4. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).

3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 31: Identifying Front Inner Fender And Front Splash Shield Bolts And Clips Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 32: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

NOTE:

- **Check for DTCs. If any DTCs are stored, troubleshoot and clear them first.**
- **Do not allow dust or other foreign particles to enter the port while installing the A/T oil pressure gauge.**
- **Be sure to check the ATF level after each pressure port test. When installing or removing the A/T oil pressure gauge, ATF may run out of the pressure inspection ports.**
- **Disable the VSA by pressing the VSA OFF button.**
- **VSA DTC(s) may appear when running the wheels off the ground. If the VSA DTC(s) appears, clear the DTC (s) with the HDS after pressure testing.**

1. A/T Line Pressure - Test

   Line Pressure Test

   1. Connect the A/T oil pressure gauge to the line pressure inspection port (A).

Fig. 33: Locating Line Pressure Inspection Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
3. Measure the line pressure from the A/T oil pressure gauge while holding the engine speed at 2, 000 rpm with the shift lever in P or N.

NOTE: **Do not measure the line pressure with the shift lever in other than P or N.**

Pressure	Fluid Pressure	
	Standard	Service Limit
Line	926.6 - 985.4 kPa (9.449 - 10.048 kgf/cm^2 , 134.39 - 142.92 psi)	877 kPa (8.94 kgf/cm^2 , 127.1 psi)

4. If the line pressure is out of the service limit, refer to the problem and probable causes listed in the table.

Problem	Probable causes
No or low line pressure	• Torque converter • ATF pump • Regulator valve • Torque converter check valve • Clogged ATF strainer

5. Turn the engine off, then disconnect the A/T oil pressure gauge from the line pressure inspection port.
6. Install the sealing bolt to the line pressure inspection port using a new sealing washer, and tighten the bolt to 18 N.m (1.8 kgf.m, 13 lbf.ft).

NOTE: **Do not reuse the old sealing washer.**

2. A/T 1st Clutch Pressure - Test

1st Clutch Pressure Test

1. Connect the A/T oil pressure gauge to the 1st clutch pressure inspection port (A).

Fig. 34: Locating 1st Clutch Pressure Inspection Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine, and run the vehicle in 1st gear.
3. Measure the 1st clutch pressure from the A/T oil pressure gauge while holding the engine speed at 2, 000 rpm.

Pressure	Fluid Pressure	
	Standard	Service Limit
1st Clutch	916.8 - 995.2 kPa (9.349 - 10.148 kgf/cm^2 , 132.97 - 144.34 psi)	867 kPa (8.84 kgf/cm^2 , 125.7 psi)

4. If the 1st clutch pressure is out of the service limit, refer to the problem and probable cause listed in the table.

Problem	Probable cause
No or low 1st clutch pressure	1st clutch

5. Turn the engine off, then disconnect the A/T oil pressure gauge from the 1st clutch pressure inspection port.
6. Install the sealing bolt to the 1st clutch pressure inspection port using a new sealing washer, and tighten the bolt to 18 N.m (1.8 kgf.m, 13 lbf.ft).

NOTE: **Do not reuse the old sealing washer.**

3. A/T 3rd Clutch Pressure - Test

3rd Clutch Pressure Test

1. Connect the A/T oil pressure gauge to the 3rd clutch pressure inspection port (A).

Fig. 35: Locating 3rd Clutch Pressure Inspection Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine, and run the vehicle in 3rd gear.
3. Measure the 3rd clutch pressure from the A/T oil pressure gauge while holding the engine speed at 2, 000 rpm.

Pressure	Fluid Pressure	
	Standard	Service Limit
3rd Clutch	916.8 - 995.2 kPa (9.349 - 10.148 kgf/cm^2 , 132.97 - 144.34 psi)	867 kPa (8.84 kgf/cm^2 , 125.7 psi)

4. If the 3rd clutch pressure is out of the service limit, refer to the problem and probable cause listed in the table.

Problem	Probable cause
No or low 3rd clutch pressure	3rd clutch

5. Turn the engine off, then disconnect the A/T oil pressure gauge from the 3rd clutch pressure inspection port.
6. Install the sealing bolt to the 3rd clutch pressure inspection port using a new sealing washer, and tighten the bolt to 18 N.m (1.8 kgf.m, 13 lbf.ft).

NOTE: **Do not reuse the old sealing washer.**

4. A/T 4th Clutch Pressure - Test

4th Clutch Pressure Test - Engaging 4th Gear

1. Connect the A/T oil pressure gauge to the 4th clutch pressure inspection port (A).

Fig. 36: Locating 4th Clutch Pressure Inspection Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine, and run the vehicle in 4th gear.
3. Measure the 4th clutch pressure from the A/T oil pressure gauge while holding the engine speed at 2, 000 rpm.

Pressure	Fluid Pressure	
	Standard	Service Limit
4th Clutch	916.8 - 995.2 kPa (9.349 - 10.148 kgf/cm^2 , 132.97 - 144.34 psi)	867 kPa (8.84 kgf/cm^2 , 125.7 psi)

4. If the 4th clutch pressure is out of the service limit, refer to the problem and probable cause listed in the table.

Problem	Probable cause
No or low 4th clutch pressure	4th clutch

5. Bring the engine back to an idle, then apply the brake to stop the wheels from rotating.

4th Clutch Pressure Test - Engaging Reverse Gear

6. Shift to R, then release the brake pedal.
7. Measure the 4th clutch pressure from the A/T oil pressure gauge while holding the engine speed at 2, 000 rpm.

Pressure	Fluid Pressure	
	Standard	Service Limit
4th Clutch in R	916.8 - 995.2 kPa (9.349 - 10.148 kgf/cm^2 , 132.97 - 144.34 psi)	867 kPa (8.84 kgf/cm^2 , 125.7 psi)

8. If the 4th clutch pressure is out of the service limit, refer to the problem and probable causes listed in the table.

Problem	Probable causes
No or low 4th clutch pressure in R	• Servo valve • 4th clutch

9. Turn the engine off, then disconnect the A/T oil pressure gauge from the 4th clutch pressure inspection port.
10. Install the sealing bolt to the 4th clutch pressure inspection port using a new sealing washer, and tighten the bolt to 18 N.m (1.8 kgf.m, 13 lbf.ft).

NOTE: Do not reuse the old sealing washer.

5. A/T 5th Clutch Pressure - Test

5th Clutch Pressure Test

1. Connect the A/T oil pressure gauge to the 5th clutch pressure inspection port (A).

Fig. 37: Locating 5th Clutch Pressure Inspection Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine, and run the vehicle in 5th gear.
3. Measure the 5th clutch pressure from the A/T oil pressure gauge while holding the engine speed at

2, 000 rpm.

Pressure	Fluid Pressure	
	Standard	Service Limit
5th Clutch	916.8 - 995.2 kPa (9.349 - 10.148 kgf/cm^2 , 132.97 - 144.34 psi)	867 kPa (8.84 kgf/cm^2 , 125.7 psi)

4. If the 5th clutch pressure is out of the service limit, refer to the problem and probable cause listed in the table.

Problem	Probable cause
No or low 5th clutch pressure	5th clutch

5. Turn the engine off, then disconnect the A/T oil pressure gauge from the 5th clutch pressure inspection port.
6. Install the sealing bolt to the 5th clutch pressure inspection port using a new sealing washer, and tighten the bolt to 18 N.m (1.8 kgf.m, 13 lbf.ft).

NOTE: Do not reuse the old sealing washer.

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 38: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Intake Air Duct
    1. Remove the intake air duct.

Fig. 39: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

NOTE:

- **Check for DTCs. If any DTCs are stored, troubleshoot and clear them first.**
- **Do not allow dust or other foreign particles to enter the port while installing the A/T oil pressure gauge.**
- **Be sure to check the ATF level after each pressure port test. When installing or removing the A/T oil pressure gauge, ATF may run out of the pressure inspection ports.**
- **Disable the VSA by pressing the VSA OFF button.**
- **VSA DTC(s) may appear when running the wheels off the ground. If the VSA DTC(s) appears, clear the DTC (s) with the HDS after pressure testing.**

1. A/T 2nd Clutch Pressure - Test

2nd Clutch Pressure Test

1. Connect the A/T oil pressure gauge to the 2nd clutch pressure inspection port (A).

Fig. 40: Locating 2nd Clutch Pressure Inspection Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Temporarily install the intake air duct and the air cleaner assembly, and reconnect the MAF sensor/IAT sensor connector.
3. Start the engine, and run the vehicle in 2nd gear.
4. Measure the 2nd clutch pressure from the A/T oil pressure gauge while holding the engine speed at 2, 000 rpm.

Pressure	Fluid Pressure	
	Standard	Service Limit

2nd Clutch	916.8 - 995.2 kPa (9.349 - 10.148 kgf/cm^2 , 132.97 - 144.34 psi)	867 kPa (8.84 kgf/cm^2 , 125.7 psi)

5. If the 2nd clutch pressure is out of the service limit, refer to the problem and probable cause listed in the table.

Problem	Probable cause
No or low 2nd clutch pressure	2nd clutch

6. Turn the engine off, remove the air cleaner assembly and the intake air duct.
7. Disconnect the A/T oil pressure gauge from the 2nd clutch pressure inspection port.
8. Install the sealing bolt to the 2nd clutch pressure inspection port using a new sealing washer, and tighten the bolt to 18 N.m (1.8 kgf.m, 13 lbf.ft).

NOTE: Do not reuse the old sealing washer.

INSTALLATION

1. Intake Air Duct
    1. Install the intake air duct.

Fig. 41: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).

4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 42: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 43: Identifying Front Splash Shield, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T ROAD TEST

TEST

1. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
2. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 44: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Automatic Transmission Road - Test
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine.
    3. Shift to D while pressing the brake pedal. Press the accelerator pedal, and release it suddenly. The engine should not stall.
    4. Repeat step 3 in all shift lever positions.
    5. Prepare the HDS and the MVCI to take a SNAPSHOT (refer to the user's guide for more details if needed):
        - Set the Trigger Type to Parameter.
        - Adjust the Parameter setting to APP Sensor A (V) above 1.2 V.
        - Set the recording time to 60 seconds.
        - Set the trigger point to (Negative) - 30 seconds.
    6. Find a suitable level road.
    7. When you are ready to do the test, press OK on the HDS.
    8. Accelerate quickly until APP Sensor A reads 1.3 V. Maintain a steady throttle until the transmission shifts to 5th gear, then slow the vehicle and come to a stop.
    9. Save the snapshot if the entire event was recorded or increase the recording time setting as necessary, and repeat step 8.
    10. Adjust the APP Sensor A parameter setting to 2.4 V.
    11. Test-drive the vehicle again. Accelerate quickly until APP Sensor A reads 2.5 V. Maintain a steady throttle until the transmission shifts to 5th gear (or a reasonable speed), then slow the vehicle and come to a stop.
    12. Save the snapshot if the entire event was recorded or increase the recording time setting as necessary, and repeat step 11.
    13. Adjust the APP Sensor A parameter setting to 4.5 V.

14. Accelerate quickly until the accelerator pedal is to the floor. Maintain a steady pedal until the transmission shifts to 4th gear, then slow to a stop, and save the snapshot.
15. Review each snapshot individually, and compare the Shift Control, APP Sensor A (V), and the Vehicle Speed to the following table.

KA (2WD), KC (2WD) - SHIFT CONTROL, APP SENSOR A (V), AND VEHICLE SPEED

Upshift: D Position	**APP Sensor A (V): 1.3 V**	
	1st-->2nd	9 - 11 mph (14 - 18 km/h)
	2nd-->3rd	18 - 22 mph (29 - 35 km/h)
	3rd-->4th	26 - 31 mph (42 - 50 km/h)
	4th-->5th	38 - 44 mph (61 - 71 km/h)
	Lock-up ON	34 - 39 mph (54 - 62 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	24 - 27 mph (38 - 44 km/h)
	2nd-->3rd	44 - 50 mph (70 - 80 km/h)
	3rd-->4th	65 - 73 mph (105 - 117 km/h)
	4th-->5th	109 - 119 mph (175 - 191 km/h)
	Lock-up ON	83 - 91 mph (133 - 147 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	44 - 50 mph (71 - 81 km/h)
	2nd-->3rd	76 - 85 mph (122 - 136 km/h)
	3rd-->4th	113 - 123 mph (182 - 198 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	33 - 38 mph (53 - 61 km/h)
	5th-->4th	33 - 39 mph (53 - 63 km/h)
	4th-->3rd	24 - 29 mph (38 - 46 km/h)
	3rd-->1st	4 - 8 mph (7 - 13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	62 - 69 mph (99 - 111 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112 - 122 mph (181 - 197 km/h)
	5th-->4th	113 - 123 mph (182 - 198 km/h)
	4th-->3rd	89 - 98 mph (143 - 157 km/h)
	3rd-->2nd	54 - 62 mph (87 - 99 km/h)
	2nd-->1st	25 - 31 mph (40 - 50 km/h)

KA (AWD), KC (AWD) - SHIFT CONTROL, APP SENSOR A (V), AND VEHICLE SPEED

	APP Sensor A (V): 1.3 V	
	1st-->2nd	9 - 11 mph (14 - 18 km/h)
	2nd-->3rd	17 - 21 mph (27 - 33 km/h)
	3rd-->4th	26 - 31 mph (42 - 50 km/h)
	4th-->5th	37 - 43 mph (59 - 69 km/h)

Upshift: D Position	Lock-up ON	31 - 36 mph (50 - 58 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	23 - 27 mph (37 - 43 km/h)
	2nd-->3rd	42 - 48 mph (67 - 77 km/h)
	3rd-->4th	64 - 71 mph (103 - 115 km/h)
	4th-->5th	106 - 116 mph (170 - 186 km/h)
	Lock-up ON	83 - 92 mph (134 - 148 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	42 - 48 mph (68 - 78 km/h)
	2nd-->3rd	71 - 80 mph (115 - 129 km/h)
	3rd-->4th	109 - 119 mph (175 - 191 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	30 - 35 mph (49 - 57 km/h)
	5th-->4th	30 - 37 mph (49 - 59 km/h)
	4th-->3rd	22 - 25 mph (35 - 41 km/h)
	3rd-->1st	4 - 8 mph (7 - 13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	62 - 70 mph (100 - 112 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112 - 122 mph (181 - 197 km/h)
	5th-->4th	113 - 123 mph (182 - 198 km/h)
	4th-->3rd	89 - 98 mph (143 - 157 km/h)
	3rd-->2nd	54 - 62 mph (87 - 99 km/h)
	2nd-->1st	25 - 31 mph (40 - 50 km/h)

KX (2WD) - SHIFT CONTROL, APP SENSOR A (V), AND VEHICLE SPEED

Upshift: D Position	**APP Sensor A (V): 1.3 V**	
	1st-->2nd	9 - 11 mph (14 - 18 km/h)
	2nd-->3rd	18 - 22 mph (29 - 35 km/h)
	3rd-->4th	26 - 31 mph (42 - 50 km/h)
	4th-->5th	38 - 44 mph (61 - 71 km/h)
	Lock-up ON	34 - 39 mph (54 - 62 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	24 - 27 mph (38 - 44 km/h)
	2nd-->3rd	44 - 50 mph (70 - 80 km/h)
	3rd-->4th	65 - 73 mph (105 - 117 km/h)
	4th-->5th	109 - 119 mph (175 - 191 km/h)
	Lock-up ON	83 - 91 mph (133 - 147 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	41 - 47 mph (66 - 76 km/h)
	2nd-->3rd	69 - 76 mph (111 - 123 km/h)

	3rd-->4th	107 - 117 mph (172 - 188 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	33 - 38 mph (53 - 61 km/h)
	5th-->4th	33 - 39 mph (53 - 63 km/h)
	4th-->3rd	24 - 29 mph (38 - 46 km/h)
	3rd-->1st	4 - 8 mph (7 - 13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	62 - 69 mph (99 - 111 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112 - 122 mph (181 - 197 km/h)
	5th-->4th	113 - 123 mph (182 - 198 km/h)
	4th-->3rd	83 - 91 mph (133 - 147 km/h)
	3rd-->2nd	51 - 58 mph (82 - 94 km/h)
	2nd-->1st	25 - 31 mph (40 - 50 km/h)

KX (4WD) - SHIFT CONTROL, APP SENSOR A (V), AND VEHICLE SPEED

Upshift: D Position	**APP Sensor A (V): 1.3 V**	
	1st-->2nd	9 - 11 mph (14 - 18 km/h)
	2nd-->3rd	17 - 21 mph (27 - 33 km/h)
	3rd-->4th	26 - 31 mph (42 - 50 km/h)
	4th-->5th	37 - 43 mph (59 - 69 km/h)
	Lock-up ON	31 - 36 mph (50 - 58 km/h)
	APP Sensor A (V): 2.5 V	
	1st-->2nd	23 - 27 mph (37 - 43 km/h)
	2nd-->3rd	42 - 48 mph (67 - 77 km/h)
	3rd-->4th	64 - 71 mph (103 - 115 km/h)
	4th-->5th	106 - 116 mph (170 - 186 km/h)
	Lock-up ON	83 - 92 mph (134 - 148 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	1st-->2nd	39 - 45 mph (63 - 73 km/h)
	2nd-->3rd	65 - 72 mph (104 - 116 km/h)
	3rd-->4th	103 - 112 mph (165 - 181 km/h)
Downshift: D Position	**APP Sensor A (V): 1.3 V**	
	Lock-up OFF	30 - 35 mph (49 - 57 km/h)
	5th-->4th	30 - 37 mph (49 - 59 km/h)
	4th-->3rd	22 - 25 mph (35 - 41 km/h)
	3rd-->1st	4 - 8 mph (7 - 13 km/h)
	APP Sensor A (V): 2.5 V	
	Lock-up OFF	60 - 67 mph (96 - 108 km/h)
	APP Sensor A (V): 4.5 V (Fully-opened throttle)	
	Lock-up OFF	112 - 122 mph (181 - 197 km/h)

	5th-->4th	113 - 123 mph (182 - 198 km/h)
	4th-->3rd	83 - 91 mph (133 - 147 km/h)
	3rd-->2nd	51 - 58 mph (82 - 94 km/h)
	2nd-->1st	25 - 31 mph (40 - 50 km/h)

16. Drive the vehicle in 4th or 5th gear, then shift to 2nd gear. The vehicle should immediately begin to slow down from engine braking.
17. Shift to 1, accelerate from a stop at full throttle, and check for abnormal noise and clutch slippage. Upshifts should not occur in this position.
18. Shift to 2, accelerate from a stop at full throttle, and check for abnormal noise and clutch slippage. Upshifts and downshifts should not occur in this position.
19. Shift to R, accelerate from a stop at to full throttle momentarily, and check for abnormal noise and clutch slippage.
20. Park the vehicle on an upward slope (about 16 degrees), apply the parking brake, and shift into P. Release the brake; the vehicle should not move.

NOTE: **Always use the parking brake to hold the vehicle when stopped on an incline in gear. Depending on the grade of the incline, the vehicle could roll if the brake is released.**

A/T STALL SPEED TEST

TEST

1. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
2. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60 - 90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 45: Inserting Dipstick Into Guide Tube Aligning Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 46: Locating ATF Level Upper Mark And Lower Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 47: Locating Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).

3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 48: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Automatic Transmission Stall Speed - Test
   1. Make sure the A/C switch is OFF.
   2. Shift to D while pressing the brake pedal firmly, then press the accelerator pedal for 6 to 8 seconds, and note the engine speed.

      NOTE: **Do not move the shift lever or remove your foot off the brake pedal, while raising the engine speed.**

   3. Allow 2 minutes for cooling, then repeat the test in the all shift lever positions.

      NOTE:
      - **Do not test stall speed for more than 10 seconds at a time.**
      - **Record the engine speed at 6 to 8 seconds after pressing the accelerator pedal. Higher engine speed will be indicated for 5 seconds.**
      - **Stall speed tests should be used for diagnostic purposes only.**
      - **The stall speed should be the same in the all shift lever positions.**
      - **Do not test stall speed with A/T pressure gauges installed.**

      Stall Speed rpm

      Specification: 2, 200 rpm

Service Limit: 2, 050 - 2, 350 rpm

4. If any of the stall speeds are out of the service limit, refer to the problems and probable causes listed in the table.

Problem	Probable Causes
Stall speed rpm high in D, 2, 1, and R	• ATF pump output low • Clogged ATF strainer • Regulator valve stuck • Slipping clutch
Stall speed rpm high in 2	Slippage of 2nd clutch
Stall speed rpm high in 1	Slippage of 1st clutch
Stall speed rpm high in R	Slippage of 4th clutch
Stall speed rpm low in D, 2, 1, and R	• Engine output low • Engine throttle valve closed • Torque converter one-way clutch slipping

ATF TEMPERATURE SENSOR TEST

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 49: Identifying Front Inner Fender And Front Splash Shield Bolts And Clips Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. ATF Temperature Sensor - Test
    1. Disconnect the connector.
    2. Measure the resistance between shift solenoid wire harness 7P connector (A) terminals No. 5 and No. 6 for ATF temperature sensor.

       Standard: 50 ohms - 25 kohms

       - If the resistance is out of the standard, replace the ATF temperature sensor and the solenoid wire harness.

         NOTE: The ATF temperature sensor is not available separately from the shift solenoid wire harness.

       - If the resistance is within the standard, the test is complete.
    3. Check the connector for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 50: Identifying Shift Solenoid Wire Harness 7P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 51: Identifying Front Splash Shield, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUTOMATIC TRANSMISSION DTC TROUBLESHOOTING INDEX

Before you troubleshoot, record all freeze data and any on-board snapshot with the HDS, and **review the General Troubleshooting Information** . See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS**

DTC(1)	Two Drive Cycle Detection	D Indicator	MIL	Detection Item
P0705 (5) (2)	---------	Blinks	ON	Transmission Range Switch (Multiple Shift - Position Input)
P0706 (6) (2)	o	OFF	ON	Transmission Range Switch (Open)
P0711 (28) (2)	o	Blinks	OFF	ATF Temperature Sensor (Range/Performance)

P1733 (45)	o	Blinks	ON	Shift Error E
P1734 (45)	o	Blinks	ON	Shift Error F

(1) The DTC in parentheses is the flash code the D indicator indicates when the data link connector (DLC) is connected to the HDS, and in the SCS mode.

(2) This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission.

D3 SWITCH CIRCUIT TROUBLESHOOTING

D3 Switch Circuit Troubleshooting

<u>Fig. 52: D3 Switch Circuit Troubleshooting Flowchart</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. D3 switch check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      D3 switch 2P connector

    - 3. **<u>TEST THE D3 SWITCH</u>**.

Does the switch test OK?

YES : The D3 switch is OK. Go to step 2.

NO : **<u>REPLACE THE D3 SWITCH.</u>**

2. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      D3 switch 2P connector: disconnected

      Test circuit D3 SW, D3 SW

      Test point 1 D3 switch 2P connector No. 1 (WHT)

      Test point 2 D3 switch 2P connector No. 2 (WHT)

Fig. 53: Measuring Voltage Between D3 Switch 2P Connector No. 1 (WHT) And D3 Switch 2P Connector No. 2 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck. If the symptom goes away with a known-good PCM, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : The failure is duplicated. Go to step 3.

3. Open wire check (D3 SW line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      D3 switch 2P connector: disconnected

      Test circuit D3 SW

Test point 1 D3 switch 2P connector No. 1 (WHT)

Test point 2 Body ground

Fig. 54: Checking For Continuity Between D3 Switch 2P Connector No. 1 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The D3 SW wire is OK. Go to step 4.

NO : Repair an open in the D3 SW wire between the D3 switch 2P connector and ground (G502), or repair poor ground (G502).

4. Shorted wire check (D3 SW line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector A (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     D3 switch 2P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit D3 SW

     Test point 1 D3 switch 2P connector No. 2 (WHT)

     Test point 2 Body ground

Fig. 55: Checking For Continuity Between D3 Switch 2P Connector No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the D3 SW wire between the D3 switch 2P connector and the PCM.

NO : The D3 SW wire is not shorted. Go to step 5.

5. Open wire check (D3 SW/OD SW line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     D3 switch 2P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit D3 SW/OD SW

     Test point 1 D3 switch 2P connector No. 2 (WHT)

     Test point 2 PCM connector A (49P) No. 14 (RED)

Fig. 56: Checking For Continuity Between D3 Switch 2P Connector No. 2 (WHT) And PCM Connector A (49P) No. 14 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The D3 SW/OD SW wire is OK. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck. If the symptom goes away with a known-good PCM, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Repair an open in the D3 SW/OD SW wire between the D3 switch 2P connector and the PCM.

D3 SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 57: Locating Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 58: Locating Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. D3 Switch Harness - Disconnection
    1. Remove the harness wire tie (A).

2. Disconnect the D3 switch connector (B).

Fig. 59: Locating Harness Wire Tie And D3 Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Unhook the D3 switch harness (A) from the harness guide (B).
2. Remove the shift lever knob/shift lever knob ring assembly (C).

Fig. 60: Locating D3 Switch Harness, Harness Guide And Shift Lever Knob/Shift Lever Knob Ring Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Shift Lever Knob Ring

NOTE: Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.

1. Remove the shift lever ring (A).

Fig. 61: Locating Shift Lever Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Shift Lever Knob Cover - Driver's Side

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Wrap the end of a flat-tip screwdriver (A) with tape, remove the shift lever knob cover (B) using the screwdriver.
2. Remove the shift lever button (C) and the spring (D).

Fig. 62: Removing Shift Lever Knob Cover Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. D3 Switch

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Remove the D3 switch (A) by expanding the lock tabs (B).

Fig. 63: Locating D3 Switch And Lock Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. D3 Switch

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the D3 switch (A).

Fig. 64: Locating D3 Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Knob Cover - Driver's Side

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the spring (A) and the shift lever button (B).
2. Install the shift lever knob cover (C).

Fig. 65: Locating Spring, Shift Lever Button And Shift Lever Knob Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Knob Ring

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever ring (A).

Fig. 66: Locating Shift Lever Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Knob/Shift Lever Knob Ring Assembly

NOTE: **Do not wipe off the special grease applied to the area of the shift lever marked with an asterisk (*) when you disassemble or assemble it.**

1. Install the shift lever knob/shift lever knob ring assembly (A).
2. Hook the D3 switch harness (B) to the harness guide (C).

Fig. 67: Locating Shift Lever Knob/Shift Lever Knob Ring Assembly, D3 Switch Harness And Harness Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. D3 Switch Harness - Reconnection
    1. Connect the D3 switch connector (A).
    2. Route the D3 switch harness (B) along with the shift lever assembly, and tie the harnesses at the guide (C) with the harness wire tie (D).

Fig. 68: Locating D3 Switch Connector, D3 Switch Harness, Guide And Harness Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 69: Locating Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 70: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

D3 SWITCH TEST

REMOVAL

1. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 71: Locating Maintenance Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. D3 Switch - Continuity Test
    1. Disconnect the connector (A).
    2. Check for continuity between D3 switch connector terminals No. 1 and No. 2. There should be continuity while pressing the D3 button and no continuity when the D3 button is released.
        - If the D3 switch test is OK, the test is finished.
        - If the D3 switch test fails, replace the D3 switch.

Fig. 72: Identifying D3 Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 73: Locating Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARK PIN SWITCH TEST

REMOVAL

1. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

    Left side

Fig. 74: Identifying Clips And Front Console Covers - Left Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 75: Identifying Clips And Front Console Covers - Right Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips

(B) and the hooks (C), then remove the center console rear trim.

Fig. 76: Identifying Center Console Rear Trim, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 77: Identifying Center Lower Cover, Clips And Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 78: Locating Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 79: Locating Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 80: Locating Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seatbacks around two thirds to the rear.
7. Remove the center console (A).

Fig. 81: Locating Center Console

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Park Pin Switch - Test
    1. Disconnect the connector.
    2. Check for continuity between connector terminals No. 6 and No. 9.
        - There should be no continuity when the shift lever is moved to P and the shift lever button is released.
        - There should be continuity when the shift lever button is pressed or the shift lever is moved out of P.
    3. If the continuity is not as specified, the park pin switch is faulty, replace the shift lever/shift cable bracket assembly.
    4. Connect the connector.

Fig. 82: Identifying Park Pin Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Center Console
    1. Install the center console (A).

Fig. 83: Locating Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 84: Locating Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 85: Locating Bolts And Console Box Mat
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 86: Locating Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 87: Locating Bolt, Center Lower Cover And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 88: Locating Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

PCM A/T CONTROL SYSTEM PCM INPUTS AND OUTPUTS

PCM A/T CONTROL SYSTEM INPUTS AND OUTPUTS AT PCM CONNECTOR A ([]) (49P)

Fig. 91: Identifying PCM Connector A (49P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCM CONNECTOR A ([]) (49P) DESCRIPTION

Terminal number	Wire color	Terminal name	Description	Signal
A1	BLU	IG1_FI-ECU (POWER SOURCE FOR SOLENOID VALVES)	Power source for solenoid valves	With ignition switch ON (II): battery voltage
		F_CAN-H (CAN	Sends and receives	

A3	WHT	COMMUNICATION SIGNAL HIGH)	communication signal	With ignition switch ON (II): pulses
A4	RED	F_CAN-L (CAN COMMUNICATION SIGNAL LOW)	Sends and receives communication signal	With ignition switch ON (II): pulses
A7	GRY	FI_MAIN_RLY_CL - (PGM-FI MAIN RELAY 1)	Drives PGM-FI main relay 1	With ignition switch ON (II): about 0 V With ignition switch in LOCK (0): battery voltage
A9	BRN	FI_MAIN_RLY_OUT (POWER SOURCE)	Power source for PCM	With ignition switch ON (II): battery voltage
A13	BLU	STOP_SW (BRAKE PEDAL POSITION SWITCH)	Detects brake pedal position switch signal	With brake pedal released: about 0 V With brake pedal pressed: battery voltage
A14	RED	OD_SW (D3 SWITCH)	Detects D3 switch signal	With ignition switch ON (II): • D3 switch ON (pressed): about 0 V • D3 switch OFF (released): battery voltage
A21	WHT	SHIFT_LOCK_SOL (SHIFT LOCK SOLENOID)	Drives shift lock solenoid	With ignition switch ON (II), in P, brake pedal pressed, and accelerator pedal released: about 0 V
A28	ORN	APS1 (ACCELERATOR PEDAL POSITION (APP) SENSOR A)	Detects APP sensor A signal	With ignition switch ON (II) and accelerator pedal pressed: about 4.7 V With ignition switch ON (II) and accelerator pedal released: about 1.0 V
A29	PUR	APS2 (ACCELERATOR PEDAL POSITION (APP) SENSOR B)	Detects APP sensor B signal	With ignition switch ON (II) and accelerator pedal pressed: about 2.4 V With ignition switch ON (II) and accelerator pedal released: about 0.5 V
A35	LT GRN	VCC5 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
A36	BRN	VCC4 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
A45	YEL	SG5 (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times
A46	LT BLU	SG4 (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times

PCM A/T CONTROL SYSTEM INPUTS AND OUTPUTS AT PCM CONNECTOR B () (49P)

Fig. 92: Identifying PCM Connector B (49P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCM CONNECTOR B ([]) (49P) DESCRIPTION

Terminal number	Wire color	Terminal name	Description	Signal
B1	BLK	PG2 (POWER GROUND)	Ground circuit for PCM	Less than 0.2 V at all times
B8	LT BLU	LINEAR_A+ (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A)	Drives A/T clutch pressure control solenoid valve A	With ignition switch ON (II): current controlled
B9	BLU	OP_3_SW (TRANSMISSION FLUID PRESSURE SWITCH B (3RD CLUTCH))	Detects transmission fluid pressure switch B (3rd clutch) signal	With engine running: • Without 3rd clutch pressure: about 5.0 V • With 3rd clutch pressure: about 0 V
B10	BLK	PG1 (POWER GROUND)	Ground circuit for PCM	Less than 0.2 V at all times
B11	PUR	LINEAR_B+ (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B)	Drives A/T clutch pressure control solenoid valve B	With ignition switch ON (II): current controlled
B19	RED	OP_2_SW (TRANSMISSION FLUID PRESSURE SWITCH A (2ND CLUTCH))	Detects transmission fluid pressure switch A (2nd clutch) signal	With engine running: • Without 2nd clutch pressure: about 5.0 V • With 2nd clutch pressure: about 0 V
B21	PUR	SHA (SHIFT SOLENOID VALVE A)	Drives shift solenoid valve A	With engine running in R, D (in 1st, 4th, and 5th gears), D3 (in 1st gear), and 1: battery voltage With engine running in P, N, D (in 2nd and 3rd gears), D3 (in 2nd and 3rd gears),

				and 2: about 0 V
B23	WHT	ATP-N (TRANSMISSION RANGE SWITCH N POSITION)	Detects transmission range switch N position signal	With ignition switch ON (II) in N: about 0 V With ignition switch ON (II) in any position other than N: about 5.0 V
B24	PUR	ATP-P (TRANSMISSION RANGE SWITCH P POSITION)	Detects transmission range switch P position signal	With ignition switch ON (II) in P: about 0 V With ignition switch ON (II) in any position other than P: more than 5.0 V
B25	TAN	ATP-R (TRANSMISSION RANGE SWITCH R POSITION)	Detects transmission range switch R position signal	With ignition switch ON (II) in R: about 0 V With ignition switch ON (II) in any position other than R: battery voltage
B26	PUR	ATP-1 (TRANSMISSION RANGE SWITCH 1 POSITION)	Detects transmission range switch 1 position signal	With ignition switch ON (II) in 1: about 0 V With ignition switch ON (II) in any position other than 1: battery voltage
B27	RED	ATP-D3 (TRANSMISSION RANGE SWITCH 2 POSITION)	Detects transmission range switch 2 position signal	With ignition switch ON (II) in 2: about 0 V With ignition switch ON (II) in any position other than 2: battery voltage
B28	WHT	NM (INPUT SHAFT (MAINSHAFT) SPEED SENSOR)	Detects input shaft (mainshaft) speed sensor signals	With ignition switch ON (II): about 0 V or about 5.0 V With engine running in N: about 2.5 V (pulses)
B29	PNK	VCC2 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
B32	WHT	SHB (SHIFT SOLENOID VALVE B)	Drives shift solenoid valve B	With engine running in P, R, N, D (in 1st and 2nd gears), D3 (in 1st and 2nd gears), 2, and 1: battery voltage With engine running in D (in 3rd, 4th, and 5th gears), and D3 (in 3rd gear): about 0 V
B35	YEL	ATP-D (TRANSMISSION RANGE SWITCH D POSITION)	Detects transmission range switch D position signal	With ignition switch ON (II) in D: about 0 V With ignition switch ON (II) in any position other than D: battery voltage
B36	BLU	LINEAR_C+ (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C)	Drives A/T clutch pressure control solenoid valve C	With ignition switch ON (II): current controlled
B38	RED	TATF (ATF TEMPERATURE SENSOR)	Detects ATF temperature signal	With ignition switch ON (II): about 0.2 - 4.8 V (depending on ATF temperature)
				With ignition switch ON (II) in D, 2,

B39	LT GRN	ATP-FWD (TRANSMISSION RANGE SWITCH FWD POSITION)	Detects transmission range switch FWD position signal	and 1: about 0 V With ignition switch ON (II) in any position other than D, 2, and 1: battery voltage
B40	YEL	SHE (SHIFT SOLENOID VALVE E)	Drives shift solenoid valve E	With engine running in P and R, and lock-up condition (in D): battery voltage With engine running in N, and no lock-up condition (in D, D3, 2, and 1): about 0 V
B44	GRY	SG2 (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times
B45	PNK	ATP-RVS (TRANSMISSION RANGE SWITCH RVS POSITION)	Detects transmission range switch RVS position signal	With ignition switch ON (II) in R: about 0 V With ignition switch ON (II) in any position other than R: battery voltage
B48	LT GRN	NC (OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR)	Detects output shaft (countershaft) speed sensor signal	With ignition switch ON (II): about 0 V or about 5.0 V With driving: about 2.5 V (pulses)

PCM A/T CONTROL SYSTEM INPUTS AND OUTPUTS AT PCM CONNECTOR C (O) (49P)

Terminal side of female terminals

Fig. 93: Identifying PCM Connector C (49P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCM CONNECTOR C (o) (49P) DESCRIPTION

Terminal number	Wire color	Terminal name	Description	Signal
C10	WHT	IG1 (F/P) (IGNITION SIGNAL)	Detects ignition signal	With ignition switch ON (II): battery voltage
C15	BRN	PG1 (POWER GROUND)	Ground circuit for PCM	Less than 0.2 V at all times
C20	BRN	LG2 (LOGIC GROUND)	Ground circuit for PCM	Less than 0.2 V at all times
				With engine running in N, D, and S (in

C21	GRN	SHC (SHIFT SOLENOID VALVE C)	Drives shift solenoid valve C	1st, 3rd, and 5th gears), D3 (in 1st and 3rd gears), and 1: battery voltage With engine running in P, R, D (in 2nd and 4th gears), D3 (in 2nd gear), and 2: about 0 V
C23	PNK	VCC1 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
C24	GRY	SG1 (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times
C32	PNK	SHD (SHIFT SOLENOID VALVE D)	Drives shift solenoid valve D	With engine running in D (in 2nd and 5th gears), D3 (in 2nd gear), and 2: battery voltage With engine running in P, R, N, D (in 1st, 3rd, and 4th gears), D3 (in 1st and 3rd gears), and 1: about 0 V

SHIFT SOLENOID VALVE TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 94: Locating Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Solenoid Valve - HDS Test

1. Select Shift Solenoid Valve A, B, C, D, and E individually in the Miscellaneous Test Menu with the HDS.
2. Check that shift solenoid valve A, B, C, D, or E operate with the HDS. A clicking sound should be heard.
    - If a clicking sound is heard, the solenoid valve is OK. The test is complete.
    - If no clicking sound is heard, go to the next procedure and check the solenoid valve resistance.

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 95: Identifying Front Inner Fender And Front Splash Shield Bolts And Clips Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Shift Solenoid Wire Harness - Resistance Check
    1. Disconnect the connector.
    2. Measure the resistance between following terminal and body ground for each shift solenoid valve A, B, C, D, and E.
        - Shift solenoid valve A: No. 7
        - Shift solenoid valve B: No. 2
        - Shift solenoid valve C: No. 3
        - Shift solenoid valve D: No. 4
        - Shift solenoid valve E: No. 1

        Standard: 13.8 - 17.1 ohms

        - If the resistance is within the standard, go to the next step and check the solenoid valve for a clicking sound.
        - If the resistance is out of the standard, go to the next procedure and check the solenoid valve operation.
    3. Connect a jumper wire from the battery positive terminal to each shift solenoid wire harness connector terminal individually. A clicking sound should be heard.
        - If a clicking sound is heard, the valves are OK, and the test is complete.
        - If no clicking sound is heard, go to the next procedure and check the solenoid valve operation.

Fig. 96: Identifying Shift Solenoid Wire Harness Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.

2. Reinstall the drain plug using a new sealing washer (B).

Fig. 97: Locating Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Dipstick Guide Tube
    1. Remove the ATF dipstick (yellow loop) (A).
    2. Remove the harness clamp (B).
    3. Remove the ATF dipstick guide tube (C).
    4. Remove the O-ring (D) from the ATF dipstick guide tube.

Fig. 98: Locating ATF Dipstick (Yellow Loop), Harness Clamp, ATF Dipstick Guide Tube And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/T Shift Solenoid Cover
    1. Remove the shift solenoid valve cover (A), the dowel pins (B), and the gasket (C).

Fig. 99: Locating Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Shift Solenoid Valve - Operation Check
    1. Disconnect the shift solenoid valve connectors:
        - BLU wire from shift solenoid valve A.
        - ORN wire from shift solenoid valve B.
        - GRN wire from shift solenoid valve C.
        - YEL, WHT, and WHT wires from shift solenoid valve D.
        - RED wire from shift solenoid valve E.
    2. Measure the resistance of the solenoid valve that was out of the standard between the connector terminal and body ground.

       Standard: 13.8 - 17.1 ohms

        - If the resistance is out of the standard, replace faulty shift solenoid valve.
        - If the resistance is within the standard, go to the next step and check the solenoid valve for a clicking sound.
    3. Connect a jumper wire from the battery positive terminal to each connector terminal individually. A clicking sound should be heard.
        - If a clicking sound is heard, replace faulty shift solenoid wire harness.
        - If no clicking sound is heard, replace faulty shift solenoid valve.

Fig. 100: Identifying Shift Solenoid Valve Connectors Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/T Shift Solenoid Cover
    1. Install the shift solenoid valve cover (A) with the dowel pins (B) and a new gasket (C).

Fig. 101: Locating Shift Solenoid Valve Cover, Dowel Pins And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Dipstick Guide Tube
    1. Install a new O-ring (A) on the ATF dipstick guide tube (B).
    2. Install the ATF dipstick guide tube.
    3. Install the harness clamp (C).
    4. Install the ATF dipstick (D).

<u>Fig. 102: Locating O-Ring, ATF Dipstick Guide Tube, Harness Clamp And ATF Dipstick</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 103: Identifying Front Splash Shield, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 104: Locating ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF

DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 105: Locating Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 106: Inserting Dipstick Into Guide Tube Aligning Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 107: Locating ATF Level Upper Mark And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan

comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

6. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60 - 90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 108: Inserting Dipstick Into Guide Tube Aligning Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**

- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 109: Locating ATF Level Upper Mark And Lower Mark On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 110: Locating Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER.**

TRANSMISSION RANGE SWITCH TEST

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 111: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ATF Warmer - Move
    1. Remove the bolts (A) securing the ATF warmer (B), and move it out of the way.

NOTE: **Be careful not to damage the lines and fin part of the ATF warmer when moving ATF warmer.**

Fig. 112: Locating Bolts And ATF Warmer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Transmission Range Switch Subharness - Continuity Test
    1. Disconnect the connector (A), then remove the transmission range switch subharness 10P connector (B) from its bracket (C).

Fig. 113: Locating Connector, Transmission Range Switch Subharness 10P Connector And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between terminals at the transmission range switch subharness 10P connector. There should be continuity between the terminals in the table for each shift lever position.
   - The transmission range switch test is finished if the test results are OK. Reconnect the connector.
   - If there is no continuity between any terminals, go to the next procedure.

Position	Connector Terminal/Signal									
	1	2	3	4	5	6	7	8	9	10
	ATP P	ATP R	ATP D	ATP 1	GND	ATP RVS	ATP N	ATP 2	ATP NP	ATP FWD
P	○				○				○	
R		○			○	○				
N					○		○		○	
D			○		○					○
2					○			○		○
1				○	○					○

Fig. 114: Transmission Range Switch Subharness 10P Connector Terminals Continuity Chart

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. Transmission Range Switch Cover
    1. Remove the transmission range switch cover (A).

Fig. 115: Locating Transmission Range Switch Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Transmission Range Switch - Continuity Test
    1. Disconnect the connector (A).

Fig. 116: Locating Transmission Range Switch Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between terminals at the transmission range switch 10P connector. There should be continuity between the terminals in the table for each shift lever position.
   - If the transmission range switch test is OK, replace the faulty transmission range switch subharness.
   - If there is no continuity between any terminals, go to the next step and check the selector control shaft.

Position	Connector Terminal/Signal									
	1	2	3	4	5	6	7	8	9	10
	ATP FWD	ATP NP	ATP 2	ATP N	ATP RVS	GND	ATP 1	ATP D	ATP R	ATP P
P		○				○				○
R					○	○			○	
N		○		○		○				
D	○					○		○		
2	○		○			○				
1	○					○	○			

Fig. 117: Transmission Range Switch 10P Connector Terminals Continuity Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the transmission range switch (A).

Fig. 118: Locating Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the end of the selector control shaft (A).

Selector Control Shaft Specification

Width (B): 6.1 - 6.2 mm (0.240 - 0.244 in)

End Gap (C): 1.8 - 2.0 mm (0.071 - 0.079 in)

- If the measurement at the end of the selector control shaft end is within the specification, replace the transmission range switch.
- If the measurement is out of the specification, repair the selector control shaft end, and recheck the transmission range switch continuity.

Fig. 119: Locating Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transmission Range Switch
    1. Make sure the selector control shaft is in the N position. If necessary, move the selector control shaft to the N position.

NOTE: **Do not use the selector control shaft to adjust the shift position. If the selector control shaft tips are squeezed together it will cause a faulty signal or position due to play between the selector control shaft and switch.**

Fig. 120: Identifying Selector Control Shaft N Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the cutouts (A) on the rotary-frame with the neutral positioning cutouts (B) on the transmission range switch (C), then put a 2.0 mm (0.079 in) feeler gauge blade (D) in the cutouts to hold the switch in the N position.

NOTE: **Be sure to use a 2.0 mm (0.079 in) blade or equivalent to hold the switch in the N position.**

Fig. 121: Aligning Cutouts On Rotary-Frame With Neutral Positioning Cutouts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the transmission range switch (A) gently on the selector control shaft (B) while holding it in the N position with the 2.0 mm (0.079 in) blade (C).

Fig. 122: Installing Transmission Range Switch On Selector Control Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the bolts on the transmission range switch (A) while you continue holding the N position.

NOTE: **Do not move the transmission range switch when tightening the bolts.**

5. Remove the feeler gauge (B).
6. Check the connector (C) for corrosion, dirt, or oil, and clean or repair if necessary, then connect the connector securely.

Fig. 123: Locating Bolts On Transmission Range Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transmission Range Switch Cover
    1. Install the transmission range switch cover (A).

Fig. 124: Locating Transmission Range Switch Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ATF Warmer - Move
    1. Install the ATF warmer (A).

Fig. 125: Locating ATF Warmer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 126: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Air Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. After Installing Transmission Range Switch - Check
    1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
    2. Move the shift lever through all positions, and check the transmission range switch synchronization with the A/T gear position indicator.
    3. Check that the engine will start with the shift lever in P and N, and will not start in any other shift lever position.
    4. Check that the back-up lights come on when the shift lever is in R.
    5. Raise the vehicle on a lift, and make sure it is securely supported.
    6. Start the engine, and check the shift lever operation.

AUDIO SYSTEM ERROR CODES

The audio system can display a few error codes when some problems are detected with the XM radio, the audio disc player and the audio disc. This is not a complete list of audio error codes. Refer to **SYMPTOM TROUBLESHOOTING**.

CD ERROR CODES (WITH NAVIGATION)

Error Code Displayed	Possible Cause	Solution
Bad Disc Please Check Owners Manual	There is a problem with the disc player. A common problem is paper disc labels coming off the disc while in the player.	Try to eject the disc and try another one. If there is still a problem, REPLACE THE AUDIO-NAVIGATION UNIT .
Heat Error	Disc player is hot. This can happen if the vehicle is parked out in the hot sun all day.	Park the vehicle in a cooler place for a while and try the disc player again. If the error code is still present, try another disc and remove the audio-navigation unit to make sure nothing is blocking the cooling fan on the back of the unit. If the error code is still present, REPLACE THE AUDIO-NAVIGATION UNIT.
Unsupported	• Track/File format not supported. • Scratched disc	• Current track is skipped. The next supported track of file plays automatically. • Verify that CD, CD-R, or CD-RW file names end in CD-DA or WAV. • Verify that CD, CD-R, or CD-RW with compressed music formats end in MP3 or WMA. • Other file formats like iTunes or Ogg are not recognized. • WMA files may have (DRM) copy protection and cannot be read.
Unplayable File		
Check Disc	• CD label jammed in the mechanism. • CD eject mechanism or motor is inoperative. • Scratched disc • CD spindle motor won't spin up the CD.	Press the EJECT button and hold it for 5 seconds. If the CD does not eject, try again. If the CD still won't eject, go to **AUDIO DISC DOES NOT EJECT TROUBLESHOOTING**.
Mech Error		

CD ERROR CODES (WITHOUT NAVIGATION)

Error Code Displayed	Possible Cause	Solution

BAD DISC PLEASE CHECK OWNERS MANUAL PUSH EJECT	• There is a problem with the disc player. A common problem is paper disc labels coming off the disc while in the player. • Scratched disc	Try to eject the disc and try another one. If there is still a problem, REPLACE THE AUDIO UNIT .
HEAT ERROR	Disc player is hot. This can happen if the vehicle is parked out in the hot sun all day.	Park the vehicle in a cooler place for a while and try the disc player again. If the error code is still present, REPLACE THE AUDIO UNIT .
UNPLAYABLE FILE	• Track/File format not supported. • Scratched disc	• Current track is skipped. The next supported track of file plays automatically. • Verify that CD, CD-R, or CD-RW file names end in CD-DA or WAV. • Verify that CD, CD-R, or CD-RW with compressed music formats end in MP3 or WMA. • Other file formats like iTunes or Ogg are not recognized. • WMA files may have (DRM) copy protection and cannot be read.
CHECK DISC	• CD label jammed in the mechanism. • CD eject mechanism or motor is inoperative. • Scratched disc • CD spindle motor won't spin up the CD.	Press the EJECT button and hold it for 5 seconds. If the CD does not eject, try again. If the CD still won't eject, go to **AUDIO DISC DOES NOT EJECT TROUBLESHOOTING**.
MECH ERROR		

XM ERROR CODES

Error Code Displayed	Possible Cause	Solution
Loading	XM radio is acquiring audio or program information.	Wait until the XM radio receives the information. Compare the vehicle against a known-good vehicle in the same area under the same conditions.
Channel Off Air	XM channel not in service.	Try another XM channel.
No Signal	Loss of signal.	Both terrestrial and satellite antennas have lost the signal. Park the vehicle outside with a clear view of the southern horizon. Compare the vehicle against a known-good vehicle in the same area under the same conditions.
Check		Go to **ERROR CODE: CHECK ANTENNA IS DISPLAYED TROUBLESHOOTING**:

Antenna	XM antenna error.	• WITH NAVIGATION • WITHOUT NAVIGATION
NOTE: **do these checks with the vehicle parked outside with a clear view of the southern horizon.**		

AUDIO SYSTEM SELF-DIAGNOSTIC FUNCTION

HOW TO OBTAIN THE AUDIO UNIT SERIAL NUMBER

The audio-navigation unit (with navigation) does not support this function.

This procedure can only be done after the power has been disconnected and reconnected to the audio unit, and the audio unit displays Push and hold POWER for more than two seconds to start. when the audio unit is turned on.

1. Turn the ignition switch to ON (II).
2. Make sure the audio unit is turned off.
3. Use the DISPLAY button on the steering wheel to select the screen that displays Audio Off.
4. Press and hold the preset No. 1 and No. 6 buttons.
5. While holding the buttons, press the POWER button.
6. Release the buttons, and displays an 8-digit serial number.

Fig. 1: Locating Audio Unit POWER Button, No. 1 And No. 6 Buttons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Use all 8 numbers as the serial number when using the Interactive Network (iN) to retrieve the 5-digit anti-theft code.
8. To end the function, turn the audio system off, or turn the ignition switch to LOCK (0).

HOW TO CHECK THE AUDIO SYSTEM CONDITION

The audio-navigation unit (with navigation) does not support this diagnosis.

The audio system has a self-diagnostic function to help find problems with the audio system. To run the self-diagnostic function, do the following:

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **Not all self-diagnostic functions appear on all models.**
- **There may be other self-diagnostic functions that are for factory use only.**
- **The self-diagnostic function does not find every problem with the audio system.**

1. Turn the ignition switch to ON (II).
2. Make sure the audio unit is turned off.
3. With multi-information display, use the DISPLAY button on the steering wheel to select the screen that displays Audio Off.
4. Press and hold the preset No. 1 and No. 6 buttons.
5. While holding the buttons, press the POWER button.
6. Release the buttons, and the self-diagnosis begins.

Fig. 2: Locating Audio Unit Buttons And Multi-Information Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. When you are in the self-diagnostic mode, pressing a preset button starts the diagnostic mode that is assigned to that preset button. To exit this mode, go to step 8. Once you exit this test, you must start again at step 1.

NOTE: **The segments (A) change to the illumination duty when you turn the headlights switch is in parking light position.**

- No. 2 button: Audio button, knob, and audio remote switch detection mode
- No. 3 button*1 : Entire LCD lighting/light-out mode
- No. 4 button: Duty indication mode (for the Illumination dim)
- No. 5 button: Vehicle speed pulse (VSP) indication mode
- FM/AM button*2 , FM button*3 or AM button*3 (Press and hold 5 sec): Reception level indication mode

*1: Without multi-information display

*2: With XM

*3: Without XM

8. To end the self-diagnostic mode, turn the audio system off, or turn the ignition switch to LOCK (0).

AUDIO BUTTON, KNOB, AND AUDIO REMOTE SWITCH DETECTION MODE (PRESS NO. 2 BUTTON)

This test allows you to manually check all the audio switch panel buttons and knobs, and the audio remote switch buttons. When the button, the knob, or the switch is properly detected, the name or value of the input appears on the display.

NOTE:

- **The POWER button does not support this diagnosis.**
- **The DISPLAY button and the MENU button on the audio remote/multi-information display switch are not supported with this diagnosis.**

ENTIRE LCD LIGHTING/LIGHTS-OUTS MODE (PRESS NO. 3 BUTTON)

This diagnostic screen checks for segments that may be dead (off) or stuck on.

NOTE: **The multi-information display unit does not support this diagnosis.**

All the display segments should be on. If any segments are dead (off), **REPLACE THE CENTER DISPLAY UNIT** . With all the segments on, press the No. 3 button a second time. The entire display must turn black. If any segments are stuck on, **REPLACE THE CENTER DISPLAY UNIT** .

Fig. 3: Identifying Display Segments
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ILLUMINATION LEVEL (FOR THE GAUGE ILLUMINATION) INDICATION (PRESS NO. 4 BUTTON)

This diagnostic screen checks the gauge illumination input.

With the headlights on, use the dimmer knob to dim and brighten the gauge. You should see the value change from 1 (max low) to 22 (max high). If it does not change, go to **DISPLAY DOES NOT DIM OR BRIGHTEN WITH DIMMER TROUBLESHOOTING** .

Display Message	State	Remarks
A-Diag 22	Headlights switch is in parking light position and dashlights brightness is max high.	With multi-information display
21 MAX 22	Headlights switch is in parking light position and dashlights brightness is max high.	Without multi-information display
A-Diag -(1)	Headlights switch is in parking light position and dashlights brightness is max low.	With multi-information display
00 248 01	Headlights switch is in parking light position and dashlights brightness is max low.	Without multi-information display
(1) The display screen is black when the dashlight brightness is max low.		

Vehicle Speed Pulse Indication (press No. 5 button)

This diagnostic screen checks that the audio unit is receiving the VSP indication.

When you test drive the vehicle, the VSP indicates the vehicle speed in km/h.

Display Message	State	Remarks
A-Diag VSP 0	When the vehicle is stopped.	With multi-information display
VSP 000	When the vehicle is stopped.	Without multi-information display

RECEPTION LEVEL INDICATION MODE (PRESS AND HOLD FM/AM BUTTON, FM BUTTON OR AM BUTTON FOR 5 SEC)

This diagnostic screen checks the audio unit's reception level in decibels (dB). This level then can be used in the diagnosis of audio unit reception quality.

Display Message	State	Remarks
A-Diag 0 12.3	Antenna power supply (SWD +B) is on (radio reception level is 12.3 dB).	With multi-information display
006	Antenna power supply (SWD +B) is on (radio signal meter value is 6).	Without multi-information display
A-Diag A	Antenna power supply (SWD +B) is off.	With multi-information display
A 001	Antenna power supply (SWD +B) is off (radio signal meter value is 1).	Without multi-information display

Preparation:

- Park the vehicle outside in a good location away from tall buildings, mountains, high-voltage power line or any other object that may interfere with reception.
- Tune to a powerful local FM radio station then write down the radio station number.
- Tune to a powerful local AM radio station then write down the radio station number.

1. Enter the reception level indication mode in the self-diagnostic function.
2. Tune to the FM radio station you wrote down in Preparation using the tuning button, and note the decibel level of that station when you release the button.
3. Press and release the SETUP button to turn the AM/FM antenna amplifier off.
4. Note the decibel level of that station with the AM/FM antenna amplifier off.
5. Press and release the SETUP button to turn the AM/FM antenna amplifier back on.
6. Press and hold the FM/AM button (with XM) or the AM button (without XM) for more than 5 seconds to enter the AM reception mode.
7. Tune to the AM radio station you wrote down in preparation using the tuning button, and note the decibel level of that station.
8. Press and release the SETUP button to turn the AM/FM antenna amplifier off.
9. Note the decibel level of that station with the AM/FM antenna amplifier off.
10. Press and release the SETUP button to turn the AM/FM antenna amplifier back on.
11. To end the self-diagnostic mode, turn the audio system off, or turn the ignition switch to LOCK (0).
12. Compare your results to a known-good, (make sure it is the same year and trim level) in the same location and direction, and under the same environmental conditions.
    - If the reception level is within 10 % of the known-good vehicle, no repair is needed at this time.
    - If the reception level is at least 10 % less than the known good vehicle, go to **POOR AM OR FM RADIO RECEPTION OR INTERFERENCE TROUBLESHOOTING**.

SPEAKER CHECK MODE

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST.</u>**
- **Not all self-diagnostic functions appear on all models.**

1. Turn the ignition switch to ON (II).
2. Make sure the audio unit is turned off.
3. With multi-information display, use the DISPLAY button on the steering wheel to select the screen that displays Audio Off.
4. Press and hold the preset No. 1 and No. 3 buttons.
5. While holding the buttons, press the POWER button.
6. Release the buttons, and the speaker check mode begins.

<u>Fig. 4: Locating Audio Unit Buttons</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Display Specifications (with multi-information display)

When you press the FORWARD button, the system checks the speakers in this order: 1-->2-->3-->4-->5-->6

When you press the BACK button, the system checks the speakers in this order: 6-->5-->4-->3-->2-->1

	Display Message	Status	Remarks
(1)	A-Diag SPK FR-L	You should hear a tone from the driver's door speaker and the left tweeter.	
(2)	A-Diag SPK FR-R	You should hear a tone from the front passenger's door speaker and the right tweeter.	
(3)	A-Diag SPK RR-R	You should hear a tone from the right rear door speaker.	
(4)	A-Diag SPK	You should hear a tone from the subwoofer.	With stereo

	SUBW		amplifier
(5)	A-Diag SPK RR-L	You should hear a tone from the left rear door speaker.	
(6)	A-Diag SPK ALL	You should hear a tone from the all speakers.	

Display Specifications (without multi-information display)

When you press the FORWARD button, the system checks the speakers in this order: 1-->2-->3-->4-->5-->6-->7

When you press the REVERSE button, the system checks the speakers in this order: 7-->6-->5-->4-->3-->2-->1

	Display Message	Status	Remarks
(1)	SPK FR-L	You should hear a tone from the driver's door speaker.	
(2)	SPK FR-R	You should hear a tone from the front passenger's door speaker.	
(3)	SPK RR-R	You should hear a tone from the right rear door speaker.	
(4)	SPK RR-L	You should hear a tone from the left rear door speaker.	
(5)	SPK FTWL	You should hear a tone from the driver's door speaker and the left tweeter (outputs 8kHz tone).	
(6)	SPK FTWR	You should hear a tone from the front passenger's door speaker and the right tweeter (outputs 8kHz tone).	
(7)	SPK ALL	You should hear a tone from the all speakers.	

7. To end the speaker check mode, turn the audio system off, or turn the ignition switch to LOCK (0).

XM SELF-DIAGNOSIS

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **This diagnostic screen checks the audio unit's XM radio reception level. To check the XM reception, do the following:**

1. Turn the ignition switch to ON (II).
2. Select XM1 mode.
3. Turn off the audio system.
4. Press and hold the preset No. 3 and No. 6 buttons.
5. While holding the buttons, press the POWER button. Continue holding the buttons for about 5 seconds, then release the buttons.
6. Press and release preset No. 1 button to read the error code.

Fig. 5: Locating Audio Unit Buttons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **There may be other error codes that are for factory use only.**

Error Code No. Displayed	Error Code Title	Solution
ER 00	NO ERROR	System is normal.
ER 04	NO SIGNAL	Move the vehicle to an open area, and recheck.
ER 05	NO XM ACTIVATION	The subscription may have expired. Contact XM Radio at 800-852-9696.
ER 06	NO XM AUTHORIZATION	Contact XM Radio at 800-852-9696.
ER 14	ANTENNA NOT CONNECTED/NO SIGNAL	Refer to **ERROR CODE: CHECK ANTENNA IS DISPLAYED TROUBLESHOOTING**.
ER 24	ANTENNA SHORTED/NO SIGNAL	Refer to **ERROR CODE: CHECK ANTENNA IS DISPLAYED TROUBLESHOOTING**.
ER 55	HARDWARE FAILURE (CONDITIONAL ACCESS FAILURE)	There is an internal failure. REPLACE THE XM RECEIVER .
ER 65	HARDWARE FAILURE (CONDITIONAL ACCESS FAILURE)	There is an internal failure. REPLACE THE XM RECEIVER .

7. To end the XM self-diagnosis, turn the audio system off, or turn the ignition switch to LOCK (0).

DISPLAY DIAGNOSIS

Service Diag

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **This diagnosis is applied to the multi-information display unit only.**

- **Not all self-diagnostic functions appear on all models.**
- **There may be other self-diagnostic functions that are for factory use only.**
- **If you run this diagnosis with a door open, press the INFO button to exit the door open screen.**

1. Turn the ignition switch to ON (II).
2. Press the MENU button to display the Vehicle Menu.
3. Press and hold the MENU button (A) and then the SOURCE button (B) on the audio remote switch for about 10 seconds. The Service Diag menu screen appears.

Fig. 6: Screen Display - Vehicle Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Use the directional pad (C) to select the diagnosis, then press the SOURCE button to enter your selection.

Fig. 7: Screen Display - Service Diag Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. To end the self-diagnostic function, turn the audio system off, press the MENU button, or turn the ignition switch to LOCK (0).

In Line Diag (i-MID)

NOTE: **If the vehicle left the factory in the factory diagnostic mode, you will see this screen every time you turn the ignition switch to ON (II). You may also see this screen if you recently replaced the multi-information display unit.**

When the multi-information display unit is powered up for the first time at the factory or sometimes when a remanufactured multi-information display unit is installed, the factory diagnostic screen (In Line Diag) appears. Normally the factory does the steps necessary to verify proper operation and terminate the factory diagnosis. Until the proper confirmation sequence is done, the screen appears every time the vehicle is started. Also, the In Line Diag function can be performed from the Service Diag menu.

Select the In Line Diag in the Service Diag menu, then select the Diagnostic Result.

Terminal / Position	7	9	10
LOCK	○	○	
NEUTRAL			
UNLOCK	○		○

Fig. 8: Screen Display - In Line Diag Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

The In Line Diag function runs automatically. When the diagnosis finishes, the icons turn different colors based on their test status (OK or NG).

NOTE: **The Result (A) indicates NG until the audio remote switch buttons (the DISPLAY button or the MENU button and the SOURCE button or the directional pad) are pressed.**

Icon Colors	Description
Green	The system run a diagnosis and the results are OK.
Red	Errors that require replacement of hardware or harness.
Yellow	Errors that do not require hardware replacement, such as a missing optional systems (audio unit or rearview camera).
White	The diagnosis is running. The screen functions are locked out while the diagnosis runs.

After the test is complete, press the SOURCE button to exit.

Fig. 9: Locating Result On In Line Diag Menu Screen

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Camera

Wide View Normal View Top Down View

This screen adjusts the rearview camera image guide lines. Press the audio unit selector knob to select the rear view mode (wide, normal, top down). If you need to adjust a guide line, select the point you want to adjust using the SOURCE button, and use the directional pad, and you can move the guide line.

The coordinate of the guide line (A) indicates the selected point position on the screen.

If you need to reset the guide line to the factory settings, press and hold the MENU button for more than 2 seconds.

Wide View

Fig. 10: Locating Coordinate Of Rearview Camera Image Guide Line (Wide View)

After the setting is complete, press the MENU button to exit.

Display Check

These diagnostic screens allow you to troubleshoot the display unit. Select the item you want to troubleshoot, and follow the diagnostic instructions.

- Color Bar
- Black
- White
- Red
- Green
- Blue
- Gray Bar
- Point

Color Bar

This screen shows the colors being used for the multi-information display unit. This is for factory use only.

The colors should appear in the following order: White, Yellow, Light Blue, Green, Purple, Red, Blue, Black

Fig. 13: Multi-Information Display Unit Screen - Color Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Black

This screen checks for pixels that may be stuck on. The entire display must be black. If pixels are stuck on, **REPLACE THE MULTI-INFORMATION DISPLAY UNIT.**

Fig. 14: Multi-Information Display Unit Screen - Black
Courtesy of AMERICAN HONDA MOTOR CO., INC.

White

This screen checks for pixels that may be dead (off). The entire display must be white. If there are dead pixels, **REPLACE THE MULTI-INFORMATION DISPLAY UNIT.**

Fig. 15: Multi-Information Display Unit Screen - White
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Red, Green, Blue

These screens checks that the multi-information display unit is displaying red, green, and blue colors properly. If any of the colors are missing, **REPLACE THE MULTI-INFORMATION DISPLAY UNIT.**

The display changes the color by your selection (Red, Green, Blue).

Fig. 16: Multi-Information Display Unit Screen - Red, Green, Blue
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Gray Bar

This screen checks problems with contrast. You should be able to see the changes from bar to bar across the scale. It is normal for the two bars on either side to appear the same. If you cannot see changes from bar to bar, **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

Fig. 17: Multi-Information Display Unit Screen - Gray Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Point

This screen is for factory use only.

Fig. 18: Multi-Information Display Unit Screen - Point
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Product Info

This screen displays the parts number (A), the product number (PN), and the serial number (S/N) about the multi-information display unit. This is for factory use only.

Fig. 19: Screen Display - Product Info
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Artwork

This screen allows you to select the iPod album art function on or off. Refer to the Owner's Manual for the album art function.

Fig. 20: Screen Display - Artwork Function
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PANDORA

This screen allows you to select the PANDORA function on or off. Refer to the Owner's Manual for the PANDORA function.

Fig. 21: Screen Display - PANDORA Function

HOW TO TROUBLESHOOT THE AUDIO SYSTEM

ANTI-THEFT FEATURE

The audio-navigation unit or the audio unit (with multi-information display) has an anti-theft protection circuit. When one of the following occurs, the unit enters the anti-theft mode.

- Disconnecting the battery.
- Disconnecting audio-navigation unit connector A (24P), connector B (20P), or audio unit connector A (24P).
- With navigation: Removing the No. A1-6 (100 A) fuse or the No. A29 (10 A) fuse from the under-hood fuse/relay box.
- Without navigation: Removing the No. A1-6 (100 A) fuse or the No. A2-2 (60 A) fuse from the under-hood fuse/relay box or the No. B25 (10 A) fuse from the under-dash fuse/relay box.

After service, reconnect power to the audio-navigation unit or the audio unit, and turn the ignition switch to ON (II). There are two ways to exit the anti-theft mode:

- Press and hold the VOLUME/POWER knob or the POWER button for at least 2 seconds. The audio-navigation unit or the audio unit automatically exits the anti-theft mode. If the audio-navigation unit or the audio unit does not exit anti-theft mode, like in cases where a known-good unit was substituted for testing, enter the anti-theft code.
- Enter the 5-digit anti-theft code.

There are no anti-theft cards included with the vehicle. If you need the code, you can get the code from the Interactive Network (iN) using the audio-navigation unit or the audio unit serial number. The unit serial number can easily be obtained without removing the audio-navigation unit or the audio unit, do the following:

- With navigation: **Go to Anti-Theft Future in How to Troubleshoot the Navigation System** See **HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM** or **HOW TO TROUBLESHOOT THE NAVIGATION SYSTEM** .
- Without navigation: **GO TO HOW TO OBTAIN THE AUDIO UNIT SERIAL NUMBER IN SELF-DIAGNOSTIC FUNCTION**.

After you retrieve the serial number, go to the iN, select Service, Vehicle Information, Anti-Theft Code Inquiry, and fill out the form.

When the audio-navigation unit or the audio unit is installed in another vehicle (same Year/Model/Trim), you have to enter the 5-digit anti-theft security code. After that, you can release the anti-theft mode by pressing and holding the VOLUME/POWER knob or the POWER button.

LEVER-LOCKED CONNECTOR

Disconnecting

To disconnect the connector, pull the lever (A) while pushing the lock tab (B) down, then pull the connector (C).

Fig. 22: Disconnecting Lever-Locked Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

To connect the connector, push the connector into the connector sleeve (A). As the connector is pressed in, the lever (B) moves to the locked position.

Fig. 23: Connecting Lever-Locked Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM

REAR SCREEN OPERATION

The rear screen power and the back light on/off depends on the screen panel opening angle.

- When the rear screen panel opened more than 15°, the rear screen turns on.
- When the rear screen panel opened more than 130°, the screen back light is off (power is still on).

AUTO DIAGNOSIS

When a new DVD player unit is powered up after installing into a vehicle for the first time, the self-diagnostic screen appears.

When check status and the DVD player unit connection was OK, press the REAR POWER button and the diagnostic screen should not appear again.

LEVER-LOCKED CONNECTOR

Disconnecting

To disconnect the connector, pull the lever (A) while pushing the lock tab (B) down, then pull the connector (C).

Fig. 24: Disconnecting Lever-Locked Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

To connect the connector, push the connector into the connector sleeve (A). As the connector is pressed in, the lever (B) moves to the locked position.

Fig. 25: Connecting Lever-Locked Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION

How to Check the Rear Entertainment System Condition

The rear entertainment system has a self-diagnostic function that appears on the rear screen.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **Do not check the headphones when you are doing the self-diagnostic function because the sound may be intermittent.**
- **The self-diagnostic function does not find every problem with the rear entertainment system.**

There are two ways to enter the diagnostic mode:

HOW TO ENTER THE SELF-DIAGNOSTIC FUNCTION USING THE DVD PLAYER UNIT

1. Turn the ignition switch to ON (II).
2. Open the rear display, then turn the REAR POWER off.
3. Press and hold the REAR POWER button for one second, then press it 3 more times within 3 seconds. On the last press, hold the REAR POWER button until the diagnostic screen appears.

NOTE:

- **The wireless headphones LED blinks at one second intervals when in the se diagnostic mode. This indicates the RES is in the diagnostic mode, even wh nothing appears on the screen because of a display problem.**
- **The DVD player unit LED blinks every 0.5 seconds. When the RES is running the self-diagnostic, the REAR POWER button LED blinks. When the self-diagnostic function is complete, you will see one of the two following results**
  - **During check: The REAR POWER button LED blinks.**
  - **If the diagnosis result is OK: The REAR POWER button LED first blinks and then stays on.**
  - **If the diagnosis result is NG: All the buttons and indicator LEDs blink.**

Fig. 26: Identifying REAR POWER Button LED Blinks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. To end the self-diagnostic function, turn the REAR POWER button off, or turn the ignition switch to LOCK (0). After completing the repair work, run the self-diagnostic function again to make sure that there are no other malfunctions.

HOW TO ENTER THE SELF-DIAGNOSTIC FUNCTION USING THE WIRELESS REMOTE CONTROL

1. Turn the ignition switch to ON (II).
2. Open the rear display.
3. Press each of these buttons in the order listed within 2 seconds of each other: DVD, AUX, FAST FOWARD, AUX to enter the self-diagnostic function mode.

NOTE:

- **The wireless headphones LED blinks every 1 second when in self-diagnostic function. This indicates the RES is in the diagnostic mode, even when nothing appears on the screen because of a display problem.**
- **The DVD player unit LED blinks every 0.5 seconds. When the RES is running the self-diagnostic, the REAR POWER button LED blinks. When the self-diagnostic function is complete, you will see one of the two following results:**
  - **During check: The REAR POWER button LED blinks.**
  - **If the diagnosis result is OK: The REAR POWER button LED blinks.**
  - **If the diagnosis result is NG: The all buttons and the all indicators LED blinks.**

Fig. 27: Identifying Wireless Remote Control LED Blinks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. To end the self-diagnostic function, turn the DVD player unit REAR POWER button off, or turn the ignition switch to LOCK (0). After completing the repair work, run the self-diagnostic function again to

make sure that there are no other malfunctions.

DIAGNOSIS MENU

Use the DVD player unit SOURCE button or the wireless remote control LEFT or RIGHT buttons to select the diagnosis.

CONNECT

This screen shows the connection check status for each units.

- If Connection shows NG (red color), check the connection between faulty units.
- **IF RAM CHECK SHOWS NG (RED COLOR), REPLACE THE REAR CONTROLLER AND SCREEN.**

Position \ Terminal	1	4
LOCK	⊖	⊕
UNLOCK	⊕	⊖

Fig. 28: Screen Display - Connection Check Status For Each Units

AUDIO SYSTEM SOUND QUALITY DIAGNOSIS

Special Tools Required

Diagnostic CD 07AAZ-SDBA100

Use the following tests to check sound quality.

NOTE:

- **Before beginning the following tests, write down the bass, the treble, the fader and the balance settings, and then set them to their center positions for testing.**
- **Always verify the customer's complaint, and compare it a known-good vehicle of the same model and trim under the same conditions using the same inputs (iPod, USB device, etc.). If the complaint is the same on the known-good vehicle, it is a system characteristic.**

LEFT/RIGHT CHANNEL ID

Do this test to confirm proper channel routing.

1. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
2. Play track No. 1 (left, both, right channel ID) at a normal, or slightly higher than normal, volume level.
3. The voice should be audible only from the channel or channels when indicated.
    - If the channel ID is correct for each side, go to **PHASE TEST**.
    - If the channel ID is not correct, check for:
        - Shorted speaker wire
        - Faulty audio-navigation unit or audio unit
        - Faulty stereo amplifier
        - Shorted speaker
        - Open in speaker wire
        - Loose pins or poor pin fit in the speaker circuit

PHASE TEST

Do this test to confirm proper speaker phasing.

1. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
2. Play track No. 2 (phase) at a normal, or slightly higher than normal, volume level.
3. The voice should sound centered and focused when it indicates it is in-phase.
4. The voice should sound diffused, and have less bass when it indicates it is out of phase.
    - If the voice changes from in-phase to out of phase as indicated by the prompt, the phasing is correct. Go to **ELECTRICAL NOISE TEST**.

- If the voice always sounds out of phase, phasing is not correct. Check for:
  - Shorted speaker wire
  - Faulty audio-navigation unit or audio unit
  - Faulty stereo amplifier
  - Shorted speaker
  - Open in speaker wire
  - Loose pins or poor pin fit in the speaker circuit
  - Aftermarket audio components like amplifiers, speakers, etc.

ELECTRICAL NOISE TEST

Do this test to check for electrical noise being induced into the audio system.

NOTE: Electrical noise may be caused by outside sources that cannot be handled by the audio system. Make sure you remove any cell phones and/or turn off any aftermarket devices before beginning this test.

1. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
2. Play track No. 4 (digital zero) at a normal, or slightly higher than normal, volume level.
3. Operate any electrical device that may create electrical noise in the audio system, including starting the engine, operating the power door locks, turning on the rear window defroster, etc.
4. Play track No. 5 (near digital zero) at a normal, or slightly higher than normal, volume level.
5. Operate any electrical device that may create electrical noise in the audio system, including starting the engine, operating the power door locks, turning on the rear window defroster, etc.
6. Play track No. 6 (SNR) at a normal, or slightly higher than normal, volume level.
7. Operate any electrical device that may create electrical noise in the audio system, including starting the engine, operating the power door locks, turning on the rear window defroster, etc.
   - If no abnormal noise is heard, go to **INDIVIDUAL SPEAKER TEST**.
   - If the noise is present only during the SNR track, replace the audio-navigation unit or the audio unit.
   - If the noise is heard during the digital zero or near digital zero track, check for:
     - Poor ground for audio-navigation unit or audio unit, engine or battery cable
     - Pinched or shorted speaker wire
     - Faulty audio-navigation unit or audio unit
     - Faulty stereo amplifier
     - Aftermarket devices or aftermarket window tint
     - Other faulty components causing excessive electrical noise (ignition coils, alternator, door lock actuators, etc.). Disconnect or remove any suspect components, and then replay the tracks that were originally noisy. If the noise goes away, check the component and its circuit

INDIVIDUAL SPEAKER TEST

NOTE: **Check the vehicle for aftermarket speakers, amplifiers, etc. that may affect sound quality.**

Do this test to identify a faulty speaker.

1. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
2. Play track No. 30 (steady 300 Hz tone) at a normal, or slightly higher than normal, volume level.
3. Listen to each speaker for poor sound compared to the other speakers. Use the audio-navigation unit's or the audio unit's fader and balance settings to help isolate the channel with the problem.
   - If the sound quality produced by a specific speaker is poor, substitute it with a known-good speaker. If substituting a known-good speaker solves the problem, the speaker should be replaced. If the poor sound quality continues, go to Sound Balance Test.
   - If the sound quality is OK, go to Sound Balance Test.

SOUND BALANCE TEST

Do this test to identify a faulty channel or speaker.

1. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
2. Confirm the bass and treble are set to the center positions.
3. Play track No. 3 (pink noise) at a normal, or slightly higher then normal, volume level.
4. A static type sound should be heard through all speakers.
5. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit of a known-good vehicle.
6. Set the bass and treble to the center position.
7. Play track No. 3 (pink noise) all the same level as was played in step 3.
8. Compare the sounds made by the two vehicles.
   - If the sounds made by the two vehicles are very similar, go to **FREQUENCY SWEEP TEST**.
   - If the sound does not have as much bass, check the subwoofer and its circuit.
   - If the sound does not have enough hiss, check the tweeters and their circuits.

FREQUENCY SWEEP

NOTE: **If possible, have the customer demonstrate their complaint, and record the conditions under which the complaint occurred. Try to reproduce the complaint in a known-good vehicle.**

Do this test to find rattles or reverberations that may cause a perception of poor sound quality.

1. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
2. Play track No. 13 (sweep from 500 Hz to 35 Hz) at a normal, or slightly higher than normal, volume level.
3. Listen to each speaker for poor sound quality or reverberations caused by specific frequencies. Use the

voice-over to estimate the frequency that causes the vibration. Use the audio-navigation unit's or the audio unit's fader and balance settings to help isolate the channel with the problem.

- If vibrations or poor sound quality are heard, go to step 4.
- If no vibrations or poor sound quality are heard, go to Sound Judging.

4. Choose the appropriate track from No. 14 to 25 (small range frequency sweep) or 26 to 53 (single frequencies) to recreate the frequency that caused the poor sound quality or vibration located in step 3; this aids in diagnosis of the cause.

NOTE: When you get to the track that recreates the problem, select the repeat function on the audio-navigation unit or the audio unit, this will help you isolate the cause.

5. Replace or insulate the source of the vibrations or, if the speaker is the source of the poor sound quality, substitute a known-good speaker and retest.

SOUND JUDGING

Do this test to compare overall sound quality, imaging, and dynamics between the customer's vehicle and a known-good vehicle. Only use a vehicle of the same model and trim level for this test. If possible, have the customer demonstrate the problem.

Make sure the vehicle is using only OEM speakers, amplifiers, etc.

1. In the customer vehicle, set the bass, treble, fader, and balance settings to the customer's normal settings that were written down before beginning testing.
2. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit.
3. Play tracks No. 7 to 12 (sound quality, midland, dynamics, and imaging demonstration tracks) at a normal, or slightly higher than normal, volume level. Write down the volume setting being used.
4. Listen to the areas of the track that stand out as being either very clear or poorer than other areas of the track.
5. Insert the audio diagnostic CD (T/N 07AAZ-SDBA100) into the audio-navigation unit or the audio unit of a known-good vehicle.
6. Play the tracks at the same volume level and the same bass, treble, balance, and fader settings as used in step 3 in the customer's vehicle.
7. Listen to the same area of the track that stood out as being either very clear or poorer than other areas of the track.
8. Compare the customer vehicle's sound quality results to the known-good vehicle's results.
    - If the sound quality in the customer vehicle is comparable to the sound quality in the known-good vehicle, then the customer's vehicle is operating as designed.
    - If the sound quality is not comparable, check these items in order.
        - Loose or improperly installed speakers or other hardware that may become excited by the vibrations generated by the speakers
        - Damaged speaker(s)

- Faulty audio-navigation unit or audio unit
- Faulty stereo amplifier
- Aftermarket accessories

SEEK STOP TEST

Do this test to check the performance of the audio-navigation unit's or the audio unit's AM and FM reception. Refer to **SYMPTOM TROUBLESHOOTING** before continuing with this test:

- Audio system sound is weak or distorted (display is normal)
- No sound is heard from the speakers (display is normal) (with navigation)
- No sound is heard from the speakers (display is normal) (without navigation, with stereo amplifier)
- No sound is heard from the speakers (display is normal) (without navigation and stereo amplifier)

NOTE:

- **Aftermarket window tint, aftermarket theft-recovery devices and other aftermarket accessories may reduce radio reception.**
- **Changes in cloud cover and other atmosphere conditions will affect the ability of the audio-navigation unit or the audio unit to receive radio signals.**

1. Park the customer's vehicle in an open area away from buildings or other obstructions.
2. Park a known-good vehicle (same year, model, and trim level) next to the customer's vehicle, facing the same direction.
3. Start the engine in the customer's vehicle, and turn on the radio.
4. Set the FM receiver to 87.7 MHz.
5. Press the Seek + button and record the first station that the audio-navigation unit or the audio unit locks onto.
6. Press the Seek + button repeatedly, and write down each station that the audio-navigation unit or the audio unit locks onto until the station recorded in step 5 is reached again.
7. Set the AM receiver to 530 kHz.
8. Press the Seek + button, and record the first station that the audio-navigation unit or the audio unit locks on to.
9. Press the Seek + button repeatedly, and write down each station that the audio-navigation unit or the audio unit locks onto until the station recorded in step 8 is reached again.
10. Turn the ignition switch to LOCK (0).
11. Start the engine in the known-good vehicle, and then do steps 4 thru 10 on the known-good vehicle.
12. Compare the number of stations received in steps 6 and 9 in the customer's vehicle with the number of stations received in the known-good vehicle.
    - If the number of stations received is the same, or within 10 %, the audio-navigation unit's or the audio unit's tuner performance is OK. The problem may be atmospheric conditions, multi path interference, or other obstructions to the radio signal.
    - If the customer's vehicle receives fewer stations by at least 10 %, go to **POOR AM OR FM**

RADIO RECEPTION OF INTERFERENCE TROUBLESHOOTING .

SYMPTOM TESTS

AUDIO DISC DOES NOT EJECT

Fig. 33: Audio System Symptom Troubleshooting Flowchart - Audio Disc Does Not Eject
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Disc labels should not be used in the audio unit. They may jam and damage the player mechanism.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check to see if the disc ejects correctly with no binding by pushing the EJECT button.

Does the disc eject normally?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, but the disc can be ejected, go to step 2.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : REPLACE THE AUDIO UNIT .

2. Audio unit check:
    - 1. Insert another disc.

Does the disc eject normally?

YES : The original disc is faulty.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : REPLACE THE AUDIO UNIT .

AUDIO DISC DOES NOT LOAD

Fig. 34: Audio System Symptom Troubleshooting Flowchart - Audio Disc Does Not Load
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Disc labels should not be used in the audio-navigation unit or the audio unit. They may jam and damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Try loading a disc.

    Does the disc load?

    YES : Intermittent failure, the system is OK at this time. If the disc loads normally, but will not play, go to **AUDIO DISC DOES NOT PLAY TROUBLESHOOTING**.

    NO : The failure is duplicated, go to step 2.

2. Audio unit check:
    - 1. Insert another disc.

    Does the disc load?

    YES : The original disc is faulty.

    NO : REPLACE THE AUDIO-NAVIGATION UNIT .

    NO : REPLACE THE AUDIO UNIT .

AUDIO DISC DOES NOT PLAY

Fig. 35: Audio System Symptom Troubleshooting Flowchart - Audio Disc Does Not Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

Diagnostic CD 07AAZ-SDBA100

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Disc labels should not be used in the audio-navigation unit or the audio unit. They may jam and damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Insert a disc to see if the symptom can be duplicated.

   Does the disc play?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Audio unit check:
   - 1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) in the audio-navigation unit or the audio unit.

   Does the disc play?

   YES : The original disc is faulty, or has an unreadable format.

   NO : REPLACE THE AUDIO-NAVIGATION UNIT .

   NO : REPLACE THE AUDIO UNIT .

AUDIO DISC SKIPS

Fig. 36: Audio System Symptom Troubleshooting Flowchart - Audio Disc Skips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **Diagnostic CD 07AAZ-SDBA100**
- **Skip Test CD 07AAZ-SDBA200**
- **Skip Test CD 07AAZ-SDBA300**

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Disc labels should not be used in the audio-navigation unit or the audio unit. They may jam and damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification 1:
   - 1. Confirm the vehicle's tires are properly inflated.
   - 2. Check the customers disc for scratches, fingerprints, and marks.

NOTE: **Do the following test with the audio-navigation unit or the audio unit bass and the treble set to customer's listening performance. When comparing to a known-good vehicle, do the comparison on the same model and trim level.**

- 3. Test drive the vehicle to identify when the disc skips. The audio diagnostic CD (T/N: 07AAZ-SDBA100) can be used if the customers disc is not available. Use tracks 10 to 12.

Does the disc skip?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Problem verification 2:
   1. The vehicle parked and engine running.
   2. Eject the CD, and insert the diagnostic skip test CD (T/N: 07AAZSDBA300) (ABEX TCD 721). Play tracks 2 to 11 and note the track number(s) where the CD starts skipping. Do the same test on a known-good vehicle.

Does the CD skip on the same track number(s) on both vehicles?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 3.

3. Audio unit check:
   - 1. Eject the CD, and insert the diagnostic skip test CD (T/N: 07AAZSDBA200) (ABEX TCD 725B) play tracks 7 to 11 and tracks 13 to 15 and note the track number(s) where the CD starts skipping. Do the same test on a known-good vehicle.

Does the CD skip on the same track number(s) on both vehicles?

YES : Intermittent failure, the system is OK at this time.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : REPLACE THE AUDIO UNIT .

AUDIO REMOTE SWITCH DOES NOT WORK PROPERLY (AUDIO UNIT BUTTONS WORK) (KA, KC MODELS WITH NAVIGATION)

Audio System Symptom Troubleshooting - Audio remote switch does not work properly (audio unit buttons work)

<u>Fig. 37: Audio System Symptom Troubleshooting Flowchart - Audio Remote Switch Does Not Work Properly</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (audio system, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if any MID information appears on the multi-information display unit.

   Is there any information displayed?

   YES : Go to step 2.

   NO : Go to **<u>MULTI-INFORMATION DISPLAY UNIT DOES NOT WORK TROUBLESHOOTING</u>**.

2. Problem verification:
   - 1. Turn on the audio system, and using the audio remote switch buttons, check if the multi-information display operates properly.

   Is the display operation OK?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 3.

3. Determine possible failure area (B CAN lines, others):
   - 1. **<u>DO THE SELF-DIAGNOSTIC FUNCTION, AND USE THE IN LINE DIAG IN THE DISPLAY DIAGNOSIS</u>**.

     NOTE: **When specific button(s) does not work normally, try with the specific button(s).**

   Does the Display Diagnosis start, and is the audio remote switch connection OK?

   YES : Go to step 9.

   NO : Go to step 4.

4. Determine possible failure area (audio remote/multi-information display switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Audio remote/multi-information display switch 12P connector

   - 3. DO THE AUDIO REMOTE/MULTI-INFORMATION DISPLAY SWITCH TEST .

Is the audio remote/multi-information display switch OK?

YES : Go to step 5.

NO : REPLACE THE AUDIO REMOTE/MULTI-INFORMATION DISPLAY SWITCH .

5. Shorted wire check (AUDIO REMOTE SW line, TFT INFO line):
   - 1. Disconnect the following connector.

     Multi-information display unit connector A (32P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio remote/multi-information display switch 12P connector: disconnected Multi-information display unit connector A (32P): disconnected

     Test circuit AUDIO REMOTE SW

     Test point 1 Multi-information display unit connector A (32P) No. 6 (PNK)

     Test point 2 Body ground

     Test circuit TFT INFO

     Test point 1 Multi-information display unit connector A (32P) No. 7 (PUR)

     Test point 2 Body ground

Fig. 38: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 6 (PNK) And No. 7 (PUR)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the multi-information display unit and the

audio remote switch. If the wires are OK, **REPLACE THE CABLE REEL** .

NO : The AUDIO REMOTE SW and the TFT INFO wires are not shorted to ground. Go to step 6.

6. Determine possible failure area (TFT INFO line, others):
    1. Reconnect the audio remote/multi-information display switch, and measure the resistance between test points 1 and 2 as specified in the table.

       Test condition IG LOCK (0)

       Multi-information display unit connector A (32P): disconnected

       Test circuit AUDIO REMOTE SW, REMOTE SW GND

       Test point 1 Multi-information display unit connector A (32P) No. 6 (PNK)

       Test point 2 Multi-information display unit connector A (32P) No. 23 (BRN)

Button held down	VOL DOWN	VOL UP	LEFT	RIGHT	SOURCE	No button pressed
Resistance	About 99 ohms	About 357 ohms	About 775 ohms	About 1.7 kohms	About 3.7 kohms	About 10 kohms

Fig. 39: Measuring Resistance Between Test Point Multi-Information Display Unit Connector A (32P) No. 6 (PNK) And No. 23 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : Go to step 7.

NO : Go to step 8.

7. Open wire check (TFT INFO line):
    1. Measure the resistance between test points 1 and 2 as specified in the table.

       Test condition IG LOCK (0)

Multi-information display unit connector A (32P): disconnected

Test circuit TFT INFO, REMOTE SW GND

Test point 1 Multi-information display unit connector A (32P) No. 7 (PUR)

Test point 2 Multi-information display unit connector A (32P) No. 23 (BRN)

Button held down	MENU	DISPLAY	No button pressed
Resistance	About 33 ohms	About 363 ohms	No continuity

Fig. 40: Measuring Resistance Between Test Point Multi-Information Display Unit Connector A (32P) No. 7 (PUR) And No. 23 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

NO : Repair an open in the wire between the multi-information display unit and the audio remote switch. If the wires are OK, **REPLACE THE CABLE REEL** .

8. Determine possible failure area (AUDIO REMOTE SW line, REMOTE SW GND line):
   1. Measure the resistance between test points 1 and 2 as specified in the table.

      Test condition IG LOCK (0)

      Multi-information display unit connector A (32P): disconnected

      Test circuit TFT INFO, REMOTE SW GND

      Test point 1 Multi-information display unit connector A (32P) No. 7 (PUR)

      Test point 2 Multi-information display unit connector A (32P) No. 23 (BRN)

Button held down	MENU	DISPLAY	No button pressed

Resistance	About 33 ohms	About 363 ohms	No continuity

Fig. 41: Measuring Resistance Between Test Point Multi-Information Display Unit Connector A (32P) No. 7 (PUR) And No. 23 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : Repair an open in the wire between the multi-information display unit and the audio remote switch. If the wires are OK, **REPLACE THE CABLE REEL** .

NO : Repair an open in the wire between the multi-information display unit and the audio remote switch. If the wires are OK, **REPLACE THE CABLE REEL** .

9. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio-navigation unit connector E (16P)

     Multi-information display unit connector A (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector E (16P): disconnected Multi-information display unit connector A (32P): disconnected

     Test circuit B CAN-H

     Test point 1 Audio-navigation unit connector E (16P) No. 1 (PNK)

     Test point 2 Multi-information display unit connector A (32P) No. 31 (PNK)

     Test circuit B CAN-L

Test point 1 Audio-navigation unit connector E (16P) No. 9 (BLU)

Test point 2 Multi-information display unit connector A (32P) No. 15 (BLU)

Fig. 42: Checking For Continuity Between Test Point Audio-Navigation Unit Connector E (16P) No. 9 (BLU) And Multi-Information Display Unit Connector A (32P) No. 15 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The B CAN-H and the B CAN-L wires are OK. Go to step 10.

NO : Repair an open in the wire(s) between the audio-navigation unit and the multi-information display unit.

10. Audio-navigation unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT** , and recheck.

Does the symptom go away?

YES : Replace the original multi-information display unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

AUDIO REMOTE SWITCH DOES NOT WORK PROPERLY (AUDIO UNIT BUTTONS WORK) (WITH MULTI-INFORMATION DISPLAY WITHOUT NAVIGATION)

Audio System Symptom Troubleshooting - Audio remote switch does not work properly (audio unit buttons work)

Fig. 43: Audio System Symptom Troubleshooting Flowchart - Audio Remote Switch Does Not Work Properly

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (audio system, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if any MID information appears on the multi-information display unit.

