- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**
- **If there are other SRS DTCs stored with 92-2x; troubleshoot them first.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 92-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Open wire check (OFF_PTT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the following connectors.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

     FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR 4P CONNECTOR (ON THE DASHBOARD WIRE HARNESS)

   - 4. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector A (39P): disconnected

     Front passenger's airbag cutoff indicator 4P connector (on the dashboard wire harness): disconnected

Test circuit OFF_PTT

Test point 1 SRS unit connector A (39P) No. 17

Test point 2 Front passenger's airbag cutoff indicator 4P connector No. 4 (on the dashboard wire harness)

Fig. 245: Measuring Resistance Between SRS Unit Connector A (39P) No. 17 And Front Passenger's Airbag Cutoff Indicator 4P Connector No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The OFF_PTT wire is not open. Go to step 3.

NO : Open in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

3. Shorted wire check (OFF_PTT line):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Front passenger's airbag cutoff indicator 4P connector (on the dashboard wire harness): disconnected

     SRS unit connector A (39P): disconnected

     Test circuit OFF_PTT

Test point 1 SRS unit connector A (39P) No. 17

Test point 2 Body ground

Fig. 246: Measuring Resistance Between SRS Unit Connector A (39P) No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The OFF_PTT wire is OK. **REPLACE THE FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Short to ground in the dashboard wire harness; replace the dashboard wire harness.

DTC A1-1X ("X" CAN BE 0 THRU 9 OR A THRU F): FAULTY POWER SUPPLY (VA LINE)

Fig. 247: SRS DTC Troubleshooting Flow Chart (A1-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC A1-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B29 (7.5 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse, then turn the ignition switch to ON (II). If the fuse blows again, check for a short to ground in the under-dash fuse/relay box No. B29 (7.5 A) fuse circuit (dashboard wire harness, floor wire harness, or ODS unit harness); replace the faulty harness, then clear the DTC, and retest. If the DTC is still present, **REPLACE THE UNDER-DASH FUSE/RELAY BOX** , then clear the DTC.

3. Open wire check (VA line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 3. Reconnect the negative cable to the battery.
   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     SRS unit connector A (39P): disconnected

     Test circuit VA

     Test point 1 SRS unit connector A (39P) No. 39

     Test point 2 Body ground

Fig. 248: Measuring Voltage Between SRS Unit Connector A (39P) No. 39 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The VA wire is OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit; check the connection. If the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Open in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC A2-1X ("X" CAN BE 0 THRU 9 OR A THRU F): FAULTY POWER SUPPLY (VB LINE)

Fig. 249: SRS DTC Troubleshooting Flow Chart (A2-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC A2-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B3 (10 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 3.

NO : Replace the fuse, then turn the ignition switch to ON (II). If the fuse blows again, check for a short

to ground in the under-dash fuse/relay box No. B3 (10 A) fuse circuit (dashboard wire harness); replace the dashboard wire harness, then clear the DTC, and retest. If the DTC is still present, **REPLACE THE UNDER-DASH FUSE/RELAY BOX** , then clear the DTC.

3. Open wire check (VB line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 3. Reconnect the negative cable to the battery.
   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     SRS unit connector A (39P): disconnected

     Test circuit VB

     Test point 1 SRS unit connector A (39P) No. 38

     Test point 2 Body ground

Fig. 250: Measuring Voltage Between SRS Unit Connector A (39P) No. 38 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The VB wire is OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit; check the connection. If the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Open in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC A3-1X ("X" CAN BE 0 THRU 9 OR A THRU F): SRS UNIT CONNECTOR A NOT PROPERLY INSTALLED

Fig. 251: SRS DTC Troubleshooting Flow Chart (A3-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC A3-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Connector connection check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following connector connection.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

Is the connector OK?

YES : Go to step 4.

NO : Go to step 3.

3. System check:
   - 1. Repair the poor connector connection which was the cause of the problem in step 2.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC A3-1x indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 4.

NO : The system is OK at this time.

4. SRS unit check:
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 3. Check for bent or damaged terminals on the SRS unit.

Are any terminals bent or damaged?

YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Replace the dashboard wire harness, then clear the DTC.

DTC A4-1X ("X" CAN BE 0 THRU 9 OR A THRU F): SRS UNIT CONNECTOR B NOT PROPERLY INSTALLED

Fig. 252: SRS DTC Troubleshooting Flow Chart (A4-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in**

a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

   Is DTC A4-1x indicated?

   YES : The failure is duplicated. Go to step 2.

   NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Connector connection check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following connector connection.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   Is the connector OK?

   YES : Go to step 4.

   NO : Go to step 3.

3. System check:

- 1. Repair the poor connector connection which was the cause of the problem in step 2.
- 2. **CLEAR THE DTCS WITH THE HDS** .
- 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC A4-1x indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 4.

NO : The system is OK at this time.

4. SRS unit check:
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

   - 3. Check for bent or damaged terminals on the SRS unit.

Are any terminals bent or damaged?

YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Replace the floor wire harness, then clear the DTC.

DTC B2-1X ("X" CAN BE 0 THRU 9 OR A THRU F): NO SIGNAL FROM THE REAR SAFING SENSOR

Fig. 253: SRS DTC Troubleshooting Flow Chart (B2-1x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC B2-1x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Connector connection check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following connector connections.

SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

REAR SAFING SENSOR 2P CONNECTOR (ON THE FLOOR WIRE HARNESS)

Are the connectors OK?

YES : Go to step 4.

NO : Go to step 3.

3. System check:
   - 1. Repair the poor connector connection which was the cause of the problem in step 2.
   - 2. **CLEAR THE DTCS WITH THE HDS** .
   - 3. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 4. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC B2-1x indicated?

YES : Turn the ignition switch to LOCK (0), then go to step 4.

NO : The system is OK at this time.

4. Shorted wire check (SSS+ line to SSS- line):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connectors.

     SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

     REAR SAFING SENSOR 2P CONNECTOR (ON THE FLOOR WIRE HARNESS)

   - 3. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector B (39P): disconnected

     Rear safing sensor 2P connector (on the floor wire harness): disconnected

     Test circuit SSS+, SSS-

     Test point 1 SRS unit connector B (39P) No. 38

     Test point 2 SRS unit connector B (39P) No. 39

Fig. 254: Measuring Resistance Between SRS Unit Connector B (39P) No. 38 And 39
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The SSS+, SSS- wires are not shorted. Go to step 5.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

5. Shorted wire check (SSS+, SSS- lines):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     SRS unit connector B (39P): disconnected

     Rear safing sensor 2P connector (on the floor wire harness): disconnected

     Test circuit SSS+

     Test point 1 SRS unit connector B (39P) No. 38

     Test point 2 Body ground

     Test circuit SSS-

     Test point 1 SRS unit connector B (39P) No. 39

     Test point 2 Body ground

Fig. 255: Measuring Resistance Between SRS Unit Connector B (39P) No. 38 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The SSS+, SSS- wires are not shorted. Go to step 6.

NO : Short to ground in the floor wire harness; replace the floor wire harness, then clear the DTC.

6. Shorted wire check (SSS+, SSS- lines to power):
   - 1. Reconnect the negative cable to the battery.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     SRS unit connector B (39P): disconnected

     Rear safing sensor 2P connector (on the floor wire harness): disconnected

     Test circuit SSS+

     Test point 1 SRS unit connector B (39P) No. 38

     Test point 2 Body ground

     Test circuit SSS-

     Test point 1 SRS unit connector B (39P) No. 39

     Test point 2 Body ground

Fig. 256: Measuring Voltage Between SRS Unit Connector B (39P) No. 38 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The SSS+, SSS- wires are not shorted to power. Go to step 7.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

7. Open wire check (SSS+, SSS- lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the black terminal (A) of SRS simulator lead L to the SRS inflator simulator (jumper connector), and then connect the SRS simulator lead L to the rear safing sensor 2P connector (B) on the floor wire harness.

Fig. 257: Connecting SRS Simulator Lead L To Rear Safing Sensor 2P Connector On Floor

Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  SRS unit connector B (39P): disconnected

  Rear safing sensor 2P connector (on the floor wire harness): disconnected

  Rear safing sensor 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit SSS+, SSS-

  Test point 1 SRS unit connector B (39P) No. 38

  Test point 2 SRS unit connector B (39P) No. 39

Fig. 258: Measuring Resistance Between SRS Unit Connector B (39P) No. 38 And 39
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The SSS+, SSS- wires are OK. **REPLACE THE REAR SAFING SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Open in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC B2-2X, B2-9X, B2-AX, B2-BX ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE REAR SAFING SENSOR

Fig. 259: SRS DTC Troubleshooting Flow Chart (B2-2x, B2-9x, B2-Ax, B2-Bx)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC B2-2x, B2-9x, B2-Ax, or B2-Bx indicated?

YES : **REPLACE THE REAR SAFING SENSOR** , then clear the DTC, and retest. If the DTC is still present, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC EX-11 ("X" CAN BE 0 THRU 9 OR A THRU F): CONTROL OPERATION RECORDED

Fig. 260: SRS DTC Troubleshooting Flow Chart (Ex-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT UPDATE or SRS UNIT REMOVAL AND INSTALLATION , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC Ex-11 indicated?

YES : **Replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** .

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING**

INTERMITTENT FAILURES . If another DTC is indicated, troubleshoot the DTC.

DTC FX-11 ("X" CAN BE 0 THRU 9 OR A THRU F): AIRBAGS AND/OR TENSIONERS DEPLOYMENT RECORDED

Fig. 261: SRS DTC Troubleshooting Flow Chart (Fx-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES and GENERAL TROUBLESHOOTING INFORMATION .**
- **When any airbag or tensioners have deployed, go to Component Removal, Inspection, and Installation After Deployment See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**

DTC Description	DTC

1. DTC check:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC F1-11, F2-11, F3-11, F4-11, F5-11, or F6-11 indicated?

DTC F1-11 : Driver's airbag, left side curtain airbag, and/or driver's seat belt tensioner deployed.

DTC F2-11 : Front passenger's airbag, right side curtain airbag, and/or front passenger's seat belt tensioner deployed.

DTC F3-11 : Driver's side airbag and/or left side curtain airbag deployed.

DTC F4-11 : Front passenger's side airbag and/or right side curtain airbag deployed.

DTC F5-11 : Both or only one side curtain airbag and front seat belt tensioner deployed.

DTC F6-11 : Both or only one side curtain airbag and front seat belt tensioner deployed.

NO DTC : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 14-11: SHORT TO POWER IN THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT INNER SIDE) POWER CIRCUIT; DTC 14-12: SHORT TO GROUND IN THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT INNER

SIDE) POWER CIRCUIT; DTC 14-13: OPEN IN THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT INNER SIDE) OUTPUT CIRCUIT; DTC 14-14: SHORT TO GROUND IN THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT INNER SIDE) OUTPUT CIRCUIT

Fig. 262: SWS DTC Troubleshooting Flow Chart (14-11, 14-12, 14-13, 14-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Only read DTCs from the SRS menu, not from SWS menus unless instructed to check SWS DTCs. SWS (ODS unit) DTCs are subcodes of SRS DTCs. Only troubleshoot the corresponding SRS DTCs. These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**

DTC Description	DTC
14-11 Short to power in the front passenger's weight sensor (front inner side) power circuit	
14-12 Short to ground in the front passenger's weight sensor (front inner side) power circuit	
14-13 Open in the front passenger's weight sensor (front inner side) output circuit	
14-14 Short to ground in the front passenger's weight sensor (front inner side) output circuit	

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC
14-11 Short to power in the front passenger's weight sensor (front inner side) power circuit	
14-12 Short to ground in the front passenger's weight sensor (front inner side) power circuit	

14-13 Open in the front passenger's weight sensor (front inner side) output circuit	
14-14 Short to ground in the front passenger's weight sensor (front inner side) output circuit	

Is SWS DTC 14-11, 14-12, 14-13, or 14-14 indicated?

YES : The failure is duplicated. **GO TO SRS DTC 82-14 TROUBLESHOOTING**.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC 15-3X ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT INNER SIDE); DTC 17-3X ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (REAR INNER SIDE); DTC 25-3X ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (FRONT OUTER SIDE); DTC 27-3X ("X" CAN BE 0 THRU 9 OR A THRU F): INTERNAL FAILURE OF THE FRONT PASSENGER'S WEIGHT SENSOR (REAR OUTER SIDE)

Fig. 263: SWS DTC Troubleshooting Flow Chart (15-3x, 17-3x, 25-3x, 27-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Only read DTCs from the SRS menu, not from SWS menus unless**

instructed to check SWS DTCs. SWS (ODS unit) DTCs are subcodes of SRS DTCs. Only troubleshoot the corresponding SRS DTCs. These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR SWS DTCS WITH THE HDS** .

DTC Description	DTC

Is SWS DTC 15-3x, 17-3x, 25-3x, or 27-3x indicated?

YES : The failure is duplicated. **GO TO SRS DTC 82-15, 82-17, 83-25, AND 83-27 TROUBLESHOOTING**.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

DTC Description	DTC

Is SWS DTC 71-xx indicated?

YES : The failure is duplicated. **GO TO SRS DTC 81-71 TROUBLESHOOTING**.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

AIRBAG AND TENSIONER DISPOSAL

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Deployment Tool 07AAZ-000A100

PROCEDURE

Before scrapping any front airbags, side airbags, side curtain airbags, or front seat belt tensioners (including those in a whole vehicle to be scrapped), the part(s) must be deployed. If the vehicle is still within the warranty period, the Honda District Parts and Service Manager must give approval and/or special instruction before deploying the part(s). Only after the part(s) have been deployed (as the result of vehicle collision, for example), can they be scrapped. If the parts appear intact (not deployed), treat them with extreme caution. Follow this procedure.

1. Deploying Airbags In the Vehicle

   If an SRS equipped vehicle is to be entirely scrapped, its front airbags, side airbags, side curtain airbags, and front seat belt tensioners should be deployed while still in the vehicle. These parts should not be considered as salvageable parts and should never be installed in another vehicle.

   Deploying Airbags in the Vehicle

   1. Turn the ignition switch to LOCK (0). Do the battery terminal disconnection procedure, then wait at least 3 minutes before starting work.
   2. Confirm that each front airbag, side airbag, side curtain airbag, or front seat belt tensioner is securely mounted.
   3. Confirm that the deployment tool is functioning properly by following the check procedure on the tool label.

Fig. 1: Identifying Driver's Airbag Inflator Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Driver's Airbag

4. Remove the access panel (A).
5. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.

Front Passenger's Airbag

6. Lower the glove box.
7. Disconnect the front passenger's airbag inflator connector (A) on the dashboard wire harness.

Fig. 2: Identifying Front Passenger's Airbag Inflator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Side Airbag

8. Disconnect the driver's and front passenger's side airbag inflator connectors (A) on the floor wire harness or front passenger's seat wire harness.

Fig. 3: Identifying Driver's And Front Passenger's Side Airbag Inflator Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Side Curtain Airbag

9. Remove the quarter pillar trim.
10. Disconnect the left and right side curtain airbag inflator connectors (A) on the floor wire harness.

Fig. 4: Identifying Left And Right Side Curtain Airbag Inflator Connectors

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front Seat Belt Tensioner

11. Remove the B-pillar lower trim.
12. Disconnect the driver's and front passenger's seat belt tensioner connectors (A) on the floor wire harness. Pull the front seat belt out all the way and cut it.

Fig. 5: Identifying Driver's And Front Passenger's Seat Belt Tensioner Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Cut off each connector, and strip the ends of the wires. Twist each pair of unlike colored wires together, and clip an alligator clip (A) from the deployment tool to each pair.

NOTE:

- **Place the deployment tool at least 10 m (33 ft) away from the vehicle.**
- **The driver's and front passenger's airbags have dual inflators. Twist each pair of unlike colored wires together, and clip an alligator clip to each pair.**

14. Connect a 12 volt battery to the tool.
    - If the green light on the tool comes on, the igniter circuit is defective and cannot deploy the component. Go to **DISPOSAL OF DAMAGED COMPONENTS**.
    - If the red light on the tool comes on, the component is ready to be deployed.
15. Push the tool's deployment switch. The airbags and tensioners should deploy (deployment is both highly audible and visible: A loud noise and rapid inflation of the bag, followed by slow deflation).
    - If the components deploy and the green light on the tool comes on, continue with this procedure.
    - If a component does not deploy, and the green light comes ON, its igniter is defective. Go to **DISPOSAL OF DAMAGED COMPONENTS**.

- During deployment, the airbags can become hot enough to burn you. Wait for 30 minutes after deployment before touching the airbags.

Fig. 6: Checking Igniter Circuit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 7: Checking Deployment Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Dispose of the complete airbag or tensioner. No part of it can be reused. Place it in a sturdy plastic bag (A), and seal it securely. Dispose of the deployed airbag according to your local regulations.

Fig. 8: Handling Deployed Airbag Or Tensioner Using Plastic Bag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Deploying Components Out Of the Vehicle

Deploying Components Out of the Vehicle

If an intact airbag or tensioner has been removed from a scrapped vehicle, or has been found defective or damaged during transit, storage, or service, it should be deployed as follows:

Fig. 9: Removing Deploying Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Confirm that the deployment tool is functioning properly by following the check procedure Deploying Airbags in the Vehicle on the tool label.
2. Position the airbag face up, outdoors, on flat ground, at least 10 m (33 ft) from any obstacles or people.
3. Cut off each connector, and strip the ends of the wires. Twist each pair of unlike colored wires

together, and clip an alligator clip from the deployment tool to each pair.

NOTE: **The driver's and front passenger's airbags have dual inflators. Twist each pair of unlike colored wires together, and clip an alligator clip to each pair.**

4. Connect a 12 volt battery to the tool.
   - If the green light on the tool comes on, the igniter circuit is defective and cannot deploy the component. Go to **DISPOSAL OF DAMAGED COMPONENTS**.
   - If the red light on the tool comes on, the component is ready to be deployed.

Fig. 10: Handling Deployed Airbag Or Tensioner Using Plastic Bag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Push the tool's deployment switch. The airbags and tensioners should deploy (deployment is both highly audible and visible: A loud noise and rapid inflation of the bag, followed by slow deflation).
   - If the components deploy and the green light on the tool comes on, continue with this procedure.
   - If a component does not deploy, and the green light comes ON, its igniter is defective. Go to **DISPOSAL OF DAMAGED COMPONENTS**.
   - During deployment, the airbags can become hot enough to burn you. Wait for 30 minutes after deployment before touching the airbags.
6. Dispose of the complete airbag or tensioner. No part of it can be reused. Place it in a sturdy plastic bag (A), and seal it securely. Dispose of the deployed airbag according to your local regulations.

Disposal of Damaged Components

1. If installed in a vehicle, follow the removal procedure for the driver's airbag, the front passenger's airbag, the side airbag, the side curtain airbag, and the front seat belt tensioner.
2. In all cases, make a short circuit by cutting, stripping, and twisting together the two inflator wires.

NOTE: **The driver's and front passenger's airbags and the side curtain airbag**

have dual inflators. The like color wires go to the individual inflators. Twist the like colored wires together.

3. Package the component in exactly the same packaging that the new replacement part came in.
4. Mark the outside of the box DAMAGED AIRBAG NOT DEPLOYED, DAMAGED SIDE AIRBAG NOT DEPLOYED, DAMAGED SIDE CURTAIN AIRBAG NOT DEPLOYED, or DAMAGED SEAT BELT TENSIONER NOT DEPLOYED so it does not get confused with your parts stock.
5. Contact your Honda District Parts and Service Manager for instructions on how and where to return it for disposal.

Deployment Tool Check

1. Connect the yellow clips to both switch protector handles on the tool.
2. Then connect the red lead to the positive battery post and the black lead to the negative battery post.
3. Push the operation switch: The green light should come on, indicating that the tool is operating properly and is ready for use. If the red light stays on, the tool is faulty, and another one must be used for the procedure.
4. Disconnect the tool clips and connectors from the protector handles and the battery.

CABLE REEL REMOVAL AND INSTALLATION

LON > 753100

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Before doing this procedure, set the front wheels in the straight ahead position.**

1. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 11: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 12: Identifying Driver's Airbag Inflator Connector, Access Panel And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the TORX bolts using a TORX T30 bit.

5. Remove the driver's airbag (A).

Fig. 13: Identifying Driver's Airbag And Torx Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 14: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).

5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 15: Turning Puller Pressure Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 16: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 17: Identifying Dashboard Meter Visor Blind Cover, Clips And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the upper column cover (A).

Fig. 18: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lower Column Cover
    1. Remove the screws (A) securing the lower column cover (B) from the front side.

Fig. 19: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the screw (A), then remove the lower column cover (B).

Fig. 20: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Cable Reel/Steering Angle Sensor
    1. Disconnect cable reel connector A on the dashboard wire harness, cable reel connector B on the dashboard wire harness, and the steering angle sensor connector (C).

Fig. 21: Identifying Cable Reel Connectors And Steering Angle Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the cable reel/steering angle sensor (A).

Fig. 22: Identifying Cable Reel/Steering Angle Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Cable Reel
    1. Remove the cable reel (A) from the steering angle sensor (B).

Fig. 23: Identifying Cable Reel And Steering Angle Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Before installing the steering wheel, make sure the front wheels are aligned straight ahead.**
- **New cable reel is locked by yellow tab for center adjustment. When installing a new cable reel there is no need to rotate the cable reel. You remove the tab and discard it, after install new cable reel.**

1. Cable Reel
    1. Install the cable reel (A) to the steering angle sensor (B).

Fig. 24: Identifying Cable Reel And Steering Angle Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cable Reel/Steering Angle Sensor
    1. Install the cable reel/steering angle sensor (A).

Fig. 25: Identifying Cable Reel/Steering Angle Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect cable reel connector A on the dashboard wire harness, cable reel connector B on the

dashboard wire harness, and the steering angle sensor connector (C).

Fig. 26: Identifying Cable Reel Connectors And Steering Angle Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

Fig. 27: Engaging Column Cover And Locking Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the lower column cover (A), then install the screw (B).

Fig. 28: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

Fig. 29: Identifying Lower Column Cover Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Column Cover
    1. Install the upper column cover (A).

Fig. 30: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

Fig. 31: Identifying Dashboard Meter Visor Blind Cover, Clips And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 32: Identifying Arrow Mark On Cable Reel Label And Cable Reel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.

5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 33: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 34: Identifying Steering Wheel Connector And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 35: Identifying Driver's Airbag And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 36: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 37: Identifying Driver's Airbag Inflator Connector, Horn Switch Connector And Access

Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 38: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 39: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
10. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
11. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
12. Steering Wheel Spoke Angle - Check
    1. Check the steering wheel spoke angle.
    2. If steering spoke angles to the right and left are not equal (steering wheel is not centered), correct the engagement of the wheel/column shaft splines.
13. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

14. Steering Angle Sensor Neutral Position - Clear

1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

DRIVER'S AIRBAG REMOVAL AND INSTALLATION

LON > 752100

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **If replacing the driver's airbag after deployment, refer to COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT for a complete list of other parts that must also be replaced.**

1. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 40: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    4. Remove the TORX bolts using a TORX T30 bit.
    5. Remove the driver's airbag (A).

Fig. 41: Identifying Driver's Airbag And Torx Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 42: Identifying Driver's Airbag And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 43: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 44: Identifying Driver's Airbag Inflator Connector, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 45: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 46: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
5. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

FRONT IMPACT SENSOR REMOVAL AND INSTALLATION

LON > 7521A4 LEFT FRONT 7521A8 RIGHT FRONT

REMOVAL

NOTE: SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

        NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 47: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

Fig. 48: Removing Front Grille Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

Fig. 49: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 50: Removing Front Grille Clips Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

Fig. 51: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Wheel Arch Protector Front Side As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the screws (A) and the clips (B) securing the front wheel arch protector (C).
2. Carefully pry out the clip portions of the wheel arch protector with the appropriate trim tool to detach the clips (D, E), then detach the wheel arch protector front side as needed.
3. Put a shop towel (F) in the opening between the front wheel arch protector and the front fender.

Fig. 52: Prying Out Wheel Arch Protector Clip Portions Using Trim Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 53: Inserting Shop Towel In Opening Between Wheel Arch Protector And Fender
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Bumper
    1. Remove the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

Fig. 54: Identifying Front Bumper And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the front bumper (A) from the side spacer (B). Repeat this step on the opposite side.

Fig. 55: Pulling Out Front Bumper From Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clip (A). Repeat this step on the opposite side.

Fig. 56: Disconnecting Front Bumper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the help of an assistant, pull out both sides of the front bumper (A) from the upper beam (B).

Fig. 57: Pulling Out Front Bumper From Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, disconnect the connectors (A), then remove the front bumper (B).

Fig. 58: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Impact Sensor
    1. Disconnect the front impact sensor connector on the engine compartment wire harness.
    2. Remove the TORX bolt using a TORX T30 bit, then remove the front impact sensor (A).

Fig. 59: Identifying Front Impact Sensor And Torx Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Front Impact Sensor

1. Install the front impact sensor (A) with the new TORX bolt using a TORX T30 bit.
2. Connect the front impact sensor connector on the engine compartment wire harness.

Fig. 60: Identifying Front Impact Sensor And Torx Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 61: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 62: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
5. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
6. Front Bumper

1. With the help of an assistant, connect the connectors (A), then install the front bumper (B).

Fig. 63: Identifying Front Bumper And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install both sides of the front bumper (A) to the upper beam (B).

Fig. 64: Installing Front Bumper To Upper Beam

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push the front bumper (A) until the clip (B) snaps into place. Repeat this step on the opposite side.

Fig. 65: Pushing Front Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

Fig. 66: Identifying Front Bumper And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Wheel Arch Protector Front Side As Needed - Both Sides

1. Install the front wheel arch protector (A), then install the screws (B) and the clips (C). Make sure the clips (D, E) snap into place securely. Repeat this step on the opposite side.

<u>Fig. 67: Identifying Front Wheel Arch Protector And Fasteners</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Grille
    1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
    2. Install the clips (B).

Fig. 68: Installing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR REMOVAL AND INSTALLATION

LON > 754104

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: **Always disconnect the negative side first.**

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 69: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 70: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Audio-Navigation Unit Assembly (With Navigation)

NOTE:

- **Eject the discs before removing the audio-navigation unit to prevent damaging the CD/DVD player's load mechanism.**
- **If you are replacing the audio-navigation unit, write down the audio presets (if possible), then enter them into the new audio-navigation unit.**
- **If the audio-navigation unit is replaced or disconnected, Map Matching must be done.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio-navigation unit (A).

Except KX

Fig. 71: Identifying Audio-Navigation Unit (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 72: Identifying Audio-Navigation Unit (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Audio Unit Assembly (Without Navigation)

NOTE:

- **Eject the CD before disconnecting the audio unit to prevent damaging the CD player's load mechanism.**
- **If you are replacing the audio unit, write down the audio presets (if possible), and enter them into the new audio unit.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio unit (A).

Fig. 73: Identifying Audio Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Dashboard Center Display Visor Assembly
    1. Remove the dashboard center display visor (A).

Fig. 74: Identifying Dashboard Center Display Visor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Multi-Information Display Unit Assembly (For Some Model)
    1. Remove the multi-information display unit assembly (A).
    2. Disconnect the connectors from the multi-information display unit.

Fig. 75: Identifying Multi-Information Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Display Unit Assembly (For Some Model)
    1. Remove the center display unit assembly (A).
    2. Disconnect the connectors.

Fig. 76: Identifying Center Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Passenger's Airbag Cutoff Indicator
    1. Remove the front passenger's airbag cutoff indicator (A).

Fig. 77: Identifying Front Passenger's Airbag Cutoff Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Front Passenger's Airbag Cutoff Indicator
    1. Install the front passenger's airbag cutoff indicator (A).

Fig. 78: Identifying Front Passenger's Airbag Cutoff Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Multi-Information Display Unit (For Some Model)
    1. Connect the connectors.

2. Install the multi-information display unit assembly (A).

NOTE: **If you see the In Line Diag screen when it is turned on, refer to In Line Diag (i-MID) under Display Diagnosis to complete the diagnosis.**

Fig. 79: Identifying Multi-Information Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Display Unit Assembly (For Some Model)
    1. Connect the connectors.
    2. Install the center display unit assembly (A).

Fig. 80: Identifying Center Display Unit Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Dashboard Center Display Visor Assembly
    1. Install the dashboard center display visor (A).

Fig. 81: Identifying Dashboard Center Display Visor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Audio Unit Assembly (Without Navigation)
    1. Connect the connectors, then install the audio unit (A).

        NOTE: Make sure all the connectors and the antenna lead are secure.

    2. Install the bolts (B).

        NOTE: If the audio unit was replaced, enter the audio presets that you saved onto the new unit.

Fig. 82: Identifying Audio Unit And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Navigation Unit Assembly (With Navigation)

1. Connect the connectors, then install the audio-navigation unit (A).

   NOTE: Make sure all the connectors and the antenna lead are secure.

2. Install the bolts (B).

   Except KX

Fig. 83: Identifying Audio-Navigation Unit Mounting Bolt With Torque Specification (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 84: Identifying Audio-Navigation Unit Mounting Bolt With Torque Specification (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Inner Vent - Both Sides
    1. Install the inner vents (A). Make sure the clips (B) snap into place securely.

Fig. 85: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 86: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 87: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
11. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

FRONT PASSENGER'S AIRBAG REMOVAL AND INSTALLATION

LON > 754110

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the precautions and procedures See SRS PRECAUTIONS AND PROCEDURES or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT before doing repairs or service.**
- **If replacing the driver's airbag after deployment, refer to COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT for a complete list of other parts that must also be replaced.**

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: **Always disconnect the negative side first.**

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 88: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 89: Disconnecting Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Passenger's Airbag Assembly

1. Disconnect the front passenger's airbag inflator connector (A) on the dashboard wire harness.
2. Remove the mounting nuts.

Fig. 90: Identifying Front Passenger's Airbag Inflator Connector And Mounting Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently remove the front passenger's airbag and cover assembly (A).

NOTE: The airbag cover has clips on each side where it attaches to the dashboard.

Fig. 91: Removing Front Passenger's Airbag And Cover Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 92: Identifying Airbag Cover Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Passenger's Airbag
    1. Cut four parts of the front passenger's cover as shown (A).
    2. Remove the front passenger's airbag.

NOTE:

- **Always replace the cover whenever you remove the airbag.**
- **Replace the airbag if the clips or its housing is damaged.**

Fig. 93: Identifying Front Passenger's Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Passenger's Airbag
    1. Insert the front passenger's airbag housing (A) into the new front passenger's cover (B).

NOTE:

- **Make sure there are no objects between the airbag and the**

cover.

- **Make sure the airbag is fully seated, and make sure the cover is not deformed or damaged after the airbag is in place.**
- **Replace the airbag if the clips or its housing is damaged.**
- **Do not use tools when detaching the front passenger's airbag in order to protect it.**
- **Make sure the hooks are set properly.**

Fig. 94: Identifying Front Passenger's Airbag Housing And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Passenger's Airbag Assembly
    1. Place the front passenger's airbag and cover as an assembly (A) into the dashboard.
    2. Tighten the front passenger's airbag new mounting nuts.

Fig. 95: Identifying Front Passenger's Airbag Assembly And Mounting Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the front passenger's airbag inflator connector (A) on the dashboard wire harness.

Fig. 96: Identifying Front Passenger's Airbag Inflator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

Fig. 97: Installing Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 98: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 99: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
7. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

FRONT PASSENGER'S WEIGHT SENSOR REMOVAL AND INSTALLATION

LON > 7491C5

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **The front passenger's weight sensor is part of the seat rail and must be replaced as an assembly.**

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

        NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 100: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 101: Removing Anchor Cover Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 102: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 103: Pulling Out Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 104: Removing Rear Inner Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 105: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 106: Identifying Rear Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Fig. 107: Identifying Connector And Harness Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 108: Identifying Connector And Harness Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Recline Cover - Passenger's Side
    1. Remove the recline knob (A).
    2. Remove the screw (B), and detach the clip (C).
    3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
    4. Release the rear hooks (G) of the recline cover from the recline inner cover.
    5. Detach the hook (H) by pulling the recline cover back by hand.
    6. Gently pull out the recline cover and remove it.

Fig. 109: Removing Front Seat Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Center Cover - Passenger's Side
    1. Pull up the center cover (A) to release the tabs (B) from the inner cover (C).

Fig. 110: Pulling Up Center Cover From Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Cushion - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 111: Removing Elastic Strap From Seat Cushion Frame Springs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connector(s) (A).
3. Detach the harness clip (B).
4. With sheet heater: Pry up the hook (C) of the harness holders (D), then release them from the seat cushion frame springs (E).

Except KX - With Seat Heater

Fig. 112: Removing Seat Cushion Frame Springs Hook (Except KX - With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 113: Identifying Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A) from both sides of the seat cushion frame.
6. Detach the clip (B) from the seat cushion frame.

Fig. 114: Identifying Seat Cushion Frame Hook Strips And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A) from under the seat cushion.

Fig. 115: Identifying Seat Cushion Hook Strips And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the seat cushion cover/pad (A) from the seat frame (B).

Fig. 116: Removing Seat Cushion Cover/Pad From Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Armrest - Passenger's Side
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 117: Identifying Center Pin, Bushing, Cap, Washer And Armrest

KX

Fig. 121: Identifying Seat Cushion Frame Spring Hooks (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strip (A).
6. Unzip the seat-back cover (B).

Fig. 122: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 123: Identifying Seat-Back Cover And Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the harness clips (A).

9. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 124: Pulling Out Harnesses Through Seat-Back Cover Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 125: Removing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the screw (A), and release the hooks (B), then remove the cover (C) and detach the harness clip (D).

Fig. 126: Identifying Cover, Harness Clip And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Disconnect the connectors (A) and detach the harness clips (B) from the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 127: Identifying OPDS Unit, Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Release the hook strips (A) from the seat-back frame (B).

14. Detach the harness clips (C).

Fig. 128: Removing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Head Restraint Guide - Passenger's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 129: Removing Head Restraint Guide From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat-Back Cover/Pad - Passenger's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 130: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat Frame - Passenger's Side
    1. Detach the hook(s) (A) and the clip (B), then remove the front foot covers (C).

Front Side

Fig. 131: Identifying Front Foot Covers, Hook And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 132: Identifying Front Foot Cover, Hook And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A), then remove the rear raiser covers (B).

Rear Side

Fig. 133: Identifying Rear Raiser Covers And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the hooks (A), then remove the outer recline inner cover (B) and the inner recline inner cover (C).

Fig. 134: Identifying Outer And Inner Recline Inner Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Passenger's Seat Rail/Front Passenger's Weight Sensors as an Assembly
    1. Remove the seat cushion frame (A).

Fig. 135: Identifying Seat Cushion Frame And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the TORX nuts using a TORX E18 socket, then remove the front passenger's seat rail/front passenger's weight sensors as an assembly (A).

Fig. 136: Identifying Front Passenger's Seat Rail/Front Passenger's Weight Sensors Assembly And Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Be sure to install the harness wires so they are not pinched or interfering with other parts.**
- **The front passenger's weight sensor is part of the seat rail and must be replaced as an assembly.**

1. Front Passenger's Seat Rail/Front Passenger's Weight Sensors as an Assembly
    1. Install the front passenger's seat rail/front passenger's weight sensors as an assembly (A) to the seat frame, and loosely tighten the TORX nuts.

NOTE: **The spacers and collars can be identified by their color. Make sure to install the spacers and collars as shown.**

Fig. 137: Identifying Front Passenger's Seat Rail/Front Passenger's Weight Sensors And Assembly Components

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 138: Identifying Seat Frame, Spacer, Collar, Housing And Spring

3. Front Seat-Back Cover/Pad - Passenger's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 145: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Head Restraint Guide - Passenger's Side
    1. Install the head restraint guides (A).

Fig. 146: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat-Back - Passenger's Side
    1. Install the hook strips (A) to the seat-back frame (B).
    2. Install the harness clips (C).

Fig. 147: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A) and install the harness clips (B) to the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 148: Identifying OPDS Unit, Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the hooks (A) and install the cover (B), then install the screw (C) and the harness clip (D).

Fig. 149: Identifying Cover, Harness Clip, Hooks And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 150: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the harness clips (A).
7. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 151: Installing Harnesses To Seat-Back Cover Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the hook strips (A) to the seat-back frame.

Fig. 152: Identifying Seat-Back Frame Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Zip the seat-back cover (A).
10. Install the hook strip (B).

Fig. 153: Installing Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the connector clips (A).
12. Install the harness clips (B).
13. Install the harness holders (C) to the seat cushion frame springs (D).
14. Except KX: Connect the connectors (E).

Except KX - With Seat Heater

Fig. 155: Installing Harness Holders To Seat Cushion Frame Springs - Without Seat Heater (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 156: Installing Harness Holders To Seat Cushion Frame Springs (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Armrest - Passenger's Side
    1. Install the pins (A) to the seat-back.

Fig. 157: Identifying Seat-Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
3. Install the cap (E) to the armrest.

Fig. 158: Identifying Armrest, Cap, Washer, Bushing And Center Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Cushion - Passenger's Side
   1. Install the seat cushion cover/pad (A) on the seat frame (B).

Fig. 159: Installing Seat Cushion Cover/Pad And Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Install the hook strips (A) to under the seat cushion.

Fig. 160: Identifying Seat Cushion Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the hook strips (A), then install the clip (B).

Fig. 161: Identifying Front Seat Cushion Hook Strips And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With seat heater: Install the harness holder (A) to the seat cushion frame springs (B).
5. Install the harness clip (C).

6. Connect the connecter(s) (D).

Except KX - With Seat Heater

Fig. 162: Installing Harness Holder To Seat Cushion Frame Springs - With Seat Heater (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

Fig. 163: Identifying Harness Clip And Connector (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 164: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Center Cover - Passenger's Side
    1. Install the center cover (A) to the recline inner cover (B). Make sure the tabs (C) snap into place securely.

Fig. 165: Installing Center Cover To Recline Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat Recline Cover - Passenger's Side
    1. Install the hook (A) and the clip (B) of the recline cover (C).
    2. Install the front hooks (D) to the recline inner cover (E).
    3. Install the rear hooks (F) of the recline cover to the recline inner cover.
    4. Install the recline knob (G) and the screw (H).

Fig. 166: Installing Recline Cover Rear Hooks To Recline Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 167: Identifying Front Seat Assembly Connectors And Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 168: Identifying Front Seat Assembly Connectors And Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 169: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 170: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 171: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Head Restraint - Passenger's Side
    1. Insert the head restraint (A) into the seat-back as shown.

Fig. 172: Inserting Head Restraint Into Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Install the lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 173: Installing Lower Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 174: Installing Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

    1. Clean the battery terminals.

2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 175: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 176: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
16. Front Passenger's Weight Sensor Initialization

Front Passenger's Weight Sensor Initialization

When you replace the SRS unit, the front passenger's weight sensor, the front passenger's seat frame, front passenger's seat rail, or the ODS unit, initialize the front passenger's weight sensor with the HDS.

NOTE:

- **Before initializing the front passenger's weight sensor, clear the DTCs.**
- **Before initializing the front passenger's weight sensor, make sure the battery is fully charged.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Keep the windows and the moonroof closed (if equipped).**
- **Make sure the vehicle is on level ground.**
- **Dehumidify inside of the vehicle with A/C.**
- **Do not touch the front passenger's seat during the operation check.**
- **Do not expose the front passenger's seat to sudden temperature changes.**

1. Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the initialization is completed.
2. Drive the vehicle, and accelerate to 22 mph (36 km/h), then stop on level ground.
3. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu, select SWS Initialization. Follow the prompts until the front passenger's weight sensor initialization has been completed.
4. Turn the ignition switch to LOCK (0).

17. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

ODS UNIT INITIALIZATION

PROCEDURE

NOTE:

- **After SRS unit or ODS unit is replaced, do this procedure to initialize the ODS unit.**
- **ODS unit initialization initializes both the OPDS sensor and the front passenger's weight sensor.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 177: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
3. OPDS Sensor Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu, select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.
3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

4. Front Passenger's Weight Sensor Initialization

Front Passenger's Weight Sensor Initialization

When you replace the SRS unit, the front passenger's weight sensor, the front passenger's seat frame, front passenger's seat rail, or the ODS unit, initialize the front passenger's weight sensor with the HDS.

NOTE:

- **Before initializing the front passenger's weight sensor, clear the DTCs.**

- **Before initializing the front passenger's weight sensor, make sure the battery is fully charged.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Keep the windows and the moonroof closed (if equipped).**
- **Make sure the vehicle is on level ground.**
- **Dehumidify inside of the vehicle with A/C.**
- **Do not touch the front passenger's seat during the operation check.**
- **Do not expose the front passenger's seat to sudden temperature changes.**

1. Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the initialization is completed.
2. Drive the vehicle, and accelerate to 22 mph (36 km/h), then stop on level ground.
3. From the HDS Main Menu, select SRS, then INITIALIZATION.

   In the INITIALIZATION Menu, select SWS Initialization. Follow the prompts until the front passenger's weight sensor initialization has been completed.

4. Turn the ignition switch to LOCK (0).

ODS UNIT OPERATION CHECK

PROCEDURE

1. After Replacing Front Passenger's Seat Component(s)

   After Replacing Front Passenger's Seat Component(s)

   NOTE: Check the ODS unit operation after any of these actions:

   - **Front passenger's seat component(s) replacement (except ODS unit and/or front passenger's weight sensor).**
   - **SRS unit replacement.**
   - **Remove the front passenger's weight sensor(s).**
   - **After a vehicle collision.**

2. Test Drive
   1. Drive the vehicle, accelerate to 22 mph (36 km/h), then stop on level ground.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 178: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pre-Operation Check Set-Up

Pre-Operation Check Set-Up

- Make sure all the components of the front passenger's seat are correctly installed.
- Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the output check is completed.
- Make sure nothing is on the front passenger's seat, including after market seat covers or mats.
- Make sure there is nothing in the front passenger's seat-back pocket.
- Keep the windows and the moonroof closed (if equipped).
- Do all initialization procedures, except test-driving, in the service bay.
- Make sure the vehicle is on level ground.
- Dehumidify inside of the vehicle with A/C.
- Do not touch the front passenger's seat during the operation check.
- Do not expose the front passenger's seat to sudden temperature changes.
- Make sure all aftermarket devices such as amplifiers, fluorescent light, air purifiers, CB or HAM radios, etc. are turned off.

1. From the HDS Main Menu, select SRS, then Inspection. In the Inspection Menu, select AFTER

REPLACING FRONT PASSENGER'S SEAT COMPONENT(S). Follow the prompts until the ODS unit operation check has been completed.

