. 6: Identifying Front Seat Mounting Bolts (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the seat mounting bolts (A) from the rear side of the front seat.

Fig. 7: Identifying Front Seat Mounting Bolts (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Driver's Seat

Fig. 8: Identifying Driver Seat Connectors And Harness Clip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Belt Buckle
    1. Assemble the washers and the collar on the anchor bolt as shown.

NOTE:

- **Apply medium strength liquid thread lock to the anchor bolt before reinstallation.**
- **Tighten the bolts by hand first, then tighten to the specified torque.**

Fig. 17: Identifying Washers And Collar On Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the seat belt buckle (A), then install the bolt.
3. Install the harness clip(s) (B).

Driver's seat

Fig. 18: Identifying Driver Front Seat Belt Buckle And Harness Clip With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat - Except KX

Fig. 19: Identifying Passenger Front Seat Belt Buckle And Harness Clip With Torque Specifications (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat - KX

Fig. 20: Identifying Passenger Front Seat Belt Buckle And Harness Clip With Torque Specifications (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the connector clip (A) and the harness clip(s) (B).
5. Passenger's seat - Except KX: Install the harness holder (C) to the seat cushion frame spring (D).

Driver's seat

Fig. 21: Identifying Driver Seat Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat - Except KX

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat - KX

Fig. 23: Identifying Passenger Seat Connector And Harness Clip (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Assembly
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Driver's Seat

Fig. 24: Identifying Front Seat Assembly Connector And Harness Clip (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's Seat (Without Subwoofer)

Fig. 25: Identifying Passenger Seat Assembly Connector And Harness Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's Seat (With Subwoofer)

Fig. 26: Identifying Passenger Seat Assembly Connector And Harness Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts.

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts (A) to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 27: Identifying Seat Mounting Bolts With Torque Specification (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 28: Identifying Seat Mounting Bolts With Torque Specification (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

NOTE: Repeat this procedure on the opposite side.

Fig. 29: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 30: Inserting Head Restraint To Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 31: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 32: Installing Lower Anchor Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 33: Installing Anchor Cover, Hooks And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT BELT REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 34: Removing Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 35: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 36: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 37: Identifying Front Door Sill Trim And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.

2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

<u>Fig. 38: Identifying Rear Door Sill Trim And Fasteners</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front/Rear Door Opening Seals As Needed
    1. Pull out the door opening seals (A) from the trim hooks (B) around the door opening flange as needed.

Front

Fig. 39: Identifying Front Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 40: Identifying Rear Door Opening Seals And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. B-Pillar Lower Trim
    1. Slide the front seat forward fully.
    2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
    3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 41: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Belt Upper Anchor Bolt
    1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt (B).

Fig. 42: Identifying Front Seat Belt Adjuster Cap And Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. B-Pillar Upper Trim

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 43: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Belt Assembly
    1. Disconnect the connector (A).
    2. Remove the retractor mounting bolt (B) and the retractor bolt (C), then remove the front seat belt assembly (D).

Fig. 44: Identifying Front Seat Belt Assembly, Retractor Mounting Bolt And Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Belt Assembly
    1. Install the front seat belt assembly (A), then install the retractor mounting bolt (B) and the retractor bolt (C),
    2. Connect the connector (D).

Fig. 45: Identifying Front Seat Belt Assembly, Retractor Mounting Bolt And Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. B-Pillar Upper Trim
    1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 46: Installing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Belt Upper Anchor Bolt
    1. Assemble the washer, the collar, and the bushing on the upper anchor bolt as shown.

NOTE: **Apply medium strength liquid thread lock to the upper anchor bolt before installation.**

Fig. 47: Identifying Front Seat Belt Adjuster Cap And Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the front seat belt upper anchor bolt (A), then install the front seat belt shoulder anchor adjuster cap (B).

Fig. 48: Identifying Front Seat Belt Upper Anchor Bolt And Adjuster Cap With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. B-Pillar Lower Trim
    1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 49: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front/Rear Door Opening Seals As Needed
    1. Install the door opening seals (A). Make sure the seal is installed securely into the hooks (B).

    Front

Fig. 50: Identifying Front Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 51: Identifying Rear Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 52: Identifying Rear Door Sill Trim And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Door Sill Trim
    1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 53: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 54: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 55: Installing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 56: Installing Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT BELT BUCKLE REMOVAL AND INSTALLATION

REMOVAL

1. Rear Seat Belt Buckle
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Remove the bolt (A), then remove the rear seat belt buckles (B) and the detachable anchor (C).

    Left side

Fig. 57: Identifying Rear Seat Belt Buckles, Detachable Anchor And Bolt (Left Side) With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 58: Identifying Rear Seat Belt Buckles, Detachable Anchor And Bolt (Right Side) With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat Belt Buckle
    1. Install the rear seat belt buckles (A) and the detachable anchor (B), then install the bolt (C).

NOTE:

- **Apply medium strength liquid thread lock to the anchor bolts before installation.**
- **Tighten the bolts by hand first, then tighten to the specified torque.**

Left side

Fig. 59: Identifying Rear Seat Belt Buckles, Detachable Anchor And Bolt (Left Side) With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 60: Identifying Rear Seat Belt Buckles, Detachable Anchor And Bolt (Right Side) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT BELT REMOVAL AND INSTALLATION

REMOVAL

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 61: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 62: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the

trim.

Fig. 63: Identifying Rear Door Sill Trim And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Opening Seal As Needed
    1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

Fig. 64: Identifying Rear Door Opening Seal With Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Seat Foot Cover

1. Pull up the rear seat foot cover (A) by hand to detach the clips (B).
2. Detach the hooks (C), then remove the rear seat foot cover.

Left Side

Fig. 65: Identifying Rear Seat Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 66: Identifying Rear Seat Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 67: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Carpet Trim
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

Left side

Fig. 68: Removing Rear Carpet Trim (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 69: Removing Rear Carpet Trim (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trim (C) by hand to detach the clips (D), then remove the rear carpet trims.

Left side

Fig. 70: Identifying Rear Carpet Trim, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 71: Identifying Rear Carpet Trim, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 72: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 73: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Side Trim Panel
    1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.

2. Remove the screws (C).

Fig. 74: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 75: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 76: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 77: Identifying Quarter Pillar Trim, Rear Side Trim Panel, Hooks And Tabs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 78: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 79: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat Belt Lower Anchor Bolt
    1. Remove the rear seat belt lower anchor bolt (A).

Fig. 80: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Quarter Pillar Trim
    1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
    2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

Fig. 81: Identifying Quarter Pillar Trim And Rear Seat Belt Lower Anchor With Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Seat Belt Assembly
    1. Remove the bolt securing the rear seat belt upper anchor (A).

Fig. 82: Identifying Rear Seat Belt Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the retractor mounting bolt (A) and the retractor bolt (B), then remove the rear seat belt assembly (C).
    3. If necessary, remove the retractor protector (D).

Fig. 83: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat Belt Assembly
    1. Install the retractor protector (A).
    2. Install the rear seat belt assembly (B), then install the retractor mounting bolt (C) and the retractor bolt (D),

Fig. 84: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Protector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Assemble the washer, the collar, and the bushing on the upper anchor bolt as shown.

NOTE: **Apply medium strength liquid thread lock to the upper anchor bolt before installation.**

Fig. 85: Identifying Washer, Collar, Bushing And Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear seat belt upper anchor bolt (A).

Fig. 86: Identifying Rear Seat Belt Upper Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Quarter Pillar Trim
   1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 87: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
   3. Fit the clips into the holes in the quarter pillar.
   4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips**

or the ribs.

- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 88: Identifying Rear Seat Belt Lower Anchor And Quarter Pillar Trim With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Belt Lower Anchor Bolt
    1. Install the rear seat belt lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 89: Identifying Rear Seat Belt Lower Anchor Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Side Trim Panel
    1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 90: Identifying Rear Side Trim Panel, Rear Seat Release Cable, Clip And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 91: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 92: Identifying Rear Side Trim Panel, Hooks And Tabs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 93: Identifying Tie-Down Hook And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 94: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 95: Identifying Rear Seat Release Lever Cap, Hook And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 96: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 97: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Carpet Trim
    1. Install the rear carpet trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

Fig. 98: Identifying Rear Carpet Trim With Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 99: Identifying Rear Carpet Trim With Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 100: Identifying Rear Seat Release Lever Cap, Hook And Screws (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 101: Identifying Rear Seat Release Lever Cap, Hook And Screws (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 102: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Seat Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left Side

Fig. 103: Identifying Rear Seat Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 104: Identifying Rear Seat Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Door Opening Seal As Needed
    1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 105: Identifying Rear Door Opening Seal With Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.

2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 106: Installing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 107: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 108: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT BELT REMOVAL AND INSTALLATION - CENTER

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 109: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 110: Pulling Up Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 111: Identifying Front Door Opening Seal, Trim Hooks And Front Door Opening Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 112: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 113: Putting Shop Towel Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 114: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 115: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 116: Identifying Rear Door Sill Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 117: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 118: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt.

Fig. 119: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 120: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 121: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 122: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 123: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 124: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Damper Maintenance Cover - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Fold down the rear seat-back.
2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 125: Identifying Rear Damper Maintenance Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Carpet Trim - Both Sides
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

Left side

Fig. 126: Removing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 127: Removing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trims (C) by hand to detach the clips (D), then remove the rear carpet trims.

Left side

Fig. 128: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 129: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)
    1. Pull up the rear seat cushion foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat cushion foot cover.

Left side

Fig. 130: Identifying Rear Seat Cushion Foot Cover, Clip And Hook (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 131: Identifying Rear Seat Cushion Foot Cover, Clip And Hook (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the rear seat belt lower anchor bolt (A).

Fig. 132: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.
2. Remove the screws (C).

Fig. 133: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 134: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 135: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 136: Identifying Rear Seat Release Lever And Rear Side Trim Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 137: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 138: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Quarter Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

Fig. 139: Identifying Quarter Pillar Trim And Rear Seat Belt Lower Anchor With Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

Fig. 140: Identifying Lenses, Screws, Connectors And Roof Console Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Ceiling Light (without RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the ceiling light (B).
    5. Disconnect the connector.

Fig. 141: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Display Cover (With RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

Fig. 142: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear display cover (A).

Fig. 143: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Rear Controller and Screen (With RES)
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 144: Identifying Rear Controller And Screen (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Cargo Area Light
    1. Turn the cargo area light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the cargo area light (B).
    5. Disconnect the connector.

Fig. 145: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Grab Handles for One Vehicle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

Fig. 146: Inserting Tips Of Push Pin/Grab Rail Cap Pliers Into Notch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 147: Squeezing Handles Of Push Pin/Grab Rail Cap Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

Fig. 148: Identifying Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

Fig. 149: Removing Grab Handles Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

Fig. 150: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: Make sure the tab slides into the bracket cover as you rotate the sunvisor.

Fig. 151: Removing Sunvisor From Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 152: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Sunvisor Holder - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

Fig. 153: Removing Sunvisor Holder From Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the holder grommet (A).

Fig. 154: Identifying Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Headliner
    1. Without moonroof: Disconnect the connector (A), and detach the harness clips (B) from the driver's side A-pillar.

Fig. 155: Identifying Headliner Connector And Harness Clips (Driver Side A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A), and detach the harness clips (B) from the passenger's side A-pillar.

Fig. 156: Identifying Headliner Connector And Harness Clips (Passenger Side A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A), and detach the connector clips (B) and the harness clip (C) from the right quarter pillar.

Fig. 157: Identifying Headliner Connector And Harness Clips (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the front seats all the way back, and recline the seat-back fully.
5. Fold down the rear seats.
6. Detach the clips (A) and release the fasteners (B) from the headliner (C) by pulling it down.
7. With the help of an assistant, lower the headliner.

Without moonroof

Fig. 158: Identifying Headliner, Fasteners And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 159: Identifying Headliner, Fasteners And Clips (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With the help of an assistant, remove the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 160: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Rear Seat Belt Assembly - Center
    1. Remove the retractor mounting bolt (A) and the retractor bolt (B), then remove the rear seat belt assembly (C).

Fig. 161: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Rear Seat Belt Assembly - Center
    1. Install the rear seat belt assembly (A), then install the retractor mounting bolt (B) and the retractor bolt (C).

Fig. 162: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

Fig. 163: Identifying Headliner, Fasteners, Clip Bases, Handle And Sunvisor Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 164: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 165: Identifying Headliner, Fasteners And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 166: Identifying Headliner, Fasteners And Clips (With Moonroof)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 167: Identifying Connectors, Connector Clips And Harness Clip (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

Fig. 168: Identifying Connectors, Connector Clips And Harness Clip (Passenger A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

Fig. 169: Identifying Connectors, Connector Clips And Harness Clip (Driver A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 170: Identifying Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)

- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

Fig. 171: Identifying Sunvisor Bracket, Cover, Shaft, Base And Vanity Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 172: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.

3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 173: Rotating Sunvisor Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

Fig. 174: Identifying Grab Handle With Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Grab Handles for One Vehicle
    1. Install the clips (A) on the grab handle (B).

2. Install the caps (C) fully into the clips.

Fig. 175: Installing Clips On Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Position the grab handle (A) on the grab handle bracket (B).
4. Push on the grab handle until the clips (C) snap into place securely.

Fig. 176: Identifying Grab Handle, Grab Handle Bracket And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Cargo Area Light
    1. Connect the connector.
    2. Install the cargo area light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

Fig. 177: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Controller and Screen (With RES)
    1. Install the rear controller and screen (A).
    2. Connect the connector.

Fig. 178: Identifying Rear Controller And Screen (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Display Cover (With RES)

1. Install the rear display cover (A).

Fig. 179: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connector.
3. Install the ceiling light (B).
4. Carefully install the lenses (C).

Fig. 180: Identifying Connector, Ceiling Light, Lenses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Ceiling Light (without RES)
    1. Connect the connector.
    2. Install the ceiling light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

<u>Fig. 181: Identifying Ceiling Light And Lens</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Roof Console Assembly
    1. Connect the connectors (A), then install the roof console assembly (B).
    2. Install the screws (C, D), then install the lenses (E).

Fig. 182: Identifying Lenses, Screws, Connectors And Roof Console Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 183: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 184: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 185: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 186: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 187: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 188: Installing Clip Into Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
    3. Fit the clips into the holes in the quarter pillar.
    4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**

- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 189: Identifying Rear Seat Belt Lower Anchor And Quarter Pillar Trim With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 190: Identifying Rear Side Trim Panel, Rear Seat Release Cable, Clip And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 191: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 192: Identifying Rear Side Trim Panel, Hooks And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 193: Identifying Tie-Down Hook And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 194: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 195: Identifying Rear Seat Release Lever Cap, Hook And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear seat belt lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 196: Identifying Rear Seat Belt Lower Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left side

Fig. 197: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 198: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Rear Carpet Trim - Both Sides

1. Install the rear carpet trims (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

Fig. 199: Removing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 200: Removing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 201: Identifying Rear Seat Release Lever Cap, Hook And Screws (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 202: Identifying Rear Seat Release Lever Cap, Hook And Screws (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 203: Identifying Rear Damper Maintenance Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 204: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way

around.

Fig. 205: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 206: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 207: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
    3. If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

Fig. 208: Identifying B-Pillar Trim (Lower And Upper), Upper Hooks, Clip Seating Surfaces And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 209: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 210: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 211: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 212: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 213: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front seat belt upper anchor bolt, then install the front seat belt shoulder anchor adjuster cap (A).

Fig. 214: Identifying Front Seat Belt Upper Anchor Bolt And Adjuster Cap With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 215: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 216: Identifying Rear Door Opening Seal With Trim Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 217: Identifying Rear Door Sill Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
    3. After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
    4. If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 218: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

Fig. 219: Identifying Headliner And Pillar Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 220: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 221: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 222: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 223: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then

lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 224: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 225: Identifying Front Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 226: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 227: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT BELT INSPECTION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

	

INSPECTION

1. Seat Belt - Inspection (In Vehicle)

   In-Vehicle

   1. Check that the seat belt is not twisted or caught on anything.
   2. After installing the anchors, check for free movement on the anchor bolts. If necessary, remove the anchor bolts, and check that the washers and other parts are not damaged or improperly installed.
   3. Check the seat belts for damage or discoloration. Clean with a shop towel if necessary. Use only soap and water to clean the seat belts.

      NOTE: Dirt build-up in the loops of the upper anchors can cause the seat belts to retract slowly. Wipe the inside of the loops with a shop towel dampened with isopropyl alcohol.

   4. Check that the seat belt does not lock when pulled out slowly. The seat belt is designed to lock only during a sudden stop or impact.
   5. Make sure that the seat belt will retract automatically when released.
   6. For each passenger's seat belt, check the seat belt retractor locking mechanism automatic locking retractor (ALR). This function is for securing child seats.
   7. Pull out the seat belt all the way to engage the ALR. The seat belt should retract with a ratcheting sound, but not extend. This is normal.
   8. To disengage the ALR, release the seat belt and allow it to fully retract, then pull out the seat belt part-way. The seat belt should retract and extend normally.
   9. Replace the seat belt with a new assembly if there is any abnormality. Do not disassemble any part of the seat belt for any reason.

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the

PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 228: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 229: Pulling Up Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 230: Identifying Front Door Opening Seal, Trim Hooks And Front Door Opening Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 231: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 232: Putting Shop Towel Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 233: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 234: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 235: Identifying Rear Door Sill Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 236: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 237: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt.

Fig. 238: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 239: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 240: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 241: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 242: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 243: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 244: Identifying Rear Damper Maintenance Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Carpet Trim - Both Sides
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

Left side

Fig. 245: Removing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 246: Removing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trims (C) by hand to detach the clips (D), then remove the rear carpet trims.

Left side

Fig. 247: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 248: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)
    1. Pull up the rear seat cushion foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat cushion foot cover.

Left side

Fig. 249: Identifying Rear Seat Cushion Foot Cover, Clip And Hook (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 250: Identifying Rear Seat Cushion Foot Cover, Clip And Hook (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the rear seat belt lower anchor bolt (A).

Fig. 251: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.
2. Remove the screws (C).

Fig. 252: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 253: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 254: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 255: Identifying Rear Seat Release Lever And Rear Side Trim Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 256: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 257: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Quarter Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

Fig. 258: Identifying Quarter Pillar Trim And Rear Seat Belt Lower Anchor With Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

Fig. 259: Identifying Lenses, Screws, Connectors And Roof Console Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Ceiling Light (without RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the ceiling light (B).
    5. Disconnect the connector.

Fig. 260: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Display Cover (With RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

Fig. 261: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear display cover (A).

Fig. 262: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Rear Controller and Screen (With RES)
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 263: Identifying Rear Controller And Screen (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Cargo Area Light
    1. Turn the cargo area light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the cargo area light (B).
    5. Disconnect the connector.

Fig. 264: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Grab Handles for One Vehicle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

Fig. 265: Inserting Tips Of Push Pin/Grab Rail Cap Pliers Into Notch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 266: Squeezing Handles Of Push Pin/Grab Rail Cap Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

Fig. 267: Identifying Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

Fig. 268: Removing Grab Handles Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

Fig. 269: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: Make sure the tab slides into the bracket cover as you rotate the sunvisor.

Fig. 270: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 271: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Sunvisor Holder - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

Fig. 272: Turning Sunvisor Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the holder grommet (A).

Fig. 273: Identifying Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Headliner
    1. Without moonroof: Disconnect the connector (A), and detach the harness clips (B) from the driver's side A-pillar.

Fig. 274: Identifying Headliner Connector And Harness Clips (Driver Side A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A), and detach the harness clips (B) from the passenger's side A-pillar.

Fig. 275: Identifying Headliner Connector And Harness Clips (Passenger Side A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A), and detach the connector clips (B) and the harness clip (C) from the right quarter pillar.

Fig. 276: Identifying Headliner Connector And Harness Clips (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the front seats all the way back, and recline the seat-back fully.
5. Fold down the rear seats.
6. Detach the clips (A) and release the fasteners (B) from the headliner (C) by pulling it down.
7. With the help of an assistant, lower the headliner.

Without moonroof

Fig. 277: Identifying Headliner, Fasteners And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 278: Identifying Headliner, Fasteners And Clips (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With the help of an assistant, remove the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 279: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Seat Belt - Inspection (Out of Vehicle)

Out of Vehicle

For front seat belt retractors with seat belt tensioners, review **THE SRS COMPONENT LOCATIONS** , and **THE PRECAUTIONS AND PROCEDURES** before doing repairs or service.

Retractor

1. Before installing the retractor, check that the seat belt can be pulled out freely.
2. Make sure that the seat belt does not lock when the retractor (A) is leaned slowly up to 15 ° from the mounted position. The seat belt should lock when the retractor is leaned over 40 °. Do not attempt to disassemble the retractor.
3. Replace the seat belt with a new assembly if there is any abnormality. Do not disassemble any part of the seat belt for any reason.

Front

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

Fig. 283: Identifying Headliner, Fasteners, Clip Bases, Handle And Sunvisor Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 284: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 285: Identifying Headliner, Fasteners And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 286: Identifying Headliner, Fasteners And Clip (With Moonroof)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 287: Identifying Connectors, Connector Clips And Harness Clip (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

Fig. 288: Identifying Connectors And Harness Clip (Passenger A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

Fig. 289: Identifying Connectors And Harness Clip (Driver A-pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 290: Identifying Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)

- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

Fig. 291: Identifying Sunvisor Bracket, Cover, Shaft, Base And Vanity Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 292: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.

3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 293: Rotating Sunvisor Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

Fig. 294: Identifying Grab Handle With Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Grab Handles for One Vehicle
    1. Install the clips (A) on the grab handle (B).

2. Install the caps (C) fully into the clips.

Fig. 295: Installing Clips On Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Position the grab handle (A) on the grab handle bracket (B).
4. Push on the grab handle until the clips (C) snap into place securely.

Fig. 296: Identifying Grab Handle, Grab Handle Bracket And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Cargo Area Light
    1. Connect the connector.
    2. Install the cargo area light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

Fig. 297: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Controller and Screen (With RES)
    1. Install the rear controller and screen (A).
    2. Connect the connector.

Fig. 298: Identifying Rear Controller And Screen (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Display Cover (With RES)

1. Install the rear display cover (A).

Fig. 299: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connector.
3. Install the ceiling light (B).
4. Carefully install the lenses (C).

Fig. 300: Identifying Connector, Ceiling Light, Lenses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Ceiling Light (without RES)
    1. Connect the connector.
    2. Install the ceiling light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

<u>Fig. 301: Identifying Ceiling Light And Lens</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Roof Console Assembly
    1. Connect the connectors (A), then install the roof console assembly (B).
    2. Install the screws (C, D), then install the lenses (E).

Fig. 302: Identifying Lenses, Screws, Connectors And Roof Console Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
    3. After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
    4. If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 303: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 304: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 305: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 306: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 307: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 308: Installing Clip Into Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
    3. Fit the clips into the holes in the quarter pillar.
    4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**

- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 309: Identifying Rear Seat Belt Lower Anchor And Quarter Pillar Trim With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 310: Identifying Rear Side Trim Panel, Rear Seat Release Cable, Clip And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 311: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 312: Identifying Rear Side Trim Panel, Hooks And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 313: Identifying Tie-Down Hook And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 314: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 315: Identifying Rear Seat Release Lever Cap, Hook And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear seat belt lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 316: Identifying Rear Seat Belt Lower Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left side

Fig. 317: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 318: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Rear Carpet Trim - Both Sides

1. Install the rear carpet trims (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

Fig. 319: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 320: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 321: Identifying Rear Seat Back Cover And Clip (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 322: Identifying Rear Seat Back Cover And Clip (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 323: Identifying Rear Damper Maintenance Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 324: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way

around.

Fig. 325: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 326: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 327: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

Fig. 328: Identifying B-Pillar Trim (Lower And Upper), Upper Hooks, Clip Seating Surfaces And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 329: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 330: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 331: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 332: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 333: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front seat belt upper anchor bolt, then install the front seat belt shoulder anchor adjuster cap (A).

Fig. 334: Identifying Front Seat Belt Upper Anchor Bolt And Adjuster Cap With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 335: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 336: Identifying Rear Door Opening Seal With Trim Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 337: Identifying Rear Door Sill Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 338: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 339: Identifying Headliner And Pillar Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 340: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 341: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 342: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 343: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then

lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 344: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 345: Identifying Front Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 346: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 347: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT BELT SHOULDER ANCHOR ADJUSTER REMOVAL AND INSTALLATION

REMOVAL

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 348: Pulling Front Seat Belt Lower Anchor Bolt Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 349: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 350: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 351: Identifying Front Door Sill Trim And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.

2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

<u>Fig. 352: Identifying Rear Door Sill Trim And Fasteners</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front/Rear Door Opening Seals As Needed
    1. Pull out the door opening seals (A) from the trim hooks (B) around the door opening flange as needed.

Front

Fig. 353: Identifying Front Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 354: Identifying Rear Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. B-Pillar Lower Trim
    1. Slide the front seat forward fully.
    2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
    3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 355: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Belt Upper Anchor Bolt
    1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt (B).

Fig. 356: Identifying Front Seat Belt Adjuster Cap And Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. B-Pillar Upper Trim

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 357: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Belt Shoulder Anchor Adjuster
    1. Remove the bolts securing the shoulder anchor adjuster (A), then remove the shoulder anchor adjuster.

Fig. 358: Identifying Shoulder Anchor Adjuster With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Seat Belt Shoulder Anchor Adjuster

1. Install the shoulder anchor adjuster (A), then install the bolts.

Fig. 359: Identifying Shoulder Anchor Adjuster With Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. B-Pillar Upper Trim
    1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 360: Installing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Belt Upper Anchor Bolt
    1. Assemble the washer, the collar, and the bushing on the upper anchor bolt as shown.

NOTE: **Apply medium strength liquid thread lock to the upper anchor bolt before installation.**

Fig. 361: Identifying Washer, Collar, And Bushing On Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the front seat belt upper anchor bolt (A), then install the front seat belt shoulder anchor adjuster cap (B).

Fig. 362: Identifying Front Seat Belt Upper Anchor Bolt And Adjuster Cap With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. B-Pillar Lower Trim
   1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 363: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front/Rear Door Opening Seals As Needed
    1. Install the door opening seals (A). Make sure the seal is installed securely into the hooks (B).

Front

Fig. 364: Identifying Front Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 365: Identifying Rear Door Opening Seals And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 366: Installing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Door Sill Trim
    1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 367: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 368: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 369: Installing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 370: Installing Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVER'S POWER SEAT ADJUSTMENT SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Cover
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the front cover (E).

Fig. 1: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover
    1. Remove the screw (A), and detach the clip (B).
    2. Release the tabs (C).
    3. Pull up the recline cover (D) to release the hook (E).
    4. Disconnect the connectors.

5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 2: Identifying Front Seat Recline Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Power Seat Adjustment Switch
    1. Remove the power seat adjustment switch knobs (A).
    2. Remove the power seat adjustment switch (B) from the recline cover (C).

Fig. 3: Identifying Power Seat Adjustment Switch, Knob And Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Power Seat Adjustment Switch - Test
    1. Reinstall the power seat adjustment switch knobs (A) to the power seat adjustment switch (B).

Fig. 4: Identifying Power Seat Adjustment Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the terminals in each position according to the table.

Position \ Terminal		1	2	3	4	5	6	7	8	9	10	11	12
SLIDE SWITCH	Forward							○	* ○		○	○	
	Backward							* ○	○		○	○	
RECLINE SWITCH	Forward		* ○		○		○						○
	Backward		* ○		○		○						○
FRONT UP-DOWN SWITCH	UP			○					* ○	○	○		
	DOWN			* ○					○	○	○		
REAR UP-DOWN SWITCH	UP	* ○	○		○	○							
	DOWN	○	* ○		○	○							

*:There is continuity without operating a switch.

Fig. 5: Power Seat Adjustment Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the continuity is not as specified, replace the power seat adjustment switch.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Power Seat Adjustment Switch
    1. Install the power seat adjustment switch (A) from the recline cover (B).
    2. Install the power seat adjustment switch knobs (C).

Fig. 6: Identifying Power Seat Adjustment Switch, Knob And Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover
    1. Install the upper center inner cover (A) to the recline cover (B).
    2. Connect the connector, then install the wire harness (C) to the hooks (D).
    3. Install the clip (E) and tabs (F), then install the recline cover.
    4. Install the tabs (G), then install the screw (H).

Fig. 7: Identifying Upper Center Inner Cover, Recline Cover, Wire Harness, Hooks, Clips And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Cover
    1. Install the tabs (A), set the pin (B), and install the hook (C), then install the front cover (D). Make sure the hooks snap into place securely.

Fig. 8: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVER'S POWER SEAT MOTOR TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 9: Removing Front Seat Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 10: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 11: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 12: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 13: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the front mounting bolts (A) from the front seat.

Fig. 14: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 15: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 16: Identifying Front Seat Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat-Back As Needed - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 17: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Release the hook strip (A).
    3. Unzip the seat-back cover (B).

Fig. 18: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hook strips (A).

Fig. 19: Identifying Front Seat Hook Strips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Power Seat Motor - Test
    1. Disconnect the connectors.

Fig. 20: Identifying Slide, Rear And Front Up-Down Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 21: Identifying Recline Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the motor operation by connecting power and ground according to the table.

NOTE: **To prevent damage to the motor, apply battery voltage only momentarily.**

3. If the slide motor does not run or fails to run smoothly, replace it.

NOTE: **If the front up-down motor, rear up-down motor, or the recline motor does not run or fails to run smoothly, replace the seat frame assembly.**

4. Connect the connectors.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat-Back As Needed - Driver's Side
    1. Install the hook strips (A) to the seat frame.

Fig. 26: Identifying Front Seat Frame Hook Strips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Zip the seat-back cover (A).
    3. Install the hook strip (B).

Fig. 27: Placing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 28: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 29: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 30: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 31: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 32: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 33: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 34: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

NOTE: Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.

Fig. 35: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 36: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVER'S SEAT POSITION SENSOR OPERATION CHECK

PROCEDURE

Check the driver's seat position sensor operation after the driver's seat position sensor replacement.

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 37: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Seat Position Sensor Operation Check
    1. Make sure the driver's seat is in the full forward position.
    2. From the HDS Main Menu, select SRS, then Data List.
    3. Using two pieces of tape (A), make alignment marks (B) on the recline cover (C) and the front door sill trim (D) as shown. The driver's seat position sensor should read NEAR on the HDS.
    4. Move the seat back in small increments (about 5 mm, 0.20 in) until the driver's seat position sensor reads NOT NEAR on the HDS. The seat should be about 55 mm (2.17 in) from the front.

Fig. 38: Identifying Alignment Marks On Recline Cover And Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **It takes a few seconds for the HDS to display changes, so wait for about 5 seconds between each movement. If the driver's seat position sensor data does not work as described above, check the driver's seat position sensor for damage, and replace parts as needed.**

5. Turn the ignition switch to LOCK (0).

DRIVER'S SEAT POSITION SENSOR REMOVAL AND INSTALLATION

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Before doing this procedure, raise the driver's seat all the way up, and position all the way rearward.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 39: Removing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 40: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

4. Wait at least 3 minutes before starting work.

Fig. 41: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 42: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 43: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 44: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 45: Identifying Front Seat Connector And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Height Adjuster Handle - Manual Seat
    1. Pry out the cap (A) to release the hooks (B), and remove the screws (C), then remove the height adjuster handle (D).

Fig. 46: Removing Height Adjuster Handle (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Recline Cover - Driver's Side

Power Seat

1. Remove the screw (A), and detach the clip (B).
2. Release the tabs (C).
3. Pull up the recline cover (D) to release the hook (E).
4. Disconnect the connectors.
5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 47: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Remove the recline knob (A).
2. Remove the screw (B), and detach the clip (C).
3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
4. Release the rear hooks (G) of the recline cover from the recline inner cover.
5. Detach the hook (H) by pulling the recline cover back by hand.
6. Gently pull out the recline cover and remove it.

Fig. 48: Identifying Front Seat Recline Cover And Related Components (Manual Seat Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Seat Position Sensor
    1. Disconnect the driver's seat position sensor connector on the driver's seat wire harness.
    2. Power seat: Remove the TORX bolt and nut using a TORX T30 bit, then remove the driver's seat position sensor (A).
    3. Manual seat: Remove the TORX bolt using a TORX T30 bit, then remove the driver's seat position sensor (A).

    Power seat

Fig. 49: Identifying Driver Seat Position Sensor (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual seat

Fig. 50: Identifying Driver Seat Position Sensor (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Be sure to install the harness so it is not pinched or interferes with other parts.**

- **Check the driver's seat position sensor operation after the driver's seat position sensor replacement.**

1. Driver's Seat Position Sensor
    1. Power seat: Install the driver's seat position sensor (A) with the new TORX bolts using a TORX T30 bit, and new nut.
    2. Manual seat: Install the driver's seat position sensor (A) with the new TORX bolts using a TORX T30 bit.
    3. Connect the driver's seat position sensor connector on the driver's seat wire harness.

    Power seat

Fig. 51: Identifying Driver Seat Position Sensor And Bolt With Torque Specifications (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual seat

Fig. 52: Identifying Driver Seat Position Sensor And Bolt With Torque Specifications (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A) to the recline cover (B).
2. Connect the connector, then install the wire harness (C) to the hooks (D).
3. Install the clip (E) and tabs (F), then install the recline cover.
4. Install the tabs (G), then install the screw (H).

Fig. 53: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the hook (A) and clip (B) of the recline cover (C).
2. Install the front hooks (D) to the recline inner cover (E).
3. Install the hook (F) of the recline cover to the recline inner cover.
4. Install the recline knob (G) and the screw (H).

Fig. 54: Installing Front Seat Recline Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Height Adjuster Handle - Manual Seat
    1. Install the height adjuster handle (A) and the screws (B).
    2. Install the cap (C). Make sure the hooks (D) snap into place securely.

Fig. 55: Identifying Height Adjuster Handle, Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 56: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**

- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 57: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 58: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 59: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 60: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 61: Installing Front Seat Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 62: Installing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 63: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
9. Driver's Seat Position Sensor Operation Check

1. Make sure the driver's seat is in the full forward position.
2. From the HDS Main Menu, select SRS, then Data List.
3. Using two pieces of tape (A), make alignment marks (B) on the recline cover (C) and the front door sill trim (D) as shown. The driver's seat position sensor should read NEAR on the HDS.
4. Move the seat back in small increments (about 5 mm, 0.20 in) until the driver's seat position sensor reads NOT NEAR on the HDS. The seat should be about 55 mm (2.17 in) from the front.

NOTE: **It takes a few seconds for the HDS to display changes, so wait for about 5 seconds between each movement. If the driver's seat position sensor data does not work as described above, check the driver's seat position sensor for damage, and replace parts as needed.**

5. Turn the ignition switch to LOCK (0).

Fig. 64: Identifying Alignment Marks On Recline Cover And Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds

and then goes off.

FRONT SEAT ARMREST REMOVAL AND INSTALLATION

REMOVAL

1. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 65: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 66: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Seat Armrest

1. Install the pins (A) to the seat-back.

Fig. 67: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
3. Install the cap (E) to the armrest.

Fig. 68: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT CUSHION COVER REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-10 show removing the driver's side, steps 11-17 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 69: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 70: Removing Front Seat Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).