   Is there any information displayed?

   YES : Go to step 2.

   NO : Go to **<u>MULTI-INFORMATION DISPLAY UNIT DOES NOT WORK TROUBLESHOOTING</u>**.

2. Problem verification:
   - 1. Turn on the audio unit, and using the audio remote switch buttons, check if the multi-information display operates properly.

   Is the display operation OK?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 3.

3. Determine possible failure area (B CAN lines, others):
   - 1. **<u>DO THE SELF-DIAGNOSTIC FUNCTION, AND USE THE IN LINE DIAG IN THE DISPLAY DIAGNOSIS</u>**.

     NOTE: **When specific button(s) does not work normally, try with the specific button(s).**

   Does the Display Diagnosis start, and is the audio remote switch connection OK?

   YES : Go to step 9.

   NO : Go to step 4.

4. Determine possible failure area (audio remote/multi-information display switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Audio remote/multi-information display switch 12P connector

- 3. DO THE AUDIO REMOTE/MULTI-INFORMATION DISPLAY SWITCH TEST .

Is the audio remote/multi-information display switch OK?

YES : Go to step 5.

NO : REPLACE THE AUDIO REMOTE/MULTI-INFORMATION DISPLAY SWITCH .

5. Shorted wire check (AUDIO REMOTE SW line, TFT INFO line):
   - 1. Disconnect the following connector.

     Multi-information display unit connector A (32P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio remote/multi-information display switch 12P connector: disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit AUDIO REMOTE SW

     Test point 1 Multi-information display unit connector A (32P) No. 6 (PNK)

     Test point 2 Body ground

     Test circuit TFT INFO

     Test point 1 Multi-information display unit connector A (32P) No. 7 (PUR)

     Test point 2 Body ground

Fig. 44: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 7 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the multi-information display unit and the audio remote switch. If the wires are OK, **REPLACE THE CABLE REEL** .

NO : The AUDIO REMOTE SW and the TFT INFO wires are not shorted to ground. Go to step 6.

6. Determine possible failure area (TFT INFO line, others):
   1. Reconnect the audio remote/multi-information display switch, and measure the resistance between test points 1 and 2 as specified in the table.

      Test condition IG LOCK (0)

      Multi-information display unit connector A (32P): disconnected

      Test circuit AUDIO REMOTE SW, REMOTE SW GND

      Test point 1 Multi-information display unit connector A (32P) No. 6 (PNK)

      Test point 2 Multi-information display unit connector A (32P) No. 23 (BRN)

Button held down	VOL DOWN	VOL UP	LEFT	RIGHT	SOURCE	No button pressed
Resistance	About 99 ohms	About 357 ohms	About 775 ohms	About 1.7 kohms	About 3.7 kohms	About 10 kohms

Fig. 45: Measuring Resistance Between Test Point Multi-Information Display Unit Connector A (32P) No. 6 (PNK) And No. 23 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : Go to step 7.

NO : Go to step 8.

7. Open wire check (TFT INFO line):

1. Measure the resistance between test points 1 and 2 as specified in the table.

   Test condition IG LOCK (0)

   Multi-information display unit connector A (32P): disconnected

   Test circuit TFT INFO, REMOTE SW GND

   Test point 1 Multi-information display unit connector A (32P) No. 7 (PUR)

   Test point 2 Multi-information display unit connector A (32P) No. 23 (BRN)

Button held down	MENU	DISPLAY	No button pressed
Resistance	About 33 ohms	About 363 ohms	No continuity

Fig. 46: Measuring Resistance Between Test Point Multi-Information Display Unit Connector A (32P) No. 7 (PUR) And No. 23 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

NO : Repair an open in the wire between the multi-information display unit and the audio remote switch. If the wire is OK, **REPLACE THE CABLE REEL** .

8. Determine possible failure area (AUDIO REMOTE SW line, REMOTE SW GND line):
   1. Measure the resistance between test points 1 and 2 as specified in the table.

      Test condition IG LOCK (0)

      Multi-information display unit connector A (32P): disconnected

      Test circuit TFT INFO, REMOTE SW GND

      Test point 1 Multi-information display unit connector A (32P) No. 7 (PUR)

Test point 2 Multi-information display unit connector A (32P) No. 23 (BRN)

Button held down	MENU	DISPLAY	No button pressed
Resistance	About 33 ohms	About 363 ohms	No continuity

Fig. 47: Measuring Resistance Between Test Point Multi-Information Display Unit Connector A (32P) No. 7 (PUR) And No. 23 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : Repair an open in the wire between the multi-information display unit and the audio remote switch. If the wire is OK, **REPLACE THE CABLE REEL** .

NO : Repair an open in the wire between the multi-information display unit and the audio remote switch. If the wire is OK, **REPLACE THE CABLE REEL** .

9. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio unit connector B (20P)

     Multi-information display unit connector A (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit B CAN-H

     Test point 1 Audio unit connector B (20P) No. 13 (PNK)

Test point 2 Multi-information display unit connector A (32P) No. 31 (PNK)

Test circuit B CAN-L

Test point 1 Audio unit connector B (20P) No. 3 (BLU)

Test point 2 Multi-information display unit connector A (32P) No. 15 (BLU)

Fig. 48: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 3 (BLU) And Multi-Information Display Unit Connector A (32P) No. 15 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The B CAN-H and the B CAN-L wires are OK. Go to step 10.

NO : Repair an open in the wire(s) between the audio unit and the multi-information display unit.

10. Audio unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT** , and recheck.

Does the symptom go away?

YES : Replace the original multi-information display unit.

NO : REPLACE THE AUDIO UNIT .

AUDIO REMOTE SWITCH DOES NOT WORK PROPERLY (AUDIO UNIT BUTTONS WORK) (WITHOUT MULTI-INFORMATION DISPLAY AND NAVIGATION)

Fig. 49: Audio System Symptom Troubleshooting Flowchart - Audio Remote Switch Does Not Work Properly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn on the audio unit, and using the audio remote switch buttons, check if the audio unit operates properly.

   Is the audio unit operation OK?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (audio remote switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Audio remote switch 12P connector

- 3. DO THE AUDIO REMOTE SWITCH TEST .

Is the audio remote switch OK?

YES : Go to step 3.

NO : REPLACE THE AUDIO REMOTE SWITCH .

3. Shorted wire check (AUDIO REMOTE SW line):
   - 1. Disconnect the following connector.

     NOTE: Eject all the discs before disconnecting the audio unit to prevent damaging the CD player's load mechanism.

     Audio unit connector A (24P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio remote switch 12P connector: disconnected

     Audio unit connector A (24P): disconnected

     Test circuit AUDIO REMOTE SW

     Test point 1 Audio unit connector A (24P) No. 22 (PNK)

     Test point 2 Body ground

Fig. 50: Checking For Continuity Between Test Point Audio Unit Connector A (24P) No. 22 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the audio unit and the audio remote switch. If the wire is OK, **REPLACE THE CABLE REEL** .

NO : The AUDIO REMOTE SW wire is not shorted to ground. Go to step 4.

4. Open wire check (AUDIO REMOTE SW line, REMOTE SW GND line):
   - 1. Reconnect the audio remote switch, and measure the resistance between test points 1 and 2 as specified in the table.

     Test condition IG LOCK (0)

     Audio unit connector A (24P): disconnected

     Test circuit AUDIO REMOTE SW, REMOTE SW GND

     Test point 1 Audio unit connector A (24P) No. 22 (PNK)

     Test point 2 Audio unit connector A (24P) No. 11 (BRN)

Button held down	VOL DOWN	VOL UP	LEFT	RIGHT	SOURCE	No button pressed
Resistance	About 99 ohms	About 357 ohms	About 775 ohms	About 1.7 kohms	About 3.7 kohms	About 10 kohms

Fig. 51: Measuring Resistance Between Test Point Audio Unit Connector A (24P) No. 22 (PNK) And No. 11 (BRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire(s) between the audio unit and the audio remote switch. If the wires are OK, **REPLACE THE CABLE REEL** .

AUDIO SYSTEM INFORMATION DOES NOT DISPLAY ON THE CENTER DISPLAY

Audio System Symptom Troubleshooting - Audio system information does not display on the center display

Fig. 52: Audio System Symptom Troubleshooting Flowchart - Audio System Information Does Not Display On Center Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio unit, and check the audio information on the center display unit.

   Does the audio information display properly?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A29 (10 A)

     Location Under-hood fuse/relay box

   Is the fuse OK?

   YES : Go to step 3.

   NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A29 (10 A) fuse circuit.

3. Open wire check (+B BACK UP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B BACK UP

     Test point 1 Center display unit 12P connector No. 1 (RED)

     Test point 2 Body ground

Fig. 53: Measuring Voltage Between Test Point 1 Center Display Unit 12P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the center display unit.

4. Open wire check (GND line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit GND

     Test point 1 Center display unit 12P connector No. 10 (BRN)

     Test point 2 Body ground

Fig. 54: Measuring Voltage Between Test Point Center Display Unit 12P Connector No. 10

(BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire between the center display unit and body ground (G502).

5. Shorted wire check (DUET CONT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio unit connector B (20P)

     Center display unit 12P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Center display unit 12P connector: disconnected

     Test circuit DUET CONT

     Test point 1 Center display unit 12P connector No. 3 (LT GRN)

     Test point 2 Body ground

Fig. 55: Checking For Continuity Between Test Point Center Display Unit 12P Connector No. 3 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the center display unit and the audio unit.

NO : The DUET CONT wire is not shorted to ground. Go to step 6.

6. Open wire check (DUET CONT line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      Center display unit 12P connector: disconnected

      Test circuit DUET CONT

      Test point 1 Audio unit connector B (20P) No. 14 (LT GRN)

      Test point 2 Center display unit 12P connector No. 3 (LT GRN)

Terminal / Position	5	6	7
LOCK		○——	——○
UNLOCK	○——	——	——○

Fig. 56: Checking For Continuity Between Audio Unit Connector B (20P) No. 14 (LT GRN) And Center Display Unit 12P Connector No. 3 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The DUET CONT wire is OK. Go to step 7.

NO : Repair an open in the wire between the audio unit and the center display unit.

7. Shorted wire check (DUET RX line, DUET TX line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      Center display unit 12P connector: disconnected

Test circuit DUET RX

Test point 1 Audio unit connector B (20P) No. 4 (RED)

Test point 2 Body ground

Test circuit DUET TX

Test point 1 Audio unit connector B (20P) No. 5 (GRN)

Test point 2 Body ground

Terminal / Position	8	10
LOCK		
UNLOCK	○	○

Fig. 57: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 5 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the center display unit. Replace the affected shielded harness.

NO : The DUET RX and the DUET TX wires are not shorted to ground. Go to step 8.

8. Shorted wire check (DUET RX line to DUET TX line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Center display unit 12P connector: disconnected

     Test circuit DUET RX, DUET TX

     Test point 1 Audio unit connector B (20P) No. 4 (RED)

     Test point 2 Audio unit connector B (20P) No. 5 (GRN)

Fig. 58: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 4 (RED) And No. 5 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the center display unit. Replace the affected shielded harness.

NO : The DUET RX and the DUET TX wires are not shorted. Go to step 9.

9. Shorted wire check (SH DUET line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Center display unit 12P connector: disconnected

     Test circuit SH DUET, DUET RX

     Test point 1 Audio unit connector B (20P) No. 15 (GRY)

     Test point 2 Audio unit connector B (20P) No. 4 (RED)

     Test circuit SH DUET, DUET TX

     Test point 1 Audio unit connector B (20P) No. 15 (GRY)

     Test point 2 Audio unit connector B (20P) No. 5 (GRN)

Position \ Terminal	6 [9]	9 [6]

UNLOCK	○	○

[ ]: Right side

Fig. 59: Checking For Continuity Between Test Point 1 Audio Unit Connector B (20P) No. 15 (GRY) And No. 5 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the center display unit. Replace the affected shielded harness.

NO : The SH DUET wire is OK. Go to step 10.

10. Open wire check (DUET RX line, DUET TX line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      Center display unit 12P connector: disconnected

      Test circuit DUET RX

      Test point 1 Audio unit connector B (20P) No. 4 (RED)

      Test point 2 Center display unit 12P connector No. 6 (RED)

      Test circuit DUET TX

      Test point 1 Audio unit connector B (20P) No. 5 (GRN)

      Test point 2 Center display unit 12P connector No. 5 (GRN)

Fig. 60: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 5 (GRN) And Center Display Unit 12P Connector No. 5 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The DUET RX and the DUET TX wires are OK. Go to step 11.

NO : There is an open in the wire(s) between the audio unit and the center display unit. Replace the affected shielded harness.

11. Audio unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD CENTER DISPLAY UNIT, AND RECHECK.**

Does the symptom go away?

YES : Replace the original center display unit.

NO : REPLACE THE AUDIO UNIT .

AUDIO SYSTEM INFORMATION DOES NOT DISPLAY ON THE MULTI-INFORMATION DISPLAY UNIT (WITH NAVIGATION)

Audio System Symptom Troubleshooting - Audio system information does not display on the multi-information display

Fig. 61: Audio System Symptom Troubleshooting Flowchart - Audio System Information Does Not Display On Multi-Information Display Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check the connectors for poor connections or loose terminals.**
- **The climate control unit 32P (black) connector and the HFL control unit 32P (grey) connector are the same shape. Make sure the correct connector is connected to the applicable unit.**

1. Determine possible failure area (audio system, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if any MID information appears on the multi-information display unit.

   Is there any information displayed?

   YES : Go to step 2.

   NO : Go to **<u>MULTI-INFORMATION DISPLAY UNIT DOES NOT WORK TROUBLESHOOTING</u>**.

2. Problem verification:
   - 1. Turn on the audio system, and press the AUDIO button to check if the multi-information display changes to the audio information screen.

   Is the audio information displayed?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 3.

3. Shorted wire check (GA SYS ON line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio-navigation unit connector C (14P)

     XM receiver connector A (14P)

     Multi-information display unit connector A (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

Multi-information display unit connector A (32P): disconnected

Test circuit GA SYS ON

Test point 1 Multi-information display unit connector A (32P) No. 32 (PNK)

Test point 2 Body ground

Fig. 62: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 32 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the multi-information display unit and the audio-navigation unit.

NO : The GA SYS ON wire is not shorted to ground. Go to step 4.

4. Open wire check (GA SYS ON line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit GA SYS ON

     Test point 1 Audio-navigation unit connector C (14P) No. 5 (PNK)

     Test point 2 Multi-information display unit connector A (32P) No. 32 (PNK)

Fig. 63: Checking For Continuity Between Audio-Navigation Unit Connector C (14P) No. 5 (PNK) And Multi-Information Display Unit Connector A (32P) No. 32 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA SYS ON wire is OK. Go to step 5.

NO : Repair an open in the wire between the audio-navigation unit and the multi-information display unit.

5. Shorted wire check (GA BUS+ line, GA BUS- line):
   - 1. Disconnect the following connector.

     HandsFreeLink control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Test circuit GA BUS-

     Test point 1 Audio-navigation unit connector C (14P) No. 11 (PNK)

Test point 2 Body ground

Test circuit GA BUS+

Test point 1 Audio-navigation unit connector C (14P) No. 12 (BLU)

Test point 2 Body ground

Fig. 64: Checking For Continuity Between Test Point Audio-Navigation Unit Connector C (14P) No. 12 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio-navigation unit and the multi-information display unit. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted to ground. Go to step 6.

6. Shorted wire check (GA BUS+ line to GA BUS- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Test circuit GA BUS-, GA BUS+

     Test point 1 Audio-navigation unit connector C (14P) No. 11 (PNK)

     Test point 2 Audio-navigation unit connector C (14P) No. 12 (BLU)

Fig. 65: Checking For Continuity Between Test Point Audio-Navigation Unit Connector C (14P) No. 11 (PNK) And No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio-navigation unit and the multi-information display unit. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted. Go to step 7.

7. Shorted wire check (SH GA BUS line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Test circuit SH GA BUS, GA BUS+

     Test point 1 Audio-navigation unit connector C (14P) No. 4 (GRY)

     Test point 2 Audio-navigation unit connector C (14P) No. 12 (BLU)

     Test circuit SH GA BUS, GA BUS-

     Test point 1 Audio-navigation unit connector C (14P) No. 4 (GRY)

     Test point 2 Audio-navigation unit connector C (14P) No. 11 (PNK)

Fig. 66: Checking For Continuity Between Test Point Audio-Navigation Unit Connector C (14P) No. 4 (GRY) And No. 11 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio-navigation unit and the multi-information display unit. Replace the affected shielded harness.

NO : The SH GA BUS wire is OK. Go to step 8.

8. Open wire check (GA BUS+ line, GA BUS- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Test circuit GA BUS-

     Test point 1 Audio-navigation unit connector C (14P) No. 11 (PNK)

     Test point 2 Multi-information display unit connector A (32P) No. 11 (PNK)

     Test circuit GA BUS+

     Test point 1 Audio-navigation unit connector C (14P) No. 12 (BLU)

     Test point 2 Multi-information display unit connector A (32P) No. 27 (BLU)

Fig. 67: Checking For Continuity Between Test Point 1 Audio-Navigation Unit Connector C (14P) No. 12 (BLU) And Multi-Information Display Unit Connector A (32P) No. 27 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 9.

NO : There is an open in the wire(s) between the audio-navigation unit and the multi-information display unit. Replace affected shielded harness.

9. Determine possible failure area (related unit, others):
   - 1. Reconnect audio-navigation unit connector C (14P) and multi-information display unit connector A (32P).
   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio system, and press the AUDIO button to check if the multi-information display changes to the audio information screen.

Is the audio information displayed?

YES : Go to step 10.

NO : Go to step 11.

10. XM receiver check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect XM receiver connector A (14P).
    - 3. Turn the ignition switch to ON (II).
    - 4. Turn on the audio system, and press the CD/XM button to check if the multi-information display changes to the XM information screen.

Is the XM information displayed on the multi-information display unit?

YES : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

NO : REPLACE THE XM RECEIVER .

11. Audio-navigation unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT** , and recheck.

Does the symptom go away?

YES : Replace the original multi-information display unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

AUDIO SYSTEM INFORMATION DOES NOT DISPLAY ON THE MULTI-INFORMATION DISPLAY (WITHOUT NAVIGATION)

Audio System Symptom Troubleshooting - Audio system information does not display on the multi-information display

Fig. 68: Audio System Symptom Troubleshooting Flowchart - Audio System Information Does Not Display On Multi-Information Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

- **Check the connectors for poor connections or loose terminals.**
- **The climate control unit 32P (black) connector and the HFL control unit 32P (grey) connector are the same shape. Make sure the correct connector is connected to the applicable unit.**

1. Determine possible failure area (audio system, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if any MID information appears on the multi-information display unit.

   Is there any information displayed?

   YES : Go to step 2.

   NO : Go to **MULTI-INFORMATION DISPLAY UNIT DOES NOT WORK TROUBLESHOOTING**.

2. Problem verification:
   - 1. Turn on the audio unit, and check the audio information on the multi-information display unit.

   Does the audio information display properly?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 3.

3. Shorted wire check (DUET CONT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio unit connector B (20P)

     Multi-information display unit connector A (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit DUET CONT

     Test point 1 Multi-information display unit connector A (32P) No. 30 (LT GRN)

Test point 2 Body ground

Fig. 69: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 30 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the multi-information display unit and the audio unit.

NO : The DUET CONT wire is not shorted to ground. Go to step 4.

4. Open wire check (DUET CONT line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit DUET CONT

     Test point 1 Audio unit connector B (20P) No. 14 (LT GRN)

     Test point 2 Multi-information display unit connector A (32P) No. 30 (LT GRN)

Fig. 70: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 14 (LT GRN) And Multi-Information Display Unit Connector A (32P) No. 30 (LT GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The DUET CONT wire is OK. Go to step 5.

NO : Repair an open in the wire between the audio unit and the multi-information display unit.

5. Shorted wire check (DUET RX line, DUET TX line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit DUET RX

     Test point 1 Audio unit connector B (20P) No. 4 (RED)

     Test point 2 Body ground

     Test circuit DUET TX

     Test point 1 Audio unit connector B (20P) No. 5 (GRN)

     Test point 2 Body ground

Fig. 71: Checking For Continuity Between Audio Unit Connector B (20P) No. 5 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The DUET RX and the DUET TX wires are not shorted to ground. Go to step 6.

6. Shorted wire check (DUET RX line to DUET TX line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit DUET RX, DUET TX

     Test point 1 Audio unit connector B (20P) No. 4 (RED)

     Test point 2 Audio unit connector B (20P) No. 5 (GRN)

Fig. 72: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 4

(RED) And No. 5 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The DUET RX and the DUET TX wires are not shorted. Go to step 7.

7. Shorted wire check (SH DUET line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit SH DUET, DUET RX

     Test point 1 Audio unit connector B (20P) No. 15 (GRY)

     Test point 2 Audio unit connector B (20P) No. 4 (RED)

     Test circuit SH DUET, DUET TX

     Test point 1 Audio unit connector B (20P) No. 15 (GRY)

     Test point 2 Audio unit connector B (20P) No. 5 (GRN)

Fig. 73: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 15 (GRY) And No. 5 (GRN)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The SH DUET wire is OK. Go to step 8.

8. Open wire check (DUET RX line, DUET TX line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit DUET RX

     Test point 1 Audio unit connector B (20P) No. 4 (RED)

(GRN) And Multi-Information Display Unit Connector A (32P) No. 29 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The DUET RX and the DUET TX wires are OK. Go to step 9.

NO : There is an open in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

9. Audio unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT** , and recheck.

Does the symptom go away?

YES : Replace the original multi-information display unit.

NO : REPLACE THE AUDIO UNIT .

AUDIO SYSTEM SOUND IS WEAK OR DISTORTED (DISPLAY IS NORMAL)

Fig. 75: Audio System Symptom Troubleshooting Flowchart - Audio System Sound Is Weak Or Distorted (Display Is Normal)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio unit, and check for sound in each mode (AM/FM and CD).

Is there sound from the speakers, and is the sound quality normal in each mode?

YES : Intermittent failure. The system is OK at this time. Check for loose connections at the audio unit and each speaker.

NO : Go to **Poor AM or FM radio reception or interference (With Navigation)** troubleshooting.

NO : Go to **Poor AM or FM radio reception or interference (without navigation)** troubleshooting.

NO : Go to **AUDIO DISC DOES NOT PLAY TROUBLESHOOTING**.

NO : **GO TO SOUND QUALITY DIAGNOSIS** .

AUDIO UNIT BUTTON ILLUMINATION DOES NOT WORK

Fig. 76: Audio System Symptom Troubleshooting Flowchart - Audio Unit Button Illumination Does Not Work
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- **CHECK THE VEHICLE BATTERY CONDITION FIRST** .
- Check for B-CAN DTCs and resolve them before troubleshooting.
- Check the connectors for poor connections or loose terminals.
- The climate control unit 32P (black) connector and the HFL control unit 32P (grey) connector are the same shape. Make sure the correct connector is connected to the applicable unit.

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn the combination lighting switch to the parking light position.
    - 3. Check if the audio unit buttons are illuminated.

Are the buttons illuminated?

YES : Intermittent failure, the audio unit is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (interior lights circuit, others):
    - 1. Check if several other buttons that are not related to the audio system are illuminated.

Are the buttons illuminated?

YES : Go to step 3.

NO : Troubleshoot the interior lights.

3. Open wire check (B CAN-H line, B CAN-L line):
    - 1. Turn the combination lighting switch off.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connectors.

      Audio unit connector B (20P)

      Gauge control module 32P connector

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      Gauge control module 32P connector: disconnected

      Test circuit B CAN-H

      Test point 1 Audio unit connector B (20P) No. 13 (PNK)

      Test point 2 Gauge control module 32P connector No. 30 (PNK)

      Test circuit B CAN-L

      Test point 1 Audio unit connector B (20P) No. 3 (BLU)

      Test point 2 Gauge control module 32P connector No. 31 (BLU)

Fig. 77: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 3 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire(s) between the audio unit and the gauge control module.

AUDIO UNIT DOES NOT EXIT ANTI-THEFT MODE

Fig. 78: Audio System Symptom Troubleshooting Flowchart - Audio Unit Does Not Exit Anti-Theft Mode
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

- **Check for B-CAN and F-CAN DTCs and resolve them before troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Press and hold the POWER button more than 2 seconds to release the anti-theft mode.

    Is the anti-theft mode released?

    YES : Intermittent failure, the system is OK at this time.

    NO : The failure is duplicated, go to step 2.

2. Open wire check (B CAN-H line, B CAN-L line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio unit connector B (20P)

      Gauge control module 32P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      Gauge control module 32P connector: disconnected

      Test circuit B CAN-H

      Test point 1 Audio unit connector B (20P) No. 13 (PNK)

      Test point 2 Gauge control module 32P connector No. 30 (PNK)

      Test circuit B CAN-L

      Test point 1 Audio unit connector B (20P) No. 3 (BLU)

      Test point 2 Gauge control module 32P connector No. 31 (BLU)

Fig. 79: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 3 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire(s) between the audio unit and the gauge control module.

AUDIO UNIT POWER SWITCH WILL NOT TURN OFF

Keyless/Power Door Locks/Security System Symptom Troubleshooting - Auto door unlock does not work

Fig. 80: Audio System Symptom Troubleshooting Flowchart - Audio Unit Power Switch Will Not Turn Off

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Check the connectors for poor connections or loose terminals.

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Press the POWER button off to see if the audio unit turns off.

    Does the audio unit turn off?

    YES : Intermittent failure, the system is OK at this time.

    NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (ACC line, others):
    - 1. Turn the ignition switch to LOCK (0).

    Does the audio unit turn off?

    YES : Go to step 4.

    NO : Go to step 3.

3. Shorted wire check (ACC line to power):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      Test circuit ACC

      Test point 1 Audio unit connector A (24P) No. 24 (PUR)

      Test point 2 Body ground

<u>Fig. 81: Measuring Voltage Between Test Point Audio Unit Connector A (24P) No. 24 (PUR) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the No. B19 (7.5 A) fuse in the under-dash fuse/relay box and the audio unit.

NO : REPLACE THE AUDIO UNIT .

4. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD AUDIO SWITCH PANEL , and recheck.

Does the symptom go away?

YES : Replace the original audio switch panel.

NO : REPLACE THE AUDIO UNIT .

AUDIO UNIT POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND)

Fig. 82: Audio System Symptom Troubleshooting Flowchart - Audio Unit Power Switch Will Not Turn On (No Information Display And No Sound)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Press the POWER button on to see if the audio unit turns on.

   Does the audio system operate properly, and does the audio sound normal?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

     Fuse No. B19 (7.5 A)

     Location Under-dash fuse/relay box

     Fuse No. B25 (10 A)

     Location Under-dash fuse/relay box

   Are the fuses OK?

   YES : Go to step 3.

   NO : Replace the fuse(s), and recheck. If the fuse(s) blows again, check for a short in the No. B19 (7.5 A) fuse and/or the No. B25 (10 A) fuse circuit(s).

3. Open wire check (+B AUDIO line, ACC line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit +B AUDIO

     Test point 1 Audio unit connector A (24P) No. 3 (RED)

     Test point 2 Body ground

     Test circuit ACC

Test point 1 Audio unit connector A (24P) No. 24 (PUR)

Test point 2 Body ground

Fig. 83: Measuring Voltage Between Test Point Audio Unit Connector A (24P) No. 24 (PUR) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B AUDIO and the ACC wires are OK. Go to step 4.

NO : Repair an open or high resistance in the wire(s) between the No. B19 (7.5 A) fuse in the under-dash fuse/relay box and/or the No. B25 (10 A) fuse in the under-dash fuse/relay box and the audio unit.

4. Open wire check (GND line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit GND

     Test point 1 Audio unit connector A (24P) No. 1 (BLK)

     Test point 2 Body ground

<u>Fig. 84: Measuring Voltage Between Test Point Audio Unit Connector A (24P) No. 1 (BLK) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire between the audio unit and body ground (G503).

5. Audio unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. SUBSTITUTE A KNOWN-GOOD AUDIO SWITCH PANEL , and recheck.

Does the symptom go away?

YES : Replace the original audio switch panel.

NO : REPLACE THE AUDIO UNIT .

AUDIO-NAVIGATION UNIT BUTTON ILLUMINATION DOES NOT WORK

Fig. 85: Audio System Symptom Troubleshooting Flowchart - Audio-Navigation Unit Button Illumination Does Not Work
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**
- **The climate control unit 32P (black) connector and the HFL control unit 32P (grey) connector are the same shape. Make sure the correct connector is connected to the applicable unit.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the combination lighting switch to the parking light position.
   - 3. Check if the audio-navigation unit buttons are illuminated.

   Are the buttons illuminated?

   YES : Intermittent failure, the audio-navigation unit is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (interior lights circuit, others):
   - 1. Check if several other buttons that are not related to the audio system are illuminated.

   Are the buttons illuminated?

   YES : Go to step 3.

   NO : Troubleshoot the interior lights.

3. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the combination lighting switch off.
   - 2. Turn the ignition switch to LOCK (0).
   - 3.

     Disconnect the following connectors.

     Audio-navigation unit connector E (16P)

     Gauge control module 32P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector E (16P): disconnected

Gauge control module 32P connector: disconnected

Test circuit B CAN-H

Test point 1 Audio-navigation unit connector E (16P) No. 1 (PNK)

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Fig. 86: Checking For Continuity Between Test Point Audio-Navigation Unit Connector E (16P) No. 9 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open in the wire(s) between the audio-navigation unit and the gauge control module.

AUDIO-NAVIGATION UNIT DOES NOT EXIT ANTI-THEFT MODE

Fig. 87: Audio System Symptom Troubleshooting Flowchart - Audio-Navigation Unit Does Not Exit Anti-Theft Mode
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check for B-CAN and F-CAN DTCs and resolve them before troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Press and hold the VOLUME/POWER knob more than 2 seconds to release the anti-theft mode.

   Is the anti-theft mode released?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

Audio-navigation unit connector E (16P)

Gauge control module 32P connector

- 3. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Audio-navigation unit connector E (16P): disconnected

Gauge control module 32P connector: disconnected

Test circuit B CAN-H

Test point 1 Audio-navigation unit connector E (16P) No. 1 (PNK)

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Fig. 88: Checking For Continuity Between Test Point Audio-Navigation Unit Connector E (16P) No. 9 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open in the wire(s) between the audio-navigation unit and the gauge control module.

AUDIO-NAVIGATION UNIT POWER SWITCH WILL NOT TURN ON (NO AUDIO INFORMATION DISPLAY AND NO SOUND)

Fig. 89: Audio System Symptom Troubleshooting Flowchart - Audio-Navigation Unit Power Switch Will Not Turn On (No Audio Information Display And No Sound)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check if the Day/Night button was pressed and turned off the display. See the Navigation Manual for more information.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (navigation system, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if the audio-navigation unit displays the Honda globe screen.

   Is the Honda globe screen displayed?

   YES : Go to step 2.

   NO : Go to **NO PICTURE IS DISPLAYED** troubleshooting.

2. Problem verification:
   - 1. Press the VOLUME/POWER knob on to see if audio system turns on.

   Does the audio system operate properly, and does the audio sound normal?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 3.

3. Open wire check (GND line):

- 1. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Test circuit GND

  Test point 1 Audio-navigation unit connector A (24P) No. 1 (BLK)

  Test point 2 Body ground

  Test circuit GND

  Test point 1 Audio-navigation unit connector B (20P) No. 20 (BLK)

  Test point 2 Body ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 91: Measuring Resistance Between Test Point Audio-Navigation Unit Connector B (20P) No. 20 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open or high resistance in the wire(s) between the audio-navigation unit and body ground (G502) and/or body ground (G503).

AUXILIARY INPUT SOUND IS LOW OR CANNOT BE HEARD (WITH NAVIGATION)

Fig. 92: Audio System Symptom Troubleshooting Flowchart - Auxiliary Input Sound Is Low Or Cannot Be Heard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Use auxiliary stereo cables with 3.5 mm ends only.**
- **Auxiliary accessories may be played on the audio-navigation unit using the auxiliary input.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio system, and connect an auxiliary accessory to the auxiliary input jack.
    - 3. Press the AUDIO button, and check the auxiliary audio source sound.

    Is the sound normal?

    YES : Intermittent failure, the system is OK at this time.

    NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (volume level, others):
    - 1. Make sure the auxiliary accessory volume is set to high.

    Is the volume set to high?

    YES : Go to step 3.

    NO : Raise the auxiliary accessory volume to high. Make sure the audio-navigation unit volume is turned down before rechecking.

3. Determine possible failure area (auxiliary audio accessory, others):
    - 1. Substitute a known-good auxiliary audio accessory and/or auxiliary stereo cable, and recheck.

    Does the auxiliary audio accessory operate properly?

    YES : Original auxiliary audio accessory or auxiliary stereo cable is faulty.

    NO : Go to step 4.

4. Shorted wire check (AUX lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio-navigation unit connector E (16P)

      Auxiliary jack assembly 5P connector

    - 3. Check for continuity between these test points and body ground individually.

      Test condition IG LOCK (0)

      Audio-navigation unit connector E (16P): disconnected

      Auxiliary jack assembly 5P connector: disconnected

Connector	Test circuit	Terminal
Audio-navigation unit connector E (16P)	AUX R CH	No. 6 (RED)
	AUX SGND	No. 7 (BLK)
	AUX L CH	No. 8 (WHT)
	AUX GND	No. 15 (LT GRN)
	AUX DET	No. 16 (LT BLU)

Fig. 93: Identifying Audio-Navigation Unit Connector E (16P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio-navigation unit and the auxiliary jack assembly. Repair or replace the affected harness.

NO : The AUX wires are not shorted to ground. Go to step 5.

5. Shorted wire check (SH AUX line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector E (16P): disconnected

     Auxiliary jack assembly 5P connector: disconnected

     Test circuit AUX R CH, SH AUX

Test point 1 Audio-navigation unit connector E (16P) No. 6 (RED)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AUX wires are OK. Go to step 8.

NO : There is an open in the wire(s) between the audio-navigation unit and the auxiliary jack assembly. Repair or replace the affected harness.

8. Audio-navigation unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD AUXILIARY JACK ASSEMBLY , and recheck.

Does the symptom go away?

YES : Replace the original auxiliary jack assembly.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

AUXILIARY INPUT SOUND IS LOW OR CANNOT BE HEARD (WITHOUT NAVIGATION)

Fig. 98: Audio System Symptom Troubleshooting Flowchart - Auxiliary Input Sound Is Low Or Cannot Be Heard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Use auxiliary stereo cables with 3.5 mm ends only.**
- **Auxiliary accessories may be played on the audio unit using the auxiliary input.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).

- 2. Turn on the audio unit, and connect an auxiliary accessory to the auxiliary input jack.
- 3. Press the AUX button, and check the auxiliary audio source sound.

Is the sound normal?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (volume level, others):
   - 1. Make sure the auxiliary accessory volume is set to high.

Is the volume set to high?

YES : Go to step 3.

NO : Raise the auxiliary accessory volume to high. Make sure the audio unit volume is turned down before rechecking.

3. Determine possible failure area (auxiliary audio accessory, others):
   - 1. Substitute a known-good auxiliary audio accessory and/or auxiliary stereo cable, and recheck.

Does the auxiliary audio accessory operate properly?

YES : Original auxiliary audio accessory or auxiliary stereo cable is faulty.

NO : Go to step 4.

4. Shorted wire check (AUX lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio unit connector B (20P)

     Auxiliary jack assembly 5P connector

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Auxiliary jack assembly 5P connector: disconnected

Connector	Test circuit	Terminal

Audio unit connector B (20P)	AUX GND	No. 6 (LT GRN)
	AUX SGND	No. 8 (BLK)
	AUX DET	No. 16 (LT BLU)

Is there continuity?

YES : There is a short in the wires between the audio unit and the auxiliary jack assembly. Replace the affected shielded harness.

NO : The SH AUX wire is OK. Go to step 6.

6. Shorted wire check (AUX SGND line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Auxiliary jack assembly 5P connector: disconnected

     Test circuit AUX R CH, AUX SGND

     Test point 1 Audio unit connector B (20P) No. 17 (RED)

     Test point 2 Audio unit connector B (20P) No. 8 (BLK)

     Test circuit AUX L CH, AUX SGND

     Test point 1 Audio unit connector B (20P) No. 18 (WHT)

     Test point 2 Audio unit connector B (20P) No. 8 (BLK)

Fig. 101: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 18 (WHT) And No. 8 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the auxiliary jack assembly. Replace the affected shielded harness.

NO : The AUX SGND wire is not shorted. Go to step 7.

7. Open wire check (AUX lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Auxiliary jack assembly 5P connector: disconnected

Test circuit	Test point 1: Audio unit connector B (20P)	Test point 2: Auxiliary jack assembly 5P connector
AUX GND	No. 6 (LT GRN)	No. 4 (LT GRN)
AUX SGND	No. 8 (BLK)	No. 3 (BLK)
AUX DET	No. 16 (LT BLU)	No. 5 (LT BLU)
AUX R CH	No. 17 (RED)	No. 1 (RED)
AUX L CH	No. 18 (WHT)	No. 2 (WHT)

Fig. 102: Identifying Audio Unit Connector B (20P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 103: Identifying Auxiliary Jack Assembly 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AUX wires are OK. Go to step 8.

NO : There is an open in the wire(s) between the audio unit and the auxiliary jack assembly. Repair or replace the affected harness.

8. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD AUXILIARY JACK ASSEMBLY , and recheck.

Does the symptom go away?

YES : Replace the original auxiliary jack assembly.

NO : **REPLACE THE AUDIO UNIT** .

DISPLAY DOES NOT DIM OR BRIGHTEN WITH DIMMER (WITH MULTI-INFORMATION DISPLAY)

Fig. 104: Audio System Symptom Troubleshooting Flowchart - Display Does Not Dim Or Brighten With Dimmer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**
- **The climate control unit 32P (black) connector and the HFL control unit 32P (grey) connector are the same shape. Make sure the correct connector is connected to the applicable unit.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the combination lighting switch to the parking light position.
   - 3. Rotate the dashlights brightness controller knob several times.

   Does the multi-information display brightness change?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the combination lighting switch off.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connectors.

Multi-information display unit connector A (32P)

Gauge control module 32P connector

- 4. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Multi-information display unit connector A (32P): disconnected

Gauge control module 32P connector: disconnected

Test circuit B CAN-H

Test point 1 Multi-information display unit connector A (32P) No. 31 (PNK)

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Test circuit B CAN-L

Test point 1 Multi-information display unit connector A (32P) No. 15 (BLU)

Test point 2 Gauge control module 32P connector No. 31 (BLU)

Fig. 105: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 15 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

NO : Repair an open in the wire(s) between the multi-information display unit and the gauge control module.

DISPLAY DOES NOT DIM OR BRIGHTEN WITH DIMMER (WITHOUT MULTI-INFORMATION DISPLAY)

Fig. 106: Audio System Symptom Troubleshooting Flowchart - Display Does Not Dim Or Brighten With Dimmer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**
- **The climate control unit 32P (black) connector and the HFL control unit 32P (grey) connector are the same shape. Make sure the correct connector is connected to the applicable unit.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the combination lighting switch to the parking light position.
   - 3. Rotate the dashlights brightness controller knob several times.

   Does the audio display brightness change?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Gauge control module check:
   - 1. Turn the combination lighting switch off.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connector.

     Center display unit 12P connector

   - 4. Turn the ignition switch to ON (II).
   - 5. Turn the combination lighting switch to the parking light position.
   - 6. Measure the voltage between test points 1 and 2 while rotating the dashlights brightness

controller knob several times.

Test condition IG ON (II), while rotating the dashlights brightness controller knob Center display unit 12P connector: disconnected

Test circuit ILLUMI+, ILLUMI- (BULB)

Test point 1 Center display unit 12P connector No. 7 (GRY)

Test point 2 Center display unit 12P connector No. 9 (RED)

Fig. 107: Measuring Voltage Between Test Point Center Display Unit 12P Connector No. 7 (GRY) And No. 9 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage change?

YES : **REPLACE THE CENTER DISPLAY UNIT** .

NO : **REPLACE THE GAUGE CONTROL MODULE** .

ERROR CODE: CHECK ANTENNA IS DISPLAYED (WITH NAVIGATION)

Fig. 108: Audio System Symptom Troubleshooting Flowchart - Error Code: Check Antenna Is Displayed

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check XM radio reception in an open area. Poor reception/interference can be caused by tall buildings, mountains, or high-voltage power lines.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Park the vehicle outside with a clear view of the southern horizon.
   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio system, and press the CD/XM button to select the XM radio.

   Is Check Antenna displayed?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (XM antenna, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. SUBSTITUTE A KNOWN-GOOD AM/FM/XM ANTENNA .
   - 3. Turn the ignition switch to ON (II).
   - 4. Turn on the audio system, and press the CD/XM button to select the XM radio.

   Is Check Antenna displayed?

   YES : Go to step 3.

   NO : Replace the original AM/FM/XM antenna.

3. XM receiver check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Substitute a known-good XM antenna lead, and recheck.

   Does the symptom/indication go away?

   YES : Replace the original XM antenna lead.

   NO : REPLACE THE XM RECEIVER .

ERROR CODE: CHECK ANTENNA IS DISPLAYED (WITHOUT NAVIGATION)

Fig. 109: Audio System Symptom Troubleshooting Flowchart - Error Code: Check Antenna Is Displayed
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check XM radio reception in an open area. Poor reception/interference can be caused by tall buildings, mountains, or high-voltage power lines.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Park the vehicle outside with a clear view of the southern horizon.
   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio unit, and press the XM button to select the XM radio.

   Is CHECK ANTENNA displayed?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (XM antenna, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. SUBSTITUTE A KNOWN-GOOD AM/FM/XM ANTENNA .
   - 3. Turn the ignition switch to ON (II).
   - 4. Turn on the audio unit, and press the XM button to select the XM radio.

   Is Check Antenna displayed?

   YES : Go to step 3.

   NO : Replace the original AM/FM/XM antenna.

3. XM receiver check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. Substitute a known-good XM antenna lead, and recheck.

Does the symptom/indication go away?

YES : Replace the original XM antenna lead.

NO : REPLACE THE XM RECEIVER .

MULTI-INFORMATION DISPLAY UNIT DOES NOT WORK

Fig. 110: Audio System Symptom Troubleshooting Flowchart - Multi-Information Display Unit Does Not Work
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check for B-CAN DTCs and resolve them before troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if any MID information appears on the multi-information display unit.

   Is there any information displayed?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A29 (10 A)

Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A29 (10 A) fuse circuit.

3. Open wire check (+B BACK UP line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2.

   Test condition IG LOCK (0)

   Test circuit +B BACK UP

   Test point 1 Multi-information display unit connector A (32P) No. 16 (RED)

   Test point 2 Body ground

Fig. 111: Measuring Voltage Between Test Point Multi-Information Display Unit Connector A (32P) No. 16 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the multi-information display unit.

4. Open wire check (GND line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

Test circuit GND

Test point 1 Multi-information display unit connector A (32P) No. 10 (BRN)

Test point 2 Body ground

Fig. 112: Measuring Voltage Between Test Point Multi-Information Display Unit Connector A (32P) No. 10 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire between the multi-information display unit and body ground (G502).

5. Open wire check (B CAN-H line, B CAN-L line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Multi-information display unit connector A (32P)

     Gauge control module 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Multi-information display unit connector A (32P): disconnected

     Gauge control module 32P connector: disconnected

     Test circuit B CAN-H

Test point 1 Multi-information display unit connector A (32P) No. 31 (PNK)

Test point 2 Gauge control module 32P connector No. 30 (PNK)

Test circuit B CAN-L

Test point 1 Multi-information display unit connector A (32P) No. 15 (BLU)

Test point 2 Gauge control module 32P connector No. 31 (BLU)

Fig. 113: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 15 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

NO : Repair an open in the wire(s) between the multi-information display unit and the gauge control module.

NO SOUND IS HEARD FROM THE SPEAKER(S) (DISPLAY IS NORMAL) (KA, KC MODELS WITH NAVIGATION)

Fig. 114: Audio System Symptom Troubleshooting Flowchart - No Sound Is Heard From Speaker(s)

[Display Is Normal] (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 115: Audio System Symptom Troubleshooting Flowchart - No Sound Is Heard From Speaker(s) [Display Is Normal] (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Set the fader and the balance positions to the center.**
- **Before doing this troubleshooting, go to AUDIO-NAVIGATION UNIT POWER SWITCH WILL NOT TURN ON (NO AUDIO INFORMATION DISPLAY AND NO SOUND) TROUBLESHOOTING.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio system, and check for sound in each mode (AM/FM, USB, XM, and CD).

   Is the sound OK in each mode?

   YES : Intermittent failure, the system is OK at this time. Check for loose connections at the audio-navigation unit and speaker(s).

   NO : The failure is duplicated in all modes, go to step 2.

   NO : Go to **Poor AM or FM radio reception or interference (With Navigation)** troubleshooting.

   NO : Go to **Poor AM or FM radio reception or interference (without navigation)** troubleshooting.

   NO : Go to **USB INPUT SOUND IS LOW OR CANNOT BE HEARD TROUBLESHOOTING**.

   NO : Go to **POOR OR NO SOUND WITH XM RADIO (AUDIO-NAVIGATION UNIT DOES DISPLAY XM CHANNELS) TROUBLESHOOTING**.

NO : Go to **AUDIO DISC DOES NOT PLAY TROUBLESHOOTING**.

2. Determine possible failure area (volume level, others):
    - 1. Check that the volume knob is not set to the MIN level.

Is it at the MIN level?

YES : Raise the volume level, and recheck the function.

NO : Go to step 3.

3. Fuse check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check the following fuse.

      Fuse No. A13 (20 A)

      Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 4.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A13 (20 A) fuse circuit.

4. Open wire check (+B AUDIO AMP line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      Test circuit +B AUDIO AMP

      Test point 1 Stereo amplifier connector A (18P) No. 3 (RED)

      Test point 2 Body ground

Fig. 116: Measuring Voltage Between Test Point Stereo Amplifier Connector A (18P) No. 3 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B AUDIO AMP wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire between the No. A13 (20 A) fuse in the under-hood fuse/relay box and the stereo amplifier.

5. Determine possible failure area (SWD +B line, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit SWD +B

     Test point 1 Stereo amplifier connector B (24P) No. 13 (RED)

     Test point 2 Body ground

Fig. 117: Measuring Resistance Between Test Point Stereo Amplifier Connector B (24P) No. 13 (RED) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 7.

NO : Go to step 6.

6. Open wire check (SWD +B line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit SWD +B

     Test point 1 Audio-navigation unit connector A (24P) No. 21 (RED)

     Test point 2 Body ground

Fig. 118: Measuring Voltage Between Test Point Audio-Navigation Unit Connector A (24P) No. 21 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wire between the stereo amplifier and the audio-navigation unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

7. Open wire check (GND line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

Test circuit GND

Test point 1 Stereo amplifier connector A (18P) No. 1 (BLK)

Test point 2 Body ground

Fig. 119: Measuring Voltage Between Test Point Stereo Amplifier Connector A (18P) No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 8.

NO : Repair an open or high resistance in the wire between the stereo amplifier and body ground (G503).

8. Shorted wire check (SPKR lines, TWEETER lines, SUB WOOFER lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Stereo amplifier connector A (18P)

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     Stereo amplifier connector A (18P): disconnected

Connector	Test circuit	Terminal
	FL SPKR+	No. 13 (WHT)
	FL SPKR-	No. 6 (BLK)
	FL TWEETER+	No. 12 (PUR)
	FL TWEETER-	No. 5 (PNK)
	FR SPKR+	No. 14 (RED)

Stereo amplifier connector A (18P)	FR SPKR-	No. 7 (GRN)
	FR TWEETER+	No. 15 (RED)
	FR TWEETER-	No. 8 (BLU)
	RL SPKR+	No. 16 (BLU)
	RL SPKR-	No. 9 (PNK)
	RR SPKR+	No. 17 (BLU)
	RR SPKR-	No. 10 (PNK)
	SUB WOOFER+	No. 4 (GRN)
	SUB WOOFER-	No. 2 (BLK)

Fig. 120: Identifying Stereo Amplifier Connector A (18P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the audio unit and the speaker(s).

NO : The SPKR, the TWEETER, and the SUB WOOFER wires are not shorted to ground. Go to step 9.

9. Determine possible failure area (speaker, others) 1:
   - 1. Check the speaker(s) with no sound for any damage.

Is there any damage?

YES : REPLACE THE FAULTY SPEAKER(S) .

NO : Go to step 10.

10. Determine possible failure area (speaker, others) 2:
    - 1. Disconnect the following connector(s).

      Front door speaker 2P connector

      Rear door speaker 2P connector

Tweeter 2P connector

Subwoofer 2P connector

- 2. TEST THE SPEAKER(S) .

Is the speaker(s) OK?

YES : Go to step 11.

NO : REPLACE THE FAULTY SPEAKER(S) .

11. Open wire check (SPKR lines, SUB WOOFER lines):
    - 1. Reconnect the front door speaker 2P connector(s), the rear door speaker 2P connector(s), and the subwoofer 2P connector.
    - 2. Measure the resistance between test points 1 and 2.

    Test condition IG LOCK (0)

    Stereo amplifier connector A (18P): disconnected

Test circuits	Test point 1: Stereo amplifier connector A (18P)	Test point 2: Stereo amplifier connector A (18P)	Resistance
FL SPKR+, FL SPKR-	No. 13 (WHT)	No. 6 (BLK)	About 4 ohms
FR SPKR+, FR SPKR-	No. 14 (RED)	No. 7 (GRN)	About 4 ohms
RL SPKR+, RL SPKR-	No. 16 (BLU)	No. 9 (PNK)	About 4 ohms
RR SPKR+, RR SPKR-	No. 17 (BLU)	No. 10 (PNK)	About 4 ohms
SUB WOOFER+, SUB WOOFER-	No. 4 (GRN)	No. 2 (BLK)	About 2 ohms

Fig. 121: Identifying Stereo Amplifier Connector A (18P)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance OK?

YES : The SPKR and the SUB WOOFER wires are OK. Go to step 12.

NO : Repair an open in the wire(s) between the audio unit and the speaker(s).

12. Open wire check (TWEETER lines):
    - 1. Connect terminals A and B with jumper wires.

      Terminal A Stereo amplifier connector A (18P) No. 5 (PNK)

      Terminal B Stereo amplifier connector A (18P) No. 12 (PUR)

      Terminal A Stereo amplifier connector A (18P) No. 8 (BLU)

      Terminal B Stereo amplifier connector A (18P) No. 15 (RED)

Fig. 125: Checking For Continuity Between Test Point Right Tweeter 2P Connector No. 1 (BLU) And No. 2 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TWEETER wires are OK. Go to step 13.

NO : Repair an open in the wire(s) between the stereo amplifier and the tweeter.

13. Open wire check (PRE lines):
    - 1. Disconnect the following connectors.

NOTE: **Eject all the discs before disconnecting the audio-navigation unit to prevent damaging the CD player's load mechanism.**

Stereo amplifier connector B (24P)

Audio-navigation unit connector A (24P)

Audio-navigation unit connector E (16P)

- 2. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Left (Right) tweeter 2P connector: disconnected

Stereo amplifier connector A (18P): disconnected

Stereo amplifier connector B (24P): disconnected

Audio-navigation unit connector A (24P): disconnected

Audio-navigation unit connector E (16P): disconnected

SH FR PRE to FR PRE+, FR PRE-	No. 7 (GRY)	No. 20 (RED), No. 8 (GRN)

SH RL PRE to RL PRE+, RL PRE-	No. 22 (GRY)	No. 21 (BLU), No. 9 (PNK)
SH RR PRE to RR PRE+, RR PRE-	No. 19 (GRY)	No. 18 (LT BLU), No. 6 (PUR)
SH SUB W to SUB W PRE+, SUB W PRE-	No. 4 (GRY)	No. 17 (LT BLU), No. 5 (PUR)

Fig. 130: Identifying Stereo Amplifier Connector B (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : There is a short in the wires between the stereo amplifier and the audio-navigation unit. Replace the affected shielded harness.

NO : The SH PRE wires and the PRE wires are OK. Go to step 16.

16. Audio-navigation unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD STEREO AMPLIFIER , and recheck.

Does the symptom go away?

YES : Replace the original stereo amplifier.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NO SOUND IS HEARD FROM THE SPEAKER(S) (DISPLAY IS NORMAL) (WITH STEREO

AMPLIFIER WITHOUT NAVIGATION)

Keyless/Power Door Locks/Security System Symptom Troubleshooting - Keyless operation does not work (LOCK, UNLOCK, PANIC)

Fig. 131: Audio System Symptom Troubleshooting Flowchart - No Sound Is Heard From Speaker(s) [Display Is Normal] (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Keyless/Power Door Locks/Security System Symptom Troubleshooting - Security alarm system will not arm

Fig. 132: Audio System Symptom Troubleshooting Flowchart - No Sound Is Heard From Speaker(s) [Display Is Normal] (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Set the fader and the balance positions to the center.**
- **Before doing this troubleshooting, go to AUDIO UNIT POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND) TROUBLESHOOTING.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio system, and check for sound in each mode (AM/FM, USB, and CD).

   Is the sound OK in each mode?

   YES : Intermittent failure, the system is OK at this time. Check for loose connections at the audio unit and speaker (s).

   NO : The failure is duplicated in all modes, go to step 2.

   NO : **GO TO POOR AM OR FM RADIO RECEPTION INTERFERENCE (WITHOUT NAVIGATION) TROUBLESHOOTING**.

   NO : Go to **USB INPUT SOUND IS LOW OR CANNOT BE HEARD (WITHOUT NAVIGATION, WITH MULTI-INFORMATION DISPLAY) TROUBLESHOOTING**.

   NO : Go to **AUDIO DISC DOES NOT PLAY TROUBLESHOOTING**.

2. Determine possible failure area (volume level, others):
   - 1. Check that the volume knob is not set to the MIN level.

   Is it at the MIN level?

   YES : Raise the volume level, and recheck the function.

   NO : Go to step 3.

3. Determine possible failure area (audio unit, others):
   - 1. **DO THE SELF-DIAGNOSTIC FUNCTION, AND USE THE SPEAKER CHECK MODE**.

   Did all speakers produce a tone?

   YES : REPLACE THE AUDIO UNIT .

   NO : Go to step 4.

4. Fuse check:

- 1. Turn the ignition switch to LOCK (0).
- 2. Check the following fuse.

  Fuse No. A13 (20 A)

  Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 5.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A13 (20 A) fuse circuit.

5. Open wire check (+B AUDIO AMP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B AUDIO AMP

     Test point 1 Stereo amplifier connector A (18P) No. 3 (RED)

     Test point 2 Body ground

Fig. 133: Measuring Voltage Between Test point Stereo Amplifier Connector A (18P) No. 3 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B AUDIO AMP wire is OK. Go to step 6.

NO : Repair an open or high resistance in the wire between the No. A13 (20 A) fuse in the under-hood fuse/relay box and the stereo amplifier.

6. Determine possible failure area (SWD +B line, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit SWD +B

    Test point 1 Stereo amplifier connector B (24P) No. 13 (RED)

    Test point 2 Body ground

<u>Fig. 134: Measuring Voltage Between Test Point Stereo Amplifier Connector B (24P) No. 13 (RED) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 8.

NO : Go to step 7.

7. Open wire check (SWD +B line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit SWD +B

      Test point 1 Audio unit connector A (24P) No. 21 (RED)

      Test point 2 Body ground

<u>Fig. 135: Measuring Resistance Between Test Point Audio Unit Connector A (24P) No. 21 (RED) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wire between the stereo amplifier and the audio unit.

NO : REPLACE THE AUDIO UNIT .

8. Open wire check (GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit GND

      Test point 1 Stereo amplifier connector A (18P) No. 1 (BLK)

      Test point 2 Body ground

Under-dash fuse/relay

Fig. 136: Measuring Voltage Between Test Point Stereo Amplifier Connector A (18P) No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 9.

NO : Repair an open or high resistance in the wire between the stereo amplifier and body ground (G503).

9. Shorted wire check (SPKR lines, TWEETER lines, SUB WOOFER lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Stereo amplifier connector A (18P)

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     Stereo amplifier connector A (18P): disconnected

Connector	Test circuit	Terminal
Stereo amplifier connector A (18P)	FL SPKR+	No. 13 (WHT)
	FL SPKR-	No. 6 (BLK)
	FL TWEETER+	No. 12 (PUR)
	FL TWEETER-	No. 5 (PNK)

	SUB WOOFER	No. 2 (BLK)

<u>Fig. 137: Identifying Stereo Amplifier Connector A (18P)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the audio unit and the speaker(s).

NO : The SPKR, the TWEETER, and the SUB WOOFER wires are not shorted to ground. Go to step 10.

10. Determine possible failure area (speaker, others) 1:
    - 1. Check the speaker(s) with no sound for any damage.

Is there any damage?

YES : REPLACE THE FAULTY SPEAKER(S) .

NO : Go to step 11.

11. Determine possible failure area (speaker, others) 2:
    - 1. Disconnect the following connector(s).

      Front door speaker 2P connector

      Rear door speaker 2P connector

      Tweeter 2P connector

      Subwoofer 2P connector

    - 2. TEST THE SPEAKER(S) .

Is the speaker(s) OK?

YES : Go to step 12.

NO : REPLACE THE FAULTY SPEAKER(S) .

12. Open wire check (SPKR lines, SUB WOOFER lines):
    - 1. Reconnect the front door speaker 2P connector(s), the rear door speaker 2P connector(s), and the subwoofer 2P connector.
    - 2. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Stereo amplifier connector A (18P): disconnected

Test circuits	Test point 1: Stereo amplifier connector A (18P)	Test point 2: Stereo amplifier connector A (18P)	Resistance

Fig. 147: Identifying Stereo Amplifier Connector B (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : There is a short in the wires between the stereo amplifier and the audio unit. Replace the affected shielded harness.

NO : The SH PRE wires and the PRE wires are OK. Go to step 17.

17. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD STEREO AMPLIFIER, AND RECHECK .

    Does the symptom go away?

    YES : Replace the original stereo amplifier.

    NO : REPLACE THE AUDIO UNIT .

NO SOUND IS HEARD FROM THE SPEAKER(S) (DISPLAY IS NORMAL) (WITHOUT NAVIGATION AND STEREO AMPLIFIER)

Fig. 148: Audio System Symptom Troubleshooting Flowchart - No Sound Is Heard From Speaker(s) (Display Is Normal)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Set the fader and the balance positions to the center.**
- **Before doing this troubleshooting, go to AUDIO UNIT POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND) TROUBLESHOOTING.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio unit, and check for sound in each mode (AM/FM, USB, and CD).

    Is the sound OK in each mode?

    YES : Intermittent failure, the system is OK at this time. Check for loose connections at the audio unit and speaker(s).

    NO : The failure is duplicated in all modes, go to step 2.

NO : Go to **POOR AM OR FM RADIO RECEPTION INTERFERENCE (WITH NAVIGATION) TROUBLESHOOTING**.

NO : Go to **USB INPUT SOUND IS LOW OR CANNOT BE HEARD (WITHOUT NAVIGATION, WITH MULTI-INFORMATION DISPLAY) TROUBLESHOOTING**.

NO : Go to **USB INPUT SOUND IS LOW OR CANNOT BE HEARD (WITHOUT NAVIGATION AND MULTI-INFORMATION DISPLAY) TROUBLESHOOTING**.

NO : Go to **AUDIO DISC DOES NOT PLAY TROUBLESHOOTING**.

2. Determine possible failure area (volume level, others):
   - 1. Check that the volume button is not set to the MIN level.

Is it at the MIN level?

YES : Raise the volume level, and recheck the function.

NO : Go to step 3.

3. Determine possible failure area (audio unit, others):
   - 1. **DO THE SELF-DIAGNOSTIC FUNCTION, AND USE THE SPEAKER CHECK MODE**.

Did all speakers produce a tone?

YES : REPLACE THE AUDIO UNIT .

NO : Go to step 4.

4. Shorted wire check (SPKR lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

NOTE: **Eject all the discs before disconnecting the audio unit to prevent damaging the CD player's load mechanism.**

Audio unit connector A (24P)

- 3. Check for continuity between these test points and body ground individually.

Test condition IG LOCK (0)

Audio unit connector A (24P): disconnected

Connector	Test circuit	Terminal

Audio unit connector A (24P)	RL SPKR+	No. 5 (BLU)
	RL SPKR-	No. 6 (PNK)
	RR SPKR+	No. 9 (BLU)
	RR SPKR-	No. 10 (PNK)
	FL SPKR+	No. 15 (WHT)
	FL SPKR-	No. 16 (BLK)
	FR SPKR+	No. 19 (RED)
	FR SPKR-	No. 20 (GRN)

Fig. 149: Identifying Audio Unit Connector A (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the audio unit and the speaker(s).

NO : The SPKR wires are not shorted to ground. Go to step 5.

5. Determine possible failure area (speaker, others) 1:
   - 1. Check the speaker(s) with no sound for any damage.

Is there any damage?

YES : REPLACE THE FAULTY SPEAKER(S) .

NO : Go to step 6.

6. Determine possible failure area (speaker, others) 2:
   - 1. Disconnect the following connector(s).

     Front door speaker 2P connector

     Rear door speaker 2P connector

Tweeter 2P connector (with tweeter)

- 2. TEST THE SPEAKER(S) .

Is the speaker(s) OK?

YES : Go to step 7.

NO : REPLACE THE FAULTY SPEAKER(S) .

7. Open wire check (SPKR lines):
   - 1. Reconnect the front door speaker 2P connector(s) and the rear door speaker 2P connector(s).
   - 2. Measure the resistance between test points 1 and 2.

   Test condition IG LOCK (0)

   Audio unit connector A (24P): disconnected

Test circuits	Test point 1: Audio unit connector A (24P)	Test point 2: Audio unit connector A (24P)	Resistance
RL SPKR+, RL SPKR-	No. 5 (BLU)	No. 6 (PNK)	About 4 ohms

Is there continuity?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire(s) between the audio unit and the tweeter.

POOR AM OR FM RADIO RECEPTION OR INTERFERENCE (WITH NAVIGATION)

Fig. 155: Audio System Symptom Troubleshooting Flowchart - Poor AM Or FM Radio Reception Or Interference (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 156: Audio System Symptom Troubleshooting Flowchart - Poor AM Or FM Radio Reception Or Interference (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check for aftermarket accessories plugged into the vehicle accessory power sockets.**
- **Check for any radio frequency modulators that are plugged into the FM antenna lead. These modulators allow customers to play audio from accessories like CD players or game consoles using the audio system, but they can create interference issues.**
- **Check the radio reception in an open area. Compare it to a known-good vehicle whenever possible. Poor reception/interference can be caused by the following:**
  - **The radio station is far away**
  - **Atmospheric conditions are unfavorable**
  - **Tall buildings, mountains, or high-voltage power lines are nearby**
  - **Electrical loads like the rear window defroster, seat heaters, game consoles, etc.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE SEEK STOP TEST IN THE SOUND QUALITY DIAGNOSIS** .

   Is the test vehicle within 10 % of the known-good vehicle?

   YES : Multipath interference or weak station. Operation is normal.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (charging system and ignition system, others):

- 1. Start the engine, and turn on the electrical loads one at a time (defrosters, seat heaters, blower motor, etc.).
- 2. Check the reception/interference while the engine is running.

Is there noise (static or whine) only with the engine running?

YES : Check the antenna, the antenna mounting nut, and radio grounds. If OK, check the charging system and the ignition system.

NO : Go to step 3.

3. Determine possible failure area (AM/FM antenna mast, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the AM/FM antenna mast for cracks or other damage. Verify that the AM/FM antenna mast is not loose.

NOTE: Do not use any tools to tighten the AM/FM antenna mast.

Is there any damage?

YES : Replace the AM/FM antenna mast.

NO : Go to step 4.

4. Determine possible failure area (SWD +B line, AM/FM line):
   - 1. Disconnect the following connector.

     AM/FM antenna 3P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio system, and select AM or FM.
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     AM/FM antenna 3P connector: disconnected

     Test circuit SWD +B

     Test point 1 AM/FM antenna 3P connector No. 1

     Test point 2 Body ground

Fig. 157: Measuring Voltage Between Test point AM/FM antenna 3P connector No. 1 and Body ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 5.

NO : Go to step 14.

5. Open wire check (AM/FM line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Audio-navigation unit connector D (3P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

     Audio-navigation unit connector D (3P): disconnected

     Test circuit AM/FM

     Test point 1 Audio-navigation unit connector D (3P) No. 2

     Test point 2 AM/FM antenna 3P connector No. 2

Fig. 158: Checking For Continuity Between Test Point Audio-Navigation Unit Connector D (3P) No. 2 And AM/FM Antenna 3P Connector No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AM/FM wire is not open. Go to step 7.

NO : Go to step 6.

6. FM distributor check:
    1. Disconnect the following connector.

       FM distributor 3P connector

    2. Check for continuity between test points 1 and 2.

       Test condition IG LOCK (0)

       AM/FM antenna 3P connector: disconnected

       Audio-navigation unit connector D (3P): disconnected

       FM distributor 3P connector: disconnected

       Test circuit AM/FM

       Test point 1 FM distributor 3P connector No. 2

       Test point 2 AM/FM antenna 3P connector No. 2

Fig. 159: Checking For Continuity Between Test Point FM Distributor 3P Connector No. 2 And AM/FM Antenna 3P Connector No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE FM DISTRIBUTOR .

NO : Replace the AM/FM antenna lead and/or the sublead.

7. Shorted wire check (AM/FM line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

     Audio-navigation unit connector D (3P): disconnected

     Test circuit AM/FM

     Test point 1 Audio-navigation unit connector D (3P) No. 2

     Test point 2 Body ground

Fig. 160: Checking For Continuity Between Audio-Navigation Unit Connector D (3P) No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 8.

NO : The AM/FM wire is not shorted to ground. Go to step 9.

8. FM distributor check:
   - 1. Disconnect the following connector.

     FM distributor 3P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

     Audio-navigation unit connector D (3P): disconnected

     FM distributor 3P connector: disconnected

     Test circuit AM/FM

     Test point 1 FM distributor 3P connector No. 2

     Test point 2 Body ground

Fig. 161: Checking For Continuity Between FM Distributor 3P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Replace the AM/FM antenna lead and/or the sublead.

NO : REPLACE THE FM DISTRIBUTOR .

9. Open wire check (SH (AM/FM) line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

     Audio-navigation unit connector D (3P): disconnected

     Test circuit SH (AM/FM)

     Test point 1 Audio-navigation unit connector D (3P) No. 3

     Test point 2 AM/FM antenna 3P connector No. 3

Fig. 162: Checking For Continuity Between Test Point Audio-Navigation Unit Connector D (3P) No. 3 And AM/FM Antenna 3P Connector No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SH (AM/FM) wire is not open. Go to step 11.

NO : Go to step 10.

10. FM distributor check:
    - 1. Disconnect the following connector.

      FM distributor 3P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      FM distributor 3P connector: disconnected

      Test circuit SH (AM/FM)

      Test point 1 FM distributor 3P connector No. 3

      Test point 2 AM/FM antenna 3P connector No. 3

Fig. 163: Checking For Continuity Between Test Point FM Distributor 3P Connector No. 3 And AM/FM Antenna 3P Connector No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE FM DISTRIBUTOR .

NO : Replace the AM/FM antenna lead and/or the sublead.

11. Shorted wire check (AM/FM line to SH (AM/FM) line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      Test circuit AM/FM, SH (AM/FM)

      Test point 1 Audio-navigation unit connector D (3P) No. 2

      Test point 2 Audio-navigation unit connector D (3P) No. 3

Fig. 164: Checking For Continuity Between Test Point Audio-Navigation Unit Connector D (3P) No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 13.

NO : Go to step 12.

12. Audio-navigation unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD AM/FM ANTENNA , and recheck.

Does the symptom go away?

YES : Replace the original AM/FM antenna.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

13. FM distributor check:
    - 1. Disconnect the following connector.

      FM distributor 3P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      FM distributor 3P connector: disconnected

      Test circuit AM/FM, SH (AM/FM)

Test point 1 FM distributor 3P connector No. 2

Test point 2 FM distributor 3P connector No. 3

Fig. 165: Checking For Continuity Between Test Point FM Distributor 3P Connector No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Replace the AM/FM antenna lead and/or the sublead.

NO : REPLACE THE FM DISTRIBUTOR .

14. Open wire check (SWD +B line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Audio-navigation unit connector D (3P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      Test circuit SWD +B

      Test point 1 Audio-navigation unit connector D (3P) No. 1

      Test point 2 AM/FM antenna 3P connector No. 1

Fig. 166: Checking For Continuity Between Test Point Audio-Navigation Unit Connector D (3P) No. 1 And AM/FM Antenna 3P Connector No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SWD +B wire is not open. Go to step 16.

NO : Go to step 15.

15. FM distributor check:
    - 1. Disconnect the following connector.

      FM distributor 3P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      FM distributor 3P connector: disconnected

      Test circuit SWD +B

      Test point 1 FM distributor 3P connector No. 1

      Test point 2 AM/FM antenna 3P connector No. 1

Fig. 167: Checking For Continuity Between Test Point FM Distributor 3P Connector No. 1 And AM/FM Antenna 3P Connector No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE FM DISTRIBUTOR .

NO : Replace the AM/FM antenna lead and/or the sublead.

16. Shorted wire check (SWD +B line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      Test circuit SWD +B

      Test point 1 Audio-navigation unit connector D (3P) No. 1

      Test point 2 Body ground

Fig. 168: Checking For Continuity Between Test Point Audio-Navigation Unit Connector D (3P) No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 7 m ohms resistance?

YES : Go to step 17.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

17. FM distributor check:
    - 1. Disconnect the following connector.

      FM distributor 3P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio-navigation unit connector D (3P): disconnected

      FM distributor 3P connector: disconnected

      Test circuit SWD +B

      Test point 1 FM distributor 3P connector No. 1

      Test point 2 Body ground

Fig. 169: Checking For Continuity Between Test Point FM Distributor 3P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Replace the AM/FM antenna lead and/or the sublead.

NO : REPLACE THE FM DISTRIBUTOR .

POOR AM OR FM RADIO RECEPTION OR INTERFERENCE (WITHOUT NAVIGATION)

Fig. 170: Audio System Symptom Troubleshooting Flowchart - Poor AM Or FM Radio Reception Or Interference
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check for aftermarket accessories plugged into the vehicle accessory power sockets.**
- **Check for any radio frequency modulators that are plugged into the FM antenna lead. These modulators allow customers to play audio from accessories like CD players or game consoles using the audio system, but**

they can create interference issues.

- **Check the radio reception in an open area. Compare it to a known-good vehicle whenever possible. Poor reception/interference can be caused by the following:**
  - **The radio station is far away**
  - **Atmospheric conditions are unfavorable**
  - **Tall buildings, mountains, or high-voltage power lines are nearby**
  - **Electrical loads like the rear window defroster, seat heaters, game consoles, etc.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE SEEK STOP TEST IN THE SOUND QUALITY DIAGNOSIS** .

   Is the test vehicle within 10 % of the known-good vehicle?

   YES : Multipath interference or weak station. Operation is normal.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (charging system and ignition system, others):
   - 1. Start the engine, and turn on the electrical loads one at a time (defrosters, seat heaters, blower motor, etc.)
   - 2. Check the reception/interference while the engine is running.

   Is there noise (static or whine) only with the engine running?

   YES : Check the antenna, the antenna mounting nut, and radio grounds. If OK, check the charging system and the ignition system.

   NO : Go to step 3.

   Is there any damage?

3. Determine possible failure area (AM/FM antenna mast, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the AM/FM antenna mast for cracks or other damage. Verify that the AM/FM antenna mast is not loose.

   NOTE: Do not use any tools to tighten the AM/FM antenna mast.

   Is there any damage?

YES : Replace the AM/FM antenna mast.

NO : Go to step 4.

4. Determine possible failure area (SWD +B line, AM/FM line):
   - 1. Disconnect the following connector.

     AM/FM antenna 3P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio system, and select AM or FM.
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     AM/FM antenna 3P connector: disconnected

     Test circuit SWD +B

     Test point 1 AM/FM antenna 3P connector No. 1

     Test point 2 Body ground

Fig. 171: Measuring Voltage Between Test Point AM/FM Antenna 3P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 5.

NO : Go to step 10.

5. Open wire check (AM/FM line):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Audio unit connector D (3P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  AM/FM antenna 3P connector: disconnected

  Audio unit connector D (3P): disconnected

  Test circuit AM/FM

  Test point 1 Audio unit connector D (3P) No. 2

  Test point 2 AM/FM antenna 3P connector No. 2

Fig. 172: Checking For Continuity Between Test Point Audio Unit Connector D (3P) No. 2 And AM/FM Antenna 3P Connector No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AM/FM wire is not open. Go to step 6.

NO : Replace the AM/FM antenna lead and/or the sublead.

6. Shorted wire check (AM/FM line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

Audio unit connector D (3P): disconnected

Test circuit AM/FM

Test point 1 Audio unit connector D (3P) No. 2

Test point 2 Body ground

Fig. 173: Checking For Continuity Between Test Point Audio Unit Connector D (3P) No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Replace the AM/FM antenna lead and/or the sublead.

NO : The AM/FM wire is not shorted to ground. Go to step 7.

7. Open wire check (SH (AM/FM) line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

     Audio unit connector D (3P): disconnected

     Test circuit SH (AM/FM)

     Test point 1 Audio unit connector D (3P) No. 3

     Test point 2 AM/FM antenna 3P connector No. 3

Fig. 174: Checking For Continuity Between Audio Unit Connector D (3P) No. 3 And AM/FM Antenna 3P Connector No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SH (AM/FM) wire is not open. Go to step 8.

NO : Replace the AM/FM antenna lead and/or the sublead.

8. Shorted wire check (AM/FM line to SH (AM/FM) line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     AM/FM antenna 3P connector: disconnected

     Audio unit connector D (3P): disconnected

     Test circuit AM/FM, SH (AM/FM)

     Test point 1 Audio unit connector D (3P) No. 2

     Test point 2 Audio unit connector D (3P) No. 3

Fig. 175: Checking For Continuity Between Test Point Audio Unit Connector D (3P) No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Replace the AM/FM antenna lead and/or the sublead.

NO : Go to step 9.

9. Audio unit check:
   - 1. SUBSTITUTE A KNOWN-GOOD AM/FM ANTENNA , and recheck.

Does the symptom go away?

YES : Replace the original AM/FM antenna.

NO : REPLACE THE AUDIO UNIT .

10. Open wire check (SWD +B line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Audio unit connector D (3P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio unit connector D (3P): disconnected

      Test circuit SWD +B

Test point 1 Audio unit connector D (3P) No. 1

Test point 2 AM/FM antenna 3P connector No. 1

Fig. 176: Checking For Continuity Between Test Point Audio Unit Connector D (3P) No. 1 And AM/FM Antenna 3P Connector No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SWD +B wire is not open. Go to step 11.

NO : Repair an open in the wire between the audio unit and the AM/FM antenna.

11. Shorted wire check (SWD +B line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      AM/FM antenna 3P connector: disconnected

      Audio unit connector D (3P): disconnected

      Test circuit SWD +B

      Test point 1 AM/FM antenna 3P connector No. 1

      Test point 2 Body ground

Fig. 177: Checking For Continuity Between Test Point AM/FM Antenna 3P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the audio unit and the AM/FM antenna.

NO : REPLACE THE AUDIO UNIT .

POOR OR NO SOUND WITH XM RADIO (AUDIO UNIT DOES DISPLAY XM CHANNELS)

Fig. 178: Audio System Symptom Troubleshooting Flowchart - Poor Or No Sound With XM Radio (Audio Unit Does Display XM Channels)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the radio reception in an open area. Poor reception/interference can be caused by tall buildings, mountains, or high-voltage power lines are nearby.**
- **If you can only tune to channel 000, 001, and 174, make sure the audio unit is set to channel mode (see the Owner's Manual), if it is set to channel**

mode, call XM Radio customer support at 800-852-9696, and check the account activation status.

- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Park the vehicle outside with a clear view of the southern horizon.
   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio unit, and set the proper XM radio station.

   Does the XM radio play?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Disconnect the HFL unit and recheck:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Disconnect the HFL unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** and recheck.

   Does the symptom go away?

   YES : Replace the HFL control unit.

   NO : Go to step 3.

3. Disconnect the multi-information display and retest:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DISCONNECT THE MULTI-INFORMATION DISPLAY** and retest.

   Does the symptom go away?

   YES : Replace the multi-information display.

   NO : Go to step 4.

4. Shorted wire check (GA AUDIO lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio unit connector C (14P)

     XM receiver connector A (14P)

Multi-information display unit connector A (32P)

HandsFreeLink control unit 32P connector

- 3. Check for continuity between these test points and body ground individually.

Test condition IG LOCK (0)

Audio unit connector C (14P): disconnected

XM receiver connector A (14P): disconnected

Multi-information display unit connector A (32P): disconnected

HandsFreeLink control unit 32P connector: disconnected

Connector	Test circuit	Terminal
Audio unit connector C (14P)	GA AUDIO L+	No. 1 (RED)
	GA AUDIO R+	No. 2 (GRN)
	GA AUDIO L-	No. 7 (WHT)
	GA AUDIO R-	No. 8 (BLK)

Fig. 179: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the XM receiver. Replace the affected shielded harness.

NO : The GA AUDIO wires are not shorted to ground. Go to step 5.

5. Shorted wire check (SH GA AUDIO line to another lines):

- 1. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Audio unit connector C (14P): disconnected

  XM receiver connector A (14P): disconnected

  Multi-information display unit connector A (32P): disconnected

  HandsFreeLink control unit 32P connector: disconnected

Test circuits	Connector: Audio unit connector C (14P)	
	Test point 1	Test points 2
SH GA AUDIO to GA AUDIO L+, GA AUDIO R+, GA AUDIO L-, GA AUDIO R-	No. 3 (GRY)	No. 1 (RED), No. 2 (GRN), No. 7 (WHT), No. 8 (BLK)

Fig. 180: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : There is a short in the wires between the audio unit and the XM receiver. Replace the affected shielded harness.

NO : The SH GA AUDIO wire is OK. Go to step 6.

6. Open wire check (GA AUDIO lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

XM receiver connector A (14P): disconnected

Multi-information display unit connector A (32P): disconnected

HandsFreeLink control unit 32P connector: disconnected

Test circuit	Test point 1: Audio unit connector C (14P)	Test point 2: XM receiver connector A (14P)
GA AUDIO L+	No. 1 (RED)	No. 1 (RED)
GA AUDIO R+	No. 2 (GRN)	No. 2 (GRN)
GA AUDIO L-	No. 7 (WHT)	No. 7 (WHT)
GA AUDIO R-	No. 8 (BLK)	No. 8 (BLK)

Fig. 181: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 182: Identifying XM Receiver Connector A (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA AUDIO wires are OK. Go to step 7.

NO : There is an open in the wire(s) between the audio unit and the XM receiver. Replace the affected shielded harness.

7. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD XM RECEIVER , and recheck.

Does the symptom go away?

YES : Replace the original XM receiver.

NO : REPLACE THE AUDIO UNIT .

POOR OR NO SOUND WITH XM RADIO (AUDIO-NAVIGATION UNIT DOES DISPLAY XM CHANNELS)

Fig. 183: Audio System Symptom Troubleshooting Flowchart - Poor Or No Sound With XM Radio (Audio-Navigation Unit Does Display XM Channels)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the radio reception in an open area. Poor reception/interference can be caused by tall buildings, mountains, or high-voltage power lines are nearby.**
- **If you can only tune to channel 000, 001, and 174, make sure the audio-navigation unit is set to channel mode (see the Owner's Manual), if it is set to channel mode, call XM Radio customer support at 800-852-9696, and check the account activation status.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Park the vehicle outside with a clear view of the southern horizon.
    - 2. Turn the ignition switch to ON (II).

- 3. Turn on the audio system, and set the proper XM radio station.

Does the XM radio play?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Disconnect the HFL unit and recheck:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Disconnect the HFL unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** and recheck.

Does the symptom go away?

YES : Replace the HFL control unit.

NO : Go to step 3.

3. Disconnect the multi-information display and retest:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DISCONNECT THE MULTI-INFORMATION DISPLAY** and retest.

Does the symptom go away?

YES : Replace the multi-information display.

NO : Go to step 4.

4. Shorted wire check (GA AUDIO lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio-navigation unit connector C (14P)

     XM receiver connector A (14P)

     Multi-information display unit connector A (32P)

     HandsFreeLink control unit 32P connector

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

Audio-navigation unit connector C (14P): disconnected

XM receiver connector A (14P): disconnected

Multi-information display unit connector A (32P): disconnected

HandsFreeLink control unit 32P connector: disconnected

Connector	Test circuit	Terminal
Audio-navigation unit connector C (14P)	GA AUDIO L+	No. 1 (RED)
	GA AUDIO R+	No. 2 (GRN)
	GA AUDIO L-	No. 7 (WHT)
	GA AUDIO R-	No. 8 (BLK)

Fig. 184: Identifying Audio-Navigation Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio-navigation unit and the XM receiver. Replace the affected shielded harness.

NO : The GA AUDIO wires are not shorted to ground. Go to step 5.

5. Shorted wire check (SH GA AUDIO line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

Audio-navigation unit connector C (14P): disconnected

XM receiver connector A (14P): disconnected

Multi-information display unit connector A (32P): disconnected

HandsFreeLink control unit 32P connector: disconnected

Test circuits	Connector: Audio-navigation unit connector C (14P)	
	Test point 1	Test points 2
SH GA AUDIO to GA AUDIO L+, GA AUDIO R+, GA AUDIO L-, GA AUDIO R--	No. 3 (GRY)	No. 1 (RED), No. 2 (GRN), No. 7 (WHT), No. 8 (BLK)

Fig. 185: Identifying Audio-Navigation Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : There is a short in the wires between the audio-navigation unit and the XM receiver. Replace the affected shielded harness.

NO : The SH GA AUDIO wire is OK. Go to step 6.

6. Open wire check (GA AUDIO lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

	Test point 1: Audio-navigation unit	Test point 2: XM receiver

Test circuit	connector C (14P)	connector A (14P)
GA AUDIO L+	No. 1 (RED)	No. 1 (RED)
GA AUDIO R+	No. 2 (GRN)	No. 2 (GRN)
GA AUDIO L-	No. 7 (WHT)	No. 7 (WHT)
GA AUDIO R-	No. 8 (BLK)	No. 8 (BLK)

Fig. 186: Identifying Audio-Navigation Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1	2
RELEASE (Open)	○	○
LOCK (Close)		

Fig. 187: Identifying XM Receiver Connector A (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA AUDIO wires are OK. Go to step 7.

NO : There is an open in the wire(s) between the audio-navigation unit and the XM receiver. Replace the affected shielded harness.

7. Audio-navigation unit check:

- 1. SUBSTITUTE A KNOWN-GOOD XM RECEIVER , and recheck.

Does the symptom go away?

YES : Replace the original XM receiver.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

Fig. 188: Audio System Symptom Troubleshooting Flowchart - Radio Preset Memory Is Lost
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIO PRESET MEMORY IS LOST (WITH NAVIGATION)

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio system, and set the audio system presets.
    - 3. Turn the ignition switch to LOCK (0) for 1 minute, then turn it back to ON (II).
    - 4. Turn on the audio system, and test the preset buttons for proper recall operation.

Do the preset buttons recall the set radio stations?

YES : Intermittent failure. The system is OK at this time.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

RADIO PRESET MEMORY IS LOST (WITHOUT NAVIGATION)

Fig. 189: Audio System Symptom Troubleshooting Flowchart - Radio Preset Memory Is Lost
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Determine possible failure area (audio switch panel, audio unit):
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio unit, and set each of the radio station preset buttons.

    Does each button set properly?

    YES : Go to step 2.

    NO : REPLACE THE AUDIO SWITCH PANEL .

2. Problem verification:
    - 1. Turn the ignition switch to LOCK (0) for 1 minute, then turn it back to ON (II).
    - 2. Turn on the audio unit, and test the preset buttons for proper recall operation.

    Do the preset buttons recall the set radio stations?

    YES : Intermittent failure. The system is OK at this time.

    NO : REPLACE THE AUDIO UNIT .

RADIO TUNER DOES NOT CHANGE STATIONS

Fig. 190: Audio System Symptom Troubleshooting Flowchart - Radio Tuner Does Not Change Stations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the radio station change?

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio system, and select AM or FM.
    - 3. Operate the tuning knob to see if the radio station changes.

    YES : Intermittent failure, the tuning knob is OK at this time.

    NO : REPLACE THE AUDIO-NAVIGATION UNIT .

    NO : REPLACE THE AUDIO UNIT .

REARVIEW CAMERA IMAGE DOES NOT CHANGE

Fig. 191: Audio System Symptom Troubleshooting Flowchart - Rearview Camera Image Does Not Change
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **You can select three different rearview camera angles for backing up. If there is no camera image on the display, go to <u>REARVIEW CAMERA IMAGE DOES NOT COME ON OR WORK PROPERLY TROUBLESHOOTING</u>.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Move the shift lever to R.
   - 3. Press the selector knob to see if the rearview image changes between the wide view, the normal view, and the top down view in this order.

   Does the rearview camera image change properly?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Shorted wire check (CAMERA BIT0 line, CAMERA BIT1 line):
   - 1. Move the shift lever to P or N.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connector.

     Multi-information display unit connector A (32P)

     Rearview camera 12P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Multi-information display unit connector A (32P): disconnected

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA BIT0

     Test point 1 Rearview camera 12P connector No. 2 (GRN)

     Test point 2 Body ground

     Test circuit CAMERA BIT1

     Test point 1 Rearview camera 12P connector No. 1 (BLU)

     Test point 2 Body ground

Fig. 192: Checking For Continuity Between Test Point Rearview Camera 12P Connector No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the rearview camera and the multi-information display unit.

NO : The CAMERA BIT0 and the CAMERA BIT1 wires are not shorted to ground. Go to step 3.

3. Shorted wire check (CAMERA BIT0 line, CAMERA BIT1 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Multi-information display unit connector A (32P): disconnected

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA BIT0, CAMERA BIT1

     Test point 1 Rearview camera 12P connector No. 2 (GRN)

     Test point 2 Rearview camera 12P connector No. 1 (BLU)

Fig. 193: Checking For Continuity Between Test Point Rearview Camera 12P Connector No. 2 (GRN) And No. 1 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wires between the rearview camera and the multi-information display unit.

NO : The CAMERA BIT0 and the CAMERA BIT1 wires are not shorted. Go to step 4.

4. Open wire check (CAMERA BIT0 line, CAMERA BIT1 line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Multi-information display unit connector A (32P): disconnected

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA BIT0

     Test point 1 Multi-information display unit connector A (32P) No. 4 (GRN)

     Test point 2 Rearview camera 12P connector No. 2 (GRN)

     Test circuit CAMERA BIT1

     Test point 1 Multi-information display unit connector A (32P) No. 5 (BLU)

     Test point 2 Rearview camera 12P connector No. 1 (BLU)

Fig. 194: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 5 (BLU) And Rearview Camera 12P Connector No. 1 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The CAMERA BIT0 and the CAMERA BIT1 wires are OK. Go to step 5.

NO : Repair an open in the wire(s) between the rearview camera and the multi-information display unit.

5. Multi-information display unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD REARVIEW CAMERA** , and recheck.

YES : Replace the original rearview camera.

NO : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

Does the symptom go away?

REARVIEW CAMERA IMAGE DOES NOT COME ON OR WORK PROPERLY

Fig. 195: Audio System Symptom Troubleshooting Flowchart - Rearview Camera Image Does Not Come

<u>On Or Work Properly</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Make sure the multi-information display comes on.
   - 3. Move the shift lever to R.

   Does the multi-information display unit image change when the shift lever is in R?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (BACK LT line, others):
   - 1. Move the shift lever to P or N.
   - 2. **<u>DO THE SELF-DIAGNOSTIC FUNCTION</u>**, and use the Camera in the Display Diagnosis.

   Does the rearview image appear?

   YES : Go to step 3.

   NO : Go to step 4.

3. Open wire check (BACK LT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Multi-information display unit connector A (32P)

   - 3. Turn the ignition switch to ON (II).
   - 4. Move the shift lever to R.
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Multi-information display unit connector A (32P): disconnected

     Test circuit BACK LT

     Test point 1 Multi-information display unit connector A (32P) No. 14 (BRN)

Test point 2 Body ground

Fig. 196: Checking For Continuity Between Test Point Multi-Information Display Unit Connector A (32P) No. 14 (BRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

NO : Repair an open in the wire between the multi-information display unit and the under-dash fuse/relay box.

4. Determine possible failure area (CAMERA ADPT line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rearview camera 12P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA ADPT

     Test point 1 Rearview camera 12P connector No. 11 (YEL)

     Test point 2 Body ground

Fig. 197: Measuring Voltage Between Test Point Rearview Camera 12P Connector No. 11 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : The CAMERA ADPT wire is OK. Go to step 6.

NO : Go to step 5.

5. Open wire check (CAMERA ADPT line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rearview camera 12P connector: disconnected

     Test circuit CAMERA ADPT

     Test point 1 Multi-information display unit connector A (32P) No. 21 (BLK)

     Test point 2 Body ground

Fig. 198: Measuring Voltage Between Test Point Multi-Information Display Unit Connector A (32P) No. 21 (BLK) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Repair an open in the wire between the multi-information display unit and the rearview camera.

NO : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

6. Open wire check (CAMERA lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Multi-information display unit connector A (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rearview camera 12P connector: disconnected

     Multi-information display unit connector A (32P): disconnected

Test circuit	Test point 1: Multi-information display unit connector A (32P)	Test point 2: Rearview camera 12P connector
SH CAMERA	No. 2 (GRY)	No. 12 (GRY)
CAMERA V GND	No. 3 (WHT)	No. 6 (WHT)
CAMERA GND	No. 18 (GRN)	No. 7 (BLK)
CAMERA V	No. 19 (RED)	No. 9 (RED)
CAMERA VCC	No. 20 (YEL)	No. 4 (GRN)

Fig. 199: Identifying Multi-Information Display Unit Connector A (32P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 200: Identifying Rearview Camera 12P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The CAMERA wires are not open. Go to step 7.

NO : There is an open in the wire(s) between the multi-information display unit and the rearview camera. Replace affected shielded harness.

7. Shorted wire check (CAMERA lines) 1:
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rearview camera 12P connector: disconnected

     Multi-information display unit connector A (32P): disconnected

Test circuits	Connector: Multi-information display unit connector A (32P)	
	Test point 1	Test points 2
SH CAMERA to CAMERA V GND, CAMERA GND, CAMERA V, CAMERA VCC No. 2 (GRY)	No. 3 (WHT),	No. 18 (GRN), No. 19 (RED), No. 20 (YEL)
CAMERA V GND to CAMERA GND, CAMERA V, CAMERA VCC	No. 3 (WHT)	No. 18 (GRN), No. 19 (RED), No. 20 (YEL)
CAMERA GND to CAMERA V, CAMERA VCC	No. 18 (GRN)	No. 19 (RED), No. 20 (YEL)
CAMERA V to CAMERA VCC	No. 19 (RED)	No. 20 (YEL)

Fig. 201: Identifying Multi-Information Display Unit Connector A (32P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : There is a short in the wires between the multi-information display unit and the rearview camera. Replace the affected shielded harness.

NO : The CAMERA wires are not shorted in the wires. Go to step 8.

8. Shorted wire check (CAMERA lines) 2:
   - 1. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     Rearview camera 12P connector: disconnected

     Multi-information display unit connector A (32P): disconnected

Connector	Test circuit	Terminal
Multi-information display unit connector A (32P)	CAMERA V GND	No. 3 (WHT)
	CAMERA GND	No. 18 (GRN)
	CAMERA V	No. 19 (RED)
	CAMERA VCC	No. 20 (YEL)

Fig. 202: Identifying Multi-Information Display Unit Connector A (32P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the multi-information display unit and the rearview camera. Replace the affected shielded harness.

NO : The CAMERA wires are OK. Go to step 9.

9. Multi-information display unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD REARVIEW CAMERA** , and recheck.

Does the symptom go away?

YES : Replace the original rearview camera.

