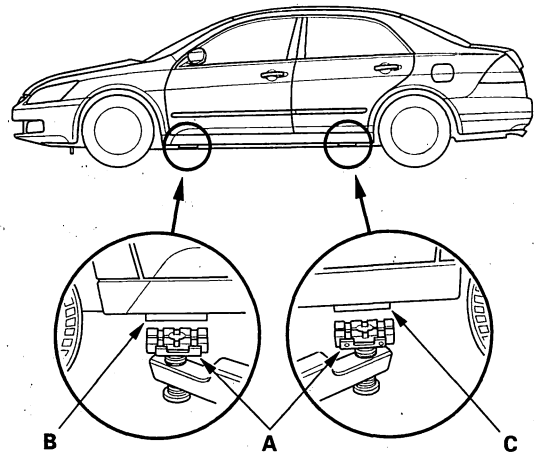
Lift and Support Points

NOTE: If you are going to remove heavy components such as suspension or the fuel tank from the rear of the vehicle, first support the front of the vehicle with tall safety stands. When substantial weight is removed from the rear of the vehicle, the center of gravity can change and cause the vehicle to tip forward on the hoist.

Frame Hoist

1. Position the hoist lift blocks (A), under the vehicle's front support points (B) and rear support points (C).



2. Raise the hoist a few inches, and rock the vehicle gently to be sure it is firmly supported.

3. Raise the hoist to full height, and inspect the lift points for solid contact with the lift blocks.

Safety Stands

To support the vehicle on safety stands, use the same support points (B and C) as for a frame hoist. Always use safety stands when working on or under any vehicle that is supported only by a jack.

BACK

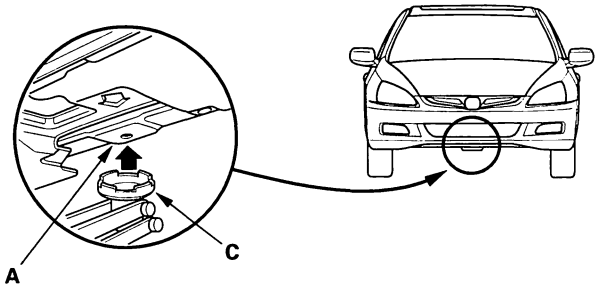
Protected by AR

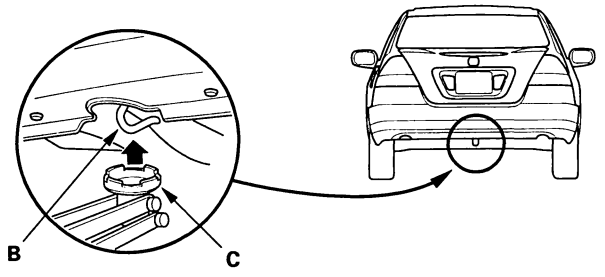
Floor Jack

1. When lifting the front of the vehicle, set the parking brake. When lifting the rear of the vehicle, put the gearshift lever in reverse for manual transmission, or in the P position for automatic transmission.

2. Block the wheels that are not being lifted.

3. Position the floor jack under the front jacking bracket (A) or rear jacking bracket (B), center the jacking bracket in the jack lift platform (C), and jack up the vehicle high enough to fit the safety stands under it.





4. Position the safety stands under the support points and adjust them so the vehicle is level.

5. Lower the vehicle onto the stands.

Towing

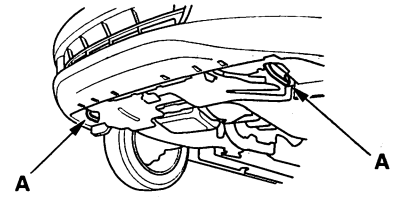
If the vehicle needs to be towed, call a professional towing service. Never tow the vehicle behind another vehicle with just a rope or chain. It is very dangerous.

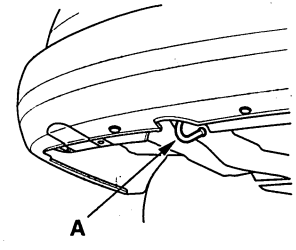
Emergency Towing
There are three popular methods of towing a vehicle.

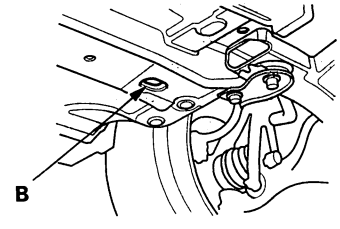
Flat-bed Equipment — The operator loads the vehicle on the back of a truck. This is the best way of transporting the vehicle.

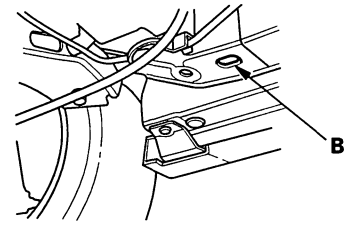
To accommodate flat-bed equipment, the vehicle is equipped with towing hooks (A) and tie down hook slots (B).

The towing hook can be used with a winch to pull the vehicle onto the truck, and the tie down hook slots can be used to secure the vehicle to the truck.









(cont'd)

Protected by AR

Towing (cont'd)

Wheel Lift Equipment — The tow truck uses two pivoting arms that go under the tires (front or rear) and lifts them off the ground. The other two wheels remain on the ground. This is an acceptable way of towing the vehicle.

Sling-type Equipment — The tow truck uses metal cables with hooks on the ends. These hooks go around parts of the frame or suspension and the cables lift that end of the vehicle off the ground. The vehicle's suspension and body can be seriously damaged if this method of towing is attempted.

If the vehicle cannot be transported by flat-bed, it should be towed with the front wheels off the ground. If due to damage, the vehicle must be towed with the front wheels on the ground, do the following:

Manual Transmission
- Release the parking brake.
- Shift the transmission in Neutral.

Automatic Transmission
- Release the parking brake.
- Start the engine.
- Shift to D position, then to the N position.
- Turn off the engine.

It is best to tow the vehicle no farther than 50 miles (80 km), and keep the speed below 35 mph (55 km/h).

NOTICE
- Improper towing preparation will damage the transmission. Follow the above procedure exactly. If you cannot shift the transmission or start the engine (automatic transmission), the vehicle must be transported on a flat-bed.
- Trying to lift or tow the vehicle by the bumpers will cause serious damage. The bumpers are not designed to support the vehicle's weight.

Parts Marking

To deter vehicle theft, certain major components are marked with the vehicle identification number (VIN). Original parts have self-adhesive labels. Replacement body parts have generic self-adhesive labels. These labels should not be removed. The original engine or transmission VIN plates are not transferable to the replacement engine or transmission.

NOTE: Be careful not to damage the parts marking labels during body repair. Mask the labels before repairing the part.

Manual Transmission and M/T Differential (cont'd)

Item	Measurement	Qualification	Standard or New	Service Limit
Reverse idler gear	I.D.		20.016—20.043 mm (0.7880—0.7891 in.)	20.90 mm (0.832 in.)
	Gear-to-reverse gear shaft clearance		0.036—0.084 mm (0.0014—0.0033 in.)	0.16 mm (0.006 in.)
Synchro ring	Ring-to-gear clearance	Ring pushed against gear	0.70—1.49 mm (0.028—0.059 in.)	0.4 mm (0.016 in.)
Double cone synchro	Outer synchro ring-to-synchro cone clearance	Ring pushed against gear	0.70—1.19 mm (0.028—0.047 in.)	0.3 mm (0.012 in.)
	Synchro cone-to-gear clearance	Ring pushed against gear	0.50—1.04 mm (0.020—0.041 in.)	0.3 mm (0.012 in.)
	Outer synchro ring-to-gear cone clearance	Ring pushed against gear	0.95—1.68 mm (0.037—0.066 in.)	0.6 mm (0.024 in.)
Triple cone synchro	Outer synchro ring-to-synchro cone clearance	Ring pushed against gear	0.70—1.19 mm (0.028—0.047 in.)	0.3 mm (0.012 in.)
	Synchro cone-to-gear clearance	Ring pushed against gear	0.50—1.04 mm (0.020—0.041 in.)	0.3 mm (0.012 in.)
	Outer synchro ring-to-gear cone clearance	Ring pushed against gear	0.95—1.68 mm (0.037—0.066 in.)	0.6 mm (0.024 in.)
Shift fork	Finger thickness		7.4—7.6 mm (0.29—0.30 in.)	———
	Fork-to-synchro sleeve clearance		0.35—0.65 mm (0.014—0.026 in.)	1.0 mm (0.039 in.)
Reverse shift fork	Finger thickness		13.4—13.7 mm (0.527—0.539 in.)	———
	Fork-to-reverse idler gear clearance		0.20—0.59 mm (0.007—0.024 in.)	1.2 mm (0.047 in.)
Shift arm	I.D.		13.973—14.000 mm (0.5501—0.5512 in.)	———
	Shift fork diameter at contact area		16.9—17.0 mm (0.665—0.669 in.)	———
	Shift arm-to-shift lever clearance		0.2—0.5 mm (0.008—0.020 in.)	0.6 mm (0.024 in.)
Select lever	Finger width		14.85—14.95 mm (0.585—0.589 in.)	———
Change lever	Change-to-select lever clearance		0.05—0.25 mm (0.002—0.010 in.)	0.5 mm (0.020 in.)
	Groove (to select lever)		15.00—15.10 mm (0.591—0.594 in.)	———
	Shaft-to-shift arm clearance		0.013—0.07 mm (0.0005—0.003 in.)	0.1 mm (0.004 in.)
M/T differential carrier	Pinion shaft contact area I.D.		18.010—18.028 mm (0.7091—0.7098 in.)	———
	Carrier-to-pinion shaft clearance		0.027—0.057 mm (0.0011—0.0022 in.)	0.1 mm (0.004 in.)
	Driveshaft contact area I.D.		28.025—28.045 mm (1.1033—1.1041 in.)	———
M/T differential pinion gear	Backlash		0.05—0.15 mm (0.002—0.006 in.)	———
	I.D.		18.042—18.066 mm (0.7103—0.7113 in.)	———
	Pinion gear-to-pinion shaft clearance		0.059—0.095 mm (0.0023—0.0037 in.)	0.15 mm (0.006 in.)
80 mm shim	80 mm shim-to-bearing outer race clearance in transmission housing		0—0.10 mm (0—0.0039 in.)	Adjust

Lubricants and Fluids

For details of lubrication points and type of lubricants to be applied, refer to the illustrated index and various work procedures (such as Assembly/Reassembly, Replacement, Overhaul, Installation, etc.) contained in each section.

Lubrication Points		Lubricant
A	Engine	Honda Motor Oil: P/N 08798-9023 (5W-20) Look for the API certification seal on the oil container as shown below. Make sure it says "For Gasoline Engines." SAE Viscosity 5W-20.
B	Manual Transmission	Honda Manual Transmission Fluid (MTF): P/N 08798-9016 Always use Honda MTF. Using motor oil can cause stiffer shifting because it does not contain the proper additives.
	Automatic Transmission	Honda Automatic Transmission Fluid (ATF)-Z1: P/N 08200-9001 Always use Honda ATF-Z1. Using a non-Honda ATF can Affect shift quality.
C	Brake system (includes ABS)	Honda DOT 3 Brake Fluid : P/N 08798-9008
D	Clutch line	Honda DOT 3 Brake Fluid : P/N 08798-9008 Always use Honda DOT 3 Brake Fluid. Using a non-Honda brake fluid can cause corrosion and decrease the life of the system.
E F G H	Shift lever (manual transmission) Release fork (manual transmission) Shift and select cable ends Throttle cable end (throttle link)*	Super High Temp Grease: P/N 08798-9002
I J	Throttle cable end (below dashboard) Caliper piston boot, caliper pins, and boots	Honda Silicone Grease: P/N 08C30-B0234M
K	Rear brake shoe linkage	MolyKote Grease 44MA
L M N O P Q R S T	Brake booster clevis Clutch master cylinder clevis Battery terminals Pedal linkage Fuel fill door Hood hinges and hood latch Door hinges: upper and lower Trunk hinges Power steering gearbox	Multipurpose Grease
U	Power steering system	Honda Power Steering Fluid: P/N 088206-9002 Always use Honda Power Steering Fluid. Using any other type of power steering fluid or automatic transmission fluid can cause increased wear and poor steering in cold weather.
V	Air conditioning compressor	Compressor oil: DENSO ND-OIL 8 (P/N 38897-PR7-A01AH or 38899-PR7-A01) for refrigerant HFC-134a (R-134a)

Maintenance Schedule

Listed by Distance/Time for Normal Conditions

2003-2005 Models

Follow the Normal Schedule if the severe driving conditions specified in the Maintenance Schedule for Severe Conditions do not apply, and if only OCCASIONALLY driven in severe driving conditions. Follow the Severe Conditions schedule if the vehicle is driven MAINLY in Canada.

Distance		Time	Maintenance Items
10,000 miles	16,000 km	———	Do items in A.
20,000 miles	32,000 km	1 year	Do items in A and B.
30,000 miles	48,000 km	———	Do items in A and C.
40,000 miles	64,000 km	2 years	Do items in A, B, and C.
50,000 miles	80,000 km	———	Do items in A.
60,000 miles	96,000 km	3 years	Do items in A, B, and C.
———	———	3 years	Replace brake fluid (see page 19-9). Use Honda DOT 3 Brake Fluid.
70,000 miles	112,000 km	———	Do items in A.
80,000 miles	128,000 km	4 years	Do items in A, B, and C.
90,000 miles	144,000 km	———	Do items in A and C.
100,000 miles	160,000 km	5 years	Do items in A and B.
110,000 miles	176,000 km	———	Do items in A and D.
120,000 miles	192,000 km	6 years	Do items in A, B, C, E, F, and G.
———	———	6 years	Replace brake fluid (see page 19-9). Use Honda DOT 3 Brake Fluid.
130,000 miles	208,000 km	———	Do items in A.
140,000 miles	224,000 km	7 years	Do items in A and B.
150,000 miles	240,000 km	———	Do items in A and C.
160,000 miles	256,000 km	———	Inspect idle speed (see page 11-315) every 160,000 miles (256,000 km). Idle speed: M/T 700±50 rpm, A/T 800±50 rpm in N or P position.
160,000 miles	256,000 km	8 years	Do items in A and B.
———	———	9 years	Replace brake fluid (see page 19-9). Use Honda DOT 3 Brake Fluid.

BACK

Protected by AR

Do the items in parts A, B, C, D, E, F, and G as required for the mileage/time interval listed.

Part	Maintenance Items
A	Replace engine oil (see page 8-6) every 10,000 miles (16,000 km) or 1 year. Engine oil capacity without oil filter: 4.0 L (4.2 US qt).
	Rotate tires, and check tire inflation and condition every 10,000 miles (16,000 km). Follow the pattern shown in the Owner's Manual.
B	Replace engine oil filter (see page 8-7) every 20,000 miles (32,000 km) or 1 year. Engine oil capacity with oil filter: 4.2 L (4.4 US qt).
	Check front and rear brakes (see page 19-3) every 20,000 miles (32,000 km) or 1 year. • Check pads and discs for wear (thickness), damage, and cracks. • Check calipers for damage, leaks, and tightness of mount bolts. • Check wheel cylinders for leaks. • Check brake linings for cracking, glazing, wear, or contamination.
	Check parking brake adjustment (see page 19-8) every 20,000 miles (32,000 km) or 1 year. • Check the number of clicks when the parking brake lever is pulled with 196 N (20 kgf, 44 lbf) of force. With rear discs: 6 to 9 clicks. With rear drums: 4 to 7 clicks.
	Inspect tie rod ends, steering gearbox, and gearbox boots (see page 17-3) every 20,000 miles (32,000 km) or 1 year. • Check rack grease and steering linkage. • Check boots for damage and leaking grease. • Check fluid lines for damage and leaks.
	Inspect suspension components (see page 18-3) every 20,000 miles (32,000 km) or 1 year. • Check bolts for tightness. • Check condition of ball joint boots for deterioration and damage.
	Inspect driveshaft boots (see page 16-4) every 20,000 miles (32,000 km) or 1 year. Check boots for cracks and boot bands for tightness.
	Inspect brake hoses and lines including ABS (see page 19-31) every 20,000 miles (32,000 km) or 1 year. Check the master cylinder and ABS modulator-control unit for damage and leakage.
	Inspect all fluid levels and condition of fluids, every 20,000 miles (32,000 km) or 1 year. • Manual transmission fluid (MTF) (see page 13-3). • Automatic transmission fluid (ATF-Z1) (see page 14-207). • Power steering fluid (see page 17-12). • Brake fluid (see page 19-9). • Clutch Fluid • Windshield washer fluid. • Engine coolant (see page 10-6).
	Inspect exhaust system 2003-2005 models (see page 9-15)*, 2006 model (see page 9-16)* every 20,000 miles (32,000 km) or 1 year. Check catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
	Inspect fuel lines and connections (see page 11-334)* every 20,000 miles (32,000 km) or 1 year. Check loose connections, cracks, and deterioration; retighten loose connections and replace damaged parts.
C	Inspect drive belts (see page 4-37) every 30,000 miles (48,000 km) or 2 years. Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator (see page 4-38).
	Replace dust and pollen filter (see page 21-51) every 30,000 miles (48,000 km) or 2 years. • Replace the filter as often (at 15,000 miles/24,000 km intervals) if the vehicle is driven mostly in urban areas that have high concentrations of soot in the air from industry and diesel-powered vehicles. • Replace the filter whenever airflow from the heating and cooling/climate control system is less than normal.
	Replace air cleaner element (see page 11-361) every 30,000 miles (48,000 km) (independent of time).
D	Inspect the valve clearance (see page 6-9) every 110,000 miles (176,000 km) otherwise adjust only if noisy. Intake: 0.21—0.25 mm (0.008—0.010 in.), Exhaust: 0.28—0.32 mm (0.011—0.013 in.).
	Replace spark plugs (see page 4-27) every 110,000 miles (176,000 km). • Use IZFR6K11 (NGK) or SKJ20DR-M11 (DENSO). • Use IZFR6K13 (NGK) or SKJ20DR-M13 (DENSO) for SULEV model (4-door model only).
E	Replace manual transmission fluid (see page 13-3) every 120,000 miles (192,000 km) or 6 years. Capacity: 1.9 L (2.0 US qt); use Honda MTF.
F	Replace automatic transmission fluid (see page 14-208) at 120,000 miles (192,000 km) or 6 years, then replace every 90,000 miles (144,000 km) or 5 years. Capacity: 2.8 L (3.0 US qt); use Honda ATF-Z1.
G	Replace engine coolant (see page 10-6) at 120,000 miles (192,000 km) or 10 years, then every 60,000 miles (96,000 km) or 5 years. Capacity: M/T 5.1 L (1.35 US gal), A/T 5.0 L (1.32 US gal); use Honda Long Life Antifreeze/coolant Type 2.

NOTE: According to state and federal regulations, failure to do the maintenance items marked with an asterisk (*) will not void the customer's emissions warranties. However, Honda recommends that all maintenance services be done at the recommended intervals to ensure long-term reliability.

Protected by AR

Maintenance Schedule

Listed by Distance/Time for Severe Conditions

2003-2005 Models

Use the Severe Conditions schedule if the vehicle is driven MAINLY in Canada or in any of the following conditions; if only OCCASIONALLY driven in these conditions, use the Normal Conditions schedule.

Severe Driving Conditions
- Driving less than 5 miles (8 km) per trip or, in freezing temperatures, driving less than 10 miles (16 km) per trip.
- Driving in extremely hot over 90°F (32°C) conditions.
- Extensive idling, or long periods of stop-and-go driving, such as a taxi or a commercial delivery vehicle.
- Trailer towing, driving with a loaded roof rack, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

Distance		Time	Maintenance Items
5,000 miles	8,000 km	———	Do item in A.
10,000 miles	16,000 km	———	Do items in A and B.
15,000 miles	24,000 km	———	Do items in A and C.
20,000 miles	32,000 km	1 year	Do items in A, B, and D.
25,000 miles	40,000 km	———	Do item in A.
30,000 miles	48,000 km	———	Do items in A, B, C, and E.
35,000 miles	56,000 km	———	Do item in A.
40,000 miles	64,000 km	2 years	Do items in A, B, and D.
45,000 miles	72,000 km	———	Do items in A and C.
50,000 miles	80,000 km	———	Do items in A and B.
55,000 miles	88,000 km	———	Do item in A.
60,000 miles	96,000 km	3 years	Do items in A, B, C, D, E, F, and G.
———	———	3 years	Replace brake fluid (see page 19-9). Use Honda DOT 3 Brake Fluid.
65,000 miles	104,000 km	———	Do item in A.
70,000 miles	112,000 km	———	Do items in A and B.
75,000 miles	120,000 km	———	Do items in A and C.
80,000 miles	128,000 km	4 years	Do items in A, B, and D.
85,000 miles	136,000 km	———	Do item in A.
90,000 miles	144,000 km	———	Do items in A, B, C, E, and G.
95,000 miles	152,000 km	———	Do item in A.
100,000 miles	160,000 km	5 years	Do items in A, B, and D.
105,000 miles	168,000 km	———	Do items in A and C.
110,000 miles	176,000 km	———	Do items A, B, and H.
115,000 miles	184,000 km	———	Do item in A.
120,000 miles	192,000 km	6 years	Do items in A, B, C, D, E, F, G, and I.
———	———	6 years	Replace brake fluid (see page 19-9). Use Honda DOT 3 Brake Fluid.
125,000 miles	200,000 km	———	Do item in A.
130,000 miles	208,000 km	———	Do items in A and B.
135,000 miles	216,000 km	———	Do items in A and C.
140,000 miles	224,000 km	7 years	Do items in A, B, and D.
145,000 miles	232,000 km	———	Do item in A.
150,000 miles	240,000 km	———	Do items in A, B, C, E, and G.
155,000 miles	248,000 km	———	Do item in A.
160,000 miles	256,000 km	———	Inspect idle speed (see page 11-315) every 160,000 miles (256,000 km). Idle speed: M/T 700±50 rpm, A/T 800±50 rpm in N or P position.
160,000 miles	256,000 km	8 years	Do items in A, B, and D.
———	———	9 years	Replace brake fluid (see page 19-9). Use Honda DOT 3 Brake Fluid.

BACK

Protected by AR

Do the items in parts A, B, C, D, E, F, G, H, and I as required for the mileage/time interval listed.

Part	Maintenance Items
A	Replace engine oil (see page 8-6) every 5,000 miles (8,000 km). Engine oil capacity without oil filter: 4.0 L (4.2 US qt).
B	Replace engine oil filter (see page 8-7) every 10,000 miles (16,000 km) or 1 year. Engine oil capacity with oil filter: 4.2 L (4.4 US qt).
	Check front and rear brakes (see page 19-3) every 10,000 miles (16,000 km) or 1 year. • Check pads and discs for wear (thickness), damage, and cracks. • Check calipers for damage, leaks, and tightness of mount bolts. • Check wheel cylinders for leaks. • Check brake linings for cracking, glazing, wear, or contamination.
	Lubricate all hinges, locks, and latches every 10,000 miles (16,000 km) or 1 year.
	Rotate tires, and check tire inflation and condition every 10,000 miles (16,000 km). Follow the pattern shown in the Owner's Manual.
	Inspect tie rod ends, steering gearbox, and gearbox boots (see page 17-3) every 10,000 miles (16,000 km) or 1 year. • Check rack grease and steering linkage. • Check boots for damage and leaking grease. • Check fluid lines for damage and leaks.
	Inspect suspension components (see page 18-3) every 10,000 miles (16,000 km) or 1 year. • Check bolts for tightness. • Check condition of ball joint boots for deterioration and damage.
	Inspect driveshaft boots (see page 16-4) every 10,000 miles (16,000 km) or 1 year. Check boots for cracks and boot bands for tightness.
C	Replace air cleaner element when driving in dusty conditions (see page 11-361) every 15,000 miles (24,000 km) (independent of time).
D	Check the parking brake adjustment (see page 19-8) every 20,000 miles (32,000 km) or 1 year. • Check the number of clicks when parking brake lever is pulled with 196 N (20 kgf, 44 lbf) of force. With rear discs: 6 to 9 clicks. With rear drums: 4 to 7 clicks.
	Inspect brake hoses and lines including ABS (see page 19-31) every 20,000 miles (32,000 km) or 1 year. Check the master cylinder and ABS modulator-control unit for damage and leakage.
	Inspect all fluid levels and condition of fluids, every 20,000 miles (32,000 km) or 1 year. • Manual transmission fluid (MTF) (see page 13-3). • Automatic transmission fluid (ATF-Z1) (see page 14-207). • Power steering fluid (see page 17-12). • Brake fluid (see page 19-9). • Clutch Fluid. • Windshield washer fluid • Engine coolant (see page 10-6).
	Inspect exhaust system 2003-2005 models (see page 9-15)*, 2006 model (see page 9-16)* every 20,000 miles (32,000 km) or 1 year. Check catalytic converter heat shield, exhaust pipe, and muffler for damage, leaks, and tightness.
	Inspect fuel lines and connections (see page 11-334)* every 20,000 miles (32,000 km) or 1 year. Check for loose connections, cracks, and deterioration; retighten loose connections and replace damaged parts.
	Check lights and controls, every 20,000 miles (32,000 km) or 1 year. Check function of interior and exterior lights (see page 22-222), and position of the headlights (see page 22-196).
	Inspect vehicle underbody, every 20,000 miles (32,000 km) or 1 year. Check the paint for damage, scratches, stone chipping, and dents.
E	Replace dust and pollen filter (see page 21-51) every 30,000 miles (48,000 km) or 2 years. • Replace the filter as often (at 15,000 miles/24,000 km intervals) if the vehicle is driven mostly in urban areas that have high concentrations of soot in the air from industry and diesel-powered vehicles. • Replace the filter whenever airflow from the heating and cooling/climate control system is less than normal.
	Inspect drive belts (see page 4-37) every 30,000 miles (48,000 km) or 2 years. Look for cracks and damage, then check the position of the drive belt auto-tensioner indicator (see page 4-38).

NOTE: According to state and federal regulations, failure to do the maintenance items marked with an asterisk (*) will not void the customer's emissions warranties. However, Honda recommends that all maintenance services be done at the recommended intervals to ensure long-term reliability.

Maintenance Schedule

Listed by Distance/Time for Severe Conditions (cont'd)

2003-2005 Models

Use the Severe Conditions schedule if the vehicle is driven MAINLY in Canada or in any of the following conditions; if only OCCASIONALLY driven in these conditions, use the Normal Conditions schedule.

Severe Driving Conditions
- Driving less than 5 miles (8 km) per trip or, in freezing temperatures, driving less than 10 miles (16 km) per trip.
- Driving in extremely hot over 90°F (32°C) conditions.
- Extensive idling, or long periods of stop-and-go driving, such as a taxi or a commercial delivery vehicle.
- Trailer towing, driving with a loaded roof rack, or driving in mountainous conditions.
- Driving on muddy, dusty, or de-iced roads.

Do the items in parts A, B, C, D, E, F, G, H, and I as required for the mileage/time interval listed.

Part	Maintenance Items
F	Replace manual transmission fluid (see page 13-3) every 60,000 miles (96,000 km) or 3 years. Capacity: 1.9 L (2.0 US qt); use Honda MTF.
G	Replace automatic transmission fluid (see page 14-208) at 60,000 miles (96,000 km) or 3 years, then replace every 30,000 miles (48,000 km) or 2 years. Capacity: 2.8 L (3.0 US qt); use Honda ATF-Z1.
H	Inspect the valve clearance (see page 6-9) every 110,000 miles (176,000 km), otherwise adjust only if noisy. Intake: 0.21—0.25 mm (0.008—0.010 in.), Exhaust: 0.28—0.32 mm (0.011—0.013 in.).
	Replace spark plugs (see page 4-27) every 110,000 miles (176,000 km). • Use IZFR6K-11 (NGK) or SKJ20DR-M11 (DENSO). • Use IZFR6K-13 (NGK) or SKJ20DR-M13 (DENSO) for SULEV model (4-door model only).
I	Replace engine coolant (see page 10-6) at 120,000 miles (192,000 km) or 10 years, then every 60,000 miles (96,000 km) or 5 years. Capacity: M/T 5.1 L (1.35 US gal), A/T 5.0 L (1.32 US gal); use Honda Long Life Antifreeze/coolant Type 2.

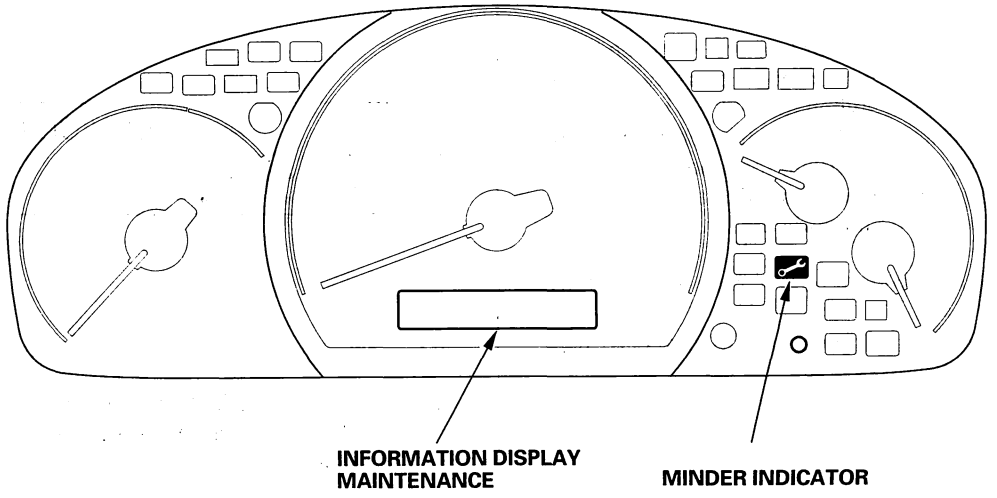
Maintenance Minder

Maintenance Display

2006 Model

The Maintenance Minder is an important feature of the information display. Based on engine operating conditions and accumulated engine revolutions, the Accord's onboard computer (ECM/PCM) calculates the remaining engine oil life. The system also displays the code for other scheduled maintenance items needing service.



Protected by AR

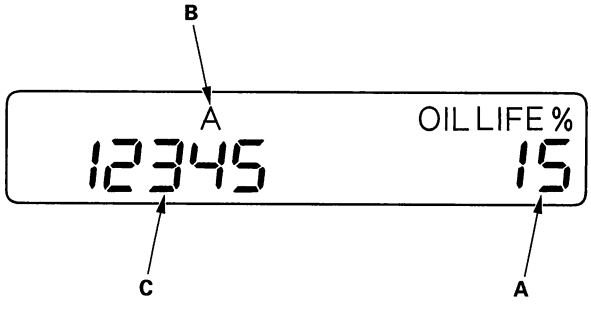
Engine Oil Life Indicator

2006 Model

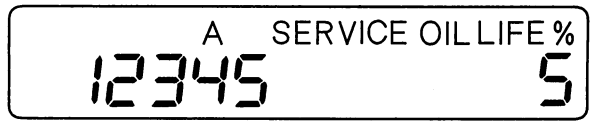
1. To see the current engine oil life, turn the ignition switch to ON (II), and push and release the trip meter select/reset knob instrument panel repeatedly until the engine oil life indicator is displayed.

2. If the oil life is 15 percent or less, you will see the oil life indicator (A) for several seconds every time you turn the ignition switch to ON (II). The maintenance minder indicator also comes on, and the maintenance item code(s) for other maintenance items needing service are displayed next to the engine oil life indicator.

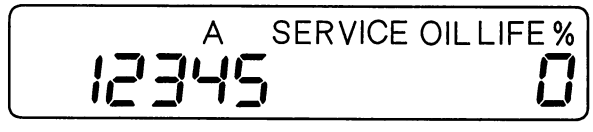
   - Complete list of maintenance main items "A" (B) (see page 3-12).
   - Complete list of maintenance sub items "B" (C) (see page 3-13).



3. When the remaining engine oil life is less then 5 percent, you will see "SERVICE OIL LIFE" message in the smart maintenance display along with the same maintenance item code(s) every time you turn the ignition switch to ON (II).



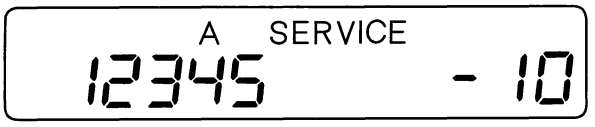
4. When the oil life is 0 percent, the remaining oil life indicator blinks when the ignition switch is in the ON (II) position.



BACK

Protected by AR

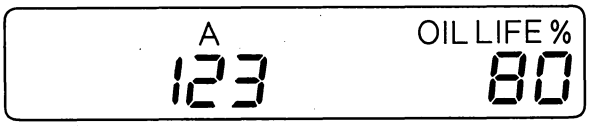
5. If you still do not perform the indicated maintenance, you will see a negative mileage, for example "—10," blinking in the display. This negative mileage means that you should have performed the indicated maintenance 10 miles ago.



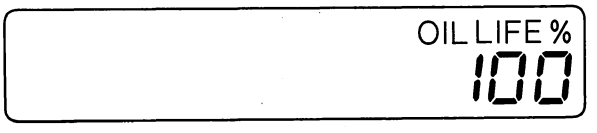
Resetting the Engine Oil Life Indicator

2006 Model

1. Turn the ignition switch ON (II).
2. Press the trip meter select/reset knob on the instrument panel repeatedly until the engine oil life indicator is displayed.
3. Press and hold the trip meter select/reset knob for about 10 seconds until the engine oil life and maintenance item code(s) blink, then release the knob.



4. Press and hold the trip meter select/reset knob again for about 5 seconds. The maintenance item code(s) disappear and the engine oil life resets to "100," then release the knob.



Protected by AR

Maintenance Minder

Maintenance Main Items

2006 Model

If you do not see the maintenance minder indicator or the maintenance schedule display more than 12 months after the display is reset, change the engine oil every year.

NOTE:
- Independent of the maintenance messages in the smart maintenance display, replace the brake fluid every 3 years.
- Inspect idle speed every 160,000 miles (256,000 km).
- Adjust the valves during services A, B, 1, 2 or 3 if they are noisy.

Symbol	Maintenance Main Items
A	Replace engine oil (see page 8-6). Engine oil capacity without oil filter: 4.0 L (4.2 US qt).
B	Replace engine oil and oil filter (see page 8-6). Engine oil capacity with oil filter: 4.2 L (4.4 US qt).
	Check front and rear brakes (see page 19-3). • Check pads and discs for wear (thickness), damage, and cracks. • Check calipers for damage, leaks, and tightness of mounting bolts. • Check wheel cylinders for leaks. • Check brake linings for cracking, glazing, wear, or contamination.
	Check parking brake adjustment (see page 19-8). Check the number of clicks when the parking brake lever is pulled with 196 N (20 kgf, 44 lbf) of force. With rear discs: 6 to 9 clicks With rear drums: 4 to 7 clicks
	Inspect tie-rod ends, steering gearbox, and gearbox boots (see page 17-3). • Check rack grease and steering linkage. • Check boots for damage and leaking grease. • Check fluid lines for damage or leaks.
	Inspect suspension components (see page 18-3). • Check bolts for tightness. • Check condition of ball joint boots for deterioration and damage.
	Inspect driveshaft boots (see page 16-4). Check boots for cracks and boot bands for tightness.
	Inspect brake hoses and lines including ABS (see page 19-31). Check the master cylinder and ABS modulator for damage and leakage.
	Inspect all fluid levels and condition of fluids. • Manual transmission fluid (MTF) (see page 13-3). • Automatic transmission fluid (ATF-Z1) (see page 14-207). • Power steering fluid (see page 17-12). • Brake fluid (see page 19-9). • Clutch fluid. • Windshield washer fluid. • Engine coolant (see page 10-6).
	Inspect exhaust system 2003-2005 models (see page 9-15)*, 2006 model (see page 9-16)*. Check catalytic converter heat shields, exhaust pipes, and muffler for damage, leaks, and tightness.
	Inspect fuel lines and connections (see page 11-334)*. Check for loose connections, cracks, and deterioration; retighten loose connections and replace damaged parts.

NOTE: According to state and federal regulations, failure to do the maintenance items marked with an asterisk (*) will not void the customer's emissions warranties. However, Honda recommends that all maintenance services be done at the recommended interval, to ensure long-term reliability.

BACK

Protected by AR

Maintenance Sub Items

2006 Model

Number	Maintenance Sub Items
1	Rotate tires, and check tire inflation and condition. Follow the pattern shown in the Owner's Manual.
2	Replace air cleaner element (see page 11-361). If you drive primarily in dusty conditions, replace every 15,000 miles (24,000 km).
	Replace dust and pollen filter (see page 21-51). • Replace the filter at 15,000 miles (24,000 km) intervals if the vehicle is driven mostly in urban areas that have high concentrations of soot in the air from industry and diesel-powered vehicles. • Replace the filter whenever airflow from the heating and cooling/climate control system is less than normal.
	Inspect drive belt (see page 4-37). Look for cracks and damage, and inspect auto tensioner; no adjustment is needed.
3	Replace transmission fluid (see page 13-3). • Driving in mountainous areas at very low vehicle speed or trailer towing results in higher transmission temperatures. This requires transmission fluid changes more frequently than recommended by the Maintenance Minder. If the vehicle is regularly driven in these conditions, have the transmission fluid, changed at 60,000 miles (96,000 km) or 3 years, then every 30,000 miles (48,000 km) or 2 years. • Capacity: M/T: 1.9 L (2.0 US qt), use Honda MTF. A/T: 3.1 L (3.3 US qt), use Honda ATF-Z1.
4	Replace spark plugs (see page 4-27). • Use IZFR6K-11 (NGK) or SKJ20DR-M11 (DENSO). • Use IZFR6K-13 (NGK) or SKJ20DR-M13 (DENSO) for SULEV model (4-door model only).
	Inspect the valve clearance (cold) (see page 6-9). • Otherwise, adjust only if noisy. • Intake: 0.21—0.25 mm (0.008—0.010 in.), Exhaust: 0.28—0.32 mm (0.011—0.013 in.).
5	Replace engine coolant (see page 10-6). Capacity (including the reserve tank): M/T 5.1 L (1.35 US gal), A/T 5.0 L (1.32 US gal); use Honda Long Life Antifreeze/Coolant Type 2.

Protected by AR

SUPPLEMENTAL RESTRAINT SYSTEM (SRS) (If engine electrical maintenance is required)

The Accord SRS includes a driver's airbag in the steering wheel hub, a passenger's airbag in the dashboard above the glove box, seat belt tensioners in the front seat belt retractors, side curtain airbags in the sides of the roof, and side airbags in the front seat-backs. Information necessary to safely service the SRS is included in this Service Manual. Items marked with an asterisk (*) on the contents page include or are located near SRS components. Servicing, disassembling, or replacing these items require special precautions and tools, and should be done only by an authorized Honda dealer.

- To avoid rendering the SRS inoperative, which could lead to personal injury or death in the event of a severe frontal or side collision, all SRS service work must be performed by an authorized Honda dealer.
- Improper service procedures, including incorrect removal and installation of the SRS, could lead to personal injury caused by unintentional deployment of the airbags and/or side airbags.
- Do not bump or impact the SRS unit, front impact sensors, or side impact sensors when the ignition switch is ON (II), or for at least 3 minutes after the ignition switch is turned OFF; otherwise, the system may fail in a collision, or the airbags may deploy.
- SRS electrical connectors are identified by yellow color coding. Related components are located in the steering column, front console, dashboard, dashboard lower panel, in the dashboard above the glove box, in the front seats, in the roof side, and around the floor. Do not use electrical test equipment on these circuits.

Symptom Troubleshooting Index

Symptom	Diagnostic procedure	Also check for
Engine does not start (does not crank)	1. Check for loose battery terminals or connections. 2. Test the battery for a low charge (see page 22-78). 3. Check the starter (see page 4-6). 4. Check the starter cut relay (see page 22-79). 5. Check the transmission range switch (A/T) (see page 14-247). 6. Check the clutch interlock switch (M/T) (see page 4-8). 7. Check the ignition switch or wire (see page 22-81).	Poor ground at G101 (A/T) or G501 (M/T)
Engine cranks, but does not start	1. Check for PGM-FI DTCs. 2. Check the fuel pressure (see page 11-332). 3. Check for a plugged or damaged fuel line (see page 11-334). 4. Check for a plugged fuel filter (see page 11-344). 5. Check the throttle body (see page 11-356). 6. Check for low engine compression (see page 6-6). 7. Check for a damaged or broken cam chain.	
Engine is hard to start	1. Check for PGM-FI DTCs. 2. Check the fuel pressure (see page 11-332). 3. Check for a plugged or damaged fuel line (see page 11-334). 4. Check for a plugged fuel filter (see page 11-344).	
Engine cranks slowly	1. Check for loose battery terminals or connections. 2. Test the battery for a low charge (see page 22-78). 3. Check the starter for binding (see page 4-6). 4. Check for excessive drag in the engine.

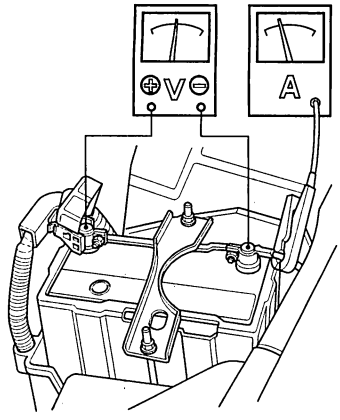
Starter Circuit Troubleshooting

NOTE:
- Air temperature must be between 59 and 100°F (15 and 38°C) during this procedure.
- After this inspection, you must select engine control module (ECM)/powertrain control module (PCM) reset using the Honda Diagnostic System (HDS) (see page 11-4), otherwise the ECM/PCM continues to stop the fuel injectors.
- The battery must be in good condition and fully charged.

Recommended Procedure:
- Use a starter system tester.
- Connect and operate the equipment in accordance with the manufacturer's instructions.

Alternate Procedure

1. Hook up the following equipment:
   - Ammeter, 0—400 A
   - Voltmeter, 0—20 V (accurate within 0.1 V)



2. Connect the HDS to the data link connector (DLC) (see page 11-3).

3. Turn the ignition switch ON (II), then select PGM-FI, INSPECTION, then ALL INJECTORS OFF on the HDS.

4. With the shift lever in N or P (A/T) or the clutch pedal pressed (M/T), turn the ignition switch to START (III).

   Did the starter crank the engine normally?

   YES—The starting system is OK. Go to step 10.

   NO—Go to step 5.

5. Check the battery condition. Check electrical connections at the battery, the negative battery cable to body, the engine ground cables, and the starter for looseness and corrosion. Then try cranking the engine again.

   Did the starter crank the engine?

   YES—Repairing the loose connection corrected the problem. The starting system is OK. Go to step 10.

   NO—Check the following:

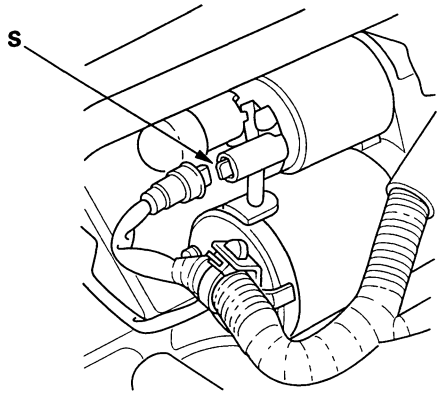
   - If the starter will not crank the engine at all, go to step 6.
   - If it cranks the engine erratically or too slowly, go to step 7.
   - If it does not disengage from the flywheel or torque converter ring gear when you release the key, check the following:
     - Solenoid plunger and switch malfunction
     - Dirty drive gear or damaged overrunning clutch

BACK

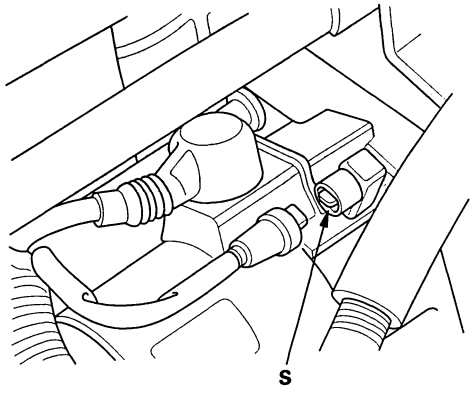
Protected by AR

6. Make sure the transmission is in Neutral, then disconnect the BLK/WHT wire from the starter solenoid S terminal. Connect a jumper wire from the battery positive terminal to the solenoid terminal.

M/T (2003-2005 Models)



A/T, M/T (2006 Model)



Did the starter crank the engine?

YES—Check the following items in the order listed until you find the open circuit:■

- The BLK/WHT wire and connectors between the under-dash fuse/relay box and the ignition switch, and between the under-dash fuse/relay box and the starter.
- The ignition switch (see page 22-81).
- The transmission range switch and connector (A/T) or the clutch interlock switch and connector (M/T).
- The starter cut relay (see page 22-79).

NO—Remove the starter, and repair or replace as necessary.■

7. While cranking the engine, check the cranking voltage and current draw.

Is cranking voltage greater than or equal to 7.7 V (M/T 2003-2005 Models)/8.5 V (A/T, M/T 2006 Model) and current draw less than or equal to 400A (M/T 2003-2005 Models)/380A (A/T, M/T 2006 Model)?

YES—Go to step 9.

NO—Replace the starter, or remove and disassemble it, and check for the following until you find the cause:■

- Drag in the starter armature
- Shorted armature winding
- Excessive drag in the engine

8. Check the engine speed while cranking the engine.

Is the engine speed above 100 rpm?

YES—Go to step 9.

NO—Replace the starter, or remove and disassemble it, and check for the following:■

- Open circuit in starter armature commutator segments
- Excessively worn starter brushes
- Open circuit in commutator brushes
- Dirty or damaged helical splines or drive gear
- Faulty drive gear clutch

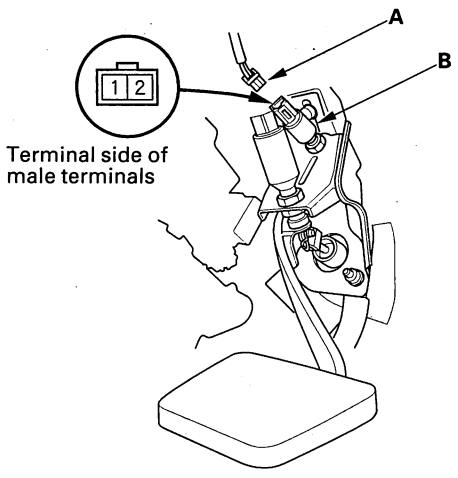
9. Remove the starter, and inspect its drive gear and the flywheel or torque converter ring gear for damage. Replace any damaged parts.

10. Select ECM/PCM reset (see page 11-4) to cancel the ALL INJECTORS OFF function on the HDS.

Protected by AR

Clutch Interlock Switch Test

1. Disconnect the clutch interlock switch 2P connector (A).



2. Remove the clutch interlock switch (B).

3. Check for continuity between the terminals according to the table.

   - If the continuity is not as specified, replace the clutch interlock switch.
   - If OK, install the clutch interlock switch and adjust the pedal height (see page 12-4).

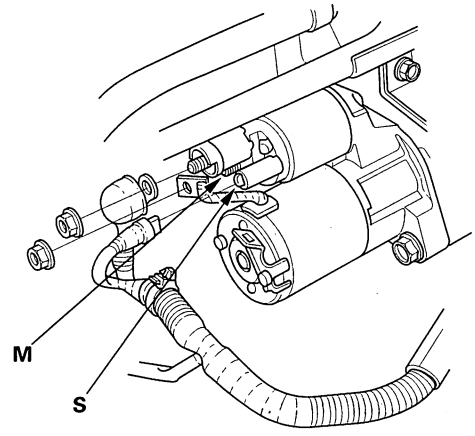
Terminal / Clutch Interlock Switch	1	2
PRESSED	○	○
RELEASED		

Starter Solenoid Test

M/T (2003-2005 Models)

1. Check the hold-in coil for continuity between the S terminal and the armature housing (ground). There should be continuity.

   - If there is continuity, go to step 2.
   - If there is no continuity, replace the solenoid.



2. Check the pull-in coil for continuity between the S terminal and the M terminal. There should be continuity.

   - If there is continuity, the solenoid is OK.
   - If there is no continuity, replace the solenoid.

BACK

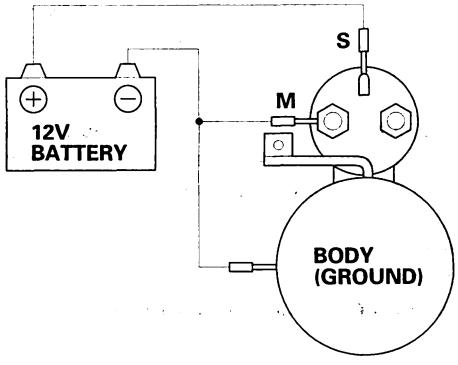
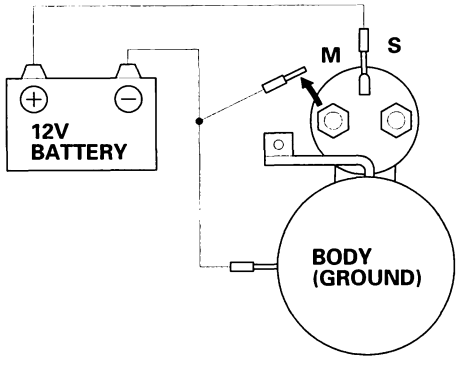
Starter Performance Test

M/T (2003-2005 Models)

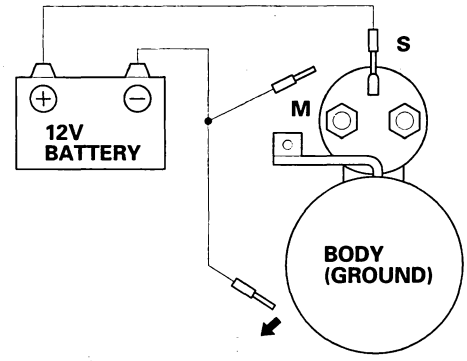
1. Disconnect the wires from the M terminal.
2. Make the connections as shown using as heavy a wire as possible (preferably equivalent to the wire used for the vehicle). To avoid damaging the starter, never leave the battery connected for more than 10 seconds.
3. Connect the battery as shown. Be sure to disconnect the starter motor wire from the solenoid. If the starter pinion moves out, it is working properly.



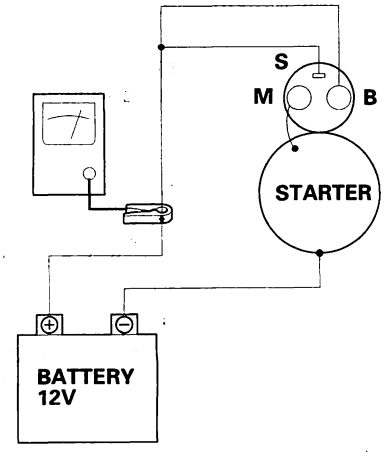
4. Disconnect the negative battery terminal from the M terminal. If the pinion does not retract, the hold-in coil of the solenoid is working properly.



5. Disconnect the battery from the starter body. If the pinion retracts immediately, it is working properly.



6. Firmly clamp the starter in a vise.
7. Reconnect the wire to the M terminal.
8. Connect the starter to the battery as shown, and check that the motor turns and keeps rotating.



9. If the electric current and motor speed meet the specifications when the battery voltage is at 11 V, the starter is working properly.

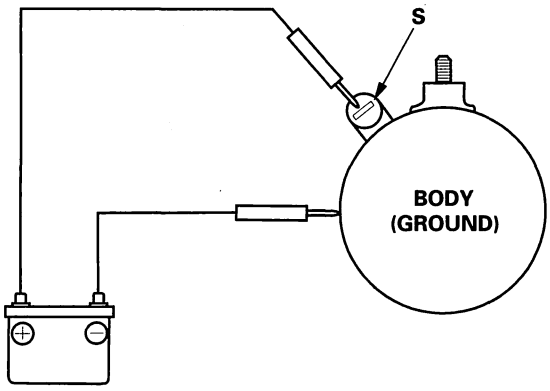
Specifications
Electric current: 90 A or less
Motor speed: 2,000 rpm or more

Protected by AR

Starter Performance Test (cont'd)

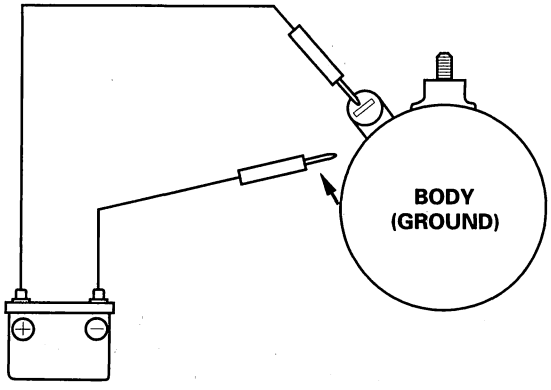
A/T, M/T (2006 Model)

1. Connect the battery to the starter as shown using as heavy a wire as possible (preferably equivalent to the wire used for the vehicle). To avoid damaging the starter, never leave the battery connected for more than 10 seconds.



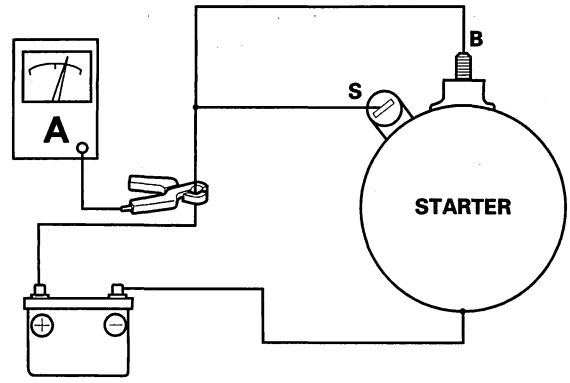
2. Connect the battery as shown. If the starter pinion moves out, it is working properly.

3. Disconnect the negative battery terminal from the body as shown. If the pinion retracts immediately, it is working properly.



4. Firmly clamp the starter in a vise.

5. Connect the starter to the battery as shown, and check that the motor turns and keeps rotating.



6. If the electric current and motor speed meet the specifications when the battery voltage is at 11.5 V, the starter is working properly.

Specifications
Electric current: 80 A or less
Motor speed: 2,300 rpm or more

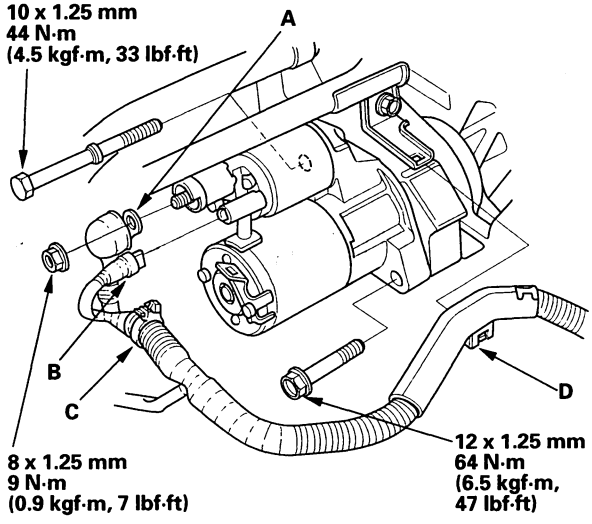
Starter Removal and Installation

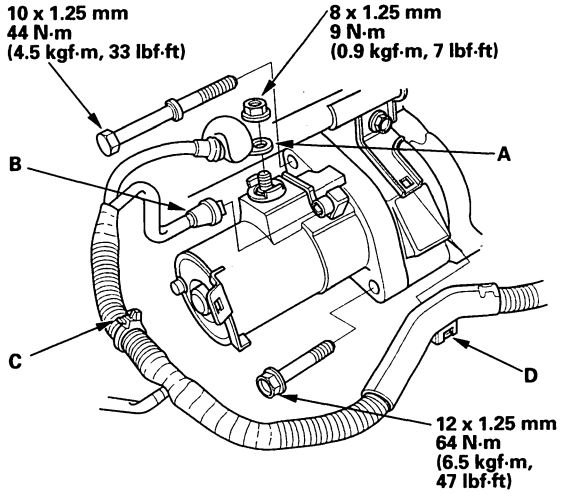
Removal

1. Make sure you have the anti-theft codes for the radio, and the navigation system, then write down the customer's radio station and XM radio channel presets.
2. Disconnect the negative cable from the battery first, then disconnect the positive cable.
3. Remove the intake manifold (see page 9-4).
4. Disconnect the starter cable (A) from the B terminal, then disconnect the BLK/WHT wire (B) from the S terminal.

M/T (2003-2005 Models)



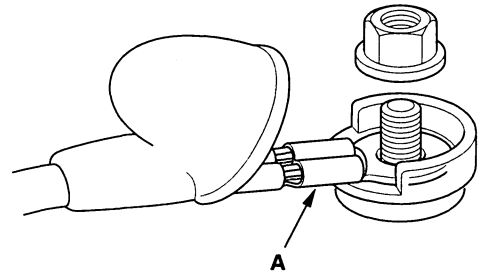
A/T, M/T (2006 Model)



5. Remove the harness clamp (C).
6. Remove the harness holder (D).
7. Remove the two bolts holding the starter, then remove the starter.

Installation

1. Install in the reverse order of removal. Make sure the crimped side of the ring terminal (A) is facing out.



2. Connect the battery positive cable to the battery first, then connect the negative cable.
3. Start the engine to make sure the starter works properly.
4. Enter the anti-theft codes for the radio and the navigation system, then enter the customer's radio station and XM radio channel presets.
5. Do the power window control unit reset procedure (see page 22-232).
6. Set the clock.

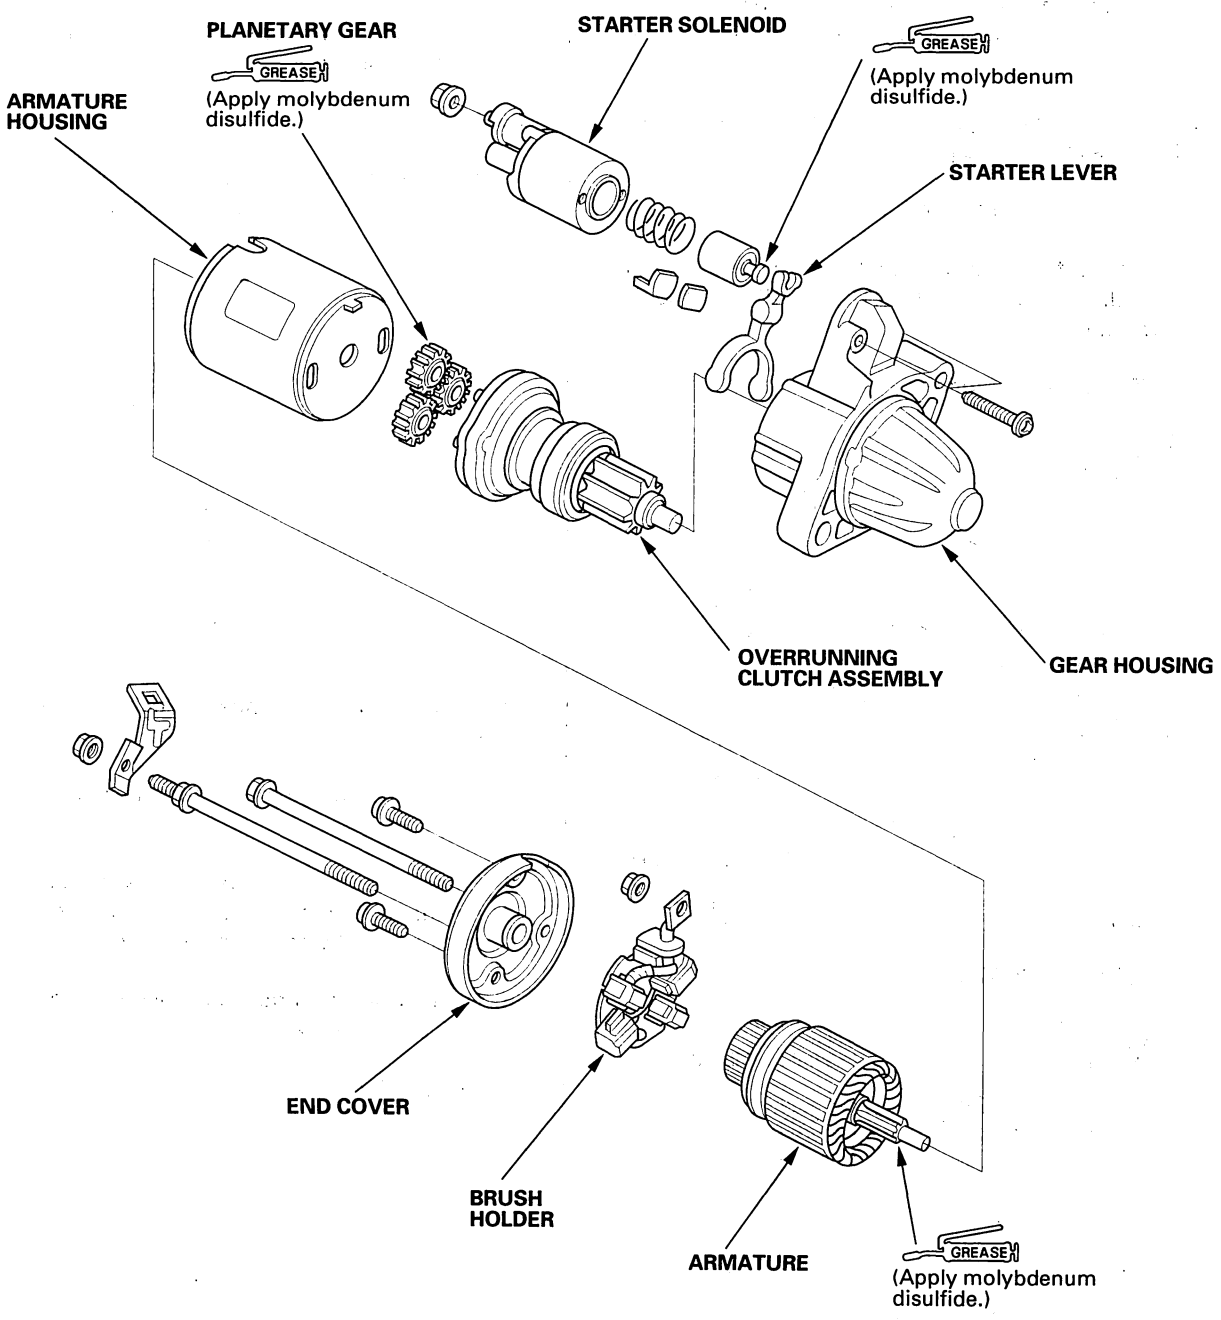
Starter Overhaul

MITSUBISHI M/T (2003-2005 Models)

Disassembly/Reassembly

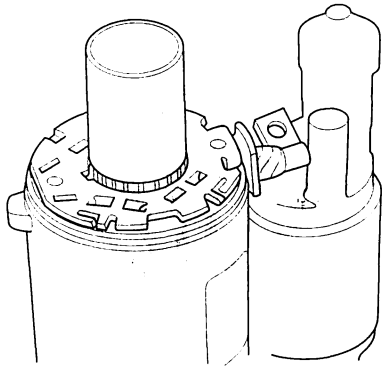


BACK

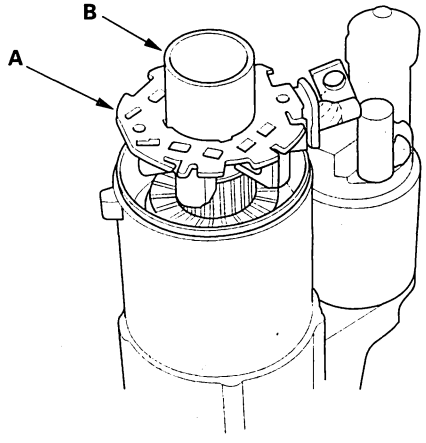
Protected by AR

Brush Holder Removal

1. Remove the starter (see page 4-11).
2. Disconnect the wire from the M terminal, and remove the end cover.
3. Place a 29.4 mm (1.16 in.) outside diameter plastic pipe on the armature.

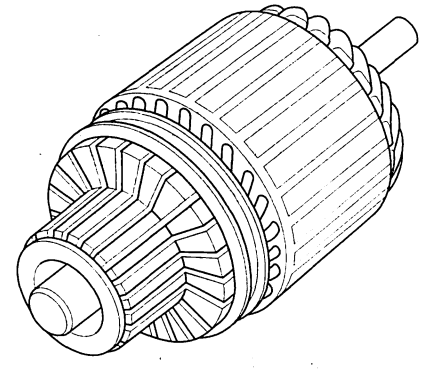


4. Move the brush holder (A) up to the pipe (B) while holding the pipe so the brushes do not pop out from the holder.

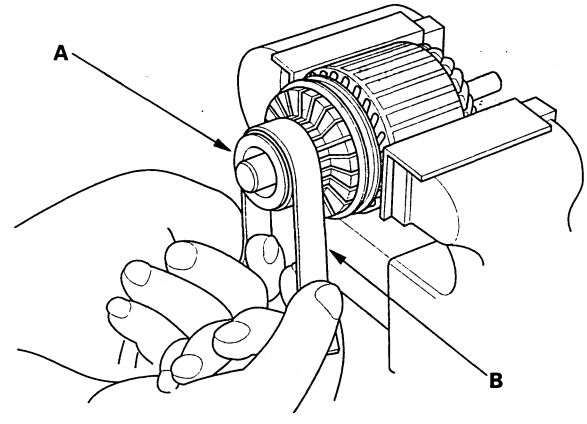


Armature Inspection and Test

5. Disassemble the starter as shown at the beginning of this procedure.
6. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.



7. Check the commutator (A) surface. If the surface is dirty or burnt, resurface with emery cloth or a lathe within the following specifications, or recondition with #500 or #600 sandpaper (B).



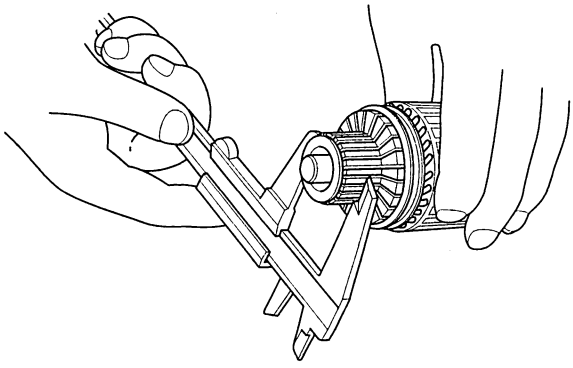
(cont'd)

Protected by AR

Starter Overhaul (cont'd)

8. Check the commutator diameter. If the diameter is below the service limit, replace the armature.

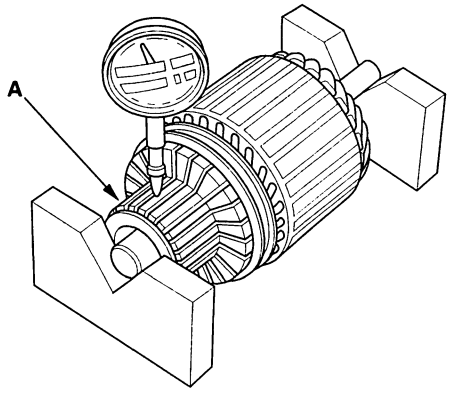
Commutator Diameter
Standard (New): 29.3—29.5 mm (1.154—1.161 in.)
Service Limit: 28.8 mm (1.134 in.)



9. Measure the commutator (A) runout.

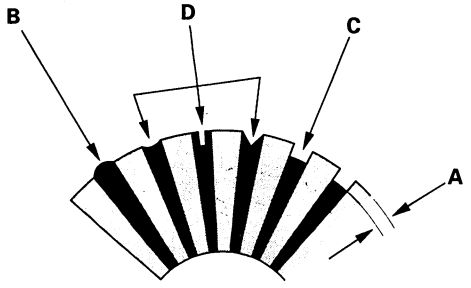
- If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
- If the commutator runout is not within the service limit, replace the armature.

Commutator Runout
Standard (New): 0.05 mm (0.002 in.) max.
Service Limit: 0.1 mm (0.004 in.)

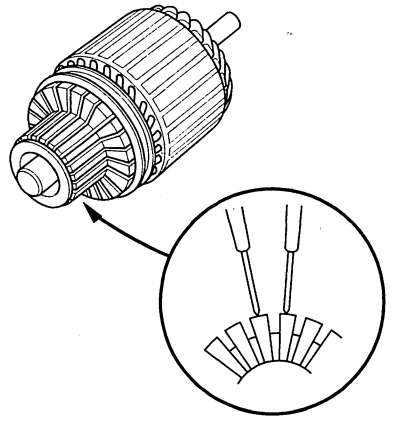


10. Check the mica depth (A). If the mica is too high (B), undercut the mica with a hacksaw blade to the proper depth. Cut away all the mica (C) between the commutator segments. The undercut should not be too shallow, too narrow, or V-shaped (D).

Commutator Mica Depth
Standard (New): 0.40—0.60 mm (0.016—0.024 in.)
Service Limit: 0.20 mm (0.008 in.)



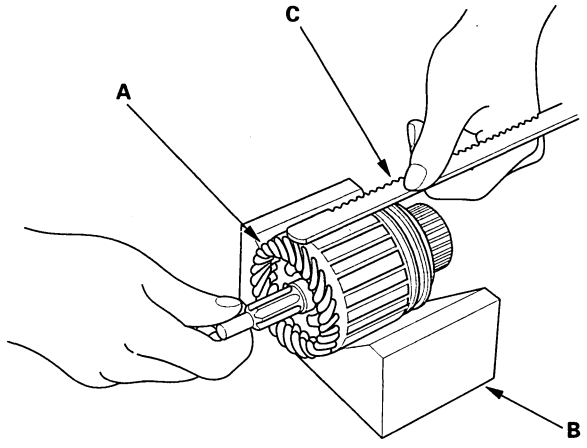
11. Check for continuity between the segments of the commutator. If there is an open circuit between any segments, replace the armature.



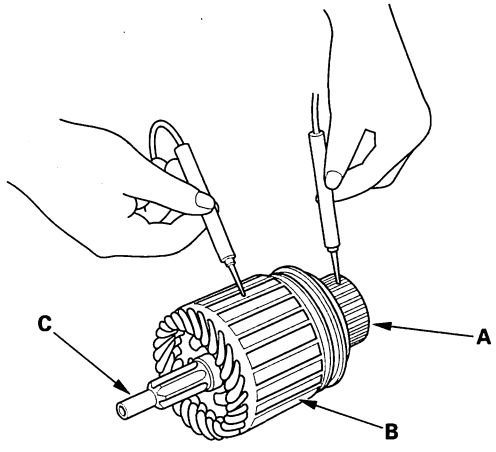
BACK

Protected by AR

12. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attached to the core or vibrates while the core is turned, the armature is shorted. Replace the armature.



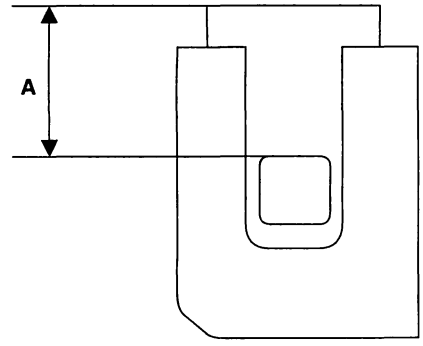
13. Check with an ohmmeter for continuity between the commutator (A) and armature coil core (B), and between the commutator and armature shaft (C). If there is continuity, replace the armature.



Starter Brush Inspection

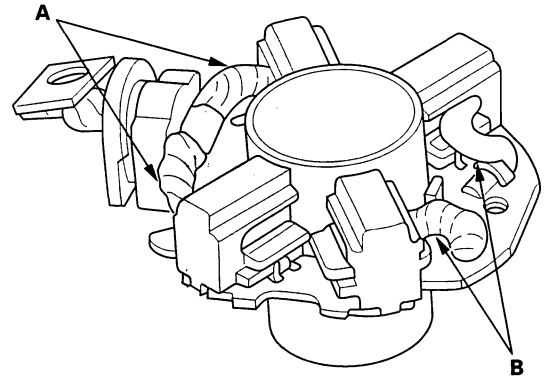
14. Measure the brush length (A). If it is shorter than the service limit, replace the brush holder assembly.

Brush Length
Standard (New): 7.7—8.0 mm (0.30—0.31 in.)
Service Limit: 0.9 mm (0.04 in.)



Starter Brush Holder Test

15. Check for continuity between the (+) brush (A) and (—) brush (B). If there is continuity, replace the brush holder assembly.



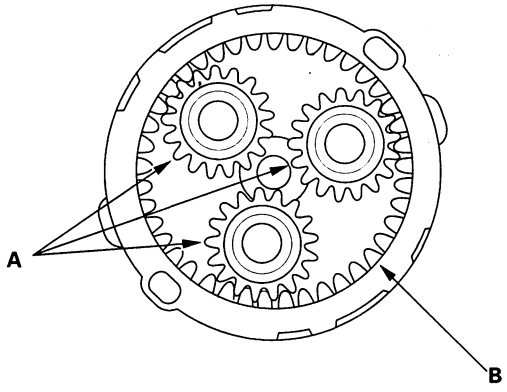
(cont'd)

Protected by AR

Starter Overhaul (cont'd)

Planetary Gear Inspection

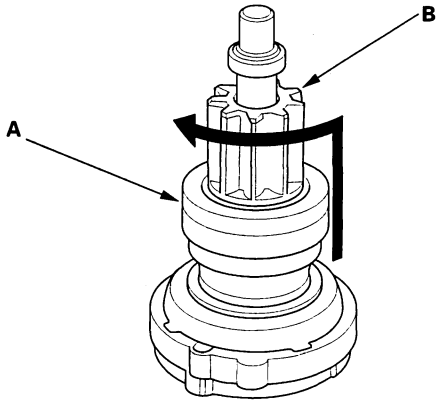
16. Check the planetary gears (A) and ring gear (B). Replace them if they are worn or damaged.



Overrunning Clutch Inspection

17. Slide the overrunning clutch along the shaft. Replace it, if it does not slide smoothly.

18. Hold the drive gear (A), and turn the overruning clutch in the direction shown to be sure it turns freely. Also make sure the overrunig clutch locks in the opposite direction. If it does not lock in either direction or it locks in both directions, replace it.

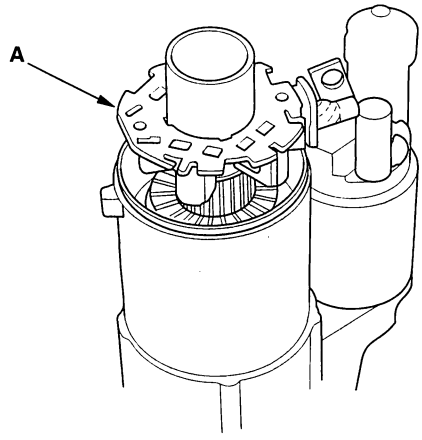


19. If the starter drive gear (B) is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately. Check the condition of the flywheel ring gear to see, if the starter drive gear teeth are damaged.

Starter Reassembly

20. Install the armature into the housing.

21. Place the brush holder assembly on the armature, then move the brush holder (A) down to the armature.



22. Install the end cover to retain the brush holder.

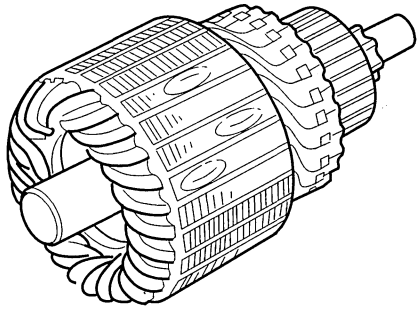
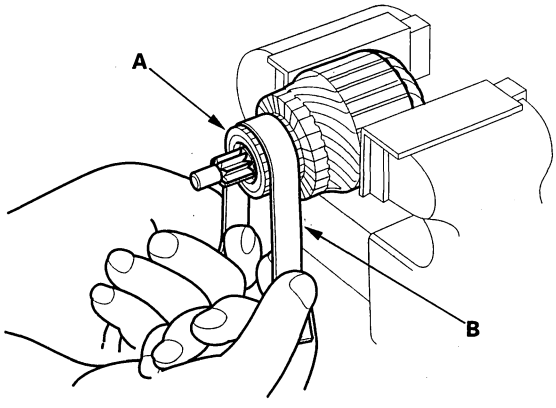
Starter Overhaul (cont'd)

Armature Inspection and Test

1. Remove the starter (see page 4-11).
2. Disassemble the starter as shown at the beginning of this procedure.
3. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.

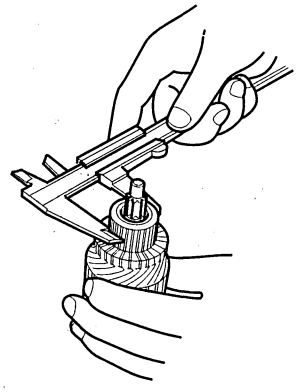


4. Check the commutator (A) surface. If the surface is dirty or burnt, resurface with emery cloth or a lathe within the following specifications, or recondition with #500 or #600 sandpaper (B).



5. Check the commutator diameter. If the diameter is below the service limit, replace the armature.

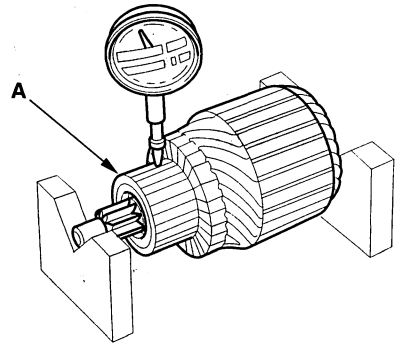
Commutator Diameter
Standard (New): 28.0—28.1 mm (1.102—1.106 in.)
Service Limit: 27.5 mm (1.083 in.)



6. Measure the commutator (A) runout.

- If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
- If the commutator runout is not within the service limit, replace the armature.

Commutator Runout
Standard (New): 0.02 mm (0.001 in.) max.
Service Limit: 0.05 mm (0.002 in.)

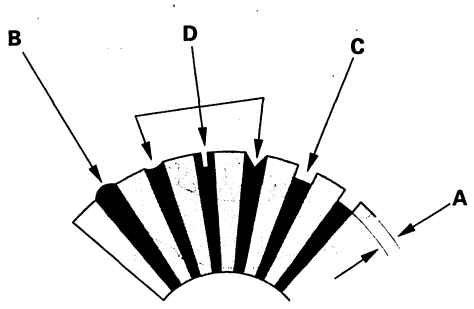


BACK

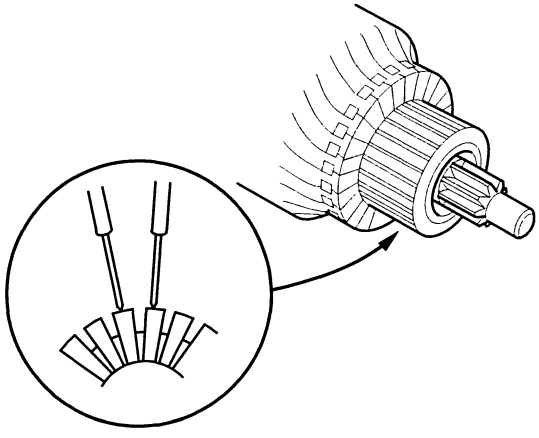
Protected by AR

7. Check the mica depth (A). If the mica is too high (B), undercut the mica with a hacksaw blade to the proper depth. Cut away all the mica (C) between the commutator segments. The undercut should not be too shallow, too narrow, or V-shaped (D).

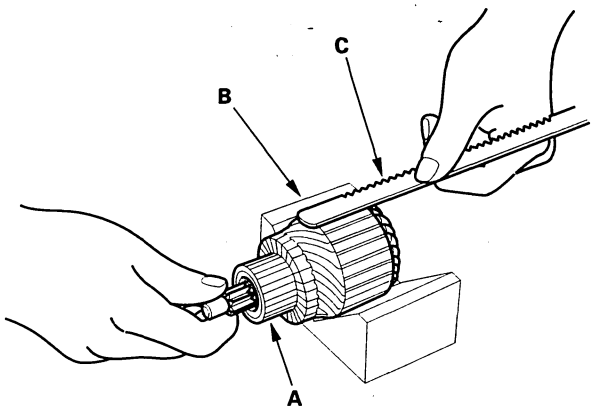
Commutator Mica Depth
Standard (New): 0.40—0.50 mm (0.016—0.020 in.)
Service Limit: 0.15 mm (0.006 in.)



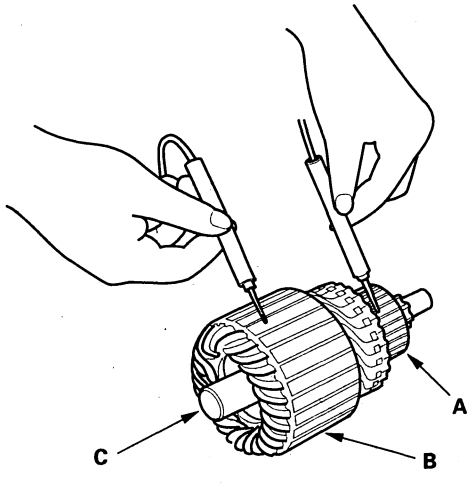
8. Check for continuity between the segments of the commutator. If there is an open circuit between any segments, replace the armature.



9. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attracted to the core or vibrates while the core is turned, the armature is shorted. Replace the armature.



10. Check with an ohmmeter for continuity between the commutator (A) and armature coil core (B), and between the commutator and armature shaft (C). If there is continuity, replace the armature.



(cont'd)

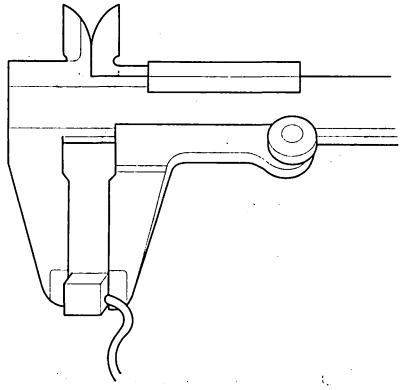
Protected by AR

Starter Overhaul (cont'd)

Starter Brush Inspection

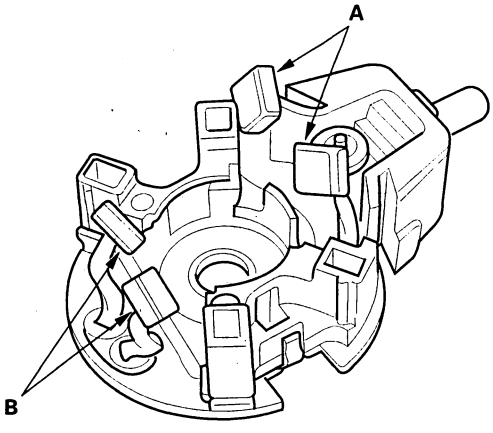
11. Measure the brush length. If it is shorter than the service limit, replace the brush holder assembly.

Brush Length
Standard (New): 11.1—11.5 mm (0.44—0.45 in.)
Service Limit: 4.3 mm (0.17 in.)



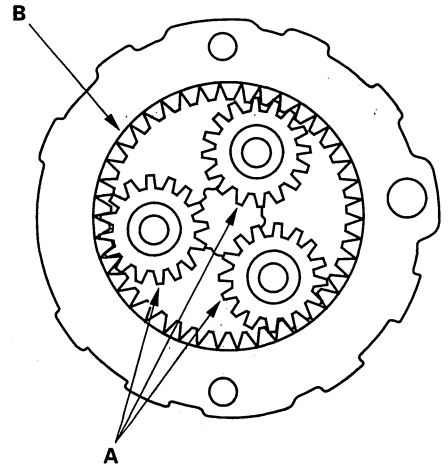
Starter Brush Holder Test

12. Check for continuity between the (+) brush (A) and (—) brush (B). If there is continuity, replace the brush holder assembly.



Planetary Gear Inspection

13. Check the planetary gears (A) and ring gear (B). Replace them if they are worn or damaged.

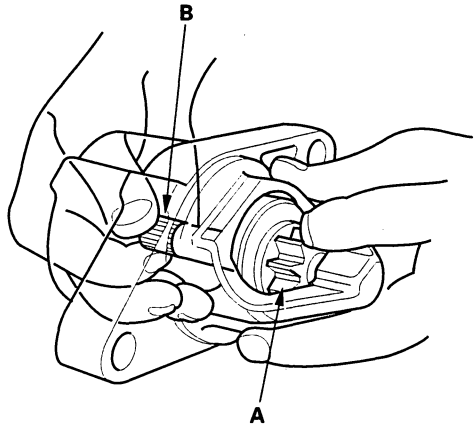


BACK

Protected by AR

Overrunning Clutch Inspection

14. While holding the drive gear (A), turn the gear shaft (B) clockwise. Check that the drive gear comes out to the other end. If the drive gear does not move smoothly, replace the gear cover assembly.



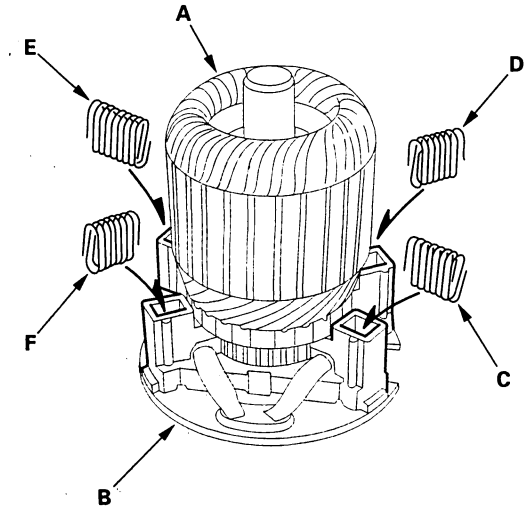
15. While holding the drive gear, turn the gear shaft counterclockwise. The gear shaft should rotate freely. If the gear shaft does not rotate smoothly, replace the gear cover assembly.

16. If the starter drive gear is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately.
Check the condition of the torque converter ring gear to see if the starter drive gear teeth are damaged.

Starter Reassembly

17. Install the brush into the brush holder, and set the armature (A) in the brush holder (B).

NOTE: To seat the new brushes, slip a strip of #500 or #600 sandpaper, with the grit side up, between the commutator and each brush, and smoothly rotate the armature. The contact surface of the brushes will be sanded to the same contour as the commutator.



18. While squeezing a spring (C), insert it in the hole on the brush holder, and push it until it bottoms. Repeat this for the other three springs (D, E, and F).

19. Install the armature and brush holder assembly into the housing.

NOTE: Make sure the armature stays in the holder.

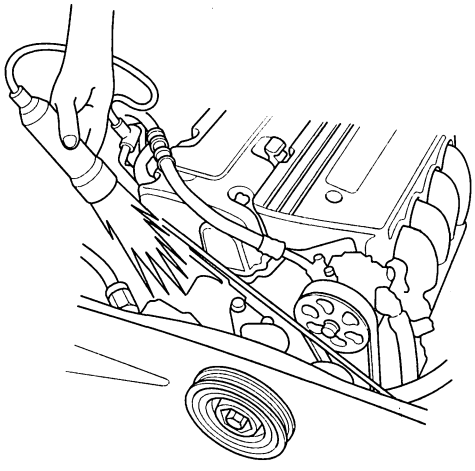
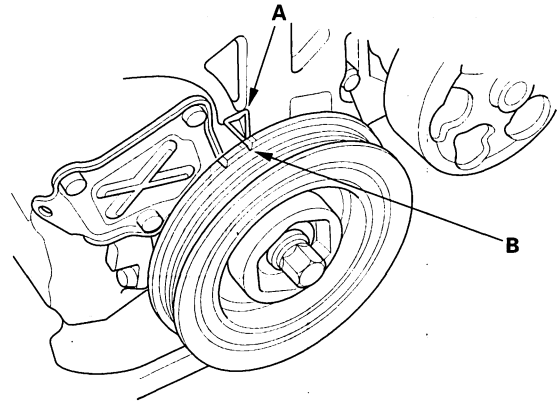
Ignition Timing Inspection

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on page 11-3), and check for DTCs. If a DTC is present, diagnose and repair the cause before inspecting the ignition timing.
2. Start the engine. Hold the engine at 3,000 rpm with no load (in Neutral) until the radiator fan comes on, then let it idle.
3. Check the idle speed (see page 11-315).
4. Select "SCS" mode using the HDS.
5. Free the service loop from the wire harness, then connect the timing light to the service loop.



6. Aim the light toward the pointer (A) on the cam chain case. Check the ignition timing under a no load condition (headlights, blower fan, rear window defogger, and air conditioner are turned off).

Ignition Timing
M/T: 8°±2° BTDC (RED mark (B)) at idle in Neutral
A/T: 8°±2° BTDC (RED mark (B)) at idle in Park or Neutral



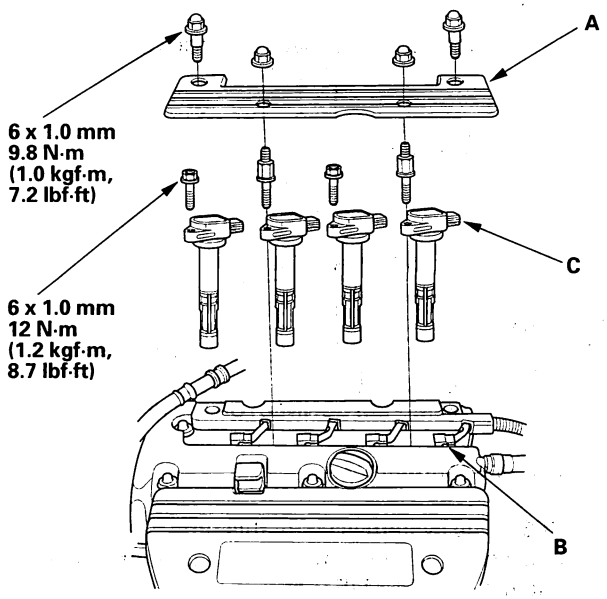
7. If the ignition timing differs from the specification, check the cam timing. If the cam timing is OK, update the engine control module (ECM)/ powertrain control module (PCM) if it does not have the latest software (see page 11-6), or substitute a known-good ECM/PCM (see page 11-7), then recheck. If the system works properly, and the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).
8. Disconnect the HDS and the timing light.
9. Secure the service loop to the wire harness with wire ties.

BACK

Protected by AR

Ignition Coil Removal/Installation

1. Remove the ignition coil cover (A), disconnect the ignition coil connectors (B), then remove the ignition coils (C).



2. Install the ignition coils in the reverse order of removal.

Ignition Coil Relay Circuit Troubleshooting

1. Check the No. 2 (15A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?

   YES—Go to step 2.

   NO—Replace the fuse. ■

2. Remove the ignition coil relay from the under-dash fuse/relay box, and test it (see page 22-79).

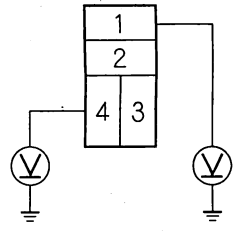
   Is the relay OK?

   YES—Go to step 3.

   NO—Replace the ignition coil relay. ■

3. Measure the voltage between ignition coil relay 4P socket terminal No. 1 and body ground, then terminal No. 4 and body ground.

IGNITION COIL RELAY 4P SOCKET



Terminal side of female terminals

Is there battery voltage?

YES—Go to step 4.

NO—Replace the under-dash fuse/relay box. ■

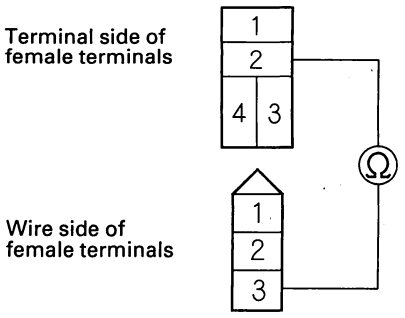
4. Check for continuity between ignition coil relay 4P socket terminal No. 2 and the No. 1 ignition coil 3P connector terminal No. 3.

IGNITION COIL RELAY 4P SOCKET



No.1 IGNITION COIL 3P CONNECTOR

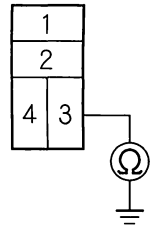
Is there continuity?

YES—Go to step 5.

NO—Repair an open in the wire between ignition coil relay 4P socket terminal No. 2 and ignition coil 3P connector terminal No. 3.■

5. Check for continuity between ignition coil relay 4P socket terminal No. 3 and body ground.

IGNITION COIL RELAY 4P SOCKET



Terminal side of female terminals

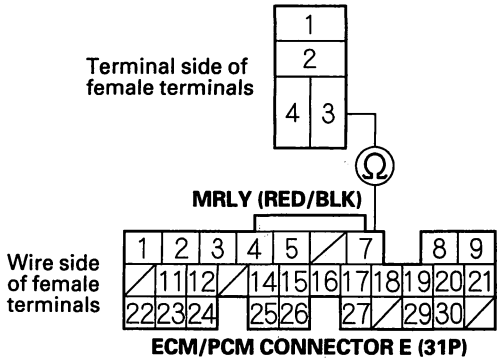
Is there continuity?

YES—Repair a short in the wire between ignition coil relay 4P socket terminal No. 3 and the ECM/PCM (E7).■

NO—Go to step 6.

6. Check for continuity between ignition coil relay 4P socket terminal No. 3 and engine control module (ECM)/powertrain contorl module (PCM) connector terminal E7.

IGNITION COIL RELAY 4P SOCKET



ECM/PCM CONNECTOR E (31P)

Is there continuity?

YES—The system is OK at this time. Check for loose or poor connections at the ignition coil relay and the ECM/PCM (E7).■

NO—Repair an open in the wire between ignition coil relay 4P socket terminal No. 3 and the ECM/PCM (E7).■

BACK

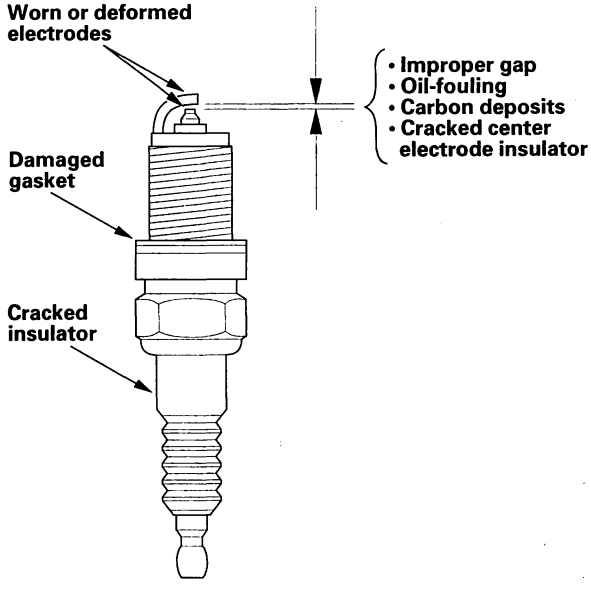
Protected by AR

Spark Plug Inspection

1. Inspect the electrodes and ceramic insulator.

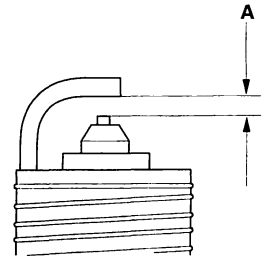
   - Burned or worn electrodes may be caused by:
     - Advanced ignition timing
     - Loose spark plug
     - Plug heat range too hot
     - Insufficient cooling

   - Fouled plug may be caused by:
     - Retarded ignition timing
     - Oil in combustion chamber
     - Incorrect spark plug gap
     - Plug heat range too cold
     - Excessive idling/low speed running
     - Clogged air cleaner element
     - Deteriorated ignition coils



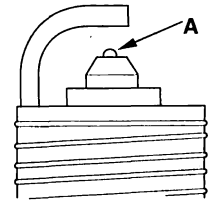
2. Do not adjust the gap (A) of iridium tip plugs; replace the spark plug if the gap is out of specification.

   Electrode Gap
   Except LX-SULEV, EX-SULEV, EX-L-SULEV:
   Standard (New): 1.0—1.1 mm (0.039—0.043 in.)
   LX-SULEV, EX-SULEV, EX-L-SULEV:
   Standard (New): 1.2—1.3 mm (0.047—0.051 in.)



3. Replace the plug at the specified interval or if the center electrode is rounded (A). Use only the spark plugs listed.

   Spark Plugs
   Except LX-SULEV, EX-SULEV, EX-L-SULEV:
   IZFR6K11 (NGK)
   SKJ20DR-M11 (DENSO)
   LX-SULEV, EX-SULEV, EX-L-SULEV:
   IZFR6K13 (NGK)
   SKJ20DR-M13 (DENSO)



4. Apply a small amount of anti-seize compound to the plug threads, and screw the plugs into the cylinder head, finger-tight. Then torque them to 18 N·m (1.8 kgf·m, 13 lbf·ft).

Charging System Indicator Circuit Troubleshooting

2003-2004 Models

1. Turn the ignition switch ON (II).

   Does the charging system indicator come on?

   YES—Go to step 2.

   NO—Go to step 3.

2. Start the engine.

   Does the charging system indicator go off?

   YES—Charging system indicator circuit is OK. Go to the alternator and regulator circuit troubleshooting (see page 4-34). ■

   NO—Go to step 3.

3. Do the gauge control module self-test procedure (see page 22-259).

   Does the charging system indicator flash?

   YES—Go to step 4.

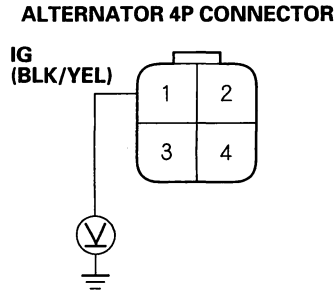
   NO—Replace the gauge control module (see page 22-276). ■

4. Turn the ignition switch OFF.

5. Disconnect the alternator 4P connector.

6. Turn the ignition switch ON (II).

7. Measure the voltage between alternator 4P connector terminal No. 1 and body ground.



Wire side of female terminals

   Is there battery voltage?

   YES—Go to step 8.

   NO—Check for a blown No. 18 (15A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the wire between the alternator and under-dash fuse/relay box. ■

8. Turn the ignition switch OFF.

9. Connect the Honda Diagnostic System (HDS) to the data link connecter (DLC) (see step 2 on page 11-3). Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the engine control module (ECM)/powertrain control module (PCM) from damage.

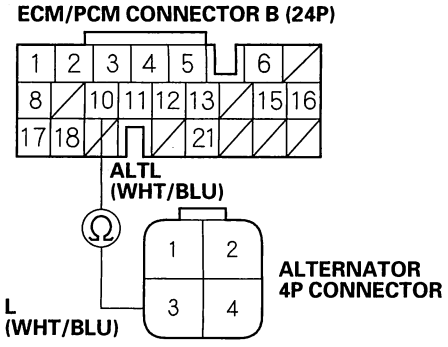
10. Disconnect ECM/PCM connector B (24P).

(cont'd)

Protected by AR

Charging System Indicator Circuit Troubleshooting (cont'd)

11. Check for continuity between ECM/PCM connector terminal B10 and alternator 4P connector terminal No. 3.



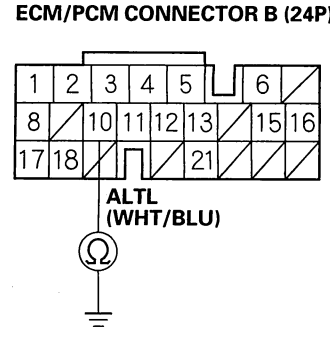
Wire side of female terminals

Is there continuity?

YES—Go to step 12.

NO—Repair an open in the wire between the alternator and the ECM/PCM. ■

12. Check for continuity between ECM/PCM connector terminal B10 and body ground.



Wire side of female terminals

Is there continuity?

YES—Repair a short in the wire between the alternator and the ECM/PCM. ■

NO—Go to the alternator and regulator circuit troubleshooting (see page 4-34). ■

2005-2006 Models

1. Turn the ignition switch ON (II).

   Does the charging system indicator come on?

   YES—Go to step 2.

   NO—Go to step 11.

2. Shift to Park or Neutral, and start the engine. Hold the engine speed at 2,000 rpm for 1 minute.

   Does the charging system indicator go off?

   YES—Charging system indicator circuit is OK. Go to the alternator and regulator circuit troubleshooting (see page 4-34). ■

   NO—Go to step 3.

3. Do the gauge control module self-test procedure (see page 22-259).

   Does the charging system indicator flash?

   YES—Go to step 4.

   NO—Replace the gauge control module (see page 22-276). ■

4. Turn the ignition switch OFF.

5. Disconnect the alternator 4P connector.

6. Turn the ignition switch ON (II).

   Does the charging system indicator go off?

   YES—Replace the alternator (see page 4-40) or repair the alternator (see page 4-41). ■

   NO—Go to step 7.

BACK

Protected by AR

7. Turn the ignition switch OFF.

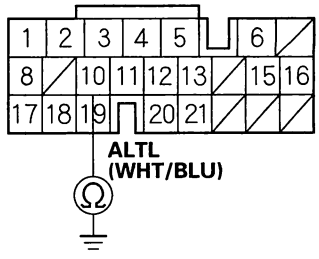
8. Connect the Honda Diagnostic System (HDS) to the data link connecter (DLC) (see step 2 on page 11-3). Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the engine control module (ECM)/powertrain control module (PCM) from damage.

9. Disconnect ECM/PCM connector B (24P).

10. Check for continuity between ECM/PCM connector terminal B10 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Repair a short in the wire between the alternator and the ECM/PCM. ■

NO—Update the ECM/PCM if it does not have the latest software (see page 11-6), or substitute a known-good ECM/PCM (see page 11-7), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

11. Do the gauge control module self-test procedure (see page 22-259).

    Does the charging system indicator flash?

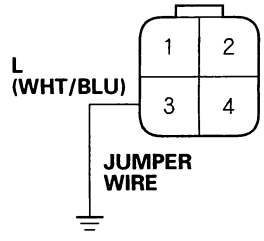
    YES—Go to step 12.

    NO—Replace the gauge control module (see page 22-276). ■

12. Turn the ignition switch OFF.

13. Disconnect the alternator 4P connector.

ALTERNATOR 4P CONNECTOR



Wire side of female terminals

14. Connect alternator 4P connector terminal No. 3 and body ground with a jumper wire.

15. Turn the ignition switch ON (II).

    Does the charging system indicator come on?

    YES—Replace the alternator (see page 4-40) or repair the alternator (see page 4-41). ■

    NO—Go to step 16.

(cont'd)

Protected by AR

Charging System Indicator Circuit Troubleshooting (cont'd)

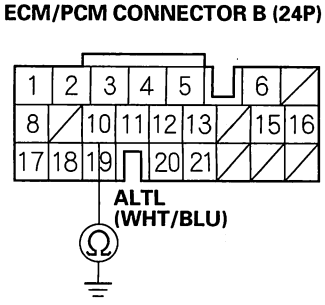
16. Turn the ignition switch OFF.

17. Connect the HDS to the DLC (see step 2 on page 11-3). Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

    NOTE: This step must be done to protect the ECM/PCM from damage.

18. Disconnect ECM/PCM connector B (24P).

19. Check for continuity between ECM/PCM connector terminal B10 and body ground.



Wire side of female terminals

Is there continuity?

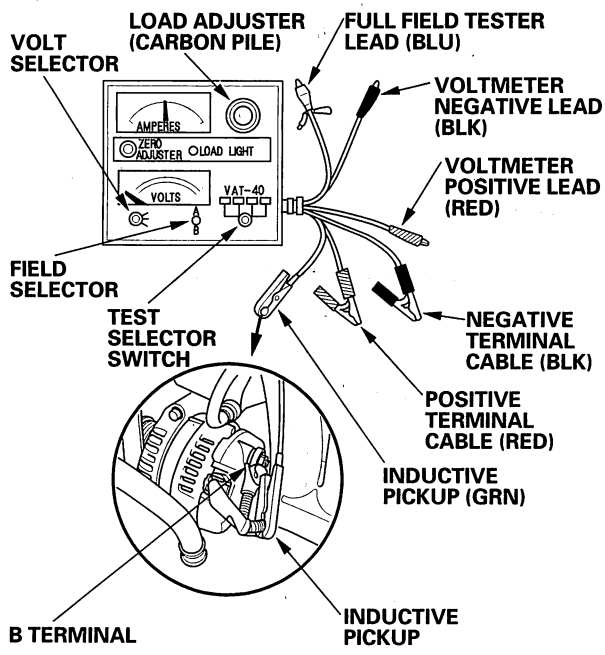
YES—Update the ECM/PCM if it does not have the latest software (see page 11-6), or substitute a known-good ECM/PCM (see page 11-7), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

NO—Repair an open in the wire between the alternator and the ECM/PCM.■

Alternator and Regulator Circuit Troubleshooting

1. Make sure the battery connections are good and the battery is sufficiently charged (see page 22-78).

2. Connect a VAT-40 (or equivalent tester), and turn the selector switch to position 1 (starting).



3. Shift to Park or Neutral, and start the engine. Hold the engine at 3,000 rpm, with no load until the radiator fan comes on, then let it idle.

4. Raise the engine speed to 2,000 rpm, and hold it there.

   Is the voltage over 15.1 V?

   YES—Replace the alternator or the rear housing assembly.■

   NO—Go to step 5.

BACK

Protected by AR

5. Release the accelerator pedal, and let the engine idle.
6. Make sure all accessories are turned off. Turn the selector switch to position 2 (charging).
7. Remove the inductive pickup, and zero the ammeter.
8. Place the inductive pickup over the B terminal wire of the alternator so that the arrow points away from the alternator.
9. Raise the engine speed to 2,000 rpm, and hold it there.

   Is the voltage less than 13.5 V?

   YES—Go to Alternator Control Circuit Troubleshooting (see page 4-35).■

   NO—Go to step 10.

10. Apply a load with the VAT-40 until the battery voltage reads between 12—13.5 V.

    Is the amperage 60A or more?

    YES—The charging system is OK.■

    NOTE: If the charging system indicator is still on, replace the alternator or the rear housing assembly.

    NO—Replace the alternator (see page 4-40) or repair the alternator (see page 4-41).■

Alternator Control Circuit Troubleshooting

1. Check for proper operation of the electrical load detector (ELD) by checking the malfunction indicator lamp (MIL) (see page 11-3).
2. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on page 11-3), and check for DTCs. If a DTC is present, diagnose and repair the cause before continuing with this test.
3. Disconnect the alternator 4P connector from the alternator.
4. Start the engine, and turn on the headlights to high beam.
5. Measure the voltage between alternator 4P connector terminal No. 2 and the positive terminal of the battery.

   Is there 1 V or less?

   YES—Go to step 6.

   NO—Go to step 9.

6. Jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the engine control module (ECM)/powertrain control module (PCM) from damage.

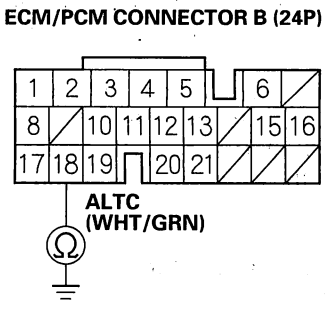
7. Disconnect engine control module ECM/PCM connector B (24P).

(cont'd)

Protected by AR

Alternator Control Circuit Troubleshooting (cont'd)

8. Check for continuity between ECM/PCM connector terminal B18 and body ground.



Wire side of female terminals

Is there continuity?

YES—Repair a short in the wire between the alternator and the ECM/PCM. ■

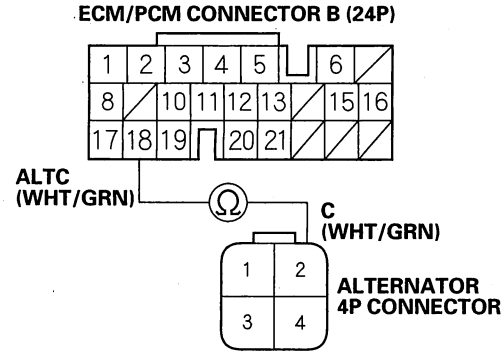
NO—Update the ECM/PCM if it does not have the latest software (see page 11-6), or substitute a known-good ECM/PCM (see page 11-7), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

9. Jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the engine control module (ECM)/powertrain control module (PCM) for damage.

10. Disconnect ECM/PCM connector B (24P).

11. Check for continuity between ECM/PCM connector terminal B18 and alternator 4P connector terminal No. 2.



Wire side of female terminals

Is there continuity?

YES—Replace the alternator (see page 4-40) or repair the alternator (see page 4-41). ■

NO—Repair an open in the wire between the alternator and the ECM/PCM. ■

BACK

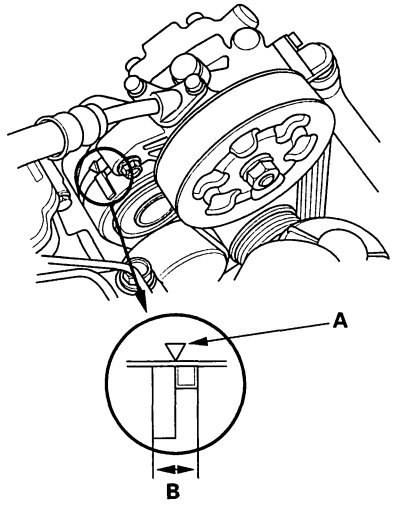
Drive Belt Inspection

1. Inspect the belt for cracks and damage. If the belt is cracked or damaged, replace it.

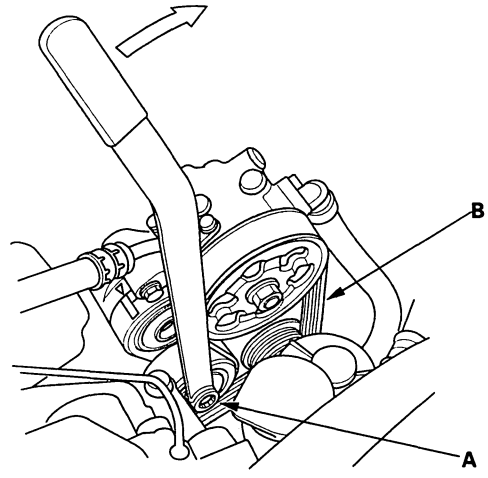
2. Check that the auto-tensioner indicator (A) is within the standard range (B) as shown. If it is out of the standard range, replace the drive belt (see page 4-37).



Drive Belt Replacement

Special Tools Required
Belt tension release tool Snap-on YA9317 or equivalent, commercially available

1. Move the auto-tensioner (A) with the belt tension release tool to relieve tension from the drive belt (B), and remove the drive belt.



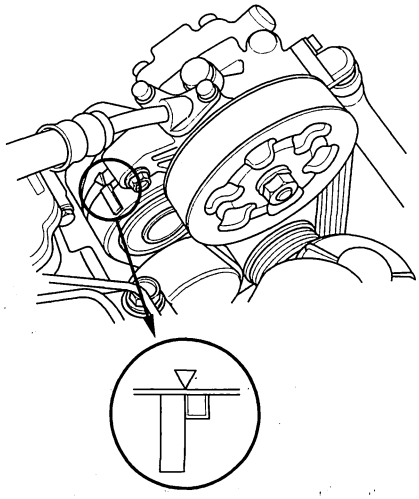
2. Install the new belt in the reverse order of removal.

Protected by AR

Drive Belt Auto-tensioner Inspection

Special Tools Required
Belt tension release tool Snap-on YA9317 or equivalent, commercially available

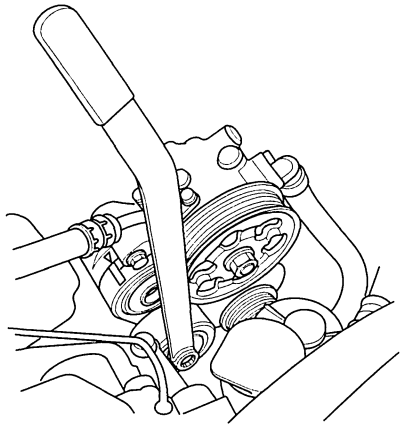
1. Check whether there is a change in the position of the auto-tensioner indicator before starting the engine and after starting the engine. If there is a change in the position, replace the auto-tensioner.



2. Check for abnormal noise from the tensioner pulley. If you hear abnormal noise, replace the tensioner pulley.

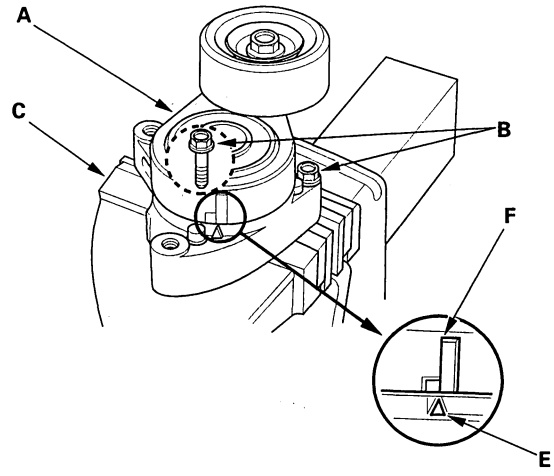
3. Remove the drive belt (see page 4-37).

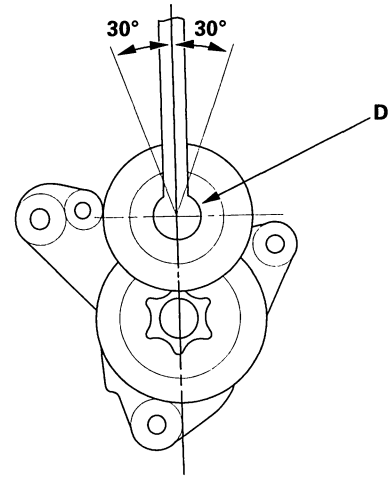
4. Move the auto-tensioner within its limit with the belt tension release tool in the direction shown. Check that the tensioner moves smoothly and without any abnormal noise. If the tensioner does not move smoothly or you hear abnormal noise, replace the auto-tensioner.



5. Remove the auto-tensioner (see page 4-39).

6. Clamp the auto-tensioner (A) by using two 8 mm bolts (B) and a vise (C) as shown. Do not clamp the auto-tensioner itself.





7. Set the torque wrench (D) in the pulley bolt in the direction shown.

8. Align the indicator (E) on the tensioner base with center mark on the tensioner arm by using the torque wrench, and measure the torque. If the torque value is out of specification, replace the auto-tensioner.

   NOTE: If the indicator exceeds the center mark, recheck the torque.

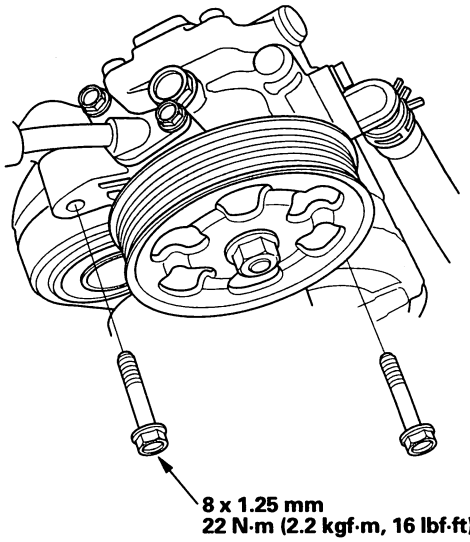
   Auto-tensioner Spring Torque:
   32.5—39.7 N·m (3.31—4.05 kgf·m, 23.9—29.3 lbf·ft)

BACK

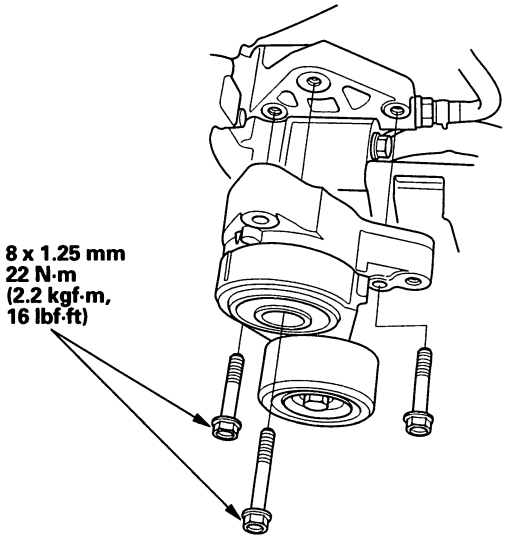
Protected by AR

Drive Belt Auto-tensioner Replacement

1. Remove the drive belt (see page 4-37).
2. Remove the power steering (P/S) pump without disconnecting the P/S hoses.



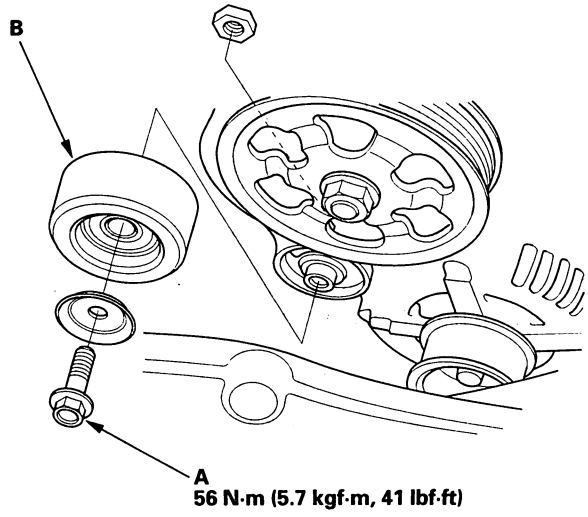
3. Remove the auto-tensioner.



4. Install the auto-tensioner in the reverse order of removal.

Tensioner Pulley Replacement

1. Remove the drive belt (see page 4-37).
2. Remove the pulley bolt (A), and remove the tensioner pulley (B).



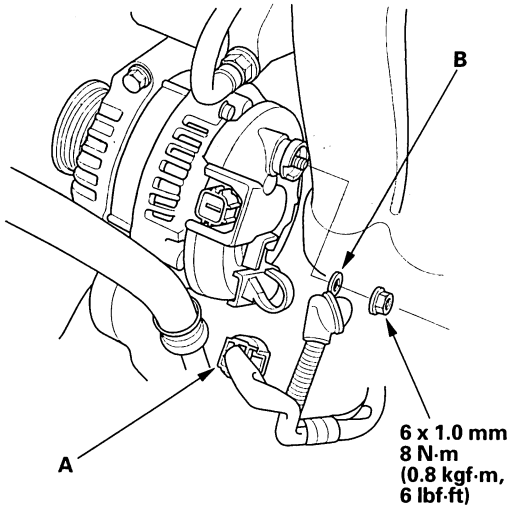
3. Install the tensioner pulley in the reverse order of removal.

Protected by AR

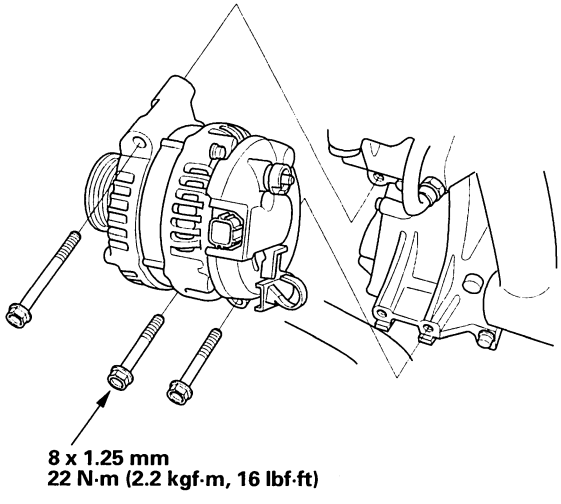
Alternator Removal and Installation

Removal

1. Make sure you have the anti-theft codes for the radio, and the navigation system, then write down the customer's radio station and XM radio channel presets.
2. Disconnect the negative cable from the battery first, then disconnect the positive cable.
3. Remove the drive belt (see page 4-37).
4. Remove the auto-tensioner (see page 4-39).
5. Disconnect the alternator connector (A) and BLK wire (B) from the alternator.



6. Remove the three bolts securing the alternator.



Installation

1. Install the alternator and drive belt in the reverse order of removal.
2. Connect the positive cable to the battery first, and then connect the negative cable.
3. Enter the anti-theft codes for the radio and the navigation system, then enter the customer's radio station and XM radio channel presets.
4. Do the power window control unit reset procedure (see page 22-232).
5. Set the clock.

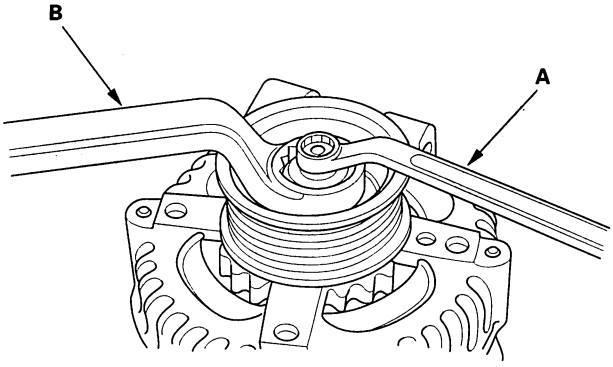
Alternator Overhaul (cont'd)

Special Tools Required
- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300

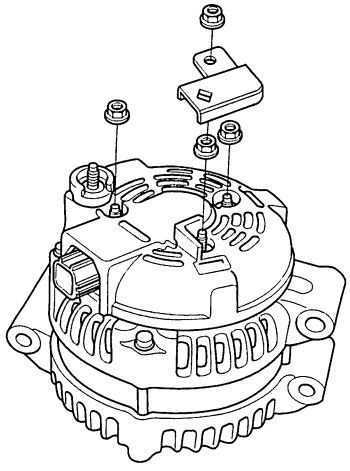
NOTE: Refer to the Exploded View as needed during this procedure.

Alternator Disassembly

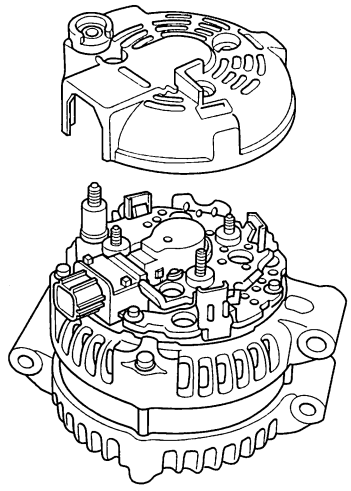
1. Test the alternator and regulator before you remove them (see page 4-31).
2. Remove the alternator (see page 4-40).
3. If the front bearing needs replacing, remove the pulley locknut with a 10 mm wrench (A) and a 22 mm wrench (B). If necessary, use an impact wrench.



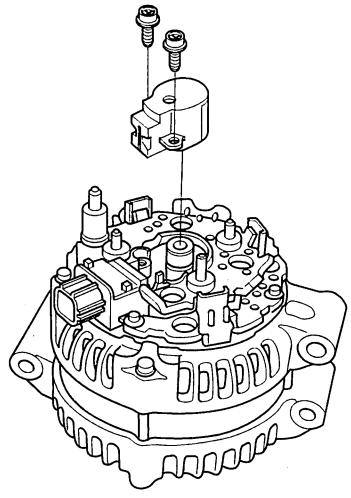
4. Remove the harness stay and the three flange nuts from the alternator.



5. Remove the end cover.



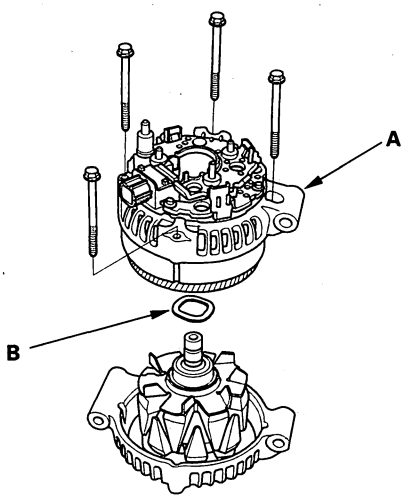
6. Remove the brush holder.



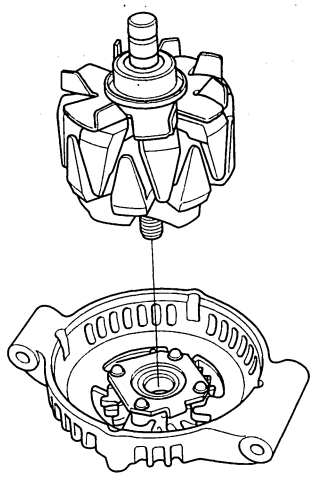
BACK

Protected by AR

7. Remove the four bolts, then remove the rear housing assembly (A), and washer (B).



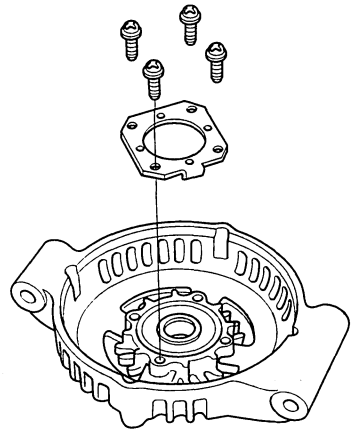
8. If you are not replacing the front bearing, go to step 13. Remove the rotor from the drive end housing.



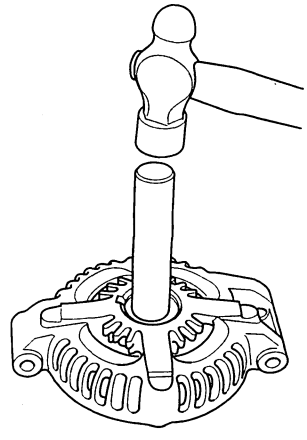
9. Inspect the rotor shaft for scoring, and inspect the bearing journal surface in the drive end housing for seizure marks.

   - If the rotor is damaged, replace the rotor assembly.
   - If the rotor is OK, go to step 10.

10. Remove the front bearing retainer plate.



11. Drive out the front bearing with a brass drift and hammer.

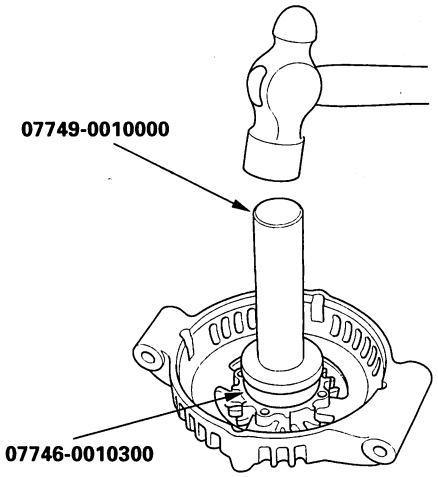


(cont'd)

Protected by AR

Alternator Overhaul (cont'd)

12. With a hammer and special tools, install a new front bearing in the drive end housing.

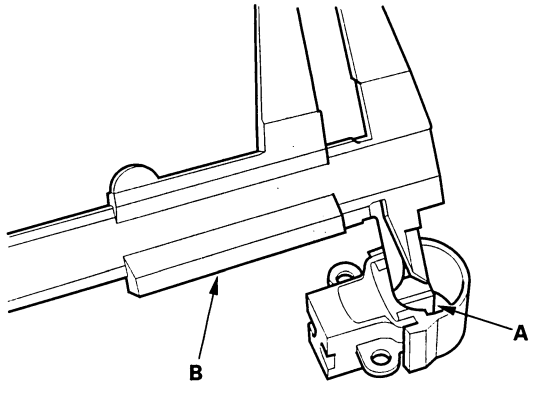


Alternator Brush Inspection

13. Measure the length of both brushes (A) with vernier calipers (B).

- If either brush is shorter than the service limit, replace the brush holder assembly.
- If the brush length is OK, go to step 14.

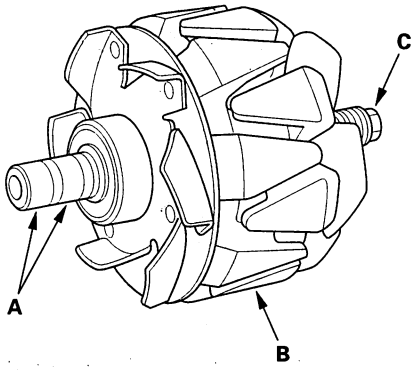
Alternator Brush Length
Standard (New): 10.5 mm (0.41 in.)
Service Limit: 1.5 mm (0.06 in.)



Rotor Slip Ring Test

14. Check for continuity between the slip rings (A).

- If there is continuity, go to step 15.
- If there is no continuity, replace the rotor assembly.



15. Check for continuity between each slip ring and the rotor (B) and the rotor shaft (C).

- If there is no continuity, replace the rear housing assembly, and go to step 16.
- If there is continuity, replace the rotor assembly.

BACK

Protected by AR

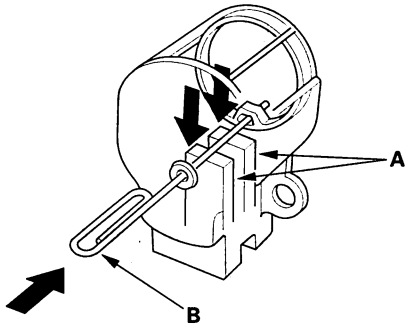
Alternator Reassembly

16. If you removed the pulley, put the rotor in the drive-end housing, then tighten its locknut to 110 N·m (11.2 kgf·m, 81.0 lbf·ft).

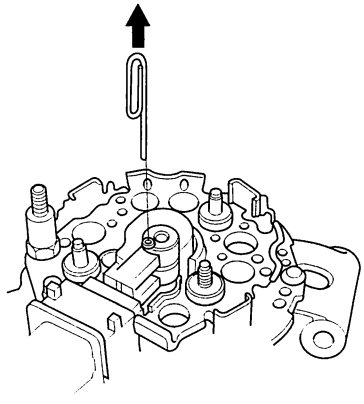
17. Remove any grease or oil from the slip rings.

18. Put the rear housing assembly and drive-end housing/rotor assembly together, then tighten the four through bolts.

19. Push the brushes (A) in, then insert a pin or drill bit (B) (about 1.6 mm (0.06 in.) diameter) to hold them there.



20. Install the brush holder, and pull out the pin.



21. Install the end cover.

22. After assembling the alternator, turn the pulley by hand to make sure the rotor rotates smoothly and without noise.

23. Install the alternator and drive belt (see page 4-40).

Symptom Troubleshooting Index

2003-2005 Models

Symptom	Diagnostic procedure	Also check for
Cruise control cannot be set	1. Check for PGM-FI and body DTCs. 2. Check horn operation. 3. Check the cruise control combination switch (see page 4-60). 4. Test the brake pedal position switch (see page 19-4), and check its adjustment (see page 19-6). 5. Test the clutch pedal position switch (see page 4-63), and check its adjustment (M/T) (see page 12-4). 6. Do the cruise control unit input test (see page 4-55). 7. Check for continuity between engine control module (ECM)/powertrain control module (PCM) connector terminal E26 and cruise control unit 14P connector terminal No. 12. • If there is continuity, replace the ECM/PCM (see page 11-227). • If there is no continuity, repair open or short in the wire.	• Blown No. 13 (20A) fuse in the under-hood fuse/relay box • Blown No. 18 (15A) fuse in the under-dash fuse/relay box • Poor ground: G202, G501 • Faulty horn relay • Faulty ECM/PCM • Open circuit, loose or disconnected terminals: GRN/YEL, LT GRN, PNK, LT GRN/BLK, GRY/RED, LT BLU (M/T), PNK (A/T)
Cruise control can be set, but the cruise main indicator does not come on	Do the gauge control module self-diagnostic function (see page 22-259).	• Faulty gauge control module • Open circuit, loose or disconnected terminals: LT GRN
Cruise control can be set, but the cruise control indicator does not come on	1. Do the gauge control module self-diagnostic function (see page 22-259). 2. Do the cruise control unit input test on terminal No. 10 (see page 4-55).	• Faulty gauge control module • Open circuit, loose or disconnected terminals: BLU/YEL • Poor ground: G501
Cruise speed is noticeably higher or lower than what was set	1. Check the cruise control actuator (see page 4-61). 2. Adjust the cruise control actuator cable (see page 4-63). 3. Do the cruise control unit input test on terminal No. 12 (see page 4-55).	
Excessive overshooting or undershooting when trying to set speed	1. Check the cruise control actuator (see page 4-61). 2. Adjust the cruise control actuator cable (see page 4-63). 3. Do the cruise control unit input test on terminal No. 12 (see page 4-55).	
Speed fluctuates on a flat road with the cruise control set	1. Check the cruise control actuator (see page 4-61). 2. Adjust the cruise control actuator cable (see page 4-63). 3. Do the cruise control unit input test on terminal No. 12 (see page 4-55).	
Vehicle does not decelerate or accelerate accordingly when the set/decel, resume/accel, or cancel switch is pressed	1. Check the cruise control combination switch (see page 4-60). 2. Do the cruise control unit input test on terminals No. 6 and No. 7 (see page 4-55).	Open circuit, loose or disconnected terminals: GRN/RED, LT GRN/BLK

BACK

Protected by AR

Symptom	Diagnostic procedure	Also check for
Set speed does not cancel (engine rpm stays high) when the clutch pedal is pressed (M/T)	1. Do the cruise control unit input test on terminal No. 14 (see page 4-55). 2. Test the clutch pedal position switch (see page 4-63), and check its adjustment (see page 12-4).	• Short to ground in the LT BLU wire • Faulty clutch pedal position switch
Set speed does not cancel (engine rpm stays high) when the shift lever is moved to N (A/T)	Do the cruise control unit input test on terminal No. 14 (see page 4-55).	• Short to ground in the PNK wire • Faulty transmission range switch
Set speed does not cancel when the brake pedal is pressed	1. Do the cruise control unit input test on terminals No. 1 and No. 5 (see page 4-55). 2. Test the brake pedal position switch (see page 19-4), and check its adjustment (see page 19-6).	• Short to power on BRN/BLK wire • Open circuit, loose or disconnected terminals: WHT/BLK • Faulty brake pedal position switch
Set speed does not cancel when the cruise control main switch is pressed	1. Check the cruise control combination switch (see page 4-60). 2. Do the cruise control unit input test on terminal No. 2 (see page 4-55).	Short to power on PNK wire
Set speed does not cancel when the cancel switch is pressed	1. Check the cruise control combination switch (see page 4-60). 2. Do the cruise control unit input test on terminals No. 6 and No. 7 (see page 4-55).	Open circuit, loose or disconnected terminals: LT GRN/BLK or GRY/RED
Set speed will not resume when the resume/accel switch is pressed (with the cruise control main switch turned on, and set speed temporarily canceled by pressing the brake pedal)	1. Check the cruise control combination switch (see page 4-60). 2. Do the cruise control unit input test on terminals No. 1, No. 5 and No. 7 (see page 4-55).	Open circuit, loose or disconnected terminals: BRN/BLK, WHT/BLK, LT GRN/BLK
The transmission shifts down slower than normal when going uphill with the cruise control on (A/T)	Troubleshoot the cruise control communication circuit (see page 4-54).	Open circuit, loose or disconnected terminals: BLU/BLK

Symptom Troubleshooting Index (cont'd)

2006 Model

Symptom	Diagnostic procedure	Also check for
Cruise control cannot be set	1. Check for PGM-FI and body DTCs. 2. Check the No. 13 (20 A) fuse in the under-hood fuse/relay box, and the No. 18 (15 A) fuse in the under-dash fuse/relay box. 3. Do the cruise control input test (see page 4-58). 4. Do the cruise control combination switch test (see page 4-60).	Poor ground G501
Cruise control can be set, but the cruise main indicator does not come on	1. Check for PGM-FI and body DTCs. 2. Do the gauge control module self-diagnostic function procedure (see page 22-259). 3. Do the cruise control input test (see page 4-58). Test the cruise control master button signal input.	Faulty gauge control module
Cruise control can be set, but the cruise control indicator does not come on	1. Check for PGM-FI and body DTCs. 2. Do the gauge control module self-diagnostic function procedure (see page 22-259). 3. Do the cruise control input test (see page 4-58). Test the cruise control indicator signal input.	Faulty gauge control module
Vehicle does not decelerate or accelerate accordingly when the set/decel or resume/accel switch is pressed	1. Check for PGM-FI and body DTCs. 2. Do the cruise control input test (see page 4-58). Test the cruise control Set/decel and Resume/accel switch signal inputs. 3. Do the cruise control combination switch test (see page 4-60).	Open circuit, loose or disconnected terminals: LT GRN/BLK or GRY/RED wire
Set speed does not cancel when the brake pedal is pressed	1. Check for PGM-FI and body DTCs. 2. Check the No. 13 (20 A) fuse in the under-hood fuse/relay box, and No. 18 (15 A) fuse in the under-dash fuse/relay box. 3. Do the cruise control input test (see page 4-58). Test the brake pedal position switch signal input. 4. Do the brake pedal position switch test (see page 19-4).	• Short in the BRN/BLK wire • Faulty brake pedal position switch
Set speed does not cancel (engine rpm stays high) when the clutch pedal is pressed (M/T)	1. Check for PGM-FI and body DTCs. 2. Do the cruise control input test (see page 4-58). Test the clutch pedal position switch signal input. 3. Do the clutch pedal position switch test (see page 4-60).	• Short in the LT BLU wire • Faulty clutch pedal position switch
Set speed does not cancel when the cruise control main switch is turned off	1. Check for PGM-FI and body DTCs. 2. Do the cruise control input test (see page 4-58). Test the cruise control main switch signal input. 3. Do the cruise control combination switch test (see page 4-60).	Short to ground in the LT GRN wire
Set speed does not cancel when the cancel switch is pressed	1. Check for PGM-FI and body DTCs. 2. Check the No. 13 (20 A) fuse in the under-hood fuse/relay box. 3. Do the cruise control input test (see page 4-58). Test the cruise control Cancel switch signal input. 4. Do the cruise control combination switch test (see page 4-60).	Open circuit, loose or disconnected terminals: LT GRN/BLK or GRY/RED wire

Cruise Control Communication Circuit Troubleshooting

A/T (2003-2005 Models)

1. Start the engine.
2. Turn on the cruise control main switch, then drive the vehicle at speeds over 25 mph (40 km/h) with the cruise control.

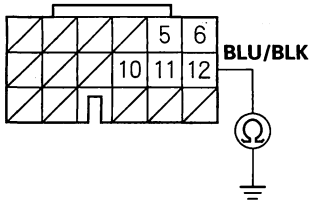
   Does the cruise control operate?

   YES—Go to step 3.

   NO—Check the cruise control unit (see page 4-55) or cruise control actuator. ■
3. Turn the ignition switch OFF.
4. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on page 11-3). Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the powertrain control module (PCM) from damage.
5. Disconnect PCM connector D (17P) and cruise control unit 14P connector.
6. Check for continuity between PCM connector terminal D12 and body ground.

PCM CONNECTOR D (17P)



Wire side of female terminals

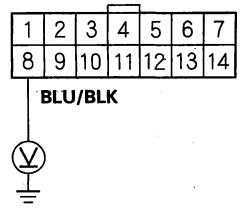
Is there continuity?

YES—Repair a short to ground in the wire between PCM connector terminal D12 and the cruise control unit 14P connector terminal No. 8. ■

NO—Go to step 7.

7. Reconnect PCM connector D (17P) and the cruise control unit 14P connector.
8. Connect a voltmeter between cruise control unit 14P connector terminal No. 8 and body ground. Test-drive the vehicle at speeds over 25 mph (40 km/h) with the cruise control set, and watch the voltmeter.

CRUISE CONTROL UNIT 14P CONNECTOR



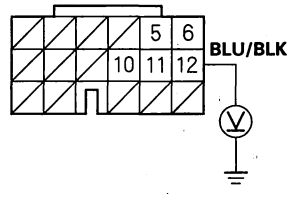
Wire side of female terminals

Is there about 1 V?

YES—Go to step 9.
NO—Substitute a known-good cruise control unit. If the system works properly, replace the cruise control unit. ■

9. Connect a voltmeter between PCM connector terminal D12 and body ground. Drive the vehicle at speeds over 25 mph (40 km/h) with the cruise control set, and watch the voltmeter.

PCM CONNECTOR D (17P)



Wire side of female terminals

Is there about 1 V?

YES—Check for a loose connector or wire between the cruise control unit and the PCM. If the wire is OK, update the PCM. If it does not have the latest software (see page 11-6), substitute a known-good PCM (see page 11-7), and recheck. If the system works properly, replace the original PCM (see page 11-227). ■
NO—Repair an open in the wire between PCM connector terminal D12 and the control unit 14P connector terminal No. 8. ■

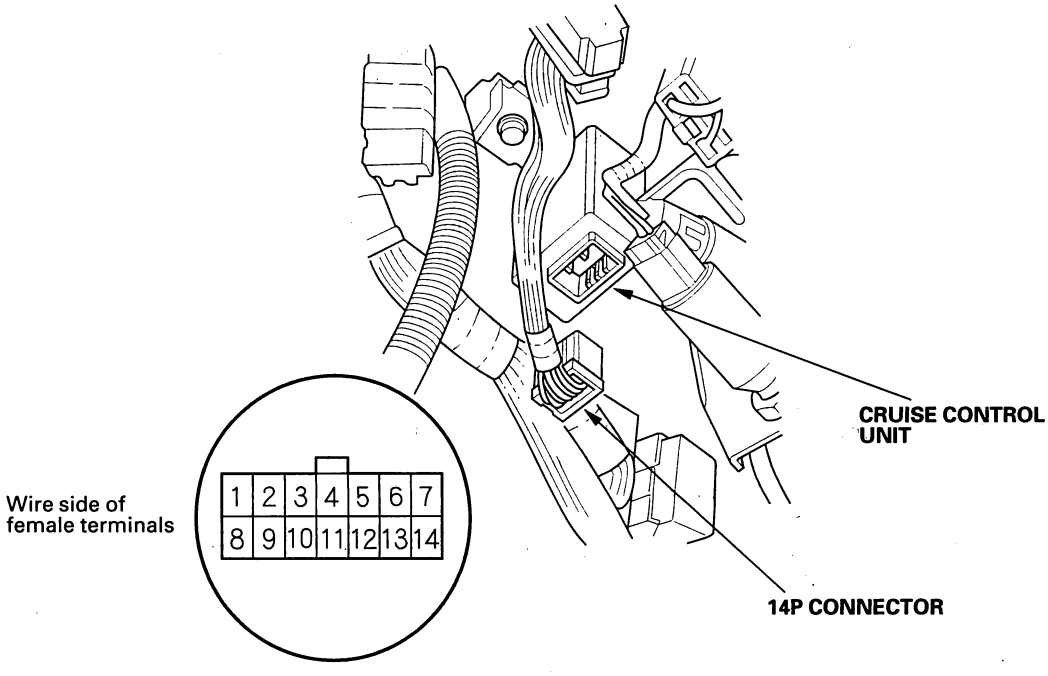
Cruise Control Unit Input Test

2003-2005 Models

SRS components are located in this area. Review the SRS component locations (see page 23-17) and precautions and procedures (see page 23-19), before doing repairs or service.

1. Disconnect the 14P connector from the control unit.
2. Inspect the connector and socket terminals to make sure they are all making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 3.



3. With the 14P connector disconnected, do these input tests.
   - If test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the cruise control unit may by faulty. Substitute a known-good cruise control unit, and retest. If the system works properly, replace the cruise control unit.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
1	BRN/BLK	Connect battery power	Check the operation of the magnetic clutch: Clutch should click and output link should be locked.	• Faulty brake pedal position switch • Faulty actuator • Poor ground (G202) • An open in the wire • Short to ground

(cont'd)

Protected by AR

Cruise Control Unit Input Test (cont'd)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
3	BLK	Under all conditions	Check for continuity to ground: There should be continuity.	• Poor ground (G501) • An open in the wire
4	BLK/RED	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	• Blown No. 18 (15A) fuse in the under-dash fuse/relay box • An open in the wire
5	WHT/BLK	Brake pedal pressed, then released	Check for voltage to ground: There should be battery voltage with the pedal pressed, and 0 V with the pedal released.	• Blown No. 13 (20A) fuse in the under-hood fuse/relay box • Faulty brake pedal position switch • An open in the wire
6	GRY/RED	Set/decel switch pressed	Check for voltage to ground: There should be battery voltage. When testing terminal No. 6, there should be no voltage on terminal No. 7.	• Blown No. 13 (20A) fuse in the under-hood fuse/relay box • Faulty horn relay • Faulty cruise control combination switch • Faulty cable reel • An open in the wire
7	LT GRN/ BLK	Resume/accel switch pressed	Check for voltage to ground: There should be battery voltage. When testing terminal No. 7, there should be no voltage on terminal No. 6.	
9 11	BRN/YEL BRN/WHT	Connect battery power to the BRN/ YEL terminal and ground to the BRN/ WHT terminal	Check the operation of the actuator motor: You should hear the motor.	• Faulty actuator • An open in the wire
10	BLU/YEL	Ignition switch ON (II)	Attach to ground: CRUISE CONTROL indicator in the gauge assembly should comes on.	• Blown bulb • Faulty gauge control module • An open in the wire
12	BLU/WHT	Ignition switch ON (II) and cruise control main switch ON; raise the front of the vehicle, and rotate one wheel slowly while holding the other wheel NOTE: This input test must be done with the 14P connector reconnected.	Check for voltage between the BLU/WHT (+) and BLK (—) terminal: There should be 0—5 V or more repeatedly.	• Faulty ECM/PCM • An open in the wire • Short to ground

BACK

Protected by AR

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
13	LT GRN	Cruise control main switch ON, then OFF	Check for continuity between No. 2 terminal and No. 13 terminal: There should be continuity with the cruise control main switch ON and no continuity with the cruise control main switch OFF.	• Faulty cruise control combination switch • Faulty cable reel • An open in the wire
14	M/T: LT BLU	Clutch pedal released	Check for continuity to ground: There should be continuity. NOTE: There should be no continuity when the clutch pedal is pressed.	• Faulty clutch pedal position switch • Poor ground (G501) • An open in the wire
	A/T: PNK	Shift lever in D, D3	Check for continuity to ground: There should be continuity. NOTE: There should be no continuity when shift lever is in other positions.	• Faulty ECM/PCM • An open in the wire
2	PNK	Reconnect the cruise control unit 14P connector, turn the ignition switch ON (II), and cruise control main switch ON	Check for voltage to ground: There should be battery voltage.	• Blown No. 18 (15A) fuse in the under-dash fuse/relay box • Faulty cruise control unit • Short to ground
8	BLU/BLK	Reconnect the cruise control unit 14P connector, start the engine, press the cruise control main switch ON, and drive the vehicle at speeds over 25 mph (40 km/h) with the cruise control set	Check for voltage to ground: There should be about 1V	• Blown No. 18 (15A) fuse in the under-hood fuse/relay box • Faulty cruise control unit • Short to ground • Cruise control communication circuit problem (see page 4-54)

Protected by AR

Cruise Control Input Test

2006 Model

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC).
2. Go to B-CAN System Diagnosis Test Mode A, and check for DTCs.
3. Go to PGM-FI, and check for DTCs.
4. Turn the ignition switch ON (II).
5. Do the following tests while monitoring parameters in the PGM-FI DATA LIST with the HDS.

Signal to be tested	Test condition	Parameter: Desired result	Possible cause if result is not obtained
Brake switch signal	Brake pedal pressed, then released	CRUISE BRAKE SW should indicate OFF when the brake pedal is pressed and ON when the brake pedal is released.	• Faulty brake pedal position switch • Blown No.18 (15 A) fuse in the under-dash fuse/relay box • An open in the wire between the ECM/PCM and the brake pedal position switch • A wire shorted to ground between the ECM/PCM and the brake pedal position switch
Clutch pedal position switch signal (M/T)	Clutch pedal pressed, then released	SHIFT/CLUTCH SW should indicate OFF when the clutch pedal is pressed and ON when the clutch pedal is released.	• Faulty clutch pedal position switch • An open in the wire between the ECM and the clutch pedal position switch • A wire shorted to ground between the ECM and the clutch pedal position switch • Poor ground G501
Transmission range switch signal (A/T)	Shift lever in D, or D3 position	SHIFT/TRANS RANGE SW should indicate OFF in P, R, and N position and ON in D, and D3 position.	• Faulty transmission range switch • An open in the wire between the PCM and the transmission range switch • A wire shorted to ground between the PCM and the transmission range switch • Poor ground G101
Cruise control main switch signal	Cruise control main switch ON and OFF	CRUISE MASTER SW should indicate ON when the cruise control main switch is turned ON and OFF when the cruise control main switch is turned OFF.	• Faulty cruise control combination switch • An open in the wire between the gauge assembly and the cruise control combination switch • A wire shorted to ground between the gauge assembly and the cruise control combination switch • An open in the wire between the cruise control combination switch and the ground
Set switch signal	Set/decel switch pressed and released	CRUISE SET SW should indicate ON when the Set/decel switch is pressed and OFF when the Set/decel switch is released.	• Faulty cruise control combination switch • An open in the wire between the gauge assembly and the cruise control combination switch • A wire shorted to ground between the gauge assembly and the cruise control combination switch

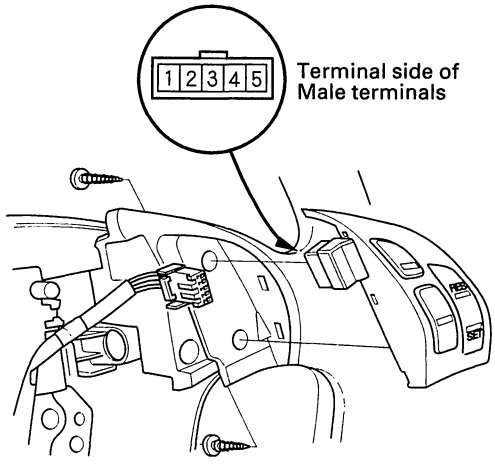
Cruise Control Combination Switch Test/Replacement

SRS components are located in this area. Review the SRS component locations (see page 23-17), and the precautions and procedures (see page 23-19), before doing repairs or service.

1. Remove the driver's airbag (see page 23-197).
2. Remove the two screws, then disconnect the connector, and remove the switch.



3. Check for continuity between the terminals in each switch position according to the table.
   - If there is continuity, and it matches the table, but switch failure occurred on the cruise control unit input test, check and repair the wire harness on the switch circuit.
   - If there is no continuity in one or both positions, replace the switch.

Terminal / Position	1	2	3		4	5
Cruise control main switch (ON)	○	○				
Cruise control main switch (OFF)						
Set/decel (PRESSED)			○			○
Resume/accel (PRESSED)			○		○	
Cancel (PRESSED)			○	▶		○

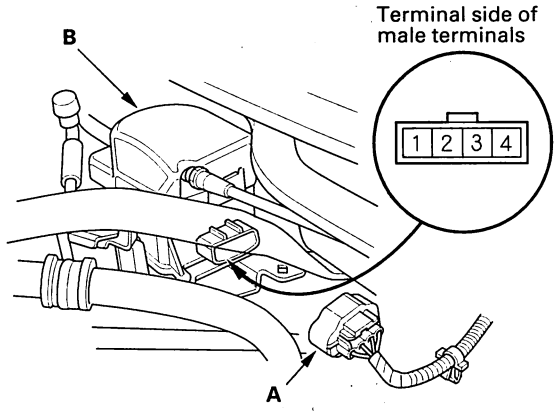
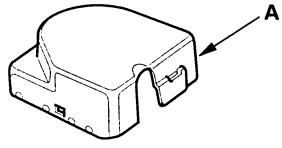
Cruise Control Actuator Test

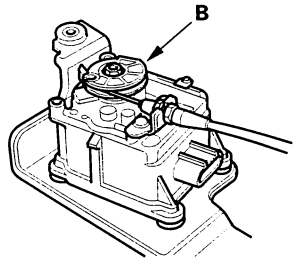
2003-2005 Models

1. Disconnect the 4P connector (A) from the actuator (B).



2. Remove the cover (A), and check the output linkage (B) for smooth movement.



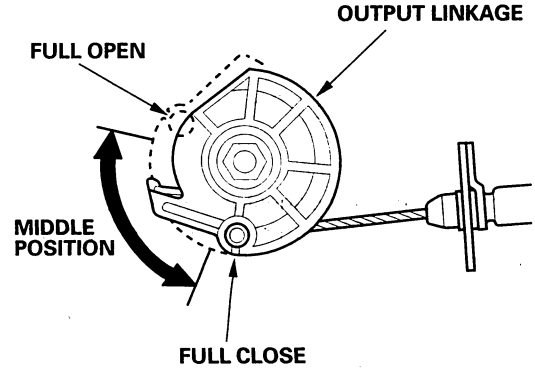


3. Connect battery power to the No. 2 terminal and ground to the No. 1 terminal.

4. Check for a clicking sound from the magnetic clutch. The output linkage should be locked. If the output linkage is not locked, replace the actuator assembly.

5. Check the operation of the actuator motor in each output linkage position according to the table. You should hear the motor.

Battery power polarities		Output linkage position		
(+)	(−)	FULL CLOSE	MIDDLE POSITION	FULL OPEN
No. 4 Terminal	No. 3 Terminal	The motor runs.	The motor runs.	The motor stops.
No. 3 Terminal	No. 4 Terminal	The motor stops.	The motor runs.	The motor runs.



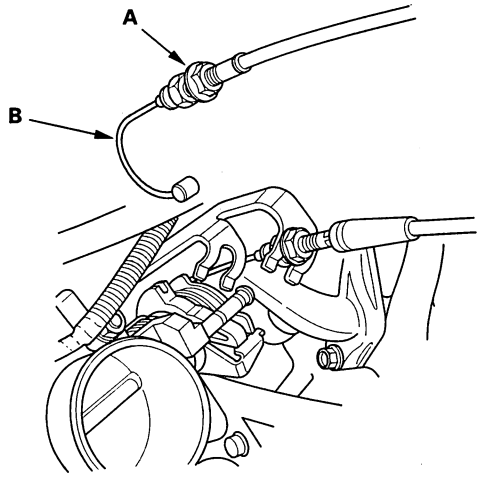
6. If the actuator motor does not operate as specified, replace the actuator assembly.

Protected by AR

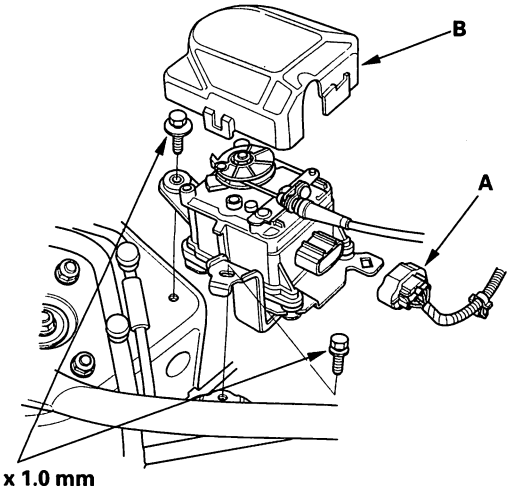
Cruise Control Actuator/Cable Replacement

2003-2005 Models

1. Loosen the locknut (A), then remove the cruise control cable (B) from the throttle linkage.

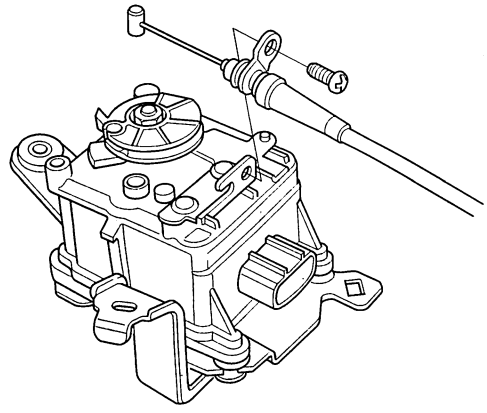


2. Disconnect the 4P connector (A), and remove the actuator cover (B), then remove the bolts securing the actuator.



6 x 1.0 mm
9.8 N·m (1.0 kgf·m, 7.2 lbf·ft)

3. Remove the actuator cable from the actuator.



4. Install in the reverse order of removal, and adjust the free play at the throttle linkage after connecting the cruise control cable.

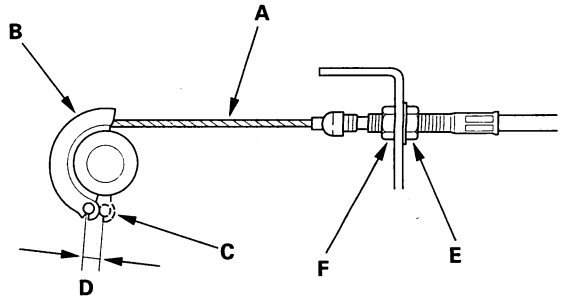
BACK

Protected by AR

Cruise Control Actuator Cable Adjustment

2003-2005 Models

1. Check that the actuator cable (A) moves smoothly with no binding or sticking.

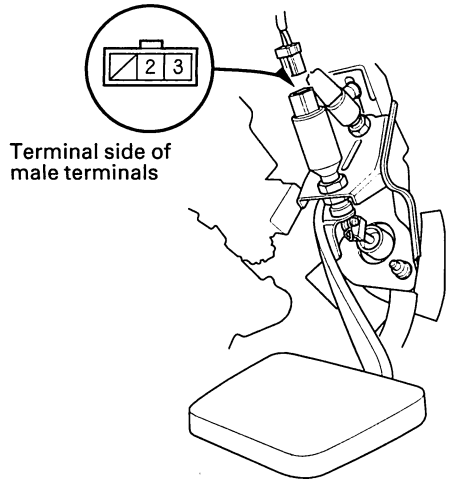


2. Measure the amount of movement of the output linkage (B) until the engine speed starts to increase. At first, the output linkage should be located at the fully closed position (C). The free play (D) should be 3.75±0.5 mm (0.15±0.02 in.).

3. If the free play is not within specs, loosen the locknut (E), and turn the adjusting nut (F) until the free play is as specified, then retighten the locknut.

Clutch Pedal Position Switch Test

1. Disconnect the 3P connector from the clutch pedal position switch.



2. Check for continuity between the terminals according to the table.

   - If the continuity is not as specified, replace the clutch pedal position switch.
   - If OK, install the clutch pedal position switch, and adjust the pedal height (see page 12-4).

Engine Mount Control System

Troubleshooting

Special Tools Required
Vacuum pump/gauge, 0—30 in.Hg
Snap-on YA4000A or equivalent, commercially available

NOTE: Check the vacuum hoses and lines for damage and proper connections before troubleshooting.

Follow this procedure if the engine vibrates excessively when idling.

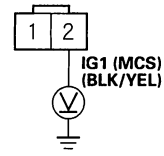
1. Check the idle speed (see page 11-315).
2. Raise the engine speed from idling to 2,000 rpm.
3. Check the MOUNT CTRL SOL in the PGM-FI DATA LIST with the Honda Diagnostic System (HDS).

   Is ON indicated at idling and OFF indicated at 2,000 rpm?

   YES—Go to step 4.

   NO—Update the powertrain control module (PCM) if it does not have the latest software (see page 11-6), or substitute a known-good PCM (see page 11-7), then recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see page 11-5).■
4. A/T model: Shift to P or N.
5. Disconnect the engine mount control solenoid valve 2P connector from the engine mount control solenoid valve.
6. Measure voltage between engine mount control solenoid valve 2P connector terminal No. 2 and body ground.

ENGINE MOUNT CONTROL SOLENOID VALVE 2P CONNECTOR



Wire side of female terminals

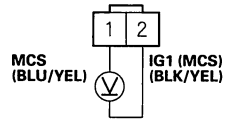
Is there battery voltage?

YES—Go to step 7.

NO—Repair an open in the wire between the engine mount control solenoid valve 2P connector terminal No. 2 and No. 18 (15A) fuse in the under-dash fuse/relay box.■

7. Measure voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2.

ENGINE MOUNT CONTROL SOLENOID VALVE 2P CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—Go to step 8.

NO—Repair an open in the wire between PCM (B15) and the engine mount control solenoid valve 2P connector. If the wire is OK, update the PCM if it does not have the latest software (see page 11-6), or substitute a known-good PCM (see page 11-7), and recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see page 11-227).■

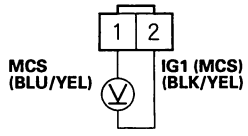
BACK

Protected by AR

8. Raise the engine speed above 1,000 rpm.

9. Measure voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2.

ENGINE MOUNT CONTROL SOLENOID VALVE 2P CONNECTOR



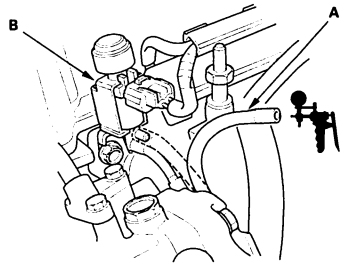
Wire side of female terminals

Is there battery voltage?

YES—Repair a short to body ground in the wire between PCM (B15) and the engine mount control solenoid valve. If the wire is OK, update the PCM if it does not have the latest software (see page 11-6), or substitute a known-good PCM (see page 11-7), and recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see page 11-227).■

NO—Go to step 10.

10. Disconnect the upper vacuum hose (A) from the engine mount control solenoid valve (B), and connect a vacuum pump/gauge, 0—30 in. Hg, to the hose. Apply about 20 in.Hg of vacuum, and wait 20 seconds.



Does the engine mount hold vacuum?

YES—Go to step 11.

NO—Either the vacuum hose or the engine mount has a vacuum leak. Repair as needed.■

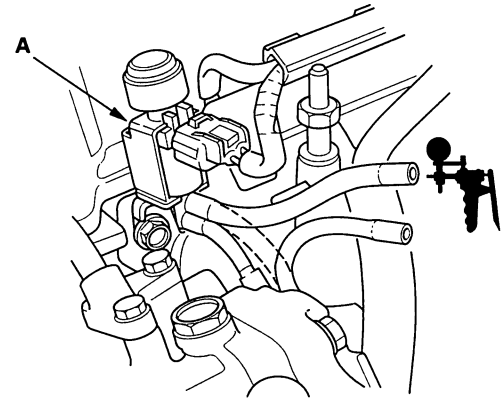
11. Release the vacuum, then apply vacuum again.

Is there a noticeable change in idle smoothness with and without vacuum applied?

YES—Go to step 12.

NO—Replace the front engine mount.■

12. Connect a vacuum pump/gauge, 0—30 in. Hg, to the engine mount control solenoid valve (A).



Is there manifold vacuum at idle, and a decrease in manifold vacuum when you raise the engine speed above 1,000 rpm?

YES—The system is OK.■

NO—Replace the engine mount control solenoid valve.■

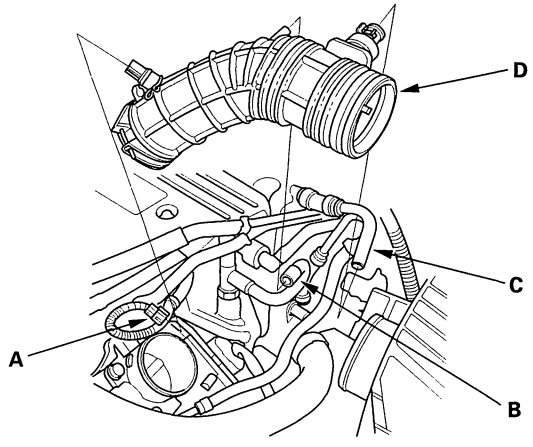
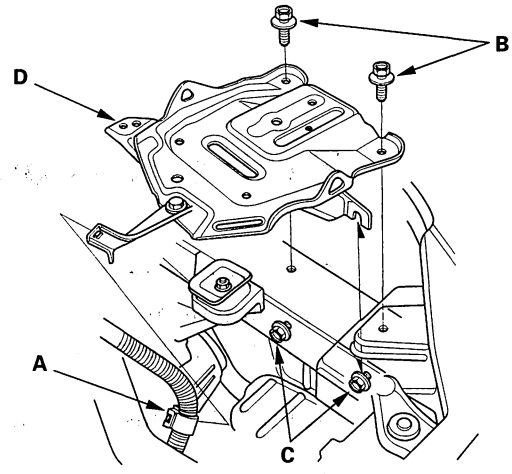
Engine Removal

NOTE:
- Use fender covers to avoid damaging painted surfaces.
- To avoid damaging the wire and terminals, unplug the wiring connectors carefully while holding the connector portion.
- Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.

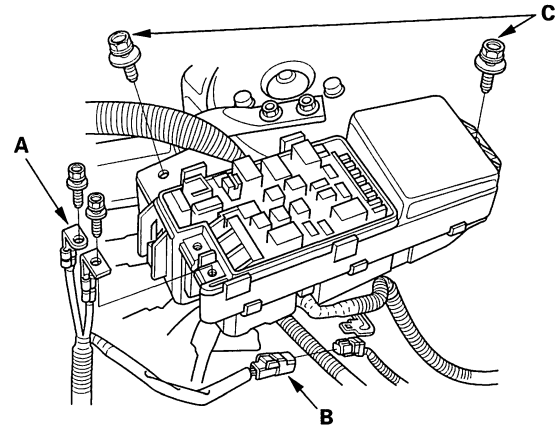
1. Secure the hood in the wide open position (support rod in the lower hole).
2. Make sure you have the anti-theft codes for the radio and navigation system, then write down the customer's audio presets . Make sure the ignition switch is OFF.
3. Relieve the fuel pressure (see page 11-330).
4. Disconnect the negative cable from the battery first, then disconnect the positive cable.
5. Remove the battery.
6. Disconnect the intake air temperature (IAT) sensor connector (A).



7. Remove the vacuum hose (B) and breather pipe (C), then remove the intake air duct (D).
8. Remove the air cleaner housing (see page 11-361).
9. Remove the harness clamp (A).



10. Remove the two bolts (B), and loosen the two bolts (C) securing the battery base, then remove the battery base (D).
11. Remove the battery cables (A) from the under-hood fuse/relay box, then disconnect the harness connector (B).



12. Remove the two bolts (C) securing the under-hood fuse/relay box.

BACK

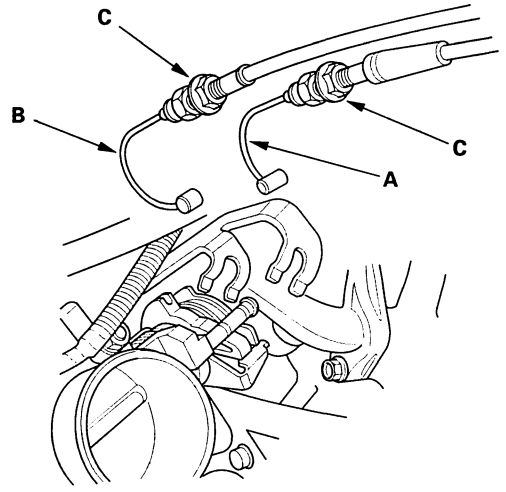
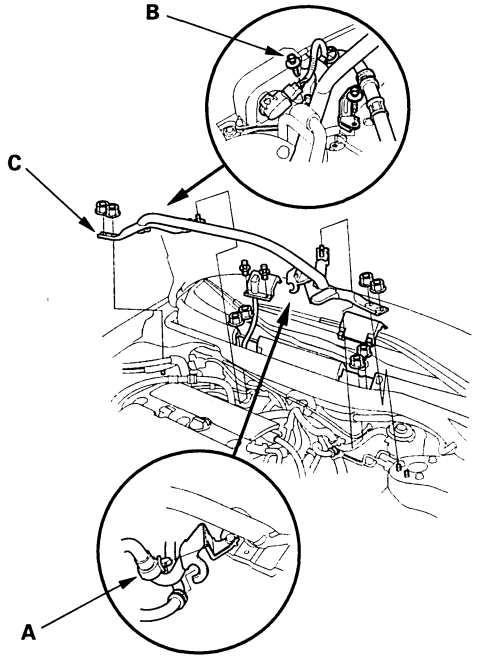
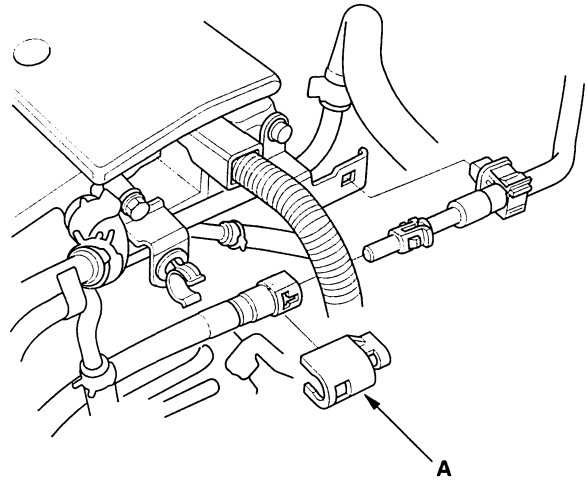
13. 2003-2005 models: Remove the throttle cable (A) and cruise control actuator cable (B) by loosening the locknuts (C), then slipping the cable ends out of the accelerator linkage. Take care not to bend the cables when removing them. Always replace any kinked cable with a new one.



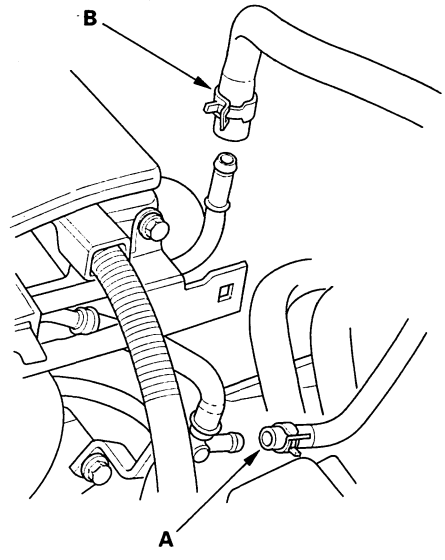
14. 2006 model: Remove the harness clamp (A) and bolt (B), then remove the strut brace (C).



15. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see page 11-338).



16. Remove the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).

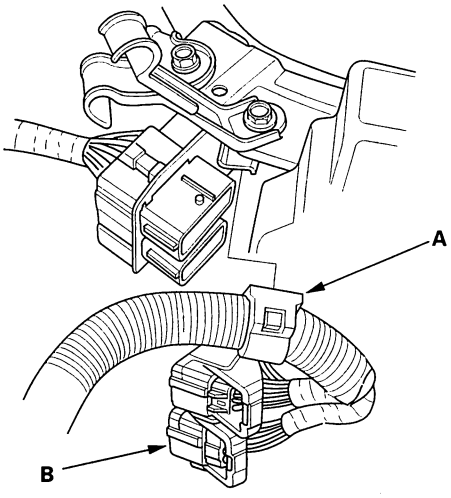


(cont'd)

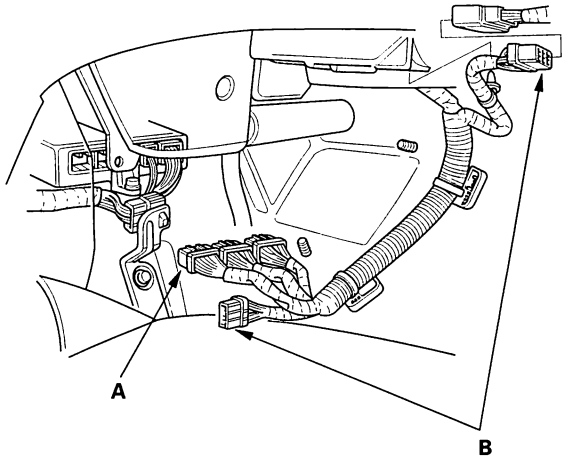
Protected by AR

Engine Removal (cont'd)

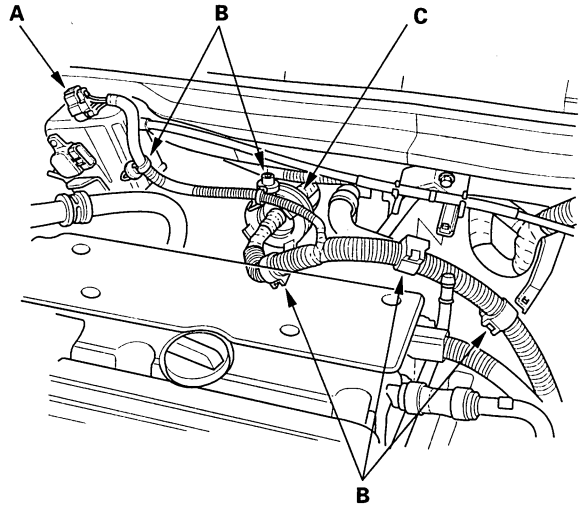
17. 2003-2005 models: Remove the harness clamp (A), then disconnect the engine wire harness connectors (B) on the left side of the engine compartment.



18. 2006 model: Disconnect the engine control module (ECM)/powertrain control module (PCM) connectors (A) and the main wire harness connectors (B).

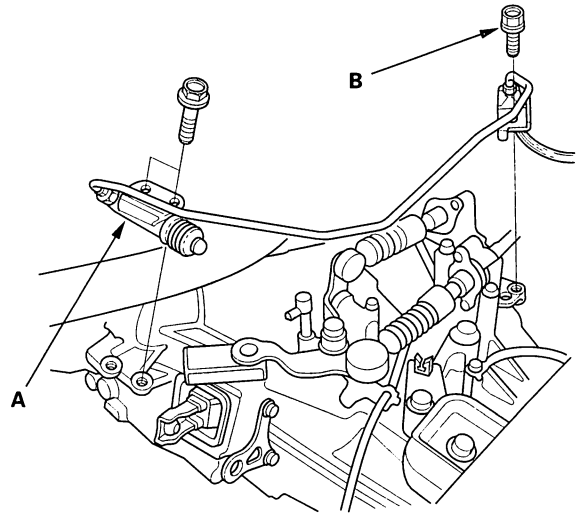


19. 2006 model: Disconnect the accelerator pedal position (APP) sensor connector (A).



20. 2006 model: Remove the harness clamps (B) and grommet (C), then pull the engine wire harness through the bulkhead.

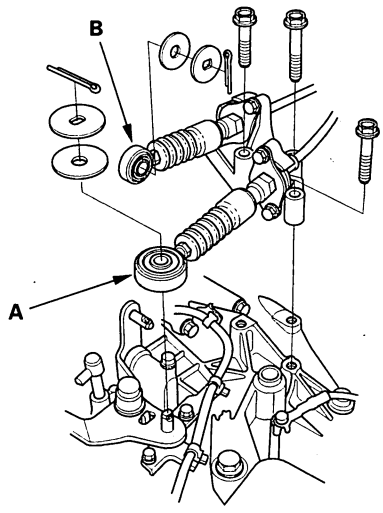
21. M/T model: Remove the clutch slave cylinder (A), and clutch line bracket mounting bolt (B).



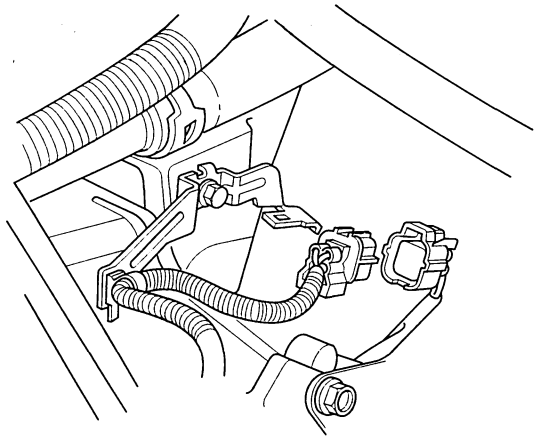
BACK

Protected by AR

22. M/T model: Remove the shift cable (A) and select cable (B).

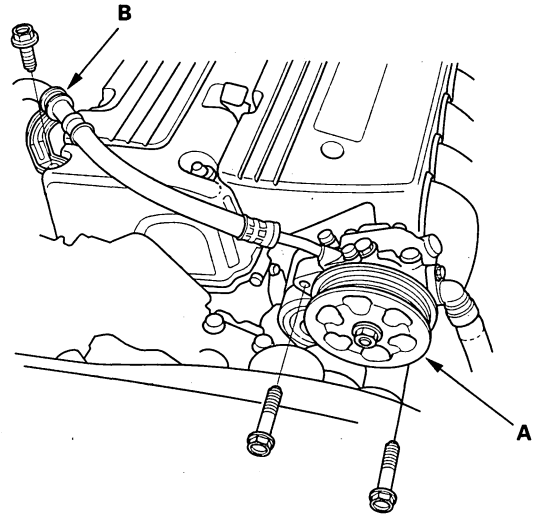


23. Disconnect the air fuel ratio (A/F) sensor connector.

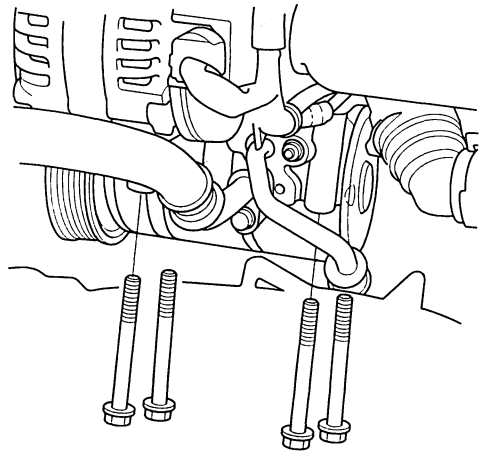


24. Remove the drive belt (see page 4-37).

25. Remove the power steering (P/S) pump (A), and the P/S hose clamp (B). Do not disconnect the P/S hoses from the pump.



26. Remove the A/C compressor without disconnecting the A/C hoses.



(cont'd)

Protected by AR

Engine Removal (cont'd)

27. Remove the radiator cap.

28. Raise the vehicle on the hoist to full height.

29. Remove the front wheels.

30. Loosen the drain plug in the radiator and drain the engine coolant (see page 10-6).

31. Drain the transmission fluid:

    - Manual transmission (see page 13-3)
    - Automatic transmission (see page 14-208)

32. Drain the engine oil (see page 8-6).

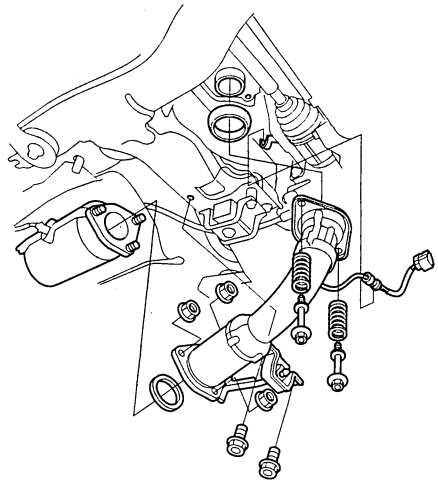
33. Disconnect the stabilizer links (see page 18-22).

34. Remove the damper fork (see step 3 on page 18-25).

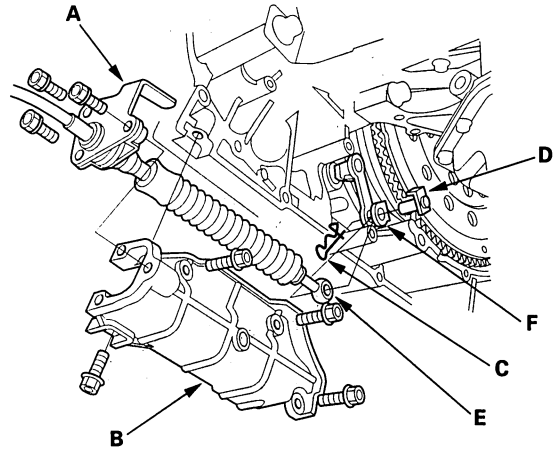
35. Separate the knuckles from the lower arm ball joints (see step 6 on page 18-21).

36. Remove the driveshafts (see step 12 on page 16-6). Coat all precision-finished surfaces with clean engine oil. Tie plastic bags over the driveshaft ends.

37. Remove exhaust pipe A.

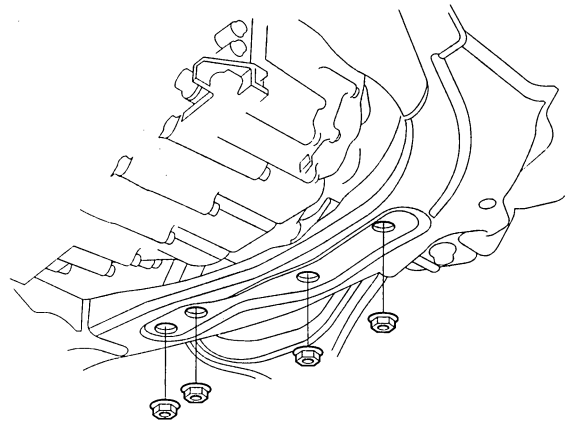


38. A/T model: Remove the three bolts securing the shift cable holder (A), then remove the shift cable cover (B).



39. A/T model: Remove the spring clip (C) and control pin (D), then separate the shift cable (E) from the control lever (F). Do not bend the cable excessively.

40. Remove the nuts securing the transmission lower front mount and transmission lower rear mount.

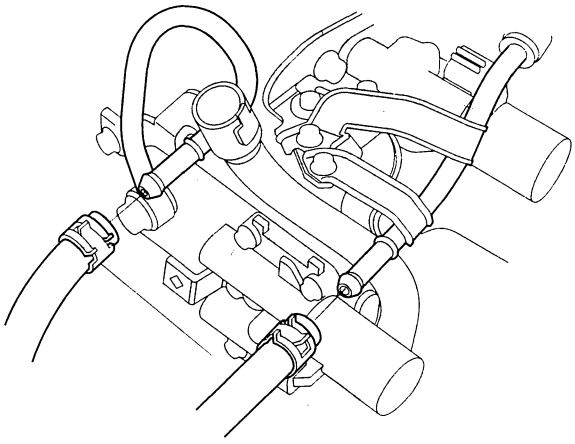


BACK

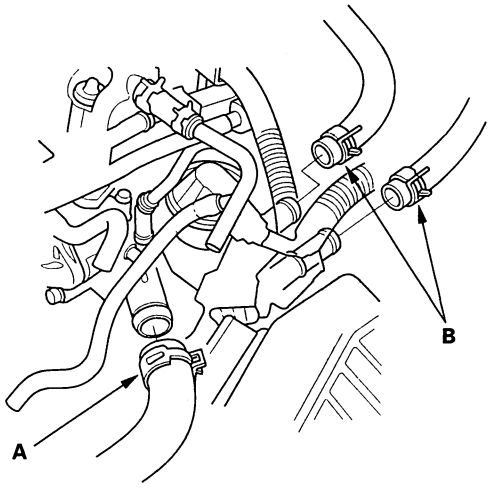
Protected by AR

41. Lower the vehicle on the hoist.

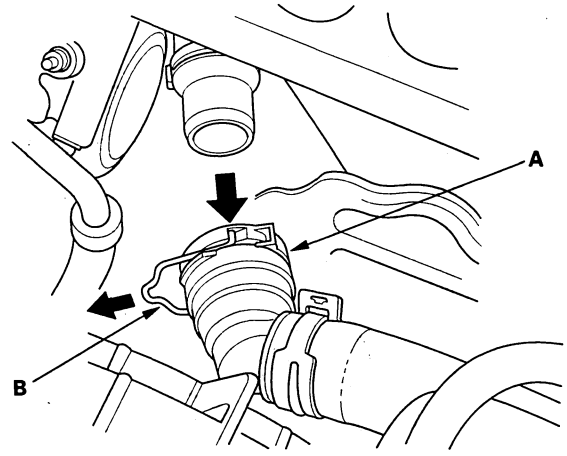
42. A/T model: Remove the automatic transmission fluid (ATF) cooler hoses.



43. Remove the upper radiator hose (A) and heater hoses (B).

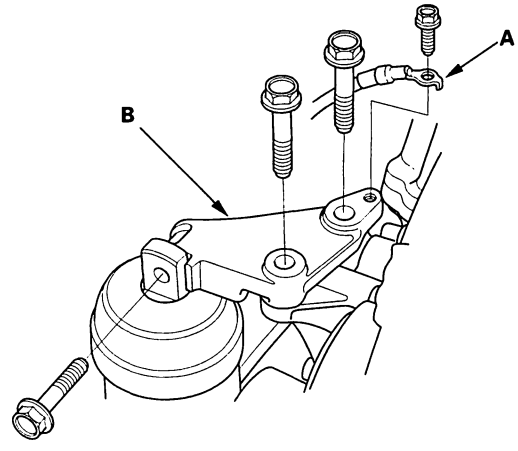


44. Clean any dirt off the quick connector (A), thermostat cover, and lower radiator hose.



45. Pull out the lock (B) by hand, then wiggle the quick connector loose, and remove it from the thermostat cover. Do not use any tools to remove the quick connector.

46. Remove the ground cable (A), then remove the upper bracket (B).

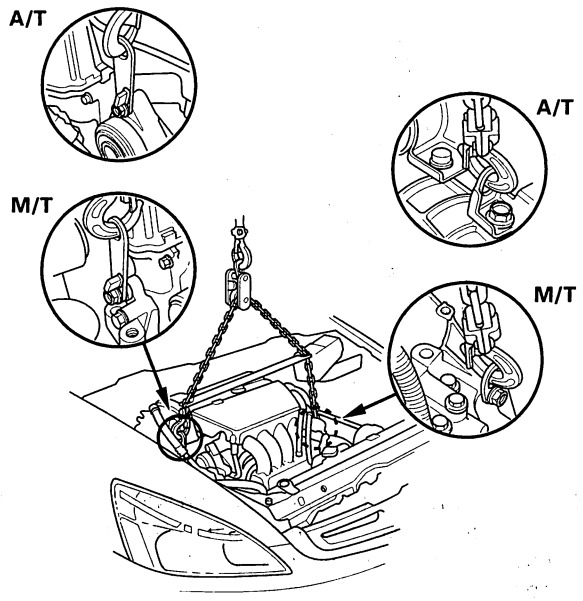


(cont'd)

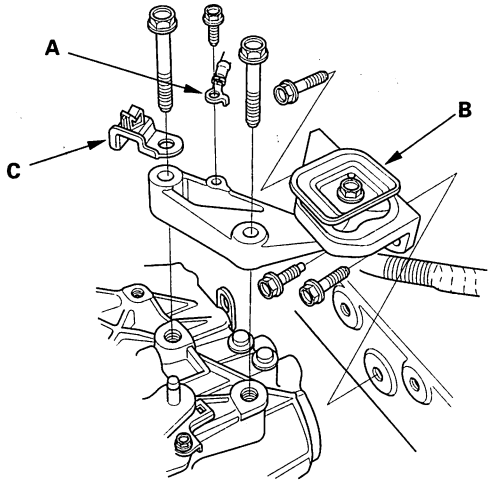
Protected by AR

Engine Removal (cont'd)

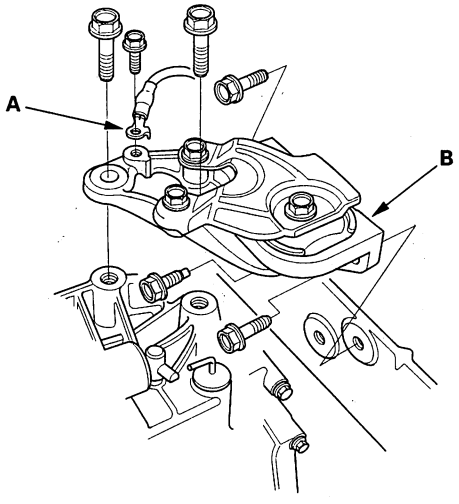
47. Attach the chain hoist to the engine as shown.



48. M/T model: Remove the ground cable (A), then remove the transmission upper mount/bracket assembly (B) and clutch line clamp bracket (C).



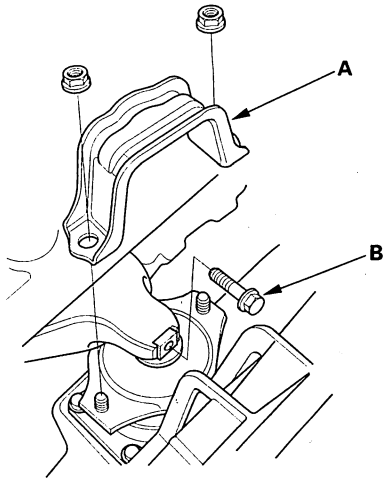
49. A/T model: Remove the ground cable (A), then remove the transmission upper mount/bracket assembly (B).



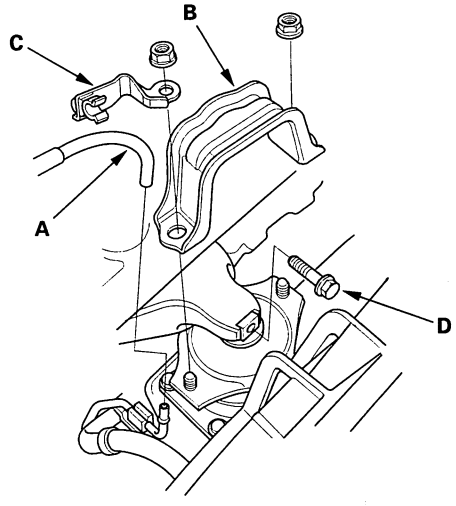
BACK

Protected by AR

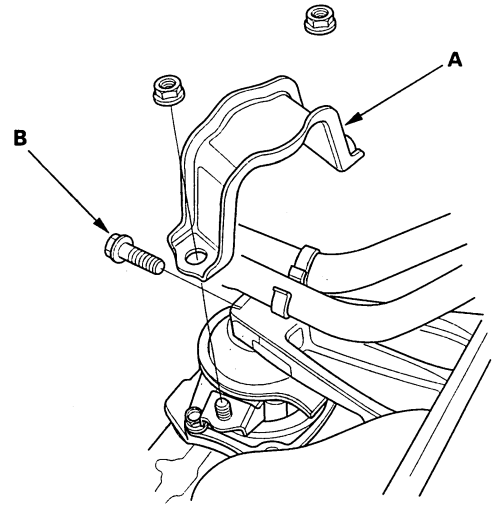
50. M/T model: Remove the front mount stop (A), then remove the front mount bolt (B).



51. A/T model: Remove the vacuum hose (A) from the vacuum line. Remove the front mount stop (B) and vacuum hose clamp bracket (C), then remove the front mount bolt (D).



52. Remove the rear mount stop (A), then remove the rear mount bolt (B).



53. Check that the engine/transmission is completely free of vacuum hoses, fuel and coolant hoses, and electrical wiring.

54. Slowly lower the engine/transmission assembly about 150 mm (6 in.). Check once again that all hoses and wires are disconnected from the engine/transmission.

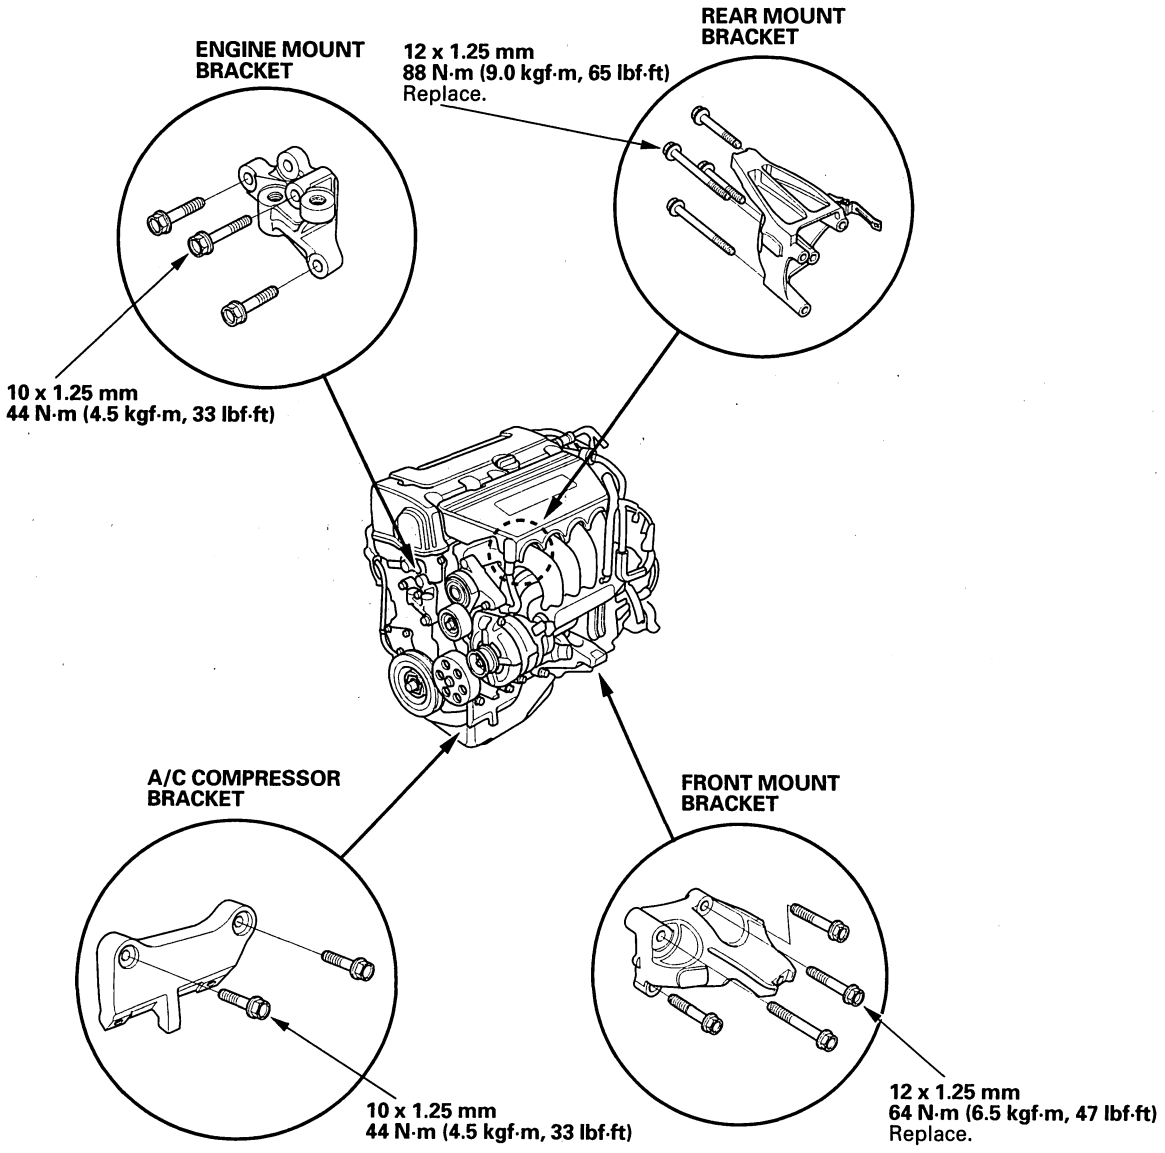
55. Raise the engine/transmission assembly from under the vehicle.

Protected by AR

Engine Assembly

Engine Installation

1. Install the accessory brackets and tighten their bolts to the specified torques.



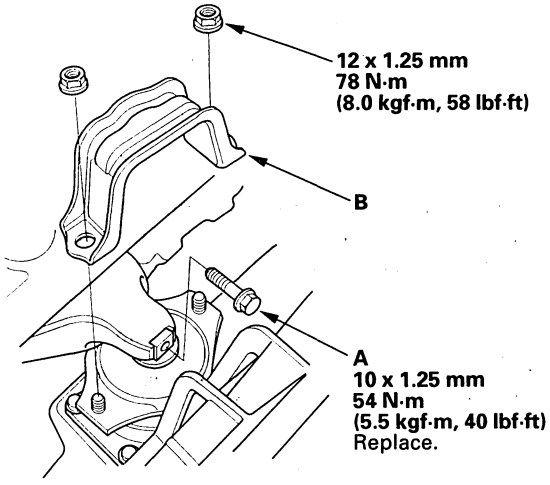
BACK

Protected by AR

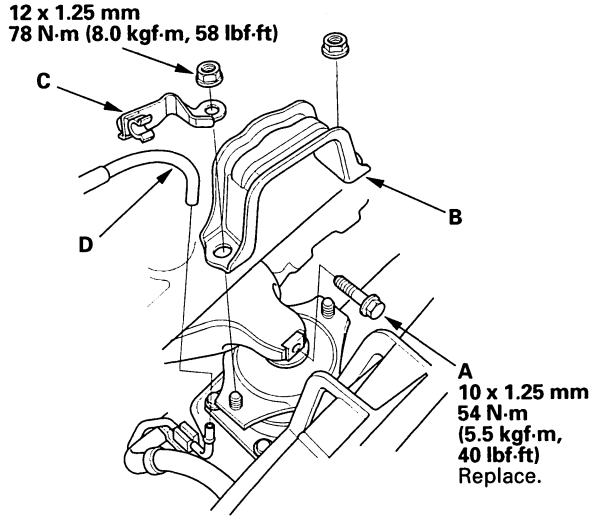
2. Install the engine/transmission assembly into position in the vehicle, then remove the chain hoist from the engine.

   NOTE: Reinstall the mounting bolts/support nuts in the sequence given. Failure to follow this sequence may cause excessive noise and vibration, and reduce bushing life.

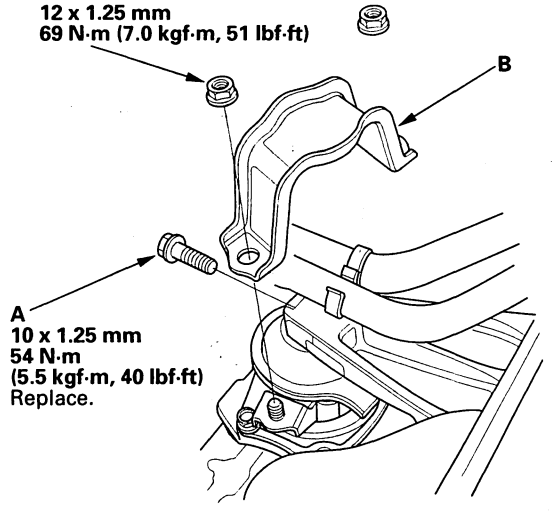
3. M/T model: Tighten the front mount bolt (A), then install the front mount stop (B).



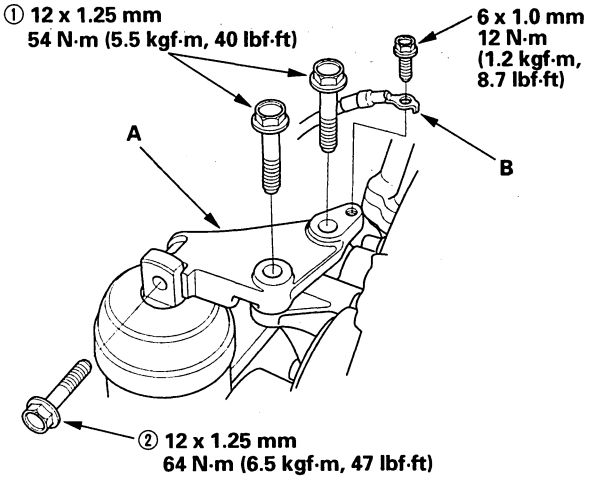
4. A/T model: Tighten the front mount bolt (A), then install the front mount stop (B) and vacuum hose clamp bracket (C). Install vacuum hose (D).



5. Tighten the rear mount bolt (A), then install the rear mount stop (B).



6. Install the upper bracket (A), then tighten the bolts in the numbered sequence shown.



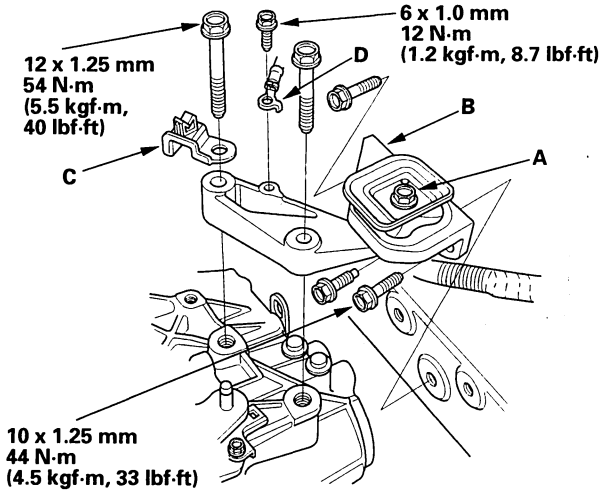
7. Install the ground cable (B).

(cont'd)

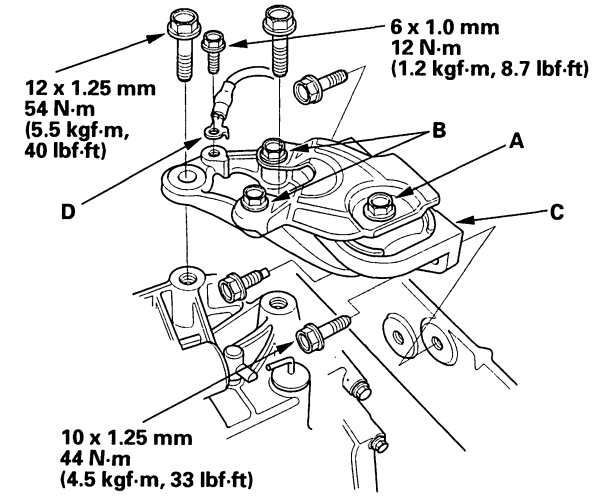
Protected by AR

Engine Installation (cont'd)

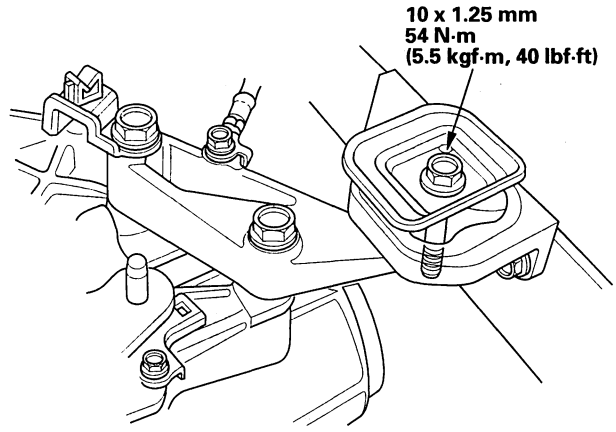
8. M/T model: Loosen the mount bolt (A), then install the transmission upper mount/bracket assembly (B), clutch line clamp bracket (C), and ground cable (D).



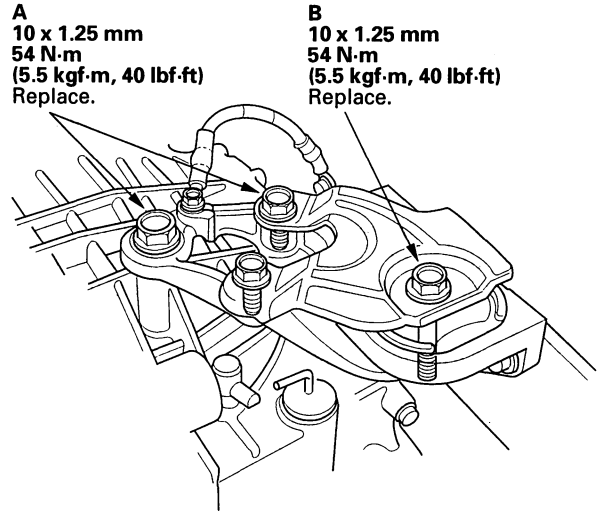
9. A/T model: Loosen the mount bolt (A) and bracket plate mounting bolts (B), then install the transmission upper mount/bracket assembly (C), and ground cable (D).



10. M/T model: Tighten the transmission upper mount bolt.



11. A/T model: Tighten the transmission upper mount bracket plate mounting bolts (A), then tighten the transmission upper mount bolt (B).

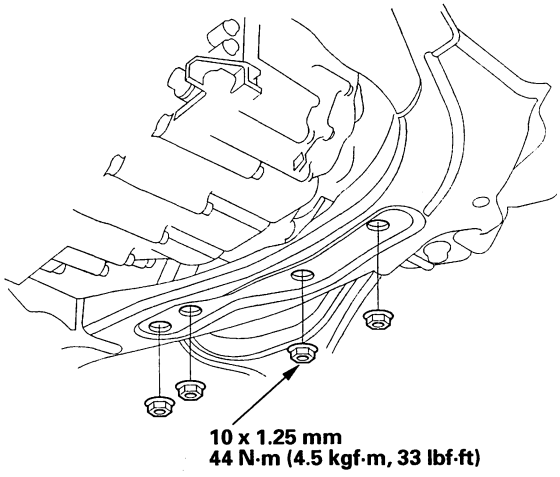


BACK

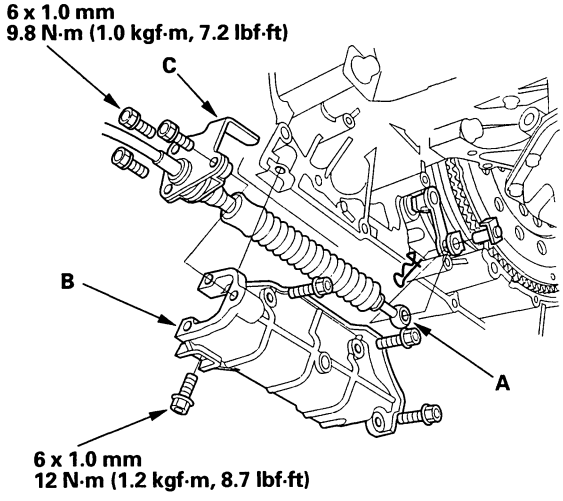
Protected by AR

12. Raise the hoist to full height.

13. Tighten the nuts securing the transmission lower front mount and transmission lower rear mount.

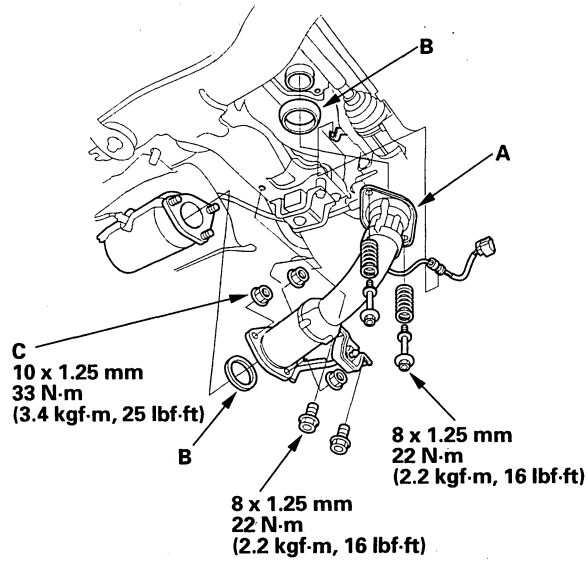


14. A/T model: Install the shift control cable (A).



15. A/T model: Install the shift cable cover (B), then install the shift cable holder (C).

16. Install exhaust pipe A. Use new gaskets (B) and new self locking nuts (C).



17. Install a new set ring on the end of each driveshaft, then install the driveshafts. Make sure each ring "clicks" into place in the differential and intermediate shaft.

18. Connect the suspension lower arm ball joints (see step 8 on page 18-21).

19. Install the damper fork (see step 2 on page 18-27).

20. Connect the stabilizer links (see page 18-22).

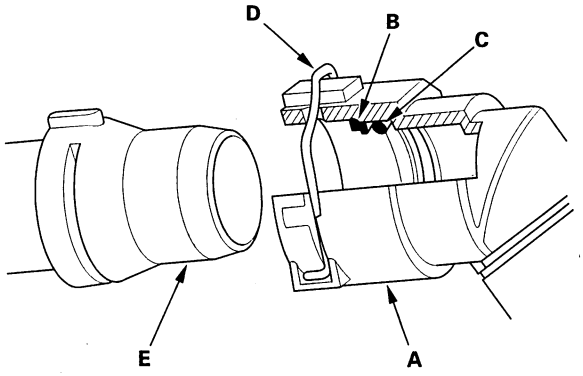
(cont'd)

Protected by AR

Engine Installation (cont'd)

21. Lower the hoist.

22. Check the quick connector (A) and set ring (B) for cracks or damage. If the connector and/or set ring are cracked or damaged, replace the connector.



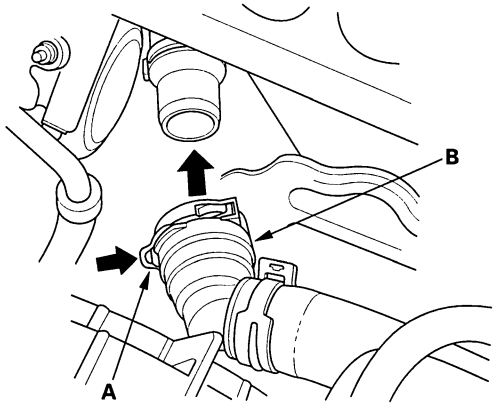
23. Make sure the set ring is in place inside the quick connector. If the set ring is off the connector, replace the quick connector.

24. Replace the O-ring (C) in the quick connector.

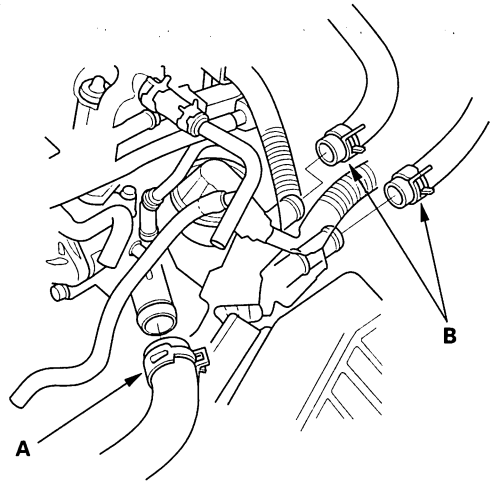
25. Check the lock (D). If the lock is damaged or deformed, replace it. When installing the new lock on the connector, press it straight down along the groove.

26. Clean the connecting surface of the thermostat cover (E), then apply clean engine coolant around the connecting surface.

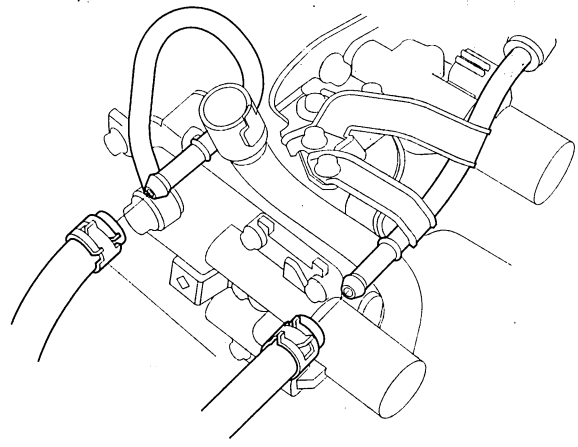
27. Push down the lock (A), then push the quick connector (B) onto the thermostat cover until you hear it click.



28. Install the upper radiator hose (A) and heater hoses (B).



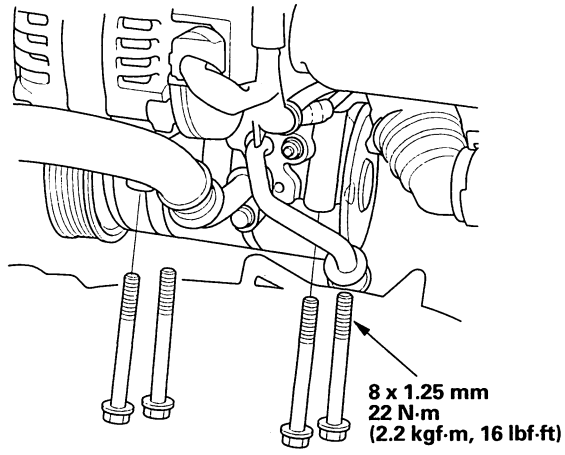
29. A/T model: Install the automatic transmission fluid (ATF) cooler hoses.



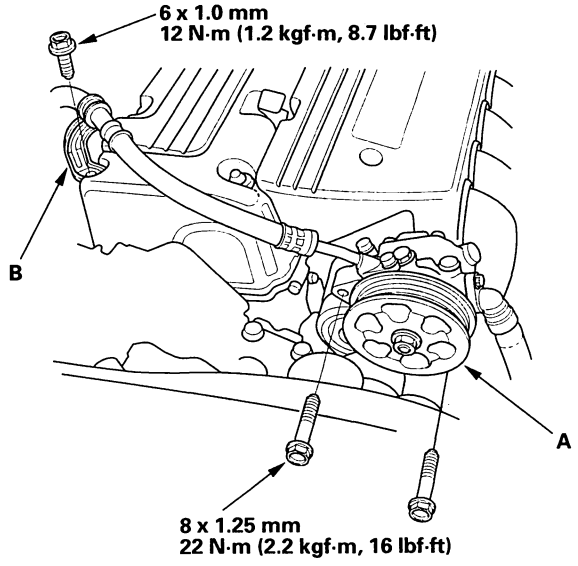
BACK

Protected by AR

30. Install the A/C compressor.

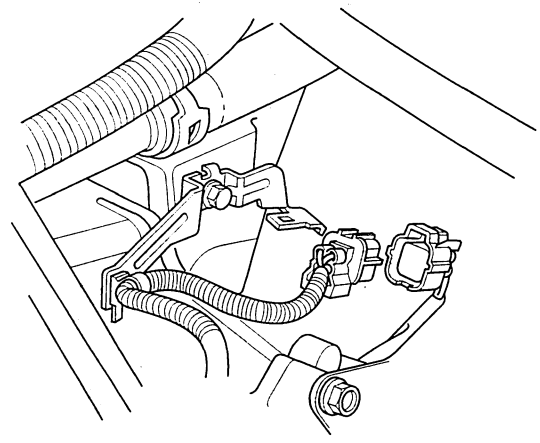


31. Install the power steering (P/S) pump (A), and the P/S hose clamp (B).

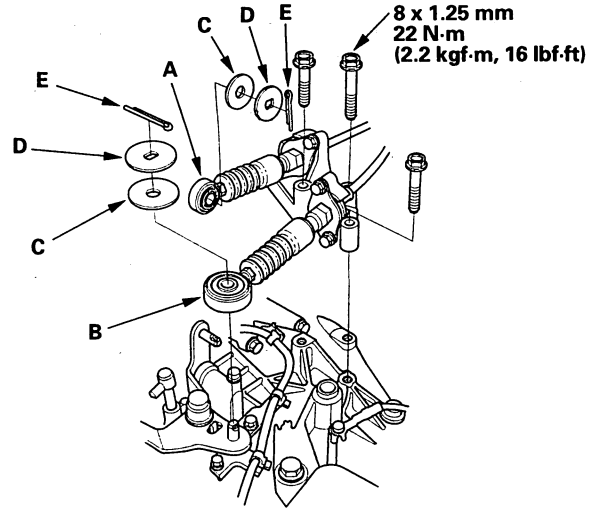


32. Install the drive belt.

33. Connect the air fuel ratio (A/F) sensor connector.



34. M/T model: Install the select cable (A) and shift cable (B) with the plastic washers (C), washers (D), and new cotter pins (E).



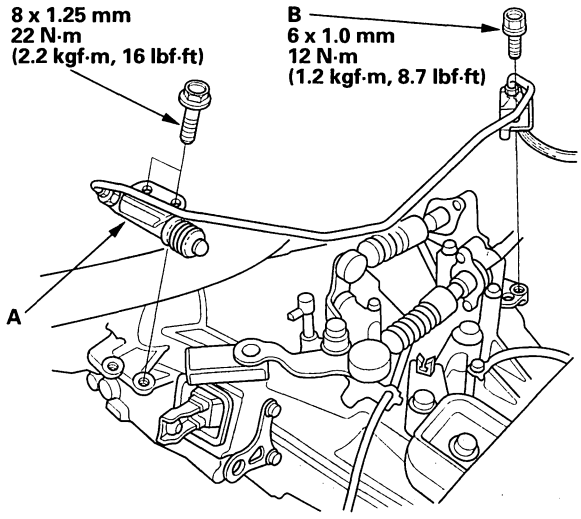
(cont'd)

BACK

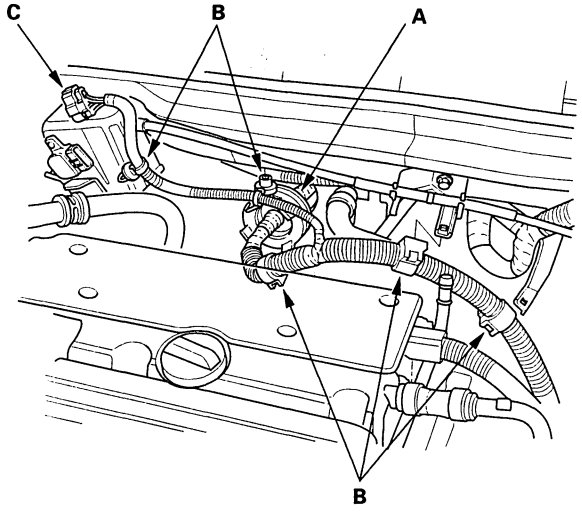
Protected by AR

Engine Installation (cont'd)

35. M/T model: Install the clutch slave cylinder (A) and clutch line bracket mounting bolt (B).

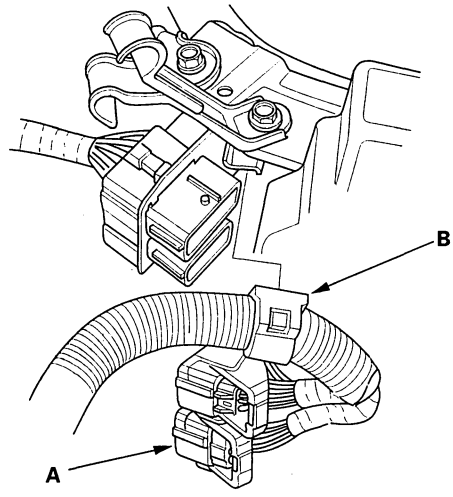


36. 2006 model: Push the engine control module (ECM)/powertrain control module (PCM) connectors through the bulkhead, then install the grommet (A) and harness clamps (B).

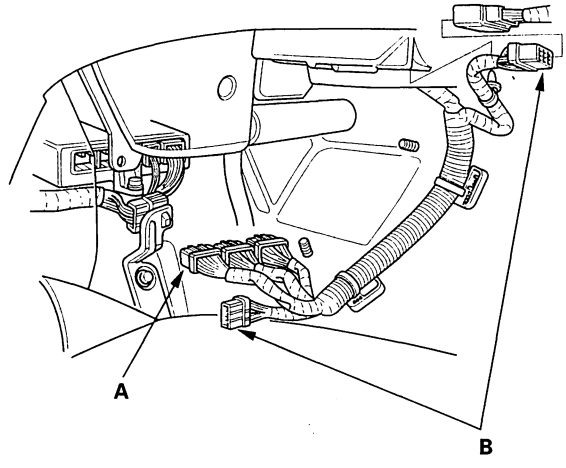


37. Connect the accelerator pedal position (APP) sensor connector (C).

38. 2003-2005 models: Connect the engine wire harness connectors (A), then install the harness clamp (B).



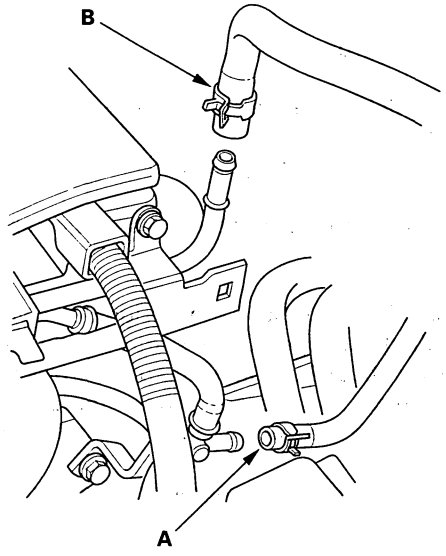
39. 2006 model: Connect the ECM/PCM connectors (A) and main wire harness connectors (B).



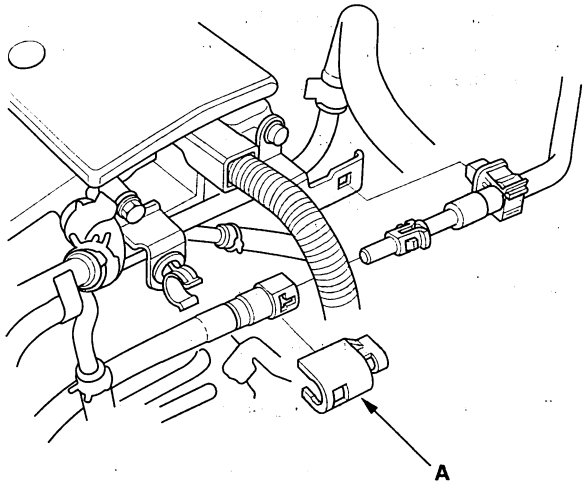
BACK

Protected by AR

40. Install the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).



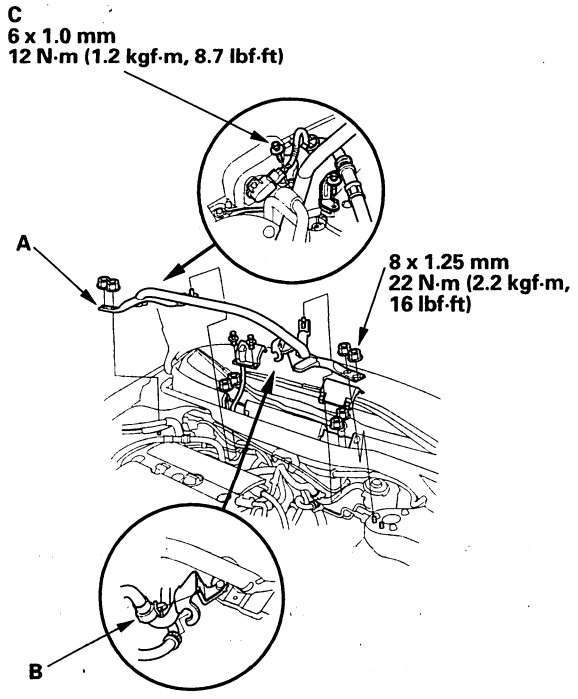
41. Connect the fuel feed hose (see page 11-340), then install the quick-connect fitting cover (A). Make sure the connector engages fully.



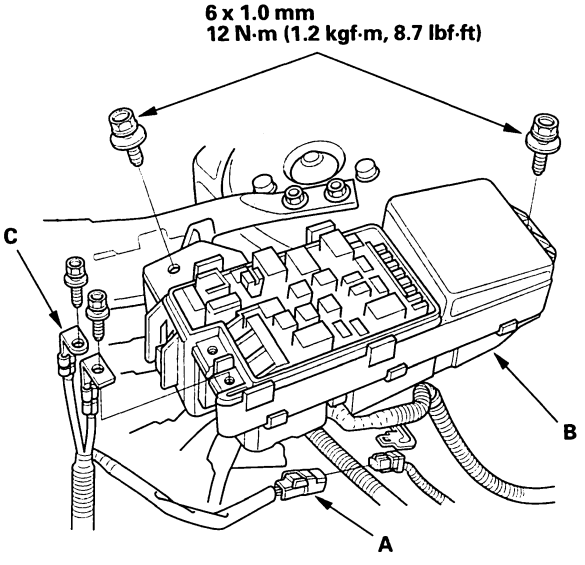
42. 2003-2005 models: Install the throttle cable (see page 11-365), then adjust the cable (see page 11-362).

43. 2003-2005 models: Install the cruise control actuator cable (see page 4-62), then adjust it (see page 4-63).

44. 2006 model: Install the strut brace (A), then install the harness clamp (B) and bolt (C).



45. Connect the harness connector (A).



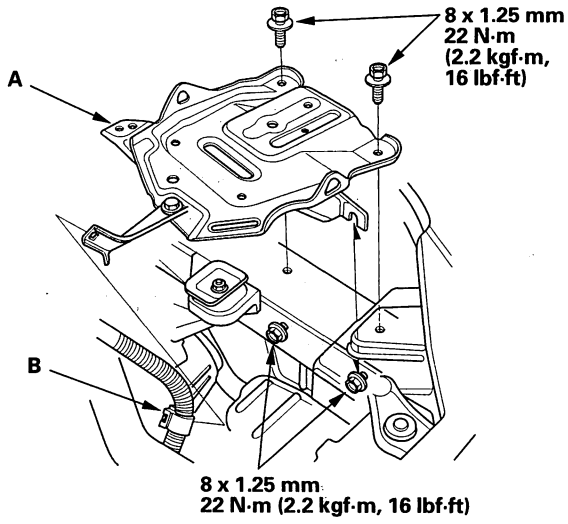
46. Install the under-hood fuse/relay box (B), then install the battery cables (C).

(cont'd)

Protected by AR

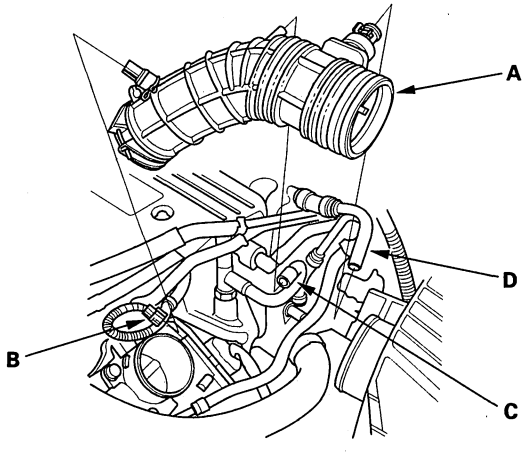
Engine Installation (cont'd)

47. Install the battery base (A), then install the harness clamp (B).



48. Install the air cleaner housing (see page 11-361).

49. Install the intake air duct (A), then connect the intake air temperature (IAT) sensor connector (B), and install the vacuum hose (C) and breather pipe (D).



50. Install the battery. Clean the battery posts and cable terminals with sandpaper, then assemble them and apply grease to prevent corrosion.

51. Install the front wheels.

52. A/T model: Move the shift lever to each gear, and verify that the A/T gear position indicator follows the transmission range switch.

53. M/T model: Check that the transmission shift into gear smoothly.

54. Inspect for fuel leaks. Turn the ignition switch to ON (II) (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation two or three times, then check for fuel leakage at any point in the fuel line.

55. Refill the engine with engine oil (see step 4 on page 8-6).

56. Refill the transmission with fluid:

    - Manual transmission (see page 13-3)
    - Automatic transmission (see page 14-208)

57. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 7 on page 10-7).

58. Do the PCM reset procedure (see page 11-4).

59. Do the crankshaft position (CPK) pattern clear/CPK pattern learn procedure (see page 11-4).

60. Do the PCM idle learn procedure (see page 11-316).

61. Inspect the idle speed (see page 11-315).

62. Inspect the ignition timing (see page 4-24).

63. Check the wheel alignment (see page 18-6).

64. Enter the anti-theft codes for the radio and the navigation system, then enter the customer's audio presets.

65. Do the power window control unit reset procedure (see page 22-232).

66. Set the clock.

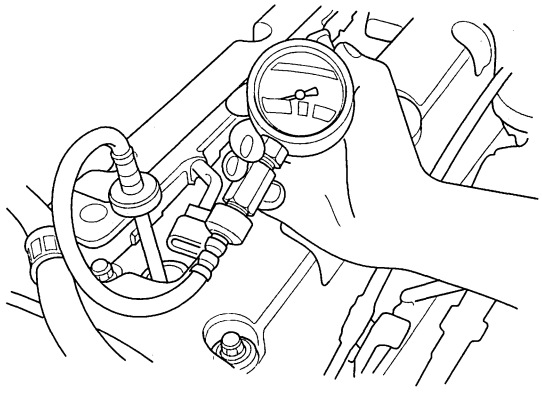
Engine Compression Inspection

After this inspection, you must reset the engine control module (ECM)/the powertrain control module (PCM) will continue to stop the injectors from functioning. Select ECM/PCM reset using the Honda Diagnostic System (HDS) (see page 11-4).

1. Warm up the engine to normal operating temperature (cooling fan comes on).
2. Turn the ignition switch OFF.
3. Connect the HDS to the data link connector (DLC) (see step 2 on page 11-3).
4. Turn the ignition switch ON (II), select PGM-FI, INSPECTION, then ALL INJECTORS OFF on the HDS.
5. Remove the four ignition coils (see page 4-25).
6. Remove the four spark plugs.
7. Attach the compression gauge to the spark plug hole.



8. Open the throttle fully, then crank the engine with the starter motor and measure the compression.

   Compression Pressure:
   Above 930 kPa (9.5 kgf/cm², 135 psi)

9. Measure the compression on the remaining cylinders.

   Maximum Variation:
   Within 200 kPa (2.0 kgf/cm², 28 psi)

10. If the compression is not within specifications, check the following items, then remeasure the compression.

    - Damaged or worn valves and seats
    - Damaged cylinder head gasket
    - Damaged or worn piston rings
    - Damaged or worn piston and cylinder bore

11. Select ECM/PCM reset (see page 11-4) to cancel the ALL INJECTORS OFF function on the HDS.

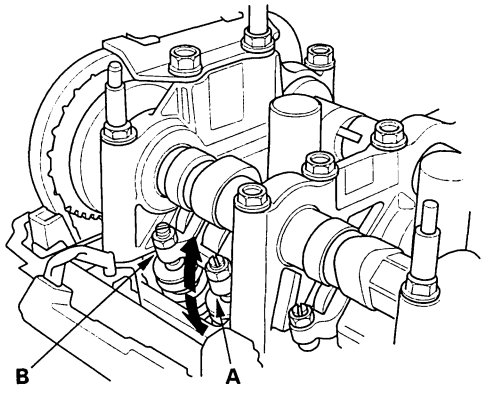
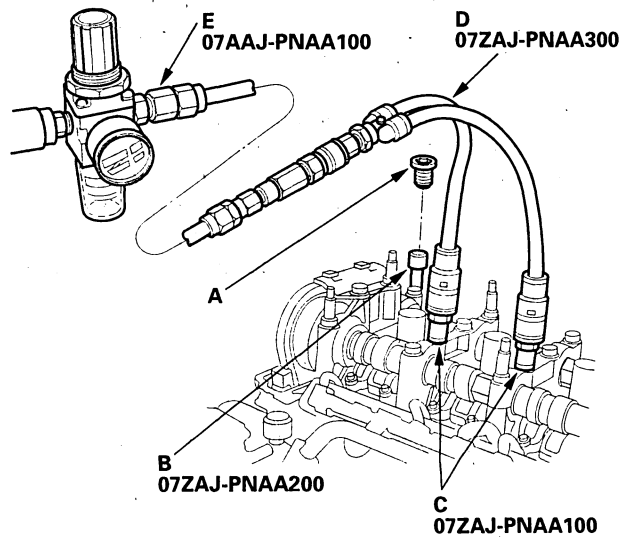
VTEC Rocker Arm Test

Special Tools Required
- Air pressure regulator 07AAJ-PNAA100
- VTEC air adapter 07ZAJ-PNAA100
- VTEC air stopper 07ZAJ-PNAA200
- Air joint adapter 07ZAJ-PNAA300

1. Start the engine and let it run for 5 minutes, then turn the ignition switch OFF.
2. Remove the cylinder head cover (see page 6-25).
3. Set the No. 1 piston at top dead center (TDC) (see step 1 on page 6-12).
4. Verify that the intake primary rocker arm (A) moves independently of the intake secondary rocker arm (B).
   - If the intake primary rocker arm does not move, remove the primary and secondary rocker arms as an assembly, then check that the pistons in the secondary and primary rocker arms move smoothly. If any rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, and test.
   - If the intake primary rocker arm moves freely, go to step 4.



5. Repeat step 3 on the remaining intake primary rocker arms with each piston at TDC. When all the primary rocker arms pass the test, go to step 5.
6. Check that the air pressure on the shop air compressor gauge indicates over 400 kPa (4 kgf/cm², 57 psi).
7. Inspect the valve clearance (see page 6-9).
8. Remove the sealing bolt (A) from the relief hole, and install the VTEC air stopper (B).



9. Remove the No. 2 and No. 3 camshaft holder bolts, and install the VTEC air adapters (C) finger-tight.
10. Connect the air joint adapter (D) and air pressure regulator (E).

(cont'd)

Protected by AR

VTEC Rocker Arm Test (cont'd)

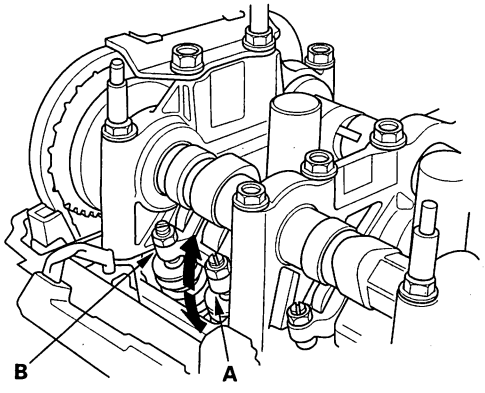
11. Loosen the valve on the regulator, and apply the specified air pressure.

    Specified air pressure:
    290 kPa (3.0 kgf/cm², 42 psi)

    NOTE: If the synchronizing piston does not move after applying air pressure, move the primary or secondary rocker arm up and down manually by rotating the crankshaft clockwise.

12. With the specified air pressure applied, move the intake primary rocker arm (A) for the No. 1 cylinder. The primary rocker arm and secondary rocker arm (B) should move together.

    If the intake secondary rocker arm does not move, remove the primary and secondary rocker arms as an assembly, and check that the pistons in the primary and secondary rocker arms move smoothly. If any rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, and test.



13. Remove the special tools.

14. Tighten the camshaft holder mounting bolts to 22 N·m (2.2 kgf·m, 16 lbf·ft).

15. Tighten the sealing bolt to 20 N·m (2.0 kgf·m, 14 lbf·ft).

16. Install the cylinder head cover (see page 6-26).

VTC Actuator Inspection

1. Remove the cam chain (see page 6-12).

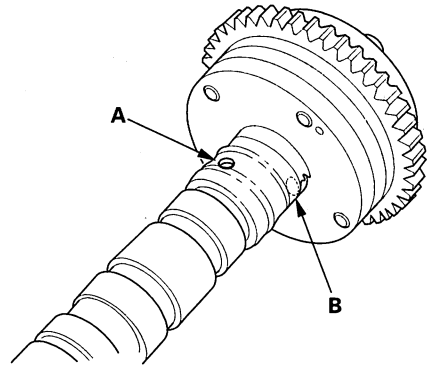
2. Loosen the rocker arm adjusting screws (see step 2 on page 6-33).

3. Remove the camshaft holder (see step 3 on page 6-33).

4. Remove the intake camshaft.

5. Check that the variable valve timing control (VTC) actuator is locked by turning the VTC actuator clockwise and counterclockwise. If the VTC actuator is not locked, replace the VTC actuator.

6. Seal the advance holes (A) and retard holes (B) in the No. 1 camshaft journal with tape.

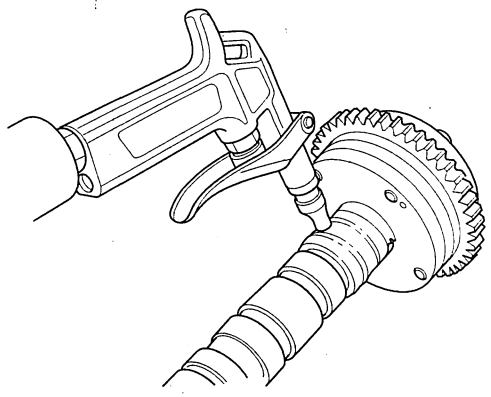


7. Punch a hole in the tape over one of the advance holes.

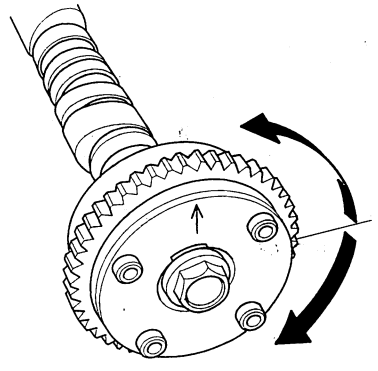
BACK

Protected by AR

8. Apply air to the advance hole to release the lock.



9. Check that the VTC actuator moves smoothly. If the VTC actuator does not move smoothly, replace the VTC actuator.



10. Make sure the punch marks on the VTC actuator and exhaust camshaft sprocket are facing up, then set the camshafts in the rocker shaft holder (see step 6 on page 6-45).

11. Set the camshaft holders and chain guide B in place (see step 7 on page 6-45).

12. Tighten the camshaft holder bolts to the specified torque (see step 8 on page 6-45).

13. Check that the variable valve timing control (VTC) actuator is locked by turning the VTC actuator counterclockwise. If not locked, turn the VTC actuator clockwise until it stops, then recheck it. If it is still not locked, replace the VTC actuator.

14. Install the cam chain (see page 6-15).

15. Adjust the valve clearance (see page 6-9).

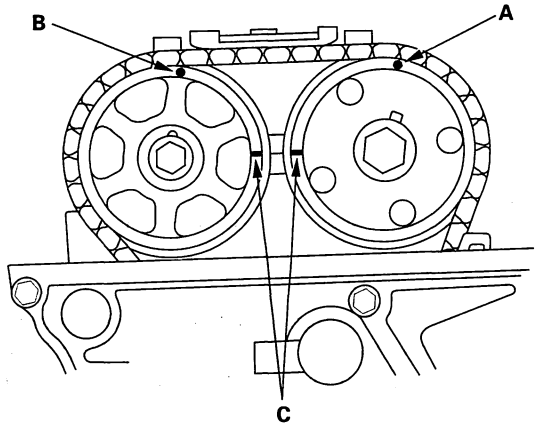
Valve Clearance Adjustment

Special Tools Required
Tappet adjust wrench set 07MAA-PR70100

NOTE: Adjust the valves only when the cylinder head temperature is less than 100 °F (38 °C).

1. Remove the cylinder head cover (see page 6-25).

2. Set the No. 1 piston at top dead center (TDC). The punch mark (A) on the variable valve timing control (VTC) actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and exhaust camshaft sprocket.



(cont'd)

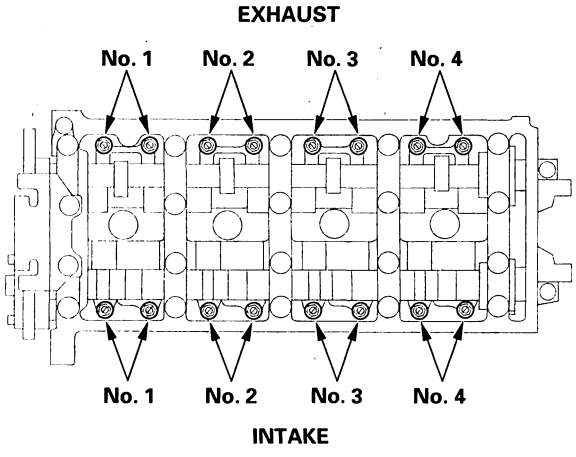
Protected by AR

Valve Clearance Adjustment (cont'd)

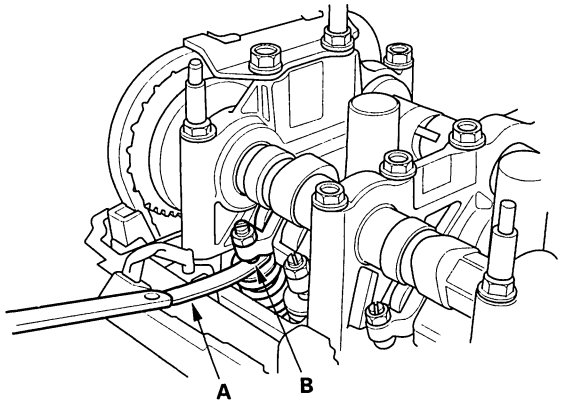
3. Select the correct thickness feeler gauge for the valves you're going to check.

Valve Clearance
Intake: 0.21—0.25 mm (0.008—0.010 in.)
Exhaust: 0.28—0.32 mm (0.011—0.013 in.)

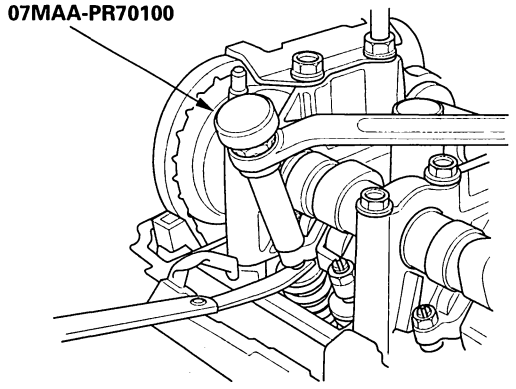
Adjusting screw locations:



4. Insert the feeler gauge (A) between the adjusting screw (B) and the end of the valve stem, and slide it back and forth; you should feel a slight amount of drag.



5. If you feel too much or too little drag, loosen the locknut with the special tools, and turn the adjusting screw until the drag on the feeler gauge is correct.

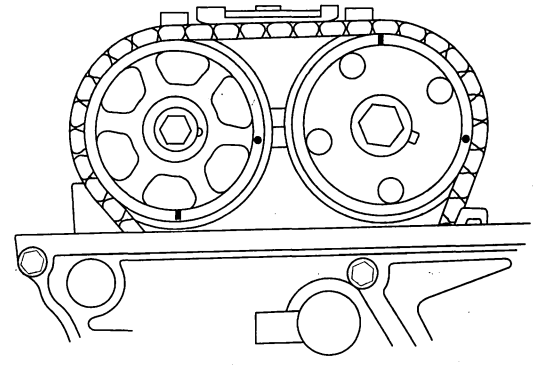


6. Tighten the locknut.

Specified torque
Intake: 20 N·m (2.0 kgf·m, 14 lbf·ft)
Apply engine oil to the nut threads.
Exhaust: 14 N·m (1.4 kgf·m, 10 lbf·ft)
Apply engine oil to the nut threads.

7. Recheck the valve clearance. Repeat the adjustment if necessary.

8. Rotate the crankshaft 180 ° clockwise (camshaft pulley turns 90 °).

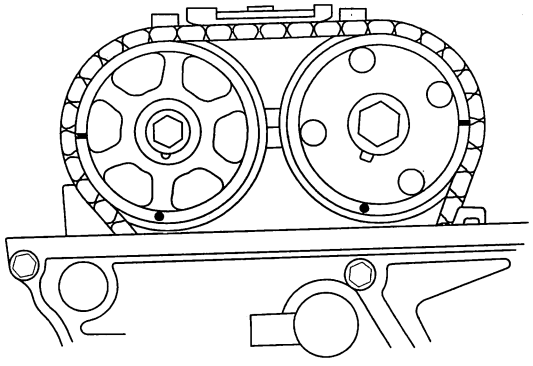


9. Check and, if necessary, adjust the valve clearance on No. 3 cylinder.

BACK

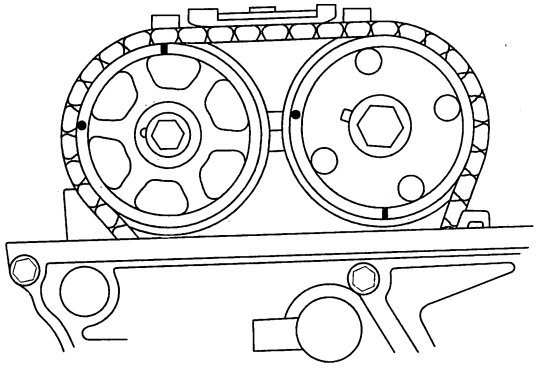
Protected by AR

10. Rotate the crankshaft 180 ° clockwise (camshaft pulley turns 90 °).



11. Check and, if necessary, adjust the valve clearance on No. 4 cylinder.

12. Rotate the crankshaft 180 ° clockwise (camshaft pulley turns 90 °).



13. Check and, if necessary, adjust the valve clearance on No. 2 cylinder.

14. Install the cylinder head cover (see page 6-26).

Crankshaft Pulley Removal and Installation

Special Tools Required
- Holder handle 07JAB-001020A
- Holder attachment, 50 mm 07NAB-001040A
- Socket, 19 mm 07JAA-001020A or a commercially available 19 mm socket

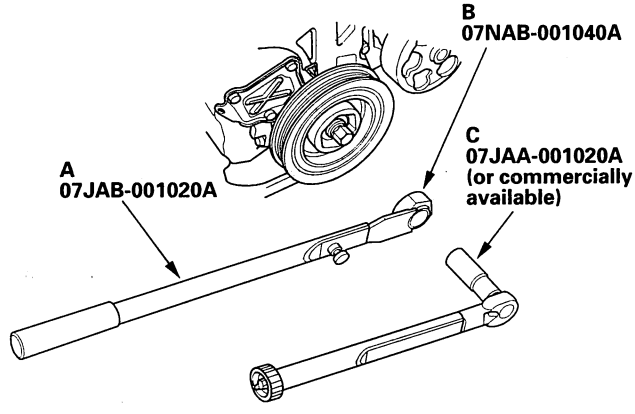
Removal

1. Remove the front tires/wheels.

2. Remove the splash shield (see step 25 on page 13-7).

3. Remove the drive belt (see page 4-37).

4. Hold the pulley with holder handle (A) and holder attachment (B).



5. Remove the bolt with a 19 mm socket (C) and breaker bar.

(cont'd)

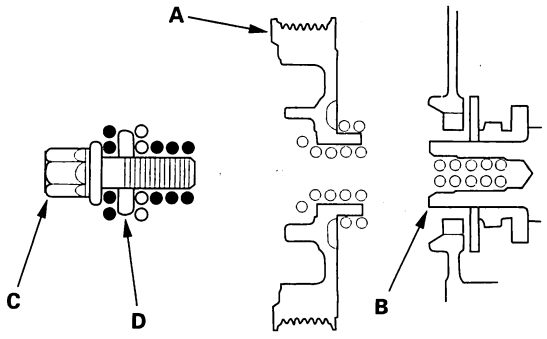
Protected by AR

Crankshaft Pulley Removal and Installation (cont'd)

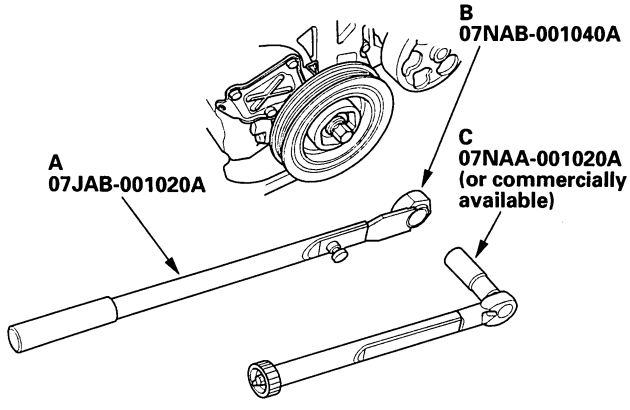
Installation

1. Clean the crankshaft pulley (A), crankshaft (B), bolt (C), and washer (D). Lubricate new engine oil as shown.

   ○: **Clean**
   ●: **Lubricate**



2. Install the crankshaft pulley, and hold the pulley with holder handle (A) and holder attachment (B).

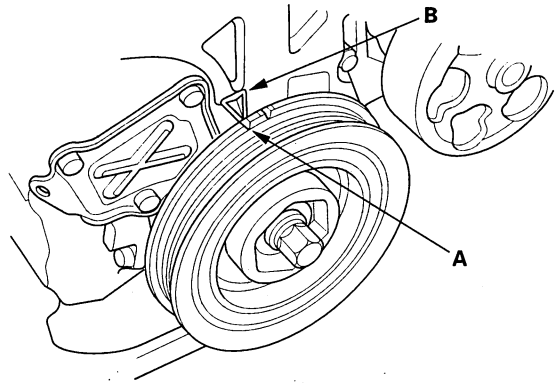


3. Tighten the bolt to 49 N·m (5.0 kgf·m, 36 lbf·ft) with a torque wrench and 19 mm socket (C). Do not use an impact wrench.
4. Tighten the pulley bolt on additional 90 °.
5. Install the drive belt (see page 4-37).
6. Install the splash shield (see step 25 on page 13-15).
7. Install the front tires/wheels.

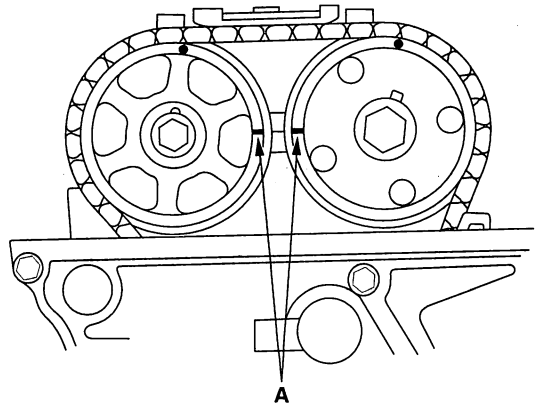
Cam Chain Removal

NOTE: Keep the cam chain away from magnetic fields.

1. Turn the crankshaft pulley so its top dead center (TDC) mark (A) lines up with the pointer (B).



2. Remove the front tires/wheels.
3. Remove the splash shield (see step 25 on page 13-7).
4. Remove the drive belt (see page 4-37).
5. Remove the cylinder head cover (see page 6-25).
6. Check that the No. 1 piston TDC marks (A) on the variable valve timing control (VTC) actuator and exhaust camshaft sprocket are aligned.

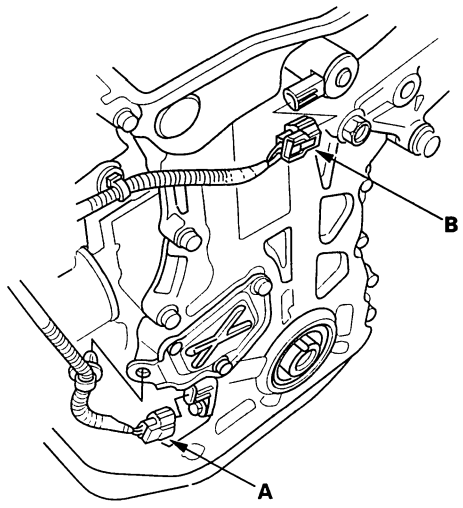


7. Remove the crankshaft pulley (see step 4 on page 6-11).

BACK

Protected by AR

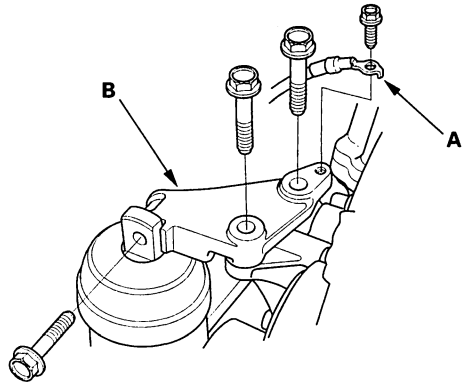
8. Disconnect the crankshaft position (CKP) sensor connector (A) and variable valve timing control (VTC) oil control solenoid valve connector (B).



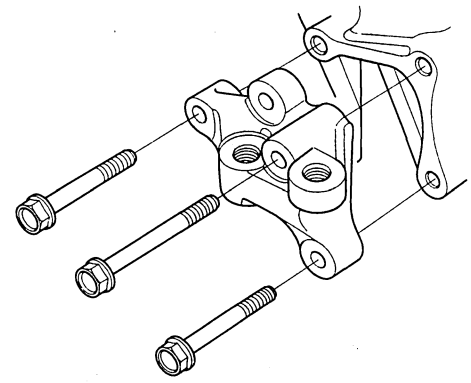
9. Remove the VTC oil control solenoid valve (see page 11-295).

10. Support the engine with a jack and wood block under the oil pan.

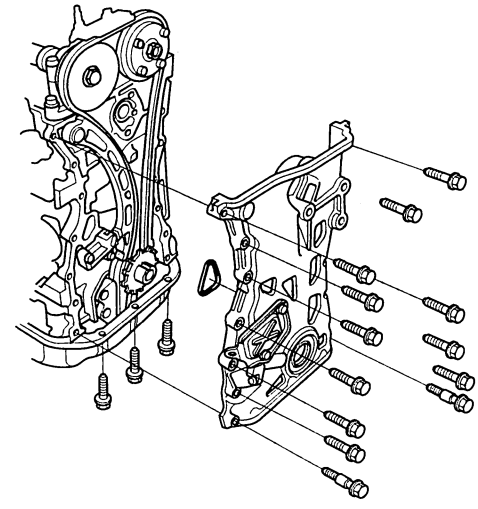
11. Remove the ground cable (A), and remove the upper bracket (B).



12. Remove the side engine mount bracket.



13. Remove the chain case.



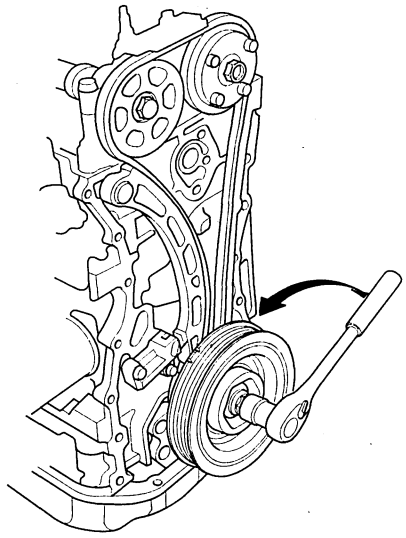
(cont'd)

Protected by AR

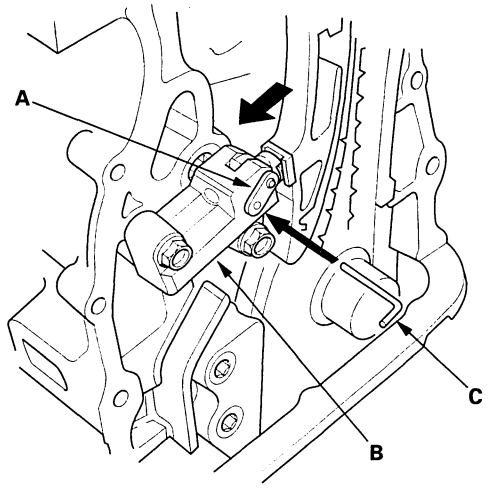
Cam Chain Removal (cont'd)

14. Loosely install the crankshaft pulley.

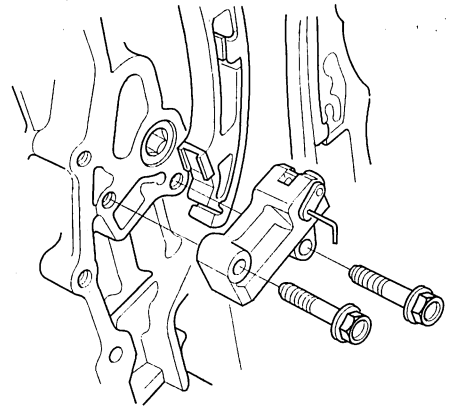
15. Turn the crankshaft counterclockwise to compress the auto-tensioner.