2. Turn the ignition switch to LOCK (0).

ODS UNIT REMOVAL AND INSTALLATION

LON > 7521B5

REMOVAL

NOTE: SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

Fig. 179: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Belt Lower Anchor Bolt - Passenger's Side
   1. Carefully pry up on the bottom of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it upward.

Fig. 180: Removing Anchor Cover Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 181: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Passenger's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 182: Pulling Out Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 183: Removing Rear Inner Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 184: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 185: Identifying Rear Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Fig. 186: Identifying Connector And Harness Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 187: Identifying Connector And Harness Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest - Passenger's Side
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 188: Identifying Center Pin, Bushing, Cap, Washer And Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 189: Identifying Seat-Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back As Needed - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 190: Removing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hook strip (A).
3. Unzip the seat-back cover (B).

Fig. 191: Removing Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw, and release the hooks (A), then remove the cover (B).

Fig. 192: Identifying Front Seat-Back Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A) and harness clips from the ODS unit (USA and Canada models) or the OPDS unit (Mexico models) (B).

Fig. 193: Identifying ODS Unit (USA And Canada Models) Or OPDS Unit (Mexico Models) And Connectors

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. ODS UNIT
    1. Remove the ODS unit (A).

Fig. 194: Identifying ODS Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **When you replace the ODS unit, initialize the ODS unit. ODS unit initialization initializes both the OPDS sensor and the front passenger's weight sensor.**

1. ODS UNIT

NOTE:

- **Be sure to install the harness so that they are not pinched or interfering with other parts.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**

    1. Install the ODS unit (A).

Fig. 195: Identifying ODS Unit And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat-Back As Needed - Passenger's Side
    1. Connect the connectors (A) and harness clips to the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (B).

Fig. 196: Identifying ODS Unit (USA And Canada Models) Or OPDS Unit (Mexico Models) And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the hooks (A), and install the cover (B) and the screw.

Fig. 197: Identifying Front Seat Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Zip the seat-back cover (A).
4. Install the hook strip (B).

Fig. 198: Installing Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 199: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Armrest - Passenger's Side
    1. Install the pins (A) to the seat-back.

Fig. 200: Identifying Seat-Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 201: Identifying Armrest, Cap, Washer, Bushing And Center Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 202: Identifying Front Seat Assembly Connectors And Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 203: Identifying Front Seat Assembly Connectors And Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 204: Identifying Seat Mounting Bolts With Torque Specification (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 205: Identifying Seat Mounting Bolts With Torque Specification (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 206: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Head Restraint - Passenger's Side
    1. Insert the head restraint (A) into the seat-back as shown.

Fig. 207: Inserting Head Restraint Into Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Belt Lower Anchor Bolt - Passenger's Side
    1. Install the lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 208: Installing Lower Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 209: Installing Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.

2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 210: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 211: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
10. OPDS Sensor Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu,

select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.

3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

11. Front Passenger's Weight Sensor Initialization

Front Passenger's Weight Sensor Initialization

When you replace the SRS unit, the front passenger's weight sensor, the front passenger's seat frame, front passenger's seat rail, or the ODS unit, initialize the front passenger's weight sensor with the HDS.

NOTE:

- **Before initializing the front passenger's weight sensor, clear the DTCs.**
- **Before initializing the front passenger's weight sensor, make sure the battery is fully charged.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Keep the windows and the moonroof closed (if equipped).**
- **Make sure the vehicle is on level ground.**
- **Dehumidify inside of the vehicle with A/C.**
- **Do not touch the front passenger's seat during the operation check.**
- **Do not expose the front passenger's seat to sudden temperature changes.**

1. Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the initialization is completed.
2. Drive the vehicle, and accelerate to 22 mph (36 km/h), then stop on level ground.
3. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu, select SWS Initialization. Follow the prompts until the front passenger's weight sensor initialization has been completed.
4. Turn the ignition switch to LOCK (0).

12. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

REAR SAFING SENSOR REMOVAL AND INSTALLATION

LON > 7521D0

REMOVAL

NOTE: SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 212: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel

(D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 213: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 214: Identifying Rear Damper Maintenance Cover And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Seat Cushion Foot Cover - Both Sides
    1. Pull up the rear seat cushion foot covers (A) by hand to detach the clips (B).
    2. Detach the hooks (C), then remove the rear seat cushion foot covers.

Left side

Fig. 215: Identifying Rear Seat Cushion Foot Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 216: Identifying Rear Seat Cushion Foot Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Rear Seat Cushion Assembly
    1. Detach the cables (A) from the cable brackets (B), and detach the cable clip (C), then disconnect the cables from the seat cushion assembly (D).

Fig. 217: Disconnecting Cables From Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the bolts (A) securing the left rear seat cushion assembly (B), then remove the left rear seat cushion assembly.

Fig. 218: Removing Left Rear Seat Cushion Assembly And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Right Rear Seat Cushion Assembly
    1. Detach the cables (A) from the cable brackets (B), and detach the cable clip (C), then disconnect the cables from the seat cushion assembly (D).

Fig. 219: Disconnecting Cables From Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the bolts (A) securing the right rear seat cushion assembly (B), then remove the right rear seat cushion assembly.

Fig. 220: Identifying Right Rear Seat Cushion Assembly And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Seat-Back Assembly - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the clips (A) from the rear carpet trim (B).
2. Remove the bolts (C, D) securing the rear seat-back assembly (E), then remove the rear seat-back assembly.

Left side

Fig. 221: Removing Rear Seat-Back Assembly (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 222: Removing Rear Seat-Back Assembly (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Carpet Trim - Both Sides
    1. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trims (C) by hand to detach the clips (D), then remove the rear carpet trims.

    Left side

Fig. 223: Identifying Rear Side Trim Panel, Rear Carpet Trims, Hook And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 224: Identifying Rear Side Trim Panel, Rear Carpet Trims, Hook And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Floor Carpet As Needed

1. Detach the clips, then turn over the carpet (A).

Fig. 225: Turning Floor Carpet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Safing Sensor
    1. Remove the cover (A), then disconnect the rear safing sensor 2P connector on the floor wire harness.
    2. Remove the TORX bolt using a TORX T30 bit, then remove the rear safing sensor (B).

Fig. 226: Identifying Rear Safing Sensor And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: SRS components are located in this area. Review the SRS COMPONENT

<u>LOCATIONS</u> and the <u>PRECAUTIONS AND PROCEDURES</u> before doing repairs or service.

1. Rear Safing Sensor
    1. Install the rear safing sensor (A) with the new TORX bolt using a TORX T30 bit.
    2. Connect the rear safing sensor connector on the floor wire harness, then install the cover (B).

<u>Fig. 227: Identifying Rear Safing Sensor And Torx Bolt With Torque Specification</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 228: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 229: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
5. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
6. Floor Carpet As Needed
    1. Reinstall the carpet (A), and install the clips.

Fig. 230: Identifying Floor Carpet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Carpet Trim - Both Sides
    1. Install the rear carpet trims (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left side

Fig. 231: Identifying Rear Carpet Trims, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 232: Identifying Rear Carpet Trims, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Seat-Back Assembly - Both Sides
    1. Install the rear seat-back assembly (A).

NOTE: **Tighten the bolts (B, C) by hand first, then tighten them to the specified torque.**

2. Install the rear seat-back cover (D). Make sure the clips (E) snap into place securely.

Left side

Fig. 233: Installing Rear Seat-Back Cover With Torque Specifications (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 234: Installing Rear Seat-Back Cover With Torque Specifications (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Right Rear Seat Cushion Assembly
    1. Install the right rear seat cushion assembly (A).

NOTE: **Tighten the bolts (B) by hand first, then tighten them to the specified torque.**

Fig. 235: Identifying Right Rear Seat Cushion Assembly And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the cables (A) to the rear seat cushion assembly (B), then install the cables to the cable brackets (C), and install the cable clip (D).

Fig. 236: Connecting Cables To Rear Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Left Rear Seat Cushion Assembly
    1. Install the left rear seat cushion assembly (A).

NOTE: **Tighten the bolts (B) by hand first, then tighten them to the specified torque.**

Fig. 237: Identifying Left Rear Seat Cushion Assembly And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the cables (A) to the rear seat cushion assembly (B), then install the cables to the cable brackets (C), and install the cable clip (D).

Fig. 238: Connecting Cables To Rear Seat Cushion Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat Cushion Foot Cover - Both Sides
    1. Install the rear seat cushion foot covers (A). Make sure the clips (B) and the hooks (C) snap into place securely.

    Left side

Fig. 239: Identifying Rear Seat Cushion Foot Covers, Clips And Hook (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 240: Identifying Rear Seat Cushion Foot Covers, Clips And Hook (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 241: Identifying Rear Damper Maintenance Cover And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 242: Installing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SIDE AIRBAG REMOVAL AND INSTALLATION

LON > 751107 LEFT 751108 RIGHT

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **If replacing the side airbag after deployment, refer to Component Replacement/Inspection After Deployment See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT for a complete list of other parts that must also be**

replaced.

- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 243: Removing Anchor Cover Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 244: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 245: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
   1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 246: Removing Head Restraint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
   1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 247: Removing Rear Inner Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 248: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.
3. Remove the rear mounting bolts (A) from the front seat.

Fig. 249: Identifying Rear Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 250: Identifying Connectors And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat - Passenger's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 251: Removing Rear Inner Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 252: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 253: Identifying Rear Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Without Subwoofer

Fig. 254: Identifying Connector And Harness Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 255: Identifying Connector And Harness Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Subwoofer
    1. Remove the subwoofer (A).

Fig. 256: Identifying Subwoofer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 257: Identifying Center Pin, Bushing, Cap, Washer And Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 258: Identifying Seat-Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat-Back - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 259: Removing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the connector clips (A).
3. Detach the harness clips (B).
4. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
5. Disconnect the connectors (F).

Power Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat with Seat Heater

Fig. 261: Prying Up Harness Holder Hooks Using Power Seat (Manual Seat With Seat Heater)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hook strip (A).
7. Unzip the seat-back cover (B).

Fig. 262: Releasing Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 263: Identifying Seat-Back Cover And Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Detach the harness clips (A).
10. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 264: Pulling Out Harnesses Through Seat-Back Cover Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 265: Removing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Release the hook strips (A) from the seat-back frame (B).

Fig. 266: Removing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat-Back - Passenger's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

Fig. 267: Removing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the connector clips (A).
3. Detach the harness clips (B).
4. Pry up the hooks (C) of the harness holders (D), then release them from the seat cushion frame springs (E).
5. Disconnect the connectors (F).

Except KX - Without Seat Heater

6. Release the hook strip (A).
7. Unzip the seat-back cover (B).

Fig. 271: Removing Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A), and loosen the seat-back cover (B).

Fig. 272: Identifying Seat-Back Cover And Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Detach the harness clips (A).

10. Pull out the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 273: Pulling Out Harnesses Through Seat-Back Cover Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Release airbag attachment wires A, B from the seat-back frame (C).

Fig. 274: Removing Airbag Attachment Wires From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the screw (A), and release the hooks (B), then remove the cover (C), and detach the harness clip (D).

Fig. 275: Identifying Screw, Hooks, Cover And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Disconnect the connectors (A) detatch the and harness clips (B) from the ODS unit (USA and Canada models) or OPDS unit (Mexico models) (C).

Fig. 276: Identifying ODS Unit (USA And Canada Models) Or OPDS Unit (Mexico Models), Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Release the hook strips (A) from the seat-back frame (B).
15. Detach the harness clips (C).

Fig. 277: Removing Hook Strips From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Head Restraint Guides - Driver's Side
    1. Pinch the tabs (A) on the end of the head restraint guides (B), and remove the guides from the seat-back.

Fig. 278: Removing Head Restraint Guide From Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Seat-Back Cover/Pad - Driver's Side
    1. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 279: Removing Seat-Back Cover/Pad From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Side Airbag
    1. Detach the harness clip (A), then remove the side airbag (B).

Fig. 280: Identifying Side Airbag And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Side Airbag

NOTE:

- **If the side airbag cover is secured with tape, remove the tape.**
- **Do not open the cover on the side airbag cover.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**
- **Be sure to install the harness so that they are not pinched or interfering with other parts.**

1. Install the side airbag (A), then tighten the new mounting nuts.
2. Install the clip (B).

Fig. 281: Identifying Side Airbag, Clip And Mounting Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat-Back Cover/Pad - Driver's Side
    1. Install the seat-back cover/pad (A) on the seat-back frame (B).

Fig. 282: Installing Seat-Back Cover/Pad On Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint Guides - Driver's Side
    1. Install the head restraint guides (A).

Fig. 283: Installing Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat-Back - Driver's Side
    1. Install the hook strips (A) to the seat-back frame (B).

Fig. 284: Installing Hook Strips To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install airbag attachment wires A, B to the seat-back frame (C).

Fig. 285: Installing Airbag Attachment Wires To Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness clips (A).
4. Install the harnesses (B) through the holes (C) in the seat-back cover (D).

Fig. 286: Installing Harnesses Through Seat-Back Cover Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the hook strips (A) to the seat frame.

Fig. 287: Identifying Seat Frame Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Zip the seat-back cover (A).
7. Install the hook strip (B).

Fig. 288: Installing Hook Strip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the connector clips (A).
9. Install the harness clips (B).
10. Install the harness holders (C) to the seat cushion frame springs (D).
11. Connect the connector (E).

Power Seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Except KX - With Seat Heater

Fig. 300: Installing Harness Holders To Seat Cushion Frame Springs - With Seat Heater (Except KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

KX

<u>Fig. 301: Installing Harness Holders To Seat Cushion Frame Springs (KX)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the elastic strap (A) to the seat cushion frame springs (B).

Fig. 302: Installing Elastic Strap To Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Armrest
    1. Install the pins (A) to the seat-back.

Fig. 303: Identifying Seat-Back Pins With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the armrest (A), then install the washer (B), the bushing (C), and the center pin (D).
    3. Install the cap (E) to the armrest.

Fig. 304: Identifying Armrest, Cap, Washer, Bushing And Center Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Subwoofer
    1. Install the subwoofer (A).

Fig. 305: Identifying Subwoofer And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Assembly - Passenger's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Without Subwoofer

Fig. 306: Identifying Front Seat Assembly Connectors And Clip (Without Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With Subwoofer

Fig. 307: Identifying Front Seat Assembly Connectors And Clip (With Subwoofer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front Side

Fig. 308: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Rear Side

Fig. 309: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 310: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 311: Identifying Front Seat Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

Fig. 312: Identifying Seat Mounting Bolts With Torque Specifications (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 313: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 314: Installing Rear Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 315: Inserting Head Restraint To Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 316: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

NOTE: Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.

Fig. 317: Installing Lower Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 318: Installing Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 319: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
15. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

SIDE CURTAIN AIRBAG REMOVAL AND INSTALLATION

LON > 7521A5 LEFT 7521C2 RIGHT 7521C9 BOTH

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **If replacing the side airbag after deployment, refer to Component Replacement/Inspection After Deployment See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT for a complete list of other parts that must also be replaced.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 320: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 321: Removing Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 322: Removing Front Door Opening Seal From Trim Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 323: Removing A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 324: Inserting Shop Towel Between A-Pillar Trim And Dashboard

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

Fig. 325: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 326: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the

upright position.

2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 327: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 328: Pulling Out Rear Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. B-Pillar Lower Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 329: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt.

Fig. 330: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 331: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 332: Removing Tonneau Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 333: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 334: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 335: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Damper Maintenance Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Fold down the rear seat-back.
2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 336: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Carpet Trim - Both Sides
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

       Left side

Fig. 337: Pulling Up Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

       Right side

Fig. 338: Pulling Up Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Detach the hooks (A) from the rear side trim panel (B), and pull up the rear carpet trims (C) by hand to detach the clips (D), then remove the rear carpet trims.

       Left side

Fig. 339: Identifying Rear Side Trim Panel, Rear Carpet Trims, Hook And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 340: Identifying Rear Side Trim Panel, Rear Carpet Trims, Hook And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Rear Seat Cushion Foot Cover - Both Sides (Remove The Outer Left Side Only)

1. Pull up the rear seat cushion foot cover (A) by hand to detach the clips (B).
2. Detach the hooks (C), then remove the rear seat cushion foot cover.

Left side

Fig. 341: Identifying Rear Seat Cushion Foot Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 342: Identifying Rear Seat Cushion Foot Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the rear seat belt lower anchor bolt (A).

Fig. 343: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.
2. Remove the screws (C).

Fig. 344: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 345: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

Fig. 346: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 347: Identifying Rear Side Trim Panel, Quarter Pillar Trim, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 348: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 349: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Quarter Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

Fig. 350: Identifying Rear Seat Belt Lower Anchor, Quarter Pillar Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

Fig. 351: Identifying Roof Console Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Ceiling Light (without RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the ceiling light (B).
    5. Disconnect the connector.

Fig. 352: Identifying Ceiling Light And Lens (Without RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Display Cover (With RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

Fig. 353: Identifying Ceiling Light And Lens (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear display cover (A).

Fig. 354: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Rear Controller and Screen (With RES)
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 355: Identifying Rear Controller And Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Cargo Area Light
    1. Turn the cargo area light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the cargo area light (B).
    5. Disconnect the connector.

Fig. 356: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Grab Handles for One Vehicle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

Fig. 357: Inserting Tips Of Push Pin/Grab Rail Cap Pliers Into Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 358: Pulling Cap Using Push Pin/Grab Rail Cap Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

Fig. 359: Identifying Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

Fig. 360: Removing Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

Fig. 361: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: Make sure the tab slides into the bracket cover as you rotate the

sunvisor.

Fig. 362: Rotating Sunvisor Backward 45 °
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 363: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Headliner
    1. Without moonroof: Disconnect the connector (A), and detach the harness clips (B) from the driver's side A-pillar.

Fig. 364: Identifying Driver's Side A-Pillar Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A), and detach the harness clips (B) from the passenger's side A-pillar.

Fig. 365: Identifying Passenger's Side A-Pillar Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A), and detach the connector clips (B) and the harness clip (C) from the right quarter pillar.

Fig. 366: Identifying Right Quarter Pillar, Connector, Clips And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the front seats all the way back, and recline the seat-back fully.
5. Fold down the rear seats.
6. Detach the clips (A) and release the fasteners (B) from the headliner (C) by pulling it down.
7. With the help of an assistant, lower the headliner.

Without moonroof

Fig. 367: Identifying Headliner, Clips And Fasteners (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 368: Identifying Headliner, Clips And Fasteners (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With the help of an assistant, remove the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 369: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Side Curtain Airbag
    1. Disconnect the side curtain airbag inflator connector (A) on the floor wire harness.

Fig. 370: Identifying Side Curtain Airbag Inflator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left side shown; right side is similar .

2. Remove the side curtain airbag (A).

Fig. 371: Identifying Side Curtain Airbag Mounting Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left side shown; right side is similar .

INSTALLATION

NOTE: **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Side Curtain Airbag

NOTE:

- **If replacing the side curtain airbag after deployment, refer to COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT for a complete list of other parts that must also be replaced.**

- **Installation of the side curtain airbag must be done according to precautions and procedures.**
- **If the side curtain airbag is frayed, or has any other visible damage, replace it. Do not attempt to repair an airbag.**
- **When you install the side curtain airbag, make sure it is not twisted, and that it is not caught between the inflator bracket by the bracket bolts.**
- **Make sure that the side curtain airbag inflator retainer is installed properly. Otherwise the side curtain airbag could incorrectly deploy and cause damage or injuries.**
- **If there is any damage to the side curtain airbag, do not try to repair it. Replace any damaged side curtain airbag.**

1. Install the side curtain airbag (A).

Left side shown; right side is similar.

Fig. 372: Identifying Side Curtain Airbag Components And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left side shown; right side is similar .

2. Connect the side curtain airbag inflator connector (A) on the floor wire harness.

Fig. 373: Identifying Side Curtain Airbag Inflator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left side shown; right side is similar .

2. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 374: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 375: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
5. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
6. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

Fig. 376: Identifying Headliner, Grab Handle Holes, Sunvisor Holes, Clip Bases And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 377: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 378: Identifying Headliner, Clips And Fasteners (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 379: Identifying Headliner, Clips And Fasteners (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 380: Identifying Right Quarter Pillar Connector, Clips And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

Fig. 381: Identifying Passenger's A-Pillar Connector, Clips And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

Fig. 382: Identifying Driver's A-Pillar, Connector And Harness Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)

- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

Fig. 383: Identifying Sunvisor Bracket, Cover, Shaft, Base And Vanity Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 384: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.

3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 385: Rotating Sunvisor Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

Fig. 386: Identifying Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Grab Handles for One Vehicle

1. Install the clips (A) on the grab handle (B).
2. Install the caps (C) fully into the clips.

Fig. 387: Installing Clips On Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Position the grab handle (A) on the grab handle bracket (B).
4. Push on the grab handle until the clips (C) snap into place securely.

Fig. 388: Identifying Grab Handle, Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Cargo Area Light
    1. Connect the connector.
    2. Install the cargo area light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

Fig. 389: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Controller and Screen (With RES)
    1. Install the rear controller and screen (A).
    2. Connect the connector.

Fig. 390: Identifying Rear Controller And Screen With Torque Specifications (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Display Cover (With RES)
    1. Install the rear display cover (A).

Fig. 391: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connector.
    3. Install the ceiling light (B).
    4. Carefully install the lenses (C).

Fig. 392: Identifying Ceiling Light And Lenses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Ceiling Light (without RES)
    1. Connect the connector.
    2. Install the ceiling light (A).
    3. Install the bulb.
    4. Carefully install the lens (B).

17. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 395: Identifying Quarter Pillar Trim And Clips Seating Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 396: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 397: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shown the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 398: Removing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shown the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 399: Cutting Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shown the A-pillar .

19. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 400: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 401: Identifying Rear Seat Belt Lower Anchor, Quarter Pillar Trim And Clips

26. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with

the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 417: Identifying Alignment Mark On Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 418: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 419: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

Fig. 420: Identifying B-Pillar Upper/Lower Trim Components

30. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 421: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 422: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 423: Removing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 424: Cutting Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

31. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the upper hook (A) of the B-pillar upper trim (B) to the hole in the body. Push the bottom portion of the B-pillar upper trim to install the lower hooks (C). Make sure the hooks snap into place securely.

Fig. 425: Installing Upper Hook Of B-Pillar Upper Trim To Hole In Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front seat belt upper anchor bolt, then install the front seat belt shoulder anchor adjuster cap (A).

Fig. 426: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. B-Pillar Lower Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 427: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 428: Installing Rear Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 429: Installing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 430: Installing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 431: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 432: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 433: Removing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 434: Cutting Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

38. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 435: Installing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 436: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 437: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Front Door Sill Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 438: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SIDE IMPACT SENSOR (FIRST) REMOVAL AND INSTALLATION

LON > 7521B6 LEFT FRONT 7521B7 RIGHT FRONT

REMOVAL

NOTE: **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: **Always disconnect the negative side first.**

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 439: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 440: Removing Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the

upright position.

2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 441: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front/Rear Door Opening Seals As Needed
    1. Pull out the door opening seals (A) from the trim hooks (B) around the door opening flange as needed.

    Front

Fig. 442: Pulling Out Front Door Opening Seals From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 443: Pulling Out Rear Door Opening Seals From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. B-Pillar Lower Trim
    1. Slide the front seat forward fully.
    2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
    3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 444: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Side Impact Sensor (First)
    1. Disconnect the side impact sensor (first) connector on the floor wire harness.
    2. Remove the TORX bolt using a TORX T30 bit, then remove the side impact sensor (first) (A).

Fig. 445: Identifying Side Impact Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Side Impact Sensor (First)
    1. Install the side impact sensor (first) (A) with the new TORX bolt using a TORX T30 bit.
    2. Connect the side impact sensor (first) connector on the floor wire harness.

Fig. 446: Identifying Side Impact Sensor And Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 447: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 448: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
5. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
6. B-Pillar Lower Trim
    1. Install the B-pillar lower trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 449: Installing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front/Rear Door Opening Seals As Needed
    1. Install the door opening seals (A). Make sure the seal is installed securely into the hooks (B).

    Front

Fig. 450: Installing Front Door Opening Seals

1. Side Impact Sensor (Second)

1. Install the side impact sensor (second) (A) with the new TORX bolt using a TORX T30 bit.
2. Connect the side impact sensor (second) connector on the floor wire harness.

Fig. 473: Identifying Side Impact Sensor And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 474: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 475: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
5. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
6. Rear Side Trim Panel
    1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 476: Removing Rear Seat Release Lever Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 477: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 478: Identifying Rear Side Trim Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 479: Identifying Tie-Down Hook And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 480: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

Fig. 481: Identifying Rear Seat Release Lever Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 482: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 483: Identifying Alignment Mark Of Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Carpet Trim
    1. Install the rear carpet trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

Fig. 484: Identifying Rear Carpet Trim, Clips And Hooks (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 485: Identifying Rear Carpet Trim, Clips And Hooks (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear seat-back cover (A). Make sure the clips (B) snap into place securely.

Left side

Fig. 486: Installing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 487: Installing Rear Seat-Back Cover (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 488: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Door Opening Seal As Needed
    1. Install the rear door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 489: Installing Rear Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 490: Installing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 491: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

Fig. 492: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SRS COMPONENT LOCATION INDEX

USA AND CANADA MODELS

SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT

INSPECTION

1. Component Replacement/Inspection After Deployment

NOTE:

- **If the harness is broken or damaged in the areas relevant to the**

replacement parts shown below, replace the harness, do not repair it.

- **Before doing any SRS repairs, check for DTCs with the HDS for the less obvious deployed components (front seat belt tensioners, front impact sensors, side impact sensors, etc).**
- **Do not replace the ODS unit (USA and Canada models) or the OPDS unit (Mexico models) unless it is physically damaged or a specific fault was found during DTC troubleshooting because it could complicate troubleshooting other DTCs.**
- **USA and Canada models: After a vehicle collision, do the ODS unit operation check.**
- **After a vehicle collision, inspect the front seat active head restraints.**

After a collision where the front seat belt tensioners deployed, replace these items:

- SRS unit
- Front seat belt(s)
- Front impact sensor(s)

After a collision where the front airbag(s) deployed, replace these items:

- SRS unit
- Deployed front airbag(s)
- Front seat belt(s)
- Front impact sensor(s)

After a collision where the side airbag has deployed, replace the items for the side(s) that deployed:

- SRS unit
- Deployed side airbag(s)
- Front seat belt(s)
- Side impact sensor(s) (first)
- Side impact sensor(s) (second)
- Rear safing sensor
- B-pillar lower trim
- Seat frame and related parts

After a collision where a side curtain airbag has deployed, replace the items for the side(s) that deployed:

- SRS unit
- Deployed side curtain airbag(s)
- Front seat belt(s)
- Side impact sensor(s) (first)

- Side impact sensor(s) (second)
- Rear safing sensor
- A-pillar trim
- B-pillar upper trim
- Quarter pillar trim
- Front grab handle
- Rear grab handle
- All related trim clips
- Sunvisor
- Headliner

After a moderate to severe side or rear collision, inspect for any damage on the side curtain airbag or other related components. Replace the components as needed.

A-Pillar Trim

Fig. 499: Identifying A-Pillar Trim Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

B-Pillar Upper/Lower Trim

Fig. 500: Identifying B-Pillar Upper/Lower Trim Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Quarter Pillar Trim

Fig. 501: Identifying Quarter Pillar Trim Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

During the repair process, inspect these areas:

- Inspect all the SRS wire harnesses. Replace, do not repair, any damaged harnesses.
- Inspect the cable reel for heat damage. If there is any damage, replace the cable reel.

  After the vehicle is completely repaired, turn the ignition switch to ON (II). If the SRS indicator comes on for about 6 seconds and then goes off, the SRS is OK. If the indicator does not function properly, use the HDS to check for the DTCs. If you cannot retrieve a code, do the SRS Symptom Troubleshooting.

2. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 502: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 503: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 504: Removing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

This illustration shows the A-pillar.

Fig. 505: Cutting Headliner Using Utility Knife

SRS UNIT REMOVAL AND INSTALLATION

LON > 751100

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

	MVCI unit with the latest control module (CM) update software installed*

REMOVAL

NOTE: SRS components are located in this area. Review the <u>SRS COMPONENT LOCATIONS</u> and the <u>PRECAUTIONS AND PROCEDURES</u> before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 508: Identifying Battery Positive And Negative Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Console Cover - Both Sides
    1. Remove the clips (A).
    2. Detach the clips (B), then remove the front console covers (C).

Left side

Fig. 509: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 510: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 511: Identifying Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B), then remove the center lower cover.
    2. Remove the bolt (C).

Fig. 512: Identifying Center Lower Cover, Clips And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 513: Identifying Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

Fig. 514: Identifying Console Box Mat And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 515: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

Fig. 516: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Heater Joint Duct A

1. Remove the rear heater joint duct A.

Fig. 517: Identifying Rear Heater Joint Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Heater Joint Duct B
    1. Remove the rear heater joint duct B.

Fig. 518: Identifying Rear Heater Joint Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. SRS Unit
    1. Disconnect SRS unit connectors A and B.

Fig. 519: Identifying SRS Unit Connectors A And B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the TORX bolts from left side, using a TORX T30 bit.

Fig. 520: Identifying SRS Unit Torx Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the TORX bolt from the right side, using a TORX T30 bit, then remove the SRS unit (A).

Fig. 521: Identifying SRS Unit And Torx Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **After installing the SRS unit, make sure the SRS unit has the latest software. If it does not have the latest, update the software in the SRS unit.**
- **USA and Canada models: When you replace the SRS unit, initialize the ODS unit. ODS unit initialization initializes both the OPDS sensor and the front passenger's weight sensor.**
- **Mexico models: When you replace the SRS unit, initialize the OPDS unit. OPDS unit initialization initializes the OPDS sensor.**

1. SRS Unit

NOTE: **The SRS unit connectors have lever locks. Push them into position until they click and the lever locks are fully secured.**

To reconnect the connector (A), push in on the connector. As the connector is pressed in, the lever (B) moves to the locked position.

Fig. 522: Moving Lever At Locked Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Install the SRS unit (A) with the new TORX bolt using a TORX T30 bit.

Fig. 523: Identifying SRS Unit And Torx Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new TORX bolts using a TORX T30 bit.

Fig. 524: Identifying SRS Unit Torx Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the SRS connectors A and B.

Fig. 525: Identifying SRS Connectors A And B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Heater Joint Duct B
    1. Install the rear heater joint duct B.

Fig. 526: Identifying Rear Heater Joint Duct B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Heater Joint Duct A
    1. Install the rear heater joint duct A.

Fig. 527: Identifying Rear Heater Joint Duct A
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Console
    1. Install the center console (A).

Fig. 528: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors (A), and install the clips (B).

Fig. 529: Identifying Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 530: Identifying Console Box Mat And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

Fig. 531: Identifying Center Console Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 532: Identifying Center Lower Cover, Clips And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 533: Identifying Center Console Rear Trim, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

Left side

Fig. 534: Identifying Front Console Covers And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

Fig. 535: Identifying Front Console Covers And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 536: Identifying Multipurpose Grease Applying Area On Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. SRS Unit - Update

NOTE: **Check any official Honda service website for more service information about updating the MVCI and control units.**

9. USA and Canada models: ODS Unit - Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**

- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu, select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.
3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

Front Passenger's Weight Sensor Initialization

When you replace the SRS unit, the front passenger's weight sensor, the front passenger's seat frame, front passenger's seat rail, or the ODS unit, initialize the front passenger's weight sensor with the HDS.

NOTE:

- **Before initializing the front passenger's weight sensor, clear the DTCs.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including after market seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Keep the windows and the moonroof closed (if equipped).**
- **Make sure the vehicle is on level ground.**
- **Dehumidify inside of the vehicle with A/C.**
- **Do not touch the front passenger's seat during the operation check.**
- **Do not expose the front passenger's seat to sudden temperature changes.**

1. Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the initialization is completed.
2. Drive the vehicle, and accelerate to 22 mph (35 km/h), then stop on level ground.
3. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu, select SWS Initialization. Follow the prompts until the front passenger's weight sensor initialization has been completed.
4. Turn the ignition switch to LOCK (0).

10. Mexico models: OPDS Unit Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the OPDS unit,

initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) OPDS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the OPDS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu, select OPDS Initialization. Follow the prompts until the OPDS unit initialization has been completed.
3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the OPDS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the OPDS unit continues to fail to initialize, replace the OPDS unit.**

11. USA and Canada models: ODS Unit Operation Check

After Replacing Front Passenger's Seat Component(s)

NOTE: **Check the ODS unit operation after any of these actions:**

- **Front passenger's seat component(s) replacement (except ODS unit and/or front passenger's weight sensor).**
- **SRS unit replacement.**
- **Remove the front passenger's weight sensor(s).**
- **After a vehicle collision.**

Pre-Operation Check Set-Up

- Make sure all the components of the front passenger's seat are correctly installed.
- Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the output check is completed.

- Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.
- Make sure there is nothing in the front passenger's seat-back pocket.
- Keep the windows and the moonroof closed.
- Do all initialization procedures, except test-driving, in the service bay.
- Make sure the vehicle is on level ground.
- Dehumidify inside of the vehicle with A/C.
- Do not touch the front passenger's seat during the operation check.
- Do not expose the front passenger's seat to sudden temperature changes.
- Make sure all aftermarket devices such as amplifiers, fluorescent light, air purifiers, CB or HAM radios, etc. are turned off.

1. Drive the vehicle, accelerate to 22 mph (35 km/h), then stop on level ground.
2. From the HDS Main Menu, select SRS, then Inspection. In the Inspection Menu, select AFTER REPLACING FRONT PASSENGER'S SEAT COMPONENT(S). Follow the prompts until the ODS unit operation check has been completed.
3. Turn the ignition switch to LOCK (0).

12. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

SRS UNIT UPDATE

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	MVCI unit with the latest control module (CM) update software installed*

PROCEDURE

1. SRS Unit - Update

NOTE: **Check any official Honda service website for more service information about updating the MVCI and control units.**

HOW TO TROUBLESHOOT THE SRS

HOW TO TROUBLESHOOT CIRCUITS AT THE SRS UNIT CONNECTORS

Special Tools Required

Pin Probe Male 07ZAJ-RDJA110

1. When diagnosing or troubleshooting at an SRS unit connector (A), use the terminal test port below the terminal you need to check. Gently insert the pin probes of the tester or jumper wire at the terminal test port from the terminal side.

Fig. 1: Identifying SRS Short Canceller Terminal, Port And Terminal Test Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not insert the pin probes of the tester or a jumper wire at the terminal or the SRS short canceller terminal port.**
- **To prevent damage to the connector terminals, do not insert the test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.**

2. Connect one side of the patch cord terminals (A) to a commercially available digital multimeter (B), and connect the other side of the terminals (C) to the pin probe male.

Fig. 2: Connecting Patch Cord Terminals To Digital Multimeter And Pin Probe Male
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently contact the pin probe male at the terminal test port from the terminal side. Do not force the tips into the terminals.

NOTE:

- **For accurate results, always use the pin probe male.**
- **To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes. Damaged terminals cause a poor connection and an incorrect measurement.**
- **Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.**

HOW TO TROUBLESHOOT CIRCUITS AT THE WATERPROOF SRS CONNECTORS

Special Tools Required

Pin Probe Male 07ZAJ-RDJA110

1. When diagnosis or troubleshooting is done at waterproof SRS connectors (A), use the terminal test port above the terminal you need to check. Gently insert the pin probe of the tester or jumper wire at the terminal test port from the terminal side.

Fig. 3: Identifying Waterproof SRS Connector Terminals And Test Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not insert the pin probes of the tester or a jumper wire into the terminal.**
- **To prevent damage to the connector terminals, do not insert the test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals can cause a poor connection and an incorrect measurement.**

2. Connect one side of the patch cord terminals (A) to a commercially available digital multimeter (B), and connect the other side of the terminals (C) to the pin probe male.

Fig. 4: Connecting Patch Cord Terminals To Digital Multimeter And Pin Probe Male

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently contact the pin probe male at the terminal test port from the terminal side. Do not force the tips into the terminals.

NOTE:

- **For accurate results, always use the pin probe male.**
- **To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes. Damaged terminals cause a poor connection and an incorrect measurement.**
- **Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.**

HOW TO TROUBLESHOOT CIRCUITS AT THE CONNECTORS EXCEPT FOR SRS UNIT CONNECTORS AND WATERPROOF SRS CONNECTORS

Special Tools Required

Back Probe Adapter, 17 mm 07TAZ-001020A

When using electrical test equipment, insert the back probe adapter, 17 mm of the tester into the wire side of the connector (except SRS unit connector and waterproof connector).

NOTE:

- **Make sure the battery is fully charged when doing electrical test. If the battery is not fully charged, the results of the tests may not be accurate.**
- **Do not insert the probe of the tester into the terminal side of the connector, and do not tamper with the connector.**
- **To prevent damage to the connector, do not insert test equipment probes, paper clips, or other substitutes. Damaged terminals cause a poor connection and an incorrect measurement.**
- **Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.**
- **Do not insert the probe forcibly.**
- **Use specified service connectors in troubleshooting. Using improper tools could cause a diagnostic error due to poor metal-to-metal contact.**

Fig. 5: Inserting Back Probe Adapter Into Wire Side Of Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OPENING THE SRS UNIT SHORTING CONNECTORS FOR DIAGNOSIS

Special Tools Required

SRS Short Canceller 070AZ-SAA0100

NOTE:

- **To prevent damage to the connector cavity, insert an SRS short canceller straight into the cavity from the terminal side.**
- **Before installing an SRS short canceller, wash it with electrical contact cleaner, then dry it with compressed air.**
- **Do not use an SRS short canceller if it is damaged.**
- **Make sure to remove an SRS short canceller before reconnecting the SRS unit connector.**
- **Some systems store data in memory that is lost when the battery is disconnected. Before disconnecting the battery, BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

When SRS unit connectors A (39P) and B (39P) are disconnected, short circuits are automatically created in the connector to prevent accidental deployment of an airbag or tensioner. The circuit may need to be opened sometimes when diagnosing the system. Insert an SRS short canceller in the specified cavities when necessary to keep the circuit open for diagnosis.

Fig. 6: Identifying SRS Short Canceller In Specified Cavities
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal numbers are shown on the terminal side of the female terminals. Insert the SRS short canceller(s) into the cavities on the terminal side of the connector.

Fig. 7: Identifying SRS Unit Connector A (39P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 8: Identifying SRS Unit Connector B (39P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC (DIAGNOSTIC TROUBLE CODES)

The self-diagnostic function of the SRS unit allows it to locate the causes of system problems and store this information in memory. For easier troubleshooting, this data can be retrieved with the HDS via the data link circuit.

- When you turn the ignition switch to ON (II), the SRS indicator should come on. If it goes off after 6 seconds, the system is normal, and is not currently detecting any problems.
- If there is a problem, the system locates and defines the problem, stores this information in the memory, and turns on the SRS indicator. The data remains in the memory even if the ignition switch is turned to LOCK (0), or the battery is disconnected.
- The data is stored in memory as a diagnostic trouble code (DTC).
- DTCs are either latching or resetting depending on the malfunction. With resetting DTCs, the SRS indicator goes off the next time the ignition switch is turned to ON (II), and the system is normal, but the DTC is still stored. With latching DTCs, the SRS indicator does not turn off until the malfunction is repaired and the DTC is cleared.
- When you connect the HDS to the data link connector (DLC), you can retrieve a more detailed DTC in the HDS "SRS" menu.

NOTE: **Only read DTCs from the SRS menu, not from SWS menus unless instructed to check SWS DTCs. SWS (ODS unit) DTCs are subcodes of SRS DTCs. Only troubleshoot the corresponding SRS DTCs. These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**

- After reading and recording the DTC, go to the troubleshooting procedure for that code.

Precautions

- Make sure the battery is fully charged. If the battery is dead or low, electrical measurements values may not be correct.
- Use only a digital multimeter to check the system. Make sure its output is 10 mA (0.01 A) or less when switched to the smallest value in the ohmmeter range. A tester with a higher output could damage the

airbag circuit or cause accidental airbag deployment and possible injury.

- Whenever the ignition switch is in ON (II), or has been turned to LOCK (0) for less than 3 minutes, be careful not to bump the SRS unit; the airbags could accidentally deploy and cause damage or injuries.
- Before removing the dashboard wire harness or floor wire harness, disconnect the driver's airbag inflator connector, the front passenger's airbag inflator connector, both side airbag inflator connectors, both side curtain airbag inflator connectors, and both front seat belt tensioner connectors.

HOW TO READ DTCS

NOTE: Make sure the battery is fully charged before you begin.

1. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
2. Connect the HDS to the data link connector (DLC) (A).

Fig. 9: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the SRS unit. If it does not communicate, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
5. Use the HDS to check for SRS DTCs.
6. Read and record the DTC.

NOTE:

- **Only read DTCs from the SRS menu, not from SWS menus unless instructed to check SWS DTCs. SWS (ODS unit) DTCs are subcodes of SRS DTCs. Only troubleshoot the corresponding SRS DTCs. These SWS DTCs are cleared when you turn the ignition switch to LOCK (0).**
- **Do not clear the DTCs until instructed by the troubleshooting procedure.**

7. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
8. Disconnect the HDS from the DLC.
9. Do the troubleshooting procedure for the DTC.

HOW TO CLEAR DTCS

NOTE: Make sure the battery is fully charged before you begin.

1. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
2. Connect the HDS to the data link connector (DLC) (A).

Fig. 10: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the SRS unit. If it does not communicate, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
5. In the SRS MENU of the HDS, select SRS, then DTC to clear DTCs.
6. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
7. Disconnect the HDS from the DLC.

TROUBLESHOOTING INTERMITTENT FAILURES

If there was a malfunction that sets a DTC, but it does not recur, a DTC will be stored in the memory, and the SRS indicator may come on depending on the malfunction detected.

NOTE:

- **CHECK THE CONDITION OF THE BATTERY . Low battery voltage may cause some intermittent failures.**
- **A faulty or damaged cable reel can cause intermittent problems related to the driver's airbag inflator DTCs.**

After checking the DTC, troubleshoot as follows:

1. Check for DTCs with the HDS.
2. Clear the DTCs with the HDS.
3. Set the parking brake, then start the engine, and let it idle.
4. The SRS indicator comes on for about 6 seconds and then goes off.
5. Shake the related wire harnesses and the connectors, and look for loose connections, poor pin fits, and poor grounds.
6. Take a test-drive (quick acceleration, quick braking, and cornering), turn the steering wheel fully left and right, and hold it there for 5 to 10 seconds. If the problem recurs, the SRS indicator will come on.
7. If you cannot duplicate the concern, ask the customer about the conditions when it occurred, or ask the customer to demonstrate the concern.
8. If you cannot duplicate the intermittent failure, the system is OK at this time.

SRS PRECAUTIONS AND PROCEDURES

GENERAL PRECAUTIONS

NOTE: Before disconnecting the battery, refer to BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

Please read the following precautions carefully before servicing the SRS, or the airbags could accidentally deploy and cause damage or injuries.