NO : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

USB DEVICE DOES NOT FUNCTION

Fig. 203: Audio System Symptom Troubleshooting Flowchart - USB Device Does Not Function
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the USB's specifications:**
    - **Mass-storage class ready digital audio player with USB 2.0 port**
    - **More than 256 MB storage space**
    - **Supports MP3, WMA, and AAC (encoded with the iTunes) files, DRM files are not supported**
- **Not all players and player functions work with the USB adapter. Please see the Owner's Manual for more information. Always test the customer's USB device in a known-good vehicle of the same year and trim (if possible). Technologies change and are updated frequently which may result in USB devices working in newer vehicles, but not in older vehicles of the same model.**
- **If Unsupported Ver appears on the display, the vehicle is OK, there is a software problem with the USB device.**

- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (GA-NET circuit, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio system, and press the AUDIO button to select the USB mode.

    NOTE: Do not connect the USB device.

    Is No Data displayed in the multi-information display unit?

    YES : Go to step 2.

    NO : Go to **Audio system information does not display on the multi-information display unit (Navigation)** troubleshooting.

2. Determine possible failure area (USB device, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Connect the customer's USB device to a known-good vehicle (same year/trim) that is equipped with a USB adapter, and check the USB device operation.

    Does the USB device work properly in the known-good vehicle?

    YES : Go to step 3.

    NO : See the Owner's Manual for details about the USB device requirements and approved file types.

3. Problem verification:
    - 1. On the customer's vehicle, connect the customer's USB device to the USB port located in the center console.
    - 2. Turn the ignition switch to ON (II).
    - 3. Check the USB device operation in the customer's vehicle.

    Does the USB device work properly in the customer's vehicle?

    YES : Intermittent failure, the system is OK at this time. Inspect the connectors of the USB device, the USB port and the USB adapter for wear.

    NO : The failure is duplicated, go to step 4.

4. Determine possible failure area (USB lines, multi-information display unit):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. On the customer's vehicle, disconnect the customer's USB device from the USB port.
    - 3. Disconnect the following connector.

Multi-information display unit connector B (5P)

- 4. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Multi-information display unit connector B (5P): disconnected

Test circuit	Connector: Multi-information display unit connector B (5P)	
	Test point 1	Test point 2
USB SH to USB GND, USB DATA+, USB DATA-, USB VBUS	No. 5	No. 1, No. 2, No. 3, No. 4

Fig. 204: Identifying Multi-Information Display Unit Connector B (5P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : Go to step 5.

NO : Go to step 6.

5. USB adapter check:
   - 1. Disconnect the following connector.

     USB adapter 5P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     USB adapter 5P connector: disconnected

Test circuit	Connector: USB adapter 5P connector	
	Test point	

	1	Test point 2
USB SH to USB GND, USB DATA+, USB DATA-, USB VBUS	No. 5	No. 1, No. 2, No. 3, No. 4

Fig. 205: Identifying USB Adapter 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : REPLACE THE USB ADAPTER , then recheck.

NO : Replace the USB main harness, then recheck.

6. Determine possible failure area (USB lines, multi-information display unit):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. On the customer's vehicle, disconnect the customer's USB device from the USB port.
   - 3. Disconnect the following connector.

     Multi-information display unit connector B (5P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Multi-information display unit connector B (5P): disconnected

Test circuit	Test point 1: Multi-information display unit connector B (5P)	Test point 2: USB port 5P connector
USB GND	No. 1	No. 4

Is there continuity?

YES : Replace the USB main harness, then recheck.

NO : REPLACE THE USB ADAPTER , then recheck.

8. Open wire check (GA SYS ON line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio unit connector C (14P)

     Multi-information display unit connector A (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

Audio unit connector C (14P): disconnected

Multi-information display unit connector A (32P): disconnected

Test circuit GA SYS ON

Test point 1 Audio unit connector C (14P) No. 5 (PNK)

Test point 2 Multi-information display unit connector A (32P) No. 32 (PNK)

Fig. 218: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 5 (PNK) And Multi-Information Display Unit Connector A (32P) No. 32 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA SYS ON wire is OK. Go to step 9.

NO : Repair an open in the wire between the audio unit and the multi-information display unit.

9. Shorted wire check (GA BUS+ line, GA BUS- line):
   - 1. Disconnect the following connectors.

     HandsFreeLink control unit 32P connector

     XM receiver connector A (14P) (with XM)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     XM receiver connector A (14P) (with XM): disconnected

Test circuit GA BUS-

Test point 1 Audio unit connector C (14P) No. 11 (PNK)

Test point 2 Body ground

Test circuit GA BUS+

Test point 1 Audio unit connector C (14P) No. 12 (BLU)

Test point 2 Body ground

Fig. 219: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 12 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted to ground. Go to step 10.

10. Shorted wire check (GA BUS+ line to GA BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      Multi-information display unit connector A (32P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      XM receiver connector A (14P) (with XM): disconnected

Test circuit GA BUS-, GA BUS+

Test point 1 Audio unit connector C (14P) No. 11 (PNK)

Test point 2 Audio unit connector C (14P) No. 12 (BLU)

Fig. 220: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 11 (PNK) And No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted. Go to step 11.

11. Shorted wire check (SH GA BUS line to another lines):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      Multi-information display unit connector A (32P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      XM receiver connector A (14P) (with XM): disconnected

      Test circuit SH GA BUS, GA BUS+

      Test point 1 Audio unit connector C (14P) No. 4 (GRY)

      Test point 2 Audio unit connector C (14P) No. 12 (BLU)

Test circuit SH GA BUS, GA BUS-

Test point 1 Audio unit connector C (14P) No. 4 (GRY)

Test point 2 Audio unit connector C (14P) No. 11 (PNK)

Fig. 221: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 4 (GRY) And No. 11 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The SH GA BUS wire is OK. Go to step 12.

12. Open wire check (GA BUS+ line, GA BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      Multi-information display unit connector A (32P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      XM receiver connector A (14P) (with XM): disconnected

      Test circuit GA BUS-

      Test point 1 Audio unit connector C (14P) No. 11 (PNK)

      Test point 2 Multi-information display unit connector A (32P) No. 11 (PNK)

      Test circuit GA BUS+

Test point 1 Audio unit connector C (14P) No. 12 (BLU)

Test point 2 Multi-information display unit connector A (32P) No. 27 (BLU)

Fig. 222: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 12 (BLU) And Multi-Information Display Unit Connector A (32P) No. 27 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 13.

NO : There is an open in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

13. Determine possible failure area (related unit, others):
    - 1. Reconnect audio unit connector C (14P) and multi-information display unit connector A (32P).
    - 2. Turn the ignition switch to ON (II).
    - 3. Turn on the audio unit, and press the AUX button to select USB mode.

    NOTE: Do not connect the USB device.

Is No Data displayed in the multi-information display unit?

YES : Go to Step 14.

YES : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

NO : Go to step 15.

14. XM receiver check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. SUBSTITUTE A KNOWN-GOOD XM RECEIVER, AND RECHECK .

Does the symptom go away?

YES : Replace the original XM receiver.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

15. Audio unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT, AND RECHECK.**

Does the symptom go away?

YES : Replace the original multi-information display unit.

NO : REPLACE THE AUDIO UNIT .

USB DEVICE DOES NOT FUNCTION (WITHOUT NAVIGATION)

Fig. 223: Audio System Symptom Troubleshooting Flowchart - USB Device Does Not Function (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 224: Audio System Symptom Troubleshooting Flowchart - USB Device Does Not Function (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Check the USB's specifications:**
  - **Mass-storage class ready digital audio player with USB 2.0 port**
  - **More than 256 MB storage space**
  - **Supports MP3, WMA, and AAC (encoded with the iTunes) files, DRM files are not supported**
- **Not all players and player functions work with the USB adapter. Please see the Owner's Manual for more information. Always test the customer's USB device in a known-good vehicle of the same year and trim (if possible). Technologies change and are updated frequently which may result in USB devices working in newer vehicles, but not in older vehicles of the same model.**
- **If Unsupported Ver appears on the display, the vehicle is OK, there is a software problem with the USB device.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (GA-NET circuit, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio unit, and press the AUX button to select the USB mode.

   NOTE: **Do not connect the USB device.**

   Is No Data displayed in the audio display unit?

   YES : Go to step 2.

   NO : Go to step 8.

2. Determine possible failure area (USB device, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the customer's USB device to a known-good vehicle (same year/trim) that is equipped with a USB adapter, and check the USB device operation.

   Is the USB device working properly in the known-good vehicle?

   YES : Go to step 3.

   NO : See the Owner's Manual for details about the USB device requirements and approved file types.

3. Problem verification:
   - 1. On the customer's vehicle, connect the customer's USB device to the USB port located in the center console.
   - 2. Turn the ignition switch to ON (II).

- 3. Check the USB device operation in the customer's vehicle.

Does the USB device work properly in the customer's vehicle?

YES : Intermittent failure, the system is OK at this time. Inspect the connectors of the USB device, the USB port, and the USB adapter for wear.

NO : The failure is duplicated, go to step 4.

4. Determine possible failure area (USB lines, USB adapter control unit):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. On the customer's vehicle, disconnect the customer's USB device from the USB port.
   - 3. Disconnect the following connector.

     USB adapter control unit connector B (5P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     USB adapter control unit connector B (5P): disconnected

Test circuit	**Connector: USB adapter control unit B (5P)**	
	Test point 1	**Test point 2**
USB SH to USB GND, USB DATA+, USB DATA-, USB VBUS	No. 5	No. 1, No. 2, No. 3, No. 4

Fig. 225: Identifying USB Adapter Control Unit B (5P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : Go to step 5.

NO : Go to step 6.

5. USB adapter check:
   - 1. Disconnect the following connector.

     USB adapter 5P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     - USB adapter control unit connector B (5P): disconnected

     USB adapter 5P connector: disconnected

	Connector: USB adapter 5P

Test circuit	connector	
	Test point 1	Test point 2
USB SH to USB GND, USB DATA+, USB DATA-, USB VBUS	No. 5	No. 1, No. 2, No. 3, No. 4

Fig. 226: Identifying USB Adapter 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : REPLACE THE USB ADAPTER , then recheck.

NO : Replace the USB main harness, then recheck.

6. Determine possible failure area (USB lines, USB adapter control unit):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     USB adapter control unit connector B (5P): disconnected

Test circuit	Test point 1: USB adapter control unit connector B (5P)	Test point 2: USB port 5P connector
USB GND	No. 1	No. 4
USB DATA+	No. 2	No. 3
USB DATA-	No. 3	No. 2

USB VBUS	No. 4	No. 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 228: Identifying USB Port 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE USB ADAPTER CONTROL UNIT .

NO : Go to step 7.

7. USB adapter check:
   - 1. Disconnect the following connector.

     USB adapter 5P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     USB adapter control unit connector B (5P): disconnected

     USB adapter 5P connector: disconnected

Test circuit	Test point 1: USB adapter 5P connector	Test point 2: USB port 5P connector
USB GND	No. 1	No. 4
USB DATA+	No. 2	No. 3
USB DATA-	No. 3	No. 2
USB VBUS	No. 4	No. 1

Audio System Symptom Troubleshooting - Audio remote switch does not work properly (audio unit buttons work)

Fig. 229: Identifying USB Adapter 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 230: Identifying USB Port 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Replace the USB main harness, then recheck.

NO : REPLACE THE USB ADAPTER , then recheck.

8. Determine possible failure area (GA +B line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit GA +B

     Test point 1 USB adapter control unit connector A (14P) No. 6 (RED)

     Test point 2 Body ground

Fig. 231: Measuring Voltage Between Test Point USB Adapter Control Unit Connector A (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GA +B wire is OK. Go to step 10.

NO : Go to step 9.

9. Open wire check (GA +B line):
   - 1.

     Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit GA +B

     Test point 1 Audio unit connector C (14P) No. 6 (RED)

     Test point 2 Body ground

Fig. 232: Measuring Voltage Between Test Point Audio Unit Connector C (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wire between the audio unit and the USB adapter control unit.

NO : REPLACE THE AUDIO UNIT .

10. Determine possible failure area (GA GND line, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit GA GND

      Test point 1 USB adapter control unit connector A (14P) No. 10 (BLK)

Test point 2 Body ground

Fig. 233: Measuring Voltage Between Test Point USB Adapter Control Unit Connector A (14P) No. 10 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GA GND wire is OK. Go to step 12.

NO : Go to step 11.

11. Open wire check (GA GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit GA GND

      Test point 1 Audio unit connector C (14P) No. 10 (BLK)

      Test point 2 Body ground

Fig. 234: Measuring Voltage Between Test Point Audio Unit Connector C (14P) No. 10 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire between the audio unit and the USB adapter control unit.

12. Open wire check (GA SYS ON line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio unit connector C (14P)

      USB adapter control unit connector A (14P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      USB adapter control unit connector A (14P): disconnected

      Test circuit GA SYS ON

      Test point 1 Audio unit connector C (14P) No. 5 (PNK)

Test point 2 USB adapter control unit connector A (14P) No. 5 (PNK)

Fig. 235: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 5 (PNK) And USB Adapter Control Unit Connector A (14P) No. 5 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA SYS ON wire is OK. Go to step 13.

NO : Repair an open in the wire between the audio unit and the USB adapter control unit.

13. Shorted wire check (GA BUS+ line, GA BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      USB adapter control unit connector A (14P): disconnected

      Test circuit GA BUS-

      Test point 1 Audio unit connector C (14P) No. 11 (PNK)

      Test point 2 Body ground

      Test circuit GA BUS+

      Test point 1 Audio unit connector C (14P) No. 12 (BLU)

      Test point 2 Body ground

Fig. 236: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 12 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the USB adapter control unit. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted to ground. Go to step 14.

14. Shorted wire check (GA BUS+ line to GA BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      USB adapter control unit connector A (14P): disconnected

      Test circuit GA BUS-, GA BUS+

      Test point 1 Audio unit connector C (14P) No. 11 (PNK)

      Test point 2 Audio unit connector C (14P) No. 12 (BLU)

Fig. 237: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 11 (PNK) And No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the USB adapter control unit. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted. Go to step 15.

15. Shorted wire check (SH GA BUS line to another lines):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      USB adapter control unit connector A (14P): disconnected

      Test circuit SH GA BUS, GA BUS+

Test point 1 Audio unit connector C (14P) No. 4 (GRY)

Test point 2 Audio unit connector C (14P) No. 12 (BLU)

Test circuit SH GA BUS, GA BUS-

Test point 1 Audio unit connector C (14P) No. 4 (GRY)

Test point 2 Audio unit connector C (14P) No. 11 (PNK)

Fig. 238: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 4 (GRY) And No. 11 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the USB adapter control unit. Replace the affected shielded harness.

NO : The SH GA BUS wire is OK. Go to step 16.

16. Open wire check (GA BUS+ line, GA BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      USB adapter control unit A (14P): disconnected

      Test circuit GA BUS-

      Test point 1 Audio unit connector C (14P) No. 11 (PNK)

      Test point 2 USB adapter control unit connector A (14P) No. 11 (PNK)

      Test circuit GA BUS+

Test point 1 Audio unit connector C (14P) No. 12 (BLU)

Test point 2 USB adapter control unit connector A (14P) No. 12 (BLU)

Fig. 239: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 12 (BLU) And USB Adapter Control Unit Connector A (14P) No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 17.

NO : There is an open in the wire(s) between the audio unit and the USB adapter control unit. Replace the affected shielded harness.

17. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD USB ADAPTER CONTROL UNIT, AND RECHECK.

Does the symptom go away?

YES : Replace the original USB adapter control unit.

NO : REPLACE THE AUDIO UNIT .

USB INPUT SOUND IS LOW OR CANNOT BE HEARD (WITH NAVIGATION)

Fig. 240: Audio System Symptom Troubleshooting Flowchart - USB Input Sound Is Low Or Cannot Be Heard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Not all players and player functions work with the USB adapter. Please see the Owner's Manual for more information. Always test the customer's USB device in a known-good vehicle of the same year and trim (if possible). Technologies change and are updated frequently which may result in USB devices working in newer vehicles, but not in older vehicles of the same model.**
- **Check the USB device's volume settings.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. On the customer's vehicle, connect the customer's USB device to the USB port located in the center console.
   - 2. Turn the ignition switch to ON (II).
   - 3. Turn on the audio system, and press the AUDIO button to select the USB mode.
   - 4. Check if the USB device can be operated with the audio-navigation unit (Folders or Files UP/DOWN, etc.).

   Can you operate the USB device, and is the sound normal?

   YES : Intermittent failure. The USB device is OK at this time.

   NO : The failure is duplicated, go to step 2.

   NO : Go to **USB device does not function** USB device does not function (with navigation) troubleshooting.

2. Determine possible failure area (USB device, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Connect the customer's USB device to a known-good vehicle (same year/trim) that is equipped with a USB adapter, and check the USB device operation.

    Does the USB work properly in the known-good vehicle?

    YES : Go to step 3.

    NO : USB device is faulty or not compatible.

3. Determine possible failure area (XM receiver).
    - 1. DISCONNECT THE XM RECEIVER and retest.

    Does the symptom go away?

    YES : Replace the XM receiver.

    NO : Go to step 4.

4. Determine possible failure area (HFL control unit)
    - 1. **Disconnect the HFL control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** and retest.

    Does the symptom go away?

    YES : Replace the HFL control unit.

    NO : Go to step 5.

5. Shorted wire check (GA AUDIO lines):
    - 1. Return to the customer's vehicle.
    - 2. Disconnect the following connectors.

      Audio-navigation unit connector C (14P)

      Multi-information display unit connector A (32P)

      HandsFreeLink control unit 32P connector

      XM receiver connector A (14P)

    - 3. Check for continuity between these test points and body ground individually.

      Test condition IG LOCK (0)

Audio-navigation unit connector C (14P): disconnected

Multi-information display unit connector A (32P): disconnected

HandsFreeLink control unit 32P connector: disconnected

XM receiver connector A (14P): disconnected

Connector	Test circuit	Terminal
Audio-navigation unit connector C (14P)	GA AUDIO L+	No. 1 (RED)
	GA AUDIO R+	No. 2 (GRN)
	GA AUDIO L-	No. 7 (WHT)
	GA AUDIO R-	No. 8 (BLK)

Fig. 241: Identifying Audio-Navigation Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio-navigation unit and the multi-information display unit. Replace the affected shielded harness.

NO : The GA AUDIO wires are not shorted to ground. Go to step 6.

6. Shorted wire check (SH GA AUDIO line to another lines):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio-navigation unit connector C (14P): disconnected

      Multi-information display unit connector A (32P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      XM receiver connector A (14P): disconnected

Test circuits	Connector: Audio-navigation unit connector C (14P)

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **Not all players and player functions work with the USB adapter. Please see the Owner's Manual for more information. Always test the customer's USB device in a known-good vehicle of the same year and trim (if possible). Technologies change and are updated frequently which may result in USB devices working in newer vehicles, but not in older vehicles of the same model.**
- **Check the USB device's volume settings.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (USB system, others):
    - 1. Turn the ignition switch to ON (II).

- 2. **DO THE SPEAKER CHECK MODE WITH THE SELF-DIAGNOSTIC FUNCTION**.

Do all speakers make a sound?

YES : Go to step 2.

NO : Go to **No sound is heard from the speaker(s) (display is normal) (With Stereo Amplifier without Navigation)** troubleshooting.

NO : Go to **No sound is heard from the speaker(s) (display is normal) (Without Navigation and Stereo Amplifier)** troubleshooting.

2. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. On the customer's vehicle, connect the customer's USB device to the USB port located in the center console.
   - 3. Turn the ignition switch to ON (II).
   - 4. Turn on the audio unit, and press the AUX button to select the USB mode.
   - 5. Check if the USB device can be operated with the audio unit (Folders or Files UP/DOWN, etc.).

Can you operate the USB device, and is the sound normal?

YES : Intermittent failure. The USB device is OK at this time.

NO : The failure is duplicated, go to step 3.

3. Determine possible failure area (USB device, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the customer's USB device to a known-good vehicle (same year/trim) that is equipped with a USB adapter, and check the USB device operation.

Does the USB device work properly in the known-good vehicle?

YES : Go to step 4.

NO : USB device is faulty or not compatible.

4. Determine possible failure area (XM receiver).
   - 1. DISCONNECT THE XM RECEIVER and retest.

Does the symptom go away?

YES : Replace the XM receiver.

NO : Go to step 5.

5. Determine possible failure area (HFL control unit)
    - 1. **Disconnect the HFL control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** and retest.

    Does the symptom go away?

    YES : Replace the HFL control unit.

    NO : Go to step 6.

6. Shorted wire check (GA AUDIO lines):
    - 1. Return to the customer's vehicle.
    - 2. Disconnect the following connectors.

      Audio unit connector C (14P)

      Multi-information display unit connector A (32P)

      HandsFreeLink control unit 32P connector

      XM receiver connector A (14P) (with XM)

    - 3. Check for continuity between these test points and body ground individually.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      Multi-information display unit connector A (32P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      XM receiver connector A (14P) (with XM): disconnected

Connector	Test circuit	Terminal
Audio unit connector C (14P)	GA AUDIO L+	No. 1 (RED)
	GA AUDIO R+	No. 2 (GRN)
	GA AUDIO L-	No. 7 (WHT)
	GA AUDIO R-	No. 8 (BLK)

Fig. 246: Identifying Audio Unit Connector C (14P) No Sound Is Heard From The Speaker(S) (Display Is Normal) (Without Navigation And Stereo Amplifier)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The GA AUDIO wires are not shorted to ground. Go to step 7.

7. Shorted wire check (SH GA AUDIO line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     XM receiver connector A (14P) (with XM): disconnected

Test circuits	Connector: Audio unit connector C (14P)	
	Test point 1	Test points 2
SH GA AUDIO to GA AUDIO L+, GA AUDIO R+, GA AUDIO L-, GA AUDIO R--	No. 3 (GRY)	No. 1 (RED), No. 2 (GRN), No. 7 (WHT), No. 8 (BLK)

Fig. 247: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES : There is a short in the wires between the audio unit and the multi-information display unit. Replace the affected shielded harness.

NO : The SH GA AUDIO wire is OK. Go to step 8.

8. Open wire check (GA AUDIO lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     XM receiver connector A (14P) (with XM): disconnected

Test circuit	Test point 1: Audio unit connector C (14P)	Test point 2: Multi-information display unit connector A (32P)
GA AUDIO L+	No. 1 (RED)	No. 9 (RED)
GA AUDIO R+	No. 2 (GRN)	No. 8 (GRN)
GA AUDIO L-	No. 7 (WHT)	No. 25 (WHT)
GA AUDIO R-	No. 8 (BLK)	No. 24 (BLK)

Fig. 248: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 249: Identifying Multi-Information Display Unit Connector A (32P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA AUDIO wires are OK. Go to step 9.

NO : There is an open in the wire(s) between the audio unit and the multi-information display unit. Replace the affected shielded harness.

9. Audio unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT** , and recheck.

Does the symptom go away?

YES : Replace the original multi-information display unit.

NO : REPLACE THE AUDIO UNIT .

USB INPUT SOUND IS LOW OR CANNOT BE HEARD (WITH MULTI-INFORMATION DISPLAY & NAVIGATION)

Fig. 250: Audio System Symptom Troubleshooting Flowchart - USB Input Sound Is Low Or Cannot Be Heard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Not all players and player functions work with the USB adapter. Please see the Owner's Manual for more information. Always test the customer's USB device in a known-good vehicle of the same year and trim (if possible). Technologies change and are updated frequently which may result in USB devices working in newer vehicles, but not in older vehicles of the same model.**
- **Check the connectors for poor connections or loose terminals.**
- **Check the USB device's volume settings.**

1. Determine possible failure area (USB system, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE SPEAKER CHECK MODE WITH THE SELF-DIAGNOSTIC FUNCTION**.

   Do all speakers make a sound?

   YES : Go to step 2.

   NO : Go to **No sound is heard from the speaker(s) (display is normal) (Without Navigation and Stereo Amplifier)** troubleshooting.

2. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. On the customer's vehicle, connect the customer's USB device to the USB port located in the center console.
   - 3. Turn the ignition switch to ON (II).

- 4. Turn on the audio unit, and press the AUX button to select the USB mode.
- 5. Check if the USB device can be operated with the audio unit (Folders or Files UP/DOWN, etc.).

Can you operate the USB device, and is the sound normal?

YES : Intermittent failure. The USB device is OK at this time.

NO : The failure is duplicated, go to step 3.

3. Determine possible failure area (USB device, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the customer's USB device to a known-good vehicle (same year/trim) that is equipped with a USB adapter, and check the USB device operation.

Does the USB device work properly in the known-good vehicle?

YES : Go to step 4.

NO : USB device is faulty or not compatible.

4. Determine possible failure area (XM receiver).
   - 1. DISCONNECT THE XM RECEIVER and retest.

Does the symptom go away?

YES : Replace the XM receiver.

NO : Go to step 5.

5. Determine possible failure area (HFL control unit)
   - 1. **Disconnect the HFL control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** and retest.

Does the symptom go away?

YES : Replace the HFL control unit.

NO : Go to step 6.

6. Shorted wire check (GA AUDIO lines):
   - 1. Return to the customer's vehicle.
   - 2. Disconnect the following connectors.

     Audio unit connector C (14P)

USB adapter control unit connector A (14P)

- 3. Check for continuity between these test points and body ground individually.

  Test condition IG LOCK (0)

  Audio unit connector C (14P): disconnected

  USB adapter control unit connector A (14P): disconnected

Connector	Test circuit	Terminal
Audio unit connector C (14P)	GA AUDIO L+	No. 1 (RED)
	GA AUDIO R+	No. 2 (GRN)
	GA AUDIO L-	No. 7 (WHT)
	GA AUDIO R-	No. 8 (BLK)

Fig. 251: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the USB adapter control unit. Replace the affected shielded harness.

NO : The GA AUDIO wires are not shorted to ground. Go to step 7.

7. Shorted wire check (SH GA AUDIO line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     USB adapter control unit connector A (14P): disconnected

Test circuits	Connector: Audio unit connector C (14P)	
	Test point 1	Test points 2

Audio System Symptom Troubleshooting - Audio system information does not display on the multi-information display

Fig. 253: Identifying Audio Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 254: Identifying USB Adapter Control Unit Connector A (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA AUDIO wires are OK. Go to step 9.

NO : There is an open in the wire(s) between the audio unit and the USB adapter control unit. Replace the affected shielded harness.

9. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD USB ADAPTER CONTROL UNIT , and recheck.

Does the symptom go away?

YES : Replace the original USB adapter control unit.

NO : REPLACE THE AUDIO UNIT .

VOLUME DOES NOT CHANGE

Fig. 255: Audio System Symptom Troubleshooting Flowchart - Volume Does Not Change

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Set the fader and the balance positions to the center.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Listen for sound from the speakers.
   - 3. Operate the volume knob to see if the volume changes.

   Does the volume change?

   YES : Intermittent failure. The system is OK at this time.

   NO : REPLACE THE AUDIO-NAVIGATION UNIT .

   NO : The failure is duplicated, go to step 2.

2. Audio unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. SUBSTITUTE A KNOWN-GOOD AUDIO SWITCH PANEL , and recheck.

   Does the symptom go away?

   YES : Replace the original audio switch panel.

   NO : REPLACE THE AUDIO UNIT .

VOLUME DOES NOT INCREASE WITH SPEED (WITH NAVIGATION)

Fig. 256: Audio System Symptom Troubleshooting Flowchart - Volume Does Not Increase With Speed
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **If possible, have the customer demonstrate their concern and compare it against a known-good vehicle.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Test-drive the vehicle at freeway speeds, and monitor if the volume increases, then compare it to a known-good vehicle with the same SVC setting.

   Does the volume increase, and is it comparable to a known-good vehicle.?

   YES : Intermittent failure, the system is OK at this time. If the customer's concern is that the level of volume change is not enough, refer to the OM to change the SVC level setting.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (audio setting, others):
   - 1. Verify the SVC mode setting in the audio-navigation unit sound set-up.

   Is the SVC set to off?

   YES : Change the setting to SVC MID, and recheck.

   NO : Go to step 3.

3. Determine possible failure area (VSP signal):
   - 1. **Enter the system diagnostic mode** See **NAVIGATION SYSTEM DIAGNOSTIC MODE** or **NAVIGATION SYSTEM DIAGNOSTIC MODE** and check the car status.
   - 2. Drive the vehicle.

Fig. 257: Screen Display - Car Status
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the VSP change from 0 (stopped) to 1 (driving) .

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Go to step 4.

4. Determine possible failure area (VSP line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Turn the ignition switch to ON (II).
   - 5. Move the shift lever to N.
   - 6. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     PCM connector A (49P): disconnected

     Test circuit VSP

     Test point 1 PCM connector A (49P) No. 26 (GRN)

     Test point 2 Body ground

Fig. 258: Measuring Voltage Between Test Point PCM Connector A (49P) No. 26 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : The VSP wire is OK. Go to step 6.

NO : Go to step 5.

5. Open wire check (VSP line):

- 1. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  PCM connector A (49P): disconnected

  Test circuit VSP

  Test point 1 Audio-navigation unit connector A (24P) No. 23 (GRN)

  Test point 2 Body ground

Fig. 259: Measuring Voltage Between Test Point Audio-Navigation Unit Connector A (24P) No. 23 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Repair an open in the wire between the audio-navigation unit and the PCM.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

6. PCM check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect PCM connector A (49P).
   - 3. Raise the vehicle on a lift.
   - 4. Turn the ignition switch to ON (II).
   - 5. Move the shift lever to N.
   - 6. Measure the voltage between test points 1 and 2.

Test condition IG ON (II), with the tires slowly rotating

Test circuit VSP

Test point 1 Audio-navigation unit connector A (24P) No. 23 (GRN)

Test point 2 Body ground

Audio System Symptom Troubleshooting - Audio system information does not display on the multi-information display

<u>Fig. 260: Measuring Voltage Between Test Point Audio-Navigation Unit Connector A (24P) No. 23 (GRN) And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage pulse between 0 V and 5 V as you rotate the tires by hand?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

VOLUME DOES NOT INCREASE WITH SPEED (WITHOUT NAVIGATION)

Fig. 261: Audio System Symptom Troubleshooting Flowchart - Volume Does Not Increase With Speed
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- **CHECK THE VEHICLE BATTERY CONDITION FIRST** .
- Check for B-CAN DTCs and resolve them before troubleshooting.
- If possible, have the customer demonstrate their concern and compare it against a known-good vehicle.
- Check the connectors for poor connections or loose terminals.

1. Problem verification:
   - 1. Test-drive the vehicle at freeway speeds, and monitor if the volume increases, then compare it to a known-good vehicle.

   Does the volume increase and, is it comparable to a known-good vehicle?

   YES : Intermittent failure, the system is OK at this time. If the customer's concern is that the level of volume change is not enough, refer to the OM to change the SVC level setting.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (audio setting, others):
   - 1. Verify the SVC mode setting in the audio unit sound set-up.

   Is the SVC set to off?

   YES : Change the setting to SVC MID, and recheck.

   NO : Go to step 3.

3. Determine possible failure area (audio unit, others):
    - 1. **<u>DO THE SELF-DIAGNOSTIC FUNCTION, AND USE THE VEHICLE SPEED PULSE INDICATION</u>**.
    - 2. With the help of an assistant test-drive the vehicle, and watch the VSP signal.

    Does the self-diagnostic function indicate a VSP signal?

    YES : REPLACE THE AUDIO UNIT .

    NO : Go to step 4.

4. Open wire check (B CAN-H line, B CAN-L line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio unit connector B (20P)

      Gauge control module 32P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector B (20P): disconnected

      Gauge control module 32P connector: disconnected

      Test circuit B CAN-H

      Test point 1 Audio unit connector B (20P) No. 13 (PNK)

      Test point 2 Gauge control module 32P connector No. 30 (PNK)

      Test circuit B CAN-L

      Test point 1 Audio unit connector B (20P) No. 3 (BLU)

      Test point 2 Gauge control module 32P connector No. 31 (BLU)

Fig. 262: Checking For Continuity Between Test Point Audio Unit Connector B (20P) No. 3 (BLU) And Gauge Control Module 32P Connector No. 31 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire(s) between the audio unit and the gauge control module.

VOLUME IS TOO HIGH OR TOO LOW WHEN DRIVING AT FREEWAY SPEEDS

Fig. 263: Audio System Symptom Troubleshooting Flowchart - Volume Is Too High Or Too Low When Driving At Freeway Speeds
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **If possible, have the customer demonstrate their concern and compare it against a known-good vehicle.**

1. Problem verification:

- 1. Test-drive the vehicle at freeway speeds and monitor the volume level.

Is the volume level too high, or too low?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Operation check:
   - 1. Change the SVC mode setting in sound set-up to SVC MID.

Is the volume level still too high, or too low?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

YES : REPLACE THE AUDIO UNIT .

NO : Improper SVC setting for the customers sound taste.

XM RADIO DISPLAY IS BLANK AND NO STATION INFORMATION IS DISPLAYED (NAVIGATION)

Fig. 264: Audio System Symptom Troubleshooting Flowchart - XM Radio Display Is Blank And No Station Information Is Displayed
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (related GA-NET circuit, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio system, and press the AUDIO button to check if the multi-information display changes to the audio information screen.

Is the audio information displayed?

YES : Go to step 2.

NO :Go to **Audio system information does not display on the multi-information display unit (With Navigation)** troubleshooting.

2. Problem verification:
   - 1. Press the CD/XM button to check if the navigation display changes to the XM radio information screen.

Is the XM radio information displayed?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 3.

3. Determine possible failure area (GA +B line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2.

Test condition IG LOCK (0)

Test circuit GA +B

Test point 1 XM receiver connector A (14P) No. 6 (RED)

Test point 2 Body ground

Fig. 265: Measuring Voltage Between Test Point XM Receiver Connector A (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GA +B wire is OK. Go to step 6.

NO

Go to step 4.

4. Open wire check (GA +B line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      Test circuit GA +B

      Test point 1 Audio-navigation unit connector C (14P) No. 6 (RED)

      Test point 2 Body ground

Fig. 266: Measuring Voltage Between Test Point Audio-Navigation Unit Connector C (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wire between the audio-navigation unit and the XM receiver.

NO : Go to step 5.

5. Shorted wire check (GA +B line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors:

      Audio-navigation unit connector C (14P)

      XM receiver connector A (14P)

HandsFreeLink control unit connector (32P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Audio-navigation unit connector C (14P): disconnected

  XM receiver A (14) connector: disconnected

  HandsFreeLink control unit 32P connector: disconnected

  Test circuit GA +B

  Test point 1 Audio-navigation unit connector C (14P) No. 6 (RED)

  Test point 2 Body ground

Audio System Symptom Troubleshooting / Audio system sound is weak or distorted (display is normal)

Fig. 267: Checking For Continuity Between Test Point Audio-Navigation Unit Connector C (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire between the audio-navigation unit and the XM receiver.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

6. Determine possible failure area (GA GND line, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Test circuit GA GND

   Test point 1 XM receiver connector A (14P) No. 10 (BLK)

   Test point 2 Body ground

Fig. 268: Measuring Voltage Between Test Point XM Receiver Connector A (14P) No. 10 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GA GND wire is OK. Go to step 8.

NO : Go to step 7.

7. Open or high resistance wire check (GA GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit GA GND

      Test point 1 Audio unit connector C (14P) No. 10 (BLK)

      Test point 2 Body ground

Fig. 269: Measuring Voltage Between Test Point Audio Unit Connector C (14P) No. 10 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Repair an open or high resistance in the wire between the audio unit and the XM receiver.

8. Open wire check (GA SYS ON line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio-navigation unit connector C (14P)

XM receiver connector A (14P)

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Audio-navigation unit connector C (14P): disconnected

  XM receiver connector A (14P): disconnected Test circuit GA SYS ON

  Test point 1 Audio-navigation unit connector C (14P) No. 5 (PNK)

  Test point 2 XM receiver connector A (14P) No. 5 (PNK)

Fig. 270: Checking For Continuity Between Test Point Audio-Navigation Unit Connector C (14P) No. 5 (PNK) And XM Receiver Connector A (14P) No. 5 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA SYS ON wire is OK. Go to step 9.

NO : Repair an open in the wire between the audio-navigation unit and the XM receiver.

9. Open wire check (GA BUS+ line, GA BUS- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

XM receiver connector A (14P): disconnected

Test circuit GA BUS-

Test point 1 Audio-navigation unit connector C (14P) No. 11 (PNK)

Test point 2 XM receiver connector A (14P) No. 11 (PNK)

Test circuit GA BUS+

Test point 1 Audio-navigation unit connector C (14P) No. 12 (BLU)

Test point 2 XM receiver connector A (14P) No. 12 (BLU)

Fig. 271: Checking For Continuity Between Test Point Audio-Navigation Unit Connector C (14P) No. 12 (BLU) And XM Receiver Connector A (14P) No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 10.

NO : There is an open in the wire(s) between the audio-navigation unit and the XM receiver. Replace the affected shielded harness.

10. Audio-navigation unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD XM RECEIVER , and recheck.

Does the symptom go away?

YES : Replace the original XM receiver.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

XM RADIO DISPLAY IS BLANK AND NO STATION INFORMATION IS DISPLAYED (WITHOUT NAVIGATION)

Fig. 272: Audio System Symptom Troubleshooting Flowchart - XM Radio Display Is Blank And No Station Information Is Displayed
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio unit, and press the XM button to check if the multi-information display changes to the XM radio information screen.

Is the XM radio information displayed?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (GA +B line, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG LOCK (0)

    Test circuit GA +B

    Test point 1 XM receiver connector A (14P) No. 6 (RED)

    Test point 2 Body ground

Fig. 273: Measuring Voltage Between Test Point XM Receiver Connector A (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GA +B wire is OK. Go to step 5.

NO : Go to step 3.

3. Open wire check (GA +B line):
    - 1. Measure the voltage between test points 1 and 2.

    Test condition IG LOCK (0)

    Test circuit GA +B

    Test point 1 Audio unit connector C (14P) No. 6 (RED)

    Test point 2 Body ground

Audio System Symptom Troubleshooting - Audio unit power switch will not turn on (No information display and no sound)

Fig. 274: Measuring Voltage Between Test Point Audio Unit Connector C (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wires between the audio unit and the XM receiver.

NO : Go to step 4.

4. Shorted wire check (GA +B line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors:

     Audio unit connector C (14P)

     XM receiver connector A (14P)

     HandsFreeLink control unit connector (32P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

Audio unit connector C (14P): disconnected

XM receiver A (14) connector: disconnected

HandsFreeLink control unit 32P connector: disconnected

Test circuit GA +B

Test point 1 Audio unit connector C (14P) No. 6 (RED)

Test point 2 Body ground

Fig. 275: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 6 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire between the audio unit and the XM receiver.

NO : REPLACE THE AUDIO UNIT .

5. Determine possible failure area (GA GND line, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Test circuit GA GND

   Test point 1 XM receiver connector A (14P) No. 10 (BLK)

   Test point 2 Body ground

Fig. 276: Measuring Voltage Between Test Point XM Receiver Connector A (14P) No. 10 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GA GND wire is OK. Go to step 7.

NO : Go to step 6.

6. Open or high resistance wire check (GA GND line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit GA GND

     Test point 1 Audio unit connector C (14P) No. 10 (BLK)

     Test point 2 Body ground

Fig. 277: Measuring Voltage Between Test Point Audio Unit Connector C (14P) No. 10 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES : REPLACE THE AUDIO UNIT .

NO : Repair an open in the wire between the audio unit and the XM receiver.

7. Open wire check (GA SYS ON line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Multi-information display unit connector A (32P): disconnected

     Test circuit GA SYS ON

     Test point 1 Audio unit connector C (14P) No. 5 (PNK)

Test point 2 XM receiver connector A (14P) No. 5 (PNK)

Fig. 278: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 5 (PNK) And XM Receiver Connector A (14P) No. 5 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA SYS ON wire is OK. Go to step 8.

NO : Repair an open in the wire between the audio unit and the XM receiver.

8. Shorted wire check (GA BUS+ line, GA BUS- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Test circuit GA BUS-

     Test point 1 Audio unit connector C (14P) No. 11 (PNK)

     Test point 2 Body ground

Test circuit GA BUS+

Test point 1 Audio unit connector C (14P) No. 12 (BLU)

Test point 2 Body ground

Fig. 279: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 12 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the XM receiver. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted to ground. Go to step 9.

9. Shorted wire check (GA BUS+ line to GA BUS- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector C (14P): disconnected

     XM receiver connector A (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     Test circuit GA BUS-, GA BUS+

Test point 1 Audio unit connector C (14P) No. 11 (PNK)

Test point 2 Audio unit connector C (14P) No. 12 (BLU)

Fig. 280: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 11 (PNK) And No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the XM receiver. Replace the affected shielded harness.

NO : The GA BUS+ and the GA BUS- wires are not shorted. Go to step 10.

10. Shorted wire check (SH GA BUS line to another lines):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      XM receiver connector A (14P): disconnected

      Multi-information display unit connector A (32P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      Test circuit SH GA BUS, GA BUS+

      Test point 1 Audio unit connector C (14P) No. 4 (GRY)

Test point 2 Audio unit connector C (14P) No. 12 (BLU)

Test circuit SH GA BUS, GA BUS-

Test point 1 Audio unit connector C (14P) No. 4 (GRY)

Test point 2 Audio unit connector C (14P) No. 11 (PNK)

Fig. 281: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 4 (GRY) And No. 11 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the XM receiver. Replace the affected shielded harness.

NO : The SH GA BUS wire is OK. Go to step 11.

11. Open wire check (GA BUS+ line, GA BUS- line):
    - 1. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Audio unit connector C (14P): disconnected

XM receiver connector A (14P): disconnected

HandsFreeLink control unit 32P connector: disconnected

Multi-information display unit connector A (32P): disconnected

Test circuit GA BUS-

Test point 1 Audio unit connector C (14P) No. 11 (PNK)

Test point 2 XM receiver connector A (14P) No. 11 (PNK)

Test circuit GA BUS+

Test point 1 Audio unit connector C (14P) No. 12 (BLU)

Test point 2 XM receiver connector A (14P) No. 12 (BLU)

Fig. 282: Checking For Continuity Between Test Point Audio Unit Connector C (14P) No. 12 (BLU) And XM Receiver Connector A (14P) No. 12 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 12.

NO : There is an open in the wire(s) between the audio-navigation unit and the XM receiver. Replace the affected shielded harness.

12. Determine possible failure area (related unit, others):
    - 1. Reconnect audio unit connector C (14P) and multi-information display unit connector A (32P).
    - 2. Turn the ignition switch to ON (II).
    - 3. Turn on the audio unit, and press the AUX button to select the USB mode.

    NOTE: Do not connect the USB device.

Is USB information (No Data) displayed in the multi-information display unit?

YES : Go to step 13.

NO : Go to step 14.

13. XM receiver check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect XM receiver connector A (14P).
    - 3. Turn the ignition switch to ON (II).
    - 4. Turn on the audio unit, and press the XM button to check if the multi-information display changes to the XM radio information screen.

    Is the XM radio information displayed?

    YES : Replace the original HandsFreeLink control unit.

    NO : REPLACE THE XM RECEIVER .

14. Audio unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **SUBSTITUTE A KNOWN-GOOD MULTI-INFORMATION DISPLAY UNIT** .
    - 3. Turn the ignition switch to ON (II).
    - 4. Turn on the audio unit, and press the AUX button to select the USB mode.

    NOTE: Do not connect the USB device.

    Is USB information (No Data) displayed in the multi-information display unit?

    YES : Replace the original multi-information display unit.

    NO : REPLACE THE AUDIO UNIT .

XM RADIO PRESET MEMORY IS LOST (WITH NAVIGATION)

Fig. 283: Audio System Symptom Troubleshooting Flowchart - XM Radio Preset Memory Is Lost
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **If you can only tune to channel 000, 001, and 174, make sure the audio-**

navigation unit is set to channel mode (see the Owner's Manual), if it is set to channel mode, call XM Radio customer support at 800-852-9696, and check the account activation status.

- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio system, and set the XM presets.
    - 3. Turn the ignition switch to LOCK (0) for 1 minute, then turn it back to ON (II).
    - 4. Turn on the audio system, and test the XM preset for proper recall operation.

    Do the preset icons recall the set XM stations?

    YES : Intermittent failure. The system is OK at this time.

    NO : REPLACE THE XM RECEIVER .

XM RADIO PRESET MEMORY IS LOST (WITHOUT NAVIGATION)

Audio System Symptom Troubleshooting - Auxiliary input sound is low or cannot be heard

Fig. 284: Audio System Symptom Troubleshooting Flowchart - XM Radio Preset Memory Is Lost
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **If you can only tune to channel 000, 001, and 174, make sure the audio unit is set to channel mode (see the Owner's Manual), if it is set to channel mode, call XM Radio customer support at 800-852-9696, and check the account activation status.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn on the audio unit, and set the XM presets.
   - 3. Turn the ignition switch to LOCK (0) for 1 minute, then turn it back to ON (II).
   - 4. Turn on the audio unit, and test the XM preset for proper recall operation.

   Do the preset icons recall the set XM stations?

   YES : Intermittent failure. The system is OK at this time.

   NO : REPLACE THE XM RECEIVER .

AUDIO UNIT CONNECTOR FOR INPUTS AND OUTPUTS

AUDIO-NAVIGATION UNIT CONNECTOR FOR INPUTS AND OUTPUTS (WITH NAVIGATION) (EXCEPT KX)

Fig. 285: Audio-Navigation Unit Connector For Inputs And Outputs (With Navigation) (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR A (24P)

Fig. 286: Identifying Audio-Navigation Unit Connector A (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Audio-Navigation Unit Connector A (24P)

Cavity	Wire Color	Terminal Name	Description
A1	BLK	GND	Ground for audio-navigation unit (G503)
A2	Not Used	Not Used	-
A3	RED	+B_BACK_UP	Continuous power source
A4	Not Used	Not Used	-
A5	BLU	RL_PRE+	Outputs sound signal for left rear door speaker
A6	PNK	RL_PRE-	Outputs sound signal for left rear door speaker
A7	GRY(1)	SH_RL_PRE	Shield for terminals No. 5 and No. 6
A8	GRY(1)	SH_RR_PRE	Shield for terminals No. 9 and No. 10
A9	LT BLU	RR_PRE+	Outputs sound signal for right rear door speaker
A10	PUR	RR_PRE-	Outputs sound signal for right rear door speaker
A11	Not Used	Not Used	-
A12	GRN	SCTY_RADIO_SW	Security signal from MICU
A13	LT BLU	K_LINE	Detects scan tool signal (serial data)
A14	Not Used	Not Used	-
A15	BRN	FL_PRE+	Outputs sound signal for left front speakers
A16	YEL	FL_PRE-	Outputs sound signal for left front speakers
A17	GRY(1)	SH_FL_PRE	Shield for terminals No. 15 and No. 16
A18	GRY(1)	SH_FR_PRE	Shield for terminals No. 19 and No. 20
A19	RED	FR_PRE+	Outputs sound signal for right front speakers
A20	GRN	FR_PRE-	Outputs sound signal for right front speakers
A21	RED	SWD+B	Outputs voltage for stereo amplifier switching ON/OFF

A22	Not Used	Not Used	-
A23	GRN	VSP	Detect vehicle speed pulse from PCM
A24	PUR	ACC	Power source for accessories

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR C (14P)

Fig. 287: Identifying Audio-Navigation Unit Connector C (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Audio-Navigation Unit Connector C (14P)

Cavity	Wire Color	Terminal Name	Description
C1	RED	GA_AUDIO_L+	Inputs sound signal from GA-Net related units
C2	GRN	GA_AUDIO_R+	Inputs sound signal from GA-Net related units
C3	GRY(1)	SH_GA_AUDIO	Shield for terminals No. 1, No. 2, No. 7, and No. 8
C4	GRY(1)	SH_GA_BUS	Shield for terminals No. 11 and No. 12
C5	PNK	GA_SYS_ON	Outputs signal for GA-Net related unit(s) switching ON/OFF
C6	RED	GA+B	Power source for XM receiver and HandsFreeLink control unit
C7	WHT	GA_AUDIO_L-	Inputs sound signal from GA-Net related units
C8	BLK	GA_AUDIO_R-	Inputs sound signal from GA-Net related units
C9	Not Used	Not Used	-
C10	BLK	GA_GND	Ground for XM receiver and HandsFreeLink control unit
C11	PNK	GA_BUS-	GA-Net bus communication signal
C12	BLU	GA_BUS+	GA-Net bus communication signal
C13	Not Used	Not Used	-
C14	Not Used	Not Used	-

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR D (3P)

Fig. 288: Identifying Audio-Navigation Unit Connector D (3P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Audio-Navigation Unit Connector D (3P)

Cavity	Wire Color	Terminal Name	Description
D1	-	SWD +B	Power source for AM/FM antenna amplifier
D2	-	AM/FM	Inputs AM/FM signal
D3	-	SH (AM/FM)	Shield for terminal No. 2

AUDIO-NAVIGATION UNIT CONNECTOR E (16P)

Fig. 289: Identifying Audio-Navigation Unit Connector E (16P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR E (16P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
E1	PNK	B_CAN-H	Communication signal
E2	GRY(1)	SH_SUB_W	Shield for terminals No. 3 and No. 11
E3	LT BLU	SUB_W_PRE+	Outputs sound signal for subwoofer
E4	GRY(1)	SH_TELEM_SIG	Shield for terminals No. 5 and No. 13
E5	BRN	TELEM_SIG+	Inputs telephone sound signal from HandsFreeLink control unit
E6	RED	AUX_R_CH	Inputs sound signal from auxiliary jack assembly
E7	BLK	AUX_SGND	Ground for sound signal from auxiliary jack assembly
E8	WHT	AUX_L_CH	Inputs sound signal from auxiliary jack assembly
E9	BLU	B_CAN-L	Communication signal
E10	Not Used	Not Used	-

E11	PUR	SUB_W_PRE-	Outputs sound signal for subwoofer
E12	RED	AMP_MUTE	Outputs stereo amplifier mute signal
E13	YEL	TELEM_SIG-	Inputs telephone sound signal from HandsFreeLink control unit
E14	GRY(1)	SH_AUX	Shield for terminals No. 6, No. 7, and No. 8
E15	LT GRN	AUX_GND	Ground for auxiliary jack assembly
E16	LT BLU	AUX_DET	Detects connection signal for auxiliary jack assembly

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR H (7P)

Audio System Symptom Troubleshooting - Auxiliary input sound is low or cannot be heard

Fig. 290: Identifying Audio-Navigation Unit Connector H (7P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR H (7P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
H1	-	USB GND	Ground for communication signal
H2	-	USB_DATA+	Communication signal
H3	-	USB_DATA-	Communication signal
H4	-	USB_VBUS	Outputs power source for USB device
H5	-	USB SH	Shield for terminals No. 1, No. 2, No. 3, and No. 4
H6	-	USB ADPT	Ground for connection signal
H7	-	USB ON	Detects connection signal
(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.			

AUDIO-NAVIGATION UNIT CONNECTOR J (2P) (USA models)

Fig. 291: Identifying Audio-Navigation Unit Connector J (2P) (USA Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR J (2P) DESCRIPTION (USA MODELS)

Cavity	Wire Color	Terminal Name	Description
J1	-	TMC RF IN	Inputs FM signal
J2	-	TMC RF SH	Shield for terminal No. 1

AUDIO-NAVIGATION UNIT CONNECTOR FOR INPUTS AND OUTPUTS (WITH NAVIGATION) (KX)

Fig. 292: Identifying Audio-Navigation Unit Connector For Inputs And Outputs (With Navigation) (KX)

AUDIO-NAVIGATION UNIT CONNECTOR A (24P)

Fig. 293: Identifying Audio-Navigation Unit Connector A (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR A (24P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
A1	BLK	GND	Ground for audio-navigation unit (G503)
A2	Not Used	Not Used	-

A3	RED	+B_BACK_UP	Continuous power source
A4	GRY	ILLUMI+	Power source for illumination
A5	BLU	RL_SPKR+	Outputs sound signal for left rear door speaker
A6	PNK	RL_SPKR-	Outputs sound signal for left rear door speaker
A7	Not Used	Not Used	-
A8	Not Used	Not Used	-
A9	BLU	RR_SPKR+	Outputs sound signal for right rear door speaker
A10	PNK	RR_SPKR-	Outputs sound signal for right rear door speaker
A11	Not Used	Not Used	-
A12	GRN	SCTY_RADIO_SW	Security signal from MICU
A13	Not Used	Not Used	-
A14	Not Used	Not Used	-
A15	WHT	FL_SPKR+	Outputs sound signal for driver's door speakers
A16	BLK	FL_SPKR-	Outputs sound signal for driver's door speakers
A17	Not Used	Not Used	-
A18	Not Used	Not Used	-
A19	RED	FR_SKPR+	Outputs sound signal for passenger's door speakers
A20	GRN	FR_SPKR-	Outputs sound signal for passenger's door speakers
A21	Not Used	Not Used	-
A22	Not Used	Not Used	-
A23	Not Used	Not Used	-
A24	PUR	ACC	Power source for accessories

AUDIO-NAVIGATION UNIT CONNECTOR C (12P)

Fig. 294: Identifying Audio-Navigation Unit Connector C (12P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR C (12P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
C1	BLU	GA_BUS+	GA-Net bus communication signal
C2	PNK	GA_BUS-	GA-Net bus communication signal
C3	GRY(1)	SH_GA_BUS	Shield for terminals No. 1 and No. 2
C4	YEL	HFT/NAVI_REMOTE_SW	Detects control signal from HFT switch
C5	Not Used	Not Used	-

C6	PNK	GA_SYS_ON	Outputs signal for multi-information display unit switching ON/OFF
C7	Not Used	Not Used	-
C8	Not Used	Not Used	-
C9	Not Used	Not Used	-
C10	Not Used	Not Used	-
C11	Not Used	Not Used	-
C12	Not Used	Not Used	-
(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.			

AUDIO-NAVIGATION UNIT CONNECTOR D (3P)

Fig. 295: Identifying Audio-Navigation Unit Connector D (3P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR D (3P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
D1	-	SWD +B	Power source for AM/FM antenna amplifier
D2	-	AM/FM	Inputs AM/FM signal
D3	-	SH (AM/FM)	Shield for terminal No. 2

AUDIO-NAVIGATION UNIT CONNECTOR H (5P)

Fig. 296: Identifying Audio-Navigation Unit Connector H (5P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR H (5P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
H1	-	USB GND	Ground for communication signal
H2	-	USB DATA+	Communication signal
H3	-	USB DATA-	Communication signal
H4	-	USB VBUS	Outputs power source for USB device
H5	-	USB SH	Shield for terminals No. 1, No. 2, No. 3, and No. 4

AUDIO-NAVIGATION UNIT CONNECTOR L (8P)

Fig. 297: Identifying Audio-Navigation Unit Connector L (8P)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR L (8P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
L1	BLK	AUX_SGND	Ground for sound signal from auxiliary jack assembly
L2	WHT	AUX_L_CH	Inputs sound signal from auxiliary jack assembly
L3	RED	AUX_R_CH	Inputs sound signal from auxiliary jack assembly
L4	Not used	Not used	-
L5	LT BLU	AUX_DET	Detects connection signal for auxiliary jack assembly
L6	Not used	Not used	-
L7	GRY()	AUX_GND	Ground for sound signal from auxiliary jack assembly
L8	Not used	Not used	-

AUDIO UNIT CONNECTOR FOR INPUTS AND OUTPUTS (WITH STEREO AMPLIFIER)

Fig. 298: Identifying Audio Unit Connector For Inputs And Outputs (With Stereo Amplifier)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO UNIT CONNECTOR A (24P)

Fig. 299: Identifying Audio Unit Connector A (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO UNIT CONNECTOR A (24P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
A1	BLK	GND	Ground for audio unit (G503)
A2	Not Used	Not Used	-
A3	RED	+B_AUDIO	Continuous power source
A4	Not Used	Not Used	-
A5	BLU	RL_PRE+	Outputs sound signal for left rear door speaker
A6	PNK	RL_PRE-	Outputs sound signal for left rear door speaker
A7	GRY(1)	SH_RL_PRE	Shield for terminals No. 5 and No. 6
A8	GRY(1)	SH_RR_PRE	Shield for terminals No. 9 and No. 10
A9	LT BLU	RR_PRE+	Outputs sound signal for right rear door speaker
A10	PUR	RR_PRE-	Outputs sound signal for right rear door speaker
A11	Not Used	Not Used	-
A12	GRN	SCTY_RADIO_SW	Security signal from DVD player unit(2) Security signal from MICU(3)
A13	LT BLU	K_LINE	Detects scan tool signal (serial data)
A14	Not Used	Not Used	-
A15	BRN	FL_PRE+	Outputs sound signal for left front speakers
A16	YEL	FL_PRE-	Outputs sound signal for left front speakers
A17	GRY(1)	SH_FL_PRE	Shield for terminals No. 15 and No. 16
A18	GRY(1)	SH_FR_PRE	Shield for terminals No. 19 and No. 20
A19	RED	FR_PRE+	Outputs sound signal for right front speakers
A20	GRN	FR_PRE-	Outputs sound signal for right front speakers
A21	RED	SWD+B	Outputs voltage for stereo amplifier switching ON/OFF
A22	Not Used	Not Used	-
A23	Not Used	Not Used	-
A24	PUR	ACC	Power source for accessories

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

(2) With rear entertainment

(3) Without rear entertainment

AUDIO UNIT CONNECTOR B (20P)

Fig. 300: Identifying Audio Unit Connector B (20P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO UNIT CONNECTOR B (20P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
B1	GRY(1)	SH_TELEM_SIG	Shield for terminals No. 2 and No. 12
B2	YEL	TELEM_SIG-	Inputs telephone sound signal from HandsFreeLink control unit
B3	BLU	B_CAN-L	Communication signal
B4	RED	DUET_RX	Communication signal to multi-information display unit
B5	GRN	DUET_TX	Communication signal to multi-information display unit
B6	LT GRN	AUX_GND	Ground for DVD player unit(2)
			Ground for auxiliary jack assembly(3)
B7	GRY(1)	SH_AUX	Shield for terminals No. 8, No. 17, and No. 18
B8	BLK	AUX_SGND	Ground for sound signal from DVD player unit(2)

			Ground for sound signal from auxiliary jack assembly(3)
B9	BLU	COMPASS_TX+	Communication signal to electrical compass unit
B10	GRY	COMPASS_TX-	Communication signal to electrical compass unit
B11	Not Used	Not Used	-
B12	BRN	TELEM_SIG+	Inputs telephone sound signal from HandsFreeLink control unit
B13	PNK	B_CAN-H	Communication signal
B14	LT GRN	DUET_CONT	DUET control signal
B15	GRY(1)	SH_DUET	Shield for terminals No. 4 and No. 5
B16	LT BLU	AUX_DET	Detects connection signal for DVD player unit(2)
			Detects connection signal for auxiliary jack assembly(3)
B17	RED	AUX_R_CH	Inputs sound signal from DVD player unit(2)
			Inputs sound signal from auxiliary jack assembly(3)
B18	WHT	AUX_L_CH	Inputs sound signal from DVD player unit(2)
			Inputs sound signal from auxiliary jack assembly(3)
B19	GRN	COMPASS_RX+	Communication signal to electrical compass unit
B20	PNK	COMPASS_RX-	Communication signal to electrical compass unit

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

(2) With rear entertainment

(3) Without rear entertainment

AUDIO UNIT CONNECTOR C (14P)

Audio System Symptom Troubleshooting - Error code: Check Antenna is displayed

Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO UNIT CONNECTOR C (14P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
C1	RED	GA_AUDIO_L+	Inputs sound signal from GA-Net related unit(s)
C2	GRN	GA_AUDIO_R+	Inputs sound signal from GA-Net related unit(s)
C3	GRY(1)	SH_GA_AUDIO	Shield for terminals No. 1, No. 2, No. 7, and No. 8
C4	GRY(1)	SH_GA_BUS	Shield for terminals No. 11 and No. 12
C5	PNK	GA_SYS_ON	Outputs signal for GA-Net related unit(s) switching ON/OFF
C6	RED	GA+B	Power source for USB adapter control unit(2) and HandsFreeLink control unit(3)
C7	WHT	GA_AUDIO_L-	Inputs sound signal from GA-Net related unit(s)
C8	BLK	GA_AUDIO_R-	Inputs sound signal from GA-Net related unit(s)
C9	Not Used	Not Used	-
C10	BLK	GA_GND	Ground for USB adapter control unit(2) and HandsFreeLink control unit(3)
C11	PNK	GA_BUS-	GA-Net bus communication signal
C12	BLU	GA_BUS+	GA-Net bus communication signal
C13	Not Used	Not Used	-
C14	Not Used	Not Used	-

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

(2) Without multi-information display unit

(3) With HandsFreeLink

AUDIO UNIT CONNECTOR D (3P)

Fig. 308: Identifying Audio Unit Connector D (3P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO UNIT CONNECTOR D (3P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description

D1	BLK	SWD+B	Power source for AM/FM antenna amplifier
D2	-	AM/FM	Inputs AM/FM signal
D3	BLK	SH (AM/FM)	Shield for terminal No. 2

AUDIO, ENTERTAINMENT, NAVIGATION, AND TELEMATICS SYMPTOM TROUBLESHOOTING INDEX

AUDIO SYSTEM SYMPTOM

Symptom	Also Check for	Refer to
Poor AM or FM radio reception or interference (USA models with navigation).	• Radio reception • Loose antenna mounting nut • Aftermarket FM modulator	**Symptom Tests**
Poor AM or FM radio reception or interference (Canada models with navigation)	• Radio reception • Loose antenna mounting nut • Aftermarket FM modulator	**Symptom Tests**
Poor AM or FM radio reception or interference (without navigation)	• Radio reception • Loose antenna mounting nut • Aftermarket FM modulator	**Symptom Tests**
Audio-navigation unit power switch will not turn on (No audio information display and no sound)		**Symptom Tests**
Audio unit power switch will not turn on (No information display and no sound)		**Symptom Tests**
Audio unit power switch will not turn off		**Symptom Tests**
No sound is heard from the speaker(s) (display is normal) (with navigation)	• Fader and balance positions • Aftermarket amplifier or speakers	**Symptom Tests**
No sound is heard from the speaker(s) (display is normal) (without navigation, with stereo amplifier)	• Fader and balance positions • Aftermarket amplifier or speakers	**Symptom Tests**
No sound is heard from the speaker(s) (display is normal) (without navigation and stereo amplifier)	• Fader and balance positions • Aftermarket amplifier or speakers	**Symptom Tests**
Auxiliary input sound is low or cannot be heard (with navigation)	• Auxiliary stereo cables compatibility • Auxiliary device volume is too low	**Symptom Tests**

Auxiliary input sound is low or cannot be heard (without navigation and rear entertainment)	• Auxiliary stereo cables compatibility • Auxiliary device volume is too low	**Symptom Tests**
Audio system sound is weak or distorted (display is normal)		**Symptom Tests**
Radio preset memory is lost (with navigation)	Internal error	**Symptom Tests**
Radio preset memory is lost (without navigation)	Internal error	**Symptom Tests**
Volume does not change	• Fader and balance positions • F-CAN DTCs	**Symptom Tests**
Volume does not increase with speed (with navigation)	• PCM (vehicle speed pulse) • Speed sensitive volume control setting (see O/M)	**Symptom Tests**
Volume does not increase with speed (without navigation)	• PCM (vehicle speed pulse) • Speed sensitive volume control setting (see O/M)	**Symptom Tests**
Volume is too high or too low when driving at freeway speeds Speed sensitive volume control setting (see O/M)		**Symptom Tests**
Radio tuner does not change stations		**Symptom Tests**
Audio system information does not display on the multi-information display (with navigation)		**Symptom Tests**
Audio system information does not display on the multi-information display (without navigation)		**Symptom Tests**
Audio system information does not display on the center display (without navigation)		**Symptom Tests**
Multi-information display unit does not work		**Symptom Tests**
Audio-navigation unit button illumination does not work (with navigation)	B-CAN DTCs	**Symptom Tests**
Audio unit button illumination does not work (without navigation)	B-CAN DTCs	**Symptom Tests**

Display does not dim or brighten with dimmer (with multi-information display)	B-CAN DTCs	**Symptom Tests**
Display does not dim or brighten with dimmer (without multi-information display)	B-CAN DTCs	**Symptom Tests**
Audio disc does not load	• **Error Codes** See **AUDIO SYSTEM ERROR CODES** or **AUDIO SYSTEM ERROR CODES** • Audio disc labels • Audio disc compatibility (see the Owner's Manual)	**Symptom Tests**
Audio disc does not eject	• **Error Codes** See **AUDIO SYSTEM ERROR CODES** or **AUDIO SYSTEM ERROR CODES** • Audio disc labels	**Symptom Tests**
Audio disc does not play	• **Error Codes** See **AUDIO SYSTEM ERROR CODES** or **AUDIO SYSTEM ERROR CODES** • Audio disc labels • Audio disc compatibility (see the Owner's Manual)	**Symptom Tests**
Audio disc skips	• Audio disc labels • Audio disc compatibility (see the Owner's Manual)	**Symptom Tests**
Audio remote switch does not work properly (with navigation)		**Symptom Tests**
Audio remote switch does not work properly (without navigation, with multi-information display)		**Symptom Tests**
Audio remote switch does not work properly (without navigation and multi-information display)		**Symptom Tests**
USB input sound is low or cannot be heard (with navigation)	• USB device compatibility (see the Owner's Manual) • Auxiliary device volume is too low	**Symptom Tests**
USB input sound is low or cannot be heard (without navigation, with	• USB device compatibility (see the Owner's Manual)	**Symptom Tests**

multi-information display)	• Auxiliary device volume is too low	
USB input sound is low or cannot be heard (without navigation and multi-information display)	• USB device compatibility (see the Owner's Manual) • Auxiliary device volume is too low	**Symptom Tests**
USB device does not function (with navigation)	• USB device compatibility (see the Owner's Manual) • Auxiliary device volume is too low	**Symptom Tests**
USB device does not function (without navigation, with multi-information display)	• USB device compatibility (see the Owner's Manual) • Auxiliary device volume is too low	**Symptom Tests**
USB device does not function (without navigation and multi-information display)	• USB device compatibility (see the Owner's Manual) • Auxiliary device volume is too low	**Symptom Tests**
Audio-navigation unit does not exit anti-theft mode		**Symptom Tests**
Audio unit does not exit anti-theft mode		**Symptom Tests**
Error code: Check Antenna is displayed (with navigation)	• XM radio reception • Loose antenna mounting nut	**Symptom Tests**
Error code: Check Antenna is displayed (without navigation)	• XM radio reception • Loose antenna mounting nut	**Symptom Tests**
XM radio display is blank and no station information is displayed (with navigation)		**Symptom Tests**
XM radio display is blank and no station information is displayed (without navigation)		**Symptom Tests**
XM radio preset memory is lost (with navigation)		**Symptom Tests**
XM radio preset memory is lost (without navigation)		**Symptom Tests**
Poor or no sound with XM radio (Audio-navigation unit does display XM channels) (with navigation)		**Symptom Tests**
Poor or no sound with XM radio (Audio-navigation unit does		**Symptom Tests**

display XM channels) (without navigation) XM radio reception		
Rearview camera image does not come on or work properly	• Dirty camera lens • Object blocking camera	**Symptom Tests**
Rearview camera image does not change		**Symptom Tests**

REAR ENTERTAINMENT SYSTEM SYMPTOM

Symptom	Also Check for	Refer to
RES disc does not load	• Peeled label stuck in player • Wrong type disc	**Symptom Tests**
• RES disc does not eject	• Peeled label stuck in player • Wrong type disc	**Symptom Tests**
RES disc does not play	• Peeled label stuck in player • Scratched disc • Wrong type disc	**Symptom Tests**
RES disc skips	• Peeled label stuck in player • Scratched disc • Wrong type disc • Rough road • Over-inflated tires	**Symptom Tests**
RES power will not turn on (No information display)		**Symptom Tests**
No video display appears on the rear screen		**Symptom Tests**
No RES sound is heard from the speaker(s) (rear display is normal)		**Symptom Tests**
No sound/no display with auxiliary video unit inputs	• Poor connections or disconnect device • Low batteries in accessory device, or disconnected from power source	**Symptom Tests**
Wireless headphone sound is weak, sound is distorted, there is static, volume does not change, or there is no sound in all modes	• **WIRELESS HEADPHONE BATTERIES** • Headphones worn backwards • Aftermarket headphones • Some seating positions may affect wireless reception	**Symptom Tests**
Wireless remote control does not work	**WIRELESS REMOTE CONTROL BATTERIES**	**Symptom Tests**

DVD player unit button illumination does not work		**Symptom Tests**
Rear screen backlight does not dim/remains dim		**Symptom Tests**

NAVIGATION SYSTEM SYMPTOM

Symptom	Also Check for	Refer to
No picture is displayed	• Navigation screen settings • **ERROR MESSAGES**	**SYMPTOM TESTS**
Address cannot be found or system gives poor routing	• Verify proper operation and system limitations using the Navigation Manual • **SEE HOW TO ANSWER CUSTOMER QUESTIONS ABOUT NAVIGATION COVERAGE** • Refer to Database limitation in the Navigation Manual to report database errors • Refer to the FAQs in the Navigation Manual	**SYMPTOM TESTS**
Navigation display stays on with ignition switch in LOCK (0)	• Aftermarket accessories improperly connected to to ACC circuit	**SYMPTOM TESTS**
Error messages are displayed	• **SEE ERROR MESSAGES**	**SYMPTOM TESTS**
Vehicle position icon constantly leaves road, moves erratically, or is displayed very far from actual vehicle position	• **SEE GLOBAL POSITIONING SYSTEM (GPS) LIMITATIONS** • Software not up to date • PCM (vehicle speed pulse)	**SYMPTOM TESTS**
GPS icon is white or not shown	• **SEE GLOBAL POSITIONING SYSTEM (GPS) LIMITATIONS**	**SYMPTOM TESTS**
Vehicle position icon wanders across the map when driving (does not follow a displayed road) or map vehicle ICON spins	• See Global Positioning System (GPS) Limitations • PCM (vehicle speed pulse)	**SYMPTOM TESTS**
Picture has lines/rolls/other issues or is an odd color	• Characteristic of the system • Navigation screen settings	**SYMPTOM TESTS**
Display day/night mode does not work or does not work properly	• The instrument (gauge) brightness setting is set to High in day or night mode	**SYMPTOM TESTS**

	• Gauge control module • B-CAN DTCs	
System locks up or freezes constantly	• Error message • Correct audio-navigation unit is installed for this model	**SYMPTOM TESTS**
Voice guidance cannot be heard, is broken up, or there is static	• Volume or voice feedback setting (see the Navigation Manual)	**SYMPTOM TESTS**
Voice control does not work/respond	• Software not up to date	**SYMPTOM TESTS**
Navigation display buttons do not work or respond properly	• **SEE LCD UNIT LIMITATIONS**	**SYMPTOM TESTS**
Navigation frequently asks for anti-theft code and/or needs GPS initialization	• Error message • **SEE GPS INITIALIZATION**	**SYMPTOM TESTS**
Poor RDS-TMC reception or interference	• RDS-TMC reception • Aftermarket metallic window tint	**SYMPTOM TESTS**
Rearview camera image does not come on or work properly	Software not up to date	**SYMPTOM TESTS**
Rearview camera image does not change		**SYMPTOM TESTS**
Navigation screen is darker than normal or takes time to brighten when it is cold	**SEE LCD UNIT LIMITATIONS**	**SYMPTOM TESTS**
The navigation clock is off by 1 to 3 hours after replacing the audio-navigation unit	**SEE SERVICE PRECAUTIONS**	**SYMPTOM TESTS**
A POI cannot be found	**SEE HOW TO ANSWER CUSTOMER QUESTIONS ABOUT NAVIGATION COVERAGE**	**SYMPTOM TESTS**
An In Line Diag screen appears every time vehicle is started	**SEE FACTORY DIAGNOSTIC SCREEN IN LINE DIAG**	**SYMPTOM TESTS**

ELECTRICAL COMPASS SYMPTOM

Symptom	Also Check for
Azimuth (direction) information is not shown on the display	• **ELECTRICAL COMPASS TROUBLESHOOTING** • Strong magnetic fields in vehicle • VSS signal
	• The display brightness setting

No picture is shown on the display	• Strong magnetic fields in vehicle • VSS signal • **Audio system information does not display on the multi-information display unit**
Compass shows wrong direction	• Check if the zone setting is correct for the vehicle geographical location • Audio unit (B-CAN) • Strong magnetic fields in vehicle • VSS signal
Compass does not calibrate	• **ELECTRICAL COMPASS TROUBLESHOOTING** • Audio unit (B-CAN) • Strong magnetic fields in vehicle • VSS signal
Self-test has failed (flashing the CAL and NW)	• Reboot the electrical compass unit • **ELECTRICAL COMPASS TROUBLESHOOTING** • Strong magnetic fields in vehicle • VSS signal

HANDSFREELINK SYSTEM SYMPTOM

Symptom	Also Check for
HFL DOES NOT RESPOND (WITH NAVIGATION)	**CHECK AND REPAIR ALL HFL RELATED DTCS**
HFL DOES NOT RESPOND (USA AND CANADA MODELS WITHOUT NAVIGATION)	**CHECK AND REPAIR ALL HFL RELATED DTCS**
HFL DOES NOT RESPOND (EXCEPT USA AND CANADA MODELS WITHOUT NAVIGATION)	**CHECK AND REPAIR ALL HFL RELATED DTCS**
The Bluetooth icon in the audio display is not displayed	Cell phone with Bluetooth compatibility (see the Owner's Manual)
The Honda approved cell phone with Bluetooth is having problems pairing to the vehicle	**HFL SYSTEM TROUBLESHOOTING**
The Honda approved cell phone with Bluetooth cannot use all its functions	**HFL SYSTEM TROUBLESHOOTING**
The Honda approved cell phone with Bluetooth does not place or receive calls using the HFL system	**HFL SYSTEM TROUBLESHOOTING**
THE HFL MESSAGES CANNOT BE HEARD OR ARE WEAK (WITH NAVIGATION)	
THE HFL MESSAGES CANNOT BE HEARD OR ARE WEAK (WITHOUT NAVIGATION)	
NO SOUND WHEN BLUETOOTH AUDIO IS USED (WITH NAVIGATION)	Cell phone with Bluetooth compatibility (see the Owner's Manual)
NO SOUND WHEN BLUETOOTH AUDIO IS USED	Cell phone with Bluetooth compatibility (see

(WITHOUT NAVIGATION)	the Owner's Manual)
BLUETOOTH AUDIO DOES NOT WORK (WITH NAVIGATION)	Cell phone with Bluetooth compatibility (see the Owner's Manual)
BLUETOOTH AUDIO DOES NOT WORK (WITHOUT NAVIGATION)	Cell phone with Bluetooth compatibility (see the Owner's Manual)
BLUETOOTH CELL PHONE CANNOT BE PAIRED	Cell phone with Bluetooth compatibility (see the Owner's Manual)

AUDIO-NAVIGATION UNIT CONNECTOR FOR INPUTS AND OUTPUTS

AUDIO-NAVIGATION UNIT CONNECTOR FOR INPUTS AND OUTPUTS (EXCEPT KX)

Fig. 309: Identifying Audio-Navigation Unit Connector For Inputs And Outputs (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR A (24P)

Fig. 310: Identifying Audio-Navigation Unit Connector A (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR A (24P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
A1	BLK	GND	Ground for audio-navigation unit (G503)	0V	If open: Display picture goes out. If short to ground: No effect on system.
A2	Not Used	Not Used	-	-	-
A3	RED	+B_BACK_UP	Continuous power source for audio system	Battery voltage	If open: Display picture goes out. If short to ground: Blows No. A29 (10 A) fuse in the under-hood fuse/relay box.
A4	Not Used	Not Used	-	-	-
A5	BLU	RL_PRE+	Outputs sound signal for left rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left rear door speaker.
A6	PNK	RL_PRE-	Outputs sound signal for left rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left rear door speaker.
A7	GRY (1)	SH_RL_PRE	Shield for terminals No. 5 and No. 6	-	-
A8	GRY (1)	SH_RR_PRE	Shield for terminals No. 9 and No. 10	-	-
A9	LT BLU	RR_PRE+	Outputs sound signal for right rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right rear door speaker.
A10	PUR	RR_PRE-	Outputs sound signal for right rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right rear door speaker.

A11	Not Used	Not Used	-	-	-
A12	GRN	SCTY_RADIO_SW	Security signal from MICU	-	If open: The security system sets, and does not trip when audio-navigation unit is removed. If short to ground: The security system sets, and does not trip when audio-navigation unit is removed.
A13	LT BLU	K_LINE	Detects scan tool signal (serial data)	-	-
A14	Not Used	Not Used	-	-	-
A15	BRN	FL_PRE+	Outputs sound signal for left front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left front speaker(s).
A16	YEL	FL_PRE-	Outputs sound signal for left front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left front speaker(s).
A17	GRY (1)	SH_FL_PRE	Shield for terminals No. 15 and No. 16	-	-
A18	GRY (1)	SH_FR_PRE	Shield for terminals No. 19 and No. 20	-	-
A19	RED	FR_PRE+	Outputs sound signal for right front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right front speaker(s).
A20	GRN	FR_PRE-	Outputs sound signal for right front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right front speaker(s).
A21	RED	SWD+B	Outputs voltage for stereo amplifier switching ON/OFF	Ignition switch ACC (I): 10.5 V	If open/short: No sound is heard from all speakers.
A22	Not Used	Not Used	-	-	-
A23	GRN	VSP	Detects vehicle speed pulse from PCM	Ignition switch ON (II): 0-5 V pulses, 2.5 V average (depends on vehicle speed)	If open/short: No vehicle speed pulse. Diagnostic screen Car Status, VSP = 0. If open: No vehicle speed pulse. Diagnostic screen Car Status, VSP = 0. If short to ground: No

					vehicle speed pulse. Diagnostic screen Vehicle Signal, VSP = 0.
A24	PUR	ACC	Power source for accessories	Ignition switch ACC (I): battery voltage	If open: Display picture goes out. If short to ground: Blows No. B19 (7.5 A) fuse in the under-dash fuse/relay box.
(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.					

AUDIO-NAVIGATION UNIT CONNECTOR B (20P)

Fig. 311: Identifying Audio-Navigation Unit Connector B (20P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR B (20P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
B1	RED	F_CAN-L	Communication signal	Ignition switch ON (II): Pulses (depends on bus traffic)	If open: System Links F-CAN icon shown as red. If short: Same diagnostic conditions as when open, also sets the related units DTC (F-CAN BUS OFF).
B2	WHT	F_CAN-H	Communication signal	Ignition switch ON (II): Pulses (depends on bus traffic)	If open: System Links F-CAN icon shown as red. If short: Same diagnostic conditions as when open, also sets the related units DTC (F-CAN BUS OFF).
B3	Not Used	Not Used	-	-	-
					If open: No change to

B4	GRN	CAMERA_BIT0	Mode select signal for rearview camera	Normal view: 8V	rearview camera image. If short to ground: No change to rearview camera image.
B5	Not Used	Not Used	-	-	-
B6	Not Used	Not Used	-	-	-
B7	Not Used	Not Used	-	-	-
B8	Not Used	Not Used	-	-	-
B9	BRN	BACK_LT	Detects reverse signal of select lever from reverse relay circuit	In reverse: Battery voltage	If open/short to ground: Diagnostic screen Car Status, BACK = 0.
B10	RED	+B_BACK_UP	Continuous power source for navigation system	Battery voltage	If open: Display picture goes out. If short to ground: Blows No. A29 (10 A) fuse in the under-hood fuse/relay box.
B11	BRN	HFL_NAVI_MIC+	Inputs microphone signal positive	Ignition switch ACC (l): 2.3 V pulses (TALK button pressed)	If open/short to ground: Mic diag indicator do not work.
B12	YEL	HFL_NAVI_MIC-	Inputs microphone signal negative	0V	If open/short to ground: Mic diag indicator do not work.
B13	GRY (1)	SH_HFL_NAVI_MIC	Shield for terminals No. 11 and No. 12	-	-
B14	Not Used	Not Used	-	-	-
B15	BLU	CAMERA_BIT1	Mode select signal for rearview camera	Top down view: 8V	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
B16	Not Used	Not Used	-	-	-
B17	Not Used	Not Used	-	-	-
B18	Not Used	Not Used	-	-	-
B19	Not Used	Not Used	-	-	-

B20	BLK	GND	Ground for audio-navigation unit (G503)	0V	If open: Display picture goes out. If short to ground: No effect on system.
(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.					

AUDIO-NAVIGATION UNIT CONNECTOR E (16P)

Fig. 312: Identifying Audio-Navigation Unit Connector E (16P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Audio-Navigation Unit Connector E (16P)

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
E1	PNK	B_CAN-H	Communication signal	Ignition switch ON (II): Pulses (depends on bus traffic)	If open: System Links B-CAN icon shown as red. If short: Same diagnostic conditions as when open, also sets the related units DTC (B-CAN BUS OFF).
E2	GRY (1)	SH_SUB_W	Shield for terminals No. 3 and No. 11	-	-
E3	LT BLU	SUB_W_PRE+	Outputs sound signal for subwoofer	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from subwoofer.
E4	GRY (1)	SH_TELEM_SIG	Shield for terminals No. 5 and No. 13	-	-
E5	BRN	TELEM_SIG+	Inputs telephone sound signal from HandsFreeLink control unit	-	-
E6	RED	AUX_R_CH	Inputs sound signal from auxiliary jack assembly	-	-
E7	BLK	AUX_SGND	Ground for sound signal from auxiliary jack	-	-

			assembly		
E8	WHT	AUX_L_CH	Inputs sound signal from auxiliary jack assembly	-	-
E9	BLU	B_CAN-L	Communication signal	Ignition switch ON (II): Pulses (depends on bus traffic)	If open: System Links B-CAN icon shown as red. If short: Same diagnostic conditions as when open, also sets the related units DTC (B-CAN BUS OFF).
E10	Not Used	Not Used	-	-	-
E11	PUR	SUB_W_PRE-	Outputs sound signal for subwoofer	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from subwoofer.
E12	RED	AMP_MUTE	Outputs stereo amplifier mute signal	-	-
E13	YEL	TELEM_SIG-	Inputs telephone sound signal from HandsFreeLink control unit	-	-
E14	GRY (1)	SH_AUX	Shield for terminals No. 6, No. 7, and No. 8	-	-
E15	LT GRN	AUX_GND	Ground for auxiliary jack assembly	-	-
E16	LT BLU	AUX_DET	Detects connection signal for auxiliary jack assembly	-	-
(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.					

AUDIO-NAVIGATION UNIT CONNECTOR F (7P)

Fig. 313: Identifying Audio-Navigation Unit Connector F (7P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR F (7P) DESCRIPTION

	Wire			Voltage	

Cavity	Color	Terminal Name	Description	(about)	Symptom
F1	BLK	CAMERA_ADPT	Control signal for rearview camera	0V	If open: No change to display. If short to ground: No effect on system.
F2	GRY (1)	SH_CAMERA	Shield for terminals No. 1, No. 3, No. 4, No. 6, and No. 7	-	-
F3	RED	CAMERA_V	Video signal for rearview camera	0.3V	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
F4	WHT	CAMERA_V_GND	Ground for rearview camera	0V	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
F5	Not Used	Not Used	-	-	-
F6	GRN	CAMERA_GND	Ground for rearview camera	In reverse: battery voltage	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
F7	YEL	CAMERA_VCC	Power source for rearview camera	8V	If open: When put into reverse, the navigation screen goes black (backlight still operation) If short to ground: When put into reverse, the navigation screen goes black (backlight still operative).

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR G (2P)

Fig. 314: Identifying Audio-Navigation Unit Connector G (2P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR G (2P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
G1	-	GPS	Inputs GPS signal	Ignition switch ACC (l): 5V	If open/short to ground: GPS icon on screen is not shown, System Links screen GPS Ant. shows red.
G2	-	SH (GPS)	Shield for terminal No. 1	-	If open/short to ground: GPS icon on screen is not shown, System Links screen GPS Ant. shows red.

AUDIO-NAVIGATION UNIT CONNECTOR H (7P)

Fig. 315: Identifying Audio-Navigation Unit Connector H (7P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR H (7P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
H1	-	USB GND	Ground for communication signal	0V	-
H2	-	USB_DATA +	Communication signal	-	-
H3	-	USB_DATA -	Communication signal	-	-
H4	-	USB_VBUS	Outputs power source for USB device	Ignition switch ACC (I): 5V	-
H5	-	USB SH	Shield for terminals No. 1, No. 2, No. 3, and No. 4	-	-
H6	-	USB ADPT	Ground for connection signal	0V	If open: System Links USB icon shown as red. If short to ground: No effect on system.
H7	-	USB ON	Detects connection signal	Connector H connected: 2V or less Connector H disconnected: Open	If open: System Links USB icon shown as red. If short to ground: No effect on system.

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR FOR INPUTS AND OUTPUTS (KX)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR A (24P)

Fig. 317: Identifying Audio-Navigation Unit Connector A (24P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR A (24P) DESCRIPTION

Cavity	Wire	Terminal Name	Description	Voltage	Symptom

	Color			(about)	
A1	BLK	GND	Ground	for audio-navigation unit (G503)	0V If open: Display picture goes out. If short to ground: No effect on system.
A2	Not Used	Not Used	-	-	-
A3	RED	+ B_BACK_UP	Continuous power source for audio system	Battery voltage	If open: Display picture goes out. If short to ground: Blows fuse No. A29 (10 A) in the under-hood fuse/relay box.
A4	GRY	ILLUMI+	Detects parking light on signal	Light ON: Battery voltage Light OFF: 0V	If open: When brightness=Auto, night mode for me display is inoperative when light on. If short to ground: Blows No. B35 (7.5A) fuse in the under-dash fuse/relay box.
A5	BLU	RL_SPKR+	Outputs sound signal for left rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left rear door speaker.
A6	PNK	RL_SPKR-	Outputs sound signal for left rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left rear door speaker.
A7	Not Used	Not Used	-	-	-
A8	Not Used	Not Used	-	-	-
A9	BLU	RR_SPKR+	Outputs sound signal for right rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right rear door speaker.
A10	PUR	RR_SPKR-	Outputs sound signal for right rear door speaker	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right rear door speaker.
A11	Not Used	Not Used	-	-	-
A12	GRN	SCTY_RADIO_SW	Security signal from MICU	-	If open: The security system sets, and does not trip when audio-navigation unit is removed. If short to ground: The security system sets, and does not trip when audio-

					navigation unit is removed.
A13	Not Used	Not Used	-	-	-
A14	Not Used	Not Used	-	-	-
A15	WHT	FL_SPKR+	Outputs sound signal for left front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left front speaker(s).
A16	BLK	FL_SPKR-	Outputs sound signal for left front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from left front speaker(s).
A17	Not Used	Not Used	-	-	-
A18	Not Used	Not Used	-	-	-
A19	RED	FR_SPKR+	Outputs sound signal for right front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right front speaker(s).
A20	GRN	FR_SPKR-	Outputs sound signal for right front speaker(s)	Audio system on: Pulses (depends on audio output)	If open/short to ground: No sound is heard from right front speaker(s).
A21	Not Used	Not Used	-	-	-
A22	Not Used	Not Used	-	-	-
A23	Not Used	Not Used	-	-	-
A24	PUR	ACC	Power source for accessories	Ignition switch ACC (I)/vehicle in ACC mode: battery voltage	If open: Display picture goes out. If short to ground: Blows No. B19 (7.5 A) fuse in the under-dash fuse/relay box.

AUDIO-NAVIGATION UNIT CONNECTOR C (12P)

Fig. 318: Identifying Audio-Navigation Unit Connector C (12P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR C (12P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
C1	BLU	GA_BUS+	GA-Net bus communication signal	Ignition switch ACC (I)/vehicle in ACC mode: Pulses (depends on bus traffic)	If open/short to ground: MID do not display audio infomation.
C2	PNK	GA_BUS-	GA-Net bus communication signal	Ignition switch ACC (I)/vehicle in ACC mode: Pulses (depends on bus traffic)	If open/short to ground: MID do not display audio infomation.
C3	GRY (1)	SH_GA_BUS	Shield for terminals No. 1 and No. 2	-	-
C4	YEL	HFT/NAVI_REMOT_SW	Detects control signal from HFT switch	-	-
C5	Not Used	Not Used	-	-	-
C6	PNK	GA_SYS_ON	Outputs signal for multi-information display unit switching on/off	-	-
C7	Not Used	Not Used	-	-	-
C8	Not Used	Not Used	-	-	-
C9	Not Used	Not Used	-	-	-
C10	Not Used	Not Used	-	-	-
C11	Not Used	Not Used	-	-	-
C12	Not Used	Not Used	-	-	-

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR F (7P)

AUDIO-NAVIGATION UNIT CONNECTOR E (16P)

Fig. 319: Identifying Audio-Navigation Unit Connector F (7P)

AUDIO-NAVIGATION UNIT CONNECTOR F (7P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
F1	BLK	CAMERA_ADPT	Control signal for rearview camera	0V	If open: No change to display. If short to ground: No effect on system.
F2	GRY (1)	SH_CAMERA	Shield for terminals No. 1, No. 3, No. 4, No. 6, and No. 7	-	-
F3	RED	CAMERA_V	Video signal for rearview camera	0.3V	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
F4	WHT	CAMERA_V_GND	Ground for rearview camera	0V	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
F5	Not Used	Not Used	-	-	-
F6	GRN	CAMERA_GND	Ground for rearview camera	In reverse: battery voltage	If open: No change to rearview camera image. If short to ground: No change to rearview camera image.
F7	YEL	CAMERA_VCC	Power source for rearview camera	Ignition switch ON (II)/vehicle in ON mode, in reverse: 5V-8V	If open: When put into reverse, the navigation screen goes black (backlight still operation) If short to ground: When put into reverse, the navigation screen goes black (backlight still operative).

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

AUDIO-NAVIGATION UNIT CONNECTOR G (2P)

Fig. 320: Identifying Audio-Navigation Unit Connector G (2P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR G (2P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
G1	-	GPS	Inputs GPS signal	Ignition switch ACC (I)/vehicle in ACC mode: 5V	If open/short to ground: No GPS reception Diagnostic screen GPS information GPS ant: OFF
G2	-	SH (GPS)	Shield for terminal No. 1	-	If open/short to ground: No GPS reception Diagnostic screen GPS information GPS ant: OFF

AUDIO-NAVIGATION UNIT CONNECTOR H (5P)

Fig. 321: Identifying Audio-Navigation Unit Connector H (5P)

AUDIO-NAVIGATION UNIT CONNECTOR H (5P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
H1	-	USB GND	Ground for communication signal	0V	-
H2	-	USB_DATA +	Communication signal	-	-
H3	-	USB_DATA -	Communication signal	-	-
H4	-	USB_VBUS	Outputs power source for USB device	Ignition switch ACC (I)/vehicle in ACC mode: 5V	-
H5	-	USB SH	Shield for terminals No. 1, No.	-	-

			2, No. 3, and No. 4		

AUDIO-NAVIGATION UNIT CONNECTOR K (3P)

Fig. 322: Identifying Audio-Navigation Unit Connector K (3P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO-NAVIGATION UNIT CONNECTOR K (3P) DESCRIPTION

Cavity	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
K1	BLU	PARKING_RAKE_SW	Detects parking brake switch on signal	-	-
K2	BRN	BACK_LT	Detects reverse signal of select lever from reverse relay	In reverse: Battery voltage Otherwise: Below 2 V	If open/short: Diagnostic screen vehicle signal Check mode, REV= OFF
K3	GRN	VSP	Detects vehicle speed pulse from PCM	Ignition switch ON (II)/vehicle in ON mode: 0-5 V pulses, 2.5 V average (depends on vehicle speed)	If open/short: No vehicle speed pulse. Diagnostic screen Car Status, VSP = 0. If open: No vehicle speed pulse. Diagnostic screen Car Status, VSP = 0. If short to ground: No vehicle speed pulse. Diagnostic screen Vehicle Signal, VSP = 0.