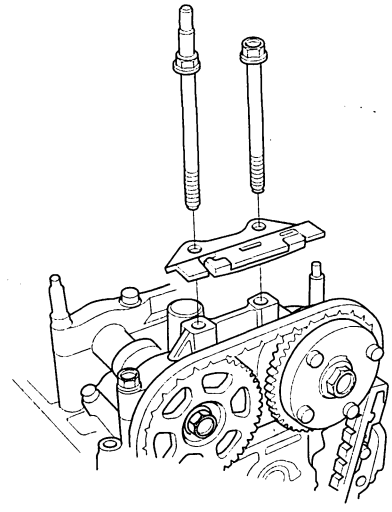
16. Align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.2 mm (0.05 in.) diameter pin or lock pin (P/N 14511-PNA-003) (C) into the holes. Turn the crankshaft clockwise to secure the pin.



17. Remove the auto-tensioner.



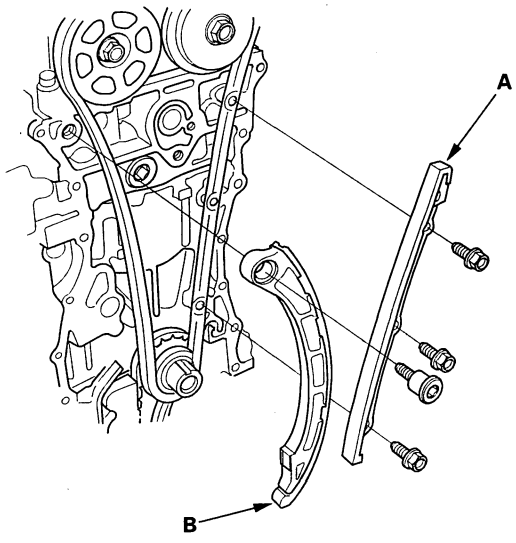
18. Remove the cam chain guide B.



BACK

Protected by AR

19. Remove the cam chain guide A and tensioner arm (B).

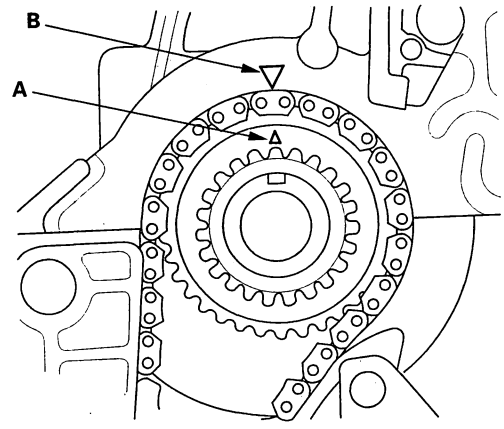


20. Remove the cam chain.

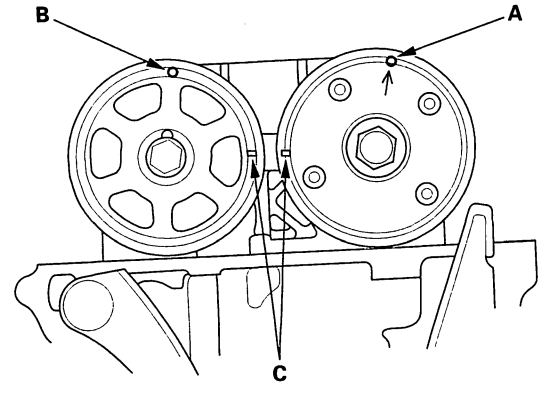
Cam Chain Installation

NOTE:
- Keep the cam chain away from magnetic fields.
- Before this procedure, check that the variable valve timing control (VTC) actuator is locked by turning the VTC actuator counterclockwise. If not locked, turn the VTC actuator clockwise until it stops, then recheck it. If it is still not locked, replace the VTC actuator.

1. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.



2. Set the camshafts to TDC. The punch mark (A) on the variable valve timing control (VTC) actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and exhaust camshaft sprocket.

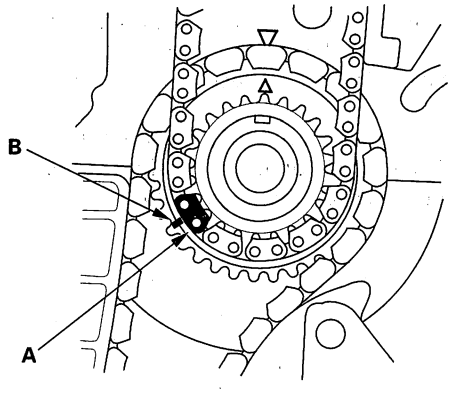


(cont'd)

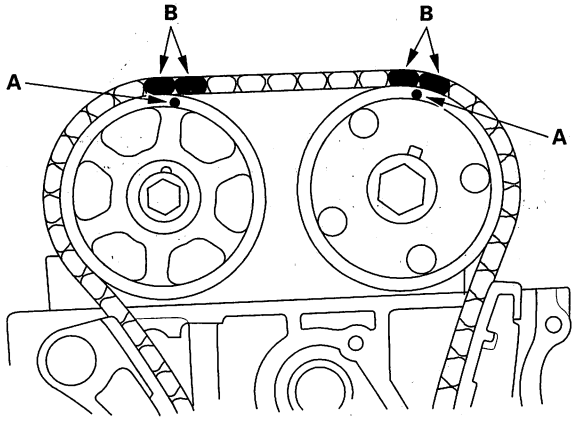
Protected by AR

Cam Chain Installation (cont'd)

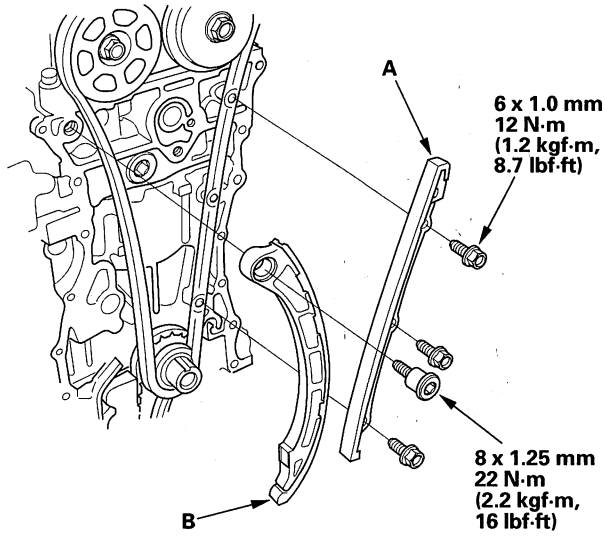
3. Install the cam chain on the crankshaft sprocket with the colored piece (A) aligned with the mark (B) on the crankshaft sprocket.



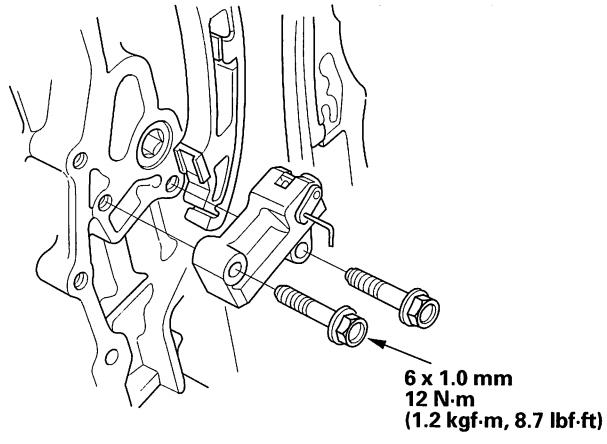
4. Install the cam chain on the VTC actuator and the exhaust camshaft sprocket with the punch marks (A) aligned with the center of the two colored pieces (B).



5. Install the cam chain guide A and tensioner arm (B).



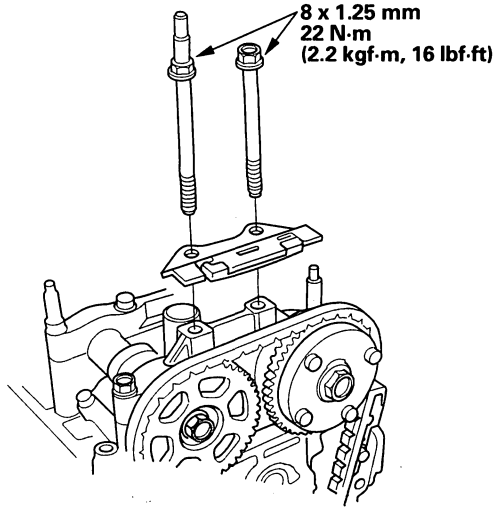
6. Install the auto-tensioner.



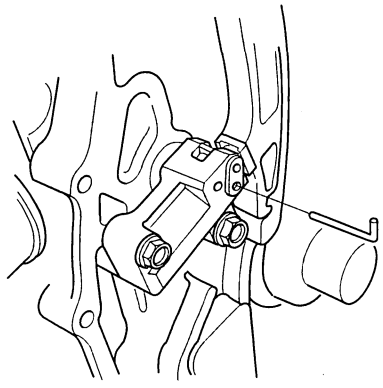
BACK

Protected by AR

7. Install the cam chain guide B.



8. Remove the pin or lock pin (P/N 14511-PNA-003) from the auto-tensioner.



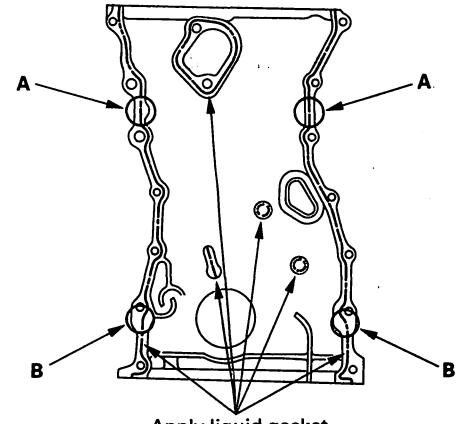
9. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal (see page 6-21).

10. Remove all of the old liquid gasket from the chain case mating surfaces, bolts, and bolt holes.

11. Clean and dry the chain case mating surfaces.

12. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the chain case.

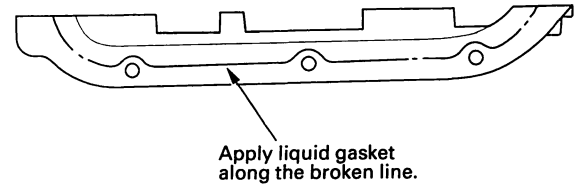
NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.



13. Apply liquid gasket to the engine block upper surface contact areas (A) on the chain case and lower block upper surface contact areas (B) on the chain case.

14. Apply liquid gasket, P/N 08718-0001, 08718-0002, or 08718-0009, evenly to the oil pan mating surface of the chain case.

NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.



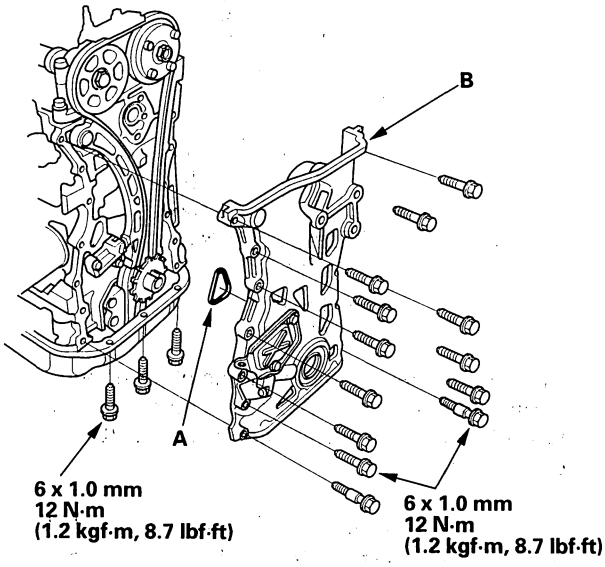
(cont'd)

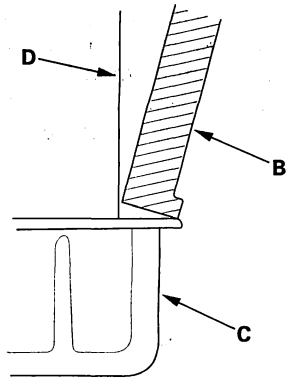
Protected by AR

Cam Chain Installation (cont'd)

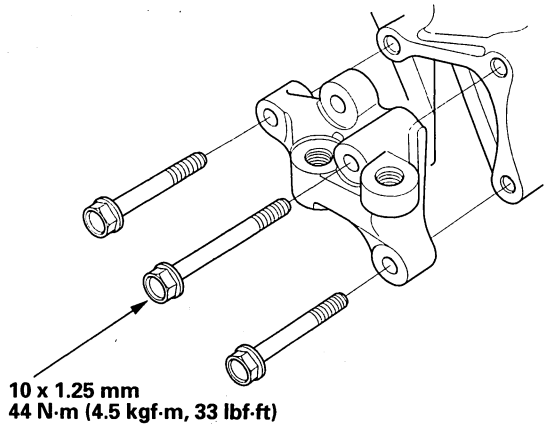
15. Install the new O-ring (A) on the chain case. Set the edge of the chain case (B) to the edge of the oil pan (C), then install the chain case on the engine block (D). Wipe off all of the excess liquid gasket on the oil pan and chain case mating area.

NOTE:
- When installing the chain case, do not slide the bottom surface on the oil pan mounting surface.
- Wait at least 30 minutes before filling the engine with oil.
- Do not run the engine within 3 hours after installing the chain case.

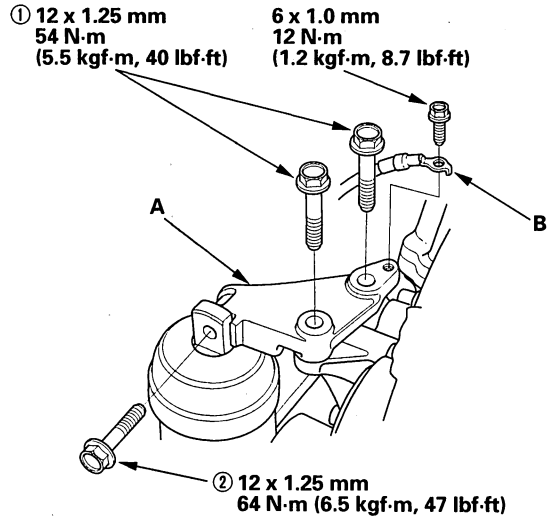




16. Install the side engine mount bracket.



17. Install the upper bracket (A), then tighten the bolt in the numbered sequence shown.



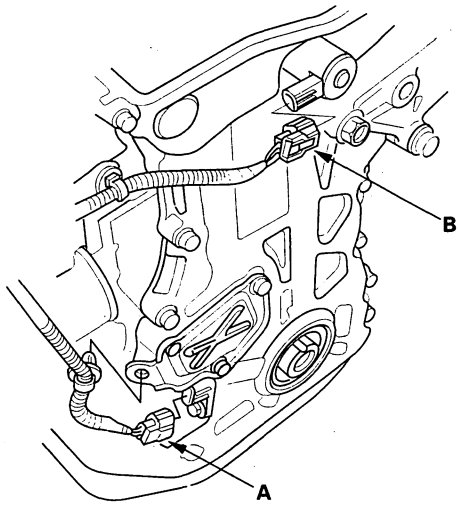
18. Install the ground cable (B).

BACK

Protected by AR

19. Install the variable valve timing control (VTC) oil control solenoid valve (see page 11-295).

20. Connect the crankshaft position (CKP) sensor connector (A) and VTC oil control solenoid valve connector (B).



21. Install the crankshaft pulley (see page 6-12).

22. Install the cylinder head cover (see page 6-26).

23. Install the drive belt.

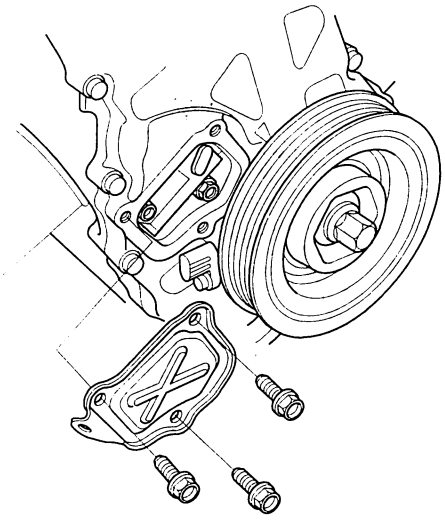
24. Install the splash shield (see step 25 on page 13-15).

25. Do the CKP pattern clear/CKP learn procedure (see page 11-4).

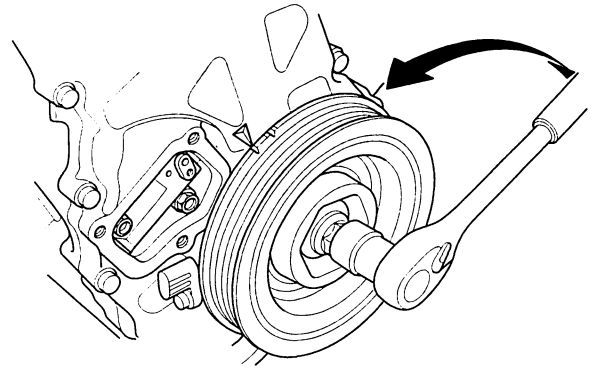
Auto-tensioner Removal and Installation

Removal

1. Remove the chain case cover.



2. Turn the crankshaft counterclockwise to compress the auto-tensioner.

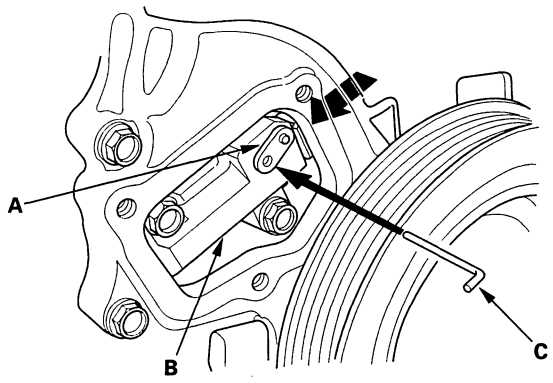


(cont'd)

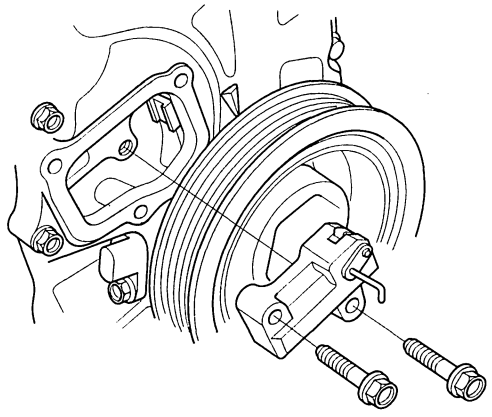
Protected by AR

Auto-tensioner Removal and Installation (cont'd)

3. Align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.2 mm (0.05 in.) diameter pin or lock pin (P/N 14511-PNA-003) (C) into the holes. Turn the crankshaft clockwise to secure the pin.

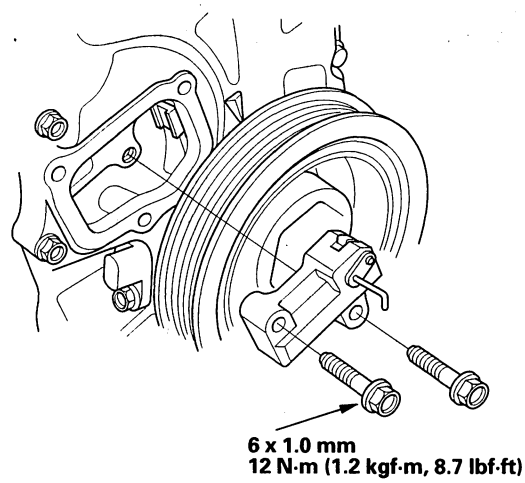


4. Remove the auto-tensioner.

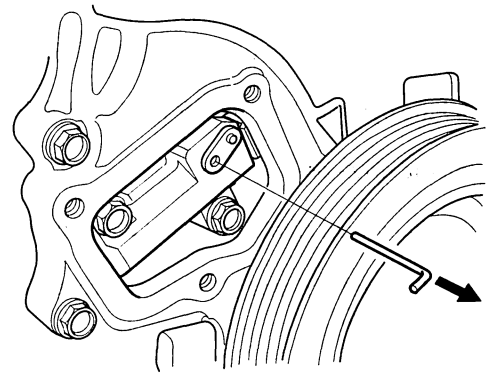


Installation

1. Install the auto-tensioner.



2. Remove the pin or lock pin (P/N 14511-PNA-003) from the auto-tensioner.



BACK

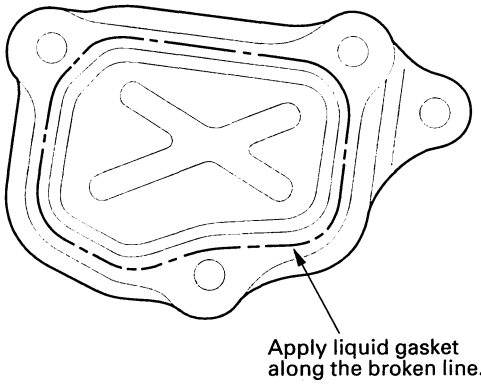
Protected by AR

3. Remove old liquid gasket from the chain case cover mating surfaces, bolts, and bolt holes.

4. Clean and dry the chain case cover mating surfaces.

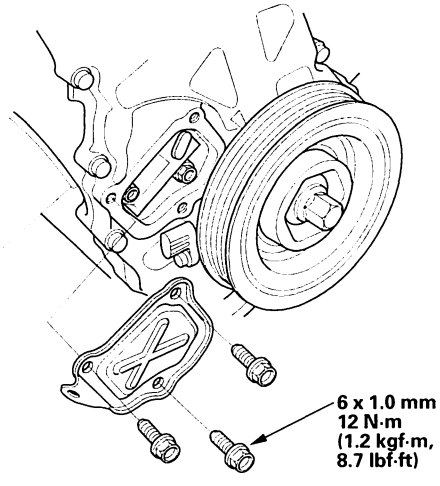
5. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the chain case mating surface of the chain case cover.

   NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.



6. Install the chain case cover.

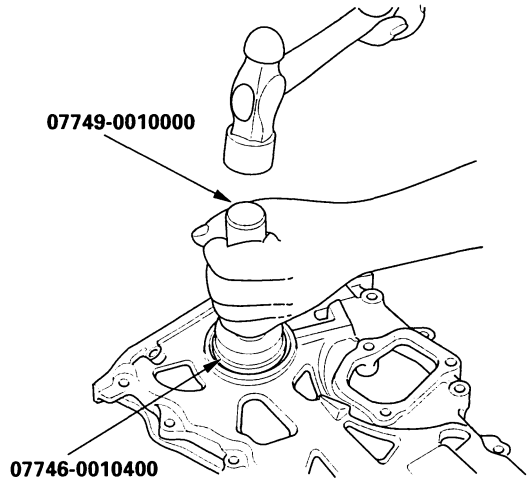
   NOTE:
   - Wait at least 30 minutes before filling the engine with oil.
   - Do not run the engine within 3 hours after installing the chain case cover.



Chain Case Oil Seal Installation

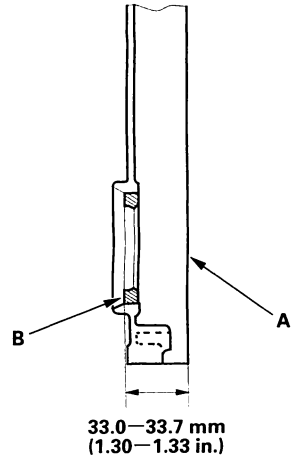
Special Tools Required
- Driver 07749-0010000
- Attachment, 52 x 55 mm 07746-0010400

1. Use the special tools to drive a new oil seal squarely into the chain case to the specified installed height.



2. Measure the distance between the chain case surface (A) and oil seal (B).

   Oil Seal Installed Height:
   33.0—33.7 mm (1.30—1.33 in.)

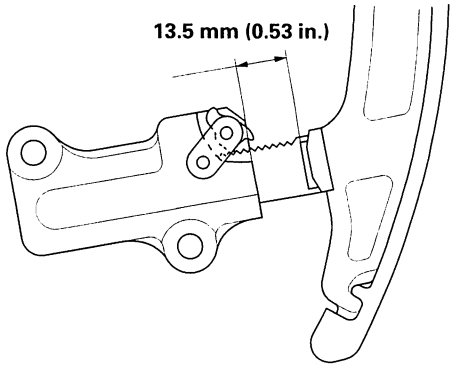


Protected by AR

Cam Chain Inspection

1. Remove the front wheels.
2. Remove the splash shield.
3. Remove the drive belt (see page 4-37).
4. Remove the cylinder head cover (see page 6-25).
5. Remove the crankshaft pulley (see page 6-11).
6. Disconnect the crankshaft position (CKP) sensor connector and variable valve timing control (VTC) oil control solenoid valve connector (see step 8 on page 6-13).
7. Remove the VTC oil control solenoid valve (see page 11-295).
8. Support the engine with a jack and wood block under the oil pan.
9. Remove the ground cable, and remove the upper bracket (see step 11 on page 6-13).
10. Remove the side engine mount bracket (see step 12 on page 6-13).
11. Remove the chain case (see step 13 on page 6-13).
12. Measure the tensioner rod length between the tensioner body and bottom of the flat surface section on the tensioner rod. If the length is over the tolerance, replace the cam chain and oil pump chain.

    Tensioner Rod Length
    Service Limit: 13.5 mm (0.53 in.)



13. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal (see page 6-21).
14. Remove all of the old liquid gasket from the chain case mating surfaces, bolt, and bolt holes.
15. Clean and dry the chain case mating surfaces.
16. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the chain case (see step 12 on page 6-17).
17. Apply liquid gasket to the engine block upper surface contact areas on the chain case and lower block upper surface contact areas on the chain case (see step 13 on page 6-17).
18. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pan mating surface of the chain case (see step 14 on page 6-17).

    NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.
19. Install the new O-ring on the chain case. Set the edge of the chain case to the edge of the oil pan, then install the chain case on the engine block (see step 15 on page 6-18). Wipe off the excess liquid gasket on the oil pan and chain case mating area.

    NOTE:
    - When installing the chain case, do not slide the bottom surface on the oil pan mounting surface.
    - Wait at least 30 minutes before filling the engine with oil.
    - Do not run the engine for at least 3 hours after installing the chain case.
20. Install the side engine mount bracket (see step 16 on page 6-18).
21. Install the upper bracket and the ground cable (see step 17 on page 6-18).

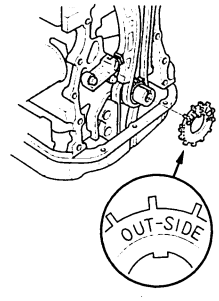
BACK

Protected by AR

22. Install the VTC oil control solenoid valve (see page 11-295).
23. Connect the CKP sensor connector and VTC oil control solenoid valve connector (see step 20 on page 6-19).
24. Install the crankshaft pulley (see page 6-12).
25. Install the cylinder head cover (see page 6-26).
26. Install the drive belt (see page 4-37).
27. Install the splash shield.
28. Install the front wheels.
29. Do the CKP pattern clear/CKP learn procedure (see page 11-4).

CKP Pulse Plate Replacement

1. Remove the front tires/wheels.
2. Remove the splash shield (see step 25 on page 13-7).
3. Remove the drive belt (see page 4-37).
4. Remove the cylinder head cover (see page 6-25).
5. Remove the crankshaft pulley (see page 6-11).
6. Disconnect the crankshaft position (CKP) sensor connector and variable valve timing control (VTC) oil control solenoid valve connector (see step 8 on page 6-13).
7. Remove the VTC oil control solenoid valve (see page 11-295).
8. Support the engine with a jack and wood block under the oil pan.
9. Remove the ground cable, and remove the upper bracket (see step 11 on page 6-13).
10. Remove the side engine mount bracket (see step 12 on page 6-13).
11. Remove the chain case (see step 13 on page 6-13).
12. Remove the CKP pulse plate.



13. Install the CKP pulse plate.
14. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal (see page 6-21).

(cont'd)

Protected by AR

CKP Pulse Plate Replacement (cont'd)

15. Remove all of the old liquid gasket from the chain case mating surfaces, bolts, and bolt holes.

16. Clean and dry the chain case mating surfaces.

17. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08717-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the chain case (see step 12 on page 6-17).

    NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.

18. Apply liquid gasket to the engine block upper surface contact areas on the chain case and lower block upper surface contact areas on the chain case (see step 13 on page 6-17).

19. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pan mating surface of the chain case (see step 14 on page 6-17).

    NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.

20. Install the new O-ring on the chain case. Set the edge of the chain case to the edge of the oil pan, then install the chain case on the engine block (see step 15 on page 6-18). Wipe off the excess liquid gasket on the oil pan and chain case mating area.

    NOTE:
    - When installing the chain case, do not slide the bottom surface on the oil pan mounting surface.
    - Wait at least 30 minutes before filling the engine with oil.
    - Do not run the engine within 3 hours after installing the chain case.

21. Install the side engine mount bracket (see step 16 on page 6-18).

22. Install the upper bracket and the ground cable (see step 17 on page 6-18).

23. Install the VTC oil control solenoid valve (see page 11-295).

24. Connect the CKP sensor connector and VTC oil control solenoid valve connector (see step 20 on page 6-19).

25. Install the crankshaft pulley (see page 6-12).

26. Install the cylinder head cover (see page 6-26).

27. Install the drive belt.

28. Install the splash shield (see step 25 on page 13-15).

29. Install the front tires/wheels.

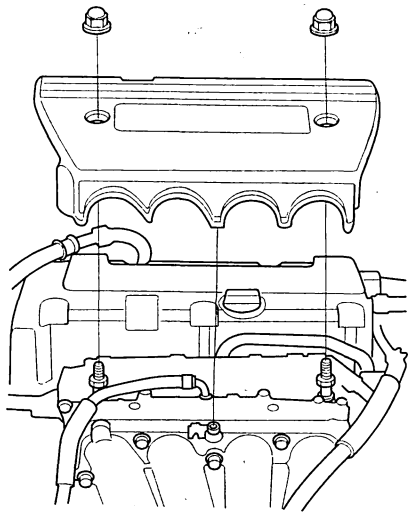
30. Do the CKP pattern clear/CKP learn procedure (see page 11-4).

BACK

Protected by AR

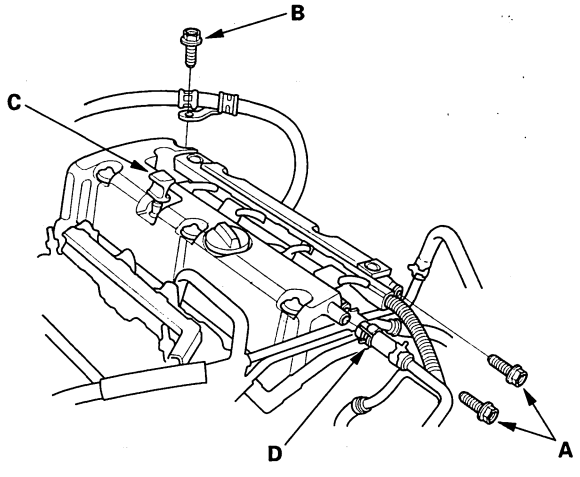
Cylinder Head Cover Removal

1. Remove the intake manifold cover.



2. Remove the four ignition coils (see page 4-25).

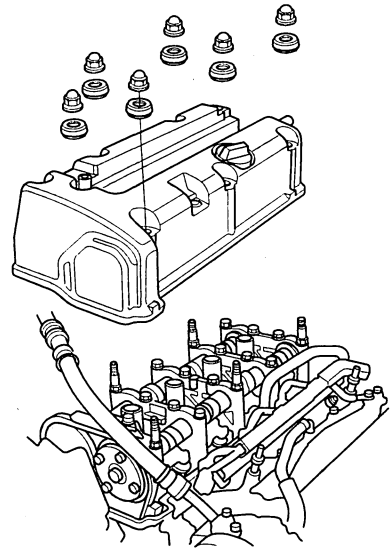
3. Remove the two bolts (A) securing the vacuum line.



4. Remove the bolt (B) securing the power steering hose bracket.

5. Remove the dipstick (C) and breather hose (D).

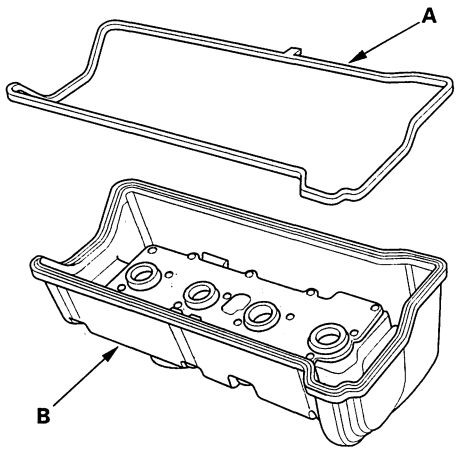
6. Remove the cylinder head cover.



Protected by AR

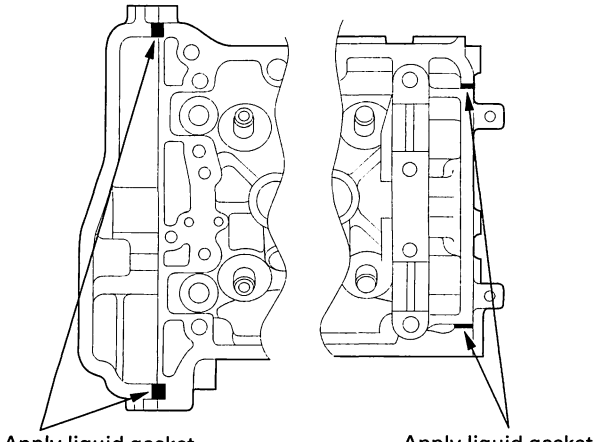
Cylinder Head Cover Installation

1. Thoroughly clean the head cover gasket and the groove.
2. Install the head cover gasket (A) in the groove of the cylinder head cover (B).



3. Check that the mating surfaces are clean and dry.
4. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, on the chain case and the No. 5 rocker shaft holder mating areas.

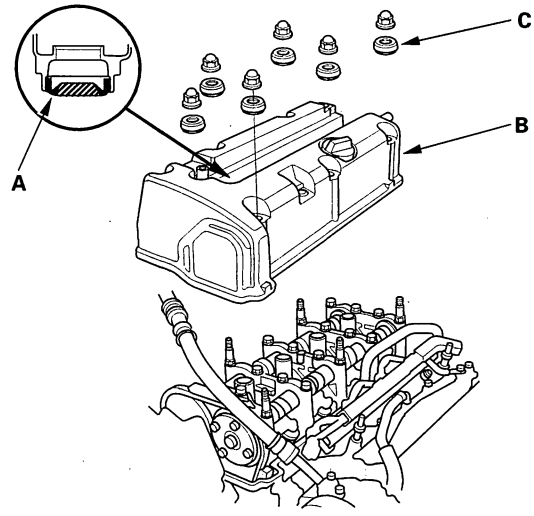
   NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.



Apply liquid gasket to these points.

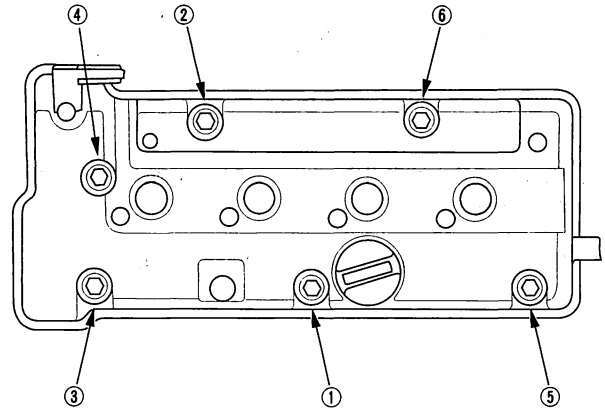
Apply liquid gasket to these points.

5. Set the spark plug seals (A) on the spark plug tubes. Place the cylinder head cover (B) on the cylinder head, then slide the cover slightly back and forth to seat the head cover gasket.



6. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
7. Tighten the bolts in two or three steps. In the final step tighten all bolts, in sequence, to 12 N·m (1.2 kgf·m, 8.7 lbf·ft).

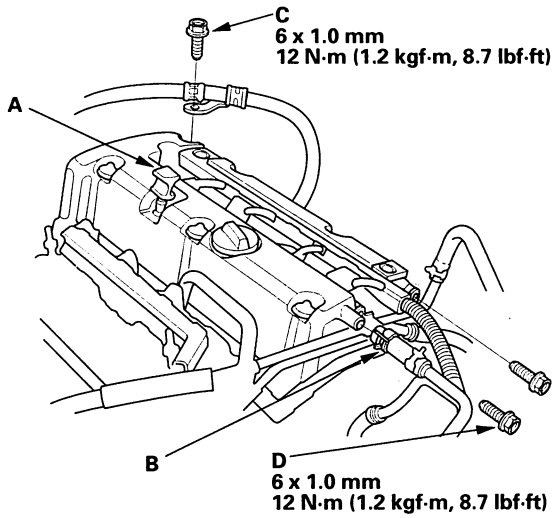
   NOTE:
   - Wait at least 30 minutes before filling the engine with oil.
   - Do not run the engine for at least 3 hours after installing the head cover.



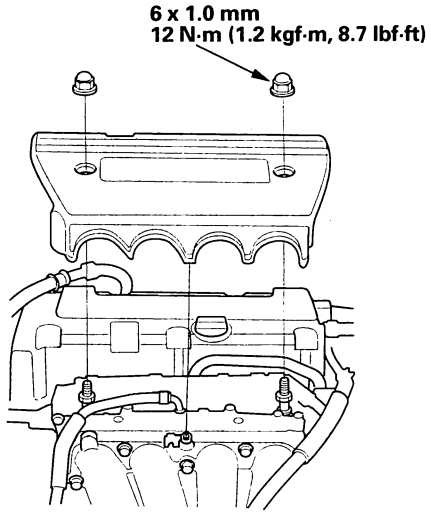
BACK

Protected by AR

8. Install the dipstick (A) and breather hose (B).



9. Tighten the bolt (C) securing the power steering hose bracket.
10. Tighten the two bolts (D) securing the vacuum line.
11. Install the four ignition coils (see page 4-25).
12. Check that all tubes, hoses, and connectors are installed correctly.
13. Install the intake manifold cover.

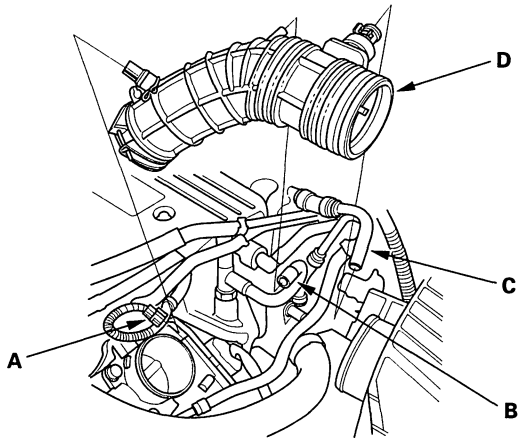


Protected by AR

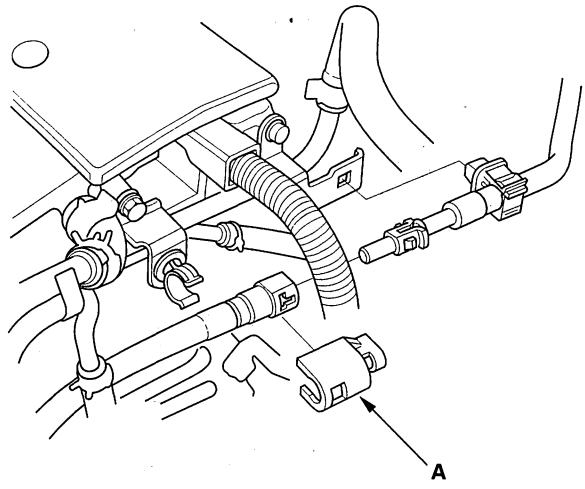
Cylinder Head Removal

NOTE:
- Use fender covers to avoid damaging painted surfaces.
- To avoid damaging the wires and terminals, unplug the wiring connectors carefully while holding the connector portion.
- To avoid damaging the cylinder head, wait until the engine coolant temperature drops below 100 °F (38 °C) before loosening the cylinder head bolts.
- Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.

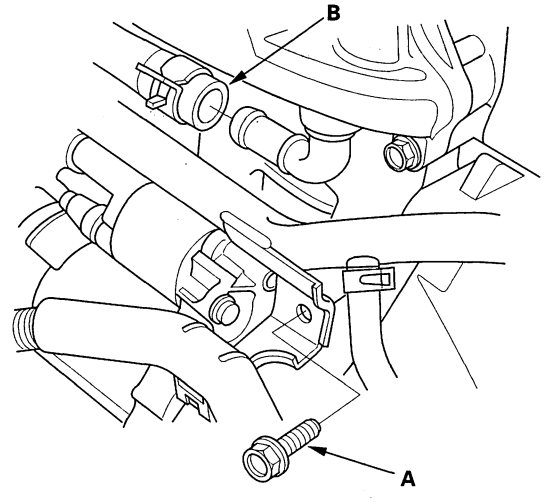
1. Relieve fuel pressure (see page 11-330).
2. Drain the engine coolant (see page 10-6).
3. Remove the drive belt (see page 4-37).
4. Disconnect the intake air temperature (IAT) sensor connector (A).



5. Remove the vacuum hose (B) and breather pipe (C), then remove the intake air duct (D).
6. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see page 11-338).



7. Remove the intake manifold:
   - 2003-2005 models (see page 9-4)
   - 2006 model (see page 9-9)
8. Remove the exhaust manifold (see page 9-14).
9. Remove the bolt (A) securing the connecting pipe.

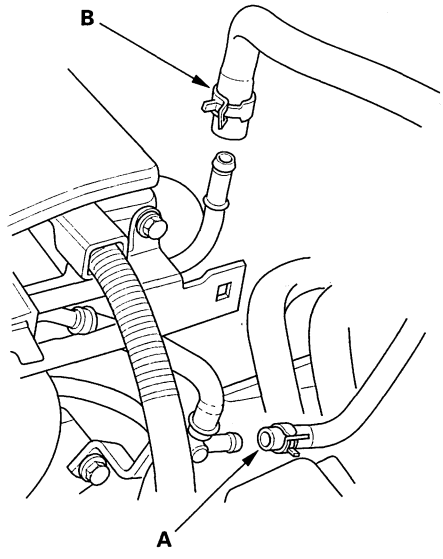


10. Remove the water bypass hose (B).

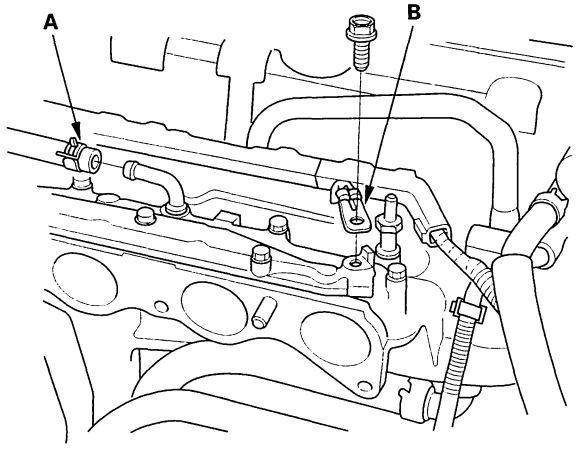
BACK

Protected by AR

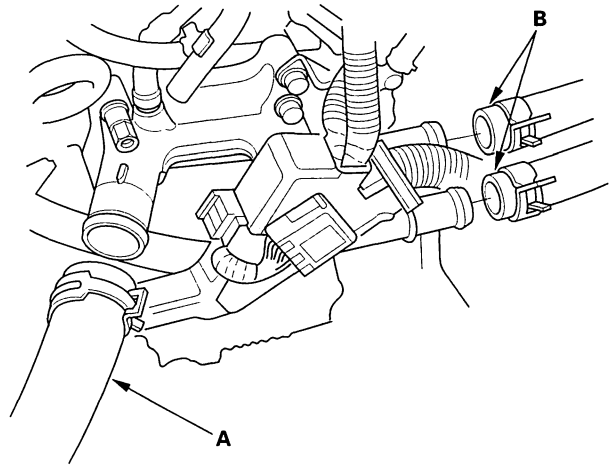
11. Remove the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).



12. Remove the positive crankcase ventilation (PCV) hose (A) and ground cable (B).



13. Remove the upper radiator hose (A) and heater hoses (B).



14. Remove the engine wire harness connectors and wire harness clamps from the cylinder head.

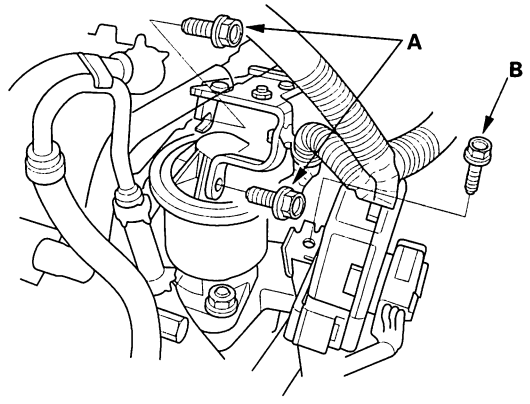
- Four injector connectors
- Engine coolant temperature (ECT) sensor connector
- Camshaft position (CMP) sensor A/B connectors
- Exhaust gas recirculation (EGR) valve connector
- Rocker arm oil control solenoid (VTEC solenoid valve) connector
- Engine oil pressure (EOP) sensor connector

(cont'd)

Protected by AR

Cylinder Head Removal (cont'd)

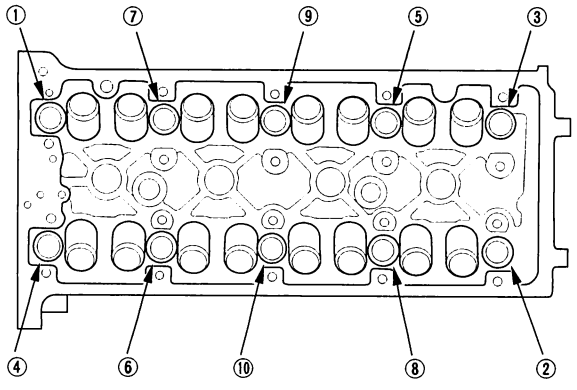
15. Remove the two bolts (A) securing the EVAP canister purge valve bracket and remove the bolt (B) securing the harness bracket.



16. Remove the cam chain (see page 6-12).

17. Remove the rocker arm assembly (see page 6-33).

18. Remove the cylinder head bolts. To prevent warpage, unscrew the bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.

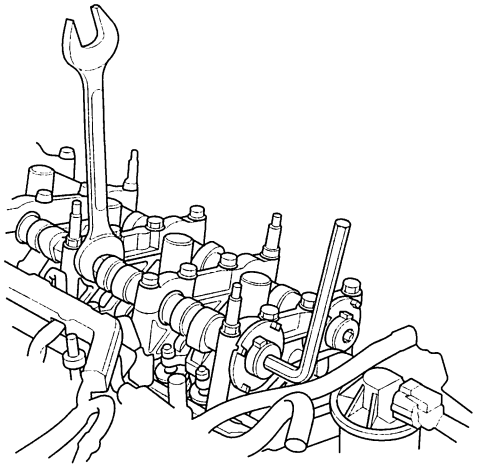


19. Remove the cylinder head.

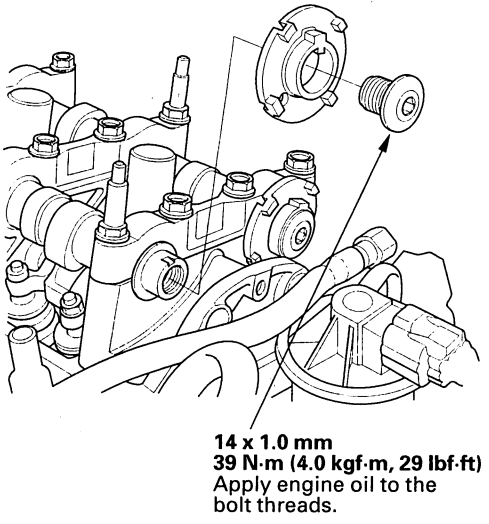
CMP Pulse Plate A Replacement

1. Remove the cylinder head cover (see page 6-25).

2. Hold the camshaft with an open-end wrench, then loosen the bolt.



3. Remove the camshaft position (CMP) pulse plate A.



14 x 1.0 mm
39 N·m (4.0 kgf·m, 29 lbf·ft)
Apply engine oil to the bolt threads.

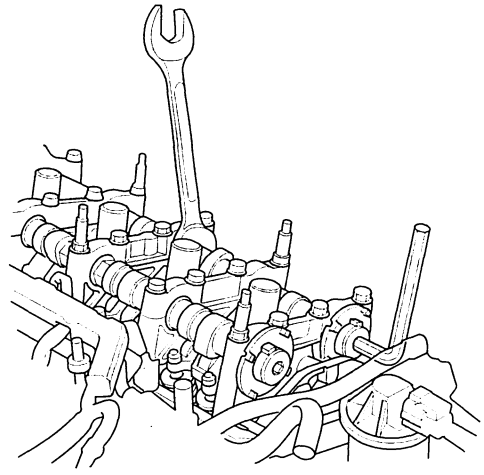
4. Install the CMP pulse plate A in the reverse order of removal.

BACK

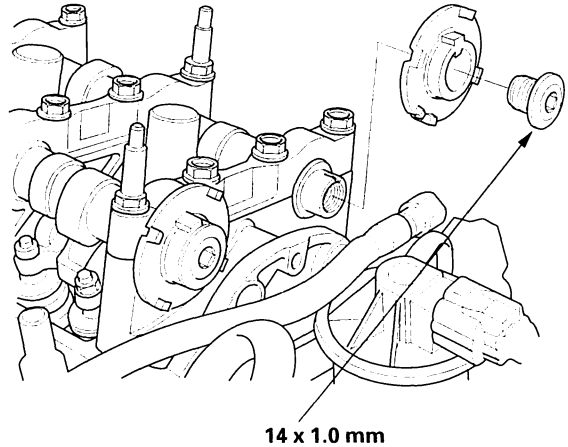
Protected by AR

CMP Pulse Plate B Replacement

1. Remove the cylinder head cover (see page 6-25).
2. Hold the camshaft with an open-end wrench, then loosen the bolt.



3. Remove the camshaft position (CMP) pulse plate B.



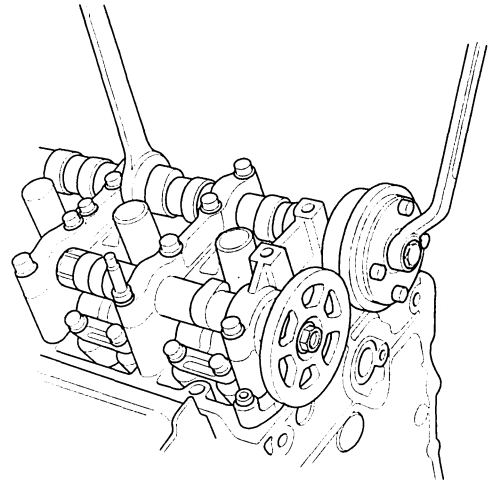
14 x 1.0 mm
39 N·m (4.0 kgf·m, 29 lbf·ft)
Apply engine oil to the bolt threads.

4. Install the CMP pulse plate B in the reverse order of removal.

VTC Actuator, Exhaust Camshaft Sprocket Removal and Installation

Removal

1. Remove the cam chain (see page 6-12).
2. Hold the camshaft with an open-end wrench, then loosen the variable valve timing control (VTC) actuator mounting bolt and exhaust camshaft sprocket mounting bolt.



3. If the VTC actuator is reused, do the following steps.
   - –1 Remove the intake camshaft, and seal the advance holes and retard holes in the No. 1 camshaft journal with tape (see step 6 on page 6-8).
   - –2 Punch a hole in the tape over one of the advance holes (see step 7 on page 6-8).
   - –3 Apply air to the advance hole to release the lock (see step 8 on page 6-9).
   - –4 Remove the tape from the No. 1 camshaft journal.
4. Remove the VTC actuator and exhaust camshaft sprocket.

(cont'd)

VTC Actuator, Exhaust Camshaft Sprocket Removal and Installation (cont'd)

Installation

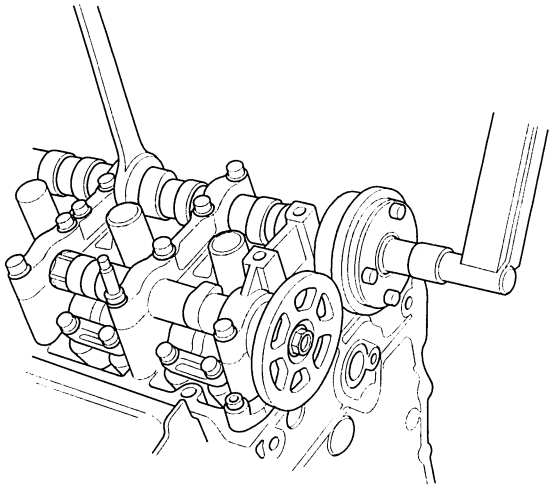
1. Install the VTC actuator and exhaust camshaft sprocket.

   NOTE: Installing the VTC actuator to unlock position.

2. Apply engine oil to the threads of the VTC actuator mounting bolt and exhaust camshaft mounting bolt, then install them.

3. Hold the camshaft with an open-end wrench, then tighten the bolts.

   Specified torque
   VTC actuator mounting bolt:
   113 N·m (11.5 kgf·m, 83 lbf·ft)
   Exhaust camshaft sprocket mounting bolt:
   72 N·m (7.3 kgf·m, 53 lbf·ft)



4. Hold the camshaft, and turn the VTC actuator clockwise until you hear it click.

5. Install the cam chain (see page 6-15).

Cylinder Head Inspection for Warpage

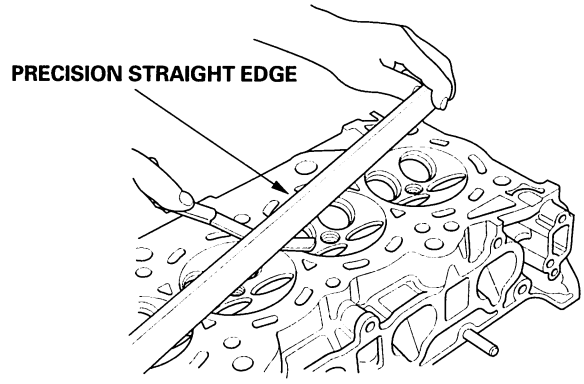
1. Remove the cylinder head (see page 6-28).

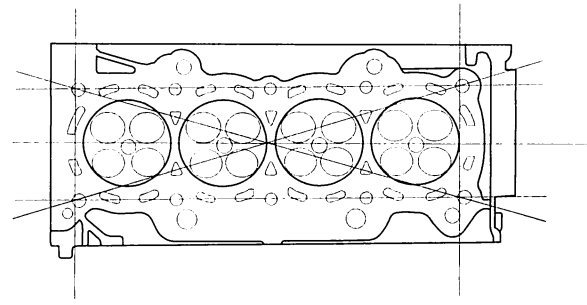
2. Inspect the camshaft (see page 6-36).

3. Check the cylinder head for warpage. Measure along the edges, and three ways across the center.

   - If warpage is less than 0.05 mm (0.002 in.) cylinder head resurfacing is not required.
   - If warpage is between 0.05 mm (0.002 in.) and 0.2 mm (0.008 in.), resurface the cylinder head.
   - Maximum resurface limit is 0.2 mm (0.008 in.) based on a height of 104 mm (4.09 in.).

   Cylinder Head Height
   Standard (New): 103.95—104.05 mm (4.093—4.096 in.)



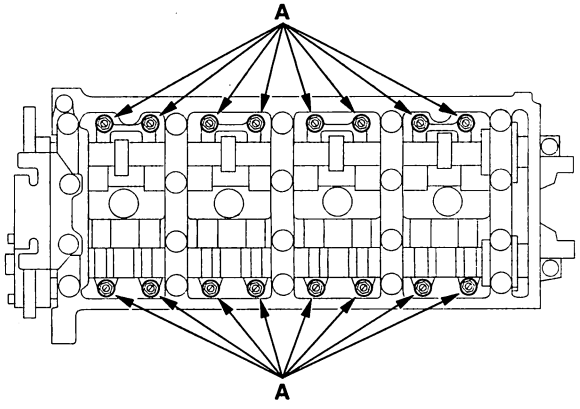


BACK

Protected by AR

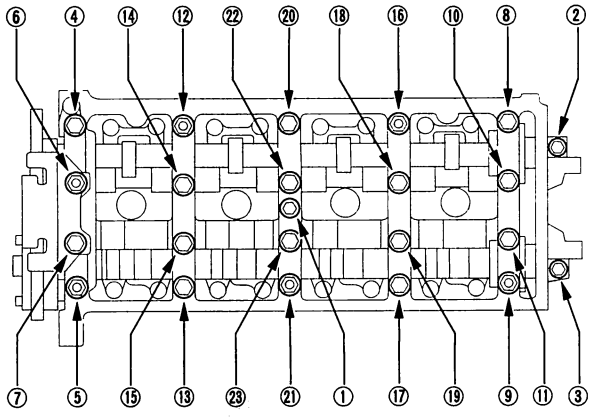
Rocker Arm Assembly Removal

1. Remove the cam chain (see page 6-12).
2. Loosen the rocker arm adjusting screws (A).

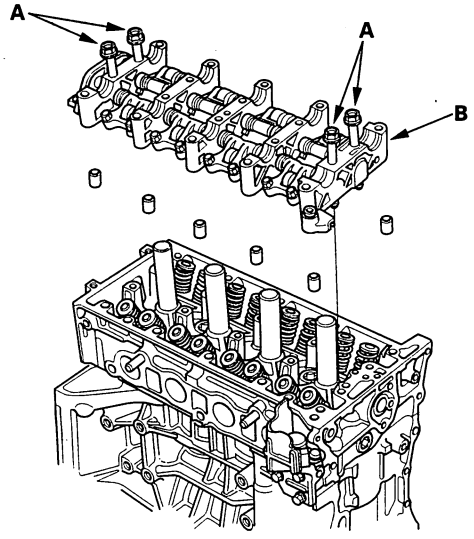


3. Remove the camshaft holder bolts. To prevent damaging the camshafts, unscrew the bolts two turns at a time, in a crisscross pattern.

   NOTE: Bolt ① is not on all engines.



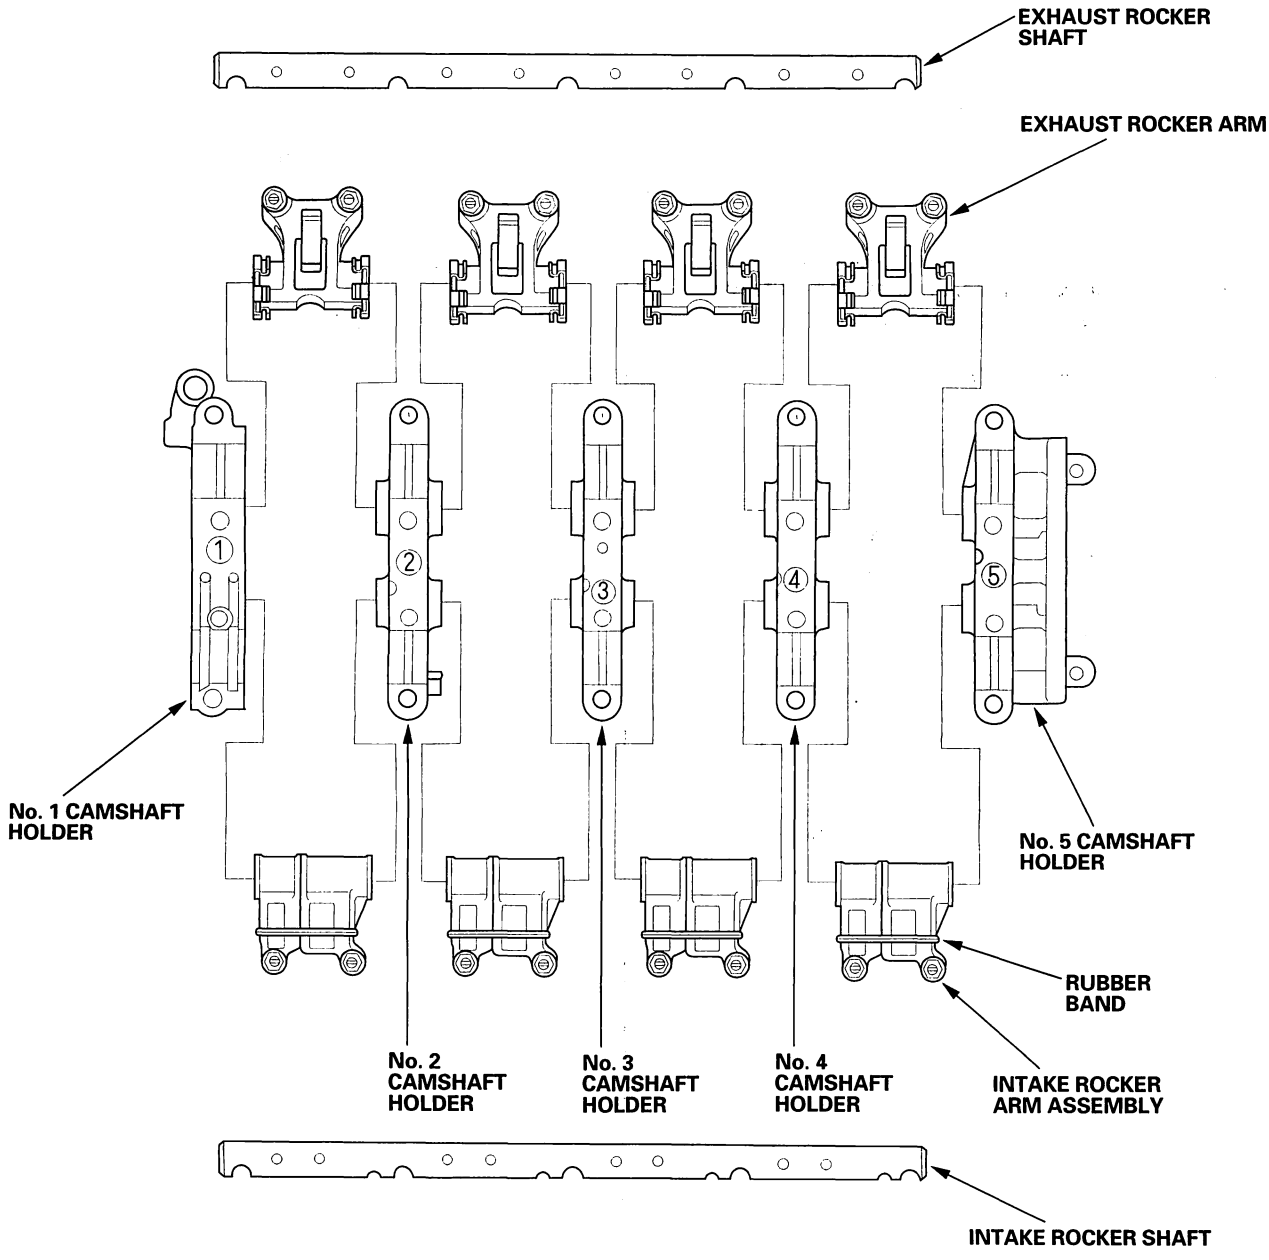
4. Remove the cam chain guide B, camshaft holders, and camshafts.
5. Insert the bolts (A) into the rocker shaft holder, then remove the rocker arm assembly (B).



Protected by AR

Rocker Arm and Shaft Disassembly/Reassembly

NOTE:
- Identify parts as they are removed to ensure reinstallation in original location.
- Inspect the rocker arm shaft and rocker arms (see page 6-35).
- The rocker arms must be installed in the same positions if reused.
- When removing or installing the rocker arm assembly, do not remove the camshaft holder bolts. The bolts will keep the holders and rocker arms on the shaft.
- Prior to reassembling, clean all the parts in solvent, dry them, and apply lubricant to any contact points.
- Bundle the intake rocker arms with rubber bands to keep them together as a set.
- When replacing the intake rocker arm assembly, remove the fastening hardware from the new intake rocker arm assembly.



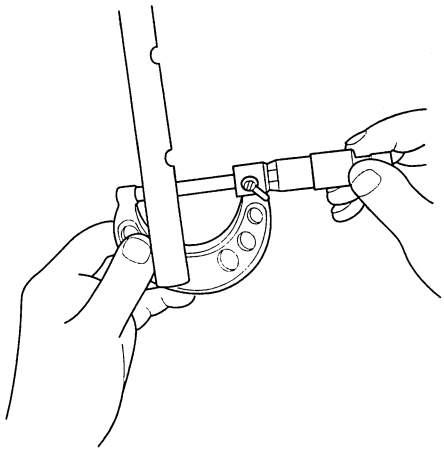
BACK

Protected by AR

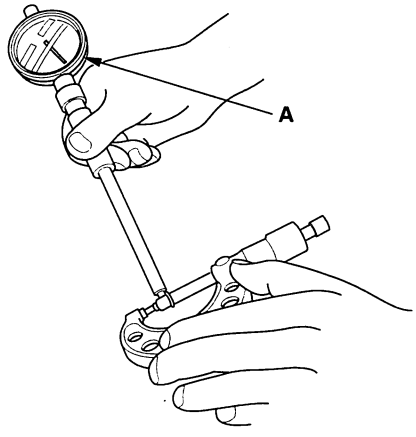
Rocker Arm and Shaft Inspection

1. Remove the rocker arm assembly (see page 6-33), then disassemble the rocker arm assembly (see page 6-34).

2. Measure the diameter of the shaft at the first rocker location.



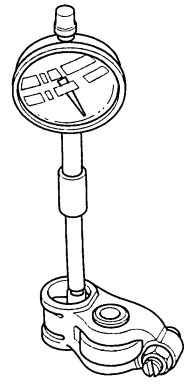
3. Zero the gauge (A) to the shaft diameter.



4. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

Rocker Arm-to-Shaft Clearance
Standard (New):

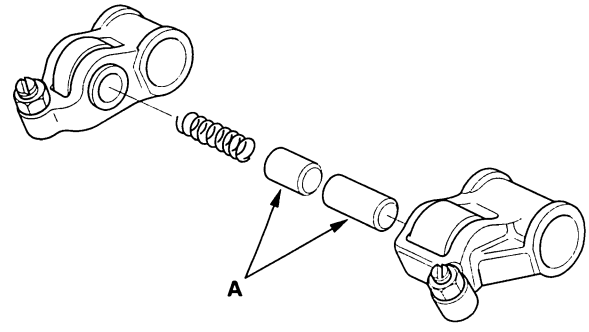
Intake:	**0.025—0.052 mm (0.0010—0.0020 in.)**
Exhaust:	**0.018—0.056 mm (0.0007—0.0022 in.)**
Service Limit:	**0.08 mm (0.003 in.)**



5. Repeat for all rocker arms and both shafts. If the clearance is over the limit, replace the rocker shaft and all overtolerance rocker arms. If any VTEC rocker arm needs replacement, replace the rocker arms (primary and secondary) as a set.

6. Inspect the rocker arm pistons (A). Push each piston manually. If it does not move smoothly, replace the rocker arm set.

   NOTE: Apply oil to the pistons when reassembling.



7. Install the rocker arm assembly (see page 6-45).

Protected by AR

Camshaft Inspection

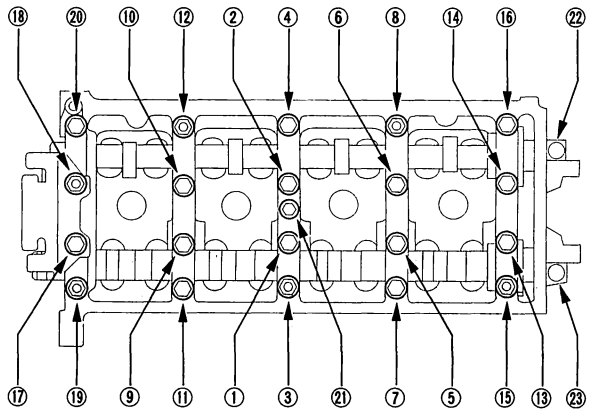
NOTE: Do not rotate the camshaft during inspection.

1. Remove the rocker arm assembly (see page 6-33).

2. Put the rocker shaft holders, camshaft and camshaft holders on the cylinder head, then tighten the bolts to the specified torque.

   NOTE: If the engine does not have bolt ㉑, skip it and continue the torque sequence.

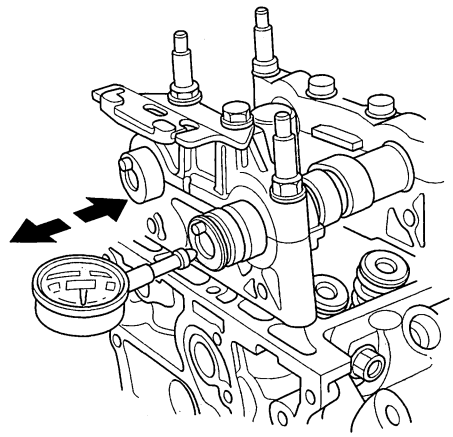
   Specified torque
   8 mm bolts: 22 N·m (2.2 kgf·m, 16 lbf·ft)
   6 mm bolts: 12 N·m (1.2 kgf·m, 8.7 lbf·ft)
   6 mm bolts: ㉑, ㉒, ㉓



3. Seat the camshaft by pushing it away from the camshaft pulley end of the cylinder head.

4. Zero the dial indicator against the end of the camshaft, then push the camshaft back and forth and read the end play. If the end play is beyond the service limit, replace the cylinder head and recheck. If it is still beyond the service limit, replace the camshaft.

   Camshaft End Play
   Standard (New): 0.05—0.20 mm (0.002—0.008 in.)
   Service Limit: 0.4 mm (0.02 in.)



BACK

Protected by AR

5. Unscrew the camshaft holder bolts two turns at a time, in a crisscross pattern. Then remove the camshaft holders from the cylinder head.

6. Lift the camshafts out of the cylinder head, wipe them clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.

7. Clean the camshaft journal surfaces in the cylinder head, then set the camshafts back in place. Place a plastigage strip across each journal.

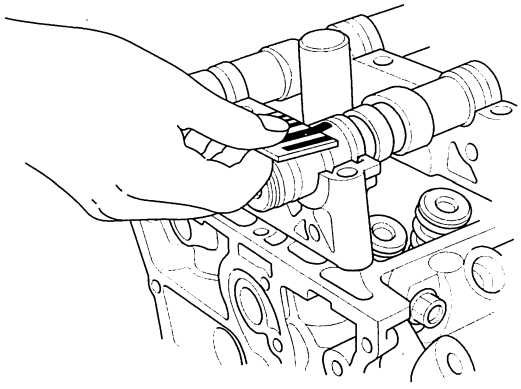
8. Install the camshaft holders, then tighten the bolts to the specified torque as shown in step 2.

9. Remove the camshaft holders. Measure the widest portion of plastigage on each journal.

   - If the camshaft-to-holder clearance is within limits, go to step 11.
   - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has been replaced, replace the cylinder head.
   - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has not been replaced, go to step 10.

Camshaft-to-Holder Oil Clearance
Standard (New):

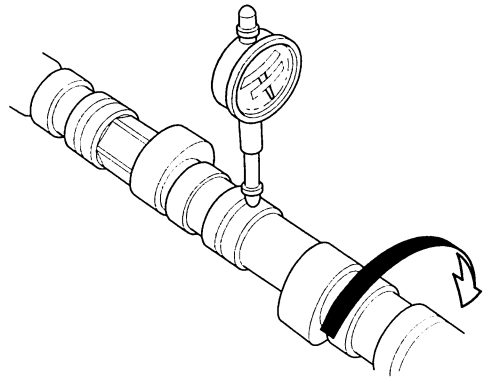
No. 1 Journal:	**0.030—0.069 mm (0.001—0.003 in.)**
No. 2, 3, 4, 5 Journals:	**0.060—0.099 mm (0.002—0.004 in.)**
Service Limit:	**0.15 mm (0.006 in.)**



10. Check the total runout with the camshaft supported on V-blocks.

    - If the total runout of the camshaft is within the service limit, replace the cylinder head.
    - If the total runout is beyond the service limit, replace the camshaft and recheck the camshaft-to-holder oil clearance. If the oil clearance is still beyond the service limit, replace the cylinder head.

Camshaft Total Runout
Standard (New): 0.03 mm (0.001 in.) max.
Service Limit: 0.04 mm (0.002 in.)

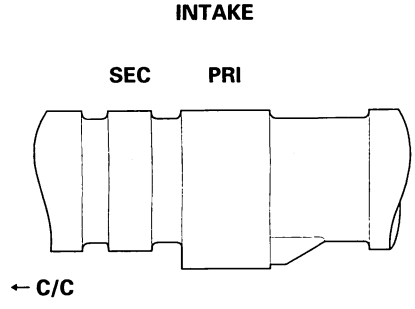


11. Measure cam lobe height.

Cam Lobe Height Standard (New):

	INTAKE	EXHAUST
PRI	33.925 mm (1.3356 in.)	34.092 mm (1.3422 in.)
SEC	29.638 mm (1.1668 in.)	

PRI: Primary SEC: Secondary C/C: Cam Chain



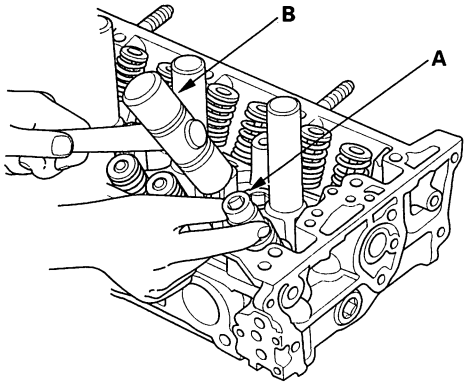
Protected by AR

Valve, Spring, and Valve Seal Removal

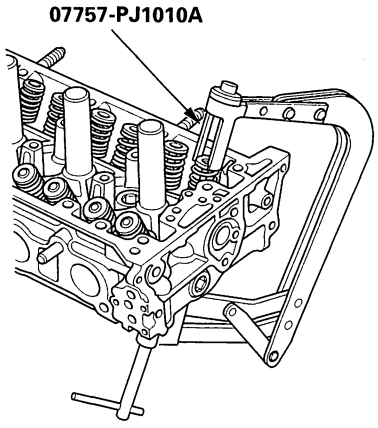
Special Tools Required
Valve spring compressor attachment 07757-PJ1010A

Identify the valves and valve springs as they are removed so that each item can be reinstalled in its original position.

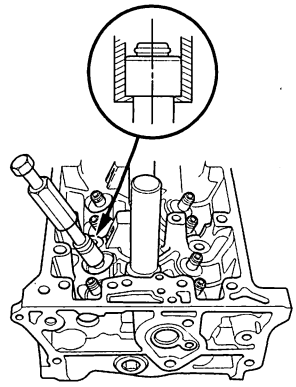
1. Remove the cylinder head (see page 6-28).
2. Using an appropriate-sized socket (A) and plastic mallet (B), lightly tap the valve retainer to loosen the valve cotters.



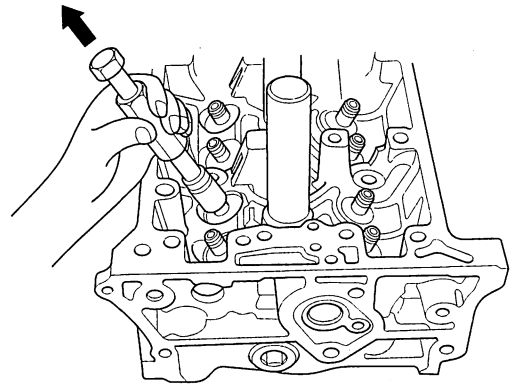
3. Install the spring compressor. Compress the spring, and remove the valve cotters.



4. Remove the special tool, then remove the valve retainer and valve spring.
5. Install the valve guide seal remover.



6. Remove the valve seal.



BACK

Protected by AR

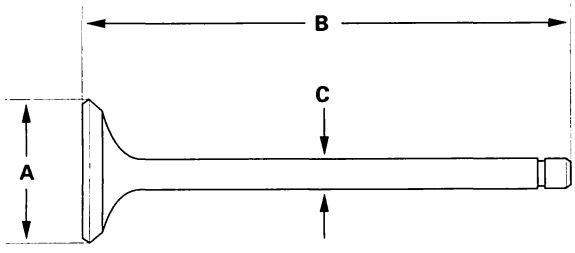
Valve Inspection

1. Remove the valves (see page 6-38).

2. Measure the valve in these areas.

Intake Valve Dimensions
A Standard (New): 34.85—35.15 mm (1.372—1.384 in.)
B Standard (New): 108.7—109.5 mm (4.280—4.311 in.)
C Standard (New): 5.475—5.485 mm (0.2156—0.2159 in.)
C Service Limit: 5.445 mm (0.214 in.)

Exhaust Valve Dimensions
A Standard (New): 29.85—30.15 mm (1.175—1.187 in.)
B Standard (New): 108.3—109.1 mm (4.264—4.295 in.)
C Standard (New): 5.450—5.460 mm (0.2146—0.2150 in.)
C Service Limit: 5.42 mm (0.213 in.)



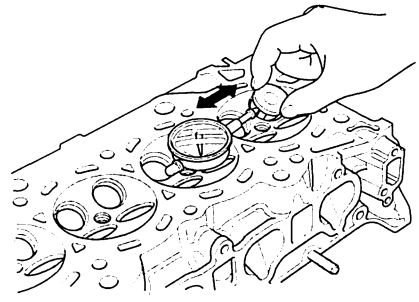
Valve Stem-to-Guide Clearance Inspection

1. Remove the valves (see page 6-38).

2. Slide the valve out of its guide about 10 mm (0.39 in.), then measure the guide-to-stem clearance with a dial indicator while rocking the stem in the direction of normal thrust (wobble method).
   - If the measurement exceeds the service limit, recheck it using a new valve.
   - If the measurement is now within the service limit, reassemble using a new valve.
   - If the measurement with a new valve still exceeds the service limit, go to step 3.

Intake Valve Stem-to-Guide Clearance
Standard (New): 0.06—0.11 mm (0.002—0.004 in.)
Service Limit: 0.16 mm (0.006 in.)

Exhaust Valve Stem-to-Guide Clearance
Standard (New): 0.11—0.16 mm (0.004—0.006 in.)
Service Limit: 0.22 mm (0.009 in.)



3. Subtract the O.D. of the valve stem, measured with a micrometer, from the I.D. of the valve guide, measured with an inside micrometer or ball gauge. Take the measurements in three places along the valve stem and three places inside the valve guide. The difference between the largest guide measurement and the smallest stem measurement should not exceed the service limit.

Intake Valve Stem-to-Guide Clearance
Standard (New): 0.030—0.055 mm (0.0012—0.0022 in.)
Service Limit: 0.08 mm (0.003 in.)

Exhaust Valve Stem-to-Guide Clearance
Standard (New): 0.055—0.080 mm (0.0022—0.0031 in.)
Service Limit: 0.11 mm (0.004 in.)

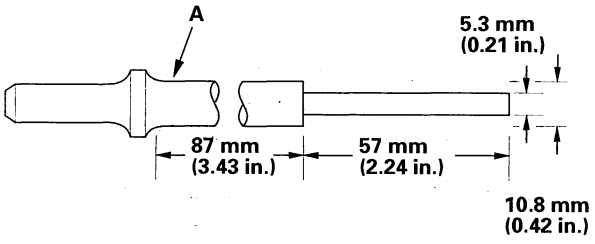
Protected by AR

Valve Guide Replacement

Special Tools Required
- Valve guide driver, 5.5 mm 07742-0010100
- Valve guide reamer, 5.5 mm 07HAH-PJ7010B

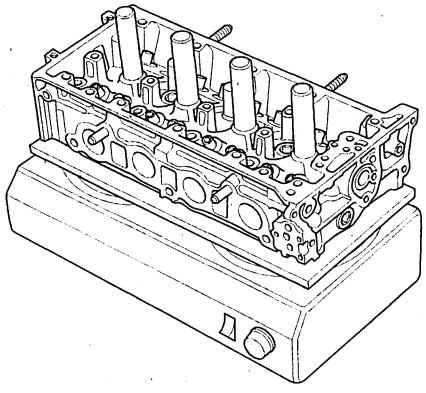
1. Inspect valve stem-to-guide clearance (see page 6-39).

2. As illustrated, use a commercially available air-impact valve guide driver (A) modified to fit the diameter of the valve guides. In most cases, the same procedure can be done using the special tool and a conventional hammer.



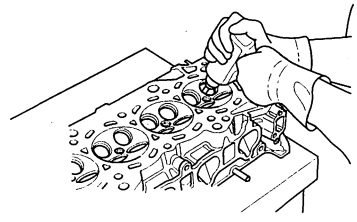
3. Select the proper replacement guides, and chill them in the freezer section of a refrigerator for about an hour.

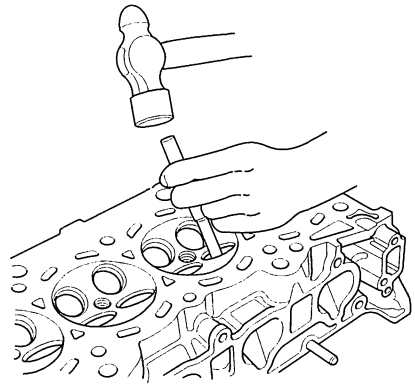
4. Use a hot plate or oven to evenly heat the cylinder head to 300 °F (150 °C). Monitor the temperature with a cooking thermometer. Do not get the head hotter than 300 °F (150 °C); excessive heat may loosen the valve seats.



5. Working from the camshaft side, use the driver and an air hammer to drive the guide about 2 mm (0.1 in.) towards the combustion chamber. This will knock off some of the carbon and make removal easier. Hold the air hammer directly in line with the valve guide to prevent damaging the driver. Wear safety goggles or a face shield.

6. Turn the head over, and drive the guide out toward the camshaft side of the head.





7. If a valve guide won't move, drill it out with a 8 mm (5/16 in.) bit, then try again. Drill guides only in extreme cases; you could damage the cylinder head if the guide breaks.

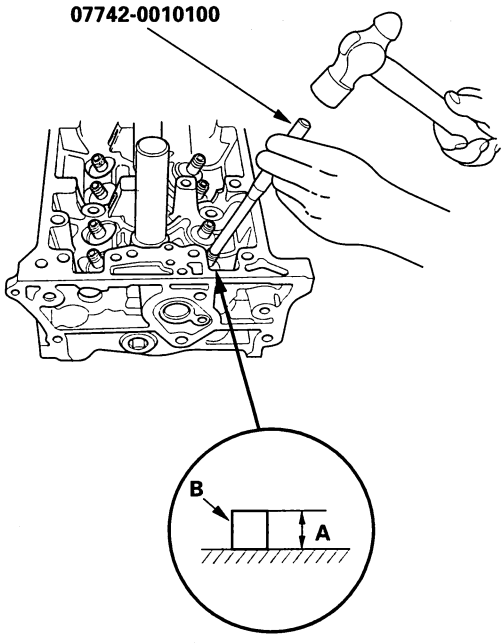
8. Take out the new guide(s) from the freezer, one at a time, as you need them.

BACK

Protected by AR

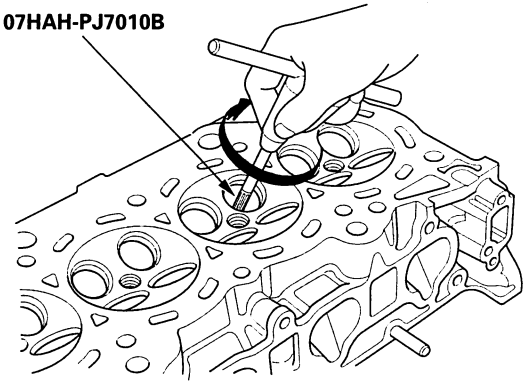
9. Apply a thin coat of clean engine oil to the outside of the new valve guide. Install the guide from the camshaft side of the head; use the special tool to drive the guide in to the specified installed height (A) of the guide (B). If you have all 16 guides to do, you may have to reheat the head.

Valve Guide Installed Height
Intake: 15.2—16.2 mm (0.598—0.638 in.)
Exhaust: 15.5—16.5 mm (0.610—0.650 in.)



10. Coat both reamer and valve guide with cutting oil.

11. Rotate the reamer clockwise the full length of the valve guide bore.



12. Continue to rotate the reamer clockwise while removing it from the bore.

13. Thoroughly wash the guide in detergent and water to remove any cutting residue.

14. Check the clearances with a valve (see page 6-39). Verify that a valve slides in the intake and exhaust valve guides without exerting pressure.

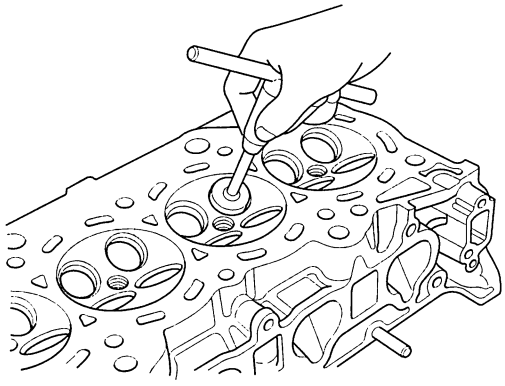
15. Inspect the valve seating, if necessary renew the valve seat using a valve seat cutter (see page 6-42).

Protected by AR

Valve Seat Reconditioning

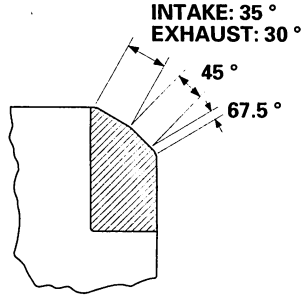
1. Inspect valve stem-to-guide clearance (see page 6-39). If the valve guides are worn, replace them (see page 6-40) before cutting the valve seats.

2. Renew the valve seats in the cylinder head using a valve seat cutter.



3. Carefully cut a 45 ° seat, removing only enough material to ensure a smooth and concentric seat.

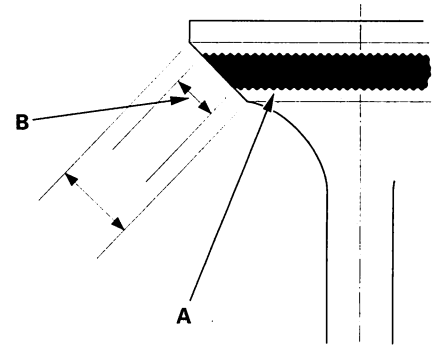
4. Bevel the upper and lower edges at the angles shown in the illustration. Check the width of the seat and adjust accordingly.



5. Make one more very light pass with the 45 ° cutter to remove any possible burrs caused by the other cutters.

Valve Seat Width
Standard (New): 1.25—1.55 mm (0.049—0.061 in.)
Service Limit: 2.00 mm (0.079 in.)

6. After resurfacing the seat, inspect for even valve seating. Apply Prussian Blue compound (A) to the valve face. Insert the valve in its original location in the head, then lift it and snap it closed against the seat several times.



7. The actual valve seating surface (B), as shown by the blue compound, should be centered on the seat.

   - If it is too high (closer to the valve stem), you must make a second cut with the 67.5 ° cutter to move it down, then one more cut with the 45 ° cutter to restore seat width.
   - If it is too low (close to the valve edge), you must make a second cut with the 35 ° cutter (intake side) or the 30 ° cutter (exhaust side) to move it up, then make one more cut with the 45 ° cutter to restore seat width.

   NOTE: The final cut should always be made with the 45 ° cutter.

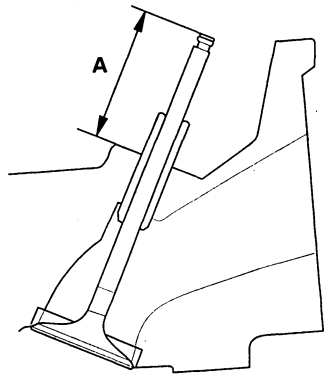
BACK

Protected by AR

8. Insert the intake and exhaust valves in the head, and measure valve stem installed height (A).

Intake Valve Stem Installed Height
Standard (New): 44.0—44.5 mm (1.73—1.75 in.)
Service Limit: 44.7 mm (1.76 in.)

Exhaust Valve Stem Installed Height
Standard (New): 44.1—44.6 mm (1.74—1.76 in.)
Service Limit: 44.8 mm (1.76 in.)



9. If valve stem installed height is over the service limit, replace the valve and recheck. If it is still over the service limit, replace the cylinder head; the valve seat in the head is too deep.

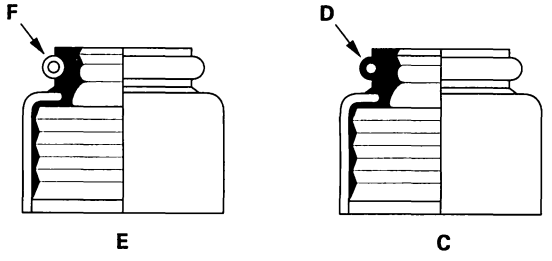
Protected by AR

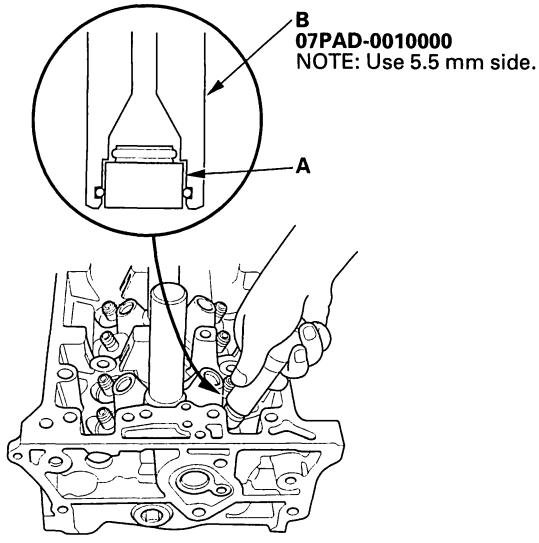
Valve, Spring, and Valve Seal Installation

Special Tools Required
- Stem seal driver 07PAD-0010000
- Valve spring compressor attachment 07757-PJ1010A

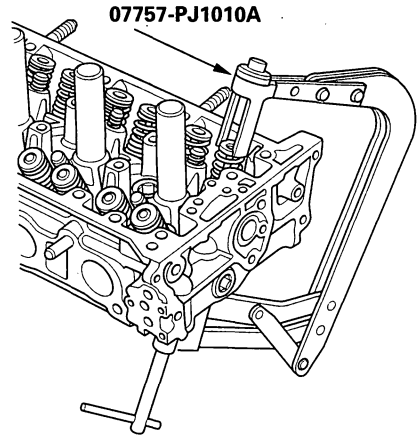
1. Coat the valve stems with new engine oil. Install the valves in the valve guides.
2. Check that the valves move up and down smoothly.
3. Install the spring seats on the cylinder head.
4. Install the new valve seals (A) using the stem seal driver (B).

   NOTE: The exhaust valve seal (C) has a black spring (D), and the intake valve seal (E) has a white spring (F). They are not interchangeable.

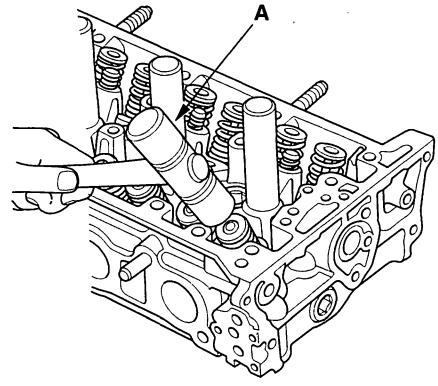




5. Install the valve spring. Place the end of the valve spring with closely wound coils toward the cylinder head.
6. Install the valve retainer.
7. Install the valve spring compressor. Compress the spring, and install the valve cotters.



8. Lightly tap the end of each valve stem two or three times with a plastic mallet (A) to ensure proper seating of the valve and valve cotters. Tap the valve stem only along its axis so you do not bend the stem.



BACK

Protected by AR

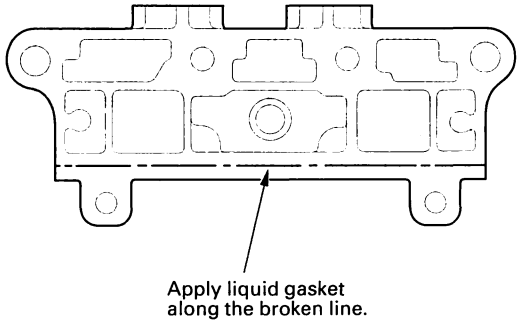
Rocker Arm Assembly Installation

1. Reassemble the rocker arm assembly (see page 6-34).

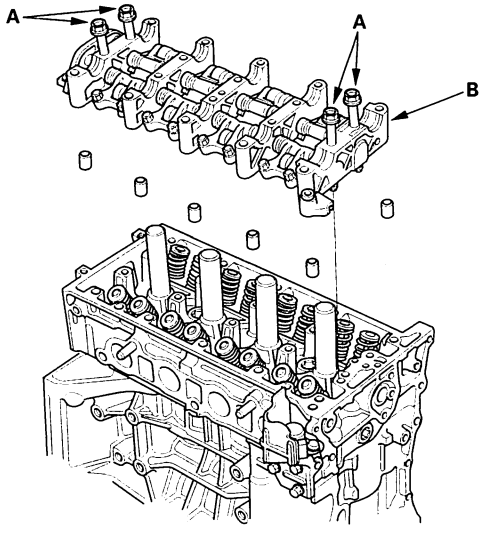
2. Clean and dry the No. 5 rocker shaft holder mating surface.

3. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the cylinder head mating surface of the No. 5 rocker shaft holder.

   NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.

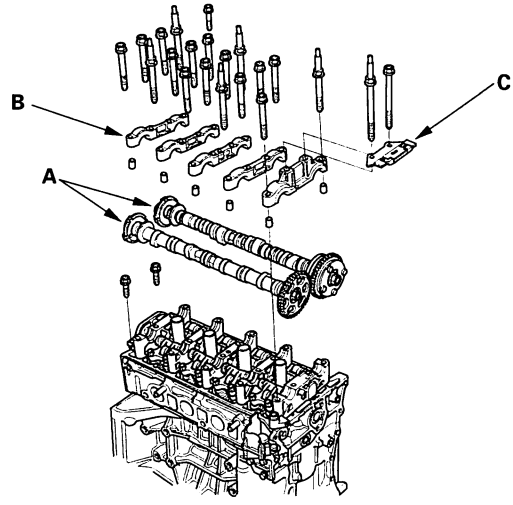


4. Insert the bolts (A) into the rocker shaft holder, then install the rocker arm assembly (B) on the cylinder head.



5. Remove the bolts from the rocker shaft holder.

6. Make sure the punch marks on the variable valve timing control (VTC) actuator and exhaust camshaft sprocket are facing up, then set the camshafts (A) in the holder.

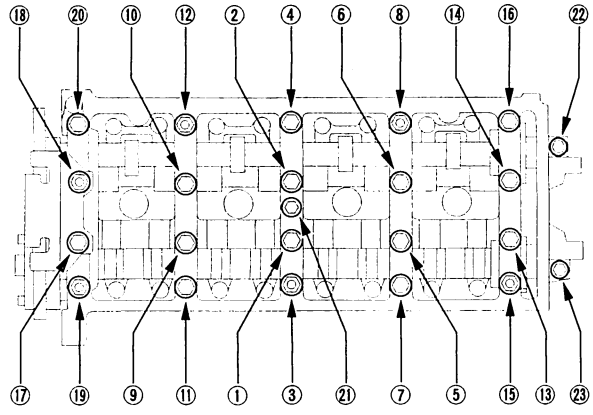


7. Set the camshaft holders (B) and cam chain guide B (C) in place.

8. Tighten the bolts in sequence to the specified torque.

   NOTE: If the engine does not have bolt ㉑, skip it and continue the torque sequence.

   Specified torque
   8 mm bolts: 22 N·m (2.2 kgf·m, 16 lbf·ft)
   6 mm bolts: 12 N·m (1.2 kgf·m, 8.7 lbf·ft)
   6 mm bolts: ㉑, ㉒, ㉓



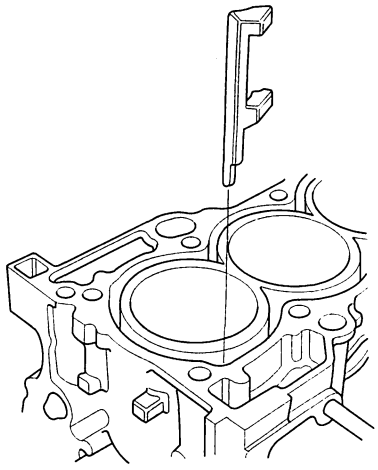
9. Install the cam chain (see page 6-15), and adjust the valve clearance (see page 6-9).

Protected by AR

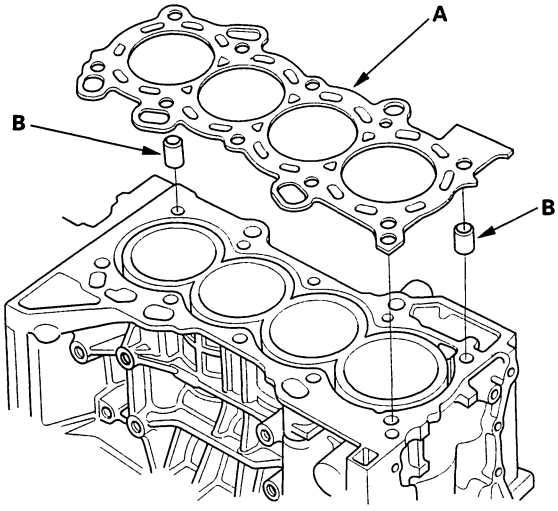
Cylinder Head Installation

Install the cylinder head in the reverse order of removal.

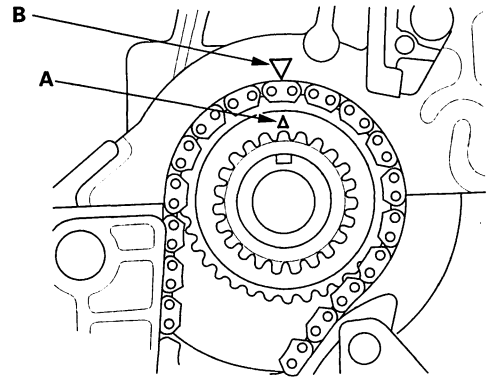
1. Install the new coolant separator in the engine block, when replacing the engine block.



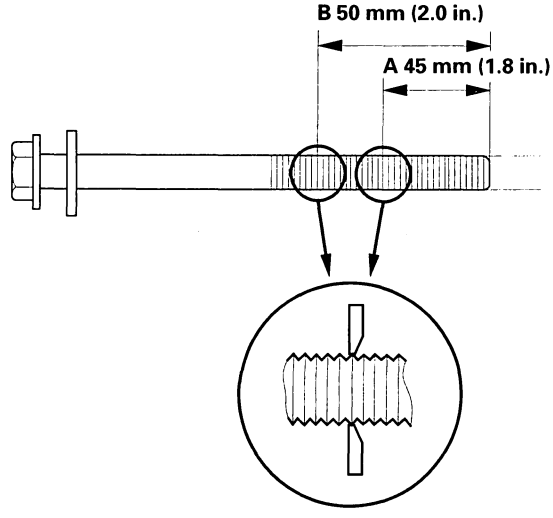
2. Clean the cylinder head and engine block surface.
3. Install the new cylinder head gasket (A) and dowel pins (B) on the engine block. Always use a new cylinder head gasket.



4. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.



5. Install the cylinder head on the engine block.
6. Measure the diameter of each cylinder head bolt at point A and point B.



7. If either diameter is less than 10.6 mm (0.42 in.), replace the cylinder head bolt.

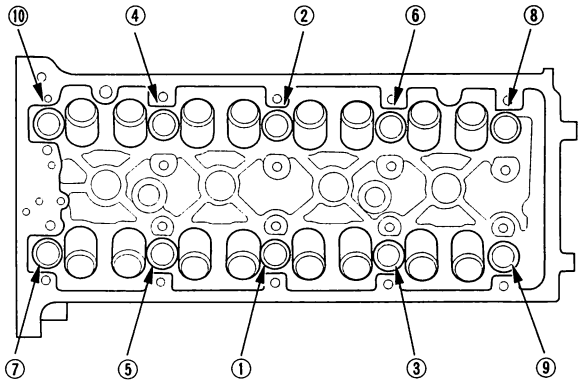
BACK

Protected by AR

8. Apply new engine oil to the threads and flange of all cylinder head bolts.

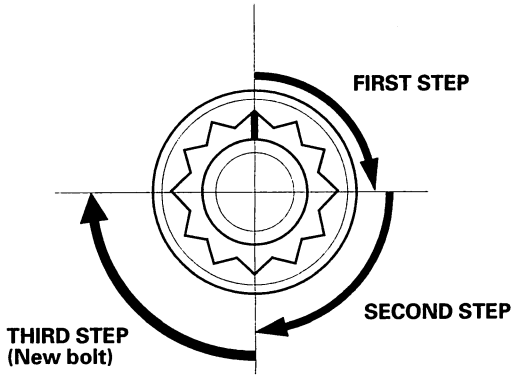
9. Tighten the cylinder head bolts in sequence to 39 N·m (4.0 kgf·m, 29 lbf·ft). Use a beam-type torque wrench. When using a preset-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

Specified Toque: 39 N·m (4.0 kgf·m, 29 lbf·ft)



10. After torquing, tighten all cylinder head bolts in two steps (90 ° per step). If you are using a new cylinder head bolt, tighten the bolt an extra 90 °.

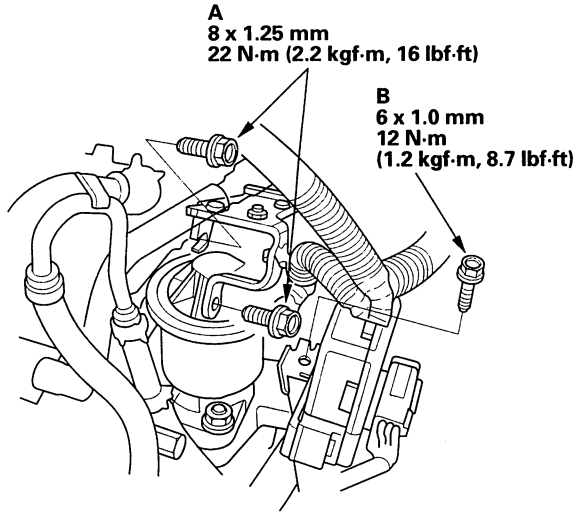
NOTE: Remove the cylinder head bolt if you tightened it beyond the specified angel, and go back to step 6 of the procedure. Do not loosen it back to the specified angel.



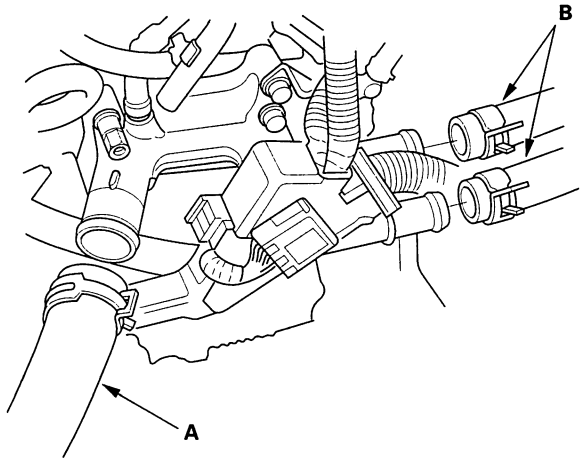
11. Install the rocker arm assembly (see page 6-45).

12. Install the cam chain (see page 6-15).

13. Tighten the two bolts (A) securing the evaporative emission (EVAP) canister purge valve bracket and tighten the bolt (B) securing the harness brackets.



14. Install the upper radiator hose (A) and heater hoses (B).

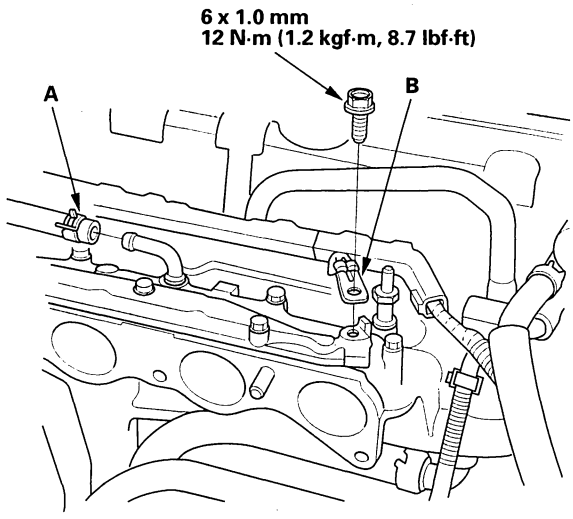


(cont'd)

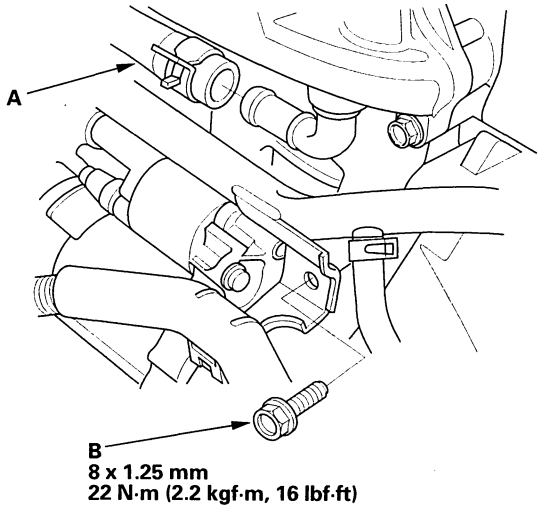
Protected by AR

Cylinder Head Installation (cont'd)

15. Install the positive crankcase ventilation (PCV) hose (A) and ground cable (B).



16. Install the water bypass hose (A).

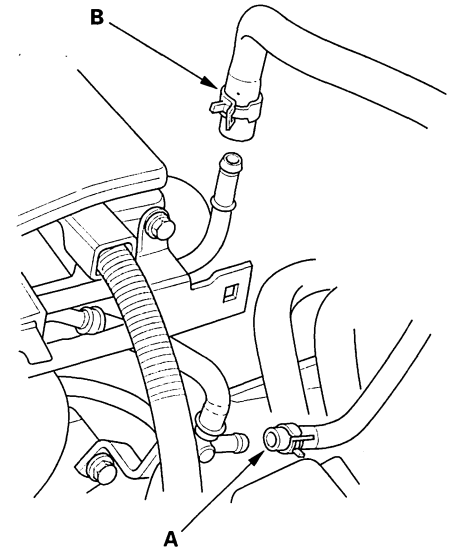


17. Tighten the bolt (B) securing the connecting pipe.

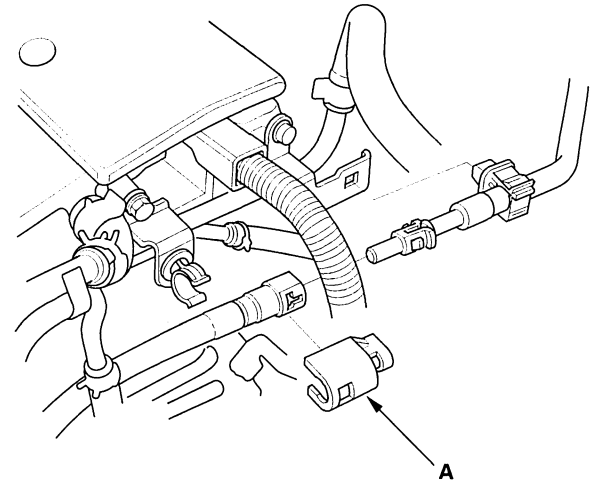
18. Install the exhaust manifold (see page 9-14).

19. Install the intake manifold (see page 9-11).

20. Install the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).



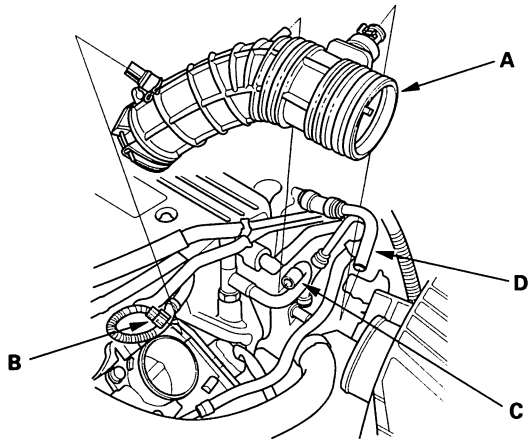
21. Connect the fuel feed hose (see page 11-340), then install the quick-connect fitting cover (A). Make sure the connector engages fully.



BACK

Protected by AR

22. Install the intake air duct (A), then connect the intake air temperature (IAT) sensor connector (B), and install the vacuum hose (C) and breather pipe (D).



23. After installation, check that all tubes, hoses, and connectors are installed correctly.

24. Inspect for fuel leaks. Turn the ignition switch ON (II) (do not operate the starter) so that the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation two or three times, then check for fuel leakage at any point in the fuel line.

25. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see page 10-6).

26. Do the power window control unit reset procedure (see page 22-232).

27. Inspect the idle speed (see page 11-315).

28. Inspect the ignition timing (see page 4-24).

29. Set the clock.

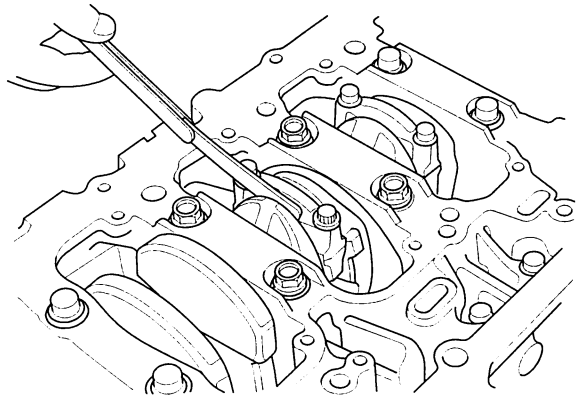
Connecting Rod and Crankshaft End Play Inspection

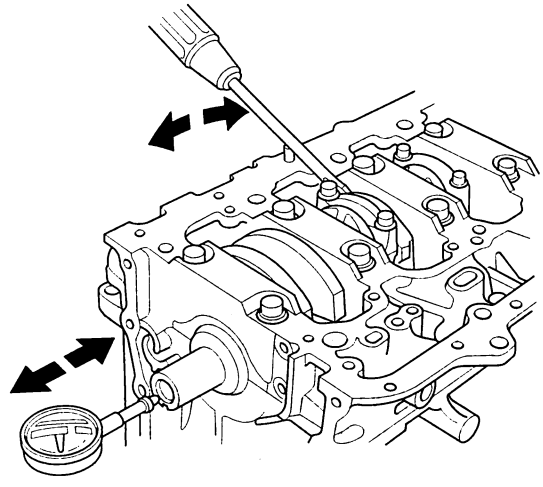
1. Remove the oil pump (see page 8-10).
2. Remove the baffle plates (see step 8 on page 7-13).
3. Measure the connecting rod end play with a feeler gauge between the connecting rod and crankshaft.

   Connecting Rod End Play
   Standard (New): 0.15—0.35 mm (0.006—0.014 in.)
   Service Limit: 0.40 mm (0.016 in.)



4. If the connecting rod end play is out-of-tolerance, install a new connecting rod, and recheck. If it is still out-of-tolerance; replace the crankshaft (see step 9 on page 7-13).
5. Push the crankshaft firmly away from the dial indicator, and zero the dial against the end of the crankshaft. Then pull the crankshaft firmly back toward the indicator; the dial reading should not exceed the service limit.

   Crankshaft End Play
   Standard (New): 0.10—0.35 mm (0.004—0.014 in.)
   Service Limit: 0.45 mm (0.018 in.)



6. If the end play is out-of-tolerance, replace the thrust washers and recheck, if it is still out-of-tolerance, replace the crankshaft (see step 9 on page 7-13).

Protected by AR

Crankshaft Main Bearing Replacement

Main Bearing Clearance Inspection

1. To check main bearing-to-journal oil clearance, remove the lower block and bearing halves (see page 7-13).

2. Clean each main journal and bearing half with a clean shop towel.

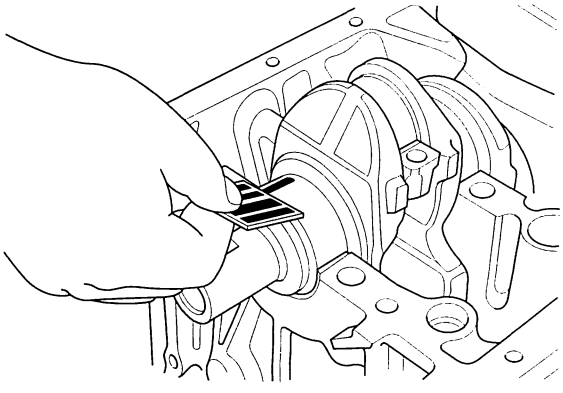
3. Place one strip of plastigage across each main journal.

4. Reinstall the bearing half and lower block, then torque the bolts to 29 N·m (3.0 kgf·m, 22 lbf·ft) + 56 ° in the proper sequence (see step 18 on page 7-27).

   NOTE: Do not rotate the crankshaft during inspection.

5. Remove the lower block and bearing half again, and measure the widest part of the plastigage.

   Main Bearing-to-Journal Oil Clearance
   No. 1, 2, 4, 5 Journals:
   Standard (New): 0.017 — 0.041 mm (0.0007 — 0.0016 in.)
   Service Limit: 0.050 mm (0.0020 in.)
   No. 3 Journal:
   Standard (New): 0.025 — 0.049 mm (0.0010 — 0.0019 in.)
   Service Limit: 0.055 mm (0.0022 in.)



6. If the plastigage measures too wide or too narrow, remove the crankshaft, and remove the upper half of the bearing. Install a new, complete bearing with the same color code(s), and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.

7. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below that one), and check again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the crankshaft and start over.

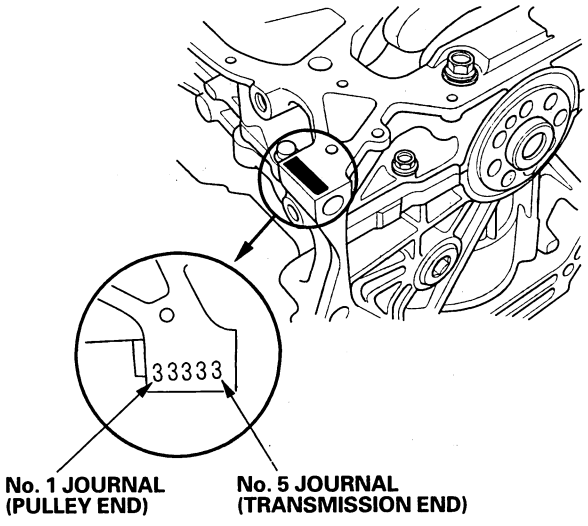
BACK

Protected by AR

Main Bearing Selection

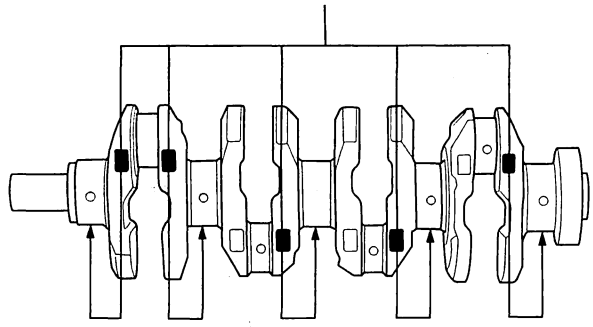
Crankshaft Bore Code Location

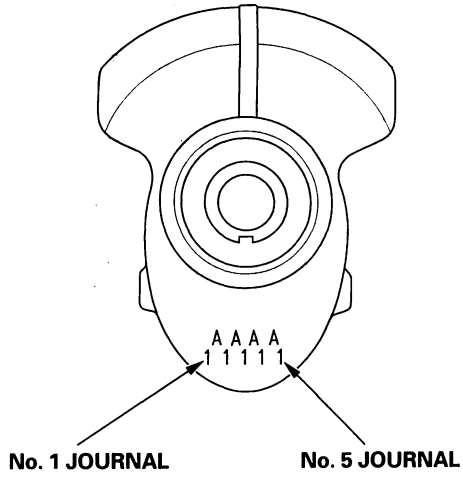
1. Numbers or letters or bars have been stamped on the end of the block as a code for the size of each of the five main journal bores. Write down the crank bore codes.
   If you can't read the codes because of accumulated dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.



Main Journal Code Location

2. The main journal codes are stamped on the crankshaft.





(cont'd)

Protected by AR

Crankshaft Main Bearing Replacement (cont'd)

3. Use the crank bore codes and crank journal codes to select the appropriate replacement bearings from the following table.

   NOTE:
   - Color code is on the edge of the bearing.
   - When using bearing halves of different colors, it does not matter which color is used in the top or bottom.

Main journal code	Crank bore code: 1 or A or I	2 or B or II	3 or C or III	4 or D or IIII
	← Larger crank bore			
1	Pink	Pink/ Yellow	Yellow	Green
2	Pink/ Yellow	Yellow	Green	Green/ Brown
3	Yellow	Green	Green/ Brown	Brown
4	Green	Green/ Brown	Brown	Black
5	Green/ Brown	Brown	Black	Black/ Blue
6	Brown	Black	Black/ Blue	Blue
	→ Smaller bearing (Thicker)			

Smaller main journal

Smaller bearing (Thicker)

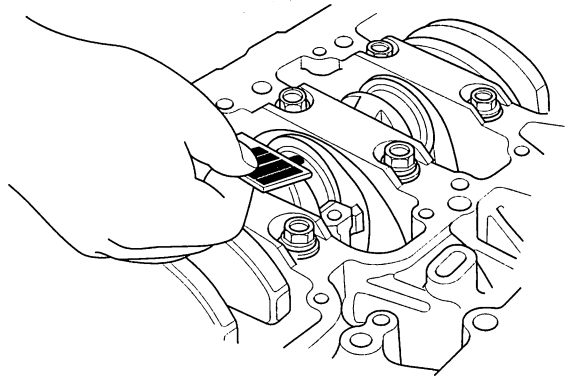
Connecting Rod Bearing Replacement

Rod Bearing Clearance Inspection

1. Remove the oil pump (see page 8-10).
2. Remove the baffle plates (see step 8 on page 7-13).
3. Remove the connecting rod cap and bearing half.
4. Clean the crankshaft rod journal and bearing half with a clean shop towel.
5. Place plastigage across the rod journal.
6. Reinstall the bearing half and cap, and torque the bolts to 20 N·m (2.0 kgf·m, 14 lbf·ft) + 90 °.

   NOTE: Do not rotate the crankshaft during inspection.
7. Remove the rod cap and bearing half, and measure the widest part of the plastigage.

Connecting Rod Bearing-to-Journal Oil Clearance
Standard (New): 0.020—0.050 mm (0.0008—0.0020 in.)
Service Limit: 0.060 mm (0.0024 in.)



BACK

Protected by AR

8. If the plastigage measures too wide or too narrow, remove the upper half of the bearing, install a new, complete bearing with the same color code(s), and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.

9. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below that one), and check clearance again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearing, replace the crankshaft and start over.

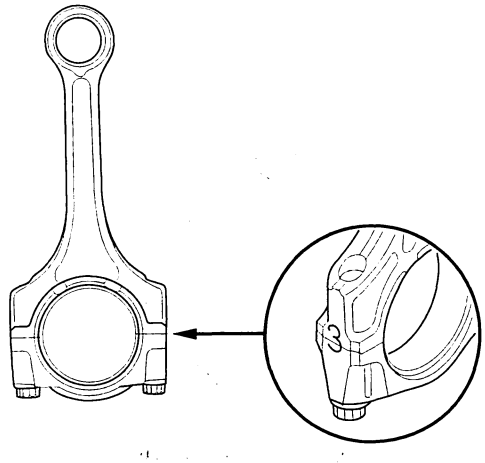
Rod Bearing Selection

1. Inspect each connecting rod for cracks and heat damage.

Connecting Rod Big End Bore Code Locations

2. Each rod has a tolerance range from 0 to 0.024 mm (0.0009 in.), in 0.006 mm (0.0002 in.) increments, depending on the size of its big end bore. It's then stamped with a number or bar (1, 2, 3 or 4/I, II, III, or IIII) indicating the range. You may find any combination of numbers and bars in any engine. (Half the number or bar is stamped on the bearing cap, the other half is on the rod.)
If you can't read the code because of an accumulation of oil and varnish, do not scrub it with a wire brush or scraper. Clean it only with solvent or detergent.

Normal Bore Size: 51.0 mm (2.01 in.)



(cont'd)

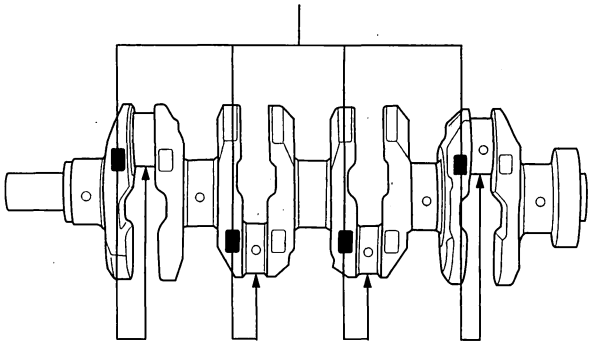
Protected by AR

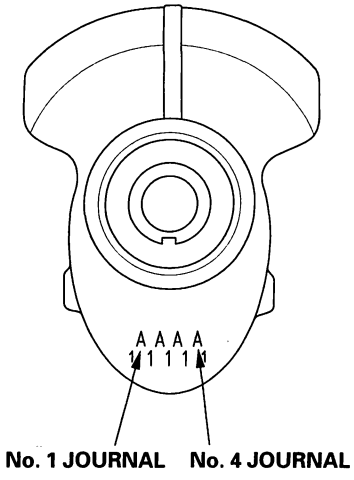
Connecting Rod Bearing Replacement (cont'd)

Connecting Rod Journal Code Location

3. The connecting rod journal codes are stamped on the crankshaft.

Connecting Rod Journal Code Location (Letters or Bars)





4. Use the big end bore codes and rod journal codes to select appropriate replacement bearings from the following table.

NOTE:
- The color code is on the edge of the bearing.
- When using bearing halves of different colors, it does not matter which color is used in the top or bottom.

Rod journal code (Smaller rod journal)	Big end bore code → Larger big end bore: 1 or I	2 or II	3 or III	4 or IIII
	→ Smaller bearing (Thicker)			
A	Pink	Pink/ Yellow	Yellow/ Green	Green
B	Yellow	Yellow/ Green	Green/ Brown	Brown
C	Green	Green/ Brown	Brown/ Black	Black
D	Brown	Brown/ Black	Black/ Blue	Blue

Smaller bearing (Thicker)

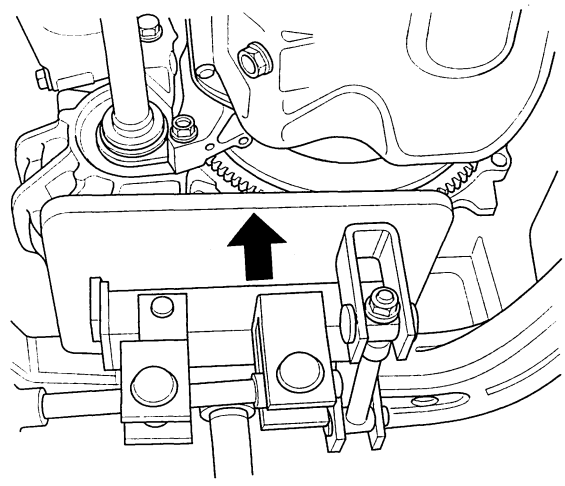
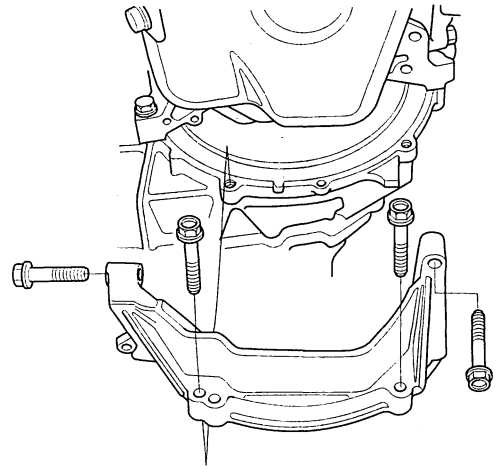
Protected by AR

Oil Pan Removal

1. If the engine is out of the vehicle, go to step 19.
2. Drain the engine oil (see page 8-6).
3. Make sure you have the anti-theft codes for the radio and navigation system, then write down the frequencies for the radio's preset buttons.
4. Disconnect the negative cable from the battery first, then disconnect the positive cable. Remove the battery.
5. Remove the air cleaner housing (see page 11-361).
6. Remove the harness clamp. Remove the two bolts, and loosen the two bolts securing the battery base, then remove the battery base (see step 9 on page 5-2).
7. Remove the clutch slave cylinder, and clutch line bracket mounting bolt (M/T) (see step 21 on page 5-4).
8. Remove the ground cable, then remove the transmission upper mount/bracket assembly:
   - Manual transmission (see step 48 on page 5-8)
   - Automatic transmission (see step 49 on page 5-8)
9. Remove the front mount stop, then remove the front mount bolt (see step 50 on page 5-9).
10. Remove the rear mount stop, then remove the rear mount bolt (see step 52 on page 5-9).
11. Raise the vehicle on the hoist to full height.
12. Remove the front tires/wheels.
13. Disconnect the stabilizer links (see page 18-22).
14. Remove the left side damper fork (see page 18-25).
15. Disconnect the left side suspension lower arm ball joint (see page 18-20).
16. Remove the left side driveshaft (see step 12 on page 16-6). Coat all precision-finished surfaces with clean engine oil. Tie plastic bag over the driveshaft end.
17. Remove the nuts securing the transmission lower front mount and transmission lower rear mount (see step 40 on page 5-6).
18. Use a transmission jack to lift the transmission 40—55 mm (1.6—2.2 in.).



19. Remove the stiffener.



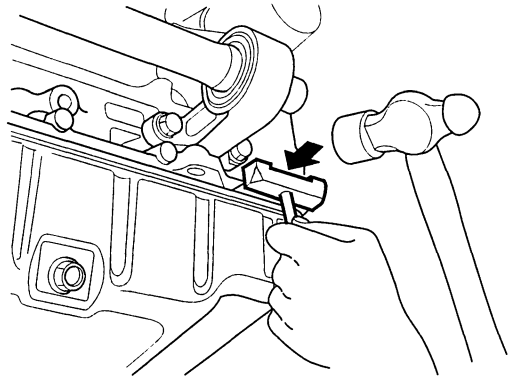
(cont'd)

Protected by AR

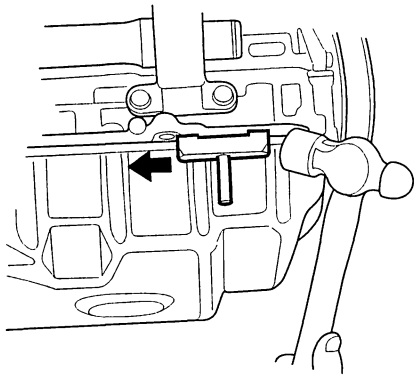
Oil Pan Removal (cont'd)

20. Remove the bolts/nuts securing the oil pan.

21. Drive an oil pan seal cutter between the oil pan and engine block.



22. Cut the oil pan seal by striking the side of the cutter to slide the cutter along the oil pan.



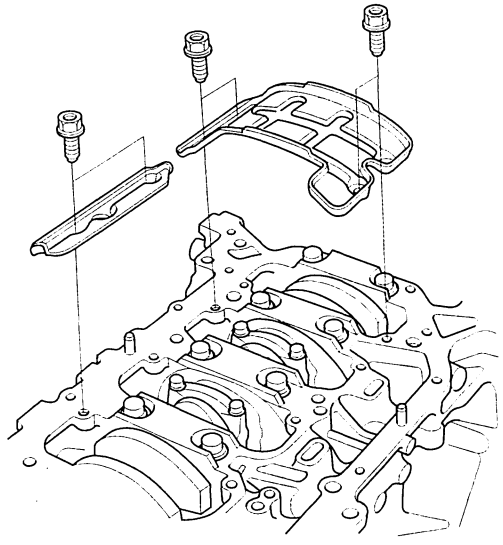
23. Remove the oil pan.

BACK

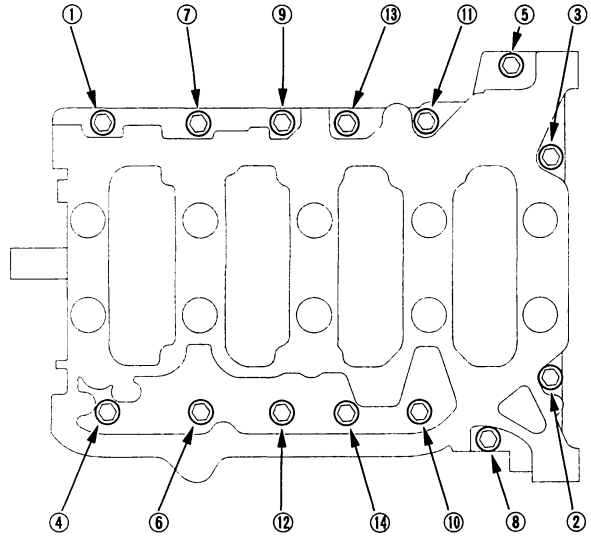
Protected by AR

Crankshaft and Piston Removal

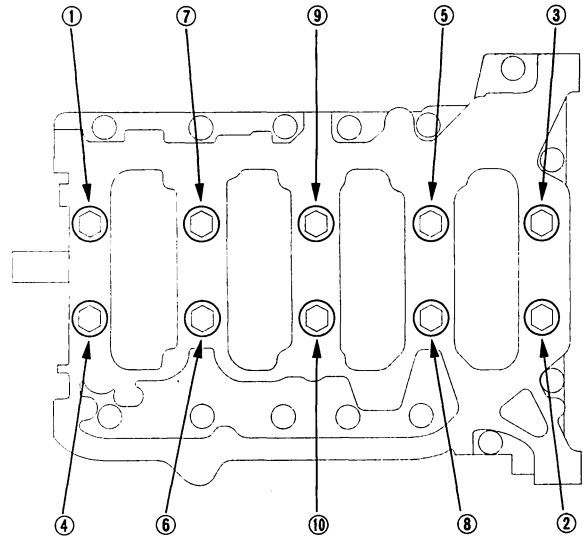
1. Remove the engine assembly (see page 5-2).
2. Remove the transmission:
   - Manual transmission (see page 13-4)
   - Automatic transmission (see page 14-209)
3. M/T model: Remove the pressure plate (see page 12-10), clutch disc (see page 12-10), and flywheel (see page 12-12).
4. A/T model: Remove the drive plate (see page 14-218).
5. Remove the oil pan (see page 7-11).
6. Remove the oil pump (see page 8-10).
7. Remove the cylinder head (see page 6-28).
8. Remove the baffle plates.



9. Remove the 8 mm bolts.



10. Remove the bearing cap bolts. To prevent warpage, unscrew the bolts in sequence 1/3 turn at a time: repeat the sequence until all bolts are loosened.

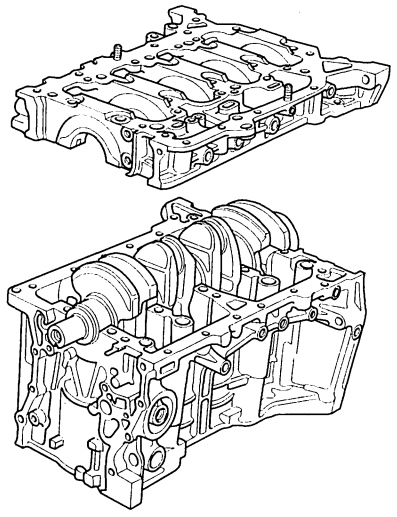


(cont'd)

Protected by AR

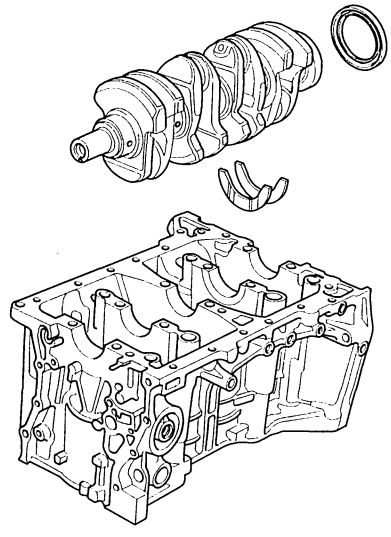
Crankshaft and Piston Removal (cont'd)

11. Remove the lower block and bearings. Keep all bearings in order.



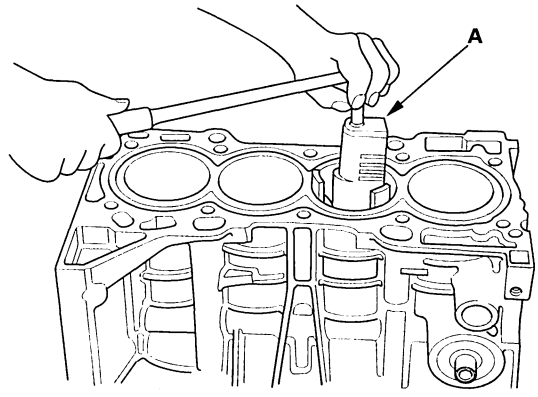
12. Remove the rod caps/bearings. Keep all caps/bearings in order.

13. Lift the crankshaft out of the engine, being careful not to damage the journals.

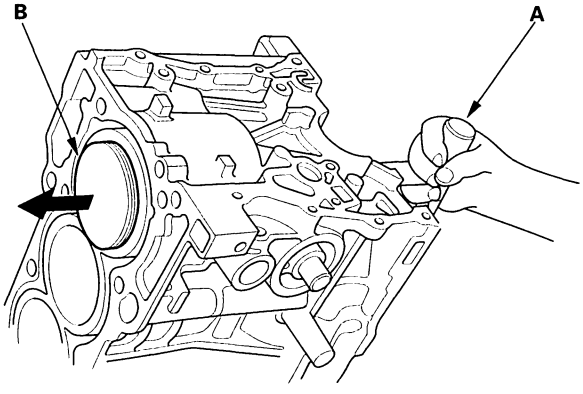


14. Remove the upper bearing halves from the connecting rods, and set them aside with their respective caps.

15. If you can feel a ridge of metal or hard carbon around the top of each cylinder, remove it with a ridge reamer (A). Follow the reamer manufacturer's instructions. If the ridge is not removed, it may damage the pistons as they are pushed out.



16. Use the wooden handle of a hammer (A) to drive out the pistons (B).



17. To avoid mixup on reassembly, mark each piston/connecting rod assembly with its cylinder number.

    NOTE: The existing number on the connecting rod does not indicate its position in the engine, it indicates the rod bore size.

18. Reinstall the connecting rod bearings and caps after removing each piston/connecting rod assembly.

19. Reinstall the lower block and bearings on the engine in the proper order.

BACK

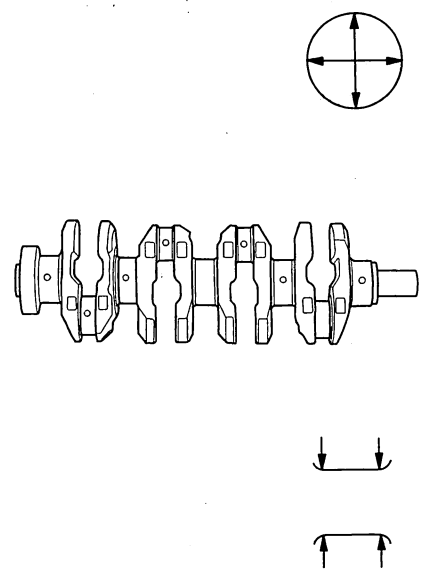
Protected by AR

Crankshaft Inspection

Out-of-Round and Taper

1. Remove the crankshaft from the engine block (see page 7-13).
2. Clean the crankshaft oil passages with pipe cleaners or a suitable brush.
3. Clean the keyway and threads.
4. Measure out-of round at the middle of each rod and main journal in two places. The difference between measurements on each journal must not be more than the service limit.

   Journal Out-of-Round
   Standard (New): 0.005 mm (0.0002 in.) max.
   Service Limit: 0.010 mm (0.0004 in.)



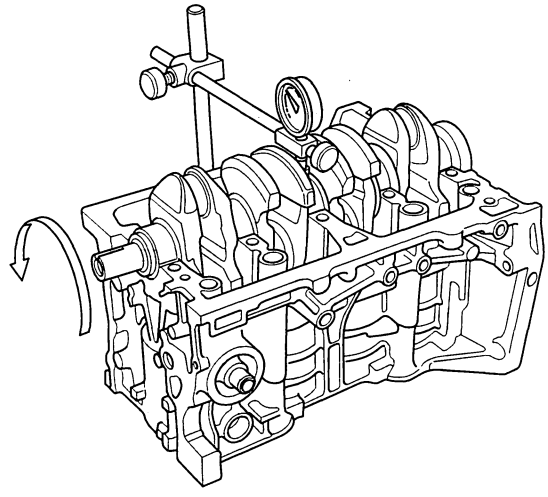
5. Measure taper at the edges of each rod and main journal. The difference between measurements on each journal must not be more than the service limit.

   Journal Taper
   Standard (New): 0.005 mm (0.0002 in.) max.
   Service Limit: 0.010 mm (0.0004 in.)

Straightness

6. Place the engine block on the surface plate.
7. Clean and install the bearings on the No. 1 and No. 5 journals of the engine block.
8. Lower the crankshaft into the block.
9. Measure the runout on all of the main journals. Rotate the crankshaft two complete revolutions. The difference between measurements on each journal must not be more than the service limit.

   Crankshaft Total Runout
   Standard (New): 0.03 mm (0.0012 in.) max.
   Service Limit: 0.04 mm (0.0016 in.)



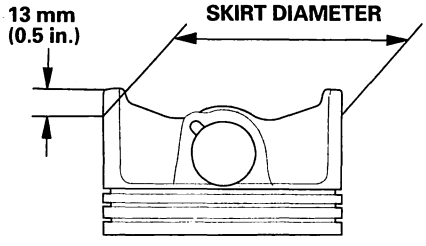
Protected by AR

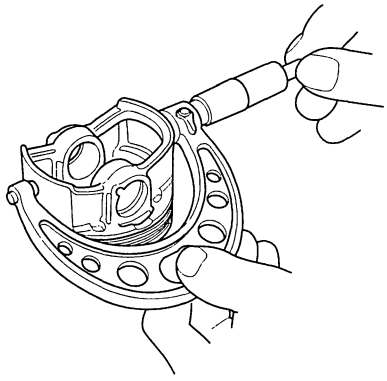
Block and Piston Inspection

1. Remove the crankshaft and pistons (see page 7-13).
2. Check the piston for distortion or cracks.
3. Measure the piston diameter at a point 13 mm (0.5 in.) from the bottom of the skirt. There are two standard-size pistons (No Letter or A, and B). The letter is stamped on the top of the piston. Letters are also stamped on the block as cylinder bore sizes.

Piston Diameter
Standard (New):
No Letter (or A): 86.980—86.990 mm (3.4244—3.4248 in.)
B: 86.970—86.980 mm (3.4240—3.4244 in.)
Service Limit:
No Letter (or A): 86.930 mm (3.4224 in.)
B: 86.920 mm (3.4220 in.)

Oversize Piston Diameter
0.25: 87.230—87.240 mm (3.4342—3.4346 in.)





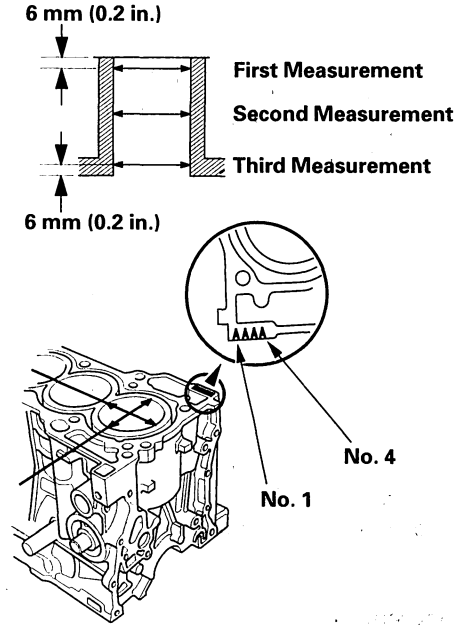
4. Measure wear and taper in direction X and Y at three levels in each cylinder as shown. If measurements in any cylinder are beyond the Oversize Bore Service Limit, replace the block. If the block is to be rebored, refer to step 7 after reboring.

Cylinder Bore Size
Standard (New):
A or I: 87.010—87.020 mm (3.4256—3.4260 in.)
B or II: 87.000—87.010 mm (3.4252—3.4256 in.)
Service Limit: 87.070 mm (3.4279 in.)

Oversize
0.25: 87.250—87.260 mm (3.4350—3.4354 in.)

Reboring limit: 0.25 mm (0.01 in.) max.

Bore Taper
Limit: (Difference between first and third measurement) 0.05 mm (0.002 in.)



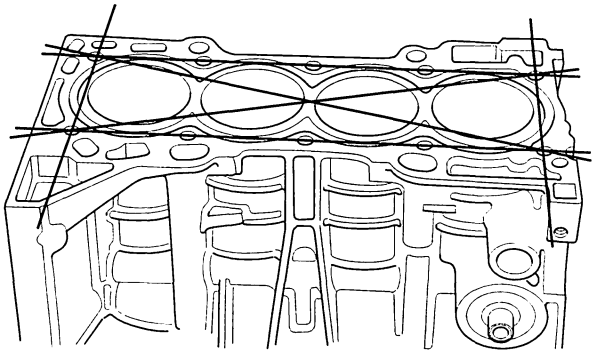
BACK

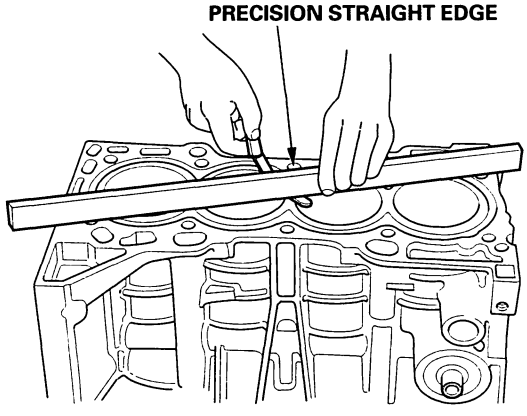
Protected by AR

5. Scored or scratched cylinder bores must be honed.

6. Check the top of the block for warpage. Measure along the edges and across the center as shown.

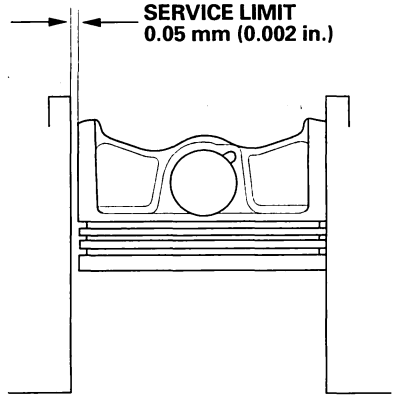
Engine Block Warpage
Standard (New): 0.07 mm (0.003 in.) max.
Service Limit: 0.10 mm (0.004 in.)





7. Calculate the difference between the cylinder bore diameter and the piston diameter. If the clearance is near or exceeds the service limit, inspect the piston and engine block for excessive wear.

Piston-to-Cylinder Bore Clearance
Standard (New): 0.020—0.040 mm (0.0008—0.0016 in.)
Service Limit: 0.05 mm (0.002 in.)



Protected by AR

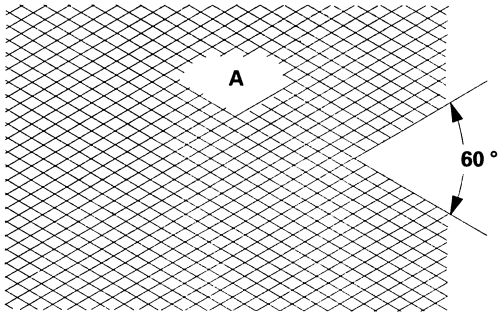
Cylinder Bore Honing

Only a scored or scratched cylinder bore must be honed.

1. Measure the cylinder bores (see step 4 on page 7-16).
   If the block is to be reused, hone the cylinders and remeasure the bores. Only scored or scratched cylinder bores must be honed.

2. Hone the cylinder bores with honing oil and a fine (400 grit) stone in a 60 degree cross-hatch pattern (A).

   NOTE:
   - Use only a rigid hone with 400 grit or finer stone such as Sunnen, Ammco, or equivalent.
   - Do not use stones that are worn or broken.



3. When honing is complete, thoroughly clean the engine block of all metal particles. Wash the cylinder bores with hot soapy water, then dry and oil them immediately to prevent rusting. Never use solvent, it will only redistribute the grit on the cylinder walls.

4. If scoring or scratches are still present in the cylinder bores after honing to the service limit, rebore the engine block. Some light vertical scoring and scratching is acceptable if it is not deep enough to catch your fingernail and does not run the full length of the bore.

BACK

Protected by AR

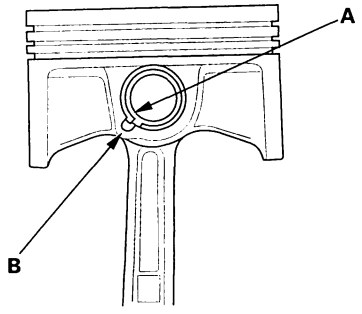
Piston, Pin, and Connecting Rod Replacement

Disassembly

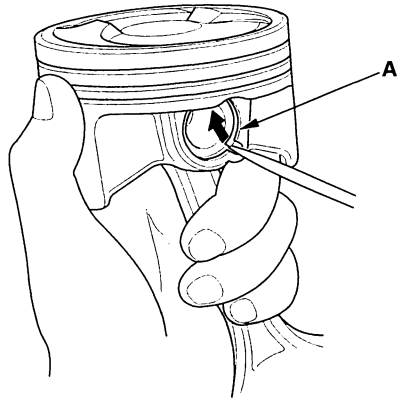
1. Remove the piston from the engine block (see page 7-13).

2. Apply new engine oil to the piston pin snap rings (A), and turn them in the ring grooves until the end gaps are lined up with the cutouts in the piston pin bores (B).

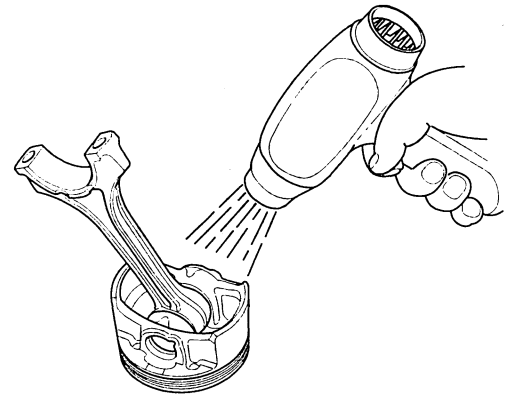
   NOTE: Take care not to damage the ring grooves.



3. Remove both snap rings (A). Start at the cutout in the piston pin bore. Remove the snap rings carefully so they do not go flying or get lost. Wear eye protection.



4. Heat the piston and connecting rod assembly to about 158 °F (70 °C), then remove the piston pin.



(cont'd)

Protected by AR

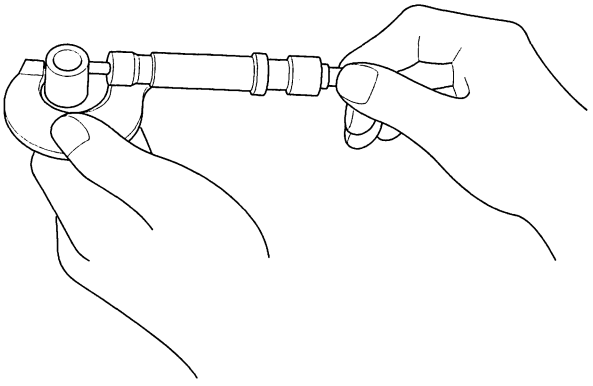
Piston, Pin, and Connecting Rod Replacement (cont'd)

Inspection

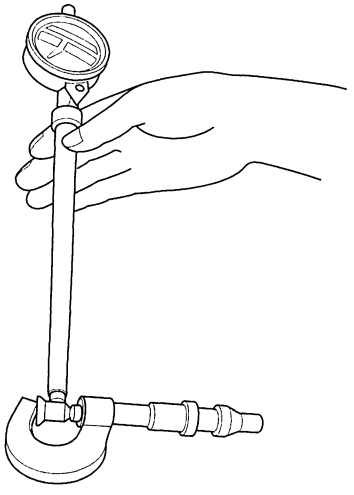
NOTE: Inspect the piston, piston pin, and connecting rod when they are at room temperature.

1. Measure the diameter of the piston pin.

Piston Pin Diameter
Standard (New): 21.961—21.965 mm (0.8646—0.8648 in.)
Service Limit: 21.953 mm (0.8643 in.)

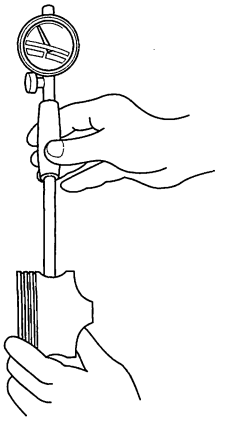


2. Zero the dial indicator to the piston pin diameter.



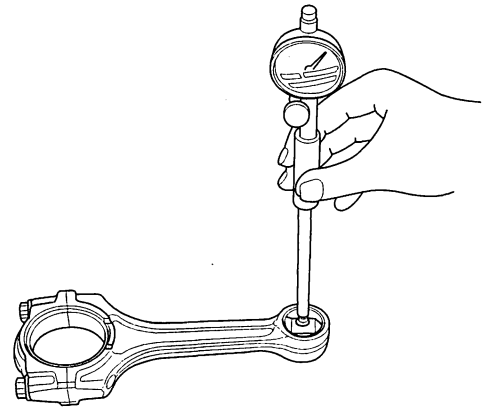
3. Check the difference between the piston pin diameter and piston pin hole diameter in the piston.

Piston Pin-to-Piston Clearance
Standard (New): —0.005 to +0.002 mm (—0.00020 to +0.00008 in.)
Service Limit: 0.005 mm (0.0002 in.)



4. Measure the piston pin-to-connecting rod clearance.

Piston Pin-to-Connecting Rod Clearance
Standard (New): 0.005—0.015 mm (0.0002—0.0006 in.)
Service Limit: 0.02 mm (0.0008 in.)

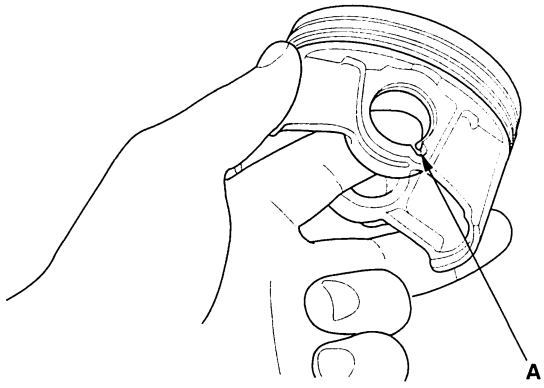


BACK

Protected by AR

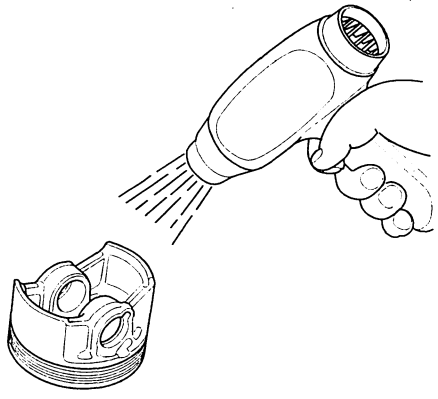
Reassembly

1. Install a piston pin snap ring (A) only on one side.

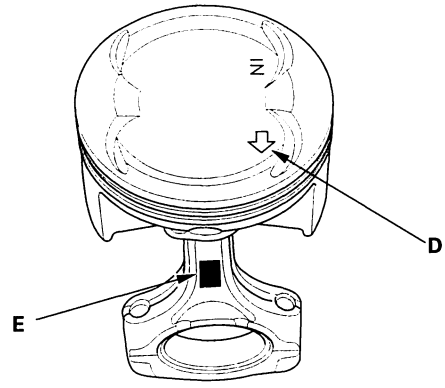


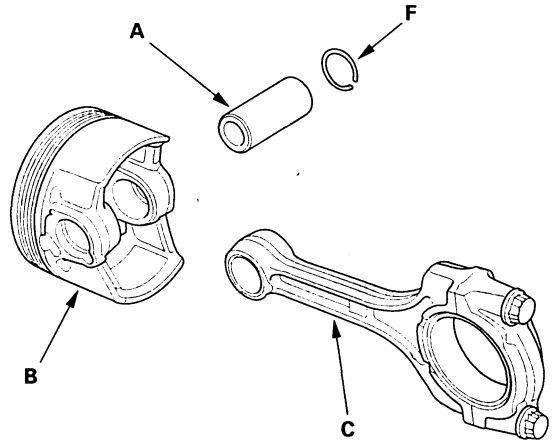
2. Coat the piston pin bore in the piston, the bore in the connecting rod, and the piston pin with new engine oil.

3. Heat the piston to about 158 °F (70 °C).



4. Install the piston pin (A). Assemble the piston (B) and connecting rod (C) with the arrow (D) and the embossed mark (E) on the same side.





5. Install the remaining snap ring (F).

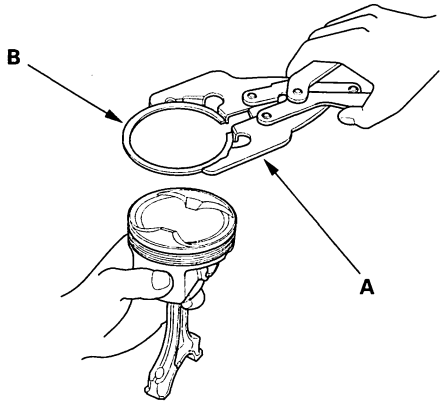
6. Turn the snap rings in the ring grooves until the end gaps are positioned at the bottom of the piston.

Protected by AR

Piston Ring Replacement

1. Remove the piston from the engine block (see page 7-13).

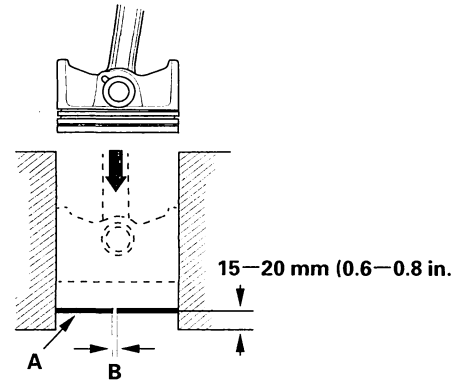
2. Using a ring expander (A), remove the old piston rings (B).



3. Clean all ring grooves thoroughly with a squared-off broken ring or ring groove cleaner with a blade to fit the piston grooves.
The top and 2nd ring grooves are 1.2 mm (0.05 in.) wide. The oil ring groove is 2.0 mm (0.08 in.) wide. File down a blade if necessary.
Do not use a wire brush to clean the ring grooves, or cut the ring grooves deeper with the cleaning tools.

   NOTE: If the piston is to be separated from the connecting rod, do not install new rings yet.

4. Using a piston, push a new ring (A) into the cylinder bore 15—20 mm (0.6—0.8 in.) from the bottom.



5. Measure the piston ring end-gap (B) with a feeler gauge:

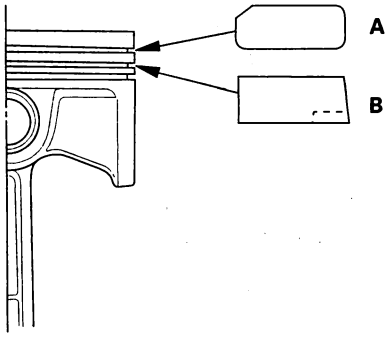
   - If the gap is too small, check to see if you have the proper rings for your engine.
   - If the gap is too large, recheck the cylinder bore diameter against the wear limits (see page 7-16). If the bore is over the service limit, the engine block must be rebored.

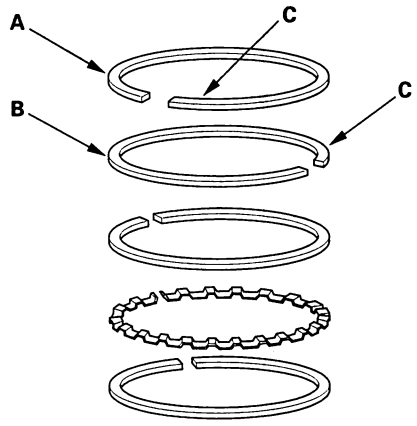
Piston Ring End-Gap
Top Ring:
Standard (New): 0.20—0.35 mm (0.008—0.014 in.)
Service Limit: 0.60 mm (0.024 in.)
Second Ring:
Standard (New): 0.40—0.55 mm (0.016—0.022 in.)
Service Limit: 0.70 mm (0.028 in.)
Oil Ring:
Standard (New): 0.20—0.70 mm (0.008—0.028 in.)
Service Limit: 0.80 mm (0.031 in.)

BACK

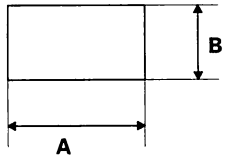
Protected by AR

6. Install the top ring and second ring as shown. The top ring (A) has a T, 1A, or 1R mark and the second ring (B) has a 2T, 2A, or 2R mark. The manufacturing marks (C) must be facing upward.





Piston Ring Dimensions:

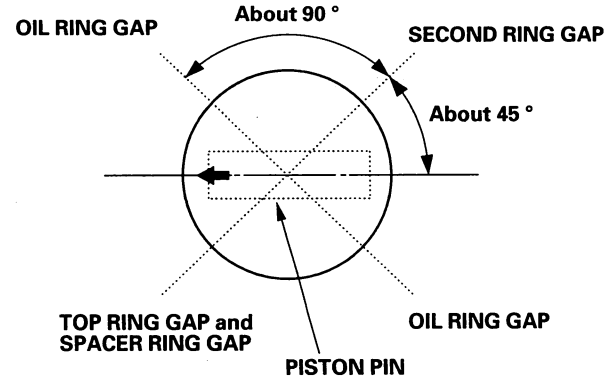


Top Ring (Standard):
A: 3.1 mm (0.12 in.)
B: 1.2 mm (0.05 in.)

Second Ring (Standard):
A: 3.4 mm (0.13 in.)
B: 1.2 mm (0.05 in.)

7. Rotate the rings in their grooves to make sure they do not bind.

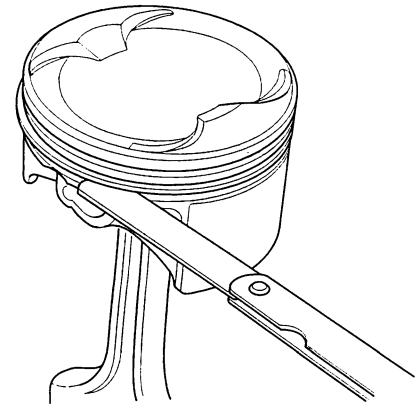
8. Position the ring end gaps as shown:



9. After installing a new set of rings, measure the ring-to-groove clearances:

Top Ring Clearance
Standard (New): 0.045—0.070 mm (0.0018—0.0028 in.)
Service Limit: 0.13 mm (0.005 in.)

Second Ring Clearance
Standard (New): 0.050—0.075 mm (0.0020—0.0030 in.)
Service Limit: 0.13 mm (0.005 in.)

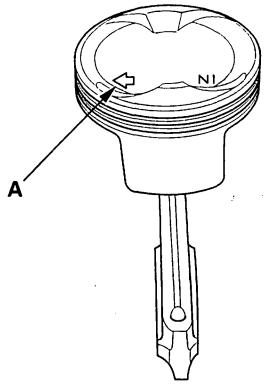


Protected by AR

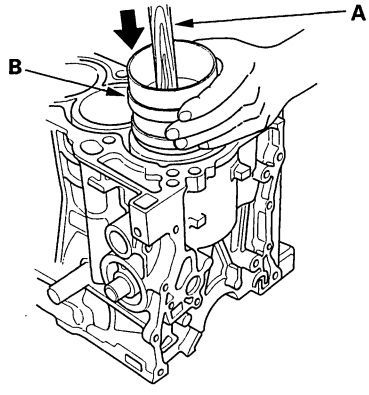
Piston Installation

If the Crankshaft is Already Installed

1. Set the crankshaft to bottom dead center (BDC) for each cylinder.
2. Remove the connecting rod caps, then install the ring compressor. Check that the bearing is securely in place.
3. Position the mark (A) to face the cam chain side of the engine.

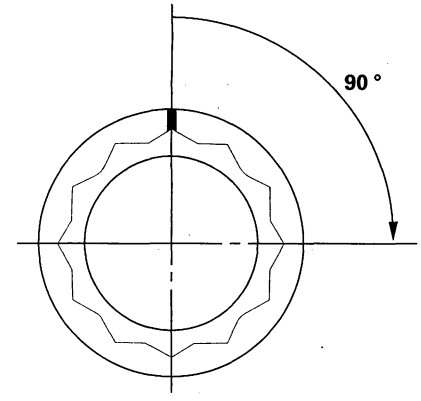


4. Position the piston in the cylinder, and tap it in using the wooden handle of a hammer (A). Maintain downward force on the ring compressor (B) to prevent the rings from expanding before entering the cylinder bore.



5. Stop after the ring compressor pops free, and check the connecting rod-to-crank journal alignment before pushing the piston into place.
6. Check the connecting rod bearing clearance with plastigage (see page 7-8).
7. Inspect the connecting rod bolts (see page 7-25).
8. Apply new engine oil to the bolt threads, then install the rod caps with bearings. Torque the bolts to 20 N·m (2.0 kgf·m, 14 lbf·ft).
9. Tighten the connecting rod bolts an additional 90 °.

   NOTE: Remove the connecting rod bolt if you tightened it beyond the specified angle, and go back to step 7 of the procedure. Do not loosen it back to the specified angle.

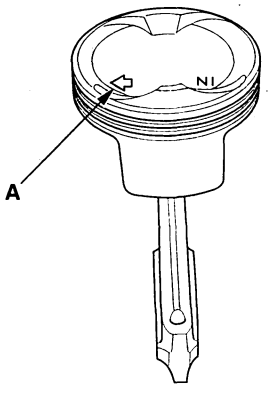


BACK

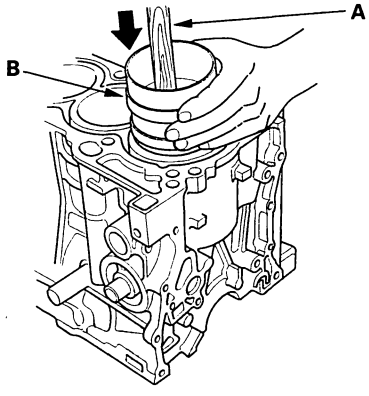
Protected by AR

If the Crankshaft is Not Installed

1. Remove the connecting rod caps, then install the ring compressor, and check that the bearing is securely in place.
2. Position the mark (A) to face the cam chain side of the engine.



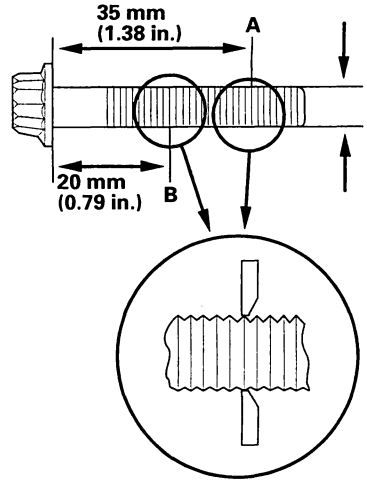
3. Position the piston in the cylinder, and tap it in using the wooden handle of a hammer (A). Maintain downward force on the ring compressor (B) to prevent the rings from expanding before entering the cylinder bore.



4. Position all pistons at top dead center (TDC).

Connecting Rod Bolt Inspection

1. Measure the diameter of each connecting rod bolt at point A and point B.



2. Calculate the difference in diameter between point A and point B.

   Point A—Point B = Difference in Diameter

   Difference in Diameter:
   Specification: 0—0.1 mm (0—0.004 in.)

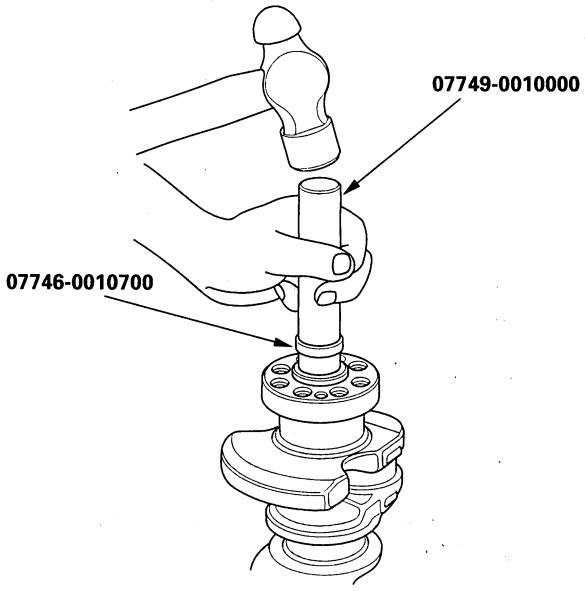
3. If the difference in diameter is out of tolerance, replace the connecting rod bolt.

Protected by AR

Crankshaft Installation

Special Tools Required
- Driver 07749-0010000
- Attachment, 24 x 26 mm 07746-0010700
- Oil seal driver attachment 96 07ZAD-PNAA100

1. With a manual transmission, install the crankshaft end bushing when replacing the crankshaft. Using the special tools, drive in the crankshaft end bushing until the special tools bottom against the crankshaft.



2. Check the connecting rod bearing clearance with plastigage (see page 7-8).

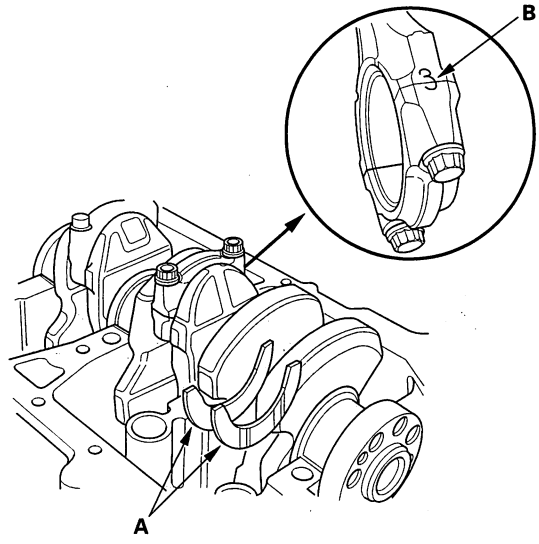
3. Check the main bearing clearance with plastigage (see page 7-6).

4. Install the bearing halves in the engine block and connecting rods.

5. Apply a coat of new engine oil to the main bearings and rod bearings.

6. Hold the crankshaft so rod journal No. 2 and rod journal No. 3 are straight up, and lower the crankshaft into the block.

7. Apply new engine oil to the thrust washer surfaces. Install the thrust washers (A) in the No. 4 journal of the engine block.



8. Inspect the connecting rod bolts (see page 7-25).

9. Apply new engine oil to the threads of the connecting rod bolts.

10. Seat the rod journals into connecting rod No. 1 and connecting rod No. 4. Line up the mark (B) on the connecting rod and cap, then install the caps and bolts finger-tight.

11. Rotate the crankshaft clockwise, and seat the journals into connecting rod No. 2 and connecting rod No. 3. Line up the mark on the connecting rod and cap, then install the caps and bolts finger-tight.

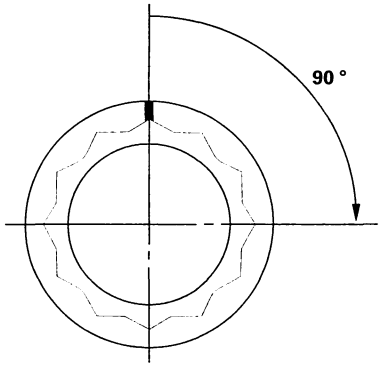
BACK

Protected by AR

12. Tighten the connecting rod bolts to 20 N·m (2.0 kgf·m, 14 lbf·ft).

13. Tighten the connecting rod bolts an additional 90 °.

    NOTE: Remove the connecting rod bolt if you tightened it beyond the specified angle, and go back to step 8 of the procedure. Do not loosen it back to the specified angle.

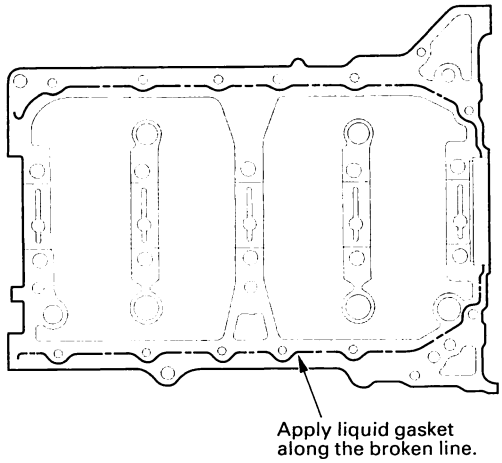


14. Remove all of the old liquid gasket from the lower block mating surfaces, bolts, and bolt holes.

15. Clean and dry the lower block mating surfaces.

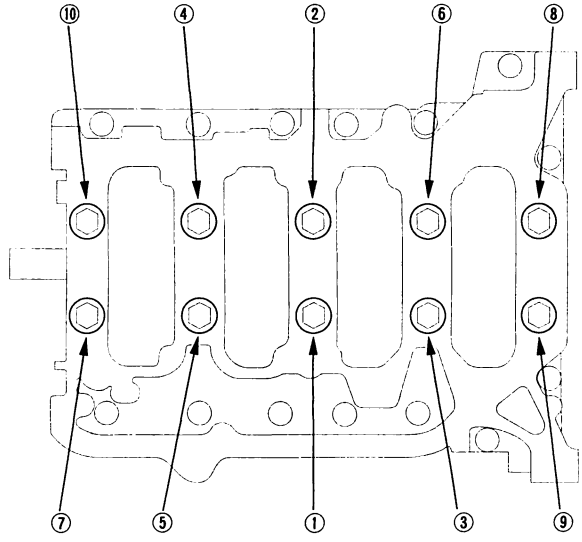
16. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the lower block and to the inner threads of the bolt holes.

    NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead,remove the old residue and reapply the liquid gasket.

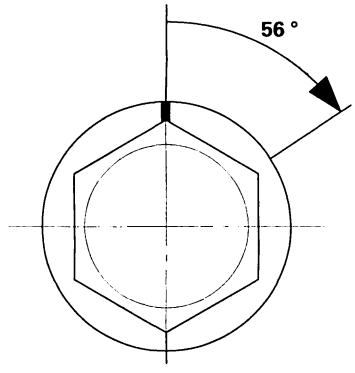


17. Put the lower block on the engine block.

18. Tighten the bearing cap bolts in sequence to 29 N·m (3.0 kgf·m, 22 lbf·ft).



19. Tighten the bearing cap bolts an additional 56 °.

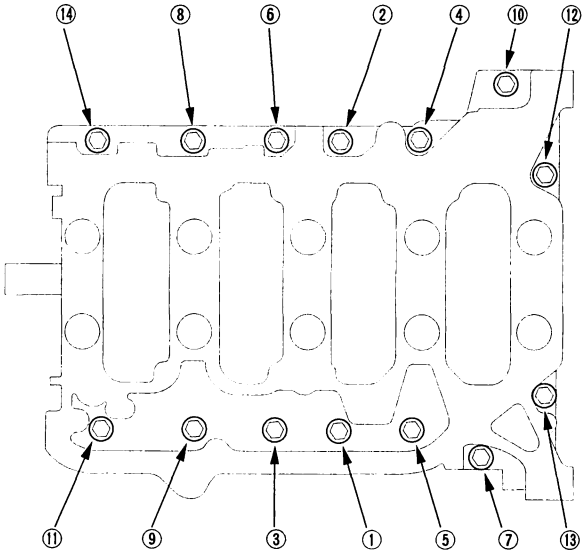


(cont'd)

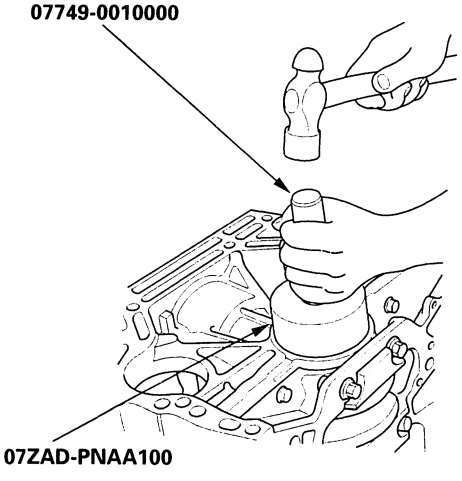
Protected by AR

Crankshaft Installation (cont'd)

20. Tighten the 8 mm bolts in sequence to 22 N·m (2.2 kgf·m, 16 lbf·ft).

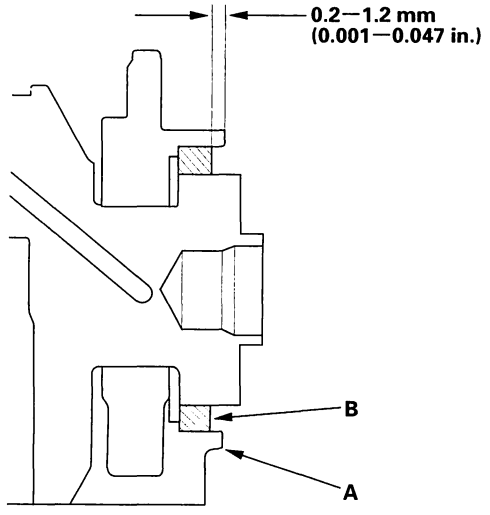


21. Use the special tools to drive a new oil seal squarely into the block to the specified installed height.

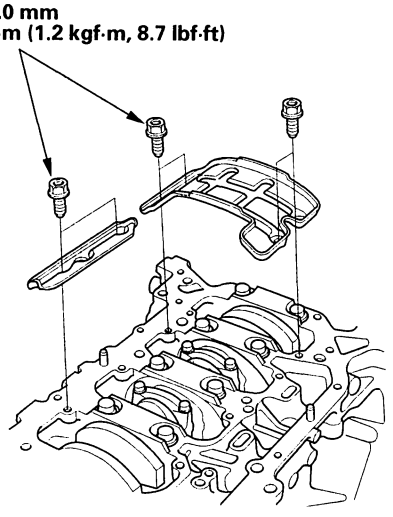


22. Measure the distance between the engine block (A) and oil seal (B).

Oil Seal Installed Height: 0.2—1.2 mm (0.001—0.047 in.)



23. Install the baffle plates.



BACK

Protected by AR

24. Install the oil pump (see page 8-15).

25. Install the oil pan (see page 7-29).

26. Install the cylinder head (see page 6-46).

27. M/T model: Install the flywheel (see page 12-12), clutch disc (see page 12-13), and pressure plate (see page 12-13),

28. A/T model: Install the drive plate (see page 14-218).

29. Install the transmission:

    - Manual transmission (see page 13-11)
    - Automatic transmission (see page 14-219)

30. Install the engine assembly (see page 5-10).

    NOTE: Whenever any crankshaft or connecting rod bearing is replaced, it is necessary after reassembly to run the engine at idling speed until it reaches normal operating temperature, then continue to run it for about 15 minutes.

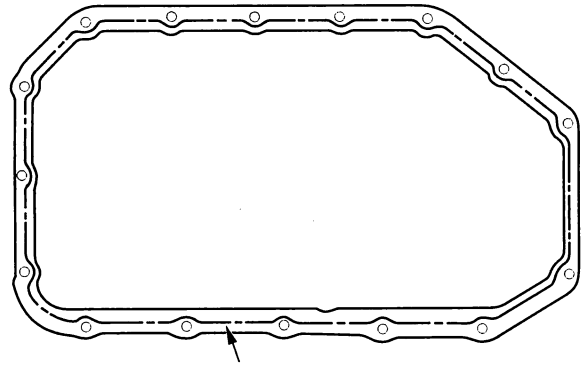
Oil Pan Installation

1. Remove all of the old liquid gasket from the oil pan mating surfaces, bolts, and bolt holes.

2. Clean and dry the oil pan mating surfaces.

3. Apply liquid gasket, P/N 08718-0001, 08718-0002, 08718-0009, evenly to the engine block mating surface of the oil pan and to the inner threads of the bolt holes.

   NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.



Apply liquid gasket along the broken line.

4. Install the oil pan.

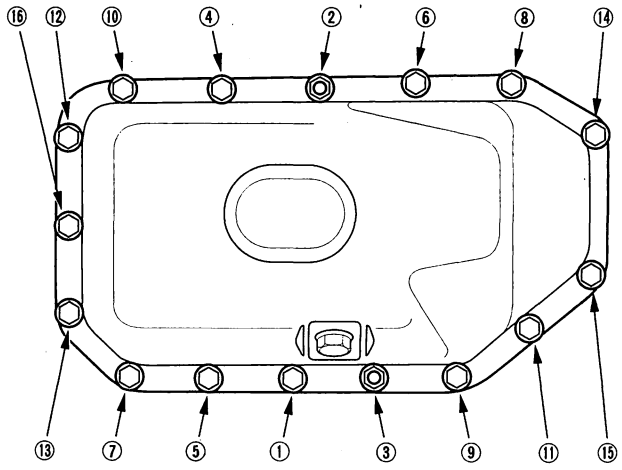
(cont'd)

Protected by AR

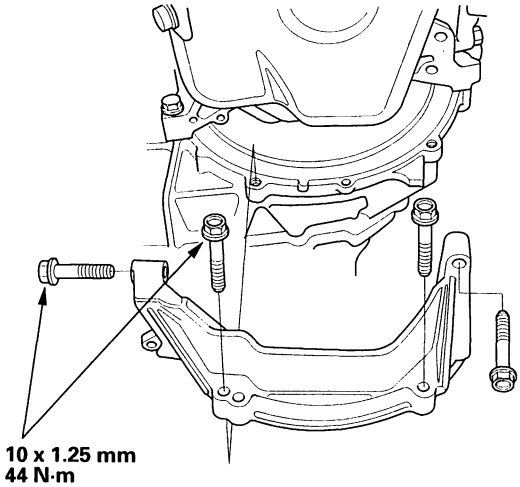
Oil Pan Installation (cont'd)

5. Tighten the bolts in two or three steps. In the final step, tighten all bolts, in sequence, to 12 N·m (1.2 kgf·m, 8.7 lbf·ft). Wipe off the excess liquid gasket on the each side of crankshaft pulley and flywheel/drive plate.

   NOTE:
   - Wait at least 30 minutes before filling the engine with oil.
   - Do not run the engine for at least 3 hours after installing the oil pan.



6. Install the stiffener.



7. If the engine is still in the vehicle, do the following steps.

8. Tighten the nuts securing the transmission lower front mount and transmission lower rear mount (see step 13 on page 5-13).

9. Install a new set ring on the end of the left side driveshaft, then install the driveshaft. Make sure each ring "clicks" into place in the differential.

10. Connect the left side suspension lower arm ball joint (see step 8 on page 18-21).

11. Install the left side damper fork (see step 2 on page 18-27).

12. Connect the stabilizer links (see page 18-22).

13. Lower the hoist.

14. Tighten the front mount bolt, then install the front mount stop (see step 3 on page 5-11).

15. Tighten the rear mount bolt, then install the rear mount stop (see step 5 on page 5-11).

16. Loosen the mount bolt, then install the transmission upper mount/bracket assembly, clutch line clamp bracket and ground cable (M/T) (see step 8 on page 5-12).

17. Loosen the mount bolt and bracket plate mounting bolts, then install the transmission upper mount/bracket assembly, and ground cable (A/T) (see step 9 on page 5-12).

18. Tighten the transmission upper mount bolt (M/T) (see step 10 on page 5-12).

19. Tighten the transmission upper mount bracket plate mounting bolts, then tighten the transmission upper mount bolt (A/T) (see step 11 on page 5-12).

BACK

Protected by AR

20. Install the clutch slave cylinder and clutch line bracket mounting bolt (M/T) (see step 35 on page 5-16).

21. Install the battery base, then install the harness clamp (see step 47 on page 5-18).

22. Install the air cleaner housing (see page 11-361).

23. Install the battery. Clean the battery posts and cable terminals with sandpaper, then assemble them and apply grease to prevent corrosion.

24. Perform the power window control unit reset procedure (see page 22-232).

25. Enter the anti-theft codes for the radio and the navigation system, then enter the customer's radio station presets.

26. Set the clock.

Transmission End Crankshaft Oil Seal Installation - In Car

Special Tools Required
- Driver 07749-0010000
- Oil seal driver attachment 96 07ZAD-PNAA100

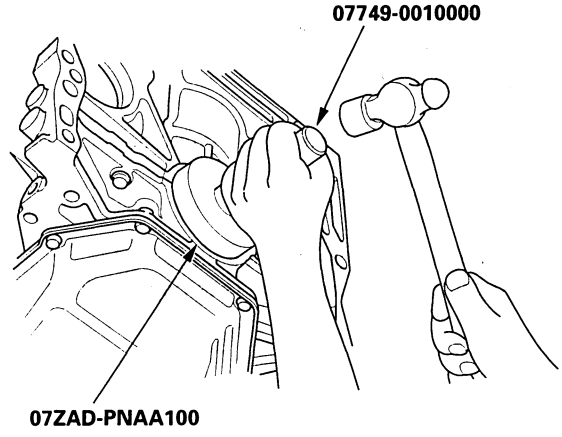
1. Remove the transmission:
   - Manual transmission (see page 13-4)
   - Automatic transmission (see page 14-209)

2. M/T model: Remove the pressure plate (see page 12-10), clutch disc (see page 12-10), and flywheel (see page 12-12).

3. A/T model: Remove the drive plate (see page 14-218).

4. Clean and dry the crankshaft oil seal housing.

5. Use the special tools to drive a new oil seal squarely into the block to the specified installed height.



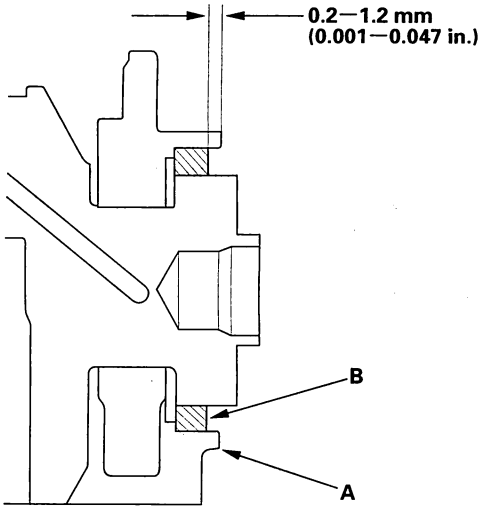
(cont'd)

Protected by AR

Transmission End Crankshaft Oil Seal Installation - In Car (cont'd)

6. Measure the distance between the engine block (A) and oil seal (B).

   Oil Seal Installed Height: 0.2—1.2 mm (0.001—0.047 in.)



7. M/T model: Install the flywheel (see page 12-12), clutch disc (see page 12-13), and pressure plate (see page 12-13).

8. A/T model: Install the drive plate (see page 14-218).

9. Install the transmission:

   - Manual transmission (see page 13-11)
   - Automatic transmission (see page 14-219)

Engine Lubrication

Symptom Troubleshooting Index

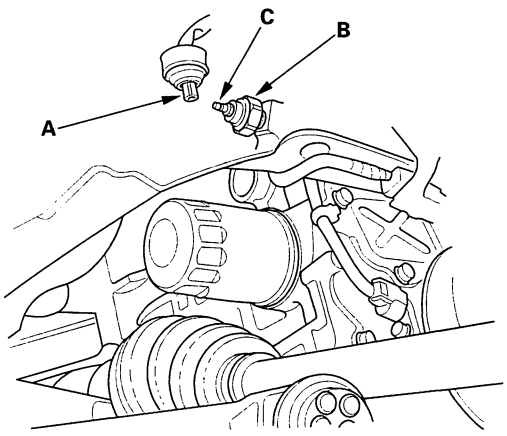
Symptom	Diagnostic procedure	Also check for
Excessive engine oil consumption	1. Check the loose of the engine oil fill cap, oil drain bolt, and oil filter. 2. Check for oil leaks. 3. Check for worn valve guide(s) (see page 6-39) or worn valve stem seal(s) (see page 6-39). 4. Check for damaged or worn piston ring(s) (see page 7-22). 5. Check for damaged or worn engine internal parts (cylinder wall, pistons, etc.) (see page 7-16).	
Low oil pressure indicator does not come on with the ignition switch ON (II)	1. Do the gauge control module self-diagnostic function (see page 22-259). 2. Test the oil pressure switch (see page 8-5).	An open in the wire between the gauge control module and the oil pressure switch
Low oil pressure indicator stays on	1. Check the engine oil level. 2. Do the gauge control module self-diagnostic function (see page 22-259). 3. Test the oil pressure switch (see page 8-5). 4. Check the engine oil pressure (see page 8-6). 5. Check the oil filter for clogging. 6. Check the oil screen for clogging. 7. Check the relief valve. 8. Test the oil pump (see page 8-11).	A wire shorted to ground between the gauge control module and the oil pressure switch

BACK

Protected by AR

Oil Pressure Switch Test

1. Remove the YEL/RED wire (A) from the engine oil pressure switch (B).

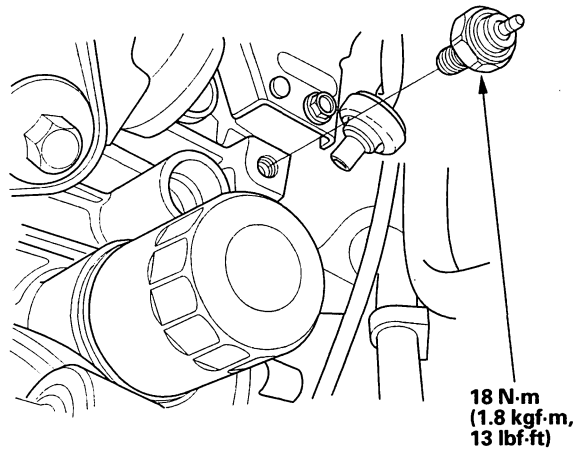


2. Check for continuity between the positive terminal (C) and the engine (ground). There should be continuity with the engine stopped. There should be no continuity with the engine running.

3. If the switch fails to operate, check the engine oil level. If the engine oil level is OK, check the engine oil pressure. If the oil pressure is OK, replace the oil pressure switch (see page 8-5).

Oil Pressure Switch Replacement

1. Disconnect the oil pressure switch connector, then remove the oil pressure switch.



2. Remove all of the old liquid gasket from the switch and switch mounting hole.

3. Apply liquid gasket to the new oil pressure switch threads, then install the oil pressure switch.

   NOTE: Using too much liquid gasket may cause liquid gasket to enter the oil passage or the end of the new oil pressure switch.

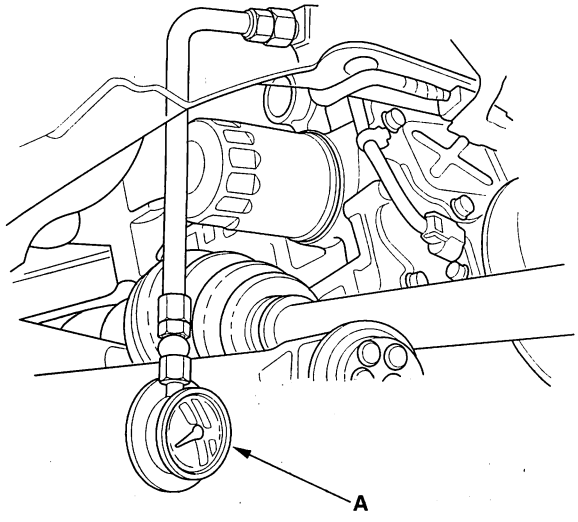
Protected by AR

Engine Lubrication

Oil Pressure Test

If the oil pressure warning light stays on with the engine running, check the engine oil level. If the oil level is correct:

1. Remove the engine oil pressure switch, and install an oil pressure gauge (A).



2. Start the engine. Shut it off immediately if the gauge registers no oil pressure. Repair the problem before continuing.

3. Allow the engine to reach operating temperature (fan comes on at least twice). The pressure should be:

   Engine Oil Temperature: 176 °F (80 °C)
   Engine Oil Pressure:
   At Idle: 70 kPa (0.7 kgf/cm², 10 psi) min.
   At 3,000 rpm: 300 kPa (3.1 kgf/cm², 44 psi) min.

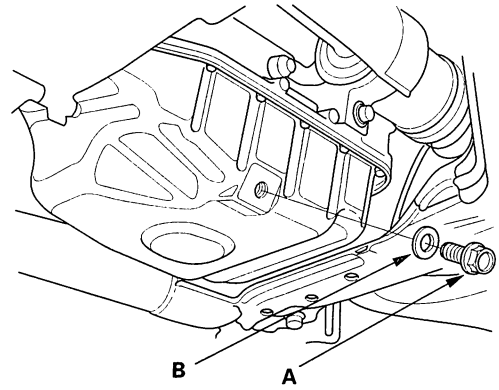
4. If the oil pressure is NOT within specifications, inspect these items:

   - Check the oil screen for clogging.
   - Inspect the oil pump (see page 8-11).

Engine Oil Replacement

1. Warm up the engine.

2. Remove the drain bolt (A), and drain the engine oil.



44 N·m (4.5 kgf·m, 33 lbf·ft)
Do not overtighten.

3. Reinstall the drain bolt with a new washer (B).

4. Refill with the recommended oil (see page 3-2).

   Capacity
   At Oil Change:
   4.0 L (4.2 US qt)
   At Oil Change Including Filter:
   4.2 L (4.4 US qt)
   After Engine Overhaul:
   5.3 L (5.6 US qt)

5. Run the engine for more than 3 minutes, then check for oil leakage.

6. 2006 model: Reset the engine oil life indicator (see page 3-11).

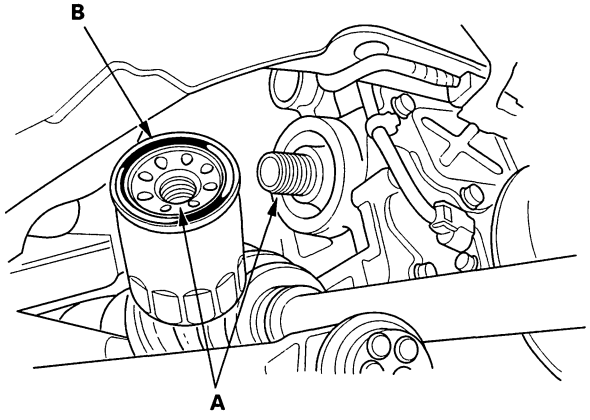
Engine Oil Filter Replacement

Special Tools Required
Oil filter wrench 07HAA-PJ70100

1. Remove the oil filter with the special tool.

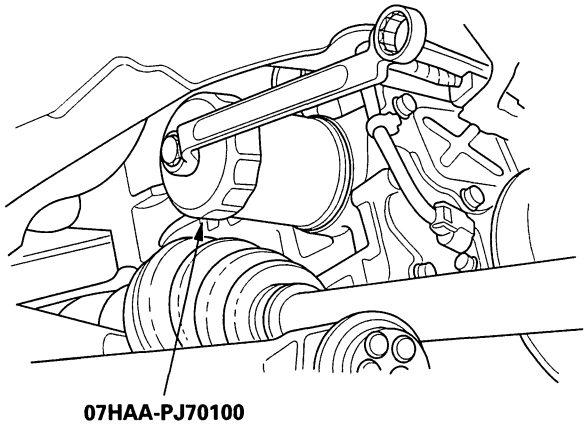
2. Inspect the threads (A) and rubber seal (B) on the new filter. Clean the seat on the engine block, then apply a light coat of new engine oil to the filter rubber seal. Use only filters with a built-in bypass system.



3. Install the oil filter by hand.

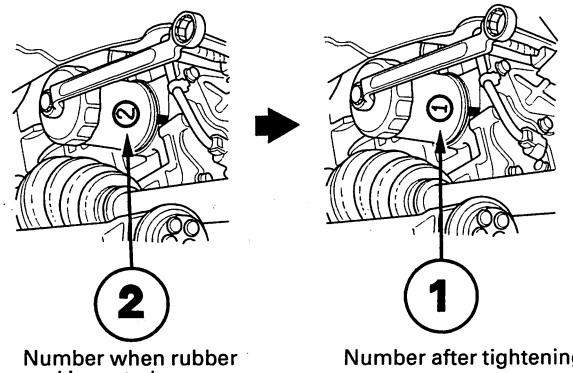
4. After the rubber seal seats, tighten the oil filter clockwise with the special tool.

Tighten: **3/4 Turn Clockwise**
Tightening torque: **12 N·m (1.2 kgf·m, 8.7 lbf·ft)**



5. If four numbers or marks (1 to 4 or ▼ to ▼▼▼▼) are printed around the outside of the filter, use the following procedure to tighten the filter.

   - Spin the filter on until its seal lightly seats against the block, and note which number or mark is at the bottom.
   - Tighten the filter by turning it clockwise three numbers or marks from the one you noted. For example, if number 2 is at the bottom when the seal is seated, tighten the filter until the number 1 comes around the bottom.



Number when rubber seal is seated.

Number after tightening.

Number or Mark when rubber seal is seated	1 or ▼	2 or ▼▼	3 or ▼▼▼	4 or ▼▼▼▼
Number or Mark after tightening	4 or ▼▼▼▼	1 or ▼	2 or ▼▼	3 or ▼▼▼

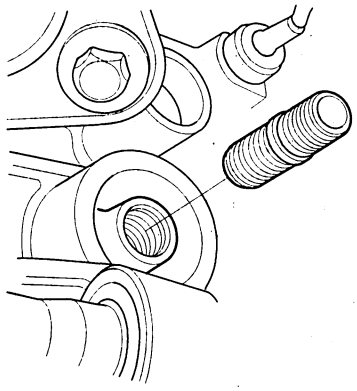
6. After installation, fill the engine with oil up to the specified level, run the engine for more than 3 minutes, then check for oil leakage.

7. 2006 model: Reset the engine oil life indicator (see page 3-11).

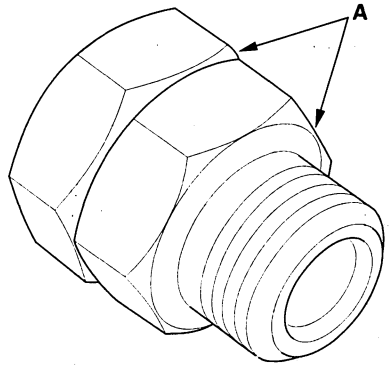
Protected by AR

Oil Filter Feed Pipe Replacement

1. Remove the oil filter (see page 8-7).
2. Remove the oil filter feed pipe.



3. Install the two 20 x 1.5 mm nuts (A) onto the new oil filter feed pipe. Hold one nut with a wrench, then tighten the other nut.



4. Tighten the oil filter feed pipe to the block to 49 N·m (5.0 kgf·m, 36 lbf·ft), then remove the nuts from the oil filter feed pipe.

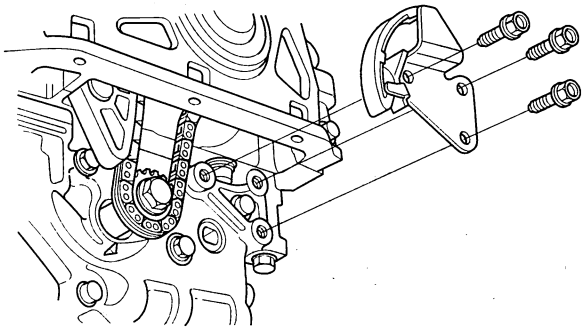
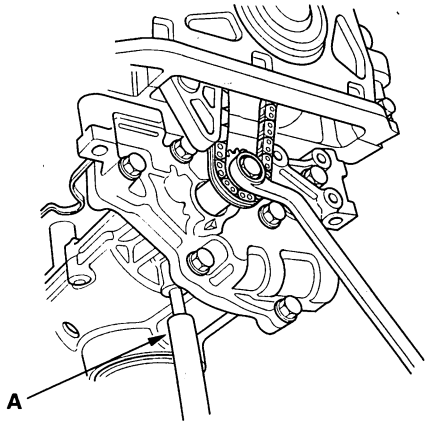
Oil Pump Overhaul (cont'd)

Oil Pump Removal

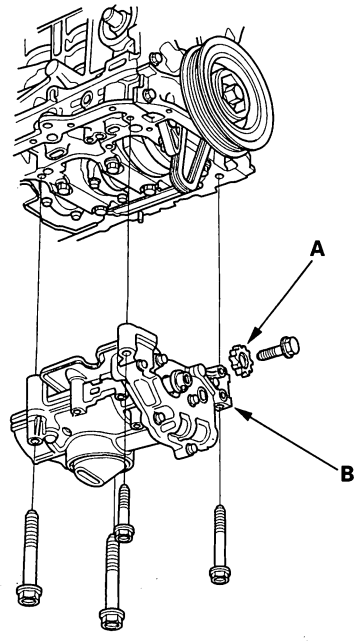
1. Turn the crankshaft pulley so its top dead center (TDC) mark lines up with the pointer (see step 1 on page 6-12).
2. Remove the oil pan (see page 7-11).
3. Remove and discard the oil pump chain tensioner.



4. To hold the rear balancer shaft, insert a 6 mm pin driver (A) into the maintenance hole in the lower balancer shaft holder and through the rear balancer shaft.



5. Loosen the oil pump sprocket mounting bolt.
6. Remove the oil pump sprocket (A), then remove the oil pump (B).

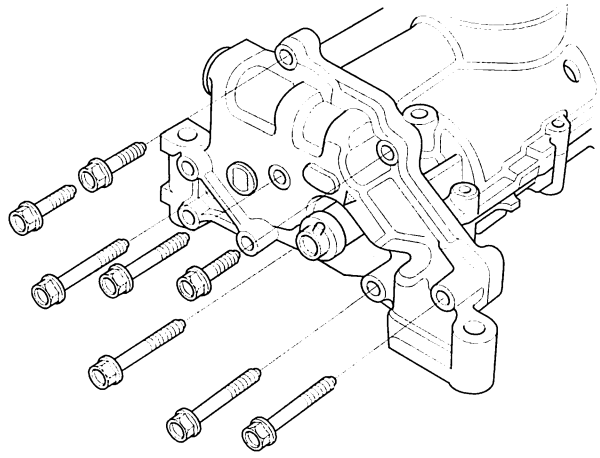


BACK

Protected by AR

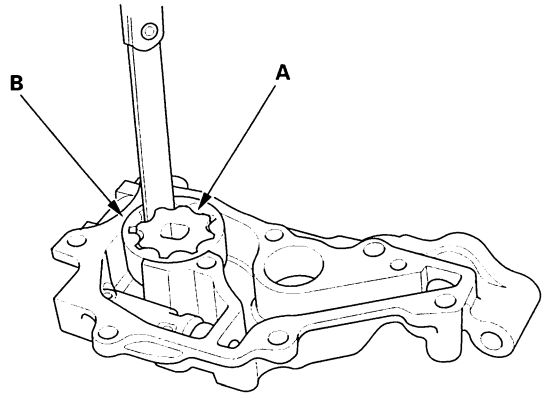
Oil Pump Inspection

1. Remove the pump housing.



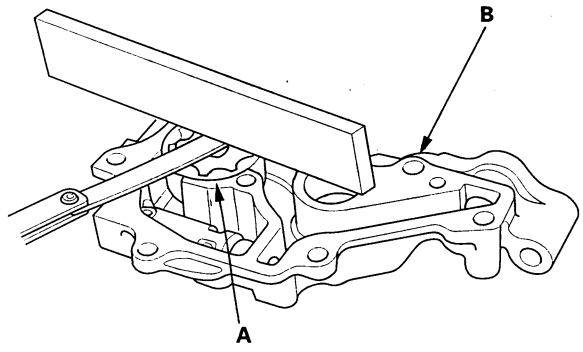
2. Check the inner-to-outer rotor radial clearance between the inner rotor (A) and outer rotor (B). If the inner-to-outer rotor radial clearance exceeds the service limit, replace the oil pump.

Inner Rotor-to-Outer Rotor Radial Clearance
Standard (New): 0.06—0.16 mm (0.002—0.006 in.)
Service Limit: 0.20 mm (0.008 in.)



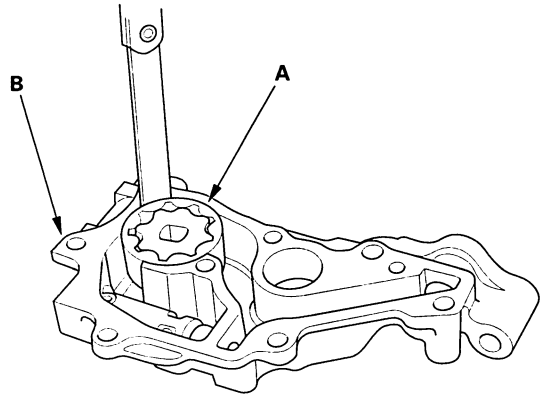
3. Check the housing-to-rotor axial clearance between the rotor (A) and pump housing (B). If the housing-to-rotor axial clearance exceeds the service limit, replace the oil pump.

Housing-to-Rotor Axial Clearance
Standard (New): 0.035—0.070 mm (0.0014—0.0028 in.)
Service Limit: 0.12 mm (0.005 in.)



4. Check the housing-to-outer rotor radial clearance between the outer rotor (A) and pump housing (B). If the housing-to-outer rotor radial clearance exceeds the service limit, replace the oil pump.

Housing-to-Outer Rotor Radial Clearance
Standard (New): 0.15—0.21 mm (0.006—0.008 in.)
Service Limit: 0.23 mm (0.009 in.)



5. Inspect both rotors and the pump housing for scoring or other damage. Replace parts if necessary.

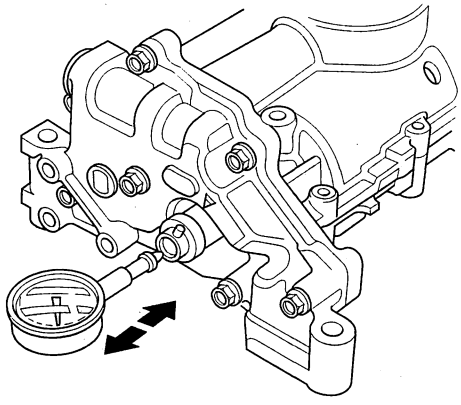
Oil Pump Overhaul (cont'd)

Balancer Shaft Inspection

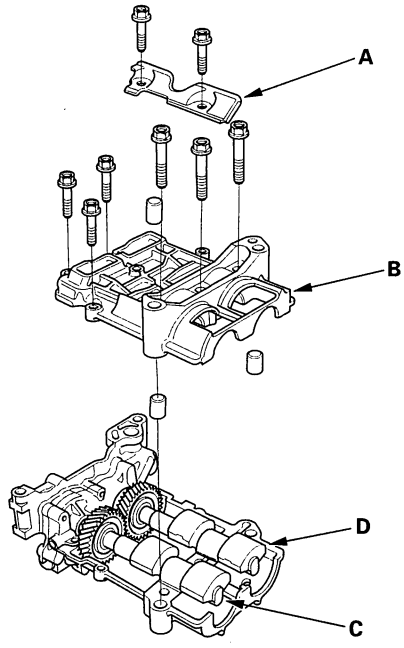
1. Seat the balancer shaft by pushing it away from the oil pump sprocket end of the oil pump.

2. Zero the dial indicator against the end of the balancer shaft, then push the balancer shaft back and forth and read the end play.

Balancer Shaft End Play
Front Balancer Shaft:
Standard (New): 0.063—0.108 mm (0.0025—0.0043 in.)
Service Limit: 0.14 mm (0.0055 in.)
Rear Balancer Shaft:
Standard (New): 0.063—0.108 mm (0.0025—0.0043 in.)
Service Limit: 0.14 mm (0.0055 in.)



3. Remove the baffle plate (A) and upper balancer shaft holder (with bearings) (B), then remove the front balancer shaft (C) and rear balancer shaft (D).



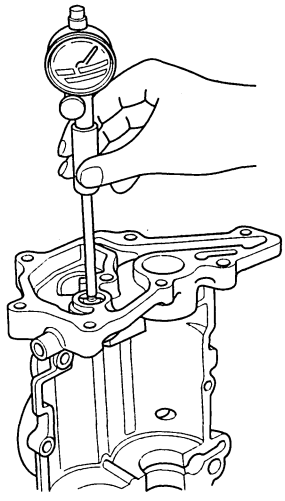
BACK

Protected by AR

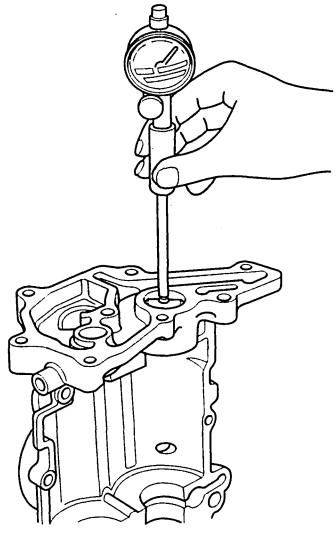
4. Measure the inner diameter of the No. 1 bearing for the front balancer shaft hole and the rear balancer shaft hole.

Bearing Inner Diameter
Front:
Standard (New): 20.000—20.020 mm (0.7874—0.7882 in.)
Service Limit: 20.03 mm (0.789 in.)
Rear:
Standard (New): 24.000—24.020 mm (0.9449—0.9457 in.)
Service Limit: 24.03 mm (0.946 in.)

Front:



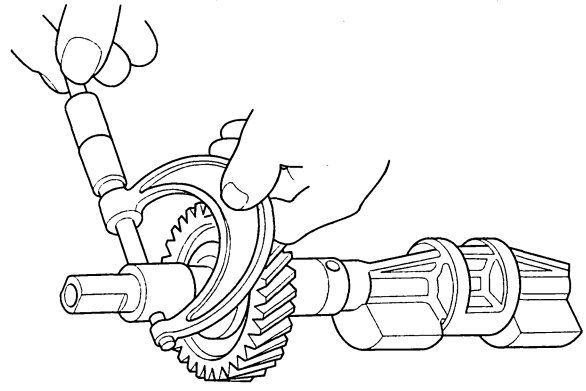
Rear:



5. Measure the diameters of the No. 1 journals on the front balancer shaft and rear balancer shaft.

Journal Diameter
Front:
Standard (New): 19.938—19.950 mm (0.7850—0.7854 in.)
Service Limit: 19.92 mm (0.784 in.)
Rear:
Standard (New): 23.938—23.950 mm (0.9424—0.9429 in.)
Service Limit: 23.92 mm (0.942 in.)

Front:



Rear:

Oil Pump Overhaul (cont'd)

6. Clean both balancer shaft No. 2 journals and bearing halves with a clean shop towel.

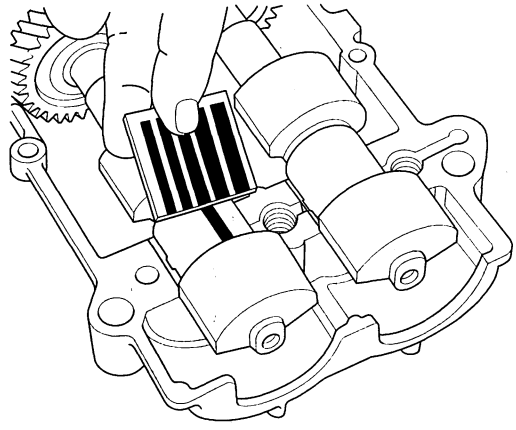
7. Place one strip of plastigage across each No. 2 journal.

8. Reinstall the bearings and upper balancer shaft holder, then torque the bolts.

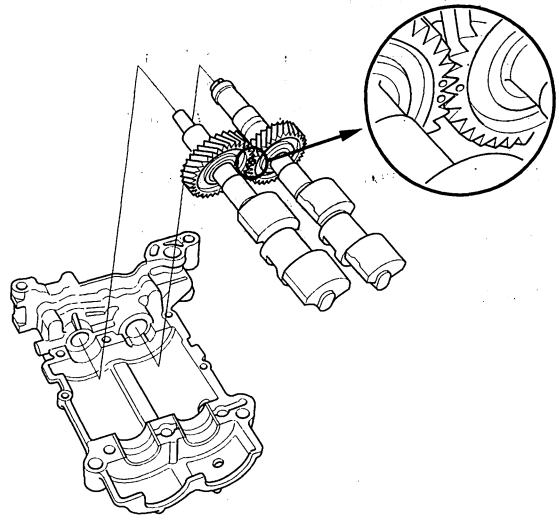
   NOTE: Do not rotate the balancer shafts during inspection.

9. Remove the upper balancer shaft holder and bearings again, and measure the widest part with the plastigage. If the balancer shaft No. 2 journal oil clearance is out-of-tolerance, install new bearings, and recheck. If it is still out-of-tolerance, replace the balancer shafts.

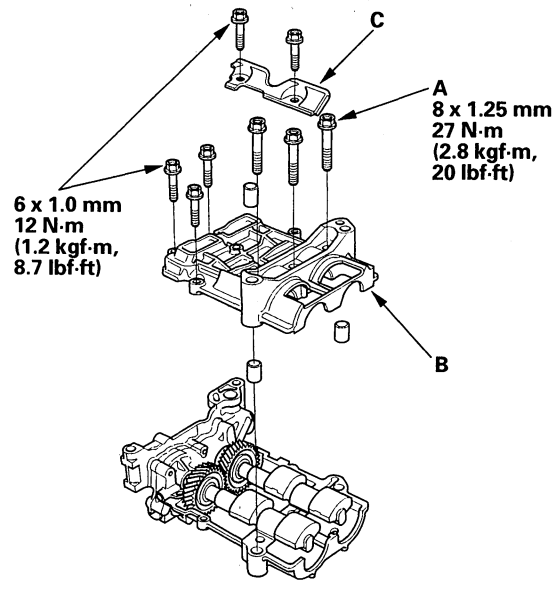
   No. 2 Journal Oil Clearance
   Standard (New): 0.060—0.120 mm (0.0024—0.0047 in.)
   Service Limit: 0.15 mm (0.006 in.)



10. Align the punch mark on the rear balancer shaft in the center of the two punch marks on the front balancer shaft, then install the balancer shafts on the lower balancer shaft holder.



11. Apply new engine oil to the threads of the 8 mm bolts (A).

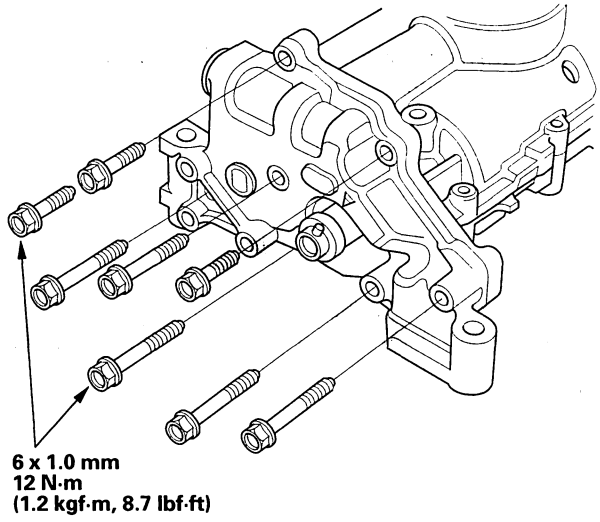


12. Install the upper balancer shaft holder (B) and baffle plate (C).

BACK

Protected by AR

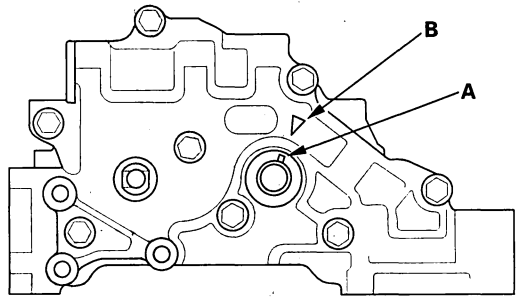
13. Install the pump housing.



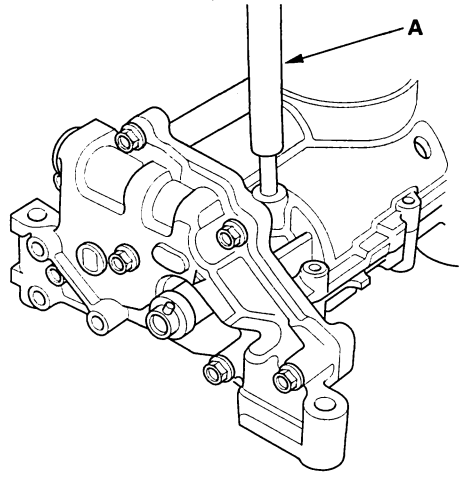
Oil Pump Installation

1. Make sure the No. 1 piston is at TDC (see step 1 on page 6-12).

2. Align the dowel pin (A) on the rear balancer shaft with the mark (B) on the oil pump.



3. To hold the rear balancer shaft, insert a 6 mm pin driver (A) into the maintenance hole in the lower balancer shaft holder and through the rear balancer shaft.

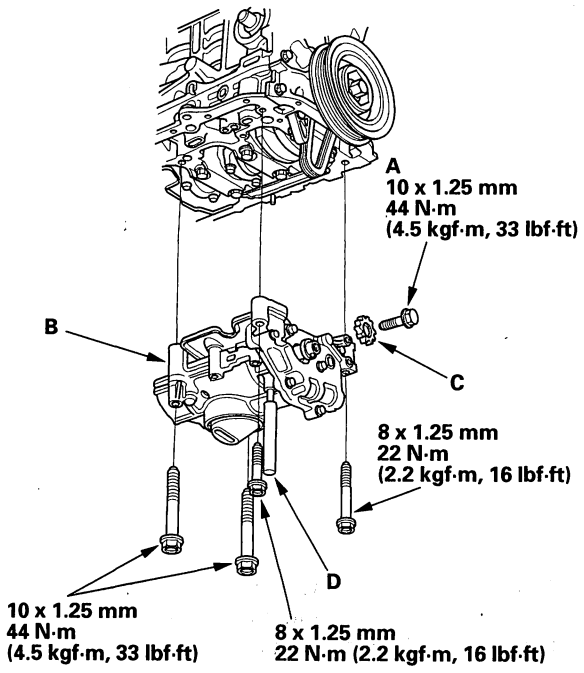


(cont'd)

Protected by AR

Oil Pump Overhaul (cont'd)

4. Apply new engine oil to the threads of the oil pump sprocket mounting bolt (A).



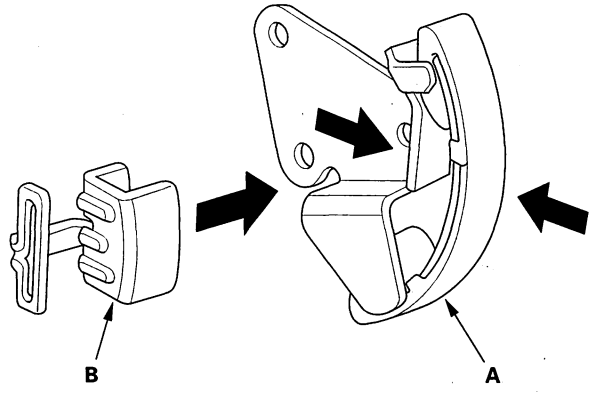
5. Loosely install the oil pump (B), then install the oil pump sprocket (C).

6. Remove the pin driver (D).

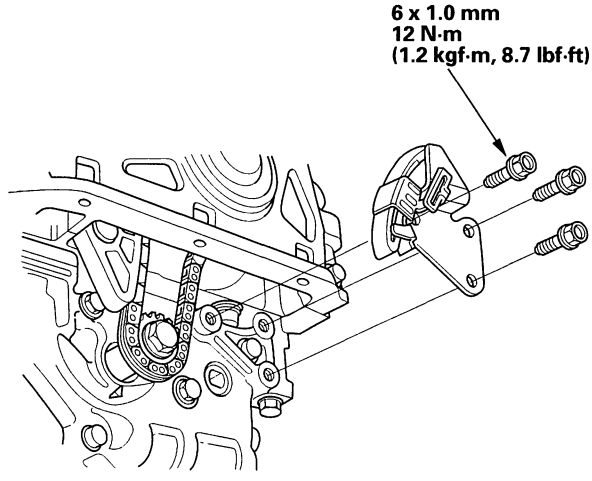
7. Tighten the oil pump mounting bolts.

8. Squeeze the new oil pump chain tensioner (A), then install the set clip (B) on it as shown.

   NOTE: The set clip is supplied with the oil pump chain tensioner.



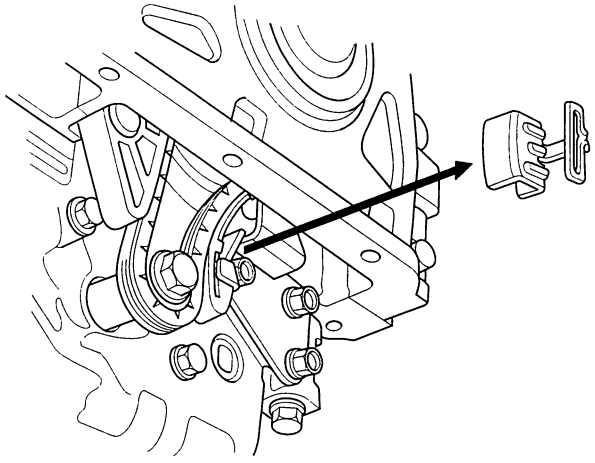
9. Install the new oil pump chain tensioner.



BACK

Protected by AR

10. Remove the set clip from the oil pump chain tensioner.



11. Install the oil pan (see page 7-29).

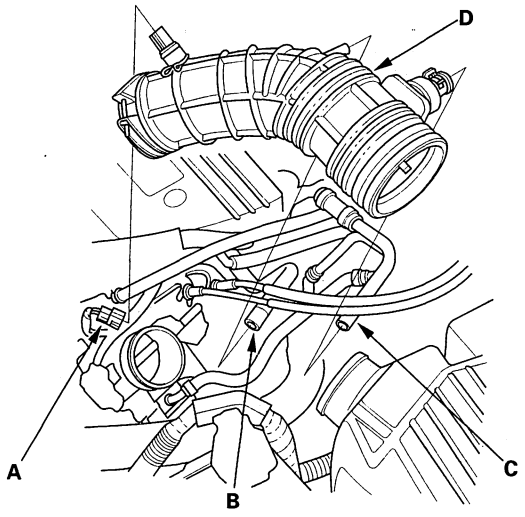
Intake Manifold Removal and Installation (cont'd)

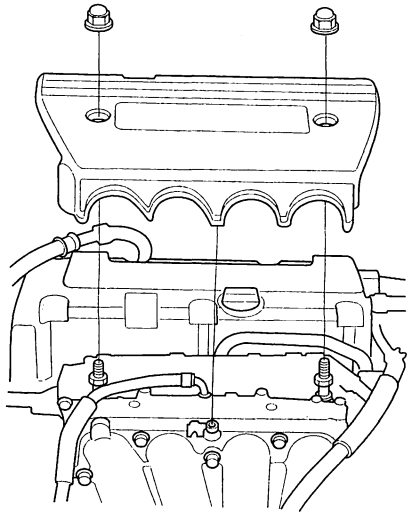
Removal (2003-2005 Models)

1. Disconnect the intake air temperature (IAT) sensor connector (A).

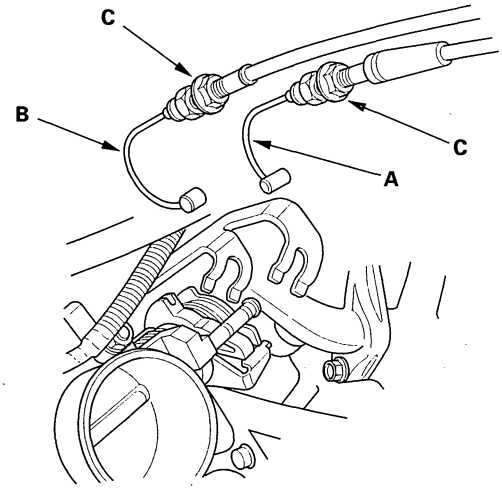


2. Remove the vacuum hose (B) and breather pipe (C), then remove the intake air duct (D).

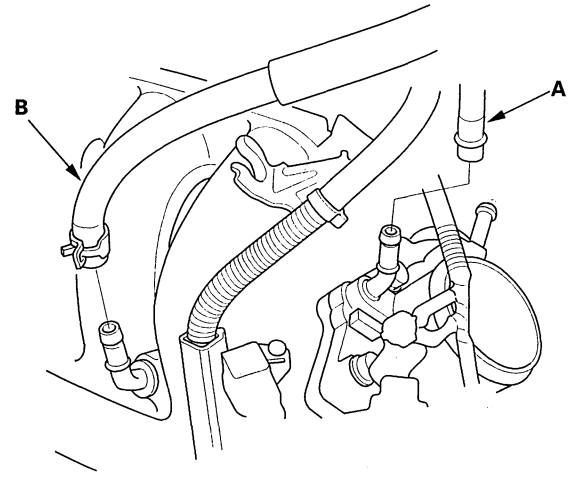
3. Remove the intake manifold cover.



4. Remove the throttle cable (A) and cruise control actuator cable (B) by loosening the locknuts (C), then slipping the cable ends out of the accelerator linkage. Take care not to bend the cables when removing them. Always replace any kinked cable with a new one.



5. Remove the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).



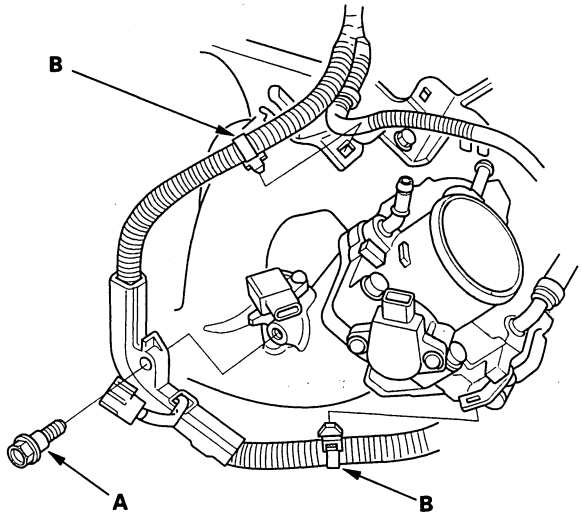
BACK

Protected by AR

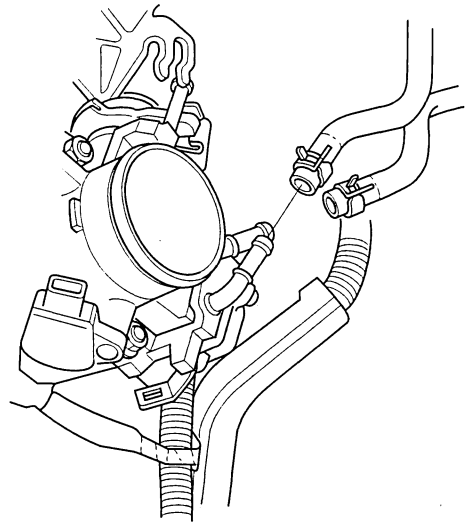
6. Remove the engine wire harness connectors and wire harness clamps from the intake manifold.

   - Idle air control (IAC) valve connector
   - Throttle position sensor connector
   - Manifold absolute pressure (MAP) sensor connector

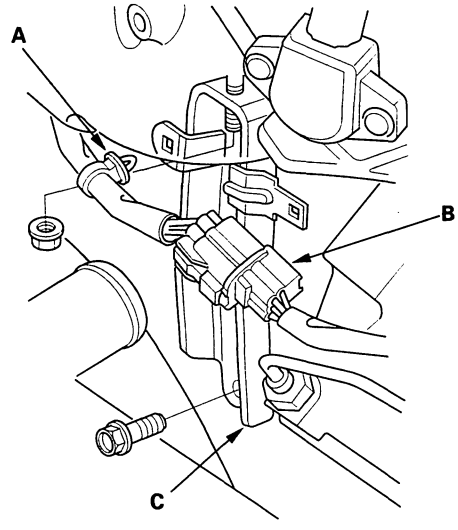
7. Remove the bolt (A) securing the harness holder, and remove the harness clamps (B).



8. Remove and plug the water bypass hoses.



9. Remove the harness clamp (A), and the harness connector (B) from the intake manifold bracket, then remove the intake manifold bracket (C).

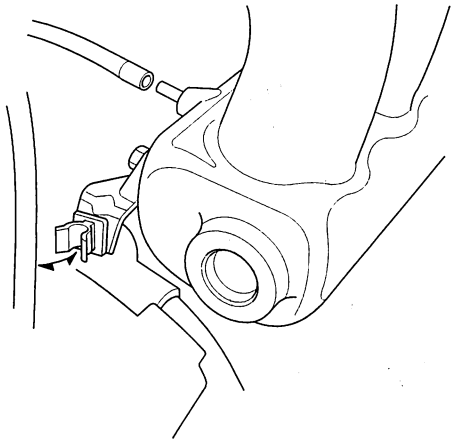


(cont'd)

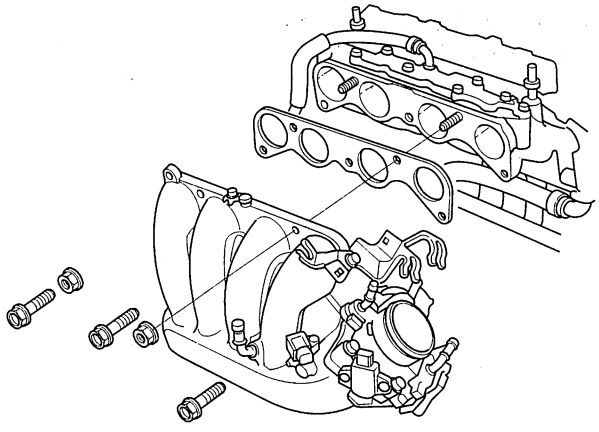
Protected by AR

Intake Manifold Removal and Installation (cont'd)

10. Remove the vacuum hose (A/T).

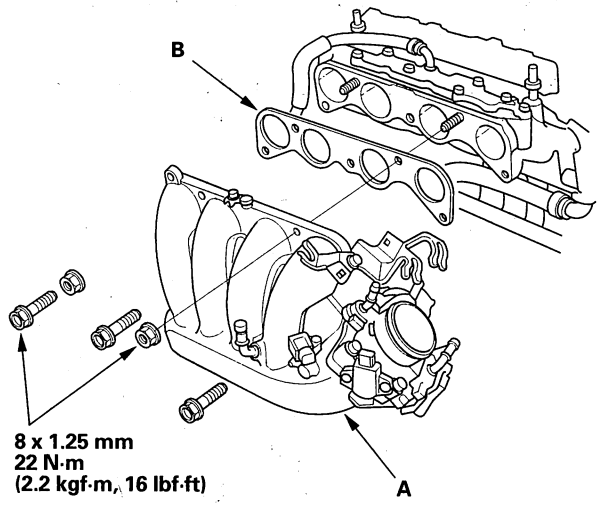


11. Remove the intake manifold.

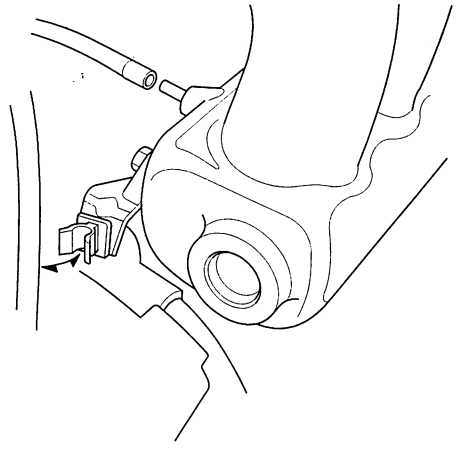


Installation (2003-2005 Models)

1. Install the intake manifold (A) with a new gasket (B), and tighten the bolts/nuts in a crisscross pattern in two or three steps, beginning with the inner bolt.



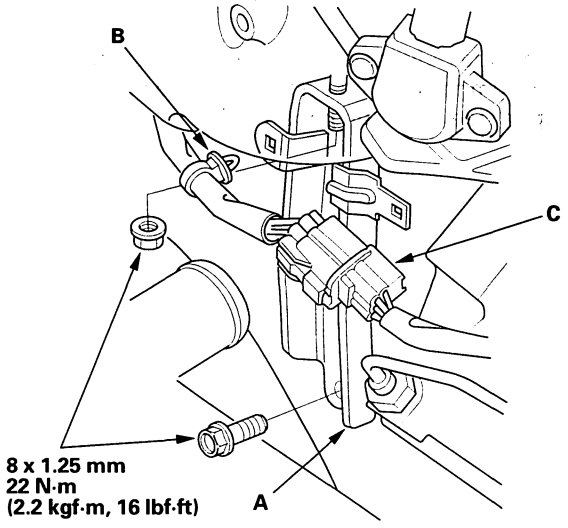
2. Install the vacuum hose (A/T).



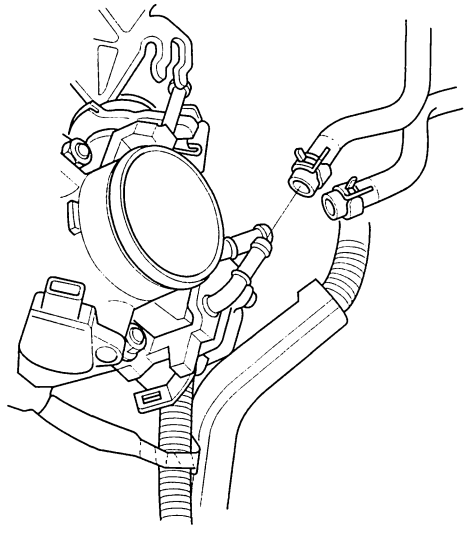
BACK

Protected by AR

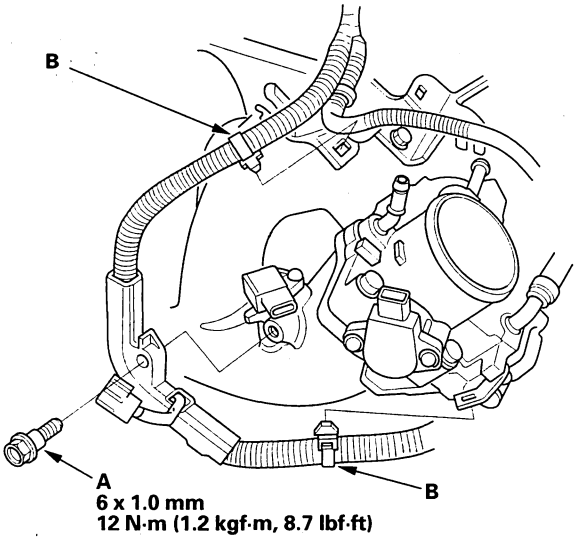
3. Install the intake manifold bracket (A), then install the harness clamp (B), and harness connector (C) to the intake manifold bracket.



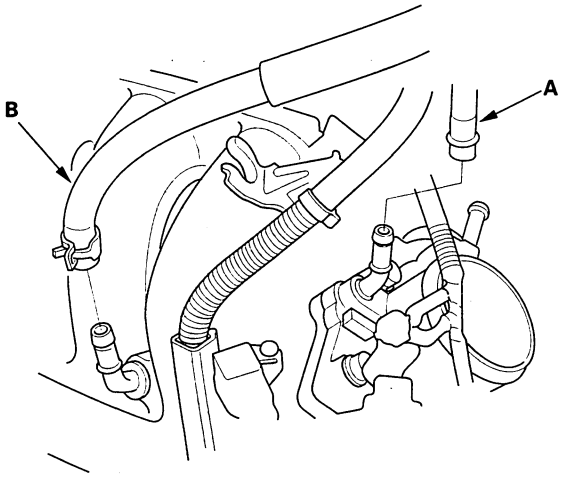
4. Install the water bypass hoses.



5. Tighten the bolt (A) securing the harness holder, and install the harness clamps (B).



6. Install the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).



7. Install the throttle cable (see page 11-364), then adjust the cable (see page 11-362).

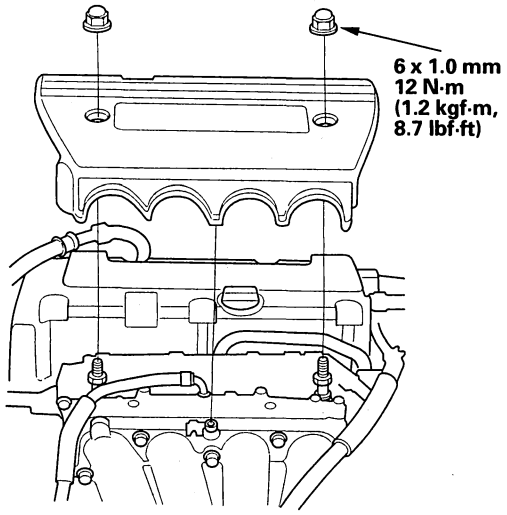
8. Install the cruise control actuator cable (see page 4-62), then adjust the cable (see page 4-63).

(cont'd)

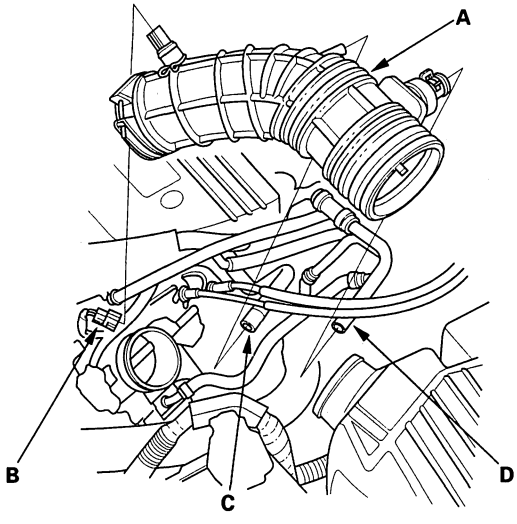
Protected by AR

Intake Manifold Removal and Installation (cont'd)

9. Install the intake manifold cover.



10. Install the intake air duct (A), then connect the intake air temperature (IAT) sensor connector (B), and install the vacuum hose (C) and breather pipe (D).



11. Clean up any spilled engine coolant.

12. After installation, check that all tubes, hoses, and connectors are installed correctly.

13. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 7 on page 10-7).

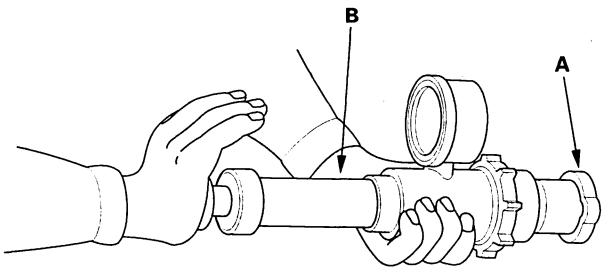
Radiator Cap Test

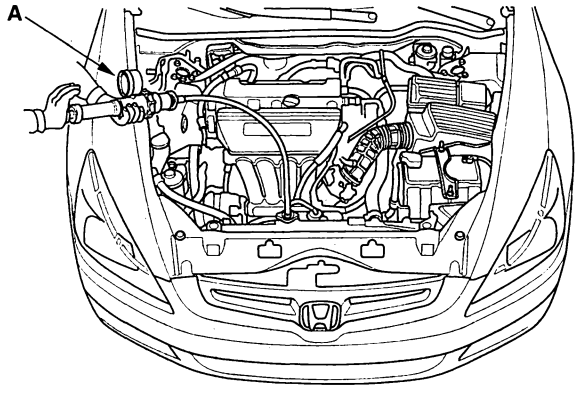
1. Remove the radiator cap (A), wet its seal with engine coolant, then install it on the pressure tester (B) (commercially available).



2. Apply a pressure of 93—123 kPa (0.95—1.25 kgf/cm², 14—18 psi).
3. Check for a drop in pressure.
4. If the pressure drops, replace the cap.

Radiator Test

1. Wait until the engine is cool, then carefully remove the radiator cap and fill the radiator with engine coolant to the top of the filler neck.
2. Attach the pressure tester (A) (commercially available) to the radiator.

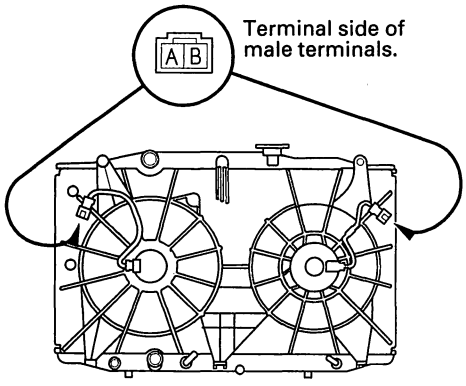


3. Apply a pressure of 93—123 kPa (0.95—1.25 kgf/cm², 14—18 psi).
4. Inspect for engine coolant leaks and a drop in pressure.
5. Remove the tester, and reinstall the radiator cap.
6. Check for engine oil in the coolant and/or coolant in the engine oil.

Protected by AR

Fan Motor Test

1. Disconnect the 2P connectors from the radiator fan motor and condenser fan motor.



2. Test the motor by connecting battery power to the B terminal and ground to the A terminal.

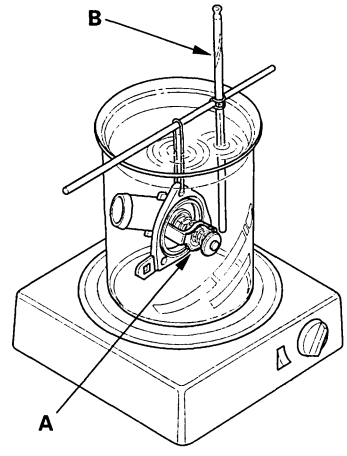
3. If the motor fails to run or does not run smoothly, replace it (see page 10-13).

Thermostat Test

Replace the thermostat if it is open at room temperature.

To test a closed thermostat:

1. Suspend the thermostat (A) in a container of water. Do not let the thermometer (B) touch the bottom of the hot container.



2. Heat the water, and check the temperature with a thermometer. Check the temperature at which the thermostat first opens, and at which it is fully open.

3. Measure the lift height of the thermostat when it is fully open.

Standard Thermostat

Lift Height:	**above 8.0 mm (0.31 in.)**
Starts Opening:	**169—176 °F (76—80 °C)**
Fully Open:	**194 °F (90 °C)**

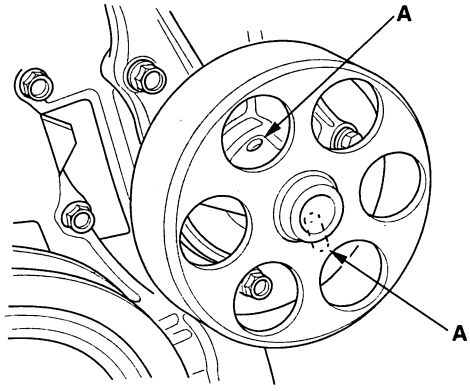
BACK

Protected by AR

Water Pump Inspection

1. Remove the drive belt (see page 4-37).
2. Turn the water pump pulley counterclockwise. Check that it turns freely. If it doesn't turn smoothly, replace the water pump (see page 10-5).

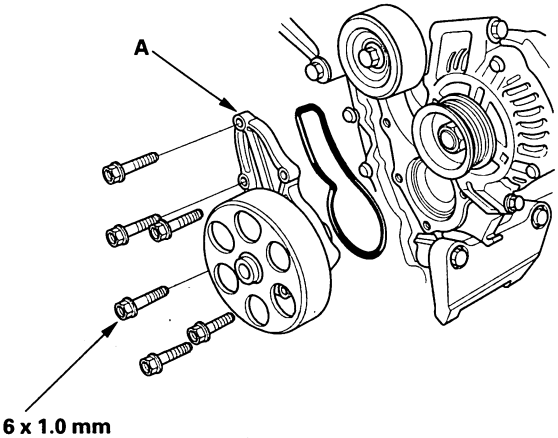
   NOTE: When you check the water pump pulley, you may see a small amount of "weeping" from the bleed holes (A). This is normal.



3. Install the drive belt (see page 4-37).

Water Pump Replacement

1. Remove the drive belt (see page 4-37).
2. Drain the engine coolant (see page 10-6).
3. Remove the *drive belt auto-tensioner* (see page 4-39).
4. Remove the six bolts securing the water pump, then remove the water pump (A).



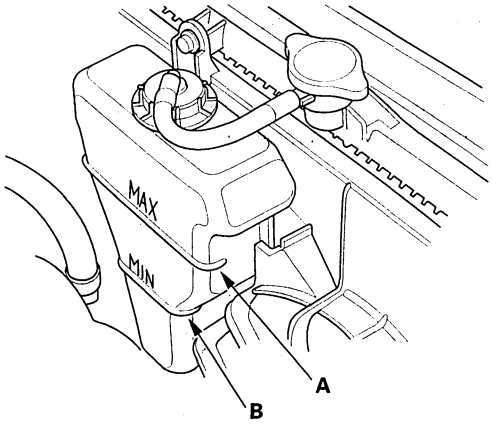
6 x 1.0 mm
12 N·m (1.2 kgf·m, 8.7 lbf·ft)

5. Inspect and clean the O-ring groove and mating surface with the water passage.
6. Install the water pump with new O-rings in the reverse order of removal.
7. Clean up any spilled engine coolant.
8. Install the drive belt auto-tensioner (see page 4-39).
9. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on page 10-7).

Protected by AR

Coolant Check

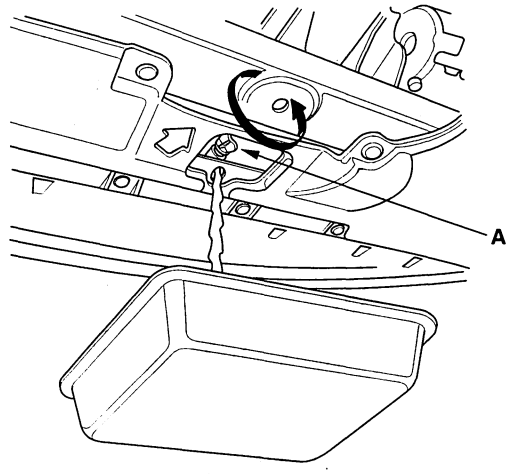
1. Look at the coolant level in the reserve tank. Make sure it is between the MAX mark (A) and MIN mark (B).



2. If the coolant level in the reserve tank is at or below the MIN mark, add coolant to bring it up to the MAX mark, and inspect the cooling system for leaks.

Coolant Replacement

1. Start the engine. Set the heater temperature control dial to maximum heat, or climate control system to HI, then turn off the ignition switch. Make sure the engine and radiator are cool to the touch.
2. Remove the radiator cap.
3. Loosen the drain plug (A), and drain the coolant.



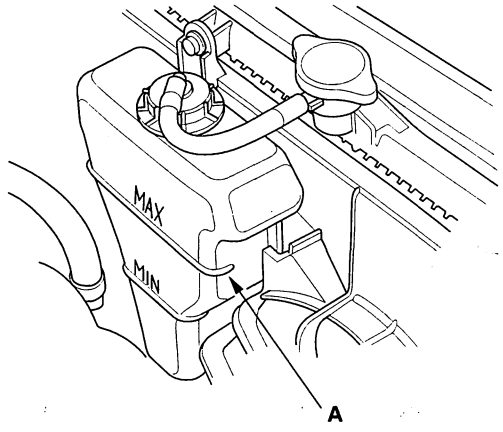
4. After the coolant has drained, tighten the radiator drain plug.

BACK

Protected by AR

5. Remove, drain and reinstall the reverse tank.

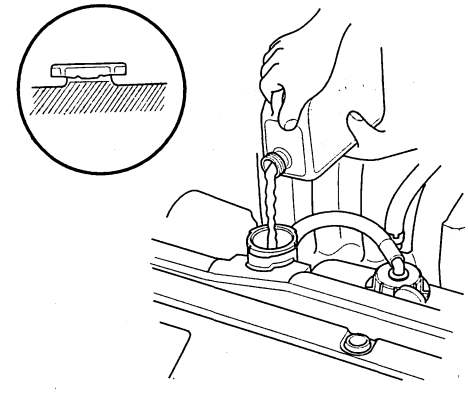
6. Fill the reserve tank to the MAX mark (A) with Honda Antifreeze/Coolant Type 2 (P/N OL999-9001).



7. Pour Honda Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck.

   NOTE:
   - Always use Honda Antifreeze/Coolant Type 2 (P/N OL999-9001). Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.
   - Honda Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.

   Engine Coolant Capacities (including the reserve tank capacity of 0.6 L (0.16 US gal))
   After Coolant Change:
   M/T: 5.1 L (1.35 US gal)
   A/T: 5.0 L (1.32 US gal)
   After Engine Overhaul:
   M/T: 7.2 L (1.90 US gal)
   A/T: 7.1 L (1.88 US gal)



8. Install the radiator cap loosely.

9. Start the engine, and let it run until it warms up (the radiator fan comes on at least twice).

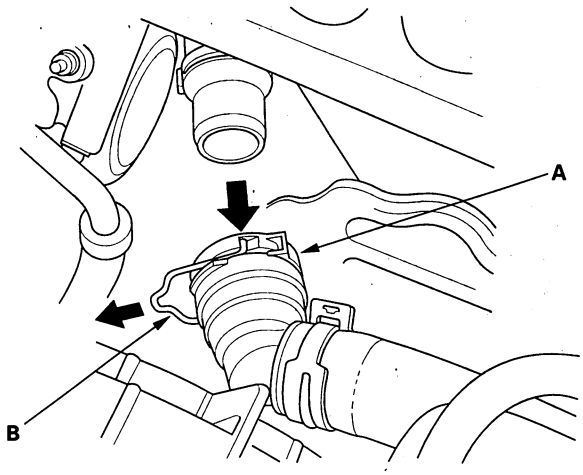
10. Turn off the engine. Check the level in the radiator and add Honda Antifreeze/Coolant Type 2 if needed.

11. Put the radiator cap on tightly, then run the engine again and check for leaks.

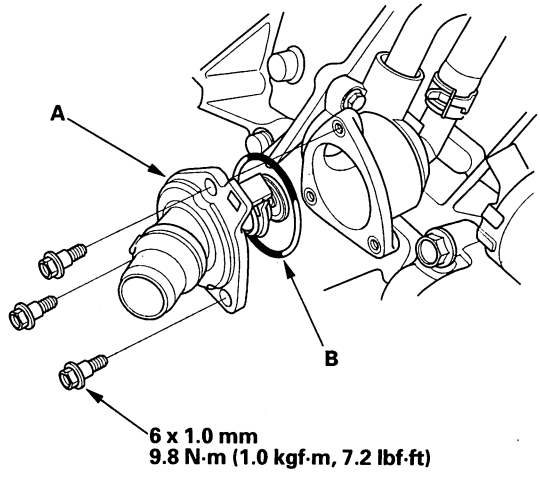
Protected by AR

Thermostat Replacement

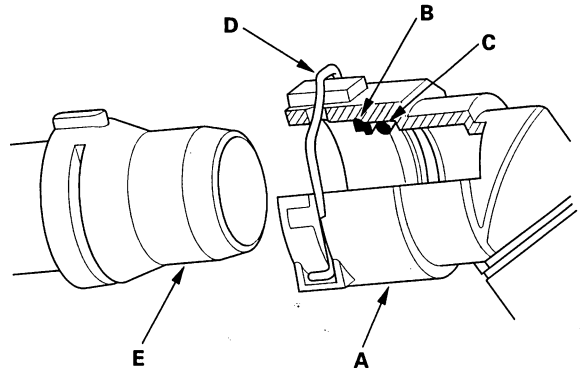
1. Drain the engine coolant (see page 10-6).
2. Clean any dirt off the quick connector (A), thermostat cover, and lower radiator hose.



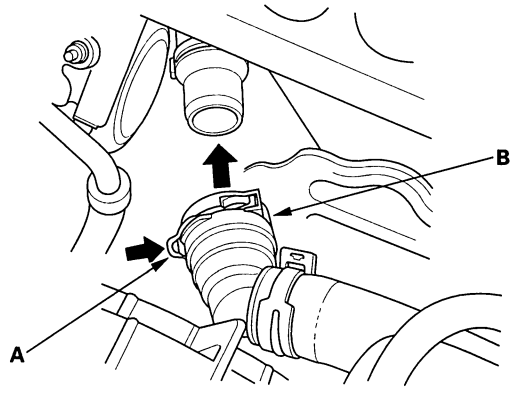
3. Pull out lock (B) by hand, then wiggle the quick connector loose, and remove it from the thermostat cover. Do not use any tools to remove the quick connector.
4. Remove the thermostat (A).



5. Install the thermostat with a new O-ring (B).
6. Check the quick connector (A) and set ring (B) for cracks or damage. If the connector and/or set ring are cracked or damaged, replace the connector.



7. Make sure the set ring is in place inside the quick connector. If the set ring is off the connector, replace the quick connector.
8. Replace the O-ring (C) in the quick connector.
9. Check the lock (D). If the lock is damaged or deformed, replace it. When installing the new lock on the connector, press it straight down along the groove.
10. Clean the connecting surface of the thermostat cover (E), then apply clean engine coolant around the connecting surface.
11. Push down the lock (A), then push the quick connector (B) onto the thermostat cover until you hear it click.



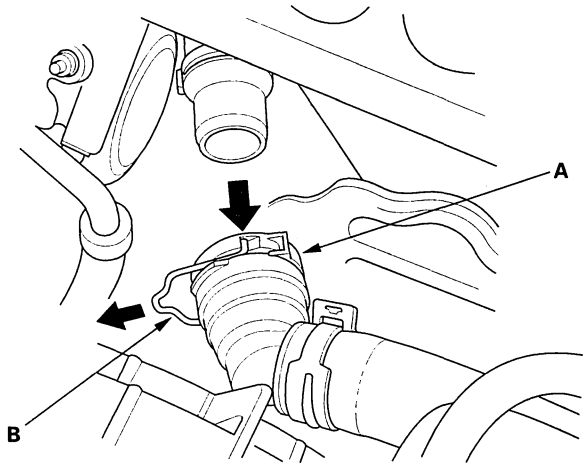
12. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on page 10-7).

BACK

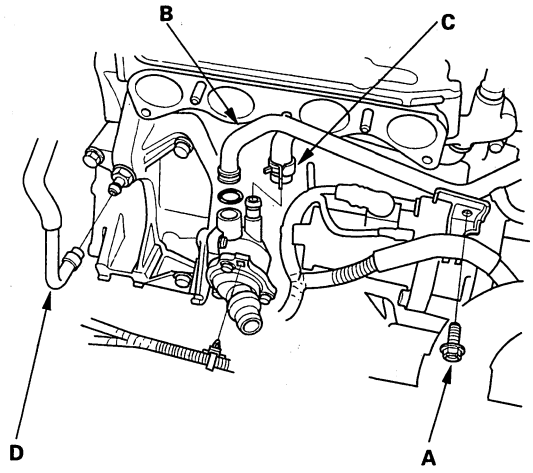
Protected by AR

Water Passage Replacement

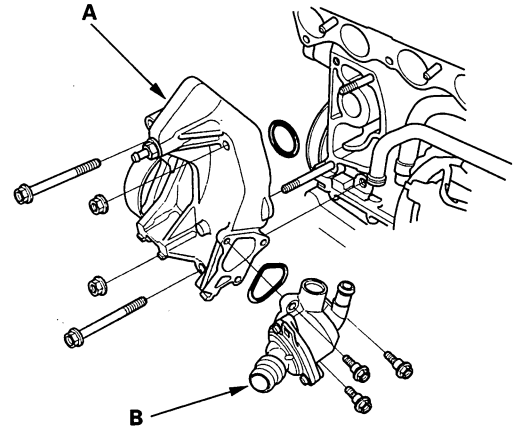
1. Drain the engine coolant (see page 10-6).
2. Clean any dirt off the quick connector (A), thermostat cover, and lower radiator hose.