- Except when doing electrical inspections that requires battery power, always turn the ignition switch to LOCK (0), disconnect the negative cable from the battery, then wait at least 3 minutes before starting work.

  NOTE: The SRS memory is not erased even if the ignition switch is turned to LOCK (0), or if the battery cables are disconnected from the battery.

- Use replacement parts which are manufactured to the same standards and quality as the original parts. Do not install used SRS parts. Use only new parts when making SRS repairs.
- Carefully inspect any SRS part before you install it.

  Do not install any part that shows signs of being dropped or improperly handled, such as dents, cracks or deformation.

Fig. 11: Caution For Installing SRS Parts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Before disconnecting the SRS unit connectors, always disconnect the appropriate SRS parts connectors.
- Use only a digital multimeter to check the system. If it is not a Honda multimeter, make sure its output is 10 mA (0.01 A) or less when switched to the lowest value in the ohmmeter range. A tester with a higher output could cause accidental deployment and possible injury.
- Do not put objects on the front passenger's airbag.

STEERING-RELATED PRECAUTIONS

Cable Reel Alignment

- Misalignment of the cable reel could cause an open in the wiring, making the SRS, remote steering wheel controls, or the horn inoperative. Center the cable reel whenever you do the following.
  - Installation of the steering wheel.
  - Installation of the cable reel.
  - Installation of the steering column.
  - Other steering-related adjustment or installation.
- Do not disassemble the cable reel.
- Do not apply grease to the cable reel.
- If the cable reel shows any signs of damage, replace it with a new one. For example, if the cable reel does not rotate smoothly, replace it.

AIRBAG HANDLING AND STORAGE

Do not disassemble an airbag. It has no serviceable parts. Once an airbag has been deployed, it cannot be repaired or reused.

For temporary storage of an airbag during service, observe the following precautions.

- Store the removed airbag with the pad surface up. Never put anything on the airbag.

Fig. 12: Identifying Airbags Pad Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- To prevent damage to the airbag, keep it away from any oil, grease, detergent, or water.

Fig. 13: Caution For Preventing Damage On Airbag From Any Oil, Grease, Detergent Or Water
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Store the removed airbag on a secure, flat surface away from any high heat source (exceeding 200 °F (93 °C)).

Fig. 14: Caution For Securing Airbag From High Heat Source
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Never do electrical tests on the airbags, such as measuring resistance.

- Do not position yourself in front of the airbag during removal, inspection, or replacement.

Fig. 15: Caution For Repairing Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- For proper disposal of a damaged airbag or tensioner, refer to Airbag and Tensioner Disposal.
- The side curtain airbag module assembly is a long, jointed part containing an inflator (A), a flexible bag (B), and brackets (C). When removing or installing the side curtain airbag assembly, never:
  - Handle the flexible bag.
  - Drop the airbag assembly.
  - Cut, tear, or unwrap the tape strips.

Fig. 16: Caution For Handling Side Curtain Airbag Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SRS UNIT AND FRONT AND SIDE IMPACT SENSORS

NOTE: **Some systems store data in memory that is lost when the battery is disconnected. Before disconnecting the battery, refer to BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

- Turn the ignition switch to LOCK (0), disconnect the negative cable from the battery, then wait at least 3 minutes before starting installation or replacement of the SRS unit, or disconnecting the connectors from the SRS unit.
- Be careful not to bump or impact the SRS unit, the front impact sensors, side impact sensors, or the rear safing sensor when the ignition switch is in ON (II), for at least 3 minutes after the ignition switch is turned to LOCK (0).
- Do not reconnect any connectors to the SRS unit until it is fully installed, including torquing the TORX bolts.
- During installation or replacement, be careful not to bump (by impact wrench, hammer, etc.) the area around the SRS unit, the front impact sensors, side impact sensors, or the rear safing sensor. The airbags could accidentally deploy and cause damage or injury.

Fig. 17: Caution For Impacting SRS Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- After a collision where the front airbags, the side airbags, the side curtain airbags, or the front seat belt tensioners deploy, go to Component Replacement/Inspection After Deployment. After a collision where the airbags or the side airbags do not deploy, inspect for any damage or any deformation on the SRS unit, the front impact sensors, side impact sensors, and the rear safing sensor. If there is any damage, replace the SRS unit and/or the sensors. Also, do the front seat active head restraint inspection. Replace all damaged parts.

Fig. 18: Identifying Damage Or Any Deformation On SRS Unit

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Do not disassemble the SRS unit, the front impact sensors, the side impact sensors, the rear safing sensor, the driver's seat position sensor, or the front passenger's weight sensors.
- Always install the SRS unit and all impact sensors with the new TORX bolts to the specified torque.
- Do not spill water or oil on the SRS unit or any of the sensors.

WIRING PRECAUTIONS

Some of the SRS wiring can be identified by a special yellow outer covering, and the SRS connectors can be identified by their yellow color. Observe the following instructions.

- Never attempt to modify, splice, or repair SRS wiring.

  If there is an open or damage to the SRS wiring, replace the harness.

Fig. 19: Caution For Repairing SRS Wiring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Be sure to install the harness wires so they do not get pinched or interfere with other parts.

Fig. 20: Caution For Installing SRS Wiring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Make sure all SRS ground locations are clean, and the grounds are securely fastened for optimum metal-

to-metal contact. Poor grounds can cause intermittent problems that are difficult to diagnose.

- Do not use any silicone based cleaners or lubricants on any SRS connectors or terminals.

LEVER-LOCKED CONNECTOR

The SRS unit connectors have a lever lock.

SRS Unit Connectors

Disconnecting

To release the lock (A), pull the lever (B) while pushing the lock on the outside of the connector, then pull out the connector (C).

Fig. 21: Disconnecting SRS Unit Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

To reconnect the connector (A), push in on the connector. As the connector is pressed in, the lever (B) moves to the locked position.

Fig. 22: Connecting SRS Unit Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SPRING-LOADED LOCK CONNECTOR

Some SRS connectors have a spring-loaded lock.

Front Airbag Connector

Disconnecting

To release the lock, pull the spring-loaded sleeve (A) toward the stop (B) while holding the opposite half of the connector, then pull the connector halves apart. Be sure to pull on the sleeve and not on the connector.

Fig. 23: Disconnecting Front Airbag Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

To reconnect, hold the pawl-side connector, and press on the back of the sleeve-side connector in the direction shown. As the two connector halves are pressed together, the sleeve (A) is pushed back by the pawl (B). Do not touch the sleeve.

Fig. 24: Connecting Front Airbag Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Side Airbag Connector

Disconnecting

To release the lock, pull the spring-loaded sleeve (A) toward the stop (B) while holding the opposite half of the connector, then pull the connector halves apart. Be sure to pull on the sleeve and not on the connector half.

Fig. 25: Disconnecting Side Airbag Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

Hold both connector halves, and press them firmly together until the projection (A) of the sleeve-side connector clicks.

Fig. 26: Connecting Side Airbag Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front Seat Belt Tensioner Connector/Side Curtain Airbag Connector

Disconnecting

Pull out on the locking tabs (A) to disconnect the connector (B). Be careful not to damage the connector.

Fig. 27: Disconnecting Front Seat Belt Tensioner Connector/Side Curtain Airbag Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting

Align the guide tab (A) of the connector (B) with the ditch of the other side, and then connect the connector. Be careful not to damage the connector.

Fig. 28: Connecting Front Seat Belt Tensioner Connector/Side Curtain Airbag Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front Seats With Side Airbags

Front seats with side airbags have a "SIDE AIRBAG" label on the seat-back.

Fig. 29: Identifying Side Airbag Label On Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Clean the seats with a damp cloth. Do not soak the seats with liquid. Do not spray steam on the seats.
- Do not repair a torn or frayed seat-back cover/pad. Replace the seat-back cover/pad if it is damaged.
- After a collision where the side airbag was deployed, replace the side airbag and the seat frame with the new parts. If the seat-back cover is split, it must be replaced. Refer to Component Replacement/Inspection After Deployment.
- Never put aftermarket accessories on the seats (covers, pads, seat heaters, lights, etc.).

SRS SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
SRS indicator does not come on	**SYMPTOM TROUBLESHOOTING**	-
SRS indicator stays on, but no DTCs are stored, or cannot be read	**SYMPTOM TROUBLESHOOTING**	• Charging system for under or overcharging • Communication with the HDS
Side airbag cutoff indicator flashes	Check for DTCs. If any DTC is indicated, go to the DTC troubleshooting	ODS unit initialization
Side airbag cutoff indicator stays on	**SYMPTOM TROUBLESHOOTING**	-
Side airbag cutoff indicator does not come on	**SYMPTOM TROUBLESHOOTING**	-
Front passenger's airbag cutoff indicator flashes	Check for DTCs. If any DTC is indicated, go to the DTC troubleshooting	ODS unit initialization
Front passenger's airbag cutoff indicator stays on or comes on suddenly	**SYMPTOM TROUBLESHOOTING**	ODS unit initialization
Front passenger's airbag cutoff indicator does not come on	Check for DTCs. If any DTC is indicated, go to the DTC troubleshooting	DTC 92-xx Troubleshooting
Seat belt reminder indicator does not come on, turn off, or flash	**SYMPTOM TROUBLESHOOTING**	-
HDS does not communicate with the SRS unit or the vehicle	**DLC CIRCUIT TROUBLESHOOTING**	Communication with the HDS

FRONT PASSENGER'S WEIGHT SENSOR OUTPUT CHECK AFTER A VEHICLE COLLISION

PROCEDURE

NOTE: Check the front passenger's weight sensor output after this action:

- **After a vehicle collision.**

1. Test Drive
    1. Drive the vehicle, accelerate to 22 mph (36 km/h), then stop on level ground.
2. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC

circuit troubleshooting.

Fig. 30: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Passenger's Weight Sensor Output Check After a Vehicle Collision

Pre-Operation Check Set-Up

- Make sure all the components of the front passenger's seat are correctly installed.
- Position the front passenger's seat all the way rearward, and adjust the seat-back to the forward most position. Do not move the seat from this position until the output check is completed.
- Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.
- Make sure there is nothing in the front passenger's seat-back pocket.
- Keep the windows and the moonroof closed (if equipped).
- Do all initialization procedures, except test-driving, in the service bay.
- Make sure the vehicle is on level ground.
- Dehumidify inside of the vehicle with A/C.
- Do not touch the front passenger's seat during the operation check.
- Do not expose the front passenger's seat to sudden temperature changes.
- Make sure all aftermarket devices such as amplifiers, fluorescent light, air purifiers, CB or HAM radios, etc. are turned off.

1. From the HDS Main Menu, select SRS, then Inspection. In the Inspection Menu, select AFTER A VEHICLE COLLISION. Follow the prompts until the front passenger's weight sensor output check has been completed.
2. Turn the ignition switch to LOCK (0).

SRS Symptom Troubleshooting - Front passenger's airbag cutoff indicator stays on or comes on suddenly

Fig. 31: SRS Symptom Troubleshooting Flow Chart (Front Passenger's Airbag Cutoff Indicator Stays On Or Comes On Suddenly)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR STAYS ON OR COMES ON SUDDENLY

NOTE: **Under the following conditions, the front passenger's airbag cutoff indicator stays on or comes on suddenly:**

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **When no one is sitting on the front passenger's seat, but there is an object on the seat more than 5 kg (11 lbs).**
- **The front seat belt is buckled, but no one is sitting on the front**

passenger's seat.

- **Someone who is less than about 30 kg (66 lbs) is sitting on the front passenger's seat.**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

1. System check 1:
   - 1. Check for these items, then recheck the front passenger's airbag cutoff indicator.
     - The front passenger's seat is installed correctly.
     - Nothing is/was on the front passenger's seat.
     - Nothing is/was under the front passenger's seat.
     - Nothing is/was in the front passenger's seat-back pocket.
     - Whoever was sitting on the front passenger's seat was sitting in the proper sitting position.
     - The seat weight sensors may not measure the correct weight of the front passenger. If the front passenger's weight is more than 30 kg (66 lbs) but is supporting some of their body weight with their feet on the floor, or with their hands and arms on an arm rest, the actual weight of the passenger is not measured.

   Does the front passenger's airbag cutoff indicator stay on?

   YES : Go to step 2.

   NO : The vehicle is OK at this time.

2. System check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **CONNECT THE HDS TO THE DATA LINK CONNECTOR (DLC)**.
   - 3. Turn the ignition switch to ON (II).
   - 4. From the HDS Main Menu, select SRS, then Inspection. In the Inspection Menu, select AFTER REPLACING FRONT PASSENGER'S SEAT COMPONENT(S), and follow the prompts.

   Does the front passenger's airbag cutoff indicator stay on?

   YES : Go to step 3.

   NO : The vehicle is OK at this time.

3. System check 3:
   - 1. From the HDS Main Menu, select SRS, then Inspection. In the Inspection Menu, select AFTER A VEHICLE COLLISION, and follow the prompts.

Does the front passenger's airbag cutoff indicator stay on?

YES : Go to step 4.

NO : The vehicle is OK at this time.

4. System check 4:
   - 1. **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .
   - 2. Turn the ignition switch to ON (II), and see if the **FRONT PASSENGER'S AIRBAG CUTOFF INDICATOR COMES ON**.

Does the front passenger's airbag cutoff indicator stay on?

YES : Replace the ODS unit, and retest. If the problem is still present, **REPLACE THE FRONT PASSENGER'S SEAT RAIL INCLUDING ALL FOUR FRONT PASSENGER'S WEIGHT SENSORS** .

NO : The vehicle is OK at this time.

SEAT BELT REMINDER INDICATOR DOES NOT COME ON, TURN OFF, OR FLASH

SRS Symptom Troubleshooting - Seat belt reminder indicator does not come on, turn off, or flash

Fig. 32: SRS Symptom Troubleshooting Flow Chart (Seat Belt Reminder Indicator Does Not Come On, Turn Off Or Flash)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

1. DTC check:
   - 1. **CHECK FOR DTCS WITH THE HDS**.

DTC Description	DTC

Are any SRS DTCs indicated?

YES : Go to SRS DTC troubleshooting.

NO : Go to step 2.

2. Body electrical system DTC check:
   - 1. **CHECK FOR BODY ELECTRICAL DTCS WITH THE HDS**.

DTC Description	DTC
U0151 Gauge control module lost communication with SRS unit	

Is DTC U0151 indicated?

YES : **GO TO DTC U0151 TROUBLESHOOTING** .

NO : Go to step 3.

3. Gauge control module check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the seat belt reminder indicator blink?

YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

SIDE AIRBAG CUTOFF INDICATOR DOES NOT COME ON

Fig. 33: SRS Symptom Troubleshooting Flow Chart (Side Airbag Cutoff Indicator Does Not Come On)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **If the SRS indicator also stays on, go to SRS indicator stays on, but no DTCs are stored, or cannot be read.**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and wait for 10 seconds.
   - 2. Turn the ignition switch to ON (II), and check that the side airbag cutoff indicator comes on for about 6 seconds.

Does the side airbag cutoff indicator come on for about 6 seconds?

YES : Intermittent failure, the vehicle is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Gauge control module check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **CONNECT THE HDS TO THE DATA LINK CONNECTOR (DLC)**.
    - 3. Turn the ignition switch to ON (II).
    - 4. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

    Does the side airbag cutoff indicator blink?

    YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

    NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

SIDE AIRBAG CUTOFF INDICATOR STAYS ON

SRS Symptom Troubleshooting / Side airbag cutoff indicator stays on

Fig. 34: SRS Symptom Troubleshooting Flow Chart (Side Airbag Cutoff Indicator Stays On)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

1. System check 1:
   - 1. Make sure nothing is on the front passenger's seat.
   - 2. Make sure the seat-back is dry.
   - 3. Turn the ignition switch to ON (II), and see if the **SRS INDICATOR COMES ON**.

Does the SRS indicator come on and stay on?

YES : Go to Symptom Troubleshooting "**SRS indicator stays on, but no DTCs are stored, or cannot be read**".

NO : Go to step 2.

2. Body electrical system DTC check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **CHECK FOR BODY ELECTRICAL DTCS WITH THE HDS**.

DTC Description	DTC
U0151 Gauge control module lost communication with SRS unit	

Is DTC U0151 indicated?

YES : **Go to DTC U0151 troubleshooting** .

NO : Go to step 3.

3. Gauge control module check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the side airbag cutoff indicator blink?

YES : Go to step 4.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

4. System check 2:
   - 1. Do the ODS unit initialization (USA and Canada models) or OPDS unit initialization (Mexico models).
   - 2. Turn the ignition switch to ON (II), and see if the **SIDE AIRBAG CUTOFF INDICATOR COMES ON**.

Does the side airbag cutoff indicator come on and stay on?

YES : **REPLACE THE SEAT-BACK COVER/PAD EQUIPPED WITH AN OPDS SENSOR** , and retest. If the problem is still present, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : The vehicle is OK at this time.

SRS INDICATOR DOES NOT COME ON

Fig. 35: SRS Symptom Troubleshooting Flow Chart (SRS Indicator Does Not Come On)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
   - 2. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds.

   Does the SRS indicator come on for about 6 seconds?

   YES : Intermittent failure, the vehicle is OK at this time.

   NO : The failure is duplicated. Go to step 2.

2. Gauge control module check:
   - 1. Turn the ignition switch to LOCK (0).

- 2. **CONNECT THE HDS TO THE DATA LINK CONNECTOR (DLC)**.
- 3. Turn the ignition switch to ON (II).
- 4. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the SRS indicator blink?

YES : **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

SRS INDICATOR STAYS ON, BUT NO DTCS ARE STORED, OR CANNOT BE READ

SRS Symptom Troubleshooting / SRS indicator stays on, but no DTCs are stored, or cannot be read

<u>Fig. 36: SRS Symptom Troubleshooting Flow Chart (SRS Indicator Stays On, But No DTCs Are Stored Or Cannot Be Read)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, MAKE SURE THE BATTERY IS FULLY CHARGED . If the battery voltage is low, SRS indicator may stay on.**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES, GENERAL TROUBLESHOOTING INFORMATION, and BATTERY TERMINAL DISCONNECTION AND RECONNECTION.**

1. PGM-FI system check:
   - 1. Start the engine, and see if the malfunction indicator lamp (MIL) also stays on.

   Does the MIL stay on longer than 30 seconds?

   YES : **GO TO THE FUEL AND EMISSIONS SYSTEMS GENERAL TROUBLESHOOTING INFORMATION** .

   NO : Go to step 2.

2. System check 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Connect the HDS to the data link connector (DLC)** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 3. Turn the ignition switch to ON (II).
   - 4. Check for communication to the SRS with the HDS.

   Does the HDS communicate with the SRS unit?

   YES : Go to step 3.

   NO : Go to step 6.

3. DTC check:
   - 1. **CHECK FOR DTCS WITH THE HDS**.

DTC Description	DTC

   Are any SRS DTCs indicated?

   YES : Go to SRS DTC troubleshooting.

NO : Go to step 4.

4. Body electrical system DTC check:
   - 1. **CHECK FOR BODY ELECTRICAL DTCS WITH THE HDS**.

DTC Description	DTC
U0151 Gauge control module lost communication with SRS unit	

Is DTC U0151 indicated?

YES : **GO TO DTC U0151 TROUBLESHOOTING**.

NO : Go to step 5.

5. Gauge control module check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the SRS indicator blink?

YES : **REPLACE THE SRS UNIT** .

NO : **Replace the gauge control module** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

6. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

     Fuse No. B29 (7.5 A)

     No. B3 (10 A)

     Location Under-dash fuse/relay box

Are the fuses OK?

YES : Go to step 7.

NO : Replace the fuse, then turn the ignition switch to ON (II). If the fuse blows again, check for a short to ground in the under-dash fuse/relay box No. B29 (7.5 A) and No. B3 (10 A) fuse circuit (dashboard wire harness, floor wire harness, or front passenger's seat wire harness); replace the faulty harness, and retest. If the problem is still present, **replace the under-dash fuse/relay box** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

7. Connector connection check:

- 1. Check the following connector connections.

  <u>SRS UNIT CONNECTOR A (39P)</u>

  Under-dash fuse/relay box connector H (4P)

Are the connectors OK?

YES : Go to step 9.

NO : Go to step 8.

8. System check 2:
   - 1. Repair the poor connector connection which was the cause of the problem in step 7.
   - 2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
   - 3. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.

Does the SRS indicator come on for about 6 seconds and then goes off?

YES : The vehicle is OK at this time.

NO : Turn the ignition switch to LOCK (0), then go to step 9.

9. Open wire check (VA, VB lines):
   - 1. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 2. Disconnect the following connector.

     SRS unit connector A (39P) See **<u>SRS UNIT REMOVAL AND INSTALLATION</u>** or **<u>SRS UNIT UPDATE</u>**

   - 3. Reconnect the negative cable to the battery.
   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     SRS unit connector A (39P): disconnected

     Test circuit VA

     Test point 1 SRS unit connector A (39P) No. 39

     Test point 2 Body ground

Test circuit VB

Test point 1 SRS unit connector A (39P) No. 38

Test point 2 Body ground

Fig. 37: Measuring Voltage Between SRS Unit Connector A (39P) No. 38, 39 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The VA, VB wires are OK. Go to step 10.

NO : Open in the dashboard wire harness; replace the dashboard wire harness.

10. Open wire check (GND lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Measure the resistance between test points 1 and 2.

    Test condition IG LOCK (0)

    SRS unit connector A (39P): disconnected

    Test circuit GND

    Test point 1 SRS unit connector A (39P) No. 37

    Test point 2 Body ground

    Test circuit GND

    Test point 1 SRS unit connector A (39P) No. 36

Test point 2 Body ground

Fig. 38: Measuring Resistance Between SRS Unit Connector A (39P) No. 36, 37 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The GND wires are OK. **Replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** .

NO : Open in the dashboard wire harness; check for a poor ground at G504. If the ground is OK, replace the dashboard wire harness.

TAILGATE ADJUSTMENT

REMOVAL

1. Upper/Lower Taillight Assembly - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the screws, then remove the lower taillight assembly (A).
2. Disconnect the connectors (B).

Fig. 1: Identifying Lower Taillight Assembly And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw, then remove the upper taillight assembly (A).
4. Disconnect the connector (B), then detach the harness clip (C).

Fig. 2: Identifying Upper Taillight Assembly, Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Tailgate Adjustment
    1. Detach the hooks (A), then remove the striker cap (B) from the rear trim panel (C).

Fig. 3: Identifying Rear Trim Panel, Striker Cap And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Slightly loosen the tailgate hinge bolts (A) and the striker mounting bolts (B).
    3. Adjust the tailgate (C) alignment in the following sequence:
        - Adjust the tailgate right and left using the elongated holes in the tailgate hinges (D).
        - Turn the tailgate edge cushions (E), in or out as necessary, to make sure the tailgate fits flush with the body at the side edges.
        - Adjust the fit between the tailgate and the tailgate opening by moving the striker (F), and adjust the striker right or left until it is centered in the tailgate latch (G).

- Tighten each bolt to the specified torque.
- Make sure the tailgate opens properly and locks securely.

<u>Fig. 4: Adjusting Tailgate Alignment</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply new seam sealer into the cracks in the sealed area (A) around the tailgate hinge (B), and let the sealer dry.
5. Apply touch-up paint to the hinge mounting bolts and around the hinges, and let the paint dry.
6. Apply multipurpose grease to the pivot portion of the tailgate hinges as indicated by the arrow.

Fig. 5: Sealant Applying Area On Tailgate Hinge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Upper/Lower Taillight Assembly - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), then install the harness clip (B).
2. Install the upper taillight assembly (C), then install the screw.

Fig. 6: Identifying Upper Taillight Assembly, Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A), then install the lower taillight assembly (B). Make sure the tab (C) locks into the holder (D) securely.
4. Install the screws.

Fig. 7: Identifying Connectors, Lower Taillight Assembly, Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Water Leak Test

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 8: Checking Water Leaks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE COMPONENT LOCATION INDEX

Fig. 9: Tailgate Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE	**ADJUSTMENT**
TAILGATE LATCH	**REMOVAL AND INSTALLATION**
TAILGATE SUPPORT STRUT	**REMOVAL AND INSTALLATION**
TAILGATE WEATHERSTRIP	**REMOVAL AND INSTALLATION**

TAILGATE LATCH REMOVAL AND INSTALLATION

REMOVAL

NOTE: **If the tailgate latch does not open by the tailgate open switch, remove the maintenance cover (A) from the tailgate lower trim panel, then turn the emergency lever (B) clockwise as shown.**

Fig. 10: Turning Emergency Lever Clockwise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 11: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 12: Identifying Tailgate Side Trim, Tailgate Lower Trim, Hook And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 13: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 14: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Latch
    1. Disconnect the connector (A).

Fig. 15: Identifying Tailgate Latch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bolts (A), then remove the tailgate latch (B).

Fig. 16: Identifying Tailgate Latch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tailgate Latch
    1. Install the tailgate latch (A), then install the bolts (B).

Fig. 17: Identifying Tailgate Latch And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connector (A).

Fig. 18: Identifying Tailgate Latch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 19: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 20: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

<u>Fig. 21: Identifying Tailgate Side Trim, Hook And Clips</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 22: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE LATCH SWITCH TEST

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 23: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 24: Identifying Tailgate Side Trim, Tailgate Lower Trim, Hook And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 25: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the

tailgate lower trim panel.

Fig. 26: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Tailgate Latch Switch - Test
    1. Disconnect the connector.
    2. Check for continuity between the terminals in each switch position according to the table.
    3. If the continuity is not as specified, the tailgate latch switch is faulty; replace the tailgate latch.
    4. Connect the connector.

Fig. 27: Identifying Tailgate Latch Switch Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1	2
RELEASE (Open)	○	○
LOCK (Close)		

Fig. 28: Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 29: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 30: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 31: Identifying Tailgate Side Trim, Hook And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 32: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE LOWER TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Lower Trim
    1. Remove the bolts (A) securing the tailgate lower trim (B).

Fig. 33: Identifying Tailgate Lower Trim And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the tailgate lower trim (A) with the appropriate trim tool to release the clip pins (B) from the clip grommets (C) on the tailgate, and detach the clips (D), then remove the tailgate lower trim from the tailgate.

NOTE: The clip grommets will stay in the tailgate.

3. Remove the clip grommets from the tailgate.

Fig. 34: Identifying Tailgate Lower Trim, Clip Pins And Clip Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tailgate Lower Trim
    1. Install the clip grommets into the clip pins on the tailgate lower trim.
    2. Hold up the tailgate lower trim (A), and fit all the clips (B, C) into the holes in the tailgate. Push on the trim until the clips securely snap into place.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

Fig. 35: Identifying Tailgate Lower Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A).

Fig. 36: Identifying Tailgate Lower Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE OUTER HANDLE SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Lower Trim
    1. Remove the bolts (A) securing the tailgate lower trim (B).

Fig. 37: Identifying Tailgate Lower Trim And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim (A) with the appropriate trim tool to release the clip pins (B) from the clip grommets (C) on the tailgate, and detach the clips (D), then remove the tailgate lower trim

from the tailgate.

NOTE: The clip grommets will stay in the tailgate.

3. Remove the clip grommets from the tailgate.

Fig. 38: Identifying Tailgate Lower Trim, Clip Pins And Clip Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 39: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 40: Identifying Tailgate Side Trim, Tailgate Lower Trim, Hook And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 41: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 42: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Outer Handle Switch
    1. Disconnect the connector.
    2. Remove the tailgate outer handle switch (A).

Fig. 43: Identifying Tailgate Outer Handle Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tailgate Outer Handle Switch
    1. Install the tailgate outer handle switch (A).
    2. Connect the connector.

Fig. 44: Identifying Tailgate Outer Handle Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 45: Identifying Tailgate Lower Trim Panel And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 46: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 47: Identifying Tailgate Side Trim, Hook And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 48: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Lower Trim

1. Install the clip grommets into the clip pins on the tailgate lower trim.
2. Hold up the tailgate lower trim (A), and fit all the clips (B, C) into the holes in the tailgate. Push on the trim until the clips securely snap into place.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

Fig. 49: Identifying Tailgate Lower Trim And Clips

TAILGATE OUTER HANDLE SWITCH TEST

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 51: Tailgate Upper Trim Panel Fasteners Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 52: Identifying Tailgate Side Trim, Tailgate Lower Trim, Hook And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 53: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 54: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Tailgate Outer Handle Switch - Test
    1. Disconnect the connector.
    2. Check for continuity between the terminals in each switch position according to the table.
    3. If the continuity is not as specified, replace the tailgate outer handle switch.
    4. Connect the connector.

Fig. 55: Identifying Tailgate Latch Switch Connector Terminals

3. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 63: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 64: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Tailgate Release Actuator - Test
    1. Disconnect the connector.
    2. Check actuator operation by connecting power and ground according to the table.

    NOTE: To prevent damage to the actuator, apply battery voltage only momentarily.

    3. If the actuator does not work, the tailgate latch switch/tailgate release actuator is faulty; replace the tailgate latch (A).
    4. Connect the connector.

Fig. 65: Identifying Tailgate Latch Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	3	4
UNLOCK	⊖	⊕

TAILGATE SUPPORT STRUT REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Support Strut
    1. With the help of an assistant, remove the pivot bolts (A) from the tailgate and the body, then remove the tailgate support strut (B).

Fig. 71: Identifying Tailgate Support Strut And Pivot Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Taillight
    1. Remove the screws, then remove the lower taillight assembly (A).
    2. Disconnect the connectors (B).

Fig. 72: Identifying Lower Taillight Assembly, Connectors, Tab And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Lower Tailgate Support Strut Bracket
    1. Detach the hook (A), then remove the lower tailgate support strut bracket trim (B).

Fig. 73: Identifying Lower Tailgate Support Strut Bracket Trim And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the bolts (A), then remove the lower tailgate support strut bracket (B).

Fig. 74: Identifying Lower Tailgate Support Strut Bracket And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Lower Tailgate Support Strut Bracket
    1. Install the lower tailgate support strut bracket (A), then install the bolts (B).

Fig. 75: Identifying Lower Tailgate Support Strut Bracket And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the lower tailgate support strut bracket trim (A). Make sure the hook (B) snaps into place securely.

Fig. 76: Identifying Lower Tailgate Support Strut Bracket Trim And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Taillight
    1. Connect the connectors (A), then install the lower taillight assembly (B). Make sure the tab (C) locks into the holder (D) securely.

2. Install the screws.

Fig. 77: Identifying Connectors, Lower Taillight Assembly, Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Support Strut
    1. With the help of an assistant, install the tailgate support strut (A).

Fig. 78: Identifying Tailgate Support Strut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE WEATHERSTRIP REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Weatherstrip
    1. Remove the tailgate weatherstrip (A) from the tailgate opening.

Fig. 79: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tailgate Weatherstrip
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 80: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Water Leak Test

    Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

<u>Fig. 81: Checking Water Leaks</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOW TO TROUBLESHOOT THE TPMS

SYSTEM INDICATOR

The TPMS (tire pressure monitoring system) has the low tire pressure indicator and the TPMS indicator.

Fig. 1: Identifying Low Tire Pressure Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

THE LOW TIRE PRESSURE INDICATOR

- If the system detects low tire pressure in any of the four tires, the low tire pressure indicator comes on.
- When the indicator comes on, inflate the tires to the recommended pressure listed on the doorjamb label, and test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes, and the low tire pressure indicator will go off.
- If the TPMS control unit detects a problem in the system during an indication of low tire pressure, it turns off the low tire pressure indicator, stores the DTC(s), and turns on the TPMS indicator.

THE TPMS INDICATOR

- If a problem is detected in the system, the TPMS indicator comes on.
- If low tire pressure and a problem in the system are detected, only the TPMS indicator comes on.

When the system is OK, the TPMS indicator and the low tire pressure indicator should come on when you turn

the ignition switch to ON (II), and then go off 2 seconds later. If they don't, there is a problem with the system.

DTC 11, 13, 15, 17

If the system detects low pressure in any of the four tires, the low tire pressure indicator comes on, and the TPMS control unit sets one or more of these codes: DTC 11, 13, 15, 17. When the tire pressure returns to normal, and the TPMS control unit receives the normal pressure signal from the tire pressure sensor, the TPMS control unit turns off the indicator. However, the TPMS control unit still retains the DTC(s).

NOTE: **After reinflating the tire, you must test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes so that the tire pressure sensor transmits the signal that it is OK.**

TIRE PRESSURE CHANGING BY TEMPERATURE

Tire pressures increase slightly as the temperature in the tires rises during driving. Pressures can also increase or decrease slightly with changes in outside air temperature. A temperature change of about 18 °F (10 °C) changes tire pressure by about 10 kPa (0.1 kgf/cm^2 , 1.5 psi). If the temperature drops, tire pressure could decrease enough to turn on the low tire pressure indicator, but later, the tire temperature could increase enough to turn the indicator off. To resolve a complaint of such intermittent indications, confirm and clear the stored DTC(s) and check the cold tire pressures. Then explain to the customer how temperature changes can affect the system.

Fig. 2: Tire Pressure Versus Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PROBLEMS THAT ARE NOT SYSTEM FAULTS

- Tire Sealant

Fluid sealant used to repair a punctured tire can damage the tire pressure sensor mounted on each wheel. It can prevent the system from detecting the correct tire pressure, which sets a DTC 11, 13, 15, or 17 even though the system is normal.

- Cold Weather

  When the weather is extremely cold, about -4 °F (-20 °C) or colder, the output of the lithium battery in each tire pressure sensor may drop far enough that the TPMS control unit sets a DTC for low battery voltage (DTC 31, 33, 35, or 37) even though the system is normal.

- Non-TPMS type Wheels (Including Spare Tire)

  Vehicles equipped with TPMS must use wheels made for the system. Every TPMS type wheel has an exclusive mark; do not use any other type of wheel.

  When a flat tire is replaced with the spare tire, the TPMS indicator comes on (DTC 32, 34, 36, or 38) because the system is no longer receiving the signal from the flat tire's transmitter.

  This is not a problem with the spare tire.

HOW A DIAGNOSTIC TROUBLE CODE (DTC) IS SET

- When the system detects a problem, the TPMS control unit sets a code, but shifts to fail-safe mode, and does not alert the driver to low tire pressures.
- If the TPMS control unit loses power, or fails, the TPMS indicator comes on, but no DTC is set.
- The memory can hold all the DTCs that could possibly be set. However, when the same DTCs are detected more than once, the most recent one overwrites the previous one, so only the latest DTC of each type is stored.
- DTCs are indicated in ascending order, not in the order they occurred.
- Set DTCs are stored in the EEPROM (nonvolatile memory), they cannot be cleared by disconnecting the battery. To clear a DTC, connect the HDS (Honda Diagnostic System) to the data link connector (DLC), and follow the screen prompts.

HOW TO TROUBLESHOOT DTCS

DTC troubleshooting procedures assume that the cause of the problem is still present and the TPMS indicator is still on. Do not use a troubleshooting procedure unless the system has set the DTC listed for it.

1. Ask the customer to describe the conditions when the indicator came on, and try to reproduce the same conditions for troubleshooting. Find out if the customer checked and/or adjusted tire pressures since the indicator came on.
2. If an indicator does not come on during the test-drive, check for loose terminals, poor contact due to damaged terminals, etc. before you start troubleshooting.
3. After troubleshooting, repair and clear the DTCs, and test-drive the vehicle at 28 mph (45 km/h) or more for at least 20 minutes. Make sure no indicators come on.

HOW TO RETRIEVE DTCS

1. With the ignition switch in LOCK (0), connect the HDS (Honda Diagnostic System) to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 3: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the TPMS control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the **DTC TROUBLESHOOTING**.

NOTE: See the HDS Help menu for specific instructions.

5. Turn the ignition switch to LOCK (0).

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0), connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 4: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the TPMS control unit. If it does not, **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .
4. Clear the DTC(s) by following the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

5. Turn the ignition switch to LOCK (0).

MEMORIZING THE TIRE PRESSURE SENSOR ID

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	TPMS Trigger Tool ATEQ VT55
	TPMS Trigger Tool Bartec Wheelrite Tech 300-J-48714*
Available through the Honda Tool and Equipment Program 888-424-6857*For Canada: Available through DES-Canada 866-868-3372	

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 5: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Memorizing the Tire Pressure Sensor ID

Fig. 6: Memorizing Tire Pressure Sensor ID Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **The TPMS tool is needed to do this procedure.**
- **Let the vehicle sit for at least 5 minutes to allow the tire pressure sensors to switch to sleep mode.**
- **To ensure the TPMS control unit memorizes the correct sensor ID, the vehicle with the new tire pressure sensor must be at least 10 ft (3 m) away from other vehicles that have sensors.**
- **When doing a tire rotation, memorizing the sensors is not needed.**

1. Select Sensor ID Learning from the Mode Menu on the HDS.
2. Follow the HDS screen prompts to turn on the TPMS tool.
3. Hold the TPMS tool near the valve stem of one wheel, and memorize the tire pressure sensor ID by following the screen prompts on the HDS.

NOTE:

- **If you turn the ignition switch to LOCK (0) before memorizing all four sensor IDs, the memorizing sensor ID is canceled.**
- **If more than one sensor ID is displayed on the HDS, verify that the vehicle has not been driven for 5 minutes, and there are no other vehicles or tire pressure sensors within 10 ft (3 m).**
- **See the HDS Help menu for specific instructions.**

4. Repeat step 3 for each wheel until all four sensor IDs are memorized. When all four IDs are memorized, the low tire pressure indicator blinks.
5. Turn the ignition switch to LOCK (0).
6. Disconnect the HDS from the DLC.
7. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
8. Make sure the low tire pressure indicator does not blink.
9. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb sticker.
10. Turn the ignition switch to LOCK (0).

TIRE PRESSURE SENSOR LOCATION

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 7: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. TIRE PRESSURE SENSOR - LOCATION

Fig. 8: Identifying TPMS Tool Pressure Sensor ID
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- The TPMS tool is needed to do this procedure.
- Let the vehicle sit for at least 5 minutes to allow the tire pressure sensors to switch to sleep mode.
- This procedure locates where the tire pressure sensors 1, 2, 3, 4 are mounted, when activated by the TPMS tool.
- Position the vehicle at least 10 ft (3 m) away from other vehicles that have tire pressure sensors.

1. Using the HDS, bring up the TPMS DATA LIST, scroll down to the bottom, and locate the four tire pressure sensors ID. These are the ID assigned to each tire location.
2. Follow HDS screen prompts under tire pressure sensor ID learn, to turn on the TPMS tool.

3. Hold the TPMS tool near the valve stem of one wheel, and activate the tire pressure sensor by following the prompts on the HDS.
4. The TPMS tool will display the sensor data including the tire pressure sensor ID.
5. Locate the tire pressure sensor ID in the TPMS DATA LIST with the HDS, and match it to the sensor ID on the TPMS tool. Note the sensor location.

TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	TPMS Trigger Tool ATEQ VT55
	TPMS Trigger Tool Bartec Wheelrite Tech 300-J-48714*
Available through the Honda Tool and Equipment Program 888-424-6857*For Canada: Available through DES-Canada 866-868-3372	

REMOVAL

1. Vehicle Lift

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Wheel With The Faulty Tire Pressure Sensor
    1. Remove the wheel with the faulty tire pressure sensor.

Fig. 9: Identifying Wheel With Faulty Tire Pressure Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tire Pressure Sensor

NOTE: **Each tire pressure sensor contains a lithium anode battery that is not removable. The complete tire pressure sensor should be disposed of according to local battery disposal guidelines or requirements. An improperly disposed of battery can be harmful to the environment.**

    1. Remove the tire valve stem cap and the valve stem core to deflate the tire.
    2. Remove any balance weights.

Fig. 10: Removing Tire From Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Break the bead loose from the wheel with a commercially available tire changer (A).

NOTE: **Note these items to avoid damaging the tire pressure sensor:**

- **Do the outside of the wheel first.**
- **Position the wheel as shown so the valve stem (B) is 90 degrees from the bead breaker (C) as shown.**
- **Do not position the bead breaker of the tire changer too close to the rim.**

4. Position the wheel so that the tire machine (A) and the tire iron (B) are next to the valve stem (C), and will move away from it when the machine starts.
5. Remove the tire from the wheel.

Fig. 11: Removing Tire From Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the valve stem nut (A) and the washer (B).
7. Remove the tire pressure sensor with the valve stem (C).

NOTE: **Check the nut and the washer; if they are deteriorated or damaged, replace them with new ones during reassembly.**

Fig. 12: Identifying Valve Stem Nut And Washer And Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove and discard the valve stem grommet (A).

NOTE:

- **The valve stem grommet might stay in the wheel; make sure you remove it.**
- **Always use a new valve stem grommet whenever the tire pressure sensor has been removed from the wheel, or when replacing the tire.**

Fig. 13: Identifying Valve Stem Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tire Pressure Sensor

NOTE:

- **Use only wheels that have a "TPMS" stamp (A) on the inside of the aluminum wheels, and the outside of the steel wheels.**
- **This vehicle may be equipped with either aluminum wheels, or steel wheels.**

Fig. 14: Identifying TPMS Stamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Before installing the tire pressure sensor, clean the mating surfaces on the sensor and the wheel.
2. Install the tire pressure sensor (A), the washer (B), and the valve stem nut (C) to the wheel (D).

NOTE: **Install the tire pressure sensor so that the sensor housing surface (E) is below the protrusion (F) of the wheel to prevent the sensor housing from being caught on the bead of the tire when installing the tire. Be sure to always mount the tire pressure sensor with its feet (G) in the downward position toward the wheel.**

3. Tighten the valve stem nut to the specified torque while holding the tire pressure sensor.

NOTE:

- **Do not use air or electric impact tools to tighten the valve stem nut.**
- **Do not twist the tire pressure sensor to adjust its position with the wheel, as this will damage or deform the valve stem grommet.**

Fig. 15: Installing Tire Pressure Sensor, Washer And Valve Stem Nut To Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 16: Installing Tire Onto Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Lube the tire bead sparingly with a paste-type tire mounting lubricant, and position the wheel so that the tire machine (A) is next to the valve stem (B) and will move away from it when the machine starts.
5. Install the tire onto the wheel.
6. With a dry air source, inflate the tire to 300 kPa (3.1 kgf/cm^2 , 44 psi) to seat the tire bead to the rim.

NOTE: Make sure the tire bead is seated on both sides of the rim evenly.

7. Adjust the tire pressure.
8. Install the valve stem cap.

Fig. 17: Identifying Tire Machine And Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check and adjust the wheel balance.