AUXILIARY JACK ASSEMBLY CONNECTOR FOR INPUTS AND OUTPUTS

Audio System Symptom Troubleshooting - No sound is heard from the speaker(s) (display is normal)

BATTERY REMOVAL AND INSTALLATION

REMOVAL

1. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

        NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

Fig. 3: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery
    1. Remove the battery setting plate (A) and the battery (B).

Fig. 4: Identifying Battery And Setting Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Battery
    1. Install the battery (A) and the battery setting plate (B).

NOTE: Do not deform the battery setting plate by over-tightening the nuts.

Fig. 5: Identifying Battery And Setting Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 6: Connecting Battery Terminals With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BATTERY SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Battery Sensor
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect the connector from the battery sensor (A).
    3. Remove the battery sensor from the battery.
    4. Remove the cover (B).
    5. Remove the negative terminal (C).

NOTE: **Do not hold the battery sensor connector (D), for protecting from damage when removing the negative terminal.**

Fig. 7: Identifying Battery Sensor And Connector, Cover And Negative Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Battery Sensor
    1. Install the negative terminal (A) on the battery sensor (B).

    NOTE:

    - **Make sure between the nagative terminal and battery sensor are clean.**
    - **Do not hold the battery sensor connector (D), for protecting from damage when installing the negative terminal.**

    2. Install the cover (C).
    3. Install the battery sensor to the battery.
    4. Connect the connector to the battery sensor.
    5. Apply multipurpose grease to the terminal to prevent corrosion.

BATTERY SYMPTOM TROUBLESHOOTING

Fig. 9: Battery Symptom Troubleshooting Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOW OR DEAD BATTERY

NOTE:

- **A battery might be discharged under these conditions:**
  - **Driving a vehicle 6 miles (10 km) or less per day.**
  - **Leaving a vehicle parked without removing the ignition key from the ignition switch.**
  - **Leaving a vehicle idling with high electrical loads such as headlight, seat heaters, wipers, rear window defogger, etc.**
- **When doing the following operation during the measurement of the parasitic draw, it may not be measured accurate:**
  - **With keyless access system: Approaching a vehicle with remote.**
  - **Locking or unlocking a door.**

Indication Example

- Latest History -

Duration: 72* hours

Discharge: 2.03 Ah

Data	Value
IG-OFF	-439.65 mA
1 hour later	-19.54 mA
2 hours later	-29.31 mA
72(1) hours later	-19.54 mA
(1) The value that just before the ignition switch is turned to ON (II) is shown. The value varies depending on when the ignition switch is turned to ON (II).	

1. PGM-FI system check:
   - 1. Check for PGM-FI DTCs.

DTC Description	Confirmed DTC	Pending DTC
P0562 CHARGING SYSTEM LOW VOLTAGE		
P065A ACG NO CHARGING MALFUNCTION		
P16BB ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE		

Are DTCs P0562, P065A, and/or P16BB indicated?

YES : Go to indicated troubleshooting.

NO : Go to step 2.

2. Parasitic draw check:
    - 1. Turn the ignition switch to ON (II).
    - 2. Check all the battery consumption current history with the HDS.

Are all the values of 1 hour later -29.31 mA or less?

YES : Check the battery.

NO : Go to step 3.

3. Problem verification:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Without keyless access system: remove the ignition key from the ignition switch.
    - 3. Get out of the vehicle, and close all doors and tailgate securely.
    - 4. Lock the doors with the keyless transmitter.
    - 5. Make sure the individual map lights are turned off and the security alarm system is armed.
    - 6. Wait 70 minutes or more.
    - 7. Turn the ignition switch to ON (II).
    - 8. Check the latest battery consumption current history with the HDS.

Is the value of 1 hour later -29.31 mA or less?

YES Intermittent failure, the system is OK at this time.

The possible cause that an incorrect parasitic draw value was recorded:

- When you have forgotten to turn off a switch.
- When you operated a vehicle with the ignition switch in ACCESSORY (I) for a long time.

NO : **GO TO THE PARASITIC DRAW CHECK** .

BATTERY TERMINAL DISCONNECTION AND RECONNECTION

REMOVAL

1. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.

Fig. 10: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 11: Connecting Battery Terminals With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BATTERY TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Honda battery diagnostic station (GR8): Model Number MTRGR81100P(1)

	Honda electrical system analyzer (ED-18 battery tester): Model Number INB17191840(1)

(1) Available through the Honda Tool and Equipment Program 888-424-6857	

TEST

1. Battery - Test

WARNING: A battery can explode if you do not follow the proper procedure, causing serious injury to anyone nearby. Follow all procedures carefully and keep sparks and open flames away from the battery.

Software Version

Make sure you have the latest software for the ED-18 and GR8.

To check the version on the ED-18, do this:

- Press the POWER button.
- Read the version number on the screen. It should appear for about 3 seconds.
- Or you can select: Language> Options> Info> Version. The version number will appear near the top of the screen.

Write down the version number, then call Midtronics at 800-776-1995 to verify you have the latest software version.

To check the version on the GR8, do this:

- Press the POWER button.
- Read the version number on the screen. It should appear for about 5 seconds.
- Or from the Main Menu, select: Options> Info> Version. The version number will appear on the screen.

Write down the version number, then call Midtronics at 800-776-1995 to verify you have the latest software version.

Using the ED-18 Battery Tester

NOTE: For setup, customization, and other available features, refer to the ED-18 user's manual.

1. Connect the leads to the positive and negative terminal of the battery.
2. Use the arrow keys to select the Battery Test, then press ENTER, then follow the prompts:
   - Make sure to enter the correct cold cranking ampere (CCA) rating of the battery. You can find the CCA printed on the label on the top of the battery. If the CCA rating is not entered correctly, the test result will not be accurate.
   - Make sure you select FLOODED for the battery type.
3. Here are the four possible battery conditions:
   - Good Battery: The battery has at least 60 percent of its charge and required no action.
   - GR8 Diagnostic Needed: The battery voltage is below 60 percent of its state-of-charge, and the condition of the battery is unknown. Use the GR8 to charge the battery and properly diagnose it.
   - Replace Battery: The battery condition is poor. Replace it.
   - Bad Cell: There is an internal problem with the battery. Replace it.

Using the GR8 Battery Diagnostic Station

NOTE:

- **For set up, customization, and other available features, refer to the GR8 user's manual.**
- **On the GR8, you can select two modes: DEALER INVENTORY or CUSTOMER VEHICLE:**
  - **DEALER INVENTORY: Use this mode for vehicles in dealer inventory. The GR8 charges the battery to 80% of its state-of-charge. If the battery condition is OK, the GR8 states the battery is GOOD. If you leave the GR8 attached to the battery, it changes to Top Off mode, and continues to charge the battery until it is at 100% of its state-of-charge.**
  - **CUSTOMER VEHICLE: In order to give a waiting customer quicker service, the GR8 charges the battery to 60% of its state-of-charge. If the battery condition is OK, the GR8 states the battery is GOOD. If you leave the GR8 attached to the battery, it changes to Top Off mode, and continues to charge the battery until it is at 100% of its state-of-charge.**

1. Connect the leads to the positive and negative terminal of the battery.
2. Use the arrow keys to select Diagnostic, and follow the prompts:
   - Make sure to enter the correct cold cranking ampere (CCA) rating of the battery. You can find the CCA printed on the label on the top of the battery. If the CCA rating is not entered correctly, the test result will not be accurate.
   - Make sure you select FLOODED for the battery type.
3. Here are the three possible battery conditions:
   - Good Battery: The battery state of health is good and state-of-charge is at least 60%.
   - Replace Battery: The battery condition is poor. Replace it.
   - Bad Cell: There is a problem with the battery. Replace it.

DTC B1002: MICU INTERNAL (EEPROM) ERROR

Fig. 1: DTC Troubleshooting Chart (B1002)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1002 MICU Internal (EEPROM) Error	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Wait for at least 6 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
B1002 MICU Internal (EEPROM) Error	

Is DTC B1002 indicated?

YES : Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Intermittent failure, the MICU is OK at this time.

DTC B1003: MICU PROGRAM UPDATE ERROR

Fig. 2: DTC Troubleshooting Chart (B1003)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1003 MICU Program Update Error	

NOTE:

- **This DTC is indicated when a MICU update is not completed properly.**
- **Before updating the MICU, make sure the battery in the vehicle is fully charged, and connect a jumper battery (not a battery charger) to maintain system voltage.**
- **Never turn the ignition switch to ACC (I) or LOCK (0) during the update. If there is a problem with the update, leave the ignition switch in ON (II).**

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Check for DTCs with the HDS.

DTC Description	DTC
B1003 MICU Program Update Error	

Is DTC B1003 indicated?

YES : Update the MICU.

NO : Intermittent failure, the system is OK at this time.

DTC B1026: PASSENGER'S DOOR LOCK SWITCH MALFUNCTION

DTC Troubleshooting: B1026

Fig. 3: DTC Troubleshooting Chart (B1026)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1026 Passenger's Door Lock Switch Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Problem verification (passenger's door lock switch in the neutral position):
   - 1. With the front passenger's door lock switch in the neutral position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Front Passenger's Door Lock Sw. (LOCK)		
Front Passenger's Door Lock Sw. (UNLOCK)		

Is either information indicator ON?

YES : Go to step 4.

NO : Go to step 2.

2. Problem verification (passenger's door lock switch in the lock position):
   - 1. With the front passenger's door lock switch in the lock position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Front Passenger's Door Lock Sw. (LOCK)		
Front Passenger's Door Lock Sw. (UNLOCK)		

Are both information indicators ON?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Shorted wire check (AS REMOTE SW LOCK to AS REMOTE SW UNLOCK line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Front passenger's power window switch 10P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Front passenger's power window switch 10P connector No. 3 (RED)

     Terminal B Body ground

Fig. 4: Identifying Front Passenger's Power Window Switch 10P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Front Passenger's Door Lock Sw. (LOCK)		
Front Passenger's Door Lock Sw. (UNLOCK)		

Are both information indicators ON?

YES : Repair a short between the wires.

NO : The AS REMOTE SW LOCK to AS REMOTE SW UNLOCK wire is OK. Faulty door lock switch; **replace the front passenger's power window switch** See **FRONT PASSENGER'S POWER WINDOW SWITCH REMOVAL AND INSTALLATION** or **REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION** .

4. Passenger's door lock switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Front passenger's power window switch 10P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Front Passenger's Door Lock Sw. (LOCK)		
Front Passenger's Door Lock Sw. (UNLOCK)		

Is either information indicator ON?

YES : Go to step 5.

NO : Faulty door lock switch; **replace the front passenger's power window switch** See **FRONT PASSENGER'S POWER WINDOW SWITCH REMOVAL AND INSTALLATION** or **REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION** .

5. Shorted wire check (AS REMOTE SW LOCK, AS REMOTE SW UNLOCK lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector W (24P)

   - 3. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Front passenger's power window switch 10P connector: disconnected

     Under-dash fuse/relay box connector W (24P): disconnected

     Test circuit AS REMOTE SW LOCK

     Test point 1 Under-dash fuse/relay box connector W (24P) No. 7 (LT GRN)

     Test point 2 Body ground

     Test circuit AS REMOTE SW UNLOCK

     Test point 1 Under-dash fuse/relay box connector W (24P) No. 8 (ORN)

     Test point 2 Body ground

Fig. 5: Under-Dash Fuse/Relay Box Connector W Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The AS REMOTE SW LOCK and AS REMOTE SW UNLOCK wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

DTC B1028: REAR WIPER AUTO STOP SWITCH MALFUNCTION

Fig. 6: DTC Troubleshooting Flow Chart (B1028)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1028 Rear Wiper Auto Stop Switch Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash**

fuse/relay box connectors.

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Turn the rear window wiper switch to INT for 15 seconds or more, then turn the switch OFF.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
B1028 Rear Wiper Auto Stop Switch Malfunction	

Is DTC B1028 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Fuse check:
   - 1. Check the following fuse.

     Fuse No. B23 (10 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse. If the fuse blows again, repair the short to ground in the No. B23 (10 A) fuse circuit.

3. Open wire check (IG1 WIPER&WASHER line):
   - 1. Disconnect the following connector.

     Rear window wiper motor 4P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear window wiper motor 4P connector: disconnected

     Test circuit IG1 WIPER&WASHER

Test point 1 Rear window wiper motor 4P connector No. 2 (GRN)

Test point 2 Body ground

Fig. 7: Rear Window Wiper Motor - Circuit Diagram (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 WIPER&WASHER wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire.

4. Shorted wire check (RR WIPER RLY CL- line):
   - 1. Disconnect the following connector.

     Under-dash fuse/relay box connector T (20P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear window wiper motor 4P connector: disconnected

     Under-dash fuse/relay box connector T (20P): disconnected

     Test circuit RR WIPER RLY CL-

     Test point 1 Rear window wiper motor 4P connector No. 4 (BRN)

     Test point 2 Body ground

Fig. 8: Rear Window Wiper Motor - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The RR WIPER RLY CL- wire is not shorted. Go to step 5.

5. Open wire check (RR WIPER RLY CL- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear window wiper motor 4P connector: disconnected

     Under-dash fuse/relay box connector T (20P): disconnected

     Test circuit RR WIPER RLY CL-

     Test point 1 Rear window wiper motor 4P connector No. 4 (BRN)

     Test point 2 Under-dash fuse/relay box connector T (20P) No. 20 (BRN)

Fig. 9: Rear Window Wiper Motor - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RR WIPER RLY CL- wire is OK. Go to step 6.

NO : Repair an open or high resistance in the wire.

6. Rear window wiper motor check:
   - 1. **DO THE REAR WINDOW WIPER MOTOR TEST** .

Does the wiper motor run and does it pulse normally?

YES : Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : **REPLACE THE REAR WINDOW WIPER MOTOR** .

DTC B1036: IG1 POWER SUPPLY CIRCUIT MALFUNCTION

Fig. 10: DTC Troubleshooting Flow Chart (B1036)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1036 IG1 Power Supply Circuit Malfunction	

1. Problem verification:
    - 1. Clear the DTCs with the HDS.
    - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
    - 3. Wait for at least 6 seconds.
    - 4. Check for DTCs with the HDS.

DTC Description	DTC
B1036 IG1 Power Supply Circuit Malfunction	

Is DTC B1036 indicated?

YES : Repair an open or high resistance in the wire between the under-dash fuse/relay box and the gauge control module.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

DTC B1077: WIPER SWITCH (AS) MALFUNCTION

Fig. 11: DTC B1077 Wiper Switch Malfunction Flowchart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC

B1077 Wiper Switch (As) Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Determine possible failure area (windshield wiper motor and its drive circuit, FR WIPER AS line):
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. Turn the windshield wiper switch to LOW or HIGH for 15 seconds or more, then turn the switch OFF.

   Does the wiper motor work?

   YES : FR WIPER AS line: go to step 2.

   NO : Windshield wiper motor and its drive circuit: go to step 5.

2. Problem verification (DTC):
   - 1. Check for DTCs with the HDS.

DTC Description	DTC
B1077 Wiper Switch (As) Malfunction	

   Is DTC B1077 indicated?

   YES : Go to step 3.

   NO : Intermittent failure, the system is OK at this time.

3. Windshield wiper motor check (AS signal):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DO THE WINDSHIELD WIPER MOTOR TEST** .

   Does the wiper motor run and does it pulse normally?

   YES : Go to step 4.

   NO : **REPLACE THE WINDSHIELD WIPER MOTOR** .

4. Open or shorted wire check (FR WIPER AS line):
   - 1. Disconnect the following connectors.

     Windshield wiper motor 4P connector

Under-dash fuse/relay box connector C (38P)

- 2. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Windshield wiper motor 4P connector: disconnected

  Under-dash fuse/relay box connector C (38P): disconnected

  Test circuit FR WIPER AS

  Test point 1 Windshield wiper motor 4P connector No. 4 (YEL)

  Test point 2 Under-dash fuse/relay box connector C (38P) No. 23 (GRY)

Fig. 12: Identifying Windshield Wiper Motor 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FR WIPER AS wire is OK. Repair a short to ground in the wire.

NO : Repair an open or high resistance in the wire.

5. Fuse check:
   - 1. Check the following fuses.

     Fuse No. A2-9 (30 A)

     Location Under-hood fuse/relay box

Fuse No. B23 (10 A)

Location Under-dash fuse/relay box

Is each fuse OK?

YES : Go to step 6.

NO : Replace the fuse. If the fuse blows again, repair the short to ground in the No. A2-9 (30 A) and/or No. B23 (10 A) fuse circuit(s).

6. Open wire check (+B FR WIPER MAIN line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Relay circuit board connector A (16P)

     Relay circuit board connector B (10P)

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Relay circuit board connector A (16P): disconnected

     Relay circuit board connector B (10P): disconnected

     Test circuit +B FR WIPER MAIN

     Test point 1 Relay circuit board connector A (16P) No. 16 (RED)

     Test point 2 Body ground

Fig. 13: Identifying Relay Circuit Board Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B FR WIPER MAIN wire is OK. Go to step 7.

NO : Repair an open or high resistance in the wire.

7. Open wire check (IG1 WIPER&WASHER line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Relay circuit board connector A (16P): disconnected

    Relay circuit board connector B (10P): disconnected

    Test circuit IG1 WIPER&WASHER

    Test point 1 Relay circuit board connector A (16P) No. 9 (LT BLU)

    Test point 2 Body ground

<u>Fig. 14: Measuring Voltage Between Relay Circuit Board Connector Terminals 1 And 2</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 WIPER&WASHER wire is OK. Go to step 8.

NO : Repair an open or high resistance in the wire.

8. Relay circuit board check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **<u>DO THE RELAY CIRCUIT BOARD TEST</u>** .

Is the relay circuit board OK?

YES : Go to step 9.

NO : **<u>REPLACE THE RELAY CIRCUIT BOARD</u>** .

9. Open wire check (GND line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Relay circuit board connector A (16P): disconnected

      Relay circuit board connector B (10P): disconnected

      Test circuit GND

      Test point 1 Relay circuit board connector B (10P) No. 1 (GRY)

      Test point 2 Body ground

<u>Fig. 15: Checking Continuity Between Relay Circuit Board Connector Terminals 1 And 2 (10P)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : GND wire is OK. Go to step 10.

NO : Repair an open or high resistance in the ground wire or poor ground (G302).

10. Open wire check (FR WIPER INT RLY CL- line):
    - 1. Disconnect the following connector.

      Under-dash fuse/relay box connector C (38P)

- 2. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Relay circuit board connector A (16P): disconnected

  Relay circuit board connector B (10P): disconnected

  Under-dash fuse/relay box connector C (38P): disconnected

  Test circuit FR WIPER INT RLY CL-

  Test point 1 Relay circuit board connector A (16P) No. 6 (WHT)

  Test point 2 Under-dash fuse/relay box connector C (38P) No. 22 (WHT)

Fig. 16: Checking Continuity Between Relay Circuit Board Connector Terminals 1 And 2 (16P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FR WIPER INT RLY CL- wire is OK. Go to step 11.

NO : Repair an open or high resistance in the wire.

11. Open wire check (FR WIPER HI line):
    - 1. Disconnect the following connector.

      Windshield wiper motor 4P connector

- 2. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Relay circuit board connector A (16P): disconnected

  Relay circuit board connector B (10P): disconnected

  Under-dash fuse/relay box connector C (38P): disconnected

  Windshield wiper motor 4P connector: disconnected

  Test circuit FR WIPER HI

  Test point 1 Relay circuit board connector A (16P) No. 12 (YEL)

  Test point 2 Windshield wiper motor 4P connector No. 3 (WHT)

Fig. 17: Checking Continuity Between Relay Circuit Board Connector Terminals (16P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : FR WIPER HI wire is OK. Go to step 12.

NO : Repair an open or high resistance in the wire.

12. Open wire check (WIPER HI/LO RLY CL- line):
    - 1. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Relay circuit board connector A (16P): disconnected

Relay circuit board connector B (10P): disconnected

Under-dash fuse/relay box connector C (38P): disconnected

Windshield wiper motor 4P connector: disconnected

Test circuit WIPER HI/LO RLY CL-

Test point 1 Relay circuit board connector A (16P) No. 3 (BLU)

Test point 2 Under-dash fuse/relay box connector C (38P) No. 32 (BLU)

Fig. 18: Checking Continuity Between Under-Dash Fuse/Relay Box Connector Terminals 1 And 2 (38P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The WIPER HI/LO RLY CL- wire is OK. Go to step 13.

NO : Repair an open or high resistance in the wire.

13. Open wire check (FR WIPER LO line):
    - 1. Check for continuity between test points 1 and 2.

    Test condition IG LOCK (0)

Relay circuit board connector A (16P): disconnected

Relay circuit board connector B (10P): disconnected

Under-dash fuse/relay box connector C (38P): disconnected

Windshield wiper motor 4P connector: disconnected

Test circuit FR WIPER LO

Test point 1 Relay circuit board connector A (16P) No. 13 (BLU)

Test point 2 Windshield wiper motor 4P connector No. 1 (BLU)

Fig. 19: Checking Continuity Between Windshield Wiper Motor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FR WIPER LO wire is OK. Go to step 14.

NO : Repair an open or high resistance in the wire.

14. Windshield wiper motor check:
    - 1. **DO THE WINDSHIELD WIPER MOTOR TEST** .

Does the wiper motor run and does it pulse normally?

YES : Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : **REPLACE THE WINDSHIELD WIPER MOTOR** .

DTC B1079: DAYTIME RUNNING LIGHT MALFUNCTION

Fig. 20: DTC Troubleshooting Chart (B1079)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1079 Daytime Running Light Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash**

fuse/relay box connectors.

1. Problem verification:
   - 1. Turn the headlights switch OFF, and apply the parking brake.
   - 2. Clear the DTCs with the HDS.
   - 3. Release the parking brake.
   - 4. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 5. Check for DTCs with the HDS.

DTC Description	DTC
B1079 Daytime Running Light Malfunction	

Is DTC B1079 indicated?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

     Fuse No. B38 (10 A)

     No. B39 (10 A)

     Location Under-dash fuse/relay box

Is each fuse OK?

YES : Go to step 3.

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. B38 (10 A) and/or No. B39 (10 A) fuse circuit(s).

3. MICU check:
   - 1. Turn the headlight (high beam) ON.

Do both headlights (high beam) come on?

YES : Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Go to step 4.

4. Headlight bulb visual check:
    - 1. Check the headlight (high beam) bulbs.

    Are the headlight (high beam) bulbs OK?

    YES : Go to step 5.

    NO : Replace the faulty bulb.

5. Open wire check (L H/L HI line):
    - 1. Disconnect the following connectors.

      Under-dash fuse/relay box connector C (38P)

      Left headlight 3P connector

      Right headlight 3P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Under-dash fuse/relay box connector C (38P): disconnected

      Left headlight 3P connector: disconnected

      Right headlight 3P connector: disconnected

      Test circuit L H/L HI

      Test point 1 Under-dash fuse/relay box connector C (38P) No. 18 (WHT)

      Test point 2 Left headlight 3P connector No. 3 (WHT)

Fig. 21: Checking Continuity Between Left Headlight 3P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The L H/L HI wire is OK. Go to step 6.

NO : Repair an open or high resistance in the wire.

6. Open wire check (R H/L HI line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector C (38P): disconnected

     Left headlight 3P connector: disconnected

     Right headlight 3P connector: disconnected

     Test circuit R H/L HI

     Test point 1 Under-dash fuse/relay box connector C (38P) No. 14 (YEL)

     Test point 2 Right headlight 3P connector No. 3 (YEL)

Fig. 22: Checking Continuity Between Right Headlight 3P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The R H/L HI wire is OK. Go to step 7.

NO : Repair an open or high resistance in the wire.

7. Open wire check (GND line):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector C (38P): disconnected

     Left headlight 3P connector: disconnected

     Right headlight 3P connector: disconnected

     Test circuit GND

     Test point 1 Left/Right headlight 3P connector No. 2 (BLK)

     Test point 2 Body ground

Fig. 23: Checking Continuity Between Left/Right Headlight 3P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Repair an open or high resistance in the ground wire or poor ground (G301).

DTC B1127: DRIVER'S DOOR KEY CYLINDER SWITCH INPUT CIRCUIT MALFUNCTION (SIMULTANEOUS INPUT OF LOCK AND UNLOCK SIGNAL)

DTC Troubleshooting: B1127

Fig. 24: DTC Troubleshooting Chart (B1127)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1127 Driver's Door Key Cylinder Switch Input Circuit Malfunction (Simultaneous Input of Lock and Unlock Signal)	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Problem verification (driver's door key cylinder switch in the neutral position):
   - 1. With the driver's door key cylinder in the neutral position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Key Cylinder Switch (LOCK)		
Driver's Door Key Cylinder Switch (UNLOCK)		

Is either information indicator ON?

YES : Go to step 4.

NO : Go to step 2.

2. Problem verification (driver's door key cylinder switch in the lock position):
   - 1. With the driver's door key cylinder in the lock position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Key Cylinder Switch (LOCK)		
Driver's Door Key Cylinder Switch (UNLOCK)		

Are both information indicators ON?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Shorted wire check (DR KEY CYL UNLOCK to DR KEY CYL LOCK line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Driver's door latch 10P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Under-dash fuse/relay box connector X (10P) No. 10 (PNK)

     Terminal B Body ground

Fig. 25: Identifying Under-Dash Fuse/Relay Box Connector Terminals (10P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Key Cylinder Switch (LOCK)		
Driver's Door Key Cylinder Switch (UNLOCK)		

Are both information indicators ON?

YES : Repair a short between the wires.

NO : The DR KEY CYL UNLOCK to DR KEY CYL LOCK wire is OK. Faulty driver's door key cylinder switch; **REPLACE THE DRIVER'S DOOR LATCH** .

4. Determine possible failure area (driver's door latch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Driver's door latch 10P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Key Cylinder Switch (LOCK)		
Driver's Door Key Cylinder Switch (UNLOCK)		

Is either information indicator ON?

YES : Go to step 5.

NO : Faulty driver's door key cylinder switch; **REPLACE THE DRIVER'S DOOR LATCH** .

5. Shorted wire check (DR KEY CYL UNLOCK, DR KEY CYL LOCK lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector X (10P)

   - 3. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Driver's door latch 10P connector: disconnected

     Under-dash fuse/relay box connector X (10P): disconnected

     Test circuit DR KEY CYL UNLOCK

     Test point 1 Under-dash fuse/relay box connector X (10P) No. 9 (BRN)

     Test point 2 Body ground

     Test circuit DR KEY CYL LOCK

     Test point 1 Under-dash fuse/relay box connector X (10P) No. 10 (PNK)

     Test point 2 Body ground

Fig. 26: Checking Continuity Between Under-Dash Fuse/Relay Box Connector Terminals 1 And 2 (10P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The DR KEY CYL UNLOCK and DR KEY CYL LOCK wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

DTC B1128: DRIVER'S DOOR REMOTE SWITCH INPUT CIRCUIT MALFUNCTION (SIMULTANEOUS INPUT OF LOCK AND UNLOCK SIGNAL)

Fig. 27: DTC Troubleshooting Chart (B1128)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1128 Driver's Door Remote Switch Input Circuit Malfunction (Simultaneous Input of Lock and Unlock Signal)	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Keyless/power door locks/security system check 1:
   - 1. With the driver's door lock switch in the neutral position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Lock Switch (LOCK)		
Driver's Door Lock Switch (UNLOCK)		

Is either information indicator ON?

YES : Go to step 4.

NO : Go to step 2.

2. Keyless/power door locks/security system check 2:
   - 1. With the driver's door lock switch in the lock position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Lock Switch (LOCK)		
Driver's Door Lock Switch (UNLOCK)		

Are both information indicators ON?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Shorted wire check (REMOTE SW UNLOCK to REMOTE SW LOCK line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Power window master switch 26P connector

   - 3. Connect terminals A and B with a jumper wire.

Terminal A Under-dash fuse/relay box connector X (10P) No. 8 (GRN)

Terminal B Body ground

Fig. 28: Under-Dash Fuse/Relay Box - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Lock Switch (LOCK)		
Driver's Door Lock Switch (UNLOCK)		

Are both information indicators ON?

YES : Repair a short between the wires.

NO : The REMOTE SW UNLOCK to REMOTE SW LOCK wire is OK. Faulty door lock switch; **REPLACE THE POWER WINDOW MASTER SWITCH** .

4. Keyless/power door locks/security system check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Power window master switch 26P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Lock Switch (LOCK)		
Driver's Door Lock Switch (UNLOCK)		

Is either information indicator ON?

YES : Go to step 5.

NO : Faulty door lock switch; **REPLACE THE POWER WINDOW MASTER SWITCH** .

5. Shorted wire check (REMOTE SW UNLOCK, REMOTE SW LOCK lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector X (10P)

   - 3. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Power window master switch 26P connector: disconnected

     Under-dash fuse/relay box connector X (10P): disconnected

     Test circuit REMOTE SW UNLOCK

     Test point 1 Under-dash fuse/relay box connector X (10P) No. 7 (GRY)

     Test point 2 Body ground

     Test circuit REMOTE SW LOCK

     Test point 1 Under-dash fuse/relay box connector X (10P) No. 8 (GRN)

     Test point 2 Body ground

Fig. 29: Under-Dash Fuse/Relay Box - Circuit Diagram (10P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The REMOTE SW UNLOCK and REMOTE SW LOCK wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

DTC B1129: DRIVER'S DOOR LOCK KNOB SWITCH INPUT CIRCUIT MALFUNCTION (SIMULTANEOUS INPUT OF LOCK AND UNLOCK SIGNAL)

Fig. 30: DTC Troubleshooting Flowchart (B1129)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1129 Driver's Door Lock Knob Switch Input Circuit Malfunction (Simultaneous Input of Lock and Unlock Signal)	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Keyless/power door locks/security system check 1:
   - 1. With the driver's door lock knob switch in the lock position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit

Driver's Door Lock Knob Switch (LOCK)		
Driver's Door Lock Knob Switch (UNLOCK)		

Are both information indicators ON?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (driver's door latch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Driver's door latch 10P connector

   - 3.

     Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Driver's Door Lock Knob Switch (LOCK)		
Driver's Door Lock Knob Switch (UNLOCK)		

Is either information indicator ON?

YES : Go to step 3.

NO : Faulty driver's door knob switch; **REPLACE THE DRIVER'S DOOR LATCH** .

3. Shorted wire check (DR SILCON UNLOCK, DR SILCON LOCK lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector X (10P)

   - 3. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Driver's door latch 10P connector: disconnected

     Under-dash fuse/relay box connector X (10P): disconnected

     Test circuit DR SILCON UNLOCK

Test point 1 Under-dash fuse/relay box connector X (10P) No. 4 (WHT)

Test point 2 Body ground

Test circuit DR SILCON LOCK

Test point 1 Under-dash fuse/relay box connector X (10P) No. 5 (LT GRN)

Test point 2 Body ground

Fig. 31: Under-Dash Fuse/Relay Box - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The DR SILCON UNLOCK and DR SILCON LOCK wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

DTC B1175: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT MALFUNCTION

Fig. 32: DTC Troubleshooting Flow Chart (B1175)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1175 Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Malfunction	

1. Problem verification:
   - 1. Check the fuel gauge.

   Does the gauge move to the empty position and the low fuel indicator blink?

   YES : Go to step 2.

   NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Fuel gauge operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

Fuel gauge sending unit 4P connector

- 3. Connect terminals A and B with a 2 ohms resistor and a jumper wire.

  Terminal A Fuel gauge sending unit 4P connector No. 2 (YEL)

  Terminal B Body ground

Fig. 33: Connecting Fuel Gauge Sensding Unit Terminals A And B Using 2 ohms Resistor And Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Remove the No. A29 (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds, then reinstall it.
- 5. Turn the ignition switch to ON (II).
- 6. Check the fuel gauge.

Does the gauge move to the full position?

YES : Go to step 4.

NO : Go to step 3.

3. Open wire check (FUEL GAGE+ line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Fuel gauge sending unit 4P connector: disconnected

     Test circuit FUEL GAGE+

     Test point 1 Gauge control module 32P connector No. 22 (BLU)

     Test point 2 Body ground

Fig. 34: Measuring Voltage Between Gauge Control Module 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wire.

NO : The FUEL GAGE+ wire is OK. **REPLACE THE GAUGE CONTROL MODULE** .

4. Open wire check (FUEL GAGE- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Gauge control module 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Fuel gauge sending unit 4P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit FUEL GAGE-

     Test point 1 Gauge control module 32P connector No. 21 (BLK)

     Test point 2 Fuel gauge sending unit 4P connector No. 4 (PUR)

Fig. 35: Checking Continuity Between Gauge Control Module 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FUEL GAGE- wire is OK. **Replace the fuel gauge sending unit** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION .

NO : Repair an open or high resistance in the wire.

DTC B1176: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT SHORT

Fig. 36: DTC Troubleshooting Chart (B1176)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1176 Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Short	

1. Problem verification:
   - 1. Check the fuel gauge.

   Does the gauge move to the full position and the low fuel indicator blink?

   YES : Go to step 2.

   NO : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

2. Fuel gauge operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Fuel gauge sending unit 4P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the fuel gauge.

   Does the gauge move to the empty position?

YES : REPLACE THE FUEL GAUGE SENDING UNIT .

NO : Go to step 3.

3. Shorted wire check (FUEL GAGE+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Gauge control module 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Fuel gauge sending unit 4P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit FUEL GAGE+

     Test point 1 Gauge control module 32P connector No. 22 (BLU)

     Test point 2 Body ground

Fig. 37: Checking Continuity Between Gauge Control Module 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire between the gauge control module and the fuel gauge sending unit.

NO : The FUEL GAGE+ wire is OK. **REPLACE THE GAUGE CONTROL MODULE** .

DTC B121A OR DTC INDICATOR 49: AN OPEN IN THE MODE CONTROL MOTOR CIRCUIT

Fig. 38: DTC Troubleshooting Chart (B121A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B121A An open in the mode control motor circuit	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .

- 4. Check for DTCs.

DTC Description	DTC
B121A An open in the mode control motor circuit	

Is DTC B121A or 49 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the mode control motor circuit.

2. DTC check:
   - 1. Check for DTCs.

DTC Description	DTC
B121D Humidity/in-car temperature sensor communication error	
B1227 An open in the outside air temperature sensor circuit	
B1229 An open in the sunlight sensor circuit	
B1231 An open in the evaporator temperature sensor circuit	
B1233 An open in the air mix control motor circuit (driver's)	
B1236 An open in the passenger's air mix control motor circuit	
B2986 An open in the recirculation control motor circuit	

Is DTC B121D or 89 and/or B1227 or 05 and/or B1229 or 07 and/or B1231 or 09 and/or B1233 or 40 and/or B1236 or 43 and/or B2986 or 55 indicated?

YES : Repair an open in the wire between the climate control unit and the mode control motor.

NO : Go to step 3.

3. Open wire check (MODE-P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A Mode control motor 7P connector No. 2 (BRN)

     Terminal B Body ground

Fig. 39: Connecting Mode Control Motor 7P Connector Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
- 5. Check for DTCs.

DTC Description	DTC
B121A An open in the mode control motor circuit	

Is DTC B121A or 49 indicated?

YES : Repair an open in the wire between the climate control unit and the mode control motor.

NO : The MODE-P wire is OK. **REPLACE THE MODE CONTROL MOTOR** .

DTC B121B OR DTC INDICATOR 4A: A SHORT IN THE MODE CONTROL MOTOR CIRCUIT

Fig. 40: DTC Troubleshooting Chart (B121B)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B121B A short in the mode control motor circuit	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC

B121B A short in the mode control motor circuit	

Is DTC B121B or 4A indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the mode control motor circuit.

2. DTC check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Mode control motor 7P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 5. Check for DTCs with the HDS.

DTC Description	DTC
B121B A short in the mode control motor circuit	

Is DTC B121B or 4A indicated?

YES : Go to step 3.

NO : **REPLACE THE MODE CONTROL MOTOR** .

3. Mode control motor S5V line check:
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Mode control motor 7P connector: disconnected

     Test circuit S5V

     Test point 1 Mode control motor 7P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 41: Measuring Voltage Between Mode Control Motor 7P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 5 V?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (MODE-P line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Climate control unit 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Mode control motor 7P connector: disconnected

     Test circuit MODE-P

     Test point 1 Climate control unit 32P connector No. 22 (WHT)

     Test point 2 Body ground

Fig. 42: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wire between the climate control unit and the mode control motor.

NO : The MODE-P wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

5. Shorted wire check (SENSOR 5V line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Climate control unit 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Mode control motor 7P connector: disconnected

     Test circuit SENSOR 5V

     Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

     Test point 2 Body ground

Fig. 43: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wire between the climate control unit and the mode control motor.

NO : The SENSOR 5V wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

DTC B121D OR DTC INDICATOR 89: HUMIDITY/IN-CAR TEMPERATURE SENSOR COMMUNICATION ERROR

Fig. 44: DTC Troubleshooting Chart (B121D)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC

B121D Humidity/in-car temperature sensor communication error	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B121D Humidity/in-car temperature sensor communication error	

Is DTC B121D or 89 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the humidity/in-car temperature sensor.

2. Humidity/in-car temperature sensor SENSOR 5V line check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Humidity/in-car temperature sensor 4P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Humidity/in-car temperature sensor 4P connector: disconnected

     Test circuit SENSOR 5V

     Test point 1 Humidity/in-car temperature sensor 4P connector No. 1 (LT BLU)

     Test point 2 Body ground

Fig. 45: Measuring Voltage Between Humidity/In-Car Temperature Sensor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : Go to step 3.

NO : Go to step 7.

3. Open wire check (SENSOR COM line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Climate control unit 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Humidity/in-car temperature sensor 4P connector: disconnected

     Test circuit SENSOR COM

     Test point 1 Climate control unit 32P connector No. 23 (GRY)

     Test point 2 Humidity/in-car temperature sensor 4P connector No. 3 (GRY)

Fig. 46: Checking Continuity Between Humidity/In-Car Temperature Sensor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SENSOR COM wire is OK. Go to step 4.

NO : Repair an open in the wire between the climate control unit and the humidity/in-car temperature sensor.

4. Climate control unit HUM CLK, HUM DATA lines check:
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A Humidity/in-car temperature sensor 4P connector No. 2 (ORN)

     Terminal B Humidity/in-car temperature sensor 4P connector No. 4 (RED)

Fig. 47: Identifying Humidity/In-Car Temperature Sensor 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Climate control unit 32P connector: disconnected

Humidity/in-car temperature sensor 4P connector: disconnected

Humidity/in-car temperature sensor 4P connector No. 2 and No. 4: jumped

Test circuit HUM CLK, HUM DATA

Test point 1 Climate control unit 32P connector No. 4 (ORN)

Test point 2 Climate control unit 32P connector No. 5 (RED)

Fig. 48: Identifying Climate Control Unit 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 5.

NO : Go to step 8.

5. Climate control unit HUM DATA line check:
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Humidity/in-car temperature sensor 4P connector: disconnected

     Humidity/in-car temperature sensor 4P connector No. 2 and No. 4: jumped

     Test circuit HUM DATA

     Test point 1 Climate control unit 32P connector No. 4 (ORN)

     Test point 2 Body ground

Fig. 49: Checking Continuity Between Climate Control Unit 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 6.

NO : Go to step 9.

6. Shorted wire check (HUM DATA line):
   - 1. Disconnect the jumper wire.
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   Climate control unit 32P connector: disconnected

   Humidity/in-car temperature sensor 4P connector: disconnected

   Test circuit HUM DATA

   Test point 1 Climate control unit 32P connector No. 4 (ORN)

   Test point 2 Body ground

Fig. 50: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the climate control unit and the humidity/in-car temperature sensor.

NO : Repair a short to body ground in the wire between the climate control unit and the humidity/in-car temperature sensor.

7. Open wire check (SENSOR 5V line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Climate control unit 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Humidity/in-car temperature sensor 4P connector: disconnected

     Test circuit SENSOR 5V

     Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

     Test point 2 Humidity/in-car temperature sensor 4P connector No. 1 (LT BLU)

Fig. 51: Checking Continuity Between Humidity/In-Car Temperature Sensor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wire between the climate control unit and the humidity/in-car temperature sensor.

NO : Repair an open in the wire between the climate control unit and the humidity/in-car temperature sensor.

8. Open wire check (HUM DATA line):
   - 1. Disconnect the jumper wire.
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Humidity/in-car temperature sensor 4P connector: disconnected

     Test circuit HUM DATA

     Test point 1 Climate control unit 32P connector No. 4 (ORN)

     Test point 2 Humidity/in-car temperature sensor 4P connector No. 2 (ORN)

Fig. 52: Checking Continuity Between Humidity/In-Car Temperature Sensor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open in the wire between the climate control unit and the humidity/in-car temperature sensor.

NO : Repair an open in the wire between the climate control unit and the humidity/in-car temperature

sensor.

9. Shorted wire check (HUM CLK line to HUM DATA line):
    - 1. Disconnect the jumper wire.
    - 2. Check for continuity between test points 1 and 2.

    Test condition IG LOCK (0)

    Climate control unit 32P connector: disconnected

    Humidity/in-car temperature sensor 4P connector: disconnected

    Test circuit HUM CLK, HUM DATA

    Test point 1 Climate control unit 32P connector No. 4 (ORN)

    Test point 2 Climate control unit 32P connector No. 5 (RED)

Fig. 53: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wires between the climate control unit and the humidity/in-car temperature sensor.

NO : Go to step 10.

10. Climate control unit check:
    - 1. Reconnect the climate control unit 32P connector.
    - 2. Connect terminals A and B with a jumper wire.

    Terminal A Humidity/in-car temperature sensor 4P connector No. 2 (ORN)

    Terminal B Humidity/in-car temperature sensor 4P connector No. 4 (RED)

Fig. 54: Identifying Humidity/In-Car Temperature Sensor 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Press and hold the AUTO and ON/OFF buttons.

Fig. 55: Identifying Mode Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the mode indicator turn on?

YES : **REPLACE THE HUMIDITY/IN-CAR TEMPERATURE SENSOR** .

NO : **REPLACE THE CLIMATE CONTROL UNIT** .

DTC B1220 OR DTC INDICATOR 56: A SHORT IN THE RECIRCULATION CONTROL MOTOR CIRCUIT

Fig. 56: DTC Troubleshooting Chart (B1220)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1220 A Short in the recirculation control motor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1220 A Short in the recirculation control motor circuit	

Is DTC B1220 or 56 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the recirculation control motor circuit.

2. Shorted wire check (RFD-P, SENSOR 5V lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Climate control unit 32P connector

      Recirculation control motor 7P connector

    - 3. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Recirculation control motor 7P connector: disconnected

      Test circuit RFD-P

      Test point 1 Climate control unit 32P connector No. 6 (PNK)

      Test point 2 Body ground

      Test circuit SENSOR 5V

      Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

      Test point 2 Body ground

Fig. 57: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the recirculation control motor.

NO : The RFD-P and SENSOR 5V wires are OK. Go to step 3.

3. Recirculation control motor check:
   - 1. **TEST THE RECIRCULATION CONTROL MOTOR** .

Is the recirculation control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **REPLACE THE RECIRCULATION CONTROL MOTOR** .

DTC B1227 OR DTC INDICATOR 05: AN OPEN IN THE OUTSIDE AIR TEMPERATURE SENSOR CIRCUIT

Fig. 58: DTC Troubleshooting Chart (B1227)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1227 An open in the outside air temperature sensor circuit	

1. Problem verification:

- 1. Clear the DTC with the HDS.
- 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
- 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
- 4. Check for DTCs.

DTC Description	DTC
B1227 An open in the outside air temperature sensor circuit	

Is DTC B1227 or 05 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the outside air temperature sensor circuit.

2. Outside air temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **REMOVE THE OUTSIDE AIR TEMPERATURE SENSOR, AND TEST IT** .

Is the outside air temperature sensor OK?

YES : With the outside air temperature sensor disconnected, go to step 3.

NO : **REPLACE THE OUTSIDE AIR TEMPERATURE SENSOR** .

3. Open wire check (TAM line):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Outside air temperature sensor 2P connector: disconnected

     Test circuit TAM

     Test point 1 Climate control unit 32P connector No. 19 (PNK)

     Test point 2 Outside air temperature sensor 2P connector No. 1 (BLU)

Fig. 59: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TAM wire is OK. Go to step 4.

NO : Repair an open in the wire between the climate control unit and the outside air temperature sensor.

4. Open wire check (SENSOR COM line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Outside air temperature sensor 2P connector: disconnected

     Test circuit SENSOR COM

     Test point 1 Climate control unit 32P connector No. 23 (GRY)

     Test point 2 Outside air temperature sensor 2P connector No. 2 (GRY)

Fig. 60: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SENSOR COM wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

NO : Repair an open in the wire between the climate control unit and the outside air temperature sensor.

DTC B1228 OR DTC INDICATOR 06: A SHORT IN THE OUTSIDE AIR TEMPERATURE SENSOR CIRCUIT

Fig. 61: DTC Troubleshooting Chart (B1228)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1228 A short in the outside air temperature sensor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1228 A short in the outside air temperature sensor circuit	

Is DTC B1228 or 06 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the outside air temperature circuit.

2. Outside air temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. **REMOVE THE OUTSIDE AIR TEMPERATURE SENSOR, AND TEST IT** .

Is the outside air temperature sensor OK?

YES : With the outside air temperature sensor disconnected, go to step 3.

NO : **REPLACE THE OUTSIDE AIR TEMPERATURE SENSOR** .

3. Shorted wire check (TAM line):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Outside air temperature sensor 2P connector: disconnected

     Test circuit TAM

     Test point 1 Climate control unit 32P connector No. 19 (PNK)

     Test point 2 Body ground

Fig. 62: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the climate control unit and the outside air temperature sensor.

NO : The TAM wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

DTC B1229 OR DTC INDICATOR 07: AN OPEN IN THE SUNLIGHT SENSOR CIRCUIT

Fig. 63: DTC Troubleshooting Chart (B1229)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1229 An open in the sunlight sensor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1229 An open in the sunlight sensor circuit	

Is DTC B1229 or 07 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the sunlight sensor circuit.

2. Sunlight sensor check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **TEST THE SUNLIGHT SENSOR** .

Is the sunlight sensor OK?

YES : With the automatic lighting/sunlight sensor disconnected, go to step 3.

NO : **REPLACE THE SUNLIGHT SENSOR** .

3. Open wire check (TSUN line):
    - 1. Disconnect the following connector.

      Climate control unit 32P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Automatic lighting/sunlight sensor 7P connector: disconnected

      Test circuit TSUN

      Test point 1 Climate control unit 32P connector No. 3 (PUR)

      Test point 2 Automatic lighting/sunlight sensor 7P connector No. 2 (PUR)

Fig. 64: Checking Continuity Between Automatic Lighting/Sunlight Sensor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TSUN wire is OK. Go to step 4.

NO : Repair an open in the wire between the climate control unit and the sunlight sensor.

4. Open wire check (SENSOR COM line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Automatic lighting/sunlight sensor 7P connector: disconnected

     Test circuit SENSOR COM

     Test point 1 Climate control unit 32P connector No. 23 (GRY)

     Test point 2 Automatic lighting/sunlight sensor 7P connector No. 3 (GRY)

Fig. 65: Checking Continuity Between Automatic Lighting/Sunlight Sensor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SENSOR COM wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

NO : Repair an open in the wire between the climate control unit and the sunlight sensor.

DTC B1230 OR DTC INDICATOR 08: A SHORT IN THE SUNLIGHT SENSOR CIRCUIT

Fig. 66: DTC Troubleshooting Chart (B1230)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1230 A short in the sunlight sensor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1230 A short in the sunlight sensor circuit	

   Is DTC B1230 or 08 indicated?

   YES : Go to step 2.

   NO : Intermittent failure. Check for loose wires or poor connections on the sunlight sensor circuit.

2. Sunlight sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TEST THE SUNLIGHT SENSOR** .

   Is the sunlight sensor OK?

   YES : With the automatic lighting/sunlight sensor disconnected, go to step 3.

   NO : **REPLACE THE SUNLIGHT SENSOR** .

3. Shorted wire check (TSUN line):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

Automatic lighting/sunlight sensor 7P connector: disconnected

Test circuit TSUN

Test point 1 Climate control unit 32P connector No. 3 (PUR)

Test point 2 Body ground

Fig. 67: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the climate control unit and the sunlight sensor.

NO : The TSUN wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

DTC B1231 OR DTC INDICATOR 09: AN OPEN IN THE EVAPORATOR TEMPERATURE SENSOR CIRCUIT

Fig. 68: DTC Troubleshooting Chart (B1231)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1231 An open in the evaporator temperature sensor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1231 An open in the evaporator temperature sensor circuit	

Is DTC B1231 or 09 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the evaporator temperature sensor circuit.

2. Evaporator temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **REMOVE THE EVAPORATOR TEMPERATURE SENSOR, AND TEST IT** .

Is the evaporator temperature sensor OK?

YES : With the evaporator temperature sensor disconnected, go to step 3.

NO : **REPLACE THE EVAPORATOR TEMPERATURE SENSOR** .

3. Open wire check (TEVA line):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Evaporator temperature sensor 2P connector: disconnected

     Test circuit TEVA

     Test point 1 Climate control unit 32P connector No. 18 (ORN)

     Test point 2 Evaporator temperature sensor 2P connector No. 1 (BRN)

Fig. 69: Checking Continuity Between Evaporator Temperature Sensor 2P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TEVA wire is OK. Go to step 4.

NO : Repair an open in the wire between the climate control unit and the evaporator temperature sensor.

4. Open wire check (SENSOR COM/SENS-COM lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Evaporator temperature sensor 2P connector: disconnected

     Test circuit SENSOR COM/SENS-COM

     Test point 1 Climate control unit 32P connector No. 23 (GRY)

     Test point 2 Evaporator temperature sensor 2P connector No. 2 (RED)

Fig. 70: Checking Continuity Between Evaporator Temperature Sensor 2P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SENSOR COM/SENS-COM wires are OK. **REPLACE THE CLIMATE CONTROL UNIT** .

NO : Repair an open in the wire between the climate control unit and the evaporator temperature sensor.

DTC B1232 OR DTC INDICATOR 0A: A SHORT IN THE EVAPORATOR TEMPERATURE SENSOR CIRCUIT

Fig. 71: DTC Troubleshooting Flowchart (B1232)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1232 A short in the evaporator temperature sensor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1232 A short in the evaporator temperature sensor circuit	

Is DTC B1232 or 0A indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the evaporator temperature sensor circuit.

2. Evaporator temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. **REMOVE THE EVAPORATOR TEMPERATURE SENSOR, AND TEST IT** .

Is the evaporator temperature sensor OK?

YES : With the evaporator temperature sensor disconnected, go to step 3.

NO : **REPLACE THE EVAPORATOR TEMPERATURE SENSOR** .

3. Shorted wire check (TEVA line):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Evaporator temperature sensor 2P connector: disconnected

     Test circuit TEVA

     Test point 1 Climate control unit 32P connector No. 18 (ORN)

     Test point 2 Body ground

Fig. 72: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the climate control unit and the evaporator temperature sensor.

NO : The TEVA wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

DTC B1233 OR DTC INDICATOR 40: AN OPEN IN THE AIR MIX CONTROL MOTOR CIRCUIT (DRIVER'S)

Fig. 73: DTC Troubleshooting Chart (B1233)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1233 An open in the air mix control motor circuit (driver's)	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1233 An open in the air mix control motor circuit (driver's)	

Is DTC B1233 or 40 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the driver's air mix control motor circuit.

2. Open wire check (AMD P DR/AMD-P, SENSOR 5V/S5V, SENSOR COM/SENS-COM lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Climate control unit 32P connector

     Driver's air mix control motor 7P connector

   - 3. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Driver's air mix control motor 7P connector: disconnected

     Test circuit AMD P DR/AMD-P

     Test point 1 Climate control unit 32P connector No. 20 (LT GRN)

     Test point 2 Driver's air mix control motor 7P connector No. 2 (GRY)

     Test circuit SENSOR 5V/S5V

     Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

     Test point 2 Driver's air mix control motor 7P connector No. 3 (BLK)

     Test circuit SENSOR COM/SENS-COM

     Test point 1 Climate control unit 32P connector No. 23 (GRY)

     Test point 2 Driver's air mix control motor 7P connector No. 1 (RED)

Fig. 74: Checking Continuity Between Driver's Air Mix Control Motor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AMD P DR/AMD-P, SENSOR 5V/S5V, and SENSOR COM/SENS-COM wires are OK. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the driver's air mix control motor.

3. Driver's air mix control motor check
   - 1. **Test the driver's air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

Is the driver's air mix control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **Replace the driver's air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** .

DTC B1234 OR DTC INDICATOR 41: A SHORT IN THE AIR MIX CONTROL MOTOR CIRCUIT (DRIVER'S)

Fig. 75: DTC Troubleshooting Chart (B1234)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1234 A short in the air mix control motor circuit (driver's)	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1234 A short in the air mix control motor circuit (driver's)	

Is DTC B1234 or 41 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the driver's air mix control motor circuit.

2. Shorted wire check (AMD P DR, SENSOR 5V lines):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connectors.

  Climate control unit 32P connector

  Driver's air mix control motor 7P connector

- 3. Check for continuity between test points 1 and 2 individually.

  Test condition IG LOCK (0)

  Climate control unit 32P connector: disconnected

  Driver's air mix control motor 7P connector: disconnected

  Test circuit AMD P DR

  Test point 1 Climate control unit 32P connector No. 20 (LT GRN)

  Test point 2 Body ground

  Test circuit SENSOR 5V

  Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

  Test point 2 Body ground

Fig. 76: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the driver's air mix control motor.

NO : The AMD P DR and SENSOR 5V wires are OK. Go to step 3.

3. Driver's air mix control motor check:
   - 1. **Test the driver's air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

   Is the driver's air mix control motor OK?

   YES : **REPLACE THE CLIMATE CONTROL UNIT** .

   NO : **Replace the driver's air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** .

DTC B1235 OR DTC INDICATOR 42: A PROBLEM IN THE AIR MIX CONTROL MOTOR CIRCUIT, LINKAGE, DOOR, OR MOTOR (DRIVER'S)

Fig. 77: DTC Troubleshooting Chart (B1235)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1235 A problem in the air mix control motor circuit, linkage, door, or motor (driver's)	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1235 A problem in the air mix control motor circuit, linkage, door, or motor (driver's)	

Is DTC B1235 or 42 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections in the driver's air mix control motor circuit.

2. Open wire check (M-HOT DR/M-HOT, M-COOL DR/M-COOL lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Climate control unit 32P connector

     Driver's air mix control motor 7P connector

   - 3. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Driver's air mix control motor 7P connector: disconnected

     Test circuit M-HOT DR/M-HOT

     Test point 1 Climate control unit 32P connector No. 13 (LT BLU)

     Test point 2 Driver's air mix control motor 7P connector No. 7 (LT GRN)

     Test circuit M-COOL DR/M-COOL

Test point 1 Climate control unit 32P connector No. 14 (GRN)

Test point 2 Driver's air mix control motor 7P connector No. 6 (BLU)

Fig. 78: Checking Continuity Between Driver's Air Mix Control Motor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The M-HOT DR/M-HOT and M-COOL DR/M-COOL wires are not open. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the driver's air mix control motor.

3. Shorted wire check (M-HOT DR, M-COOL DR lines):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Driver's air mix control motor 7P connector: disconnected

     Test circuit M-HOT DR

     Test point 1 Climate control unit 32P connector No. 13 (LT BLU)

     Test point 2 Body ground

     Test circuit M-COOL DR

     Test point 1 Climate control unit 32P connector No. 14 (GRN)

Test point 2 Body ground

Fig. 79: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the driver's air mix control motor.

NO : The M-HOT and M-COOL wires are OK. Go to step 4.

4. Driver's air mix control motor check:
   - 1. **Test the driver's air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

Is the driver's air mix control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **Replace the driver's air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , or repair the air mix control linkage or door.

DTC B1236 OR DTC INDICATOR 43: AN OPEN IN THE PASSENGER'S AIR MIX CONTROL MOTOR CIRCUIT

Fig. 80: DTC Troubleshooting Chart (B1236)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1236 An open in the passenger's air mix control motor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1236 An open in the passenger's air mix control motor circuit	

Is DTC B1236 or 43 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the passenger's air mix control motor circuit.

2. Open wire check (AMD P AS/AMD-P AS, SENSOR 5V/S5V, SENSOR COM/SENS-COM lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Climate control unit 32P connector

      Passenger's air mix control motor 7P connector

    - 3. Check for continuity between test points 1 and 2 respectively.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Passenger's air mix control motor 7P connector: disconnected

      Test circuit AMD P AS/AMD-P AS

      Test point 1 Climate control unit 32P connector No. 21 (BRN)

      Test point 2 Passenger's air mix control motor 7P connector No. 2 (YEL)

      Test circuit SENSOR 5V/S5V

      Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

      Test point 2 Passenger's air mix control motor 7P connector No. 1 (BLK)

      Test circuit SENSOR COM/SENS-COM

      Test point 1 Climate control unit 32P connector No. 23 (GRY)

      Test point 2 Passenger's air mix control motor 7P connector No. 3 (RED)

Fig. 81: Checking Continuity Between Passenger's Air Mix Control Motor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AMD P AS/AMD-P AS, SENSOR 5V/S5V, and SENSOR COM/SENS-COM wires are OK. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the passenger's air mix control motor.

3. Passenger's air mix control motor check:
   - 1. **Test the passenger's air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

Is the passenger's air mix control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **Replace the passenger's air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** .

DTC B1237 OR DTC INDICATOR 44: A SHORT IN THE PASSENGER'S AIR MIX CONTROL MOTOR CIRCUIT

Fig. 82: DTC Troubleshooting Chart (B1237)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1237 A short in the passenger's air mix control motor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1237 A short in the passenger's air mix control motor circuit	

Is DTC B1237 or 44 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the passenger's air mix control motor circuit.

2. Shorted wire check (AMD P AS, SENSOR 5V lines):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connectors.

  Climate control unit 32P connector

  Passenger's air mix control motor 7P connector

- 3. Check for continuity between test points 1 and 2 individually.

  Test condition IG LOCK (0)

  Climate control unit 32P connector: disconnected

  Passenger's air mix control motor 7P connector: disconnected

  Test circuit AMD P AS

  Test point 1 Climate control unit 32P connector No. 21 (BRN)

  Test point 2 Body ground

  Test circuit SENSOR 5V

  Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

  Test point 2 Body ground

Fig. 83: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the passenger's air mix control motor.

NO : The AMD P AS and SENSOR 5V wires are OK. Go to step 3.

3. Passenger's air mix control motor check:
   - 1. **Test the passenger's air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

   Is the passenger's air mix control motor OK?

   YES : **REPLACE THE CLIMATE CONTROL UNIT** .

   NO : **Replace the passenger's air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** .

DTC B1238 OR DTC INDICATOR 45: A PROBLEM IN THE PASSENGER'S AIR MIX CONTROL MOTOR CIRCUIT, LINKAGE, DOOR, OR MOTOR

Fig. 84: DTC Troubleshooting Chart (B1238)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1238 A problem in the passenger's air mix control motor circuit, linkage, door, or motor	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1238 A problem in the passenger's air mix control motor circuit, linkage, door, or motor	

Is DTC B1238 or 45 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections in the passenger's air mix control motor circuit.

2. Open wire check (M-HOT AS, M-COOL AS lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Climate control unit 32P connector

     Passenger's air mix control motor 7P connector

   - 3. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Passenger's air mix control motor 7P connector: disconnected

     Test circuit M-HOT AS

     Test point 1 Climate control unit 32P connector No. 29 (WHT)

     Test point 2 Passenger's air mix control motor 7P connector No. 6 (PNK)

     Test circuit M-COOL AS

Test point 1 Climate control unit 32P connector No. 30 (PUR)

Test point 2 Passenger's air mix control motor 7P connector No. 7 (LT BLU)

Fig. 85: Checking Continuity Between Passenger's Air Mix Control Motor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The M-HOT AS and M-COOL AS wires are not open. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the passenger's air mix control motor.

3. Shorted wire check (M-HOT AS, M-COOL AS lines):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Passenger's air mix control motor 7P connector: disconnected

     Test circuit M-HOT AS

     Test point 1 Climate control unit 32P connector No. 29 (WHT)

     Test point 2 Body ground

     Test circuit M-COOL AS

     Test point 1 Climate control unit 32P connector No. 30 (PUR)

Test point 2 Body ground

Fig. 86: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the passenger's air mix control motor.

NO : The M-HOT AS and M-COOL AS wires are OK. Go to step 4.

4. Passenger's air mix control motor check:
   - 1. **Test the passenger's air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

Is the passenger's air mix control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **Replace the passenger's air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , or repair the passenger's air mix control linkage or door.

DTC B1240 OR DTC INDICATOR 4B: A PROBLEM IN THE MODE CONTROL MOTOR CIRCUIT, LINKAGE, DOOR, OR MOTOR

Fig. 87: DTC Troubleshooting Chart (B1240)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1240 A problem in the mode control motor circuit, linkage, door, or motor	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1240 A problem in the mode control motor circuit, linkage, door, or motor	

Is DTC B1240 or 4B indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the mode control motor circuit.

2. Open wire check (M-DEF, M-VENT lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Climate control unit 32P connector

      Mode control motor 7P connector

    - 3. Check for continuity between test points 1 and 2 respectively.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Mode control motor 7P connector: disconnected

      Test circuit M-DEF

      Test point 1 Climate control unit 32P connector No. 10 (YEL)

      Test point 2 Mode control motor 7P connector No. 6 (GRN)

      Test circuit M-VENT

      Test point 1 Climate control unit 32P connector No. 11 (PUR)

      Test point 2 Mode control motor 7P connector No. 7 (WHT)

Fig. 88: Checking Continuity Between Mode Control Motor 7P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The M-DEF and M-VENT wires are not open. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the mode control motor.

3. Shorted wire check (M-DEF, M-VENT lines):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Mode control motor 7P connector: disconnected

     Test circuit M-DEF

     Test point 1 Climate control unit 32P connector No. 10 (YEL)

     Test point 2 Body ground

     Test circuit M-VENT

     Test point 1 Climate control unit 32P connector No. 11 (PUR)

     Test point 2 Body ground

Fig. 89: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the mode control motor.

NO : The M-DEF and M-VENT wires are OK. Go to step 4.

4. Mode control motor check:
    - 1. **TEST THE MODE CONTROL MOTOR** .

    Is the mode control motor OK?

    YES : **REPLACE THE CLIMATE CONTROL UNIT** .

    NO : **REPLACE THE MODE CONTROL MOTOR** , or repair the mode control linkage or doors.

DTC B1241 OR DTC INDICATOR 59: A PROBLEM IN THE BLOWER MOTOR CIRCUIT

Fig. 90: DTC B1241 Description Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC

B1241 A problem in the blower motor circuit	

1. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B1241 A problem in the blower motor circuit	

Is DTC B1241 or 59 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the blower motor circuit.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

     Fuse No. A2-8 (40 A)

     Location Under-hood fuse/relay box

     Fuse No. B22 (7.5A)

     Location Under-dash fuse/relay box

Are the fuses OK?

YES : Go to step 3.

NO : Replace the fuse, and recheck. If fuse blows again, check for a short in the No. A2-8 (40 A) and or B22 (7.5A) fuse circuits.

3. Blower motor power circuit check:
   - 1. Disconnect the following connector.

     Blower motor 2P connector

   - 2. Turn the ignition switch to ON (II).

- 3. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Blower motor 2P connector: disconnected

  Test circuit BLW-RLY

  Test point 1 Blower motor 2P connector No. 2 (WHT)

  Test point 2 Body ground

Fig. 91: Measuring Voltage Between Blower Motor 2P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 4.

NO : Go to step 10.

4. Blower motor operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the blower 2P connector.
   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Blower motor 2P connector No. 1 (GRN)

     Terminal B Body ground

Fig. 92: Connecting Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).

Does the blower motor run?

YES : Go to step 5.

NO : **REPLACE THE BLOWER MOTOR** .

5. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the jumper wire.
   - 3. Disconnect the following connector.

     Power transistor 4P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Power transistor 4P connector: disconnected

     Test circuit GND

     Test point 1 Power transistor 4P connector No. 3 (BLK)

     Test point 2 Body ground

Fig. 93: Checking Continuity Between Power Transistor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 6.

NO : Check for an open in the wire between the power transistor and body ground. If the wire is OK, check for poor ground at G402.

6. Open wire check (BLW-M line):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A Power transistor 4P connector No. 3 (BLK)

     Terminal B Power transistor 4P connector No. 4 (GRN)

Fig. 94: Connecting Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Turn the ignition switch to ON (II).

Does the blower motor run at high speed?

YES : The BLW-M wire is OK. Go to step 7.

NO : Repair an open in the wire between the power transistor and the blower motor.

7. Shorted wire check (BLOWER G, BLOWER V lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the jumper wire.
    - 3. Disconnect the following connector.

      Climate control unit 32P connector

    - 4. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Power transistor 4P connector: disconnected

      Test circuit BLOWER G

      Test point 1 Climate control unit 32P connector No. 7 (GRN)

      Test point 2 Body ground

      Test circuit BLOWER V

      Test point 1 Climate control unit 32P connector No. 8 (RED)

      Test point 2 Body ground

Fig. 95: Checking Continuity Between Climate Control Unit 32P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the power transistor.

NO : The BLOWER G and BLOWER V wires are not shorted to ground. Go to step 8.

8. Open wire check (BLOWER G/BLW-G, BLOWER V/BLW-V lines):
    - 1. Check for continuity between test points 1 and 2 respectively.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Power transistor 4P connector: disconnected

      Test circuit BLOWER G/BLW-G

      Test point 1 Climate control unit 32P connector No. 7 (GRN)

      Test point 2 Power transistor 4P connector No. 1 (YEL)

      Test circuit BLOWER V/BLW-V

      Test point 1 Climate control unit 32P connector No. 8 (RED)

      Test point 2 Power transistor 4P connector No. 2 (BLU)

Fig. 96: Checking Continuity Between Power Transistor 4P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The BLOWER G/BLW-G and BLOWER V/BLW-V wires are OK. Go to step 9.

NO : Repair an open in the wire between the climate control unit and the power transistor.

9. Power transistor check:
    - 1. Reconnect the climate control unit 32P connector.
    - 2. **TEST THE POWER TRANSISTOR** .

    Is the power transistor OK?

    YES : **REPLACE THE CLIMATE CONTROL UNIT** .

    NO : **REPLACE THE POWER TRANSISTOR** .

    If the power transistor is faulty, check the blower motor for damage. If necessary, **REPLACE THE BLOWER MOTOR** .

10. Blower motor relay check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove the blower motor relay from the under-hood fuse/relay box, and **TEST IT** .

    Is the relay OK?

    YES : Go to step 11.

    NO : Replace the blower motor relay.

11. Open wire check (+B HTR MTR line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      Blower motor 2P connector: disconnected

      Blower motor relay: disconnected

      Test circuit +B HTR MTR

      Test point 1 Blower motor relay 5P socket No. 1 (Under-hood fuse/relay box)

      Test point 2 Body ground

Fig. 97: Measuring Voltage Between Blower Motor Relay 5P Socket No. 1 Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B HTR MTR wire is OK. Go to step 12.

NO : An open in +B HTR MTR wire. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

12. Open wire check (IG2 A/C line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Blower motor 2P connector: disconnected

    Blower motor relay: disconnected

    Test circuit IG2 A/C

    Test point 1 Blower motor relay 5P socket No. 3 (PNK) (Under-hood fuse/relay box)

    Test point 2 Body ground

Fig. 98: Measuring Voltage Between Blower Motor Relay 5P Socket Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG2 A/C wire is OK. Go to step 13.

NO : Repair an open in the wire between the No. B22 (7.5 A) fuse in the under-dash fuse/relay box and the blower motor relay.

13. Open wire check (GND line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check for continuity between test points 1 and 2.

    Test condition IG LOCK (0)

    Blower motor 2P connector: disconnected

    Blower motor relay: disconnected

    Test circuit GND

    Test point 1 Blower motor relay 5P socket No. 5 (BRN) (Under-hood fuse/relay box)

    Test point 2 Body ground

Fig. 99: Checking Continuity Between Blower Motor Relay 5P Socket Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open in the wire between the blower motor relay and the blower motor.

NO : Check for an open in the wire between the blower motor relay and body ground. If the wire is OK, check for poor ground at G402.

DTC B1275: HEADLIGHT SWITCH OFF POSITION CIRCUIT MALFUNCTION; DTC B1276: HEADLIGHT SWITCH PARKING POSITION CIRCUIT MALFUNCTION; DTC B1277: HEADLIGHT SWITCH AUTO POSITION CIRCUIT MALFUNCTION; DTC B1278: HEADLIGHT SWITCH ON POSITION CIRCUIT MALFUNCTION

DTC Troubleshooting: B1275, B1276, B1277, B1278

Fig. 100: DTC Troubleshooting Chart (B1275, B1276, B1277, B1278)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1275 Headlight Switch OFF Position Circuit Malfunction	
B1276 Headlight Switch PARKING Position Circuit Malfunction	
B1277 Headlight Switch AUTO Position Circuit Malfunction	
B1278 Headlight Switch ON Position Circuit Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Problem verification:
   - 1. Check the parameter(s) below with the HDS.

WHEN COMBINATION LIGHT SWITCH IS TURNED OFF

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Headlight Switch (OFF)	ON			
Headlight Switch (PARKING)	OFF			
Headlight Switch (AUTO)	OFF			
Headlight Switch (HEADLIGHT)	OFF			

WHEN COMBINATION LIGHT SWITCH IS TURNED TO PARKING POSITION

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Headlight Switch (OFF)	OFF			
Headlight Switch (PARKING)	ON			
Headlight Switch (AUTO)	OFF			
Headlight Switch (HEADLIGHT)	OFF			

WHEN COMBINATION LIGHT SWITCH IS TURNED TO AUTO

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Headlight Switch (OFF)	OFF			
Headlight Switch (PARKING)	OFF			
Headlight Switch (AUTO)	ON			
Headlight Switch (HEADLIGHT)	OFF			

WHEN COMBINATION LIGHT SWITCH IS TURNED ON (HEADLIGHT)

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Headlight Switch (OFF)	OFF			
Headlight Switch (PARKING)	ON			
Headlight Switch (AUTO)	OFF			

Headlight Switch (HEADLIGHT)	ON			

Do the current condition(s) match the threshold?

YES : Intermittent failure, the system is OK at this time. Check for loose or poor connections.

NO : Go to step 2.

2. Exterior lights system check:
   - 1. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Headlight Switch (OFF)		
Headlight Switch (PARKING)		
Headlight Switch (AUTO)		
Headlight Switch (HEADLIGHT)		

Is data list value OFF, not ON?

YES : Go to step 5.

NO : Go to step 3.

3. Determine possible failure area (combination light switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Combination light switch 12P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Headlight Switch (OFF)		
Headlight Switch (PARKING)		
Headlight Switch (AUTO)		
Headlight Switch (HEADLIGHT)		

Has the data list value changed from ON to OFF?

YES : Replace the combination light switch.

NO : Go to step 4.

4. Shorted wire check (H/L OFF SW, H/L ON SW, SMALL LT SW lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Under-dash fuse/relay box connector T (20P)

    - 3. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

      Combination light switch 12P connector: disconnected

      Under-dash fuse/relay box connector T (20P): disconnected

      Test circuit H/L OFF SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 1 (ORN)

      Test point 2 Body ground

      Test circuit H/L ON SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 2 (WHT)

      Test point 2 Body ground

      Test circuit SMALL LT SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 3 (BLU)

      Test point 2 Body ground

Fig. 101: Checking Continuity Between Under-Dash Fuse/Relay Box Connector T (20P) Terminals 1 And 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The H/L OFF SW, H/L ON SW, and SMALL LT SW wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

5. Determine possible failure area (combination light switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Combination light switch 12P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Combination light switch 12P connector No. 1 (ORN)

     Terminal B Body ground

     Terminal A Combination light switch 12P connector No. 7 (WHT)

     Terminal B Body ground

     Terminal A Combination light switch 12P connector No. 8 (BLU)

     Terminal B Body ground

Fig. 102: Connecting Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Check the parameter(s) below with the HDS.

Signal	Current conditions	

	Values	Unit
Headlight Switch (OFF)		
Headlight Switch (PARKING)		
Headlight Switch (AUTO)		
Headlight Switch (HEADLIGHT)		

Has the data list value changed from OFF to ON?

YES : **<u>REPLACE THE COMBINATION LIGHT SWITCH</u>** .

NO : Go to step 6.

6. Open wire check (H/L OFF SW, H/L ON SW, SMALL LT SW, COMBI SW GND (LT) lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector T (20P)

   - 3. Check for continuity test points 1 and 2.

     Test condition IG LOCK (0)

     Under-dash fuse/relay box connector T (20P): disconnected

     Combination light switch 12P connector: disconnected

     Test circuit H/L OFF SW

     Test point 1 Under-dash fuse/relay box connector T (20P) No. 1 (ORN)

     Test point 2 Combination light switch 12P connector No. 1 (ORN)

     Test circuit H/L ON SW

     Test point 1 Under-dash fuse/relay box connector T (20P) No. 2 (WHT)

     Test point 2 Combination light switch 12P connector No. 7 (WHT)

     Test circuit SMALL LT SW

     Test point 1 Under-dash fuse/relay box connector T (20P) No. 3 (BLU)

     Test point 2 Combination light switch 12P connector No. 8 (BLU)

     Test circuit COMBI SW GND (LT)

Test point 1 Under-dash fuse/relay box connector T (20P) No. 5 (BLK)

Test point 2 Combination light switch 12P connector No. 6 (BLK)

Fig. 103: Checking Continuity Between Under-Dash Fuse/Relay Box Connector T (20P) Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The H/L OFF SW, H/L ON SW, SMALL LT SW, and COMBI SW GND (LT) wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Repair an open or high resistance in the wire.

DTC B1279: DIMMER SWITCH CIRCUIT MALFUNCTION

DTC Troubleshooting: B1279

Fig. 104: DTC Troubleshooting Chart (B1279)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1279 Dimmer Switch Circuit Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Exterior lights system check 1:
    - 1. With the headlight dimmer switch in the neutral position, check the parameter(s) below with the

HDS.

Signal	Current conditions	
	Values	Unit
Headlight Switch (HIGH BEAM)		
Headlight Switch (PASSING)		

Is either information indicator ON?

YES : Go to step 4.

NO : Go to step 2.

2. Exterior lights system check 2:
   - 1. With the headlight dimmer switch in the high beam position, check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Headlight Switch (HIGH BEAM)		
Headlight Switch (PASSING)		

Are both information indicators ON?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Shorted wire check (H/L HI SW to PASSING SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Combination light switch 12P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Under-dash fuse/relay box connector T (20P) No. 12 (LT BLU)

     Terminal B Body ground

   - 4. Check the parameter(s) below with the HDS.

Fig. 105: Connecting Jumper Wire Between Under-Dash Fuse/Relay Box Connector (20P) Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Signal	Current conditions	
	Values	Unit
Headlight Switch (HIGH BEAM)		
Headlight Switch (PASSING)		

Are both information indicators ON?

YES : Repair a short between the wires.

NO : The H/L HI SW to PASSING SW wire is OK. **REPLACE THE COMBINATION LIGHT SWITCH** .

4. Determine possible failure area (combination light switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Combination light switch 12P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Headlight Switch (HIGH BEAM)		
Headlight Switch (PASSING)		

Is either information indicator ON?

YES : Go to step 5.

NO : **REPLACE THE COMBINATION LIGHT SWITCH** .

5. Shorted wire check (PASSING SW, H/L HI SW lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Under-dash fuse/relay box connector T (20P)

    - 3. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

      Combination light switch 12P connector: disconnected

      Under-dash fuse/relay box connector T (20P): disconnected

      Test circuit PASSING SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 11 (RED)

      Test point 2 Body ground

      Test circuit H/L HI SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 12 (LT BLU)

      Test point 2 Body ground

Fig. 106: Checking Continuity Between Under-Dash Fuse/Relay Box Connector (20P) Terminals 11, 12 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Are there continuity?

YES : Repair a short to ground in the wire.

NO : The PASSING SW and H/L HI SW wires are OK. Faulty MICU; **REPLACE THE UNDER-**

DASH FUSE/RELAY BOX .

DTC B1280: TURN SIGNAL SWITCH CIRCUIT MALFUNCTION

DTC Troubleshooting: B1280

Fig. 107: DTC Troubleshooting Chart (B1280)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1280 Turn Signal Switch Circuit Malfunction	

1. Turn signal/hazard warning lights system check 1:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Turn Signal Switch (LEFT)	OFF			
Turn Signal Switch (RIGHT)	OFF			

Do the current condition(s) match the threshold?

YES : Go to step 2.

NO : Go to step 4.

2. Turn signal/hazard warning lights system check 2:
   - 1. Operate the turn signal switch to the left or right position.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Turn Signal Switch (LEFT)	ON			
Turn Signal Switch (RIGHT)	ON			

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Shorted wire check (R TURN SW to L TURN SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Combination light switch 12P connector

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Combination light switch 12P connector No. 10 (LT GRN)

     Terminal B Body ground

Fig. 108: Connecting Jumper Wire Between Combination Light Switch Connector (12P) Terminal 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Turn Signal Switch (LEFT)	OFF			
Turn Signal Switch (RIGHT)	ON			

Do the current condition(s) match the threshold?

YES : The R TURN SW to L TURN SW wire is OK. **REPLACE THE COMBINATION LIGHT SWITCH** .

NO : Repair a short between the wires.

4. Turn signal/hazard warning lights system check 2:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Turn Signal Switch (LEFT)	ON			

Do the current condition(s) match the threshold?

YES : Go to step 6.

NO : Go to step 5.

5. Shorted wire check (R TURN SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

Combination light switch 12P connector

- 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Turn Signal Switch (RIGHT)	ON			

Do the current condition(s) match the threshold?

YES : Repair a short to ground in the wire.

NO : The R TURN SW wire is OK. **REPLACE THE COMBINATION LIGHT SWITCH** .

6. Shorted wire check (L TURN SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Combination light switch 12P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Turn Signal Switch (LEFT)	ON			

Do the current condition(s) match the threshold?

YES : Repair a short to ground in the wire.

NO : The L TURN SW wire is OK. **REPLACE THE COMBINATION LIGHT SWITCH** .

DTC B1281: FRONT WIPER MIST POSITION CIRCUIT MALFUNCTION; DTC B1282: FRONT WIPER INT (AUTO) POSITION CIRCUIT MALFUNCTION; DTC B1283: FRONT WIPER LOW POSITION CIRCUIT MALFUNCTION; DTC B1284: FRONT WIPER HIGH POSITION CIRCUIT MALFUNCTION

DTC Troubleshooting: B1281, B1282, B1283, B1284

Fig. 109: DTC Troubleshooting Chart (B1281, B1282, B1283 And B1284)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC

B1281 Front Wiper MIST Position Circuit Malfunction	
B1282 Front Wiper INT (AUTO) Position Circuit Malfunction	
B1283 Front Wiper LOW Position Circuit Malfunction	
B1284 Front Wiper HIGH Position Circuit Malfunction	

NOTE: **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. Wiper/washers system check:
   - 1. Turn the windshield wiper switch to the OFF position, check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	OFF			
Windshield Wiper Switch (HIGH)	OFF			
Windshield Wiper Switch (INT)	OFF			
Windshield Wiper Switch (MIST)	OFF			

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Go to step 2.

2. Determine possible failure area (windshield wiper/washer switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Windshield wiper/washer switch 10P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	OFF			
Windshield Wiper Switch (HIGH)	OFF			
Windshield Wiper Switch (INT)	OFF			
Windshield Wiper Switch (MIST)	OFF			

Do the current condition(s) match the threshold?

YES : Replace the windshield wiper/washer switch.

NO : Go to step 3.

3. Shorted wire check (FR WIPER INT&LO SW, FR WIPER HI&LO SW, FR WIPER MIST SW lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Under-dash fuse/relay box connector T (20P)

    - 3. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

      Windshield wiper/washer switch 10P connector: disconnected

      Under-dash fuse/relay box connector T (20P): disconnected

      Test circuit FR WIPER INT&LO SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 16 (ORN)

      Test point 2 Body ground

      Test circuit FR WIPER HI&LO SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 17 (WHT)

      Test point 2 Body ground

      Test circuit FR WIPER MIST SW

      Test point 1 Under-dash fuse/relay box connector T (20P) No. 18 (GRN)

      Test point 2 Body ground

Fig. 110: Checking Continuity Between Under-Dash Fuse/Relay Box Connector (20P) Terminals 16, 17, 18 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire.

NO : The FR WIPER INT&LO SW, FR WIPER HI&LO SW, and FR WIPER MIST SW wires are OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

4. Shorted wire check (FR WIPER MIST SW to FR WIPER HI&LO SW, FR WIPER HI&LO SW to FR WIPER INT&LO SW, FR WIPER MIST SW to FR WIPER INT&LO SW lines):
   - 1. Check the parameter(s) below with the HDS.

WHEN WINDSHIELD WIPER SWITCH IS TURNED TO HI

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	OFF			
Windshield Wiper Switch (HIGH)	ON			
Windshield Wiper Switch (INT)	OFF			
Windshield Wiper Switch (MIST)	OFF			

WHEN WINDSHIELD WIPER SWITCH IS TURNED TO LO

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	ON			
Windshield Wiper Switch (HIGH)	OFF			
Windshield Wiper Switch (INT)	ON			
Windshield Wiper Switch (MIST)	OFF			

WHEN WINDSHIELD WIPER SWITCH IS TURNED TO INT

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	OFF			
Windshield Wiper Switch (HIGH)	OFF			
Windshield Wiper Switch (INT)	ON			
Windshield Wiper Switch (MIST)	OFF			

WHEN WINDSHIELD WIPER SWITCH IS TURNED OFF

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	OFF			
Windshield Wiper Switch (HIGH)	OFF			
Windshield Wiper Switch (INT)	OFF			
Windshield Wiper Switch (MIST)	OFF			

WHEN WINDSHIELD WIPER SWITCH IS TURNED TO MIST

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Windshield Wiper Switch (LOW)	OFF			
Windshield Wiper Switch (HIGH)	OFF			
Windshield Wiper Switch (INT)	OFF			
Windshield Wiper Switch (MIST)	ON			

Do the current condition(s) match the threshold?

YES : The FR WIPER MIST SW to FR WIPER HI&LO SW, FR WIPER HI&LO SW to FR WIPER INT&LO SW, and FR WIPER MIST SW to FR WIPER INT&LO SW wires are OK. Intermittent failure, the system is OK at this time. Check for loose or poor connections.

NO : Repair a short between the wires.

DTC B1575: AUTO LIGHT SENSOR MALFUNCTION

Fig. 111: DTC Troubleshooting Chart (B1575)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B1575 Auto Light Sensor Malfunction	

1. Problem verification:
    - 1. Clear the DTCs with the HDS.
    - 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
    - 3. Check for DTCs with the HDS.

DTC Description	DTC
B1575 Auto Light Sensor Malfunction	

Is DTC B1575 indicated?

YES : **REPLACE THE AUTOMATIC LIGHTING/SUNLIGHT SENSOR** .

NO : Intermittent failure, the system is OK at this time.

DTC B1775: MICROPHONE INPUT/OUTPUT SHORTED TO POWER OR OPEN (WITH MOONROOF)

Fig. 112: DTC Troubleshooting Chart (B1775)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CHECK FOR HFL DTCS** .

   Is DTC B1775 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (MIC+ line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     HandsFreeLink control unit 32P connector

     HFL microphone 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     HandsFreeLink control unit 32P connector: disconnected

     HFL microphone 3P connector: disconnected

     Test circuit MIC+

     Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

     Test point 2 Body ground

Fig. 113: Measuring Voltage Between Handsfreelink Control Unit 32P Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES : There is a short to power in the wire between the HandsFreeLink control unit and the HFL microphone. Replace the affected shielded harness.

NO : The MIC+ wire is not shorted to power. Go to step 3.

3. Open wire check (MIC+ line, MIC- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   HandsFreeLink control unit 32P connector: disconnected

   HFL microphone 3P connector: disconnected

   Test circuit MIC-

   Test point 1 HandsFreeLink control unit 32P connector No. 1 (RED)

   Test point 2 HFL microphone 3P connector No. 2 (RED)

   Test circuit MIC+

   Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

   Test point 2 HFL microphone 3P connector No. 3 (GRN)

Fig. 114: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 1 And

Is there continuity?

YES : The MIC+ and the MIC- wires are OK. Go to step 5.

YES : The MIC+ and the MIC- wires are OK. Go to step 4.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the HFL microphone. Replace the affected shielded harness.

4. HandsFreeLink control unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD HFL MICROPHONE** , and recheck.

Does the symptom/indication go away?

YES : Replace the original HFL microphone.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

5. Shorted wire check (HFT-NAVI MIC+ line to power):
   - 1. Disconnect the following connector.

     Audio-navigation unit connector B (20P)

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     HandsFreeLink control unit 32P connector: disconnected

     HFL microphone 3P connector: disconnected

     Audio-navigation unit connector B (20P): disconnected

     Test circuit HFT-NAVI MIC+

     Test point 1 HandsFreeLink control unit 32P connector No. 18 (BRN)

     Test point 2 Body ground

Fig. 115: Checking Voltage Between HandsFreeLink Control Unit 32P Connector No. 18 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES : There is a short to power in the wire between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

NO : The HFT-NAVI MIC+ wire is OK. Go to step 6.

6. Determine possible failure area (audio-navigation unit, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the HandsFreeLink control unit 32P connector and the HFL microphone 3P connector.
   - 3. Turn the ignition switch to ON (II).
   - 4. **DO THE HFL SELF-DIAGNOSTIC FUNCTION** .

Do you hear, "The HFT is OK"?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Go to step 7.

7. HandsFreeLink control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD HFL MICROPHONE** , and recheck.

Does the symptom/indication go away?

YES : Replace the original HFL microphone.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

DTC B1775: MICROPHONE INPUT/OUTPUT SHORTED TO POWER OR OPEN (WITHOUT MOONROOF)

Fig. 116: DTC Troubleshooting Chart (B1775)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CHECK FOR HFL DTCS** .

   Is DTC B1775 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (MIC+ line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

HandsFreeLink control unit 32P connector

HFL microphone 10P connector

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

HandsFreeLink control unit 32P connector: disconnected

HFL microphone 10P connector: disconnected

Test circuit MIC+

Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

Test point 2 Body ground

Fig. 117: Measuring Voltage Between Handsfreelink Control Unit 32P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES : There is a short to power in the wire between the HandsFreeLink control unit and the HFL microphone. Replace the affected shielded harness.

NO : The MIC+ wire is not shorted to power. Go to step 3.

3. Open wire check (MIC+ line, MIC- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   HandsFreeLink control unit 32P connector: disconnected

HFL microphone 10P connector: disconnected

Test circuit MIC-

Test point 1 HandsFreeLink control unit 32P connector No. 1 (RED)

Test point 2 HFL microphone 10P connector No. 4 (RED)

Test circuit MIC+

Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

Test point 2 HFL microphone 10P connector No. 5 (GRN)

Fig. 118: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The MIC+ and the MIC- wires are OK. Go to step 4.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the HFL microphone. Replace the affected shielded harness.

4. HandsFreeLink control unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD HFL MICROPHONE** , and recheck.

Does the symptom/indication go away?

YES : Replace the original HFL microphone.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

DTC B1776: MICROPHONE INPUT/OUTPUT SHORTED TO GROUND

DTC Troubleshooting: B1776

Fig. 119: DTC Troubleshooting Chart (B1776)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CHECK FOR HFL DTCS** .

   Is DTC B1776 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (MIC+ line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     HandsFreeLink control unit 32P connector

     HFL microphone 3P connector (with moonroof)

     HFL microphone 10P connector (without moonroof)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

     HFL microphone 3P connector (with moonroof): disconnected

     HFL microphone 10P connector (without moonroof): disconnected

     Test circuit MIC+

     Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

     Test point 2 Body ground

Fig. 120: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire between the HandsFreeLink control unit and the HFL microphone. Replace the affected shielded harness.

NO : The MIC+ wire is not shorted to ground. Go to step 3.

3. Shorted wire check (MIC+ line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

     HFL microphone 3P connector (with moonroof): disconnected

     HFL microphone 10P connector (without moonroof): disconnected

     Test circuit MIC+, MIC-

     Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

     Test point 2 HandsFreeLink control unit 32P connector No. 1 (RED)

     Test circuit MIC+, SH MIC

     Test point 1 HandsFreeLink control unit 32P connector No. 2 (GRN)

     Test point 2 HandsFreeLink control unit 32P connector No. 3 (GRY)

Fig. 121: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 1, 2 And 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the HandsFreeLink control unit and the HFL microphone. Replace the affected shielded harness.

NO : The MIC+ wire is OK. Go to step 5.

NO : The MIC+ wire is OK. Go to step 4.

4. HandsFreeLink control unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD HFL MICROPHONE** , and recheck.

Does the symptom/indication go away?

YES : Replace the original HFL microphone.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

5. Shorted wire check (HFT-NAVI MIC+ line):
   - 1. Disconnect the following connector.

     Audio-navigation unit connector B (20P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

     HFL microphone 3P connector: disconnected

     Audio-navigation unit connector B (20P): disconnected

Test circuit HFT-NAVI MIC+

Test point 1 HandsFreeLink control unit 32P connector No. 18 (BRN)

Test point 2 Body ground

Fig. 122: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 18 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

NO : The HFT-NAVI MIC+ wire is not shorted to ground. Go to step 6.

6. Shorted wire check (HFT-NAVI MIC+ line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

     HFL microphone 3P connector: disconnected

     Audio-navigation unit connector B (20P): disconnected

     Test circuit HFT-NAVI MIC+, HFT-NAVI MIC-

     Test point 1 Audio-navigation unit connector B (20P) No. 11 (BRN)

     Test point 2 Audio-navigation unit connector B (20P) No. 12 (YEL)

     Test circuit HFT-NAVI MIC+, SH HFT-NAVI MIC

     Test point 1 Audio-navigation unit connector B (20P) No. 11 (BRN)

     Test point 2 Audio-navigation unit connector B (20P) No. 13 (GRY)

Fig. 123: Checking Continuity Between Handsfreelink Control Unit 20P Connector No. 11, 12 And 13
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

NO : The HFT-NAVI MIC+ wire is OK. Go to step 7.

7. Determine possible failure area (audio-navigation unit, others):
   - 1. Reconnect the HandsFreeLink control unit 32P connector and the HFL microphone 3P connector.
   - 2. Turn the ignition switch to ON (II).
   - 3. **DO THE HFL SELF-DIAGNOSTIC FUNCTION** .

Do you hear, "The HFT is OK"?

YES : REPLACE THE AUDIO-NAVIGATION UNIT .

NO : Go to step 8.

8. HandsFreeLink control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Substitute a known-good **HFL MICROPHONE** , and recheck.

Does the symptom/indication go away?

YES : Replace the original HFL microphone.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

DTC B1779: HANDSFREELINK STEERING WHEEL SWITCH FAILURE

DTC Troubleshooting: B1779

Fig. 124: DTC Troubleshooting Chart (B1779)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CHECK FOR HFL DTCS** .

   Is DTC B1779 indicated?

   YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (HFL switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DO THE HFL SWITCH TEST** .

Is the switch OK?

YES : Go to step 3.

NO : **REPLACE THE HFL SWITCH** .

3. Shorted wire check (HFT/NAVI REMOTE SW line to power):
   - 1. Disconnect the following connectors.

     HandsFreeLink control unit 32P connector

     HFL switch 7P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     HandsFreeLink control unit 32P connector: disconnected

     HFL switch 7P connector: disconnected

     Test circuit HFT/NAVI REMOTE SW

     Test point 1 HandsFreeLink control unit 32P connector No. 15 (YEL)

     Test point 2 Body ground

Fig. 125: Measuring Voltage Between Handsfreelink Control Unit 32P Connector No. 15 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES : Repair a short to power in the wire between the HandsFreeLink control unit and the HFL switch. If the wire is OK, **REPLACE THE CABLE REEL** .

NO : The HFT/NAVI REMOTE SW wire is not shorted to power. Go to step 4.

4. Open wire check (HFT/NAVI REMOTE SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   HandsFreeLink control unit 32P connector: disconnected

   HFL switch 7P connector: disconnected

   Test circuit HFT/NAVI REMOTE SW

   Test point 1 HandsFreeLink control unit 32P connector No. 15 (YEL)

   Test point 2 HFL switch 7P connector No. 3 (PUR)

Fig. 126: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 15 And HFL Switch 7P Connector No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The HFT/NAVI REMOTE SW wire is OK. Go to step 5.