2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 71: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
   1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 72: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
   1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 73: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 74: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 75: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 76: Identifying Front Seat Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Cover - Power Seat
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the front cover (E).

Fig. 77: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Height Adjuster Handle - Manual Seat
    1. Pry out the cap (A) to release the hooks (B), and remove the screws (C), then remove the height adjuster handle (D).

Fig. 78: Removing Height Adjuster Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Recline Cover - Driver's Side

Power Seat

1. Remove the screw (A), and detach the clip (B).
2. Release the tabs (C).
3. Pull up the recline cover (D) to release the hook (E).
4. Disconnect the connectors.
5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 79: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Remove the recline knob (A).
2. Remove the screw (B), and detach the clip (C).
3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
4. Release the rear hooks (G) of the recline cover from the recline inner cover.
5. Detach the hook (H) by pulling the recline cover back by hand.
6. Gently pull out the recline cover and remove it.

Fig. 80: Identifying Front Seat Recline Cover And Related Components (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Center Cover - Driver's Side

Power Seat

1. Remove the screw (A).
2. Release the tabs (B), then remove the center cover (C).
3. Remove the upper center inner cover (D).

Fig. 81: Identifying Front Seat Center Cover, Upper Center Inner Cover, Tabs And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 82: Identifying Front Seat Center Cover, Upper Center Inner Cover, Tabs And Screws (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Cushion - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 83: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. With seat heater: Disconnect the connectors (A).
    3. With seat heater: Detach the harness clip (B).
    4. With seat heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

With Seat Heater

Fig. 84: Prying Up Harness Holders Hook (With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A) from both sides of the seat cushion frame.
6. Detach the clip (B) from the seat cushion frame.

Power Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 86: Identifying Front Seat Cushion Hook Strips And Clips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A) from under the seat cushion.

Power Seat

Fig. 87: Identifying Hook Strips Under Seat Cushion (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 88: Identifying Hook Strips Under Seat Cushion (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the seat cushion cover/pad (A) from the seat frame (B).

Fig. 89: Removing Seat Cushion Cover/Pad From Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Seat Cushion Cover - Driver's Side
    1. Release the hook strips (A) fastening the seat cushion cover (B) on the seat cushion pad (C).

Fig. 90: Identifying Front Seat Cushion Cover, Pad And Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull back the edges of the seat cushion cover (A) all the way around, and release the upholstery rings (B).
    3. Remove the seat cushion cover.

Leather Seat

Fabric Seat

Fig. 92: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 93: Removing Front Seat Belt Lower Anchor Cover (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 94: Removing Front Seat Belt Lower Anchor Bolt (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 95: Pulling Head Restraint (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 96: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the front mounting bolts (A) from the front seat.

Fig. 97: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 98: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Fig. 99: Identifying Front Seat - Passenger Side Connector And Clips (Without Subwoofer)

With Subwoofer

Fig. 100: Identifying Front Seat - Passenger Side Connectors (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat Recline Cover - Passenger's Side
    1. Remove the recline knob (A).
    2. Remove the screw (B), and detach the clip (C).
    3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
    4. Release the rear hooks (G) of the recline cover from the recline inner cover.
    5. Detach the hook (H) by pulling the recline cover back by hand.
    6. Gently pull out the recline cover and remove it.

Fig. 101: Identifying Front Seat Recline Cover And Related Components With Torque Specifications (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Front Seat Center Cover - Passenger's Side
    1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 102: Identifying Front Seat Center Cover, Tabs And Inner Cover (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Seat Cushion - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 103: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connector(s) (A).
3. Detach the harness clip (B).
4. With sheet heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

Except KX - With Seat Heater

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Steps 1-7 show installing the passenger's side, steps 8-17 show installing the driver's side.

1. Front Seat Cushion Cover - Passenger's Side

NOTE: Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).

Fig. 112: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat cushion cover (A) with the upholstery rings (B).

Leather Seat

Fig. 113: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 114: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the hook strips (A) to the seat cushion pad (B).

Fig. 115: Identifying Seat Cushion Pad Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Cushion - Passenger's Side
    1. Install the seat cushion cover/pad (A) on the seat frame (B).

Fig. 116: Installing Seat Cushion Cover/Pad On Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the hook strips (A) to under the seat cushion.

Fig. 117: Identifying Under Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the hook strips (A), then install the clip (B).

Fig. 118: Identifying Front Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With seat heater: Install the harness holder (A) to the seat cushion frame springs (B).
5. Install the harness clip (C).
6. Connect the connecter(s) (D).

Except KX - With Seat Heater

Fig. 119: Installing Harness Holder To Seat Cushion Frame Springs (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 120: Identifying Seat Cushion Frame Springs, Connector, Holder And Clips (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 121: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Center Cover - Passenger's Side
    1. Install the center cover (A) to the recline inner cover (B). Make sure the tabs (C) snap into place securely.

Fig. 122: Installing Center Cover To Recline Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Recline Cover - Passenger's Side
    1. Install the hook (A) and the clip (B) of the recline cover (C).
    2. Install the front hooks (D) to the recline inner cover (E).
    3. Install the rear hooks (F) of the recline cover to the recline inner cover.
    4. Install the recline knob (G) and the screw (H).

Fig. 123: Identifying Front Seat Recline Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 124: Identifying Front Seat Connectors And Clips (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 125: Identifying Front Seat Connectors And Clips (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 126: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 127: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 128: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Head Restraint - Passenger's Side
    1. Insert the head restraint (A) into the seat-back as shown.

Fig. 129: Inserting Head Restraint Into Seat-Back (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Belt Lower Anchor Bolt - Passenger's Side

1. Install the lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 130: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 131: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Cushion Cover - Driver's Side

NOTE: **Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).**

Fig. 132: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat cushion cover (A) with the upholstery rings (B).

   Leather Seat

Fig. 133: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 134: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the hook strips (A) to the seat cushion pad (B).

Fig. 135: Identifying Seat Cushion Pad Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Cushion - Driver's Side
    1. Install the seat cushion cover/pad (A) on the seat frame (B).

Fig. 136: Installing Seat Cushion Cover/Pad On Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the hook strips (A) under the seat cushion.

Power Seat

Fig. 137: Identifying Under Seat Cushion Hook Strips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 138: Identifying Under Seat Cushion Hook Strips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the hook strips (A) to both sides of the seat cushion frame.
4. Install the clip (B) to the seat cushion frame.

Power Seat

Fig. 139: Identifying Seat Cushion Frame Hook Strips And Clips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 140: Identifying Seat Cushion Frame Hook Strips And Clips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With seat heater: Connect the connectors (A).
6. With seat heater: Install the harness clip (B).
7. With seat heater: Install the holders (C) to the seat cushion frame springs (D).

With Seat Heater

Fig. 141: Installing Holder To Seat Cushion Frame Springs (With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 142: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Seat Center Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A).
2. Install the center cover (B). Make sure the tabs (C) snap into place securely.
3. Install the screw (D).

Fig. 143: Identifying Front Seat Center Cover, Upper Center Inner Cover, Tabs And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the center cover (A) to the recline inner cover (B). make sure the tabs (C) snap into place securely.

Fig. 144: Installing Center Cover To Recline Inner Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat Recline Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A) to the recline cover (B).
2. Connect the connector, then install the wire harness (C) to the hooks (D).
3. Install the clip (E) and tabs (F), then install the recline cover.
4. Install the tabs (G), then install the screw (H).

Fig. 145: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the hook (A) and clip (B) of the recline cover (C).
2. Install the front hooks (D) to the recline inner cover (E).
3. Install the hook (F) of the recline cover to the recline inner cover.
4. Install the recline knob (G) and the screw (H).

Fig. 146: Installing Front Seat Recline Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat Height Adjuster Handle - Manual Seat
    1. Install the height adjuster handle (A) and the screws (B).
    2. Install the cap (C). Make sure the hooks (D) snap into place securely.

Fig. 147: Identifying Height Adjuster Handle, Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Cover - Power Seat
    1. Install the tabs (A), set the pin (B), and install the hook (C), then install the front cover (D). Make sure the hooks snap into place securely.

Fig. 148: Identifying Front Cover, Hook, Tabs, Pin And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat - Driver's Side
    1. Connect the connectors (A).

2. Install the harness clip (B).

Fig. 149: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 150: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 151: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 152: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 153: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 154: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

       NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 155: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 156: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT FRAME REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-19 show removing the driver's side, steps 20-35 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 157: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 158: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 159: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 160: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 161: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 162: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 163: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 164: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 165: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 166: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Slide Lever - Manual Seat
    1. Slide the front seat all the way forward.
    2. Release the hooks (A), then remove both seat slide lever springs (B) from the front seat rail (C).

Fig. 167: Removing Seat Slide Lever Springs From Front Seat Rail (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release both sides of tabs (A) from the front seat rail (B), then remove the seat slide lever (C).

Fig. 168: Identifying Seat Slide Lever, Front Seat Rail And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Cover - Power Seat
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the front cover (E).

Fig. 169: Identifying Front Cover, Hook, Tabs, Pin And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Height Adjuster Handle - Manual Seat
    1. Pry out the cap (A) to release the hooks (B), and remove the screws (C), then remove the height adjuster handle (D).

Fig. 170: Removing Height Adjuster Handle (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Recline Cover - Driver's Side

Power Seat

1. Remove the screw (A), and detach the clip (B).
2. Release the tabs (C).
3. Pull up the recline cover (D) to release the hook (E).
4. Disconnect the connectors.
5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 171: Identifying Front Seat Recline Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Remove the recline knob (A).
2. Remove the screw (B), and detach the clip (C).
3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
4. Release the rear hooks (G) of the recline cover from the recline inner cover.
5. Detach the hook (H) by pulling the recline cover back by hand.
6. Gently pull out the recline cover and remove it.

Fig. 172: Removing Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Seat Center Cover - Driver's Side

Power Seat

1. Remove the screw (A).
2. Release the tabs (B), then remove the center cover (C).
3. Remove the upper center inner cover (D).

Fig. 173: Identifying Front Seat Center Cover, Upper Center Inner Cover, Tabs And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 174: Removing Center Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat Cushion - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 175: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. With seat heater: Disconnect the connectors (A).
    3. With seat heater: Detach the harness clip (B).
    4. With seat heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

With Seat Heater

Fig. 176: Prying Up Hook Of Harness Holders (With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A) from both sides of the seat cushion frame.
6. Detach the clip (B) from the seat cushion frame.

Power Seat

Fig. 177: Identifying Front Seat Cushion Hook Strips And Clips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 178: Identifying Front Seat Cushion Hook Strips And Clips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A) from under the seat cushion.

Power Seat

Fig. 179: Identifying Hook Strips Under Seat Cushion (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 180: Identifying Hook Strips Under Seat Cushion (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the seat cushion cover/pad (A) from the seat frame (B).

Fig. 181: Removing Seat Cushion Cover/Pad From Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat-Back - Driver's Side
    1. Detach the connector clips (A).
    2. Detach the harness clips (B).
    3. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
    4. Disconnect the connectors (F).

Power Seat

Fig. 182: Removing Seat Cushion Frame Springs Holder (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 183: Removing Seat Cushion Frame Springs Holder (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strip (A).
6. Unzip the seat-back cover (B).

Fig. 184: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 185: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the harness clips (A).

9. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 186: Removing Harnesses Through Holes From Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 187: Releasing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release the hook strips (A) from the seat-back frame (B).

Fig. 188: Releasing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Head Restraint Guides - Driver's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 189: Removing Guides From Seat-Back

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat-Back Cover/Pad - Driver's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 190: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Side Airbag
    1. Detach the harness clip (A), then remove the side airbag (B).

Fig. 191: Identifying Side Airbag And Harness Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Seat Belt Buckle - Driver's Side
    1. Detach the connector clip (A) and the harness clips (B) from under the seat cushion.

Fig. 192: Identifying Under Seat Cushion Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the center anchor bolt (A), and detach the harness clips (B), then remove the front seat belt buckle (C).

Fig. 193: Identifying Front Seat Belt Buckle, Center Anchor Bolt And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat Lumbar Support
    1. Remove the cable band (A) fastening the lumbar support cable (B).
    2. Remove the two screws (C) and the plate (D).

Fig. 194: Identifying Lumbar Support Cable, Plate, Cable Band And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the lower wire (A) from both seat-back side frames (B), then remove the lumbar support (C).

Fig. 195: Removing Lumbar Support

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hook (A), then remove the pin (B).
5. Pull the cover up to release it from the upper hook (C), then remove the power lumbar support motor cover (D).

Fig. 196: Identifying Power Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the connector and detach the harness clip (A).
7. Remove the nuts (B), and separate the lumbar support motor (C) from the seat frame (D), then remove the lumbar support.

Fig. 197: Identifying Lumbar Support Motor, Seat Frame, Nuts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Seat Slide Motor
    1. Remove the slide motor cover (A).

Fig. 198: Identifying Slide Motor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Release the cable housing (A) from the hooks (B).
    3. Disconnect the flex cable (C) from the worm gear (D) in the inner seat track by pulling out the cable housing.
    4. Disconnect the flex cable from the slide motor (E).

NOTE: Take care not to kink the cable.

Fig. 199: Disconnecting Flex Cable From Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connector.
6. Detach the harness clip (A).
7. Remove the bolts (B) securing the motor bracket (C) with a TORX T30 bit.

Fig. 200: Identifying Motor Bracket, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the slide motor (A) from the short flex cable (B), and remove the slide motor bracket (C) from the slide gearbox bracket (D).

Fig. 201: Removing Slide Motor From Slide Gearbox Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pull out the short flex cable (A) from the worm gear (B).

Fig. 202: Identifying Short Flex Cable And Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the screws (A), then remove the slide motor (B) from the slide motor bracket (C).

Fig. 203: Identifying Slide Motor, Bracket And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Front Seat Frame - Driver's Side
    1. Detach the clips (A, B), then remove the side cover (C).

    Power Seat (side)

Fig. 204: Identifying Front Seat Side Cover And Clips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) and the clip (B), then remove the upper rail covers (C).

Manual Seat

Fig. 205: Identifying Front Seat Upper Rail Cover, Hooks And Clips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the hooks (A) and the clip (B), then remove the front foot covers (C).

Front Side

Fig. 206: Identifying Front Seat Front Foot Cover, Hooks And Clips (Front Side; 1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 207: Identifying Front Seat Front Foot Cover, Hooks And Clips (Front Side; 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the hooks (A), then remove the rear raiser covers (B).

Rear Side

Fig. 208: Identifying Rear Raiser Cover And Hooks (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the hook(s), then remove the outer recline inner cover (A) and the inner recline inner cover (B) from the seat frame (C).

Power Seat

Fig. 209: Identifying Seat Cover, Inner And Outer Recline Cover And Hooks (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 210: Identifying Seat Cover, Inner And Outer Recline Cover And Hooks (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 211: Removing Front Seat Belt Lower Anchor Cover (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 212: Removing Front Seat Belt Lower Anchor Bolt (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 213: Pulling Head Restraint (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 214: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 215: Identifying Front Seat Front Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 216: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Fig. 217: Identifying Front Seat Connectors And Clips (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 218: Identifying Front Seat Connectors And Clips (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Front Seat Armrest - Passenger's Side
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 219: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the pins (A) from the seat-back.

Fig. 220: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Front Seat Slide Lever - Passenger's Side
    1. Slide the front seat all the way forward.
    2. Release the hooks (A), then remove both seat slide lever springs (B) from the front seat rail (C).

Fig. 221: Removing Seat Slide Lever Springs From Front Seat Rail
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Release both sides of the tabs (A) from the front seat rail (B), then remove the seat slide lever (C).

Fig. 222: Identifying Front Seat Rail, Seat Slide Rail And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Front Seat Recline Cover - Passenger's Side
    1. Remove the recline knob (A).
    2. Remove the screw (B), and detach the clip (C).
    3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
    4. Release the rear hooks (G) of the recline cover from the recline inner cover.
    5. Detach the hook (H) by pulling the recline cover back by hand.
    6. Gently pull out the recline cover and remove it.

Fig. 223: Removing Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Front Seat Center Cover - Passenger's Side
    1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 224: Removing Center Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Front Seat Cushion - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 225: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connector(s) (A).
3. Detach the harness clip (B).
4. With sheet heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

Except KX - With Seat Heater

Fig. 226: Removing Hooks From Seat Cushion Frame Springs (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 227: Identifying Front Seat Connectors And Clips (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A) from both sides of the seat cushion frame.
6. Detach the clip (B) from the seat cushion frame.

Fig. 228: Identifying Front Seat Cushion Hook Strips And Clips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A) from under the seat cushion.

Fig. 229: Identifying Hook Strips Under Seat Cushion (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the seat cushion cover/pad (A) from the seat frame (B).

Fig. 230: Removing Seat Cushion Cover/Pad From Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Front Seat-Back - Passenger's Side
    1. Detach the connector clips (A).
    2. Detach the harness clips (B).
    3. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
    4. Except KX: Disconnect the connectors (F).

    Except KX - With Seat Heater

5. Release the hook strip (A).
6. Unzip the seat-back cover (B).

Fig. 234: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 235: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the harness clips (A).
9. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 236: Removing Harnesses Through Holes From Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 237: Releasing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the screw (A), and release the hooks (B), then remove the cover (C) and detach the harness clip (D).

Fig. 238: Identifying Airbag Cover, Hooks, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Disconnect the connectors (A) and detach the harness clips (B) from the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 239: Identifying ODS/OPDS Unit Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Release the hook strips (A) from the seat-back frame (B).
14. Detach the harness clips (C).

Fig. 240: Releasing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Head Restraint Guide - Passenger's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 241: Removing Guides From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Front Seat-Back Cover/Pad - Passenger's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 242: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Side Airbag
    1. Remove the nuts and detach the harness clip (A), then remove the side airbag (B).

Fig. 243: Identifying Side Airbag And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. ODS Unit (For some models)
    1. Remove the ODS unit (A).

Fig. 244: Identifying ODS Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. OPDS Unit (For some models)
    1. Remove the OPDS unit (A).

Fig. 245: Identifying OPDS Unit

Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Front Seat Belt Buckle - Passenger's Side
    1. Detach the connector clip (A) and the harness clip(s) (B) from the under seat cushion.
    2. Except KX: Pry up the hook (C) of the harness holder (D), then release them from the seat cushion frame spring (E).

Except KX

2. Detach the hooks (A), then remove the rear raiser covers (B).

Rear Side

Fig. 252: Identifying Rear Raiser Covers And Hooks (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the hooks (A), then remove the outer recline inner cover (B) and the inner recline inner cover (C).

Fig. 253: Identifying Inner And Outer Recline Inner Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service .

NOTE: Steps 1-16 show installing the passenger's side, steps 17-35 show installing the

driver's side.

1. Front Seat Frame - Passenger's Side
    1. Install the outer recline inner cover (A) and the inner recline inner cover (B) to the seat frame (C).

Fig. 254: Identifying Inner And Outer Recline Inner Cover And Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear raiser covers (A). Make sure the hooks (B) snap into place securely.

Rear Side

Fig. 255: Identifying Rear Raiser Covers And Hooks (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the front foot covers (A). Make sure the hook(s) (B) and the clip (C) snap into place securely.

Front Side

Fig. 256: Identifying Front Foot Covers, Hooks And Clips (Front Side; 1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 257: Identifying Front Foot Covers, Hooks And Clips (Front Side; 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Belt Buckle - Passenger's Side
    1. Assemble the washers and the collar on the center anchor bolt as shown.

NOTE:

- **Apply medium strength liquid thread lock to the center anchor bolt before reinstallation.**
- **Tighten the bolts by hand first, then tighten to the specified torque.**

Fig. 258: Identifying Front Seat Belt Buckle Washer, Collar And Center Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the seat belt buckle (A) and harness clip(s) (B), then tighten the center anchor bolt (C) to the specified torque.

Except KX

Fig. 259: Identifying Seat Belt Buckle, Center Anchor Bolt And Clip With Torque Specifications (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 260: Identifying Seat Belt Buckle, Center Anchor Bolt And Clip With Torque Specifications (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the connector clip (A) and the harness clip(s) (B).
4. Except KX: Install the harness holder (C) to the seat cushion frame spring (D).

Except KX

Fig. 261: Installing Harness Holder To Seat Cushion Frame Spring (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 262: Identifying Front Seat Belt Buckle Connector And Clip (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. OPDS Unit (For some models)

NOTE:

- **Be sure to install the harness so that they are not pinched or interfering with other parts.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**

1. Install the OPDS unit (A).

Fig. 263: Identifying OPDS Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ODS Unit (For some models)

NOTE:

- **Be sure to install the harness so that they are not pinched or interfering with other parts.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**

1. Install the ODS unit (A).

Fig. 264: Identifying OPDS Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Side Airbag

NOTE:

- **If the side airbag cover is secured with tape, remove the tape.**
- **Do not open the lid on the side airbag cover.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**
- **Be sure to install the harness so that they are not pinched or interfering with other parts.**

1. Install the side airbag (A), then tighten the new mounting nuts.
2. Install the harness clip (B).

Fig. 265: Identifying Side Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back Cover/Pad - Passenger's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 266: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Head Restraint Guide - Passenger's Side
    1. Install the head restraint guides (A).

Fig. 267: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat-Back - Passenger's Side
    1. Install the hook strips (A) to the seat-back frame (B).
    2. Install the harness clips (C).

Fig. 268: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A) and install the harness clips (B) to the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 269: Identifying ODS/OPDS Unit, Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the hooks (A) and install the cover (B), then install the screw (C) and the harness clip (D).

Fig. 270: Identifying Front Seat-Back Cover, Hooks, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 271: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the harness clips (A).
7. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 272: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the hook strips (A) to the seat-back frame.

Fig. 273: Identifying Seat-Back Frame Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Zip the seat-back cover (A).
10. Install the hook strip (B).

Fig. 274: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the connector clips (A).
12. Install the harness clips (B).
13. Install the harness holders (C) to the seat cushion frame springs (D).
14. Except KX: Connect the connectors (E).

Except KX - With Seat Heater

Fig. 275: Installing Harness Holder To Seat Cushion Frame Springs (Except KX - With Seat Heater)

KX

Fig. 277: Installing Harness Holder To Seat Cushion Frame Springs (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Cushion - Passenger's Side
    1. Install the seat cushion cover/pad (A) on the seat frame (B).

Fig. 278: Installing Seat Cushion Cover/Pad On Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the hook strips (A) to under the seat cushion.

Fig. 279: Identifying Under Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the hook strips (A), then install the clip (B).

Fig. 280: Identifying Front Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With seat heater: Install the harness holder (A) to the seat cushion frame springs (B).
5. Install the harness clip (C).
6. Connect the connecter(s) (D).

Except KX - With Seat Heater

Fig. 281: Installing Harness Holder To Seat Cushion Frame Springs (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 282: Identifying Seat Cushion Frame Springs, Connector, Holder And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 283: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Seat Center Cover - Passenger's Side
    1. Install the center cover (A) to the recline inner cover (B). Make sure the tabs (C) snap into place securely.

Fig. 284: Installing Center Cover To Recline Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat Recline Cover - Passenger's Side
    1. Install the hook (A) and the clip (B) of the recline cover (C).
    2. Install the front hooks (D) to the recline inner cover (E).
    3. Install the rear hooks (F) of the recline cover to the recline inner cover.
    4. Install the recline knob (G) and the screw (H).

Fig. 285: Installing Front Seat Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat Slide Lever - Passenger's Side
    1. Install the seat slide lever (A), and install both sides of tabs (B) to the front seat rail (C).

Fig. 286: Identifying Seat Slide Lever, Front Seat Rail And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install both seat slide lever springs (A) to the front seat rail (B).
3. Set the seat slide lever springs through the hooks (C) of the seat rail.

Fig. 287: Installing Seat Slide Lever Springs To Front Seat Rail
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Seat Armrest - Passenger's Side
    1. Install the pins (A) to the seat-back.

Fig. 288: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 289: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 290: Identifying Front Seat Connectors And Clips (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 291: Identifying Front Seat Connectors And Clips (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 292: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 293: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 294: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Head Restraint - Passenger's Side
    1. Insert the head restraint (A) into the seat-back as shown.

Fig. 295: Inserting Head Restraint Into Seat-Back (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Seat Belt Lower Anchor Bolt - Passenger's Side

1. Install the lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 296: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 297: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat Frame - Driver's Side
    1. Install the outer recline inner cover (A) and the inner recline inner cover (B) to the seat frame (C).

Power Seat

Fig. 298: Identifying Inner And Outer Recline Inner Cover And Seat Frame (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 299: Identifying Inner And Outer Recline Inner Cover And Seat Frame (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear raiser covers (A). Make sure the hooks (B) snap into place securely.

Rear Side

Fig. 300: Identifying Rear Raiser Covers And Hooks (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the front foot covers (A). Make sure the hook(s) (B) and the clip (C) snap into place securely.

Front Side

Fig. 301: Identifying Front Foot Covers, Hooks And Clips (Front Side; 1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 302: Identifying Front Foot Covers, Hooks And Clips (Front Side; 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the upper rail covers (A). Make sure the hooks (C) and the clips (B) snap into place securely.

Fig. 303: Identifying Front Seat Frame Upper Rail Covers, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the side cover (A). Make sure the clips (B, C) snap into place securely.

Power Seat (side)

Fig. 304: Identifying Front Seat Frame Side Cover (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Seat Slide Motor
    1. Install the slide motor (A) to the slide motor bracket (B) with the screws (C).

Fig. 305: Identifying Front Seat Slide Motor, Bracket And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the short flex cable (A) to the worm gear (B).

NOTE: **Apply multipurpose grease to the warm gear area.**

Fig. 306: Identifying Short Flex Cable And Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the slide motor (A) to the short flex cable (B), and install the slide motor bracket (C) to the slide gearbox bracket (D).

Fig. 307: Installing Slide Motor To Short Flex Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts (A) securing the motor bracket (B) with a TORX T30 bit.
5. Install the harness clip (C).
6. Connect the connector.

Fig. 308: Identifying Front Seat Motor Connector, Bracket, Clip And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the flex cable (A) to the slide motor (B).
8. Install the flex cable to the worm gear (C).

NOTE: Apply multipurpose grease to the worm gear area.

9. Install the cable housing (D) to the hooks (E).

Fig. 309: Identifying Slide Motor, Flex Cable, Worm Gear, Cable Housing And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the slide motor cover (A).

Fig. 310: Identifying Slide Motor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Front Seat Lumbar Support
    1. Install the lumbar support motor (A) to the seat frame (B), then install the nuts (C).
    2. Connect the connector and install the harness clip (D).

Fig. 311: Identifying Lumbar Support Motor, Seat Frame, Clip And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Insert the lumbar support motor cover (A) down to install it to the upper hook (B).
    4. Install the cover to the lower hook (C) and the pin (D). Make sure the hooks snap into place

securely.

Fig. 312: Identifying Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the lower wire (A) to both seat-back side frames (B), then install the lumbar support (C).

Fig. 313: Installing Lower Wire To Seat-Back Side Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the plate (A) and the two screws (B) to the seat frame (C).
7. Install the cable band (D) securing the lumbar support cable (E).

Fig. 314: Identifying Lumbar Support Cable, Seat Frame, Band, Plate And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Front Seat Belt Buckle - Driver's Side
    1. Assemble the washers and the collar on the center anchor bolt as shown.

NOTE:

- **Apply medium strength liquid thread lock to the center anchor bolt before reinstallation.**
- **Tighten the bolts by hand first, then tighten to the specified torque.**

Fig. 315: Identifying Front Seat Belt Buckle Washer, Collar And Center Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the seat belt buckle (A) and harness clips (B), then tighten the center anchor bolt (C) to the specified torque.

Fig. 316: Identifying Seat Belt Buckle, Center Anchor Bolt And Clip With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the connector clip (A) and the harness clips (B).

Fig. 317: Identifying Seat Belt Buckle Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Side Airbag

NOTE:

- **If the side airbag cover is secured with tape, remove the tape.**
- **Do not open the cover on the side airbag cover.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**
- **Be sure to install the harness so that they are not pinched or interfering with other parts.**

1. Install the side airbag (A), then tighten the new mounting nuts.

2. Install the clip (B).

Fig. 318: Identifying Side Airbag And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Front Seat-Back Cover/Pad - Driver's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 319: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Head Restraint Guides - Driver's Side
    1. Install the head restraint guides (A).

Fig. 320: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Front Seat Back - Driver's Side
    1. Install the hook strips (A) to the seat-back frame (B).

Fig. 321: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 322: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness clips (A).
4. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 323: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the hook strips (A).

Fig. 324: Installing Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Zip the seat-back cover (A).
7. Install the hook strip (B).

Fig. 325: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the connector clips (A).
9. Install the harness clips (B).
10. Install the harness holders (C) to the seat cushion frame springs (D).
11. Connect the connector (E).

Power Seat

Fig. 326: Installing Harness Holder To Seat Cushion Frame Springs (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 327: Installing Harness Holder To Seat Cushion Frame Springs (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Front Seat Cushion - Driver's Side
    1. Install the seat cushion cover/pad (A) on the seat frame (B).

Fig. 328: Installing Seat Cushion Cover/Pad On Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the hook strips (A) under the seat cushion.

Power Seat

Fig. 329: Identifying Under Seat Cushion Hook Strips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 330: Identifying Under Seat Cushion Hook Strips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the hook strips (A) to both sides of the seat cushion frame.
4. Install the clip (B) to the seat cushion frame.

Power Seat

Fig. 331: Identifying Seat Cushion Frame Hook Strips And Clips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 332: Identifying Seat Cushion Frame Hook Strips And Clips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With seat heater: Connect the connectors (A).
6. With seat heater: Install the harness clip (B).
7. With seat heater: Install the holders (C) to the seat cushion frame springs (D).

With Seat Heater

Fig. 333: Installing Holder To Seat Cushion Frame Springs (With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 334: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Front Seat Center Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A).
2. Install the center cover (B). Make sure the tabs (C) snap into place securely.
3. Install the screw (D).

Fig. 335: Identifying Front Seat Center Cover, Upper Center Inner Cover, Tabs And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the center cover (A) to the recline inner cover (B). make sure the tabs (C) snap into place securely.

Fig. 336: Installing Center Cover To Recline Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Front Seat Recline Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A) to the recline cover (B).
2. Connect the connector, then install the wire harness (C) to the hooks (D).
3. Install the clip (E) and tabs (F), then install the recline cover.
4. Install the tabs (G), then install the screw (H).

Fig. 337: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the hook (A) and clip (B) of the recline cover (C).
2. Install the front hooks (D) to the recline inner cover (E).
3. Install the hook (F) of the recline cover to the recline inner cover.
4. Install the recline knob (G) and the screw (H).

Fig. 338: Installing Front Seat Recline Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Front Seat Height Adjuster Handle - Manual Seat
    1. Install the height adjuster handle (A) and the screws (B).
    2. Install the cap (C). Make sure the hooks (D) snap into place securely.

Fig. 339: Identifying Height Adjuster Handle, Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Front Cover - Power Seat
    1. Install the tabs (A), set the pin (B), and install the hook (C), then install the front cover (D). Make sure the hooks snap into place securely.

Fig. 340: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Front Seat Slide Lever - Manual Seat
    1. Install the seat slide lever (A), and install both sides of tabs (B) to the front seat rail (C).

Fig. 341: Identifying Seat Slide Lever, Front Seat Rail And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install both seat slide lever springs (A) to the front seat rail (B).
3. Set the seat slide lever springs through the hooks (C) of the seat rail.

Fig. 342: Installing Seat Slide Lever Springs To Front Seat Rail
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Front Seat Armrest
    1. Install the pins (A) to the seat-back.

Fig. 343: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 344: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 345: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 346: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 347: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 348: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 349: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 350: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

       NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 351: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 352: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 353: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
38. OPDS Sensor Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu,

select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.

3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

FRONT SEAT LUMBAR SUPPORT REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
   1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 354: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the lower anchor bolt (A).

Fig. 355: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 356: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 357: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 358: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 359: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 360: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 361: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 362: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the pins (A) from the seat-back.

Fig. 363: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 364: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Detach the connector clips (A).
    3. Detach the harness clips (B).
    4. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
    5. Disconnect the connectors (F).

Power Seat

<u>Fig. 365: Removing Seat Cushion Frame Springs Holder (Power Seat)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat with Seat Heater

Fig. 366: Removing Seat Cushion Frame Springs Holder (Manual Seat With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hook strip (A).
7. Unzip the seat-back cover (B).

Fig. 367: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 368: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Detach the harness clips (A).

10. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 369: Removing Harnesses Through Holes From Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 370: Releasing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook strips (A) from the seat-back frame (B).

Fig. 371: Releasing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Head Restraint Guides - Driver's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 372: Removing Guides From Seat-Back

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat-Back Cover/Pad - Driver's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 373: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Lumbar Support
    1. Remove the cable band (A) fastening the lumbar support cable (B).
    2. Remove the two screws (C) and the plate (D).

Fig. 374: Identifying Lumbar Support Cable, Plate, Cable Band And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the lower wire (A) from both seat-back side frames (B), then remove the lumbar support (C).

Fig. 375: Removing Lumbar Support
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hook (A), then remove the pin (B).
5. Pull the cover up to release it from the upper hook (C), then remove the power lumbar support motor cover (D).

Fig. 376: Identifying Power Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the connector and detach the harness clip (A).
7. Remove the nuts (B), and separate the lumbar support motor (C) from the seat frame (D), then remove the lumbar support.

Fig. 377: Identifying Lumbar Support Motor, Seat Frame, Nuts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Lumbar Support
    1. Install the lumbar support motor (A) to the seat frame (B), then install the nuts (C).
    2. Connect the connector and install the harness clip (D).

Fig. 378: Identifying Lumbar Support Motor, Seat Frame, Clip And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the lumbar support motor cover (A) down to install it to the upper hook (B).
4. Install the cover to the lower hook (C) and the pin (D). Make sure the hooks snap into place securely.

Fig. 379: Identifying Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the lower wire (A) to both seat-back side frames (B), then install the lumbar support (C).

Fig. 380: Installing Lower Wire To Seat-Back Side Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the plate (A) and the two screws (B) to the seat frame (C).
7. Install the cable band (D) securing the lumbar support cable (E).

Fig. 381: Identifying Lumbar Support Cable, Seat Frame, Band, Plate And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat-Back Cover/Pad - Driver's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 382: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint Guides - Driver's Side
    1. Install the head restraint guides (A).

Fig. 383: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat-Back - Driver's Side
    1. Install the hook strips (A) to the seat-back frame (B).

Fig. 384: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 385: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness clips (A).
4. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 386: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the hook strips (A) to the seat frame.

Fig. 387: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Zip the seat-back cover (A).
7. Install the hook strip (B).

Fig. 388: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the connector clips (A).
9. Install the harness clips (B).
10. Install the harness holders (C) to the seat cushion frame springs (D).
11. Connect the connector (E).

Power Seat

Fig. 389: Installing Harness Holder To Seat Cushion Frame Springs (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat with Seat Heater

Fig. 390: Installing Harness Holder To Seat Cushion Frame Springs (Manual Seat With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 391: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Install the pins (A) to the seat-back.

Fig. 392: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 393: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 394: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 395: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 396: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 397: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 398: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 399: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 400: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 401: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service .

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove

the cover by pulling it up.