3. Pull out the lock (B) by hand, then wiggle the quick connector loose, and remove it from the thermostat cover. Do not use any tools to remove the quick connector.
4. Remove the alternator (see page 4-40).
5. Remove the splash shield (see step 25 on page 13-7).
6. Remove the A/C compressor without disconnecting the A/C hoses (see step 26 on page 5-5).
7. Remove the intake manifold (see page 9-3).
8. Remove a bolt (A) securing the connecting pipe.



9. Remove the connecting pipe (B), water bypass hose (C), and positive crankcase ventilation (PCV) hose (D).
10. Remove the water passage (A).



11. Remove the thermostat housing (B).
12. Remove the water pump (see page 10-5).

(cont'd)

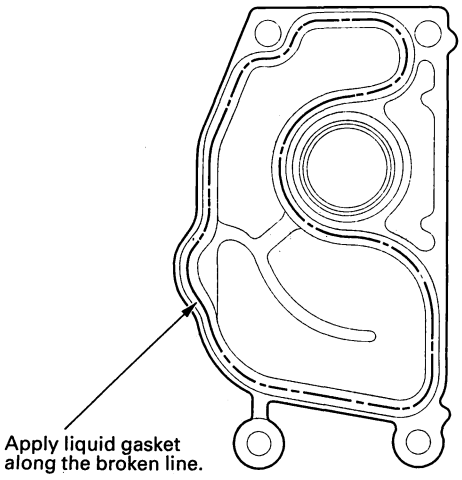
Protected by AR

Water Passage Replacement (cont'd)

13. Clean and dry the water passage mating surfaces.

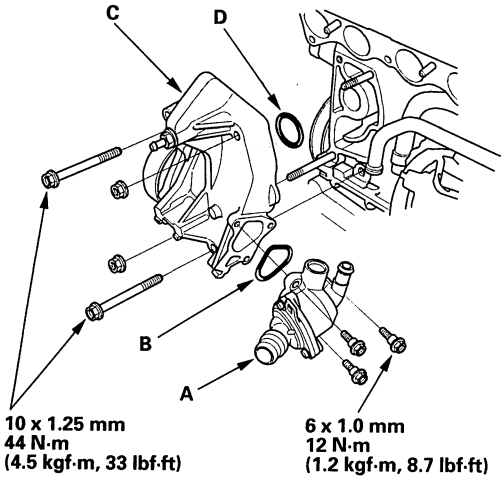
14. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the cylinder block mating surface of the water passage and to the inner threads of the bolt holes.

    NOTE:
    - Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.
    - Do not run the engine for at least 3 hours after installing the water passage.



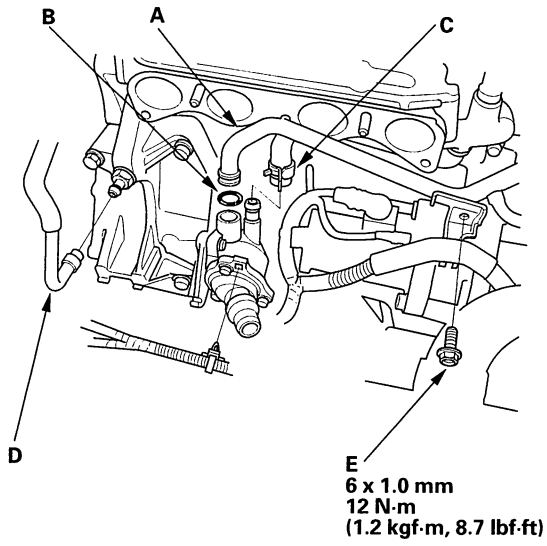
15. Install the water pump (see page 10-5).

16. Install the thermostat housing (A) with a new O-ring (B).



17. Install the water passage (C) with a new O-ring (D).

18. Install the connecting pipe (A) with a new O-ring (B).



19. Install the water bypass hose (C), and PCV hose (D), then tighten a bolt (E) securing the connecting pipe.

20. Install the intake manifold (see page 9-11).

21. Install the A/C compressor (see step 30 on page 5-15).

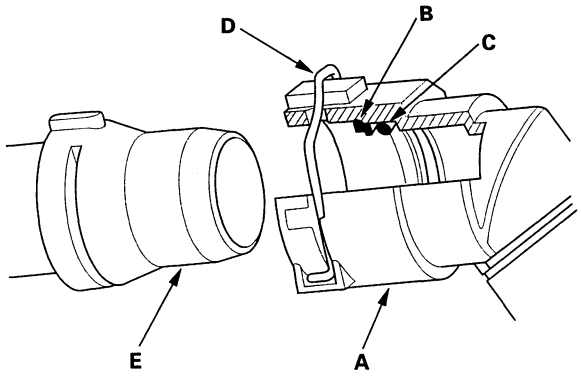
22. Install the splash shield (see step 25 on page 13-15).

23. Install the alternator (see page 4-40).

BACK

Protected by AR

24. Check the quick connector (A) and set ring (B) for cracks or damage. If the connector and/or set ring are cracked or damaged, replace the connector.



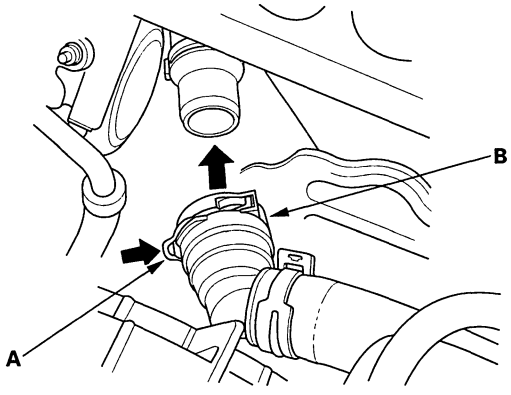
25. Make sure the set ring is in place inside the quick connector. If the set ring is off the connector, replace the quick connector.

26. Replace the O-ring (C) in the quick connector.

27. Check the lock (D). If the lock is damaged or deformed, replace it. When installing the new lock on the connector, press it straight down along the groove.

28. Clean the connecting surface of the thermostat cover (E), then apply clean engine coolant around the connecting surface.

29. Push down the lock (A), then push the quick connector (B) onto the thermostat cover until you here it click.

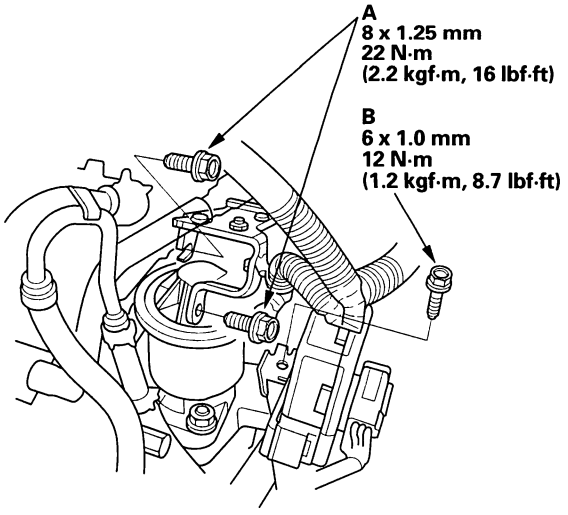


30. After assembly, wait at least 30 minutes before filling the engine with coolant or oil.

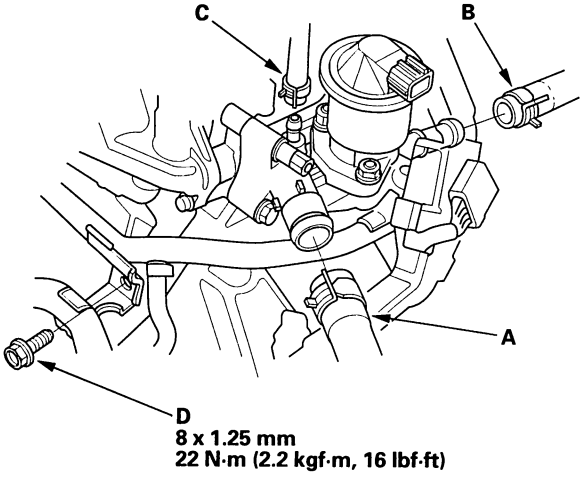
Protected by AR

EGR Passage Replacement

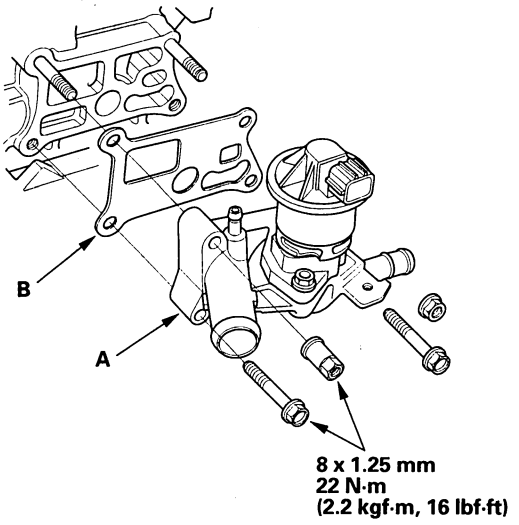
1. Drain the engine coolant (see page 10-6).
2. Remove the two bolts (A) securing the EVAP canister purge valve bracket and remove the bolt (B) securing the harness bracket.



3. Remove the upper radiator hose (A), heater hose (B), water bypass hose (C), and connecting pipe mounting bolt (D).



4. Disconnect the exhaust gas recirculation (EGR) valve connector.
5. Remove the EGR passage (A).



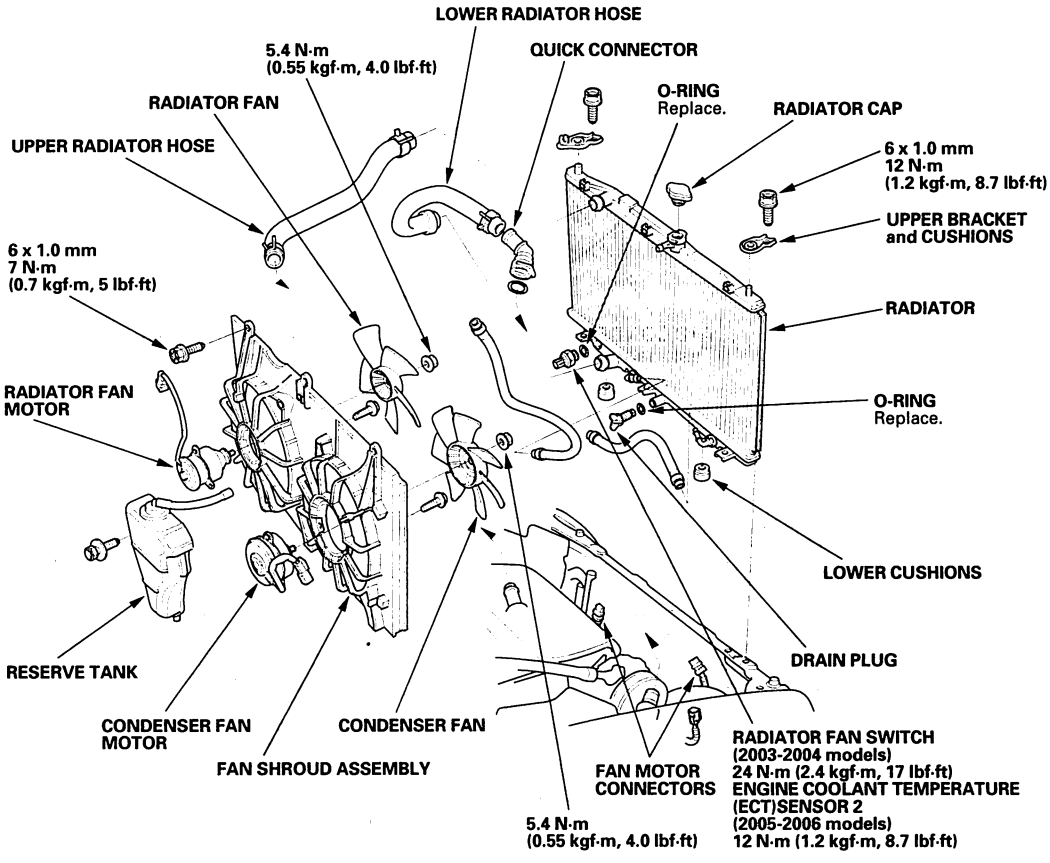
6. Install the EGR passage with a new gasket (B).
7. Install the other parts in the reverse order of removal.
8. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on page 10-7).

BACK

Protected by AR

Radiator and Fan Replacement

1. Drain the engine coolant (see page 10-6).
2. Remove the front bulkhead cover:
   - 2-door (see page 20-184)
   - 4-door (see page 20-185)
3. Remove the automatic transmission fluid (ATF) cooler hoses (A/T). Plug the ATF cooler hoses and lines.



4. Remove the upper radiator hose and lower radiator hose from the radiator.
5. Disconnect the fan motor connectors and radiator fan switch connector (2003-2004 models)/engine coolant temperture (ECT) sensor 2 connector (2005-2006 models).
6. Remove the A/C compressor clutch connector.
7. Remove the upper bracket and cushions, then pull up the radiator.
8. Remove the fan shroud assemblies and other parts from the radiator.
9. Install the radiator in the reverse order of removal. Make sure the upper and lower cushions are set securely.
10. Fill the radiator with engine coolant, then bleed air from the cooling system (see step 7 on page 10-7).
11. Check the ATF level in the automatic transmission (A/T) (see page 14-207).

Symptom Troubleshooting Index

2003-2004 Models

Symptom	Diagnostic procedure	Also check for
Engine overheats	1. Inspect the water pump (see page 10-5). 2. Check for a broken drive belt (see page 4-37). 3. Check the drive belt auto-tensioner (see page 4-38). 4. Check the thermostat (see page 10-4). 5. Check for the coolant leakage (from gaskets, hoses, O-rings, etc.). 6. Check for dirt, leaves, or insects on radiator and condenser. 7. Check for damaged or deformed fan shroud. 8. Check for plugged or deteriorated radiator hoses. 9. Check the radiator cap (see page 10-3). 10. Inspect the fan motors or fan relays. 11. Check for plugged heater core or hose(s). 12. Check the coolant level. 13. Check for deteriorated coolant. 14. Check for a damaged cylinder head gasket.	
The radiator fan does not run at all	Radiator fan circuit troubleshooting (see page 10-18).	Cleanliness and tightness of all connectors
The radiator fan does not run for engine cooling, but it runs with the A/C on	Radiator fan switch circuit troubleshooting (Open) (see page 10-22).	Cleanliness and tightness of all connectors
The radiator fan runs with the ignition switch ON (II), the A/C off, and the engine coolant temperature below 199 °F (93 °C)	Radiator fan switch circuit troubleshooting (Short) (see page 10-22).	Cleanliness and tightness of all connectors
The A/C condenser fan does not run at all (but the radiator fan runs with the A/C on)	A/C condenser fan circuit troubleshooting (see page 21-36).	• HVAC DTCs (see page 21-11) • Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan do not run with the A/C on (but the A/C compressor runs with the A/C on)	Radiator and A/C condenser fan common circuit troubleshooting (see page 21-37).	• HVAC DTCs (see page 21-11) • Cleanliness and tightness of all connectors
The A/C compressor clutch does not engage (but both the radiator fan and the A/C condenser fan run with the A/C on)	A/C compressor clutch circuit troubleshooting (see page 21-38).	• HVAC DTCs (see page 21-11) • Cleanliness and tightness of all connectors

Radiator Fan Circuit Troubleshooting

2003-2004 Models

NOTE: Before beginning this troubleshooting procedure, refer to the symptom troubleshooting index.

1. Check the No. 11 (30 A) fuse in the under-hood fuse/relay box, and the No. 30 (7.5 A) fuse in the under-dash fuse/relay box.

   Are the fuses OK?

   YES—Go to step 2.

   NO—Replace the fuse(s) and recheck. ■

2. Remove the radiator fan relay from the under-hood fuse/relay box, and test it (see page 22-75).

   Is the relay OK?

   YES—Go to step 3.

   NO—Replace the radiator fan relay. ■

3. Measure the voltage between radiator fan relay 4P socket terminal No. 2 and body ground.

   RADIATOR FAN RELAY 4P SOCKET

   Terminal side of female terminals

   Is there battery voltage?

   YES—Go to step 4.

   NO—Replace the under-hood fuse/relay box. ■

4. Connect radiator fan relay 4P socket terminal No. 1 and No. 2 with a jumper wire.

   RADIATOR FAN RELAY 4P SOCKET

   Terminal side of female terminals

   Does the radiator fan run?

   YES—Go to step 5.

   NO—Go to step 6.

5. Disconnect the jumper, and turn the ignition switch ON (II). Check for voltage between radiator fan relay 4P socket terminal No. 3 and body ground.

   RADIATOR FAN RELAY 4P SOCKET

   Terminal side of female terminals

   Is there battery voltage?

   YES—Go to step 9.

   NO—Repair an open in the wire between the under-hood fuse/relay box and under-dash fuse/relay box. ■

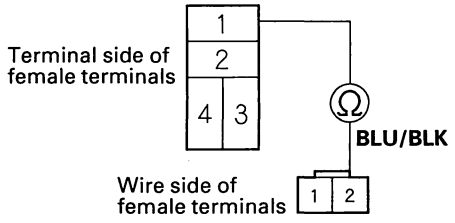
BACK

Protected by AR

6. Disconnect the radiator fan motor 2P connector.

7. Check for continuity between radiator fan relay 4P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 2.

RADIATOR FAN RELAY 4P SOCKET



RADIATOR FAN MOTOR 2P CONNECTOR

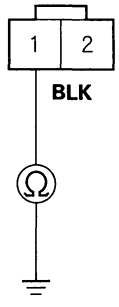
Is there continuity?

YES—Go to step 8.

NO—Repair an open in the wire between the under-hood fuse/relay box and radiator fan motor 2P connector terminal No. 2. ■

8. Check for continuity between radiator fan motor 2P connector terminal No. 1 and body ground.

RADIATOR FAN MOTOR 2P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Replace the radiator fan motor (see page 10-13). ■

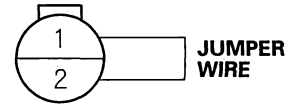
NO—Repair an open in the wire between radiator fan motor 2P connector terminal No. 1 and body ground. If the wire is OK, check for a poor ground at G301. ■

9. Reinstall the radiator fan relay.

10. Disconnect the radiator fan switch 2P connector.

11. Connect radiator fan switch 2P connector terminal No. 1 and No. 2 with a jumper wire.

RADIATOR FAN SWITCH 2P CONNECTOR



Wire side of female terminals

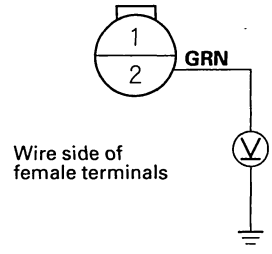
Does the radiator fan run?

YES—Replace the radiator fan switch (see page 10-23). ■

NO—Go to step 12.

12. Remove the jumper wire, and measure the voltage between radiator fan switch 2P connector terminal No. 2 and body ground.

RADIATOR FAN SWITCH 2P CONNECTOR



Is there battery voltage?

YES—Repair an open in the wire between radiator fan switch 2P connector terminal No. 1 and body ground. If the wire is OK, check for a poor ground at G301. ■

NO—Repair open in the wire between radiator fan switch 2P connector terminal No. 2 and the under-hood fuse/relay box. ■

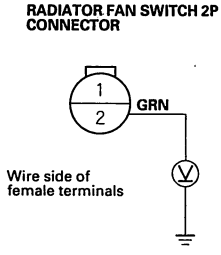
Radiator Fan Switch Circuit Troubleshooting (Open)

2003-2004 Models

NOTE: Before beginning this troubleshooting procedure, refer to the symptom troubleshooting index.

1. Disconnect the radiator fan switch 2P connector.
2. Turn the ignition switch ON (II).
3. Measure voltage between radiator fan switch 2P connector terminal No. 2 and body ground.

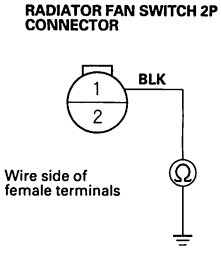


Is there battery voltage?

YES—Go to step 4.

NO—Repair an open in the wire between radiator fan switch 2P connector terminal No. 2 and under-hood fuse/relay box. ■

4. Turn the ignition switch OFF, and check for continuity between radiator fan switch 2P connector terminal No. 1 and body ground.



Is there continuity?

YES—Replace the radiator fan switch (see page 10-23). ■

NO—Repair an open in the wire between radiator fan switch 2P connector terminal No. 1 and body ground. If the wire is OK, check for a poor ground at G301. ■

Radiator Fan Switch Circuit Troubleshooting (Short)

2003-2004 Models

NOTE: Before beginning this troubleshooting procedure, refer to the symptom troubleshooting index.

1. Remove the radiator fan relay from the under-hood fuse/relay box, and test it (see page 22-75).

Is the relay OK?

YES—Go to step 2.

NO—Replace the radiator fan relay. ■

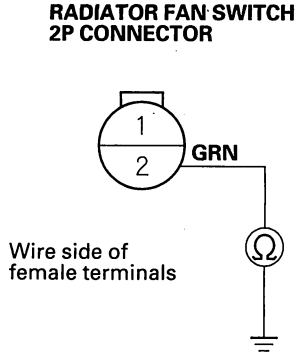
2. Remove the radiator fan switch, and test it (see page 10-23).

Is the radiator fan switch OK?

YES—Go to step 3.

NO—Replace the radiator fan switch (see page 10-23). ■

3. Disconnect the under-hood fuse relay box 20P connector.
4. Check for continuity between radiator fan switch 2P connector terminal No. 2 and body ground.



Is there continuity?

YES—Repair a short in the wire between radiator fan switch 2P connector terminal No. 2 and under-hood fuse/relay box. ■

NO—Replace the under-hood fuse/relay box. ■

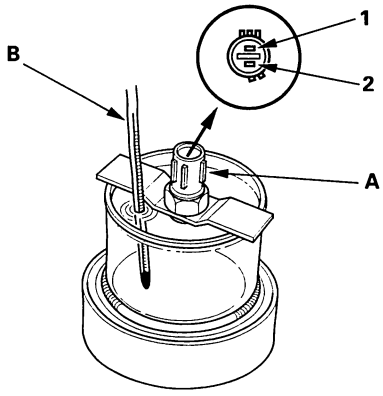
Radiator Fan Switch Test

2003-2004 Models

NOTE: Bleed air from the cooling system after installing the radiator fan switch (see page 10-6).

1. Remove the radiator fan switch from the radiator (see page 10-13).
2. Suspend the radiator fan switch (A) in a container of water as shown.



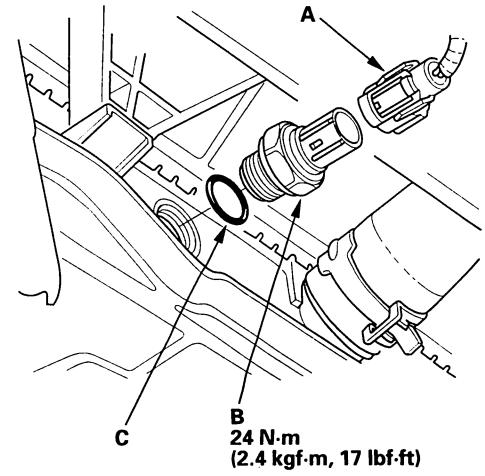
3. Heat the water, and check the temperature with a thermometer. Do not let the thermometer (B) touch the bottom of the hot container.
4. Measure the continuity between terminal No. 1 and terminal No. 2 according to the table.

Operation		Temperature	Terminal 1	Terminal 2
SWITCH	ON	196—203 °F (91—95 °C)	○—○	
	OFF	5—15 °F (3—8 °C) lower than the temperature when it goes on		

Radiator Fan Switch Replacement

2003-2004 Models

1. Drain the engine coolant (see page 10-6).
2. Remove the splash shield.
3. Disconnect the radiator fan switch connector (A), then remove the radiator fan switch (B).



4. Install the radiator fan switch with a new O-ring (C).
5. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on page 10-7).

General Troubleshooting Information

Intermittent Failures

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If the malfunction indicator lamp (MIL) on the dash does not come on, check for poor connections or loose pins at all connectors related to the circuit that you are troubleshooting. If the MIL was on, but then went out, the original problem may have been intermittent.

Opens and Shorts

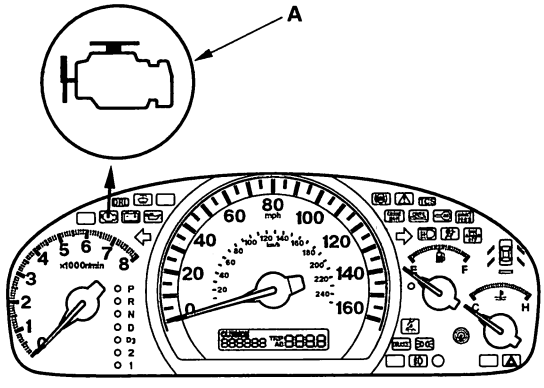
"Open" and "Short" are common electrical terms. An open is a break in a wire or at a connection. A short is an accidental connection of a wire to ground or to another wire. In simple electronics, this usually means something won't work at all. With complex electronics (such as ECMs and PCMs) this can sometimes mean something works, but not the way it's supposed to.

How to Use the HDS (Honda Diagnostic System)

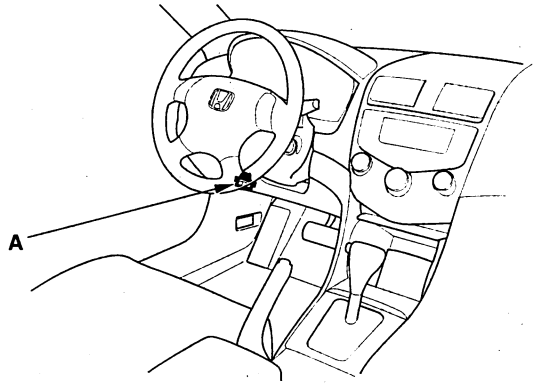
If the MIL (Malfunction Indicator Lamp) has come on

1. Start the engine, and check the MIL (A).

   NOTE: If the ignition switch is turned ON (II), and the engine is not started, the MIL will stay on for 15—20 seconds (see page 11-59).



2. If the MIL stays on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



3. Turn the ignition switch ON (II).

4. Check the diagnostic trouble code (DTC) and note it. Also check the freeze data. Refer to the DTC troubleshooting and begin the appropriate troubleshooting procedure.

   NOTE:
   - Freeze data indicates the engine conditions when the first malfunction, misfire, or fuel trim malfunction was detected.
   - The HDS can read the DTC, freeze data, current data, and other engine control module (ECM)/ powertrain control module (PCM) data.
   - For specific operations, refer to the user's manual that came with the HDS.

5. If no DTCs are found, go to MIL troubleshooting (see page 11-205).

If the MIL did not stay on
If the MIL did not stay on but there is a driveability problem, do the symptom troubleshooting.

If you can't duplicate the DTC
Some of the troubleshooting requires you to reset the ECM/PCM and try to duplicate the DTC. If the problem is intermittent and you can't duplicate the code, do not continue through the procedure. To do so will only result in confusion and possibly, a needlessly replaced ECM/PCM.

(cont'd)

Protected by AR

General Troubleshooting Information (cont'd)

HDS Clear Command

The ECM/PCM stores various specific data to correct the system even if there is no electrical power such as when the battery negative terminal or No. 8 FI ECU (ECM/PCM) (15 A) fuse are disconnected. Stored data based on failed parts should be cleared by using the "CLEAR COMMAND" of the HDS, if parts are replaced.

The HDS has three kinds of clear commands to meet this purpose. They are DTC clear, ECM/PCM reset, and CKP pattern clear. DTC clear command erases all stored DTC codes, freeze data, readiness codes, and on-board snapshot. This must be done with the HDS after reproducing the DTC during troubleshooting.
The ECM/PCM reset command erases all stored DTC codes, freeze data, readiness codes, on-board snapshot, and all specific data to correct the system except CKP pattern. If the CKP pattern data in the ECM/PCM was cleared, you must do the CKP pattern learn procedure. The CKP pattern clear command erases only CKP pattern data. This command is for repair of a misfire or the CKP sensor.

Scan Tool Clear Command

If you are using a generic scan tool to clear commands, be aware that there is only one setting for clearing the ECM/PCM, and it clears all commands at the same time (CKP pattern learn, idle learn, readiness codes, freeze data, on-board snapshot, and DTCs). After you clear all commands, you then need to do these procedures, in this order: ECM/PCM idle learn procedure (see page 11-316); CKP pattern learn procedure; Test-drive to set readiness codes to complete (see page 11-59).

DTC Clear

1. Clear the DTC with the HDS while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II). Wait 30 seconds.
4. Turn the ignition switch OFF, and disconnect the HDS from the DLC.

ECM/PCM Reset

This command clears stored specific data from each vehicle such as DTCs, freeze data, and readiness codes. It does not clear CKP PATTERN data.

1. Reset the ECM/PCM with the HDS while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and wait 30 seconds.
4. Turn the ignition switch OFF, and disconnect the HDS from the DLC.
5. Do the ECM/PCM idle learn procedure (see page 11-316).

CKP Pattern Clear/CKP Pattern Learn

NOTE: The ECT needs to be at 176 °F (80 °C) or higher.

1. Clear the CKP pattern while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and wait 30 seconds.
4. Test-drive the vehicle on a level road: decelerate (with the throttle fully closed) from an engine speed of 2,500 rpm to 1,000 rpm with the A/T in 2 position, or M/T in 1st gear.
5. Stop the vehicle, but keep the engine running.
6. Check PULSER F/B LEARN in the DATA LIST with the HDS. If it is NOT COMPLETED, go to step 4. If it is COMPLETED, go to step 7.
7. Turn the ignition switch OFF.
8. Turn the ignition switch ON (II), and wait for 30 seconds. The CKP learning procedure is completed.

BACK

Protected by AR

How to End a Troubleshooting Session (required after any troubleshooting)

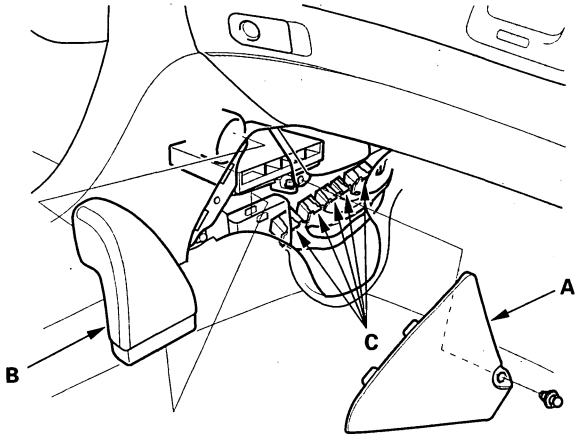
1. Reset the ECM/PCM with the HDS.
2. Do the ECM/PCM idle learn procedure (see page 11-316).
3. Turn the ignition switch OFF.
4. Disconnect the HDS from the DLC.

   NOTE: The ECM/PCM is part of the immobilizer system. If you replace the ECM/PCM, it will have a different immobilizer code. In order for the engine to start, you must rewrite the immobilizer code with the HDS.

How to Remove the ECM/PCM Connectors for Testing

If DTC troubleshooting requires voltage or resistance checks at the ECM/PCM connectors, remove the ECM/PCM connectors and test it:

1. Jump the SCS line with the HDS.
2. Remove the center lower cover (A).

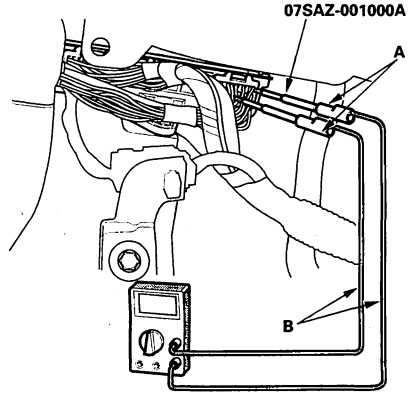


3. Remove the duct (B).
4. Disconnect ECM/PCM connectors (C).
5. Open the SCS line with the HDS.

How to Troubleshoot Circuits at the ECM/PCM

Special Tools Required
- Digital multimeter KS-AHM-32-003 (1) or a commercially available digital multimeter
- Backprobe set 07SAZ-001000A (2)

1. Connect the backprobe adapters (A) to the stacking patch cords (B), and connect the cords to a digital multimeter.



2. Using the wire insulation as a guide for the contoured tip of the backprobe adapter, gently slide the tip into the connector from the wire side until it touches the end of the wire terminal.
3. If you cannot get to the wire side of the connector or the wire side is sealed (A), disconnect the connector and probe the terminals (B) from the terminal side. Do not force the probe into the connector.

NOTICE

Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.

General Troubleshooting Information (cont'd)

ECM/PCM Updating and Substitution for Testing

Special Tools Required
Honda interface module (HIM) EQS05A35570

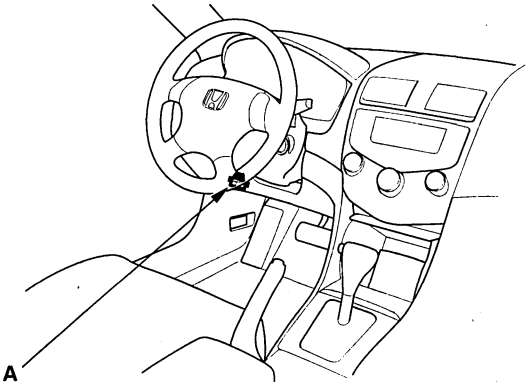
Use this procedure when you have to substitute a known-good ECM/PCM in a troubleshooting procedure. Update the ECM/PCM only if the ECM/PCM does not have the latest software loaded.

NOTE: Do not turn the ignition switch OFF while updating the ECM/PCM. If you turn the ignition switch OFF before completion, the ECM/PCM can be damaged.

How to Update the ECM/PCM

NOTE:
- To ensure the latest program is installed, do an ECM/PCM update whenever the ECM/PCM is substituted or replaced.
- You can not update an ECM/PCM with the program it already has. It will only accept a new program.
- Before you update the ECM/PCM, make sure the vehicle's battery is fully charged.
- To prevent ECM/PCM damage, do not operate anything electrical (audio system, brakes, A/C, power windows, moonroof, door locks, etc.) during the update.
- If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashing during the update, leave the ignition switch in the ON (II) position when you disconnect the HIM from the data link connector (DLC). This will prevent ECM/PCM damage.

1. Turn the ignition switch ON (II). Do not start the engine.
2. Connect the HDS or the Honda interface module (HIM) to the data link connector (DLC) (A) located under the driver's side of the dashboard.



3. Select the INSPECTION MENU with the HDS.
4. Do the TP POSITION CHECK in the ETCS TEST.
5. If the HDS does not have the update function, disconnect the HDS from the vehicle and connect the Honda interface module (HIM).
6. If the software in the ECM/PCM is the latest, disconnect the HDS or the HIM from the DLC and go back to the procedure that you were doing.
   If the software in the ECM/PCM is not the latest, do the ECM/PCM update procedure as described on the HIM label or in the ECM/PCM update system.

   NOTE: If the ECM/PCM update system requires you to cool the ECM/PCM, follow what is shown in the screen.
7. Do the ECM/PCM idle learn procedure (see page 11-316).
8. Do the CKP pattern clear/pattern learn procedure with the HDS.

BACK

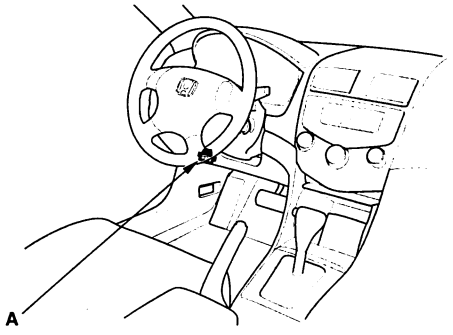
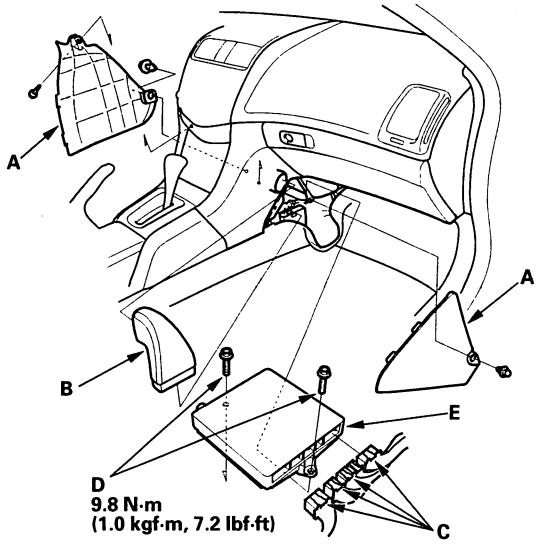
How to Substitute the ECM/PCM

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



2. Make sure the HDS communicates with the ECM/PCM. If it doesn't, skip steps 3 to 5 and clean the throttle body (2006 model only) (see page 11-357) after this procedure.
3. Turn the ignition switch ON (II).
4. 2006 model: Select the INSPECTION MENU with the HDS.
5. 2006 model: Do the TP POSITION CHECK in the ETCS TEST.
6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Remove the center lower covers (A).



9. Remove the duct (B).
10. Disconnect ECM/PCM connectors (C).
11. Remove the bolts (D), then remove the ECM/PCM (E).
12. Install the ECM/PCM in the reverse order of removal.
13. Open the SCS line with the HDS.
14. Turn the ignition switch ON (II).

    NOTE: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because VIN has not been programmed into the ECM/PCM; ignore it, and continue this procedure.

15. Input the VIN to the ECM/PCM with the HDS.
16. Rewrite the immobilizer code with the ECM/PCM replacement procedure in the HDS; it allows you to start the engine.
17. Reset the ECM/PCM with the HDS.
18. Do the ECM/PCM idle learn procedure (see page 11-316).
19. Do the CKP pattern clear/pattern learn procedure with the HDS.

OBD Status

The OBD status shows the current system status of each DTC and all of the parameters. This function is used to see if the technician's repair was successfully finished. The results of diagnostic tests for the DTC are displayed as:

- PASSED: On board diagnosis is successfully finished.
- FAILED: On board diagnosis has finished but failed.
- EXECUTING: The vehicle is in enable criteria conditions for the DTC and the on board diagnosis is running.
- NOT COMPLETED: The on board diagnosis was running but is out of the enable conditions of the DTC.
- OUT OF CONDITION: The vehicle has stayed out of the enable conditions of the DTC.

Symptom Troubleshooting Index

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

Symptom	Diagnostic procedure	Also check for
Engine will not start (MIL works OK, no DTCs set)	1. Test the battery (see page 22-78). 2. Test the starter solenoid (see page 4-9). 3. Check the fuel pressure (see page 11-332). 4. Troubleshoot the fuel pump circuit (see page 11-326).	• Low compression • No ignition spark • Intake air leaks • Locked up engine • Broken cam chain • Contaminated fuel
Engine will not start (MIL comes on and stays on, or never comes on at all, no DTCs set)	Troubleshoot the MIL circuit (see page 11-205).	
Engine will not start (immobilizer indicator stays on or flashes)	Troubleshoot the immobilizer system (see page 22-407).	
Engine starts but stalls immediately (MIL works OK, no DTCs set)	Troubleshoot the immobilizer system (see page 22-407).	
Engine is hard to start (MIL works OK, no DTCs set)	1. Test the battery (see page 22-78). 2. Check the fuel pressure (see page 11-332). 3. 2006 model: Clean the throttle body (see page 11-357).	• Low compression • Intake air leaks • Contaminated fuel • Weak spark
Cold fast idle too low (MIL works OK, no DTCs set)	1. Do the ECM/PCM idle learn procedure (see page 11-316). 2. Check the idle speed (see page 11-315). 3. 2006 model: Clean the throttle body (see page 11-357).	
Cold fast idle too high (MIL works OK, no DTCs set)	1. Do the ECM/PCM idle learn procedure (see page 11-316). 2. Check the idle speed (see page 11-315). 3. Inspect/adjust the throttle cable; 2003-2005 models (see page 11-362), 2006 model (see page 11-363). 4. 2003-2005 models: Test the throttle body (see page 11-356). 5. 2006 model: Do the throttle position learning check (see page 11-356).	
Idle speed fluctuates (MIL works OK, no DTCs set)	1. Do the ECM/PCM idle learn procedure (see page 11-316). 2. Check the idle speed (see page 11-315). 3. Inspect/adjust the throttle cable; 2003-2005 models (see page 11-362), 2006 model (see page 11-363). 4. 2003-2005 models: Test the throttle body (see page 11-356). 5. 2006 model: Do the carbon accumulation check (see page 11-356).	Intake vacuum leaks

Symptom	Diagnostic procedure	Also check for
After warming up, idle speed is below specification without load (MIL works OK, no DTCs set)	1. 2003-2004 models: Troubleshoot the alternator FR signal circuit (see page 11-309). 2. 2005-2006 models: Troubleshoot the alternator FR signal circuit (see page 11-311). 3. 2003-2005 models: Test the throttle body (see page 11-356). 4. 2006 model: Do the carbon accumulation check (see page 11-356).	
After warming up, idle speed is above specification without load (MIL works OK, no DTCs set)	1. Inspect/adjust the throttle cable; 2003-2005 models (see page 11-362), 2006 model (see page 11-363). 2. 2003-2004 models: Troubleshoot the alternator FR signal circuit (see page 11-309). 3. 2005-2006 models: Troubleshoot the alternator FR signal circuit (see page 11-311). 4. 2006 model: Inspect the APP sensor (see page 11-273). 5. 2003-2005 models: Inspect the TP sensor (see page 11-358).	
Low power (MIL works OK, no DTCs set)	1. Check the fuel pressure (see page 11-332). 2. 2003-2005 models: Test the throttle body (see page 11-356). 3. Inspect/adjust the throttle cable; 2003-2005 models (see page 11-362), 2006 model (see page 11-363).	• Low compression • Incorrect camshaft timing • Incorrect engine oil level
Engine stalls (MIL works OK, no DTCs set)	1. Do the ECM/PCM idle learn procedure (see page 11-316). 2. Check the fuel pressure (see page 11-332). 3. Check the idle speed (see page 11-315). 4. Troubleshoot the brake pedal position switch signal circuit (see page 11-314).	• Intake air leaks • Faulty harness and sensor connections
Difficult to refuel (MIL works OK, no DTCs set)	1. Check the fuel vent tube between the EVAP canister and the fuel tank. 2. Check the fuel tank vapor recirculation tube between the fuel pipe and the fuel tank. 3. Check the fuel tank signal tube between the fuel pipe and the fuel tank (SULEV and LX-P models). 4. Replace the fuel tank (see page 11-347).	Malfunctioning gas station filling nozzle.
Fuel overflows during refueling (No DTCs set)	Replace the fuel tank (see page 11-347).	Malfunctioning gas station filling nozzle.

System Description

Electronic Control System

The functions of the fuel and emission control systems are managed by the engine control module (ECM) on vehicles with manual transmission, or the powertrain control module (PCM) on vehicles with automatic transmissions.

Self-diagnosis
The ECM/PCM detects a failure of a signal from a sensor or from another control unit and stores a Temporary DTC or a DTC. Depending on the failure, a DTC is stored in the either first or the second drive cycle. When a DTC is stored, the ECM/PCM turns on the malfunction indicator lamp (MIL) by supplying ground to the MIL circuit.

- **One Drive Cycle Detection Method**
  When an abnormality occurs in the signal from a sensor or from another control unit, the ECM/PCM stores a DTC and turns on the MIL.

- **Two Drive Cycle Detection Method**
  When an abnormality occurs in the signal from a sensor or from another control unit in the first drive cycle, the ECM/PCM stores a Temporary DTC. The MIL does not come on at this time. If the failure continues in the second drive cycle, the ECM/PCM stores a DTC and turns on the MIL.

Fail-safe Function
When an abnormality occurs in the signal from a sensor or from another control unit, the ECM/PCM ignores that signal, stores a DTC and turns on the MIL. The ECM/PCM will use a pre-programmed value for that sensor which allows the engine to continue running. This causes a DTC to be stored and the MIL to comes on.

MIL Bulb Check and Readiness Code Condition
When the ignition switch is turned ON (II), the ECM/PCM supplies ground to the MIL circuit for about 15 to 20 seconds to check the bulb condition. If any readiness codes are not set to complete, the MIL flashes five times. If all readiness codes are set to complete, the MIL goes out.

Self Shut Down (SSD) Mode
After the ignition switch is turned OFF, the ECM/PCM stays on (up to 15 minutes). If the ECM/PCM connector is disconnected during this time, the ECM/PCM may be damaged. To cancel this mode, disconnect the negative cable from the battery or jump the SCS line with the HDS after the ignition switch is turned OFF.

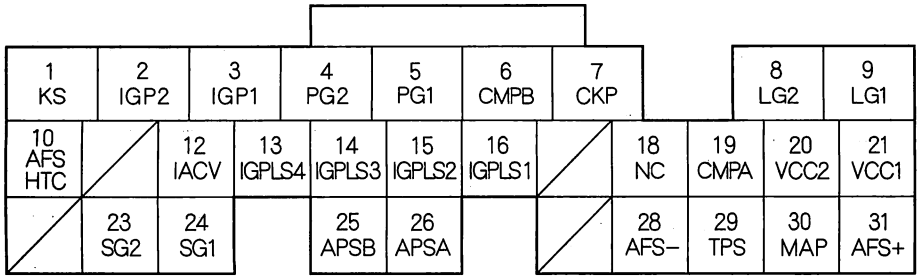
ECM/PCM Inputs and Outputs at Connector A (31P)



Wire side of female terminals

NOTE: Standard battery voltage is 12 V.

Terminal number	Wire color	Terminal name	Description	Signal
1	RED/BLU	KS (KNOCK SENSOR)	Detects knock sensor signal	With engine knocking: pulses
2	YEL/BLK	IGP2 (POWER SOURCE)	Power source for ECM/PCM circuit	With ignition switch ON (II): battery voltage With ignition switch OFF: about 0 V
3	YEL/BLK	IGP1 (POWER SOURCE)	Power source for ECM/PCM circuit	With ignition switch ON (II): battery voltage With ignition switch OFF: about 0 V
4	BLK	PG2 (POWER GROUND)	Ground circuit for ECM/ PCM	Less than 1.0 V at all times
5	BLK	PG1 (POWER GROUND)	Ground circuit for ECM/ PCM	Less than 1.0 V at all times
6	GRN	CMPB (CAMSHAFT POSITION SENSOR B)	Detects CMP sensor B signal	With engine running: pulses With the ignition switch ON (II): about 5.0 V
7	BLU	CKP (CRANKSHAFT POSITION SENSOR)	Detects CKP sensor signal	With engine running: pulses With the ignition switch ON (II): about 5.0 V
8	BRN/YEL	LG2 (LOGIC GROUND)	Ground circuit for ECM/ PCM	Less than 1.0 V at all times
9	BRN/YEL	LG1 (LOGIC GROUND)	Ground circuit for ECM/ PCM	Less than 1.0 V at all times
10	GRN	AFSHTC (AIR FUEL RATIO (A/F) SENSOR HEATER CONTROL)	Drives A/F sensor heater	With ignition switch ON (II): battery voltage With fully warmed up engine running: about 0 V
12*6	BLK/RED	IACV (IDLE AIR CONTROL (IAC) VALVE)	Drives IAC valve	With engine running: duty controlled
13	BRN	IGPLS4 (No. 4 IGNITION COIL PULSE)	Drives No. 4 ignition coil	With ignition switch ON (II): about 0 V With engine running: pulses
14	WHT/BLU	IGPLS3 (No. 3 IGNITION COIL PULSE)	Drives No. 3 ignition coil	
15	BLU/RED	IGPLS2 (No. 2 IGNITION COIL PULSE)	Drives No. 2 ignition coil	
16	YEL/GRN	IGPLS1 (No. 1 IGNITION COIL PULSE)	Drives No. 1 ignition coil	
18	BLK/BLU	NC (OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR)	Detects output shaft (countershaft) speed sensor signal	With ignition switch ON (II): about 0 V or about 5.0 V While driving: about 2.5 V
19	BLU/WHT	CMPA (CAMSHAFT POSITION SENSOR A)	Detects CMP sensor A signal	With engine running: pulses With ignition switch ON (II): about 5.0 V

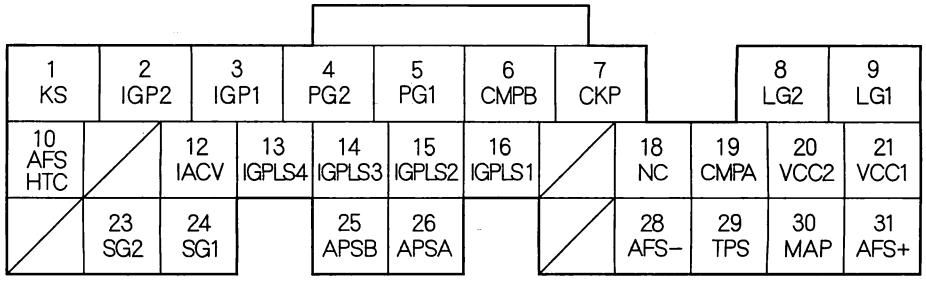
ECM/PCM Inputs and Outputs at Connector A (31P)



Wire side of female terminals

NOTE: Standard battery voltage is 12 V.

Terminal number	Wire color	Terminal name	Description	Signal
20	YEL/BLU	VCC2 (SENSOR VOLTAGE)	Provides sensor voltage	With ignition switch ON (II): about 5.0 V With ignition switch OFF: about 0 V
21	YEL/RED	VCC1 (SENSOR VOLTAGE)	Provides sensor voltage	With ignition switch ON (II): about 5.0 V With ignition switch OFF: about 0 V
23	GRN/YEL	SG2 (SENSOR GROUND)	Sensor ground	Less than 1.0 V at all times
24	GRN/WHT	SG1 (SENSOR GROUND)	Sensor ground	Less than 1.0 V at all times
25*7	RED/YEL	APSB (ACCELERATOR PEDAL POSITION (APP) SENSOR B)	Detects APP sensor B signal	With ignition switch ON (II) and accelerator pedal pressed: about 2.3 V With ignition switch ON (II) and accelerator pedal released: about 0.2 V
26*7	RED/BLU	APSA (ACCELERATOR PEDAL POSITION (APP) SENSOR A)	Detects APP sensor A signal	With ignition switch ON (II) and accelerator pedal pressed: about 4.5 V With ignition switch ON (II) and accelerator pedal released: about 0.5 V
28	RED/YEL	AFS− (AIR FUEL RATIO (A/F) SENSOR, SENSOR 1 −SIDE)	Detects A/F sensor (sensor 1) signal	
29*6	RED/BLK	TPS (THROTTLE POSITION SENSOR)	Detects TP sensor signal	With throttle fully open: about 4.5 V With throttle fully closed: about 0.5 V
30	GRN/RED	MAP (MANIFOLD ABSOLUTE PRESSURE SENSOR)	Detects MAP sensor signal	With ignition switch ON (II): about 3.0 V At idle: about 1.0 V (depending on engine speed)
31	RED	AFS+ (AIR FUEL RATIO (A/F) SENSOR, SENSOR 1 +SIDE)	Detects A/F sensor (sensor 1) signal

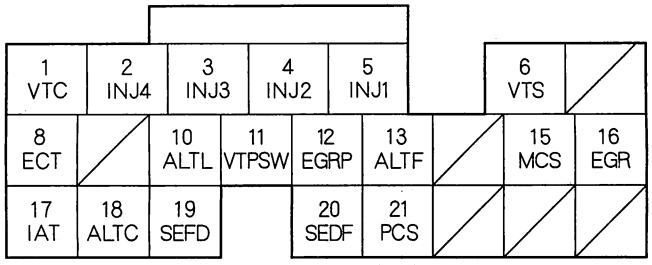
ECM/PCM Inputs and Outputs at Connector B (24P)



Wire side of female terminals

NOTE: Standard battery voltage is 12 V.

Terminal number	Wire color	Terminal name	Description	Signal
1	BLU/WHT	VTC (VTC OIL CONTROL SOLENOID VALVE)	Drives VTC oil control solenoid valve	With ignition switch ON (II): 0 V
2	YEL	INJ4 (No. 4 INJECTOR)	Drives No. 4 injector	At idle: duty controlled With ignition switch ON (II): battery voltage
3	BLU	INJ3 (No. 3 INJECTOR)	Drives No. 3 injector	
4	RED	INJ2 (No. 2 INJECTOR)	Drives No. 2 injector	
5	BRN	INJ1 (No. 1 INJECTOR)	Drives No. 1 injector	
6	GRN/YEL	VTS (ROCKER ARM OIL CONTROL SOLENOID (VTEC SOLENOID VALVE))	Drives rocker arm oil control solenoid (VTEC solenoid valve)	At idle: about 0 V
8	RED/WHT	ECT (ENGINE COOLANT TEMPERATURE SENSOR (ENGINE COOLANT TEMPERATURE SENSOR 1)*4)	Detects ECT sensor (ECT sensor 1)*4 signal	With ignition switch ON (II): about 0.1—4.8 V (depending on engine coolant temperature) With fully warmed up engine: about 0.5—0.7 V
10	WHT/BLU	ALTL (ALTERNATOR L SIGNAL)	Detects alternator signal	With ignition switch ON (II): about 0 V With engine running: battery voltage
11	BLU/BLK	VTPSW (ROCKER ARM OIL PRESSURE SWITCH (VTEC OIL PRESSURE SWITCH))	Detects rocker arm oil pressure switch (VTEC oil pressure switch) signal	With engine at low speed: about 0 V With engine at high speed: battery voltage
12	WHT/BLK	EGRP (EXHAUST GAS RECIRCULATION (EGR) VALVE POSITION SENSOR)	Detects EGR valve position sensor signal	With engine running: 1.2—3.0 V (depending on EGR valve lift)
13	WHT/RED	ALTF (ALTERNATOR FR SIGNAL)	Detects alternator FR signal	With engine running: about 0—5.0 V (depending on electrical load)
15*2	BLU/YEL	MCS (ENGINE MOUNT CONTROL SOLENOID VALVE)	Drives engine mount control solenoid valve	At idle: about 0 V Above idle: battery voltage With ignition switch ON (II): battery voltage
16	BLU/RED	EGR (EXHAUST GAS RECIRCULATION (EGR) VALVE)	Drives EGR valve	With EGR operating: duty controlled With EGR not operating: about 0 V
17	RED/YEL	IAT (INTAKE AIR TEMPERATURE SENSOR)	Detects IAT sensor signal	With ignition switch ON (II): about 0.1—4.8 V (depending on intake air temperature)
18	WHT/GRN	ALTC (ALTERNATOR CONTROL)	Sends alternator control signal	With engine running and fully warmed up: about 8.0 V
19*7	GRN	SEFD (THROTTLE ACTUATOR CONTROL SERIAL SIGNAL)	Sends throttle actuator control serial signal	
20*7	BLU	SEFD (THROTTLE ACTUATOR CONTROL SERIAL SIGNAL)	Detects throttle actuator control serial signal	
21	YEL/BLU	PCS (EVAPORATIVE EMISSION CANISTER PURGE VALVE)	Drives EVAP canister purge valve	With engine running, engine coolant below 131° F (55 °C): battery voltage With engine running, engine coolant above 131 °F (55 °C): duty controlled

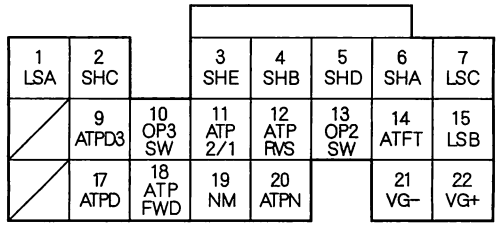
ECM/PCM Inputs and Outputs at Connector C (22P)



Wire side of female terminals

NOTE: Standard battery voltage is 12 V.

Terminal number	Wire color	Terminal name	Description	Signal
1*2	RED/BLK	LSA (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A)	Drives A/T clutch pressure control solenoid valve A	With ignition switch ON (II): duty controlled
2*2	GRN	SHC (SHIFT SOLENOID VALVE C)	Drives shift solenoid valve C	With engine running in Neutral and 1, or in D or D3 (in 1st, 3rd and 5th gears): battery voltage With engine running in Park, R, 2, or D or D3 (in 2nd, 4th gears): about 0 V
2*3	BLU/WHT			
3*2	YEL	SHE (SHIFT SOLENOID VALVE E)	Drives shift solenoid valve E	With engine running in Park, R: battery voltage With engine running in Neutral, or in D, D3, 2, and 1: about 0 V
3*3	RED/BLK			
4*2	GRN/WHT	SHB (SHIFT SOLENOID VALVE B)	Drives shift solenoid valve B	With engine running in Park, R, Neutral, 2, and 1, or D, D3 (in 1st, 2nd gears): battery voltage With engine running in D, D3 (in 3rd, 4th, 5th gears): about 0 V
4*3	RED			
5*2	GRN/RED	SHD (SHIFT SOLENOID VALVE D)	Drives shift solenoid valve D	With engine running in 2 or D, D3 (in 2nd, 5th gears): battery voltage With engine running in Park, R, Neutral, 1, or D, D3 position (in 1st, 3rd, 4th, gears): about 0 V
5*3	GRN/RED			
6*2	BLU/BLK	SHA (SHIFT SOLENOID VALVE A)	Drives shift solenoid valve A	With engine running in R and 1, or D, D3 (in 1st, 4th, 5th gears): battery voltage With engine running in Park, Neutral and 2, or D, D3 (in 2nd, 3rd gears): about 0 V
7*2	BLU/YEL	LSC (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C)	Drives A/T clutch pressure control solenoid valve C	With ignition switch ON (II): duty controlled
9*2	RED	ATPD3 (TRANSMISSION RANGE SWITCH D3)	Detects transmission range switch D3 signal input	In D3: about 0 V In any other position: battery voltage
10*2	BLU/WHT	OP3SW (3RD CLUTCH TRANSMISSION FLUID PRESSURE SWITCH)	Detects 3rd clutch transmission fluid pressure switch signal output	With ignition switch ON (II): about 5.0 V With 3rd clutch pressure: about 0 V
11*2	GRN/RED	ATP2/1 (TRANSMISSION RANGE SWITCH 2ND/1ST)	Detects transmission range switch 2/1 signal input	In 2/1: about 0 V In any other position: battery voltage
12*2	RED/WHT	ATPRVS (TRANSMISSION RANGE SWITCH R)	Detects transmission range switch R signal input	In R: about 0 V In any other position: battery voltage
13*2	BLU/RED	OP2SW (2ND CLUTCH TRANSMISSION FLUID PRESSURE SWITCH)	Detects 2nd clutch transmission fluid pressure switch signal input	With ignition switch ON (II): about 5.0 V With 2nd clutch pressure: about 0 V
14*2	RED/YEL	ATFT (ATF TEMPERATURE SENSOR)	Detects ATF temperature sensor signal input	With ignition switch ON (II): about 0.2—4.8 V (depending on ATF temperature)

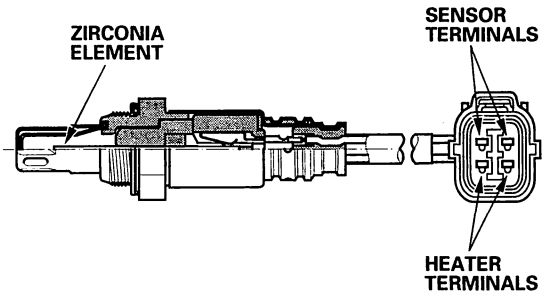
PGM-FI System

The programmed fuel injection (PGM-FI) system is a sequential multiport fuel injection system.

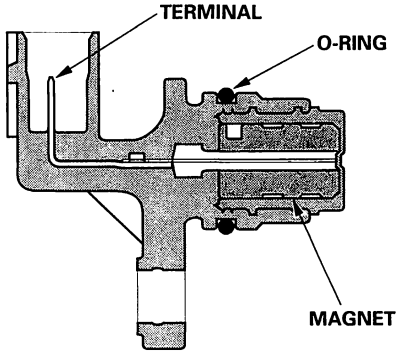
Air Conditioning (A/C) Compressor Clutch Relay
When the ECM/PCM receives a demand for cooling from the A/C system, it delays the compressor from being energized and enriches the mixture to assure smooth transition to the A/C mode.

Air Fuel Ratio (A/F) Sensor
The A/F sensor operates over a wide air/fuel range. The A/F sensor is installed upstream of the TWC, and sends signals to the ECM/PCM which varies the duration of fuel injection accordingly.

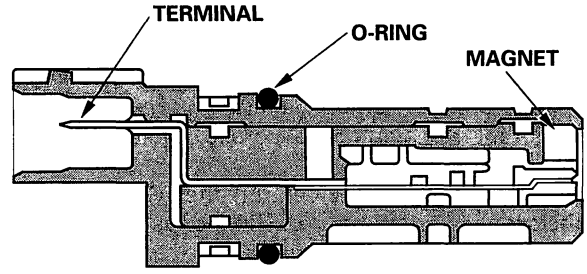


Barometric Pressure (BARO) Sensor
The BARO sensor is inside the ECM/PCM. It converts atmospheric pressure into a voltage signal that the ECM/PCM uses to modify the basic duration of the fuel injection discharge.

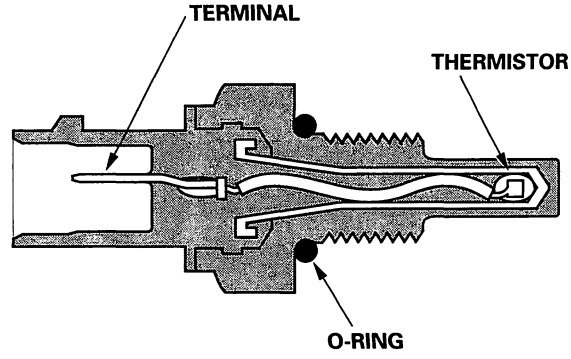
Camshaft Position (CMP) Sensor B
CMP sensor B detects the position of the No. 1 cylinder as a reference for sequential fuel injection to each cylinder.



Crankshaft Position (CKP) Sensor
The CKP sensor detects crankshaft speed and is used by the ECM/PCM to determine ignition timing and timing for fuel injection of each cylinder, as well as detecting engine misfire.



Engine Coolant Temperature (ECT) Sensor (2005-2006 models: Engine Coolant Temperature (ECT) Sensor 1)
The ECT sensor (2005-2006 models: ECT sensor 1) is a temperature dependent resistor (thermistor). The resistance of the thermistor decreases as the engine coolant temperature increases.



(cont'd)

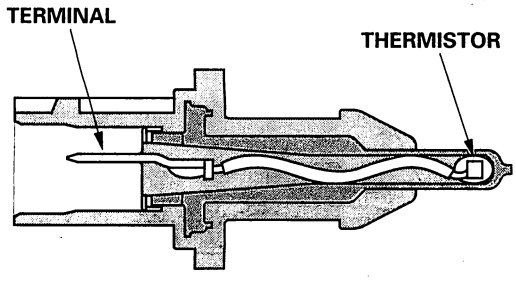
Protected by AR

System Description (cont'd)

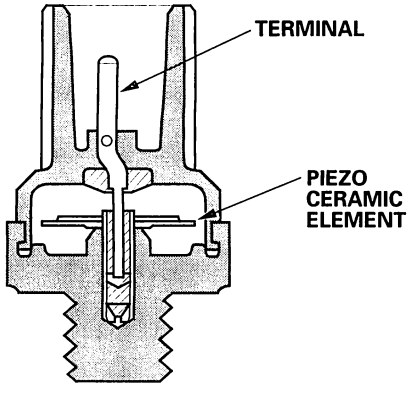
Ignition Timing Control
The ECM/PCM contains the memory for basic ignition timing at various engine speeds and manifold absolute pressures. It also adjusts the timing according to engine coolant temperature and intake air temperature.

Injector Timing and Duration
The ECM/PCM contains the memory for basic discharge duration at various engine speeds and manifold pressures. The basic discharge duration, after being read out from the memory, is further modified by signals sent from various sensors to obtain the final discharge duration.
By monitoring long term fuel trim, the ECM/PCM detects long term malfunctions in the fuel system and sets a diagnostic trouble code (DTC).

Intake Air Temperature (IAT) Sensor (except 2003-2004 SULEV, LX-P models, and 2005-2006 models)
The IAT sensor is a temperature dependent resistor (thermistor). The resistance of the thermistor decreases as the intake air temperature increases.



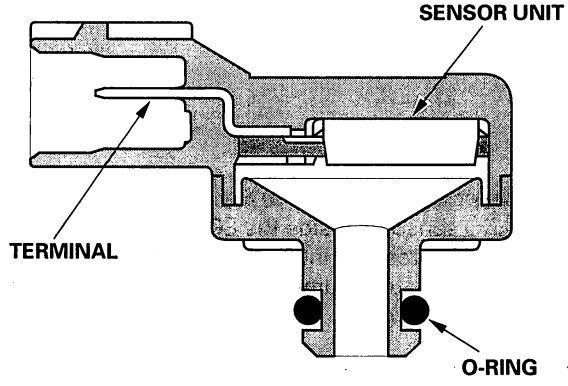
Knock Sensor
The knock control system adjusts the ignition timing to minimize knock.



Malfunction Indicator Lamp (MIL) Indication (In relation to Readiness Codes)
The vehicle has certain "readiness codes" that are part of the on-board diagnostics for the emissions systems. If the vehicle's battery has been disconnected or gone dead, if the DTCs have been cleared, or if the ECM/PCM has been reset, these codes are reset. In some states, part of the emissions testing is to make sure these codes are set to complete. If all of them are not set to complete, the vehicle may fail the test, or the test cannot be finished.

To check if the readiness codes are set to complete, turn the ignition switch ON (II), but do not start the engine. The MIL will come on for 15—20 seconds. If it then goes off, the readiness codes are complete. If it flashies five times, one or more readiness codes are not complete. To set each code, drive the vehicle or run the engine as described in the procedures (see page 11-59).

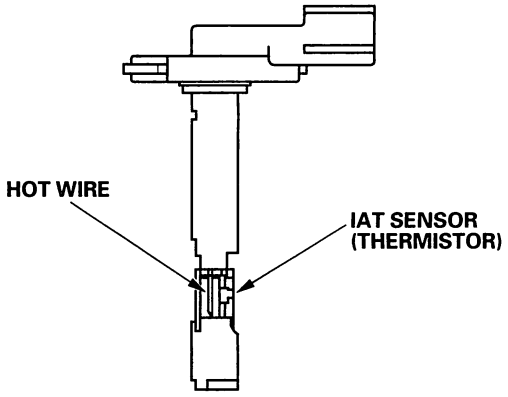
Manifold Absolute Pressure (MAP) Sensor
The MAP sensor converts manifold absolute pressure into electrical signals to the ECM/PCM.



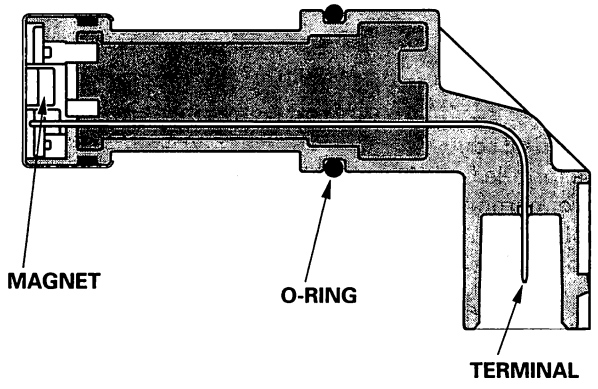
BACK

Protected by AR

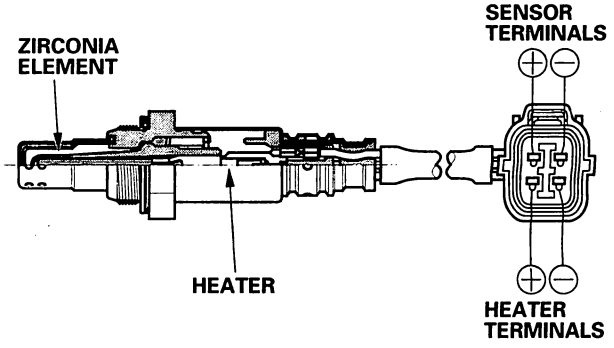
Mass Air Flow (MAF) Sensor/Intake Air Temperature (IAT) Sensor (2003-2004 SULEV, LX-P models, and 2005-2006 models)
The mass air flow/intake air temperature (MAF/IAT) sensor contains a hot wire and a thermistor. It is located in the intake air passage. The resistance of the hot wire and thermistor change due to intake air temperature and air flow. The control circuit in the MAF sensor controls the current to keep the hot wire at a set temperature. The current is converted to voltage in the control circuit, then output to the ECM/PCM.



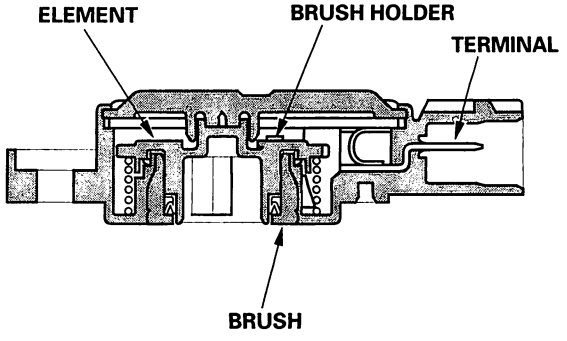
Output Shaft (Countershaft) Speed Sensor (M/T)
This sensor detects countershaft speed.



Secondary Heated Oxygen Sensor (Secondary HO2S)
The secondary HO2S detects the oxygen content in the exhaust gas downstream of the three way catalytic converter (TWC), and sends signals to the ECM/PCM which varies the duration of fuel injection accordingly. To stabilize its output, the sensor has an internal heater. The ECM/PCM compares the HO2S output with the A/F sensor output to determine catalyst efficiency. The secondary HO2S is on the TWC.



Throttle Position (TP) Sensor (2003-2005 models)
The TP sensor is a potentiometer connected to the throttle valve shaft. As the throttle position changes, the sensor varies the signal voltage to the ECM/PCM. The TP sensor is not available separately from the throttle body.



(cont'd)

Protected by AR

System Description (cont'd)

Electronic Throttle Control System (2006 model)

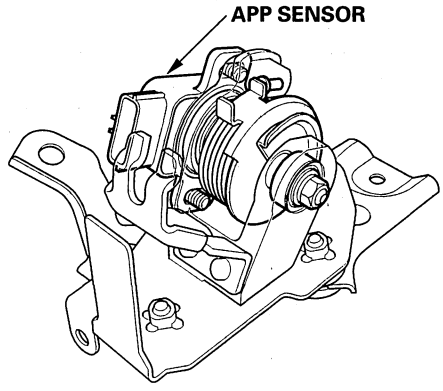
The throttle is electronically controlled by the electronic throttle control system. Refer to the system diagram to see a functional layout of the system.

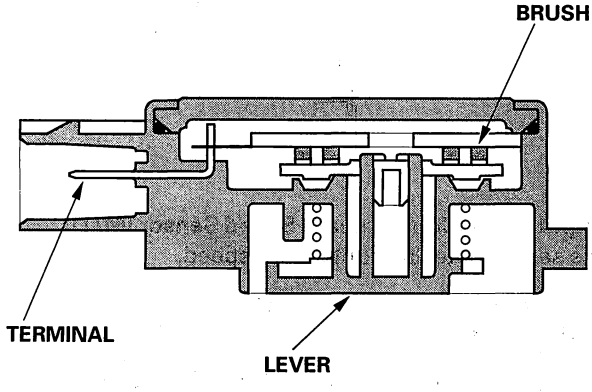
Idle control: When the engine is idling, the ECM/PCM controls the throttle actuator to maintain the proper idle speed according to engine loads.

Acceleration control: When the accelerator pedal is pressed, the ECM/PCM opens the throttle valve depending on the accelerator pedal position (APP) sensor signal.

Cruise control: The ECM/PCM controls the throttle actuator to maintain set speed when the cruise control is operating. The throttle actuator takes the place of the cruise control actuator.

Accelerator Pedal Position (APP) Sensor
As the accelerator pedal position changes, the sensor varies the signal voltage to the ECM/PCM.





Throttle Body
The throttle body is a single-barrel side draft type. The lower portion of the throttle valve is heated by engine coolant from the cylinder head to prevent icing of the throttle plate.

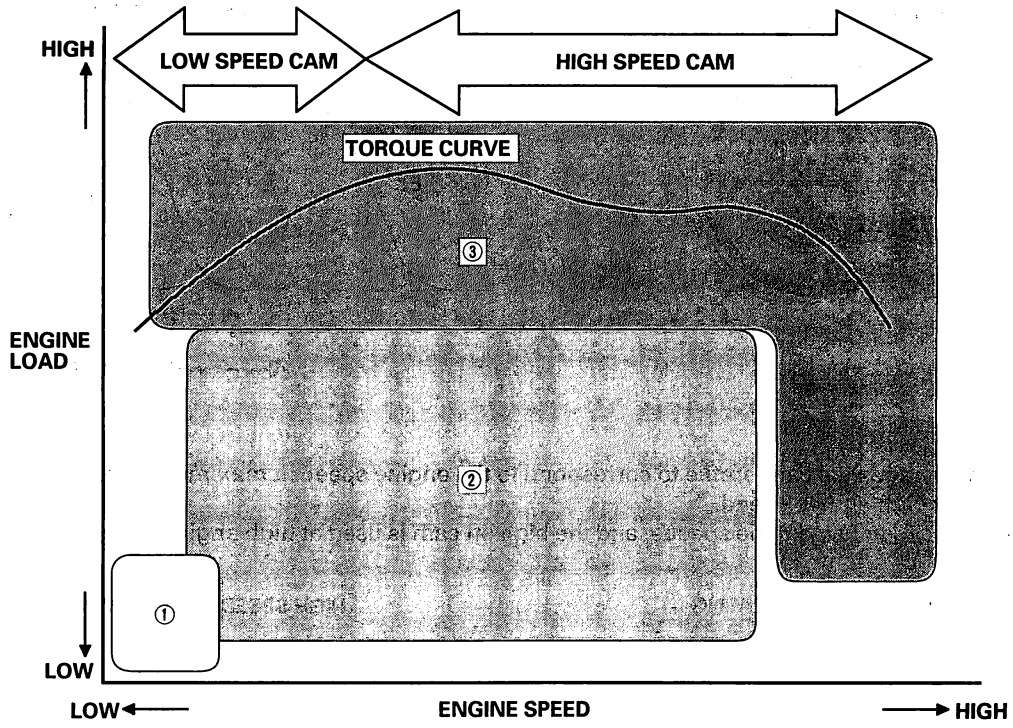
VTEC/VTC

- The i-VTEC has a VTC (Variable Valve Timing Control) mechanism on the intake camshaft in addition to the usual VTEC.
  This mechanism improves fuel efficiency and reduces exhaust emissions at all levels of engine speed, vehicle speed, and engine load.
- The VTEC mechanism changes the valve lift and timing by using more than one cam profile.
- The VTC changes the phase of the intake camshaft via oil pressure. It changes the intake valve timing continuously.



Driving Condition	VTC Control	Description
① Light-load	Base Position	Cam angle is retarded to reduce the entry of exhaust gas into the intake port.
② Medium/high-load	Advance Control	To reduce pumping loss, the intake valve is closed quickly to help reduce the entry of air/fuel mixture into the intake port and improve the charging effect.
③ High speed	Advance-Base Position	Cam phase angle is controlled for optimum valve timing and maximum engine power.

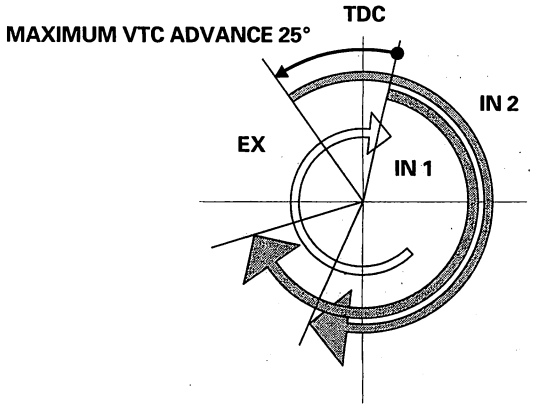
(cont'd)

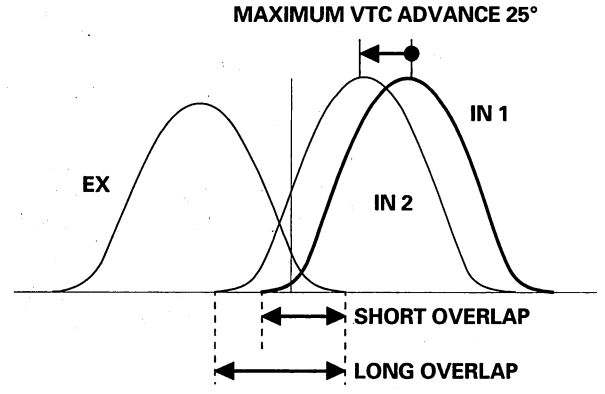
Protected by AR

System Description (cont'd)

VTC System

- The VTC system makes continuous intake valve timing changes based on operating conditions.
- Intake valve timing is optimized to allow the engine to produce maximum power.
- Cam angle is advanced to obtain the EGR effect and reduce pumping loss. The intake valve is closed quickly to reduce the entry of the air/fuel mixture into the intake port and improve the charging effect.
- The system reduces the cam advance at idle, stabilizes combustion, and reduces engine speed.
- If a malfunction occurs, the VTC system control is disabled and the valve timing is fixed at the fully retarded position.





VTEC System

- The VTEC system changes the cam profile to correspond to the engine speed. It maximizes torque at low engine speed and output at high engine speed.
- The low lift cam is used at low engine speeds, and the high lift cam is used at high engine speeds.

System Description (cont'd)

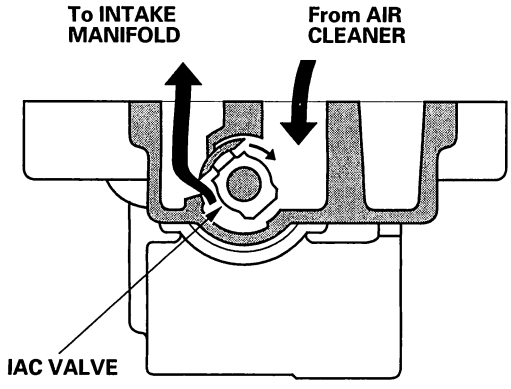
Idle Control System

2003-2005 models
When the engine is cold, the A/C compressor is on, the transmission is in gear, the brake pedal is pressed, the power steering load is high, or the alternator is charging, the ECM/PCM controls current to the idle air control (IAC) valve to maintain the correct idle speed. Refer to the system diagram to see the functional layout of the system.

2006 model
When the engine is cold, the A/C compressor is on, the transmission is in gear, the brake pedal is pressed, the power steering load is high, or the alternator is charging, the ECM/PCM controls current to the throttle actuator to maintain the correct idle speed.

Brake Pedal Position Switch
The brake pedal position switch signals the ECM/PCM when the brake pedal is pressed.

Idle Air Control (IAC) Valve (2003-2005 models)
To maintain proper idle speed, the IAC valve changes the amount of air bypassing the throttle body in response to an electrical signal from the ECM/PCM.



Power Steering Pressure (PSP) Switch
The PSP switch signals the ECM/PCM when the power steering load is high.

Fuel Supply System

Fuel Cutoff Control
During deceleration with the throttle valve closed, current to the injectors is cut off to improve fuel economy at engine speeds over 1,000 rpm (A/T (2006 model): 1,200 rpm). Fuel cutoff control also occurs when the engine speed exceeds 6,700 rpm, regardless of the position of the throttle valve, to protect the engine from over-revving. When the vehicle is stopped, the ECM/PCM cuts the fuel at engine speeds over 5,000 rpm (M/T (2003-2005 models: 4,200 rpm)). The engine speed of fuel cut is lower on a cold engine.

Fuel Pump Control
When the ignition is turned on, the ECM/PCM grounds PGM-FI main relay 2 (FUEL PUMP) which feeds current to the fuel pump for 2 seconds to pressurize the fuel system. With the engine running, the ECM/PCM grounds PGM-FI main relay 2 (FUEL PUMP) and feeds current to the fuel pump. When the engine is not running and the ignition is on, the ECM/PCM cuts ground to PGM-FI main relay 2 (FUEL PUMP) which cuts current to the fuel pump.

PGM-FI Main Relay 1 and 2
PGM-FI main relay 1 (FI MAIN) is energized whenever the ignition switch is ON (II) to supply battery voltage to the ECM/PCM, power to the injectors, and power for PGM-FI main relay 2 (FUEL PUMP). PGM-FI main relay 2 (FUEL PUMP) is energized to supply power to the fuel pump for 2 seconds when the ignition switch is turned ON (II), and when the engine is cranking or running.

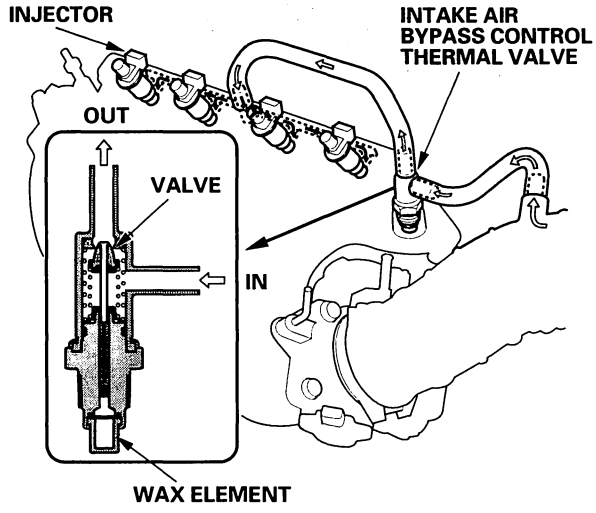
Intake Air System

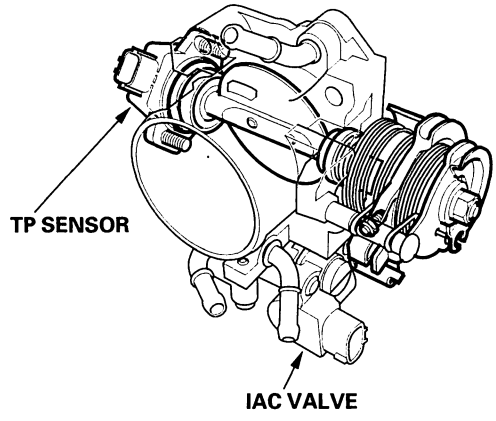
Refer to the system diagram to see a functional layout of the system.

Intake Air Bypass Control Thermal Valve
When the engine is cold, the intake air bypass control thermal valve sends air to the injector.
The amount of air is regulated by engine coolant temperature.
Once the engine is hot, the intake air bypass thermal valve closes, stopping air to the injector.



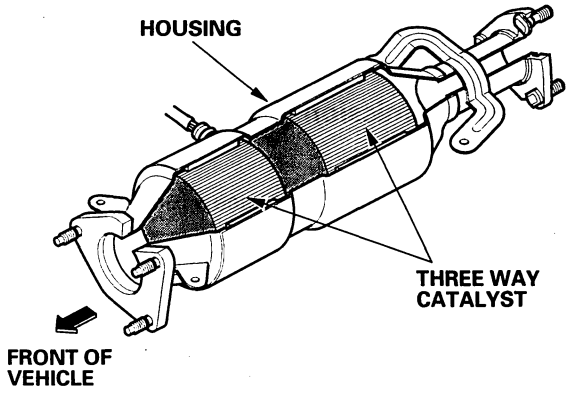
*: This illustration shows 2003-2005 models.

Throttle Body (2003-2005 models)
The throttle body is a single-barrel side draft type. The lower portion of the idle air control (IAC) valve is heated by engine coolant from the cylinder head to prevent icing of the throttle plate.



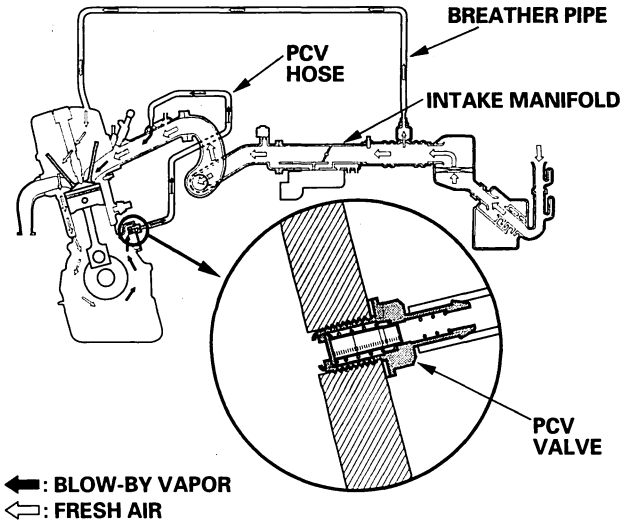
Catalytic Converter System

Three Way Catalytic Converter (TWC)
The TWC converts hydrocarbons (HC), carbon monoxide (CO), and oxides of nitrogen (NOx) in the exhaust gas to carbon dioxide (CO_2), nitrogen (N_2), and water vapor.



Positive Crankcase Ventilation (PCV) System

The PCV valve prevents blow-by gasses from escaping into the atmosphere by venting them into the intake manifold.



*: This illustration shows 2003-2005 models.

(cont'd)

Protected by AR

System Description (cont'd)

Exhaust Gas Recirculation (EGR) System

Refer to the system diagram to see a functional layout of the system.

EGR Valve
The EGR valve lowers peak combustion temperatures and reduces oxides of nitrogen emissions (NOx) by recirculating exhaust gas through the intake manifold and into the combustion chambers.

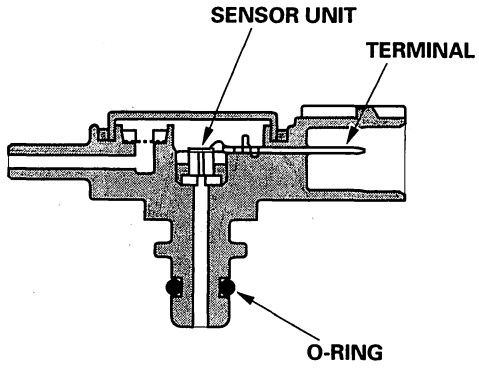
Evaporative Emission (EVAP) Control System

Refer to the system diagram to see a functional layout of the system.

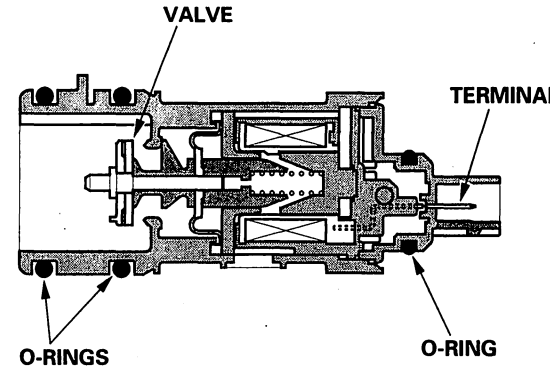
EVAP Canister
The EVAP canister temporarily stores fuel vapor from the fuel tank until it can be purged from the EVAP canister into the engine and burned.

EVAP Canister Purge Valve
When the engine coolant temperature is below 131 °F (55 °C), the ECM/PCM turns off the EVAP canister purge valve which cuts vacuum to the EVAP canister.

Fuel Tank Pressure (FTP) Sensor
The FTP sensor converts fuel tank absolute pressure into an electrical input to the ECM/PCM.



EVAP Canister Vent Shut Valve
The EVAP canister vent shut valve is on the EVAP canister.
The EVAP canister vent shut valve controls the venting of the EVAP canister.



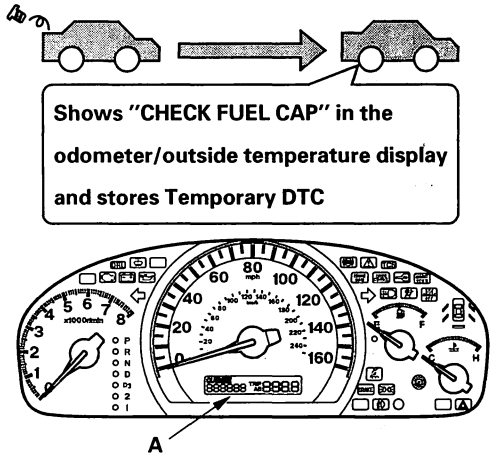
BACK

Protected by AR

Fuel Cap Warning Message (2005-2006 models)

The ECM/PCM detects whether the fuel fill cap is loose or missing under certain conditions and alerts the driver by showing the information in the odometer/outside temperature display. If the ECM/PCM detects a small volume leak, the MIL may come on during the second drive cycle and store a DTC.

First drive cycle
During the first drive cycle after a cold start, the ECM/PCM alerts the driver to check the fuel fill cap by showing a "CHECK FUEL CAP" message in the odometer/outside temperature display (A), and it stores Temporary DTC P0457 "Evaporative Emission (EVAP) System Leak Detected/Fuel Cap Loose or Missing". Tightening the fuel cap does not make the message go off immediately.

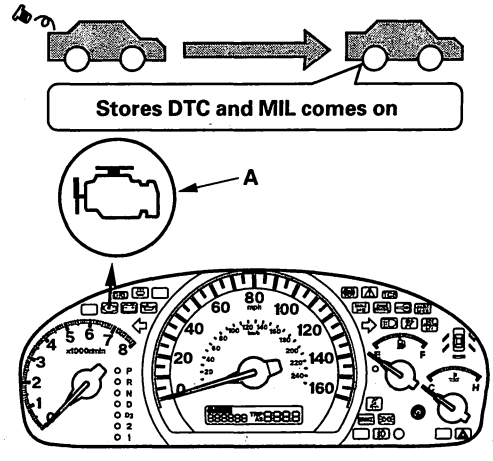


To make the message go off
Tighten the fuel fill cap properly, and do this procedure several times.

1. Turn the ignition switch OFF.
2. Start the engine, and drive at a steady speed over 28 mph (45 km/h), without moving the accelerator pedal, for about 1 minute.

Second drive cycle
During the second drive cycle after a cold start, if the fuel fill cap is still loose or missing, the ECM/PCM alerts the driver to check the fuel fill cap by showing a "CHECK FUEL CAP" message in the odometer/outside temperature display as same as the first drive cycle. Tightening the fuel cap does not make the message go off immediately.

Third drive cycle
During the third drive cycle after a cold start, if the fuel fill cap is still loose or missing, the ECM/PCM stores DTC P0457 "Evaporative Emission (EVAP) System Leak Detected/Fuel Cap Loose or Missing". The malfunction indicator lamp (MIL) (A) comes on, and the "CHECK FUEL CAP" message goes off.



(cont'd)

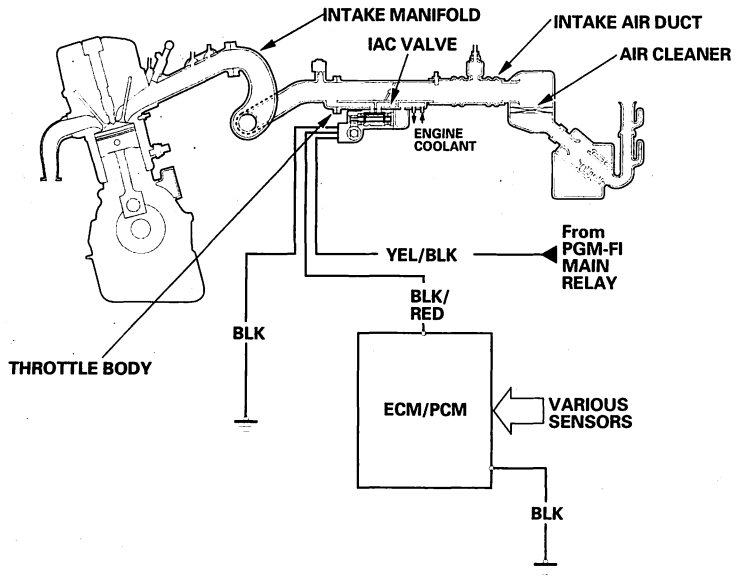
Protected by AR

System Description (cont'd)

Idle Control System Diagram (2003-2005 models)

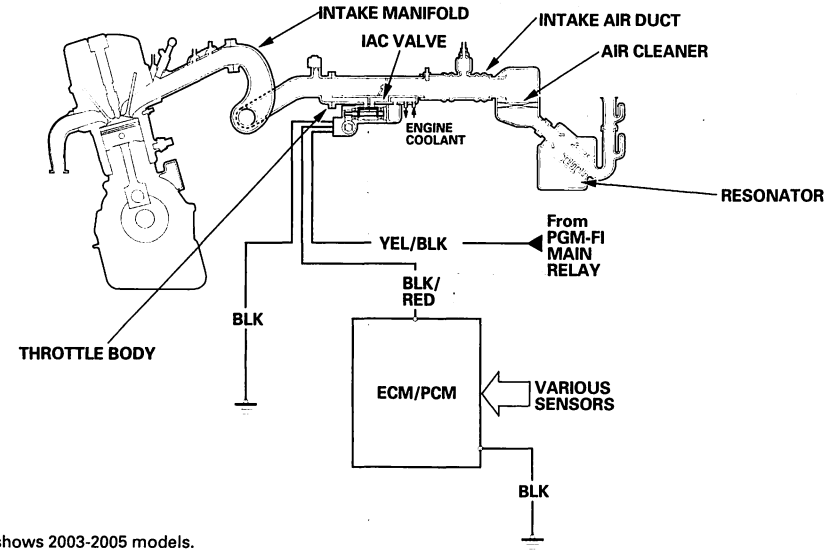
The engine idle speed is controlled by the idle air control (IAC) valve:

- After the engine starts, the IAC valve opens for a certain amount of time. The amount of air is increased to raise the idle speed.
- When the engine coolant temperature is low, the IAC valve is opened to obtain the proper fast idle speed. The amount of bypassed air is controlled in relation to engine coolant temperature.



Intake Air System Diagram

This system supplies air for engine needs. A resonator in the intake air duct provides additional silencing as air is drawn into the system.



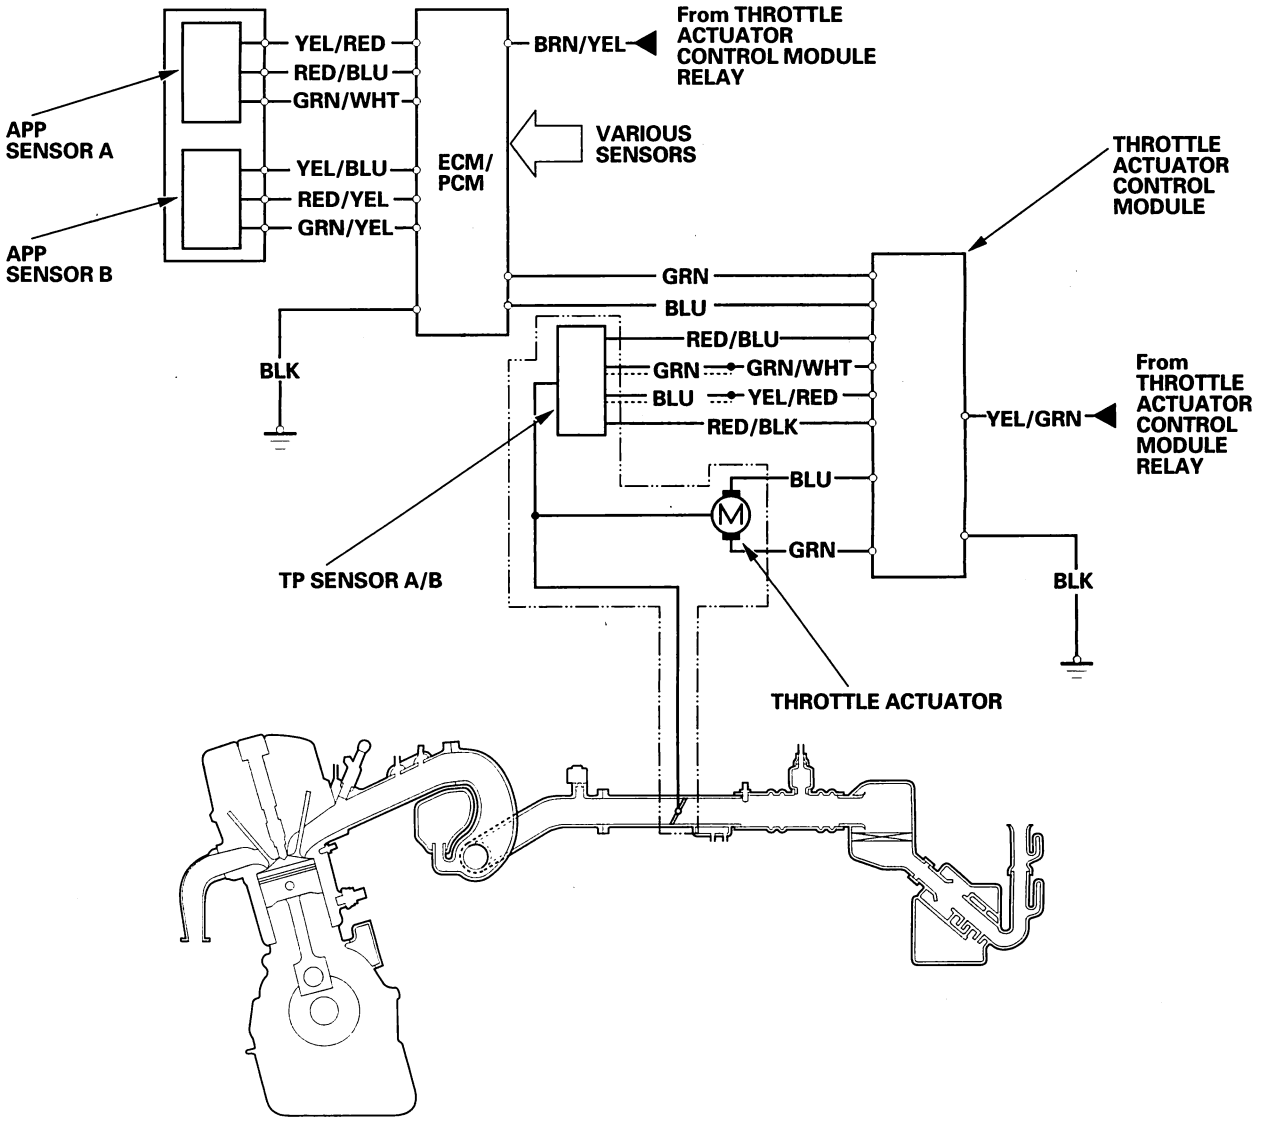
*: This illustration shows 2003-2005 models.

BACK

Protected by AR

Electronic Throttle Control System Diagram (2006 model)

The electronic throttle control system consists of the throttle actuator, throttle position (TP) sensor, accelerator pedal position (APP) sensor, throttle actuator control module, and the ECM/PCM. The throttle is electronically controlled by this system.



(cont'd)

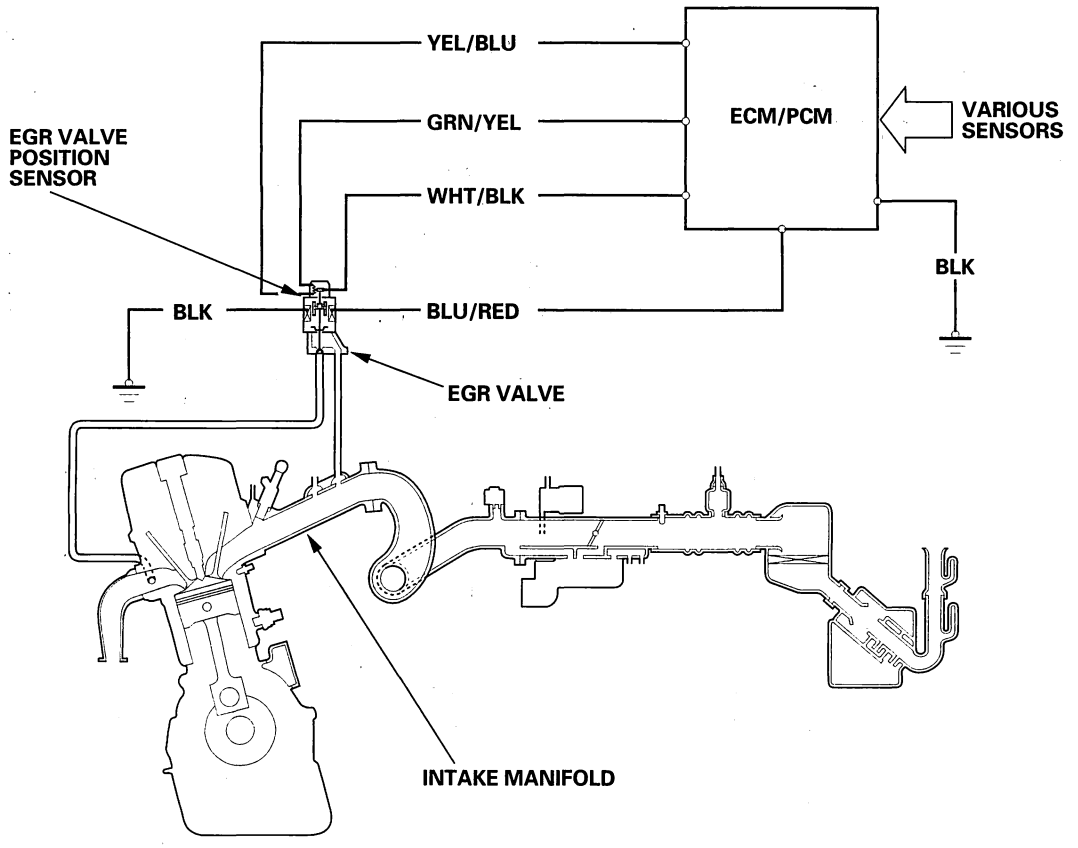
Protected by AR

System Description (cont'd)

Exhaust Gas Recirculation (EGR) System Diagram

The EGR system reduces oxides of nitrogen (NOx) emissions by recirculating exhaust gas through the EGR valve and the intake manifold into the combustion chambers. The ECM/PCM memory includes the ideal EGR valve position for varying operating conditions.

The EGR valve position sensor detects the amount of EGR valve lift and sends it to the ECM/PCM. The ECM/PCM then compares it with the ideal lift in its memory (based on signals sent from other sensors). If there is any difference between the two, the ECM/PCM cuts current to the EGR valve.



*: This illustration shows 2003-2005 models.

BACK

Protected by AR

Evaporative Emission (EVAP) Control Diagram

The EVAP controls minimize the amount of fuel vapor escaping to the atmosphere. Vapor from the fuel tank is temporarily stored in the EVAP canister until it can be purged from the canister into the engine and burned.

- The EVAP canister is purged by drawing fresh air through it and into a port on the intake manifold. The purging vacuum is controlled by the EVAP canister purge valve, which operates whenever engine coolant temperature is above 131 °F (55 °C).
- During refueling, the fuel tank vapor control valve opens with the pressure in the fuel tank, and feeds the fuel vapor to the EVAP canister (SULEV model).

How to Set Readiness Codes

Malfunction Indicator Lamp (MIL) Indication (In Relation to Readiness Codes)

The vehicle has certain "readiness codes" that are part of the on-board diagnostics for the emissions systems. If the vehicle's battery has been disconnected or gone dead, if the DTCs have been cleared, or if the ECM/PCM has been reset, these readiness codes are reset. In some states, part of the emissions testing is to make sure these codes are set to complete. If all of them are not set to complete, the vehicle may fail the emission test, or the test cannot be finished.

To check if the readiness codes are set to complete, turn the ignition switch ON (II), but do not start the engine. The MIL will come on for 15—20 seconds. If it then goes off, the readiness codes are complete. If it flashes five times, one or more readiness codes are not set to complete. To set readiness codes from incomplete to complete, do the procedure for the appropriate code.

To check the status of a specific DTC system, check the OBD status in the DTC MENU with the HDS (see page 11-7). This screen displays the code, the current data list of the enable criteria, and the status of the readiness testing.

Catalytic Converter Monitor and Readiness Code

NOTE:
- Do not turn the ignition switch off during the procedure.
- All readiness codes are cleared when the battery is disconnected or when the ECM/PCM is cleared with the HDS.
- Low ambient temperatures or excessive stop-and-go traffic may increase the drive time needed to switch the readiness code from incomplete to complete.
- The readiness code will not switch to complete until all the enable criteria are met.
- If a fault in the secondary HO2S system caused the MIL to come on, the readiness code cannot be set to complete until you correct the fault.

Enable Criteria

- ECT at 158 °F (70 °C) or higher.
- Intake air temperature (IAT) at —13 °F (—25 °C) or higher.
- Vehicle speed sensor (VSS) reads more than 3 mph (5 km/h).

Procedure

1. Connect the HDS to the vehicle's data link connector (DLC), and bring up the READINESS CODEs screen for Catalyst in the DTCs MENU.
2. Start the engine.
3. Test-drive the vehicle under stop-and-go conditions with short periods of steady cruise. After about 5 miles (8 km), the readiness code should switch to completed.
4. If the readiness code is still not set to complete, check for a Temporary DTC with the HDS. If there is no DTC, one or more of the enable criteria were probably not met; repeat the procedure.

(cont'd)

Protected by AR

How to Set Readiness Codes (cont'd)

Evaporative Emission (EVAP) Control System Monitor and Readiness Code

NOTE: All readiness codes are cleared when the battery is disconnected or when the ECM/PCM is cleared with the HDS.

Enable Criteria

- Battery voltage is higher than 10.5 V.
- Engine at idle.
- ECT sensor between 176 °F (80 °C) and 212 °F (100 °C).
- MAP sensor less than 46.6 kPa (14 in.Hg, 350 mmHg).
- Vehicle speed 0 mph (0 km/h).
- IAT sensor between 32 °F (0 °C) and 212 °F (100 °C).

Procedure

1. Connect the HDS to the vehicle's data link connector (DLC).
2. Start the engine.
3. Select EVAP TEST in the INSPECTION MENU with the HDS, then select the FUNCTION TEST in the EVAP TEST MENU.
   - If the functions are normal, readiness is complete.
   - If the functions are not normal, go to the next step.
4. If the readiness code is still not set to complete, check for a temporary DTC. If there is no DTC, one or more of the enable criteria were probably not met; repeat the procedure.

Air Fuel Ratio (A/F) Sensor Monitor and Readiness Code

NOTE:
- Do not turn the ignition switch off during the procedure.
- All readiness codes are cleared when the battery is disconnected or when the ECM/PCM is cleared with the HDS.

Enable Criteria

ECT at 158 °F (70 °C) or higher.

Procedure

1. Start the engine.
2. Test-drive the vehicle under stop-and-go conditions with short periods of steady cruise. During the drive, decelerate (with the throttle fully closed) for 5 seconds. After about 3.5 miles (5.6 km), the readiness code should switch from incomplete to complete.
3. Check the readiness codes screen for the Air Fuel Ratio (A/F) Sensor in the DTCs MENU with the HDS.
   - If the screen shows complete, readiness is complete.
   - If the screen shows not complete, go to the next step.
4. Check for a Temporary DTC. If there is no DTC, the enable criteria was probably not met. Select the DATA LIST Menu. Check the ECT in the ALL DATA LIST with the HDS. If the ECT is lower than 158 °F (70 °C), run the engine until it is higher than 158 °F (70 °C), then repeat the procedure.

BACK

Protected by AR

Air Fuel Ratio (A/F) Sensor Heater Monitor Readiness Code

NOTE: All readiness codes are cleared when the battery is disconnected or when the ECM/PCM is cleared with the HDS.

Procedure

1. Start the engine, and let it idle for 1 minute. The readiness code should switch from incomplete to complete.

2. If the readiness code is still not set to complete, check for a temporary DTC. If there is no DTC, repeat the procedure.

Misfire Monitor and Readiness Code

- This readiness code is always set to available because misfiring is continuously monitored.
- Monitoring pauses, and the misfire counter resets, if the vehicle is driven over a rough road.
- Monitoring also pauses, and the misfire counter holds at its current value, if the throttle position changes more than a predetermined value, or if driving conditions fall outside the range of any related enable criteria.

Fuel System Monitor and Readiness Code

- This readiness code is always set to available because the fuel system is continuously monitored during closed loop operation.
- Monitoring pauses when the catalytic converter, EVAP control system, and A/F sensor monitors are active.
- Monitoring also pauses when any related enable criteria are not being met. Monitoring resumes when the enable criteria is again being met.

Comprehensive Component Monitor and Readiness Code

This readiness code is always set to available because the comprehensive component monitor is continuously running whenever the engine is cranking or running.

EGR Monitor and Readiness Code

NOTE:
- Do not turn the ignition switch off during the procedure.
- All readiness codes are cleared when the battery is disconnected or when the ECM/PCM is cleared with the HDS.

Enable Criteria

ECT at 176 °F (80 °C) or higher.

Procedure

1. Connect the HDS to the vehicle's data link connector (DLC).

2. Start the engine.

3. Drive at a steady speed with the A/T in D or M/T in 4th gear, 50—62 mph (80—100 km/h) or above for more than 10 seconds.

4. With the A/T in D or M/T in 4th gear, decelerate from 62 mph (100 km/h) or above by completely releasing the throttle for at least 5 seconds. If the engine is stopped during this procedure, go to step 2 and do the procedure again.

5. Check the OBD status screen for DTC P0401 in the DTC's MENU with the HDS.

   - If it is passed, readiness is complete.
   - If it is not passed, go to step 3 and retest.

DTC Troubleshooting

DTC P0101: MAF sensor Range/Performance Problem (2003-2004 SULEV, LX-P models and 2005-2006 models)

NOTE: If DTC P1128, P1129, P2228, and/or P2229 are stored at the same time as DTC P0101, troubleshoot those DTCs first, then recheck for DTC P0101.

1. Record all freeze data and any on-board snapshot with the HDS.
2. Check for poor connections or damage to these parts:
   - PCV hose
   - Intake air tube
   - Air cleaner
   - Purge (PCS) line
   - Brake booster hose

   Are the parts OK?

   YES—Go to step 3.

   NO—Repair or replace the damaged parts, then go to step 18.
3. Check for damage or looseness at the air tube in the air cleaner.

   Is it OK?

   YES—Go to step 4.

   NO—Reconnect or replace the air tube in the air cleaner, then go to step 16.
4. Check for a dirty air cleaner.

   Is it dirty?

   YES—Replace the air cleaner element (see page 11-361), then go to step 16.

   NO—Go to step 5.
5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II).
7. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is there about 0.2 gm/s or 0.5 V?

   YES—Go to step 8.

   NO—Go to step 14.
8. Start the engine.
9. Vary the engine speed between 2,000 rpm and 3,000 rpm.
10. Check the MAF SENSOR in the DATA LIST with the HDS.

    Does the reading change?

    YES—Go to step 11.

    NO—Go to step 14.
11. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - Engine speed
    - Vehicle speed
    - MAP sensor
    - MAF sensor
13. Monitor the OBD STATUS for DTC P0101 in the DTCs MENU with the HDS.

    Does the screen indicate FAILED?

    YES—Go to step 14.

    NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check the poor connections or loose terminals at the MAF sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 12 and recheck.

BACK

Protected by AR

14. Turn the ignition switch OFF.

15. Replace the MAF sensor/IAT sensor (see page 11-226).

16. Turn the ignition switch ON (II).

17. Reset the ECM/PCM with the HDS.

18. Do the ECM/PCM idle learn procedure (see page 11-316).

19. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - MAP sensor
    - MAF sensor

20. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0101 is indicated, check for poor connections or loose terminals at the MAF sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 21.

21. Monitor the OBD STATUS for DTC P0101 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the MAF sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 19 and recheck.

DTC Troubleshooting (cont'd)

DTC P0102: MAF Sensor Circuit Low Voltage (2003-2004 SULEV, LX-P models and 2005-2006 models)

1. Turn the ignition switch ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is about 0 gm/s or 0.1 V or less indicated?

   YES—Go to step 3.

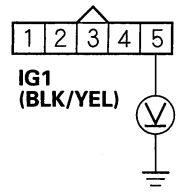
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the MAF sensor and the ECM/PCM. ■
3. Check the No. 18 ACG (15 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?

   YES—Go to step 4.

   NO—Repair short in the wire between the MAF sensor and the No. 18 ACG (15 A) fuse. Also replace the No. 18 ACG (15 A) fuse, then go to step 20.
4. Turn the ignition switch OFF.
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Turn the ignition switch ON (II).
7. Measure voltage between MAF sensor/IAT sensor 5P connector terminal No. 5 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR



Wire side of female terminals

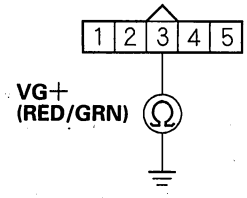
Is there battery voltage?

YES—Go to step 8.

NO—Repair open in the wire between the No. 18 ACG (15 A) fuse and the MAF sensor, then go to step 20.

8. Turn the ignition switch OFF.
9. Measure resistance between MAF sensor/IAT sensor 5P connector terminal No. 3 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR



Wire side of female terminals

Is there 190—210 kΩ?

YES—Go to step 15.

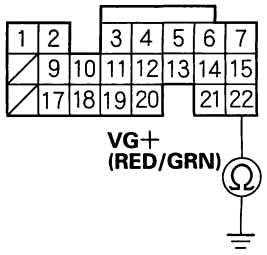
NO—Go to step 10.

BACK

Protected by AR

10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector C (22P).
12. Check for continuity between ECM/PCM connector terminal C22 and body ground.

ECM/PCM CONNECTOR C (22P)



Wire side of female terminals

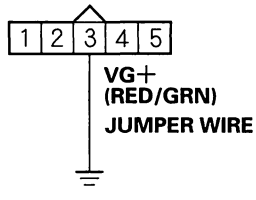
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (C22) and the MAF sensor, then go to step 20.

NO—Go to step 13.

13. Connect MAF sensor/IAT sensor 5P connector terminal No. 3 to body ground with a jumper wire.

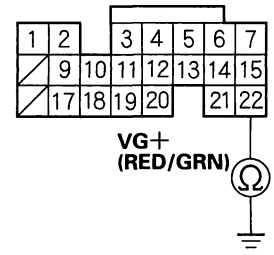
MAF SENSOR/IAT SENSOR 5P CONNECTOR



Wire side of female terminals

14. Check for continuity between ECM/PCM connector terminal C22 and body ground.

ECM/PCM CONNECTOR C (22P)



Wire side of female terminals

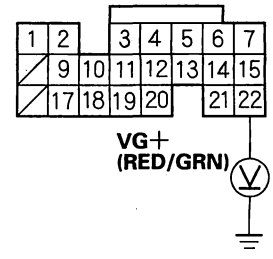
Is there continuity?

YES—Go to step 25.

NO—Repair open in the wire between the ECM/PCM (C22) and the MAF sensor, then go to step 20.

15. Reconnect the MAF sensor/IAT sensor 5P connector.
16. Start the engine. Hold the engine speed at 2,000 rpm without load (in Park or neutral).
17. Measure voltage between ECM/PCM connector terminal C22 and body ground.

ECM/PCM CONNECTOR C (22P)



Wire side of female terminals

Is there about 1.5 V?

YES—Go to step 25.

NO—Go to step 18.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

18. Turn the ignition switch OFF.
19. Replace the MAF sensor/IAT sensor (see page 11-226).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the ECM/PCM with the HDS.
23. Do the ECM/PCM idle learn procedure (see page 11-316).
24. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0102 is indicated, check for poor connections or loose terminals at the MAF sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
26. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0102 is indicated, check for poor connections or loose terminals at the MAF sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0103: MAF Sensor Circuit High Voltage (2003-2004 SULEV, LX-P models and 2005-2006 models)

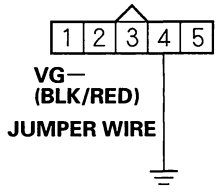
1. Turn the ignition switch ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

   Is about 202 gm/s or 4.89 V or more indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the MAF sensor and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Jump the SCS line with the HDS.
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Disconnect ECM/PCM connector C (22P).
7. Connect MAF sensor/IAT sensor 5P connector terminal No. 4 to body ground with a jumper wire.

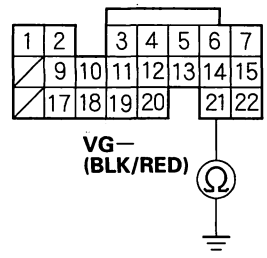
MAF SENSOR/IAT SENSOR 5P CONNECTOR



Wire side of female terminals

8. Check for continuity between ECM/PCM connector terminal C21 and body ground.

ECM/PCM CONNECTOR C (22P)



Wire side of female terminals

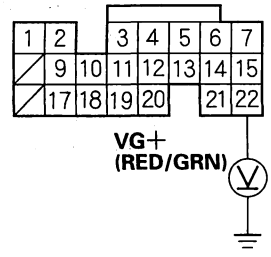
Is there continuity?

YES—Go to step 9.

NO—Repair open in the wire between the ECM/PCM (C21) and the MAF sensor, then go to step 15.

9. Reconnect ECM/PCM connector C (22P).
10. Reconnect the MAF sensor/IAT sensor 5P connector.
11. Start the engine. Hold the engine speed at 2,000 rpm without load (in Park or neutral).
12. Measure voltage between ECM/PCM connector terminal C22 and body ground.

ECM/PCM CONNECTOR C (22P)



Wire side of female terminals

Is there about 1.5 V?

YES—Go to step 20.

NO—Go to step 13.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. Turn the ignition switch OFF.
14. Replace the MAF sensor/IAT sensor (see page 11-226).
15. Reconnect all connectors.
16. Turn the ignition switch ON (II).
17. Reset the ECM/PCM with the HDS.
18. Do the ECM/PCM idle learn procedure (see page 11-316).
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0103 is indicated, check for poor connections or loose terminals at the MAF sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
21. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0103 is indicated, check for poor connections or loose terminals at the MAF sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0107: MAP Sensor Circuit Low Voltage (2003-2004 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II).
5. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0107, P0122, and P0452 indicated at the same time?

   YES—Go to step 17.

   NO—Go to step 6.
6. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is about 3 kPa (1.0 in.Hg, 26 mmHg), or 0.23 V or less indicated?

   YES—Go to step 7.

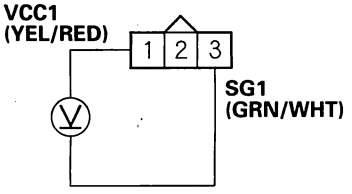
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. ■
7. Turn the ignition switch OFF.
8. Disconnect the MAP sensor 3P connector.
9. Turn the ignition switch ON (II).
10. Check the MAP SENSOR in the DATA LIST with the HDS.

    Is about 3 kPa (1.0 in.Hg, 26 mmHg), or 0.23 V or less indicated?

    YES—Go to step 13.

    NO—Go to step 11.
11. Measure voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

MAP SENSOR 3P CONNECTOR



Wire side of female terminals

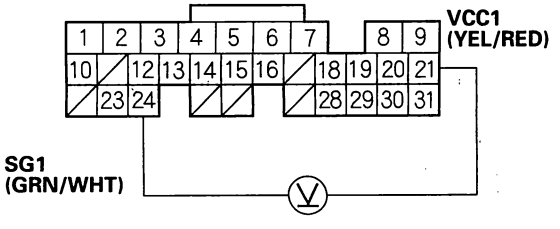
Is there about 5 V?

YES—Go to step 26.

NO—Go to step 12.

12. Measure voltage between ECM/PCM connector terminals A21 and A24.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (A21) and the MAP sensor, then go to step 29.

NO—Go to step 33.

13. Turn the ignition switch OFF.
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector A (31P).

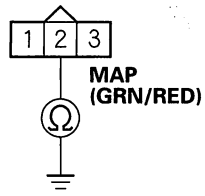
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

16. Check for continuity between MAP sensor 3P connector terminal No. 2 and body ground.

MAP SENSOR 3P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A30) and the MAP sensor, then go to step 28.

NO—Go to step 33.

17. Turn the ignition switch OFF.

18. Jump the SCS line with the HDS.

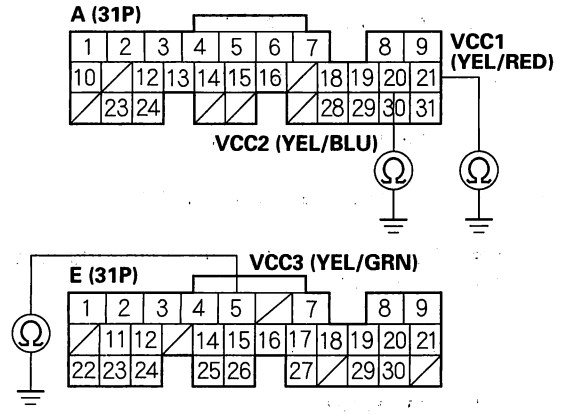
19. Disconnect ECM/PCM connectors A (31P) and E (31P).

20. Disconnect the connectors from these parts:

- MAP sensor
- TP sensor
- FTP sensor
- EGR valve
- Input shaft (mainshaft) speed sensor
- Output shaft (countershaft) speed sensor

21. Check for continuity between body ground and ECM/PCM connector terminals A20, A21, and E5 individually.

ECM/PCM CONNECTORS



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A20, A21, or E5) and each disconnected part, then go to step 28.

NO—Go to step 22.

BACK

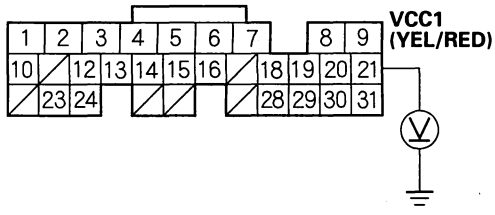
Protected by AR

22. Reconnect ECM/PCM connectors A (31P) and E (31P).

23. Turn the ignition switch ON (II).

24. Measure voltage between ECM/PCM connector terminal A21 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Go to step 25.

NO—Go to step 33.

25. Continue to monitor voltage at the ECM/PCM connector terminal A21 while reconnecting these parts, one at a time:

- MAP sensor
- TP sensor
- FTP sensor
- EGR valve
- Input shaft (mainshaft) speed sensor
- Output shaft (countershaft) speed sensor

Did the voltage drop to about 0 V?

YES—Replace the part that caused the voltage to drop, then go to step 29.

NO—Go to step 33.

26. Turn the ignition switch OFF.

27. Replace the MAP sensor (see page 11-226).

28. Reconnect all connectors.

29. Turn the ignition switch ON (II).

30. Reset the ECM/PCM with the HDS.

31. Do the ECM/PCM idle learn procedure (see page 11-316).

32. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0107 is indicated, check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete. ■

33. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

34. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0107 is indicated, check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0111: IAT Sensor Circuit Range/ Performance Problem (2005-2006 models)

1. Check for poor connections or loose terminals at the ECT sensor and the IAT sensor.

   Are the connections and terminals OK?

   YES—Go to step 2.

   NO—Repair the connectors or terminals, then go to step 15.

2. Replace the MAF sensor/IAT sensor (see page 11-226).

3. Allow IAT sensor to cool to 77° F (25 °C).

4. Note the ambient temperature.

5. Connect the MAF sensor/IAT sensor to the 5P connector, but do not install the sensor to the air cleaner.

6. Turn the ignition switch ON (II).

7. Note the value of the IAT SENSOR quickly in the DATA LIST with the HDS.

8. Compare the value of IAT SENSOR and the ambient temperature.

   Does the value of IAT SENSOR differ 5.4 °F (3 °C) or more?

   YES—Go to step 13.

   NO—Go to step 9.

9. Disconnect the MAF sensor/IAT sensor from the 5P connector.

10. Using a heat gun, blow hot air on the MAF sensor/ IAT sensor for a few seconds. Do not apply the heat longer than a few seconds or you will damage the sensor.

11. Connect MAF sensor/IAT sensor to the 5P connector, but do not install the sensor to the air cleaner.

12. Check the IAT SENSOR in the DATA LIST with the HDS.

    Does the IAT SENSOR change 58 °F (32 °C) or more?

    YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM. ■

    NO—Go to step 13.

13. Turn the ignition switch OFF.

14. Replace the MAF sensor/IAT sensor (see page 11-226).

15. Turn the ignition switch ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure (see page 11-316).

18. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0111 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0112: IAT Sensor Circuit Low Voltage (2003-2004 except SULEV, LX-P models)

1. Turn the ignition switch ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 3.

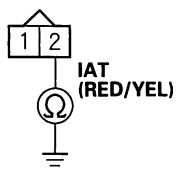
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the IAT sensor 2P connector.
5. Turn the ignition switch ON (II).
6. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 7.

   NO—Go to step 11.
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (24P).
10. Check for continuity between IAT sensor 2P connector terminal No. 2 and body ground.

IAT SENSOR 2P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the IAT sensor and the ECM/PCM (B17), then go to step 13.

NO—Go to step 18.

11. Turn the ignition switch OFF.
12. Replace the IAT sensor (see page 11-226).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0112 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0112 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0112: IAT Sensor Circuit Low Voltage (2003-2004 SULEV, LX-P models and 2005-2006 models)

1. Turn the ignition switch ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 3.

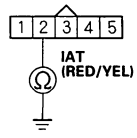
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Turn the ignition switch ON (II).
6. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 7.

   NO—Go to step 11.
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (24P).
10. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the IAT sensor and the ECM/PCM (B17), then go to step 13.

NO—Go to step 18.

11. Turn the ignition switch OFF.
12. Replace the MAF sensor/IAT sensor (see page 11-226).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0112 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0112 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0113: IAT Sensor Circuit High Voltage (2003-2004 except SULEV, LX-P models)

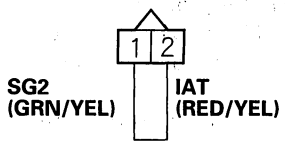
1. Turn the ignition switch ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about −40 °F (−40 °C) or less, or 4.90 V or more indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the IAT sensor 2P connector.
5. Connect IAT sensor 2P connector terminals No. 1 and No. 2 with a jumper wire.

IAT SENSOR 2P CONNECTOR



Wire side of female terminals

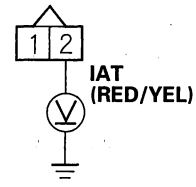
6. Turn the ignition switch ON (II).
7. Check the IAT SENSOR in the DATA LIST with the HDS.

   Is about −40 °F (−40 °C) or less, or 4.90 V or more indicated?

   YES—Go to step 8.

   NO—Go to step 18.
8. Turn the ignition switch OFF.
9. Remove the jumper wire from the IAT sensor 2P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between IAT sensor 2P connector terminal No. 2 and body ground.

IAT SENSOR 2P CONNECTOR



Wire side of female terminals

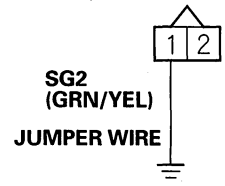
Is there about 5 V?

YES—Go to step 12.

NO—Go to step 17.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector A (31P).
15. Connect IAT sensor 2P connector terminal No. 1 to body ground with a jumper wire.

IAT SENSOR 2P CONNECTOR



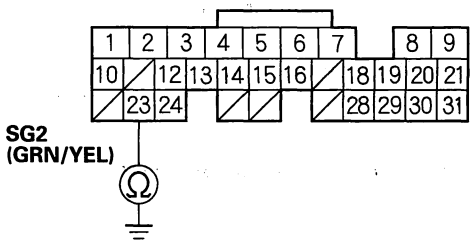
Wire side of female terminals

BACK

Protected by AR

16. Check for continuity between ECM/PCM connector terminal A23 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

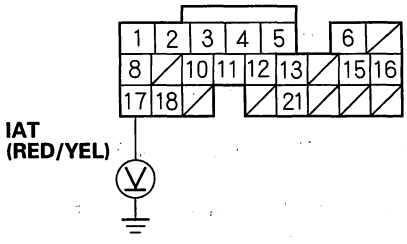
Is there continuity?

YES—Go to step 25.

NO—Repair open in the wire between the ECM/PCM (A23) and the IAT sensor, then go to step 20.

17. Measure voltage between ECM/PCM connector terminal B17 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (B17) and the IAT sensor, then go to step 20.

NO—Go to step 25.

18. Turn the ignition switch OFF.

19. Replace the IAT sensor (see page 11-226).

20. Reconnect all connectors.

21. Turn the ignition switch ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure (see page 11-316).

24. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0113 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete. ■

25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

26. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0113 is indicated, check for poor connections or loose terminals at the IAT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0116: ECT Sensor Circuit Range/ Performance Problem (2003-2004 models)

1. Turn the ignition switch ON (II).
2. Check the ECT SENSOR in the DATA LIST with the HDS.

   Is about 176 °F (80 °C) or more, or 0.86 V or less indicated?

   YES—Go to step 3.

   NO—Go to step 7.
3. Note the coolant temperature from step 2.
4. Turn the ignition switch OFF.
5. Let the engine cool for 1 hour.
6. Check the ECT SENSOR in the DATA LIST with the HDS.

   Did the ECT change 3.6 °F (2 °C) or more?

   YES—Intermittent failure, system is OK at this time. Check the thermostat and the cooling system. ■

   NO—Go to step 10.
7. Note the coolant temperature.
8. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
9. Check the ECT SENSOR in the DATA LIST with the HDS.

   Does the ECT change 3.6 °F (2 °C) or more?

   YES—Intermittent failure, system is OK at this time. Check the thermostat and the cooling system. ■

   NO—Go to step 10.
10. Turn the ignition switch OFF.
11. Replace the ECT sensor (see page 11-223).
12. Turn the ignition switch ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure (see page 11-316).
15. Allow the engine to cool to between 23 °F (—5 °C) and 77 °F (25 °C).
16. Start the engine, and let it idle 20 minutes.
17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0116 is indicated, check for poor connections or loose terminals at the ECT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 18.
18. Monitor the OBD STATUS for DTC P0116 in the DTCs MENU with the HDS.

    Does the screen indicates PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the ECT sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 15 and recheck.

DTC P0116: ECT Sensor 1 Range/ Performance Problem (2005-2006 models)

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 176 °F (80 °C) or more, or 0.78 V or less indicated?

   YES—Go to step 6.

   NO—Go to step 3.
3. Note the value of ECT SENSOR 1 in the DATA LIST with the HDS.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Does ECT SENSOR 1 change 18 °F (10 °C) or more?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM. ■

   NO—Go to step 11.
6. Note the value of ECT SENSOR 1 in the DATA LIST with the HDS.
7. Turn the ignition switch OFF.
8. Open the hood, and let the engine cool for 3 hours.
9. Turn the ignition switch ON (II).
10. Check ECT SENSOR 1 in the DATA LIST with the HDS.

    Does ECT SENSOR 1 change 18 °F (10 °C) or more?

    YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM. ■

    NO—Go to step 11.
11. Turn the ignition switch OFF.
12. Replace ECT sensor 1 (see page 11-223).
13. Turn the ignition switch ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure (see page 11-316).
16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0116 is indicated, check for poor connections or loose terminals at ECT sensor 1 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC Troubleshooting (cont'd)

DTC P0117: ECT Sensor/ECT Sensor 1 Circuit Low Voltage

1. Turn the ignition switch ON (II).
2. Check the ECT SENSOR (1) in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 3.

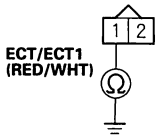
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the ECT sensor/ECT sensor 1 and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the ECT sensor/ECT sensor 1 2P connector.
5. Turn the ignition switch ON (II).
6. Check the ECT SENSOR (1) in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 7.

   NO—Go to step 11.
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector B (24P).
10. Check for continuity between ECT sensor/ECT sensor 1 2P connector terminal No. 1 and body ground.

ECT SENSOR/ECT SENSOR 1 2P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECT sensor/ECT sensor 1 and the ECM/PCM (B8), then go to step 13.

NO—Go to step 18.

11. Turn the ignition switch OFF.
12. Replace the ECT sensor/ECT sensor 1 (see page 11-223).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0117 is indicated, check for poor connections or loose terminals at the ECT sensor/ECT sensor 1 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0117 is indicated, check for poor connections or loose terminals at the ECT sensor/ECT sensor 1 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0122: TP Sensor Circuit Low Voltage (2003-2004 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II).
5. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0107, P0122, and P0452 indicated at the same time?

   YES—Go to step 20.

   NO—Go to step 6.

6. Check the TP SENSOR in the DATA LIST with the HDS.

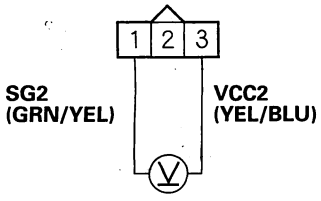
   Is there about 0.5 V when the throttle is fully closed, and about 4.5 V when the throttle is fully opened?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the TP sensor and the ECM/PCM. ■

   NO—Go to step 7.

7. Turn the ignition switch OFF.
8. Disconnect the TP sensor 3P connector.
9. Turn the ignition switch ON (II).
10. On the wire harness side, measure voltage between TP sensor 3P connector terminals No. 1 and No. 3.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

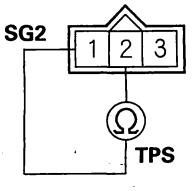
Is there about 5 V?

YES—Go to step 11.

NO—Go to step 19.

11. Turn the ignition switch OFF.
12. On the sensor side, measure resistance between TP sensor 3P connector terminals No. 1 and No. 2 with the throttle fully closed.

TP SENSOR 3P CONNECTOR



Terminal side of male terminals

Is there about 0.5—0.9 kΩ ?

YES—Go to step 13.

NO—Go to step 29.

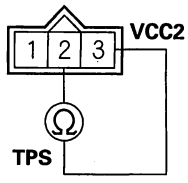
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. On the sensor side, measure resistance between TP sensor 3P connector terminals No. 2 and No. 3 with the throttle fully closed.

TP SENSOR 3P CONNECTOR



Terminal side of male terminals

Is there about 5.0 kΩ ?

YES—Go to step 14.

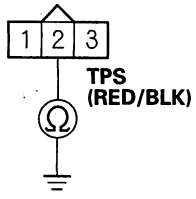
NO—Go to step 29.

14. Jump the SCS line with the HDS.

15. Disconnect ECM/PCM connector A (31P).

16. On the wire harness side, check for continuity between TP sensor 3P connector terminal No. 2 and body ground.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

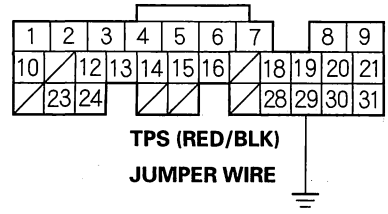
Is there continuity?

YES—Repair short in the wire between the TP sensor and the ECM/PCM (A29), then go to step 30.

NO—Go to step 17.

17. Connect ECM/PCM connector terminal A29 to body ground with a jumper wire.

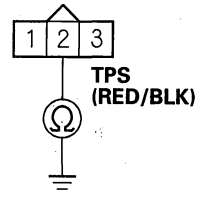
ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

18. On the wire harness side, check for continuity between TP sensor 3P connector terminal No. 2 and body ground.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

Is there continuity?

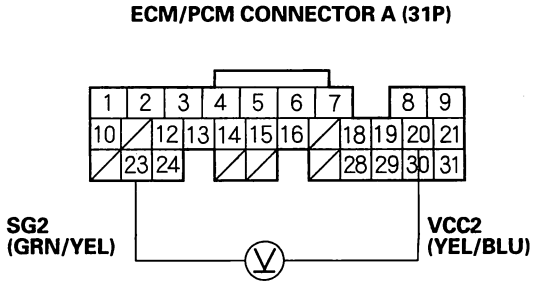
YES—Go to step 35.

NO—Repair open in the wire between the TP sensor and the ECM/PCM (A29), then go to step 30.

BACK

Protected by AR

19. Measure voltage between ECM/PCM connector terminals A20 and A23.



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (A20) and the TP sensor, then go to step 30.

NO—Go to step 35.

20. Turn the ignition switch OFF.

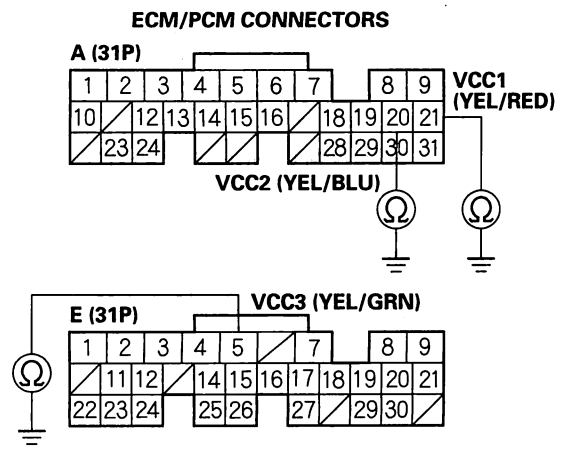
21. Jump the SCS line with the HDS.

22. Disconnect ECM/PCM connectors A (31P) and E (31P).

23. Disconnect the connectors from these parts:

- MAP sensor
- TP sensor
- FTP sensor
- EGR valve
- Input shaft (mainshaft) speed sensor
- Output shaft (countershaft) speed sensor

24. Check for continuity between body ground and ECM/PCM connector terminals A20, A21, and E5 individually.



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A20, A21, or E5) and each disconnected part, then go to step 30.

NO—Go to step 25.

(cont'd)

Protected by AR

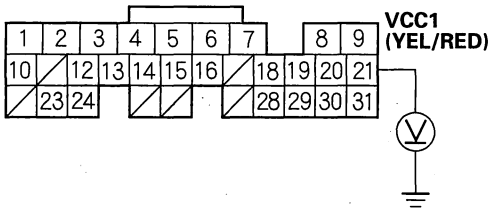
DTC Troubleshooting (cont'd)

25. Reconnect ECM/PCM connectors A (31P) and E (31P).

26. Turn the ignition switch ON (II).

27. Measure voltage between ECM/PCM connector terminal A21 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Go to step 28.

NO—Go to step 35.

28. Continue to monitor voltage at ECM/PCM connector terminal A21 while reconnecting these parts, one at a time:

- MAP sensor
- TP sensor
- FTP sensor
- EGR valve
- Input shaft (mainshaft) speed sensor
- Output shaft (countershaft) speed sensor

Did the voltage drop to about 0 V?

YES—Replace the part that caused the voltage to drop, then go to step 30.

NO—Go to step 35.

29. Replace the throttle body (see page 11-366).

30. Reconnect all connectors.

31. Turn the ignition switch ON (II).

32. Reset the ECM/PCM with the HDS.

33. Do the ECM/PCM idle learn procedure (see page 11-316).

34. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0122 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete. ■

35. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

36. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0122 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0122: TP Sensor Circuit Low Voltage (2005 model)

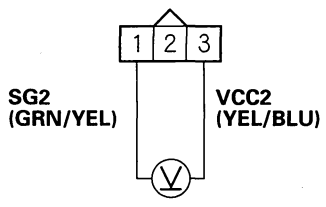
1. Turn the ignition switch ON (II).
2. Check the TP SENSOR in the DATA LIST with the HDS.

   Is there about 0.5 V when the throttle is fully closed, and about 4.5 V when the throttle is fully opened?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the TP sensor and the ECM/PCM. ■

   NO—Go to step 3.
3. Turn the ignition switch OFF.
4. Disconnect the TP sensor 3P connector.
5. Turn the ignition switch ON (II).
6. On the wire harness side, measure voltage between TP sensor 3P connector terminals No. 1 and No. 3.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

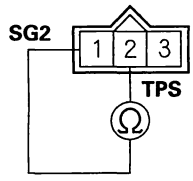
Is there about 5 V?

YES—Go to step 7.

NO—Go to step 15.

7. Turn the ignition switch OFF.
8. On the sensor side, measure resistance between TP sensor 3P connector terminals No. 1 and No. 2 with the throttle fully closed.

TP SENSOR 3P CONNECTOR



Terminal side of male terminals

Is there about 0.5—0.9 kΩ ?

YES—Go to step 9.

NO—Go to step 16.

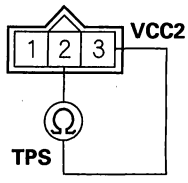
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

9. On the sensor side, measure resistance between TP sensor 3P connector terminals No. 2 and No. 3 with the throttle fully closed.

TP SENSOR 3P CONNECTOR



Terminal side of male terminals

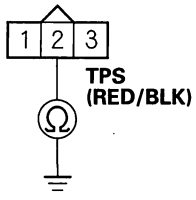
Is there about 5.0 kΩ ?

YES—Go to step 10.

NO—Go to step 16.

10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector A (31P).
12. On the wire harness side, check for continuity between TP sensor 3P connector terminal No. 2 and body ground.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

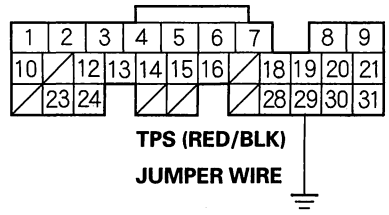
Is there continuity?

YES—Repair short in the wire between the TP sensor and the ECM/PCM (A29), then go to step 17.

NO—Go to step 13.

13. Connect ECM/PCM connector terminal A29 to body ground with a jumper wire.

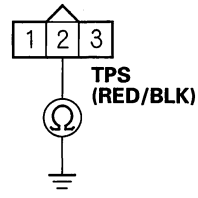
ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

14. On the wire harness side, check for continuity between TP sensor 3P connector terminal No. 2 and body ground.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 22.

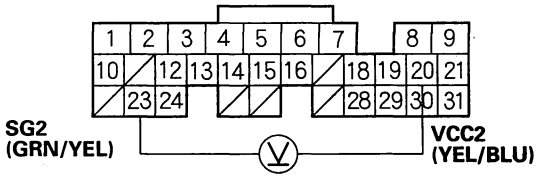
NO—Repair open in the wire between the TP sensor and the ECM/PCM (A29), then go to step 17.

BACK

Protected by AR

15. Measure voltage between ECM/PCM connector terminals A20 and A23.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (A20) and the TP sensor, then go to step 17.

NO—Go to step 22.

16. Replace the throttle body (see page 11-366).

17. Reconnect all connectors.

18. Turn the ignition switch ON (II).

19. Reset the ECM/PCM with the HDS.

20. Do the ECM/PCM idle learn procedure (see page 11-316).

21. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0122 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete.■

22. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

23. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0122 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC Troubleshooting (cont'd)

DTC P0123: TP Sensor Circuit High Voltage (2003-2005 models)

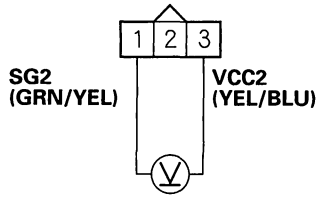
1. Turn the ignition switch ON (II).
2. Check the TP SENSOR in the DATA LIST with the HDS.

   Is there about 0.5 V when the throttle is fully closed, and about 4.5 V when the throttle is fully opened?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the TP sensor and the ECM/PCM. ■

   NO—Go to step 3.
3. Turn the ignition switch OFF.
4. Disconnect the TP sensor 3P connector.
5. Turn the ignition switch ON (II).
6. At the wire harness side, measure voltage between TP sensor 3P connector terminals No. 1 and No. 3.

TP SENSOR 3P CONNECTOR



Wire side of female terminals

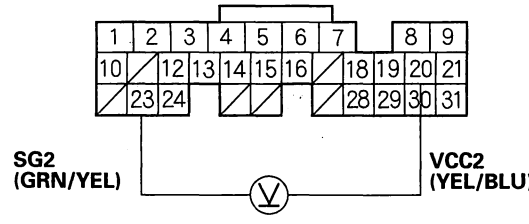
Is there about 5 V?

YES—Go to step 8.

NO—Go to step 7.

7. Measure voltage between ECM/PCM connector terminals A20 and A23.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (A23) and the TP sensor, then go to step 10.

NO—Go to step 15.

8. Turn the ignition switch OFF.
9. Replace the throttle body (see page 11-366).
10. Reconnect all connectors.
11. Turn the ignition switch ON (II).
12. Reset ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0123 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

BACK

Protected by AR

15. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0123 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0125: ECT Sensor Malfunction/Slow Response
(2003-2004 models)

1. Start the engine, and let it idle.
2. Check the ECT SENSOR in the DATA LIST with the HDS.

   Is about 86 °F (30 °C) or less, or 2.61 V or more indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check the thermostat and the cooling system. ■
3. Let the engine idle for 6 minutes.
4. Check the ECT SENSOR in the DATA LIST with the HDS.

   Is about 86 °F (30 °C) or less, or 2.61 V or more indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check the thermostat (see page 10-4) and the cooling system. ■
5. Turn the ignition switch OFF.
6. Replace the ECT sensor (see page 11-223).
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Allow the engine to cool to between 23 °F (—5 °C) and 77 °F (25 °C).
11. Start the engine, and let it idle 20 minutes.
12. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0125 is indicated, check for poor connections or loose terminals at the ECT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 13.
13. Monitor the OBD STATUS for DTC P0125 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the ECT sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 10 and recheck.

BACK

Protected by AR

DTC P0125: ECT Sensor 1 Malfunction/Slow Response
(2005-2006 models)

1. Start the engine, and let it idle 5 minutes or more.
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 10 °F (−12 °C) or less, or 4.45 V or more indicated?

   YES—Go to step 9.

   NO—Go to step 3.
3. Allow the engine to cool to 104 °F (40 °C) or less.
4. Note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.
5. Start the engine, and let it idle.
6. Let the engine idle until ECT SENSOR 1 goes up 49 °F (27 °C) or more from the recorded temperature.
7. Note the value of ECT SENSOR 2 in the DATA LIST with the HDS.
8. Compare ECT SENSOR 2 and the recorded temperature.

   Did ECT SENSOR 2 change 17 °F (9.5 °C) or more?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2 and the ECM/PCM. ■

   NO—Check the thermostat (see page 10-4), then go to step 9.
9. Turn the ignition switch OFF.
10. Replace ECT sensor 1 (see page 11-223).
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Allow the engine to cool to ambient temperature.
15. Start the engine, and let it idle 20 minutes.
16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0125 is indicated, check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 17.
17. Monitor the OBD STATUS for DTC P0125 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 14 and recheck.

DTC Troubleshooting (cont'd)

DTC P0128: Cooling System Malfunction (2003-2004 models)

NOTE: If the DTCs listed below are stored at the same time as DTC P0128, troubleshoot them first, then recheck for P0128.

P0112, P0113: Intake air temperature (IAT) sensor
P0116, P0117, P0118, P0125: Engine coolant temperature (ECT) sensor
P0300: Random misfire
P0301, P0302, P0303, P0304: No. 1, No. 2, No. 3, or No. 4 cylinder misfire
P0335, P0339: Crankshaft position (CKP) sensor
P2227, P2228, P2229: Barometric pressure (BARO) sensor
P2646, P2647, P2648, P2649: VTEC system
P0506, P0507: Idle control system malfunction
P0511: Idle air control (IAC) valve

DTC P0128 can occasionally set when the hood is opened while the engine is running.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the blower switch OFF.
4. Turn the A/C switch OFF.
5. Check the FAN CTRL in the DATA LIST with the HDS.

   Is it OFF?

   YES—Go to step 6.

   NO—Wait until the FAN CTRL is off, then go to step 6.
6. Check the ECT SENSOR in the DATA LIST with the HDS, then check the radiator fan operation.

   Does the radiator fan keep running when the engine coolant temperature is less than 158 °F (70 °C)?

   YES—Check the radiator fan circuit (see page 10-18), the radiator fan switch circuit for open (see page 10-22), the radiator fan switch circuit for short (see page 10-22), and the radiator fan switch (see page 10-23). If the circuits and the switch are OK, go to step 21.

   NO—Go to step 7.
7. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
8. Turn the ignition switch OFF.
9. Turn the ignition switch ON (II).
10. Do the RADIATOR FAN TEST in the INSPECTION MENU with the HDS for 20 minutes.
11. Check the ECT SENSOR in the DATA LIST with the HDS.

    Is about 151 °F (66 °C) or less, or 1.25 V or more indicated?

    YES—Intermittent failure, system is OK at this time. ■

    NO—Go to step 12.
12. Turn the ignition switch OFF.
13. Let the engine cool until the coolant temperature is between 23 °F (—5 °C) and 95 °F (35 °C).
14. Replace the thermostat (see page 10-8).
15. Turn the ignition switch ON (II).
16. Reset the ECM/PCM with the HDS.
17. Do the ECM/PCM idle learn procedure (see page 11-316).

BACK

Protected by AR

18. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0128 is indicated, check the cooling system, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting. ■

    NO—Go to step 20.

20. Monitor the OBD STATUS for DTC P0128 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check the cooling system, then go to step 1. If the screen indicates NOT COMPLETED, go to step 18 and recheck.

21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

22. Let the engine cool until the coolant temperature is between 23 °F (—5 °C) and 95 °F (35 °C).

23. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

24. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0128 is indicated, check for poor connections or loose terminals at the ECT sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0128: Cooling System Malfunction (2005-2006 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the blower switch OFF.
4. Turn the A/C switch OFF.
5. Check the FAN CTRL in the DATA LIST with the HDS.

   Is it OFF?

   YES—Go to step 6.

   NO—Wait until the FAN CTRL is off, then go to step 6.
6. Check the radiator fan operation.

   Does the radiator fan keep running?

   YES—Check the radiator fan circuit (see page 10-20), the radiator fan switch circuit for open (see page 10-22), the radiator fan switch circuit for short (see page 10-22), and the radiator fan switch (see page 10-23). If the circuits and the switch are OK, go to step 20.

   NO—Go to step 7.
7. Let the engine cool until the coolant temperature is 104 °F (40 °C) or less.
8. Note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.
9. Start the engine, and let it idle.
10. Let the engine idle until ECT SENSOR 1 goes up 49 °F (27 °C) or more from the recorded temperature.
11. Check ECT SENSOR 2 in the DATA LIST with the HDS.
12. Compare the value of recorded ECT SENSOR 2 and the value of present ECT SENSOR 2.

    Did temperature rise 17 °F (9.5 °C) or more?

    YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM. ■

    NO—Test the thermostat (see page 10-4), then go to step 13.
13. Turn the ignition switch ON (II).
14. Reset the ECM/PCM with the HDS.
15. Let the engine cool until the coolant temperature is between 21 °F (—6 °C) and 104 °F (40 °C).
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Test-drive at a steady speed between 15—75 mph (24—120 km/h) for 10 minutes.
18. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0128 is indicated, check the cooling system, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 19.
19. Monitor the OBD STATUS for DTC P0128 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check the cooling system, then go to step 1. If the screen indicates NOT COMPLETED, go to step 15 and recheck.

BACK

DTC Troubleshooting (cont'd)

DTC P0133: A/F Sensor (Sensor 1) Response Malfunction (2003-2004 models)

NOTE: If DTC P0139 is stored at the same time as DTC P0133, troubleshoot DTC P0139 first, then recheck for DTC P0133.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 5th gear)
   - Vehicle speed at 30 mph (48 km/h) or more, and engine speed between 1,000 and 3,000 rpm
5. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
6. Turn the ignition switch OFF.
7. Replace the A/F sensor (Sensor 1) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 5th gear)
    - Vehicle speed at 30 mph (48 km/h) or more, and engine speed between 1,000 and 3,000 rpm
12. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0133 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 13.
13. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 10 and recheck.

DTC P0133: A/F Sensor (Sensor 1) Response Malfunction (2005-2006 models)

NOTE: If DTC P0139 is stored at the same time as DTC P0133, troubleshoot DTC P0139 first, then recheck for DTC P0133.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 176 °F (80 °C)
   - A/T in D position (M/T in 3rd or 4th gear)
   - Drive the vehicle at 25 mph (40 km/h) or less for 5 minutes, then drive at a steady speed between 26—81 mph (41—130 km/h)
5. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
6. Turn the ignition switch OFF.
7. Replace the A/F sensor (Sensor 1) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Start the engine. Hold the engine speed at 3,000 rpm with no load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
    - Engine coolant temperature above 176 °F (80 °C)
    - A/T in D position (M/T in 3rd or 4th gear)
    - Drive the vehicle at 25 mph (40 km/h) or less for 5 minutes, then drive at a steady speed between 26—81 mph (41—130 km/h)
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0133 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.
14. Monitor the OBD STATUS for DTC P0133 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 11 and recheck.

DTC Troubleshooting (cont'd)

DTC P0134: A/F Sensor (Sensor 1) Heater System Malfunction

NOTE: If DTC P0135 is stored at the same time as DTC P0134, troubleshoot DTC P0135 first, then recheck for DTC P0134.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0134 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Replace the A/F sensor (Sensor 1) (see page 11-222).
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0134 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 11.
11. Monitor the OBD STATUS for DTC P0134 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 8 and recheck.

DTC P0135: A/F Sensor (Sensor 1) Heater Circuit Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0135 indicated?

   YES—Go to step 5.

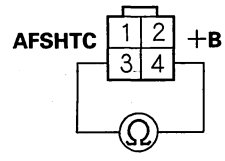
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Check these fuses:
   - No. 19 OPTION (40 A) fuse in the under-hood fuse/relay box.
   - No. 4 A/F SENSOR (15 A) fuse in the under-dash fuse/relay box.
   - No. 23 IGP (7.5 A) fuse in the under-dash fuse/relay box.

   Are any of the fuses blown?

   YES—Repair short in the wire between the A/F sensor relay and the fuses. Also replace the blown fuse, then go to step 22.

   NO—Go to step 7.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Measure resistance between A/F sensor (Sensor 1) 4P connector terminals No. 3 and No. 4.

A/F SENSOR (SENSOR 1) 4P CONNECTOR



Wire side of female terminals

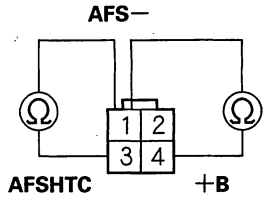
Is there 2.1—2.9 Ω at room temperature?

YES—Go to step 9.

NO—Go to step 21.

9. Check for continuity between A/F sensor (Sensor 1) 4P connector terminals No. 1 and No. 3, and between terminals No. 1 and No. 4 individually.

A/F SENSOR (SENSOR 1) 4P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 21.

NO—Go to step 10.

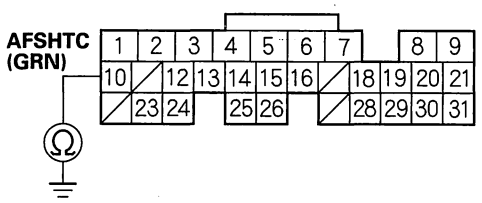
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector A (31P).
12. Check for continuity between ECM/PCM connector terminal A10 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

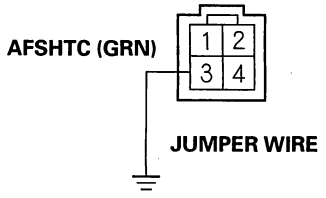
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A10) and the A/F sensor (Sensor 1), then go to step 22.

NO—Go to step 13.

13. Connect A/F sensor (Sensor 1) 4P connector terminal No. 3 to body ground with a jumper wire.

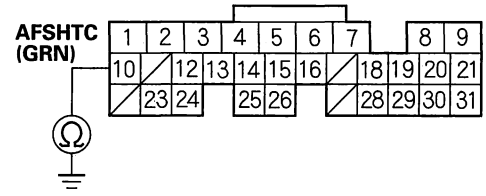
A/F SENSOR (SENSOR 1) 4P CONNECTOR



Terminal side of male terminals

14. Check for continuity between ECM/PCM connector terminal A10 and body ground.

ECM/PCM CONNECTOR A (31P)



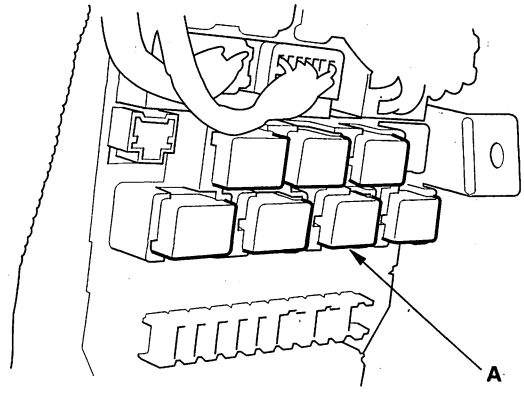
Wire side of female terminals

Is there continuity?

YES—Go to step 15.

NO—Repair open in the wire between the ECM/PCM (A10) and the A/F sensor (Sensor 1), then go to step 22.

15. Remove the A/F sensor relay (A).

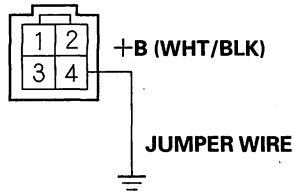


BACK

Protected by AR

16. Connect A/F sensor (Sensor 1) 4P connector terminal No. 4 to body ground with a jumper wire.

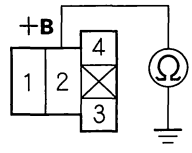
A/F SENSOR (SENSOR 1) 4P CONNECTOR



Terminal side of male terminals

17. Check for continuity between A/F sensor relay 4P connector terminal No. 2 and body ground.

A/F SENSOR RELAY 4P CONNECTOR



Terminal side of female terminals

Is there continuity?

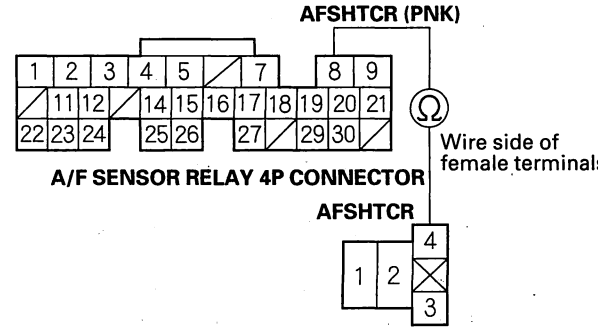
YES—Go to step 18.

NO—Repair open in the wire between the A/F sensor (Sensor 1) and the A/F sensor relay, then go to step 22.

18. Disconnect ECM/PCM connector E (31P).

19. Check for continuity between ECM/PCM connector terminal E8 and A/F sensor relay 4P connector terminal No. 4.

ECM/PCM CONNECTOR E (31P)



Terminal side of female terminals

Is there continuity?

YES—Go to step 20.

NO—Repair open in the wire between the ECM/PCM (E8) and the A/F sensor relay, then go to step 22.

20. Check the A/F sensor relay (see page 22-79).

Is the A/F sensor relay OK?

YES—Go to step 28.

NO—Replace the A/F sensor relay, then go to step 22.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

21. Replace the A/F sensor (Sensor 1) (see page 11-222).

22. Reconnect all connectors.

23. Turn the ignition switch ON (II).

24. Reset the ECM/PCM with the HDS.

25. Do the ECM/PCM idle learn procedure (see page 11-316).

26. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0135 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 27.

27. Monitor the OBD STATUS for DTC P0135 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay, and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 24 and recheck.

28. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

29. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0135 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the A/F sensor relay, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0137: Secondary HO2S (Sensor 2) Circuit Low Voltage (2003-2004 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 0.29 V or less?

   YES—Go to step 5.

   NO—Go to step 9.
5. Turn the ignition switch OFF.
6. Disconnect the secondary HO2S (Sensor 2) 4P connector (see page 11-222).
7. Turn the ignition switch ON (II).
8. Check the HO2S S2 in the DATA LIST with the HDS.

   Does the voltage stay at 0.29 V or less?

   YES—Go to step 11.

   NO—Go to step 15.
9. Test-drive under these conditions:

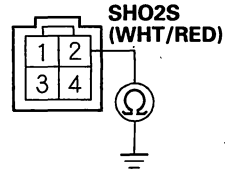
   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 4th gear)
   - Engine speed at 2,000—3,000 rpm
   - Drive about 10 minutes, then decelerate (with the throttle fully closed) for 5 seconds
10. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

    Does the screen indicate FAILED?

    YES—Go to step 16.

    NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 9 and recheck.
11. Turn the ignition switch OFF.
12. Jump the SCS line with the HDS.
13. Disconnect ECM/PCM connector E (31P).
14. Check for continuity between secondary HO2S (Sensor 2) 4P connector terminal No. 2 and body ground.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR



Terminal side of male terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E20) and the secondary HO2S (Sensor 2), then go to step 17.

NO—Go to step 25.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

15. Turn the ignition switch OFF.
16. Replace the secondary HO2S (Sensor 2) (see page 11-222).
17. Reconnect all connectors.
18. Turn the ignition switch ON (II).
19. Reset the ECM/PCM with the HDS.
20. Do the ECM/PCM idle learn procedure (see page 11-316).
21. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
22. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 4th gear)
    - Engine speed at 2,000—3,000 rpm
    - Drive about 10 minutes, then decelerate (with the throttle fully closed) for 5 seconds
23. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0137 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 24.
24. Monitor the OBD STATUS for DTC P0137 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 21 and recheck.
25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
26. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
27. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 4th gear)
    - Engine speed at 2,000—3,000 rpm
    - Drive about 10 minutes, then decelerate (with the throttle fully closed) for 5 seconds
28. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0137 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC Troubleshooting (cont'd)

29. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

30. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

31. Test-drive under these conditions:

    - Engine coolant temperature above 176 °F (80 °C)
    - A/T in D position (M/T in 4th gear)
    - Engine speed at 1,500—3,000 rpm
    - Drive 1 minute or more

32. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0138 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0139: Secondary HO2S (Sensor 2) Slow Response
(2003-2004 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 4th gear)
   - Engine speed at 2,000—3,000 rpm
   - Drive about 10 minutes, then decelerate (with the throttle fully closed) for 5 seconds
5. Monitor the OBD STATUS for DTC P0139 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
6. Turn the ignition switch OFF.
7. Replace the secondary HO2S (Sensor 2) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 4th gear)
    - Engine speed at 2,000—3,000 rpm
    - Drive about 10 minutes, then decelerate (with the throttle fully closed) for 5 seconds
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0139 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.
14. Monitor the OBD STATUS for DTC P0139 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 11 and recheck.

DTC Troubleshooting (cont'd)

DTC P0139: Secondary HO2S (Sensor 2) Slow Response
(2005-2006 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 176 °F (80 °C)
   - A/T in D position (M/T in 4th gear)
   - Vehicle speed between 35—55 mph (56—88 km/h)
   - Drive 5 minutes or more
5. Monitor the OBD STATUS for DTC P0139 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
6. Turn the ignition switch OFF.
7. Replace the secondary HO2S (Sensor 2) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
    - Engine coolant temperature above 176 °F (80 °C)
    - A/T in D position (M/T in 4th gear)
    - Vehicle speed between 35—55 mph (56—88 km/h)
    - Drive 5 minutes or more
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0139 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.
14. Monitor the OBD STATUS for DTC P0139 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 11 and recheck.

DTC P0141: Secondary HO2S (Sensor 2) Heater Circuit Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0141 indicated?

   YES—Go to step 5.

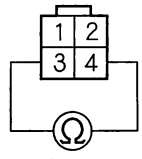
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. ■
5. Check the No. 18 ACG (15 A) fuse in the under-dash fuse/relay box.

   Is the fuse OK?

   YES—Go to step 6.

   NO—Repair short in the wire between the secondary HO2S (Sensor 2) and the No. 18 ACG (15 A) fuse, then go to step 24.
6. Turn the ignition switch OFF.
7. Disconnect the secondary HO2S (Sensor 2) 4P connector (see page 11-222).
8. At the secondary HO2S (Sensor 2), measure resistance between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR



Wire side of female terminals

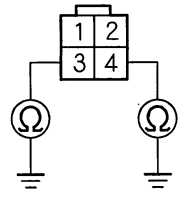
Is there 5.0—6.4 Ω at room temperature?

YES—Go to step 9.

NO—Go to step 23.

9. At the secondary HO2S (Sensor 2), check for continuity between body ground and secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4 individually.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 23.

NO—Go to step 10.

(cont'd)

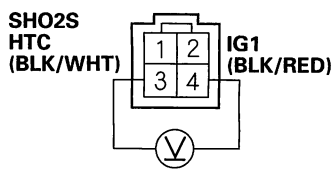
Protected by AR

DTC Troubleshooting (cont'd)

10. Turn the ignition switch ON (II).

11. On the harness side, measure voltage between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR



Terminal side of male terminals

Is there battery voltage?

YES—Go to step 12.

NO—Go to step 16.

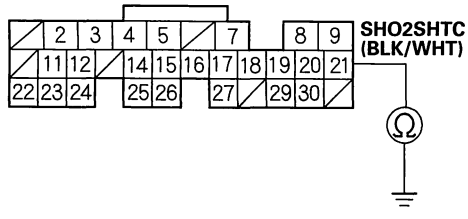
12. Turn the ignition switch OFF.

13. Jump the SCS line with the HDS.

14. Disconnect ECM/PCM connector E (31P).

15. Check for continuity between ECM/PCM connector terminal E21 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

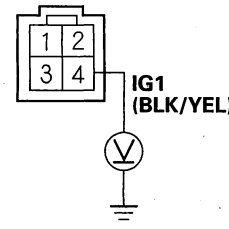
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E21) and the secondary HO2S (Sensor 2), then go to step 24.

NO—Go to step 30.

16. Measure voltage between secondary HO2S (Sensor 2) 4P connector terminal No. 4 and body ground.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR



Terminal side of male terminals

Is there battery voltage?

YES—Go to step 17.

NO—Check the No. 18 ACG (15 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the wire between the secondary HO2S (Sensor 2) and the No. 18 ACG (15 A) fuse, then go to step 24.

17. Turn the ignition switch OFF.

18. Jump the SCS line with the HDS.

19. Reconnect the secondary HO2S (Sensor 2) 4P connector.

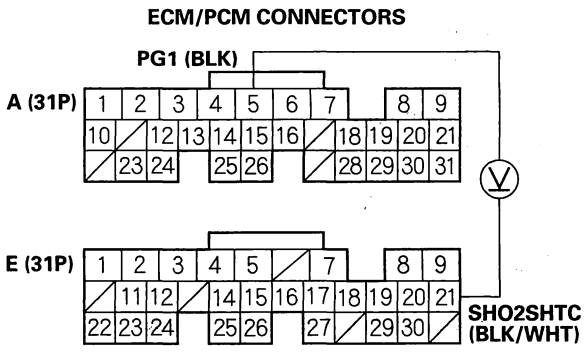
20. Disconnect ECM/PCM connector E (31P).

21. Turn the ignition switch ON (II).

BACK

Protected by AR

22. Measure voltage between ECM/PCM connector terminals A5 and E21.



Wire side of female terminals

Is there 0.1 V or less?

YES—Repair open in the wire between the ECM/PCM (E21) and the secondary HO2S (Sensor 2), then go to step 25.

NO—Go to step 30.

23. Replace the secondary HO2S (Sensor 2) (see page 11-222).

24. Reconnect all connectors.

25. Turn the ignition switch ON (II).

26. Reset the ECM/PCM with the HDS.

27. Do the ECM/PCM idle learn procedure (see page 11-316).

28. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0141 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 29.

29. Monitor the OBD STATUS for DTC P0141 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete.■

NO—If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 26 and recheck.

30. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

31. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0141 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0171: Fuel System Too Lean

DTC P0172: Fuel System Too Rich

NOTE: If some of the DTCs listed below are indicated at the same time as DTC P0171 and/or P0172, troubleshoot those DTCs first, then recheck for P0171 and/or P0172.

P0101, P0102, P0103: Mass air flow (MAF) sensor (2003-2004 SULEV, LX-P models and 2005-2006 models)
P0107, P0108, P1128, P1129: Manifold absolute pressure (MAP) sensor
P0133, P1172 (2005-2006 models), P1157, P2195, P2238, P2252, P2A00: Air fuel ratio (A/F) sensor (Sensor 1)
P0134, P0135: Air fuel ratio (A/F) sensor (Sensor 1) heater
P0137, P0138, P0139, P2270 (2005-2006 models), P2271 (2005-2006 models): Secondary HO2S (Sensor 2)
P0141: Secondary HO2S (Sensor 2) heater
P2646, P2647, P2648, P2649: VTEC system
P0401, P0404, P0406, P2413: Exhaust gas recirculation (EGR) system
P2279: Intake air leakage (2003-2004 except SULEV, LX-P models)
P0443, P0496: EVAP canister purge valve (2003-2004 SULEV, LX-P models and 2005-2006 models)

1. Check the fuel pressure (see page 11-332).

   Is the fuel pressure OK?

   YES—
   - 2003-2004 SULEV, LX-P models and 2005-2006 models: Go to step 2.
   - 2003-2004 except SULEV, LX-P models: Check the engine valve clearances and adjust if necessary (see page 6-9). If the valve clearances are OK, replace the injectors (see page 11-220), then go to step 7.

   NO—
   - If the pressure is too high, replace the fuel pressure regulator; SULEV model (see page 11-343), Non-SULEV model (see page 11-343), then go to step 7.
   - If the pressure is too low, check the fuel pump and the fuel feed line. Then go to step 7.

2. Check these parts for vacuum leaks:

   - PCV valve
   - PCV hose
   - EVAP canister purge valve
   - Throttle body
   - Intake manifold
   - Brake booster hose

   Are the parts OK?

   YES—Go to step 3.

   NO—Repair or replace parts with leaks, then go to step 7.

3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

4. Check for these conditions:

   - Engine coolant temperature above 176 °F (80 °C)
   - M/T in neutral (A/T in Park or neutral)
   - All electric load off

5. Monitor the ENG SPD in the DATA LIST with the HDS, and hold the engine speed at 4,500 rpm. Once the engine speed is met, hold the accelerator pedal steady for more than 10 seconds.

   Did the engine speed vary more than 100 rpm from 4,500 rpm?

   YES—Repeat step 5.

   NO—Go to step 6.

6. While holding the engine speed at 4,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

   Is there about 14—20 gm/s?

   YES—Check the engine valve clearances and adjust if necessary (see page 6-9). If the valve clearances are OK, replace the injectors (see page 11-220), then go to step 7.

   NO—Replace the MAF sensor/IAT sensor (see page 11-226), then go to step 7.

BACK

Protected by AR

7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
11. Test-drive under these conditions:

    - Engine coolant temperature above 176 °F (80 °C)
    - M/T in neutral (A/T in Park or neutral)
    - All electric loads off

    NOTE: DTC P0171 and/or P0172 may take up to 80 minutes of test driving to set. Using the HDS, monitor the long term fuel trim (LT FUEL TRIM) or the air fuel feed back average (AF FB AVE). If the long term fuel trim/air fuel feed back average stays within 0.80—1.20, there is no problem at this time.
12. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0171 or P0172 is indicated, go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete.■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0300: Random Misfire and Any Combination of the Following:

DTC P0301: No. 1 Cylinder Misfire Detected

DTC P0302: No. 2 Cylinder Misfire Detected

DTC P0303: No. 3 Cylinder Misfire Detected

DTC P0304: No. 4 Cylinder Misfire Detected

Special Tools Required
- Pressure gauge adapter 07NAJ-P07010A
- A/T low pressure gauge w/panel 07406-0070300
- A/T pressure hose 07406-0020201
- A/T pressure hose, 2,210 mm 07MAJ-PY4011A
- A/T pressure adapter 07MAJ-PY40120
- Oil pressure hose 07ZAJ-S5A0200

NOTE:
- If the misfire is frequent enough to trigger detection of increased emissions during two consecutive driving cycles, the MIL will come on, and DTC P0300 (and some of the combination of P0301 through P0304) will be stored.
- If the misfire is frequent enough to damage the catalyst, the MIL will flash whenever the misfire occurs, and DTC P0300 (and some of the combination of P0301 through P0304) will be stored. When the misfire stops, the MIL will remain on.
- Troubleshoot the following DTCs first, if any of them were stored along with the random misfire DTC(s):

P0101, P0102, P0103: Mass air flow (MAF) sensor (2003-2004 SULEV, LX-P models and 2005-2006 models)
P0107, P0108, P1128, P1129: Manifold absolute pressure (MAP) sensor
P0171, P0172: Fuel system
P0335, P0339: Crankshaft position (CKP) sensor
P0365, P0369: Camshaft position (CMP) sensor B
P2646, P2647, P2648, P2649: VTEC system
P0506, P507: Idle control system
P0511: Idle air control (IAC) valve (2003-2005 models)
P0401, P0404, P0416, P2413: Exhaust gas recirculation (EGR) system

1. Record all freeze data and any on-board snapshot with the HDS.
2. Clear the DTC with the HDS.
3. Start the engine without load (in Park or neutral), then let it idle.
4. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 9.

   NO—If the screen indicates PASSED, go to step 5. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, wait for several minutes, then recheck.
5. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

   YES—Go to step 9.

   NO—Go to step 6.
6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
   - Engine speed
   - Vehicle speed
   - Throttle position
   - CLV (calculated load value)
7. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 9.

   NO—If the screen indicates PASSED, go to step 8. If the screen indicates EXECUTING, keep driving until a result comes on. if the screen indicates OUT OF CONDITION, go to step 6 and recheck.

BACK

Protected by AR

8. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

   YES—Go to step 9.

   NO—Intermittent failure, system is OK at this time. ■

9. Turn the ignition switch OFF.

10. Check the fuel quality.

    Is the quality good?

    YES—Go to step 11.

    NO—Drain the tank and fill with a known-good fuel, then go to step 24.

11. Inspect the spark plugs (see page 4-27). If the spark plugs are fouled or worn, replace them.

12. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

13. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

    YES—Go to step 14.

    NO—Go to step 24.

14. Check the fuel pressure (see page 11-332).

    Is the fuel pressure OK?

    YES—
    - 2003-2004 SULEV, LX-P models and 2005-2006 models: Go to step 15.
    - 2003-2004 except SULEV, LX-P models: Go to step 19.

    NO—
    - If the fuel pressure is too high, replace the fuel pressure regulator; SULEV model (see page 11-343), Non-SULEV model (see page 11-343), then go to step 24.
    - If the fuel pressure is too low, check the fuel pump, the fuel feed pipe, and the fuel filter. If they are OK, replace the fuel pressure regulator; SULEV model (see page 11-343), Non-SULEV model (see page 11-343), then go to step 24.

15. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

16. Check for these conditions:

    - Engine coolant temperature above 176 °F (80 °C)
    - M/T in neutral (A/T in Park or neutral)
    - All electric load off

17. Monitor the ENG SPD in the DATA LIST with the HDS, and hold the engine speed at 4,500 rpm. Once the engine speed is met, hold the accelerator pedal steady for more than 10 seconds.

    Did the engine speed vary more than 100 rpm from 4,500 rpm?

    YES—Repeat step 17.

    NO—Go to step 18.

18. While holding the engine speed at 4,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

    Is there about 14—20 gm/s?

    YES—Go to step 19.

    NO—Replace the MAF sensor/IAT sensor (see page 11-226), then go to step 24.

(cont'd)

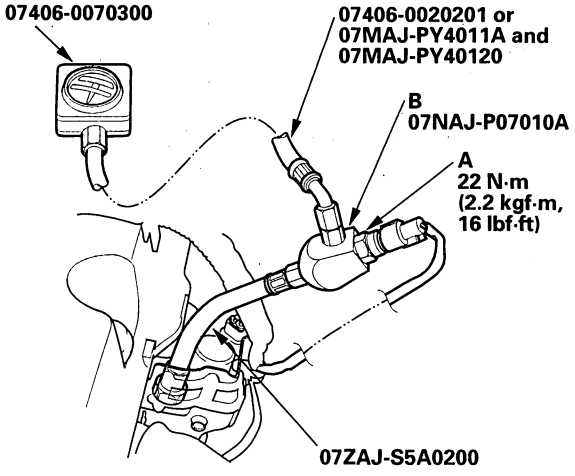
Protected by AR

DTC Troubleshooting (cont'd)

19. Turn the ignition switch OFF.

20. Remove the rocker arm oil pressure switch (VTEC oil pressure switch) (A), and install the special tools as shown, then install the rocker arm oil pressure switch (VTEC oil pressure switch) in the pressure gauge adapter (B).

    NOTE: Install the switch in the reverse order of removal with a new O-ring.



21. Reconnect the rocker arm oil pressure switch (VTEC oil pressure switch) 2P connector.

22. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

23. Check the oil pressure at engine speeds of 1,000 rpm and 2,000 rpm. Keep the test time as short as possible (less than 1 minute) because the engine is running without load.

    Is the oil pressure below 49 kPa (7 psi, 0.5 kgf/cm²)?

    YES—Check for air in the fuel line, then go to step 24.

    NO—Inspect the VTEC system, then go to step 24.

24. Turn the ignition switch ON (II).

25. Reset the ECM/PCM with the HDS.

26. Clear the CKP pattern with the HDS.

27. Do the ECM/PCM idle learn procedure (see page 11-316).

28. Do the CKP pattern learn procedure (see page 11-4).

29. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

30. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0300, P0301, P0302, P0303, or P0304 are indicated, check for a poor connection or loose terminals at the ignition coil, the injector, and the ECM/PCM, then go to troubleshooting DTC P0301, P0302, P0303, or P0304 (see page 11-133). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 31.

31. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 29 and recheck.

BACK

Protected by AR

DTC P0301: No. 1 Cylinder Misfire Detected

DTC P0302: No. 2 Cylinder Misfire Detected

DTC P0303: No. 3 Cylinder Misfire Detected

DTC P0304: No. 4 Cylinder Misfire Detected

1. Record all freeze data and any on-board snapshot with the HDS.
2. Clear the DTC with the HDS.
3. Start the engine without load (in Park or neutral), then let it idle.
4. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 9.

   NO—If the screen indicates PASSED, go to step 5. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, wait for several minutes, and recheck.
5. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

   YES—Go to step 9.

   NO—Go to step 6.
6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

   - Engine speed
   - Vehicle speed
   - Throttle position
   - CLV (calculated load value)
7. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 9.

   NO—If the screen indicates PASSED, go to step 8. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6 and recheck.
8. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

   Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

   YES—Go to step 9.

   NO—Intermittent failure, system is OK at this time. ■
9. Turn the ignition switch OFF.
10. Remove the intake manifold cover; 2003-2005 models (see step 3 on page 9-4), 2006 model (see step 3 on page 9-9).
11. Start the engine, and listen for a clicking sound at the injector of the problem cylinder.

    Does the injector click?

    YES—Go to step 12.

    NO—Go to step 43.
12. Turn the ignition switch OFF.

DTC Troubleshooting (cont'd)

13. Exchange the ignition coil from the problem cylinder with one from another cylinder.

14. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

15. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

    YES—Go to step 16.

    NO—Intermittent misfire due to poor contact at the ignition coil connector (no misfire at this time). Make sure the coil connections are secure. ■

16. Determine which cylinder had the misfire.

    Does the misfire occur in the cylinder where the ignition coil was moved?

    YES—Replace the faulty ignition coil (see page 4-25), then go to step 62.

    NO—Go to step 17.

17. Turn the ignition switch OFF.

18. Exchange the spark plug from the problem cylinder with one from another cylinder.

19. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

20. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

    YES—Go to step 21.

    NO—Intermittent misfire due to spark plug fouling (no misfire at this time). ■

21. Determine which cylinder had the misfire.

    Does the misfire occur in the cylinder where the spark plug was moved?

    YES—Replace the faulty spark plug, then go to step 62.

    NO—Go to step 22.

22. Turn the ignition switch OFF.

23. Exchange the injector from the problem cylinder with one from another cylinder.

24. Start the engine, and let it idle 2 minutes.

25. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

26. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

    Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

    YES—Go to step 27.

    NO—Intermittent misfire due to bad contact in the injector connector (no misfire at this time). Check for poor connections or loose terminals at the injector. ■

BACK

Protected by AR

27. Determine which cylinder had the misfire.

    Does the misfire occur in the cylinder where the injector was moved?

    YES—Replace the faulty injector (see page 11-220), then go to step 62.

    NO—Go to step 28.

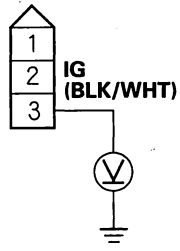
28. Turn the ignition switch OFF.

29. Disconnect the ignition coil 3P connector from the problem cylinder.

30. Turn the ignition switch ON (II).

31. Measure voltage between ignition coil 3P connector terminal No. 3 and body ground.

IGNITION COIL 3P CONNECTOR



Wire side of female terminals

Is there battery voltage?

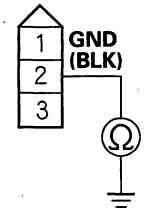
YES—Go to step 32.

NO—Repair open in the wire between the ignition coil and the ignition coil relay, then go to step 62.

32. Turn the ignition switch OFF.

33. Check for continuity between ignition coil 3P connector terminal No. 2 and body ground.

IGNITION COIL 3P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 34.

NO—Repair open in the wire between the ignition coil and G101, then go to step 62.

34. Turn the ignition switch OFF.

35. Jump the SCS line with the HDS.

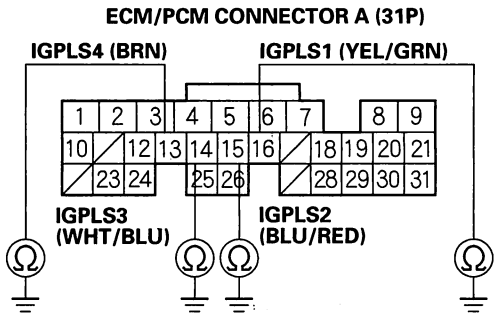
36. Disconnect ECM/PCM connector A (31P).

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

37. Check for continuity between body ground and the appropriate ECM/PCM connector terminal (see table).



Wire side of female terminals

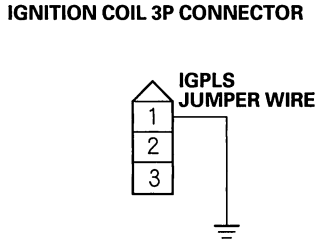
PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0301	A16	YEL/GRN
No. 2	P0302	A15	BLU/RED
No. 3	P0303	A14	WHT/BLU
No. 4	P0304	A13	BRN

Is there continuity?

YES—Repair short in the wire between the ECM/PCM and the ignition coil, then go to step 62.

NO—Go to step 38.

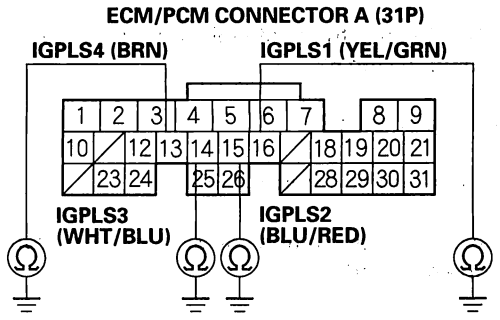
38. Connect appropriate ignition coil 3P connector terminal No. 1 to body ground with a jumper wire (see table).



Wire side of female terminals

PROBLEM CYLINDER	DTC	WIRE COLOR
No. 1	P0301	YEL/GRN
No. 2	P0302	BLU/RED
No. 3	P0303	WHT/BLU
No. 4	P0304	BRN

39. Check for continuity between body ground and the appropriate ECM/PCM connector terminal (see table).



Wire side of female terminals

PROBLEM CYLINDER	DTC	ECM/PCM TERMINAL	WIRE COLOR
No. 1	P0301	A16	YEL/GRN
No. 2	P0302	A15	BLU/RED
No. 3	P0303	A14	WHT/BLU
No. 4	P0304	A13	BRN

Is there continuity?

YES—Go to step 40.

NO—Repair open in the wire between the ECM/PCM and the ignition coil, then go to step 62.

40. Reconnect the ignition coil 3P connector and ECM/PCM connector A (31P).

41. Do an engine compression and a cylinder leakdown test.

Did the engine pass both tests?

YES—Go to step 42.

NO—Repair the engine, then go to step 62.

42. Do the VTEC rocker arm test (see page 6-7).

Did the VTEC rocker arm pass the test?

YES—Go to step 71.

NO—Repair as necessary, then go to step 62.

No. 2	P0302	B4	RED
No. 3	P0303	B3	BLU
No. 4	P0304	B2	YEL

Is there continuity?

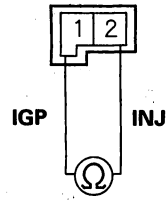
YES—Go to step 56.

NO—Repair open in the wire between the ECM/PCM and the injector, then go to step 62.

56. Measure resistance between injector 2P connector terminals No. 1 and No. 2.

INJECTOR 2P CONNECTOR



Terminal side of male terminals

Is there 10— 13 Ω ?

YES—Go to step 57.

NO—Replace the injector (see page 11-220), then go to step 62.

57. Substitute a known-good injector from another cylinder to the problem cylinder.

58. Reconnect ECM/PCM connector B (24P).

59. Start the engine, and let it idle 2 minutes.

60. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

- Engine speed
- Vehicle speed
- Throttle position
- CLV (calculated load value)

61. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, and/or CYL4 MISFIRE show misfire counts?

YES—Go to step 71.

NO—Replace the original injector (see page 11-220), then go to step 62.

BACK

Protected by AR

62. Reconnect all connectors.

63. Turn the ignition switch ON (II).

64. Reset the ECM/PCM with the HDS.

65. Clear the CKP pattern with the HDS.

66. Do the ECM/PCM idle learn procedure (see page 11-316).

67. Do the CKP pattern learn procedure (see page 11-4).

68. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

69. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0301, P0302, P0303, or P0304 are indicated, check for poor connections or loose terminals at the ignition coil, the injector, and the ECM/PCM, then go to troubleshooting DTC P0300, P0301, P0302, P0303, or P0304 (see page 11-130). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 70.

70. Monitor the OBD STATUS for DTC P0301, P0302, P0303, or P0304 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 68 and recheck.

71. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

72. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

    - Engine speed
    - Vehicle speed
    - Throttle position
    - CLV (calculated load value)

73. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0301, P0302, P0303, or P0304 are indicated, check for poor connections or loose terminals at the injector, the ignition coil, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0325: Knock Sensor Circuit Malfunction

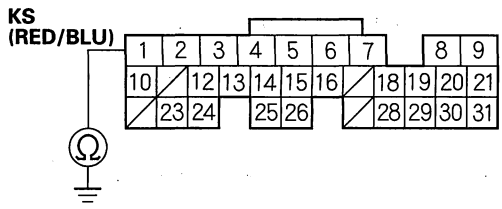
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Hold the engine speed at 3,000—4,000 rpm for at least 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0325 indicated?

   YES—Go to step 6.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the knock sensor and the ECM/PCM. ■
6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect the knock sensor 1P connector.
9. Disconnect ECM/PCM connector A (31P).
10. Check for continuity between ECM/PCM connector terminal A1 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

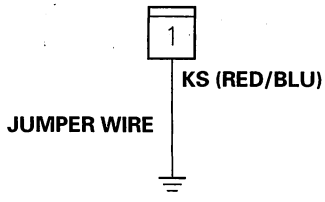
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A1) and the knock sensor, then go to step 14.

NO—Go to step 11.

11. Connect the knock sensor 1P connector terminal to body ground with a jumper wire.

KNOCK SENSOR 1P CONNECTOR



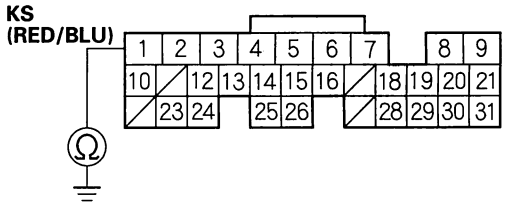
Wire side of female terminals

BACK

Protected by AR

12. Check for continuity between ECM/PCM connector terminal A1 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Go to step 13.

NO—Repair open in the wire between the ECM/PCM (A1) and the knock sensor, then go to step 14.

13. Replace the knock sensor (see page 11-224).

14. Reconnect all connectors.

15. Turn the ignition switch ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure (see page 11-316).

18. Hold the engine speed at 3,000—4,000 rpm for at least 10 seconds.

19. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—Go to step 21.

NO—Go to step 20.

20. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete.■

NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 17 and recheck.

21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

22. Hold the engine speed at 3,000—4,000 rpm for at least 10 seconds.

23. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0325 is indicated, check for poor connections or loose terminals at the knock sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

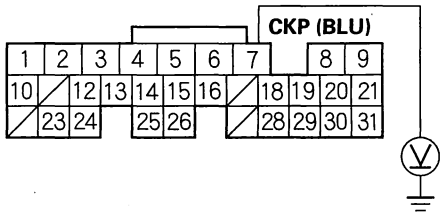
11. Measure voltage between ECM/PCM connector terminal A7 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

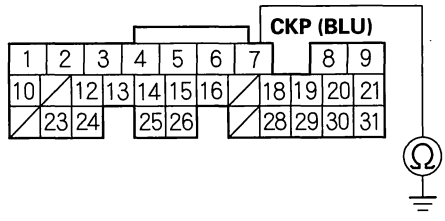
Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (A7) and the CKP sensor, then go to step 18.

NO—Go to step 12.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector A (31P).
15. Check for continuity between ECM/PCM connector terminal A7 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A7) and the CKP sensor, then go to step 18.

NO—Go to step 25.

16. Turn the ignition switch OFF.
17. Replace the CKP sensor (see page 11-225).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the ECM/PCM with the HDS.
21. Clear the CKP pattern with the HDS.
22. Do the ECM/PCM idle learn procedure (see page 11-316).
23. Do the CKP pattern learn procedure (see page 11-4).
24. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0335 is indicated, check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
26. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0335 is indicated, check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0339: CKP Sensor Intermittent Interruption

1. Record all freeze data and any on-board snapshot with the HDS.
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle 10 seconds.
4. Check the CKP NOISE COUNT in the DATA LIST with the HDS.

   Are 0 counts indicated?

   YES—Go to step 7.

   NO—Go to step 5.
5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

   - Engine speed
   - Vehicle speed
6. Check the CKP NOISE COUNT in the DATA LIST with the HDS.

   Are 0 counts indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the CKP sensor and the ECM/PCM. ■
7. Check for poor or loose connections and terminals at these locations:

   - CKP sensor
   - ECM/PCM
   - Engine ground
   - Body ground

   Are the connections and terminals OK?

   YES—Go to step 8.

   NO—Repair the connectors or terminals, then go to step 11.
8. Remove the cam chain case (see page 6-12), and check for damage on the CKP sensor pulse plate.

   Is the pulse plate damaged?

   YES—Replace the CKP sensor pulse plate, then go to step 11.

   NO—Go to step 9.
9. Turn the ignition switch OFF.
10. Replace the CKP sensor (see page 11-225).
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Clear the CKP pattern with the HDS.
14. Do the ECM/PCM idle learn procedure (see page 11-316).
15. Do the CKP pattern learn procedure (see page 11-4).
16. Start the engine, and let it idle 10 seconds.
17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0339 is indicated, check for poor connections or loose terminals at the CKP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

BACK

DTC P0369: CMP Sensor B Intermittent Interruption

1. Record all freeze data and any on-board snapshot with the HDS.
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle 10 seconds.
4. Check the CMP NOISE B COUNT in the DATA LIST with the HDS.

   Are 0 counts indicated?

   YES—Go to step 7.

   NO—Go to step 5.
5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

   • Engine speed
   • Vehicle speed
6. Check the CMP NOISE B COUNT in the DATA LIST with the HDS.

   Are 0 counts indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at CMP sensor B and the ECM/PCM. ■
7. Check for poor or loose connections and terminals at these locations:

   • CMP sensor B
   • ECM/PCM
   • Engine ground
   • Body ground

   Are the connections and terminals OK?

   YES—Go to step 8.

   NO—Repair the connectors or terminals, then go to step 11.
8. Check for damage on the CMP sensor B pulse plate (see page 6-31).

   Is the pulse plate damaged?

   YES—Replace the CMP sensor B pulse plate (see page 6-31), then go to step 11.

   NO—Go to step 9.
9. Turn the ignition switch OFF.
10. Replace CMP sensor B (see page 11-223).
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Start the engine, and let it idle 10 seconds.
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0369 is indicated, check for poor connections or loose terminals at CMP sensor B and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

DTC Troubleshooting (cont'd)

DTC P0562: Charging System Low Voltage (2005-2006 models)

NOTE:
- If any high current load accessories are installed, this DTC can be set.
- If DTC P16BB and/or P16BC is stored at the same time as DTC P0562, troubleshoot DTC P16BB and/or P16BC first, then recheck for DTC P0562.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check under these conditions:
   - A/C on
   - Temperature control at maximum cool
   - Blower fan at maximum speed
   - Rear window defogger on
   - Headlights on high beam
5. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0562 indicated?

   YES—Replace the alternator (see page 4-40), then go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box, and check the battery performance (see page 22-78). ■
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Start the engine.
11. Check under these coditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
12. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0562 is indicated, check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

BACK

DTC P0563: ECM/PCM Power Source Circuit Unexpected Voltage

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Wait 10 seconds.
5. Turn the ignition switch ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

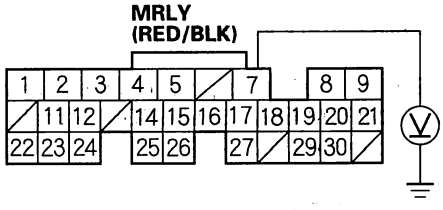
   Is DTC P0563 indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the No. 8 ECU (ECM/PCM) (15 A) fuse in the under-hood fuse/relay box, PGM-FI main relay 1, and the ECM/PCM. ■

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector E (31P).
10. Measure voltage between ECM/PCM connector terminal E7 and body ground.

ECM/PCM CONNECTOR E (31P)



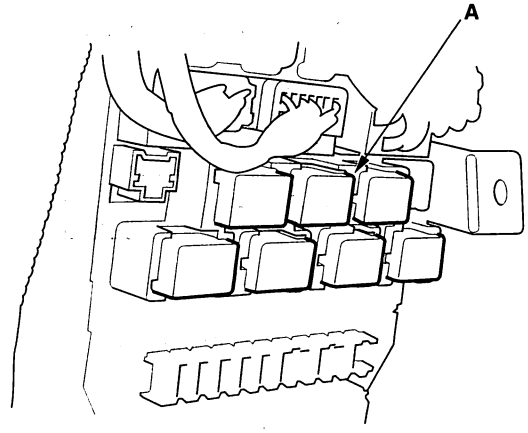
Wire side of female terminals

Is there battery voltage?

YES—Go to step 13.

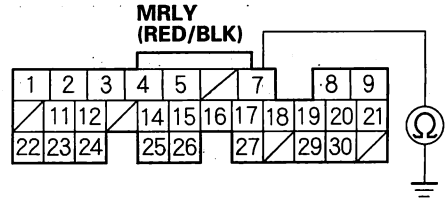
NO—Go to step 11.

11. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 1 (FI MAIN) (A) from the under-dash fuse/relay box.



12. Check for continuity between ECM/PCM connector terminal E7 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E7) and PGM-FI main relay 1, then go to step 20.

NO—Go to step 19.

(cont'd)

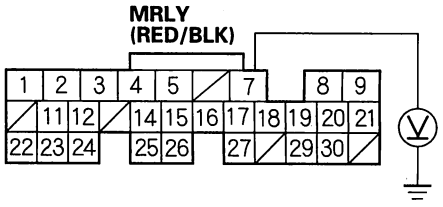
Protected by AR

DTC Troubleshooting (cont'd)

13. Reconnect ECM/PCM connector E (31P).

14. Measure voltage between ECM/PCM connector terminal E7 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there battery voltage?

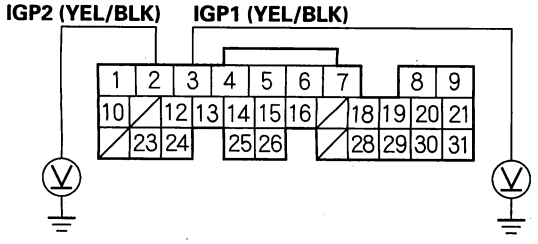
YES—Go to step 15.

NO—Go to step 27.

15. Disconnect ECM/PCM connector A (31P).

16. Measure voltage between body ground and ECM/PCM connector terminals A3 and A2 individually.

ECM/PCM CONNECTOR A (31P)



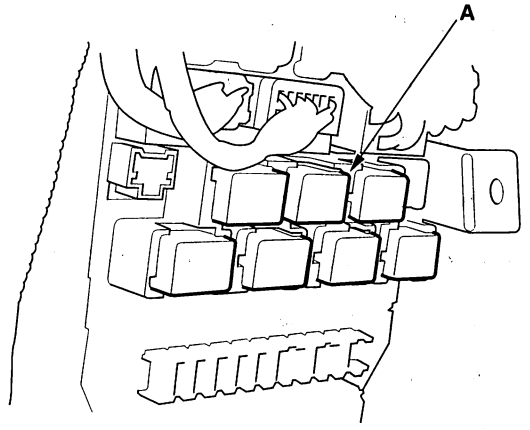
Wire side of female terminals

Is there battery voltage?

YES—Go to step 17.

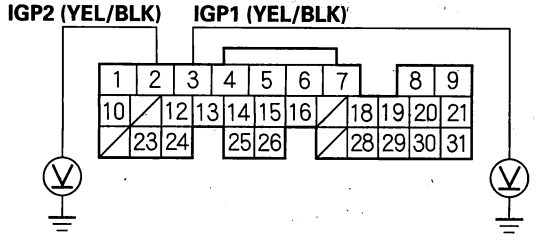
NO—Go to step 27.

17. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 1 (FI MAIN) (A) from the under-dash fuse/relay box.



18. Measure voltage between body ground and ECM/PCM connector terminals A3 and A2 individually.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there battery voltage?

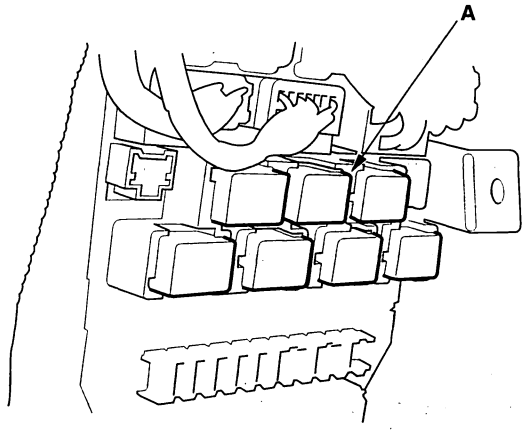
YES—Repair short to power in the wire between the ECM/PCM (A2, A3) and PGM-FI main relay 1, then go to step 20.

NO—Go to step 19.

BACK

Protected by AR

19. Replace PGM-FI main relay 1 (A).



20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the ECM/PCM with the HDS.
23. Turn the ignition switch OFF.
24. Wait 10 seconds.
25. Do the ECM/PCM idle learn procedure (see page 11-316).
26. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0563 is indicated, check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

27. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
28. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0563 is indicated, check for poor connections or loose terminals at PGM-FI main relay 1 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P050A: Cold Start Idle Air Control System Performance (2006 model)

1. Turn the ignition switch ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs (except P050A) indicated?

   YES—Go to the indicated DTC's troubleshooting. ■

   NO—Go to step 3.
3. Check for poor connections or blockage at the intake air duct.

   Is it OK?

   YES—Go to step 4.

   NO—Reconnect or repair the intake air duct, then go to step 19.
4. Check for damage at the air cleaner.

   Is it OK?

   YES—Go to step 5.

   NO—Replace the air cleaner (see page 11-361), then go to step 19.
5. Check for dirt at the air cleaner.

   Is it dirty?

   YES—Replace the air cleaner element (see page 11-361), then go to step 19.

   NO—Go to step 6.
6. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.
7. Clear the DTC with the HDS.
8. Start the engine, and let it idle 10 seconds or more.
9. Monitor the OBD STATUS for DTC P050A in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 10.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6 and recheck.
10. Do the ETCS TEST in the INSPECTION MENU with the HDS.

    Is the THROTTLE ACTUATOR CONTROL VALVE normal?

    YES—Go to step 11.

    NO—Replace the throttle body (see page 11-367), then go to step 19.
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

BACK

Protected by AR

12. Monitor the ENG SPD in the DATA LIST with the HDS, and hold the engine speed at 2,500 rpm for at least 30 seconds.

13. While holding the engine speed at 2,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

    Is there about 7.70– 11.09 g/s (A/T model), 6.72– 9.67 g/s (M/T model)?

    YES—Go to step 14.

    NO—Replace the MAF sensor/IAT sensor (see page 11-226), then go to step 19.

14. Turn the ignition switch OFF.

15. Allow the engine to cool to ambient temperature.

16. Note the ambient temperature.

17. Note the value of the IAT SENSOR quickly in the DATA LIST with the HDS.

18. Compare the value of the IAT SENSOR and the ambient temperature.

    Does the value of the IAT SENSOR differ 5.4 °F (3 °C) or more?

    YES—Replace the MAF sensor/IAT sensor (see page 11-226), then go to step 19.

    NO—Check for dirt, carbon, or damage in the throttle bore. If there is dirt or carbon, clean the throttle body (see page 11-357), then go to step 19. If there is damage in the throttle bore, replace the throttle body (see page 11-367), then go to step 19.

19. Turn the ignition switch ON (II).

20. Reset the ECM/PCM with the HDS.

21. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

22. Do the ECM/PCM idle learn procedure (see page 11-316).

23. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P050A is indicated, check for poor connections or loose terminals at the throttle body, the MAF sensor/IAT sensor, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 24.

24. Monitor the OBD STATUS for DTC P050A in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the throttle body, the MAF sensor/IAT sensor, and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 20 and recheck.

DTC Troubleshooting (cont'd)

DTC P050B: Cold Start Ignition Timing Performance
(2006 model)

1. Turn the ignition switch ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs (except P050B) indicated?

   YES—Go to the indicated DTC's troubleshooting. ■

   NO—Go to step 3.
3. Check for poor connections or blockage at the intake air duct.

   Is it OK?

   YES—Go to step 4.

   NO—Reconnect or repair the intake air duct, then go to step 20.
4. Check for damage at the air cleaner.

   Is it OK?

   YES—Go to step 5.

   NO—Replace the air cleaner (see page 11-361), then go to step 24.
5. Check for dirt in the air cleaner element.

   Is it dirty?

   YES—Replace the air cleaner element (see page 11-361), then go to step 24.

   NO—Go to step 6.
6. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.
7. Clear the DTC with the HDS.
8. Start the engine, and let it idle 10 seconds or more.
9. Monitor the OBD STATUS for DTC P050B in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 10.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6 and recheck.
10. Inspect the ignition timing (see page 4-24).

    Is the ignition timing OK?

    YES—Go to step 12.

    NO—Go to step 11.
11. Check for damage at the CKP sensor (see page 11-225) and the CKP sensor pulse plate (see page 6-23).

    Is the CKP sensor and/or the CKP sensor pulse plate damaged?

    YES—Replace the CKP sensor (see page 11-225) and/or the CKP sensor pulse plate (see page 6-23), then go to step 24.

    NO—Go to step 30.

BACK

Protected by AR

12. Do the ETCS TEST in the INSPECTION MENU with the HDS.

    Is the THROTTLE ACTUATOR CONTROL VALVE normal?

    YES—Go to step 13.

    NO—Replace the throttle body (see page 11-367), then go to step 24.

13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

14. Monitor the ENG SPD in the DATA LIST with the HDS, and hold the engine speed at 2,500 rpm for at least 30 seconds.

15. While holding the engine speed at 2,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

    Is there about 7.70— 11.09 g/s (A/T model), 6.72— 9.67 g/s (M/T model)?

    YES—Go to step 16.

    NO—Replace the MAF sensor/IAT sensor (see page 11-226), then go to step 24.

16. Turn the ignition switch OFF.

17. Drain the coolant (see page 10-6).

18. Remove ECT sensor 1 (see page 11-223), and ECT sensor 2 (see page 11-228).

19. Allow the sensors to cool to the ambient temperature.

20. Note the ambient temperature.

21. Connect ECT sensor 1 to its 2P connector, and ECT sensor 2 to its 2P connector, but do not install them on the engine.

22. Note the value of ECT SENSOR 1 and ECT SENSOR 2 quickly in the DATA LIST with the HDS.

23. Compare the value of ECT SENSOR 1 and the ambient temperature, and the value of ECT SENSOR 2 and the ambient temperature individually.

    Does either sensor differ more than 5.4 °F (3 °C) from the ambient temperature?

    YES—Replace the sensor that differed more than 5.4 °F (3 °C) from the ambient temperature, then go to step 24.

    NO—Check and repair any problems with these items, then go to step 24.

    - Engine compression and cylinder leakdown
    - VTEC system
    - Engine oil
    - A/C system
    - Power steering

24. Turn the ignition switch ON (II).

25. Reset the ECM/PCM with the HDS.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

26. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

27. Do the ECM/PCM idle learn procedure (see page 11-316).

28. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P050B is indicated, check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 29.

29. Monitor the OBD STATUS for DTC P050B in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 26 and recheck.

30. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

31. Let the engine cool until the value of ECT SENSOR 1 is 122 °F (50 °C) or less.

32. Do the ECM/PCM idle learn procedure (see page 11-316).

33. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P050B is indicated, check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

BACK

Protected by AR

DTC P0602: ECM/PCM Programming Error (2005-2006 models)

NOTE:
- This DTC is indicated when the ECM/PCM update is not completed.
- Do not turn the ignition switch OFF while updating the ECM/PCM. If you turn the ignition switch OFF before completion, the ECM/PCM can be damaged.

1. Do the ECM/PCM update procedure (see page 11-6).
2. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0602 indicated?

   YES—Replace the original ECM/PCM (see page 11-227). ■

   NO—Updating is complete. ■

DTC P0603: ECM/PCM Internal Control Module Keep Alive Memory (KAM) Error

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

   NO—Intermittent failure, system is OK at this time. ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0606: ECM/PCM Processer Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II).
5. Wait 40 seconds.
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0606 indicated?

   YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

   NO—Intermittent failure, system is OK at this time. ■

DTC P0630: VIN Not Programmed or Mismatch (2005-2006 models)

NOTE: This DTC is stored only when the ECM/PCM does not have the VIN information of the vehicle. Use the HDS to input the missing VIN information.

1. Turn the ignition switch ON (II).
2. Check the VIN with the HDS.

   Does the HDS show the vehicle's VIN?

   YES—Go to step 5.

   NO—Go to step 3.
3. Input the VIN to the ECM/PCM with the HDS.

   Does the screen show COMPLETE?

   YES—Go to step 5.

   NO—Go to step 4.
4. Check for DTCs with the HDS.

   Is DTC P0603 indicated?

   YES—Go to the DTC P0603 troubleshooting. ■

   NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■
5. Clear the DTC with the HDS.
6. Turn the ignition switch OFF.
7. Turn the ignition switch ON (II), and wait 5 seconds.

BACK

Protected by AR

8. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P0630 is indicated, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting. ■

   NO—Intermittent failure, system is OK at this time. ■

DTC P0685: ECM/PCM Power Control Circuit/ Internal Circuit Malfunction

NOTE: If the problem doesn't return after you clear the DTC, or if this DTC is stored intermittently, check for loose terminals at the IGP line connectors before replacing the ECM/PCM.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle 30 seconds.
4. Turn the ignition switch OFF.
5. Start the engine, then let it idle 30 seconds.
6. Turn the ignition switch OFF.
7. Turn the ignition switch ON (II).
8. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0685 indicated?

   YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

   NO—Intermittent failure, system is OK at this time. ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0700: A/T Control System Malfunction

NOTE: This DTC is stored when there is a problem in the A/T control system. Check for A/T DTCs with the HDS, and go to the indicated DTC's troubleshooting.

DTC P0720: Output Shaft (Countershaft) Speed Sensor Circuit Malfunction

NOTE: This DTC only occurs on M/T vehicles.

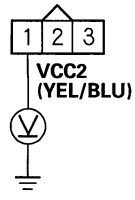
1. Start the engine. Hold the engine speed at 3,000 rpm without load (in neutral) until the radiator fan comes on, then let it idle.
2. Test-drive several miles.
3. Check the C SHAFT SPD in the DATA LIST with the HDS.

   Is any vehicle speed indicated?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM. ■

   NO—Go to step 4.
4. Turn the ignition switch OFF.
5. Disconnect the output shaft (countershaft) speed sensor 3P connector.
6. Turn the ignition switch ON (II).
7. Measure voltage between output shaft (countershaft) speed sensor 3P connector terminal No. 1 and body ground.

OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR 3P CONNECTOR



Wire side of female terminals

Is there about 5 V?

YES—Go to step 8.

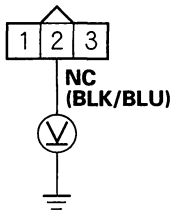
NO—Repair open in the wire between the ECM (A20) and the output shaft (countershaft) speed sensor, then go to step 17.

BACK

Protected by AR

8. Measure voltage between output shaft (countershaft) speed sensor 3P connector terminal No. 2 and body ground.

OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR 3P CONNECTOR



Wire side of female terminals

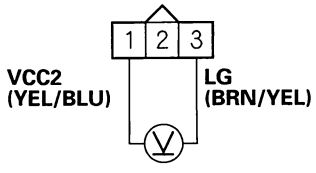
Is there about 5 V?

YES—Go to step 9.

NO—Go to step 10.

9. Measure voltage between output shaft (countershaft) speed sensor 3P connector terminals No. 1 and No. 3.

OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR 3P CONNECTOR



Wire side of female terminals

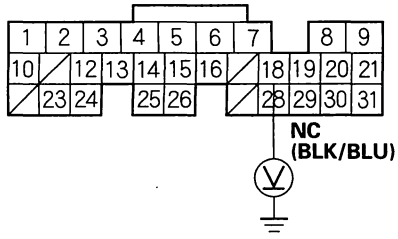
Is there about 5 V?

YES—Go to step 15.

NO—Repair open in the wire between the output shaft (countershaft) speed sensor and G101, then go to step 17.

10. Measure voltage between ECM connector terminal A18 and body ground.

ECM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM (A18) and the output shaft (countershaft) speed sensor, then go to step 17.

NO—Go to step 11.

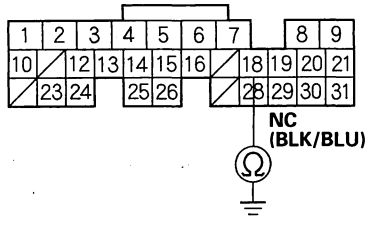
11. Turn the ignition switch OFF.

12. Jump the SCS line with the HDS.

13. Disconnect ECM connector A (31P).

14. Check for continuity between ECM connector terminal A18 and body ground.

ECM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM (A18) and the output shaft (countershaft) speed sensor, then go to step 17.

NO—Go to step 24.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

15. Turn the ignition switch OFF.

16. Replace the output shaft (countershaft) speed sensor (see page 11-225).

17. Reconnect all connectors.

18. Turn the ignition switch ON (II).

19. Reset the ECM with the HDS.

20. Do the ECM idle learn procedure (see page 11-316).

21. Test-drive under these conditions:

    - Engine coolant temperature above 158 °F (70 °C)
    - Transmission in 5th gear
    - Engine speed at 2,000—3,000 rpm
    - Drive for several minutes, then decelerate (with the throttle fully closed) for 8 seconds

22. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0720 is indicated, check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 23.

23. Monitor the OBD STATUS for DTC P0720 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 21 and recheck.

24. Update the ECM if it does not have the latest software, or substitute a known-good ECM (see page 11-6).

25. Test-drive under these conditions:

    - Engine coolant temperature above 158 °F (70 °C)
    - Transmission in 5th gear
    - Engine speed at 2,000—3,000 rpm
    - Drive for several minutes, then decelerate (with the throttle fully closed) for 8 seconds

26. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0720 is indicated, check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and the ECM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM was updated, troubleshooting is complete. If the ECM was substituted, replace the original ECM (see page 11-227).■

DTC P1109: BARO Sensor Circuit Out of Range High
(2005-2006 models)

1. Reset the ECM/PCM with the HDS.
2. Start the engine.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1109 indicated?

   YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

   NO—Intermittent failure, system is OK at this time. ■

DTC Troubleshooting (cont'd)

DTC P1116: ECT Sensor 1 Performance Problem (2005-2006 models)

NOTE: If DTC P0111 is stored at the same time as DTC P1116, troubleshoot DTC P0111 first, then recheck for DTC P1116.

1. Check for poor connections or loose terminals at ECT sensor 1 and ECT sensor 2.

   Are the connections and terminals OK?

   YES—Go to step 2.

   NO—Repair the connectors or terminals, then go to step 27.

2. Turn the ignition switch ON (II).

3. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P1116 and P2183 indicated at the same time?

   YES—Go to step 15.

   NO—Go to step 4.

4. Start the engine, and let it idle 10 minutes.

5. Check ECT SENSOR 1 in the DATA LIST with the HDS.

   Is about 129 °F (54 °C) or less, or 1.54 V or more indicated?

   YES—Replace ECT sensor 1 (see page 11-223), then go to step 27.

   NO—Go to step 6.

6. Turn the ignition switch OFF.

7. Drain the coolant (see page 10-6).

8. Remove ECT sensor 1 (see page 11-223).

9. Allow ECT sensor 1 to cool to 77 °F (25 °C).

10. Note the ambient temperature.

11. Connect ECT sensor 1 to the 2P connector, but do not install sensor on the engine.

12. Turn the ignition switch ON (II).

13. Note the value of ECT SENSOR 1 quickly in the DATA LIST with the HDS.

14. Compare the value of ECT SENSOR 1 and the ambient temperature.

    Does the value of ECT SENSOR 1 differ 5.4 °F (3 °C) or more?

    YES—Replace ECT sensor 1 (see page 11-223), then go to step 27.

    NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM. ■

15. Start the engine, and let it idle 10 minutes.

16. Check ECT SENSOR 1 in the DATA LIST with the HDS.

    Is about 118 °F (48 °C) or less, or 1.75 V or more indicated?

    YES—Replace ECT sensor 1 (see page 11-223), then go to step 27.

    NO—Go to step 17.

17. Let the engine idle 10 minutes.

18. Check ECT SENSOR 2 in the DATA LIST with the HDS.

    Is about 131 °F (55 °C) or less, or 1.50 V or more indicated?

    YES—Replace ECT sensor 2 (see page 11-228), then go to step 27.

    NO—Go to step 19.

BACK

Protected by AR

19. Turn the ignition switch OFF.
20. Drain the coolant (see page 10-6).
21. Remove ECT sensor 1 (see page 11-223) and the ECT sensor 2 (see page 11-228).
22. Allow the sensors to cool to 77 °F (25 °C).
23. Note the ambient temperature.
24. Connect ECT sensor 1 to the 2P connector, and ECT sensor 2 to the 2P connector, but do not install them on the engine.
25. Note the value of ECT SENSOR 1 and ECT SENSOR 2 quickly in the DATA LIST with the HDS.
26. Compare the value of ECT SENSOR 1 and the ambient temperature, and the value of ECT SENSOR 2 and the ambient temperature individually.

    Does one of the sensors differ more than 5.4 °F (3 °C) from the ambient temperature?

    YES—Replace the sensor that differed more than 5.4 °F (3 °C) from the ambient temperature, then go to step 27.

    NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM. ■

27. Turn the ignition switch ON (II).
28. Reset the ECM/PCM with the HDS.
29. Do the ECM/PCM idle learn procedure (see page 11-316).
30. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1116 is indicated, check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

DTC Troubleshooting (cont'd)

DTC P1121: TP Sensor Signal Lower Than Expected
(2003-2005 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Open the throttle fully.
4. Check the TP SENSOR in the DATA LIST with the HDS.

   Is the throttle position less than 4.0 degrees (REL) (14 % (REL)) for 5 seconds?

   YES—Go to step 8.

   NO—Go to step 5.
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
6. Test-drive the vehicle at 16 mph (25 km/h) or more, and at 1,400 rpm or more.
7. Monitor the OBD STATUS for DTC P1121 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 8.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the TP sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 5 and recheck.
8. Turn the ignition switch OFF.
9. Replace the throttle body (see page 11-366).
10. Reconnect all connectors.
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
15. Test-drive the vehicle at 16 mph (25 km/h) or more, and at 1,400 rpm or more.
16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1121 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 17.
17. Monitor the OBD STATUS for DTC P1121 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 13 and recheck.

DTC P1122: TP Sensor Signal Higher Than Expected
(2003-2005 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check the TP SENSOR in the DATA LIST with the HDS.

   Is the throttle position more than 6.4 degrees (REL) (16 % (REL)) for 5 seconds?

   YES—Go to step 8.

   NO—Go to step 5.
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
6. Test-drive the vehicle at 16 mph (25 km/h) or more, and at 1,400 rpm or more.
7. Monitor the OBD STATUS for DTC P1122 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 8.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the TP sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 5 and recheck.
8. Turn the ignition switch OFF.
9. Replace the throttle body (see page 11-366).
10. Reconnect all connectors.
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
15. Test-drive the vehicle at 16 mph (25 km/h) or more, and at 1,400 rpm or more.
16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1122 is indicated, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 17.
17. Monitor the OBD STATUS for DTC P1122 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the TP sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 13 and recheck.

DTC Troubleshooting (cont'd)

DTC P1128: MAP Sensor Signal Lower Than Expected

1. Turn the ignition switch ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is less than 54.1 kPa (16.0 in.Hg, 406 mmHg) or 1.61 V held for more than 5 seconds?

   YES—Go to step 7.

   NO—Go to step 3.
3. Clear the DTC with the HDS.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Test-drive under these conditions:

   - Engine coolant temperature above 158 °F (70 °C)
   - Engine speed between 1,400 and 5,700 rpm
   - A/T in D position (M/T in 3rd gear)
   - Vehicle speed accelerated from 16 mph (25 km/h) to 31 mph (50 km/h) under half throttle
6. Monitor the OBD STATUS for DTC P1128 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 7.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 4 and recheck.
7. Turn the ignition switch OFF.
8. Replace the MAP sensor (see page 11-226).
9. Turn the ignition switch ON (II).
10. Reset the ECM/PCM with the HDS.
11. Do the ECM/PCM idle learn procedure (see page 11-316).
12. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
13. Test-drive under these conditions:

    - Engine coolant temperature above 158 °F (70 °C)
    - Engine speed between 1,400 and 5,700 rpm
    - A/T in D position (M/T in 3rd gear)
    - Vehicle speed accelerated from 16 mph (25 km/h) to 31 mph (50 km/h) under half throttle
14. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1128 is indicated, check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 15.
15. Monitor the OBD STATUS for DTC P1128 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 12 and recheck.

DTC P1129: MAP Sensor Signal Higher Than Expected

1. Check for vacuum leaks in these parts:

   - PCV valve
   - PCV hose
   - EVAP canister purge valve
   - Throttle body
   - Intake manifold
   - Brake booster hose

   Are there any vacuum leaks?

   YES—Repair or replace parts with vacuum leaks, then go to step 9.
   NO—Go to step 2.

2. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

3. Check the MAP SENSOR in the DATA LIST with the HDS.

   Is more than 36.9 kPa (11.0 in.Hg, 277 mmHg) or 1.1 V held for more than for 5 seconds?

   YES—Go to step 7.
   NO—Go to step 4.

4. Clear the DTC with the HDS.

5. Test-drive under these conditions:

   - Engine coolant temperature above 158 °F (70 °C)
   - Engine speed between 1,400 and 5,700 rpm
   - A/T in D position (M/T in 5th gear)
   - Vehicle speed decelerated from more than 50 mph (80 km/h) with the throttle fully closed for at least 5 seconds

6. Monitor the OBD STATUS for DTC P1129 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 7.
   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 5 and recheck.

7. Turn the ignition switch OFF.

8. Replace the MAP sensor (see page 11-226).

9. Turn the ignition switch ON (II).

10. Reset the ECM/PCM with the HDS.

11. Do the ECM/PCM idle learn procedure (see page 11-316).

12. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

13. Test-drive under these conditions:

    - Engine coolant temperature above 158 °F (70 °C)
    - Engine speed between 1,400 and 5,700 rpm
    - A/T in D position (M/T in 5th gear)
    - Vehicle speed decelerated from more than 50 mph (80 km/h) with the throttle fully closed for at least 5 seconds

14. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1129 is indicated, check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 15.

15. Monitor the OBD STATUS for DTC P1129 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the MAP sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 12 and recheck.

DTC Troubleshooting (cont'd)

DTC P1157: A/F Sensor (Sensor 1) AFS Line High Voltage

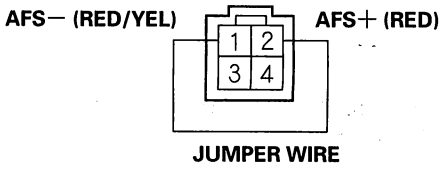
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and wait 1 minute.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1157 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Disconnect ECM/PCM connector A (31P).
9. Connect A/F sensor (Sensor 1) 4P connector terminals No. 1 and No. 2 with a jumper wire.

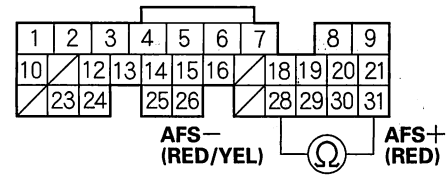
A/F SENSOR (SENSOR 1) 4P CONNECTOR



Terminal side of male terminals

10. Check for continuity between ECM/PCM connector terminals A28 and A31.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

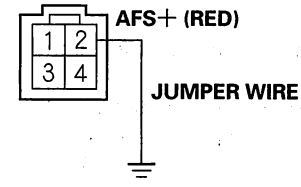
Is there continuity?

YES—Go to step 14.

NO—Go to step 11.

11. Remove the jumper wire from the A/F sensor (Sensor 1) 4P connector.
12. Connect A/F sensor (Sensor 1) 4P connector terminal No. 2 to body ground with a jumper wire.

A/F SENSOR (SENSOR 1) 4P CONNECTOR



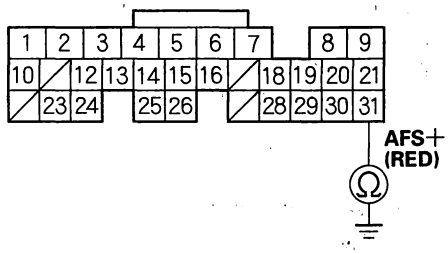
Terminal side of male terminals

BACK

Protected by AR

13. Check for continuity between ECM/PCM connector terminal A31 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair open in the wire between the ECM/PCM (A28) and the A/F sensor (Sensor 1), then go to step 15.

NO—Repair open in the wire between the ECM/PCM (A31) and the A/F sensor (Sensor 1), then go to step 15.

14. Replace the A/F sensor (Sensor 1) (see page 11-222).

15. Reconnect all connectors.

16. Turn the ignition switch ON (II).

17. Reset the ECM/PCM with the HDS.

18. Do the ECM/PCM idle learn procedure (see page 11-316).

19. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P1157 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the connector and terminal fits are OK, go to step 21. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 20.

20. Monitor the OBD STATUS for DTC P1157 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete. ■

NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 18 and recheck.

21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1157 indicated?

YES—Go to step 20 and recheck.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P1172: A/F Sensor (Sensor 1) Circuit Out of Range High (2005-2006 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Monitor the OBD STATUS for DTC P1172 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 5.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
5. Turn the ignition switch OFF.
6. Replace the A/F sensor (Sensor 1) (see page 11-222).
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
11. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1172 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 12.
12. Monitor the OBD STATUS for DTC P1172 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 10 and recheck.

DTC P1297: ELD Circuit Low Voltage

1. Turn the ignition switch ON (II).
2. Check the ELD in the DATA LIST with the HDS.

   Is 72 A or more indicated?

   YES—Go to step 3.

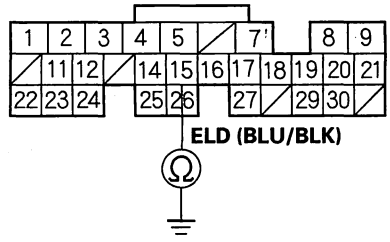
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the ELD and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the ELD 3P connector.
5. Turn the ignition switch ON (II).
6. Check the ELD in the DATA LIST with the HDS.

   Is 72 A or more indicated?

   YES—Go to step 7.

   NO—Go to step 11.
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector E (31P).
10. Check for continuity between ECM/PCM connector terminal E15 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E15) and the ELD, then go to step 13.

NO—Go to step 20.

11. Turn the ignition switch OFF.
12. Replace the under-hood fuse/relay box (see page 22-75).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Start the engine.
18. Turn on the headlights.
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1297 is indicated, check for poor connections or loose terminals at the ELD and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

(cont'd)

DTC P1298: ELD Circuit High Voltage

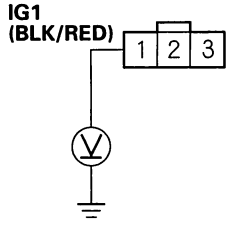
1. Start the engine, and let it idle.
2. Check the ELD in the DATA LIST with the HDS.

   Is 0.2 A or less indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the ELD and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the ELD 3P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between ELD 3P connector terminal No. 1 and body ground.

ELD 3P CONNECTOR



Wire side of female terminals

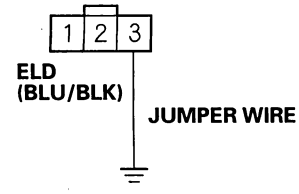
Is there battery voltage?

YES—Go to step 7.

NO—Repair open in the wire between the No. 18 ACG (15 A) fuse and the ELD, then go to step 14.

7. Turn the ignition switch OFF.
8. Connect ELD 3P connector terminal No. 3 to body ground with a jumper wire.

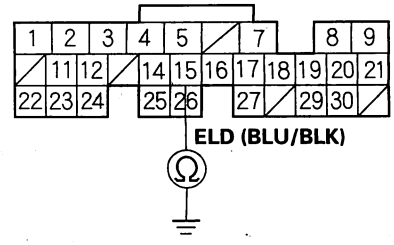
ELD 3P CONNECTOR



Wire side of female terminals

9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector E (31P).
11. Check for continuity between ECM/PCM connector terminal E15 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Go to step 12.

NO—Repair open in the wire between the ECM/PCM (E15) and the ELD, then go to step 14.

(cont'd)

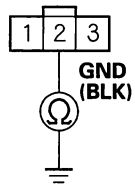
DTC Troubleshooting (cont'd)

12. Check for continuity between ELD 3P connector terminal No. 2 and body ground.

ELD 3P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 13.

NO—Repair open in the wire between the ELD and G302, then go to step 14.

13. Replace the under-hood fuse/relay box (see page 22-75).

14. Reconnect all connectors.

15. Turn the ignition switch ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure (see page 11-316).

18. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—Go to step 19.

NO—Troubleshooting is complete.■

19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

20. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P1298 is indicated, check for poor connections or loose terminals at the ELD and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC P1549: Charging System High Voltage (2005-2006 models)

NOTE: If a high voltage battery (24 V, etc.) is connected to the vehicle, this DTC can be stored.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check under these conditions:
   - A/C off
   - Headlights off
   - Rear window defogger off
5. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1549 indicated?

   YES—Replace the alternator (see page 4-40), then go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box. ■
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Start the engine.
11. Check under these conditions:
    - A/C off
    - Headlights off
    - Rear window defogger off
12. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES— If DTC P1549 is indicated, check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

DTC Troubleshooting (cont'd)

DTC P16BB: Alternator B Terminal Circuit Low Voltage
(2005-2006 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with HDS.
3. Start the engine.
4. Check under these conditions:
   - A/C on
   - Temperature control at maximum cool
   - Blower fan at maximum speed
   - Rear window defogger on
   - Headlights on high beam
5. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P16BB indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box, and check the battery performance (see page 22-78).■
7. Check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box (+B line).

   Are the connections and terminals OK?

   YES—Go to step 8.

   NO—Repair the connectors or terminals, then go to step 9.
8. Check for an open in the wire between the alternator and under fuse/relay box at the starter subharness.

   Is the harness OK?

   YES—Replace the alternator (see page 4-40), then go to step 9.

   NO—Repair open in the wire between the alternator and the under-hood fuse/relay box, then go to step 9.
9. Turn the ignition switch ON (II).
10. Reset the ECM/PCM with the HDS.
11. Do the ECM/PCM idle learn procedure (see page 11-316).
12. Start the engine.
13. Check under these conditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
14. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P16BB is indicated, check for poor connections or loose terminals at the alternator and the under-hood fuse/relay box, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete.■

DTC P16BC: Alternator FR Terminal Circuit/ IGP Circuit Low Voltage (2005-2006 models)

1. Check for poor connections at the alternator 4P connector.

   Are the connectors OK?

   YES—Go to step 2.

   NO—Reconnect the connector, then go to step 18.

2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check under these conditions:
   - A/C on
   - Temperature control at maximum cool
   - Blower fan at maximum speed
   - Rear window defogger on
   - Headlights on high beam
6. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
7. Check for Temporary DTCs or DTCs with the HDS.

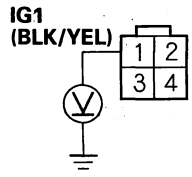
   Is DTC P16BC indicated?

   YES—Go to step 8.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the alternator. ■

8. Turn the ignition switch OFF.
9. Disconnect the alternator 4P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between alternator 4P connector terminal No. 1 and body ground.

ALTERNATOR 4P CONNECTOR



Wire side of female terminals

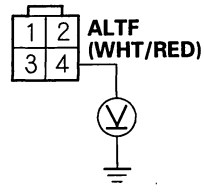
Is there battery voltage?

YES—Go to step 12.

NO—Repair open in the wire between the alternator (IG1 line) and the No. 18 ACG (15 A) fuse in under-dash fuse/relay box, then go to step 18.

12. Measure voltage between alternator 4P connector terminal No. 4 and body ground.

ALTERNATOR 4P CONNECTOR



Wire side of female terminals

Is there about 5 V?

YES—Replace the alternator (see page 4-40), then go to step 18.

NO—Go to step 13.

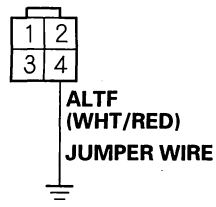
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. Turn the ignition switch OFF.
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector B (24P).
16. Connect alternator 4P connector terminal No. 4 to body ground with a jumper wire.

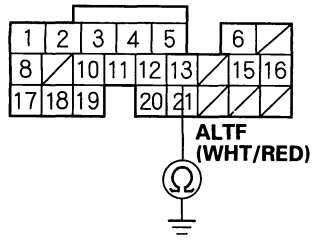
ALTERNATOR 4P CONNECTOR



Wire side of female terminals

17. Check for coutinuity between ECM/PCM connector terminal B13 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Go to step 26.

NO—Repair open in the wire between the ECM/PCM (B13) and the alternator, then go to step 18.

18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure (see page 11-316).
22. Start the engine.
23. Check under these conditions:
    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam
24. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
25. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P16BC is indicated, check for poor connections or loose terminals at the alternator and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete.■

BACK

Protected by AR

26. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

27. Start the engine.

28. Check under these conditions:

    - A/C on
    - Temperature control at maximum cool
    - Blower fan at maximum speed
    - Rear window defogger on
    - Headlights on high beam

29. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.

30. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P16BC is indicated, check for poor connections or loose terminals at the alternator and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P2183: ECT Sensor 2 Range/ Performance Problem (2005-2006 models)

NOTE: If DTC P0111 is stored at the same time as DTC P2183, troubleshoot DTC P0111 first, then recheck for DTC P2183.

1. Check for poor connections or loose terminals at ECT sensor 1 and ECT sensor 2.

   Are the connections and terminals OK?

   YES—Go to step 2.

   NO—Repair the connectors or terminals, then go to step 27.

2. Turn the ignition switch ON (II).
3. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P1116 and P2183 indicated at the same time?

   YES—Go to step 15.

   NO—Go to step 4.

4. Start the engine, and let it idle 10 minutes.
5. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 131 °F (55 °C) or less, or 1.50 V or more indicated?

   YES—Replace ECT sensor 2 (see page 11-228), then go to step 27.

   NO—Go to step 6.

6. Turn the ignition switch OFF.
7. Drain the coolant (see page 10-6).
8. Remove ECT sensor 2 (see page 11-228).
9. Allow ECT sensor 2 to cool to 77 °F (25 °C).
10. Note the ambient temperature.
11. Connect ECT sensor 2 to the 2P connector, but do not install it on the engine.
12. Turn the ignition switch ON (II).
13. Note the value of ECT SENSOR 2 quickly in the DATA LIST with the HDS.
14. Compare the value of ECT SENSOR 2 and the ambient temperature.

    Does ECT SENSOR 2 differ 5.4 °F (3 °C) or more?

    YES—Replace ECT sensor 2 (see page 11-228), then go to step 27.

    NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM. ■

15. Start the engine, and let it idle 10 minutes.
16. Check ECT SENSOR 1 in the DATA LIST with the HDS.

    Is about 118 °F (48 °C) or less, or 1.75 V or more indicated?

    YES—Replace ECT sensor 1 (see page 11-223), then go to step 27.

    NO—Go to step 17.

17. Let the engine idle 10 minutes.
18. Check ECT SENSOR 2 in the DATA LIST with the HDS.

    Is about 131 °F (55 °C) or less, or 1.50 V or more indicated?

    YES—Replace ECT sensor 2 (see page 11-228), then go to step 27.

    NO—Go to step 19.

BACK

Protected by AR

19. Turn the ignition switch OFF.
20. Drain the coolant (see page 10-6).
21. Remove ECT sensor 1 (see page 11-223) and ECT sensor 2 (see page 11-228).
22. Allow the sensors to cool to 77 °F (25 °C).
23. Note the ambient temperature.
24. Connect ECT sensor 1 to 2P connector, and ECT sensor 2 to the 2P connector, but do not install them into the engine.
25. Note the value of ECT SENSOR 1 and ECT SENSOR 2 quickly in the DATA LIST with the HDS.
26. Compare the value of ECT SENSOR 1 and the ambient temperature, and the value of ECT SENSOR 2 and the ambient temperature individually.

    Does one of the sensors differ more than 5.4 °F (3 °C) from the ambient temperature?

    YES—Replace the sensor that differed more than 5.4 °F (3 °C) from the ambient temperature, then go to step 27.

    NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM. ■

27. Turn the ignition switch ON (II).
28. Reset the ECM/PCM with the HDS.
29. Do the ECM/PCM idle learn procedure (see page 11-316).
30. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2183 is indicated, check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P2184: ECT Sensor 2 Circuit Low Voltage (2005-2006 models)

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 3.

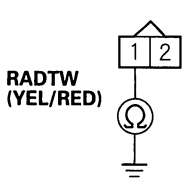
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect ECT sensor 2 2P connector.
5. Turn the ignition switch ON (II).
6. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about 356 °F (180 °C) or more, or 0.08 V or less indicated?

   YES—Go to step 7.

   NO—Go to step 11.
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector E (31P).
10. Check for continuity between ECT sensor 2 2P connector terminal No. 1 and body ground.

ECT SENSOR 2 2P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between ECT sensor 2 and the ECM/PCM (E1), then go to step 13.

NO—Go to step 18.

11. Turn the ignition switch OFF.
12. Replace ECT sensor 2 (see page 11-228).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2184 is indicated, check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
18. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2184 is indicated, check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P2185: ECT Sensor 2 Circuit High Voltage (2005-2006 models)

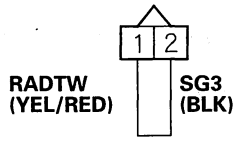
1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about −40 °F (−40 °C) or less, or 4.90 V or more indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect ECT sensor 2 2P connector.
5. Connect ECT sensor 2 2P connector terminals No. 1 and No. 2 with a jumper wire.

ECT SENSOR 2 2P CONNECTOR



Wire side of female terminals

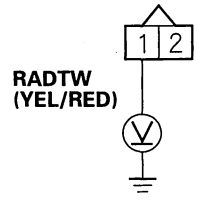
6. Turn the ignition switch ON (II).
7. Check ECT SENSOR 2 in the DATA LIST with the HDS.

   Is about −40 °F (−40 °C) or less, or 4.90 V or more indicated?

   YES—Go to step 8.

   NO—Go to step 18.
8. Turn the ignition switch OFF.
9. Remove the jumper wire from ECT sensor 2 2P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between ECT sensor 2 2P connector terminal No. 1 and body ground.

ECT SENSOR 2 2P CONNECTOR



Wire side of female terminals

Is there about 5 V?

YES—Go to step 12.

NO—Go to step 17.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector E (31P).
15. Connect ECT sensor 2 2P connector terminal No. 2 to body ground with a jumper wire.

ECT SENSOR 2 2P CONNECTOR

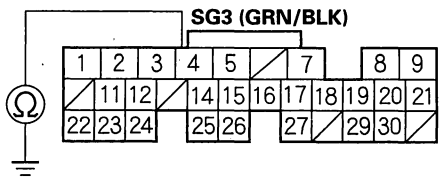
DTC Troubleshooting (cont'd)

16. Check for continuity between ECM/PCM connector terminal E4 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

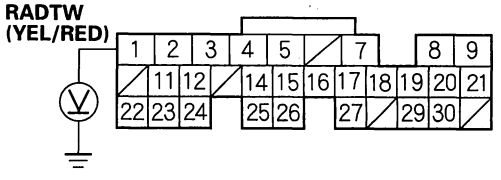
Is there continuity?

YES—Go to step 25.

NO—Repair open in the wire between the ECM/PCM (E4) and ECT sensor 2, then go to step 20.

17. Measure voltage between ECM/PCM connector terminal E1 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (E1) and ECT sensor 2, then go to step 20.

NO—Go to step 25.

18. Turn the ignition switch OFF.

19. Replace ECT sensor 2 (see page 11-228).

20. Reconnect all connectors.

21. Turn the ignition switch ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure (see page 11-316).

24. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2185 is indicated, check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete.■

25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

26. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2185 is indicated, check for poor connections or loose terminals at ECT sensor 2 and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC P2195: A/F Sensor (Sensor 1) Signal Stuck Lean

NOTE:
- If the vehicle was out of fuel and the engine stalled before this DTC was stored, refuel and clear the DTC with the HDS.
- If DTC P2101, P2108, P2118, P2135, P2138, P2176, U0107 or a combination of P2122 and P2127, P2122 and P2138, or P2127 and P2138 is stored at the same time, troubleshoot them first, then recheck for DTC P2195 (2006 model).

1. Inspect the condition of the A/F sensor (Sensor 1).

   Is it loose in the exhaust pipe?

   YES—Go to step 6.

   NO—Go to step 2.

2. Turn the ignition switch ON (II).
3. Clear the DTC with the DTC.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P2195 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. ■
6. Turn the ignition switch OFF.
7. Reinstall the A/F sensor (Sensor 1) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2195 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 6. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 12.
12. Monitor the OBD STATUS for DTC P2195 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 6. If the screen indicates NOT COMPLETED, go to step 5 and recheck.

Protected by AR

DTC Troubleshooting (cont'd)

DTC P2227: BARO Sensor Range/ Performance Problem

NOTE: If DTC P0107, P0108, P1128, and/or P1129 are stored at the same time as DTC P2227, troubleshoot those DTCs first, then recheck for DTC P2227.

1. Turn the ignition switch ON (II), and wait 2 seconds.
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 101 kPa (29.9 in.Hg, 760 mmHg), or about 2.9 V at sea level indicated?

   YES—Go to step 3.

   NO—Go to step 7.
3. Clear the DTC with the HDS.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Test-drive under these conditions, then connect the HDS:

   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 4th gear)
   - Throttle position between 12 degrees and 20 degrees for 2 seconds
6. Monitor the OBD STATUS for DTC P2227 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 7.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates NOT COMPLETED, go to step 4 and recheck.
7. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
8. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P2227 is indicated, check for poor connections or loose terminals at the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

   NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

BACK

Protected by AR

DTC P2228: BARO Sensor Circuit Low Voltage

1. Turn the ignition switch ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 53 kPa (15.6 in.Hg, 397 mmHg), or 1.58 V or less indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. ■
3. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
4. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P2228 is indicated, check for poor connections or loose terminals at the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

   NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P2229: BARO Sensor Circuit High Voltage

1. Turn the ignition switch ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

   Is about 160 kPa (47.2 in.Hg, 1,200 mmHg), or 4.5 V or higher indicated?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. ■
3. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
4. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P2229 is indicated, check for poor connections or loose terminals at the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

   NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P2238: A/F Sensor (Sensor 1) AFS+ Line Low Voltage

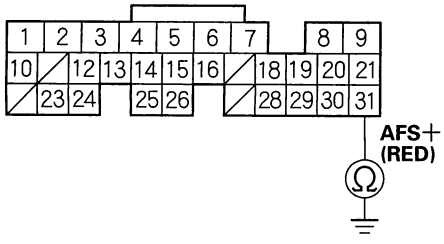
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2238 indicated?

   YES—Go to step 4.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. ■
4. Turn the ignition switch OFF.
5. Jump the SCS line with the HDS.
6. Disconnect the A/F sensor (Sensor 1) 4P connector.
7. Disconnect ECM/PCM connector A (31P).
8. Check for continuity between ECM/PCM connector terminal A31 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A31) and the A/F sensor (Sensor 1), then go to step 10.

NO—Go to step 9.

9. Replace the A/F sensor (Sensor 1) (see page 11-222).
10. Reconnect all connectors.
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2238 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the connector and terminal fits are OK, go to step 16. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 15.
15. Monitor the OBD STATUS for DTC P2238 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 13 and recheck.
16. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
17. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2238 indicated?

    YES—Go to step 1 and recheck.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P2252: A/F Sensor (Sensor 1) AFS— Line Low Voltage

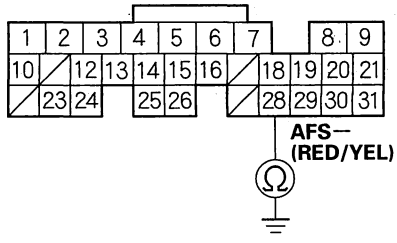
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2252 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 4P connector.
8. Disconnect ECM/PCM connector A (31P).
9. Check for continuity between ECM/PCM connector terminal A28 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A28) and the A/F sensor (Sensor 1), then go to step 11.

NO—Go to step 10.

10. Replace the A/F sensor (Sensor 1) (see page 11-222).
11. Reconnect all connectors.
12. Turn the ignition switch ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure (see page 11-316).
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2252 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the connector and terminal fits are OK, go to step 17. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 16.
16. Monitor the OBD STATUS for DTC P2252 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 14 and recheck.
17. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
18. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P2252 indicated?

    YES—Go to step 1 and recheck.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P2270: Secondary HO2S (Sensor 2) Circuit Signal Stuck Lean (2005-2006 models)

DTC P2271: Secondary HO2S (Sensor 2) Circuit Signal Stuck Rich (2005-2006 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 176 °F (80 °C)
   - Vehicle speed between 35—55 mph (56—88 km/h)
   - Drive 1 minute or more
5. Monitor the OBD STATUS for DTC P2270 or P2271 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
6. Turn the ignition switch OFF.
7. Replace the secondary HO2S (Sensor 2) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
    - Engine coolant temperature above 176 °F (80 °C)
    - Vehicle speed between 35—55 mph (56—88 km/h)
    - Drive 1 minute or more
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2270 or P2271 is indicated, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.
14. Monitor the OBD STATUS for DTC P2270 or P2271 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 11 and recheck.

DTC P2610: ECM/PCM Ignition Off Internal Timer Performance Problem (2005-2006 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is P2610 indicated?

   YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

   NO—Intermittent failure, system is OK at this time.■

DTC Troubleshooting (cont'd)

DTC P2A00: A/F Sensor (Sensor 1) Range/ Performance Problem

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 3rd gear)
   - Vehicle speed at 26 mph (41 km/h) or more, and engine speed at 3,250 rpm or less
   - Drive with the throttle fully opened for 5 seconds from an engine speed of 1,600 rpm, then slow down with the throttle completely closed.
5. Monitor the OBD STATUS for DTC P2A00 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.
6. Turn the ignition switch OFF.
7. Replace the A/F sensor (Sensor 1) (see page 11-222).
8. Turn the ignition switch ON (II).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 3rd gear)
    - Vehicle speed at 26 mph (41 km/h) or more, and engine speed at 3,250 rpm or less
    - Drive with the throttle fully opened for 5 seconds from an engine speed of 1,600 rpm, then slow down with the throttle completely closed.
12. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2A00 is indicated, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 13.
13. Monitor the OBD STATUS for DTC P2A00 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 10 and recheck.

DTC U0073: F-CAN Malfunction (Bus-Off) (2003-2004 models)

DTC U0155: F-CAN Malfunction (Gauge Control Module-ECM/PCM) (2003-2005 models)

DTC U1102: F-CAN Malfunction (Bus-Off) (2005 model)

NOTE:
- Information marked with an asterisk (*) applies to 2003-2004 models.
- Information marked with double asterisk (**) applies to 2005 model.

With Navigation System

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0073 (U1102)** and/or U0155 indicated?*

   YES—Go to step 4.

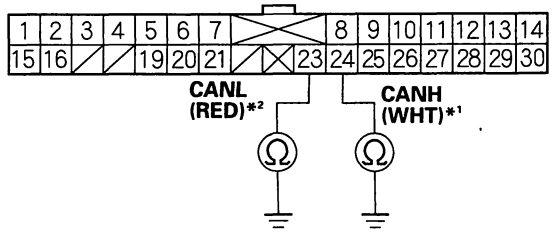
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the gauge control module, the navigation unit, and the ECM/PCM.■
4. Check for Body Electrical DTCs in the DTCs MENU with the HDS.

   Is DTC B1168, B1169, and/or B1178 indicated?

   YES—Go to step 5.

   NO—Do the gauge control module input test (see page 22-259).■
5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Remove the gauge control module (see page 22-276).
8. Disconnect the gauge assembly 30P connector.
9. Disconnect the navigation unit 20P connector.
10. Disconnect ECM/PCM connector E (31P).
11. Check for continuity between gauge assembly 30P connector terminals No. 23, No. 24 and body ground individually.

GAUGE ASSEMBLY 30P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the gauge control module, the navigation unit, and the ECM/PCM (E11*1 (E24)*2), then go to step 18.

NO—Go to step 12.

* 1: CANH line
* 2: CANL line

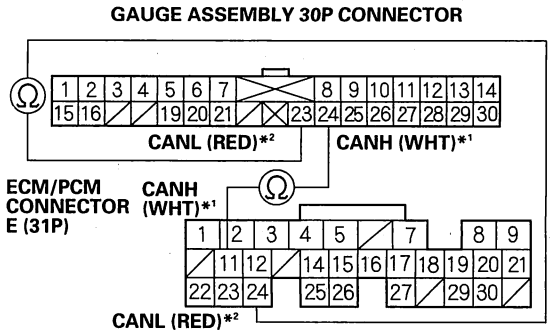
DTC Troubleshooting (cont'd)

12. Check for continuity between gauge assembly 30P connector terminal No. 24 and ECM/PCM connector terminal E11, and between gauge assembly 30P connector terminal No. 23 and ECM/PCM connector terminal E24 individually.



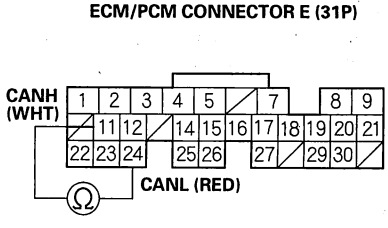
Is there continuity?

YES—Go to step 13.

NO—Repair open in the wire between the gauge control module and the ECM/PCM (E11*1 (E24)*2), then go to step 18.

* 1: CANH line
* 2: CANL line

13. Check for continuity between ECM/PCM connector terminals E11 and E24.



Is there continuity?

YES—Repair short in the wires between ECM/PCM connector terminals E11 and E24, then go to step 18.

NO—Go to step 14.

14. Reconnect ECM/PCM connector E (31P) and the gauge assembly 30P connector.

15. Turn the ignition switch ON (II).

16. Clear the DTC with the HDS.

17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0073 (U1102)** and/or U0155 indicated?*

YES—Go to step 23.

NO—Replace the navigation unit (see page 22-481), then go to step 18.

18. Reconnect all connectors.

19. Turn the ignition switch ON (II).

20. Reset the ECM/PCM with the HDS.

21. Do the ECM/PCM idle learn procedure (see page 11-316).

22. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC U0073* (U1102)** and/or U0155 is indicated, check for poor connections or loose terminals at the gauge assembly, the navigation unit, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete.■

23. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0073 (U1102)** and/or U0155 indicated?*

YES—If DTC U0073* (U1102)** and/or U0155 is indicated, check for poor connections or loose terminals at the gauge assembly, the navigation unit, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

MIL Circuit Troubleshooting

1. Turn the ignition switch ON (II).
2. Do the gauge self-diagnostic procedure (see page 22-259).

   Does the MIL indicator flash?

   YES—Go to step 3.

   NO—Substitute a known-good gauge control module (see page 22-276), and recheck. If the MIL circuit is OK, replace the original gauge control module.■
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II), and watch the MIL.

   Does the MIL stay off?

   YES—Go to step 17.

   NO—Go to step 5.
5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II), wait 20 seconds, and watch the MIL.

   Does the MIL stay on more than 20 seconds or flash more than 5 times?

   YES—Go to step 7.

   NO—The MIL circuit is OK.■
7. Turn the ignition switch OFF.
8. Connect the HDS (see page 11-3).
9. Turn the ignition switch ON (II), and read the HDS.

   Does the HDS communicate with the ECM/PCM?

   YES—Go to step 10.

   NO—Go to "DLC Circuit Troubleshooting" (see page 11-218).■
10. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—Go to the indicated DTC's troubleshooting.■

    NO—Go to step 11.
11. Check the MIL in the DATA LIST with the HDS.

    Is ON indicated?

    YES—Go to step 12.

    NO—Substitute a known-good gauge control module (see page 22-276), and recheck. If the MIL circuit is OK, replace the original gauge control module.■

(cont'd)

Protected by AR

MIL Circuit Troubleshooting (cont'd)

12. Check the SCS in the DATA LIST with the HDS.

    Is a short indicated?

    YES—Go to step 13.

    NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

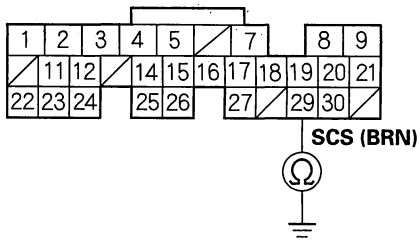
13. Turn the ignition switch OFF.

14. Jump the SCS line with the HDS.

15. Disconnect ECM/PCM connector E (31P).

16. Check for continuity between ECM/PCM connector terminal E29 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E29) and the DLC.■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

17. Try to start the engine.

    Does the engine start and idle smoothly?

    YES—Go to step 18.

    NO—Go to step 22.

18. Turn the ignition switch OFF.

19. Connect the HDS (see page 11-3).

20. Turn the ignition switch ON (II), and read the HDS.

    Does the HDS communicate with the ECM/PCM?

    YES—Go to step 21.

    NO—Go to "DLC Circuit Troubleshooting" (see page 11-218).■

21. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC U0073 and/or U0155 indicated?

    YES—Go to the indicated DTC's troubleshooting.■

    NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

BACK

Protected by AR

22. Turn the ignition switch OFF.

23. Inspect the No. 23 +B IG MAIN (50 A) fuse in the under-hood fuse/relay box.

    Is the fuse OK?

    YES—Repair open in the wire between the No. 23 +B IG MAIN (50 A) fuse and the ignition switch. If the wire is OK, go to step 24.

    NO—Repair short in the wire between No. 23 +B IG MAIN (50 A) fuse and the under-dash fuse/relay box. Also replace the No. 23 +B IG MAIN (50 A) fuse. ■

24. Inspect the No. 8 FI ECU (ECM/PCM) (15 A) fuse in the under-hood fuse/relay box.

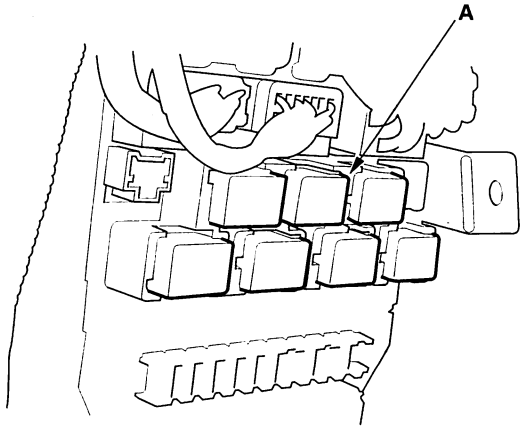
    Is the fuse OK?

    YES—Go to step 31.

    NO—Go to step 25.

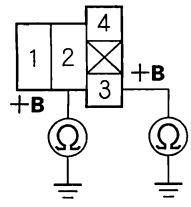
25. Remove the blown No. 8 FI ECU (ECM/PCM) (15 A) fuse from the under-dash fuse/relay box.

26. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 1 (FI MAIN) (A) from the under-dash fuse/relay box.



27. Check for continuity between body ground and PGM-FI main relay 1 (FI MAIN) 4P connector terminals No. 2 and No. 3 individually.

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Terminal side of female terminals

Is there continuity?

YES—Repair short in the wire between the No. 8 FI ECU (ECM/PCM) (15 A) fuse and PGM-FI main relay 1 (FI MAIN). Also replace the No. 8 FI ECU (ECM/PCM) (15 A) fuse. ■

NO—Go to step 28.

(cont'd)

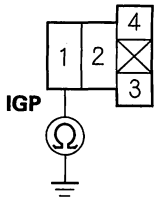
Protected by AR

MIL Circuit Troubleshooting (cont'd)

28. Disconnect each of the components or connectors below, one at a time, and check for continuity between PGM-FI main relay 1 (FI MAIN) 4P connector terminal No. 1 and body ground.

    - PGM-FI main relay 2 (FUEL PUMP)
    - A/F sensor relay
    - Throttle actuator control module relay (2006 model)
    - ECM/PCM connector A (31P)
    - Each injector 2P connector
    - Idle air control (IAC) valve 3P connector (2003-2005 models)
    - Camshaft position (CMP) sensor B 3P connector
    - Crankshaft position (CKP) sensor 3P connector

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Terminal side of female terminals

Does continuity go away when one of the above components is disconnected?