NO : Repair an open in the wire between the HandsFreeLink control unit and the HFL switch. If the wire is OK, **REPLACE THE CABLE REEL** .

5. Open wire check (GND line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      HandsFreeLink control unit 32P connector: disconnected

      HFL switch 7P connector: disconnected

      Test circuit GND

      Test point 1 HFL switch 7P connector No. 5 (BLK)

      Test point 2 Body ground

Fig. 127: Checking Continuity Between HFL Switch 7P Connector No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

NO : Repair an open in the wire between the HFL switch and body ground (T6).

DTC B1780: HANDSFREELINK STEERING WHEEL SWITCH LINE SHORT

Fig. 128: DTC Troubleshooting Chart (B1780)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CHECK FOR HFL DTCS** .

   Is DTC B1780 indicated?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (HFL switch, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DO THE HFL SWITCH TEST** .

   Is the switch OK?

   YES : Go to step 3.

NO : **REPLACE THE HFL SWITCH** .

3. Shorted wire check (HFT/NAVI REMOTE SW line):
   - 1. Disconnect the following connectors.

     HandsFreeLink control unit 32P connector

     HFL switch 7P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

     HFL switch 7P connector: disconnected

     Test circuit HFT/NAVI REMOTE SW

     Test point 1 HandsFreeLink control unit 32P connector No. 15 (YEL)

     Test point 2 Body ground

Fig. 129: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 15 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the HandsFreeLink control unit and the HFL switch. If the wire is OK, **REPLACE THE CABLE REEL** .

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

DTC B1792: HANDSFREELINK CONTROL MODULE ERROR

Fig. 130: DTC Troubleshooting Chart (B1792)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. **CHECK FOR HFL DTCS** .

   Is DTC B1792 indicated?

   YES : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** .

   NO : Intermittent failure, the system is OK at this time.

DTC B2969: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH MICU (WIPSW MESSAGE)

Fig. 131: DTC Troubleshooting Chart (B2969)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC

B2969 Climate control unit lost communication with MICU (WIPSW message)	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check the DTCs.

DTC Description	DTC
B2969 Climate control unit lost communication with MICU (WIPSW message)	

Is DTC B2969 indicated?

YES : Go to **MICU DTC U1280 TROUBLESHOOTING** .

NO : The system is OK at this time. Check for loose wires or poor connections on the MICU and the climate control unit circuit.

DTC B2983 OR DTC INDICATOR 57: A PROBLEM IN THE RECIRCULATION CONTROL MOTOR CIRCUIT, LINKAGE, DOOR, OR MOTOR

Fig. 132: DTC Troubleshooting Chart (DTC B2983 Or DTC Indicator 57)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B2983 A problem in the recirculation control motor circuit, linkage, door, or motor	

1. Problem verification:
   - 1. Clear the DTCs with the HDS.
   - 2. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 4. Check for DTCs.

DTC Description	DTC
B2983 A problem in the recirculation control motor circuit, linkage, door, or motor	

Is DTC B2983 or 57 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the recirculation control motor circuit.

2. Open wire check (F/R MTR(FRESH)/FRS, F/R MTR(REC)/REC lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Climate control unit 32P connector

     Recirculation control motor 7P connector

   - 3. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Recirculation control motor 7P connector: disconnected

     Test circuit F/R MTR(FRESH)/FRS

     Test point 1 Climate control unit 32P connector No. 27 (BLU)

     Test point 2 Recirculation control motor 7P connector No. 6 (RED)

     Test circuit F/R MTR(REC)/REC

     Test point 1 Climate control unit 32P connector No. 28 (BLK)

     Test point 2 Recirculation control motor 7P connector No. 7 (ORN)

Fig. 133: Checking Continuity Between Climate Control Unit 32P Connector No. 27 And Recirculation Control Motor 7P Connector No. 6
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F/R MTR(FRESH)/FRS and F/R MTR(REC)/REC wires are not open. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the recirculation control motor.

3. Shorted wire check (F/R MTR(FRESH), F/R MTR(REC) lines):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Recirculation control motor 7P connector: disconnected

     Test circuit F/R MTR(FRESH)

     Test point 1 Climate control unit 32P connector No. 27 (BLU)

     Test point 2 Body ground

     Test circuit F/R MTR(REC)

     Test point 1 Climate control unit 32P connector No. 28 (BLK)

     Test point 2 Body ground

Fig. 134: Checking Continuity Between Climate Control Unit 32P Connector No. 27, 28 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the climate control unit and the recirculation

control motor.

NO : The F/R MTR(FRESH) and F/R MTR(REC) wires are OK. Go to step 4.

4. Recirculation control motor check:
   - 1. **TEST THE RECIRCULATION CONTROL MOTOR** .

Is the recirculation control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **REPLACE THE RECIRCULATION CONTROL MOTOR** , or repair the recirculation control linkage or door.

DTC B2986 OR DTC INDICATOR 55: AN OPEN IN THE RECIRCULATION CONTROL MOTOR CIRCUIT

Fig. 135: DTC Troubleshooting Chart (DTC B2986 Or DTC Indicator 55)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
B2986 An open in the recirculation control motor circuit	

1. Problem verification:

- 1. Clear the DTC with the HDS.
- 2. Turn the ignition switch to LOCK (0) and then back to ON (II).
- 3. **Do the Self-Diagnostic Function with the HDS or the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
- 4. Check for DTCs.

DTC Description	DTC
B2986 An open in the recirculation control motor circuit	

Is DTC B2986 or 55 indicated?

YES : Go to step 2.

NO : Intermittent failure. Check for loose wires or poor connections on the recirculation control motor circuit.

2. Open wire check (RFD-P/FRD-P, SENSOR 5V/S5V, SENSOR COM/SENS-COM lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Climate control unit 32P connector

     Recirculation control motor 7P connector

   - 3. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     Climate control unit 32P connector: disconnected

     Recirculation control motor 7P connector: disconnected

     Test circuit RFD-P/FRD-P

     Test point 1 Climate control unit 32P connector No. 6 (PNK)

     Test point 2 Recirculation control motor 7P connector No. 2 (PUR)

     Test circuit SENSOR 5V/S5V

     Test point 1 Climate control unit 32P connector No. 17 (LT BLU)

     Test point 2 Recirculation control motor 7P connector No. 3 (BLK)

Test circuit SENSOR COM/SENS-COM

Test point 1 Climate control unit 32P connector No. 23 (GRY)

Test point 2 Recirculation control motor 7P connector No. 1 (RED)

Fig. 136: Checking Continuity Between Climate Control Unit 32P Connector No. 6 And Recirculation Control Motor 7P Connector No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RFD-P/FRD-P, SENSOR 5V/S5V, and SENSOR COM/SENS-COM wires are OK. Go to step 3.

NO : Repair an open in the wire(s) between the climate control unit and the recirculation control motor.

3. Recirculation control motor check
   - 1. **TEST THE RECIRCULATION CONTROL MOTOR** .

Is the recirculation control motor OK?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **REPLACE THE RECIRCULATION CONTROL MOTOR** .

HOW TO TROUBLESHOOT THE BODY ELECTRICAL SYSTEM

TIPS AND PRECAUTIONS

Special Tools Required

Back Probe Adapter, 17 mm 07TAZ-001020A

Before Troubleshooting

1. Check applicable fuses in the appropriate fuse/relay box.
2. Check the battery for damage, state of charge, and clean and tight connections.

NOTE:

- **Do not quick-charge a battery unless the battery ground cable has been disconnected; otherwise you will damage the alternator diodes.**
- **Do not attempt to crank the engine with the battery ground cable loosely connected, or you will severely damage the wiring.**

Handling Connectors

- Make sure the connectors are clean and have no loose wire terminals.
- Make sure multiple cavity connectors are packed with dielectric grease (except waterproof connectors).
- All connectors have push-down release type locks (A).

Fig. 1: Pushing Down Release Type Locks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Some connectors have a clip on their side used to attach them to a mount bracket on the body or on another component. This clip has a pull type lock.
- Some mounted connectors cannot be disconnected unless you first release the lock and remove the connector from its mount bracket (A).

Fig. 2: Disconnecting Connector From Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Never try to disconnect connectors by pulling on their wires; pull on the connector halves instead.
- Always reinstall plastic covers.

Fig. 3: Installing Plastic Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Before connecting connectors, make sure the terminals are in place and not bent (A).

Fig. 4: Identifying Bent Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Check for loose retainers (A) and rubber seals (B).

Fig. 5: Identifying Retainers And Rubber Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- The backs of some connectors are packed with dielectric grease. Add grease if necessary. If the grease is contaminated, replace it.

Fig. 6: Identifying Grease Applying Areas On Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Insert the connector all the way and make sure it is securely locked.
- Position wires so that the open end of the cover faces down.

Fig. 7: Removing Connector Cover Faces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Handling Wires and Harnesses

- Secure wires and wire harnesses to the frame with their respective wire ties at the designated locations.
- Remove clips carefully; do not damage their locks (A).

Fig. 8: Removing Wires And Harnesses Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- After installing harness clips, make sure the harness does not interfere with any moving parts.
- Keep wire harnesses away from exhaust components and other hot parts, from sharp edges of brackets and holes, and from exposed screws and bolts.
- Seat grommets in their grooves properly (A). Do not leave grommets distorted (B).

Fig. 9: Identifying Proper And Improper Grommet Fitting Into Grooves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Testing and Repairs

- Do not use wires or harnesses with broken insulation. Replace them or repair them by wrapping the break with electrical tape or shrink tubing.
- Never attempt to modify, splice, or repair SRS wiring. If there is an open or damage in SRS wiring or terminals, replace the harness.
- After installing parts, make sure that no wires are pinched under them.
- When using electrical test equipment, follow the manufacturer's instructions and those described in this service information.
- If possible, insert the probe of the tester from the wire side (except waterproof connectors).

Fig. 10: Inserting Tester Probe Into Connectors (Except Waterproof Connectors)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Use back probe adapter, 17mm 07TAZ-001020A.

Fig. 11: Identifying Back Probe Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Refer to the instructions in the Honda Terminal Kit for identification and replacement of connector terminals.

FIVE-STEP TROUBLESHOOTING

1. Verify The Complaint:

   Turn on all the components in the problem circuit to verify the customer complaint. Note the symptoms. Do not begin disassembly or testing until you have narrowed down the problem area.

2. Analyze The Schematic:

   Look up the schematic for the problem circuit. Determine how the circuit is supposed to work by tracing the current paths from the power feed through the circuit components to ground. If several circuits fail at the same time, the fuse or a ground is a likely cause.

   Based on the symptoms and your understanding of the circuit operation, identify one or more possible causes of the problem.

3. Isolate The Problem By Testing The Circuit:

   Make circuit tests to check the diagnosis you made in step 2. Keep in mind that a logical, simple procedure is the key to efficient troubleshooting. Test for the most likely cause of failure first. Try to make tests at points that are easily accessible.

4. Fix The Problem:

   Once the specific problem is identified, make the repair. Be sure to use proper tools and safe procedures.

5. Make Sure The Circuit Works:

   Turn on all components in the repaired circuit in all modes to make sure you've fixed the entire problem. If the problem was a blown fuse, be sure to test all of the circuits on the fuse. Make sure no new problems turn up and the original problem does not recur.

WIRE COLOR CODES

The following abbreviations are used to identify wire colors in the circuit schematics:

WHT	White
YEL	Yellow
BLK	Black
BLU	Blue
GRN	Green
RED	Red
ORN	Orange
PNK	Pink
BRN	Brown
GRY	Gray

PUR	Purple
TAN	Tan
LT BLU	Light Blue
LT GRN	Light Green

The wire insulation has one color or one color with another color stripe. The second color is the stripe.

Fig. 12: Identifying Wire Insulation Color And Color Stripe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TROUBLESHOOT THE B-CAN CIRCUIT RELATED PROBLEMS

Check the PCM for DTCs and troubleshoot PCM or F-CAN loss of communication errors first.

HOW TO CHECK FOR DTCS WITH THE HDS (PREFERRED METHOD)

The HDS can check F-CAN and B-CAN communication status, read and clear DTCs, display data list, and perform function tests.

Check for DTCs

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 13: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle.

NOTE: **If the HDS does not communicate with the vehicle, TROUBLESHOOT THE DLC CIRCUIT .**

4. Select BODY ELECTRICAL, then select the desired MODE MENU, and check for DTCs. If the DTCs do not pertain to the select menu, select the ALL DTC Check icon to view all Body Electrical DTCs.

NOTE: **For specific operations, refer to the HDS user's manual.**

5. If any DTCs are indicated, go to the indicated DTCs troubleshooting.

NOTE: **If DTC U1280 is stored, troubleshoot DTC U1280 first.**

HOW TO CHECK FOR DTCS WITHOUT THE HDS (USE ONLY IF THE HDS IS UNAVAILABLE)

If the HDS is unavailable, you can use the following method to check B-CAN communication status, DTCs, and some F-CAN communication status related with the gauge control module, and interior lights. Refer to Troubleshooting Test Mode 1. See **BODY ELECTRICAL TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)** .

HOW TO CLEAR DTCS WITH THE HDS

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 14: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Clear the DTCs with the HDS.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.

HOW TO CLEAR DTCS WITHOUT THE HDS

1. While in DTCs Indication Status, press and hold the SEL/RESET button for at least 10 seconds.
2. Turn the ignition switch to LOCK (0).

B-CAN CIRCUIT TROUBLESHOOTING INFORMATION

1. Connect the HDS to the data link connector (DLC).
2. From the BODY ELECTRICAL SYSTEM SELECT menu, select B-CAN CONTROL UNITS INFORMATION, and then select CHECK CONNECTED CONTROL UNITS.
3. Check that the electronic control units (ECU) are communicating with the HDS.

NOTE:

- **If an ECU is communicating with the HDS, "DETECT" will be displayed.**
- **If an ECU is not communicating, or the vehicle is not equipped with that ECU, "NOT AVAILABLE" will be displayed.**

4. If a control unit is not communicating, confirm which ECUs are communicating, then refer to the B-CAN Communication Line from the Electrical Wiring Diagrams to find the malfunction point.

   For example, when unit "K" is communicating, but units "G", "M", and "N" are not communicating, that will direct you to the malfunction point (A).

Fig. 15: B-CAN Communication Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOSS OF COMMUNICATION DTC CROSS-REFERENCE CHART

When an ECU on the CAN circuit is unable to communicate with other ECUs on the CAN circuit, the other control units will set loss of communication DTCs. Use this chart to find the ECU that is not communicating with the other ECUs on the CAN circuit.

1. Find the Transmitting Control Unit that is in the same row as all of the loss of communication DTCs that you retrieved.

2. Do the input test for the transmitting control unit.

BUS OFF AND INTERNAL ERROR CODES

DTC Type	Related Unit				
	MICU	Gauge Control Module	Climate Control Unit	Automatic Lighting/Sunlight Sensor	Immobilizer-Keyless Control Unit
BUS OFF	U1280	U1280	U1280	U1280	U1280
ECU (EEPROM) Error	B1002	U3000		B1575	

LOSS OF COMMUNICATION

Transmitting Control Unit	Receiving Unit/Loss of Communication DTC				
	MICU	Gauge Control Module	Climate Control Unit	Automatic Lighting/Sunlight Sensor	Immobilizer-Keyless Control Unit
MICU	TX		U1281	U1281	U1281
Gauge Control Module	U128D	TX	U128D	U128D	U128D
Climate Control Unit			TX		
Automatic Lighting/Sunlight Sensor				TX	
Immobilizer-Keyless Control Unit					TX
PCM		U0100			
SRS Unit		U0151			
VSA Modulator-Control Unit		U0122			
TPMS Control Unit		U0127			
EPS Control Unit		U0131			
Real Time AWD Control Unit		U0114			
TX: Transmitting units do not set loss of communication DTCs.					

BRAKE BOOSTER REMOVAL AND INSTALLATION

REMOVAL

NOTE:

- **Press the brake pedal several times to deplete the vacuum in the brake booster.**
- **Be careful when handling the master cylinder. Do not hold it at the piston, or the piston may separate from the body. If the piston separates from the body, then the master cylinder must be replaced. Do not reinsert the piston back into the master cylinder body.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 1: Identifying MAF Sensor/IAT Sensor Connector, Air Cleaner, Intake Air Pipe And Harness Clamp

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove the brake fluid from the master cylinder reservoir with a syringe.

Fig. 2: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Master Cylinder

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Be careful not to damage or bend the brake lines during removal and installation.**
- **After removal, plug the ends of the hoses and the joints to prevent spilling brake fluid.**
- **Make sure not to get any silicone grease on the terminal part of the connectors and switches, especially if you have silicone grease on your hands or gloves.**

1. Disconnect the connector (A).
2. Remove the reservoir tank (B) and the reservoir tank bracket (C).

Fig. 3: Identifying Connector, Reservoir Tank And Reservoir Tank Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the brake lines (A) from the master cylinder (B).
4. Remove the master cylinder from the brake booster (C).
5. Remove the O-ring (D) from the master cylinder.

Fig. 4: Identifying Master Cylinder, Brake Booster, O-Ring And Brake Lines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Brake Booster Items
    1. Disconnect the brake booster vacuum hose (A) from the brake booster (B).

Fig. 5: Identifying Brake Booster Vacuum Hose And Brake Booster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the brake lines (A) from the clamps (B).

Fig. 6: Identifying Brake Lines And Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Engine Control Module - Move
    1. Remove the bolts (A).
    2. Move the PCM (B) aside.

Fig. 7: Moving PCM
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Brake Booster
    1. Remove the lock pin (A) and the clevis pin (B).
    2. Disconnect the yoke (C) from the brake pedal.
    3. Remove the brake booster mounting nuts (D).

Fig. 8: Identifying Brake Booster Mounting Nuts, Yoke, Lock Pin And Clevis Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the brake booster (A) from the engine compartment.

NOTE: **Be careful not to bend or damage the brake lines.**

5. Remove the brake booster gasket (B).

Fig. 9: Removing Brake Booster From Engine Compartment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Brake Booster
    1. Install the brake booster (A) with the new brake booster gasket (B).

NOTE: **Be careful not to bend or damage the brake lines.**

Fig. 10: Installing Brake Booster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the brake booster mounting nuts (A).
3. Connect the yoke (B) to the brake pedal.
4. Install the lock pin (C) and the clevis pin (D).

Fig. 11: Identifying Brake Booster, Yoke, Lock Pin, Clevis Pin And Mounting Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Engine Control Module - Move
    1. Install the PCM (A).

Fig. 12: Installing PCM
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Booster Items
    1. Install the brake lines (A) to the clamps (B).

Fig. 13: Identifying Brake Line And Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the brake booster vacuum hose (A) to the brake booster (B).

Fig. 14: Identifying Brake Booster And Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Master Cylinder
    1. Install the new O-ring (A) to the master cylinder.

    NOTE: Coat the O-ring with silicone grease (Shin-Etsu G40M).

    2. Install the master cylinder (B) to the brake booster (C).
    3. Connect the brake lines (D) to the master cylinder.

Fig. 15: Identifying Master Cylinder, Brake Booster, Brake Lines, O-Ring And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the reservoir tank (A) and the reservoir tank bracket (B).
5. Connect the connector (C).

Fig. 16: Identifying Reservoir Tank, Bracket, Connector And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 17: Identifying MAF Sensor/IAT Sensor Connector, Air Cleaner, Intake Air Pipe, Duct And Harness Clamp With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Brake Pedal Height - Inspection
    1. Pull back the carpet, and find the cutout (A) in the insulation.
    2. Measure the pedal height (B) from the left side middle of the pedal pad (C) to the floor (D) without the insulation.

       Standard pedal height: 216±7 mm (8.50±0.28 in)

    3. If the pedal height is not as specified, adjust the pedal height.

Fig. 18: Identifying Pedal Height From Left Side Middle Of Pedal Pad To Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Brake Pedal Free Play - Check
    1. Turn the ignition switch to LOCK (0).
    2. Inspect the free play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

    Free play: 1-5 mm (0.04-0.20 in)

Fig. 19: Identifying Brake Pedal Free Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Brake System - Bleeding.

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

Fig. 20: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).
2. Start the bleeding at the driver's side of the front brake system.

NOTE: **Bleed the calipers in the sequence shown.**

Fig. 21: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front

Fig. 22: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.

8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.
10. Repeat this procedure for each brake in the bleeding sequence.

Rear

Fig. 23: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Brake Drag - Check
    1. Spin the wheels to check for brake drag.

BRAKE SYSTEM BLEEDING

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

Fig. 24: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).
2. Start the bleeding at the driver's side of the front brake system.

NOTE: **Bleed the calipers in the sequence shown.**

Fig. 25: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front

Fig. 26: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.
10. Repeat this procedure for each brake in the bleeding sequence.

Rear

BRAKE MASTER CYLINDER REMOVAL AND INSTALLATION

REMOVAL

NOTE:

- **Press the brake pedal several times to deplete the vacuum in the brake booster.**
- **Be careful when handling the master cylinder. Do not hold it at the piston, or the piston may separate from the body. If the piston separates from the body, then the master cylinder must be replaced. Do not reinsert the piston back into the master cylinder body.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

Fig. 28: Identifying MAF Sensor/IAT Sensor Connector, Air Cleaner, Intake Air Pipe And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove the brake fluid from the master cylinder reservoir with a syringe.

Fig. 29: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Master Cylinder

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Be careful not to damage or bend the brake lines during removal and installation.**
- **After removal, plug the ends of the hoses and the joints to prevent spilling brake fluid.**
- **Make sure not to get any silicone grease on the terminal part of the connectors and switches, especially if you have silicone grease on your hands or gloves.**

1. Disconnect the connector (A).
2. Remove the reservoir tank (B) and the reservoir tank bracket (C).

Fig. 30: Identifying Connector, Reservoir Tank And Reservoir Tank Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the brake lines (A) from the master cylinder (B).
4. Remove the master cylinder from the brake booster (C).
5. Remove the O-ring (D) from the master cylinder.

Fig. 31: Identifying Master Cylinder, Brake Booster, O-Ring And Brake Lines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Brake Master Cylinder
    1. Install the new O-ring (A) to the master cylinder.

        NOTE: Coat the O-ring with silicone grease (Shin-Etsu G40M).

    2. Install the master cylinder (B) to the brake booster (C).
    3. Connect the brake lines (D) to the master cylinder.
    4. Install the reservoir tank (A) and the reservoir tank bracket (B).

Fig. 32: Identifying Master Cylinder, Brake Booster, Brake Lines And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the connector (C).

Fig. 33: Identifying Reservoir Tank, Bracket, Connector And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

Fig. 34: Identifying MAF Sensor/IAT Sensor Connector, Air Cleaner, Intake Air Pipe, Duct And Harness Clamp With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake System - Bleeding

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing**

the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).

Fig. 35: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the bleeding at the driver's side of the front brake system.

Fig. 36: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Bleed the calipers in the sequence shown.

Front

Fig. 37: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.
10. Repeat this procedure for each brake in the bleeding sequence.

Rear

Fig. 38: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Pedal Height - Inspection
    1. Pull back the carpet, and find the cutout (A) in the insulation.
    2. Measure the pedal height (B) from the left side middle of the pedal pad (C) to the floor (D) without the insulation.

       Standard pedal height: 216±7 mm (8.50±0.28 in)

    3. If the pedal height is not as specified, adjust the pedal height.

Fig. 39: Identifying Pedal Height From Left Side Middle Of Pedal Pad To Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Brake Pedal Free Play - Check
    1. Turn the ignition switch to LOCK (0).
    2. Inspect the free play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

       Free play: 1-5 mm (0.04-0.20 in)

Fig. 40: Identifying Brake Pedal Free Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Brake Drag - Check
    1. Spin the wheels to check for brake drag.

BRAKE PEDAL FREE PLAY CHECK

CHECK

1. Brake Pedal Free Play - Check
    1. Turn the ignition switch to LOCK (0).
    2. Inspect the free play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

       Free play: 1-5 mm (0.04-0.20 in)

Fig. 41: Identifying Brake Pedal Free Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT

REMOVAL

1. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 42: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Brake Pedal Height - Inspection
    1. Pull back the carpet, and find the cutout (A) in the insulation.
    2. Measure the pedal height (B) from the left side middle of the pedal pad (C) to the floor (D) without the insulation.

       Standard pedal height: 216±7 mm (8.50±0.28 in)

    3. If the pedal height is not as specified, adjust the pedal height.

Fig. 43: Identifying Pedal Height From Left Side Middle Of Pedal Pad To Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Brake Pedal - Adjustment
    1. Turn the brake pedal position switch (A) 45 ° counterclockwise, and pull it back until it is no longer touching the brake pedal (B).

Fig. 44: Turning Brake Pedal Position Switch To 45 ° Counterclockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosen the pushrod locknut (A), and screw the pushrod (B) in or out with pliers until the standard pedal height from the floor is reached. After adjustment, tighten the locknut firmly. Do not adjust the pedal height with the pushrod pressed.

Fig. 45: Loosening Pushrod Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Brake Pedal Position Switch - Adjustment
    1. Lift up on the brake pedal by hand. Push in the brake pedal position switch until its plunger is fully pressed (threaded end (A) touching the pad (B) on the pedal arm).
    2. Turn the switch 45 ° clockwise to lock it. The gap between the brake pedal position switch and the pad is automatically adjusted to 0.7 mm (0.028 in) by locking the switch. Make sure the brake lights go off when the pedal is released.

Fig. 46: Identifying Gap Between Brake Pedal Position Switch And Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Pedal Free Play - Check
    1. Turn the ignition switch to LOCK (0).
    2. Inspect the free play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

    Free play: 1-5 mm (0.04-0.20 in)

Fig. 47: Identifying Brake Pedal Free Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 48: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE PEDAL POSITION SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Brake Pedal Position Switch
    1. Disconnect the connector.
    2. Turn the brake pedal position switch (A) 45 ° counterclockwise to remove it.

Fig. 49: Identifying Brake Pedal Position Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Brake Pedal Position Switch
    1. Turn the brake pedal position switch (A) 45 ° clockwise to install it.
    2. Connect the connector.

Fig. 50: Identifying Brake Pedal Position Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Brake Pedal Position Switch - Adjustment
    1. **Adjust the brake pedal position switch** See **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **BRAKE PEDAL REMOVAL AND**

INSTALLATION.

BRAKE PEDAL REMOVAL AND INSTALLATION

REMOVAL

1. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 51: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 52: Identifying Driver's Dashboard Undercover, Holder, Pin, Lock Knob And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Pedal Assembly
    1. Disconnect the connector (A).
    2. Remove the harness clip (B).
    3. Remove the brake pedal position switch (C) by turning it 45 ° counterclockwise.
    4. Remove the lock pin (D) and the clevis pin (E).
    5. Remove the brake pedal with the bracket (F).

Fig. 53: Identifying Brake Pedal Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Brake Pedal Assembly
    1. Install the brake pedal with the bracket (A).
    2. Install the lock pin (B) and the clevis pin (C).
    3. Install the brake pedal position switch (D) by turning it 45 ° clockwise.
    4. Install the harness clip (E).
    5. Connect the connector (F).

Fig. 54: Identifying Brake Pedal Assembly Components And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Brake Pedal Height - Inspection
    1. Pull back the carpet, and find the cutout (A) in the insulation.
    2. Measure the pedal height (B) from the left side middle of the pedal pad (C) to the floor (D) without the insulation.

       Standard pedal height: 216±7 mm (8.50±0.28 in)

    3. If the pedal height is not as specified, adjust the pedal height.

Fig. 55: Identifying Pedal Height From Left Side Middle Of Pedal Pad To Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Pedal Position Switch - Adjustment
    1. Lift up on the brake pedal by hand. Push in the brake pedal position switch until its plunger is fully pressed (threaded end (A) touching the pad (B) on the pedal arm).
    2. Turn the switch 45 ° clockwise to lock it. The gap between the brake pedal position switch and the pad is automatically adjusted to 0.7 mm (0.028 in) by locking the switch. Make sure the brake lights go off when the pedal is released.

Fig. 56: Identifying Gap Between Brake Pedal Position Switch And Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Pedal Free Play - Check
    1. Turn the ignition switch to LOCK (0).
    2. Inspect the free play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

    Free play: 1-5 mm (0.04-0.20 in)

Fig. 57: Identifying Brake Pedal Free Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 58: Identifying Driver's Dashboard Undercover, Holder, Pin, Clip And Lock Knob

DISASSEMBLY

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

NOTE:

- **Clean all parts in brake fluid and air dry; blow out all passages with compressed air.**

- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **Make sure no grease or oil gets on the brake discs or pads.**
- **Do not reuse drained brake fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Refer to the EXPLODED VIEW as needed during this procedure.**

1. Front Brake Caliper - Disassembly

2WD

1. Set the wooden block (A) or several shop towels to the caliper body (B) as shown.
2. Blow out the piston with compressed air gradually, and remove the piston from the caliper body.

NOTE: **Do not put the hand into the caliper body because the piston will come out forcibly from the caliper body.**

Fig. 62: Removing Piston From Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the boot rings (A).
4. Remove the piston boot (B).
5. Remove the piston seal (C).

Fig. 63: Identifying Boot Rings, Piston Boot And Piston Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Be careful not to damage the inner surface of the cylinder wall with the tool.**

6. Remove the caliper pins (A).

NOTE: **The upper and lower caliper pins are different. During installation, make sure the caliper pins are in the proper positions.**

7. Remove the pin boots (B).

Fig. 64: Identifying Caliper Pins And Pin Boots

Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

1. Set the wooden block (A) or several shop towels to the caliper body (B) as shown.
2. Blow out the piston with compressed air gradually, and remove the piston from the caliper body.

Fig. 65: Removing Piston From Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do not put the hand into the caliper body because the piston will come out hardly from the caliper body.**

3. Remove the piston boots (A).
4. Remove the piston seals (B).

NOTE: **Be careful not to damage the inner surface of the cylinder wall with the tool.**

Fig. 66: Identifying Piston Boots And Piston Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the caliper pins (A).

NOTE: **The upper and lower caliper pins are different. During installation, make sure the caliper pins are in the proper positions.**

6. Remove the pin boots (B).

REASSEMBLY

CAUTION: **Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.**

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

NOTE:

- **Clean all parts in brake fluid and air dry; blow out all passages with compressed air.**
- **Before reassembling, check that all parts are free of dirt and other foreign particles.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **Make sure no grease or oil gets on the brake discs or pads.**
- **Do not reuse drained brake fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**

- **Coat the piston, the piston seal groove, and the caliper bore with clean brake fluid.**
- **Use recommended greases in the front caliper set.**
- **After installing the caliper, check the brake hose and line for leaks, interference, and twisting.**
- **Refer to the EXPLODED VIEW as needed during this procedure.**

1. Front Brake Caliper - Reassembly

2WD

1. Apply a thin coat of Honda caliper grease (P/N 08C30-B0224M) to the caliper pins (A) and the new pin boots (B).
2. Install the pin boots.
3. Install the caliper pins.

NOTE:

- **Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.**
- **Remove air with the inside of the boots.**

Fig. 68: Identifying Thin Coat Of Honda Caliper Grease Applying Area On Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply the brake fluid to the new piston seal (A).
5. Install the piston seal.
6. Apply a thin coat of Honda silicone grease (P/N 08C30-B0234M) to the new piston boot (B).
7. Install the piston boot.
8. Install the new boot rings (C).

Fig. 69: Identifying Thin Coat Of Honda Silicone Grease Applying Area On Piston Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Apply the brake fluid to the outer surface of the piston, then set the piston in place on the caliper body.
10. Press in the piston with the brake caliper piston compressor tool.

NOTE:

- **Make sure that the piston boot is properly positioned into the groove of the piston.**
- **Do not press the piston diagonally, and do not press it forcibly.**
- **Be careful not to damage the piston boot when pressing the piston.**

Fig. 70: Pressing Piston Using Brake Caliper Piston Compressor Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

1. Apply a thin coat of Honda caliper grease (P/N 08C30-B0224M) to the caliper pins (A) and the new pin boots (B).
2. Install the pin boots.
3. Install the caliper pins.

NOTE:

- **Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.**
- **Remove air from within the pin boots.**

Fig. 71: Identifying Thin Coat Of Honda Caliper Grease Applying Area On Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply a thin coat of Honda silicone grease (P/N 08C30-B0234M) to the new piston seals (A).
5. Install the piston seals.
6. Apply a thin coat of Honda silicone grease (P/N 08C30-B0234M) to the new piston boots (B).
7. Install the piston boots.

Fig. 72: Identifying Thin Coat Of Honda Silicone Grease Applying Area On Piston Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Apply the brake fluid to the outer surface of the pistons, then set the pistons in place on the caliper body.
9. Press in the pistons with the brake caliper piston compressor tool.

NOTE:

- **Make sure that the piston boots is properly positioned into the grooves of the piston.**
- **Do not press the piston diagonally, and do not press it forcibly.**
- **Be careful not to damage the piston boot when pressing in the piston.**

Fig. 73: Pressing Pistons Using Brake Caliper Piston Compressor Tool

FRONT BRAKE CALIPER REMOVAL AND INSTALLATION

REMOVAL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 74: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove the brake fluid from the master cylinder reservoir with a syringe.

Fig. 75: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Brake Caliper Body

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

1. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper body.

2. Remove the flange bolts (C) while holding respective caliper pins (D) with a wrench.
3. Remove the caliper body (E).

NOTE: **Be careful when removing the caliper body or the spring could pop out of position.**

Fig. 76: Identifying Front Brake Caliper Body Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Brake Pad
    1. Remove the pad return springs (A) while holding the brake pads.

Fig. 77: Holding Brake Pads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the pad shims (A) and the brake pads (B).

2WD

Fig. 78: Identifying Pad Shims And Brake Pads (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 79: Identifying Pad Shims And Brake Pads (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Brake Caliper Pin and Boot
    1. Remove the caliper pins (A).

    NOTE: **The upper and lower caliper pins are different. During installation, make sure the caliper pins are in the proper positions.**

    2. Remove the pin boots (B).

Fig. 80: Identifying Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Front Brake Caliper Pin and Boot
    1. Apply a thin coat of Honda caliper grease (P/N 08C30-B0224M) to the caliper pins (A) and the new pin boots (B).
    2. Install the pin boots.
    3. Install the caliper pins.

NOTE:

- **Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.**
- **Make sure that the pin boots are properly positioned into the grooves (C) of the caliper pin and the grooves (D) of the caliper body.**
- **Remove air from the inside of the pin boots by gently squeezing them.**

Fig. 81: Identifying Thin Coat Of Honda Caliper Grease Applying Area On Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Brake Pad

2WD

Fig. 82: Locating Thin Coat Of Assembly Paste Applying Area On Shim Pad Side And Back Of Brake Pads (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 83: Locating Thin Coat Of Assembly Paste Applying Area On Shim Pad Side And Back Of Brake Pads (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the

back of the brake pads (B), and the other areas indicated by the arrows.

NOTE: **Wipe off the excess assembly paste from the pad shims and brake pads friction material.**

2. Install the brake pads and pad the shims.

NOTE: **Install the brake pad with the wear indicator (C) on the upper inside position.**

3. Install the pad return springs (A) while holding the brake pads

Fig. 84: Installing Brake Pads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Brake Caliper Body
    1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pistons (A).
    2. Install the caliper body (B).
    3. Install the flange bolts (C) while holding respective caliper pins (D) with a wrench.
    4. Connect the brake hose (E) to the caliper body with the banjo bolt (F) and new sealing washers (G).

Fig. 85: Identifying Front Brake Caliper Body And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake System - Bleeding

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

Fig. 86: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).
2. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers in the sequence shown.

Fig. 87: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.

Front

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 89: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Repeat this procedure for each brake in the bleeding sequence.

5. Front Wheel
    1. Install the front wheel.

NOTE: Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.

Fig. 90: Identifying Front Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT BRAKE DISC INSPECTION

REMOVAL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 91: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Brake Pad
    1. Remove the flange bolt (A) while holding caliper pins (B) with a wrench
    2. Pivot the caliper body (C) up out of the way.

NOTE:

- **Be careful when pivoting the caliper body up or the spring could pop out of position.**
- **Check the hose and pin boots for damage and deterioration.**

Fig. 92: Pivoting Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pad return springs (A).

Fig. 93: Removing Pad Return Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pad shims (A) and the brake pads (B).

2WD

Fig. 94: Identifying Pad Shims And Brake Pads (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 95: Identifying Pad Shims And Brake Pads (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Front Brake Disc Thickness and Parallelism - Inspection
    1. Using a micrometer (A), measure the brake disc thickness at eight points, about 45 ° apart and 10 mm (0.39 in) in from the outer edge of the brake disc.

       Replace the brake disc if the smallest measurement is less than the maximum refinishing limit.

       Brake disc thickness:

       Standard:

       2WD: 25.0 mm (0.984 in)

       AWD/4WD: 28.0 mm (1.102 in)

       Maximum refinishing limit:

       2WD: 23.0 mm (0.906 in)

       AWD/4WD: 26.0 mm (1.024 in)

       Brake disc parallelism*: 0.015 mm (0.00059 in) max .

       *: This is the maximum allowable difference between the thickness measurements.

2. If the brake disc is beyond the service limit for parallelism, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

NOTE: If the brake disc is beyond the service limit for refinishing, replace it.

3. Inspect the brake disc runout.

Fig. 96: Measuring Brake Disc Runout Using Micrometer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Brake Disc Runout - Inspection
    1. Inspect the brake disc to wheel surface for damage and cracks.
    2. Clean the brake disc thoroughly, and remove all rust.
    3. Install suitable flat washers (A) and the wheel nuts (B).
    4. Tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.
    5. Set up the dial gauge (C) as shown.
    6. Measure the runout at 10 mm (0.39 in) from the outer edge of the brake disc.

    Brake disc runout:

    Service limit: 0.04 mm (0.0016 in)

    7. If the brake disc is beyond the service limit, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

    Maximum refinishing limit:

    2WD: 23.0 mm (0.906 in)

AWD/4WD: 26.0 mm (1.024 in)

NOTE:

- **If the brake disc is beyond the service limit for refinishing, replace it.**
- **If the brake disc is replaced with a new one, check the new disc for runout. If the new disc is out of specification, refinish the disc.**

Fig. 97: Measuring Brake Disc Outer Edge Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Front Brake Pad

2WD

Fig. 98: Locating Thin Coat Of Assembly Paste Applying Area On Shim Pad Side And Back Of Brake Pads (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 99: Locating Thin Coat Of Assembly Paste Applying Area On Shim Pad Side And Back Of Brake Pads (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows.

NOTE: **Wipe off the excess assembly paste from the pad shims and brake pads friction material.**

2. Install the brake pads and pad shims.

NOTE: **Install the brake pad with the wear indicator (C) on the upper inside position.**

3. Install the pad return springs (A).

Fig. 100: Installing Pad Return Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pivot the caliper body (A) down into position.
5. Install the flange bolt (B).
6. Press the brake pedal several times to make sure the brakes work.

NOTE: **Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.**

Fig. 101: Pivoting Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Wheel - Both Side
    1. Install both front wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 102: Identifying Front Wheel And Mounting Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT BRAKE DISC REMOVAL AND INSTALLATION

REMOVAL

NOTE: Keep grease away from the brake disc and the brake pads.

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 103: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose excessively.**

Fig. 104: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Brake Disc
    1. Remove the brake disc (A).

NOTE: **If the brake disc is stuck to the front hub, thread two 8 x 1.25 mm bolts (B) into the brake disc to push it away from the front hub. Turn each bolt 90 degrees at a time to prevent the brake disc from binding.**

Fig. 105: Identifying Brake Disc And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Keep grease away from the brake disc and the brake pads.**

1. Front Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the front hub and the inside of the brake disc.**

Fig. 106: Identifying Brake Disc And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Brake Disc Runout - Inspection
    1. Inspect the brake disc to wheel surface for damage and cracks.
    2. Clean the brake disc thoroughly, and remove all rust.
    3. Install suitable flat washers (A) and the wheel nuts (B).
    4. Tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.
    5. Set up the dial gauge (C) as shown.
    6. Measure the runout at 10 mm (0.39 in) from the outer edge of the brake disc.

    Brake disc runout:

    Service limit: 0.04 mm (0.0016 in)

    7. If the brake disc is beyond the service limit, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

    Maximum refinishing limit:

    2WD: 23.0 mm (0.906 in)

    AWD/4WD: 26.0 mm (1.024 in)

NOTE:
- **If the brake disc is beyond the service limit for refinishing, replace it.**
- **If the brake disc is replaced with a new one, check the new disc for runout. If the new disc is out of specification, refinish the disc.**

Fig. 107: Measuring Brake Disc Outer Edge Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 108: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 109: Identifying Front Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT BRAKE HOSE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 110: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove the brake fluid from the master cylinder reservoir with a syringe.

Fig. 111: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Brake Hose

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE: **After removal, plug the ends of the hoses and the joints to prevent spilling**

brake fluid.

1. Disconnect the brake line (A) from the brake hose (B).
2. Remove the brake hose clip (C).

Fig. 112: Identifying Brake Line, Brake Hose And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper body.
4. Remove the brake hose mounting bolt (C).
5. Remove the brake hose.

Fig. 113: Identifying Brake Hose, Mounting Bolt And Banjo Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Brake Hose

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE: **Check that all parts are free of dirt and other foreign particles.**

1. Install the brake hose (A) with the mounting bolt (B).
2. Connect the brake hose to the caliper body with the banjo bolt (C) and new sealing washers (D).

Fig. 114: Identifying Brake Line, Brake Hose, Washer, Clip And Banjo Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the brake line (A) to the brake hose (B).
4. Install the brake hose clip (C).

Fig. 115: Installing Brake Hose Clip Using Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Brake System - Bleeding

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).

Fig. 116: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers in the sequence shown.

Fig. 117: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.

Front

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 119: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Repeat this procedure for each brake in the bleeding sequence.

3. Brake Hose After Install - Check
    1. Do the following checks:
        - Check the brake hose and line joint for leaks, and tighten if necessary.
        - Check the brake hoses for interference and twisting.
4. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT BRAKE PAD INSPECTION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 121: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Front Brake Pad - Inspection

2WD: Inner pad

Fig. 122: Identifying Inner Pad Thickness (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**

- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Check the thickness (A) of the inner pad (B) and the outer pad (C). Do not include the thickness of the backing plate.

   Brake pad thickness:

   Standard limit:

   2WD: 11.0 mm (0.433 in)

   AWD/4WD: 12.0 mm (0.472 in)

   Service limit: 1.6 mm (0.063 in)

2. If any part of the brake pad thickness is less than the service limit, replace the brake pads as a set.

   2WD: Outer pad

Fig. 123: Identifying Outer Pad Thickness (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 124: Identifying Pad Thickness (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Wheel - Both Side
    1. Install both front wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 125: Identifying Front Wheel And Mounting Bolt With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT BRAKE PAD REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Brake Caliper Piston Compressor 07AAE-SEPA101

REMOVAL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove some brake fluid from the master cylinder reservoir with a syringe.

Fig. 126: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 127: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Brake Pad
    1. Remove the flange bolt (A) while holding caliper pins (B) with a wrench
    2. Pivot the caliper body (C) up out of the way.

NOTE:

- **Be careful when pivoting the caliper body up or the spring could pop out of position.**
- **Check the hose and pin boots for damage and deterioration.**

Fig. 128: Pivoting Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pad return springs (A).

Fig. 129: Removing Pad Return Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pad shims (A) and the brake pads (B).

2WD

Fig. 130: Identifying Pad Shims And Brake Pads (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AWD/4WD

Fig. 131: Identifying Pad Shims And Brake Pads (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Brake Pad Retainer and Caliper Bracket Clean and Check
    1. Remove the pad retainers (A).

NOTE: **The upper and lower pad retainers are different. During installation, make sure the pad retainers are in the proper positions (2WD).**

2. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks.
3. Verify that the caliper pins (C) move in and out smoothly. Clean and lube the pins if needed.

Fig. 132: Identifying Pad Retainers, Caliper Bracket And Caliper Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: **Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.**

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Front Brake Pad Retainer and Caliper Bracket Clean and Check
   1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainer mating surface of the caliper bracket (indicated by the arrows).
   2. Install the pad retainers (A).

NOTE:

- **Wipe off the excess assembly paste from the retainers. Keep the assembly paste away from the brake disc and the brake pads.**
- **2WD: Make sure that the pad retainers are installed correctly.**

Fig. 133: Locating Thin Coat Assembly Paste Applying Area On Caliper Bracket Retainer Mating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Press in the piston with the brake caliper piston compressor tool.

NOTE: **Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir. If brake fluid gets on any painted surface, wash it off immediately with water.**

Fig. 134: Pressing Piston Using Brake Caliper Piston Compressor Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Brake Pad

2WD

Fig. 135: Locating Thin Coat Of Assembly Paste Applying Area On Shim Pad Side And Back Of Brake Pads (2WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows.

   NOTE: Wipe off the excess assembly paste from the pad shims and brake pads friction material.

2. Install the brake pads and pad shims.

   NOTE: Install the brake pad with the wear indicator (C) on the upper inside position.

   AWD/4WD

Fig. 136: Locating Thin Coat Of Assembly Paste Applying Area On Shim Pad Side And Back Of Brake Pads (AWD/4WD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the pad return springs (A).

Fig. 137: Installing Pad Return Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pivot the caliper body (A) down into position.
5. Install the flange bolt (B).
6. Press the brake pedal several times to make sure the brakes work.

NOTE: **Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.**

Fig. 138: Pivoting Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Wheel - Both Side
    1. Install both front wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 139: Identifying Front Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Fluid - Refill
    1. Add brake fluid as needed.
    2. Install the reservoir cap (A).
    3. Install the master cylinder maintenance lid (B).

Fig. 140: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 141: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Wheel Speed Sensor
    1. Turn the ignition switch to LOCK (0).
    2. Release the connector holding clamps (A).

Fig. 142: Removing Front Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (B).
4. Remove the clips (C).
5. Remove the wheel speed sensor (D).

INSTALLATION

1. Front Wheel Speed Sensor
    1. Install the wheel speed sensor (A).

NOTE:

- **Do not twist the sensor wires.**
- **If the wheel speed sensor comes in contact with the wheel**

bearing, it is faulty.

- **Make sure there is no debris in the sensor mounting hole.**

Fig. 143: Installing Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the harness clips (B).
3. Connect the connector (C).
4. Connect the connector holding clamps (D).

2. Front Wheel
   1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 144: Identifying Front Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE CABLE REMOVAL AND INSTALLATION

EXPLODED VIEW

1. Parking Brake Cable Exploded View

   Exploded View

Fig. 145: Exploded View Of Parking Brake Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

NOTE:

- **Refer to the EXPLODED VIEW as needed during this procedure.**
- **For the front parking brake cable, go to step 1-11.**
- **For the Rear parking brake cable, go to step 12-21.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 146: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 147: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Parking Brake Adjusting Bolt - Loosen
    1. Release the parking brake pedal fully.
    2. Disconnect and remove the return spring (A).
    3. Loosen the adjusting nut (B).

Fig. 148: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Kick Panel
    1. Pull out the front door opening seal (A) as needed from the kick panel hooks and the door opening flange.
    2. Pull back the kick panel by hand to detach the clips (B), then remove the driver's side kick panel

(C).

Fig. 149: Removing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 150: Removing Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 151: Identifying Driver's Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C)
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 152: Identifying Driver's Dashboard Undercover, Holder, Pin, Lock Knob And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 153: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Parking Brake Cable - Pedal Side
    1. Remove the lock pin (A) and the clevis pin (B).
    2. Remove the parking brake cable mounting bolts (C).

Fig. 154: Identifying Lock Pin, Clevis Pin And Parking Brake Cable Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Parking Brake Cable
    1. Remove the wire guide base (A).
    2. Remove the front parking brake cable mounting bolts (B).
    3. Disconnect the rear parking brake cables (C) from the equalizer (D).

Fig. 155: Identifying Rear Parking Brake Cables, Equalizer, Wire Guide Base And Front Parking Brake Cable Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the front parking brake cable mounting nut (A).

Fig. 156: Identifying Front Parking Brake Cable Mounting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front parking brake cable mounting bolt (A).
6. Pull the front parking brake cable (B) and remove it from the body.

Fig. 157: Identifying Front Parking Brake Cable And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
13. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 158: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 159: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Parking Brake Adjusting Bolt - Loosen
    1. Release the parking brake pedal fully.
    2. Disconnect and remove the return spring (A).
    3. Loosen the adjusting nut (B).

Fig. 160: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Parking Brake Cable - Equalizer Side
    1. Remove the wire guide base (A).
    2. Remove the front parking brake cable mounting bolts (B).
    3. Disconnect the rear parking brake cables (C) from the equalizer (D).

Fig. 161: Identifying Rear Parking Brake Cables, Equalizer, Wire Guide Base And Front Parking Brake Cable Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Middle Floor Undercover

Left side

Fig. 162: Identifying Middle Floor Undercover And Fasteners (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the bolts (A) and the clips (B, C), then remove the left middle floor undercover (D) or the right middle floor undercover (E).

   Right side

Fig. 163: Identifying Middle Floor Undercover And Fasteners (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 164: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 165: Turning Adjuster Bolt Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Parking Brake Shoe
    1. Disconnect and remove brake spring A.
    2. Disconnect and remove the upper return spring (B).

Fig. 166: Identifying Brake Spring And Upper Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Disconnect and remove the lower return spring (A).

Fig. 167: Identifying Lower Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the tension pins (A) by pushing the respective retainer springs (B), and turning the pin.
5. Remove the adjuster assembly (C) by moving forward brake shoe (D).

Fig. 168: Removing Tension Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the rod spring (A), and remove the strut (B).

Fig. 169: Identifying Forward Brake Shoe, Rod Spring And Strut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the forward brake shoe (C).
8. Remove the rearward brake shoe (A) by disconnecting the rear parking brake cable (B) from the parking brake lever (C).

Fig. 170: Identifying Rearward Brake Shoe, Rear Parking Brake Cable And Parking Brake Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Rear Parking Brake Cable
    1. Remove the rear parking brake cable mounting bolts (A) from backing plate (B).

2. Pull the rear parking brake cable (C) and remove it from the backing plate.

Fig. 171: Identifying Backing Plate, Rear Parking Brake Cable And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear parking brake cable grommets (A), and pull out the rear parking brake cables from the body floor.

Fig. 172: Identifying Rear Parking Brake Cable Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left side cable

Fig. 173: Identifying Rear Parking Brake Cable Mounting Bolts (Left Side Cable)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side cable

Fig. 174: Identifying Rear Parking Brake Cable Mounting Bolts (Right Side Cable)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear parking brake cable mounting bolts (A) then, remove the rear parking brake cables.

Right side cable

Fig. 175: Identifying Rear Parking Brake Cable Mounting Bolts (Right Side Cable)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **Refer to the EXPLODED VIEW as needed during this procedure.**
- **For the front parking brake cable, go to step 1-12.**
- **For the Rear parking brake cable, go to step 13-23.**

1. Front Parking Brake Cable
    1. Install the front parking brake cable (A).

Fig. 176: Identifying Front Parking Brake Cable And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the front parking brake cable mounting nut (A).

Fig. 177: Identifying Front Parking Brake Cable Mounting Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the rear parking brake cables (A) to the equalizer (B).
4. Install the wire guide base (C).

Fig. 178: Identifying Rear Parking Brake Cables, Equalizer And Wire Guide Base And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Parking Brake Cable - Pedal Side
    1. Install the front parking brake cable (A) by aligning the tab (B) with the groove (C).
    2. Install the lock pin (D) and the clevis pin (E).

Fig. 179: Identifying Front Parking Brake Cable, Tab, Groove Lock, Pin And Clevis Pin With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Major Parking Brake - Adjustment
    1. Remove the access plug (A).
    2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 7 clicks, an install the access plug.

Fig. 180: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surface between the brake disc/drum and the inside of the wheel.**

Fig. 181: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 182: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66 1 lbf) of force to fully apply the parking brake.
7. Make sure the parking brake pedal is within the specified number of clicks.

    Pedal locked clicks: 5 to 6 clicks

Fig. 183: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Parking Brake Return Spring
    1. Install the return spring (A).

Fig. 184: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 185: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Driver's Dashboard Lower Cover
    1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 186: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder securely.
    2. Turn the lock knob (E) 90 °.

Fig. 187: Identifying Driver's Dashboard Undercover, Holder, Pin, Clip And Lock Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 188: Identifying Driver's Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Kick Panel
    1. Install the driver's side kick panel (A). Make sure the clips snap into place securely.
    2. Install the front door opening seal (C).

Fig. 189: Installing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Door Sill Trim
    1. Install the front door inner sill trim (A). Make sure the clips(B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 190: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Parking Brake Cable
    1. Install the rear parking brake cables.
    2. Install the rear parking brake cable mounting bolts (A).

    Left side cable

Fig. 191: Identifying Rear Parking Brake Cable Mounting Bolts With Torque Specifications (Left Side Cable)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side cable

Fig. 192: Identifying Rear Parking Brake Cable Mounting Bolts With Torque Specifications (Right Side Cable)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side cable

Fig. 193: Identifying Rear Parking Brake Cable Mounting Bolts With Torque Specifications (Right Side Cable)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the parking brake cable grommets (A).

Fig. 194: Identifying Parking Brake Cable Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear parking brake cable (A) to the backing plate (B).

NOTE: Be careful not to bend or distort the cable.

Fig. 195: Identifying Rear Parking Brake Cable And Backing Plate With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Parking Brake Shoe
    1. Connect the rear parking brake cable (A) to the parking brake lever (B).
    2. Apply Molykote 44MA grease to the cable contact surface (C) on the backing plate.

Fig. 196: Identifying Molykote Grease Applying Area On Backing Plate Cable Contact Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Apply a thin coat of Molykote 44MA grease to the brake shoe ends and strut ends (A), sliding surfaces of the parking brake shoe (B), and the pivot of the parking brake lever (C) as shown. Wipe off any excess. Keep grease off the brake linings.

Greasing symbols:

A ➡ ◉ Brake shoe ends and strut ends

B ⇨ ○ Sliding surface of the shoe

C ⇨ ● Opposite edge of the shoe

Fig. 197: Locating Thin Coat Of Molykote Grease Applying Area On Brake Shoe Ends And Strut Ends

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Position the parking brake shoes (A), then hook the rod spring (B) on the strut (C) first with the spring end (D) pointing downward. Then hook the rod spring to the parking brake shoe, and install the strut on the parking brake shoes.

Fig. 198: Identifying Parking Brake Shoes, Rod Spring, Strut And Spring End

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tension pins (C) and retainer springs (D). Make sure the tension pin does not contact the parking brake lever.
6. Install connecting rods A and B on the adjuster nut (E).

NOTE:

- **Clean the threaded portions of connecting rod A and the sliding surface of connecting rod B, then coat them with Molykote 44MA grease.**
- **Shorten connecting rod A by fully turning the adjuster nut.**

Fig. 199: Installing Tension Pins And Retainer Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the lower return spring (A).

Fig. 200: Identifying Lower Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the upper return spring (B).
9. Install brake spring A.

Fig. 201: Identifying Upper Return Spring And Brake Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surface between the hub bearing unit and the inside of the brake disc.**

Fig. 202: Identifying Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 203: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Middle Floor Undercover

Left side

Fig. 204: Identifying Middle Floor Undercover And Fasteners (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the left middle floor undercover (A) or the right middle floor undercover (B), then install the bolts (C) and the clips (D, E). Make sure the clips snap into place securely.

   Right side

Fig. 205: Identifying Middle Floor Undercover And Fasteners (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Parking Brake Cable - Equalizer Side
    1. Connect the rear parking brake cables (A) to the equalizer (B).
    2. Install the wire guide base (C).

Fig. 206: Identifying Rear Parking Brake Cables, Equalizer And Wire Guide Base And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Major Parking Brake - Adjustment
    1. Remove the access plug (A).
    2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against parking brake drum. Then back off the adjuster 7 clicks, an install the access plug.

Fig. 207: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 208: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 209: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
    7. Make sure the parking brake pedal is within the specified number of clicks.

    Pedal locked clicks: 5 to 6 clicks

Fig. 210: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Parking Brake Return Spring
    1. Install the return spring (A).

Fig. 211: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 212: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE INSPECTION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 213: Identifying Rear Wheel And Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 214: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Parking Brake Adjusting Bolt - Loosen
    1. Release the parking brake pedal fully.
    2. Disconnect and remove the return spring (A).
    3. Loosen the adjusting nut (B).

Fig. 215: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 216: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 217: Turning Adjuster Bolt Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Parking Brake Inspection
    1. Check the parking brake linings (A) for cracking, glazing, wear, and contamination.
    2. Measure the parking brake lining thickness (B). Measurement does not include brake shoe thickness.

       Parking brake lining thickness:

       Standard: 1.7-3.0 mm (0.067-0.118 in)

       Service limit: 1.0 mm (0.039 in)

    3. If any part of the parking brake lining thickness is less than the service limit, replace all of the parking brake shoes as a set.
    4. Check the hub (C) for smooth operation. If it requires servicing, replace the hub bearing unit.

Fig. 218: Identifying Parking Brake Lining Thickness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the inside diameter of the parking brake drum with an inside vernier caliper.

   Parking brake drum inside diameter:

   Standard: 200 mm (7.874 in)

   Service limit: 201 mm (7.913 in)

6. If the inside diameter of the parking brake drum is more than the service limit, replace the brake disc/drum.
7. Check the parking brake disc/drum for scoring, grooves, and cracks.

Fig. 219: Measuring Inside Diameter Of Parking Brake Drum Using Inside Vernier Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 220: Identifying Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 221: Identifying Caliper Assembly And Brake Hose Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Major Parking Brake - Adjustment
    1. Remove the access plug (A).
    2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 7 clicks, and install the access plug.

Fig. 222: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 223: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 224: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
7. Make sure the parking brake pedal is within the specified number of clicks.

   Pedal locked clicks: 5 to 6 clicks

Fig. 225: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Parking Brake Return Spring
   1. Install the return spring (A).

Fig. 226: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 227: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE INSPECTION AND ADJUSTMENT

INSPECTION

1. Parking Brake Pedal - Inspection
    1. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
    2. The parking brake pedal should be locked within the specified number of clicks.

       Pedal locked clicks: 5 to 6 clicks

    3. Adjust the parking brake if the pedal clicks are not within the specification.

       NOTE: **Minor parking brake pedal adjustments (1 to 2 clicks) can be made with the adjusting nut (see parking brake minor adjustment). If a larger adjustment is required, follow the major adjustment procedure using the adjuster nut at the parking brake drum (see parking brake major adjustment). After installing new parking brake shoes and/or new brake disc/drum, make sure you drive the vehicle for "break-in"**

Fig. 228: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

NOTE:
- **For the parking brake minor adjustment, go to steps 1-2.**
- **For the parking brake major adjustment, go to step 3-6.**

1. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 229: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Parking Brake Return Spring
    1. Disconnect and remove the return spring (A).

Fig. 230: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
4. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 231: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 232: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Parking Brake Adjusting Bolt - Loosen
    1. Release the parking brake pedal fully.
    2. Disconnect and remove the return spring (A).
    3. Loosen the adjusting nut (B).

Fig. 233: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

NOTE:

- **For the parking brake minor adjustment, go to step 1.**
- **For the parking brake major adjustment, go to step 2.**

1. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 234: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking

brake.

7. Make sure the parking brake pedal is within the specified number of clicks.

   Pedal locked clicks: 5 to 6 clicks

Fig. 235: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Major Parking Brake - Adjustment
   1. Remove the access plug (A).
   2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 7 clicks, and install the access plug.

Fig. 236: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip

Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear wheel on both sides.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc or the brake drum and the inside of the wheel.**

4. Release the parking brake pedal fully.
5. Press the parking brake pedal 1 click.

Fig. 237: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
7. Release the parking brake pedal fully.
8. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 238: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
10. Make sure the parking brake pedal is within the specified number of clicks.

    Pedal locked clicks: 5 to 6 clicks

Fig. 239: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Parking Brake Return Spring
    1. Install the return spring (A).

Fig. 240: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 241: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE PEDAL REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 242: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 243: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Parking Brake Adjusting Bolt - Loosen

1. Release the parking brake pedal fully.
2. Disconnect and remove the return spring (A).
3. Loosen the adjusting nut (B).

Fig. 244: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 245: Identifying Driver's Dashboard Panel Assembly, Connector And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 246: Identifying Driver's Dashboard Undercover, Holder, Pin, Lock Knob And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 247: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Parking Brake Cable - Pedal Side
    1. Remove the lock pin (A) and the clevis pin (B).
    2. Remove the parking brake cable mounting bolts (C).

Fig. 248: Identifying Lock Pin, Clevis Pin And Parking Brake Cable Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Parking Brake Pedal Assembly
    1. Disconnect the connector (A).
    2. Remove the harness clip (B).
    3. Remove the parking brake pedal bracket mounting bolt (C) and nuts (D).
    4. Remove the parking brake pedal assembly (E).

Fig. 249: Identifying Parking Brake Pedal Assembly Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Parking Brake Switch
    1. Remove the parking brake switch (A).

Fig. 250: Identifying Parking Brake Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Parking Brake Switch
    1. Install the parking brake switch (A).

Fig. 251: Identifying Parking Brake Switch And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Parking Brake Pedal Assembly
    1. Install the parking brake pedal assembly (A).
    2. Install the harness clip (B).
    3. Connect the connector (C).

Fig. 252: Identifying Parking Brake Pedal Assembly Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Parking Brake Cable - Pedal Side
    1. Install the front parking brake cable (A) by aligning the tab (B) with the groove (C).
    2. Install the lock pin (D) and the clevis pin (E).

Fig. 253: Identifying Lock Pin, Clevis Pin And Parking Brake Cable Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Major Parking Brake - Adjustment
    1. Remove the access plug (A).
    2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 7 clicks, and install the access plug.

Fig. 254: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 255: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 256: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
    7. Make sure the parking brake pedal is within the specified number of clicks.

    Pedal locked clicks: 5 to 6 clicks

Fig. 257: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Parking Brake Return Spring

1. Install the return spring (A).

Fig. 258: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 259: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driver's Dashboard Lower Cover

1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 260: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 261: Identifying Driver's Dashboard Undercover, Holder, Pin, Clip And Lock Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 262: Identifying Driver's Dashboard Panel Assembly, Connector And Clips

PARKING BRAKE SHOE LINING BREAK-IN

INSPECTION

1. Parking Brake Shoe Lining Break-in

WARNING: Do this operation in a safe area.

NOTE:

- **Do the brake lining surface break-in when replacing shoes with new brake linings and/or new rear brake disc/drum.**
- **Check the number of parking brake pedal clicks. Adjust the parking brake before lining surface break-in**

1. Park the vehicle on a firm, level surface.
2. Release the parking brake pedal.
3. Press the parking brake pedal 4 clicks.
4. Drive the vehicle for 0.25 mile (400 m) at about 31 mph (50 km/h).
5. Stop the vehicle, and release the parking brake for 5-10 minutes to allow the brake disc/drum to cool.
6. Repeat steps 3 through 5 two more times.
7. Check the parking brake pedal adjustment.

PARKING BRAKE SHOE REMOVAL AND INSTALLATION

EXPLODED VIEW

1. Parking Brake Shoe Exploded View

Exploded View

Fig. 263: Exploded View Of Parking Brake Shoe Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 264: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 265: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Parking Brake Adjusting Bolt - Loosen
    1. Release the parking brake pedal fully.
    2. Disconnect and remove the return spring (A).
    3. Loosen the adjusting nut (B).

Fig. 266: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 267: Identifying Caliper Assembly And Brake Hose Mounting Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 268: Turning Adjuster Bolt Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Parking Brake Shoe
    1. Disconnect and remove brake spring A.
    2. Disconnect and remove the upper return spring (B).

Fig. 269: Identifying Brake Spring And Upper Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect and remove the lower return spring (A).

Fig. 270: Identifying Lower Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the tension pins (A) by pushing the respective retainer springs (B), and turning the pin.
5. Remove the adjuster assembly (C) by moving forward brake shoe (D).

Fig. 271: Removing Tension Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the rod spring (A), and remove the strut (B).
7. Remove the forward brake shoe (C).

Fig. 272: Identifying Forward Brake Shoe, Rod Spring And Strut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the rearward brake shoe (A) by disconnecting the rear parking brake cable (B) from the parking brake lever (C).

Fig. 273: Identifying Rearward Brake Shoe, Rear Parking Brake Cable And Parking Brake Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Parking Brake Lever
    1. Remove the U-clip (A), the wave washer (B), the parking brake lever (C) and the pivot pin (D) from the brake shoe (E).

Fig. 274: Identifying U-Clip, Wave Washer, Parking Brake Lever, Pivot Pin And Brake Shoe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Parking Brake Lever
    1. Apply Molykote 44MA grease to the sliding surface of the pivot pin (A), and insert the pin into the rearward brake shoe (B) from the outside.

2. Install the parking brake lever (C) and wave washer (D) on the pivot pin, and secure with a new U-clip (E).
    - Install the wave washer with its convex side facing out.
    - Pinch the U-clip securely to prevent the parking brake lever from coming out of the brake shoe.

Fig. 275: Identifying Molykote Grease Applying Area On Sliding Surface Of Pivot Pin And Rearward Brake Shoe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Parking Brake Shoe
    1. Connect the rear parking brake cable (A) to the parking brake lever (B).
    2. Apply Molykote 44MA grease to the cable contact surface (C) on the backing plate.

Fig. 276: Identifying Molykote Grease Applying Area On Backing Plate Cable Contact

Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Apply a thin coat of Molykote 44MA grease to the brake shoe ends and strut ends (A), sliding surfaces of the parking brake shoe (B), and the pivot of the parking brake lever (C) as shown. Wipe off any excess. Keep grease off the brake linings.

Fig. 277: Locating Thin Coat Of Molykote Grease Applying Area On Brake Shoe Ends And Strut Ends
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Position the parking brake shoes (A), then hook the rod spring (B) on the strut (C) first with the spring end (D) pointing downward. Then hook the rod spring to the parking brake shoe, and install the strut on the parking brake shoes.

Fig. 278: Identifying Parking Brake Shoes, Rod Spring, Strut And Spring End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tension pins (C) and retainer springs (D). Make sure the tension pin does not contact the parking brake lever.
6. Install connecting rods A and B on the adjuster nut (E).

NOTE:

- **Clean the threaded portions of connecting rod A and the sliding surface of connecting rod B, then coat them with Molykote 44MA grease.**
- **Shorten connecting rod A by fully turning the adjuster nut.**

Fig. 279: Installing Tension Pins And Retainer Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the lower return spring (A).

Fig. 280: Identifying Lower Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the upper return spring (B).
9. Install brake spring A.

Fig. 281: Identifying Upper Return Spring And Brake Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 282: Identifying Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 283: Identifying Caliper Assembly And Brake Hose Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Major Parking Brake - Adjustment
    1. Remove the access plug (A).
    2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 7 clicks, and install the access plug.

Fig. 284: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 285: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 286: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
7. Make sure the parking brake pedal is within the specified number of clicks.

   Pedal locked clicks: 5 to 6 clicks

Fig. 287: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Parking Brake Return Spring
   1. Install the return spring (A).

Fig. 288: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 289: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications

DISASSEMBLY

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

NOTE:

- **Clean all parts in brake fluid and air dry; blow out all passages with compressed air.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **Make sure no grease or oil gets on the brake discs or pads.**

- **Do not reuse drained brake fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Refer to the EXPLODED VIEW as needed during this procedure.**

1. Rear Brake Caliper - Disassembly
    1. Remove the pad spring (A).

Fig. 291: Identifying Pad Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Set the wooden block (A) or several shop towels in the caliper body (B) as shown.
3. Blow out the piston with compressed air gradually, and remove the piston from the caliper body.

NOTE: **Do not put the hand into the caliper body because the piston will come out forcibly from the caliper body.**

Fig. 292: Removing Piston From Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the piston boot (A).
5. Remove the piston seal (B).

NOTE: **Be careful not to damage the inner surface of the cylinder wall with the tool.**

Fig. 293: Identifying Piston Boot And Piston Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the caliper pins (A).

NOTE: **The upper and lower caliper pins are different. During installation, make sure the caliper pins are in the proper positions.**

7. Remove the pin boots (B).

Fig. 294: Identifying Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

NOTE:

- **Clean all parts in brake fluid and air dry; blow out all passages with compressed air.**
- **Before reassembling, check that all parts are free of dirt and other foreign particles.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **Make sure no grease or oil gets on the brake discs or pads.**
- **Do not reuse drained brake fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Coat the piston, the piston seal groove, and the caliper bore with clean brake fluid.**
- **Use recommended greases in the rear caliper set.**
- **After installing the caliper, check the brake hose and line for leaks, interference, and twisting.**
- **Refer to the EXPLODED VIEW as needed during this procedure.**

1. Rear Brake Caliper - Reassembly
    1. Apply a thin coat of Honda caliper grease (P/N 08C30-B0224M) to the caliper pins (A) and the new pin boots (B).
    2. Install the pin boots.
    3. Install the caliper pins.

NOTE:

- **Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.**
- **Remove air from within the pin boots.**

Fig. 295: Identifying Thin Coat Of Honda Caliper Grease Applying Area On Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply a thin coat of Honda silicone grease (P/N 08C30-B0234M) to the new piston seal (A).
5. Install the piston seal.
6. Apply a thin coat of Honda silicone grease (P/N 08C30-B0234M) to the new piston boot (B).
7. Install the piston boot.

Fig. 296: Identifying Thin Coat Of Honda Silicone Grease Applying Area On Piston Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Apply the brake fluid to the outer surface of the piston, then set the piston in place on the caliper body.

9. Press in the piston with the brake caliper piston compressor tool.

NOTE:

- **Make sure that the piston boot is properly positioned into the groove of the piston.**
- **Do not press the piston diagonally, and do not press it forcibly.**
- **Be careful not to damage the piston boot when pressing the piston.**

Fig. 297: Pressing Piston Using Brake Caliper Piston Compressor Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the pad spring (A).

Fig. 298: Identifying Pad Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR BRAKE CALIPER REMOVAL AND INSTALLATION

REMOVAL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 299: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove the brake fluid from the master cylinder reservoir with a syringe.

Fig. 300: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Caliper Body

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

1. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper body (C).
2. Remove the flange bolts (D) while holding respective caliper pins (E) with a wrench.
3. Remove the brake caliper body.

Fig. 301: Identifying Brake Hose, Caliper Body, Banjo Bolt, Flange Bolts And Caliper Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Pad
    1. Remove the outer pad shim (A) and the outer brake pad (B).

Fig. 302: Identifying Outer Pad Shim And Outer Brake Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the inner pad (A) from the caliper body (B).

Fig. 303: Identifying Inner Pad And Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Brake Caliper Pin and Boot
    1. Remove the caliper pins (A).

NOTE: The upper and lower caliper pins are different. During installation,

make sure the caliper pins are in the proper positions.

2. Remove the pin boots (B).

Fig. 304: Identifying Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Brake Caliper Pin and Boot
   1. Apply a thin coat of Honda caliper grease (P/N 08C30-B0224M) to the caliper pins (A) and the new pin boots (B).
   2. Install the pin boots.
   3. Install the caliper pins.

NOTE:

- **Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.**
- **Make sure that the pin boots are properly positioned into the grooves (C) of the caliper pin and the grooves (D) of the caliper body.**
- **Remove air from within the pin boots.**

Fig. 305: Identifying Thin Coat Of Honda Caliper Grease Applying Area On Caliper Pins And Pin Boots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Brake Pad

Outer pad

Fig. 306: Locating Thin Coat Of Assembly Paste Applying Area On Pad Side Shims And Brake

Pads (Outer Pad)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows.

   NOTE: Wipe off the excess assembly paste from the pad shims and brake pads friction material.

2. Install the brake pads and the pad shims.

   NOTE: Install the brake pad with the wear indicator (C) on the bottom inside position.

   Inner pad

Fig. 307: Locating Thin Coat Of Assembly Paste Applying Area On Pad Side Shims And Brake Pads (Inner Pad)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper Body
   1. Install the caliper body (A).
   2. Install the flange bolts (B) while holding respective caliper pins (C) with a wrench.
   3. Connect the brake hose (D) to the caliper body with the banjo bolt (E) and new sealing washers (F).

Fig. 308: Identifying Rear Brake Caliper Body Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake System - Bleeding

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).

Fig. 309: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers in the sequence shown.

Fig. 310: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front

Fig. 311: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.
10. Repeat this procedure for each brake in the bleeding sequence.

Rear

Fig. 312: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 313: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR BRAKE DISC INSPECTION

REMOVAL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 314: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Outer Brake Pad
    1. Remove the brake hose (A) from the brake hose bracket (B).
    2. Remove the flange bolts (C) while holding the caliper pin (D) with a wrench.
    3. Remove the caliper body (E).

NOTE: Do not twist the brake hose to prevent damage.

Fig. 315: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the outer pad shim (A) and the outer brake pad (B).

Fig. 316: Identifying Outer Pad Shim And Outer Brake Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Rear Brake Disc Thickness and Parallelism - Inspection
    1. Using a micrometer (A), measure the brake disc thickness at eight points, about 45 ° apart and 10 mm (0.39 in) in from the outer edge of the brake disc.

Replace the brake disc if the smallest measurement is less than the maximum refinishing limit.

Brake disc thickness:

Standard: 9.0 mm (0.354 in)

Maximum refinishing limit: 7.5 mm (0.295 in)

Brake disc parallelism*: 0.015 mm (0.00059 in) max .

***: This is the maximum allowable difference between the thickness measurements** .

2. If the brake disc is beyond the service limit for parallelism, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

NOTE: If the brake disc is beyond the service limit for refinishing, replace it.

3. Inspect the brake disc runout.

Fig. 317: Measuring Brake Disc Runout Using Micrometer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Brake Disc Runout - Inspection
    1. Inspect the brake disc to wheel surface for damage and cracks.
    2. Clean the brake disc thoroughly, and remove all rust.
    3. Install suitable flat washers (A) and the wheel nuts (B).
    4. Tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.
    5. Set up the dial gauge (C) against the brake disc as shown.
    6. Measure the runout at 10 mm (0.39 in) from the outer edge of the brake disc.

Brake disc runout:

Service limit: 0.04 mm (0.0016 in)

7. If the brake disc is beyond the service limit, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

   Maximum refinishing limit: 7.5 mm (0.295 in)

NOTE:

- **If the brake disc is beyond the service limit for refinishing, replace it.**
- **If the brake disc is replaced with a new one, check the new disc for runout. If the new disc is out of specification, refinish the disc.**

Fig. 318: Measuring Brake Disc Outer Edge Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Rear Outer Brake Pad
   1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shim (A), the back of the brake pad (B), and the other areas indicated by the arrows.

NOTE: **Wipe off the excess assembly paste from the pad shims and brake pad friction material.**

2. Install the brake pad and the pad shim.

Fig. 319: Locating Thin Coat Of Assembly Paste Applying Area On Pad Side Shims And Brake Pads (Inner Pad)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the caliper body (A).
4. Install the flange bolts (B) while holding respective caliper pins (C) with a wrench.
5. Install the brake hose (D).

Fig. 320: Identifying Caliper Body, Brake Hose And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 321: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR BRAKE DISC REMOVAL AND INSTALLATION

REMOVAL

NOTE: **Keep grease away from the brake disc and the brake pads.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 322: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Equalizer Cover
    1. Pull back the left rear carpet/cutout/insulation, under the driver's seat.
    2. Remove the equalizer cover (A).

Fig. 323: Identifying Equalizer Cover And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Parking Brake Adjusting Bolt - Loosen
    1. Release the parking brake pedal fully.
    2. Disconnect and remove the return spring (A).
    3. Loosen the adjusting nut (B).

Fig. 324: Identifying Return Spring And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 325: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque

Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

Fig. 326: Turning Adjuster Bolt Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Keep grease away from the brake disc and the brake pads.**

1. Rear Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 327: Identifying Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Brake Disc Runout - Inspection
    1. Inspect the brake disc to wheel surface for damage and cracks.
    2. Clean the brake disc thoroughly, and remove all rust.
    3. Install suitable flat washers (A) and the wheel nuts (B).
    4. Tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.
    5. Set up the dial gauge (C) against the brake disc as shown.
    6. Measure the runout at 10 mm (0.39 in) from the outer edge of the brake disc.

       Brake disc runout:

       Service limit: 0.04 mm (0.0016 in)

    7. If the brake disc is beyond the service limit, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

       Maximum refinishing limit: 7.5 mm (0.295 in)

NOTE:
- **If the brake disc is beyond the service limit for refinishing, replace it.**
- **If the brake disc is replaced with a new one, check the new disc for runout. If the new disc is out of specification, refinish the disc.**

Fig. 328: Measuring Brake Disc Outer Edge Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 329: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Major Parking Brake - Adjustment
    1. Remove the access plug (A).
    2. Turn the ratchet teeth on the adjuster nut (B) with a brake adjuster tool or a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 7 clicks, and install the access plug.

Fig. 330: Turning Ratchet Teeth On Adjuster Nut Using Brake Adjuster Tool Or Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 331: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Minor Parking Brake - Adjustment
    1. Release the parking brake pedal fully.
    2. Press the parking brake pedal 1 click.
    3. Tighten the adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.
    4. Release the parking brake pedal fully.
    5. Check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.

Fig. 332: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    6. Press the parking brake pedal (A) with 294 N (30.0 kgf, 66.1 lbf) of force to fully apply the parking brake.
    7. Make sure the parking brake pedal is within the specified number of clicks.

Pedal locked clicks: 5 to 6 clicks

Fig. 333: Pressing Parking Brake Pedal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Parking Brake Return Spring
    1. Install the return spring (A).

Fig. 334: Identifying Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Equalizer Cover
    1. Install the equalizer cover (A).
    2. Fold back into place the left rear carpet/cutout/insulation.

Fig. 335: Identifying Equalizer Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR BRAKE HOSE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 336: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove the brake fluid from the master cylinder reservoir with a syringe.

Fig. 337: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Hose

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE: **After removal, plug the ends of the hoses and the joints to prevent spilling brake fluid.**

    1. Disconnect the brake line (A) from the brake hose (B).
    2. Remove the brake hose clip (C).

Fig. 338: Identifying Brake Line, Brake Hose And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper body.
4. Remove the brake hose mounting bolt (C).
5. Remove the brake hose.

Fig. 339: Identifying Brake Hose, Mounting Bolt And Banjo Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Brake Hose

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE: **Check that all parts are free of dirt and other foreign particles.**

1. Install the brake hose (A) with the mounting bolt (B).
2. Connect the brake hose to the caliper body with the banjo bolt (C) and new sealing washers (D).

Fig. 340: Identifying Brake Line, Brake Hose, Washer, Clip And Banjo Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the brake line (A) to the brake hose (B).
4. Install the brake hose clip (C).

Fig. 341: Installing Brake Hose Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Brake System - Bleeding

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).

Fig. 342: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers in the sequence shown.

Fig. 343: Identifying Bleeding Sequence Of Front Brake System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.
7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.

Front

Fig. 344: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 345: Bleeding Brake Fluid To Plastic Catch Bottle Using Hose (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Repeat this procedure for each brake in the bleeding sequence.

3. Brake Hose After Install - Check
    1. Do the following checks:
        - Check the brake hose and line joint for leaks, and tighten if necessary.
        - Check the brake hoses for interference and twisting.
4. Rear Wheel
    1. Install the rear wheel.

NOTE: Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.

Fig. 346: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR BRAKE PAD INSPECTION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 347: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Rear Brake Pad - Inspection

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Check the thickness (A) of the inner pad (B) and the outer pad (C). Do not include the thickness of the backing plate.

   Brake pad thickness:

   Standard: 9.0 mm (0.354 in)

   Service limit: 1.6 mm (0.063 in)

2. If any part of the brake pad thickness is less than the service limit, replace the brake pads as a set.

Fig. 348: Identifying Inner Pad And Outer Pad Thickness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 349: Identifying Rear Wheel And Mounting Bolts With Torque Specifications

REAR BRAKE PAD REMOVAL AND INSTALLATION

REMOVAL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Brake Fluid - Remove
    1. Pull out the hood rear seal, then remove the master cylinder maintenance lid (A).
    2. Remove the reservoir cap (B).
    3. Remove some brake fluid from the master cylinder reservoir with a syringe.

Fig. 350: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Wheel - Both Side
    1. Remove both rear wheels.

Fig. 351: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Pad
    1. Remove the brake hose (A) from the brake hose bracket (B).
    2. Remove the flange bolts (C) while holding the caliper pin (D) with a wrench.
    3. Remove the caliper body (E).

NOTE: Do not twist the brake hose to prevent damage.

Fig. 352: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the outer pad shim (A) and the outer brake pad (B).

Fig. 353: Identifying Outer Pad Shim And Outer Brake Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the inner pad (A) from the caliper body (B).

Fig. 354: Identifying Inner Pad And Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Pad Retainer and Caliper Bracket Clean and Check
    1. Remove the pad retainers (A).
    2. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks.
    3. Verify that the caliper pins (C) move in and out smoothly. Clean and lube if needed.

Fig. 355: Identifying Pad Retainers, Caliper Bracket And Caliper Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Rear Brake Pad Retainer and Caliper Bracket Clean and Check
    1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainer mating surface of the caliper bracket (indicated by the arrows).
    2. Install the pad retainers (A).

NOTE: Wipe off the excess assembly paste from the retainers. Keep the assembly paste away from the brake disc and the brake pads.

Fig. 356: Locating Thin Coat Assembly Paste Applying Area On Caliper Bracket Retainer Mating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Brake Pad

Outer pad

Fig. 357: Locating Thin Coat Of Assembly Paste Applying Area On Pad Side Shims And Brake Pads (Outer Pad)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows.

   NOTE: Wipe off the excess assembly paste from the pad shims and brake pads friction material.

2. Install the brake pads and the pad shims.

   NOTE: Install the brake pad with the wear indicator (C) on the bottom inside position.

Inner pad

Fig. 358: Locating Thin Coat Of Assembly Paste Applying Area On Pad Side Shims And Brake Pads (Inner Pad)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the caliper body (A).
4. Install the flange bolts (B) while holding respective caliper pins (C) with a wrench.
5. Install the brake hose (D).

Fig. 359: Identifying Caliper Body, Brake Hose And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 360: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Brake Fluid - Refill
    1. Add brake fluid as needed.
    2. Install the reservoir cap (A).
    3. Install the master cylinder maintenance lid (B).

Fig. 361: Identifying Master Cylinder Maintenance Lid And Reservoir Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 362: Identifying Rear Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Wheel Speed Sensor
    1. Turn the ignition switch to LOCK (0).
    2. Release the connector holding clamps (A).

Fig. 363: Removing Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (B).
4. Remove the clips (C).
5. Remove the wheel speed sensor (D).

INSTALLATION

1. Rear Wheel Speed Sensor
    1. Install the wheel speed sensor (A).

NOTE:

- **Do not twist the sensor wires.**
- **If the wheel speed sensor comes in contact with the wheel bearing, it is faulty.**
- **Make sure there is no debris in the sensor mounting hole.**

Fig. 364: Installing Wheel Speed Sensor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the harness clips (B).
3. Connect the connector (C).
4. Connect the connector holding clamps (D).

2. Rear Wheel
   1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 365: Identifying Rear Wheel And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOW TO TROUBLESHOOT THE VSA SYSTEM

SYSTEM INDICATOR

This system has four indicators:

- ABS indicator (A)
- Brake system indicator (B)
- VSA indicator (C)
- VSA OFF indicator (D)

Fig. 2: Identifying ABS, Brake System And VSA Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When the system is OK, each indicator comes on for about 2 seconds after turning the ignition switch to ON (II), then goes off.

When the system detects a problem, a DTC will set and depending upon the failure, the VSA modulator control unit determines which indicator(s) will turn on. If the problem goes away (system returns to normal), the indicator(s) will be controlled in the following way depending upon the DTC that was set:

- The indicator(s) will come on and stay on when the ignition switch is ON (II).
- The indicator(s) will automatically go off.
- The indicator(s) will go off after the vehicle is driven.

ABS INDICATOR

The ABS indicator comes on when the ABS function is lost. The brakes still work like a conventional system.

BRAKE SYSTEM INDICATOR

The brake system indicator comes on when the EBD function is lost, the parking brake is applied, and/or the brake fluid level is low.

NOTE: **If two or more wheel speed sensors fail, the brake system indicator will come on.**

VSA INDICATOR

The VSA indicator comes on when the VSA function is lost. The VSA indicator blinks when the VSA function is activating.

VSA OFF INDICATOR

The VSA OFF indicator comes on when the VSA is turned OFF by using the VSA OFF switch.

DIAGNOSTIC TROUBLE CODE (DTC)

- The memory can hold 10 DTCs. However, when the same DTC is detected more than once, the more recent DTC is written over the earlier one. Therefore, when the same problem is detected repeatedly, it is memorized as a single DTC.
- The DTCs are memorized in an EEPROM in the VSA modulator-control unit. Therefore, the memorized DTCs cannot be erased by disconnecting the battery. Do the specified procedures to clear the DTCs.

SELF-DIAGNOSIS

- Self-diagnosis can be classified into two categories:
  - Initial diagnosis: Done right after the ignition switch is turned to ON (II) and until the ABS and VSA indicators go off.
  - Regular diagnosis: Done right after the initial diagnosis until the ignition switch is turned to LOCK (0).
- When the system detects a problem, the VSA modulator-control unit shifts to fail-safe mode.

KICKBACK

The pump motor operates when the VSA modulator-control unit is functioning, and the fluid in the modulator is forced out to the master cylinder, causing kickback at the brake pedal.

PUMP MOTOR

- The pump motor operates when the VSA modulator-control unit is functioning.
- The VSA modulator-control unit checks the pump motor operation during the first acceleration after the vehicle starts driving.

BRAKE FLUID REPLACEMENT/AIR BLEEDING

Brake fluid replacement and air bleeding procedures are identical to the procedures used on vehicles without the

VSA System. See **Brake System Bleeding**

HOW TO TROUBLESHOOT DTCS

The troubleshooting procedures assume that the cause of the problem is still present and the ABS and/or VSA indicator is still on. Following a troubleshooting procedure for a DTC that has been cleared but does not reset can result in incorrect diagnosis.

1. Question the customer about the conditions when the problem occurred, and try to reproduce the same conditions for troubleshooting. Find out when the ABS and/or VSA indicator came on, such as during activation, after activation, when the vehicle was traveling at a certain speed, etc. If necessary, have the customer demonstrate the concern.
2. When the ABS and/or VSA indicators do not come on during the test-drive, but troubleshooting is done based on the DTC, check for loose connectors, poor contact of the terminals, etc. in the circuit indicated by the DTC.
3. After troubleshooting, or the repairs are done, clear the DTCs, and test-drive the vehicle under the same conditions that originally set the DTCs. Make sure the ABS and VSA indicators do not come on.

INTERMITTENT FAILURES

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If you cannot reproduce the condition, check for loose connections and terminals. Also check ground and power connections related to the circuit that you are troubleshooting.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

NOTE: Make sure the battery is in good condition and fully charged.

1. If the system indicators stay on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 3: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Check the diagnostic trouble code (DTC) and the freeze data, for all systems, troubleshoot the powertrain DTCs first. Then refer to the indicated DTC's troubleshooting, and do the appropriate troubleshooting procedure.

NOTE:

- **Freeze data indicates the VSA conditions when the first system malfunction that activated the indicator was detected.**
- **The HDS communication will be stopped when the vehicle speed reaches the disconnect speed.**
- **The HDS can read the DTC, the freeze data, the current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**

HOW TO RETRIEVE DTCS

1. With the ignition switch in LOCK (0), connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the DTC troubleshooting. Do the all systems DTC check, and troubleshoot any powertrain DTCs first.
5. Turn the ignition switch to LOCK (0).

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0), connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Clear the DTC(s) by following the screen prompts on the HDS.
5. Turn the ignition switch to LOCK (0).

VSA SYSTEM SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for VSA diagnostic trouble codes (DTCs) with the HDS. If there are no DTCs, do the diagnostic procedure for the symptom, in the sequence listed, until you find the

cause.

Symptom	Diagnostic procedure	Also check for
HDS does not communicate with the VSA modulator-control unit or the vehicle	**TROUBLESHOOT THE DLC CIRCUIT** .	Power and ground at the VSA modulator
ABS indicator, brake system indicator, VSA indicator, or VSA OFF indicator do not come on at start-up (bulb check)	1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** . 2. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** . If the VSA modulator-control unit was updated and the symptom is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** .	
VSA cannot be turned OFF	1. **SYMPTOM TROUBLESHOOTING**. 2. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** . If the VSA modulator-control unit was updated and the symptom is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** .	
VSA OFF indicator does not go off	1. **Do the VSA sensor neutral position memorization** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** . 2. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .	
ABS indicator, brake system indicator, and VSA indicator do not go off	1. **Check for F-CAN DTCs, and troubleshoot and repair those first** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . 2. **SYMPTOM TROUBLESHOOTING**.	

BRAKE BOOSTER TEST

TEST

1. Brake Booster Functional - Test
    1. With the ignition switch in LOCK (0), press the brake pedal several times to deplete the vacuum reservoir, then press the brake pedal hard and hold it for 15 seconds. If the brake pedal sinks, either the master cylinder is bypassing internally or the brake system is leaking. Inspect the brake hoses and lines.
    2. Start the engine with the brake pedal pressed. If the brake pedal sinks slightly, the vacuum booster is operating normally. If the brake pedal height does not vary, do the brake system test.
2. Brake Booster Leak - Test
    1. Press the brake pedal with the engine running, then turn the ignition switch to LOCK (0). The brake pedal height should not vary while pressed for 30 seconds.
        - If the pedal height rises, go to step 6.
        - If it does not rise, go to step 2.
    2. Start the engine, and let it idle for 30 seconds. Turn the ignition switch to LOCK (0), and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise.
        - If it rises, the booster is OK.
        - If it does not rise, go to step 3.

Fig. 4: Identifying Brake Booster Vacuum Hose And Check Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the brake booster vacuum hose (A) at the booster. The check valve (B) is built into the hose.

NOTE: **If the check valve is faulty, replace the brake booster vacuum hose and the check valve as an assembly.**

4. Start the engine, and let it idle. There should be vacuum available.
   - If no vacuum is available, the check valve is not working properly. Replace the brake booster vacuum hose and the check valve as an assembly, and retest.
   - If vacuum is found, go to step 5.
5. Turn the ignition switch to LOCK (0), then reconnect the vacuum hose to the brake booster.
6. Start the engine, and then pinch the brake booster vacuum hose between the check valve and the booster.
7. Turn the ignition switch to LOCK (0), and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise.
   - If the pedal position does not vary, inspect the O-ring between the master cylinder and booster. If the O-ring is OK, replace the brake booster.
   - If the pedal position varies, replace the brake booster vacuum hose and the check valve as an assembly.

BRAKE FLUID LEVEL SWITCH TEST

TEST

1. Brake Fluid Level Switch - Test

NOTE: **If both the ABS/VSA indicator and the brake system indicator come on at the same time, check the VSA system for DTCs first.**

1. Disconnect the brake fluid level switch connector.
2. Check for continuity between the terminals (1) and (2) with the float in the down position and in the up position.
   - Remove the brake fluid completely from the reservoir. With the float down, there should be continuity.
   - Fill the reservoir with brake fluid to the MAX (upper) level (A). With the float up, there should be no continuity.

NOTE: **If the parking brake switch and the brake fluid level switch are OK, but the brake system indicator does not function, do the gauge control module self-diagnostic function.**

3. Reconnect the brake fluid level switch connector.

Fig. 5: Identifying Brake Fluid Level Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE HOSE AND LINE INSPECTION

INSPECTION

1. Brake Hose and Line - Inspection
    1. Inspect the brake hoses for damage, deterioration, leaks, interference, and twisting.

Fig. 6: Identifying Front Brake Caliper And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the brake lines for damage, rusting, and leaks. Also check for bent brake lines.
3. Check for leaks at hose and line joints and connections, and retighten if necessary.
4. Check the master cylinder and the VSA modulator-control unit for damage and leaks.