Fig. 402: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 403: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 404: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 405: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Assembly
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 406: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the seat mounting bolts (A) from the front side of the front seat.

Fig. 407: Identifying Front Seat Mounting Bolts (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the seat mounting bolts (A) from the rear side of the front seat.

Fig. 408: Identifying Front Seat Mounting Bolts (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Driver's Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

NOTE: Repeat this procedure on the opposite side.

Fig. 417: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 418: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 419: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 420: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 421: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT SLIDE MOTOR REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove

the cover by pulling it up.

Fig. 422: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 423: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 424: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 425: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 426: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 427: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 428: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 429: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Slide Motor
    1. Remove the slide motor cover (A).

Fig. 430: Identifying Front Seat Slide Motor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the cable housing (A) from the hooks (B).
3. Disconnect the flex cable (C) from the worm gear (D) in the inner seat track by pulling out the cable housing.
4. Disconnect the flex cable from the slide motor (E).

NOTE: Take care not to kink the cable.

Fig. 431: Disconnecting Flex Cable From Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connector.
6. Detach the harness clip (A).

7. Remove the bolts (B) securing the motor bracket (C) with a TORX T30 bit.

Fig. 432: Identifying Motor Bracket, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the slide motor (A) from the short flex cable (B), and remove the slide motor bracket (C) from the slide gearbox bracket (D).

Fig. 433: Removing Slide Motor From Slide Gearbox Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pull out the short flex cable (A) from the worm gear (B).

Fig. 434: Identifying Short Flex Cable And Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the screws (A), then remove the slide motor (B) from the slide motor bracket (C).

Fig. 435: Identifying Front Seat Slide Motor, Bracket And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Slide Motor
    1. Install the slide motor (A) to the slide motor bracket (B) with the screws (C).

Fig. 436: Identifying Front Seat Slide Motor, Bracket And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the short flex cable (A) to the worm gear (B).

NOTE: Apply multipurpose grease to the warm gear area.

Fig. 437: Identifying Short Flex Cable And Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the slide motor (A) to the short flex cable (B), and install the slide motor bracket (C) to the slide gearbox bracket (D).

Fig. 438: Installing Slide Motor To Short Flex Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts (A) securing the motor bracket (B) with a TORX T30 bit.
5. Install the harness clip (C).
6. Connect the connector.

Fig. 439: Identifying Front Seat Motor Connector, Bracket, Clip And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the flex cable (A) to the slide motor (B).

8. Install the flex cable to the worm gear (C).

NOTE: Apply multipurpose grease to the worm gear area.

9. Install the cable housing (D) to the hooks (E).

Fig. 440: Identifying Slide Motor, Flex Cable, Worm Gear, Cable Housing And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the slide motor cover (A).

Fig. 441: Identifying Slide Motor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat - Driver's Side
    1. Connect the connectors (A).

2. Install the harness clip (B).

Fig. 442: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 443: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 444: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 445: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 446: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 447: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 448: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 449: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT-BACK COVER REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-9 show removing the driver's side, steps 10-17 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 450: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 451: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 452: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 453: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 454: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 455: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 456: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 457: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 458: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 459: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 460: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the connector clips (A).
3. Detach the harness clips (B).
4. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
5. Disconnect the connectors (F).

Power Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat with Seat Heater

Fig. 462: Removing Seat Cushion Frame Springs Holder (Manual Seat With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hook strip (A).
7. Unzip the seat-back cover (B).

Fig. 463: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 464: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Detach the harness clips (A).

10. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 465: Removing Harnesses Through Holes From Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 466: Releasing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook strips (A) from the seat-back frame (B).

Fig. 467: Releasing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Head Restraint Guides - Driver's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 468: Removing Guides From Seat-Back

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat-Back Cover/Pad - Driver's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 469: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat-Back Cover - Driver's Side
    1. Remove airbag attachment wire B from the outside reinforcing cloth (C).
    2. Remove airbag attachment wire A from the inside reinforcing cloth (D).

Fig. 470: Removing Airbag Attachment Wire From Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Pull back the edge of the seat-back cover (A) all the way around, and release the upholstery rings (B), then remove the seat-back cover.

Leather Seat

10. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 473: Removing Front Seat Belt Lower Anchor Cover (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 474: Removing Front Seat Belt Lower Anchor Bolt (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 475: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 476: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the front mounting bolts (A) from the front seat.

Fig. 477: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 478: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

13. Front Seat Armrest - Passenger's Side
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 481: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 482: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat-Back - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 483: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the connector clips (A).
3. Detach the harness clips (B).
4. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
5. Disconnect the connectors (F).

Except KX - Without Seat Heater

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hook strip (A).
7. Unzip the seat-back cover (B).

Fig. 487: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 488: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Detach the harness clips (A).
10. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 489: Removing Harnesses Through Holes From Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 490: Releasing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the screw (A), and release the hooks (B), then remove the cover (C), and detach the harness clip (D).

Fig. 491: Identifying Airbag Cover, Hooks, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Disconnect the connectors (A) detach the and harness clips (B) from the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 492: Identifying ODS/OPDS Unit, Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Release the hook strips (A) from the seat-back frame (B).
15. Detach the harness clips (C).

Fig. 493: Releasing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Head Restraint Guide - Passenger's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 494: Removing Guides From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Seat-Back Cover/Pad - Passenger's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 495: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat-Back Cover - Passenger's Side
    1. Remove airbag attachment wire B from the outside reinforcing cloth (C).
    2. Remove airbag attachment wire A from the inside reinforcing cloth (D).

Fig. 496: Removing Airbag Attachment Wire From Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Pull back the edge of the seat-back cover (A) all the way around, and release the upholstery rings (B), then remove the seat-back cover.

Leather Seat

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Steps 1-8 show installing the passenger's side, steps 9-17 show installing the driver's side.**

1. Front Seat-Back Cover - Passenger's Side

NOTE: **Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).**

Fig. 499: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat-back cover (A) with the upholstery rings (B).

Leather Seat

Fig. 500: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 501: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loop airbag attachment wire A through the inside reinforcing cloth (C).
3. Loop airbag attachment wire B through the outside reinforcing cloth (D).

Fig. 502: Connecting Airbag Attachment Wire Through Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat-Back Cover/Pad - Passenger's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 503: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint Guide - Passenger's Side
    1. Install the head restraint guides (A).

Fig. 504: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat-Back - Passenger's Side
    1. Install the hook strips (A) to the seat-back frame (B).
    2. Install the harness clips (C).

Fig. 505: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A) and install the harness clips (B) to the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 506: Identifying ODS/OPDS Unit, Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the hooks (A), and install the cover (B), and install the screw (C) and the harness clip (D).

Fig. 507: Identifying Front Seat-Back Cover, Hooks, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 508: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the harness clips (A).
7. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 509: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the hook strips (A) to the seat-back frame.

Fig. 510: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Zip the seat-back cover (A).

10. Install the hook strip (B).

Fig. 511: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the connector clips (A).
12. Install the harness clips (B).
13. Install the harness holders (C) to the seat cushion frame springs (D).
14. Connect the connector (E).

Except KX - Without Seat Heater

10. Front Seat-Back Cover/Pad - Driver's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 530: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Head Restraint Guides - Driver's Side
    1. Install the head restraint guides (A).

Fig. 531: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat-Back - Driver's Side
    1. Install the hook strips (A) to the seat-back frame (B).

Fig. 532: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 533: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness clips (A).
4. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 534: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the hook strips (A) to the seat frame.

Fig. 535: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Zip the seat-back cover (A).
7. Install the hook strip (B).

Fig. 536: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the connector clips (A).
9. Install the harness clips (B).
10. Install the harness holders (C) to the seat cushion frame springs (D).
11. Connect the connector (E).

Power Seat

14. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 542: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 543: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 544: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 545: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 546: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 547: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

       NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 548: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 549: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 550: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
20. OPDS Sensor Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu,

select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.

3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

POWER LUMBAR SUPPORT SWITCH	**REMOVAL, INSTALLATION, AND TEST**

POWER LUMBAR SUPPORT MOTOR TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 552: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 553: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).

2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 554: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
   1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 555: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
   1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 556: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 557: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 558: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 559: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 560: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 561: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back As Needed - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 562: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hook strip (A).
3. Unzip the seat-back cover (B).

Fig. 563: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hook strips (A).

Fig. 564: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hooks (A).

Fig. 565: Releasing Seat-Back Cover Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Power Lumbar Support Motor Cover
    1. Release the hook (A), then remove the pin (B).
    2. Pull the cover up to release it from the upper hook (C), then remove the power lumbar support motor cover (D).

Fig. 566: Identifying Power Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Power Lumbar Support Motor - Test
    1. Disconnect the connector.
    2. Test the power lumbar support motor by applying battery power and ground to the terminals according to the table.
    3. If the motor does not run smoothly, replace it.
    4. Connect the connector.

Fig. 567: Identifying Power Lumbar Support Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1	2
Forward	⊖	⊕
Backward	⊕	⊖

Fig. 568: Power Lumbar Support Motor Switch Terminal Position Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Power Lumbar Support Motor Cover
    1. Install the power lumbar support motor cover (A) upward to install it to the upper hook (B).
    2. Install the power lumbar support motor cover to the lower hook (C) and pin (D). Make sure the hook snaps into place securely.

Fig. 569: Identifying Power Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat-Back As Needed - Driver's Side
    1. Install the hook strips (A) to the seat-back frame (B).

Fig. 570: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the hook strips (A) to the seat frame.

Fig. 571: Identifying Seat Frame Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Zip the seat-back cover (A).
4. Install the hook strip (B).

Fig. 572: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 573: Installing Elastic Strap To Seat Cushion Frame Springs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Armrest
    1. Install the pins (A) to the seat-back.

Fig. 574: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 575: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 576: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 577: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 578: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 579: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 580: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 581: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 582: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 583: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

POWER LUMBAR SUPPORT SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Cover
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the

front cover (E).

Fig. 584: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover
    1. Remove the screw (A), and detach the clip (B).
    2. Release the tabs (C).
    3. Pull up the recline cover (D) to release the hook (E).
    4. Disconnect the connectors.
    5. Remove the upper center inner cover (F).
    6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 585: Identifying Front Seat Recline Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Power Lumbar Support Switch
    1. Remove the power lumbar support switch cover (A).
    2. Remove the power lumbar support switch (B) from the recline cover (C).

Fig. 586: Identifying Power Lumbar Support Switch, Cover And Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Power Lumbar Support Switch - Test
    1. Reinstall the power lumbar support switch cover (A) to the power lumbar support switch (B).
    2. Check for continuity between the terminals in each switch position according to the table.
    3. If the continuity is not as specified, replace the switch.

Fig. 587: Identifying Power Lumbar Support Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1	2	3	4	5
Forward	*	○	○	○	
Backward	○	○		* ○	○

*:There is continuity without operating a switch.

Fig. 588: Power Lumbar Support Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Power Lumbar Support Switch
    1. Install the power lumbar support switch (A) to the recline cover (B).
    2. Install the power lumbar support switch cover (C).

Fig. 589: Identifying Power Lumbar Support Switch, Cover And Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover

1. Install the upper center inner cover (A) to the recline cover (B).
2. Connect the connector, then install the wire harness (C) to the hooks (D).
3. Install the clip (E) and tabs (F), then install the recline cover.
4. Install the tabs (G), then install the screw (H).

Fig. 590: Identifying Front Seat Recline Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Cover
    1. Install the tabs (A), set the pin (B), and install the hook (C), then install the front cover (D). Make sure the hooks snap into place securely.

Fig. 591: Identifying Front Cover, Hook, Tabs, Pin And Screws

REAR SEAT ARMREST BEVERAGE HOLDER REMOVAL AND INSTALLATION

REMOVAL

1. Rear Seat Armrest Beverage Holder
    1. Push on the bottom ribs (A) of the left side hooks (B) with the appropriate trim tool to pull up the armrest beverage holder (C), then release the hooks from the wire (D).

Fig. 593: Removing Rear Seat Armrest Beverage Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Release the right side hooks (A) of the rear seat armrest beverage holder (B) from the wire (C), then remove the beverage holder.

Fig. 594: Identifying Rear Seat Armrest Beverage Holder, Wire And Right Side Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat Armrest Beverage Holder
    1. Install the right side hooks (A) of the rear seat armrest beverage holder (B) to the wire (C).

NOTE: Make sure the right side hooks are installed securely to the wire.

Fig. 595: Identifying Rear Seat Armrest Beverage Holder, Wire And Right Side Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Push down on the beverage holder (A), and install the left side hooks (B) into the wire (C).

Fig. 596: Installing Rear Seat Armrest Beverage Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT ARMREST REMOVAL AND INSTALLATION

REMOVAL

1. Rear Seat Armrest
    1. Release the tab (A), then slide the armrest side cover (B) forward.
    2. Remove the bolt (C) with a 5 mm hex wrench.

Fig. 597: Sliding Armrest Side Cover Forward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the armrest (A) toward the left side.
4. Remove the right pivot shaft (B) from the friction plate (C).

Fig. 598: Removing Right Pivot Shaft From Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the armrest (A) toward the right side.
6. Release the left pivot shaft (B) from the collar (C).
7. Pull up the armrest, then pull out the armrest shaft (D) from the rear seat-back frame (E), then remove the armrest.

Fig. 599: Removing Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the collar (A), the inner friction plate (B), and the outer friction plate (C) from the rear seat-back frame.

Fig. 600: Identifying Rear Seat-Back Frame Collar, Inner And Outer Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat Armrest

1. Install the collar (A), the inner friction plate (B), and the outer friction plate (C) to the rear seat-back frame.

Fig. 601: Identifying Rear Seat-Back Frame Collar, Inner And Outer Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the armrest shaft (A) to the seat-back frame (B).
3. Insert the left pivot shaft (C) to the collar (D).
4. Slide the armrest (E) toward the left side.

Fig. 602: Installing Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the pivot shaft (A) to the friction plate (B).
6. Slide the armrest (C) toward the right side.

Fig. 603: Installing Pivot Shaft From Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bolt (A) with a 5 mm hex wrench to the armrest (B), then install the armrest side cover (C).

Fig. 604: Installing Armrest Side Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT CUSHION COVER REMOVAL AND INSTALLATION

REMOVAL

1. Upper Inner Seat Cushion Cover
    1. Detach the hooks (A), then remove the upper inner seat cushion cover (B) from the rear seat cushion (C).

Fig. 605: Identifying Upper Inner Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Upper Outer Seat Cushion Cover
    1. Detach the hooks (A), then remove the upper outer seat cushion cover (B) from the rear seat cushion (C).

Fig. 606: Identifying Upper Outer Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Cushion
    1. Remove the nuts (A), then remove the rear seat cushion (B) from the rear seat cushion foot assembly (C).

Fig. 607: Identifying Rear Seat Cushion Foot Assembly, Rear Seat Cushion And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat Cushion Cover
    1. Pull back the edge of the rear seat cushion cover (A) all the way around.

Left Rear Seat Cushion Cover

2. Rear Seat Cushion
    1. Set the position of the pins (A), then install the rear seat cushion (B) and the nuts (C) to the rear seat cushion foot assembly (D).

Fig. 630: Identifying Rear Seat Cushion Foot Assembly, Rear Seat Cushion And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Upper Outer Seat Cushion Cover
    1. Install the upper outer seat cushion cover (A) to the rear seat cushion (B). Make sure the hooks (C) snap into place securely.

Fig. 631: Identifying Upper Outer Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Inner Seat Cushion Cover
    1. Install the upper inner seat cushion cover (A) to the rear seat cushion (B). Make sure the hooks (C) snap into place securely.

Fig. 632: Identifying Upper Inner Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT CUSHION DISASSEMBLY AND REASSEMBLY

DISASSEMBLY

1. Rear Seat Cushion Foot Cover - Both Sides
    1. Pull up the rear seat cushion foot covers (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat cushion foot covers.

    Left side

Fig. 633: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 634: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Left Rear Seat Cushion Assembly
    1. Detach the cables (A) from the cable brackets (B), and detach the cable clip (C), then disconnect

the cables from the seat cushion assembly (D).

Fig. 635: Removing Left Rear Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bolts (A) securing the left rear seat cushion assembly (B), then remove the left rear seat cushion assembly.

Fig. 636: Identifying Left Rear Seat Cushion Assembly And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Right Rear Seat Cushion Assembly
    1. Detach the cables (A) from the cable brackets (B), and detach the cable clip (C), then disconnect the cables from the seat cushion assembly (D).

Fig. 637: Removing Right Rear Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bolts (A) securing the right rear seat cushion assembly (B), then remove the right rear seat cushion assembly.

Fig. 638: Identifying Right Rear Seat Cushion Assembly And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Inner Seat Cushion Cover
    1. Detach the hooks (A), then remove the upper inner seat cushion cover (B) from the rear seat cushion (C).

Fig. 639: Identifying Upper Inner Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Upper Outer Seat Cushion Cover
    1. Detach the hooks (A), then remove the upper outer seat cushion cover (B) from the rear seat cushion (C).

Fig. 640: Identifying Upper Outer Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Seat Cushion Foot Assembly
    1. Remove the nuts (A), then remove the rear seat cushion foot assembly (B).

Fig. 641: Identifying Rear Seat Cushion Foot Assembly And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat Cushion Foot
    1. Remove the screws (A), then remove the cover(s) (B).

    Left Side

Fig. 642: Identifying Rear Seat Cushion Foot Cover And Screws (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 643: Identifying Rear Seat Cushion Foot Cover And Screws (Right Side)

3. Rear Seat Cushion Foot Assembly
    1. Install the nuts (A) securing the rear seat cushion foot assembly (B).

Fig. 658: Identifying Rear Seat Cushion Foot Assembly And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Outer Seat Cushion Cover
    1. Install the upper outer seat cushion cover (A) to the rear seat cushion (B). Make sure the hooks (C) snap into place securely.

Fig. 659: Identifying Upper Outer Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Upper Inner Seat Cushion Cover
    1. Install the upper inner seat cushion cover (A) to the rear seat cushion (B). Make sure the hooks (C) snap into place securely.

Fig. 660: Identifying Upper Inner Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Right Rear Seat Cushion Assembly
    1. Install the right rear seat cushion assembly (A).

NOTE: **Tighten the bolts (B) by hand first, then tighten them to the specified torque.**

Fig. 661: Identifying Right Rear Seat Cushion Assembly And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the cables (A) to the rear seat cushion assembly (B), then install the cables to the cable brackets (C), and install the cable clip (D).

Fig. 662: Installing Right Rear Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Left Rear Seat Cushion Assembly
    1. Install the left rear seat cushion assembly (A).

NOTE: **Tighten the bolts (B) by hand first, then tighten them to the specified torque.**

Fig. 663: Identifying Left Rear Seat Cushion Assembly And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the cables (A) to the rear seat cushion assembly (B), then install the cables to the cable brackets (C), and install the cable clip (D).

Fig. 664: Installing Left Rear Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Seat Cushion Foot Cover - Both Sides

1. Install the rear seat cushion foot covers (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

Fig. 665: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Left Side)

REAR SEAT CUSHION LATCH REMOVAL AND INSTALLATION

REMOVAL

1. Rear Seat Cushion Foot Cover
    1. Pull up the rear seat cushion foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat foot cover.

Fig. 667: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Seat Release Cable Latch Side - Disconnection/Reconnection
    1. Disconnect the rear seat release cable (A) and the rear seat cushion control cable (B) from the rear seat cushion latch (C).

Fig. 668: Disconnecting Rear Seat Release Cable And Control Cable From Rear Seat Cushion Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Cushion Latch
    1. Remove the bolts (A), then remove the rear seat cushion latch (B) from the rear seat cushion foot assembly (C).

Fig. 669: Identifying Rear Seat Cushion Foot Assembly, Latch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat Cushion Latch

1. Install the rear seat cushion latch (A) to the rear seat cushion foot assembly (B).

Fig. 670: Identifying Rear Seat Cushion Foot Assembly, Latch And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Seat Release Cable Latch Side - Disconnection/Reconnection
    1. Connect the rear seat release cable (A) and the rear seat cushion control cable (B) to the rear seat cushion latch (C).

NOTE:

- **Make sure the cables are connected securely.**
- **Make sure the rear seat cushion latches and unlatches properly.**

Fig. 671: Connecting Rear Seat Release Cable And Control Cable To Rear Seat Cushion Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Cushion Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 672: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT CUSHION REMOVAL AND INSTALLATION

REMOVAL

1. Upper Inner Seat Cushion Cover
    1. Detach the hooks (A), then remove the upper inner seat cushion cover (B) from the rear seat cushion (C).

Fig. 673: Identifying Upper Inner Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Upper Outer Seat Cushion Cover
    1. Detach the hooks (A), then remove the upper outer seat cushion cover (B) from the rear seat cushion (C).

Fig. 674: Identifying Upper Outer Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Cushion
    1. Remove the nuts (A), then remove the rear seat cushion (B) from the rear seat cushion foot assembly (C).

Fig. 675: Identifying Rear Seat Cushion Foot Assembly, Rear Seat Cushion And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat Cushion
    1. Set the position of the pins (A), then install the rear seat cushion (B) and the nuts (C) to the rear seat cushion foot assembly (D).

Fig. 676: Identifying Rear Seat Cushion Foot Assembly, Rear Seat Cushion And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Upper Outer Seat Cushion Cover
    1. Install the upper outer seat cushion cover (A) to the rear seat cushion (B). Make sure the hooks (C) snap into place securely.

Fig. 677: Identifying Upper Outer Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Upper Inner Seat Cushion Cover
    1. Install the upper inner seat cushion cover (A) to the rear seat cushion (B). Make sure the hooks (C) snap into place securely.

Fig. 678: Identifying Upper Inner Seat Cushion Cover, Rear Seat Cushion And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT RELEASE LEVER/CABLE REMOVAL AND INSTALLATION

REMOVAL

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 679: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover

1. Remove the cargo floor cover (A).

Fig. 680: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 681: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Opening Seal As Needed

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

Fig. 682: Removing Rear Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 683: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Carpet Trim
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

    Left side

Fig. 684: Removing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 685: Removing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trim (C) by hand to detach the clips (D), then remove the rear carpet trims.

Left side

Fig. 686: Identifying Rear Side Trim Panel, Rear Carpet Trim, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 687: Identifying Rear Side Trim Panel, Rear Carpet Trim, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 688: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 689: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Side Trim Panel
    1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.

2. Remove the screws (C).

Fig. 690: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 691: Identifying Trunk Hook And Center Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 692: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 693: Identifying Rear Side Trim Panel, Quarter Pillar Trim, Hooks And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 694: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 695: Identifying Rear Seat Release Cable And Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Seat Foot Cover
    1. Pull up the rear seat foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat foot cover.

Left Side

Fig. 696: Identifying Rear Seat Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 697: Identifying Rear Seat Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat-Back Release Lever/Cable

1. Detach the rear seat release cable (A) from the cable bracket (B).
2. Disconnect the rear seat release cable from the rear seat cushion latch (C).

Fig. 698: Disconnecting Rear Seat Release Cable From Cushion Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear seat release cable (A) from the cable bracket (B).
4. Remove the rear seat release cable from the rear seat release lever (C).

Fig. 699: Identifying Rear Seat Release Cable, Lever And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat-Back Release Lever/Cable
    1. Install the rear seat release cable (A) to the rear seat release lever (B).
    2. Install the rear seat release cable to the cable bracket (C).

NOTE: **Make sure the rear seat release cable is connected securely.**

Fig. 700: Identifying Rear Seat Release Cable, Lever And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the rear seat release cable (A) to the rear seat cushion latch (B).
4. Install the rear seat release cable to the cable bracket (C).

NOTE: Make sure the rear seat release cable is connected securely.

Fig. 701: Installing Rear Seat Release Cable To Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Seat Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left Side

Fig. 702: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 703: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Side Trim Panel
    1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 704: Installing Rear Seat Release Cable To Clips Of Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 705: Identifying Rear Seat Release Lever And Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 706: Identifying Rear Side Trim Panel, Tabs, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 707: Identifying Tie-Down Hook And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 708: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 709: Identifying Rear Seat Release Lever Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 710: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 711: Identifying Alignment Mark Of Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Carpet Trim
    1. Install the rear carpet trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

Fig. 712: Identifying Rear Carpet Trim, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 713: Identifying Rear Carpet Trim, Hooks And Clips (Right Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 714: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 715: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 716: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Door Opening Seal As Needed
    1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 717: Installing Rear Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 718: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 719: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 720: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT-BACK COVER REMOVAL AND INSTALLATION

REMOVAL

NOTE: Steps 6-9 show removing the left side, steps 10-12 is right side shown.

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 721: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 722: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 723: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat Foot Cover
    1. Pull up the rear seat foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat foot cover.

    Left Side

Fig. 724: Identifying Rear Seat Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 725: Identifying Rear Seat Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Seat-Back

1. Detach the rear seat-back arrange control cable (A) from the cable bracket (B).
2. Detach the cable clip (C), then disconnect the seat-back arrange control cable from the rear seat cushion foot (D).

Fig. 726: Disconnecting Seat-Back Arrange Control Cable From Rear Seat Cushion Foot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull up the edge of seat-back cover (A), then detach the clips (B).
4. Left Side: Remove the mounting bolts (C), then remove the rear seat-back (D).
5. Right Side: Remove the mounting bolts (C) and the anchor bolt (E), then remove the rear seat-back (F).

Left Side

Fig. 727: Removing Rear Seat-Back (Left Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 728: Removing Rear Seat-Back (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Seat Head Restraint - Left Side

Left Rear Head Restraint

1. Push a flat-tip screwdriver (A) into the notch at the center of the knob (B) to release the tab (C).

Fig. 729: Removing Rear Seat Head Restraint Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert a 5 mm (0.2 in) thickness flat-tip screwdriver in one side of the notch on both sides of the knob (A), then the knob is moved out about 2 mm (0.08 in).
3. Push and hold the knob (B), then pull out the head restraint (C) as shown.

Fig. 730: Pulling Rear Seat Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Center Rear Head Restraint

1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 731: Pulling Center Rear Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat Armrest
    1. Release the tab (A), then slide the armrest side cover (B) forward.
    2. Remove the bolt (C) with a 5 mm hex wrench.

Fig. 732: Sliding Armrest Side Cover Forward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the armrest (A) toward the left side.
4. Remove the right pivot shaft (B) from the friction plate (C).

Fig. 733: Removing Right Pivot Shaft From Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the armrest (A) toward the right side.
6. Release the left pivot shaft (B) from the collar (C).
7. Pull up the armrest, then pull out the armrest shaft (D) from the rear seat-back frame (E), then remove the armrest.

Fig. 734: Removing Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the collar (A), the inner friction plate (B), and the outer friction plate (C) from the rear seat-back frame.

Fig. 735: Identifying Rear Seat-Back Frame Collar, Inner And Outer Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Seat-Back Latch Cover - Left Side
    1. Detach the clips (A) securing the latch cover (B), and pull out the cover to detach the hooks (C).

Fig. 736: Identifying Rear Seat-Back Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Seat-Back Cover - Left Side
    1. Release the hooks (A), then remove the tether anchor cover (B).

Fig. 737: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hooks (A), then pull up the armrest back panel (B).

Fig. 738: Removing Armrest Back Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the armrest back panel (A) from the hook strip (B).

Fig. 739: Identifying Armrest Back Panel And Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw (A), while pulling the lock knob (B) out.
5. Pull out the lock knob trim (C).

Fig. 740: Identifying Lock Knob, Trim And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Detach the rear seat-back lock knob control cable (A) from the cable bracket (B).
7. Disconnect the rear seat-back lock knob control cable from the lock knob trim (C).

Fig. 741: Identifying Rear Seat-Back Lock Knob Control Cable, Bracket And Lock Knob Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hooks (A) on the strap cover (B).

Fig. 742: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the bolt (A) with a 6 mm hex wrench.
10. Remove the washer (B), the left rear seat inner pivot (C), and the bushing (D).

Fig. 743: Identifying Left Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release the hooks (A), then remove the covers (B) from the left rear seat inner pivot (C).

Fig. 744: Identifying Left Rear Seat Inner Pivot, Covers And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook strips (A) from the rear seat-back frame (B).
13. Release the hook and loop fastener (C).

Fig. 745: Identifying Rear Seat-Back Frame, Fastener And Hook Strips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the push nut (A), then disconnect the rear seat-back cancel control cable (B) from the left rear seat cushion pivot (C).
15. Pull out the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 746: Identifying Rear Seat-Back Cancel Control Cable, Seat Cushion Pivot, Seat Arrange Control Cable, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Release the hook (A).
17. Release the hook and loop fastener (B).

Fig. 747: Identifying Hook And Loop Fastener And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Detach the rear seat-back cover (A) from the hooks (B) of the rear seat-back inner trim (C).

Fig. 748: Identifying Rear Seat-Back Cover, Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Unzip the rear seat-back cover (A).
20. Release the hook strips (B).

Fig. 749: Removing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the rear seat-back frame.

Fig. 750: Removing Guides From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Detach the clip (A) from the rear seat-back frame (B), then remove the seat-back cover/pad (C).

Fig. 751: Removing Seat-Back Cover/Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. While pulling back the rear seat-back cover (A), release the upholstery rings (B), then remove the rear seat-back cover.

Leather Seat

Fig. 752: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 753: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Seat Head Restraint - Right Side
    1. Push a flat-tip screwdriver (A) into the notch at the center of the knob (B) to release the tab (C).

Fig. 754: Pushing Rear Seat Head Restraint Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Insert a 5 mm (0.2 in) thickness flat-tip screwdriver in one side of the notch on both sides of the knob (A), then the knob is moved out about 2 mm (0.08 in).
    3. Push and hold the knob (B), then pull out the head restraint (C) as shown.

Fig. 755: Pulling Rear Seat Head Restraint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat-Back Latch Cover - Right Side
    1. Detach the clips (A) securing the latch cover (B), and pull out the cover to detach the hooks (C).

Fig. 756: Identifying Rear Seat-Back Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Seat-Back Cover - Right Side
    1. Release the hooks (A), then remove the tether anchor cover (B).

Fig. 757: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screw (A), while pulling the lock knob (B) out.
3. Pull out the lock knob trim (C).

Fig. 758: Identifying Lock Knob, Trim And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the rear seat-back lock knob control cable (A) from the cable bracket (B).
5. Disconnect the rear seat-back lock knob control cable from the lock knob trim (C).

Fig. 759: Identifying Rear Seat-Back Lock Knob Control Cable, Bracket And Lock Knob Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hooks (A) on the strap cover (B).

Fig. 760: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the bolt (A) with a 6 mm hex wrench.
8. Remove the washer (B), the right rear seat inner pivot (C), and the bushing (D).

Fig. 761: Identifying Right Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Release the hooks (A), then remove the covers (B) from the right rear seat inner pivot (C).

Fig. 762: Identifying Right Rear Seat Inner Pivot, Cover And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the push nut (A), then disconnect the rear seat-back cancel control cable (B) from the right rear seat cushion pivot (C).
11. Pull out the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 763: Identifying Rear Seat-Back Cancel Control Cable, Seat Cushion Pivot, Seat Arrange Control Cable, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook (A).
13. Release the hook and loop fastener (B).

Fig. 764: Identifying Hook And Loop Fastener And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Detach the rear seat-back cover (A) from the hooks (B) of the rear seat-back inner trim (C).

Fig. 765: Identifying Rear Seat-Back Cover, Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Unzip the rear seat-back cover (A).
16. Release the hook strips (B).

Fig. 766: Removing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Detach the clip (A) from the rear seat-back frame (B), then remove the seat-back cover/pad (C).

Fig. 767: Removing Seat-Back Cover/Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. While pulling back the rear seat-back cover (A), release the upholstery rings (B), then remove the rear seat-back cover.

Leather Seat

Fig. 768: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 769: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Steps 1-3 show installing the right side, steps 4-7 show installing the left side.

1. Rear Seat-Back Cover - Right Side

NOTE: Replace all of the upholstery rings (A) fastening the seatback cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).

Fig. 770: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the upholstery rings (B) securing the rear seat-back cover (A).

Leather Seat

Fig. 771: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 772: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover/pad (A) to the rear seat-back frame (B). Make sure the clip (C) snaps into place securely.

Fig. 773: Installing Rear Seat-Back Cover/Pad To Rear Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Zip the rear seat-back cover (A).
4. Install the hook strips (B) into place securely.

Fig. 774: Installing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the holes (A) to the hooks (B) of the seat-back inner trim (C).

Fig. 775: Identifying Seat-Back Inner Trim, Hooks And Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the hook and loop fastener (A) into place securely.
7. Install the hook (B) into place securely.

Fig. 776: Identifying Rear Seat-Back Cover Hook And Loop Fastener And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the rear seat-back cancel control cable (A) to the right rear seat cushion pivot (B), then install the push nut (C).
9. Install the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 777: Identifying Rear Seat-Back Cancel Control Cable, Right Rear Seat Cushion Pivot, Push Nut And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the covers (A) to the right rear seat pivot (B). Make sure the hooks (C) snap into place securely.

Fig. 778: Identifying Right Rear Seat Pivot, Covers And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Apply oil to the pivot bushing (A).
12. Install the pivot bushing, the right rear seat inner pivot (B), and the washer (C).
13. Install the bolt (D) with a 6 mm hex wrench.

Fig. 779: Identifying Right Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the strap cover (A). Make sure the hooks (B) snap into place securely.

Fig. 780: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Connect the rear seat-back lock knob control cable (A) to the lock knob trim (B).
16. Install the rear seat-back lock knob control cable to the cable bracket (C).

Fig. 781: Identifying Rear Seat-Back Lock Knob Control Cable And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the lock knob trim (A).
18. Install the screw (B), while pulling up the lock knob (C).

Fig. 782: Identifying Lock Knob Trim, Lock Knob And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the tether anchor cover (A). Make sure the hooks (B) snap into place securely.

Fig. 783: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Seat-Back Latch Cover - Right Side

1. Install the right rear seat latch cover (A). Make sure the hooks (B) and the clips (C) snap into place securely.

Fig. 784: Identifying Right Rear Seat Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Head Restraint
    1. Inspect the knob (A) if it has any of the following damage:
        - Any cracks or deformation at the tab (B) of the knob.
        - Any cracks or stress-whitening at the tab (B) of the knob.

Fig. 785: Identifying Rear Seat Head Restraint Knob And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the knob (A) to the head restraint (B) as shown.
3. Install the head restraint.

NOTE: **Make sure the head restraint is locked securely. If not, replace the head restraint.**

Fig. 786: Installing Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat-Back Cover - Left Side

NOTE: **Replace all of the upholstery rings (A) fastening the seatback cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).**

Fig. 787: Removing Seat Back Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the upholstery rings (B) securing the rear seat-back cover (A).

Leather Seat

Fig. 788: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric seat

Fig. 789: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover/pad (A) to the rear seat-back frame (B). Make sure the clip (C) snaps into place securely.

Fig. 790: Installing Rear Seat-Back Cover/Pad To Rear Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the head restraint guides (A). Make sure the guides are installed in the seat-back frame securely.

Fig. 791: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Zip the rear seat-back cover (A).
5. Install the hook strips (B) into place securely.

Fig. 792: Installing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the holes (A) to the hooks (B) of the seat-back inner trim (C).

Fig. 793: Identifying Seat-Back Inner Trim, Hooks And Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the hook and loop fastener (A) into place securely.
8. Install the hook strip (B) into place securely.