YES—Replace the component that made the short to body ground go away when disconnected. If the item is the ECM/PCM, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■
Also replace the No. 8 FI ECU (ECM/PCM) (15 A) fuse.■

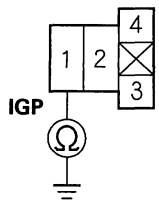
NO—Go to step 29.

29. Disconnect the connectors from these components:

    - PGM-FI main relay 2 (FUEL PUMP)
    - A/F sensor relay
    - Throttle actuator control module relay (2006 model)
    - ECM/PCM connector A (31P)
    - Injectors
    - Idle air control (IAC) valve (2003-2005 models)
    - Camshaft position (CMP) sensor B
    - Crankshaft position (CKP) sensor

30. Check for continuity between PGM-FI main relay 1 (FI MAIN) 4P connector terminal No. 1 and body ground.

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Terminal side of female terminals

Is there continuity?

YES—Repair short in the wire between PGM-FI main relay 1 (FI MAIN) and each component. Also replace the No. 8 FI ECU (ECM/PCM) (15 A) fuse.■

NO—Replace PGM-FI main relay 1 (FI MAIN). Also replace the No. 8 FI ECU (ECM/PCM) (15 A) fuse.■

31. Inspect the No. 19 FUEL PUMP (15 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?

YES—Go to step 44.

NO—Go to step 32.

32. Remove the blown No. 19 FUEL PUMP (15 A) fuse from the under-dash fuse/relay box.

33. Jump the SCS line with the HDS.

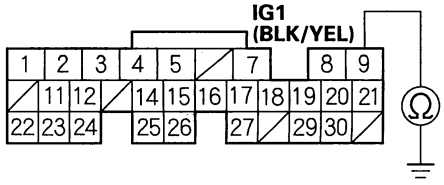
34. Disconnect ECM/PCM connector E (31P).

BACK

Protected by AR

35. Check for continuity between ECM/PCM connector terminal E9 and body ground.

ECM/PCM CONNECTOR E (31P)



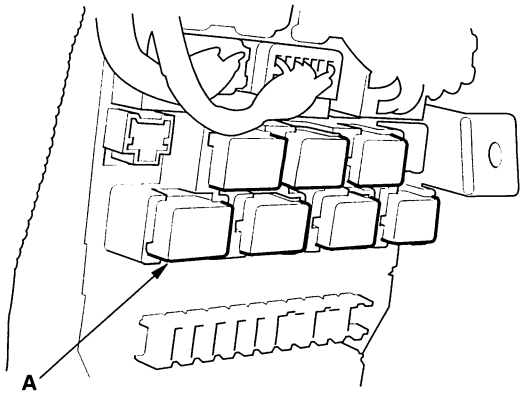
Wire side of female terminals

Is there continuity?

YES—Go to step 36.

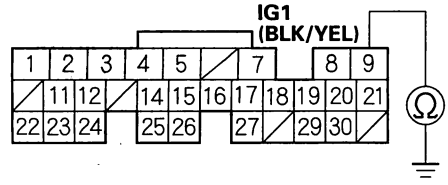
NO—Replace the No. 19 FUEL PUMP (15 A) fuse, and update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

36. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.



37. Check for continuity between ECM/PCM connector terminal E9 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the No. 19 FUEL PUMP (15 A) fuse and the ECM/PCM (E9), or between the No. 19 FUEL PUMP (15 A) fuse and PGM-FI main relay 2 (FUEL PUMP), or between the No. 19 FUEL PUMP (15 A) fuse and the immobilizer control unit. Also replace the No. 19 FUEL PUMP (15 A) fuse.■

NO—Go to step 38.

38. Remove the trunk floor trim panel.

39. Remove the access panel from the floor (see page 11-345).

40. Disconnect the fuel pump 5P connector.

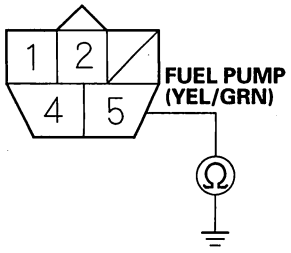
(cont'd)

Protected by AR

MIL Circuit Troubleshooting (cont'd)

41. Check for continuity between fuel pump 5P connector terminal No. 5 and body ground.

FUEL PUMP 5P CONNECTOR



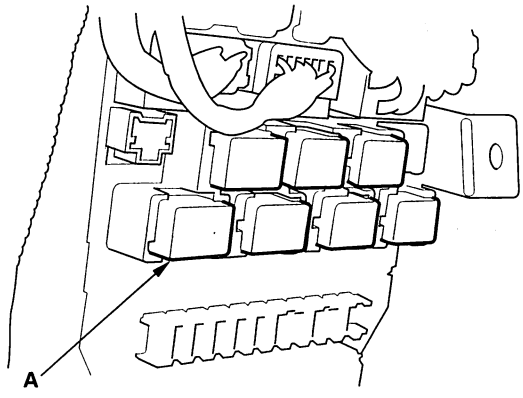
Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the fuel pump and PGM-FI main relay 2 (FUEL PUMP). Also replace the No. 19 FUEL PUMP (15 A) fuse. ■

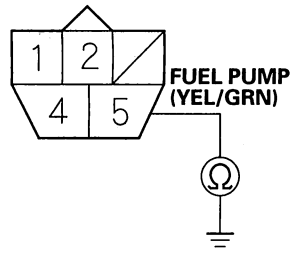
NO—Go to step 42.

42. Reinstall PGM-FI main relay 2 (FUEL PUMP) (A).



43. Check for continuity between fuel pump 5P connector terminal No. 5 and body ground.

FUEL PUMP 5P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Replace PGM-FI main relay 2 (FUEL PUMP). Also replace the No. 19 FUEL PUMP (15 A) fuse. ■

NO—Check the fuel pump, and replace it if necessary. Also replace the No. 19 FUEL PUMP (15 A) fuse. ■

BACK

Protected by AR

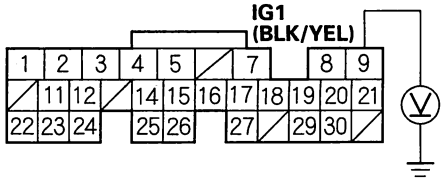
44. Jump the SCS line with the HDS.

45. Disconnect ECM/PCM connector E (31P).

46. Turn the ignition switch ON (II).

47. Measure voltage between ECM/PCM connector terminal E9 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

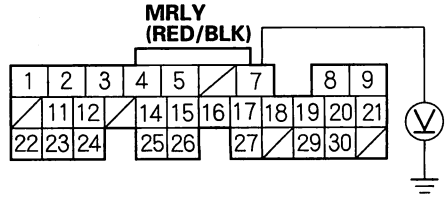
Is there battery voltage?

YES—Go to step 48.

NO—Repair open in the wire between the No. 19 FUEL PUMP (15 A) fuse and the ECM/PCM (E9).■

48. Measure voltage between ECM/PCM connector terminal E7 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

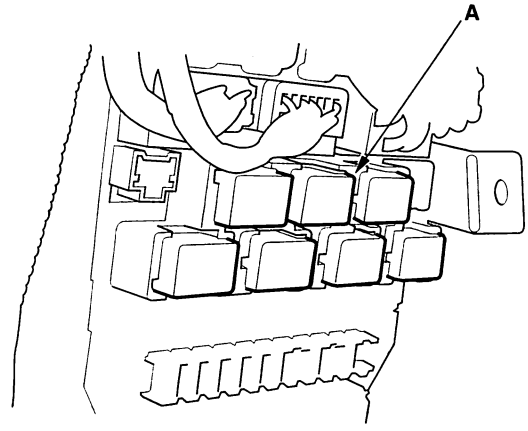
Is there battery voltage?

YES—Go to step 53.

NO—Go to step 49.

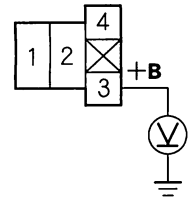
49. Turn the ignition switch OFF.

50. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 1 (FI MAIN) (A) from the under-dash fuse/ relay box.



51. Measure voltage between PGM-FI main relay 1 (FI MAIN) 4P connector terminal No. 3 and body ground.

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Terminal side of female terminals

Is there battery voltage?

YES—Go to step 52.

NO—Repair open in the wire between the No. 8 FI ECU (ECM/PCM) (15 A) fuse and PGM-FI main relay 1 (FI MAIN).■

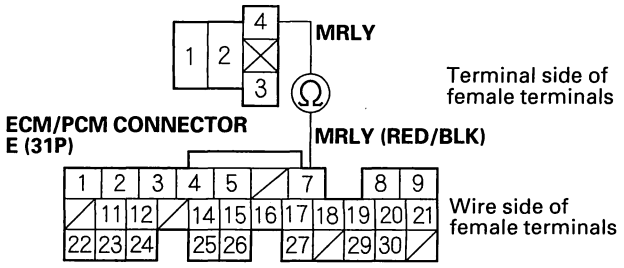
(cont'd)

Protected by AR

MIL Circuit Troubleshooting (cont'd)

52. Check for continuity between PGM-FI main relay 1 (FI MAIN) 4P connector terminal No. 4 and ECM/PCM connector terminal E7.

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Is there continuity?

YES—Test PGM-FI main relay 1 (FI MAIN) (see page 22-79). If the relay is OK, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■

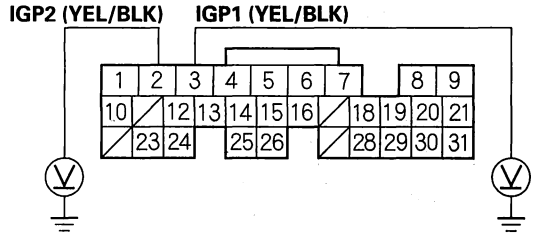
NO—Repair open in the wire between PGM-FI main relay 1 (FI MAIN) and the ECM/PCM (E7).■

53. Reconnect ECM/PCM connector E (31P).

54. Turn the ignition switch ON (II).

55. Measure voltage between body ground and ECM/PCM connector terminals A2 and A3 individually.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

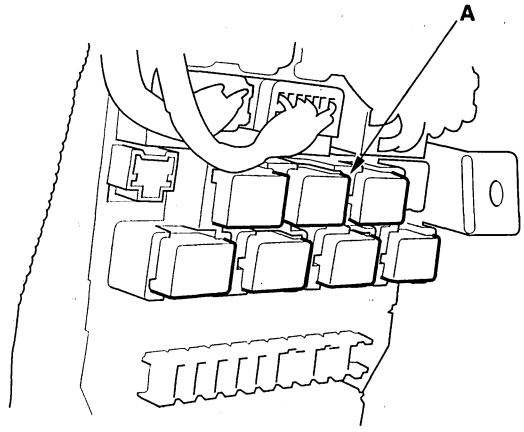
Is there battery voltage?

YES—Go to step 62.

NO—Go to step 56.

56. Turn the ignition switch OFF.

57. Remove PGM-FI main relay 1 (FI MAIN) (A).



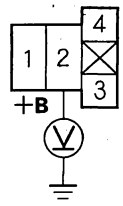
58. Turn the ignition switch ON (II).

BACK

Protected by AR

59. Measure voltage between PGM-FI main relay 1 (FI MAIN) 4P connector terminal No. 2 and body ground.

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Terminal side of female terminals

Is there battery voltage?

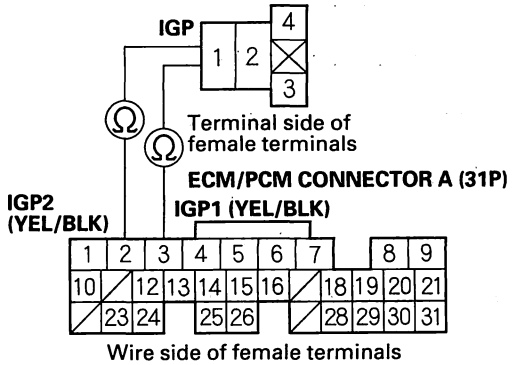
YES—Go to step 60.

NO—Repair open in the wire between the No. 8 FI ECU (ECM/PCM) (15 A) fuse and PGM-FI main relay 1 (FI MAIN).■

60. Turn the ignition switch OFF.

61. Check for continuity between PGM-FI main relay 1 (FI MAIN) 4P connector terminal No. 1 and ECM/PCM connector terminals A2 and A3 individually.

PGM-FI MAIN RELAY 1 (FI MAIN) 4P CONNECTOR



Wire side of female terminals

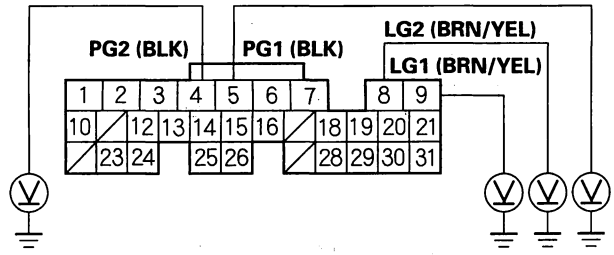
Is there continuity?

YES—Replace PGM-FI main relay 1 (FI MAIN).■

NO—Repair open in the wire between PGM-FI main relay 1 (FI MAIN) and the ECM/PCM (A2, A3).■

62. Measure voltage between body ground and ECM/PCM connector terminals A4, A5, A8, and A9 individually.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there more than 0.2 V?

YES—Repair open in the wire(s) that had more than 0.2 V between G101 and the ECM/PCM (A4, A5, A8, A9).■

NO—

- 2003-2004 models: Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227).■
- 2005-2006 models: Go to step 63.

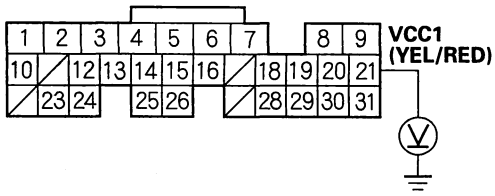
Protected by AR

MIL Circuit Troubleshooting (cont'd)

63. Measure voltage between body ground and ECM/PCM connector terminal A21.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Go to step 71.

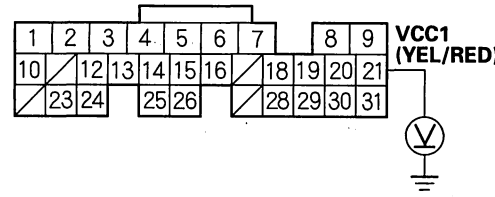
NO—Go to step 64.

64. Turn the ignition switch OFF.

65. Disconnect the connector from each of these sensors, one at a time, and measure voltage between body ground and ECM/PCM connector terminal A21 with the ignition switch ON (II).

- Manifold absolute pressure (MAP) sensor
- Accelerator pedal position (APP) sensor
- Input shaft (mainshaft) speed sensor (A/T)

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Replace the sensor that restored 5 V when disconnected.■

NO—Go to step 66.

66. Turn the ignition switch OFF.

67. Jump the SCS line with the HDS.

68. Disconnect the connectors from these sensors:

- Manifold absolute pressure (MAP) sensor
- Accelerator pedal position (APP) sensor
- Input shaft (mainshaft) speed sensor (A/T)

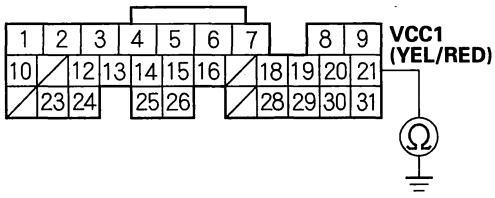
69. Disconnect ECM/PCM connector A (31P).

BACK

Protected by AR

70. Check for continuity between ECM/PCM connector terminal A21 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

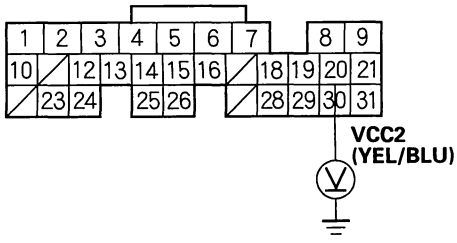
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A21) and the MAP sensor, the APP sensor or the input shaft (mainshaft) speed sensor (A/T). ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

71. Measure voltage between body ground and ECM/PCM connector terminal A20.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Go to step 79.

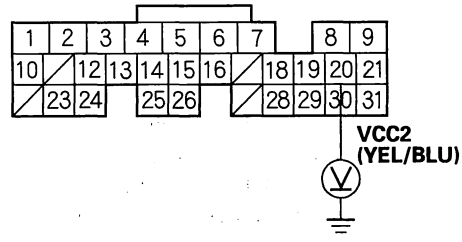
NO—Go to step 72.

72. Turn the ignition switch OFF.

73. Disconnect the connector from each of these sensors, one at a time, and measure voltage between body ground and ECM/PCM connector terminal A20 with the ignition switch ON (II).

- TP sensor (2005 model)
- Accelerator pedal position (APP) sensor (2006 model)
- Output shaft (countershaft) speed sensor
- EGR valve

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Replace the sensor that restored 5 V when disconnected. ■

NO—Go to step 74.

74. Turn the ignition switch OFF.

75. Jump the SCS line with the HDS.

76. Disconnect the connector from these sensors:

- TP sensor (2005 model)
- Accelerator pedal position (APP) sensor (2006 model)
- Output shaft (countershaft) speed sensor
- EGR valve

77. Disconnect ECM/PCM connector A (31P).

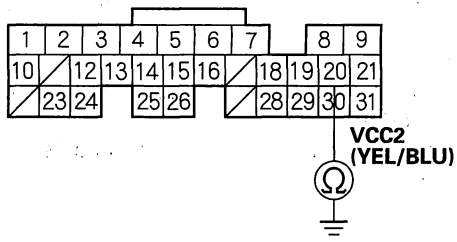
Protected by AR

MIL Circuit Troubleshooting (cont'd)

78. Check for continuity between ECM/PCM connector terminal A20 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

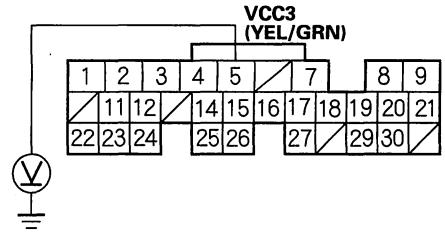
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A20) and the TP sensor (2005 model), the APP sensor (2006 model), the output shaft (countershaft) speed sensor or EGR valve. ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

79. Measure voltage between body ground and ECM/PCM connector terminal E5.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there about 5 V?

YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

NO—Go to step 80.

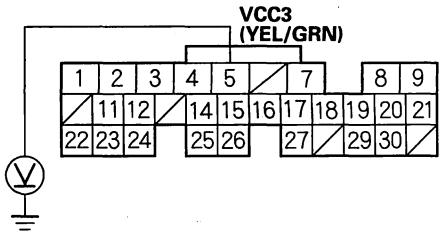
80. Turn the ignition switch OFF.

BACK

Protected by AR

81. Disconnect the FTP sensor 3P connector, and measure voltage between body ground and ECM/PCM connector terminal E5 with the ignition switch ON (II).

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there about 5 V?

YES—Replace the FTP sensor (see page 11-422). ■

NO—Go to step 82.

82. Turn the ignition switch OFF.

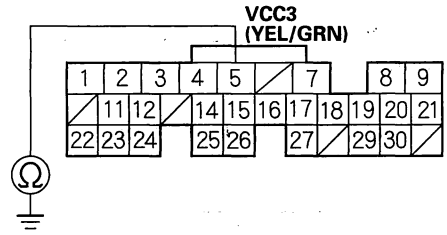
83. Jump the SCS line with the HDS.

84. Disconnect the FTP sensor 3P connector.

85. Disconnect ECM/PCM connector E (31P).

86. Check for continuity between ECM/PCM connector terminal E5 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E5) and the FTP sensor. ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

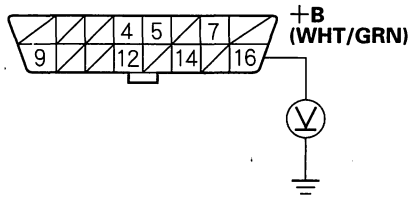
DLC Circuit Troubleshooting

NOTE:
- If the ECM/PCM does not communicate with the HDS, do this troubleshooting procedure.
- Check that the MIL circuit is normal, then do this troubleshooting.

1. Measure voltage between DLC terminal No. 16 and body ground.

DATA LINK CONNECTOR (DLC)



Terminal side of female terminals

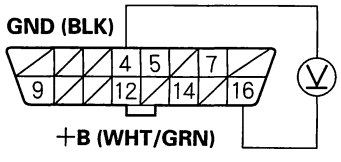
Is there battery voltage?

YES—Go to step 2.

NO—Repair open in the wire between DLC terminal No. 16 and the No. 8 FI ECU (15 A) fuse in the under-hood fuse/relay box.■

2. Measure voltage between DLC terminals No. 4 and No. 16.

DATA LINK CONNECTOR (DLC)



Terminal side of female terminals

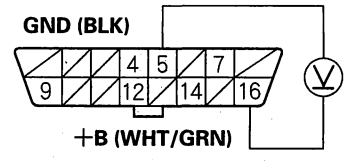
Is there battery voltage?

YES—Go to step 3.

NO—Repair open in the wire between DLC terminal No. 4 and body ground (G501).■

3. Measure voltage between DLC terminals No. 5 and No. 16.

DATA LINK CONNECTOR (DLC)



Terminal side of female terminals

Is there battery voltage?

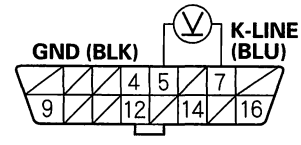
YES—Go to step 4.

NO—Repair open in the wire between DLC terminal No. 5 and body ground (G503).■

4. Turn the ignition switch ON (II).

5. Measure voltage between DLC terminals No. 5 and No. 7.

DATA LINK CONNECTOR (DLC)



Terminal side of female terminals

Is there 8.5 V or more?

YES—Go to step 11.

NO—Go to step 6.

6. Turn the ignition switch OFF.

7. Jump the SCS line with the HDS.

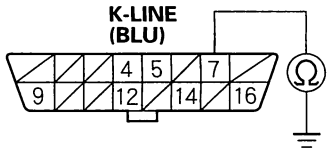
8. Disconnect ECM/PCM connector E (31P).

BACK

Protected by AR

9. Check for continuity between DLC terminal No. 7 and body ground.

DATA LINK CONNECTOR (DLC)



Terminal side of female terminals

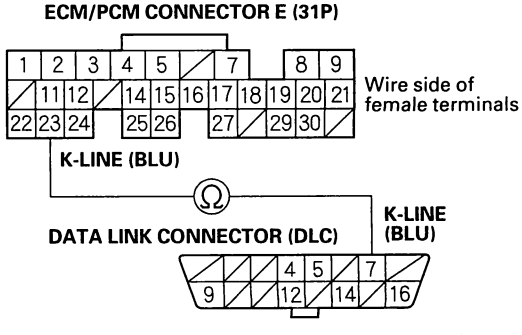
Is there continuity?

YES—Repair short to ground in the wire between DLC terminal No. 7 and the ECM/PCM (E23). After repairing the wire, check for a DTC with the HDS, then go to the indicated DTC's troubleshooting. ■

NO—Go to step 10.

10. Check for continuity between DLC terminal No. 7 and ECM/PCM terminal E23.

ECM/PCM CONNECTOR E (31P)



Terminal side of female terminals

Is there continuity?

YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

NO—Repair open in the wire between DLC terminal No. 7 and the ECM/PCM (E23). After repairing the wire, check for a DTC with the HDS, then go to the indicated DTC's troubleshooting. ■

11. Turn the ignition switch OFF.

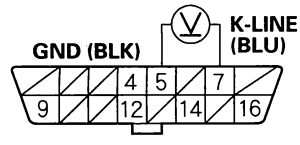
12. Jump the SCS line with the HDS.

13. Disconnect ECM/PCM connector E (31P).

14. Turn the ignition switch ON (II).

15. Measure voltage between DLC terminals No. 5 and No. 7.

DATA LINK CONNECTOR (DLC)



Terminal side of female terminals

Is there 0 V?

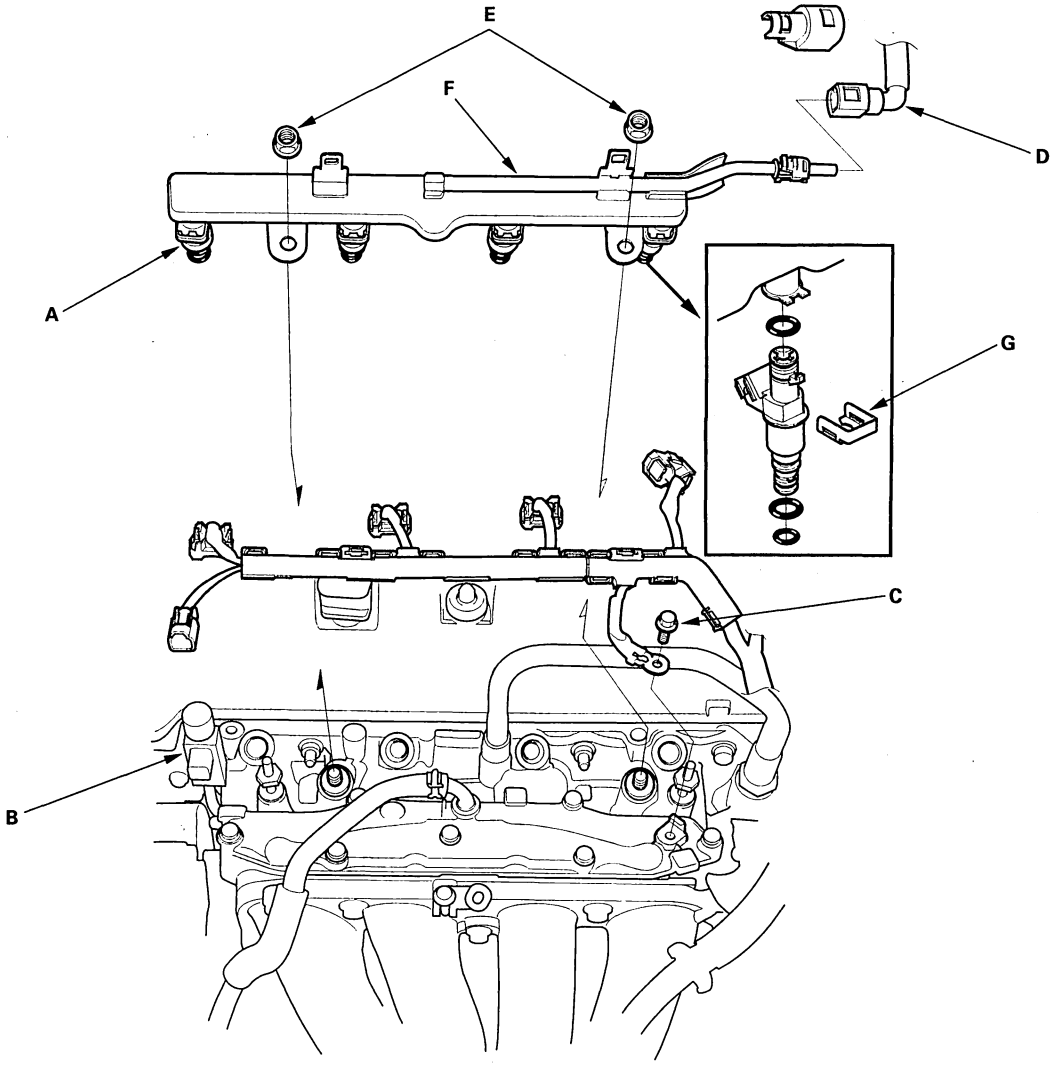
YES—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

NO—Repair short to power in the wire between DLC terminal No. 7 and the ECM/PCM (E23). After repairing the wire, check for a DTC with the HDS, then go to the indicated DTC's troubleshooting. ■

Protected by AR

Injector Replacement

1. Relieve fuel pressure (see page 11-330).
2. Remove the engine cover.
3. Disconnect the connectors from the injectors (A). On A/T models, disconnect the engine mount control solenoid valve (B).

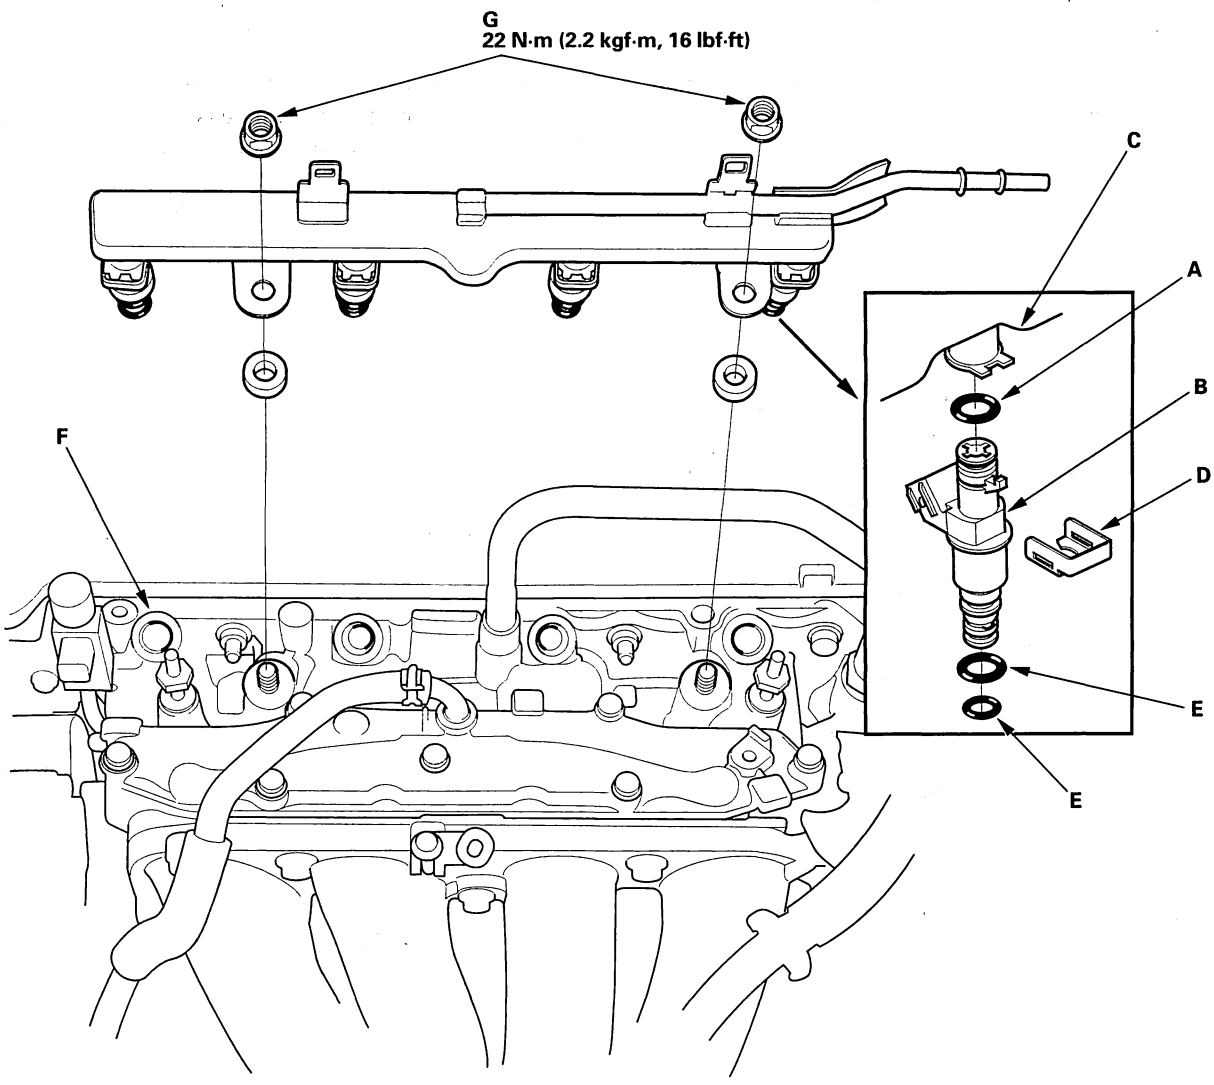


4. Remove the ground cable bolt (G101) (C).
5. Disconnect the quick-connect fittings (D).
6. Remove the fuel rail mounting nuts (E) from the fuel rail (F).
7. Remove the injector clip (G) from the injector.
8. Remove the injector from the fuel rail.

BACK

Protected by AR

9. Coat the new O-rings (A) with clean engine oil, and insert the injectors (B) into the fuel rail (C).



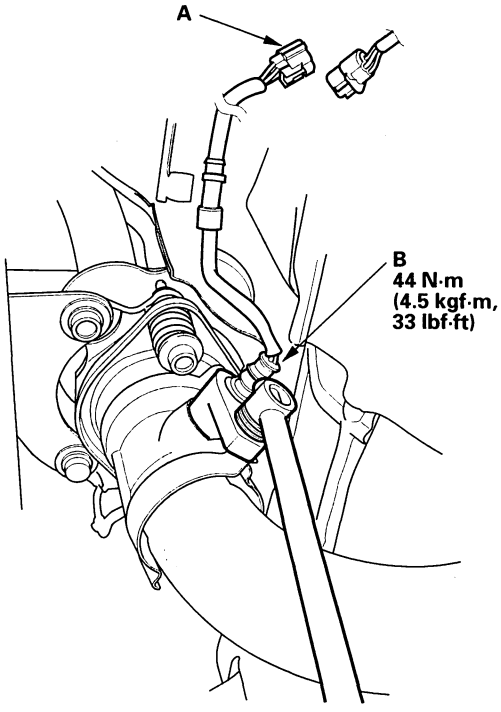
10. Install the injector clip (D).
11. Coat the injector O-rings (E) with clean engine oil.
12. Install the injectors into the injector base (F).
13. Install the fuel rail mounting nuts (G) and the ground cable bolt (G101).
14. Connect the connectors on the injectors. On A/T models, connect the engine mount control solenoid valve.
15. Connect the quick-connect fittings.
16. Turn the ignition switch ON (II), but do not operate the starter. After the fuel pump runs for about 2 seconds, the fuel rail will be pressureized. Repeat this two or three times, then check for fuel leakage.

Protected by AR

A/F Sensor Replacement

Special Tools Required
O2 sensor wrench, Snap-on YA8875, SP Tools 93750, or equivalent, commercially available

1. Disconnect the A/F sensor 4P connector (A), then remove the A/F sensor (B).

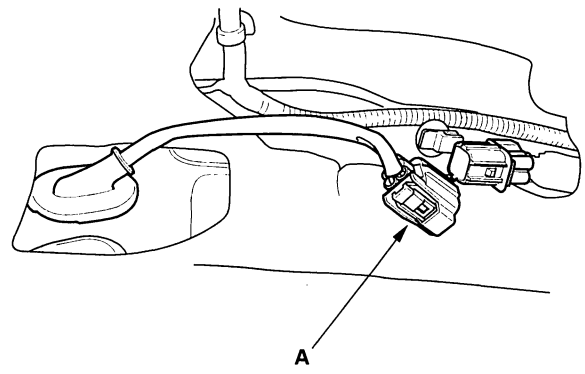


2. Install the A/F sensor in the reverse order of removal.

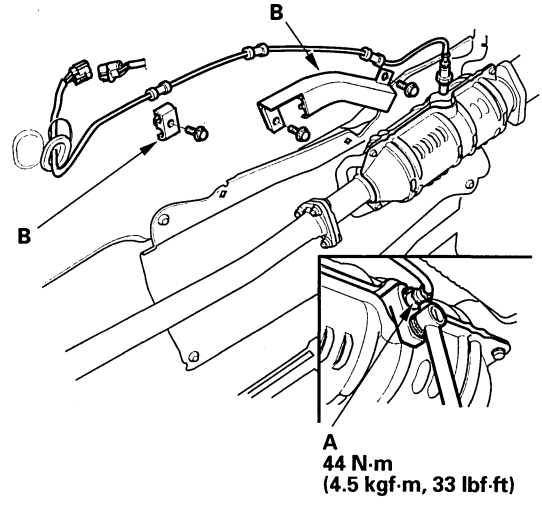
Secondary HO2S Replacement

Special Tools Required
O2 sensor wrench, Snap-on YA8875, SP Tools 93750, or equivalent, commercially available

1. Pull back the carpet from the floor rail under the front edge of the front passenger seat to expose the secondary HO2S 4P connector.
2. Disconnect the secondary HO2S 4P connector (A).



3. Remove the secondary HO2S (A), and the covers (B).



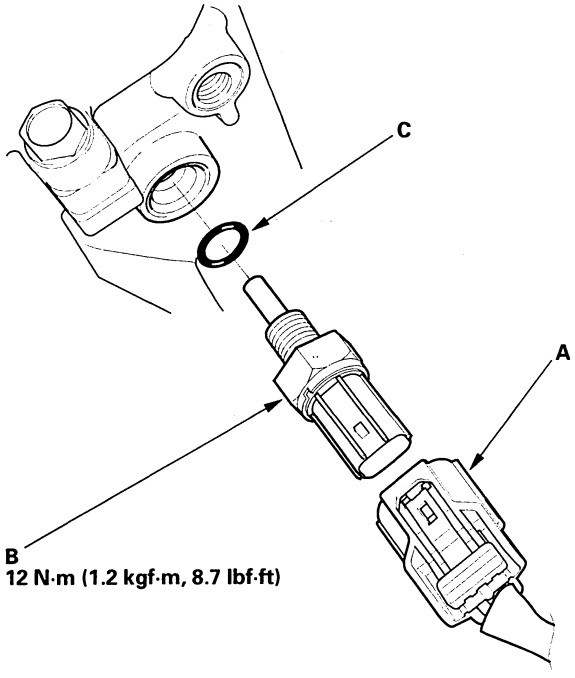
4. Install the secondary HO2S in the reverse order of removal.

BACK

Protected by AR

ECT Sensor/ECT Sensor 1 Replacement

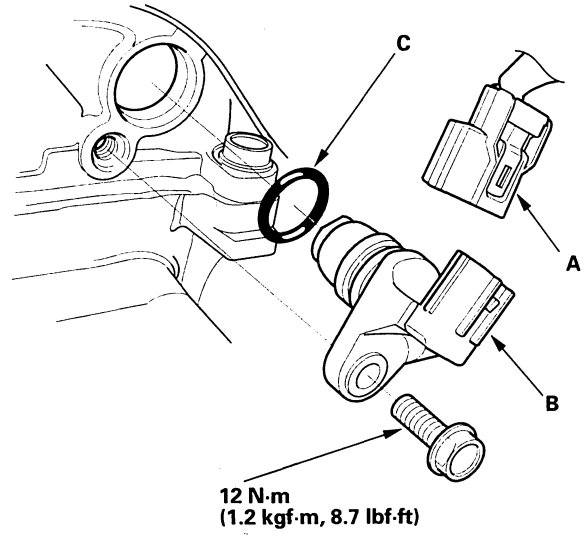
1. Remove the air cleaner (see page 11-361).
2. Remove the EVAP canister purge valve (see page 11-423).
3. Unbolt the under-hood fuse/relay box, and move the box aside.
4. Disconnect the ECT sensor/ECT sensor 1 connector (A).



5. Remove the ECT sensor/ECT sensor 1 (B).
6. Install the sensor in the reverse order of removal with a new O-ring (C), then refill the radiator with engine coolant (see page 10-6).

CMP Sensor B Replacement

1. Remove the air cleaner (see page 11-361).
2. Remove the EVAP canister purge valve (see page 11-423).
3. Disconnect the CMP sensor B connector (A).



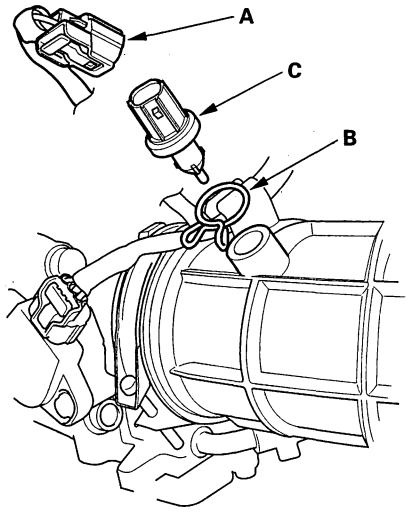
4. Remove CMP sensor B (B) from the exhaust camshaft side of the cylinder head.
5. Install the sensor in the reverse order of removal with a new O-ring (C).

Protected by AR

IAT Sensor Replacement

Except 2003-2004 SULEV, LX-P models

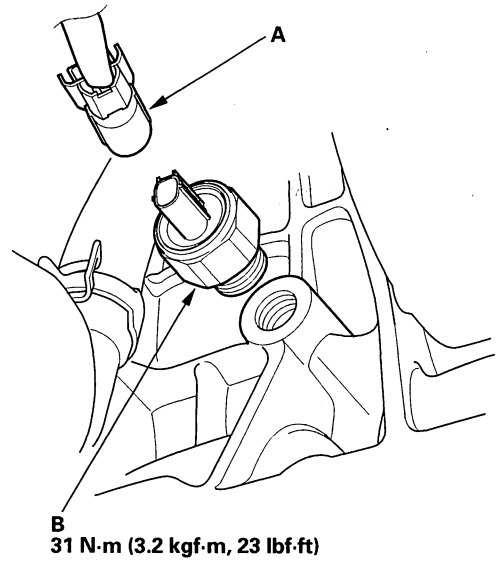
1. Disconnect the IAT sensor connector (A).



2. Remove the clamp (B) and the IAT sensor (C).
3. Install the sensor in the reverse order of removal.

Knock Sensor Replacement

1. Remove the intake manifold (see page 9-2).
2. Disconnect the knock sensor connector (A).



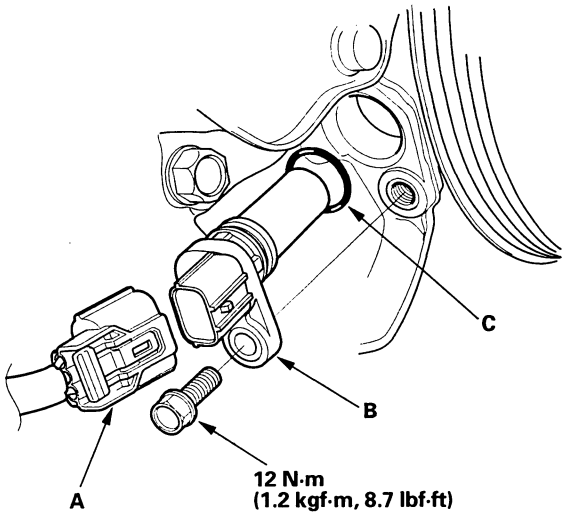
3. Remove the knock sensor (B).
4. Install the sensor in the reverse order of removal.

BACK

Protected by AR

CKP Sensor Replacement

1. Disconnect the CKP sensor connector (A).

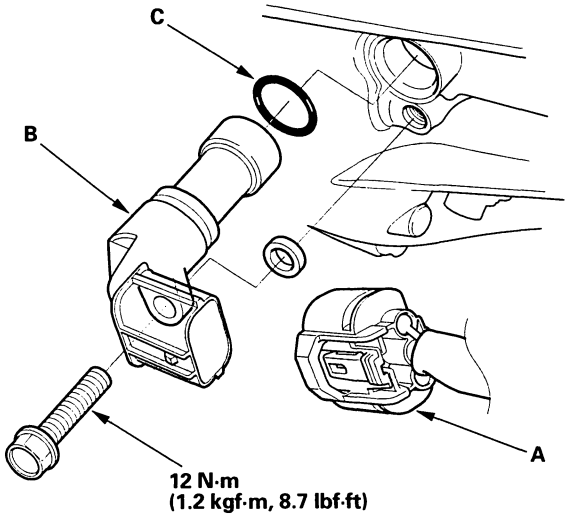


2. Remove the CKP sensor (B).
3. Install the sensor in the reverse order of removal with a new O-ring (C).
4. Do the CKP pattern clear/pattern learn procedure with the HDS (see page 11-4).

Output Shaft (Countershaft) Speed Sensor Replacement

M/T

1. Remove the air cleaner (see page 11-361).
2. Disconnect the output shaft (countershaft) speed sensor connector (A).

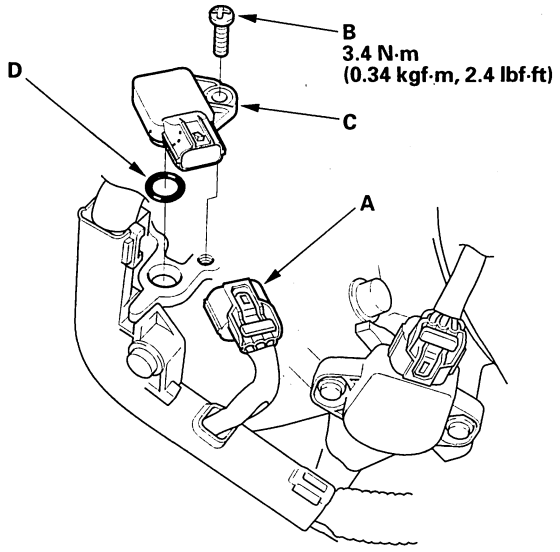


3. Remove the output shaft (countershaft) speed sensor (B).
4. Install the sensor in the reverse order of removal with a new O-ring (C).

Protected by AR

MAP Sensor Replacement

1. Disconnect the MAP sensor connector (A).



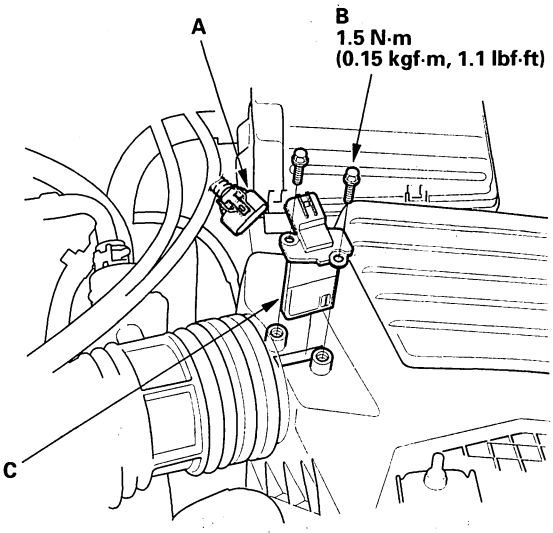
*: This illustration shows 2003-2005 models.

2. Remove the screw (B).
3. Remove the MAP sensor (C).
4. Install the sensor in the reverse order of removal with a new O-ring (D).

MAF Sensor/IAT Sensor Replacement

2003-2004 SULEV, LX-P models and 2005-2006 models

1. Disconnect the MAF sensor/IAT sensor connector (A).



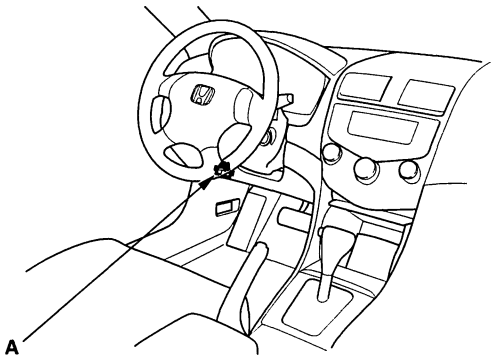
2. Remove the bolts (B).
3. Remove the MAF sensor/IAT sensor (C).
4. Install the sensor in the reverse order of removal.

BACK

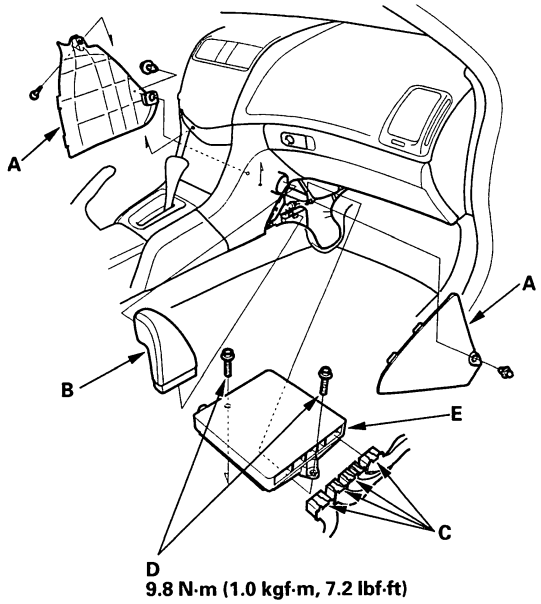
Protected by AR

ECM/PCM Replacement

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



2. Make sure the HDS communicates with the ECM/PCM. If it doesn't, skip steps 3 to 5 and clean the throttle body (2006 model only) (see page 11-357).
3. Turn the ignition switch ON (II).
4. 2006 model: Select the INSPECTION MENU with the HDS.
5. 2006 model: Do the TP POSITION CHECK in the ETCS TEST.
6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Remove the center lower covers (A).



9. Remove the duct (B).
10. Disconnect ECM/PCM connectors (C).
11. Remove the bolts (D), then remove the ECM/PCM (E).
12. Install the ECM/PCM in the reverse order of removal.
13. Open the SCS line with the HDS.
14. Turn the ignition switch ON (II).

    NOTE: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because VIN has not been programmed into the ECM/PCM; ignore it, and continue this procedure.

15. Input the VIN to the ECM/PCM with the HDS.
16. Rewrite the immobilizer code with the ECM/PCM replacement procedure in the HDS; it allows you to start the engine.
17. Reset the ECM/PCM with the HDS.
18. Do the ECM/PCM idle learn procedure (see page 11-316).
19. Do the CKP pattern clear/pattern learn procedure with the HDS (see page 11-4).

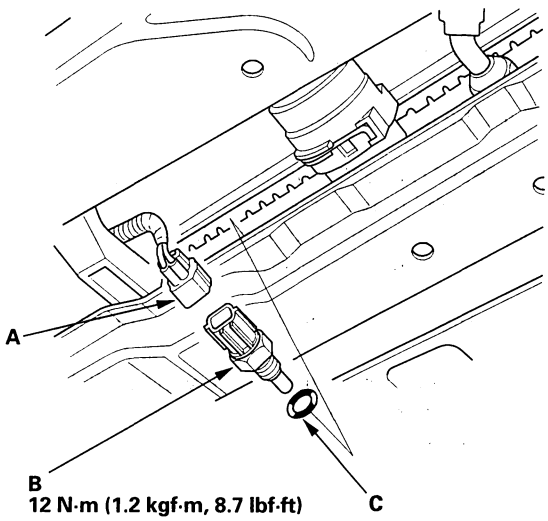
ECT Sensor 2 Replacement

2005-2006 models

1. Drain the engine coolant (see page 10-6).
2. Remove the splash shield.
3. Disconnect the ECT sensor 2 connector (A), then remove ECT sensor 2 (B).



4. Install ECT sensor 2 with a new O-ring (C).
5. Install the splash shield.
6. Refill the radiator with engine coolant (see page 10-6).

DTC Troubleshooting

DTC P0122: TP Sensor A Circuit Low Voltage (2006 model)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

   Is there about 0.3 V or less?

   YES—Go to step 4.

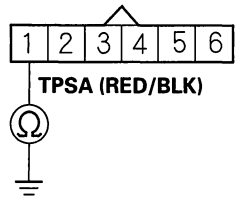
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body and the throttle actuator control module.■
4. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0122 and P0222 indicated at the same time?

   YES—Check for poor connections or loose terminals at the throttle body, the throttle actuator control module, and at the ECM/PCM, then go to step 18. If the connections are OK, go to step 9.

   NO—Go to step 5.
5. Turn the ignition switch OFF.
6. Disconnect the throttle body 6P connector.
7. Disconnect the throttle actuator control module 16P connector.
8. Check for continuity between throttle body 6P connector terminal No. 1 and body ground.

THROTTLE BODY 6P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the throttle body and the throttle actuator control module (TPSA line), then go to step 17.

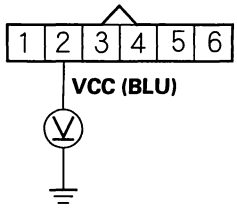
NO—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 17 and recheck. If DTC P0122 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 18. If DTC P0122 is indicated, go to step 15.

BACK

Protected by AR

9. Measure voltage between throttle body 6P connector terminal No. 2 and body ground.

THROTTLE BODY 6P CONNECTOR



Wire side of female terminals

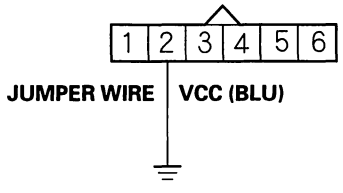
Is there about 5 V?

YES—Go to step 15.

NO—Go to step 10.

10. Turn the ignition switch OFF.
11. Disconnect the throttle actuator control module 16P connector.
12. Disconnect the throttle body 6P connector.
13. Connect throttle body 6P connector terminal No. 2 to body ground with a jumper wire.

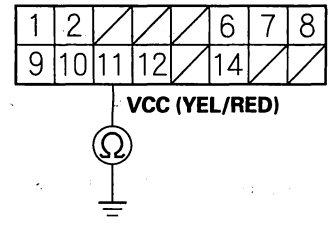
THROTTLE BODY 6P CONNECTOR



Wire side of female terminals

14. Check for continuity between throttle actuator control module 16P connector terminal No. 11 and body ground.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 17 and recheck. If DTC P0122 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 18. If DTC P0122 is indicated, go to step 15.

NO—Repair open in the wire between the throttle body and the throttle actuator control module (VCC line), then go to step 17.

DTC Troubleshooting (cont'd)

DTC P1683: Throttle Valve Default Position Spring Performance Problem (2006 model)

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your finger if the throttle valve is activated.

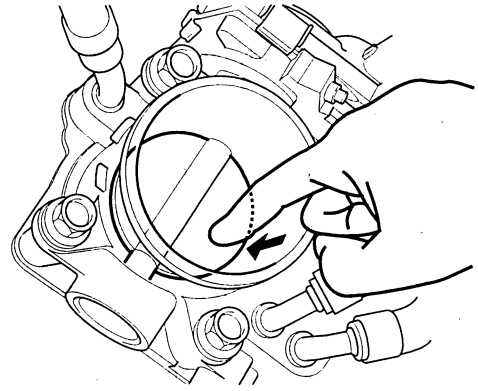
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch OFF, and wait 10 seconds.
5. Turn the ignition switch ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1683 indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body and the throttle actuator control module.■
7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body.
9. Push the throttle valve closed as shown.

   NOTE:
   - Do not operate the ignition switch during the check.
   - Be careful not to pinch your finger during the check.



10. Release the throttle valve.

    Does the throttle valve return?

    YES—Clean the throttle body (see page 11-357), then go to step 13.

    NO—Go to step 11.
11. Turn the ignition switch OFF.
12. Replace the throttle body (see page 11-367).
13. Turn the ignition switch ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure (see page 11-316).
16. Turn the ignition switch OFF, and wait 10 seconds.
17. Turn the ignition switch ON (II).
18. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1683 is indicated, check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete.■

DTC P1684: Throttle Valve Return Spring Performance Problem (2006 model)

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your finger if the throttle valve is activated.

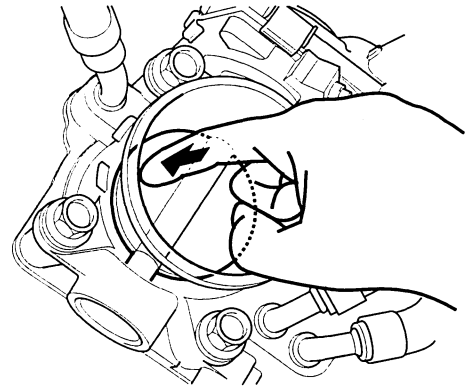
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch OFF, and wait 10 seconds.
5. Turn the ignition switch ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1684 indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body and the throttle actuator control module. ■
7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body.
9. Push the throttle valve open as shown.

   NOTE:
   - Do not operate the ignition switch during the check.
   - Be careful not to pinch your finger during the check.



10. Release the throttle valve.

    Does the throttle valve return?

    YES—Clean the throttle body (see page 11-357), then go to step 13.

    NO—Go to step 11.
11. Turn the ignition switch OFF.
12. Replace the throttle body (see page 11-367).
13. Turn the ignition switch ON (II).
14. Reset the ECM/PCM with the HDS.
15. Do the ECM/PCM idle learn procedure (see page 11-316).
16. Turn the ignition switch OFF, and wait 10 seconds.
17. Turn the ignition switch ON (II).
18. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1684 is indicated, check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

DTC Troubleshooting (cont'd)

DTC P2101: Throttle Actuator System Malfunction
(2006 model)

1. Record all freeze data and any on-board snapshot with the HDS.
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2101 indicated?

   YES—Go to step 7.

   NO—Go to step 5.
5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

   - Engine speed
   - Vehicle speed
   - Accelerator position
6. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2101 indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body and at the throttle actuator control module, then clean the throttle body (see page 11-357). ■
7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body.
9. Turn the ignition switch ON (II).
10. Clear the DTC with the HDS.
11. Do the ETCS TEST in the INSPECTION MENU with the HDS.
12. Visually check the throttle valve operation.

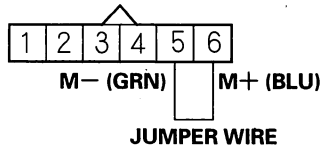
    NOTE: Be careful not to pinch your finger during the check.

    Does the throttle valve operate smoothly?

    YES—Clean the throttle body (see page 11-357), then go to step 21 and recheck. If DTC P2101 is indicated, go to step 18.

    NO—Go to step 13.
13. Turn the ignition switch OFF.
14. Disconnect the throttle body 6P connector.
15. Disconnect the throttle actuator control module 16P connector.
16. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

THROTTLE BODY 6P CONNECTOR



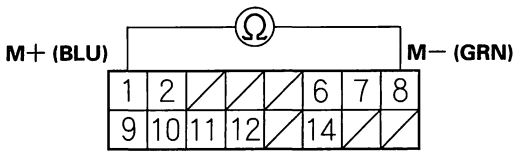
Wire side of female terminals

BACK

Protected by AR

17. Check for continuity between throttle actuator control module 16P connector terminals No. 1 and No. 8.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 20 and recheck. If DTC P2101 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 20. If DTC P2101 is indicated, go to step 18.

NO—Repair open in the wires between the throttle body and the throttle actuator control module (motor drive lines), then go to step 20.

18. Turn the ignition switch OFF.
19. Replace the throttle body (see page 11-367).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the ECM/PCM with the HDS.
23. Do the ECM/PCM idle learn procedure (see page 11-316).
24. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
    - Engine speed
    - Vehicle speed
    - Accelerator position
25. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2101 is indicated, check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then clean the throttle body (see page 11-357), and go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

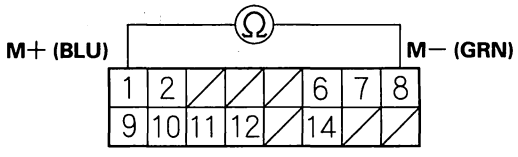
DTC P2118: Throttle Actuator Current Range/ Performance Problem (2006 model)

1. Disconnect the throttle actuator control module 16P connector.
2. Measure resistance between throttle actuator control module 16P connector terminals No. 1 and No. 8.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

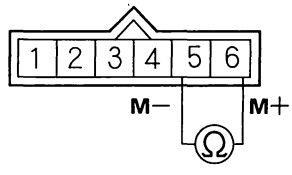
Is there about 1.0 Ω or less?

YES—Go to step 3.

NO—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 6 and recheck. If DTC P2118 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 6.

3. Disconnect the throttle body 6P connector.
4. At the throttle body side, measure resistance between throttle body 6P connector terminals No. 5 and No. 6 with the throttle fully closed.

THROTTLE BODY 6P CONNECTOR



Terminal side of male terminals

Is there about 1.0 Ω or less?

YES—Go to step 5.

NO—Repair short in the wires between the throttle body and throttle actuator control module (motor drive lines), then go to step 6.

5. Replace the throttle body (see page 11-367).
6. Reconnect all connectors.
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Turn the ignition switch OFF.
11. Turn the ignition switch ON (II).
12. Slowly press the accelerator pedal to the floor.
13. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2118 is indicated, check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete.■

DTC Troubleshooting (cont'd)

DTC P2122: APP Sensor A (TP Sensor D) Circuit Low Voltage
(2006 model)

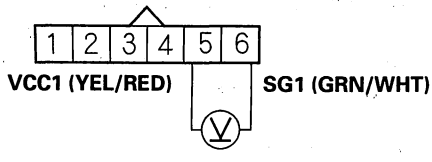
1. Turn the ignition switch ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

   Is there about 0.2 V or less?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect APP sensor A/B 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor A/B 6P connector terminals No. 5 and No. 6.

APP SENSOR A/B 6P CONNECTOR



Wire side of female terminals

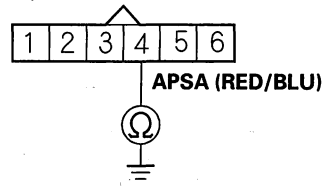
Is there about 5 V?

YES—Go to step 7.

NO—Go to step 17.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (31P).
10. Check for continuity between APP sensor A/B 6P connector terminal No. 4 and body ground.

APP SENSOR A/B 6P CONNECTOR



Wire side of female terminals

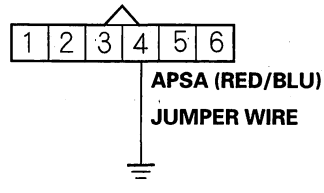
Is there continuity?

YES—Repair short in the wire between APP sensor A and the ECM/PCM (A26), then go to step 20.

NO—Go to step 11.

11. Connect APP sensor A/B 6P connector terminal No. 4 to body ground with a jumper wire.

APP SENSOR A/B 6P CONNECTOR



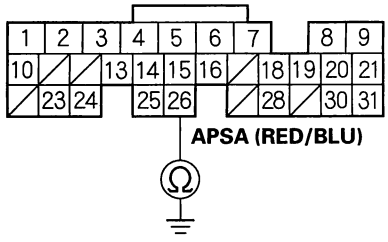
Wire side of female terminals

BACK

Protected by AR

12. Check for continuity between ECM/PCM connector terminal A26 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

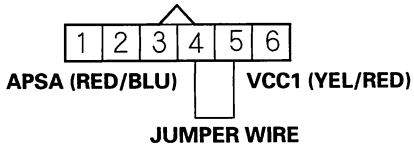
YES—Go to step 13.

NO—Repair open in the wire between APP sensor A and the ECM/PCM (A26), then go to step 20.

13. Reconnect ECM/PCM connector A (31P).

14. Connect APP sensor A/B 6P connector terminals No. 4 and No. 5 with a jumper wire.

APP SENSOR A/B 6P CONNECTOR



Wire side of female terminals

15. Turn the ignition switch ON (II).

16. Check APP SENSOR A in the DATA LIST with the HDS.

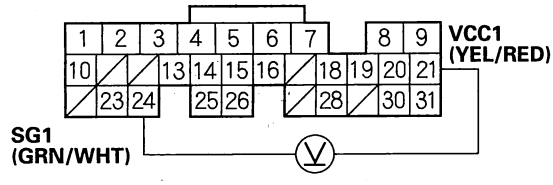
Is there about 0.2 V or less?

YES—Go to step 25.

NO—Go to step 18.

17. Measure voltage between ECM/PCM connector terminals A21and A24.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between APP sensor A and the ECM/PCM (A21), then go to step 20.

NO—Go to step 25.

(cont'd)

DTC Troubleshooting (cont'd)

18. Turn the ignition switch OFF.
19. Replace APP sensor A/B (see page 11-274).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the ECM/PCM with the HDS.
23. Do the ECM/PCM idle learn procedure (see page 11-316).
24. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2122 is indicated, check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
26. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2122 is indicated, check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P2123: APP Sensor A (TP Sensor D) Circuit High Voltage (2006 model)

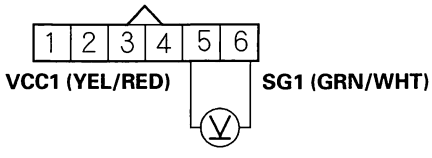
1. Turn the ignition switch ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

   Is there about 4.9 V or more?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect APP sensor A/B 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor A/B 6P connector terminals No. 5 and No. 6.

APP SENSOR A/B 6P CONNECTOR



Wire side of female terminals

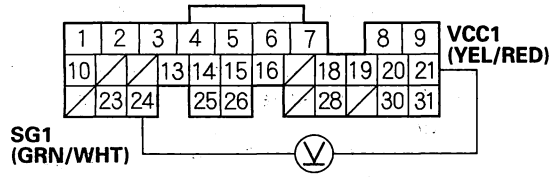
Is there about 5 V?

YES—Go to step 8.

NO—Go to step 7.

7. Measure voltage between ECM/PCM connector terminals A21 and A24.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between APP sensor A and the ECM/PCM (A24), then go to step 10.

NO—Go to step 15.

8. Turn the ignition switch OFF.
9. Replace APP sensor A/B (see page 11-274).
10. Reconnect APP sensor A/B 6P connector.
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2123 is indicated, check for poor connections or loose terminals at APP sensor A and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

DTC P2127: APP Sensor B (TP Sensor E) Circuit Low Voltage (2006 model)

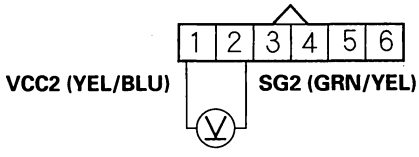
1. Turn the ignition switch ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

   Is there about 0.2 V or less?

   YES—Go to step 3.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at APP sensor B and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect APP sensor A/B 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor A/B 6P connector terminals No. 1 and No. 2.

APP SENSOR A/B 6P CONNECTOR



Wire side of female terminals

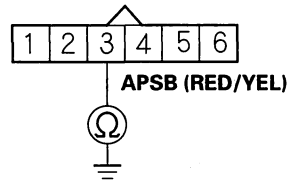
Is there about 5 V?

YES—Go to step 7.

NO—Go to step 17.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (31P).
10. Check for continuity between APP sensor A/B 6P connector terminal No. 3 and body ground.

APP SENSOR A/B 6P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between APP sensor B and the ECM/PCM (A25), then go to step 20.

NO—Go to step 11.

11. Connect APP sensor A/B 6P connector terminal No. 3 to body ground with a jumper wire.

DTC Troubleshooting (cont'd)

DTC P2135: TP Sensor A/B Incorrect Voltage Correlation
(2006 model)

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2135 indicated?

   YES—Go to step 5.

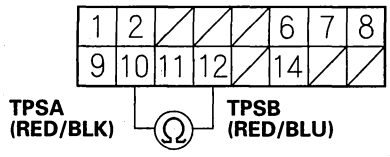
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body and the throttle actuator control module. ■
5. Turn the ignition switch OFF.
6. Disconnect the intake air duct from the throttle body.
7. Turn the ignition switch ON (II).
8. Clear the DTC with the HDS.
9. Visually check the throttle valve operation.

   Does the valve temporarily move to the fully closed position?

   YES—Go to step 15.

   NO—Go to step 10.
10. Turn the ignition switch OFF.
11. Disconnect the throttle actuator control module 16P connector.
12. Check for continuity between throttle actuator control module 16P connector terminals No. 10 and No. 12.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 13.

NO—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 17 and recheck. If DTC P2135 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 18.

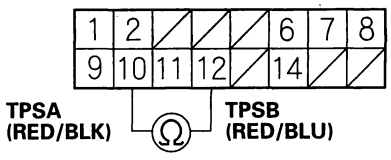
BACK

Protected by AR

13. Disconnect the throttle body 6P connector.

14. Check for continuity between throttle actuator control module 16P connector terminals No. 10 and No. 12.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wires between the TPSA line and the TPSB line, then go to step 17.

NO—Go to step 15.

15. Turn the ignition switch OFF.

16. Replace the throttle body (see page 11-367).

17. Reconnect all connectors.

18. Turn the ignition switch ON (II).

19. Reset the ECM/PCM with the HDS.

20. Do the ECM/PCM idle learn procedure (see page 11-316).

21. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2135 is indicated, check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete.■

DTC Troubleshooting (cont'd)

DTC P2138: APP Sensor A/B (TP Sensor D/E) Incorrect Voltage Correlation (2006 model)

1. Turn the ignition switch ON (II).
2. Clear the DTC with HDS.
3. Press the accelerator pedal to the floor.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2138 indicated?

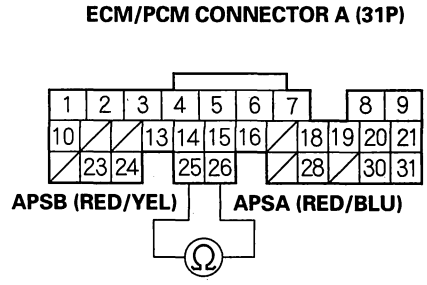
   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM. ■
5. Check APP SENSOR A and APP SENSOR B in the DATA LIST with the HDS.

   Are they the same voltage?

   YES—Go to step 6.

   NO—Go to step 11.
6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect APP sensor A/B 6P connector.
9. Disconnect ECM/PCM connector A (31P).
10. Check for continuity between ECM/PCM connector terminals A25 and A26.



Wire side of female terminals

   Is there continuity?

   YES—Repair short in the wires between the ECM/PCM terminals (A25, A26), then go to step 13.

   NO—Go to step 21.
11. Turn the ignition switch OFF.
12. Replace APP sensor A/B (see page 11-274).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Turn the ignition switch OFF.
18. Turn the ignition switch ON (II).
19. Press the accelerator pedal to the floor.

BACK

Protected by AR

20. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2138 is indicated, check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

21. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

22. Turn the ignition switch OFF.

23. Turn the ignition switch ON (II).

24. Press the accelerator pedal to the floor.

25. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2138 is indicated, check for poor connections or loose terminals at APP sensor A/B and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P2176: Throttle Actuator Control System Idle Position Not Learned
(2006 model)

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: If DTC P2135 is stored at the same time as DTC P2176, troubleshoot DTC P2135 first, then recheck for DTC P2176.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II), and wait 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2176 indicated?

   YES—Go to step 6.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then clean the throttle body (see page 11-357).■
6. Turn the ignition switch OFF.
7. Disconnect the intake air duct from the throttle body.
8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS.
10. Do the ETCS TEST in the INSPECTION MENU with the HDS.
11. Visually check the throttle valve operation.

    NOTE: Be careful not to pinch your finger. Keep hands away from the throttle valve.

    Does the throttle valve move to its fully closed position?

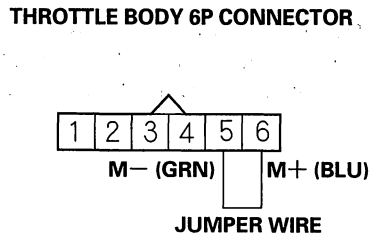
    YES—Go to step 12.

    NO—Go to step 13.
12. Check for sludge or carbon on the throttle valve.

    Is there sludge or carbon on the throttle valve?

    YES—Clean the throttle body (see page 11-357), then go to step 21 and recheck.

    NO—Go to step 18.
13. Turn the ignition switch OFF.
14. Disconnect the throttle body 6P connector.
15. Disconnect the throttle actuator control module 16P connector.
16. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.



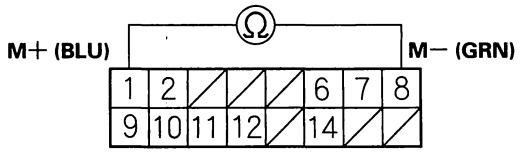
Wire side of female terminals

BACK

Protected by AR

17. Check for continuity between throttle actuator control module 16P connector terminals No. 1 and No. 8.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 20 and recheck. If DTC P2176 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 20.

NO—Repair open in the wires between the throttle body and the throttle actuator control module (motor drive lines), then go to step 20.

18. Turn the ignition switch OFF.
19. Replace the throttle body (see page 11-367).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the ECM/PCM with the HDS.
23. Do the ECM/PCM idle learn procedure (see page 11-316).
24. Turn the ignition switch OFF.
25. Turn the ignition switch ON (II), and wait 10 seconds.
26. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2176 is indicated, check for poor connections or loose terminals at the throttle body and the throttle actuator control module, then clean the throttle body (see page 11-357), and go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete.■

DTC Troubleshooting (cont'd)

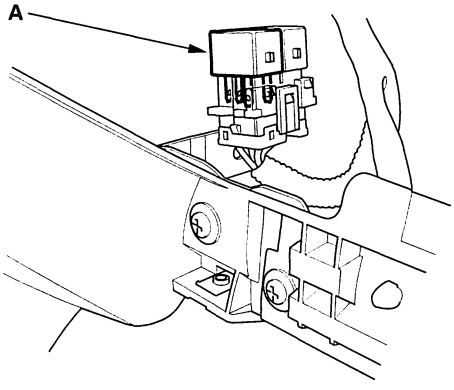
DTC P2552: Throttle Actuator Control Module Relay Malfunction
(2006 model)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.

   Is the RELAY Circuit OK?

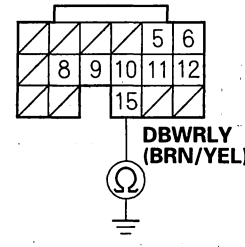
   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM.■

   NO—Go to step 4.
4. Turn the ignition switch OFF.
5. Jump the SCS line with the HDS.
6. Remove the throttle actuator control module relay (A).



7. Disconnect ECM/PCM connector D (17P).
8. Check for continuity between ECM/PCM connector terminal D15 and body ground.

ECM/PCM CONNECTOR D (17P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the throttle actuator control module relay and the ECM/PCM (D15), then go to step 10.

NO—Go to step 9.

9. Test the throttle actuator control module relay (see page 22-79).

   Is the relay OK?

   YES—Go to step 17.

   NO—Replace the throttle actuator control module relay, then go to step 10.

BACK

Protected by AR

10. Reconnect ECM/PCM connector D (17P).
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Turn the ignition switch OFF.
15. Turn the ignition switch ON (II), and wait 10 seconds.
16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2552 is indicated, check for poor connections or loose terminals at the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
17. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
18. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2552 is indicated, check for poor connections or loose terminals at the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC U0107: Lost Communication With Throttle Actuator Control Module (2006 model)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0107 indicated?

   YES—Check for poor connections or loose terminals at the throttle body, the throttle actuator control module, and the ECM/PCM, then go to step 50. If the connections are OK, go to step 6.

   NO—Go to step 4.
4. Start the engine.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC U0107 indicated?

   YES—Go to step 46.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the throttle body, the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM. ■
6. Clear the DTC with the HDS.
7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body.
9. Press the accelerator pedal to the floor.
10. Turn the ignition switch ON (II).
11. Check the throttle valve operation.

    Does it open after the throttle valve closes?

    YES—Go to step 12.

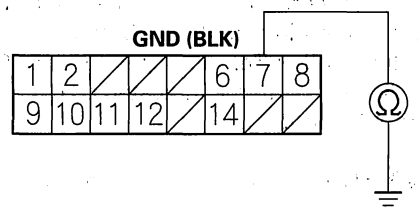
    NO—Go to step 13.
12. Check the throttle valve again.

    Does the throttle valve open fully?

    YES—Go to step 40.

    NO—Go to step 34.
13. Turn the ignition switch OFF.
14. Disconnect the throttle actuator control module 16P connector.
15. Check for continuity between throttle actuator control module 16P connector terminal No. 7 and body ground.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

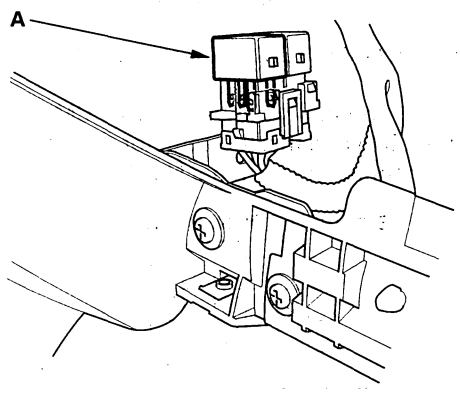
YES—Go to step 16.

NO—Repair open in the wire between the throttle body, the throttle actuator control module, and G101, then go to step 50.

BACK

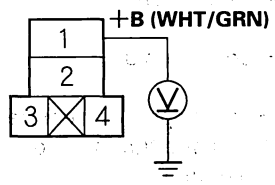
Protected by AR

16. Remove the throttle actuator control module relay (A).



17. Measure voltage between throttle actuator control module relay 4P connector terminal No. 1 and body ground.

THROTTLE ACTUATOR CONTROL MODULE RELAY 4P CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—Go to step 19.

NO—Go to step 18.

18. Check the No. 1 THROTTLE ACTUATOR CONTROL (15 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?

YES—Repair open in the wire between the throttle actuator control module relay (+B line) and the No. 1 THROTTLE ACTUATOR CONTROL (15 A) fuse, then go to step 50.

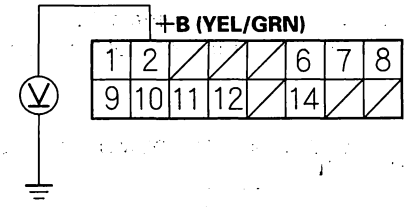
NO—Repair short in the wire between the throttle actuator control module relay (+B line) and the No. 1 THROTTLE ACTUATOR CONTROL (15 A) fuse. Also replace the fuse, then go to step 50.

19. Install the throttle actuator control module relay.

20. Measure voltage between throttle actuator control module 16P connector terminal No. 2 and body ground.

21. Turn the ignition switch ON (II).

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there battery voltage for about 2 seconds?

YES—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 50 and recheck. If DTC U0107 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 50.

NO—Go to step 22.

22. Turn the ignition switch OFF.

23. Remove the throttle actuator control module relay (A).

Is there continuity?

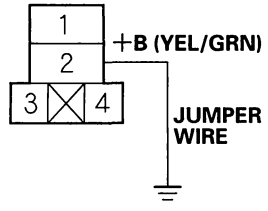
YES—Repair short in the wire between the throttle actuator control module and the throttle actuator control module relay (+B line), then go to step 50.

NO—Go to step 32.

32. Connect throttle actuator control module relay 4P connector terminal No. 2 to body ground with a jumper wire.

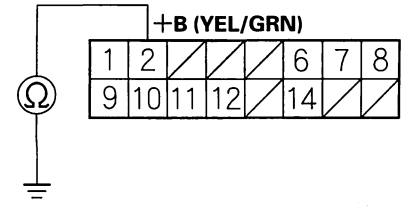
THROTTLE ACTUATOR CONTROL MODULE RELAY 4P CONNECTOR



Wire side of female terminals

33. Check for continuity between throttle actuator control module 16P connector terminal No. 2 and body ground.

THROTTLE ACTUATOR CONTROL MODULE 16P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 56.

NO—Repair open in the wire between the throttle actuator control module and the throttle actuator control module relay (+B line), then go to step 50.

34. Turn the ignition switch OFF.

35. Jump the SCS line with the HDS.

36. Disconnect the throttle actuator control module 16P connector.

37. Disconnect ECM/PCM connector B (24P).

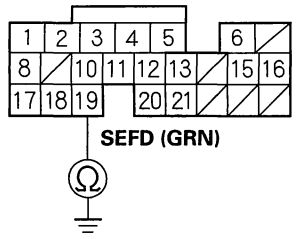
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

38. Check for continuity between ECM connector terminal B19 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

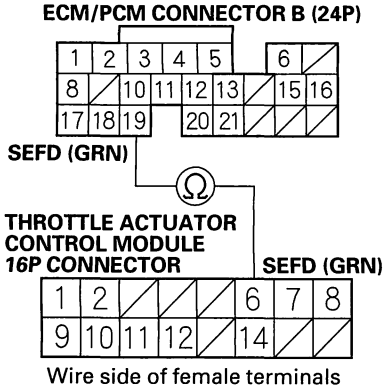
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B19) and the throttle actuator control module, then go to step 50.

NO—Go to step 39.

39. Check for continuity between ECM/PCM connector terminal B19 and throttle actuator control module 16P connector terminal No. 6.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 50 and recheck. If DTC U0107 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 50. If DTC U0107 is indicated, go to step 56.

NO—Repair open in the wire between the ECM/PCM (B19) and the throttle actuator control module, then go to step 50.

40. Turn the ignition switch OFF.

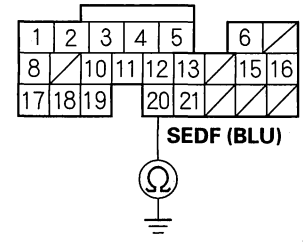
41. Jump the SCS line with the HDS.

42. Disconnect the throttle actuator control module 16P connector.

43. Disconnect ECM/PCM connector B (24P).

44. Check for continuity between ECM/PCM connector terminal B20 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

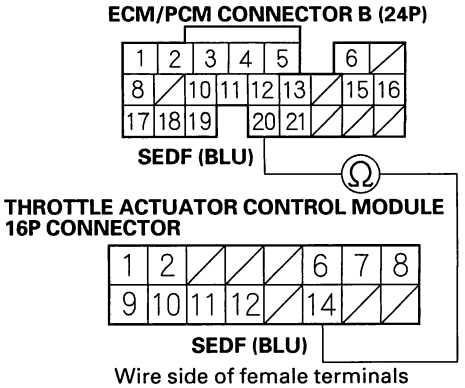
YES—Repair short in the wire between the ECM/PCM (B20) and the throttle actuator control module, then go to step 50.

NO—Go to step 45.

BACK

Protected by AR

45. Check for continuity between ECM/PCM connector terminal B20 and throttle actuator control module 16P connector terminal No. 14.



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good throttle actuator control module (see page 11-274), then go to step 50 and recheck. If DTC U0107 is not indicated, replace the original throttle actuator control module (see page 11-274), then go to step 50. If DTC U0107 is indicated, go to step 56.

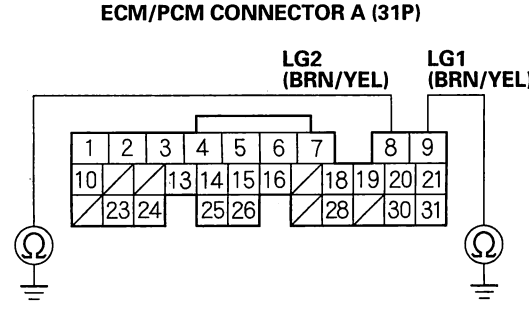
NO—Repair open in the wire between the ECM/PCM (B20) and the throttle actuator control module, then go to step 50.

46. Turn the ignition switch OFF.

47. Jump the SCS line with the HDS.

48. Disconnect ECM/PCM connector A (31P).

49. Check for continuity between body ground and ECM/PCM connector terminals A8 and A9 individually.



Wire side of female terminals

Is there continuity?

YES—Check for poor connections or loose terminals at the throttle body, the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM. Then reconnect all connectors, and go to step 6.

NO—Repair open in the wire between the ECM/PCM (A8, A9) and G101, then go to step 50.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

50. Turn the ignition switch OFF.
51. Reconnect all connectors.
52. Turn the ignition switch ON (II).
53. Reset the ECM/PCM with the HDS.
54. Do the ECM/PCM idle learn procedure (see page 11-316).
55. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC U0107 is indicated, check for poor connections or loose terminals at the throttle body, the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
56. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
57. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC U0107 is indicated, check for poor connections or loose terminals at the throttle body, the throttle actuator control module relay, the throttle actuator control module, and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

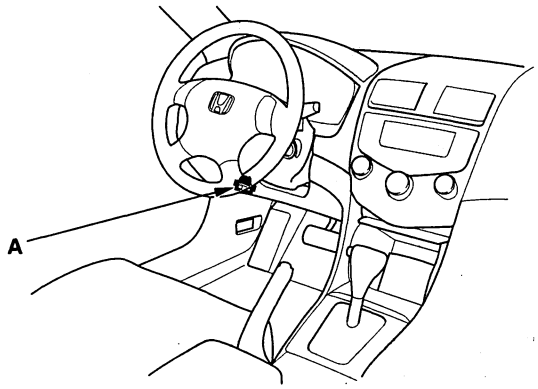
APP Sensor Signal Inspection

NOTE:
- Check for Temporary DTCs or DTCs with the HDS before doing this procedure. If any DTCs are indicated, troubleshoot them first, then do this procedure.
- Press the accelerator pedal several times to check its operation. If it does not operate properly, check the pedal, the throttle cable, and the APP sensor individually. If you find a problem in one of them, replace the part(s) that caused the problem.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



2. Turn the ignition switch ON (II).

3. Make sure the accelerator pedal is not pressed, then check the APP SENSOR in the DATA LIST with the HDS.

   - If it is below 2 %, the APP sensor is OK.
   - If it is above 2 %, adjust the throttle cable (see page 11-365), then go to step 4.

4. Make sure the accelerator pedal is not pressed, then check the APP SENSOR in the DATA LIST with the HDS.

   - If it is below 2 %, the APP sensor is OK.
   - If it is above 2 %, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then go to step 5.

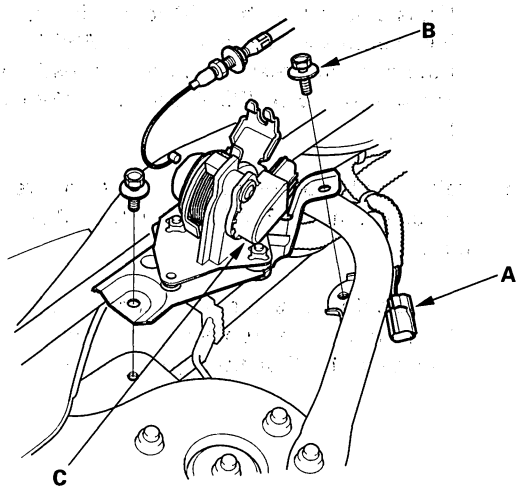
5. Make sure the accelerator pedal is not pressed, then check the APP SENSOR in the DATA LIST with the HDS.

   - If it is below 2 %, the APP sensor is OK.
   - If it is above 2 %, replace the APP sensor (see page 11-274), then go to step 1.

Protected by AR

APP Sensor Replacement

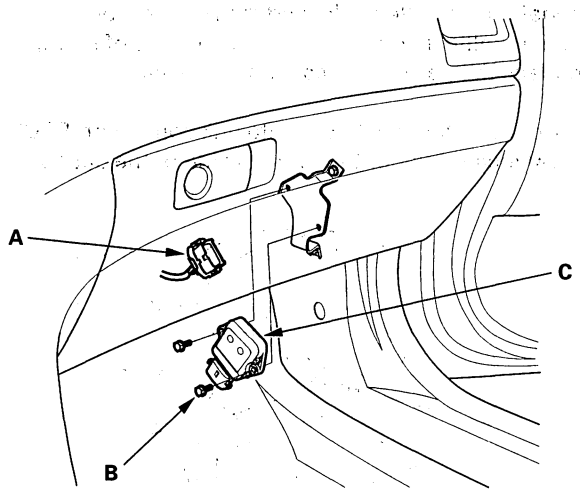
1. Remove the throttle cable (see page 11-365).
2. Disconnect the accelerator pedal position (APP) sensor 6P connector (A).



3. Remove the bolts (B) and the APP sensor (C).
4. Install the sensor in the reverse order of removal.

Throttle Actuator Control Module Replacement

1. Remove the right kick panel; 2-door (see page 20-90), 4-door (see page 20-91).
2. Disconnect the throttle actuator control module 16P connector (A).



3. Remove the bolts (B) and the throttle actuator control module (C).
4. Install the control module in the reverse order of removal.

DTC Troubleshooting

DTC P0010: VTC Oil Control Solenoid Valve Malfunction

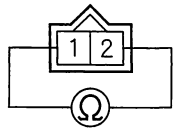
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the VTC TEST in the INSPECTION MENU with the HDS.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0010 indicated?

   YES—Go to step 6.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM. ■
6. Turn the ignition switch OFF.
7. Disconnect the VTC oil control solenoid valve 2P connector.
8. Measure resistance between VTC oil control solenoid valve 2P connector terminals No. 1 and No. 2.

VTC OIL CONTROL SOLENOID VALVE 2P CONNECTOR



Terminal side of male terminals

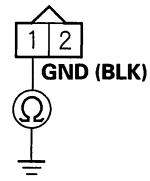
Is there 6.75—8.25 Ω at room temperature?

YES—Go to step 9.

NO—Go to step 15.

9. Check for continuity between VTC oil control solenoid valve 2P connector terminal No. 1 and body ground.

VTC OIL CONTROL SOLENOID VALVE 2P CONNECTOR



Wire side of female terminals

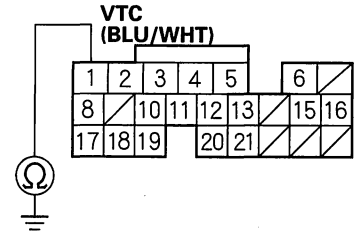
Is there continuity?

YES—Go to step 10.

NO—Repair open in the wire between the VTC oil control solenoid valve and G101, then go to step 16.

10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector B (24P).
12. Check for continuity between ECM/PCM connector terminal B1 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B1) and the VTC oil control solenoid valve, then go to step 16.

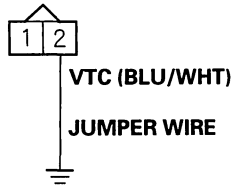
NO—Go to step 13.

BACK

Protected by AR

13. Connect VTC oil control solenoid valve 2P connector terminal No. 2 to body ground with a jumper wire.

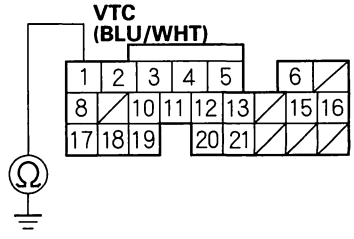
VTC OIL CONTROL SOLENOID VALVE 2P CONNECTOR



Wire side of female terminals

14. Check for continuity between ECM/PCM connector terminal B1 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Go to step 23.

NO—Repair open in the wire between the ECM/PCM (B1) and the VTC oil control solenoid valve, then go to step 16.

15. Replace the VTC oil control solenoid valve (see page 11-295).

16. Reconnect all connectors.

17. Turn the ignition switch ON (II).

18. Reset the ECM/PCM with the HDS.

19. Do the ECM/PCM idle learn procedure (see page 11-316).

20. Do the VTC TEST in the INSPECTION MENU with the HDS.

21. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0010 is indicated, check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 22.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

22. Monitor the OBD STATUS for DTC P0010 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 20 and recheck.

23. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

24. Do the VTC TEST in the INSPECTION MENU with the HDS.

25. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0010 is indicated, check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0011: VTC System Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Watch the low oil pressure indicator with the engine running.

   Is the low oil pressure indicator on?

   YES—Check the oil pressure (see page 8-6), then go to step 15.

   NO—Go to step 5.
5. Do the VTC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Go to step 6.

   NO—Go to step 9.
6. Test-drive at a steady speed between 19—38 mph (30—60 km/h) for 10 minutes.
7. Check the VTC STATUS in the DATA LIST with the HDS.

   Does it indicate ON?

   YES—Go to step 8.

   NO—Go to step 6 and recheck.
8. Monitor the OBD STATUS for DTC P0011 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 9.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates NOT COMPLETED, go to step 5 and recheck.
9. Turn the ignition switch OFF.
10. Remove the power steering pump (see page 17-14) and the auto-tensioner (see page 4-38).
11. Remove the VTC strainer (A), and check it for clogging.

   Is the strainer OK?

   YES—Go to step 12.

   NO—Clean the VTC strainer, replace the engine oil filter and the engine oil, then go to step 14.
12. Test the VTC oil control solenoid valve (see page 11-295).

   Is the VTC oil control solenoid valve OK?

   YES—Go to step 13.

   NO—Replace the VTC oil control solenoid valve (see page 11-295), then go to step 14.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. Inspect the VTC actuator (see page 6-8).

    Is the VTC actuator OK?

    YES—Go to step 14.

    NO—Replace the VTC actuator (see page 6-31), then go to step 14.

14. Turn the ignition switch ON (II).

15. Reset the ECM/PCM with the HDS.

16. Clear the CKP pattern with the HDS.

17. Do the ECM/PCM idle learn procedure (see page 11-316).

18. Do the CKP pattern learn procedure (see page 11-4).

19. Do the VTC TEST in the INSPECTION MENU with the HDS.

20. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0011 is indicated, check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 21.

21. Monitor the OBD STATUS for DTC P0011 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 19 and recheck.

DTC P0340: CMP Sensor A No Signal

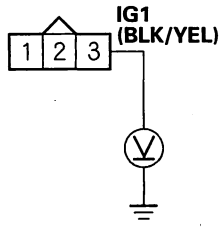
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0340 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at CMP sensor A and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Disconnect the CMP sensor A 3P connector.
7. Turn the ignition switch ON (II).
8. Measure voltage between CMP sensor A 3P connector terminal No. 3 and body ground.

CMP SENSOR A 3P CONNECTOR



Wire side of female terminals

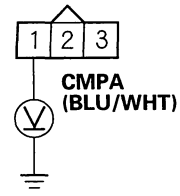
Is there battery voltage?

YES—Go to step 9.

NO—Repair open in the wire between the No. 18 ACG (15 A) fuse in the under-dash fuse/relay box and CMP sensor A, then go to step 18.

9. Measure voltage between CMP sensor A 3P connector terminal No. 1 and body ground.

CMP SENSOR A 3P CONNECTOR



Wire side of female terminals

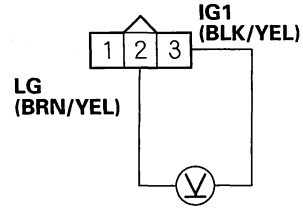
Is there about 5 V?

YES—Go to step 10.

NO—Go to step 11.

10. Measure voltage between CMP sensor A 3P connector terminals No. 2 and No. 3.

CMP SENSOR A 3P CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—Go to step 16.

NO—Repair open in the wire between CMP sensor A and G101, then go to step 18.

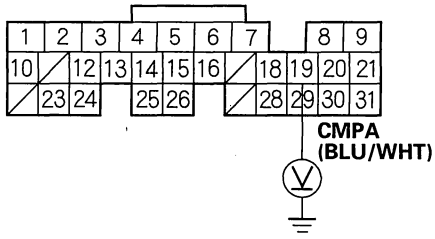
Protected by AR

DTC Troubleshooting (cont'd)

11. Measure voltage between ECM/PCM connector terminal A19 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

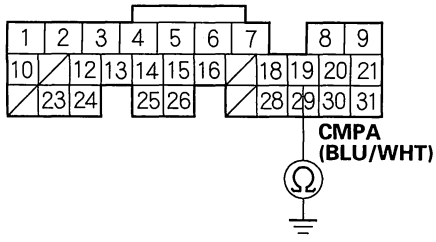
Is there about 5 V?

YES—Repair open in the wire between the ECM/PCM (A19) and CMP sensor A, then go to step 18.

NO—Go to step 12.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect ECM/PCM connector A (31P).
15. Check for continuity between ECM/PCM connector terminal A19 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A19) and CMP sensor A, then go to step 18.

NO—Go to step 24.

16. Turn the ignition switch OFF.
17. Replace CMP sensor A (see page 11-297).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure (see page 11-316).
22. Start the engine.
23. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0340 is indicated, check for poor connections or loose terminals at CMP sensor A and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

24. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
25. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0340 is indicated, check for poor connections or loose terminals at CMP sensor A and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0341: CMP Sensor and CKP Sensor Incorrect Phase Detected

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive at a steady speed between 19—38 mph (30—60 km/h) for 10 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0341 indicated?

   YES—Go to step 9.

   NO—Go to step 5.
5. Do the VTC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Go to step 6.

   NO—Go to step 9.
6. Test-drive at a steady speed between 19—38 mph (30—60 km/h) for 10 minutes.
7. Check the VTC STATUS in the DATA LIST with the HDS.

   Does it indicate ON?

   YES—Go to step 8.

   NO—Go to step 6 and recheck.
8. Monitor the OBD STATUS for DTC P0341 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 9.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 6 and recheck.
9. Turn the ignition switch OFF.
10. Test the VTC oil control solenoid valve (see page 11-295).

    Is the VTC oil control solenoid valve OK?

    YES—Go to step 11.

    NO—Replace the VTC oil control solenoid valve (see page 11-295), then go to step 14.
11. Check the camshaft timing (see step 1 on page 6-15).

    Is the camshaft timing OK?

    YES—Go to step 12.

    NO—Reset the camshaft timing (see page 6-15), then go to step 14.
12. Check for damage or stretch at the cam chain (see page 6-3).

    Is the cam chain damaged?

    YES—Replace the cam chain (see page 6-12), then go to step 14.

    NO—Go to step 13.
13. Inspect the VTC actuator (see page 6-8).

    Is the actuator OK?

    YES—Go to step 14.

    NO—Replace the VTC actuator (see page 6-31), then go to step 14.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Clear the CKP pattern with the HDS.
17. Do the ECM/PCM idle learn procedure (see page 11-316).
18. Do the CKP pattern learn procedure (see page 11-4).
19. Test-drive at a steady speed between 19—38 mph (30—60 km/h) for 10 minutes.
20. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0341 is indicated, check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 21.
21. Monitor the OBD STATUS for DTC P0341 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the VTC oil control solenoid valve and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 19 and recheck.

DTC P0344: CMP Sensor A Intermittent Interruption

1. Record all freeze data and any on-board snapshot with the HDS.
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle 10 seconds.
4. Check the CMP NOISE A COUNT in the DATA LIST with the HDS.

   Are 0 counts indicated?

   YES—Go to step 7.

   NO—Go to step 5.
5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

   - Engine speed
   - Vehicle speed
6. Check the CMP NOISE A COUNT in the DATA LIST with the HDS.

   Are 0 counts indicated?

   YES—Go to step 7.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at CMP sensor A and the ECM/PCM. ■
7. Check for poor or loose connections and terminals at these locations:

   - CMP sensor A
   - ECM/PCM
   - Engine ground
   - Body ground

   Are the connections and terminals OK?

   YES—Go to step 8.

   NO—Repair the connectors or terminals, then go to step 11.
8. Check for damage on the CMP sensor A pulse plate (see page 6-30).

   Is the pulse plate damaged?

   YES—Replace the CMP sensor A pulse plate (see page 6-30), then go to step 11.

   NO—Go to step 9.
9. Turn the ignition switch OFF.
10. Replace CMP sensor A (see page 11-297).
11. Turn the ignition switch ON (II).
12. Reset the ECM/PCM with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Start the engine, and let it idle 10 seconds.
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0344 is indicated, check for poor connections or loose terminals at CMP sensor A and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

DTC Troubleshooting (cont'd)

DTC P1009: VTC Advance Malfunction

NOTE: If DTC P0341 is stored at the same time as DTC P1009, troubleshoot DTC P1009 first, then recheck for DTC P0341.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P1009 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time.■
5. Turn the ignition switch OFF.
6. Remove the power steering pump (see page 17-14) and auto-tensioner (see page 4-38).
7. Remove the VTC strainer (A), and check it for clogging.

   Is the strainer OK?

   YES—Go to step 8.

   NO—Clean the VTC strainer, replace the engine oil filter and the engine oil, then go to step 10.
8. Test the VTC oil control solenoid valve (see page 11-295).

   Is the valve OK?

   YES—Go to step 9.

   NO—Replace the VTC oil control solenoid valve (see page 11-295), then go to step 10.
9. Inspect the VTC actuator (see page 6-8).

   Is the actuator OK?

   YES—Check the VTC system oil passages, then go to step 10.

   NO—Replace the VTC actuator (see page 6-31), then go to step 10.
10. Turn the ignition switch ON (II).
11. Reset the ECM/PCM with the HDS.
12. Clear the CKP pattern with the HDS.
13. Do the ECM/PCM idle learn procedure (see page 11-316).
14. Do the CKP pattern learn procedure (see page 11-4).
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P1009 is indicated, check the oil passages for at the VTC system, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete.■

DTC P2646: Rocker Arm Oil Pressure Switch (VTEC Oil Pressure Switch) Circuit Low Voltage

Special Tools Required
- Pressure gauge adapter 07NAJ-P07010A
- A/T low pressure gauge w/panel 07406-0070300
- A/T pressure hose 07406-0020201
- A/T pressure hose, 2,210 mm 07MAJ-PY4011A
- A/T pressure adapter 07MAJ-PY40120
- Oil pressure hose 07ZAJ-S5A0200

1. Check the engine oil level.

   Is the level OK?

   YES—Go to step 2.

   NO—Adjust the engine oil to the proper level, then go to step 19.

2. Turn the ignition switch ON (II).

3. Clear the DTC with the HDS.

4. Do the VTEC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch), the rocker arm oil control solenoid (VTEC solenoid valve), and the ECM/PCM.■

   NO—Go to step 5.

5. Turn the ignition switch OFF.

6. Disconnect the rocker arm oil pressure switch (VTEC oil pressure switch) 2P connector.

7. Turn the ignition switch ON (II).

8. Check the VTEC PRES SW in the DATA LIST with the HDS.

   Is SWITCH ON indicated?

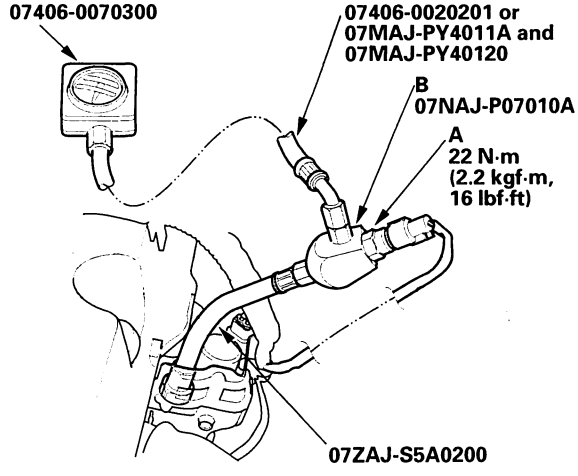
   YES—Go to step 14.

   NO—Go to step 9.

9. Turn the ignition switch OFF.

10. Remove the rocker arm oil pressure switch (VTEC oil pressure switch) (A) and install the special tools as shown, then install the rocker arm oil pressure switch (VTEC oil pressure switch) to the oil pressure gauge adapter (B).

    NOTE: Install the switch in the reverse order of removal with a new O-ring.



11. Start the engine.

12. Do the VTEC TEST in the INSPECTION MENU with the HDS.

13. Check the oil pressure.

    Does the oil pressure increase to at least 392 kPa (56.9 psi, 4.0 kgf/cm²)?

    YES—Replace the rocker arm oil pressure switch (VTEC oil pressure switch) (see page 11-298), then go to step 18.

    NO—Inspect the VTEC system. If it is OK, replace the rocker arm oil control solenoid (VTEC solenoid valve) (see page 11-297), then go to step 18.

14. Turn the ignition switch OFF.

15. Jump the SCS line with the HDS.

16. Disconnect ECM/PCM connector B (24P).

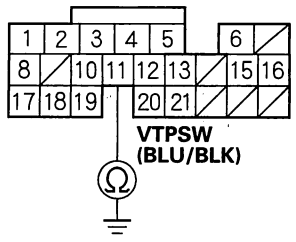
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

17. Check for continuity between ECM/PCM connector terminal B11 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B11) and the rocker arm oil pressure switch (VTEC oil pressure switch), then go to step 18.

NO—Go to step 25.

18. Reconnect all connectors.

19. Turn the ignition switch ON (II).

20. Reset the ECM/PCM with the HDS.

21. Do the ECM/PCM idle learn procedure (see page 11-316).

22. Do the VTEC TEST in the INSPECTION MENU with the HDS.

23. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2646 is indicated, check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch), the rocker arm oil control solenoid (VTEC solenoid valve), and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 24.

24. Monitor the OBD STATUS for DTC P2646 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete.■

NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 22 and recheck.

25. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

26. Do the VTEC TEST in the INSPECTION MENU with the HDS.

27. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2646 is indicated, check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch), the rocker arm oil control solenoid (VTEC solenoid valve), and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC P2647: Rocker Arm Oil Pressure Switch (VTEC Oil Pressure Switch) Circuit High Voltage

1. Check the engine oil level.

   Is the level OK?

   YES—Go to step 2.

   NO—Adjust the engine oil to the proper level, then go to step 14.

2. Turn the ignition switch ON (II).

3. Clear the DTC with the HDS.

4. Do the VTEC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch) and the ECM/PCM.■

   NO—Go to step 5.

5. Check the result of step 4.

   - VTEC Switch Failure
   - VTEC Switch Open
   - VTEC Switch SIG Line Open
   - VTEC Switch GND Line Open

   Is the test result any of the above?

   YES—Go to step 6.

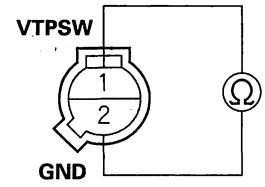
   NO—Check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch). If it is OK, replace the rocker arm oil control solenoid (VTEC solenoid valve) (see page 11-297), then go to step 14.

6. Turn the ignition switch OFF.

7. Disconnect the rocker arm oil pressure switch (VTEC oil pressure switch) 2P connector.

8. At the rocker arm oil pressure switch (VTEC oil pressure switch), check for continuity between rocker arm oil pressure switch (VTEC oil pressure switch) 2P connector terminals No. 1 and No. 2.

ROCKER ARM OIL PRESSURE SWITCH (VTEC OIL PRESSURE SWITCH) 2P CONNECTOR



Terminal side of male terminals

Is there continuity?

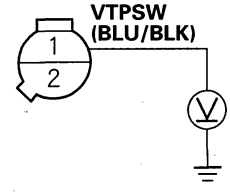
YES—Go to step 9.

NO—Replace the rocker arm oil pressure switch (VTEC oil pressure switch) (see page 11-298), then go to step 13.

9. Turn the ignition switch ON (II).

10. Measure voltage between rocker arm oil pressure switch (VTEC oil pressure switch) 2P connector terminal No. 1 and body ground.

ROCKER ARM OIL PRESSURE SWITCH (VTEC OIL PRESSURE SWITCH) 2P CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—Repair open in the wire between the rocker arm oil pressure switch (VTEC oil pressure switch) and G101, then go to step 13.

NO—Go to step 11.

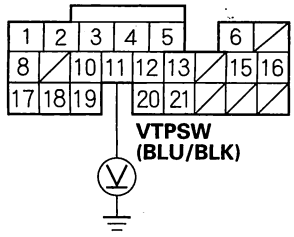
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

11. Measure voltage between ECM/PCM connector terminal B11 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there battery voltage?

YES—Repair open in the wire between the ECM/PCM (B11) and the rocker arm oil pressure switch (VTEC oil pressure switch), then go to step 12.

NO—Go to step 19.

12. Turn the ignition switch OFF.

13. Reconnect the rocker arm oil pressure switch (VTEC oil pressure switch) 2P connector.

14. Turn the ignition switch ON (II).

15. Reset the ECM/PCM with the HDS.

16. Do the ECM/PCM idle learn procedure (see page 11-316).

17. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2647 is indicated, check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 18.

18. Monitor the OBD STATUS for DTC P2647 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete. ■

NO—If the screen indicates FAILED, then go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 16 and recheck.

19. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

20. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2647 is indicated, check for poor connections or loose terminals at the rocker arm oil pressure switch (VTEC oil pressure switch) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P2648: Rocker Arm Oil Control Solenoid (VTEC Solenoid Valve) Circuit Low Voltage

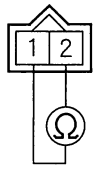
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VTEC TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid (VTEC solenoid valve) and the ECM/PCM. ■

   NO—Go to step 4.
4. Turn the ignition switch OFF.
5. Disconnect the rocker arm oil control solenoid (VTEC solenoid valve) 2P connector.
6. Measure resistance between rocker arm oil control solenoid (VTEC solenoid valve) 2P connector terminals No. 1 and No. 2.

ROCKER ARM OIL CONTROL SOLENOID (VTEC SOLENOID VALVE) 2P CONNECTOR



Terminal side of male terminals

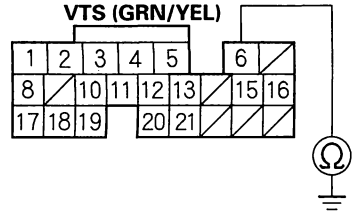
Is there 14—30 Ω at room temperature?

YES—Go to step 7.

NO—Go to step 10.

7. Jump the SCS line with the HDS.
8. Disconnect ECM/PCM connector B (24P).
9. Check for continuity between ECM/PCM connector terminal B6 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B6) and the rocker arm oil control solenoid (VTEC solenoid valve), then go to step 11.

NO—Go to step 18.

10. Replace the rocker arm oil control solenoid (VTEC solenoid valve) (see page 11-297).
11. Reconnect all connectors.
12. Turn the ignition switch ON (II).
13. Reset the ECM/PCM with the HDS.
14. Do the ECM/PCM idle learn procedure (see page 11-316).
15. Do the VTEC TEST in the INSPECTION MENU with the HDS.
16. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2648 is indicated, check for poor connections or loose terminals at the rocker arm oil control solenoid (VTEC solenoid valve) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 17.

DTC P2649: Rocker Arm Oil Control Solenoid (VTEC Solenoid Valve) Circuit High Voltage

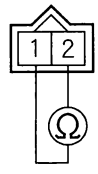
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P2649 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid (VTEC solenoid valve) and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Disconnect the rocker arm oil control solenoid (VTEC solenoid valve) 2P connector.
7. Measure resistance between rocker arm oil control solenoid (VTEC solenoid valve) 2P connector terminals No. 1 and No. 2.

ROCKER ARM OIL CONTROL SOLENOID (VTEC SOLENOID VALVE) 2P CONNECTOR



Terminal side of male terminals

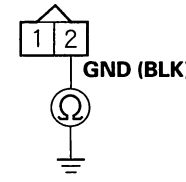
Is there 14—30 Ω at room temperature?

YES—Go to step 8.

NO—Go to step 13.

8. Check for continuity between rocker arm oil control solenoid (VTEC solenoid valve) 2P connector terminal No. 2 and body ground.

ROCKER ARM OIL CONTROL SOLENOID (VTEC SOLENOID VALVE) 2P CONNECTOR



Wire side of female terminals

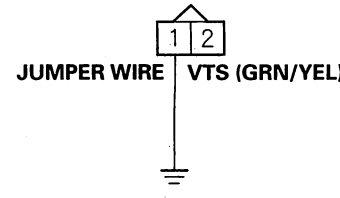
Is there continuity?

YES—Go to step 9.

NO—Repair open in the wire between the rocker arm oil control solenoid (VTEC solenoid valve) and G101, then go to step 14.

9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector B (24P).
11. Connect rocker arm oil control solenoid (VTEC solenoid valve) 2P connector terminal No. 1 to body ground with a jumper wire.

ROCKER ARM OIL CONTROL SOLENOID (VTEC SOLENOID VALVE) 2P CONNECTOR



Wire side of female terminals

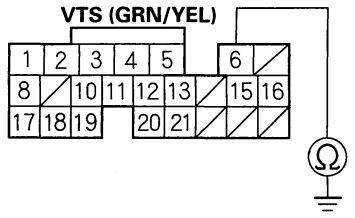
DTC Troubleshooting (cont'd)

12. Check for continuity between ECM/PCM connector terminal B6 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Go to step 20.

NO—Repair open in the wire between the ECM/PCM (B6) and the rocker arm oil control solenoid (VTEC solenoid valve), then go to step 14.

13. Replace the rocker arm oil control solenoid (VTEC solenoid valve) (see page 11-297).

14. Reconnect all connectors.

15. Turn the ignition switch ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure (see page 11-316).

18. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2649 is indicated, check for poor connections or loose terminals at the rocker arm oil control solenoid (VTEC solenoid valve) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 19.

19. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete.■

NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 17 and recheck.

20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

21. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P2647 is indicated, check for poor connections or loose terminals at the rocker arm oil control solenoid (VTEC solenoid valve) and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

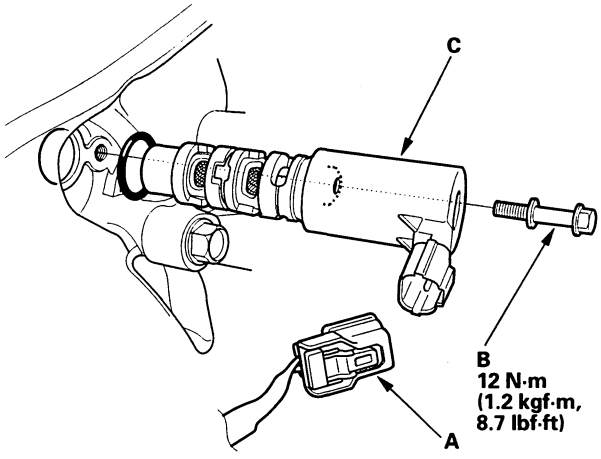
VTC Oil Control Solenoid Valve Removal/Test/Installation

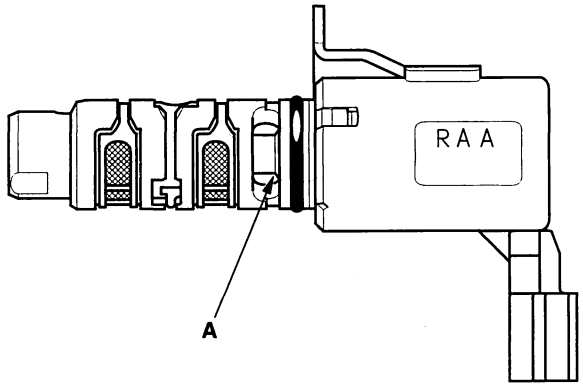
1. Disconnect the VTC oil control solenoid valve connector (A).



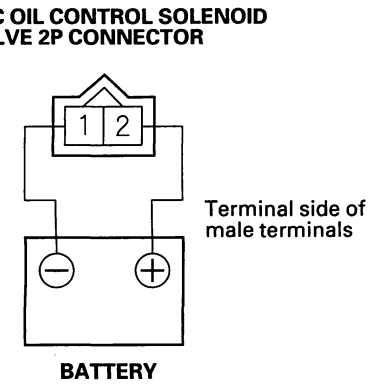
2. Remove the bolt (B) and the VTC oil control solenoid valve (C).

3. Check the VTC oil control solenoid valve for sticking and the solenoid valve filter for clogging. If the valve is stuck or clogged, replace the VTC oil control solenoid valve.

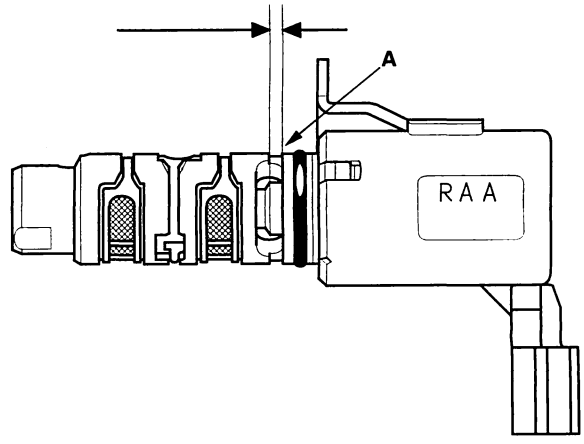
4. Check clearance between the port (advance side) and the valve. Make sure the valve (A) closes fully.



5. Connect the battery positive terminal to VTC oil control solenoid valve 2P connector terminal No. 2.



6. Connect the battery negative terminal to VTC oil control solenoid valve 2P connector terminal No. 1. Clearance (A) should be at least 1/16 in. (1.8 mm). If the valve does not open, replace it, then go to step 7.

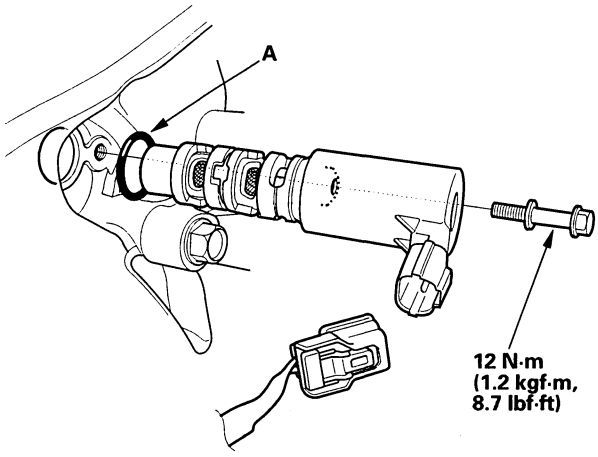


(cont'd)

Protected by AR

VTC Oil Control Solenoid Valve Removal/Test/Installation (cont'd)

7. Replace the VTC valve O-ring (A).



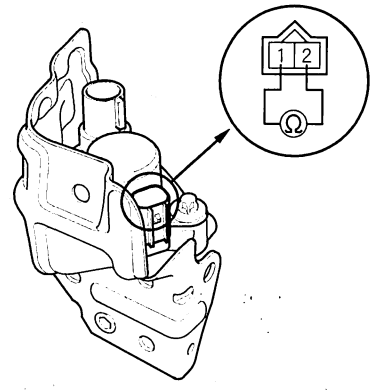
8. Coat a new O-ring with engine oil, then install it.
9. Clean and dry the mating surface of the valve.
10. Install the valve.

NOTE: Do not install the valve while wearing cloth fibrous gloves. Be careful not to contaminate the cylinder head opening.

Rocker Arm Oil Control Solenoid (VTEC Solenoid Valve) Inspection

1. Disconnect the rocker arm oil control solenoid (VTEC solenoid valve) connector.
2. Measure resistance between rocker arm oil control solenoid (VTEC solenoid valve) 2P connector terminals No. 1 and No. 2.

Resistance: 14—30 Ω



3. If the resistance is within specifications, remove the rocker arm oil pressure switch (VTEC oil pressure switch) connector (A), cover (B), and the rocker arm oil control solenoid (VTEC solenoid valve) (C), then check the rocker arm oil control solenoid (VTEC solenoid valve) filter (D) for clogging. If it is clogged, replace the rocker arm oil control solenoid (VTEC solenoid valve) filter, the engine oil filter, and the engine oil.

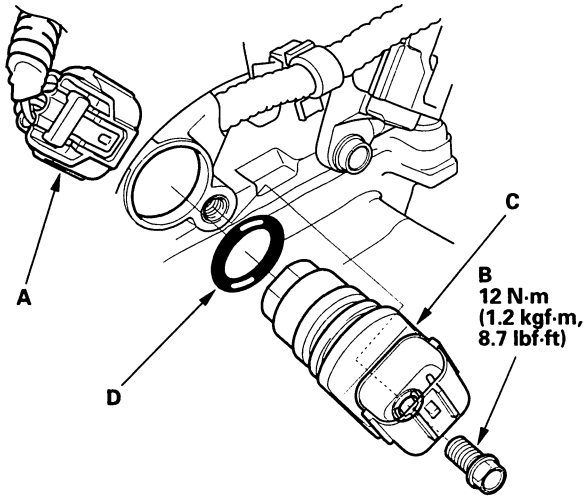
CMP Sensor A Replacement

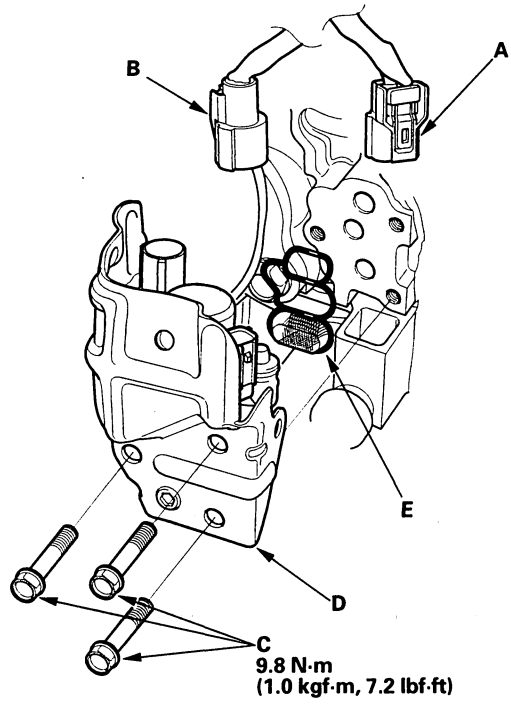
1. Remove the air cleaner (see page 11-361).
2. Remove the EGR valve (see page 11-386).
3. Disconnect the CMP sensor A connector (A).



4. Remove the bolt (B).
5. Remove CMP sensor A (C) from the intake camshaft side of the cylinder head.
6. Install the sensor in the reverse order of removal with a new O-ring (D).

Rocker Arm Oil Control Solenoid (VTEC Solenoid Valve) Assembly Removal/Installation

1. Disconnect the rocker arm oil control solenoid (VTEC solenoid valve) connector (A) and the rocker arm oil pressure switch (VTEC oil pressure switch) connector (B).

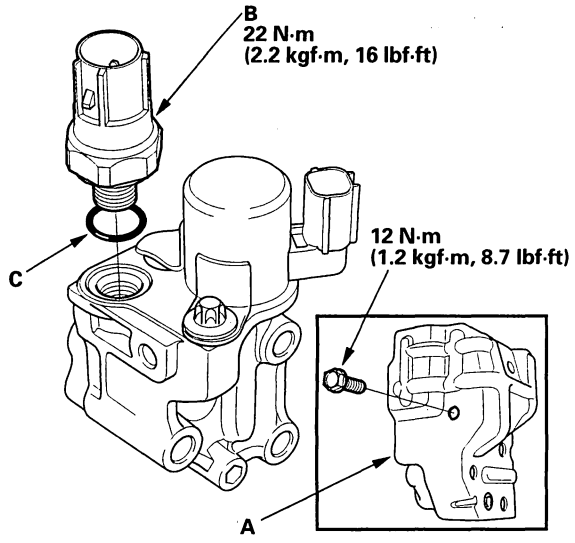


2. Remove the bolts (C).
3. Remove the rocker arm oil control solenoid (VTEC solenoid valve) assembly (D).
4. Install the valve in the reverse order of removal with a new rocker arm oil control solenoid (VTEC solenoid valve) filter (E).

Protected by AR

Rocker Arm Oil Pressure Switch (VTEC Oil Pressure Switch) Removal/ Installation

1. Remove the rocker arm oil control solenoid (VTEC solenoid valve) assembly (see page 11-297).
2. Remove the cover (A).



3. Remove the rocker arm oil pressure switch (VTEC oil pressure switch) (B).
4. Install the switch in the reverse order of removal with a new O-ring (C).

DTC Troubleshooting

DTC P0506: Idle Control System RPM Lower Than Expected (2003-2005 models)

NOTE: If DTC P0511 is stored at the same time as DTC P0506, troubleshoot DTC P0511 first, then recheck for DTC P0506.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
4. Check this data in the DATA LIST with the HDS:
   - Engine coolant temperature above 158 °F (70 °C)
   - Intake air temperature above 18 °F (—7.6 °C)
   - Vehicle speed is 0 mph (0 km/h)
   - FSS is CLOSED
   - ST FUEL TRIM between 0.65 and 1.47
5. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAC valve and the ECM/PCM. If it is EXECUTING, keep the engine idling until a result comes on. If the screen indicates OUT OF CONDITION, recheck with a different load condition (electrical, A/C, gear position, etc.), then go to step 3.
6. Clear the DTC with the HDS.
7. Do the IACV TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Check the A/C system and the power steering system, then go to step 10.

   NO—Go to step 8.
8. Turn the ignition switch OFF.
9. Replace the IAC valve (see page 11-368).
10. Turn the ignition switch ON (II).
11. Reset the ECM/PCM with the HDS.
12. Do the ECM/PCM idle learn procedure (see page 11-316).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
14. Check this data in the DATA LIST with the HDS:
    - Engine coolant temperature above 158 °F (70 °C)
    - Intake air temperature above 18 °F (—7.6 °C)
    - Vehicle speed is 0 mph (0 km/h)
    - FSS is CLOSED
    - ST FUEL TRIM between 0.65 and 1.47
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0506 is indicated, check for poor connections or loose terminals at the IAC valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 16.
16. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the IAC valve and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep the engine idling until a result comes on. If the screen indicates OUT OF CONDITION, recheck with a different load condition (electrical, A/C, gear position, etc.), then go to step 13.

DTC P0506: Idle Control System RPM Lower Than Expected
(2006 model)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check this data in the DATA LIST with the HDS:
   - Engine coolant temperature above 156 °F (70 °C)
   - Intake air temperature above 32 °F (0 °C)
   - Vehicle speed is 0 mph (0 km/h)
   - ST FUEL TRIM between 0.73 and 1.47
   - FSS is CLOSED
5. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 6.

   NO—If the screen indicates PASSED, go to step 15. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 4 and recheck.
6. Remove the intake air duct from the throttle body.
7. Check for dirt, carbon, or damage in the throttle bore.

   Is there dirt, carbon, or damage in the throttle bore?

   YES—If there is dirt or carbon, clean the throttle body (see page 11-357). Also check for a damage at the air cleaner element (see page 11-361), then go to step 9. If there is damage in the throttle bore, go to step 8.

   NO—Check the A/C system or power steering system, then go to step 17.
8. Replace the throttle body (see page 11-367).
9. Reset the ECM/PCM with the HDS.
10. Do the ECM/PCM idle learn procedure (see page 11-316).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Check this data in the DATA LIST with the HDS:
    - Engine coolant temperature above 156 °F (70 °C)
    - Intake air temperature above 32 °F (0 °C)
    - Vehicle speed is 0 mph (0 km/h)
    - ST FUEL TRIM between 0.73 and 1.47
    - FSS is CLOSED

DTC Troubleshooting (cont'd)

13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0506 is indicated, go to step 1 and recheck. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.

14. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 12 and recheck.

15. Remove the intake air duct from the throttle body.

16. Check for dirt, carbon, or damage in the throttle bore.

    Is there dirt, carbon, or damage in the throttle bore?

    YES—If there is dirt or carbon, clean the throttle body (see page 11-357). Also check for a damage at the air cleaner element (see page 11-361), then go to step 9. If there is damage in the throttle bore, go to step 8.

    NO—Go to step 17.

17. Recheck with different load conditions (turn on the headlights, blower motor, rear window defogger and/or/A/C, change the gear position, etc.).

18. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Intermittent failure, system is OK at this time.■

    NO—If the screen indicates FAILED, check the A/C system and/or power steering system, then go to step 1 and recheck. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 17 and recheck.

DTC P0507: Idle Control System RPM Higher Than Expected (2003-2005 models)

NOTE: If DTC P0511 is stored at the same time as DTC P0507, troubleshoot DTC P0511 first, then recheck for DTC P0507.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
4. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 5.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAC valve and the ECM/PCM. If the screen indicates EXECUTING, keep the engine idling until a result comes on. If the screen indicates OUT OF CONDITION, recheck with a different load condition (electrical, A/C, gear position, etc.), then go to step 3.
5. Clear the DTC with the HDS.
6. Do the IACV TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Check these parts for vacuum leaks, then go to step 8:

   - PCV valve
   - PCV hose
   - EVAP canister purge valve
   - Throttle body
   - Intake manifold
   - Brake booster hose

   NO—Go to step 7.
7. Turn the ignition switch OFF.
8. Replace the IAC valve (see page 11-368).
9. Turn the ignition switch ON (II).
10. Reset the ECM/PCM with the HDS.
11. Do the ECM/PCM idle learn procedure (see page 11-316).
12. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0507 is indicated, check for poor connections or loose terminals at the IAC valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.
14. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the IAC valve and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep the engine idling until a result comes on. If the screen indicates OUT OF CONDITION, recheck with a different load condition (electrical, A/C, gear position, etc.), then go to step 12.

DTC Troubleshooting (cont'd)

DTC P0507: Idle Control System RPM Higher Than Expected
(2006 model)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 5.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, recheck with different load conditions (turn on the headlights, blower motor, or A/C; change the gear position, etc.), then go to step 3.
5. Check for vacuum leaks at these parts:

   - PCV valve
   - PCV hose
   - EVAP canister purge valve
   - Throttle body
   - Intake manifold
   - Brake booster hose

   Are there any leaks?

   YES—Repair or replace faulty parts, then go to step 6.

   NO—Go to step 6.
6. Turn the ignition switch ON (II).
7. Reset the ECM/PCM with the HDS.
8. Do the ECM/PCM idle learn procedure (see page 11-316).
9. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
10. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0507 is indicated, check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 11.
11. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the throttle body and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, recheck with different load conditions (turn on the headlights, blower motor, or A/C; change the gear position, etc.), then go to step 9.

DTC P0511: IAC Valve Circuit Malfunction (2003-2005 models)

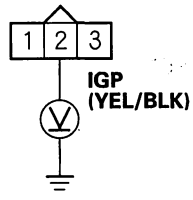
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0511 indicated?

   YES—Go to step 4.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the IAC valve and the ECM/PCM. ■
4. Turn the ignition switch OFF.
5. Disconnect the IAC valve 3P connector.
6. Turn the ignition switch ON (II).
7. Measure voltage between IAC valve 3P connector terminal No. 2 and body ground.

IAC VALVE 3P CONNECTOR



Wire side of female terminals

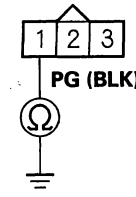
Is there battery voltage?

YES—Go to step 8.

NO—Repair open in the wire between the IAC valve and PGM-FI main relay 1, then go to step 21.

8. Turn the ignition switch OFF.
9. Check for continuity between body ground and IAC valve 3P connector terminal No. 1.

IAC VALVE 3P CONNECTOR



Wire side of female terminals

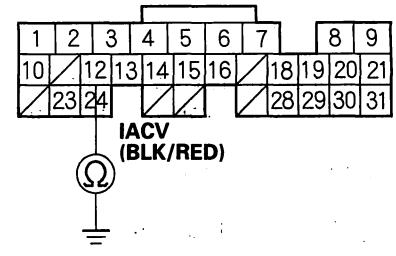
Is there continuity?

YES—Go to step 10.

NO—Repair open in the wire between the IAC valve and G101, then go to step 21.

10. Turn the ignition switch OFF.
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector A (31P).
13. Check for continuity between ECM/PCM connector terminal A12 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A12) and the IAC valve, then go to step 21.

NO—Go to step 14.

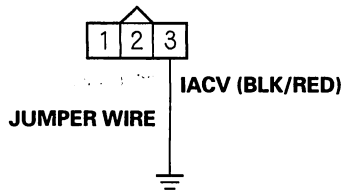
DTC Troubleshooting (cont'd)

14. Connect IAC valve 3P connector terminal No. 3 to body ground with a jumper wire.

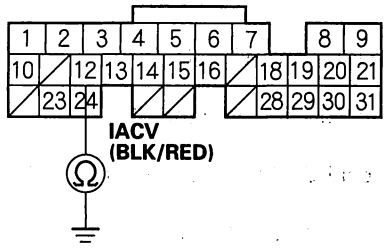
IAC VALVE 3P CONNECTOR



Wire side of female terminals

15. Check for continuity between ECM/PCM connector terminal A12 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Go to step 16.

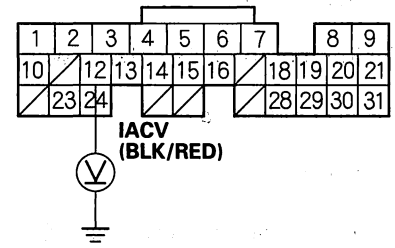
NO—Repair open in the wire between the ECM/PCM (A12) and the IAC valve, then go to step 21.

16. Reconnect the IAC valve 3P connector.

17. Turn the ignition switch ON (II).

18. Measure voltage between ECM/PCM connector terminal A12 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there battery voltage?

YES—Go to step 26.

NO—Go to step 19.

19. Turn the ignition switch OFF.

20. Replace the IAC valve (see page 11-368).

21. Turn the ignition switch ON (II).

22. Reset the ECM/PCM with the HDS.

23. Do the ECM/PCM idle learn procedure (see page 11-316).

24. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0511 is indicated, check for poor connections or loose terminals at the IAC valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 25.

BACK

Protected by AR

25. Monitor the OBD STATUS for DTC P0511 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 23 and recheck.

26. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

27. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0511 is indicated, check for poor connections or loose terminals at the IAC valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

A/C Signal Circuit Troubleshooting

1. Start the engine.
2. Turn the blower switch on.
3. Turn the A/C switch on.
4. Check the A/C CLUTCH in the DATA LIST with the HDS.

   Is it ON?

   YES—Go to step 5.

   NO—Do the A/C pressure switch circuit troubleshooting (see page 21-120). ■
5. Check the A/C system.

   Does the A/C system operate?

   YES—The air conditioning system circuit is OK. ■

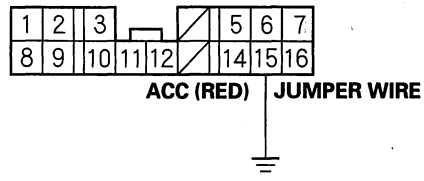
   NO—Go to step 6.
6. Turn the ignition switch OFF.
7. Turn the ignition switch ON (II).
8. Activate the A/C CLUTCH in the INSPECTION MENU with the HDS.

   Is there a clicking noise from the A/C compressor clutch?

   YES—Do the A/C system test (see page 21-69). ■

   NO—Go to step 9.
9. Momentarily connect under-hood fuse/relay box 16P connector terminal No. 15 to body ground with a jumper wire several times.

UNDER-HOOD FUSE/RELAY BOX 16P CONNECTOR



Wire side of female terminals

Is there clicking noise from the A/C compressor clutch?

YES—Repair open in the wire between the ECM/PCM (E18) and the A/C clutch relay. ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

Alternator FR Signal Circuit Troubleshooting

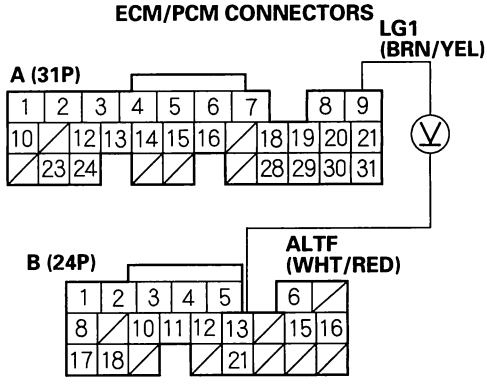
2003-2004 models

1. Start the engine, and let it idle.
2. Monitor the ALTERNATOR in the DATA LIST with the HDS.
3. Check if the indicated percentage varies when the headlight switch is on.

   Does the percentage vary?

   YES—The alternator signal circuit is OK.■

   NO—Go to step 4.
4. Turn the headlight switch and ignition switch OFF.
5. Disconnect the alternator 4P connector.
6. Turn the ignition switch ON (II).
7. Measure voltage between ECM/PCM connector terminals A9 and B13.



Wire side of female terminals

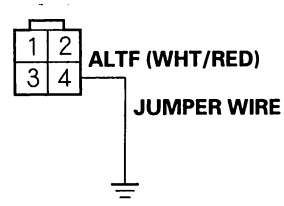
Is there about 5 V?

YES—Go to step 8.

NO—Go to step 13.

8. Turn the ignition switch OFF.
9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector B (24P).
11. Connect alternator 4P connector terminal No. 4 to body ground with a jumper wire.

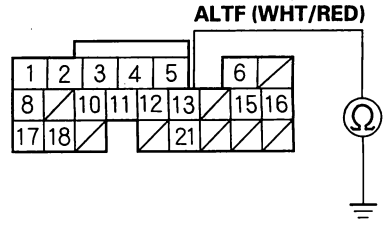
ALTERNATOR 4P CONNECTOR



Wire side of female terminals

12. Check for continuity between body ground and ECM/PCM connector terminal B13.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Test the alternator (see page 4-34).■

NO—Repair open in the wire between the ECM/PCM (B13) and the alternator.■

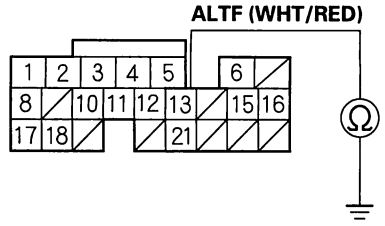
(cont'd)

Protected by AR

Alternator FR Signal Circuit Troubleshooting (cont'd)

13. Turn the ignition switch OFF.
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector B (24P).
16. Check for continuity between body ground and ECM/PCM connector terminal B13.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B13) and the alternator. ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

BACK

Protected by AR

2005-2006 models

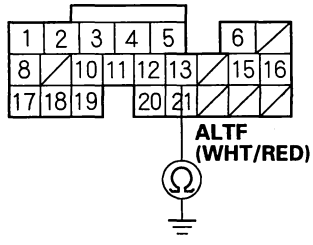
1. Start the engine, and let it idle.
2. Monitor the ALTERNATOR in the DATA LIST with the HDS.
3. Check if the indicated percentage varies when the headlight switch is on.

   Does the percentage vary?

   YES—The alternator signal circuit is OK. ■

   NO—Go to step 4.
4. Turn the headlight switch and ignition switch OFF.
5. Jump the SCS line with the HDS.
6. Disconnect the alternator 4P connector.
7. Disconnect ECM/PCM connector B (24P).
8. Check for coutinuity between body ground and ECM/PCM connector terminal B13.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B13) and the alternator. ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

PSP Switch Signal Circuit Troubleshooting

1. Start the engine, and let it idle.
2. Align the steering wheel straight ahead.
3. Check the PSP SWITCH in the DATA LIST with the HDS.

   Does it indicate ON?

   YES—Go to step 4.

   NO—Go to step 14.
4. Turn the steering wheel to the full lock position.
5. Check the PSP SWITCH in the DATA LIST with the HDS.

   Does it change to OFF?

   YES—The PSP switch signal circuit is OK. ■

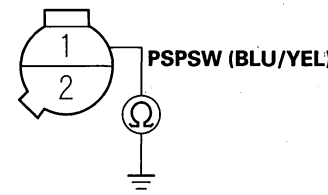
   NO—Go to step 6.
6. Turn the ignition switch OFF.
7. Disconnet the PSP switch 2P connector.
8. Start the engine.
9. Check the PSP SWITCH in the DATA LIST with the HDS.

   Does it change to OFF?

   YES—Replace the PSP switch. ■

   NO—Go to step 10.
10. Turn the ignition switch OFF.
11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector E (31P).
13. Check for continuity between PSP switch 2P connector terminal No. 1 and body ground.

PSP SWITCH 2P CONNECTOR



Wire side of female terminals

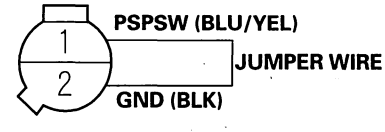
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E16) and the PSP switch. ■

NO—Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see page 11-227). ■

14. Turn the ignition switch OFF.
15. Disconnect the PSP switch 2P connector.
16. Connect PSP switch 2P connector terminals No. 1 and No. 2 with a jumper wire, then start the engine.

PSP SWITCH 2P CONNECTOR



Wire side of female terminals

BACK

Brake Pedal Position Switch Signal Circuit Troubleshooting

1. Turn the ignition switch ON (II).
2. Check the BRAKE SWITCH in the DATA LIST with the HDS.

   Does it indicate OFF?

   YES—Go to step 3.

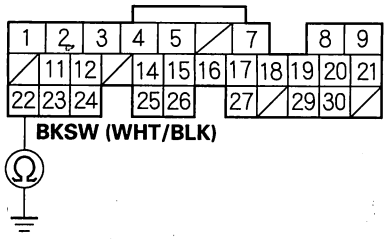
   NO—Inspect the brake pedal position switch (see page 19-6).■
3. Press the brake pedal, and check the BRAKE SWITCH in the DATA LIST with the HDS.

   Does it change to ON?

   YES—The brake pedal position switch signal circuit (BKSW line) is OK.■

   NO—Go to step 4.
4. Turn the ignition switch OFF.
5. Jump the SCS line with the HDS.
6. Disconnect the brake pedal position switch 4P connector.
7. Disconnect ECM/PCM connector E (31P).
8. Check for continuity between ECM/PCM connector terminal E22 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

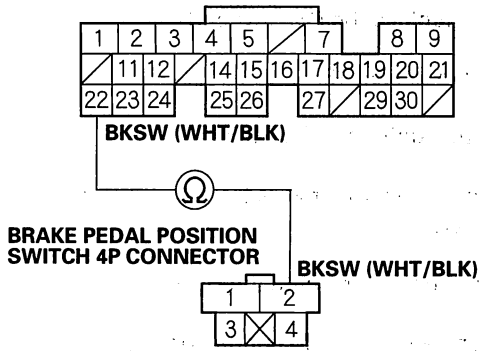
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E22) and the No. 13 HORN, STOP (20 A) fuse. Replace the No. 13 HORN, STOP (20 A) fuse.■

NO—Go to step 9.

9. Check for continuity between ECM/PCM connector terminal E22 and brake pedal position switch 4P connector terminal No. 2.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair open in the wire between the brake pedal position switch and the No. 13 HORN, STOP (20 A) fuse. Inspect the brake pedal position switch (see page 19-6).■

NO—Repair open in the wire between the ECM/PCM (E22) and the brake pedal position switch.■

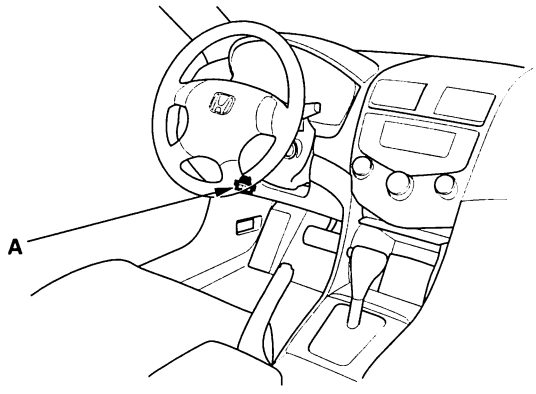
Idle Speed Inspection

NOTE:
- Leave the idle air control (IAC) valve connected.
- Before checking the idle speed, check these items:
  - The malfunction indicator lamp (MIL) has not been reported on.
  - Ignition timing
  - Spark plugs
  - Air cleaner
  - PCV system
- Pull the parking brake lever up.

1. Disconnect the evaporative emission (EVAP) canister purge valve connector.

2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

4. Check the idle speed without load conditions: headlights, blower fan, radiator fan, and air conditioner off.

Idle speed should be:
2003-2004 models:
SULEV and M/T models

M/T	**700±50 rpm**
A/T	**700±50 rpm (in Park or neutral)**

A/T (except SULEV) model
800±50 rpm (in Park or neutral)

2005-2006 models:

M/T	**720±50 rpm**
A/T	**800±50 rpm (in Park or neutral)**

5. Let the engine idle for 1 minute with high electric load (A/C switch on, temperature set to max cool, blower fan on High, and headlights on high beam).

Idle speed should be:
2003-2004 models:
SULEV and M/T models

M/T	**720±50 rpm**
A/T	**720±50 rpm (in Park or neutral)**

A/T (except SULEV) model
800±50 rpm (in Park or neutral)

2005-2006 models:

M/T	**720±50 rpm**
A/T	**800±50 rpm (in Park or neutral)**

NOTE: If the idle speed is not within specification, do the ECM/PCM idle learn procedure (see page 11-316). If the idle is still out of specification, go to the symptom troubleshooting.

6. Reconnect the EVAP canister purge valve connector.

Protected by AR

ECM/PCM Idle Learn Procedure

The idle learn procedure must be done so the ECM/PCM can learn the engine idle characteristics.

Do the idle learn procedure whenever you do any of these actions:

- Replace ECM/PCM.
- Reset ECM/PCM.
- Update ECM/PCM.
  NOTE: Erasing DTCs with the HDS does not require you to do the idle learn procedure.
- Replace or clean the throttle body.

Procedure

1. Make sure all electrical items (A/C, audio, rear window defogger, lights, etc.) are off.
2. Reset the ECM/PCM with the HDS.
3. Turn the ignition switch ON (II), and wait 2 seconds.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, or until the engine coolant temperature reaches 194 °F (90 °C).
5. Let the engine idle for about 5 minutes with the throttle fully closed.

   NOTE: If the radiator fan comes on, do not include its running time in the 5 minutes.

DTC Troubleshooting

DTC P0461: Fuel Level Sensor (Fuel Gauge Sending Unit) Range/Performance Problem (2005-2006 models)

NOTE: Because it requires 162 miles (260 km) of driving without refueling to complete this diagnosis, DTC P0461 cannot be duplicated during this troubleshooting.

1. Test the fuel gauge sending unit (see page 11-352).

   Is the fuel gauge sending unit OK?

   YES—Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge assembly. ■

   NO—Replace the fuel gauge sending unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346), then go to step 2.

2. Turn the ignition switch ON (II).

3. Reset the ECM/PCM with the HDS.

4. Do the ECM/PCM idle learn procedure (see page 11-316).

5. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P0461 is indicated, check for poor connections or loose terminals at the fuel gauge sending unit and the gauge assembly, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

   NO—Troubleshooting is complete. ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0462: Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Low Voltage (2005-2006 models)

NOTE:
- Information marked with an asterisk (*) applies to 2005 model.
- Information marked with double asterisk (**) applies to 2006 model.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0462 indicated?

   YES—Go to step 4.

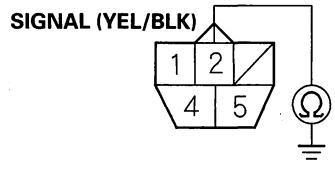
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit. ■
4. Turn the ignition switch OFF.
5. Remove the trunk floor trim panel.
6. Remove the access panel from the floor.
7. Disconnect the fuel tank unit 5P connector.
8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS, and wait 5 seconds.
10. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?

    YES—Go to step 11.

    NO—Replace the fuel gauge sending unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346), then go to step 22.
11. Turn the ignition switch OFF.
12. Remove the gauge control module (see page 22-276).
13. Disconnect the gauge control module 30P* (36P**) connector.
14. Check for continuity between fuel tank unit 5P connector terminal No. 2 and body ground.

FUEL TANK UNIT 5P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the gauge control module (signal line) and the fuel gauge sending unit, then go to step 23.

NO—Go to step 15.

15. Reconnect the gauge control module 30P* (36P**) connector.
16. Remove the fuel tank unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346).
17. Connect the fuel tank unit 5P connector.
18. Turn the ignition switch ON (II).
19. Clear the DTC with the HDS.

BACK

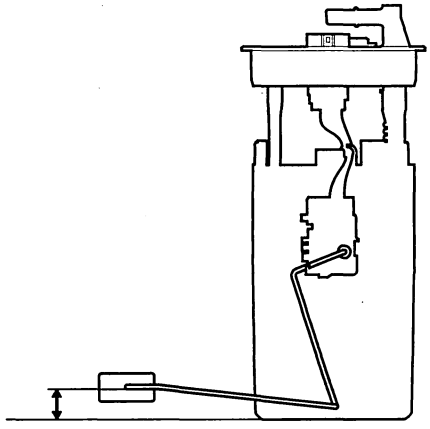
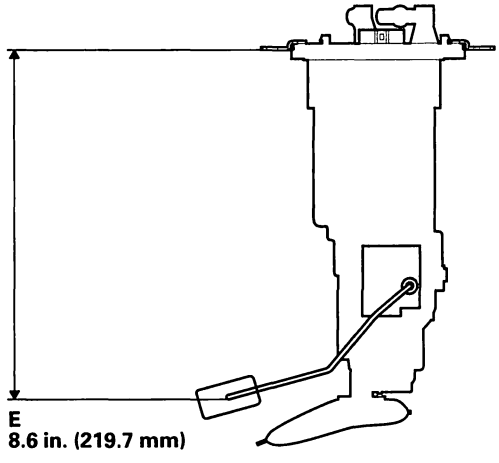
20. Set the float (A) to the E position.

Non-SULEV model



SULEV model



21. Check the fuel gauge.

Does the gauge move to the empty position?

YES—Go to step 29.

NO—Replace the gauge control module (see page 22-276), then go to step 22.

22. Turn the ignition switch OFF.

23. Reconnect all connectors.

24. Install the parts in the reverse order of removal.

25. Turn the ignition switch ON (II).

26. Reset the ECM/PCM with the HDS.

27. Do the ECM/PCM idle learn procedure (see page 11-316).

28. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0462 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Troubleshooting is complete. ■

29. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

30. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0462 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

23. Turn the ignition switch OFF.
24. Reconnect all connectors.
25. Install the parts in the reverse order of removal.
26. Turn the ignition switch ON (II).
27. Reset the ECM/PCM with the HDS.
28. Do the ECM/PCM idle learn procedure (see page 11-316).
29. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0463 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■

30. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
31. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0463 is indicated, check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

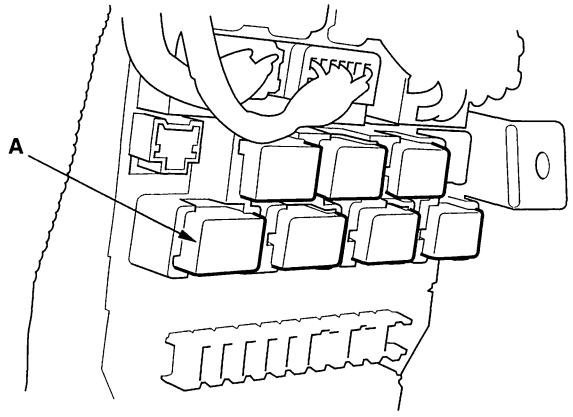
    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

Protected by AR

Fuel Pump Circuit Troubleshooting

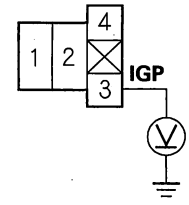
If you suspect a problem with the fuel pump, check that the fuel pump actually runs; when it is on, you will hear some noise if you listen to the fuel fill port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on. If the fuel pump does not make noise, check as follows:

1. Turn the ignition switch OFF.
2. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.



3. Turn the ignition switch ON (II).
4. Measure voltage between PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 3 and body ground.

PGM-FI MAIN RELAY 2 (FUEL PUMP) 4P CONNECTOR



Terminal side of female terminals

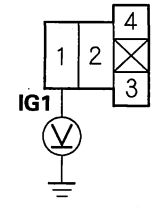
Is there battery voltage?

YES—Go to step 5.

NO—
- Replace PGM-FI main relay 1 (FI MAIN). ■
- If needed, replace the under-dash fuse/relay box. ■

5. Measure voltage between PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 1 and body ground.

PGM-FI MAIN RELAY 2 (FUEL PUMP) 4P CONNECTOR



Terminal side of female terminals

Is there battery voltage?

YES—Go to step 6.

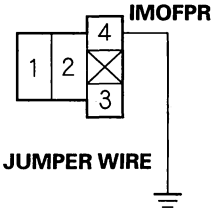
NO—
- Replace the No. 19 FUEL PUMP (15 A) fuse in the under-dash fuse/relay box. ■
- If needed, replace the under-dash fuse/relay box. ■

BACK

Protected by AR

6. Turn the ignition switch OFF.
7. Connect PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 4 to body ground with a jumper wire.

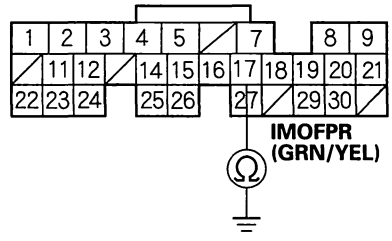
PGM-FI MAIN RELAY 2 (FUEL PUMP) 4P CONNECTOR



Terminal side of female terminals

8. Turn the ignition switch OFF.
9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector E (31P).
11. Check for continuity between body ground and ECM/PCM connector terminal E17.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

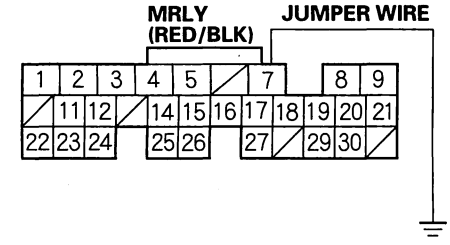
Is there continuity?

YES—Go to step 12.

NO—Repair open in the wire between PGM-FI main relay 2 (FUEL PUMP) and the ECM/PCM (E17).■

12. Reinstall PGM-FI main relay 2 (FUEL PUMP).
13. Connect ECM/PCM connector terminal E7 to body ground with a jumper wire.

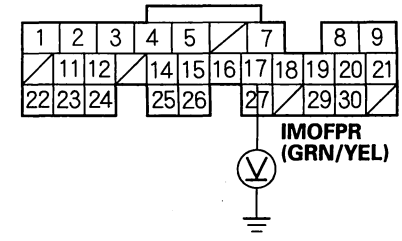
ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

14. Turn the ignition switch ON (II).
15. Measure voltage between ECM/PCM connector terminal E17 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there battery voltage?

YES—Go to step 16.

NO—Replace PGM-FI main relay 2 (FUEL PUMP).■

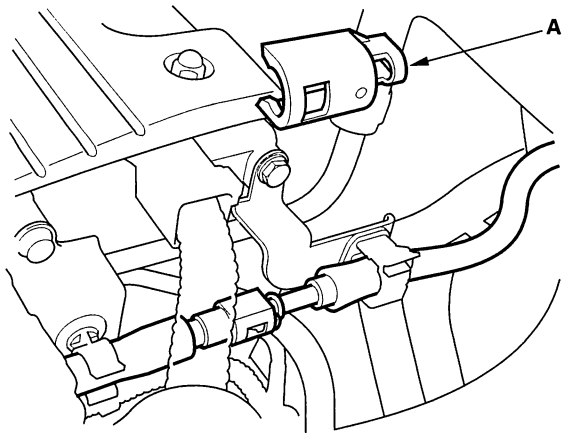
Fuel Pressure Relieving

Before disconnecting fuel lines or hoses, relieve pressure from the system by stopping the fuel pump and disconnecting the fuel tube/quick connect fitting in the engine compartment.

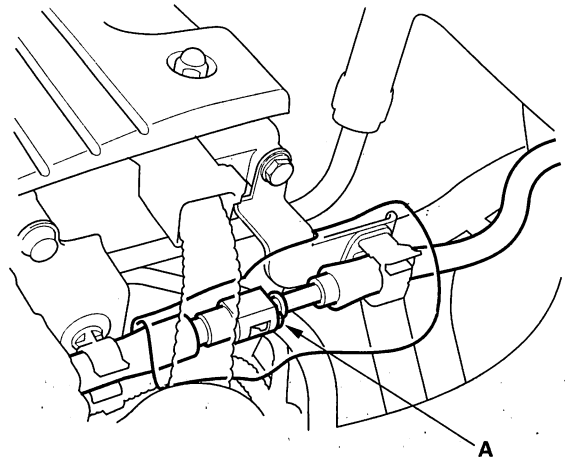
With the HDS

1. Remove the fuel fill cap.
2. Turn the ignition switch ON (II).
3. From the INSPECTION MENU of the HDS, select Fuel Pump OFF, then start the engine, and let it idle until it stalls.
4. Turn the ignition switch OFF.

   NOTE:
   - Do not allow the engine to idle above 1,000 rpm or the ECM/PCM will continue to operate the fuel pump.
   - A DTC or a Temporary DTC may be set during this procedure. Check for DTCs, and clear them as needed (see page 11-3).
5. Turn the ignition switch OFF.
6. Make sure you have the anti-theft code for the radio and the navigation system (if equipped), then write down the frequencies for the radio's preset buttons.
7. Disconnect the negative cable from the battery.
8. Remove the quick-connect fitting cover (A).

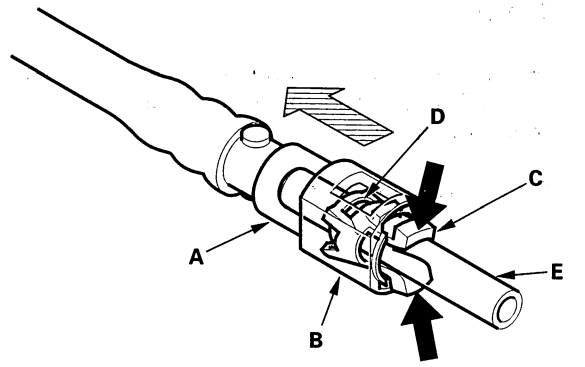


9. Check the fuel quick-connect fitting for dirt, and clean it if needed.
10. Place a rag or shop towel over the quick-connect fitting (A).



11. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

    NOTE:
    - Be careful not to damage the line (E) or other parts.
    - Do not use tools.
    - If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.
    - Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.



BACK

Protected by AR

12. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4 on page 11-339).

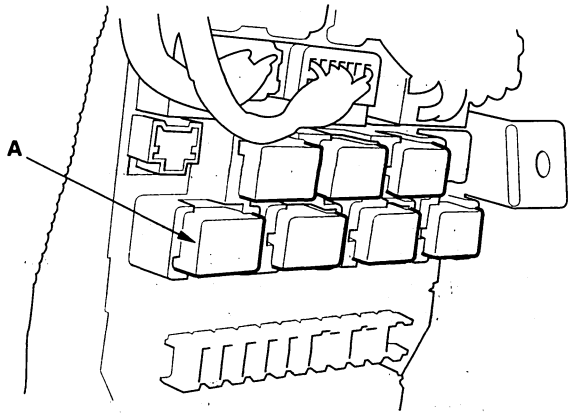
13. Reconnect the negative cable to the battery, and do these items:

    - Power window control unit reset procedure (see page 22-232).
    - Enter the anti-theft codes for the radio and the navigation system, then enter the customer's radio station presets.
    - Reset the clock.

Without the HDS

1. Make sure you have the anti-theft code for the radio, and the navigation system (if equipped) then write down the frequencies for the radio's preset buttons.

2. Remove the left kick panel; 2-door (see page 20-90), 4-door (see page 20-91), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.



3. Start the engine, and let it idle until it stalls.

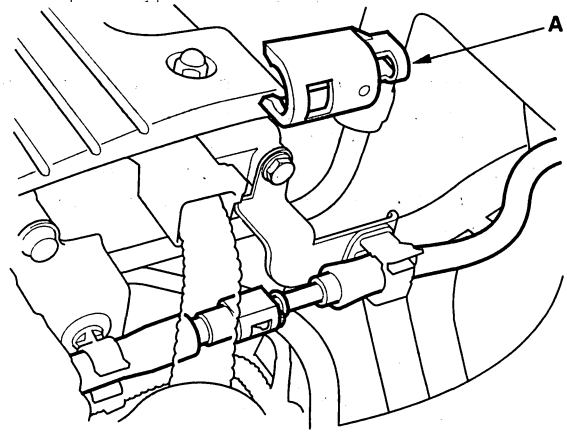
   NOTE: If any DTCs are stored, clear and ignore them.

4. Turn the ignition switch OFF.

5. Remove the fuel fill cap.

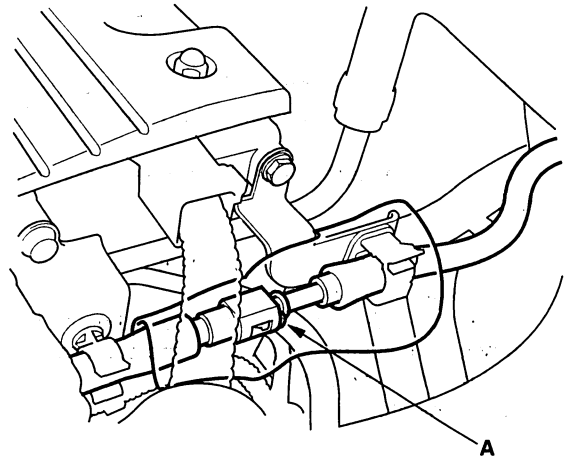
6. Disconnect the negative cable from the battery.

7. Remove the quick-connect fitting cover (A).



8. Check the fuel quick-connect fitting for dirt, and clean it if needed.

9. Place a rag or shop towel over the quick-connect fitting (A).



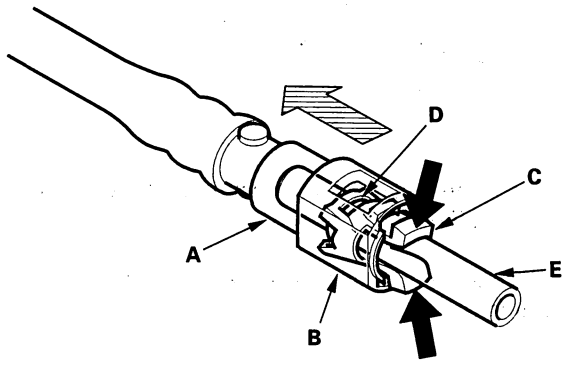
(cont'd)

Protected by AR

Fuel Pressure Relieving (cont'd)

10. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

    NOTE:
    - Be careful not to damage the line (E) or other parts.
    - Do not use tools.
    - If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.
    - Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.



11. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4 on page 11-339).

12. Reconnect the negative cable to the battery, and do these items:

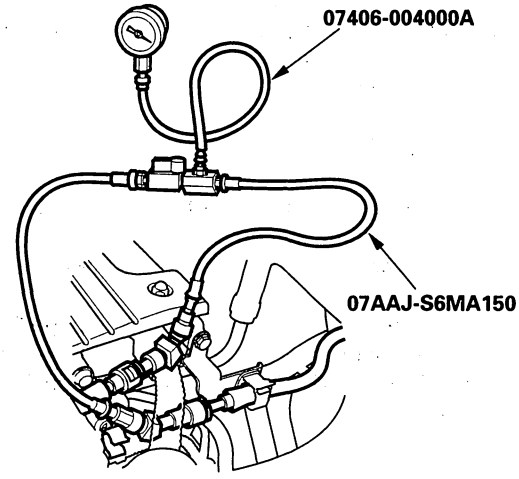
    - Power window control unit reset procedure (see page 22-232).
    - Enter the anti-theft codes for the radio and the navigation system, then enter the customer's radio station presets.
    - Reset the clock.

Fuel Pressure Test

Special Tools Required
- Fuel pressure gauge 07406-004000A
- Fuel pressure gauge attachment set 07AAJ-S6MA150

1. Relieve the fuel pressure (see page 11-330).

2. Disconnect the quick-connect fitting. Attach the fuel pressure gauge set and the fuel pressure gauge.



3. Start the engine, and let it idle.

    - If the engine starts, go to step 5.
    - If the engine does not start, go to step 4.

4. Check to see if the fuel pump is running: Listen to the fuel filler port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on.

    - If the pump runs, go to step 5.
    - If the pump does not run, do the fuel pump circuit troubleshooting (see page 11-326).

BACK

Protected by AR

Fuel Tank Draining

5. Read the fuel pressure gauge. The pressure should be:

   2003-2004 SULEV models and 2006 (except SULEV) model
   320—370 kPa (3.3—3.8 kgf/cm², 47—54 psi)

   2003-2004 (except SULEV) models, 2005 model, and 2006 SULEV model
   330—380 kPa (3.4—3.9 kgf/cm², 48—55 psi)

   - If the pressure is OK, the test is complete.
   - If the pressure is out of specification, replace the fuel pressure regulator; Non-SULEV model (see page 11-343), SULEV model (see page 11-343) and the fuel filter (see page 11-344), then recheck the fuel pressure.

1. Remove the fuel tank unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346).
2. Using a hand pump, a hose, and a container suitable for fuel, draw the fuel from the fuel tank.
3. Install the fuel tank unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346).

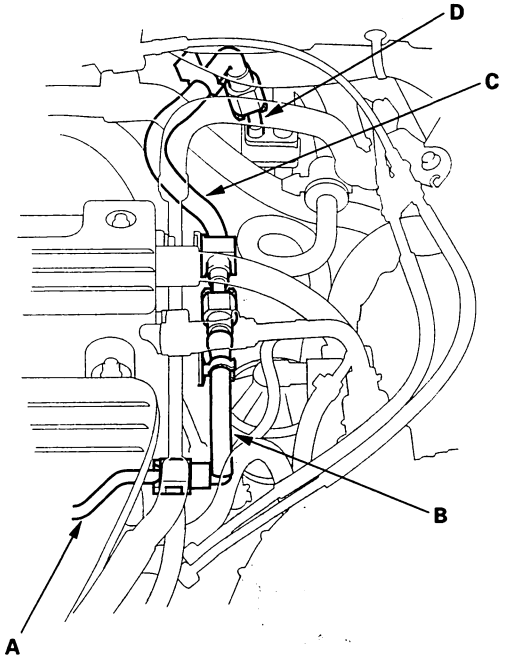
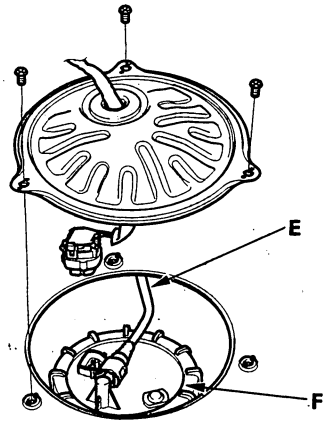
Fuel Line/Quick-Connect Fitting Precautions

The fuel line/quick-connect fittings connect the fuel rail (A) to fuel feed hose (B), fuel feed hose to the fuel feed hose (C), the fuel feed hose to the fuel line (D), and the fuel line (E) to the fuel tank unit (F) and the fuel vapor line (G) to the EVAP canister (H) (SULEV model: and fuel fill neck tube (I), fuel tank vapor signal tube (J), fuel tank vapor recirculation tube (K) to the fuel tank). When removing or installing the fuel feed hose, fuel tank unit, or fuel tank, it is necessary to disconnect or connect the quick-connect fittings.
Pay attention to the following:

- The fuel feed hoses, fuel line, and quick-connect fittings are not heat-resistant; be careful not to damage them during welding or other heat-generating procedures.
- The fuel feed hoses, fuel line, and quick-connect fittings are not acid-proof; do not touch them with a shop towel that was used for wiping battery electrolyte. Replace them if they came into contact with electrolyte or something similar.
- When connecting or disconnecting the fuel feed hoses, fuel line, and quick-connect fittings, be careful not to bend or twist them excessively. Replace them if they are damaged.





*: This illustration shows the non-SULEV model.

Fuel Line/Quick-Connect Fitting Precautions (cont'd)

A disconnected quick-connect fitting can be reconnected, but the retainer on the mating line cannot be reused once it has been removed from the line. Replace the retainer when:

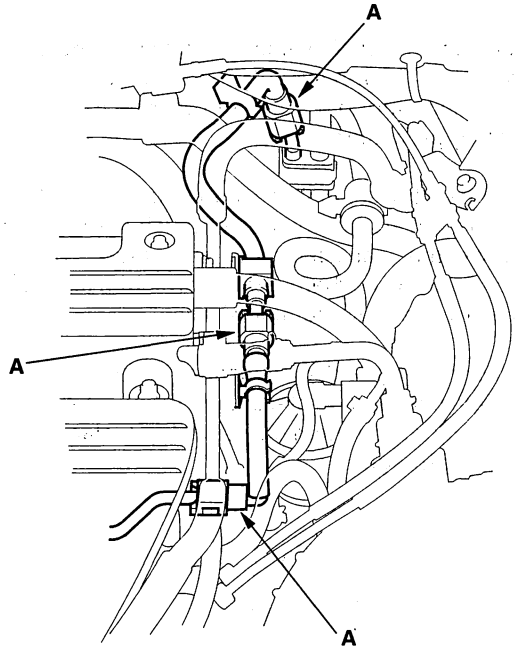
- replacing the fuel rail.
- replacing the fuel line.
- replacing the fuel pump.
- replacing the fuel filter.
- replacing the fuel gauge sending unit.
- replacing the fuel tank (SULEV model).
- it has been removed from the line.
- replacing EVAP purge line.
- replacing EVAP canister.
- it is damaged.

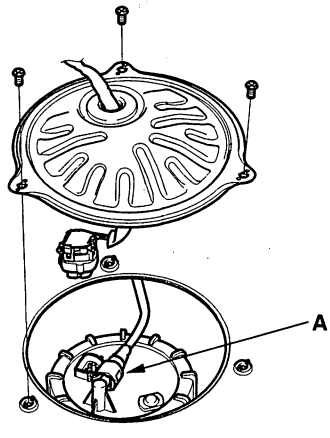
Retainer location	Manufacturer	Retainer color	Piping diameter
Engine compartment fuel feed hose A, fuel rail side	Tokai	Blue/ green	0.3 in. (8 mm)
Engine compartment fuel feed hose A, fuel feed hose B side and fuel hose B	Tokai	Green	0.2 in. (6.3 mm)
Fuel tank unit: Fuel feed line, fuel tank unit side	Tokai	Orange	0.4 in. (9.5 mm)
Fuel tank unit: Fuel feed line, fuel line side	Tokai	Green	0.2 in. (6.3 mm)
EVAP canister: fuel vapor line	Tokai	Orange	0.4 in. (9.5 mm)
Fuel tank unit: Fuel feed neck tube (SULEV model)	Tokai	Grey	1.1 in. (28.55 mm)
Fuel tank unit: Fuel tank vapor recirculation tube (SULEV model)	Tokai	Natural	0.5 in. (11.8 mm)
Fuel tank unit: Fuel feed tank vapor signal tube, fuel tank side (SULEV model)	Tokai	Green	0.2 in. (6.3 mm)
Fuel tank unit: Fuel tank vapor signal tube, fuel fill side (SULEV model)	Tokai	Blue/ green	0.3 in. (8 mm)

Fuel Line/Quick-Connect Fitting Removal

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see page 11-337).

1. Relieve the fuel pressure (see page 11-330).
2. Check the fuel quick-connect fitting (A) for dirt, and clean it if needed.

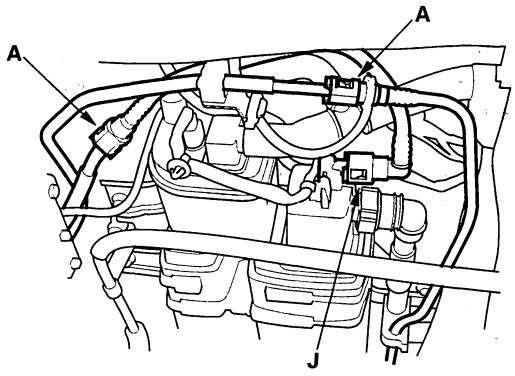




*: This illustration shows the non-SULEV model.

BACK

Protected by AR



*: This illustration shows the non-SULEV model.

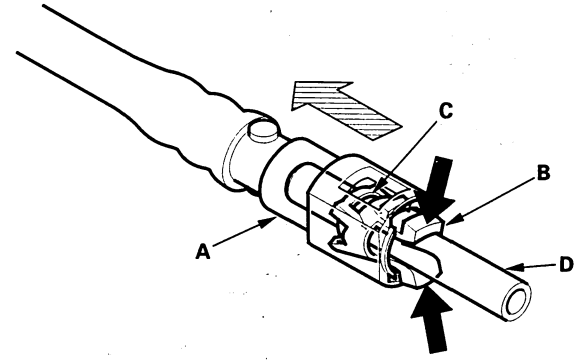
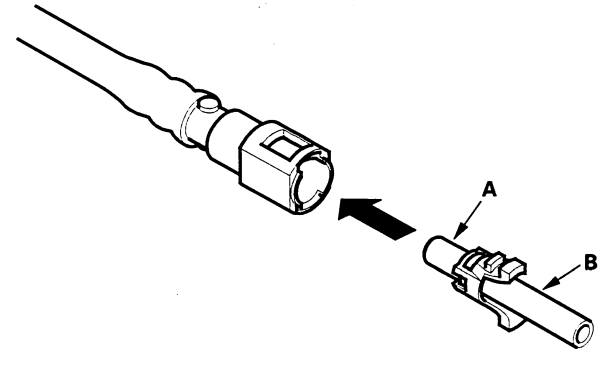
3. Place a rag or shop towel over the quick-connect fitting. Hold the connector (A) with one hand, and squeeze the retainer tabs (B) with the other hand to release them from the locking tabs (C). Pull the connector off.

NOTE:
- Be careful not to damage the line (D) or other parts. Do not use tools.
- If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.
- Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.



4. Check the contact area (A) of the line (B) for dirt or damage.

- If it is dirty, clean it.
- If it is rusty or damaged, replace the fuel pump, fuel filter, or fuel feed line.



(cont'd)

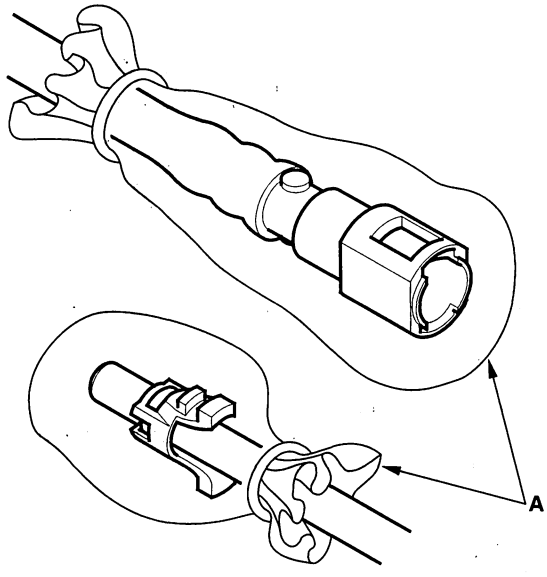
Protected by AR

Fuel Line/Quick-Connect Fitting Removal (cont'd)

5. To prevent damage and keep foreign matter out, cover the disconnected connector and line ends with plastic bags (A).

   NOTE: The retainer cannot be reused once it has been removed from the line.
   Replace the retainer when:

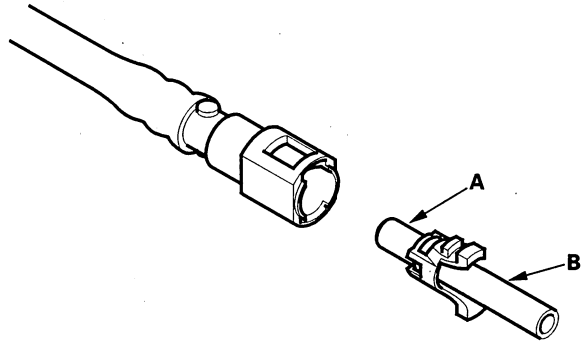
   - replacing the fuel rail.
   - replacing the fuel feed line.
   - replacing the fuel pump.
   - replacing the fuel filter.
   - replacing the fuel gauge sending unit.
   - it has been removed from the line.
   - replacing EVAP purge line.
   - replacing EVAP canister.
   - it is damaged.



Fuel Line/Quick-Connect Fitting Installation

NOTE: Before you work on the fuel line and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see page 11-337).

1. Check the contact area (A) of the line (B) for dirt or damage, and clean it if needed.



2. Insert a new retainer (A) into the connector (B) if the retainer is damaged, or after:

   - replacing the fuel rail.
   - replacing the fuel feed line.
   - replacing the fuel pump.
   - replacing the fuel filter.
   - replacing the fuel gauge sending unit
   - removing the retainer from the line.
   - replacing EVAP purge line.
   - replacing EVAP canister.

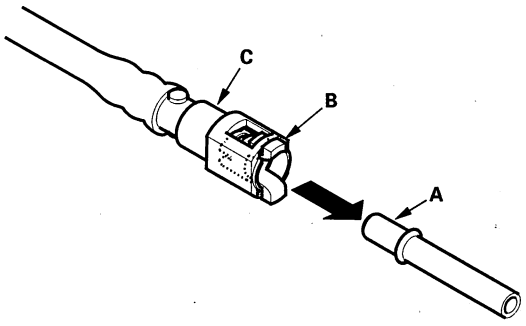
Fuel Line/Quick-Connect Fitting Installation (cont'd)

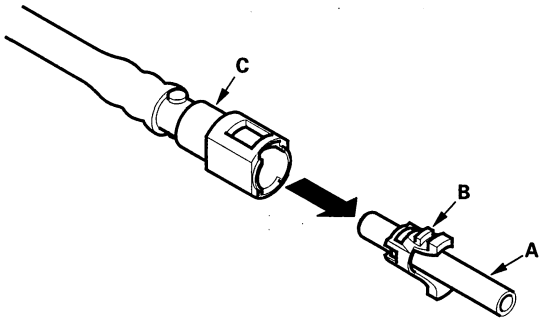
4. Align the quick-connect fittings with the line (A), and align the retainer locking tabs (B) with the connector tabs (C), then press the quick-connect fittings onto the line until both retainer pawls lock with a clicking sound.

   NOTE: If it is hard to connect, put a small amount of new engine oil on the line end.

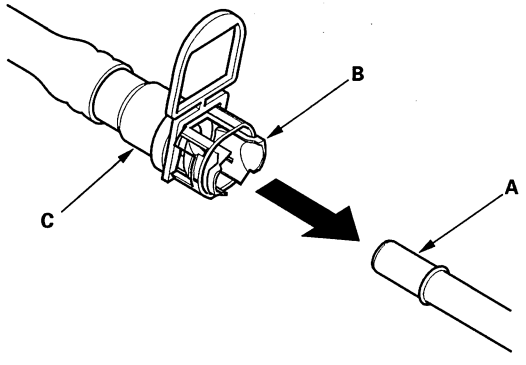
Connection with new retainer



Reconnection to existing retainer



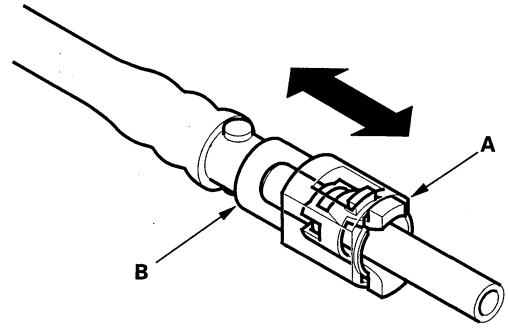
Connection to new fuel line



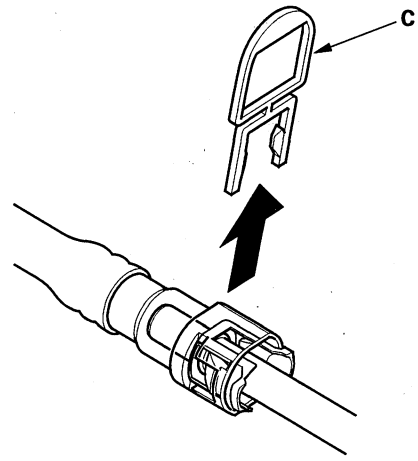
5. When you reconnect the connector with the old retainer, make sure the connection is secure and the tabs (A) are firmly locked into place; check visually and also by pulling the connector (B). When you replace the fuel line with a new one, make sure you remove the ring pull (C) upwards after you confirm the connection is secure.

   NOTE: Before you remove the ring pull, make sure the fuel line connection is secure. If the connection is not secure, the ring pull could break when you try to remove it.

Reconnection to existing retainer



Connection to new fuel line



6. Reconnect the negative cable to the battery, and turn the ignition switch ON (II). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat this two or three times, and check that there is no leakage in the fuel supply system.

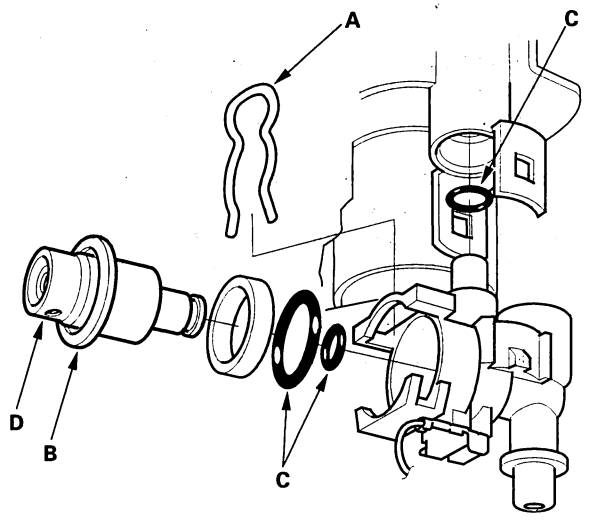
BACK

Protected by AR

Fuel Pressure Regulator Replacement

Non-SULEV model

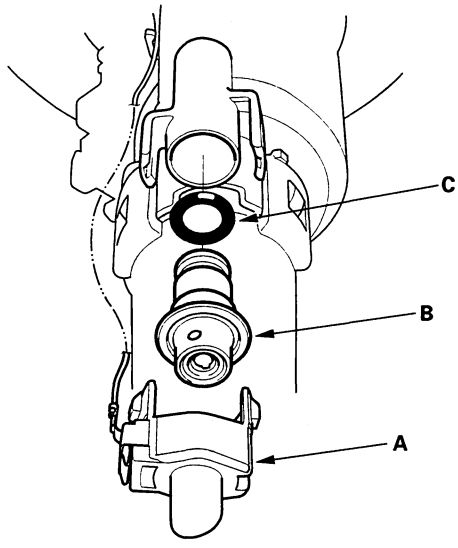
1. Remove the fuel tank unit (see page 11-345).
2. Remove the clip (A).



3. Remove the fuel pressure regulator (B).
4. Install the regulator in the reverse order of removal with new O-rings (C).
   Make sure the regulator is installed with the drain hole (D) facing down.

SULEV model

1. Remove the fuel tank unit (see page 11-346).
2. Remove the holder (A).



3. Remove the fuel pressure regulator (B).
4. Install the regulator in the reverse order of removal with a new O-ring (C).

   NOTE: Coat the O-ring with clean engine oil.

Protected by AR

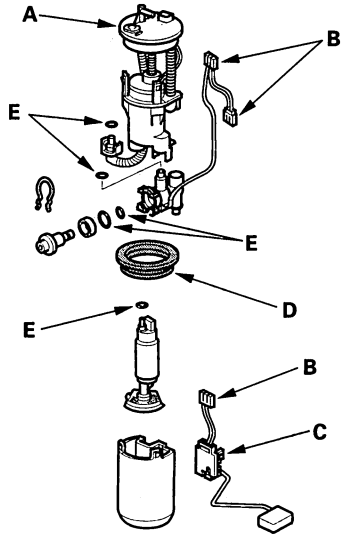
Fuel Filter Replacement

The fuel filter should be replaced whenever the fuel pressure drops below the specified value (see page 11-330), after making sure that the fuel pump and the fuel pressure regulator are OK.

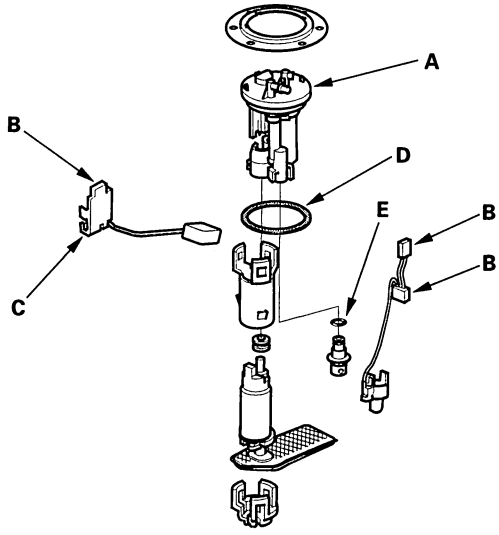
1. Remove the fuel tank unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346).

2. Remove the fuel filter set (A).

Non-SULEV model



SULEV model



3. Check these items before installing the fuel tank unit:

   - When connecting the wire harness, make sure the connection is secure and the connectors (B) are firmly locked into place.
   - When installing the fuel gauge sending unit (C), make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.

4. Install the parts in the reverse order of removal with a new base gasket (D) and new O-rings (E). When installing the fuel tank unit, align the marks on the unit and the fuel tank (see page 11-347).

   NOTE: For non-SULEV models, replace the fuel tank unit locknut and base gasket as a set.

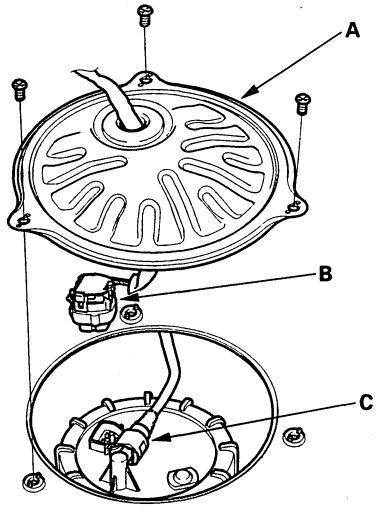
Fuel Pump/Fuel Gauge Sending Unit Replacement

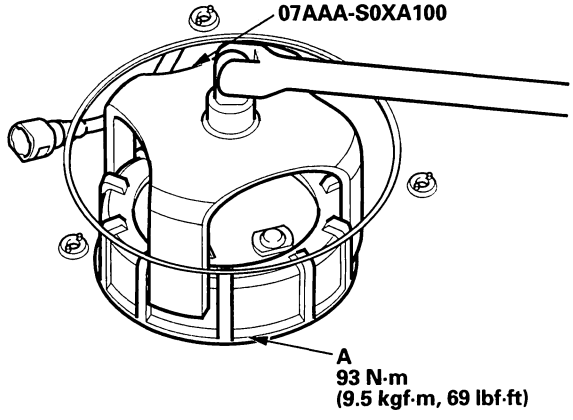
Special Tools Required
Fuel sender wrench 07AAA-S0XA100

Non-SULEV model

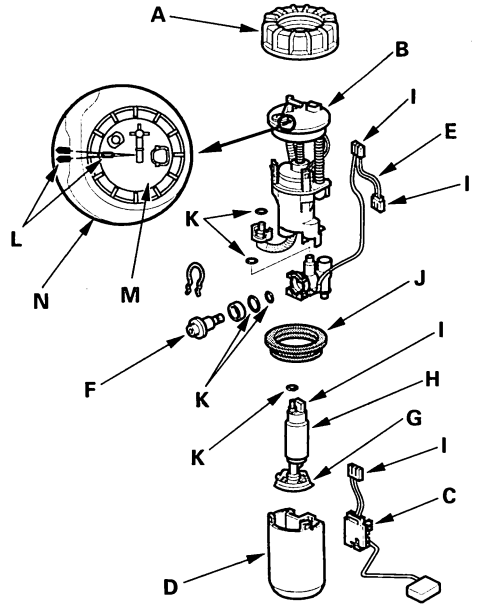
1. Relieve the fuel pressure (see page 11-330).
2. Remove the fuel fill cap.
3. Remove the trunk floor.
4. Remove the access panel (A) from the floor.



5. Disconnect the fuel pump 5P connector (B).
6. Disconnect the quick-connect fitting (C) from the fuel tank unit.
7. Using the special tool, loosen the fuel tank unit locknut (A).



8. Remove the locknut (A) and the fuel tank unit.



9. Remove the fuel filter (B), the fuel gauge sending unit (C), the case (D), the wire harness (E), and the fuel pressure regulator (F).
10. Check these items before installing the fuel tank unit:
    - Make sure the connection is secure and the suction filter (G) is firmly connected to the fuel pump (H).
    - When connecting the wire harness, make sure the connection is secure and the connectors (I) are firmly locked into place.
    - When installing the fuel gauge sending unit, make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
11. Install the parts in the reverse order of removal with a new base gasket (J), new locknut, and new O-rings (K). When installing the fuel tank unit, align the marks (L) on the unit (M) and the fuel tank (N).

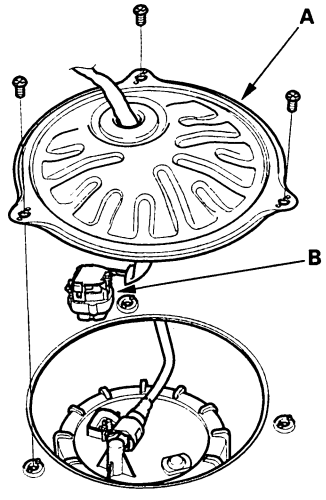
Fuel Gauge Sending Unit Test

2003-2004 models

NOTE: For the fuel gauge system circuit diagram, refer to the Gauges Circuit Diagram (see page 22-261).

1. Do multiplex integrated control system troubleshooting test mode A (see page 22-91).
   - If no problem is found, go to step 2.
   - If DTC B1175 is indicated, go to the DTC B1175 troubleshooting (see page 22-283).
2. Check the No. 21 METER (7.5 A) fuse in the under-dash fuse/relay box.
3. Do the gauge drive circuit check (see page 22-260).
   - If the fuel gauge needle sweeps from the minimum to maximum position and then returns to minimum, the gauge is OK. Go to step 4.
   - If the fuel gauge needle does not sweep correctly, replace the gauge assembly and retest.
4. Turn the ignition switch OFF.
5. Remove the trunk floor.
6. Remove the access panel (A) from the floor.



*: This illustration shows the non-SULEV model.

7. Disconnect the fuel tank unit connector (B).
8. Non-SULEV model:
   Remove the fuel tank unit from the fuel tank (see page 11-345).
9. SULEV model:
   Remove the fuel tank unit from the fuel tank (see page 11-346).
10. Measure resistance between the No. 1 and No. 2 terminals of the fuel tank unit 5P connector with the float at E (EMPTY), 1/2 (HALF FULL), and F (FULL) positions.
    If you do not get the following readings, replace the fuel gauge sending unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346).

Non-SULEV model:

Float Position	F	1/2	LOW	E
	7.5 in. (191.4 mm)	4.4 in. (113.1 mm)	2.0 in. (52.4 mm)	1.0 in. (25.6 mm)
Resistance (Ω)	19 to 21	205.5 to 215.5	487.9 to 617.1	770 to 790

SULEV model:

Float Position	F	1/2	LOW	E
	1.9 in. (49 mm)	5.2 in. (132.4 mm)	7.6 in. (194.1 mm)	8.6 in. (219.7 mm)
Resistance (Ω)	19 to 21	215.4 to 225.4	491.7 to 634.2	770 to 790

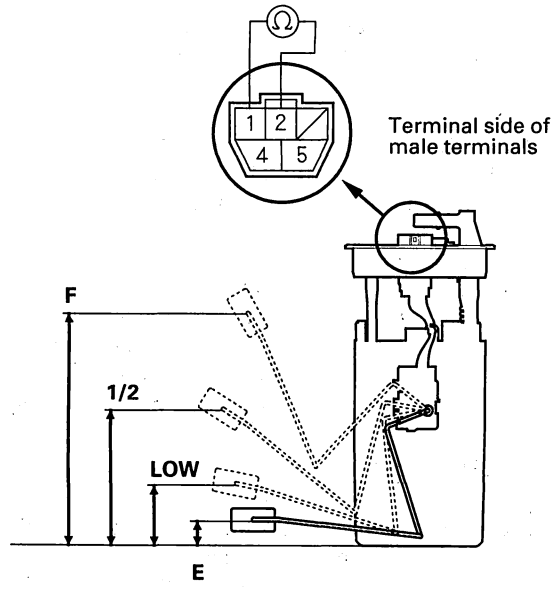
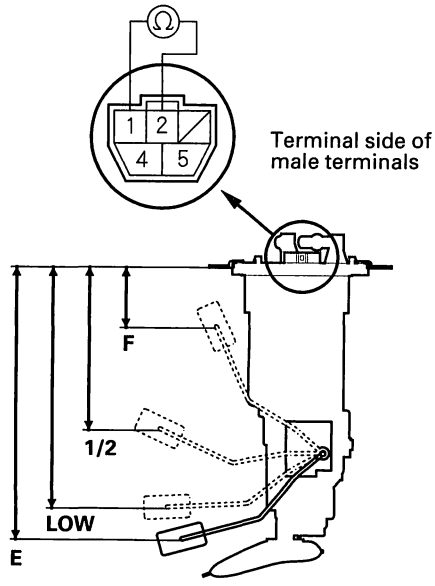
Fuel Gauge Sending Unit Test (cont'd)

NOTE: Remove the No. 15 BACK UP (40 A) fuse from the under-hood fuse/relay box for at least 10 seconds after completing troubleshooting, otherwise it may take up to 20 minutes for the fuel gauge to indicate the correct fuel level.

Non-SULEV model



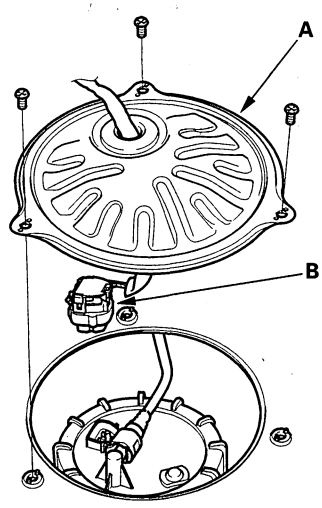
SULEV model



2005-2006 models

NOTE: For the fuel gauge system circuit diagram, refer to the Gauges Circuit Diagram; 2003-2005 models (see page 22-261), 2006 model (see page 22-268).

1. Check the No. 21 METER (7.5 A) fuse in the under-dash fuse/relay box before testing.
2. Do the B-CAN system diagnosis Test Mode A troubleshooting (see page 22-91).
   - If no problem is found, go to step 3.
   - If DTC B1175 or B1176 is indicated, go to the indicated DTC's troubleshooting.
3. Turn the ignition switch OFF.
4. Remove the trunk floor.
5. Remove the access panel (A) from the floor.



*: This illustration shows the non-SULEV model.

6. Disconnect the fuel tank unit connector (B).

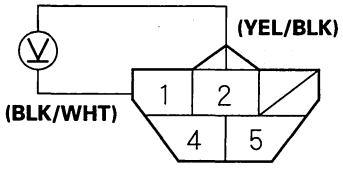
BACK

Protected by AR

7. Measure voltage between fuel tank unit 5P connector terminals No. 1 and No. 2 with the ignition switch ON (II). There should be battery voltage.

   - If the voltage is OK, go to step 8.
   - If the voltage is not as specified, check for:
     - a short in the YEL/BLK wire to ground.
     - an open in the YEL/BLK or BLK/WHT wire.

FUEL TANK UNIT 5P CONNECTOR



Wire side of female terminals

8. Turn the ignition switch OFF.

9. Non-SULEV model:
   Remove the fuel tank unit from the fuel tank (see page 11-345).

10. SULEV model:
    Remove the fuel tank unit from the fuel tank (see page 11-346).

11. Measure resistance between fuel tank unit 5P connector terminals No. 1 and No. 2 with the float at E (EMPTY), LOW (LOW FUEL INDICATOR), 1/2 (HALF FULL), and F (FULL) positions.
    If you do not get the following readings, replace the fuel gauge sending unit; Non-SULEV model (see page 11-345), SULEV model (see page 11-346).

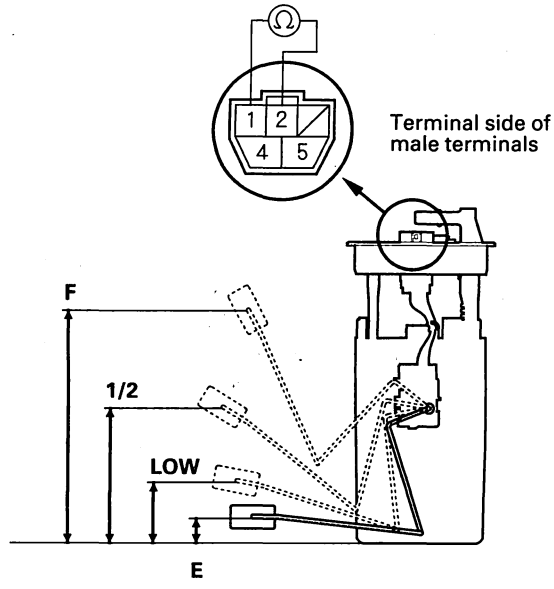
Non-SULEV model:

Float Position	F 7.5 in. (191.4 mm)	1/2 4.4 in. (113.1 mm)	LOW 2.0 in. (52.4 mm)	E 1.0 in. (25.6 mm)
Resistance (Ω)	19 to 21	205.5 to 215.5	487.9 to 617.1	770 to 790

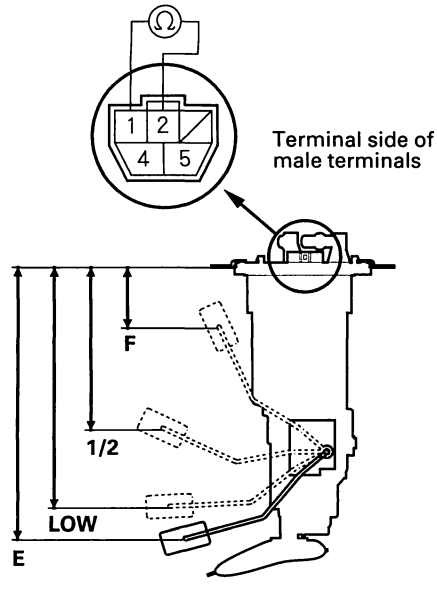
SULEV model:

Float Position	F 1.9 in. (49 mm)	1/2 5.2 in. (132.4 mm)	LOW 7.6 in. (194.1 mm)	E 8.6 in. (219.7 mm)
Resistance (Ω)	19 to 21	215.4 to 225.4	491.7 to 634.2	770 to 790

Non-SULEV model



SULEV model



12. Reconnect the fuel tank unit 5P connector.

13. Remove the No. 15 BACK UP (40 A) fuse from the under-hood fuse/relay box for at least 10 seconds, then reinstall it.

14. Turn the ignition switch ON (II).

(cont'd)

Protected by AR

Fuel Gauge Sending Unit Test (cont'd)

15. Check that the pointer of the fuel gauge indicates "F" with the float at F.

    - If the pointer of the fuel gauge does not indicate "F" replace the gauge assembly.
    - If the gauge is OK, the test is complete.

    NOTE:
    - The pointer of the fuel gauge returns to the bottom of the gauge dial when the ignition switch is OFF, regardless of the fuel level.
    - Remove the No. 15 BACK UP (40 A) fuse from the under-hood fuse/relay box for at least 10 seconds after completing troubleshooting, otherwise it may take up to 20 minutes for the fuel gauge to indicate the correct fuel level.

Low Fuel Indicator Test

1. Do the gauge drive circuit check (see page 22-260).

    - If the low fuel indicator flashes, go to step 2.
    - If the low fuel indicator does not flash, replace the gauge control module assembly.

2. Do the B-CAN system diagnosis Test Mode A troubleshooting (see page 22-91).

    - If any DTCs are indicated, go to the indicated DTC's troubleshooting.
    - If no DTCs are indicated, go to step 3.

3. Do the fuel gauge sending unit test; 2003-2004 models (see page 11-351), 2005-2006 models (see page 11-352).

Throttle Body Test

2003-2005 models

NOTE:
- Do not adjust the throttle stop screw. It is preset at the factory.
- If the malfunction indicator lamp (MIL) has been reported on, check for diagnostic trouble codes (DTCs) (see page 11-3).

1. With the engine off, check the throttle cable movement. The cable should move without binding or sticking.

   - If the cable moves OK, go to step 2.
   - If the cable binds or sticks, check it and its routing. If the cable is faulty, reroute it or replace it, then adjust it (see page 11-362). Go to step 2.

2. Move the throttle lever by hand to see if the throttle valve and/or shaft are too loose or too tight.

   - If there is excessive play in the throttle valve shaft, or any binding in the throttle valve at the fully closed or fully opened position, replace the throttle body.
   - If the throttle valve and shaft are OK, go to step 3.

3. Connect the HDS to the data link connector (DLC).

4. Turn the ignition switch ON (II).

5. Check the throttle position with the HDS. The reading should be about 0 ° (REL), 0 % (REL) or 0.5 V when the throttle is fully closed and about 80 ° (REL), 89 % (REL) or 4.5 V when the throttle is fully opened.

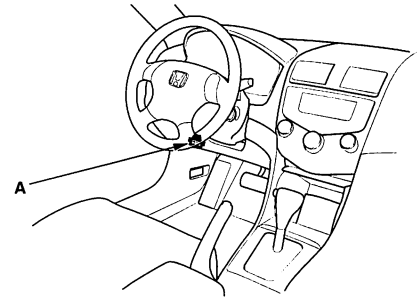
   - If the throttle position is correct, the throttle body is OK.
   - If the throttle position is not correct, replace the throttle body.

2006 model

Carbon Accumulation Check

NOTE: If the malfunction indicator lamp (MIL) has been reported on, check for diagnostic trouble codes (DTCs) (see page 11-3).

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



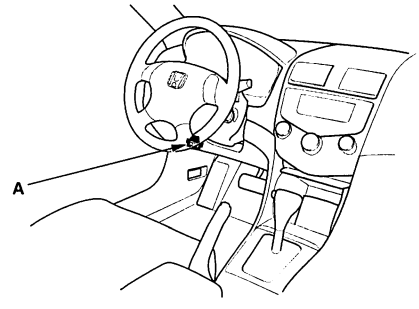
2. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

3. Check the REL TP SENSOR in the DATA LIST with the HDS. The reading should be below 2.46 %. If it is not, clean the throttle body (see page 11-357).

Throttle Position Learning Check

NOTE: If the malfunction indicator lamp (MIL) has been reported on, check for diagnostic trouble codes (DTCs) (see page 11-3).

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



2. Select the INSPECTION MENU with the HDS.

3. Do the TP POSITION CHECK in the ETCS TEST. If needed, clean the throttle body (see page 11-357).

BACK

Protected by AR

Throttle Body Cleaning

2003-2005 models

1. Check for damage to the air cleaner.
2. Remove the throttle body (see page 11-366).
3. Clean off any carbon from the throttle valve and inside of the throttle body with throttle plate and induction cleaner.
4. Install the throttle body (see page 11-366).
5. Do the ECM/PCM idle learn procedure (see page 11-316).

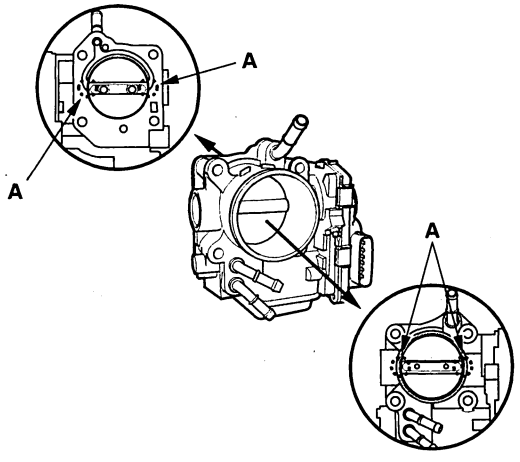
2006 model

⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your finger if the throttle valve is activated.

1. Check for damage to the air cleaner. If the air cleaner is damaged, replace it (see page 11-361).
2. Remove the throttle body (see page 11-367).
3. Wipe off the carbon from the throttle valve and inside the throttle body with a paper towel soaked in throttle plate and induction cleaner.

   NOTE:
   - Remove the throttle body to clean it.
   - Be careful not to pinch your fingers.
   - To avoid removing the molybdenum coating, do not clean the bearing area of the throttle shaft (A).
   - Do not spray throttle plate and induction cleaner directly on the throttle body.
   - Use Honda genuine throttle plate and induction cleaner.



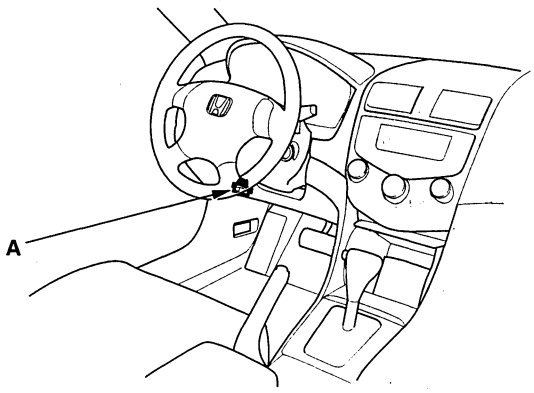
4. Install the throttle body (see page 11-367).
5. Reset the ECM/PCM with the HDS.
6. Turn the ignition switch ON (II), and wait 2 seconds.
7. Do the ECM/PCM idle learn procedure (see page 11-316).

Protected by AR

Throttle Position Sensor Signal Inspection

NOTE:
- This procedure is to inspect the abnormalities of the throttle position sensor full closed position.
- Other failures than full closed position will store a DTC, therefore the procedure to inspect them are not included in this procedure.
- Check for Temporary DTCs or DTCs with the HDS before this procedure. If there are any DTCs indicated, troubleshoot them first, then do this procedure.
- Press the accelerator pedal several times, and check the operation. If it does not operate properly check the accelerator pedal, the throttle cable, and the throttle linkage individually. If you fined a problem in one of them, replace the parts that caused the problem.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.



2. Turn the ignition switch ON (II).

3. Make sure the accelerator pedal is not pressed and check the TP SENSOR in the DATA LIST with the HDS.

   - If it is below 0.5 V, the throttle position sensor is OK.
   - If it is above 0.5 V, adjust the throttle cable (see page 11-362), then go to step 4.

4. Make sure the accelerator pedal is not pressed and check the TP SENSOR in the DATA LIST with the HDS.

   - If it is below 0.5 V, the throttle position sensor is OK.
   - If it is above 0.5 V, update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6), then go to step 5.

5. Make sure the accelerator pedal is not pressed and check the TP SENSOR in the DATA LIST with the HDS.

   - If it is below 0.5 V, the throttle position sensor is OK.
   - If it is above 0.5 V, replace the throttle body assembly (see page 11-366), then go to step 1.

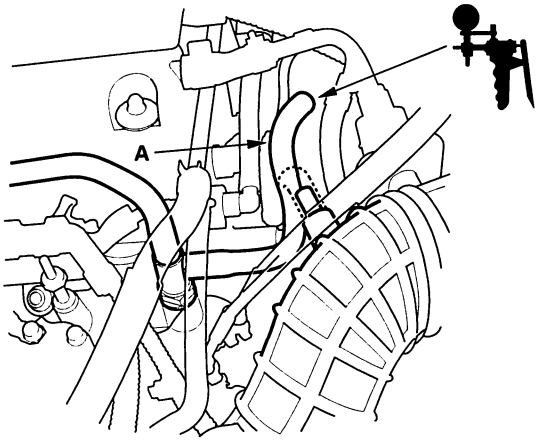
Intake Air Bypass Control Thermal Valve Test

Special Tools Required
Vacuum pump/gauge, 0—30 in.Hg, Snap-on YA4000A or equivalent, commercially available

1. Start the engine, and let it idle.

   NOTE: The engine coolant temperature must be below 131 °F (55 °C).

2. Remove the vacuum hose (A) from the intake air duct, and connect a vacuum pump/gauge, 0—30 in.Hg, to the hose.



3. Raise and lower the engine speed, making sure the vacuum gauge reading changes as the engine speed changes.

   If the vacuum reading does not change, check for these problems:

   - Misrouted, leaking, broken, or clogged intake air bypass control system vacuum lines.
   - A cracked or damaged intake air bypass control thermal valve.

4. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

5. Raise and lower the engine speed, making sure the vacuum gauge reading does not indicate any vacuum as the rpm changes.

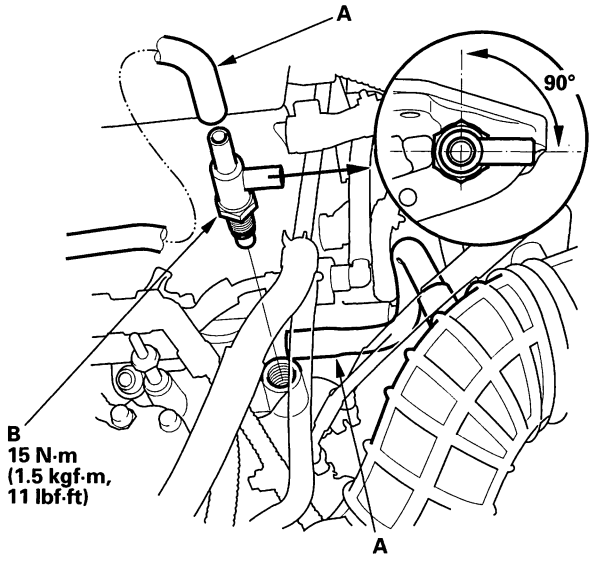
   If there is a vacuum reading, check for these problems:

   - Misrouted, leaking, broken, or clogged intake air bypass control system vacuum lines.
   - A cracked or damaged intake air bypass control thermal valve.

Protected by AR

Intake Air Bypass Control Thermal Valve Replacement

1. Remove the intake manifold cover.
   - 2003-2005 models (see step 3 on page 9-4)
   - 2006 model (see step 3 on page 9-9)
2. Remove the air intake boot.
3. Remove the throttle cable bracket.
4. Disconnect the hoses (A).



5. Remove the intake air bypass control thermal valve (B).
6. Install the valve in the reverse order of removal.

   NOTE: Position the valve angle as shown.

BACK

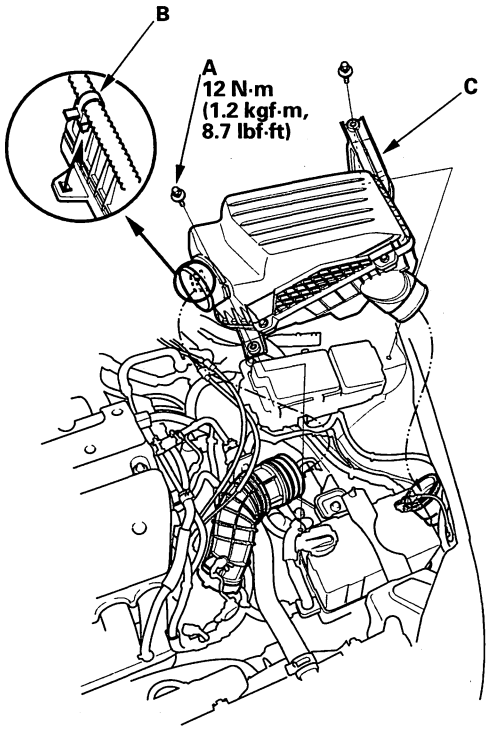
Air Cleaner Removal/Installation

1. Remove the bolts (A) and the clamp (B) (2003-2004 SULEV, LX-P models, and 2005-2006 models: Disconnect the MAF sensor/IAT sensor connector).

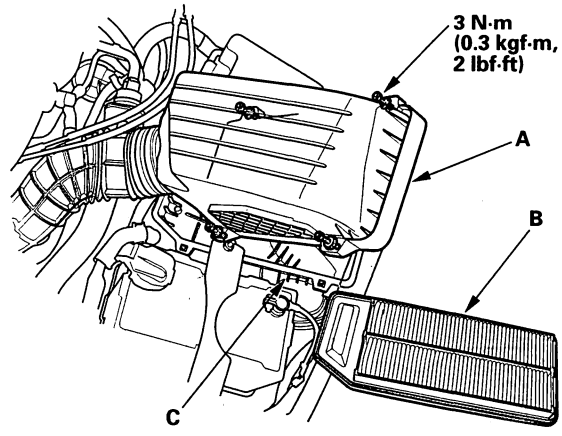


*: This illustration shows 2003-2004 except SULEV, LX-P models.

2. Remove the air cleaner (C).
3. Install the parts in the reverse order of removal.

Air Cleaner Element Inspection/ Replacement

1. Open the air cleaner housing cover (A).



*: This illustration shows 2003-2004 except SULEV, LX-P models.

2. Remove the air cleaner element (B) from the air cleaner housing (C).
3. Check the air cleaner element for damage or clogging. It needed, replace the air cleaner element.

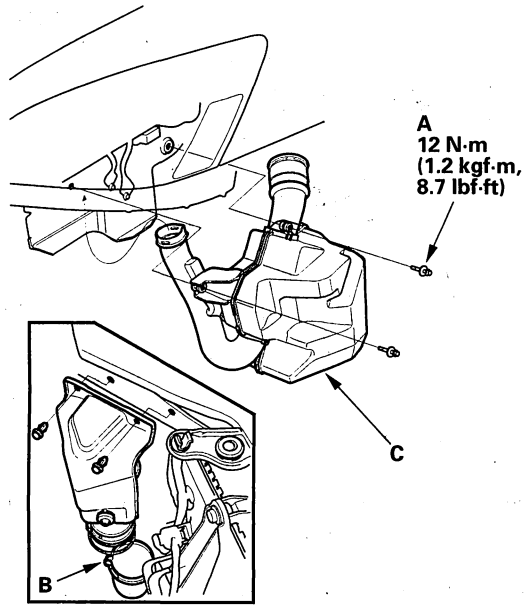
   NOTE: Do not use compressed air to clean the air cleaner element.

4. Install the parts in the reverse order of removal.

Protected by AR

Resonator Removal/Installation

1. Remove the front bumper; 2-door (see page 20-184), 4-door (see page 20-185).
2. Remove the bolts (A), and the intake air duct (B).

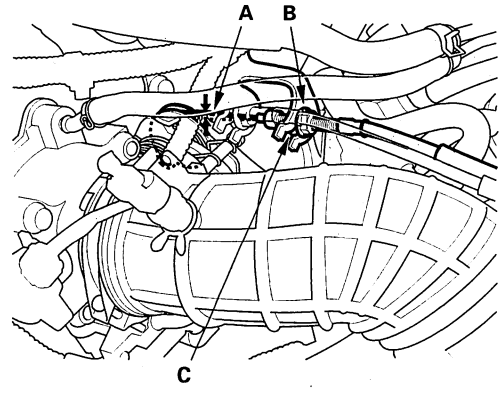


3. Remove the resonator (C).
4. Install the parts in the reverse order of removal.

Throttle Cable Adjustment

2003-2005 models

1. Check cable free play at the throttle linkage. Cable free play (A) should be 3/8—1/2 in. (10—12 mm).



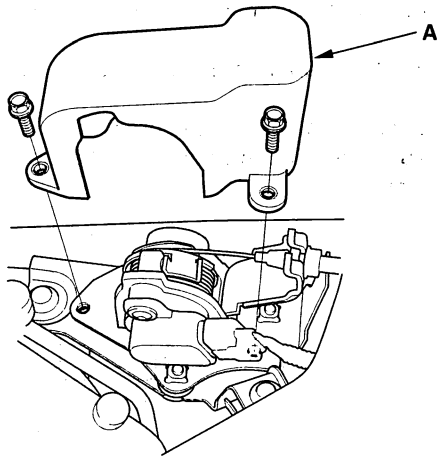
2. If the free play is not within spec (3/8—1/2 in., 10—12 mm), loosen the locknut (B), turn the adjusting nut (C) until the free play is as specified, then retighten the locknut.
3. With the cable properly adjusted, check the throttle valve to be sure it opens fully when you push the accelerator pedal to the floor. Also check the throttle valve to be sure it returns to the idle position whenever you release the accelerator pedal.

BACK

Protected by AR

2006 model

1. Remove the throttle cable cover (A).



2. Check cable free play at the throttle linkage. Cable free play (A) should be 10—12 mm (3/8—1/2 in.).

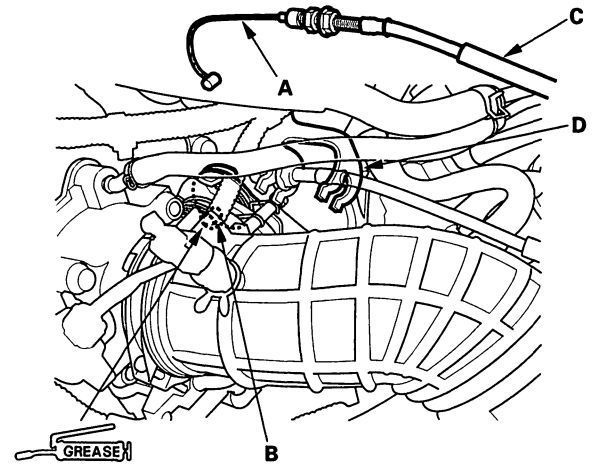
Throttle Cable Removal/Installation

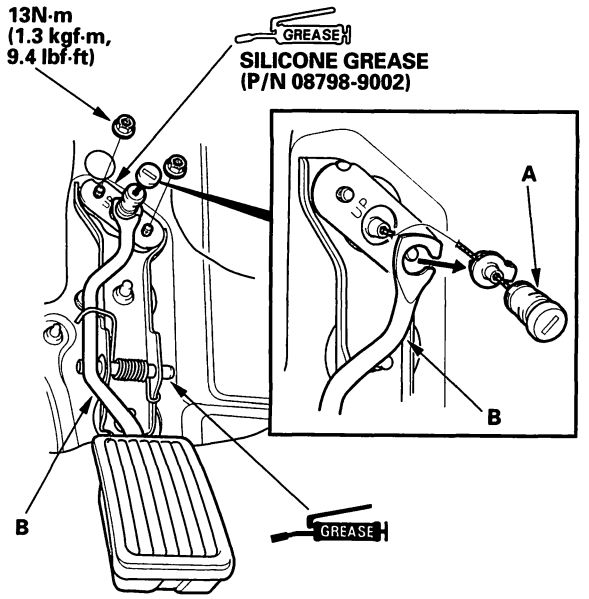
2003-2005 models

1. Remove the engine cover.
2. Fully open the throttle valve, then remove the throttle cable (A) from the throttle link (B).

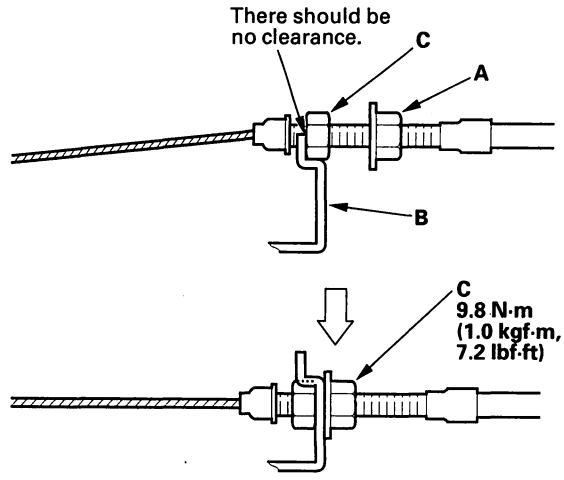


SILICONE GREASE
(P/N 08798-9002)

3. Remove the cable housing (C) from the cable bracket (D).
4. Remove the throttle cable (A) from the accelerator pedal (B).



5. Install the cable in the reverse order of removal.
6. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
7. Hold the cable, removing all slack from it.
8. Set the cable (A) on the bracket (B). Turn the adjusting nut (C) so that its free play is 0 mm.



9. Position the adjusting nut on the other side of the bracket, then tighten the locknut .
10. Check the throttle cable free play (see step 2 on page 11-362).
11. With the cable properly adjusted, check the throttle valve to be sure it opens fully when you push the accelerator pedal to the floor. Also check the throttle valve to be sure it returns to the idle position whenever you release the accelerator pedal.

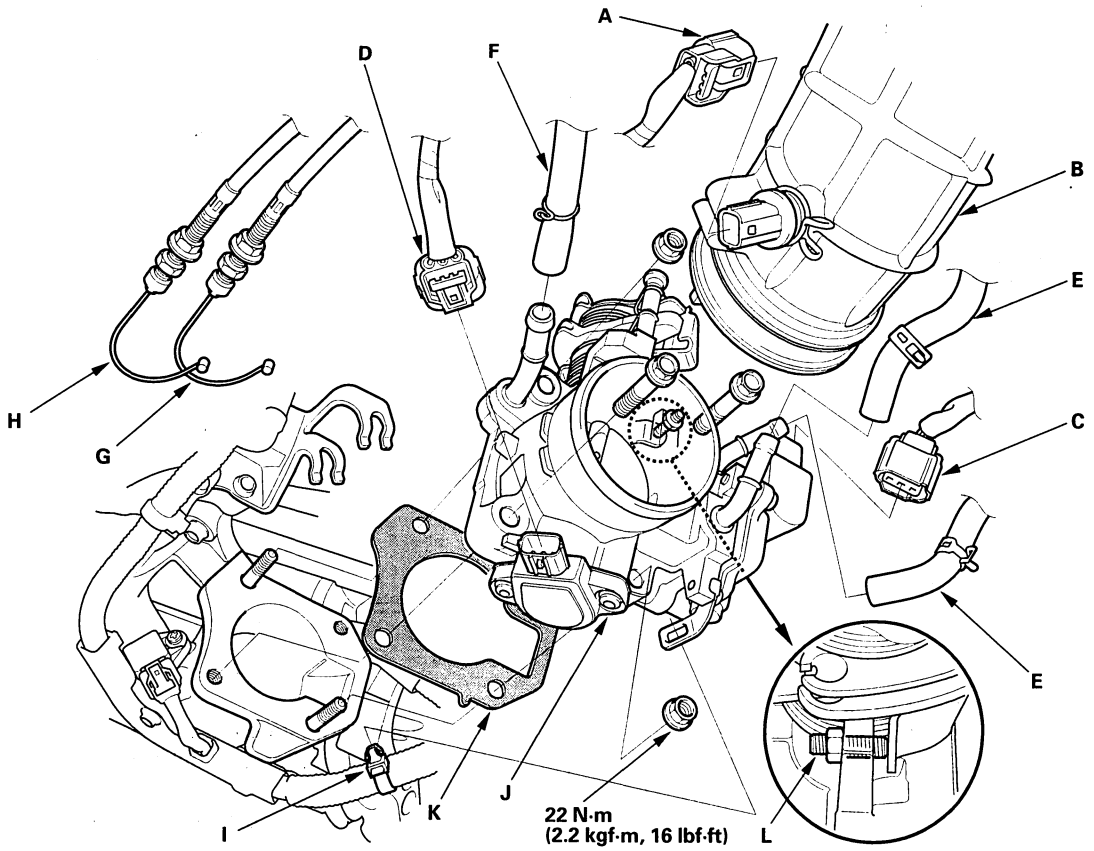
Throttle Body Removal/Installation

2003-2005 models

1. 2003-2004 except SULEV, LX-P models:
   Disconnect the IAT sensor connector (A).



2. Remove the intake air duct (B).
3. Disconnect the IAC valve connector (C), and the TP sensor connector (D).
4. Disconnect and plug the water bypass hoses (E).
5. Disconnect the vacuum hose (F).
6. Remove the throttle cable (G) and actuator cable (with cruise control) (H).
7. Remove the harness clip (I) and throttle body (J).
8. Install the parts in the reverse order of removal with a new gasket (K).

NOTE:
- Do not adjust the throttle stop screw (L).
- Do the ECM/PCM idle learn procedure after the throttle body has been replaced (see page 11-316).
- Refill the radiator with engine coolant (see page 10-6).
- After reassembly, adjust the cruise control cable (see page 4-63), and the throttle cable (see page 11-362).
- The throttle position (TP) sensor is not removable.

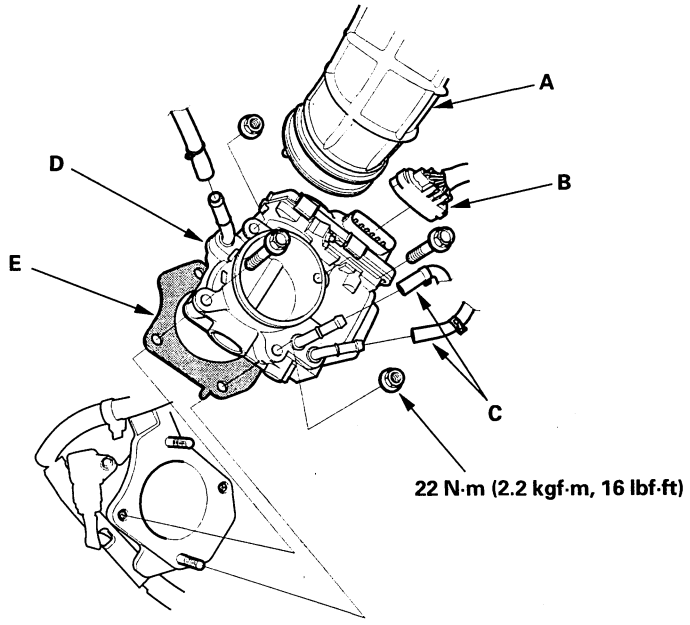
⚠CAUTION

Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your finger if the throttle valve is activated.

NOTE: If you are replacing or cleaning the throttle body, begin from step 1. If you are removing the throttle body, skip step 1 to 3, and begin from step 4.

1. Connect the HDS while the engine is stopped.
2. Select the INSPECTION MENU with the HDS.
3. Do the TP POSITION CHECK in the ETCS TEST.
4. Remove the intake air duct (A).



5. Disconnect the throttle body connector (B).
6. Disconnect and plug the water bypass hoses (C).
7. Remove the throttle body (D).
8. Install the parts in the reverse order of removal with a new gasket (E).

NOTE:
- Do the ECM/PCM idle learn procedure after the throttle body has been replaced (see page 11-316).
- Refill the radiator with engine coolant (see page 10-6).

DTC Troubleshooting

DTC P0420: Catalyst System Efficiency Below Threshold
(2003-2004 models)

NOTE:
- If some of the DTCs listed below are stored at the same time as DTC P0420, troubleshoot them first, then recheck for DTC P0420.
  P0137, P0138: Secondary HO2S (Sensor 2)
  P0141: Secondary HO2S (Sensor 2) heater
- Poor quality fuel may cause this DTC.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 5th gear)
   - Vehicle speed between 50 mph (80 km/h) and 55 mph (88 km/h) with cruise control set
   - Drive about 2 minutes, decelerate for at least 4 seconds with the throttle completely closed, then maintain 55 mph (88 km/h) for 20 minutes with cruise control set
5. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate EXECUTING?

   YES—Go to step 6.

   NO—Go to step 4 and recheck.
6. Continue test driving until a result comes on.
7. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 8.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 4 and recheck.
8. Turn the ignition switch OFF.
9. Replace the TWC (see page 9-15).
10. Turn the ignition switch ON (II).
11. Reset the ECM/PCM with the HDS.
12. Do the ECM/PCM idle learn procedure (see page 11-316).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
14. Test-drive for about 10 minutes, varying the vehicle speed.
15. Check the CATA MON TEMP in the DATA LIST with the HDS.

    Is the temperature OK?

    YES—Go to step 16.

    NO—Go to step 13 and recheck.
16. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 5th gear)
    - Vehicle speed between 50 mph (80 km/h) and 55 mph (88 km/h) with cruise control set
    - Drive about 2 minutes, decelerate for at least 4 seconds with the throttle completely closed, then maintain 55 mph (88 km/h) for 20 minutes with cruise control set

DTC Troubleshooting (cont'd)

DTC P0420: Catalyst System Efficiency Below Threshold
(2005-2006 models)

NOTE:
- If some of the DTCs listed below are stored at the same time as DTC P0420, troubleshoot them first, then recheck for DTC P0420.
  P0137, P0138: Secondary HO2S (Sensor 2)
  P0141: Secondary HO2S (Sensor 2) heater
- Poor quality fuel may cause this DTC.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 5th gear)
   - Vehicle speed between 45—75 mph (72—120 km/h) for 5 minutes or more with cruise control set
   - Maintain the vehicle speed at 55 mph (88 km/h) for 5 minutes or more with cruise control set
5. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate EXECUTING?

   YES—Go to step 6.

   NO—Go to step 4 and recheck.
6. Continue test driving until a result comes on.
7. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 8.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 4 and recheck.
8. Turn the ignition switch OFF.
9. Replace the TWC (see page 9-16).
10. Turn the ignition switch ON (II).
11. Reset the ECM/PCM with the HDS.
12. Do the ECM/PCM idle learn procedure (see page 11-316).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
14. Test-drive for about 10 minutes, varying the vehicle speed.
15. Check the CATA MON TEMP in the DATA LIST with the HDS.

    Is the temperature OK?

    YES—Go to step 16.

    NO—Go to step 13 and recheck.
16. Test-drive under these conditions:
    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 5th gear)

DTC Troubleshooting

DTC P0401: EGR Insufficient Flow

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the EGR TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Go to step 5.

   NO—Go to step 7.
5. Test-drive under these conditions:

   - Engine coolant temperature above 158 °F (70 °C)
   - A/T in D position (M/T in 4th gear)
   - Vehicle speed at 25 mph (40 km/h) or more, and engine speed between 1,100 and 3,000 rpm
   - During the drive, decelerate (with the throttle fully closed) for 5 seconds
6. Monitor the OBD STATUS for DTC P0401 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Remove the EGR plate (see page 9-2), and clean the intake manifold port with throttle plate and induction cleaner, then go to step 9.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 5 and recheck.
7. Turn the ignition switch OFF.
8. Replace the EGR valve (see page 11-386).
9. Turn the ignition switch ON (II).
10. Reset the ECM/PCM with the HDS.
11. Do the ECM/PCM idle learn procedure (see page 11-316).
12. Test-drive under these conditions:

    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 4th gear)
    - Vehicle speed at 25 mph (40 km/h) or more, and engine speed between 1,100 and 3,000 rpm
    - During the drive, decelerate (with the throttle fully closed) for 5 seconds
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0401 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM. If the connections are OK, go to step 15. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 14.
14. Monitor the OBD STATUS for DTC P0401 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 12 and recheck.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

15. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

16. Test-drive under these conditions:

    - Engine coolant temperature above 158 °F (70 °C)
    - A/T in D position (M/T in 4th gear)
    - Vehicle speed at 25 mph (40 km/h) or more, and engine speed between 1,100 and 3,000 rpm
    - During the drive, decelerate (with the throttle fully closed) for 5 seconds

17. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0401 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P0404: EGR Valve Circuit Range/ Performance Problem

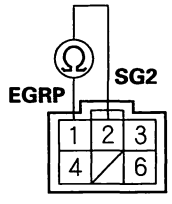
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the EGR TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for carbon in the EGR valve.■

   NO—Go to step 5.
5. Turn the ignition switch OFF.
6. Disconnect the EGR valve 6P connector.
7. At the sensor side, measure resistance between EGR valve 6P connector terminals No. 1 and No. 2.

EGR VALVE 6P CONNECTOR



Terminal side of male terminals

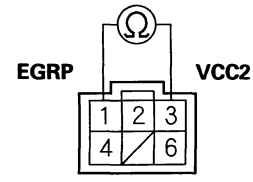
Is there 100 kΩ or more?

YES—Go to step 26.

NO—Go to step 8.

8. Measure resistance between EGR valve 6P connector terminals No. 1 and No. 3.

EGR VALVE 6P CONNECTOR



Terminal side of male terminals

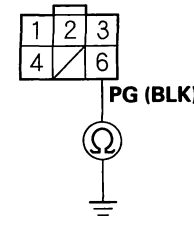
Is there 100 kΩ or more?

YES—Go to step 26.

NO—Go to step 9.

9. Check for continuity between EGR valve 6P connector terminal No. 6 and body ground.

EGR VALVE 6P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 10.

NO—Repair open in the wire between the EGR valve and G101, then go to step 27.

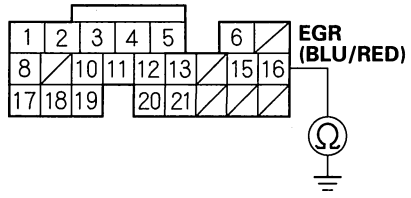
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

10. Jump the SCS line with the HDS.
11. Disconnect ECM/PCM connector B (24P).
12. Check for continuity between ECM/PCM connector terminal B16 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

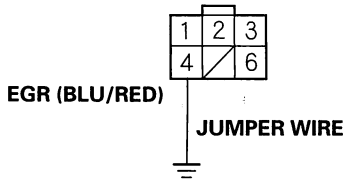
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B16) and the EGR valve, then go to step 27.

NO—Go to step 13.

13. Connect EGR valve 6P connector terminal No. 4 to body ground with a jumper wire.

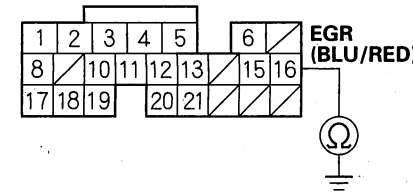
EGR VALVE 6P CONNECTOR



Wire side of female terminals

14. Check for continuity between ECM/PCM connector terminal B16 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Go to step 15.

NO—Repair open in the wire between the ECM/PCM (B16) and the EGR valve, then go to step 27.

15. Remove the EGR valve (see page 11-386).
16. Clean the intake manifold EGR port with throttle plate and induction cleaner. Also, clean the passage inside the EGR valve with throttle plate and induction cleaner.
17. Install the EGR valve (see page 11-386).
18. Reconnect the EGR valve 6P connector.
19. Reconnect ECM/PCM connector B (24P).
20. Turn the ignition switch ON (II).
21. Reset the ECM/PCM with the HDS.
22. Do the ECM/PCM idle learn procedure (see page 11-316).
23. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

BACK

Protected by AR

24. Do the EGR TEST in the INSPECTION MENU with the HDS.

    Is the result OK?

    YES—Go to step 31.

    NO—Go to step 25.

25. Turn the ignition switch OFF.

26. Replace the EGR valve (see page 11-386).

27. Reconnect all connectors.

28. Turn the ignition switch ON (II).

29. Reset the ECM/PCM with the HDS.

30. Do the ECM/PCM idle learn procedure (see page 11-316).

31. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

32. Do the EGR TEST in the INSPECTION MENU with the HDS.

33. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0404 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM. If the connections are OK, go to step 35. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 34.

34. Monitor the OBD STATUS for DTC P0404 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 31 and recheck.

35. Update the ECM/PCM if it does not have the latest software, or substitute a know-good ECM/PCM (see page 11-6).

36. Do the EGR TEST in the INSPECTION MENU with the HDS.

37. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0404 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC Troubleshooting (cont'd)

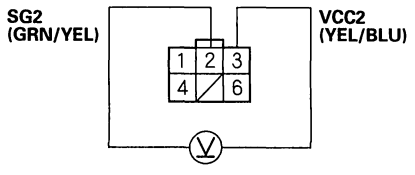
DTC P0406: EGR Valve Position Sensor Circuit High Voltage

1. Turn the ignition switch ON (II).
2. Check the EGR VLS in the DATA LIST with the HDS.

   Is 4.88 V or higher indicated?

   YES—Go to step 3.
   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the EGR valve and the ECM/PCM. ■
3. Turn the ignition switch OFF.
4. Disconnect the EGR valve 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between EGR valve 6P connector terminals No. 2 and No. 3.

EGR VALVE 6P CONNECTOR



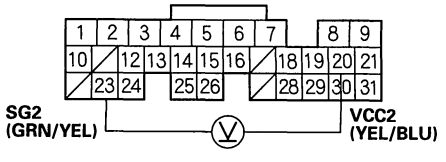
Wire side of female terminals

Is there about 5 V?

YES—Go to step 8.
NO—Go to step 7.

7. Measure voltage between ECM/PCM connector terminals A20 and A23.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the EGR valve and the ECM/PCM (A23), then go to step 10.

NO—Go to step 14.

8. Turn the ignition switch OFF.
9. Replace the EGR valve (see page 11-386).
10. Turn the ignition switch ON (II).
11. Reset the ECM/PCM with the HDS.
12. Do the ECM/PCM idle learn procedure (see page 11-316).
13. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0406 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete. ■
14. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).
15. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0406 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC P2413: EGR System Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the EGR TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the EGR valve and the ECM/PCM. ■

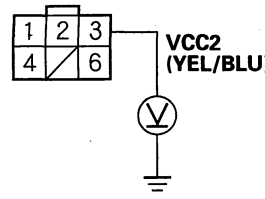
   NO—Go to step 5.
5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II).
7. Check the EGR VLS in the DATA LIST with the HDS.

   Is about 0 V indicated?

   YES—Go to step 8.

   NO—Go to step 19.
8. Turn the ignition switch OFF.
9. Disconnect the EGR valve 6P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between EGR valve 6P connector terminal No. 3 and body ground.

EGR VALVE 6P CONNECTOR



Wire side of female terminals

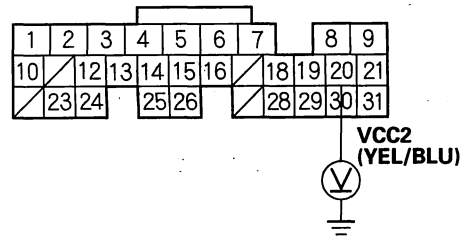
Is there about 5 V?

YES—Go to step 13.

NO—Go to step 12.

12. Measure voltage between ECM/PCM connector terminal A20 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between the EGR valve and the ECM/PCM (A20), then go to step 44.

NO—Go to step 51.

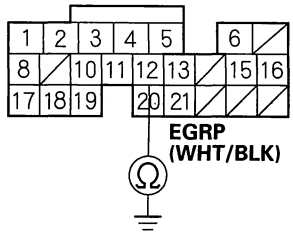
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. Turn the ignition switch OFF.
14. Jump the SCS line with the HDS.
15. Disconnect ECM/PCM connector B (24P).
16. Check for continuity between ECM/PCM connector terminal B12 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

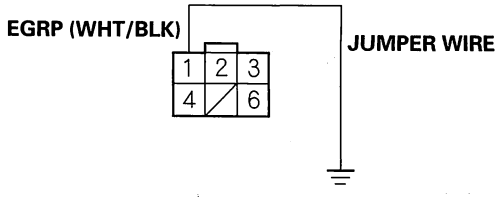
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B12) and the EGR valve, then go to step 44.

NO—Go to step 17.

17. Connect EGR valve 6P connector terminal No. 1 to body ground with a jumper wire.

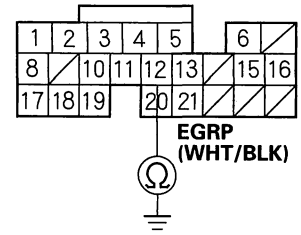
EGR VALVE 6P CONNECTOR



Wire side of female terminals

18. Check for continuity between ECM/PCM connector terminal B12 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

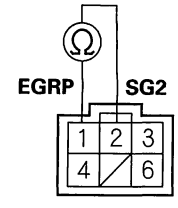
Is there continuity?

YES—Go to step 19.

NO—Repair open in the wire between the ECM/PCM (B12) and the EGR valve, then go to step 44.

19. Turn the ignition switch OFF.
20. If not already done, disconnect the EGR valve 6P connector.
21. At the sensor side, measure resistance between EGR valve 6P connector terminals No. 1 and No. 2.

EGR VALVE 6P CONNECTOR



Terminal side of male terminals

Is there continuity or resistance of 100 kΩ or more?

YES—Go to step 43.

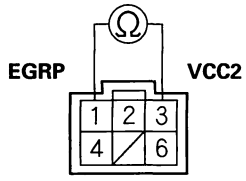
NO—Go to step 22.

BACK

Protected by AR

22. Measure resistance between EGR valve 6P connector terminals No. 1 and No. 3.

EGR VALVE 6P CONNECTOR



Terminal side of male terminals

Is there 100 kΩ or more?

YES—Go to step 43.

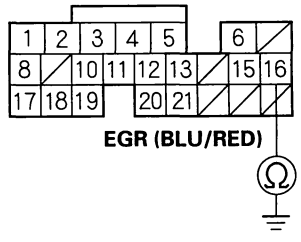
NO—Go to step 23.

23. If not already done, jump the SCS line with the HDS.

24. If not already done, disconnect ECM/PCM connector B (24P).

25. Check for continuity between ECM/PCM connector terminal B16 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

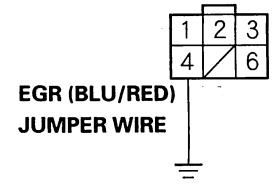
Is there continuity?

YES—Repair short in the wire between the ECM/PCM (B16) and the EGR valve, then go to step 44.

NO—Go to step 26.

26. Connect EGR valve 6P connector terminal No. 4 to body ground with a jumper wire.

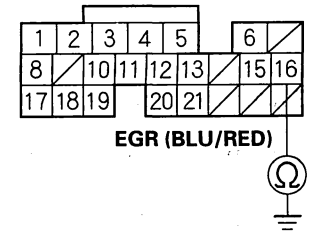
EGR VALVE 6P CONNECTOR



Wire side of female terminals

27. Check for continuity between ECM/PCM connector terminal B16 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

Is there continuity?

YES—Go to step 28.

NO—Repair open in the wire between the ECM/PCM (B16) and the EGR valve, then go to step 44.

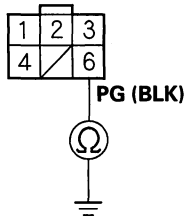
DTC Troubleshooting (cont'd)

28. Remove the jumper wire from the EGR valve 6P connector.

29. Check for continuity between EGR valve 6P connector terminal No. 6 and body ground.

EGR VALVE 6P CONNECTOR



Wire side of female terminals

Is there continuity?

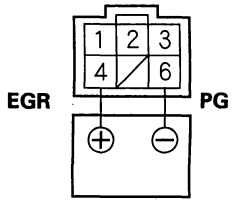
YES—Go to step 30.

NO—Repair open in the wire between the EGR valve and G101, then go to step 44.

30. Reconnect ECM/PCM connector B (24P).

31. Connect the battery positive terminal to EGR valve 6P connector terminal No. 4 with a jumper wire.

EGR VALVE 6P CONNECTOR



Terminal side of male terminals

32. Start the engine and let it idle, then connect the battery negative terminal to EGR valve 6P connector terminal No. 6 with a jumper wire.

Does the engine stall or run rough?

YES—Go to step 51.

NO—Go to step 33.

33. Turn the ignition switch OFF.

34. Remove the EGR valve (see page 11-386).

35. Clean the intake manifold EGR port with throttle plate and induction cleaner. Also, clean the passage inside the EGR valve with throttle plate and induction cleaner.

36. Install the EGR valve (see page 11-386).

37. Reconnect the EGR valve 6P connector.

38. Turn the ignition switch ON (II).

39. Reset the ECM/PCM with the HDS.

40. Do the ECM/PCM idle learn procedure (see page 11-316).

41. Do the EGR TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES—Go to step 49.

NO—Go to step 42.

BACK

Protected by AR

42. Turn the ignition switch OFF.

43. Replace the EGR valve (see page 11-386).

44. Reconnect all connectors.

45. Turn the ignition switch ON (II).

46. Reset the ECM/PCM with the HDS.

47. Do the ECM/PCM idle learn procedure (see page 11-316).

48. Do the EGR TEST in the INSPECTION MENU with the HDS.

49. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P2413 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 50.

50. Monitor the OBD STATUS for DTC P2413 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates EXCUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 48 and recheck.

51. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

52. Do the EGR TEST in the INSPECTION MENU with the HDS.

53. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

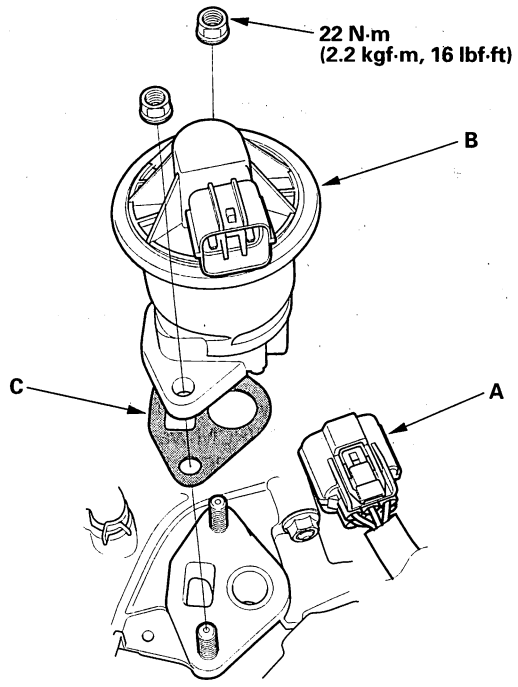
    YES—If DTC P2413 is indicated, check for poor connections or loose terminals at the EGR valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

Protected by AR

EGR Valve Replacement

1. Remove the air cleaner (see page 11-361).
2. Remove the EGR valve 6P connector (A).



3. Remove the EGR valve (B).
4. Install the valve in the reverse order of removal with a new gasket (C).

BACK

DTC Troubleshooting

DTC P2279: Intake Air System Leak Detected (2003-2004 except SULEV, LX-P models)

NOTE: If DTC P0443 is stored at the same time as DTC P2279, troubleshoot DTC P0443 first, then recheck for DTC P2279.

1. Check for vacuum leaks at these parts:

   - PCV valve
   - PCV hose
   - Purge (PCS) line
   - Throttle body
   - Intake manifold
   - Brake booster hose

   Are the parts OK?

   YES—Go to step 2.

   NO—Repair or replace the leaking part(s), then go to step 4.

2. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle for 1 minute.

3. Monitor the OBD STATUS for DTC P2279 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Check the camshaft timing (see step 1 on page 6-15), then go to step 4.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. If the screen indicates NOT COMPLETED, go to step 2 and recheck.

4. Reset the ECM/PCM with the HDS.

5. Do the ECM/PCM idle learn procedure (see page 11-316).

6. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle for 1 minute.

7. Check for Temporary DTCs or DTCs with the HDS.

   Are any Temporary DTCs or DTCs indicated?

   YES—If DTC P2279 is indicated, check for vacuum leaks at the PCV valve, the PCV hose, the purge (PCS) line, the throttle body, the intake manifold, or the brake booster hose, then go to step 4. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

   NO—Go to step 8.

8. Monitor the OBD STATUS for DTC P2279 in the DTCs MENU with the HDS.

   Does the screen indicate PASSED?

   YES—Troubleshooting is complete.■

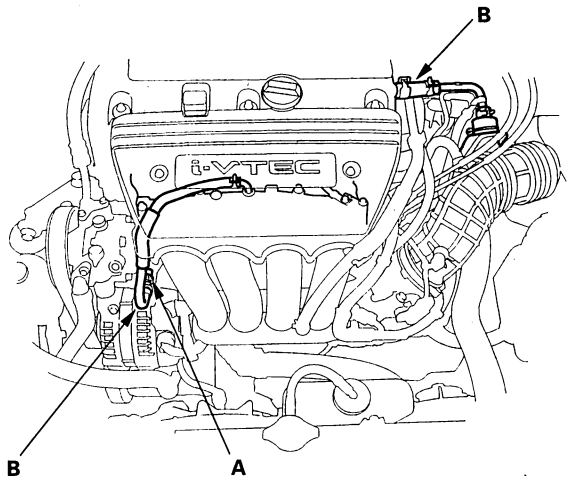
   NO—If the screen indicates FAILED, go to step 1 and recheck. If the screen indicates NOT COMPLETED, go to step 6 and recheck.

Protected by AR

PCV System

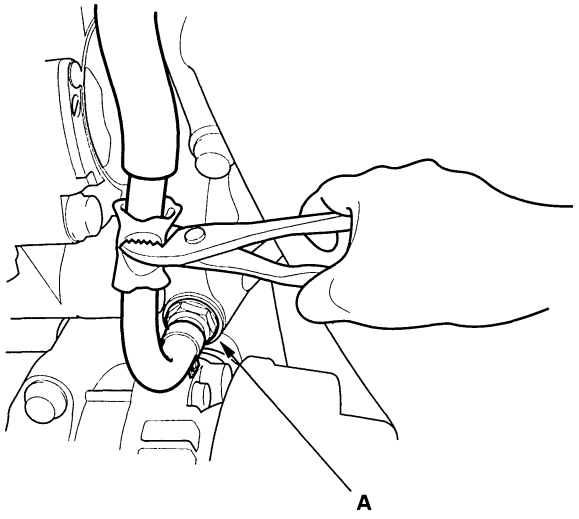
PCV Valve Inspection

1. Check the PCV valve (A), hoses (B), and connections for leaks or restrictions.



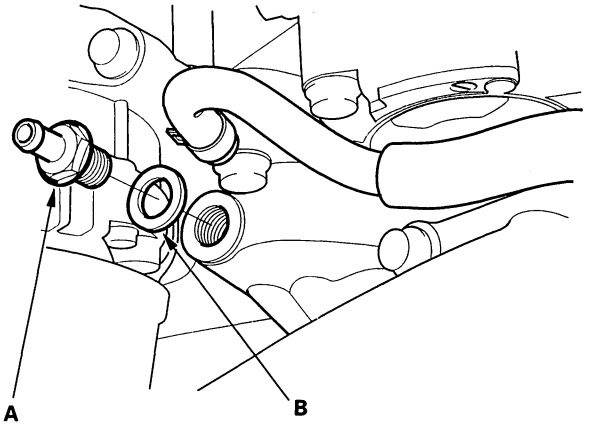
*: This illustration shows 2003-2005 models.

2. At idle, make sure there is a clicking sound from the PCV valve when the hose between the PCV valve and intake manifold is lightly pinched (A) with your fingers or pliers.
   If there is no clicking sound, check the PCV valve washer for cracks or damage. If the washer is OK, replace the PCV valve and recheck.



PCV Valve Replacement

1. Disconnect the PCV hose.
2. Remove the PCV valve (A).



A
44 N·m
(4.5 kgf·m, 33 lbf·ft)

3. Install the valve in the reverse order of removal with a new washer (B).

DTC Troubleshooting

DTC P0442: EVAP System Small Leak Detected
(2003-2004 models)

DTC P0455: EVAP System Large Leak Detected
(2005-2006 models)

DTC P0456: EVAP System Very Small Leak Detected

NOTICE

The fuel system is designed to allow specified maximum vacuum and pressure conditions. Do not deviate from the vacuum and pressure tests as indicated in these procedures. Excessive pressure/vacuum would damage the EVAP components or cause eventual fuel tank failure.

Special Tools Required

- Vacuum/pressure gauge, 0—4 in.Hg 07JAZ-001000B
- Vacuum pump/gauge, 0—30 in.Hg, Snap-on YA4000A or equivalent, commercially available

NOTE: Fresh fuel has a higher volatility that will create greater pressure/vacuum. The optimum condition for testing is less than a full tank of fresh fuel. If possible, to assist in leak detection, add 1 gallon of fresh fuel to the tank (as long as it will not fill the tank) just before starting these procedures.

1. Check the fuel fill cap (the cap must say "Tighten to click"). It should turn 1/4 turn after it's tight, then it clicks.

   Is the correct fuel fill cap installed and properly tightened?

   YES—Go to step 2.

   NO—Replace or tighten the cap, then go to step 22.

2. Check the fuel fill cap seal (A) and the fuel fill pipe mating surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

   Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

   YES—Replace the fuel fill cap or the fuel fill pipe, then go to step 22.

   NO—Go to step 3.

3. Turn the ignition switch ON (II).

4. Clear the DTC with the HDS.

5. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, or the EVAP canister vent shut valve and the ECM/PCM. ■

   NO—Go to step 6.

6. Turn the ignition switch OFF.

7. Turn the ignition switch ON (II).

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

8. Check for a poor connection or damage at the fuel tank vapor recirculation tube (see page 11-334).

   Is the tube OK?

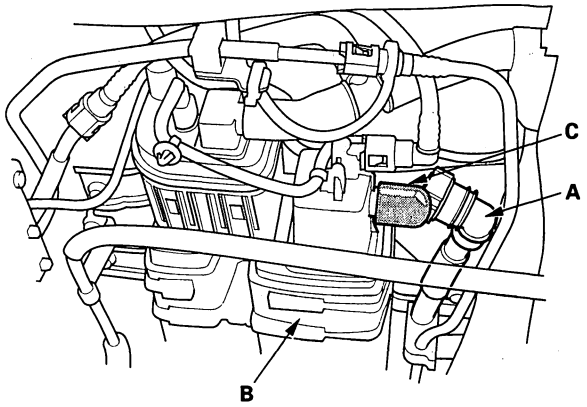
   YES—Go to step 9.

   NO—
   - Replace the fuel tank vapor recirculation tube (see page 11-347), then go to step 22.
   - If necessary, replace the fuel tank (see page 11-347), then go to step 22.

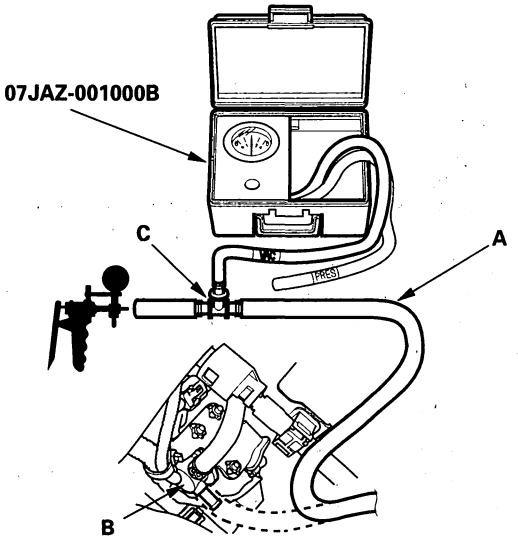
9. Disconnect the fuel tank vapor recirculation tube (A) from the EVAP canister (B), and plug the EVAP canister port (C).

   SULEV model

   Non-SULEV model



10. Disconnect the vacuum hose (purge line) (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a T-fitting (C) from the vacuum gauge and the vacuum pump/gauge, 0—30 in.Hg, to the hose as shown.



11. Select EVAP CVS ON in the INSPECTION MENU with the HDS.

12. Apply vacuum to the hose until the FTP reads 1.90 V (—0.59 in.Hg, —15.1 mmHg).

13. Monitor the FTP SENSOR in the DATA LIST for 1 minute with the HDS.

    Does the voltage increase more than 0.2 V (0.1 in.Hg, 2.5 mmHg)?

    YES—Go to step 14.

    NO—Go to step 19.

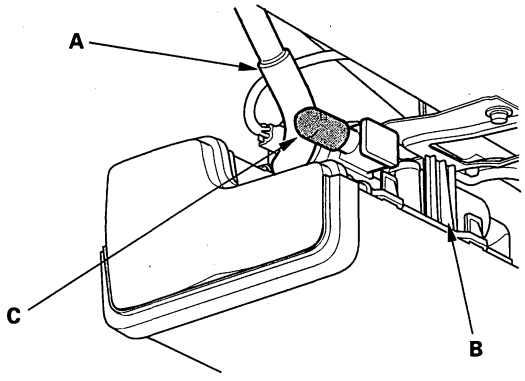
14. Select EVAP CVS OFF in the INSPECTION MENU with the HDS.

BACK

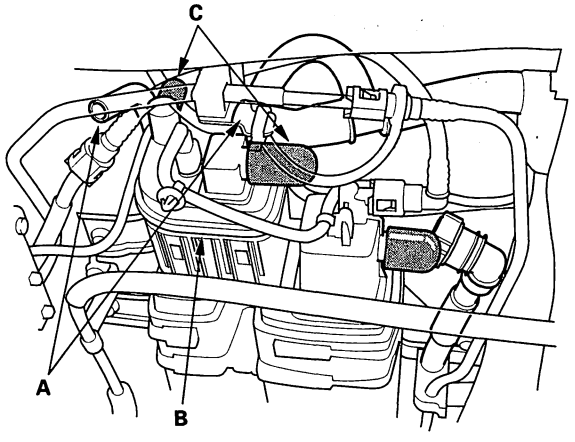
Protected by AR

15. Disconnect the fresh air hoses (A) from the EVAP canister vent shut valve (B), and plug the EVAP canister vent shut valve ports (C).