2. Wheel With The Faulty Tire Pressure Sensor
   1. Install the wheel with the faulty tire pressure sensor.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc or the brake drum and the inside of the wheel.**

Fig. 18: Identifying Wheel With Faulty Tire Pressure Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the

dashboard.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 19: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Memorizing the Tire Pressure Sensor ID

Fig. 20: Memorizing Tire Pressure Sensor ID Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **The TPMS tool is needed to do this procedure.**
- **Let the vehicle sit for at least 5 minutes to allow the tire pressure sensors to switch to sleep mode.**

- **To ensure the TPMS control unit memorizes the correct sensor ID, the vehicle with the new tire pressure sensor must be at least 10 ft (3 m) away from other vehicles that have sensors.**
- **When doing a tire rotation, memorizing the sensors is not needed.**

1. Select Sensor ID Learning from the Mode Menu on the HDS.
2. Follow the HDS screen prompts to turn on the TPMS tool.
3. Hold the TPMS tool near the valve stem of one wheel, and memorize the tire pressure sensor ID by following the screen prompts on the HDS.

NOTE:

- **If you turn the ignition switch to LOCK (0) before memorizing all four sensor IDs, the memorizing sensor ID is canceled.**
- **If more than one sensor ID is displayed on the HDS, verify that the vehicle has not been driven for 5 minutes, and there are no other vehicles or tire pressure sensors within 10 ft (3 m).**
- **See the HDS Help menu for specific instructions.**

4. Repeat step 3 for each wheel until all four sensor IDs are memorized. When all four IDs are memorized, the low tire pressure indicator blinks.
5. Turn the ignition switch to LOCK (0).
6. Disconnect the HDS from the DLC.
7. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
8. Make sure the low tire pressure indicator does not blink.
9. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb sticker.
10. Turn the ignition switch to LOCK (0).

TPMS CONTROL UNIT REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	TPMS Trigger Tool ATEQ VT55
	TPMS Trigger Tool Bartec Wheelrite Tech 300-J-48714*
Available through the Honda Tool and Equipment Program 888-424-6857*For Canada: Available through DES-Canada 866-868-3372	

REMOVAL

1. Front Console Cover - Left Side
    1. Remove the clips (A) and detach the hooks (B), then remove the left side console cover (C).

Fig. 23: Identifying Left Side Console Cover, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Maintenance Cover
    1. Remove the maintenance cover (A).

Fig. 24: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 25: Identifying Shift Lever Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. TPMS Control Unit

NOTE: **Make sure the TPMS control unit mounting bracket is not bent or twisted as this may affect its communication with the tire pressure sensors.**

1. Turn the ignition switch to LOCK (0).
2. Disconnect the connector (A).
3. Remove the TPMS control unit (B) from the bracket (C).

NOTE: **While separating the TPMS control unit from the bracket, release the hook (D) on the TPMS control unit using a flat-tipped screwdriver (E), and push up to release it from the bracket.**

Fig. 26: Identifying TPMS Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. TPMS Control Unit
    1. Install the TPMS control unit (A) to the bracket (B).

        NOTE: Make sure the TPMS control unit is properly installed. You will hear a click when the TPMS control unit is securely mounted on the bracket.

    2. Connect the connector (C).

Fig. 27: Identifying TPMS Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 28: Identifying Shift Lever Panel And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Maintenance Cover

1. Install the maintenance cover (A).

Fig. 29: Identifying Center Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Console Cover - Left Side
    1. Install the left side console cover (A).

Fig. 30: Identifying Left Side Console Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 31: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Memorizing the Tire Pressure Sensor ID

NOTE:

- **The TPMS tool is needed to do this procedure.**
- **Let the vehicle sit for at least 5 minutes to allow the tire pressure sensors to switch to sleep mode.**
- **To ensure the TPMS control unit memorizes the correct sensor ID, the vehicle with the new tire pressure sensor must be at least 10 ft (3 m) away from other vehicles that have sensors.**
- **When doing a tire rotation, memorizing the sensors is not needed.**

1. Select Sensor ID Learning from the Mode Menu on the HDS.
2. Follow the HDS screen prompts to turn on the TPMS tool.
3. Hold the TPMS tool near the valve stem of one wheel, and memorize the tire pressure sensor ID by following the screen prompts on the HDS.

NOTE:

- **If you turn the ignition switch to LOCK (0) before memorizing all four sensor IDs, the memorizing sensor ID is canceled.**
- **If more than one sensor ID is displayed on the HDS, verify that the vehicle has not been driven for 5 minutes, and there are no other vehicles or tire pressure sensors within 10 ft (3 m).**
- **See the HDS Help menu for specific instructions.**

4. Repeat step 3 for each wheel until all four sensor IDs are memorized. When all four IDs are memorized, the low tire pressure indicator blinks.
5. Turn the ignition switch to LOCK (0).
6. Disconnect the HDS from the DLC.

Fig. 32: Memorizing Tire Pressure Sensor ID Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
8. Make sure the low tire pressure indicator does not blink.
9. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb sticker.
10. Turn the ignition switch to LOCK (0).

TPMS DTC TROUBLESHOOTING INDEX

DTC	Detection Item
11	Tire 1 Low Air Pressure
13	Tire 2 Low Air Pressure
15	Tire 3 Low Air Pressure
17	Tire 4 Low Air Pressure
21	Tire 1 Pressure Sensor Abnormally High Temperature
22	Tire 2 Pressure Sensor Abnormally High Temperature
23	Tire 3 Pressure Sensor Abnormally High Temperature
24	Tire 4 Pressure Sensor Abnormally High Temperature
31	Tire 1 Pressure Sensor Low Battery Voltage
32	Tire 1 Pressure Sensor Signal Failure
33	Tire 2 Pressure Sensor Low Battery Voltage
34	Tire 2 Pressure Sensor Signal Failure

35	Tire 3 Pressure Sensor Low Battery Voltage
36	Tire 3 Pressure Sensor Signal Failure
37	Tire 4 Pressure Sensor Low Battery Voltage
38	Tire 4 Pressure Sensor Signal Failure
41	Abnormal Signal Reception Error
51	Tire 1 Pressure Sensor Registration Error
53	Tire 2 Pressure Sensor Registration Error
55	Tire 3 Pressure Sensor Registration Error
57	Tire 4 Pressure Sensor Registration Error
81	TPMS Control Unit Failure
83	No VSP Signal
85	F-CAN Communication Failure
91	Tire 1 Pressure Sensor Internal Error
93	Tire 2 Pressure Sensor Internal Error
95	Tire 3 Pressure Sensor Internal Error
97	Tire 4 Pressure Sensor Internal Error

DTC 11, 13, 15, 17: TIRE LOW AIR PRESSURE

Fig. 33: TPMS DTC Troubleshooting (11, 13, 15, 17) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **If low tire pressure is detected, the TPMS control unit sets one or more of these DTCs, and turns on the low tire pressure indicator. If the low tire pressure indicator comes on because of a low tire pressure, and the customer corrects it before bringing the vehicle in, the DTCs will be stored, but the indicator turns off.**

DTC Description	DTC
11 Tire 1 Low Air Pressure	
13 Tire 2 Low Air Pressure	
15 Tire 3 Low Air Pressure	
17 Tire 4 Low Air Pressure	

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb label.
   - 3. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.

   Does the low tire pressure indicator go off?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated. Go to step 2.

2. Tire pressure sensor check:
   - 1. Check for DTCs with the HDS.
   - 2. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.
   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current Condition	
	Values	Unit	Values	Unit
Tire 1 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		
Tire 2 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		
Tire 3 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		

Tire 4 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		

Is the indicated tire pressure on the HDS within the threshold limits of the actual tire pressure?

YES : Go to step 3.

NO : **Replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

3. TPMS control unit check:
   - 1. Clear the DTC with the HDS.
   - 2. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC

Is DTC 11, 13, 15, or 17 indicated?

YES : **REPLACE THE TPMS CONTROL UNIT**.

NO : If any other DTCs are indicated, troubleshoot the appropriate DTC.

NO : If no DTCs are indicated, the system is OK at this time.

DTC 21, 22, 23, 24: TIRE PRESSURE SENSOR ABNORMALLY HIGH TEMPERATURE

TPMS DTC Troubleshooting: 21, 22, 23, 24

Fig. 34: TPMS DTC Troubleshooting (21, 22, 23, 24) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
21 Tire 1 Pressure Sensor Abnormally High Temperature	
22 Tire 2 Pressure Sensor Abnormally High Temperature	
23 Tire 3 Pressure Sensor Abnormally High Temperature	
24 Tire 4 Pressure Sensor Abnormally High Temperature	

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Make sure the tires have cooled down.

NOTE: **An abnormal rise in the internal temperature of the tires can be caused by:**

- **Excessive braking**
- **Failure to release the parking brake (rear tires only)**
- **Leaving the vehicle running while parked (front tires only)**
- **Improper assembly of a wheel and tire**

- 3. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.

Does the TPMS indicator go off?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Tire pressure sensor check:
   - 1. Check for DTCs with the HDS.
   - 2. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.
   - 3. Check the parameter(s) below with the HDS.

Signal	Threshold		Current Condition	
	Values	Unit	Values	Unit
Tire 1 Air Temperature	More than 176	°F		
	More than 80	°C		
Tire 2 Air Temperature	More than 176	°F		
	More than 80	°C		
Tire 3 Air Temperature	More than 176	°F		
	More than 80	°C		
Tire 4 Air Temperature	More than 176	°F		
	More than 80	°C		

Are the indicated temperatures of each tire within the threshold?

YES : **Replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

NO : Go to step 3.

3. TPMS control unit check:
   - 1. Clear the DTC with the HDS.
   - 2. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC

Is DTC 21, 22, 23, or 24 indicated?

YES : Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : If any other DTCs are indicated, troubleshoot the appropriate DTC.

NO : If no DTCs are indicated, the system is OK at this time.

DTC 31, 33, 35, 37: TIRE PRESSURE SENSOR LOW BATTERY VOLTAGE

Fig. 35: TPMS DTC Troubleshooting (31, 33, 35, 37) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **This problem may occur when the temperature around the sensor is -4 °F (-20 ° C) or less. If low temperature is a possible cause, do the diagnosis in a place where ambient temperature is -4 °F (-20 °C) or less.**

DTC Description	DTC
31 Tire 1 Pressure Sensor Low Battery Voltage	
33 Tire 2 Pressure Sensor Low Battery Voltage	
35 Tire 3 Pressure Sensor Low Battery Voltage	
37 Tire 4 Pressure Sensor Low Battery Voltage	

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).

- 2. Clear the DTC with the HDS.
- 3. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
- 4. Check for DTCs with the HDS.

DTC Description	DTC
31 Tire 1 Pressure Sensor Low Battery Voltage	
33 Tire 2 Pressure Sensor Low Battery Voltage	
35 Tire 3 Pressure Sensor Low Battery Voltage	
37 Tire 4 Pressure Sensor Low Battery Voltage	

Is DTC 31, 33, 35, or 37 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Tire pressure sensor check 1:
   - 1. Check for DTCs with the HDS.

DTC Description	DTC
31 Tire 1 Pressure Sensor Low Battery Voltage	
33 Tire 2 Pressure Sensor Low Battery Voltage	
35 Tire 3 Pressure Sensor Low Battery Voltage	
37 Tire 4 Pressure Sensor Low Battery Voltage	

   - 2. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

Did each tire pressure sensor respond to the TPMS tool?

YES : Go to step 3.

NO : Check that the tire pressure sensor is properly mounted. If necessary, **replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

3. Tire pressure sensor check 2:
   - 1. Check the parameter(s) below with the HDS.

Signal	Current Condition	
	Values	Unit
Tire1 Pressure Sensor Battery Status		

Tire2 Pressure Sensor Battery Status		
Tire3 Pressure Sensor Battery Status		
Tire4 Pressure Sensor Battery Statuts		

Is LOW indicated?

YES : **Replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

NO : Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

DTC 32, 34, 36, 38: TIRE PRESSURE SENSOR SIGNAL FAILURE

Fig. 36: TPMS DTC Troubleshooting (32, 34, 36, 38) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Inspect for an aftermarket electrical device(s) (such as an inverter, cell phone charger, CB radio, etc) interfering with the signal from the tire pressure sensors when driving the vehicle.**

DTC Description	DTC
32 Tire 1 Pressure Sensor Signal Failure	
34 Tire 2 Pressure Sensor Signal Failure	
36 Tire 3 Pressure Sensor Signal Failure	

38 Tire 4 Pressure Sensor Signal Failure	

If DTC 41 is also set, **TROUBLESHOOT THAT DTC FIRST**.

DTC Description	DTC
41 Abnormal Signal Reception Error	

1. Wheel check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Make sure all four wheels are TPMS type wheels with mounted tire pressure sensors.

   Are TPMS type wheels with a tire pressure sensor mounted on the vehicle?

   YES : Go to step 2.

   NO : Install a TPMS type wheel, and **memorize the tire pressure sensor ID with the HDS** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

2. Tire pressure sensor check 1:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC
32 Tire 1 Pressure Sensor Signal Failure	
34 Tire 2 Pressure Sensor Signal Failure	
36 Tire 3 Pressure Sensor Signal Failure	
38 Tire 4 Pressure Sensor Signal Failure	

   - 3. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

   Did each tire pressure sensor respond to the TPMS tool?

   YES : Go to step 3.

   NO : Check for an aftermarket electrical device interfering with the signals from the sensors. If there are no electrical devices causing interference, **replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

3. Tire pressure sensor check 2:

- 1. Turn the ignition switch to LOCK (0), and wait 5 minutes or more.
- 2. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
- 3. Check the parameter(s) below of the affected sensor change from DEFAULT to the correct value with the HDS.

Signal	Current Condition	
	Values	Unit
Tire 1 Air Pressure		
Tire 1 Air Temperature		
Tire 2 Air Pressure		
Tire 2 Air Temperature		
Tire 3 Air Pressure		
Tire 3 Air Temperature		
Tire 4 Air Pressure		
Tire 4 Air Temperature		

Did the values of the AIR PRESSURE and AIR TEMPERATURE change from DEFAULT to the correct value?

YES : Intermittent failure, the system is OK at this time.

NO : **Replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

DTC 41: ABNORMAL SIGNAL RECEPTION ERROR

TPMS DTC Troubleshooting: 41

Fig. 37: TPMS DTC Troubleshooting (41) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Inspect for an aftermarket electrical device(s) (such as an inverter, cell phone charger, CB radio, etc) interfering with the signal from the tire pressure sensors when driving the vehicle.**

DTC Description	DTC
41 Abnormal Signal Reception Error	

1. Wheel check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Make sure all four wheels are TPMS type wheels with mounted tire pressure sensors.

Are TPMS type wheels with tire pressure sensors mounted on the vehicle?

YES : Go to step 2.

NO : Install a TPMS type wheel, and **memorize the tire pressure sensor ID with the HDS** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

2. Tire pressure sensor check 1:
   - 1. **Memorize the tire pressure sensor IDs with the HDS** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

Did all four tire pressure sensors respond to the TPMS tool?

YES : Go to step 3.

NO : **REPLACE THE TIRE PRESSURE SENSOR** that did not respond the TPMS tool.

3. Tire pressure sensor check 2:
   - 1. Check the sensor registration with the HDS.

Did the TPMS control unit learn the tire pressure sensor IDs?

YES : The system is OK at this time.

NO : Go to step 4.

4. Tire pressure sensor check (substitution):
   - 1. Substitute known-good wheels with the tire pressure sensors.
   - 2. **Memorize the tire pressure sensor IDs with the HDS** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

Did the TPMS control unit learn the tire pressure sensor IDs?

YES : **Replace the tire pressure sensors in the original wheels** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

NO : Check the TPMS control unit for loose connections. Also check the vehicle for RF interference. If necessary, **REPLACE THE TPMS CONTROL UNIT**.

DTC 51, 53, 55, 57: TIRE PRESSURE SENSOR REGISTRATION ERROR

TPMS DTC Troubleshooting: 51, 53, 55, 57

Fig. 38: TPMS DTC Troubleshooting (51, 53, 55, 57) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **The DTCs will only set during memorizing the tire pressure sensor ID.**
- **Inspect for an aftermarket electrical device(s) (such as an inverter, cell phone charger, CB radio, etc) interfering with the signal from the tire pressure sensors when driving the vehicle.**

DTC Description	DTC
51 Tire 1 Pressure Sensor Registration Error	
53 Tire 2 Pressure Sensor Registration Error	
55 Tire 3 Pressure Sensor Registration Error	
57 Tire 4 Pressure Sensor Registration Error	

1. Wheel check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Make sure all four wheels are TPMS type wheels with mounted tire pressure sensors.

Are TPMS type wheels with a tire pressure sensor mounted on the vehicle?

YES : Go to step 2.

NO : Install a TPMS type wheel, and **memorize the tire pressure sensor ID with the HDS** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

2. Tire pressure sensor check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC
51 Tire 1 Pressure Sensor Registration Error	
53 Tire 2 Pressure Sensor Registration Error	
55 Tire 3 Pressure Sensor Registration Error	
57 Tire 4 Pressure Sensor Registration Error	

   - 3. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

Did each tire pressure sensor respond to the TPMS tool?

YES : Go to step 3.

NO : Check for an aftermarket electrical device interfering with the signals from the sensors. If there are no electrical devices causing interference, **replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

3. TPMS control unit check:
   - 1. Turn the ignition switch to LOCK (0), and wait 5 minutes or more.
   - 2. Turn the ignition switch to ON (II).
   - 3. Clear the DTC with the HDS.
   - 4. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC
51 Tire 1 Pressure Sensor Registration Error	
53 Tire 2 Pressure Sensor Registration Error	
55 Tire 3 Pressure Sensor Registration Error	
57 Tire 4 Pressure Sensor Registration Error	

Is DTC 51, 53, 55, or 57 indicated?

YES : Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : Intermittent failure, the system is OK at this time.

DTC 81: TPMS CONTROL UNIT FAILURE

Fig. 39: TPMS DTC Troubleshooting (81) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Low battery voltage can cause this DTC. Make sure the battery is fully charged and in good condition.**

DTC Description	DTC
81 TPMS Control Unit Failure	

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 4. Check for DTCs with the HDS.

DTC Description	DTC
81 TPMS Control Unit Failure	

Is DTC 81 indicated?

YES : The failure is duplicated. **REPLACE THE TPMS CONTROL UNIT**.

NO : Intermittent failure, the system is OK at this time.

DTC 83: NO VSP SIGNAL

TPMS DTC Troubleshooting: 83

Fig. 40: TPMS DTC Troubleshooting (83) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
83 No VSP Signal	

If DTC 85 stored at the same time as DTC 83, troubleshoot DTC 85 first, then recheck for DTC 83.

DTC Description	DTC
85 F-CAN Communication Failure	

1. PCM check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Test-drive the vehicle at 7 mph (10 km/h) or more.
   - 4. Check the speedometer.

   Does the speedometer register speed?

   YES : Go to step 2.

   NO : **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then go to step 1 and recheck. If the PCM was updated and DTCs are not indicated, troubleshooting is complete. If the PCM was substituted and DTCs are not indicated, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

2. TPMS control unit check:
   - 1. Check the parameter(s) below with the HDS.

	Current Condition

Signal	Values	Unit
Vehicle Speed		

Is the vehicle speed indicated?

YES : Intermittent failure, the system is OK at this time.

NO : **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

DTC 85: F-CAN COMMUNICATION FAILURE

Fig. 41: TPMS DTC Troubleshooting (85) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
85 F-CAN Communication Failure	

Check for PGM-FI DTCs with the HDS, and troubleshoot the PCM and F-CAN communication errors first.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 4. Wait about 5 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC
85 F-CAN Communication Failure	

Is DTC 85 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (TPMS control unit, F-CAN line):
   - 1. Test-drive the vehicle.

Does the speedometer work?

YES : There is a problem in the F-CAN line. Go to step 4.

NO : There is a problem in the TPMS control unit. Go to step 3.

3. TPMS control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     TPMS CONTROL UNIT 20P CONNECTOR

   - 3. Test-drive the vehicle.

Does the speedometer work?

YES : Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : Turn the ignition switch to LOCK (0), and reconnect all connectors, then **check and troubleshoot**

the PGM-FI See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

4. Open wire check (F CAN-L, F CAN-H lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Short the SCS line with the HDS.
    - 3. Disconnect the following connectors.

      PCM connector A (49P) See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**

      TPMS CONTROL UNIT 20P CONNECTOR

    - 4. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector A (49P): disconnected

      TPMS control unit 20P connector: disconnected

      Test circuit F CAN-L

      Test point 1 TPMS control unit 20P connector No. 20 (RED)

      Test point 2 PCM connector A (49P) No. 4 (RED)

      Test circuit F CAN-H

      Test point 1 TPMS control unit 20P connector No. 9 (WHT)

      Test point 2 PCM connector A (49P) No. 3 (WHT)

Fig. 42: Checking Continuity Between TPMS Control Unit 20P Connector No. 9 (WHT) And PCM Connector A (49P) No. 3 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Check for loose terminals and poor connections at the TPMS control unit and G503. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : Repair an open in the wire between the TPMS control unit and the PCM.

DTC 91, 93, 95, 97: TIRE PRESSURE SENSOR INTERNAL ERROR

TPMS DTC Troubleshooting: 91, 93, 95, 97

Fig. 43: TPMS DTC Troubleshooting (91, 93, 95, 97) Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Description	DTC
91 Tire 1 Pressure Sensor Internal Error	
93 Tire 2 Pressure Sensor Internal Error	
95 Tire 3 Pressure Sensor Internal Error	
97 Tire 4 Pressure Sensor Internal Error	

1. Tire pressure sensor check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC
91 Tire 1 Pressure Sensor Internal Error	
93 Tire 2 Pressure Sensor Internal Error	
95 Tire 3 Pressure Sensor Internal Error	
97 Tire 4 Pressure Sensor Internal Error	

   - 3. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID**, **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

Did each tire pressure sensor respond to the TPMS tool?

YES : Go to step 2.

NO : Check that the tire pressure sensor is properly mounted. If necessary, **replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

2. TPMS check:
   - 1. Clear the DTC with the HDS.
   - 2. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
   - 3.

     Check for DTCs with the HDS.

DTC Description	DTC

Is DTC 91, 93, 95, or 97 indicated?

YES : **Replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**, and recheck. If DTCs are still present, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : If any other DTCs are indicated, troubleshoot the appropriate DTC.

NO : If no DTCs are indicated, the system is OK at this time.

LOW TIRE PRESSURE INDICATOR DOES NOT COME ON, AND NO DTCS ARE STORED

TPMS Symptom Troubleshooting - Low tire pressure indicator does not come on, and no DTCs are stored

Fig. 44: TPMS Symptom Troubleshooting Flow Chart (Low Tire Pressure Indicator No On And No DTCS Stored)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. TPMS check:
    - 1. Turn the ignition switch to ON (II).
    - 2. Check the low tire pressure indicator for several seconds when the ignition switch is turned ON (II).

    Did the indicator come on, and then go off?

    YES : Go to step 2.

    NO : Go to step 5.

2. Tire pressure sensor check 1:
   - 1. Test-drive the vehicle at 28 mph (45 km/h) or more for at least 3 minutes.
   - 2. Stop the vehicle, and lower the pressure in each tire until the low tire pressure indicator comes on.

NOTE:

- **Reinflate the tire before continuing to the next tire.**
- **After noting whether the low tire pressure indicator came on, make sure it goes off when you reinflate the tire before proceeding to the next tire.**
- **If 5 minutes has passed since finishing the last test-drive, reactivate the appropriate tire pressure sensor using the TPMS tool See MEMORIZING THE TIRE PRESSURE SENSOR ID or TIRE PRESSURE SENSOR LOCATION or TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION.**

Model	Specified Tire Pressure Lower Limit
16 inch wheels	168 kPa (1.7 kgf/cm^2 , 24 psi)
17 inch wheels	175 kPa (1.8 kgf/cm^2 , 25 psi)

Does the low pressure indicator come on when the pressure drops below the specified tire pressure lower limit for any tire?

YES : Intermittent failure, the system is OK at this time.

NO : Go to step 3.

3. Tire pressure sensor check 2:
   - 1. **Do the tire pressure sensor location procedure to determine the affected tire location and relate it to the tire pressure sensor number** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

Did each tire pressure sensor respond to the TPMS tool?

YES : Go to step 4.

NO : Check that the tire pressure sensor is properly mounted. If necessary, **replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

4. TPMS control unit check:
   - 1. Check the parameter(s) below with the HDS.

	Threshold	Current Condition

Signal	Values	Unit	Values	Unit
Tire 1 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		
Tire 2 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		
Tire 3 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		
Tire 4 Air Pressure	Within 40	kPa		
	Within 0.4	kgf/cm^2		
	Within 6	psi		

Is the indicated tire pressure on the HDS match the malfunction threshold?

YES : **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : **Replace the appropriate tire pressure sensor** See **MEMORIZING THE TIRE PRESSURE SENSOR ID** or **TIRE PRESSURE SENSOR LOCATION** or **TIRE PRESSURE SENSOR REMOVAL AND INSTALLATION**.

5. Gauge control module operation check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Is the gauge control module OK?

YES : Go to step 6.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

6. Shorted wire check (IG1 METER line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     TPMS CONTROL UNIT 20P CONNECTOR

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     TPMS control unit 20P connector: disconnected

Test circuit IG1 METER, GND

Test point 1 TPMS control unit 20P connector No. 3 (LT GRN)

Test point 2 TPMS control unit 20P connector No. 8 (BLK)

Fig. 45: Measuring Voltage Between TPMS Control Unit 20P Connector No. 3 (LT GRN) And No. 8 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair a short to power in the wire between the TPMS control unit and the No. B5 (10 A) fuse in the under-dash fuse/relay box.

NO : The IG1 METER wire is OK. Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

LOW TIRE PRESSURE INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

TPMS Symptom Troubleshooting - Low tire pressure indicator does not go off, and no DTCs are stored

Fig. 46: TPMS Symptom Troubleshooting Flow Chart (Low Tire Pressure Indicator No Go Off And No DTCS Stored)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. TPMS control unit check:

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  TPMS CONTROL UNIT 20P CONNECTOR

- 3. Turn the ignition switch to ON (II).
- 4. Check the low tire pressure indicator for several seconds when the ignition switch is turned ON (II).

Did the indicator come on, and then go off?

YES : Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : **DO THE TROUBLESHOOTING FOR THE GAUGE CONTROL MODULE** . If necessary, **substitute a known-good gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

TPMS CANNOT BE CALIBRATED

Fig. 47: TPMS Symptom Troubleshooting Flow Chart (TPMS Not Calibrated)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Check the number of miles on the gauge control module. After proceeding TPMS calibration, DATA LIST with the HDS shows the same number of miles on the gauge control module. When TPMS switch is not working, DATA LIST with the HDS shows the number of miles of the last TPMS calibration done before.**

1. TPMS calibration check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the number of miles on the gauge control module.
   - 3. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb label.
   - 4. Do the TPMS calibration.
   - 5. Check the parameter(s) below with the HDS.

Signal	Current Condition	
	Values	Unit
INITIALIZED ODOMETER		

Does the value on the HDS match the number of miles on the gauge control module?

YES : Intermittent failure, the system is OK at this time. Check that the tires match recommended size and loaded rating as described on the doorjamb label.

NO : Go to step 2.

2. TPMS switch check 1:
   - 1. Check the TPMS switch on the gauge data list with the HDS.

Signal	Current Condition	
	Values	Unit
TPMS Initialization Switch		

Does the TPMS switch input change from on to off when the switch is pressed?

YES : Do all DTC check. If any B-CAN or VSA DTCs are indicated, do the troubleshooting for these DTCs first.

NO : Go to step 3.

3. TPMS switch check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the TPMS switch.

Is the TPMS switch OK?

YES : Go to step 4.

NO : Replace the TPMS switch.

4. Shorted wire check (TPMS_SW line):
   - 1. Disconnect the following connectors.

     TPMS switch 5P connector

     Gauge control module 32P connector See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     TPMS switch 5P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit TPMS_SW

     Test point 1 TPMS switch 5P connector No. 4 (YEL)

     Test point 2 Body ground

Fig. 48: Checking Continuity Between TPMS Switch 5P Connector No. 4 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the gauge control module and the TPMS switch.

NO : The TPMS_SW wire is OK. **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

TPMS INDICATOR DOES NOT COME ON, AND NO DTCS ARE STORED

Fig. 49: TPMS Symptom Troubleshooting Flowchart (TPMS Indicator Not On And No DTCS Stored)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. TPMS control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     TPMS CONTROL UNIT 20P CONNECTOR

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the TPMS indicator for several seconds when the ignition switch is turned ON (II).

   Did the indicator come on?

   YES : Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

   NO : **DO THE TROUBLESHOOTING FOR THE GAUGE CONTROL MODULE** . If necessary, **substitute a known-good gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

TPMS INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

TPMS Symptom Troubleshooting - TPMS indicator does not go off, and no DTCs are stored

Fig. 50: TPMS Symptom Troubleshooting Flow Chart (TPMS Indicator Not Go Off And No DTCs Stored)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **If the TPMS control unit was replaced, the TPMS indicator will be on until all four tire pressure sensor ID codes are learned.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the TPMS indicator for several seconds when the ignition switch is turned to ON (II).

   Did the indicator come on, and then go off?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated. Go to step 2.

2. Fuse check 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B40 (7.5 A)

     Location Under-dash fuse/relay box

   Is the fuse OK?

   YES : The fuse is OK. Reinstall the fuse, then go to step 3.

   NO : Replace the fuse. If the fuse blows again, repair the short to ground on the No. B40 (7.5 A) fuse circuit.

3. Fuse check 2:
   - 1. Check the following fuse.

     Fuse No. B5 (10 A)

     Location Under-dash fuse/relay box

   Is the fuse OK?

   YES : The fuse is OK. Reinstall the fuse, then go to step 4.

   NO : Replace the fuse. Turn the ignition switch to ON (II), then turn it to LOCK (0) again. If the fuse blows again, repair the short to ground on the No. B5 (10 A) fuse circuit.

4. Gauge control module operation check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Is the gauge control module OK?

YES : Go to step 5.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module**

5. Open wire check (+B TPMS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     TPMS CONTROL UNIT 20P CONNECTOR

   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     TPMS control unit 20P connector: disconnected

     Test circuit +B TPMS

     Test point 1 TPMS control unit 20P connector No. 1 (RED)

     Test point 2 Body ground

Fig. 51: Measuring Voltage Between TPMS Control Unit 20P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B TPMS wire is OK. Go to step 6.

NO : Repair an open in the wire between the TPMS control unit and the No. B40 (7.5 A) fuse in the

under-dash fuse/relay box.

6. Open wire check (IG1 METER line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      TPMS control unit 20P connector: disconnected

      Test circuit IG1 METER

      Test point 1 TPMS control unit 20P connector No. 3 (LT GRN)

      Test point 2 Body ground

Fig. 52: Measuring Voltage Between TPMS Control Unit 20P Connector No. 3 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 METER wire is OK. Go to step 7.

NO : Repair an open in the wire between the TPMS control unit and the No. B5 (10 A) fuse in the under-dash fuse/relay box.

7. Open wire check (GND line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect the following connector.

      TPMS control unit 20P connector

    - 3. Turn the ignition switch to ON (II).

- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Test circuit GND

  Test point 1 TPMS control unit 20P connector No. 8 (BLK)

  Test point 2 Body ground

Fig. 53: Measuring Voltage Between TPMS Control Unit 20P Connector No. 8 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES : Repair an open or high resistance in the wire between the TPMS control unit and body ground (G503).

NO : The GND wire is OK. Go to step 8

8. Open wire check (F CAN-L, F CAN-H lines)
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Gauge control module 32P connector See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

     TPMS CONTROL UNIT 20P CONNECTOR

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

Gauge control module 32P connector: disconnected

TPMS control unit 20P connector: disconnected

Test circuit F CAN-L

Test point 1 TPMS control unit 20P connector No. 20 (RED)

Test point 2 Gauge control module 32P connector No. 20 (RED)

Test circuit F CAN-H

Test point 1 TPMS control unit 20P connector No. 9 (WHT)

Test point 2 Gauge control module 32P connector No. 19 (WHT)

Fig. 54: Checking Continuity Between TPMS Control Unit 20P Connector No. 9 (WHT) And Gauge Control Module 32P Connector No. 19 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Check for loose terminals and poor connections at the TPMS control unit. If necessary, **SUBSTITUTE A KNOWN-GOOD TPMS CONTROL UNIT**, and recheck.

NO : Repair an open in the wire between the TPMS control unit and the gauge control module.

TORQUE SPECIFICATIONS

NOTE:

- **Refer to the appropriate portion of the manual for the precautions and complete procedures.**
- **Refer to the appropriate portion of the manual for the bolts/nuts not indicated here.**

ENGINE ELECTRICAL TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Starting system	Starter bolt (10 mm)		45 N.m (4.6 kgf.m, 33 lbf.ft)
	Starter bolt (12 mm)		64 N.m (6.5 kgf.m, 47 lbf.ft)
	Starter harness clamp nut		9 N.m (0.9 kgf.m, 7 lbf.ft)
Ignition system	Spark plugs		18 N.m (1.8 kgf.m, 13 lbf.ft)
Charging system	Alternator bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Drive belt auto-tensioner bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Drive belt auto-tensioner pulley bolt		56 N.m (5.7 kgf.m, 41 lbf.ft)
	Idler pulley bolt		45 N.m (4.6 kgf.m, 33 lbf.ft)

ENGINE MECHANICAL TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Engine assembly	Side engine mount bolts		64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bracket bolt	Use new bolt	74 N.m (7.5 kgf.m, 55 lbf.ft)
	Side engine mount bracket nut	Use new nut	74 N.m (7.5 kgf.m, 55 lbf.ft)
	Upper torque rod bolts (2)	Use new bolts	74 N.m (7.5 kgf.m, 55 lbf.ft)
	Upper torque rod bolt (2)	Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Lower torque rod bolts (12 mm) (2)	Use new bolts	88 N.m (7.5 kgf.m, 55 lbf.ft)
	Lower torque rod bolt (14 mm) (2)	Use new bolt	93 N.m (9.5 kgf.m, 67 lbf.ft)
	Lower torque rod bracket bolts	Use new bolts	74 N.m (7.5 kgf.m, 55 lbf.ft)
	Front engine mount bolts	Use new bolts	74 N.m (7.5 kgf.m, 55 lbf.ft)
			64 N.m (6.5 kgf.m, 47

	Front engine mount bolt	Use new bolt	lbf.ft)
	Transmission mount bolts	Use new bolts	59 N.m (6.0 kgf.m, 44 lbf.ft)
	Transmission mount bolt	Use new bolt	88 N.m (9.0 kgf.m, 65 lbf.ft)
	Transmission mount bracket bolt	Use new bolt	74 N.m (7.5 kgf.m, 55 lbf.ft)
	Transmission mount bracket nuts	Use new nuts	74 N.m (7.5 kgf.m, 55 lbf.ft)
Engine lubrication	Oil pressure switch	Apply liquid gasket on threads	18 N.m (1.8 kgf.m, 13 lbf.ft)
	Oil pan drain bolt	Use new washer	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Oil filter		12 N.m (1.2 kgf.m, 9 lbf.ft)
Intake manifold and exhaust system	Intake manifold bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Intake manifold nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Muffler flexible joint bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Exhaust pipe B self-locking nuts	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
(1) Parts to be tightened in a particular order. (2) Follow the appropriate manual procedures closely for torque, sequence, and special steps.			

ENGINE COOLING TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Cooling system	Water passage bolts		45 N.m (4.6 kgf.m, 33 lbf.ft)
	Water passage nuts		45 N.m (4.6 kgf.m, 33 lbf.ft)
	Water outlet bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Water outlet nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)

FUEL AND EMISSIONS TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
	A/F sensor		44 N.m (4.5 kgf.m, 33 lbf.ft)
	Fuel tank locknut (1)	Use new locknut, locknut plate, and base gasket	100 N.m (10.2 kgf.m, 73.8 lbf.ft)
	Fuel tank support straps bolts 38		N.m (3.9 kgf.m, 28 lbf.ft)
	Knock sensor		22 N.m (2.2 kgf.m, 16

			lbf.ft)
	PCV valve	Use new washer	45 N.m (4.6 kgf.m, 33 lbf.ft)
	Rocker arm oil pressure switch	Use new O-ring	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Secondary HO2S		44 N.m (4.5 kgf.m, 33 lbf.ft)
Fuel and emissions	Throttle body bolts	Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	TWC bracket bolts		45 N.m (4.6 kgf.m, 33 lbf.ft)
	TWC upper bolts and nuts	Use new gaskets	31 N.m (3.2 kgf.m, 23 lbf.ft)
	TWC self locking nuts	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
*1: Parts to be tightened in a particular order. (1) Follow the appropriate manual procedures closely for torque, sequence, and special steps.			

AUTOMATIC TRANSMISSION TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
	ATF drain plug	Use new sealing washer	49 N.m (5.0 kgf.m, 36 lbf.ft)
	Clutch pressure inspection hole sealing bolts	Use new sealing washers	18 N.m (1.8 kgf.m, 13 lbf.ft)
	Drive plate bolts ()		74 N.m (7.5 kgf.m, 55 lbf.ft)
	Shift cable end nut		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift lever assembly bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
Automatic transmission	Shift lever bracket base nut		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift lever bracket base bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Transfer assembly bolts		44 N.m (4.5 kgf.m, 32 lbf.ft)
	Transmission fluid pressure switches	Use new sealing washer	20 N.m (2.0 kgf.m, 15 lbf.ft)
	Transmission assembly mounting bolts (10mm)		44 N.m (4.5 kgf.m, 33 lbf.ft)
	Transmission assembly mounting bolts (12mm)		64 N.m (6.5 kgf.m, 47 lbf.ft)

REAR DIFFERENTIAL TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Rear differential	Filler plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Drain plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential mount rubber bolts		31 N.m (3.2 kgf.m, 23 lbf.ft)
	Right and left rear differential mount brackets B bolt (10 mm)	• Use new bolt • Use new washer	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Right and left rear differential mount brackets B bolts (12 mm)	Use new bolts	59 N.m (6.0 kgf.m, 44 lbf.ft)
	Rear differential mount assembly A bolts (10 mm)		44 N.m (4.5 kgf.m, 32 lbf.ft)
	Rear differential mount assembly A bolts (12 mm)	Use new bolts	59 N.m (6.0 kgf.m, 44 lbf.ft)
*1: Parts to be tightened in a particular order. (1) Follow the appropriate manual procedures closely for torque, sequence, and special steps.			

DRIVELINE/AXLE TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Driveline/axle	Front driveshaft spindle nut	• Use oil on the seating surface • Use new nut	328 N.m (33.5 kgf.m, 242 lbf.ft)
	Rear driveshaft spindle nut	• Use oil on the seating surface • Use new nut	181 N.m (18.5 kgf.m, 133 lbf.ft)
	Intermediate shaft dowel bolts		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Intermediate shaft flange bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	No. 1 propeller shaft bolts	Use new bolts	32 N.m (3.3 kgf.m, 24 lbf.ft)
	No. 2 propeller shaft bolts	Use new bolts	32 N.m (3.3 kgf.m, 24 lbf.ft)
	Center support bearing bolts	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	No. 1 propeller shaft protector bolts	Use new bolts	22 N.m (2.2 kgf.m, 16 lbf.ft)
	No. 2 propeller shaft protector bolts	Use new bolts	22 N.m (2.2 kgf.m, 16 lbf.ft)

STEERING TORQUE SPECIFICATIONS

Location	Item	Remark	Torque value
Steering	Steering wheel nut		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Steering joint bolts		29 N.m (3.0 kgf.m, 21 lbf.ft)
	Steering column bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Steering column nuts		13 N.m (1.3 kgf.m, 10 lbf.ft)
	Steering gearbox bolts	Use new bolts	87 N.m (8.9 kgf.m, 64 lbf.ft)
	Steering gearbox stiffener bolts	Use new bolts	29 N.m (3.0 kgf.m, 21 lbf.ft)
	Tie-rod end nuts		54 N.m (5.5 kgf.m, 40 lbf.ft)
	Tie-rod end lock nuts		44 N.m (4.5 kgf.m, 32 lbf.ft)

SUSPENSION TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Front suspension	Wheel nuts		108 N.m (11.0 kgf.m, 80 lbf.ft)
	Knuckle damper pinch bolts/nuts	Use new bolts/nuts	157 N.m (16.0 kgf.m, 116 lbf.ft)
	Lower ball joint nuts	Use new nuts	52 N.m (5.3 kgf.m, 38 lbf.ft)
	Lower ball joint bolt	Use new bolt	52 N.m (5.3 kgf.m, 38 lbf.ft)
	Lower ball joint castle nut	Use new nut	59-69 N.m (6.0-7.0 kgf.m, 44-51 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	59 N.m (6.0 kgf.m, 44 lbf.ft)
	Lower arm bolt (14mm)	Use new bolt	113 N.m (11.5 kgf.m, 83 lbf.ft)
	Stabilizer bar bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Stabilizer link nut		78 N.m (8.0 kgf.m, 58 lbf.ft)
	Stabilizer link nut	Use new nut	78 N.m (8.0 kgf.m, 58 lbf.ft)
	Damper self-locking nut	Use new nut	44 N.m (4.5 kgf.m, 32 lbf.ft)
	Damper upper nuts	Use new nuts	44 N.m (4.5 kgf.m, 32 lbf.ft)
Rear suspension	Wheel nuts		108 N.m (11.0 kgf.m, 80 lbf.ft)
	Knuckle bolt (14mm)	Use new bolt	69 N.m (7.0 kgf.m, 51 lbf.ft)
	Knuckle nut (12mm)	Use new nut	57 N.m (5.8 kgf.m, 42 lbf.ft)
	Upper arm bolts (12mm)	Use new bolts	93 N.m (9.5 kgf.m, 44 lbf.ft)
	Trailing arm front bolts	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Trailing arm rear bolt	Use new bolt	59 N.m (6.0 kgf.m, 44 lbf.ft)
	Stabilizer bar bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Stabilizer link self-locking nut	Use new nut	38 N.m (3.9 kgf.m, 28 lbf.ft)
	Stabilizer link nut	Use new nut	38 N.m (3.9 kgf.m, 28 lbf.ft)
	Damper lower bolt	Use new bolt	93 N.m (9.5 kgf.m, 69 lbf.ft)
	Damper upper nut	Use new nut	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Damper self-locking nut	Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)

BRAKE TORQUE SPECIFICATIONS

Location	Item	Remark	Torque

Conventional brake	Front brake caliper bolts 8mm (2WD)		34 N.m (3.5 kgf.m, 25 lbf.ft)
	Front brake caliper bolts 10mm (AWD)		50 N.m (5.1 kgf.m, 37 lbf.ft)
	Front brake caliper bracket bolts		137 N.m (14.0 kgf.m, 101 lbf.ft)
	Front brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Rear brake caliper bolts		23 N.m (2.3 kgf.m, 17 lbf.ft)
	Rear brake caliper bracket bolts		108 N.m (11.0 kgf.m, 80 lbf.ft)
	Rear brake hose banjo bolt		Use new washers 35 N.m (3.6 kgf.m, 26 lbf.ft)
	Parking brake pedal bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Parking brake pedal nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Brake pedal bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Brake booster/brake pedal nuts		12 N.m (1.2 kgf.m, 9 lbf.ft)
	Master cylinder nuts		15 N.m (1.5 kgf.m, 11 lbf.ft)
	Master cylinder brake line		22 N.m (2.2 kgf.m, 16 lbf.ft)
VSA	VSA modulator-control unit brake line (10 mm)		15 N.m (1.5 kgf.m, 11 lbf.ft)
	VSA modulator-control unit brake line (12 mm)		22 N.m (2.2 kgf.m, 16 lbf.ft)

BODY TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Frame	Front subframe mid bolts	Use new bolts	71 N.m (7.2 kgf.m, 52 lbf.ft)
	Front subframe bolts	Use new bolts	103 N.m (10.5 kgf.m, 75.9 lbf.ft)
	Rear subframe bolts	Use new bolts	69 N.m (7.0 kgf.m, 51 lbf.ft)
	Rear subframe stiffener bolt		29 N.m (3.0 kgf.m, 21 lbf.ft)

HEATING, VENTILATION, AND AIR CONDITIONING TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
A/C compressor	A/C compressor bracket bolts		45 N.m (4.6 kgf.m, 33 lbf.ft)
	A/C compressor bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	A/C compressor center nut		25.5 N.m (2.6 kgf.m, 19 lbf.ft)
	A/C compressor relief valve		9.8 N.m (1.00 kgf.m, 7.2 lbf.ft)
Receiver line	A/C pressure sensor		11 N.m (1.1 kgf.m, 8 lbf.ft)

BODY ELECTRICAL TORQUE SPECIFICATIONS

Location	Item	Remark	Torque
Wipers/washers	Windshield wiper arm nut		30 N.m (3.0 kgf.m, 22 lbf.ft)
	Windshield wiper linkage nut		31 N.m (3.2 kgf.m, 23 lbf.ft)

TRANSFER ASSEMBLY COMPONENT LOCATION INDEX

Fig. 1: Transfer Assembly Components Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER ASSEMBLY	**INSPECTION**
	REMOVAL AND INSTALLATION
TRANSFER OIL SEAL	**REPLACEMENT**
TRANSFER SHAFT ASSEMBLY O-RING	**REPLACEMENT**

TRANSFER ASSEMBLY INSPECTION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 2: Identifying Front Splash Shield, Bumper And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover

1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 3: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Propeller Shaft Transmission Side - Disconnection
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Separate the No. 1 propeller shaft from the transfer companion flange.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 4: Identifying Reference Mark On No. 1 Propeller Shaft And Transfer Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Transfer Gear Backlash - Measurement
    1. Shift the shift lever to N.
    2. Set a dial indicator (A) on the companion flange (B).
    3. Measure the transfer gear backlash.