Connection Point	Component	Connected to	Specified Torque Value	Note
A	Front brake caliper	Brake hose	35 N.m (3.6 kgf.m, 26 lbf.ft)	Banjo bolt
		Bleed screw	8.4 N.m (0.86 kgf.m, 6.2 lbf.ft)	2WD
			8.5 N.m (0.87 kgf.m, 6.3 lbf.ft)	AWD/4WD
B	Rear brake caliper (rear disc brake)	Brake hose	35 N.m (3.6 kgf.m, 26 lbf.ft)	Banjo bolt
		Bleed screw	8.5 N.m (0.87 kgf.m, 6.3 lbf.ft)	
C	Brake hose	Brake line	15 N.m (1.5 kgf.m, 11	Flare nut

			lbf.ft)	
D	Master cylinder	Brake line	22 N.m (2.2 kgf.m, 16 lbf.ft)	Flare nut
E	VSA modulator-control unit	Brake line (10 mm nut)	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
		Brake line (12 mm nut)	22 N.m (2.2 kgf.m, 16 lbf.ft)	

BRAKE MASTER CYLINDER INSPECTION

INSPECTION

1. Master Cylinder - Inspection
    1. Inspect and note these items:
        - Before reassembling, check that all parts are free of dirt and other foreign particles.
        - Do not try to disassemble the master cylinder assembly. Replace the master cylinder assembly with a new part if necessary.
        - Do not allow dirt or foreign matter to contaminate the brake fluid.

          USA and Canada models

Fig. 7: Identifying Master Cylinder And Related Components (USA And Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mexico models

Fig. 8: Identifying Master Cylinder And Related Components (Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the reservoir tank hose was disconnected, install the reservoir tank (A) and the reservoir tank hose (B) to the subreservoir (C).

NOTE: **Align the "delta" marks (D) on the reservoir tank and subreservoir with the paint marks (E) on the hose.**

Fig. 9: Identifying Reservoir Tank And Subreservoir Align Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE PEDAL POSITION SWITCH SIGNAL CIRCUIT TROUBLESHOOTING

Brake Pedal Position Switch Signal Circuit Troubleshooting

Fig. 10: Brake Pedal Position Switch Signal Circuit Troubleshooting Flowchart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Brake pedal position switch signal check 1:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
BRAKE SWITCH	OFF			

Do the current condition(s) match the threshold?

YES : Go to step 2.

NO : **Inspect the brake pedal position switch** See **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **BRAKE PEDAL REMOVAL AND INSTALLATION** .

2. Brake pedal position switch signal check 2:
   - 1. Press the brake pedal while checking the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
BRAKE SWITCH	ON			

Do the current condition(s) match the threshold?

YES : The brake pedal position switch signal circuit (BKSW line) is OK.

NO : Go to step 3.

3. Shorted wire check (STOP SW line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Jump the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     PCM connector A (49P)

     Brake pedal position switch 4P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     Brake pedal position switch 4P connector: disconnected

     Test circuit STOP SW

     Test point 1 PCM connector A (49P) No. 13 (BLU)

     Test point 2 Body ground

Fig. 11: PCM Connector A 49P Connector - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the STOP SW wire between the PCM (A13) and the No. A16 (10 A) fuse. Also, replace the No. A16 (10 A) fuse.

NO : The STOP SW wire is not shorted. Go to step 4.

4. Open wire check (STOP SW line):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A Brake pedal position switch 4P connector No. 1 (BLU)

     Terminal B Body ground

Fig. 12: Brake Pedal Position Switch 4P Connector - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     Brake pedal position switch 4P connector: disconnected

Brake pedal position switch 4P connector terminal No. 1: jumped to body ground

Test circuit STOP SW

Test point 1 PCM connector A (49P) No. 13 (BLU)

Test point 2 Body ground

Fig. 13: PCM Connector A (49P) - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The STOP SW wire is OK. Repair an open in the +B STOP wire between the brake pedal position switch and the No. A16 (10 A) fuse. **Inspect the brake pedal position switch** See **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **BRAKE PEDAL REMOVAL AND INSTALLATION** .

NO : Repair an open in the STOP SW wire between the PCM (A13) and the brake pedal position switch.

BRAKE PEDAL POSITION SWITCH TEST

TEST

1. Brake Pedal Position Switch - Test
    1. Disconnect the connector.
    2. Check for continuity between the terminals in each switch position according to the table.
    3. If the test results are not as specified, adjust the pedal position switch (A), then check. If the results are still not as specified, replace the pedal position switch.
    4. Connect the connector.

Fig. 14: Identifying Brake Pedal Position Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1	2	3	4
Pressed			○—○	
Released	○—○			

Fig. 15: Brake Pedal Position Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE SYSTEM INSPECTION AND TEST

INSPECTION

1. Brake System - Inspection

   Inspect the brake system components listed. Repair or replace any parts that are leaking or damaged.

COMPONENT INSPECTIONS

Component	Procedure	Also check for
	Look for damage or signs of fluid leakage at:	

Master Cylinder	• Reservoir tank, subreservoir or master cylinder body. • Lines, reservoir tank hose and grommets, and their joints. • Between master cylinder and booster.	Bulging seal at reservoir cap. This is a sign of fluid contamination.
Brake Hoses	Look for damage or signs of fluid leakage at: • Line joints and banjo bolt connections. • Hoses and lines, also inspect for twisting or damage.	Bulging, twisted, or bent lines.
Caliper	Look for damage or signs of fluid leakage at: • Piston seal. • Banjo bolt connections. • Bleed screw.	Seized or sticking caliper pins.
VSA Modulator-Control Unit	Look for damage or signs of fluid leakage at: • Line joints. • Modulator-control unit.	

TEST

1. Brake System - Test

   Brake pedal sinks/fades when braking

   1. Set the parking brake, and start the engine, then turn off the A/C. Allow the engine to warm up to normal operating temperature (radiator fan comes on twice).
   2. Attach a 50 mm (1.97 in) piece of masking tape along the bottom of the steering wheel, and draw a horizontal reference mark across it.
   3. Make sure the steering column lock lever is in the locked position. With the transmission in P or N, press and hold the brake pedal lightly (about the same pressure needed to keep an A/T-equipped vehicle from creeping), then release the parking brake.
   4. While still holding the brake pedal, hook the end of the tape measure behind the brake pedal, then pull the tape up to the steering wheel. Note the measurement between the brake pedal and the reference mark on the steering wheel.
   5. Apply steady pressure to the brake pedal for 3 minutes.
   6. Watch the tape measure.

- If the measurement increases 10 mm (0.39 in) or less, the master cylinder is OK.
- If the measurement increases more than 10 mm (0.39 in), replace the master cylinder.

RAPID BRAKE PAD WEAR, VEHICLE VIBRATION (AFTER A LONG DRIVE), OR HIGH, HARD BRAKE PEDAL

Fig. 16: Brake System Symptom Troubleshooting Flowchart (Rapid Brake Pad Wear, Vehicle Vibration, High And Hard Brake Pedal)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid pad wear, and possibly uneven tire wear. See the proper caliper pin location:**

- **Front caliper** See **FRONT BRAKE CALIPER OVERHAUL** or **FRONT BRAKE CALIPER REMOVAL AND INSTALLATION**
- **Rear caliper** See **REAR BRAKE CALIPER OVERHAUL** or **REAR BRAKE CALIPER REMOVAL AND INSTALLATION**

1. Brake system check:
    - 1. Drive the vehicle to note if the brakes drag or the pedal becomes high and hard. This may take 20 or more brake pedal applications during an extended test-drive.
    - 2. With the engine running, raise and support the vehicle, and spin all four wheels by hand.

    Is there brake drag at any of the wheels?

    YES : Go to step 2.

    NO : Look for other causes of pad wear, high pedal, or vehicle vibration.

2. Brake booster check:
    - 1. Turn the ignition switch to LOCK (0), press the brake pedal several times to deplete the vacuum in the brake booster, and then spin the wheels again to check for brake drag.

    Is there brake drag at any of the wheels?

    YES : Go to step 3.

    NO : **REPLACE THE BRAKE BOOSTER** .

3. Brake pedal position switch check:
    - 1. Without removing the brake lines, unbolt and separate the master cylinder from the brake booster, then spin the wheels to check for brake drag.

    Is there brake drag at any of the wheels?

    YES : Go to step 4.

    NO : **Check the brake pedal position switch adjustment** See **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **BRAKE PEDAL REMOVAL AND INSTALLATION** and **PEDAL FREE PLAY** .

4. Master cylinder check:
    - 1. Loosen the hydraulic lines at the master cylinder, then spin the wheels to check for brake drag.

    Is there brake drag at any of the wheels?

    YES : Go to step 5.

    NO : Check the master cylinder reservoir for contamination in the brake fluid. If you find contamination, flush the entire brake system of all contaminated fluid, then replace all rubber parts in the brake system that were exposed to contaminated fluid. If the brake fluid is OK, **replace the master cylinder** See **BRAKE MASTER CYLINDER INSPECTION** or **BRAKE MASTER CYLINDER REMOVAL AND INSTALLATION** .

5. Caliper check:
    - 1. Loosen the bleed screws at each caliper, then spin the wheels to check for brake drag.

    Is there brake drag at any of the wheels?

    YES : Check the master cylinder reservoir for contamination in the brake fluid. If you find contamination, flush the entire brake system of all contaminated fluid, then replace all rubber parts in the brake system that were exposed to contaminated fluid. If the brake fluid is OK, disassemble and repair the caliper on the wheel(s) with brake drag.

    NO : Look for and replace any damaged brake lines. If all brake lines are OK, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** , **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION** .

PARKING BRAKE SWITCH TEST

REMOVAL

1. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 17: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Undercover

1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 18: Identifying Driver Dashboard Undercover, Lock Knob, Holder, Clip And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 19: Identifying Driver Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Parking Brake Switch - Test

NOTE: **If both the ABS/VSA indicator and the brake system indicator come on at the same time, check the VSA system for DTCs first.**

1. Disconnect the connector (A).
2. Check for continuity between the switch terminal (B) and body ground.
   - With the parking brake pedal pressed, there should be continuity.
   - With the parking brake pedal released, there should be no continuity.

NOTE: **If the parking brake switch and the brake fluid level switch are OK, but the brake system indicator does not function, do the gauge control module self-diagnostic function.**

3. Connect the connector.

Fig. 20: Checking Continuity Between Switch Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Driver's Dashboard Lower Cover
    1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 21: Identifying Driver Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 22: Identifying Driver Dashboard Undercover, Lock Knob, Holder, Clip And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 23: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION

PROCEDURE

NOTE: Whenever the VSA modulator-control unit is replaced, its neutral position memorization must be done.

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 24: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Yaw Rate-Acceleration Neutral Position Memorization
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the G SENSOR LEARNING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

CABIN AIR FILTER

Honda - Civic & CR-V

CABIN AIR FILTER REMOVAL & INSTALLATION

NOTE: **Manufacturer's terminology for this filter is dust and pollen filter.**

REMOVAL

Glove Box - Move

1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 1: Glove Box Damper Hook And Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Cabin Air Filter

1. Remove the lid (A).
2. Pull out the dust and pollen filter (B).

Fig. 2: Lid And Dust And Pollen Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

Cabin Air Filter

1. Install the dust and pollen filter (A).
2. Install the lid (B).

Fig. 3: Lid And Dust And Pollen Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Glove Box - Move

1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
2. Install the glove box damper hook (C)

Fig. 4: Lid And Dust And Pollen Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Maintenance Minder - Reset (With Maintenance Minder System)

1. If the Maintenance Minder required to replace the dust and pollen filter, reset the Maintenance Minder with the gauge (see "Resetting the Maintenance Minder"). If the Maintenance Minder did not require to replace the dust and pollen filter, reset the Maintenance Minder with the HDS (see "Resetting the Individual Maintenance Items").

PARASITIC DRAW CHECK

Parasitic Draw Check

<u>Fig. 2: Parasitic Draw Check Flowchart</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

LH41 AC/DC low current clamp meter, FLULH41A*

*: Available through the Honda Tool and Equipment Program, 888-424-6857

1. Parasitic draw check 1:
    - 1. Make sure the battery is fully charged, and that all the vehicle's electrical accessories are turned off.
        - With security, go to step 1-2.
        - Without security, go to step 1-4.
    - 2. To make the security alarm system recognize that the door is closed, open the hood, and disconnect the hood switch 2P connector.
    - 3. Connect the security hood switch 2P connector terminals No. 1 and No. 2 with a jumper wire.
    - 4. Turn the ignition switch to ON (II).
    - 5. Turn the ignition switch to LOCK (0).
    - 6. Remove the ignition key from the ignition switch.
    - 7. Get out of the vehicle, and close all doors and tailgate securely.
    - 8. Lock the doors with the keyless transmitter.
    - 9. Make sure the individual map lights are turned off, and the security alarm system is armed.
    - 10. Wait for at least 20 minutes.
    - 11. Attach the LH41 AC/DC low current clamp meter (A) to the battery ground cable (B).

    Follow the equipment manufacturer's instructions, then measure the parasitic draw.

    NOTE: If you are using a digital multimeter: go to step 2.

Fig. 3: Measuring Parasitic Draw Using Clamp Meter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the parasitic draw 27 mA or less?

YES : Intermittent failure, the system is normal at this time.

NO : Go to step 3.

2. Parasitic draw check 2:
   - 1. Check the following items before measuring:
     - Set the multimeter dial to the DCA (direct current amps) range.
     - Plug the red test probe into the red A (Amps) jack, and plug the black test probe into the COM jack.
     - To avoid blowing an input fuse, start by setting the range above 10 A.
   - 2. Loosen the nut (A) on the battery negative terminal.

NOTE: **Follow the instructions exactly to avoid disconnecting the battery ground cable terminal from the battery negative terminal.**

Fig. 4: Identifying Battery Negative Terminal Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Connect the red (+) test lead (A) to the negative terminal (B) of the battery ground cable.

Fig. 5: Identifying Battery Ground Cable Test Lead (+) And Negative Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Carefully slide the negative terminal of the battery ground cable upwards from the battery negative terminal post to maintain contact and avoid disconnection. Then connect the black (-) test lead (C) to the battery negative terminal post.
- 5. Disconnect the negative terminal (A) of the battery ground cable from the battery negative terminal.

Fig. 6: Identifying Negative Terminal Of Battery Ground Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 6. Measure the parasitic draw.

NOTE: **If the measured value is over the threshold, wait 10 minutes and recheck.**

Is the parasitic draw 27 mA or less?

YES : Intermittent failure, the system is normal at this time.

NO : Go to step 3.

3. Electrical equipment check 1:
   - 1. Check if there are any aftermarket electrical accessories installed on the vehicle.

Are there any aftermarket electrical accessories installed?

YES : Go to step 4.

NO : Go to step 6.

4. Electrical equipment check 2:

- 1. Make sure that the aftermarket electrical accessories have been properly installed.

NOTE: **Check that the harness connected with the ACC, IG1, or IG2 line is not connected with the +B line.**

Are the aftermarket electrical accessories installed correctly?

YES : Go to step 5.

NO : Repair, reinstall, or remove the aftermarket electrical accessories, then recheck.

5. Electrical equipment check 3:
   - 1. Disconnect the aftermarket electrical accessories one at a time.
   - 2. Turn the ignition switch to ON (II) and then back to LOCK (0).
   - 3. Get out of the vehicle, and close all the doors and tailgate securely.
   - 4. Wait for at least 40 seconds.
   - 5. Measure the parasitic draw.

   Is the parasitic draw 27 mA or less?

   YES : Replace, remove, or repair the aftermarket electrical accessories that reduced the parasitic draw to 27 mA or less when disconnected.

   NO : Go to step 6.

6. Parasitic draw check 3:
   - 1. Remove the back-up fuse while the test leads are connected, and measure the parasitic draw.

   Is the parasitic draw 14 mA or less?

   YES : Go to step 7.

   NO : Go to step 8.

7. Parasitic draw check 4:
   - 1. Install the back-up fuse.
   - 2. Short the B-CAN line to body ground with a jumper wire while the test leads are connected.
   - 3. Turn the ignition switch to ON (II) and then back to LOCK (0).
   - 4. Get out of the vehicle, and close all doors and tailgate securely.
   - 5. Wait for at least 40 seconds.
   - 6. Measure the parasitic draw.

   Is the parasitic draw 27 mA or less?

YES : Disconnect the control units from the B-CAN circuit one at a time, perform step 3-6 above, then measure the parasitic draw. Do the input test for the control unit that reduced the parasitic draw to 27 mA or less when disconnected.

NO : Disconnect the control units from the back-up fuse circuit one at a time, perform step 3-6 above, then measure the parasitic draw. Replace the control unit that reduced the parasitic draw to 27 mA or less when disconnected.

8. Parasitic draw check 4:
   - 1. Remove the No. A2-1 (50 A) fuse in the under-hood fuse/relay box while the test leads are connected.
   - 2. Turn the ignition switch to ON (II) and then back to LOCK (0).
   - 3. Get out of the vehicle, and close all doors and tailgate securely.
   - 4. Wait for at least 40 seconds.
   - 5. Measure the parasitic draw.

   Is the parasitic draw 27 mA or less?

   YES : Go to step 9.

   NO : Remove the fuses from the under-hood fuse/relay box one at a time, and identify the parts which excessively consume current.

   NO : If all electrical circuits are OK, check the starter system circuit.

   NO : Perform the starter performance test.

9. Parasitic draw check 5:
   - 1. Install the No. A2-1 (50 A) fuse in the under-hood fuse/relay box.
   - 2. Disconnect the 7P connector from the ignition switch while the test leads are connected, and measure the parasitic draw.

   Is the parasitic draw 27 mA or less?

   YES : **REPLACE THE IGNITION SWITCH** .

   NO : Repair a short to ground in the wire between the No. A2-1 (50 A) fuse in the under-hood fuse/relay box and ignition switch.

ALTERNATOR REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

	Belt Tension Release Tool Snap-on YA9317(1), commercially available
(1) Available through the Honda Tool and Equipment Program 888-424-6857	

REMOVAL

1. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

        NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

Fig. 7: Identifying Battery (+) And (-) Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Drive Belt
    1. Move the auto-tensioner (A) using the belt tension release tool in the direction of the arrow to relieve tension from the drive belt, then remove the drive belt.

Fig. 8: Removing Drive Belt Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Idler Pulley Base Assembly
    1. Remove the idler pulley base.

Fig. 9: Identifying Idler Pulley Base Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Auto-Tensioner Assembly

1. Remove the auto-tensioner.

Fig. 10: Identifying Auto - Tensioner Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Alternator
   1. Remove the three bolts securing the alternator.

Fig. 11: Identifying Alternator And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Disconnect the connector and the cable.
   3. Remove the alternator.

Fig. 12: Identifying Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Alternator
    1. Connect the connector and the cable.
    2. Install the alternator.

Fig. 13: Identifying Alternator Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the three bolts securing the alternator.

Fig. 14: Identifying Alternator Securing Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Auto-Tensioner Assembly
    1. Install the auto-tensioner.

Fig. 15: Identifying Auto-Tensioner Assembly With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Idler Pulley Base Assembly
    1. Install the idler pulley base.

Fig. 16: Identifying Idler Pulley Base Assembly With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Drive Belt
    1. Install the drive belt.

Fig. 17: Installing Drive Belt Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

    1. Clean the battery terminals.

2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 18: Identifying Battery (+) And (-) Terminal With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ALTERNATOR OVERHAUL

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Driver Handle, 15 x 135L 07749-0010000

	Bearing Driver Attachment, 42 x 47 mm 07746-0010300

VIEW

1. Alternator Exploded View

   Exploded View

Fig. 19: Exploded View Of Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DISASSEMBLY

NOTE: Refer to the Exploded View if needed during this procedure.

1. Alternator End Cover
    1. Remove the end cover (A).

Fig. 20: Identifying Alternator End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Alternator Brush Holder
    1. Remove the brush holder assembly.

Fig. 21: Identifying Alternator Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Alternator Brush - Inspection
    1. Measure the length of both brushes (A) with a vernier caliper (B).

        If either brush is shorter than the service limit, replace the brush holder assembly.

Alternator Brush Length

Standard (New): 10.5 mm(0.41 in)

Service Limit: 1.5 mm(0.06 in)

Fig. 22: Measuring Alternator Brush Length Using Vernier Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Alternator Rear Housing Assembly
    1. Remove the rear housing assembly.

Fig. 23: Identifying Alternator Rear Housing Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Alternator Pulley
    1. If the front bearing needs replacing, remove the pulley locknut with a 10 mm wrench (A) and a 22 mm wrench (B). If necessary, use an impact wrench.

Fig. 24: Removing Alternator Pulley Locknut Using Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Alternator Rotor
    1. Remove the drive-end housing.

Fig. 25: Identifying Alternator Rotor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Alternator Rotor Slip Ring - Test
    1. Check for continuity between the slip rings (A).
    2. Check for continuity between each slip ring (A) and the rotor (B) and the rotor shaft (C).

    If there is continuity, replace the rotor assembly.

Fig. 26: Identifying Alternator Rotor Slip Ring, Rotor And Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Alternator Bearing
    1. Remove the front bearing retainer.

Fig. 27: Identifying Front Alternator Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the front bearing.

Fig. 28: Removing Front Bearing Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

NOTE: Refer to the Exploded View if needed during this procedure.

1. Front Alternator Bearing
    1. Install a new front bearing in the driver-end housing with a hammer, the driver handle, 15 x 135L, and the bearing driver attachment, 42 x 47 mm.

Fig. 29: Installing Front Bearing In Driver - End Housing Using Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the front bearing retainer.

Fig. 30: Identifying Front Bearing Retainer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Alternator Rotor
    1. Install the drive-end housing.

Fig. 31: Identifying Alternator Rotor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Alternator Pulley
    1. Install the pulley on the rotor and install the locknut, then torque the locknut to 110 N.m (11.2 kgf.m, 81 lbf.ft).

Fig. 32: Installing Alternator Pulley On Rotor Using Wrench With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Alternator Rear Housing Assembly
    1. Install the rear housing assembly.

Fig. 33: Identifying Alternator Rear Housing Assembly With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Alternator Brush Holder
    1. Push the brushes (A) in, then insert a pin or drill bit (B) (about 1.6 mm (1/16 in) diameter) to hold them there.

Fig. 34: Inserting Pin Or Drill Bit In Alternator Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the brush holder, and pull out the pin.

Fig. 35: Removing Pin Or Drill Bit From Alternator Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Alternator End Cover
    1. Install the end cover (A).

Fig. 36: Identifying Alternator End Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Alternator After Install - Check
    1. After assembling the alternator, turn the pulley by hand to make sure the rotor turns smoothly and without noise.

HOW TO TROUBLESHOOT THE ELECTRICAL COMPASS

STARTING OPERATION

When the ignition switch is turned to ACCESSORY (I), the electrical compass unit begins to communicate with the audio unit. Then turn the ignition switch to ON (II), the self-test mode begins automatically. The audio unit receives a speed signal from the PCM (VSS signal) via the CAN and UART circuits to the compass unit.

The self-test function checks for the current voltage, non-volatile memory (NVM), and ROM status in the electrical compass unit. If the unit detects a malfunction while in the self-test, it indicates a malfunction by flashing compass information segments (CAL and NW) in the audio display.

SELF-CALIBRATION

The electrical compass unit has a self-calibration function. It detects and compensates for magnetic anomalies caused by magnetized tires, bridges, subways and large steel structures. When the vehicle leaves an area with a strong magnetic interference field (2, 00 mG or more), the electrical compass unit automatically begins calibrating after it receives the VSS from the PCM. **IF NEEDED, YOU CAN MANUALLY CALIBRATE THE COMPASS**.

ZONE SELECTION

Zone selection is required to compensate for the difference between magnetic North and geographic North. This deviation is referred to as declination, the compass compensates for declination when you select the zone where the vehicle is located. **IF YOU REPLACED THE ELECTRICAL COMPASS UNIT, SET THE COMPASS ZONE**.

SYSTEM DIAGRAM

ELECTRICAL COMPASS TROUBLESHOOTING

Electrical Compass Troubleshooting

Fig. 3: Electrical Compass Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST.**
- **Check the connectors for poor connections or loose terminals.**

1. VSP status check:
    - 1. **ENTER THE AUDIO SYSTEM DIAGNOSTIC MODE** and check the VSP status.

Does the VSP indicate when the vehicle is stopped, and when it is moving?

YES : Go to step 2.

NO : See appropiate symptom troubleshooting in **How to Troubleshoot the Audio System**

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B5 (10 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. B5 (10 A) fuse circuit.

3. Open wire check (IG1 METER line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit IG1 METER

     Test point 1 Electrical compass unit 6P connector No. 6 (LT GRN)

     Test point 2 Body ground

Fig. 4: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire between the No. B5 (10 A) fuse in the under-dash fuse/relay box and the electrical compass unit.

4. Open wire check (GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit GND

      Test point 1 Electrical compass unit 6P connector No. 5 (BLK)

      Test point 2 Body ground

<u>Fig. 5: Measure Voltage Between Test Points 1 And 2</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 5.

NO : Repair an open or high resistance in the wire between the electrical compass unit and body ground (G603).

5. Shorted wire check (COMPASS lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      Audio unit connector B (20P)

      Electrical compass unit 6P connector

    - 3. Check for continuity between these test points and body ground individually.

Test condition IG LOCK (0)

Audio unit connector B (20P): disconnected

Electrical compass unit 6P connector: disconnected

Connector	Test circuit	Terminal
Electrical compass unit 6P connector	COMPASS TX-	No. 1 (GRY)
	COMPASS TX+	No. 2 (BLU)
	COMPASS RX-	No. 3 (PNK)
	COMPASS RX+	No. 4 (GRN)

Fig. 6: Identifying Electrical Compass Unit 6P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the electrical compass unit and the audio unit.

NO : The COMPASS wires are not shorted to ground. Go to step 6.

6. Open wire check (COMPASS lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     Electrical compass unit 6P connector: disconnected

Test circuit	Test point 1: Audio unit connector B (20P)	Test point 2: Electrical compass unit 6P connector
COMPASS TX-	No. 10 (GRY)	No. 1 (GRY)
COMPASS TX+	No. 9 (BLU)	No. 2 (BLU)
COMPASS RX-	No. 20 (PNK)	No. 3 (PNK)
COMPASS		

RX+	No. 19 (GRN)	No. 4 (GRN)

Fig. 7: Identifying Audio Unit Connector B (20P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 8: Identifying Electrical Compass Unit 6P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The COMPASS wires are OK. Go to step 7.

NO : Repair an open in the wire(s) between the electrical compass unit and the audio unit.

7. Audio unit check:
   - 1. **SUBSTITUTE A KNOWN-GOOD ELECTRICAL COMPASS UNIT**, and recheck.

Does the symptom go away?

YES : Replace the original electrical compass unit.

NO : REPLACE THE AUDIO UNIT.

ELECTRICAL COMPASS UNIT CONNECTOR FOR INPUTS AND OUTPUTS

ELECTRICAL COMPASS UNIT 6P CONNECTOR DESCRIPTION

Cavity	Wire Color	Terminal Name	Description
1	GRY	COMPASS_TX-	Communication signal to audio unit
2	BLU	COMPASS_TX+	Communication signal to audio unit
3	PNK	COMPASS_RX-	Communication signal to audio unit
4	GRN	COMPASS_RX+	Communication signal to audio unit
5	BLK	GND	Ground for electrical compass unit (G603)
6	LT GRN	IG1_METER	IG1 power source

ELECTRICAL COMPASS UNIT REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

NOTE: SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

        NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 11: Identifying Negative And Positive Cables Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 12: Identifying Hooks And Tabs On Kick Panel And B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 13: Pulling Out Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 14: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 15: Putting Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 16: Pulling Out And Up On A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 17: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 18: Identifying Hooks And Tabs Of B-Pillar Lower Trim And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 19: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. B-Pillar Lower Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 20: Pulling Bottom Portion Of B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt.

Fig. 21: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 22: Pulling Back Bottom Portion Of B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)

1. Remove the tonneau cover (A).

Fig. 23: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 24: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 25: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 26: Pulling Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Damper Maintenance Cover - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Fold down the rear seat-back.
2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 27: Identifying Damper Maintenance Cover Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Carpet Trim - Both Sides
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

Left side

Fig. 28: Tucking Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 29: Tucking Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trims (C) by hand to detach the clips (D), then remove the rear carpet trims.

Left side

Fig. 30: Identifying Rear Carpet Trims Fasteners (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 31: Identifying Rear Carpet Trims Fasteners (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)
    1. Pull up the rear seat cushion foot cover (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat cushion foot cover.

    Left side

Fig. 32: Identifying Rear Seat Cushion Foot Cover Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 33: Identifying Rear Seat Cushion Foot Cover Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the rear seat belt lower anchor bolt (A).

Fig. 34: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.
2. Remove the screws (C).

Fig. 35: Identifying Rear Seat Release Lever Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 36: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 37: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 38: Identifying Rear Side Trim Panel Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 39: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 40: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Quarter Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove

the quarter pillar trim.

Fig. 41: Identifying Quarter Pillar Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

Fig. 42: Identifying Lense, Screws, Connectors And Roof Console Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Ceiling Light (without RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the ceiling light (B).
    5. Disconnect the connector.

<u>Fig. 43: Identifying Lens And Celing Light</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Display Cover (With RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

Fig. 44: Identifying Lenses And Ceiling Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear display cover (A).

Fig. 45: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Rear Controller and Screen (With RES)
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 46: Identifying Rear Controller Screen

Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Cargo Area Light
    1. Turn the cargo area light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the cargo area light (B).
    5. Disconnect the connector.

Fig. 47: Identifying Lens And Cargo Area Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Grab Handles for One Vehicle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

Fig. 48: Inserting Push Pin/Grab Rail Cap Pliers Into Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 49: Pulling Cap Out
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

Fig. 50: Identifying Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

Fig. 51: Identifying Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

Fig. 52: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: **Make sure the tab slides into the bracket cover as you rotate the sunvisor.**

Fig. 53: Pushing Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 54: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Headliner
    1. Without moonroof: Disconnect the connector (A), and detach the harness clips (B) from the driver's side A-pillar.

Fig. 55: Identifying Connector And Harness Clips Of Driver's Side A-Pillar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Disconnect the connectors (A), and detach the harness clips (B) from the passenger's side A-pillar.

Fig. 56: Identifying Connector And Harness Clips Of Passenger's Side A-Pillar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A), and detach the connector clips (B) and the harness clip (C) from the right quarter pillar.

Fig. 57: Identifying Connectors, Clips And Harness Clip Of Right Quarter Pillar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the front seats all the way back, and recline the seatback fully.
5. Fold down the rear seats.
6. Detach the clips (A) and release the fasteners (B) from the headliner (C) by pulling it down.
7. With the help of an assistant, lower the headliner.

Without moonroof

Fig. 58: Identifying Headliner (Without Manroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 59: Identifying Headliner (With Manroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With the help of an assistant, remove the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 60: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Electrical Compass Unit
    1. Remove the electrical compass unit (A).

Fig. 61: Identifying Electrical Compass Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Electrical Compass Unit
    1. Install the electrical compass unit (A).

Fig. 62: Identifying Electrical Compass Unit And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

Fig. 63: Identifying Headliner, Grab Handle Holes, Survivor Holes, Clip Bases And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 64: Identifying Headliner

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 65: Identifying Headliner, Clips And Fasteners (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 66: Identifying Headliner, Clips And Fasteners (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 67: Identifying Right Quarter Pillar Connectors, And Harness And Connector Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

Fig. 68: Identifying Passenger's A-Pillar Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

Fig. 69: Identifying Driver's A-Pillar Connector And Harness Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)

- Any cracks in the sunvisor base (D)

Fig. 70: Identifying Sunvisor Bracket, Cover, Shaft And Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

5. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 71: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.

3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 72: Rotating Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

Fig. 73: Identifying Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Grab Handles for One Vehicle

1. Install the clips (A) on the grab handle (B).
2. Install the caps (C) fully into the clips.

Fig. 74: Installing Clips On Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Position the grab handle (A) on the grab handle bracket (B).
4. Push on the grab handle until the clips (C) snap into place securely.

Fig. 75: Identifying Grab Handle, Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Cargo Area Light
    1. Connect the connector.
    2. Install the cargo area light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

Fig. 76: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Controller and Screen (With RES)
    1. Install the rear controller and screen (A).
    2. Connect the connector.

Fig. 77: Identifying Screen And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Display Cover (With RES)
    1. Install the rear display cover (A).

Fig. 78: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connector.
    3. Install the ceiling light (B).
    4. Carefully install the lenses (C).

Fig. 79: Identifying Ceiling Light And Lenses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Ceiling Light (without RES)
    1. Connect the connector.
    2. Install the ceiling light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

Fig. 80: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Roof Console Assembly
    1. Connect the connectors (A), then install the roof console assembly (B).
    2. Install the screws (C, D), then install the lenses (E).

Fig. 81: Identifying Connectors, Roof Console Assembly, Screws And Lenses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 82: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 83: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 84: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 85: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 86: Trimming Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 87: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 88: Identifying Rear Seat Belt Lower Anchor, Quarter Pillar Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 89: Identifying Rear Seat Release Cable, Rear Side Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 90: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 91: Identifying Rear Side Trim Panel, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 92: Identifying Tie-Down Hook And Bolt With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 93: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 94: Identifying Rear Seat Release Lever Cap, Upper And Lower Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear seat belt lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 95: Identifying Rear Seat Belt Lower Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)
    1. Install the rear seat cushion foot cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left side

Fig. 96: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 97: Identifying Rear Seat Cushion Foot Cover, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Rear Carpet Trim - Both Sides
    1. Install the rear carpet trims (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

<u>Fig. 98: Identifying Rear Carpet Trims, Clips And Hooks (Left Side)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 99: Identifying Rear Carpet Trims, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 100: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 101: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 102: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 103: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with

the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 104: Identifying Alignment Mark Of Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 105: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 106: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. B-Pillar Upper/Lower Trim - Check

Trim inspection

Fig. 107: Identifying B-Pillar Upper And Lower Trims, And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:

- To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
    - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
    - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
    - Any cracks or stress-whitening areas in the clip seating surfaces (E)
- If the clips (F) are damaged or stress-whitened, replace them with new ones.

26. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).
2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 108: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar.

Fig. 109: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
    - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
    - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 110: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 111: Trimming Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 112: Installing Upper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front seat belt upper anchor bolt, then install the front seat belt shoulder anchor adjuster cap (A).

Fig. 113: Identifying Seat Belt Shoulder Anchor Adjuster Cap And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. B-Pillar Lower Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 114: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 115: Identifying Rear Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 116: Installing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 117: Replacing Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 118: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 119: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 120: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 121: Timing Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 122: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-

pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 123: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 124: Identifying Front Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 125: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 126: Identifying Positive And Negative Cables Of Battery And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ELECTRICAL COMPASS ZONE SELECTION AND CALIBRATION

PROCEDURE

1. ELECTRICAL COMPASS ZONE SELECTION AND CALIBRATION

NOTE:

- **You should do this procedure any time the electrical compass unit is replaced.**
- **You should do this procedure in an open area away from buildings, power lines, other vehicles, and any other sources of strong magnetic fields.**

- **If you see "- -" and the CAL indicator is shown in the audio display, the electrical compass unit is self-calibrating.**
- **In most areas, there is a variation between magnetic north and true north. The compass zone needs to be set to your geographic zone to compensate for this variation.**
- **The electrical compass unit may need to be manually calibrated after exposure to a strong magnetic field. If the electrical compass unit seems to be continually showing the wrong direction, and is not self-calibrating, do the following.**

Zone Selection

1. Turn the ignition switch to ON (II).
2. Press and hold the SETUP button until you hear a beep (about 5 seconds). The display shows the electrical compass setting menu items.

Fig. 127: Display Electrical Compass Setting Menu Items
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 128: Identifying Return And Setup Buttons And Selector Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rotate the SELECTOR knob to select the Zone (A) and press the SELECTOR knob to enter the selection.

NOTE: **If necessary, press the RETURN button to return to the previous display. Pressing the SETUP button cancels the electrical compass setting mode.**

4. The display shows the currently selected zone number between from 1 to 15. Find the zone for your area on the zone map. If the correct zone is not shown, turn the selector knob to cycle the zone lists up or down.

Fig. 129: Display Zone Map
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 130: Display Zone Value
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 131: Identifying Return And Setup Buttons And Selector Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Press the SELECTOR knob to decide the selected zone. Returning to the normal display, the zone selection mode ends.

Calibration

NOTE: **The electrical compass unit may need to be manually calibrated after exposure to a strong magnetic field. If the electrical compass unit seems to be continually showing the wrong direction, and is not self-calibrating, do the following.**

1. Check the No. A2-2 (F/B MAIN) (60A) fuse in the under-hood fuse/relay box and the No. B25 (10A), No. B19 (7.5 A) and the No. B5 (10A) fuses in the under-dash fuse/relay box.
2. Turn the ignition switch to ON (II).
3. Press and hold the SETUP button until you hear a beep (about 5 seconds). The display shows the electrical compass setting menu items.

Fig. 132: Display Electrical Compass Setting Menu Items
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 133: Identifying Return And Setup Buttons And Selector Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rotate the SELECTOR knob to select the Calibration (A) and press the SELECTOR knob to enter the selection.

NOTE: **If necessary, press the RETURN button to return to the previous display. Pressing the SETUP button cancels the electrical compass setting mode.**

5. Press the SELECTOR knob to enter the selection. The display shows the Calibration Start (A).

Fig. 134: Display Calibration Start
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 135: Identifying Return And Setup Buttons And Selector Knob
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. When the display shows the Calibration Start, press the SELECTOR knob. The compass display blinks and the CAL indicator (B) comes on.
7. Drive the vehicle slowly in three complete circles (20 seconds or more per a circle). When the calibration is successfully completed, the compass display stops blinking and the CAL indicator goes off.

NOTE:

- **The audio system is not related to the electrical compass system. Even if the electrical compass system is calibrating, the display returns to the normal display which was last selected.**

- **If the calibration fails, try another location (an open area away from buildings, power lines, other vehicles, and any other sources of strong magnetic fields) and do the calibration procedure again.**

CRUISE CONTROL SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Cruise control cannot be set	1. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . 2. Check the No. B2 (10 A) fuse in the under-dash fuse/relay box. 3. **DO THE CRUISE CONTROL COMBINATION SWITCH TEST.** 4. **DO THE CRUISE CONTROL INPUT TEST**.	• Open circuit, loose or disconnected terminals: LT BLU, WHT, BLU, or LT BLU wire between the cruise control combination switch and the gauge control module • Faulty gauge control module
Cruise control can be set, but the cruise main indicator does not come on	1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION PROCEDURE** . 2. **DO THE CRUISE CONTROL INPUT TEST**. Test the cruise control main switch signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .	Faulty gauge control module
Cruise control can be set, but the cruise control indicator does not come on	1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION PROCEDURE** . 2. **DO THE CRUISE CONTROL INPUT TEST**. Test the cruise control indicator signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO**	Faulty gauge control module

	TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .	
Vehicle does not accelerate accordingly when the res/+ button is pressed	1. **DO THE CRUISE CONTROL COMBINATION SWITCH TEST**. 2. **DO THE CRUISE CONTROL INPUT TEST**. Test the res/+ switch signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .	
Set speed does not cancel when the brake pedal is pressed	1. **DO THE BRAKE PEDAL POSITION SWITCH TEST** . 2. **DO THE CRUISE CONTROL INPUT TEST**. Test the brake pedal position switch signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .	Faulty brake pedal position switch
Set speed does not cancel when the cruise control main button is pressed	1. **DO THE CRUISE CONTROL COMBINATION SWITCH TEST**. 2. **DO THE CRUISE CONTROL INPUT TEST**. Test the cruise control main switch signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .	
	1. **DO THE CRUISE CONTROL COMBINATION SWITCH TEST**.	

Set speed does not cancel when the cancel button is pressed	2. **DO THE CRUISE CONTROL INPUT TEST**. Test the cruise control cancel switch signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .	
Set speed does not resume when the res/+ button is pressed (with the cruise control main switch turned on, and set speed temporarily canceled by pressing the brake pedal)	1. **DO THE CRUISE CONTROL COMBINATION SWITCH TEST**. 2. **DO THE CRUISE CONTROL INPUT TEST**. Test the res/+ switch signal input. 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .	
Light switch turned on, the cruise control combination switch illumination does not come on	1. Check the No. B35 (7.5 A) fuse in the under-dash fuse/relay box. 2. **DO THE CRUISE CONTROL COMBINATION SWITCH TEST**. 3. Audio Remote/Multi-Information Display Switch Removal, Installation, and Test .	

CRUISE CONTROL COMBINATION SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

There are SRS components located in this area. **REVIEW THE SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** , in the SRS before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 1: Identifying Battery (+ And -) Terminal (SRS)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 2: Identifying Driver Airbag, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the TORX bolts using a TORX T30 bit.
5. Remove the driver's airbag (A).

Fig. 3: Identifying Driver Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 4: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 5: Removing Steering Wheel Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 6: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Wheel Rear Cover
    1. Remove the steering wheel rear cover (A).

Fig. 7: Identifying Steering Wheel Rear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HFL-Voice Control Switch
    1. Remove the switch cover (A).
    2. Remove the HFL - voice control switch (B).

Fig. 8: Identifying HFL - Voice Control Switch And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Steering Wheel Trim
    1. Remove the steering wheel trim (A).

Fig. 9: Identifying Steering Wheel Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Cruise Control Combination Switch
    1. Remove the cruise control combination switch (A).

Fig. 10: Identifying Cruise Control Combination Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Cruise Control Combination Switch - Test
    1. Measure the resistance between cruise control combination switch 12P connector terminal No. 2 and No. 5 according to the table.

       If there is no resistance in one or more positions, replace the cruise control combination switch.

Position	Resistance
OFF	About 2.2 kohms
Cruise control main (PRESSED)	About 60 ohms
Cancel (PRESSED)	About 190 ohms
Set/- (PRESSED)	About 450 ohms
Res/+ (PRESSED)	About 900 ohms

Fig. 11: Identifying Cruise Control Combination Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between cruise control combination switch 12P connector terminal No. 1 and No. 6.

   If there is no continuity, replace the cruise control combination switch.

Fig. 12: Cruise Control Combination Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

There are SRS components located in this area. **REVIEW THE SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** , in the SRS before doing repairs or service.

1. Cruise Control Combination Switch
   1. Install the Install the cruise control combination switch (A).

Fig. 13: Identifying Cruise Control Combination Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Steering Wheel Trim Assembly
   1. Install the steering wheel trim (A).

Fig. 14: Identifying Steering Wheel Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HFL-Voice Control Switch
    1. Install the HFL - voice control switch (A).
    2. Install the switch cover (B).

Fig. 15: Identifying HFL - Voice Control Switch And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Wheel Rear Cover
    1. Install the steering wheel rear cover (A).

Fig. 16: Identifying Steering Wheel Rear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 17: Identifying Steering Wheel Assembly Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.
    5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 18: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 19: Identifying Steering Wheel Connector And Bolt Witch Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 20: Identifying Driver Airbag And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 21: Identifying Steering Wheel And Horn Pad Clearance Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 22: Identifying Driver Airbag, Horn Switch Connector And Access Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 23: Identifying Battery (+ And -) Terminal (SRS) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 24: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

10. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

11. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

CRUISE CONTROL COMPONENT LOCATION INDEX

Fig. 25: Cruise Control System Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CRUISE CONTROL COMBINATION SWITCH	**REMOVAL, TEST, AND INSTALLATION**
	TEST

BRAKE PEDAL POSITION SWITCH	**Pedal and Brake Pedal Position Switch Adjustment** See **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **BRAKE PEDAL REMOVAL AND INSTALLATION**

CRUISE CONTROL (PCM) INPUT TEST

NOTE: Always make sure that you have the latest HDS software.

1. **Connect the HDS to the DLC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, **TROUBLESHOOT THE DLC CIRCUIT** .
4. **Check for and troubleshoot any DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
5. Do the following tests while monitoring parameters in the PGM-FI DATA LIST with the HDS.
6. If the input tests prove OK, **replace the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NOTE: Intermittent failures are often caused by loose circuit connections. While monitoring cruise control inputs, flex the circuit wires, and note if any of the test results change.

Signal to be tested	Test condition	Parameter: Desired result	Possible cause if result is not obtained
	Cruise control combination switch buttons are not pressed	CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list should indicate DEFAULT when the cruise control combination switch buttons are not pressed.	If the CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list indicates SIGNAL LOST, check as shown. • Check for DTCs in the PGM-FI system and do the appropriate troubleshooting. • Faulty gauge control module • Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch • A short to power in the wire between the gauge control module and the cruise control combination switch when the
	Cruise control main button is pressed	CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list should indicate MAIN SW when the cruise control main button is pressed.	

Cruise control system switch status	Cancel button is pressed	CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list should indicate CANCEL SW when the cancel button is pressed.	illumination switch is turned on If the CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list indicates SIGNAL SHORT, check as shown. • Check for DTCs in the PGM-FI system and do the appropriate troubleshooting • Faulty gauge control module • Faulty cruise control combination switch • A short to ground in the wire between the gauge control module and the cruise control combination switch If the CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list indicates a different status, check for a faulty cruise control combination switch.
	Set/- button is pressed	CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list should indicate SET SW when the set/- button is pressed.	
	Res/+ button is pressed	CRUISE CONTROL SYSTEM SWITCH STATUS in the HDS data list should indicate RESUME SW when the res/+ button is pressed.	
Brake pedal position switch signal	Brake pedal pressed, then released	CRUISE BRAKE SW/IDLE STOP SW should indicate OPEN when the brake pedal is pressed and CLOSE when the brake pedal is released.	• Faulty brake pedal position switch • Blown No. B2 (10 A) fuse in the under-dash fuse/relay box • An open in the wire between the PCM and the brake pedal position switch • A wire shorted to ground or power between the PCM and the brake pedal position switch
Cruise control indicator signal	Start the engine, press the cruise control main button on, and drive the vehicle above 25 mph (40 km/h) with the cruise control set and cancel the cruise	CRUISE INDICATOR should indicate ON when the cruise control is set and OFF when the cruise control is canceled.	• Faulty gauge control module • Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch

	control		• A short to ground in the wire between the gauge control module and the cruise control combination switch

CENTER CONSOLE DISASSEMBLY AND REASSEMBLY

DISASSEMBLY

1. Center Console - Disassembly
    1. Carefully pry up the center console upper trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console upper trim.

Fig. 1: Identifying Center Console Upper Trim, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A), then pull out the console panels (B) to detach the clips (C).

Fig. 2: Identifying Console Panels, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A), and disconnect the connectors (B).
4. Remove the beverage holder (C).

Fig. 3: Identifying Center Console Assembly Connector, Beverage Holder And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Center Console - Reassembly
    1. Connect the connectors (A), then install the beverage holder (B).

Fig. 4: Identifying Center Console Assembly Connector, Beverage Holder And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the screws (C).
    3. Install the console panels (A), then install the screws (B). Make sure the clips (C) snap into place securely.

Fig. 5: Identifying Console Panels, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the center console upper trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 6: Identifying Center Console Upper Trim, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CENTER CONSOLE REMOVAL AND INSTALLATION

REMOVAL

1. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 7: Identifying Front Console Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 8: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 9: Identifying Center Console Rear Trim, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 10: Identifying Center Lower Cover, Bolt And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 11: Identifying Center Console Assembly Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 12: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 13: Identifying Center Console Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 14: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Center Console
    1. Install the center console (A).

Fig. 15: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

Fig. 16: Identifying Center Console Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 17: Identifying Console Box Mat And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 18: Identifying Center Console Assembly Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 19: Identifying Center Lower Cover, Bolt And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 20: Identifying Center Console Rear Trim, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

DASHBOARD CENTER DISPLAY VISOR REMOVAL AND INSTALLATION

REMOVAL

1. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 24: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio-Navigation Unit Assembly (With Navigation)

NOTE:

- **Eject the discs before removing the audio-navigation unit to prevent damaging the CD/DVD player's load mechanism.**

- **If you are replacing the audio-navigation unit, write down the audio presets (if possible), then enter them into the new audio-navigation unit.**
- **If the audio-navigation unit is replaced or disconnected, Map Matching must be done.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio-navigation unit (A).

Except KX

Fig. 25: Identifying Audio - Navigation Unit (With Navigation Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 26: Identifying Audio - Navigation Unit (With Navigation For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Audio Unit Assembly (Without Navigation)

NOTE:

- **Eject the CD before disconnecting the audio unit to prevent damaging the CD player's load mechanism.**
- **If you are replacing the audio unit, write down the audio presets (if possible), and enter them into the new audio unit.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio unit (A).

Fig. 27: Identifying Audio Unit Assembly (Without Navigation)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Dashboard Center Display Visor Assembly
    1. Remove the dashboard center display visor (A).

Fig. 28: Identifying Dashboard Center Display Visor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Dashboard Center Display Visor Assembly
    1. Install the dashboard center display visor (A).

Fig. 29: Identifying Dashboard Center Display Visor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio Unit Assembly (Without Navigation)
    1. Connect the connectors, then install the audio unit (A).

    NOTE: Make sure all the connectors and the antenna lead are secure.

    2. Install the bolts (B).

    NOTE: If the audio unit was replaced, enter the audio presets that you saved onto the new unit.

Fig. 30: Identifying Audio Unit And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Navigation Unit Assembly (With Navigation)

1. Connect the connectors, then install the audio-navigation unit (A).

   NOTE: Make sure all the connectors and the antenna lead are secure.

2. Install the bolts (B).

4. Inner Vent - Both Sides
   1. Install the inner vents (A). Make sure the clips (B) snap into place securely.

      Except KX

DASHBOARD DRIVER'S PANEL REMOVAL AND INSTALLATION

REMOVAL

1. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 35: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Panel Trim
    1. Detach the clips (A), then remove the driver's dashboard panel trim (B).

Fig. 36: Identifying Driver Dashboard Panel Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Driver's Dashboard Panel Trim
    1. Install the driver's dashboard panel trim (A). Make sure the clips (B) snap into place securely.

Fig. 37: Identifying Driver Dashboard Panel Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 38: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DASHBOARD METER VISOR REMOVAL AND INSTALLATION

REMOVAL

1. Dashboard Meter Visor
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 39: Identifying Dashboard Meter Visor Blind Cover, Hook And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the dashboard meter visor assembly (A) with the appropriate trim tool to detach the clips (B, C) and the tabs (D), then remove the dashboard meter visor assembly.

Fig. 40: Identifying Dashboard Meter Visor Assembly, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Dashboard Meter Visor
    1. Install the dashboard meter visor assembly (A). Make sure the clips (B, C) and the tabs (D) snap into place securely.

Fig. 41: Identifying Dashboard Meter Visor Assembly, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

Fig. 42: Identifying Dashboard Meter Visor Blind Cover, Hook And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DASHBOARD SIDE COVER REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Opening Seal As Needed
    1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange as needed.

Fig. 43: Pulling Front Door Opening Seal From Trim Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Dashboard Side Cover
    1. Gently pry out the dashboard side cover (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the dashboard side cover.

Fig. 44: Identifying Dashboard Side Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Dashboard Side Cover
    1. Install the dashboard side cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 45: Identifying Dashboard Side Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Opening Seal As Needed
    1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 46: Installing Front Door Opening Seal From Trim Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DASHBOARD TRIM PANEL REMOVAL AND INSTALLATION

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 47: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Inner Dashboard Trim Panel
    1. Carefully pry out the driver's inner dashboard trim panel (A) with the appropriate trim tool to detach the clips (B), then remove the driver's inner dashboard trim panel.

Fig. 48: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Passenger's Dashboard Trim Panel
    1. Carefully pry out the passenger's dashboard trim panel (A) with the appropriate trim tool to detach the clips (B), then remove the passenger's dashboard trim panel.

Fig. 49: Identifying Passenger Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Passenger's Dashboard Trim Panel
    1. Install the passenger's dashboard trim panel (A). Make sure the clips (B) snap into place securely.

Fig. 50: Identifying Passenger Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Inner Dashboard Trim Panel
    1. Install the driver's inner dashboard trim panel (A). Make sure the clips (B) snap into place securely.

Fig. 51: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 52: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DASHBOARD VENT REMOVAL AND INSTALLATION

REMOVAL

1. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 53: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 54: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Outer Vent
    1. Remove the screw (A).
    2. Pull out the driver's outer vent (B) to detach the clips (C, D), then remove the driver's outer vent.

Fig. 55: Identifying Driver Outer Vent, Screw And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 56: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Inner Dashboard Trim Panel
    1. Carefully pry out the driver's inner dashboard trim panel (A) with the appropriate trim tool to detach the clips (B), then remove the driver's inner dashboard trim panel.

Fig. 57: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Passenger's Dashboard Trim Panel

1. Carefully pry out the passenger's dashboard trim panel (A) with the appropriate trim tool to detach the clips (B), then remove the passenger's dashboard trim panel.

Fig. 58: Identifying Passenger Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Passenger's Outer Vent
    1. Remove the screw (A).
    2. Pull out the passenger's outer vent (B) to detach the clips (C, D), then remove the passenger's outer vent.

Fig. 59: Identifying Passenger Outer Vent, Screw And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Passenger's Outer Vent
    1. Install the passenger's outer vent (A), then install the screw (B). Make sure the clips (C, D) snap into place securely.

Fig. 60: Identifying Passenger Outer Vent, Screw And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Passenger's Dashboard Trim Panel
    1. Install the passenger's dashboard trim panel (A). Make sure the clips (B) snap into place securely.

Fig. 61: Identifying Passenger Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Inner Dashboard Trim Panel
    1. Install the driver's inner dashboard trim panel (A). Make sure the clips (B) snap into place securely.

Fig. 62: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 63: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Outer Vent
    1. Install the driver's outer vent (A), then install the screw (B). Make sure the clips (C, D) snap into place securely.

Fig. 64: Identifying Driver Outer Vent, Screw And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Dashboard Panel Assembly

1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 65: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Inner Vent - Both Sides
    1. Install the inner vents (A). Make sure the clips (B) snap into place securely.

Fig. 66: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DASHBOARD/STEERING HANGER BEAM DISASSEMBLY AND REASSEMBLY

DISASSEMBLY

1. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 67: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio-Navigation Unit Assembly (With Navigation)

NOTE:

- **Eject the discs before removing the audio-navigation unit to prevent damaging the CD/DVD player's load mechanism.**
- **If you are replacing the audio-navigation unit, write down the audio presets (if possible), then enter them into the new audio-navigation unit.**
- **If the audio-navigation unit is replaced or disconnected, Map Matching must be done.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio-navigation unit (A).

Except KX

Fig. 68: Identifying Audio - Navigation Unit (With Navigation Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 69: Identifying Audio - Navigation Unit (With Navigation For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Audio Unit Assembly (Without Navigation)

NOTE:

- **Eject the CD before disconnecting the audio unit to prevent damaging the CD player's load mechanism.**
- **If you are replacing the audio unit, write down the audio presets (if possible), and enter them into the new audio unit.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio unit (A).

Fig. 70: Identifying Audio - Navigation Unit (Without Navigation)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Dashboard Center Display Visor Assembly
    1. Remove the dashboard center display visor (A).

Fig. 71: Identifying Dashboard Center Display Visor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. GPS Antenna (For Some Models)
    1. Disconnect the connector (A).
    2. Remove the screws, then remove the GPS antenna (B).

Fig. 72: Identifying GPS Antenna And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Detach the harness clip (A).

Fig. 73: Identifying GPS Antenna Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Center Display Unit Assembly (For Some Model)
    1. Remove the center display unit assembly (A).
    2. Disconnect the connectors.

Fig. 74: Identifying Center Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Multi-Information Display Unit Assembly (For Some Model)
    1. Remove the multi-information display unit assembly (A).
    2. Disconnect the connectors from the multi-information display unit.

Fig. 75: Identifying Multi-Information Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Sunlight Sensor
    1. Using a flat-tip screwdriver wrapped with protective tape, pry up the sunlight sensor (A).
    2. Disconnect the sunlight sensor connector (B).

Fig. 76: Identifying Sunlight Sensor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Meter Visor Assembly (After Remove Blind Cover)
    1. Pull out the dashboard meter visor assembly (A) with the appropriate trim tool to detach the clips (B, C) and the tabs (D), then remove dashboard meter visor assembly.

Fig. 77: Identifying Dashboard Meter Visor Assembly, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Gauge Control Module

NOTE: **Spread a protective cloth on the upper column cover for protect the upper column cover.**

1. Adjust the steering column to full tilt down position and to the full telescopic pull position.
2. Remove the gauge control module (A).
3. Disconnect the connector.

Fig. 78: Identifying Gauge Control Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Driver's Inner Dashboard Trim Panel
    1. Carefully pry out the driver's inner dashboard trim panel (A) with the appropriate trim tool to detach the clips (B), then remove the driver's inner dashboard trim panel.

Fig. 79: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Passenger's Dashboard Trim Panel
    1. Carefully pry out the passenger's dashboard trim panel (A) with the appropriate trim tool to detach

the clips (B), then remove the passenger's dashboard trim panel.

Fig. 80: Identifying Passenger Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Climate Control Panel Assembly (For Some Models)
    1. Remove the screws.
    2. Disconnect the connector (A), then remove the climate control panel assembly (B).

Fig. 81: Identifying Climate Control Panel Assembly And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. HVAC Control Unit Assembly (For Some Models)
    1. Remove the screws.
    2. Disconnect the connector (A), then remove the HVAC control unit assembly (B).

Fig. 82: Identifying HVAC Control Unit Assembly And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Outer Vent - Both Sides
    1. Remove the screw (A).
    2. Pull out the driver's outer vent (B) to detach the clips (C, D), then remove the driver's outer vent.
    3. Repeat this step on the opposite side.

Fig. 83: Identifying Driver Outer Vent, Clips And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Glove Box
    1. Remove the bolts (A).

Fig. 84: Identifying Glove Box Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release both glove box stops (A) by pushing them in, then let the glove box (B) hang down.

Fig. 85: Releasing Glove Box Stops To Hang Down Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the glove box damper hook (A), then remove the glove box (B).

Fig. 86: Removing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Passenger's Airbag Assembly
    1. Disconnect the front passenger's airbag inflator connector (A) on the dashboard wire harness.
    2. Remove the mounting nuts.

Fig. 87: Identifying Front Passenger Airbag Inflator Connector And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Gently remove the front passenger's airbag and cover assembly (A).

NOTE: **The airbag cover has clips on each side where it attaches to the dashboard.**

Fig. 88: Removing Front Passenger Airbag And Cover Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 89: Identifying Airbag Cover Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Glove Box Striker
    1. Remove the screws (A), then remove the glove box striker (B).

Fig. 90: Identifying Glove Box Striker And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Steering Hanger Beam
    1. Remove the bolts (A).

Fig. 91: Identifying Steering Hanger Beam Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the screws (A).

Fig. 92: Identifying Steering Hanger Beam Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the harness clip(s) (A).

Left side

Fig. 93: Identifying Steering Hanger Beam Harness Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 94: Identifying Steering Hanger Beam Harness Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With climate control: Disconnect the connector (A).

Fig. 95: Identifying Steering Hanger Beam Connector (With Climate Control)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the dashboard (A) from the steering/hanger beam (B).

Fig. 96: Removing Dashboard From Steering/Hanger Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, remove the screw (A), then remove the center joint duct (B).

Fig. 97: Identifying Center Joint Duct And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If necessary, remove the screws (A), then remove the glove box covers (B, C).

Left side

Fig. 98: Identifying Glove Box Cover And Screw (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 99: Identifying Glove Box Cover And Screw (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Steering Hanger Beam
    1. Install the glove box covers (A, B), then install the screws (C).

Left side

Fig. 100: Identifying Steering Hanger Beam Glove Box Cover And Screws (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 101: Identifying Steering Hanger Beam Glove Box Cover And Screws (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the center joint duct (A), then install the screw (B).

Fig. 102: Identifying Steering Hanger Beam Center Joint Duct And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the dashboard (A) to the steering hanger beam (B).

Fig. 103: Installing Dashboard To Steering Hanger Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With climate control: Connect the connector (A).

Fig. 104: Identifying Steering Hanger Beam Connector (With Climate Control)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the harness clip(s) (A).

Left side

Fig. 105: Identifying Steering Hanger Beam Harness Clip (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 106: Identifying Steering Hanger Beam Harness Clip (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the screws (A).

Fig. 107: Identifying Steering Hanger Beam Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bolts (A).

Fig. 108: Identifying Steering Hanger Beam Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box Striker
    1. Install the glove box striker (A), then install the screws (B).

Fig. 109: Identifying Glove Box Striker And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Passenger's Airbag Assembly
    1. Place the front passenger's airbag and cover as an assembly (A) into the dashboard.
    2. Tighten the front passenger's airbag new mounting nuts.

Fig. 110: Identifying Front Passenger Airbag, Cover And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the front passenger's airbag inflator connector (A) on the dashboard wire harness.

Fig. 111: Identifying Front Passenger Airbag Inflator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Glove Box
    1. Install the glove box (A), then install the glove box damper hook (B).

Fig. 112: Installing Glove Box With Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the bolts (A).

Fig. 113: Identifying Glove Box Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Outer Vent - Both Sides
    1. Install the outer vent (A), then install the screw (B). Make sure the clips (C, D) snap into place securely.
    2. Repeat this step on the opposite side.

Fig. 114: Identifying Outer Vent, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. HVAC Control Unit Assembly (For Some Models)
    1. Connect the connector (A), then install the HVAC control unit assembly (B).
    2. Install the screws.

Fig. 115: Identifying HVAC Control Unit Assembly And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Climate Control Panel Assembly (For Some Models)
    1. Connect the connector (A), then install the climate control panel assembly (B).
    2. Install the screws.

Fig. 116: Identifying Climate Control Panel Assembly And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Passenger's Dashboard Trim Panel
    1. Install the passenger's dashboard trim panel (A). Make sure the clips (B) snap into place securely.

Fig. 117: Identifying Passenger Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driver's Inner Dashboard Trim Panel
    1. Install the driver's inner dashboard trim panel (A). Make sure the clips (B) snap into place securely.

Fig. 118: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Gauge Control Module

NOTE: **Spread a protective cloth on the upper column cover for protect the upper column cover.**

1. Connect the connector.
2. Install the gauge control module (A).

Fig. 119: Identifying Gauge Control Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Meter Visor Assembly (After Remove Blind Cover)
    1. Install the dashboard meter visor assembly (A). Make sure the clips (B, C) and the tabs (D) snap into place securely.

Fig. 120: Identifying Dashboard Meter Visor Assembly, Clips And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Sunlight Sensor
    1. Connect the sunlight sensor connector (A).

2. Install the sunlight sensor (B).

Fig. 121: Identifying Sunlight Sensor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Multi-Information Display Unit (For Some Model)
    1. Connect the connectors.
    2. Install the multi-information display unit assembly (A).

NOTE: **If you see the In Line Diag screen when it is turned on, refer to In Line Diag (i-MID) under Display Diagnosis to complete the diagnosis.**

Fig. 122: Identifying Multi - Information Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Center Display Unit Assembly (For Some Model)
    1. Connect the connectors.
    2. Install the center display unit assembly (A).

Fig. 123: Identifying Center Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. GPS Antenna (For Some Models)
    1. Install the harness clip (A).

Fig. 124: Identifying GPS Antenna Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the GPS antenna (A), then install the screws.
    3. Connect the connector (B).

Fig. 125: Identifying GPS Antenna And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Dashboard Center Display Visor Assembly
    1. Install the dashboard center display visor (A).

Fig. 126: Identifying Dashboard Center Display Visor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Audio Unit Assembly (Without Navigation)
    1. Connect the connectors, then install the audio unit (A).

NOTE: **Make sure all the connectors and the antenna lead are secure.**

    2. Install the bolts (B).

NOTE: **If the audio unit was replaced, enter the audio presets that you saved onto the new unit.**

Fig. 127: Identifying Audio Unit (Without Navigation) And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Navigation Unit Assembly (With Navigation)
    1. Connect the connectors, then install the audio-navigation unit (A).

       NOTE: Make sure all the connectors and the antenna lead are secure.

    2. Install the bolts (B).

       Except KX

Fig. 128: Identifying Audio - Navigation Unit And Bolts With Torque Specifications (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 129: Identifying Audio - Navigation Unit And Bolts With Torque Specifications (For KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Inner Vent - Both Sides
    1. Install the inner vents (A). Make sure the clips (B) snap into place securely.

Fig. 130: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DASHBOARD/STEERING HANGER BEAM REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 131: Identifying Battery (+ And -) Terminal (SRS)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 132: Pulling Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A-Pillar Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 133: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 134: Placing Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: **The upper clip will stay in the body.**

Fig. 135: Releasing A-Pillar Trim From Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 136: Removing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 137: Identifying Driver Dashboard Undercover, Lock Knob, Holder, Clip And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Passenger's Dashboard Undercover
    1. Gently pull down the passenger's dashboard undercover (A) to detach the clips (B), then pull away the undercover to release the pins (C) from the holder (D).

Fig. 138: Identifying Passenger Dashboard Undercover, Holder, Clips And Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 139: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 140: Identifying Driver Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Kick Panel - Both Sides
    1. Pull out the front door opening seal (A) as needed from the kick panel hooks and the door opening flange.
    2. Pull back the kick panel by hand to detach the clips (B), then remove the driver's side kick panel (C) and the passenger's side kick panel (D).

    Driver's side

Fig. 141: Pulling Front Door Opening Seal From Kick Panel Hooks And Door Opening Flange (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 142: Pulling Front Door Opening Seal From Kick Panel Hooks And Door Opening Flange (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 143: Disconnecting Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

    Left side

Fig. 144: Identifying Front Console Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 145: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips

(B) and the hooks (C), then remove the center console rear trim.

Fig. 146: Identifying Center Console Rear Trim, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 147: Identifying Center Lower Cover, Clips And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 148: Identifying Center Console Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 149: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 150: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 151: Removing Center Console

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 152: Identifying Driver Airbag Inflator, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the TORX bolts using a TORX T30 bit.
    5. Remove the driver's airbag (A).

Fig. 153: Identifying Driver Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 154: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
    5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

Note these items when removing the steering wheel:

- Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
- If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 155: Removing Steering Wheel Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 156: Identifying Steering Wheel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 157: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the upper column cover (A).

Fig. 158: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Lower Column Cover
    1. Remove the screws (A) securing the lower column cover (B) from the front side.

Fig. 159: Identifying Lower Column Cover And Screws (From Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the screw (A), then remove the lower column cover (B).

Fig. 160: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Combination Switch Body Assembly
    1. Disconnect the connectors (A).
    2. Remove the clip (B).

Fig. 161: Identifying Combination Switch Connector And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A).

Fig. 162: Identifying Combination Switch Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the combination switch body assembly (A) from the steering column shaft.

Fig. 163: Identifying Combination Switch Body Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 164: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

Fig. 165: Identifying Steering Column Lower Slide Shaft, Joint Yoke And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.

NOTE:

- **If the center guide (C) is in place and has not moved, leave it in**

place.

- **If the center guide has come off, discard it.**

Fig. 166: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Steering Column
    1. Disconnect the connectors (A) from the ignition switch (B).

Fig. 167: Identifying Steering Column, Ignition Switch, Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the wire harness clips (C) from the steering column.
3. Remove the steering column (D).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

22. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 168: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 169: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

       NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

    3. Remove the nut (C) securing the shift cable end (D).

Fig. 170: Shifting Shift Lever At R Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 171: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

Fig. 172: Locking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 173: Removing Shift Cable From Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Dashboard/Steering Hanger Beam
    1. At the A-pillar, disconnect the connector(s) (A).

Driver's side

Fig. 174: Identifying Dashboard/Steering Hanger Beam Connector At A-Pillar (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 175: Identifying Dashboard/Steering Hanger Beam Connector At A-Pillar (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. From under the dash, disconnect the connectors (A).

Fig. 176: Identifying Dashboard/Steering Hanger Beam Connector (Under Dash)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From under the dash, remove the nut (A) and the bolt (B).

Fig. 177: Identifying Dashboard/Steering Hanger Beam Connector Nut And Clip (Under Dash)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With climate control: Disconnect the aspirator hose (A).
5. Disconnect the connector (B).

Fig. 178: Identifying Aspirator Hose And Connector (With Climate Control)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From under the dash, disconnect the connectors (A).
7. Remove the bolts (B, C), and remove the ground bolt (D) with a TORX T30 bit.

Fig. 179: Identifying Connector And Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. From under the dash, disconnect the connectors (A), and detach the harness clips (B).

Fig. 180: Identifying Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Loosen the special bolts (A) until they disengage from the threads on the hanger beam side bracket (B), and engage the inside threads of the collar bolts (C). The thread lock on the special bolts makes the special bolts and the collar bolts turn together.
10. Continue loosening the special bolts to turn the collar bolts into the fixed space adjusters (D) until the collar bolts engage the stops (E). This creates a gap (F) between the collar bolts and the body.
11. Loosen the special bolts to disengage them from the collar bolts, then remove them.

Fig. 181: Removing Collar Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check that the collar bolts (A) are seated in the fixed space adjusters (B).

NOTE: **If either collar bolt was not seated, replace the special bolts.**

Fig. 182: Identifying Fixed Space Adjusters And Collar Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the bolts (A, B).

Fig. 183: Identifying Dashboard/Steering Hanger Beam Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the dashboard/steering hanger beam (A).

Fig. 184: Removing Dashboard/Steering Hanger Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. If necessary, detach the hooks (A), then remove the dashboard upper side cover (B).

Fig. 185: Identifying Dashboard Upper Side Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Upper Dashboard Support Gusset
    1. If necessary, remove the upper dashboard support gusset (A).

Fig. 186: Identifying Upper Dashboard Support Gusset
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Upper Dashboard Support Gusset
    1. Install the upper dashboard support gusset (A).

Fig. 187: Identifying Upper Dashboard Support Gusset With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Dashboard/Steering Hanger Beam

NOTE:

- **Make sure the collar bolts (A) turn easily by hand in the fixed space adjusters (B). Tighten the collar bolts by hand until they engage the fixed space adjusters before reinstalling the dashboard.**
- **Before reinstalling the dashboard, screw the special bolts (C) into the collar bolts, and check that they turn together. If they do not turn together, replace the special bolts.**
- **After setting the dashboard/steering hanger beam in the body, install all of the mounting bolts but do not tighten them. First tighten the driver's side bracket bolts to the specified torque. Next, tighten the special bolts to turn the collar bolts. As you tighten the bolts, the collar bolts screw out of the fixed space adjuster until they contact the body. Continue tightening the special bolts to the specified torque.**

Special bolt tightening on passenger's side

Fig. 188: Installing Collar Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the dashboard upper side cover (A). Make sure the hooks (B) snap into place securely.

Fig. 189: Identifying Upper Dashboard Upper Side Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the dashboard/steering hanger beam (A).

Fig. 190: Installing Dashboard/Steering Hanger Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A, B).

Fig. 191: Identifying Dashboard/Steering Hanger Beam Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the special bolts (A).

Fig. 192: Identifying Dashboard/Steering Hanger Beam Special Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. From under the dash, connect the connectors (A).
6. Install the bolts (B, C), and install the ground bolt (D) with a TORX T30 bit.

NOTE: **Apply medium strength liquid thread lock to the mounting bolts (C) before installation.**

Fig. 193: Identifying Dashboard/Steering Hanger Beam Connector, Bolt And Ground Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. From under the dash, connect the connectors (A), and install the harness clips (B).

Fig. 194: Identifying Dashboard/Steering Hanger Beam Connector And Harness Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With climate control: Connect the aspirator hose (A).
9. Connect the connector (B).

Fig. 195: Identifying Aspirator Hose And Connector (With Climate Control)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. From under the dash, install the nut (A) and the bolt (B).

Fig. 196: Identifying Dashboard/Steering Hanger Beam Nut And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. From under the dash, connect the connectors (A).

Fig. 197: Identifying Dashboard/Steering Hanger Beam Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. At the A-pillar, connect the connector(s) (A).

Driver's side

Fig. 198: Identifying A-Pillar Connector (Driver Side)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 199: Identifying A-Pillar Connector (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Column
    1. Install the steering column (A).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

Fig. 200: Identifying Steering Column And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely tighten the attaching nuts and bolts.
3. Tighten the attaching nuts and bolts to the specified torque in the sequence shown.
4. Install the wire harness clips (B) to the steering column.
5. Connect the connectors (C) to the ignition switch (D).

4. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 201: Identifying Steering Column Lower Slide Shaft Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE:

- **Pinion shaft with center guide: Install the steering joint by aligning the center guide (C).**
- **Pinion shaft without center guide: Position the steering column by aligning the gap (D) within the angle.**

Fig. 202: Identifying Lower End Of Steering Joint, Pinion Shaft, Center Guide And Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
4. Loosely install the steering joint bolt (C).
5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
6. Pull on the steering joint to make sure that the steering joint is fully seated.
7. Tighten the steering joint bolt to the specified torque.

Fig. 203: Identifying Steering Joint Bolt, Hole And Groove With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 204: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Combination Switch Body Assembly
    1. Install the combination switch body assembly (A).
    2. Tighten three screws (B) in the sequence shown.

Fig. 205: Identifying Combination Switch Body Assembly And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A).

Fig. 206: Identifying Combination Switch Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the connectors (A).
5. Install the clip (B).

Fig. 207: Identifying Combination Switch Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

Fig. 208: Engaging Column Cover With Lock Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the lower column cover (A), then install the screw (B).

Fig. 209: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

Fig. 210: Identifying Lower Column Cover And Screws (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Upper Column Cover
    1. Install the upper column cover (A).

Fig. 211: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

Fig. 212: Identifying Dashboard Meter Visor Blind Cover, Clips And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 213: Identifying Cable Reel And Label Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.

5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 214: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 215: Identifying Steering Wheel Connector And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 216: Identifying Steering Wheel Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 217: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 218: Identifying Driver Airbag Inflator, Horn Switch Connector And Access Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

Fig. 219: Installing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Kick Panel - Both Sides
    1. Install the driver's side kick panel (A) and the passenger's side kick panel (B). Make sure the clips (C) snap into place securely.
    2. Install the front door opening seal (D).

Driver's side

Fig. 220: Installing Front Door Opening Seal (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 221: Installing Front Door Opening Seal (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Driver's Dashboard Lower Cover
    1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips

(C) snap into place securely.

Fig. 222: Identifying Driver Dashboard Lower Cover And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 223: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Passenger's Dashboard Undercover
    1. Install the passenger's dashboard undercover (A). Make sure the clips (B) snap into place securely, and the pins (C) into the holder (D) securely.

Fig. 224: Identifying Passenger Dashboard Undercover, Clips, Holder And Pins

Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 225: Identifying Driver Dashboard Undercover, Clips, Holder And Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 226: Removing Headliner And A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 227: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 228: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 229: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 230: Timing Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

20. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 231: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 232: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 233: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 234: Identifying Battery Terminal (SRS) Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 235: Locating Shift Cable Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Check that the R position indicator comes on.
4. Turn the ignition switch to LOCK (0).

Fig. 236: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Unlock the retainer lock (A).

Fig. 237: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C) between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 238: Locking Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing

the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**
- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 239: Installing Socket Holder Into Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 240: Locking Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

Fig. 241: Identifying Shift Cable End Into Mounting Stud Installation Position (Proper/Improper)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the shift cable end nut (A).
11. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
12. Turn the ignition switch to ON (II).
13. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
14. Shift the shift lever to P.
15. Check that the shift lock works properly.
16. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.

Fig. 242: Identifying Shift Cable End Nut And Pin With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 243: Identifying Shift Lever Panel, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Center Maintenance Cover
    1. Install the maintenance cover (A).

Fig. 244: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Center Console
    1. Install the center console (A).

Fig. 245: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

Fig. 246: Identifying Center Console Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 247: Identifying Console Box Mat And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 248: Identifying Center Console Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 249: Identifying Center Lower Cover, Clips And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 250: Identifying Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 251: Identifying Front Console Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 252: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
30. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 253: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
32. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
33. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

34. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

DRIVER'S DASHBOARD LOWER COVER REMOVAL AND INSTALLATION

REMOVAL

1. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).

2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 254: Identifying Driver Dashboard Undercover, Lock Knob, Clip, Pin And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 255: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 256: Identifying Driver Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Driver's Dashboard Lower Cover
    1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 257: Identifying Driver Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 258: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 259: Identifying Driver Dashboard Undercover, Lock Knob, Pin, Clips And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVER'S DASHBOARD UNDERCOVER REMOVAL AND INSTALLATION

REMOVAL

1. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 260: Identifying Driver Dashboard Undercover, Lock Knob, Pin, Clips And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 261: Identifying Driver Dashboard Undercover, Lock Knob, Pin, Clips And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ECON SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 262: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ECON Switch
    1. Remove the ECON switch (A).

Fig. 263: Identifying ECON Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. ECON Switch Bulb
    1. Remove the rear cover (A).
    2. Remove the front cover (B).

3. Remove the ECON switch bulb (C).

Fig. 264: Identifying ECON Switch Bulb, Front And Rear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. ECON Switch - Test

NOTE: When doing the ECON switch test, install the bulb correctly.

1. Check for continuity between the terminals in each switch position according to the table.
2. If the continuity is not as specified, replace the ECON switch (A).

Fig. 265: Identifying ECON Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Position \ Terminal	1		2	4	5
OFF	○	⊕	○		
ON				○	○

Fig. 266: ECON Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. ECON Switch Bulb
    1. Install the ECON switch bulb (A).
    2. Install the front cover (B).
    3. Install the rear cover (C).

Fig. 267: Identifying ECON Switch Bulb, Rear And Front Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ECON Switch
    1. Install the ECON switch (A).

Fig. 268: Identifying ECON Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the

clips (C) snap into place securely.

Fig. 269: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT CONSOLE COVER REMOVAL AND INSTALLATION

REMOVAL

1. Front Console Cover
    1. Remove the clips (A), and detach the clips (B), then remove the front console cover (C).

    Left side

Fig. 270: Identifying Front Console Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 271: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Console Cover
    1. Install the front console cover (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 272: Identifying Front Console Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 273: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GLOVE BOX REMOVAL AND INSTALLATION

REMOVAL

1. Glove Box
    1. Remove the bolts (A).

Fig. 274: Identifying Glove Box Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release both glove box stops (A) by pushing them in, then let the glove box (B) hang down.

Fig. 275: Releasing Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the glove box damper hook (A), then remove the glove box (B).

Fig. 276: Removing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box Lock Cylinder
    1. Remove the glove box lock cylinder trim (A).

Fig. 277: Removing Glove Box Lock Cylinder Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the retainer (A).

Fig. 278: Removing Glove Box Lock Cylinder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the glove box lock cylinder (A).

Fig. 279: Removing Glove Box Lock Cylinder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Glove Box Damper
    1. Detach the hooks (A), then pull out the glove box damper (B).

Fig. 280: Pulling Glove Box Damper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Glove Box Striker

    Remove the screws (A), then remove the glove box striker (B).

Fig. 281: Identifying Glove Box Striker And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Glove Box Striker
    1. Install the glove box striker (A), then install the screws (B).

Fig. 282: Identifying Glove Box Striker And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box Damper
    1. Install the glove box damper (A). Make sure the hooks (B) snap into place securely.

Fig. 283: Identifying Glove Box Damper And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Glove Box Lock Cylinder
    1. Install the retainer (A) in its slot.

Fig. 284: Installing Retainer In Slot

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the glove box lock cylinder (A). Push the lock cylinder into place securely until the retainer snaps into place.

Fig. 285: Installing Glove Box Lock Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Install the glove box lock cylinder trim (A).

Fig. 286: Installing Glove Box Lock Cylinder Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Glove Box
    1. Install the glove box (A), then install the glove box damper hook (B).

Fig. 287: Installing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the bolts (A).

Fig. 288: Identifying Glove Box Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DOOR LOCK SWITCH TEST

REMOVAL

1. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 1: Identifying Power Window Switch Panel, Connector, Hooks, Notch And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel - Passenger's Side
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 2: Identifying Power Window Switch Panel, Connector, Hooks, Notch And Clips (Passenger's Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Driver's Door Lock Switch - Test
    1. Check for continuity between the terminals in each switch position according to table.
    2. If the continuity is not as specified, the driver's door lock switch is faulty; replace the power window master switch (A).

Fig. 3: Identifying Driver's Power Window Master Switch And Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	2	3	13
LOCK	○		○
NEUTRAL			
UNLOCK		○	○

Fig. 4: Power Window Master Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Passenger's Door Lock Switch - Test
    1. Check for continuity between the terminals in each switch according to table.
    2. If the continuity is not as specified, the passenger's door lock switch is faulty; replace the front passenger's power window switch (A).

Fig. 5: Identifying Passenger's Power Window Master Switch And Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	2	3	4
LOCK	○	○	
NEUTRAL			
UNLOCK	○		○

Fig. 6: Power Window Master Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Power Window Switch Panel - Passenger's Side
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

<u>Fig. 7: Installing Power Window Switch Panel</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 8: Identifying Power Window Switch Panel, Connector, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DOOR POSITION ADJUSTMENT

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 9: Identifying Front Wheel Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Guard
    1. For some models: Remove the screws (A), then remove the front splash guard (B).

Fig. 10: Identifying Front Splash Guard And Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Inner Fender As Needed
    1. Front door: Remove the bolt (A), the screws (B), and the clips (C, D, and E) securing the front inner fender (F), then detach the front inner fender as needed.

<u>Fig. 11: Identifying Front Inner Fender, Bolt, Screws And Clips</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Fender Fairing (When Front Door Position Adjustment)
    1. From the wheel arch, detach the clips (A).

Fig. 12: Identifying Wheel Arch Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hooks (A) securing the front fender fairing (B).

Fig. 13: Removing Front Fender Fairing Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front fender fairing (A).
4. Install the front wheel.
5. Lower the vehicle on the lift.

Fig. 14: Removing Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Door Position - Adjustment

Front

NOTE: **Check for a flush fit with the body, then check for equal gaps between the front and the rear doors, and between doors and the body. Check that the door and body edges are parallel.**

1. Place the vehicle on a firm, level surface when adjusting the doors.
2. Adjust at the hinges:
   - Have an assistant help you when adjusting the door.
   - Loosen the hinge mounting bolts (A) slightly, and move the door backward or forward, up or down as necessary to equalize the gaps.
3. If necessary, replace the door mounting bolts with the adjusting bolts made specifically for door adjustment, then adjust at the door: Loosen the door mounting bolts (B) slightly, and move the door up or down as necessary to equalize the gaps, and move it in or out until it's flush with the body.

NOTE: **Refer to the Parts Catalog if you need to use an adjusting bolt.**

Fig. 15: Identifying Front Door And Hinge Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 16: Identifying Rear Door And Hinge Mounting Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check that the door and body edges are parallel. If necessary, adjust the door cushions (A) to make the rear of the doors flush with the body.
5. Apply touch-up paint to the hinge mounting bolts, and around the hinges.

Fig. 17: Adjusting Door Cushions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Fender Fairing (When Front Door Position Adjustment)
    1. Raise the vehicle on a lift, and make sure it is securely supported.
    2. Remove the front wheel.
    3. Place the front fender fairing (A) as shown.

Fig. 18: Installing Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the hooks (A) of the front fender fairing (B) to the body holes as shown.

Fig. 19: Identifying Front Fender Fairing Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. From the wheel arch, install the clips (A).

Fig. 20: Identifying Wheel Arch Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Inner Fender As Needed
    1. Front door: Install the front inner fender (A), then install the bolt (B), the screws (C), and the clips (D, E, and F). Make sure the clips snap into place securely.

Fig. 21: Identifying Front Inner Fender, Bolt, Screws And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Guard
    1. For some models: Install the front splash guard (A), then install the screws (B).

Fig. 22: Identifying Front Splash Guard And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 23: Identifying Front Wheel Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DOOR STRIKER ADJUSTMENT

ADJUSTMENT

1. Door Striker - Adjustment

   Make sure the door latches securely without slamming it. If necessary, adjust the striker (A): The striker screws are fixed, but the striker can be adjusted slightly up or down, and in or out.

   1. Loosen the screws (B).
   2. Wrap the striker with a shop towel, then adjust the striker by tapping it with a plastic hammer. Do not tap the striker too hard.
   3. Lightly tighten the screws.
   4. Hold the outer handle out, and push the door against the body to be sure the striker allows a flush fit. If the door latches properly, tighten the screws to the specified torque, and recheck.

Fig. 24: Adjusting Door Striker With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR COMPONENT LOCATION INDEX

FRONT DOOR GLASS OUTER WEATHERSTRIP REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 27: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 28: Identifying Power Window Switch Panel, Connectors, Notch, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 29: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the screws (A) securing the inner handle (B).

Fig. 30: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 31: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 32: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Door Mirror
    1. Disconnect the connector.
    2. Detach the harness clip (A).
    3. While holding the power mirror (B), remove the nuts (C) securing the mirror.

Fig. 33: Identifying Power Mirror, Harness Clip And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the power mirror (A) and carefully pull out the harness (B).

Fig. 34: Identifying Power Mirror And Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 35: Identifying Pocket Bracket, Connector, Plastic Cover, Plug Caps And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Glass Outer Weatherstrip
    1. Remove the screw (A) securing the front door glass outer weatherstrip.
    2. Slide the front door glass outer weatherstrip clips (B) forward to release it from the door.

Fig. 36: Sliding Front Door Glass Outer Weatherstrip Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front door glass outer weatherstrip (A).

Fig. 37: Removing Front Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Glass Outer Weatherstrip

1. Install the front door glass outer weatherstrip (A).

Fig. 38: Identifying Front Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the front door glass outer weatherstrip clips (A) securely onto the flanges, then install the screw (B).

Fig. 39: Sliding Front Door Glass Outer Weatherstrip Clips Onto Flanges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Plastic Cover As Needed
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).
    3. Connect the connector (E), then install the harness clips (F).

Fig. 40: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Door Mirror
    1. Insert the harness (A) into the hole in the door, then install the power mirror (B).

Fig. 41: Identifying Power Mirror And Harness

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the nuts (A).
3. Attach the harness clip (B).
4. Connect the connector.

Fig. 42: Identifying Connector, Harness Clip And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 43: Installing Inner Handle In Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 44: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 45: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 46: Installing Inner Handle Cap And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 47: Installing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 48: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR LATCH REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 49: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 50: Removing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 51: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 52: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 53: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.

6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 54: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 55: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Center Lower Channel
    1. Remove the bolt (A), then remove the center lower channel (B).

Fig. 56: Removing Front Door Center Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Latch
    1. Detach the cables (A) from the cable clip (B), then remove the screws (C).

Fig. 57: Identifying Front Door Latch, Cable And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the latch (A) down to disconnect the outer handle rod (B) as shown, then remove the latch.

Fig. 58: Disconnecting Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Open the latch protector (A).

Fig. 59: Opening Latch Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the latch cable (A) and the inner handle cable (B).

Fig. 60: Disconnecting Latch Cable And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Latch
    1. Connect the latch cable (A) and the inner handle cable (B).

Fig. 61: Connecting Latch Cable And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Close the latch protector (A).

Fig. 62: Closing Latch Protector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the latch (A) up to connect the outer handle rod (B) as shown.

NOTE: Outer handle rod into the latch securely.

Fig. 63: Connecting Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the latch (A), then install the screws (B).
5. Install the cables (C) to the cable clip (D).

Fig. 64: Identifying Front Door Latch, Cable And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Center Lower Channel
    1. Install the center lower channel (A), then install the bolt (B).

Fig. 65: Installing Front Door Center Lower Channel And Fastener With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Plastic Cover As Needed
    1. Install the plastic cover (A), then install the plug caps (B).

2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 66: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 67: Installing Front Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 68: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 69: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 70: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 71: Identifying Front Door Power Window Switch Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 72: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR LOWER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Lower Trim
    1. Remove the cap (A), then remove the screw (B).

Fig. 73: Identifying Front Door Lower Trim Cap And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the rear edge of the door lower trim (B) with a utility knife while separating the trim from the door (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 74: Cutting Adhesive Tape From Door Lower Trim Rear Edge Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the upper edge of the door lower trim (B) with a utility knife while separating the trim from the door (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 75: Cutting Adhesive Tape From Door Lower Trim Rear Edge Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the door lower trim (A) rearward and remove it. The clips (B, C) will stay in the door.
5. Remove the clips by turning them 45°.
6. Install the clips on the door lower trim.
7. Rub off the remaining double-sided adhesive tape from the door lower trim and the door, then clean the trim and door surface with a sponge dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the clean surface.

Fig. 76: Sliding Door Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Lower Trim
    1. If you are reusing the original door lower trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C, and D) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 1.2 mm (0.047 in)

       Width 8 mm (0.31 in)

       Length 68 mm (2.68 in)

       Adhesive tape (C): Thickness 1.5 mm (0.059 in)

       Width 6 mm (0.24 in)

       Length 1000 mm (39.37 in)

       Adhesive tape (D): Thickness 1.2 mm (0.047 in)

       Width 8 mm (0.31 in)

       Length 50 mm (1.97 in)

Fig. 77: Identifying Adhesive Tap Applying Area On Front Door Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
3. Install the screw (A) securing the clip (B) to the door lower trim (C). Hold up the trim, and first set the clip B into the hole in the door (D). Fit the clips (E) into the hole in the door, then push on the trim until the clips snap into place.
4. Carefully pull away the adhesive backing, and push on the double-sided adhesive tape areas to make the adhesives stick securely.
5. Install the cap.

Fig. 78: Installing Door Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR OUTER HANDLE REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 79: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 80: Removing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 81: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 82: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 83: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 84: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: **If the plastic cover is damaged or torn, replace it.**

Fig. 85: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Door Lock Cylinder
    1. Remove the plug cap (A), then remove the bolt (B).

Fig. 86: Identifying Plug Cap And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the door lock cylinder (A).

Fig. 87: Identifying Door Lock Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Outer Handle
    1. Release the rod fastener (A).

Fig. 88: Turning Rod Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Disconnect the outer handle rod (A).

Fig. 89: Disconnecting Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the nut (A) securing the outer handle base (B).

Fig. 90: Identifying Outer Handle Base And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the outer handle (A).

Fig. 91: Removing Outer Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the outer handle seals (A).

Fig. 92: Identifying Outer Handle Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the outer handle base (A).

Fig. 93: Identifying Outer Handle Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rod fastener (A).

Fig. 94: Identifying Rod Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Outer Handle
    1. Install a new rod fastener (A).

Fig. 95: Installing Rod Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the outer handle base (A).

Fig. 96: Identifying Outer Handle Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the outer handle seals (A).

Fig. 97: Identifying Outer Handle Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the outer handle (A).

Fig. 98: Installing Outer Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the nut (A) securing the outer handle base (B).

Fig. 99: Identifying Outer Handle Base And Mounting Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connect the outer handle rod (A), then fasten the rod fastener (B) to the outer handle rod.

Fig. 100: Fastening Rod Fastener To Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Door Lock Cylinder
    1. Install the door lock cylinder (A).

Fig. 101: Identifying Door Lock Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the bolt (A), then install the plug cap (B).

Fig. 102: Identifying Plug Cap And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Plastic Cover As Needed
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).
    3. Connect the connector (E), then install the harness clips (F).

Fig. 103: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 104: Installing Front Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 105: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 106: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 107: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 108: Identifying Front Door Power Window Switch Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 109: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR OUTER MOLDING REPLACEMENT

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 110: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 111: Removing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 112: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 113: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 114: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.

6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 115: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Door Mirror
    1. Disconnect the connector.
    2. Detach the harness clip (A).
    3. While holding the power mirror (B), remove the nuts (C) securing the mirror.

Fig. 116: Identifying Power Mirror, Harness Clip And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the power mirror (A) and carefully pull out the harness (B).

Fig. 117: Identifying Power Mirror And Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Outer Molding
    1. Detach the clips (A), then pull out the upper edge of the front door outer molding (B) from the edge of the sash. If necessary, cut the double-sided adhesive tape (C) with a utility knife.

Fig. 118: Removing Front Door Outer Molding Upper Edge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Outer Molding
    1. Scrape off the remaining double-sided adhesive tape from the sash, then clean the surface with a sponge dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
    2. Install a new front door outer molding (A). Make sure the clips (B) snap into place securely.

Fig. 119: Installing Front Door Outer Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Door Mirror
    1. Insert the harness (A) into the hole in the door, then install the power mirror (B).

Fig. 120: Identifying Power Mirror And Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the nuts (A).
    3. Attach the harness clip (B).
    4. Connect the connector.

Fig. 121: Identifying Connector, Harness Clip And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 122: Installing Front Door Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 123: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 124: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 125: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 126: Identifying Front Door Power Window Switch Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 127: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR PANEL REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 128: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 129: Removing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 130: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 131: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 132: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 133: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Inner Weatherstrip
    1. If necessary, remove the front door inner weatherstrip (A).

Fig. 134: Identifying Front Door Inner Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Inner Handle
    1. Detach the cable fasteners (A), then disconnect the latch cable (B) and the inner handle cable (C).

Fig. 135: Disconnecting Latch Cable And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Inner Handle
    1. Connect the latch cable (A) and the inner handle cable (B), then fasten the cable fasteners (C).

Fig. 136: Connecting Latch Cable And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Inner Weatherstrip
    1. Install the front door inner weatherstrip (A).

Fig. 137: Identifying Front Door Inner Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 138: Installing Front Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 139: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 140: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 141: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 142: Identifying Front Door Power Window Switch Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 143: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR REGULATOR REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 144: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 145: Removing Front Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 146: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 147: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 148: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.