SULEV model



Non-SULEV model



16. Apply vacuum to the hose (disconnected in step 10) until the FTP reads 1.90 V (—0.59 in.Hg, —15.1 mmHg).

17. Monitor the FTP SENSOR in the DATA LIST for 1 minute with the HDS.

Does the voltage increase more than 0.2 V (0.1 in.Hg, 2.5 mmHg)?

YES—Go to step 18.

NO—Replace the EVAP canister vent shut valve; Non-SULEV model (see page 11-423), SULEV model (see page 11-424), then go to step 21.

18. Check for a loose or damaged EVAP canister purge line between the EVAP canister and the EVAP canister purge valve.

Is the line OK?

YES—Replace the following parts, then go to step 21.

- FTP sensor O-ring (see page 11-422)
- EVAP canister vent shut valve case and O-ring; Non-SULEV model (see page 11-423), SULEV model (see page 11-424)
- EVAP canister (see page 11-421)

NO—Reconnect or repair the EVAP canister purge hose, then go to step 21.

19. Select EVAP CVS OFF in the INSPECTION MENU with the HDS.

20. Check these parts for looseness or damage:

- Fuel fill pipe
- Fuel vapor return pipe
- Fuel tank vapor signal tube (SULEV model)

Are the parts OK?

YES—Check the fuel pump base gasket (see page 11-345), and check the fuel tank, then go to step 21.

NO—Repair or replace the damaged parts, then go to step 21.

21. Reconnect all hoses and connectors.

22. Turn the ignition switch ON (II).

23. Reset the ECM/PCM with the HDS.

24. Do the ECM/PCM idle learn procedure (see page 11-316).

25. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES—Troubleshooting is complete.■

NO—Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, or the EVAP canister vent shut valve and the ECM/PCM, then go to step 1.

Protected by AR

DTC Troubleshooting (cont'd)

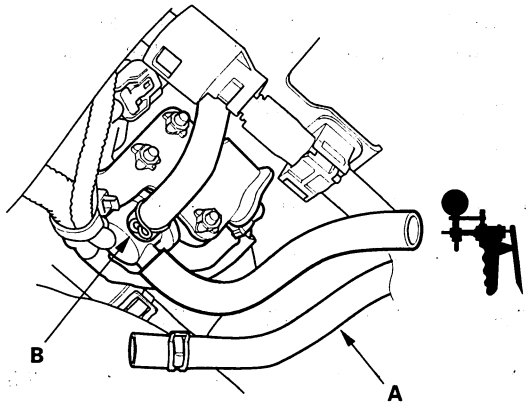
DTC P0443: EVAP Canister Purge Valve Circuit Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0443 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM. ■
5. Turn the ignition switch OFF, and allow the engine to cool below 131 °F (55 °C).
6. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a vacuum pump/gauge, 0—30 in.Hg, to the hose.



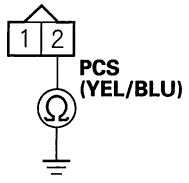
7. Start the engine, and let it idle.

   Is there vacuum?

   YES—Go to step 8.

   NO—Go to step 14.
8. Turn the ignition switch OFF.
9. Disconnect the EVAP canister purge valve 2P connector.
10. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

EVAP CANISTER PURGE VALVE 2P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 11.

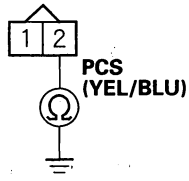
NO—Go to step 24.

BACK

Protected by AR

11. Jump the SCS line with the HDS.
12. Disconnect ECM/PCM connector B (24P).
13. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

EVAP CANISTER PURGE VALVE 2P CONNECTOR



Wire side of female terminals

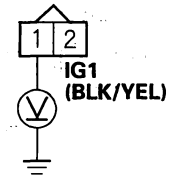
Is there continuity?

YES—Repair short in the wire between the EVAP canister purge valve and the ECM/PCM (B21), then go to step 25.

NO—Go to step 31.

14. Turn the ignition switch OFF.
15. Disconnect the EVAP canister purge valve 2P connector.
16. Turn the ignition switch ON (II).
17. Measure voltage between EVAP canister purge valve 2P connector terminal No. 1 and body ground.

EVAP CANISTER PURGE VALVE 2P CONNECTOR



Wire side of female terminals

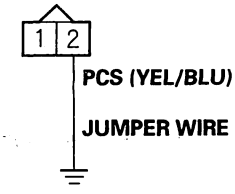
Is there battery voltage?

YES—Go to step 18.

NO—Repair open in the wire between the EVAP canister purge valve and the No. 18 ACG (15 A) fuse in the under-dash fuse/relay box, then go to step 25.

18. Turn the ignition switch OFF.
19. Jump the SCS line with the HDS.
20. Disconnect ECM/PCM connector B (24P).
21. Connect EVAP canister purge valve 2P connector terminal No. 2 to body ground with a jumper wire.

EVAP CANISTER PURGE VALVE 2P CONNECTOR



Wire side of female terminals

(cont'd)

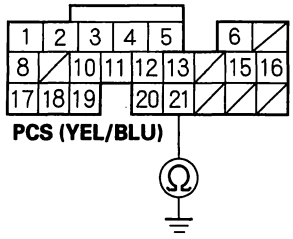
DTC Troubleshooting (cont'd)

22. Check for continuity between ECM/PCM connector terminal B21 and body ground.

ECM/PCM CONNECTOR B (24P)



Wire side of female terminals

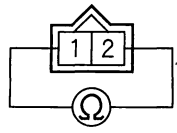
Is there continuity?

YES—Go to step 23.

NO—Repair open in the wire between the EVAP canister purge valve and the ECM/PCM (B21), then go to step 25.

23. Measure resistance between EVAP canister purge valve 2P connector terminals No. 1 and No. 2.

EVAP CANISTER PURGE VALVE 2P CONNECTOR



Terminal side of male terminals

Is there about 33 Ω at room temperature?

YES—Go to step 31.

NO—Go to step 24.

24. Replace the EVAP canister purge valve (see page 11-423).

25. Reconnect all connectors.

26. Turn the ignition switch ON (II).

27. Reset the ECM/PCM with the HDS.

28. Do the ECM/PCM idle learn procedure (see page 11-316).

29. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0443 is indicated, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—2003 model: Troubleshooting is complete.■ 2004-2006 models: Go to step 30.

30. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete.■

NO—If the screen indicate FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to step 1. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 28 and recheck.

BACK

Protected by AR

31. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

32. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0443 is indicated, check for poor connections or loose terminals at the EVAP canister purge valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227). ■

DTC Troubleshooting (cont'd)

DTC P0451: FTP Sensor Range/Performance Problem

NOTE: If DTC P2422 is stored at the same time as DTC P0451, troubleshoot DTC P2422 first, then recheck for DTC P0451.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle 1 minute.
4. Monitor the OBD STATUS for DTC P0451 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 5.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 3 and recheck.
5. Turn the ignition switch OFF.
6. Replace the FTP sensor (see page 11-422).
7. Turn the ignition switch ON (II).
8. Reset the ECM/PCM with the HDS.
9. Do the ECM/PCM idle learn procedure (see page 11-316).
10. Start the engine, and let it idle 1 minute.
11. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0451 is indicated, check for poor connections or loose terminals at the FTP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Go to step 12.
12. Monitor the OBD STATUS for DTC P0451 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 10 and recheck.

DTC P0452: FTP Sensor Circuit Low Voltage (2003-2004 models)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II).
5. Check for Temporary DTCs or DTCs with the HDS.

   Are DTC P0107, P0122, and P0452 indicated at the same time?

   YES—Go to step 23.

   NO—Go to step 6.
6. Turn the ignition switch OFF.
7. Remove the fuel fill cap.
8. Turn the ignition switch ON (II).
9. Check the FTP SENSOR in the DATA LIST with the HDS.

   Is about −7.3 kPa (−2.16 in.Hg, −55 mmHg), or 0.3 V or less indicated?

   YES—Go to step 13.

   NO—Go to step 10.
10. Install the fuel fill cap.
11. Start the engine.
12. Monitor the OBD STATUS for DTC P0452 in the DTCs MENU with the HDS.

    Does the screen indicate FAILED?

    YES—Go to step 13.

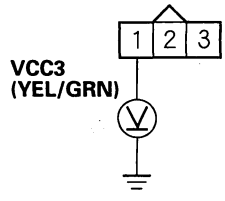
    NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the ECM/PCM. If the screen indicates NOT COMPLETED, go to step 8 and recheck.
13. Turn the ignition switch OFF.
14. Disconnect the FTP sensor 3P connector.
15. Turn the ignition switch ON (II).
16. Check the FTP SENSOR in the DATA LIST with the HDS.

    Is about 7.3 kPa (2.15 in.Hg, 54.7 mmHg), or 4.90 V indicated?

    YES—Go to step 32.

    NO—Go to step 17.
17. Measure voltage between FTP sensor 3P connector terminal No. 1 and body ground.

FTP SENSOR 3P CONNECTOR



Wire side of female terminals

Is there about 5 V?

YES—Go to step 19.

NO—Go to step 18.

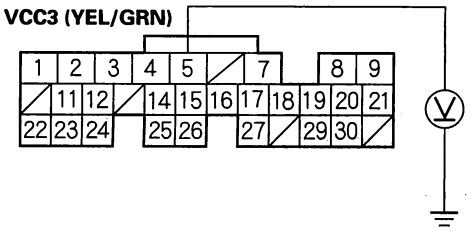
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

18. Measure voltage between ECM/PCM connector terminal E5 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there 5 V?

YES—Repair open in the wire between the ECM/PCM (E5) and the FTP sensor, then go to step 35.

NO—Go to step 41.

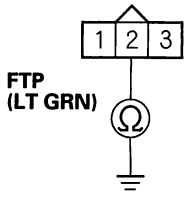
19. Turn the ignition switch OFF.

20. Jump the SCS line with the HDS.

21. Disconnect ECM/PCM connector E (31P).

22. Check for continuity between FTP sensor 3P connector terminal No. 2 and body ground.

FTP SENSOR 3P CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (E14) and the FTP sensor, then go to step 34.

NO—Go to step 41.

23. Turn the ignition switch OFF.

24. Jump the SCS line with the HDS.

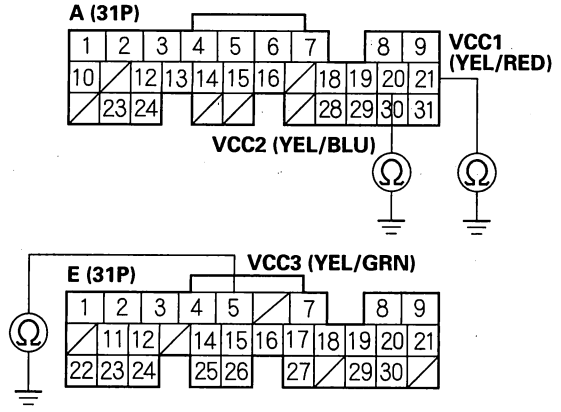
25. Disconnect ECM/PCM connectors A (31P) and E (31P).

26. Disconnect the connectors from these parts:

- MAP sensor
- TP sensor
- FTP sensor
- EGR valve
- Input shaft (mainshaft) speed sensor
- Output shaft (countershaft) speed sensor

27. Check for continuity between body ground and ECM/PCM connector terminals A20, A21, and E5 individually.

ECM/PCM CONNECTORS



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the ECM/PCM (A20, A21, or E5) and each disconnected part, then go to step 34.

NO—Go to step 28.

BACK

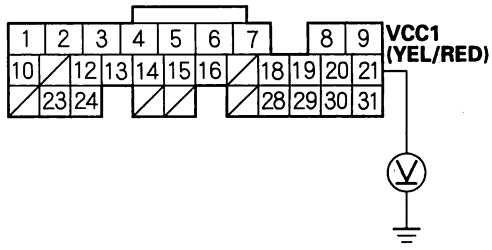
Protected by AR

28. Reconnect ECM/PCM connectors A (31P) and E (31P).

29. Turn the ignition switch ON (II).

30. Measure voltage between ECM/PCM connector terminal A21 and body ground.

ECM/PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Go to step 31.

NO—Go to step 41.

31. Continue to monitor voltage at ECM/PCM connector terminal A21 while reconnecting these parts, one at a time:

- MAP sensor
- TP sensor
- FTP sensor
- EGR valve
- Input shaft (mainshaft) speed sensor
- Output shaft (countershaft) speed sensor

Did the voltage drop to about 0 V?

YES—Replace the part that caused the voltage to drop, then go to step 36.

NO—Go to step 41.

32. Turn the ignition switch OFF.

33. Replace the FTP sensor (see page 11-422).

34. Reconnect the ECM/PCM connectors.

35. Reconnect the FTP sensor 3P connector.

36. Turn the ignition switch ON (II).

37. Reset the ECM/PCM with the HDS.

38. Do the ECM/PCM idle learn procedure (see page 11-316).

39. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0452 is indicated, check for poor connections or loose terminals at the FTP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 40.

40. Monitor the OBD STATUS for DTC P0452 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES—Troubleshooting is complete.■

NO—If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the ECM/PCM, then go to step 1. If the sereen indicates NOT COMPLETED, go to step 38 and recheck.

41. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

42. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P0452 is indicated, check for poor connections or loose terminals at the FTP sensor and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC Troubleshooting (cont'd)

DTC P0457: EVAP System Leak Detected/Fuel Cap Loose or Missing

1. Check the fuel fill cap (the cap must say "Tighten to click"). It should turn 1/4 turn after it's tight, then it clicks.

   Is the correct fuel fill cap installed and properly tightened?

   YES—Go to step 2.

   NO—Replace or tighten the cap, then go to step 19.

2. Check the fuel fill cap seal (A) and the fuel fill pipe mating surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

   Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

   YES—Replace the fuel fill cap or the fuel fill pipe, then go to step 19.

   NO—Go to step 3.

3. Turn the ignition switch ON (II).

4. Clear the DTC with the HDS.

5. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the FTP sensor or the EVAP canister vent shut valve and the ECM/PCM. ■

   NO—Go to step 6.

6. Turn the ignition switch OFF.

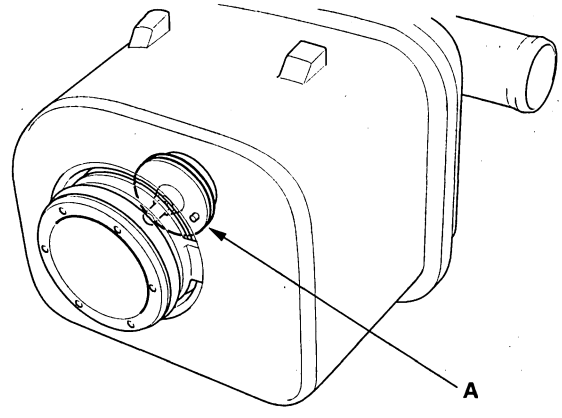
7. Remove the EVAP canister vent shut valve from the EVAP canister; Non-SULEV model (see page 11-423), SULEV model (see page 11-424).

8. Connect the 2P connector to the EVAP canister vent shut valve.

9. Turn the ignition switch ON (II).

10. Select EVAP CVS ON in the INSPECTION MENU with the HDS.

11. Check the EVAP canister vent shut valve (A) operation.



This illustration shows the non-SULEV model.

   Does the valve operate?

   YES—Check the routing of the EVAP canister vent tube, then go to step 18.

   NO—Go to step 12.

BACK

Protected by AR

12. Turn the ignition switch OFF.
13. Replace the EVAP canister vent shut valve; Non-SULEV model (see page 11-423), SULEV model (see page 11-424).
14. Turn the ignition switch ON (II).
15. Reset the ECM/PCM with the HDS.
16. Do the ECM/PCM idle learn procedure (see page 11-316).
17. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

    Is the result OK?

    YES—Troubleshooting is complete.■

    NO—Check for poor connections or loose terminals at the FTP sensor or the EVAP canister vent shut valve and the ECM/PCM, then go to step 1.
18. Reinstall the EVAP canister vent shut valve; Non-SULEV model (see page 11-423), SULEV model (see page 11-424).
19. Turn the ignition switch ON (II).
20. Reset the ECM/PCM with the HDS.
21. Do the ECM/PCM idle learn procedure (see page 11-316).
22. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

    Is the result OK?

    YES—Troubleshooting is complete.■

    NO—Check for poor connections or loose terminals at the FTP sensor or the EVAP canister vent shut valve and the ECM/PCM, then go to step 1.

DTC P0497: EVAP System Low Purge Flow

Special Tools Required
- Vacuum/pressure gauge, 0—4 in.Hg, 07JAZ-001000B
- Vacuum pump/gauge, 0—30 in.Hg, Snap-on YA4000A or equivalent, commercially available

1. Check the fuel fill cap installation.

   Is the fuel fill cap installed and properly tightened?

   YES—Go to step 2.

   NO—Properly install the fuel fill cap (the cap must say "Tighten to click"). It should turn 1/4 turn after it's tight, then go to step 23.

2. Turn the ignition switch ON (II).

3. Clear the DTC with the HDS.

4. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

   Is the result OK?

   YES—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, or the EVAP canister vent shut valve and the ECM/PCM. ■

   NO—Go to step 5.

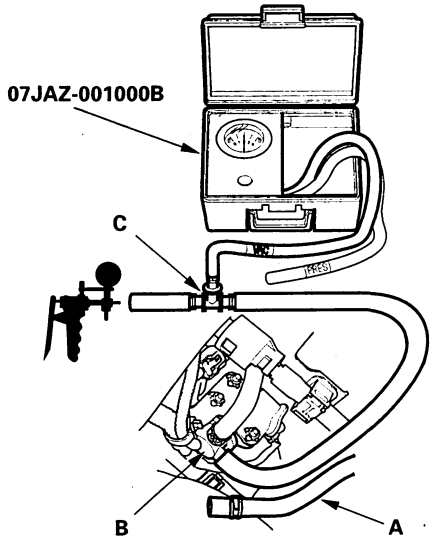
5. Check for a loose or damaged EVAP canister purge line between the intake manifold and the EVAP canister purge valve.

   Is the line OK?

   YES—Go to step 6.

   NO—Reconnect or repair the EVAP canister purge line, then go to step 23.

6. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a T-fitting (C) from the vacuum gauge and the vacuum pump/gauge, 0—30 in.Hg, to the EVAP canister purge valve as shown.



7. Select EVAP PCS ON in the INSPECTION MENU with the HDS.

8. Slowly apply about 2 kPa (0.6 in.Hg, 15 mmHg) of vacuum to the hose.

   Does it hold vacuum?

   YES—Check for blockage in the EVAP canister purge line between the intake manifold and the EVAP canister purge valve. If the vacuum hose is OK, replace the EVAP canister purge valve, then go to step 22.

   NO—Go to step 9.

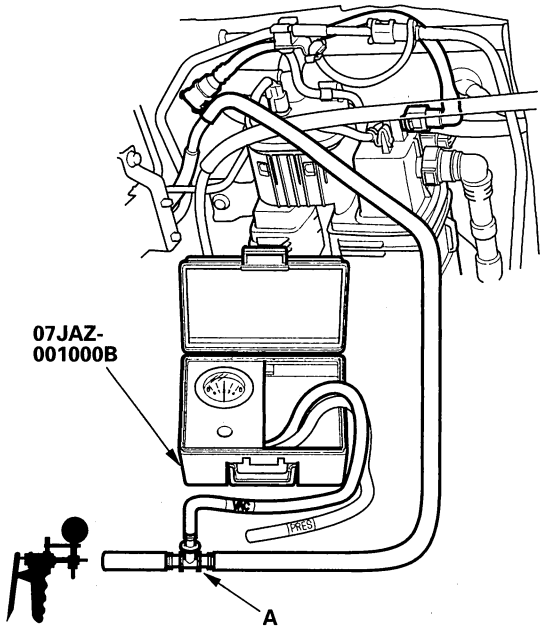
9. Reconnect the vacuum hose to the EVAP canister purge valve.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

10. Disconnect the vacuum hose from the EVAP canister purge line (EVAP canister side), and connect a T-fitting (A) from the vacuum gauge and the vacuum pump/gauge, 0—30 in.Hg, to the hose as shown.



*: This illustration shows the non-SULEV model.

11. Select EVAP PCS ON in the INSPECTION MENU with the HDS.

12. Slowly apply about 2 kPa (0.6 in.Hg, 15 mmHg) of vacuum to the hose.

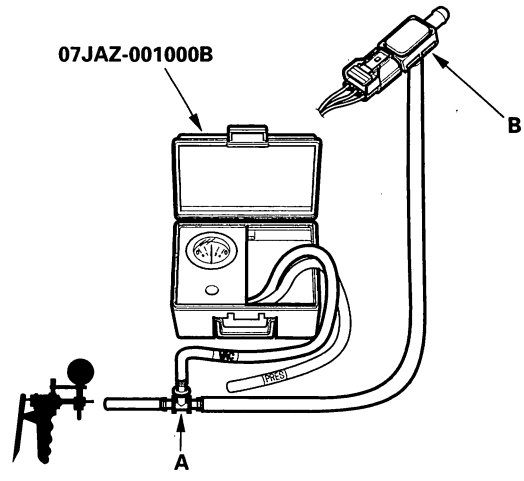
    Does it hold vacuum?

    YES—Check for a restricted in the PCS line between the EVAP canister purge valve and the EVAP canister, then go to step 22.

    NO—Go to step 13.

13. Remove the FTP sensor with its connector connected (see page 11-422).

14. Connect a T-fitting (A) from the vacuum gauge and the commercially available vacuum pump/gauge, 0—30 in.Hg, to the FTP sensor (B) as shown.



15. Check and record the FTP SENSOR reading in the DATA LIST with the HDS.

16. Slowly apply about 1.3 kPa (0.4 in.Hg, 10 mmHg) of vacuum to the hose.

17. Check the FTP SENSOR in the DATA LIST with the HDS.

    Is the difference more than 1.1 kPa (0.31 in.Hg, 8 mmHg) before and after applying vacuum?

    YES—Go to step 18.

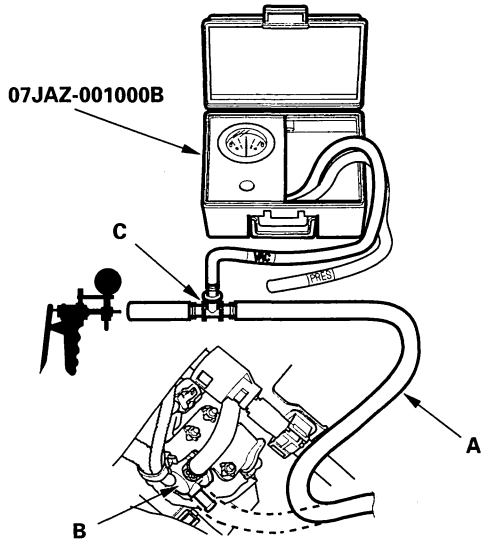
    NO—Replace the FTP sensor (see page 11-422), then go to step 22.

18. Reconnect the vacuum hose to the PCS line (EVAP canister side) and reinstall the FTP sensor.

BACK

Protected by AR

19. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B), and connect a T-fitting (C) from the vacuum gauge and the vacuum pump/gauge, 0—30 in.Hg, to the hose as shown.



20. Select EVAP CVS ON in the INSPECTION MENU with the HDS.

21. Slowly apply about 2 kPa (0.6 in.Hg, 15 mmHg) of vacuum to the hose.

    Does the hose hold vacuum?

    YES—Check for blockage at the EVAP canister port, then go to step 22.

    NO—Replace the EVAP canister vent shut valve, then go to step 22.

22. Reconnect all hoses.

23. Turn the ignition switch ON (II).

24. Reset the ECM/PCM with the HDS.

25. Do the ECM/PCM idle learn procedure (see page 11-316).

26. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

    Is the result OK?

    YES—Troubleshooting is complete.■

    NO—Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, or the EVAP canister vent shut valve and the ECM/PCM, then go to step 1.

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0498: EVAP Canister Vent Shut Valve Circuit Low Voltage

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, then wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0498 indicated?

   YES—Go to step 6.

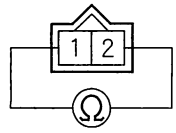
   NO—Go to step 4.
4. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0498 indicated?

   YES—Go to step 6.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the EVAP canister vent shut valve and the ECM/PCM. ■
6. Turn the ignition switch OFF.
7. Disconnect the EVAP canister vent shut valve 2P connector.
8. Measure resistance between EVAP canister vent shut valve 2P connector terminals No. 1 and No. 2.

EVAP CANISTER VENT SHUT VALVE 2P CONNECTOR



Terminal side of male terminals

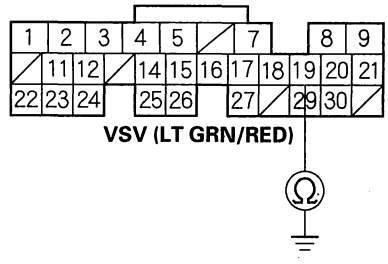
Is there about 25—30 Ω at room temperature?

YES—Go to step 9.

NO—Go to step 12.

9. Jump the SCS line with the HDS.
10. Disconnect ECM/PCM connector E (31P).
11. Check for continuity between ECM/PCM connector terminal E19 and body ground.

ECM/PCM CONNECTOR E (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between the EVAP canister vent shut valve and the ECM/PCM (E19), then go to step 13.

NO—Go to step 20.

BACK

Protected by AR

12. Replace the EVAP canister vent shut valve; Non-SULEV model (see page 11-423), SULEV model (see page 11-424).

13. Reconnect ECM/PCM connector E (31P).

14. Reconnect the EVAP canister vent shut valve 2P connector.

15. Turn the ignition switch ON (II).

16. Reset the ECM/PCM with the HDS.

17. Do the ECM/PCM idle learn procedure (see page 11-316).

18. Select EVAP CVS ON in the INSPECTION MENU with the HDS.

19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0498 is indicated, check for poor connections or loose terminals at the EVAP canister vent shut valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—Troubleshooting is complete.■

20. Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM (see page 11-6).

21. Select EVAP CVS ON in the INSPECTION MENU with the HDS.

22. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES—If DTC P0498 is indicated, check for poor connections or loose terminals at the EVAP canister vent shut valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

    NO—If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see page 11-227).■

DTC Troubleshooting (cont'd)

DTC P0499: EVAP Canister Vent Shut Valve Circuit High Voltage

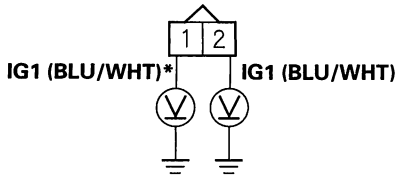
1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, then wait 5 seconds.
3. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0499 indicated?

   YES—Go to step 5.

   NO—Intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the EVAP canister vent shut valve and the ECM/PCM. ■
5. Turn the ignition switch OFF.
6. Disconnect the EVAP canister vent shut valve 2P connector.
7. Turn the ignition switch ON (II).
8. Measure voltage between EVAP canister vent shut valve 2P connector terminal No. 2 (No. 1)* and body ground.
   *: SULEV model

EVAP CANISTER VENT SHUT VALVE 2P CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—Go to step 9.

NO—2003-2004 models: Repair open in the wire between the EVAP canister vent shut valve and the No. 18 ACG (15 A) fuse in the under-dash fuse/relay box, then go to step 16.
2005-2006 models: Repair open in the wire between the EVAP canister vent shut valve and the A/F sensor relay, then go to step 16.

9. Turn the ignition switch OFF.
10. Measure resistance between EVAP canister vent shut valve 2P connector terminals No. 1 and No. 2.

DTC Troubleshooting (cont'd)

DTC P1454: FTP Sensor Range/Performance Problem

DTC P2422: EVAP Canister Vent Shut Valve Stuck Close Malfunction

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Remove the fuel fill cap, and wait 1 minute.
5. Check the FTP SENSOR in the DATA LIST with the HDS.

   Is it between −0.67 kPa and 0.67 kPa (−0.2 and 0.2 in.Hg, −5 and 5 mmHg), or 2.4−2.6 V?

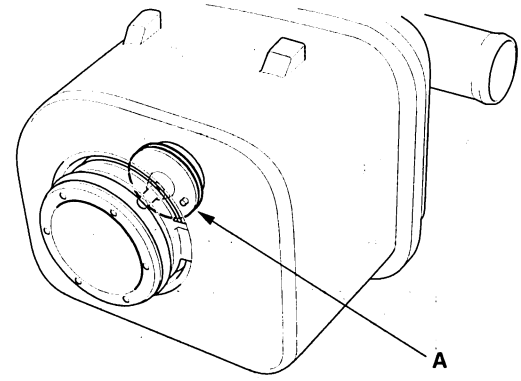
   YES—Go to step 6.

   NO—Go to step 17.
6. Install the fuel fill cap.
7. Clear the DTC with the HDS.
8. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
9. Monitor the OBD STATUS for DTC P1454 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES—Go to step 10.

   NO—If the screen indicates PASSED, intermittent failure, system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, or the EVAP canister vent shut valve and the ECM/PCM. Also check for a blockage in the canister filter, vent hoses, and drain joint. If the screen indicates NOT COMPLETED, go to step 8 and recheck.
10. Clear the DTC with the HDS.
11. Turn the ignition switch OFF.
12. Remove the EVAP canister vent shut valve from the EVAP canister; Non-SULEV model (see page 11-423), SULEV model (see page 11-424).
13. Connect the 2P connector to the EVAP canister vent shut valve.
14. Turn the ignition switch ON (II).
15. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
16. Check the EVAP canister vent shut valve (A) operation.



*: This illustration shows the non-SULEV model.

Does the valve operate?

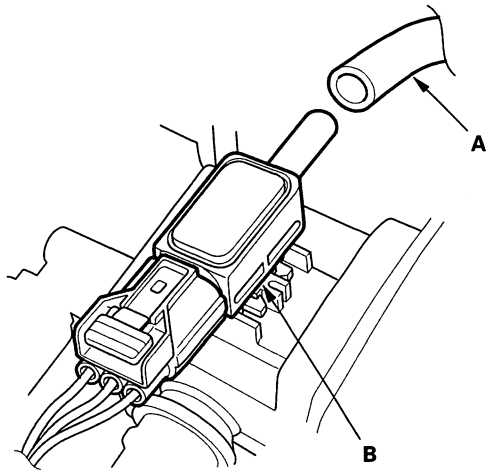
YES—Check for a blockage in the EVAP canister, canister filter, vent hoses, and drain joint, then install the EVAP canister vent shut valve, and go to step 23.

NO—Replace the EVAP canister vent shut valve; Non-SULEV model (see page 11-423), SULEV model (see page 11-424), then go to step 23.

BACK

Protected by AR

17. Disconnect the air tube (A) from the FTP sensor (B).



*: This illustration shows the non-SULEV model.

18. Check the FTP SENSOR in the DATA LIST with the HDS.

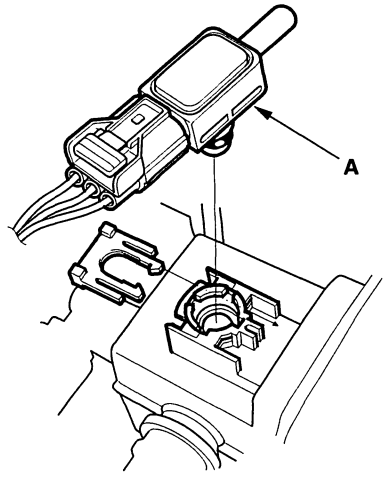
Is it between −0.67 kPa and 0.67 kPa (−0.2 and 0.2 in.Hg, −5 and 5 mmHg), or 2.4−2.6 V?

YES—Check for a blockage in the FTP sensor air tube, then go to step 23.

NO—Go to step 19.

19. Turn the ignition switch OFF.

20. Remove the FTP sensor (A) from the EVAP canister with its connector connected (see page 11-422).



21. Turn the ignition switch ON (II).

22. Check the FTP SENSOR in the DATA LIST with the HDS.

Is it between −0.67 kPa and 0.67 kPa (−0.2 and 0.2 in.Hg, −5 and 5 mmHg), or 2.4−2.6 V?

YES—Check for debris or clogging at the EVAP canister and the FTP sensor port, then go to step 23.

NO—Replace the FTP sensor (see page 11-422), then go to step 23.

23. Turn the ignition switch ON (II).

24. Reset the ECM/PCM with the HDS.

25. Do the ECM/PCM idle learn procedure (see page 11-316).

26. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

27. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES—If DTC P1454 and/or P2422 is indicated, check for poor connections or loose terminals at the FTP sensor, or the EVAP canister vent shut valve and the ECM/PCM, then go to step 1. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

NO—Go to step 28.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

28. Monitor the OBD STATUS for DTC P1454 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor, or the EVAP canister vent shut valve and the ECM/PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 26 and recheck.

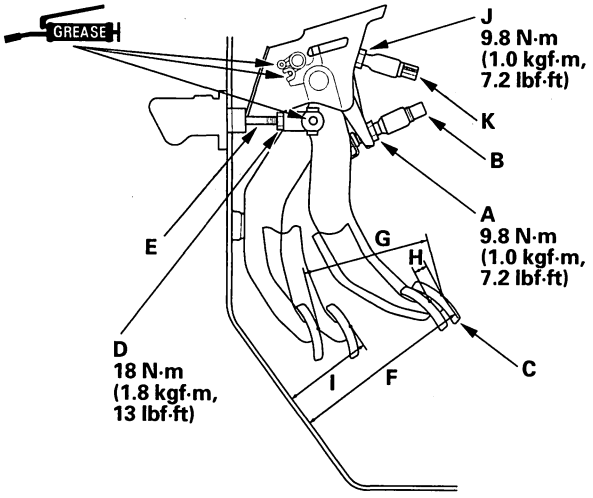
Clutch Pedal, Clutch Pedal Position Switch, and Clutch Interlock Switch Adjustment

NOTE:
- Check the clutch pedal position switch (see page 4-63).
- Check the clutch interlock switch (see page 4-8).
- Remove the driver's floor mat before adjusting the clutch pedal.
- The clutch is self-adjusting to compensate for wear.
- If there is no clearance between the master cylinder piston and push rod, the release bearing will be held against the diaphragm spring, which can result in clutch slippage or other clutch problems.

1. Loosen the clutch pedal position switch locknut (A), and back off the clutch pedal position switch (B) until it no longer touches the clutch pedal (C).



2. Loosen the clutch pushrod locknut (D), and turn the pushrod (E) in or out to get the specified height (F), stroke (G), free play (H), and disengagement height (I) at the clutch pedal.

Clutch Pedal Stroke:	**130—140 mm (5.12—5.51 in.)**
Clutch Pedal Free Play:	**10—18 mm (0.39—0.71 in.)**
Clutch Pedal Height:	**191 mm (7.52 in.)**
Clutch Pedal Disengagement Height:	**95 mm (3.74 in.)**

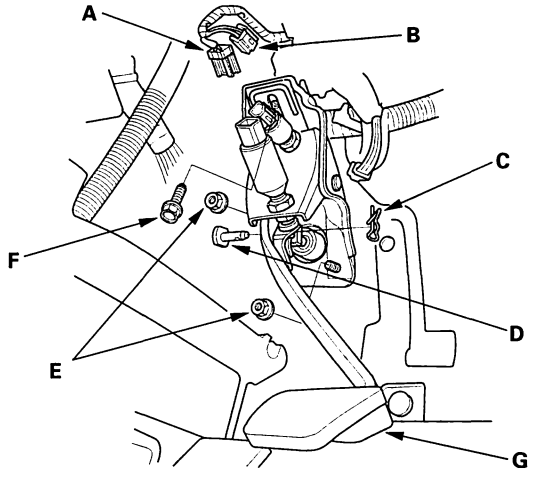
3. Tighten the clutch pushrod locknut.
4. With the clutch pedal released, turn in the clutch pedal position switch until it contacts the clutch pedal.
5. Turn in the clutch pedal position switch an additional 3/4 to 1 turn.
6. Tighten the clutch pedal position switch locknut.
7. Press the clutch pedal to the floor.
8. Release the clutch pedal 9—12 mm (0.35—0.47 in.) from the fully pressed position, and hold it there. Adjust the position of the clutch interlock switch (K) so the engine will start with the clutch pedal in this position.
9. Tighten the clutch interlock switch locknut (J).

BACK

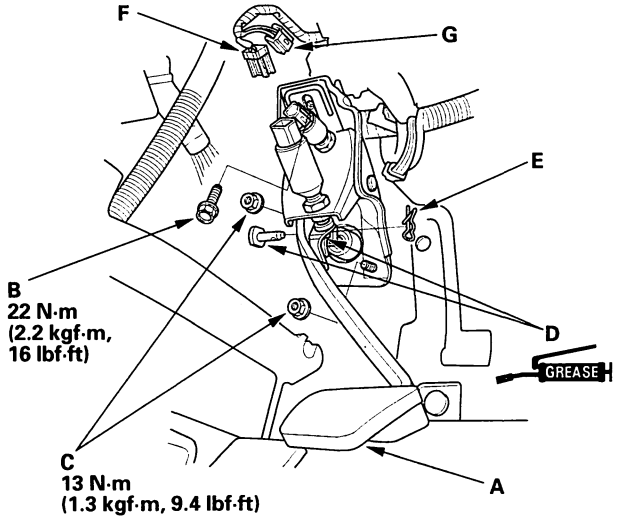
Protected by AR

Clutch Pedal Replacement

1. Disconnect the clutch pedal position switch connector (A) and clutch interlock switch connector (B).



2. Pry out the lock pin (C), and pull the pedal pin (D) out of the yoke.
3. Remove the master cylinder mounting nuts (E) and clutch pedal mounting bolt (F).
4. Remove the clutch pedal (G).
5. Install the clutch pedal (A).



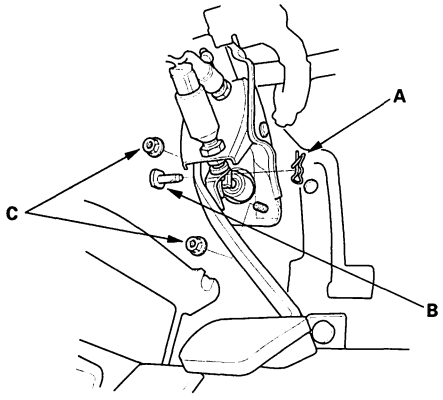
6. Install the clutch pedal mounting bolt (B) and master cylinder mounting nuts (C).
7. Apply grease to the pedal pin (D), and slide it into the yoke, then install a new lock pin (E).
8. Connect the clutch pedal position switch connector (F) and clutch interlock switch connector (G).
9. Adjust the clutch pedal, clutch pedal position switch, and clutch interlock switch (see page 12-4).

Protected by AR

Clutch Master Cylinder Replacement

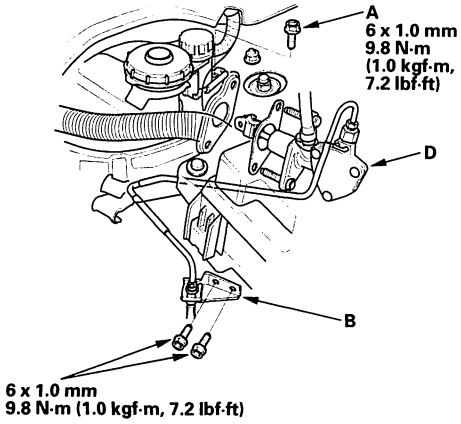
NOTE: Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid does contact the paint, wash it off immediately with water.

1. Remove the brake fluid from the clutch master cylinder reservoir with a syringe.
2. Make sure you have the anti-theft codes for the radio and the navigation system, then write down the customer's audio presets. Disconnect the negative cable from the battery first, then disconnect the positive cable. Remove the battery.
3. Remove the air cleaner housing (see page 11-361).
4. Remove the battery base (see step 10 on page 5-2).
5. Pry out the lock pin (A), and pull the pedal pin (B) out of the yoke. Remove the master cylinder mounting nuts (C).

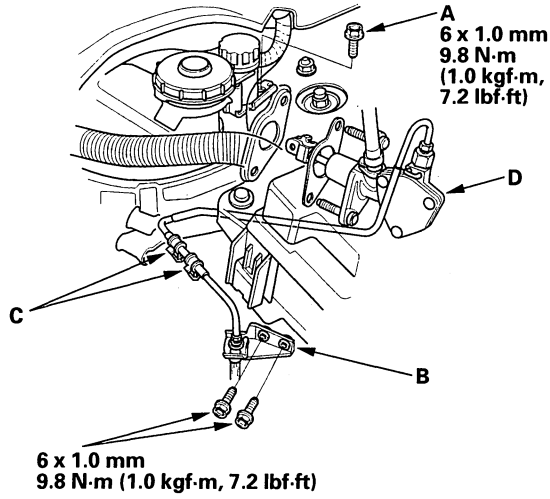


6. Remove the reservoir mounting bolt (A).

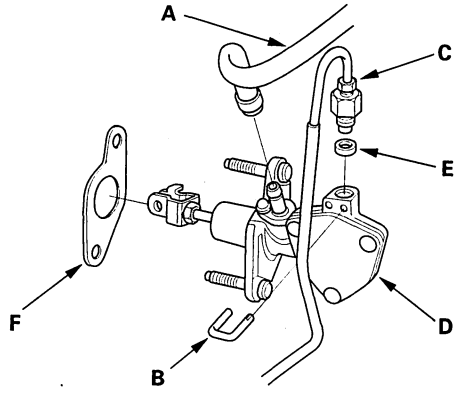
Type A:



Type B:



7. Remove the clutch line bracket (B).
8. Remove the clutch line clips (C).
9. Remove the clutch master cylinder (D).
10. Disconnect the reservoir hose (A), then remove the retaining clip (B) and remove clutch line (C) from the clutch master cylinder (D). Plug the end of the reservoir hose and clutch line to prevent brake fluid from coming out.



11. Remove the O-ring (E) and clutch master cylinder seal (F) from the clutch master cylinder.

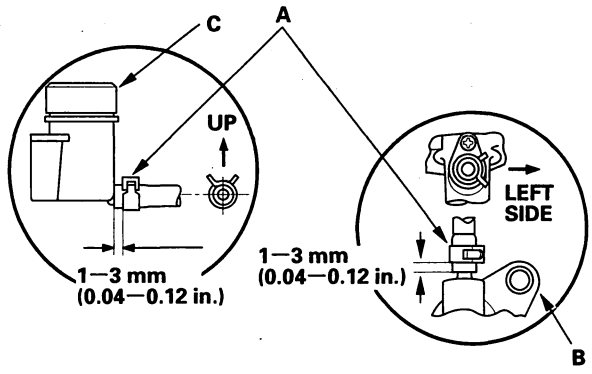
BACK

Protected by AR

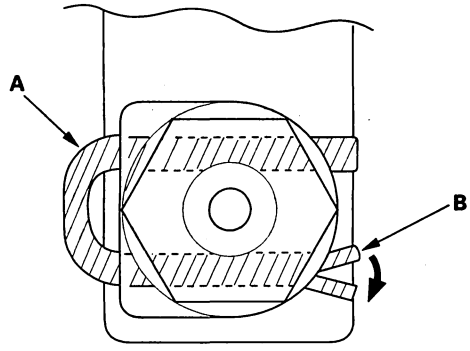
12. Install the clutch master cylinder in the reverse order of removal, and note these items.

    - Apply brake assembly lube to the clutch line, and install a new O-ring.
    - Tighten the master cylinder mounting nuts to 13 N·m (1.3 kgf·m, 9.4 lbf·ft).
    - Install the battery base (see step 47 on page 5-18).
    - Install the air cleaner housing (see page 11-361).
    - Install the battery. Connect the positive cable to the battery first, then connect the negative cable.
    - Enter the anti-theft code for the radio and the navigation system, then enter the customer's audio presets.
    - Do the power window control unit reset procedure (see page 22-232).

13. Make sure the hose clamps (A) are positioned on the master cylinder (B) and reservoir (C) as shown.



14. To prevent the retaining clip (A) from coming off, pry apart the tip of the retaining clip (B) with a screwdriver.



15. Bleed the clutch master hydraulic system (see step 11 on page 12-9).

    NOTE: Reservoir filling is covered in the bleeding procedure.

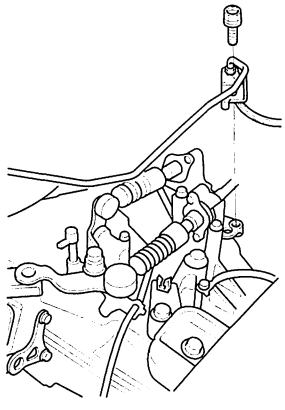
Protected by AR

Slave Cylinder Replacement

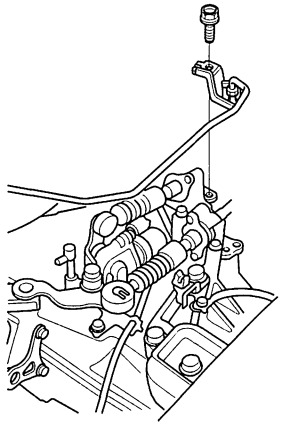
NOTE:
- Use fender covers to avoid damaging painted surfaces.
- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid does contact the paint, wash it off immediately with water.

1. Make sure you have the anti-theft codes for the radio and the navigation system, then write down the customer's audio presets.
2. Disconnect the negative cable from the battery first, then disconnect the positive cable. Remove the battery.
3. Remove the air cleaner housing (see page 11-361).
4. Remove the battery base (see step 10 on page 5-2).
5. Remove the clutch line bracket.

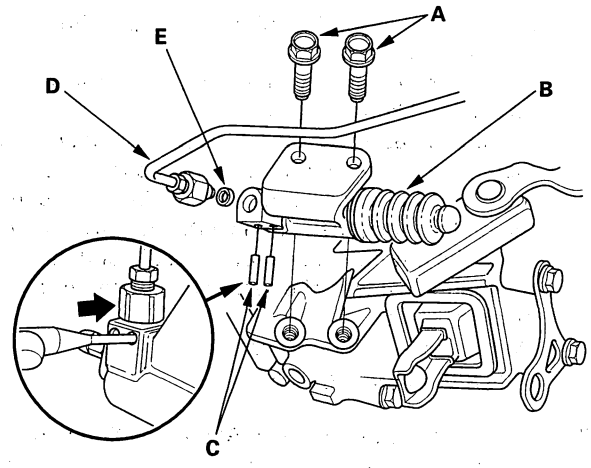
Type A:



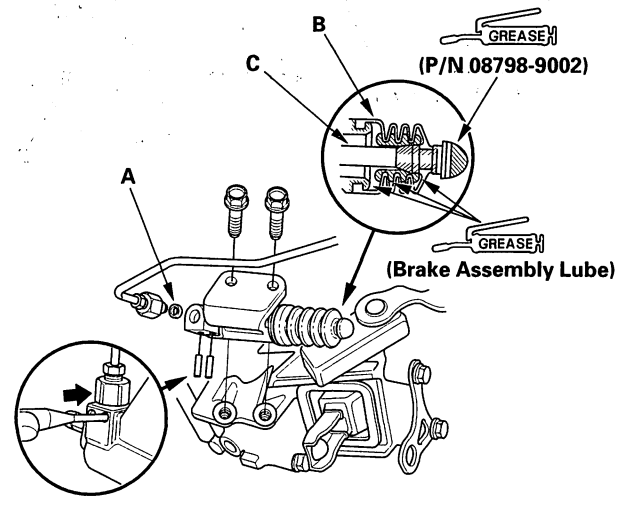
Type B:



6. Remove the mounting bolts (A) and the slave cylinder (B).



7. Remove the roll pins (C). Disconnect the clutch line (D), and remove the O-ring (E). Plug the end of the clutch line to prevent brake fluid from coming out.
8. Install the slave cylinder in the reverse order of removal. Install a new O-ring (A).



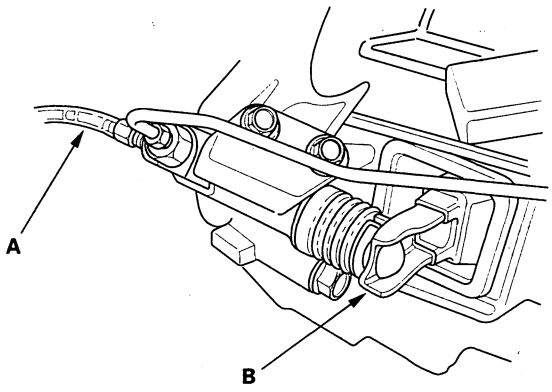
9. Pull back the boot (B), and apply brake assembly lube to the boot and slave cylinder rod (C). Reinstall the boot.
10. Apply super high temp urea grease (P/N 08798-9002) to the pushrod of the slave cylinder. Tighten the slave cylinder mounting bolts to 22 N·m (2.2 kgf·m, 16 lbf·ft).

BACK

Protected by AR

11. Bleed the clutch hydraulic system.

    - Attach a hose to the bleeder screw (A), and suspend the hose in a container of brake fluid.
    - Make sure there is an adequate supply of fluid in the reservoir, then slowly pump the clutch pedal until no more bubbles appear at the bleeder hose.
    - It may be necessary to limit the movement of the release fork (B) with a block of wood to remove all the air from the system.
    - Tighten the bleeder screw to 8 N·m (0.8 kgf·m, 5.8 lbf·ft); do not overtighten it.
    - After bleeding, refill the reservoir to the MAX mark with fluid.
    - Use only Honda DOT 3 brake fluid from an unopened container.



12. Install the air cleaner housing (see page 11-361).

13. Install the battery base (see step 47 on page 5-18).

14. Install the battery. Connect the positive cable to the battery first, then connect the negative cable.

15. Enter the anti-theft codes for the radio and navigation system, then enter the customer's audio presets.

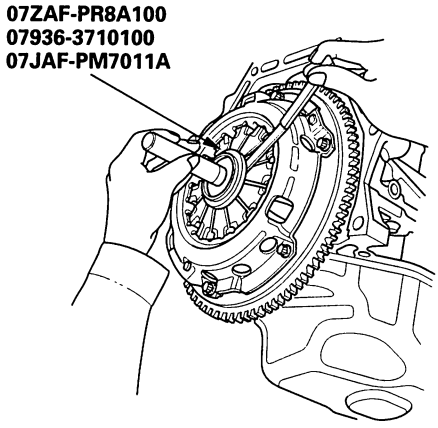
Clutch Replacement

Special Tools Required
- Clutch alignment disc 07JAF-PM7011A
- Ring gear holder 07LAB-PV00100 or 07924-PD20003
- Clutch alignment shaft 07ZAF-PR8A100
- Remover handle 07936-3710100

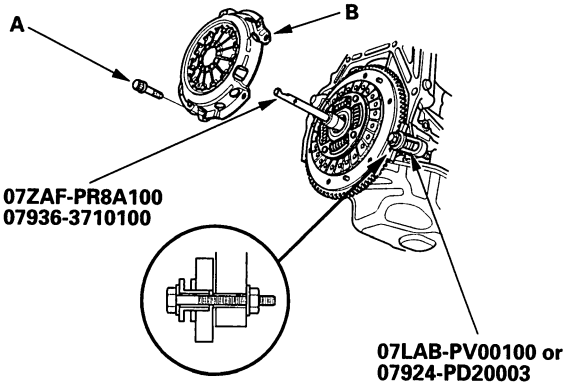
Pressure Plate and Clutch Disc Removal

1. Check the height of the diaphragm spring fingers using the special tool and a feeler gauge. If the height is more than the service limit, replace the pressure plate.

   Standard (New): 0.6 mm (0.02 in.) max.
   Service Limit: 0.8 mm (0.03 in.)

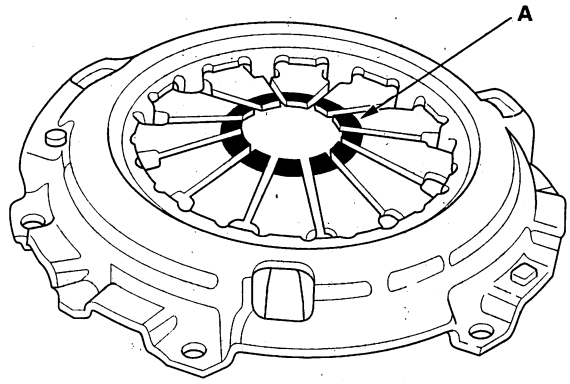


2. Install the special tools.

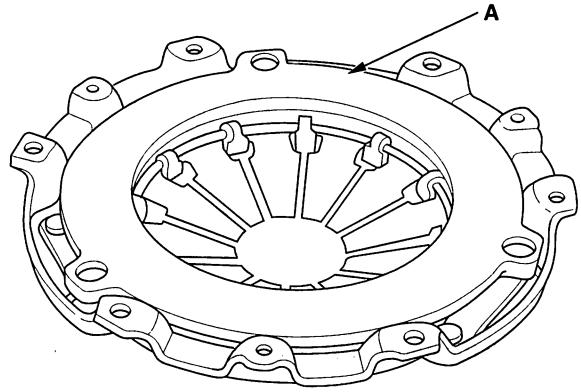


3. To prevent warping, unscrew the pressure plate mounting bolts (A) in a crisscross pattern in several steps, then remove the pressure plate (B).

4. Inspect the fingers of the diaphragm spring (A) for wear at the release bearing contact area.



5. Inspect the pressure plate surface (A) for wear, cracks, and burning.

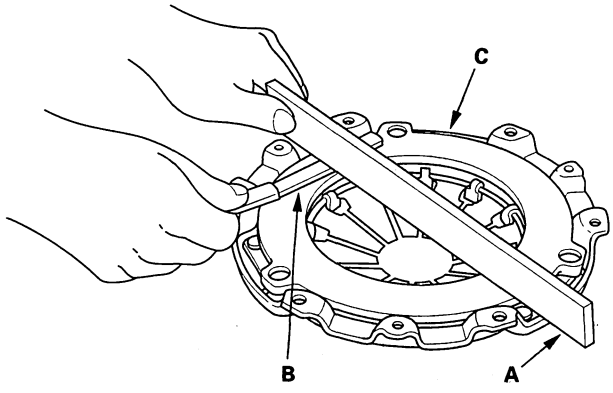


BACK

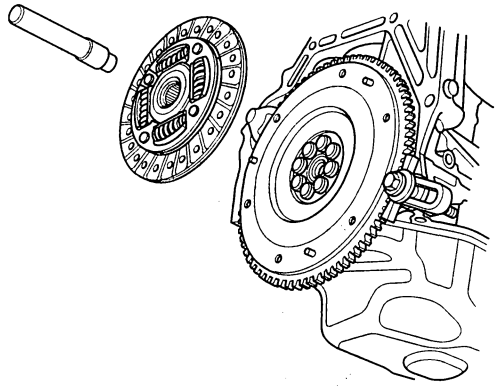
Protected by AR

6. Inspect for warpage using a straight edge (A) and a feeler gauge (B). Measure across the pressure plate (C). If the warpage is more than the service limit, replace the pressure plate.

Standard (New): **0.03 mm (0.001 in.) max.**
Service Limit: **0.15 mm (0.006 in.)**



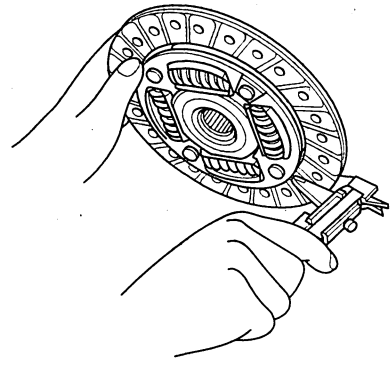
7. Remove the clutch disc and special tools.



8. Inspect the lining of the clutch disc for signs of slippage or oil. If the clutch disc looks burnt or is oil soaked, replace it. Find and repair the source of the oil leak, if the clutch disc is soaked.

9. Measure the clutch disc thickness. If the thickness is less than the service limit, replace the clutch disc.

Standard (New): **8.6—9.2 mm (0.343—0.366 in.)**
Service Limit: **6.0 mm (0.24 in.)**



10. Measure the rivet depth from the clutch disc lining surface (A) to the rivets (B) on both sides. If the rivet depth is less than the service limit, replace the clutch disc.

Standard (New): **1.65—2.25 mm (0.065—0.089 in.)**
Service Limit: **0.7 mm (0.03 in.)**

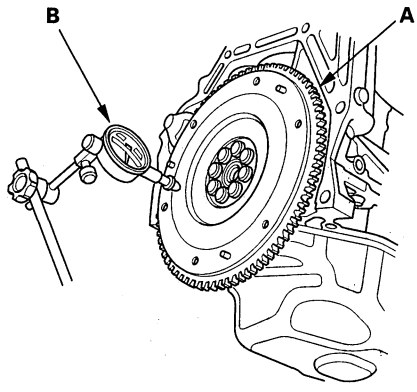
Clutch Replacement (cont'd)

Flywheel Inspection

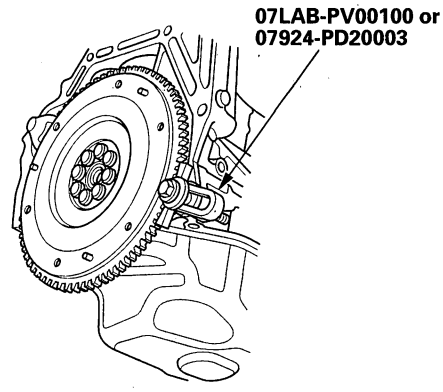
1. Inspect the ring gear teeth for wear and damage.
2. Inspect the clutch disc mating surface on the flywheel for wear, cracks, and burning.
3. Measure the flywheel runout with the flywheel (A) installed on the engine. Set the dial indicator (B). Turn the flywheel at least two turns while pressing the flywheel. If the runout is more than the service limit, replace the flywheel, and recheck the runout. Resurfacing the flywheel is not recommended.

Standard (New): **0.05 mm (0.002 in.) max.**
Service Limit: **0.15 mm (0.006 in.)**

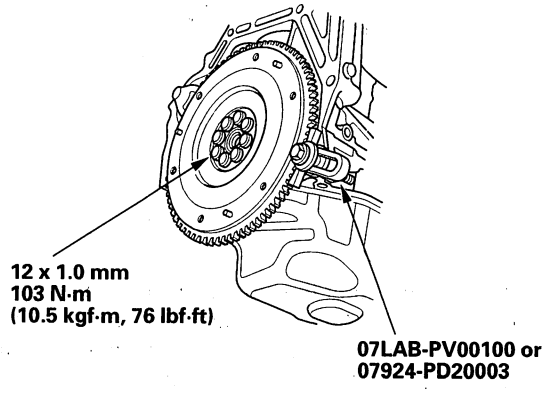


Flywheel Replacement

1. Install the special tool.



2. Loosen the flywheel mounting bolts in a crisscross pattern in several steps. Remove the bolts, then remove the flywheel.
3. Install the flywheel on the crankshaft, and install the mounting bolts, finger-tight.
4. Install the special tool, then torque the flywheel mounting bolts in a crisscross pattern in several steps.



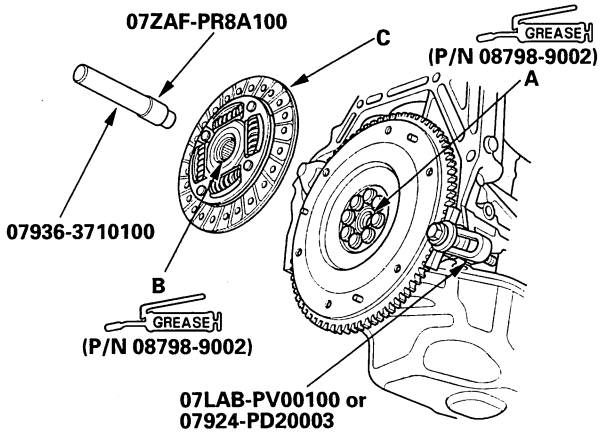
BACK

Protected by AR

Clutch Disc and Pressure Plate Installation

1. Temporarily install the clutch disc onto the splines of the transmission mainshaft. Make sure the clutch disc slides freely on the mainshaft.

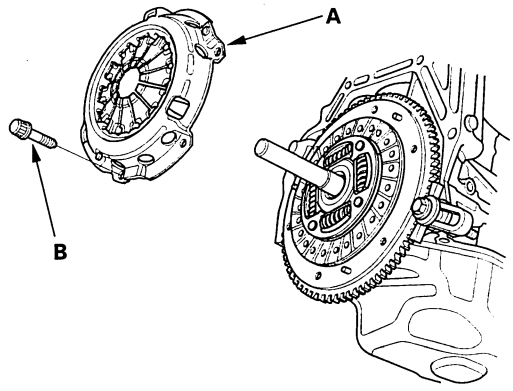
2. Install the ring gear holder.



3. Apply a light coat of super high temp urea grease (P/N 08798-9002) to the crankshaft pilot bushing (A).

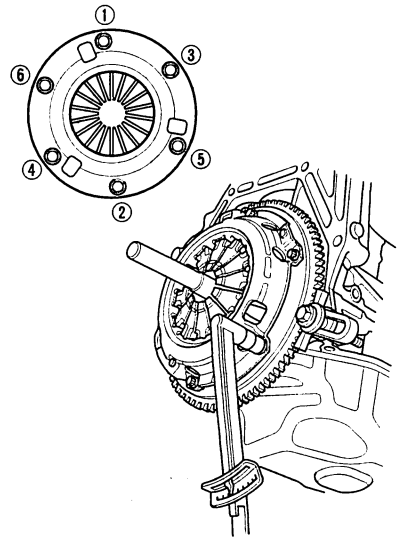
4. Apply super high temp urea grease (P/N 08798-9002) to the splines (B) of the clutch disc (C), then install the clutch disc using the special tools.

5. Install the pressure plate (A) and the mounting bolts (B), finger-tight.



6. Torque the mounting bolts in a crisscross pattern. Tighten the bolts in several steps to prevent warping the diaphragm spring.

PRESSURE PLATE MOUNTING BOLT TORQUE:
25 N·m (2.6 kgf·m, 19 lbf·ft)



7. Remove the special tools.

8. Make sure the diaphragm spring fingers are all the same height.

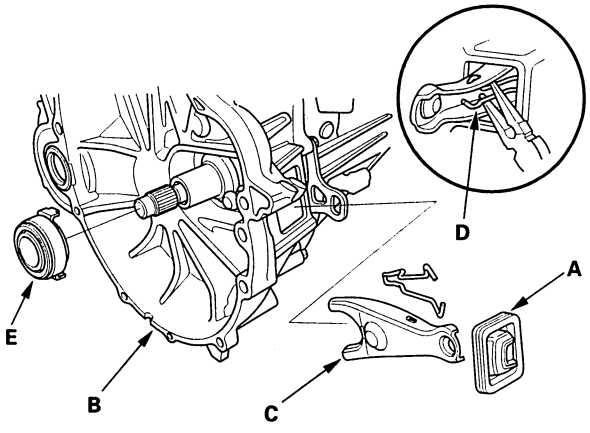
(cont'd)

Protected by AR

Clutch Replacement (cont'd)

Release Bearing Replacement

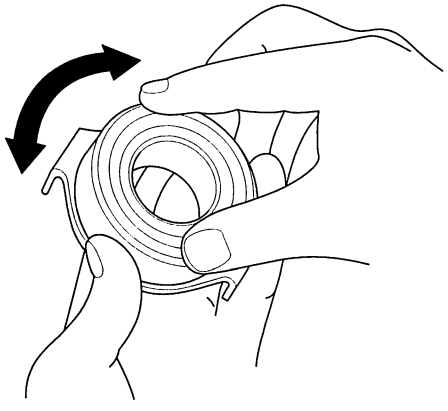
1. Remove the release fork boot (A) from the clutch housing (B).



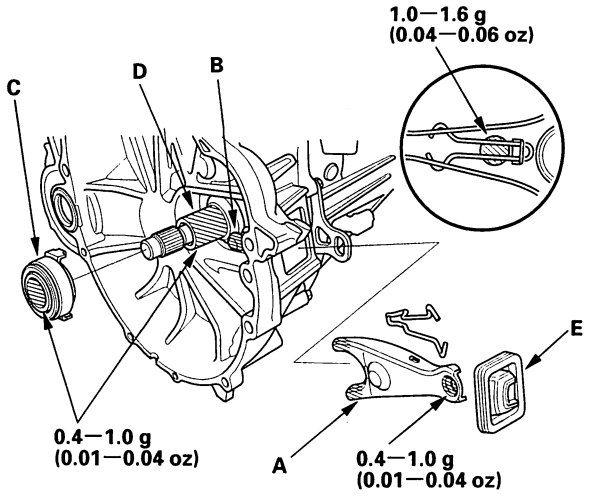
2. Remove the release fork (C) from the clutch housing by squeezing the release fork set spring (D) with pliers. Remove the release bearing (E).

3. Check the play of the release bearing by spinning it by hand. If there is excessive play, replace the release bearing.

   NOTE: The release bearing is packed with grease. Do not wash it in solvent.



4. Apply super high temp urea grease (P/N 08798-9002) to the release fork (A), the release fork bolt (B), the release bearing (C), and the release bearing guide (D) in the shaded areas.



5. With the release fork slid between the release bearing pawls, install the release bearing on the mainshaft while inserting the release fork through the hole in the clutch housing.

6. Align the detent of the release fork with the release fork bolt, then press the release fork over the release fork bolt squarely.

7. Install the release fork boot (E). Make sure the boot seals around the release fork and clutch housing.

8. Move the release fork (A) right and left to make sure that it fits properly against the release bearing (B) and that the release bearing slides smoothly.

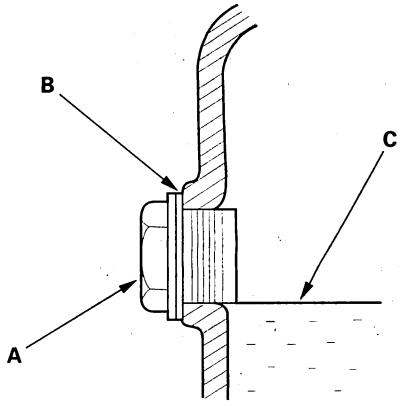
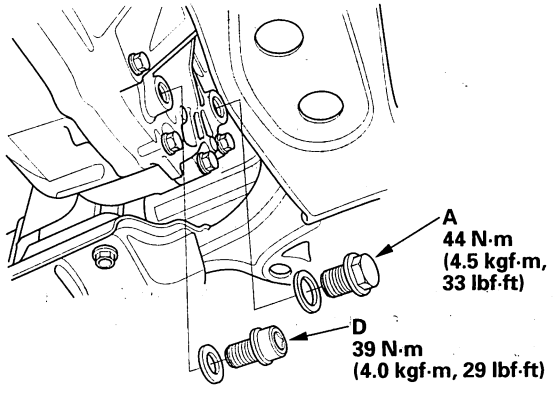
Transmission Fluid Inspection and Replacement

1. Park the vehicle on level ground, and turn the ignition switch OFF.
2. Remove the oil filler plug (A) and washer (B), check the condition of the fluid, and make sure it is at the proper level (C).



3. If the fluid is dirty, remove the drain plug (D) and drain the fluid.



4. Install the drain plug with a new washer, and refill the transmission fluid to the proper level.

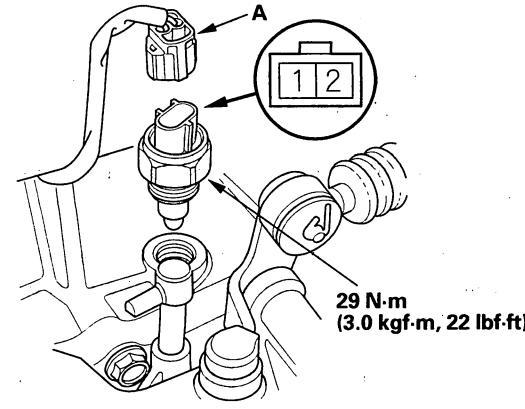
   Fluid Capacity
   1.9 L (2.0 US qt) at fluid change
   2.1 L (2.2 US qt) at overhaul

   Always use Honda Manual Transmission Fluid (MTF). Using engine oil can cause stiffer shifting because it does not contain the proper additives.

5. Install the oil filler plug with a new washer.

Back-up Light Switch Test

1. Disconnect the back-up light switch 2P connector (A).



2. Check for continuity between the No. 1 and No. 2 terminals of the back-up light switch 2P connector. There should be continuity when the shift lever is in Reverse.
3. If necessary, replace the back-up light switch. Apply liquid gasket (P/N 08718-0001), and install it on the transmission housing.

Transmission Removal

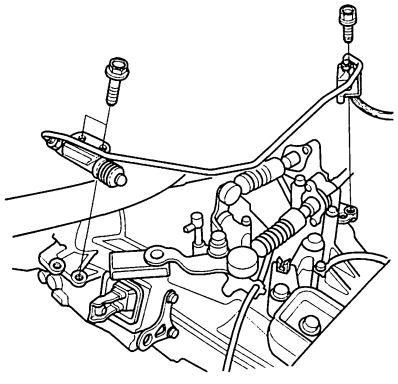
Special Tools Required
- Engine hanger/adapter VSB02C000015 *
- Engine support hanger, A & Reds AAR-T-12566 *
- Subframe adapter VSB02C000016 *

* Available through the Honda Tool and Equipment Program 888-424-6857.

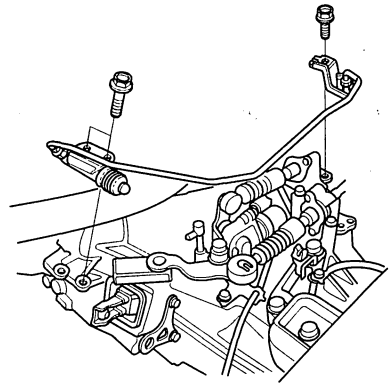
NOTE: Use fender covers to avoid damaging painted surfaces.

1. Make sure you have the anti-theft codes for the radio and the navigation system, then write down the customer's audio presets.
2. Set the wheels in the straight ahead position.
3. Lock the steering wheel.
4. Disconnect the negative cable from the battery first, then disconnect the positive cable. Remove the battery.
5. Remove the air cleaner housing (see page 11-361).
6. Remove the battery base (see step 10 on page 5-2).
7. Carefully remove the slave cylinder without bending the clutch line. Do not press the clutch pedal once the slave cylinder has been removed.

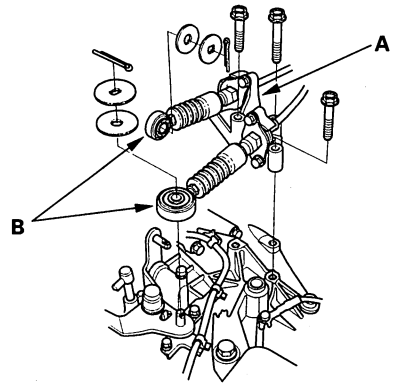
Type A:



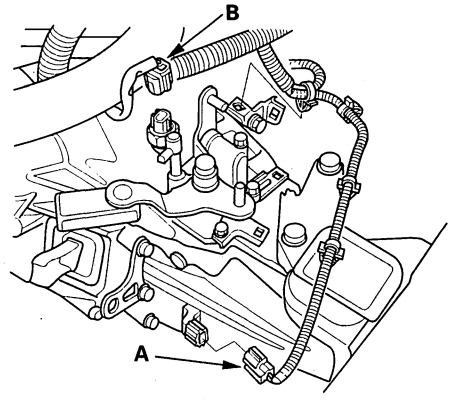
Type B:



8. Remove the cable bracket (A), then disconnect the cables (B) from the top of the transmission housing. Carefully remove both cables and the bracket together to avoid bending the cables.



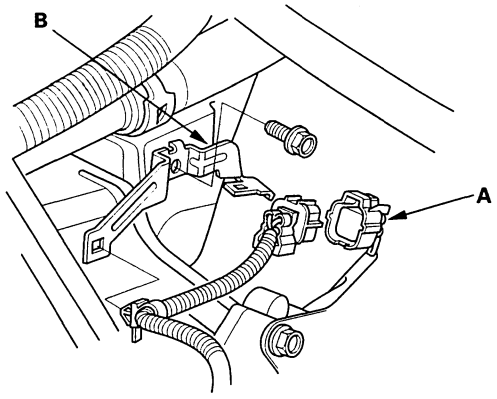
9. Disconnect the output shaft (countershaft) speed sensor connector (A) and back-up light switch connector (B).



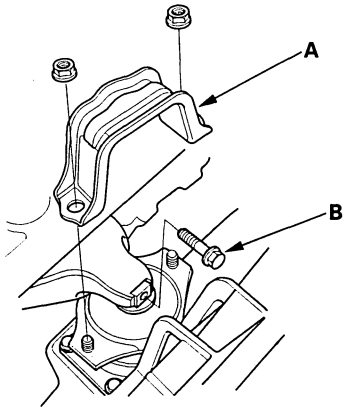
BACK

Protected by AR

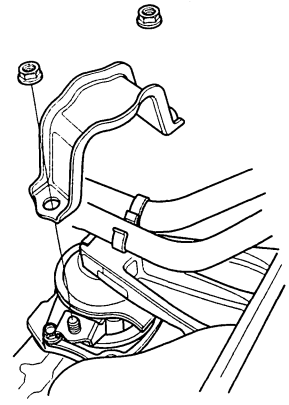
10. Disconnect the secondary heated oxygen sensor (secondary HO2S) connector (A), then remove the bracket (B).



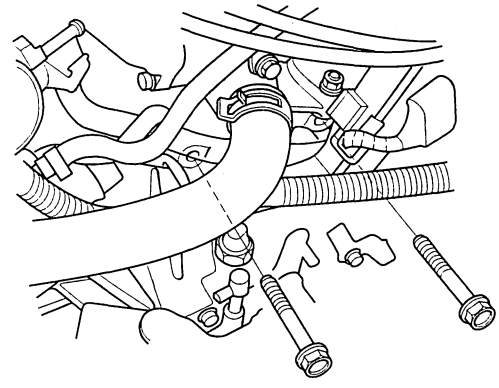
11. Remove the front mount stop (A), then remove the front mount bolt (B).



12. Remove the rear mount stop.



13. Remove the transmission upper mounting bolts.

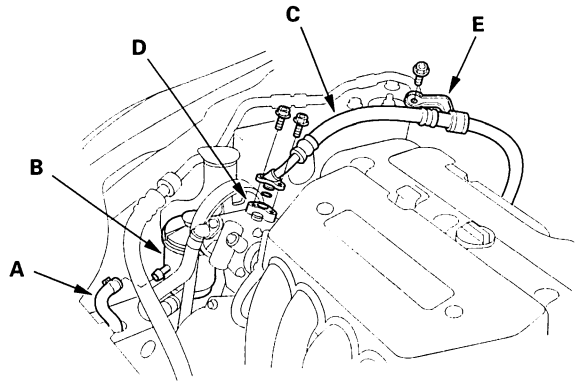


(cont'd)

Protected by AR

Transmission Removal (cont'd)

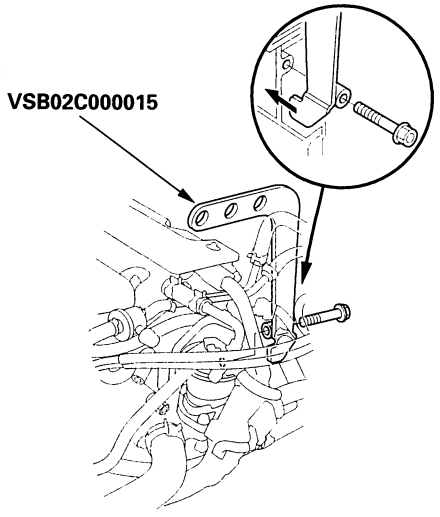
14. Remove and plug the return hose (A) from the power steering fluid reservoir (B). Wipe off any spilled fluid at once.



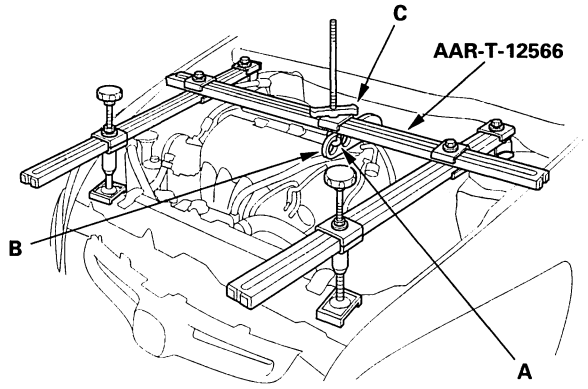
15. Remove the power steering pump outlet line (C) from the power steering pump (D).

16. Remove the power steering pump outlet line bracket (E).

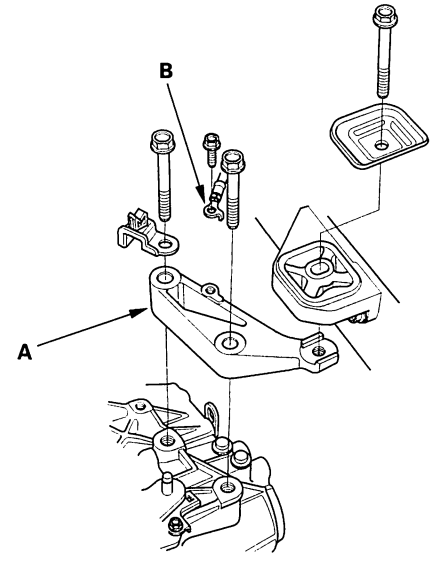
17. Attach the special tool to the threaded hole in the cylinder head.



18. Install the engine support hanger (AAR-T-12566) to the vehicle, and attach the hook (A) to the special tool adapter (B). Tighten the wing nut (C) by hand, and lift and support the engine.



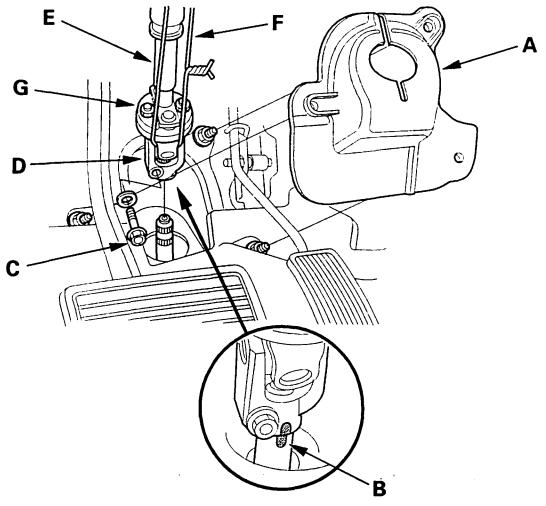
19. Remove the transmission mount bracket (A) and ground cable (B).



BACK

Protected by AR

20. Remove the steering joint cover (A).



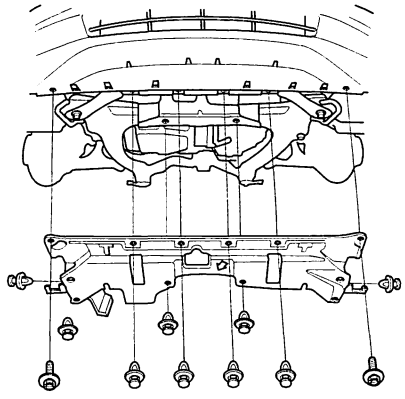
21. Make a reference mark (B) across the steering joint and steering gearbox pinion shaft. Remove the steering joint bolt (C), and disconnect the steering joint (D) by removing the steering joint toward the steering column. Hold the slider shaft (E) on the column with a piece of wire (F) between the joint yoke (G) on the slider shaft and the joint yoke on the upper shaft (see page 17-25).

22. Raise the vehicle, and make sure it is securely supported.

23. Remove the front wheels.

24. Drain the transmission fluid. Reinstall the drain bolt using a new washer (see page 13-3).

25. Remove the splash shield.



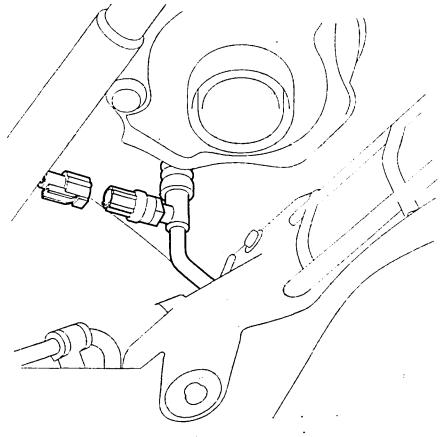
26. Separate the tie-rod ball joint (see step 8 on page 17-31).

27. Separate the front stabilizer link (see step 6 on page 16-4).

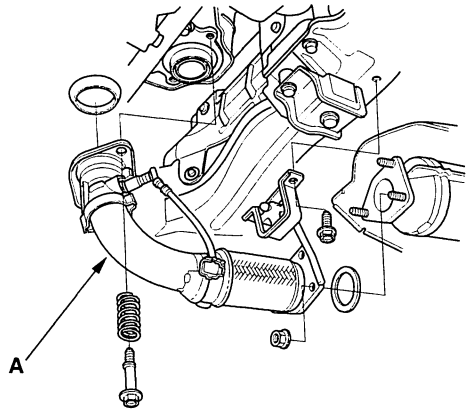
28. Remove the damper fork (see step 7 on page 16-5).

29. Separate the knuckle from the lower arm (see step 8 on page 16-5).

30. Disconnect the power steering pressure switch connector.



31. Remove exhaust pipe A.



32. Remove the left and right driveshaft inboard joints (see step 12 on page 16-6).

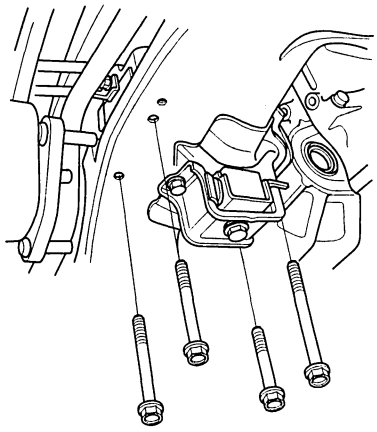
33. Remove the intermediate shaft (see page 16-21).

(cont'd)

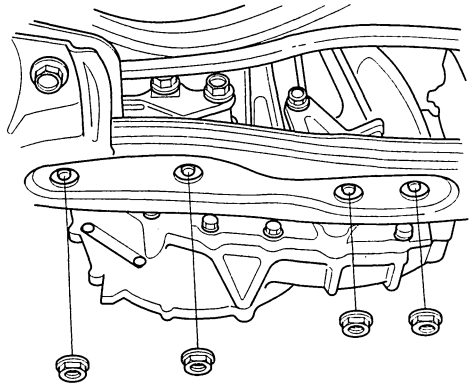
Protected by AR

Transmission Removal (cont'd)

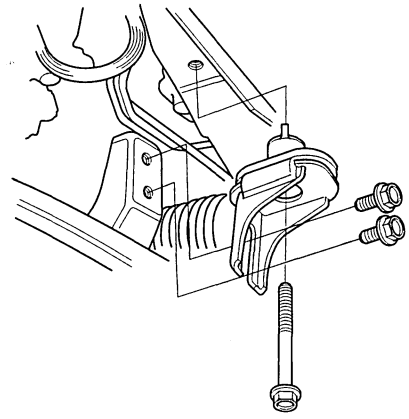
34. Remove the engine lower rear mount mounting bolts.



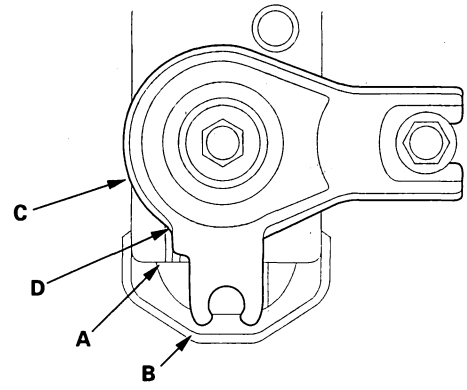
35. Remove the transmission lower mount mounting nuts.



36. Remove the subframe mid mounts from both sides.



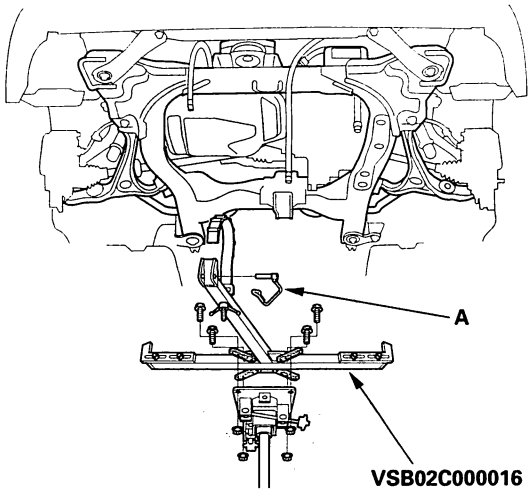
37. Make the appropriate reference lines (A) at both ends of the subframe (B) that line up with the edge (C) of the stiffeners (D).



BACK

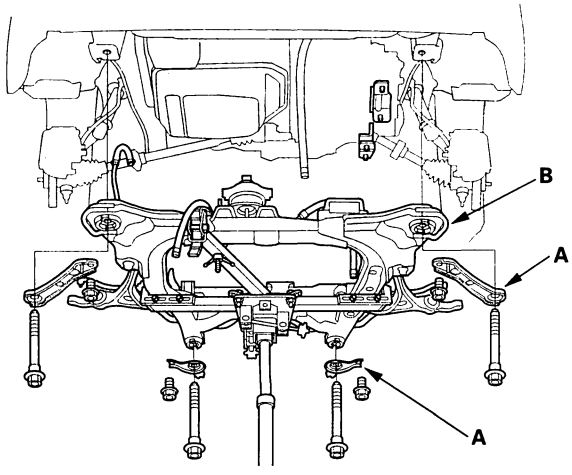
Protected by AR

38. Attach the special tool to the subframe by wrapping the band over the subframe and attaching the end of the band to the tool with a pin (A).

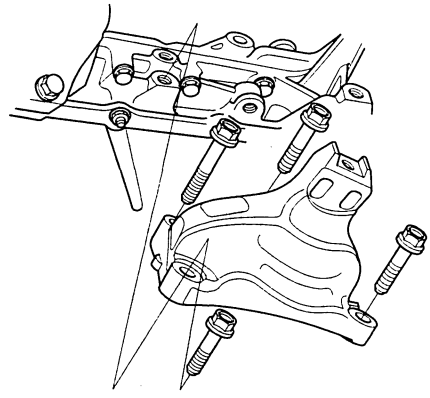


39. Raise the jack, and line up the slots in the arms with the bolt holes on the corner of the jack base, then attach them securely.

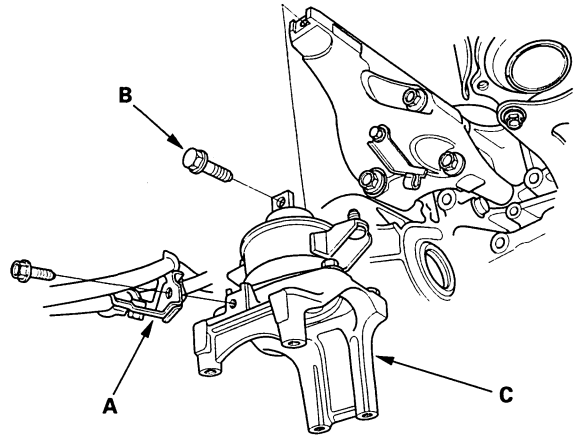
40. Remove the front suspension subframe stays (A) and the front suspension subframe (B).



41. Remove the front engine mount upper bracket.



42. Remove the shift cable bracket (A), rear engine mount upper mounting bolt (B), and rear engine mount (C).

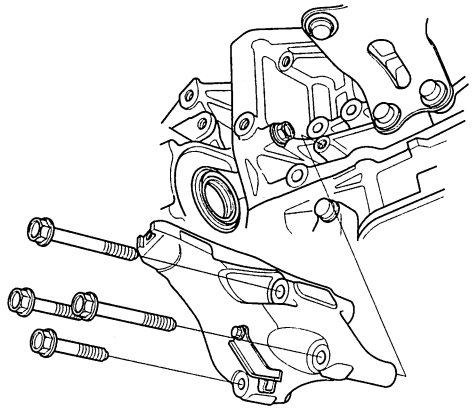


(cont'd)

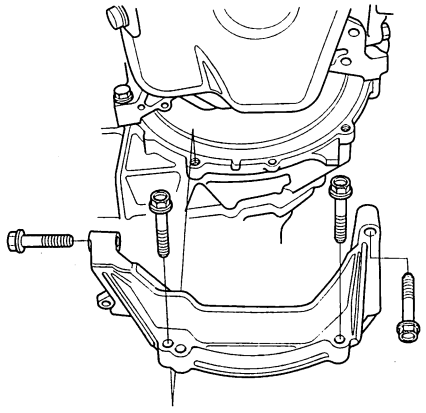
Protected by AR

Transmission Removal (cont'd)

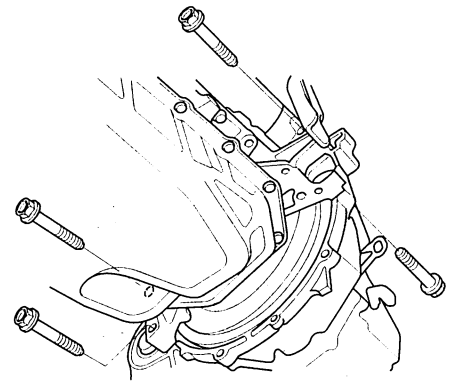
43. Remove the rear engine mount upper bracket.



44. Remove the clutch cover.

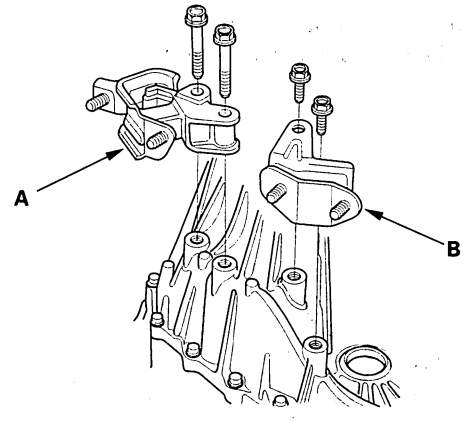


45. Place the transmission jack under the transmission, and remove the transmission lower mounting bolts.



46. Pull the transmission away from the engine until the transmission mainshaft clears the clutch pressure plate, then lower the transmission on the transmission jack.

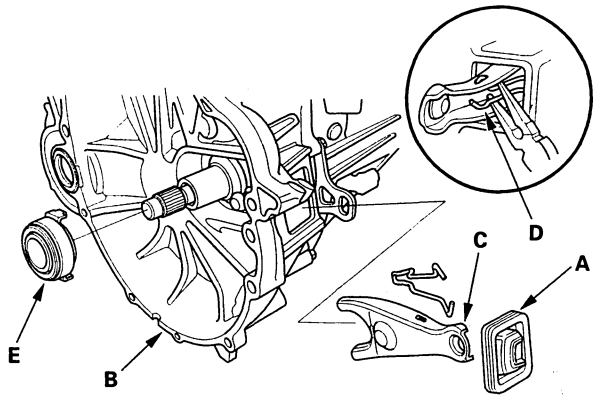
47. Remove the transmission lower front mount (A) and transmission lower rear mount (B).



BACK

Protected by AR

48. Remove the release fork boot (A) from the clutch housing (B).



49. Remove the release fork (C) from the clutch housing by squeezing the release fork set spring (D) with pliers. Remove the release bearing (E).

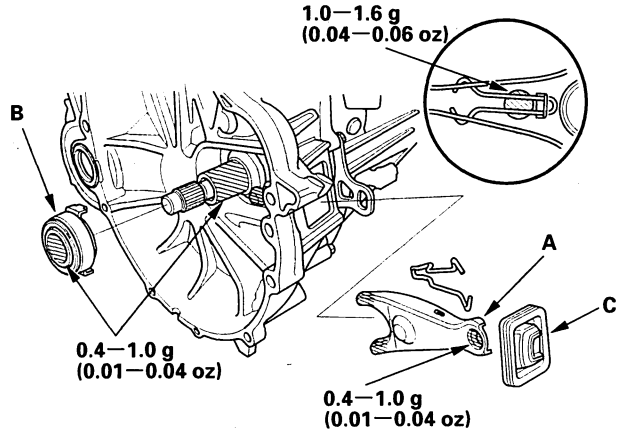
Transmission Installation

Special Tools Required
- Engine hanger/adapter VSB02C000015 *
- Engine support hanger, A & Reds AAR-T-12566 *
- Subframe adapter VSB02C000016 *

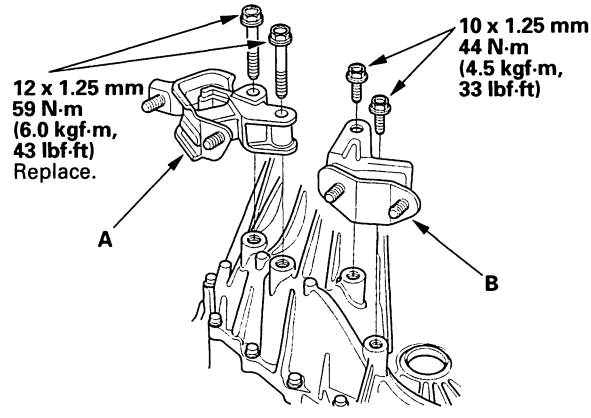
* Available through the Honda Tool and Equipment Program 888-424-6857.

1. Make sure the two dowel pins are installed in the clutch housing.

2. Apply super high temp urea grease (P/N 08798-9002) to the release fork (A), the release bearing (B) and the mainshaft splines. Install the release fork, the release bearing, and the boot (C).



3. Install the transmission lower front mount (A) and transmission lower rear mount (B).



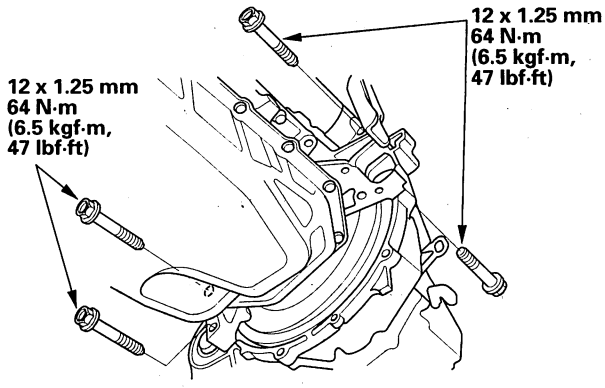
4. Place the transmission on the transmission jack, and raise it to engine level.

(cont'd)

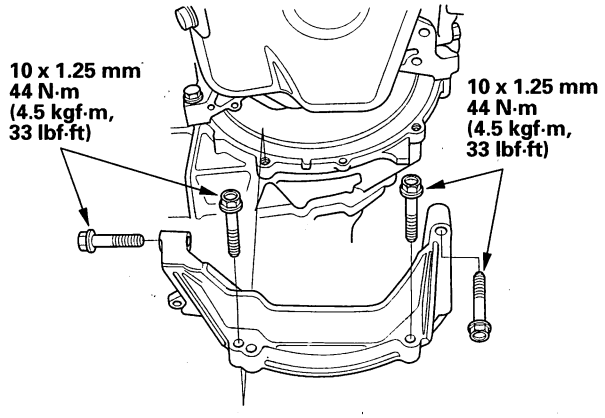
Protected by AR

Transmission Installation (cont'd)

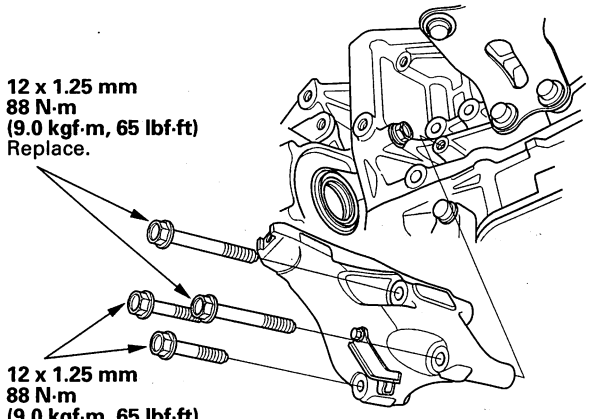
5. Install the transmission mounting lower bolts.



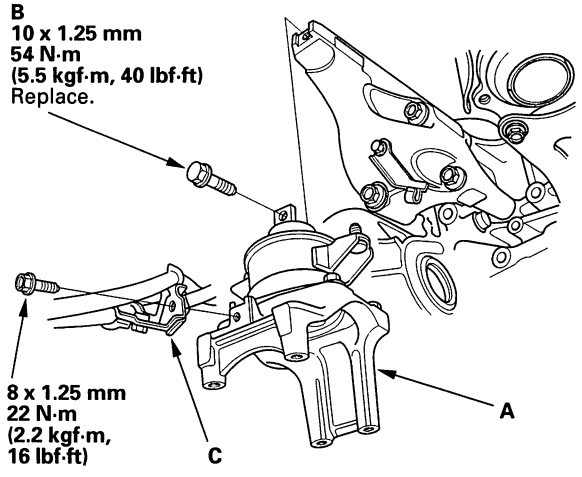
6. Install the clutch cover.



7. Install the rear engine mount upper bracket.



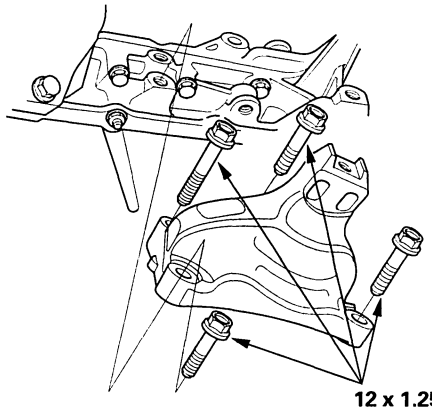
8. Install the rear engine mount (A), rear engine mount upper mounting bolt (B), and shift cable bracket (C).



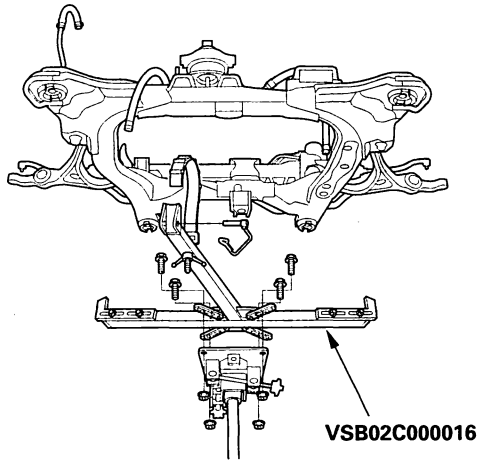
BACK

Protected by AR

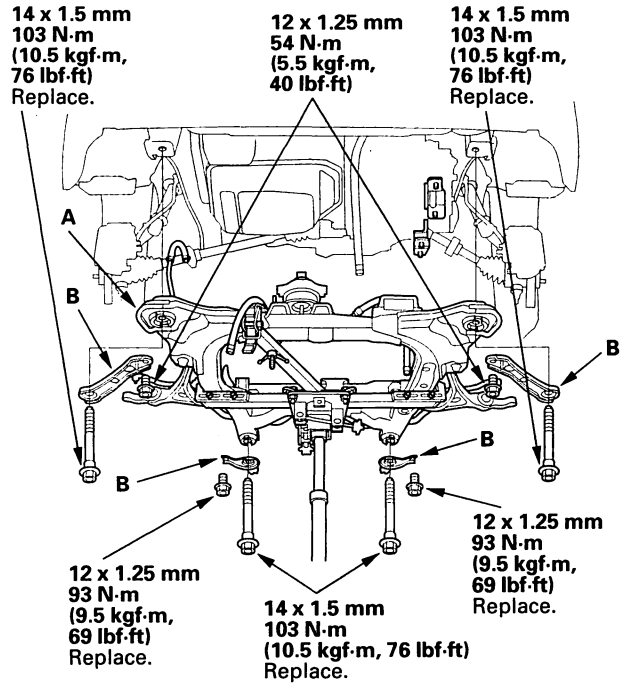
9. Install the front engine mount upper bracket.



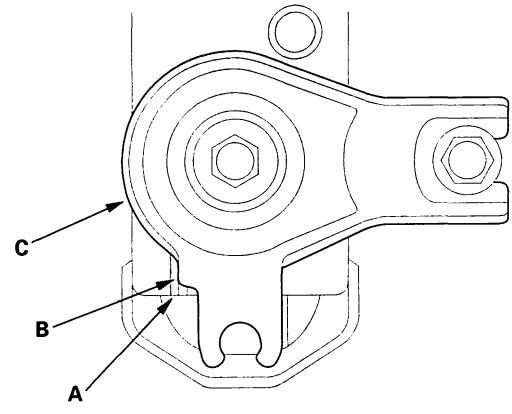
10. Support the subframe with the subframe adapter and a jack.



11. Install the front suspension subframe (A) and front suspension subframe stays (B).



12. Align the reference marks (A) with the edge (B) of both rear stiffeners (C), then tighten the rear subframe mounting bolts, the front bolts, and the stiffener bolts to the specified torque.

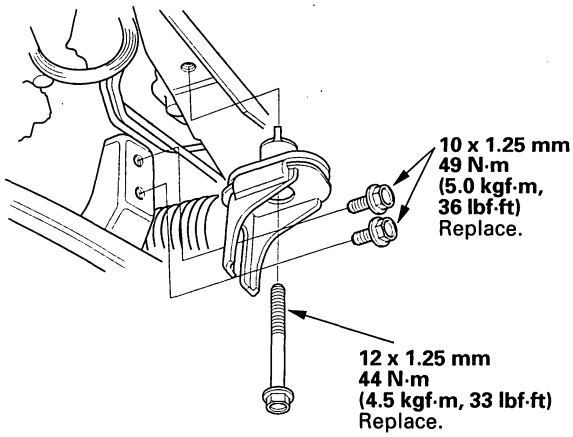


(cont'd)

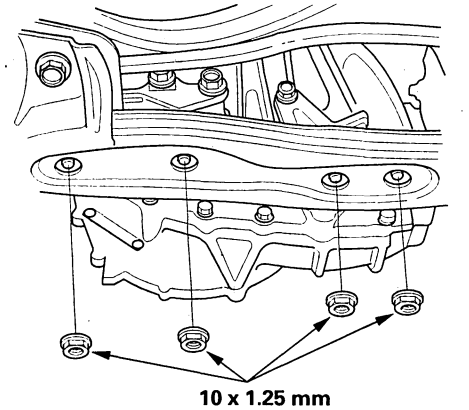
Protected by AR

Transmission Installation (cont'd)

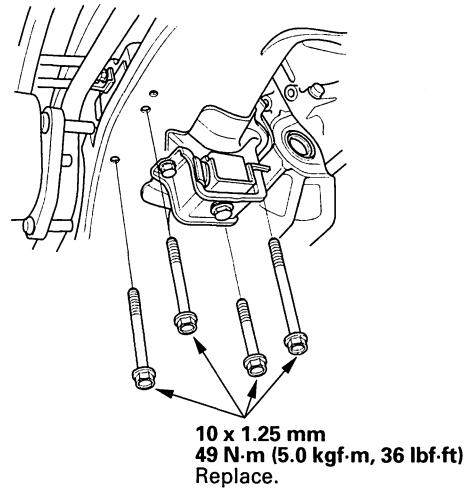
13. Install the subframe mid mounts on both sides.



14. Install the transmission lower mount mounting nuts.



15. Install the engine lower rear mount mounting bolts.



16. Install the intermediate shaft (see page 16-25).

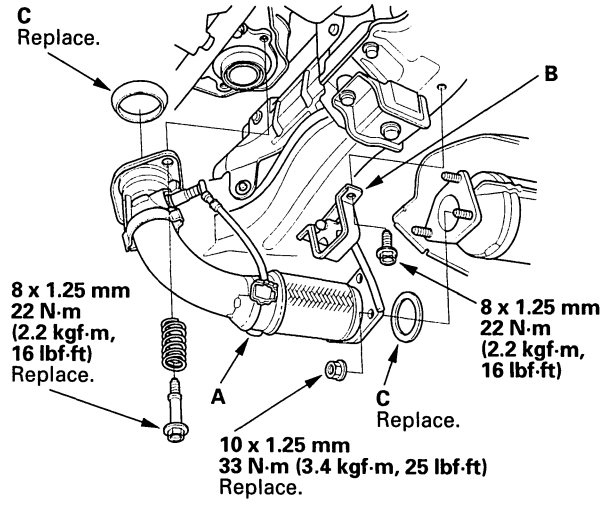
17. Install the left and right inboard joints (see page 16-19).

18. Install the knuckle onto the lower arm (see step 6 on page 16-20).

19. Install the damper fork (see step 8 on page 16-20).

20. Connect the front stabilizer links (see step 10 on page 16-20).

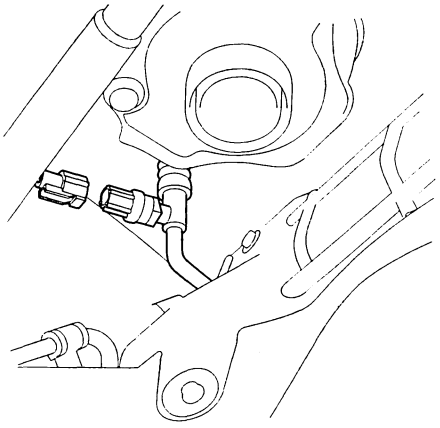
21. Install exhaust pipe A, the mount (B), and new gaskets (C).



BACK

Protected by AR

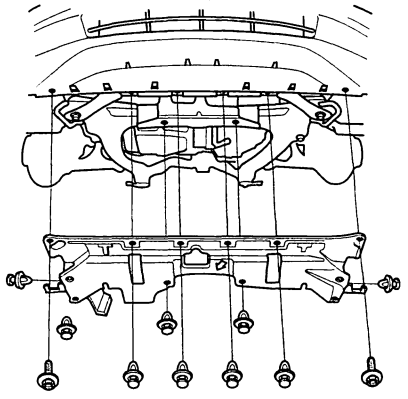
22. Connect the power steering pressure switch connector.



23. Connect the return line to the power steering fluid reservoir.

24. Install the tie-rod ball joint (see step 23 on page 17-54).

25. Install the splash shield.



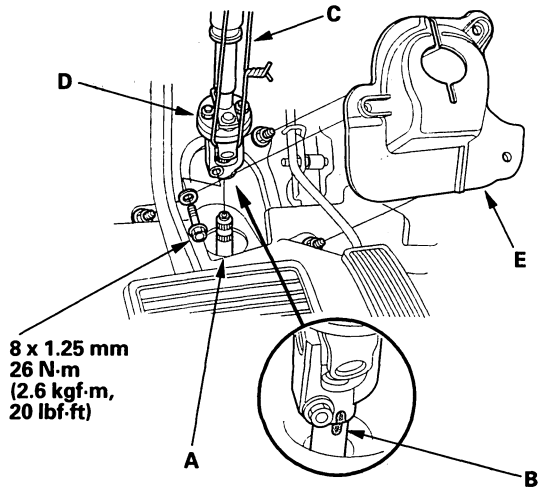
26. Refill the transmission with fluid.

27. Install the front wheels, and set them in the straight ahead position.

28. Lower the vehicle.

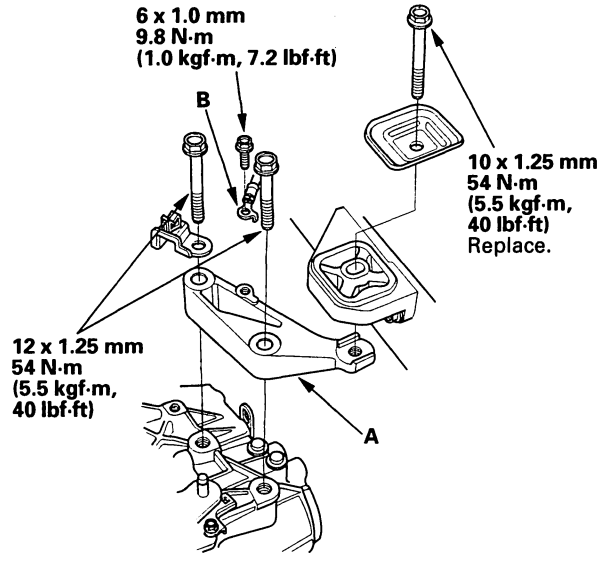
29. Unlock the steering wheel.

30. Connect the steering joint to the steering gearbox pinion shaft (A) by aligning the reference mark (B), and remove the wire (C) from the joint yoke (D).



31. Install the steering joint cover (E).

32. Install the transmission mount bracket (A) and ground cable (B).



(cont'd)

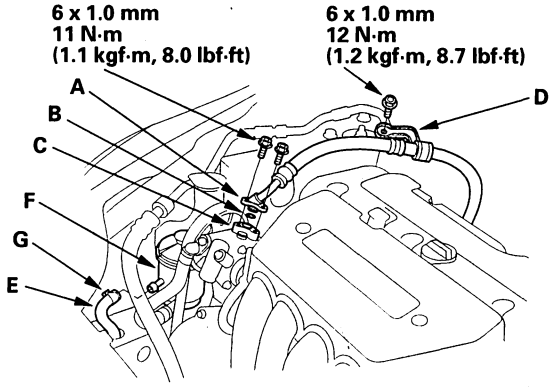
BACK

Protected by AR

Transmission Installation (cont'd)

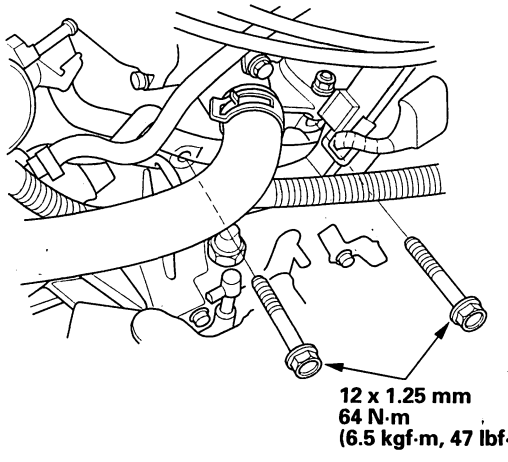
33. Remove the engine hanger and the special tool from the engine.

34. Install the power steering pump outlet line (A) with a new O-ring (B) to the pump (C), and secure the hose clamp (D) with the bolt.

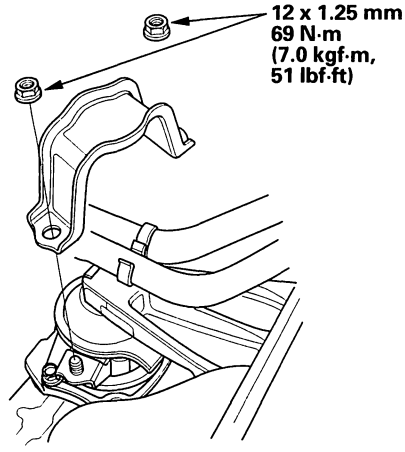


35. Connect the return hose (E) to the power steering fluid reservoir (F), then secure the hose with the clamp (G).

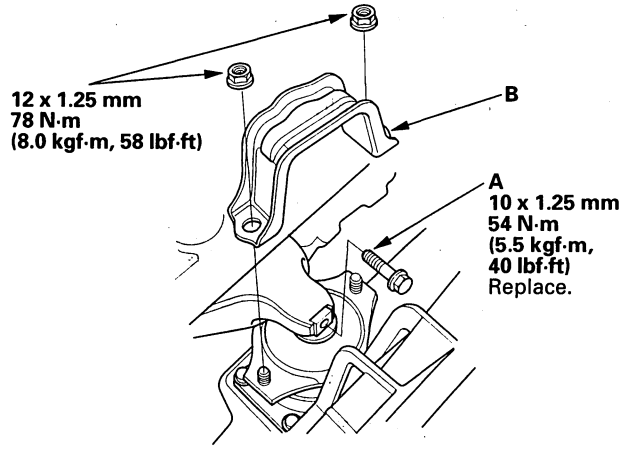
36. Install the transmission upper mounting bolts.



37. Install the engine rear mount stop.



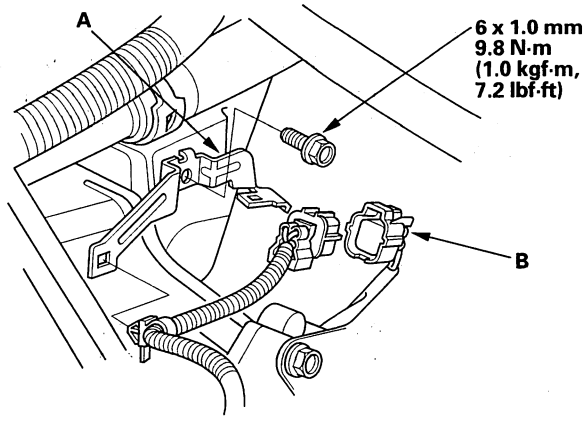
38. Install the engine front mount mounting bolt (A) and front mount stop (B).



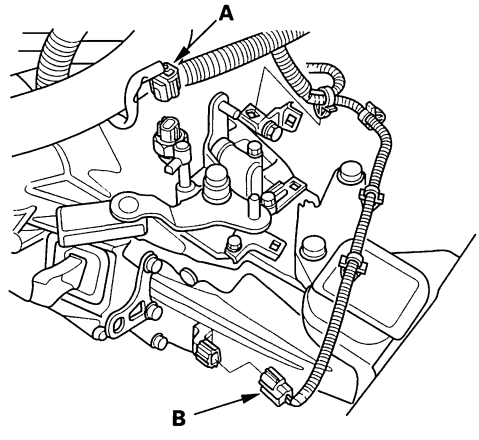
BACK

Protected by AR

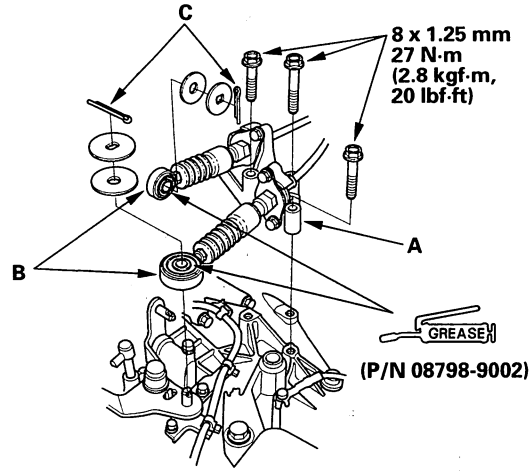
39. Install the bracket (A), then connect the secondary heated oxygen sensor (secondary HO2S) connector (B).



40. Connect the back-up light switch connector (A) and output shaft (countershaft) speed sensor connector (B).



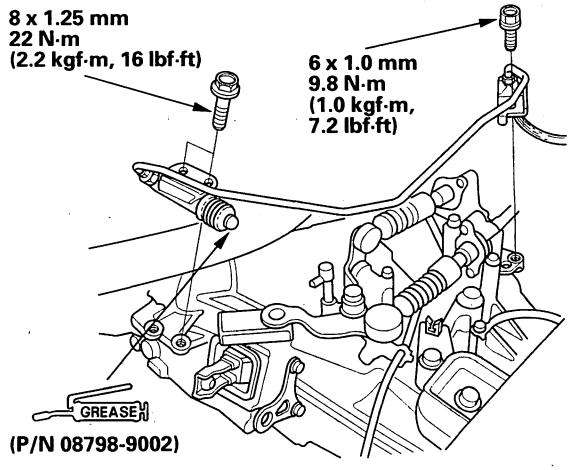
41. Install the cable bracket (A) and cables (B).



42. Apply a light coat of super high temp urea grease (P/N 08798-9002) to the cable ends, and install new cotter pins (C).

43. Apply super high temp urea grease (P/N 08798-9002) to the end of the cylinder rod. Install the slave cylinder. Be careful not to bend the clutch line.

Type A:

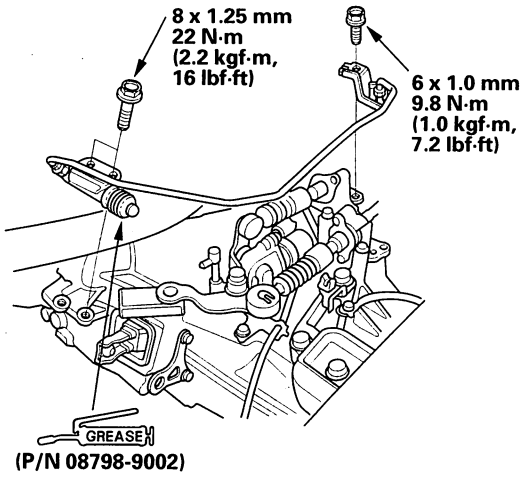


(cont'd)

Protected by AR

Transmission Installation (cont'd)

Type B:



(P/N 08798-9002)

44. Install the battery base (see step 47 on page 5-18).
45. Install the air cleaner housing (see page 11-361).
46. Remove the steering wheel (see page 17-22).
47. Center the cable reel by first rotating it clockwise until it stops. Then rotate it counterclockwise (about three full turns) until the arrow mark on the label points straight up.
48. Reinstall the steering wheel (see page 17-24).
49. Install the battery. Connect the positive cable to the battery first, then connect the negative cable.
50. Fill the power steering fluid reservoir with fluid to the upper level line.
51. Start the engine, and run it at fast idle, then turn the steering wheel from lock-to-lock several times to bleed air from the system.
52. Recheck the fluid level, and refill if necessary.
53. Check the front wheel alignment (see page 18-6).
54. Check the steering wheel spoke angle. If the steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft serrations, then adjust the front toe by turning the tie-rod ends if necessary. If you need to correct the engagement of the joint/pinion shaft, repeat step 46 thru 48 after disconnecting the battery and waiting 3 minutes.
55. Test-drive the vehicle.
56. Check the clutch operation.
57. Enter the anti-theft code for the radio and navigation system, then enter the customer's audio presets.
58. Do the power window control unit reset procedure (see page 22-232).

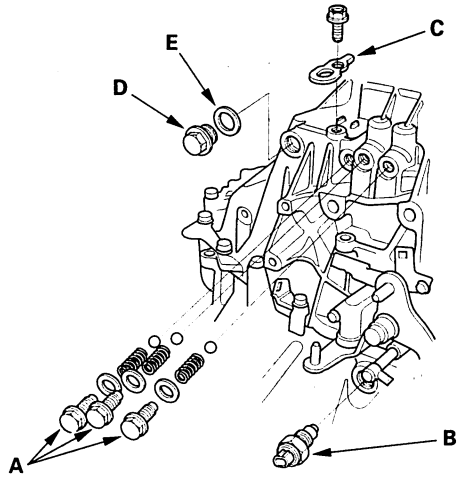
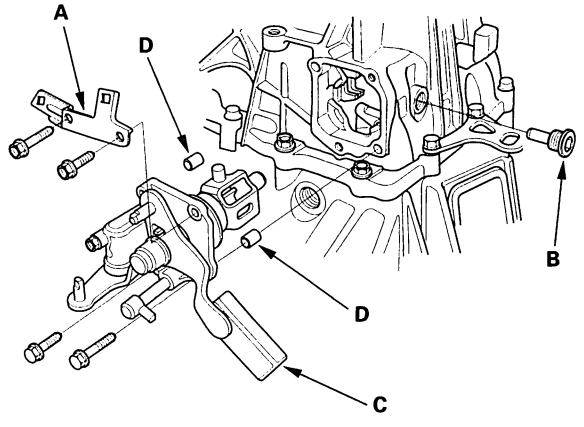
NOTE: Place the clutch housing on two pieces of wood thick enough to keep the mainshaft from hitting the workbench.

1. Remove the detent bolts (A), springs, steel balls, and back-up light switch (B).

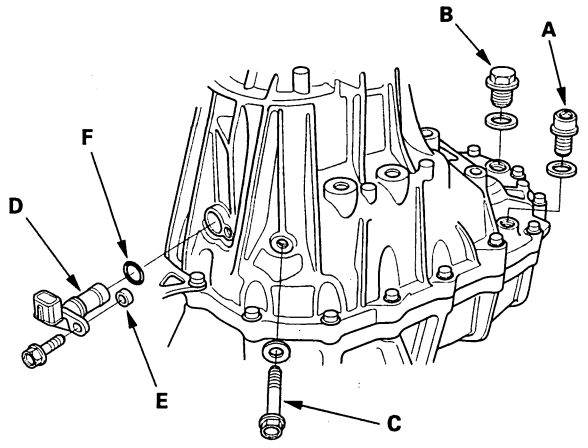


2. Remove the transmission hanger (C), 20 mm bolt (D), and 20 mm washer (E).

3. Remove the interlock bolt (B), change lever assembly (C), 8 x 14 mm dowel pins (D), and harness bracket A.



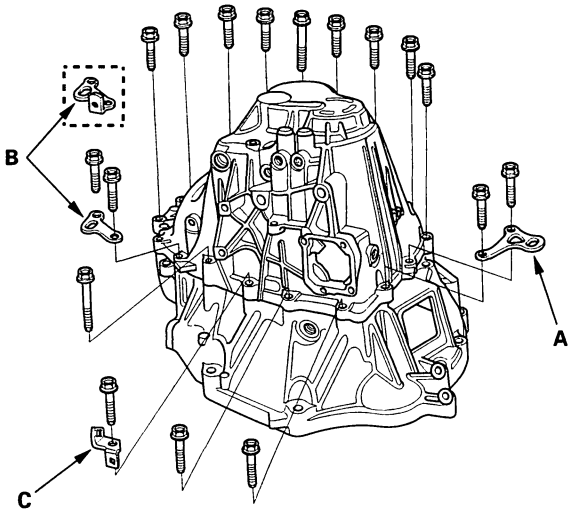
4. Remove the drain plug (A), filler plug (B), and 10 mm flange bolt (C).



5. Remove the output shaft (countershaft) speed sensor (D), plain washer (E), and O-ring (F).

6. Loosen the 8 mm flange bolts in a crisscross pattern in several steps, then remove them.

7. Remove the transmission hanger A, transmission hanger B, and harness bracket B (C).



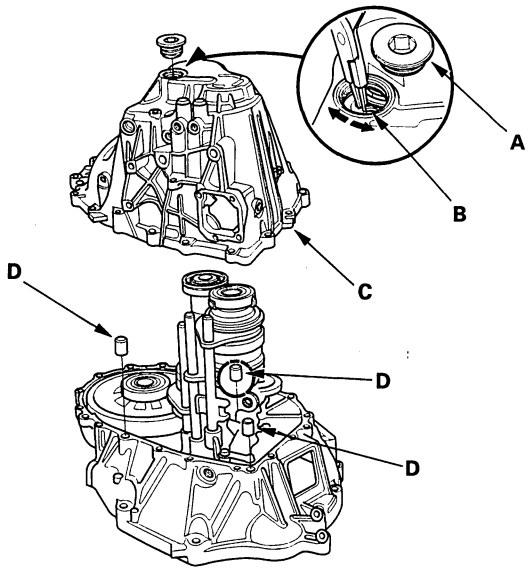
(cont'd)

BACK

Protected by AR

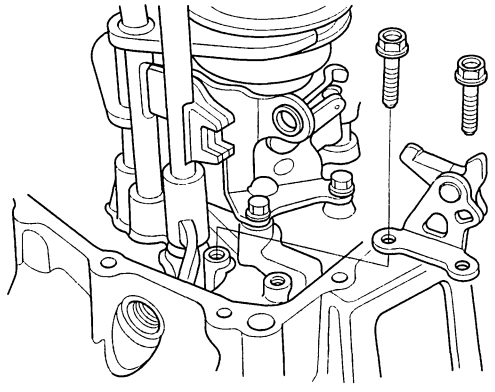
Transmission Disassembly (cont'd)

8. Remove the 32 mm sealing cap (A).

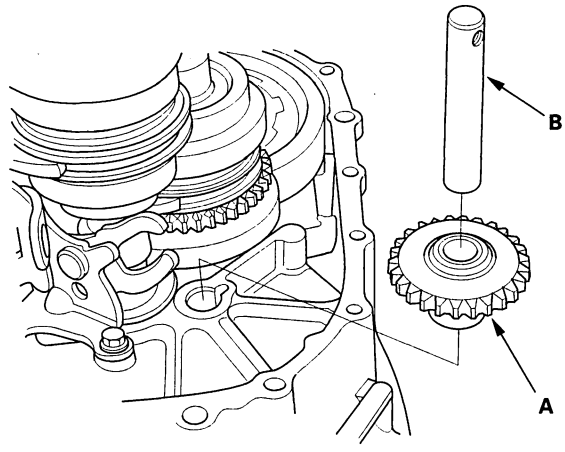


9. While expanding the 72 mm snap ring (B) of the countershaft ball bearing with snap ring pliers, lift the transmission housing (C). Release the snap ring pliers, and remove the transmission housing and 14 x 20 mm dowel pins (D).

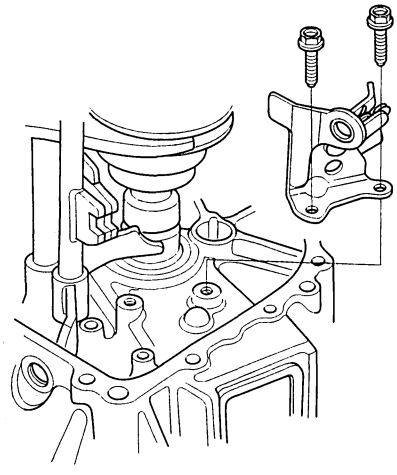
10. Remove the reverse lock cam.



11. Remove the reverse idler gear (A) and reverse gear shaft (B).



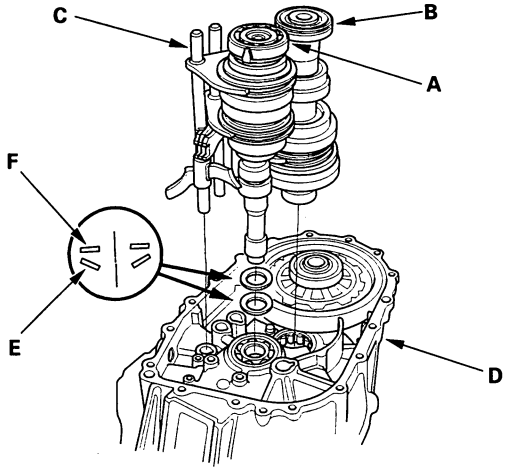
12. Remove the reverse shift fork.



BACK

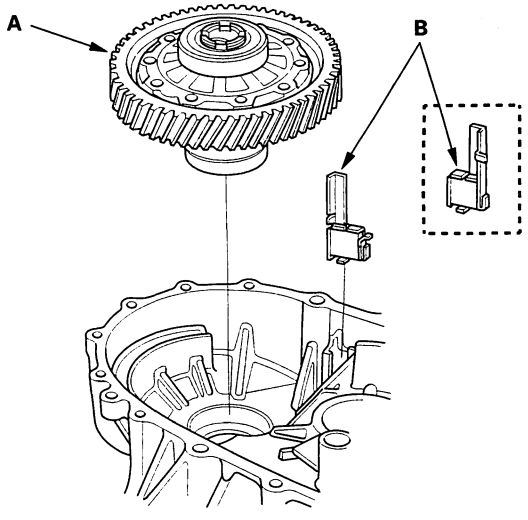
Protected by AR

13. Apply tape to the mainshaft splines to protect the seal, then remove the mainshaft assembly (A) and the countershaft assembly (B) with the shift forks (C) from the clutch housing (D).

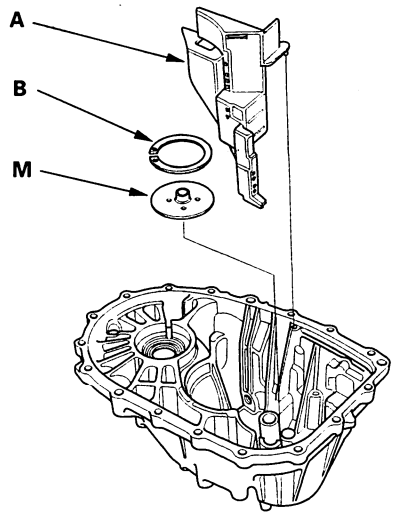


14. Remove the 28 mm spring washer (E) and the 28 mm washer (F).

15. Remove the differential assembly (A) and magnet (B).



16. Remove the oil gutter plate (A), 72 mm shim (B), and oil guide plate M.

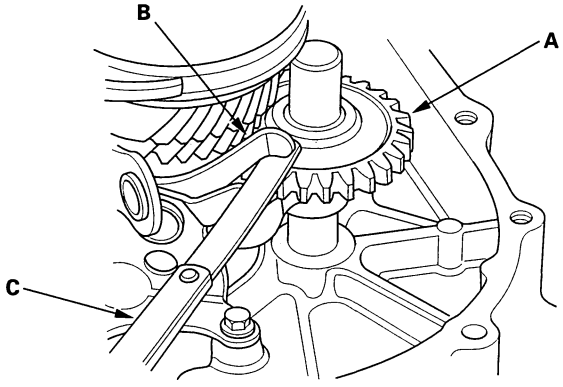


Protected by AR

Reverse Shift Fork Clearance Inspection

1. Measure the clearance between the reverse idler gear (A) and the reverse shift fork (B) with a feeler gauge (C). If the clearance is more than the service limit, go to step 2.

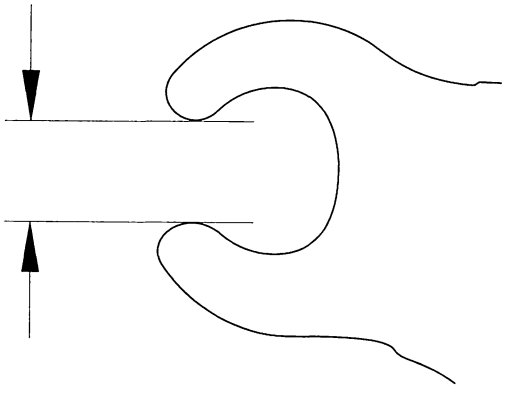
Standard: 0.20—0.59 mm (0.007—0.024 in.)
Service Limit: 1.2 mm (0.047 in.)



2. Measure the width of the reverse shift fork.

- If the width is not within the standard, replace the reverse shift fork.
- If the width is within the standard, replace the reverse gear.

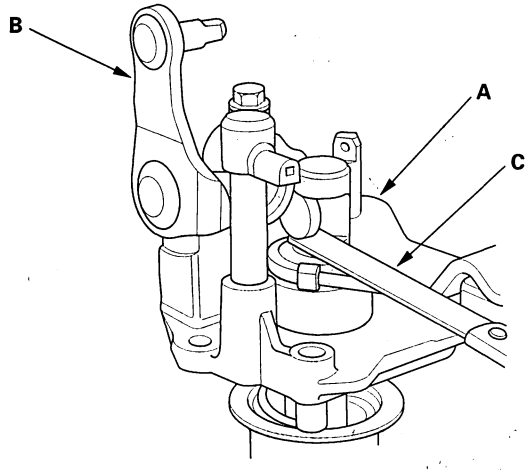
Standard: 13.4—13.7 mm (0.527—0.539 in.)



Change Lever Clearance Inspection

1. Measure the clearance between change lever (A) and the select lever (B) with a feeler gauge (C). If the clearance is more than the service limit, go to step 2.

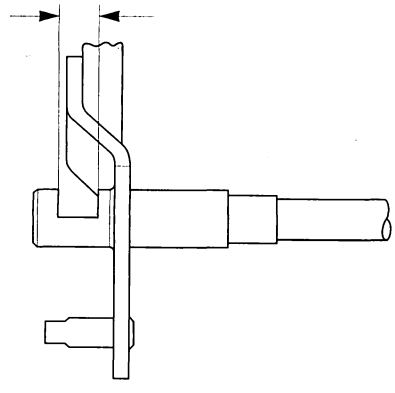
Standard: 0.05—0.25 mm (0.002—0.010 in.)
Service Limit: 0.5 mm (0.020 in.)



2. Measure the groove width of the change lever.

- If the groove width is not within the standard, replace the change lever.
- If the groove width is within the standard, replace the select lever.

Standard: 15.00—15.10 mm (0.591—0.594 in.)

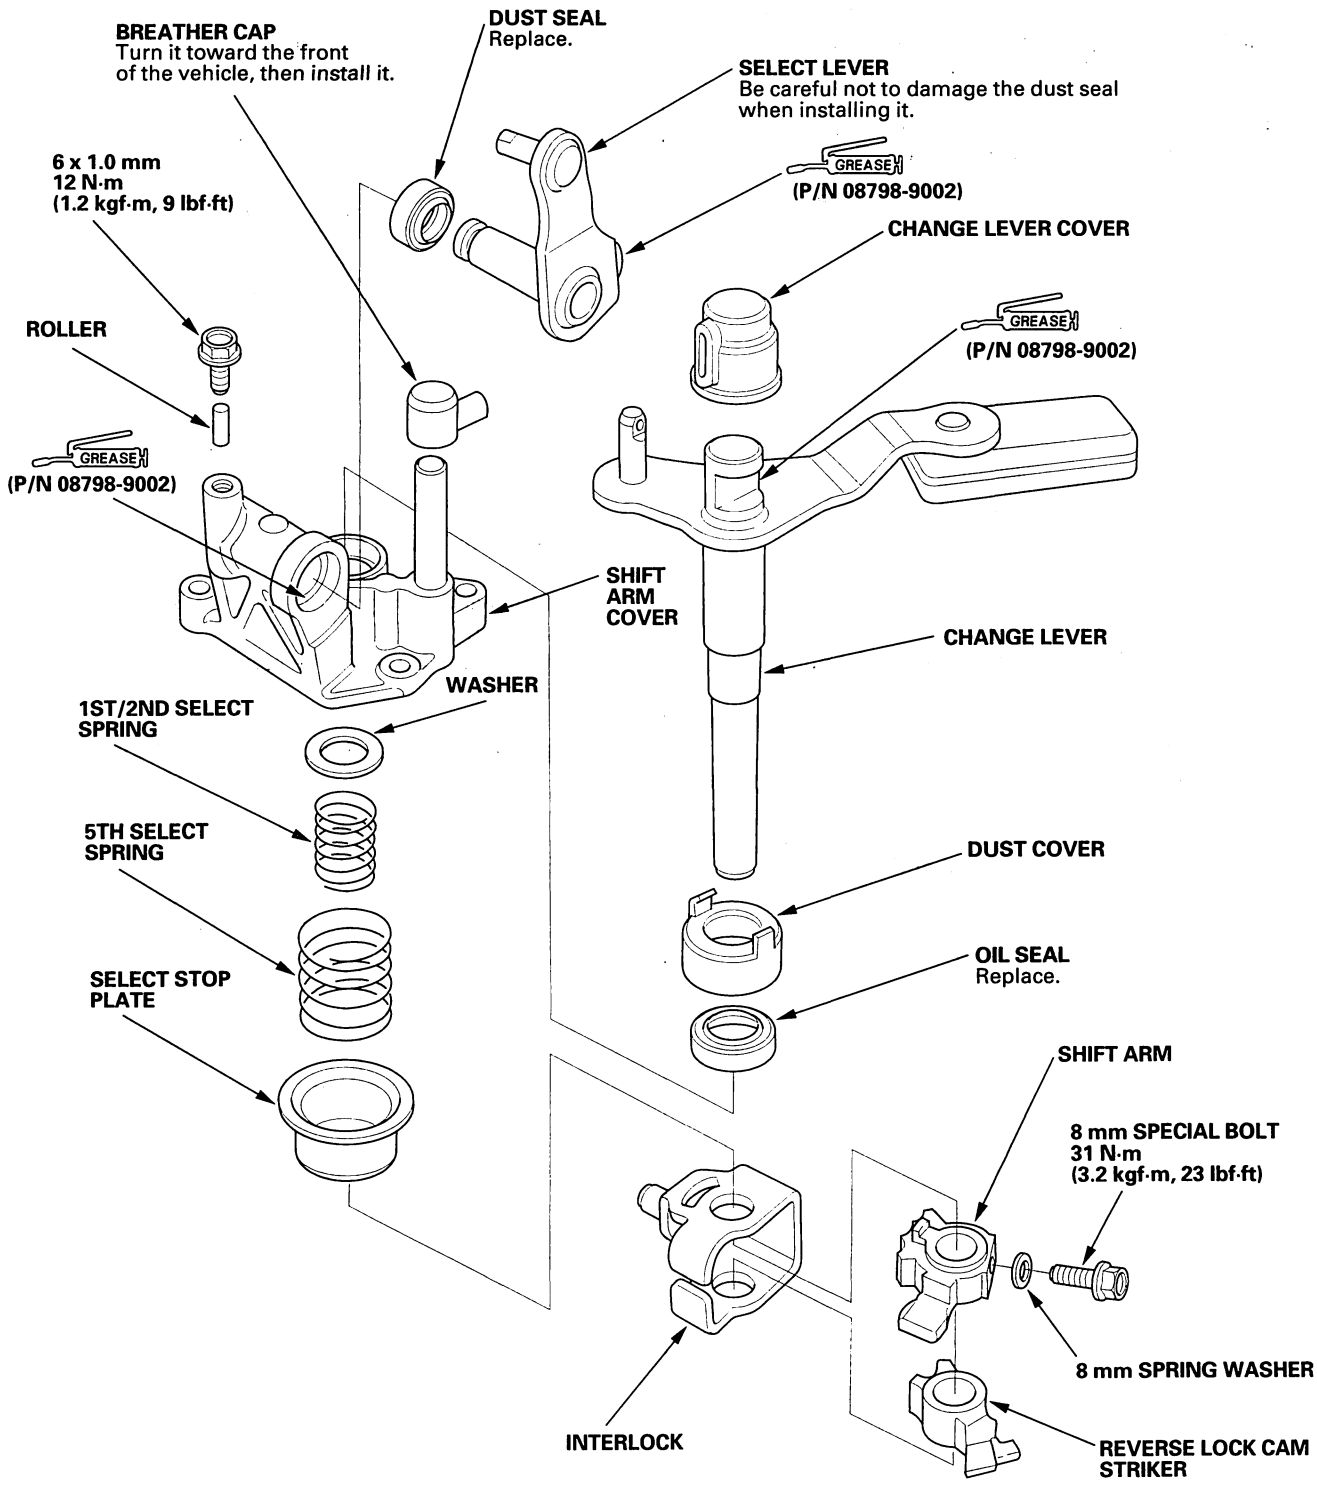


BACK

Protected by AR

Change Lever Assembly Disassembly/Reassembly

Prior to reassembling, clean all the parts in solvent, dry them, and apply grease to contact surfaces as shown.



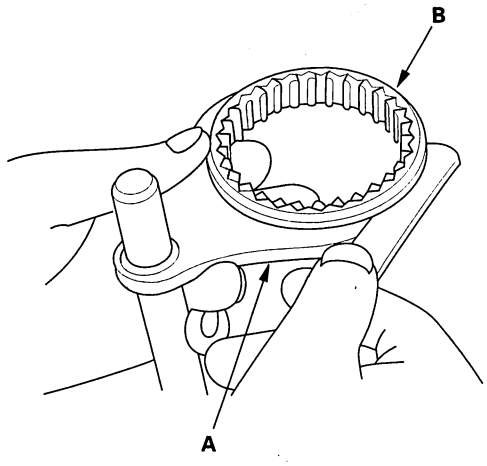
Protected by AR

Shift Fork Clearance Inspection

NOTE: The synchro sleeve and synchro hub should be replaced as a set.

1. Measure the clearance between each shift fork (A) and its matching synchro sleeve (B). If the clearance exceeds the service limit, go to step 2.

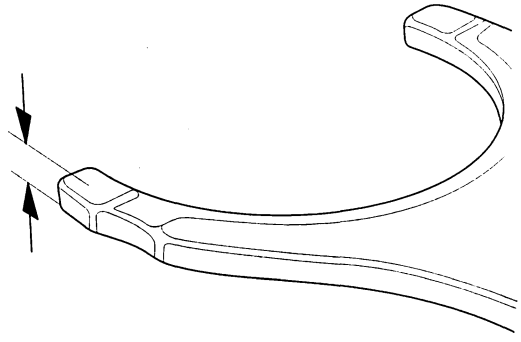
Standard: 0.35—0.65 mm (0.014—0.026 in.)
Service Limit: 1.0 mm (0.039 in.)



2. Measure the thickness of the shift fork fingers.

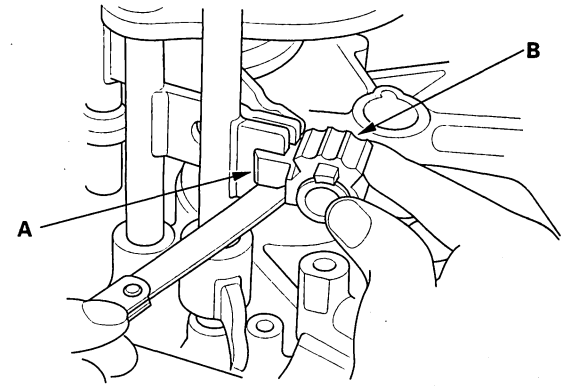
- If the thickness is not within the standard, replace the shift fork.
- If the thickness is within the standard, replace the synchro sleeve.
- If one arm of the shift fork shows more wear than others, the fork may be bent and needs to be replaced.

Standard: 7.4—7.6 mm (0.29—0.30 in.)



3. Measure the clearance between the shift fork (A) and the shift arm (B). If the clearance exceeds the service limit, go to step 4.

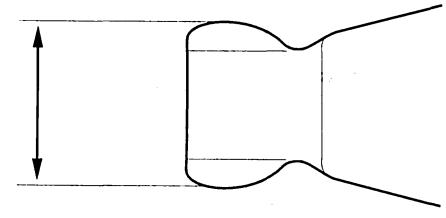
Standard: 0.2—0.5 mm (0.008—0.020 in.)
Service Limit: 0.6 mm (0.023 in.)



4. Measure the width of the shift arm.

- If the width is not within the standard, replace the shift arm.
- If the width is within the standard, replace the shift fork.

Standard: 16.9—17.0 mm (0.665—0.669 in.)

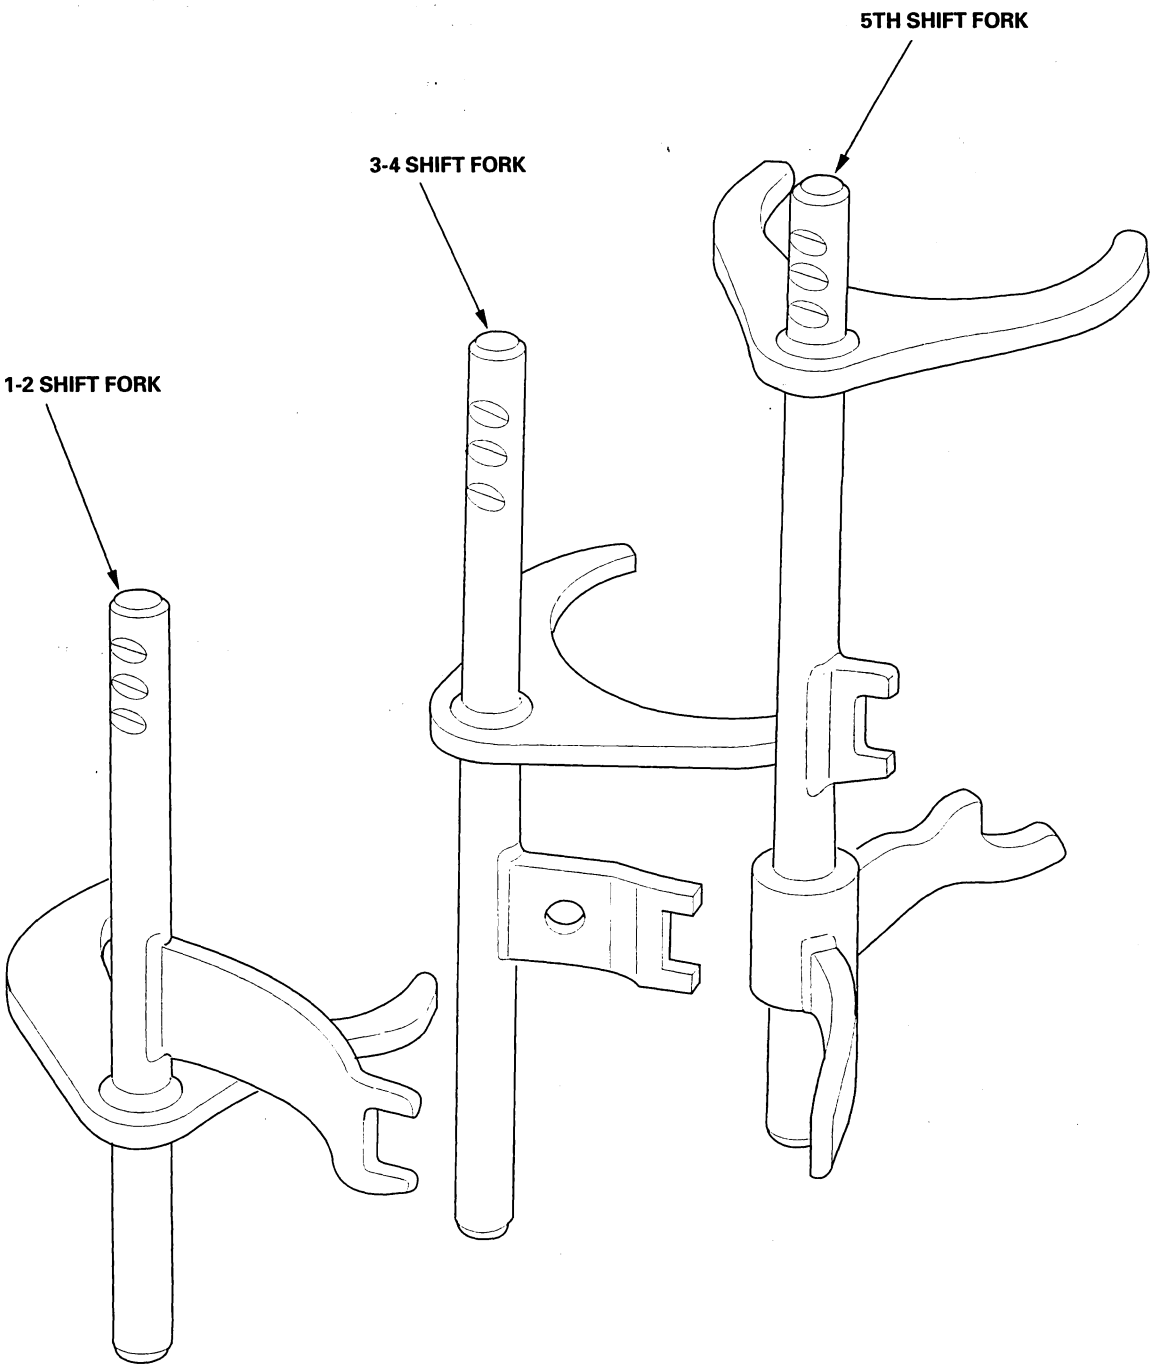


BACK

Protected by AR

Shift Fork Disassembly/Reassembly

Prior to reassembling, clean all the parts in solvent, dry them, and apply lubricant to all contact surfaces.



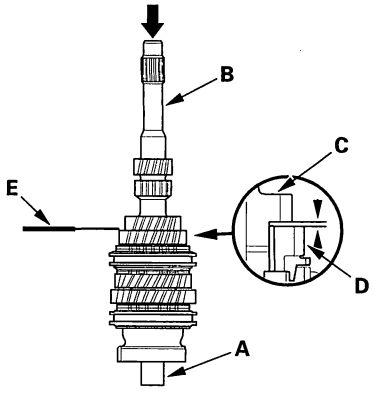
Protected by AR

Mainshaft Assembly Clearance Inspection

NOTE: If replacement is required, always replace the synchro sleeve and hub as a set.

1. Support the bearing inner race with an appropriate sized socket (A), and push down on the mainshaft (B).

   Standard: 0.06—0.16 mm (0.002—0.006 in.)
   Service Limit: 0.25 mm (0.010 in.)



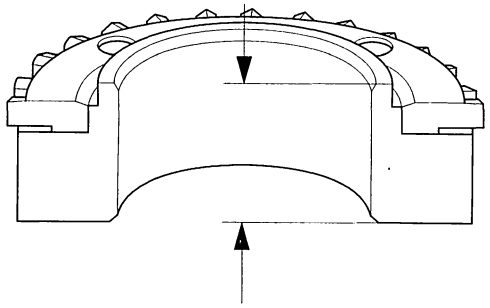
2. Measure the clearance between 2nd gear (C) and 3rd gear (D) with a feeler gauge (E).

   - If the clearance is more than the service limit, go to step 3.
   - If the clearance is within the service limit, go to step 4.

3. Measure the thickness of 3rd gear.

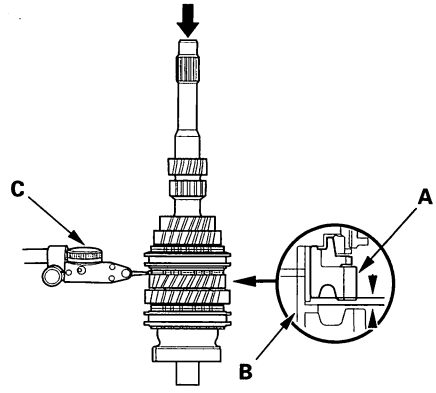
   - If the thickness is less than the service limit, replace 3rd gear.
   - If the thickness is within the service limit, replace the 3rd/4th synchro hub.

   Standard: 23.92—23.97 mm (0.941—0.944 in.)
   Service Limit: 23.80 mm (0.937 in.)



4. Measure the clearance between 4th gear (A) and the distance collar (B) with a dial indicator (C). If the clearance is more than the service limit, go to step 5.

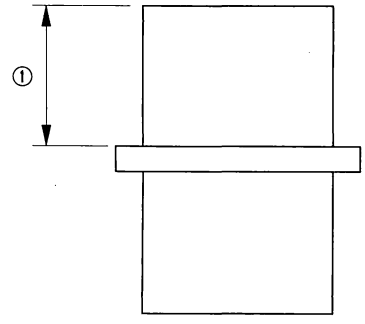
   Standard: 0.06—0.16 mm (0.002—0.006 in.)
   Service Limit: 0.25 mm (0.010 in.)



5. Measure distance ① on the distance collar.

   - If distance ① is not within the standard, replace the distance collar.
   - If distance ① is within the standard, go to step 6.

   Standard: 24.03—24.08 mm (0.946—0.947 in.)



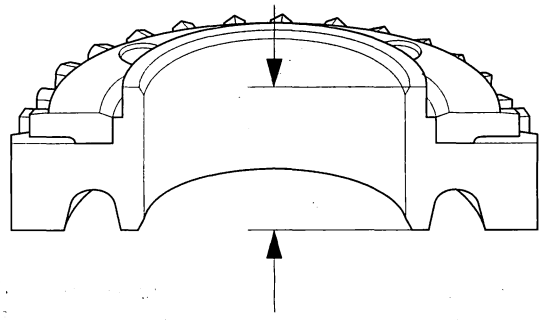
BACK

Protected by AR

6. Measure the thickness of 4th gear.

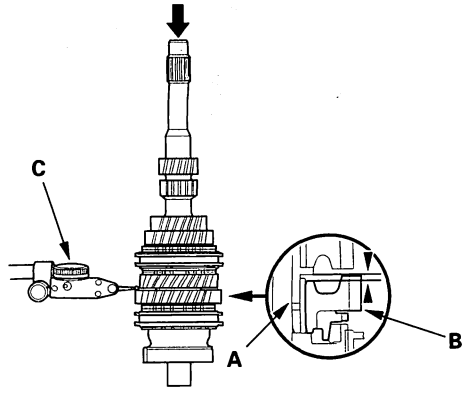
   - If the thickness is less than the service limit, replace 4th gear.
   - If the thickness is within the service limit, replace the 3rd/4th synchro hub.

   Standard: 23.92—23.97 mm (0.941—0.944 in.)
   Service Limit: 23.80 mm (0.937 in.)



7. Measure the clearance between the distance collar (A) and 5th gear (B) with a dial indicator (C). If the clearance is more than the service limit, go to step 8.

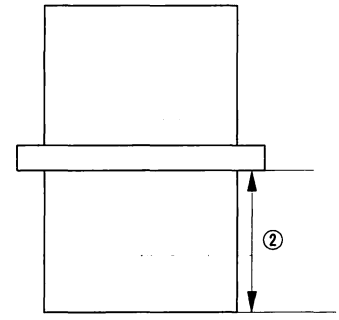
   Standard: 0.06—0.16 mm (0.002—0.006 in.)
   Service Limit: 0.25 mm (0.010 in.)



8. Measure distance ② on the distance collar.

   - If distance ② is not within the standard, replace the distance collar.
   - If distance ② is within the standard, go to step 9.

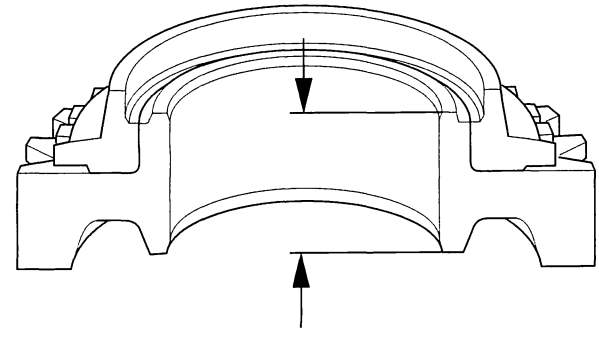
   Standard: 24.03—24.08 mm (0.946—0.947 in.)



9. Measure the thickness of 5th gear.

   - If the thickness is less than the service limit, replace 5th gear.
   - If the thickness is within the service limit, replace the 5th synchro hub.

   Standard: 23.92—23.97 mm (0.941—0.944 in.)
   Service Limit: 23.80 mm (0.937 in.)



(cont'd)

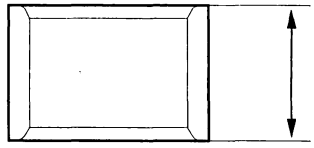
Protected by AR

Mainshaft Assembly Clearance Inspection (cont'd)

10. Measure the thickness of the MBS distance collar.

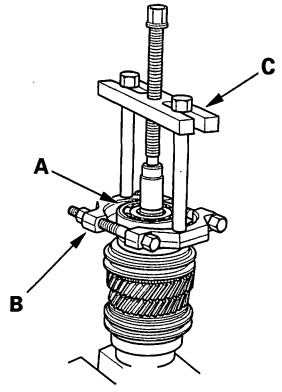
    If the thickness is not within standard, replace the MBS distance collar.

    Standard: 23.95—24.05 mm (0.943—0.947 in.)

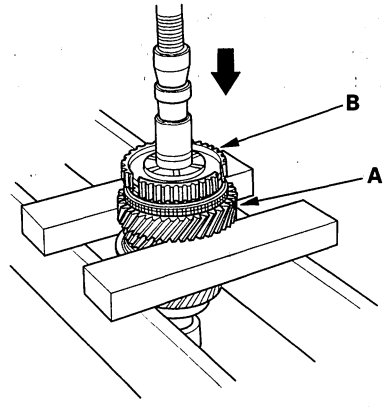


Mainshaft Disassembly

1. Remove the angular ball bearing (A) and the tapered cone ring using a commercially available bearing separator (B) and a commercially available bearing puller (C). Make sure the bearing separator is under the tapered cone ring.



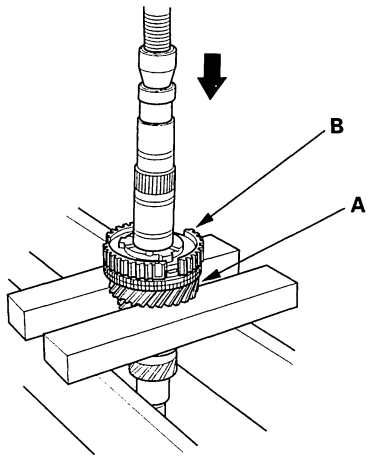
2. Support 5th gear (A) on steel blocks, and press the mainshaft out of the 5th synchro hub (B). Use of a jaw-type puller can damage the gear teeth.



BACK

Protected by AR

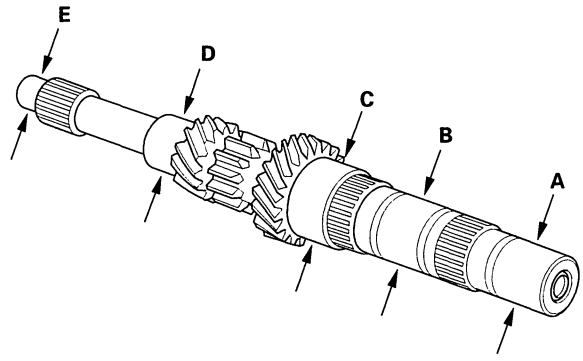
3. Support 3rd gear (A) on steel blocks, and press the mainshaft out of the 3rd/4th synchro hub (B). Use of a jaw-type puller can damage the gear teeth.



Mainshaft Inspection

1. Inspect the gear and bearing surfaces for wear and damage, then measure the mainshaft at points A, B, C, D, and E. If any part of the mainshaft is less than the service limit, replace it.

Standard:
A Ball bearing surface (transmission housing side):
27.987—28.000 mm (1.1019—1.1024 in.)
B Distance collar surface:
31.984—32.000 mm (1.2594—1.2598 in.)
C Needle bearing surface:
38.984—39.000 mm (1.5348—1.5354 in.)
D Ball bearing surface (clutch housing side):
27.977—27.990 mm (1.1015—1.1020 in.)
E Bushing surface:
20.80—20.85 mm (0.8189—0.8209 in.)
Service Limit:
A: 27.94 mm (1.100 in.)
B: 31.93 mm (1.257 in.)
C: 38.93 mm (1.533 in.)
D: 27.94 mm (1.100 in.)
E: 20.75 mm (0.817 in.)



(cont'd)

Protected by AR

Mainshaft Inspection (cont'd)

2. Inspect the runout by supporting both ends of the mainshaft. Then rotate the mainshaft two complete turns while measuring with a dial gauge. If the runout is more than the service limit, replace the mainshaft.

Standard: **0.02 mm (0.001 in.) max.**
Service Limit: **0.05 mm (0.002 in.)**

Mainshaft Reassembly (cont'd)

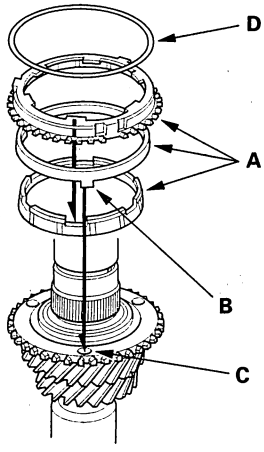
Special Tools Required
- Driver, 40 mm I.D. 07746-0030100
- Attachment, 30 mm I.D. 07746-0030300

NOTE: Refer to the Exploded View as needed during this procedure.

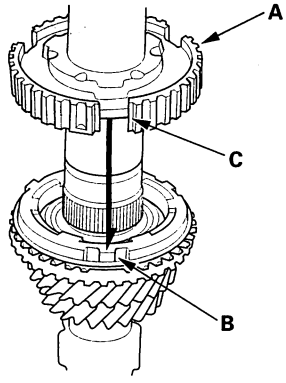
1. Clean all the parts in solvent, dry them, and apply lubricant to all contact surfaces except the 3rd/4th and 5th synchro hubs.

2. Install the needle bearing and 3rd gear on the mainshaft.

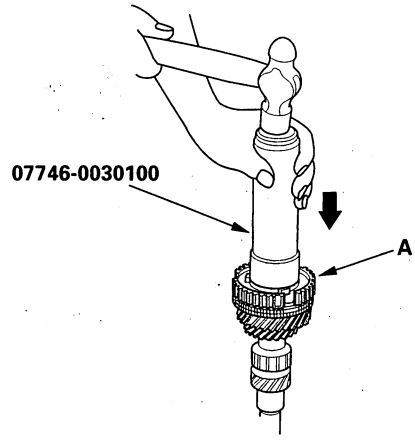
3. Install the double cone synchro assembly (A) by aligning the synchro cone fingers (B) with the holes in 3rd gear (C), then install the synchro spring (D).



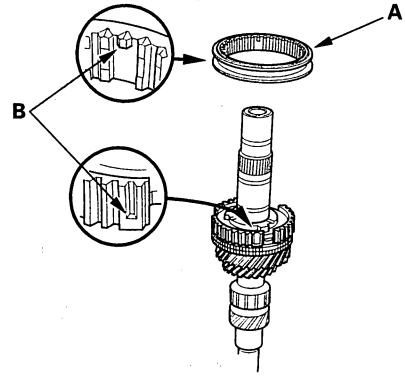
4. Install the 3rd/4th synchro hub (A) by aligning the synchro cone fingers (B) with the grooves in the 3rd/4th synchro hub (C).



5. Install the 3rd/4th synchro hub (A) using the special tool.



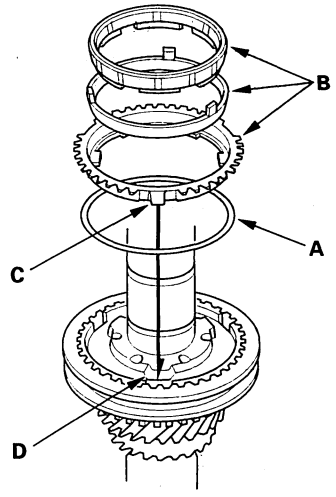
6. Install the 3rd/4th synchro sleeve (A) by aligning the stops (B) with the 3rd/4th synchro sleeve and hub. After installing, check the operation of the 3rd/4th synchro hub set.



BACK

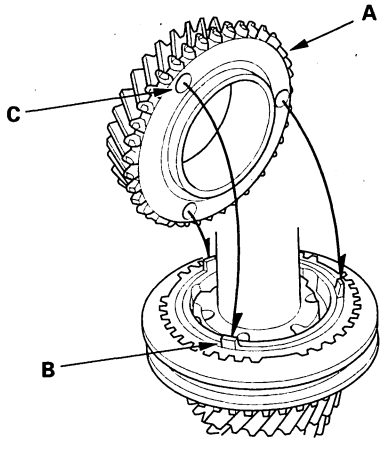
Protected by AR

7. Install the synchro spring (A).



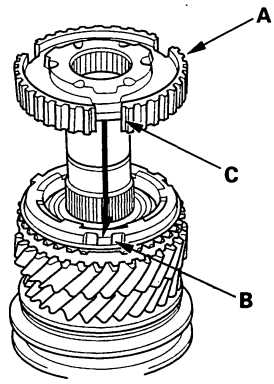
8. Install the double cone synchro assembly (B) by aligning the synchro cone fingers (C) with the grooves in the 3rd/4th synchro hub (D).

9. Install 4th gear (A) by aligning the synchro cone fingers (B) with holes in 4th gear (C).

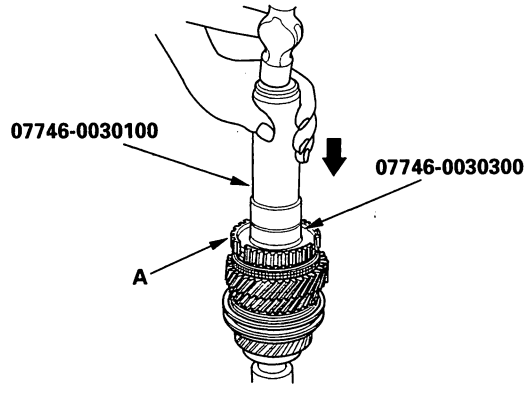


10. Install the needle bearings, distance collar, 5th gear, and 5th gear synchro spring and ring.

11. Install the 5th synchro hub (A) by aligning the synchro cone fingers (B) with the grooves in the 5th synchro hub (C).



12. Install the 5th synchro hub (A) using the special tools.



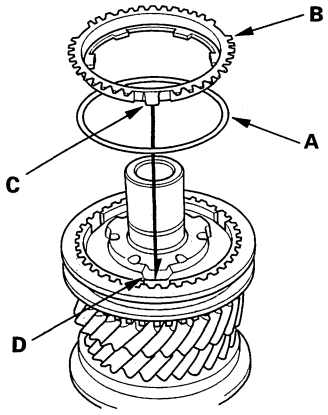
13. Install the 5th synchro sleeve.

(cont'd)

Protected by AR

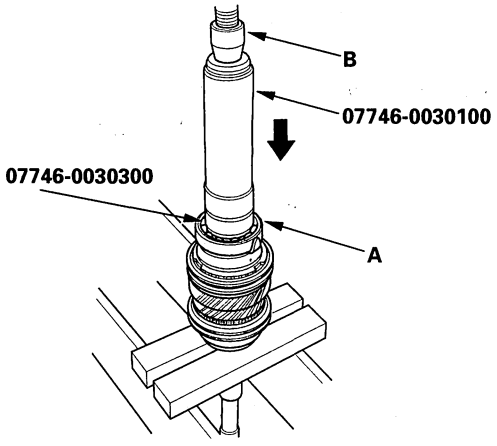
Mainshaft Reassembly (cont'd)

14. Install the synchro spring (A).



15. Install the synchro ring (B) by aligning the synchro cone fingers (C) with the grooves in the 5th synchro hub (D).

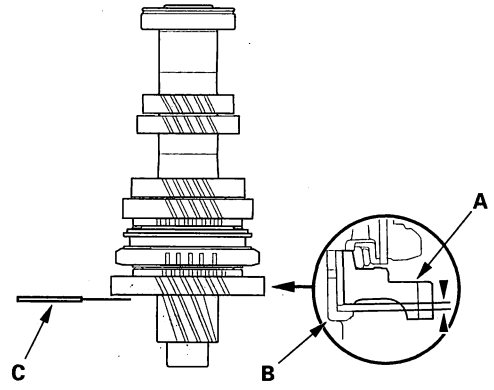
16. Install the new ball bearing (A) using the special tools and a press (B).



Countershaft Assembly Clearance Inspection

1. Measure the clearance between 1st gear (A) and the distance collar (B) with a feeler gauge (C). If the clearance is more than the service limit, go to step 2.

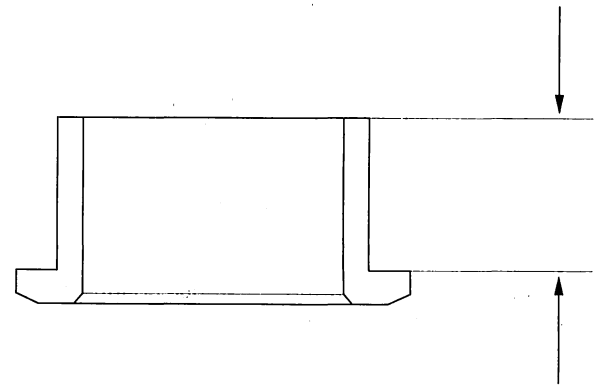
Standard: **0.06—0.16 mm (0.002—0.006 in.)**
Service Limit: **0.25 mm (0.010 in.)**



2. Measure the thickness of the distance collar.

- If the thickness is not within the standard, replace the distance collar.
- If the thickness is within the standard, go to step 3.

Standard: 23.03—23.08 mm (0.907—0.909 in.)



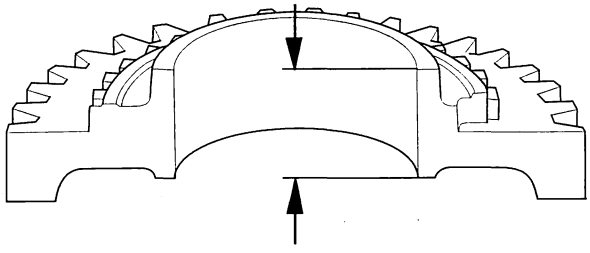
BACK

Protected by AR

3. Measure the thickness of 1st gear.

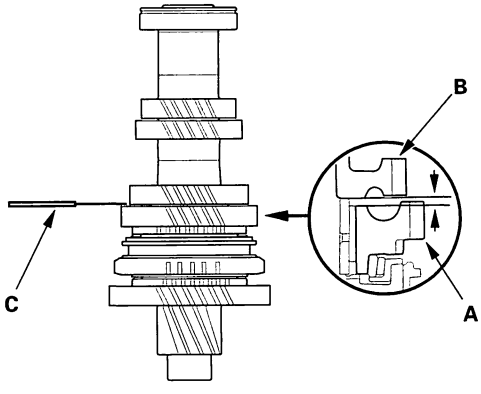
   - If the thickness is less than the service limit, replace 1st gear.
   - If the thickness is within the service limit, replace the 1st/2nd synchro hub.

   Standard: 22.92—22.97 mm (0.902—0.904 in.)
   Service Limit: 22.87 mm (0.900 in.)



4. Measure the clearance between 2nd gear (A) and 3rd gear (B) with a feeler gauge (C). If the clearance is more than the service limit, go to step 5.

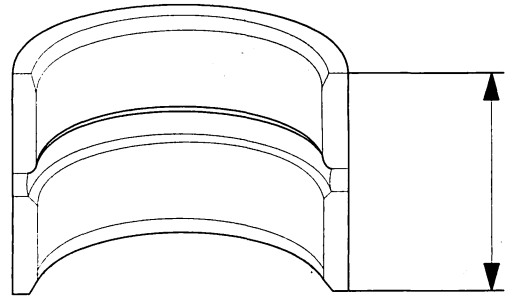
   Standard: 0.06—0.16 mm (0.002—0.006 in.)
   Service Limit: 0.25 mm (0.010 in.)



5. Measure the thickness of the distance collar.

   - If the thickness is not within the standard, replace the distance collar.
   - If the thickness *is within* the standard, go to step 6.

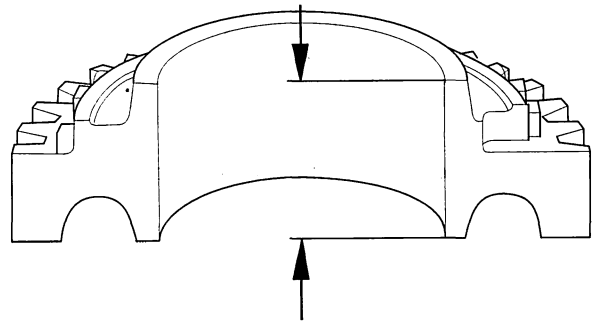
   Standard: 28.03—28.08 mm (1.104—1.106 in.)



6. Measure the thickness of 2nd gear.

   - If the thickness is less than the service limit, replace 2nd gear.
   - If the thickness is within the service limit, replace the 1st/2nd synchro hub.

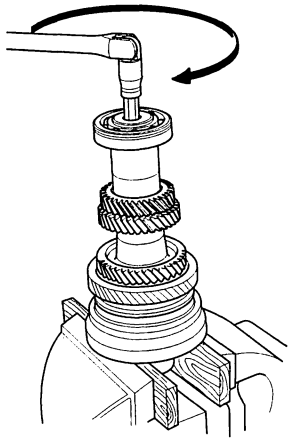
   Standard: 27.92—27.97 mm (1.099—1.101 in.)
   Service Limit: 27.87 mm (1.097 in.)



Protected by AR

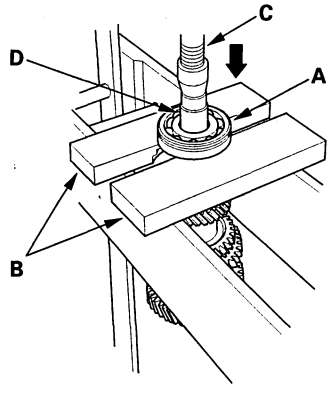
Countershaft Disassembly

1. Securely clamp the countershaft assembly in a vise with wood blocks.



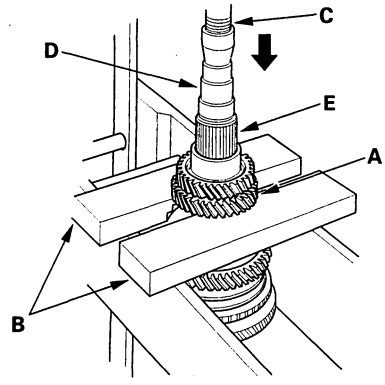
2. Remove the special bolt (left-hand threads).

3. Support the ball bearing (A) on steel blocks (B), then use a press (C) and an attachment (D) to press the countershaft out of the ball bearing.

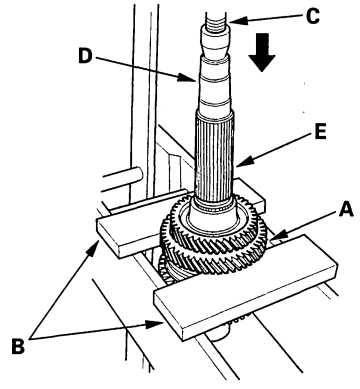


4. Remove the 35 mm shim and distance collar.

5. Support 4th gear (A) on steel blocks (B), then use a press (C) and an attachment (D) to press the countershaft (E) out of 5th gear.



6. Support 2nd gear (A) on steel blocks (B), then use a press (C) and an attachment (D) to press the countershaft (E) out of 3rd gear.



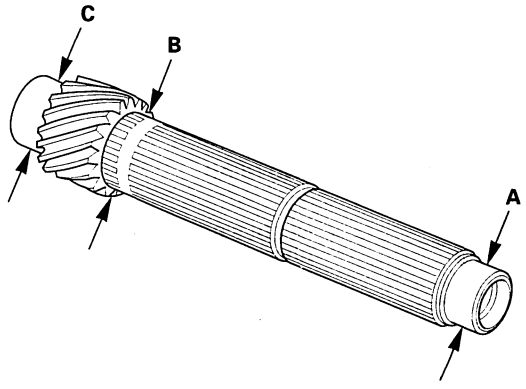
BACK

Protected by AR

Countershaft Inspection

1. Inspect the gear and bearing surfaces for wear and damage, then measure the countershaft at points A, B, and C. If any part of the countershaft is less than the service limit, replace it.

   Standard:
   A Ball bearing surface (transmission housing side):
   30.020—30.033 mm (1.1819—1.1824 in.)
   B Distance collar surface:
   39.937—39.950 mm (1.5723—1.5728 in.)
   C Needle bearing surface (clutch housing side):
   40.000—40.015 mm (1.5748—1.5754 in.)
   Service Limit:
   A: 29.97 mm (1.180 in.)
   B: 39.88 mm (1.570 in.)
   C: 39.95 mm (1.573 in.)



2. Inspect the runout by supporting both ends of the countershaft. Then rotate the countershaft two complete turns while measuring with a dial gauge. If the runout exceeds the service limit, replace the countershaft.

   Standard: 0.02 mm (0.001 in.) max.
   Service Limit: 0.05 mm (0.002 in.)

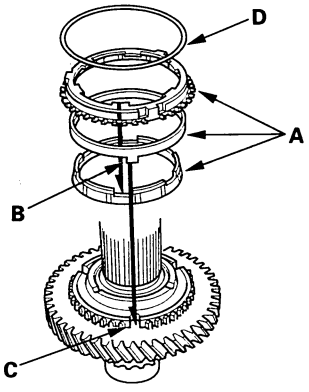
Special Tools Required
- Driver, 40 mm I.D. 07746-0030100
- Attachment, 30 mm 07746-0030300

NOTE: Refer to the Exploded View as needed during this procedure.

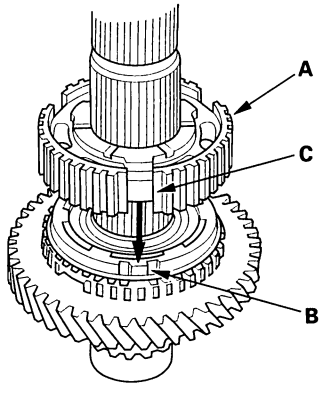
1. Clean all parts in solvent, dry them, and apply lubricant to all contact surfaces.

2. Install the distance collar and needle bearing onto the countershaft.

3. Install the triple cone synchro assembly (A) by aligning the synchro cone fingers (B) with the 1st gear grooves (C), then install the synchro spring (D).

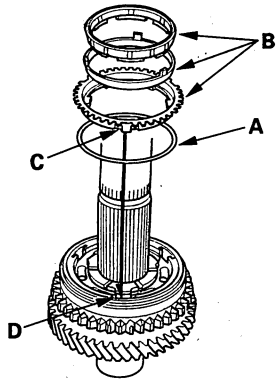


4. Install the 1st/2nd synchro hub (A) by aligning the synchro cone fingers (B) with the 1st/2nd synchro hub grooves (C).



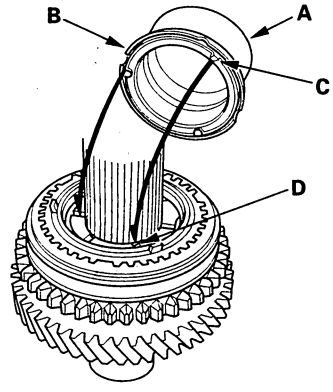
5. Install the reverse gear.

6. Install the synchro spring (A).



7. Install the triple cone synchro assembly (B) by aligning the synchro cone fingers (C) with the 1st/2nd synchro hub grooves (D).

8. Install the distance collar (A) and friction damper (B) by aligning the friction damper fingers (C) with the 1st/2nd synchro hub grooves (D).



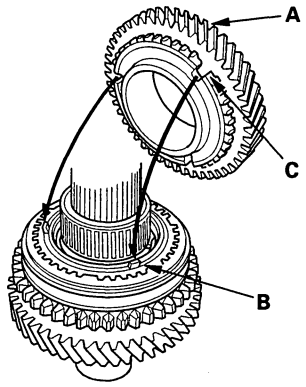
(cont'd)

Protected by AR

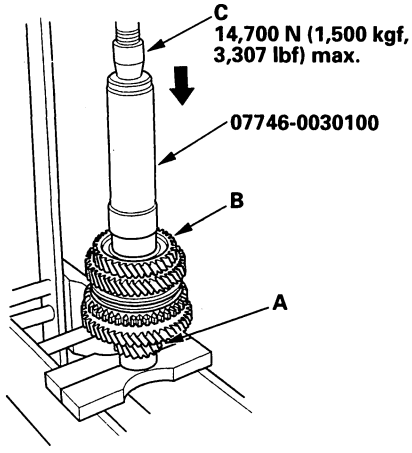
Countershaft Reassembly (cont'd)

9. Install the needle bearing.

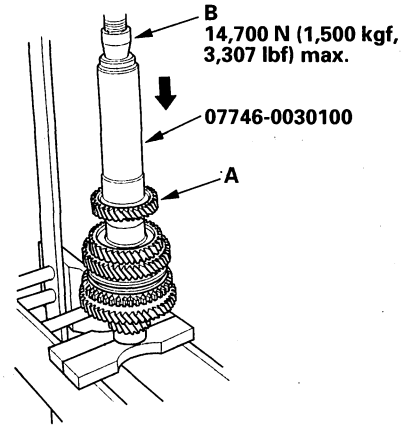
10. Install 2nd gear (A) by aligning the synchro cone fingers (B) with the 2nd gear grooves (C).



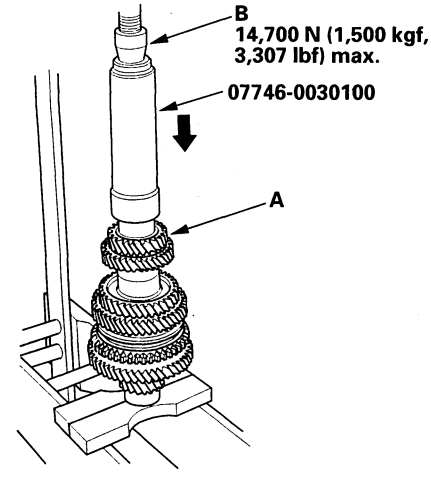
11. Support the countershaft (A) on steel blocks, then install 3rd gear (B) using the special tool and a press (C). Do not exceed the maximum pressure.



12. Install 4th gear (A) using the special tool and a press (B). Do not exceed the maximum pressure.



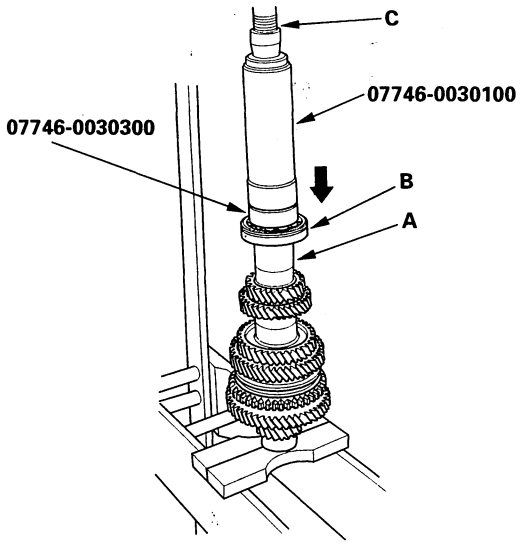
13. Install 5th gear (A) using the special tool and a press (B). Do not exceed the maximum pressure.



BACK

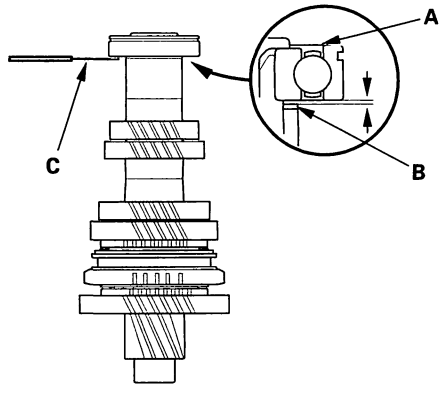
Protected by AR

14. Install the distance collar (A), 35 mm shim, and old ball bearing (B) using the special tools and a press (C).



15. Measure the clearance between the old bearing (A) and the 35 mm shim (B) with a feeler gauge (C).

Standard: 0.04—0.10 mm (0.0016—0.0039 in.)



16. If the clearance is more than the standard, select a new shim from the following table. If the clearance measured in step 15 is within the standard, replace only the ball bearing.

35 mm Shim

	Part Number	Thickness
A	23981-PPP-000	0.87 mm (0.034 in.)
AA	23981-PPP-900	0.91 mm (0.036 in.)
B	23982-PPP-000	0.95 mm (0.037 in.)
AB	23982-PPP-900	0.99 mm (0.039 in.)
C	23983-PPP-000	1.03 mm (0.041 in.)
AC	23983-PPP-900	1.07 mm (0.042 in.)
D	23984-PPP-000	1.11 mm (0.044 in.)
AD	23984-PPP-900	1.15 mm (0.045 in.)
E	23985-PPP-000	1.19 mm (0.047 in.)
AE	23985-PPP-900	1.23 mm (0.048 in.)
F	23986-PPP-000	1.27 mm (0.050 in.)

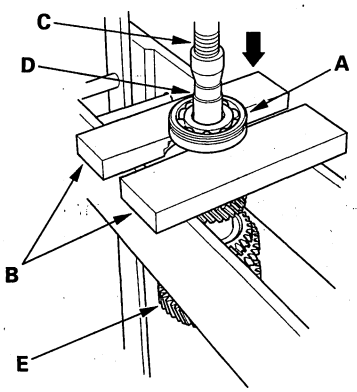
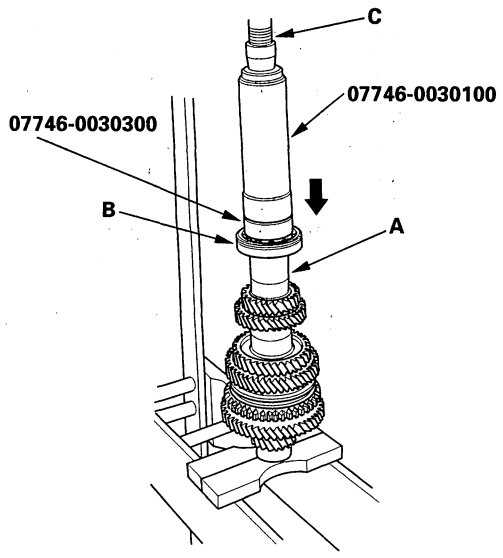
Countershaft Reassembly (cont'd)

17. Support the ball bearing (A) on steel blocks (B), then use a press (C) and an attachment (D) to press the countershaft (E) out of the ball bearing.

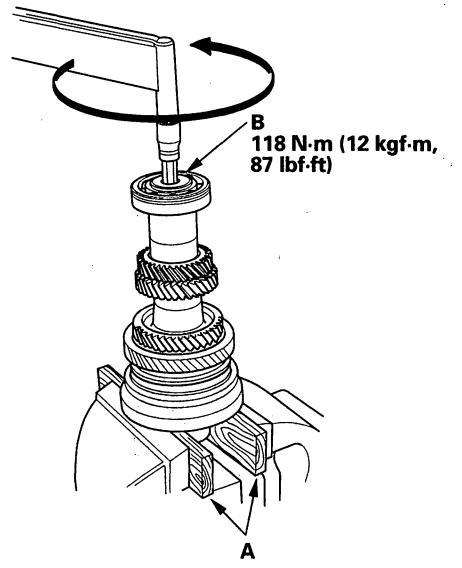


18. If necessary, install the 35 mm shim selected in step 16, then recheck the clearance.

19. Install the distance collar (A), 35 mm shim, and new ball bearing (B) using the special tools and a press (C).



20. Securely clamp the countershaft assembly in a bench vise with wood blocks (A).



21. Tighten the new special bolt (B) (left-hand threads).

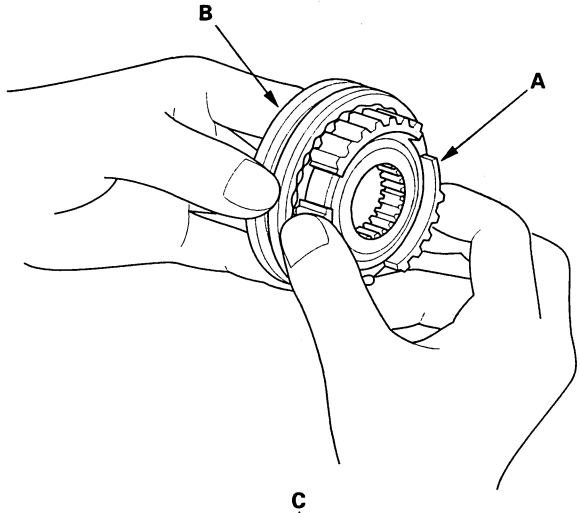
BACK

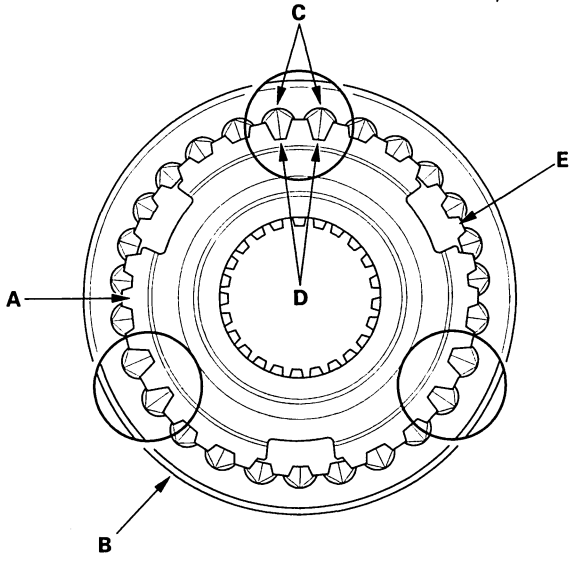
Protected by AR

Synchro Sleeve and Hub Inspection and Reassembly

1. Inspect gear teeth on all synchro hubs and synchro sleeves for wear (rounded off corners).
2. Install each synchro hub (A) in its mating synchro sleeve (B), and check for free movement. Make sure you match the three sets of longer teeth (C) (120 degrees apart) on the synchro sleeve with the three sets of deeper grooves (D) in the synchro hub. Do not install the synchro sleeve with its longer teeth in the 1st/2nd synchro hub slots (E) because it will damage the spring ring.

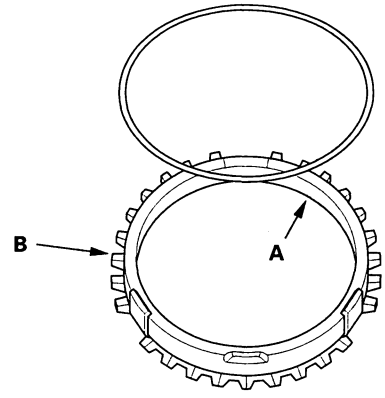
   NOTE: If replacement is required, always replace the synchro sleeve and synchro hub as a set.





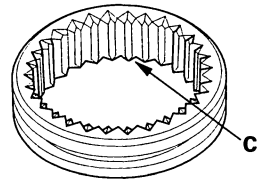
Synchro Ring and Gear Inspection

1. Inspect the inside of each synchro ring (A) for wear. Inspect the teeth (B) on each synchro ring for wear (rounded off).

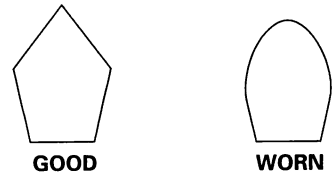


Example of synchro ring teeth

2. Inspect the teeth (C) on each synchro sleeve and matching teeth on each gear for wear (rounded off).



Example of synchro sleeve teeth and gear teeth

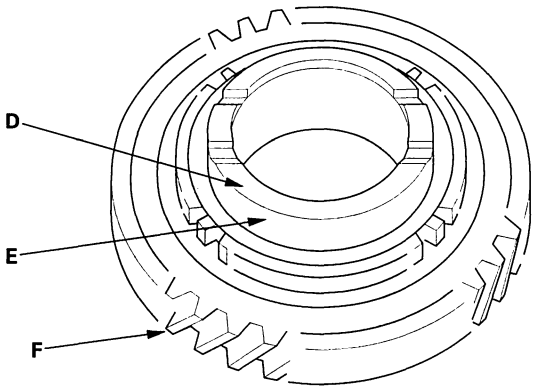


(cont'd)

Protected by AR

Synchro Ring and Gear Inspection (cont'd)

3. Inspect the thrust surface (D) on each gear hub for wear.



4. Inspect the cone surface (E) on each gear hub for wear and roughness.

5. Inspect the teeth on all gears (F) for uneven wear, scoring, galling, and cracks.

6. Coat the cone surface of each gear (E) with oil, and place its synchro ring on it. Rotate the synchro ring, making sure that it does not slip.

7. Measure the clearance between each gear (A) and its synchro ring (B) all around the gear. Hold the synchro ring against the gear evenly while measuring the clearance. If the clearance is less than the service limit, replace the synchro ring and gear.

Synchro Ring-to-Gear Clearance
Standard: 0.70—1.49 mm (0.028—0.059 in.)
Service Limit: 0.4 mm (0.016 in.)

Double Cone Synchro and Triple Cone Synchro-to-Gear Clearance
Standard:
①: Outer Synchro Ring (B) to Synchro Cone (C) 0.70—1.19 mm (0.028—0.047 in.)
②: Synchro Cone (C) to Gear (A) 0.50—1.04 mm (0.020—0.041 in.)
③: Outer Synchro Ring (B) to Gear (A) 0.95—1.68 mm (0.037—0.066 in.)
Service Limit:
①: 0.3 mm (0.012 in.)
②: 0.3 mm (0.012 in.)
③: 0.6 mm (0.024 in.)

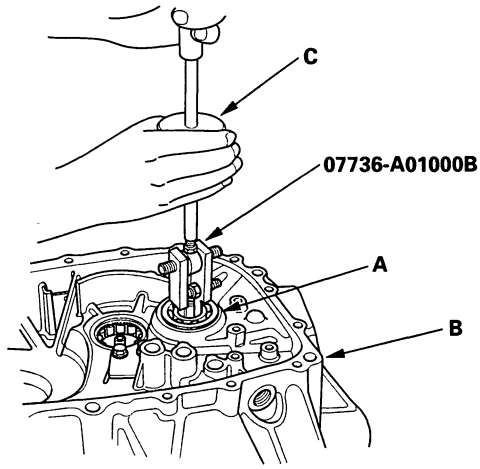
Mainshaft Bearing and Oil Seal Replacement

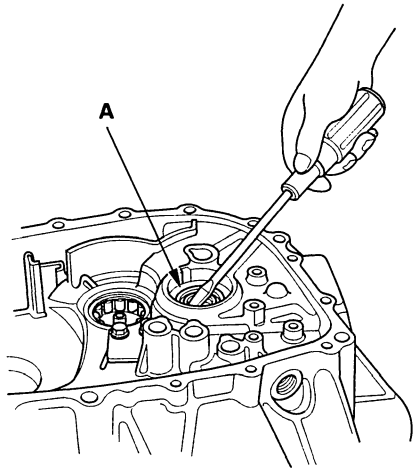
Special Tools Required
- Oil seal driver 07JAD-PL90100
- Adjustable bearing puller, 20—40 mm 07736-A01000B
- Attachment, 42 x 47 mm 07746-0010300
- Driver 07749-0010000

1. Remove the differential assembly.

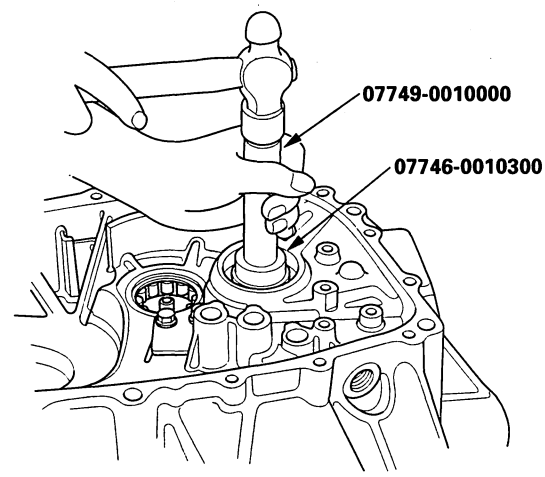
2. Remove the ball bearing (A) from the clutch housing (B) using the special tool and a commercially available 3/8"-16 slide hammer (C).



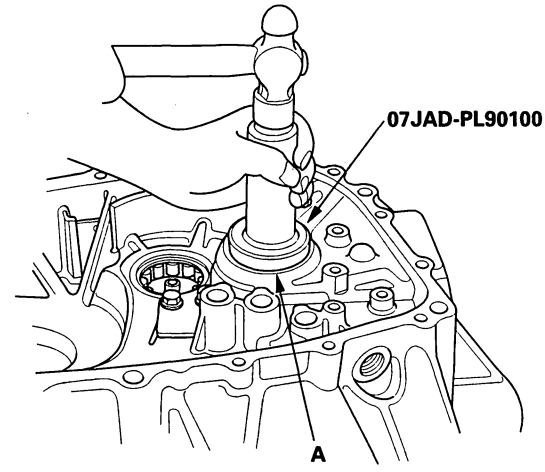
3. Remove the oil seal (A) from the clutch housing. Be careful when removing the seal so the clutch housing is not damaged.



4. Drive in the new oil seal from the transmission side using the special tools.



5. Drive in the new ball bearing (A) from the transmission side using the special tools.

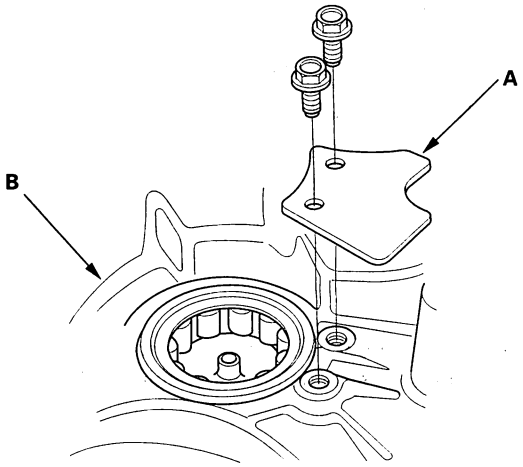


Protected by AR

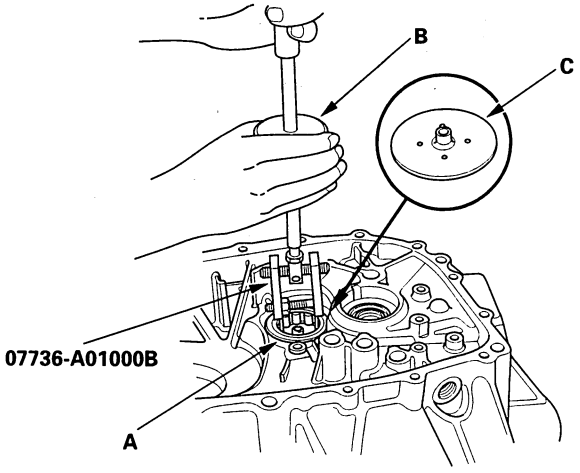
Countershaft Bearing Replacement

Special Tools Required
- Oil seal driver 07JAD-PL90100
- Adjustable bearing puller, 20—40 mm 07736-A01000B
- Slide hammer, commercially available

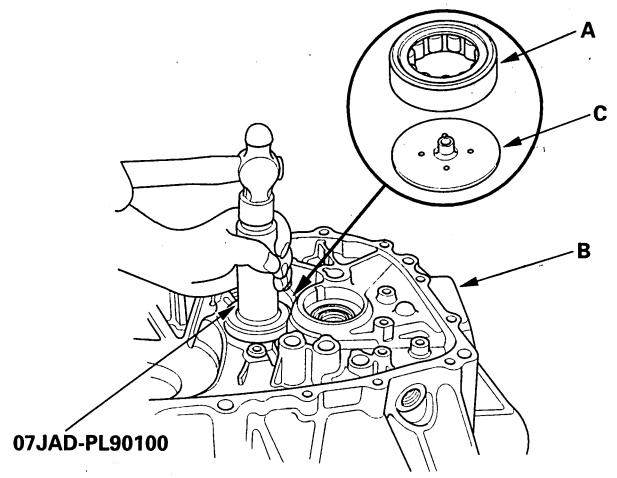
1. Remove the bearing set plate (A) from the clutch housing (B).



2. Remove the needle bearing (A) using the special tool and a commercially available 3/8''-16 slide hammer (B), then remove the oil guide plate C.

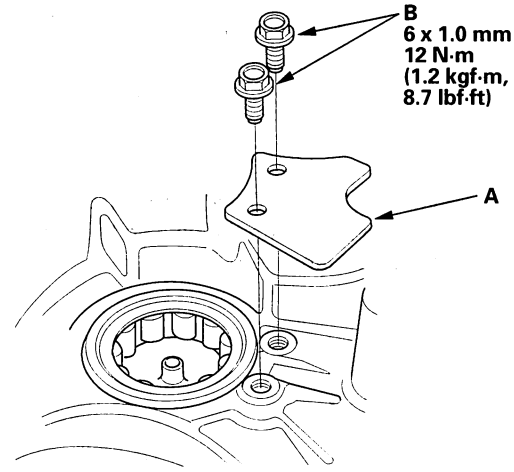


3. Position the oil guide plate C and new needle bearing (A) in the bore of the clutch housing (B).



4. Install the needle bearing using the special tools.

5. Install the bearing set plate (A) with bolts (B).



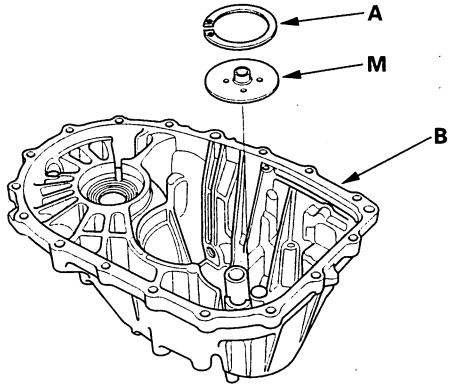
BACK

Protected by AR

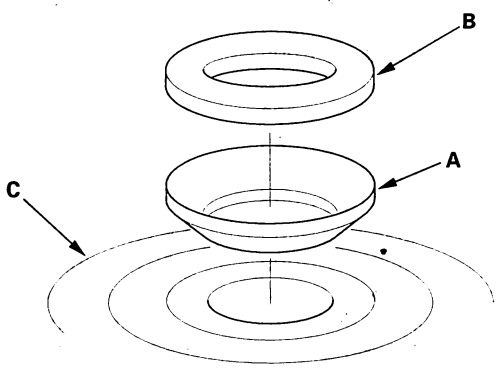
Mainshaft Thrust Clearance Adjustment

Special Tools Required
- Mainshaft base 07GAJ-PG20130
- Mainshaft holder 07GAJ-PG20110

1. Remove the 72 mm shim (A) and oil guide plate M from the transmission housing (B).



2. Thoroughly clean the spring washer (A) and washer (B) before installing them on the clutch housing side ball bearing (C). Note the installation direction of the spring washer.



3. Install the 3rd/4th synchro hub, the distance collar, the 5th synchro hub, the distance collar, and the ball bearing on the mainshaft.

   NOTE: Refer to the mainshaft reassembly Exploded View (see page 13-33).

4. Install the mainshaft in the clutch housing.

5. Place the transmission housing over the mainshaft and onto the clutch housing.

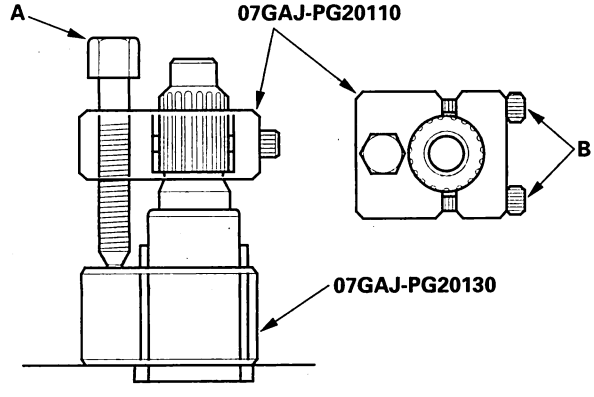
6. Secure the clutch and transmission housings with several 8 mm bolts.

   NOTE: It is not necessary to use sealing agent between the housing for this procedure.

7. Lightly tap on the mainshaft with a plastic hammer.

8. Attach the special tool to the mainshaft as follows:

   - Back-out the mainshaft holder bolt (A), and loosen the two hex bolts (B).
   - Fit the holder over the mainshaft so its lip is towards the transmission.
   - Align the mainshaft holder lip around the groove at the inside of the mainshaft splines, then tighten the hex bolts.



9. Fully seat the mainshaft by tapping its end with a plastic hammer.

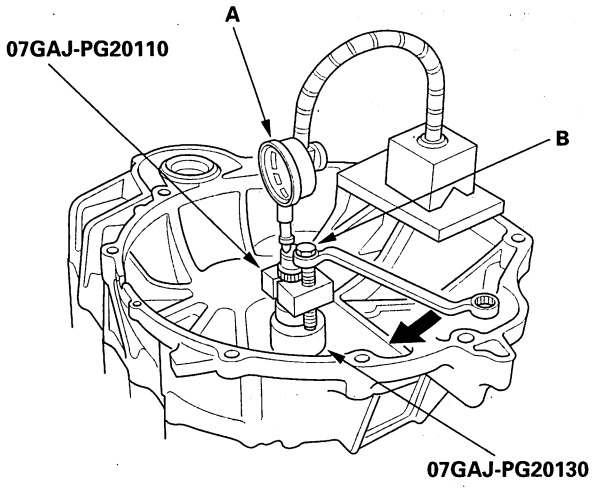
10. Thread the mainshaft holder bolt in until it just contacts the wide surface of the mainshaft base.

(cont'd)

Protected by AR

Mainshaft Thrust Clearance Adjustment (cont'd)

11. Zero a dial gauge (A) on the end of the mainshaft.



12. Turn the mainshaft holder bolt (B) clockwise; stop turning when the dial gauge has reached its maximum movement. The reading on the dial gauge is the amount of mainshaft thrust clearance.

    NOTE: Do not turn the mainshaft holder bolt more than 60 degrees after the needle of the dial gauge stops moving. Applying more pressure with the mainshaft holder bolt could damage the transmission.

13. If the reading is with in the standard, the clearance is correct. If the reading is not within the standard, select the appropriate shim needed from the table, and recheck the thrust clearance.

    Standard: 0.11—0.17 mm (0.004—0.007 in.)

    (Example)
    Measure reading: 1.93 mm (0.0759 in.)

    Subtract the total clearance measurement from the middle of the clearance standard 0.14 mm (0.0056 in.)

    1.93—0.14=1.79 mm (0.0704 in.)

    Select the shim closest to the amount calculated, for example the 1.80 mm (0.0709 in.) shim.

14. With oil guide plate M and the appropriate size shim installed in the transmission housing, check the thrust clearance again to verify the clearance is within the standard.

72 mm Shim

	Part Number	Thickness
A	23931-P21-000	0.60 mm (0.024 in.)
B	23932-P21-000	0.63 mm (0.025 in.)
C	23933-P21-000	0.66 mm (0.026 in.)

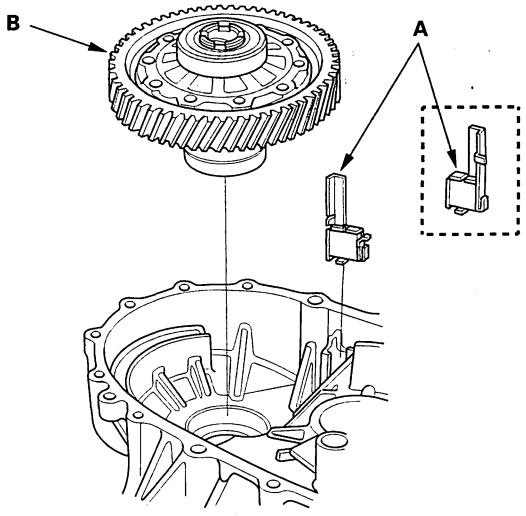
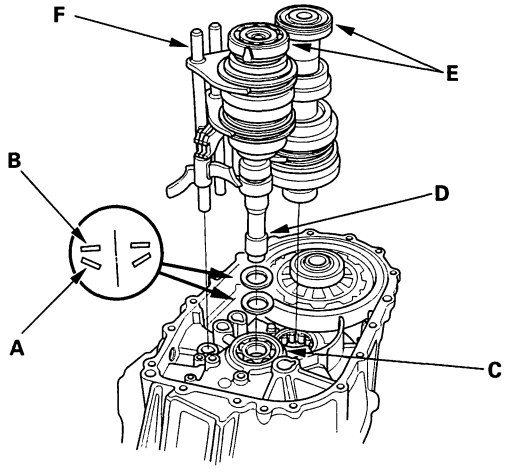
Transmission Reassembly

NOTE: Prior to reassembling, clean all parts in solvent, dry them, and apply lubricant to any contact surfaces.

1. Install the magnet (A) and differential assembly (B).

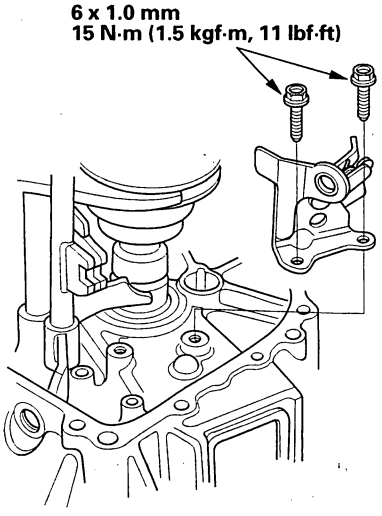


2. Install the 28 mm spring washer (A) and the 28 mm washer (B) over the ball bearing (C). Note the installation direction of the spring washer.

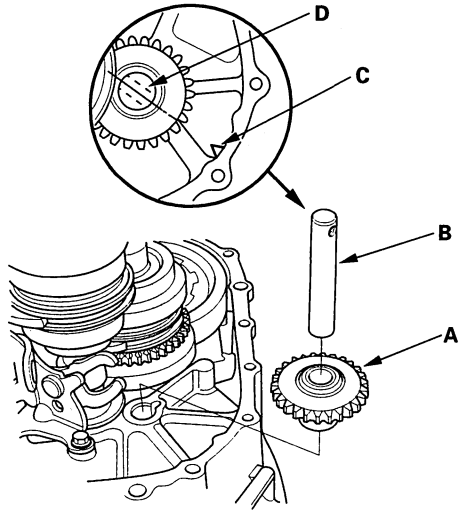


3. Apply vinyl tape to the mainshaft splines (D) to protect the seal. Install the mainshaft and the countershaft (E) with the shift forks (F), as an assembly.

4. Install the reverse shift fork.



5. Install the reverse idler gear (A) and reverse gear shaft (B) by aligning the mark (C) with the reverse gear shaft hole (D).

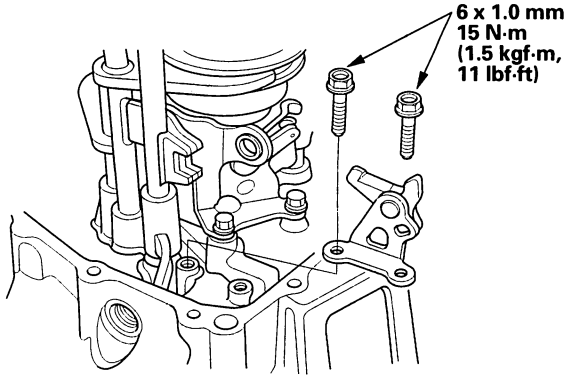


(cont'd)

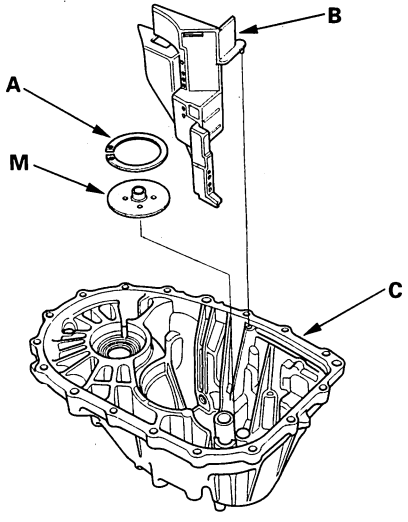
Protected by AR

Transmission Reassembly (cont'd)

6. Install the reverse lock cam.

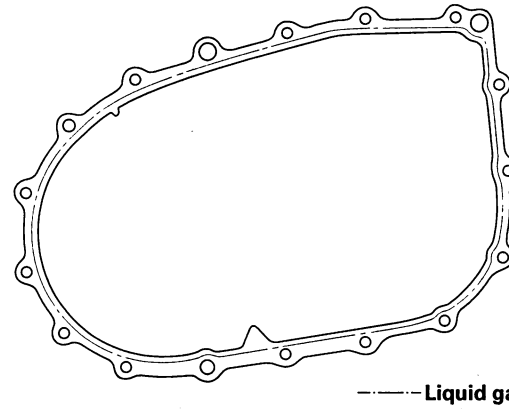


7. Select the proper size 72 mm shim (A) according to the measurements made during the Mainshaft Thrust Clearance Adjustment (see page 13-49). Install the oil gutter plate (B), oil guide plate M, and 72 mm shim into the transmission housing (C).



8. Remove any dirt or oil from the transmission housing sealing surface. Apply liquid gasket (P/N 08718-0002) to the sealing surface. Make sure you seal the entire circumference of the bolt holes to prevent oil leakage.

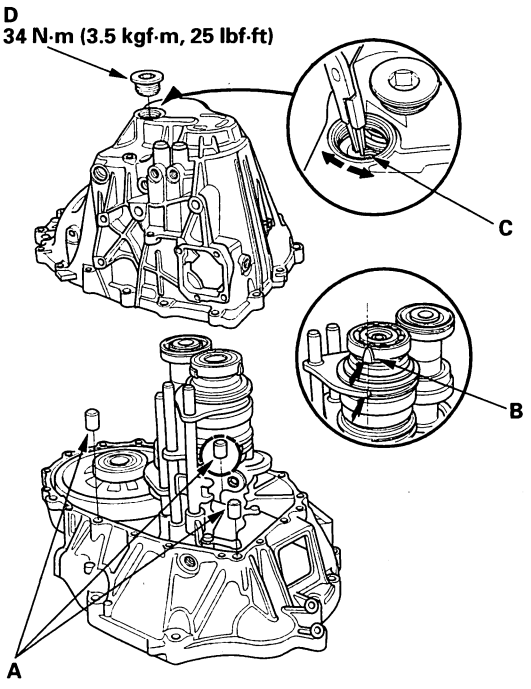
NOTE: Do not install components if 4 minutes or more have passed after applying the liquid gasket. Instead, remove the old residue and reapply the liquid gasket.

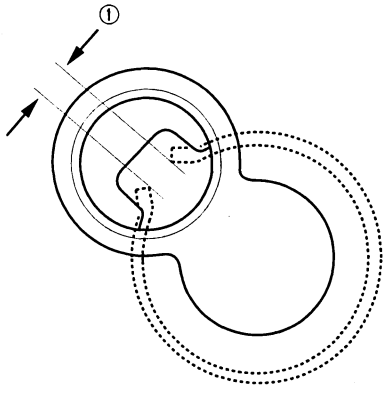


BACK

Protected by AR

9. Install the 14 x 20 mm dowel pins (A).





10. Set the tapered cone ring (B) as shown. Place the transmission housing on the clutch housing, being careful to line up the shafts.

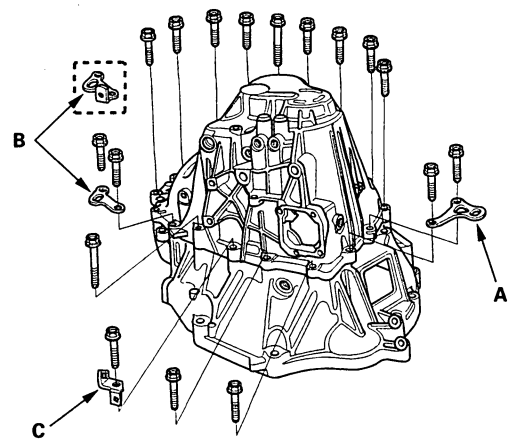
11. While expanding the 72 mm snap ring (C) of the countershaft ball bearing using the snap ring pliers, push the transmission housing down to start the countershaft ball bearing through the snap ring. Then release the pliers, and push down the housing until it bottoms and the snap ring snaps in place in the countershaft ball bearing snap ring groove.

12. Make sure the 52 mm snap ring is securely seated in the groove of the countershaft bearing.

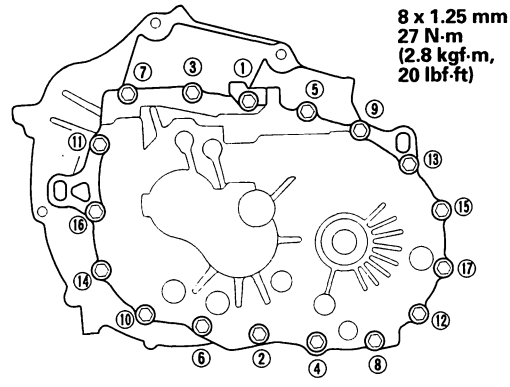
Dimension ① as installed: 3.3—6.0 mm (0.13—0.24 in.)

13. Apply liquid gasket (P/N 08718-0001) to the threads of the 32 mm sealing cap (D), and install it on the transmission housing.

14. Install the transmission hangers A and B, harness bracket B (C), and the 8 mm flange bolts, finger-tight.



15. Tighten the 8 mm flange bolts in a crisscross pattern in several steps.



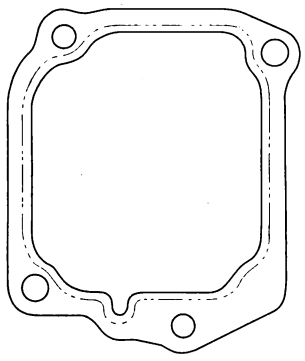
(cont'd)

Protected by AR

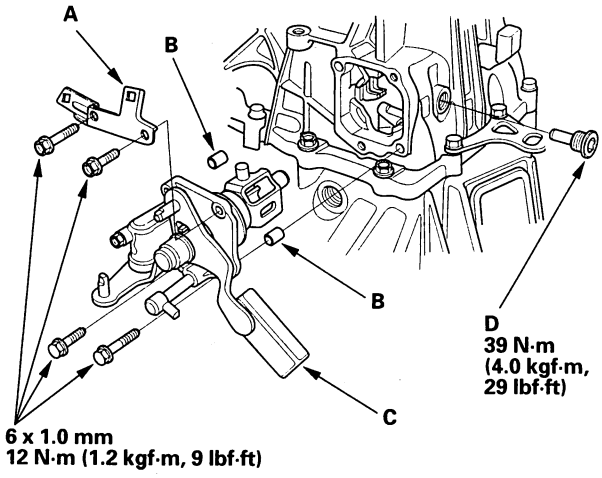
Transmission Reassembly (cont'd)

16. Remove any dirt or oil from the shift lever cover sealing surface. Apply liquid gasket (P/N 08718-0002) to the sealing surface.

    NOTE: Do not install components if 4 minutes or more have passed after applying the liquid gasket. Instead, remove the old residue and reapply the liquid gasket.

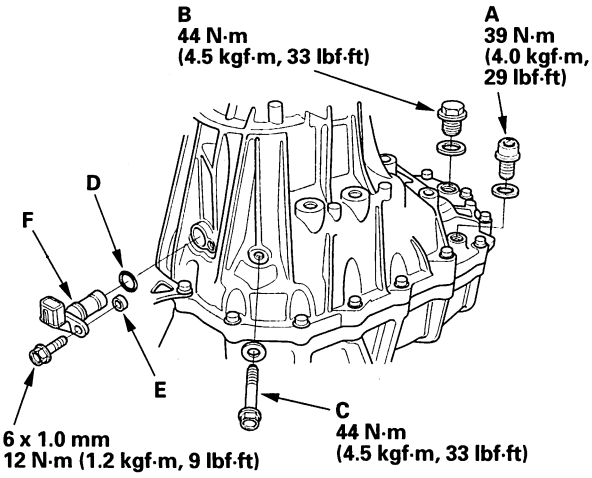


17. Install the 8 x 14 mm dowel pins (B), change lever assembly (C), and harness bracket A.



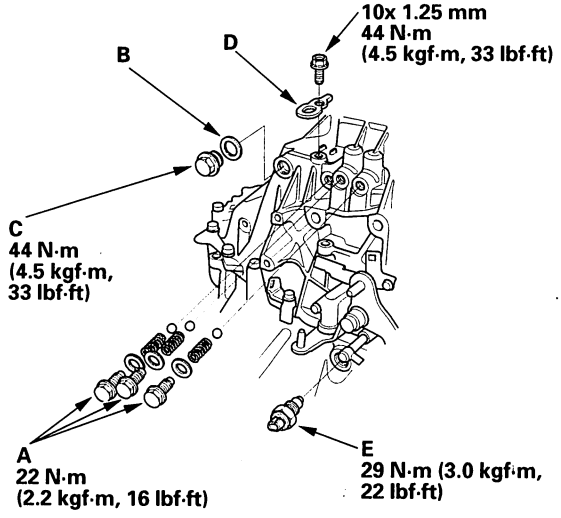
18. Apply liquid gasket (P/N 08718-0002) to the threads of the interlock bolt (D), and install it on the transmission housing.

19. Install the drain plug (A), filler plug (B), and 10 mm flange bolt (C) with new washers.



20. Install the new O-ring (D), plain washer (E), and output shaft (countershaft) speed sensor (F).

21. Install the detent bolts (A), spring, and steel balls with new washers.



22. Install the new 20 mm washer (B), 20 mm bolt (C), and transmission hanger (D).

23. Apply liquid gasket (P/N 08718-0002) to the threads of the back-up light switch (E), and install it in the transmission housing.

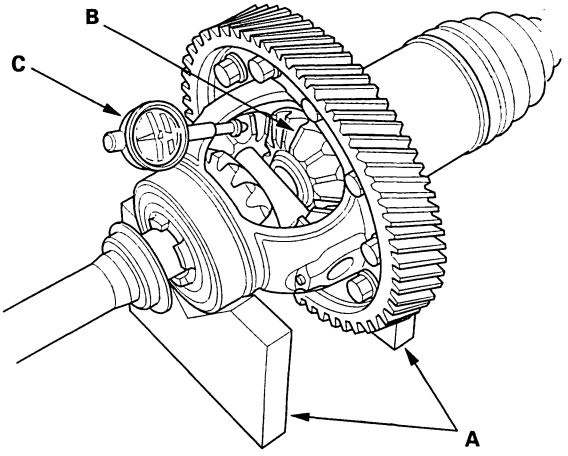
Backlash Inspection

1. Place the differential assembly on V-blocks (A), and install both axles.

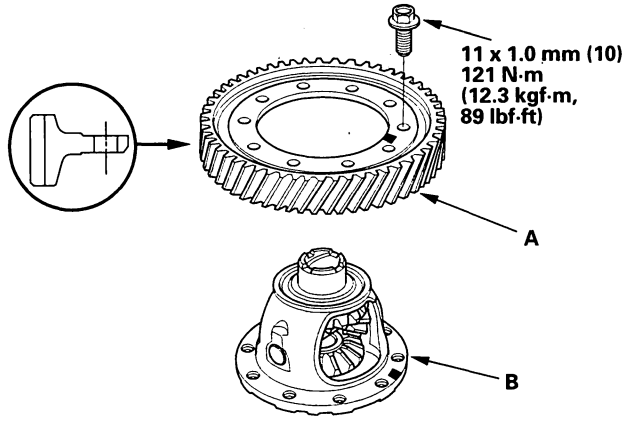


2. Measure the backlash of both pinion gears (B) with a dial indicator (C). If the backlash is not within the standard, replace the differential carrier.

Standard (New): 0.05—0.15 mm (0.002—0.006 in.)

Differential Carrier, Final Driven Gear Replacement

1. Loosen the bolts (left-hand threads) in a crisscross pattern in several steps, then remove the bolts and the final driven gear (A) from the differential carrier (B).



2. Install the final driven gear with the chamfer on the inside diameter facing the carrier. Tighten the bolts in a crisscross pattern in several steps.

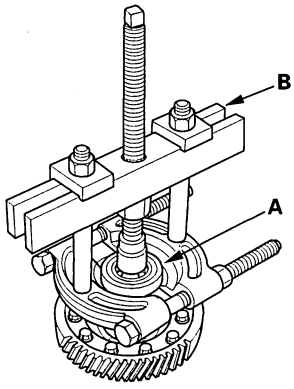
Protected by AR

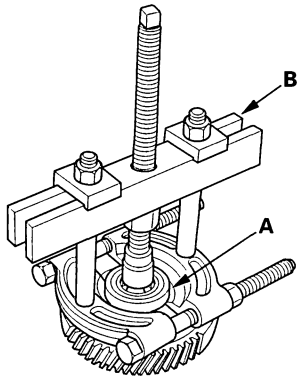
Carrier Bearing Replacement

Special Tools Required
Driver, 40 mm I.D. 07746-0030100

1. Check the carrier bearings for wear and rough rotation. If they rotate smoothly and their rollers show no signs of wear, the bearings are OK.

2. Remove the carrier bearing (A) with a commercially available bearing puller (B).





3. Install the new bearings (A) with the special tool and a press. Press each bearing on until it bottoms. There should be no clearance between the bearings and the carrier.

   NOTE: Place the seal part of the bearing (B) towards the outside of the differentral, then install it.

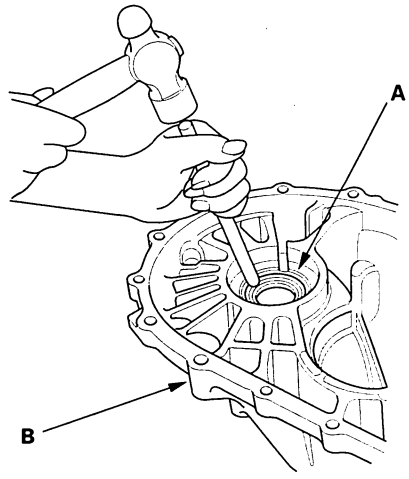
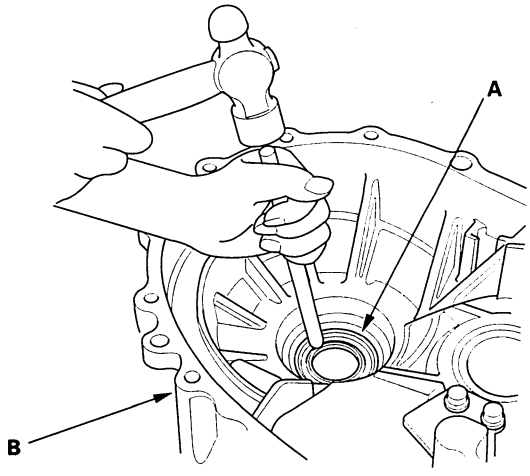
Oil Seal Replacement

Special Tools Required
- Driver 07749-0010000
- Oil seal driver attachment 07NAD-P20A100

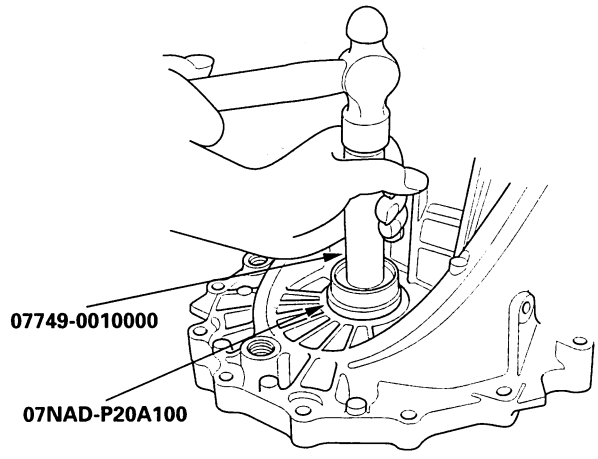
1. Remove the differential assembly.
2. Remove the oil seal (A) from the transmission housing (B).



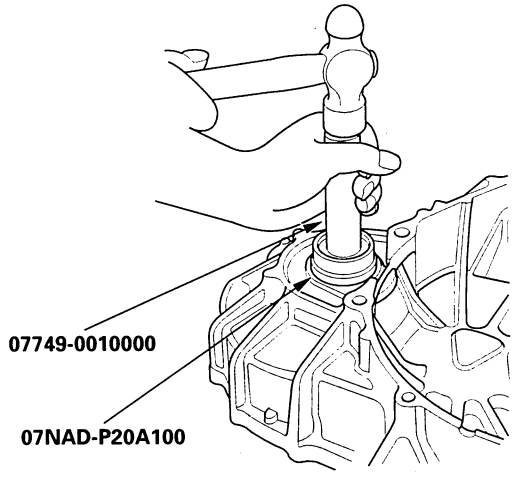
3. Remove the oil seal (A) from the clutch housing (B).



4. Install the new oil seal in the transmission housing with the special tools.



5. Install the new oil seal in the clutch housing with the special tools.

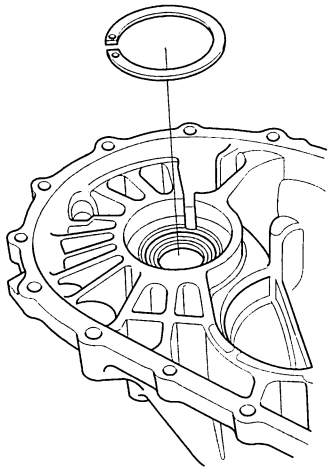


Protected by AR

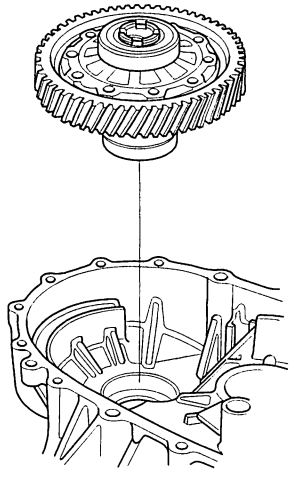
Differential Thrust Clearance Adjustment

Special Tools Required
Driver, 40 mm I.D. 07746-0030100

1. If you removed the 80 mm shim from the clutch housing, reinstall the same sized shim.



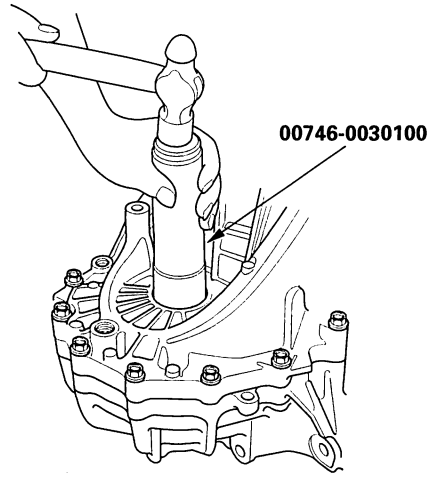
2. Install the differential assembly into the clutch housing.



3. Install the transmission housing onto the clutch housing, then tighten the 8 mm flange bolts in a crisscross pattern in several steps (see step 15 on page 13-53).

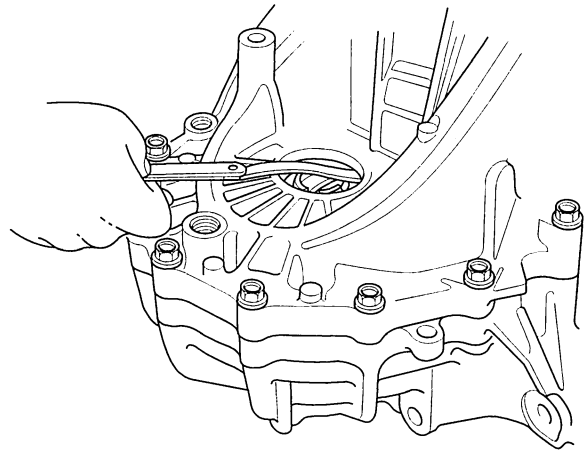
8 x 1.25 mm
27 N·m (2.8 kgf·m, 20 lbf·ft)

4. Use the special tool to bottom the differential assembly in the clutch housing.



5. Measure clearance between 80 mm shim and the bearing outer race in the transmission housing.

Standard: 0—0.10 mm (0—0.0039 in.)



BACK

Protected by AR

6. If the clearance is more than the standard, select a new shim from the following table. If the clearance measured in step 5 is within the standard, go to step 9.

80 mm Shim

	Part Number	Thickness
A	41441-PL3-B00	1.0 mm (0.039 in.)
B	41442-PL3-B00	1.1 mm (0.043 in.)
C	41443-PL3-B00	1.2 mm (0.047 in.)
D	41444-PL3-B00	1.3 mm (0.051 in.)
E	41445-PL3-B00	1.4 mm (0.055 in.)
F	41446-PL3-B00	1.5 mm (0.059 in.)
G	41447-PL3-B00	1.6 mm (0.063 in.)
H	41448-PL3-B00	1.7 mm (0.067 in.)
J	41449-PL3-B00	1.8 mm (0.071 in.)
K	41450-PL3-B00	1.05 mm (0.041 in.)
L	41451-PL3-B00	1.15 mm (0.045 in.)
M	41452-PL3-B00	1.25 mm (0.049 in.)
N	41453-PL3-B00	1.35 mm (0.053 in.)
P	41454-PL3-B00	1.45 mm (0.057 in.)
Q	41455-PL3-B00	1.55 mm (0.061 in.)
R	41456-PL3-B00	1.65 mm (0.065 in.)
S	41457-PL3-B00	1.75 mm (0.069 in.)

7. Remove the bolts and transmission housing.

8. Replace the thrust shim selected in step 6, then recheck the clearance.

9. Reinstall the transmission.

SUPPLEMENTAL RESTRAINT SYSTEM (SRS) (If automatic transmission maintenance is required)

The Accord SRS includes a driver's airbag in the steering wheel hub, a passenger's airbag in the dashboard above the glove box, seat belt tensioners in the front seat belt retractors, side curtain airbags in the sides of the roof, and side airbags in the front seat-backs. Information necessary to safely service the SRS is included in this Service Manual. Items marked with an asterisk (*) on the contents page include or are located near SRS components. Servicing, disassembling, or replacing these items require special precautions and tools, and should be done only by an authorized Honda dealer.

- To avoid rendering the SRS inoperative, which could lead to personal injury or death in the event of a severe frontal or side collision, all SRS service work must be performed by an authorized Honda dealer.
- Improper service procedures, including incorrect removal and installation of the SRS, could lead to personal injury caused by unintentional deployment of the airbags and/or side airbags.
- Do not bump or impact the SRS unit, front impact sensors, or side impact sensors when the ignition switch is ON (II), or for at least 3 minutes after the ignition switch is turned OFF; otherwise, the system may fail in a collision, or the airbags may deploy.
- SRS electrical connectors are identified by yellow color coding. Related components are located in the steering column, front console, dashboard, dashboard lower panel, in the dashboard above the glove box, in the front seats, in the roof side, and around the floor. Do not use electrical test equipment on these circuits.

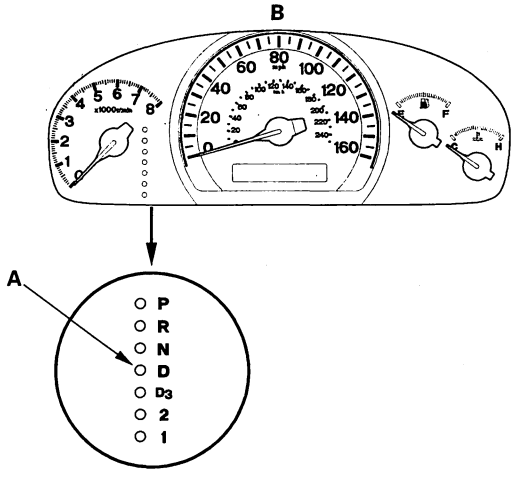
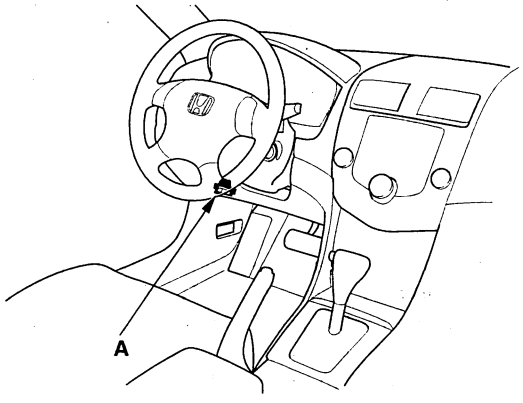
General Troubleshooting Information

How to Check for DTCs with the Honda Diagnostic System

When the powertrain control module (PCM) senses an abnormality in the input or output systems, the D indicator (A) in the gauge assembly (B) will usually blink.



When the Honda diagnostic system (HDS) is connected to the data link connector (DLC) (A) (located under the left end of the dash) and the SCS mode is selected, it will indicate the diagnostic trouble code (DTC) when the ignition switch is turned ON (II) and the appropriate menu is selected.



If the D indicator or malfunction indicator lamp (MIL) has been reported on, or if a driveability problem is suspected, follow this procedure:

1. Connect the HDS to the DLC. (See the HDS user's manual for specific instructions.)
2. Turn the ignition switch ON (II), select A/T system, and observe the DTC in the DTCs MENU on the HDS screen.
3. Record all fuel and emissions DTCs, A/T DTCs, and freeze data.
4. If there is a fuel and emissions DTC, first check the fuel and emissions system as indicated by the DTC (except for DTC P0700, DTC P0700 means there is one or more A/T DTCs, and no problems were detected in the fuel and emissions circuit of the PCM).
5. Clear the DTC and data.
6. Drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, and then recheck for a DTC. If the A/T DTC returns, go to the DTC troubleshooting Index. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all pins and terminals in the circuit are tight.

Symptom Troubleshooting Versus DTC Troubleshooting

Some symptoms will not trigger diagnostic trouble codes (DTCs) or cause the D indicator to blink. If the malfunction indicator lamp (MIL) was reported ON or the D indicator has been blinking, check for DTCs. If the vehicle has an abnormal symptom, and there are no DTCs stored, go to the Symptom Troubleshooting Index. Check the list of probable cause(s) for the symptom, in the sequence listed, until you find the problem.

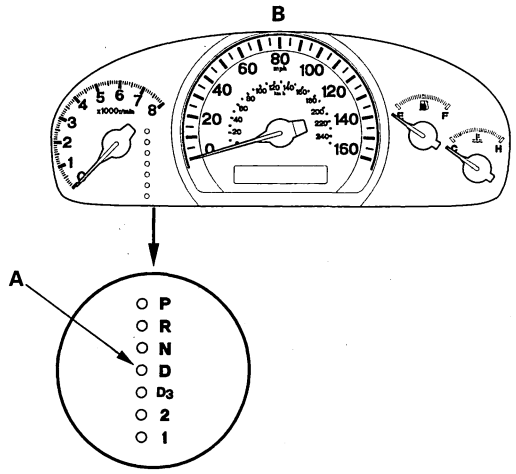
Protected by AR

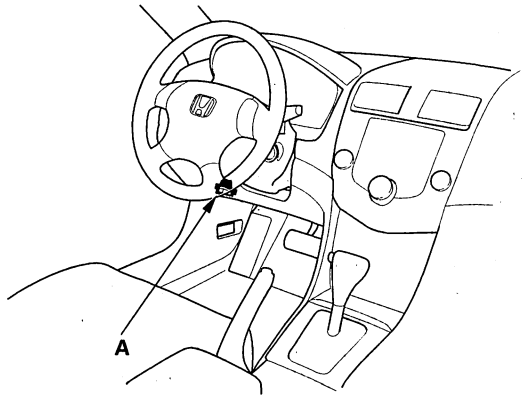
General Troubleshooting Information (cont'd)

How to Check for DTCs with the SCS Mode (retrieving the flash codes)

When the PCM senses an abnormality in the input or output system, the D indicator (A) in the gauge assembly (B) will usually blink.



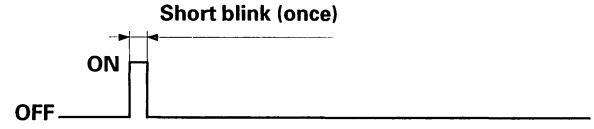
When the D indicator has been reported on, connect the HDS to the DLC (A) (located under the left end of the dash). Turn the ignition switch ON (II), select SCS mode, then the D indicator will indicate the DTC.



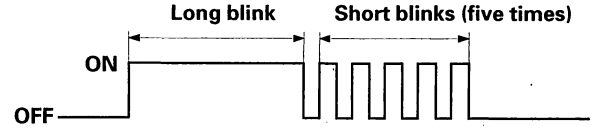
If the D indicator and the MIL come on at the same time, or if a driveability problem is suspected, follow this procedure:

1. Connect the HDS to the DLC. (See the HDS user's manual for specific instructions.)
2. Turn the ignition switch ON (II), select SCS mode, then observe the D indicator in the gauge assembly. Codes 1 through 9 are indicated by individual short blinks. Code 10 and above are indicated by a series of long and short blinks. One long blink equals 10 short blinks. Add the long and short blinks together to determine the code.

Example: DTC 1-1



Example: DTC 15-5



3. Record all fuel and emissions DTCs and A/T DTCs.
4. If there is a fuel and emissions DTC, first check the fuel and emissions system as indicated by the DTC (except DTC 70, DTC 70 means there is one or more A/T DTCs, and no problems were detected in the fuel and emissions circuit of the PCM).
5. Clear the DTC and data.
6. Drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, and then recheck for DTC. If the A/T DTC returns, go to the DTC Troubleshooting Index. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all pins and terminals in the circuit are tight.

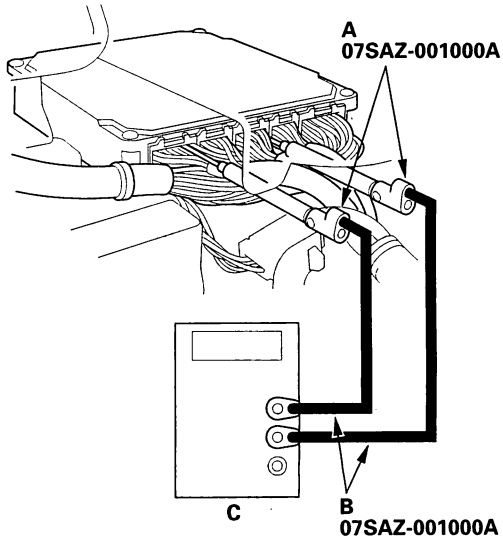
How to Troubleshoot Circuits at the PCM

Special Tools Required
Backprobe set 07SAZ-001000A (two required)

1. Pull back the carpet, and remove the passenger's center lower cover and rear vent duct (see step 5 on page 20-136).

2. Inspect the circuit on the PCM, according to the DTC troubleshooting, with the special tools and a digital multimeter.

3. Connect the backprobe adapters (A) to the stacking patch cords (B), and connect the cords to a multimeter (C).



4. Using the wire insulation as a guide for the contoured tip of the backprobe adapter, gently slide the tip into the connector from the wire side until it touches the end of the wire terminal.

5. If you cannot get to the wire side of the connector or the wire side is sealed, disconnect the connector and use the tester probe to probe the connectors from the terminal side. Do not force the probe into the connector.

Clear A/T DTCs, and PCM Reset Procedures

1. Connect the HDS to the DLC.

2. Turn the ignition switch ON (II).

3. Clear the DTC(s) on the HDS screen.

OBD Status

The OBD Status shows the current system status of each DTC and all of the parameters. This function is used to see if the technician's repair was successfully finished. The results of diagnostic tests for the DTC are displayed as:

- PASSED: On Board Diagnosis is successfully finished.
- FAILED: On Board Diagnosis has finished but failed.
- NOT COMPLETED: The On Board Diagnosis was running but is out of the Enable conditions of the DTC.

General Troubleshooting Information (cont'd)

PCM Updating and Substitution for Testing

Special Tools Required
Honda Interface Module (HIM) EQS05A35570

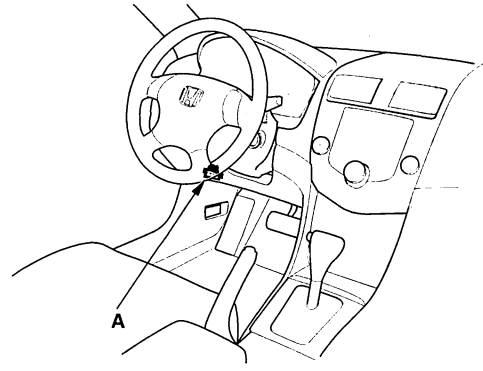
Use this procedure when you have to substitute a known-good PCM in a troubleshooting procedure. Update the PCM only if the PCM does not already have the latest software loaded.

NOTE: Do not turn the ignition switch OFF while updating the PCM. If you turn the ignition switch OFF before completion, the PCM can be damaged.

How to Update the PCM

NOTE:
- To ensure the latest program is installed, update a PCM whenever the PCM is substituted or replaced.
- You cannot update a PCM with the program it already has. It will only accept a new program.
- Before you update the PCM, make sure the vehicle's battery is fully charged.
- To prevent PCM damage, do not operate any electrical system; audio system, brakes, air conditioning, power windows, moonroof, and door locks, during the update.
- If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashing during the update, leave the ignition switch in the ON (II) position when you disconnect the HIM from the data link connector (DLC). This will prevent PCM damage.

1. Turn the ignition switch ON (II). Do not start the engine.
2. Connect the HDS or the Honda interface module (HIM) to the DLC (A) located under the left end of the dash.



3. Select the INSPECTION MENU with the HDS.
4. Do the TP POSITION CHECK in the ETCS TEST.
5. If the HDS does not have the update function, disconnect the HDS from the vehicle and connect the Honda interface module (HIM).
6. If the software in the PCM is the latest, disconnect the HDS or the HIM from the DLC and go back to the procedure that you were doing.
   If the software in the PCM is not the latest, do the PCM update procedure as described on the HIM label or in the PCM update system.

   NOTE: If the PCM update system requires you to cool the PCM, follow what is shown in the screen.
7. Do the PCM idle learn procedure (see page 11-316).
8. Clean the CKP pattern with the HDS while the engine is stopped.

BACK

Protected by AR

How to Substitute the PCM

1. Connect the HDS to the DLC.
2. Turn the ignition switch OFF.
3. Jump the SCS line with the HDS.
4. Remove the PCM, and install a known-good PCM.
5. Rewrite the immobilizer code with the PCM replacement procedure in the HDS; this will allow you to start the engine.
6. After completing your test, reinstall the original PCM and rewrite the immobilizer code with the PCM replacement procedure in the HDS again.

How to Remove and Install the PCM

1. Pull back the carpet, and remove the driver's and passenger's center lower covers and rear vent ducts (see page 20-136).
2. Connect the HDS to the DLC.
3. Turn the ignition switch OFF.
4. Jump the SCS line with the HDS.
5. Disconnect PCM connectors.
6. Remove the two bolts, and remove the PCM.
7. Install the PCM in the reverse order of the removal.

How to End a Troubleshooting Session

This procedure must be done after any troubleshooting.

1. Turn the ignition switch OFF.
2. Connect the HDS to the DLC.
3. Turn the ignition switch ON (II).
4. Clear the DTC(s) on the HDS screen.
5. Turn the ignition switch ON (II).
6. Start the engine in the P or N position, and warm it up to normal operating temperature (the radiator fan comes on).
7. To verify that the problem is repaired, test-drive the vehicle for several minutes at speeds over 30 mph (50 km/h) or in freeze data range.

Protected by AR

DTC Troubleshooting Index

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

DTC * (1)	D Indicator	MIL	Detection Item	Page
P0705 (5-2) * (2)	Blinks	ON	Transmission range switch (multiple shift-position input)	(see page 14-76)

Symptom Troubleshooting Index (cont'd)

Symptom	Probable cause(s)	Notes
Engine runs, but vehicle does not move in any gear	1. Low ATF level 2. Shift cable broken or out of adjustment 3. Connection between the shift cable and transmission or body is worn 4. ATF pump worn or binding 5. Regulator valve stuck or spring worn 6. ATF strainer clogged 7. Mainshaft worn or damaged 8. Final gears worn or damaged 9. Transmission-to-engine assembly error 10. Axle disengaged	• Check the ATF level, and check the ATF cooler lines for leakage and loose connections. If necessary, clean the ATF cooler lines. • Check for a loose shift cable at the shift lever and the transmission control shaft. • Improper alignment of ATF pump and torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Check the line pressure. • Be careful not to damage the torque converter housing when replacing the main ball bearing. You may also damage the ATF pump when you torque down the main valve body. This will result in ATF pump seizure if not detected. Use the proper tools. • Install the main seal flush with the torque converter housing. If you push it into the torque converter housing until it tops out, it will block the fluid return passage and result in damage. • Check the ATF strainer for debris. If the ATF strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Inspect the differential pinion gears for wear. If the differential pinion gears are worn, replace the differential assembly, replace the ATF strainer, thoroughly clean the transmission, and clean the torque converter, cooler, and lines.
Vehicle moves in 2 and R, but not in D, D3, or 1	1. 1st accumulator defective 2. 1st gears worn or damaged 3. 1st clutch defective	• Check the 1st clutch pressure. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer and retainer seal for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate. • Inspect the 1st clutch feed pipe. If the 1st clutch feed pipe is scored, replace the end cover. • Replace the secondary shaft if the bushing for the 1st clutch feed pipe is loose or damaged.

BACK

Protected by AR

Symptom	Probable cause(s)	Notes
Vehicle moves in D, D3, 1, and R, but not in 2	1. 2nd accumulator defective 2. 2nd gears worn or damaged 3. 2nd clutch defective	• Check the 2nd clutch pressure. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer and retainer seal for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate.
Vehicle moves in D, D3, 2, and 1, but not in R	1. Shift solenoid valve E defective 2. Shift fork shaft stuck 3. Shift valve E defective 4. 4th/reverse accumulator defective 5. 4th clutch defective 6. Reverse gears worn or damaged	• Check the D indicator, and check for loose connectors. Inspect the shift solenoid valve E for seizure, and O-rings for wear and damage. • Check for a missing shift fork bolt on the shift fork shaft. • Check the 4th clutch pressure. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate. • Inspect the reverse selector gear teeth chamfers, and inspect the engagement teeth chamfers of the countershaft 4th gear and reverse gear. Replace the reverse gears and the reverse selector if they are worn or damaged. If the transmission makes a clicking, grinding, or whirring noise, also replace the mainshaft 4th gear, reverse idler gear, and countershaft 4th gear.
Poor acceleration; flares when starting off in D, D3, and R; stall speed high in 2 and 1, and in D and D3 in 1st and 2nd	1. Low ATF level 2. Shift cable broken or out of adjustment 3. ATF pump worn or binding 4. Regulator valve stuck or spring worn 5. ATF strainer clogged 6. Torque converter check valve defective	• Check the ATF level, and check the ATF cooler lines for leakage and loose connections. If necessary, clean the ATF cooler lines. • Check for a loose shift cable at the shift lever and the transmission control shaft. • Improper alignment of ATF pump and torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Check the ATF strainer for debris. If the ATF strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter.

Symptom Troubleshooting Index (cont'd)

Symptom	Probable cause(s)	Notes
Poor acceleration; flares when starting off in D, D3, and R; stall speed high when starting off in 2	2nd clutch defective	• Check the 2nd clutch pressure. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer and retainer seal for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate.
Poor acceleration; flares when starting off in D, D3, and R; stall speed high in R	1. Shift cable broken or out of adjustment 2. 4th clutch defective	• Check for a loose shift cable at the shift lever and the transmission control shaft. • Check the 4th clutch pressure in the D and R positions. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate.
Poor acceleration; stall speed low in 2 and 1, and in D and D3 in 1st and 2nd	1. Shift solenoid valve E defective 2. Torque converter one-way clutch defective 3. Engine output low 4. Torque converter clutch piston defective 5. Lock-up shift valve defective	• Check the D indicator, and check for loose connectors. Inspect the shift solenoid valve E for seizure, and O-ring for wear and damage. • Replace the torque converter.
Poor acceleration; stall speed low in R	1. Engine output low 2. Torque converter clutch piston defective 3. Lock-up shift valve defective	Replace the torque converter.

Symptom	Probable cause(s)	Notes
Engine idle vibration	1. Low ATF level 2. Shift solenoid valve E defective 3. Drive plate defective or transmission misassembled 4. Engine output low 5. Torque converter clutch piston defective 6. ATF pump worn or binding 7. Lock-up shift valve defective 8. Misadjusted engine and transmission mounts	• Check the ATF level, and check the ATF cooler lines for leakage and loose connections. If necessary, clean the ATF cooler lines. • Improper alignment of ATF pump and torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Inspect the ATF strainer for clogging with particles of steel or aluminum. If the ATF strainer is clogged, replace it, and clean the torque converter, cooler, and lines. • Check the D indicator, and check for loose connectors. Inspect the shift solenoid valve E for seizure, and O-rings for wear and damage. • Check for a misinstalled/damaged drive plate. • Set idle rpm in gear to the specified idle speed. If still no good, adjust the engine and transmission mounts. • Replace the torque converter.
Vehicle moves in N	1. Excessive ATF 2. Foreign material in separator plate orifice 3. Relief valve defective 4. 1st clutch defective 5. 2nd clutch defective 6. 3rd clutch defective 7. 4th clutch defective 8. 5th clutch defective 9. Clutch end plate-to-top disc clearance incorrect 10. Needle bearing seized up, worn, or damaged 11. Thrust washer seized up, worn, or damaged	• Check the ATF level, and drain the ATF if it is over-filled. • Check the 1st, 2nd, 3rd, 4th, and 5th clutch pressures. • Check the ATF strainer for debris. If the ATF strainer is clogged with particles of steel or aluminum, inspect the ATF pump. If the ATF pump is OK, find the damaged components that caused the debris. If no cause for contamination is found, replace the torque converter. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer and retainer seal (1st, 2nd, and 3rd) for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate. • Inspect the 1st clutch feed pipe. If the 1st clutch feed pipe is scored, replace the end cover. • Inspect the 3rd clutch feed pipe. If the 3rd clutch feed pipe is scored, replace it and O-ring under the feed pipe guide. • Replace the secondary shaft if the bushing for the 1st or 3rd clutch feed pipe is loose or damaged. • Inspect the 5th clutch feed pipe. If the 5th clutch feed pipe is scored, replace it and the O-ring under the feed pipe guide. • Replace the mainshaft if the bushing for the 5th clutch feed pipe is loose or damaged.

Symptom	Probable cause(s)	Notes
Excessive shock or flares on 4-5 upshift or 5-4 downshift	1. A/T clutch pressure control solenoid valve B defective 2. A/T clutch pressure control solenoid valve C defective 3. Foreign material in separator plate orifice 4. 4th accumulator defective 5. 5th accumulator defective 6. 4th clutch defective 7. 5th clutch defective	• Check the D indicator, and check for loose connectors. • Inspect the solenoid valve filter/gasket and O-rings for wear and damage, and inspect the solenoid valves for seizure. • Check the 4th and 5th clutch pressures. • Inspect the clutch piston, clutch piston check valve, and O-rings. Check the spring retainer for wear and damage. Inspect the clutch end-plate-to-top-disc clearance. If the clearance is out of tolerance, inspect the clutch discs and plates for wear and damage. If the discs are worn or damaged, replace them as a set. Inspect the clutch waved-plate height. If the height is out of tolerance, replace the waved-plate. If the discs and plates are OK, adjust the clearance with the clutch end plate. • Inspect the 5th clutch feed pipe. If the 5th clutch feed pipe is scored, replace it and the O-ring under the feed pipe guide. • Replace the mainshaft if the bushing for the 5th clutch feed pipe is loose or damaged.
Noise from transmission in all shift lever positions	1. ATF pump worn or binding 2. Mainshaft bearing, countershaft bearing, or secondary shaft bearing defective	• Improper alignment of ATF pump and torque converter housing may cause ATF pump seizure. The symptoms are mostly an rpm-related ticking noise or a high pitched squeak. • Be careful not to damage the torque converter housing when replacing the main ball bearing. You may also damage the ATF pump when you torque down the main valve body. This will result in ATF pump seizure if not detected. Use the proper tools. • Install the main seal flush with the torque converter housing. If you push it into the torque converter housing until it tops out, it will block the fluid return passage and result in damage. • Inspect the ATF strainer for clogging with particles of steel or aluminum. If the ATF strainer is clogged, replace it, and clean the torque converter, cooler, and lines. • Inspect the mainshaft, countershaft and secondary shaft for wear or damage.
Vehicle does not accelerate above 31 mph (50 km/h)	Torque converter one-way clutch defective	Replace the torque converter.
Vibration in all shift lever positions	Drive plate defective or transmission misassembled	• Check for a misinstalled/damaged drive plate. • Set idle rpm in gear to the specified idle speed. If still no good, adjust the engine and transmission mounts.