       Standard: 0.06-0.16 mm (0.0024-0.0063 in)

    4. If the backlash is out of the standard, replace the transfer assembly.

Fig. 5: Measuring Transfer Gear Backlash Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer Fluid Leak - Check
    1. Check for fluid leaks between the mating faces of the transfer assembly and the transmission.

2. If there is leak, remove the transfer assembly, then replace the O-ring.
3. Check for fluid leaks between the mating surfaces of the transfer housing and transfer shaft assembly.
4. If there is leak, remove the transfer shaft assembly, then replace the transfer shaft assembly O-ring.
5. Check for fluid leaks between the transfer companion flange and the transfer oil seal.
6. If there is leak, remove the transfer assembly, then replace the transfer oil seal and the O-ring on the transfer output shaft (hypoid gear).

NOTE: **Do not replace the oil seal with the transfer assembly on the transmission.**

REMOVAL

1. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 6: Identifying Sealing Washer And Drain Plug With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 7: Identifying Under-Floor TWC Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Transfer Assembly
    1. Remove the transfer assembly (A) and the dowel pin (B).
    2. Remove the O-ring (C) from the transfer assembly.

Fig. 8: Identifying Transfer Assembly, Dowel Pin And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Total Starting Torque - Measurement
    1. Secure the transfer housing (A) in a bench vise (B) with soft jaws.

        NOTE: **To prevent damaging the transfer housing, always use wood blocks or equivalent materials between the transfer housing and the bench vise.**

    2. Rotate the transfer companion flange several times to seat the tapered roller bearings.
    3. Measure the starting torque at the companion flange (C) using a torque wrench (D) and a socket (E).

        Standard: 2.44-3.88 N.m (24.9-39.6 kgf.cm, 21.6-34.3 lbf.in)

    4. If the starting torque is out of the standard, replace the transfer assembly.

Fig. 9: Measuring Total Starting Torque Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer Drive Gear Tooth Contact - Inspection
    1. Remove the transfer shaft assembly (A) and the dowel pin (B).

Fig. 10: Identifying Transfer Shaft Assembly And Dowel Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the O-ring (A).
3. Apply Prussian Blue to both sides of the transfer drive gear (hypoid gear) (B) teeth lightly and evenly.

Fig. 11: Identifying Transfer Drive Gear And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Temporarily install the transfer shaft assembly (A) and the dowel pin (B). Do not install the O-ring during inspection.
5. Rotate the companion flange in both directions until the transfer gears rotate one full turn in both directions.

6. Remove the transfer shaft assembly and the dowel pin.

Fig. 12: Identifying Transfer Shaft Assembly And Dowel Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the transfer drive gear (hypoid gear) tooth contact pattern. The pattern should be centered on the gear teeth as shown.
8. If the tooth contact pattern are incorrect, replace the transfer assembly.

Fig. 13: Identifying Correct Contact Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before reassembly.

1. Transfer Shaft Assembly
    1. Install a new O-ring (A).

Fig. 14: Identifying Transfer Shaft Assembly O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the transfer shaft assembly (A) and the dowel pin (B).

Fig. 15: Identifying Transfer Shaft Assembly And Dowel Pin With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer Assembly
    1. Install a new O-ring (A) on the transfer assembly (B).
    2. Install the transfer assembly and the dowel pin (C).

Fig. 16: Identifying Transfer Assembly, O-Ring And Dowel Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Propeller Shaft Transmission Side - Reconnection
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure. Then install new flange bolts (D) to the specified torque.

Fig. 17: Identifying Alignment Marks On No. 1 Propeller Shaft And Transfer Companion Flange With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 18: Identifying Under Floor TWC Assembly Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

<u>Fig. 19: Identifying Front Floor Undercover And Fasteners</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 20: Identifying Front Splash Shield And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 21: Identifying ATF Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift

quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 22: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 23: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 24: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

9. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 25: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- Transmission damage.
- Vehicle does not move in any gear.
- Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.

- Engine vibrates at idle.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 26: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 27: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 28: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

TRANSFER ASSEMBLY REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 29: Identifying Front Splash Shield, Bumper And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 30: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 31: Identifying Sealing Washer And Drain Plug With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 32: Identifying Under-Floor TWC Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Propeller Shaft Transmission Side - Disconnection
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Separate the No. 1 propeller shaft from the transfer companion flange.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 33: Identifying Reference Mark On No. 1 Propeller Shaft And Transfer Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Transfer Assembly
    1. Remove the transfer assembly (A) and the dowel pin (B).
    2. Remove the O-ring (C) from the transfer assembly.

Fig. 34: Identifying Transfer Assembly, Dowel Pin And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transfer Assembly
    1. Install a new O-ring (A) on the transfer assembly (B).
    2. Install the transfer assembly and the dowel pin (C).

Fig. 35: Identifying Transfer Assembly, O-Ring And Dowel Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Propeller Shaft Transmission Side - Reconnection
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure. Then install new flange bolts (D) to the specified torque.

Fig. 36: Identifying Alignment Marks On No. 1 Propeller Shaft And Transfer Companion Flange With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 37: Identifying Under Floor TWC Assembly Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 38: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 39: Identifying Front Splash Shield And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 40: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift

quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 41: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 42: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 43: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

8. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 44: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- Transmission damage.
- Vehicle does not move in any gear.
- Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.

- Engine vibrates at idle.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 45: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 46: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 47: Identifying Data Link Connector

10. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

TRANSFER OIL SEAL REPLACEMENT

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Companion Flange Holder 07RAB-TB4010B

	Holder Handle 07JAB-001020B
	Driver Handle, 15 x 135L 07749-0010000
	Oil Seal Driver Attachment, 58 mm 07JAD-PH80101

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 48: Identifying Front Splash Shield, Bumper And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 49: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 50: Identifying Sealing Washer And Drain Plug With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 51: Identifying Under-Floor TWC Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Propeller Shaft Transmission Side - Disconnection
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Separate the No. 1 propeller shaft from the transfer companion flange.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 52: Identifying Reference Mark On No. 1 Propeller Shaft And Transfer Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Transfer Assembly
    1. Remove the transfer assembly (A) and the dowel pin (B).
    2. Remove the O-ring (C) from the transfer assembly.

Fig. 53: Identifying Transfer Assembly, Dowel Pin And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Transfer Shaft Assembly
    1. Remove the transfer shaft assembly (A) and the dowel pin (B).

Fig. 54: Identifying Transfer Shaft Assembly And Dowel Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the O-ring (A).

Fig. 55: Identifying O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Companion Flange
    1. Using a chisel, cut the lock tab (A) on the locknut (B) of the transfer output shaft (hypoid gear).

NOTE: Be careful not to damage the transfer output shaft (hypoid gear).

Fig. 56: Cutting Transfer Output Shaft Lock Tab Using Chisel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Secure the transfer housing (A) in a bench vise (B) with soft jaws.

NOTE: **To prevent damaging the transfer housing, always use wood blocks or equivalent materials between the transfer housing and the bench vise.**

3. Install the companion flange holder and the holder handle, then loosen the locknut.
4. Remove the companion flange holder and the holder handle.

Fig. 57: Removing Companion Flange Holder And Holder Handle Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the locknut (A), the conical spring washer (B), the backup ring (C), the O-ring (D), and the companion flange (E).

Fig. 58: Identifying Companion Flange, Conical Spring Washer, Locknut And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Transfer Output Shaft (Hypoid Gear)
    1. Remove the transfer output shaft (hypoid gear) (A) and the transfer spacer (B).

Fig. 59: Identifying Transfer Output Shaft And Transfer Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Transfer Output Shaft Oil Seal
    1. Remove the oil seal (A).

Fig. 60: Identifying Transfer Output Shaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Apply a light coat of clean ATF on all moving parts before reassembly.

1. Transfer Output Shaft Oil Seal
    1. Install a new oil seal (A) flush with the transfer housing surface (B) using the driver handle and the 58 mm oil seal driver attachment.

NOTE: Apply a light coat of clean ATF on oil seal before installation.

Fig. 61: Installing Oil Seal Flush On Transfer Housing Surface Using Driver Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer Output Shaft (Hypoid Gear)
    1. Install a new transfer spacer (A) on the transfer output shaft (hypoid gear) (B) in the direction

shown, and install them in the transfer housing.

Fig. 62: Identifying Transfer Spacer And Transfer Output Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Companion Flange
    1. Install the companion flange (A), a new O-ring (B), the back-up ring (C), a new conical spring washer (D), and a new locknut (E). Install the conical spring washer in the direction shown.

Fig. 63: Identifying Companion Flange, O-Ring, Back-Up Ring, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Secure the transfer housing (A) in a bench vise (B) with soft jaws.

NOTE: To prevent damaging the transfer housing, always use wood blocks

or equivalent materials between the transfer housing and the bench vise.

3. Install the companion flange holder and the holder handle.
4. Tighten the locknut to the specified torque.

   Tightening torque:

   AWD: 213 N.m (21.7 kgf.cm, 157 lbf.ft)

   4WD: 196 N.m (20.0 kgf.cm, 145 lbf.ft)

Fig. 64: Installing Companion Flange Holder And Holder Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Stake the locknut to a depth (A) of at least 0.7 mm (0.028 in) using a 3.5 mm punch (B). Be careful not to make a crack on the locknut when staking.

Fig. 65: Staking Locknut To Depth Using Punch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Transfer Shaft Assembly
    1. Install a new O-ring (A).

Fig. 66: Installing Transfer Shaft Assembly O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the transfer shaft assembly (A) and the dowel pin (B).

Fig. 67: Identifying Transfer Shaft Assembly And Dowel Pin With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Transfer Assembly
    1. Install a new O-ring (A) on the transfer assembly (B).
    2. Install the transfer assembly and the dowel pin (C).

Fig. 68: Identifying Transfer Assembly, O-Ring And Dowel Pin With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Propeller Shaft Transmission Side - Reconnection
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure. Then install new flange bolts (D) to the specified torque.

Fig. 69: Identifying Alignment Marks On No. 1 Propeller Shaft And Transfer Companion Flange With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 70: Identifying Under Floor TWC Assembly Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 71: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 72: Identifying Front Splash Shield And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 73: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift

quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 74: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 75: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 76: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

12. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 77: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- Transmission damage.
- Vehicle does not move in any gear.
- Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.

- Engine vibrates at idle.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 78: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 79: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 80: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

TRANSFER SHAFT ASSEMBLY O-RING REPLACEMENT

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

<u>Fig. 81: Identifying Front Splash Shield, Bumper And Fasteners</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 82: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. ATF - Replacement
    1. Remove the drain plug (A), and drain the ATF.
    2. Reinstall the drain plug using a new sealing washer (B).

Fig. 83: Identifying Sealing Washer And Drain Plug With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 84: Identifying Under-Floor TWC Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Propeller Shaft Transmission Side - Disconnection
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Separate the No. 1 propeller shaft from the transfer companion flange.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 85: Identifying Reference Mark On No. 1 Propeller Shaft And Transfer Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Transfer Assembly
    1. Remove the transfer assembly (A) and the dowel pin (B).
    2. Remove the O-ring (C) from the transfer assembly.

Fig. 86: Identifying Transfer Assembly, Dowel Pin And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Transfer Shaft O-Ring
    1. Remove the transfer shaft assembly (A) and the dowel pin (B).

Fig. 87: Identifying Transfer Shaft Assembly And Dowel Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the O-ring (A).

Fig. 88: Identifying O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Transfer Shaft O-Ring
    1. Install a new O-ring (A).

Fig. 89: Identifying Transfer Shaft O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the transfer shaft assembly (A) and the dowel pin (B).

Fig. 90: Identifying Transfer Shaft Assembly And Dowel Pin With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer Assembly
    1. Install a new O-ring (A) on the transfer assembly (B).
    2. Install the transfer assembly and the dowel pin (C).

Fig. 91: Identifying Transfer Assembly, O-Ring And Dowel Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Propeller Shaft Transmission Side - Reconnection
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure. Then install new flange bolts (D) to the specified torque.

Fig. 92: Identifying Alignment Marks On No. 1 Propeller Shaft And Transfer Companion Flange With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 93: Identifying Under Floor TWC Assembly Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 94: Identifying Front Floor Undercover And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 95: Identifying Front Splash Shield And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. ATF - Replacement
    1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.

Fig. 96: Identifying ATF Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Refill the transmission with the recommended fluid into the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift

quality.

Automatic Transmission Fluid Capacity

2WD:

2.2 L (2.3 US qt) at change

5.85 L (6.18 US qt) at overhaul

AWD/4WD:

2.6 L (2.7 US qt) at change

6.4 L (6.8 US qt) at overhaul

Fig. 97: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the dipstick (A) into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 98: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the dipstick.
5. Make sure the fluid level is between the upper mark (A) and the lower mark (B) on the dipstick.
6. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 99: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Warm Up The Engine
    1. Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on.

2. Park the vehicle on level ground.
3. Turn the ignition switch to LOCK (0).

9. ATF Level Check

NOTE:

- **Keep all foreign particles out of the transmission.**
- **Check the fluid level within 60-90 seconds after turning the engine off.**
- **Higher fluid level may be indicated if the radiator fan comes on twice or more.**

1. Remove the ATF dipstick (yellow loop) (A), and wipe it with a clean cloth.
2. Insert the dipstick into the guide tube aligning the notch (B) with the guide tab (C).

Fig. 100: Identifying Dipstick, Notch And Guide Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the dipstick, and check the ATF level. It should be between the upper mark (A) and the lower mark (B).
4. If the ATF level is below the lower mark, check for fluid leaks at the transmission, the hoses, and the line joints. If a problem is found, fix it before filling the transmission with ATF.

NOTE: **If the vehicle is driven when the ATF level is below the lower mark, one or more of these symptoms may occur:**

- Transmission damage.
- Vehicle does not move in any gear.
- Vehicle accelerates poorly, and engine revs up abnormally high when starting off in forward and reverse positions.

- Engine vibrates at idle.

5. If the ATF level is above the upper mark, drain the ATF to proper level.

NOTE: **If the vehicle is driven when the ATF level is above the upper mark, the vehicle may creep forward while in N, or have shifting problems.**

Fig. 101: Identifying Upper And Lower Marks On Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, fill the transmission with ATF through the dipstick guide tube opening (A) to bring the fluid level between the upper mark and the lower mark of the dipstick. Do not fill the fluid above the upper mark. Always use ATF DW-1 (genuine Honda automatic transmission fluid). Using a non-Honda ATF can affect shift quality.
7. Insert the dipstick into the guide tube aligning the notch with the guide tab.

Fig. 102: Identifying Dipstick Guide Tube Opening
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 103: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    1. **RESET THE MAINTENANCE MINDER** .

GENERAL INFORMATION

Trouble Shooting - Basic Procedures

* PLEASE READ THIS FIRST *

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

ACCESSORIES & ELECTRICAL

CHARGING SYSTEM TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC CHARGING SYSTEM TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Vehicle Will Not Start	
Dead battery	Check battery cells, alternator belt tension and alternator output
Loose or corroded battery connections	Check all charging system connections
Ignition circuit or switch malfunction	Check and replace as necessary
Alternator Light Stays On With Engine Running	
Loose or worn alternator drive belt	Check alternator drive tension and condition, See Belt Adjustment in TUNE-UP article in the TUNE-UP section
Loose alternator wiring connections	Check all charging system connections

Short in alternator light wiring	See Indicator Warning Lights in STANDARD INSTRUMENTS in the ACCESSORIES & EQUIPMENT section
Defective alternator stator or diodes	See Bench Tests in ALTERNATOR article
Defective regulator	See Regulator Check in ALTERNATOR article
Alternator Light Stays Off With Ignition Switch ON	
Blown fuse	See WIRING DIAGRAMS
Defective alternator	See Testing in ALTERNATOR article
Defective indicator light bulb or socket	See Indicator Warning Lights in STANDARD INSTRUMENTS in the ACCESSORIES & EQUIPMENT section
Alternator Light Stays OFF With Ignition Switch ON	
Short in alternator wiring	See On-Vehicle Tests in ALTERNATOR article
Defective rectifier bridge	See Bench Tests in ALTERNATOR article
Lights or Fuses Burn Out Frequently	
Defective alternator wiring	See On-Vehicle Tests in ALTERNATOR article
Defective regulator	See Regulator Check in ALTERNATOR article
Defective battery	Check and replace as necessary
Ammeter Gauge Shows Discharge	
Loose or worn drive belt	Check alternator drive belt tension and condition. See Belt Adjustment in TUNE-UP article in the TUNE-UP section
Defective wiring	Check all wires and wire connections
Defective alternator or regulator	See Bench Tests and On-Vehicle Tests in ALTERNATOR article
Defective ammeter, or improper ammeter wiring connection	See Testing in STANDARD INSTRUMENTS in the ACCESSORIES & EQUIPMENT section
Noisy Alternator	
Loose drive pulley	Tighten drive pulley attaching nut

Loose mounting bolts	Tighten all alternator mounting bolts
Worn or dirty bearings	See Bearing Replacement ALTERNATOR article
Defective diodes or stator	See Bench Test in ALTERNATOR article
Battery Does Stay Charged	
Loose or worn drive belt	Check alternator drive belt tension and condition. See Belt Adjustment in appropriate TUNE-UP article in the TUNE-UP section
Loose or corroded battery connections	Check all charging system connections
Loose alternator connections	Check all charging system connections
Defective alternator or battery	See On-Vehicle Tests and Bench Tests in ALTERNATOR article
Add-on electrical accessories exceeding alternator capacity	Install larger alternator
Battery Overcharged-Uses Too Much Water	
Defective battery	Check alternator output and repair as necessary
Defective alternator	See On-Vehicle Test and Bench Tests in ALTERNATOR article
Excessive alternator voltage	Check alternator output and repair as necessary

IGNITION SYSTEM TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

Fig. 1: Ignition Secondary Trouble Shooting Chart

Ignition Primary Trouble Shooting Chart

Fig. 2: Ignition Primary Trouble Shooting Chart

STARTER TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC STARTER TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Starter Fails to Operate	
Dead battery or bad connections between starter and battery	Check battery charge and all wires and connections to starter
Ignition switch faulty or misadjusted	Adjust or replace ignition switch
Open circuit between starter switch ignition terminal on starter relay	Check and repair wires and connections as necessary
Starter relay or starter defective	See Testing in STARTER article
Open solenoid pull-in wire	Testing in STARTER article
Starter Does Not Operate and Headlights Dim	
Weak battery or dead cell	Charge or replace battery as necessary
Loose or corroded battery connections	Check that battery connections are clean and tight
Internal ground in starter windings	See Testing in STARTER article
Grounded starter fields	See Testing in STARTERS
Armature rubbing on pole	See STARTER article shoes
Starter Turns but Engine Does Not Rotate	
Starter clutch slipping	See STARTER article
Broken clutch housing	See STARTER article
Pinion shaft rusted or dry	See STARTER article
Engine basic timing incorrect	See Ignition Timing in TUNE-UP article
Broken teeth on engine flywheel	Replace flywheel and check for starter pinion gear damage
Starter Will Not Crank Engine	
Faulty overrunning clutch	See STARTER article
Broken clutch housing	See STARTER article
Broken flywheel teeth	Replace flywheel and check

	for starter pinion gear damage
Armature shaft sheared or reduction gear teeth stripped	See STARTER article
Weak battery	Charge or replace battery as necessary
Faulty solenoid	See On-Vehicle Tests in STARTER article
Poor grounds	Check all ground connections for tight and clean connections
Ignition switch faulty or misadjusted	Adjust or replace ignition switch as necessary
Starter Cranks Engine Slowly	
Battery weak or defective	Charge or replace battery as necessary
Engine overheated	See ENGINE COOLING SYSTEM article
Engine oil too heavy	Check that proper viscosity oil is used
Poor battery-to-starter connections	Check that all between battery and starter are clean and tight
Current draw too low or too high	See Bench Tests in STARTER article
Bent armature, loose pole shoes screws or worn bearing	See STARTER article
Burned solenoid contacts	Replace solenoid
Faulty starter	Replace starter
Starter Engages Engine Only Momentarily	
Engine timing too far advanced	See Ignition Timing in TUNE-UP article
Overrunning clutch not engaging properly	Replace overrunning clutch. See STARTER article
Broken starter clutch	See STARTER article
Broken teeth on engine flywheel	Replace flywheel and check starter pinion gear for damage
Weak drive assembly thrust spring	See STARTER article
Weak hold-in coil	See Bench Tests in STARTER article
Starter Drive Will Not Engage	
Defective point assembly	See Testing in STARTER article
Poor point assembly ground	See Testing in STARTER article
Defective pull-in coil	Replace starter solenoid
Starter Relay Does Not Close	
Dead battery	Charge or replace battery as

	necessary
Faulty wiring	Check all wiring and connections leading to relay
Neutral safety switch faulty	Replace neutral safety switch
Starter relay faulty	Replace starter relay
Starter Drive Will Not Disengage	
Starter motor loose on mountings	Tighten starter attach bolts
Worn drive end bushing	See STARTER article
Damaged engine flywheel teeth	Replace flywheel and starter pinion gear for damage
Drive yolk return spring broken or missing	Replace return spring
Faulty ignition switch	Replace ignition switch
Insufficient clearance between winding leads to solenoid terminal and main contact in solenoid	Replace starter solenoid
Starter clutch not disengaging	Replace starter clutch
Ignition starter switch	Replace ignition switch contacts sticking
Starter Relay Operates but Solenoid Does Not	
Faulty solenoid switch, switch connections or relay	Check all wiring between relay and solenoid or replace relay or solenoid as necessary
Broken lead or loose soldered connections	Repair wire or wire connections as necessary
Solenoid Plunger Vibrates When Switch is Engaged	
Weak battery	Charge or replace battery as necessary
Solenoid contacts corroded	Clean contacts or replace solenoid
Faulty wiring	Check all wiring leading to solenoid
Broken connections inside switch cover	Repair connections or replace solenoid
Open hold-in wire	solenoid
Low Current Draw	
Worn brushes or weak brush springs	Replace brushes or brush springs as necessary
High Pitched Whine During Cranking Before Engine Fires but Engine Fires and Cranks Normally	
Distance too great between starter pinion and flywheel	Align starter or check that correct starter and flywheel are being used
High Pitched Whine After Engine Fires With Key released. Engine Fires and Cranks Normally	
Distance too small between starter pinion and flywheel	Flywheel runout contributes to the intermittent nature

AIR CONDITIONING & HEAT

AIR CONDITIONING TROUBLE SHOOTING

WARNING: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC AIR CONDITIONING TROUBLE SHOOTING CHART

CONDITION	POSSIBLE CAUSE
Compressor Not Working	Compressor clutch circuit open.
.....	Compressor clutch coil inoperative.
.....	Poor clutch ground connection.
.....	Fan belts loose.
.....	Thermostatic switch inoperative.
.....	Thermostatic switch not adjusted.
.....	Ambient temperature switch open.
.....	Superheat fuse blown.
Excessive Noise or Vibration	Missing or loose mounting bolts.
.....	Bad idler pulley bearings.
.....	Fan belts not tightened correctly.
.....	Compressor clutch contacting body.
.....	Excessive system pressure.
.....	Compressor oil level low.
.....	Damaged clutch bearings.
.....	Damaged reed valves.
.....	Damaged compressor.
Insufficient or No Cooling; Compressor Working	Expansion valve inoperative.
.....	Heater control valve stuck open.
.....	Low system pressure.
.....	Blocked condenser fins.
.....	Blocked evaporator fins.
.....	Vacuum system leak.
.....	Vacuum motors inoperative.
.....	Control cables improperly adjusted.
.....	Restricted air inlet.
.....	Mode doors binding.
.....	Blower motor inoperative.

.....	Temperature above system capacity.

HEATER SYSTEM TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC HEATER SYSTEM TROUBLE SHOOTING CHART

CONDITION	POSSIBLE CAUSE
Insufficient, Erratic, or No Heat	Low Coolant Level
.....	Incorrect thermostat.
.....	Restricted coolant flow through core.
.....	Heater hoses plugged.
.....	Misadjusted control cable.
.....	Sticking heater control valve.
.....	Vacuum hose leaking.
.....	Vacuum hose blocked.
.....	Vacuum motors inoperative.
.....	Blocked air inlet.
.....	Inoperative heater blower motor.
.....	Oil residue on heater core fins.
.....	Dirt on heater core fins.
Too Much Heat	Improperly adjusted cables.
.....	Sticking heater control valve.
.....	No vacuum to heater control valve.
.....	Temperature door stuck open.
Air Flow Changes During Acceleration	Vacuum system leak.
.....	Bad check valve or reservoir.
Air From Defroster At All Times	Vacuum system leak.
.....	Improperly adjusted control cables.
.....	Inoperative vacuum motor.
Blower Does Not Operate Correctly	Blown fuse.
.....	Blower motor windings open.
.....	Resistors burned out.
.....	Motor ground connection loose.
.....	Wiring harness connections loose.
.....	Blower motor switch inoperative.
.....	Blower relay inoperative.

.....	Fan binding or foreign object in housing.
.....	Fan blades broken or bent.

BRAKES

BRAKE SYSTEM TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BRAKE SYSTEM TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Brakes Pull Left or Right	
Incorrect tire pressure	Inflate tires to proper pressure
Front end out of alignment	See WHEEL ALIGNMENT
Mismatched tires	Check tires sizes
Restricted brake lines or hoses	Check hose routing
Loose or malfunctioning caliper	See DISC BRAKES or BRAKE SYSTEM
Bent shoe or oily linings	See DRUM BRAKES or BRAKE SYSTEM
Malfunctioning rear brakes	See DRUM, DISC BRAKES or BRAKE SYSTEM
Loose suspension parts	See SUSPENSION
Noises Without Brakes Applied	
Front linings worn out	Replace linings
Dust or oil on drums or rotors	See DRUM, DISC BRAKES or BRAKE SYSTEM
Noises With Brakes Applied	
Insulator on outboard shoe damaged	See DISC BRAKES or BRAKE SYSTEM
Incorrect pads or linings	Replace pads or linings
Brake Rough, Chatters or Pulsates	
Excessive lateral runout	Check rotor runout
Parallelism not to specifications	Reface or replace rotor
Wheel bearings not adjusted	See SUSPENSION
Rear drums out-of-round	Reface or replace drums
Disc pad reversed, steel against rotor	Remove and reinstall pad
Excessive Pedal Effort	
Malfunctioning power unit	See POWER BRAKES or

	BRAKE SYSTEM
Partial system failure	Check fluid and pipes
Worn disc pad or lining	Replace pad or lining
Caliper piston stuck or sluggish	See DISC BRAKES or BRAKE SYSTEM
Master cylinder piston stuck	See MASTER CYLINDERS or BRAKE SYSTEM
Brake fade due to incorrect pads for linings	Replace pads or linings
Linings or pads glazed	Replace pads or linings
Worn drums	Reface or replace drums
Excessive Pedal Travel	
Partial brake system failure	Check fluid and pipes
Insufficient fluid in master cylinder	See MASTER CYLINDERS or BRAKE SYSTEM
Air trapped in system	See BRAKE BLEEDING or BRAKE SYSTEM
Rear brakes not adjusted	See Adjustments in DRUM BRAKES or BRAKE SYSTEM
Bent shoe or lining	See DRUM BRAKES or BRAKE SYSTEM
Plugged master cylinder cap	See MASTER CYLINDERS or BRAKE SYSTEM
Improper brake fluid	Replace brake fluid
Pedal Travel Decreasing	
Compensating port plugged	See MASTER CYLINDERS or BRAKE SYSTEM
Swollen cup in master cylinder	See MASTER CYLINDERS or BRAKE SYSTEM
Master cylinder piston not returning	See MASTER CYLINDERS or BRAKE SYSTEM
Weak shoe retracting springs	See DRUM BRAKES BRAKE SYSTEM
Wheel cylinder piston sticking	See DRUM BRAKES or BRAKE SYSTEM
Dragging Brakes	
Master cylinder pistons not returning	See MASTER CYLINDERS BRAKE SYSTEM
Restricted brake lines or hoses	Check line routing
Incorrect parking brake adjustment	See DRUM BRAKES BRAKE SYSTEM
Parking Brake cables frozen	See DRUM BRAKES BRAKE SYSTEM

Incorrect installation of inboard disc pad	Remove and replace correctly
Power booster output rod too long	See POWER BRAKE UNITS BRAKE SYSTEM
Brake pedal not returning freely	See DISC, DRUM BRAKES BRAKE SYSTEM
Brakes Grab or Uneven Braking Action	
Malfunction of combination valve	See CONTROL VALVE or BRAKE SYSTEM
Malfunction of power brake unit	See POWER BRAKE UNITS or BRAKE SYSTEM
Binding brake pedal	See DISC, DRUM BRAKES or BRAKE SYSTEM
Pulsation or Roughness	
Uneven pad wear caused by caliper	See DISC BRAKES or BRAKE SYSTEM
Uneven rotor wear	See DISC BRAKES or BRAKE SYSTEM
Drums out-of-round	Reface or replace drums

ENGINE MECHANICAL

COOLING SYSTEM TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

COOLING SYSTEM TROUBLE SHOOTING

CONDITION & POSSIBLE CAUSE	CORRECTION
Overheating	
Coolant Leak	Fill/Pressure Test System
A/C Condenser Fins Clogged	Remove/Clean Condenser
Radiator Fins Clogged	Remove/Clean Radiator
Thermostat Stuck Closed	Replace Thermostat
Clogged Cooling System Passages	Clean/Flush Cooling System
Water Pump Malfunction	Replace Water Pump
Fan Clutch Malfunction	Replace Fan Clutch
Retarded Ignition Timing	Reset Ignition Timing
Cooling Fan Malfunction	Test Cooling Fan/Circuit
Cooling Fan Motor Malfunction	Test Fan Motor
Cooling Fan Relay Malfunction	Test Fan Relay

Faulty Radiator Cap	Replace Radiator Cap
Broken/Slipping Fan Belt	Replace Fan Belt
Restricted Exhaust	Repair Exhaust System
Corrosion	
Impurities In Coolant	Clean/Flush System
Coolant Leakage	
Damaged hose	Replace Hose
Leaky Water Pump	Replace Water Pump
Damaged Radiator Seam	Replace/Repair Radiator
Leaky Thermostat Cover	Replace Thermostat Cover
Cylinder Head Problem	Check Head/Head Gasket
Leaky Freeze Plugs	Replace Freeze Plugs
Recovery System Inoperative	
Loose and/or Defective Radiator Cap	Replace Radiator Cap
Overflow Tube Clogged and/or Leaking	Repair Tube
Recovery Bottle Vent Restricted	Clean Vent
No Heater Core Flow	
Collapsed Heater Hose	Replace Heater Hose
Plugged Heater Core	Clean/Replace Heater Core
Faulty Heater Valve	Replace Heater Valve

GASOLINE ENGINE - MECHANICAL TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC GASOLINE ENGINE - MECHANICAL TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Lopes At Idle	
Intake manifold-to-head leaks	Replace manifold gasket, See ENGINES
Blown head gasket	Replace head gasket, See ENGINES
Worn timing gears, chain or sprocket	Replace gears, chain or sprocket
Worn camshaft lobes	Replace camshaft, See ENGINES
Overheated engine	Check cooling system, See COOLING
Blocked crankcase vent valve	Remove restriction

Leaking EGR valve	Repair leak and/or replace valve
Faulty fuel pump	Replace fuel pump
Engine Has Low Power	
Leaking fuel pump	Repair leak and/or replace fuel pump
Excessive piston-to-bore clearance	Install larger pistons, See ENGINES
Sticking valves or weak valve springs	Check valve train components, See ENGINES
Incorrect valve timing	Reset valve timing, See ENGINES
Worn camshaft lobes	Replace camshaft, See ENGINES
Blown head gasket	Replace head gasket. See ENGINES.
Clutch slipping	Adjust pedal and/or replace components, See ENGINES
Engine overheating	Check cooling system, See COOLING
Auto. Trans. pressure regulator valve faulty	Replace pressure regulator valve
Auto. Trans. fluid level too low	Add fluid as necessary
Improper vacuum diverter valve operation	Replace vacuum diverter valve
Vacuum leaks	Inspect vacuum system and repair as required
Leaking piston rings	Replace piston rings, See ENGINES
Faulty High Speed Operation	
Low fuel pump volume	Replace fuel pump
Leaking valves or worn	Replace valves and/or springs, See ENGINES
Incorrect valve timing	Reset valve timing,See ENGINES
Intake manifold restricted	Remove restriction
Worn distributor shaft	Replace distributor
Faulty Acceleration	
Improper fuel pump stroke	Remove pump and reset pump stroke
Incorrect ignition timing	Reset ignition timing, See TUNE-UP
Leaking valves	Replace valves, See ENGINES

Worn fuel pump diaphragm or piston	Replace diaphragm or piston
Intake Backfire	
Improper ignition timing	Reset ignition timing, See TUNE-UP
Faulty accelerator pump discharge	Replace accelerator pump
Improper choke operation	Check choke and adjust as required
Defective EGR valve	Replace EGR valve
Fuel mixture too lean	Reset air/fuel mixture, See TUNE-UP
Choke valve initial clearance too large	Reset choke valve initial clearance
Exhaust Backfire	
Vacuum leak	Inspect and repair vacuum system
Faulty vacuum diverter valve	Replace vacuum diverter valve
Faulty choke operation	Check choke and adjust as required
Exhaust system leak	repair exhaust system leak
Engine Detonation	
Ignition timing too far advanced	Reset ignition timing, See TUNE-UP
Faulty ignition system	Check ignition timing, See TUNE-UP
Spark plugs loose or faulty	Retighten or replace plugs
Fuel delivery system clogged	Inspect lines, pump and filter for clog
EGR valve inoperative	Replace EGR valve
PCV system inoperative	Inspect and/or replace hoses or valve
Vacuum leaks	Check vacuum system and repair leaks
Excessive combustion chamber deposits	Remove built-up deposits
Leaking, sticking or broken valves	Inspect and/or replace valves
External Oil Leakage	
Fuel pump improperly seated or worn gasket	Remove pump, replace gasket and seat properly
Oil pan gasket broken or pan bent	Straighten pan and replace gasket
Timing chain cover gasket broken	Replace timing chain cover gasket
Rear main oil seal worn	Replace rear main oil seal

Oil pan drain plug not seated properly	Remove and reinstall drain plug
Camshaft bearing drain hole blocked	Remove restriction
Oil pressure sending switch leaking	Remove and reinstall sending switch
Excessive Oil Consumption	
Worn valve stems or guides	Replace stems or guides, See ENGINES
Valve "O" ring seals damaged	Replace "O" ring seals, See ENGINES
Plugged oil drain back holes	Remove restrictions
Improper PCV valve operation	Replace PCV valve
Engine oil level too high	Remove excess oil
Engine oil too thin	Replace thicker oil
Valve stem oil deflectors damaged	Replace oil deflectors
Incorrect piston rings	Replace piston rings, See ENGINES
Piston ring gaps not staggered	Reinstall piston rings, See ENGINES
Insufficient piston ring tension	Replace rings, See ENGINES
Piston ring grooves or oil return	slots clogged Replace piston rings, See ENGINES
Piston rings sticking in grooves	Replace piston rings, See ENGINES
Piston ring grooves excessively worn	Replace piston and rings, See ENGINES
Compression rings installed upside down	Replace compression rings correctly, See ENGINES
Worn or scored cylinder walls	Rebore cylinders or replace block
Mismatched oil ring expander and rail	Replace oil ring expander and rail, See ENGINES
Intake gasket dowels too long	Replace intake gasket dowels
Excessive main or connecting rod bearing clearance	Replace main or connecting rod bearings, See ENGINES
No Oil Pressure	
Low oil level	Add oil to proper level
Oil pressure sender or gauge broken	Replace sender or gauge
Oil pump malfunction	Remove and overhaul oil pump, See ENGINES
Oil pressure relief valve sticking	Remove and reinstall valve
Oil pump passages blocked	Overhaul oil pump, See ENGINES

Oil pickup screen or tube blocked	Remove restriction
Loose oil inlet tube	Tighten oil inlet tube
Loose camshaft bearings	Replace camshaft bearings, See ENGINES
Internal leakage at oil passages	Replace block or cylinder head
Low Oil Pressure	
Low engine oil level	Add oil to proper level
Engine oil too thin	Remove and replace with thicker oil
Excessive oil pump clearance	Reduce oil pump clearance, See ENGINES
Oil pickup tube or screen blocked	Remove restrictions
Main, rod or cam bearing clearance excessive	Replace bearing to reduce clearance, See ENGINES
High Oil Pressure	
Improper grade of oil	Replace with proper oil
Oil pressure relief valve stuck closed	Eliminate binding
Oil pressure sender or gauge faulty	Replace sender or gauge
Noisy Main Bearings	
Inadequate oil supply	Check oil delivery to main bearings
Excessive main bearing clearance	Replace main bearings, See ENGINES
Excessive crankshaft end play	Replace crankshaft, See ENGINES
Loose flywheel or torque converter	Tighten attaching bolts
Loose or damaged vibration damper	Tighten or replace vibration damper
Crankshaft journals out-of-round	Re-grind crankshaft journals
Excessive belt tension	Loosen belt tension
Noisy Connecting Rods	
Excessive bearing clearance or missing bearing	Replace bearing, See ENGINES
Crankshaft rod journal out-of-round	Re-grind crankshaft journal
Misaligned connecting rod or cap	Remove rod or cap and realign
Incorrectly tightened rod bolts	Remove and re-tighten rod bolts
Noisy Pistons and Rings	
Excessive piston-to-bore clearance	Install larger pistons, See ENGINES
Bore tapered or out-of-round	Rebore block

Piston ring broken	Replace piston rings, See ENGINES
Piston pin loose or seized	Replace piston pin, See ENGINES
Connecting rods misaligned	Realign connecting rods
Ring side clearance too loose or tight	Replace with larger or smaller rings
Carbon build-up on piston	Remove carbon
Noisy Valve Train	
Worn or bent push rods	Replace push rods, See ENGINES
Worn rocker arms or bridged pivots	Replace push rods, See ENGINES
Dirt or chips in valve lifters	Remove lifters and remove dirt/chips
Excessive valve lifter leak-down	Replace valve lifters, See ENGINES
Valve lifter face worn	Replace valve lifters, See ENGINES
Broken or cocked valve springs	Replace or reposition springs
Too much valve stem-to-guide clearance	Replace valve guides, See ENGINES
Valve bent	Replace valve, See ENGINES
Loose rocker arms	Retighten rocker arms, See ENGINES
Excessive valve seat run-out	Reface valve seats, See ENGINES
Missing valve lock	Install new valve lock
Excessively worn camshaft lobes	Replace camshaft, See ENGINES
Plugged valve lifter oil holes	Eliminate restriction or replace lifter
Faulty valve lifter check ball	Replace lifter check ball, See ENGINES
Rocker arm nut installed upside down	Remove and reinstall correctly
Valve lifter incorrect for engine	Remove and replace valve lifters
Faulty push rod seat or lifter plunger	Replace plunger or push rod
Noisy Valves	
Improper valve lash	Re-adjust valve lash, See ENGINES
Worn or dirty valve lifters	Clean and/or replace lifters
Worn valve guides	Replace valve guides, See ENGINES