6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 149: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: **If the plastic cover is damaged or torn, replace it with a new one.**

Fig. 150: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Glass Support
    1. Carefully lower the glass (A) until you can see the glass mounting bolts (B), then remove them.

Fig. 151: Identifying Front Door Glass And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Raise the glass (A), then secure the glass with tape (B). Take care not to drop the glass inside the door.

Fig. 152: Securing Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Regulator
    1. Disconnect the connector (A) from the regulator (B).
    2. Remove the nuts (C).
    3. Remove the bolts (D), and loosen the bolts (E), then remove the regulator through the hole in the door.

Fig. 153: Identifying Front Door Regulator, Connector And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Regulator
    1. Apply multipurpose grease to the sliding surfaces of the regulator (A) where as shown.

Fig. 154: Identifying Multipurpose Grease Applying Area On Regulator Sliding Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the regulator (A) through the hole in the door, then install the nuts (B) and the bolts (C, D).
    3. Connect the connector (E) to the regulator.

Fig. 155: Identifying Regulator, Connector And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Glass Support
    1. While holding the glass (A), remove the tape (B), then carefully lower the glass. Take care not to drop the glass inside the door.

Fig. 156: Holding Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the glass mounting bolts (A).

Fig. 157: Identifying Glass Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the center lower channel (C), then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 158: Pushing Glass Against Center Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 159: Identifying Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover
    1. Install the plastic cover (A), then install the plug caps (B).

2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 160: Identifying Front Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 161: Installing Rear Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 162: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 163: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 164: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Power Window Switch Panel
    1. Connect the connectors (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 165: Identifying Front Door Power Window Switch Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Door Mirror Cover
    1. With tweeter: Connect the connector (A).
    2. Install the door mirror cover (B). Make sure the clips (C) snap into place securely.

Fig. 166: Installing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Power Window Control Unit - Reset

1. **DO THE POWER WINDOW CONTROL UNIT RESETTING PROCEDURE** .

FRONT DOOR SASH OUTER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Sash Outer Trim
    1. Detach the clip with a clip remover, then pull back the front door weatherstrip (A) as needed, and remove the screw (B) securing the front door sash outer trim (C).
    2. Pull down the upper portion of the front door sash outer trim to detach it from the front door outer molding (D).
    3. Pull up the front door sash outer trim to release the hooks (E) from the door, and release the trim from between the door glass outer weatherstrip (F) and the door.

Fig. 167: Removing Front Door Sash Outer Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Sash Outer Trim
    1. Set the hooks (A) into the hole in the door, then slide the front door sash outer trim (B) down.
    2. Insert the upper portion of the front door sash outer trim to the front door outer molding (C).

3. Install the screw (D) securing the front door sash outer trim, then install the front door weatherstrip (E).

Fig. 168: Installing Front Door Sash Outer Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR WEATHERSTRIP REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Weatherstrip
    1. Remove the door checker mounting bolt (A) at the A-pillar.
    2. Detach the clips (B, C, and D), and release the door weatherstrip (E) from the holder (F) of the door sash, then remove the door weatherstrip.

Fig. 169: Identifying Door Weatherstrip, Holder And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Weatherstrip

NOTE: Apply medium strength liquid thread lock to the door checker mounting bolt (A) before installation.

1. Install the front door weatherstrip (B). Make sure the clips (C, D, and E) snap into place securely.
2. Install the door checker mounting bolt.

NOTE: Make sure the door weatherstrip is installed in the holder (F) securely.

Fig. 170: Identifying Front Door Weatherstrip, Holder And Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Water Leak Test

   Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

   - Use a 12 mm (0.47 in) diameter hose (A).
   - Adjust the rate of water flow as shown.
   - Do not use a nozzle.
   - Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 171: Checking Water Leaks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR GLASS OUTER WEATHERSTRIP REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 174: Removing Rear Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 175: Removing Rear Door Quarter Inner Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 176: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 177: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

<u>Fig. 178: Identifying Pocket Mat And Screw</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 179: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the door pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 180: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Glass Outer Weatherstrip
    1. Remove the screw (A) securing the rear door glass outer weatherstrip.
    2. Slide the rear door glass outer weatherstrip clips (B) forward to release it from the door.

Fig. 181: Sliding Rear Door Glass Outer Weatherstrip Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear door glass outer weatherstrip (A).

Fig. 182: Removing Rear Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Glass Outer Weatherstrip

1. Install the rear door glass outer weatherstrip (A).

Fig. 183: Installing Rear Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the rear door glass outer weatherstrip clips (A) securely onto the flanges, then install the screw (B).

Fig. 184: Sliding Rear Door Glass Outer Weatherstrip Clips Onto Flanges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Plastic Cover As Needed
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).
    3. Connect the connector (E), then install the harness clips (F).

Fig. 185: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 186: Installing Rear Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 187: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 188: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 189: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 190: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 191: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR LATCH REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 192: Removing Rear Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 193: Removing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 194: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 195: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 196: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 197: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the door pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 198: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Glass
    1. Carefully move the glass (A) until you can see the glass mounting bolts (B), then remove them. Carefully lower the glass into the door. Take care not to drop the glass inside the door.

Fig. 199: Identifying Rear Door Glass And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the nut (A) and the bolt (B) securing the rear door rear lower channel.
3. Carefully pull out the glass (C) through the window slot. Take care not to drop the glass inside the door.

Fig. 200: Removing Rear Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Rear Lower Channel
    1. Remove the rear door rear lower channel (A).

Fig. 201: Removing Rear Door Rear Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Latch

1. Remove the child lock trim (A), and detach the cable clip (B), then remove the screws (C).

Fig. 202: Identifying Child Lock Trim And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the latch (A) down to disconnect the outer handle rod (B) as shown, then remove the latch.

Fig. 203: Disconnecting Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Open the latch protectors (A).

Fig. 204: Opening Latch Protectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the inner handle cable (A) and the latch cable (B).

Fig. 205: Disconnecting Inner Handle Cable And Latch Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Latch
    1. Connect the inner handle cable (A) and the latch cable (B).

Fig. 206: Connecting Inner Handle Cable And Latch Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Close the latch protectors (A).

Fig. 207: Closing Latch Protectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the latch (A) up to connect the outer handle rod (B) as shown.

NOTE: Make sure the outer handle rod goes into the latch securely.

Fig. 208: Connecting Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A).
5. Install the cable clip (B) and the child lock trim (C).

Fig. 209: Identifying Cable Clip, Child Lock Trim And Screws With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Rear Lower Channel
    1. Install the rear door rear lower channel (A).

Fig. 210: Installing Rear Door Rear Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Glass
    1. Install the glass (A) through the window slot.
    2. Install the nut (B) and the bolt (C) securing the rear door rear lower channel.

Fig. 211: Securing Rear Door Rear Lower Channel Using Nut And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the glass mounting bolts (A) securing the rear door glass (B).

Fig. 212: Identifying Rear Door Glass And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the front side channel, then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 213: Pushing Glass Against Center Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 214: Identifying Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Plastic Cover As Needed
    1. Install the plastic cover (A), then install the plug caps (B).

2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 215: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 216: Installing Rear Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 217: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 218: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 219: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 220: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 221: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR LOWER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Lower Trim
    1. Remove the cap (A), then remove the screw (B).

Fig. 222: Identifying Front Door Lower Trim Cap And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the rear edge of the door lower trim (B) with a utility knife while separating the trim from the door (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 223: Cutting Adhesive Tape From Door Lower Trim Rear Edge Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the upper edge of the door lower trim (B) with a utility knife while separating the trim from the door (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 224: Cutting Adhesive Tape From Door Lower Trim Rear Edge Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the door lower trim (A) forward and remove it. The clips (B, C) will stay in the door.
5. Remove the clips by turning them 45°.
6. Install the clips on the door lower trim.
7. Rub off the remaining double-sided adhesive tape from the door lower trim and the door, then clean the trim and door surface with a sponge dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the clean surface.

Fig. 225: Sliding Door Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Lower Trim
    1. If you are reusing the original door lower trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C, and D) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 1.2 mm (0.047 in)

       Width 8 mm (0.31 in)

       Length 68 mm (2.68 in)

       Adhesive tape (C): Thickness 1.5 mm (0.059 in)

       Width 6 mm (0.24 in)

       Length 555 mm (21.85 in)

       Adhesive tape (D): Thickness 1.6 mm (0.063 in)

       Width 10 mm (0.39 in)

       Length 114 mm (4.49 in)

Fig. 226: Identifying Adhesive Tap Applying Area On Rear Door Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
3. Install the screw (A) securing the clip (B) to the door lower trim (C). Hold up the trim, and first set the clip B into the hole in the door (D). Fit the clips (E) into the hole in the door, then push on the trim until the clips snap into place.
4. Carefully pull away the adhesive backing, and push on the double sided-adhesive tape areas to make the adhesives stick securely.
5. Install the cap.

Fig. 227: Installing Door Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR OUTER HANDLE REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 228: Removing Rear Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 229: Removing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 230: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 231: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 232: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 233: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the door pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 234: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Outer Handle
    1. Remove the seal (A), then remove the bolt (B).
    2. Remove the outer handle cover (C).

Fig. 235: Identifying Outer Handle Cover, Seal And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the nut (A) securing the outer handle base (B).

Fig. 236: Identifying Outer Handle Base And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the outer handle (A).

Fig. 237: Removing Outer Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the outer handle seals (A).

Fig. 238: Identifying Outer Handle Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the outer handle base (A).

Fig. 239: Removing Outer Handle Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If necessary, release the rod fastener (A), then remove the outer handle rod (B).

Fig. 240: Identifying Outer Handle Base And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the rod fastener (A).

Fig. 241: Removing Rod Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Outer Handle

1. Install a new rod fastener (A).

Fig. 242: Installing Rod Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the outer handle rod (A), then fasten the rod fastener (B) to the outer handle rod.

Fig. 243: Installing Outer Handle Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the outer handle base (A).

NOTE: **Make sure the outer handle rod (B) goes into the latch (C) securely.**

Fig. 244: Installing Outer Handle Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the outer handle seals (A).

Fig. 245: Identifying Outer Handle Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the outer handle (A).

Fig. 246: Installing Outer Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the nut (A) securing the outer handle base (B).

Fig. 247: Identifying Outer Handle Base And Mounting Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the outer handle cover (A).
8. Install the bolt (B), then install a new seal (C).

Fig. 248: Identifying Outer Handle Cover, Seal And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Plastic Cover As Needed
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).
    3. Connect the connector (E), then install the harness clips (F).

Fig. 249: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

<u>Fig. 250: Installing Rear Door Panel</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 251: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 252: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 253: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 254: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 255: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR OUTER MOLDING REPLACEMENT

REMOVAL

1. Rear Door Outer Molding
    1. Detach the clips (A), then pull out the upper edge of the rear door outer molding (B) from the edge of the sash. If necessary, cut the double-sided adhesive tape (C) with a utility knife.

Fig. 256: Removing Rear Door Outer Molding Upper Edge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Outer Molding
    1. Scrape off the remaining double-sided adhesive tape from the sash, then clean the surface with a sponge dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
    2. Install a new rear door outer molding (A). Make sure the clips (B) snap into place securely.

Fig. 257: Installing Rear Door Outer Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR PANEL REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 258: Removing Rear Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 259: Removing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 260: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 261: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 262: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 263: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Inner Weatherstrip
    1. If necessary, remove the rear door inner weatherstrip (A).

Fig. 264: Identifying Rear Door Inner Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Inner Handle
    1. Detach the cable fasteners (A), then disconnect the latch cable (B) and the inner handle cable (C).

Fig. 265: Disconnecting Latch Cable And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Inner Handle
    1. Connect the latch cable (A) and the inner handle cable (B), then fasten the cable fasteners (C).

Fig. 266: Connecting Latch Cable And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Inner Weatherstrip
    1. Install the rear door inner weatherstrip (A).

Fig. 267: Identifying Rear Door Inner Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 268: Installing Rear Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 269: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 270: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 271: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 272: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 273: Installing Power Window Switch Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR REAR SASH OUTER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Rear Sash Outer Trim
    1. Detach the clip with a clip remover, then pull back the rear door weatherstrip (A) as needed, and remove the screw (B) securing the rear door rear sash outer trim (C).
    2. Pull down the upper portion of the rear door rear sash outer trim to detach it from the rear door outer molding (D).
    3. Pull up the rear door rear sash outer trim to release the hooks (E) from the door, and release the trim from between the door glass outer weatherstrip (F) and the door.

Fig. 274: Pulling Up Rear Door Rear Sash Outer Trim From Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Rear Sash Outer Trim
    1. Set the hooks (A) into the hole in the door, then slide the rear door rear sash outer trim (B) down.
    2. Insert the upper portion of the rear door rear sash outer trim to the rear door outer molding (C).
    3. Install the screw (D) securing the rear door rear sash outer trim, then install the rear door

weatherstrip (E).

Fig. 275: Inserting Rear Door Rear Sash Outer Trim Upper Portion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR REGULATOR REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 276: Removing Rear Door Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Panel
    1. Detach the clip (A) and the hooks (B), then remove the rear door quarter inner trim (C).

Fig. 277: Removing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 278: Removing Inner Handle Cap Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws (A) securing the inner handle (B).

Fig. 279: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 280: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
6. Starting at the rear, pull the door panel up.
7. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 281: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Plastic Cover
    1. Disconnect the connector (A), then remove the harness clips (B).
    2. Remove the screws (C), then remove the door pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: If the plastic cover is damaged or torn, replace it.

Fig. 282: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Glass Support
    1. Carefully move the glass (A) until you can see the glass mounting bolts (B), then remove them.

Fig. 283: Identifying Rear Door Glass And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Raise the glass (A), and secure the glass with tape (B). Take care not to drop the glass inside the door.

Fig. 284: Securing Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Regulator
    1. Disconnect the connector (A) from the regulator (B).
    2. Remove the nut (C) and the bolts (D), then remove the regulator through the hole in the door.

Fig. 285: Identifying Rear Door Regulator, Connector And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Regulator
    1. Apply multipurpose grease to all the sliding surfaces of the regulator (A) where as shown.

Fig. 286: Identifying Multipurpose Grease Applying Areas On Regulator Sliding Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the regulator (A) through the hole in the door, then install the nut (B) and the bolts (C).
3. Connect the connector (D) to the regulator.

Fig. 287: Identifying Regulator, Connector And Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Glass Support

1. While holding the glass (A), remove the tape (B), then carefully lower the glass. Take care not to drop the glass inside the door.

Fig. 288: Holding Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the glass mounting bolts (A).

Fig. 289: Identifying Glass Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the front side channel, then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

Fig. 290: Pushing Glass Against Center Lower Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 291: Identifying Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Door Plastic Cover
    1. Install the plastic cover (A), then install the plug caps (B).

2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 292: Identifying Rear Door Plastic Cover, Pocket Bracket And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

Fig. 293: Installing Rear Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 294: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

Fig. 295: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 296: Installing Inner Handle Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

Fig. 297: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 298: Installing Power Window Switch Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR SASH OUTER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Sash Outer Trim
    1. Detach the clip with a clip remover, then pull back the rear door weatherstrip (A) as needed, and remove the screw (B) securing the rear door sash outer trim (C).
    2. Pull down the upper portion of the rear door sash outer trim to detach it from the rear door outer molding (D).
    3. Pull up the rear door sash outer trim to release the hooks (E) from the door, and release the trim from between the door glass outer weatherstrip (F) and the door.

Fig. 299: Pulling Down Rear Door Sash Outer Trim Upper Portion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Sash Outer Trim
    1. Set the hooks (A) into the hole in the door, then slide the rear door sash outer trim (B) down.
    2. Insert the upper portion of the rear door sash outer trim to the rear door outer molding (C).
    3. Install the screw (D) securing the rear door sash outer trim, then install the rear door weatherstrip

(E).

Fig. 300: Inserting Rear Door Sash Outer Trim Upper Portion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR WEATHERSTRIP REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Weatherstrip
    1. Remove the door checker mounting bolt (A) at the B-pillar.
    2. Detach the clips (B, C, and D), and release the rear door weatherstrip (E) from the holder (F) of the door sash, then remove the rear door weatherstrip.

Fig. 301: Disconnecting Rear Door Weatherstrip Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Weatherstrip

NOTE: Apply medium strength liquid thread lock to the door checker mounting bolt (A) before installation.

1. Install the rear door weatherstrip (B). Make sure the clips (C, D, and E) snap into place securely.
2. Install the door checker mounting bolt.

NOTE: Make sure the door weatherstrip is installed in the holder (F) securely.

Fig. 302: Connecting Rear Door Weatherstrip Fastener With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Water Leak Test

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 303: Checking Water Leaks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR WHEEL ARCH PROTECTOR REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Wheel Arch Protector
    1. Remove the clip (A), then carefully pry out the clip portions of the rear door wheel arch protector (B) with the appropriate trim tool to detach the clips (C), then remove the rear door wheel arch protector.

Fig. 304: Identifying Rear Door Wheel Arch Protector And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Wheel Arch Protector
    1. If you are reusing the original rear door wheel arch protector (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C, and D) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 1.2 mm (0.047 in)

       Width 6 mm (0.24 in)

       Length 48 mm (1.89 in)

       Adhesive tape (C): Thickness 1.0 mm (0.039 in)

       Width 6 mm (0.24 in)

       Length 18 mm (0.71 in)

       Adhesive tape (D): Thickness 1.2 mm (0.047 in)

       Width 6 mm (0.24 in)

       Length 18 mm (0.71 in)

Fig. 305: Identifying Adhesive Tape Applying Area On Rear Door Wheel Arch Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
    3. Install the rear door wheel arch protector (A), then install the clip (B). Make sure the clips (C) snap

into place securely.

Fig. 306: Identifying Rear Door Wheel Arch Protector And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT AUTO-TENSIONER INSPECTION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Belt Tension Release Tool Snap-on YA9317, commercially available

*Available through the Honda Tool and Equipment Program 888-424-6857

INSPECTION

1. Drive Belt Auto-Tensioner - Position Check
    1. Turn the ignition switch to ON (II), and make sure to turn the A/C switch OFF, then turn the ignition switch to LOCK (0).
    2. Check the position of the auto-tensioner indicator pointer (A).
    3. Start the engine, then check the position again with the engine idling. If the position of the indicator moves or fluctuates a lot, replace the auto-tensioner.
    4. Check for abnormal noise from the tensioner pulley. If you hear abnormal noise, replace the auto-tensioner.

Fig. 1: Identifying Auto-Tensioner Indicator Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. Drive Belt
    1. Move the auto-tensioner (A) using the belt tension release tool in the direction of the arrow to relieve tension from the drive belt, then remove the drive belt.

Fig. 2: Moving Auto-Tensioner Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Drive Belt Auto-Tensioner - Inspection, Without Drive Belt
    1. Move the auto-tensioner within its limit using the belt tension release tool in the direction of the arrow. Check that the auto-tensioner moves smoothly and without any abnormal noise. If the tensioner does not move smoothly, or if you hear abnormal noise, replace the auto-tensioner.

Fig. 3: Moving Auto-Tensioner Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. Idler Pulley Base Assembly
    1. Remove the idler pulley base.

Fig. 4: Identifying Idler Pulley Base Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Auto-Tensioner Assembly
    1. Remove the auto-tensioner.

Fig. 5: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Drive Belt Auto-Tensioner - Inspection
    1. Clamp the auto-tensioner (A) by using two 8mm bolts (B) and a vise (C) as shown. Do not clamp the auto-tensioner itself.

Fig. 6: Identifying Auto-Tensioner And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 7: Identifying Alignment Of Torque Wrench On Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Attach the torque wrench (D) on the pulley bolt, and align it as shown.
3. Align the auto-tensioner indicator's pointer (E) on the auto-tensioner base with Max. belt position mark (F) on the auto-tensioner arm by using the torque wrench, and measure the torque. If the torque value is out of specification, replace the auto-tensioner.

NOTE: **If the auto-tensioner indicator's pointer exceeds the Max. belt position mark, recheck the torque.**

Auto-tensioner Spring Torque:

32.5-39.7 N.m (3.31-4.05 kgf.m, 24.0-29.3 lbf.ft)

INSTALLATION

1. Auto-Tensioner Assembly
    1. Install the auto-tensioner.

Fig. 8: Identifying Auto-Tensioner And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Idler Pulley Base Assembly
    1. Install the idler pulley base.

Fig. 9: Identifying Idler Pulley Base And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Drive Belt
    1. Install the drive belt.

Fig. 10: Installing Drive Belt W/ Drive Belt Routing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT AUTO-TENSIONER PULLEY REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Belt Tension Release Tool Snap-on YA9317, commercially available

*Available through the Honda Tool and Equipment Program 888-424-6857

REMOVAL

1. Drive Belt
    1. Move the auto-tensioner (A) using the belt tension release tool in the direction of the arrow to relieve tension from the drive belt, then remove the drive belt.

Fig. 11: Moving Auto-Tensioner Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Drive Belt Auto-Tensioner Pulley
    1. Remove the drive belt auto-tensioner pulley.

Fig. 12: Identifying Drive Belt Auto-Tensioner Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Drive Belt Auto-Tensioner Pulley
    1. Install the drive belt auto-tensioner pulley.

Fig. 13: Identifying Belt Auto-Tensioner Pulley And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Drive Belt
    1. Install the drive belt.

Fig. 14: Installing Drive Belt W/ Drive Belt Routing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT AUTO-TENSIONER REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

2. Idler Pulley
    1. Remove the idler pulley.

Fig. 26: Identifying Idler Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Idler Pulley
    1. Install the idler pulley.

Fig. 27: Identifying Idler Pulley And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Drive Belt
    1. Install the drive belt.

Fig. 28: Installing Drive Belt W/ Drive Belt Routing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT INSPECTION

INSPECTION

1. Drive Belt - Inspection
    1. Inspect the belt for cracks or damage. If the belt is cracked or damaged, replace it.
    2. Check the position of the auto-tensioner indicator's pointer (A) is within the standard range (B) as shown. If it is out of the standard range, replace the drive belt.

Fig. 29: Identifying Position Of Auto-Tensioner Indicator's Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT INSPECTION

INSPECTION

1. Driveshaft Inspection
    1. Check the driveshaft (A) for cracks and damage. If any damage is found, replace the driveshaft.
    2. Check the inboard joint (B) and the outboard joint (C) for cracks and damage. If any damage is found, replace the inboard joint or the outboard joint as an assembly.
    3. Hold the inboard joint and turn the front wheel by hand, then make sure the joint is not excessively loose. If necessary, replace the inboard joint or the outboard joint as an assembly.

Fig. 2: Identifying Driveshaft, Inboard Joint And Outboard Joints
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driveshaft Boot Inspection
    1. Check the inboard boot (A) and the outboard boot (B) on the driveshaft (C) for cracks, damage, leaking grease, and loose boot bands (D). If any damage is found, replace the boot and the boot bands.

Fig. 3: Identifying Inboard And Outboard Boots On Driveshaft

FRONT DRIVESHAFT INBOARD BOOT REPLACEMENT

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number

	Boot Band Pliers, commercially available
	Boot Band Tool KD-3191 or equivalent, commercially available
	Driver Handle, 15 x 135L 07749-0010000

	Pilot, 22 mm 07746-0041000
	Oil Seal Driver, 41.8 mm 07947-6890100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 5: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B).
    2. Remove the spindle nut.

Fig. 6: Identifying Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 7: Identifying Front Bumper, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 8: Identifying Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Lower Ball Joint Lower Arm Side - Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Disconnect the lower arm (C) from the front lower ball joint (D).

Fig. 9: Identifying Flange Bolt, Nuts And Lower Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Driveshaft - Disconnection Outboard Side
    1. Separate the outboard joint from the front hub using a soft face hammer.

Fig. 10: Separating Outboard Joint From Front Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull the knuckle outward, and separate the outboard joint from the front hub.

Fig. 11: Pulling Knuckle Outward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Driveshaft - Disconnection Inboard Side
    1. Pry the inboard joint (A) from the differential using a pry bar.

NOTE:

- **Do not pull on the driveshaft, or the inboard joint may come apart. Pull the inboard joint straight out to avoid damaging the oil seal.**
- **Be careful not to damage the oil seal or the end of the inboard joint using the pry bar.**

Fig. 12: Prying Inboard Joint From Differential Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A).

Fig. 13: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Right Front Driveshaft Inboard Side - Disconnection
   1. Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a hammer.

NOTE: Do not pull on the driveshaft or the inboard joint may come apart.

Fig. 14: Driving Inboard Joint Off Of Intermediate Shaft Using Drift Punch And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the set ring (A).

Fig. 15: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Inboard Joint

Welded type

Fig. 16: Removing Boot Bands (Welded Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the boot bands.

NOTE: **Be careful not to damage the boot.**

- **If the boot band is a welded type (A), cut the boot band.**
- **If the boot band is a double loop type (B), lift up the band end (C), and push it into the clip (D).**
- **If the boot band is a low profile type (E), pinch the boot band using commercially available boot band pliers (F).**

Double loop type

Fig. 17: Removing Boot Bands (Double Loop Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Low profile type

Fig. 18: Removing Boot Bands (Low Profile Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Make marks (A) on each roller (B) and the inboard joint (C) to identify the locations of the rollers to the grooves in the inboard joint.

   NOTE: Do not engrave or scribe any marks on the rolling surfaces.

3. Remove the inboard joint on a clean shop towel (D).

   NOTE: Be careful not to drop the rollers when separating them from the inboard joint.

Fig. 19: Identifying Marks On Roller And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Make marks (A) on the spider (B) that match the marks on the rollers.

NOTE: Do not engrave or scribe any marks on the rolling surfaces.

5. Remove the rollers.
6. Make marks (C) on the spider and the driveshaft (D) to identify the position of the spider on the shaft.

Fig. 20: Identifying Marks On Spider And Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Make a mark (A) on the driveshaft (B) at the same level as the spider end.

Fig. 21: Making Marks On Spider And Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Support the spider (A) on a bench vise (B).
9. Remove the driveshaft (C) from the spider using the 22 mm pilot (D) and the 15 x 135L driver handle (E).

NOTE: Do not directly hit the driveshaft with the hammer.

Fig. 22: Removing Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the stop ring (A).

Fig. 23: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Inboard Boot
    1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.
    2. Remove the inboard boot.

NOTE: Be careful not to damage the boot.

Fig. 24: Identifying Vinyl Tape On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Inboard Boot
    1. Install the inboard boot.

NOTE: Be careful not to damage the inboard boot.

    2. Remove the vinyl tape (A).

Fig. 25: Identifying Vinyl Tape On Inboard Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Inboard Joint
    1. Install the stop ring (A).

Fig. 26: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Insert the driveshaft (A) into the spider (B) until the stop ring (C) is close to the spider.

NOTE: **Install the spider onto the driveshaft by aligning the marks you made on the spider and the end of the driveshaft.**

Fig. 27: Identifying Driveshaft, Spider And Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pick up the driveshaft and the spider, and tap or hit the assembly onto a hard surface from a height of about 10 cm (3.9 in).

Fig. 28: Picking Up Driveshaft And Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Securely clamp the driveshaft (A) in the bench vise with wood blocks (B).

5. Drive on the spider (C) using the 41.8 mm oil seal driver (D).

Fig. 29: Installing Spider Using Oil Seal Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the alignment of the paint mark (A) you made with the spider end.

Fig. 30: Identifying Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **To avoid driveshaft and vehicle damage, the shaft must be all the way into the spider to ensure the stop ring is properly seated.**

7. Fit the rollers (A) onto the spider (B) as shown, and note these items:
    - Reinstall the rollers in their original positions on the spider by aligning the marks (C) you made.
    - Hold the driveshaft pointed up to prevent the rollers from falling off.

Fig. 31: Fitting Rollers Onto Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pack the inboard joint with the joint grease included in the new inboard boot set.

    Grease quantity

    Inboard joint:

    100-110 g (3.5-3.9 oz)

Fig. 32: Packing Inboard Joint With Joint Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fit the inboard joint onto the driveshaft, and note these items:
    - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.

- Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

Fig. 33: Fitting Inboard Joint Onto Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).

Fig. 34: Identifying Boot Ends Onto Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Adjust the length (A) of the driveshaft in the figure as shown, then adjust the boots to halfway between full compression and full extension.
12. Bleed excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.
13. Install new boot bands.

Fig. 35: Identifying Length Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- For the double loop type, go to step 14.
- For the low profile type, go to step 25.

Double loop type

14. Install a new double loop band (A) onto the boot (B).

NOTE: **Pass the end of the double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.**

15. Pull up the slack in the band by hand.

Fig. 36: Installing Double Loop Band Onto Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Mark a line (A) on the band 10-14 mm (0.39-0.55 in) from the clip (B).

Fig. 37: Marking Line On Band 10-14 mm (0.39-0.55 In) From Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Thread the free end of the band through the nose section of the commercially available boot band tool (KD-3191 or equivalent) (A).
18. Into the slot on the winding mandrel (B).
19. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked line (C) on the band meets the edge of the clip.

Fig. 38: Threading Free End Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip.
21. Center-punch the clip.
22. Fold over the remaining tail onto the clip.

Fig. 39: Lifting Up Boot Band Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5-10 mm (0.20-0.39 in) tail protruding from the clip.

Fig. 40: Cutting Excess Free End Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Bend the band end (A) by tapping it down using a hammer.

NOTE:

- **Make sure the band and the clip do not interfere with anything on the vehicle, and the band does not move.**
- **Clean any grease remaining on the surrounding surfaces.**

Fig. 41: Bending Band End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Low profile type

25. Install a new low profile band (A) onto the boot (B).
26. Hook the tab (C) of the band.

Fig. 42: Installing Low Profile Band Onto Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Check the hook portion of the band using commercially available boot band pliers (A).
28. Hook the tabs (B) of the band.

Fig. 43: Hooking Tabs Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Right Front Driveshaft Inboard Side - Reconnection
    1. Install a new set ring (A).

Fig. 44: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Apply 0.5-1.0 g (0.018-0.035 oz) of super high temp area grease (P/N 08798-9002) to the whole splined surface (A) of the right driveshaft.
    3. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft during reassembly.

Fig. 45: Applying Super High Temp Area Grease To Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the inboard end (A) of the driveshaft onto the intermediate shaft (B) until the set ring (C) locks in the groove (D).

Fig. 46: Inserting Inboard End Of Driveshaft Onto Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driveshaft Front Left - Reconnection, Inboard Side
    1. Install a new set ring (A).

Fig. 47: Identifying Set Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the areas where the driveshaft contacts the differential thoroughly with solvent.

NOTE: Do not wash the rubber parts with solvent.

3. Dry the areas where the driveshaft contacts the differential thoroughly with compressed air.
4. Insert the inboard end (A) of the driveshaft into the differential (B) until the set ring (C) locks in the groove (D).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seal.

Fig. 48: Inserting Inboard End Of Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driveshaft Front Left - Reconnection, Outboard Side
   1. Apply about 5 g (0.18 oz) of holy 60 paste (P/N 08734-0001) to the contact area (A) of the outboard joint and the front wheel bearing.

NOTE: The paste helps to prevent noise and vibration.

Fig. 49: Applying About 5 G (0.18 Oz) Of Holy 60 Paste (P/N 08734-0001) To Contact Area Of Outboard Joint And Front Wheel Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the outboard joint (A) into the front hub (B) on the knuckle.

Fig. 50: Installing Outboard Joint Into Front Hub On Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Lower Ball Joint Lower Arm Side - Reconnection
    1. Connect the front lower ball joint (A) to the lower arm.
    2. Install the new flange nuts and the new flange bolt in the sequence shown.

Fig. 51: Identifying Front Lower Ball Joint And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driveshaft Spindle Nut, Front Left
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut.
    3. Use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 52: Identifying Spindle Nut And Nut Shoulder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 53: Identifying Front Wheel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
10. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 54: Identifying ATF Dipstick (Yellow Loop)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

   Automatic Transmission Fluid Capacity

   2WD:

   2.2 L (2.3 US qt) at change

   5.85 L (6.18 US qt) at overhaul

   AWD/4WD:

   2.6 L (2.7 US qt) at change

   6.4 L (6.8 US qt) at overhaul

Fig. 55: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 56: Identifying Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 57: Identifying Marking On Dipstick

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 58: Identifying Front Splash Shield, Clips And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
13. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

   Caster angle:

   2WD:

   With 16 inch wheel: 2 ° 44 '±30 '

   Without 16 inch wheel: 2 ° 50 '±30 '

   AWD/4WD:

   With 16 inch wheel: 2 ° 38 '±30 '

   Without 16 inch wheel: 2 ° 44 '±30 '

   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

14. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

       Camber angle:

       2WD:

       Front:

       With 16 inch wheel: -0 ° 01 '±1 ° 00 '

       Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

       (Maximum difference between the front right and left side: 1 °00 ')

       Rear:

       With 16 inch wheel: -1 ° 06 '±45 '

       Without 16 inch wheel: -1 ° 12 '±45 '

       (Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

15. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

   Front toe-in: 0±2 mm (0±0.08 in)

   - If adjustment is required, go to the front toe adjustment.
   - If no adjustment is required, remove the alignment equipment.

16. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.

Fig. 59: Measuring Wheel Alignment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

17. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
18. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 60: Identifying ATF Dipstick And Alignment Of Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark,**

one or more of these symptoms may occur:

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

Fig. 61: Identifying Marking On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 62: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Test Drive
    1. Test-drive the vehicle.
20. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 63: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen

prompts.

NOTE: See the HDS Help menu for specific instructions.

22. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

23. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

FRONT DRIVESHAFT OUTBOARD BOOT REPLACEMENT

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number
	Threaded Adapter, 26 x 1.5 mm 07XAC-001030A

	
	Boot Band Clamp Tool Kent-Moore J-35910 or equivalent, commercially available

	Slide Hammer 5/8"-18 UNF, commercially available

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 64: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B).
    2. Remove the spindle nut.

Fig. 65: Identifying Stake On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 66: Identifying Front Bumper, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 67: Identifying Drain Plug And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Lower Ball Joint Lower Arm Side - Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Disconnect the lower arm (C) from the front lower ball joint (D).

Fig. 68: Identifying Front Lower Ball Joint, Lower Arm, Flange Bolt And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Driveshaft - Disconnection Outboard Side
    1. Separate the outboard joint from the front hub using a soft face hammer.

Fig. 69: Separating Outboard Joint From Front Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull the knuckle outward, and separate the outboard joint from the front hub.

Fig. 70: Pulling Knuckle Outward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Driveshaft - Disconnection Inboard Side
   1. Pry the inboard joint (A) from the differential using a pry bar.

NOTE:

- **Do not pull on the driveshaft, or the inboard joint may come apart. Pull the inboard joint straight out to avoid damaging the oil seal.**
- **Be careful not to damage the oil seal or the end of the inboard joint using the pry bar.**

Fig. 71: Prying Inboard Joint From Differential Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A).

Fig. 72: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Right Front Driveshaft Inboard Side - Disconnection
   1. Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a hammer.

NOTE: Do not pull on the driveshaft or the inboard joint may come apart.

Fig. 73: Driving Inboard Joint Off Of Intermediate Shaft Using Drift Punch And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A).

Fig. 74: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Outboard Joint
    1. Lift up the three tabs (A) using a flat-tipped screwdriver.

       NOTE: Be careful not to damage the boot.

    2. Release the ear clamp bands (B).

Fig. 75: Lifting Up Three Tabs Using A Flat-Tipped Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Slide the outboard boot (A) partially toward the inboard joint side.

       NOTE: Be careful not to damage the boot.

Fig. 76: Sliding Outboard Boot Partially Toward Inboard Joint Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
5. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint end (C).

Fig. 77: Identifying Mark On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Securely clamp the driveshaft in a bench vise with a shop towel wrapped around the driveshaft.
7. Remove the outboard joint (A) using the threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).
8. Remove the driveshaft from the bench vise.

Fig. 78: Removing Outboard Joint Using Threaded Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the stop ring (A).

Fig. 79: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Outboard Boot, Left
    1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the outboard boot.
    2. Remove the outboard boot.

NOTE: **Be careful not to damage the boot.**

Fig. 80: Identifying Tape On Driveshaft Splines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Outboard Boot, Left
    1. Install new ear clamp bands (A) and the outboard boot onto the driveshaft.

        NOTE: Be careful not to damage the boot.

    2. Remove the vinyl tape.

Fig. 81: Identifying Ear Clamp Bands
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Outboard Joint, Left
    1. Make sure to check the size of a new stop ring.

        NOTE: To avoid driveshaft and vehicle damage, make sure you install a new stop ring.

STOP RING SPECIFICATIONS

Model	Overall diameter (A)	Wire diameter (B)
12 model	26.0 mm (1.024 in)	2.0 mm (0.079 in)
Except 12 models	26.45 mm (1.0413 in)	2.0 mm (0.079 in)

Fig. 82: Identifying Stop Ring Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the stop ring (A).

Fig. 83: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pack about 35 g (1.23 oz) of grease included in the new outboard boot set into the driveshaft hole in the outboard joint.

NOTE: **If you are installing a new outboard joint, the grease is already installed.**

Fig. 84: Packing Grease Included In Outboard Boot Set Into Driveshaft Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.

Fig. 85: Inserting Driveshaft Into Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. To completely seat the outboard joint, pick up the driveshaft and the joint, and tap or hit the assembly onto a hard surface from a height of about 10 cm (3.9 in).

NOTE: **Do not use a hammer, as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.**

Fig. 86: Seating Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the alignment of the paint mark (A) you made with the outboard joint end (B).

NOTE: **To avoid driveshaft and vehicle damage, the shaft must be all the way into the outboard joint to ensure the stop ring is properly seated.**

Fig. 87: Checking Alignment Of Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pack the outboard joint (A) with the remaining joint grease included in the outboard boot set.

Total grease quantity

Outboard joint:

115-125 g (4.1-4.4 oz)

Fig. 88: Packing Outboard Joint With Joint Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Fit the boot ends (A) onto the driveshaft (B) and the outboard joint (C).
9. Bleed any excess air from the boot by inserting a flat-tipped screwdriver between the boot and the joint.

Fig. 89: Identifying Boot Ends On Driveshaft And Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Inspect the length (A) of the driveshaft in the figure as shown, then adjust the boots to halfway between full compression and full extension.

Fig. 90: Identifying Length Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Close the ear portion (A) of the band using a commercially available boot band clamp tool (Kent-Moore J-35910 or equivalent) (B).

Fig. 91: Closing Ear Portion Of Band Using Commercially Available Boot Band Clamp Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

Fig. 92: Identifying Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Right Front Driveshaft Inboard Side - Reconnection
    1. Install a new set ring (A).

Fig. 93: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Apply 0.5-1.0 g (0.018-0.035 oz) of super high temp area grease (P/N 08798-9002) to the whole splined surface (A) of the right driveshaft.
    3. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft during reassembly.

Fig. 94: Applying Super High Temp Area Grease To Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the inboard end (A) of the driveshaft onto the intermediate shaft (B) until the set ring (C) locks in the groove (D).

Fig. 95: Inserting Inboard End Of Driveshaft Onto Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driveshaft Front Left - Reconnection, Inboard Side
    1. Install a new set ring (A).

Fig. 96: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the areas where the driveshaft contacts the differential thoroughly with solvent.

NOTE: Do not wash the rubber parts with solvent.

3. Dry the areas where the driveshaft contacts the differential thoroughly with compressed air.
4. Insert the inboard end (A) of the driveshaft into the differential (B) until the set ring (C) locks in the groove (D).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seal.

Fig. 97: Inserting Inboard End Of Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driveshaft Front Left - Reconnection, Outboard Side
   1. Apply about 5 g (0.18 oz) of holy 60 paste (P/N 08734-0001) to the contact area (A) of the outboard joint and the front wheel bearing.

NOTE: The paste helps to prevent noise and vibration.

Fig. 98: Applying About 5 G (0.18 Oz) Of Holy 60 Paste To Contact Area Of Outboard Joint And Front Wheel Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the outboard joint (A) into the front hub (B) on the knuckle.

Fig. 99: Installing Outboard Joint Into Front Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Lower Ball Joint Lower Arm Side - Reconnection
    1. Connect the front lower ball joint (A) to the lower arm.
    2. Install the new flange nuts and the new flange bolt in the sequence shown.

Fig. 100: Identifying Front Lower Ball Joint, Nut And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driveshaft Spindle Nut, Front Left
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut.
    3. Use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 101: Identifying Spindle Nut And Nut Shoulder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 102: Identifying Front Wheel And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
10. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 103: Identifying ATF Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 104: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 105: Identifying Dipstick And Alignment Of Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 106: Identifying Marking On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 107: Identifying Front Splash Shield, Bolts And Chips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
13. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

       Caster angle:

       2WD:

       With 16 inch wheel: 2 ° 44 '±30 '

       Without 16 inch wheel: 2 ° 50 '±30 '

       AWD/4WD:

       With 16 inch wheel: 2 ° 38 '±30 '

       Without 16 inch wheel: 2 ° 44 '±30 '

       - If the measurement is within specifications, measure the front camber angle.
       - If the measurement is not within specifications, check for bent or damaged suspension components.
14. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

       Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

15. Front Toe - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

   Front toe-in: 0±2 mm (0±0.08 in)

   - If adjustment is required, go to the front toe adjustment.
   - If no adjustment is required, remove the alignment equipment.

16. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

Fig. 108: Measuring Wheel Alignment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.
    2. Park the vehicle on level ground.
    3. Turn the ignition switch to LOCK (0).
18. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 109: Identifying ATF Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.**
- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 110: Identifying Marking On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 111: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Test Drive
    1. Test-drive the vehicle.
20. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the

dashboard.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 112: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

22. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

23. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

FRONT DRIVESHAFT REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift

    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 113: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B).
    2. Remove the spindle nut.

Fig. 114: Identifying Stake On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Splash Shield

1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
2. From under the front bumper (D), remove the clips (E).
3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 115: Identifying Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 116: Identifying Drain Plug And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Lower Ball Joint Lower Arm Side - Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Disconnect the lower arm (C) from the front lower ball joint (D).

Fig. 117: Identifying Front Lower Ball Joint, Lower Arm, Flange Bolts And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Driveshaft - Disconnection Outboard Side
    1. Separate the outboard joint from the front hub using a soft face hammer.

Fig. 118: Separating Outboard Joint From Front Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull the knuckle outward, and separate the outboard joint from the front hub.

Fig. 119: Pulling Knuckle Outward
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Driveshaft - Disconnection Inboard Side
   1. Pry the inboard joint (A) from the differential using a pry bar.

NOTE:

- **Do not pull on the driveshaft, or the inboard joint may come apart. Pull the inboard joint straight out to avoid damaging the oil seal.**
- **Be careful not to damage the oil seal or the end of the inboard joint using the pry bar.**

Fig. 120: Prying Inboard Joint From Differential Using A Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A).

Fig. 121: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Right Front Driveshaft Inboard Side - Disconnection
    1. Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a hammer.

NOTE: **Do not pull on the driveshaft or the inboard joint may come apart.**

Fig. 122: Driving Inboard Joint Off Of Intermediate Shaft Using Drift Punch And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the set ring (A).

Fig. 123: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Right Front Driveshaft Inboard Side - Reconnection
    1. Install a new set ring (A).

Fig. 124: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply 0.5-1.0 g (0.018-0.035 oz) of super high temp area grease (P/N 08798-9002) to the whole splined surface (A) of the right driveshaft.
3. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft during reassembly.

Fig. 125: Applying Super High Temp Area Grease To Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the inboard end (A) of the driveshaft onto the intermediate shaft (B) until the set ring (C) locks in the groove (D).

Fig. 126: Inserting Inboard End Of Driveshaft Onto Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driveshaft Front Left - Reconnection, Inboard Side
    1. Install a new set ring (A).

Fig. 127: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Clean the areas where the driveshaft contacts the differential thoroughly with solvent.

NOTE: Do not wash the rubber parts with solvent.

    3. Dry the areas where the driveshaft contacts the differential thoroughly with compressed air.
    4. Insert the inboard end (A) of the driveshaft into the differential (B) until the set ring (C) locks in the groove (D).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seal.

Fig. 128: Inserting Inboard End Of Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driveshaft Front Left - Reconnection, Outboard Side
    1. Apply about 5 g (0.18 oz) of holy 60 paste (P/N 08734-0001) to the contact area (A) of the outboard joint and the front wheel bearing.

    NOTE: The paste helps to prevent noise and vibration.

Fig. 129: Applying About 5 G (0.18 Oz) Of Holy 60 Paste To Contact Area Of Outboard Joint And Front Wheel Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the outboard joint (A) into the front hub (B) on the knuckle.

Fig. 130: Installing Outboard Joint Into Front Hub On Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Lower Ball Joint Lower Arm Side - Reconnection
    1. Connect the front lower ball joint (A) to the lower arm.
    2. Install the new flange nuts and the new flange bolt in the sequence shown.

Fig. 131: Identifying Front Lower Ball Joint And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driveshaft Spindle Nut, Front Left
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut.

3. Use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 132: Identifying Spindle Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 133: Identifying Front Wheel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
8. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 134: Identifying ATF Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 135: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 136: Identifying Dipstick And Alignment Of Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 137: Identifying Marking On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips

snap into place securely.

Fig. 138: Identifying Front Splash Shield, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.

11. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

       Caster angle:

2WD:

With 16 inch wheel: 2 ° 44 '±30 '

Without 16 inch wheel: 2 ° 50 '±30 '

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

12. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

13. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

14. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

Fig. 139: Measuring Wheel Alignment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

15. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

16. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 140: Identifying ATF Dipstick And Alignment Of Notch With Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- **Transmission damage.**
- **Vehicle does not move in any gear.**
- **Vehicle accelerates poorly, and engine revs up abnormally high**

when starting off in forward and reverse positions.

- **Engine vibrates at idle.**

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 141: Identifying ATF Level
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 142: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Test Drive
    1. Test-drive the vehicle.
18. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 143: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.

2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

20. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

21. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER**

PROPELLER SHAFT INSPECTION

INSPECTION

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Universal Joint And Boot - Inspection
    1. Move the shift lever to N.
    2. Check the center support bearing (A) for excessive play or noise.
        - If the center support has excessive play or noise, replace the propeller shaft assembly.
    3. Check the rubber portion (B) of the center support bearing for damage and deterioration.
        - If the rubber portion is damaged or deteriorated, replace the propeller shaft assembly.
    4. Check the universal joints for excessive play or noise.
        - If the universal joints have excessive play or noise, replace the propeller shaft assembly.

Fig. 144: Identifying Center Support Bearing And Rubber Portion

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Propeller Shaft Runout - Inspection
    1. Install a dial indicator with its needle on the center of the No. 1 propeller shaft or the No. 2 propeller shaft.
    2. Turn the other propeller shaft slowly and check the runout. Repeat this procedure for the other propeller shaft.
    3. If the runout on either propeller shaft exceeds the service limit, replace the propeller shaft assembly.

No. 1 Propeller Shaft Runout
Service Limit: 1.5 mm (0.059 in)

Fig. 145: Checking No. 1 Propeller Shaft Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 146: Checking No. 2 Propeller Shaft Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PROPELLER SHAFT REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 147: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Middle Floor Undercover
    1. Remove the bolts (A) and clips (B, C), then remove the left middle floor undercover (D).

Fig. 148: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Propeller Shaft Protector No.
    1. Remove the No. 1 propeller shaft protector (A).

Fig. 149: Identifying No. 1 Propeller Shaft Protector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Propeller Shaft Protector No.
    1. Remove the No. 2 propeller shaft protector (A).

Fig. 150: Identifying No. 2 Propeller Shaft Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Propeller Shaft Transmission Side - Disconnection
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Remove the No. 1 propeller shaft flange bolts (D).

Fig. 151: Identifying Mark On No. 1 Propeller Shaft, Transfer Companion Flange And Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Propeller Shaft Differential Side - Disconnection

1. Make reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
2. Remove the No. 2 propeller shaft flange bolts (D).

Fig. 152: Identifying Marks On No. 2 Propeller Shaft And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Propeller Shaft Assembly
    1. Remove the center support bearing mounting bolts (A), then remove the propeller shaft assembly (B).

Fig. 153: Identifying Center Support Bearing Mounting Bolts And Propeller Shaft Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Propeller Shaft Assembly
    1. Install the propeller shaft assembly (A), then Install new center support bearing mounting bolts (B).

Fig. 154: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Propeller Shaft Differential Side - Reconnection
    1. Set the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 2 propeller shaft flange bolts (D) to the specified torque.

Fig. 155: Identifying No. 2 Propeller Shaft, Companion Flange And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Propeller Shaft Transmission Side - Reconnection
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure. Then install new No. 1 propeller shaft flange bolts (D) to the specified torque.

Fig. 156: Identifying No. 1 Propeller Shaft, Transfer Companion Flange And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Propeller Shaft Protector No.
    1. Install the No. 2 propeller shaft protector (A).

Fig. 157: Identifying No. 2 Propeller Shaft Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Propeller Shaft Protector No.
    1. Install the No. 1 propeller shaft protector (A).

Fig. 158: Identifying No. 1 Propeller Shaft Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Middle Floor Undercover
    1. Install the left middle floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 159: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 160: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Propeller Shaft After Install - Check
    1. If you installed a new propeller shaft, test-drive the vehicle at 55 mph (88 km/h), and check for noise or vibration.
    2. If there is a noise or vibration, rotate the propeller shaft 180 degrees from its current alignment with the rear differential companion flange, then recheck.

REAR DRIVESHAFT DISASSEMBLY AND REASSEMBLY

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Except japan - built models

Fig. 162: Exploded View Of Rear Driveshaft (Except Japan)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DRIVESHAFT INBOARD BOOT REPLACEMENT

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number

	Driver, 30 mm I.D. 07946-MB00000
	Boot Band Pliers, commercially available
	Boot Band Tool KD-3191 or equivalent, commercially available

	Boot Band Clamp Tool Kent-Moore J-35910 or equivalent, commercially available

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 163: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 164: Identifying Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 165: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 166: Identifying Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 167: Identifying No. 2 Propeller Shaft, Flange Bolts And Rear Differential Companion Flange

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 168: Identifying Connectors And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the harness clips (A).

Fig. 169: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 170: Identifying Breather Hoses, Breather Pipes And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 171: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 172: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
9. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 173: Identifying Left And Right Rear Differential Mount Brackets B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mounting bolts (A) and the plates (B).

Fig. 174: Identifying Mounting Bolts And Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Driveshaft Inboard Side Both - Disconnection
    1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 175: Lowering Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the set ring (A) from inboard joint.

Fig. 176: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Driveshaft Outboard Side - Disconnection
    1. Separate the outboard joint from the rear hub using a soft face hammer.

Fig. 177: Separating Outboard Joint From Rear Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the rear driveshaft (A).

NOTE:

- **Be careful not to damage the wheel speed sensor (B).**
- **Pull on the outboard joint. Do not pull on the driveshaft because the joint may come apart.**

Fig. 178: Identifying Rear Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Inboard Joint (Except japan - built models)

Double loop type

Fig. 179: Removing Boot Bands (Double Loop Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Low profile type

Fig. 180: Removing Boot Bands (Low Profile Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Ear clamp type

1. Remove the boot bands.

NOTE: **Be careful not to damage the boot.**

- **If the boot band is a double loop type (A), lift up the band end (B), and push it into the clip (C).**
- **If the boot band is a low profile type (D), pinch the boot band using commercially available boot band pliers (E).**
- **If the boot band is an ear clamp type (F), lift up the three tabs (G) using a flat-tipped screwdriver.**

Fig. 181: Removing Boot Bands (Ear Clamp Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Make marks (A) on each roller (B) and the inboard joint (C) to identify the locations of the rollers to the grooves in the inboard joint.

NOTE: Do not engrave or scribe any marks on the rolling surfaces.

3. Remove the inboard joint on a clean shop towel (D).

Fig. 182: Identifying Marks On Roller And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the circlip (A).
5. Make marks (B) on the spider (C) and the driveshaft (D) to identify the position of the spider on the shaft.
6. Remove the spider and the rollers using a commercially available bearing remover (E).

Fig. 183: Removing Spider And Rollers Using Commercially Available Bearing Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Inboard Boot
    1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.
    2. Remove the inboard boot.

NOTE: Be careful not to damage the boot.

Fig. 184: Identifying Vinyl Tape On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Inboard Boot
    1. Install new ear clamp bands (A) and the outboard boot onto the driveshaft.

    NOTE: Be careful not to damage the boot.

    2. Remove the vinyl tape.

Fig. 185: Identifying Ear Clamp Bands
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Inboard Joint (Except japan - built models)
    1. Install the spider and rollers (A) onto the driveshaft by aligning the marks (B) you made, install it using the 30 mm driver (C).
    2. Install a new circlip (D) into the driveshaft groove. Always rotate the circlip in its groove to make sure it is fully seated.

Fig. 186: Installing Circlip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pack the inboard joint with the joint grease included in the new inboard boot set.

   Grease quantity

   Inboard joint:

   100-116 g (3.5-4.1 oz)

Fig. 187: Packing Inboard Joint With Joint Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Fit the inboard joint onto the driveshaft, and note these items:
   - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.
   - Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

Fig. 188: Fitting Inboard Joint Onto Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).

Fig. 189: Fitting Boot Ends Onto Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Adjust the length (A) of the driveshaft in the figure as shown, then adjust the boots to halfway between full compression and full extension.

Driveshaft	Specified length (A)
Left	658.6-663.6 mm (25.929-26.126 in)
Right	702.6-707.6 mm (27.661-27.858 in)

7. Bleed excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.

8. Install new boot bands.
    - For the double loop type, go to step 9.
    - For the low profile type, go to step 20.
    - For the ear clamp type, go to step 24.

Fig. 190: Identifying Length Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Double loop type

9. Install a new double loop band (A) onto the boot (B).

NOTE: **Pass the end of the double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.**

10. Pull up the slack in the band by hand.

Fig. 191: Installing Double Loop Band Onto Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Mark a line (A) on the band 10-14 mm (0.39-0.55 in) from the clip (B).

Fig. 192: Identifying Line On Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Thread the free end of the band through the nose section of the commercially available boot band tool (KD-3191 or equivalent) (A).
13. Into the slot on the winding mandrel (B).
14. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked line (C) on the band meets the edge of the clip.

Fig. 193: Threading Free End Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip.
16. Center-punch the clip.
17. Fold over the remaining tail onto the clip.

Fig. 194: Bending Free End Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5-10 mm (0.20-0.39 in) tail protruding from the clip.

Fig. 195: Identifying Free End Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Bend the band end (A) by tapping it down using a hammer.

NOTE:

- **Make sure the band and the clip do not interfere with anything on the vehicle, and the band does not move.**
- **Clean any grease remaining on the surrounding surfaces.**

Fig. 196: Bending Band End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Low profile type

20. Install a new low profile band (A) onto the boot (B).
21. Hook the tab (C) of the band.

Fig. 197: Installing Low Profile Band Onto Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Check the hook portion of the band using commercially available boot band pliers (A).
23. Hook the tabs (B) of the band.

Fig. 198: Checking Hook Portion Of Band Using Commercially Available Boot Band Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Ear clamp type

24. Close the ear portion (A) of the band using a commercially available boot band clamp tool (Kent-Moore J-35910 or equivalent) (B).

Fig. 199: Closing Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

Fig. 200: Identifying Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Driveshaft Outboard Side - Reconnection
    1. Install the outboard joint (A) into the rear hub (B).

NOTE: Be careful not to damage the wheel speed sensor (C).

Fig. 201: Installing Outboard Joint Into Rear Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 202: Identifying Set Ring And Groove Of Rear Driveshaft Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lift the rear differential assembly (A) up into position.
3. Insert the inboard end (B) of the rear driveshaft (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seals (G).

Fig. 203: Lifting Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 204: Inserting Inboard End Of Rear Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 205: Identifying Tabs Of Rubber Mount, Plates And Rear Differential Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 206: Identifying Differential Mount Brackets B Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
7. Rear Differential Breather Hoses

Differential upper side

Fig. 207: Identifying Breather Hoses, Breather Pipe And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 208: Identifying Breather Hoses, Breather Pipe And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).
2. Connect the breather hose (A) to the clamp (B).

Fig. 209: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 210: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A).
    3. Install the connector cover (B).

Fig. 211: Identifying Connectors And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 212: Identifying No. 2 Propeller Shaft, Rear Differential Companion Flange And Flange

Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Left Rear Driveshaft Spindle Nut
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 213: Identifying Spindle Nut And Shoulder With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 214: Identifying Rear Wheel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
13. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 215: Identifying Drain Plug, Washer And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 216: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.

4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.

15. Test Drive
    1. Test-drive the vehicle.
16. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 217: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER**

REAR DRIVESHAFT INBOARD/OUTBOARD BOOT REPLACEMENT

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number
	Driver Handle, 15 x 135L 07749-0010000

	
	Pilot, 22 mm 07746-0041000

	Oil Seal Driver, 41.8 mm 07947-6890100
	Boot Band Clamp Tool Kent-Moore J-35910 or equivalent, commercially available

REMOVAL

NOTE:

- **Due to the amount of work required to replace one damaged boot, it is best to replace both boots at the same time.**
- **These instructions are for the inboard joint. The same procedure applies to the outboard joint.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 218: Identifying Rear Wheel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 219: Identifying Stake On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 220: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 221: Identifying Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 222: Identifying Reference Mark Across No. 2 Propeller Shaft And Rear Differential Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 223: Identifying Connectors And Connector Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the harness clips (A).

Fig. 224: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 225: Identifying Breather Hoses, Pipes And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 226: Identifying Breather Hoses, Pipes And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 227: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
9. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 228: Identifying Left And Right Rear Differential Mount Brackets B And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mounting bolts (A) and the plates (B).

Fig. 229: Identifying Mounting Bolts And Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Driveshaft Inboard Side Both - Disconnection
    1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 230: Lowering Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the set ring (A) from inboard joint.

Fig. 231: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Driveshaft Outboard Side - Disconnection
    1. Separate the outboard joint from the rear hub using a soft face hammer.

Fig. 232: Separating Outboard Joint From Rear Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the rear driveshaft (A).

NOTE:

- **Be careful not to damage the wheel speed sensor (B).**
- **Pull on the outboard joint. Do not pull on the driveshaft because the joint may come apart.**

Fig. 233: Removing Rear Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Inboard Joint (Japan - Built models)
    1. Lift up the three tabs (A) using a flat-tipped screwdriver.

       NOTE: Be careful not to damage the boot.

    2. Release the ear clamp bands (B).

Fig. 234: Lifting Up Three Tabs Using Flat-Tipped Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Make marks (A) on each roller (B) and the inboard joint (C) to identify the locations of the rollers to the grooves in the inboard joint.

       NOTE: Do not engrave or scribe any marks on the rolling surfaces.

    4. Remove the inboard joint on a clean shop towel (D).

       NOTE: Be careful not to drop the rollers when separating them from the

inboard joint.

Fig. 235: Identifying Marks On Roller And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Make marks (A) on the spider (B) that match the marks on the rollers.

NOTE: Do not engrave or scribe any marks on the rolling surfaces.

6. Remove the rollers.
7. Make marks (C) on the spider and the driveshaft (D) to identify the position of the spider on the shaft.

Fig. 236: Identifying Markings On Spider And Roller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Make a mark (A) on the driveshaft (B) at the same level as the spider end.

Fig. 237: Identifying Marking On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Support the spider (A) on a bench vise (B).
10. Remove the driveshaft (C) from the spider using the 22 mm pilot and the 15 x 135L driver handle.

NOTE: Do not directly hit the driveshaft with the hammer.

Fig. 238: Removing Driveshaft From Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the stop ring (A).

Fig. 239: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Inboard Boot
    1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.
    2. Remove the inboard boot.

NOTE: **Be careful not to damage the boot.**

Fig. 240: Identifying Vinyl Tape On Driveshaft Splines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Refer to the EXPLODED VIEW in the Rear Driveshaft Disassembly and Reassembly as needed during this procedure.**

1. Rear Inboard Boot
    1. Install new ear clamp bands (A) and the outboard boot onto the driveshaft.

NOTE: **Be careful not to damage the boot.**

    2. Remove the vinyl tape.

Fig. 241: Identifying Clamp Bands
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Inboard Joint (Japan - Built models)
    1. Install the stop ring (A).

Fig. 242: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Insert the driveshaft (A) into the spider (B) until the stop ring (C) is close to the spider.

NOTE: **Install the spider onto the driveshaft by aligning the marks (D) you made on the spider and the end of the driveshaft.**

Fig. 243: Identifying Marks On Driveshaft And Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pick up the driveshaft and the spider, and tap or hit the assembly onto a hard surface from a height of about 10 cm (3.9 in).

Fig. 244: Tapping Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Securely clamp the driveshaft (A) in the bench vise with wood blocks (B).
5. Drive on the spider (C) using the 41.8 mm oil seal driver.

Fig. 245: Installing Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the alignment of the paint mark (A) you made with the spider end.

NOTE: **To avoid driveshaft and vehicle damage, the shaft must be all the way into the spider to ensure the stop ring is properly seated.**

Fig. 246: Checking Alignment Of Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Fit the rollers (A) onto the spider (B) as shown, and note these items:

- Reinstall the rollers in their original positions on the spider by aligning the marks (C) you made.
- Hold the driveshaft pointed up to prevent the rollers from falling off.

Fig. 247: Fitting Rollers Onto Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pack the inboard joint with the joint grease included in the new inboard boot set.

Grease quantity

Inboard joint/Outboard

joint:

60-70 g (2.1-2.5 oz)

Fig. 248: Packing Inboard Joint With Joint Grease

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fit the inboard joint onto the driveshaft, and note these items:
   - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.
   - Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

Fig. 249: Fitting Inboard Joint Onto Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).

Fig. 250: Identifying Boot Ends Onto Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Adjust the length (A) of the driveshaft in the figure as shown, then adjust the boots to halfway between full compression and full extension.

Fig. 251: Identifying Length Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Bleed excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.
13. Close the ear portion (A) of the band using a commercially available boot band clamp tool (Kent-Moore J-35910 or equivalent) (B).

Fig. 252: Closing Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

Fig. 253: Identifying Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Driveshaft Outboard Side - Reconnection
   1. Install the outboard joint (A) into the rear hub (B).

NOTE: Be careful not to damage the wheel speed sensor (C).

Fig. 254: Identifying Outboard Joint Into Rear Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Driveshaft Inboard Side Both - Reconnection
   1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 255: Identifying Set Ring And Joint Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lift the rear differential assembly (A) up into position.
3. Insert the inboard end (B) of the rear driveshaft (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

Fig. 256: Lifting Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 257: Inserting Inboard End Of Rear Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 258: Identifying Tabs Of Rubber Mount And Holes Of Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 259: Identifying Left And Right Rear Differential Mount Brackets B, And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
7. Rear Differential Breather Hoses

Differential upper side

Fig. 260: Identifying Breather Hoses, Pipes And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 261: Identifying Breather Hoses, Pipes And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).
2. Connect the breather hose (A) to the clamp (B).

Fig. 262: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 263: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A).
    3. Install the connector cover (B).

Fig. 264: Identifying Connector And Connector Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 265: Identifying Reference Mark On No. 2 Propeller Shaft And Rear Differential

Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Left Rear Driveshaft Spindle Nut
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 266: Identifying Spindle Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 267: Identifying Rear Wheel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
13. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 268: Identifying Drain Plug And Washer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 269: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.

4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.

15. Test Drive
    1. Test-drive the vehicle.
16. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 270: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DRIVESHAFT OUTBOARD BOOT REPLACEMENT

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number

	Threaded Adapter, 22 x 1.5 mm 07XAC-001010A
	Boot Band Clamp Tool Kent-Moore J-35910 or equivalent, commercially available

	Slide Hammer 5/8"-18 UNF, commercially available

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 271: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 272: Identifying Stake On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 273: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 274: Identifying Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 275: Identifying Reference Mark On No. 2 Propeller Shaft And Rear Differential Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 276: Identifying Connectors And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the harness clips (A).

Fig. 277: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 278: Identifying Breather Hoses, Breather Pipes And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 279: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 280: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
9. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 281: Identifying Left And Right Rear Differential Mount Brackets B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mounting bolts (A) and the plates (B).

Fig. 282: Identifying Mounting Bolts And Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Driveshaft Inboard Side Both - Disconnection
    1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 283: Lowering Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the set ring (A) from inboard joint.

Fig. 284: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Driveshaft Outboard Side - Disconnection
    1. Separate the outboard joint from the rear hub using a soft face hammer.

Fig. 285: Separating Outboard Joint From Rear Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the rear driveshaft (A).

NOTE:

- **Be careful not to damage the wheel speed sensor (B).**
- **Pull on the outboard joint. Do not pull on the driveshaft because the joint may come apart.**

Fig. 286: Identifying Rear Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Outboard Joint (Except japan - built models)
    1. Lift up the three tabs (A) using a flat-tipped screwdriver.

       NOTE: Be careful not to damage the boot.

    2. Release the ear clamp bands (B).

Fig. 287: Lifting Up Three Tabs Using A Flat-Tipped Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Slide the outboard boot (A) partially toward the inboard joint side.

       NOTE: Be careful not to damage the boot.

Fig. 288: Sliding Outboard Boot Partially Toward Inboard Joint Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
5. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint end (C).

Fig. 289: Making Mark On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Securely clamp the driveshaft in a bench vise with a shop towel wrapped around the driveshaft.
7. Remove the outboard joint (A) using the threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).
8. Remove the driveshaft from the bench vise.

Fig. 290: Removing Outboard Joint Using Threaded Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the stop ring (A).

Fig. 291: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Outboard boot (Except japan - built models)
    1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the outboard boot.
    2. Remove the outboard boot.

NOTE: Be careful not to damage the boot.

Fig. 292: Identifying Tape On Driveshaft Splines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Refer to the EXPLODED VIEW in the Rear Driveshaft Disassembly and Reassembly, as needed, during this procedure.

1. Rear Outboard boot (Except japan - built models)
    1. Install new ear clamp bands (A) and the outboard boot onto the driveshaft.

        NOTE: Be careful not to damage the boot.

    2. Remove the vinyl tape.

Fig. 293: Identifying Ear Clamp Bands
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Outboard Joint (Except japan - built models)
    1. Make sure to check the size of a new stop ring.

        NOTE: To avoid driveshaft and vehicle damage, make sure you install a new

stop ring.

Stop ring specifications

Overall diameter (A): 20.9 mm (0.823 in)

Wire diameter (B): 1.4 mm (0.055 in)

Fig. 294: Identifying Stop Ring Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the stop ring (A).

Fig. 295: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pack about 35 g (1.23 oz) of grease included in the new outboard boot set into the driveshaft hole in the outboard joint.

NOTE: **If you are installing a new outboard joint, the grease is already installed.**

Fig. 296: Packing Grease Included In Outboard Boot Set Into Driveshaft Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.

Fig. 297: Inserting Driveshaft Into Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. To completely seat the outboard joint, pick up the driveshaft and the joint, and tap or hit the assembly onto a hard surface from a height of about 10 cm (3.9 in).

NOTE: **Do not use a hammer, as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.**

Fig. 298: Hitting Assembly Onto Hard Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the alignment of the paint mark (A) you made with the outboard joint end (B).

NOTE: **To avoid driveshaft and vehicle damage, the shaft must be all the way into the outboard joint to ensure the stop ring is properly seated.**

Fig. 299: Checking Alignment Of Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pack the outboard joint (A) with the remaining joint grease included in the outboard boot set.

Total grease quantity

Outboard joint:

67-77 g (2.4-2.7 oz)

Fig. 300: Packing Outboard Joint With Joint Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Fit the boot ends (A) onto the driveshaft (B) and the outboard joint (C).
9. Bleed any excess air from the boot by inserting a flat-tipped screwdriver between the boot and the joint.

Fig. 301: Identifying Boot Ends On Driveshaft And Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Inspect the length (A) of the driveshaft in the figure as shown, then adjust the boots to halfway between full compression and full extension.

Driveshaft	Specified length (A)
Left	658.6-663.6 mm (25.929-26.126 in)
Right	702.6-707.6 mm (27.661-27.858 in)

Fig. 302: Identifying Length Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Close the ear portion (A) of the band using a commercially available boot band clamp tool (Kent-Moore J-35910 or equivalent) (B).

Fig. 303: Closing Ear Portion Of Band Using Commercially Available Boot Band Clamp Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

Fig. 304: Identifying Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Driveshaft Outboard Side - Reconnection
    1. Install the outboard joint (A) into the rear hub (B).

NOTE: **Be careful not to damage the wheel speed sensor (C).**

Fig. 305: Identifying Outboard Joint, Rear Hub And Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 306: Identifying Set Ring And Groove Of Rear Driveshaft Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Lift the rear differential assembly (A) up into position.
    3. Insert the inboard end (B) of the rear driveshaft (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

Fig. 307: Lifting Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 308: Inserting Inboard End Of Rear Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 309: Identifying Tabs Of Rubber Mount, Plates And Rear Differential Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 310: Identifying Differential Mount Brackets B Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
7. Rear Differential Breather Hoses

Differential upper side

Fig. 311: Identifying Breather Hoses, Breather Pipe And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 312: Identifying Breather Hoses, Breather Pipe And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).
2. Connect the breather hose (A) to the clamp (B).

Fig. 313: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Connector

1. Install the harness clips (A).

Fig. 314: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A).
3. Install the connector cover (B).

Fig. 315: Identifying Connectors And Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 316: Identifying No. 2 Propeller Shaft, Rear Differential Companion Flange And Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Left Rear Driveshaft Spindle Nut
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 317: Identifying Spindle Nut And Shoulder With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 318: Identifying Rear Wheel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
13. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 319: Identifying Drain Plug, Washer And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 320: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
15. Test Drive
    1. Test-drive the vehicle.
16. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 321: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DRIVESHAFT REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 322: Identifying Rear Wheel Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 323: Identifying Stake On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 324: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 325: Identifying Drain Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 326: Identifying Reference Mark Across No. 2 Propeller Shaft And Rear Differential Companion Flange

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 327: Identifying Connectors And Connector Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the harness clips (A).

Fig. 328: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

    Differential upper side

Fig. 329: Identifying Breather Hoses, Pipes And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 330: Identifying Breather Hoses, Pipes And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 331: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
9. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 332: Identifying Left And Right Rear Differential Mount Brackets B And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mounting bolts (A) and the plates (B).

Fig. 333: Identifying Mounting Bolts And Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Driveshaft Inboard Side Both - Disconnection
    1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 334: Lowering Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the set ring (A) from inboard joint.

Fig. 335: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Driveshaft Outboard Side - Disconnection
    1. Separate the outboard joint from the rear hub using a soft face hammer.

Fig. 336: Separating Outboard Joint From Rear Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the rear driveshaft (A).

NOTE:

- **Be careful not to damage the wheel speed sensor (B).**
- **Pull on the outboard joint. Do not pull on the driveshaft because the joint may come apart.**

Fig. 337: Removing Rear Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Driveshaft Outboard Side - Reconnection
    1. Install the outboard joint (A) into the rear hub (B).

NOTE: Be careful not to damage the wheel speed sensor (C).

Fig. 338: Installing Outboard Joint Into Rear Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 339: Identifying Set Ring And Groove Of Rear Driveshaft Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lift the rear differential assembly (A) up into position.
3. Insert the inboard end (B) of the rear driveshaft (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seals (G).

Fig. 340: Lifting Rear Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 341: Inserting Inboard End Of Rear Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 342: Identifying Tabs Of Rubber Mount, Plates And Rear Differential Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 343: Identifying Differential Mount Brackets B Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
5. Rear Differential Breather Hoses

Differential upper side

Fig. 344: Identifying Breather Hoses, Breather Pipe And Clamps (Differential Upper Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pump motor side

Fig. 345: Identifying Breather Hoses, Breather Pipe And Clamps (Pump Motor Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).
2. Connect the breather hose (A) to the clamp (B).

Fig. 346: Identifying Breather Hose And Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 347: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A).
    3. Install the connector cover (B).

Fig. 348: Identifying Connectors And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 349: Identifying No. 2 Propeller Shaft, Rear Differential Companion Flange And Flange

Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Left Rear Driveshaft Spindle Nut
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 350: Identifying Spindle Nut And Shoulder With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 351: Identifying Rear Wheel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Driveshaft After Install Check
    1. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
11. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 352: Identifying Drain Plug And Sealing Washer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 353: Identifying Oil Filler Plug And Sealing Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.

4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.

13. Test Drive
    1. Test-drive the vehicle.
14. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 354: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

HOW TO TROUBLESHOOT THE EPS

EPS INDICATOR

Under normal conditions, the EPS indicator (A) comes on when the ignition switch is turned to ON (II), then goes off after the engine is started. This indicates that the LED and its circuit are operating correctly.

If there is a failure in the system after the engine is started, the EPS indicator will stay on, and the power assist is turned off or restricted.

Fig. 1: Identifying EPS Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When the EPS indicator comes on, the control unit stores the DTC. In this case, the control unit will not activate the EPS system after the engine starts again, but it keeps the EPS indicator on.

The EPS indicator will stay on until the DTC is erased. When a problem is detected and the EPS indicator comes on, there are cases when the indicator stays on until the ignition switch is turned to LOCK (0), and cases when the indicator goes off automatically when the system returns to normal. Even though the system is operating normally, the EPS indicator will come on under some conditions with the vehicle stopped and the engine at high speed with constant input from the steering wheel.

To determine the actual cause of the problem, question the customer about the conditions during which the problem occurred, taking the above conditions into consideration.

DIAGNOSTIC TROUBLE CODE (DTC)

- If the CPU cannot be activated, or it fails, the EPS indicator comes on, but no EPS DTC is stored.
- The memory can hold any number of DTCs. However, when the same DTC is detected more than once, the most recent DTC is written over the prior DTC, therefore only one occurrence is stored.
- The lowest DTC is indicated first. The DTCs are indicated in ascending order, not in the order that they occurred.
- The DTCs are stored in the EEPROM (non-volatile memory) therefore the stored DTCs cannot be erased by disconnecting the battery. Do the specified procedures to clear the DTCs.

SELF-DIAGNOSIS

Self-diagnosis can be classified into three categories:

- Initial diagnosis: Done right after the engine starts and until the EPS indicator goes off.
- Regular diagnosis: Done right after the initial diagnosis until the ignition switch is turned to LOCK (0).

RESTRICTION ON POWER ASSIST OPERATION

Repeated extreme steering force, such as turning the steering wheel continuously back-and-forth with the vehicle stopped, causes an increase in electrical current draw by the EPS motor. The increase of electric current causes the EPS motor and EPS control unit to heat up. Because this heat adversely affects the system, the control unit monitors the electric current draw of the EPS motor.

When the control unit detects heat build-up in the EPS motor, it reduces the electric current to the EPS motor gradually to protect the system, and it restricts the power assist operation. The EPS indicator does not come on during this function.

When steering torque is not applied to the steering wheel, or when the ignition is turned to LOCK (0) and the EPS motor cools, the control unit will restore the power assist gradually until it's fully restored (after about 8 minutes).

TORQUE SENSOR NEUTRAL POSITION

The EPS control unit stores the torque sensor neutral position in the EEPROM. The torque sensor neutral position must be memorized whenever the steering gearbox or the EPS control unit is replaced.

NOTE: The torque sensor neutral position is not affected when erasing the DTCs.

STEERING ANGLE SENSOR NEUTRAL POSITION

The EPS control unit stores the steering angle sensor neutral position in the EEPROM. Do the steering angle sensor neutral position clear whenever you do any of these actions:

- Disconnect the steering joint.
- Remove the steering wheel.
- Remove the steering angle sensor.

- Adjust the front toe.
- VSA sensor neutral position memorization procedure.

HOW TO TROUBLESHOOT DTCS

The troubleshooting procedures assume that the cause of the problem is still present and the EPS indicator is still on. Following the procedure when the EPS indicator does not come on can result in incorrect diagnosis.

1. Question the customer about the conditions when the problem occurred, and try to reproduce the same conditions for troubleshooting. Find out when the EPS indicator came on, such as while turning, after turning, when the vehicle was at a certain speed, etc.
2. When the EPS indicator does not come on during the test-drive, but troubleshooting is done based on the DTC, check for loose connectors, poor terminal contact, etc., in the affected circuit before you start troubleshooting.
3. After troubleshooting, clear the DTC and test-drive the vehicle. Be sure the EPS indicator does not come on.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

NOTE: Make sure the battery is in good condition and fully charged.

1. If the system indicators stay on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 2: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the EPS control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Check the diagnostic trouble code (DTC) and the freeze data, for all systems, troubleshoot the powertrain

DTCs first. Then refer to the indicated DTC's troubleshooting, and do the appropriate troubleshooting procedure.

NOTE:

- **Freeze data indicates the EPS conditions when the first system malfunction that activated the indicator was detected.**
- **The HDS can read the DTC, the freeze data, the current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**

HOW TO RETRIEVE DTCS

1. With the ignition switch in LOCK (0), connect the HDS to the data link connector (DLC) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the EPS control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the DTC troubleshooting. Do the all systems DTC check, and troubleshoot any powertrain DTCs first.
5. Turn the ignition switch to LOCK (0).

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0), connect the HDS to the data link connector (DLC) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the EPS control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Clear the DTC(s) by following the screen prompts on the HDS.
5. Turn the ignition switch to LOCK (0).

15	BLU	VS2	Detects torque sensor signal	Turn to the right: about 2.5 -3.3 V (increase) Turn to the left: about 2.5-1.7 V (decrease)
16	WHT	PVF	Power source for torque sensor	With engine running: about 10 V

EPS CONTROL UNIT REMOVAL AND INSTALLATION

REMOVAL

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 7: Identifying Negative And Positive Cables Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 8: Identifying Driver's Dashboard Panel Assembly, Clips And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 9: Identifying Lock Knob, Driver's Dashboard Undercover, Clip, Pin And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 10: Identifying Driver's Dashboard Lower Cover, Clips And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. EPS Control Unit
    1. Disconnect the accelerator pedal position (APP) sensor connector (A).
    2. Disconnect the EPS control unit connectors (B) by pushing the lock (C) and pulling down the lever (D).
    3. Remove the EPS control unit (E).

Fig. 11: Disconnecting EPS Control Unit Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. EPS Control Unit
    1. Install the EPS control unit (A).
    2. Pull up the lever (B) of the EPS control unit connectors (C), then confirm the connector is fully seated.
    3. Connect the accelerator pedal position (APP) sensor connector (D).

Fig. 12: Pulling Up Lever Of EPS Control Unit Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Lower Cover
    1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 13: Identifying Driver's Dashboard Lower Cover And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 14: Identifying Driver's Dashboard Undercover, Clip, Pin And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 15: Identifying Driver's Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 16: Identifying Positive And Negative Battery Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. EPS Control Unit After Install - Check
   1. After installation, check these items:
      - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
      - Check that the EPS indicator does not come on.

EPS CONTROL UNIT UPDATE

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number

	MVCI unit with the latest control module (CM) update software installed

Any one of the above updating tools can be used.

PROCEDURE

1. EPS Control Unit - Update

NOTE: **Check any official Honda service website for more service information about updating the MVCI and control units.**

EPS DTC TROUBLESHOOTING INDEX

DTC	Detection Item
11-02	Control Unit Power Supply Voltage
12-01	Motor Power Supply Voltage
21-03	CAN Vehicle Speed Stuck ON
22-01	Engine Speed Signal
23-01	CAN Data Stuck ON

DTC 11-02: CONTROL UNIT POWER SUPPLY VOLTAGE; DTC 12-01: MOTOR POWER SUPPLY VOLTAGE

Fig. 17: EPS DTC Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**
- **If the ignition switch is turned to ON (II) and the engine is started, this DTC can be stored when any of these occur:**
  - **Quick-charging the battery.**
  - **High voltage battery (24 V) is connected to the vehicle.**
  - **Dead battery is connected to the vehicle.**

DTC Description	DTC	Freeze Frame
11-02 Control Unit Power Supply Voltage		
12-01 Motor Power Supply Voltage		

1. EPS system check:
   - 1. Start the engine.
   - 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit

BATTERY VOLTAGE		
IG1 VOLTAGE		

Is there battery voltage?

YES : Intermittent failure, the system is OK at this time.

NO : **CHECK THE BATTERY** and **the PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . If they are OK, go to step 2.

2. IG1 VSA/ABS line check:
   - 1. Check for a poor connection at all IG1 VSA/ABS line connections between the EPS control unit connector A (11P) terminal No. 11 and the under dash fuse/relay box No. B24 (7.5 A) fuse.

Are the connections OK?

YES : Go to step 3.

NO : Repair the IG1 VSA/ABS line.

3. +B EPS line check:
   - 1. Check for a poor connection at all +B EPS line connections between the EPS control unit connector A (11P) terminal No. 2 and the under-hood fuse/relay box No. A1-1 (70 A) fuse.

Are the connections OK?

YES : Go to step 4.

NO : Repair the +B EPS line.

4. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. Turn the ignition switch to LOCK (0), then start the engine.
   - 3. Check the parameter(s) below with the HDS.

Signal	**Current conditions**	
	Values	**Unit**
BATTERY VOLTAGE		
IG1 VOLTAGE		

Is there battery voltage?

YES : Troubleshooting is complete.

NO : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

DTC 21-03: CAN VEHICLE SPEED STUCK ON

Fig. 18: EPS DTC Troubleshooting Flow Chart (CAN Vehicle Speed Stuck ON)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**
- **Troubleshoot any fuel and emissions systems DTCs first.**
- **Even though the system is operating normally, the EPS indicator may come on and set DTC 21-03 when you raise the engine speed repeatedly with the vehicle stopped. REVIEW THE HOW TO TROUBLESHOOT THE EPS.**
- **VSA DTCs may set during this troubleshooting. If so, clear them.**

DTC Description	DTC	Freeze Frame
21-03 CAN Vehicle Speed Stuck ON		

1. EPS system check:
   - 1. **RAISE AND SUPPORT THE VEHICLE** , and allow all wheels to rotate freely.
   - 2. Start the engine.

- 3. Turn off the VSA function by using the VSA OFF switch.
- 4. Run the vehicle while in D position.
- 5. Check the parameter(s) below with the HDS.

Signal	Current condition	
	Values	Unit
VEHICLE SPEED		

Is the vehicle speed indicated?

YES : Intermittent failure, the system is OK at this time.

NO : Go to step 2.

2. Gauge control module operation check:
   - 1. Check the tachometer and the speedometer.

Is the tachometer and the speedometer working correctly?

YES : Go to step 3.

NO : Go to gauge control module troubleshooting.

3. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. **RAISE AND SUPPORT THE VEHICLE** , and allow all wheels to rotate freely.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn off the VSA function by using the VSA OFF switch.
   - 5. Run the vehicle while in D position.
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
21-03 CAN Vehicle Speed Stuck ON		

Is DTC 21-03 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 22-01: ENGINE SPEED SIGNAL

EPS DTC Troubleshooting: 22-01

Fig. 19: EPS DTC Troubleshooting Flow Chart (Engine Speed Signal)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**
- **If the MIL indicator is on, troubleshoot the fuel and emissions systems first.**

DTC Description	DTC	Freeze Frame
22-01 Engine Speed Signal		

1. EPS system check:
    - 1. Start the engine.
    - 2. Check the parameter(s) below with the HDS.

Signal	Current condition	
	Values	Unit
ENGINE SPEED		

Is the engine speed 0-400 rpm?

YES : Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. PCM check:
   - 1. Disconnect the following connector.

     EPS control unit connector A (11P)

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     EPS control unit connector A (11P): disconnected

     Test circuit NEP

     Test point 1 EPS control unit connector A (11P) No. 3 (YEL)

     Test point 2 Body ground

Fig. 20: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The NEP wire is OK. Go to step 3.

NO : Go to step 3.

3. Shorted wire check (NEP line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Short the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector A (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      EPS control unit connector A (11P): disconnected

      PCM connector A (49P): disconnected

      Test circuit NEP

      Test point 1 EPS control unit connector A (11P) No. 3 (YEL)

      Test point 2 Body ground

Fig. 21: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the PCM.

NO : The NEP wire is not shorted. Go to step 4.

4. Open wire check (NEP line):
    - 1. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

EPS control unit connector A (11P): disconnected

PCM connector A (49P): disconnected

Test circuit NEP

Test point 1 EPS control unit connector A (11P) No. 3 (YEL)

Test point 2 PCM connector A (49P) No. 22 (YEL)

Fig. 22: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The NEP wire is not open. Go to step 5.

NO : Repair an open in the wire between the EPS control unit and the PCM.

5. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector A (11P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND**

INSTALLATION or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.

- 3. Turn the ignition switch to LOCK (0), then start the engine.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
22-01 Engine Speed Signal		

Is DTC 22-01 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 23-01: CAN DATA STUCK ON; DTC 32-0C: BATTERY CURRENT DETECT CIRCUIT; DTC 34-01: POWER RELAY; DTC 35-02: EPS CONTROL UNIT INTERNAL CIRCUIT (EEPROM1); DTC 35-04: EPS CONTROL UNIT INTERNAL CIRCUIT (CPU COMMUNICATION); DTC 35-05: EPS CONTROL UNIT INTERNAL CIRCUIT (A/D CONVERSION); DTC 35-08: EPS CONTROL UNIT INTERNAL CIRCUIT (EEPROM2); DTC 35-0A: EPS CONTROL UNIT INTERNAL CIRCUIT (CPU OPERATION); DTC 36-02: EPS CONTROL UNIT INTERNAL CIRCUIT (INH OUTPUT CIRCUIT); DTC 37-01: EPS CONTROL UNIT INTERNAL CIRCUIT (STEP-UP CIRCUIT); DTC 38-01: EPS CONTROL UNIT INTERNAL CIRCUIT (TEMPERATURE SENSOR)

EPS DTC Troubleshooting: 23-01, 32-0C, 34-01, 35-02, 35-04, 35-05, 35-08, 35-0A, 36-02, 37-01, 38-01

Fig. 23: EPS DTC Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
23-01 CAN Data Stuck ON		
32-0C Battery Current Detect Circuit		
34-01 Power Relay		
35-02 EPS Control Unit Internal Circuit (EEPROM1)		
35-04 EPS Control Unit Internal Circuit (CPU Communication)		
35-05 EPS Control Unit Internal Circuit (A/D Conversion)		
35-08 EPS Control Unit Internal Circuit (EEPROM2)		
35-0A EPS Control Unit Internal Circuit (CPU Operation)		
36-02 EPS Control Unit Internal Circuit (INH Output Circuit)		
37-01 EPS Control Unit Internal Circuit (Step-Up Circuit)		
38-01 EPS Control Unit Internal Circuit (Temperature Sensor)		

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Clear the DTC with the HDS.

- 3. Turn the ignition switch to LOCK (0), then start the engine.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-01 CAN Data Stuck ON		
32-0C Battery Current Detect Circuit 34-01 Power Relay		
35-02 EPS Control Unit Internal Circuit (EEPROM1)		
35-04 EPS Control Unit Internal Circuit (CPU Communication)		
35-05 EPS Control Unit Internal Circuit (A/D Conversion)		
35-08 EPS Control Unit Internal Circuit (EEPROM2)		
35-0A EPS Control Unit Internal Circuit (CPU Operation)		
36-02 EPS Control Unit Internal Circuit (INH Output Circuit)		
37-01 EPS Control Unit Internal Circuit (Step-Up Circuit)		
38-01 EPS Control Unit Internal Circuit (Temperature Sensor)		

Is DTC 23-01, 32-0C, 34-01, 35-02, 35-04, 35-05, 35-08, 35-0A, 36-02, 37-01, or 38-01 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. Turn the ignition switch to LOCK (0), then start the engine.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-01 CAN Data Stuck ON		
32-0C Battery Current Detect Circuit		
34-01 Power Relay		
35-02 EPS Control Unit Internal Circuit (EEPROM1)		
35-04 EPS Control Unit Internal Circuit (CPU Communication)		
35-05 EPS Control Unit Internal Circuit (A/D Conversion)		
35-08 EPS Control Unit Internal Circuit (EEPROM2)		
35-0A EPS Control Unit Internal Circuit (CPU Operation)		
36-02 EPS Control Unit Internal Circuit (INH Output Circuit)		
37-01 EPS Control Unit Internal Circuit (Step-Up Circuit)		
38-01 EPS Control Unit Internal Circuit (Temperature Sensor)		

Is DTC 23-01, 32-0C, 34-01, 35-02, 35-04, 35-05, 35-08, 35-0A, 36-02, 37-01, or 38-01 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 23-02: CAN VEHICLE SPEED DATA

Fig. 24: EPS DTC Troubleshooting Flow Chart (Vehicle Speed Data)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**
- **VSA DTCs may set during this troubleshooting. If so, clear them.**

DTC Description	DTC	Freeze Frame

23-02 CAN Vehicle Speed Data		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine, and let it run for at least 60 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-02 CAN Vehicle Speed Data		

Is DTC 23-02 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Short the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     EPS control unit connector A (11P)

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector A (11P): disconnected

     PCM connector A (49P): disconnected

     Test circuit F CAN-H

     Test point 1 EPS control unit connector A (11P) No. 7 (WHT)

     Test point 2 PCM connector A (49P) No. 3 (WHT)

     Test circuit F CAN-L

     Test point 1 EPS control unit connector A (11P) No. 9 (RED)

Test point 2 PCM connector A (49P) No. 4 (RED)

Fig. 25: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F AN-H, F CAN-L wires are OK. Go to step 3.

NO : Repair an open in the wire between the EPS control unit and the PCM.

3. EPS system check:
   - 1. Reconnect the following connectors.

     EPS control unit connector A (11P)

     PCM connector A (49P)

   - 2. **RAISE AND SUPPORT THE VEHICLE** , and allow all wheels to rotate freely.
   - 3. Start the engine.
   - 4. Turn off the VSA function by using the VSA OFF switch.
   - 5. Run the vehicle while in the D position for at least 60 seconds.
   - 6. Check the parameter(s) below with the HDS.

Signal	Current condition	
	Values	Unit

VEHICLE SPEED		

Is the vehicle speed indicated?

YES : Go to step 5.

NO : Go to step 4.

4. PCM check (update or substitution):
   - 1. Update the PCM if it does not have the latest software, or substitute a known-good PCM.
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-02 CAN Vehicle Speed Data		

Is DTC 23-02 indicated?

YES : Go to step 5.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM.

5. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. **RAISE AND SUPPORT THE VEHICLE** , and allow all wheels to rotate freely.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn off the VSA function by using the VSA OFF switch.
   - 5. Run the vehicle while in the D position for at least 60 seconds.
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-02 CAN Vehicle Speed Data		

Is DTC 23-02 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 23-03: CAN ENGINE SPEED DATA

Fig. 26: EPS DTC Troubleshooting Flow Chart (CAN Engine Speed Data)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
23-03 CAN Engine Speed Data		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine, and let it run for at least 60 seconds.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-03 CAN Engine Speed Data		

Is DTC 23-03 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS system check:
   - 1. Start the engine, and let it run for at least 60 seconds.
   - 2. Check the parameter(s) below with the HDS.

Signal	Current condition	
	Values	Unit
ENGINE SPEED		

Is the engine speed indicated?

YES : Go to step 5.

NO : Go to step 3.

3. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Short the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     EPS control unit connector A (11P)

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector A (11P): disconnected

     PCM connector A (49P): disconnected

     Test circuit F CAN-H

Test point 1 EPS control unit connector A (11P) No. 7 (WHT)

Test point 2 PCM connector A (49P) No. 3 (WHT)

Test circuit F CAN-L

Test point 1 EPS control unit connector A (11P) No. 9 (RED)

Test point 2 PCM connector A (49P) No. 4 (RED)

<u>Fig. 27: Checking For Continuity Between Test Points 1 And 2</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Go to step 4.

NO : Repair an open in the wire between the EPS control unit and the PCM.

4. PCM check (update or substitution):
   - 1. **Update the PCM** See **<u>PCM REMOVAL AND INSTALLATION</u>** or **<u>PCM UPDATE</u>** if it does not have the latest software, or substitute a known-good PCM.
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine, and let it run for at least 60 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-03 CAN Engine Speed Data		

Is DTC 23-03 indicated?

YES : Go to step 5.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM.

5. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. Turn the ignition switch to LOCK (0), then start the engine, and let it run for at least 60 seconds.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-03 CAN Engine Speed Data		

Is DTC 23-03 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 23-04: CAN BUS-OFF MALFUNCTION

EPS DTC Troubleshooting: 23-04

Fig. 28: EPS DTC Troubleshooting Flow Chart (CAN Bus-Off Malfunction)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**
- **If the MIL indicator is on, troubleshoot the fuel and emissions systems first.**

DTC Description	DTC	Freeze Frame
23-04 CAN Bus-Off Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-04 CAN Bus-Off Malfunction		

Is DTC 23-04 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Open wire check (F CAN-H, F CAN-L lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Short the SCS line with the HDS.
    - 3. Disconnect the following connectors.