System Description

General Operation

The automatic transmission is a combination of a 3-element torque converter and triple-shaft electronically controlled unit which provides 5 speeds forward and 1 reverse. The entire unit is positioned in line with the engine.

Torque Converter, Gears, and Clutches
The torque converter consists of a pump, turbine, and stator assembly in a single unit. The converter housing (pump) is connected to the engine crankshaft and turns as the engine turns. Around the outside of the torque converter is a ring gear which meshes with the starter pinion when the engine is being started. The entire torque converter assembly serves as a flywheel while transmitting power to the transmission mainshaft, the transmission has three parallel shafts; the mainshaft, the countershaft, and the secondary shaft. The mainshaft is in line with the engine crankshaft, and includes the 4th and 5th clutches, and gears for 5th, 4th, reverse, and idler. The mainshaft reverse gear is integral with the mainshaft 4th gear. The countershaft includes the gears for 1st, 2nd, 3rd, 4th, 5th, reverse, park, and the final drive. The final drive gear is integral with the countershaft. The countershaft 4th gear and the countershaft reverse gear can be locked to the countershaft providing 4th or reverse gear, depending on which way the selector is moved. The secondary shaft includes the 1st, 2nd, and 3rd clutches, and gears for 1st, 2nd, 3rd, and idler. The idler shaft is located between the mainshaft and secondary shaft, and the idler gear transmits power between the mainshaft and the secondary shaft. The gears on the mainshaft and the secondary shaft are in constant mesh with those on the countershaft. When certain combinations of gears in the transmission are engaged by the clutches, power is transmitted through the mainshaft, then to the secondary shaft to the countershaft provide drive.

Electronic Control
The electronic control system consists of the powertrain control module (PCM), sensors, and solenoid valves. Shifting and lock-up are electronically controlled for comfortable driving under all conditions. The PCM is located below the dashboard, under the front lower panel behind the center console.

Hydraulic Control
The valve bodies include the main valve body, the regulator valve body, and the servo body. They are bolted to the torque converter housing. The main valve body contains the manual valve, the shift valves A, B, C, and E, the relief valve, the lock-up control valve, the cooler check valve, the servo control valve, and the ATF pump gears. The regulator valve body contains the regulator valve, the torque converter check valve, lock-up shift valve, and the 1st and 3rd accumulators. The servo body contains the servo valve, the shift valve D, accumulators for 2nd, 4th, and 5th, and shift solenoid valves for A, B, C, D, and E. Fluid from the regulator passes through the manual valve to the various control valves. The 1st, 3rd, 5th clutches receive fluid from their respective feed pipes, and the 2nd and the 4th clutches receive fluid from the internal hydraulic circuit.

Shift Control Mechanism
The PCM controls to shift gears shift solenoid valves A, B, C, D, and E, and the A/T clutch pressure control solenoid valves A, B, and C, while receiving input signals from various sensors and switches located throughout the vehicle. The shift solenoid valves shift the positions of the shift valves to switch the port leading hydraulic pressure to the clutch. The A/T clutch pressure control solenoid valves A, B, and C regulate their respective pressure, and pressurize to the clutches to engage it and its corresponding gear. The pressures of the A/T clutch pressure control solenoid valves also apply to the shift valves to switch the port.

Lock-up Mechanism
The lock-up mechanism operates in the D position (2nd, 3rd, 4th, and 5th), and in D3 position (2nd and 3rd). The pressurized fluid is drained from the back of the torque converter through a fluid passage, causing the torque converter clutch piston to be held against the torque converter cover. As this takes place, the mainshaft rotates at the same speed as the engine crankshaft. Together with the hydraulic control, the PCM optimizes the timing and volume of the lock-up mechanism. When the shift solenoid valve E is turned on by the PCM, shift solenoid valve E pressure switches the lock-up shift valve on and off. The A/T clutch pressure control solenoid valve A and the lock-up control valve control the volume of the lock-up conditions.

Gear Selection
The shift lever has seven positions; P: PARK, R: REVERSE, N: NEUTRAL, D: 1st through 5th gear ranges, D3: 1st through 3rd gear ranges, 2: 2nd gear, and 1: 1st gear.

Position	Description
P: PARK	Front wheels locked; park pawl engaged with park gear on countershaft. All clutches are released.
R: REVERSE	Reverse; reverse selector engaged with countershaft reverse gear and 4th clutch engaged.
N: NEUTRAL	All clutches are released.
D: DRIVE (1st through 5th)	General driving; starts off in 1st, shifts automatically to 2nd, 3rd, 4th, then 5th, depending on vehicle speed and throttle position. Downshifts through 4th, 3rd, 2nd, and 1st on deceleration to stop. The lock-up mechanism operates in 2nd, 3rd, 4th, and 5th gear.
D3: DRIVE (1st through 3rd)	Used for rapid acceleration at highway speeds and general driving; up-hill and down-hill driving; starts off in 1st, shifts automatically to 2nd, then 3rd, depending on vehicle speed and throttle position. Downshifts through 2nd to 1st on deceleration to stop. The lock-up mechanism operates in 2nd and 3rd gear.
2: SECOND	Used for engine braking or better traction starting off on loose or slippery surfaces; stays in 2nd gear; does not shift up or down.
1: FIRST	Used for engine braking; stays in 1st gear; does not shift up.

Starting is possible only in the P and N positions because of a slide-type neutral-safety switch.

Automatic Transmission (A/T) Gear Position Indicator
The A/T gear position indicator in the instrument panel shows which shift lever position has been selected without having to look down at the shift lever.

System Description (cont'd)

Clutches and Gears

The 5-speed automatic transmission uses hydraulically-actuated clutches to engage or disengage the transmission gears. When hydraulic pressure is introduced into the clutch drum, the clutch piston moves. This presses the friction discs and steel plates together, locking them so they don't slip. Power is then transmitted through the engaged clutch pack to its hub-mounted gear. Likewise, when the hydraulic pressure is bled from the clutch pack, the piston releases the friction discs and steel plates, and they are free to slide past each other. This allows the gear to spin independently on its shaft, transmitting no power.

1st Clutch
The 1st clutch engages/disengages 1st gear, and is located at the middle of the secondary shaft. The 1st clutch is joined back-to-back to the 3rd clutch. The 1st clutch is supplied hydraulic pressure by its ATF feed pipe within the secondary shaft.

2nd Clutch
The 2nd clutch engages/disengages 2nd gear, and is located at the end of the secondary shaft, opposite the end cover. The 2nd clutch is supplied hydraulic pressure by a circuit connected to the internal hydraulic circuit.

3rd Clutch
The 3rd clutch engages/disengages 3rd gear, and is located at the middle of the secondary shaft. The 3rd clutch is joined back-to-back to the 1st clutch. The 3rd clutch is supplied hydraulic pressure by its ATF feed pipe within the secondary shaft.

4th Clutch
The 4th clutch engages/disengages 4th gear, as well as reverse gear, and is located at the middle of the mainshaft. The 4th clutch is joined back-to-back to the 5th clutch. The 4th clutch is supplied hydraulic pressure by its ATF feed pipe within the mainshaft.

5th Clutch
The 5th clutch engages/disengages 5th gear, and is located at the middle of the mainshaft. The 5th clutch is joined back-to-back to the 4th clutch. The 5th clutch is supplied hydraulic pressure by its ATF feed pipe within the mainshaft.

Gear operation
Gears on the mainshaft:
- 4th gear engages/disengages with the mainshaft by the 4th clutch.
- 5th gear engages/disengages with the mainshaft by the 5th clutch.
- Reverse gear engages/disengages with the mainshaft by the 4th clutch.
- Idler gear is splined with the mainshaft, and rotates with the mainshaft.

Gears on the countershaft:
- Final drive gear is integral with the countershaft.
- 1st, 2nd, 3rd, 5th, and park gears are splined with the countershaft, and rotate with the countershaft.
- 4th gear and reverse gear rotate freely from the countershaft. The reverse selector engages 4th gear and reverse gear with the reverse selector hub. The reverse selector hub is splined to the countershaft so that the 4th gear and reverse gear engage with the countershaft.

Gears on the secondary shaft:
- 1st gear engages/disengages with the secondary shaft by the 1st clutch.
- 2nd gear engages/disengages with the secondary shaft by the 2nd clutch.
- 3rd gear engages/disengages with the secondary shaft by the 3rd clutch.
- Idler gear is splined with the secondary shaft, and rotates with the secondary shaft.

The idler gear on the idler shaft transmits power between the mainshaft and the secondary shaft.
The reverse idler gear transmits power from the mainshaft reverse gear to the countershaft reverse gear, and changes rotational direction of the countershaft to reverse.

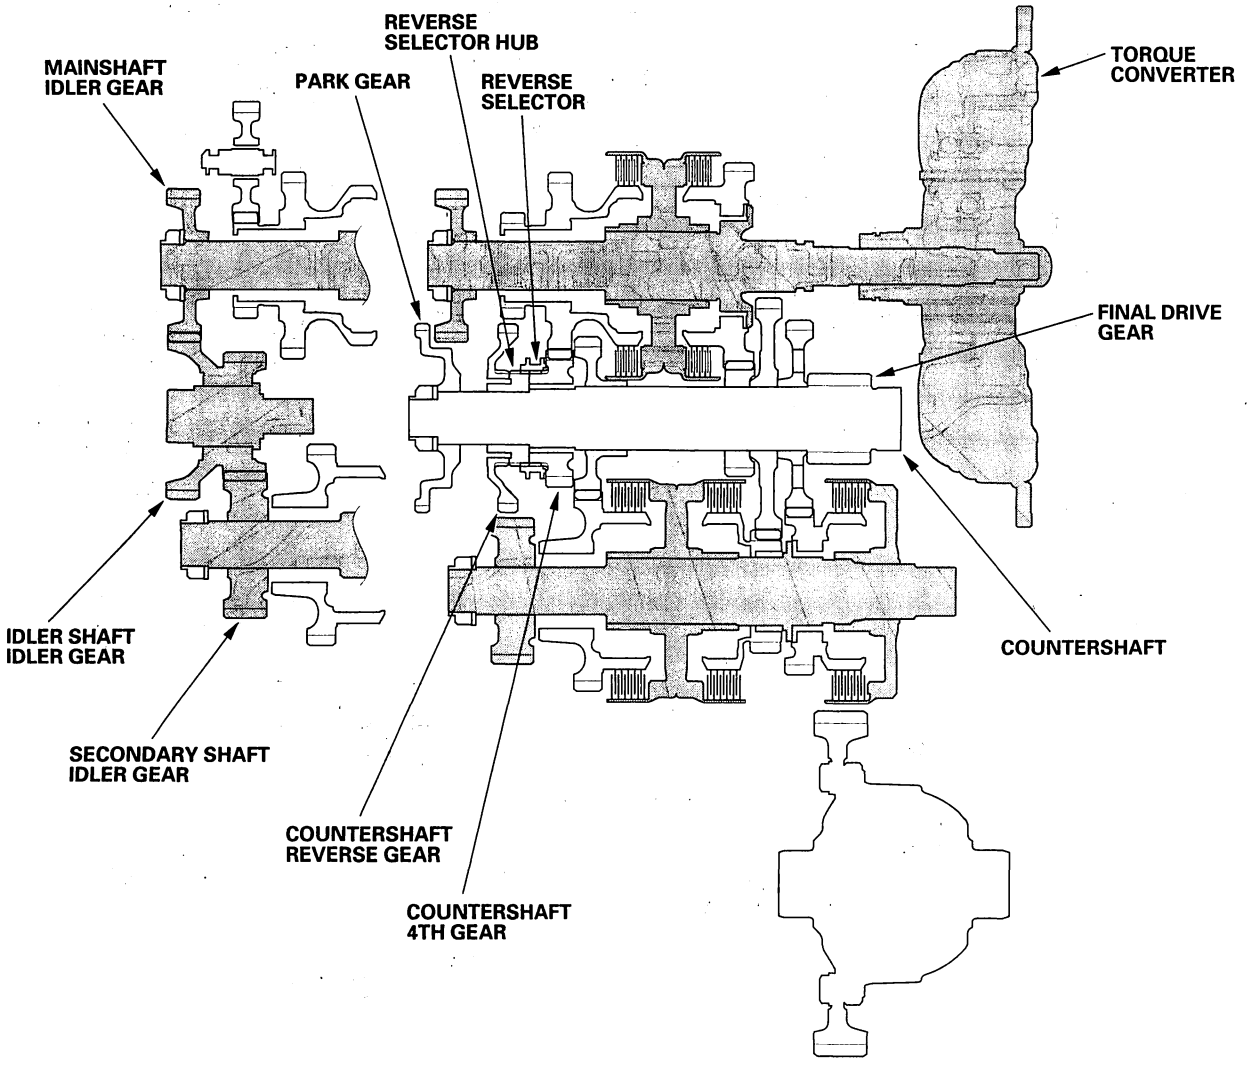
System Description (cont'd)

Power Flow

P Position
Hydraulic pressure is not applied to the clutches. Power is not transmitted to the countershaft. The countershaft is locked by the park pawl, interlocking the park gear.

N Position
Engine power transmitted from the torque converter drives the mainshaft idler gear, the idler shaft idler gear, and the secondary shaft idler gear, but hydraulic pressure is not applied to the clutches. Power is not transmitted to the countershaft.
In this position, the position of the reverse selector differs according to whether the shift lever shifted from the D or R position:

- When shifted from the D position, the reverse selector engages with the countershaft 4th gear and the reverse selector hub, and the 4th gear engages with the countershaft.
- When shifted from the R position, the reverse selector engages with the countershaft reverse gear and the reverse selector hub, and the reverse gear engages with the countershaft.



BACK

Electronic Control System

Functional Diagram

The electronic control system consists of the powertrain control module (PCM), sensors, and solenoid valves. Shifting and lock-up are electronically controlled for comfortable driving under all conditions.

The PCM recieves input signals from the sensors, switches, and other control units, processes data, and outputs signals for the engine control system and A/T control system. The A/T control system includes shift control, grade logic control, clutch pressure control, and lock-up control.
The PCM switches the shift solenoid valves and the A/T clutch pressure control solenoid valves to control shifting transmission gears and lock-up torque converter clutch.

Shift Control

The PCM instantly determines which gear should be selected by various signals sent from sensors and switches, and it actuates the shift solenoid valves A, B, C, D, and E to control shifting.

Also, a grade logic control system has been adopted to control shifting in D and D3 positions. The PCM compares actual driving conditions with memorized driving conditions, based on the input from the throttle position sensor (2003-2005 models), the accelerator pedal position sensor (2006 model), the engine coolant temperature sensor, the barometric pressure sensor, the brake pedal position switch signal, and the shift lever position signal, to control shifting while the vehicle is ascending or descending a slope.

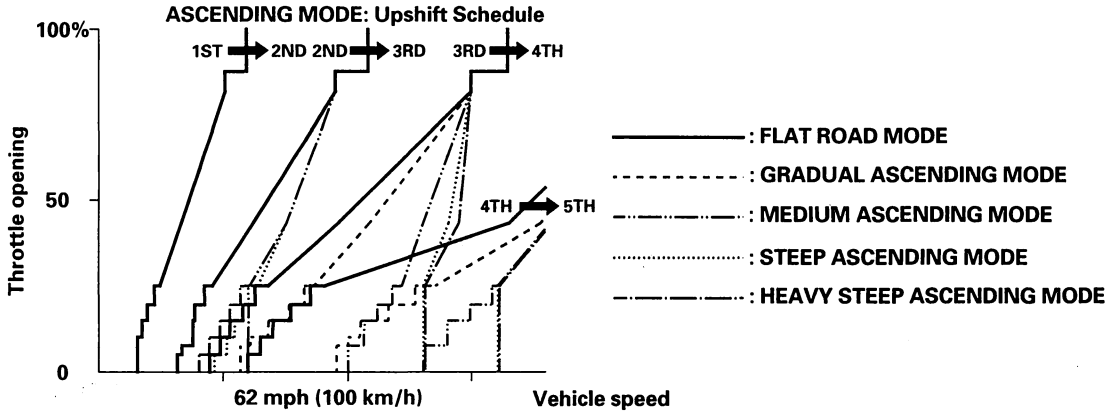
Grade Logic Control: Ascending Control

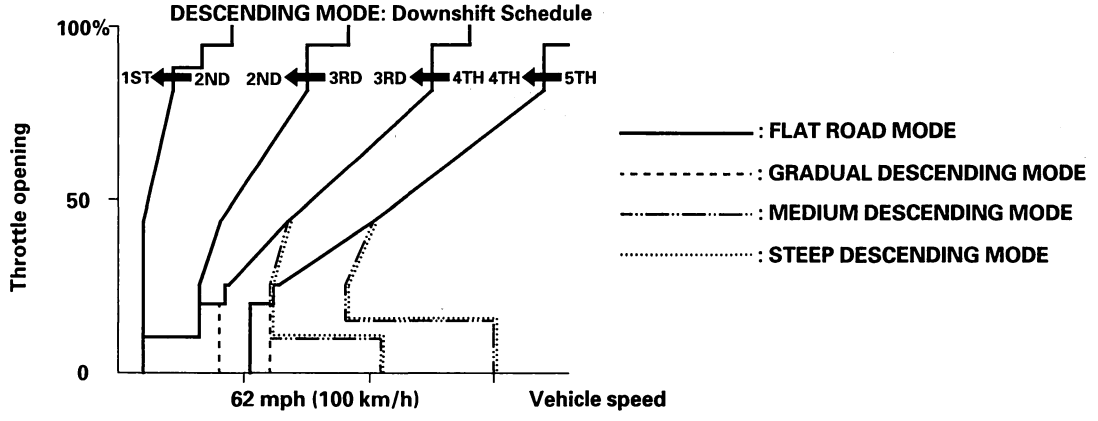
When the PCM determines that the vehicle is climbing a hill in D and D3 positions, the system extends the engagement area of 2nd, 3rd, and 4th gears to prevent the transmission from frequently shifting between 2nd and 3rd gears, between 3rd and 4th gears, and between 4th and 5th gears, so the vehicle can run smooth and have more power when needed.

Shift schedules stored in the PCM between 2nd and 3rd gears, between 3rd and 4th gears, and between 4th and 5th gears, enable it to automatically select the most suitable gear according to the magnitude of a gradient.



Grade Logic Control: Descending Control

When the PCM determines that the vehicle is going down a hill in D and D3 positions, the shift-up speed from 4th to 5th gear, from 3rd to 4th gear, and from 2nd to 3rd gear (when the throttle is closed) becomes faster than the set speed for flat road driving to widen the 4th gear, 3rd gear, and 2nd gear driving area. This, in combination with engine braking from the deceleration lock-up, achieves smooth driving when the vehicle is descending. There are three descending modes with different 4th gear driving areas, 3rd gear driving areas, and 2nd gear driving areas according to the magnitude of a gradient stored in the PCM. When the vehicle is in 5th gear or 4th gear, and you are decelerating when you are applying the brakes on a steep hill, the transmission will downshift to lower gear. When you accelerate, the transmission will then return to a higher gear.



(cont'd)

Protected by AR

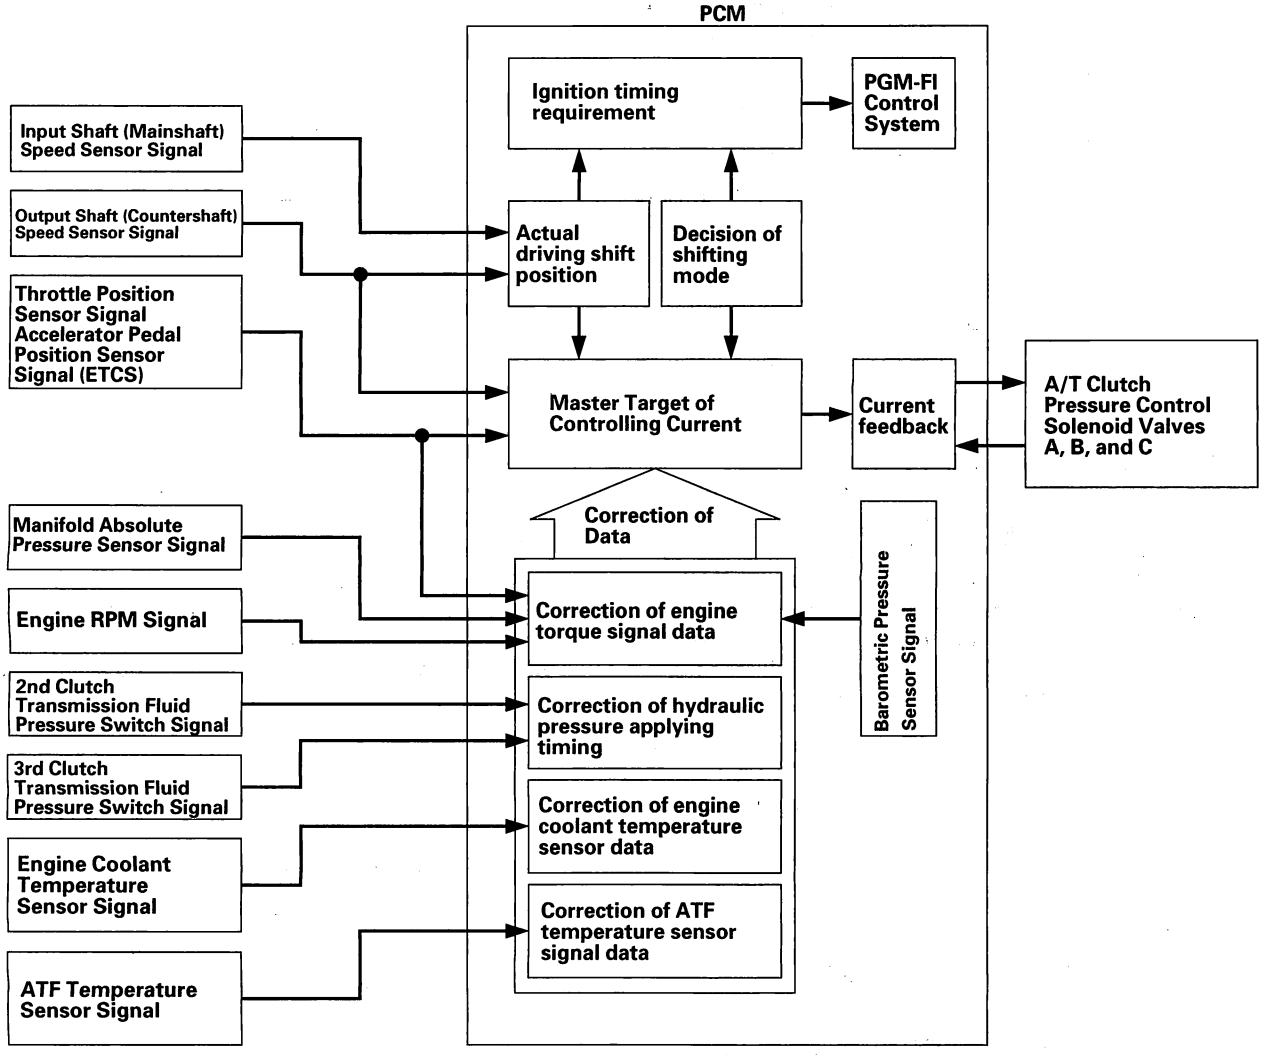
System Description (cont'd)

Electronic Control System (cont'd)

Clutch Pressure Control

The PCM actuates the A/T clutch pressure control solenoid valves A, B, and C to control the clutch pressure. When shifting between lower and higher gears, the clutch pressure regulated by the A/T clutch pressure control solenoid valves A, B, and C engages and disengages the clutch smoothly.

The PCM receives input signals from the various sensors and switches, performs data processing, and outputs a current to the A/T clutch pressure control solenoid valves A, B, and C.



BACK

Protected by AR

Lock-up Control

The shift solenoid valve E controls the hydraulic pressure to switch the lock-up shift valve and lock-up ON and OFF. The PCM actuates the shift solenoid valve E and the A/T clutch pressure control solenoid valve A to control the torque converter clutch lock-up. When the shift solenoid valve E is turned ON, the lock-up condition starts.

The A/T clutch pressure control solenoid valve A regulates and apply the hydraulic pressure to the lock-up control valve to control the amount of the lock-up.

The lock-up mechanism operates in 2nd, 3rd, 4th, and 5th gears in D position, and 2nd and 3rd gears in D3 position.

Hydraulic Controls

Valve Bodies

The valve body includes the main valve body, the regulator valve body, and the servo body. The ATF pump is driven by splines on the left end of the torque converter which is attached to the engine. Fluid flows through the regulator valve to maintain specified pressure through the main valve body to the manual valve, directing pressure to the shift valves and to each of the clutches via the solenoid valves. The shift solenoid valves A, B, C, D, and E are bolted on the servo body. The A/T clutch pressure control solenoid valves A, B, and C are mounted on the outside of the transmission housing.

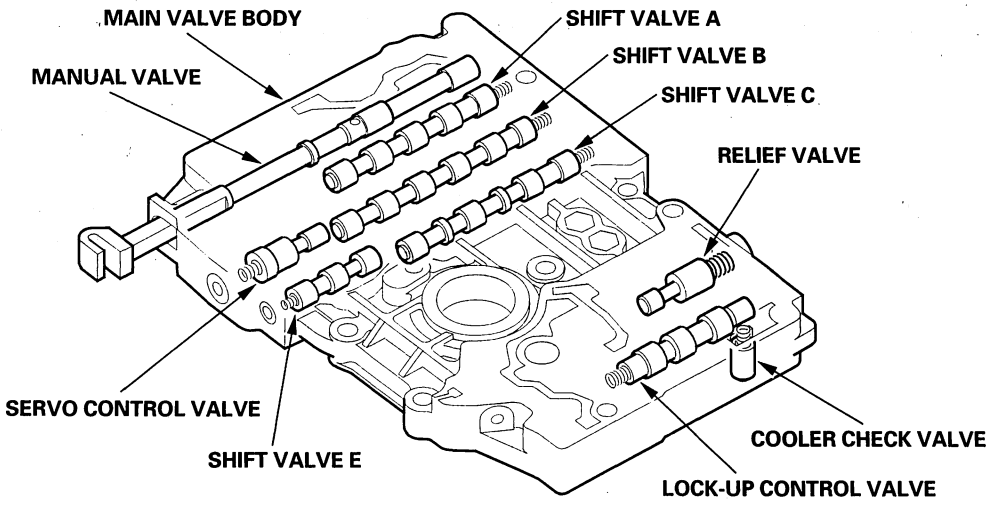
System Description (cont'd)

Hydraulic Controls (cont'd)

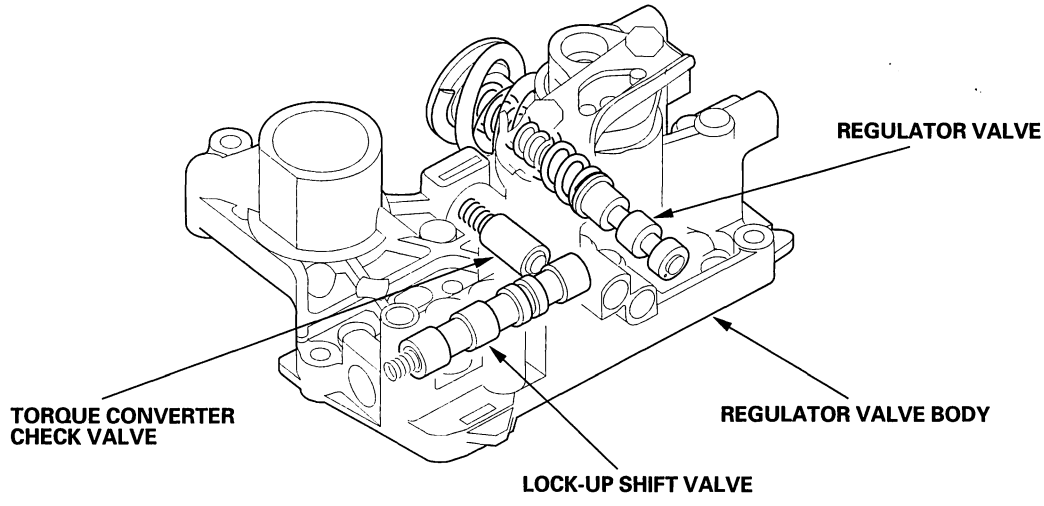
Main Valve Body

The main valve body contains the manual valve, the shift valves A, B, C, and E, the relief valve, the lock-up control valve, the cooler check valve, the servo control valve, and the ATF pump gears. The primary function of the main valve body is to switch fluid pressure on and off and to control hydraulic pressure going to the hydraulic control system.



Regulator Valve Body

The regulator valve body contains the regulator valve, the torque converter check valve, lock-up shift valve, and the 1st and 3rd accumulators.

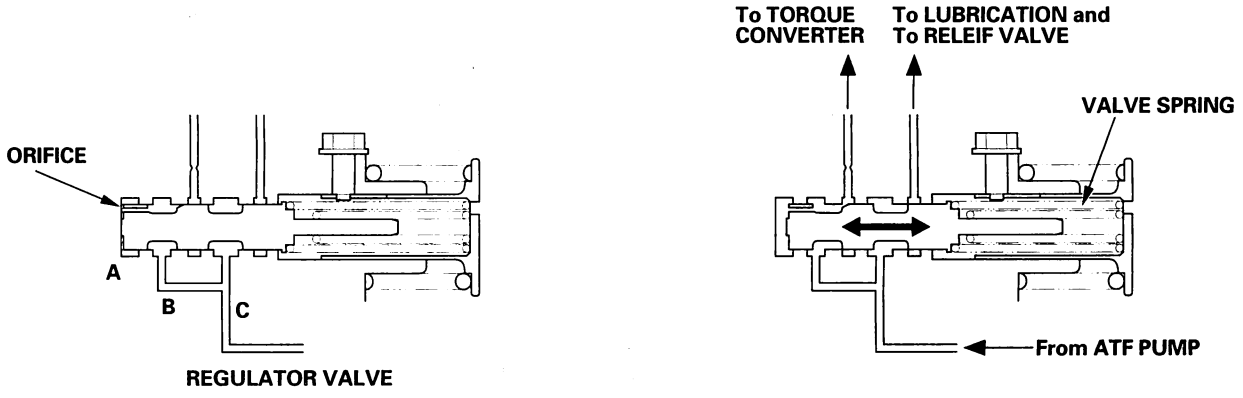


BACK

Protected by AR

Regulator Valve

The regulator valve maintains a constant hydraulic pressure from the ATF pump to the hydraulic control system, while also furnishing fluid to the lubrication system and torque converter. The fluid from the ATF pump flows through B and C. Fluid entering from B flows through the valve orifice to the A cavity. This pressure of the A cavity pushes the regulator valve to valve spring side, and this movement of the regulator valve uncovers the fluid port to the torque converter and the relief valve. The fluid flows out to the torque converter and the relief valve, and the regulator valve returns under spring force. According to the level of the hydraulic pressure through B, the position of the regulator valve changes, and the amount of fluid from C through torque converter also changes. This operation is continued, maintaining the line pressure.



Increases in hydraulic pressure according to torque are performed by the regulator valve using stator torque reaction. The stator shaft is splined with the stator in the torque converter, and its arm end contacts the regulator spring cap. When the vehicle is accelerating or climbing (torque converter range), stator torque reaction acts on the stator shaft, and the stator arm pushes the regulator spring cap in the direction of the arrow in proportion to the reaction. The stator reaction spring compresses, and the regulator valve moves to increase the line pressure which is regulated by the regulator valve. The line pressure reaches its maximum when the stator torque reaction reaches its maximum.

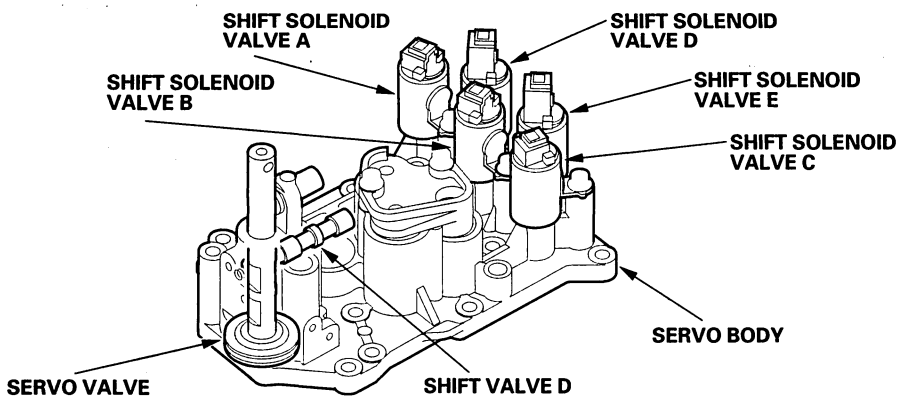
System Description (cont'd)

Hydraulic Controls (cont'd)

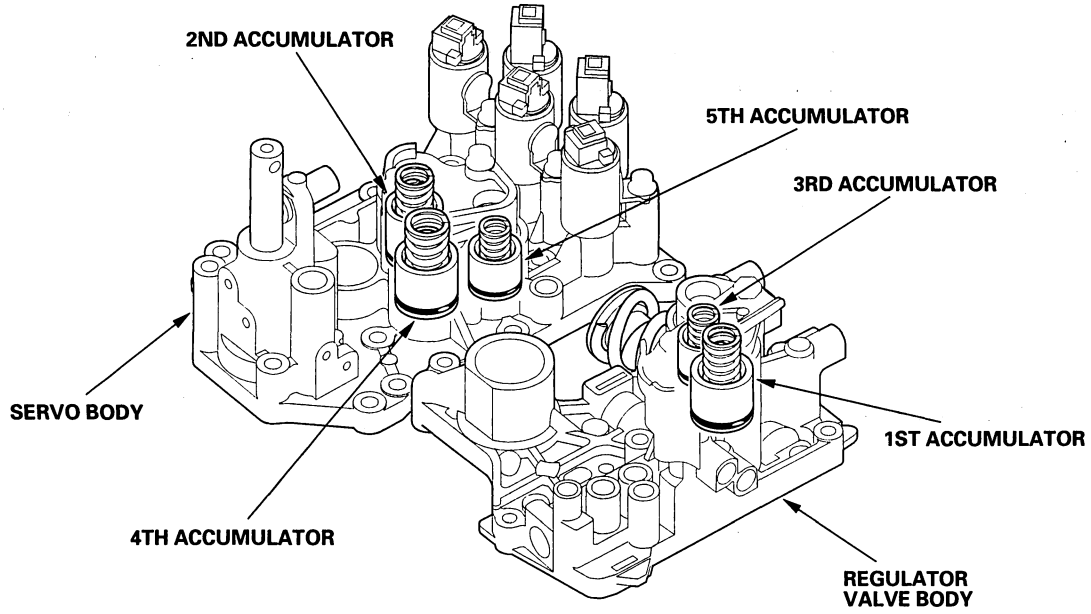
Servo Body

The servo body contains the servo valve, the shift valve D, accumulators for 2nd, 4th, and 5th, and shift solenoid valves for A, B, C, D, and E.



Accumulator

The accumulators are located in the regulator valve body and the servo body. The regulator valve body contains the 1st and 3rd accumulators, and the servo body contains the 2nd, 4th, and 5th accumulators.



BACK

Protected by AR

Hydraulic Flow

Distribution of Hydraulic Pressure

As the engine turns, the ATF pump starts to operate. Automatic transmission fluid (ATF) is drawn through the ATF strainer (filter) and discharged into the hydraulic circuit. Then, ATF flowing from the ATF pump becomes line pressure that's regulated by the regulator valve. Torque converter pressure from the regulator valve enters the torque converter through the lock-up shift valve, and it is discharged from the torque converter. The torque converter check valve prevents torque converter pressure from rising.

The PCM controls the shift solenoid valves ON and OFF. The shift solenoid valve intercepts line pressure from the ATF pump via the manual valve when the shift solenoid valve is OFF. When the shift solenoid valve is turned ON, line pressure changes to shift solenoid valve pressure at the shift solenoid valve, then the solenoid valve pressure flows to the shift valve. Applying shift solenoid pressure to the shift valves moves the position of the shift valve, and switches the port of the hydraulic circuit. The PCM also controls A/T clutch pressure control solenoid valves A, B, and C. The A/T clutch pressure control solenoid valves regulate hydraulic pressure, and apply the pressure to the clutches to engage smoothly. The clutches receive optimum clutch pressure which is regulated by the A/T clutch pressure control solenoid valves for comfortable driving and shifting under all conditions.

Hydraulic pressure at the port is as follows:

PORT No.	DESCRIPTION OF PRESSURE	PORT No.	DESCRIPTION OF PRESSURE
1	LINE	SB	SHIFT SOLENOID VALVE B
3	LINE	SC	SHIFT SOLENOID VALVE C
3'	LINE	SD	SHIFT SOLENOID VALVE D
4	LINE	SE	SHIFT SOLENOID VALVE E

System Description (cont'd)

Hydraulic Flow (cont'd)

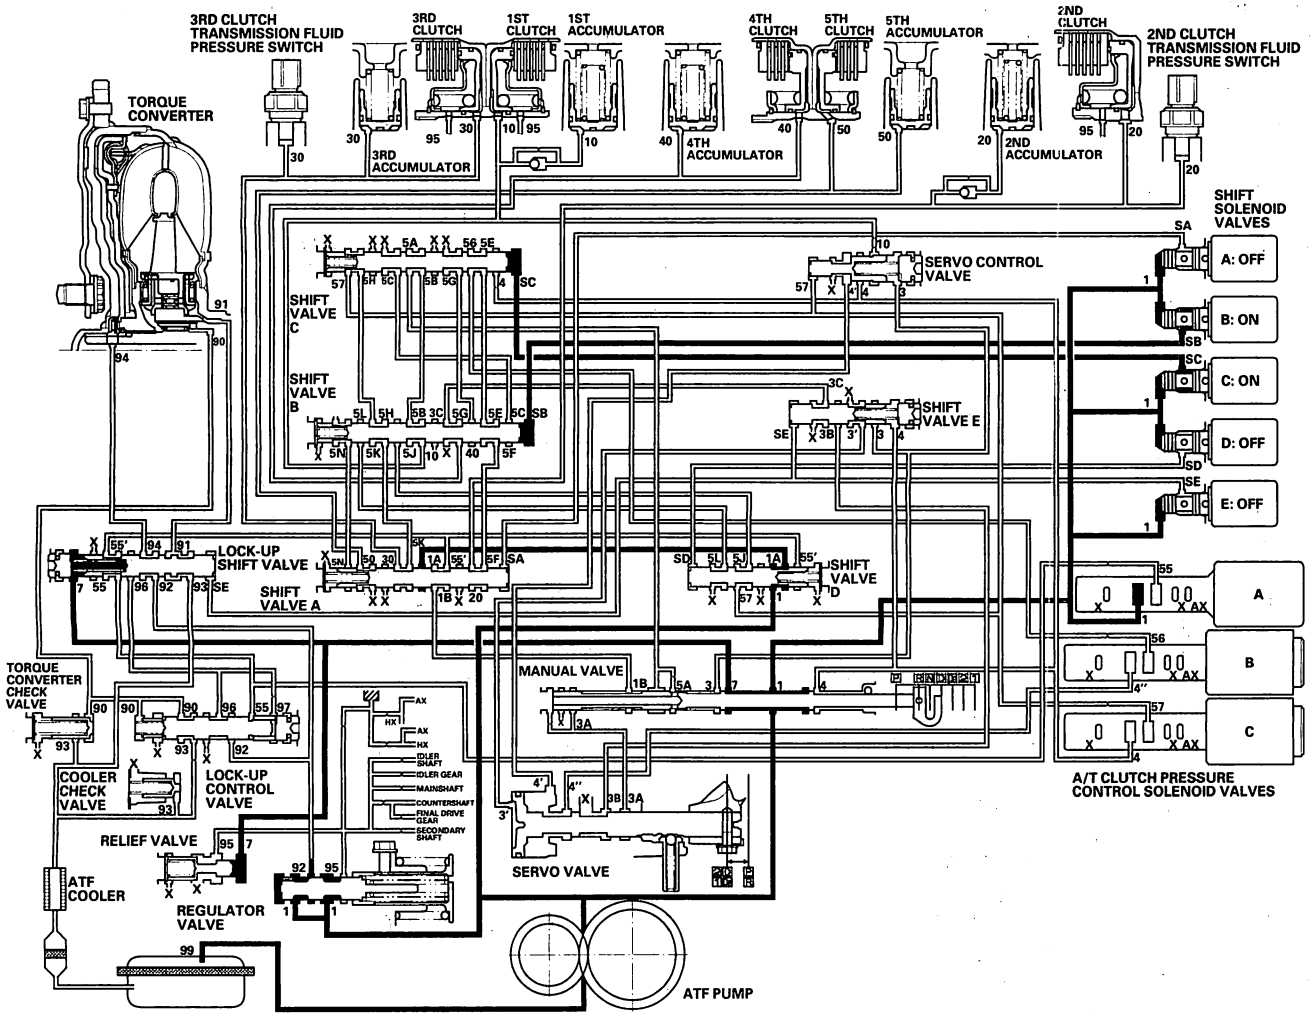
N Position

The PCM controls the shift solenoid valves. The conditions of the shift solenoid valves and positions of the shift valves are as follows:

- Shift solenoid valve A: OFF, and shift valve A stays on the right side
- Shift solenoid valve B: ON, and shift valve B moves to the left side
- Shift solenoid valve C: ON, and shift valve C moves to the left side
- Shift solenoid valve D: OFF, and shift valve D stays on the left side
- Shift solenoid valve E: OFF, and shift valve E stays on the left side

Line pressure (1) flows to the shift solenoid valves and the A/T clutch pressure control solenoid valve A. Under this condition, hydraulic pressure is not applied to the clutches.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



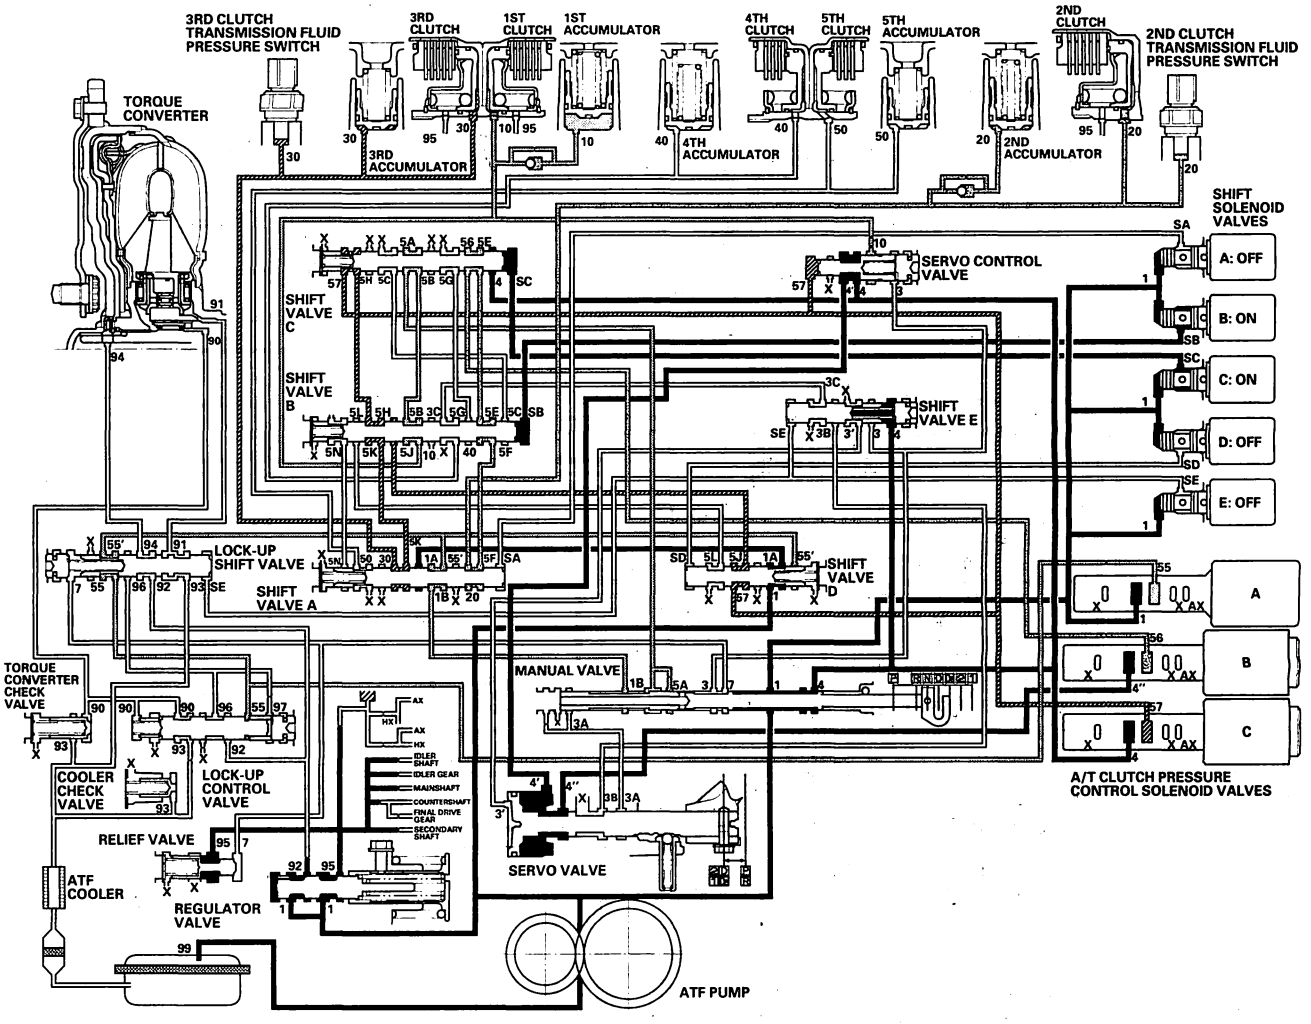
BACK

Protected by AR

D Position: 1st gear shifting from N position

Shift solenoid valves remain the same as in the N position when shifting to the D position from N. The manual valve is moved to the D position, and switches the port of line pressure (4) leading to the A/T clutch pressure control solenoid valve C. Hydraulic pressure to the 1st clutch from the A/T clutch pressure control solenoid valve A is created as shift solenoid valve A is OFF, B and C stays ON. A/T clutch pressure control solenoid valve A pressure (55) changes to 1st clutch pressure (10) at the shift valve B, and flows to the 1st clutch. The 1st clutch is engaged gently when shifting to the D position from N.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

BACK

Protected by AR

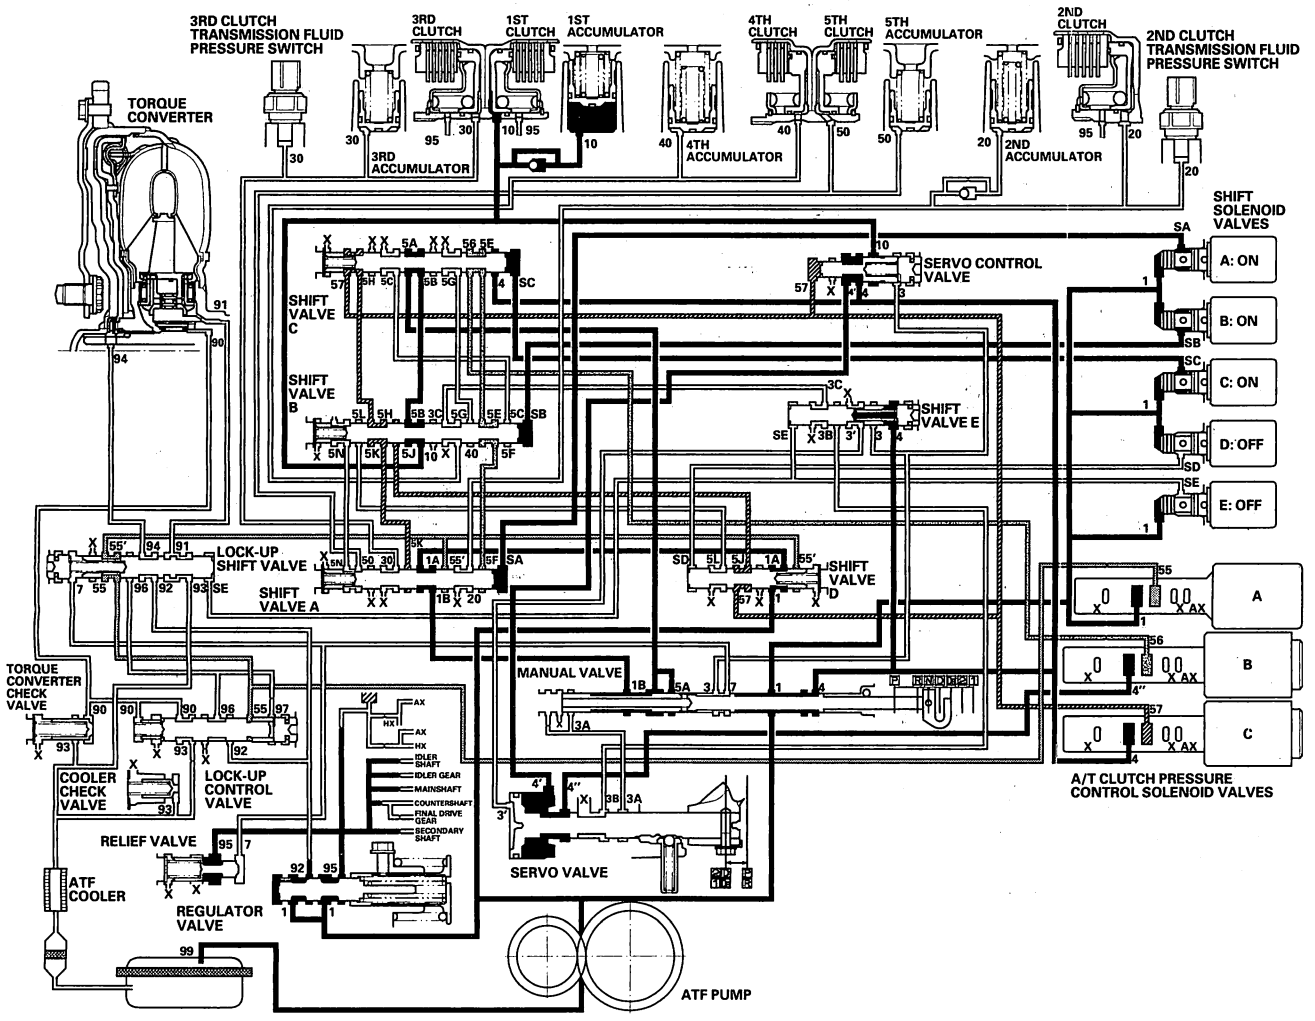
System Description (cont'd)

Hydraulic Flow (cont'd)

D Position: Driving in 1st gear
The PCM turns shift solenoid valve A ON, and B and C stays ON, and D and E OFF. Shift solenoid valve A pressure (SA) is applied to the right side of the shift valve A. Shift valve A is moved to the left side to uncover the line pressure port leading to the 1st clutch, and to cover the A/T clutch pressure control solenoid valve pressure port.

Fluid flows to the 1st clutch by way of:
Line pressure (1) → Shift valve D—Line pressure (1A) → Shift valve A—Line pressure (1B) → Manual valve—Line pressure (5A) → Shift valve C—Line pressure (5B) → Shift valve B—1st clutch pressure (10) → 1st clutch
The 1st clutch pressure (10) is applied to the 1st clutch, and the 1st clutch is engaged securely.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



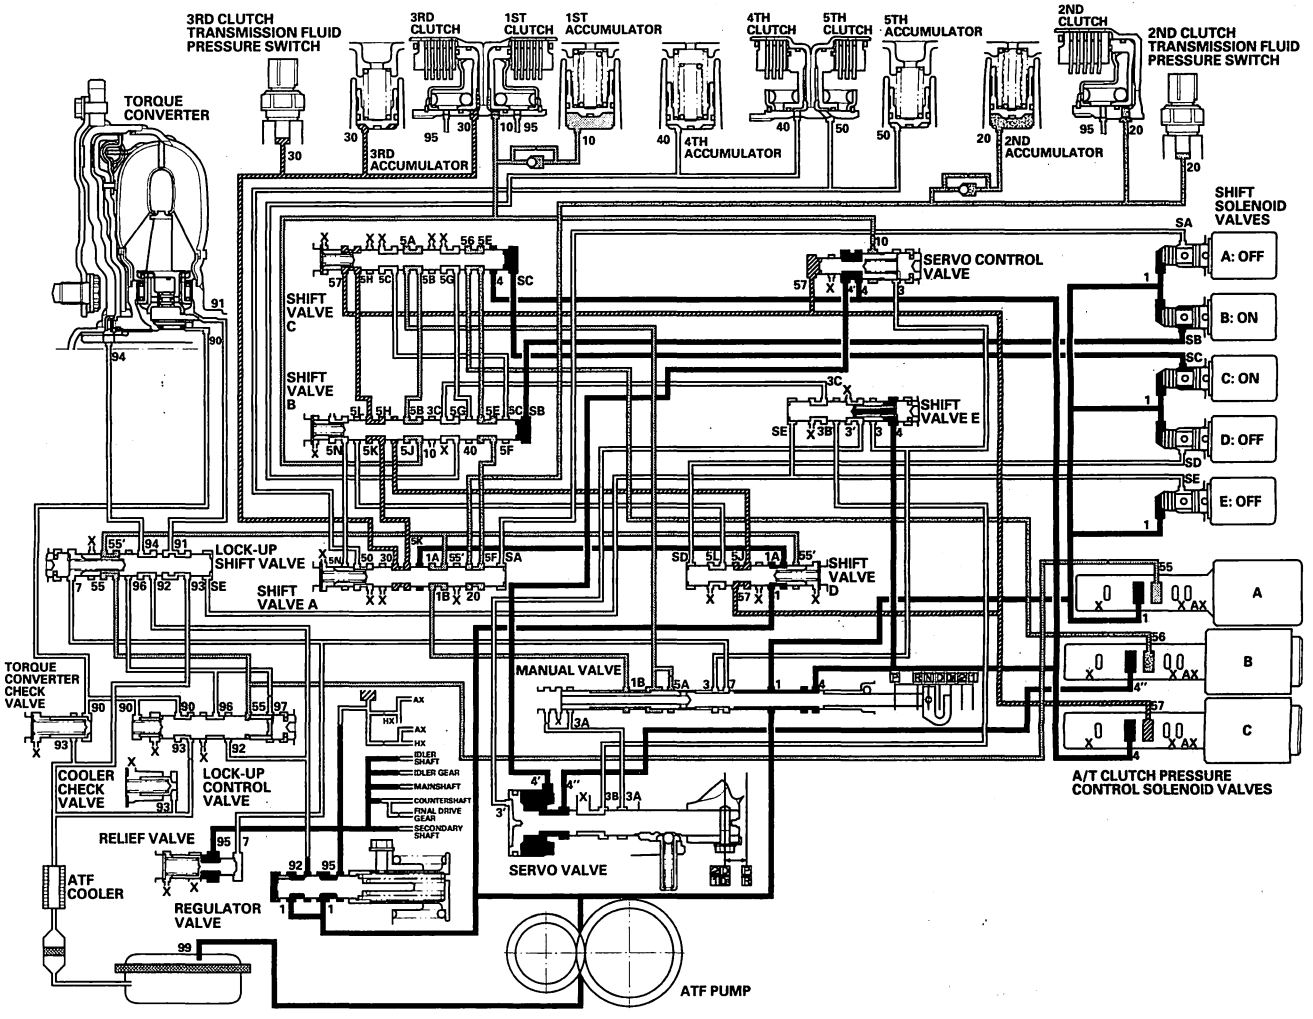
BACK

Protected by AR

D Position: Shifting between 1st gear and 2nd gear

As the speed of the vehicle reaches the prescribed value, the PCM turns shift solenoid valve A OFF, and B and C stays ON, and D and E OFF. Shift solenoid valve A pressure (SA) in the right side of the shift valve A is released. Shift valve A is moved to the right side to uncover the A/T clutch pressure control solenoid valve pressure port leading to the 1st and 2nd clutches. The PCM controls the A/T clutch pressure control solenoid valve to regulate hydraulic pressure. A/T clutch pressure control solenoid valve A pressure (55) changes to 1st clutch pressure (10) at shift valve B, and A/T clutch pressure control solenoid valve B pressure (56) changes to 2nd clutch pressure (20) at shift valve A. The 1st and 2nd clutches are engaged gently.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

BACK

Protected by AR

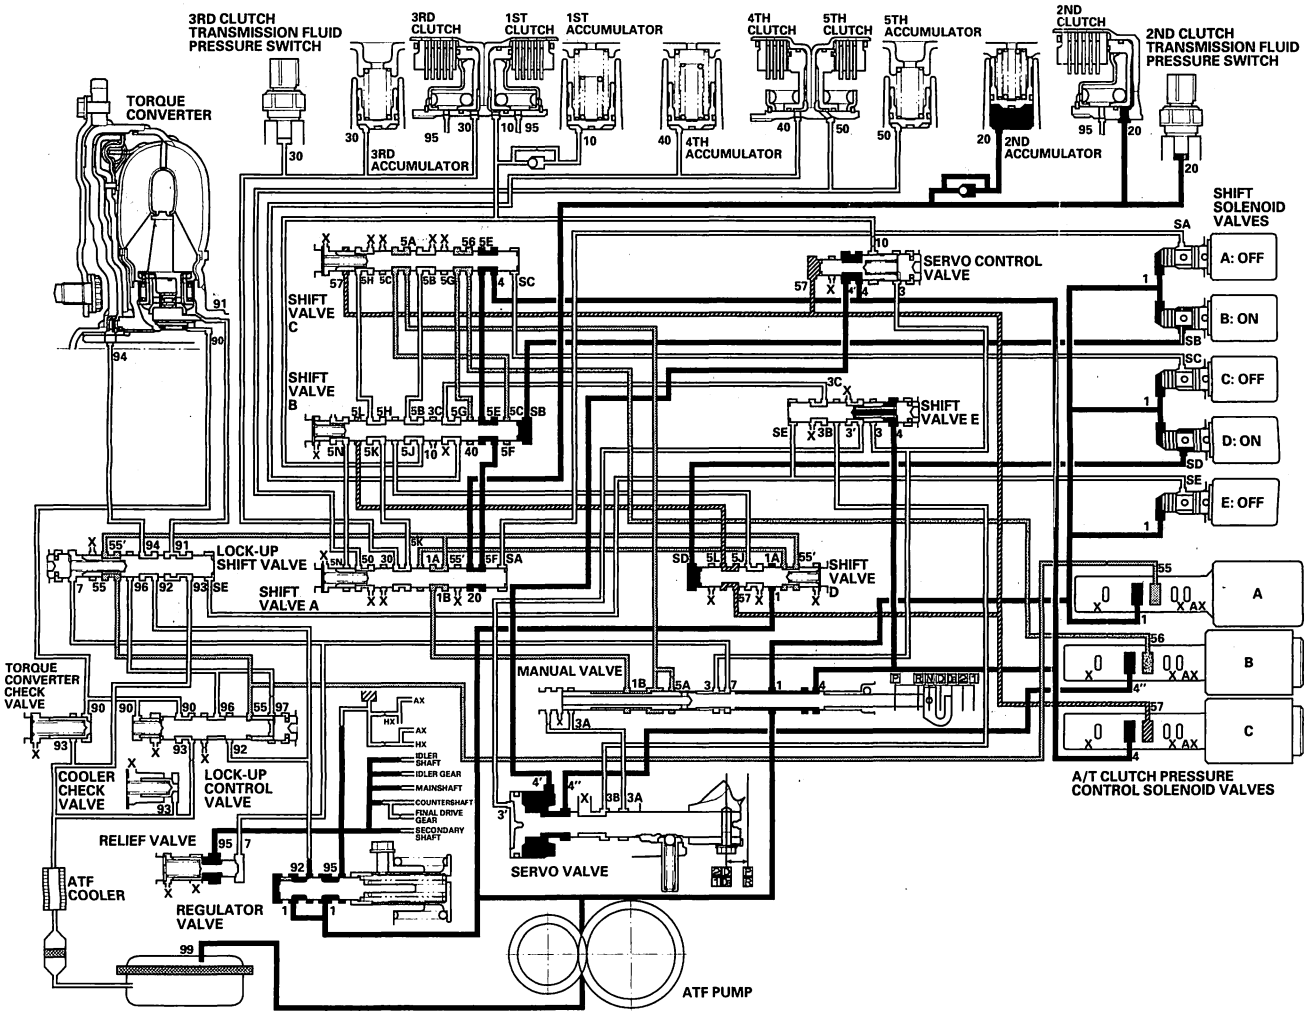
System Description (cont'd)

Hydraulic Flow (cont'd)

D Position: Driving in 2nd gear
The PCM turns shift solenoid valves C OFF, D ON, and A and E stays OFF, and B ON. Shift solenoid valve C pressure (SC) in the right side of the shift valve C is released. Shift valve C is moved to the right side to switch the ports. This movement covers the A/T clutch pressure control solenoid valve pressure ports to stop at shift valves C and A, and uncover the line pressure port leading to the 2nd clutch.

Fluid flows to 2nd clutch by way of:
Line pressure (1) → Manual valve—Line pressure (4) → Shift valve C—Line pressure (5E) → Shift valve B—Line pressure (5F) → Shift valve A—2nd clutch pressure (20) → 2nd clutch
The 2nd clutch pressure (20) is applied to the 2nd clutch, and the 2nd clutch is engaged securely.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



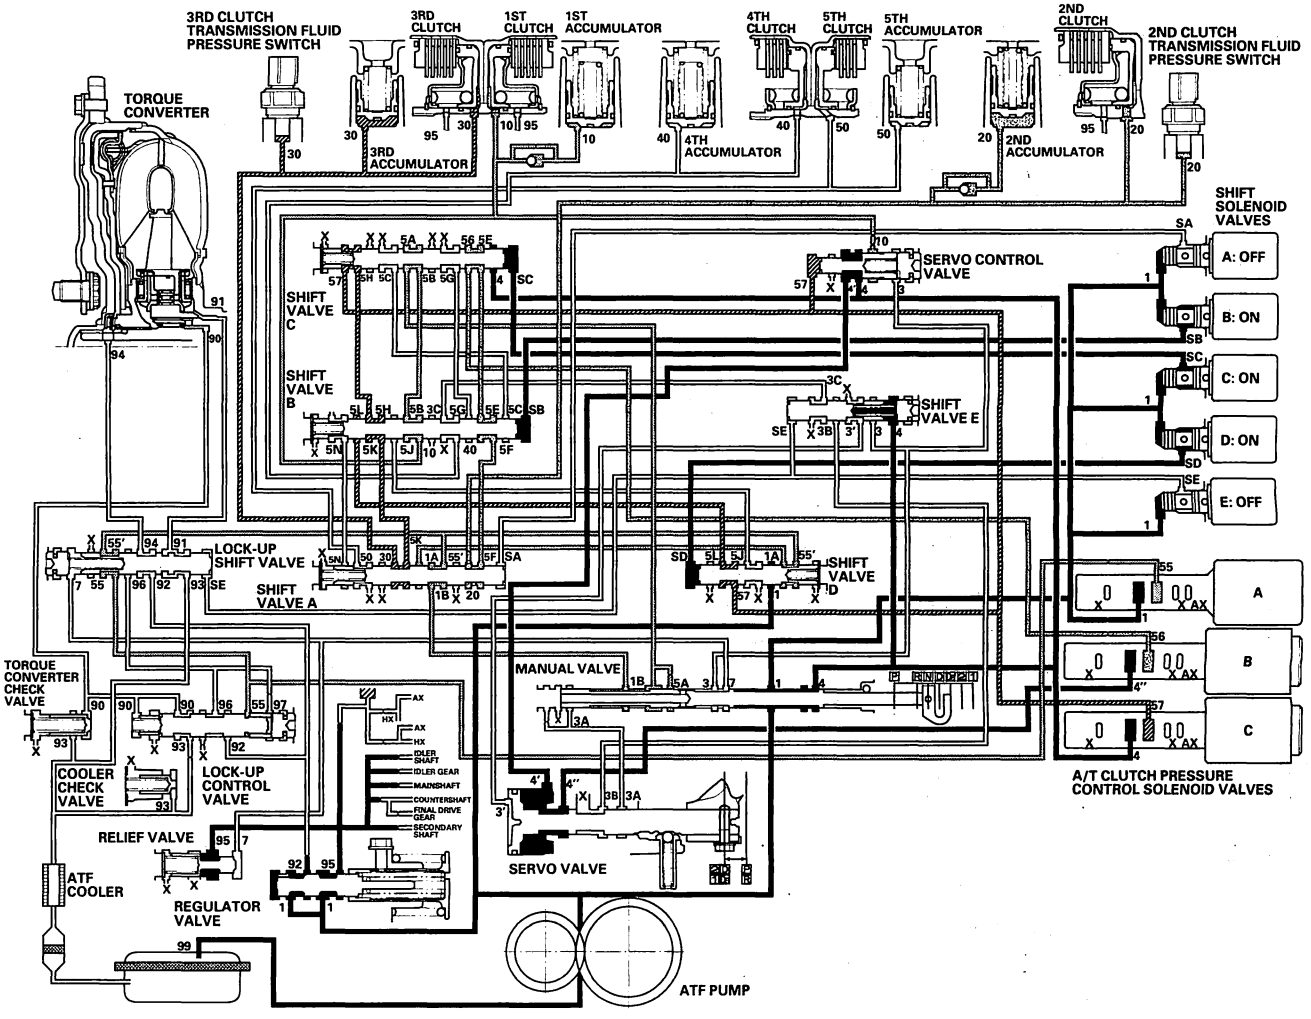
BACK

Protected by AR

D Position: Shifting between 2nd gear and 3rd gear

As the speed of the vehicle reaches the prescribed value, the PCM turns shift solenoid valves C ON, and A and E stays OFF, and B and D ON. Shift solenoid valve C pressure (SC) is applied to the right side of the shift valve C. Shift valve C is moved to the left side to uncover the A/T clutch pressure control solenoid valve pressure ports leading to the 2nd and 3rd clutches. The PCM controls the A/T clutch pressure control solenoid valves to regulate hydraulic pressure. A/T clutch pressure control solenoid valve B pressure (56) changes to 2nd clutch pressure (20) at shift valve A, and A/T clutch pressure control solenoid valve C pressure (57) changes to 3rd clutch pressure (30) at shift valve A. The 2nd and 3rd clutches are engaged gently.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

Protected by AR

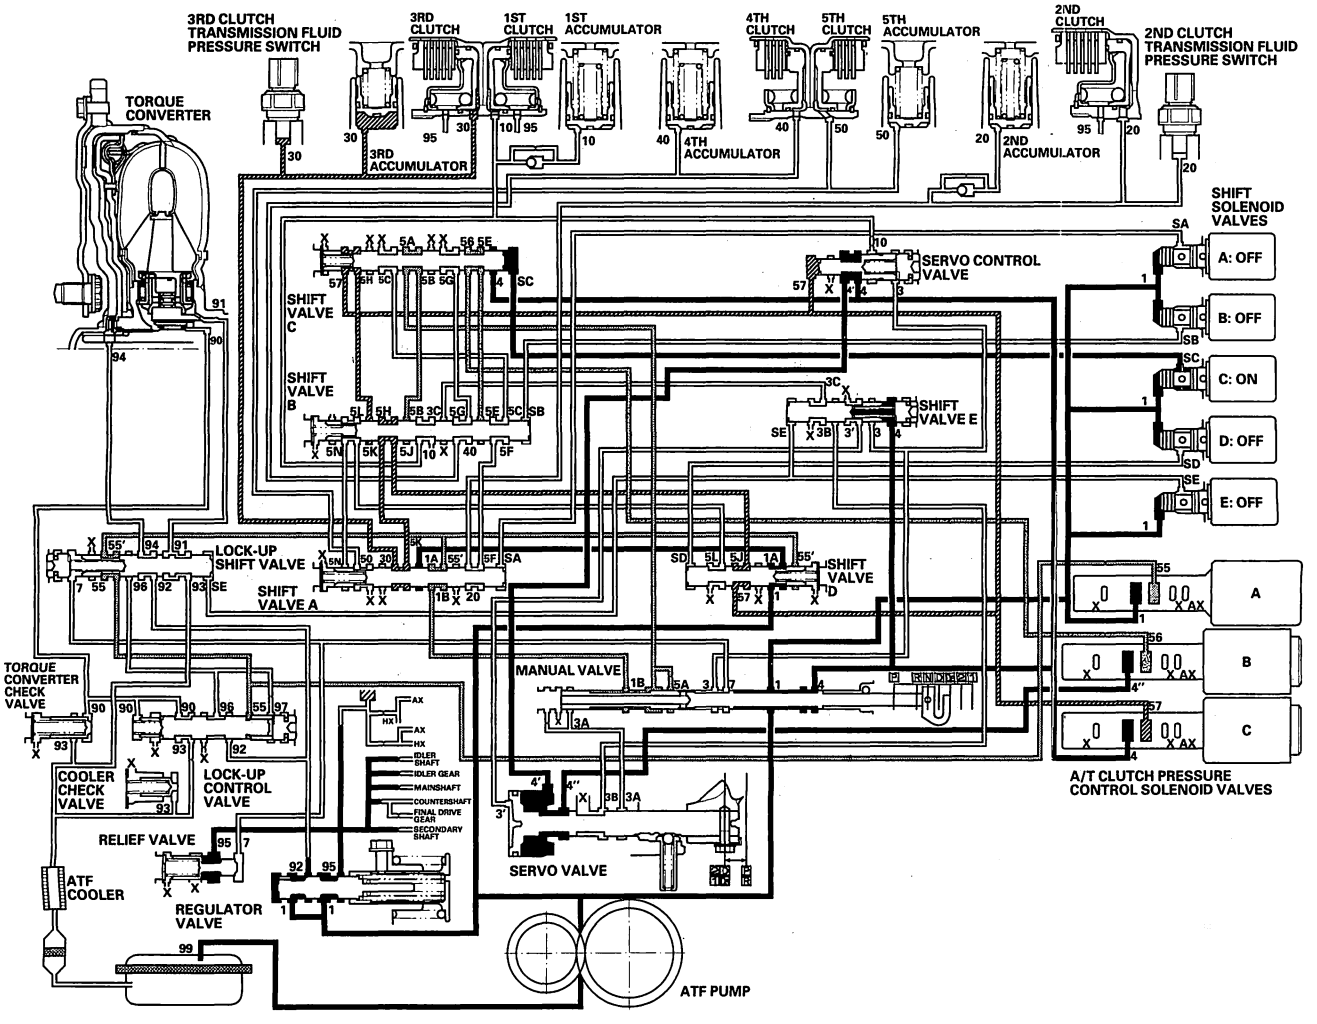
System Description (cont'd)

Hydraulic Flow (cont'd)

D Position: Driving in 3rd gear

The PCM turns shift solenoid valves B and D OFF, and A and E stays OFF, and C ON. Shift solenoid valve B pressure (SB) in the right side of shift valve B is released, and shift valve B is moved to the right side. Shift solenoid valve D pressure (SD) in the left side of the shift valve D is released, and shift valve D is moved to the left side. This valve movement switches the A/T clutch pressure control solenoid valve C pressure port leading to the 3rd clutch.
A/T clutch pressure control solenoid valve C pressure (57) changes to (5J) at shift solenoid valve D and to (5K) at shift valve B, and becomes 3rd clutch pressure (30) at shift valve A. The 3rd clutch pressure (30) is applied to the 3rd clutch, and the 3rd clutch is engaged securely.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



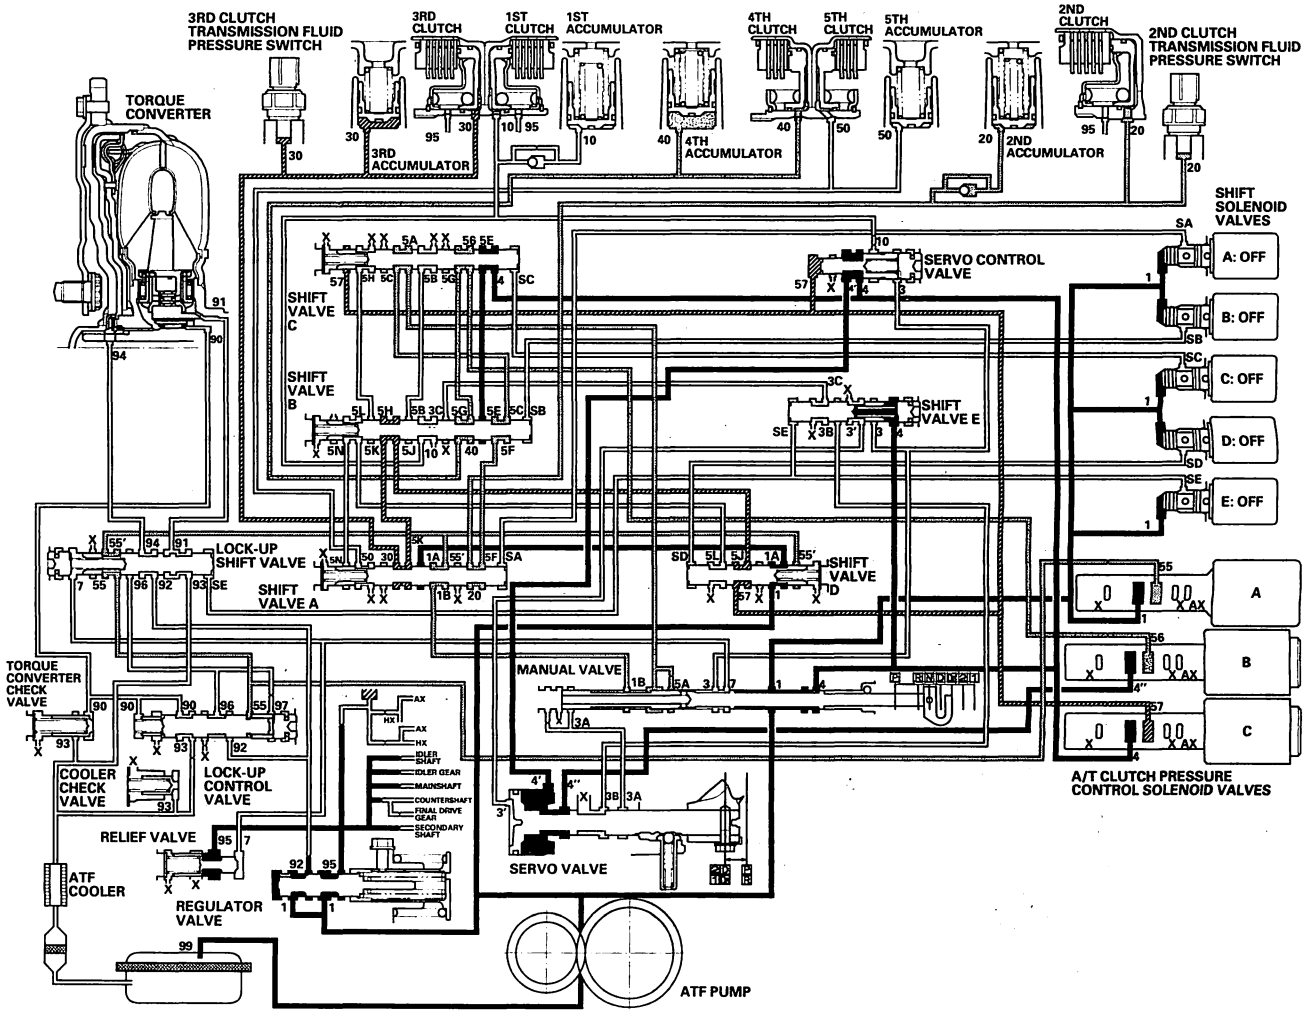
BACK

Protected by AR

D Position: Shifting between 3rd gear and 4th gear

As the speed of the vehicle reaches the prescribed value, the PCM turns shift solenoid valves C OFF, and A, B, D, and E stays OFF. Shift solenoid valve C pressure (SC) in the right side of shift valve C is released. Shift valve C is moved to the right side to uncover the A/T clutch pressure control solenoid valve B and C pressure ports leading to the 3rd and 4th clutches. The PCM controls the A/T clutch pressure control solenoid valves to regulate hydraulic pressure. A/T clutch pressure control solenoid valve C pressure (57) changes to 3rd clutch pressure (30) at shift valve A, and A/T clutch pressure control solenoid valve B pressure (56) changes to 4th clutch pressure (40) at shift valve B. The 3rd and 4th clutches are engaged gently.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

BACK

Protected by AR

System Description (cont'd)

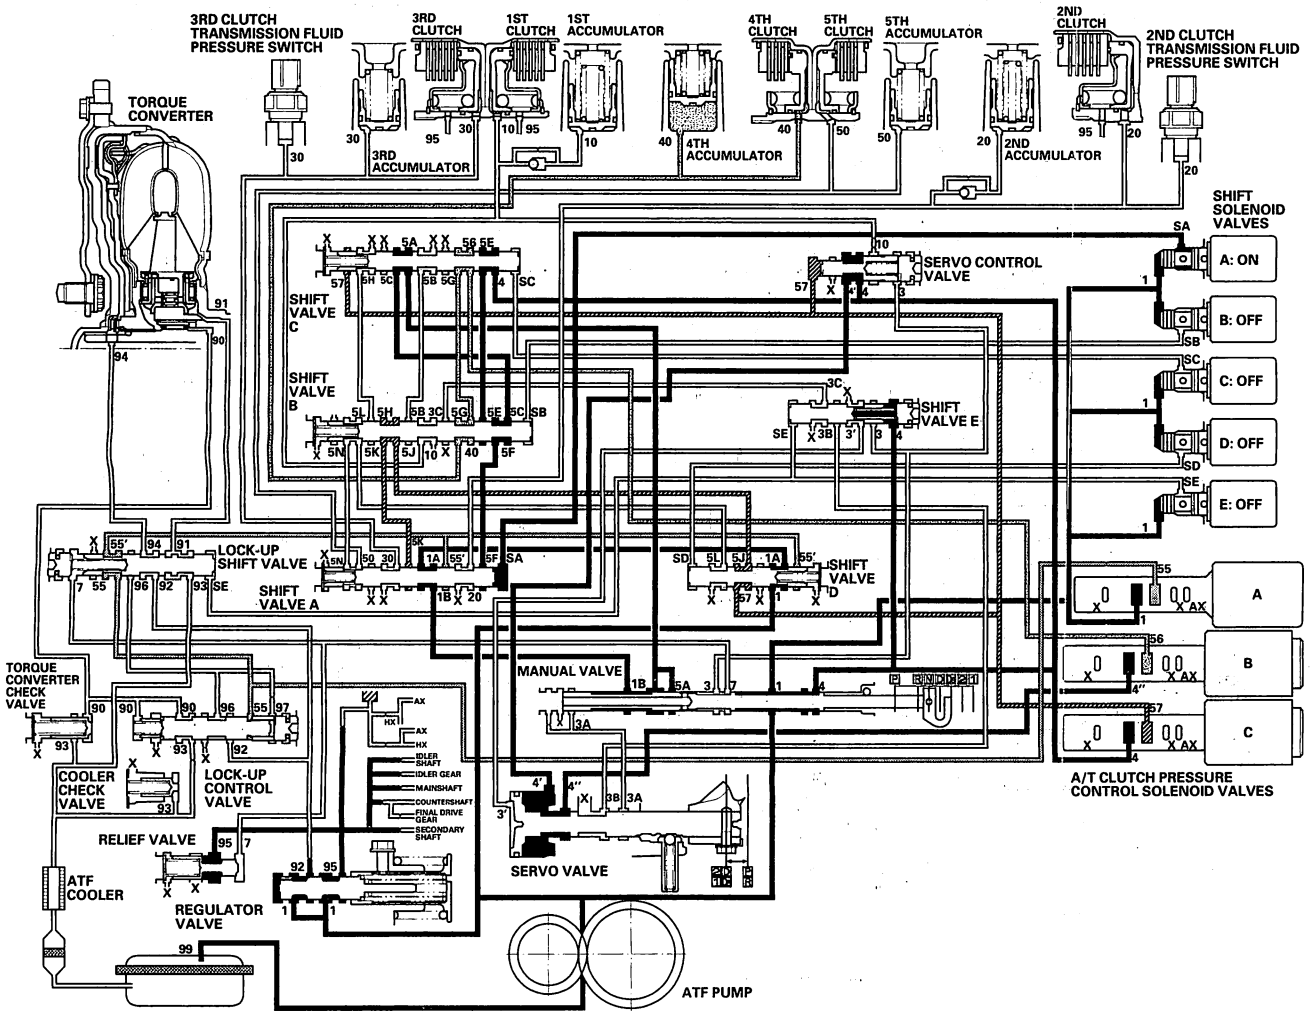
Hydraulic Flow (cont'd)

D Position: Driving in 4th gear

The PCM turns shift solenoid valve A ON, and B, C, D, and E stays OFF. Shift solenoid valve A pressure (SA) is applied to the right side of shift valve A. Shift valve A is moved to the left side to cover the A/T clutch pressure control solenoid valve A and C pressure ports leading to the 2nd and 3rd clutches.

A/T clutch pressure control solenoid valve B pressure (56) changes to (5G) at shift valve C, and becomes 4th clutch pressure (40) at shift valve B. The 4th clutch pressure (40) is held to high by the A/T clutch pressure control solenoid valve B, and the 4th clutch is engaged securely.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



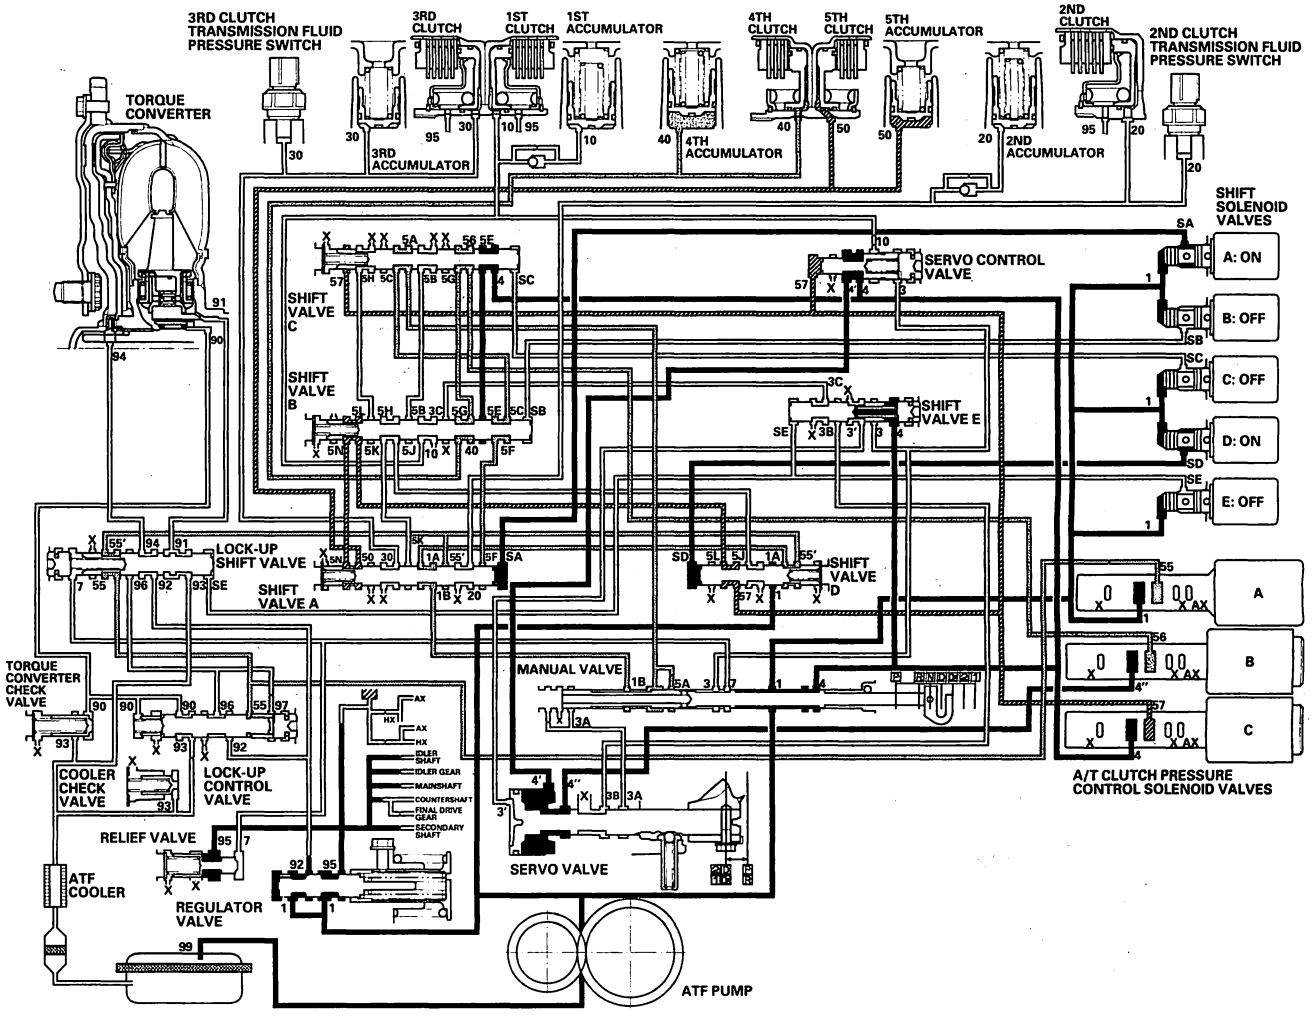
BACK

Protected by AR

D Position: Shifting between 4th gear and 5th gear

As the speed of the vehicle reaches the prescribed value, the PCM turns shift solenoid valve D ON, and A stays ON, and B, C, and E OFF. Shift solenoid valve D pressure (SD) is applied to the left side of the shift valve D. Shift valve D is moved to the right side to uncover the A/T clutch pressure control solenoid valve C pressure port leading to the 5th clutch. A/T clutch pressure control solenoid valve B pressure (56) changes to 4th clutch pressure (40) at shift valve B. A/T clutch pressure control solenoid valve C pressure (57) changes to (5L) at shift valve D and to (5N) at shift valve B, and becomes 5th clutch pressure (50) at shift valve A. The 4th and 5th clutches are engaged gently.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

Protected by AR

System Description (cont'd)

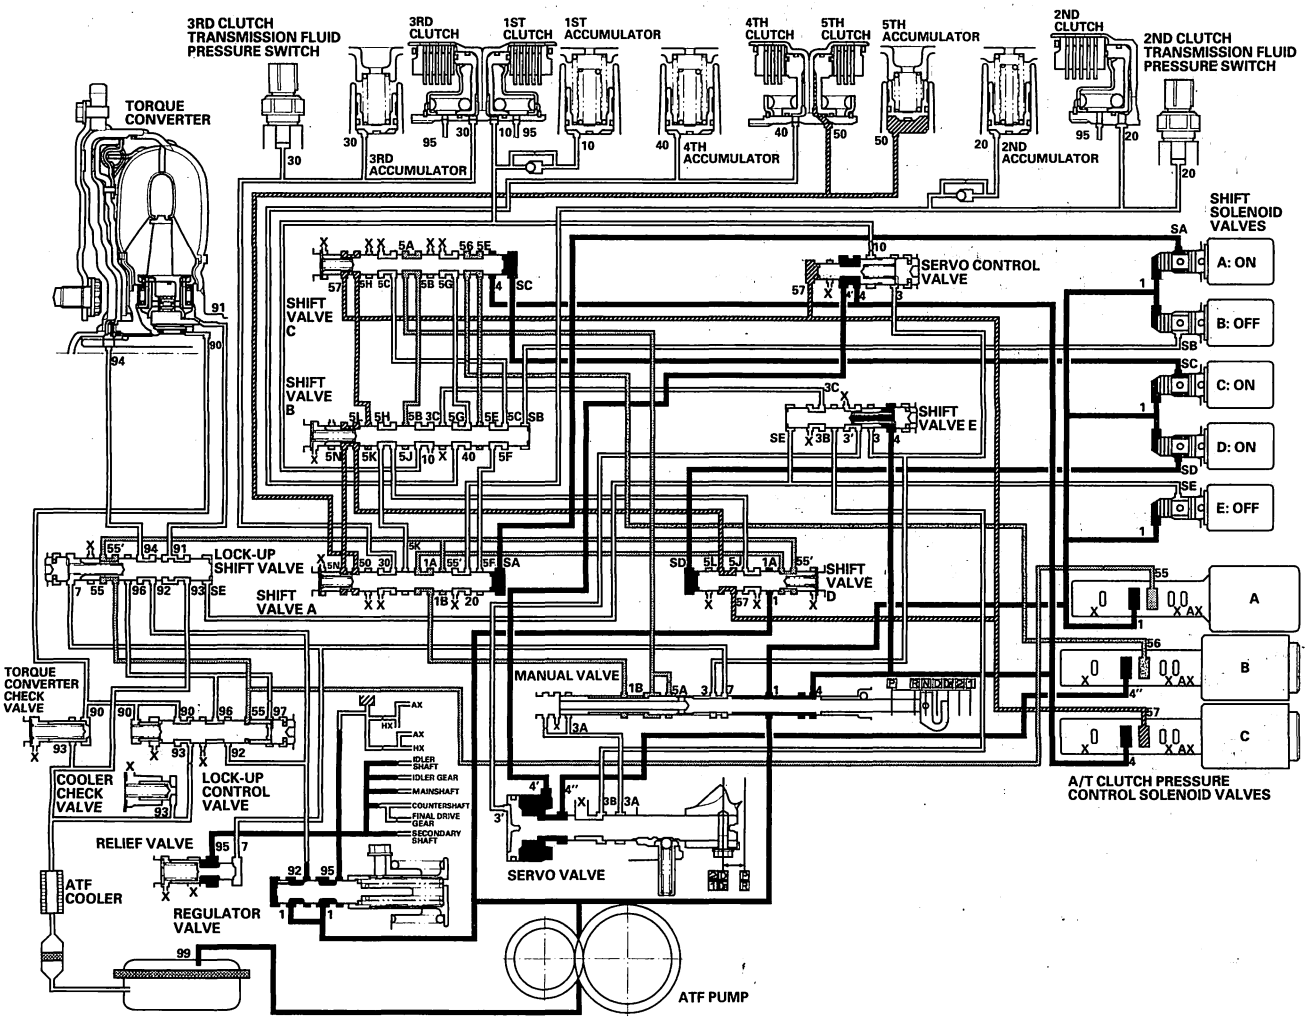
Hydraulic Flow (cont'd)

D Position: Driving in 5th gear

The PCM turns shift solenoid valve C ON, and A and D stays ON, and B and E turned OFF. Shift solenoid valve C pressure (SC) is applied to the right side of shift valve C. Shift valve C is moved to the left side to switch the A/T clutch pressure control solenoid valve B pressure port leading to the 4th clutch.

The 5th clutch pressure (50) is held to high by the A/T clutch pressure control solenoid valve C, and the 5th clutch is engaged securely.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



BACK

Protected by AR

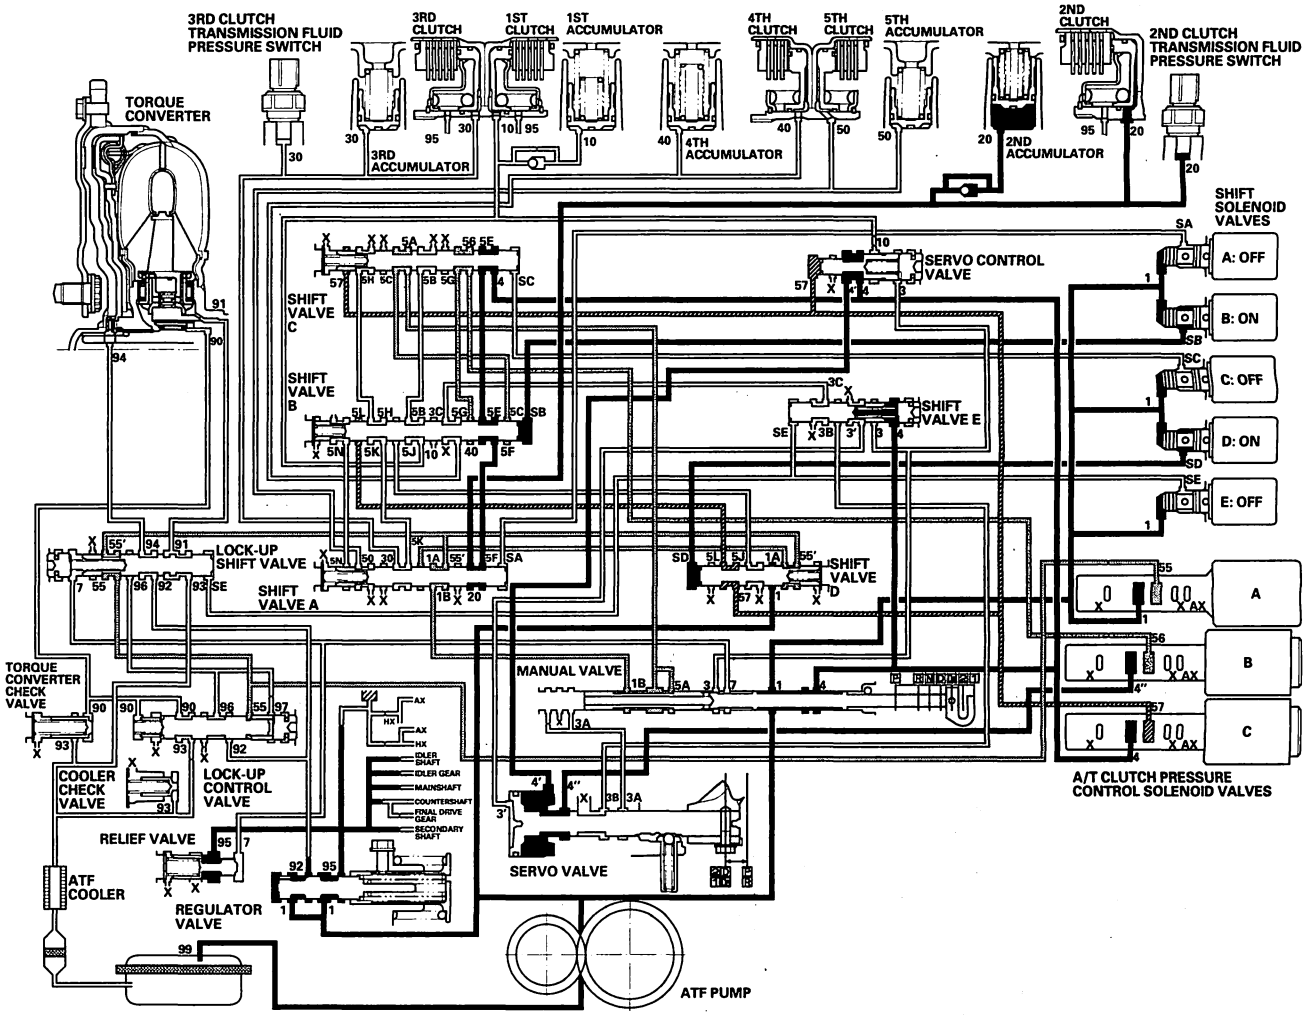
2 Position

The PCM controls the shift solenoid valves. The conditions of the shift solenoid valves and positions of the shift valves are as follows:

- Shift solenoid valve A: OFF, and shift valve A stays on the in right side
- Shift solenoid valve B: ON, and shift valve B moves to the left side
- Shift solenoid valve C: OFF, and shift valve C stays on the in right side
- Shift solenoid valve D: ON, and shift valve D moves to the right side
- Shift solenoid valve E: OFF, and shift valve E stays on the in left side

Line pressure (1) changes to line pressure (4) at the manual valve, and flows to shift valve C. Line pressure (4) flows to shift valve A via shift valve B, and becomes the 2nd clutch pressure (20). The 2nd clutch pressure (20) is applied to the 2nd clutch, and the 2nd clutch is engaged.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

BACK

Protected by AR

System Description (cont'd)

Hydraulic Flow (cont'd)

1 Position
The PCM controls the shift solenoid valves. The conditions of the shift solenoid valves and positions of the shift valves are as follows:

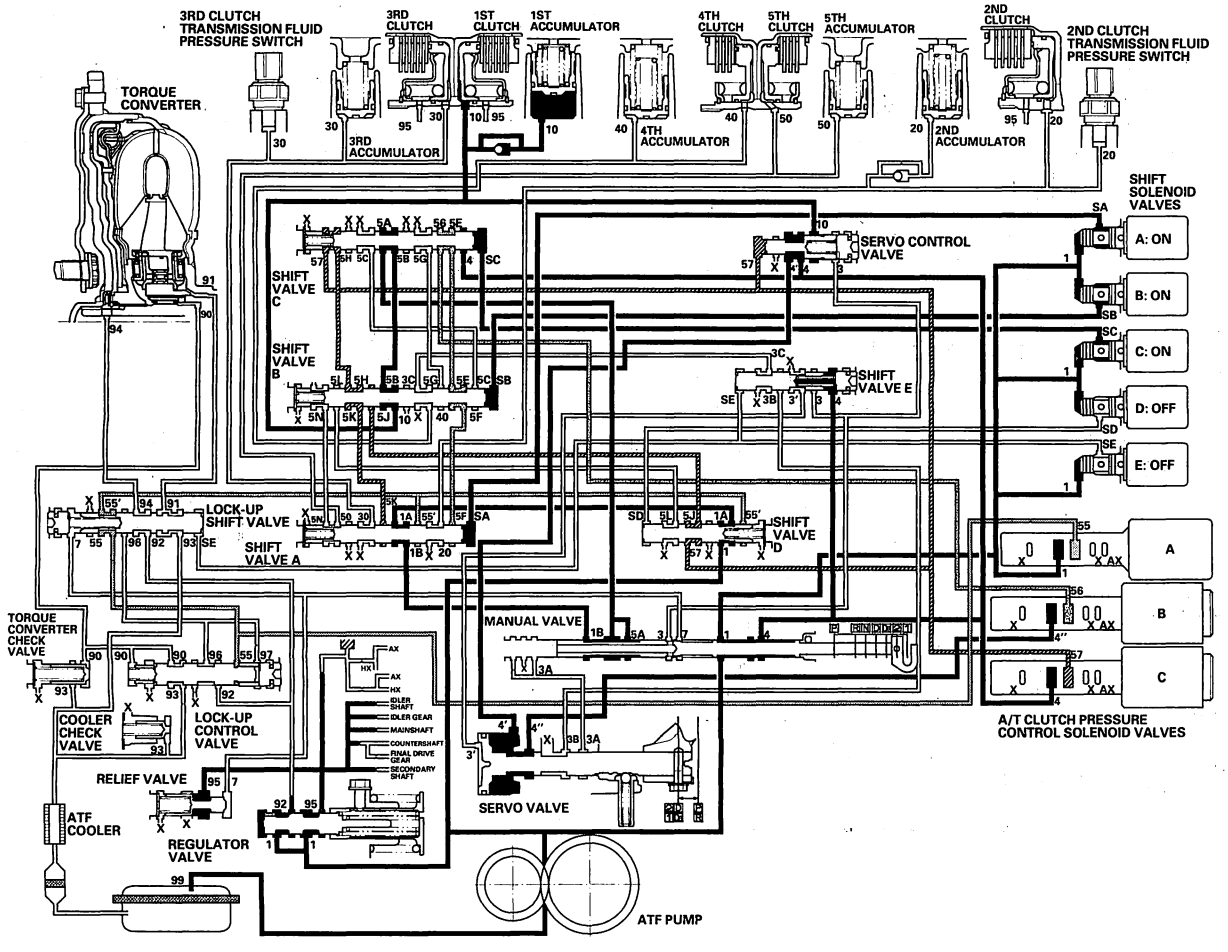
- Shift solenoid valve A: ON, and shift valve A moves to the left side
- Shift solenoid valve B: ON, and shift valve B moves to the left side
- Shift solenoid valve C: ON, and shift valve C moves to the left side
- Shift solenoid valve D: OFF, and shift valve D stays on the in left side
- Shift solenoid valve E: OFF, and shift valve E stays on the in left side

Line pressure (1) becomes the 1st clutch pressure (10) at the shift valve B.

Fluid flows to 1st clutch by way of:
Line Pressure (1) → Shift Valve D — Line Pressure (1A) → Shift Valve A — Line Pressure (1B) → Manual Valve — Line Pressure (5A) → Shift Valve C — Line Pressure (5B) → Shift Valve B — 1st Clutch Pressure (10) → 1st Clutch

The 1st clutch pressure (10) is applied to the 1st clutch, and the 1st clutch is engaged.

When used, "left" or "right" indicates direction on the hydraulic circuit.



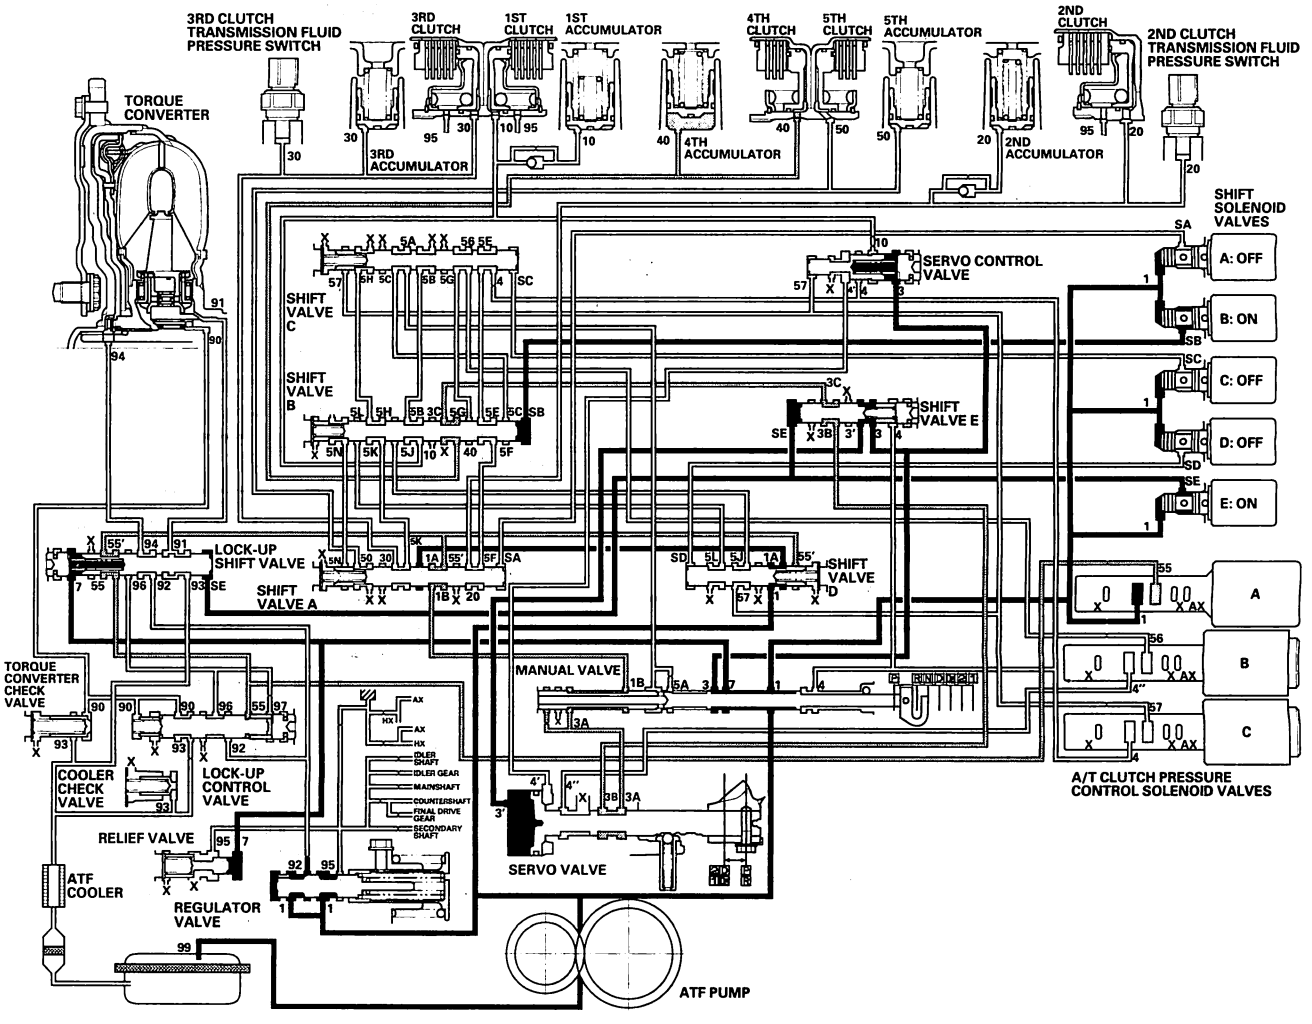
BACK

Protected by AR

R Position: Shifting to R position from P or N position

When shifting in the R position, the PCM turns shift solenoid valves B and E ON, and A, C, and D OFF. Shift solenoid valve B pressure (SB) is applied to the right side of shift valve B, and shift valve B is moved to left side. Shift solenoid valve E pressure (SE) is applied to the left side of shift valve E, and shift valve E is moved to the right side. Line pressure (1) changes to (3) at the manual valve, and flows to the servo valve via shift valve E. The servo valve is moved to reverse range position. Movement of shift valves B and E, and servo valve creates 4th clutch pressure line between the 4th clutch and the A/T clutch pressure control solenoid valve A. The 4th clutch pressure (40) is applied to the 4th clutch, and the 4th clutch is engaged gently.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

Protected by AR

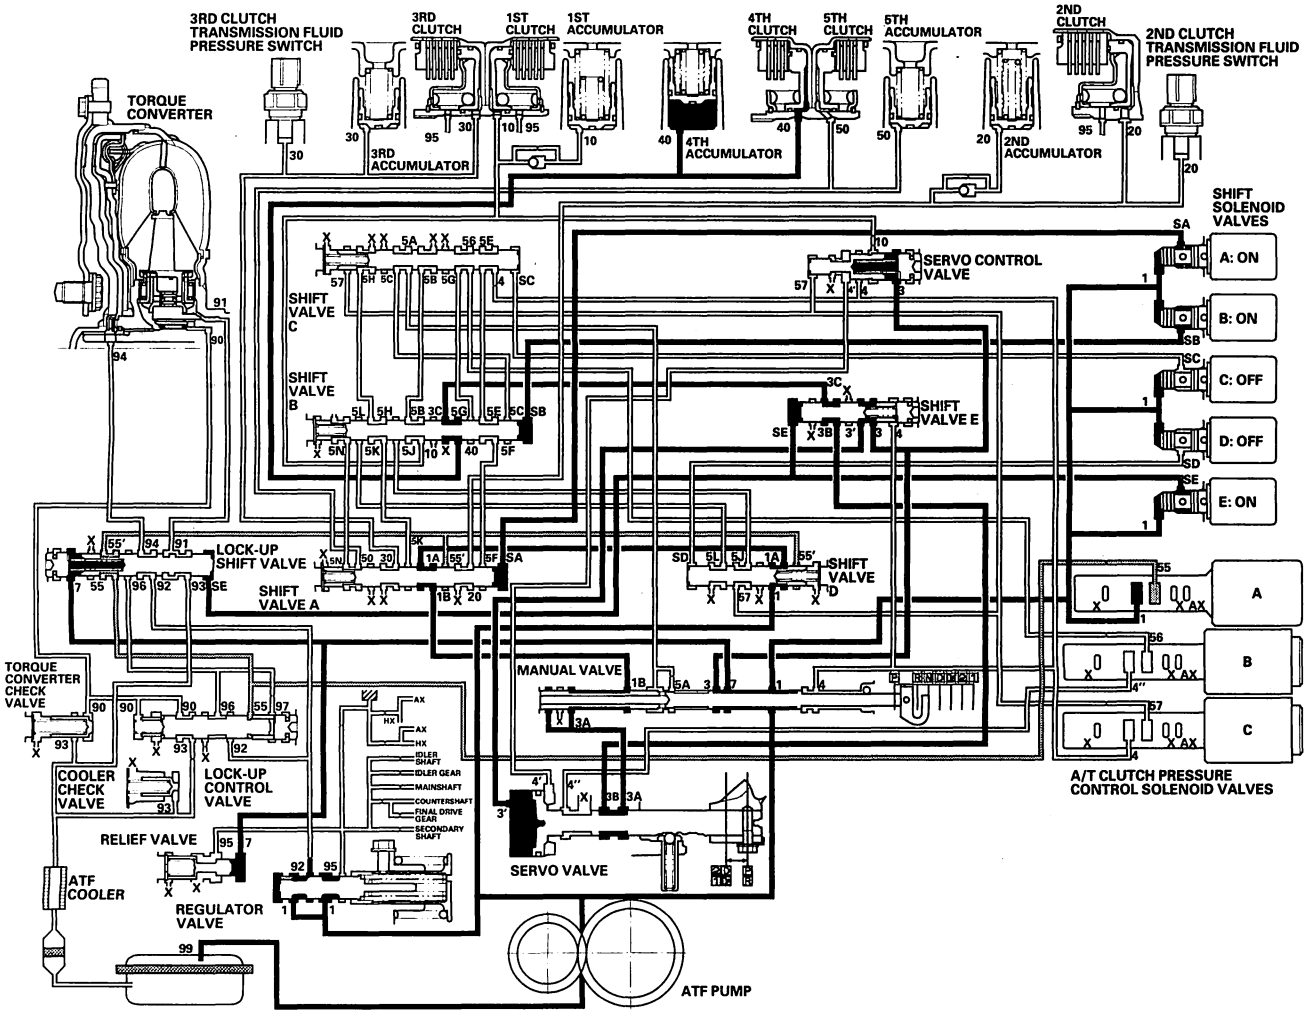
System Description (cont'd)

Hydraulic Flow (cont'd)

R Position: Driving in reverse gear
After starting off in reverse gear, the PCM turns shift solenoid valve A ON, and B and E stays ON, and C and D OFF. Shift solenoid valve A pressure (SA) is applied to the right side of shift valve A to cover the A/T clutch pressure control solenoid valve A pressure port, and to uncover the line pressure port leading to the 4th clutch creating full line pressure. The 4th clutch is engaged securely with line pressure.

Reverse Inhibitor Control
While the vehicle is moving forward, the PCM keeps shift solenoid valve E remaining OFF. Shift valve E covers the port of line pressure (3') leading to the servo valve reverse position. The servo valve cannot be shifted to reverse position, and hydraulic pressure is not applied to the 4th clutch from servo valve for reverse; as a result, power is not transmitted to the reverse direction.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.

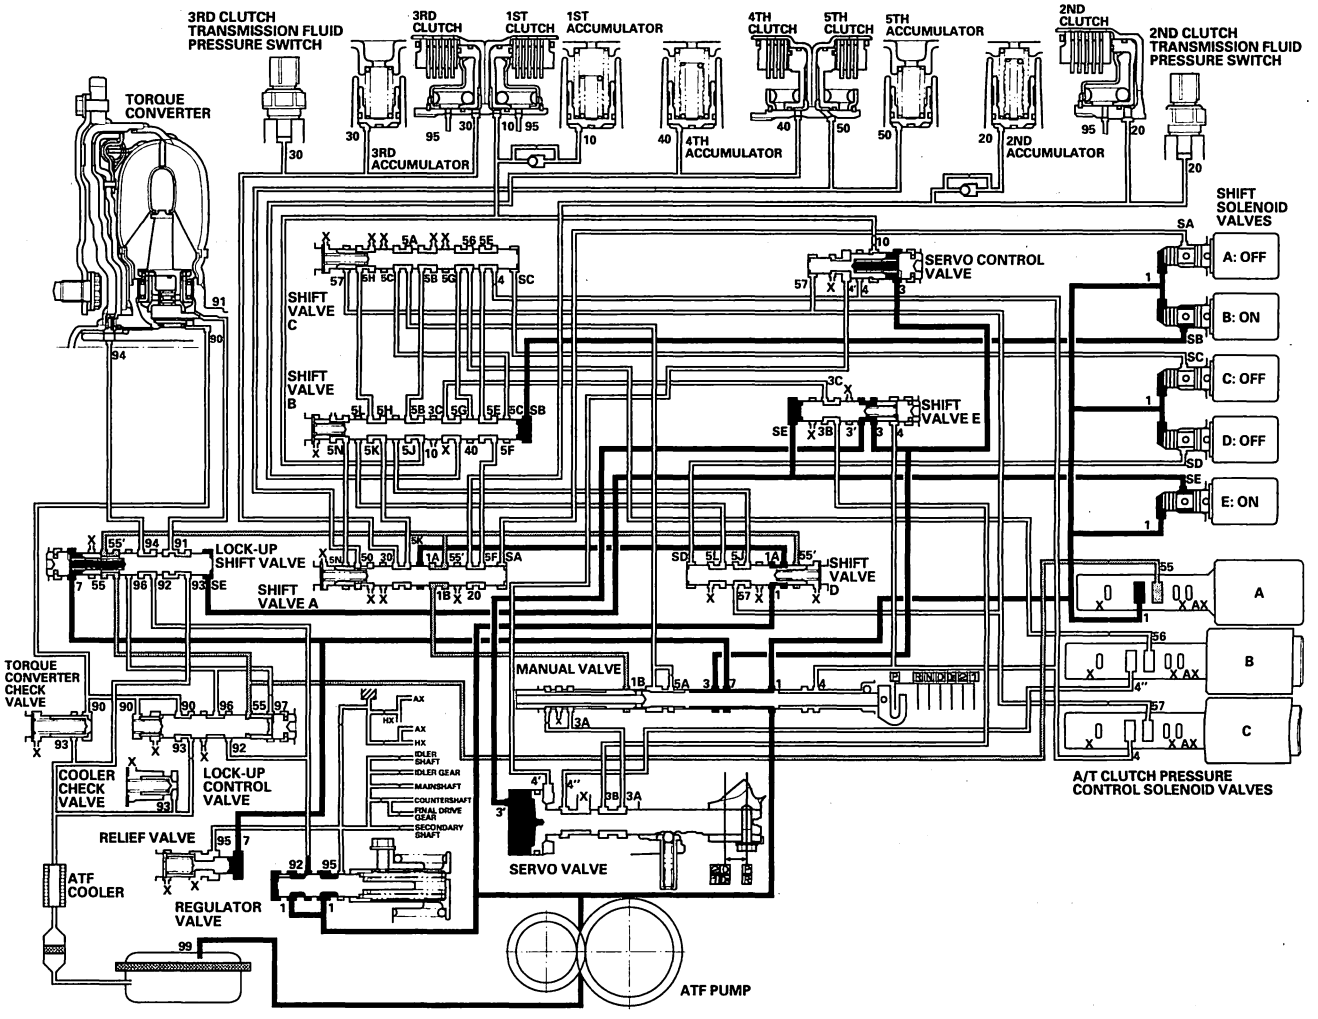


BACK

Protected by AR

P Position

Shift solenoid valves B and E are turned ON, and A, C, and D OFF by the PCM. Line pressure (1) flows to the shift solenoid valves and the A/T clutch pressure control solenoid valve A. Line pressure (3) changes to (3') at shift valve E, and flows to the servo valve. The servo valve is moved to reverse/park position. Hydraulic pressure is not applied to the clutches.



Protected by AR

System Description (cont'd)

Lock-up System

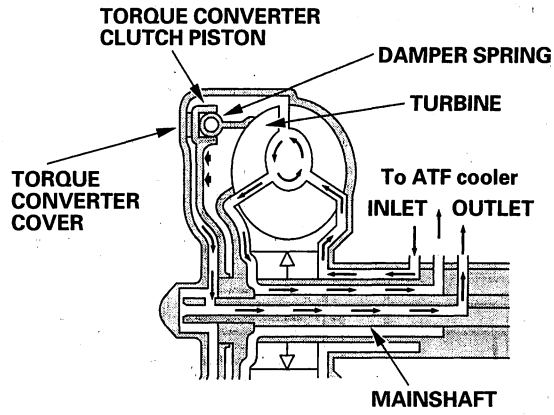
The lock-up mechanism of the torque converter clutch operates in D position (2nd, 3rd, 4th, and 5th), and in D3 position (2nd and 3rd). The pressurized fluid is drained from the back of the torque converter through a fluid passage, causing the torque converter clutch piston to be held against the torque converter cover. As this takes place, the mainshaft rotates at the same speed as the engine crankshaft. Together with the hydraulic control, the PCM optimizes the timing and volume of the lock-up mechanism. When the shift solenoid valve E is turned on by the PCM, shift solenoid valve E pressure switches the lock-up shift valve lock-up on and off. A/T clutch pressure control solenoid valve A and the lock-up control valve control the amount of the lock-up conditions.

Torque Converter Clutch Lock-up ON (Engaging Torque Converter Clutch)
Fluid in the chamber between the torque converter cover and the torque converter clutch piston is drained off, and fluid entering from the chamber between the pump and stator exerts pressure through the torque converter clutch piston against the torque converter cover. The torque converter clutch piston engages with the torque converter cover; the torque converter clutch lock-up is ON, and the mainshaft rotates at the same speed as the engine.

Power flow

The power flows by way of:

Engine
↓
Drive plate
↓
Torque converter cover
↓
Torque converter clutch piston
↓
Damper spring
↓
Turbine
↓
Mainshaft



***Torque Converter* Clutch Lock-up OFF (Disengaging Torque Converter Clutch)**
Fluid entered from the chamber between the torque converter cover and the torque converter clutch piston passes through the torque converter and goes out through the chambers between the turbine and the stator, and between the pump and the stator. As a result, the torque converter clutch piston moves away from the torque converter, and the torque converter lock-up clutch is released; torque converter clutch lock-up is OFF.

Power flow

The power flows by way of:

Engine

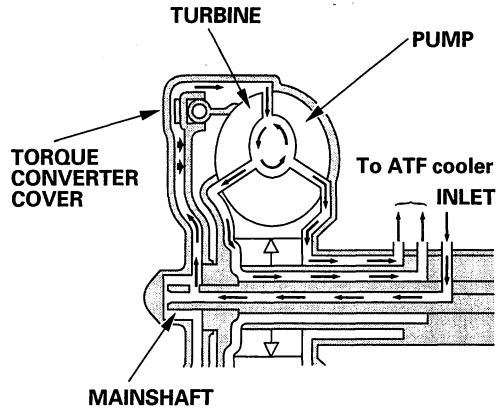
Drive plate
↓
Torque converter cover
↓
Pump
↓
Turbine
↓
Mainshaft



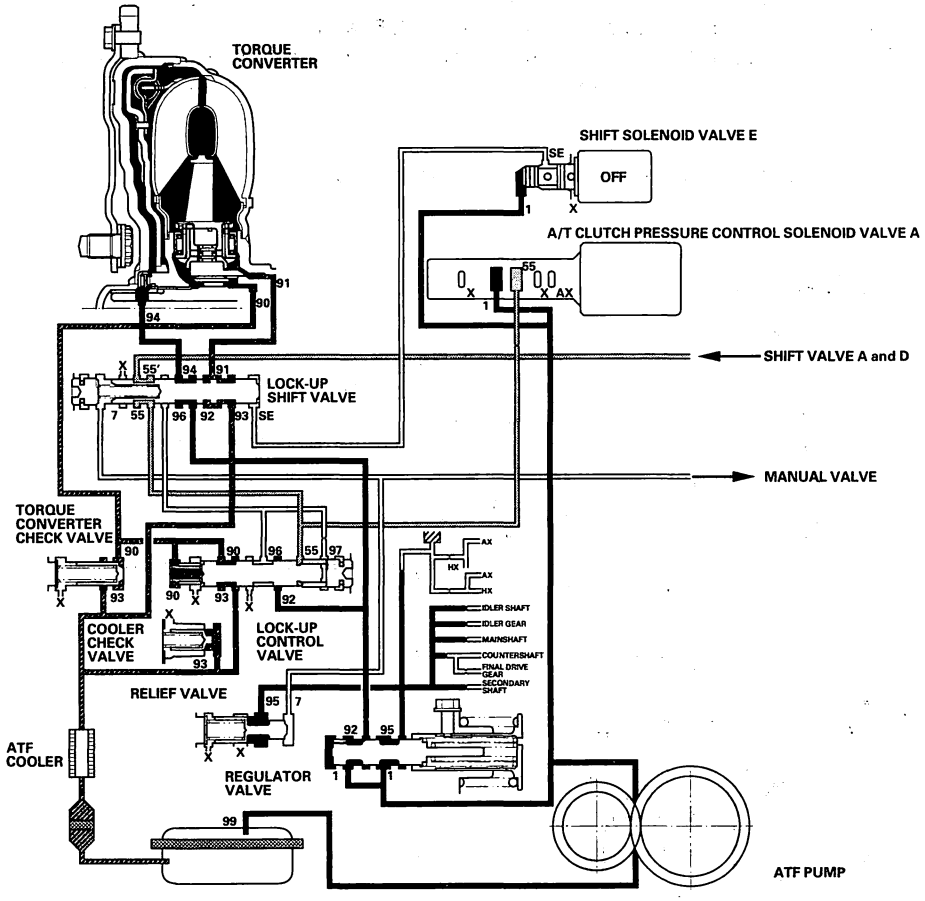
BACK

Protected by AR

No Lock-up

Shift solenoid valve E is turned OFF by the PCM, and shift solenoid valve E pressure (SE) is not applied to the lock-up shift valve. The lock-up shift valve stays to the right to uncover the torque converter pressure ports leading to the left side of the torque converter and releasing pressure from the right side of the torque converter. Torque converter pressure (92) changes to (94) at the lock-up shift valve, and enters into the left side of the torque converter to disengage the torque converter clutch. This keeps the torque converter clutch piston keeps away from the torque converter cover and the torque converter clutch lock-up is OFF.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



(cont'd)

Protected by AR

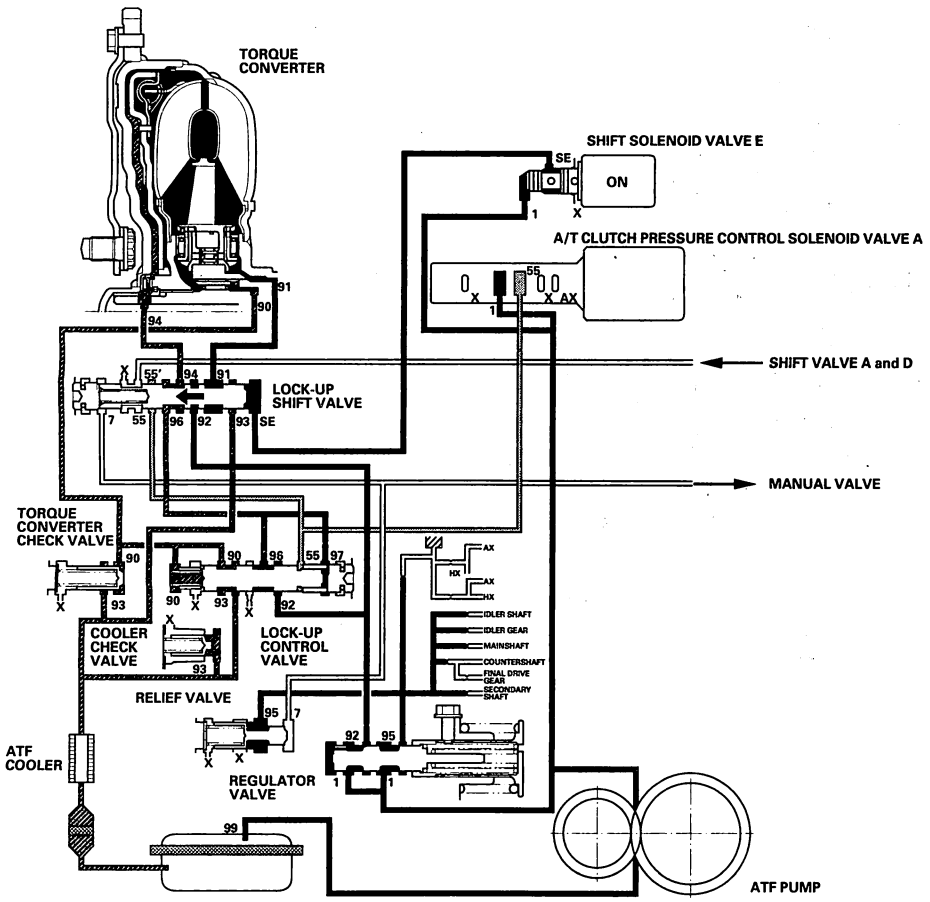
System Description (cont'd)

Lock-up System (cont'd)

Partial Lock-up

As the speed of the vehicle reaches the prescribed value, shift solenoid valve E is turned ON by the PCM, and shift solenoid valve E pressure (SE) is applied to the right side of the lock-up shift valve. The lock-up shift valve is moved to the left side to switch the torque converter pressure (91) port, which goes to the right side of the torque converter, and the port of torque converter pressure (94) is released from the left side of the torque converter. Torque converter pressure (91) flows to the right side of the torque converter to engage the torque converter clutch. The PCM also controls the A/T clutch pressure control solenoid valve A to regulate A/T clutch pressure control solenoid valve A pressure (55) is applied to the lock-up shift valve and lock-up control valve. The position of the lock-up control valve depends on A/T clutch pressure control solenoid valve A pressure (55) and torque converter pressure released from the torque converter. The lock-up control valve controls the amount of torque converter clutch lock-up until fluid between the clutch piston and torque converter cover is fully released; the torque converter clutch is in partial lock-up condition.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.



BACK

Protected by AR

Full Lock-up

When the vehicle speed increases, the PCM sends a signal to A/T clutch pressure control solenoid valve A to increase A/T clutch pressure control solenoid valve A pressure (55), and the lock-up control valve is moved to the left by the increased pressure. Then converter pressure (94) from the left side of the torque converter is completely released at the lock-up control valve, and torque converter pressure (91) engages the torque converter clutch securely; the torque converter clutch is in full lock-up.

NOTE: When used, "left" or "right" indicates direction on the hydraulic circuit.

DTC Troubleshooting

DTC P0705: Short in Transmission Range Switch Circuit (Multiple Shift-position Input)

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine.
3. Move the shift lever through all positions. Stop for at least 1 second in each position, and monitor the OBD status for P0705 in the DTCs/Freeze Data in A/T Mode Menu.

   Does the result indicate FAILED?

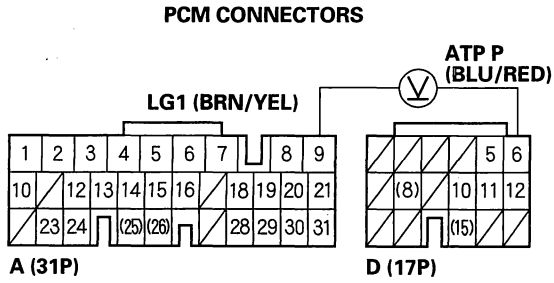
   YES—Go to step 4.

   NO—Intermittent failure, the system is OK at this time. Check for an intermittent short in the wires between the transmission range switch and PCM. If the tester indicates NOT COMPLETED, repeat this step and recheck.■
4. Test the transmission range switch (see page 14-247).

   Is the switch OK?

   YES—Go to step 5.

   NO—Replace the transmission range switch, then go to step 55.
5. Turn the ignition switch ON (II).
6. Shift to all positions other than P.
7. Measure the voltage between PCM connector terminals D6 and A9.



Wire side of female terminals

Is there battery voltage?

YES—Go to step 14.

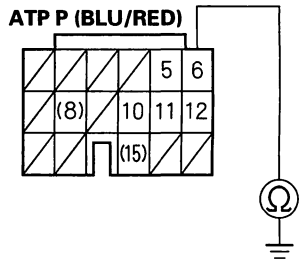
NO—Go to step 8.

BACK

Protected by AR

8. Turn the ignition switch OFF.
9. Jump the SCS line with the HDS.
10. Disconnect PCM connector D (17P).
11. Check for continuity between PCM connector terminal D6 and body ground.

PCM CONNECTOR D (17P)



Wire side of female terminals

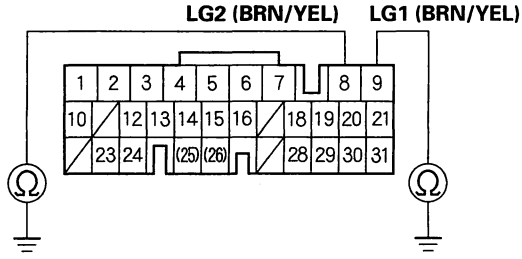
Is there continuity?

YES—Repair short in the wire between PCM connector terminal D6 and the transmission range switch, then go to step 55.

NO—Go to step 12.

12. Disconnect PCM connector A (31P).
13. Check for continuity between PCM connector terminals A8 and body ground, and between A9 and body ground.

PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open in the wire between PCM connector terminals A8, A9, and ground (G101), or repair poor ground (G101), then go to step 55.

(cont'd)

DTC P0706: Open in Transmission Range Switch Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Raise the front of the vehicle, make sure it is securely supported, and allow the front wheels to rotate freely.
3. Start the engine, drive the vehicle in the D position until the vehicle speed reaches 35 mph (56 km/h), then slow down and stop the wheels.
4. Monitor the OBD status for P0706 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 5.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the transmission range switch and PCM. If the tester indicates NOT COMPLETED, return to step 1 and recheck.■
5. Test the transmission range switch (see page 14-247).

   Is the switch OK?

   YES—Inspect the end of the selector control shaft (see step 8 on page 14-248), and go to step 6.

   NO—Replace the transmission range switch, then go to step 24.
6. Install the transmission range switch correctly, and adjust the shift cable (see page 14-241).
7. Clear the DTC with the HDS.
8. Raise the front of the vehicle, make sure it is securely supported, and allow the front wheels to rotate freely.
9. Start the engine, drive the vehicle in the D position until the vehicle speed reaches 35 mph (56 km/h), then slow down and stop the wheels.
10. Monitor the OBD status for P0706 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Go to step 11.

    NO—The problem has been corrected. If the tester indicates NOT COMPLETED, return to step 7 and recheck.■
11. Shift the shift lever into the D position, and verify the ATP FWD and ATP D inputs with the HDS in the A/T data list.

    Is the ATP FWD and ATP D ON?

    YES—Go to step 12.

    NO—Go to step 18.
12. Shift to the D3 position, and verify the ATP FWD and ATP D3 inputs with the HDS in the A/T date list.

    Is the ATP FWD and ATP D3 ON?

    YES—Go to step 13.

    NO—Go to step 18.
13. Shift to the 2 position, and verify the ATP FWD and ATP 2-1 signals with the HDS in the A/T data list.

    Is the ATP FWD and ATP 2-1 ON?

    YES—Go to step 14.

    NO—Go to step 18.

DTC Troubleshooting (cont'd)

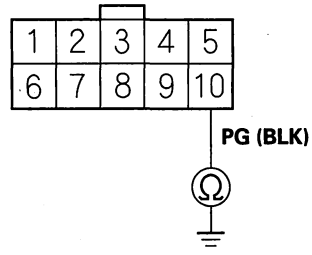
14. Clear the DTC with the HDS, and turn the ignition switch OFF.
15. Raise the front of the vehicle, make sure it is securely supported, and allow the front wheels to rotate freely.
16. Start the engine, drive the vehicle in the D position until the vehicle speed reaches 35 mph (56 km/h), then slow down and stop the wheels.
17. Monitor the OBD status for P0706 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Go to step 18.

    NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the transmission range switch and PCM. If the tester indicates NOT COMPLETED, return to step 14 and recheck.■
18. Turn the ignition switch OFF.
19. Disconnect the transmission range switch connector.
20. Check for continuity between transmission range switch connector terminal No. 10 and body ground.

TRANSMISSION RANGE SWITCH CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 21.

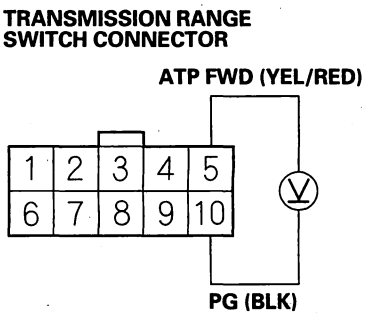
NO—Repair open in the wire between transmission range switch connector terminal No. 10 and ground (G101), or repair poor ground (G101), then go to step 26.

BACK

Protected by AR

21. Turn the ignition switch ON (II).

22. Measure the voltage between transmission range switch connector terminals No. 5 and No. 10.



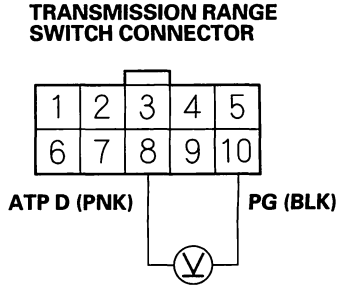
Wire side of female terminals

Is there voltage?

YES—Go to step 23.

NO—Repair open in the wire between the transmission range switch and PCM connector terminal C18, then go to step 26.

23. Measure the voltage between transmission range switch connector terminals No. 8 and No. 10.



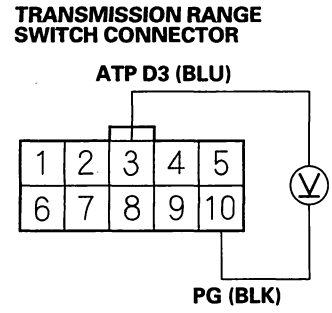
Wire side of female terminals

Is there voltage?

YES—Go to step 24.

NO—Repair open in the wire between the transmission range switch and PCM connector terminal C17, then go to step 26.

24. Measure the voltage between transmission range switch connector terminals No. 3 and No. 10.



Wire side of female terminals

Is there voltage?

YES—Go to step 25.

NO—Repair open in the wire between the transmission range switch and PCM connector terminal C9, then go to step 26.

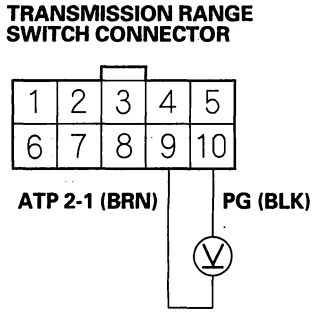
Protected by AR

DTC Troubleshooting (cont'd)

25. Measure the voltage between transmission range switch connector terminals No. 9 and No. 10.



Wire side of female terminals

Is there voltage?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open in the wire between the transmission range switch and PCM connector terminal C11, then go to step 26.

26. Clear the DTC with the HDS.

27. Turn the ignition switch OFF.

28. Raise the front of the vehicle, make sure it is securely supported, and allow the front wheels to rotate freely.

29. Start the engine, drive the vehicle in the D position until the vehicle speed reaches 35 mph (56 km/h), then slow down and stop the wheels.

30. Monitor the OBD status for P0706 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC P0711: Problem in ATF Temperature Sensor Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Check the ATF temperature with the HDS.

   Does the ATF temperature exceed the ambient-air temperature?

   YES—Record the ATF temperature. Leave the engine off for more than 30 minutes, and go to step 2.

   NO—Record the ATF temperature. Test the stall speed RPM (see page 14-188) three times. Go to step 2 after stall speed testing.

2. Check the ATF temperature with the HDS.

   Does the ATF temperature change?

   YES—Leave the engine off for at least 30 more minutes, and go to step 3.

   NO—Replace ATF temperature sensor (see page 14-204), then go to step 5.

3. Check the ECT SENSOR with the HDS.

   Is the ECT SENSOR equal to the ambient-air temperature?

   YES—Go to step 4.

   NO—Leave the engine off until ECT sensor equals ambient-air temperature, then go to step 4.

4. Check the ATF temperature with the HDS.

   Is the ATF temperature almost equal to ECT SENSOR?

   YES—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ATF temperature sensor and PCM. ■

   NO—Replace ATF temperature sensor (see page 14-204), then go to step 5.

5. Clear the DTC with the HDS.

6. Test-drive the vehicle for several minutes in the D position through all five gears.

7. Monitor the OBD status for P0711 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate PASSED?

   YES—Troubleshooting is complete. ■

   NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0712: Short in ATF Temperature Sensor Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Check ATF temperature sensor voltage with the HDS in the A/T data list.

   Is ATF temperature sensor voltage 0.07 V or less?

   YES—Go to step 2.

   NO—Intermittent failure, the system is OK at this time. Check for intermittent short in the wires between the ATF temperature sensor and PCM. ■

2. Disconnect the shift solenoid harness connector at the shift solenoid valve cover.

3. Check ATF temperature sensor voltage with the HDS.

   Is ATF temperature sensor voltage 0.07 V or less?

   YES—Go to step 4.

   NO—Check for a short to ground in the shift solenoid harness wire in the transmission (see page 14-204). If the wire is OK, replace ATF temperature sensor (see page 14-204), then go to step 8.

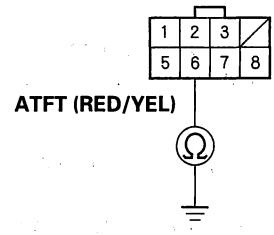
4. Turn the ignition switch OFF.

5. Jump the SCS line with the HDS.

6. Disconnect PCM connector C (22P).

7. Check for continuity between shift solenoid harness connector terminal No. 6 and body ground.

SHIFT SOLENOID HARNESS CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C14 and the shift solenoid harness connector, then go to step 8.

NO—Check for a short to ground in the shift solenoid harness wire in the transmission (see page 14-204). If the wire is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

8. Clear the DTC with the HDS.

9. Test-drive the vehicle for several minutes in the D position through all five gears.

10. Monitor the OBD status for P0712 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 1 and recheck.

DTC P0713: Open in ATF Temperature Sensor Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Check ATF temperature sensor voltage with the HDS in the A/T data list.

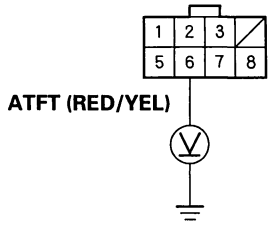
   Does ATF temperature sensor voltage exceed 4.93 V?

   YES—Go to step 2.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ATF temperature sensor and PCM. ■

2. Turn the ignition switch OFF.
3. Disconnect the shift solenoid harness connector.
4. Turn the ignition switch ON (II).
5. Measure the voltage between shift solenoid harness connector terminal No. 6 and body ground.

SHIFT SOLENOID HARNESS CONNECTOR



Wire side of female terminals

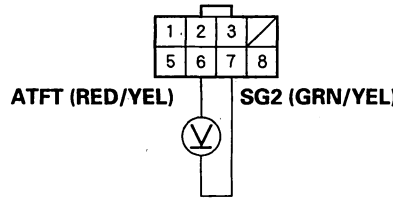
Is there about 5 V?

YES—Go to step 6.

NO—Go to step 7.

6. Measure the voltage between shift solenoid harness connector terminals No. 6 and No. 7.

SHIFT SOLENOID HARNESS CONNECTOR



Wire side of female terminals

Is there about 5 V?

YES—Check the ATF temperature sensor and shift solenoid harness in the transmission housing (see page 14-204). ■

NO—Repair open in the wire between PCM connector terminal A23 and the shift solenoid harness connector, then go to step 8.

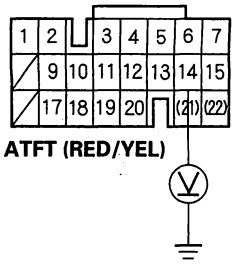
(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

7. Measure the voltage between PCM connector terminal C14 and body ground.

PCM CONNECTOR C (22P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between PCM connector terminal C14 and the shift solenoid harness connector, then go to step 8.

NO—Check for loose or poor connections at PCM connector terminal C14. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, *replace the original* PCM. ■

8. Clear the DTC with the HDS.

9. Test-drive the vehicle for several minutes in the D position through all five gears.

10. Monitor the OBD status for P0713 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC P0716: Problem in Input Shaft (Mainshaft) Speed Sensor Circuit

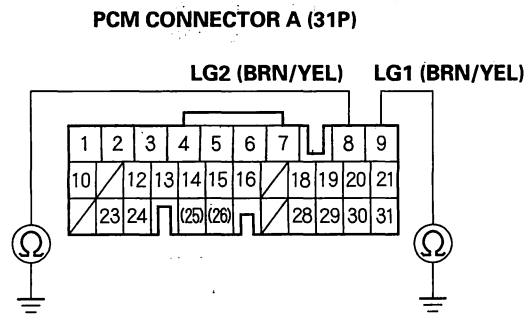
NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check for proper input shaft (mainshaft) speed sensor installation (see page 14-201).
3. Raise the front of the vehicle, make sure it is securely supported, and allow the front wheels to rotate freely.
4. Start the engine, drive the vehicle in the D position, and hold the vehicle at speeds over 30 mph (48 km/h) for more than 10 seconds.
5. Monitor the OBD status for P0716 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for loose or poor connections at the PCM and input shaft (mainshaft) speed sensor connectors. If the tester indicates NOT COMPLETED, return to step 4 and recheck.■
6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect PCM connector A (31P) and input shaft (mainshaft) speed sensor connector.
9. Check for continuity between PCM connector terminals A8 and body ground, and between A9 and body ground.



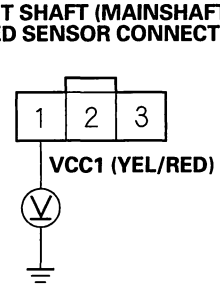
Wire side of female terminals

Is there continuity?

YES—Go to step 10.

NO—Repair open in the wires between PCM connector terminals A8, A9, and ground (G101), or repair poor ground (G101), then go to step 31.

10. Connect PCM connector A (31P).
11. Turn the ignition switch ON (II).
12. Measure the voltage between input shaft (mainshaft) speed sensor connector terminal No. 1 and body ground.



Wire side of female terminals

Is there about 5 V?

YES—Go to step 13.

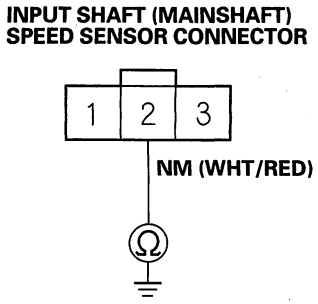
NO—Go to step 25.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. Turn the ignition switch OFF.
14. Disconnect PCM connector C (22P).
15. Check for continuity between input shaft (mainshaft) speed sensor connector terminal No. 2 and body ground.



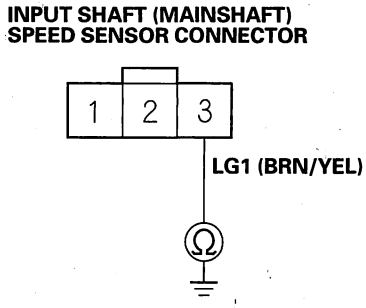
Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C19 and input shaft (mainshaft) speed sensor, then go to step 31.

NO—
- 2003-2004 models: Go to step 16.
- 2005-2006 models: Go to step 17.

16. Check for continuity between input shaft (mainshaft) speed sensor connector terminal No. 3 and body ground.



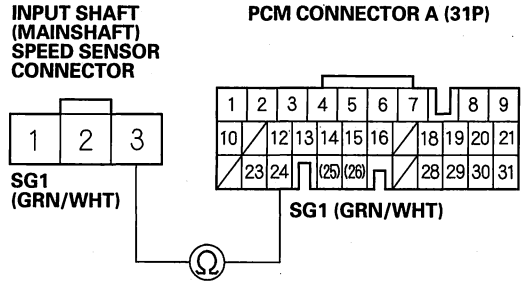
Wire side of female terminals

Is there continuity?

YES—Connect PCM connector C (22P), and go to step 19.

NO—Repair open in the wire between the input shaft (mainshaft) speed sensor and ground (G101), then go to step 31.

17. Disconnect PCM connector A (31P).
18. Check for continuity between input shaft (mainshaft) speed sensor connector terminal No. 3 and PCM connector terminal A24.



Wire side of female terminals

Is there continuity?

YES—Connect PCM connectors A (31P) and C (22P), and go to step 19.

NO—Repair open in the wire between input shaft (mainshaft) speed sensor and PCM connector terminal A24, then go to step 31.

BACK

DTC P0718: Input Shaft (Mainshaft) Speed Sensor Intermittent Failure

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Test-drive the vehicle for several minutes in the D position through all five gears.
3. Monitor the OBD status for P0718 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 4.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the input shaft (mainshaft) speed sensor and PCM. If the tester indicates NOT COMPLETED, return to step 2 and recheck.■
4. Turn the ignition switch OFF.
5. Disconnect the input shaft (mainshaft) speed sensor connector, and inspect the connector and connector terminals to be sure they are making good contact.

   Are the connector terminals OK?

   YES—Go to step 6.

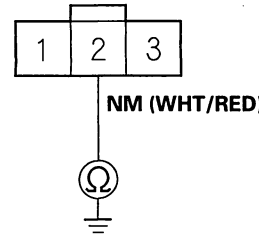
   NO—Repair the connector terminals, then go to step 6.
6. Connect the input shaft (mainshaft) speed sensor connector.
7. Test-drive the vehicle for several minutes, and monitor the OBD status for P0718 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—The problem has been corrected. If the tester indicates NOT COMPLETED, return to step 7 and recheck.■
8. Turn the ignition switch OFF.
9. Jump the SCS line with the HDS.
10. Disconnect PCM connector C (22P).
11. Disconnect the input shaft (mainshaft) speed sensor connector.
12. Check for continuity between input shaft (mainshaft) speed sensor connector terminal No. 2 and body ground.

INPUT SHAFT (MAINSHAFT) SPEED SENSOR CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C19 and the input shaft (mainshaft) speed sensor connector, then go to step 19.

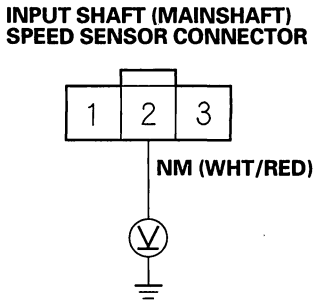
NO—Go to step 13.

(cont'd)

Protected by AR

DTC Troubleshooting (cont'd)

13. Connect PCM connector C (22P).
14. Turn the ignition switch ON (II).
15. Measure the voltage between input shaft (mainshaft) speed sensor connector terminal No. 2 and body ground.



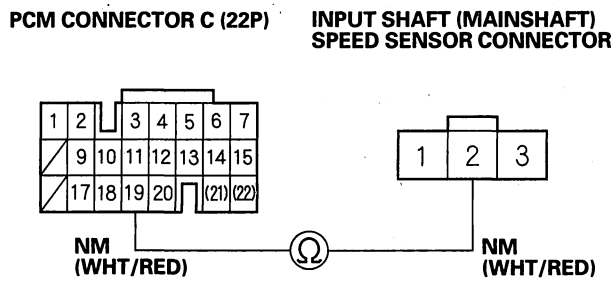
Wire side of female terminals

Is there about 5 V?

YES—Replace the input shaft (mainshaft) speed sensor (see page 14-201), then go to step 19.

NO—Go to step 16.

16. Turn the ignition switch OFF.
17. Disconnect PCM connector C (22P).
18. Check for continuity between PCM connector terminal C19 and input shaft (mainshaft) speed sensor connector terminal No. 2.



Wire side of female terminals

Is there continuity?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open in the wire between PCM connector terminal C19 and the input shaft (mainshaft) speed sensor, then go to step 19.

19. Clear the DTC with the HDS.
20. Test-drive the vehicle for several minutes in the D position through all five gears.
21. Monitor the OBD status for P0718 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC P0721: Problem in Output Shaft (Countershaft) Speed Sensor Circuit

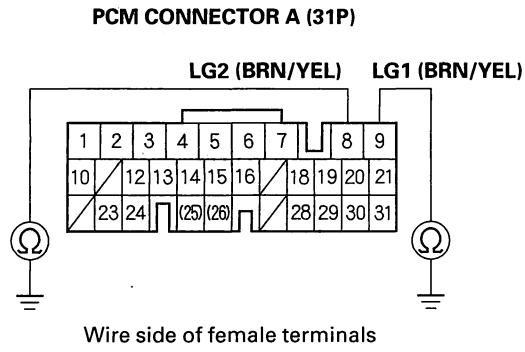
NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Record all freeze data, and clear the DTC with the HDS.
2. Raise the front of the vehicle, make sure it is securely supported, and allow the front wheels to rotate freely.
3. Start the engine, run the vehicle in the D position with engine speed 2,000 rpm or higher for more than 10 seconds. Slow down and stop the wheels.
4. Monitor the OBD status for P0721 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 5.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect PCM connector A (31P) and output shaft (countershaft) speed sensor connector.
8. Check for continuity between PCM connector terminals A8 and body ground, and between A9 and body ground.



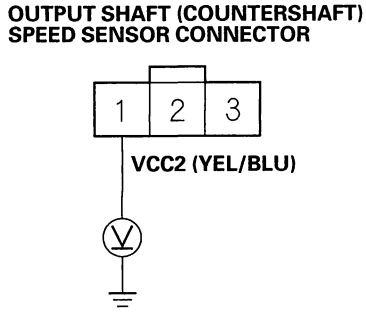
Wire side of female terminals

Is there continuity?

YES—Go to step 9.

NO—Repair open in the wire between PCM connector terminals A8, A9, and ground (G101), or repair poor ground (G101), then go to step 30.

9. Connect PCM connector A (31P).
10. Turn the ignition switch ON (II).
11. Measure the voltage between output shaft (countershaft) speed sensor connector terminal No. 1 and body ground.



Wire side of female terminals

Is there about 5 V?

YES—Go to step 12.

NO—Go to step 24.

(cont'd)

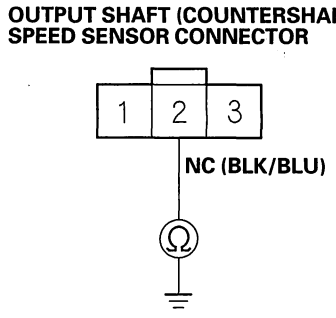
DTC Troubleshooting (cont'd)

12. Turn the ignition switch OFF.
13. Disconnect PCM connector A (31P).
14. Check for continuity between output shaft (countershaft) speed sensor connector terminal No. 2 and body ground.



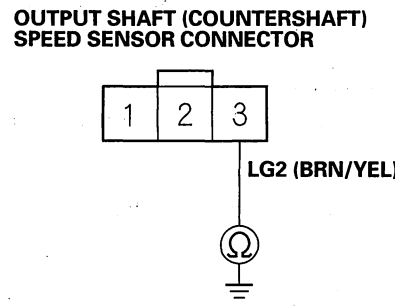
Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal A18 and output shaft (countershaft) speed sensor, then go to step 30.

NO—
- 2003-2004 models: Go to step 15.
- 2005-2006 models: Go to step 16.

15. Check for continuity between output shaft (countershaft) speed sensor connector terminal No. 3 and body ground.



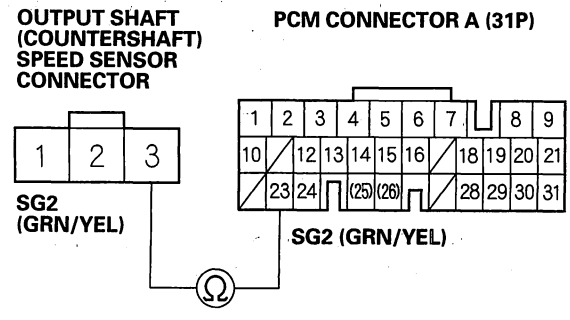
Wire side of female terminals

Is there continuity?

YES—Go to step 17.

NO—Repair open in the wire between the output shaft (countershaft) speed sensor and ground (G101), repair poor ground (G101), then go to step 30.

16. Check for continuity between output shaft (countershaft) speed sensor connector terminal No. 3 and PCM connector terminal A23.



Wire side of female terminals

Is there continuity?

YES—Go to step 17.

NO—Repair open in the wire between the output shaft (countershaft) speed sensor and PCM connector terminal A23, then go to step 30.

BACK

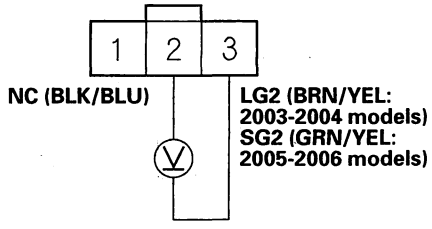
Protected by AR

17. Connect PCM connector A (31P).

18. Turn the ignition switch ON (II).

19. Measure the voltage between output shaft (countershaft) speed sensor connector terminals No. 2 and No. 3.

OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR CONNECTOR



Wire side of female terminals

Is there about 5 V?

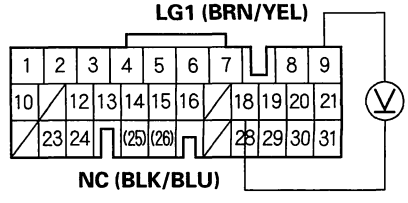
YES—Go to step 20.

NO—Go to step 29.

20. Connect output shaft (countershaft) speed sensor connector.

21. Measure the voltage between PCM connector terminals A18 and A9.

PCM CONNECTOR A (31P)



Wire side of female terminals

Is there 0 V or about 5 V?

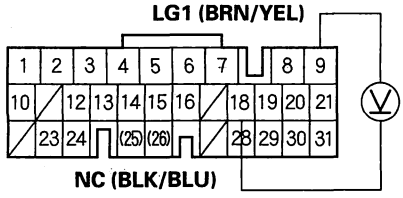
YES—Go to step 22.

NO—Replace the output shaft (countershaft) speed sensor (see page 14-201), then go to step 30.

22. Shift to the P position. Start the engine, and let it idle.

23. Shift to the D position, and measure the voltage between PCM connector terminals A18 and A9.

PCM CONNECTOR A (31P)



Wire side of female terminals

Is there 1.5—3.5 V?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM.■

NO—Replace the output shaft (countershaft) speed sensor (see page 14-201), then go to step 30.

(cont'd)

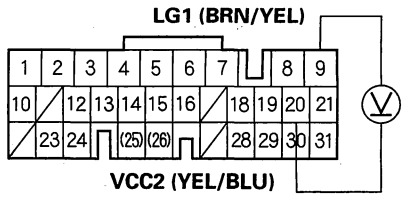
DTC Troubleshooting (cont'd)

24. Measure the voltage between PCM connector terminals A20 and A9.

PCM CONNECTOR A (31P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between PCM connector terminal A20 and the output shaft (countershaft) speed sensor, then go to step 30.

NO—Go to step 25.

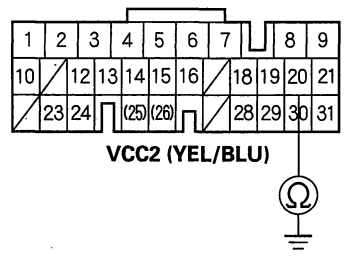
25. Turn the ignition switch OFF.

26. Jump the SCS line with the HDS.

27. Disconnect PCM connector A (31P).

28. Check for continuity between PCM connector terminal A20 and body ground.

PCM CONNECTOR A (31P)



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal A20 and the output shaft (countershaft) speed sensor, then go to step 30.

NO—Check for loose or poor connections at PCM connector terminal A20. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

BACK

DTC P0723: Output Shaft (Countershaft) Speed Sensor Intermittent Failure

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.

2. Test-drive the vehicle for more than 10 minutes under the same conditions as those indicated by the freeze data, and monitor the OBD status for P0723 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 3.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the output shaft (countershaft) speed sensor and PCM. If the tester indicates NOT COMPLETED, return to step 2 and recheck.■

3. Turn the ignition switch OFF.

4. Disconnect the output shaft (countershaft) speed sensor connector, and inspect the connector and connector terminals to be sure they are making good contact.

   Are the connector terminals OK?

   YES—Go to step 5.

   NO—Repair the connector terminals, then go to step 5.

5. Connect the output shaft (countershaft) speed sensor connector.

6. Test-drive the vehicle for several minutes, and monitor the OBD status for P0723 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 7.

   NO—The problem has been corrected. If the tester indicates NOT COMPLETED, return to step 6 and recheck.■

7. Turn the ignition switch OFF.

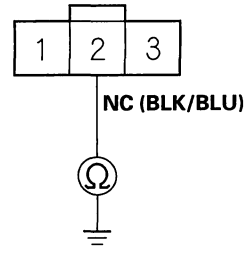
8. Jump the SCS line with the HDS.

9. Disconnect PCM connector A (31P).

10. Disconnect the output shaft (countershaft) speed sensor connector.

11. Check for continuity between output shaft (countershaft) speed sensor connector terminal No. 2 and body ground.

OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR CONNECTOR



Wire side of female terminals

Is there continuity?

DTC P0731: Problem in 1st Clutch and 1st Clutch Hydraulic Circuit

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Measure the line pressure (see page 14-189).

   Is the line pressure within service limit?

   YES—Go to step 5.

   NO—Repair the ATF pump and regulator valve, or replace the transmission. ■
5. Measure the 1st clutch pressure (see page 14-189).

   Is the 1st clutch pressure within service limits?

   YES—Go to step 6.

   NO—Shift valves B and C are stuck. Repair these valves and hydraulic circuit, or replace the transmission. ■
6. Test stall speed in the 1 position (see page 14-188).

   Does the stall speed test within service limits?

   YES—Go to step 7.

   NO—Shift valves A and D are stuck. Repair these valves and hydraulic circuit, or replace the transmission. ■
7. Clear the DTC with the HDS.
8. Test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, or drive in 1st gear in the D position at 10 mph (16 km/h) for 20 seconds.
9. Monitor the OBD status for P0731 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Repair the 1st clutch, or replace the transmission. ■

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 8 and recheck. ■

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0732: Problem in 2nd Clutch and 2nd Clutch Hydraulic Circuit

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Measure the line pressure (see page 14-189).

   Is the line pressure within service limit?

   YES—Go to step 5.

   NO—Repair the ATF pump and regulator valve, or replace the transmission. ■
5. Measure the 2nd clutch pressure (see page 14-189).

   Is the 2nd clutch pressure within service limits?

   YES—Go to step 6.

   NO—Shift valves A and B are stuck. Repair these valves and hydraulic circuit, or replace the transmission. ■
6. Test stall speed in the 2 position (see page 14-188).

   Does the stall speed test within service limits?

   YES—Go to step 7.

   NO—Shift valve C is stuck. Repair the shift valve C and hydraulic circuit, or replace the transmission. ■
7. Clear the DTC with the HDS.
8. Test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, or drive in 2nd gear in the D position at 10 mph (16 km/h) for 20 seconds.
9. Monitor the OBD status for P0732 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Repair the 2nd clutch, or replace the transmission. ■

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 8 and recheck. ■

DTC P0733: Problem in 3rd Clutch and 3rd Clutch Hydraulic Circuit

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Measure the line pressure (see page 14-189).

   Is the line pressure within service limits?

   YES—Go to step 5.

   NO—Repair the ATF pump and regulator valve, or replace the transmission. ■
5. Measure the 3rd clutch pressure (see page 14-189).

   Is the 3rd clutch pressure within service limits?

   YES—Go to step 6.

   NO—Shift valves A and D are stuck. Repair these valves and hydraulic circuit, or replace the transmission. ■
6. Clear the DTC with the HDS.
7. Test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, or drive in 3rd gear in the D3 position at speeds over 10 mph (16 km/h) for 20 seconds.
8. Monitor the OBD status for P0733 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Repair the 3rd clutch, or replace the transmission. ■

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 7 and recheck. ■

DTC Troubleshooting (cont'd)

DTC P0734: Problem in 4th Clutch and 4th Clutch Hydraulic Circuit

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).

2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.

3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.

4. Measure the line pressure (see page 14-189).

   Is the line pressure within service limits?

   YES—Go to step 5.

   NO—Repair the ATF pump and regulator valve, or replace the transmission. ■

5. Measure the 4th clutch pressure (see page 14-189).

   Is the 4th clutch pressure within service limits?

   YES—Go to step 6.

   NO—Shift valve B, shift valve C, servo control valve, and servo valve are stuck. Repair these valves and hydraulic circuit, or replace the transmission. ■

6. Clear the DTC with the HDS.

7. Test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, or drive in 4th gear in the D position at speeds over 10 mph (16 km/h) for 20 seconds.

8. Monitor the OBD status for P0734 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Repair the 4th clutch, or replace the transmission. ■

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 7 and recheck. ■

DTC P0735: Problem in 5th Clutch and 5th Clutch Hydraulic Circuit

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).

2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.

3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.

4. Measure the line pressure (see page 14-189).

   Is the line pressure within service limits?

   YES—Go to step 5.

   NO—Repair the ATF pump and regulator valve, or replace the transmission. ■

5. Measure the 5th clutch pressure (see page 14-189).

   Is the 5th clutch pressure within service limits?

   YES—Go to step 6.

   NO—Shift valves A, B, and/or D are stuck. Repair these valves and hydraulic circuit, or replace the transmission. ■

6. Clear the DTC with the HDS.

7. Test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data, or drive in 5th gear in the D position at speeds over 10 mph (16 km/h) for 20 seconds.

8. Monitor the OBD status for P0735 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Repair the 5th clutch, or replace the transmission. ■

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 7 and recheck. ■

DTC Troubleshooting (cont'd)

DTC P0741: Torque Converter Clutch Hydraulic Circuit Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Choose Shift Solenoid E in Miscellaneous Test Menu, and check that the shift solenoid valve E operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 6.

   NO—Replace shift solenoid valve E (see page 14-194), then go to step 10.
6. Run the engine until the engine coolant temperature reaches 176 °F (80 °C).
7. Choose Clutch Pressure Control (Linear) Solenoid A in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve A with the HDS.

   Is the system OK?

   YES—Go to step 8.

   NO—Follow instructions indicated on the HDS by the test result. Go to step 10 if any part was replaced.
8. Test-drive the vehicle at 55 mph (88 km/h) for 2 minutes while monitoring the vehicle speed with the HDS.
9. Monitor the OBD status for P0741 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Faulty torque converter mechanism, torque converter clutch hydraulic circuit, lock-up shift valve, or lock-up control valve, or replace the transmission. ■

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 8 and recheck. ■
10. Clear the DTC with the HDS.
11. Test-drive the vehicle for several minutes under the same conditions as those indicated by the freeze data.
12. Monitor the OBD status for P0741 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 5 and recheck.

DTC P0747: A/T Clutch Pressure Control Solenoid Valve A Stuck ON

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0747 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Clutch Pressure Control (Linear) Solenoid A in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve A with the HDS.

   Is the system OK?

   YES—Intermittent failure, the system is OK at this time. ■

   NO—Follow instructions indicated on the HDS by the test result, but the tester has not determined the cause of the failure, go to step 10. If any part was replaced, go to step 11.
10. Inspect A/T clutch pressure control solenoid valve A (see page 14-197).

    Does the A/T clutch pressure control solenoid valve A work properly?

    YES—Repair hydraulic system related with shift valve B and E, or replace the transmission, then go to step 11.

    NO—Replace A/T clutch pressure control solenoid valve A (see page 14-198), then go to step 11.
11. Clear the DTC with the HDS.
12. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds. Slow down to a stop.
13. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
14. Monitor the OBD status for P0747 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC Troubleshooting (cont'd)

DTC P0752: Shift Solenoid Valve A Stuck ON

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0752 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid A in Miscellaneous Test Menu, and check that the shift solenoid valve A operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve A (see page 14-194), then go to step 13.
10. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
11. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Monitor the OBD status for P0752 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair shift valve A, or replace the transmission, then go to step 13.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 10 and recheck. ■
13. Clear the DTC with the HDS.
14. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
15. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down and to a stop.
16. Monitor the OBD status for P0752 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC P0756: Shift Solenoid Valve B Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0756 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid B in Miscellaneous Test Menu, and check that the shift solenoid valve B operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve B (see page 14-194), then go to step 13.
10. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
11. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Monitor the OBD status for P0756 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair shift valve B, or replace the transmission, then go to step 13.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 10 and recheck. ■
13. Clear the DTC with the HDS.
14. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
15. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
16. Monitor the OBD status for P0756 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC Troubleshooting (cont'd)

DTC P0757: Shift Solenoid Valve B Stuck ON

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0757 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid B in Miscellaneous Test Menu, and check that the shift solenoid valve B operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve B (see page 14-194), then go to step 13.
10. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
11. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Monitor the OBD status for P0757 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair shift valve B, or replace the transmission, then go to step 13.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 10 and recheck. ■
13. Clear the DTC with the HDS.
14. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
15. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
16. Monitor the OBD status for P0757 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC P0761: Shift Solenoid Valve C Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0761 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid C in Miscellaneous Test Menu, and check that the shift solenoid valve C operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve C (see page 14-194), then go to step 13.
10. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
11. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Monitor the OBD status for P0761 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair shift valve C, or replace the transmission, then go to step 13.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 10 and recheck. ■
13. Clear the DTC with the HDS.
14. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
15. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
16. Monitor the OBD status for P0761 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC Troubleshooting (cont'd)

DTC P0771: Shift Solenoid Valve E Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0771 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid E in Miscellaneous Test Menu, and check that the shift solenoid valve E operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve E (see page 14-194), then go to step 13.
10. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
11. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Monitor the OBD status for P0771 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair shift valve E, or replace the transmission, then go to step 13.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 10 and recheck. ■
13. Clear the DTC with the HDS.
14. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
15. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
16. Monitor the OBD status for P0771 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC P0776: A/T Clutch Pressure Control Solenoid Valve B Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission.■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0776 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck.■
8. Clear the DTC with the HDS.
9. Choose Clutch Pressure Control (Linear) Solenoid B in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve B with the HDS.

   Is the system OK?

   YES—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 9 and recheck.■

   NO—Follow instructions indicated on the HDS by the test result, but the tester has not determined the cause of the failure, go to step 10. If any part was replaced, go to step 11.
10. Inspect A/T clutch pressure control solenoid valve B (see page 14-199).

    Does the A/T clutch pressure control solenoid valve B work properly?

    YES—Repair hydraulic system related with shift valve B, or replace the transmission, then go to step 11.

    NO—Replace A/T clutch pressure control solenoid valve B (see page 14-200), then go to step 11.
11. Clear the DTC with the HDS.
12. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
13. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
14. Monitor the OBD status for P0776 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—Return to step 8 and recheck.

DTC Troubleshooting (cont'd)

DTC P0777: A/T Clutch Pressure Control Solenoid Valve B Stuck ON

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0777 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Clutch Pressure Control (Linear) Solenoid B in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve B with the HDS.

   Is the system OK?

   YES—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 9 and recheck. ■

   NO—Follow instructions indicated on the HDS by the test result, but the tester has not determined the cause of the failure, go to step 10. If any part was replaced, go to step 11.
10. Inspect A/T clutch pressure control solenoid valve B (see page 14-199).

    Does the A/T clutch pressure control solenoid valve B work properly?

    YES—Repair hydraulic system related with shift valve B, or replace the transmission, then go to step 11.

    NO—Replace A/T clutch pressure control solenoid valve B (see page 14-200), then go to step 11.
11. Clear the DTC with the HDS.
12. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
13. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
14. Monitor the OBD status for P0777 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC P0780: Shift Control System

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Check for other DTCs indicated simultaneous with the code P0780.

   NOTE: P0780 means there is one or more A/T DTCs about the shift control system.

   Are there other DTCs?

   YES—Go to step 2.

   NO—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

2. Perform the troubleshooting flowchart for the indicated codes:

   - P1730: (see page 14-176)
   - P1731: (see page 14-178)
   - P1732: (see page 14-180)
   - P1733: (see page 14-182)
   - P1734: (see page 14-184)

DTC Troubleshooting (cont'd)

DTC P0796: A/T Clutch Pressure Control Solenoid Valve C Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0796 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Clutch Pressure Control (Linear) Solenoid C in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve C with the HDS.

   Is the system OK?

   YES—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 9 and recheck. ■

   NO—Follow instructions indicated on the HDS by the test result, but the tester has not determined the cause of the failure, go to step 10. If any part was replaced, go to step 11.
10. Inspect A/T clutch pressure control solenoid valve C (see page 14-199).

    Does the A/T clutch pressure control solenoid valve C work properly?

    YES—Repair hydraulic system related with shift valve B and C, or replace the transmission, then go to step 11.

    NO—Replace A/T clutch pressure control solenoid valve C (see page 14-200), then go to step 11.
11. Clear the DTC with the HDS.
12. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
13. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
14. Monitor the OBD status for P0796 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC P0797: A/T Clutch Pressure Control Solenoid Valve C Stuck ON

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P0797 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Clutch Pressure Control (Linear) Solenoid C in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve C with the HDS.

   Is the system OK?

   YES—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 9 and recheck. ■

   NO—Follow instructions indicated on the HDS by the test result, but the tester has not determined the cause of the failure, go to step 10. If any part was replaced, go to step 11.
10. Inspect A/T clutch pressure control solenoid valve C (see page 14-199).

    Does the A/T clutch pressure control solenoid valve C work properly?

    YES—Repair hydraulic system related with shift valves B and C, or replace the transmission, then go to step 11.

    NO—Replace A/T clutch pressure control solenoid valve C (see page 14-200), then go to step 11.
11. Clear the DTC with the HDS.
12. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
13. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
14. Monitor the OBD status for P0797 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC Troubleshooting (cont'd)

DTC P0812: Open in Transmission Range Switch ATP RVS Switch Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Turn the ignition switch ON (II).

2. Shift to the R position, and verify the A/T R SWITCH signal with the HDS in the A/T data list.

   Is the A/T R SWITCH ON?

   YES—Go to step 3.

   NO—Inspect the end of the selector control shaft (see step 8 on page 14-248), adjust the shift cable (see page 14-241), then recheck. If the problem still exists, go to step 4.

3. Check the REVERSE SWITCH signal with the HDS.

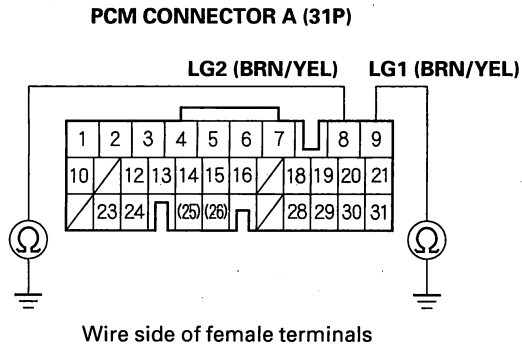
   Is the REVERSE SWITCH ON?

   YES—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the transmission range switch and PCM. ■

   NO—Go to step 4.

4. Turn the ignition switch OFF.

5. Check for continuity between PCM connector terminals A8 and body ground, and between A9 and body ground.



Wire side of female terminals

Is there continuity?

YES—Go to step 6.

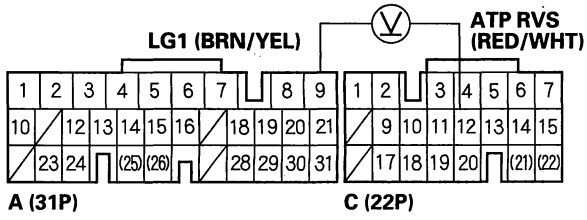
NO—Repair open in the wires between PCM connector terminals A8, A9, and ground (G101), and repair poor ground (G101), then go to step 12.

BACK

Protected by AR

6. Turn the ignition switch ON (II).
7. Shift to the R position.
8. Measure the voltage between PCM connector terminals C12 and A9.

PCM CONNECTORS



Wire side of female terminals

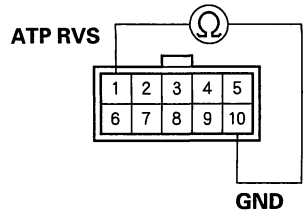
Is there voltage?

YES—Go to step 9.

NO—Check for loose or poor connections at PCM connector terminal C12. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

9. Turn the ignition switch OFF.
10. Disconnect the transmission range switch connector.
11. Check for continuity between the No. 1 and No. 10 terminals at the transmission range switch. The shift position must be R.

TRANSMISSION RANGE SWITCH CONNECTOR



Terminal side of male terminals

Is there continuity?

YES—Check for loose or poor connections at the transmission range switch connector terminal No. 1. If the connection is OK, repair open in the wire between PCM connector terminal C12 and the transmission range switch, then go to step 12.

NO—Replace the transmission range switch, then go to step 12.

12. Clear the DTC with the HDS.
13. Start the engine, and shift the shift lever slowly into the P, R, then N position.
14. Monitor the OBD status for P0812 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0842: Short in 2nd Clutch Transmission Fluid Pressure Switch Circuit, or 2nd Clutch Transmission Fluid Pressure Switch Stuck ON

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check the 2nd PRES SWITCH signal with the HDS in the A/T data list when not in 2nd gear.

   Is the 2nd PRES SWITCH OFF?

   YES—Go to step 3.

   NO—Go to step 5.
3. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Drive the vehicle in 2nd gear in the 2 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.
4. Monitor the OBD status for P0842 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 5.

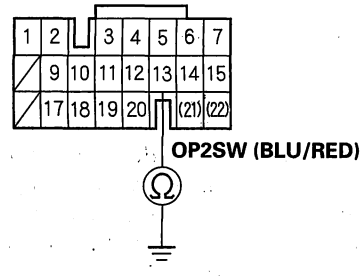
   NO—Intermittent failure, the system is OK at this time. Check the BLU/RED wire for an intermittent short to ground between the 2nd clutch transmission fluid pressure switch and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
5. Turn the ignition switch OFF.
6. Disconnect the 2nd clutch transmission fluid pressure switch connector.
7. Turn the ignition switch ON (II).
8. Check the 2nd PRES SWITCH signal with the HDS in the A/T data list.

   Is the 2nd PRES SWITCH OFF?

   YES—Replace the 2nd clutch transmission fluid pressure switch (see page 14-202), then go to step 13.

   NO—Go to step 9.
9. Turn the ignition switch OFF.
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector C (22P).
12. Check for continuity between PCM connector terminal C13 and body ground.

PCM CONNECTOR C (22P)



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C13 and the 2nd clutch transmission fluid pressure switch, then go to step 13.

NO—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM. ■

BACK

Protected by AR

13. Clear the DTC with the HDS.

14. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Drive the vehicle in 2nd gear in the 2 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.

15. Monitor the OBD status for P0842 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 1 and recheck.

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0843: Open in 2nd Clutch Transmission Fluid Pressure Switch Circuit, or 2nd Clutch Transmission Fluid Pressure Switch Stuck OFF

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Shift into the 2 position while pressing the brake pedal, and verify that the SHIFT MAP NUMBER indicates 2nd with the HDS in the A/T data list.
3. Check the 2nd PRES SWITCH signal with the HDS in the A/T data list.

   Is the 2nd PRES SWITCH ON?

   YES—Go to step 4.

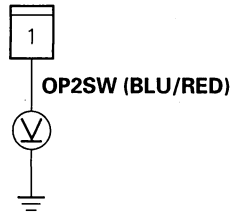
   NO—Go to step 6.
4. Drive the vehicle in 2nd gear in the 2 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.
5. Monitor the OBD status for P0843 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the 2nd clutch transmission fluid pressure switch and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck. ■
6. Turn the ignition switch OFF.
7. Disconnect the 2nd clutch transmission fluid pressure switch connector.
8. Turn the ignition switch ON (II).
9. Measure the voltage between the 2nd clutch transmission fluid pressure switch connector terminal and body ground.

2ND CLUTCH TRANSMISSION FLUID PRESSURE SWITCH CONNECTOR



Wire side of female terminals

Is there about 5 V?

YES—Replace the 2nd clutch transmission fluid pressure switch (see page 14-202), then go to step 11.

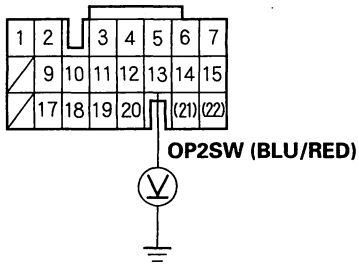
NO—Go to step 10.

BACK

Protected by AR

10. Measure the voltage between PCM connector terminal C13 and body ground.

PCM CONNECTOR C (22P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between PCM connector terminal C13 and the 2nd clutch transmission fluid pressure switch, then go to step 11.

NO—Check for loose or poor connections at PCM connector terminal C13. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

11. Clear the DTC with the HDS.

12. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Drive the vehicle in 2nd gear in the 2 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.

13. Monitor the OBD status for P0843 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0847: Short in 3rd Clutch Transmission Fluid Pressure Switch Circuit, or 3rd Clutch Transmission Fluid Pressure Switch Stuck ON

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check the 3rd PRES SWITCH signal with the HDS in the A/T data list when not in 3rd gear.

   Is the 3rd PRES SWITCH ON?

   YES—Go to step 3.

   NO—Go to step 5.
3. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Drive the vehicle in 3rd gear in the D3 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.
4. Monitor the OBD status for P0847 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 5.

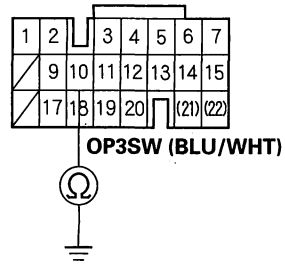
   NO—Intermittent failure, the system is OK at this time. Check the BLU/WHT wire for an intermittent short to ground between the 3rd clutch transmission fluid pressure switch and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck.■
5. Turn the ignition switch OFF.
6. Disconnect the 3rd clutch transmission fluid pressure switch connector.
7. Turn the ignition switch ON (II).
8. Check the 3rd PRES SWITCH signal with the HDS in the A/T data list.

   Is the 3rd PRES SWITCH OFF?

   YES—Replace the 3rd clutch transmission fluid pressure switch (see page 14-203), then go to step 13.

   NO—Go to step 9.
9. Turn the ignition switch OFF.
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector C (22P).
12. Check for continuity between PCM connector terminal C10 and body ground.

PCM CONNECTOR C (22P)



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C10 and the 3rd clutch transmission fluid pressure switch, then go to step 13.

NO—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM.■

BACK

DTC Troubleshooting (cont'd)

DTC P0848: Open in 3rd Clutch Transmission Fluid Pressure Switch Circuit, or 3rd Clutch Transmission Fluid Pressure Switch Stuck OFF

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Drive the vehicle in the 3rd gear in the D3 position, and verify that the SHIFT MAP NUMBER indicates 3rd with the HDS in the A/T data list.
3. Check the 3rd PRES SWITCH signal with the HDS in the A/T data list.

   Is the 3rd PRES SWITCH ON?

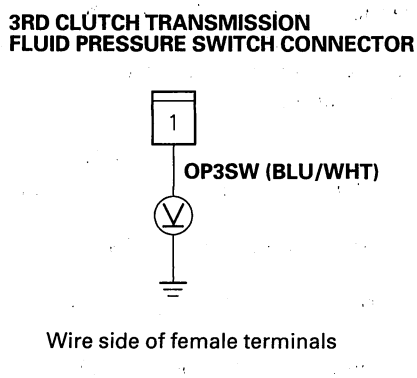
   YES—Go to step 4.

   NO—Go to step 6.
4. Drive the vehicle in 3rd gear in the D3 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.
5. Monitor the OBD status for P0848 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the 3rd clutch transmission fluid pressure switch and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck.■
6. Turn the ignition switch OFF.
7. Disconnect the 3rd clutch transmission fluid pressure switch connector.
8. Turn the ignition switch ON (II).
9. Measure the voltage between the 3rd clutch transmission fluid pressure switch connector terminal and body ground.



Wire side of female terminals

Is there about 5 V?

YES—Replace the 3rd clutch transmission fluid pressure switch (see page 14-203), then go to step 11.

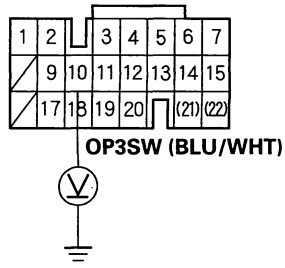
NO—Go to step 10.

BACK

Protected by AR

10. Measure the voltage between PCM connector terminal C10 and body ground.

PCM CONNECTOR C (22P)



Wire side of female terminals

Is there about 5 V?

YES—Repair open in the wire between PCM connector terminal C10 and the 3rd clutch transmission fluid pressure switch, then go to step 11.

NO—Check for loose or poor connections at PCM connector terminal C10. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM.■

11. Clear the DTC with the HDS.

12. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on). Drive the vehicle in 3rd gear in the D3 position for more than 5 seconds, then shift to the D position, and drive in 4th gear for more than 5 seconds. Slow down to a stop.

13. Monitor the OBD status for P0848 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete.■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0962: Problem in A/T Clutch Pressure Control Solenoid Valve A Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check that DTC P0962 recurs.

   Is DTC P0962 indicated?

   YES—Go to step 6.

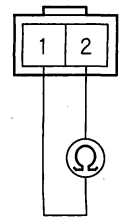
   NO—Go to step 3.
3. Choose Clutch Pressure Control Solenoid Control in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve A with the HDS.
4. Drive with the A/T clutch pressure control solenoid valve A at 1.0 A in Clutch Pressure Control Solenoid Control menu.
5. Monitor the OBD status for P0962 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/T clutch pressure control solenoid valve A and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck.■
6. Turn the ignition switch OFF.
7. Disconnect the A/T clutch pressure control solenoid valve A connector.
8. Measure A/T clutch pressure control solenoid valve A resistance at the solenoid connector.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A CONNECTOR



Terminal side of male terminals

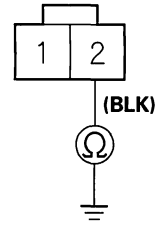
Is there 3– 10 Ω ?

YES—Go to step 9.

NO—Replace A/T clutch pressure control solenoid valve A (see page 14-198), then go to step 12.

9. Check for continuity between A/T clutch pressure control solenoid valve A connector terminal No. 2 and body ground.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 10.

NO—Repair open in the wire between the A/T clutch pressure control solenoid valve A and ground (G101), or repair poor ground (G101), then go to step 12.

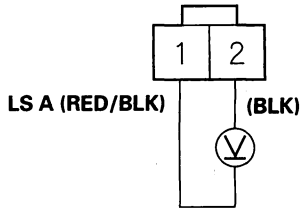
BACK

Protected by AR

10. Turn the ignition switch ON (II).

11. Measure the voltage between A/T clutch pressure control solenoid valve A connector terminals No. 1 and No. 2.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A CONNECTOR



Wire side of female terminals

Is there about 11 V as the ignition switch is turned to the ON (II) position?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open or short in the wire between PCM connector terminal C1 and A/T clutch pressure control solenoid valve A, then go to step 12.

12. Clear the DTC with the HDS.

13. Test-drive the vehicle for several minutes in the D position through all five gears.

14. Monitor the OBD status for P0962 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0963: Problem in A/T Clutch Pressure Control Solenoid Valve A

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check that DTC P0963 recurs.

   Is DTC P0963 indicated?

   YES—Go to step 6.

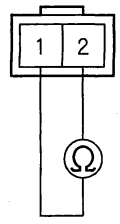
   NO—Go to step 3.
3. Choose Clutch Pressure Control Solenoid Control in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve A with the HDS.
4. Drive with the A/T clutch pressure control solenoid valve A at 0.2 A in Clutch Pressure Control Solenoid Control menu.
5. Monitor the OBD status for P0963 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/T clutch pressure control solenoid valve A and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
6. Turn the ignition switch OFF.
7. Disconnect the A/T clutch pressure control solenoid valve A connector.
8. Measure A/T clutch pressure control solenoid valve A resistance at the solenoid connector.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A CONNECTOR



Terminal side of male terminals

Is there 3—10 Ω ?

YES—Go to step 9.

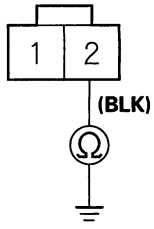
NO—Replace A/T clutch pressure control solenoid valve A (see page 14-198), then go to step 10.

BACK

Protected by AR

9. Check for continuity between A/T clutch pressure control solenoid valve A connector terminal No. 2 and body ground.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open in the wire between the A/T clutch pressure control solenoid valve A and ground (G101), or repair poor ground (G101), then go to step 10.

10. Clear the DTC with the HDS.

11. Test-drive the vehicle for several minutes in the D position through all five gears.

12. Monitor the OBD status for P0963 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0966: Problem in A/T Clutch Pressure Control Solenoid Valve B Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check that DTC P0966 recurs.

   Is DTC P0966 indicated?

   YES—Go to step 6.

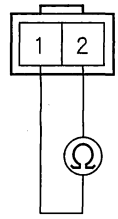
   NO—Go to step 3.
3. Choose Clutch Pressure Control Solenoid Control in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve B with the HDS.
4. Drive with the A/T clutch pressure control solenoid valve B at 1.0 A in Clutch Pressure Control Solenoid Control menu.
5. Monitor the OBD status for P0966 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections and loose terminals at the A/T clutch pressure control solenoid valve B and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
6. Turn the ignition switch OFF.
7. Disconnect the A/T clutch pressure control solenoid valve B connector.
8. Measure A/T clutch pressure control solenoid valve B resistance at the solenoid connector.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B CONNECTOR



Terminal side of male terminals

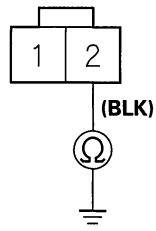
Is there 3— 10 Ω ?

YES—Go to step 9.

NO—Replace A/T clutch pressure control solenoid valve B (see page 14-200), then go to step 12.

9. Check for continuity between A/T clutch pressure control solenoid valve B connector terminal No. 2 and body ground.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 10.

NO—Repair open in the wire between the A/T clutch pressure control solenoid valve B and ground (G101), or repair poor ground (G101), then go to step 12.

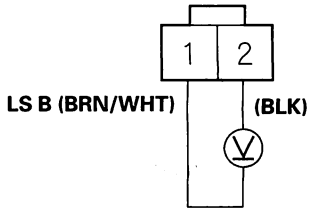
BACK

Protected by AR

10. Turn the ignition switch ON (II).

11. Measure the voltage between A/T clutch pressure control solenoid valve B connector terminals No. 1 and No. 2.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B CONNECTOR



Wire side of female terminals

Is there about 11 V as the ignition switch is turned to the ON (II) position?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open or short in the wire between PCM connector terminal C15 and A/T clutch pressure control solenoid valve B, then go to step 12.

12. Clear the DTC with the HDS.

13. Test-drive the vehicle for several minutes in the D position through all five gears.

14. Monitor the OBD status for P0966 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate FAILED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0967: Problem in A/T Clutch Pressure Control Solenoid Valve B

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check that DTC P0967 recurs.

   Is DTC P0967 indicated?

   YES—Go to step 6.

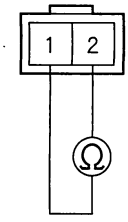
   NO—Go to step 3.
3. Choose Clutch Pressure Control Solenoid Control in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve B with the HDS.
4. Drive with the A/T clutch pressure control solenoid valve B at 0.2 A in Clutch Pressure Control Solenoid Control menu.
5. Monitor the OBD status for P0967 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/T clutch pressure control solenoid valve B and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
6. Turn the ignition switch OFF.
7. Disconnect the A/T clutch pressure control solenoid valve B connector.
8. Measure A/T clutch pressure control solenoid valve B resistance at the solenoid connector.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B CONNECTOR



Terminal side of male terminals

Is there 3– 10 Ω ?

YES—Go to step 9.

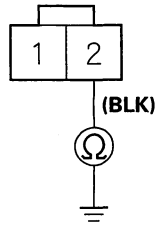
NO—Replace A/T clutch pressure control solenoid valve B (see page 14-200), then go to step 10.

BACK

Protected by AR

9. Check for continuity between A/T clutch pressure control solenoid valve B connector terminal No. 2 and body ground.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open in the wire between the A/T clutch pressure control solenoid valve B and ground (G101), or repair poor ground (G101), then go to step 10.

10. Clear the DTC with the HDS.

11. Test-drive the vehicle for several minutes in the D position through all five gears.

12. Monitor the OBD status for P0967 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0970: Problem in A/T Clutch Pressure Control Solenoid Valve C Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check that DTC P0970 recurs.

   Is DTC P0970 indicated?

   YES—Go to step 6.

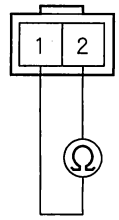
   NO—Go to step 3.
3. Choose Clutch Pressure Control Solenoid Control in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve C with the HDS.
4. Drive with the A/T clutch pressure control solenoid valve C at 1.0 A in Clutch Pressure Control Solenoid Control menu.
5. Monitor the OBD status for P0970 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/T clutch pressure control solenoid valve C and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
6. Turn the ignition switch OFF.
7. Disconnect the A/T clutch pressure control solenoid valve C connector.
8. Measure A/T clutch pressure control solenoid valve C resistance at the solenoid connector.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C CONNECTOR



Terminal side of male terminals

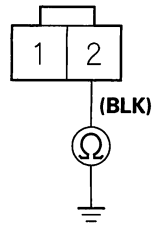
Is there 3– 10 Ω ?

YES—Go to step 9.

NO—Replace A/T clutch pressure control solenoid valve C (see page 14-200), then go to step 12.

9. Check for continuity between A/T clutch pressure control solenoid valve C connector terminal No. 2 and body ground.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Go to step 10.

NO—Repair open in the wire between the A/T clutch pressure control solenoid valve C and ground (G101), or repair poor ground (G101), then go to step 12.

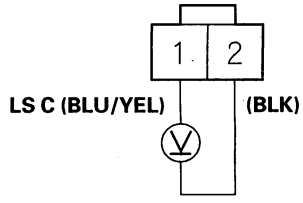
BACK

Protected by AR

10. Turn the ignition switch ON (II).

11. Measure the voltage between A/T clutch pressure control solenoid valve C connector terminals No. 1 and No. 2.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C CONNECTOR



Wire side of female terminals

Is there about 11 V as the ignition switch is turned to the ON (II) position?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open or short in the wire between PCM connector terminal C7 and A/T clutch pressure control solenoid valve C, then go to step 12.

12. Clear the DTC with the HDS.

13. Test-drive the vehicle for several minutes in the D position through all five gears.

14. Monitor the OBD status for P0970 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0971: Problem in A/T Clutch Pressure Control Solenoid Valve C

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Check that DTC P0971 recurs.

   Is DTC P0971 indicated?

   YES—Go to step 6.

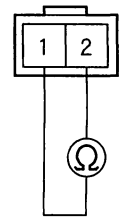
   NO—Go to step 3.
3. Choose Clutch Pressure Control Solenoid Control in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve C with the HDS.
4. Drive with the A/T clutch pressure control solenoid valve C at 0.2 A in Clutch Pressure Control Solenoid Control menu.
5. Monitor the OBD status for P0971 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/T clutch pressure control solenoid valve C and PCM. If the tester indicates NOT COMPLETED, return to step 3 and recheck. ■
6. Turn the ignition switch OFF.
7. Disconnect the A/T clutch pressure control solenoid valve C connector.
8. Measure A/T clutch pressure control solenoid valve C resistance at the solenoid connector.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C CONNECTOR



Terminal side of male terminals

Is there 3—10 Ω ?

YES—Go to step 9.

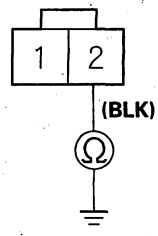
NO—Replace A/T clutch pressure control solenoid valve C (see page 14-200), then go to step 10.

BACK

Protected by AR

9. Check for continuity between A/T clutch pressure control solenoid valve C connector terminal No. 2 and body ground.

A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C CONNECTOR



Wire side of female terminals

Is there continuity?

YES—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM. ■

NO—Repair open in the wire between the A/T clutch pressure control solenoid valve C and ground (G101), or repair poor ground (G101), then go to step 10.

10. Clear the DTC with the HDS.

11. Test-drive the vehicle for several minutes in the D position through all five gears.

12. Monitor the OBD status for P0971 in the DTCs/Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0973: Short in Shift Solenoid Valve A Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine, and shift to the D position.
3. Check that DTC P0973 recurs.

   Is DTC P0973 indicated?

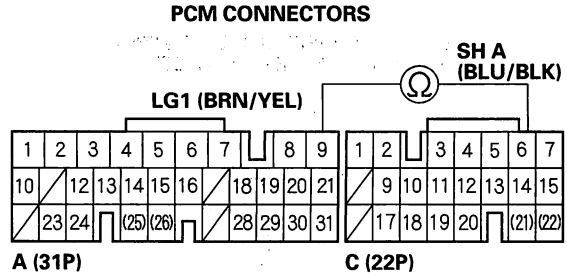
   YES—Go to step 7.

   NO—Go to step 4.
4. Choose Shift Solenoid A in Miscellaneous Test Menu, and test the shift solenoid valve A with the HDS.
5. Start the engine, and shift to the D position.
6. Monitor the OBD status for P0973 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 7.

   NO—Intermittent failure, the system is OK at this time. Check the BLU/BLK wire for an intermittent short to ground between shift solenoid valve A and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck. ■
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connectors A (31P) and C (22P).
10. Measure the resistance between PCM connector terminals C6 and A9.



Wire side of female terminals

Is there less than 12 Ω ?

YES—Go to step 11.

NO—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM. ■

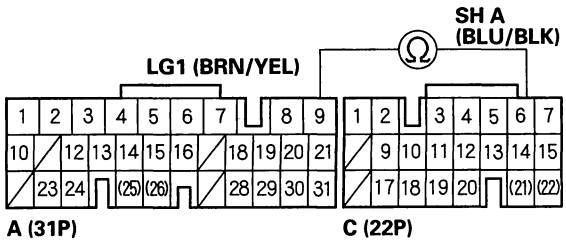
BACK

Protected by AR

11. Disconnect the shift solenoid harness connector at the transmission housing.

12. Check for continuity between PCM connector terminals C6 and A9.

PCM CONNECTORS



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C6 and the shift solenoid harness connector, then go to step 13.

NO—Check shift solenoid valve A, and check for a short in the shift solenoid harness in the transmission (see page 14-191). Replace shift solenoid valve A and/or shift solenoid harness, then go to step 13.

13. Clear the DTC with the HDS.

14. Start the engine, and shift to the D position.

15. Monitor the OBD status for P0973 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0974: Open in Shift Solenoid Valve A Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine in the P position.
3. Check that DTC P0974 recurs.

   Is DTC P0974 indicated?

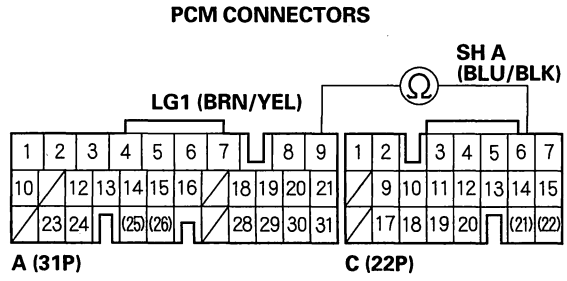
   YES—Go to step 7.

   NO—Go to step 4.
4. Choose Shift Solenoid A in Miscellaneous Test Menu, and test the shift solenoid valve A with the HDS.
5. Start the engine in the P position.
6. Monitor the OBD status for P0974 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 7.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the shift solenoid valve A and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck. ■
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connectors A (31P) and C (22P).
10. Measure the resistance between PCM connector terminals C6 and A9.



Wire side of female terminals

Is there 12—25 Ω ?

YES—Check for loose or poor connections at PCM connector terminal C6. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM. ■

NO—Go to step 11.

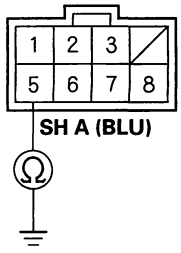
BACK

Protected by AR

11. Disconnect the shift solenoid harness connector at the transmission housing.

12. Measure the resistance between shift solenoid harness connector terminal No. 5 and body ground.

SHIFT SOLENOID HARNESS CONNECTOR



Terminal side of male terminals

Is there 12—25 Ω ?

YES—Repair open in the wire between PCM connector terminal C6 and the shift solenoid harness connector, then go to step 13.

NO—Check shift solenoid valve A, and check for an open in the shift solenoid harness in the transmission (see page 14-191). Replace shift solenoid valve A and/or shift solenoid harness, then go to step 13.

13. Clear the DTC with the HDS.

14. Start the engine in the P position.

15. Monitor the OBD status for P0974 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC P0976: Short in Shift Solenoid Valve B Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine in the P position.
3. Check that DTC P0976 recurs.

   Is DTC P0976 indicated?

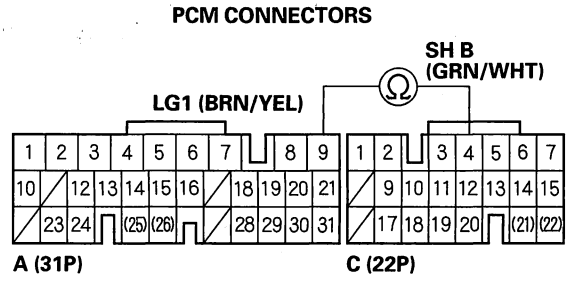
   YES—Go to step 7.

   NO—Go to step 4.
4. Choose Shift Solenoid B in Miscellaneous Test Menu, and test the shift solenoid valve B with the HDS.
5. Start the engine in the P position.
6. Monitor the OBD status for P0976 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 7.

   NO—Intermittent failure, the system is OK at this time. Check the GRN/WHT wire for an intermittent short to ground between the shift solenoid valve B and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck.■
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connectors A (31P) and C (22P).
10. Measure the resistance between PCM connector terminals C4 and A9.



Wire side of female terminals

Is there less than 12 Ω ?

YES—Go to step 11.

NO—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM.■

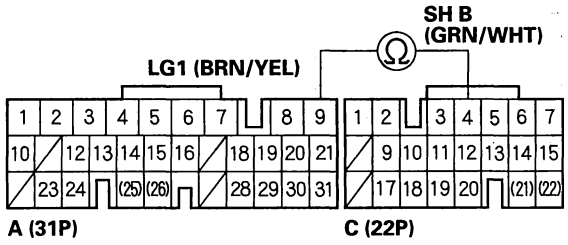
BACK

Protected by AR

11. Disconnect the shift solenoid harness connector at the transmission housing.

12. Check for continuity between PCM connector terminals C4 and A9.

PCM CONNECTORS



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C4 and the shift solenoid harness connector, then go to step 13.

NO—Check shift solenoid valve B, and check for a short in the shift solenoid harness in the transmission (see page 14-191). Replace shift solenoid valve B and/or shift solenoid harness, then go to step 13.

13. Clear the DTC with the HDS.

14. Start the engine in the P position.

15. Monitor the OBD status for P0976 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete. ■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P0985: Short in Shift Solenoid Valve E Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Start the engine in the P position.
3. Check that DTC P0985 recurs.

   Is DTC P0985 indicated?

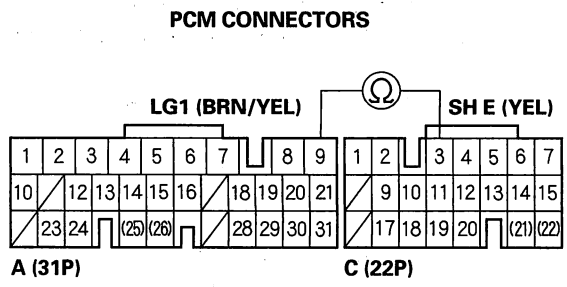
   YES—Go to step 6.

   NO—Go to step 4.
4. Choose Shift Solenoid E in Miscellaneous Test Menu, and test the shift solenoid valve E with the HDS.
5. Monitor the OBD status for P0985 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 6.

   NO—Intermittent failure, the system is OK at this time. Check the YEL wire for an intermittent short to ground between the shift solenoid valve E and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck.■
6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect PCM connectors A (31P) and C (22P).
9. Measure the resistance between PCM connector terminals C3 and A9.



Wire side of female terminals

Is there less than 12 Ω ?

YES—Go to step 10.

NO—Update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM.■

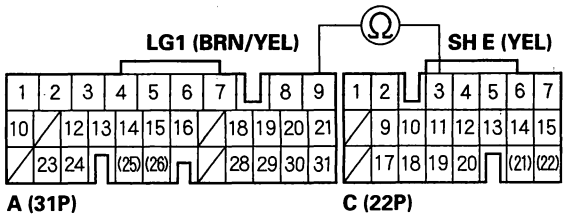
BACK

Protected by AR

10. Disconnect the shift solenoid harness connector at the transmission housing.

11. Check for continuity between PCM connector terminals C3 and A9.

PCM CONNECTORS



Wire side of female terminals

Is there continuity?

YES—Repair short to ground in the wire between PCM connector terminal C3 and the shift solenoid harness connector, then go to step 12.

NO—Check shift solenoid valve E, and check for a short in the shift solenoid harness in the transmission (see page 14-191). Replace shift solenoid valve E and/or shift solenoid harness, then go to step 12.

12. Clear the DTC with the HDS.

13. Start the engine in the P position.

14. Monitor the OBD status for P0985 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete.■

NO—Return to step 1 and recheck.

Protected by AR

DTC Troubleshooting (cont'd)

DTC P0986: Open in Shift Solenoid Valve E Circuit

NOTE:
- Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.
- This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

1. Clear the DTC with the HDS.
2. Test-drive the vehicle for several minutes in 1st and 2nd gears in the D position.
3. Check that DTC P0986 recurs.

   Is DTC P0986 indicated?

   YES—Go to step 7.

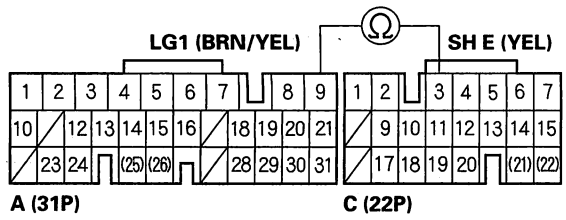
   NO—Go to step 4.
4. Choose Shift Solenoid E in Miscellaneous Test Menu, and test the shift solenoid valve E with the HDS.
5. Test-drive the vehicle for several minutes in 1st and 2nd gears in the D position.
6. Monitor the OBD status for P0986 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 7.

   NO—Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the shift solenoid valve E and PCM. If the tester indicates NOT COMPLETED, return to step 4 and recheck. ■
7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connectors A (31P) and C (22P).
10. Measure the resistance between PCM connector terminals C3 and A9.

PCM CONNECTORS



Wire side of female terminals

Is there 12—25 Ω ?

YES—Check for loose or poor connections at PCM connector terminal C3. If the connection is OK, update the PCM if it does not have the latest software, or substitute a known-good PCM (see page 14-6), then recheck. If the symptom/ indication goes away with a known-good PCM, replace the original PCM. ■

NO—Go to step 11.

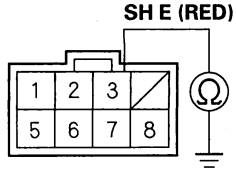
BACK

Protected by AR

11. Disconnect the shift solenoid harness connector at the transmission housing.

12. Check for continuity between shift solenoid harness connector terminal No. 3 and body ground.

SHIFT SOLENOID HARNESS CONNECTOR



Terminal side of male terminals

Is there 12—25 Ω ?

YES—Repair open in the wire between PCM connector terminal C3 and the shift solenoid harness connector, then go to step 13.

NO—Check shift solenoid valve E, and check for an open in the shift solenoid harness in the transmission (see page 14-191). Replace shift solenoid valve E and/or shift solenoid harness, then go to step 13.

13. Clear the DTC with the HDS.

14. Test-drive the vehicle for several minutes in 1st and 2nd gears in the D position.

15. Monitor the OBD status for P0986 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

Does the result indicate PASSED?

YES—Troubleshooting is complete.■

NO—Return to step 1 and recheck.

DTC Troubleshooting (cont'd)

DTC P1730: Problem in Shift Control System:

- Shift Solenoid Valves A or D Stuck OFF
- Shift Solenoid Valve B Stuck ON
- Shift Valves A, B, or D Stuck

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).

2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.

3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission.■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.

4. Clear the DTC with the HDS.

5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

7. Monitor the OBD status for P1730 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck.■

8. Clear the DTC with the HDS.

9. Choose Shift Solenoid A in Miscellaneous Test Menu, and check that the shift solenoid valve A operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve A (see page 14-194), then go to step 15.

10. Choose Shift Solenoid B in Miscellaneous Test Menu, and check that the shift solenoid valve B operates with the HDS.

    Is a clicking sound heard?

    YES—Go to step 11.

    NO—Replace shift solenoid valve B (see page 14-194), then go to step 15.

11. Choose Shift Solenoid D in Miscellaneous Test Menu, and check that the shift solenoid valve D operates with the HDS.

    Is a clicking sound heard?

    YES—Go to step 12.

    NO—Replace shift solenoid valve D (see page 14-194), then go to step 15.

12. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

13. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

14. Monitor the OBD status for P1730 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair hydraulic system related with shift valves A, B, and D, or replace the transmission, then go to step 15.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 12 and recheck.■

BACK

Protected by AR

15. Clear the DTC with the HDS.

16. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

17. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

18. Monitor the OBD status for P1730 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete.■

    NO—Return to step 8 and recheck.

Protected by AR

DTC Troubleshooting (cont'd)

DTC P1731: Problem in Shift Control System:

- Shift Solenoid Valve E Stuck ON
- Shift Valve E Stuck
- A/T Clutch Pressure Control Solenoid Valve A Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).

2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.

3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission.■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.

4. Clear the DTC with the HDS.

5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

7. Monitor the OBD status for P1731 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck.■

8. Clear the DTC with the HDS.

9. Choose Shift Solenoid E in Miscellaneous Test Menu, and check that the shift solenoid valve E operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve E (see page 14-194), then go to step 12.

10. Choose Clutch Pressure Control (Linear) Solenoid A in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve A with the HDS.

    Is the system OK?

    YES—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 10 and recheck.■

    NO—Follow instructions indicated on the HDS by the test result, but if the tester has not determined the cause of the failure, go to step 11. If any part was replaced, go to step 12.

11. Inspect A/T clutch pressure control solenoid valve A (see page 14-197).

    Dose the A/T clutch pressure control solenoid valve A work properly?

    YES—Repair hydraulic system related with shift valve E, or replace the transmission, then go to step 12.

    NO—Replace A/T clutch pressure control solenoid valve A (see page 14-198), then go to step 12.

BACK

DTC Troubleshooting (cont'd)

DTC P1732: Problem in Shift Control System:

- Shift Solenoid Valves B or C Stuck ON
- Shift Valves B or C Stuck

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission.■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P1732 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck.■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid B in Miscellaneous Test Menu, and check that the shift solenoid valve B operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve B (see page 14-194), then go to step 14.
10. Choose Shift Solenoid C in Miscellaneous Test Menu, and check that the shift solenoid valve C operates with the HDS.

    Is a clicking sound heard?

    YES—Go to step 11.

    NO—Replace shift solenoid valve C (see page 14-194), then go to step 14.
11. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
13. Monitor the OBD status for P1732 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair hydraulic system related with shift valves B and C, or replace the transmission, then go to step 14.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 14 and recheck.■

BACK

DTC Troubleshooting (cont'd)

DTC P1733: Problem in Shift Control System:

- Shift Solenoid Valve D Stuck ON
- Shift Valve D Stuck
- A/T Clutch Pressure Control Solenoid Valve C Stuck OFF

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).

2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.

3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), and go to step 4.

4. Clear the DTC with the HDS.

5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

7. Monitor the OBD status for P1733 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■

8. Clear the DTC with the HDS.

9. Choose Shift Solenoid D in Miscellaneous Test Menu, and check that the shift solenoid valve D operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve D (see page 14-194), then go to step 15.

10. Choose Clutch Pressure Control (Linear) Solenoid C in Miscellaneous Test Menu, and test the A/T clutch pressure control solenoid valve C with the HDS.

    Is the system OK?

    YES—Go to step 11.

    NO—Follow instructions indicated on the HDS by the test result, but if the tester has not determined the cause of the failure, go to step 14. If any part was replaced, go to step 15.

11. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

12. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

13. Monitor the OBD status for P1733 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair hydraulic system related with shift valve D, or replace the transmission, then go to step 15.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 11 and recheck. ■

BACK

Protected by AR

14. Inspect A/T clutch pressure control solenoid valve C (see page 14-199).

    Does the A/T clutch pressure control solenoid valve C work properly?

    YES—Repair hydraulic system related with shift valve D, or replace the transmission, then go to step 15.

    NO—Replace A/T clutch pressure control solenoid valve C (see page 14-200), then go to step 15.

15. Clear the DTC with the HDS.

16. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

17. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

18. Monitor the OBD status for P1733 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

DTC Troubleshooting (cont'd)

DTC P1734: Problem in Shift Control System:

- Shift Solenoid Valves B or C Stuck OFF
- Shift Valves B or C Stuck

NOTE: Record all freeze data and review General Troubleshooting Information (see page 14-3) before you troubleshoot.

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Make sure that the transmission is filled to the proper level, and check for fluid leaks.
3. Drain the ATF (see step 3 on page 14-208) through a strainer. Inspect the strainer for metal debris or excessive clutch material.

   Does the strainer contain metal debris or excessive clutch material?

   YES—Replace the transmission. ■

   NO—Replace the ATF (see step 4 on page 14-208), then go to step 4.
4. Clear the DTC with the HDS.
5. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
6. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
7. Monitor the OBD status for P1734 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

   Does the result indicate FAILED?

   YES—Go to step 8.

   NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 5 and recheck. ■
8. Clear the DTC with the HDS.
9. Choose Shift Solenoid B in Miscellaneous Test Menu, and check that the shift solenoid valve B operates with the HDS.

   Is a clicking sound heard?

   YES—Go to step 10.

   NO—Replace shift solenoid valve B (see page 14-194), then go to step 14.
10. Choose Shift Solenoid C in Miscellaneous Test Menu, and check that the shift solenoid valve C operates with the HDS.

    Is a clicking sound heard?

    YES—Go to step 11.

    NO—Replace shift solenoid valve C (see page 14-194), then go to step 14.
11. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
12. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.
13. Monitor the OBD status for P1734 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate FAILED?

    YES—Repair hydraulic system related with shift valves B and C, or replace the transmission, then go to step 14.

    NO—Intermittent failure, the system is OK at this time. If the tester indicates NOT COMPLETED, return to step 11 and recheck. ■

14. Clear the DTC with the HDS.

15. Test-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

16. Retest-drive the vehicle in the D position through all five gears at speeds over 12 mph (20 km/h) for more than 20 seconds, then slow down to a stop.

17. Monitor the OBD status for P1734 in the DTCs/ Freeze Data in A/T Mode Menu for a pass/fail.

    Does the result indicate PASSED?

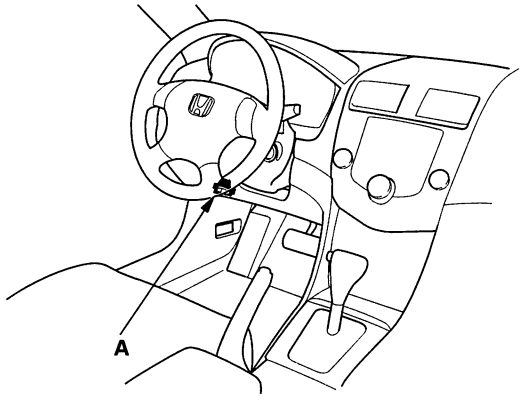
    YES—Troubleshooting is complete. ■

    NO—Return to step 8 and recheck.

Protected by AR

Road Test

1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Apply the parking brake, and block both rear wheels. Start the engine, then shift to the D position while pressing the brake pedal. Press the accelerator pedal, and release it suddenly. The engine should not stall.
3. Repeat step 2 in the D3, 2, 1, and R positions.
4. Connect the HDS to the DLC (A), and go to the A/T data list.



5. Test-drive the vehicle on a flat road in the D position. Check for abnormal noise and clutch slippage. While driving, check that the shift points occur at the proper speeds by monitoring the throttle position sensor (2003-2005 models) or accelerator pedal position sensor (2006 model) voltage with the HDS and comparing your shift point speeds and voltage to those in the table. (The throttle position sensor or accelerator pedal position sensor voltage represents the throttle opening.)

Upshift: D Position

Throttle position sensor or accelerator pedal position sensor voltage: 0.8 V	
1st→2nd	9—12 mph (15—19 km/h)
2nd→3rd	17—21 mph (28—33 km/h)
3rd→4th	27—32 mph (44—51 km/h)
4th→5th	41—47 mph (66—75 km/h)
Lock-up ON	48—55 mph (78—88 km/h)
Throttle position sensor or accelerator pedal position sensor voltage: 2.25 V	
1st→2nd	20—24 mph (32—38 km/h)
2nd→3rd	37—42 mph (60—68 km/h)
3rd→4th	57—62 mph (91—100 km/h)
4th→5th	102—112 mph (164—181 km/h)
Lock-up ON	108—119 mph (174—191 km/h)
Fully-opened throttle Throttle position sensor or accelerator pedal position sensor voltage: 4.5 V	
1st→2nd	36—41 mph (58—66 km/h)
2nd→3rd	65—73 mph (104—117 km/h)
3rd→4th	99—110 mph (160—177 km/h)
4th→5th	———
Lock-up ON	———

BACK

Protected by AR

Downshift: D Position

Throttle position sensor or accelerator pedal position sensor voltage: 0.8 V	
Lock-up OFF	47—53 mph (76—86 km/h)
5th→4th	30—35 mph (49—57 km/h)
4th→3rd	19—22 mph (30—35 km/h)
3rd→1st	5—8 mph (8—13 km/h)
Throttle position sensor or accelerator pedal position sensor voltage: 2.25 V	
Lock-up OFF	70—78 mph (113—126 km/h)
Fully-opened throttle Throttle position sensor or accelerator pedal position sensor voltage: 4.5 V	
Lock-up OFF	114—124 mph (183—200 km/h)
5th→4th	121—133 mph (195—214 km/h)
4th→3rd	88—98 mph (142—158 km/h)
3rd→2nd	53—60 mph (85—96 km/h)
2nd→1st	26—31 mph (42—50 km/h)

6. Accelerate to about 35 mph (57 km/h) so the transmission is in 4th or 5th, then shift from the D position to the 2 position. The vehicle should immediately begin to slow down from engine braking.

7. Check for abnormal noise and clutch slippage in the following positions.

   1 (1st Gear) Position
   Accelerate from a stop at full throttle. Check that there is no abnormal noise or clutch slippage. Upshifts should not occur with the shift lever in this position.

   2 (2nd Gear) Position
   Accelerate from a stop at full throttle. Check that there is no abnormal noise or clutch slippage. Upshifts and downshifts should not occur with the shift lever in this position.

   R (Reverse) Position
   Accelerate from a stop at full throttle, and check for abnormal noise and clutch slippage.

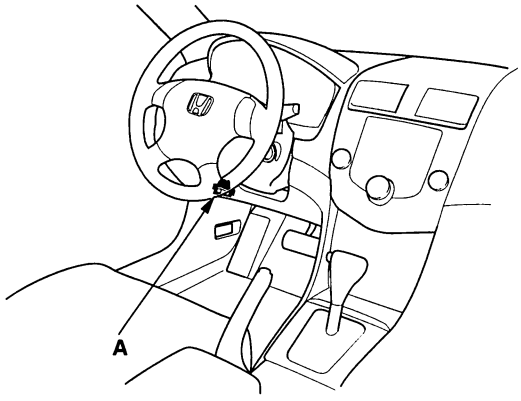
8. Test in P (Park) Position.
   Park the vehicle on a slope (about 16 °), apply the brake, and shift into the P position. Release the brake; the vehicle should not move.

   NOTE: Always use the brake to hold the vehicle, when stopped on an incline in gear. Depending on the grade of the incline, the vehicle could roll backwards if the brake is released.

Protected by AR

Stall Speed Test

1. Make sure the transmission fluid is filled to the proper level (see page 14-207).
2. Apply the parking brake, and block all four wheels.
3. Connect the HDS to the DLC (A), and go to the A/T data list.



4. Make sure the A/C switch is OFF.
5. After the engine has warmed up to normal operating temperature (the radiator fan comes on), shift to the 2 position.
6. Firmly press the brake pedal and accelerator pedal for 6 to 8 seconds, and note the engine speed. Do not move the shift lever while raising engine speed.
7. Allow 2 minutes for cooling, then repeat the test in the D, 1, and R positions.

NOTE:
- Do not test stall speed for more than 10 seconds at a time.
- Stall speed tests should be used for diagnostic purposes only.
- Stall speed should be the same in D, 2, 1, and R positions.
- Do not test stall speed with the A/T pressure gauges installed.

Stall Speed rpm:
Specification: 2,400 rpm
Service Limit: 2,250—2,550 rpm

8. If the measurements are out of the service limit, problems and probable causes are listed in the table.

Problem	Probable causes
Stall speed rpm high in the D, 2, 1, and R positions	• ATF pump output low • Clogged ATF strainer • Regulator valve stuck • Slipping clutch
Stall speed rpm high in the 1 position	Slippage of 1st clutch
Stall speed rpm high in the 2 position	Slippage of 2nd clutch
Stall speed rpm high in the R position	Slippage 4th clutch
Stall speed rpm low in the D, 2, 1, and R positions	• Engine output low • Engine throttle valve closed • Torque converter one-way clutch slipping

Protected by AR

Pressure Test

Special Tools Required
- A/T clutch pressure gauge set 07406-0020400 or 07406-0020401
- A/T pressure hose, 2,210 mm 07MAJ-PY4011A
- A/T pressure hose adapter 07MAJ-PY40120

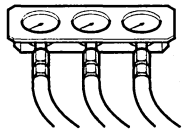
1. Make sure the transmission fluid is filled to the proper level (see page 14-207).

2. Lift the vehicle up on a lift or apply the parking brake, block rear wheels, and raise the front of the vehicle. Make sure it is securely supported.

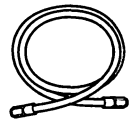
3. Allow the front wheels to rotate freely.

4. Connect the oil pressure gauges to the line pressure inspection hole (A) and 4th clutch pressure inspection hole (B). Do not allow dust or other foreign particles to enter the holes while connecting the gauges.

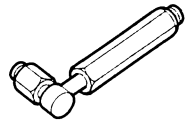
A/T OIL PRESSURE GAUGE SET/W PANEL 07406-0020400 or 07406-0020401

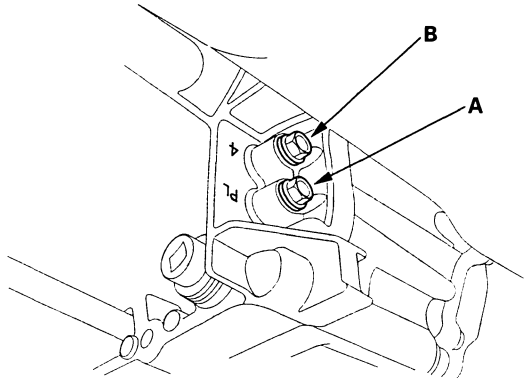


A/T PRESSURE HOSE, 2,210 mm 07MAJ-PY4011A (3 Required)

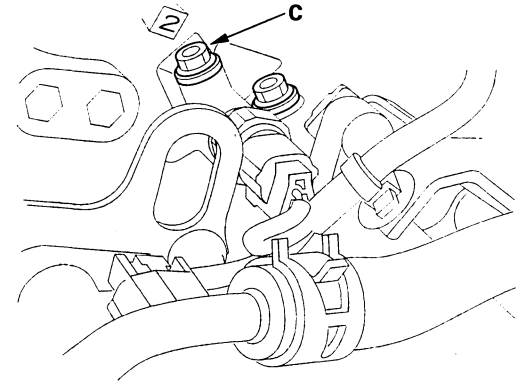


A/T PRESSURE HOSE ADAPTER 07MAJ-PY40120 (3 Required)

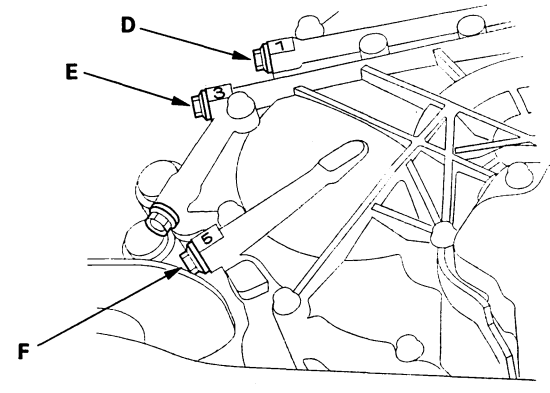




5. Remove the intake air duct and air cleaner housing, and connect the oil pressure gauges to the 2nd clutch pressure inspection hole (C). Then temporarily install the air cleaner housing and intake air duct.



6. Connect the oil pressure gauge to the 1st clutch pressure inspection hole (D), 3rd clutch pressure inspection hole (E), and 5th clutch pressure inspection hole (F).



7. Warm up the engine (the radiator fan comes on), then stop it and connect the HDS to the DLC.

(cont'd)

Protected by AR

Pressure Test (cont'd)

8. Start the engine, and run it at 2,000 rpm in the P or N position.

9. Measure the line pressure at the line pressure inspection hole (A).

   NOTE: Higher pressure may be indicated if measurements are made in shift lever position other than N or P.

Pressure	Fluid Pressure	
	Standard	Service Limit
Line (A)	900—960 kPa (9.2—9.8 kgf/cm², 130—140 psi)	850 kPa (8.7 kgf/cm², 120 psi)

10. Shift to the 1 position, and measure the 1st clutch pressure at the 1st clutch pressure inspection hole (D) while holding engine speed at 2,000 rpm.

11. Shift to the 2 position, and measure the 2nd clutch pressure at the 2nd clutch pressure inspection hole (C) while holding engine speed at 2,000 rpm.

12. Shift to the P position, then press the brake pedal and hold it.

13. Shift to the D3 position, press the accelerator pedal to increase the engine speed to 2,500 rpm; the transmission shifts into 2nd gear.

14. Release the accelerator pedal; the engine speed decreases to 1,000 rpm with the transmission in 2nd gear.

15. Press the accelerator pedal very slowly so that the engine speed increases to 2,000 rpm on 5 seconds, then hold the accelerator; the transmission shifts into 3rd gear. Measure the 3rd clutch pressure at the 3rd clutch pressure inspection hole (E) while holding the engine speed at 2,000 rpm.

16. Shift to the D position, and measure the 4th clutch pressure at the 4th clutch pressure inspection hole (B) while holding the engine speed at 2,000 rpm, then in about 15 seconds, the transmission will shift to 5th gear.

17. Measure the 5th clutch pressure at the 5th clutch pressure inspection hole (F) while holding the engine speed at 2,000 rpm.

18. Bring the engine back to an idle, then apply the brake to stop the wheels from rotating.

19. Shift to the R position. Raise the engine rpm to 2,000 rpm, and measure the reverse clutch pressure at the 4th clutch pressure inspection hole (B).

Pressure	Fluid Pressure	
	Standard	Service Limit
1st clutch (D)	890—970 kPa (9.1—9.9 kgf/cm², 130—140 psi)	840 kPa (8.6 kgf/cm², 120 psi)
2nd clutch (C)		
3rd clutch (E)		
4th clutch (B)		
5th clutch (F)		

20. If the measurements are out of service limit, problems and probable causes are listed in the table.

Problem	Probable causes
No or low line pressure	• Torque converter • ATF pump • Regulator valve • Torque converter check valve
No or low 1st clutch pressure	• 1st clutch • O-rings
No or low 2nd clutch pressure	• 2nd clutch • O-rings
No or low 3rd clutch pressure	• 3rd clutch • O-rings
No or low 4th clutch pressure	• 4th clutch • O-rings
No or low 5th clutch pressure	• 5th clutch • O-rings
No or low 4th clutch pressure in the R position	• Servo valve • 4th clutch • O-rings

21. Install the sealing bolts with the new sealing washers, and tighten the bolts to the specified torque. Do not reuse old sealing washers.

    Torque: 18 N·m (1.8 kgf·m,13 lbf·ft)

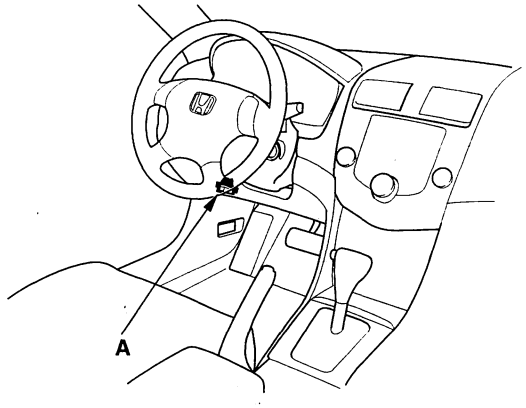
22. Install the air cleaner housing and intake air duct.

BACK

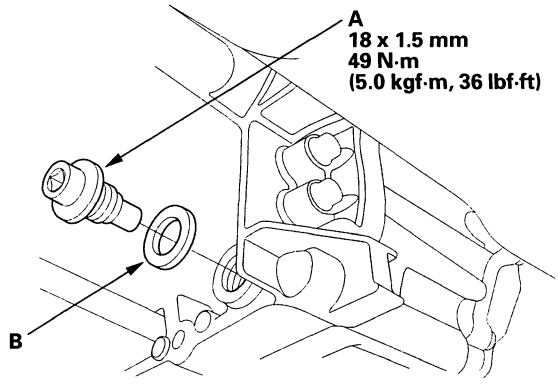
Protected by AR

Shift Solenoid Valve Test

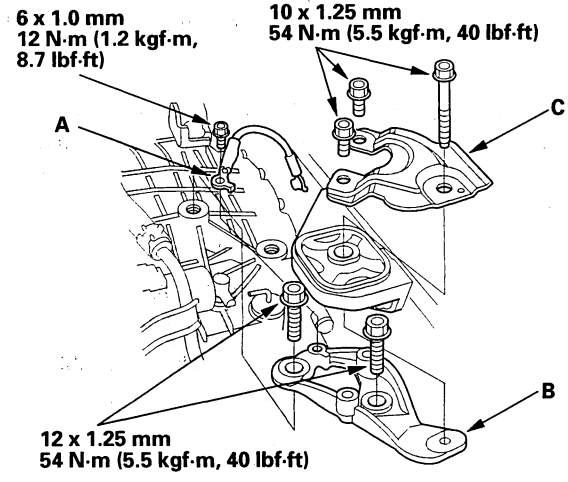
1. Connect the HDS to the DLC (A).



2. Choose Shift Solenoid A, B, C, D, and E in Miscellaneous Test Menu on the HDS.
3. Check that the shift solenoid valve A, B, C, D, and E operate with the HDS. A clicking sound should be heard.
4. Shift solenoid valves test has finished if the test results are OK.
   If no sound is heard, remove the shift solenoid valves and test.
5. Remove the splash shield.
6. Remove the drain plug (A), and drain the automatic transmission fluid (ATF). Then reinstall the drain plug with a new sealing washer (B).



7. Get the customer's radio anti-theft code (navigation code), and write down the radio station presets.
8. Disconnect the battery negative terminal, then disconnect the battery positive terminal.
9. Remove the battery hold-down bracket, then remove the battery cover, battery, and battery tray.
10. Remove the intake air duct and air cleaner housing.
11. Loosen the two bolts securing the battery base from under the vehicle, and remove the two bolts securing the battery base in the engine compartment, then remove the battery base.
12. Remove the ground cable (A), transmission upper mount bracket (B), and bracket plate (C).

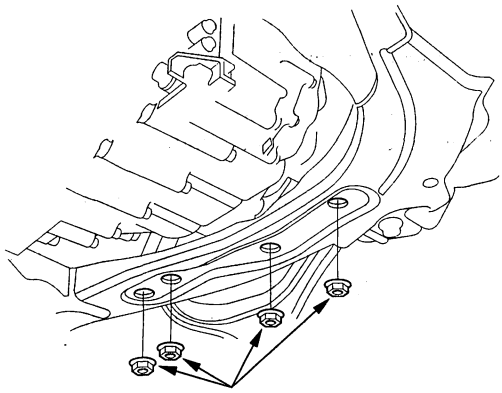


(cont'd)

Protected by AR

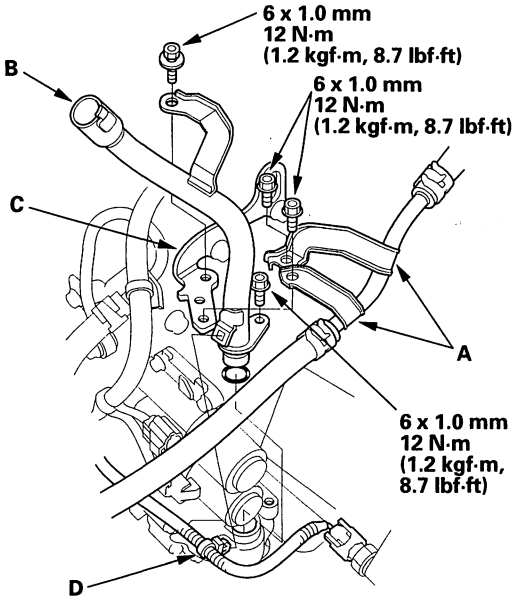
Shift Solenoid Valve Test (cont'd)

13. Place a transmission jack under the transmission, and remove the transmission lower mount nuts.



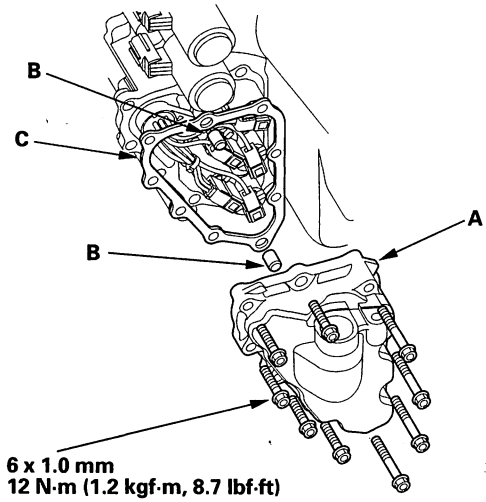
14. Lift the transmission up to create clearance between the transmission and front subframe with the jack.

15. Remove the ATF dipstick, and remove the bolts securing the ATF cooler inlet line brackets (A) and ATF dipstick guide pipe (B) from the transmission hanger (C).



16. Remove the harness clamp (D), then remove the ATF dipstick guide pipe.

17. Disconnect the shift solenoid harness connector.

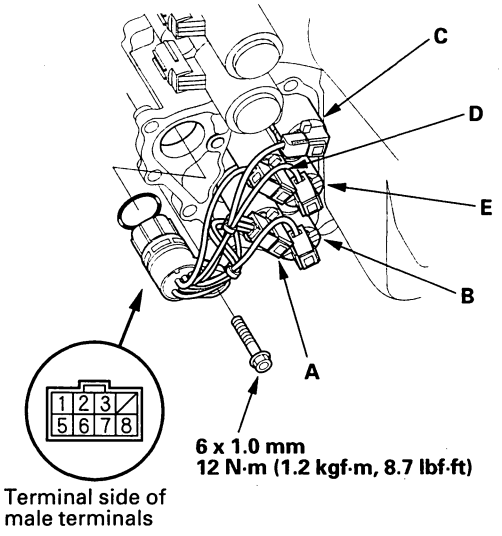


18. Remove the shift solenoid valve cover (A), dowel pins (B), and gasket (C).

BACK

Protected by AR

19. Remove the shift solenoid harness connector.



20. Measure shift solenoid valves resistance between shift solenoid harness connector terminals below and body ground:

    - No. 1 (GRN): shift solenoid valve C
    - No. 2 (ORN): shift solenoid valve B
    - No. 3 (RED): shift solenoid valve E
    - No. 5 (BLU): shift solenoid valve A
    - No. 8 (YEL): shift solenoid valve D

    Standard: 12—25 Ω

21. If the resistance is out of standard, disconnect the shift solenoid valve connector, and measure its resistance at the solenoid valve terminal. Replace the shift solenoid valve if the resistance is out of standard.

22. Connect the battery negative terminal to body ground, and connect the battery positive terminal to the shift solenoid valve terminal individually. A clicking sound should be heard.

23. If no sound is heard, connect the battery positive terminal to the shift solenoid valve terminal, and check for a clicking sound. Replace the shift solenoid valve if no clicking sound is heard.

24. Replace the shift solenoid harness if the test results are OK.

25. Install a new O-ring on the shift solenoid harness connector, and install the connector in the transmission housing.

26. Install the shift solenoid valve cover, dowel pins and a new gasket.

27. Install the new O-ring on the ATF dipstick guide pipe, and install the ATF dipstick guide pipe, then install the harness clamp on the ATF dipstick guide pipe.

28. Secure the ATF cooler line brackets on the transmission hanger with the bolts.

29. Check the connector for rust, dirt, or oil, then connect the connector securely.

30. Install the transmission lower mount nuts.

31. Install the transmission upper mount bracket, bracket plate, and ground cable, then remove the transmission jack.

32. Refill the transmission with ATF (see step 4 on page 14-208).

33. Install the battery base, then install the air cleaner housing and intake air duct.

34. Install the battery tray, battery, and battery cover, then secure the battery with its hold-down bracket. Connect the battery terminals.

35. Install the splash shield.

36. Enter the radio code (navigation code), reset the radio presets and set the clock.

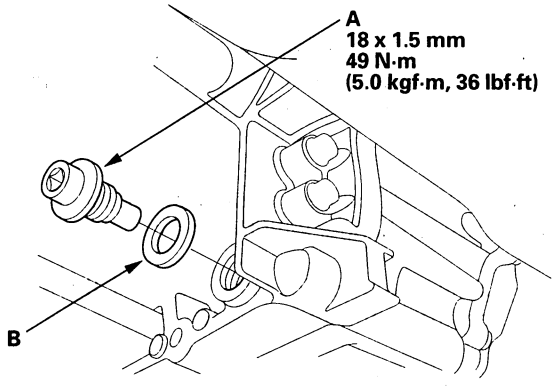
37. Do the power window control unit reset procedure (see page 22-232).

BACK

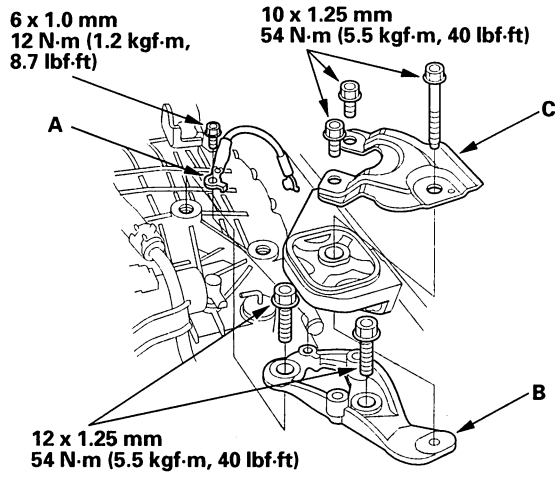
Protected by AR

Shift Solenoid Valve Replacement

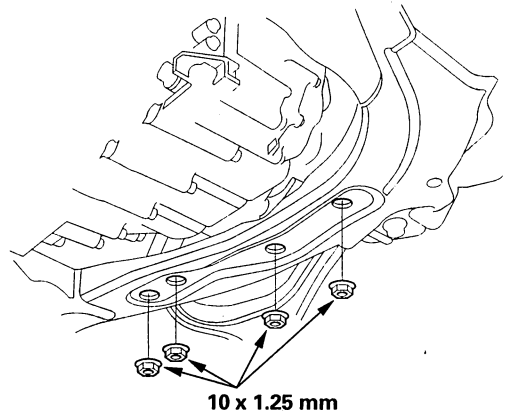
1. Get the customer's radio anti-theft code (navigation code), and write down the radio station presets.
2. Remove the splash shield.
3. Remove the drain plug (A), and drain the automatic transmission fluid (ATF). Then reinstall the drain plug with a new sealing washer (B).



4. Disconnect the battery negative terminal, then disconnect the battery positive terminal.
5. Remove the battery hold-down bracket, then remove the battery cover, battery, and battery tray.
6. Remove the intake air duct and air cleaner housing.
7. Loosen the two bolts securing the battery base from under the vehicle, and remove the two bolts securing the battery base in the engine compartment, then remove the battery base.
8. Remove the ground cable (A), transmission upper mount bracket (B), and bracket plate (C).



9. Place the transmission jack under the transmission, and remove the transmission lower mount nuts.

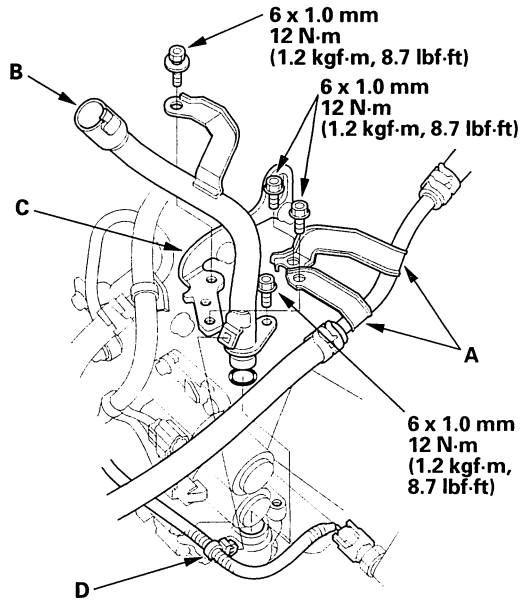


10. Lift the transmission up to create clearance between the transmission and front subframe with the jack.

BACK

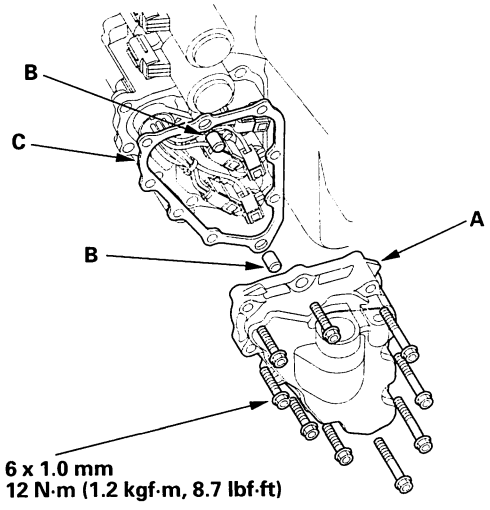
Protected by AR

11. Remove the ATF dipstick, and remove the bolts securing the ATF cooler inlet line brackets (A) and ATF dipstick guide pipe (B) from the transmission hanger (C).

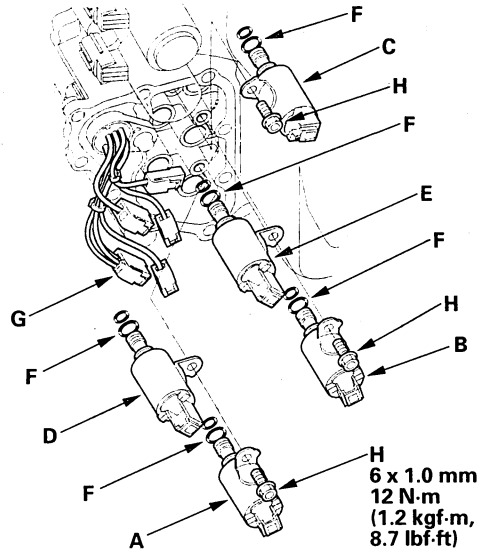


12. Remove the harness clamp (D), then remove the ATF dipstick guide pipe.

13. Remove the shift solenoid valve cover (A), dowel pins (B), and gasket (C).



14. Disconnect the shift solenoid valve connectors, remove the solenoid mounting bolts, then hold the solenoid valve body and remove the shift valves. Do not hold the connector to remove the shift solenoid valve.



15. Install the new O-rings (two O-rings per solenoid valve) (F) on the reused solenoid valve.

    NOTE: A new solenoid valve comes with new O-rings. If you install a new solenoid valve, use the O-rings provided on it.

16. Install the shift solenoid valves C, D, and E. While holding the shift solenoid valve body, be sure to install the solenoid valves until their mounting brackets contact the servo body.

17. Install the shift solenoid valves A and B. While holding the shift solenoid valve body, be sure to install the solenoid valves until their mounting brackets contact the bracket of the installed solenoid. Install the solenoid mounting bolts (H) and tighten them.

    NOTE: Do not install the solenoid valves A and B before installing the shift solenoid valves D and E. If solenoid valves A and B are installed before solenoid valves D and E, it may damage the hydraulic control system.

18. Connect the shift solenoid valve D connector (G) with the ATF temperature sensor.

(cont'd)

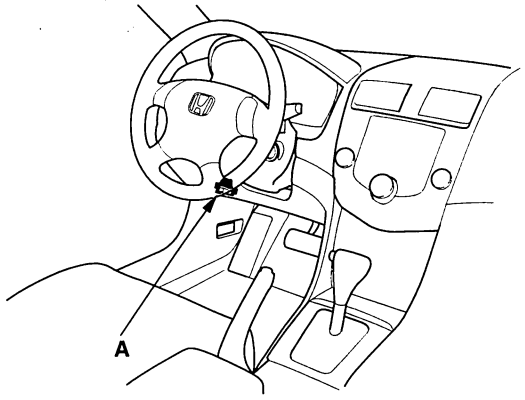
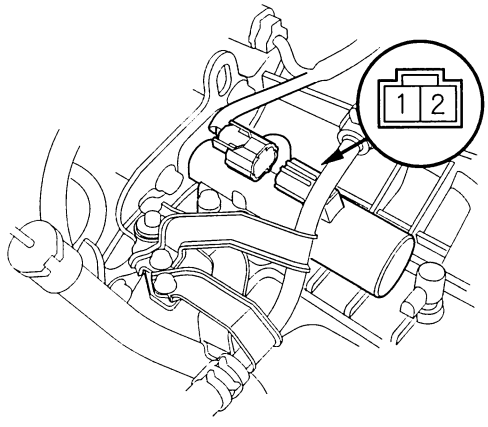
A/T Clutch Pressure Control Solenoid Valve A Test

1. Connect the HDS to the DLC (A).



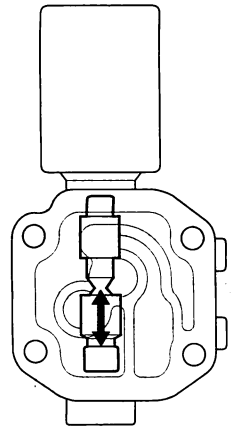
2. Choose Clutch Pressure Control (Linear) Solenoid A in Miscellaneous Test Menu on the HDS.
3. Test the A/T clutch pressure control solenoid valve A with the HDS.
4. Follow instructions indicated on the HDS by the test result. If the HDS has not determined the cause of the failure, remove A/T clutch pressure control solenoid valve A and test.
5. Remove the intake air duct.
6. Disconnect the A/T clutch pressure control solenoid valve A connector.



7. Measure A/T clutch pressure control solenoid valve A resistance at the solenoid valve A connector.

   Standard: 3—10 Ω

8. If the resistance is out of standard, replace A/T clutch pressure control solenoid valve A (see page 14-198).
9. If the resistance is *within* the standard, connect the battery positive terminal to the No. 1 terminal of the A/T clutch pressure control solenoid valve A connector, and connect the battery negative terminal to the No. 2 terminal. A clicking sound should be heard.
10. If no sound is heard, remove the A/T clutch pressure control solenoid valve A.
11. Check the fluid passage of the A/T clutch pressure control solenoid valve for dust or dirt.
12. Connect the No. 1 terminal of the A/T clutch pressure control solenoid valve A connector to the battery positive terminal, and connect the No. 2 terminal to the battery negative terminal. Make sure the A/T clutch pressure control solenoid valve moves.



13. Disconnect one of the battery terminals and check for valve movement.

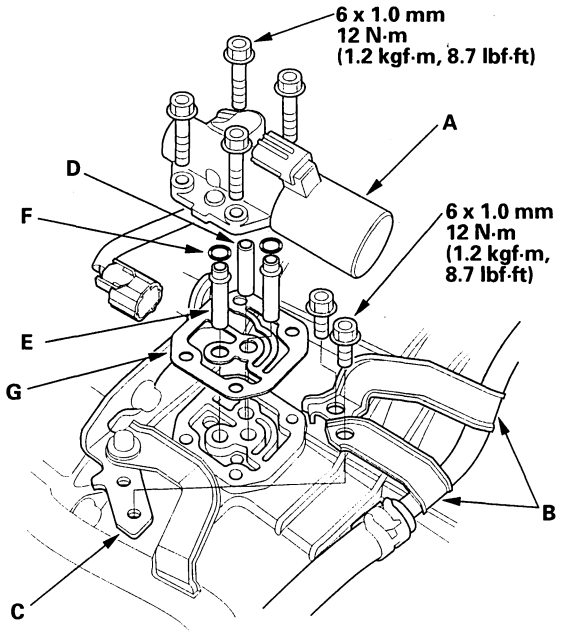
    NOTE: You can see valve movement through the fluid passage in the mounting surface of the A/T clutch pressure control solenoid valve A body.

14. If the valve binds or moves sluggishly, or if the solenoid valve does not operate, replace the A/T clutch pressure control solenoid valve A.

Protected by AR

A/T Clutch Pressure Control Solenoid Valve A Replacement

1. Remove the intake air duct.
2. Disconnect the A/T clutch pressure control solenoid valve A connector.
3. Remove the bolts securing the ATF cooler inlet line brackets (B) from the transmission hanger (C).



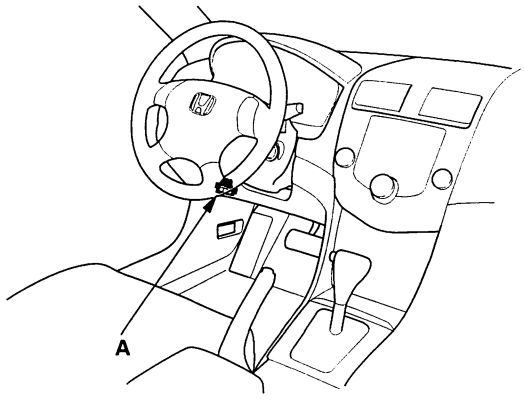
4. Remove the mounting bolts and the A/T clutch pressure control solenoid valve A.
5. Remove the ATF pipe (D), ATF joint pipes (E), O-rings (F), and gasket (G).
6. Clean the mounting surface and fluid passages of the transmission housing.
7. Install the new gasket on the transmission housing, and install the ATF pipe and ATF joint pipes.
8. Install the new O-rings over the ATF joint pipes.
9. Install the new A/T clutch pressure control solenoid valve A.
10. Secure the ATF cooler inlet line brackets with the bolts on the transmission hanger.
11. Check the A/T clutch pressure control solenoid valve A connector for rust, dirt, or oil, and clean if necessary, then connect the connector securely.
12. Install the intake air duct.

BACK

Protected by AR

A/T Clutch Pressure Control Solenoid Valve B and C Test

1. Connect the HDS to the DLC (A).

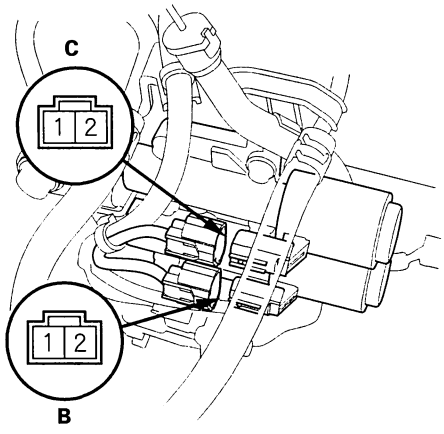


2. Choose Clutch Pressure Control (Linear) Solenoid B and C in Miscellaneous Test Menu on the HDS.

3. Test the A/T clutch pressure control solenoid valve B and C with the HDS.

4. Follow instructions indicated on the HDS by the test result. If the HDS has not determined the cause of the failure, remove A/T clutch pressure control solenoid valve B, C, and test.

5. Disconnect the A/T clutch pressure control solenoid valves B and C connectors.



6. Measure A/T clutch pressure control solenoid valve B resistance between the solenoid valve B terminals No. 1 and No. 2, and measure A/T clutch pressure control solenoid valve C resistance between the solenoid valve C terminals No. 1 and No. 2.

   Standard: 3—10 Ω

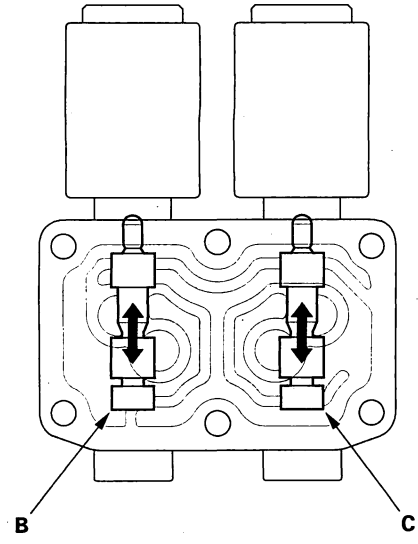
7. If the resistance of either A/T clutch pressure control solenoid valve is out of standard, replace A/T clutch pressure control solenoid valves B and C (see page 14-200).

8. If the resistance is within the standard, connect the battery positive terminal to the No. 1 terminal of the A/T clutch pressure control solenoid valves B and C connectors, and connect the battery negative terminal to the No. 2 terminal. A clicking sound should be heard.

9. If no sound is heard, remove the A/T clutch pressure control solenoid valves B and C.

10. Check the fluid passage of the A/T clutch pressure control solenoid valve for dust or dirt.

11. Connect the No. 1 terminal of the A/T clutch pressure control solenoid valves B and C connectors to the battery positive terminal, and connect the No. 2 terminal to the battery negative terminal. Make sure the A/T clutch pressure control solenoid valves B and C move.



12. Disconnect one of the battery terminals, and check valve movement.

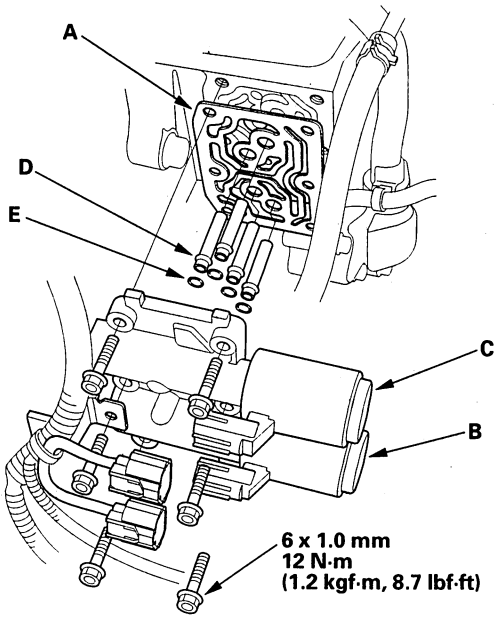
    NOTE: You can see valve movement through the fluid passage in the mounting surface of the A/T clutch pressure control solenoid valves B and C body.

13. If either valve binds or moves sluggishly, or if the solenoid valve does not operate, replace the A/T clutch pressure control solenoid valves B and C.

Protected by AR

A/T Clutch Pressure Control Solenoid Valve B and C Replacement

1. Disconnect the A/T clutch pressure control solenoid valves B and C connectors.
2. Remove the A/T clutch pressure control solenoid valves B and C.



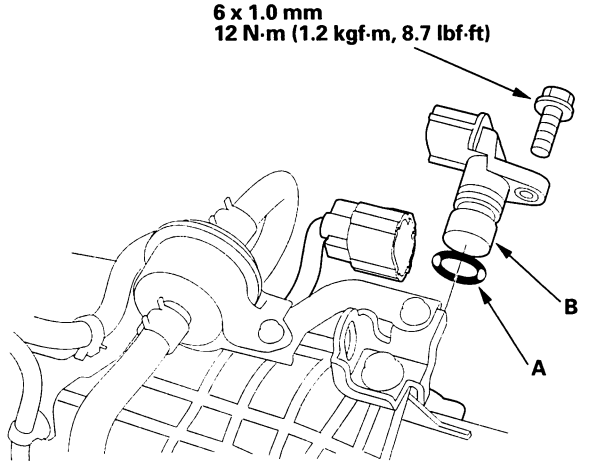
3. Remove the ATF joint pipes (D), O-rings (E), and gasket (A).
4. Clean the mounting surface and fluid passages of the transmission housing.
5. Install the new gasket on the transmission housing, and install the ATF joint pipes.
6. Install new O-rings over the ATF joint pipes.
7. Install new A/T clutch pressure control solenoid valves B and C.
8. Check A/T clutch pressure control solenoid valves B and C connectors for rust, dirt, or oil, and clean if necessary, then connect the connectors securely.

BACK

Protected by AR

Input Shaft (Mainshaft) Speed Sensor Replacement

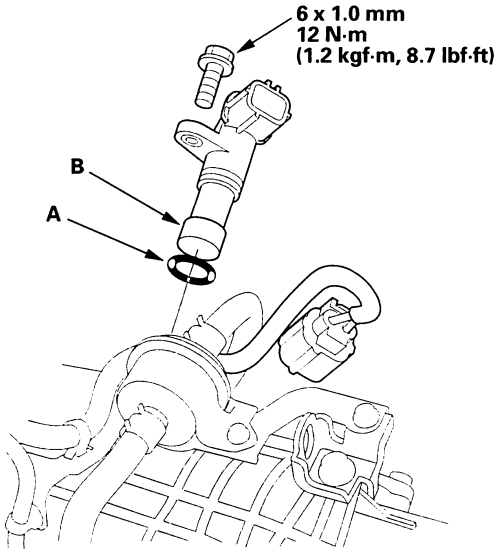
1. Remove the intake air duct and air cleaner housing.
2. Disconnect the input shaft (mainshaft) speed sensor connector, and remove the input shaft (mainshaft) speed sensor.



3. Install the new O-ring (A) on the new input shaft (mainshaft) speed sensor (B), then install the input shaft (mainshaft) speed sensor in the transmission housing.
4. Check the connector for rust, dirt, or oil, and clean if necessary, then connect the connector securely.
5. Install the intake air duct and air cleaner housing.

Output Shaft (Countershaft) Speed Sensor Replacement

1. Disconnect the output shaft (countershaft) speed sensor connector, and remove the output shaft (countershaft) speed sensor.