Fig. 794: Identifying Rear Seat-Back Cover Hook And Loop Fastener And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the rear seat-back cancel control cable (A) to the left rear seat cushion pivot (C), then install the push nut (B).
10. Install the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 795: Identifying Rear Seat-Back Cancel Control Cable, Left Rear Seat Cushion Pivot, Push Nut And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the hook strips (A) into place securely.
12. Install the hook and loop fastener (B) into place securely.

Fig. 796: Identifying Rear Seat-Back Cover Hook And Loop Fastener And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the covers (A) to the left rear seat pivot (B). Make sure the hooks (C) snap into place

securely.

Fig. 797: Identifying Left Rear Seat Pivot, Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Apply oil to the pivot bushing (A).
15. Install the pivot bushing, the left rear seat inner pivot (B), and the washer (C).
16. Install the bolt (D) with a 6 mm hex wrench.

Fig. 798: Identifying Right Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the strap cover (A). Make sure the hooks (B) snap into place securely.

Fig. 799: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Connect the rear seat-back lock knob control cable (A) to the lock knob trim (B).
19. Install the rear seat-back lock knob control cable to the cable bracket (C).

Fig. 800: Identifying Rear Seat-Back Lock Knob Control Cable And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the lock knob trim (A).
21. Install the screw (B), while pulling up the lock knob (C).

Fig. 801: Identifying Lock Knob Trim, Lock Knob And Screws

Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the lower edge of the armrest back panel (A) to the hook strip (B).

Fig. 802: Identifying Lower Edge Of Armrest Back Panel And Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the rear armrest (A) back panel. The hooks (B) snap into place securely.

Fig. 803: Installing Rear Armrest Back Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Install the tether anchor cover (A). Make sure the hooks (B) snap into place securely.

Fig. 804: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Seat-Back Latch Cover - Left Side
    1. Install the left rear seat latch cover (A). Make sure the hooks (B) and the clips (C) snap into place securely.

Fig. 805: Identifying Left Rear Seat Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Seat Armrest
    1. Install the collar (A), the inner friction plate (B), and the outer friction plate (C) to the rear seat-back frame.

Fig. 806: Identifying Rear Seat-Back Frame Collar, Inner And Outer Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the armrest shaft (A) to the seat-back frame (B).
3. Insert the left pivot shaft (C) to the collar (D).
4. Slide the armrest (E) toward the left side.

Fig. 807: Installing Armrest

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the pivot shaft (A) to the friction plate (B).
6. Slide the armrest (C) toward the right side.

Fig. 808: Installing Pivot Shaft To Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bolt (A) with a 5 mm hex wrench to the armrest (B), then install the armrest side cover (C).

Fig. 809: Installing Armrest Side Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat Head Restraint - Left Side

Left Rear Head Restraint

1. Inspect the knob (A) if it has any of the following damage:
   - Any cracks or deformation at the tab (B) of the knob.
   - Any cracks or stress-whitening at the tab (B) of the knob.

Fig. 810: Identifying Rear Seat Head Restraint Knob And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the knob (A) to the head restraint (B) as shown.
3. Install the head restraint.

NOTE: **Make sure the head restraint is locked securely. If not, replace the head restraint.**

Fig. 811: Installing Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Center Rear Head Restraint

1. Install the center rear head restraint (A).

Fig. 812: Installing Center Rear Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Seat-Back
    1. Left Side: Install the mounting bolts (A), then install the rear seatback (C).
    2. Right Side: Install the mounting bolts (A) and anchor bolt (B), then install the rear seat-back (C).

3. Install the rear seat-back cover (D). The clips (E) snap into place securely.

Left Side

Fig. 813: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 814: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the rear seat-back arrange control cable (A) to the rear seat cushion foot (B).
5. Install the rear seat-back arrange control cable to the cable bracket (C).
6. Install the cable clip (D).

NOTE:

- **Make sure the cables are connected securely.**
- **Make sure the rear seat cushion latches and unlatches properly.**

Fig. 815: Connecting Rear Seat-Back Arrange Control Cable To Rear Seat Cushion Foot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Seat Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left Side

Fig. 816: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 817: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Damper Maintenance Cover

1. Fold down the rear seat-back.
2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 818: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 819: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 820: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT-BACK FRAME REMOVAL AND INSTALLATION

REMOVAL

NOTE: **Steps 6-11 show removing the left side, steps 12-16 show removing the right side.**

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 821: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 822: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 823: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat Foot Cover
    1. Pull up the rear seat foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat foot cover.

Left Side

Fig. 824: Identifying Rear Seat Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 825: Identifying Rear Seat Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Seat-Back

1. Detach the rear seat-back arrange control cable (A) from the cable bracket (B).
2. Detach the cable clip (C), then disconnect the seat-back arrange control cable from the rear seat cushion foot (D).

Fig. 826: Disconnecting Seat-Back Arrange Control Cable From Rear Seat Cushion Foot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull up the edge of seat-back cover (A), then detach the clips (B).
4. Left Side: Remove the mounting bolts (C), then remove the rear seat-back (D).
5. Right Side: Remove the mounting bolts (C) and the anchor bolt (E), then remove the rear seat-back (F).

Left Side

Fig. 827: Removing Seat-Back Cover (Left Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 828: Removing Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Seat Head Restraint - Left Side

Left Rear Head Restraint

1. Push a flat-tip screwdriver (A) into the notch at the center of the knob (B) to release the tab (C).

Fig. 829: Pushing Rear Seat Head Restraint Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert a 5 mm (0.2 in) thickness flat-tip screwdriver in one side of the notch on both sides of the knob (A), then the knob is moved out about 2 mm (0.08 in).
3. Push and hold the knob (B), then pull out the head restraint (C) as shown.

Fig. 830: Removing Head Restraint Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Center Rear Head Restraint

1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 831: Pulling Center Rear Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat Armrest
    1. Release the tab (A), then slide the armrest side cover (B) forward.
    2. Remove the bolt (C) with a 5 mm hex wrench.

Fig. 832: Sliding Armrest Side Cover Forward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the armrest (A) toward the left side.
4. Remove the right pivot shaft (B) from the friction plate (C).

Fig. 833: Removing Right Pivot Shaft From Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the armrest (A) toward the right side.
6. Release the left pivot shaft (B) from the collar (C).
7. Pull up the armrest, then pull out the armrest shaft (D) from the rear seat-back frame (E), then remove the armrest.

Fig. 834: Removing Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the collar (A), the inner friction plate (B), and the outer friction plate (C) from the rear seat-back frame.

Fig. 835: Identifying Rear Seat-Back Frame Collar, Inner And Outer Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Seat-Back Latch Cover - Left Side
    1. Detach the clips (A) securing the latch cover (B), and pull out the cover to detach the hooks (C).

Fig. 836: Identifying Rear Seat-Back Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Seat-Back Cover - Left Side
    1. Release the hooks (A), then remove the tether anchor cover (B).

Fig. 837: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hooks (A), then pull up the armrest back panel (B).

Fig. 838: Pulling Armrest Back Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the armrest back panel (A) from the hook strip (B).

Fig. 839: Identifying Armrest Back Panel And Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw (A), while pulling up the lock knob (B).
5. Pull out the lock knob trim (C).

Fig. 840: Identifying Lock Knob Trim, Knob And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Detach the rear seat-back lock knob control cable (A) from the cable bracket (B).
7. Disconnect the rear seat-back lock knob control cable from the lock knob trim (C).

Fig. 841: Identifying Rear Seat-Back Lock Knob Control Cable, Bracket And Lock Knob Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hooks (A) on the strap cover (B).

Fig. 842: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the bolt (A) with a 6 mm hex wrench.
10. Remove the washer (B), the left rear seat inner pivot (C), and bushing (D).

Fig. 843: Identifying Left Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release the hooks (A), then remove the covers (B) from the left rear seat inner pivot (C).

Fig. 844: Identifying Left Rear Seat Inner Pivot, Covers And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook strips (A) from the rear seat-back frame (B).
13. Release the hook and loop fastener (C).

Fig. 845: Identifying Hook And Loop Fastener And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the push nut (A), then disconnect the rear seat-back cancel control cable (B) from the left rear seat cushion pivot (C).
15. Pull out the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 846: Identifying Rear Seat-Back Cancel Control Cable, Seat Cushion Pivot, Seat Arrange Control Cable, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Release the hook (A).
17. Release the hook and loop fastener (B).

Fig. 847: Identifying Hook And Loop Fastener And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Detach the rear seat-back cover (A) from the hooks (B) of the rear seat-back inner trim (C).

Fig. 848: Identifying Rear Seat-Back Cover, Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Unzip the rear seat-back cover (A).
20. Release the hook strips (B).

Fig. 849: Removing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the rear seat-back frame.

Fig. 850: Removing Guides From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Detach the clip (A) from the rear seat-back frame (B), then remove the seat-back cover/pad (C).

Fig. 851: Removing Seat-Back Cover/Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Seat-Back Latch - Left Side
    1. Detach the rear seat-back lock knob control cable (A) and the rear seat-back lock control cable (B) from the cable bracket (C).
    2. Disconnect the rear seat-back lock knob control cable and the rear seat-back lock control cable from the rear seat-back latch (D).
    3. Remove the bolts (E), then remove the rear seat-back latch.

Fig. 852: Identifying Rear Seat-Back Lock And Lock Knob Control Cable, Bracket, Latch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat Back Frame - Left Side
    1. Remove the bolts (A, B), then remove the left rear seat-back outer pivot (C).

Fig. 853: Identifying Left Rear Seat-Back Outer Pivot And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hooks (A), then remove the rear seat-back inner trim (B).
3. Remove the screw (C) and detach the hooks (D), then remove the seat-back head restraint protector (E).

Fig. 854: Identifying Rear Seat-Back Inner Trim, Seat-Back Head Restraint Protector, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws (A), then remove the rear seat-back outer cover (B).

Fig. 855: Identifying Rear Seat-Back Outer Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the tabs (A), then remove the rear seat-back lower covers (B).
6. Remove the screw (C), then remove the rear seat-back inner cover (D).

Fig. 856: Identifying Rear Seat-Back Lower And Inner Covers, Tabs And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the tab (A), then remove the rear seat-back lower cover (B).
8. Release the hooks (C), then remove the rear seat-back cancel cover (D).

Fig. 857: Identifying Rear Seat-Back Lower And Cancel Covers, Tabs And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the screw (A) and release the hooks (B), then remove the head restraint strap (C).
10. Remove the nuts (D), then remove the rear seat-back head restraint frame (E).

11. Detach the head restraint control cable (F) from the bracket (G).
12. Disconnect the head restraint control cable from the bracket (H).

Fig. 858: Identifying Rear Seat-Back Head Restraint Frame, Bracket And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the wire tie (A).

Fig. 859: Identifying Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the nuts (A), then remove the rear seat-back arrange unit (B).
15. Detach the rear seat-back cancel control cable (C) from the bracket (D).
16. Detach the cable clips (E).

Fig. 860: Removing Rear Seat-Back Cancel Control Cable From Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Detach the rear seat-back head restraint control cable (A), the rear seat-back lock control cable (B), the rear seat-back cancel control cable (C), and the rear seat-back arrange control cable (D) from

the cable bracket (E), then disconnect the cables from the rear seat-back arrange unit (F).

Fig. 861: Disconnecting Cables From Rear Seat-Back Arrange Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Seat Head Restraint - Right Side
    1. Push a flat-tip screwdriver (A) into the notch at the center of the knob (B) to release the tab (C).

Fig. 862: Pushing Rear Seat Head Restraint Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert a 5 mm (0.2 in) thickness flat-tip screwdriver in one side of the notch on both sides of the knob (A), then the knob is moved out about 2 mm (0.08 in).
3. Push and hold the knob (B), then pull out the head restraint (C) as shown.

Fig. 863: Removing Head Restraint Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Seat-Back Latch Cover - Right Side
    1. Detach the clips (A) securing the latch cover (B), and pull out the cover to detach the hooks (C).

Fig. 864: Identifying Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Seat-Back Cover - Right Side
    1. Release the hooks (A), then remove the tether anchor cover (B).

Fig. 865: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screw (A), while pulling up the lock knob (B).
3. Pull out the lock knob trim (C).

Fig. 866: Identifying Lock Knob Trim, Knob And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the rear seat-back lock knob control cable (A) from the cable bracket (B).
5. Disconnect the rear seat-back lock knob control cable from the lock knob trim (C).

Fig. 867: Identifying Rear Seat-Back Lock Knob Control Cable, Lock Knob Trim And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hooks (A) on the strap cover (B).

Fig. 868: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the bolt (A) with a 6 mm hex wrench.
8. Remove the washer (B), the right rear seat inner pivot (C), and the bushing (D).

Fig. 869: Identifying Right Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Release the hooks (A), then remove the covers (B) from the right rear seat inner pivot (C).

Fig. 870: Identifying Right Rear Seat Inner Pivot, Cover And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the push nut (A), then disconnect the rear seat-back cancel control cable (B) from the right rear seat cushion pivot (C).
11. Pull out the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 871: Identifying Rear Seat-Back Cancel Control Cable, Seat Cushion Pivot, Seat Arrange Control Cable, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook (A).
13. Release the hook and loop fastener (B).

Fig. 872: Identifying Hook And Loop Fastener And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Detach the rear seat-back cover (A) from the hooks (B) of the rear seat-back inner trim (C).

Fig. 873: Identifying Rear Seat-Back Cover, Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Unzip the rear seat-back cover (A).
16. Release the hook strips (B).

Fig. 874: Removing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Detach the clip (A) from the rear seat-back frame (B), then remove the seat-back cover/pad (C).

Fig. 875: Removing Seat-Back Cover/Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Seat-Back Latch - Right Side
    1. Detach the rear seat-back lock knob control cable (A) and the rear seat-back lock control cable (B) from the cable bracket (C).
    2. Disconnect the rear seat-back lock knob control cable and the rear seat-back lock control cable from the rear seat-back latch (D).
    3. Remove the bolts (E), then remove the rear seat-back latch.

Fig. 876: Identifying Rear Seat-Back Lock And Lock Knob Control Cable, Bracket, Latch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Seat-Back Frame - Right Side
    1. Remove the bolts (A, B), then remove the right rear seat-back outer pivot (C).

Fig. 877: Identifying Right Rear Seat-Back Outer Pivot And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hooks (A), then remove the rear seat-back inner trim (B).
3. Remove the screw (C) and detach hooks (D), then remove the seat-back head restraint protector (E).

Fig. 878: Identifying Rear Seat-Back Inner Trim, Seat-Back Head Restraint Protector, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the tab (A), then remove the rear seat-back lower cover (B).
5. Remove the screw (C), then remove the rear seat-back inner cover (D).

Fig. 879: Identifying Rear Seat-Back Lower And Inner Covers, Tabs And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the tab (A), then remove the rear seat-back lower cover (B).
7. Release the hooks (C), then remove the rear seat-back cancel cover (D).

Fig. 880: Identifying Rear Seat-Back Lower And Cancel Covers, Tabs And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the screw (A) and release the hooks (B), then remove the head restraint strap (C).
9. Remove the nuts (D), then remove the rear seat-back head restraint frame (E).
10. Detach the head restraint control cable (F) from the bracket (G).
11. Disconnect the head restraint control cable from the bracket (H).

Fig. 881: Identifying Rear Seat-Back Head Restraint Frame, Bracket And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the wire tie (A).

Fig. 882: Identifying Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the nuts (A), then remove the rear seat-back arrange unit (B).
14. Detach the rear seat-back cancel control cable (C) from the bracket (D).
15. Detach the cable clips (E).

Fig. 883: Removing Rear Seat-Back Cancel Control Cable From Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Detach the rear seat-back head restraint control cable (A), the rear seat-back lock control cable (B), the rear seat-back cancel control cable (C), and the rear seat-back arrange control cable (D) from

the cable bracket (E), then disconnect the cables from the rear seat-back arrange unit (F).

Fig. 884: Disconnecting Cables From Rear Seat-Back Arrange Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the rear seat-back damper (A) from the rear seat-back frame (B).

Fig. 885: Identifying Rear Seat-Back Damper And Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Steps 1-5 show installing the right side, steps 6-11 show installing the left side.

1. Rear Seat-Back Frame - Right Side
    1. Install the rear seat-back damper (A) to the rear seat-back frame (B).

Fig. 886: Identifying Rear Seat-Back Damper And Frame With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the rear seat-back head restraint control cable (A), the rear seat-back lock knob control cable (B), the rear seat-back cancel control cable (C), and the rear seat-back arrange control cable (D) to the rear seat-back arrange unit (E), then install the cables to the cable bracket (F).

NOTE: Make sure each cable is connected securely.

Fig. 887: Installing Cables To Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the cables to the seat-back frame (A) as shown, and install the cable clips (B). The clips snap into place securely.
4. Install the rear seat-back cancel control cable (C) to the bracket (D).
5. Install the rear seat-back arrange unit (E).

Fig. 888: Installing Rear Seat-Back Cancel Control Cable To Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the wire tie (A) to the seat-back frame (B) as shown.

NOTE: Wire tie the cables at the locations marked with tape (C).

Fig. 889: Identifying Seat-Back Frame And Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the head restraint control cable (A) to the bracket (B).
8. Install the head restraint control cable to the bracket (C).

NOTE: Make sure the cable is connected securely.

9. Install the rear seat-back head restraint frame (D) and nuts (E).
10. Install the head restraint strap (F), then install the screw (G).

Make sure the hooks (H) snap into place securely.

Fig. 890: Identifying Rear Seat-Back Head Restraint Frame And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the rear seat-back cancel control cable (A) through the holes (B) in the seat-back cancel cover (C).
12. Install the seat-back cancel cover. Make sure the hooks (D) snap into place securely.
13. Install the rear seat-back lower cover (E). Make sure the tab (F) snaps into place securely.

Fig. 891: Identifying Rear Seat-Back Cancel Control Cable, Holes, Seat-Back Cancel Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the rear seat-back inner cover (A), then install the screw (B).
15. Install the rear seat-back lower cover (C). Make sure the tab (D) snaps into place securely.

Fig. 892: Identifying Rear Seat-Back Inner And Lower Cover, Tabs And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the seat-back head restraint protector (A). Make sure the hooks (B) snap into place securely.
17. Install the rear seat-back inner trim (C). Make sure the hooks (D) snap into place securely.

Fig. 893: Identifying Seat-Back Head Restraint Protector, Rear Seat-Back Inner Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the right rear seat-back outer pivot (A), then install the bolts (B, C).

Fig. 894: Identifying Right Rear Seat-Back Outer Pivot And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Seat-Back Latch - Right Side
    1. Install the rear seat-back latch (A) and the bolts (B).
    2. Connect the rear seat-back lock knob control cable (C) and the rear seat-back lock control cable (D) to the rear seat-back latch.
    3. Install the rear seat-back lock knob control cable and the rear seat-back lock control cable to the cable bracket (E).

Fig. 895: Identifying Rear Seat-Back Lock And Lock Knob Control Cable, Bracket, Latch And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat-Back Cover - Right Side
    1. Install the rear seat-back cover/pad (A) to the rear seat-back frame (B). Make sure the clip (C) snaps into place securely.

Fig. 896: Installing Rear Seat-Back Cover/Pad To Rear Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Zip the rear seat-back cover (A).
3. Install the hook strips (B) into place securely.

Fig. 897: Installing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the holes (A) to the hooks (B) of the seat-back inner trim (C).

Fig. 898: Identifying Seat-Back Inner Trim, Hooks And Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the hook and loop fastener (A) into place securely.
6. Install the hook (B) into place securely.

Fig. 899: Identifying Rear Seat-Back Cover Hook And Loop Fastener And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the rear seat-back cancel control cable (A) to the right rear seat cushion pivot (B), then install the push nut (C).
8. Install the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 900: Identifying Rear Seat-Back Cancel Control Cable, Right Rear Seat Cushion Pivot, Push Nut And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the covers (A) to right rear seat pivot (B). Make sure the hooks (C) snap into place securely.

Fig. 901: Identifying Right Rear Seat Pivot, Covers And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Apply oil to the pivot bushing (A).

11. Install the pivot bushing, the right rear seat inner pivot (B), and the washer (C).
12. Install the bolt (D) with a 6 mm hex wrench.

Fig. 902: Identifying Right Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the strap cover (A). Make sure the hooks (B) snap into place securely.

Fig. 903: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Connect the rear seat-back lock knob control cable (A) to the lock knob trim (B).
15. Install the rear seat-back lock knob control cable to the cable bracket (C).

Fig. 904: Identifying Rear Seat-Back Lock Knob Control Cable And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the lock knob trim (A).
17. Install the screw (B), while pulling up the lock knob (C).

Fig. 905: Identifying Lock Knob Trim, Lock Knob And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the tether anchor cover (A). Make sure the hooks (B) snap into place securely.

Fig. 906: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat-Back Latch Cover - Right Side

1. Install the right rear seat latch cover (A). Make sure the hooks (B) and the clips (C) snap into place securely.

Fig. 907: Identifying Right Rear Seat Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Seat Head Restraint
    1. Inspect the knob (A) if it has any of the following damage:
        - Any cracks or deformation at the tab (B) of the knob.
        - Any cracks or stress-whitening at the tab (B) of the knob.

Fig. 908: Identifying Rear Seat Head Restraint Knob And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the knob (A) to the head restraint (B) as shown.
3. Install the head restraint.

NOTE: **Make sure the head restraint is locked securely. If not, replace the head restraint.**

Fig. 909: Installing Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Seat-Back Frame - Left Side

1. Connect the rear seat-back head restraint control cable (A), the rear seat-back lock knob control cable (B), the rear seat-back cancel control cable (C), and the rear seat-back arrange control cable (D) to the rear seat-back arrange unit (E), then install the cables to the cable bracket (F).

NOTE: Make sure each cable is connected securely.

Fig. 910: Identifying Rear Seat-Back Frame And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the cables to the seat-back frame (A) as shown, and install the cable clips (B). Make sure the clips snap into place securely.
3. Install the rear seat-back cancel control cable (C) to the bracket (D).
4. Install the rear seat-back arrange unit (E).

Fig. 911: Installing Rear Seat-Back Cancel Control Cable To Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the wire tie (A) to the seat-back frame (B) as shown.

NOTE: Wire tie the cables at the locations marked with tape (C).

Fig. 912: Identifying Seat-Back Frame And Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the head restraint control cable (A) to the bracket (B).
7. Install the head restraint control cable to the bracket (C).

NOTE: Make sure the cable is connected securely.

8. Install the rear seat-back head restraint frame (D) and the nuts (E).
9. Install the head restraint strap (F), then install the screw (G). Make sure the hooks (H) snap into place securely.

Fig. 913: Identifying Rear Seat-Back Frame, Head Restraint Strap And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the rear seat-back cancel control cable (A) through the holes (B) in the seat-back cancel cover (C).
11. Install the seat-back cancel cover. Make sure the hooks (D) snap into place securely.
12. Install the rear seat-back lower cover (E). Make sure the tab (F) snaps into place securely.

Fig. 914: Identifying Rear Seat-Back Cancel Control Cable, Seat Back Cancel And Lower Cover, Hooks And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the rear seat-back inner cover (A), then install the screw (B).
14. Install the rear seat-back lower covers (C). Make sure the tabs (D) snap into place securely.

Fig. 915: Identifying Rear Seat-Back Inner And Lower Cover, Tabs And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the rear seat-back outer cover (A).

Fig. 916: Identifying Rear Seat-Back Outer Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the seat-back head restraint protector (A). Make sure the hooks (B) snap into place securely.
17. Install the rear seat-back inner trim (C). Make sure the hooks (D) snap into place securely.

Fig. 917: Identifying Seat-Back Head Restraint Protector, Inner Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the left rear seat-back outer pivot (A), then install the bolts (B, C).

Fig. 918: Identifying Left Rear Seat-Back Outer Pivot And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat-Back Latch - Left Side
    1. Install the rear seat-back latch (A) and the bolts (B).
    2. Connect the rear seat-back lock knob control cable (C) and the rear seat-back lock control cable (D) to the rear seat-back latch.
    3. Install the rear seat-back lock knob control cable and the rear seat-back lock control cable to the cable bracket (E).

Fig. 919: Identifying Rear Seat-Back Lock And Lock Knob Control Cable, Bracket, Latch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Seat-Back Cover - Left Side
    1. Install the rear seat-back cover/pad (A) to the rear seat-back frame (B). Make sure the clip (C) snaps into place securely.

Fig. 920: Installing Rear Seat-Back Cover/Pad To Rear Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the head restraint guides (A). Make sure the guides are installed in the seat-back frame securely.

Fig. 921: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Zip the rear seat-back cover (A).
4. Install the hook strips (B) into place securely.

Fig. 922: Installing Rear Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the holes (A) to the hooks (B) of the seat-back inner trim (C).

Fig. 923: Identifying Seat-Back Inner Trim, Holes And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the hook and loop fastener (A) into place securely.
7. Install the hook strip (B) into place securely.

Fig. 924: Identifying Rear Seat-Back Cover Hook And Loop Fastener And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the rear seat-back cancel control cable (A) to the left rear seat cushion pivot (B), then install the push nut (C).
9. Install the rear seat arrange control cable (D) through the hole (E) in the rear seat-back cover (F).

Fig. 925: Identifying Rear Seat-Back Cancel Control Cable, Right Rear Seat Cushion Pivot, Push Nut And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the hook strips (A) into place securely.
11. Install the hook and loop fastener (B) into place securely.

Fig. 926: Identifying Rear Seat-Back Cover Hook And Loop Fastener And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the covers (A) to the left rear seat pivot (B). Make sure the hooks (C) snap into place securely.

Fig. 927: Identifying Left Rear Seat Pivot, Covers And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Apply oil to the pivot bushing (A).
14. Install the pivot bushing, the left rear seat inner pivot (B), and the washer (C).
15. Install the bolt (D) with a 6 mm hex wrench.

Fig. 928: Identifying Left Rear Seat Inner Pivot, Bushing, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the strap cover (A). Make sure the hooks (B) snap into place securely.

Fig. 929: Identifying Strap Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Connect the rear seat-back lock knob control cable (A) to the lock knob trim (B).
18. Install the rear seat-back lock knob control cable to the cable bracket (C).

Fig. 930: Identifying Rear Seat-Back Lock Knob Control Cable And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the lock knob trim (A).
20. Install the screw (B), while pulling up the lock knob (C).

Fig. 931: Identifying Lock Knob Trim, Lock Knob And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the lower edge of the armrest back panel (A) to the hook strip (B).

Fig. 932: Identifying Lower Edge Of Armrest Back Panel And Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the rear armrest back panel(A). The hooks (B) snap into place securely.

Fig. 933: Installing Rear Armrest Back Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the tether anchor cover (A). Make sure the hooks (B) snap into place securely.

Fig. 934: Identifying Tether Anchor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Seat-Back Latch Cover - Left Side
    1. Install the left rear seat latch cover (A). Make sure the hooks (B) and the clips (C) snap into place securely.

Fig. 935: Identifying Left Rear Seat Latch Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Seat Armrest
    1. Install the collar (A), the inner friction plate (B), and the outer friction plate (C) to the rear seat-back frame.

Fig. 936: Identifying Rear Seat-Back Frame Collar, Inner And Outer Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the armrest shaft (A) to the seat-back frame (B).
3. Insert the left pivot shaft (C) to the collar (D).
4. Slide the armrest (E) toward the left side.

Fig. 937: Installing Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the pivot shaft (A) to the friction plate (B).
6. Slide the armrest (C) toward the right side.

Fig. 938: Installing Pivot Shaft To Friction Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bolt (A) with a 5 mm hex wrench to the armrest (B), then install the armrest side cover

(C).

Fig. 939: Installing Armrest Side Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat Head Restraint - Left Side

Left Rear Head Restraint

1. Inspect the knob (A) if it has any of the following damage:
    - Any cracks or deformation at the tab (B) of the knob.
    - Any cracks or stress-whitening at the tab (B) of the knob.

Fig. 940: Identifying Left Rear Head Restraint Knob And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the knob (A) to the head restraint (B) as shown.
3. Install the head restraint.

NOTE: **Make sure the head restraint is locked securely. If not, replace the head restraint.**

Fig. 941: Installing Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Center Rear Head Restraint

1. Install the center rear head restraint (A).

Fig. 942: Installing Center Rear Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Seat-Back
    1. Left Side: Install the mounting bolts (A), then install the rear seatback (C).
    2. Right Side: Install the mounting bolts (A) and anchor bolt (B), then install the rear seat-back (C).
    3. Install the rear seat-back cover (D). The clips (E) snap into place securely.

Left Side

Fig. 943: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 944: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the rear seat-back arrange control cable (A) to the rear seat cushion foot (B).
5. Install the rear seat-back arrange control cable to the cable bracket (C).
6. Install the cable clip (D).

NOTE:

- **Make sure the cables are connected securely.**
- **Make sure the rear seat cushion latches and unlatches properly.**

Fig. 945: Connecting Rear Seat-Back Arrange Control Cable To Rear Seat Cushion Foot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Seat Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left Side

Fig. 946: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 947: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 948: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 949: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 950: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT-BACK REMOVAL AND INSTALLATION

REMOVAL

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 951: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 952: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 953: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat Foot Cover
    1. Pull up the rear seat foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat foot cover.

Left Side

Fig. 954: Identifying Rear Seat Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 955: Identifying Rear Seat Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Seat-Back
    1. Detach the rear seat-back arrange control cable (A) from the cable bracket (B).
    2. Detach the cable clip (C), then disconnect the seat-back arrange control cable from the rear seat cushion foot (D).

Fig. 956: Disconnecting Seat-Back Arrange Control Cable From Rear Seat Cushion Foot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Pull up the edge of seat-back cover (A), then detach the clips (B).

4. Left Side: Remove the mounting bolts (C), then remove the rear seat-back (D).
5. Right Side: Remove the mounting bolts (C) and the anchor bolt (E), then remove the rear seat-back (F).

Left Side

Fig. 957: Pulling Edge Of Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 958: Pulling Edge Of Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Seat-Back
    1. Left Side: Install the mounting bolts (A), then install the rear seatback (C).
    2. Right Side: Install the mounting bolts (A) and anchor bolt (B), then install the rear seat-back (C).
    3. Install the rear seat-back cover (D). The clips (E) snap into place securely.

Left Side

Fig. 959: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 960: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the rear seat-back arrange control cable (A) to the rear seat cushion foot (B).
5. Install the rear seat-back arrange control cable to the cable bracket (C).
6. Install the cable clip (D).

NOTE:

- **Make sure the cables are connected securely.**
- **Make sure the rear seat cushion latches and unlatches properly.**

Fig. 961: Connecting Rear Seat-Back Arrange Control Cable To Rear Seat Cushion Foot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Seat Foot Cover
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left Side

Fig. 962: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Side

Fig. 963: Identifying Rear Seat Cushion Foot Cover, Hooks And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 964: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 965: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 966: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT HEATER REMOVAL AND INSTALLATION - SEAT CUSHION HEATER

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-10 show removing the driver's side, steps 11-18 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 967: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 968: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

4. Wait at least 3 minutes before starting work.

Fig. 969: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 970: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 971: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 972: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 973: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 974: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Cover - Power Seat
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the front cover (E).

Fig. 975: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Recline Cover - Driver's Side

Power Seat

1. Remove the screw (A), and detach the clip (B).
2. Release the tabs (C).
3. Pull up the recline cover (D) to release the hook (E).
4. Disconnect the connectors.
5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 976: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Remove the recline knob (A).
2. Remove the screw (B), and detach the clip (C).
3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
4. Release the rear hooks (G) of the recline cover from the recline inner cover.
5. Detach the hook (H) by pulling the recline cover back by hand.
6. Gently pull out the recline cover and remove it.

Fig. 977: Identifying Front Seat Recline Cover And Related Components (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Center Cover - Driver's Side

Power Seat

1. Remove the screw (A).
2. Release the tabs (B), then remove the center cover (C).
3. Remove the upper center inner cover (D).

Fig. 978: Identifying Upper Center Inner Cover, Center Cover, Tabs And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 979: Removing Center Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Cushion - Driver's Side

1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 980: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With seat heater: Disconnect the connectors (A).
3. With seat heater: Detach the harness clip (B).
4. With seat heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

With Seat Heater

Fig. 981: Releasing Harness Holder From Seat Cushion Frame Springs (With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A) from both sides of the seat cushion frame.
6. Detach the clip (B) from the seat cushion frame.

Power Seat

Fig. 982: Identifying Front Seat Cushion Hook Strips And Clips (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 983: Identifying Front Seat Cushion Hook Strips And Clips (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A) from under the seat cushion.

Power Seat

Fig. 984: Identifying Hook Strips Under Seat Cushion (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

Fig. 985: Identifying Hook Strips Under Seat Cushion (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the seat cushion cover/pad (A) from the seat frame (B).

Fig. 986: Removing Seat Cushion Cover/Pad From Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Cushion Cover - Driver's Side
    1. Release the hook strips (A) fastening the seat cushion cover (B) on the seat cushion pad (C).

Fig. 987: Identifying Front Seat Cushion Cover, Pad And Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull back the edges of the seat cushion cover (A) all the way around, and release the upholstery rings (B).
    3. Remove the seat cushion cover.

Leather Seat

Fig. 988: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)

10. Seat Cushion Heater - Driver's Side
    1. Remove the seat cushion heater (A).

NOTE: **The seat cushion heater is glued to the seat cushion pad. When removing it, take care not to damage the seat cushion pad.**

Fig. 990: Identifying Seat Cushion Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 991: Removing Front Seat Belt Lower Anchor Cover (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 992: Removing Front Seat Belt Lower Anchor Bolt (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 993: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 994: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 995: Identifying Front Seat Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 996: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Fig. 997: Identifying Front Seat Connectors And Clips (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 998: Identifying Front Seat Connectors And Clips (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat Recline Cover - Passenger's Side
    1. Remove the recline knob (A).
    2. Remove the screw (B), and detach the clip (C).
    3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
    4. Release the rear hooks (G) of the recline cover from the recline inner cover.
    5. Detach the hook (H) by pulling the recline cover back by hand.
    6. Gently pull out the recline cover and remove it.

Fig. 999: Removing Front Seat Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Front Seat Center Cover - Passenger's Side
    1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 1000: Removing Center Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Seat Cushion - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 1001: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connector(s) (A).
3. Detach the harness clip (B).
4. With sheet heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

Except KX - With Seat Heater

Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 1003: Identifying Front Seat Connectors And Clips (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A) from both sides of the seat cushion frame.
6. Detach the clip (B) from the seat cushion frame.

Fig. 1004: Identifying Front Seat Cushion Hook Strips And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A) from under the seat cushion.

Fig. 1005: Identifying Hook Strips Under Seat Cushion (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the seat cushion cover/pad (A) from the seat frame (B).

Fig. 1006: Removing Seat Cushion Cover/Pad From Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat Cushion Cover - Passenger's Side
    1. Release the hook strips (A) fastening the seat cushion cover (B) on the seat cushion pad (C).

Fig. 1007: Identifying Front Seat Cushion Cover, Pad And Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull back the edges of the seat cushion cover (A) all the way around, and release the upholstery rings (B).
3. Remove the seat cushion cover.

Leather Seat

Fabric Seat

Fig. 1009: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Seat Cushion Heater - Passenger's Side
    1. Remove the seat cushion heater (A).