      EPS control unit connector A (11P)

      PCM connector A (49P)

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      EPS control unit connector A (11P): disconnected

      PCM connector A (49P): disconnected

      Test circuit F CAN-H

      Test point 1 EPS control unit connector A (11P) No. 7 (WHT)

      Test point 2 PCM connector A (49P) No. 3 (WHT)

      Test circuit F CAN-L

      Test point 1 EPS control unit connector A (11P) No. 9 (RED)

      Test point 2 PCM connector A (49P) No. 4 (RED)

Fig. 29: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Go to step 3.

NO : Repair an open in the wire between the EPS control unit and the PCM.

3. EPS control unit check (update):
   - 1. Reconnect the following connectors.

     EPS control unit connector A (11P)

     PCM connector A (49P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
23-04 CAN Bus-Off Malfunction		

Is DTC 23-04 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 32-09: MOTOR CURRENT CORRELATION

Fig. 30: EPS DTC Troubleshooting Flow Chart (Motor Current Correlation)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
32-09 Motor Current Correlation		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine. Turn the steering wheel lock to lock at least 5 times.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
32-09 Motor Current Correlation		

Is DTC 32-09 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. Turn the ignition switch to LOCK (0), then start the engine. Turn the steering wheel lock to lock at least 5 times.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
32-09 Motor Current Correlation		

Is DTC 32-09 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 32-0B: OVER CURRENT; DTC 32-0E: OVER CURRENT CONTINUATION; DTC 34-02: FAIL-SAFE RELAY

EPS DTC Troubleshooting: 32-0B, 32-0E, 34-02

Fig. 31: EPS DTC Troubleshooting Flow Chart (Over Current, Over Current Continuation And Fail-Safe Relay)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
32-0B Over Current		
32-0E Over Current Continuation		
34-02 Fail-Safe Relay		

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Clear the DTC with the HDS.

- 3. Turn the ignition switch to LOCK (0), then start the engine. Turn the steering wheel lock to lock at least 5 times.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
32-0B Over Current		
32-0E Over Current Continuation		
34-02 Fail-Safe Relay		

Is DTC 32-0B, 32-0E, or 34-02 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (MTR lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

Fig. 32: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 3.

NO : The MTR wires are OK. Go to step 4.

3. Shorted wire check (MTR lines) 2:
   - 1.

     Disconnect the following connector.

     EPS motor 3P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor 3P connector: disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

Fig. 33: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the EPS motor.

NO : The MTR wires are OK. **REPLACE THE EPS MOTOR**.

4. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector B (16P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine. Turn the steering wheel lock to lock at least 5 times.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
32-0B Over Current		
32-0E Over Current Continuation		
34-02 Fail-Safe Relay		

Is DTC 32-0B, 32-0E, or 34-02 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 32-0F: BATTERY CURRENT/MOTOR CURRENT CORRELATION

Fig. 34: EPS DTC Troubleshooting Flow Chart (Battery Current/Motor Current Correlation)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
32-0F Battery Current/Motor Current Correlation		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel from lock to lock several times.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
32-0F Battery Current/Motor Current Correlation		

Is DTC 32-0F indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. Turn the ignition switch to LOCK (0), then start the engine.
   - 3. Turn the steering wheel from lock to lock several times.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
32-0F Battery Current/Motor Current Correlation		

Is DTC 32-0F indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 39-01: EPS CONTROL UNIT INTERNAL CIRCUIT (PRECHARGE

CIRCUIT)

Fig. 35: EPS DTC Troubleshooting Flow Chart (EPS Control Unit Internal Circuit (Precharge Circuit))
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
39-01 EPS Control Unit Internal Circuit (Precharge Circuit)		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, and wait for at least 10 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
39-01 EPS Control Unit Internal Circuit (Precharge Circuit)		

Is DTC 39-01 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS control unit check (update):

- 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
- 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, and wait for at least 10 seconds.
- 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
39-01 EPS Control Unit Internal Circuit (Precharge Circuit)		

Is DTC 39-01 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 39-03: EPS CONTROL UNIT INTERNAL CIRCUIT (POWER SELF-HOLDING CIRCUIT)

Fig. 36: EPS DTC Troubleshooting Flow Chart (EPS Control Unit Internal Circuit (Power Self-Holding Circuit))
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
39-03 EPS Control Unit Internal Circuit (Power Self-Holding Circuit)		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Wait 30 seconds or more.
   - 5. Turn the ignition switch to ON (II).
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
39-03 EPS Control Unit Internal Circuit (Power Self-Holding Circuit)		

Is DTC 39-03 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS control unit check (update):
   - 1. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Wait 30 seconds or more.
   - 4. Turn the ignition switch to ON (II).
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
39-03 EPS Control Unit Internal Circuit (Power Self-Holding Circuit)		

Is DTC 39-03 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 52-01: TORQUE SENSOR ALLOWABLE TOLERANCE (INITIAL DIAGNOSIS); DTC 52-03: MAIN TORQUE SENSOR; DTC 52-04: SUB TORQUE SENSOR; DTC 52-05: TORQUE SENSOR ALLOWABLE TOLERANCE

EPS DTC Troubleshooting: 52-01, 52-03, 52-04, 52-05

Fig. 37: EPS DTC Troubleshooting Flow Chart (Torque Sensor Allowable Tolerance)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
52-01 Torque Sensor Allowable Tolerance (Initial Diagnosis)		
52-03 Main Torque Sensor		
52-04 Sub Torque Sensor		
52-05 Torque Sensor Allowable Tolerance		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-01 Torque Sensor Allowable Tolerance (Initial Diagnosis)		
52-03 Main Torque Sensor		
52-04 Sub Torque Sensor		
52-05 Torque Sensor Allowable Tolerance		

Is DTC 52-01, 52-03, 52-04 or 52-05 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (torque sensor lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between these test points and body ground individually.

     Test condition IG ON (II)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	VS1	No. 12 (RED)
	TRQ SUB	No. 13 (YEL)
	TRQ SE	No. 14 (BRN)
	VS2	No. 15 (BLU)
	PVF	No. 16 (WHT)

Fig. 38: Measuring Voltage Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the EPS control unit and the torque sensor.

NO : The torque sensor wires are not shorted to power. Go to step 3.

3. Shorted wire check (torque sensor lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between these test points and body ground individually.

   Test condition IG LOCK (0)

   EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	VS1	No. 12 (RED)
	TRQ SUB	No. 13 (YEL)
	TRQ SE	No. 14 (BRN)
	VS2	No. 15 (BLU)
	PVF	No. 16 (WHT)

Fig. 39: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : The torque sensor wires are not shorted. Go to step 5.

4. Shorted wire check (torque sensor lines) 2:
   - 1. Disconnect the following connector.

     Torque sensor 6P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Torque sensor 6P connector: disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	VS1	No. 12 (RED)
	TRQ SUB	No. 13 (YEL)
	TRQ SE	No. 14 (BRN)
	VS2	No. 15 (BLU)
	PVF	No. 16 (WHT)

Fig. 40: Checking Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the torque sensor.

NO : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

5. Open wire check (torque sensor lines):
   - 1. Disconnect the following connector.

     Torque sensor 6P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Torque sensor 6P connector: disconnected

Test circuit	EPS control unit connector B (16P) Terminal	Torque sensor 6P connector Terminal
VS1	No. 12 (RED)	No. 5 (WHT)
TRQ SUB	No. 13 (YEL)	No. 3 (YEL)
TRQ SE	No. 14 (BRN)	No. 1 (BLK)
VS2	No. 15 (BLU)	No. 6 (GRN)
PVF	No. 16 (WHT)	No. 4 (RED)

Fig. 41: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The torque sensor wires are OK. Go to step 6.

NO : Repair an open in the wire between the EPS control unit and the torque sensor.

6. EPS control unit check (update):
   - 1. Reconnect the following connectors.

     EPS control unit connector B (16P)

     Torque sensor 6P connector

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-01 Torque Sensor Allowable Tolerance (Initial Diagnosis)		
52-03 Main Torque Sensor		
52-04 Sub Torque Sensor		
52-05 Torque Sensor Allowable Tolerance		

Is DTC 52-01, 52-03, 52-04 or 52-05 indicated?

YES : Go to step 7.

NO : Troubleshooting is complete.

7. EPS control unit check (substitute):
   - 1. **Substitute a known good EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0), then start the engine.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-01 Torque Sensor Allowable Tolerance (Initial Diagnosis)		
52-03 Main Torque Sensor		
52-04 Sub Torque Sensor		
52-05 Torque Sensor Allowable Tolerance		

Is DTC 52-01, 52-03, 52-04 or 52-05 indicated?

YES : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

NO : **Replace the original EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

DTC 52-02: TORQUE SENSOR POWER SUPPLY (INITIAL DIAGNOSIS)

EPS DTC Troubleshooting: 52-02

Fig. 42: EPS DTC Troubleshooting Flow Chart (Torque Sensor Power Supply (Initial Diagnosis))
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
52-02 Torque Sensor Power Supply (Initial Diagnosis)		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-02 Torque Sensor Power Supply (Initial diagnosis)		

Is DTC 52-02 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (torque sensor lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between these test points and body ground individually.

     Test condition IG ON (II)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	VS1	No. 12 (RED)
	PVF	No. 16 (WHT)

Fig. 43: Measuring Voltage Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the EPS control unit and the torque sensor.

NO : The torque sensor wires are OK. Go to step 3.

3. EPS control unit check (update):
   - 1. Turn the ignition switch to LOCK (0).

- 2. Reconnect the following connector.

  EPS control unit connector B (16P)

- 3. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
- 4. Turn the ignition switch to LOCK (0), then start the engine.
- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-02 Torque Sensor Power Supply (Initial Diagnosis)		

Is DTC 52-02 indicated?

YES : Go to step 4.

NO : Troubleshooting is complete.

4. EPS control unit check (substitution):
   - 1. **Substitute a known good EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0), then start the engine.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-02 Torque Sensor Power Supply (Initial Diagnosis)		

Is DTC 52-02 indicated?

YES : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

NO : **Replace the original EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

DTC 52-06: TORQUE SENSOR OFFSET OUT OF RANGE

EPS DTC Troubleshooting: 52-06

Fig. 44: EPS DTC Troubleshooting Flow Chart (Torque Sensor Offset Out Of Range)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
52-06 Torque Sensor Offset Out of Range		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel from lock to lock several times.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-06 Torque Sensor Offset Out of Range		

Is DTC 52-06 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (torque sensor lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between these test points and body ground individually.

     Test condition IG ON (II)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	TRQ SUB	No. 13 (YEL)
	VS2	No. 15 (BLU)

Fig. 45: Measuring Voltage Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the EPS control unit and the torque sensor.

NO : The torque sensor wires are not shorted to power. Go to step 3.

3. Shorted wire check (torque sensor lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between these test points and body ground individually.

   Test condition IG LOCK (0)

   EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	TRQ SUB	No. 13 (YEL)
	VS2	No. 15 (BLU)

Fig. 46: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : The torque sensor wires are not shorted. Go to step 5.

4. Shorted wire check (torque sensor lines) 2:
   - 1. Disconnect the following connector.

     Torque sensor 6P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Torque sensor 6P connector: disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	TRQ SUB	No. 13 (YEL)
	VS2	No. 15 (BLU)

Fig. 47: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the torque sensor.

NO : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

5. Open wire check (torque sensor lines):
   - 1. Disconnect the following connector.

     Torque sensor 6P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Torque sensor 6P connector: disconnected

Test circuit	EPS control unit connector B (16P) Terminal	Torque sensor 6P connector Terminal
TRQ SUB	No. 13 (YEL)	No. 3 (YEL)
VS2	No. 15 (BLU)	No. 6 (GRN)

Fig. 48: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The torque sensor wires are OK. Go to step 6.

NO : Repair an open in the wire between the EPS control unit and the torque sensor.

6. EPS control unit check (update):
   - 1. Reconnect the following connectors.

     EPS control unit connector B (16P)

     Torque sensor 6P connector

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel from lock to lock several times.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-06 Torque Sensor Offset Out of Range		

Is DTC 52-06 indicated?

YES : Go to step 7.

NO : Troubleshooting is complete.

7. EPS control unit check (substitution):
   - 1. **Substitute a known good EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0), then start the engine.
   - 3. Turn the steering wheel from lock to lock several times.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-06 Torque Sensor Offset Out of Range		

Is DTC 52-06 indicated?

YES : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

NO : **Replace the original EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

DTC 52-08: TORQUE SENSOR POWER SUPPLY

EPS DTC Troubleshooting: 52-08

Fig. 49: EPS DTC Troubleshooting Flow Chart (Torque Sensor Power Supply)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame

52-08 Torque Sensor Power Supply		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-08 Torque Sensor Power Supply		

Is DTC 52-08 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (torque sensor line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     EPS control unit connector B (16P): disconnected

     Test circuit PVF

     Test point 1 EPS control unit connector B (16P) No. 16 (WHT)

     Test point 2 Body ground

Fig. 50: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the EPS control unit and the torque sensor.

NO : The torque sensor wire is not shorted to power. Go to step 3.

3. Shorted wire check (torque sensor line) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between these test point and body ground.

     Test condition LOCK (0)

     EPS control unit connector B (16P): disconnected

     Test circuit PVF

     Test point 1 EPS control unit connector B (16P) No. 16 (WHT)

     Test point 2 Body ground

Fig. 51: Checking For Continuity Between Test Point And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : The torque sensor wire is OK. Go to step 5.

4. Shorted wire check (torque sensor line) 2:
   - 1. Disconnect the following connector.

     Torque sensor 6P connector

   - 2. Check for continuity between these test point and body ground.

     Test condition LOCK (0)

     EPS control unit connector B (16P): disconnected

     Torque sensor 6P connector: disconnected

     Test circuit PVF

     Test point 1 EPS control unit connector B (16P) No. 16 (WHT)

     Test point 2 Body ground

Fig. 52: Checking For Continuity Between Test Point And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the torque sensor.

NO : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

5. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector B (16P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-08 Torque Sensor Power Supply		

Is DTC 52-08 indicated?

YES : Go to step 6.

NO : Troubleshooting is complete.

6. EPS control unit check (substitution):
   - 1. **Substitute a known good EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

- 2. Turn the ignition switch to LOCK (0), then start the engine.
- 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
52-08 Torque Sensor Power Supply		

Is DTC 52-08 indicated?

YES : **Replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

NO : **Replace the original EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

DTC 61-04: MOTOR HARNESS MALFUNCTION

Fig. 53: EPS DTC Troubleshooting Flow Chart (Motor Harness Malfunction)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
61-04 Motor Harness Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-04 Motor Harness Malfunction		

Is DTC 61-04 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Open wire check (MTR lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Test circuit MTR V, MTR U

     Test point 1 EPS control unit connector B (16P) No. 1 (GRN)

     Test point 2 EPS control unit connector B (16P) No. 2 (RED)

     Test circuit MTR V, MTR W

     Test point 1 EPS control unit connector B (16P) No. 1 (GRN)

Test point 2 EPS control unit connector B (16P) No. 3 (WHT)

Test circuit MTR U, MTR W

Test point 1 EPS control unit connector B (16P) No. 2 (RED)

Test point 2 EPS control unit connector B (16P) No. 3 (WHT)

Fig. 54: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The MTR wires are OK. Go to step 4.

NO : Go to step 3.

3. Open wire check (MTR lines) 2:
   - 1. Disconnect the following connector.

     EPS motor 3P connector

   - 2. On the EPS motor side, check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor 3P connector: disconnected

     Test circuit MTR W, MTR V

     Test point 1 EPS motor 3P connector No. 1 (WHT)

     Test point 2 EPS motor 3P connector No. 2 (RED)

Test circuit MTR W, MTR U

Test point 1 EPS motor 3P connector No. 1 (WHT)

Test point 2 EPS motor 3P connector No. 3 (BLK)

Test circuit MTR U, MTR V

Test point 1 EPS motor 3P connector No. 2 (RED)

Test point 2 EPS motor 3P connector No. 3 (BLK)

Fig. 55: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open in the wire between the EPS control unit and the EPS motor.

NO : The MTR wires are OK. **REPLACE THE EPS MOTOR**.

4. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector B (16P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-04 Motor Harness Malfunction		

Is DTC 61-04 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 61-05: MOTOR HARNESS SHORT

Fig. 56: EPS DTC Troubleshooting Flow Chart (Motor Harness Short)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
61-05 Motor Harness Short		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-05 Motor Harness Short		

Is DTC 61-05 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (MTR lines to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between these test points and body ground individually.

     Test condition IG ON (II)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

Fig. 57: Measuring Voltage Between These Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the EPS control unit and the EPS motor.

NO : The MTR wires are not shorted to power. Go to step 3.

3. Shorted wire check (MTR lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between these test points and body ground individually.

   Test condition IG LOCK (0)

   EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

Fig. 58: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : The MTR wires are OK. Go to step 5.

4. Shorted wire check (MTR lines) 2:
   - 1. Disconnect the following connector.

     EPS motor 3P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor 3P connector: disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

Fig. 59: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the EPS motor.

NO : The MTR wires are OK. **REPLACE THE EPS MOTOR**.

5. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector B (16P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-05 Motor Harness Short		

Is DTC 61-05 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 61-06: MOTOR HARNESS OPEN

EPS DTC Troubleshooting: 61-06

Fig. 60: EPS DTC Troubleshooting Flow Chart (Motor Harness Open)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
61-06 Motor Harness Open		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel from lock to lock several times.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-06 Motor Harness Open		

Is DTC 61-06 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Shorted wire check (MTR lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

Fig. 61: Motor Harness Open
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 3.

NO : The MTR wires are not shorted. Go to step 4.

3. Shorted wire check (MTR lines) 2:
   - 1. Disconnect the following connector.

     EPS motor 3P connector

   - 2. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor 3P connector: disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	MTR V	No. 1 (GRN)
	MTR U	No. 2 (RED)
	MTR W	No. 3 (WHT)

<u>Fig. 62: Checking For Continuity Between Test Points And Body Ground</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the EPS control unit and the EPS motor.

NO : The MTR wires are OK. **<u>REPLACE THE EPS MOTOR</u>**.

4. Open wire check (MTR lines) 1:
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Test circuit MTR V, MTR U

     Test point 1 EPS control unit connector B (16P) No. 1 (GRN)

     Test point 2 EPS control unit connector B (16P) No. 2 (RED)

     Test circuit MTR V, MTR W

     Test point 1 EPS control unit connector B (16P) No. 1 (GRN)

     Test point 2 EPS control unit connector B (16P) No. 3 (WHT)

     Test circuit MTR U, MTR W

     Test point 1 EPS control unit connector B (16P) No. 2 (RED)

     Test point 2 EPS control unit connector B (16P) No. 3 (WHT)

Fig. 63: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The MTR wires are OK. Go to step 6.

NO : Go to step 5.

5. Open wire check (MTR lines) 2:
   - 1. Disconnect the following connector.

     EPS motor 3P connector

   - 2. On the EPS motor side, check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor 3P connector: disconnected

     Test circuit MTR W, MTR V

     Test point 1 EPS motor 3P connector No. 1 (WHT)

     Test point 2 EPS motor 3P connector No. 2 (RED)

     Test circuit MTR W, MTR U

     Test point 1 EPS motor 3P connector No. 1 (WHT)

     Test point 2 EPS motor 3P connector No. 3 (BLK)

     Test circuit MTR U, MTR V

Test point 1 EPS motor 3P connector No. 2 (RED)

Test point 2 EPS motor 3P connector No. 3 (BLK)

Fig. 64: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open in the wire between the EPS control unit and the EPS motor.

NO : The MTR wires are OK. **REPLACE THE EPS MOTOR**.

6. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector B (16P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel from lock to lock several times.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-06 Motor Harness Open		

Is DTC 61-06 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 71-01: MOTOR ANGLE SENSOR (SIN/COS SIGNALS); DTC 71-02: MOTOR ANGLE SENSOR (NEUTRAL POSITION LEARNING OF SIN/COS)

EPS DTC Troubleshooting: 71-01, 71-02

Fig. 65: EPS DTC Troubleshooting Flow Chart (Motor Angle Sensor)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
71-01 Motor Angle Sensor (SIN/COS Signals)		
71-02 Motor Angle Sensor (Neutral Position Learning of SIN/COS)		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel to the right or left, and wait for at least 10 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
71-01 Motor Angle Sensor (SIN/COS Signals)		
71-02 Motor Angle Sensor (Neutral Position Learning of SIN/COS)		

Is DTC 71-01 or 71-02 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. EPS motor angle sensor internal resistance check (RESOLVER lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     EPS control unit connector B (16P)

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     Test circuit RESOLVER R1, RESOLVER R2

     Test point 1 EPS control unit connector B (16P) No. 10 (ORN)

     Test point 2 EPS control unit connector B (16P) No. 8 (LT BLU)

Test circuit RESOLVER S1, RESOLVER S3

Test point 1 EPS control unit connector B (16P) No. 5 (GRN)

Test point 2 EPS control unit connector B (16P) No. 4 (LT GRN)

Test circuit RESOLVER S2, RESOLVER S4

Test point 1 EPS control unit connector B (16P) No. 7 (PUR)

Test point 2 EPS control unit connector B (16P) No. 6 (PNK)

Fig. 66: Measuring Resistance Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance between RESOLVER R1-RESOLVER R2 10-22 ohms, RESOLVER S1-RESOLVER S3 20-47 ohms, and RESOLVER S2-RESOLVER S4 20-47 ohms?

YES : Go to step 3.

NO : Go to step 5.

3. Shorted wire check (RESOLVER lines) 1:
   - 1. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

Connector	Test circuit	Terminal
EPS control unit connector B (16P)	RESOLVER R1	No. 10 (ORN)
	RESOLVER R2	No. 8 (LT BUL)
	RESOLVER S1	No. 5 (GRN)

	RESOLVER S2	No. 7 (PUR)
	RESOLVER S3	No. 4 (LT GRN)
	RESOLVER S4	No. 6 (PNK)

Fig. 67: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 4.

NO : The RESOLVER wires are OK. Go to step 6.

4. Shorted wire check (RESOLVER lines) 2:
   - 1. Disconnect the following connector.

     EPS motor angle sensor 8P connector

   - 2. On the sensor side, check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor angle sensor 8P connector: disconnected

Connector	Test circuit	Terminal
EPS motor angle sensor 8P connector	RESOLVER R1	No. 4 (BRN)
	RESOLVER R2	No. 8 (BRN)
	RESOLVER S1	No. 7 (YEL)

	RESOLVER S2	No. 2 (BLK)
	RESOLVER S3	No. 6 (BLU)
	RESOLVER S4	No. 3 (RED)

Fig. 68: Checking For Continuity Between Test Points And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RESOLVER wires are OK. **REPLACE THE EPS MOTOR**.

NO : Repair a short to body ground in the wire between the EPS motor angle sensor and the EPS control unit.

5. EPS motor angle sensor internal resistance check (RESOLVER lines) 2:
   - 1. Disconnect the following connector.

     EPS motor angle sensor 8P connector

   - 2. On the sensor side, measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector B (16P): disconnected

     EPS motor angle sensor 8P connector: disconnected

     Test circuit RESOLVER S2, RESOLVER S4

     Test point 1 EPS motor angle sensor 8P connector No. 2 (BLK)

     Test point 2 EPS motor angle sensor 8P connector No. 3 (RED)

Test circuit RESOLVER S3, RESOLVER S1

Test point 1 EPS motor angle sensor 8P connector No. 6 (BLU)

Test point 2 EPS motor angle sensor 8P connector No. 7 (YEL)

Test circuit RESOLVER R1, RESOLVER R2

Test point 1 EPS motor angle sensor 8P connector No. 8 (BRN)

Test point 2 EPS motor angle sensor 8P connector No. 4 (BRN)

Fig. 69: Measuring Resistance Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance between RESOLVER R1-RESOLVER R2 10-22 ohms, RESOLVER S1-RESOLVER S3 20-47 ohms, and RESOLVER S2-RESOLVER S4 20-47 ohms?

YES : Repair an open or a short to body ground in the wire between the EPS motor angle sensor and the EPS control unit.

NO : **REPLACE THE EPS MOTOR**.

6. EPS control unit check (update):
   - 1. Reconnect the following connector.

     EPS control unit connector B (16P)

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Turn the steering wheel to the right or left, and wait for at least 10 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
71-01 Motor Angle Sensor (SIN/COS Signals)		
71-02 Motor Angle Sensor (Neutral Position Learning of SIN/COS)		

Is DTC 71-01 or 71-02 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 81-03: YAW RATE SENSOR MALFUNCTION; DTC 85-01: PROBLEM IN VSA SYSTEM

Fig. 70: EPS DTC Troubleshooting Flow Chart (Yaw Rate Sensor Malfunction And Problem In VSA System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
81-03 Yaw Rate Sensor Malfunction		
85-01 Problem in VSA System		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then start the engine.
   - 4. Wait 30 seconds or more.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
81-03 Yaw Rate Sensor Malfunction		
85-01 Problem in VSA System		

Is DTC 81-03 or 85-01 indicated?

YES : The failure is duplicated. **GO TO VSA SYSTEM TROUBLESHOOTING** .

NO : Intermittent failure, the system is OK at this time.

DTC 83-01: CAN COMMUNICATION FAILURE; DTC 83-02: CAN COMMUNICATION TIMEOUT ERROR

Fig. 71: EPS DTC Troubleshooting Flow Chart (CAN Communication Failure And Timeout Error)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT**

THE EPS.

- **Diagnose and repair any Powertrain DTCs first.**

DTC Description	DTC	Freeze Frame
83-01 CAN Communication Failure		
83-02 CAN Communication Timeout Error		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Wait 60 seconds or more.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
83-01 CAN Communication Failure		
83-02 CAN Communication Timeout Error		

Is DTC 83-01 or 83-02 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Open wire check (F CAN-H line, F CAN-L lines) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     EPS control unit connector A (11P)

     VSA modulator-control unit 38P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector A (11P): disconnected

     VSA modulator-control unit 38P connector: disconnected

     Test circuit F CAN-H

     Test point 1 EPS control unit connector A (11P) No. 7 (WHT)

Test point 2 VSA modulator-control unit 38P connector No. 38 (WHT)

Test circuit F CAN-L

Test point 1 EPS control unit connector A (11P) No. 9 (RED)

Test point 2 VSA modulator-control unit 38P connector No. 26 (RED)

Fig. 72: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Go to step 3.

NO : Repair open in the wire between the EPS control unit and the VSA modulator-control unit.

3. Open wire check (F CAN-H line, F CAN-L lines) 2:
   - 1. Reconnect the following connector.

     VSA modulator-control unit 38P connector

   - 2. Disconnect the following connectors.

     Steering angle sensor 4P connector

   - 3. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

EPS control unit connector A (11P): disconnected

Steering angle sensor 4P connector: disconnected

Test circuit F CAN-H

Test point 1 EPS control unit connector A (11P) No. 7 (WHT)

Test point 2 Steering angle sensor 4P connector No. 2 (WHT)

Test circuit F CAN-L

Test point 1 EPS control unit connector A (11P) No. 9 (RED)

Test point 2 Steering angle sensor 4P connector No. 3 (RED)

Fig. 73: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Go to step 4.

NO : Repair open in the wire between the EPS control unit and the steering angle sensor.

4. EPS control unit check (update):
   - 1. Reconnect the following connectors.

     EPS control unit connector A (11P)

     VSA modulator-control unit 38P connector

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Wait 60 seconds or more.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
83-01 CAN Communication Failure		
83-02 CAN Communication Timeout Error		

Is DTC 83-01 or 83-02 indicated?

YES : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete.

DTC 84-01: STEERING ANGLE SENSOR MALFUNCTION

Fig. 74: EPS DTC Troubleshooting Flow Chart (Steering Angle Sensor Malfunction)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE EPS.**

DTC Description	DTC	Freeze Frame
84-01 Steering Angle Sensor Malfunction		

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Clear the DTC with the HDS.
    - 3. Turn the ignition switch to LOCK (0), then start the engine.
    - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
84-01 Steering Angle Sensor Malfunction		

Is DTC 84-01 indicated?

YES : The failure is duplicated. **REPLACE THE STEERING ANGLE SENSOR** .

NO : Intermittent failure, the system is OK at this time.

EPS MOTOR REMOVAL AND INSTALLATION

REMOVAL

NOTE: Do not allow dust, dirt, or other foreign materials to enter the steering gearbox.

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 75: Identifying Front Bumper, Splash Shield, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 76: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. EPS Motor
    1. Disconnect the EPS motor connector (A) by pushing the lock (B) and pulling up the lever (C).
    2. Disconnect the EPS motor angle sensor connector (D).
    3. Remove the harness clips (E).

Fig. 77: Pushing Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the EPS motor (A) and O-ring (B).

Fig. 78: Identifying EPS Motor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Do not allow dust, dirt, or other foreign materials to enter the steering gearbox.**

1. EPS Motor
    1. Apply steering grease to the new O-ring (A).
    2. Apply steering grease into the EPS motor shaft (B).
    3. Install the O-ring to the EPS motor (C).
    4. Install the EPS motor.

Fig. 79: Identifying Grease Applying Areas Of EPS Motor Shaft And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pull down the lever (A) of the EPS motor connector (B), then confirm the connector is fully seated.
6. Connect the EPS motor angle sensor connector (C)
7. Install the harness clips (D).

Fig. 80: Pulling Down EPS Motor Connector Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 81: Identifying Front Floor Undercover, Clips And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 82: Identifying Front Splash Shield, Clips And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EPS INDICATOR DOES NOT COME ON

Fig. 83: EPS Symptom Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Gauge control module check:
    - 1. Turn the ignition switch to ON (II).
    - 2. Check the EPS indicator.

Does the EPS indicator come on?

YES : Intermittent failure, the system is OK at this time.

NO : **GO TO GAUGE CONTROL MODULE TROUBLESHOOTING** .

EPS INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

Fig. 84: EPS Symptom Troubleshooting Flow Chart (EPS Indicator Does Not Go Off, And No DTCs Are Stored)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Fuse check 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B24 (7.5 A)

     Location Under-dash fuse/relay box

   Is the fuse OK?

   YES : The fuse is OK. Reinstall the fuse, then go to step 2.

   NO : Replace the fuse. Turn the ignition switch to ON (II), then turn it to LOCK (0) again.

   If the fuse blows again, repair the short to ground on the No. B24 (7.5 A) fuse circuit.

2. Fuse check 2:
   - 1. Check the following fuse.

     Fuse No. A1-1 (70 A)

     Location Under-hood fuse/relay box

   Is the fuse OK?

   YES : The fuse is OK. Reinstall the fuse, then go to step 3.

   NO : Replace the fuse. If the fuse blows again, repair the short to ground on the No. A1-1 (70 A) fuse circuit.

3. Open wire check (IG1 VSA/ABS line):
   - 1. Disconnect the following connector.

     EPS control unit connector A (11P)

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     EPS control unit connector A (11P): disconnected

     Test circuit IG1 VSA/ABS

Test point 1 EPS control unit connector A (11P) No. 11 (PUR)

Test point 2 Body ground

Fig. 85: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 VSA/ABS wire is OK. Go to step 4.

NO : Repair an open in the wire between the EPS control unit and the No. B24 (7.5 A) fuse in the under-dash fuse/relay box.

4. Open wire check (+B EPS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector A (11P): disconnected

     Test circuit +B EPS

     Test point 1 EPS control unit connector A (11P) No. 2 (WHT)

     Test point 2 Body ground

Fig. 86: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B EPS wire is OK. Go to step 5.

NO : Repair an open in the wire between the EPS control unit and the No. A1-1 (70 A) fuse in the under-hood fuse/relay box.

5. Open wire check (GND line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     EPS control unit connector A (11P): disconnected

     Test circuit GND

     Test point 1 EPS control unit connector A (11P) No. 1 (BLK)

     Test point 2 Body ground

Fig. 87: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 6.

NO : Repair an open in the wire between the EPS control unit and body ground (G403).

6. Open wire check (F CAN-H, F CAN-L lines):
    - 1. Disconnect the following connector.

      Gauge control module 32P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      EPS control unit connector A (11P): disconnected

      Gauge control module 32P connector: disconnected

      Test circuit F CAN-H

      Test point 1 EPS control unit connector A (11P) No. 7 (WHT)

      Test point 2 Gauge control module 32P connector No. 19 (WHT)

      Test circuit F CAN-L

      Test point 1 EPS control unit connector A (11P) No. 9 (RED)

      Test point 2 Gauge control module 32P connector No. 20 (RED)

Fig. 88: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H, F CAN-L wires are OK. Go to step 7.

NO : Repair an open in the wire between the EPS control unit and the gauge control module.

7. EPS control unit check (update):
   - 1. Reconnect the following connectors.

     EPS control unit connector A (11P)

     Gauge control module 32P connector

   - 2. **Update the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE** if it does not have the latest software.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check the EPS indicator.

Does the EPS indicator come on, then go off?

YES : Troubleshooting is complete.

NO : **Replace the EPS control unit** See **EPS CONTROL UNIT REMOVAL AND INSTALLATION** or **EPS CONTROL UNIT UPDATE**.

EPS SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

Symptom	Diagnostic Procedure
HDS does not communicate with the EPS control unit or the vehicle	**TROUBLESHOOT THE DLC CIRCUIT** .
Steering pull	**SYMPTOM TROUBLESHOOTING** .
EPS indicator does not come on	**SYMPTOM TROUBLESHOOTING** .
EPS indicator does not go off, and no DTCs are stored	**SYMPTOM TROUBLESHOOTING** .
EPS indicator is not on, no DTCs are stored, but there is no power assist or power assist is reduced	○ 1. Check the EPS motor power wires between the EPS control unit and the EPS motor for a short to body ground. Repair as needed. ○ 2. If the EPS motor power wires are OK, replace the EPS motor (short in the EPS motor). ○ 3. Check the power and body ground connections at the EPS control unit.

STEERING PULL

Fig. 89: EPS Symptom Troubleshooting Flow Chart (Steering Pull)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Motion Adaptive EPS system check:
   - 1. Turn off the Motion Adaptive EPS System operation with HDS.
   - 2. Test-drive the vehicle.

   Is there steering pull?

YES : Go to step 2.

NO : **DO THE STEERING ANGLE SENSOR NEUTRAL POSITION CLEAR** .

2. EPS system check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      EPS control unit connector A (11P)

    - Test-drive the vehicle.

Is there steering pull?

YES : Make sure the suspension is not modified, and **ADJUST THE WHEEL ALIGNMENT** . Also check the tire pressure, tire size, and for abnormal tread wear.

NO : Do the torque sensor neutral position memorization, then retest. If it is NG, **replace the steering gearbox** See **STEERING GEARBOX DISASSEMBLY AND REASSEMBLY** or **STEERING GEARBOX REMOVAL AND INSTALLATION** .

EMISSION APPLICATIONS

2013 CR-V

Engine & Fuel System	(1) Emission Control Systems & Devices	EGR Test No.
2.4L (144") 4-Cyl. SFI	**PCV, (2) EVAP, WU-TWC, TWC, FR, (2) SPK, AFS, HO2S, CEC, (2) MIL** EVAP-CPCSV, EVAP-CVSV, EVAP-EV, EVAP-TWV, EVAP-VC, EVAP-VCF, ORVR-FTVCV, ORVR-FTVRV, FTPS	...

(1) Major emission control systems and devices are listed in bold type. Components and other related devices are listed in light type.

(2) PCM-controlled.

THROTTLE BODY CLEANING

REMOVAL

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

1. Air Cleaner Element - Inspection
    1. Check for damage to the air cleaner element. If the air cleaner element is damaged, replace it.

NOTE: Do not use compressed air to clean the air cleaner element.

2. Intake Air Duct
    1. Remove the intake air duct.

Fig. 1: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Throttle Body Assembly
    1. Disconnect the connector (A), then remove the clamps (B).

Fig. 2: Identifying Throttle Body, Water Bypass Hoses, Connector And Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the water bypass hoses (C), and plug them.
3. Remove the throttle body (D).

CLEANING

1. Throttle Body - Cleaning
    1. Clean off the carbon from the throttle valve and inside the throttle body with a paper towel soaked carburetor cleaner.

NOTE:

- **Remove the throttle body to clean it.**
- **Be careful not to pinch your fingers.**
- **To avoid removing the molybdenum coating, do not clean the bearing area of the throttle shaft (A).**
- **Do not spray carburetor cleaner directly on the throttle body.**
- **Use genuine Honda carburetor cleaner.**

Fig. 3: Identifying Throttle Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

1. Throttle Body Assembly
    1. Install the throttle body (A) with a new gasket (B).

NOTE: If the throttle body is dirty, clean it before installation.

Fig. 4: Identifying Throttle Body, Water Bypass Hoses, Connector, Gasket And Clamp

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the plug then connect the water bypass hoses (C)
3. Install the clamp (D) and connect the connector (E).

2. Intake Air Duct
   1. Install the intake air duct.

Fig. 5: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Coolant - Check
   1. Check at the coolant level in the coolant reservoir. Make sure it is between the MAX mark (A) and MIN mark (B).
   2. If the coolant level in the coolant reservoir is at or below the MIN mark, add coolant to bring it between the MIN and MAX marks, then inspect the cooling system for leaks.
   3. Check the coolant level in the radiator, and add Honda Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck, if needed.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2. Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.**

Fig. 6: Identifying MIN And MAX Marks On Coolant Reservoir
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 7: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. PCM - Reset
    1. Reset the PCM with the HDS while the engine is stopped.
    2. Turn the ignition switch to LOCK (0).

    3. Turn the ignition switch to ON (II), and wait 30 seconds.
6. TP Position - Check
    1. Select the INSPECTION MENU on the HDS.
    2. Do the TP POSITION CHECK in the ETCS TEST.
    3. Turn the ignition switch to LOCK (0).
7. Warm Up The Engine

    Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on, then let it idle.

8. PCM - Idle Learn
    1. Let the engine idle for about 5 minutes with the throttle fully closed.

        NOTE: If the radiator fan comes on, do not include its running time in the 5 minutes.

    2. After learning, turn the ignition switch to LOCK (0).

THROTTLE BODY DISASSEMBLY AND REASSEMBLY

EXPLODED VIEW

THROTTLE BODY REMOVAL AND INSTALLATION

REMOVAL

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is in ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

1. Intake Air Duct
    1. Remove the intake air duct.

Fig. 9: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Throttle Body Assembly
    1. Disconnect the connector (A), then remove the clamps (B).

Fig. 10: Identifying Throttle Body, Water Bypass Hoses, Connector And Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Disconnect the water bypass hoses (C), and plug them.
    3. Remove the throttle body (D).

INSTALLATION

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch to ON (II) or while the ignition switch is in ON (II). If you

do, you will seriously injure your fingers if the throttle valve is activated.

1. Throttle Body Assembly
    1. Install the throttle body (A) with a new gasket (B).

NOTE: **If the throttle body is dirty, clean it before installation.**

Fig. 11: Identifying Throttle Body, Water Bypass Hoses, Connector, Gasket And Clamp With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the plug then connect the water bypass hoses (C)
    3. Install the clamp (D) and connect the connector (E).
2. Intake Air Duct
    1. Install the intake air duct.

Fig. 12: Identifying Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Coolant - Check
    1. Check at the coolant level in the coolant reservoir. Make sure it is between the MAX mark (A) and MIN mark (B).
    2. If the coolant level in the coolant reservoir is at or below the MIN mark, add coolant to bring it between the MIN and MAX marks, then inspect the cooling system for leaks.
    3. Check the coolant level in the radiator, and add Honda Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck, if needed.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2. Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.**

Fig. 13: Identifying MAX And MIN Marks On Coolant Reservoir
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 14: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. PCM - Reset
    1. Reset the PCM with the HDS while the engine is stopped.
    2. Turn the ignition switch to LOCK (0).
    3. Turn the ignition switch to ON (II), and wait 30 seconds.
6. TP Position - Check
    1. Select the INSPECTION MENU on the HDS.
    2. Do the TP POSITION CHECK in the ETCS TEST.
    3. Turn the ignition switch to LOCK (0).
7. Warm Up The Engine

    Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on, then let it idle.

8. PCM - Idle Learn
    1. Let the engine idle for about 5 minutes with the throttle fully closed.

        NOTE: If the radiator fan comes on, do not include its running time in the 5 minutes.

    2. After learning, turn the ignition switch to LOCK (0).

THROTTLE BODY TEST

TEST

1. HDS DLC - Connection

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 15: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Warm Up The Engine

   Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on, then let it idle.

3. Throttle Body - Test
   1. Check the REL TP SENSOR in the DATA LIST with the HDS. The reading should be below 2.46 percent. If it is not, clean the throttle body.

UNDER-FLOOR TWC REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	O2 Sensor Socket Wrench Snap-on SWR2 or O2 Sensor Wrench Snap-on YA8875, commercially available

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 16: Identifying Front Floor Undercover Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Secondary HO2S
    1. Remove the secondary HO2S (A).

Fig. 17: Identifying Secondary HO2S
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Under-Floor TWC
    1. Remove the under-floor TWC (A).

Fig. 18: Identifying Under-Floor TWC And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Under-Floor TWC
    1. Install the under-floor TWC (A) with new gaskets (B).

Fig. 19: Identifying Under-Floor TWC And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Secondary HO2S
    1. Install the secondary HO2S (A).

Fig. 20: Identifying Secondary HO2S And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 21: Identifying Front Floor Undercover Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WARM UP TWC REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	O2 Sensor Socket Wrench Snap-on SWR2 or O2 Sensor Wrench Snap-on YA8875, commercially available

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 22: Identifying Front Splash Shield Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before removal.

1. Remove the caps (A) and nuts (B).
2. Remove the wiper arms (C).

Fig. 23: Identifying Wiper Arm, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 24: Identifying Front Fender Trim Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 25: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

<u>Fig. 26: Removing Side Cowl Cover</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

Fig. 27: Identifying Center Cowl Cover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Under-Cowl Panel
    1. Disconnect the connector (A).
    2. Remove the bolts and the nuts, then remove the under-cowl panel (B).
    3. Remove the wire harness (C) from the under-cowl panel.

Fig. 28: Identifying Under-Cowl Panel, Connecter And Wire Harness

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. A/F Sensor
    1. Remove the A/F sensor (A).

Fig. 29: Identifying A/F Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Exhaust Chamber Cover
    1. Remove the exhaust chamber cover (A).

Fig. 30: Identifying Exhaust Chamber Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. WU-TWC

1. Separate the lower side of the WU-TWC (A) from the under-floor TWC (B).

Fig. 31: Identifying WU-TWC Lower Side And Under-Floor TWC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the WU-TWC (C).
3. Remove the WU-TWC cover (D).

Fig. 32: Identifying WU-TWC And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. WU-TWC
    1. Install the upper side of the WU-TWC (A) with a new gasket (B).
    2. Install the WU-TWC cover (C).

Fig. 33: Identifying WU-TWC, Cover, Gasket And Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the lower side of the WU-TWC with a new gasket (A).

Fig. 34: Identifying WU-TWC Lower Side, Gasket And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Exhaust Chamber Cover
    1. Install the exhaust chamber cover (A).

Fig. 35: Identifying Exhaust Chamber Cover, Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/F Sensor
    1. Install the A/F sensor (A).

Fig. 36: Identifying A/F Sensor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Under-Cowl Panel
    1. Install the under-cowl panel (A), then install the bolts and the nuts.
    2. Install the wire harness (B) to the under-cowl panel.
    3. Connect the connector (C).

Fig. 37: Identifying Under-Cowl Panel, Wire Harness, Connecter And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 38: Identifying Center Cowl Cover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

    1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
    2. Right side; Install the windshield washer tube.

Fig. 39: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

Fig. 40: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

Fig. 41: Identifying Front Fender Trim Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 42: Identifying Wiper Arms, Caps And Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

<u>Fig. 43: Identifying Front Splash Shield Fasteners</u>

GENERAL INFORMATION

Engine Overhaul Procedures

* PLEASE READ THIS FIRST *

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

DESCRIPTION

Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of cleaning, inspection, and assembly processes are included.

ENGINE IDENTIFICATION

Engine may be identified from Vehicle Identification Number (VIN) stamped on a metal tab. Metal tab may be located in different locations depending on manufacturer. Engine identification number or serial number is located on cylinder block. Location varies with each manufacturer.

INSPECTION PROCEDURES

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GENERAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes**

of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Engine components must be inspected to meet manufacturer's specifications and tolerances during overhaul. Proper dimensions and tolerances must be met to obtain proper performance and maximum engine life.

Micrometers, depth gauges and dial indicator are used for checking tolerances during engine overhaul. Magnaflux, Magnaglo, dye-check, ultrasonic and x-ray inspection procedures are used for parts inspection.

MAGNETIC PARTICLE INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Magnaflux & Magnaglo

Magnaflux is an inspection technique used to locate material flaws and stress cracks. Component is subjected to a strong magnetic field. Entire component or a localized area can be magnetized. Component is coated with either a wet or dry material that contains fine magnetic particles.

Cracks which are outlined by the particles cause an interruption of magnetic field. Dry powder method of Magnaflux can be used in normal lighting and crack appears as a bright line.

Fluorescent liquid is used along with a Black light in the Magnaglo Magnaflux system. Darkened room is required for this procedure. The crack will appear as a glowing line. Complete demagnetizing of component upon completion is required on both procedures. Magnetic particle inspection applies to ferrous materials only.

PENETRANT INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Zyglo

The Zyglo process coats material with a fluorescent dye penetrant. Component is often warmed to expand cracks that will be penetrated by the dye. Using darkened room and Black light, component is inspected for cracks. Crack will glow brightly.

Developing solution is often used to enhance results. Parts made of any material, such as aluminum cylinder heads or plastics, may be tested using this process.

Dye Check

Penetrating dye is sprayed on the previously cleaned component. Dye is left on component for 5-45 minutes, depending upon material density. Component is then wiped clean and sprayed with a developing solution. Surface cracks will show up as a bright line.

ULTRASONIC INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

If an expensive part is suspected of internal cracking, ultrasonic testing is used. Sound waves are used for component inspection.

X-RAY INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

This form of inspection is used on highly stressed components. X-ray inspection may be used to detect internal and external flaws in any material.

PRESSURE TESTING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen**

to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Cylinder heads can be tested for cracks using a pressure tester. Pressure testing is performed by plugging all but one of the holes of cylinder head and injecting air or water into the open passage.

Leaks are indicated by the appearance of wet or damp areas when using water. When air is used, it is necessary to spray the head surface with a soap solution. Bubbles will indicate a leak. Cylinder head may also be submerged in water heated to specified temperature to check for cracks created during heat expansion.

CLEANING PROCEDURES

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GENERAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

All components of an engine do not have the same cleaning requirements. Physical methods include bead blasting and manual removal. Chemical methods include solvent blast, solvent tank, hot tank, cold tank and steam cleaning of components.

BEAD BLASTING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen**

to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Manual removal of deposits may be required prior to bead blasting, followed by some other cleaning method. Carbon, paint and rust may be removed using bead blasting method. Components must be free of oil and grease prior to bead blasting. Beads will stick to grease or oil soaked areas causing area not to be cleaned.

Use air pressure to remove all trapped residual beads from component after cleaning. After cleaning internal engine parts made of aluminum, wash thoroughly with hot soapy water. Component must be thoroughly cleaned as glass beads will enter engine oil resulting in bearing damage.

CHEMICAL CLEANING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Solvent tank is used for cleaning oily residue from components. Solvent blasting sprays solvent through a siphon gun using compressed air.

The hot tank, using heated caustic solvents, is used for cleaning ferrous materials only. DO NOT clean aluminum parts such as cylinder heads, bearings or other soft metals using the hot tank. After cleaning, flush parts with hot water.

A non-ferrous part will be ruined and caustic solution will be diluted if placed in the hot tank. Always use eye protection and gloves when using the hot tank.

Use of a cold tank is for cleaning aluminum cylinder heads, carburetors and other soft metals. A less caustic and unheated solution is used. Parts may be left in the tank for several hours without damage. After cleaning, flush parts with hot water.

Steam cleaning, with boiling hot water sprayed at high pressure, is recommended as the final cleaning process when using either hot or cold tank cleaning.

COMPONENT CLEANING

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

SHEET METAL PARTS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Examples of sheet metal parts are rocker covers, front and side covers, oil pan and bellhousing dust cover. Glass bead blasting or hot tank may be used for cleaning.

Ensure all mating surfaces are flat. Deformed surfaces should be straightened. Check all sheet metal parts for cracks and dents.

INTAKE & EXHAUST MANIFOLDS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Using solvent cleaning or bead blasting, clean manifolds for inspection. If intake manifold has an exhaust crossover, all carbon deposits must be removed. Inspect manifolds for cracks, burned or eroded areas, corrosion and damage to fasteners.

Exhaust heat and products of combustion cause threads of fasteners to corrode. Replace studs and bolts as necessary. On "V" type intake manifolds, sheet metal oil shield must be removed for proper cleaning and inspection. Ensure all manifold parting surfaces are flat and free of burrs.

CYLINDER HEAD REPLACEMENT

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Remove intake and exhaust manifolds and valve cover. Cylinder head and camshaft carrier bolts (if equipped) should be removed only when engine is cold. On many aluminum cylinder heads, removal while hot will cause cylinder head warpage. Mark rocker arm or overhead cam components for location.

Remove rocker arm components or overhead cam components. Components must be installed in original location. Individual design rocker arms may utilize shafts, ball-type pedestal mounts or no rocker arms. For all design types, wire components together and identify according to corresponding valve. Remove cylinder head bolts. Note length and location. Some applications require cylinder head bolts be removed in proper sequence to prevent cylinder head damage. See **Fig. 1**. Remove cylinder head.

INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ensure all surfaces and head bolts are clean. Check that head bolt holes of cylinder block are clean and dry to prevent block damage when bolts are tightened. Clean threads with tap to ensure accurate bolt torque.

Install head gasket on cylinder block. Some manufacturers may recommend sealant be applied to head gasket prior to installation. Note that all holes are aligned. Some gasket applications may be marked so that certain area faces upward. Install cylinder head using care not to damage head gasket. Ensure cylinder head is fully seated on cylinder block.

Some applications require head bolts be coated with sealant prior to installation. This is done if head bolts are exposed to coolant passages. Some applications require head bolts be coated with light coat of engine oil.

Install head bolts. Head bolts should be tightened in proper steps and sequence to specification. See **Fig. 1**. Install remaining components. Tighten all bolts to specification. Adjust valves if required. See VALVE ADJUSTMENT.

NOTE: **Some manufacturers require that head bolts be retightened after specified amount of operation. This must be done to prevent head gasket failure.**

Fig. 1: Typical Cylinder Head Tightening or Loosening Sequence

VALVE ADJUSTMENT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Engine specifications will indicate valve train clearance and temperature at which adjustment is to be made on most models. In most cases, adjustment will be made with a cold engine. In some cases, both a cold and a hot clearance will be given for maintenance convenience.

On some models, adjustment is not required. Rocker arms are tightened to specification and valve lash is automatically set. On some models with push rod actuated valve train, adjustment is made at push rod end of rocker arm while other models do not require adjustment.

Clearance will be checked between tip of rocker arm and tip of valve stem in proper sequence using a feeler gauge. Adjustment is made by rotating adjusting screw until proper clearance is obtained. Lock nut is then tightened. Engine will be rotated to obtain all valve adjustments to manufacturer's specifications.

Some models require hydraulic lifter to be bled down and clearance measured. Push rods of different length can be used to obtain proper clearance. Clearance will be checked between tip of rocker arm and tip of valve stem in proper sequence using a feeler gauge.

Overhead cam engines designed without rocker arms actuate valves directly on a cam follower. A hardened, removable disc is installed between the cam lobe and lifter. Clearance will be checked between cam heel and adjusting disc in proper sequence using a feeler gauge. Engine will be rotated to obtain all valve adjustments.

On overhead cam engines designed with rocker arms, adjustment is made at valve end of rocker arm. Ensure valve to be adjusted is riding on heel of cam on all engines. Clearance will be checked between tip of rocker arm and tip of valve stem in proper sequence using a feeler gauge. Adjustment is made by rotating adjusting screw until proper clearance is obtained. Lock nut is then tightened. Engine will be rotated to obtain all valve adjustments to manufacturer's specifications.

CYLINDER HEAD OVERHAUL

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

CYLINDER HEAD DISASSEMBLY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES

section for complete overhaul procedures and specifications for the vehicle being repaired.

Mark valves for location. Using valve spring compressor, compress valve springs. Remove valve locks. Carefully release spring compressor. Remove retainer or rotator, valve spring, spring seat and valve. See **Fig. 2**.

Fig. 2: Exploded View of Valve Assemblies

CYLINDER HEAD CLEANING & INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Clean cylinder head and valve components using approved cleaning methods. Inspect cylinder head for cracks, damage or warped gasket surface. Place straightedge across gasket surface. Determine clearance at center of straightedge. Measure across both diagonals, longitudinal center line and across cylinder head at several points. See **Fig. 3**.

On cast iron cylinder heads, if warpage exceeds .003" (.08 mm) in a 6" span, or .006" (.15 mm) over total length, cylinder head must be resurfaced. On most aluminum cylinder heads, if warpage exceeds .002" (.05 mm) in any area, cylinder head must be resurfaced. Warpage specification may vary by manufacturer. If warpage exceeds specification on some cylinder heads, cylinder head must be replaced.

Cylinder head thickness should be measured to determine amount of material which can be removed before replacement is required. Cylinder head thickness must not be less than the manufacturer's specification.

If cylinder head required resurfacing, it may not align properly with intake manifold. On "V" type engines, misalignment is corrected by machining intake manifold surface that contacts cylinder head. Cylinder head may be machined on surface that contacts intake manifold. Using oil stone, remove burrs or scratches from all sealing surfaces.

Fig. 3: Checking Cylinder Head for Warpage

VALVE SPRINGS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Inspect valve springs for corroded or pitted valve spring surfaces which may lead to breakage. Polished spring ends caused by a rotating spring indicate that spring surge has occurred. Replace springs showing evidence of these conditions.

Inspect valve springs for squareness using a 90-degree straightedge. See **Fig. 4**. Replace valve spring if out-of-square exceeds manufacturer's specification.

Fig. 4: Checking Valve Spring Squareness

Using vernier caliper, measure free length of all valve springs. Replace springs if not within specification. Using valve spring tester, test valve spring pressure at installed and compressed heights. See **Fig. 5**.

Usually compressed height is installed height minus valve lift. Replace valve spring if not within specification. It is recommended to replace all valve springs when overhauling cylinder head. Valve springs may need to be installed with color coded end or small coils at specified area according to manufacturer.

Fig. 5: Checking Valve Spring Pressure

VALVE GUIDE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Measuring Valve Guide Clearance

Check valve stem-to-guide clearance. Ensure valve stem diameter is within specification. Install valve in valve guide. Install dial indicator assembly on cylinder head with tip resting against valve stem just above valve

guide. See **Fig. 6**.

Fig. 6: Measuring Valve Stem-to-Guide Clearance

Lower valve approximately 1/16" below valve seat. Push valve stem against valve guide as far as possible. Adjust dial indicator to zero. Push valve stem in opposite direction and note reading. Clearance must be within specification.

If valve guide clearance exceeds specification, valves with oversize stems may be used and valve guides are reamed to larger size or valve guide must be replaced. On some applications, a false guide is installed, then reamed to proper specification. Valve guide reamer set is used to ream valve guide to obtain proper clearance for new valve.

Reaming Valve Guide

Select proper reamer for size of valve stem. Reamer must be of proper length to provide clean cut through entire length of valve guide. Install reamer in valve guide and rotate to cut valve guide. See **Fig. 7**.

Fig. 7: Reaming Valve Guides

Replacing Valve Guide

Replace valve guide if clearance exceeds specification. Valve guides are either pressed, hammered or shrunk in place, depending upon cylinder head design and type of metal used.

Remove valve guide from cylinder head by pressing or tapping on a stepped drift. See **Fig. 8**. Once valve guide is installed, distance from cylinder head to top of valve guide must be checked. This distance must be within specification.

Aluminum heads are often heated before installing valve guide. Valve guide is sometimes cooled in dry ice prior to installation. Combination of a heated cylinder head and cooled valve guide ensures a tight guide fit upon assembly. The new guide must be reamed to specification.

Fig. 8: Typical Valve Guide Remover & Installer

VALVES & VALVE SEATS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve Grinding

Valve stem O.D. should be measured in several areas to indicate amount of wear. Replace valve if not within specification. Valve margin area should be measured to ensure that valve can be ground. See **Fig. 9**.

If valve margin is less than specification, the valves will be burned. Valve must be replaced. Due to minimum margin dimensions during manufacture, some new type valves cannot be reground. Some manufacturers use stellite coated valves that must NOT be machined. Valves can only be lapped into valve seat.

CAUTION: Some valves are sodium filled. Extreme care must be used when disposing of damaged or worn sodium-filled valves.

Fig. 9: Measuring Valve Head Margin

Resurface valve to proper angle specification using valve grinding machine. Follow manufacturer's instructions for valve grinding machine. Specifications may indicate a different valve face angle than seat angle. Measure valve margin after grinding. Replace valve if not within specification. Valve stem tip can be refinished using valve grinding machine.

Valve Lapping

During valve lapping of recently designed valves, be sure to follow manufacturer's recommendations. Surface hardening and materials used with some valves do not permit lapping. Lapping process will remove excessive amounts of the hardened surface.

Valve lapping is done to ensure adequate sealing between valve face and seat. Use either a hand drill or lapping stick with suction cup attached.

Moisten and attach suction cup to valve. Lubricate valve stem and guide. Apply a thin coat of fine valve grinding compound between valve and seat. Rotate lapping tool between the palms or with hand drill.

Lift valve upward off the seat and change position often. This is done to prevent grooving of valve seat. Lap valve until a smooth polished seat is obtained. Thoroughly clean grinding compound from components. Valve-to-valve seat concentricity should be checked. See **VALVE SEAT CONCENTRICITY**.

CAUTION: Valve guides must be in good condition and free of carbon deposits prior to valve seat grinding. Some engines contain an induction hardened valve seat. Excessive material removal will damage valve seats.

Valve Seat Grinding

Select coarse stone of correct size and angle for seat to be ground. Ensure stone is true and has a smooth surface. Select correct size pilot for valve guide dimension. Install pilot in valve guide. Lightly lubricate pilot shaft. Install stone on pilot. Move stone off and on the seat approximately 2 times per second during grinding operation.

Select a fine stone to finish grinding operation. Various angle grinding stones are used to center and narrow the valve seat as required. See **Fig. 10**.

Fig. 10: Adjusting Valve Seat Width

Valve Seat Replacement

Replacement of valve seat inserts is done by cutting out the old insert and machining an oversize insert bore. Replacement oversize insert is usually cooled and the cylinder head is sometimes warmed. Valve seat is pressed into the head. This operation requires specialized machine shop equipment.

Valve Seat Concentricity

Using dial gauge, install gauge pilot in valve guide. Position gauge arm on the valve seat. Adjust dial indicator to zero. Rotate arm 360 degrees and note reading. Runout should not exceed specification.

To check valve-to-valve seat concentricity, coat valve face lightly with Prussian Blue dye. Install valve and rotate it on valve seat. If pattern is even and entire seat is coated at valve contact point, valve is concentric with the valve seat.

CYLINDER HEAD REASSEMBLY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve Stem Installed Height

Valve stem installed height must be checked when new valves are installed or when valves or valve seats have been ground. Install valve in valve guide. Measure distance from tip of valve stem to spring seat. See **Fig. 11**. Distance must be within specification to allow sufficient clearance for valve operation.

Remove valve and grind valve stem tip if height exceeds specification. Valve tips are surface hardened. DO NOT remove more than .010" (.25 mm) from tip. Chamfer sharp edge of reground valve tip. Recheck valve stem installed height.

Fig. 11: Measuring Valve Stem Installed Height

VALVE STEM OIL SEALS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve stem oil seals must be installed on valve stem. See **Fig. 2**. Seals are needed due to pressure differential at the ends of valve guides. Atmospheric pressure above intake guide, combined with manifold vacuum below guide, causes oil to be drawn into the cylinder.

Exhaust guides also have pressure differential created by exhaust gas flowing past the guide, creating a low pressure area. This low pressure area draws oil into the exhaust system.

Some manufacturers require that special color code or specified height valve stem oil seal be installed in

designated area.

Replacement (On-Vehicle)

Mark rocker arm or overhead cam components for location. Remove rocker arm components or overhead cam components. Components must be installed in original location. Remove spark plugs. Valve stem oil seals may be replaced by holding valves against seats using air pressure.

Air pressure must be installed in cylinder using an adapter for spark plug hole. An adapter can be constructed by welding air hose connection to spark plug body with porcelain removed.

Rotate engine until piston is at top of stroke. Install adapter in spark plug hole. Apply a minimum of 140 psi (9.8 kg/cm^2) line pressure to adapter. Air pressure should hold valve closed. If air pressure does not hold valve closed, check for damaged or bent valve. Cylinder head must be removed for service.

Using valve spring compressor, compress valve springs. Remove valve locks. Carefully release spring compressor. Remove retainer or rotator and valve spring. Remove valve stem oil seal.

If oversize valves have been installed, oversize oil seals must be used. Coat valve stem with engine oil. Install protective sleeve over end of valve stem. Install new oil seal over valve stem and seat on valve guide. Remove protective sleeve. Install spring seat, valve spring and retainer or rotator. Compress spring and install valve locks. Remove spring compressor. Ensure valve locks are fully seated.

Install rocker arms or overhead cam components. Tighten all bolts to specification. Adjust valves if required. Remove adapter. Install spark plugs, valve cover and gasket.

VALVE SPRING INSTALLED HEIGHT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve spring installed height should be checked during reassembly. Measure height from lower edge of valve spring to the upper edge. DO NOT include valve spring seat or retainer. Distance must be within specification. If valves and/or seats have been ground, a valve spring shim may be required to correct spring height. See **Fig. 12**.

Fig. 12: Measuring Valve Spring Installed Height

ROCKER ARMS & ASSEMBLIES

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Rocker Studs

Rocker studs are either threaded or pressed in place. Threaded studs are removed by locking 2 nuts on the stud. Unscrew the stud by turning the jam nut. Coat new stud threads with Loctite and install. Tighten to specification.

Pressed-in stud can be removed using a stud puller. Ream stud bore to proper specification and press in a new oversize stud. Pressed-in studs are often replaced by cutting threads in the stud bore to accept a threaded stud.

Rocker Arms & Shafts

Mark rocker arms for location. Remove rocker arm retaining bolts. Remove rocker arms. Inspect rocker arms, shafts, bushings and pivot balls (if equipped) for excessive wear. Inspect rocker arms for wear in valve stem

contact area. Measure rocker arm bushing I.D. Replace bushings if excessively worn.

The rocker arm valve stem contact point may be reground, using special fixture for valve grinding machine. Remove minimum amount of material as possible. Ensure all oil passages are clear. Install rocker arm components in original location. Ensure rocker arm is properly seated in push rod. Tighten bolts to specification. Adjust valves if required. See **VALVE ADJUSTMENT**.

PUSH RODS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Remove rocker arms. Mark push rods for location. Remove push rods. Push rods can be steel or aluminum, solid or hollow. Hollow push rods must be internally cleaned to ensure oil passage to rocker arms is cleaned. Check push rods for damage, such as loose ends on steel tipped aluminum types.

Check push rod for straightness. Roll push rod on a flat surface. Using feeler gauge, check clearance at center. Replace push rod if bent. The push rod can also be supported at each end and rotated. A dial indicator is used to detect a bent area in the push rod.

Lubricate ends of push rod and install push rod in original location. Ensure push rod is properly seated in lifter. Install rocker arm. Tighten bolts to specification. Adjust valves if required. See **VALVE ADJUSTMENT**.

LIFTERS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Hydraulic Lifters

Before replacing a hydraulic lifter for noisy operation, ensure noise is not caused by worn rocker arms or valve tips. Also ensure sufficient oil pressure exists. Hydraulic lifters must be installed in original location. Remove rocker arm assembly and push rod. Mark components for location. Some applications require intake manifold, cylinder head or lifter cover removal. Remove lifter retainer plate (if used). To remove lifters, use a hydraulic lifter remover or magnet. Different type lifters are used. See **Fig. 13**.

On sticking lifters, disassemble and clean lifter. DO NOT mix lifter components or positions. Parts are select-fitted and are not interchangeable. Inspect all components for wear. Note amount of wear in lifter body-to-camshaft contact area. Surface must have smooth and convex contact face. If wear is apparent, carefully inspect cam lobe.

Inspect push rod contact area and lifter body for scoring or signs of wear. If body is scored, inspect lifter bore for damage and lack of lubrication. On roller type lifters, inspect roller for flaking, pitting, loss of needle bearings and roughness during rotation.

Measure lifter body O.D. in several areas. Measure lifter bore I.D. Ensure components or oil clearance is within specification. Some models offer oversize lifters. Replace lifter if damaged.

If lifter check valve is not operating, obstructions may be preventing it from closing or valve spring may be broken. Clean or replace components as necessary.

Check plunger operation. Plunger should drop to bottom of the body by its own weight when assembled dry. If plunger is not free, soak lifter in solvent to dissolve deposits.

Lifter leak-down test can be performed on lifter. Lifter must be filled with special test oil. New lifters contain special test oil. Using lifter leak-down tester, perform leak-down test following manufacturer's instructions. If leak-down time is not within specifications, replace lifter assembly.

Lifters should be soaked in clean engine oil several hours prior to installation. Coat lifter base, roller (if equipped) and lifter body with ample amount of Molykote or camshaft lubricant. See **Fig. 13**. Install lifter in original location. Install remaining components. Valve lash adjustment is not required on most hydraulic lifters. Preload of hydraulic lifter is automatic. Some models may require adjustment.

NOTE: **Some manufacturers require that a crankcase conditioner be added to engine oil and engine operated for specified amount of time to aid in lifter break-in procedure if new lifters or camshaft are installed.**

Fig. 13: Typical Hydraulic Valve Lifter Assemblies

Mechanical Lifters

Lifter assemblies must be installed in original locations. Remove rocker arm assembly and push rod. Mark components for location. Some applications require intake manifold or lifter cover removal. Remove lifter retainer plate (if used). To remove lifters, use lifter remover or magnet.

Inspect push rod contact area and lifter body for scoring or signs of wear. If body is scored, inspect lifter bore for damage and lack of lubrication. Note amount of wear in lifter body-to-camshaft contact area. Surface must have smooth and convex contact face. If wear is apparent, carefully inspect cam lobe.

Coat lifter base, roller (if equipped) and lifter body with ample amount of Molykote or camshaft lubricant. Install lifter in original location. Install remaining components. Tighten bolts to specification. Adjust valves. See **VALVE ADJUSTMENT**.

PISTONS, CONNECTING RODS & BEARINGS

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

RIDGE REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ridge in cylinder wall must be removed prior to piston removal. Failure to remove ridge prior to removing pistons will cause piston damage in piston ring lands or grooves.

With piston at bottom dead center, place rag in bore to trap metal chips. Install ridge reamer in cylinder bore. Adjust ridge reamer using manufacturer's instructions. Remove ridge using ridge reamer. DO NOT remove an excessive amount of material. Ensure ridge is completely removed.

PISTON & CONNECTING ROD REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Note top of piston. Some pistons may contain a notch, arrow or be marked FRONT. Piston must be installed in proper direction to prevent damage with valve operation.

Check that connecting rod and cap are numbered for cylinder location and which side of cylinder block the number faces. Proper cap and connecting rod must be installed together. Connecting rod cap must be installed on connecting rod in proper direction to ensure bearing lock procedure. Mark connecting rod and cap if necessary. Pistons must be installed in original location.

Remove cap retaining nuts or bolts. Remove bearing cap. Install tubing protectors on connecting rod bolts. This protects cylinder walls from scoring during removal. Ensure proper removal of ridge. Push piston and connecting rod from cylinder. Connecting rod boss can be tapped with a wooden dowel or hammer handle to aid in removal.

PISTON & CONNECTING ROD

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Disassembly

Using ring expander, remove piston rings. Remove piston pin retaining rings (if equipped). Note direction of piston installation on connecting rod. On pressed type piston pins, special fixtures and procedures according to manufacturer must be used to remove piston pins. Follow manufacturer's recommendations to avoid piston distortion or breakage.

Cleaning

Remove all carbon and varnish from piston. Pistons and connecting rods may be cleaned in cold type chemical tank. Using ring groove cleaner, clean all deposits from ring grooves. Ensure all deposits are cleaned from ring grooves to prevent ring breakage or sticking. DO NOT attempt to clean pistons with wire brush.

Inspection

Inspect pistons for nicks, scoring, cracks or damage in ring areas. Connecting rod should be checked for cracks using Magnaflux procedure. Piston diameter must be measured in manufacturer's specified area.

Using telescopic gauge and micrometer, measure piston pin bore of piston in 2 areas, 90 degrees apart. This is

done to check diameter and out-of-round.

Install proper bearing cap on connecting rod. Ensure bearing cap is installed in proper location. Tighten bolts or nuts to specification. Using inside micrometer, measure inside diameter in 2 areas, 90 degrees apart.

Connecting rod I.D. and out-of-round must be within specification. Measure piston pin bore I.D. and piston pin O.D. All components must be within specification. Subtract piston pin diameter from piston pin bore in piston and connecting rod to determine proper fit.

Connecting rod length must be measured from center of crankshaft journal inside diameter to center of piston pin bushing using proper caliper. Connecting rods must be the same length. Connecting rods should be checked on an alignment fixture for bent or twisted condition. Replace all components which are damaged or not within specification.

PISTON & CYLINDER BORE FIT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ensure cylinder is checked for taper, out-of-round and properly honed prior to checking piston and cylinder bore fit. See **CYLINDER BLOCK**. Using dial bore gauge, measure cylinder bore.

Measure piston skirt diameter at 90 degree angle to piston pin at specified area by manufacturer. Subtract piston diameter from cylinder bore diameter to determine piston-to-cylinder clearance. Clearance must be within specification. Mark piston for proper cylinder location.

ASSEMBLING PISTON & CONNECTING ROD

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Install piston on connecting rod for corresponding cylinder. Ensure reference marking on top of piston corresponds with connecting rod and cap number. See **Fig. 14**.

Lubricate piston pin and install in connecting rod. Ensure piston pin retainers are fully seated (if equipped). On

pressed type piston pins, follow manufacturer's recommended procedure to avoid distortion or breakage.

Fig. 14: Installing Typical Piston Pin

CHECKING PISTON RING CLEARANCES

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Piston rings must be checked for side clearance and end gap. To check end gap, install piston ring in cylinder in which it is to be installed. Using an inverted piston, push ring to bottom of cylinder in smallest cylinder diameter.

Using feeler gauge, check ring end gap. See **Fig. 15**. Piston ring end gap must be within specification. Ring breakage will occur if insufficient ring end gap exists.

Some manufacturers permit correcting insufficient ring end gap by using a fine file while other manufacturers recommend using another ring set. Mark rings for proper cylinder installation after checking end gap.

Fig. 15: Checking Piston Ring End Gap

For checking side clearance, install rings on piston. Using feeler gauge, measure clearance between piston ring and piston ring land. Check side clearance in several areas around piston. Side clearance must be within specification.

If side clearance is excessive, piston ring grooves can be machined to accept oversize piston rings (if available). Normal practice is to replace piston.

PISTON & CONNECTING ROD INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes**

of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Cylinders must be honed prior to piston installation. See **CYLINDER HONING** under CYLINDER BLOCK.

Install upper connecting rod bearings. Lubricate upper bearings with engine oil. Install lower bearings in rod caps. Ensure bearing tabs are properly seated. Position piston ring gaps according to manufacturer's recommendations. See **Fig. 16**. Lubricate pistons, rings and cylinder walls.

Fig. 16: Positioning Typical Piston Ring End Gap

Install ring compressor. Use care not to rotate piston rings. Compress rings with ring compressor. Install plastic tubing protectors over connecting rod bolts. Install piston and connecting rod assembly. Ensure piston notch, arrow or FRONT mark is toward front of engine. See **Fig. 17**.

Fig. 17: Installing Piston & Connecting Rod Assembly

Carefully tap piston into cylinder until rod bearing is seated on crankshaft journal. Remove protectors. Install rod cap and bearing. Lightly tighten connecting rod bolts. Repeat procedure for remaining cylinders. Check bearing clearance. See **MAIN & CONNECTING ROD BEARING CLEARANCE**.

Once clearance is checked, lubricate journals and bearings. Install bearing caps. Ensure marks are aligned on connecting rod and cap. Tighten rod nuts or bolts to specification. Ensure rod moves freely on crankshaft. Check connecting rod side clearance. See **CONNECTING ROD SIDE CLEARANCE**.

CONNECTING ROD SIDE CLEARANCE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen**

to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Position connecting rod toward one side of crankshaft as far as possible. Using feeler gauge, measure clearance between side of connecting rod and crankshaft. See **Fig. 18**. Clearance must be within specification.

Check for improper bearing installation, wrong bearing cap or insufficient bearing clearance if side clearance is insufficient. Connecting rod may require machining to obtain proper clearance. Excessive clearance usually indicates excessive wear at crankshaft. Crankshaft must be repaired or replaced.

Fig. 18: Measuring Connecting Rod Side Clearance

MAIN & CONNECTING ROD BEARING CLEARANCE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Plastigage Method

Plastigage method may be used to determine bearing clearance. Plastigage can be used with an engine in service or during reassembly. Plastigage material is oil soluble.

Ensure journals and bearings are free of oil or solvent. Oil or solvent will dissolve material and false reading will be obtained. Install small piece of Plastigage along full length of bearing journal. Install bearing cap in original location. Tighten bolts to specification.

CAUTION: DO NOT rotate crankshaft while Plastigage is installed. Bearing clearance will not be obtained if crankshaft is rotated.

Remove bearing cap. Compare Plastigage width with scale on Plastigage container to determine bearing clearance. See **Fig. 19**. Rotate crankshaft 90 degrees. Repeat procedure. This is done to check journal eccentricity. This procedure can be used to check oil clearance on both connecting rod and main bearings.

Fig. 19: Measuring Bearing Clearance

Micrometer & Telescopic Gauge Method

A micrometer is used to determine journal diameter, taper and out-of-round dimensions of the crankshaft. See **CLEANING & INSPECTION** under CRANKSHAFT & MAIN BEARINGS in this article.

With crankshaft removed, install bearings and caps in original location on cylinder block. Tighten bolts to specification. On connecting rods, install bearings and caps on connecting rods. Install proper connecting rod cap on corresponding rod. Ensure bearing cap is installed in original location. Tighten bolts to specification.

Using a telescopic gauge and micrometer or inside micrometer, measure inside diameter of connecting rod and main bearings bores. Subtract each crankshaft journal diameter from the corresponding inside bearing bore diameter. This is the bearing clearance.

CRANKSHAFT & MAIN BEARINGS

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ensure all main bearing caps are marked for location on cylinder block. Some main bearing caps have an arrow stamped on them. The arrow must face timing belt or timing chain end of engine. Remove main bearing cap bolts. Remove main bearing caps. Carefully remove crankshaft. Use care not to bind crankshaft in cylinder block during removal.

CLEANING & INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Thoroughly clean crankshaft using solvent. Dry with compressed air. Ensure all oil passages are clear and free of sludge, rust, dirt and metal chips.

Inspect crankshaft for scoring and nicks. Inspect crankshaft for cracks using Magnaflux procedure. Inspect rear seal area for grooving or damage. Inspect bolt hole threads for damage. If pilot bearing or bushing is used, check pilot bearing or bushing fit in crankshaft. Inspect crankshaft gear for damaged or cracked teeth. Replace gear if damaged. Ensure oil passage plugs are tight (if equipped).

Using micrometer, measure all journals in 4 areas to determine journal taper, out-of-round and undersize. See **Fig. 20**. Some crankshafts can be reground to the next largest undersize, depending on the amount of wear or damage. Crankshafts with rolled fillet cannot be reground and must be replaced.

Fig. 20: Measuring Crankshaft Journals

Crankshaft journal runout should be checked. Install crankshaft in "V" blocks or bench center. Position dial indicator with tip resting on the main bearing journal area. See **Fig. 21**. Rotate crankshaft and note reading. Journal runout must not exceed specification. Repeat procedure on all main bearing journals. Crankshaft must be replaced if runout exceeds specification.

Fig. 21: Measuring Crankshaft Main Bearing Journal Runout

INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Install upper main bearing in cylinder block. Ensure lock tab is properly located in cylinder block. Install bearings in main bearing caps. Ensure all oil passages are aligned. Install rear seal (if removed).

Ensure crankshaft journals are clean. Lubricate upper main bearings with clean engine oil. Carefully install crankshaft. Check each main bearing clearance using Plastigage method. See **MAIN & CONNECTING ROD BEARING CLEARANCE**.

Once clearance is checked, lubricate lower main bearing and journals. Install main bearing caps in original location. Install rear seal in rear main bearing cap (if removed). Some rear main bearing caps require sealant to be applied in corners to prevent oil leakage.

Install and tighten all bolts except thrust bearing cap to specification. Tighten thrust bearing cap bolts finger tight only. Some models require that thrust bearing be aligned. On most applications, crankshaft must be moved rearward then forward. Procedure may vary with manufacturer. Thrust bearing cap is then tightened to specification. Ensure crankshaft rotates freely. Crankshaft end play should be checked. See **CRANKSHAFT END PLAY**.

CRANKSHAFT END PLAY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Dial Indicator Method

Crankshaft end play can be checked using dial indicator. Mount dial indicator on rear of cylinder block. Position dial indicator tip against rear of crankshaft. Ensure tip is resting against flat surface.

Pry crankshaft rearward. Adjust dial indicator to zero. Pry crankshaft forward and note reading. Crankshaft end play must be within specification. If end play is not within specification, check for faulty thrust bearing installation or worn crankshaft. Some applications offer oversize thrust bearings.

Feeler Gauge Method

Crankshaft end play can be checked using feeler gauge. Pry crankshaft rearward. Pry crankshaft forward. Using feeler gauge, measure clearance between crankshaft and thrust bearing surface. See **Fig. 22**.

Fig. 22: Checking Crankshaft End Play

Crankshaft end play must be within specification. If end play is not within specification, check for faulty thrust bearing installation or worn crankshaft. Some applications offer oversize thrust bearings.

CYLINDER BLOCK

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Block Cleaning

Only cast cylinder blocks should be hot tank cleaned. Aluminum cylinder blocks should be cleaned using cold tank method. Cylinder block is cleaned in order to remove carbon deposits, gasket residue and water jacket

scale. Remove oil gallery plugs, freeze plugs and cam bearings before cleaning block.

Block Inspection

Visually inspect the block. Check suspected areas for cracks using the Dye Penetrant inspection method. Block may be checked for cracks using the Magnaflux method.

Cracks are most commonly found at the bottom of cylinders, main bearing saddles, near expansion plugs and between cylinders and water jackets. Inspect lifter bores for damage. Inspect all head bolt holes for damaged threads. Threads should be cleaned using tap to ensure proper head bolt torque. Consult machine shop concerning possible welding and machining (if required).

Cylinder Bore Inspection

Inspect bore for scoring or roughness. Cylinder bore is dimensionally checked for out-of-round and taper using dial bore gauge. For determining out-of-round, measure cylinder parallel and perpendicular to the block center line. Difference in the 2 readings is the bore out-of-round. Cylinder bore must be checked at top, middle and bottom of piston travel area.

Bore taper is obtained by measuring bore at the top and bottom. If wear has exceeded allowable limits, block must be honed or bored to next available oversize piston dimension.

Cylinder Honing

Cylinder must be properly honed to allow new piston rings to properly seat. Cross-hatching at correct angle and depth is critical to lubrication of cylinder walls and pistons.

A flexible drive hone and power drill are commonly used. Drive hone must be lubricated during operation. Mix equal parts of kerosene and SAE 20W engine oil for lubrication.

Apply lubrication to cylinder wall. Operate cylinder hone from top to bottom of cylinder using even strokes to produce 45 degree cross-hatch pattern on the cylinder wall. DO NOT allow cylinder hone to extend below cylinder during operation.

Recheck bore dimension after final honing. Wash cylinder wall with hot soapy water to remove abrasive particles. Blow dry with compressed air. Coat cleaned cylinder walls with lubricating oil.

Deck Warpage

Check deck for damage or warped gasket surface. Place a straightedge across gasket surface of the deck. Using feeler gauge, measure clearance at center of straightedge. Measure across width and length of cylinder block at several points.

If warpage exceeds specifications, deck must be resurfaced. If warpage exceeds manufacturer's maximum tolerance for material removal, replace block.

NOTE: Some manufacturers recommend that a total amount of material (cylinder head and cylinder block) can only be removed before components must be replaced.

Deck Height

Distance from crankshaft center line to block deck is called the deck height. Measure and record front and rear main journals of crankshaft. To compute this distance, install crankshaft and retain with center main bearing and cap only. Measure distance from crankshaft journal to block deck, parallel to cylinder center line.

Add one half of main bearing journal diameter to distance from crankshaft journal to block deck. This dimension should be checked at front and rear of cylinder block. Both readings should be the same.

If difference exceeds specification, cylinder block must be repaired or replaced. Deck height and warpage should be corrected at the same time.

Main Bearing Bore & Alignment

For checking main bearing bore, remove all bearings from cylinder block and main bearing caps. Install main bearing caps in original location. Tighten bolts to specification. Using inside micrometer, measure main bearing bore in 2 areas 90 degrees apart. Determine bore size and out-of-round. If diameter is not within specification, block must be align-bored.

For checking alignment, place a straightedge along center line of main bearing saddles. Check for clearance between straightedge and main bearing saddles. Block must be align-bored if clearance exists.

Expansion Plug Removal

Drill hole in center of expansion plug. Remove with screwdriver or punch. Use care not to damage sealing surface.

Expansion Plug Installation

Ensure sealing surface is free of burrs. Coat expansion plug with sealer. Using wooden dowel or pipe of slightly smaller diameter, install expansion plug. Ensure expansion plug is evenly located.

Oil Gallery Plug Removal

Remove threaded oil gallery plugs using appropriate wrench. Soft press-in plugs are removed by drilling into plug and installing a sheet metal screw. Remove plug with slide hammer or pliers.

Oil Gallery Plug Installation

Ensure threads or sealing surface is clean. Coat threaded oil gallery plugs with sealer and install. Replacement soft press-in plugs are installed with a hammer and drift.

CAMSHAFT

*** PLEASE READ THIS FIRST ***

NOTE: Examples used in this article are general in nature and do not necessarily relate

to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

CLEANING & INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Clean camshaft with solvent. Ensure all oil passages are clear. Inspect cam lobes and bearing journals for pitting, flaking or scoring. Using micrometer, measure bearing journal O.D.

Support camshaft at each end with "V" blocks. Position dial indicator with tip resting on center bearing journal. Rotate camshaft and note camshaft runout reading. If reading exceeds specification, replace camshaft.

Check cam lobe lift by measuring base circle of camshaft using micrometer. Measure again at 90-degree angle to tip of cam lobe. Cam lift can be determined by subtracting base circle diameter from tip of cam lobe measurement.

Different lift dimensions are given for intake and exhaust cam lobes. Reading must be within specification. Replace camshaft if cam lobes or bearing journals are not within specification.

Inspect camshaft gear for chipped, eroded or damaged teeth. Replace gear if damaged. On camshafts using thrust plate, measure distance between thrust plate and camshaft shoulder. Replace thrust plate if not within specification.

CAMSHAFT BEARINGS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Removal & Installation

Remove camshaft rear plug. Camshaft bearing remover is assembled with shoulder resting against bearing to be removed according to manufacturer's instructions. Tighten puller nut until bearing is removed. Remove remaining bearings, leaving front and rear bearings until last. These bearings act as a guide for camshaft bearing remover.

To install new bearings, puller is rearranged to pull bearings toward the center of block. Ensure all lubrication passages of bearing are aligned with cylinder block. Coat new camshaft rear plug with sealant. Install camshaft rear plug. Ensure plug is even in cylinder block.

CAMSHAFT INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Lubricate bearing surfaces and cam lobes with ample amount of Molykote or camshaft lubricant. Carefully install camshaft. Use care not to damage bearing journals during installation. Install thrust plate retaining bolts (if equipped). Tighten bolts to specification. On overhead camshafts, install bearing caps in original location. Tighten bolts to specification. On all applications, check camshaft end play.

CAMSHAFT END PLAY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Using dial indicator, check camshaft end play. Position dial indicator on front of engine block or cylinder head. Position indicator tip against camshaft. Push camshaft toward rear of cylinder head or engine and adjust indicator to zero.

Move camshaft forward and note reading. Camshaft end play must be within specification. End play may be adjusted by relocating gear, shimming thrust plate or replacing thrust plate depending on each manufacturer.

TIMING CHAINS & BELTS

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

TIMING CHAINS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Timing chains will stretch during operation. Limits are placed upon amount of stretch before replacement is required. Timing chain stretch will alter ignition timing and valve timing.

To check timing chain stretch, rotate crankshaft to eliminate slack from one side of timing chain. Mark reference point on cylinder block. Rotate crankshaft in opposite direction to eliminate slack from remaining side of timing chain. Force other side of chain outward and measure distance between reference point and timing chain. See **Fig. 23**. Replace timing chain and gears if not within specification.

Fig. 23: Measuring Timing Chain Stretch

Timing chains must be installed so timing marks on camshaft gear and crankshaft gear are aligned according to manufacturer. See **Fig. 24**.

Fig. 24: Typical Gear Timing Mark Alignment

TIMING BELTS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Cogged tooth belts are commonly used on overhead cam engines. Inspect belt teeth for rounded corners or cracking. Replace belt if it is cracked, damaged, missing teeth or oil soaked.

Used timing belt must be installed in original direction of rotation. Inspect all sprocket teeth for wear. Replace all worn sprockets. Sprockets are marked for timing purposes. Engine is positioned so that crankshaft sprocket mark will be upward. Camshaft sprocket is aligned with reference mark on cylinder head or timing belt cover and then timing belt can be installed. See **Fig. 25**.

Fig. 25: Typical Camshaft Belt Sprocket Alignment

TENSION ADJUSTMENT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

If guide rails are used with spring loaded tensioners, ensure at least half of original rail thickness remains. Spring loaded tensioner should be inspected for damage.

Ensure all timing marks are aligned. Adjust belt tension using manufacturer's recommendations. Belt tension may require checking using tension gauge. See **Fig. 26**.

Fig. 26: Adjusting Typical Timing Belt Tension

TIMING GEARS

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

TIMING GEAR BACKLASH & RUNOUT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

On engines where camshaft gear operates directly on crankshaft gear, gear backlash and runout must be checked. To check backlash, install dial indicator with tip resting on tooth of camshaft gear. Rotate camshaft gear as far as possible. Adjust indicator to zero. Rotate camshaft gear in opposite direction as far as possible and note reading.

To determine timing gear runout, mount dial indicator with tip resting on face edge of camshaft gear. Adjust indicator to zero. Rotate camshaft gear 360 degrees and note reading. If backlash or runout exceeds specification, replace camshaft and/or crankshaft gear.

REAR MAIN OIL SEAL INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

One-Piece Type Seal

For one-piece type oil seal installation, coat block contact surface of seal with sealer if seal is not factory coated. Ensure seal surface is free of burrs. Lubricate seal lip with engine oil and press seal into place using proper oil seal installer. See **Fig. 27**.

Fig. 27: Installing Typical One-Piece Oil Seal

Rope Type Seal

For rope type rear main oil seal installation, press seal lightly into seat area. Using seal installer, fully seat seal in bearing cap or cylinder block.

Trim seal ends even with cylinder block parting surface. Some applications require sealer to be applied on main bearing cap before installing. See **Fig. 28**.

Fig. 28: Installing Typical Rope Seal

Split-Rubber Type Seal

Follow manufacturer's procedures when installing split-rubber type rear main oil seals. Installation procedures vary with manufacturer and engine type. See **Fig. 29**.

Fig. 29: Installing Typical Split-Rubber Seal

OIL PUMP

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

ROTOR TYPE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Mark oil pump rotor locations before removing. See **Fig. 30**. Remove outer rotor and measure thickness and diameter. Measure inner rotor thickness. Inspect shaft for scoring or wear. Inspect rotors for pitting or damage. Inspect cover for grooving or wear. Replace worn or damaged components.

Measure outer rotor-to-body clearance. Replace pump assembly if clearance exceeds specification. Measure clearance between rotors. See **Fig. 31**. Replace shaft and both rotors if clearance exceeds specification.

Install rotors in pump body. Position straightedge across pump body. Using feeler gauge, measure clearance between rotors and straightedge. Pump cover wear is measured using a straightedge and feeler gauge. Replace pump if clearance exceeds specification.

Fig. 30: Typical Rotor Type Oil Pump

Fig. 31: Measuring Rotor Clearance

GEAR TYPE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Mark oil pump gear location before removing. See **Fig. 32**. Remove gears from pump body. Inspect gears for pitting or damage. Inspect cover for grooving or wear. Measure gear diameter and length. Measure gear housing cavity depth and diameter. See **Fig. 33**. Replace worn or damaged components.

Pump cover wear is measured using a straightedge and feeler gauge. Replace pump or components if warpage or wear exceeds specification, or mating surface of pump cover is scratched or grooved.

Fig. 32: Typical Gear Type Oil Pump

Fig. 33: Measuring Oil Pump Gear Cavity

BREAK-IN PROCEDURE

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

ENGINE PRE-OILING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Pre-oil engine prior to operation to prevent engine damage. Lightly oiled oil pump will cavitate unless oil pump cavities are filled with engine oil or petroleum jelly.

Engine pre-oiling can be done using pressure oiler (if available). Connect pressure oiler to cylinder block oil passage such as oil pressure sending unit. Operate pressure oiler long enough to ensure correct amount of oil has filled crankcase. Check oil level while pre-oiling.

If pressure oiler is not available, disconnect ignition system. Remove oil pressure sending unit and replace with oil pressure test gauge. Using starter motor, rotate engine starter until gauge shows normal oil pressure for several seconds. DO NOT crank engine for more than 30 seconds to avoid starter motor damage. Ensure oil pressure has reached the most distant point from the oil pump.

NOTE: **If new lifters or camshaft are installed, some manufacturers require that a crankcase conditioner be added to engine oil. The engine should be operated for specified amount of time to aid in lifter break-in procedure.**

INITIAL START-UP

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Start engine and operate engine at low speed while checking for coolant, fuel and oil leaks. Stop engine. Recheck coolant and oil level. Adjust if necessary.

CAMSHAFT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Break-in procedure is required when new or reground camshaft has been installed. Operate and maintain engine speed between 1500-2500 RPM for approximately 30 minutes. Procedure may vary due to manufacturer's recommendations.

PISTON RINGS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Piston rings require a break-in procedure to ensure seating of rings to cylinder walls. Serious damage may occur to rings if correct procedures are not followed.

Extremely high piston ring temperatures are obtained during break-in process. If rings are exposed to excessively high RPM or high cylinder pressures, ring damage can occur. Follow piston ring manufacturer's recommended break-in procedure.

FINAL ADJUSTMENTS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Check or adjust ignition timing and dwell (if applicable). Adjust valves (if necessary). Adjust idle speed and mixture. Retighten cylinder heads (if required). If cylinder head or block is aluminum, retighten bolts when engine is cold. Follow the engine manufacturer's recommended break-in procedure and maintenance schedule for new engines.

NOTE: **Some manufacturers require that head bolts be retightened after specified amount of operation. This must be done to prevent head gasket failure.**

AUTOMATIC LIGHTING SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Automatic Lighting Sensor
    1. Using a flat-tip screwdriver wrapped with protective tape, carefully pry up the automatic lighting sensor (A).
    2. Disconnect the connector.

Fig. 1: Identifying Automatic Lighting Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Automatic Lighting Sensor
    1. Connect the connector.
    2. Install the automatic lighting sensor (A).

Fig. 2: Identifying Automatic Lighting Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - FOG LIGHT

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield As Needed
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 3: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Fog Light Bulb
    1. Disconnect the connector.
    2. Turn the bulb (A) 45 ° counterclockwise to remove it from the housing.

Fig. 4: Identifying Fog Light Bulb
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Fog Light Bulb
    1. Turn the bulb (A) 45 ° clockwise to install it to the housing.
    2. Connect the connectors.

Fig. 5: Identifying Fog Light Bulb
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield (2.4L) As Needed
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely. Exterior Lights Bulb Removal and Installation - Headlight Housing

Fig. 6: Identifying Front Splash Shield, Bolts And Clips