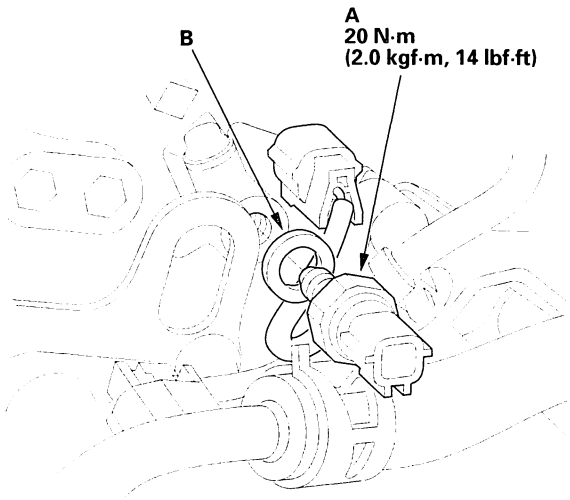
2. Install the new O-ring (A) on the new output shaft (countershaft) speed sensor (B), then install the output shaft (countershaft) speed sensor in the transmission housing.
3. Check the connector for rust, dirt, or oil, and clean if necessary, then connect the connector securely.

BACK

Protected by AR

2nd Clutch Transmission Fluid Pressure Switch Replacement

1. Remove the intake air duct.
2. Disconnect the connector from the 2nd clutch transmission fluid pressure switch (A), and remove the switch.



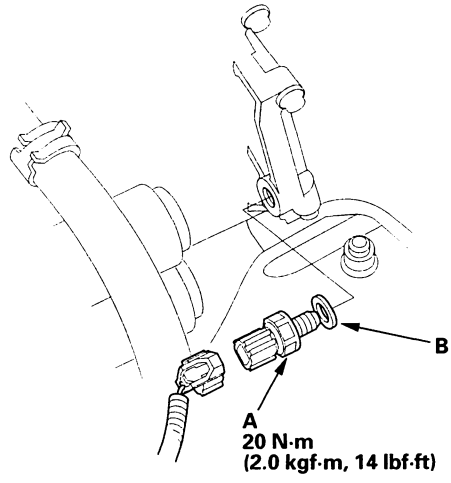
3. Make sure there is no water, oil, dust, or foreign particles inside the connector.
4. Install the new 2nd clutch transmission fluid pressure switch with a new sealing washer (B), and tighten the switch to the specified torque on the metal part, not the plastic part.
5. Connect the connector securely.
6. Install the intake air duct.

BACK

Protected by AR

3rd Clutch Transmission Fluid Pressure Switch Replacement

1. Get the customer's radio anti-theft code (navigation code), and write down the radio station presets.
2. Disconnect the battery negative terminal, then disconnect the battery positive terminal.
3. Remove the battery hold-down bracket, then remove the battery cover, battery, and battery tray.
4. Remove the intake air duct and air cleaner housing.
5. Loosen the two bolts securing the battery base from under the vehicle, and remove the two bolts securing the battery base in the engine compartment, then remove the battery base.
6. Disconnect the connector from the 3rd clutch transmission fluid pressure switch (A), then remove the switch.

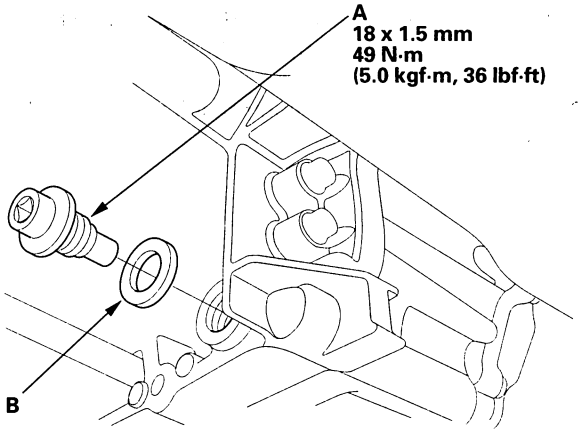


7. Make sure there is no water, oil, dust, or foreign particles inside the connector.
8. Install the 3rd clutch transmission fluid pressure switch with a new sealing washer (B), and tighten the switch to the specified torque on the metal part, not the plastic part.
9. Connect the connector securely.
10. Install the battery base, then install the air cleaner housing and intake air duct.
11. Install the battery tray, battery, and battery cover, then secure the battery with its hold-down bracket. Connect the battery terminals.
12. Enter the radio code (navigation code), reset the radio presets and set the clock.
13. Do the power window control unit reset procedure (see page 22-232).

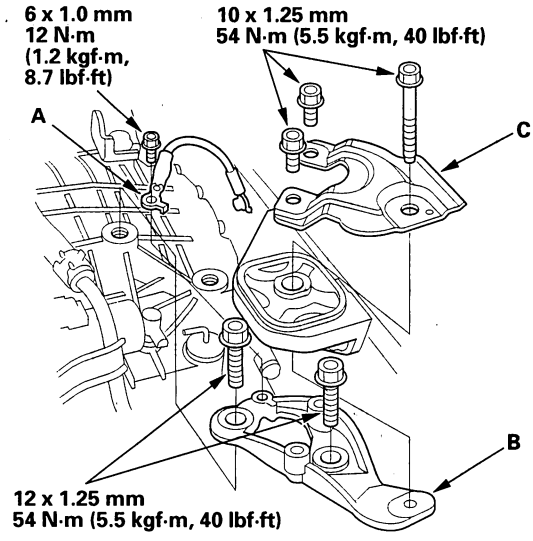
Protected by AR

ATF Temperature Sensor Test/Replacement

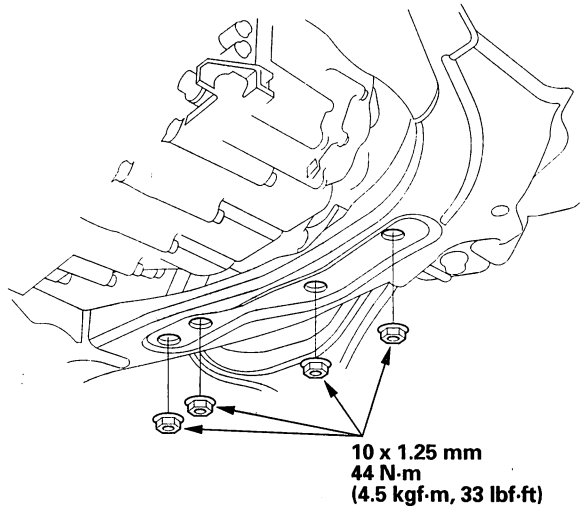
1. Get the customer's radio anti-theft code (navigation code), and write down the radio station presets.
2. Remove the splash shield.
3. Remove the drain plug (A), and drain the automatic transmission fluid (ATF). Then reinstall the drain plug with a new sealing washer (B).



4. Disconnect the battery negative terminal, then disconnect the battery positive terminal.
5. Remove the battery hold-down bracket, then remove the battery cover, battery, and battery tray.
6. Remove the intake air duct and air cleaner housing.
7. Loosen the two bolts securing the battery base from under the vehicle, and remove the two bolts securing the battery base in the engine compartment, then remove the battery base.
8. Remove the ground cable (A), transmission upper mount bracket (B), and bracket plate (C).



9. Place the transmission jack under the transmission, and remove the transmission lower mount nuts.

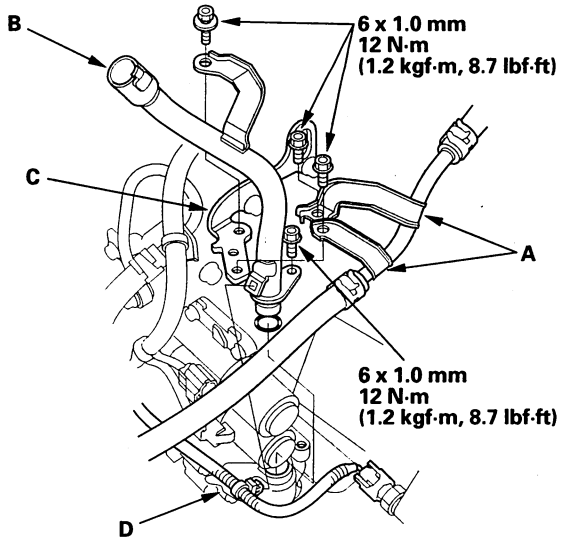


10. Lift the transmission up to create clearance between the transmission and front subframe with the jack.

BACK

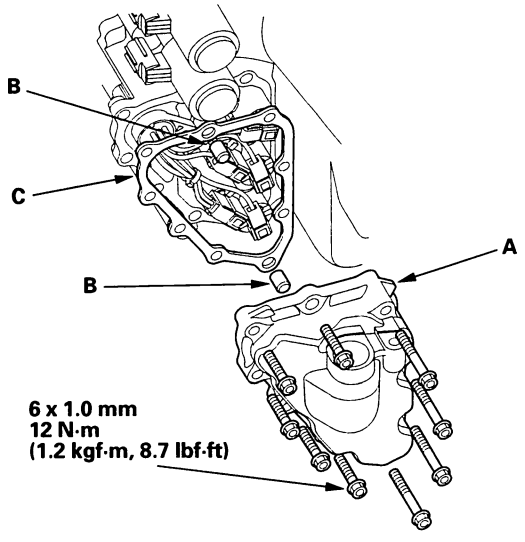
Protected by AR

11. Remove the ATF dipstick, and remove the bolts securing the ATF cooler inlet line brackets (A) and ATF dipstick guide pipe (B) from the transmission hanger (C).



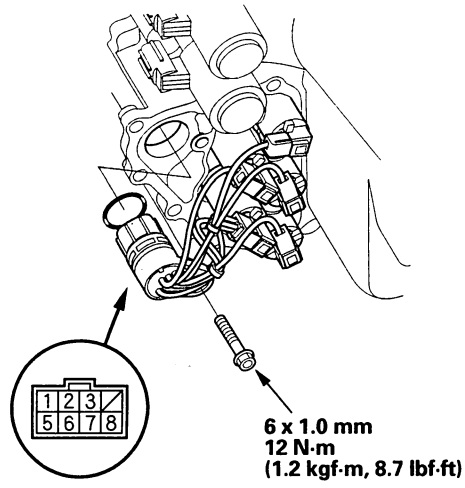
12. Remove the harness clamp (D), then remove the ATF dipstick guide pipe.

13. Disconnect the shift solenoid harness connector.



14. Remove the shift solenoid valve cover (A), dowel pins (B), and gasket (C).

15. Remove the shift solenoid harness connector.



Terminal side of male terminals

16. Measure ATF temperature sensor resistance between shift solenoid harness connector terminals No. 6 and No. 7.

Standard: 50 Ω —25 kΩ

17. If the resistance is out of standard, replace the ATF temperature sensor and solenoid harness; go to step 18. The ATF temperature sensor is not available separately from the solenoid harness. If the measurement is within the standard, install the removed parts; go to step 20.

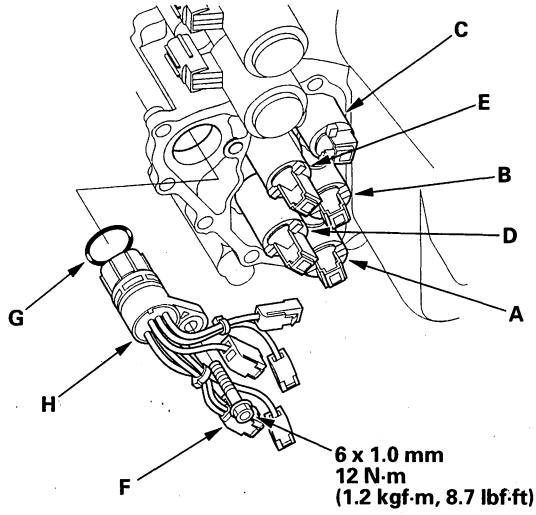
18. Disconnect the connectors from the shift solenoid valves.

(cont'd)

Protected by AR

ATF Temperature Sensor Test/Replacement (cont'd)

19. Connect the shift solenoid valve D connector with the ATF temperature sensor (F) on the shift solenoid harness.



20. Connect the solenoid valve A connector (BLU wire), solenoid valve B connector (ORN wire), solenoid valve C connector (GRN wire), and solenoid valve E connector (RED wire).

21. Install the new O-ring (G) on the shift solenoid harness connector (H), and install the connector in the transmission housing.

22. Install the shift solenoid valve cover, dowel pins and a new gasket.

23. Install the new O-ring on the ATF dipstick guide pipe, and install the ATF dipstick guide pipe, then install the harness clamp on the ATF dipstick guide pipe.

24. Secure the ATF cooler line brackets on the transmission hanger with the bolts.

25. Check the connector for rust, dirt, or oil, and clean if necessary, then connect the connector securely.

26. Install the transmission lower mount nuts.

27. Install the transmission upper mount bracket, bracket plate, and ground cable, then remove the transmission jack.

28. Refill the transmission with ATF (see step 4 on page 14-208).

29. Install the battery base, then install the air cleaner housing and intake air duct.

30. Install the battery tray, battery, and battery cover, then secure the battery with its hold-down bracket. Connect the battery terminals.

31. Install the splash shield.

32. Enter the radio code (navigation code), reset the radio presets and set the clock.

33. Do the power window control unit reset procedure (see page 22-232).

Protected by AR

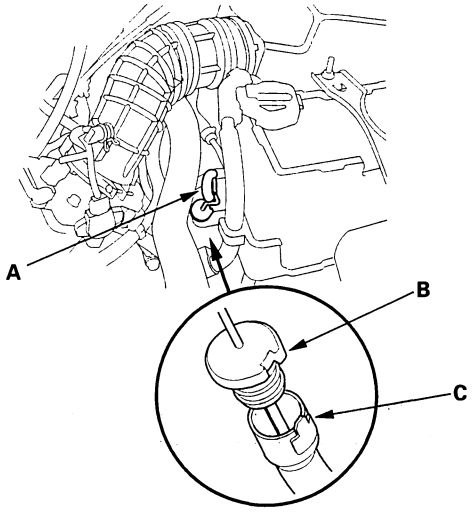
ATF Level Check

NOTE: Keep all foreign particles out of the transmission.

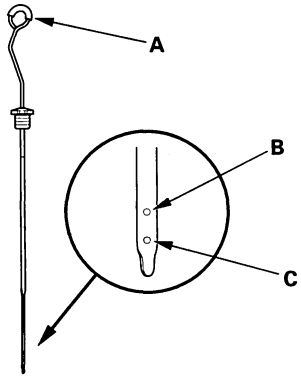
1. Warm up the engine to normal operating temperature (the radiator fan comes on).
2. Park the vehicle on level ground, and turn the engine off.

   NOTE: Check the fluid level within 60—90 seconds after turning the engine off.

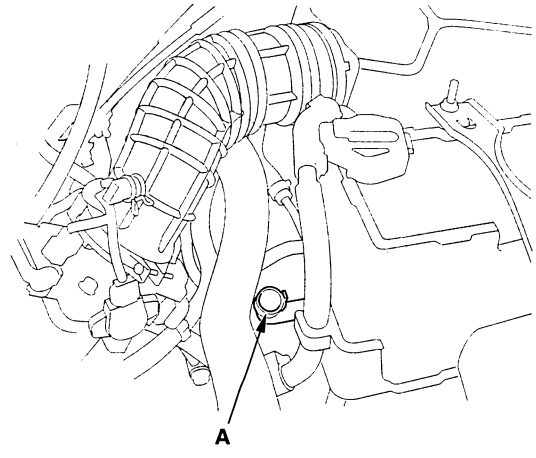
3. Remove the ATF dipstick (yellow loop) (A) from the dipstick guide pipe, and wipe it with a clean cloth.



4. Insert the dipstick aligning the cap (B) with the guide tab (C).
5. Remove the dipstick (A) and check the fluid level. It should be between upper mark (B) and lower mark (C).



6. If the level is below the lower mark, check for fluid leaks at the transmission, hose and line joints, and cooler lines.
   If a problem is found, fix it before filling the transmission.
   If the level is above the upper mark, drain the ATF to proper level (see step 3 on page 14-208).
7. If necessary fill the transmission through the dipstick guide pipe opening (A) to bring the fluid level up to the upper mark. Always use Honda ATF-Z1 automatic transmission fluid (ATF). Using a non-Honda ATF can affect shift quality.



8. Insert the dipstick back into the dipstick guide pipe aligning the cap with the guide tab on the guide pipe.

BACK

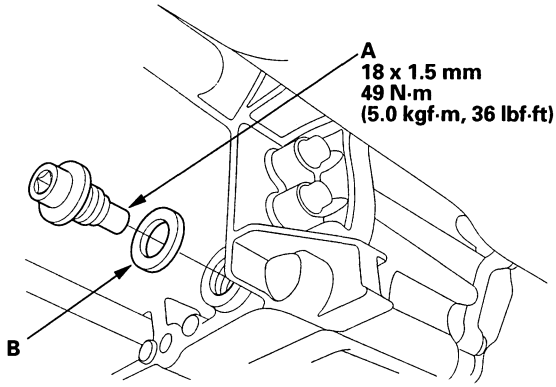
Protected by AR

ATF Replacement

NOTE: Keep all foreign particles out of the transmission.

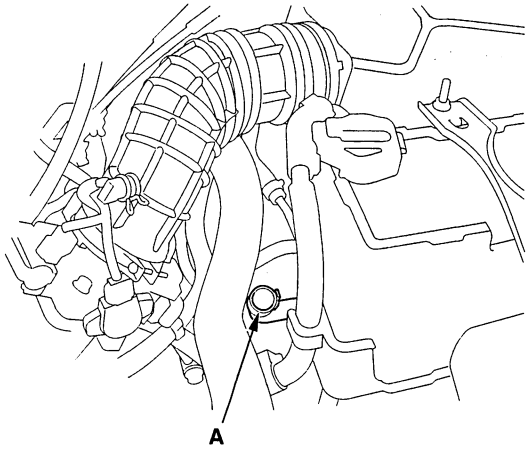
1. Bring the transmission up to normal operating temperature (the radiator fan comes on).
2. Park the vehicle on level ground, and turn the engine off.
3. Remove the drain plug (A), and drain the automatic transmission fluid (ATF). Then reinstall the drain plug with a new sealing washer (B).

   NOTE: If a cooler cleaner is going to be used, refer to ATF cooler cleaning (see page 14-228).



4. Remove the dipstick, and refill transmission with the recommended fluid amount through the opening of the dipstick guide pipe until the level reaches the upper mark on the dipstick. Always use Honda ATF-Z1 automatic transmission fluid (ATF). Using a non-Honda ATF can affect shift quality.

   Automatic Transmission Fluid Capacity:
   2.9 L (3.0 US qt) at change
   6.5 L (6.9 US qt) at overhaul



5. Insert the dipstick (A) into the dipstick guide pipe aligning the cap (B) with the guide tab (C).

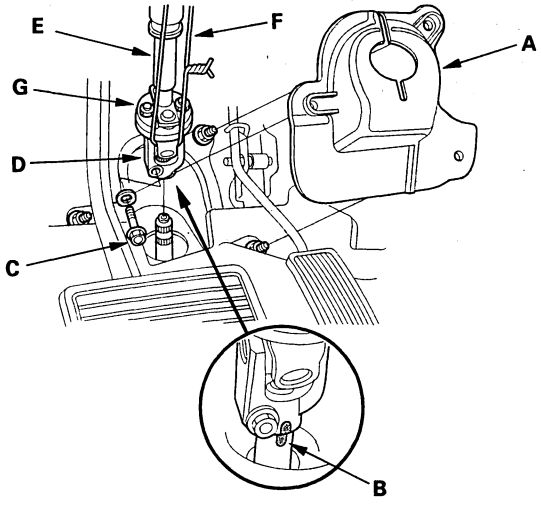
Transmission Removal

Special Tools Required
- Engine hanger adapter VSB02C000015
- Engine support hanger, A and Reds AAR-T-12566
- Front subframe adapter VSB02C000016

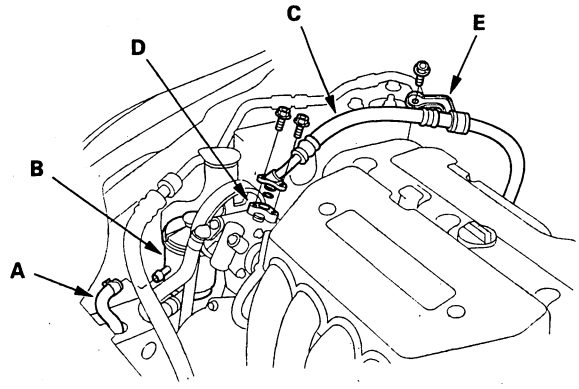
These special tools are available through the Honda Tool and Equipment Program 1-888-424-6857.

NOTE:
- Use fender covers to avoid damaging painted surfaces.
- Special tool Reds engine support hanger AAR-T-12566 must be used with the side engine mount installed.

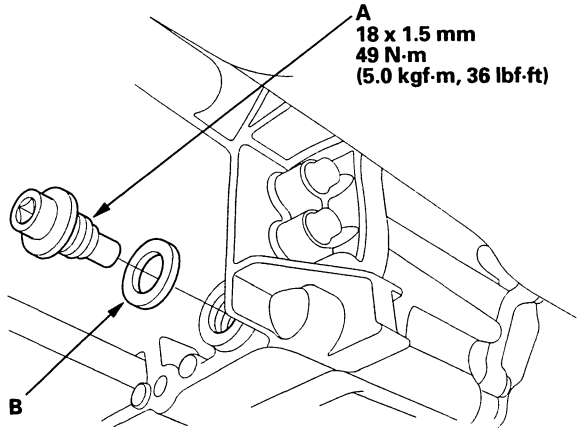
1. Get the customer's radio anti-theft code (navigation code), and write down the radio station presets.
2. Set the wheels in the straight ahead position.
3. Lock the steering wheel.
4. Remove the steering joint cover (A).



5. Make a reference mark (B) across the steering joint and steering gearbox pinion shaft. Remove the steering joint bolt (C), and disconnect the steering joint (D) by removing the steering joint toward the steering column. Hold the slider shaft (E) on the column with a piece of wire (F) between the joint yoke (G) on the slider shaft to the joint yoke on the upper shaft (see step 8 on page 17-25).
6. Remove and plug the return hose (A) from the power steering fluid reservoir (B). Wipe off any spilled fluid at once.



7. Remove the power steering pump outlet line (C) from the power steering pump (D).
8. Remove the bolt securing the power steering hose clamp (E).
9. Raise the vehicle, and make sure it is supported securely.
10. Remove the splash shield.
11. Remove the drain plug (A), and drain the automatic transmission fluid (ATF).



12. Reinstall the drain plug with a new sealing washer (B).

(cont'd)

Transmission Removal (cont'd)

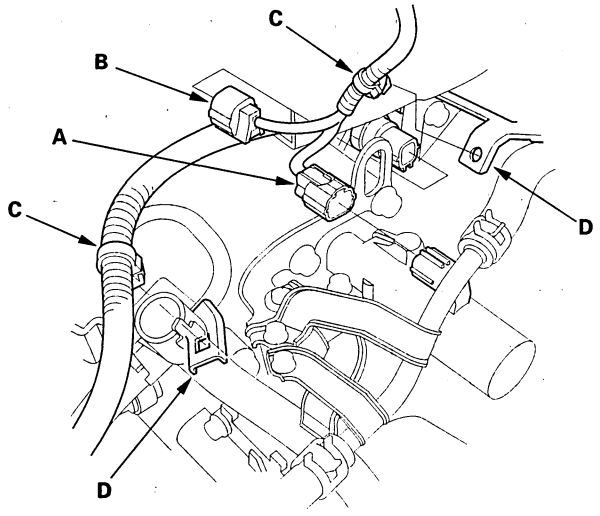
13. Disconnect the battery negative terminal, then disconnect the battery positive terminal.

14. Remove the battery hold-down bracket, then remove the battery cover, battery, and battery tray.

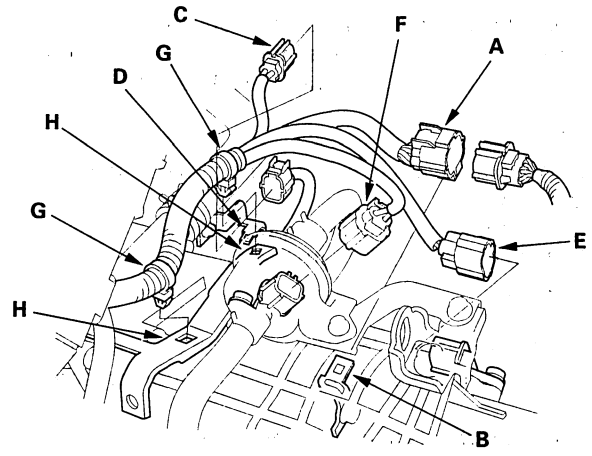
15. Remove the intake air duct and air cleaner housing.

16. Loosen the two bolts securing the battery base from under the vehicle, and remove the two bolts securing the battery base in the engine compartment, then remove the battery base.

17. Disconnect the A/T clutch pressure control solenoid valve A connector, and 2nd clutch transmission fluid pressure switch connector (B), and remove the harness clamps (C) from the clamp brackets (D).



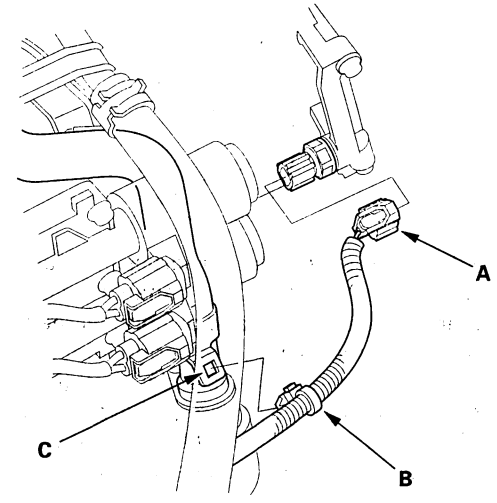
18. Remove the transmission range switch connector (A) from its bracket (B), then disconnect it.



19. Remove the AF sensor connector (C) from its bracket (D), then disconnect it.

20. Disconnect the input shaft (mainshaft) speed sensor connector (E) and output shaft (countershaft) speed sensor connector (F), and remove the harness clamps (G) from the clamp brackets (H).

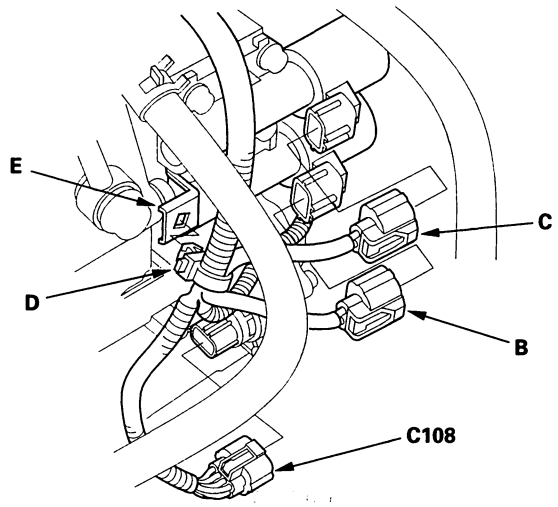
21. Disconnect the 3rd clutch transmission fluid pressure switch connector (A), and remove the harness clamp (B) from the clamp bracket (C).



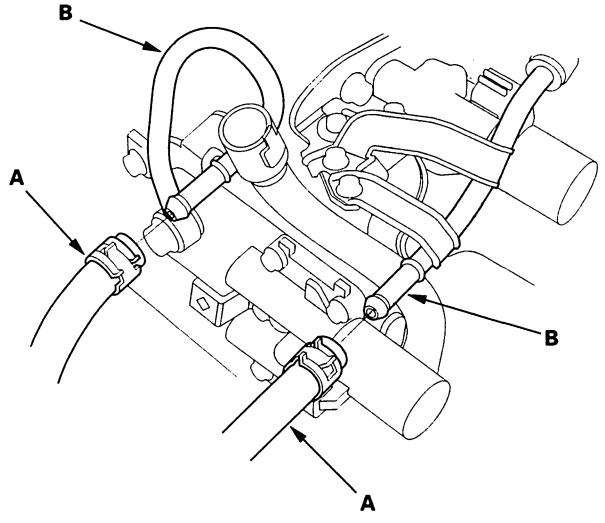
BACK

Protected by AR

22. Disconnect connector C108, A/T clutch pressure control solenoid valve B connector, and solenoid valve C connector, and remove the harness clamp (D) from the clamp bracket (E).

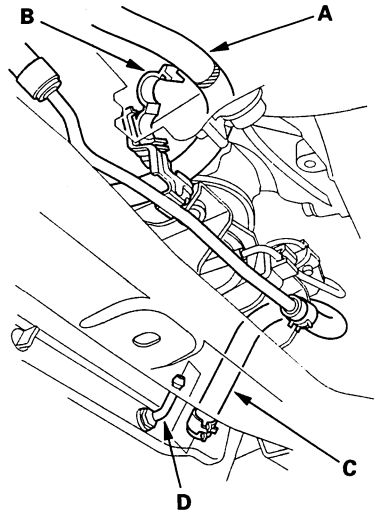


23. Remove the ATF cooler hoses (A) from the ATF cooler lines (B). Turn the ends of the ATF cooler hoses up to prevent ATF from flowing out, then plug the ATF cooler hoses and lines.



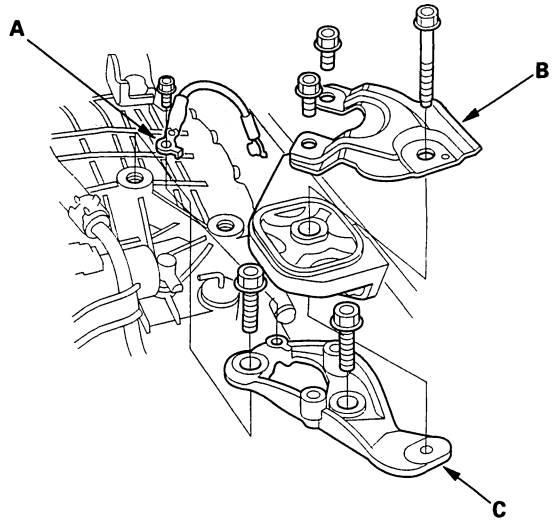
24. Check for any signs of leakage at the hose joints.

25. Remove the ATF cooler hose (A) from the hose clamp (B).



26. Disconnect the ATF cooler hose (C) from the ATF cooler line (D), then plug the hose end.

27. Remove the ground cable (A), transmission upper mount bracket plate (B), and transmission upper mount bracket (C).



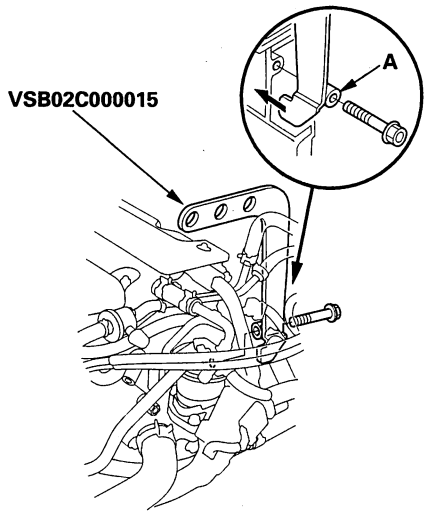
(cont'd)

BACK

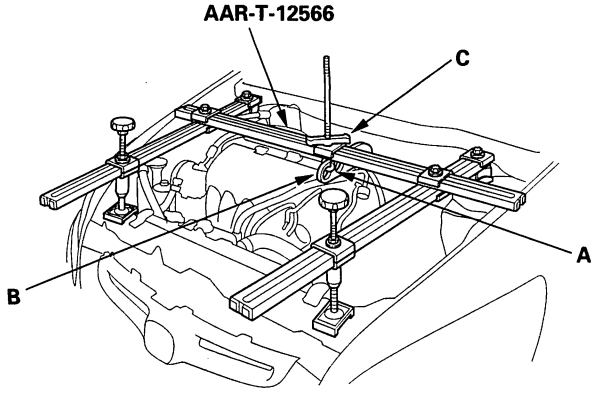
Protected by AR

Transmission Removal (cont'd)

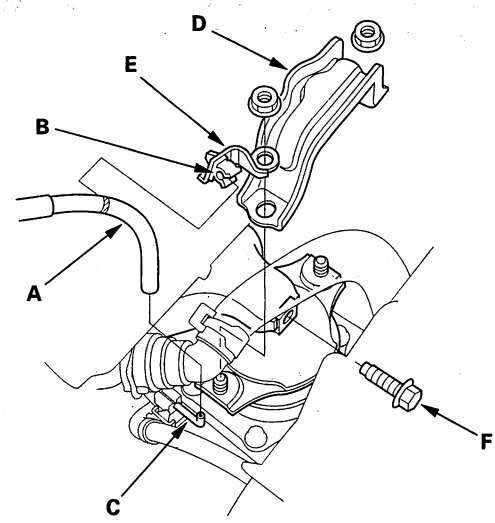
28. Attach the special tool adapter (VSB02C000015) to the threaded hole (A) in the cylinder head.



29. Install the engine support hanger (AAR-T-12566) to the vehicle, and attach the hook (A) to the special tool adapter (B). Tighten the wing nut (C) by hand, and lift and support the engine.

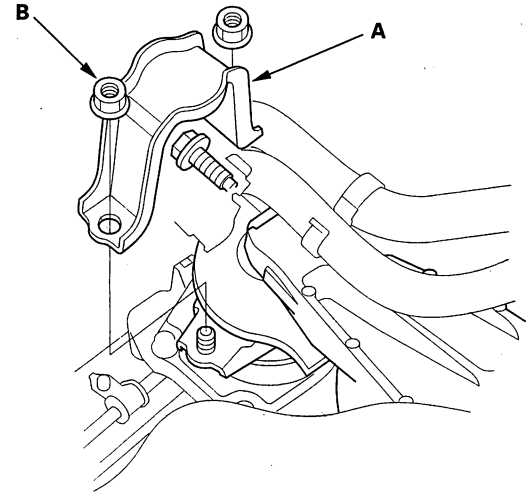


30. Remove the vacuum hose (A) from its clamp (B), then disconnect the hose from the vacuum line (C).



31. Remove the front mount stop (D) and clamp bracket (E), and remove the front mount bolt (F).

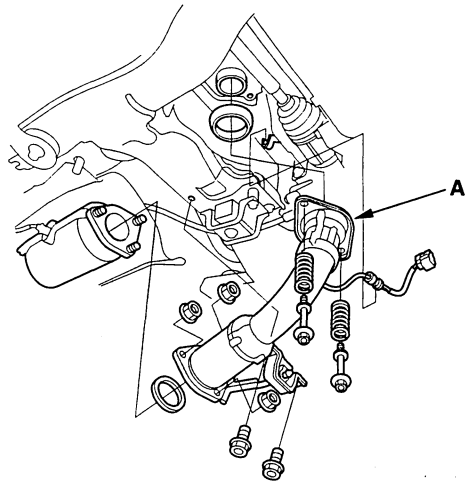
32. Remove the rear mount stop (A) and remove the rear mount bolt (B).



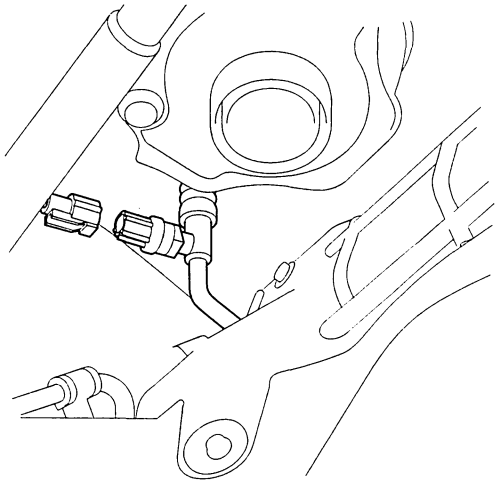
BACK

Protected by AR

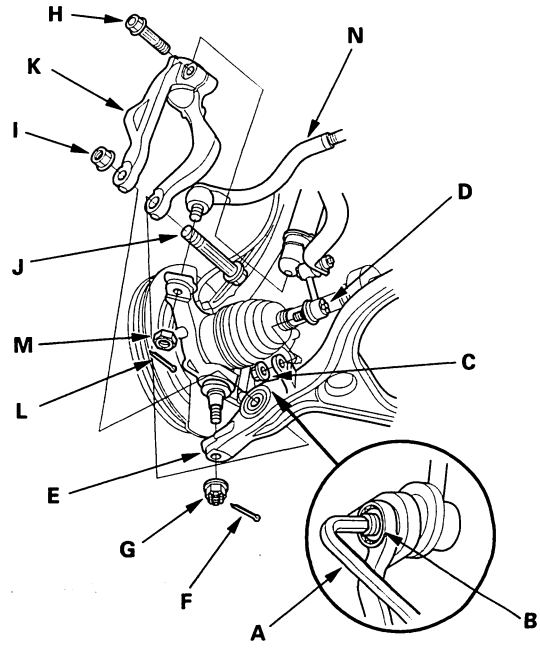
33. Remove the exhaust pipe A and its mount.



34. Disconnect the power steering pressure switch connector.



35. Insert a 6 mm Allen wrench (A) in the top of the ball joint pin (B), and remove the nuts (C), then separate the stabilizer link (D) from the lower arms (E).



36. Remove the cotter pins (F), castle nuts (G), damper pinch bolt (H), self-locking nut (I), bolt (J), and damper forks (K), then separate the ball joints from the lower arms (see page 18-11).

37. Remove the cotter pins (L) and nuts (M), and separate the tie-rod end ball joints from the knuckles (see step 10 on page 18-14).

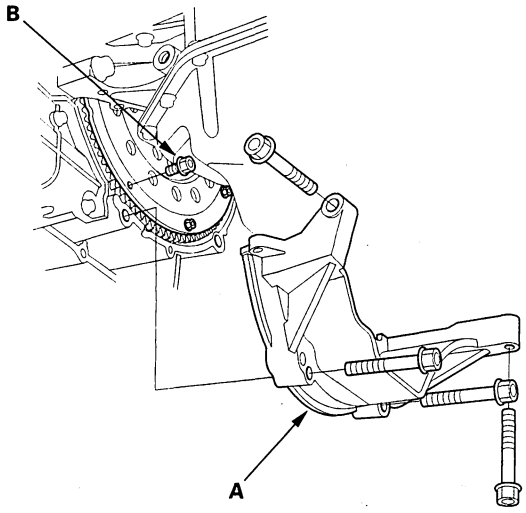
(cont'd)

BACK

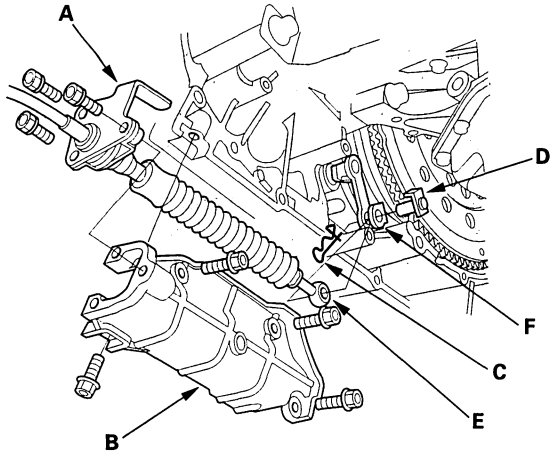
Protected by AR

Transmission Removal (cont'd)

38. Remove the engine stiffener (A), and remove the drive plate bolts (B) while rotating the crankshaft pulley.

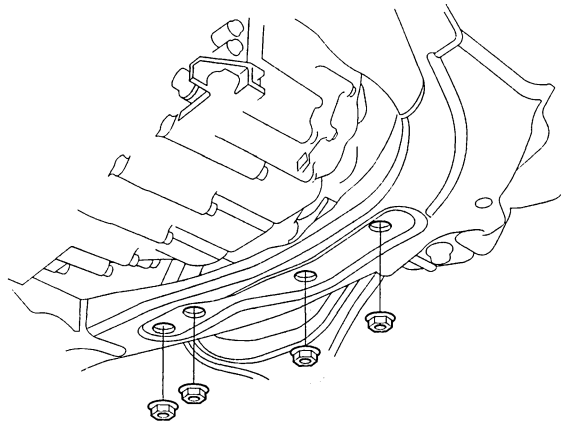


39. Remove the three bolts securing the shift cable *holder* (A), then remove the shift cable cover (B).

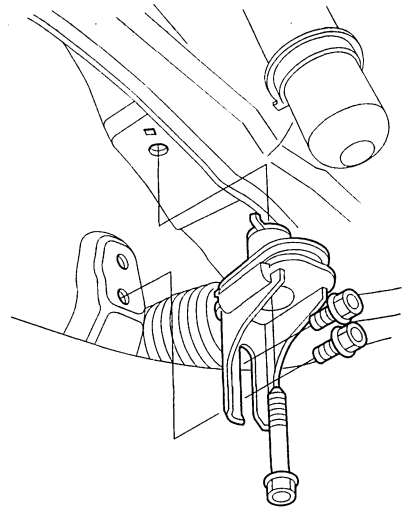


40. Remove the spring clip (C) and control pin (D), then separate the shift cable (E) from the selector control lever (F). Do not bend the shift cable excessively.

41. Remove the transmission lower mount nuts.



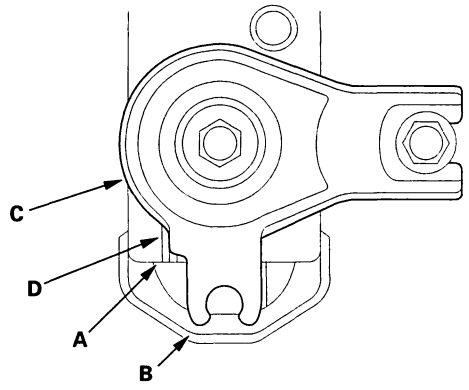
42. Remove both mid-mounts.



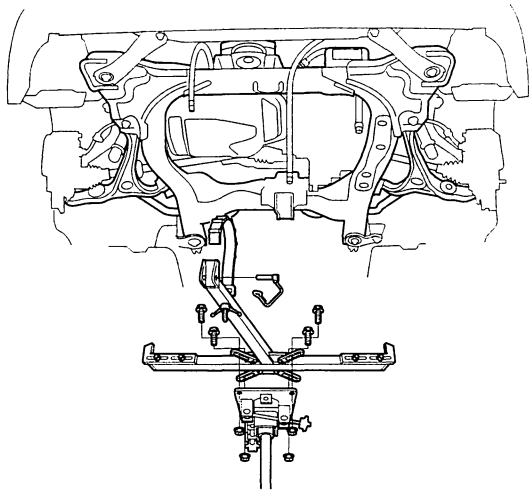
BACK

Protected by AR

43. Make the appropriate reference lines (A) at both ends of the subframe (B) that line up with the edge (C) of the stiffeners (D).

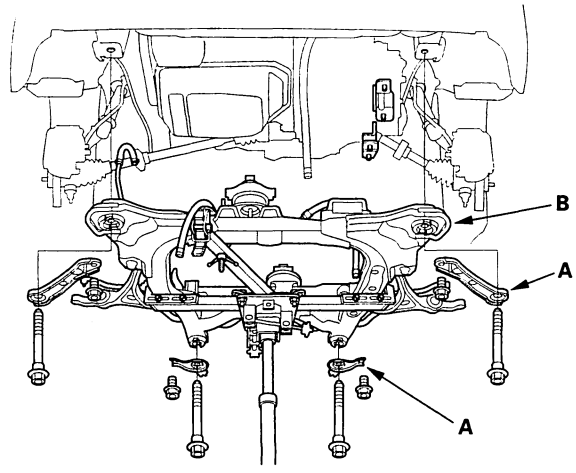


44. Attach the special tool to the subframe with hanging the belt of the special tool over the front of the subframe, then secure the belt with its stop.

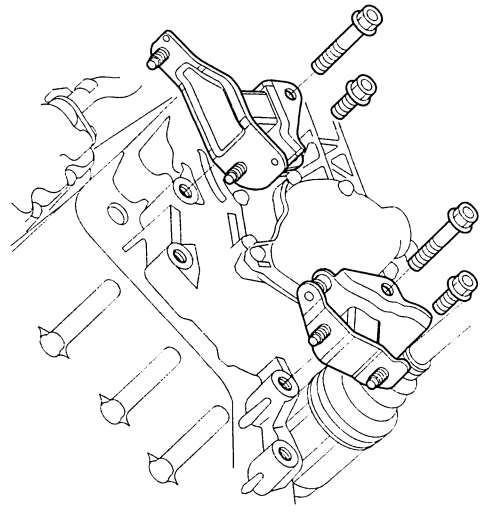


45. Raise the jack and line up the slots in the arms with the bolt holes on the corner of the jack base, then attach them with bolts securely.

46. Remove the four bolts securing the stiffeners (A), and four bolts securing the subframe (B), and lower the subframe.



47. Remove the transmission lower mounts.

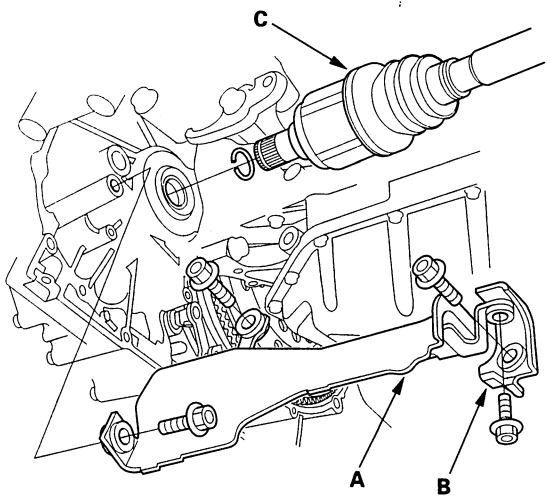


(cont'd)

Protected by AR

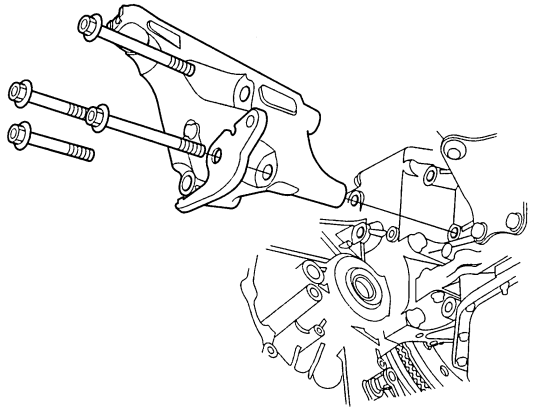
Transmission Removal (cont'd)

48. Remove the driveshaft boot cover (A) and bracket (B).



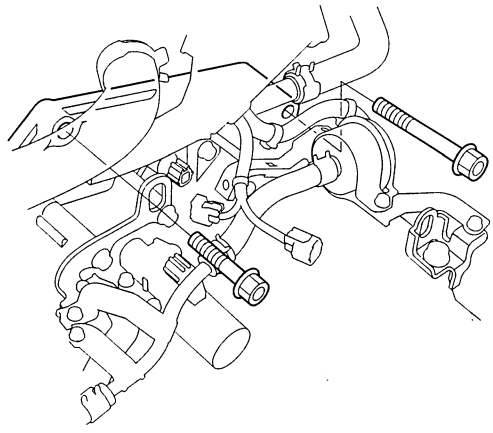
49. Pry the driveshafts (C), and remove them from the differential (see step 12 on page 16-6).

50. Remove the rear mount bracket.

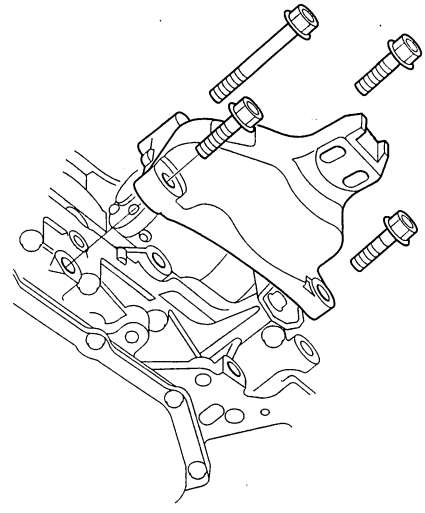


51. Place a jack under the transmission.

52. Remove the upper transmission housing mounting bolts.



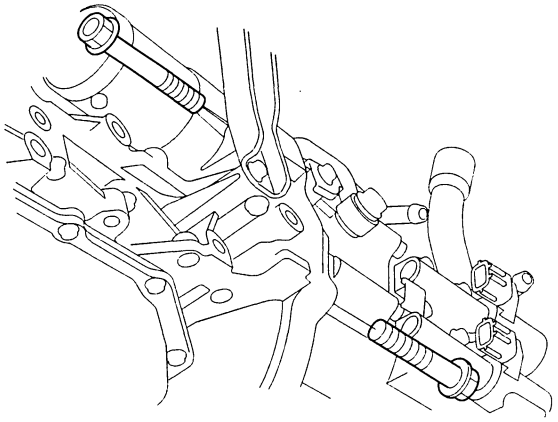
53. Remove the front mount bracket.



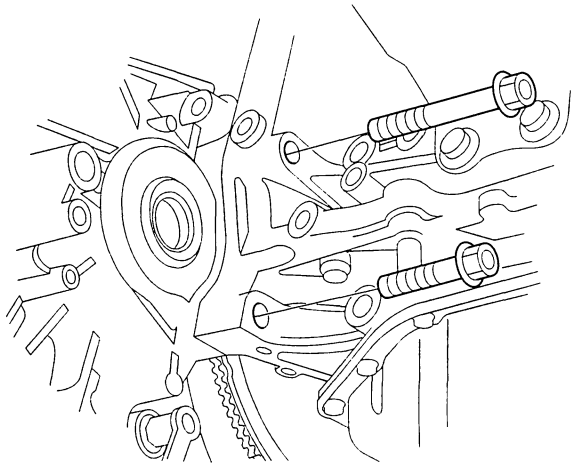
BACK

Protected by AR

54. Remove the front transmission housing mounting bolts.

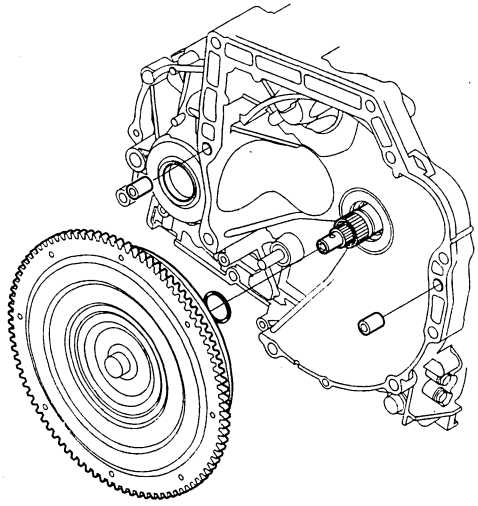


55. Remove the rear transmission housing mounting bolts.



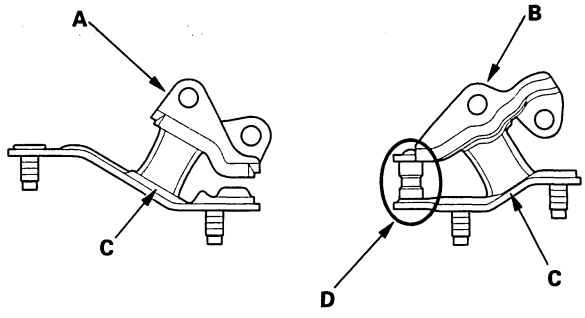
56. Slide the transmission away from the engine to remove it from the vehicle.

57. Remove the torque converter.



58. Inspect the drive plate, and replace it if it's damaged.

59. Check the transmission lower front mount (A) and lower rear mount (B). If the mount rubber (C) is worn or damaged, replace the mount. It is no need to replace the lower rear mount if its submount rubber (D) has ruptured or cracks, reuse it.

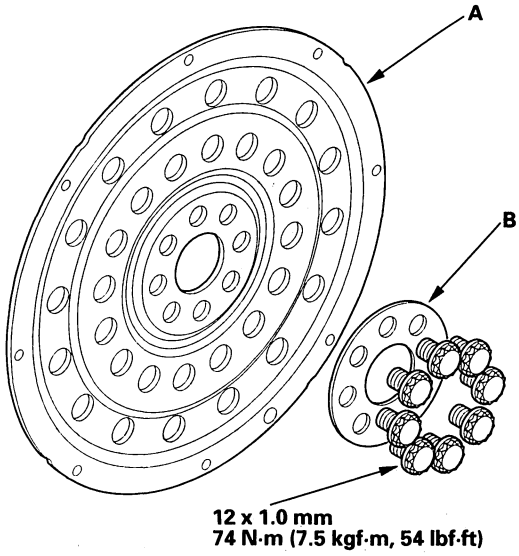


BACK

Protected by AR

Drive Plate Removal and Installation

1. Remove the transmission assembly (see page 14-209).
2. Remove the drive plate (A) and washer (B) from the engine crankshaft.



3. Install the drive plate and washer on the engine crankshaft, and tighten the eight bolts in a crisscross pattern in two or more steps.
4. Install the transmission assembly (see page 14-219).

BACK

Protected by AR

Transmission Installation

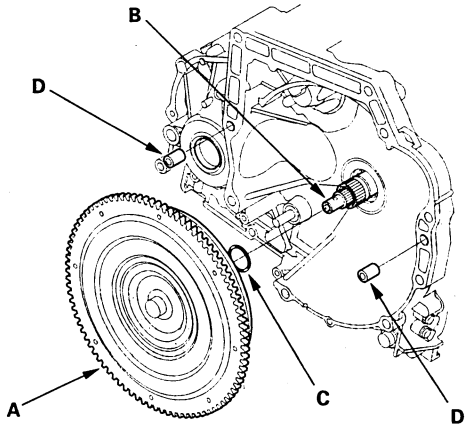
Special Tools Required
- Engine hanger adapter VSB02C000015
- Engine support hanger, A and Reds AAR-T-12566
- Front subframe adapter VSB02C000016

These special tools are available through the Honda Tool and Equipment Program 1-888-424-6857.

NOTE: Use fender covers to avoid damaging painted surfaces.

1. Clean the ATF cooler (see page 14-228).

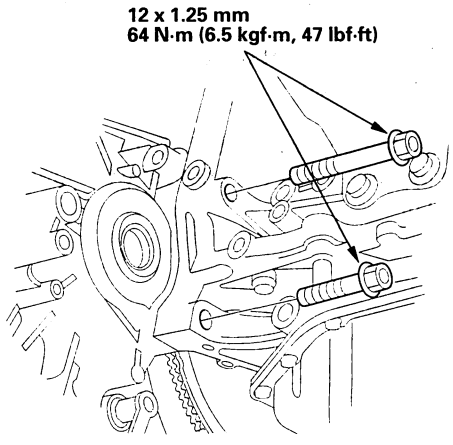
2. Install the torque converter assembly (A) on the mainshaft (B) with the new O-ring (C).



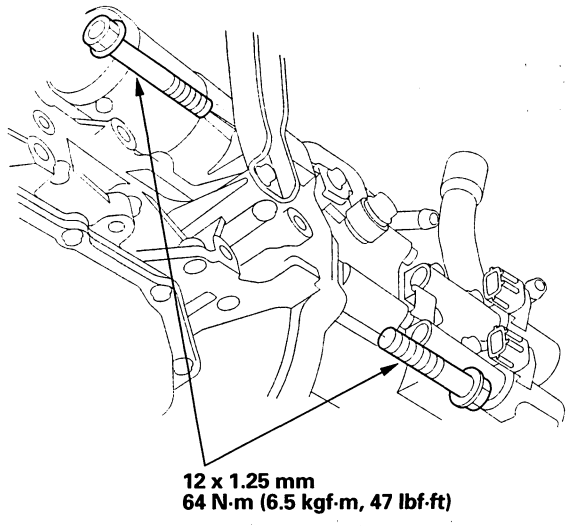
3. Install the 14 x 20 mm dowel pins (D) in the torque converter housing.

4. Place the transmission on the jack, and raise the transmission to the engine level.

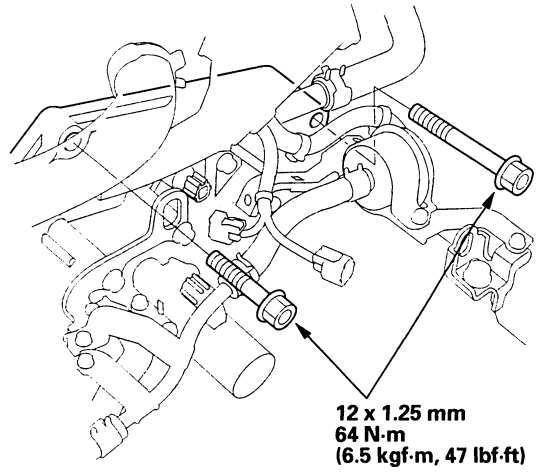
5. Attach the transmission to the engine, then install the rear transmission housing mounting bolts.



6. Install the front transmission housing mounting bolts.



7. Install the upper transmission housing mounting bolts.



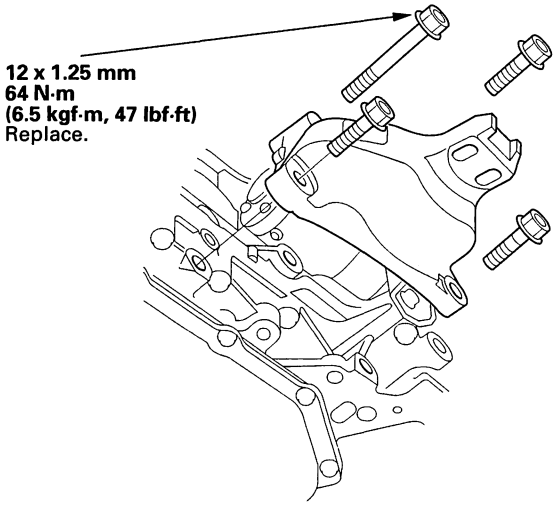
8. Remove the jack from the transmission.

(cont'd)

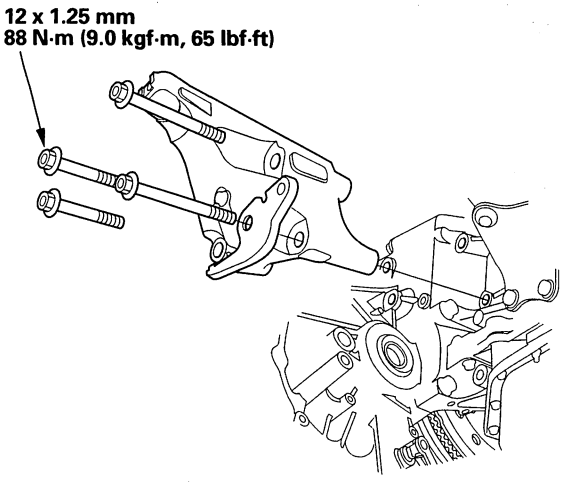
Protected by AR

Transmission Installation (cont'd)

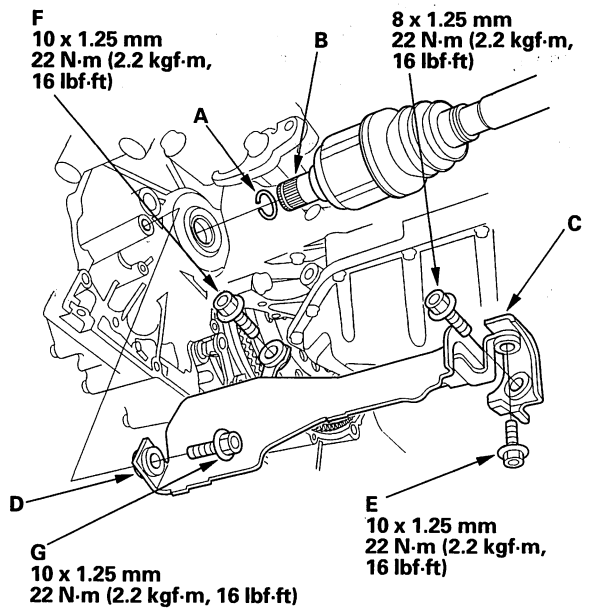
9. Install the front mount bracket with the new bolts.



10. Install the rear mount bracket.



11. Install the new set rings (A) on the right and left driveshafts (B).



12. Install the right and left driveshafts (see page 16-19). While installing the driveshafts in the differential, be sure not to allow dust or other foreign particles to enter the transmission.

    NOTE:
    - Clean the areas where the driveshafts contact the transmission (differential) with solvent or carburetor cleaner, and dry with compressed air.
    - Turn the right and left steering knuckle fully outward, and slide the driveshafts into the differential until you feel its set ring engages the side gear.

13. Install the driveshaft boot cover bracket (C).

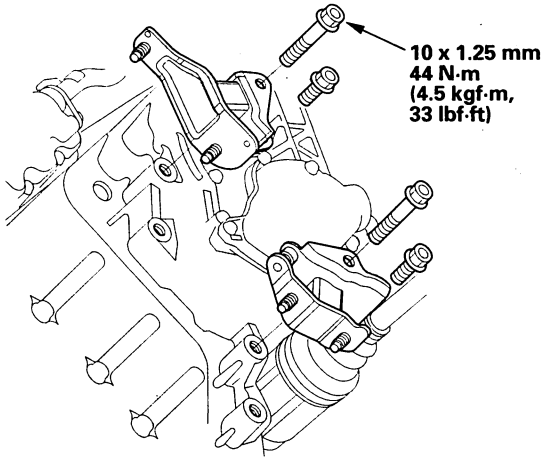
14. Install the driveshaft boot cover (D), but do not tighten the bolts.

15. Tighten the upper right bolt (E) on the cover first, then upper left bolt (F), and lastly the lower left bolt (G).

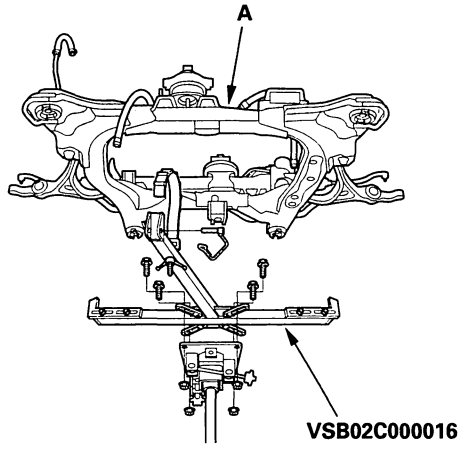
BACK

Protected by AR

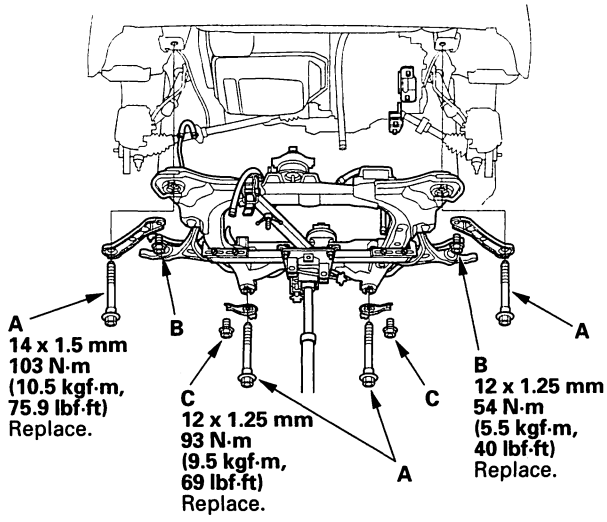
16. Install the transmission lower mounts.



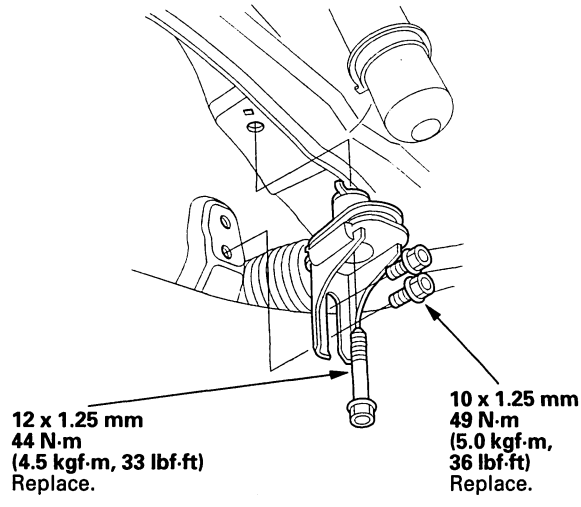
17. Support the front subframe (A) with the special tool and a jack, and lift it up to body.



18. Loosely install the new subframe mounting bolts (A), and stiffener mounting bolts (B) (C).



19. Loosely install both of the new mid-mounts mounting bolts.

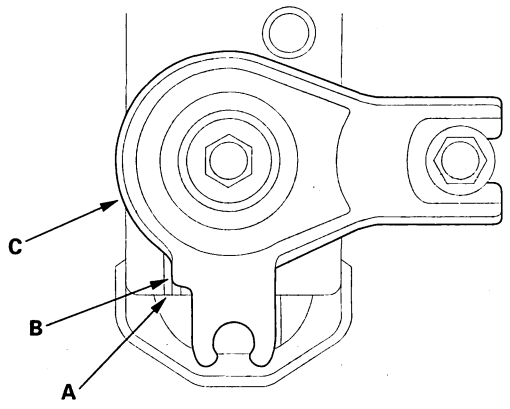


(cont'd)

Protected by AR

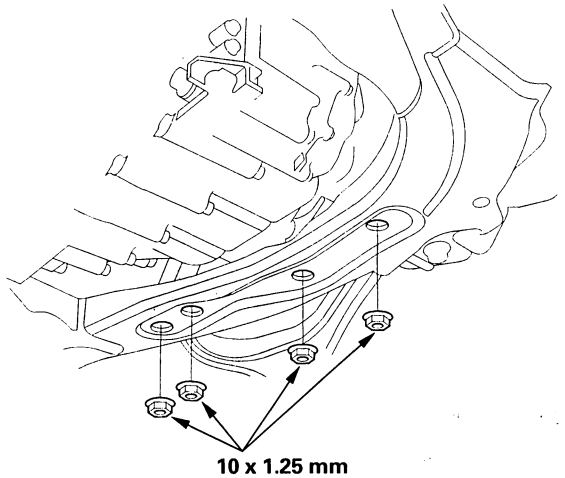
Transmission Installation (cont'd)

20. Align the reference marks (A) with edge (B) of both rear stiffeners (C), and tighten the rear subframe mounting bolts, then front bolts, and tighten the stiffener bolts to the specified torque.



21. Tighten the mid-mount mounting bolts.

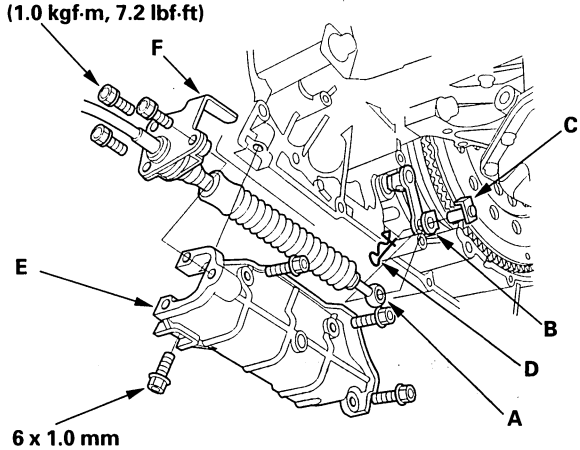
22. Install the transmission lower mount nuts.



10 x 1.25 mm
44 N·m (4.5 kgf·m, 33 lbf·ft)

23. Attach the shift cable end (A) to the selector control lever (B), then insert the control pin (C) into the control lever hole through the shift cable end, and secure the control pin with the spring clip (D). Do not bend the shift cable excessively.

6 x 1.0 mm
9.8 N·m
(1.0 kgf·m, 7.2 lbf·ft)



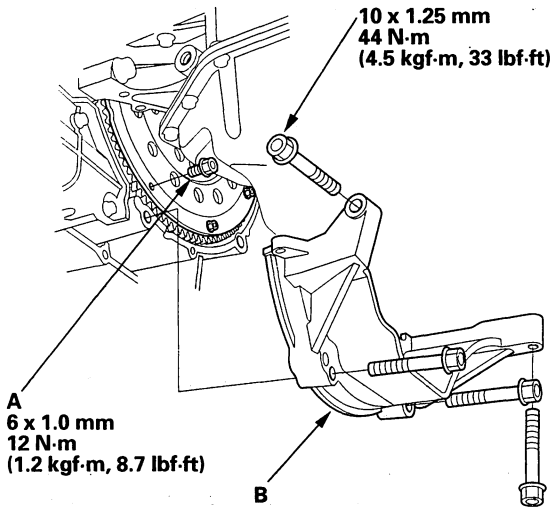
6 x 1.0 mm
12 N·m (1.2 kgf·m, 8.7 lbf·ft)

24. Install the shift cable cover (E), then secure the shift cable holder (F) to the shift cable cover with the three bolts.

BACK

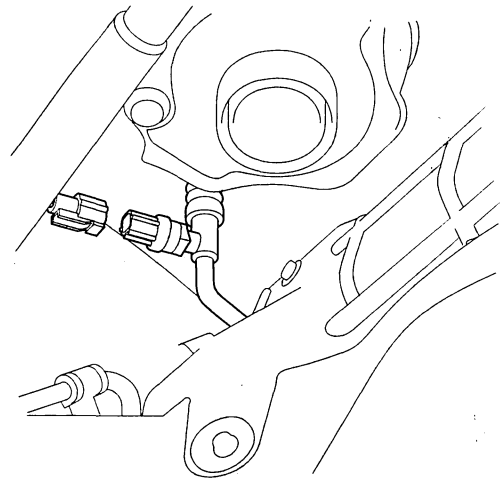
Protected by AR

25. Attach the torque converter to the drive plate with eight bolts (A). Rotate the crankshaft pulley as necessary to tighten the bolts to 1/2 of the specified torque, then to the final torque, in a crisscross pattern. After tightening the last bolt, check that the crankshaft rotates freely.

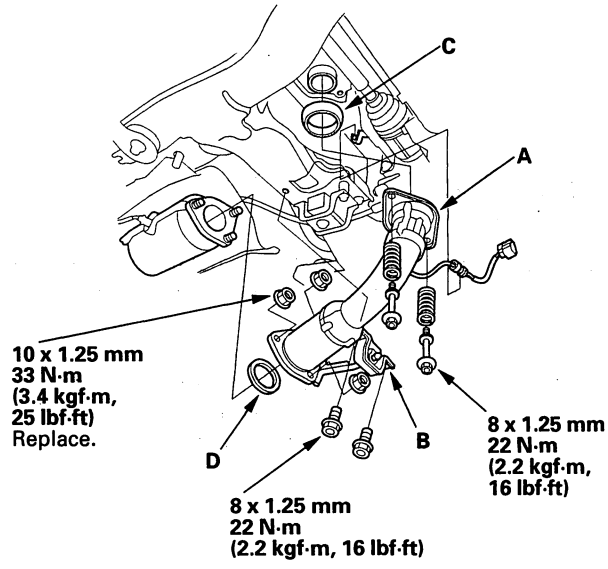


26. Install the engine stiffener (B).

27. Connect the power steering pressure switch connector.



28. Install the exhaust pipe A, its mount (B), and new gaskets (C) (D).

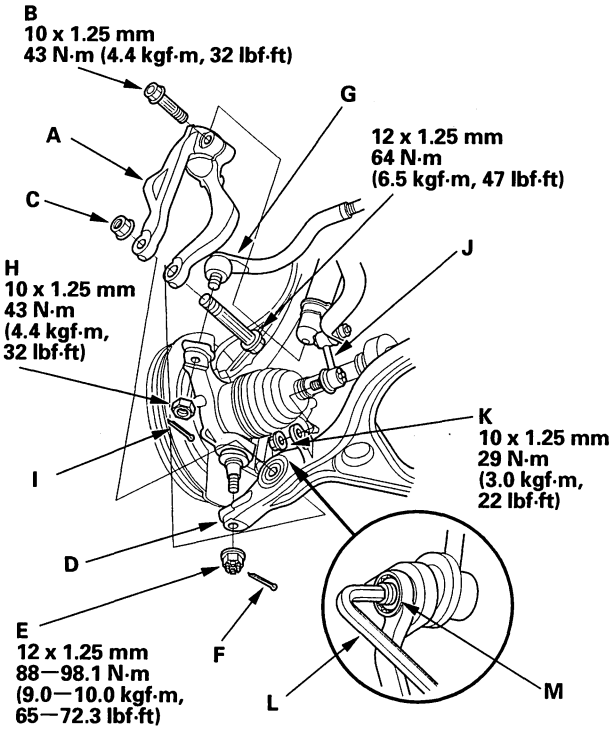


(cont'd)

Protected by AR

Transmission Installation (cont'd)

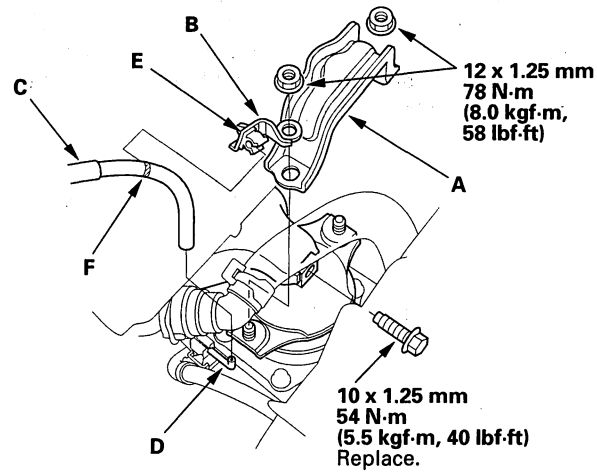
29. Install the damper forks (A) with damper pinch bolts (B) and new self-locking nuts (C), then install the ball joints on the lower arms (D) with the castle nuts (E) and new cotter pins (F) (see step 17 on page 18-15).



30. Install the tie-rod end ball joint (G) to each knuckle with the nuts (H) and new cotter pins (I) (see step 17 on page 18-15).

31. Install the stabilizer links (J) to the lower arms, and install the nuts (K). Insert a 6 mm Allen wrench (L) in the ball joint pin (M), and tighten the nuts.

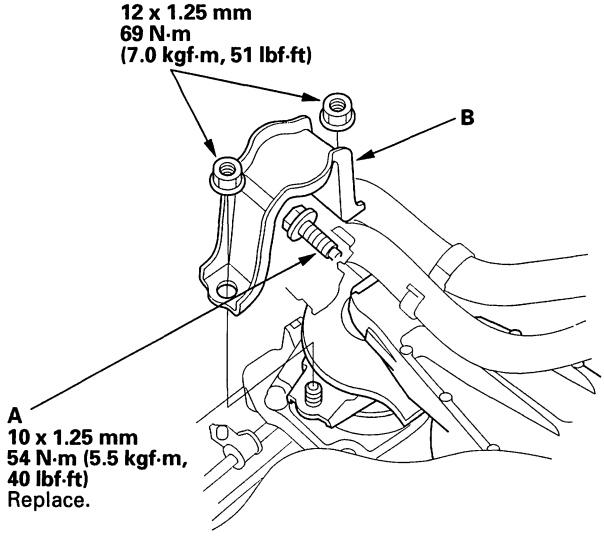
32. Install the new front mount bolt.



33. Install the front mount stop (A) and vacuum hose clamp bracket (B).

34. Connect the vacuum hose (C) to the vacuum line (D), then install the hose on its clamp (E) at the mark (F).

35. Install the new rear mount bolt.

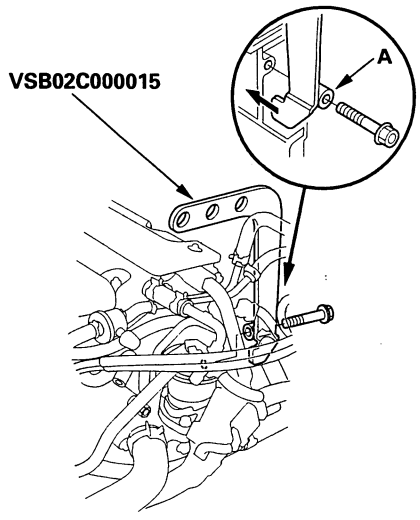


36. Install the rear mount stop (B).

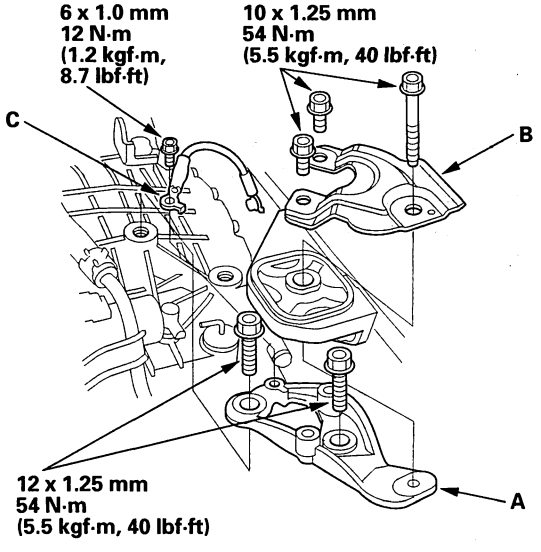
BACK

Protected by AR

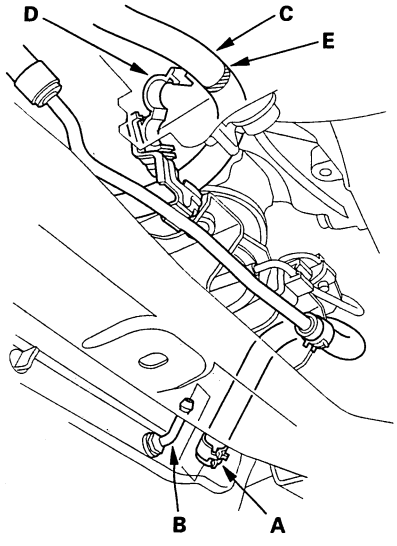
37. Remove the engine support hanger, and remove the special tool adapter from the engine.



38. Install the transmission upper mount bracket (A), transmission upper mount bracket plate (B), and ground cable (C).

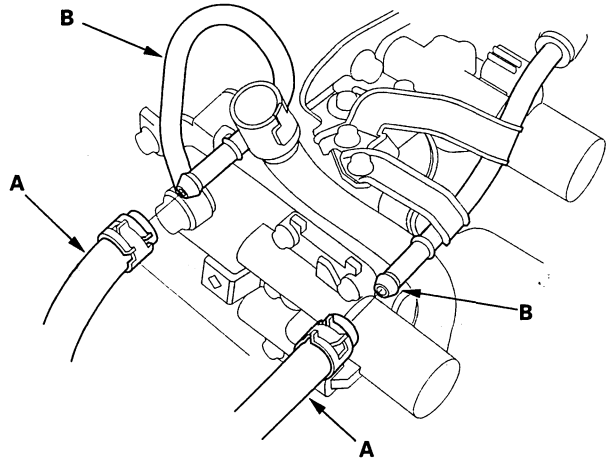


39. Connect the ATF cooler hose (A) to the ATF cooler line (B), and secure it with the clip (see page 14-230).



40. Install the ATF cooler hose (C) on the clamp (D) at the mark (E).

41. Connect the ATF cooler hoses (A) to the ATF cooler lines (B), and secure the hoses with the clips (see page 14-230).

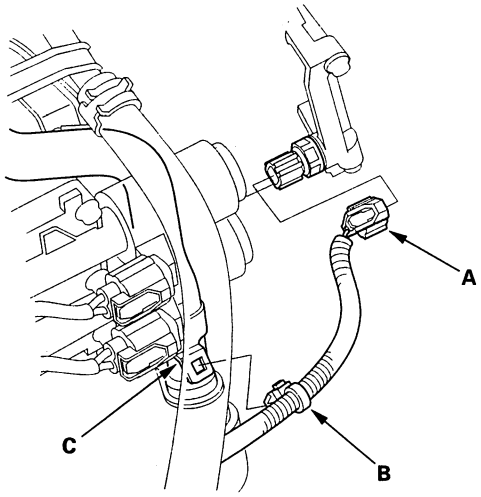


(cont'd)

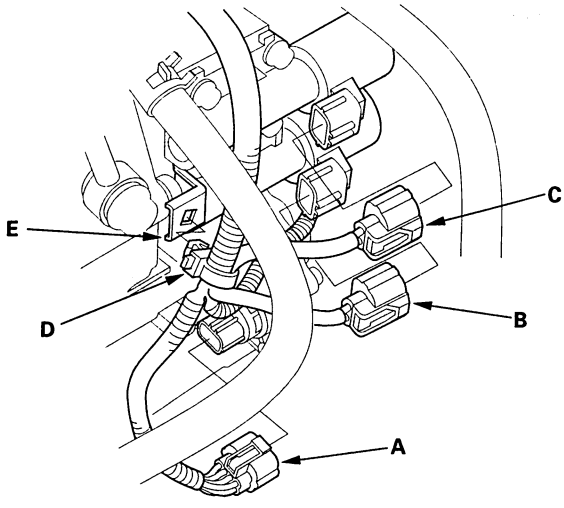
Protected by AR

Transmission Installation (cont'd)

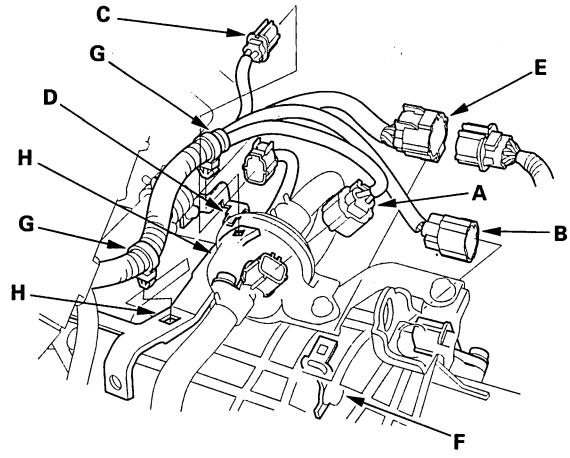
42. Connect the 3rd clutch transmission fluid pressure switch connector (A), and install the harness clamp (B) on the clamp bracket (C).



43. Connect the shift solenoid harness connector (A), A/T clutch pressure control solenoid valve B connector, and solenoid valve C connector, and install the harness clamp (D) on the clamp bracket (E).



44. Connect the output shaft (countershaft) speed sensor connector (A) and input shaft (mainshaft) speed sensor connector (B).

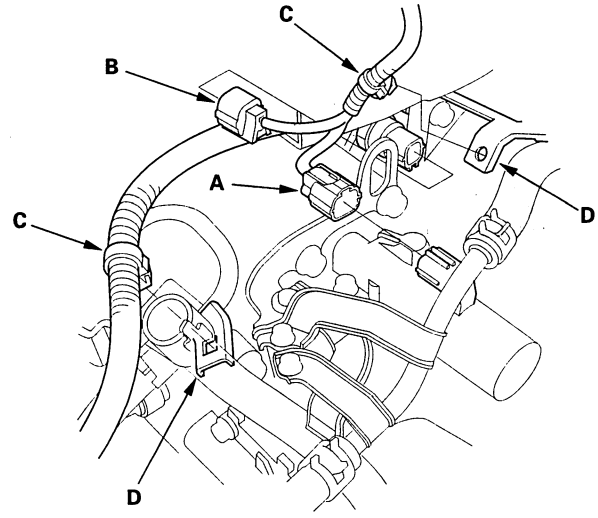


45. Connect the AF sensor connector (C), then install it on its bracket (D).

46. Connect the transmission range switch connector (E), then install it on its bracket (F).

47. Install the harness clamps (G) on the harness clamp brackets (H).

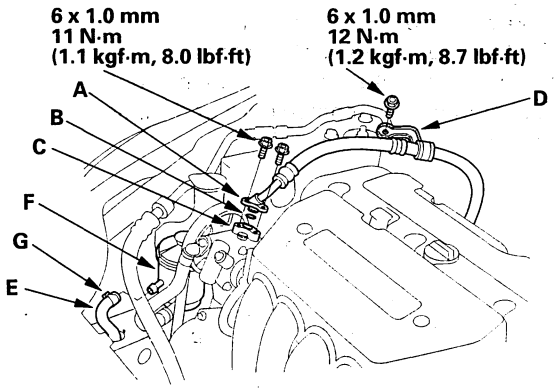
48. Install the A/T clutch pressure control solenoid valve A connector and 2nd clutch transmission fluid pressure switch connector (B), and install the harness clamps (C) on the harness clamp brackets (D).



BACK

Protected by AR

49. Install the power steering pump outlet line (A) with a new O-ring (B) to the pump (C), and secure the hose clamp (D) with the bolt.

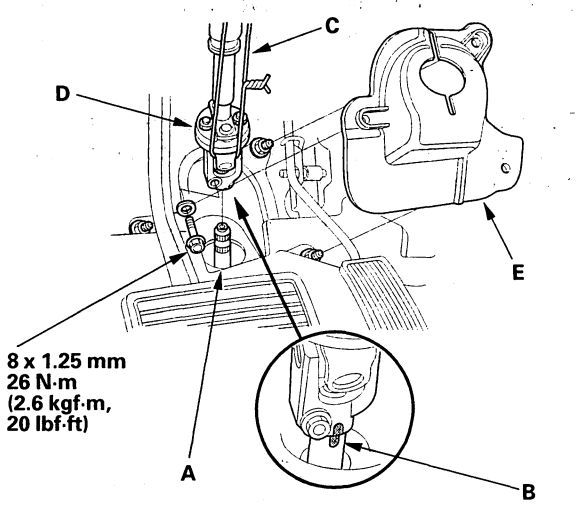


50. Connect the return hose (E) to the power steering fluid reservoir (F), then secure the hose with its clamp (G).

51. Refill the power steering system with fluid (see page 17-12).

52. Refill the transmission with ATF (see step 4 on page 14-208).

53. Connect the steering joint to the steering gearbox pinion shaft (A) by aligning the reference mark (B), and remove the wire (C) from the joint yoke (D).



54. Install the steering joint cover (E).

55. Remove the steering wheel (see page 17-22).

56. Center the SRS cable reel and install the steering wheel (see page 17-24).

57. Install the battery base.

58. Install the air cleaner housing and intake air duct.

59. Install the battery tray, battery, and battery cover, then secure the battery with its hold-down bracket.

60. Connect the battery terminals.

61. Set the parking brake. Start the engine, and shift the transmission through all gears three times.

62. Check the shift lever operation, A/T gear position indicator operation, and shift cable adjustment.

63. Check and adjust the front wheel alignment (see page 18-6).

64. Install the splash shield.

65. Start the engine in the P or N position, and warm it up to normal operating temperature (the radiator fan comes on).

66. Turn off the engine, and check the ATF level (see page 14-207).

67. Do the power window control unit reset procedure (see page 22-232).

68. Do the road test (see page 14-186).

69. Enter the radio code (navigation code), reset the radio presets and set the clock.

ATF Cooler Cleaning

Special Tools Required
- ATF Cooler Cleaner GHTTTCF6H
- Magnetic Nonbypass Spin-on Filter GTHGNBP2 (Available through the Honda Tool and Equipment Program 1-888-424-6857)

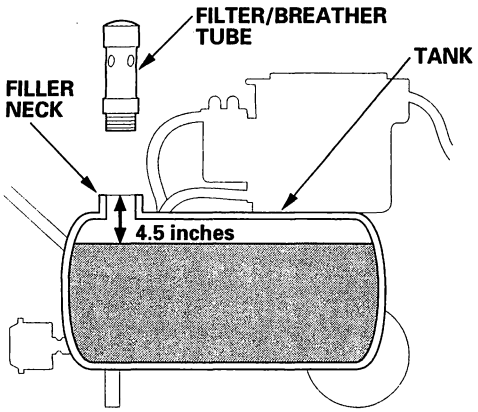
Before installing an overhauled or remanufactured automatic transmission, you must thoroughly clean the ATF cooler to prevent system contamination. Failure to do so could cause a repeat automatic transmission failure.

The cleaning procedure involves heated ATF-Z1 delivered under high pressure (100 psi). Check the security of all hoses and connections. Always wear safety glasses or a face shield, along with gloves and protective clothing. If you get ATF in your eyes or on your skin, rinse with water immediately.

⚠ WARNING

- Improper use of the ATF cooler cleaner can result in burns and other serious injuries.
- Always wear eye protection and protective clothing, and follow this procedure.

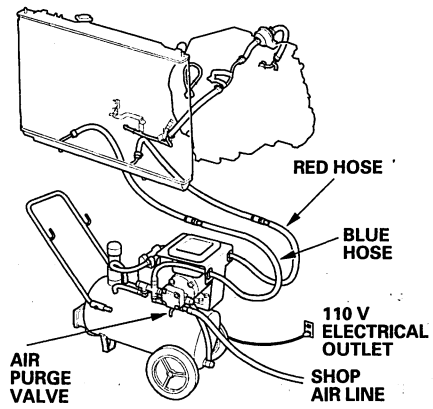
1. Check the fluid in the cooler cleaner tank. (The fluid level should be 4.5 inches from the top of the filler neck.) Adjust the level if needed; do not overfill. Use only Honda ATF-Z1; do not use any additives.



2. Plug the cooler cleaner into a 110 V grounded electrical outlet.

NOTICE

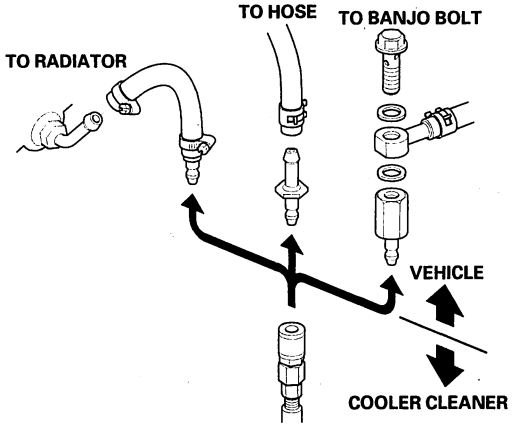
Make sure the outlet has no other appliances (light fixtures, drop lights, extension cords) plugged into it. Also, never plug the cooler cleaner into an extension cord or drop light; you could damage the unit.



3. Flip the HEAT toggle switch to ON; the green indicator above the toggle switch comes on. Wait 1 hour for the cooler cleaner to reach its operating temperature. (The cooler cleaner is ready to use when the temperature gauge reads 140 ° to 150 °F.)

   NOTE: If the red indicator above the HEAT toggle switch comes on, the fluid level in the tank is too low for the tank heater to work (see step 1 of this procedure).

4. Select the appropriate pair of fittings, and attach them to the radiator, to the hoses, or to the banjo bolts for flow through the ATF cooler cleaner.



BACK

Protected by AR

5. Connect the red hose to the cooler outlet line (the line that normally goes to the external filter on the transmission).

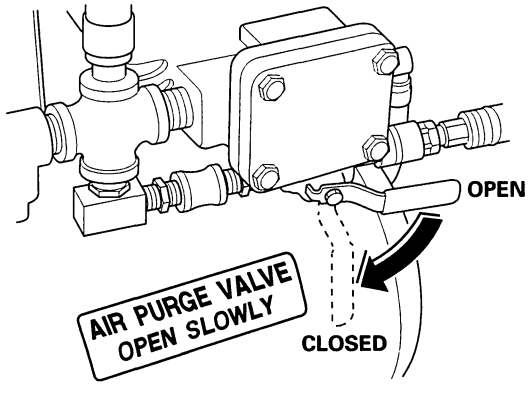
6. Connect the blue hose to the cooler inlet line.

7. Connect a shop air hose (regulated to 100 to 125 psi) to the air purge valve.

   NOTICE
   The quick-connect fitting has a one-way check valve to keep ATF from entering your shop's air system. Do not remove or replace the fitting. Attach the coupler provided with the cooler cleaner to your shop air line if your coupler is not compatible.

8. Flip the MOTOR toggle switch to ON; the green indicator above the toggle switch comes on. Let the pump run for 5 minutes. While the pump is running, open and close the air purge valve periodically to cause agitation and improve the cleaning process. Always open the valve slowly. At the end of the 5-minutes cleaning period, leave the air purge valve open.

   NOTE: While the pump is running with the air purge valve open, it is normal to see vapor coming from the filler/breather tube vents.



9. With the air purge valve open, flip the MOTOR toggle switch to OFF; the green indicator goes off. Leave the air purge valve open for at least 15 seconds to purge the lines and hoses of residual ATF, then close the valve.

10. Disconnect the red and blue hoses from the ATF cooler. Now connect the red hose to the cooler inlet line.

11. Now connect the blue hose to the cooler outlet line.

12. Flip the MOTOR toggle switch to ON, and let the pump run for 5 minutes. While the pump is running, open and close the air purge valve periodically. Always open the valve slowly. At the end of the 5-minutes cleaning period, leave the air purge valve open.

    NOTE: While the pump is running with the air purge valve open, it is normal to see vapor coming from the filler/breather tube vents.

13. With the air purge valve open, flip the MOTOR toggle switch to OFF. Leave the air purge valve open for at least 15 seconds to purge the lines and hoses of residual ATF, then close the valve.

14. Disconnect the red and blue hoses from the ATF cooler lines.

15. Connect the red and blue hoses to each other.

16. Disconnect the shop air from the air purge valve. Disconnect and stow the coupler if used.

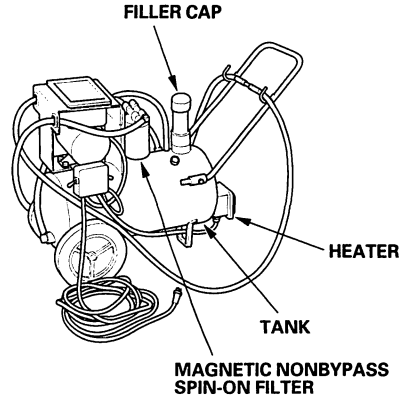
17. Disconnect and stow the fittings from the ATF cooler inlet and outlet lines.

18. Unplug the cooler cleaner from the 110 V outlet.

Tool Maintenance

Follow these instructions to keep the ATF cooler cleaner working properly:

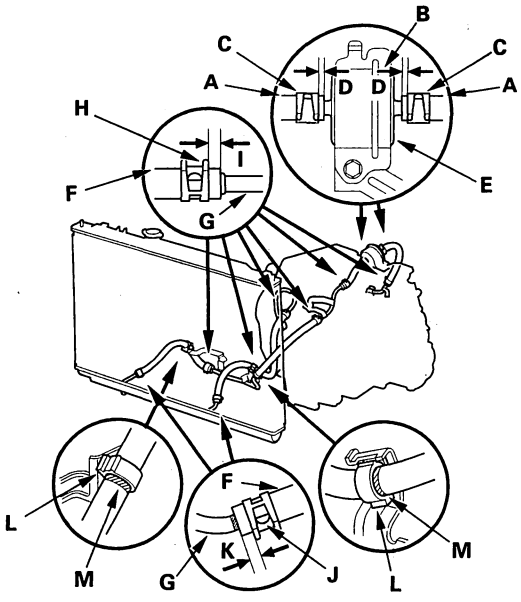
- Replace the two magnetic nonbypass spin-on filters once a year or when you notice a restriction in the ATF flow.
- Check the level and condition of the fluid in the tank before each use.
- Replace the ATF in the tank when it looks dark or dirty.



Protected by AR

ATF Cooler Hose Replacement

1. Slide the ATF cooler hoses (A) on the ATF filter (B) until they are 5—6 mm (0.20—0.24 in.) away from the filter housing.



2. Secure the hoses with the clip (C) at 10—12 mm (0.4—0.5 in.) (D) from the filter housing (E).

3. Slide the ATF cooler hoses (F) over the ATF cooler lines (G).

4. Secure the hoses with the clips (H) at 5—6 mm (0.2—0.24 in.) (I) from the hose ends, and secure the hoses at the ATF cooler with the clips (J) at 2—4 mm (0.1—0.2 in.) (K) from the hose ends.

5. Install the hoses on the clamps (L) at the marks (M).

BACK

A/T Gear Position Indicator

A/T Gear Position Indicator Circuit Troubleshooting

Symptom: A/T gear position indicator does not indicate the shift lever position, the D indicator does not blink, and no transmission range switch DTCs are indicated.

1. Check the indicator drive circuit and communication line in the gauge control module with the self-diagnostic function of the gauge control module (see page 22-259).

   Is the system OK?

   YES—Go to step 2.

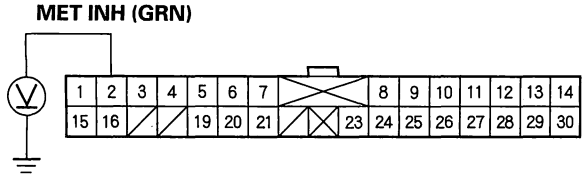
   NO—Record the ODO data in the old gauge control module, and replace the gauge control module (see page 22-276). Input the old ODO data in the new gauge control module with the HDS (see page 22-276).■

2. Remove the gauge control module.

3. Turn the ignition switch ON (II).

4. Measure the voltage between gauge control module connector terminal B2 and body ground. The shift lever can be in any position.

   GAUGE CONTROL MODULE CONNECTOR B (30P)



Wire side of female terminals

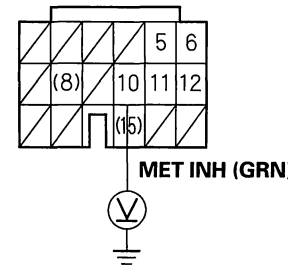
   Is there battery voltage?

   YES—Faulty A/T gear position indicator in the gauge control module, replace the gauge control module.■

   NO—Go to step 5.

5. Measure the voltage between PCM connector terminal D10 and body ground.

   PCM CONNECTOR D (17P)



Wire side of female terminals

   Is there battery voltage?

   YES—Repair open or short in the wire between PCM connector terminal D10 and the gauge control module connector terminal B2.■

   NO—Check for loose terminal fit in the PCM connectors. If necessary, substitute a known-good PCM and recheck.■

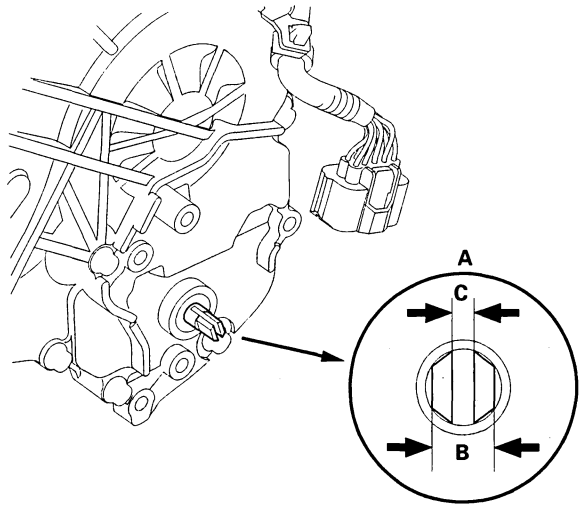
1									○	○

7. If the transmission range switch continuity check is OK, replace the faulty transmission range switch harness.

8. If there is no continuity between any terminals, remove the transmission range switch, and check the end of the selector control shaft (A).

Selector Control Shaft
Width (B): 6.1—6.2 mm (0.240—0.244 in.)
End Gap (C): 1.8—2.0 mm (0.07—0.08 in.)



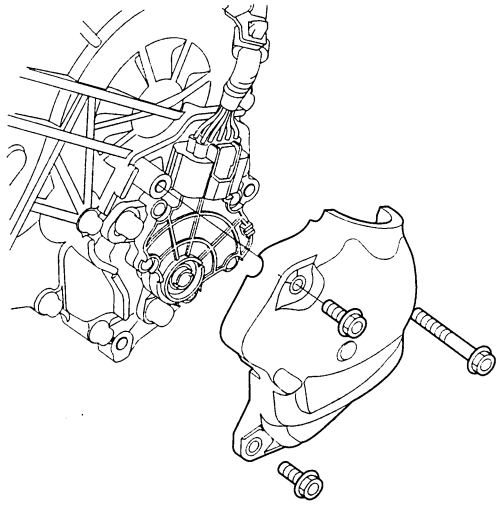
9. The measurement of the selector control shaft end is within the standard, replace the transmission range switch. If the measurement is out of the standard, repair the selector control shaft end, and recheck the transmission range switch continuity.

BACK

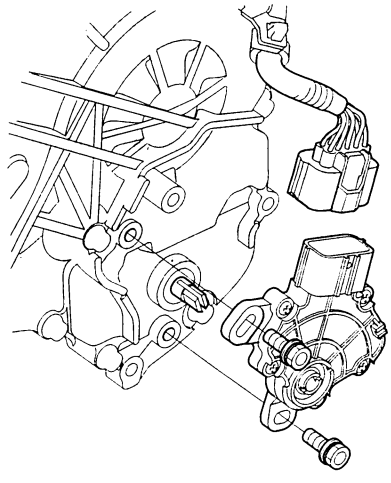
Protected by AR

Transmission Range Switch Replacement

1. Raise the vehicle, and make sure it is securely supported.
2. Shift to the N position.
3. Remove the transmission range switch cover.

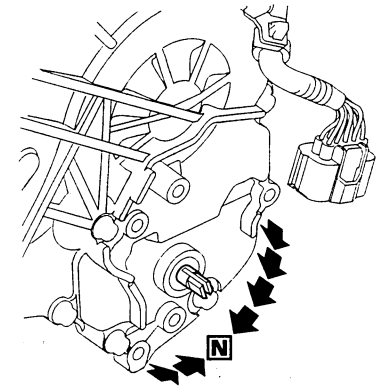


4. Disconnect the transmission range switch connector.



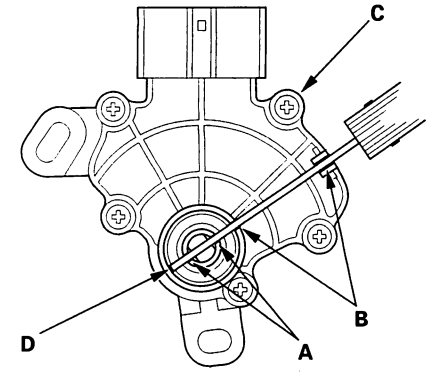
5. Remove the transmission range switch, and replace the new switch.
6. Make sure the selector control shaft is in the N position. If necessary, move the shift lever to the N position.

   NOTE: Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and the switch.



7. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.08 in.) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

   NOTE: Be sure to use a 2.0 mm (0.08 in.) blade or equivalent to hold the switch in the N position.



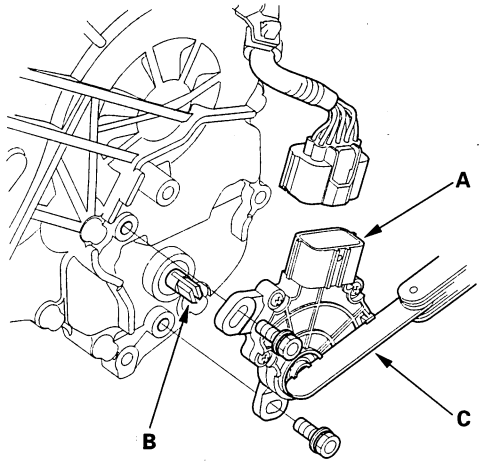
(cont'd)

Protected by AR

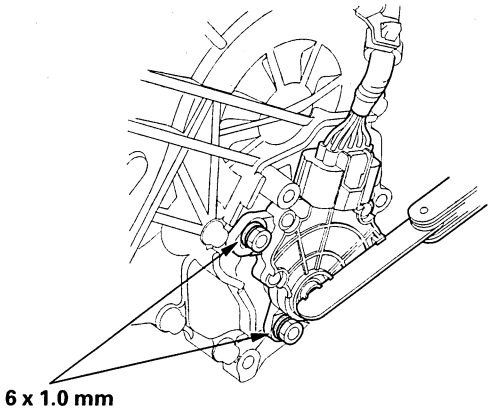
A/T Gear Position Indicator

Transmission Range Switch Replacement (cont'd)

8. Install the transmission range switch (A) gently on the selector control shaft (B) with holding it in the N position with the 2.0 mm (0.08 in.) blade (C).

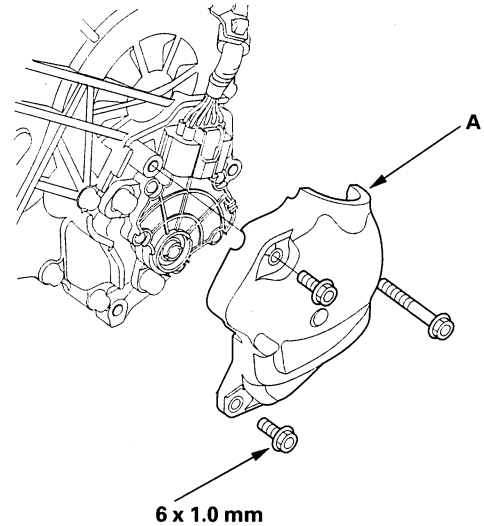


9. Tighten the bolts on the transmission range switch while you continue to hold the N position. Do not move the transmission range switch when tightening the bolts. Remove the feeler gauge.



6 x 1.0 mm
12 N·m (1.2 kgf·m, 8.7 lbf·ft)

10. Connect the connector securely, then install the transmission range switch cover (A).



6 x 1.0 mm
12 N·m (1.2 kgf·m, 8.7 lbf·ft)

11. Turn the ignition switch ON (II). Move the shift lever through all positions, and check the transmission range switch synchronization with the A/T gear position indicator.

12. Check that the engine will start in the P and N positions, and will not start in any other shift lever position.

13. Check that the back-up lights come on when the shift lever is in R position.

14. Allow the front wheels to rotate freely, then start the engine, and check the shift lever operation.

A/T Interlock System

Shift Lock System Circuit Troubleshooting

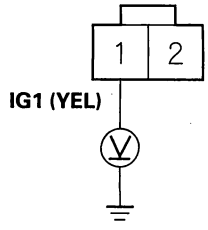
1. Connect the HDS to the DLC.
2. Choose Shift Lock Solenoid Test in Miscellaneous Test Menu, and check that the shift lock solenoid operates with the HDS.

   Does the shift lock solenoid work properly?

   YES—Go to step 14.

   NO—Go to step 3.
3. Remove the center console (see page 20-125).
4. Disconnect the shift lock solenoid connector.
5. Turn the ignition switch ON (II).
6. Measure the voltage between shift lock solenoid connector terminal No. 1 and body ground.

SHIFT LOCK SOLENOID CONNECTOR



Wire side of female terminals

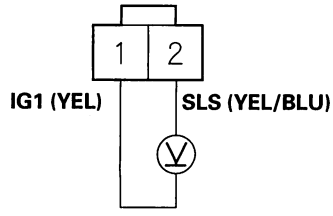
Is there battery voltage?

YES—Go to step 7.

NO—Check for a blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open or short in the wire between the shift lock solenoid connector and the under-dash fuse/relay box. ■

7. Shift the shift lever into the P position, and press the brake pedal. Do not press the accelerator.
8. Measure the voltage between shift lock solenoid connector terminals No. 1 and No. 2 while pressing the brake pedal.

SHIFT LOCK SOLENOID CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—go to step 9.

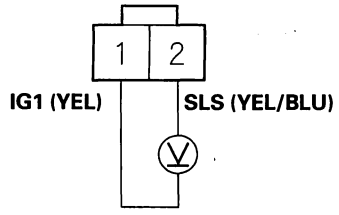
NO—go to step 10.

BACK

Protected by AR

9. Release the brake pedal, and measure the voltage between connector terminals No. 1 and No. 2. The shift lever must be in the P position.

SHIFT LOCK SOLENOID CONNECTOR



Wire side of female terminals

Is there battery voltage?

YES—Repair a short to ground in the wire between PCM connector terminal E2 and the shift lock solenoid. ■

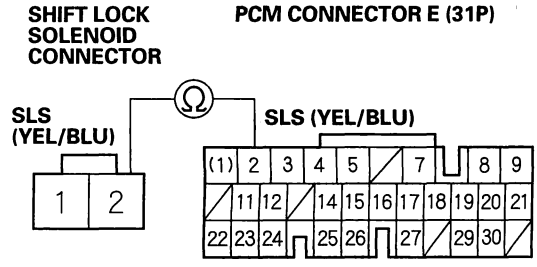
NO—Check the shift lock mechanism. If the mechanism is OK, replace the shift lock solenoid (see page 14-262). ■

10. Turn the ignition switch OFF.

11. Jump the SCS line with the HDS.

12. Disconnect PCM connector E (31P).

13. Check for continuity between PCM connector terminal E2 and shift lock solenoid connector terminal No. 2.



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good PCM and recheck. ■

NO—Repair open in the wire between PCM connector terminal E2 and the shift lock solenoid. ■

(cont'd)

Protected by AR

Shift Lock System Circuit Troubleshooting (cont'd)

14. Press the brake pedal.

    Are the brake lights ON?

    YES—Go to step 15.

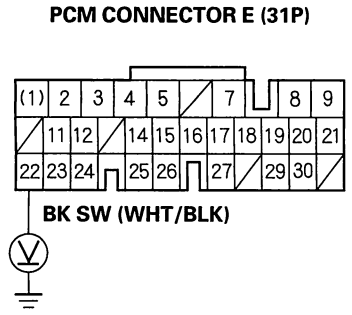
    NO—Repair faulty brake light circuit. ■

15. Turn the ignition switch OFF.

16. Jump the SCS line with the HDS.

17. Disconnect PCM connector E (31P).

18. Measure the voltage between PCM connector terminal E22 and body ground while pressing the brake pedal and when the brake pedal is released.



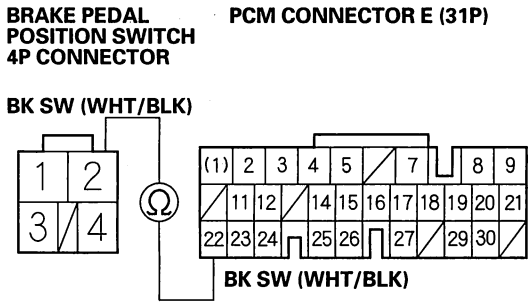
Wire side of female terminals

Is there battery voltage while the brake pedal is pressing, and no voltage when the pedal is released?

YES—Go to step 20.

NO—Go to step 19.

19. Check for continuity between PCM connector terminal E22 and brake pedal position switch 4P connector terminal No. 2.



Wire side of female terminals

Is there continuity?

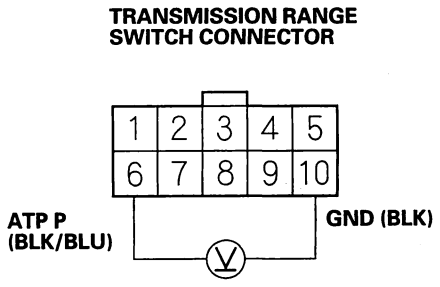
YES—Substitute a known-good PCM and recheck. ■

NO—Repair open in the wire between PCM connector terminal E22 and the brake pedal position switch. ■

BACK

Protected by AR

20. Connect PCM connector E (31P).
21. Disconnect the transmission range switch connector.
22. Turn the ignition switch ON (II).
23. Measure the voltage between transmission range switch connector terminals No. 6 and No. 10.



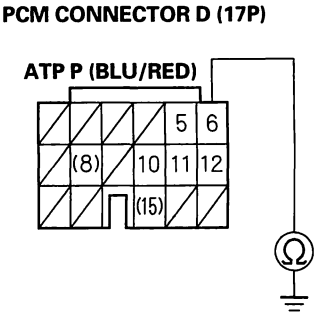
Wire side of female terminals

Is there battery voltage?

YES—Go to step 29.

NO—Go to step 24.

24. Turn the ignition switch OFF.
25. Disconnect PCM connector D (17P).
26. Check for continuity between PCM connector terminal D6 and body ground.



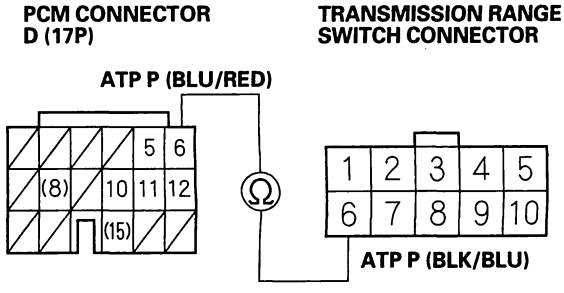
Wire side of female terminals

Is there continuity?

YES—Repair short in the wire between PCM connector terminal D6 and the transmission range switch. ■

NO—Go to step 27.

27. Check for continuity between PCM connector terminal D6 and transmission range switch connector terminal No. 6.



Wire side of female terminals

Is there continuity?

YES—Go to step 28.

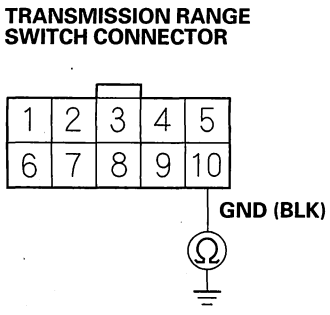
NO—Repair open in the wire between PCM connector terminal D6 and the transmission range switch. ■

(cont'd)

Protected by AR

Shift Lock System Circuit Troubleshooting (cont'd)

28. Check for continuity between transmission range switch connector terminal No. 10 and body ground.



Wire side of female terminals

Is there continuity?

YES—Substitute a known-good PCM and recheck.■

NO—Repair open in the wire between transmission range switch connector terminal No. 10 and ground (G101), or repair poor ground (G101).■

29. Test the transmission range switch (see page 14-247).

Is the switch OK?

YES—
- 2003-2005 models: Go to step 30.
- 2006 model: Go to step 32.

NO—Replace the transmission range switch (see page 14-249).■

30. Connect the HDS to the DLC.

31. Check the throttle position sensor in the A/T data list with the HDS. Do not press the accelerator.

Is the throttle position sensor opening 11% and above, or the sensor voltage 0.90 V and above?

YES—Go to step 35.

NO—Substitute a known-good PCM and recheck.■

32. Connect the HDS to the DLC.

33. Start the engine.

34. Check the engine speed and accelerator pedal position in the A/T data list with the HDS. Do not press the accelerator.

Is the engine speed at a normal idle, APSA about 0.5 V, and APSB about 0.2 V?

YES—Go to step 35.

NO—Substitute a known-good PCM and recheck.■

35. Check the throttle cable adjustment.

- 2003-2005 models (see page 11-362).
- 2006 model (see page 11-363).

Is the throttle cable adjusted properly?

YES—Check the throttle body.■

- 2003-2005 models (see page 11-356).
- 2006 model (see page 11-356).

NO—Adjust the throttle cable.■

- 2003-2005 models (see page 11-362).
- 2006 model (see page 11-363).

Key Interlock System Circuit Troubleshooting

SRS components are located in this area. Review the SRS component locations (see page 23-17) and the precautions and procedures (see page 23-19) before performing repairs or service.

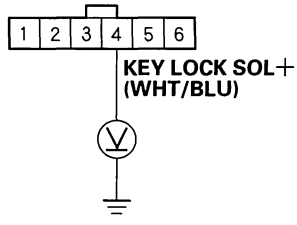
1. Turn the ignition switch to ACC (I). The shift lever must be in the P position.
2. Disconnect the steering lock assembly connector.
3. Check if the ignition key can be moved to LOCK (0) position, and remove the key from the cylinder.

   Is the ignition key able to move to the LOCK (0) position, and then removed?

   YES—Go to step 4.

   NO—Replace the ignition key cylinder/steering lock assembly (see page 17-28). ■
4. Turn the ignition switch to ACC (I) or ON (II), and shift to the N position.
5. Check for the voltage between the No. 4 terminal of the steering lock assembly connector and body ground.

STEERING LOCK ASSEMBLY CONNECTOR



Wire side of female terminals

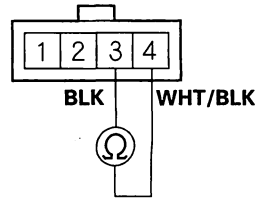
Is there battery voltage?

YES—Go to step 6.

NO—Check for an open in the WHT/BLU wire between the MICU and the steering lock assembly connector. If the wire is OK, substitute a known-good multiplex integrated control unit and recheck. ■

6. Turn the ignition switch to ACC (I), and shift to the P position.
7. Remove the center console (see page 20-125).
8. Disconnect the park pin switch connector.
9. Check for continuity between the No. 3 and No. 4 terminals of the park pin switch connector while pushing the button of the shift lever in, and when released.

PARK PIN SWITCH CONNECTOR



Terminal side of male terminals

Is there continuity when pushing the button in, and no continuity when it's released?

YES—Check for an open in the wire between the multiplex integrated control unit and the park pin switch connector. If the wire is OK, replace the multiplex integrated control unit. ■

NO—Replace the park pin switch (see page 14-263). ■

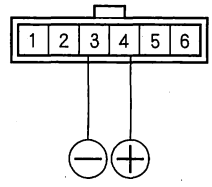
Key Interlock Solenoid Test

SRS components are located in this area. Review the SRS component locations (see page 23-17) and the precautions and procedures (see page 23-19) before performing repairs or service.

1. Remove the driver's dashboard lower cover (see page 20-130) and lower steering column cover.
2. Disconnect steering lock assembly connector.
3. Insert the ignition key in the key cylinder, then turn the ignition key to ACC (I).
4. Connect the battery positive terminal to steering lock assembly connector terminal No. 4, and connect the battery negative terminal to No. 3 terminal. Make sure that the ignition key cannot be turned to LOCK (0) position. Release the battery terminals, and make sure that the key can be turned to LOCK (0) position and removed from the cylinder.
5. If the key interlock solenoid works improperly, replace the ignition key cylinder/steering lock assembly (see page 17-28).

STEERING LOCK ASSEMBLY CONNECTOR



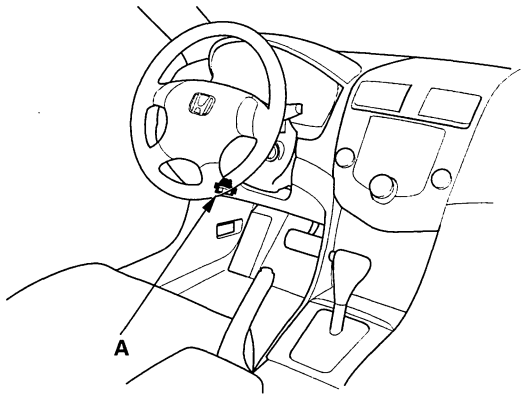
Terminal side of male terminals

BACK

Protected by AR

Shift Lock Solenoid Test

1. Connect the HDS to the DLC (A).



2. Choose Shift Lock Solenoid Test in Miscellaneous Test Menu, and check that the shift lock solenoid operates with the HDS.

3. Check that the shift lever can be moved out of the P position when Shift Lock Solenoid: ON. Move the shift lever back in the P position, and make sure it locks with Shift Lock Solenoid: OFF.

4. Check that the shift lock releases when the shift lock release is pushed, and check that it locks when the shift lock release is released.

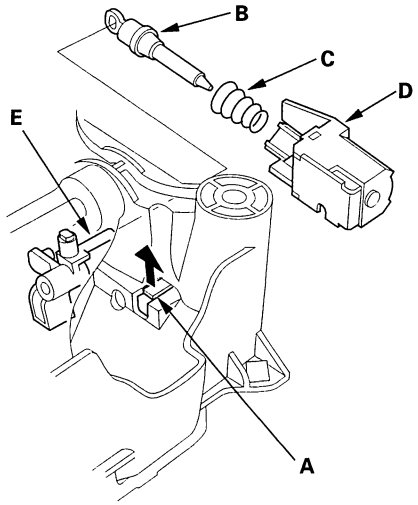
5. If the shift lock solenoid does not work properly, perform shift lock system troubleshooting (see page 14-254).

Protected by AR

Shift Lock Solenoid Replacement

2003-2005-Model Type A Shift Lever and 2006-Model Shift Lever

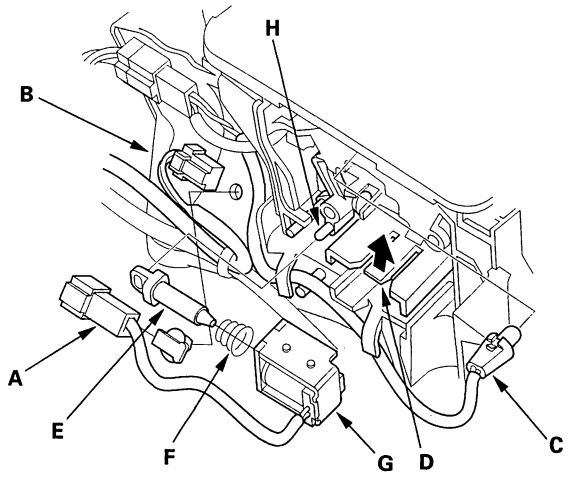
1. Remove the shift lever assembly (see page 14-231).
2. Release the lock tab (A) securing the shift lock solenoid at the bottom of the shift lever assembly, and remove the shift lock solenoid.



3. Install the shift lock solenoid plunger (B) and plunger spring (C) in the new shift lock solenoid (D).
4. Install the new shift lock solenoid by aligning the joint of the shift lock solenoid plunger with the tip of the shift lock stop (E).
5. Install the shift lever assembly (see page 14-232).

2003-2005-Model Type B Shift Lever

1. Remove the center console (see page 20-125).
2. Disconnect the shift lock solenoid connector (A), and remove it from the shift lever bracket base (B).



3. Remove the A/T gear position indicator panel light bulb socket (C).
4. Release the lock tab (D) securing the shift lock solenoid, and remove the shift lock solenoid.
5. Install the shift lock plunger (E) and plunger spring (F) in the new shift lock solenoid (G).
6. Install the new shift lock solenoid by aligning the joint of the shift lock solenoid plunger with the tip of the shift lock stop (H).
7. Install the A/T gear position indicator panel light bulb socket.
8. Install the shift lock solenoid connector on the shift lever bracket base, then connect the connector.
9. Install the center console (see page 20-125).

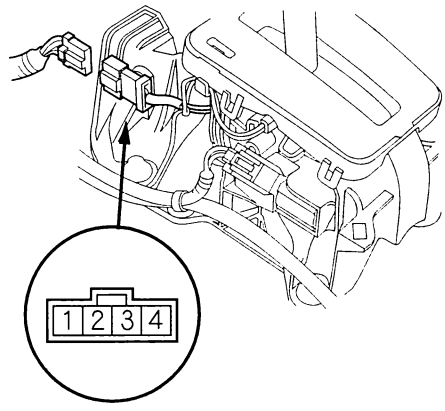
BACK

Protected by AR

Park Pin Switch Test

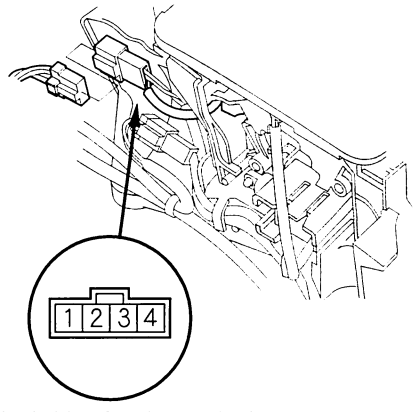
1. Remove the center console (see page 20-125).
2. Disconnect the park pin switch connector.

2003-2005-Model Type A Shift Lever and 2006-Model Shift Lever:



Terminal side of male terminals

2003-2005-Model Type B Shift Lever:



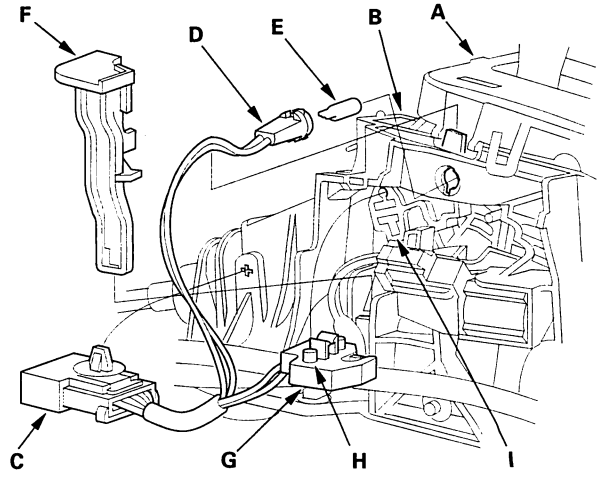
Terminal side of male terminals

3. Shift the shift lever into the P position and release the shift lever button, then check for continuity between connector terminals No. 3 and No. 4. There should be no continuity.
4. Shift out of the P position or press the shift lever button while in P position, and check for continuity between terminals No. 3 and No. 4. There should be continuity.
5. If the park pin switch is faulty, replace it (type A shift lever) or replace the shift lever bracket base (type B shift lever). The park pin switch of the type B shift lever is not available separately.

Park Pin Switch Replacement

NOTE: The park pin switch replacement is applied for the 2003-2005-model type A shift lever and 2006-model shift lever, the 2003-2005-model type B shift lever park pin switch is not available separately.

1. Remove the center console (see page 20-125).
2. Remove the A/T gear position indicator panel (A) from the shift lever bracket base (B).



3. Disconnect the park pin switch connector (C), then remove it from the bracket base.
4. Remove the A/T gear position indicator panel light bulb socket (D), then remove the bulb (E) from the socket.
5. Remove the shift lock release lever (F).
6. Remove the park pin switch, and install the new switch (G) by aligning the tabs (H) with the slots (I).
7. Install the shift lock release lever.
8. Install the bulb in the socket, then install the socket in the bracket base.
9. Install the indicator panel on the bracket base.
10. Install the park pin switch connector on the bracket base, then connect the connector.
11. Install the center console (see page 20-125).

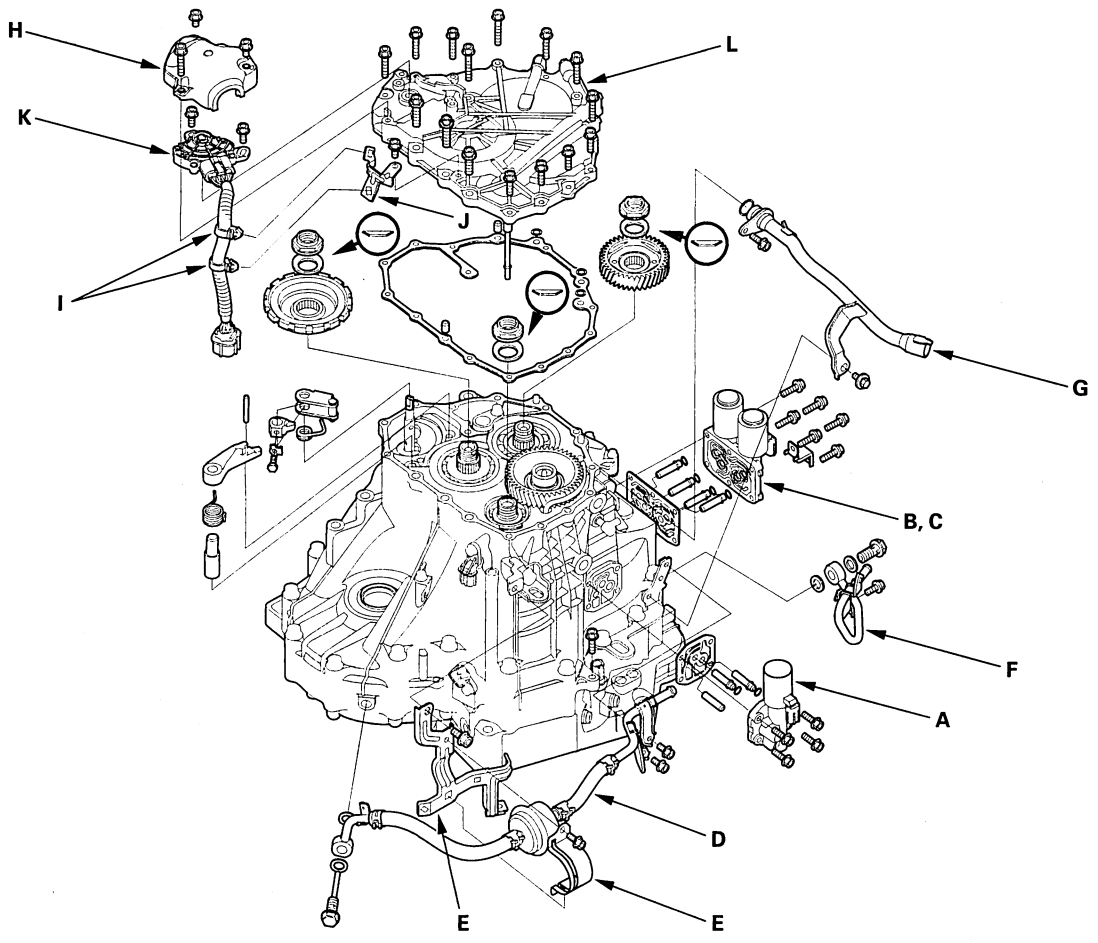
Protected by AR

Transmission End Cover

End Cover Removal

Special Tools Required
Mainshaft holder 07GAB-PF50101 or 07GAB-PF50100

1. Remove the two bolts securing the ATF cooler inlet line brackets, ATF filter bracket bolt, line bolt, and remove the ATF cooler line/ATF filter (D) and filter brackets (E).

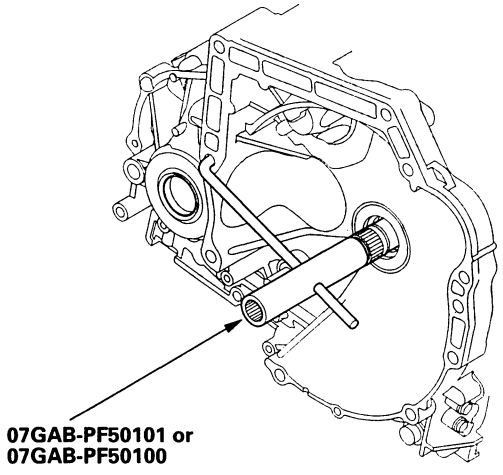


2. Remove the ATF cooler outlet line (F).
3. Remove the dipstick guide pipe (G).
4. Remove the A/T clutch pressure control solenoid valve A, ATF joint pipes, ATF pipe, and gasket.
5. Remove the A/T clutch pressure control solenoid valves B and C, ATF joint pipes, and gasket.
6. Remove the transmission range switch cover (H).
7. Remove the transmission range switch harness clamps (I) from the clamp bracket (J), then remove the transmission range switch (K).
8. Remove the end cover (L), dowel pins, O-rings, and end cover gasket.

BACK

Protected by AR

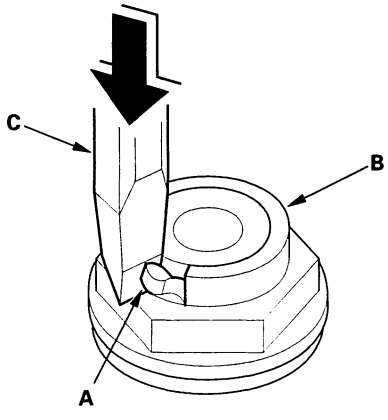
9. Slip the special tool onto the mainshaft.



10. Engage the park pawl with the park gear.

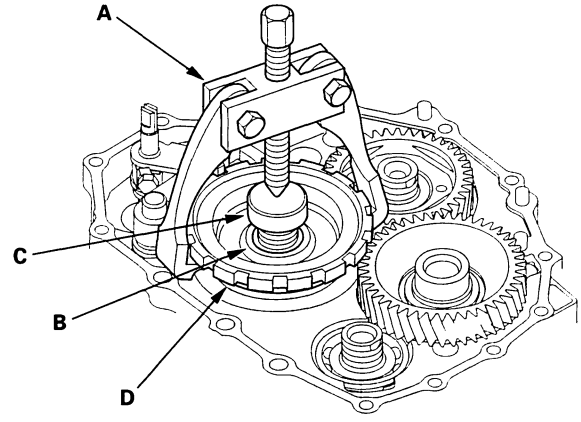
11. Cut the lock tab (A) of the each shaft locknut (B) using a chisel (C). Then remove the locknuts and conical spring washers from each shaft.

NOTE:
- Countershaft and secondary shaft locknuts have left-hand threads.
- Keep all of the chiseled particles out of the transmission.
- Clean the old mainshaft and countershaft locknuts; they are used to install the press fit idler gear on the mainshaft, and park gear on the countershaft.

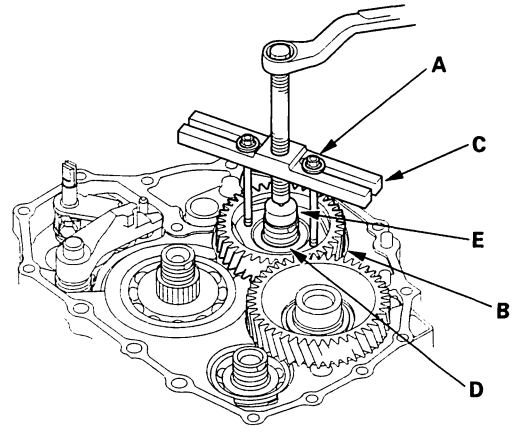


12. Remove the special tool from the mainshaft.

13. Set a two-jaw (or three-jaw) puller (A) on the countershaft (B) by putting a spacer (C) between the puller and countershaft, then remove the park gear (D).



14. Install a 6 x 1.0 mm bolts (A) on the mainshaft idler gear (B). Set a puller (C) on the mainshaft (D) with putting a spacer (E) between the puller and mainshaft, then remove the mainshaft idler gear.



15. Remove the park pawl, park pawl spring, park pawl shaft, and stop shaft.

16. Remove the park lever from the control shaft.

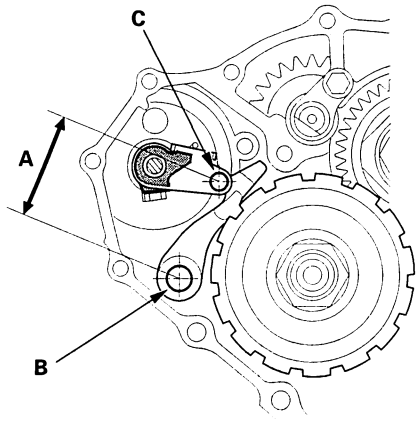
Protected by AR

Transmission End Cover

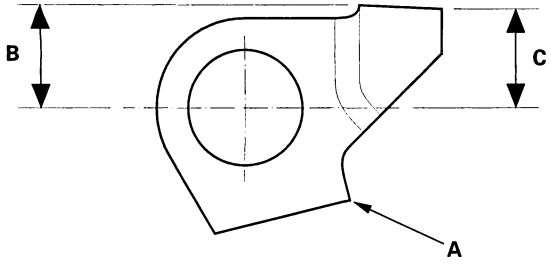
Park Lever Stop Inspection and Adjustment

1. Set the park lever in the P position.
2. Measure the distance (A) between the park pawl shaft (B) and the park lever roller pin (C).

   Standard: 57.7—58.7 mm (2.27—2.31 in.)



3. If the measurement is out of standard, select and install the appropriate park lever stop (A) from the table below.



PARK LEVER STOP

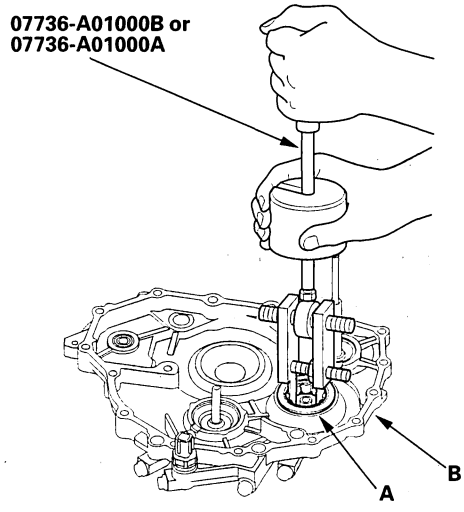
Mark	Part Number	B	C
1	24537-PA9-003	11.00 mm (0.433 in.)	11.00 mm (0.433 in.)
2	24538-PA9-003	10.80 mm (0.425 in.)	10.65 mm (0.419 in.)
3	24539-PA9-003	10.60 mm (0.417 in.)	10.30 mm (0.406 in.)

4. After replacing the park lever stop, make sure the distance is within tolerance.

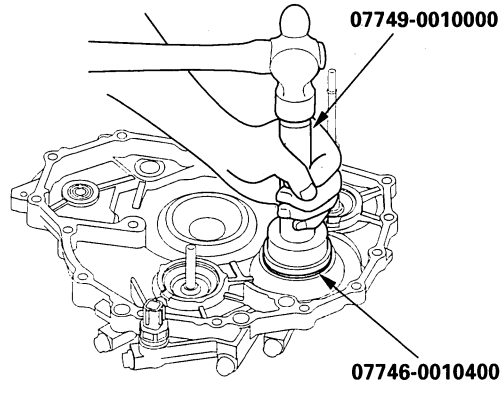
Idler Gear Shaft Bearing Replacement

Special Tools Required
- Adjustable bearing puller, 25—40 mm 07736-A01000B or 07736-A01000A
- Driver 07749-0010000
- Attachment, 52 x 55 mm 07746-0010400

1. Remove the idler gear shaft bearing (A) from the end cover (B) with the special tool.



2. Install the new bearing in the end cover with the special tools.



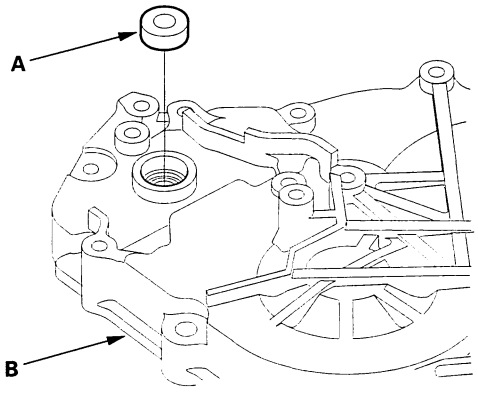
BACK

Protected by AR

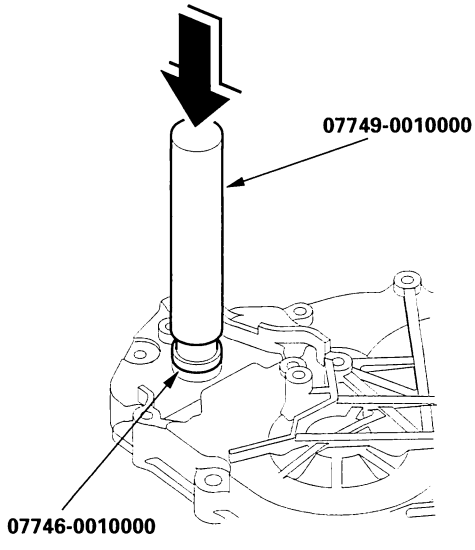
Selector Control Shaft Oil Seal Replacement

Special Tools Required
- Driver 07749-0010000
- Attachment, 22 x 24 mm 07746-0010800

1. Remove the oil seal (A) from the end cover (B).



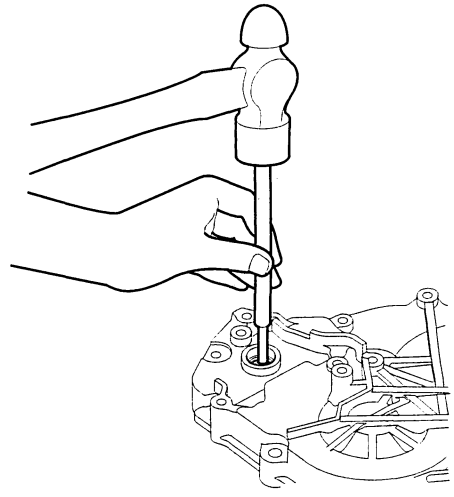
2. Install the new oil seal flush to the end cover with the special tools.



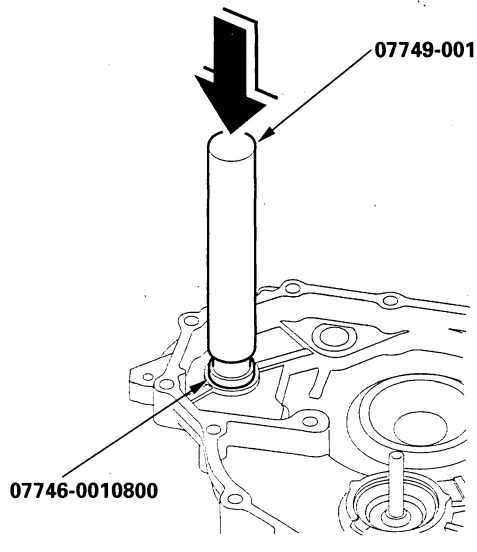
Selector Control Shaft Bearing Replacement

Special Tools Required
- Driver 07749-0010000
- Attachment, 22 x 24 mm 07746-0010800

1. Remove the oil seal from the end cover, then remove the bearing.



2. Install the new bearing flush to the end cover with the special tools.



3. Install the new oil seal.

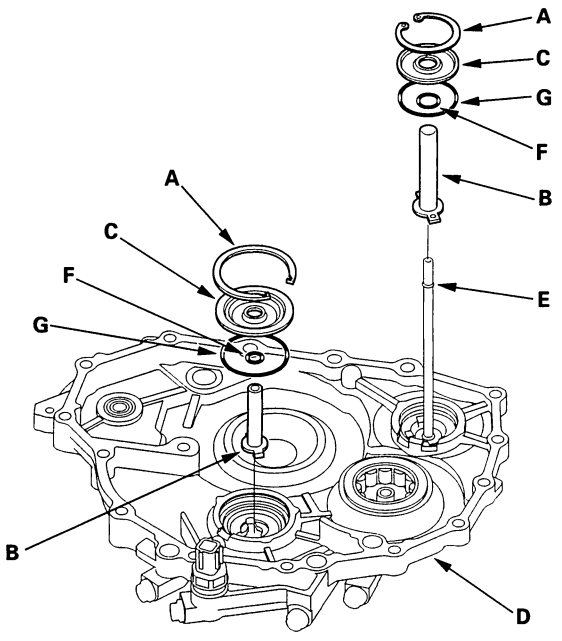
Protected by AR

Transmission End Cover

ATF Feed Pipe Replacement

1. Remove the snap rings (A), ATF feed pipes (B), and feed pipe flanges (C) from the end cover (D).

   NOTE: Replace the end cover, if the 1st clutch ATF feed pipe (E) replacement is required.



2. Install the new O-rings (F) over the ATF feed pipes.
3. Install the ATF feed pipes in the end cover by aligning the feed pipe tabs with the indentations in the end cover.
4. Install the new O-rings (G) in the end cover, then install the feed pipe flanges over the ATF feed pipes.
5. Secure the ATF feed pipes and feed pipe flanges with the snap rings.

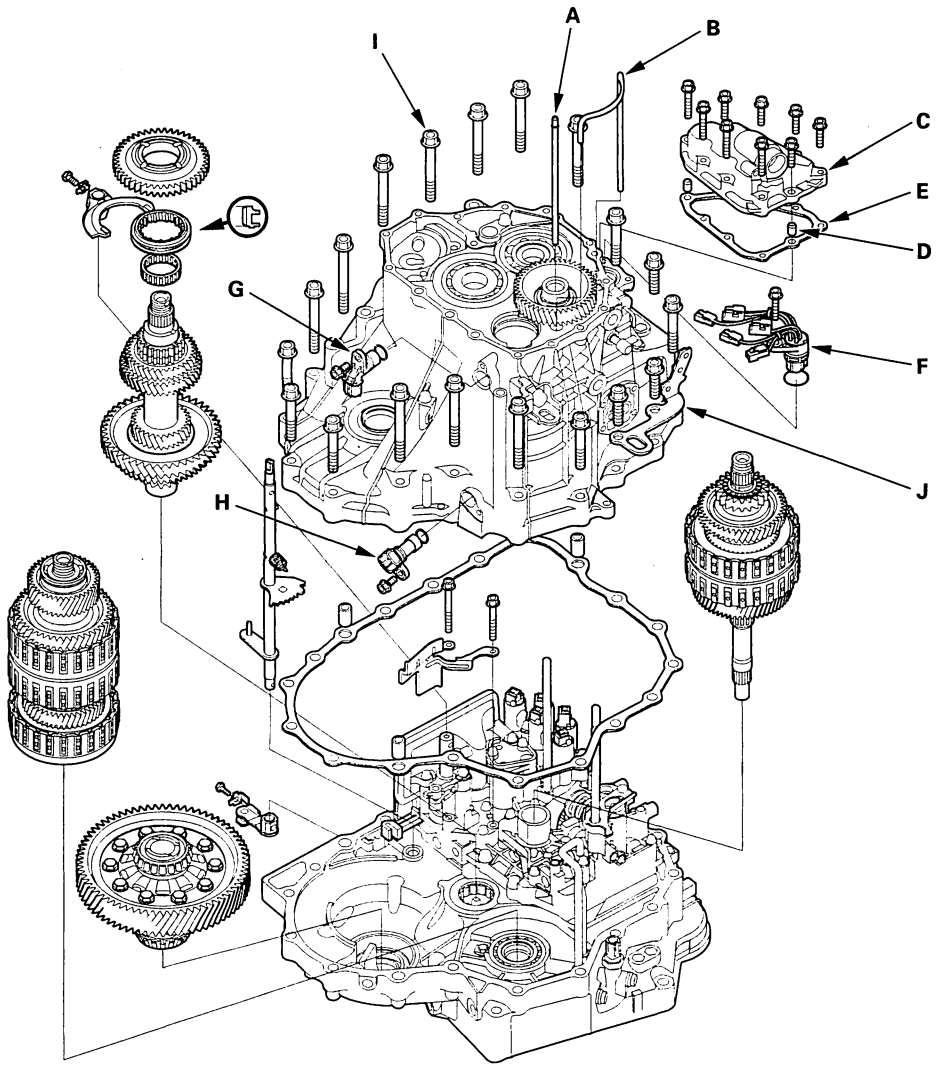
BACK

Protected by AR

Housing and Shaft Assembly Removal

Special Tools Required
Housing puller 07HAC-PK40102

1. Remove the ATF feed pipe (A) from the idler gear shaft, and the ATF lubrication pipe (B) from the transmission housing.



2. Remove the shift solenoid valve cover (C), dowel pins (D), and gasket (E).
3. Disconnect the connectors from the shift solenoid valves, and remove the solenoid harness connector (F).
4. Remove the input shaft (mainshaft) speed sensor (G) and output shaft (countershaft) speed sensor (H).
5. Remove the transmission housing mounting bolts (19 bolts) (I) and transmission hanger (J).

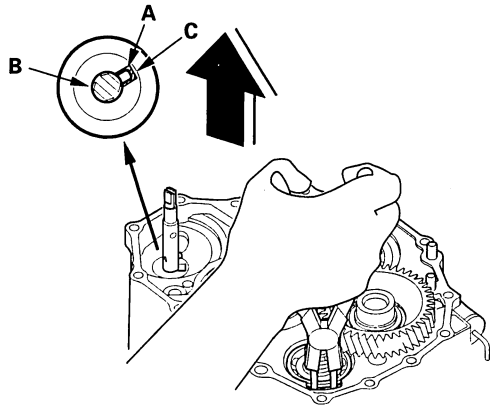
(cont'd)

Protected by AR

Housing and Shaft Assembly Removal (cont'd)

6. Align the spring pin (A) on the selector control shaft (B) with the transmission housing groove (C) by turning the control shaft with the control lever.

   NOTE: Do not squeeze the end of the control shaft tips together when turning the shaft.



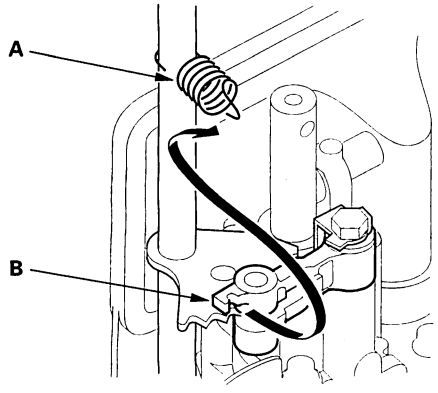
7. While expanding the snap ring of the secondary shaft bearing using the snap ring pliers, lift the transmission housing. Release the snap ring pliers and remove the transmission housing.

8. Remove the countershaft shaft reverse gear and needle bearing.

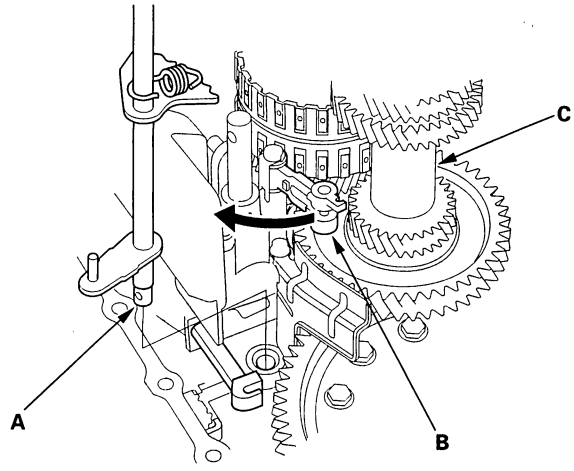
9. Remove the lock bolt securing the shift fork, then remove the shift fork with the reverse selector together.

10. Remove the selector control lever from the selector control shaft.

11. Unlock the detent spring (A) from the detent arm (B).

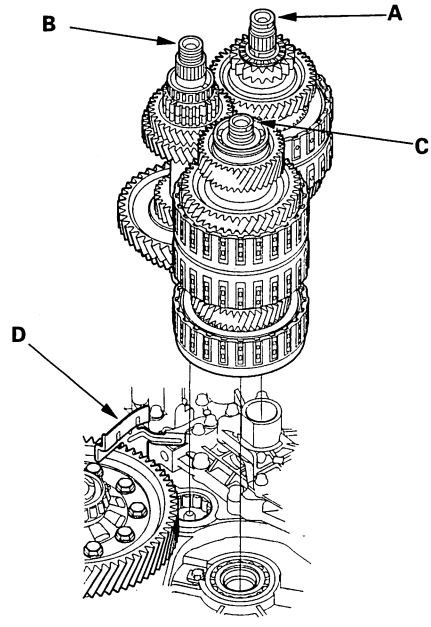


12. Remove the selector control shaft (A) from the torque converter housing.



13. Turn the detent arm (B) away from the countershaft (C).

14. Remove the mainshaft subassembly (A), countershaft subassembly (B) and secondary shaft subassembly (C) together. Do not bump the countershaft on the baffle plate (D).



15. Remove the baffle plate.

16. Remove the differential assembly.

BACK

Protected by AR

Bearing Removal

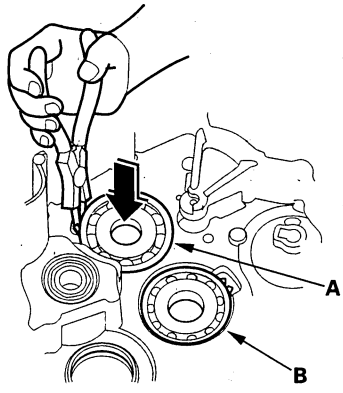
Special Tools Required
- Attachment, 78 x 90 mm 07GAD-SD40101
- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300

1. Remove the idler gear shaft when removing the mainshaft bearing and idler gear shaft bearing.

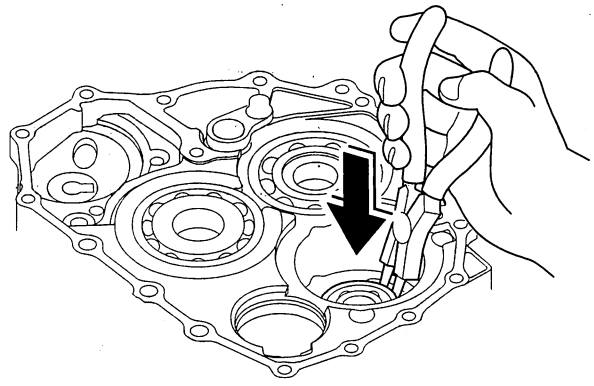
   NOTE: If you are only removing the countershaft bearing, idler gear shaft removal is not needed.

2. To remove the mainshaft bearing (A) and countershaft bearing (B) from the transmission housing, expand each snap ring with the snap ring pliers, then push the bearing out.

   NOTE: Do not remove the snap ring unless it's necessary to clean the grooves in the housing.



3. Expand the snap ring of the idler gear shaft bearing with the snap ring pliers, then push the bearing out.

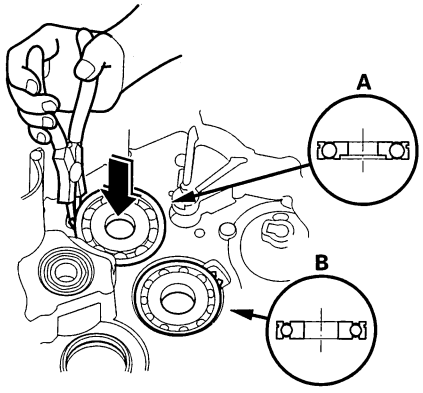


Protected by AR

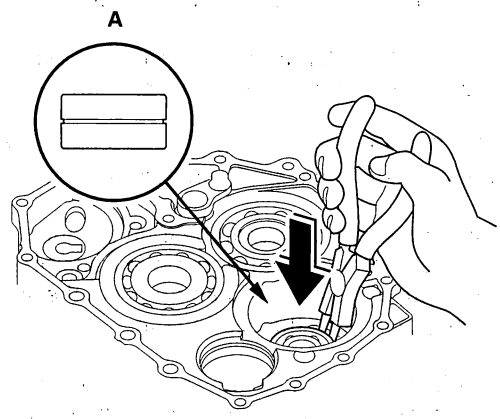
Bearing Installation

Special Tools Required
- Attachment, 78 x 90 mm 07GAD-SD40101
- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300

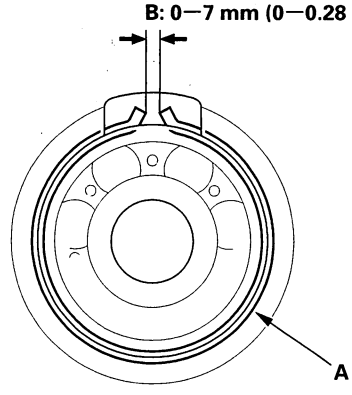
1. Install the bearings in the direction shown.
2. Expand each snap ring with the snap ring pliers, and install the mainshaft bearing (A) and countershaft bearing (B) part-way into the housing.



3. Release the pliers, then push the bearing down into the housing until the snap ring snaps in place around it.
4. Expand the snap ring of the idler gear shaft (A) with the snap ring pliers, and install the bearing part-way into the housing.



5. Release the pliers, then push the bearing down into the housing until the snap ring snaps in place around it.
6. After installing the bearings verify that the snap rings (A) are seated in the bearing and housing grooves, and that the ring end gaps (B) are correct.



7. Install the idler shaft.

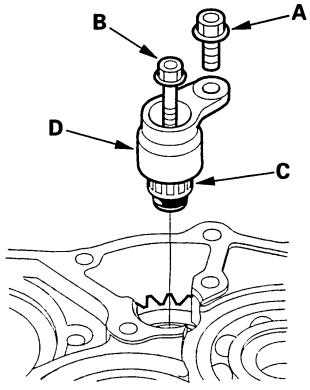
BACK

Protected by AR

Reverse Idler Gear Removal and Installation

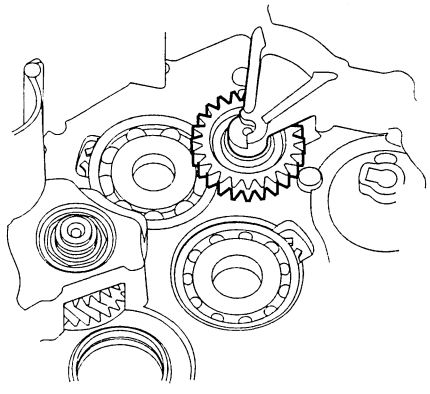
Removal

1. Remove the bolt (A) securing the reverse idler gear shaft holder.



2. Install a 5 x 0.8 mm bolt (B) in the reverse idler gear shaft, and pull it to remove the reverse idler gear shaft (C) and gear shaft holder (D) together.

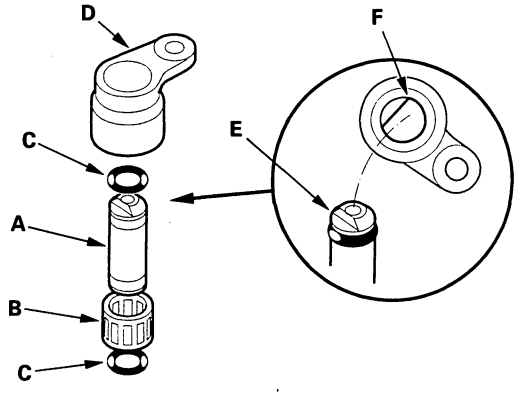
3. Remove the reverse idler gear.



Installation

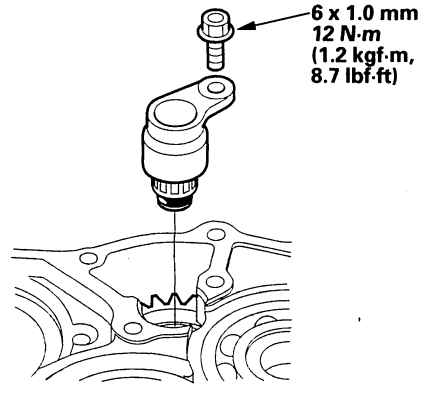
1. Install the reverse idler gear in the transmission housing.

2. Lightly coat the reverse idler gear shaft (A), needle bearing (B), and new O-rings (C) with lithium grease.



3. Assemble the new O-rings and needle bearing on the reverse idler gear shaft, then install the reverse idler gear shaft in the reverse idler gear shaft holder (D). Align the D-shaped cut out (E) of the shaft with the D-shaped area (F) of the holder.

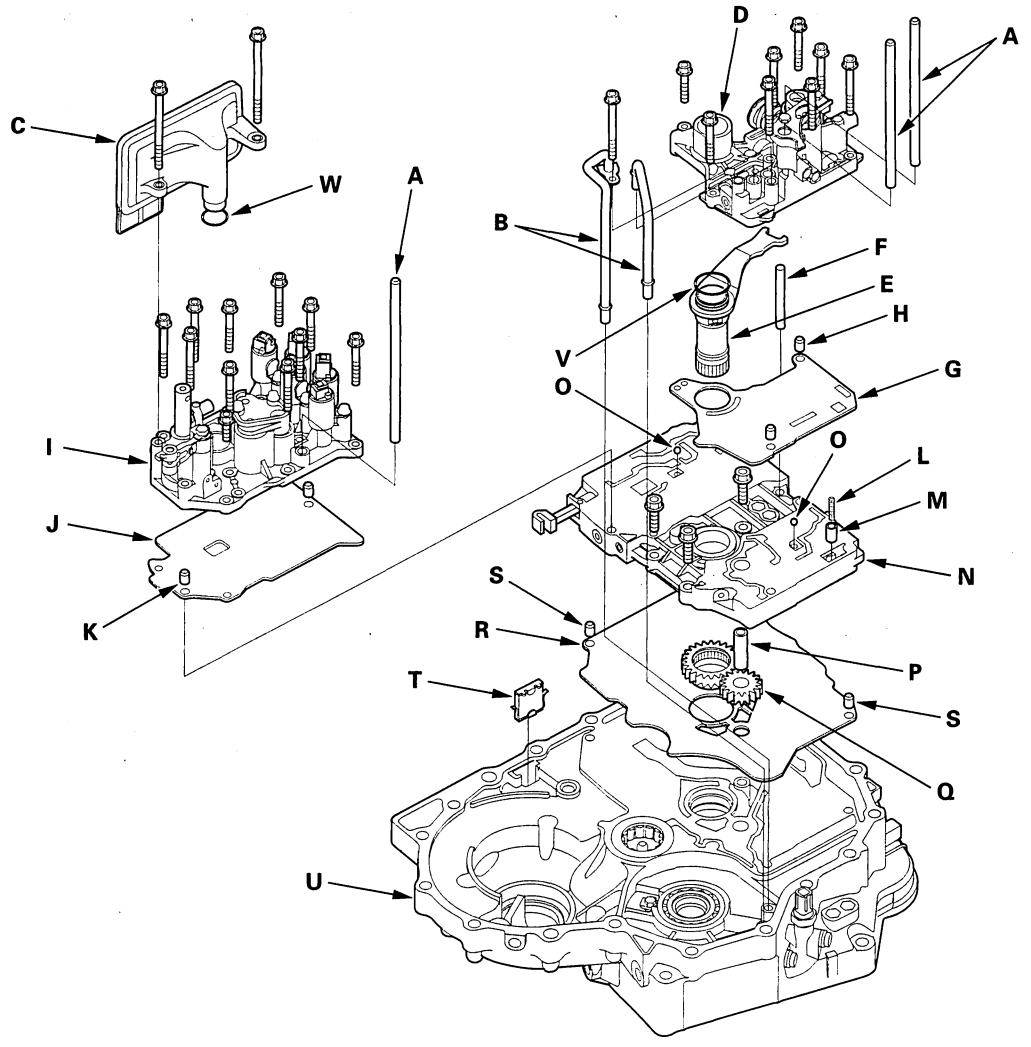
4. Install the reverse idler gear shaft/holder assembly on the transmission housing.



Protected by AR

Valve Body and ATF Strainer Removal

1. Remove the ATF feed pipes (A) and ATF joint pipes (B).



2. Remove the ATF strainer (C).
3. Remove the regulator valve body (D) (seven bolts).
4. Remove the stator shaft (E) and stator shaft stop (F), then remove the regulator separator plate (G) and two dowel pins (H).
5. Remove the servo body (I) (11 bolts), then remove the separator plate (J) and two dowel pins (K).

BACK

Protected by AR

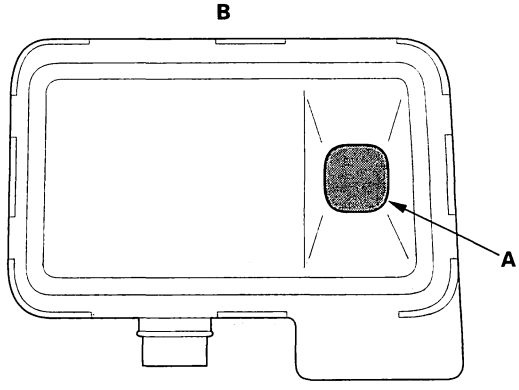
6. Remove the cooler check valve spring (L) and valve (M), then remove the main valve body (N) (three bolts). Do not let the check balls (O) fall out.

7. Remove the ATF pump driven gear shaft (P), then remove the ATF pump gears (Q).

8. Remove the main separator plate (R) and two dowel pins (S).

9. Remove the ATF magnet (T), clean and reinstall it in the torque converter housing (U).

10. Clean the inlet opening (A) of the ATF strainer (B) thoroughly with compressed air, then check that it is in good condition and that the inlet opening is not clogged.



11. Test the ATF strainer by pouring clean ATF through the inlet opening, and replace it if it is clogged or damaged.

12. Remove the O-rings (V) (W) from the stator shaft and ATF strainer. Install the new ones when installing the valve bodies.

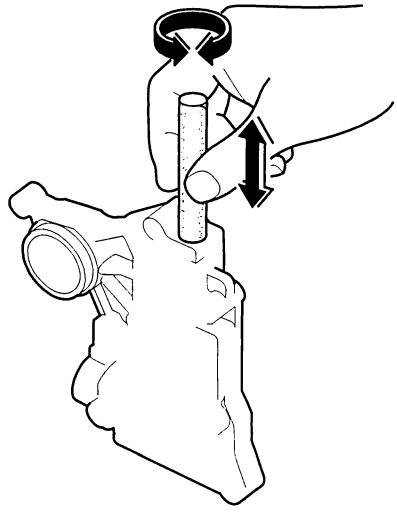
Protected by AR

Valve Body Repair

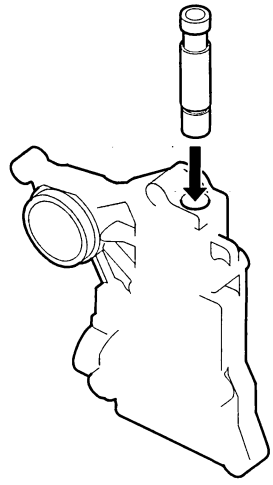
NOTE: This repair is only necessary if one or more of the valves in a valve body do not slide smoothly in their bores. Use this procedure to free the valves.

1. Soak a sheet of #600 abrasive paper in ATF for about 30 minutes.
2. Carefully tap the valve body so the sticking valve drops out of its bore. It may be necessary to use a small screwdriver to pry the valve free. Be careful not to scratch the bore with the screwdriver.
3. Inspect the valve for any scuff marks. Use the ATF-soaked #600 paper to polish off any burrs that are on the valve, then wash the valve in solvent and dry it with compressed air.
4. Roll up half a sheet of ATF-soaked #600 paper and insert it in the valve bore of the sticking valve. Twist the paper slightly, so that it unrolls and fits the bore tightly, then polish the bore by twisting the paper as you push it in and out.

   NOTE: The valve body is aluminum and doesn't require much polishing to remove any burrs.



5. Remove the #600 paper. Thoroughly wash the entire valve body in solvent, then dry it with compressed air.
6. Coat the valve with ATF, then drop it into its bore. It should drop to the bottom of the bore under its own weight. If not, repeat step 4, then retest. If the valve still sticks, replace the valve body.



7. Remove the valve, and thoroughly clean it and the valve body with solvent. Dry all parts with compressed air, then reassemble using ATF as a lubricant.

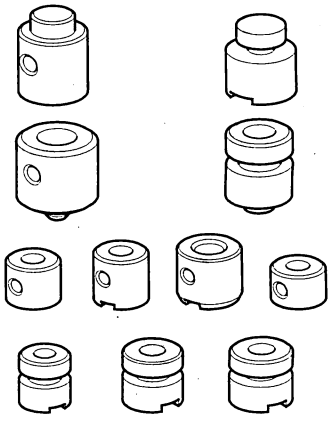
BACK

Protected by AR

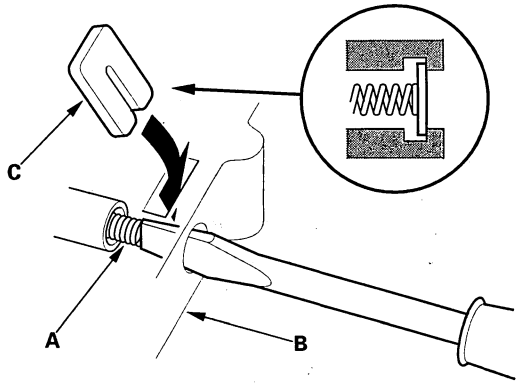
Valve Body Valve Installation

1. Coat all parts with ATF before assembly.

2. Install the valves and springs in the sequence shown for the main valve body (see page 14-278), regulator valve body 2003-2004 models (see page 14-280), 2005-2006 models (see page 14-281), and servo body (see page 14-282). Refer to the following valve cap illustrations, and install each valve cap so the end shown facing up will be facing the outside of the valve body.



3. Install all the springs and seats. Insert the spring (A) in the valve, then install the valve in the valve body (B). Push the spring in with a screwdriver, then install the spring seat (C).

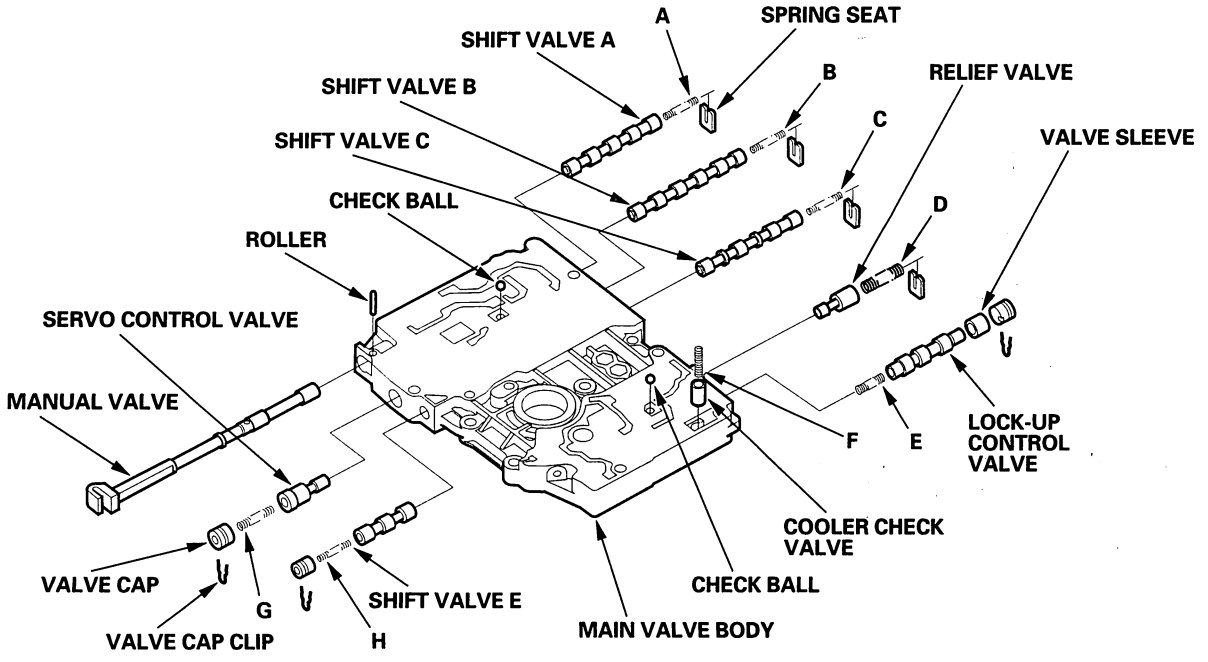


Protected by AR

Valve Body

Main Valve Body Disassembly, Inspection, and Reassembly

1. Clean all parts thoroughly in solvent or carburetor cleaner, and dry them with compressed air. Blow out all passages.
2. Do not use a magnet to remove the check balls, it may magnetize the balls.
3. Inspect the valve body for scoring and damage.
4. Check all valves for free movement. If any fail to slide freely, refer to valve body repair (see page 14-276).
5. Coat all parts with ATF during assembly.



SPRING SPECIFICATIONS

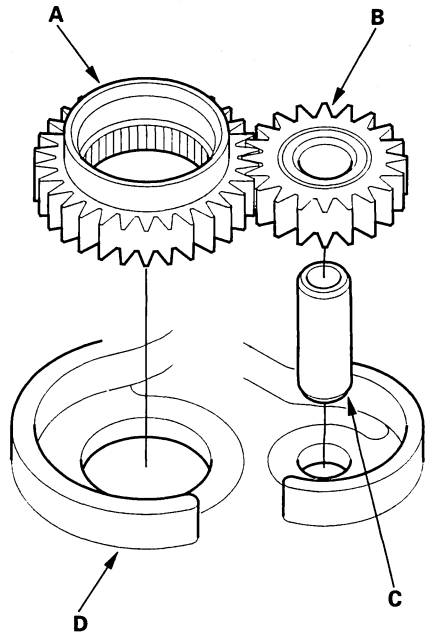
Springs		Standard (New)-Unit: mm (in.)			
		Wire Diameter	O.D.	Free Length	No. of Coils
A	Shift valve A spring	0.8 (0.031)	5.6 (0.220)	28.1 (1.106)	15.9
B	Shift valve B spring	0.8 (0.031)	5.6 (0.220)	28.1 (1.106)	15.9
C	Shift valve C spring	0.8 (0.031)	5.6 (0.220)	28.1 (1.106)	15.9
D	Relief valve spring	1.0 (0.039)	9.6 (0.378)	34.1 (1.343)	10.2
E	Lock-up control valve spring	0.65 (0.026)	7.1 (0.280)	23.1 (0.909)	12.7
F	Cooler check valve spring				
	2003-2004 models	0.9 (0.035)	6.6 (0.260)	26.5 (1.043)	12.6
	2005-2006 models	0.85 (0.034)	6.6 (0.260)	27.0 (1.063)	11.3
G	Servo control valve spring	0.7 (0.028)	6.6 (0.260)	35.7 (1.406)	17.2
H	Shift valve E spring	0.8 (0.031)	5.6 (0.220)	28.1 (1.106)	15.9

BACK

Protected by AR

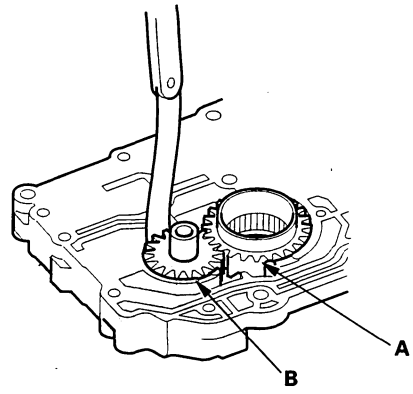
ATF Pump Inspection

1. Install the ATF pump drive gear (A), driven gear (B), and ATF pump driven gear shaft (C) in the main valve body (D). Lubricate all parts with ATF, and install the ATF pump driven gear with its grooved and chamfered side facing up.



2. Measure the side clearance of the ATF pump drive gear (A) and driven gear (B).

ATF Pump Gears Side (Radial) Clearance
Standard (New)
ATF Pump Drive Gear:
0.210—0.265 mm (0.0083—0.0104 in.)
ATF Pump Driven Gear:
0.070—0.125 mm (0.0028—0.0049 in.)



3. Remove the ATF pump driven gear shaft. Measure the thrust clearance between the ATF pump driven gear (A) and the valve body (B) with a straight edge (C) and a feeler gauge (D).

ATF Pump Drive/Driven Gear Thrust (Axial) Clearance
Standard (New): 0.03—0.05 mm (0.001—0.002 in.)
Service Limit: 0.07 mm (0.003 in.)

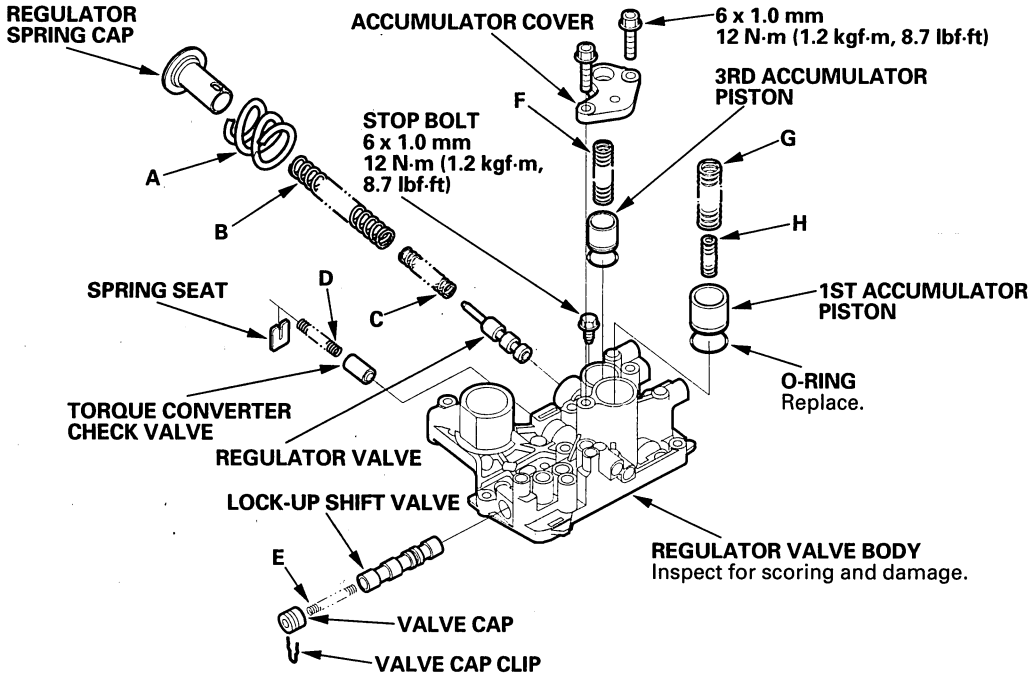
Regulator Valve Body Disassembly, Inspection, and Reassembly

2003-2004 Models

1. Clean all parts thoroughly in solvent or carburetor cleaner, and dry them with compressed air. Blow out all passages.
2. Check all valves for free movement. If any fail to slide freely, refer to valve body repair (see page 14-276).
3. Hold the regulator spring cap in place while removing the stop bolt. The regulator spring cap is spring loaded. Once the stop bolt is removed, release the spring cap slowly so it does not pop out.
4. Coat all parts with ATF during assembly.
5. When reassembling the valve body, align the hole in the regulator spring cap with the hole in the valve body, then press the spring cap into the valve body, and tighten the stop bolt.



SPRING SPECIFICATIONS

Spring		Standard (New)-Unit: mm (in.)			
		Wire Diameter	O.D.	Free Length	No. of Coils

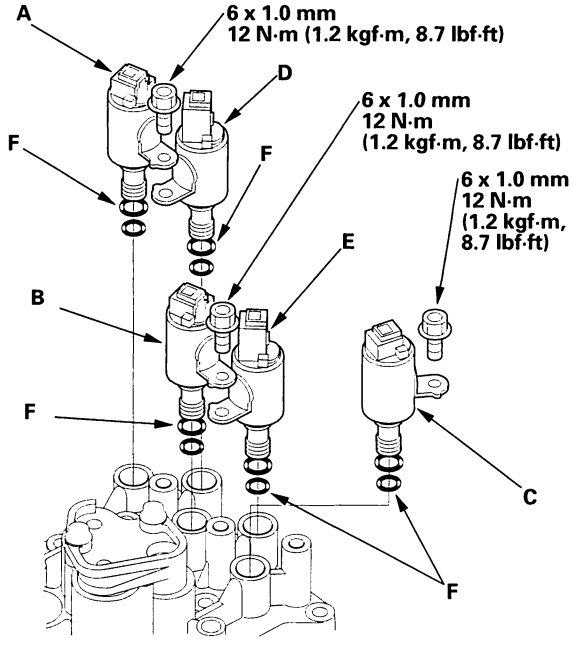
Shift Solenoid Valve Removal and Installation

NOTE:
- Do not hold the shift solenoid connector to remove and to install the shift solenoid valves. Hold the shift solenoid valve body.
- Do not install the shift solenoid valve A before installing the shift solenoid valve D, and do not install shift solenoid valve B before solenoid valve E. If solenoid valves A and B are installed before solenoid valves D and E, it may damage the hydraulic control system.

1. Remove the shift solenoid valves by holding the solenoid valve body.

2. Install new O-rings (F) on each shift solenoid valves.

   NOTE: A new solenoid valve comes with new O-rings. If you install a new solenoid valve, use the O-rings provided on it.



3. Install shift solenoid valve D by holding the shift solenoid valve body; be sure to install mounting bracket contacts the servo body.

4. Install shift solenoid valve A by holding the shift solenoid valve body; be sure to install mounting bracket contacts the bracket on shift solenoid valve D.

5. Install shift solenoid valve E by holding the shift solenoid valve body; be sure to install mounting bracket contacts the servo body.

6. Install shift solenoid valve B by holding the shift solenoid valve body; be sure to install mounting bracket contacts the bracket on shift solenoid valve E.

7. Install shift solenoid valve C by holding the shift solenoid valve body; be sure to install mounting bracket contacts the servo body.

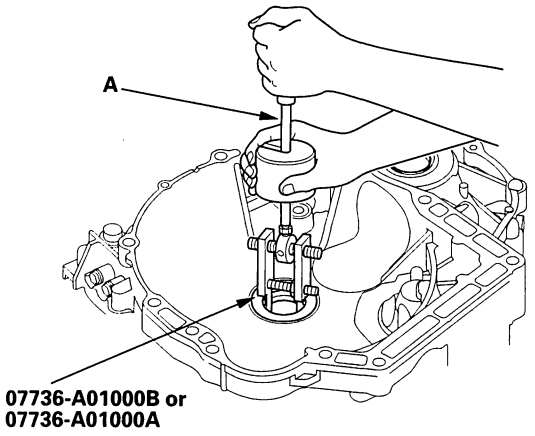
Torque Converter Housing

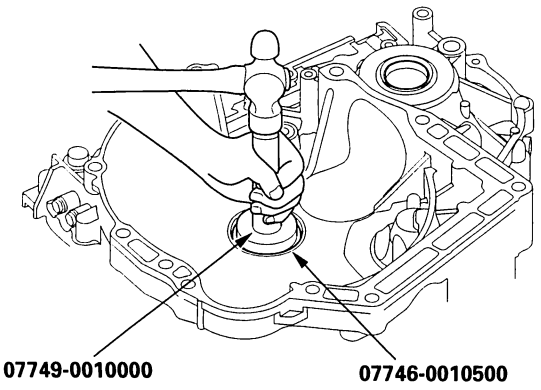
Mainshaft Bearing and Oil Seal Replacement

Special Tools Required
- Adjustable bearing puller, 25—40 mm 07736-A01000B or 07736-A01000A
- Driver 07749-0010000
- Attachment, 62 x 68 mm 07746-0010500
- Attachment, 72 x 75 mm 07746-0010600

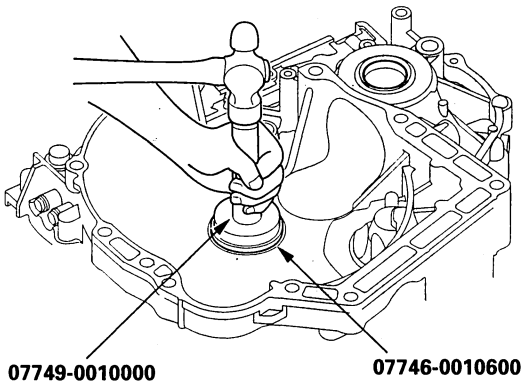
1. Remove the mainshaft bearing and oil seal with the special tool and a commercially available 3/8 "-16 slide hammer (A).



2. Install the new mainshaft bearing until it bottoms in the torque converter housing with the special tools.



3. Install the new oil seal flush with the housing with the special tools.



BACK

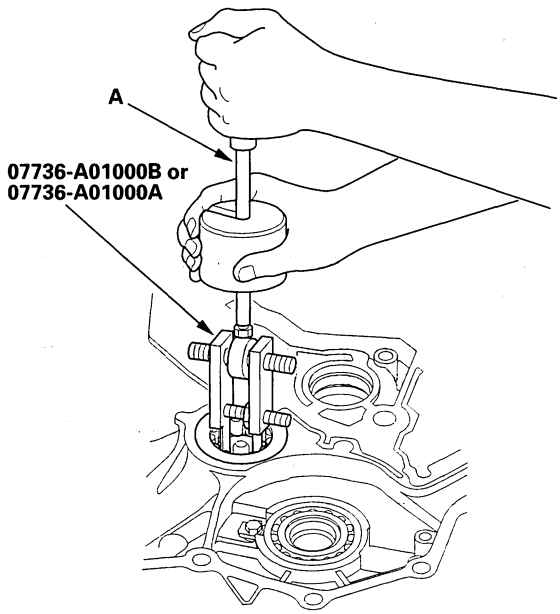
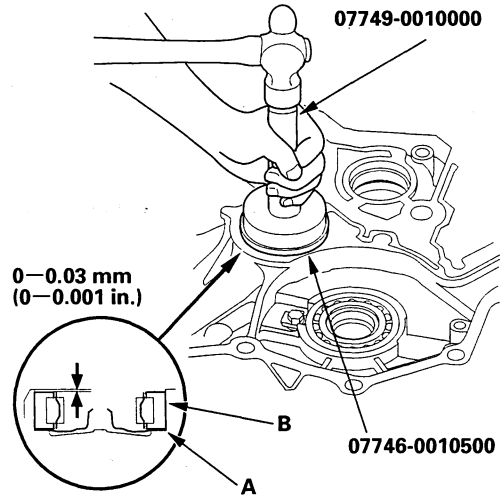
Countershaft Bearing Replacement

Special Tools Required
- Adjustable bearing puller, 25—40 mm
  07736-A01000B or 07736-A01000A
- Driver 07749-0010000
- Attachment, 62 x 68 mm 07746-0010500

1. Remove the countershaft bearing with the special tool and a commercially available 3/8 "-16 slide hammer (A).



2. Install the ATF guide plate (A).



3. Install the new countershaft bearing (B) in the housing with the special tools.

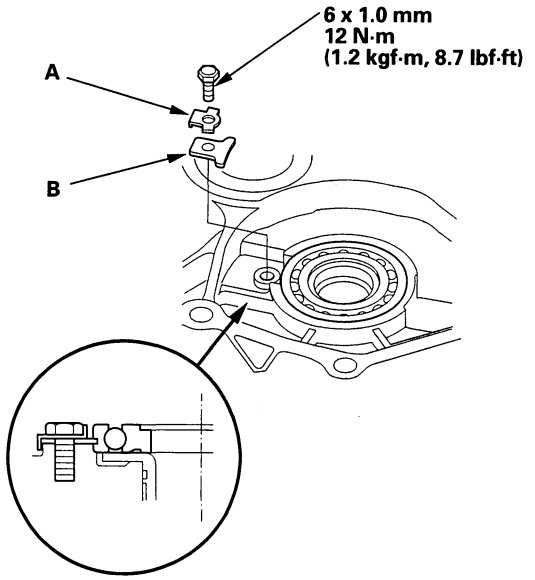
Protected by AR

Torque Converter Housing

Secondary Shaft Bearing Replacement

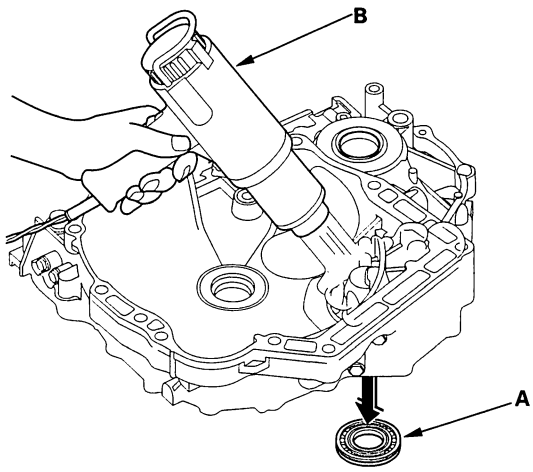
Special Tools Required
- Driver 07749-0010000
- Attachment, 62 x 68 mm 07746-0010500

1. Remove the bolt, then remove the lock washer (A) and bearing set plate (B).

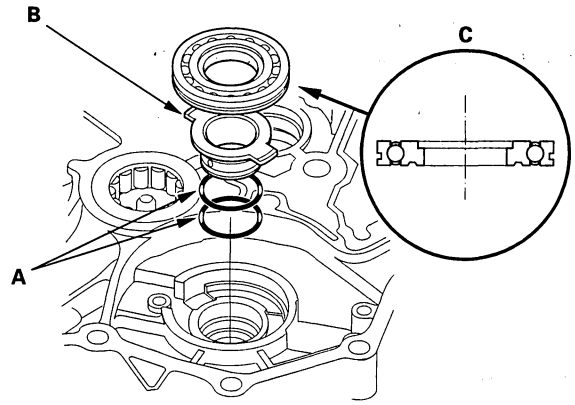


2. Remove the secondary shaft bearing (A) by heating the housing to about 212 °F (100 °C) with a heat gun (B). Do no heat the housing in excess of 212 °F (100 °C).

   NOTE: Let the housing cool to normal temperature before installing the bearing.

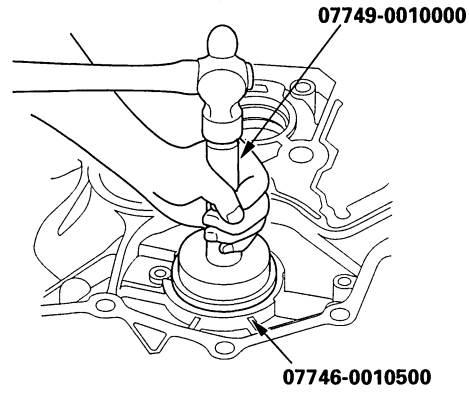


3. Install the new O-rings (A) on the ATF guide collar (B), then install the ATF guide collar in the housing.



4. Install the new secondary shaft bearing (C) in the direction shown.

5. Drive the secondary shaft bearing with the special tools, and install it securely in the housing.



6. Check that the bearing groove aligns with the housing surface, then install the bearing set plate with aligning the bearing groove.

7. Install the new lock washer and bolt, then bend the lock tab of the lock washer against the bolt head.

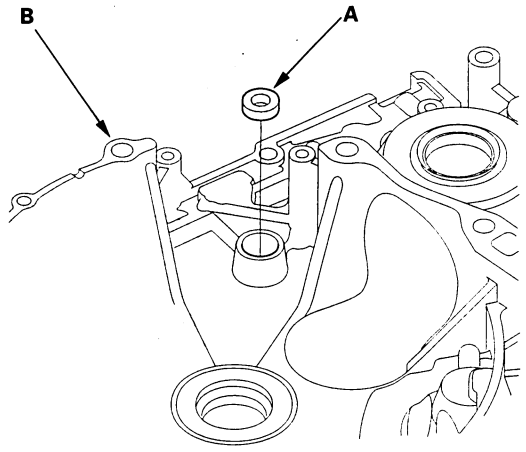
BACK

Protected by AR

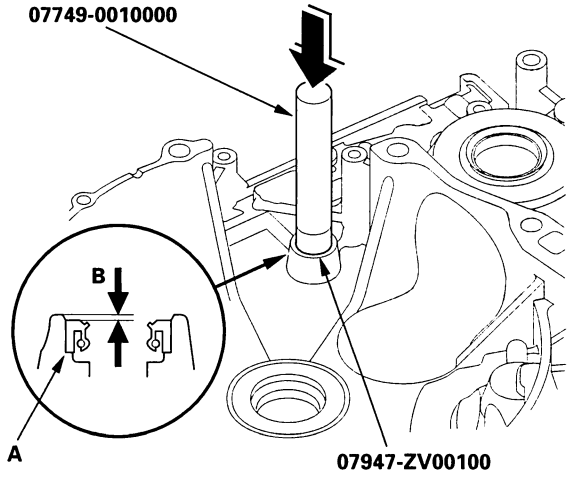
Selector Control Shaft Oil Seal Replacement

Special Tools Required
- Driver 07749-0010000
- Oil seal driver attachment 07947-ZV00100

1. Remove the oil seal (A) from the torque converter housing (B).



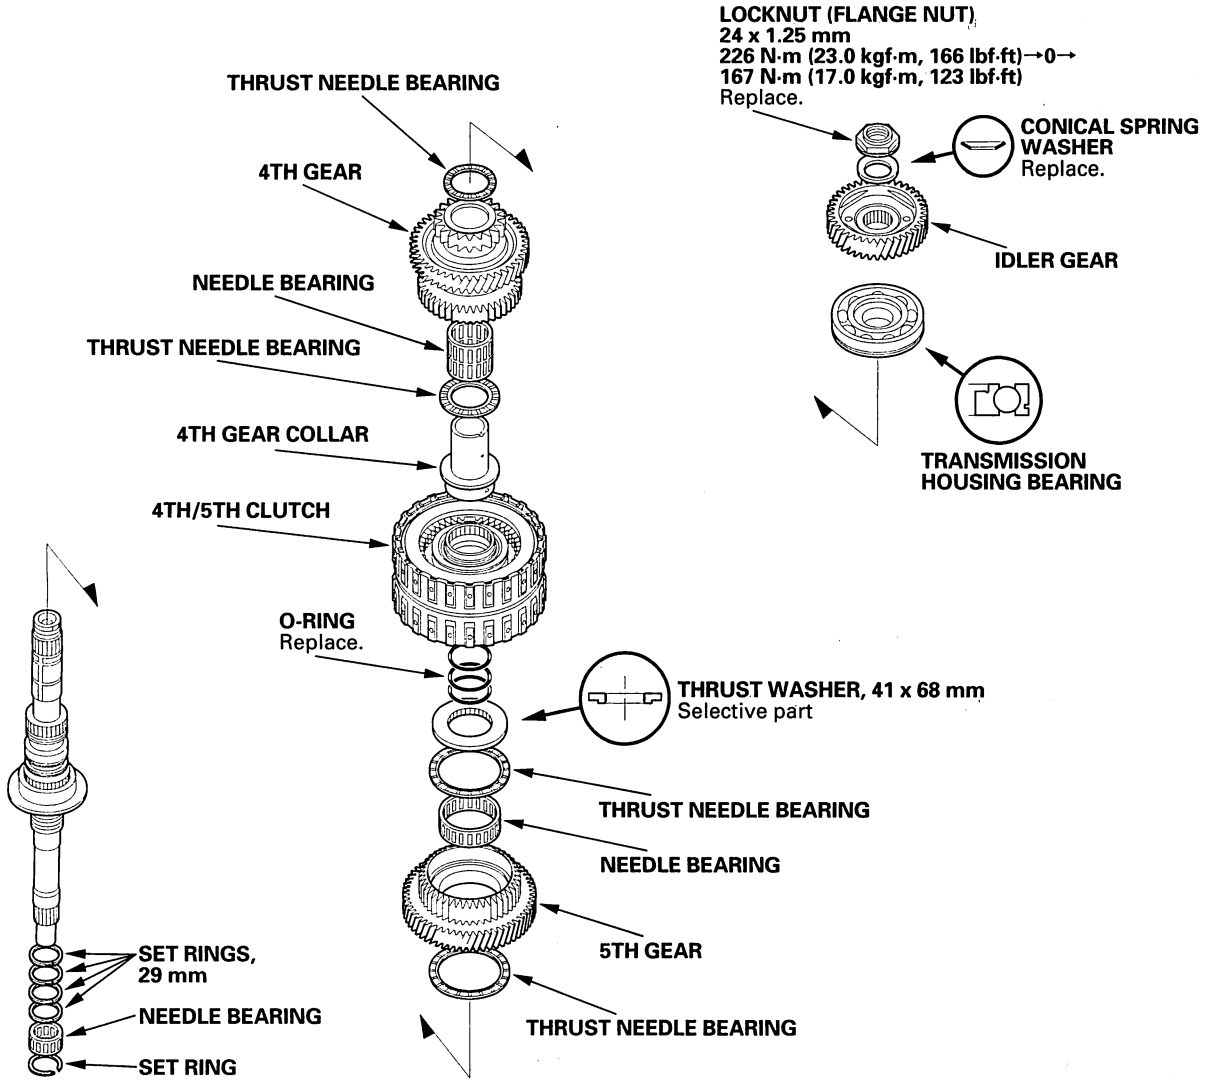
2. Install the new oil seal (A) in the torque converter housing in depth (B) of 0.5—1.5 mm (0.02—0.06 in.) below the housing surface with the special tools.



Protected by AR

Mainshaft Disassembly, Inspection, and Reassembly

1. Inspect the thrust needle bearing and the needle bearing for galling and rough movement.



2. Inspect the splines for excessive wear and damage.
3. Check shaft bearing surface for scoring and excessive wear.
4. Before installing the O-rings, wrap the shaft splines with tape to prevent O-ring damage.
5. Lubricate all parts with ATF during assembly.
6. Install the conical spring washer, 41 x 68 mm thrust washer in the direction shown.
7. Replace the locknut and conical spring washer with new ones when assembling the transmission.
8. Check the clearance of the 5th gear (see page 14-289).

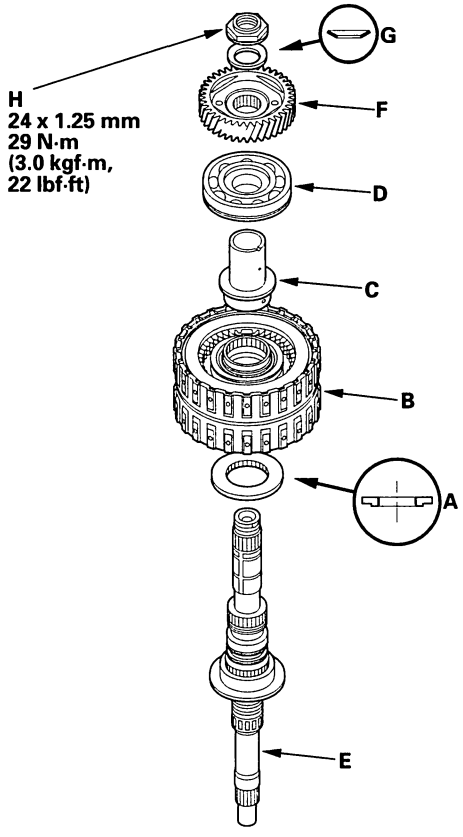
BACK

Protected by AR

Mainshaft 5th Gear Clearance Inspection

1. Remove the mainshaft transmission housing bearing (see page 14-271).

2. Assemble 41 x 68 mm thrust washer (A), 4th/5th clutch (B), 4th gear collar (C), and transmission housing bearing (D) on the mainshaft (E). Do not install the O-rings during inspection.

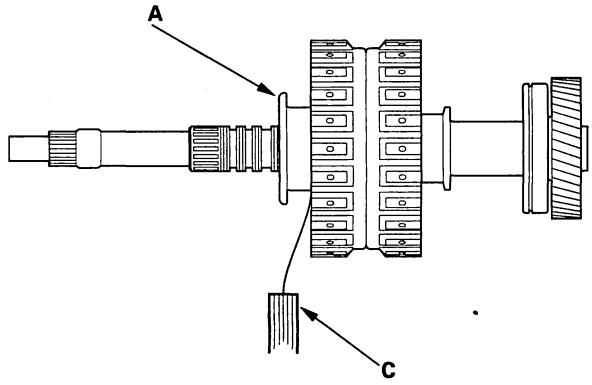


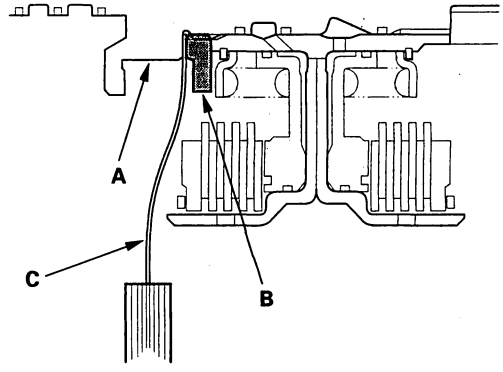
3. Install the idler gear (F) on the mainshaft by a press, then install the conical spring washer (G) and locknut (H).

4. Tighten the locknut to 29 N·m (3.0 kgf·m, 22 lbf·ft).

5. Measure the clearance between the mainshaft flange (A) and 41 x 68 mm thrust washer (B) with a feeler gauge (C), in at least three places. Use the average as the actual clearance.

Standard: 0.03—0.11 mm (0.001—0.004 in.)



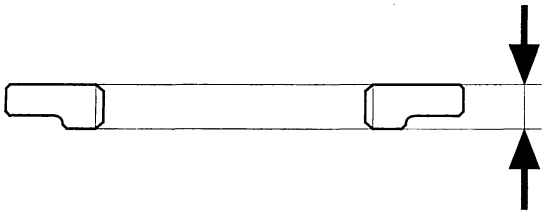


(cont'd)

Protected by AR

Mainshaft 5th Gear Clearance Inspection (cont'd)

6. If the clearance is out of standard, remove the 41 x 68 mm thrust washer and measure its thickness.



7. Select and install a new thrust washer, then recheck.

THRUST WASHER, 41 x 68 mm

No.	Part Number	Thickness
1	90414-PRP-000	6.35 mm (0.250 in.)
2	90415-PRP-000	6.40 mm (0.252 in.)
3	90416-PRP-000	6.45 mm (0.254 in.)
4	90417-PRP-000	6.50 mm (0.256 in.)
5	90418-PRP-000	6.55 mm (0.258 in.)
6	90419-PRP-000	6.60 mm (0.260 in.)

8. After replacing the thrust washer, make sure the clearance is within standard.

9. Disassemble the shaft and gears.

10. Reinstall the bearing in the transmission housing (see page 14-272).

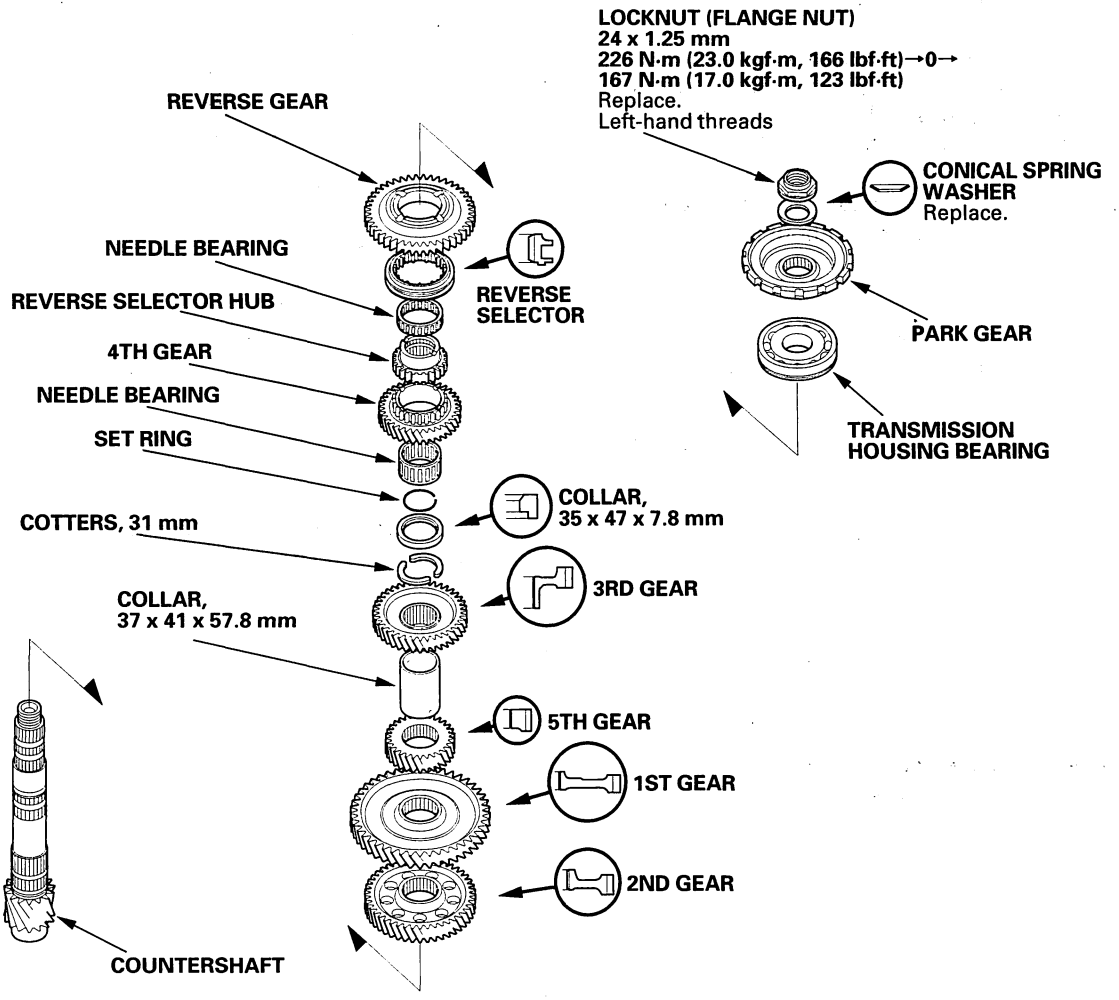
1. Inspect the thrust needle bearing and the needle bearing for galling and rough movement.



2. Inspect the splines for excessive wear and damage.
3. Check shaft bearing surface for scoring and excessive wear.
4. Lubricate all parts with ATF during assembly.
5. Install the conical spring washer, reverse selector, 35 x 47 x 7.8 mm collar, and all gears in the direction shown.
6. Replace the locknut and conical spring washer with new ones when assembling the transmission. The countershaft locknut has left-hand threads.
7. Some reverse selector hubs, and the 3rd gear are press-fitted to the countershaft; special tools are needed to remove them (see page 14-292) and to install them (see page 14-293).

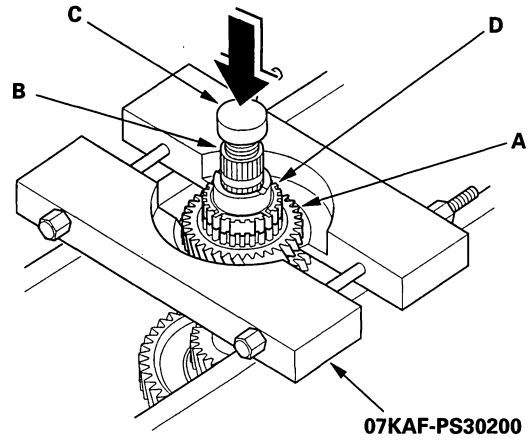
Protected by AR

Countershaft Reverse Selector Hub and 3rd Gear Removal

Special Tools Required
Bearing separator 07KAF-PS30200

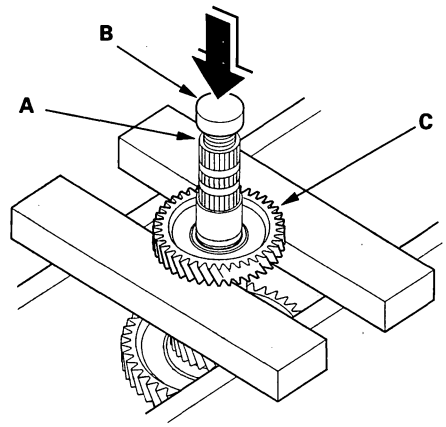
1. Install the special tool on the 4th gear (A). Set a press on the countershaft (B) with putting a spacer (C) between the press and countershaft, and remove the reverse selector hub (D).

   NOTE: Some reverse selector hubs are not press-fitted, and can be removed without using the special tool and a press.



2. Remove the needle bearing, set ring, 35 x 47 x 7.8 mm collar, and cotters.

3. Set the press on the countershaft (A) with putting a spacer (B) between the press and countershaft, and remove the 3rd gear (C).



4. Remove the 37 x 41 x 57.8 mm collar, 5th gear, 1st gear, and 2nd gear.

BACK

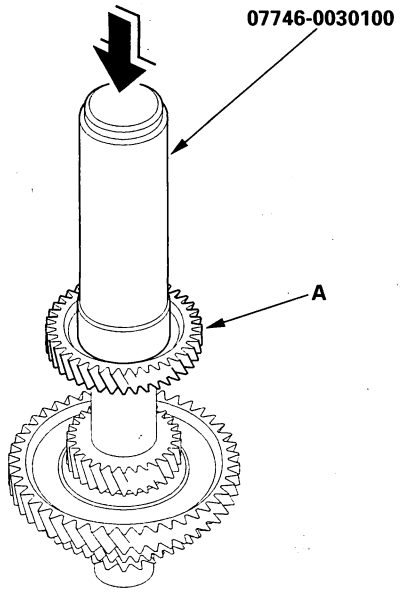
Protected by AR

Countershaft 3rd Gear and Reverse Selector Hub Installation

Special Tools Required
Driver, 40 mm I.D. 07746-0030100

1. Install the 2nd gear, 1st gear, 5th gear, and 37 x 41 x 57.8 mm collar on the countershaft.

2. Slide the 3rd gear (A) over the countershaft, and press it in place with the special tool and a press.



3. Install the cotters, 35 x 47 x 7.8 mm collar, set ring, needle bearing, and 4th gear.

4. Slide the reverse selector hub (A) over the countershaft, then press it in place with the special tool and a press.

   NOTE: Some reverse selector hubs are not press-fitted and can be installed without using the special tool and a press.

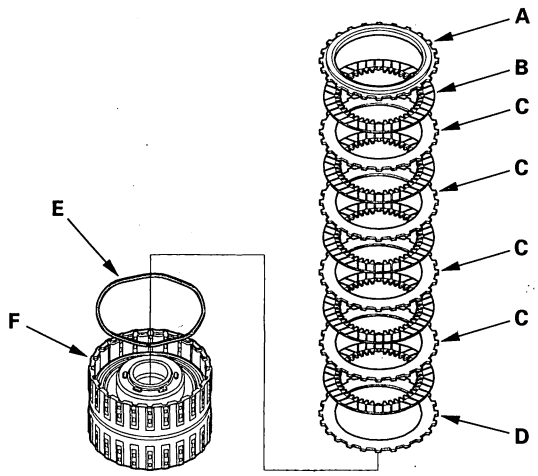
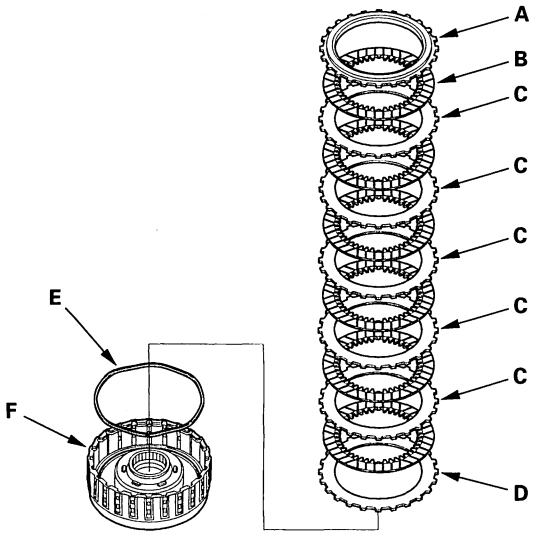
Clutch Disassembly (cont'd)

11. 2006-model 1st clutch:
    Remove the clutch end plate (A), clutch discs (B) (5), clutch waved-plates (C) (4), clutch flat-plate (D) (1), and waved spring (E) from the 1st clutch drum (F).



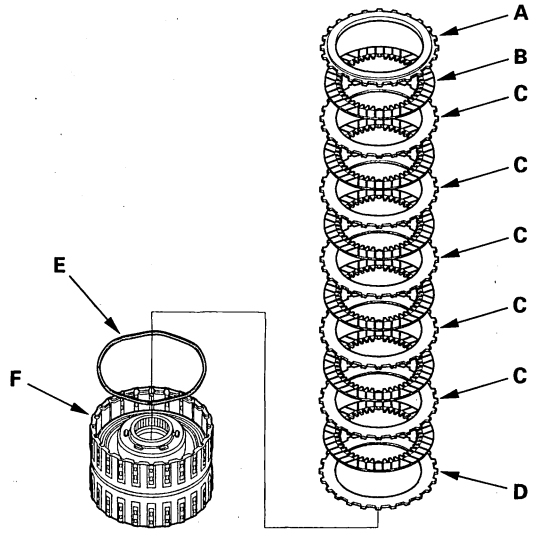
12. Make reference marks on the clutch waved-plates.

13. 2006-model 2nd clutch:
    Remove the clutch end plate (A), clutch discs (B) (6), clutch waved-plates (C) (5), clutch flat-plate (D) (1), and waved spring (E) from the 2nd clutch drum (F).



14. Make reference marks on the clutch waved-plates.

15. 2006-model 3rd clutch:
    Remove the clutch end plate (A), clutch discs (B) (6), clutch waved-plates (C) (5), clutch flat-plate (D) (1), and waved spring (E) from the 3rd clutch drum (F).

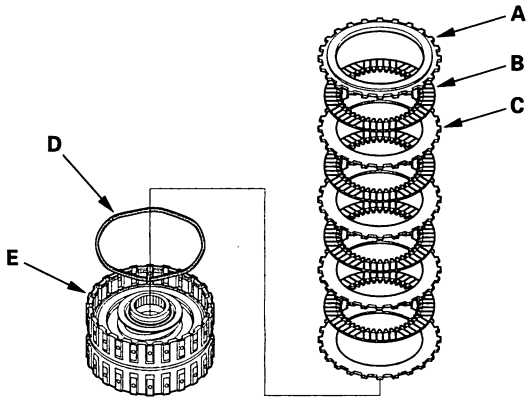


16. Make reference marks on the clutch waved-plates.

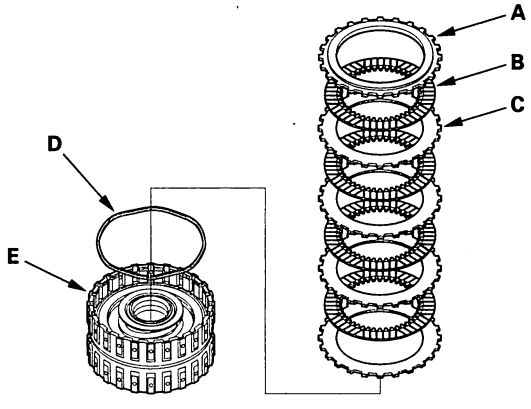
BACK

Protected by AR

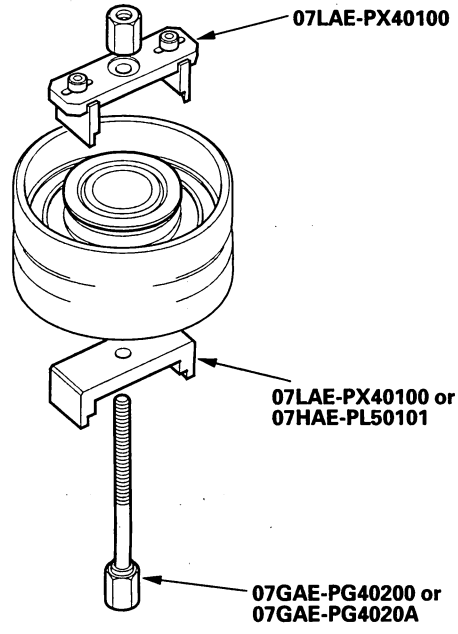
17. 2006-model 4th clutch:
Remove the clutch end plate (A), clutch discs (B) (4), clutch waved-plates (C) (4), and waved spring (D) from the 4th clutch drum (E).



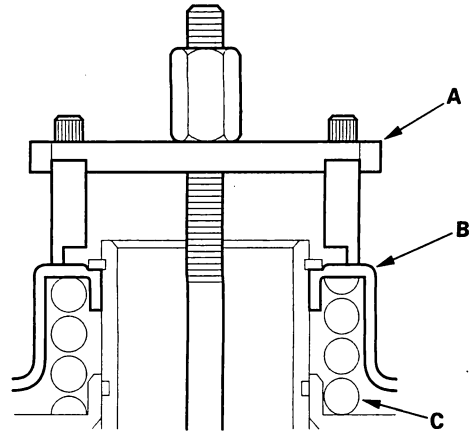
18. 2006-model 5th clutch:
Remove the clutch end plate (A), clutch discs (B) (4), clutch waved-plates (C) (4), and waved spring (D) from the 5th clutch drum (E).



19. Install the special tools.



20. Set the special tool (A) on the spring retainer (B) of the 1st, 2nd, and 3rd clutches so the special tool works on the clutch return spring (C).

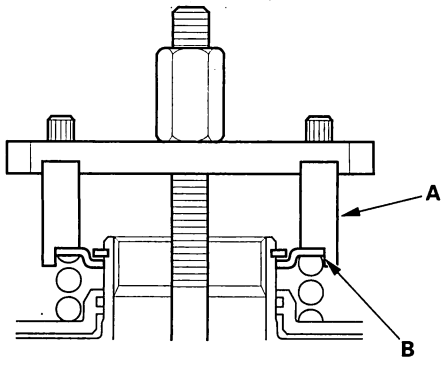


(cont'd)

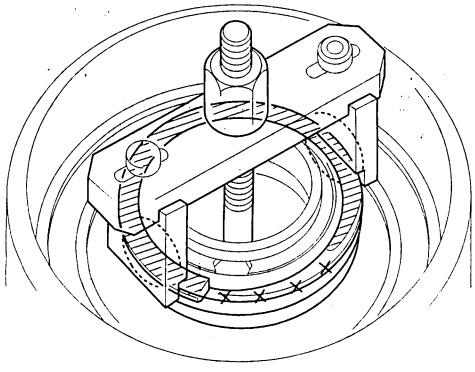
Protected by AR

Clutch Disassembly (cont'd)

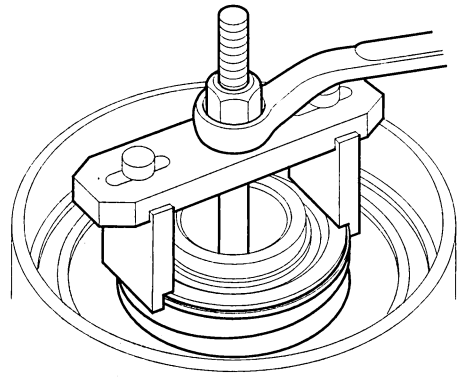
21. Be sure the special tool (A) is adjusted to have full contact with the spring retainer (B) on the 4th and 5th clutches.



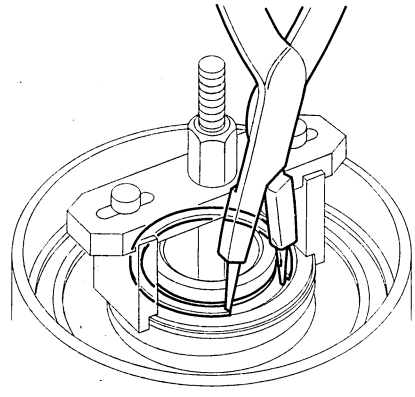
22. If either end of the special tool is set over an area of the spring retainer that is unsupported by the return spring, the retainer may be damaged.



23. Compress the return spring until the snap ring can be removed.



24. Remove the snap ring with the snap ring pliers.

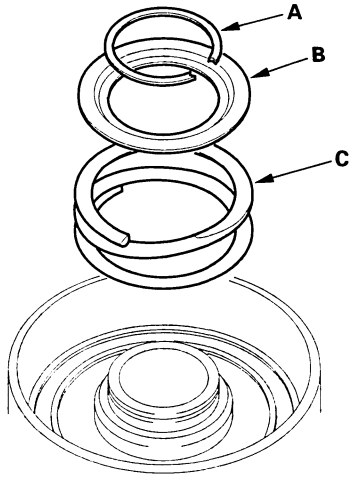


25. Remove the special tools.

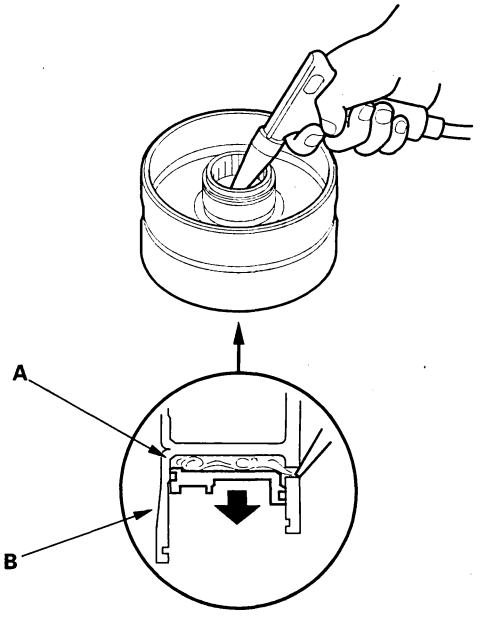
BACK

Protected by AR

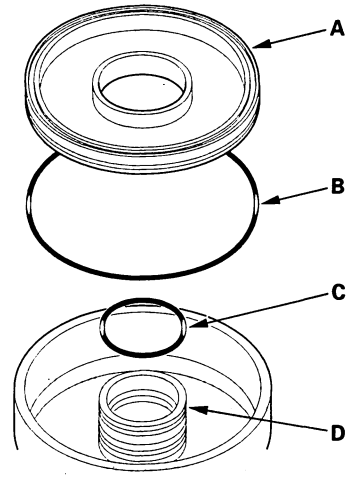
26. Remove the snap ring (A), spring retainer (B), and return spring (C).



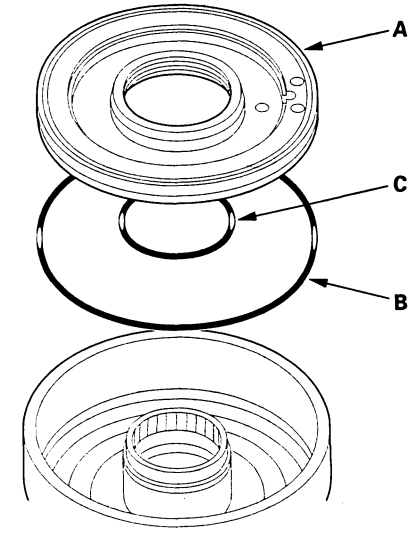
27. Wrap a shop rag around the clutch drum (A), and apply air pressure to the fluid passage to remove the piston (B). Place a finger tip on the other passage while applying air pressure.



28. 1st, 2nd, and 3rd clutches:
Remove the clutch piston (A), remove the O-ring (B) from the piston, and remove the O-ring (C) from the clutch drum (D).



29. 4th and 5th clutches:
Remove the clutch piston (A), and remove the outer O-ring (B) and inner O-ring (C) from the piston.

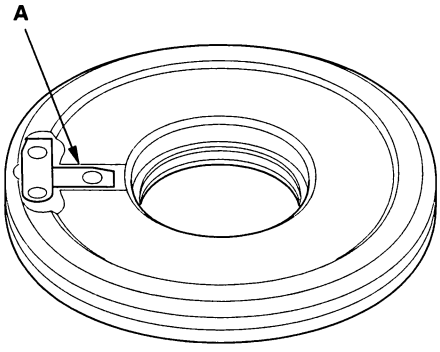


BACK

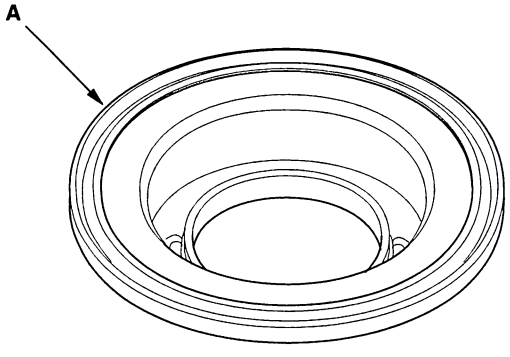
Protected by AR

Clutch Inspection

1. Inspect the clutch pistons and clutch piston check valves (A).



2. If the clutch piston check valve is loose or damaged, replace the clutch piston.
3. Check the spring retainer for wear and damage.
4. If the spring retainer is worn or damaged, replace it.
5. Check the oil seal (A) on the spring retainer of the 1st, 2nd, and 3rd clutches for wear, damaged, and peeling.



6. If the oil seal is worn, damaged, or peeling, replace the spring retainer.
7. Inspect the clutch discs, clutch plates, and clutch end plate for wear, damage, and discoloration.

Clutch Discs for All Models
Standard Thickness: 1.94 mm (0.076 in.)

Clutch Plates
Standard Thickness

2003-2004 Models

1st Clutch (waved-plates):		1.6 mm (0.063 in.)
2nd Clutch	Waved-plates:	2.0 mm (0.079 in.)
	Flat-plate:	2.0 mm (0.079 in.)
	4.0 mm-thick plate:	4.0 mm (0.157 in.)
3rd Clutch	Waved-plates:	1.6 mm (0.063 in.)
	Flat-plates:	1.6 mm (0.063 in.)
4th Clutch (waved-plates):		2.3 mm (0.091 in.)
5th Clutch (waved-plates):		2.3 mm (0.091 in.)

2005 Model

1st Clutch (waved-plates):		1.6 mm (0.063 in.)
2nd Clutch	Waved-plates:	2.0 mm (0.079 in.)
	Flat-plate:	2.0 mm (0.079 in.)
	4.0 mm-thick plate:	4.0 mm (0.157 in.)
3rd Clutch	Waved-plates:	1.6 mm (0.063 in.)
	Flat-plates:	1.6 mm (0.063 in.)
4th Clutch (waved-plates):		2.0 mm (0.079 in.)
5th Clutch (waved-plates):		2.0 mm (0.079 in.)

2006 Model

1st Clutch	Waved-plates:	1.6 mm (0.063 in.)
	Flat-plates:	1.6 mm (0.063 in.)
2nd Clutch	Waved-plates:	2.0 mm (0.079 in.)
	Flat-plate:	2.0 mm (0.079 in.)
3rd Clutch	Waved-plates:	1.6 mm (0.063 in.)
	Flat-plates:	1.6 mm (0.063 in.)
4th Clutch (waved-plates):		2.0 mm (0.079 in.)
5th Clutch (waved-plates):		2.0 mm (0.079 in.)

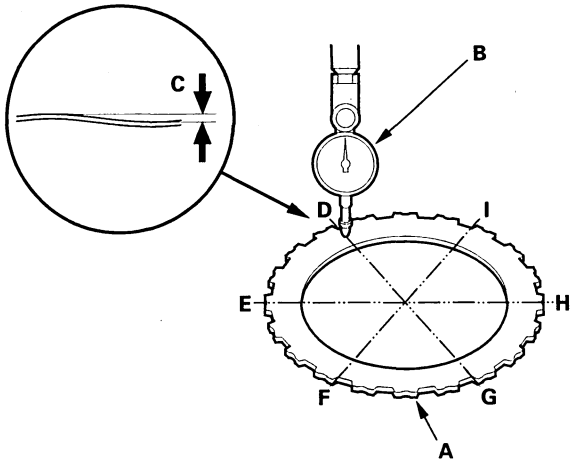
8. If the clutch discs are worn or damaged, replace them as a set. If the clutch discs are replaced, inspect the clutch end-plate-to-top-disc clearance.
9. If any plate is worn, damaged, or discolored, replace the damaged plate with a new plate, and inspect the other waved-plates for a phase difference. If the clutch plate is replaced, inspect the clutch end-plate-to-top-disc clearance.
10. If the clutch end plate is worn, damaged, or discolored, inspect the clutch end-plate-to-top-disc clearance, then replace the clutch end plate.

BACK

Protected by AR

Clutch Waved-plate Phase Difference Inspection

1. Place the clutch waved-plate (A) on a surface plate, and set a dial indicator (B) on the waved-plate.



2. Find the bottom (D) of a phase difference of the waved-plate, zero the dial indicator and make a reference mark on the bottom of the waved-plate.

3. Rotate the waved-plate about 60-degrees apart from the bottom while holding the waved-plate by its circumference. The dial indicator should be at the top (E) of a phase difference. Do not rotate the waved-plate while holding its surface, always rotate it with holding its circumference.

4. Read the dial indicator. The dial indicator reads the phase difference (C) of the waved-plate between bottom and top.

   Standard Phase Difference
   1st clutch: 0.15—0.25 mm (0.006—0.010 in.)
   2nd clutch: 0.1—0.2 mm (0.004—0.008 in.)
   3rd clutch: 0.1—0.2 mm (0.004—0.008 in.)
   4th clutch: 0.1—0.2 mm (0.004—0.008 in.)
   5th clutch: 0.1—0.2 mm (0.004—0.008 in.)

5. Rotate the waved-plate about 60-degrees. The dial indicator should be at the bottom of a phase difference (F and H), and zero the dial indicator.

6. Measure the phase difference at the other two tops (G and I) of the waved-plate by following steps 3 thru 5.

7. If the two values of the three measurements are within the standard, the waved-plate is OK. If the two values of the three measurements are out of the standard, replace the waved-plate.

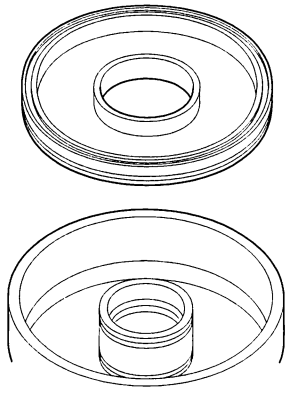
Protected by AR

Clutch Clearance Inspection

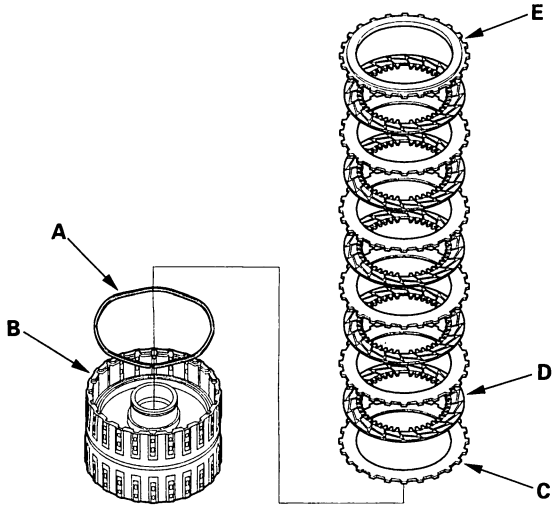
Special Tools Required
Clutch compressor attachment 07ZAE-PRP0100

1. Inspect the clutch piston, discs, plates, and end plate for wear and damage (see page 14-308), and inspect clutch waved-plate phase difference (see page 14-309), if necessary.

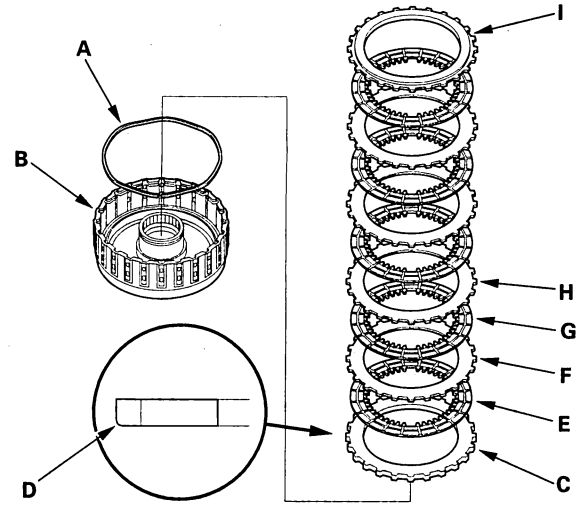
2. Install the clutch piston in the clutch drum. Do not install the O-rings during inspection.



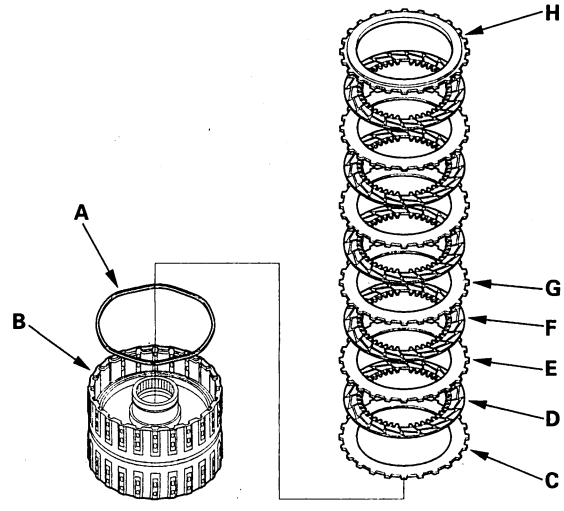
3. 2003-2005-model 1st clutch:
Install the waved spring (A) in the 1st clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (5) and discs (D) (5). Install the clutch-end-plate (E) with the flat side down on the top disc.



4. 2003-2005-model 2nd clutch:
Install the waved spring (A) in the 2nd clutch drum (B). Install the 4.0 mm-thick plate (C) with the shear droop side (D) toward the inside of the drum, clutch disc (E), and 2.0 mm-thick flat-plate (F), then starting with the disc, alternately install the discs (G) (4) and waved-plates (H) (3). Install the clutch-end-plate (I) with the flat side down on the top disc.



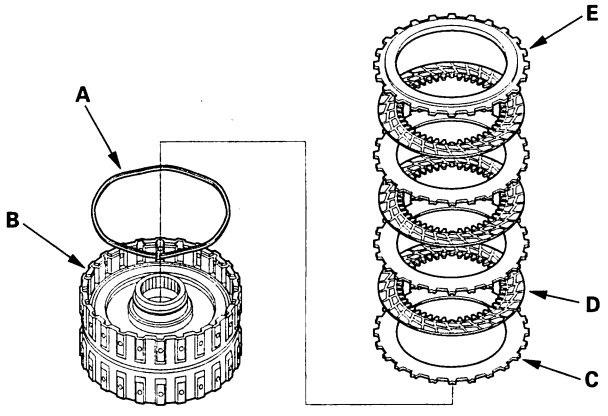
5. 2003-2005-model 3rd clutch:
Install the waved spring (A) in the 3rd clutch drum (B). Install the clutch flat-plate (C), clutch disc (D), and clutch flat-plate (E). Starting with the clutch disc, alternately install the clutch discs (F) (4) and clutch waved-plates (G) (3). Install the clutch-end-plate (H) with the flat side down on the top disc.



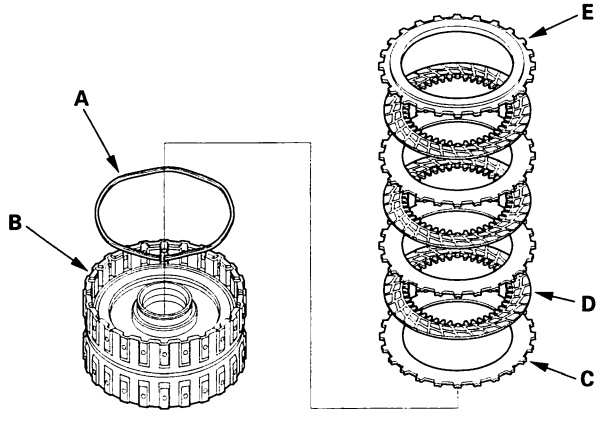
BACK

Protected by AR

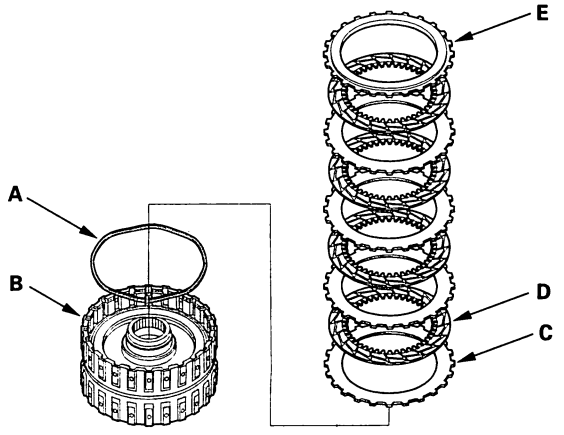
6. 2003-2004-model 4th clutch:
   Install the waved spring (A) in the 4th clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (3) and discs (D) (3). Install the clutch end plate (E) with the flat side down on the top disc.



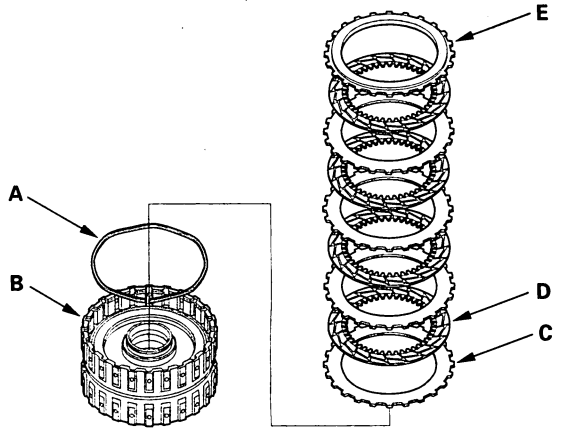
7. 2003-2004-model 5th clutch:
   Install the waved spring (A) in the 5th clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (3) and discs (D) (3). Install the clutch end plate (E) with the flat side down on the top disc.



8. 2005-model 4th clutch:
   Install the waved spring (A) in the 4th clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (4) and discs (D) (4). Install the clutch end plate (E) with the flat side down on the top disc.



9. 2005-model 5th clutch:
   Install the waved spring (A) in the 5th clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (4) and discs (D) (4). Install the clutch end plate (E) with the flat side down on the top disc.



(cont'd)

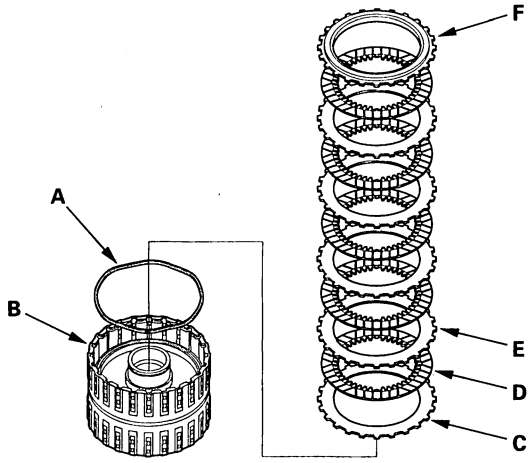
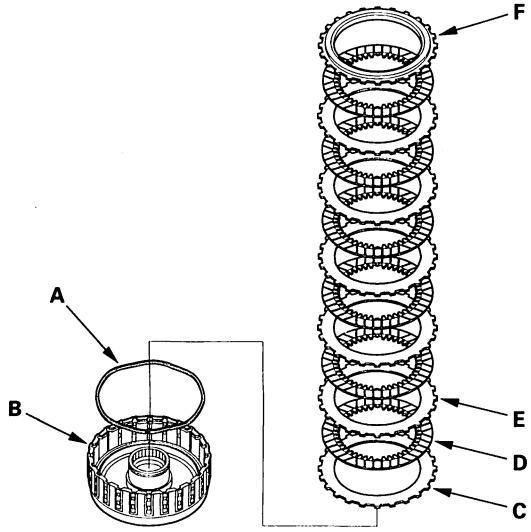
Clutch Clearance Inspection (cont'd)

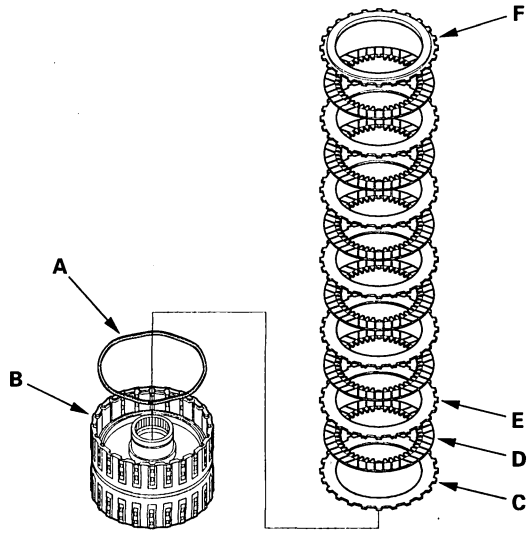
10. 2006-model 1st clutch:
    Install the waved spring (A) in the 1st clutch drum (B). Install the clutch flat-plate (C), then starting with the clutch disc, alternately install the discs (D) (5) and waved-plates (E) (4). Install the clutch-end-plate (F) with the flat side down on the top disc.



11. 2006-model 2nd clutch:
    Install the waved spring (A) in the 2nd clutch drum (B). Install the clutch flat-plate (C), then starting with the clutch disc, alternately install the discs (D) (6) and clutch waved-plates (E) (5). Install the clutch-end-plate (F) with the flat side down on the top disc.



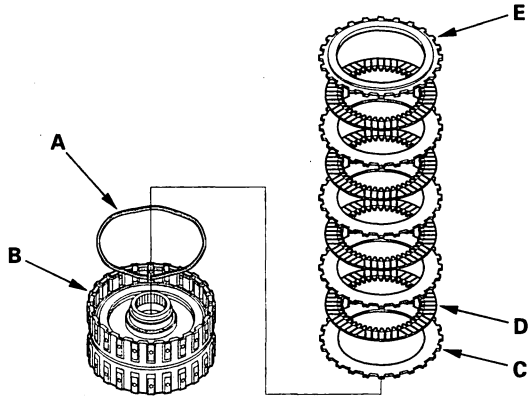
12. 2006-model 3rd clutch:
    Install the waved spring (A) in the 3rd clutch drum (B). Install the clutch flat-plate (C), then starting with the clutch disc, alternately install the discs (D) (6) and waved-plates (E) (5). Install the clutch-end-plate (F) with the flat side down on the top disc.



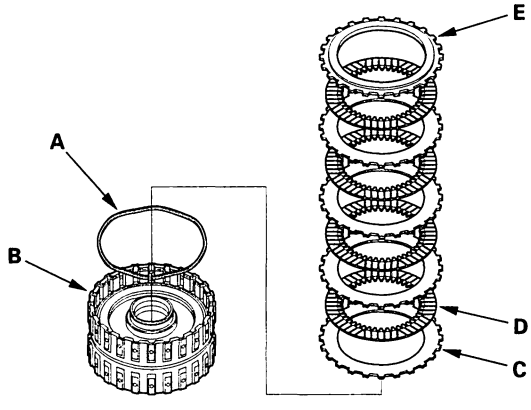
BACK

Protected by AR

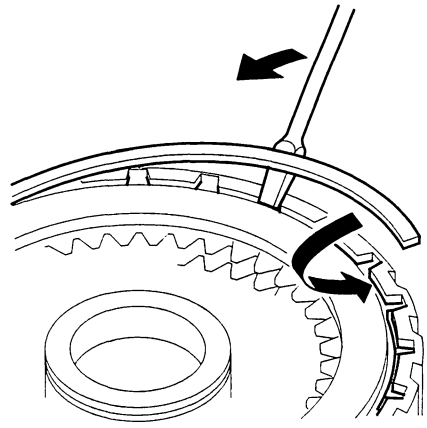
13. 2006-model 4th clutch:
Install the waved spring (A) in the 4th clutch drum (B). Starting with the clutch waved-plate, alternately install the waved-plates (C) (4) and discs (D) (4). Install the clutch-end-plate (E) with the flat side down on the top disc.



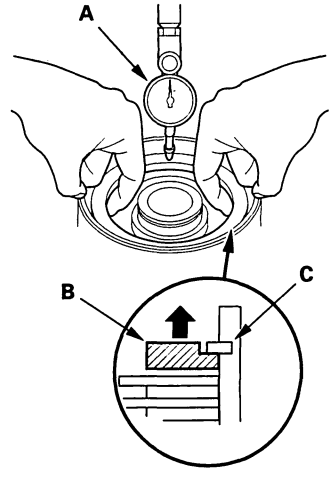
14. 2006-model 5th clutch:
Install the waved spring (A) in the 5th clutch drum (B). Starting with the clutch waved-plate, alternately install the waved-plates (C) (4) and discs (D) (4). Install the clutch-end-plate (E) with the flat side down on the top disc.



15. Install the snap ring with a screwdriver to secure the clutch-end-plate.



16. Set a dial indicator (A) on the clutch-end-plate (B).



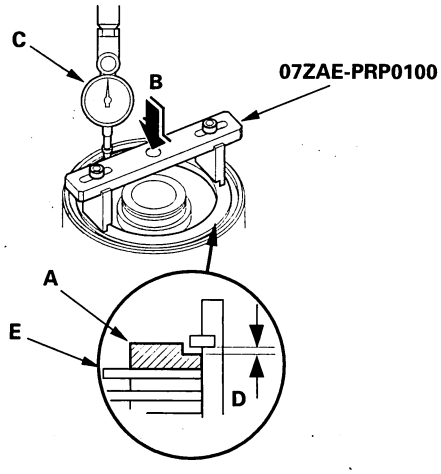
17. Zero the dial indicator with the clutch-end-plate lifted up to the snap ring (C).

(cont'd)

Protected by AR

Clutch Clearance Inspection (cont'd)

18. Release the clutch-end-plate to lower the clutch-end-plate, then put the special tool on the end-plate (A).



19. Press the special tool down with 150—160 N (15—16 kgf, 33—35 lbf) (B) using a force gauge, and read the dial indicator (C).

20. The dial indicator reads the clearance (D) between the clutch-end-plate and top disc (E). Take measurements in at least three places, and use the average as the actual clearance.

Clutch-End-Plate-to-Top Disc Clearance Service Limit

2003-2004 Models

1st clutch:	**1.28—1.48 mm (0.050—0.058 in.)**
2nd clutch:	**0.88—1.08 mm (0.035—0.043 in.)**
3rd clutch:	**0.93—1.13 mm (0.037—0.044 in.)**
4th clutch:	**0.73—0.93 mm (0.029—0.037 in.)**
5th clutch:	**0.73—0.93 mm (0.029—0.037 in.)**

2005 Model

1st clutch:	**1.28—1.48 mm (0.050—0.058 in.)**
2nd clutch:	**0.88—1.08 mm (0.035—0.043 in.)**
3rd clutch:	**0.93—1.13 mm (0.037—0.044 in.)**
4th clutch:	**0.93—1.13 mm (0.037—0.044 in.)**
5th clutch:	**0.93—1.13 mm (0.037—0.044 in.)**

2006 Model

1st clutch:	**1.38—1.58 mm (0.054—0.062 in.)**
2nd clutch:	**1.18—1.38 mm (0.046—0.054 in.)**
3rd clutch:	**1.23—1.43 mm (0.048—0.056 in.)**
4th clutch:	**0.93—1.13 mm (0.037—0.044 in.)**
5th clutch:	**0.93—1.13 mm (0.037—0.044 in.)**

3RD CLUTCH END PLATES
2006 Model

Plate No.	Part Number	Thickness
1	22551-RCL-A01	2.1 mm (0.083 in.)
2	22552-RCL-A01	2.2 mm (0.087 in.)
3	22553-RCL-A01	2.3 mm (0.091 in.)
4	22554-RCL-A01	2.4 mm (0.094 in.)
5	22555-RCL-A01	2.5 mm (0.098 in.)
6	22556-RCL-A01	2.6 mm (0.102 in.)
7	22557-RCL-A01	2.7 mm (0.106 in.)
8	22558-RCL-A01	2.8 mm (0.110 in.)
9	22559-RCL-A01	2.9 mm (0.114 in.)

4TH and 5TH CLUTCH END PLATES
All Models

Plate No.	Part Number	Thickness
1	22581-RCL-003	2.1 mm (0.083 in.)
2	22582-RCL-003	2.2 mm (0.087 in.)
3	22583-RCL-003	2.3 mm (0.091 in.)
4	22584-RCL-003	2.4 mm (0.094 in.)
5	22585-RCL-003	2.5 mm (0.098 in.)
6	22586-RCL-003	2.6 mm (0.102 in.)
7	22587-RCL-003	2.7 mm (0.106 in.)
8	22588-RCL-003	2.8 mm (0.110 in.)
9	22589-RCL-003	2.9 mm (0.114 in.)

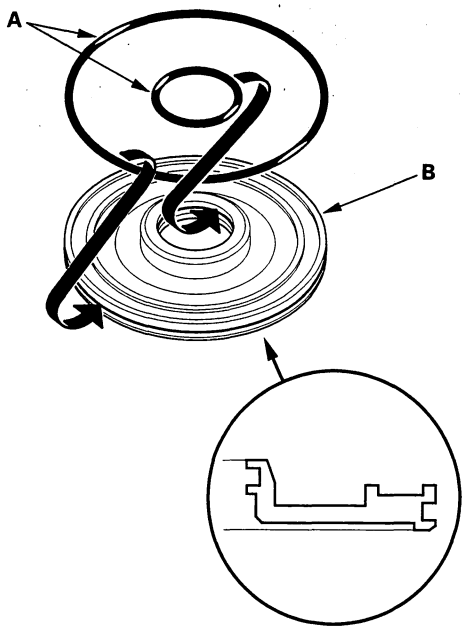
22. Install the new clutch-end-plate, and recheck the clearance. If the thickest clutch-end-plate is installed, but the clearance is still over the service limit, replace the clutch discs and plates.

Protected by AR

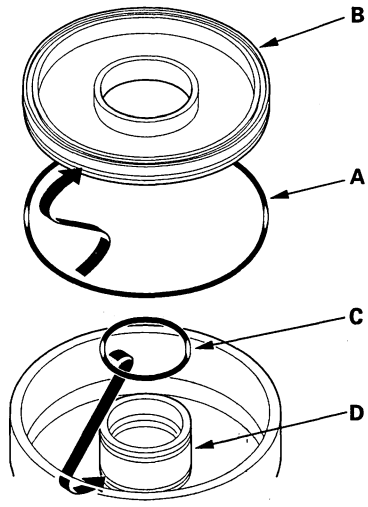
Clutch Reassembly

Special Tools Required
- Clutch spring compressor attachment 07LAE-PX40100 or 07HAE-PL50101
- Clutch spring compressor bolt assembly 07GAE-PG40200 or 07GAE-PG4020A

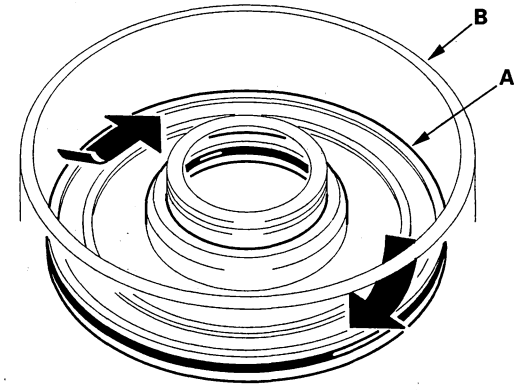
1. Soak the clutch discs thoroughly in ATF for a minimum of 30 minutes.
2. Install the new O-rings (A) on the 4th and 5th clutch piston (B).



3. Install the new O-ring (A) in the 1st, 2nd, and 3rd clutch pistons (B), and install the new O-ring (C) on the clutch drums (D).



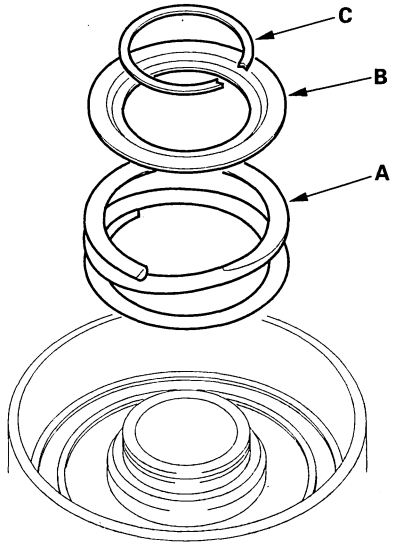
4. Install the clutch piston (A) in the clutch drum (B) while applying pressure and rotating to ensure proper seating. Do not pinch the O-ring.



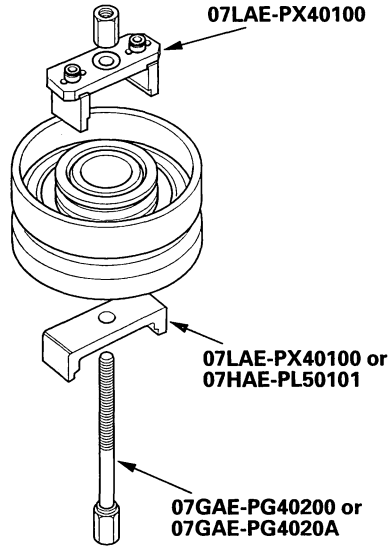
BACK

Protected by AR

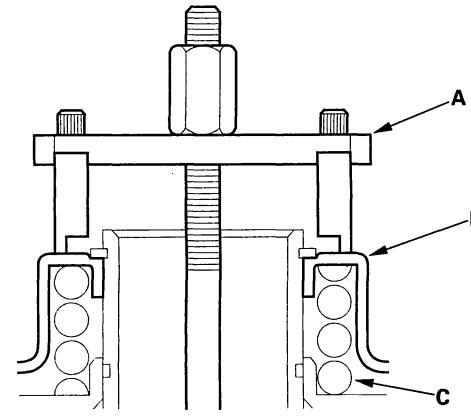
5. Install the return spring (A) and spring retainer (B), and position the snap ring (C) on the retainer.



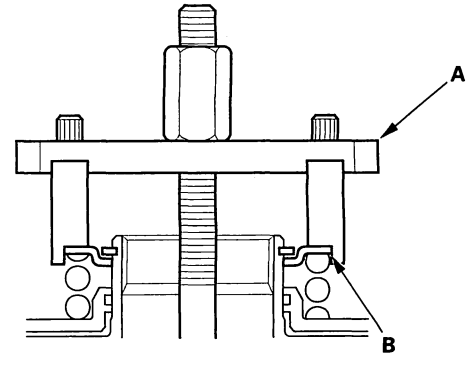
6. Install the special tools.



7. Set the special tool (A) on the spring retainer (B) of the 1st, 2nd, and 3rd clutches so the special tool works on the clutch return spring (C).



8. Be sure the special tool (A) is adjusted to have full contact with the spring retainer (B) on the 4th and 5th clutches.

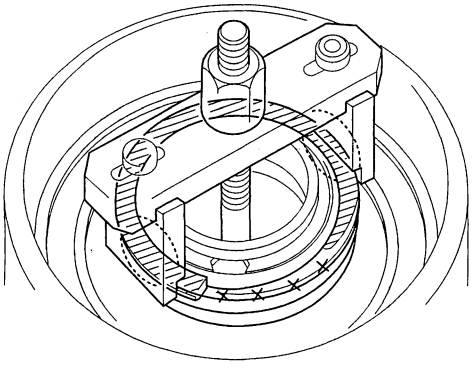


(cont'd)

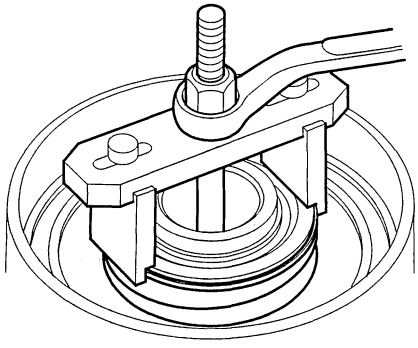
Protected by AR

Clutch Reassembly (cont'd)

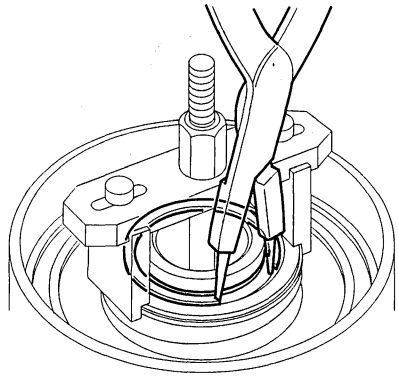
9. If either end of the special tool is set over an area of the spring retainer which is unsupported by the return spring, the retainer may be damaged.