Excessive valve seat or face run-out	Reface seats or valve face
Worn camshaft lobes	Replace camshaft, See ENGINES
Loose rocker arm studs	Re-tighten rocker arm studs, See ENGINES
Bent push rods	Replace push rods, See ENGINES
Broken valve springs	Replace valve springs, See ENGINES
Burned,Sticking or Broken Valves	
Weak valve springs or warped valves	Replace valves and/or springs, See ENGINES
Improper lifter clearance	Re-adjust clearance or replace lifters
Worn guides or improper guide clearance	Replace valve guides, See ENGINES
Out-of-round valve seats or improper seat width	Re-grind valve seats
Gum deposits on valve stems, seats or guide	Remove deposits
Improper spark timing	Re-adjust spark timing
Broken Pistons/Rings	
Undersize pistons	Replace with larger pistons, See ENGINES
Wrong piston rings	Replace with correct rings, See ENGINES
Out-of-round cylinder bore	Re-bore cylinder bore
Improper connecting rod alignment	Remove and realign connecting rods
Excessively worn ring grooves	Replace pistons, See ENGINES
Improperly assembled piston pins	Re-assemble pin-to-piston, See ENGINES
Insufficient ring gap clearance	Install new rings, See ENGINES
Engine overheating	Check cooling system
Incorrect ignition timing	Re-adjust ignition timing, See TUNE-UP
Excessive Exhaust Noise	
Leaks at manifold to head, or to pipe	Replace manifold or pipe gasket
Exhaust manifold cracked or broken	Replace exhaust manifold, See ENGINES

ENGINE PERFORMANCE

CARBURETOR TROUBLE SHOOTING:

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC COLD START SYMPTOMS TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Won't Start	
Choke not closing	Check choke operation, see FUEL SYSTEMS
Choke linkage bent	Check linkage, see FUEL SYSTEM
Engine Starts, Then Dies	
Choke vacuum kick setting too wide	Check setting and adjust see, FUEL SYSTEMS
Fast idle RPM too low	Reset RPM to specification, see TUNE-UP
Fast idle cam index incorrect	Reset fast idle cam index, see FUEL SYSTEMS
Vacuum leak	Inspect vacuum system for leaks
Low fuel pump outlet	Repair or replace pump, see FUEL SYSTEMS
Low carburetor fuel level	Check float setting see FUEL SYSTEM
Engine Quits Under Load	
Choke vacuum kick setting incorrect	Reset vacuum kick setting,see FUEL SYSTEMS
Fast idle cam index incorrect	Reset fast idle cam index, see FUEL SYSTEM
Incorrect hot fast idle speed RPM	Reset fast idle RPM, see TUNE-UP
Engine Starts, Runs Up, Then Idles, Slowly With Black Smoke	
Choke vacuum kick set too narrow	Reset vacuum kick, see FUEL SYSTEMS
Fast idle cam index incorrect	Reset fast idle cam index, see FUEL SYSTEMS
Hot fast idle RPM too low	Reset fast idle RPM, see TUNE-UP

BASIC HOT START SYMPTOMS TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Won't Start	
Engine flooded	Allow fuel to evaporate

BASIC COLD ENGINE DRIVEABILITY SYMPTOMS TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Stalls in Gear	
Choke vacuum kick setting incorrect	Reset choke vacuum kick, see FUEL SYSTEMS
Fast idle RPM incorrect	Reset fast idle RPM, see TUNE-UP
Fast idle cam index incorrect	Reset fast idle cam see FUEL SYSTEMS
Acceleration Sag or Stall	
Defective choke control switch	Replace choke control switch
Choke vacuum kick setting incorrect	Reset choke vacuum kick see, FUEL SYSTEMS
Float level incorrect (too low)	Adjust float level, FUEL SYSTEMS
Accelerator pump defective	Repair or replace pump see FUEL SYSTEMS
Secondary throttles not closed	Inspect lockout adjustment, see FUEL SYSTEMS
Sag or Stall After Warmup	
Defective choke control switch	Replace choke control switch, see FUEL SYSTEMS
Defective accelerator pump	Replace pump, see FUEL SYSTEMS
Float level incorrect (too low)	Adjust float level, see FUEL SYSTEMS
Backfiring & Black Smoke	
Plugged heat crossover system	Remove restriction

BASIC WARM ENGINE DRIVEABILITY SYMPTOMS TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Hesitation With Small Amount of Gas Pedal Movement	
Vacuum leak	Inspect vacuum lines
Accelerator pump weak or inoperable	Replace pump, see FUEL SYSTEMS
Float level setting too low	Reset float level, see,FUEL SYSTEMS
Metering rods sticking or binding	Inspect and/or replace rods, see FUEL SYSTEMS

Carburetor idle or transfer system plugged	Inspect system and remove restriction
Frozen or binding heated air inlet	Inspect heated air door for binding
Hesitation With Heavy Gas Pedal Movement	
Defective accelerator pump	Replace pump, see FUEL SYSTEMS
Metering rod carrier sticking or binding	Remove restriction
Large vacuum leak	Inspect vacuum system and repair leak
Float level setting too low	Reset float level, see FUEL SYSTEMS
Defective fuel pump, lines or filter	Inspect pump, lines and filter
Air door setting incorrect	Adjust air door setting, see FUEL

DIESEL ENGINE TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

NOTE: **Diesel engines mechanical diagnosis is the same as gasoline engines for items such as noisy valves, bearings, pistons, etc. The following trouble shooting covers only items pertaining to diesel engines.**

BASIC DIESEL ENGINE TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Won't Crank	
Bad battery connections or dead batteries	Check connections and/or replace batteries
Bad starter connections or bad starter	Check connections and/or replace starter
Engine Cranks Slowly, Won't Start	
Bad battery connections or dead batteries	Check connections and/or replace batteries
Engine oil too heavy	Replace engine oil
Engine Cranks Normally, But Will Not Start	
Glow plugs not functioning	Check glow plug system, see FUEL SYSTEMS
Glow plug control not functioning	Check controller, see FUEL SYSTEMS

Fuel not injected into cylinders	Check fuel injectors, see FUEL SYSTEMS
No fuel to injection pump	Check fuel delivery system
Fuel filter blocked	Replace fuel filter
Fuel tank filter blocked	Replace fuel tank filter
Fuel pump not operating	Check pump operation and/or replace pump
Fuel return system blocked	Inspect system and remove restriction
No voltage to fuel solenoid	Check solenoid and connections
Incorrect or contaminated fuel	Replace fuel
Incorrect injection pump timing	Re-adjust pump timing, see FUEL SYSTEMS
Low compression	Check valves, pistons, rings, see ENGINES
Injection pump malfunction	Inspect and/or replace injection pump
Engine Starts, Won't Idle	
Incorrect slow idle adjustment	Reset idle adjustment, see TUNE-UP
Fast idle solenoid malfunctioning	Check solenoid and connections
Fuel return system blocked	Check system and remove restrictions
Glow plugs go off too soon	See glow plug diagnosis in FUEL SYSTEMS
Injection pump timing incorrect	Reset pump timing, see FUEL SYSTEMS
No fuel to injection pump	Check fuel delivery system
Incorrect or contaminated fuel	Replace fuel
Low compression	Check valves, piston, rings, see ENGINES
Injection pump malfunction	Replace injection pump, see FUEL SYSTEMS
Fuel solenoid closes in RUN position	Check solenoid and connections
Engines Starts/Idles Rough W/out Smoke or Noise	
Incorrect slow idle adjustment	Reset slow idle, see TUNE-UP
Injection line fuel leaks	Check lines and connections
Fuel return system blocked	Check lines and connections
Air in fuel system	Bleed air from system
Incorrect or contaminated fuel	Replace fuel

Injector nozzle malfunction	Check nozzles, see FUEL SYSTEMS
Engines Starts and Idles Rough W/out Smoke or Noise, But Clears After Warm-Up	
Injection pump timing incorrect	Reset pump timing, see FUEL SYSTEMS
Engine not fully broken in	Put more miles on engine
Air in system	Bleed air from system
Injector nozzle malfunction	Check nozzles, see FUEL SYSTEMS
Engine Idles Correctly, Misfires Above Idle	
Blocked fuel filter	Replace fuel filter
Injection pump timing incorrect	Reset pump timing, see FUEL SYSTEMS
Incorrect or contaminated fuel	Replace fuel
Engine Won't Return To Idle	
Fast idle adjustment incorrect	Reset fast idle, see TUNE-UP
Internal injection pump malfunction	Replace injection pump, see FUEL SYSTEMS
External linkage binding	Check linkage and remove binding
Fuel Leaks On Ground	
Loose or broken fuel line	Check lines and connections
Internal injection pump seal leak	Replace injection pump, see FUEL SYSTEMS
Cylinder Knocking Noise	
Injector nozzles sticking open	Test injectors, see FUEL SYSTEMS
Very low nozzle opening pressure	Test injectors and/or replace
Loss of Engine Power	
Restricted air intake	Remove restriction
EGR valve malfunction	Replace EGR valve
Blocked or damaged exhaust system	Remove restriction and/or replace components
Blocked fuel tank filter	Replace filter
Restricted fuel filter	Remove restriction and/or replace filter
Block vent in gas cap	Remove restriction and/or replace cap
Tank-to-injection pump fuel supply blocked	Check fuel lines and connections
Blocked fuel return system	Remove restriction
Incorrect or contaminated fuel	Replace fuel
Blocked injector nozzles	Check nozzle for blockage, see

	FUEL SYSTEMS
Low compression	Check valves, rings, pistons, see ENGINES
Loud Engine Noise With Black Smoke	
Basic timing incorrect	Reset timing, see FUEL SYSTEMS
EGR valve malfunction	Replace EGR valve
Internal injection pump malfunction	Replace injection pump, see FUEL SYSTEMS
Incorrect injector pump housing pressure	Check pressure, see FUEL SYSTEMS
Engine Overheating	
Cooling system leaks	Check cooling system and repair leaks
Belt slipping or damaged	Check tension and/or replace belt
Thermostat stuck closed	Remove and replace thermostat, see ENGINE COOLING
Head gasket leaking	Replace head gasket
Oil Light on at Idle	
Low oil pump pressure	Check oil pump operation, see ENGINES
Oil cooler or line restricted	Remove restriction and/or replace cooler
Engine Won't Shut Off	
Injector pump fuel solenoid does not return fuel valve to OFF position	Remove and check solenoid and replace if needed

VACUUM PUMP DIAGNOSIS

CONDITION & POSSIBLE CAUSE	CORRECTION
Excessive Noise	
Loose pump-to-drive assembly screws	Tighten screws
Loose tube on pump assembly	Tighten tube
Valves not functioning properly	Replace valves
Oil Leakage	
Loose end plug	Tighten end plug
Bad seal crimp	Remove and re-crimp seal

FUEL INJECTION TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble**

Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC FUEL INJECTION TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Won't Start (Cranks Normally)	
Cold start valve inoperative	Test valve and circuit
Poor connection;vacuum or wiring	Check vacuum and electrical connections
Contaminated fuel	Test fuel for water or alcohol
Defective fuel pump relay or circuit	Test relay and wiring
Battery too low	Charge and test battery
Low fuel pressure	Test pressure regulator and fuel pump, check for restricted lines and filters
No distributor reference pulses	Repair ignition system as necessary
Open coolant temperature sensor circuit	Test sensor and wiring
Shorted W.O.T. switch in T.P.S.	Disconnect W.O.T. switch, engine should start
Defective ECM	Replace ECM
Fuel tank residual pressure valve leaks	Test for fuel pressure drop after shut down
Hard Starting	
Disconnected hot air tube to air cleaner	Reconnect tube and test control valve
Defective Idle Air Control (IAC) valve	Test valve operation and circuit
Shorted, open or misadjusted T.P.S.	Test and adjust or replace T.P.S.
EGR valve open	Test EGR valve and control circuit
Poor Oxygen sensor signal	Test for shorted or circuit
Incorrect mixture from PCV system	Test PCV for flow, check sealing of oil filter cap
Poor High Speed Operation	
Low fuel pump volume	Faulty pump or restricted fuel lines or filters
Poor MAP sensor signal	Test MAP sensor, vacuum hose and wiring
Poor Oxygen sensor signal	Test for shorted or open sensor or circuit

Open coolant temperature sensor circuit	Test sensor and wiring
Faulty ignition operation	Check wires for cracks or poor con- nections, test secondary voltage with oscilloscope
Contaminated fuel	Test fuel for water or alcohol
Intermittent ECM ground	Test ECM ground connection for resistance
Restricted air cleaner	Replace air cleaner
Restricted exhaust system	Test for exhaust manifold back pressure
Poor MAF sensor signal	Check leakage between sensor and manifold
Poor VSS signal	If tester for ALCL hook-up is available check that VSS reading matches speedometer
Ping or Knock on Acceleration	
Poor Knock sensor signal	Test for shorted or open sensor or circuit
Poor Baro sensor signal	Test for shorted or open sensor or circuit
Improper ignition timing	See VEHICLE EMISSION CONTROL LABEL (where applicable)
Check for engine overheating problems	Low coolant, loose belts or electric cooling fan inoperative

NOTE: **For additional electronic fuel injection trouble shooting information, see the appropriate article in the ENGINE PERFORMANCE section (not all vehicles have Computer Engine Control articles). Information is provided there for diagnosing fuel system problems on vehicles with electronic fuel injection.**

IGNITION SYSTEM TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

Fig. 3: Ignition Secondary Trouble Shooting Chart

Ignition Primary Trouble Shooting Chart

Fig. 4: Ignition Primary Trouble Shooting Chart

STARTER TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC STARTER TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Starter Fails to Operate	
Dead battery or bad connections between starter and battery	Check battery charge and all wires and connections to starter
Ignition switch faulty or misadjusted	Adjust or replace ignition switch
Open circuit between starter switch ignition terminal on starter relay	Check and repair wires and connections as necessary
Starter relay or starter defective	See Testing in STARTER article
Open solenoid pull-in wire	See Testing in STARTER article
Starter Does Not Operate and Headlights Dim	
Weak battery or dead cell	Charge or replace battery as necessary
Loose or corroded battery connections	Check that battery connections are clean and tight
Internal ground in starter windings	See Testing in STARTER article
Grounded starter fields	See Testing in STARTERS
Armature rubbing on pole shoes	See STARTER article
Starter Turns but Engine Does Not Rotate	
Starter clutch slipping	See STARTER article
Broken clutch housing	See STARTER article
Pinion shaft rusted or dry	See STARTER article
Engine basic timing incorrect	See Ignition Timing in TUNE-UP article
Broken teeth on engine flywheel	Replace flywheel and check for starter pinion gear damage
Starter Will Not Crank Engine	

Faulty overrunning clutch	See STARTER article
Broken clutch housing	See STARTER article
Broken flywheel teeth	Replace flywheel and check for starter pinion gear damage
Armature shaft sheared or reduction gear teeth stripped	See STARTER article
Weak battery	Charge or replace battery as necessary
Faulty solenoid	See On-Vehicle Tests in STARTER article
Poor grounds	Check all ground connections for tight and clean connections
Ignition switch faulty or misadjusted	Adjust or replace ignition switch as necessary
Starter Cranks Engine Slowly	
Battery weak or defective	Charge or replace battery as necessary
Engine overheated	See ENGINE COOLING SYSTEM article
Engine oil too heavy	Check that proper viscosity oil is used
Poor battery-to-starter connections	Check that all between battery and starter are clean and tight
Current draw too low or too high	See Bench Tests in STARTER article
Bent armature, loose pole shoes screws or worn bearings	See STARTER article
Burned solenoid contacts	Replace solenoid
Faulty starter	Replace starter
Starter Engages Engine Only Momentarily	
Engine timing too far advanced	See Ignition Timing in TUNE-UP article
Overrunning clutch not engaging properly	Replace overrunning clutch. See STARTER article
Broken starter clutch	See STARTER article
Broken teeth on engine flywheel	Replace flywheel and check starter pinion gear for damage
Weak drive assembly thrust spring	See STARTER article
Weak hold-in coil	See Bench Tests in STARTER article
Starter Drive Will Not Engage	
Defective point assembly	See Testing in STARTER

	article
Poor point assembly ground	See Testing in STARTER article
Defective pull-in coil	Replace starter solenoid
Starter Relay Does Not Close	
Dead battery	Charge or replace battery as necessary
Faulty wiring	Check all wiring and connections leading to relay
Neutral safety switch faulty	Replace neutral safety switch
Starter relay faulty	Replace starter relay
Starter Drive Will Not Disengage	
Starter motor loose on mountings	Tighten starter attach bolts
Worn drive end bushing	See STARTER article
Damaged engine flywheel teeth	Replace flywheel and starter pinion gear for damage
Drive yolk return spring broken or missing	Replace return spring
Faulty ignition switch	Replace ignition switch
Insufficient clearance between winding leads to solenoid terminal and main contact in solenoid	Replace starter solenoid
Starter clutch not disengaging	Replace starter clutch
Ignition starter switch contacts sticking	Replace ignition switch
Starter Relay Operates but Solenoid Does Not	
Faulty solenoid switch, switch connections or relay	Check all wiring between relay and solenoid or replace relay or solenoid as necessary
Broken lead or loose soldered connections	Repair wire or wire connections as necessary
Solenoid Plunger Vibrates When Switch is Engaged	
Weak battery	Charge or replace battery as necessary
Solenoid contacts corroded	Clean contacts or replace solenoid
Faulty wiring	Check all wiring leading to solenoid
Broken connections inside switch cover	Repair connections or replace solenoid
Open hold-in wire	Replace solenoid
Low Current Draw	
Worn brushes or weak	Replace brushes or brush springs as necessary
High Pitched Whine During Cranking Before Engine Fires but Engine Fires and Cranks Normally	
Distance too great between starter pinion and flywheel	Align starter or check that

	correct starter and flywheel are being used
High Pitched Whine After Engine Fires With Key released. Engine Fires and Cranks Normally	
Distance too small between starter pinion and flywheel	Flywheel runout contributes to the intermittent nature

TUNE-UP TROUBLE SHOOTING - GAS ENGINE VEHICLES

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC SPARK PLUG TROUBLE SHOOTING CHARTS

CONDITION & POSSIBLE CAUSE	CORRECTION
Normal Spark Plug Condition	
Light Tan or Gray deposits	No Action
Electrode not burned or fouled	No Action
Gap tolerance not changed	No Action
Cold Fouling or Carbon Deposits	
Overrich air/fuel mixture	Adjust air/fuel mixture, see ENGINE PERFORMANCE section
Faulty choke	Replace choke assembly, see ENGINE PERFORMANCE section
Clogged air filter	Clean and/or replace air filter
Incorrect idle speed or dirty carburetor	Reset idle speed and/ or clean carburetor
Faulty ignition wires	Replace ignition wiring
Prolonged operation at idle	Shut engine off during long idle
Sticking valves or worn valve guide seals	Check valve train
Wet Fouling or Oil Deposits	
Worn rings and pistons	Install new rings and pistons
Excessive cylinder wear	Rebore or replace block
Excessive valve guide clearance	Worn or loose bearing
Gap Bridged	
Deposits in combustion chamber becoming fused to electrode	Clean combustion chamber of deposits
Blistered Electrode	
Engine overheating	Check cooling system

Wrong type of fuel	Replace with correct fuel
Loose spark plugs	Retighten spark plugs
Over-advanced ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Pre-Ignition or Melted Electrodes	
Incorrect type of fuel	Replace with correct fuel
Incorrect ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Burned valves	Replace valves
Engine Overheating	Check cooling system
Wrong type of spark plug, too hot	Replace with correct spark plug, see ENGINE PERFORMANCE
Chipped Insulators	
Severe detonation	Check for over-advanced timing or combustion
Improper gapping procedure	Re-gap spark plugs
Rust Colored Deposits	
Additives in unleaded fuel	Try different fuel brand
Water In Combustion Chamber	
Blown head gasket or cracked head	Repair or replace head or head gasket

NOTE: **Before diagnosing an electronic ignition system, ensure that all wiring is connected properly between distributor, wiring connector and spark plugs. Ignition problem will show up either as: Engine Will Not Start or Engine Runs Rough.**

BASIC ELECTRONIC IGNITION TROUBLE SHOOTING CHARTS

CONDITION & POSSIBLE CAUSE	CORRECTION
Engine Won't Start	
Open circuit between distributor and bulkhead connector	Repair circuit
Open circuit between bulkhead connector and ignition switch	Repair circuit
Open circuit between ignition switch and starter solenoid	Repair circuit
Engine Runs Rough	
Fuel lines leaking or clogged	Tighten fitting, remove restriction
Initial timing incorrect	Reset ignition timing see ENGINE PERFORMANCE
Centrifugal advance malfunction	Repair distributor advance
Defective spark plugs or wiring	Replace plugs or plug wiring
Component Failure	
Spark arc-over on cap, rotor or coil	Replace cap, rotor or or coil

Defective pick-up coil	Replace pick-up coil
Defective ignition coil	Replace ignition coil
Defective vacuum unit	Replace vacuum unit
Defective control module	Replace control module

BASIC ELECTRONIC IGNITION TROUBLE SHOOTING CHARTS - USING OSCILLOSCOPE PATTERNS

CONDITION & POSSIBLE CAUSE	CORRECTION
Firing Voltage Lines are the Same, but Abnormally High	
Retarded ignition timing	Reset ignition timing, see ENGINE PERFORMANCE section
Fuel mixture too lean	Readjust carburetor, see ENGINE PERFORMANCE
High resistance in coil wire	Replace coil wire
Corrosion in coil tower terminal	Clean and/or replace coil
Corrosion in distributor coil terminal	Clean and/or replace distributor cap
Firing Voltage Lines are the Same but Abnormally Low	
Fuel mixture too rich	Readjust carburetor, see ENGINE PERFORMANCE
Breaks in coil wire causing arcing	Replace coil wire
Cracked coil tower causing arcing	Replace coil
Low coil output	Replace coil
Low engine compression	Determine cause and repair
One or More, But Not All Firing Voltage Lines are Higher Than Others	
Carburetor idle mixture not balanced	Readjust carburetor, see ENGINE PERFORMANCE
EGR valve stuck open	Clean and/or replace valve
High resistance in spark plug wires	Replace spark plug wires
Cracked or broken spark plug insulator	Replace spark plugs
Intake vacuum leak	Repair leak
Defective spark plugs	Replace spark plugs
Corroded spark plug terminals	Replace spark plugs
One or More, But Not All Firing Voltage Lines Are Lower Than Others	
Curb idle mixture not balanced	Readjust carburetor, see ENGINE PERFORMANCE
Breaks in plug wires	Replace plug wires causing arcing
Cracked coil tower causing arcing	Replace coil
Low compression	Determine cause and repair
Defective spark plugs	Replace spark plugs

Corroded spark plugs	Replace spark plugs
Cylinders Not Firing	
Cracked distributor cap terminals	Replace distributor cap
Shorted spark plug wire	Determine cause and repair
Mechanical problem in engine	Determine cause and repair
Defective spark plugs	Replace spark plugs
Spark plugs fouled	Replace spark plugs

BASIC DRIVEABILITY PROBLEMS TROUBLE SHOOTING

CONDITION & POSSIBLE CAUSE	**CORRECTION**
Hard Starting	
Binding carburetor linkage	Eliminate binding
Binding choke linkage	Eliminate binding
Binding choke piston	Eliminate binding
Restricted choke vacuum	Check vacuum lines for blockage
Worn or dirty needle valve and seat	Clean carburetor, see ENGINE PERFORMANCE
Float sticking	Readjust or replace float see the ENGINE PERFORMANCE section
Incorrect choke adjustment	Reset choke adjustment see ENGINE PERFORMANCE
Defective coil	Replace coil
Improper spark plug gap	Regap spark plugs
Incorrect ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Detonation	
Over-advanced ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Defective spark plugs	Replace spark plugs
Fuel lines clogged	Clean fuel lines
EGR system malfunction	Check and repair EGR system
PCV system malfunction	Repair PCV system
Vacuum leaks	Check and repair vacuum system
Loose fan belts	Tighten or replace fan belts, see ENGINE PERFORMANCE
Restricted airflow	Remove restriction
Vacuum advance malfunction	Check distributor operation
Dieseling	
Binding carburetor linkage	Eliminate binding

Binding throttle linkage	Eliminate blinding
Binding choke linkage or fast idle cam	Eliminate binding
Defective idle solenoid	Replace idle solenoid see ENGINE PERFORMANCE
Improper base idle speed	Reset idle speed, see see ENGINE PERFORMANCE
Incorrect ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Incorrect idle mixture setting	Reset idle mixture, see ENGINE PERFORMANCE
Faulty Acceleration	
Incorrect ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Engine cold and choke too lean	Adjust choke and allow engine to warm-up
Defective spark plugs	Replace spark plugs
Defective coil	Replace coil
Faulty Low Speed Operation	
Clogged idle transfer slots	Clean idle transfer slots, see FUEL
Restricted idle air bleeds and passages	Disassemble and clean carburetor, see FUEL
Clogged air cleaner	Replace air filter
Defective spark plugs	Replace spark plugs
Defective ignition wires	Replace ignition wire see ENGINE PERFORMANCE
Defective distributor cap	Replace distributor cap
Faulty High Speed Operation	
Incorrect ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Defective distributor centrifugal advance	Replace advance mechanism
Defective distributor vacuum advance	Replace advance unit
Incorrect spark plugs or plug gap	Check gap and/or replace spark plugs
Faulty choke operation	Check choke and repair as required
Clogged vacuum passages	Remove restrictions
Improper size or clogged main jet	Check jet size and clean, see FUEL
Restricted air cleaner	Check filter and replace as necessary
Defective distributor cap, rotor or coil	Replace cap, rotor or coil
Misfire at All Speeds	

Defective spark plugs	Replace spark plugs
Defective spark plug wires	Replace spark plug wires
Defective distributor cap, rotor, or coil	Replace cap, rotor, or coil
Cracked or broken vacuum hoses	Replace vacuum hoses
Vacuum leaks	Repair vacuum leaks
Fuel lines clogged	Remove restriction
Hesitation	
Cracked or broken vacuum	Replace vacuum hoses hoses
Vacuum leaks	Repair Vacuum leaks
Binding carburetor linkage	Eliminate binding
Binding throttle linkage	Eliminate binding
Binding choke linkage or fast idle cam	Eliminate binding
Improper float setting	Readjust float setting, see FUEL
Cracked or broken ignition wires	Replace ignition wires
Rough Idle, Missing or Stalling	
Incorrect curb idle or fast idle speed	Reset idle speed, see see ENGINE PERFORMANCE
Incorrect basic timing	Reset ignition timing see ENGINE PERFORMANCE
Improper idle mixture adjustment	Reset idle mixture, see ENGINE PERFORMANCE
Improper feedback system operation	Check feedback system see ENGINE PERFORMANCE
Incorrect spark plug gap	Reset spark plug gap, see ENGINE PERFORMANCE
Moisture in ignition components	Dry components
Loose or broken ignition wires	Replace ignition wires
Damaged distributor cap or or rotor	Replace distributor cap or rotor
Faulty ignition coil	Replace ignition coil
Fuel filter clogged or worn	Replace fuel filter
Damaged idle mixture screw	Replace idle mixture screw, see FUEL
Improper fast idle cam adjustment	Reset fast idle cam adjustment, see TUNE- see ENGINE PERFORMANCE
Improper EGR valve operation	Replace EGR valve
Faulty PCV valve air flow	Replace PCV valve
Choke binding or improper choke setting	Reset choke or eliminate binding
Vacuum leak	Repair vacuum leak
Improper float bowl fuel level	Reset float adjustment, see

	FUEL
Clogged air bleed or idle passages	Clean carburetor passages, see FUEL
Clogged or worn air cleaner filter	Replace air filter
Faulty choke vacuum diaphragm	Replace diaphragm, see ENGINE PERFORMANCE
Exhaust manifold heat valve inoperative	Replace heat valve
Improper distributor spark advance	Check distributor operation
Leaking valves or valve components	Check and repair valvetrain
Improper carburetor mounting	Remove and remount carburetor
Excessive play in distributor shaft	Replace distributor
Loose or corroded wiring connections	Repair or replace as required
Engine Surges	
Improper PCV valve airflow	Replace PCV valve
Vacuum leaks	Repair vacuum leaks
Clogged air bleeds	Remove restriction
EGR valve malfunction	Replace EGR valve
Restricted air cleaner filter	Replace air filter
Cracked or broken vacuum hoses	Replace vacuum hoses
Cracked or broken ignition wires	Replace ignition wires
Vacuum advance malfunction	Check unit and replace as necessary
Defective or fouled spark plugs	Replace spark plugs
Ping or Spark Knock	
Incorrect ignition timing	Reset ignition timing see ENGINE PERFORMANCE
Distributor centrifugal or vacuum advance malfunction	Check operation and replace as necessary
Carburetor setting too lean	Readjust mixture setting, see ENGINE PERFORMANCE
Vacuum leak	Eliminate vacuum leak
EGR valve malfunction	Replace EGR valve
Poor Gasoline Mileage	
Cracked or broken vacuum	Replace vacuum hoses hoses
Vacuum leaks	Repair vacuum leaks
Defective ignition wires	Replace wires
Incorrect choke setting	Readjust setting, see ENGINE PERFORMANCE
Defective vacuum advance	Replace vacuum advance
Defective spark plugs	Replace spark plugs
Binding carburetor power piston	Eliminate binding

Dirt in carburetor jets	Clean and/or replace jets
Incorrect float adjustment	Readjust float setting, see FUEL
Defective power valve	Replace power valve, see ENGINE PERFORMANCE
Incorrect idle speed	Readjust idle speed
Engine Stalls	
Improper float level	Readjust float level
Leaking needle valve and seat	Replace needle valve and seat
Vacuum leaks	Eliminate vacuum leaks

VACUUM PUMP - DIESEL TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

NOTE: **Diesel engines mechanical diagnosis is the same as gasoline engines for items such as noisy valves, bearings, pistons, etc. The following trouble shooting covers only items pertaining to diesel engines.**

VACUUM PUMP (DIESEL) TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Excessive Noise	
Loose pump-to-drive assembly screws	Tighten screws
Loose tube on pump assembly	Tighten tube
Valves not functioning properly	Replace valves
Oil Leakage	
Loose end plug	Tighten end plug
Bad seal crimp	Remove and re-crimp seal

MANUAL TRANSMISSION

MANUAL TRANSMISSION TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

MANUAL TRANSMISSION/TRANSAXLE TROUBLE SHOOTING

Condition	Possible Cause
Noisy In Forward Gears	Low gear oil level, Loose bell housing bolts, Worn bearings or gears
Clunk On Deceleration (FWD Only)	Loose engine mounts, Worn inboard CV joints, Worn differential pinion shaft, Side gear hub counterbore in case worn oversize
Gear Clash When Shifting Forward Gears	Clutch Out Of Adjustment, Shift linkage damaged or out of adjustment, Gears or synchronizers damaged, Low gear oil level
Transmission Noisy When Moving (RWD Only) Quiet In Neutral With Clutch Engaged	Worn rear outputshaft bearing
Gear Rattle	Worn bearings, Wrong gear oil, Low gear oil, Worn gears
Steady Ticking At Idle (Increases With RPM)	Broken tooth on gear
Gear Clash When Shifting Forward Gears	Worn or broken synchronizers
Loud Whine In Reverse	Normal condition (1)
Noise When Stepping On Clutch	Bad release bearing, Worn pilot bearing
Ticking Or Screeching As Clutch Is Engaged	Faulty release bearing, Uneven pressure plate fingers
Click Or Snap When Clutch Is Engaged	Worn clutch fork, Worn or broken front bearing retainer
Transmission Shifts Hard	Clutch not releasing, Shift mechanism binding, Clutch installed backwards
Will Not Shift Into One Gear, Shifts Into All Others	Bent shift fork, Worn detent balls
Locked Into Gear, Cannot Shift	Clutch adjustment, Worn detent balls
Transmission Jumps Out Of Gear	Pilot bearing worn, Bent shift fork, Worn gear teeth or face, Excessive gear train end play, Worn synchronizers, Missing detent ball spring, Shift mechanism worn or out of adjustment, Engine or transmission mount bolts loose or out of adjustment, Transmission not aligned
Shift Lever Rattle	Worn shift lever or detents, Worn shift forks, Worn synchronizers sleeve
Shift Lever Hops Under Acceleration	Worn engine or transmission mounts
(1) Most units use spur cut gears in reverse and are noisy	

POWERTRAIN

CLUTCH TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble**

Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC CLUTCH TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Chattering or Grabbing	
Incorrect clutch adjustment	Adjust clutch
Oil, grease or glaze on facings	Disassemble and clean or replace
Loose "U" joint flange	See DRIVE AXLES article
Worn input shaft spline	Replace input shaft
Binding pressure plate	Replace pressure plate
Binding release lever	See CLUTCH article
Binding clutch disc hub	Replace clutch disc
Unequal pressure plate contact	Replace worn/misaligned components
Loose/bent clutch disc	Replace clutch disc
Incorrect transmission alignment	Realign transmission
Worn pressure plate, disc or flywheel	Replace damaged components
Broken or weak pressure springs	Replace pressure plate
Sticking clutch pedal	Lubricate clutch pedal & linkage
Incorrect clutch disc facing	Replace clutch disc
Engine loose in chassis	Tighten all mounting bolts
Failure to Release	
Oil or grease on clutch facings	Clean or replace clutch clutch disc
Incorrect release lever or pedal adjustment	See CLUTCH article
Worn or broken clutch facings	Replace clutch disc
Bent clutch disc or pressure plate	Replace damaged components
Clutch disc hub binding on input shaft	Clean or replace clutch disc and/or input shaft
Binding pilot bearing	Replace pilot bearing
Sticking release bearing sleeve	Replace release bearing and/or sleeve
Binding clutch cable	See CLUTCH article
Defective clutch master	Replace master cylinder
Defective clutch slave	Replace slave cylinder
Air in hydraulic system	Bleed hydraulic system
Rattling	
Weak or broken release lever spring	Replace spring and check alignment
Damaged pressure plate	Replace pressure plate

Broken clutch return spring	Replace return spring
Worn splines on clutch disc or input shaft	Replace clutch disc and/or input shaft
Worn clutch release bearing	Replace release bearing
Dry or worn pilot bearing	Lubricate or replace pilot bearing
Unequal release lever contact	Align or replace release lever
Incorrect pedal free play	Adjust free play
Warped or damaged clutch disc	Replace damaged components
Slipping	
Pressure springs worn or	Release pressure plate
Oily, greasy or worn facings	Clean or replace clutch disc
Incorrect clutch alignment	Realign clutch assembly
Warped clutch disc or pressure plate	Replace damaged components
Binding release levers or clutch pedal	Lubricate and/or replace release components
Squeaking	
Worn or damaged release	Replace release bearing
Dry or worn pilot or release bearing	Lubricate or replace assembly
Pilot bearing turning in crankshaft	Replace pilot bearing and/or crankshaft
Worn input shaft bearing	Replace bearing and seal
Incorrect transmission alignment	Realign transmission
Dry release fork between pivot	Lubricate release fork and pivot
Heavy and/or Stiff Pedal	
Sticking release bearing sleeve	Replace release bearing and/or sleeve
Dry or binding clutch pedal hub	Lubricate and align components
Floor mat interference with pedal	Lay mat flat in proper area
Dry or binding ball/fork pivots	Lubricate and align components
Faulty clutch cable	Replace clutch cable
Noisy Clutch Pedal	
Faulty interlock switch	Replace interlock switch
Self-adjuster ratchet noise	Lubricate or replace self-adjuster
Speed control interlock switch	Lubricate or replace interlock switch
Clutch Pedal Sticks Down	
Binding clutch cable	See CLUTCH article
Springs weak in pressure plate	Replace pressure plate
Binding in clutch linkage	Lubricate and free linkage
Noisy	
Dry release bearing	Lubricate or replace release bearing

Dry or worn pilot bearing	Lubricate or replace bearing
Worn input shaft bearing	Replace bearing
Transmission Click	
Weak springs in pressure	Replace pressure plate plate
Release fork loose on ball stud	Replace release fork and/or ball stud
Oil on clutch disc damper	Replace clutch disc
Broken spring in slave cylinder	Replace slave cylinder

DRIVE AXLE - NOISE DIAGNOSIS

Unrelated Noises

Some driveline trouble symptoms are also common to the engine, transmission, wheel bearings, tires, and other parts of the vehicle. Ensure cause of trouble actually is in the drive axle before adjusting, repairing, or replacing any of its parts.

Non-Drive Axle Noises

A few conditions can sound just like drive axle noise and have to be considered in pre-diagnosis. The 4 most common noises are exhaust, tires, CV/universal joints and wheel trim rings.

In certain conditions, the pitch of the exhaust gases may e gear whine. At other times, it may be mistaken for a wheel bearing rumble.

Tires, especially radial and snow, can have a high-pitched tread whine or roar, similar to gear noise. Also, some non-standard tires with an unusual tread construction may emit a roar or whine.

Defective CV/universal joints may cause clicking noises or excessive driveline play that can be improperly diagnosed as drive axle problems.

Trim and moldings also can cause a whistling or whining noise. Ensure none of these components are causing the noise before disassembling the drive axle.

Gear Noise

A "howling" or "whining" noise from the ring and pinion gear can be caused by an improper gear pattern, gear damage, or improper bearing preload. It can occur at various speeds and driving conditions, or it can be continuous.

Before disassembling axle to diagnose and correct gear ke sure that tires, exhaust, and vehicle trim have been checked as possible causes.

Chuckle

This is a particular rattling noise that sounds like a stick against the spokes of a spinning bicycle wheel. It occurs while decelerating from 40 MPH and usually can be heard until vehicle comes to a complete stop. The

frequency varies with the speed of the vehicle.

A chuckle that occurs on the driving phase is usually caused ive clearance due to differential gear wear, or by a damaged tooth on the coast side of the pinion or ring gear. Even a very small tooth nick or a ridge on the edge of a gear tooth is enough the cause the noise.

This condition can be corrected simply by cleaning the gear tooth nick or ridge with a small grinding wheel. If either gear is damaged or scored badly, the gear set must be replaced. If metal has broken loose, the carrier and housing must be cleaned to remove particles that could cause damage.

Knock

This is very similar to a chuckle, though it may be louder, and occur on acceleration or deceleration. Knock can be caused by a gear tooth that is damaged on the drive side of the ring and pinion gears. Ring gear bolts that are hitting the carrier casting can cause knock. Knock can also be due to excessive end play in the axle shafts.

Clunk

Clunk is a metallic noise heard when an automatic transmission is engaged in Reverse or Drive, or when throttle is applied or released. It is caused by backlash somewhere in the driveline, but not necessarily in the axle. To determine whether driveline clunk is caused by the axle, check the total axle backlash as follows:

1. Raise vehicle on a frame or twinpost hoist so that drive wheels are free. Clamp a bar between axle companion flange and a part of the frame or body so that flange cannot move.
2. On conventional drive axles, lock the left wheel to keep it from turning. On all models, turn the right wheel slowly until it is felt to be in Drive condition. Hold a chalk marker on side of tire about 12" from center of wheel. Turn wheel in the opposite direction until it is again felt to be in Drive condition.
3. Measure the length of the chalk mark, which is the total axle backlash. If backlash is one inch or less, drive axle is not the source of clunk noise.

Bearing Whine

Bearing whine is a high-pitched sound similar to a whistle. It is usually caused by malfunctioning pinion bearings. Pinion bearings operate at drive shaft speed. Roller wheel bearings may whine in a similar manner if they run completely dry of lubricant. Bearing noise will occur at all driving speeds. This distinguishes it from gear whine, which usually comes and goes as speed changes.

Bearing Rumble

Bearing rumble sounds like marbles being tumbled. It is usually caused by a malfunctioning wheel bearing. The lower pitch is because the wheel bearing turns at only about 1/3 of drive shaft speed.

Chatter On Turns

This is a condition where the entire front or rear of vehicle vibrates when vehicle is moving. The vibration is plainly felt as well as heard. Extra differential thrust washers installed during axle repair can cause a condition of partial lock-up that creates this chatter.

Axle Shaft Noise

Axle shaft noise is similar to gear noise and pinion bearing whine. Axle shaft bearing noise will normally distinguish itself from gear noise by occurring in all driving modes (Drive, cruise, coast and float), and will persist with transmission in Neutral while vehicle is moving at problem speed.

If vehicle displays this noise condition, remove suspect parts, replace wheel seals and install a new set of bearings. Re-evaluate vehicle for noise before removing any internal components.

Vibration

Vibration is a high-frequency trembling, shaking or grinding condition (felt or heard) that may be constant or variable in level and can occur during the total operating speed range of the vehicle.

The types of vibrations that can be felt in the vehicle can d into 3 main groups:

- Vibrations of various unbalanced rotating parts of the vehicle.
- Resonance vibrations of the body and frame structures caused by rotating of unbalanced parts.
- Tip-in moans of resonance vibrations from stressed engine or exhaust system mounts or driveline flexing modes.

DRIVE AXLE - RWD TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing. For definitions of listed noises or sounds, see DRIVE AXLE - NOISE DIAGNOSIS under POWERTRAIN.**

DRIVE AXLE (RWD) TROUBLE SHOOTING

CONDITION & POSSIBLE CAUSE	CORRECTION
Knocking or Clunking	
Differential Side Gear Clearance	Check Clearance
Worn Pinion Shaft	Replace Pinion Shaft
Axle Shaft End Play	Check End Play
Missing Gear Teeth	Check Differential/Replace Gear
Wrong Axle Backlash	Check Backlash
Misaligned Driveline	Realign Driveline
Clinking During Engagement	
Side Gear Clearance	Check Clearance
Ring and Pinion Backlash	Check Backlash
Worn/Loose Pinion Shaft	Replace Shaft/Bearing

Bad "U" Joint	Replace "U" Joint
Sticking Slip Yoke	Lube Slip Yoke
Broken Rear Axle Mount	Replace Mount
Loose Drive Shaft Flange	Check Flange
Click/Chatter On Turns	
Differential Side Gear Clearance	Check Clearance
Wrong Turn On Plates (1)	Replace Clutch Plates
Wrong Differential Lubricant (1)	Change Lubricant
Knock Or Click	
Flat Spot on Rear Wheel Bearing	Replace Wheel Bearing
Low Vibration At All Speeds	
Faulty Wheel Bearing	Replace Wheel Bearing
Faulty "U" Joint	Replace "U" Joint
Faulty Drive Shaft	Balance Drive Shaft
Faulty Companion Flange	Replace Flange
Faulty Slip Yoke Flange	Replace Flange
(1) Limited slip differential only.	