NOTE: **The seat cushion heater is glued to the seat cushion pad. When removing it, take care not to damage the seat cushion pad.**

Fig. 1010: Identifying Seat Cushion Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the

PRECAUTIONS AND PROCEDURES before doing repairs or service.

NOTE: Steps 1-8 show installing the passenger's side, steps 9-18 show installing the driver's side.

1. Seat Cushion Heater - Passenger's Side
    1. Install the seat cushion heater (A).

Fig. 1011: Identifying Seat Cushion Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Cushion Cover - Passenger's Side

NOTE: Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).

Fig. 1012: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat cushion cover (A) with the upholstery rings (B).

Leather Seat

Fig. 1013: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 1014: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the hook strips (A) to the seat cushion pad (B).

Fig. 1015: Identifying Seat Cushion Pad Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Cushion - Passenger's Side
    1. Install the seat cushion cover/pad (A) on the seat frame (B).

Fig. 1016: Installing Seat Cushion Cover/Pad On Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the hook strips (A) to under the seat cushion.

Fig. 1017: Identifying Under Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the hook strips (A), then install the clip (B).

Fig. 1018: Identifying Front Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With seat heater: Install the harness holder (A) to the seat cushion frame springs (B).
5. Install the harness clip (C).
6. Connect the connecter(s) (D).

Except KX - With Seat Heater

Fig. 1019: Installing Harness Holder To Seat Cushion Frame Springs (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 1020: Identifying Seat Cushion Frame Springs, Connector, Holder And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 1021: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Center Cover - Passenger's Side
    1. Install the center cover (A) to the recline inner cover (B). Make sure the tabs (C) snap into place securely.

Fig. 1022: Installing Center Cover To Recline Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Recline Cover - Passenger's Side
    1. Install the hook (A) and the clip (B) of the recline cover (C).
    2. Install the front hooks (D) to the recline inner cover (E).
    3. Install the rear hooks (F) of the recline cover to the recline inner cover.
    4. Install the recline knob (G) and the screw (H).

Fig. 1023: Installing Front Seat Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 1024: Identifying Front Seat Connectors And Clips (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 1025: Identifying Front Seat Connectors And Clips (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 1026: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 1027: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 1028: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Head Restraint - Passenger's Side
    1. Insert the head restraint (A) into the seat-back as shown.

Fig. 1029: Inserting Head Restraint Into Seat-Back (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Lower Anchor Bolt - Passenger's Side

1. Install the lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 1030: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 1031: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Seat Cushion Heater - Driver's Side
    1. Install the seat cushion heater (A).

Fig. 1032: Identifying Seat Cushion Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Seat Cushion Cover - Driver's Side

NOTE: **Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).**

Fig. 1033: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat cushion cover (A) with the upholstery rings (B).

Leather Seat

5. With seat heater: Connect the connectors (A).
6. With seat heater: Install the harness clip (B).
7. With seat heater: Install the holders (C) to the seat cushion frame springs (D).

With Seat Heater

Fig. 1042: Installing Holder To Seat Cushion Frame Springs (With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 1043: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat Center Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A).
2. Install the center cover (B). Make sure the tabs (C) snap into place securely.
3. Install the screw (D).

Fig. 1044: Identifying Front Seat Center Cover, Upper Center Inner Cover, Tabs And Screws (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the center cover (A) to the recline inner cover (B). make sure the tabs (C) snap into place securely.

Fig. 1045: Installing Center Cover To Recline Inner Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Seat Recline Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A) to the recline cover (B).
2. Connect the connector, then install the wire harness (C) to the hooks (D).
3. Install the clip (E) and tabs (F), then install the recline cover.
4. Install the tabs (G), then install the screw (H).

Fig. 1046: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the hook (A) and clip (B) of the recline cover (C).
2. Install the front hooks (D) to the recline inner cover (E).
3. Install the hook (F) of the recline cover to the recline inner cover.
4. Install the recline knob (G) and the screw (H).

Fig. 1047: Installing Front Seat Recline Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Cover - Power Seat
    1. Install the tabs (A), set the pin (B), and install the hook (C), then install the front cover (D). Make sure the hooks snap into place securely.

Fig. 1048: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 1049: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 1050: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 1051: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 1052: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 1053: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 1054: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

       NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 1055: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 1056: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT HEATER REMOVAL AND INSTALLATION - SEAT-BACK HEATER

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-10 show removing the driver's side, steps 11-19 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 1057: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 1058: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 1059: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 1060: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 1061: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 1062: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 1063: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 1064: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 1065: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 1066: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 1067: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the connector clips (A).
3. Detach the harness clips (B).
4. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
5. Disconnect the connectors (F).

Power Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat with Seat Heater

Fig. 1069: Removing Seat Cushion Frame Springs Holder (Manual Seat With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hook strip (A).
7. Unzip the seat-back cover (B).

Fig. 1070: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 1071: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Detach the harness clips (A).

10. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 1072: Removing Harnesses Through Holes From Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 1073: Releasing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook strips (A) from the seat-back frame (B).

Fig. 1074: Releasing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Head Restraint Guides - Driver's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 1075: Removing Guides From Seat-Back

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat-Back Cover/Pad - Driver's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 1076: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat-Back Cover - Driver's Side
    1. Remove airbag attachment wire B from the outside reinforcing cloth (C).
    2. Remove airbag attachment wire A from the inside reinforcing cloth (D).

Fig. 1077: Removing Airbag Attachment Wire From Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Pull back the edge of the seat-back cover (A) all the way around, and release the upholstery rings (B), then remove the seat-back cover.

Leather Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 1079: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Seat-Back Heater - Driver's Side
    1. Remove the seat-back heater (A).

NOTE: **The seat-back heater is glued to the seat-back pad. When removing it, take care not to damage the seat-back pad.**

Fig. 1080: Identifying Seat-Back Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 1081: Removing Front Seat Belt Lower Anchor Cover (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 1082: Removing Front Seat Belt Lower Anchor Bolt (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 1083: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 1084: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 1085: Identifying Front Seat Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 1086: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Head Restraint Guide - Passenger's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 1102: Removing Guides From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Seat-Back Cover/Pad - Passenger's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 1103: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Seat-Back Cover - Passenger's Side
    1. Remove airbag attachment wire B from the outside reinforcing cloth (C).
    2. Remove airbag attachment wire A from the inside reinforcing cloth (D).

Fig. 1104: Removing Airbag Attachment Wire From Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull back the edge of the seat-back cover (A) all the way around, and release the upholstery rings (B), then remove the seat-back cover.

Leather Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 1106: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Seat-Back Heater - Passenger's Side
    1. Remove the seat-back heater (A).

NOTE: **The seat-back heater is glued to the seat-back pad. When removing it, take care not to damage the seat-back pad.**

Fig. 1107: Identifying Seat-Back Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Steps 1-9 show installing the passenger's side, steps 10-19 show installing the**

driver's side.

1. Seat-Back Heater - Passenger's Side
    1. Install the seat-back heater (A).

Fig. 1108: Identifying Seat-Back Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat-Back Cover - Passenger's Side

NOTE: **Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).**

Fig. 1109: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat-back cover (A) with the upholstery rings (B).

Leather Seat

Fig. 1110: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 1111: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loop airbag attachment wire A through the inside reinforcing cloth (C).
3. Loop airbag attachment wire B through the outside reinforcing cloth (D).

Fig. 1112: Connecting Airbag Attachment Wire Through Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat-Back Cover/Pad - Passenger's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 1113: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Head Restraint Guide - Passenger's Side
    1. Install the head restraint guides (A).

Fig. 1114: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat-Back - Passenger's Side
    1. Install the hook strips (A) to the seat-back frame (B).
    2. Install the harness clips (C).

Fig. 1115: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A) and install the harness clips (B) to the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 1116: Identifying ODS/OPDS Unit, Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the hooks (A), and install the cover (B), and install the screw (C) and the harness clip (D).

Fig. 1117: Identifying Front Seat-Back Cover, Hooks, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 1118: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the harness clips (A).
7. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 1119: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the hook strips (A) to the seat-back frame.

Fig. 1120: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Zip the seat-back cover (A).
10. Install the hook strip (B).

Fig. 1121: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the connector clips (A).
12. Install the harness clips (B).
13. Install the harness holders (C) to the seat cushion frame springs (D).
14. Connect the connector (E).

Except KX - Without Seat Heater

Fig. 1122: Installing Harness Holder To Seat Cushion Frame Springs (Except KX - Without Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Except KX - With Seat Heater

KX

Fig. 1124: Installing Harness Holder To Seat Cushion Frame Springs (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 1125: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Armrest - Passenger's Side
    1. Install the pins (A) to the seat-back.

Fig. 1126: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 1127: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 1128: Identifying Front Seat Connectors And Clips (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 1129: Identifying Front Seat Connectors And Clips (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 1130: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 1131: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 1132: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Head Restraint - Passenger's Side
    1. Insert the head restraint (A) into the seat-back as shown.

Fig. 1133: Inserting Head Restraint Into Seat-Back (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Belt Lower Anchor Bolt - Passenger's Side

1. Install the lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 1134: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 1135: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Seat-Back Heater - Driver's Side
    1. Install the seat-back heater (A).

Fig. 1136: Identifying Seat-Back Heater
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat-Back Cover - Driver's Side

NOTE: **Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).**

Fig. 1137: Removing Seat Cushion Cover To Pad Wires Fastening Upholstery Ring Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the seat-back cover (A) with the upholstery rings (B).

Leather Seat

Fig. 1138: Identifying Seat Cushion Cover And Upholstery Rings (Leather Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fabric Seat

Fig. 1139: Identifying Seat Cushion Cover And Upholstery Rings (Fabric Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loop airbag attachment wire A through the inside reinforcing cloth (C).
3. Loop airbag attachment wire B through the outside reinforcing cloth (D).

Fig. 1140: Connecting Airbag Attachment Wire Through Outside Reinforcing Cloth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat-Back Cover/Pad - Driver's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 1141: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Head Restraint Guides - Driver's Side
    1. Install the head restraint guides (A).

Fig. 1142: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Front Seat-Back - Driver's Side
    1. Install the hook strips (A) to the seat-back frame (B).

Fig. 1143: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 1144: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness clips (A).
4. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 1145: Installing Harnesses Through Holes In Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the hook strips (A) to the seat frame.

Fig. 1146: Identifying Seat Frame Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Zip the seat-back cover (A).
7. Install the hook strip (B).

Fig. 1147: Removing Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the connector clips (A).

9. Install the harness clips (B).
10. Install the harness holders (C) to the seat cushion frame springs (D).
11. Connect the connector (E).

Power Seat

Fig. 1148: Installing Harness Holder To Seat Cushion Frame Springs (Except KX - With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat with Seat Heater

Fig. 1149: Installing Harness Holder To Seat Cushion Frame Springs (Manual Seat With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 1150: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Front Seat Armrest
    1. Install the pins (A) to the seat-back.

Fig. 1151: Identifying Seat Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 1152: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 1153: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 1154: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 1155: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 1156: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 1157: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 1158: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

NOTE: Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.

Fig. 1159: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 1160: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT HEATER SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Seat Heater Switch
    1. Remove the seat heater switch panel (A).

Fig. 1161: Identifying Seat Heater Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the seat heater switches (A).

Fig. 1162: Identifying Seat Heater Switches
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Seat Heater Switch - Test
    1. Check for continuity between the terminals in each switch position according to the table.

NOTE:

- **Make sure the correct test lead (+or -) is placed on the terminal.**
- **When checking for continuity across the diode, use the diode setting ( ) on the digital volt/ohm meter to check the diode bias.**
- **Note this important operating characteristic; a diode is one that**

conducts fully in one direction (forward) and not at all in the opposite direction (reverse).

2. If the continuity is not as specified, replace the switch.

Fig. 1163: Identifying Seat Heater Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 1164: Seat Heater Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Seat Heater Switch
    1. Install the seat heater switches (A).

Fig. 1165: Identifying Seat Heater Switches
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the seat heater switch panel (A).

Fig. 1166: Identifying Seat Heater Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT HEATER TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 1167: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 1168: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

4. Wait at least 3 minutes before starting work.

Fig. 1169: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 1170: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 1171: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 1172: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 1173: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 1174: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Seat Heater Driver's Side - Test
    1. Disconnect connectors A, B, and C.

    Seat-Back Heater

2. Check for continuity between seat heater connector A terminals No. 1 and No. 2. There should be continuity.
3. If the continuity is not as specified, replace the seat-back heater.

Seat Cushion Heater

4. Check for continuity between connector B terminal No. 4 [No. 3], and connector C terminal No. 1 [No. 1]. There should be continuity.

Without power seat

Fig. 1175: Identifying Seat Heater Driver Side Connector Terminals (Without Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With power seat

Fig. 1176: Identifying Seat Heater Driver Side Connector Terminals (With Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

[]: With power seat

5. If the continuity is not as specified, replace the seat cushion heater.
6. Check for continuity between connector B terminal No. 2, and connector C terminal No. 2. There should be continuity.
7. If the continuity is not as specified, replace the seat cushion heater.
8. Check for continuity between connector B terminal No. 3 [No. 1], and connector C terminal No. 2 [No. 2]. There should be continuity.

   []: With power seat

9. If the continuity is not as specified, replace the seat cushion heater.

2. Seat Heater Passenger's Side - Test
   1. Disconnect the connectors A, B, and C.

      Seat-Back Heater

   2. Check for continuity between seat heater connector A terminals No. 1 and No. 2. There should be continuity.

Fig. 1177: Identifying Seat Heater Passenger Side Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the continuity is not as specified, replace the seat-back heater.

Seat Cushion Heater

4. Check for continuity between connector B terminal No. 4, and connector C terminal No. 2. There should be continuity.
5. If the continuity is not as specified, replace the seat cushion heater.
6. Check for continuity between connector B terminal No. 2, and connector C terminal No. 3. There should be continuity.
7. If the continuity is not as specified, replace the seat cushion heater.
8. Check for continuity between connector B terminal No. 3, and connector C terminal No. 3. There should be continuity.
9. If the continuity is not as specified, replace the seat cushion heater.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat - Driver's Side
    1. Connect the connectors (A).

2. Install the harness clip (B).

Fig. 1178: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 1179: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 1180: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 1181: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 1182: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 1183: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 1184: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 1185: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STARTER CUT	**TEST**

RELAY	
BATTERY	**TEST**
STARTER	**STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**
	STARTER OVERHAUL

STARTING SYSTEM SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Engine does not crank	1. Check for loose battery terminals or connections. 2. **TEST THE BATTERY FOR A LOW STATE OF CHARGE** . 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . 4. Check the starter. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**. 5. **CHECK THE STARTER CUT RELAY** . 6. **CHECK THE STARTER SYSTEM CIRCUIT TROUBLESHOOTING**. 7. **CHECK THE TRANSMISSION RANGE SWITCH** . 8. **CHECK THE IGNITION SWITCH AND ITS RELATED CIRCUIT** .	• Poor ground at G101 • Seized engine
Engine cranks, but does not start	1. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . 2. **CHECK THE PGM-FI MAIN RELAYS** . 3. Check for IMMOBI status and function for engine does not start with the immobilizer key. Refer to the following: • **ENGINE DOES NOT START WITH THE IMMOBILIZER KEY** • **IMMOBILIZER INDICATOR BLINKS** • **IMMOBILIZER INDICATOR DOES NOT GO OFF** 4. CHECK THE FUEL PRESSURE . 5. CHECK FOR A PLUGGED OR DAMAGED FUEL LINE . 6. **Check for a plugged fuel filter** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION . 7. **CHECK THE THROTTLE BODY** . 8. CHECK FOR LOW ENGINE COMPRESSION . 9. CHECK THE CAMSHAFT TIMING .	• Fuel level in tank • Weak or fouled spark plugs

	10. **Do the PCM reset** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.	
Engine is hard to start	Do the symptom troubleshooting for Engine will not starts, engine start but stalls immediately, or engine is hard to start. Refer to the following: • **ENGINE STALLS** • **ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START**	Weak or fouled spark plugs
Engine cranks slowly	1. Check for loose battery terminals or connections. 2. **TEST THE BATTERY FOR A LOW STATE OF CHARGE** . 3. Check the starter for binding. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST** 4. Check for excessive drag in the engine.	

STARTER SYSTEM CIRCUIT TROUBLESHOOTING

Fig. 2: Starter System Circuit Troubleshooting Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

Alternator, Regulator, Battery, and Starter Tester OTC3131*

*: Available through the Honda Tool and Equipment Program 888-424-6857.

NOTE:

- **Air temperature must be between 59-100 °F (15-38 °C) during this procedure.**
- **The battery must be in good condition and fully charged.**

1. Battery test:
   - 1. **DO THE BATTERY TEST** .

   Does the display indicate Good Battery?

   YES : The battery is OK. Charge the battery if necessary, then go to step 2.

   NO : If the display indicates Replace Battery or Bad Cell, **REPLACE THE BATTERY** , then go to step 2.

2. Starting system check 1:
   - 1. **Connect the HDS to the DLC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Turn the ignition switch to ON (II).
   - 3. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, **TROUBLESHOOT THE DLC CIRCUIT** .
   - 4. Select ALL INJECTORS STOP in the PGM-FI INSPECTION menu with the HDS.
   - 5. Set the parking brake, then with the shift lever in P or N, turn the ignition switch to START (III) to crank the engine.

   Does the starter crank the engine normally?

   YES : Select PCM reset in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.

   NO : Go to step 3.

3. Starting system check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the electrical connections at the battery, the battery negative cable to the body, the engine ground cables, and the starter for looseness and corrosion. Then try starting the engine again.

   Does the starter crank the engine normally?

   Starter cranks normally Repairing the loose connection corrected the problem. The starting system is OK. Select **PCM reset** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO**

TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.

Starter does not crank engine at all If the starter does not crank the engine at all, go to step 4.

Starter cranks abnormally If the starter cranks the engine erratically or too slowly, go to step 5.

Starter does not disengage from torque converter ring gear with key released If the starter does not disengage from the torque converter ring gear when you release the key, replace the starter, or remove and disassemble it. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**. Check for the following:

- Starter solenoid and switch malfunction
- Dirty drive gear or damaged overrunning clutch
- Damaged torque converter ring gear

4. Determine possible failure area (starter, starter circuit, ignition switch, transmission range switch):
   - 1. Make sure the shift lever is in P or N.
   - 2. Disconnect the starter subharness 1P connector (A).

Fig. 3: Identifying Battery Positive Terminal And Terminal B Starter Subharness 1P Connector No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Battery positive terminal

     Terminal B Starter subharness 1P connector No. 1 (B)

Does the starter crank the engine?

YES : Check the following items in the order listed until you find the problem in the circuit:

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

- Check for an open or short in the GRN wire and connectors between the starter cut relay, the ignition switch, and the under-hood fuse/relay box.
- Check for an open or short in the RED wire, BLK/WHT wire, and connectors between starter cut relay socket terminal No. 1 and the starter.
- Check for an open or short in the ORN wire, GRN wire, and connectors between the transmission range switch and the starter cut relay.
- Check for poor connections or loose terminals at the transmission range switch and ground G101.
- Check for a faulty ignition switch.
- Check for a faulty starter cut relay.
- Check for a faulty transmission range switch.

NO : Check for an open or short in the wire and connectors between the battery and the starter. Replace the starter, or remove and disassemble it, as necessary. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**.

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

5. Starter test:
   - 1. Connect the alternator, regulator, battery, and starter tester to the battery.

NOTE: **The probe is used for starter testing.**

Fig. 4: Performing Starter Test Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Do the STARTING TEST, check the cranking voltage and the current draw from the following service limit table.

Voltage (V)	Current (A)
8.5 or more	380 or less

Are the cranking voltage and the current draw within the service limits?

YES : Remove the starter, and inspect its drive gear and the torque converter ring gear for damage. Replace any damaged parts. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**.

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

NO : Replace the starter, or remove and disassemble it. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**. Check for these problems:

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

- **Drag in the starter armature**
- **Shorted armature winding**
- **Excessive drag in the engine**
- **Open circuit in the starter armature commutator segments**
- **Excessively worn starter brushes**
- **Open circuit in the starter brushes**
- **Dirty or damaged helical splines or drive gear**
- **Faulty overrunning clutch**

STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST

REMOVAL

1. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

Fig. 5: Identifying Battery Negative And Positive Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
3. Front Splash Shield

1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
2. From under the front bumper (D), remove the clips (E).
3. From under the body, remove the clips (F), then pull out the front splash shield.

<u>Fig. 6: Identifying Front Splash Shield Fasteners</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter
    1. Remove the starter bolts.

Fig. 7: Identifying Starter Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the cable and the connector.
3. Remove the starter.

Fig. 8: Identifying Starter, Cable And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Starter Performance - Test
    1. Clamp the starter firmly in a vise.
    2. Make the connections for this test using the thickest (gauge) wire possible (preferably the same gauge as used on the vehicle).

NOTE: **To avoid damaging the starter, never leave the battery connected for more than 5 seconds.**

3. Connect the battery as shown, and check for continuity between the B terminal and the starter body. If there is continuity, it is working properly.

Fig. 9: Checking Continuity Between B Terminal And Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the battery from the starter body, and check for continuity between the B terminal and the starter body. If there is no continuity, it is working properly.

Fig. 10: Disconnecting Battery From Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the starter to the battery as shown, and confirm that the motor runs.
6. If the electric current meets the specification when the battery voltage is at 11.5 V, the starter is working properly.

Specification

Electric Current: 90 A or less

Fig. 11: Connecting Starter To Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Starter
    1. Install the starter.
    2. Connect the cable, and the connector. Make sure the crimped side of the ring terminal faces away from the starter when you connect it.

Fig. 12: Identifying Starter Connector Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the starter.

Fig. 13: Identifying Starter Connector Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 14: Identifying Front Splash Shield Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 15: Identifying Battery Negative, Positive Cables And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter After Install - Check
    1. Start the engine to make sure the starter works properly.

STARTER OVERHAUL

VIEW

1. Starter Exploded View

    Exploded View

Fig. 16: Exploded View Of Starter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DISASSEMBLY

NOTE: Refer to the Exploded View if needed during this procedure.

1. Starter End Cover and Armature Housing
    1. Remove the end cover.

Fig. 17: Identifying Starter End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the armature housing.

Fig. 18: Identifying Armature Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Starter Armature
    1. Remove the armature.

Fig. 19: Identifying Armature

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Starter Armature - Inspection
    1. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.

Fig. 20: Identifying Starter Armature
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Check the commutator (A) surface. If the surface is dirty or burnt, resurface it with an emery cloth or a lathe to the specifications in step 3, or recondition with #500 or #600 sandpaper (B).

Fig. 21: Cleaning Commutator Surface Using Sandpaper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Check the commutator diameter with a digital caliper or dial type caliper. If the diameter is below the service limit, replace the armature.

Commutator Diameter

Standard (New): 28.0-28.1 mm (1.102-1.106 in)

Service Limit: 27.5 mm (1.083 in)

Fig. 22: Checking Commutator Diameter Using Digital Caliper Or Dial Type Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the commutator (A) runout:
   - If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
   - If the commutator runout is not within the service limit, replace the armature.

Commutator Runout

Standard (New): 0.02 mm (0.0008 in) max .

Service Limit: 0.05 mm (0.002 in)

Fig. 23: Measuring Commutator Runout Using Dial Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Use a digital caliper or dial type caliper to check the mica depth (A). If the mica depth is below the service limit, replace the armature.

Commutator Mica Depth

Standard (New): 0.40-0.50 mm (0.0157-0.0197 in)

Service Limit: 0.15 mm (0.0059 in)

Fig. 24: Identifying Mica Depth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Use an ohmmeter to check for continuity between the segments of the commutator. If there is an open circuit between any of the segments, replace the armature.

Fig. 25: Checking Continuity Between Segments Of Commutator Using Ohmmeter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attracted to the core while the core is turned, the armature is shorted. Replace the armature.

Fig. 26: Checking Armature Short Circuit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Use an ohmmeter to check for continuity between the commutator (A) and the armature coil core (B), and between the commutator and the armature shaft (C). If there is continuity, replace the armature.

Fig. 27: Checking Continuity Between Commutator And Armature Coil Core Using Ohmmeter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter Brush Holder Assembly
    1. Remove the brush holder.

Fig. 28: Identifying Starter Brush Holder Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starter Brush Holder - Test
    1. Check for continuity between the (+) brushes (A) and the (-) brushes (B). If there is continuity, replace the brush holder assembly.

Fig. 29: Identifying Brush Holder Assembly Brushes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Starter Brush - Inspection
    1. Measure the brush length. If it is shorter than the service limit, replace the brush holder assembly.

    Brush Length

    Standard (New): 11.1-11.5 mm (0.437-0.453 in)

Service Limit: 4.3 mm (0.169 in)

Fig. 30: Measuring Starter Brush Length Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Starter Planetary Gear - Inspection
    1. Check the planetary gears (A), the armature shaft gear (B), and the internal ring gear (C). Replace them if they are worn or damaged.

Fig. 31: Identifying Planetary Gears, Armature Shaft Gear And Internal Ring Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Starter Gear Cover
    1. Remove the ring gear holder.

Fig. 32: Identifying Starter Gear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the switch plunger.

Fig. 33: Identifying Switch Plunger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Starter Overrunning Clutch - Inspection
    1. Hold the drive gear (A), turn the gear shaft (B) counterclockwise. Check that the drive gear comes out to the other end. If the drive gear does not move smoothly, replace the gear cover set.
    2. Hold the drive gear, turn the gear shaft clockwise. The gear shaft should turn freely. If the gear shaft does not turn freely, replace the gear cover set.
    3. If the drive gear is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately.

Fig. 34: Inspecting Starter Overrunning Clutch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

NOTE: Refer to the Exploded View if needed during this procedure.

1. Starter Gear Cover
    1. Install the switch plunger.

Fig. 35: Identifying Switch Plunger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the ring gear holder.

Fig. 36: Identifying Starter Gear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Starter Brush Holder Assembly
    1. Install the brush holder.

Fig. 37: Identifying Starter Brush Holder Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Starter Armature
    1. Install the brush into the brush holder, and set the armature (A) in the brush holder (B).

NOTE: **To seat the new brushes, slip a strip of #500 or #600 sandpaper, with the grit side up, between the commutator and each brush, and smoothly turn the armature. The contact surface of the brushes will be sanded to the same contour as the commutator.**

    2. While squeezing a spring (C), insert it in the hole on the brush holder, and push it until it bottoms.

Repeat this for the other three springs (D, E, and F).

Fig. 38: Identifying Armature, Brush Holder And Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter End Cover and Armature Housing
    1. Install the armature housing.

Fig. 39: Identifying Starter End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the end cover.

Fig. 40: Identifying Starter End Cover Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SRS DTC TROUBLESHOOTING INDEX

SRS DTC	Detection Item
11-1x	Open in the driver's airbag first inflator
11-2x	Increased resistance in the driver's airbag first inflator
11-3x	Short to another wire or decreased resistance in the driver's airbag first inflator
11-4x	Open in the driver's airbag second inflator
11-5x	Increased resistance in the driver's airbag second inflator
11-6x	Short to another wire or decreased resistance in the driver's airbag second inflator
11-8x	Short to power in the driver's airbag first inflator
11-9x	Short to ground in the driver's airbag first inflator
11-Ax	Short to power in the driver's airbag second inflator
11-Bx	Short to ground in the driver's airbag second inflator
12-1x	Open in the front passenger's airbag first inflator
12-2x	Increased resistance in the front passenger's airbag first inflator
12-3x	Short to another wire or decreased resistance in the front passenger's airbag first inflator
12-4x	Open in the front passenger's airbag second inflator
12-5x	Increased resistance in the front passenger's airbag second inflator
12-6x	Short to another wire or decreased resistance in the front passenger's airbag second inflator
12-8x	Short to power in the front passenger's airbag first inflator
12-9x	Short to ground in the front passenger's airbag first inflator
12-Ax	Short to power in the front passenger's airbag second inflator
12-Bx	Short to ground in the front passenger's airbag second inflator
21-1x	Open in the driver's seat belt tensioner
21-2x	Increased resistance in the driver's seat belt tensioner
21-3x	Short to another wire or decreased resistance in the driver's seat belt tensioner
21-8x	Short to power in the driver's seat belt tensioner
21-9x	Short to ground in the driver's seat belt tensioner
22-1x	Open in the front passenger's seat belt tensioner
22-2x	Increased resistance in the front passenger's seat belt tensioner
22-3x	Short to another wire or decreased resistance in the front passenger's seat belt tensioner
22-8x	Short to power in the front passenger's seat belt tensioner
22-9x	Short to ground in the front passenger's seat belt tensioner
31-1x	Open in the driver's side airbag inflator
31-2x	Increased resistance in the driver's side airbag inflator
31-3x	Short to another wire or decreased resistance in the driver's side airbag inflator
31-8x	Short to power in the driver's side airbag inflator
31-9x	Short to ground in the driver's side airbag inflator

32-1x	Open in the front passenger's side airbag inflator
32-2x	Increased resistance in the front passenger's side airbag inflator
32-3x	Short to another wire or decreased resistance in the front passenger's side airbag inflator
32-8x	Short to power in the front passenger's side airbag inflator
32-9x	Short to ground in the front passenger's side airbag inflator
33-1x	Open in the left side curtain airbag inflator
33-2x	Increased resistance in the left side curtain airbag inflator
33-3x	Short to another wire or decreased resistance in the left side curtain airbag inflator
33-8x	Short to power in the left side curtain airbag inflator
33-9x	Short to ground in the left side curtain airbag inflator
34-1x	Open in the right side curtain airbag inflator
34-2x	Increased resistance in the right side curtain airbag inflator
34-3x	Short to another wire or decreased resistance in the right side curtain airbag inflator
34-8x	Short to power in the right side curtain airbag inflator
34-9x	Short to ground in the right side curtain airbag inflator
41-1x	No signal from the left front impact sensor
41-2x	Internal failure of the left front impact sensor
41-9x	
41-Ax	
41-Bx	
42-1x	No signal from the right front impact sensor

45-Ax	
45-Bx	
46-1x	No Signal from the right side impact sensor (second)

46-2x	Internal failure of the right side impact sensor (second)
46-9x	
46-Ax	
46-Bx	
51-xx	Internal failure of the SRS unit
52-xx	
53-xx	
53-FF	SRS unit programming error
54-xx	Internal failure of the SRS unit
55-xx	
56-21	Lost communication with the PCM (PGM-FI system)
56-22	Undefined data received from the PCM (PGM-FI system)
56-23	
56-25	Lost communication with the gauge control module
56-26	Undefined data received from the gauge control module
56-27	
57-xx	Internal failure of the SRS unit
58-xx	
61-1x	Open in the driver's seat belt buckle switch
61-2x	Short in the driver's seat belt buckle switch
62-1x	Open in the front passenger's seat belt buckle switch
62-2x	Short in the front passenger's seat belt buckle switch
71-1x	Open in the driver's seat position sensor
71-2x	Short in the driver's seat position sensor
81-4x	Internal failure of the ODS unit
81-61	No signal from the ODS unit
81-62	Incorrect data from the ODS unit
81-63	Internal failure of the ODS unit
81-64	
81-71	ODS unit not calibrated
81-78	
81-79	Front passenger's weight sensors initial check failure
82-14	No signal from the front passenger's weight sensor (front inner side)
82-15	Internal failure of the front passenger's weight sensor (front inner side)
82-16	No signal from the front passenger's weight sensor (rear inner side)
82-17	Internal failure of the front passenger's weight sensor (rear inner side)
83-24	No signal from the front passenger's weight sensor (front outer side)
83-25	Internal failure of the front passenger's weight sensor (front outer side)
83-26	No signal from the front passenger's weight sensor (rear outer side)
83-27	Internal failure of the front passenger's weight sensor (rear outer side)
85-4x	Internal failure of the ODS unit

85-61	No signal from the ODS unit
85-62	Incorrect data from the ODS unit
85-63	Internal failure of the ODS unit
85-64	
85-71	ODS unit not initialized
85-78	
85-79	OPDS sensor initial check failure
86-1x	Faulty OPDS seat-back sensor
86-2x	Faulty OPDS seat support sensor
92-1x	Short to power in the front passenger's airbag cutoff indicator
92-2x	Open or short to ground in the front passenger's airbag cutoff indicator
A1-1x	Faulty power supply (VA line)
A2-1x	Faulty power supply (VB line)
A3-1x	SRS unit connector A not properly installed
A4-1x	SRS unit connector B not properly installed
B2-1x	No signal from the rear safing sensor
B2-2x	Internal failure of the rear safing sensor
B2-9x	
B2-Ax	
B2-Bx	
Ex-11	Control operation recorded
Fx-11	Airbags and/or tensioners deployment recorded

NOTE: **The "x" at the end of each DTC denotes a numeric character (0 thru 9) or an alpha character (A thru F) that you may also see on the HDS display. The alphanumeric character is unrelated to your DTC troubleshooting; it is used by the SRS unit manufacturer.**

Only read DTCs from the SRS menu, not from SWS menus unless instructed to check SWS DTCs. SWS (ODS unit) DTCs are subcodes of SRS DTCs. Only troubleshoot the corresponding SRS DTCs. These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).

SWS DTC INDEX

SRS DTC	SWS DTC	Detection Item
81-4x	**41-xx**	Internal failure of the ODS unit
	42-xx	
	43-xx	
81-71	**71-xx**	ODS unit not calibrated
	14-11	Short to power in the front passenger's weight sensor (front inner side) power circuit
	14-12	Short to ground in the front passenger's weight sensor (front inner side) power circuit

82-14	**14-13**	Open in the front passenger's weight sensor (front inner side) output circuit
	14-14	Short to ground in the front passenger's weight sensor (front inner side) output circuit
82-15	**15-3x**	Internal failure of the front passenger's weight sensor (front inner side)
82-16	**16-11**	Short to power in the front passenger's weight sensor (rear inner side) power circuit
	16-12	Short to ground in the front passenger's weight sensor (rear inner side) power circuit
	16-13	Open in the front passenger's weight sensor (rear inner side) output circuit
	16-14	Short to ground in the front passenger's weight sensor (rear inner side) output circuit
82-17	**17-3x**	Internal failure of the front passenger's weight sensor (rear inner side)
83-24	**24-11**	Short to power in the front passenger's weight sensor (front outer side) power circuit
	24-12	Short to ground in the front passenger's weight sensor (front outer side) power circuit
	24-13	Open in the front passenger's weight sensor (front outer side) output circuit
	24-14	Short to ground in the front passenger's weight sensor (front outer side) output circuit
83-25	**25-3x**	Internal failure of the front passenger's weight sensor (front outer side)
83-26	**26-11**	Short to power in the front passenger's weight sensor (rear outer side) power circuit
	26-12	Short to ground in the front passenger's weight sensor (rear outer side) power circuit
	26-13	Open in the front passenger's weight sensor (rear outer side) output circuit
	26-14	Short to ground in the front passenger's weight sensor (rear outer side) output circuit
83-27	**27-3x**	Internal failure of the front passenger's weight sensor (rear outer side)

NOTE: **The "x" at the end of each DTC denotes a numeric character (0 thru 9) or an alpha character (A thru F) that you may also see on the HDS display. The alphanumeric character is unrelated to your DTC troubleshooting; it is used by the SRS unit manufacturer.**

DTC 11-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE DRIVER'S AIRBAG FIRST INFLATOR; DTC 11-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE DRIVER'S AIRBAG FIRST INFLATOR; DTC 11-4X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE DRIVER'S AIRBAG SECOND INFLATOR; DTC 11-5X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE DRIVER'S AIRBAG SECOND INFLATOR

Fig. 1: SRS DTC Troubleshooting Flow Chart (11-1x, 11-2x, 11-4x, 11-5x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead J 070AZ-SNAA100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-1x, 11-2x, 11-4x, or 11-5x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Remove the access panel (A) from the steering wheel, then disconnect the driver's airbag inflator 4P connector (B) on the cable reel harness.