10. Compress the return spring.

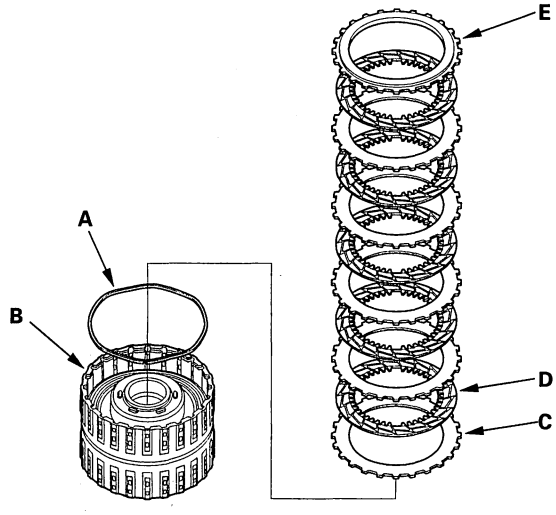


11. Install the snap ring with snap ring pliers.



12. Remove the special tools.

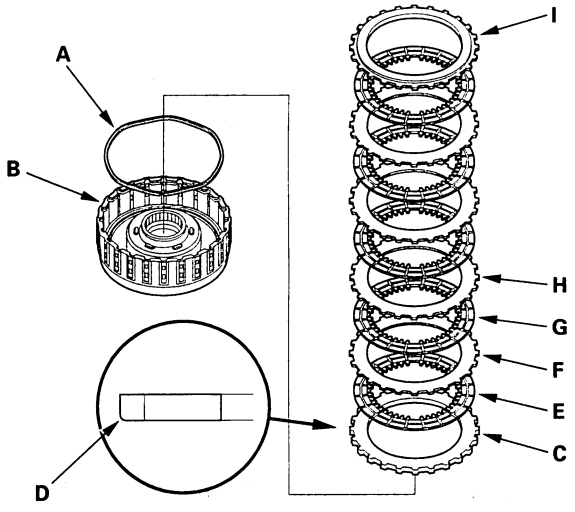
13. 2003-2005-model 1st clutch:
Install the waved spring (A) in the 1st clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (5) and discs (D) (5). Install the clutch-end-plate (E) with the flat side down on the top disc.



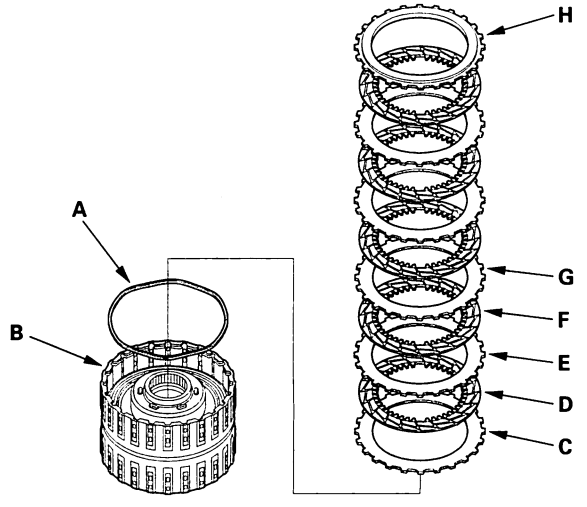
BACK

Protected by AR

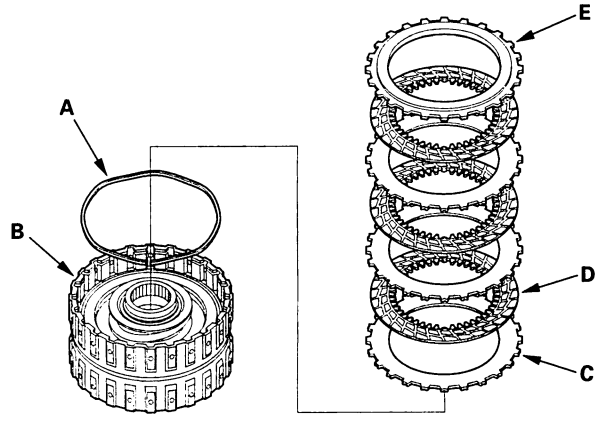
14. 2003-2005-model 2nd clutch:
Install the waved spring (A) in the 2nd clutch drum (B). Install the 4.0 mm-thick plate (C) with the shear droop side (D) toward the inside of the drum, clutch disc (E), and 2.0 mm-thick flat-plate (F), then starting with the disc, alternately install the discs (G) (4) and waved-plates (H) (3). Install the clutch-end-plate (I) with the flat side down on the top disc.



15. 2003-2005-model 3rd clutch:
Install the waved spring (A) in the 3rd clutch drum (B). Install the clutch flat-plate (C), clutch disc (D), and clutch flat-plate (E). Starting with the clutch disc, alternately install the clutch discs (F) (4) and clutch waved-plates (G) (3). Install the clutch-end-plate (H) with the flat side down on the top disc.



16. 2003-2004-model 4th clutch:
Install the waved spring (A) in the 4th clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plate (C) (3) and discs (D) (3). Install the clutch end plate (E) with the flat side down on the top disc.



17. 2003-2004-model 5th clutch:
Install the waved spring (A) in the 5th clutch drum (B). Starting with the clutch waved-plate, alternately install the clutch plates (C) (3) and discs (D) (3). Install the clutch end plate (E) with the flat side down on the top disc.

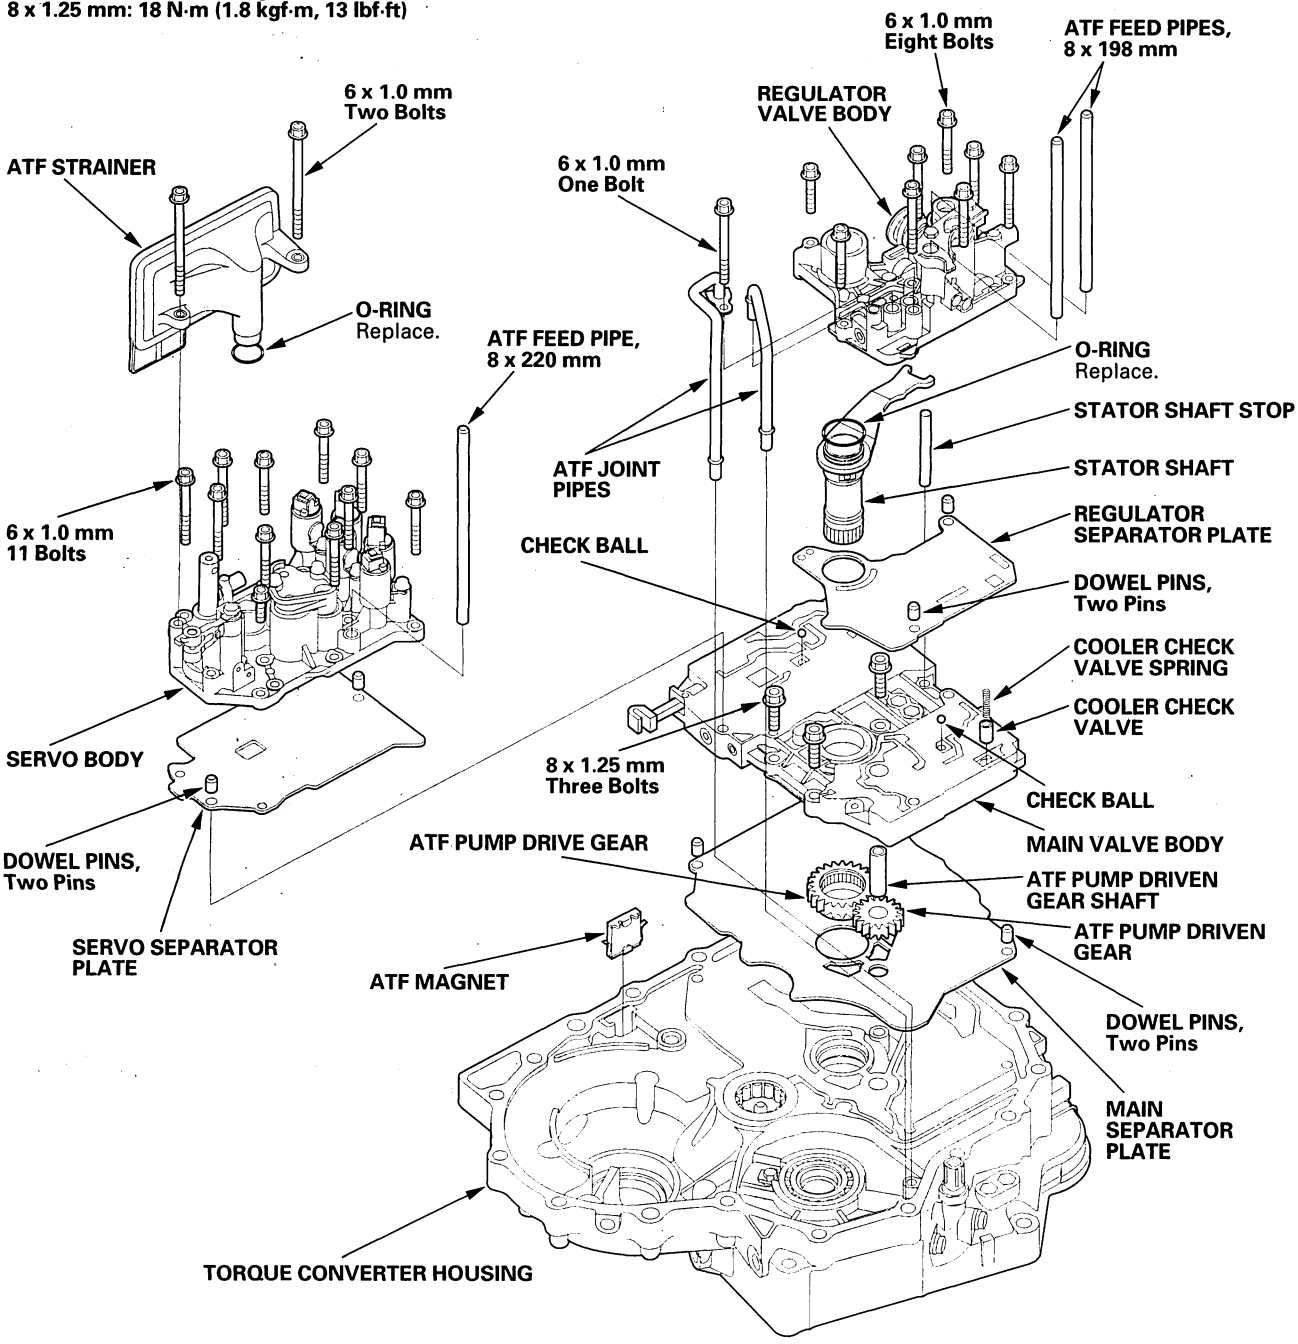
Valve Body

Valve Body and ATF Strainer Installation

Exploded View

Torque Specifications:
6 x 1.0 mm: 12 N·m (1.2 kgf·m, 8.7 lbf·ft)
8 x 1.25 mm: 18 N·m (1.8 kgf·m, 13 lbf·ft)



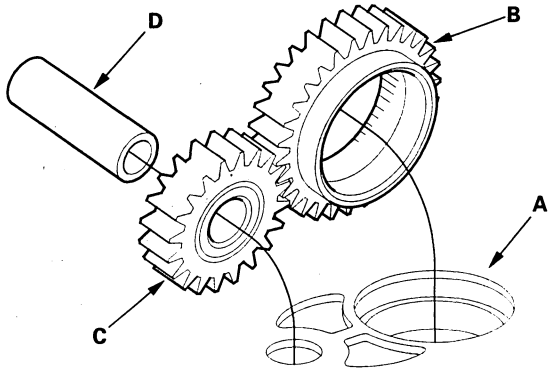
BACK

Protected by AR

NOTE: Refer to the exploded view as needed during the following procedures.

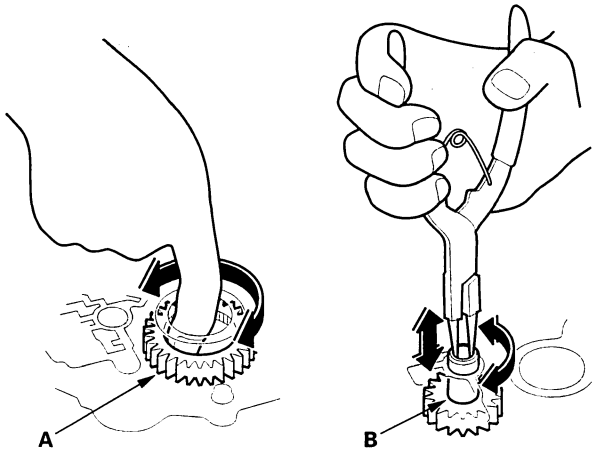
1. Make sure that the ATF magnet is cleaned and installed in the torque converter housing.

2. Install the main separator plate (A) and two dowel pins on the torque converter housing. Then install the ATF pump drive gear (B), driven gear (C), and ATF pump driven gear shaft (D). Install the ATF pump driven gear with its grooved and chamfered side facing down.



3. Install the main valve body.

4. Make sure the ATF pump drive gear (A) rotates smoothly in the normal operating direction, and the ATF pump driven gear shaft (B) moves smoothly in the axial and normal operating direction.

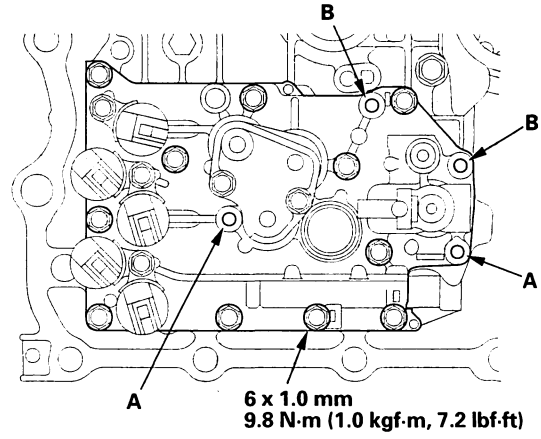


5. If the ATF pump drive gear and ATF pump driven gear shaft do not move smoothly, loosen the main valve body bolts. Realign the ATF pump driven gear shaft, and retighten the bolts to the specified torque, then recheck. Failure to align the ATF pump driven gear shaft correctly will result in a seized ATF pump drive gear or ATF pump driven gear shaft.

6. Make sure that the two check balls and the cooler check valve are in the main valve body, then install the cooler check valve spring in the cooler check valve.

7. Install the servo separator plate and two dowel pins on the main valve body.

8. Install the servo body (11 bolts). Install the ATF strainer with the two bolts in the bolt holes (A) in step 12, and install the baffle plate with the two bolts in the bolt holes (B) in step 2 in shaft assemblies and housing installation.



9. Install the regulator separator plate and two dowel pins on the main valve body.

10. Install the new O-ring on the stator shaft, and install the stator shaft and stator shaft stop.

11. Install the regulator valve body (eight bolts).

12. Install the new O-ring on the ATF strainer, and install the ATF strainer (two bolts).

13. Install the ATF joint pipes (one bolt).

14. Install the ATF feed pipes in the regulator valve body and servo body.

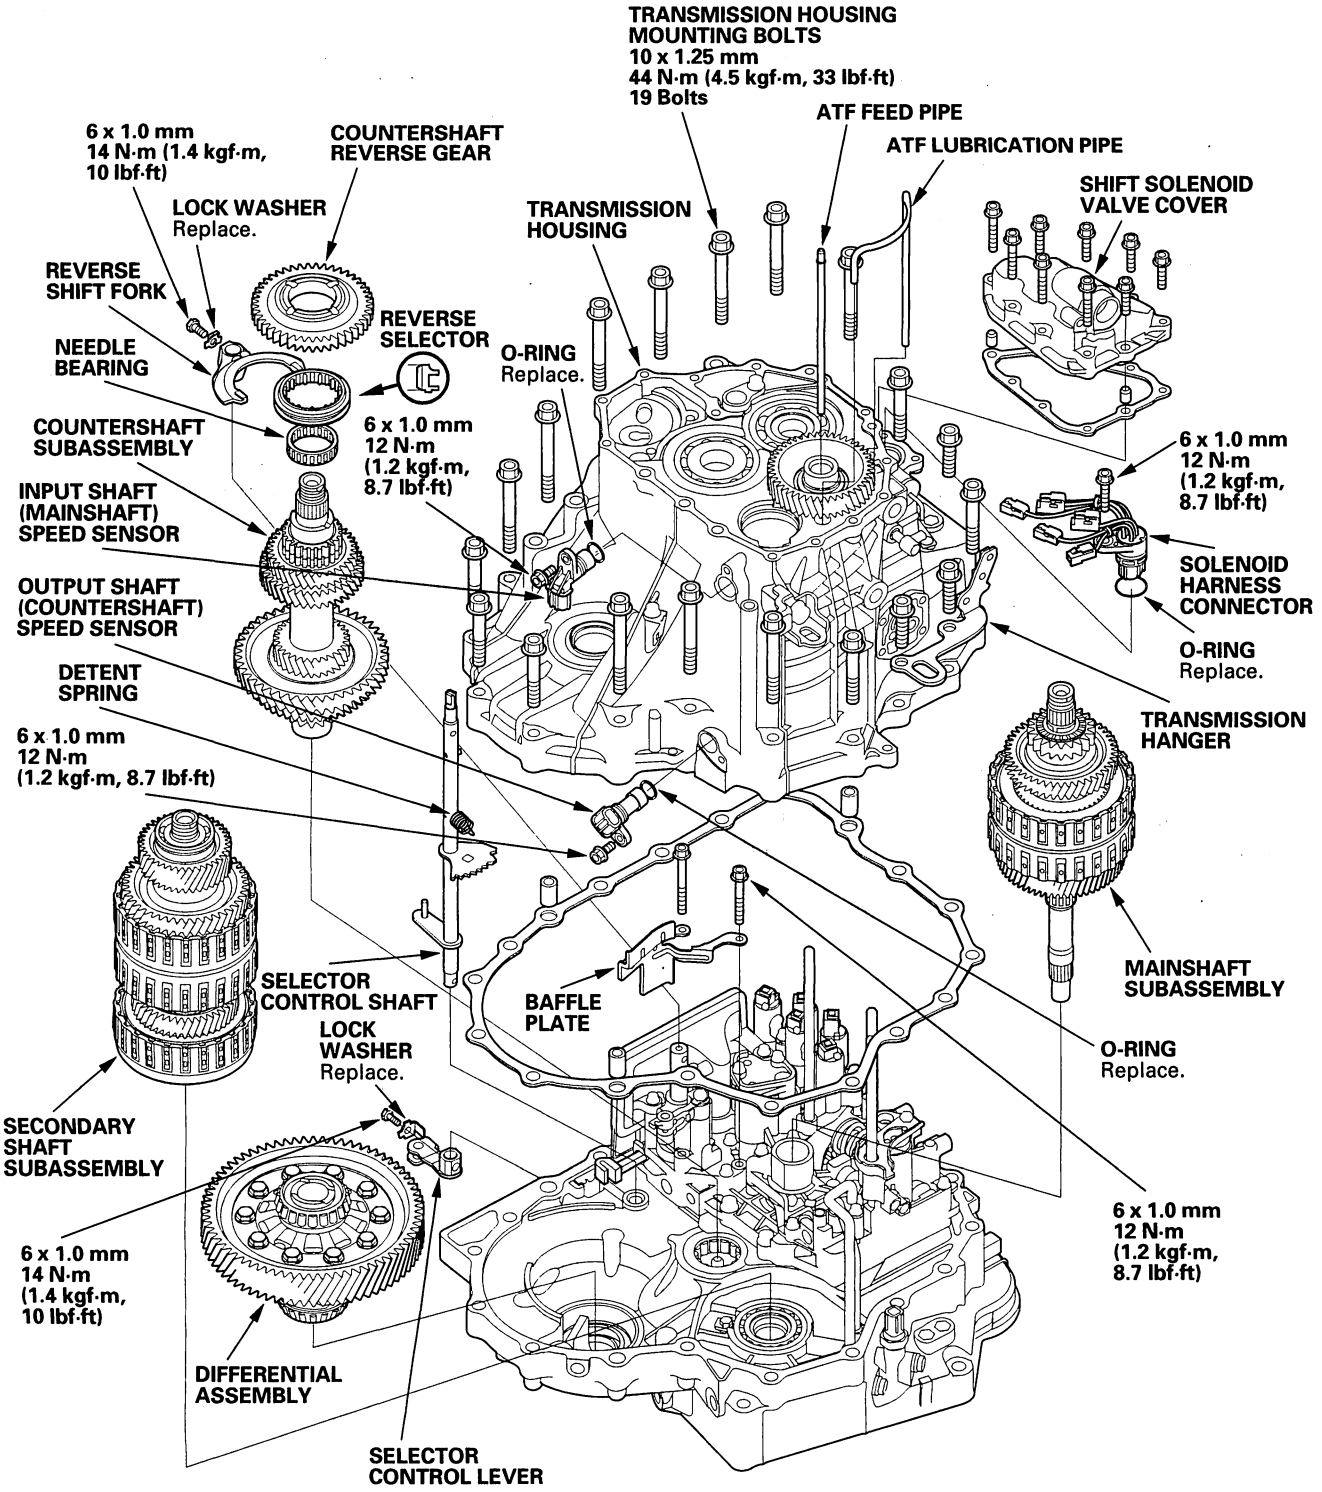
Transmission Housing

Shaft Assembly and Housing Installation

Exploded View

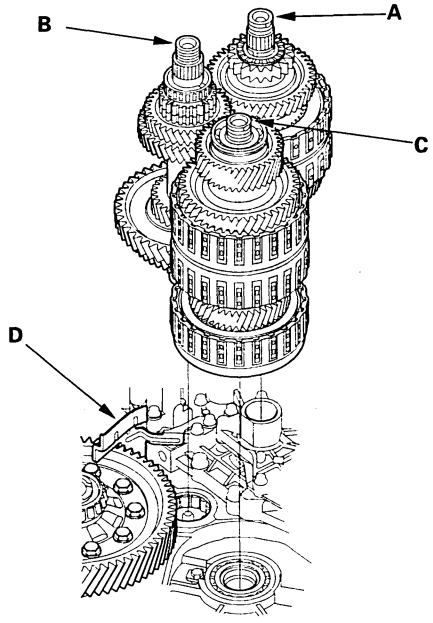


BACK

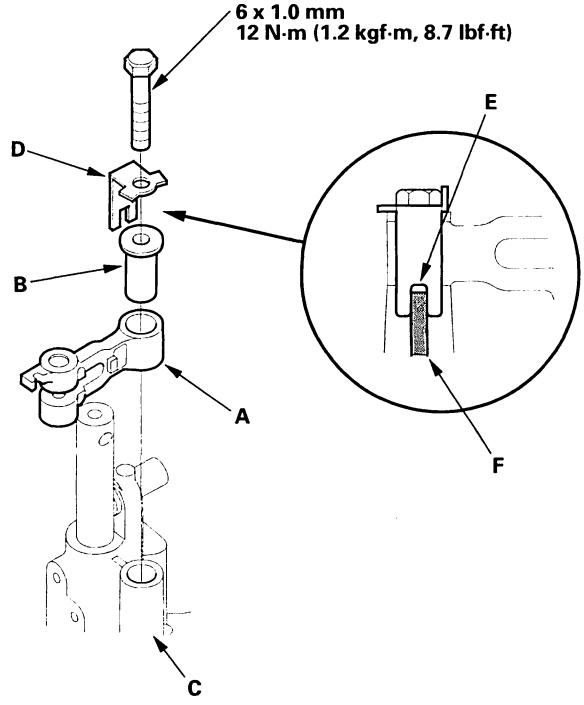
Protected by AR

NOTE: Refer to the exploded view as needed during the following procedure.

1. Install the differential assembly in the torque converter housing.
2. Install the baffle plate on the servo body.
3. Assemble the mainshaft, countershaft, and secondary shaft.
4. Join the mainshaft subassembly (A), countershaft subassembly (B), and secondary shaft subassembly (C) together, and install them in the torque converter housing. Do not bump the countershaft on the baffle plate (D).



5. Make sure if the countershaft and differential are clear of the baffle plate (D).
6. If the detent arm was removed, install the detent arm (A) with arm collar (B) on the servo body (C), and install the new lock washer (D) by aligning its cutout (E) with the projection (F) of the servo body. Install and tighten the bolt, then bend the lock tab of the lock washer against the bolt head.

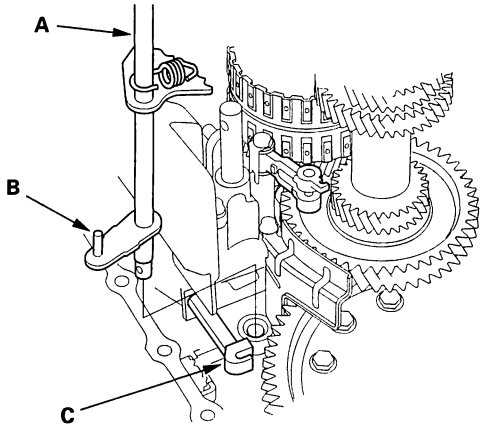


(cont'd)

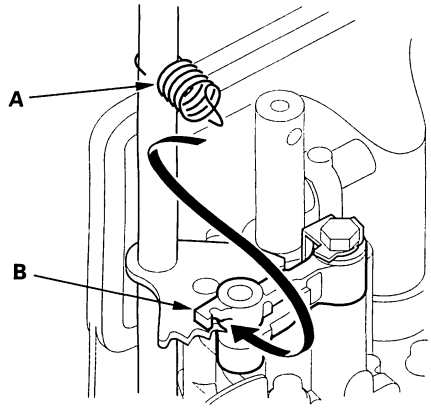
Protected by AR

Shaft Assembly and Housing Installation (cont'd)

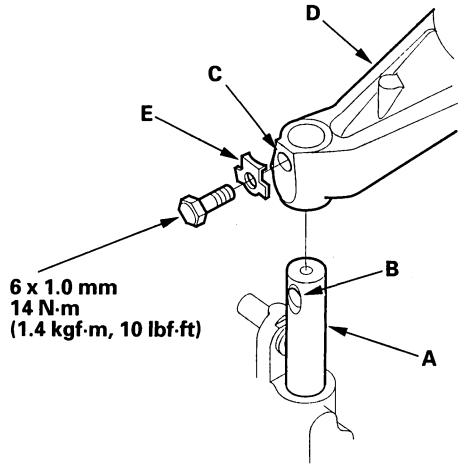
7. Install the control shaft (A) in the torque converter housing aligning the manual valve lever pin (B) on the control shaft with the guide of the manual valve (C). Pull the manual valve gently when aligning the manual valve with the control shaft.



8. Hook the detent arm spring (A) to the detent arm (B).



9. Turn the shift fork shaft (A) so the large chamfered hole (B) is facing the fork bolt hole (C) of the shift fork (D).



10. Install the shift fork and reverse selector together on the shift fork shaft and countershaft. Secure the shift fork to the shift fork shaft with the lock bolt and a new lock washer (E), then bend the lock tab of the lock washer against the bolt head.

11. Install the needle bearing and countershaft reverse gear on the countershaft.

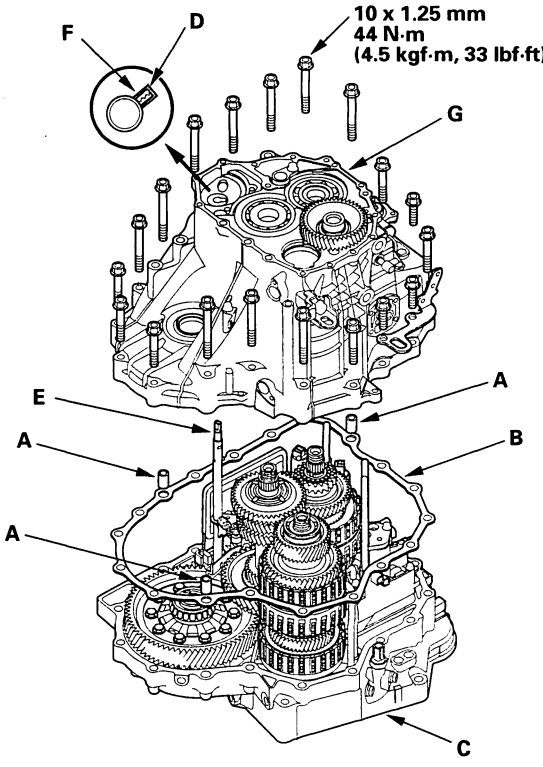
12. Install the reverse idler gear in the transmission housing (see page 14-273).

13. Install the idler gear shaft (see page 14-300), if it was removed.

BACK

Protected by AR

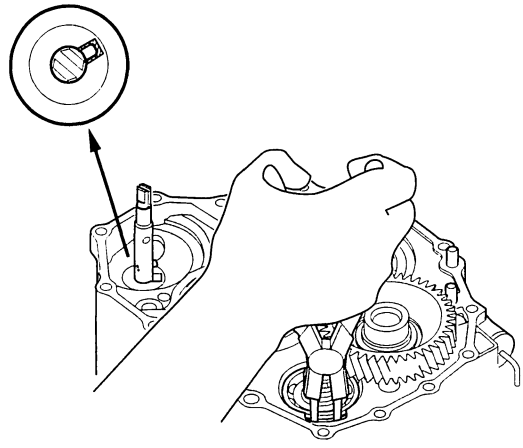
14. Install the three dowel pins (A) and a new gasket (B) on the torque converter housing (C).



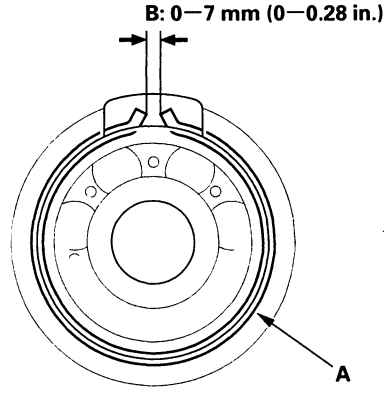
15. Align the spring pin (D) of the control shaft (E) with the transmission housing groove (F) by turning the control shaft. Do not squeeze the end of the control shaft tips together when turning the shaft. If the tips are squeezed together, it will cause a faulty shift position signal or position due to the play between the control shaft and the switch.

16. Place the transmission housing (G) on the torque converter housing. Do not install the mainshaft and countershaft speed sensors before installing the transmission housing on the torque converter housing.

17. While expanding the snap ring of the secondary shaft bearing using the snap ring pliers, push the transmission housing down to start the secondary shaft bearing through the snap ring. Then release the pliers, and push down the housing until it bottoms and snap ring snaps in place in the secondary shaft bearing snap ring groove.



18. Verify that the secondary shaft bearing snap ring (A) is seated in the bearing and housing groove, and that the ring end gap (B) is correct.



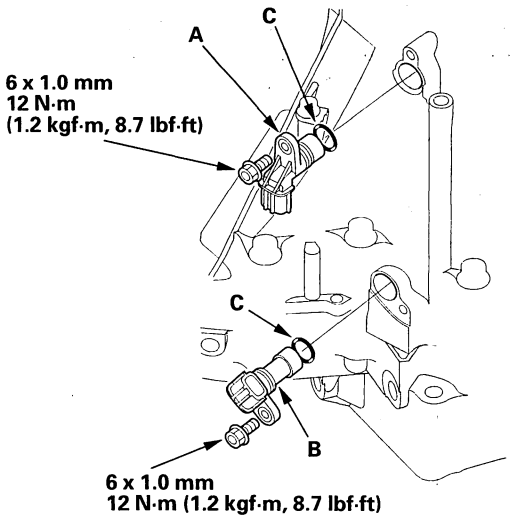
19. Install the transmission housing mounting bolts along with the transmission hanger, and tighten the 19 bolts in two or more steps in a crisscross pattern.

(cont'd)

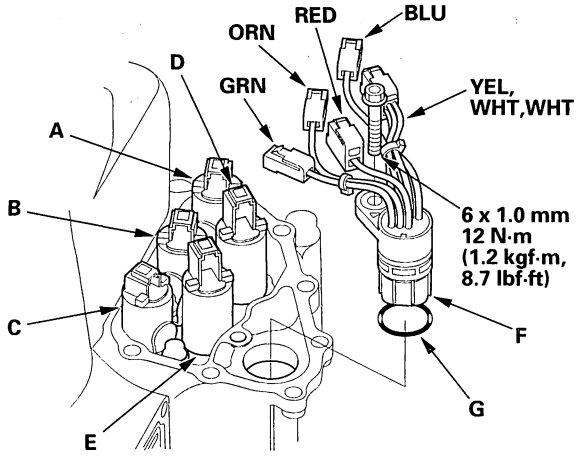
Protected by AR

Shaft Assembly and Housing Installation (cont'd)

20. Install the input shaft (mainshaft) speed sensor (A) and output shaft (countershaft) speed sensor (B) with new O-rings (C).



21. Install the shift solenoid harness connector (F) in the transmission housing with the new O-ring (G).

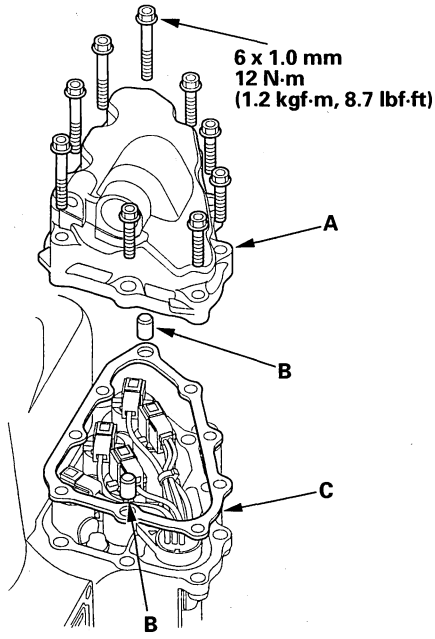


22. Connect the connector (YEL, WHT, and WHT wires) to the shift solenoid valve D.

23. Connect the connectors to the respective valves:

- BLU wire to shift solenoid valve A.
- ORN wire to shift solenoid valve B.
- GRN wire to shift solenoid valve C.
- RED wire to shift solenoid valve E.

24. Install the shift solenoid valve cover (A) with the two dowel pins (B) and the new gasket (C).



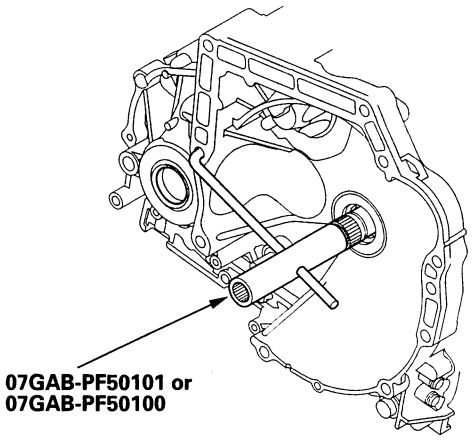
BACK

Protected by AR

End Cover Installation

Special Tool Required
Mainshaft holder 07GAB-PF50101 or 07GAB-PF50100

1. Install the special tool onto the mainshaft.

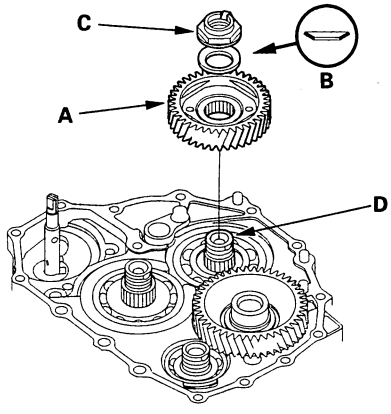


2. Lubricate the following parts with ATF:

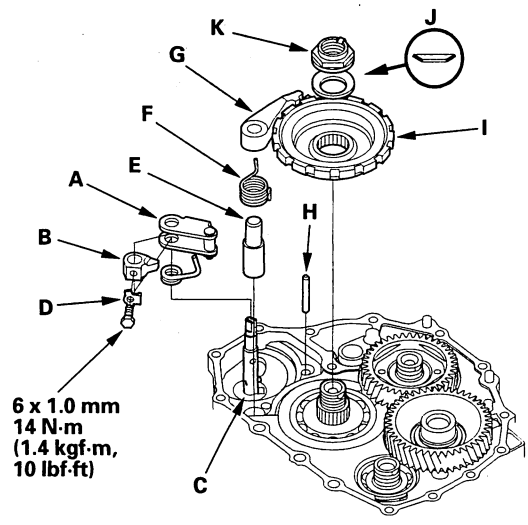
   - Splines and threads of the mainshaft.
   - Splines of the mainshaft idler gear.
   - Old conical spring washer and old locknut.

3. Install the mainshaft idler gear (A), old conical spring washer (B), and old locknut (C) on the mainshaft (D), and tighten the locknut to 226 N·m (23.0 kgf·m, 166 lbf·ft).

   NOTE:
   - Do not tap the idler gear to install.
   - Use a torque wrench to tighten the locknut. Do not use an impact wrench.



4. Install the park lever (A) and park lever stop (B) on the control shaft (C), then install the lock bolt with the new lock washer (D). Do not bend the lock tab of the lock washer until step 18.



5. Install the park pawl shaft (E), park pawl spring (F), park pawl (G), and stop shaft (H) on the transmission housing.

6. Lubricate the following parts with ATF:

   - Threads and splines of the countershaft.
   - Old conical spring washer and old locknut.
   - Areas where the park gear contacts the conical spring washer.

7. Install the park gear (I), old conical spring washer (J), and old locknut (K) on the countershaft.

8. Lift the park pawl up, and engage it with the park gear, then tighten the locknut to 226 N·m (23.0 kgf·m, 166 lbf·ft).

   NOTE:
   - Do not tap the park gear to install.
   - Use a torque wrench to tighten the locknut. Do not use an impact wrench.
   - Countershaft locknut has left-hand threads.

9. Remove the locknuts and conical spring washers from the mainshaft and countershaft.

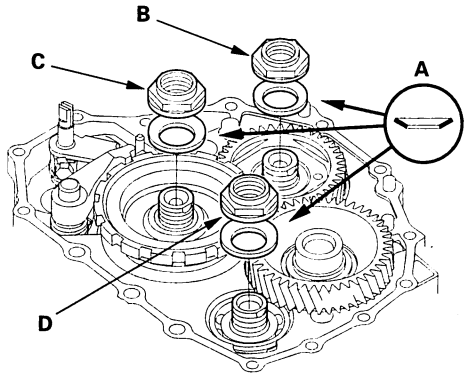
(cont'd)

Protected by AR

End Cover Installation (cont'd)

10. Lubricate the threads of the shafts, the new locknuts and the new conical spring washers with ATF.

11. Install the new conical spring washers (A) with facing stamped mark side up in the direction shown, and install the new mainshaft locknut (B), the new countershaft locknut (C), and the new secondary shaft locknut (D).

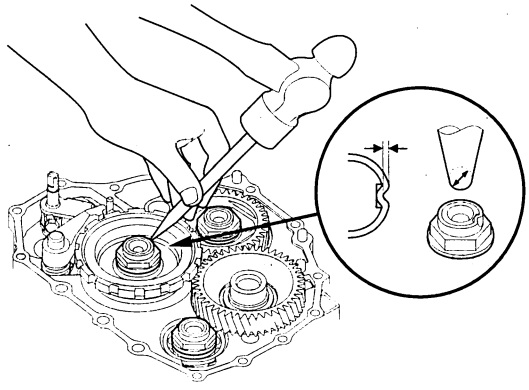


12. Tighten the locknuts to 167 N·m (17.0 kgf·m, 123 lbf·ft).

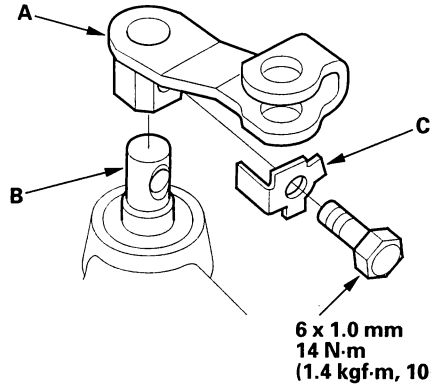
NOTE:
- Be sure to install the conical spring washers in the direction shown.
- Use a torque wrench to tighten the locknut. Do not use an impact wrench.
- Countershaft and secondary shaft locknuts have left-hand threads.

13. Remove the special tool from the mainshaft.

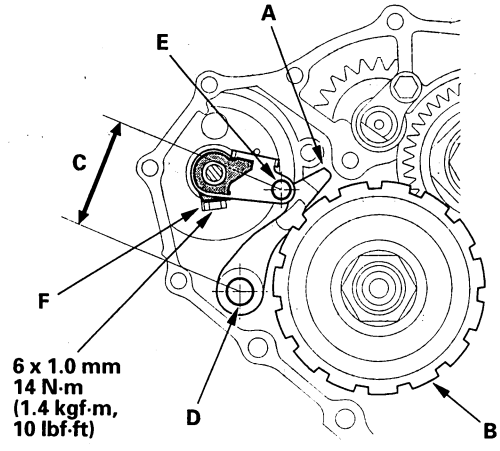
14. Stake the locknuts into the shafts with a punch.



15. Install the selector control level (A) on the selector control shaft (B), and install the bolt with the new lock washer (C), then bend the lock tab of the lock washer against the bolt head.



16. Set the park lever in the P position, then verify that the park pawl (A) engages the park gear (B).



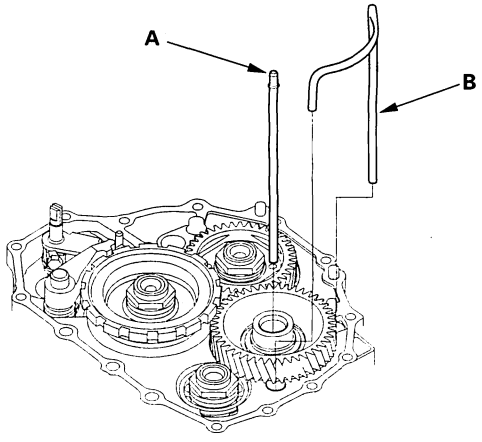
17. If the park pawl does not engage fully, check the distance (C) between the pawl shaft (D) and the park lever roller pin (E) (see page 14-266).

18. Tighten the lock bolt, and bend the lock tab of the lock washer (F) against the bolt head.

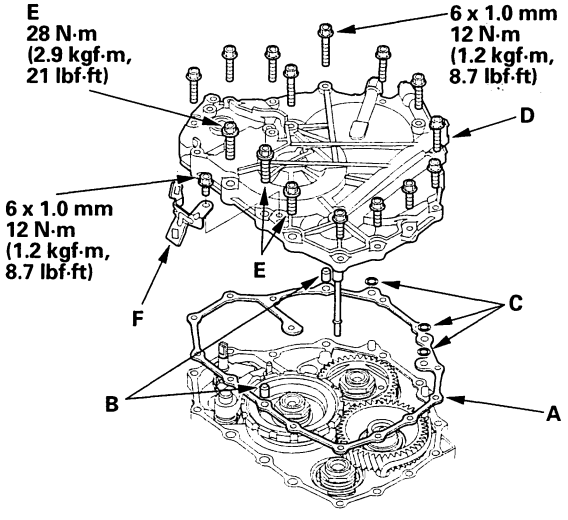
BACK

Protected by AR

19. Install the ATF feed pipe (A) into the idler gear shaft, and install the ATF lubrication pipe (B) into the transmission housing.



20. Install the new gasket (A) on the transmission housing, and install the two dowel pins (B) and new O-rings (C) over the top of the ATF feed pipes.

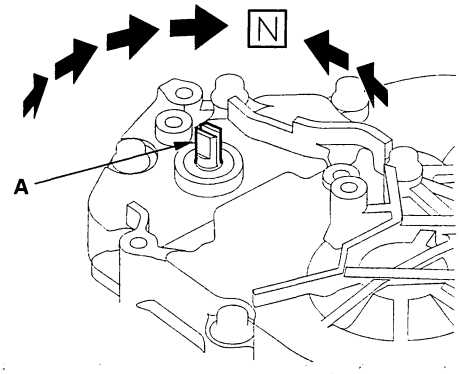


21. Install the end cover (D), and tighten the three special bolts (E) and the 6 x 1.0 mm bolts (12 bolts).

22. Install the harness clamp bracket (F) on the end cover.

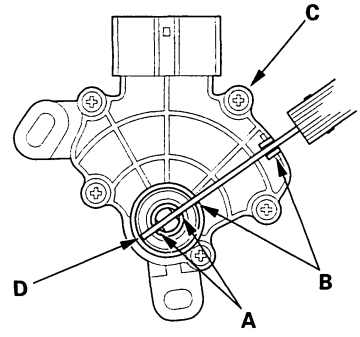
23. Set the selector control shaft (A) to the N position by turning the selector control lever on the torque converter side.

NOTE: Do not squeeze the end of the selector control shaft tips together when turning the shaft. If the tips are squeezed together it will cause a faulty shift position signal or position due to the play between the selector control shaft and the switch.



24. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.08 in.) feeler gauge blade (D) in the cutouts to hold in the N position.

NOTE: Be sure to use a 2.0 mm (0.08 in.) blade or equivalent to hold the switch in the N position.



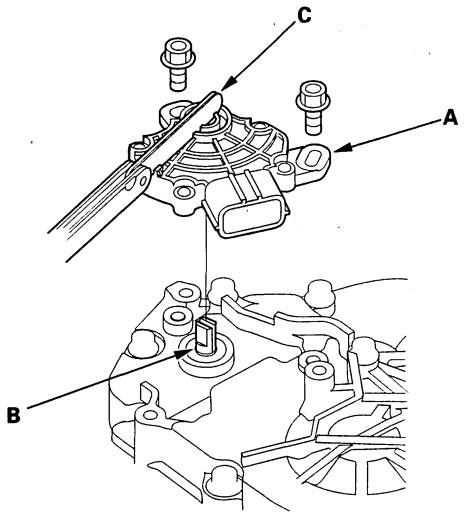
(cont'd)

Protected by AR

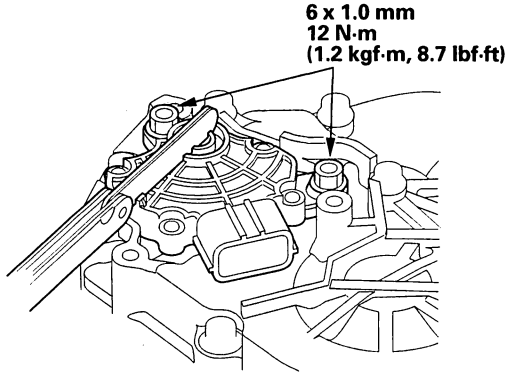
Transmission End Cover

End Cover Installation (cont'd)

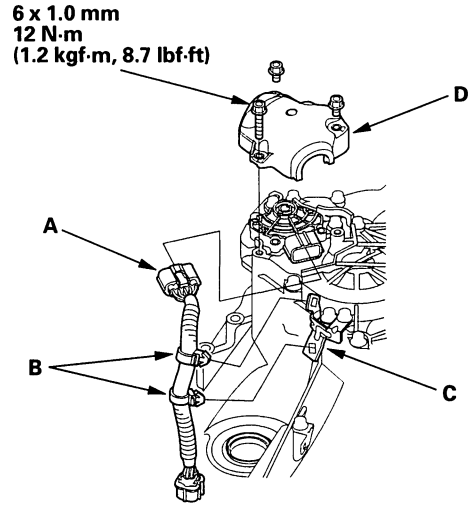
25. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.08 in.) blade (C).



26. Tighten the bolts on the transmission range switch while you continue to hold it in the N position. Do not move the transmission range switch when tightening the bolts. Remove the feeler gauge.

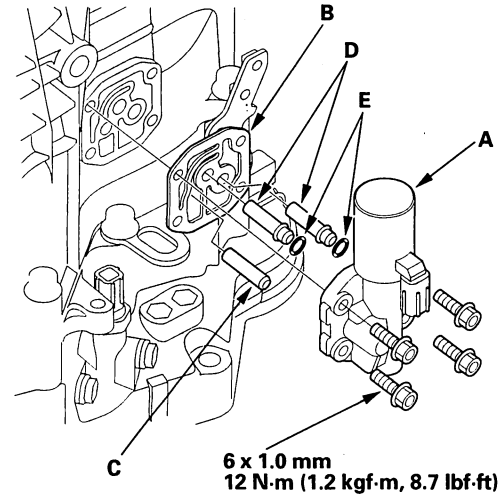


27. Connect the transmission range switch connector (A) securely, then install the harness clamps (B) on the clamp bracket (C).



28. Install the transmission range switch cover (D).

29. Install the new gasket (B) on the transmission housing, and install the ATF pipe (C) and ATF joint pipes (D).

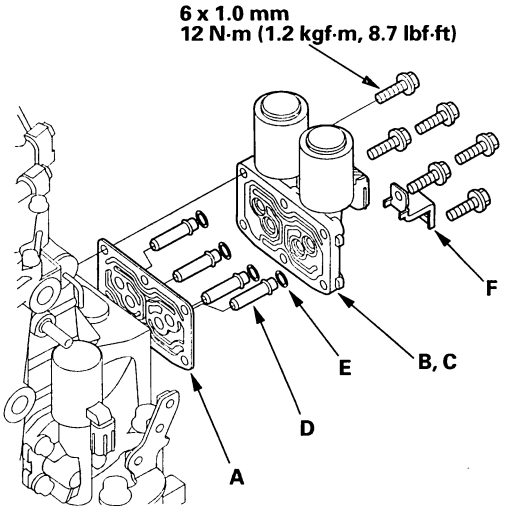


30. Install the new O-rings (E) over the ATF joint pipes, and install the A/T clutch pressure control solenoid valve A.

BACK

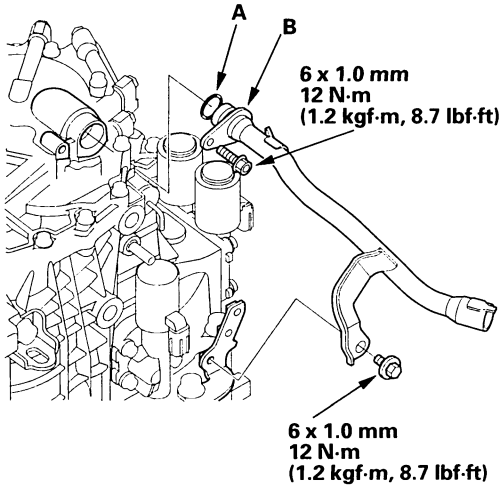
Protected by AR

31. Install the new gasket (A) and ATF joint pipes (D) on the transmission housing, and install the new O-rings (E) over the ATF joint pipes.

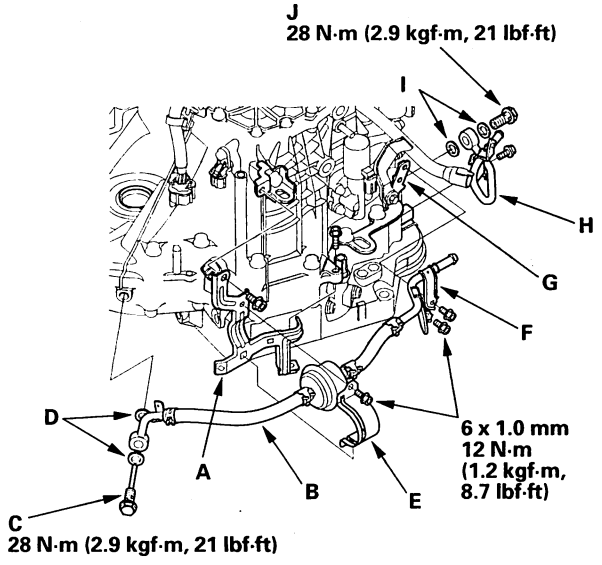


32. Install the A/T clutch pressure control solenoid valves B and C, and harness clamp bracket (F).

33. Install the new O-ring (A) on the dipstick guide pipe (B), then install the dipstick guide pipe.



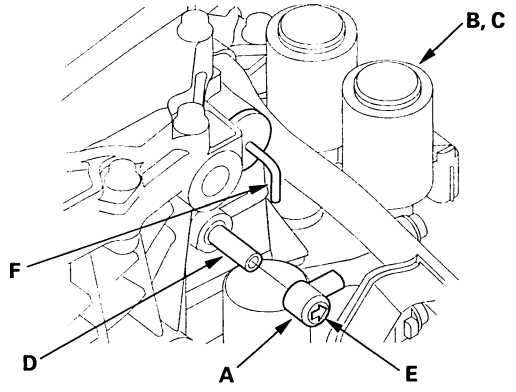
34. Install the ATF filter bracket (A) on the transmission housing, then install the ATF cooler line/ATF filter (B) with the line bolt (C) new sealing washers (D). Secure the ATF filter with its bracket (E).



35. Secure the line brackets (F) with two bolts on the transmission hanger (G).

36. Install the ATF cooler outlet line (H) with the line bolt (I) and new sealing washers (J).

37. Install the breather cap (A) on the breather pipe (D) so its arrow (E) points to the A/T clutch pressure control solenoid valves B and C.



38. Install the filler cap with pointing its handle (F) in the direction shown.

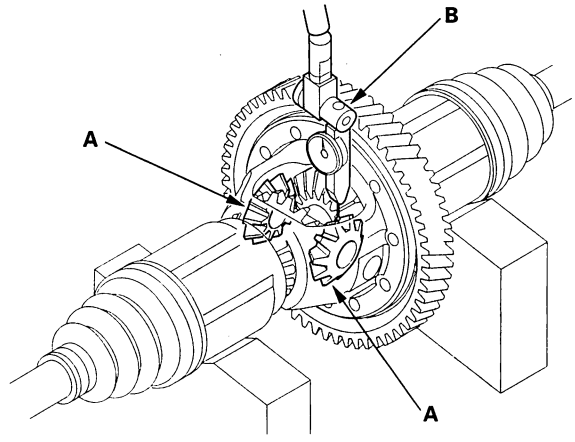
THRUST WASHER, 80 mm

Backlash Inspection

1. Install the driveshafts on the differential, then place the axles on V-blocks.



2. Check the backlash of the pinion gears (A) with a dial indicator (B).

   Standard: 0.05—0.15 mm (0.002—0.006 in.)

3. If the backlash is out of standard, replace the differential carrier.

BACK

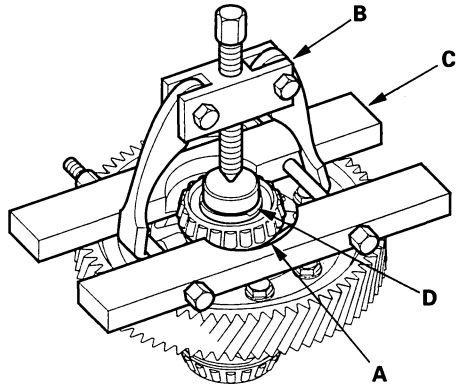
Protected by AR

Carrier Bearing Replacement

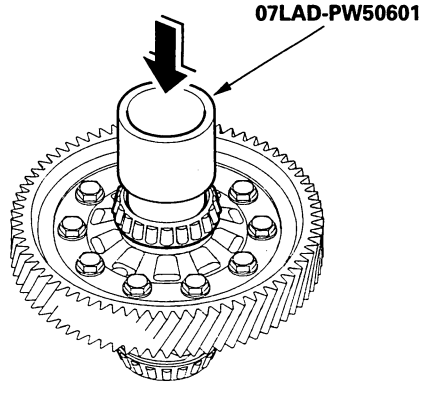
Special Tools Required
Attachment, 40 x 50 mm 07LAD-PW50601

NOTE:
- The bearing and bearing outer race should be replaced as a set.
- Inspect and adjust the carrier bearing preload whenever bearing is replaced.
- Check the bearing for wear and rough rotation. If the bearing is OK, removal is not necessary.

1. Remove the carrier bearing (A) with a commercially available puller (B), bearing separator (C), and stepped adapter (D).



2. Install the new bearings with the special tool using the small end and a press until it bottoms. Press the bearing on securely so there is no clearance between the bearing and the differential carrier.



Differential Carrier, Final Driven Gear Replacement

1. Remove the final driven gear from the differential carrier, and replace the differential carrier or final driven gear.

2. Install the final driven gear (A) in the direction shown on the differential carrier (B).

   NOTE: Differential carrier bolts have left-hand threads.

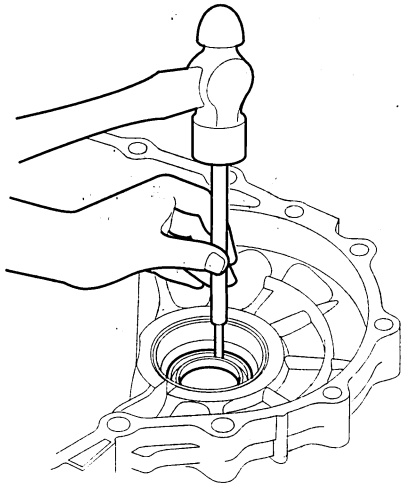
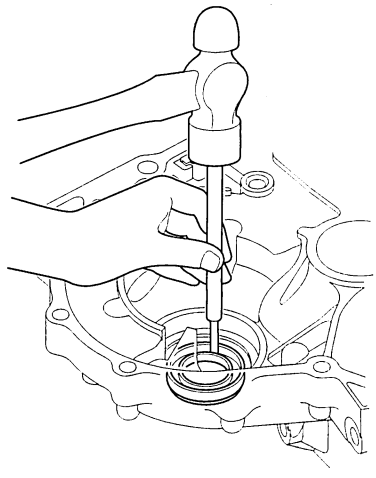
Oil Seal Replacement

Special Tools Required
- Driver 07749-0010000
- Oil seal driver attachment 07947-SD90101
- Oil seal driver attachment 07JAD-PH80101

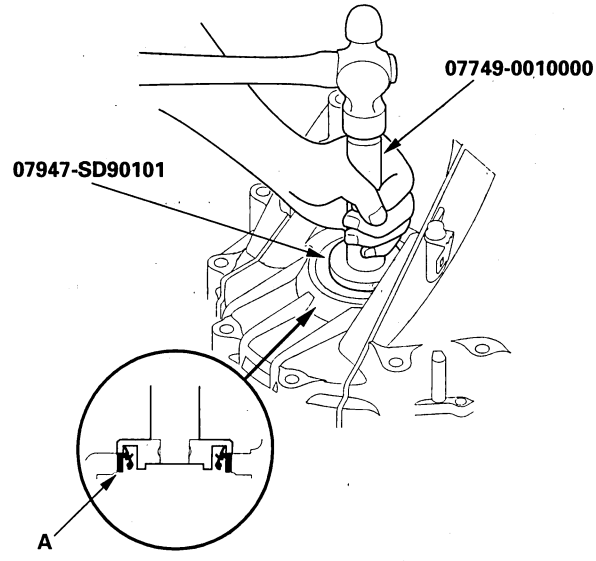
1. Remove the oil seal from the transmission housing.



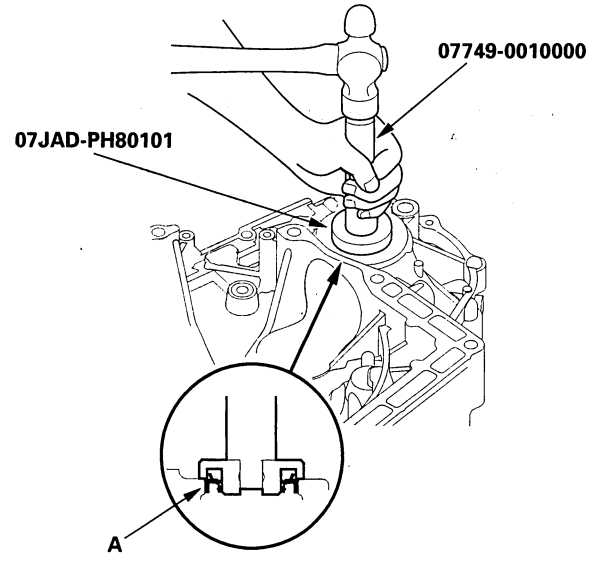
2. Remove the oil seal from the torque converter housing.



3. Install the new oil seal (A) in the transmission housing with the special tools.



4. Install the new oil seal (A) in the torque converter housing with the special tools.



BACK

Protected by AR

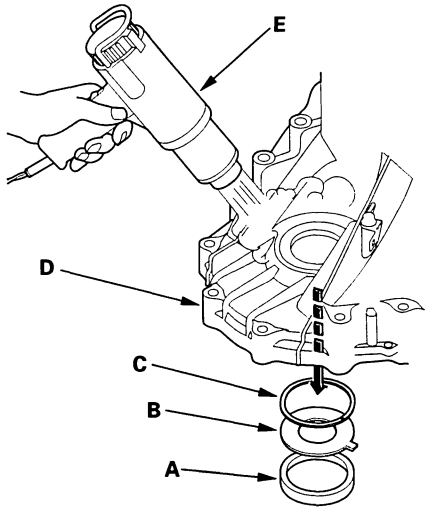
Carrier Bearing Outer Race Replacement

Special Tools Required
- Driver 07749-0010000
- Attachment, 78 x 90 mm 07GAD-SD40101
- Attachment, 72 x 75 mm 07746-0010600

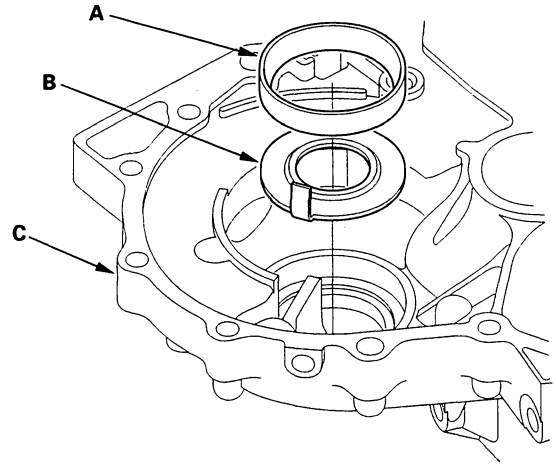
NOTE:
- The bearing and bearing outer race should be replaced as a set.
- Replace the bearing with a new one whenever the outer race is replaced.
- Do not use the thrust shim on the torque converter housing.
- Adjust bearing preload after replacing the bearing and outer race.
- Cost all parts with ATF during installation.

1. Remove the bearing outer race (A), 76.2 mm thrust washer (B), and 76 mm thrust shim (C) from the transmission housing (D) by heating the housing to about 212 °F (100 °C) with heat gun (E). Do not heat the housing in excess of 212 °F (100 °C).

   NOTE: Let the transmission housing cool to room temperature before installing the bearing outer race.

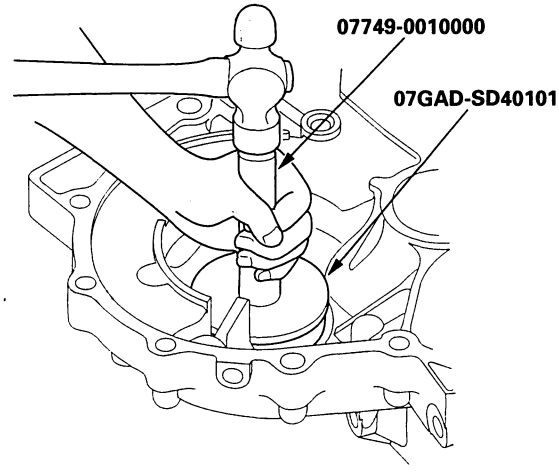


2. Remove the bearing outer race (A) and 80 mm thrust washer (B) from the torque converter housing (C).



3. Install the 80 mm thrust washer and the new bearing outer race in the torque converter housing.

4. Drive the bearing outer race to install securely in the housing with the special tools.

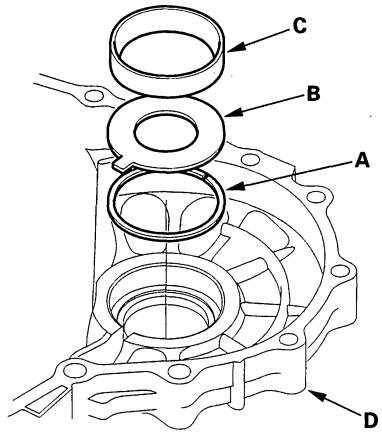


(cont'd)

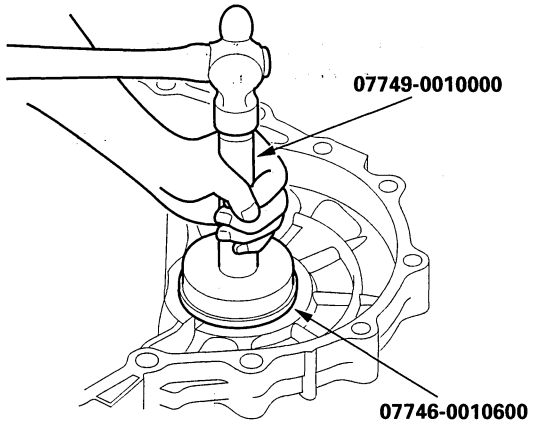
Protected by AR

Carrier Bearing Outer Race Replacement (cont'd)

5. Install the 76 mm thrust shim (A), 76.2 mm thrust washer (B), and the new bearing outer race (C) in the transmission housing (D).



6. Drive the bearing outer race in securely so there is no clearance between the outer race, thrust washer, shim and housing with the special tools.



BACK

Protected by AR

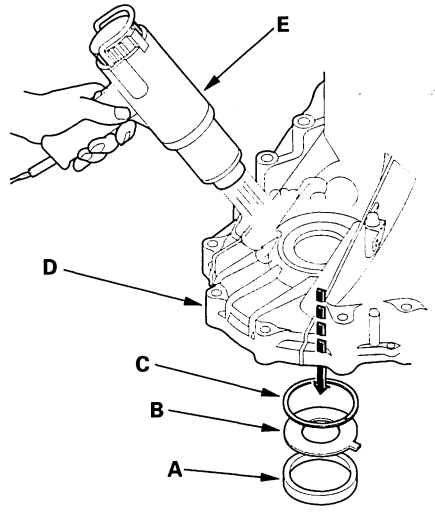
Carrier Bearing Preload Inspection

Special Tools Required
- Driver 07749-0010000
- Attachment, 72 x 75 mm 07746-0010600
- Preload inspection tool 07HAJ-PK40201

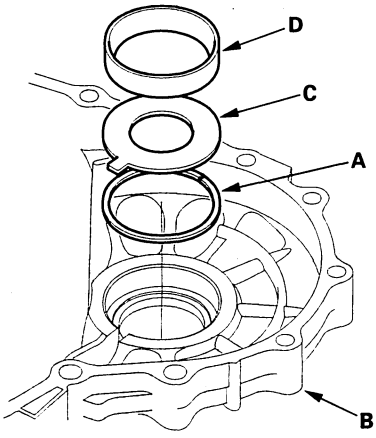
NOTE:
- If the transmission housing, torque converter housing, differential carrier, carrier bearing and outer race, or thrust shim were replaced, the bearing preload must be adjusted.
- Coat all parts with ATF during installation.
- Do not use the thrust shim in the torque converter housing.

1. Remove the bearing outer race (A), 76.2 mm thrust washer (B), and 76 mm thrust shim (C) from the transmission housing (D) by heating the housing to about 212 °F (100 °C) with heat gun (E). Do not heat the housing in excess of 212 °F (100 °C).

   NOTE: Let the transmission housing cool to room temperature before adjusting the bearing preload.

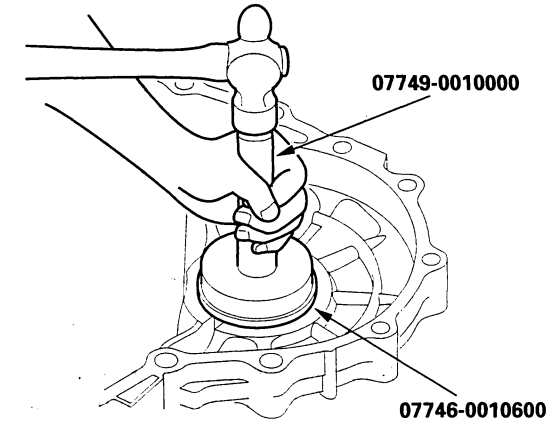


2. Install the 76 mm thrust shim (A) in the transmission housing (B). If you replace the 76 mm thrust shim with a new one, use the same thickness shim as the old one.



3. Install the 76.2 mm thrust washer (C) and the bearing outer race (D) in the transmission housing.

4. Drive the bearing outer race in securely so there is no clearance between the outer race, thrust washer, shim and housing with the special tools.

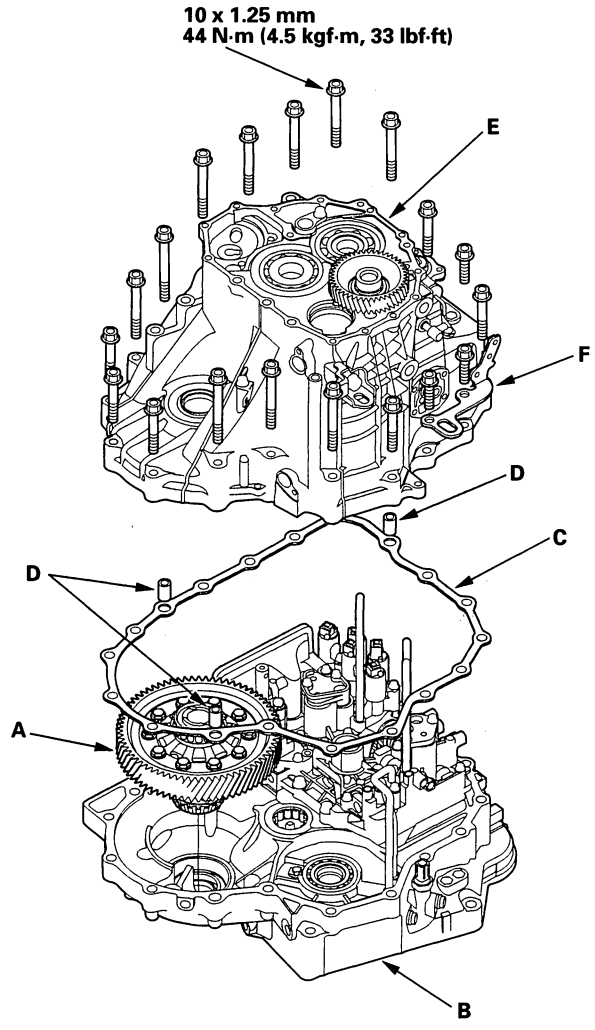


(cont'd)

Protected by AR

Carrier Bearing Preload Inspection (cont'd)

5. Install the differential assembly (A) in the torque converter housing (B), and install the gasket (C) and dowel pins (D) on the housing.

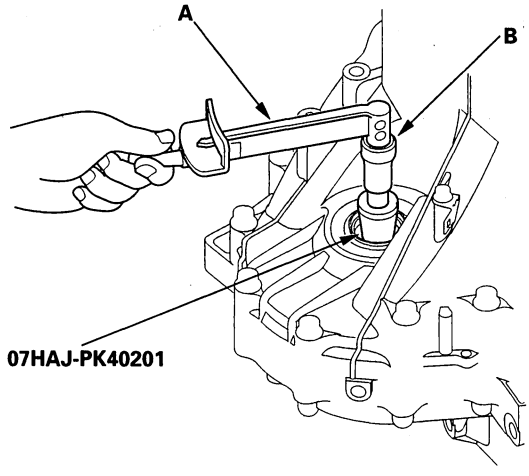


6. Install the transmission housing (E) and the transmission hanger (F), then tighten the bolts.

7. Rotate the differential assembly in both directions to seat the bearings.

8. Measure the starting torque of the differential assembly in both directions with the special tool, a torque wrench (A) and socket (B) at normal room temperature.

Standard
New Bearing: **2.7—3.9 N·m (28—40 kgf·cm, 24—35 lbf·in.)**
Reused Bearing: **2.5—3.6 N·m (25—37 kgf·cm, 22—32 lbf·in.)**



BACK

Protected by AR

9. If the measurement is out of standard, remove the thrust shim and select the thrust shim from table below. Install the new thrust shim and recheck. To increase the starting torque, increase the thickness of the thrust shim. To decrease the starting torque, decrease the thickness of the shim. Changing the shim to the next size will increase or decrease starting torque about 0.3—0.4 N·m (3—4 kgf·cm, 2—3 lbf·in.).

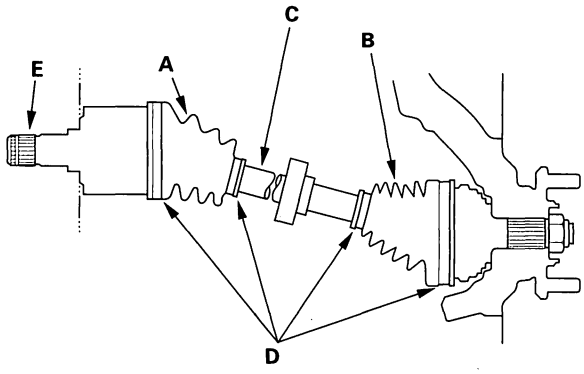
Driveshaft Inspection

1. Check the inboard boot (A) and the outboard boot (B) on the driveshaft (C) for cracks, damage, leaking grease, and loose boot bands (D). If any damage is found, replace the boot and boot bands.



2. Turn the driveshaft by hand, and make sure the splines (E) and joint are not excessively loose.

3. Make sure the driveshaft is not twisted or cracked; if it is, replace it.

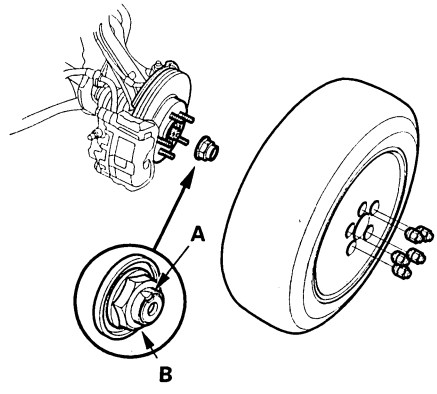
Driveshaft Removal

Special Tools Required
- Ball joint remover, 28 mm 07MAC-SL0A202
- Ball joint thread protector, 12 mm 07AAF-SDAA100

1. Loosen the wheel nuts slightly.

2. Raise the front of the vehicle, and support it with safety stands in the proper locations (see page 1-14).

3. Remove the wheel nuts and front wheels.

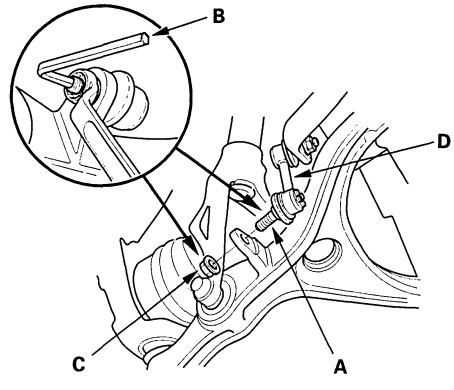


4. Lift up the locking tab (A) on the spindle nut (B), then remove the nut.

5. Drain the transmission fluid. Reinstall the drain plug using a new washer:

   - Manual transmission (see page 13-3)
   - Automatic transmission (see page 14-208)

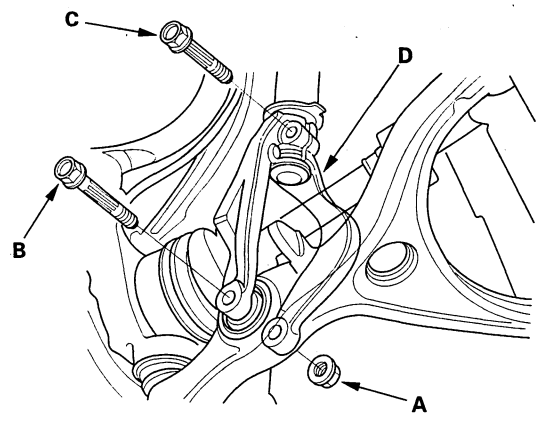
6. Hold the stabilizer ball joint pin (A) with a hex wrench (B), and remove the flange nut (C). Separate the front stabilizer link (D) from the lower arm.



BACK

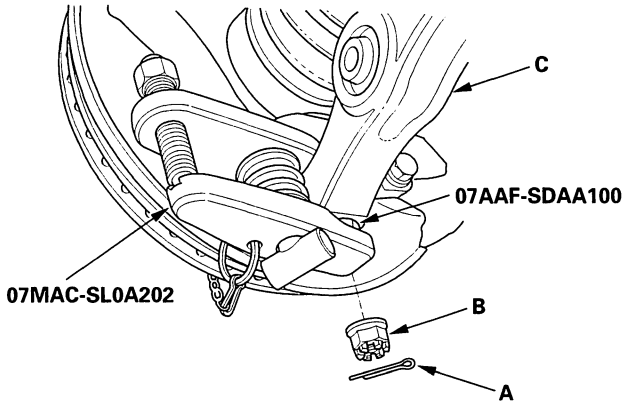
Protected by AR

7. Remove the self-locking nut (A), 12 mm flange bolt (B), and 10 mm flange bolt (C), then remove the damper fork (D).



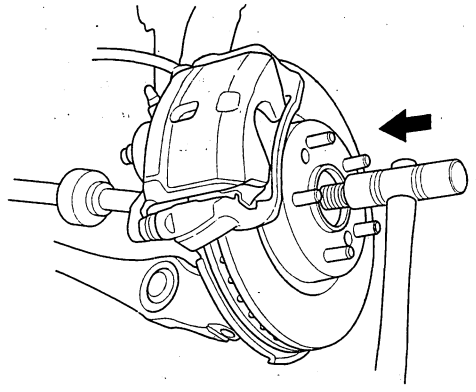
8. Remove the cotter pin (A) from the lower arm ball joint castle nut (B), and remove the nut.

NOTE:
- To avoid damaging the ball joint, install the ball joint thread protector onto the threads of the ball joint.
- Be careful not to damage the ball joint boot when installing the remover.

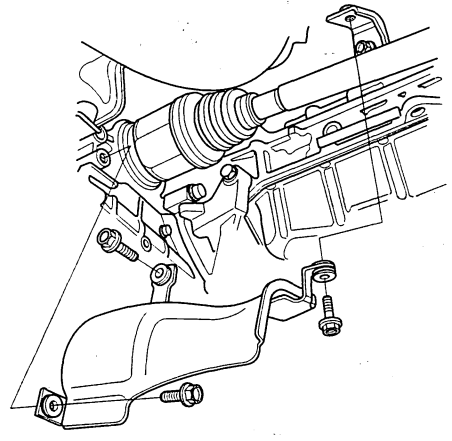


9. Separate the ball joint from the lower arm (C) with the special tool (see page 18-11).

10. Pull the knuckle outward, and remove the outboard joint from the front wheel hub using a plastic hammer.



11. A/T model: Remove the heat shield.



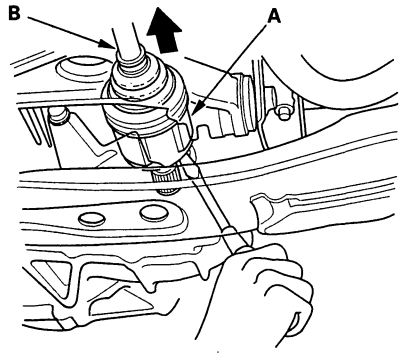
(cont'd)

Protected by AR

Driveshaft Removal (cont'd)

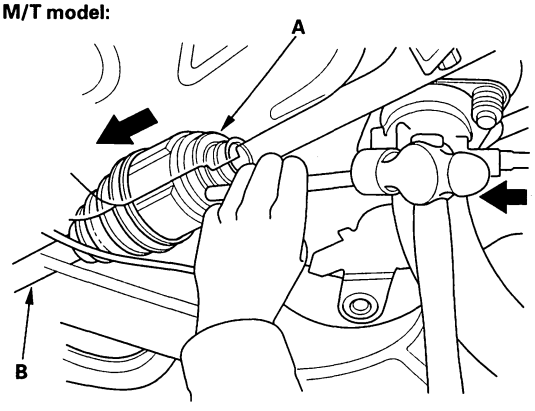
12. Left driveshaft: Pry the inboard joint (A) from the differential case with a prybar. Right driveshaft: Drive the inboard joint off of the intermediate shaft with a drift and hammer (M/T model). Pry the inboard joint from the differential case with a prybar (A/T model). Remove the driveshaft as an assembly. Do not pull on the driveshaft (B), because the inboard joint may come apart. Pull the driveshaft straight out to avoid damaging the oil seal.

Left driveshaft

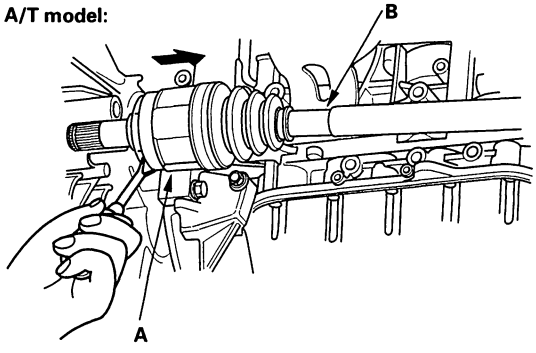


Right driveshaft

M/T model:



A/T model:

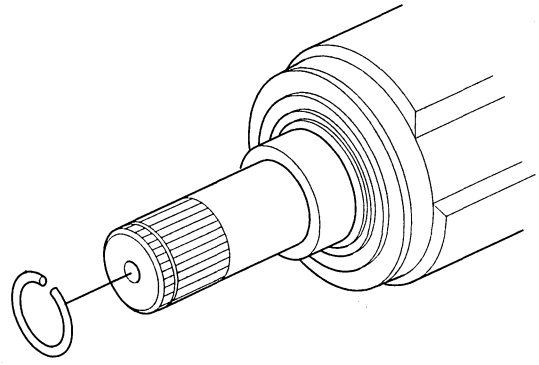


Driveshaft Disassembly

Special Tools Required
- Threaded adapter, 22 x 1.5 mm 07XAC-001010A
- Threaded adapter, 24 x 1.5 mm 07XAC-001020A
- Slide hammer, 5/8"-18 UNF, commercially available
- Boot band pincers, commercially available

Inboard Joint Side

1. Remove the set ring from the inboard joint.



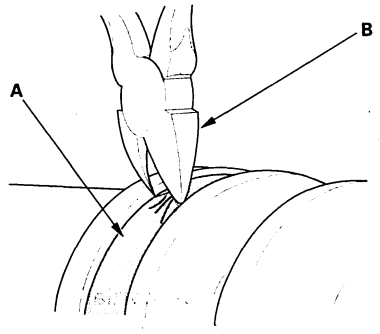
BACK

Protected by AR

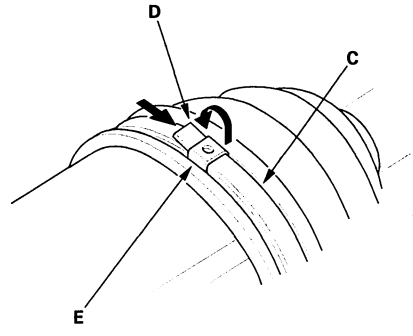
2. Remove the boot bands. Be careful not to damage the boot.

   - If the boot band is a welded type (A), cut the boot band (B).
   - If the boot band is a double loop type (C), lift up the band end (D), and push it into the clip (E).
   - If the boot band is a low profile type (F), pinch the boot band using commercially available boot band pincers (G).

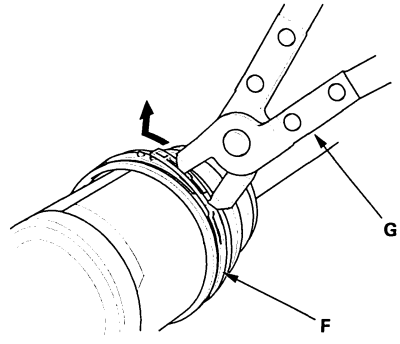
Welded Type



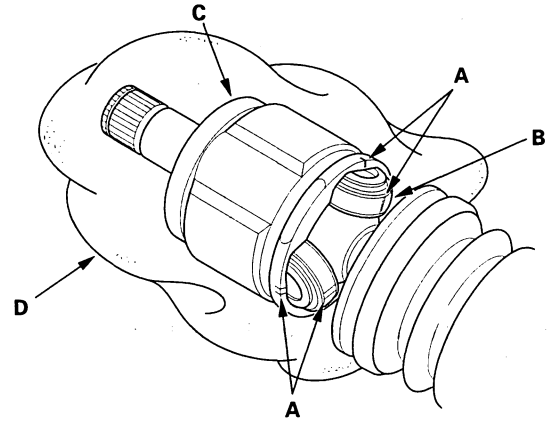
Double Loop Type



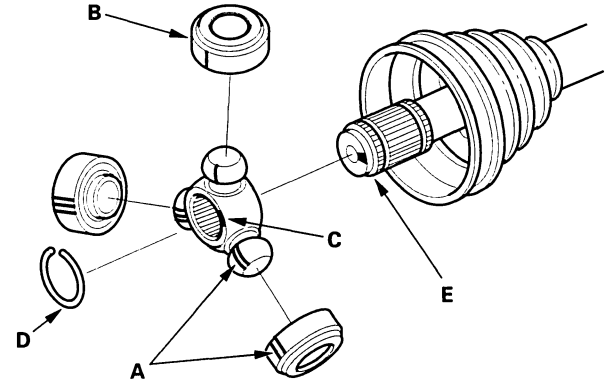
Low Profile Type



3. Make a mark (A) on each roller (B) and inboard joint (C) to identify the locations of rollers and grooves in the inboard joint. Then remove the inboard joint on the shop towel (D). Be careful not to drop the rollers when separating them from the inboard joint.



4. Make a mark (A) on the rollers (B) and spider (C) to identify the locations of the rollers on the spider, then remove the rollers.



5. Remove the circlip (D).

6. Mark the spider and driveshaft (E) to identify the position of the spider on the shaft.

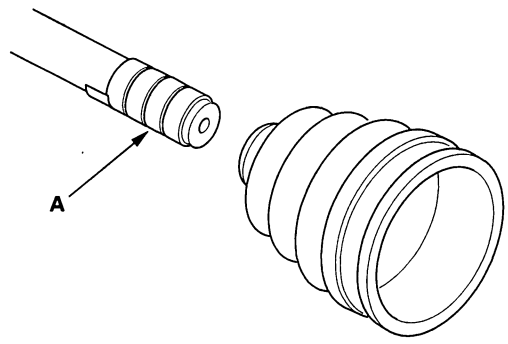
7. Remove the spider.

(cont'd)

Protected by AR

Driveshaft Disassembly (cont'd)

8. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damage to the boot.

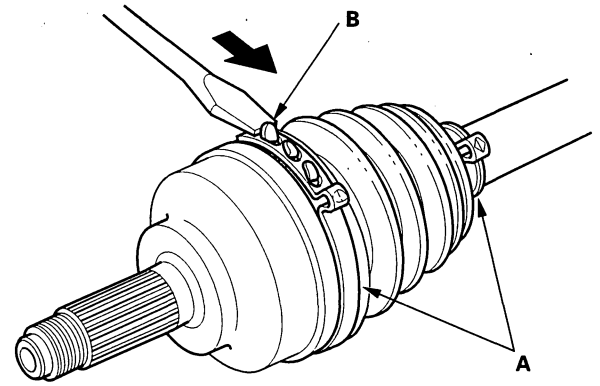


9. Remove the inboard boot. Be careful not to damage the boot.
10. Remove the vinyl tape.

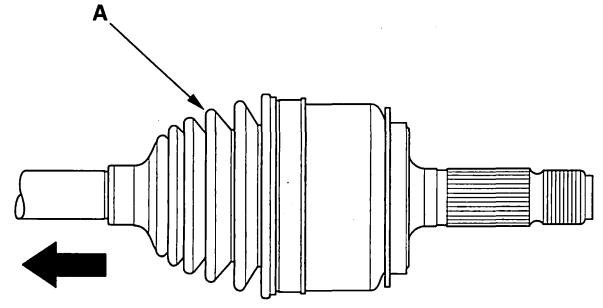
Outboard Joint Side

1. Remove the boot bands (A). Lift up the three tabs (B) with a screwdriver. Be careful not to damage the boot and dynamic damper.

Ear Clamp Type



2. Slide the outboard boot (A) partially to the inboard joint side. Be careful not to damage the boot.

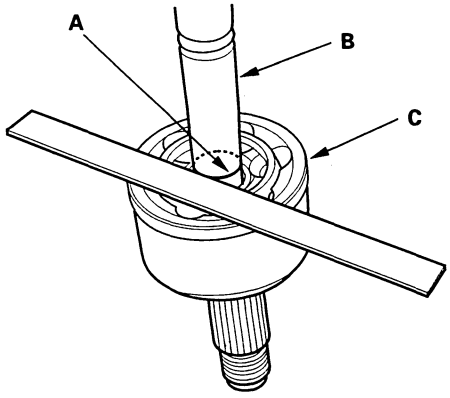


BACK

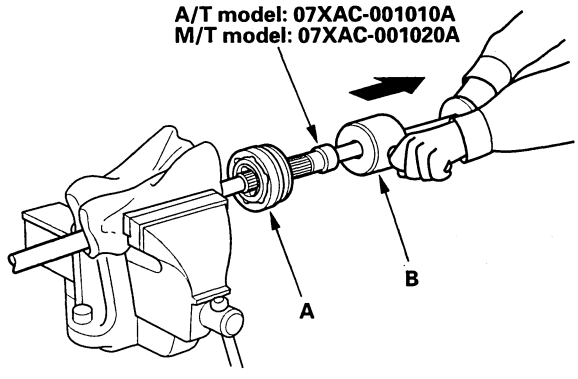
Protected by AR

3. Wipe off the grease to expose the driveshaft and the outboard joint inner race.

4. Make a mark (A) on the driveshaft (B) at the same position of the outboard joint end (C).



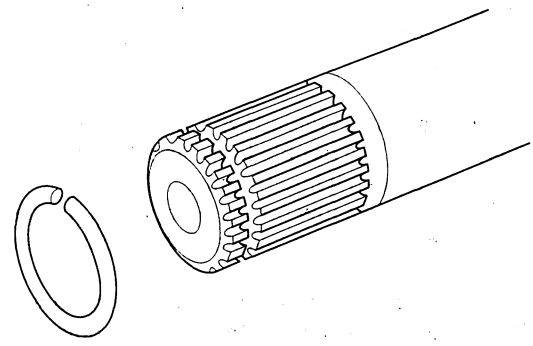
5. Carefully clamp the driveshaft in a vise.



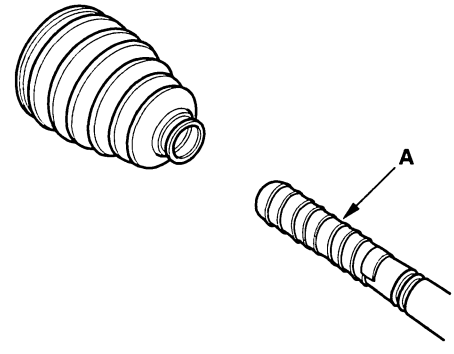
6. Remove the outboard joint (A) using the special tool and a commercially available 5/8"-18 UNF slide hammer (B).

7. Remove the driveshaft from the vise.

8. Remove the stop ring from the driveshaft.



9. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damage to the boot.



10. Remove the outboard boot. Be careful not to damage the boot.

11. Remove the vinyl tape.

Protected by AR

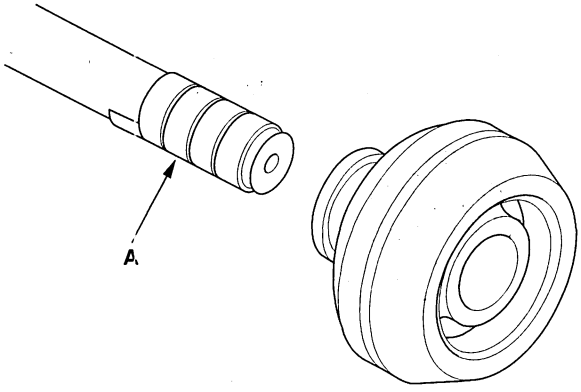
Dynamic Damper Replacement

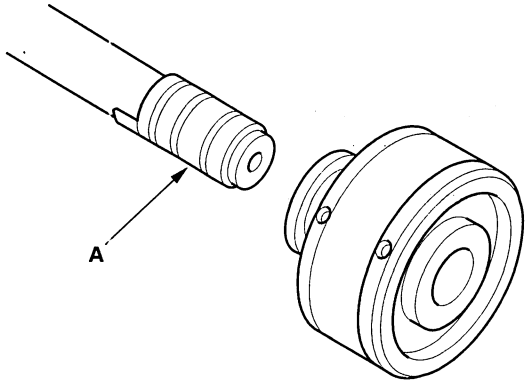
1. Remove the inboard joint (see page 16-6).

2. Remove the dynamic damper bands. Be careful not to damage the dynamic damper (see step 2 on page 16-7).

   - If the band is a welded type, cut the band.
   - If the band is a double loop type, lift up the band end, and push it into the clip.
   - If the band is a low profile type, pinch the band using commercially available boot band pincers.

3. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damage to the dynamic damper.

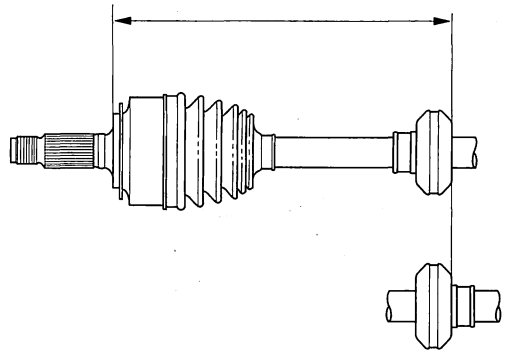




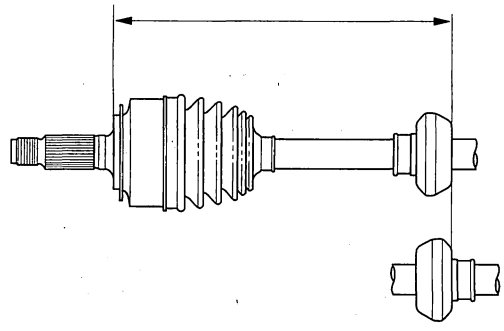
4. Remove the dynamic damper. Be careful not to damage the dynamic damper.

5. Adjust the position of the new dynamic damper to these measurements.

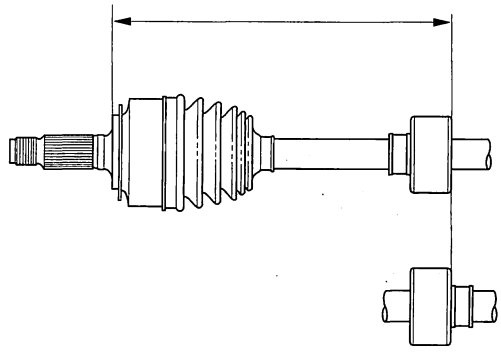
A/T model right driveshaft: 274—278 mm (10.79—10.94 in.)



M/T model right driveshaft: 275—281 mm (10.83—11.06 in.)



M/T model left driveshaft: 275—281 mm (10.83—11.06 in.)
A/T model left driveshaft: 283—287 mm (11.14—11.30 in.)



6. Install the dynamic damper band (see step 8 on page 16-13).

7. Install the inboard joint (see step 1 on page 16-12).

Protected by AR

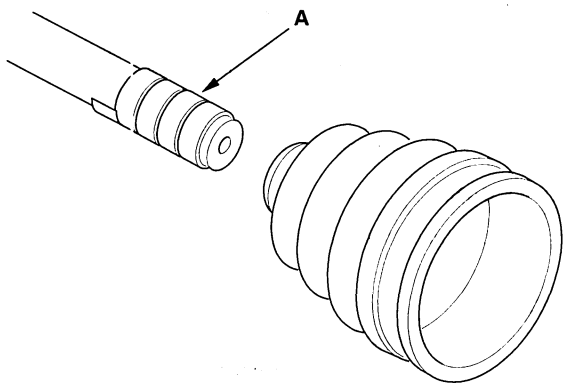
Driveshaft Reassembly (cont'd)

Special Tools Required
- Boot band tool, KD-3191 or equivalent, commercially available
- Boot band pincers, Kent-Moore J-35910 or equivalent, commercially available

NOTE: Refer to the Exploded View as needed during this procedure.

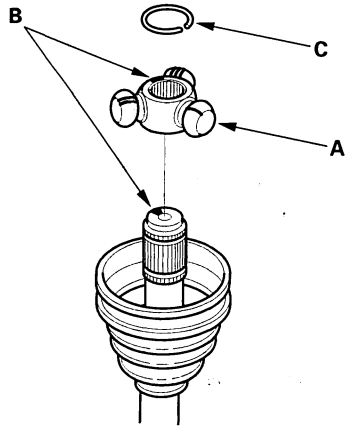
Inboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damage to the inboard boot.



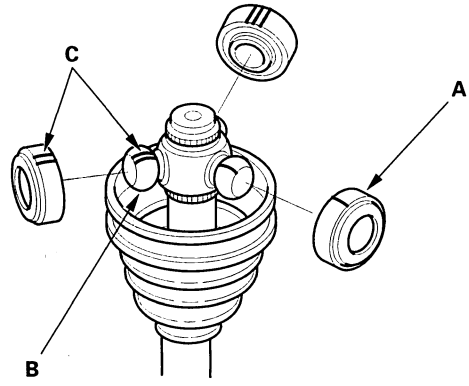
2. Install the inboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the inboard boot.

3. Install the spider (A) onto the driveshaft by aligning the marks (B) on the spider and the end of the driveshaft.



4. Fit the circlip (C) into the driveshaft groove. Rotate the circlip in its groove to make sure it is fully seated.

5. Fit the rollers (A) onto the spider (B) with their high shoulders facing outward, and note these items:
   - Reinstall the rollers in their original positions on the spider by aligning the marks (C).
   - Hold the driveshaft pointed up to prevent the rollers from falling off.

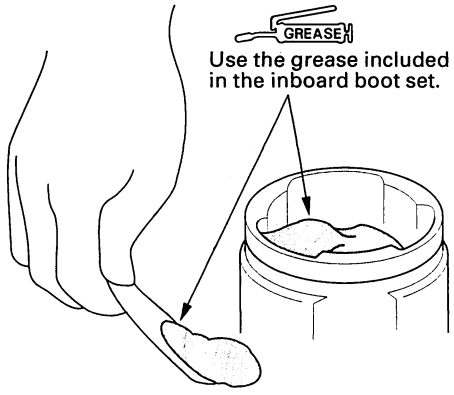


BACK

Protected by AR

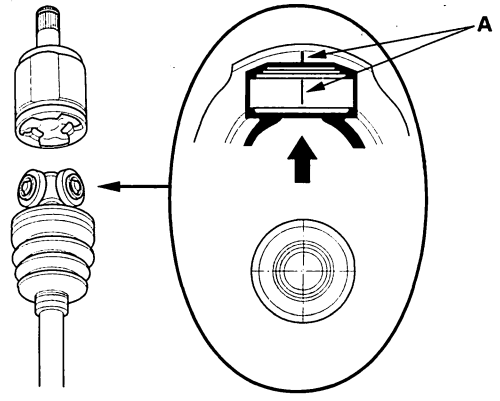
6. Pack the inboard joint with the joint grease included in the new boot set.

Grease quantity
Inboard joint:
A/T model: 130—140 g (4.6—4.9 oz)
M/T model: 150—160 g (5.3—5.6 oz)



7. Fit the inboard joint onto the driveshaft, and note these items:

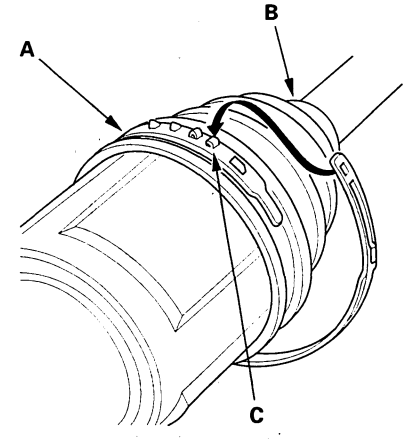
- Reinstall the inboard joint onto the driveshaft by aligning the marks (A) on the inboard joint and the rollers.
- Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.



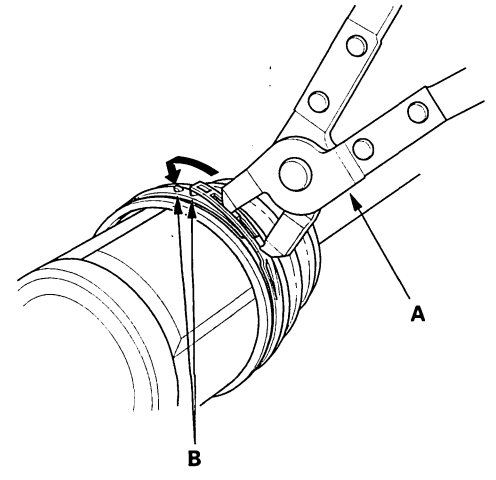
8. Install the boot bands.

- For the double loop type, go to step 13. (Boot band replacement only.)
- For the low profile type, go to step 9.

9. Install the new low profile band (A) onto the boot (B), then hook the tab (C) of the band.



10. Close the hook portion of the band with commercially available boot band pincers (A), then hook the tabs (B) of the band.



11. Install the boot band on the other end of the boot, and repeat steps 9 through 10.

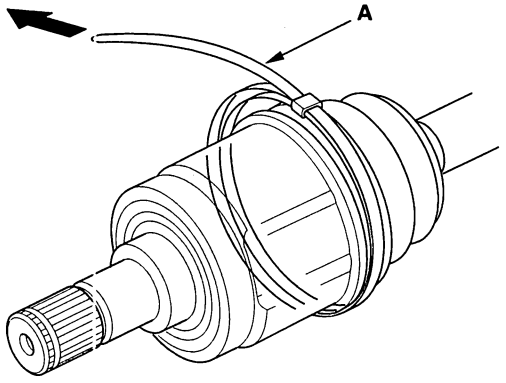
(cont'd)

Protected by AR

Driveshaft Reassembly (cont'd)

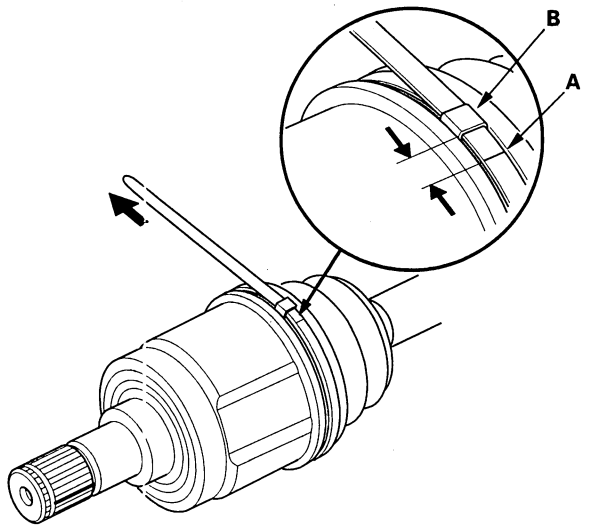
12. Adjust the inboard joint until the rollers are in the middle of the joint.

13. Fit the boot ends onto the driveshaft and the inboard joint, then install the new double loop band (A) onto the boot.

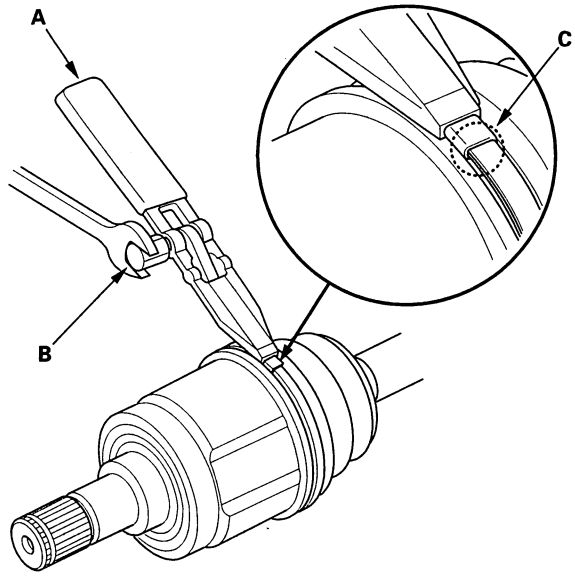


14. Pull up the slack in the band by hand.

15. Mark a position (A) on the band 10—14 mm (0.4—0.6 in.) from the clip (B).

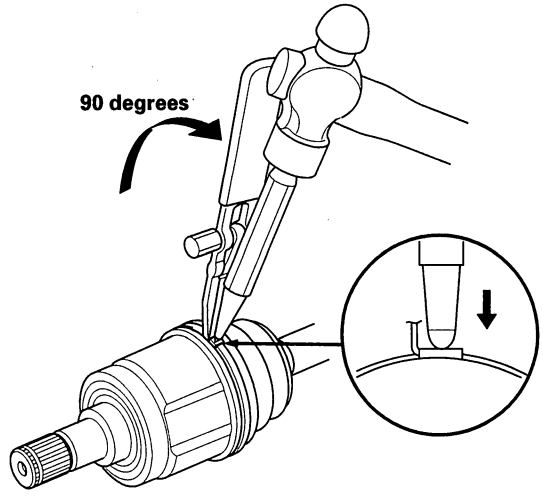


16. Thread the free end of the band through the nose section of the commercially available boot band tool KD-3191 or equivalent (A), and into the slot on the winding mandrel (B).



17. Place a wrench on the winding mandrel of the boot band tool, and tighten the band until the marked spot (C) on the band meets the edge of the clip.

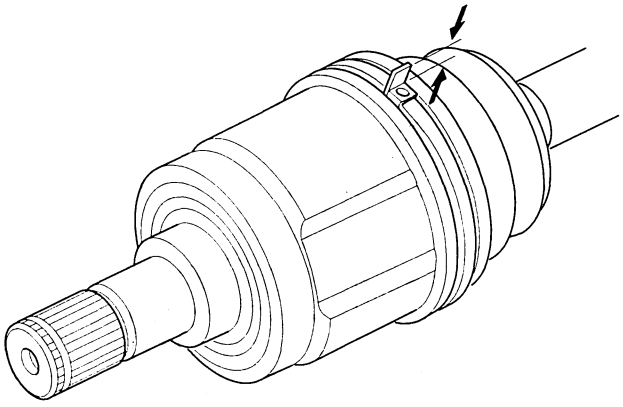
18. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip. Center-punch the clip, then fold over the remaining tail onto the clip.



BACK

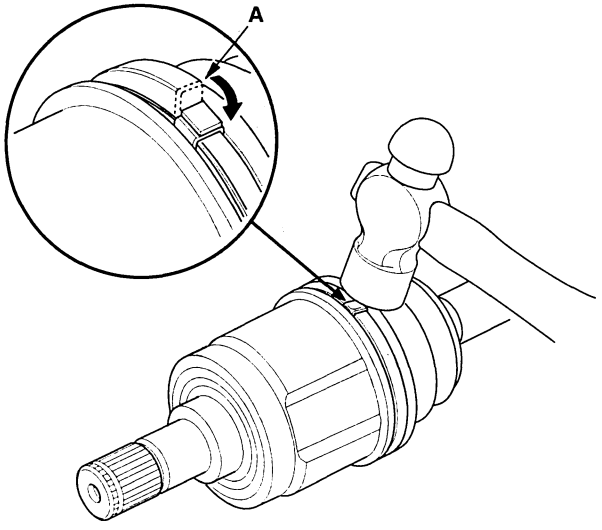
Protected by AR

19. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5—10 mm (0.2—0.4 in.) tail protruding from the clip.



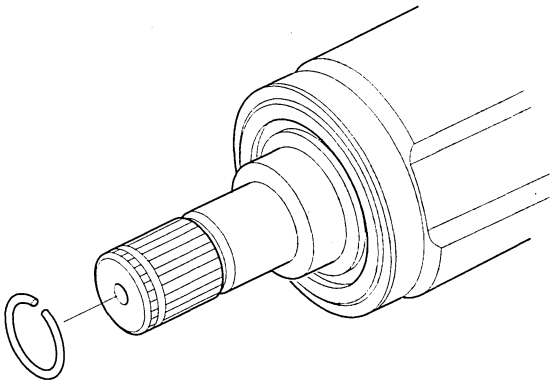
20. Bend the band end (A) by tapping it down with a hammer.

NOTE:
- Make sure the band and clip do not interfere with anything on the vehicle and the band does not move.
- Remove any grease remaining on the surrounding surfaces.



21. Repeat steps 13 through 20 for the band on the other end of the boot.

22. Install the new set ring.



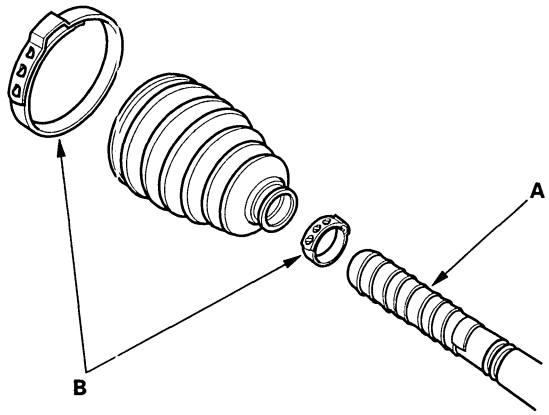
(cont'd)

Protected by AR

Driveshaft Reassembly (cont'd)

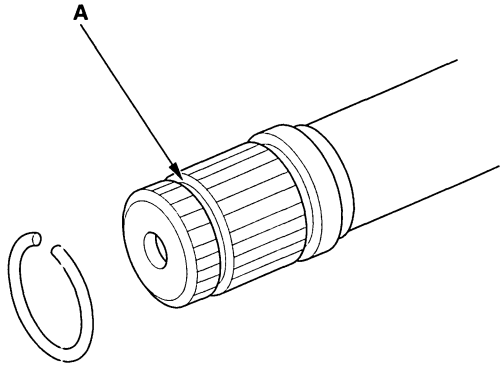
Outboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damage to the outboard boot.

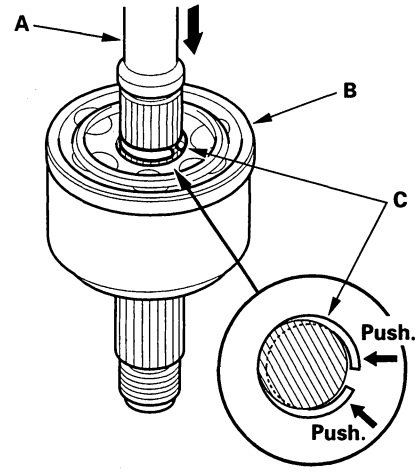


2. Install the new ear clamp bands (B) and outboard boot, then remove the vinyl tape. Be careful not to damage the outboard boot.

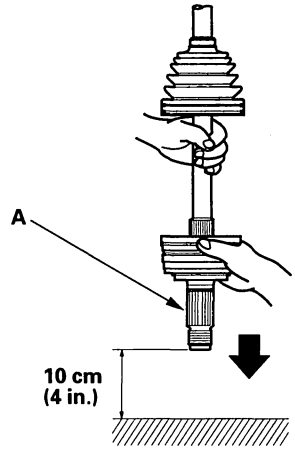
3. Install the new stop ring in the driveshaft groove (A).



4. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.



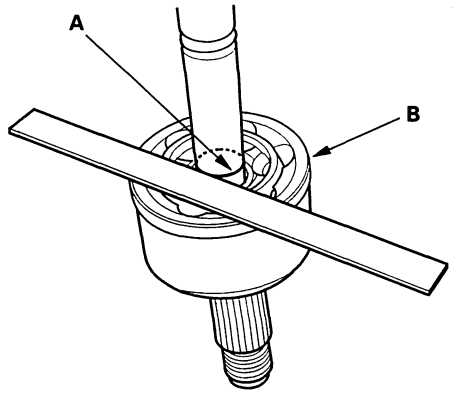
5. To completely seat the outboard joint, pick up the driveshaft and joint, and drop them from about 10 cm (4 in.) onto a hard surface. Do not use a hammer as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.



BACK

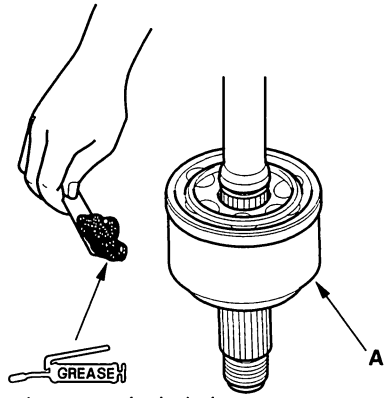
Protected by AR

6. Check the alignment of the paint mark (A) with the outboard joint end (B).



7. Pack the outboard joint (A) with the joint grease included in the new joint boot set.

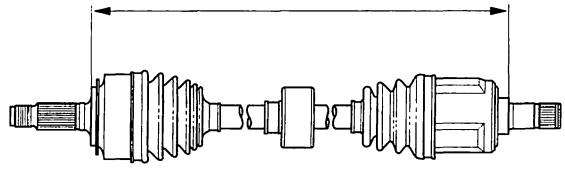
Grease quantity
Outboard joint:
A/T model: 105—115 g (3.7—4.1 oz)
M/T model: 140—150 g (4.9—5.3 oz)



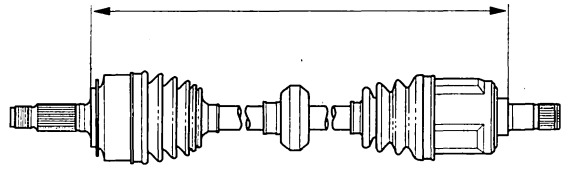
Use the grease included in the outboard boot set.

8. Adjust the length of the driveshafts to these measurements, then adjust the boots to halfway between full compression and full extension. Make sure the ends of the boots seat in the groove of the driveshaft and joint.

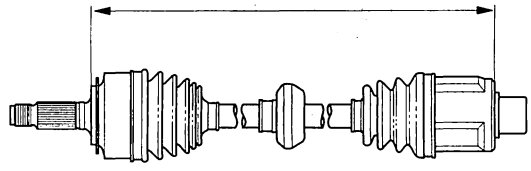
A/T model left driveshaft: 549—554 mm (21.61—21.81 in.)
M/T model left driveshaft: 544—549 mm (21.42—21.61 in.)



A/T model right driveshaft: 849—854 mm (33.43—33.62 in.)



M/T model right driveshaft: 473—478 mm (18.62—18.82 in.)

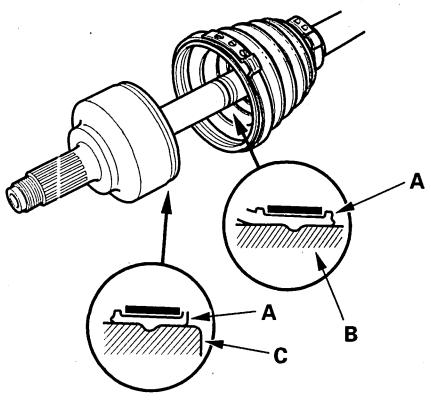


(cont'd)

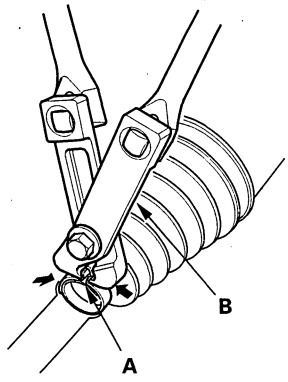
Protected by AR

Driveshaft Reassembly (cont'd)

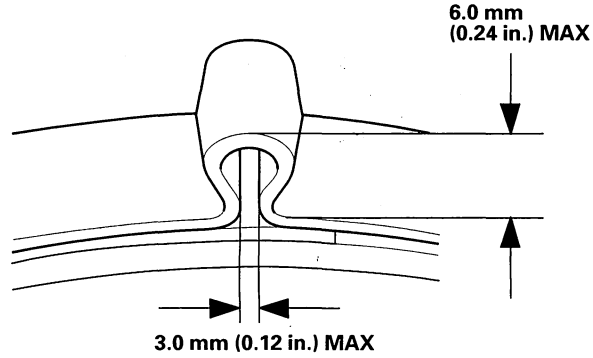
9. Fit the boot (A) ends onto the driveshaft (B) and outboard joint (C).



10. Close the ear portion (A) of the band with commercially available boot band pincers Kent-Moore J-35910 or equivalent (B).



11. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band farther.



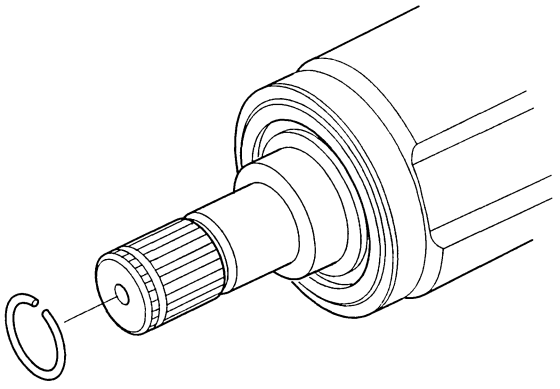
12. Repeat steps 10 and 11 for the band on the other end of the boot.

BACK

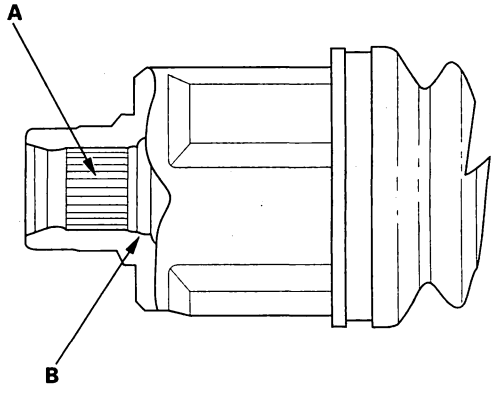
Protected by AR

Driveshaft Installation

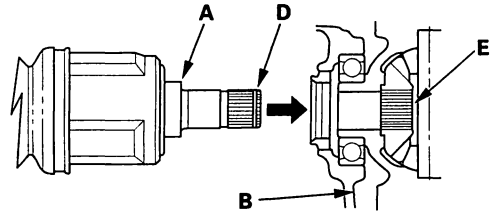
1. Install a new set ring in the set ring groove of the driveshaft (left driveshaft).

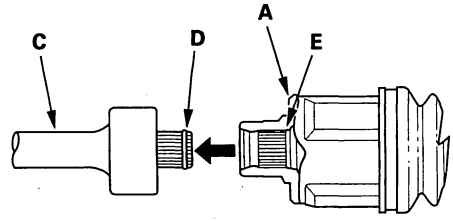


2. Apply 0.5—1.0 g (0.02—0.04 oz) of grease to the whole splined surface (A) of the right driveshaft. After applying grease, remove the grease from the splined grooves at intervals of 2—3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

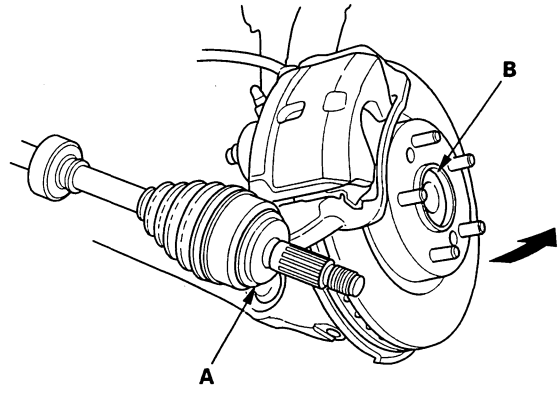


3. Clean the areas where the driveshaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air. Insert the inboard end (A) of the driveshaft into the differential (B) or intermediate shaft (C) until the new set ring (D) locks in the groove (E).





4. Install the outboard joint (A) into the front hub (B).

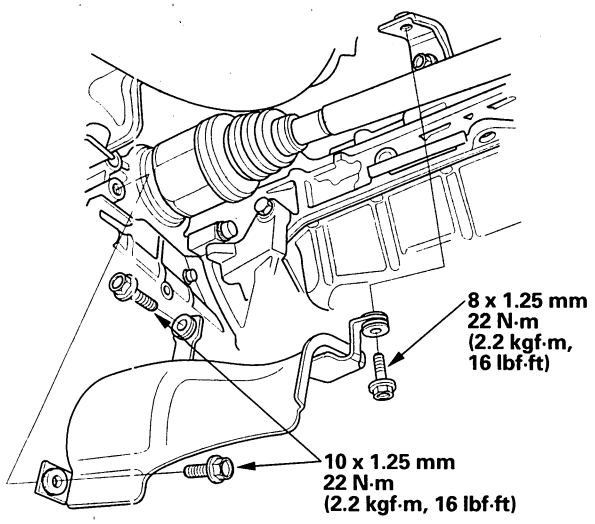


(cont'd)

Protected by AR

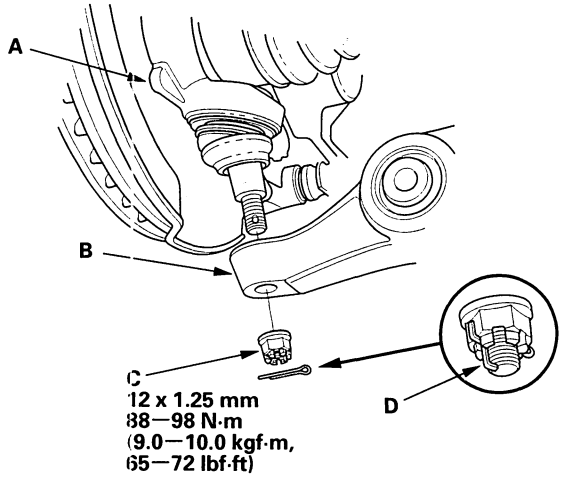
Driveshaft Installation (cont'd)

5. Install the heat shield (A/T model).



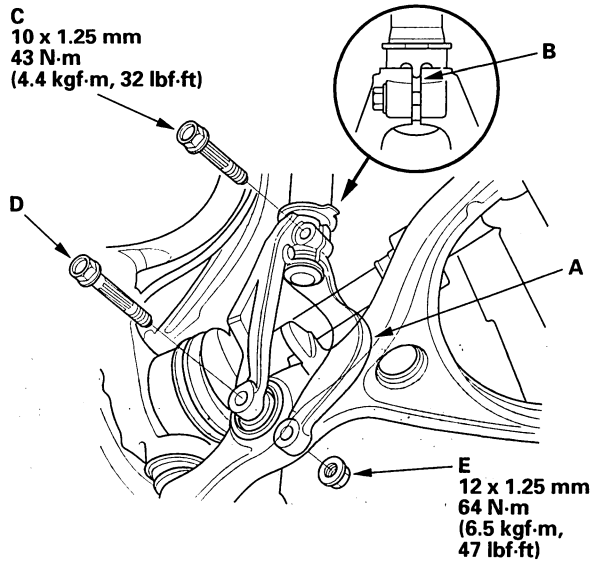
6. Clean off any grease contamination from the ball joint tapered section and threads, then install the knuckle (A) onto the lower arm (B). Torque the new castle nut (C) to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the nut by loosening it.

   NOTE: Make sure the ball joint boot is not damaged or cracked.



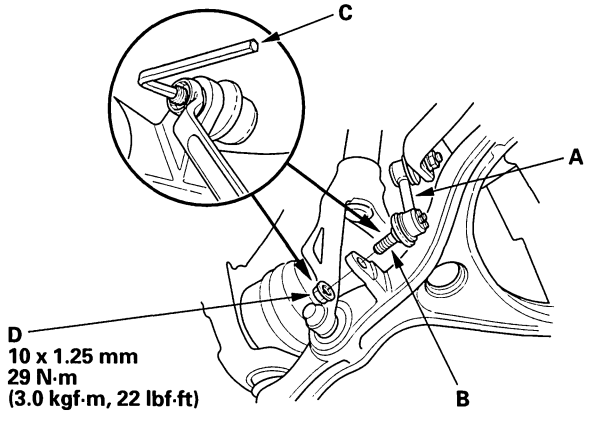
7. Install the new cotter pin (D) into the ball joint pin hole, and bend the cotter pin as shown.

8. Install the damper fork (A) over the driveshaft and onto the lower arm. Install the damper in the damper fork so the aligning tab (B) is aligned with the slot in the damper fork. Loosely install the flange bolt (C).



9. Loosely install the flange bolt (D) and a new self-locking nut (E).

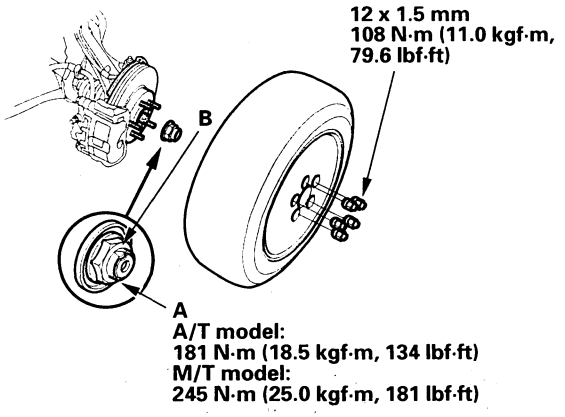
10. Connect the front stabilizer link (A) to the lower arm. Hold the stabilizer link ball joint pin (B) with a hex wrench (C), and tighten the new flange nut (D).



BACK

Protected by AR

11. Install a new spindle nut (A), then tighten the nut. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.



12. Clean the mating surfaces of the brake disc and the front wheel, then install the front wheel with the wheel nuts.

13. Turn the front wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.

14. Tighten the flange bolt and the self-locking nut with the vehicle's weight on the damper.

15. Refill the transmission with recommended transmission fluid:

    - Manual transmission (see page 13-3)
    - Automatic transmission (see page 14-208)

16. Check the front wheel alignment, and adjust it if necessary (see page 18-6).

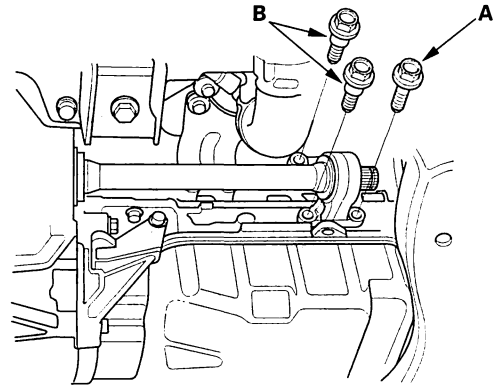
Intermediate Shaft Removal

M/T model

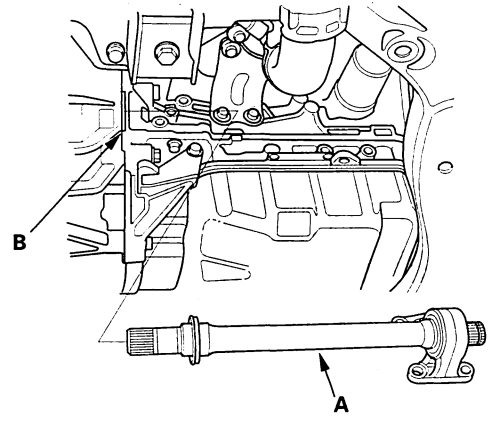
1. Drain the transmission fluid. Reinstall the drain plug using a new washer (see page 13-3).

2. Remove the right driveshaft (see page 16-4).

3. Remove the flange bolt (A) and two dowel bolts (B).



4. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damage to the differential oil seal (B).



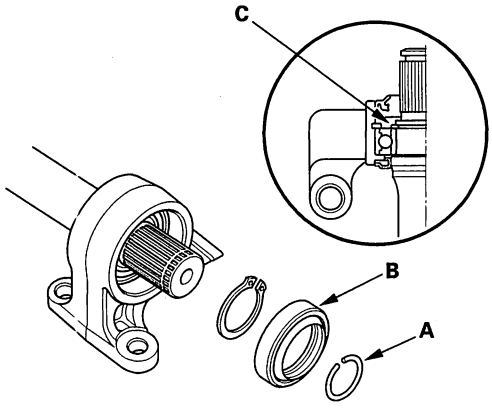
Protected by AR

Intermediate Shaft Disassembly

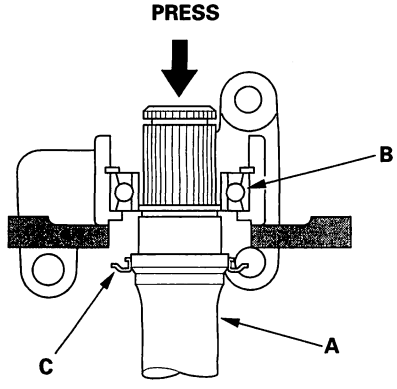
Special Tools Required
- Oil seal driver 07947-SB00100
- Half shaft base 07NAF-SR30101 or 07NAF-SR34101

M/T model

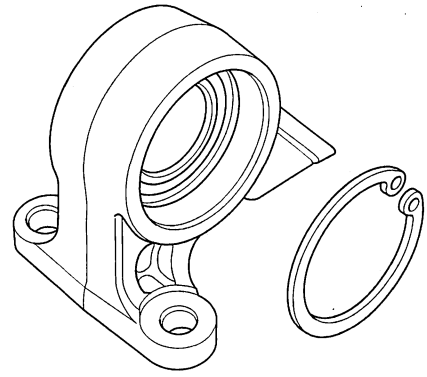
1. Remove the set ring (A), outer seal (B), and external snap ring (C).



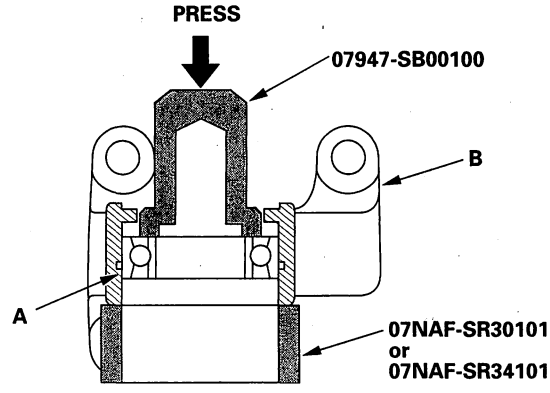
2. Press the intermediate shaft (A) out of the intermediate shaft bearing (B) using a press. Be careful not to damage the metal rings (C) on the intermediate shaft during disassembly.



3. Remove the internal snap ring.



4. Press the intermediate shaft bearing (A) out of the bearing support (B) using the special tools and a press.



BACK

Intermediate Shaft Reassembly (cont'd)

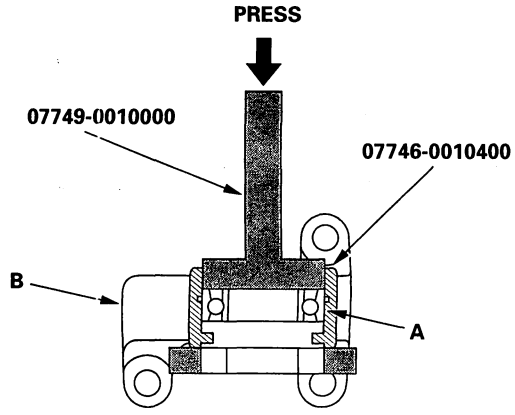
Special Tools Required
- Driver 07749-0010000
- Attachment, 52 x 55 mm 07746-0010400
- Attachment, 35 mm I.D. 07746-0030400
- Oil seal driver 07GAD-PH70201

M/T model

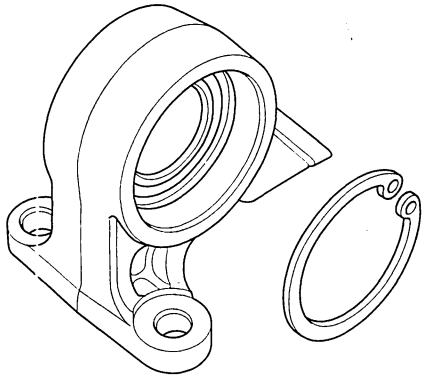
NOTE: Refer to the Exploded View as needed during this procedure.

1. Clean the disassembled parts with solvent, and dry them with compressed air. Do not wash the rubber parts with solvent.

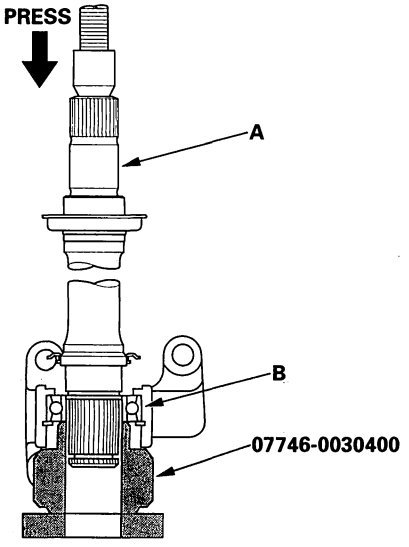
2. Press the intermediate shaft bearing (A) into the bearing support (B) using the special tools and a press.



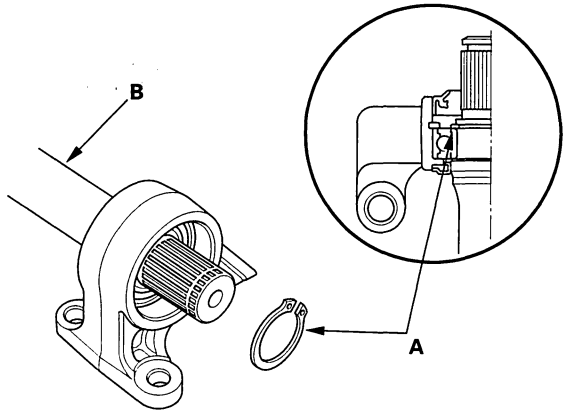
3. Install, then seat the internal snap ring in the groove of the bearing support.



4. Press the intermediate shaft bearing (A) into the shaft bearing (B) using the special tool and a press.



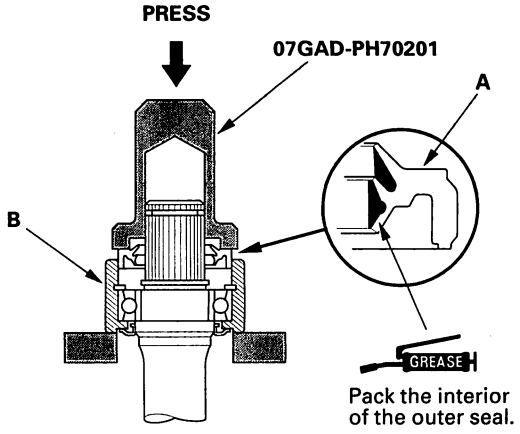
5. Install, then seat the external snap ring (A) in the groove of the intermediate shaft (B).



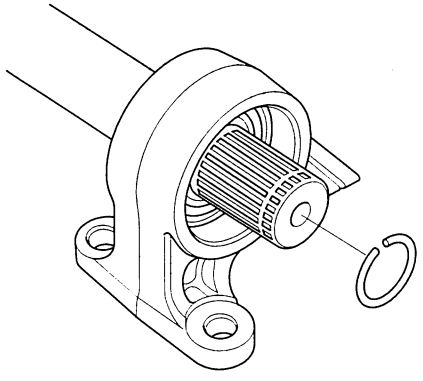
BACK

Protected by AR

6. Install the outer seal (A) into the bearing support (B) using the special tool and a press.



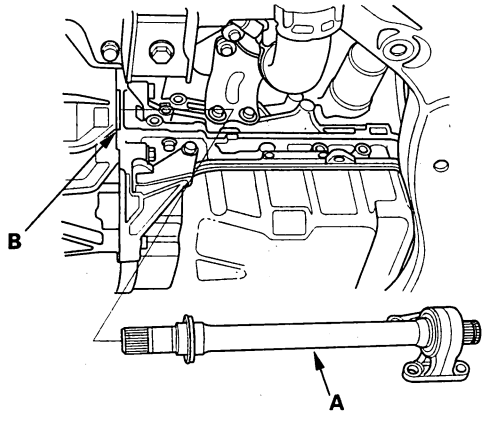
7. Install the set ring.



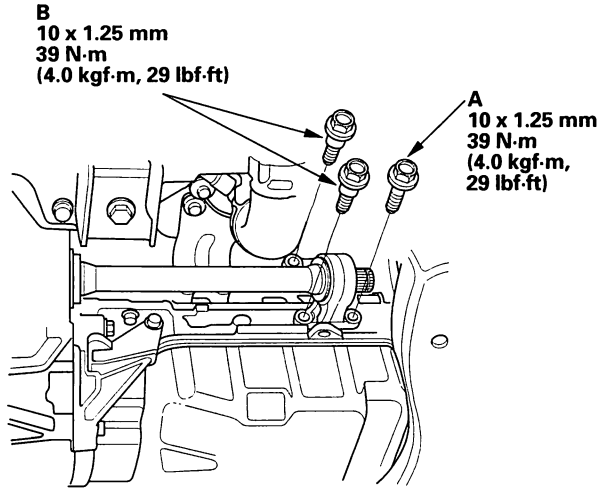
Intermediate Shaft Installation

M/T model

1. Use solvent or brake cleaner to thoroughly clean the areas where the intermediate shaft (A) contacts the transmission (differential), and dry with compressed air. Insert the intermediate shaft assembly into the differential. Hold the intermediate shaft horizontally to prevent damage to the differential oil seal (B).



2. Install the flange bolt (A) and two dowel bolts (B).



3. Install the right driveshaft (see page 16-19).

4. Refill the transmission fluid (see page 13-3).

Protected by AR

SUPPLEMENTAL RESTRAINT SYSTEM (SRS) (If steering wheel or steering column maintenance is required)

The Accord SRS includes a driver's airbag in the steering wheel hub, a passenger's airbag in the dashboard above the glove box, seat belt tensioners in the front seat belt retractors, side curtain airbags in the sides of the roof, and side airbags in the front seat-backs. Information necessary to safely service the SRS is included in this Service Manual. Items marked with an asterisk (*) on the contents page include or are located near SRS components. Servicing, disassembling, or replacing these items require special precautions and tools, and should be done only by an authorized Honda dealer.

- To avoid rendering the SRS inoperative, which could lead to personal injury or death in the event of a severe frontal or side collision, all SRS service work must be performed by an authorized Honda dealer.
- Improper service procedures, including incorrect removal and installation of the SRS, could lead to personal injury caused by unintentional deployment of the airbags and/or side airbags.
- Do not bump or impact the SRS unit, front impact sensors, or side impact sensors when the ignition switch is ON (II), or for at least 3 minutes after the ignition switch is turned OFF; otherwise, the system may fail in a collision, or the airbags may deploy.
- SRS electrical connectors are identified by yellow color coding. Related components are located in the steering column, front console, dashboard, dashboard lower panel, in the dashboard above the glove box, in the front seats, in the roof side, and around the floor. Do not use electrical test equipment on these circuits.

Symptom Troubleshooting Index

Find the symptom in the chart below, and do the related procedures in the order listed until you find the cause.

Symptom	Procedure(s)	Also check for:
Hard steering	Troubleshoot the system (see page 17-6).	• Modified suspension • Damaged suspension • Tire sizes, tire varieties, and air pressure
Assist (excessively light steering at high speed)	Check the rack guide adjustment (see page 17-29).	Front wheel alignment (see page 18-6).
Shock or vibration when the steering wheel is turned to full lock	1. Check the rack guide adjustment (see page 17-29). 2. Check the drive belt for slippage (see page 4-37). 3. Check the power steering pump fluid pressure with T/N 07406-0010001 (see page 17-9) or T/N 07406-001000A (see page 17-10). 4. Overhaul the steering gearbox (see page 17-36).	
Steering wheel will not return smoothly	1. Check cylinder lines for deformation. 2. Check upper and lower ball joints for binding. 3. Check wheel alignment (see page 18-6). 4. Overhaul the steering gearbox (see page 17-36).	
Uneven or rough steering	1. Check the rack guide adjustment (see page 17-29). 2. Check the drive belt (see page 4-37). 3. Check low or erratic engine idle speed (see page 11-315). 4. Check for air in the power steering system due to air entering inlet side of pump. 5. Check for low fluid level in the power steering reservoir due to possible leaks in system. 6. Overhaul the steering gearbox (see page 17-36).	
Steering wheel kicks back during wide turns	1. Check the drive belt (see page 4-37). 2. Check the power steering pump fluid pressure with T/N 07406-0010001 (see page 17-9) or T/N 07406-001000A (see page 17-10).	
Humming noise from the power steering system	1. Check when the noise occurs: • If the noise is heard 2—3 minutes after starting the engine in cold weather, this is normal. • If the noise is heard when the wheel is turned with the vehicle stopped, this is normal due to the fluid pulsation. 2. Check for the high-pressure hose touching the subframe or body. 3. Check for automatic transmission converter noise. 4. Check for air bubbles in the power steering fluid, leak on inlet side of pump. 5. Check for particle contamination of fluid and restricted filter in the reservoir.	Pump pressure

BACK

Protected by AR

Power steering rack rattle or chattering	1. Check for loose steering components (tie-rod and ball joints). Tighten or replace as necessary. 2. Check the steering column shaft for wobbling. If the steering column wobbles, replace the steering column assembly (see page 17-25). 3. Check the rack guide adjustment (see page 17-29). 4. Check the power steering pump pulley. • If the pulley is loose, tighten it (see step 47 on page 17-21). • If the pump shaft is loose, replace the pump (see page 17-14).	
Hissing from the power steering system	• Check the fluid level. If low, fill the reservoir to the proper level and check for leaks. • Check the reservoir for leaks. • Check for crushed inlet hose or loose hose clamp allowing air into the suction side of the system. • Check the power steering pump shaft oil seal for leaks.	Air in the P/S fluid
Noise from the power steering pump	• Compare the pump noise at normal operating temperature to another like vehicle (pump noise up to 2—3 minutes after starting the engine in cold weather is normal). • Remove and inspect the pump for wear and damage (see page 17-15).	• P/S pump pressure • Air in the P/S fluid
Squeaking from the power steering pump	Check the drive belt (see page 4-37).	
Fluid leaks from the steering gearbox	• Fluid leaks from the top of the valve body unit: Overhaul the valve body unit (see page 17-36). • Fluid leaks from the left boot: Replace the valve oil seal on the pinion shaft. Replace the cylinder end seal on the gearbox side. • Fluid leaks from the right boot: Replace the right cylinder end seal. • Fluid leaks from pinion shaft near the lower steering joint bolt: Overhaul the valve body unit. • Fluid leaks from the steering damping valve covers on the valve body unit: Replace the valve housing.	
Fluid leaks from the power steering line	• Fluid leaks from the cylinder line connections (flare nuts): Tighten the connection and retest. • Fluid leaks from damaged cylinder lines: Replace the cylinder line. • Fluid leaks from the pump outlet hose or return line fitting on the valve body unit (flare nuts): Tighten the fitting and retest. If it still leaks, replace the hose, the line, or valve body unit as necessary.	
Fluid leaks from the power steering pump	• Fluid leaks from the front oil seal: Replace the front oil seal. • Fluid leaks from the power steering pump housing: Replace the leaking O-rings or seals (see page 17-15), and if necessary replace the power steering pump (see page 17-14).	
Fluid leaks from the power steering reservoir	• Fluid leaks from around the reservoir cap: Fluid level is too high; drain the reservoir to the proper level. Aerated fluid: check for an air leak on the inlet side of pump. • Fluid leaks from reservoir: Check the reservoir for cracks and replace as necessary.	
Fluid leaks from the power steering pump outlet hose (high-pressure)	• Check the fitting for loose bolts. If the bolts are tight, replace the fitting O-ring. • Fluid leaks at the swagged joint: Replace the outlet hose.	
Fluid leaks from the power steering pump inlet hose (low-pressure)	Check the hose for damage, deterioration, or improper assembly. Replace or repair as necessary.	

Protected by AR

Symptom Troubleshooting

Hard Steering

1. Check the power assist (see page 17-7).

   Is the starting load more than 29 N (3.0 kgf, 6.6 lbf)?

   YES—Go to step 2.

   NO—Power assist is OK.■

2. Measure steady-state fluid pressure from the pump at idle with T/N 07406-0010001 (see page 17-9) or T/N 07406-001000A (see page 17-10).

   Is the pressure 1,470 kPa (15 kgf/cm², 213 psi) or less?

   YES—Go to step 3.

   NO—Go to step 7.

3. Measure the pump relief pressure at idle with T/N 07406-0010001 (see step 10 on page 17-9) or T/N 07406-001000A (see step 9 on page 17-10).

   Is the pressure 7,160—7,850 kPa (73—80 kgf/cm², 1,040—1,140 psi) or less?

   YES—Go to step 4.

   NO—Faulty pump assembly.■

4. With a spring scale, measure the power assist in both directions, to the left and to the right.

   Are the two measurements within 2.9 N (0.3 kgf, 0.66 lbf) of each other?

   YES—Go to step 5.

   NO—Go to step 8.

5. Measure the fluid pressure with both pressure gauge valves open (if so equipped), while turning the steering wheel fully to the left and fully to the right.

   Is the pressure 7,160—7,850 kPa (73—80 kgf/cm², 1,040—1,140 psi) or less?

   YES—Go to step 6.

   NO—Faulty gearbox.■

6. Adjust the rack guide (see page 17-29), and retest.

   Is the steering OK?

   YES—Repair is completed.■

   NO—Faulty gearbox.■

7. Check the feed and return lines between the pump and the gearbox for clogging and deformation.

   Are the lines clogged or deformed?

   YES—Repair or replace the lines.■

   NO—Faulty valve body unit or pump.■

8. Check the cylinder lines for deformation (see page 17-11).

   Are the lines deformed?

   YES—Replace the lines.■

   NO—Go to step 9.

9. Check for a bent rack shaft or misadjusted rack guide (too tight).

   Is the rack shaft bent or the rack guide adjusted too tight?

   YES—Replace the rack shaft or readjust the rack guide.■

   NO—Faulty valve body unit.■

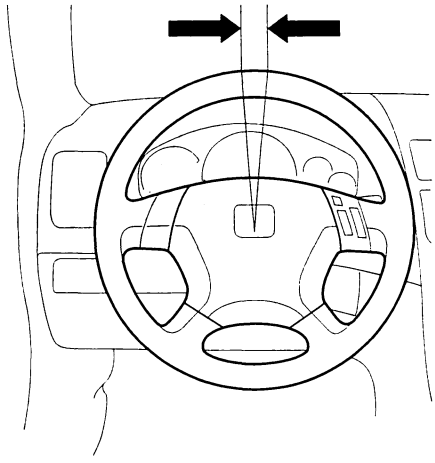
BACK

Protected by AR

Steering Wheel Rotational Play Check

1. Turn the front wheels to the straight ahead position.
2. Measure how far you can turn the steering wheel left and right without moving the front wheels.
   - If the play is within the limit, the gearbox and linkages are OK.
   - If the play exceeds the limit, adjust the rack guide (see page 17-29). If the play is still excessive after rack guide adjustment, inspect the steering linkage and gearbox (see page 17-8).

Rotational play: 0—10 mm (0—0.39 in.)



Power Assist Check

NOTE: This test should be done with original equipment tires and wheels at the correct tire pressure.

1. Check the power steering fluid level (see page 17-12).
2. Start the engine, let it idle, and turn the steering wheel from lock-to-lock several times to warm up the fluid.
3. Attach commercially available spring scale to the steering wheel. With the engine idling and the vehicle on a clean, dry floor, pull the scale as shown and read it as soon as the tires begin to turn.
   - If the scale reads no more than the specifications, the gearbox and pump are OK.
   - If the scale reads more than specifications, troubleshoot the steering system (see page 17-6).

Initial turning load: 29 N (3.0 kgf, 6.6 lbf)

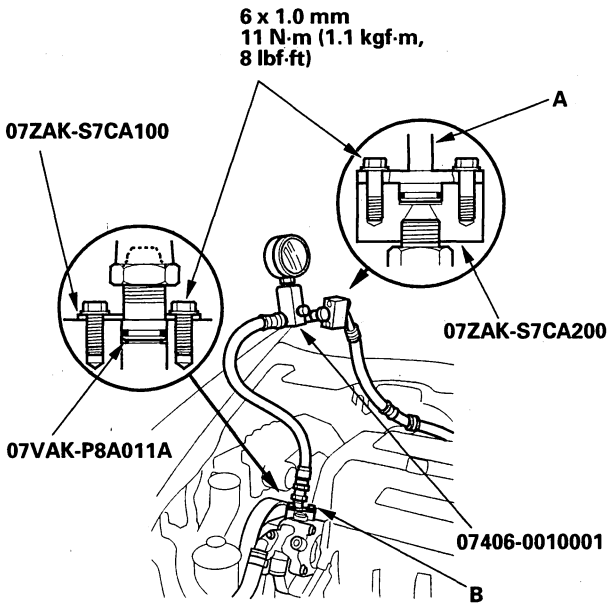
Pump Pressure Test with T/N 07406-0010001

Special Tools Required
- P/S joint adapter (pump) 07VAK-P8A011A
- P/S joint adapter plate (pump) 07ZAK-S7CA100
- P/S joint adapter (hose) 07ZAK-S7CA200
- P/S pressure gauge 07406-0010001

Check the fluid pressure as follows to determine whether the trouble is in the pump or gearbox.

1. Check the power steering fluid level (see page 17-12).

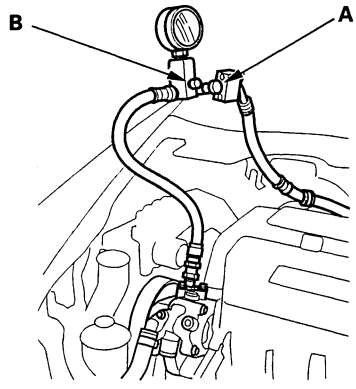
2. Disconnect the pump outlet hose (A) from the pump outlet with care so as not to spill the power steering fluid on the frame and other parts. Install the P/S joint adapter (pump) on the pump outlet (B).



3. Connect the P/S joint adapter (hose) to the P/S pressure gauge, then connect the pump outlet hose to the P/S joint adapter (hose).

4. Install the P/S pressure gauge to the P/S joint adapter (pump).

5. Fully open the shut-off valve (A).



6. Fully open the pressure control valve (B).

7. Start the engine and let it idle.

8. Turn the steering wheel from lock-to-lock several times to warm the fluid to operating temperature at 158 °F (70 °C).

9. Measure steady-state fluid pressure while the engine is idling. If the pump is in good condition, the pressure should be no more than 1,470 kPa (15 kgf/cm², 214 psi). If the pressure is too high, check the outlet hose or valve body unit (see Steering System Troubleshooting).
   Raise the engine speed to 3,000 rpm, and measure the fluid pressure. If the pump is in good condition, the pressure should be at least 1,470 kPa (15 kgf/cm², 214 psi). If the pressure is too high, repair or replace the pump.

10. Lower the engine speed and let it idle. Close the shut-off valve, then close the pressure control valve gradually until the pressure gauge needle is stable. Read the pressure.

    NOTICE
    Do not keep the shut-off valve closed more than 5 seconds or the pump could be damaged by over-heating.

11. Immediately open the shut-off valve fully. If the pump is in good condition, the gauge should read at least 7,160—7,850 kPa (73—80 kgf/cm², 1,040—1,140 psi). A low reading means pump output is too low for full assist. Repair or replace the pump.

Protected by AR

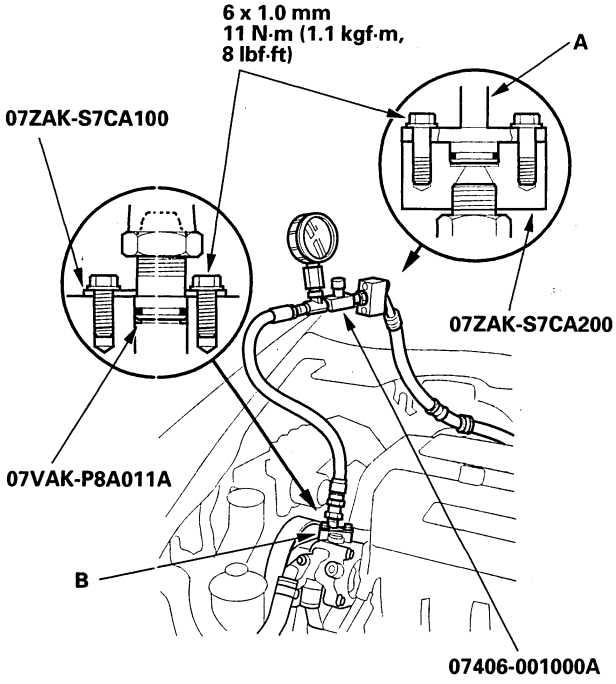
Pump Pressure Test with T/N 07406-001000A

Special Tools Required
- P/S joint adapter (pump) 07VAK-P8A011A
- P/S joint adapter plate (pump) 07ZAK-S7CA100
- P/S joint adapter (hose) 07ZAK-S7CA200
- P/S pressure gauge 07406-001000A

Check the fluid pressure as follows to determine whether the trouble is in the pump or gearbox.

1. Check the power steering fluid level (see page 17-12).

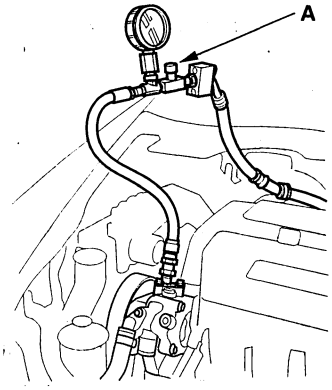
2. Disconnect the pump outlet hose (A) from the pump outlet with care so as not to spill the power steering fluid on the frame and other parts. Install the P/S joint adapter (pump) on the pump outlet (B).



3. Connect the P/S joint adapter (hose) to the P/S pressure gauge, then connect the pump outlet hose to the P/S joint adapter (hose).

4. Install the P/S pressure gauge to the P/S joint adapter (pump).

5. Open the pressure control valve (A) fully.



6. Start the engine and let it idle.

7. Turn the steering wheel from lock-to-lock several times to warm the fluid to operating temperature at 158 °F (70 °C).

8. Measure steady-state fluid pressure while the engine is idling. If the pump is in good condition, the pressure should be no more than 1,470 kPa (15 kgf/cm², 213 psi). If the pressure is too high, check the outlet hose or valve body unit (see Steering System Troubleshooting).
   Raise the engine speed to 3,000 rpm, and measure the fluid pressure. If the pump is in good condition, the pressure should be at least 1,470 kPa (15 kgf/cm², 213 psi). If the pressure is too high, repair or replace the pump.

9. Lower the engine speed and let it idle. Gradually close the pressure control valve and immediately read the pressure.

   NOTICE
   Do not keep the pressure control valve closed more than 5 seconds or the pump could be damaged by over-heating.

10. Immediately open the pressure control valve fully. If the pump is in good condition, the gauge should read at least 7,160—7,850 kPa (73—80 kgf/cm², 1,040—1,140 psi). A low reading means pump output is too low for full assist. Repair or replace the pump.

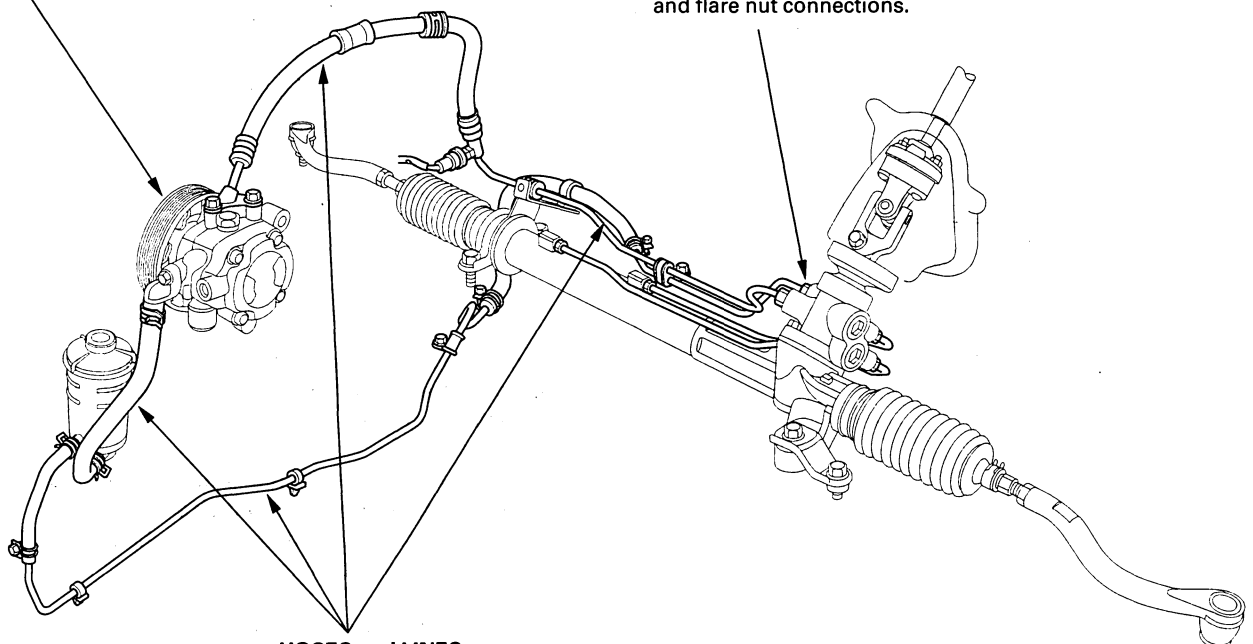
Fluid Leakage Inspection

PUMP ASSEMBLY
Check for leaks at the pump seal and inlet and outlet fittings.

GEARBOX and VALVE BODY UNIT
Check for leaks at the mating surface and flare nut connections.



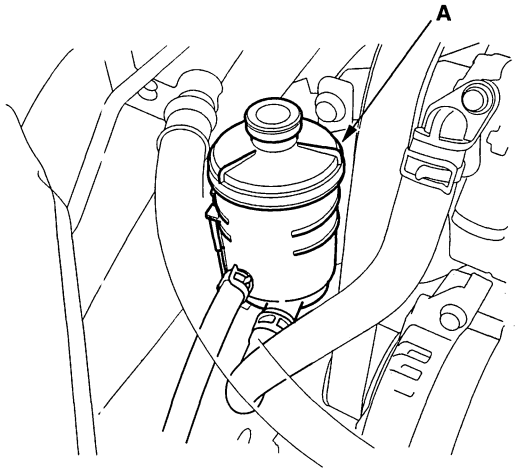
HOSES and LINES
Inspect hoses for damage, leaks, interference, and twisting.
Inspect fluid lines for damage, rusting, and leakage.
Check for leaks at hose and line joints and connections.

Protected by AR

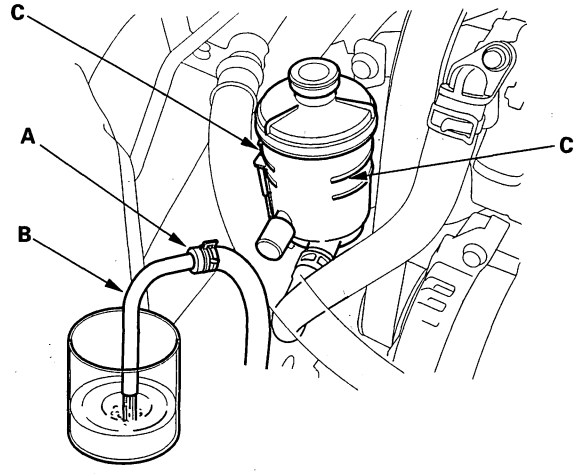
Fluid Replacement

Check the reservoir (A) at regular intervals, and add the recommended fluid as necessary. Always use Honda Power Steering Fluid. Using any other type of power steering fluid or automatic transmission fluid can cause increased wear and poor steering in cold weather.

System capacity:
1.1 L (1.16 US. qt) at disassembly
Reservoir capacity:
0.4 L (0.42 US. qt)



1. Raise the reservoir, then disconnect the return hose (A) to drain the reservoir. Take care not to spill the fluid on the body and parts. Wipe off any spilled fluid at once.



2. Connect a hose (B) of suitable diameter to the disconnected return hose, and put the hose end in a suitable container.
3. Start the engine, let it run at idle, and turn the steering wheel from lock-to-lock several times. When fluid stops running out of the hose, shut off the engine. Discard the fluid.
4. Reinstall the return hose on the reservoir.
5. Fill the reservoir to the upper level line (C).
6. Start the engine and run it at fast idle, then turn the steering wheel from lock-to-lock several times to bleed air from the system.
7. Recheck the fluid level and add more if necessary. Do not fill the reservoir beyond the upper level line.
8. If the fluid is contaminated, dark, or discolored, repeat procedure as necessary.

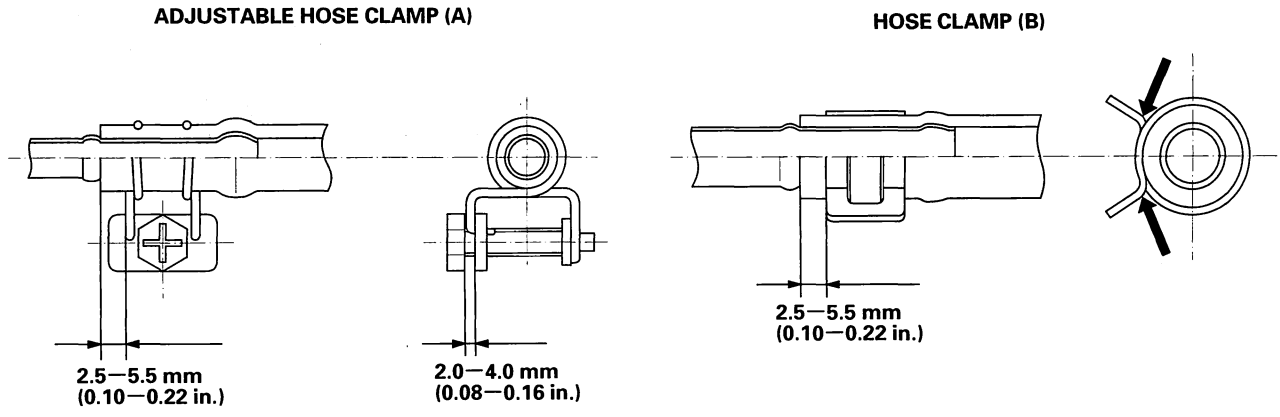
BACK

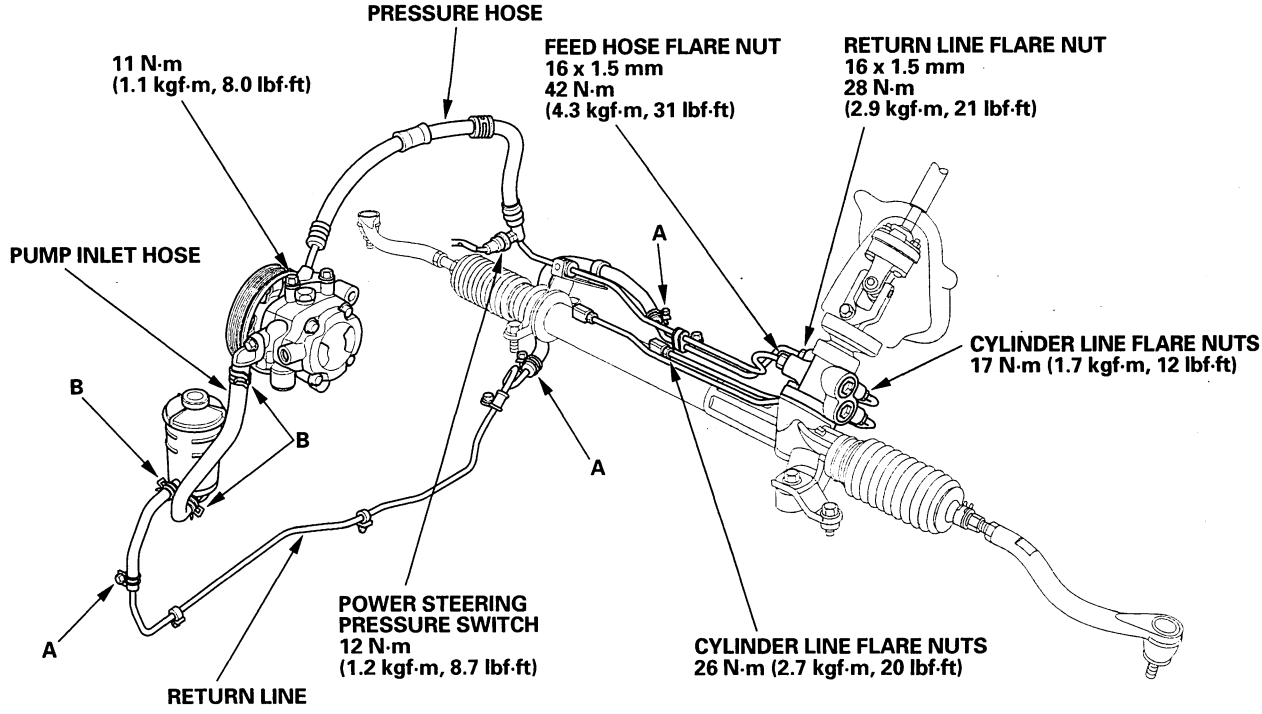
Protected by AR

Power Steering Hose, Line, and Pressure Switch Replacement

Note these items during installation:

- Connect each hose to the corresponding line securely until it contacts the stop on the line. Install the clamp or adjustable clamp at the specified distance from the hose end as shown.
- Check all clamps for deterioration or deformation; replace the clamps with new ones if necessary.
- Add the recommended power steering fluid to the specified level on the reservoir and check for leaks.

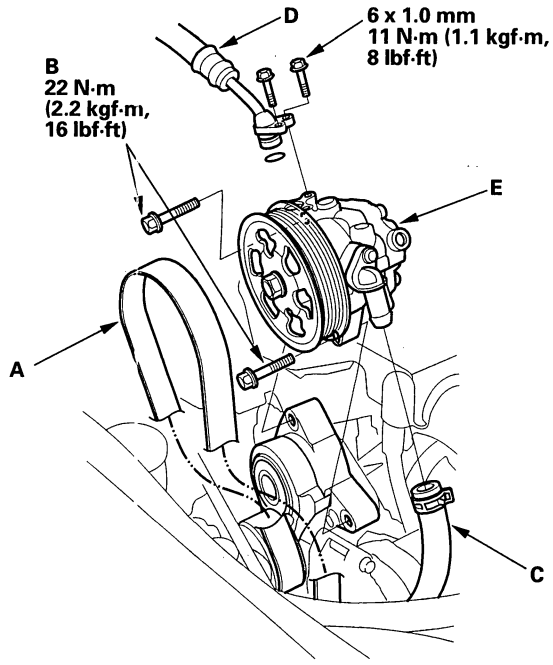




Protected by AR

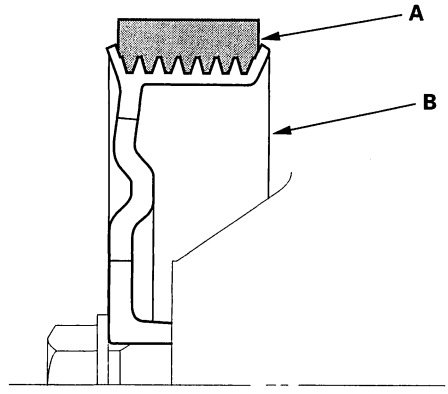
Pump Replacement

1. Place a suitable container under the vehicle.
2. Drain the power steering fluid from the reservoir.
3. Remove the drive belt (A) from the pump pulley (see page 4-37).



4. Remove the pump mounting bolts (B).
5. Cover the auto-tensioner, alternator, and A/C compressor with several shop towels to protect them from spilled power steering fluid. Disconnect the pump inlet hose (C) and pump outlet hose (D) from the pump (E), and plug them. Take care not to spill the fluid on the body or parts. Wipe off any spilled fluid at once. Do not turn the steering wheel with the pump removed.
6. Cover the opening of the pump with a piece of tape to prevent foreign material from entering the pump.
7. Connect the pump inlet hose and pump outlet hose.
8. Loosely install the pump in the pump bracket with the mounting bolts, then tighten the pump fittings securely.
9. Install the drive belt (A).

   Note these items during belt installation:
   - Make sure that the belt is properly positioned on the pulleys (B).
   - Do not get power steering fluid or grease on the auto-tensioner, alternator, A/C compressor, and drive belt or pulley faces. Clean off any fluid or grease before installation.



10. Tighten the pump mounting bolts to the specified torque.
11. Fill the reservoir to the upper level line (see page 17-12).

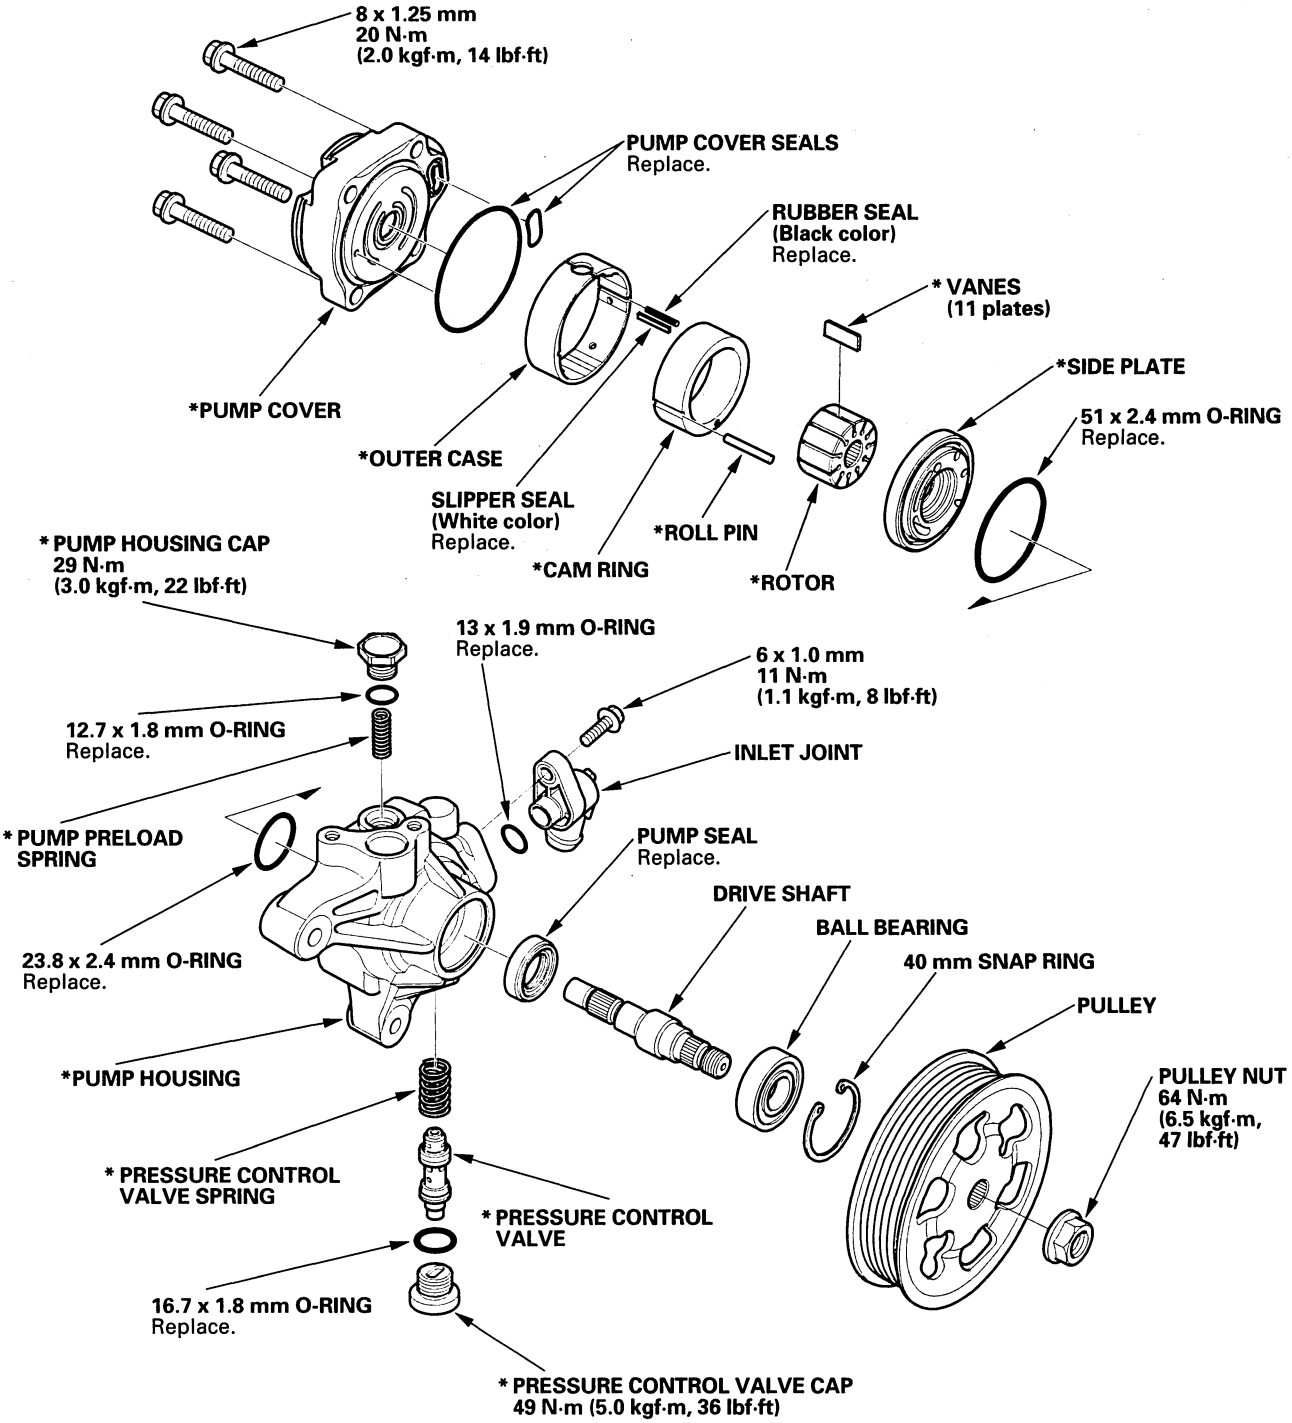
Pump Overhaul

Exploded View

Replace the pump as an assembly if the parts indicated with asterisk (*) are worn or damaged.



(cont'd)

Protected by AR

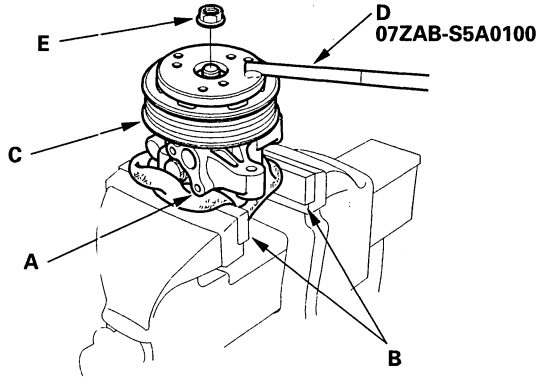
Pump Overhaul (cont'd)

Special Tools Required
- Attachment, 32 x 35 mm 07746-0010100
- Driver 07749-0010000
- Pulley holder 07ZAB-S5A0100

Disassembly

NOTE: Refer to the Exploded View as needed during the following procedure.

1. Drain the fluid from the pump (see page 17-12).
2. Remove the power steering pump (see page 17-14).
3. Hold the power steering pump (A) in a vise with soft jaws (B), hold the pulley (C) with the special tool (D), and remove the pulley nut (E) and pulley. Be careful not to damage the pump housing with the jaws of the vise.



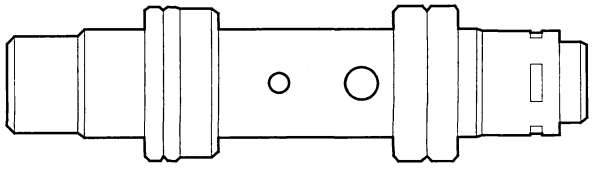
4. Remove the inlet joint and O-ring.
5. Remove the pressure control valve cap, O-ring, valve spring, and pressure control valve.
6. Remove the pump housing cap, O-ring, and pump preload spring.
7. Remove the pump cover and pump cover seals.
8. Pull out the roll pin.
9. Remove the outer case, cam ring, rotor, vanes, and side plate.
10. Remove the rubber seal and slipper seal from the outer case.
11. Remove the O-rings from the bottom of the housing.
12. Remove the snap ring, then remove the drive shaft by tapping the shaft end with the plastic hammer.
13. Remove the seal from the pump housing.

BACK

Protected by AR

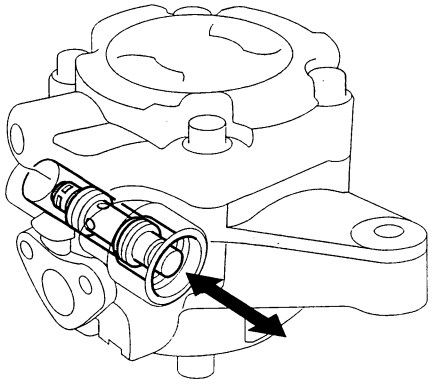
Inspection

14. Check the pressure control valve for wear, burrs, and other damage to the edges of the grooves in the valve.



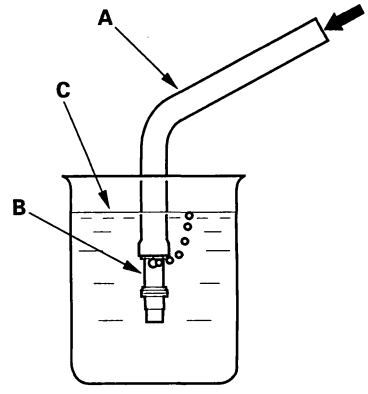
15. Inspect the bore of the pressure control valve on the pump housing for scratches and wear.

16. Slip the pressure control valve back in the pump housing, and check that it moves in and out smoothly. If OK, go to step 17; if not, replace the pump as an assembly. The pressure control valve is not available separately.

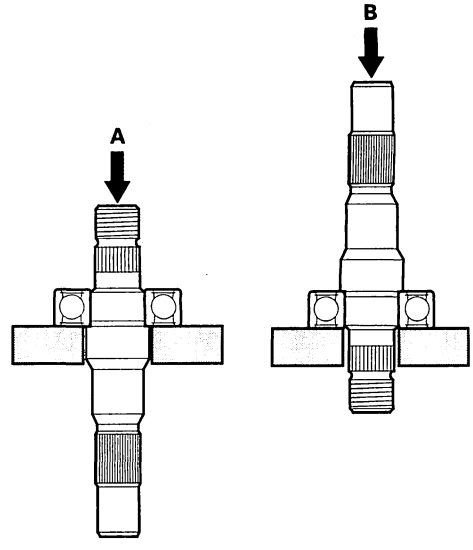


17. Attach a hose (A) to the end of the pressure control valve (B) as shown. Then submerge the pressure control valve in a container of power steering fluid or solvent (C), and blow in the hose.

    - If air bubbles leak through the valve at less than 98 kPa (1.0 kgf/cm², 14.2 psi), replace the pump as an assembly. The pressure control valve is not available separately.
    - If the pressure control valve is OK, set it aside for reassembly later.



18. Inspect the ball bearing by rotating the outer race slowly. If you feel any play (axial or radial) or roughness, remove the faulty ball bearing (A), and install a new one (B).



19. Inspect each part shown with an asterisk in the Exploded View; if any of them are worn or damaged, replace the pump as an assembly.

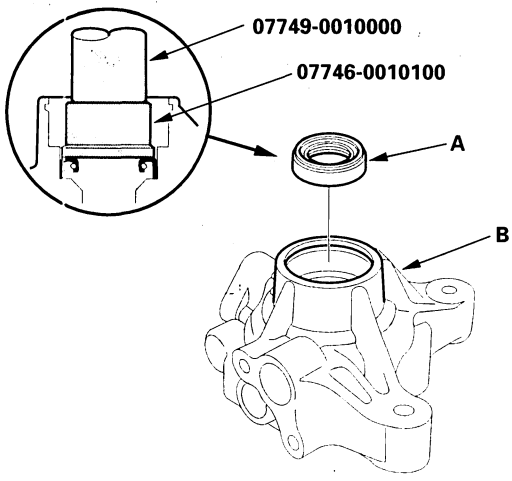
(cont'd)

Protected by AR

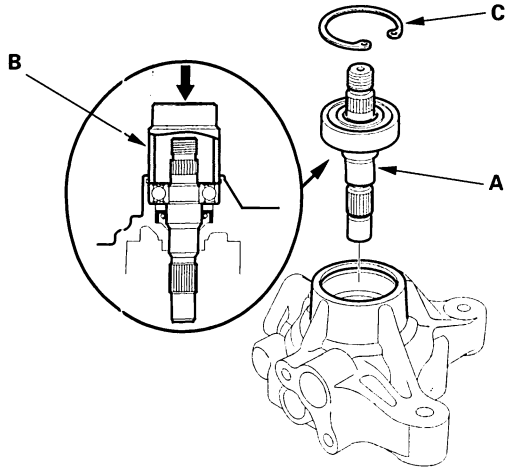
Pump Overhaul (cont'd)

Reassembly

20. Install the new pump seal (A) (with its grooved side facing in) into the pump housing (B) by hand first, then drive it in using the special tools until there is no step at the top of the pump seal, and the seal is fully seated in the pump housing.

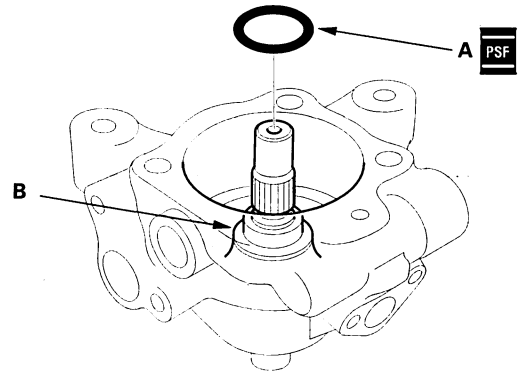


21. Position the pump drive shaft (A) in the pump housing, then press it in with the appropriate size socket wrench (B) as shown. Do not apply more than 1,370 N (140 kgf, 308 lbf) of pressure.

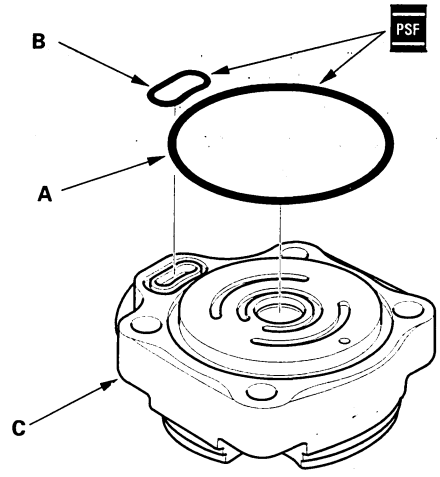


22. Install the 40 mm snap ring (C) with its radiused edge facing out.

23. Coat the new 23.8 mm O-ring (A) with power steering fluid, then position it on the bottom (B) of the pump housing.



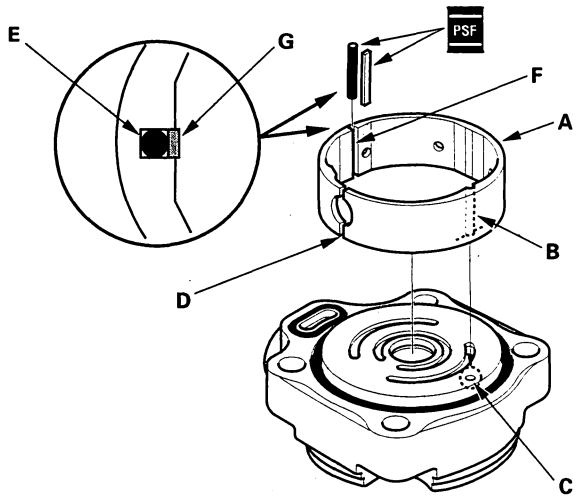
24. Coat the new cover seals (A) and (B) with power steering fluid, then position them into the grooves on the cover (C).



BACK

Protected by AR

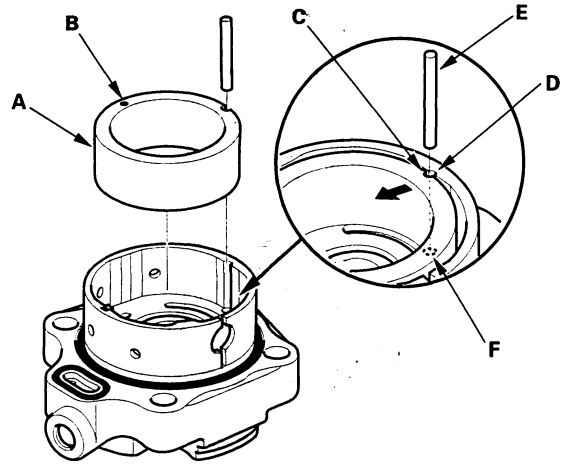
25. Install the outer case (A) by aligning the slot (B) with the cover roll pin hole (C). Be sure that the slit (D) on the outer case is positioned as shown.



26. Apply the power steering fluid to the rubber seal (E) (black), and install it in the slot (F) of the outer case.

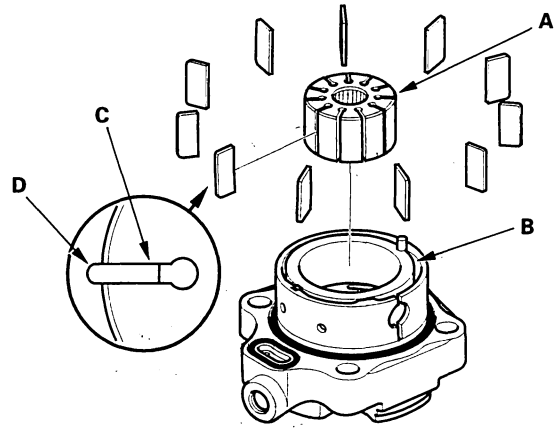
27. Apply power steering fluid to the slipper seal (G) (white), and install it on top of the rubber seal you just installed.

28. Install the cam ring (A) with the "·" mark (B) facing up. Align the slot (C) with the slot (D) in the outer case.



29. Insert the roll pin (E) into the slots between the cam ring and outer case, then push roll pin into the set hole (F).

30. Install the rotor (A) in the cam ring (B).



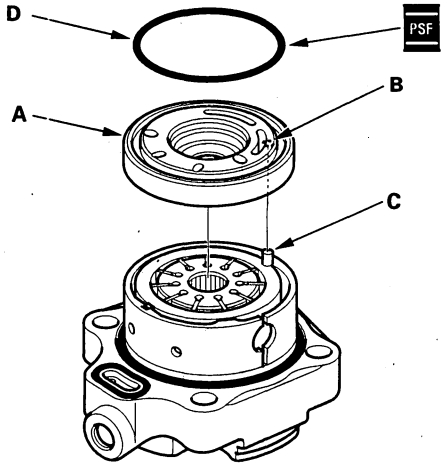
31. Set the 11 vanes (C) in the grooves in the rotor. Make sure that the round ends (D) of the vanes are in contact with the sliding surface of the cam ring.

(cont'd)

Protected by AR

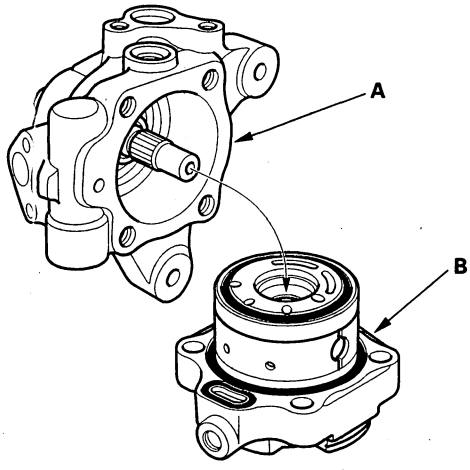
Pump Overhaul (cont'd)

32. Place the side plate (A) on the cam ring, and aligning the roll pin set hole (B) in the side plate with the roll pin end (C).

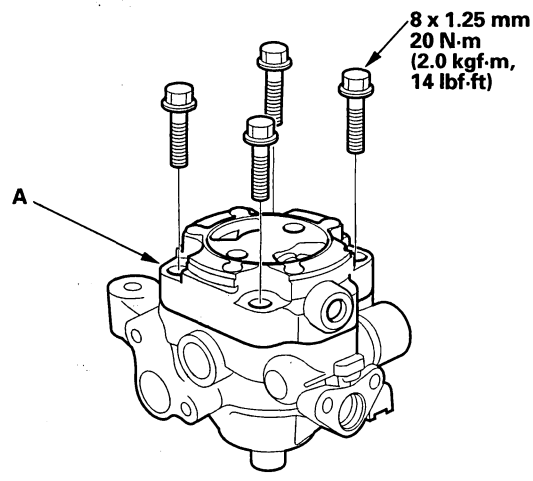


33. Coat the new O-ring (D) with the power steering fluid, then position it into the groove on the side plate.

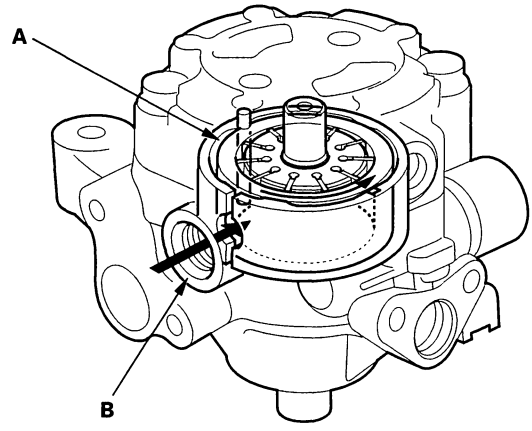
34. Install the pump housing (A) over the cover assembly (B).



35. Align the bolt holes in the cover (A) with the threaded holes in the pump housing. Install the flange bolts loosely first, then torque the flange bolts in a criss cross pattern in two or more steps.



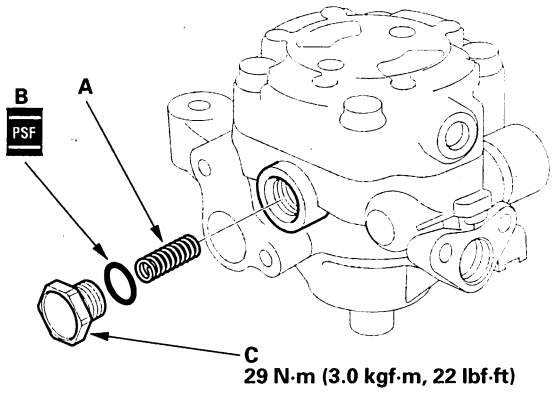
36. Push in the cam ring (A) from the pump housing cap hole (B) with a flat blade screwdriver, to make sure the cam ring is fully seated against the outer case.



BACK

Protected by AR

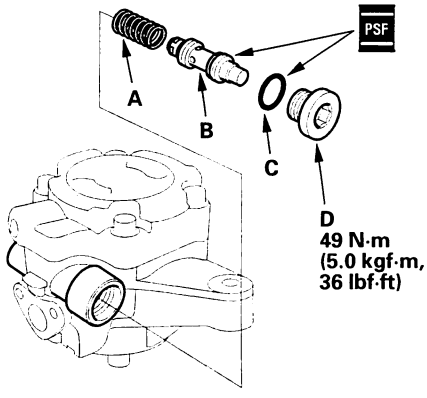
37. Install the pump preload spring (A) in the pump housing.



38. Coat the new 12.7 mm O-ring (B) with power steering fluid, and install it on the pump housing cap (C).

39. Install the pump housing cap on the pump housing, and tighten it to specified torque.

40. Install the pressure control valve spring (A) in the pump housing.

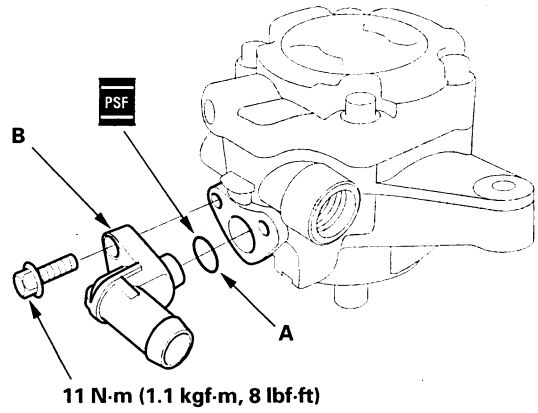


41. Coat the pressure control valve (B) with power steering fluid, and install it on the pump housing.

42. Coat the new 16.7 mm O-ring (C) with power steering fluid, and install it on the pressure control valve cap (D).

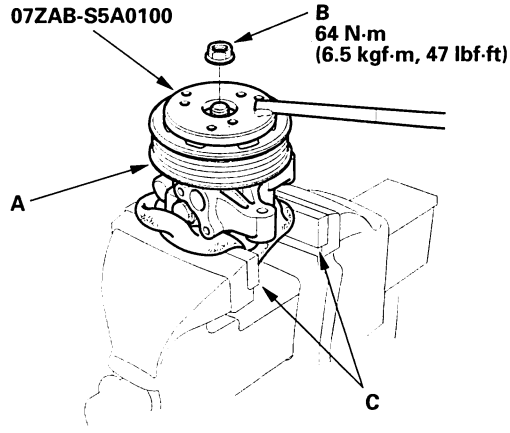
43. Install the pressure control valve cap on the pump housing, and tighten it to the specified torque.

44. Coat the new 13 mm O-ring (A) with power steering fluid, and install it on the inlet joint (B).



45. Install the inlet joint on the pump housing.

46. Install the pulley (A), then loosely install the pulley nut (B). Hold the power steering pump in a vise with soft jaws (C). Be careful not to damage the pump housing with the jaws of the vise.



47. Hold the pulley with the special tool, and tighten the pulley nut to specified torque.

48. Check that the pump turns smoothly by turning the pulley. If it turns hard, loosen the four flange bolts on the cover, then retightening them in the same manner as in the step 35. Turning the pump again by hand.

Steering Wheel Removal

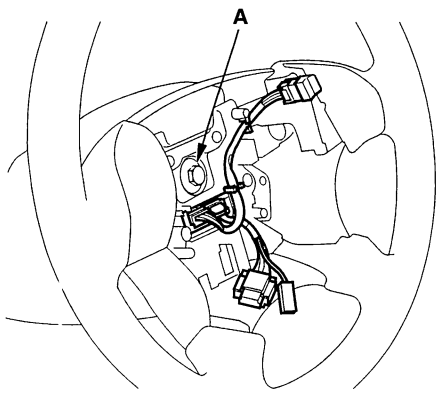
SRS components are located in this area. Review the SRS component locations (see page 23-17) and the precautions and procedures (see page 23-19) before performing repairs or servise.

1. Make sure you have the anti-theft codes for the radio and the navigation system, then write down the customer's radio station presets.

2. Align the front wheels straight ahead, then remove the driver's airbag from the steering wheel (see page 23-197).

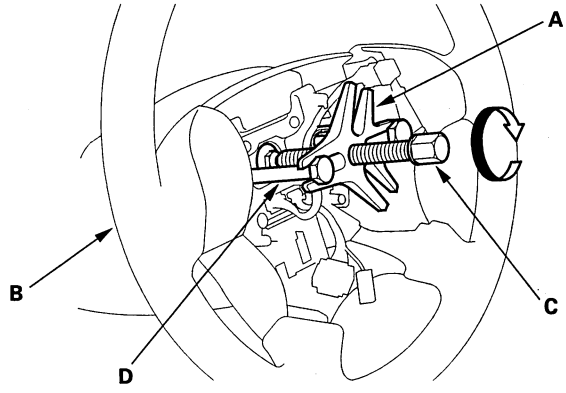
3. Disconnect the cruise control set/resume switch, audio remote switch and navigation guide switch connectors (if equipped).

4. Loosen the steering wheel bolt (A).



5. Install a commercially available steering wheel puller (A) on the steering wheel (B). Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:
   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.



6. Remove the steering wheel puller, then remove the steering wheel bolt and steering wheel from the steering column.

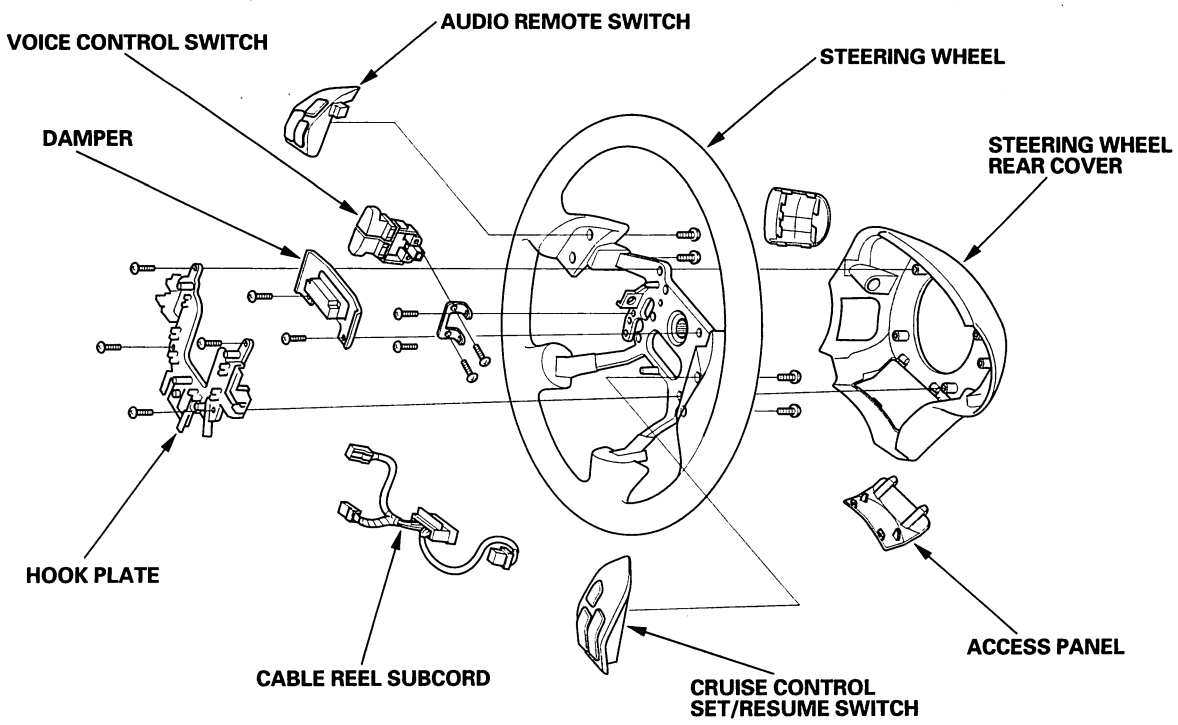
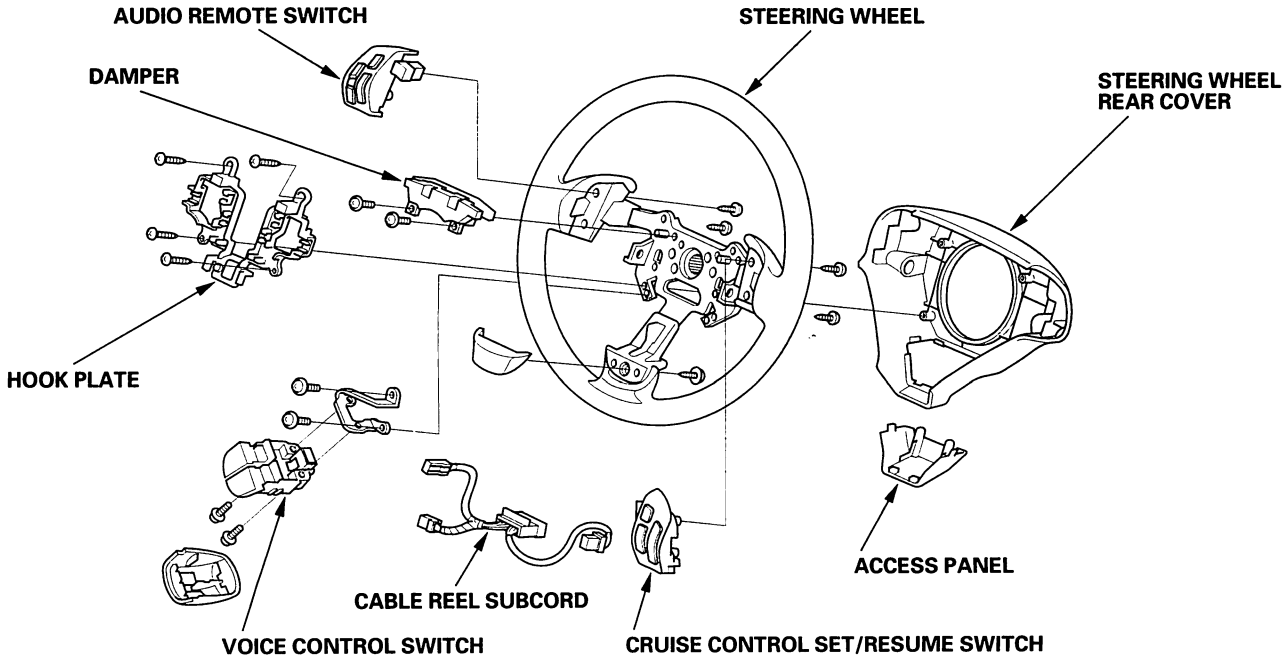
Steering Wheel Disassembly/Reassembly

4-door:



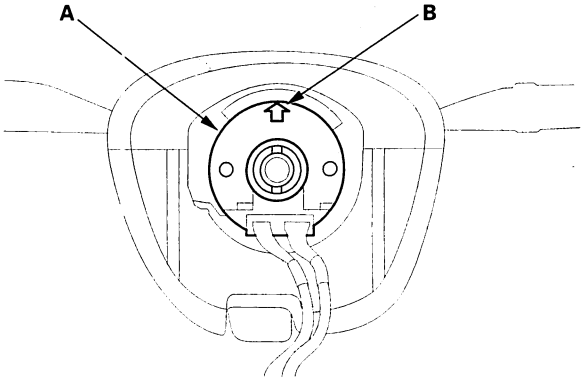
2-door:



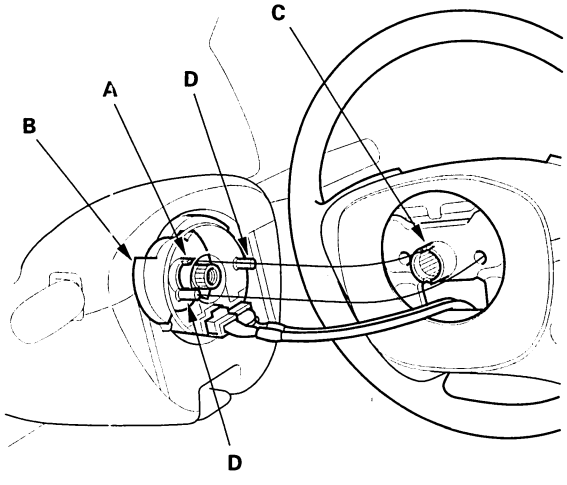
Protected by AR

Steering Wheel Installation

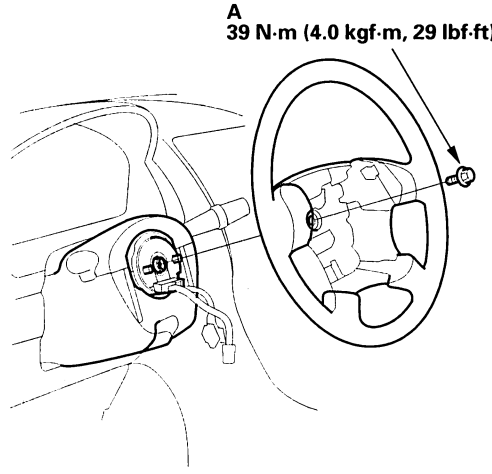
1. Before installing the steering wheel, make sure the front wheels are aligned straight ahead, then center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops. Then rotate it counterclockwise about three full turns. The arrow mark (B) on the cable reel label point should point straight up.



2. Position the two tabs (A) of the turn signal cancelling sleeve (B) as shown. Install the steering wheel on to the steering column shaft, making sure the steering wheel hub (C) engages the pins (D) of the cable reel and tabs of the turn signal canceling sleeve. Do not tap on the steering wheel or steering column shaft when installing the steering wheel.



3. Install the steering wheel bolt (A) and tighten it to the specified torque. Connect the audio remote, navigation guide and cruise control set/resume switch connectors (if equipped). Make sure the wire harness is routed and fastened properly.



4. Install the driver's airbag, and confirm that the system is operating properly (see page 23-197).

5. Enter the anti-theft codes for the radio and the navigation system, then enter the customer's radio station presets. Reset the clock.

6. Check the cruise control, audio remote, navigation guide and turn signal canceling for proper operation.

BACK

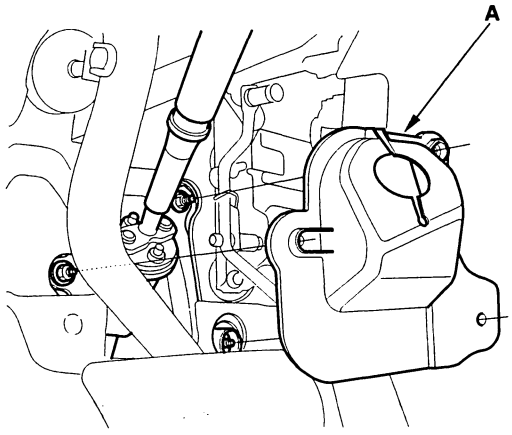
Protected by AR

Steering Column Removal and Installation

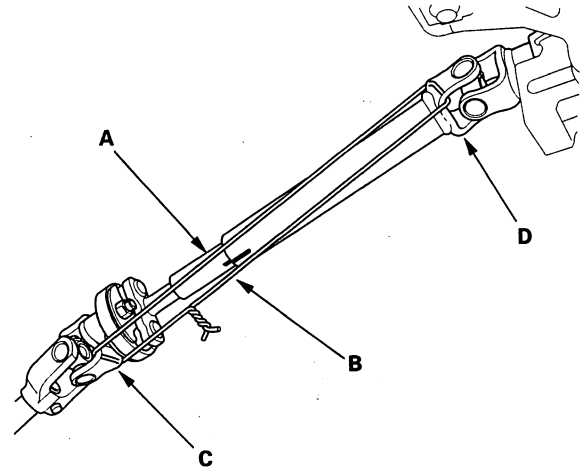
SRS components are located in this area. Review the SRS component locations (see page 23-17) and the precautions and procedures (see page 23-19) before performing repairs or servise.

Removal

1. Make sure you have the anti-theft codes for the radio and the navigation system, then write down the customer's radio station presets.
2. Disconnect the negative cable from the battery.
3. Remove the driver's airbag assembly and the steering wheel (see page 17-22).
4. Remove the column covers.
5. Remove the steering joint cover A.



6. Release the tilt/telescopic lever, and adjust the steering column to full tilt up position, and to the full telescopic in position.
7. Tighten the tilt/telescopic lever.
8. Hold the slider shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the slider shaft and joint yoke (D) of the upper shaft to prevent the slider shaft from pulling out.



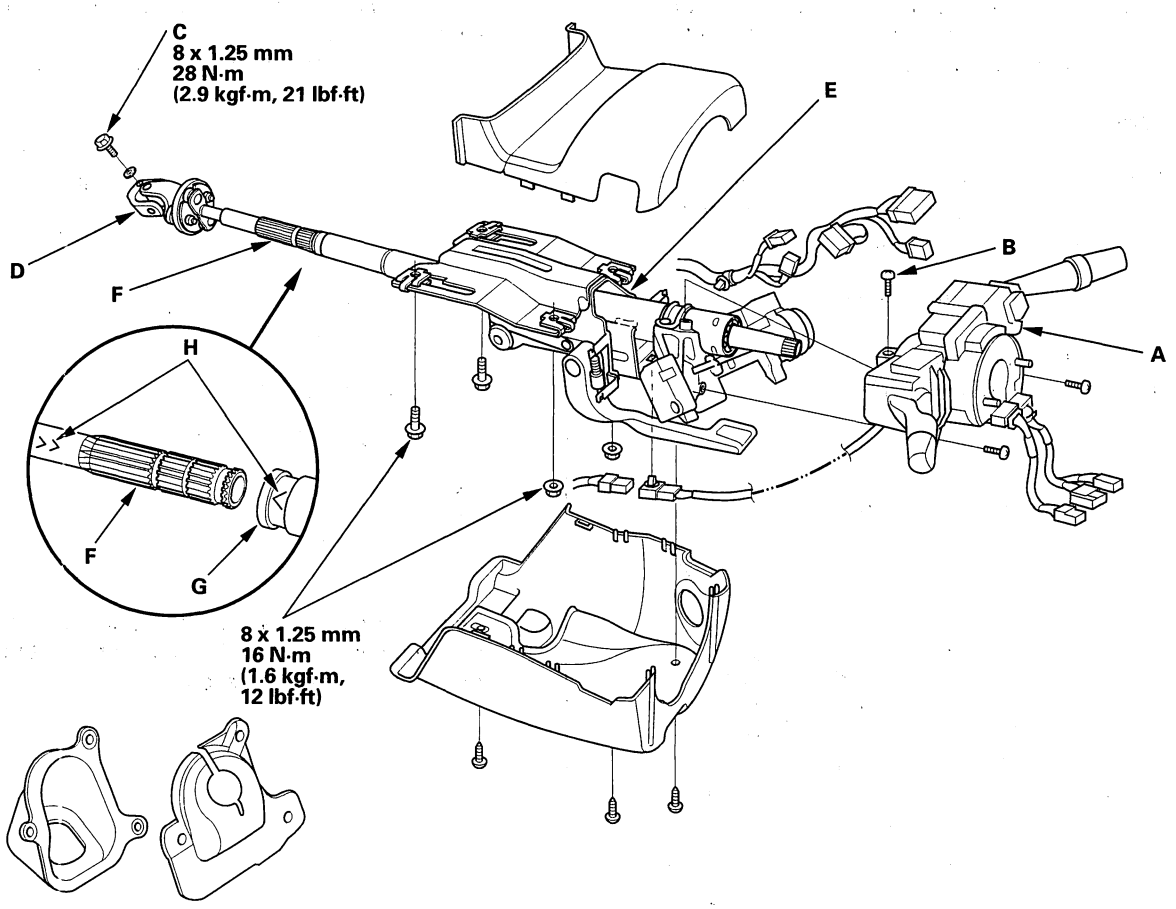
9. Release the tilt/telescopic lever, and adjust the steering column to the full telescopic out position, then tighten the tilt/telescopic lever.

(cont'd)

Protected by AR

Steering Column Removal and Installation (cont'd)

10. Disconnect the wire harness connectors from the combination switch assembly (A).



11. Remove the combination switch assembly from the steering column shaft by removing the screws (B).
12. Disconnect the connectors from the ignition switch, and release the wire harness clips from the steering column.
13. Remove the steering joint bolt (C), then disconnect the steering joint (D) from the pinion shaft.
14. Remove the steering column (E) by removing the attaching nuts and bolts. If the lower slide shaft (F) is removed, slip it into the upper shaft (G) by aligning the paint or stamped marks (H).

BACK

Protected by AR

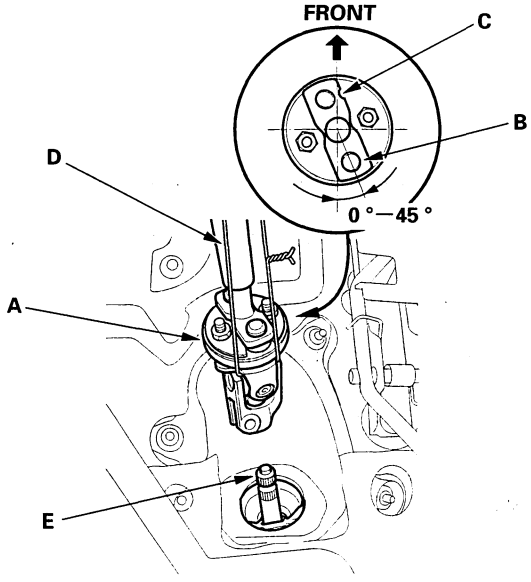
Installation

1. Install the steering column in the reverse order of removal, and note these items:

   - Make sure the wires are not caught or pinched by any parts.
   - Take care not to let the sliding capsules fall out of position during column installation.

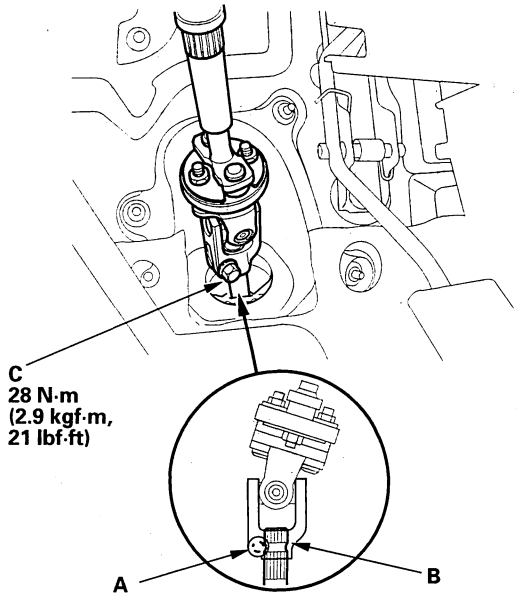
2. Steering joint connection; center the steering rack within its stroke.

3. Position the steering column joint (A) so the bolt (B) opposite to the notch (C) is within the range shown.



4. With the rack in the straight ahead driving position, cut the wire (D) and slip the lower end of the steering joint on to the pinion shaft (E).

5. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft, and loosely install the joint bolt (C). Be sure that the joint bolt is securely in the groove in the pinion shaft. Pull on the steering joint to make sure that the steering joint is fully seated. Tighten the steering joint bolt to the specified torque.



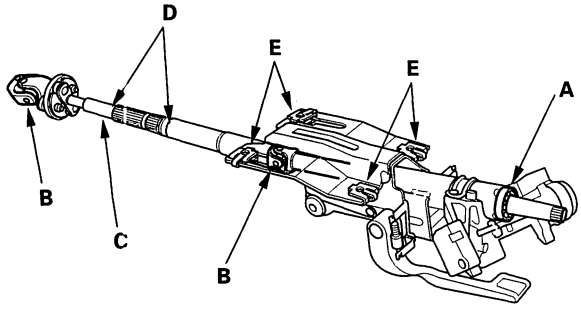
6. Finish the installation, and note these items:

   - Make sure the connectors are properly connected.
   - Reinstall the steering wheel (see page 17-24).
   - Reconnect the battery.
   - Enter the anti-theft codes for the radio and the navigation system, then the customer's radio station presets.
   - Set the clock.
   - Verify cruise control, audio remote, navigation guide and turn signal switch operation.
   - Make sure the steering wheel is centered.

Protected by AR

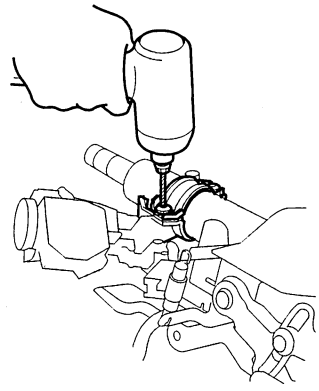
Steering Column/Tilt/Telescopic Inspection

- Check the steering column ball bearing (A) and the steering joint bearings (B) for play and proper movement. If any bearing is noisy or has excessive play, replace the steering column as an assembly.
- Check the lower side shaft (C) for smooth movement in and out. If the lower slide shaft is removed, slip it into the upper shaft by aligning the paint or stamped marks (D). If it sticks or binds, replace the steering column as an assembly.
- Check the sliding capsules (E) for distortion or breakage. If there is distortion or breakage, replace the steering column as an assembly.
- Check the tilt mechanism and telescopic mechanism for movement and damage.

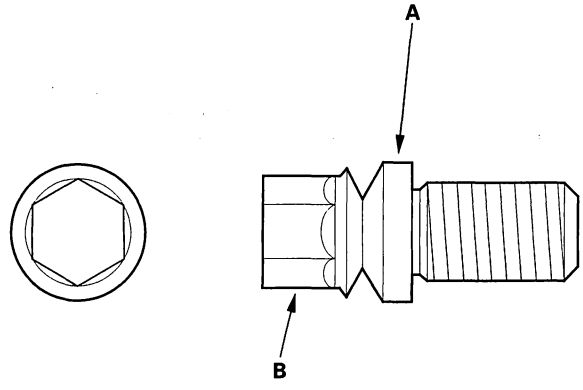


Steering Lock Replacement

1. Remove the steering column (see page 17-25).
2. Center-punch each of the two shear bolts, and drill the heads of the bolts off with a 5 mm (3/16 in.) drill bit. Be careful not to damage the switch body when removing the shear bolts.



3. Remove the shear bolts from the switch body.
4. Install the switch body without the key inserted.
5. Loosely tighten the new shear bolts.
6. Insert the ignition key, and check for proper operation of the steering wheel lock and that the ignition key turns freely.
7. Tighten the shear bolts (A) until the hex heads (B) twist off.



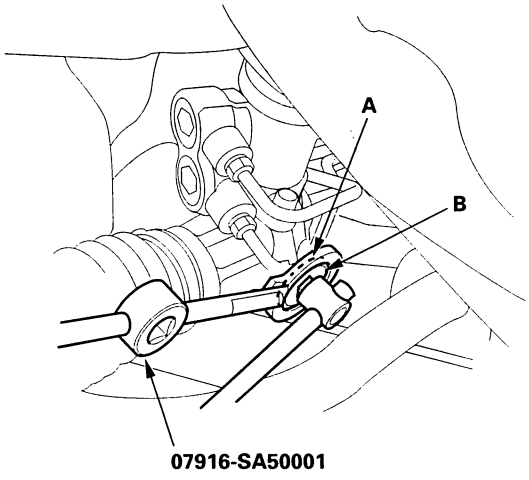
BACK

Protected by AR

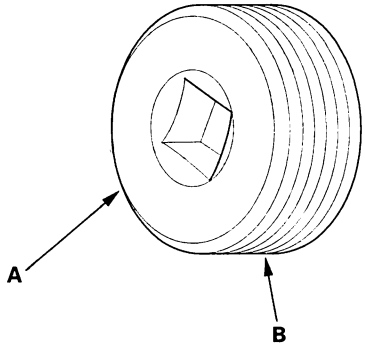
Rack Guide Adjustment

Special Tools Required
Locknut wrench, 40 mm 07916-SA50001

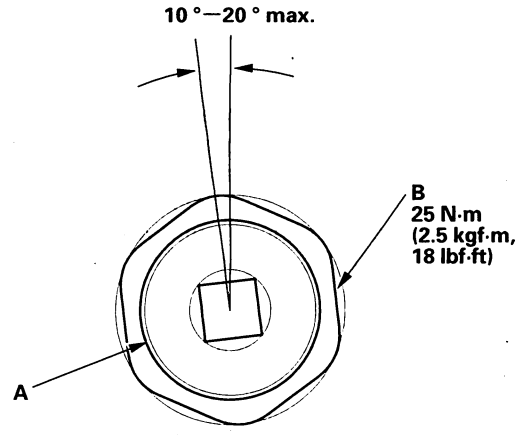
1. Set the wheels in the straight ahead position.
2. Loosen the rack guide screw locknut (A) with the special tool, then remove the rack guide screw (B).



3. Remove the old sealant from the rack guide screw (A), and apply new sealant (Three Bond 1215 or Loctite 5699) to the middle of the threads (B). Loosely install the rack guide screw on the steering gearbox.



4. Tighten the rack guide screw (A) to 25 N·m (2.5 kgf·m, 18 lbf·ft), then loosen it.



5. Retighten the rack guide screw to 3.9 N·m (0.4 kgf·m, 3 lbf·ft), then back it off to the specified angle.

   Specified return angle: 10 °—20 ° max.

6. Hold the rack guide screw stationary with a wrench, and tighten the locknut by hand until it's fully seated.
7. Install the special tool on the locknut (B), and hold the rack guide screw stationary with a wrench. Tighten the locknut an additional 30 ° with the special tool.
8. Check for unusual steering effort through the complete turning range.
9. Check the steering wheel rotation play (see page 17-7), and the power assist (see page 17-7).

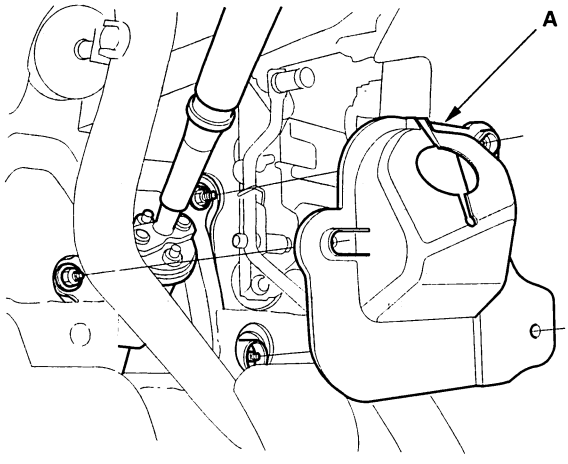
Protected by AR

Steering Gearbox Removal

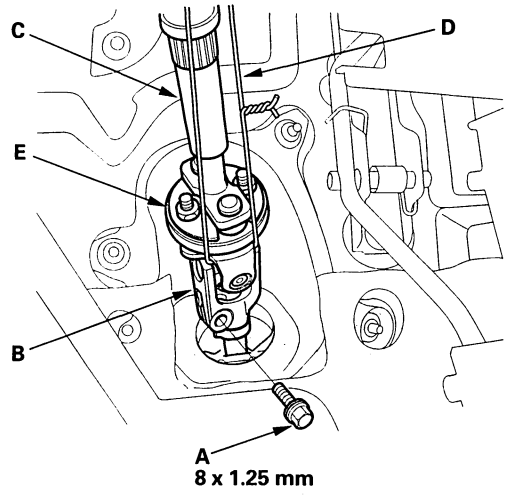
Special Tools Required
- Ball joint remover, 28 mm 07MAC-SL0A202
- Subframe adaptor EQS02C000016
  (Available through the Honda Tool and Equipment program 888-424-6857)

Note these items during removal:
- Using solvent and a brush, wash any oil and dirt off the valve body unit, its lines, and the end of the gearbox. Blow dry with compressed air.
- Make sure to remove the steering wheel before disconnecting the steering joint. Damage to the cable reel can occur.

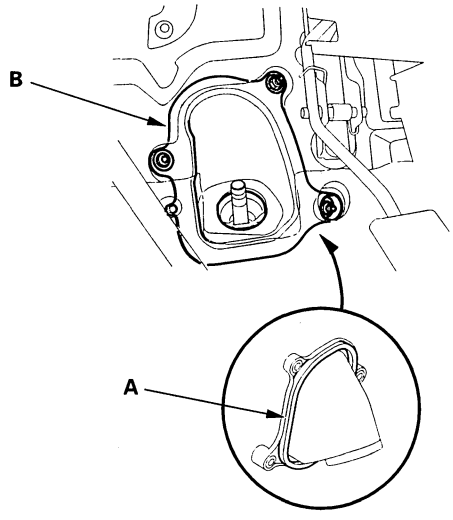
1. Drain the power steering fluid. (see step 1 on page 17-12).
2. Raise the front of the vehicle, and support it with safety stands in the proper locations (see page 1-14).
3. Remove the front wheels.
4. Remove the steering wheel (see page 17-22).
5. Remove the steering joint cover A.



6. Remove the steering joint bolt (A), and disconnect the steering joint by moving the steering joint (B) toward the column. Hold the slider shaft (C) on the column with a piece of wire (D) between the joint yoke (E) on the slider shaft to the joint yoke on the upper shaft (see page 17-25).



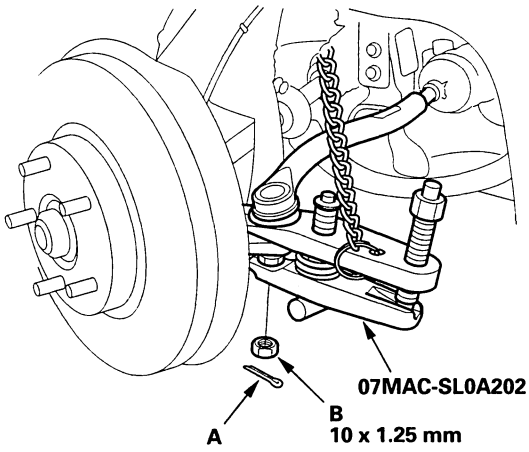
7. Remove the steering joint cover B. Be careful not to damage the mating surface on the joint cover B and pinion shaft grommet. Replace the cover seal (A) if necessary.



BACK

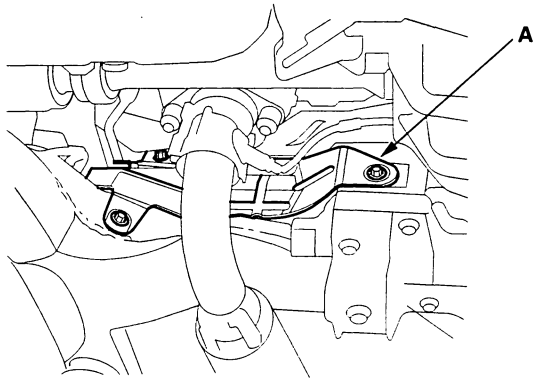
Protected by AR

8. Remove and discard the cotter pin (A) from the tie-rod ball joint nut (B), then loosen the nut.

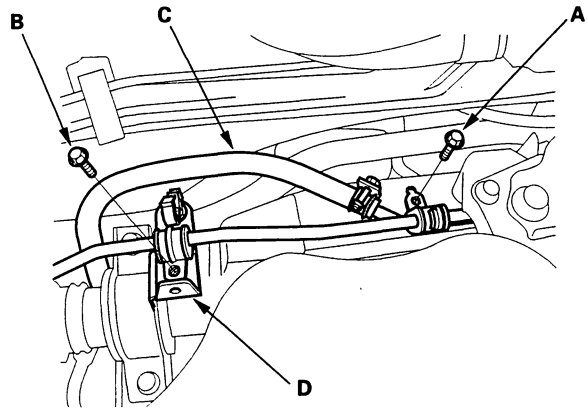


9. Separate the tie-rod ball joint and knuckle using the special tool (see page 18-11).

10. Remove the P/S heat baffle plate (A).



11. Remove the feed line holder mounting bolt (A) on the front suspension subframe.



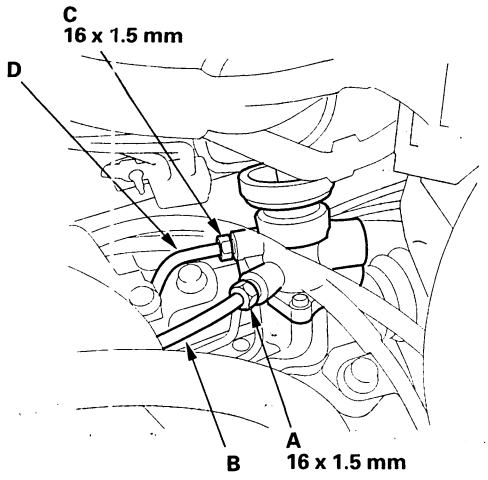
12. Remove the feed line holder mounting bolt (B) and return hose (C) from the gearbox mounting bracket (D).

(cont'd)

Protected by AR

Steering Gearbox Removal (cont'd)

13. Place several shop towels under the line connections, and cover the gearbox mounting part to protect it from the power steering fluid. Loosen the flare nut (A), and disconnect the feed line (B).

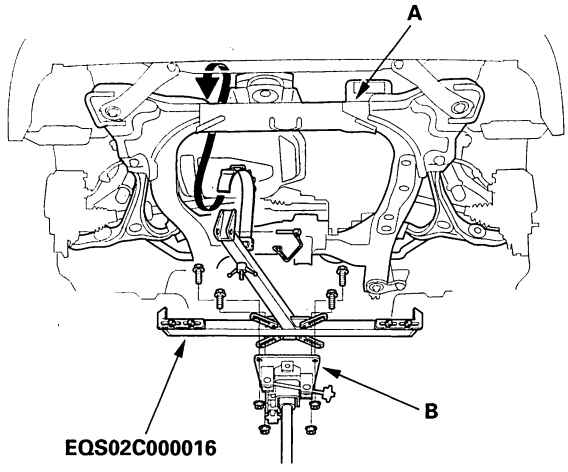


14. Loosen the flare nut (C), and disconnect the return line (D).

15. After disconnecting the lines, plug or seal them with a piece of tape or equivalent to prevent foreign materials from entering.

    NOTE: Do not loosen the cylinder line A and B between the valve body unit and the cylinder.

16. Attach the special tool to the front suspension subframe (A) with hanging the hook of the special tool over the front of the subframe, then tighten the special tool screw.

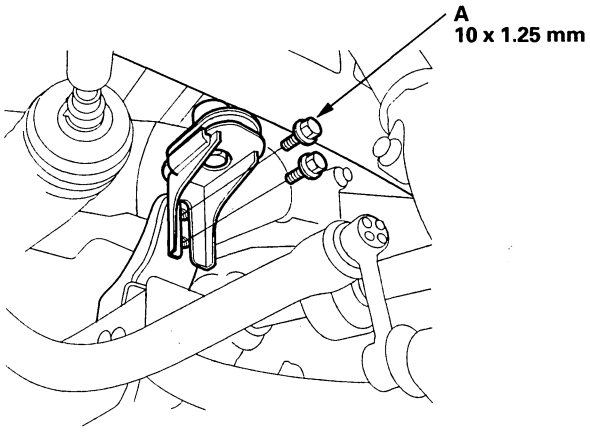


17. Raise the jack (B) and line up the slots in the arms with the bolt holes on the corner of the jack base, then attach them with bolts securely.

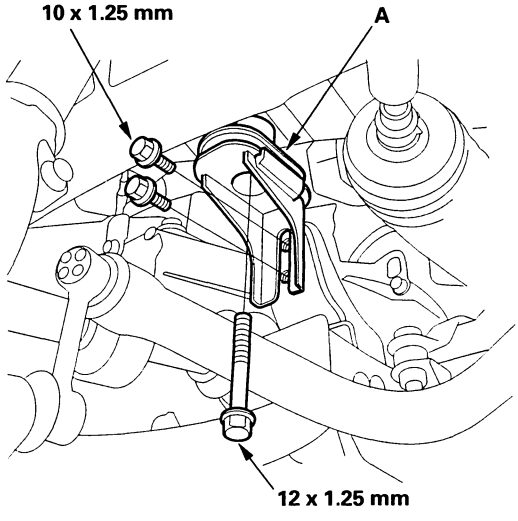
BACK

Protected by AR

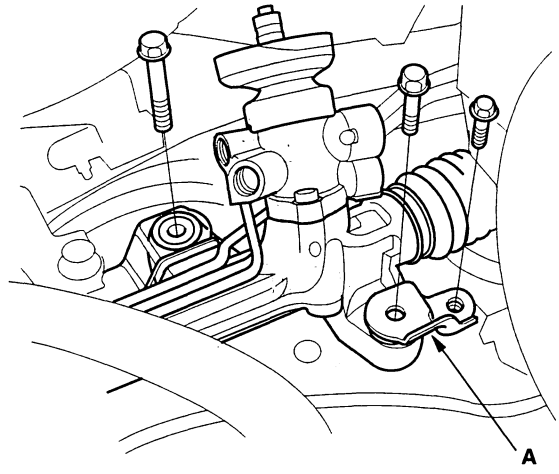
18. Remove the front suspension subframe right middle mount bolts (A).



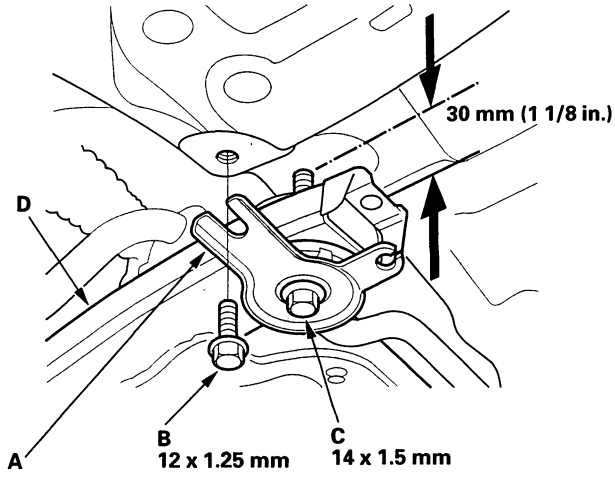
19. Remove the front suspension subframe left middle mount (A).



20. Remove the steering gearbox mounting bolts on the left gearbox mount, and remove the steering stiffener plate (A).



21. Remove the front suspension subframe rear bracket (A) mounting bolt (B).



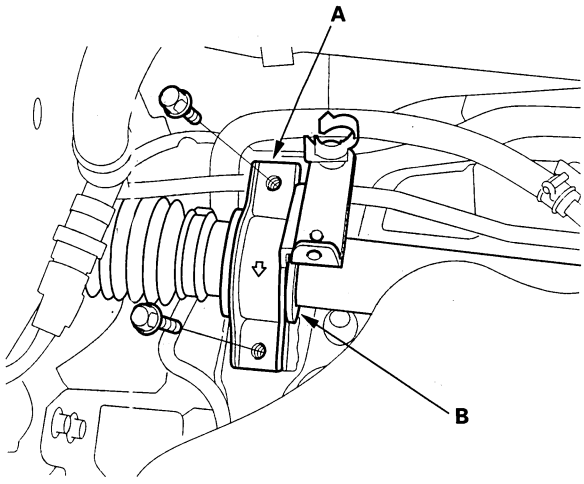
22. Loosen the two front suspension subframe rear bracket mounting bolts (C) on right and left, and slowly lower the jack supporting subframe (D) with special tool until the subframe has dropped 30 mm (1 1/8 in.) total.

(cont'd)

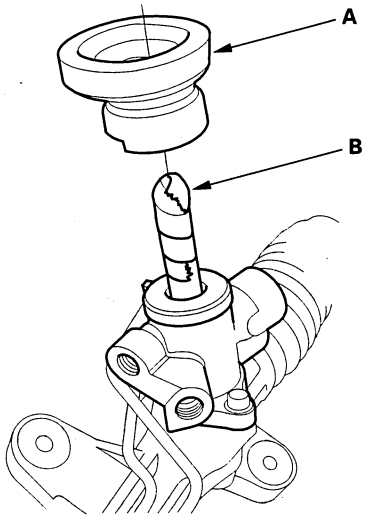
Protected by AR

Steering Gearbox Removal (cont'd)

23. Remove the two flange bolts from the right side of the gearbox, then remove the gearbox mounting bracket (A) and cushion (B).

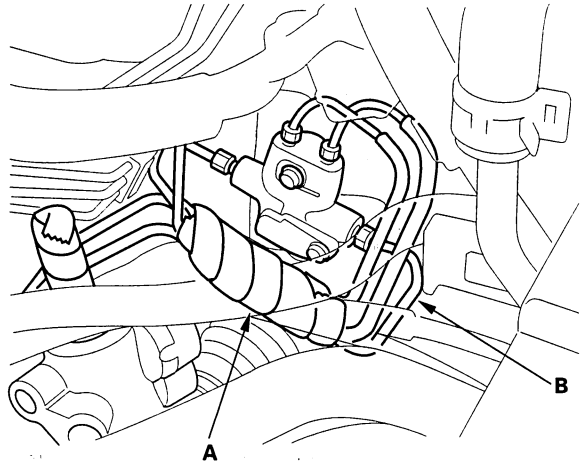


24. Move the steering gearbox toward the front, and remove the pinion shaft grommet (A) from the top of the valve body unit.



25. Apply vinyl tape (B) to the splines on the pinion shaft.

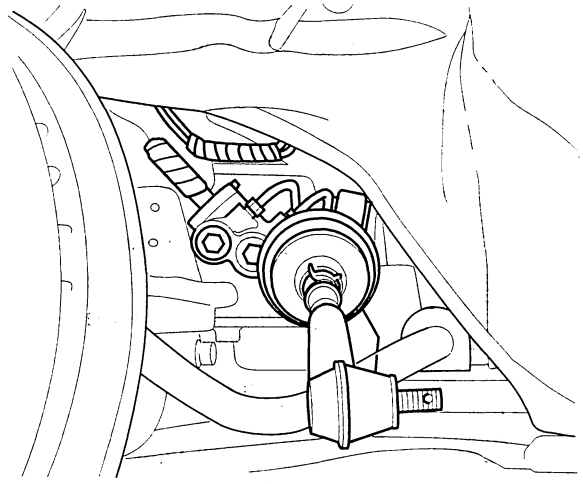
26. Apply vinyl tape or equivalent material (A) to the brake lines (B) to protect them from the pinion shaft.



BACK

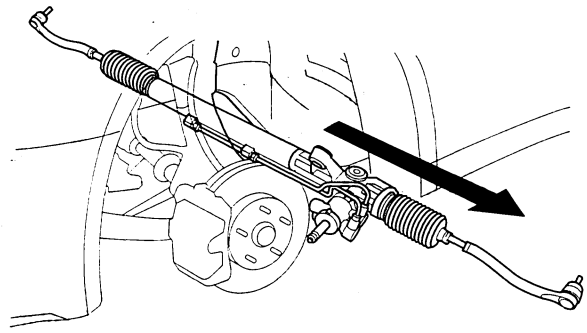
Protected by AR

27. Move the steering gearbox to the driver's side, and rotate it so the pinion shaft points toward the front of the vehicle.



28. Carefully move the steering gearbox as an assembly toward the driver's side of the vehicle until the pinion shaft clears the wheelwell opening. Be careful not to damage the brake lines with the pinion shaft.

29. Remove the steering gearbox through the wheelwell opening on the driver's side.



30. After removing the steering gearbox, make sure that no power steering fluid gets on the gearbox mount cushions, gearbox housing, surface of the subframe and stiffener. Wipe off any spilled fluid at once.

- Cylinder end seal remover attachment 07NAD-SR3020A
- Pilot collar 07GAF-PH70100
- Valve seal ring sizing tool 07NAG-SR3090A
- Ball joint boot clip guide 07974-SA50800
- Sleeve seal ring sizing tool 07974-SA5020A or 07974-SA50200
- Attachment, 32 x 35 mm 07746-0010100
- Driver 07749-0010000
- Piston seal ring guide 07HAG-SF10100
- Piston seal ring sizing tool 07HAG-SF1020A or 07HAG-SF10200
- Cylinder end seal slider 07ZAG-S5A0300
- Pincers Oetiker 1098 or equivalent, commercially available

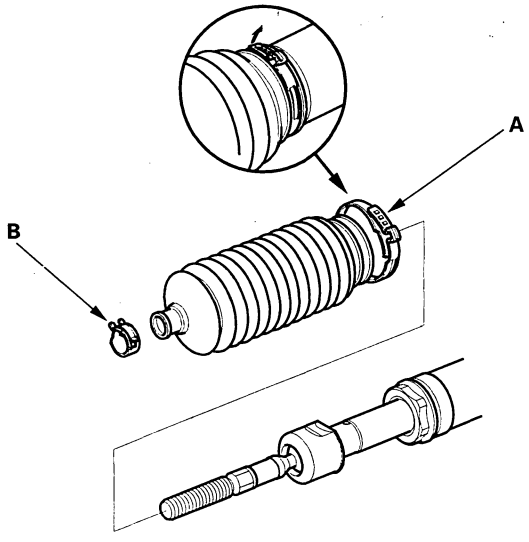
NOTE: Refer to the Exploded View as needed during this procedure.

Removal

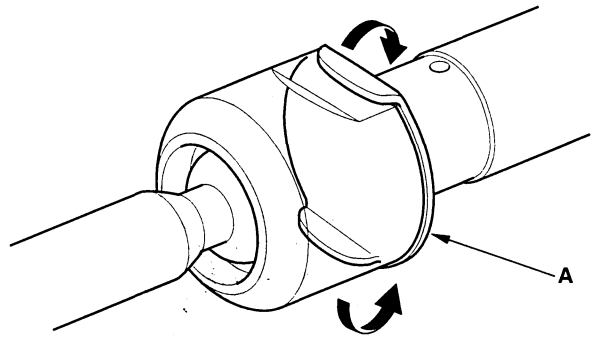
1. Remove the steering gearbox (see page 17-30).

Disassembly

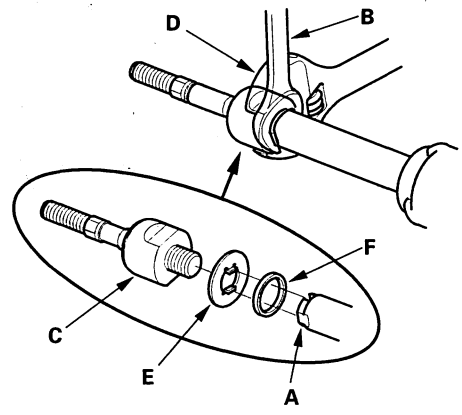
2. Remove the boot bands (A) and tie-rod clips (B). Pull the boot away from the ends of the steering gearbox.



3. Unbend the lock washer (A).



4. Hold the flat surface sections (A) of the steering rack with a wrench (B), and unscrew both rack ends (C) with a wrench (D). Be careful not to damage the rack surface with the wrench.



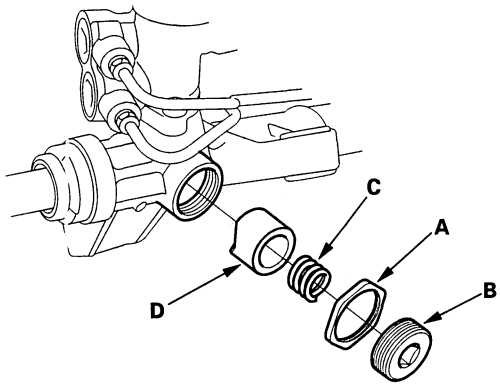
5. Remove the lock washer (E) and stop rubber (F).

(cont'd)

Protected by AR

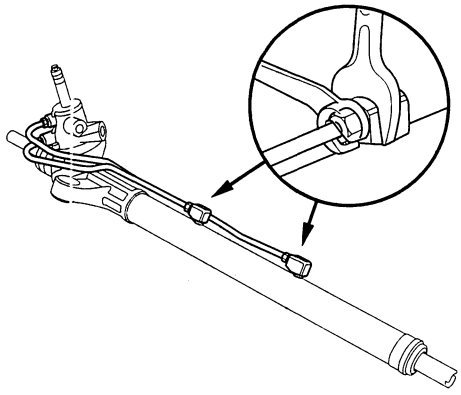
Steering Gearbox Overhaul (cont'd)

6. Loosen the locknut (A), then remove the rack guide screw (B).



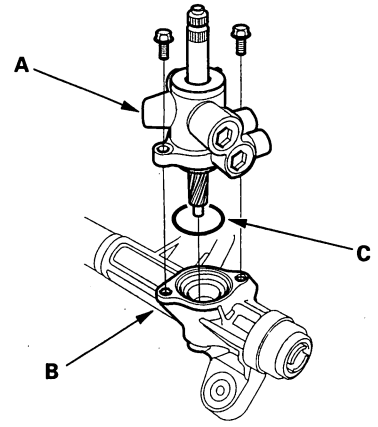
7. Remove the spring (C) and the rack guide (D) from the gearbox housing.

8. Remove the cylinder lines from the gearbox.

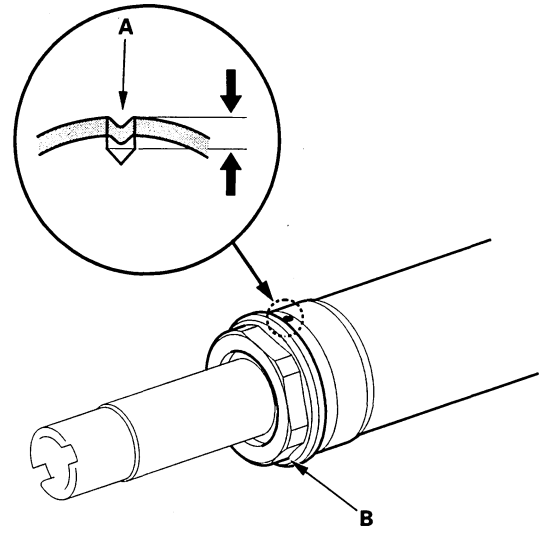


9. Drain the fluid from the cylinder fittings by slowly moving the steering rack back and forth.

10. Remove the two flange bolts, then remove the valve body unit (A) from the gearbox (B). Remove the O-ring (C), and discard it.



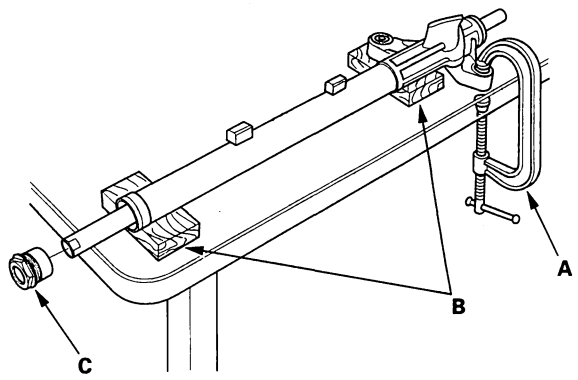
11. Drill a 3 mm (0.12 in.) diameter hole about 2.5—3.0 mm (0.10—0.12 in.) in depth in the staked point (A) on the cylinder. Do not allow metal shavings to enter the cylinder housing. After removing the cylinder end (B), remove any burrs at the staked point.



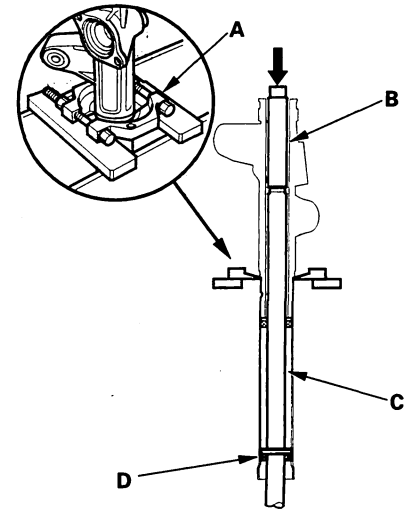
BACK

Protected by AR

12. Hold the gearbox housing using a C-clamp (commercially available) (A) and the wooden blocks (B) as shown. Do not clamp the cylinder part of the housing or gearbox housing in the vise. Then remove the cylinder end (C).



13. Install a commercially available bearing separator (A) in the gearbox housing as shown.



14. Place an appropriate size deep socket wrench (B) on the steering rack (C).

15. Set the steering gearbox in a press so the gearbox housing side points upward, then press the cylinder end seal (D) and steering rack out of the gearbox. Hold the steering rack to keep it from falling when pressed clear. Be careful not to damage the inner surface of the cylinder housing with the tool.

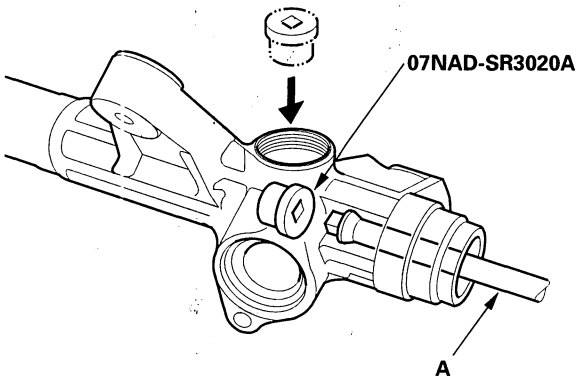
Steering Gearbox Overhaul (cont'd)

16. Install the special tool so it will fit through the rack guide hole of the gearbox housing. Insert a 24" long, 3/8" drive extension (A), and install it on the special tool. Make sure the special tool is securely positioned on the backup ring edges. Be careful not to damage the inner surface of the cylinder with the special tool.



17. Place the steering gearbox in a press, then remove the cylinder end seal (A) and backup ring (B) from the gearbox by pressing on the 24" long, 3/8" drive extension.

    Note these items when pressing the cylinder end seal:
    - Keep the tool straight to avoid damaging the cylinder wall. Check the tool angle, and correct it if necessary, when removing the cylinder end seal.
    - Use a press to remove the cylinder end seal. Do not try to remove the seal by striking the tool; striking the tool could brake the backup ring, and the cylinder end seal would remain in the gearbox.

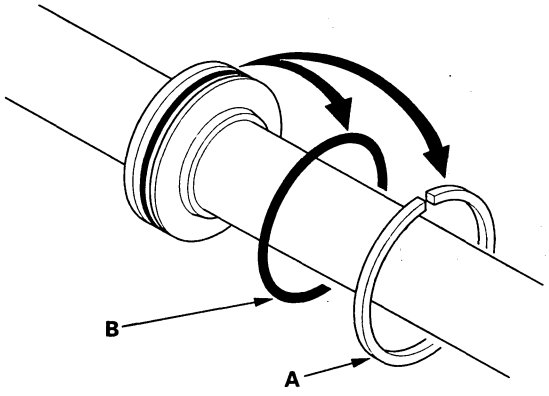
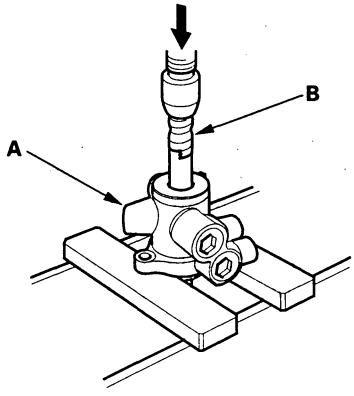
18. Carefully pry the piston seal ring (A) and O-ring (B) off the rack piston. Be careful not to damage the inside of the seal ring groove and piston edges when removing the seal ring.



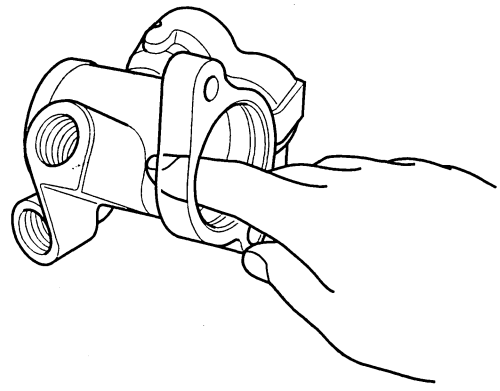
19. Before removing the valve housing (A), apply vinyl tape (B) to the splines on the pinion shaft.



20. Separate the valve housing from the pinion shaft/valve using a press.

21. With your finger, check the inner wall of the valve housing where the seal ring slides. If there is a step in the wall, the housing is worn. Replace it.

    NOTE: There may be sliding marks from the seal ring on the wall of the valve housing. Replace the valve housing only if the wall is stepped.



22. Check for wear, burrs, and other damage to the edges of the grooves in the sleeve.

    NOTE: The pinion shaft and sleeve are a precision matched set. If either the pinion shaft or sleeve must be replaced, replace both parts as a set.

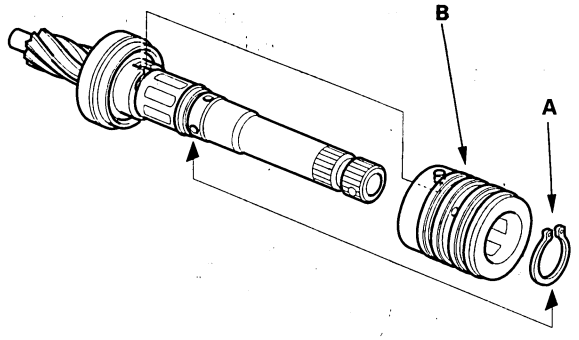
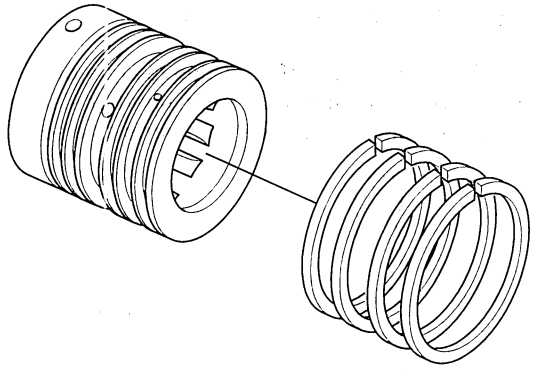
Steering Gearbox Overhaul (cont'd)

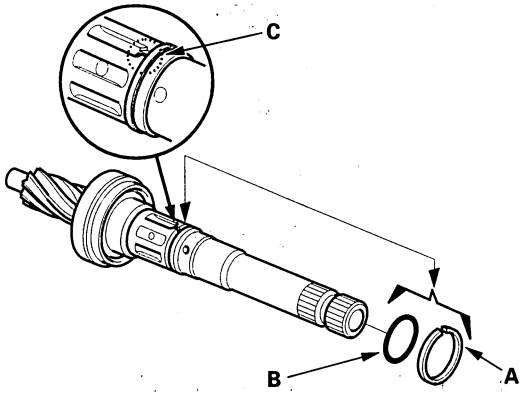
23. Remove the snap ring (A) and sleeve (B) from the pinion shaft.



24. Using a cutter or an equivalent tool, cut and remove the four seal rings from the sleeve. Be careful not to damage the edges of the sleeve grooves and outer surface when removing the seal rings.



25. Using a cutter or an equivalent tool, cut the valve seal ring (A) and O-ring (B) at the cutting groove position (C) in the pinion shaft. Remove the valve seal ring and O-ring. Be careful not to damage the edges of the pinion shaft groove and outer surface when removing the valve seal ring and O-ring.



26. Remove the valve oil seal (A) and wave washer (B) from the pinion shaft.

Note these items during disassembly:
- Inspect the ball bearing (C) by rotating the outer race slowly. If there is any excessive play or wear, replace the pinion shaft and sleeve as an assembly.
- The pinion shaft and sleeve are a precise fit; do not intermix old and new pinion shafts and sleeves.