FWD AXLE SHAFTS & CV JOINTS TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC FWD AXLE SHAFTS & CV JOINTS TROUBLE SHOOTING CHART

CONDITION	POSSIBLE CAUSE
Grease Leaks	CV boot torn or cracked
Clicking Noise on Cornering	Damaged outer CV
Clunk Noise on Acceleration	Damaged inner CV
Vibration or Shudder on Acceleration	Sticking, damaged or worn CV Misalignment or spring height

STEERING & SUSPENSION

MANUAL STEERING GEAR TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT,**

DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC MANUAL STEERING GEAR TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Rattle or Chucking Noise in Rack and Pinion	
Rack and pinion mounting bracket loose	Tighten all mounting bolts
Lack of/or incorrect lubricant	Correct as necessary
Steering gear mounting bolts loose	Tighten all mounting bolts
Excessive Play	
Front wheel bearing improperly adjusted	See FRONT SUSPENSION article
Loose or worn steering linkage	See STEERING LINKAGE article
Loose or worn steering gear shift	See MANUAL STEERING GEAR article
Steering arm loose on gear shaft	See MANUAL STEERING GEAR article
Steering gear housing bolts loose	Tighten all mounting bolts
Steering gear adjustment too loose	See MANUAL STEERING GEAR article
Steering arms loose on knuckles	Tighten and check steering linkage
Rack and pinion mounting loose	Tighten all mounting bolts
Rack and pinion out of adjustment	See adjustment in STEERING article
Tie rod end loose	Tighten and check steering linkage
Excessive Pitman shaft-to-ball nut lash	Repair as necessary
Poor Returnability	
Lack of lubricant in ball joint or linkage	Lubricate and service systems
Binding in linkage or ball joints	See STEERING LINKAGE and SUSPENSION article
Improper front end alignment	See WHEEL ALIGNMENT article
Improper tire pressure	Inflate to proper pressure
Tie rod binding	Inflate to proper pressure
Shaft seal rubbing shaft	See STEERING COLUMN article
Excessive Vertical Motion	
Improper tire pressure	Inflate to proper pressure
Tires, wheels or rotors out of balance	Balance tires then check wheels and rotors
Worn or faulty shock absorbers	Check and replace if necessary

Loose tie rod ends or steering	Tighten or replace if necessary
Loose or worn wheel bearings	See SUSPENSION article
Steering Pulls to One Side	
Improper tire pressure	Inflate to proper pressure
Front tires are different sizes	Rotate or replace if necessary
Wheel bearings not adjusted properly	See FRONT SUSPENSION article
Bent or broken suspension components	See FRONT SUSPENSION article
Improper wheel alignment	See WHEEL ALIGNMENT article
Brakes dragging	See BRAKES article
Instability	
Low or uneven tire pressure	Inflate to proper pressure
Loose or worn wheel bearings	See FRONT SUSPENSION article
Loose or worn idler arm bushing	See FRONT SUSPENSION article
Loose or worn strut bushings	See FRONT SUSPENSION article
Incorrect front wheel alignment	See WHEEL ALIGNMENT article
Steering gear not centered	See MANUAL STEERING GEARS article
Springs or shock	Check and replace if necessary
Improper cross shaft	See MANUAL STEERING GEARS article

POWER STEERING TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC POWER STEERING TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Rattle or Chucking Noise	
Pressure hoses touching engine parts	Adjust to proper clearance
Loose Pitman shaft	Adjust or replace if necessary
Tie rods ends or Pitman arm loose	Tighten and check system
Rack and pinion mounts loose	Tighten all mounting bolts

Free play in worm gear	See POWER STEERING GEAR article
Loose sector shaft or thrust bearing adjustment	See POWER STEERING GEAR
Free play in pot coupling	See STEERING COLUMN article
Worn shaft serrations	See STEERING COLUMN article
Growl in Steering Pump	
Excessive pressure in hoses	Restricted hoses, see POWER STEERING GEAR article
Scored pressure plates	See POWER STEERING GEAR article
Scored thrust plates or rotor	See POWER STEERING GEAR article
Extreme wear of cam ring	See POWER STEERING GEAR article
Rattle in Steering Pump	
Vanes not installed	See POWER STEERING PUMP article
Vanes sticking in rotor	See POWER STEERING PUMP article
Swish noise in Pump	
Defective flow control valve	See POWER STEERING PUMP article
Groan in Steering Pump	
Air in fluid	See POWER STEERING PUMP article
Poor pressure hose connection	Tighten and check, replace if necessary
Squawk When Turning	
Damper "O" ring on valve spool cut	See POWER STEERING PUMP article
Moan or Whine in Pump	
Pump shaft bearing scored	Replace bearing and fluid
Air in fluid or fluid level low	See POWER STEERING PUMP article
Hose or column grounded	Check and replace if necessary
Cover "O" ring missing or damaged	See POWER STEERING PUMP article
Valve cover baffle missing or damaged	See POWER STEERING PUMP article
Interference of components in pump	See POWER STEERING

	PUMP article
Loose or poor bracket alignment	Correct or replace if necessary
Hissing When Parking	
Internal leakage in steering gear	Check valved assembly first
Chirp in Steering Pump	
Loose or worn power steering belt	Adjust or replace if necessary
Buzzing When Not Steering	
Noisy pump	See POWER STEERING PUMP article
Free play in steering shaft bearing	See STEERING COLUMN article
Bearing loose on shaft serrations	See STEERING COLUMN article
Clicking Noise in Pump	
Pump slippers too long	See POWER STEERING PUMP article
Broken slipper springs	See POWER STEERING PUMP article
Excessive wear or nicked rotors	See POWER STEERING PUMP article
Damaged cam contour	See POWER STEERING PUMP article
Poor Return of Wheel	
Wheel rubbing against turn signal	See STEERING COLUMN SWITCHES article
Flange rubbing steering gear adjuster	See STEERING COLUMN article
Tight or frozen steering shaft bearing	See STEERING COLUMN article
Steering gear out of adjustment	See POWER STEERING GEAR article
Sticking or plugged spool valve	See POWER STEERING PUMP article
Improper front end alignment	See WHEEL ALIGNMENT article
Wheel bearings worn or loose	See FRONT SUSPENSION article
Ties rods or ball joints binding	Check and replace if necessary
Intermediate shaft joints binding	See STEERING COLUMN article
Kinked pressure hoses	Correct or replace if necessary
Loose housing head spanner nut	See POWER STEERING GEAR article

Damaged valve lever	See POWER STEERING GEAR article
Sector shaft adjusted too tight	See ADJUSTMENTS in POWER STEERING GEAR article
Worm thrust bearing adjusted too tight	See ADJUSTMENTS in POWER STEERING GEAR article
Reaction ring sticking in cylinder	See POWER STEERING GEAR article
Reaction ring sticking in housing head	See POWER STEERING GEAR article
Steering pump internal leakage	See POWER STEERING PUMP article
Steering gear-to-column misalignment	See STEERING COLUMN article
Lack of lubrication in linkage	Service front suspension
Lack of lubrication in ball joints	Service front suspension
Increased Effort When Turning Wheel Fast Foaming, Milky Power Steering Fluid, Low Fluid Level or Low Pressure	
High internal pump leakage	See POWER STEERING PUMP article
Power steering pump belt slipping	Adjust or replace if necessary
Low fluid level	Check and fill to proper level
Engine idle speed to low	Adjust to correct setting
Air in pump fluid system	See POWER STEERING PUMP article
Pump output low	See POWER STEERING PUMP article
Steering gear malfunctioning	See POWER STEERING GEAR article
Wheel Surges or Jerks	
Low fluid level	Check and fill to proper level
Loose fan belt	Adjust or replace if necessary
Insufficient pump pressure	See POWER STEERING PUMP article
Sticky flow control valve	See POWER STEERING PUMP article
Linkage hitting oil pan at full turn	Replace bent components
Kick Back or Free Play	
Air in pump fluid system	See POWER STEERING PUMP article
Worn poppet valve in steering gear	See POWER STEERING PUMP article

Excessive over center lash	See POWER STEERING GEAR article
Thrust bearing out of adjustment	See POWER STEERING GEAR article
Free play in pot coupling	See POWER STEERING PUMP article
Steering gear coupling loose on shaft	See POWER STEERING PUMP article
Steering disc mounting bolts loose	Tighten or replace if necessary
Coupling loose on worm shaft	Tighten or replace if necessary
Improper sector shaft adjustment	See POWER STEERING GEAR article
Excessive worm piston side play	See POWER STEERING GEAR article
Damaged valve lever	See POWER STEERING GEAR article
Universal joint loose	Tighten or replace if necessary
Defective rotary valve	See POWER STEERING GEAR article
No Power When Parking	
Sticking flow control valve	See POWER STEERING PUMP article
Insufficient pump pressure output	See POWER STEERING PUMP article
Excessive internal pump leakage	See POWER STEERING PUMP article
Excessive internal gear leakage	See POWER STEERING PUMP article
Flange rubs against gear adjust plug	See STEERING COLUMN article
Loose pump belt	Adjust or replace if necessary
Low fluid level	Check and add proper amount of fluid
Engine idle too low	Adjust to correct setting
Steering gear-to-column misaligned	See STEERING COLUMN article
No Power, Left Turn	
Left turn reaction seal "O" ring worn	See POWER STEERING GEAR article
Left turn reaction seal damaged/missing	See POWER STEERING GEAR article

Cylinder head "O" ring damaged	See POWER STEERING PUMP article
No Power, Right Turns	
Column pot coupling bottomed	See STEERING COLUMN article
Right turn reaction seal "O" ring worn	See POWER STEERING GEAR article
Right turn reaction seal damaged	See POWER STEERING GEAR article
Internal leakage through piston end plug	See POWER STEERING GEAR article
Internal leakage through side plugs	See POWER STEERING GEAR article
Lack of Effort in Turning	
Left and/or right reaction seal sticking in cylinder head	Replace, see POWER STEERING GEAR article
Wanders to One Side	
Front end alignment incorrect	See WHEEL ALIGNMENT article
Unbalanced steering gear valve	See POWER STEERING GEAR article
Low Pressure Due to Steering Pump	
Flow control valve stuck or inoperative	See POWER STEERING PUMP article
Pressure plate not flat against cam ring	See POWER STEERING PUMP article
Extreme wear of cam ring	Replace and check adjustments
Scored plate, thrust plate or rotor	See POWER STEERING PUMP article
Vanes not installed properly	See POWER STEERING PUMP article
Vanes sticking in rotor slots	See POWER STEERING PUMP article
Cracked/broken thrust or pressure plate	See POWER STEERING PUMP article

STEERING COLUMN TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC STEERING COLUMN TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Noise in Steering	
Coupling pulled apart	See STEERING COLUMNS article
Column not correctly aligned	See STEERING COLUMNS article
Broken lower joint	Replace joint
Horn contact ring not	See STEERING COLUMN article
Bearing not lubricated	See STEERING COLUMN article
Shaft snap ring not properly seated	Reseat or replace snap ring
Plastic spherical joint not lubricated	See STEERING COLUMN article
Shroud or housing loose	Tighten holding screws
Lock plate retaining ring not seated	See STEERING COLUMN article
Loose sight shield	Tighten holding screws
High Steering Shaft Effort	
Column assembly misaligned	See STEERING COLUMN article
Improperly installed dust shield	Adjust or replace
Tight steering universal joint	See STEERING COLUMN article
High Shift Effort	
Column is out of alignment	See STEERING COLUMN article
Improperly installed dust shield	Adjust or replace
Seals or bearings not lubricated	See STEERING COLUMNS article
Mounting bracket screws too long	Replace with new shorter screws
Burrs on shift tube	Remove burrs or replace tube
Lower bowl bearing assembled wrong	See STEERING COLUMN article
Shift tube bent or broken	Replace as necessary
Improper adjustment of shift levers	See STEERING COLUMN article
Improper Trans. Shifting	
Sheared shift tube joint	Replace as necessary
Sheared lower shaft lever	Replace as necessary
Improper shift lever adjustment	See STEERING COLUMN

	article
Improper gate plate adjustment	See STEERING COLUMN article
Excess Play in Column	
Instrument panel bracket bolts loose	Tighten bolts and check bracket
Broken weld nut on jacket	See STEERING COLUMN article
Instrument bracket capsule sheared	See STEERING COLUMN article
Column bracket/jacket bolts loose	Tighten bolts and check bracket
Steering Locks in Gear	
Release lever mechanism	See STEERING COLUMN article

SUSPENSION TROUBLE SHOOTING

NOTE: **This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.**

BASIC SUSPENSION TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Front End Noise	
Loose or worn wheel	See Wheel Bearing Adjustment in SUSPENSION
Worn shocks or shock mountings	Replace struts or strut mountings
Worn struts or strut mountings	Replace struts or strut mountings
Loose or worn lower control arm	See SUSPENSION
Loose steering gear-to-frame bolts	See STEERING
Worn control arm bushings	See SUSPENSION
Ball joints not lubricated	Lubricate ball joints & see Ball Joint Checking in SUSPENSION
Front Wheel Shake, Shimmy, or Vibration	
Tires or wheels out of balance	Check tire balance
Incorrect wheel alignment	See WHEEL ALIGNMENT
Drive shaft unbalanced	Check drive shaft balance
Loose or worn wheel bearings	See WHEEL ALIGNMENT

Loose or worn tie rod ends	See SUSPENSION
Worn upper ball joints	See Ball Joint Checking in SUSPENSION
Worn shock absorbers	Replace shock absorbers
Worn strut bushings	Replace strut bushings
Car Pulls to One Side	
Mismatched or uneven tires	Check tire condition
Broken or sagging springs	See SUSPENSION
Loose or worn strut bushings	See SUSPENSION
Improper wheel alignment	See WHEEL ALIGNMENT
Improper rear axle alignment	Check rear axle alignment
Power steering gear unbalanced	See STEERING
Front brakes dragging	See BRAKES
Abnormal Tire Wear	
Unbalanced tires	Check tire balance & rotation
Sagging or broken springs	See SUSPENSION
Incorrect front end alignment	See WHEEL ALIGNMENT
Faulty shock absorbers	Replace chock absorbers
Scuffed Tires	
Toe-In incorrect	See WHEEL ALIGNMENT
Suspension arm bent or twisted	See appropriate SUSPENSION article
Springs Bottom or Sag	
Bent or broken springs	See SUSPENSION
Leaking or worn shock absorbers	Replace shock absorbers
Frame misalignment	Check frame for damage
Spring Noises	
Loose "U" Bolts	See SUSPENSION
Loose or worn bushings	See SUSPENSION
Worn or missing interliners	See SUSPENSION
Shock Absorber Noise	
Loose shock mountings	Check & tighten mountings
Worn bushings	Replace bushings
Air in system	Bleed air from system
Undercoating on shocks	Remove undercoating
Car Leans or Sways on Corners	
Loose stabilizer bar	See SUSPENSION
Faulty shocks or mountings	Replace shocks or mountings
Broken or sagging springs	See SUSPENSION
Shock Absorbers Leaking	
Worn seals or reservoir tube crimped	See SUSPENSION

Broken Springs	
Loose "U" bolts	See SUSPENSION
Inoperative shock absorbers	Replace shock absorbers

WHEEL ALIGNMENT TROUBLE SHOOTING

NOTE: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC WHEEL ALIGNMENT TROUBLE SHOOTING CHART

CONDITION & POSSIBLE CAUSE	CORRECTION
Premature Tire Wear	
Improper tire inflation	Check tire pressure
Front alignment out of tolerance	See ALIGNMENT SPECS in WHEEL ALIGNMENT section
Suspension components worn	See SUSPENSION section
Steering system components worn	See STEERING section
Improper standing height	See WHEEL ALIGNMENT
Uneven or sagging springs	See SUSPENSION section
Bent wheel	See WHEEL ALIGNMENT
Improper torsion bar adjustment	See SUSPENSION section
Loose or worn wheel bearings	See WHEEL BEARING ADJ. in SUSPENSION section
Worn or defective shock	Replace shock absorbers
Tires out of balance	Check tire balance
Pulls to One Side	
Improper tire inflation	Check tire pressure
Brake dragging	See BRAKE section
Mismatched tires	See WHEEL ALIGNMENT
Broken or sagging spring	See SUSPENSION section
Broken torsion bar	See SUSPENSION section
Power steering valve not centered	See STEERING section
Front alignment out of tolerance	See WHEEL ALIGNMENT section
Defective wheel bearing	See WHEEL BEARINGS in SUSPENSION section
Uneven sway bar links	See SUSPENSION section
Frame bent	Check for frame damage
Steering system bushing worn	See STEERING section

Hard Steering	
Idler arm bushing too tight	See STEERING LINKAGE in STEERING section
Ball joint tight or seized	See SUSPENSION section
Steering linkage too tight	See STEERING LINKAGE in STEERING section
Power steering fluid low	Add proper amount of fluid
Power steering drive belt loose	See STEERING section
Power steering pump defective	See STEERING section
Steering gear out of adjustment	See STEERING section
Incorrect wheel alignment	See WHEEL ALIGNMENT
Damaged steering gear	See STEERING section
Damaged suspension	See SUSPENSION section
Bent steering knuckle or supports	See SUSPENSION section
Vehicle "Wanders"	
Strut rod or control arm bushing worn	See SUSPENSION section
Loose or worn wheel bearings	See WHEEL BEARINGS in SUSPENSION section
Improper tire inflation	Check tire pressure
Stabilizer bar missing or defective	See SUSPENSION section
Wheel alignment out of tolerance	See Adjustment in WHEEL ALIGNMENT section
Broken spring	See SUSPENSION section
Defective shock absorber	Replace shock absorbers
Worn steering & suspension components	See SUSPENSION section
Front End Shimmy	
Tire out of balance/round	Check tire balance
Excessive wheel runout	See WHEEL ALIGNMENT
Insufficient or improper caster	See WHEEL ALIGNMENT section
Worn suspension or steering components	See SUSPENSION section
Defective shock absorbers	Replace shock absorber
Wheel bearings worn or loose	See WHEEL BEARING ADJ. in SUSPENSION section
Power steering reaction Bracket loose	See STEERING section
Steering gear box (rack) mounting loose	See STEERING section
Steering gear adjustment loose	See STEERING section
Worn spherical joints	See SUSPENSION section
Toe-In Not Adjustable	
Lower control arm bent	See SUSPENSION section
Frame bent	Check frame for damage
Camber Not Adjustable	

Control arm bent	See SUSPENSION section
Frame bent	Check frame for damage
Hub & bearing not seated properly	See SUSPENSION section

DTC 151-11: LOW TIRE AIR PRESSURE

Fig. 1: Vsa (Tpms) Dtc Troubleshooting Flow Chart (151-11) Rewriting The Odo Data And Transferring The Maintenance Minder&Trade; Data To A New Gauge Control Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before troubleshooting, CHECK THE OUTSIDE AIR TEMPERATURE SENSOR . If outside air temperature sensor is failed, the VSA modulator-control unit may set this code.**
- **Make sure to avoid uneven loading on one side (left or right) of the vehicle and excessive loading.**
- **Make sure to inflate the tires to recommended pressure, not higher than the specified pressure, when TPMS calibration is done.**
- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the how to troubleshooting information.**

DTC Description	DTC	Freeze Frame
151-11 Low Tire Air Pressure		

1. Tire check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check all four tires for size, inflation, and wear.

Are all four tires the correct size, properly inflated, and worn evenly?

YES : The system is OK at this time. Do the TPMS calibration.

NO : Install the correct tires, a known-good set of tires, or set the tires to the correct pressure, and do the TPMS calibration.

DTC 151-21: DIFFERENT DIAMETER TIRE DETECTION

Fig. 2: VSA (TPMS) DTC Troubleshooting Flow Chart (151-21)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **The DTC will be indicated when the vehicle has a different diameter tire(s) compared to the other tires.**
- **Check the record of using tires and wheels of a different size from originally supplied with the vehicle including the use of temporary spare tire.**
- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the how to troubleshooting information.**

DTC Description	DTC	Freeze Frame
151-21 Different Diameter Tire Detection		

1. Tire and wheel check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check all four tires for size, inflation, and wear.

   Are all four tires the correct size, properly inflated, and worn evenly?

   YES : The system is OK at this time. Do the TPMS calibration.

   NO : Install the correct tires, a known-good set of tires, or set the tires to the correct pressure, and do the TPMS calibration.

DTC 151-31: TPMS SWITCH CIRCUIT OPEN

Fig. 3: VSA (TPMS) DTC Troubleshooting Flow Chart (151-31)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Pressing and holding the TPMS switch for more than 60 seconds will cause this DTC to set.**
- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the how to troubleshooting information.**

DTC Description	DTC	Freeze Frame
151-31 TPMS Switch Circuit Open		

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Clear the DTC with the HDS.
    - 3. Turn the ignition switch to LOCK (0).
    - 4. Turn the ignition switch to ON (II), then wait for 60 seconds or more.
    - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
151-31 TPMS Switch Circuit Open		

Is DTC 151-31 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Open wire check (TPMS_SW line) 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     TPMS switch 5P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     TPMS switch 5P connector: disconnected

     Test circuit TPMS_SW

     Test point 1 TPMS switch 5P connector No. 4 (YEL)

     Test point 2 Body ground

Fig. 4: Measuring Voltage Between TPMS Switch 5P Connector No. 4 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The TPMS_SW wire is not open. Go to step 3.

NO : Go to step 4.

3. Open wire check (GND line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     TPMS switch 5P connector: disconnected

     Test circuit GND

     Test point 1 TPMS switch 5P connector No. 4 (YEL)

     Test point 2 TPMS switch 5P connector No. 5 (BLK)

     Fig. 5: Measuring Voltage Between TPMS Switch 5P Connector No. 4 (YEL) And No. 5 (BLK)
     Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GND wire is OK. Check the TPMS switch.

NO : Repair an open in the wire between the TPMS switch and body ground (G501).

4. Open wire check (TPMS_SW line) 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Remove the gauge control module (Do not disconnect the connector)** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .
   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

TPMS switch 5P connector: disconnected

Gauge control module 32P connector: connected

Test circuit TPMS_SW

Test point 1 Gauge control module 32P connector No. 24 (YEL)

Test point 2 Body ground

Fig. 6: Measuring Voltage Between Gauge Control Module 32P Connector No. 24 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open in the wire between the TPMS switch and the gauge control module.

NO : **DO THE TROUBLESHOOTING FOR THE GAUGE CONTROL MODULE** . If necessary, **substitute a known-good gauge control module, and recheck** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

DTC 11-13: RIGHT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 13-13: LEFT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 15-13: RIGHT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 17-13: LEFT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION

DTC 11-13
DTC 13-13
DTC 15-13
DTC 17-13
1. Problem verification
Failure is not duplicated
Intermittent failure

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
11-13 Right-Front Wheel Speed Sensor Circuit Malfunction		

13-13 Left-Front Wheel Speed Sensor Circuit Malfunction		
15-13 Right-Rear Wheel Speed Sensor Circuit Malfunction		
17-13 Left-Rear Wheel Speed Sensor Circuit Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
11-13 Right-Front Wheel Speed Sensor Circuit Malfunction		
13-13 Left-Front Wheel Speed Sensor Circuit Malfunction		
15-13 Right-Rear Wheel Speed Sensor Circuit Malfunction		
17-13 Left-Rear Wheel Speed Sensor Circuit Malfunction		

Is DTC 11-13, 13-13, 15-13, or 17-13 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Shorted wire check (Wheel speed sensor lines to ground):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     VSA modulator-control unit 38P connector

   - 3. Check for continuity between body ground and the appropriate wheel speed sensor +B and GND terminals of the VSA modulator-control unit 38P connector individually (see table).

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

DTC	Appropriate Terminal	
	+B	GND
11-13 Right-front	No. 24	No. 13
13-13 Left-front	No. 21	No. 9
15-13 Right-rear	No. 23	No. 35
17-13 Left-rear	No. 33	No. 22

Fig. 9: Checking Continuity Between Body Ground And VSA Modulator-Control Unit 38P Connector Wheel Speed Sensor +B And GND Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Wheel speed sensor wires are shorted to ground. Go to step 3.

NO : The wheel speed sensor wires are not shorted to ground. Go to step 4.

3. Wheel speed sensor(s) check:
   - 1. Disconnect the following connector.

     Appropriate wheel speed sensor 2P connector

   - 2. On the sensor side, check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Appropriate wheel speed sensor 2P connector: disconnected

     Test circuit +B

     Test point 1 Appropriate wheel speed sensor 2P connector No. 1

     Test point 2 Body ground

     Test circuit GND

Test point 1 Appropriate wheel speed sensor 2P connector No. 2

Test point 2 Body ground

Fig. 10: Checking Continuity Between Wheel Speed Sensor 2P Connector No. 2 Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The wheel speed sensor wires are not shorted to ground. **Replace the appropriate wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

NO : Repair a short to body ground in the wire between the VSA modulator-control unit and the wheel speed sensor.

4. Shorted wire check (Wheel speed sensor lines to power):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between body ground and the appropriate wheel speed sensor +B and GND terminals of the VSA modulator-control unit 38P connector individually (see table).

     Test condition IG ON (II)

     VSA modulator-control unit 38P connector: disconnected

DTC	Appropriate Terminal	
	+B	GND
11-13 Right-front	No. 24	No. 13
13-13 Left-front	No. 21	No. 9
15-13 Right-rear	No. 23	No. 35
17-13 Left-rear	No. 33	No. 22

Fig. 11: Measuring Voltage Between Body Ground And VSA Modulator-Control Unit 38P Connector Wheel Speed Sensor +B And GND Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES : Wheel speed sensor wires are shorted to power. Go to step 5.

NO : The wheel speed sensor wires are not shorted to power. Go to step 6.

5. Wheel speed sensor(s) check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Appropriate wheel speed sensor 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. On the sensor side, measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     VSA modulator-control unit 38P connector: disconnected

     Appropriate wheel speed sensor 2P connector: disconnected

     Test circuit +B

     Test point 1 Appropriate wheel speed sensor 2P connector No. 1

Test point 2 Body ground

Test circuit GND

Test point 1 Appropriate wheel speed sensor 2P connector No. 2

Test point 2 Body ground

Fig. 12: Measuring Voltage Between Wheel Speed Sensor 2P Connector No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES : The wheel speed sensor wires are not shorted to power. **Replace the appropriate wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

NO : Repair a short to power in the wire between the VSA modulator-control unit and the appropriate wheel speed sensor.

6. Shorted wire check (Wheel speed sensor lines wire to wire):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Appropriate wheel speed sensor 2P connector

   - 3. Check for continuity between the appropriate VSA modulator-control unit 38P connector wheel speed sensor +B and GND terminals (see table).

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Appropriate wheel speed sensor 2P connector: disconnected

DTC	Appropriate Terminal	
	+B	GND

11-13 Right-front	No. 24	No. 13
13-13 Left-front	No. 21	No. 9
15-13 Right-rear	No. 23	No. 35
17-13 Left-rear	No. 33	No. 22

Fig. 13: Checking Continuity Between VSA Modulator-Control Unit 38P Connector Wheel Speed Sensor +B And GND Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the wires between the appropriate wheel speed sensor and the VSA modulator-control unit.

NO : The wheel speed sensor wires are not shorted in the wires. Go to step 7.

7. Open wire check (Wheel speed sensor lines) 1:
   - 1. Check for continuity between the appropriate VSA modulator-control unit 38P connector terminal and the appropriate wheel speed sensor 2P connector terminal (see table).

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Appropriate wheel speed sensor 2P connector: disconnected

DTC	VSA Modulator-Control Unit 38P Connector Terminal	Appropriate Wheel Speed Sensor 2P Connector Terminal
11-13	No. 24	Right-front
13-		

13	No. 21	Left-front
15-13	No. 23	Right-rear
17-13	No. 33	Left-rear

Fig. 14: Checking Continuity Between VSA Modulator-Control Unit 38P Connector Terminal And Wheel Speed Sensor 2P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 8.

NO : Repair an open in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

8. Open wire check (Wheel speed sensor lines) 2:
   - 1. Check for continuity between the appropriate VSA modulator-control unit 38P connector terminal and the appropriate wheel speed sensor 2P connector terminal (see table).

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Appropriate wheel speed sensor 2P connector: disconnected

DTC	VSA Modulator-Control Unit 38P Connector Terminal	Appropriate Wheel Speed Sensor 2P Connector Terminal
11-13	No. 13	Right-front
13-13	No. 9	Left-front
15-13	No. 35	Right-rear
17-13	No. 22	Left-rear

Fig. 15: Checking Continuity Between VSA Modulator-Control Unit 38P Connector Terminal And Wheel Speed Sensor 2P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The wheel speed sensor wires are OK. If a DTC is indicated for either one of the front or rear wheels as described in step 1, go to step 9.

YES : The wheel speed sensor wires are OK. If DTCs are indicated for both front or rear wheels as described in step 1, go to step 10.

NO : Repair an open in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

9. Wheel speed sensor(s) check 3:
   - 1. **Swap the appropriate front left and front right wheel speed sensors or rear left and rear right wheel speed sensors** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .
   - 2. Reconnect the following connectors.

     VSA modulator-control unit 38P connector

     Wheel speed sensor 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 6. Check for DTCs with the HDS.

DTC Before Swapping	DTC After Swapping
11-13 (Right-front)	13-13 (Left-front)
13-13 (Left-front)	11-13 (Right-front)
15-13 (Right-rear)	17-13 (Left-rear)
17-13 (Left-rear)	15-13 (Right-rear)

DTC Description	DTC	Freeze Frame

Is the DTC indicated for the opposite wheel?

YES : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

NO : Go to step 11.

10. Wheel speed sensor(s) check (substitution):
    - 1. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC	Appropriate Wheel Speed Sensor
11-13	Right-front
13-13	Left-front
15-13	Right-rear
17-13	Left-rear

    - 2. Reconnect the following connectors.

VSA modulator-control unit 38P connector

Wheel speed sensor 2P connector

- 3. Turn the ignition switch to ON (II).
- 4. Clear the DTC with the HDS.
- 5. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
- 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
11-13 Right-Front Wheel Speed Sensor Circuit Malfunction		
13-13 Left-Front Wheel Speed Sensor Circuit Malfunction		
15-13 Right-Rear Wheel Speed Sensor Circuit Malfunction		
17-13 Left-Rear Wheel Speed Sensor Circuit Malfunction		

Is DTC 11-13, 13-13, 15-13, or 17-13 indicated?

YES : Go to step 11.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

11. VSA modulator-control unit check (update):
    - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
    - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
    - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 11-13, 13-13, 15-13, or 17-13 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 12-11: RIGHT-FRONT WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 14-11: LEFT-FRONT WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 16-11: RIGHT-REAR WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 18-11: LEFT-REAR WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION

Fig. 16: VSA DTC Troubleshooting Flow Chart (12-11, 14-11, 16-11, 18-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**
- **If the ABS and other indicators come on because of electrical noise, the indicators will go off when you test-drive the vehicle speed at 9 mph (15**

km/h) or more and the noise is gone.

DTC Description	DTC	Freeze Frame
12-11 Right-Front Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
14-11 Left-Front Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
16-11 Right-Rear Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
18-11 Left-Rear Wheel Speed Sensor Electrical Noise or Intermittent Interruption		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle for 120 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
12-11 Right-Front Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
14-11 Left-Front Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
16-11 Right-Rear Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
18-11 Left-Rear Wheel Speed Sensor Electrical Noise or Intermittent Interruption		

Is DTC 12-11, 14-11, 16-11, or 18-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Wheel speed sensor installation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Check that the appropriate wheel speed sensor is properly mounted** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC Appropriate	Wheel Speed Sensor
12-11	Right-front

14-11	Left-front
16-11	Right-rear
18-11	Left-rear

Is the wheel speed sensor installation OK?

YES : Go to step 3.

NO : **Reinstall the wheel speed sensor, and recheck the mounting position** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** , then go to step 1.

3. Wheel speed sensor check (substitution):
   - 1. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC	Appropriate Wheel Speed Sensor
12-11	Right-front
14-11	Left-front
16-11	Right-rear
18-11	Left-rear

   - 2. Turn the ignition switch to ON (II).
   - 3. Clear the DTC with the HDS.
   - 4. Turn the ignition switch to LOCK (0).
   - 5. Test-drive the vehicle for 120 seconds or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
12-11 Right-Front Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
14-11 Left-Front Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
16-11 Right-Rear Wheel Speed Sensor Electrical Noise or Intermittent Interruption		
18-11 Left-Rear Wheel Speed Sensor Electrical Noise or Intermittent Interruption		

Is DTC 12-11, 14-11, 16-11, or 18-11 indicated?

YES : Go to step 4.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

4. Magnetic encoder check:
   - 1. Inspect the appropriate magnetic encoder for damage, debris, and correct installation.

DTC	Appropriate Magnetic Encoder	Note
12-11	Right-front	**REMOVE THE DRIVESHAFT OUTBOARD JOINT FROM THE APPROPRIATE WHEEL HUB** .
14-11	Left-front	
16-11	Right-rear	**REMOVE THE HUB BEARING UNIT** .
18-11	Left-rear	

Is the magnetic encoder surface OK?

YES : Go to step 5.

NO : Clean debris from the appropriate magnetic encoder surface on the wheel bearing or the hub bearing unit. If the DTC is still present, replace the appropriate **WHEEL BEARING** or the **HUB BEARING UNIT** .

5. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle for 120 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 12-11, 14-11, 16-11, or 18-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA

modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 12-14: RIGHT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 14-14: LEFT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 16-14: RIGHT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 18-14: LEFT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR

Fig. 17: VSA DTC Troubleshooting Flow Chart (12-14, 14-14, 16-14, 18-14)

SYSTEM .

DTC Description	DTC	Freeze Frame
12-14 Right-Front Wheel Speed Sensor Installation Error		
14-14 Left-Front Wheel Speed Sensor Installation Error		
16-14 Right-Rear Wheel Speed Sensor Installation Error		
18-14 Left-Rear Wheel Speed Sensor Installation Error		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 31 mph (50 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
12-14 Right-Front Wheel Speed Sensor Installation Error		
14-14 Left-Front Wheel Speed Sensor Installation Error		
16-14 Right-Rear Wheel Speed Sensor Installation Error		
18-14 Left-Rear Wheel Speed Sensor Installation Error		

Is DTC 12-14, 14-14, 16-14, or 18-14 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Wheel speed sensor installation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Check that the appropriate wheel speed sensor is properly mounted** See or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC	Appropriate Wheel Speed Sensor
12-14	Right-front
14-14	Left-front
16-14	Right-rear
18-14	Left-rear

Is the wheel speed sensor installation OK?

YES : Go to step 3.

NO : **Reinstall the wheel speed sensor, and recheck the mounting position** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** , then go to step 1.

3. Wheel speed sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC	Appropriate Wheel Speed Sensor
12-14	Right-front
14-14	Left-front
16-14	Right-rear
18-14	Left-rear

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Test-drive the vehicle at 31 mph (50 km/h) or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

   - 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
12-14 Right-Front Wheel Speed Sensor Installation Error		
14-14 Left-Front Wheel Speed Sensor Installation Error		
16-14 Right-Rear Wheel Speed Sensor Installation Error		
18-14 Left-Rear Wheel Speed Sensor Installation Error		

Is DTC 12-14, 14-14, 16-14, or 18-14 indicated?

YES : Go to step 4.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

4. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA**

SENSOR NEUTRAL POSITION MEMORIZATION, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

- 2. Turn the ignition switch to LOCK (0).
- 3. Test-drive the vehicle at 31 mph (50 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 12-14, 14-14, 16-14, or 18-14 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 12-15: RIGHT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 14-15: LEFT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 16-15: RIGHT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 18-15: LEFT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR

Fig. 18: VSA DTC Troubleshooting Flow Chart (12-14, 14-14, 16-14, 18-14)

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
12-15 Right-Front Wheel Speed Sensor Installation Error		
14-15 Left-Front Wheel Speed Sensor Installation Error		
16-15 Right-Rear Wheel Speed Sensor Installation Error		
18-15 Left-Rear Wheel Speed Sensor Installation Error		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 12 mph (20 km/h) or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
12-15 Right-Front Wheel Speed Sensor Installation Error		
14-15 Left-Front Wheel Speed Sensor Installation Error		
16-15 Right-Rear Wheel Speed Sensor Installation Error		
18-15 Left-Rear Wheel Speed Sensor Installation Error		

Is DTC 12-15, 14-15, 16-15, or 18-15 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Wheel speed sensor installation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Check that the appropriate wheel speed sensor is properly mounted** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC Appropriate	Wheel Speed Sensor
12-15	Right-front
14-15	Left-front
16-15	Right-rear
18-15	Left-rear

Is the wheel speed sensor installation OK?

YES : Go to step 3.

NO : **Reinstall the wheel speed sensor, and recheck the mounting position** See **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** , then go to step 1.

3. Wheel speed sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

DTC	Appropriate Wheel Speed Sensor
12-15	Right-front

14-15	Left-front
16-15	Right-rear
18-15	Left-rear

- 3. Turn the ignition switch to ON (II).
- 4. Clear the DTC with the HDS.
- 5. Turn the ignition switch to LOCK (0).
- 6. Test-drive the vehicle at 12 mph (20 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
12-15 Right-Front Wheel Speed Sensor Installation Error		
14-15 Left-Front Wheel Speed Sensor Installation Error		
16-15 Right-Rear Wheel Speed Sensor Installation Error		
18-15 Left-Rear Wheel Speed Sensor Installation Error		

Is DTC 12-15, 14-15, 16-15, or 18-15 indicated?

YES : Go to step 4.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

4. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 12 mph (20 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 12-15, 14-15, 16-15, or 18-15 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 121-11: VSA SOLENOID VALVE MALFUNCTION; DTC 122-11: VSA SOLENOID VALVE MALFUNCTION; DTC 123-11: VSA SOLENOID VALVE MALFUNCTION; DTC 124-11: VSA SOLENOID VALVE MALFUNCTION

Fig. 19: VSA DTC Troubleshooting Flow Chart (121-11, 122-11, 123-11, 124-11)

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
121-11 VSA Solenoid Valve Malfunction		
122-11 VSA Solenoid Valve Malfunction		
123-11 VSA Solenoid Valve Malfunction		
124-11 VSA Solenoid Valve Malfunction		

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).

- 2. Clear the DTC with the HDS.
- 3. Turn the ignition switch to LOCK (0).
- 4. Test-drive the vehicle at 9 mph (15 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
121-11 VSA Solenoid Valve Malfunction		
122-11 VSA Solenoid Valve Malfunction		
123-11 VSA Solenoid Valve Malfunction		
124-11 VSA Solenoid Valve Malfunction		

Is DTC 121-11, 122-11, 123-11, or 124-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 9 mph (15 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 121-11, 122-11, 123-11, or 124-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs

troubleshooting.

DTC 158-1: ECU SOFTWARE UPDATE FAILURE

Fig. 20: VSA DTC Troubleshooting Flow Chart (158-1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not turn the ignition switch to LOCK (0) while updating the VSA modulator-control unit. If you turn the ignition switch to LOCK (0) before completion, the VSA modulator-control unit will be damaged.**
- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
158-1 ECU Software Update Failure		

1. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 158-1 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL**

POSITION MEMORIZATION.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 25-21: YAW RATE SENSOR (INSIDE OF MODULATOR-CONTROL UNIT) OUTPUT SIGNAL MALFUNCTION; DTC 26-21: LATERAL ACCELERATION SENSOR (INSIDE OF MODULATOR-CONTROL UNIT) OUTPUT SIGNAL MALFUNCTION; DTC 28-21: LONGITUDINAL ACCELERATION SENSOR (INSIDE OF MODULATOR-CONTROL UNIT) OUTPUT SIGNAL MALFUNCTION; DTC 28-22: LONGITUDINAL ACCELERATION SENSOR (INSIDE OF MODULATOR-CONTROL UNIT) STUCK

Fig. 21: VSA DTC Troubleshooting Flow Chart (25-21, 26-21, 28-21, 28-22)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**
- **The yaw rate-acceleration sensor is built into the VSA modulator-control unit.**
- **Before troubleshooting, check the VSA modulator-control unit for proper mounting. If not properly installed the VSA modulator-control unit may set these codes.**

DTC Description	DTC	Freeze Frame

25-21 Yaw Rate Sensor (Inside of Modulator-Control Unit) Output Signal Malfunction		
26-21 Lateral Acceleration Sensor (Inside of Modulator-Control Unit) Output Signal Malfunction		
28-21 Longitudinal Acceleration Sensor (Inside of Modulator-Control Unit) Output Signal Malfunction		
28-22 Longitudinal Acceleration Sensor (Inside of Modulator-Control Unit) Stuck		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 31 mph (50 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
25-21 Yaw Rate Sensor (Inside of Modulator-Control Unit) Output Signal Malfunction		
26-21 Lateral Acceleration Sensor (Inside of Modulator-Control Unit) Output Signal Malfunction		
28-21 Longitudinal Acceleration Sensor (Inside of Modulator-Control Unit) Output Signal Malfunction		
28-22 Longitudinal Acceleration Sensor (Inside of Modulator-Control Unit) Stuck		

Is DTC 25-21, 26-21, 28-21, or 28-22 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 31 mph (50 km/h) or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 25-21, 26-21, 28-21, or 28-22 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 27-20: STEERING ANGLE SENSOR INTERNAL CIRCUIT MALFUNCTION

Fig. 22: VSA DTC Troubleshooting Flow Chart (27-20)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-**

BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .

DTC Description	DTC	Freeze Frame
27-20 Steering Angle Sensor Internal Circuit Malfunction		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Start the engine for at least 5 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
27-20 Steering Angle Sensor Internal Circuit Malfunction		
86-11 F-CAN Bus-Off Malfunction		
86-19 F-CAN Communication With Steering Angle Sensor Malfunction		

Is DTC 27-20 indicated?

YES : If DTC 27-20 is only indicated, go to step 2.

YES : If DTC 86-11 or 86-19 are also indicated, **go to DTC 86-11 or 86-19**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Steering angle sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD STEERING ANGLE SENSOR** .
   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
27-20 Steering Angle Sensor Internal Circuit Malfunction		

Is DTC 27-20 indicated?

YES : Go to step 3.

NO : **REPLACE THE ORIGINAL STEERING ANGLE SENSOR** .

3. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 27-20 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 27-21: STEERING ANGLE SENSOR OUTPUT SIGNAL MALFUNCTION

Fig. 23: VSA DTC Troubleshooting Flow Chart (27-21)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
27-21 Steering Angle Sensor Output Signal Malfunction		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Start the engine, then turn the steering wheel from lock to lock several times.
   - 5. Test-drive the vehicle at 31 mph (50 km/h) or more.

     NOTE: **Drive the vehicle on the road, not on a lift.**

   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
27-21 Steering Angle Sensor Output Signal Malfunction		
86-11 F-CAN Bus-Off Malfunction		
86-19 F-CAN Communication With Steering Angle Sensor Malfunction		

Is DTC 27-21 indicated?