Fig. 2: Disconnecting Driver's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the driver's airbag inflator 4P connector on the cable reel harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-1x, 11-2x, 11-4x, or 11-5x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the driver's airbag first or second inflator; **REPLACE THE DRIVER'S AIRBAG** , then clear the DTC.

3. Cable reel check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. **REMOVE THE COLUMN COVERS** .
- 4. Disconnect cable reel connector B (4P) on the dashboard wire harness.

Fig. 3: Disconnecting Cable Reel Connector B (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to cable reel connector B (4P) on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-1x, 11-2x, 11-4x, or 11-5x indicated?

YES : Go to step 4.

NO : Open or increased resistance in the cable reel; **REPLACE THE CABLE REEL** , then clear the DTC.

4. Open wire check (LA1+, LA1-, LA2+, LA2- lines):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from cable reel connector B (4P) on the dashboard wire harness.
- 5. Measure the resistance of the test points.

  Test condition IG LOCK (0)

  Driver's airbag inflator 4P connector (on the cable reel harness): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): disconnected

  SRS unit connector A (39P): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): connected to SRS simulator lead J

  Test circuit LA1+, LA1-

  Test point SRS simulator lead J black terminal

  Test circuit LA2+, LA2-

  Test point SRS simulator lead J red terminal

Fig. 4: Measuring Resistance Of Cable Reel Connector B (4P) On Dashboard Wire Harness Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LA1+, LA1-, LA2+, LA2- wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Open or increased resistance in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC 11-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S AIRBAG FIRST INFLATOR; DTC 11-6X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S AIRBAG SECOND INFLATOR

Fig. 5: SRS DTC Troubleshooting Flow Chart (11-3x, 11-6x)

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead J 070AZ-SNAA100**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-3x or 11-6x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Remove the access panel (A) from the steering wheel, then disconnect the driver's airbag inflator

4P connector (B) on the cable reel harness.

Fig. 6: Disconnecting Driver's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the driver's airbag inflator 4P connector on the cable reel harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-3x or 11-6x indicated?

YES : Go to step 3.

NO : Short to another wire in the driver's airbag first or second inflator; **REPLACE THE DRIVER'S AIRBAG** , then clear the DTC.

3. Cable reel check:

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. **REMOVE THE COLUMN COVERS** .
- 4. Disconnect cable reel connector B (4P) on the dashboard wire harness.

Fig. 7: Disconnecting Cable Reel Connector B (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to cable reel connector B (4P) on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-3x or 11-6x indicated?

YES : Go to step 4.

NO : Short to another wire in the cable reel; **REPLACE THE CABLE REEL** , then clear the DTC.

4. Shorted wire check (LA1+ line to LA1- line, LA2+ line to LA2- line):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from cable reel connector B (4P) on the dashboard wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLERS TO SRS UNIT CONNECTOR A (39P) TERMINALS NO. 3 AND NO. 4, AND TERMINALS NO. 7 AND NO. 8** .
- 6. Measure the resistance of the test points.

  Test condition IG LOCK (0)

  Driver's airbag inflator 4P connector (on the cable reel harness): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): disconnected

  SRS unit connector A (39P): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): connected to SRS simulator lead J

  SRS unit connector A (39P) No. 3 and No. 4: connected to SRS short canceller

  SRS unit connector A (39P) No. 7 and No. 8: connected to SRS short canceller

  Test circuit LA1+, LA1-

  Test point SRS simulator lead J black terminal

  Test circuit LA2+, LA2-

  Test point SRS simulator lead J red terminal

Fig. 8: Measuring Resistance Of Cable Reel Connector B (4P) On Dashboard Wire Harness Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LA1+, LA1-, LA2+, LA2- wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Short to another wire in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC 11-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE DRIVER'S AIRBAG FIRST INFLATOR; DTC 11-AX ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE DRIVER'S AIRBAG SECOND INFLATOR

Fig. 9: SRS DTC Troubleshooting Flow Chart (11-8x, 11-Ax)

- **SRS Simulator Lead J 070AZ-SNAA100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-8x or 11-Ax indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Remove the access panel (A) from the steering wheel, then disconnect the driver's airbag inflator 4P connector (B) on the cable reel harness.

Fig. 10: Disconnecting Driver's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the driver's airbag inflator 4P connector on the cable reel harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .

  Turn the ignition switch to ON (II), then wait for 10 seconds.

- 7.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-8x or 11-Ax indicated?

YES : Go to step 3.

NO : Short to power in the driver's airbag first or second inflator; **REPLACE THE DRIVER'S AIRBAG** , then clear the DTC.

3. Cable reel check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. **REMOVE THE COLUMN COVERS** .
    - 4. Disconnect cable reel connector B (4P) on the dashboard wire harness.

Fig. 11: Disconnecting Cable Reel Connector B (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to cable reel connector B (4P) on the dashboard wire harness.
    - 6. Reconnect the negative cable to the battery.
    - 7. **CLEAR THE DTCS WITH THE HDS** .
    - 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-8x or 11-Ax indicated?

YES : Go to step 4.

NO : Short to power in the cable reel; **REPLACE THE CABLE REEL** , then clear the DTC.

4. Shorted wire check (LA1+, LA1-, LA2+, LA2- lines to power):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from cable reel connector B (4P) on the dashboard wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Driver's airbag inflator 4P connector (on the cable reel harness): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): disconnected

  SRS unit connector A (39P): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): connected to SRS simulator lead J

  Test circuit LA1+, LA1-

  Test point 1 SRS simulator lead J black terminal

  Test point 2 Body ground

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with**

the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-9x or 11-Bx indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Remove the access panel (A) from the steering wheel, then disconnect the driver's airbag inflator 4P connector (B) on the cable reel harness.

Fig. 14: Disconnecting Driver's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the driver's airbag inflator 4P connector on the cable reel harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-9x or 11-Bx indicated?

YES : Go to step 3.

NO : Short to ground in the driver's airbag first or second inflator; **REPLACE THE DRIVER'S AIRBAG** , then clear the DTC.

3. Cable reel check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. **REMOVE THE COLUMN COVERS** .
- 4. Disconnect cable reel connector B (4P) on the dashboard wire harness.

Fig. 15: Disconnecting Cable Reel Connector B (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to cable reel connector B (4P) on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-9x or 11-Bx indicated?

YES : Go to step 4.

NO : Short to ground in the cable reel; **REPLACE THE CABLE REEL** , then clear the DTC.

4. Shorted wire check (LA1+, LA1-, LA2+, LA2- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from cable reel connector B (4P) on the dashboard wire harness.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's airbag inflator 4P connector (on the cable reel harness): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): disconnected

  SRS unit connector A (39P): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): connected to SRS simulator lead J

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit**

software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-1x, 12-2x, 12-4x, or 12-5x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **LOWER THE GLOVE BOX** .
   - 4. Disconnect the front passenger's airbag inflator 4P connector (A) on the dashboard wire harness.

Fig. 18: Disconnecting Front Passenger's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-1x, 12-2x, 12-4x, or 12-5x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the front passenger's airbag first or second inflator; **REPLACE THE FRONT PASSENGER'S AIRBAG** , then clear the DTC.

3. Open wire check (RA1+, RA1-, RA2+, RA2- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connector.

   SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS**

UNIT UPDATE

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 5. Measure the resistance of the test points.

Test condition IG LOCK (0)

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): disconnected

SRS unit connector A (39P): disconnected

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): connected to SRS simulator lead J

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **LOWER THE GLOVE BOX** .
   - 4. Disconnect the front passenger's airbag inflator 4P connector (A) on the dashboard wire harness.

Fig. 21: Disconnecting Front Passenger's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-3x or 12-6x indicated?

YES : Go to step 3.

NO : Short to another wire in the front passenger's airbag first or second inflator; **REPLACE THE FRONT PASSENGER'S AIRBAG** , then clear the DTC.

3. Shorted wire check (RA1+ line to RA1- line, RA2+ line to RA2- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connector.

   SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS**

UNIT UPDATE

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLERS TO SRS UNIT CONNECTOR A (39P) TERMINALS NO. 1 AND NO. 2, AND TERMINALS NO. 5 AND NO. 6** .
- 6. Measure the resistance of the test points.

Test condition IG LOCK (0)

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): disconnected

SRS unit connector A (39P): disconnected

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): connected to SRS simulator lead J

SRS unit connector A (39P) No. 1 and No. 2: connected to SRS short canceller

SRS unit connector A (39P) No. 5 and No. 6: connected to SRS short canceller

Test circuit RA1+, RA1-

Test point SRS simulator lead J black terminal

Test circuit RA2+, RA2-

Test point SRS simulator lead J red terminal

Fig. 22: Measuring Resistance Of Front Passenger's Airbag Inflator 4P Connector On Dashboard Wire Harness Using Tool

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RA1+, RA1-, RA2+, RA2- wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Short to another wire in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC 12-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE FRONT PASSENGER'S AIRBAG FIRST INFLATOR; DTC 12-AX ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE FRONT PASSENGER'S AIRBAG SECOND INFLATOR

Fig. 23: SRS DTC Troubleshooting Flow Chart (12-8x, 12-Ax)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead J 070AZ-SNAA100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-8x or 12-Ax indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **LOWER THE GLOVE BOX** .
   - 4. Disconnect the front passenger's airbag inflator 4P connector (A) on the dashboard wire harness.

Fig. 24: Disconnecting Front Passenger's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-8x or 12-Ax indicated?

YES : Go to step 3.

NO : Short to power in the front passenger's airbag first or second inflator; **REPLACE THE FRONT PASSENGER'S AIRBAG** , then clear the DTC.

3. Shorted wire check (RA1+, RA1-, RA2+, RA2- lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connector.

   SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS**

UNIT UPDATE

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): disconnected

SRS unit connector A (39P): disconnected

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): connected to SRS simulator lead J

Test circuit RA1+, RA1-

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-9x or 12-Bx indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **LOWER THE GLOVE BOX** .
   - 4. Disconnect the front passenger's airbag inflator 4P connector (A) on the dashboard wire harness.

Fig. 27: Disconnecting Front Passenger's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 12-9x or 12-Bx indicated?

YES : Go to step 3.

NO : Short to ground in the front passenger's airbag first or second inflator; **REPLACE THE FRONT PASSENGER'S AIRBAG** , then clear the DTC.

3. Shorted wire check (RA1+, RA1-, RA2+, RA2- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connector.

   SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS**

UNIT UPDATE

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from the front passenger's airbag inflator 4P connector on the dashboard wire harness.
- 5. Measure the resistance between test points 1 and 2.

Test condition IG LOCK (0)

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): disconnected

SRS unit connector A (39P): disconnected

Front passenger's airbag inflator 4P connector (on the dashboard wire harness): connected to SRS simulator lead J

Test circuit RA1+, RA1-

Test point 2 Body ground

Fig. 28: Measuring Resistance Of Front Passenger's Airbag Inflator 4P Connector On Dashboard Wire Harness Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RA1+, RA1-, RA2+, RA2- wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Short to ground in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC 21-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE DRIVER'S SEAT BELT TENSIONER; DTC 21-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE DRIVER'S SEAT BELT TENSIONER

Fig. 29: SRS DTC Troubleshooting Flow Chart (21-1x, 21-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-1x or 21-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the driver's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 30: Disconnecting Driver's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-1x or 21-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Open wire check (LRP+, LRP- lines):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 19 AND NO. 20** .
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's seat belt tensioner 4P connector (on the floor wire harness): connected to SRS simulator lead K

  SRS unit connector B (39P) No. 19 and No. 20: connected to SRS short canceller

  Test circuit LRP+, LRP-

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 SRS unit connector B (39P) No. 20

Fig. 31: Measuring Resistance Between SRS Unit Connector B (39P) No. 19 And 20
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.0 - 3.0 ohms?

YES : The LRP+, LRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P)

and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 21-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S SEAT BELT TENSIONER

Fig. 32: SRS DTC Troubleshooting Flow Chart (21-3x)

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the driver's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 33: Disconnecting Driver's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (LRP+ line to LRP- line):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect SRS simulator lead K from the driver's seat belt tensioner 4P connector on the floor wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 19 AND NO. 20** .
- 6. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  SRS unit connector B (39P) No. 19 and No. 20: connected to SRS short canceller

  Test circuit LRP+, LRP-

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 SRS unit connector B (39P) No. 20

Fig. 34: Measuring Resistance Between SRS Unit Connector B (39P) No. 19 And 20
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LRP+, LRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P)

and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 21-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE DRIVER'S SEAT BELT TENSIONER

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the driver's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 36: Disconnecting Driver's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-8x indicated?

YES : Go to step 3.

NO : Short to power in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (LRP+, LRP- lines to power):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect SRS simulator lead K from the driver's seat belt tensioner 4P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Test circuit LRP+

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 Body ground

  Test circuit LRP-

  Test point 1 SRS unit connector B (39P) No. 20

  Test point 2 Body ground

Fig. 37: Measuring Voltage Between SRS Unit Connector B (39P) No. 19 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The LRP+, LRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 21-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE DRIVER'S SEAT BELT TENSIONER

Fig. 38: SRS DTC Troubleshooting Flow Chart (21-9x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-9x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the driver's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 39: Disconnecting Driver's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-9x indicated?

YES : Go to step 3.

NO : Short to ground in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (LRP+, LRP- lines):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect SRS simulator lead K from the driver's seat belt tensioner 4P connector on the floor wire harness.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Test circuit LRP+

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 Body ground

  Test circuit LRP-

  Test point 1 SRS unit connector B (39P) No. 20

  Test point 2 Body ground

Fig. 40: Measuring Resistance Between SRS Unit Connector B (39P) No. 19 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LRP+, LRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 22-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE FRONT PASSENGER'S SEAT BELT TENSIONER; DTC 22-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE FRONT PASSENGER'S SEAT BELT TENSIONER

Fig. 41: SRS DTC Troubleshooting Flow Chart (22-1x, 22-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in**

a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-1x or 22-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the front passenger's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 42: Disconnecting Front Passenger's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the front passenger's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-1x or 22-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the front passenger's seat belt tensioner; **REPLACE THE FRONT PASSENGER'S SEAT BELT** , then clear the DTC.

3. Open wire check (RRP+, RRP- lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. Disconnect the following connector.

      SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

    - 4. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 17 AND NO. 18** .
    - 5. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's seat belt tensioner 4P connector (on the floor wire harness): disconnected

      SRS unit connector B (39P): disconnected

      Front passenger's seat belt tensioner 4P connector (on the floor wire harness): connected to SRS simulator lead K

      SRS unit connector B (39P) No. 17 and No. 18: connected to SRS short canceller

      Test circuit RRP+, RRP-

      Test point 1 SRS unit connector B (39P) No. 17

      Test point 2 SRS unit connector B (39P) No. 18

Fig. 43: Measuring Resistance Between SRS Unit Connector B (39P) No. 17 And 18
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.0 - 3.0 ohms?

YES : The RRP+, RRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 22-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE FRONT PASSENGER'S SEAT BELT TENSIONER

Fig. 44: SRS DTC Troubleshooting Flow Chart (22-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS**

COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the front passenger's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 45: Disconnecting Front Passenger's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the front passenger's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the front passenger's seat belt tensioner; **REPLACE THE FRONT PASSENGER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (RRP+ line to RRP- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. Disconnect the following connector.

      SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

    - 4. Disconnect SRS simulator lead K from the front passenger's seat belt tensioner 4P connector on the floor wire harness.
    - 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 17 AND NO. 18** .
    - 6. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's seat belt tensioner 4P connector (on the floor wire harness): disconnected

      SRS unit connector B (39P): disconnected

      SRS unit connector B (39P) No. 17 and No. 18: connected to SRS short canceller

      Test circuit RRP+, RRP-

      Test point 1 SRS unit connector B (39P) No. 17

      Test point 2 SRS unit connector B (39P) No. 18

Fig. 46: Measuring Resistance Between SRS Unit Connector B (39P) No. 17 And 18
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RRP+, RRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P)

and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 22-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE FRONT PASSENGER'S SEAT BELT TENSIONER

Fig. 47: SRS DTC Troubleshooting Flow Chart (22-8x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the front passenger's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 48: Disconnecting Front Passenger's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the front passenger's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-8x indicated?

YES : Go to step 3.

NO : Short to power in the front passenger's seat belt tensioner; **REPLACE THE FRONT PASSENGER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (RRP+, RRP- lines to power):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. Disconnect the following connector.

      SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

    - 4. Disconnect SRS simulator lead K from the front passenger's seat belt tensioner 4P connector on the floor wire harness.
    - 5. Reconnect the negative cable to the battery.
    - 6. Turn the ignition switch to ON (II).
    - 7. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Front passenger's seat belt tensioner 4P connector (on the floor wire harness): disconnected

      SRS unit connector B (39P): disconnected

      Test circuit RRP+

      Test point 1 SRS unit connector B (39P) No. 17

      Test point 2 Body ground

      Test circuit RRP-

      Test point 1 SRS unit connector B (39P) No. 18

      Test point 2 Body ground

Fig. 49: Measuring Voltage Between SRS Unit Connector B (39P) No. 17 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RRP+, RRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 22-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE FRONT PASSENGER'S SEAT BELT TENSIONER

Fig. 50: SRS DTC Troubleshooting Flow Chart (22-9x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead K 070AZ-SNAA200**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were**

properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-9x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the front passenger's seat belt tensioner 4P connector (A) on the floor wire harness.

Fig. 51: Disconnecting Front Passenger's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the front passenger's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-9x indicated?

YES : Go to step 3.

NO : Short to ground in the front passenger's seat belt tensioner; **REPLACE THE FRONT PASSENGER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (RRP+, RRP- lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. Disconnect the following connector.

      SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

    - 4. Disconnect SRS simulator lead K from the front passenger's seat belt tensioner 4P connector on the floor wire harness.
    - 5. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's seat belt tensioner 4P connector (on the floor wire harness): disconnected

      SRS unit connector B (39P): disconnected

      Test circuit RRP+

      Test point 1 SRS unit connector B (39P) No. 17

      Test point 2 Body ground

      Test circuit RRP-

      Test point 1 SRS unit connector B (39P) No. 18

      Test point 2 Body ground

Fig. 52: Measuring Resistance Between SRS Unit Connector B (39P) No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RRP+, RRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 31-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE DRIVER'S SIDE AIRBAG INFLATOR; DTC 31-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE DRIVER'S SIDE AIRBAG INFLATOR

Fig. 53: SRS DTC Troubleshooting Flow Chart (31-1x, 31-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced**

with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-1x or 31-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the driver's side airbag inflator 2P connector (A) on the floor wire harness.

Fig. 54: Disconnecting Driver's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-1x or 31-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the driver's side airbag inflator; **REPLACE THE DRIVER'S SIDE AIRBAG** , then clear the DTC.

3. Open wire check (LSA+, LSA- lines):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Driver's side airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's side airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LSA+, LSA-

  Test point SRS simulator lead L black terminal

Fig. 55: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LSA+, LSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 31-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S SIDE AIRBAG INFLATOR

Fig. 56: SRS DTC Troubleshooting Flow Chart (31-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the driver's side airbag inflator 2P connector (A) on the floor wire harness.

Fig. 57: Disconnecting Driver's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the driver's side airbag inflator; **REPLACE THE DRIVER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (LSA+ line to LSA- line):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 5 AND NO. 6** .
- 6. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Driver's side airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's side airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  SRS unit connector B (39P) No. 5 and No. 6: connected to SRS short canceller

  Test circuit LSA+, LSA-

  Test point SRS simulator lead L black terminal

Fig. 58: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LSA+, LSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 31-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE DRIVER'S SIDE AIRBAG INFLATOR

Fig. 59: SRS DTC Troubleshooting Flow Chart (31-8x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and**

BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the driver's side airbag inflator 2P connector (A) on the floor wire harness.

Fig. 60: Disconnecting Driver's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-8x indicated?

YES : Go to step 3.

NO : Short to power in the driver's side airbag inflator; **REPLACE THE DRIVER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (LSA+, LSA- lines to power):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Driver's side airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's side airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LSA+, LSA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 61: Measuring Voltage Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The LSA+, LSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 31-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE DRIVER'S SIDE AIRBAG INFLATOR

Fig. 62: SRS DTC Troubleshooting Flow Chart (31-9x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-9x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the driver's side airbag inflator 2P connector (A) on the floor wire harness.

Fig. 63: Disconnecting Driver's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-9x indicated?

YES : Go to step 3.

NO : Short to ground in the driver's side airbag inflator; **REPLACE THE DRIVER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (LSA+, LSA- lines):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's side airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's side airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LSA+, LSA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 64: Measuring Resistance Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LSA+, LSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 32-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR; DTC 32-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR

Fig. 65: SRS DTC Troubleshooting Flow Chart (32-1x, 32-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced**

with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-1x or 32-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the front passenger's side airbag inflator 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

Fig. 66: Disconnecting Front Passenger's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-1x or 32-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Open wire check (RSA+, RSA- lines):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  Test circuit RSA+, RSA-

  Test point SRS simulator lead L black terminal

Fig. 67: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The RSA+, RSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

NO : Open or increased resistance in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

DTC 32-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR

Fig. 68: SRS DTC Troubleshooting Flow Chart (32-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the front passenger's side airbag inflator 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

Fig. 69: Disconnecting Front Passenger's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (RSA+ line to RSA- line):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 3 AND NO. 4** .
- 6. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  SRS unit connector B (39P) No. 3 and No. 4: connected to SRS short canceller

  Test circuit RSA+, RSA-

  Test point SRS simulator lead L black terminal

Fig. 70: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RSA+, RSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

NO : Short to another wire in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

DTC 32-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR

Fig. 71: SRS DTC Troubleshooting Flow Chart (32-8x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS**

AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the front passenger's side airbag inflator 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

Fig. 72: Disconnecting Front Passenger's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-8x indicated?

YES : Go to step 3.

NO : Short to power in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (RSA+, RSA- lines to power):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  Test circuit RSA+, RSA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 73: Measuring Voltage Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RSA+, RSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

NO : Short to power in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

DTC 32-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR

Fig. 74: SRS DTC Troubleshooting Flow Chart (32-9x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION**

AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-9x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the front passenger's side airbag inflator 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

Fig. 75: Disconnecting Front Passenger's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-9x indicated?

YES : Go to step 3.

NO : Short to ground in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (RSA+, RSA- lines):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  Test circuit RSA+, RSA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 76: Measuring Resistance Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RSA+, RSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

NO : Short to ground in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

DTC 33-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE LEFT SIDE CURTAIN AIRBAG INFLATOR; DTC 33-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE LEFT SIDE CURTAIN AIRBAG INFLATOR

Fig. 77: SRS DTC Troubleshooting Flow Chart (33-1x, 33-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in**

a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-1x or 33-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Left side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the left side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 78: Disconnecting Left Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the left side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-1x or 33-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the left side curtain airbag inflator; **REPLACE THE LEFT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Open wire check (LCA+, LCA- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the left side curtain airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Left side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Left side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LCA+, LCA-

  Test point SRS simulator lead L black terminal

Fig. 79: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LCA+, LCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the

DTC.

DTC 33-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE LEFT SIDE CURTAIN AIRBAG INFLATOR

Fig. 80: SRS DTC Troubleshooting Flow Chart (33-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with**

the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Left side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the left side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 81: Disconnecting Left Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the left side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the left side curtain airbag inflator; **REPLACE THE LEFT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Shorted wire check (LCA+ line to LCA- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the left side curtain airbag inflator 2P connector on the floor wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 1 AND NO. 2** .
- 6. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Left side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Left side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  SRS unit connector B (39P) No. 1 and No. 2: connected to SRS short canceller

  Test circuit LCA+, LCA-

  Test point SRS simulator lead L black terminal

Fig. 82: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LCA+, LCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B

(39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 33-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE LEFT SIDE CURTAIN AIRBAG INFLATOR

Fig. 83: SRS DTC Troubleshooting Flow Chart (33-8x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Left side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the left side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 84: Disconnecting Left Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the left side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-8x indicated?

YES : Go to step 3.

NO : Short to power in the left side curtain airbag inflator; **REPLACE THE LEFT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Shorted wire check (LCA+, LCA- lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the left side curtain airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Left side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Left side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LCA+, LCA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 85: Measuring Voltage Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The LCA+, LCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 33-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE LEFT SIDE CURTAIN AIRBAG INFLATOR

Fig. 86: SRS DTC Troubleshooting Flow Chart (33-9x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and**

BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-9x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Left side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the left side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 87: Disconnecting Left Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the left side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 33-9x indicated?

YES : Go to step 3.

NO : Short to ground in the left side curtain airbag inflator; **REPLACE THE LEFT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Shorted wire check (LCA+, LCA- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the left side curtain airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Left side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Left side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LCA+, LCA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 88: Measuring Resistance Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LCA+, LCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS**

UNIT REMOVAL AND INSTALLATION or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 34-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE RIGHT SIDE CURTAIN AIRBAG INFLATOR; DTC 34-2X ("X" CAN BE 0 THRU 9 OR A THRU F): INCREASED RESISTANCE IN THE RIGHT SIDE CURTAIN AIRBAG INFLATOR

Fig. 89: SRS DTC Troubleshooting Flow Chart (34-1x, 34-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION**

AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-1x or 34-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Right side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the right side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 90: Disconnecting Right Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals SRS of simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the right side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-1x or 34-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the right side curtain airbag inflator; **REPLACE THE RIGHT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Open wire check (RCA+, RCA- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the right side curtain airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Right side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Right side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit RCA+, RCA-

  Test point SRS simulator lead L black terminal

Fig. 91: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The RCA+, RCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the

DTC.

DTC 34-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE RIGHT SIDE CURTAIN AIRBAG INFLATOR

Fig. 92: SRS DTC Troubleshooting Flow Chart (34-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with**

the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Right side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the right side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 93: Disconnecting Right Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals SRS of simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the right side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the right side curtain airbag inflator; **REPLACE THE RIGHT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Shorted wire check (RCA+ line to RCA- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the right side curtain airbag inflator 2P connector on the floor wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 11 AND NO. 12** .
- 6. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Right side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Right side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  SRS unit connector B (39P) No. 11 and No. 12: connected to SRS short canceller

  Test circuit RCA+, RCA-

  Test point SRS simulator lead L black terminal

Fig. 94: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RCA+, RCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B

(39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 34-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE RIGHT SIDE CURTAIN AIRBAG INFLATOR

Fig. 95: SRS DTC Troubleshooting Flow Chart (34-8x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Right side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the right side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 96: Disconnecting Right Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals SRS of simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the right side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-8x indicated?

YES : Go to step 3.

NO : Short to power in the right side curtain airbag inflator; **REPLACE THE RIGHT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Shorted wire check (RCA+, RCA- lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the right side curtain airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Right side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Right side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit RCA+, RCA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 97: Measuring Voltage Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RCA+, RCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 34-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE RIGHT SIDE CURTAIN AIRBAG INFLATOR

Fig. 98: SRS DTC Troubleshooting Flow Chart (34-9x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and**

BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-9x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Right side curtain airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side quarter pillar trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** , **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** or **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** .
   - 4. Disconnect the right side curtain airbag inflator 2P connector (A) on the floor wire harness.

Fig. 99: Disconnecting Right Side Curtain Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals SRS of simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the right side curtain airbag inflator 2P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 34-9x indicated?

YES : Go to step 3.

NO : Short to ground in the right side curtain airbag inflator; **REPLACE THE RIGHT SIDE CURTAIN AIRBAG** , then clear the DTC.

3. Shorted wire check (RCA+, RCA- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.

- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the right side curtain airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Right side curtain airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Right side curtain airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit RCA+, RCA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground

Fig. 100: Measuring Resistance Between SRS Simulator Lead L Black Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RCA+, RCA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS**

UNIT UPDATE or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the floor wire harness.

NO : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 41-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE LEFT FRONT IMPACT SENSOR

Fig. 101: SRS DTC Troubleshooting Flow Chart (41-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 41-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Harness visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the engine compartment wire harness or the dashboard wire harness.

Is the harness OK?

YES : Go to step 3.

NO : Replace the engine compartment wire harness or the dashboard wire harness, then clear the DTC.

3. Connector connection check:
   - 1. Check the following connector connections.

   SRS unit connector A (39P) See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION**

   LEFT FRONT IMPACT SENSOR 2P CONNECTOR (ON THE ENGINE COMPARTMENT WIRE HARNESS)

   Connector between the SRS unit and the left front impact sensor

   Are the connectors OK?

   YES : Go to step 5.

   NO : Go to step 4.

4. System check:
   - 1. Repair the poor connector connections whichever was the cause of the problem in step 3.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

   Is DTC 41-1x indicated?

   YES : Turn the ignition switch to LOCK (0), then go to step 5.

   NO : The system is OK at this time.

5. Shorted wire check (LFS+ line to LFS- line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connectors.

     SRS unit connector A (39P) See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION**

     LEFT FRONT IMPACT SENSOR 2P CONNECTOR (ON THE ENGINE COMPARTMENT WIRE HARNESS)

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

SRS unit connector A (39P): disconnected

Left front impact sensor 2P connector (on the engine compartment wire harness): disconnected

Test circuit LFS+, LFS-

Test point 1 SRS unit connector A (39P) No. 28

Test point 2 SRS unit connector A (39P) No. 29

Fig. 102: Measuring Resistance Between SRS Unit Connector A (39P) No. 28 And 29
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LFS+, LFS- wires are not shorted. Go to step 6.

NO : Short to another wire in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

6. Shorted wire check (LFS+, LFS- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector A (39P): disconnected

     Left front impact sensor 2P connector (on the engine compartment wire harness): disconnected

     Test circuit LFS+

     Test point 1 SRS unit connector A (39P) No. 28

     Test point 2 Body ground

Test circuit LFS-

Test point 1 SRS unit connector A (39P) No. 29

Test point 2 Body ground

Fig. 103: Measuring Resistance Between SRS Unit Connector A (39P) No. 28 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LFS+, LFS- wires are not shorted. Go to step 7.

NO : Short to ground in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

7. Shorted wire check (LFS+, LFS- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   SRS unit connector A (39P): disconnected

   Left front impact sensor 2P connector (on the engine compartment wire harness): disconnected

   Test circuit LFS+

   Test point 1 SRS unit connector A (39P) No. 28

   Test point 2 Body ground

Test circuit LFS-

Test point 1 SRS unit connector A (39P) No. 29

Test point 2 Body ground

Fig. 104: Measuring Resistance Between SRS Unit Connector A (39P) No. 28 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The LFS+, LFS- wires are not shorted to power. Go to step 8.

NO : Short to power in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

8. Open wire check (LFS+, LFS- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the black terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), then connect SRS simulator lead L to the left front impact sensor 2P connector (B) on the engine compartment wire harness.

Fig. 105: Connecting SRS Simulator Lead L To Left Front Impact Sensor 2P Connector On Engine Compartment Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector A (39P): disconnected

  Left front impact sensor 2P connector (on the engine compartment wire harness): disconnected

  Left front impact sensor 2P connector (on the engine compartment wire harness): connected to SRS simulator lead L

  Test circuit LFS+, LFS-

  Test point 1 SRS unit connector A (39P) No. 28

  Test point 2 SRS unit connector A (39P) No. 29

Fig. 106: Measuring Resistance Between SRS Unit Connector A (39P) No. 28 And 29
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LFS+, LFS- wires are OK. **REPLACE THE LEFT FRONT IMPACT SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Open in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

DTC 41-2X, 41-9X, 41-AX, 41-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE LEFT FRONT IMPACT SENSOR

Fig. 107: SRS DTC Troubleshooting Flow Chart (41-2x, 41-9x, 41-Ax, 41-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 41-2x, 41-9x, 41-Ax, or 41-Bx indicated?

YES : The failure is duplicated. **REPLACE THE LEFT FRONT IMPACT SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 42-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE RIGHT FRONT IMPACT SENSOR

Fig. 108: SRS DTC Troubleshooting Flow Chart (42-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 42-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Harness visual check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the engine compartment wire harness or the dashboard wire harness.

Is the harness OK?

YES : Go to step 3.

NO : Replace the engine compartment wire harness or the dashboard wire harness, then clear the DTC.

3. Connector connection check:
   - 1. Check the following connector connections.

   SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   RIGHT FRONT IMPACT SENSOR 2P CONNECTOR (ON THE ENGINE COMPARTMENT WIRE HARNESS)

   Connector between the SRS unit and the right front impact sensor

   Are the connectors OK?

   YES : Go to step 5.

   NO : Go to step 4.

4. System check:
   - 1. Repair the poor connector connections whichever was the cause of the problem in step 3.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

   Is DTC 42-1x indicated?

   YES : Turn the ignition switch to LOCK (0), then go to step 5.

   NO : The system is OK at this time.

5. Shorted wire check (RFS+ line to RFS- line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connectors.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

     RIGHT FRONT IMPACT SENSOR 2P CONNECTOR (ON THE ENGINE COMPARTMENT WIRE HARNESS)

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

SRS unit connector A (39P): disconnected

Right front impact sensor 2P connector (on the engine compartment wire harness): disconnected

Test circuit RFS+, RFS-

Test point 1 SRS unit connector A (39P) No. 26

Test point 2 SRS unit connector A (39P) No. 27

Fig. 109: Measuring Resistance Between SRS Unit Connector A (39P) No. 26 And 27
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RFS+, RFS- wires are not shorted. Go to step 6.

NO : Short to another wire in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

6. Shorted wire check (RFS+, RFS- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector A (39P): disconnected

     Right front impact sensor 2P connector (on the engine compartment wire harness): disconnected

     Test circuit RFS+

     Test point 1 SRS unit connector A (39P) No. 26

     Test point 2 Body ground

Test circuit RFS-

Test point 1 SRS unit connector A (39P) No. 27

Test point 2 Body ground

Fig. 110: Measuring Resistance Between SRS Unit Connector A (39P) No. 26 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RFS+, RFS- wires are not shorted. Go to step 7.

NO : Short to ground in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

7. Shorted wire check (RFS+, RFS- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   SRS unit connector A (39P): disconnected

   Right front impact sensor 2P connector (on the engine compartment wire harness): disconnected

   Test circuit RFS+

   Test point 1 SRS unit connector A (39P) No. 26

   Test point 2 Body ground

Test circuit RFS-

Test point 1 SRS unit connector A (39P) No. 27

Test point 2 Body ground

Fig. 111: Measuring Voltage Between SRS Unit Connector A (39P) No. 26 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RFS+, RFS- wires are not shorted to power. Go to step 8.

NO : Short to power in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

8. Open wire check (RFS+, RFS- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the black terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), then connect SRS simulator lead L to the right front impact sensor 2P connector (B) on the engine compartment wire harness.

Fig. 112: Connecting SRS Simulator Lead L To Right Front Impact Sensor 2P Connector On Engine Compartment Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector A (39P): disconnected

  Right front impact sensor 2P connector (on the engine compartment wire harness): disconnected

  Right front impact sensor 2P connector (on the engine compartment wire harness): connected to SRS simulator lead L

  Test circuit RFS+, RFS-

  Test point 1 SRS unit connector A (39P) No. 26

  Test point 2 SRS unit connector A (39P) No. 27

Fig. 113: Measuring Resistance Between SRS Unit Connector A (39P) No. 26 And 27
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The RFS+, RFS- wires are OK. **REPLACE THE RIGHT FRONT IMPACT SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the engine compartment wire harness or the dashboard wire harness; replace the faulty harness, then clear the DTC.

DTC 42-2X, 42-9X, 42-AX, 42-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE RIGHT FRONT IMPACT SENSOR

Fig. 114: SRS DTC Troubleshooting Flow Chart (42-2x, 42-9x, 42-Ax, 42-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 42-2x, 42-9x, 42-Ax, or 42-Bx indicated?

YES : The failure is duplicated. **REPLACE THE RIGHT FRONT IMPACT SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 43-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE LEFT SIDE IMPACT SENSOR (FIRST)

Fig. 115: SRS DTC Troubleshooting Flow Chart (43-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were**

properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Are DTCs indicated?

Only DTC 43-11 : Go to step 2.

DTC 43-1x (except 43-11) : **REPLACE THE LEFT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC.

DTCs 43-11 and 45-11 : **REPLACE THE LEFT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC.

NO DTC : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Shorted wire check (LS1+ line to LS1- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

LEFT SIDE IMPACT SENSOR (FIRST) 4P CONNECTOR (ON THE FLOOR WIRE HARNESS)

- 4. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector B (39P): disconnected

  Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

  Test circuit LS1+, LS1-

  Test point 1 SRS unit connector B (39P) No. 28

  Test point 2 SRS unit connector B (39P) No. 29

Fig. 116: Measuring Resistance Between SRS Unit Connector B (39P) No. 28 And 29
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LS1+, LS1- wires are not shorted. Go to step 3.

NO : Short to another wire in the floor wire harness between the SRS unit and the left side impact sensor (first); replace the floor wire harness, then clear the DTC.

3. Shorted wire check (LS1+, LS1- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector B (39P): disconnected

     Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

     Test circuit LS1+

Test point 1 SRS unit connector B (39P) No. 28

Test point 2 Body ground

Test circuit LS1-

Test point 1 SRS unit connector B (39P) No. 29

Test point 2 Body ground

Fig. 117: Measuring Resistance Between SRS Unit Connector B (39P) No. 28 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LS1+, LS1- wires are not shorted. Go to step 4.

NO : Short to ground in the floor wire harness between the SRS unit and the left side impact sensor (first); replace the floor wire harness, then clear the DTC.

4. Shorted wire check (LS1+, LS1- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   SRS unit connector B (39P): disconnected

   Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

   Test circuit LS1+

Test point 1 SRS unit connector B (39P) No. 28

Test point 2 Body ground

Test circuit LS1-

Test point 1 SRS unit connector B (39P) No. 29

Test point 2 Body ground

Fig. 118: Measuring Resistance Between SRS Unit Connector B (39P) No. 28 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The LS1+, LS1- wires are not shorted to power. Go to step 5.

NO : Short to power in the floor wire harness between the SRS unit and the left side impact sensor (first); replace the floor wire harness, then clear the DTC.

5. Open wire check (LS1+, LS1- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the black terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), then connect SRS simulator lead L to the left side impact sensor (first) 4P connector (B) on the floor wire harness.

Fig. 119: Connecting SRS Simulator Lead L To Left Side Impact Sensor 4P Connector On Floor Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector B (39P): disconnected

  Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

  Left side impact sensor (first) 4P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LS1+, LS1-

  Test point 1 SRS unit connector B (39P) No. 28

  Test point 2 SRS unit connector B (39P) No. 29

Fig. 120: Measuring Resistance Between SRS Unit Connector B (39P) No. 28 And 29
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LS1+, LS1- wires are OK. **REPLACE THE LEFT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the floor wire harness between the SRS unit and the left side impact sensor (first); replace the floor wire harness, then clear the DTC.

DTC 43-2X, 43-9X, 43-AX, 43-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE LEFT SIDE IMPACT SENSOR (FIRST)

Fig. 121: SRS DTC Troubleshooting Flow Chart (43-2x, 43-9x, 43-Ax, 43-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 43-2x, 43-9x, 43-Ax, or 43-Bx indicated?

YES : The failure is duplicated. **REPLACE THE LEFT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 44-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE RIGHT SIDE IMPACT SENSOR (FIRST)

Fig. 122: SRS DTC Troubleshooting Flow Chart (44-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were**

properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Are DTCs indicated?

Only DTC 44-11 : Go to step 2.

DTC 44-1x (except 44-11) : **REPLACE THE RIGHT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC.

DTCs 44-11 and 46-11 : **REPLACE THE RIGHT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC.

NO DTC : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Shorted wire check (RS1+ line to RS1- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

     RIGHT SIDE IMPACT SENSOR (FIRST) 4P CONNECTOR (ON THE FLOOR WIRE HARNESS)

- 4. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector B (39P): disconnected

  Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

  Test circuit RS1+, RS1-

  Test point 1 SRS unit connector B (39P) No. 26

  Test point 2 SRS unit connector B (39P) No. 27

Fig. 123: Measuring Resistance Between SRS Unit Connector B (39P) No. 26 And 27
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RS1+, RS1- wires are not shorted. Go to step 3.

NO : Short to another wire in the floor wire harness between the SRS unit and the right side impact sensor (first); replace the floor wire harness, then clear the DTC.

3. Shorted wire check (RS1+, RS1- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector B (39P): disconnected

     Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

     Test circuit RS1+

Test point 1 SRS unit connector B (39P) No. 26

Test point 2 Body ground

Test circuit RS1-

Test point 1 SRS unit connector B (39P) No. 27

Test point 2 Body ground

Fig. 124: Measuring Resistance Between SRS Unit Connector B (39P) No. 26 And 27
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RS1+, RS1- wires are not shorted. Go to step 4.

NO : Short to ground in the floor wire harness between the SRS unit and the right side impact sensor (first); replace the floor wire harness, then clear the DTC.

4. Shorted wire check (RS1+, RS1- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   SRS unit connector B (39P): disconnected

   Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

   Test circuit RS1+

   Test point 1 SRS unit connector B (39P) No. 26

Test point 2 Body ground

Test circuit RS1-

Test point 1 SRS unit connector B (39P) No. 27

Test point 2 Body ground

Fig. 125: Measuring Resistance Between SRS Unit Connector B (39P) No. 26 And 27
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RS1+, RS1- wires are not shorted to power. Go to step 5.

NO : Short to power in the floor wire harness between the SRS unit and the right side impact sensor (first); replace the floor wire harness, then clear the DTC.

5. Open wire check (RS1+, RS1- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the black terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), then connect SRS simulator lead L to the right side impact sensor (first) 4P connector (B) on the floor wire harness.

Fig. 126: Connecting SRS Simulator Lead L To Right Side Impact Sensor 4P Connector On Floor Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector B (39P): disconnected

  Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

  Right side impact sensor (first) 4P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit RS1+, RS1-

  Test point 1 SRS unit connector B (39P) No. 26

  Test point 2 SRS unit connector B (39P) No. 27

Fig. 127: Measuring Resistance Between SRS Unit Connector B (39P) No. 26 And 27
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The RS1+, RS1- wires are OK. **REPLACE THE RIGHT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the floor wire harness between the SRS unit and the right side impact sensor (first); replace the floor wire harness, then clear the DTC.

DTC 44-2X, 44-9X, 44-AX, 44-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE RIGHT SIDE IMPACT SENSOR (FIRST)

Fig. 128: SRS DTC Troubleshooting Flow Chart (44-2x, 44-9x, 44-Ax, 44-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 44-2x, 44-9x, 44-Ax, or 44-Bx indicated?

YES : The failure is duplicated. **REPLACE THE RIGHT SIDE IMPACT SENSOR (FIRST)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 45-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE LEFT SIDE IMPACT SENSOR (SECOND)

Fig. 129: SRS DTC Troubleshooting Flow Chart (45-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS**

AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Are DTCs indicated?

Only DTC 45-11 : Go to step 2.

DTC 45-1x (except 45-11) : **REPLACE THE LEFT SIDE IMPACT SENSOR (SECOND)** , then clear the DTC.

NO DTC : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Shorted wire check (LS2+ line to LS2- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

     LEFT SIDE IMPACT SENSOR (FIRST) 4P CONNECTOR (ON THE FLOOR WIRE HARNESS)

     LEFT SIDE IMPACT SENSOR (SECOND) 2P CONNECTOR (ON THE FLOOR WIRE HARNESS)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

Left side impact sensor (second) 2P connector (on the floor wire harness): disconnected

Test circuit LS2+, LS2-

Test point 1 Left side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

Test point 2 Left side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

Fig. 130: Measuring Resistance Between Left Side Impact Sensor (Second) 2P Connector No. 1 And 2 (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LS2+, LS2- wires are not shorted. Go to step 3.

NO : Short to another wire in the floor wire harness between the left side impact sensor (first) and the left side impact sensor (second); replace the floor wire harness, then clear the DTC.

3. Shorted wire check (LS2+, LS2- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

     Left side impact sensor (second) 2P connector (on the floor wire harness): disconnected

     Test circuit LS2+

     Test point 1 Left side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

     Test point 2 Body ground

     Test circuit LS2-

Test point 1 Left side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

Test point 2 Body ground

Fig. 131: Measuring Resistance Between Left Side Impact Sensor (Second) 2P Connector No. 2 And Body Ground (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LS2+, LS2- wires are not shorted. Go to step 4.

NO : Short to ground in the floor wire harness between the left side impact sensor (first) and the left side impact sensor (second); replace the floor wire harness, then clear the DTC.

4. Shorted wire check (LS2+, LS2- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

     Left side impact sensor (second) 2P connector (on the floor wire harness): disconnected

     Test circuit LS2+

     Test point 1 Left side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

     Test point 2 Body ground

     Test circuit LS2-

     Test point 1 Left side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

Test point 2 Body ground

Fig. 132: Measuring Voltage Between Left Side Impact Sensor (Second) 2P Connector No. 2 And Body Ground (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The LS2+, LS2- wires are not shorted to power. Go to step 5.

NO : Short to power in the floor wire harness between the left side impact sensor (first) and the left side impact sensor (second); replace the floor wire harness, then clear the DTC.

5. Open wire check (LS2+, LS2- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the red terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), then connect SRS simulator lead L to the left side impact sensor (first) 4P connector (B) on the floor wire harness.

Fig. 133: Connecting SRS Simulator Lead L To Left Side Impact Sensor (First) 4P Connector On Floor Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Left side impact sensor (first) 4P connector (on the floor wire harness): disconnected

  Left side impact sensor (second) 2P connector (on the floor wire harness): disconnected

  Left side impact sensor (first) 4P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LS2+, LS2-

  Test point 1 Left side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

  Test point 2 Left side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

Fig. 134: Measuring Resistance Between Left Side Impact Sensor (Second) 2P Connector No. 1 And 2 (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LS2+, LS2- wires are OK. **REPLACE THE LEFT SIDE IMPACT SENSOR (SECOND)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the floor wire harness between the left side impact sensor (first) and the left side impact sensor (second); replace the floor wire harness, then clear the DTC.

DTC 45-2X, 45-9X, 45-AX, 45-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE LEFT SIDE IMPACT SENSOR (SECOND)

Fig. 135: SRS DTC Troubleshooting Flow Chart (45-2x, 45-9x, 45-Ax, 45-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS**

AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 45-2x, 45-9x, 45-Ax, or 45-Bx indicated?

YES : The failure is duplicated. **REPLACE THE LEFT SIDE IMPACT SENSOR (SECOND)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 46-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE RIGHT SIDE IMPACT SENSOR (SECOND)

Fig. 136: SRS DTC Troubleshooting Flow Chart (46-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS**

AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Are DTCs indicated?

Only DTC 46-11 : Go to step 2.

DTC 46-1x (except 46-11) : **REPLACE THE RIGHT SIDE IMPACT SENSOR (SECOND)** , then clear the DTC.

NO DTC : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Shorted wire check (RS2+ line to RS2- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

     RIGHT SIDE IMPACT SENSOR (FIRST) 4P CONNECTOR (ON THE FLOOR WIRE HARNESS)

     RIGHT SIDE IMPACT SENSOR (SECOND) 2P CONNECTOR (ON THE FLOOR WIRE HARNESS)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

Right side impact sensor (second) 2P connector (on the floor wire harness): disconnected

Test circuit RS2+, RS2-

Test point 1 Right side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

Test point 2 Right side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

Fig. 137: Measuring Resistance Between Right Side Impact Sensor (Second) 2P Connector No. 1 And 2 (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RS2+, RS2- wires are not shorted. Go to step 3.

NO : Short to another wire in the floor wire harness between the right side impact sensor (first) and the right side impact sensor (second); replace the floor wire harness, then clear the DTC.

3. Shorted wire check (RS2+, RS2- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

     Right side impact sensor (second) 2P connector (on the floor wire harness): disconnected

     Test circuit RS2+

     Test point 1 Right side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

     Test point 2 Body ground

     Test circuit RS2-

Test point 1 Right side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

Test point 2 Body ground

Fig. 138: Measuring Resistance Between Right Side Impact Sensor (Second) 2P Connector No. 2 And Body Ground (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The RS2+, RS2- wires are not shorted. Go to step 4.

NO : Short to ground in the floor wire harness between the right side impact sensor (first) and the right side impact sensor (second); replace the floor wire harness, then clear the DTC.

4. Shorted wire check (RS2+, RS2- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

   Right side impact sensor (second) 2P connector (on the floor wire harness): disconnected

   Test circuit RS2+

   Test point 1 Right side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

   Test point 2 Body ground

   Test circuit RS2-

   Test point 1 Right side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

Test point 2 Body ground

Fig. 139: Measuring Resistance Between Right Side Impact Sensor (Second) 2P Connector No. 2 And Body Ground (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RS2+, RS2- wires are not shorted to power. Go to step 5.

NO : Short to power in the floor wire harness between the right side impact sensor (first) and the right side impact sensor (second); replace the floor wire harness, then clear the DTC.

5. Open wire check (RS2+, RS2- lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Connect the red terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), then connect SRS simulator lead L to the right side impact sensor (first) 4P connector (B) on the floor wire harness.

Fig. 140: Connecting SRS Simulator Lead L To Right Side Impact Sensor (First) 4P Connector On Floor Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Right side impact sensor (first) 4P connector (on the floor wire harness): disconnected

  Right side impact sensor (second) 2P connector (on the floor wire harness): disconnected

  Right side impact sensor (first) 4P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit RS2+, RS2-

  Test point 1 Right side impact sensor (second) 2P connector No. 1 (on the floor wire harness)

  Test point 2 Right side impact sensor (second) 2P connector No. 2 (on the floor wire harness)

Fig. 141: Measuring Resistance Between Right Side Impact Sensor (Second) 2P Connector No. 1 And 2 (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The RS2+, RS2- wires are OK. **REPLACE THE RIGHT SIDE IMPACT SENSOR (SECOND)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the floor wire harness between the right side impact sensor (first) and the right side impact sensor (second); replace the floor wire harness, then clear the DTC.

DTC 46-2X, 46-9X, 46-AX, 46-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE RIGHT SIDE IMPACT SENSOR (SECOND)

Fig. 142: SRS DTC Troubleshooting Flow Chart (46-2x, 46-9x, 46-Ax, 46-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS**

AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 46-2x, 46-9x, 46-Ax, or 46-Bx indicated?

YES : The failure is duplicated. **REPLACE THE RIGHT SIDE IMPACT SENSOR (SECOND)** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 51-XX, 52-XX, 53-XX, 54-XX, 55-XX, 57-XX, 58-XX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE SRS UNIT

Fig. 143: SRS DTC Troubleshooting Flow Chart (51-xx, 52-xx, 53-xx, 54-xx, 55-xx, 57-xx, 58-xx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE DOING THIS TROUBLESHOOTING PROCEDURE, FIND OUT IF**

THE VEHICLE WAS IN A COLLISION. IF SO, VERIFY THAT ALL THE REQUIRED COMPONENTS WERE REPLACED WITH NEW COMPONENTS, OF THE CORRECT PART NUMBER, AND THAT THEY WERE PROPERLY INSTALLED or AIRBAG AND TENSIONER DISPOSAL .

- **Before troubleshooting any of these DTCs, CHECK THE BATTERY/SYSTEM VOLTAGE AND BATTERY CABLE CONNECTIONS . If the voltage is low, repair the charging system, test and charge the battery, or replace the battery before troubleshooting the SRS. If the battery/system voltage is OK, ask the customer if the battery ever went dead or if the engine was started and run with the battery in a low state of charge. A dead battery may trigger one or more of these DTCs.**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 51-xx, 52-xx, 53-xx, 54-xx, 55-xx, 57-xx, or 58-xx indicated?

YES : The failure is duplicated. **Replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 53-FF: SRS UNIT PROGRAMMING ERROR

Fig. 144: SRS DTC Troubleshooting Flow Chart (53-FF)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **This DTC is indicated when the SRS unit update is not completed properly.**
- **Do not turn the ignition switch to ACCESSORY (I) or LOCK (0) while updating the SRS unit. If you turn the ignition switch to ACCESSORY (I) or LOCK (0) before you complete the SRS unit update procedure, the SRS unit can be damaged.**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**

DTC Description	DTC
53-FF SRS unit programming error	

1. System check:
   - 1. **Do the SRS unit update procedure** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
53-FF SRS unit programming error	

Is DTC 53-FF indicated?

YES : **Replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Update is complete.

DTC 56-21: LOST COMMUNICATION WITH THE PCM (PGM-FI SYSTEM); DTC 56-22, 56-23: UNDEFINED DATA RECEIVED FROM THE PCM (PGM-FI SYSTEM)

Fig. 145: SRS DTC Troubleshooting Flow Chart (56-21)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC
56-21 Lost communication with the PCM (PGM-FI system)	
56-22 Undefined data received from the PCM (PGM-FI system)	
56-23 Undefined data received from the PCM (PGM-FI system)	

1. Body electrical system check:
   - 1. Check for any F-CAN and B-CAN communication DTCs with the HDS.

DTC Description	DTC

Are there any communication DTCs?

Is DTC 56-21, 56-22, or 56-23 indicated?

YES : Go to the appropriate **DTC TROUBLESHOOTING**.

NO : Go to step 2.

2. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
56-21 Lost communication with the PCM (PGM-FI system)	
56-22 Undefined data received from the PCM (PGM-FI system)	
56-23 Undefined data received from the PCM (PGM-FI system)	

Does the MIL stay on longer than 30 seconds?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

3. PGM-FI system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Start the engine, and see if the malfunction indicator lamp (MIL) also stays on.

Does the MIL stay on longer than 30 seconds?

YES : **Go to the Fuel and Emissions Systems General Troubleshooting Information** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND**

EMISSIONS SYSTEMS .

NO : Go to step 4.

4. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Jump the SCS line with the HDS** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

     NOTE: This step must be done to protect the PCM from damage.

   - 3. Disconnect the following connector.

     Disconnect PCM connector A (49P) See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**

   - 4. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 5. Disconnect the following connector.

     SRS unit connector A (39P) See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION**

   - 6. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     SRS unit connector A (39P): disconnected

     Test circuit F CAN-H

     Test point 1 SRS unit connector A (39P) No. 20

     Test point 2 PCM connector A (49P) No. 3 (WHT)

     Test circuit F CAN-L

     Test point 1 SRS unit connector A (39P) No. 21

     Test point 2 PCM connector A (49P) No. 4 (RED)

Fig. 146: Checking Continuity Between SRS Unit Connector A (39P) No. 20 And PCM Connector A (49P) No. 3 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the engine compartment wire harness or the dashboard wire harness.

NO : Open in the harness between SRS unit connector A (39P) terminal No. 20 and PCM connector A (49P) terminal No. 3, or between SRS unit connector A (39P) terminal No. 21 and PCM connector A (49P) terminal No. 4 (engine compartment wire harness or dashboard wire harness); replace the faulty harness, then clear the DTC.

DTC 56-25: LOST COMMUNICATION WITH THE GAUGE CONTROL MODULE

Fig. 147: SRS DTC Troubleshooting Flow Chart (56-25)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC
56-25 Lost communication with the gauge control module	

1. Body electrical system check:
    - 1. Check for any F-CAN and B-CAN communication DTCs with the HDS.

DTC Description	DTC

Are there any communication DTCs?

YES : Go to the appropriate **DTC TROUBLESHOOTING**.

NO : Go to step 2.

2. Brake system indicator check:
   - 1. Release the parking brake, turn the ignition switch to ON (II), and see if the brake system indicator comes on for 2 seconds and then goes off.

Does the brake system indicator come on and then go off after 2 second?

YES : Go to step 3.

NO : **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** . If gauge control module has the problem, **replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

3. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
56-25 Lost communication with the gauge control module	

Is DTC 56-25 indicated?

YES : Go to step 4.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

4. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

SRS unit connector A (39P) See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND**

INSTALLATION

Gauge control module 32P connector See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION**

- 4. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

SRS unit connector A (39P): disconnected

Gauge control module 32P connector: disconnected

Test circuit F CAN-H

Test point 1 SRS unit connector A (39P) No. 20

Test point 2 Gauge control module 32P connector No. 19 (WHT)

Test circuit F CAN-L

Test point 1 SRS unit connector A (39P) No. 21

Test point 2 Gauge control module 32P connector No. 20 (RED)

Fig. 148: Checking Continuity Between SRS Unit Connector A (39P) No. 21 And Gauge Control Module 32P Connector No. 20 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the dashboard wire harness.

NO : Open in the harness between SRS unit connector A (39P) terminal No. 20 and gauge control module 32P connector terminal No. 19, or between SRS unit connector A (39P) terminal No. 21 and gauge control module 32P connector terminal No. 20; replace the dashboard wire harness, then clear the DTC.

DTC 56-26, 56-27: UNDEFINED DATA RECEIVED FROM THE GAUGE CONTROL MODULE

Fig. 149: SRS DTC Troubleshooting Flow Chart (56-26, 56-27)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

56-26 Undefined data received from the gauge control module	
56-27 Undefined data received from the gauge control module	

1. Body electrical system check:
   - 1. Check for any F-CAN and B-CAN communication DTCs with the HDS.

DTC Description	DTC

Are there any communication DTCs?

YES : Go to the appropriate **DTC TROUBLESHOOTING**.

NO : Go to step 2.

2. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
56-26 Undefined data received from the gauge control module	
56-27 Undefined data received from the gauge control module	

Is DTC 56-26 or 56-27 indicated?

YES : **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** . If gauge control module has the problem, **replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 61-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE DRIVER'S SEAT BELT BUCKLE SWITCH

Fig. 150: SRS DTC Troubleshooting Flow Chart (61-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds. Buckle and unbuckle the driver's seat belt several times.

- 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 61-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. SRS unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A SRS unit connector B (39P) No. 24

     Terminal B Body ground

Fig. 151: Checking SRS Unit Connector B (39P) No. 24 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. **CLEAR THE DTCS WITH THE HDS** .
   - 4. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 5. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 61-2x indicated?

YES : Go to step 3.

NO : Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the floor wire harness.

3. Open wire check (FLBC line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire from SRS unit connector B (39P).
   - 3. Disconnect the driver's seat belt buckle switch 2P connector (A) on the floor wire harness.

Fig. 152: Identifying Driver's Seat Belt Buckle Switch 2P Connectora
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Driver's seat belt buckle switch 2P connector (on the floor wire harness): disconnected

Test circuit FLBC

Test point 1 Driver's seat belt buckle switch 2P connector No. 1 (on the floor wire harness)

Test point 2 Body ground

Fig. 153: Measuring Voltage Between Driver's Seat Belt Buckle Switch 2P Connector No. 1 And Body Ground (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 10 V?

YES : The FLBC wire is OK. Go to step 4.

NO : Open in the floor wire harness; replace the floor wire harness, then clear the DTC.

4. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the resistance between test points 1 and 2.

   Test condition IG LOCK (0)

   Driver's seat belt buckle switch 2P connector (on the floor wire harness): disconnected

   Test circuit GND

   Test point 1 Driver's seat belt buckle switch 2P connector No. 2 (BLK) (on the floor wire harness)

   Test point 2 Body ground

Fig. 154: Measuring Resistance Between Driver's Seat Belt Buckle Switch 2P Connector No. 1 (BLK) And Body Ground (On Floor Wire Harness)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The GND wire is OK. Faulty driver's seat belt buckle switch; **REPLACE THE DRIVER'S SEAT BELT BUCKLE ASSEMBLY** , then clear the DTC.

NO : Open in the floor wire harness; check for a poor ground at G601. If the ground is OK, replace the floor wire harness, then clear the DTC.

DTC 61-2X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT IN THE DRIVER'S SEAT BELT BUCKLE SWITCH

Fig. 155: SRS DTC Troubleshooting Flow Chart (61-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds. Buckle and unbuckle the driver's seat belt several times.

- 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 61-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt buckle switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the driver's seat belt buckle switch 2P connector (A) on the floor wire harness.

Fig. 156: Identifying Driver's Seat Belt Buckle Switch 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. **CLEAR THE DTCS WITH THE HDS** .
- 4. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 5. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 61-2x indicated?

YES : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

NO : Faulty driver's seat belt buckle switch; **REPLACE THE DRIVER'S SEAT BELT BUCKLE ASSEMBLY** , then clear the DTC.

DTC 62-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE FRONT PASSENGER'S SEAT BELT BUCKLE SWITCH

Fig. 157: SRS DTC Troubleshooting Flow Chart (62-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds. Buckle and unbuckle the front passenger's seat belt several times.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 62-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. SRS unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A SRS unit connector B (39P) No. 22

     Terminal B Body ground

Fig. 158: Checking SRS Unit Connector B (39P) No. 22 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. **CLEAR THE DTCS WITH THE HDS** .
   - 4. Turn the ignition switch to ON (II), then wait for 10 seconds.

- 5. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 62-2x indicated?

YES : Go to step 3.

NO : Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

3. Open wire check (FRBC/WARNING SRS UNIT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire from SRS unit connector B (39P).
   - 3. Disconnect the front passenger's seat belt buckle switch 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

Fig. 159: Identifying Front Passenger's Seat Belt Buckle Switch 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Front passenger's seat belt buckle switch 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected

Test circuit FRBC/WARNING SRS UNIT

Test point 1 Front passenger's seat belt buckle switch 2P connector No. 1 (on the floor wire harness or the front passenger's seat wire harness)

Test point 2 Body ground

Fig. 160: Measuring Voltage Between Front Passenger's Seat Belt Buckle Switch 2P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 10 V?

YES : The FRBC/WARNING SRS UNIT wire is OK. Go to step 4.

NO : Open in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

4. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's seat belt buckle switch 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected

     Test circuit GND

     Test point 1 Front passenger's seat belt buckle switch 2P connector No. 2 (BLK) (on the floor wire harness or the front passenger's seat wire harness)

     Test point 2 Body ground

Fig. 161: Measuring Resistance Between Front Passenger's Seat Belt Buckle Switch 2P Connector No. 2 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The GND wire is OK. Faulty front passenger's seat belt buckle switch; **REPLACE THE FRONT PASSENGER'S SEAT BELT BUCKLE ASSEMBLY** , then clear the DTC.

NO : Open in the floor wire harness or the front passenger's seat wire harness; check for a poor ground at G602. If the ground is OK, replace the faulty harness, then clear the DTC.

DTC 62-2X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT IN THE FRONT PASSENGER'S SEAT BELT BUCKLE SWITCH

Fig. 162: SRS DTC Troubleshooting Flow Chart (62-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced**

with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds. Buckle and unbuckle the front passenger's seat belt several times.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

   Is DTC 62-2x indicated?

   YES : The failure is duplicated. Go to step 2.

   NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's seat belt buckle switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's seat belt buckle switch 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

Fig. 163: Identifying Front Passenger's Seat Belt Buckle Switch 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. **CLEAR THE DTCS WITH THE HDS** .
- 4. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 5. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 62-2x indicated?

YES : Short to ground in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

NO : Faulty front passenger's seat belt buckle switch; **REPLACE THE FRONT PASSENGER'S SEAT BELT BUCKLE ASSEMBLY** , then clear the DTC.

DTC 71-1X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN IN THE DRIVER'S SEAT POSITION SENSOR

Fig. 164: SRS DTC Troubleshooting Flow Chart (71-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. Raise the driver's seat all the way up, and position all the way rearward.
   - 2. **CLEAR THE DTCS WITH THE HDS** .

- 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 71-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Connector connection check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following connector connections.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

     DRIVER'S SEAT POSITION SENSOR 2P CONNECTOR (ON THE DRIVER'S SEAT WIRE HARNESS OR THE DRIVER'S SEAT POSITION SENSOR SUBHARNESS)

     Connector between the SRS unit and the driver's seat position sensor

Are the connectors OK?

YES : Go to step 4.

NO : Go to step 3.

3. System check:
   - 1. Repair the poor connector connections whichever was the cause of the problem in step 2.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 71-1x indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 4.

NO : The system is OK at this time.

4. Open wire check (SS+ line):
   - 1. Disconnect the following connector.

     DRIVER'S SEAT POSITION SENSOR 2P CONNECTOR (ON THE DRIVER'S SEAT WIRE HARNESS OR THE DRIVER'S SEAT POSITION SENSOR SUBHARNESS)

   - 2. Connect terminals A and B with a jumper wire.

     Terminal A Driver's seat position sensor 2P connector No. 1 (on the driver's seat wire harness or the driver's seat position sensor subharness)

     Terminal B Driver's seat position sensor 2P connector No. 2 (on the driver's seat wire harness or the driver's seat position sensor subharness)

     Fig. 165: Connecting Wire Between Driver's Seat Position Sensor 2P Connector No. 1 And 2
     Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 4. Disconnect the following connector.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 5. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Driver's seat position sensor 2P connector (on the driver's seat wire harness or the driver's seat position sensor subharness): disconnected SRS unit connector B (39P): disconnected

     Driver's seat position sensor 2P connector terminals No. 1 and No. 2 (on the driver's seat wire harness or the driver's seat position sensor subharness): jumped

     Test circuit SS+

     Test point 1 SRS unit connector B (39P) No. 37

Test point 2 Body ground

Fig. 166: Measuring Resistance Between SRS Unit Connector B (39P) No. 37 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The SS+ wire is OK. **REPLACE THE DRIVER'S SEAT POSITION SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the floor wire harness, the driver's seat wire harness, or the driver's seat position sensor subharness; check for a poor ground at G601. If the ground is OK, replace the faulty harness, then clear the DTC.

DTC 71-2X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT IN THE DRIVER'S SEAT POSITION SENSOR

Fig. 167: SRS DTC Troubleshooting Flow Chart (71-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. Raise the driver's seat all the way up, and position all the way rearward.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 71-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat position sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     DRIVER'S SEAT POSITION SENSOR 2P CONNECTOR (ON THE DRIVER'S SEAT WIRE HARNESS OR THE DRIVER'S SEAT POSITION SENSOR SUBHARNESS)

   - 3. **CLEAR THE DTCS WITH THE HDS** .
   - 4. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 5. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 71-2x indicated?

YES : Go to step 3.

NO : **REPLACE THE DRIVER'S SEAT POSITION SENSOR** , then clear the DTC.

3. Shorted wire check (SS+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connector.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Driver's seat position sensor 2P connector (on the driver's seat wire harness or the driver's seat position sensor subharness): disconnected SRS unit connector B (39P): disconnected

Test circuit SS+

Test point 1 SRS unit connector B (39P) No. 37

Test point 2 Body ground

Fig. 168: Measuring Resistance Between SRS Unit Connector B (39P) No. 37 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The SS+ wire is OK. **REPLACE THE DRIVER'S SEAT POSITION SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Short to ground in the floor wire harness, the driver's seat wire harness, or the driver's seat position sensor subharness; replace the faulty harness, then clear the DTC.

DTC 81-4X ("X" CAN BE 0 THRU 9 OR A THRU F), 81-63, 81-64: INTERNAL FAILURE OF THE ODS UNIT

Fig. 169: SRS DTC Troubleshooting Flow Chart (81-4x, 81-63, 81-64)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**
- **These DTCs are codes that relate to the front passenger's weight sensor operation.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 81-4x, 81-63, or 81-64 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. System check 1:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Do the front passenger's weight sensor initialization.
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 81-4x, 81-63, or 81-64 indicated?

YES : Go to step 3.

NO : The system is OK at this time.

3. System check 2:
   - 1. Replace the ODS unit.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 81-4x, 81-63, or 81-64 indicated?

YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : The system is OK at this time.

DTC 81-61: NO SIGNAL FROM THE ODS UNIT; DTC 81-62: INCORRECT DATA FROM THE ODS UNIT

Fig. 170: SRS DTC Troubleshooting Flow Chart (81-61, 81-62)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**
- **These DTCs are codes that relate to the front passenger's weight sensor operation.**

DTC Description	DTC
81-61 No signal from the ODS unit	
81-62 Incorrect data from the ODS Unit	

1. Problem verification:
   - 1. Make sure nothing is on the front passenger's seat.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-61 No signal from the ODS unit	
81-62 Incorrect data from the ODS Unit	

Is DTC 81-61 or 81-62 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B29 (7.5 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse, then turn the ignition switch to ON (II). If the fuse blows again, check for a short to ground in the under-dash fuse/relay box No. B29 (7.5 A) fuse circuit (dashboard wire harness, floor wire harness, or ODS unit harness); replace the faulty harness, then clear the DTC, and retest. If the DTC is still present, **REPLACE THE UNDER-DASH FUSE/RELAY BOX** , then clear the DTC.

3. Connector connection check:
   - 1. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 2. Remove the cover (A), then check the connection between the ODS unit 18P connector (B) and the ODS unit.

Fig. 171: Identifying ODS Unit 18P Connector, Cover And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the connector OK?

YES : Go to step 5.

NO : Go to step 4.

4. System check:
   - 1. Repair the poor connector connection which was the cause of the problem in step 3.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-61 No signal from the ODS unit	
81-62 Incorrect data from the ODS Unit	

Is DTC 81-61 or 81-62 indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 5.

NO : The system is OK at this time.

5. Open wire check (VA line):
   - 1. Detach the clip (A), then disconnect the ODS unit 18P connector (B) from the ODS unit.

Fig. 172: Identifying ODS Unit 18P Connector And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     ODS unit 18P connector: disconnected

     Test circuit VA

     Test point 1 ODS unit 18P connector No. 7 (GRN)

     Test point 2 Body ground

Fig. 173: Measuring Voltage Between ODS Unit 18P Connector No. 7 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The VA wire is OK. Go to step 6.

NO : Open in the floor wire harness or the ODS unit harness; replace the faulty harness, then clear the DTC.

6. Open wire check (GND ODS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     ODS unit 18P connector: disconnected

     Test circuit GND ODS

     Test point 1 ODS unit 18P connector No. 18 (BLK)

     Test point 2 Body ground

Fig. 174: Measuring Resistance Between ODS Unit 18P Connector No. 18 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The GND ODS wire is OK. Go to step 7.

NO : Open in the floor wire harness or the ODS unit harness; check for a poor ground connection at G602. If the ground is OK, replace the faulty harness, then clear the DTC.

7. Shorted wire check (ODS line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     ODS unit 18P connector: disconnected

     SRS unit connector B (39P): disconnected

     Test circuit ODS

     Test point 1 SRS unit connector B (39P) No. 21

     Test point 2 Body ground

Fig. 175: Measuring Resistance Between SRS Unit Connector B (39P) No. 21 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The ODS wire is not shorted. Go to step 8.

NO : Short to ground in the floor wire harness or the ODS unit harness; replace the faulty harness, then clear the DTC.

8. Shorted wire check (ODS line to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   ODS unit 18P connector: disconnected

   SRS unit connector B (39P): disconnected

   Test circuit ODS

   Test point 1 SRS unit connector B (39P) No. 21

   Test point 2 Body ground

Fig. 176: Measuring Voltage Between SRS Unit Connector B (39P) No. 21 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The ODS wire is not shorted to power. Go to step 9.

NO : Short to power in the floor wire harness or the ODS unit harness; replace the faulty harness, then clear the DTC.

9. Open wire check (ODS line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Measure the resistance between test points 1 and 2.

    Test condition IG LOCK (0)

    ODS unit 18P connector: disconnected

    SRS unit connector B (39P): disconnected

    Test circuit ODS

    Test point 1 SRS unit connector B (39P) No. 21

    Test point 2 ODS unit 18P connector No. 1 (BLU)

Fig. 177: Measuring Resistance Between SRS Unit Connector B (39P) No. 21 And ODS Unit 18P Connector No. 1 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The ODS wire is OK. Replace the ODS unit, then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the harness between SRS unit connector B (39P) terminal No. 21 and ODS unit 18P connector terminal No. 1 (floor wire harness or ODS unit harness); replace the faulty harness, then clear the DTC.

DTC 81-71, 81-78: ODS UNIT NOT CALIBRATED

Fig. 178: SRS DTC Troubleshooting Flow Chart (81-71, 81-78)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**
- **These DTCs are codes that relate to the front passenger's weight sensor operation.**

DTC Description	DTC
81-71 ODS unit not calibrated	
81-78 ODS unit not calibrated	

1. Problem verification:
    - 1. **CLEAR THE DTCS WITH THE HDS** .
    - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-71 ODS unit not calibrated	
81-78 ODS unit not calibrated	

Is DTC 81-71 or 81-78 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. System check 1:
    - 1. **CLEAR THE DTCS WITH THE HDS** .
    - 2. Do the front passenger's weight sensor initialization.
    - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-71 ODS unit not calibrated	
81-78 ODS unit not calibrated	

Is DTC 81-71 or 81-78 indicated?

YES : Go to step 3.

NO : The system is OK at this time.

3. System check 2:
    - 1. Replace the ODS unit.
    - 2. **CLEAR THE DTCS WITH THE HDS** .
    - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-71 ODS unit not calibrated	
81-78 ODS unit not calibrated	

Is DTC 81-71 or 81-78 indicated?

YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : The system is OK at this time.

DTC 81-79: FRONT PASSENGER'S WEIGHT SENSORS INITIAL CHECK FAILURE

Fig. 179: SRS DTC Troubleshooting Flow Chart (81-79)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

- **These DTCs are codes that relate to the front passenger's weight sensor operation.**

DTC Description	DTC
81-79 Front passenger's weight sensors initial check failure	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-79 Front passenger's weight sensors initial check failure	

   Is DTC 81-79 indicated?

   YES : The failure is duplicated. Go to step 2.

   NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. System check 1:
   - 1. Make sure nothing is on the front passenger's seat.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-79 Front passenger's weight sensors initial check failure	

   Is DTC 81-79 indicated?

   YES : Go to step 3.

   NO : The system is OK at this time.

3. System check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Loosen the front passenger's seat mounting bolts, and shake the seat in all directions. **TIGHTEN THE SEAT MOUNTING BOLTS TO THE SPECIFIED TORQUE** .
   - 3. **CLEAR THE DTCS WITH THE HDS** .
   - 4. Do the front passenger's weight sensor initialization.

- 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 6. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-79 Front passenger's weight sensors initial check failure	

Is DTC 81-79 indicated?

YES : Go to step 4.

NO : The system is OK at this time.

4. System check 3:
   - 1. **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** .
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
81-79 Front passenger's weight sensors initial check failure	

Is DTC 81-79 indicated?

YES : Replace the ODS unit, then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : The system is OK at this time.

Fig. 180: SRS DTC Troubleshooting Flow Chart (82-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC 82-14: NO SIGNAL FROM THE FRONT PASSENGER'S WEIGHT

SENSOR (FRONT INNER SIDE)

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**

DTC Description	DTC
82-14 No signal from the front passenger's weight sensor (front inner side)	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
82-14 No signal from the front passenger's weight sensor (front inner side)	

Is DTC 82-14 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. SWS DTC check:
   - 1. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
14-11 Short to power in the front passenger's weight sensor (front inner side) power circuit	
14-12 Short to ground in the front passenger's weight sensor (front inner side) power circuit	
14-13 Open in the front passenger's weight sensor (front inner side) output circuit	
14-14 Short to ground in the front passenger's weight sensor (front inner side) output circuit	

Is an SWS DTC also indicated?

SWS DTC 14-11 : Short to power in the front passenger's weight sensor (front inner side) power circuit; replace the front passenger's seat wire harness, then clear the DTC.

SWS DTC 14-12 : Short to ground in the front passenger's weight sensor (front inner side) power circuit. Go to step 3.

SWS DTC 14-13 : Open in the front passenger's weight sensor (front inner side) output circuit. Go to step 6.

SWS DTC 14-14 : Short to ground in the front passenger's weight sensor (front inner side) output circuit. Go to step 8.

3. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front inner side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 181: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
14-12 Short to ground in the front passenger's weight sensor (front inner side) power circuit	

Is SWS DTC 14-12 indicated?

YES : Go to step 4.

NO : Faulty front passenger's weight sensor (front inner side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT**

SENSORS , then clear the DTC.

4. Shorted wire check (WS1P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 182: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (front inner side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS1P

     Test point 1 ODS unit 18P connector No. 5 (RED)

     Test point 2 Body ground

Fig. 183: Measuring Resistance Between ODS Unit 18P Connector No. 5 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS1P wire is not shorted. Go to step 5.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

5. Shorted wire check (WS1P line to WS1G line):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (front inner side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS1P, WS1G

     Test point 1 ODS unit 18P connector No. 5 (RED)

     Test point 2 ODS unit 18P connector No. 17 (BLK)

Fig. 184: Measuring Resistance Between ODS Unit 18P Connector No. 5 (RED) And 17 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS1P, WS1G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

6. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Swap the connections between the front inner side front passenger's weight sensor and the rear inner side sensor.
   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
14-13 Open in the front passenger's weight sensor (front inner side) output circuit	

Is SWS DTC 14-13 indicated?

YES : Go to step 7.

NO : Faulty front passenger's weight sensor (front inner side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

7. Shorted wire check (WS1O line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front inner side) 3P connector (A) on the front

passenger's seat wire harness, and the front passenger's weight sensor (rear inner side) 3P connector (B) on the front passenger's seat wire harness.

Fig. 185: Identifying Front Passenger's Weight Sensor 3P Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
- 4. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 186: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Turn the ignition switch to ON (II).
- 6. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Test circuit WS1O

Test point 1 ODS unit 18P connector No. 11 (BRN)

Test point 2 Body ground

Fig. 187: Measuring Voltage Between ODS Unit 18P Connector No. 11 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The WS1O wire is OK. Replace the ODS unit, then clear the DTC.

NO : Short to power in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

8. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front inner side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 188: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. **CLEAR THE DTCS WITH THE HDS** .
- 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
14-14 Short to ground in the front passenger's weight sensor (front inner side) output circuit	

Is SWS DTC 14-14 indicated?

YES : Go to step 9.

NO : Faulty front passenger's weight sensor (front inner side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

9. Shorted wire check (WS1O line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 189: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Front passenger's weight sensor (front inner side) 3P connector (on the front passenger's seat wire harness): disconnected

  ODS unit 18P connector: disconnected

  Test circuit WS1O

  Test point 1 ODS unit 18P connector No. 11 (BRN)

  Test point 2 Body ground

Fig. 190: Measuring Resistance Between ODS Unit 18P Connector No. 11 (BRN) And Body

Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS1O wire is not shorted. Go to step 10.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

10. Shorted wire check (WS1O line to WS1G line):
    - 1. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's weight sensor (front inner side) 3P connector (on the front passenger's seat wire harness): disconnected

      ODS unit 18P connector: disconnected

      Test circuit WS1O, WS1G

      Test point 1 ODS unit 18P connector No. 11 (BRN)

      Test point 2 ODS unit 18P connector No. 17 (BLK)

Fig. 191: Measuring Resistance Between ODS Unit 18P Connector No. 11 (BRN) And 17 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS1O, WS1G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

DTC 82-15: INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT INNER SIDE); DTC 82-17: INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (REAR INNER SIDE); DTC 83-25: INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT OUTER SIDE); DTC 83-27: INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (REAR OUTER SIDE)

Fig. 192: SRS DTC Troubleshooting Flow Chart (82-15, 82-17, 83-25, 83-27)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**

DTC Description	DTC
82-15 Internal failure of the front passenger's weight sensor (front inner side)	
82-17 Internal failure of the front passenger's weight sensor (rear inner side)	
83-25 Internal failure of the front passenger's weight sensor (front outer side)	
83-27 Internal failure of the front passenger's weight sensor (rear outer side)	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

82-15 Internal failure of the front passenger's weight sensor (front inner side)	
82-17 Internal failure of the front passenger's weight sensor (rear inner side)	
83-25 Internal failure of the front passenger's weight sensor (front outer side)	
83-27 Internal failure of the front passenger's weight sensor (rear outer side)	

Is DTC 82-15, 82-17, 83-25, or 83-27 indicated?

YES : The failure is duplicated. **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

Fig. 193: SRS DTC Troubleshooting Flow Chart (82-16)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC 82-16: NO SIGNAL FROM THE FRONT PASSENGER'S WEIGHT

SENSOR (REAR INNER SIDE)

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**

DTC Description	DTC
82-16 No signal from the front passenger's weight sensor (rear inner side)	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
82-16 No signal from the front passenger's weight sensor (rear inner side)	

Is DTC 82-16 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. SWS DTC check:
   - 1. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
16-11 Short to power in the front passenger's weight sensor (rear inner side) power circuit	
16-12 Short to ground in the front passenger's weight sensor (rear inner side) power circuit	
16-13 Open in the front passenger's weight sensor (rear inner side) output circuit	
16-14 Short to ground in the front passenger's weight sensor (rear inner side) output circuit	

Is an SWS DTC also indicated?

SWS DTC 16-11 : Short to power in the front passenger's weight sensor (rear inner side) power circuit; replace the front passenger's seat wire harness, then clear the DTC.

SWS DTC 16-12 : Short to ground in the front passenger's weight sensor (rear inner side) power circuit. Go to step 3.

SWS DTC 16-13 : Open in the front passenger's weight sensor (rear inner side) output circuit. Go to step 6.

SWS DTC 16-14 : Short to ground in the front passenger's weight sensor (rear inner side) output circuit. Go to step 8.

3. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (rear inner side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 194: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
16-12 Short to ground in the front passenger's weight sensor (rear inner side) power circuit	

Is SWS DTC 16-12 indicated?

YES : Go to step 4.

NO : Faulty front passenger's weight sensor (rear inner side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT**

SENSORS , then clear the DTC.

4. Shorted wire check (WS2P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 195: Identifying ODS Unit 18P Connector, Cover And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (rear inner side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS2P

     Test point 1 ODS unit 18P connector No. 4 (BLK)

     Test point 2 Body ground

Fig. 196: Measuring Resistance Between ODS Unit 18P Connector No. 4 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS2P wire is not shorted. Go to step 5.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

5. Shorted wire check (WS2P line to WS2G line):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (rear inner side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS2P, WS2G

     Test point 1 ODS unit 18P connector No. 4 (BLK)

     Test point 2 ODS unit 18P connector No. 16 (LT GRN)

Fig. 197: Measuring Resistance Between ODS Unit 18P Connector No. 4 (BLK) And 16 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS2P, WS2G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

6. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Swap the connections between the rear inner side front passenger's weight sensor and the front inner side sensor.
   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
16-13 Open in the front passenger's weight sensor (rear inner side) output circuit	

Is SWS DTC 16-13 indicated?

YES : Go to step 7.

NO : Faulty front passenger's weight sensor (rear inner side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

7. Shorted wire check (WS2O line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front inner side) 3P connector (A) on the front

passenger's seat wire harness, and the front passenger's weight sensor (rear inner side) 3P connector (B) on the front passenger's seat wire harness.

Fig. 198: Identifying Front Passenger's Weight Sensor 3P Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
- 4. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 199: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Turn the ignition switch to ON (II).
- 6. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Front passenger's weight sensor (front inner side) 3P connector (on the front passenger's seat wire harness): disconnected

Front passenger's weight sensor (rear inner side) 3P connector (on the front passenger's seat wire harness): disconnected

ODS unit 18P connector: disconnected

Test circuit WS2O

Test point 1 ODS unit 18P connector No. 10 (BLU)

Test point 2 Body ground

Fig. 200: Measuring Voltage Between ODS Unit 18P Connector No. 10 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The WS2O wire is OK. Replace the ODS unit, then clear the DTC.

NO : Short to power in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

8. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (rear inner side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 201: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. **CLEAR THE DTCS WITH THE HDS** .
- 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
16-14 Short to ground in the front passenger's weight sensor (rear inner side) output circuit	

Is SWS DTC 16-14 indicated?

YES : Go to step 9.

NO : Faulty front passenger's weight sensor (rear inner side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

9. Shorted wire check (WS2O line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 202: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Front passenger's weight sensor (rear inner side) 3P connector (on the front passenger's seat wire harness): disconnected

  ODS unit 18P connector: disconnected

  Test circuit WS2O

  Test point 1 ODS unit 18P connector No. 10 (BLU)

  Test point 2 Body ground

Fig. 203: Measuring Resistance Between ODS Unit 18P Connector No. 10 (BLU) And Body

Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS2O wire is not shorted. Go to step 10.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

10. Shorted wire check (WS2O line to WS2G line):
    - 1. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's weight sensor (rear inner side) 3P connector (on the front passenger's seat wire harness): disconnected

      ODS unit 18P connector: disconnected

      Test circuit WS2O, WS2G

      Test point 1 ODS unit 18P connector No. 10 (BLU)

      Test point 2 ODS unit 18P connector No. 16 (LT GRN)

Fig. 204: Measuring Resistance Between ODS Unit 18P Connector No. 10 (BLU) And 16 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS2O, WS2G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

Fig. 205: SRS DTC Troubleshooting Flow Chart (83-24)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC 83-24: NO SIGNAL FROM THE FRONT PASSENGER'S WEIGHT

SENSOR (FRONT OUTER SIDE)

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**

DTC Description	DTC
83-24 No signal from the front passenger's weight sensor (front outer side)	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
83-24 No signal from the front passenger's weight sensor (front outer side)	

Is DTC 83-24 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. SWS DTC check:
   - 1. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
24-11 Short to power in the front passenger's weight sensor (front outer side) power circuit	
24-12 Short to ground in the front passenger's weight sensor (front outer side) power circuit	
24-13 Open in the front passenger's weight sensor (front outer side) output circuit	
24-14 Short to ground in the front passenger's weight sensor (front outer side) output circuit	

Is an SWS DTC also indicated?

SWS DTC 24-11 : Short to power in the front passenger's weight sensor (front outer side) power circuit; replace the front passenger's seat wire harness, then clear the DTC.

SWS DTC 24-12 : Short to ground in the front passenger's weight sensor (front outer side) power circuit. Go to step 3.

SWS DTC 24-13 : Open in the front passenger's weight sensor (front outer side) output circuit. Go to step 6.

SWS DTC 24-14 : Short to ground in the front passenger's weight sensor (front outer side) output circuit. Go to step 8.

3. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front outer side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 206: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
24-12 Short to ground in the front passenger's weight sensor (front outer side) power circuit	

Is SWS DTC 24-12 indicated?

YES : Go to step 4.

NO : Faulty front passenger's weight sensor (front outer side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT**

SENSORS , then clear the DTC.

4. Shorted wire check (WS3P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 207: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (front outer side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS3P

     Test point 1 ODS unit 18P connector No. 3 (BRN)

     Test point 2 Body ground

Fig. 208: Measuring Resistance Between ODS Unit 18P Connector No. 3 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS3P wire is not shorted. Go to step 5.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

5. Shorted wire check (WS3P line to WS3G line):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (front outer side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS3P, WS3G

     Test point 1 ODS unit 18P connector No. 3 (BRN)

     Test point 2 ODS unit 18P connector No. 15 (GRY)

Fig. 209: Measuring Resistance Between ODS Unit 18P Connector No. 3 (BRN) And 15 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS3P, WS3G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

6. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Swap the connections between the front outer side front passenger's weight sensor and the rear outer side sensor.
   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
24-13 Open in the front passenger's weight sensor (front outer side) output circuit	

Is SWS DTC 24-13 indicated?

YES : Go to step 7.

NO : Faulty front passenger's weight sensor (front outer side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

7. Shorted wire check (WS3O line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front outer side) 3P connector (A) on the front

passenger's seat wire harness, and the front passenger's weight sensor (rear outer side) 3P connector (B) on the front passenger's seat wire harness.

Fig. 210: Identifying Front Passenger's Weight Sensor 3P Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
- 4. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 211: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Turn the ignition switch to ON (II).
- 6. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Front passenger's weight sensor (front outer side) 3P connector (on the front passenger's seat wire harness): disconnected

Front passenger's weight sensor (rear outer side) 3P connector (on the front passenger's seat wire harness): disconnected

ODS unit 18P connector: disconnected

Test circuit WS3O

Test point 1 ODS unit 18P connector No. 9 (BLU)

Test point 2 Body ground

Fig. 212: Measuring Voltage Between ODS Unit 18P Connector No. 9 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The WS3O wire is OK. Replace the ODS unit, then clear the DTC.

NO : Short to power in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

8. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front outer side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 213: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. **CLEAR THE DTCS WITH THE HDS** .
- 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
24-14 Short to ground in the front passenger's weight sensor (front outer side) output circuit	

Is SWS DTC 24-14 indicated?

YES : Go to step 9.

NO : Faulty front passenger's weight sensor (front outer side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

9. Shorted wire check (WS3O line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 214: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Front passenger's weight sensor (front outer side) 3P connector (on the front passenger's seat wire harness): disconnected

  ODS unit 18P connector: disconnected

  Test circuit WS3O

  Test point 1 ODS unit 18P connector No. 9 (BLU)

  Test point 2 Body ground

Fig. 215: Measuring Resistance Between ODS Unit 18P Connector No. 9 (BLU) And Body

Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS3O wire is not shorted. Go to step 10.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

10. Shorted wire check (WS3O line to WS3G line):
    - 1. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's weight sensor (front outer side) 3P connector (on the front passenger's seat wire harness): disconnected

      ODS unit 18P connector: disconnected

      Test circuit WS3O, WS3G

      Test point 1 ODS unit 18P connector No. 9 (BLU)

      Test point 2 ODS unit 18P connector No. 15 (GRY)

Fig. 216: Measuring Resistance Between ODS Unit 18P Connector No. 9 (BLU) And 15 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS3O, WS3G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

DTC 83-26: NO SIGNAL FROM THE FRONT PASSENGER'S WEIGHT SENSOR (REAR OUTER SIDE)

Fig. 217: SRS DTC Troubleshooting Flow Chart (83-26)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**

DTC Description	DTC
83-26 No signal from the front passenger's weight sensor (rear outer side)	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
83-26 No signal from the front passenger's weight sensor (rear outer side)	

Is DTC 83-26 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. SWS DTC check:
   - 1. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
26-11 Short to power in the front passenger's weight sensor (rear outer side) power circuit	
26-12 Short to ground in the front passenger's weight sensor (rear outer side) power circuit	
26-13 Open in the front passenger's weight sensor (rear outer side) output circuit	
26-14 Short to ground in the front passenger's weight sensor (rear outer side) output circuit	

Is an SWS DTC also indicated?

SWS DTC 26-11 : Short to power in the front passenger's weight sensor (rear outer side) power circuit; replace the front passenger's seat wire harness, then clear the DTC.

SWS DTC 26-12 : Short to ground in the front passenger's weight sensor (rear outer side) power circuit. Go to step 3.

SWS DTC 26-13 : Open in the front passenger's weight sensor (rear outer side) output circuit. Go to step 6.

SWS DTC 26-14 : Short to ground in the front passenger's weight sensor (rear outer side) output circuit. Go to step 8.

3. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (rear outer side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 218: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
26-12 Short to ground in the front passenger's weight sensor (rear outer side) power circuit	

Is SWS DTC 26-12 indicated?

YES : Go to step 4.

NO : Faulty front passenger's weight sensor (rear outer side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT**

SENSORS , then clear the DTC.

4. Shorted wire check (WS4P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 219: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (rear outer side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS4P

     Test point 1 ODS unit 18P connector No. 2 (RED)

     Test point 2 Body ground

Fig. 220: Measuring Resistance Between ODS Unit 18P Connector No. 2 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS4P wire is not shorted. Go to step 5.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

5. Shorted wire check (WS4P line to WS4G line):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's weight sensor (rear outer side) 3P connector (on the front passenger's seat wire harness): disconnected

     ODS unit 18P connector: disconnected

     Test circuit WS4P, WS4G

     Test point 1 ODS unit 18P connector No. 2 (RED)

     Test point 2 ODS unit 18P connector No. 14 (WHT)

Fig. 221: Measuring Resistance Between ODS Unit 18P Connector No. 2 (RED) And 14 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS4P, WS4G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

6. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Swap the connections between the rear outer side front passenger's weight sensor and the front outer side sensor.
   - 3. Turn the ignition switch to ON (II).
   - 4. **CLEAR THE DTCS WITH THE HDS** .
   - 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
26-13 Open in the front passenger's weight sensor (rear outer side) output circuit	

Is SWS DTC 26-13 indicated?

YES : Go to step 7.

NO : Faulty front passenger's weight sensor (rear outer side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

7. Shorted wire check (WS4O line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (front outer side) 3P connector (A) on the front

passenger's seat wire harness, and the front passenger's weight sensor (rear outer side) 3P connector (B) on the front passenger's seat wire harness.

Fig. 222: Identifying Front Passenger's Weight Sensor 3P Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
- 4. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 223: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Turn the ignition switch to ON (II).
- 6. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Front passenger's weight sensor (front outer side) 3P connector (on the front passenger's seat wire harness): disconnected

Front passenger's weight sensor (rear outer side) 3P connector (on the front passenger's seat wire harness): disconnected

ODS unit 18P connector: disconnected

Test circuit WS4O

Test point 1 ODS unit 18P connector No. 8 (GRN)

Test point 2 Body ground

Fig. 224: Measuring Voltage Between ODS Unit 18P Connector No. 8 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The WS4O wire is OK. Replace the ODS unit, then clear the DTC.

NO : Short to power in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

8. Front passenger's weight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the front passenger's weight sensor (rear outer side) 3P connector (A) on the front passenger's seat wire harness.

Fig. 225: Identifying Front Passenger's Weight Sensor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. **CLEAR THE DTCS WITH THE HDS** .
- 5. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 6. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
26-14 Short to ground in the front passenger's weight sensor (rear outer side) output circuit	

Is SWS DTC 26-14 indicated?

YES : Go to step 9.

NO : Faulty front passenger's weight sensor (rear outer side); **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** , then clear the DTC.

9. Shorted wire check (WS4O line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 3. Remove the cover (A), then detach the clip (B), then disconnect the ODS unit 18P connector (C) from the ODS unit.

Fig. 226: Identifying ODS Unit 18P Connector, Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Front passenger's weight sensor (rear outer side) 3P connector (on the front passenger's seat wire harness): disconnected

  ODS unit 18P connector: disconnected

  Test circuit WS4O

  Test point 1 ODS unit 18P connector No. 8 (GRN)

  Test point 2 Body ground

Fig. 227: Measuring Resistance Between ODS Unit 18P Connector No. 8 (GRN) And Body

Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS4O wire is not shorted. Go to step 10.

NO : Short to ground in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

10. Shorted wire check (WS4O line to WS4G line):
    - 1. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Front passenger's weight sensor (rear outer side) 3P connector (on the front passenger's seat wire harness): disconnected

      ODS unit 18P connector: disconnected

      Test circuit WS4O, WS4G

      Test point 1 ODS unit 18P connector No. 8 (GRN)

      Test point 2 ODS unit 18P connector No. 14 (WHT)

Fig. 228: Measuring Resistance Between ODS Unit 18P Connector No. 8 (GRN) And 14 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The WS4O, WS4G wires are OK. Replace the ODS unit, then clear the DTC.

NO : Short to another wire in the front passenger's seat wire harness; replace the front passenger's seat wire harness, then clear the DTC.

DTC 85-4X ("X" CAN BE 0 THRU 9 OR A THRU F), 85-63, 85-64: INTERNAL FAILURE OF THE ODS UNIT

Fig. 229: SRS DTC Troubleshooting Flow Chart (85-4x, 85-63, 85-64)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**
- **These DTCs are codes that relate to the ODS unit operation.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.

- 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 85-4x, 85-63, or 85-64 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. System check 1:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Do the ODS unit initialization.
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 85-4x, 85-63, or 85-64 indicated?

YES : Go to step 3.

NO : The system is OK at this time.

3. System check 2:
   - 1. Replace the ODS unit.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 85-4x, 85-63, or 85-64 indicated?

YES : **Replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : The system is OK at this time.

DTC 85-61: NO SIGNAL FROM THE ODS UNIT; DTC 85-62: INCORRECT DATA FROM THE ODS UNIT

DTC 85-61

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**
- **These DTCs are codes that relate to the ODS unit operation.**

DTC Description	DTC
85-61 No signal from the ODS unit	
85-62 Incorrect data from the ODS unit	

1. Problem verification:
   - 1. Make sure nothing is on the front passenger's seat.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-61 No signal from the ODS unit	
85-62 Incorrect data from the ODS unit	

Is DTC 85-61 or 85-62 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B29 (7.5 A)

Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse, then turn the ignition switch to ON (II). If the fuse blows again, check for a short to ground in the under-dash fuse/relay box No. B29 (7.5 A) fuse circuit (dashboard wire harness, floor wire harness, or front passenger's seat wire harness); replace the faulty harness, then clear the DTC, and retest. If the DTC is still present, **REPLACE THE UNDER-DASH FUSE/RELAY BOX** , then clear the DTC.

3. Connector connection check:
   - 1. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
   - 2. Remove the cover (A), then check the connection between the ODS unit 18P connector (B) and the ODS unit.

Fig. 231: Identifying ODS Unit 18P Connector And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the connector OK?

YES : Go to step 5.

NO : Go to step 4.

4. System check 1:
   - 1. Repair the poor connector connection which was the cause of the problem in step 3.
   - 2. **CLEAR THE DTCS WITH THE HDS** .

- 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-61 No signal from the ODS unit	
85-62 Incorrect data from the ODS unit	

Is DTC 85-61 or 85-62 indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 5.

NO : The system is OK at this time.

5. Open wire check (VA line):
   - 1. Detach the clip (A), then disconnect the ODS unit 18P connector (B) from the ODS unit.

Fig. 232: Identifying ODS Unit 18P Connector And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Turn the ignition switch to ON (II).
- 3. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  ODS unit 18P connector: disconnected

  Test circuit VA

  Test point 1 ODS unit 18P connector No. 7 (GRN)

Test point 2 Body ground

Fig. 233: Measuring Voltage Between ODS Unit 18P Connector No. 7 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The VA wire is OK. Go to step 6.

NO : Open in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

6. Open wire check (GND ODS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     ODS unit 18P connector: disconnected

     Test circuit GND ODS

     Test point 1 ODS unit 18P connector No. 18 (BLK)

     Test point 2 Body ground

Fig. 234: Measuring Resistance Between ODS Unit 18P Connector No. 18 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The GND ODS wire is OK. Go to step 7.

NO : Open in the floor wire harness or the front passenger's seat wire harness; check for a poor ground connection at G602. If the ground is OK, replace the faulty harness, then clear the DTC.

7. Shorted wire check (ODS line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     ODS unit 18P connector: disconnected

     SRS unit connector B (39P): disconnected

     Test circuit ODS

     Test point 1 SRS unit connector B (39P) No. 21

     Test point 2 Body ground

Fig. 235: Measuring Resistance Between SRS Unit Connector B (39P) No. 21 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The ODS wire is not shorted. Go to step 8.

NO : Short to ground in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

8. Open wire check (ODS line):
    - 1. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      ODS unit 18P connector: disconnected

      SRS unit connector B (39P): disconnected

      Test circuit ODS

      Test point 1 SRS unit connector B (39P) No. 21

      Test point 2 ODS unit 18P connector No. 1 (BLU)

Fig. 236: Measuring Resistance Between SRS Unit Connector B (39P) No. 21 And ODS Unit 18P Connector No. 1 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The ODS wire is not open. Go to step 9.

NO : Open in the harness between SRS unit connector B (39P) terminal No. 21 and ODS unit 18P connector terminal No. 1 (floor wire harness or front passenger's seat wire harness); replace the faulty harness, then clear the DTC.

9. Shorted wire check (ODS line to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     ODS unit 18P connector: disconnected

     SRS unit connector B (39P): disconnected

     Test circuit ODS

     Test point 1 SRS unit connector B (39P) No. 21

Test point 2 Body ground

Fig. 237: Measuring Voltage Between SRS Unit Connector B (39P) No. 21 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The ODS wire is OK. Go to step 10.

NO : Short to power in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

10. System check 2:
    - 1. Replace the ODS unit.
    - 2. **CLEAR THE DTCS WITH THE HDS** .
    - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-61 No signal from the ODS unit	
85-62 Incorrect data from the ODS unit	

Is DTC 85-61 or 85-62 indicated?

YES : **Replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : The system is OK at this time.

DTC 85-71, 85-78: ODS UNIT NOT INITIALIZED

Fig. 238: SRS DTC Troubleshooting Flow Chart (85-71, 85-78)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**
- **These DTCs are codes that relate to the ODS unit operation.**

DTC Description	DTC
85-71 ODS unit not initialized	
85-78 ODS unit not initialized	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

85-71 ODS unit not initialized	
85-78 ODS unit not initialized	

Is DTC 85-71 or 85-78 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. System check 1:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Do the ODS unit initialization.
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-71 ODS unit not initialized	
85-78 ODS unit not initialized	

Is DTC 85-71 or 85-78 indicated?

YES : Go to step 3.

NO : The system is OK at this time.

3. System check 2:
   - 1. Replace the ODS unit.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-71 ODS unit not initialized	
85-78 ODS unit not initialized	

Is DTC 85-71 or 85-78 indicated?

YES : **Replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : The system is OK at this time.

DTC 85-79: OPDS SENSOR INITIAL CHECK FAILURE

Fig. 239: SRS DTC Troubleshooting Flow Chart (85-79)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**
- **These DTCs are codes that relate to the ODS unit operation.**

DTC Description	DTC
85-79 OPDS sensor initial check failure	

1. Problem verification:
   - 1. Make sure nothing is on the front passenger's seat.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-79 OPDS sensor initial check failure	

Is DTC 85-79 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. System check 1:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Do the ODS unit initialization.
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-79 OPDS sensor initial check failure	

Is DTC 85-79 indicated?

YES : Go to step 3.

NO : The system is OK at this time.

3. System check 2:
   - 1. Replace the ODS unit.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC
85-79 OPDS sensor initial check failure	

Is DTC 85-79 indicated?

YES : **REPLACE THE SEAT-BACK COVER/PAD EQUIPPED WITH AN OPDS SENSOR** , then clear the DTC, and retest. If the DTC is still present, replace the SRS unit **SRS Component Replacement/Inspection After Deployment** .

NO : The system is OK at this time.

DTC 86-1X ("X" CAN BE 0 THRU 9 OR A THRU F): FAULTY OPDS SEAT-

BACK SENSOR; DTC 86-2X ("X" CAN BE 0 THRU 9 OR A THRU F): FAULTY OPDS SEAT SUPPORT SENSOR

Fig. 240: SRS DTC Troubleshooting Flow Chart (86-1x, 86-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
    - 1. **CLEAR THE DTCS WITH THE HDS** .
    - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 86-1x or 86-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Connector connection check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **TURN OVER THE SEAT-BACK COVER/PAD TO GAIN ACCESS TO THE ODS UNIT** .
    - 3. Remove the cover (A), then check the connection between the ODS unit 18P connector (B), the OPDS sensor connectors (C), and the ODS unit.

Fig. 241: Identifying ODS Unit 18P Connector, OPDS Sensor Connector And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Are the connectors OK?

YES : Go to step 4.

NO : Go to step 3.

3. System check 1:
   - 1. Repair the poor connector connections which was the cause of the problem in step 2.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 86-1x or 86-2x indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 4.

NO : The system is OK at this time.

4. System check 2:
   - 1. **REPLACE THE SEAT-BACK COVER/PAD EQUIPPED WITH AN OPDS SENSOR** .
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Do the ODS unit initialization.
   - 4. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 5. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 86-1x or 86-2x indicated?

YES : Replace the ODS unit, then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : The system is OK at this time.

DTC 92-1X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR

Fig. 242: SRS DTC Troubleshooting Flow Chart (92-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**
- **If there are other SRS DTCs stored with 92-1x; troubleshoot them first.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 92-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Shorted wire check (OFF_PTT line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

     FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR 4P CONNECTOR (ON THE DASHBOARD WIRE HARNESS)

   - 4. Reconnect the negative cable to the battery.
   - 5. Turn the ignition switch to ON (II).
   - 6. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     SRS unit connector A (39P): disconnected

     Front passenger's airbag cutoff indicator 4P connector (on the dashboard wire harness): disconnected

     Test circuit OFF_PTT

     Test point 1 SRS unit connector A (39P) No. 17

     Test point 2 Body ground

Fig. 243: Measuring Voltage Between SRS Unit Connector A (39P) No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The OFF_PTT wire is OK. **REPLACE THE FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Short to power in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC 92-2X ("X" CAN BE 0 THRU 9 OR A THRU F): OPEN OR SHORT TO GROUND IN THE FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR

Fig. 244: SRS DTC Troubleshooting Flow Chart (92-2x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