YES : If DTC 27-21 is only indicated, go to step 2.

YES : If DTC 86-11 or 86-19 are also indicated, **go to DTC 86-11 or 86-19**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Steering angle sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **SUBSTITUTE A KNOWN-GOOD STEERING ANGLE SENSOR** .
   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Start the engine, then turn the steering wheel from lock to lock several times.
   - 7. Test-drive the vehicle at 31 mph (50 km/h) or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

- 8. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
27-21 Steering Angle Sensor Output Signal Malfunction		

Is DTC 27-21 indicated?

YES : Go to step 3.

NO : **REPLACE THE ORIGINAL STEERING ANGLE SENSOR** .

3. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Start the engine, then turn the steering wheel from lock to lock several times.
   - 4. Test-drive the vehicle at 31 mph (50 km/h) or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 27-21 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 31-11: ABS SOLENOID VALVE MALFUNCTION; DTC 32-11: ABS SOLENOID VALVE MALFUNCTION; DTC 33-11: ABS SOLENOID VALVE MALFUNCTION; DTC 34-11: ABS SOLENOID VALVE MALFUNCTION; DTC 35-11: ABS SOLENOID VALVE MALFUNCTION; DTC 36-11: ABS SOLENOID

VALVE MALFUNCTION; DTC 37-11: ABS SOLENOID VALVE MALFUNCTION; DTC 38-11: ABS SOLENOID VALVE MALFUNCTION

Fig. 24: VSA DTC Troubleshooting Flow Chart (31-11, 32-11, 33-11, 34-11, 35-11, 36-11, 37-11, 38-110)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
31-11 ABS Solenoid Valve Malfunction		
32-11 ABS Solenoid Valve Malfunction		
33-11 ABS Solenoid Valve Malfunction		
34-11 ABS Solenoid Valve Malfunction		
35-11 ABS Solenoid Valve Malfunction		
36-11 ABS Solenoid Valve Malfunction		
37-11 ABS Solenoid Valve Malfunction		
38-11 ABS Solenoid Valve Malfunction		

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Clear the DTC with the HDS.

- 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
31-11 ABS Solenoid Valve Malfunction		
32-11 ABS Solenoid Valve Malfunction		
33-11 ABS Solenoid Valve Malfunction		
34-11 ABS Solenoid Valve Malfunction		
35-11 ABS Solenoid Valve Malfunction		
36-11 ABS Solenoid Valve Malfunction		
37-11 ABS Solenoid Valve Malfunction		
38-11 ABS Solenoid Valve Malfunction		

Is DTC 31-11, 32-11, 33-11, 34-11, 35-11, 36-11, 37-11, or 38-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 31-11, 32-11, 33-11, 34-11, 35-11, 36-11, 37-11, or 38-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 51-12: MOTOR POWER SOURCE CIRCUIT MALFUNCTION; DTC 51-80: MOTOR MALFUNCTION; DTC 52-11: MOTOR STUCK OFF

Fig. 25: VSA DTC Troubleshooting Flow Chart (51-12, 51-80, 52-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame

51-12 Motor Power Source Circuit Malfunction		
51-80 Motor Malfunction		
52-11 Motor Stuck OFF		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Turn the ignition switch to ON (II), then wait for at least 20 seconds or more.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
51-12 Motor Power Source Circuit Malfunction		
51-80 Motor Malfunction		
52-11 Motor Stuck OFF		
53-11 Motor Relay Stuck ON		

Is DTC 51-12, 51-80, or 52-11 indicated?

YES : If DTC 51-12, 51-80, or 52-11 are only indicated, go to step 2.

YES : If DTC 53-11 is also indicated, **go to DTC 53-11**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A1-3 (40 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Reinstall the fuse, then go to step 5.

NO : Go to step 3.

3. Shorted wire check (+B ABS/VSA MTR line):
   - 1. Disconnect the following connector.

     VSA modulator-control unit 38P connector

- 2. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  VSA modulator-control unit 38P connector: disconnected

  Test circuit +B ABS/VSA MTR

  Test point 1 VSA modulator-control unit 38P connector No. 2 (RED)

  Test point 2 Body ground

Fig. 26: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 2 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the No. A1-3 (40 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

NO : The +B ABS/VSA MTR wire is not shorted to ground. Install a new No. A1-3 (40 A) fuse in the under-hood fuse/relay box, then go to step 4.

4. VSA modulator-control unit check:
   - 1. Reconnect the following connector.

     VSA modulator-control unit 38P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Clear the DTC with the HDS.
   - 4. Turn the ignition switch to LOCK (0).
   - 5. Turn the ignition switch to ON (II), then wait for at least 20 seconds or more.
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
51-12 Motor Power Source Circuit Malfunction		
51-80 Motor Malfunction		
52-11 Motor Stuck OFF		

Is DTC 51-12, 51-80, or 52-11 indicated?

YES : Go to step 6.

NO : The troubleshooting is complete.

5. Open wire check (+B ABS/VSA MTR line):
   - 1. Disconnect the following connector.

     VSA modulator-control unit 38P connector

   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Test circuit +B ABS/VSA MTR

     Test point 1 VSA modulator-control unit 38P connector No. 2 (RED)

     Test point 2 Body ground

Fig. 27: Measuring Voltage Between VSA Modulator-Control Unit 38P Connector No. 2 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B ABS/VSA MTR wire is OK. Go to step 6.

NO : Repair an open in the wire between the No. A1-3 (40 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

6. VSA modulator-control unit check (update):
   - 1. Reconnect the following connector.

     VSA modulator-control unit 38P connector (if disconnected)

   - 2. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Turn the ignition switch to ON (II), then wait for at least 20 seconds or more.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 51-12, 51-80, or 52-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 51-13: MOTOR DRIVE CIRCUIT MALFUNCTION

Fig. 28: VSA DTC Troubleshooting Flow Chart (51-13)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
51-13 Motor Drive Circuit Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 25 mph (40 km/h) or more.

     NOTE: **Drive the vehicle on the road, not on a lift.**

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
51-13 Motor Drive Circuit Malfunction		

Is DTC 51-13 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):

- 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
- 2. Turn the ignition switch to LOCK (0).
- 3. Test-drive the vehicle at 25 mph (40 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 51-13 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 53-11: MOTOR RELAY STUCK ON

Fig. 29: VSA DTC Troubleshooting Flow Chart (53-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
53-11 Motor Relay Stuck ON		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
53-11 Motor Relay Stuck ON		

Is DTC 53-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Open wire check (GND line):

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  VSA modulator-control unit 38P connector

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  VSA modulator-control unit 38P connector: disconnected

  Test circuit GND

  Test point 1 VSA modulator-control unit 38P connector No. 1 (BLK)

  Test point 2 Body ground

Fig. 30: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 1 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 3.

NO : Repair an open in the wire between the VSA modulator-control unit and body ground (G201).

3. VSA modulator-control unit check (update):
   - 1. Reconnect the following connector.

     VSA modulator-control unit 38P connector

   - 2. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

- 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 53-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 54-13: FAIL-SAFE RELAY POWER SOURCE MALFUNCTION

Fig. 31: VSA DTC Troubleshooting Flow Chart (54-13)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
54-13 Fail-Safe Relay Power Source Malfunction		

1. Problem verification:

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
54-13 Fail-Safe Relay Power Source Malfunction		

Is DTC 54-13 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 54-13 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 54-14: FAIL-SAFE RELAY DRIVE CIRCUIT MALFUNCTION

Fig. 32: VSA DTC Troubleshooting Flow Chart (54-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
54-14 Fail-Safe Relay Drive Circuit Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 9 mph (15 km/h) or more.

     NOTE: **Drive the vehicle on the road, not on a lift.**

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
54-14 Fail-Safe Relay Drive Circuit Malfunction		

Is DTC 54-14 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):

- 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.
- 2. Turn the ignition switch to LOCK (0).
- 3. Test-drive the vehicle at 9 mph (15 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 54-14 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 61-12: MODULATOR-CONTROL UNIT POWER SOURCE CIRCUIT (IG) LOW VOLTAGE

Fig. 33: VSA DTC Troubleshooting Flow Chart (61-12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
61-12 Modulator-Control Unit Power Source Circuit (IG) Low Voltage		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 5. Test-drive the vehicle at 6 mph (10 km/h) or more.

     NOTE: **Drive the vehicle on the road, not on a lift.**

   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
61-12 Modulator-Control Unit Power Source Circuit (IG) Low Voltage		

Is DTC 61-12 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting, then **CHECK THE BATTERY** .

2. VSA modulator-control unit check:
   - 1. Check and note the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
BATTERY VOLTAGE		

   - 2. Using a voltmeter, measure and note the voltage across the battery terminals.

NOTE: **If the voltage is below 9.5 V, CHECK THE BATTERY , and check the PGM-FI DTCs See HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS or HOW TO TROUBLESHOOT THE A/T SYSTEM .**

   - 3. Compare the voltage noted in step 2-1 to the voltage in step 2-2.

Is the difference between the two voltage readings less than 3 V?

YES : Check the **BATTERY** , and check the **PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** or **HOW TO TROUBLESHOOT THE A/T SYSTEM** .

NO : Go to step 3.

3. Open wire check (IG1 VSA/ABS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     VSA modulator-control unit 38P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     VSA modulator-control unit 38P connector: disconnected

Test circuit IG1 VSA/ABS

Test point 1 VSA modulator-control unit 38P connector No. 36 (PUR)

Test point 2 Body ground

Fig. 34: Measuring Voltage Between VSA Modulator-Control Unit 38P Connector No. 36 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 VSA/ABS wire is OK. Go to step 4.

NO : Repair an open or high resistance in the wire between the No. B24 (7.5 A) fuse in the under-dash fuse/relay box and the VSA modulator-control unit.

4. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Start the engine, and warm it up to normal operating temperature (the radiator fan comes on).
   - 4. Test-drive the vehicle at 6 mph (10 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 61-12 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 62-11: MODULATOR-CONTROL UNIT POWER SOURCE CIRCUIT (IG) HIGH VOLTAGE

Fig. 35: VSA DTC Troubleshooting Flow Chart (62-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
62-11 Modulator-Control Unit Power Source Circuit (IG) High Voltage		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).

- 4. Start the engine.
- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
62-11 Modulator-Control Unit Power Source Circuit (IG) High Voltage		

Is DTC 62-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check:
   - 1. With the engine still running, check and note the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
BATTERY VOLTAGE		

   - 2. Using a voltmeter, measure and note the voltage across the battery terminals.

NOTE: **If the voltage is more than 15.1 V, troubleshoot the PGM-FI DTCs See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

   - 3. Compare the voltage noted in step 2-1 to the voltage in step 2-2.

Is the difference between the two voltage readings less than 3 V?

YES : Check the **BATTERY** , and check the **PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

NO : Go to step 3.

3. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 62-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 65-11: BRAKE FLUID LEVEL SWITCH CIRCUIT MALFUNCTION

Fig. 36: VSA DTC Troubleshooting Flow Chart (65-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Bleeding the brake system while the ignition switch is ON (II) can cause this DTC.**
- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame

65-11 Brake Fluid Level Switch Circuit Malfunction		

1. Brake fluid level check:
   - 1. Check the brake fluid level in the master cylinder reservoir.

   Is the brake fluid level OK?

   YES : Go to step 2.

   NO

   - **INSPECT THE BRAKE LINES AND HOSES FOR LEAKS** , and repair as needed.
   - Inspect the brake pads: **FRONT** , **REAR** , and replace worn out brake pads.
   - Add brake fluid and recheck.
2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Wait for at least 60 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
65-11 Brake Fluid Level Switch Circuit Malfunction		

   Is DTC 65-11 indicated?

   YES : The failure is duplicated. Go to step 3.

   NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. Gauge control module check:
   - 1. Release the parking brake.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Wait for at least 60 seconds.
   - 4. Check the brake system indicator in the gauge control module.

   Does the indicator come on then go off?

   YES : Go to step 6.

   NO : Go to step 4.

4. Brake fluid level switch check:

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Brake fluid level switch 2P connector

- 3. On the switch side, check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Brake fluid level switch 2P connector: disconnected

  Test circuit BRAKE LEVEL SW, GND

  Test point 1 Brake fluid level switch 2P connector No. 1

  Test point 2 Brake fluid level switch 2P connector No. 2

Fig. 37: Checking Continuity Between Brake Fluid Level Switch 2P Connector No. 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Replace the master cylinder (brake fluid level switch is included)** See **BRAKE MASTER CYLINDER INSPECTION** or **BRAKE MASTER CYLINDER REMOVAL AND INSTALLATION** .

NO : Go to step 5.

5. Shorted wire check (BRAKE LEVEL SW line):
   - 1. Disconnect the following connector.

     Gauge control module 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

Brake fluid level switch 2P connector: disconnected

Gauge control module 32P connector: disconnected

Test circuit BRAKE LEVEL SW

Test point 1 Brake fluid level switch 2P connector No. 2 (GRY)

Test point 2 Body ground

Fig. 38: Checking Continuity Between Brake Fluid Level Switch 2P Connector No. 2 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the gauge control module and the brake fluid level switch.

NO : The BRAKE LEVEL SW wire is OK. **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

6. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Wait for at least 60 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 65-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 66-13: PRESSURE SENSOR MALFUNCTION

Fig. 39: VSA DTC Troubleshooting Flow Chart (66-13)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
66-13 Pressure Sensor Malfunction		

1. Brake pedal height check:
   - 1. **Check the brake pedal height** See **BRAKE PEDAL REMOVAL AND INSTALLATION** or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** .

Is brake pedal height OK?

YES : Go to step 2.

NO : **Adjust the brake pedal height** See **BRAKE PEDAL REMOVAL AND INSTALLATION** or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** .

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
66-13 Pressure Sensor Malfunction		

Is DTC 66-13 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 66-13 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 66-14: PRESSURE SENSOR SENSITIVITY MALFUNCTION

Fig. 40: VSA DTC Troubleshooting Flow Chart (66-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
66-14 Pressure Sensor Sensitivity Malfunction		

1. Brake pedal height check:
   - 1. **Check the brake pedal height** See **BRAKE PEDAL REMOVAL AND INSTALLATION** or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** .

   Is brake pedal height OK?

   YES : Go to step 2.

   NO : **Adjust the brake pedal height** See **BRAKE PEDAL REMOVAL AND INSTALLATION** or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** .

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 9 mph (15 km/h) or more for 60 seconds or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
66-14 Pressure Sensor Sensitivity Malfunction		

Is DTC 66-14 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 9 mph (15 km/h) or more for 60 seconds or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 66-14 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 68-12: BRAKE PEDAL POSITION SWITCH STUCK ON

Fig. 41: VSA DTC Troubleshooting Flow Chart (68-12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
68-12 Brake Pedal Position Switch Stuck ON		

1. Brake pedal position switch performance check 1:
   - 1. Check the parameter(s) below with the HDS while pressing the brake pedal.

Signal	Current conditions	
	Values	Unit
BRAKE SWITCH		

Does it indicate ON when the pedal is pressed, and OFF when the pedal is released?

YES : Go to step 2.

NO : Go to step 3.

2. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 9 mph (15 km/h) or more for 60 seconds or more.

NOTE: Drive the vehicle on the road, not on a lift.

   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
68-12 Brake Pedal Position Switch Stuck ON		

Is DTC 68-12 indicated?

YES : The failure is duplicated. Go to step 6.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. Brake pedal position switch performance check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Brake pedal position switch 4P connector

   - 3. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
BRAKE SWITCH		

Does the indicator change from ON to OFF?

YES : **Replace the brake pedal position switch** See **BRAKE PEDAL REMOVAL AND INSTALLATION** or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** .

NO : Go to step 4.

4. Shorted wire check (STOP SW line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Short the SCS line with the HDS.
   - 3. Disconnect the following connector.

     PCM connector A (49P)

   - 4. Turn the ignition switch to ON (II).
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Brake pedal position switch 4P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit STOP SW

     Test point 1 Brake pedal position switch 4P connector No. 1 (BLU)

     Test point 2 Body ground

Fig. 42: Measuring Voltage Between Brake Pedal Position Switch 4P Connector No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES : Repair a short to power in the wire between the PCM and the brake pedal position switch.

NO : The STOP SW wire is OK. Go to step 5.

5. PCM check (update or substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the following connectors.

     Brake pedal position switch 4P connector

     PCM connector A (49P)

   - 3. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** .
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Test-drive the vehicle at 9 mph (15 km/h) or more for 60 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
68-12 Brake Pedal Position Switch Stuck ON		

Is DTC 68-12 indicated?

YES : Go to step 6.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

6. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 9 mph (15 km/h) or more for 60 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 68-12 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 68-13: BRAKE PEDAL POSITION SWITCH CIRCUIT MALFUNCTION

Fig. 43: VSA DTC Troubleshooting Flow Chart (68-13)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-**

BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .

DTC Description	DTC	Freeze Frame
68-13 Brake Pedal Position Switch Circuit Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Turn the ignition switch to ON (II), then press the brake pedal hard for 1 second or more.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
68-13 Brake Pedal Position Switch Circuit Malfunction		

Is DTC 68-13 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit performance check:
   - 1. Start the engine.
   - 2. Check the parameter(s) below with the HDS. Do not press the brake pedal.

Signal	Current conditions	
	Values	Unit
BRAKE PRESSURE		

Is there 8 MPa or less?

YES : Go to step 3.

NO : **CHECK FOR BRAKE DRAG** or a **misadjusted brake pedal position switch** See **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** or **BRAKE PEDAL REMOVAL AND INSTALLATION** . If they are normal, go to step 12.

3. Brake pedal position switch performance check 1:
   - 1. Check the parameter(s) below with the HDS while pressing the brake pedal.

Signal	Current conditions	
	Values	Unit

BRAKE SWITCH		

Does it indicate ON when the pedal is pressed, and OFF when the pedal is released?

YES : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

NO : Go to step 4.

4. Brake pedal position switch performance check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Brake pedal position switch 4P connector

   - 3. Connect terminals 1 and 2 with a jumper wire.

     Terminal 1 Brake pedal position switch 4P connector No. 1 (BLU)

     Terminal 2 Brake pedal position switch 4P connector No. 2 (GRN)

Fig. 44: Connecting Wire Between Brake Pedal Position Switch 4P Connector No. 1 (BLU) And 2 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).
   - 5. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
BRAKE SWITCH		

Does it indicate ON?

YES : **Check the brake pedal position switch adjustment** See **BRAKE PEDAL REMOVAL AND INSTALLATION** or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** . If it is OK, **replace the brake pedal position switch** See **BRAKE PEDAL**

POSITION SWITCH REMOVAL AND INSTALLATION or **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT** .

NO : Go to step 5.

5. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the jumper wire.
   - 3. Check the following fuse.

     Fuse No. A16 (10 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Reinstall the fuse, then go to step 9.

NO : Go to step 6.

6. Shorted wire check (+B STOP line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Brake pedal position switch 4P connector: disconnected

     Test circuit +B STOP

     Test point 1 Brake pedal position switch 4P connector No. 2 (GRN)

     Test point 2 Body ground

Fig. 45: Checking Continuity Between Brake Pedal Position Switch 4P Connector No. 2 (GRN) And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the No. A16 (10 A) fuse in the under-hood fuse/relay box and the brake pedal position switch.

NO : The +B STOP wire is not shorted to body ground. Go to step 7.

7. Shorted wire check (STOP SW line to power):
   - 1. Short the SCS line with the HDS.
   - 2. Disconnect the following connector.

     PCM connector A (49P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Brake pedal position switch 4P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit STOP SW

     Test point 1 Brake pedal position switch 4P connector No. 1 (BLU)

     Test point 2 Body ground

Fig. 46: Checking Continuity Between Brake Pedal Position Switch 4P Connector No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the brake pedal position switch and the PCM.

NO : The STOP SW wire is not short to body ground. Install a new No. A16 (10 A) fuse in the under-hood fuse/relay box, then go to step 8.

8. VSA modulator-control unit check:
   - 1. Reconnect the following connectors.

     Brake pedal position switch 4P connector

     PCM connector A (49P)

   - 2. Turn the ignition switch to ON (II).
   - 3. Clear the DTC with the HDS.
   - 4. Turn the ignition switch to LOCK (0).
   - 5. Turn the ignition switch to ON (II), then press the brake pedal hard for 1 second or more.
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
68-13 Brake Pedal Position Switch Circuit Malfunction		

Is DTC 68-13 indicated?

YES : Go to step 12.

NO : The troubleshooting is complete.

9. Open wire check (+B STOP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Brake pedal position switch 4P connector: disconnected

     Test circuit +B STOP

     Test point 1 Brake pedal position switch 4P connector No. 2 (GRN)

     Test point 2 Body ground

Fig. 47: Measuring Voltage Between Brake Pedal Position Switch 4P Connector No. 2 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B STOP wire is OK. Go to step 10.

NO : Repair an open in the wire between the No. A16 (10 A) fuse in the under-hood fuse/relay box and the brake pedal position switch.

10. Open wire check (STOP SW line):
    - 1. Short the SCS line with the HDS.
    - 2. Disconnect the following connector.

      PCM connector A (49P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Brake pedal position switch 4P connector: disconnected

      PCM connector A (49P): disconnected

      Test circuit STOP SW

      Test point 1 Brake pedal position switch 4P connector No. 1 (BLU)

      Test point 2 PCM connector A (49P) No. 13 (BLU)

Fig. 48: Checking Continuity Between Brake Pedal Position Switch 4P Connector No. 1 (BLU) And PCM Connector A (49P) No. 13 (BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The STOP SW wires is OK. Go to step 11.

NO : Repair an open in the wire between the PCM and the brake pedal position switch.

11. PCM check (update or substitution):
    - 1. Reconnect the following connectors.

      Brake pedal position switch 4P connector

      PCM connector A (49P)

    - 2. **Update the PCM if it does not have the latest software** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** , or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** .
    - 3. Clear the DTC with the HDS.
    - 4. Turn the ignition switch to LOCK (0).
    - 5. Turn the ignition switch to ON (II), then press the brake pedal hard for 1 second or more.
    - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
68-13 Brake Pedal Position Switch Circuit Malfunction		

Is DTC 68-13 indicated?

YES : Go to step 12.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** .

12. VSA modulator-control unit check (update):
    - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Turn the ignition switch to ON (II), then press the brake pedal hard for 1 second or more.
    - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 68-13 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 71-80: ABNORMAL SLIP MALFUNCTION

Fig. 49: VSA DTC Troubleshooting Flow Chart (71-80)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
71-80 Abnormal Slip Malfunction		

1. Tire check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **CHECK ALL FOUR TIRES FOR SIZE, INFLATION, AND WEAR** .

Are all four tires the correct size, properly inflated, and worn evenly?

YES : Go to step 2.

NO : Install the correct tires, a known-good set of tires, or set the tires to the correct pressure, and retest by test-driving.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 12 mph (20 km/h) or more for 90 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
71-80 Abnormal Slip Malfunction		

Is DTC 71-80 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. Wheel speed sensor performance check:
   - 1. Test-drive the vehicle at 12 mph (20 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
RIGHT FRONT WHEEL SPEED		
LEFT FRONT WHEEL SPEED		
RIGHT REAR WHEEL SPEED		
LEFT REAR WHEEL SPEED		

Are one of the four values different?

YES : Go to step 4.

NO : Go to step 6.

4. Wheel speed sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good wheel speed sensor** See **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

Appropriate Wheel Speed Sensor
Right-front
Left-front
Right-rear
Left-rear

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Test-drive the vehicle at 12 mph (20 km/h) or more for 90 seconds or more.

NOTE: Drive the vehicle on the road, not on a lift.

   - 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
71-80 Abnormal Slip Malfunction		

Is DTC 71-80 indicated?

YES : Go to step 5.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

5. Magnetic encoder check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Inspect the magnetic encoder for damage, debris, and correct installation.
     - Front: **REMOVE THE DRIVESHAFT OUTBOARD JOINT FROM THE APPROPRIATE WHEEL HUB** .
     - Rear: **REMOVE THE HUB BEARING UNIT** .

Is the magnetic encoder surface OK?

YES : Go to step 6.

NO : Clean debris from the magnetic encoder surface on the wheel bearing or the hub bearing unit. If the DTC is still present, replace the appropriate **WHEEL BEARING** or the **HUB BEARING UNIT** .

6. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 12 mph (20 km/h) or more for 90 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 71-80 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 71-81: RIGHT-FRONT WHEEL ABNORMAL SLIP MALFUNCTION; DTC 71-82: LEFT-FRONT WHEEL ABNORMAL SLIP MALFUNCTION; DTC 71-83: RIGHT-REAR WHEEL ABNORMAL SLIP MALFUNCTION; DTC 71-84: LEFT-REAR WHEEL ABNORMAL SLIP MALFUNCTION

Fig. 50: VSA DTC Troubleshooting Flow Chart (71-81, 71-82, 71-83, 71-84)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
71-81 Right-Front Wheel Abnormal Slip Malfunction		
71-82 Left-Front Wheel Abnormal Slip Malfunction		
71-83 Right-Rear Wheel Abnormal Slip Malfunction		
71-84 Left-Rear Wheel Abnormal Slip Malfunction		

1. Tire check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **CHECK ALL FOUR TIRES FOR SIZE, INFLATION, AND WEAR** .

   Are all four tires the correct size, properly inflated, and worn evenly?

   YES : Go to step 2.

   NO : Install the correct tires, a known-good set of tires, or set the tires to the correct pressure, and retest by test-driving.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 12 mph (20 km/h) or more for 90 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
71-81 Right-Front Wheel Abnormal Slip Malfunction		
71-82 Left-Front Wheel Abnormal Slip Malfunction		
71-83 Right-Rear Wheel Abnormal Slip Malfunction		
71-84 Left-Rear Wheel Abnormal Slip Malfunction		

   Is DTC 71-81, 71-82, 71-83, or 71-84 indicated?

   YES : The failure is duplicated. Go to step 3.

   NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. Wheel speed sensor performance check:
   - 1. Test-drive the vehicle at 12 mph (20 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
RIGHT FRONT WHEEL SPEED		

LEFT FRONT WHEEL SPEED		
RIGHT REAR WHEEL SPEED		
LEFT REAR WHEEL SPEED		

Is any one of the four values different?

YES : Go to step 4.

NO : Go to step 6.

4. Wheel speed sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

Appropriate Wheel Speed Sensor
Right-front
Left-front
Right-rear
Left-rear

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Test-drive the vehicle at 12 mph (20 km/h) or more for 90 seconds or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

   - 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
71-81 Right-Front Wheel Abnormal Slip Malfunction		
71-82 Left-Front Wheel Abnormal Slip Malfunction		
71-83 Right-Rear Wheel Abnormal Slip Malfunction		
71-84 Left-Rear Wheel Abnormal Slip Malfunction		

Is DTC 71-81, 71-82, 71-83, or 71-84 indicated?

YES : Go to step 5.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

5. Magnetic encoder check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Inspect the magnetic encoder for damage, debris, and correct installation.
     - Front: **REMOVE THE DRIVESHAFT OUTBOARD JOINT FROM THE APPROPRIATE WHEEL HUB** .
     - Rear: **REMOVE THE HUB BEARING UNIT** .

   Is the magnetic encoder surface OK?

   YES : Go to step 6.

   NO : Clean debris from the magnetic encoder surface on the wheel bearing or the hub bearing unit. If the DTC is still present, replace the appropriate **WHEEL BEARING** or the **HUB BEARING UNIT** .

6. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 12 mph (20 km/h) or more for 90 seconds or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

   Is DTC 71-81, 71-82, 71-83, or 71-84 indicated?

   YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**, then go to step 2 and recheck. If the DTC is still present, replace the appropriate **WHEEL BEARING** or the **HUB BEARING UNIT** .

   NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 81-11: MODULATOR-CONTROL UNIT INTERNAL CIRCUIT MALFUNCTION

Fig. 51: VSA DTC Troubleshooting Flow Chart (81-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
81-11 Modulator-Control Unit Internal Circuit Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
81-11 Modulator-Control Unit Internal Circuit Malfunction		

Is DTC 81-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

- 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
- 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 81-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 81-19: YAW RATE SENSOR (INSIDE OF MODULATOR-CONTROL UNIT) INTERNAL CIRCUIT MALFUNCTION; DTC 81-20: ACCELERATION SENSOR (INSIDE OF MODULATOR-CONTROL UNIT) INTERNAL CIRCUIT MALFUNCTION

Fig. 52: VSA DTC Troubleshooting Flow Chart (81-19, 81-20)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**
- **The yaw rate-acceleration sensor is built into the VSA modulator-control**

unit.

- **Before troubleshooting, check the VSA modulator-control unit for proper mounting. If not properly installed the VSA modulator-control unit may set these codes.**

DTC Description	DTC	Freeze Frame
81-19 Yaw Rate Sensor (Inside of Modulator-Control Unit) Internal Circuit Malfunction		
81-20 Acceleration Sensor (Inside of Modulator-Control Unit) Internal Circuit Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
81-19 Yaw Rate Sensor (Inside of Modulator-Control Unit) Internal Circuit Malfunction		
81-20 Acceleration Sensor (Inside of Modulator-Control Unit) Internal Circuit Malfunction		

Is DTC 81-19 or 81-20 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 81-19 or 81-20 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 83-11: ECM/PCM (PGM-FI) MALFUNCTION

Fig. 53: VSA DTC Troubleshooting Flow Chart (83-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
83-11 ECM/PCM (PGM-FI) Malfunction		

1. Problem verification:

- 1. Turn the ignition switch to ON (II).
- 2. Clear the DTC with the HDS.
- 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
83-11 ECM/PCM (PGM-FI) Malfunction		

Is DTC 83-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. PGM-FI DTCs check:
   - 1. Check for PGM-FI DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

Are any DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : Go to step 3.

3. PCM check (update or substitution):
   - 1. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
83-11 ECM/PCM (PGM-FI) Malfunction		

Is DTC 83-11 indicated?

YES : Go to step 4.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

4. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 83-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 86-11: F-CAN BUS-OFF MALFUNCTION

Fig. 54: VSA DTC Troubleshooting Flow Chart (86-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
86-11 F-CAN Bus-Off Malfunction		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Start the engine for at least 5 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
86-11 F-CAN Bus-Off Malfunction		

Is DTC 86-11 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Open wire check (F CAN-L, F CAN-H lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Short the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     VSA modulator-control unit 38P connector

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit F CAN-L

     Test point 1 VSA modulator-control unit 38P connector No. 26 (RED)

Test point 2 PCM connector A (49P) No. 4 (RED)

Test circuit F CAN-H

Test point 1 VSA modulator-control unit 38P connector No. 38 (WHT)

Test point 2 PCM connector A (49P) No. 3 (WHT)

Fig. 55: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 26 (RED) And PCM Connector A (49P) No. 4 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Go to step 3.

NO : Repair an open in the wire between the PCM and the VSA modulator-control unit.

3. VSA modulator-control unit check (update):
   - 1. Reconnect the following connectors.

     VSA modulator-control unit 38P connector

     PCM connector A (49P)

   - 2. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL**

UNIT UPDATE or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

- 3. Turn the ignition switch to LOCK (0).
- 4. Start the engine for at least 5 seconds.
- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 86-11 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 86-12: F-CAN COMMUNICATION WITH ECM/PCM (PGM-FI) MALFUNCTION; DTC 86-13: F-CAN COMMUNICATION WITH PCM (AT/CVT) MALFUNCTION

Fig. 56: VSA DTC Troubleshooting Flow Chart (86-12, 86-13)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
86-12 F-CAN Communication With ECM/PCM (PGM-FI) Malfunction		
86-13 F-CAN Communication With PCM (AT/CVT) Malfunction		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Start the engine for at least 5 seconds.
   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
86-11 F-CAN Bus-Off Malfunction		
86-12 F-CAN Communication With ECM/PCM (PGM-FI) Malfunction		
86-13 F-CAN Communication With PCM (AT/CVT) Malfunction		

Is DTC 86-12 or 86-13 indicated?

YES : If DTC 86-12 or 86-13 are only indicated, go to step 2.

YES : If DTC 86-11 is also indicated, **go to DTC 86-11**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Open wire check (F CAN-L, F CAN-H lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Short the SCS line with the HDS.
   - 3. Disconnect the following connectors.

     VSA modulator-control unit 38P connector

     PCM connector A (49P)

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     PCM connector A (49P): disconnected

     Test circuit F CAN-L

     Test point 1 VSA modulator-control unit 38P connector No. 26 (RED)

     Test point 2 PCM connector A (49P) No. 4 (RED)

     Test circuit F CAN-H

     Test point 1 VSA modulator-control unit 38P connector No. 38 (WHT)

     Test point 2 PCM connector A (49P) No. 3 (WHT)

Fig. 57: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 26 (RED) And PCM Connector A (49P) No. 4 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Go to step 3.

NO : Repair an open in the wire between the PCM and the VSA modulator-control unit.

3. PCM check (update or substitution):
   - 1. Reconnect the following connectors.

     VSA modulator-control unit 38P connector

     PCM connector A (49P)

   - 2. **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM UPDATE** or **PCM REMOVAL AND INSTALLATION** .
   - 3. Clear the DTC with the HDS.
   - 4. Turn the ignition switch to LOCK (0).
   - 5. Start the engine for at least 5 seconds.
   - 6. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

86-12 F-CAN Communication With ECM/PCM (PGM-FI) Malfunction		
86-13 F-CAN Communication With PCM (AT/CVT) Malfunction		

Is DTC 86-12 or 86-13 indicated?

YES : Go to step 4.

NO : If the PCM was updated, troubleshooting is complete. If the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

4. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Start the engine for at least 5 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 86-12 or 86-13 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 86-14: F-CAN COMMUNICATION WITH GAUGE CONTROL MODULE MALFUNCTION

Fig. 58: VSA DTC Troubleshooting Flow Chart (86-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
86-14 F-CAN Communication With Gauge Control Module Malfunction		

1. DTC check:
    - 1. Turn the ignition switch to ON (II).
    - 2. Clear the DTC with the HDS.

- 3. Turn the ignition switch to LOCK (0).
- 4. Start the engine for at least 5 seconds.
- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
86-11 F-CAN Bus-Off Malfunction		
86-14 F-CAN Communication With Gauge Control Module Malfunction		

Is DTC 86-14 indicated?

YES : If DTC 86-14 is only indicated, go to step 2.

YES : If DTC 86-11 is also indicated, **go to DTC 86-11**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Body electrical system DTC check:
   - 1. Check for gauge control module DTCs with the HDS.

DTC Description	DTC

Are any DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : Go to step 3.

3. Open wire check (F CAN-L, F CAN-H lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     VSA modulator-control unit 38P connector

     Gauge control module 32P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Gauge control module 32P connector: disconnected

Test circuit F CAN-L

Test point 1 VSA modulator-control unit 38P connector No. 26 (RED)

Test point 2 Gauge control module 32P connector No. 20 (RED)

Test circuit F CAN-H

Test point 1 VSA modulator-control unit 38P connector No. 38 (WHT)

Test point 2 Gauge control module 32P connector No. 19 (WHT)

Fig. 59: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 26 (RED) And Gauge Control Module 32P Connector No. 20 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Go to step 4.

NO : Repair an open in the wire between the gauge control module and the VSA modulator-control unit.

4. Gauge control module check (substitution):
   - 1. **Substitute a known-good gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .
   - 2. Reconnect the following connectors.

     VSA modulator-control unit 38P connector

Gauge control module 32P connector

- 3. Turn the ignition switch to ON (II).
- 4. Clear the DTC with the HDS.
- 5. Turn the ignition switch to LOCK (0).
- 6. Start the engine for at least 5 seconds.
- 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
86-14 F-CAN Communication With Gauge Control Module Malfunction		

Is DTC 86-14 indicated?

YES : Go to step 5.

NO : **Replace the original gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

5. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Start the engine for at least 5 seconds.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 86-14 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 86-19: F-CAN COMMUNICATION WITH STEERING ANGLE SENSOR MALFUNCTION

Fig. 60: VSA DTC Troubleshooting Flow Chart (86-19)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
86-19 F-CAN Communication With Steering Angle Sensor Malfunction		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).

- 2. Clear the DTC with the HDS.
- 3. Turn the ignition switch to LOCK (0).
- 4. Start the engine for at least 5 seconds.
- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
86-11 F-CAN Bus-Off Malfunction		
86-19 F-CAN Communication With Steering Angle Sensor Malfunction		

Is DTC 86-19 indicated?

YES : If DTC 86-19 is only indicated, go to step 2.

YES : If DTC 86-11 is also indicated, **go to DTC 86-11**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. Open wire check (F CAN-L, F CAN-H lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     VSA modulator-control unit 38P connector

     Steering angle sensor 4P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Steering angle sensor 4P connector: disconnected

     Test circuit F CAN-L

     Test point 1 VSA modulator-control unit 38P connector No. 26 (RED)

     Test point 2 Steering angle sensor 4P connector No. 3 (RED)

     Test circuit F CAN-H

     Test point 1 VSA modulator-control unit 38P connector No. 38 (WHT)

     Test point 2 Steering angle sensor 4P connector No. 2 (WHT)

Fig. 61: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 26 (RED) And Steering Angle Sensor 4P Connector No. 3 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Go to step 3.

NO : Repair an open in the wire between the steering angle sensor and the VSA modulator-control unit.

3. Open wire check (IG1 VSA/ABS line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     VSA modulator-control unit 38P connector: disconnected

     Steering angle sensor 4P connector: disconnected

     Test circuit IG1 VSA/ABS

     Test point 1 Steering angle sensor 4P connector No. 1 (GRN)

     Test point 2 Body ground

Fig. 62: Measuring Voltage Between Steering Angle Sensor 4P Connector No. 1 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 VSA/ABS wire is OK. Go to step 4.

NO : Repair an open in the wire between the No. B24 (7.5 A) fuse in the under-dash fuse/relay box and the steering angle sensor.

4. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Steering angle sensor 4P connector: disconnected

     Test circuit GND

     Test point 1 Steering angle sensor 4P connector No. 4 (BLK)

     Test point 2 Body ground

Fig. 63: Checking Continuity Between Steering Angle Sensor 4P Connector No. 4 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 5.

NO : Repair an open in the wire between the steering angle sensor and body ground (G501).

5. Steering angle sensor check (substitution):
   - 1. **SUBSTITUTE A KNOWN-GOOD STEERING ANGLE SENSOR** .
   - 2. Reconnect the following connectors.

     VSA modulator-control unit 38P connector

     Steering angle sensor 4P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Start the engine for at least 5 seconds.
   - 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
86-19 F-CAN Communication With Steering Angle Sensor Malfunction		

Is DTC 86-19 indicated?

YES : Go to step 6.

NO : **REPLACE THE ORIGINAL STEERING ANGLE SENSOR** .

6. VSA modulator-control unit check (update):

- 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
- 2. Turn the ignition switch to LOCK (0).
- 3. Start the engine for at least 5 seconds.
- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 86-19 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 87-1: WHEEL SPEED SENSOR CIRCUIT SHORT TO POWER

Fig. 64: VSA DTC Troubleshooting Flow Chart (87-1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA**

SYSTEM .

DTC Description	DTC	Freeze Frame
87-1 Wheel Speed Sensor Circuit Short to Power		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
11-13 Right-Front Wheel Speed Sensor Circuit Malfunction		
13-13 Left-Front Wheel Speed Sensor Circuit Malfunction		
15-13 Right-Rear Wheel Speed Sensor Circuit Malfunction		
17-13 Left-Rear Wheel Speed Sensor Circuit Malfunction		
87-1 Wheel Speed Sensor Circuit Short to Power		

Is DTC 87-1 indicated?

YES : If DTC 87-1 is only indicated, go to step 2.

YES : If DTC 11-13, 13-13, 15-13, or 17-13 are also indicated, **go to DTC 11-13, 13-13, 15-13, or 17-13**.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

2. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.
   - 2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 87-1 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA MODULATOR-CONTROL UNIT UPDATE**, **VSA SENSOR**

NEUTRAL POSITION MEMORIZATION or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 88-11: WHEEL SPEED SENSOR NOISE MALFUNCTION

Fig. 65: VSA DTC Troubleshooting Flow Chart (88-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

- **A wheel bearing that is installed backwards can cause this DTC.**

DTC Description	DTC	Freeze Frame
88-11 Wheel Speed Sensor Noise Malfunction		

1. Tire check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **CHECK ALL FOUR TIRES FOR SIZE, INFLATION, AND WEAR** .

   Are all four tires the correct size, properly inflated, and worn evenly?

   YES : Go to step 2.

   NO : Install the correct tires, a known-good set of tires, or set the tires to the correct pressure, and retest by test-driving.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 9 mph (15 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
88-11 Wheel Speed Sensor Noise Malfunction		

   Is DTC 88-11 indicated?

   YES : The failure is duplicated. Go to step 3.

   NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. Wheel speed sensor performance check:
   - 1. Test-drive the vehicle at 9 mph (15 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 2. Check the parameter(s) below with the HDS.

	Current conditions

Signal	Values	Unit
RIGHT FRONT WHEEL SPEED		
LEFT FRONT WHEEL SPEED		
RIGHT REAR WHEEL SPEED		
LEFT REAR WHEEL SPEED		

Is any one of the four values different?

YES : Go to step 4.

NO : Go to step 6.

4. Wheel speed sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

Appropriate Wheel Speed Sensor
Right-front
Left-front
Right-rear
Left-rear

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Test-drive the vehicle at 9 mph (15 km/h) or more.

NOTE: **Drive the vehicle on the road, not on a lift.**

   - 7. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
88-11 Wheel Speed Sensor Noise Malfunction		

s DTC 88-11 indicated?

YES : Go to step 5.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

5. Magnetic encoder check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Inspect the magnetic encoder for damage, debris, and correct installation.
     - Front: **REMOVE THE DRIVESHAFT OUTBOARD JOINT FROM THE APPROPRIATE WHEEL HUB** .
     - Rear: **REMOVE THE HUB BEARING UNIT** .

   Is the magnetic encoder surface OK?

   YES : Go to step 6.

   NO : Clean debris from the appropriate magnetic encoder surface on the wheel bearing or the hub bearing unit. If the DTC is still present, replace the appropriate **WHEEL BEARING** or the **HUB BEARING UNIT** .

6. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 9 mph (15 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

   Is DTC 88-11 indicated?

   YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

   NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 88-12: ABS ACTIVATION TIME TOO LONG

Fig. 66: VSA DTC Troubleshooting Flow Chart (88-12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**
- **A wheel bearing that is installed backwards can cause this DTC.**

DTC Description	DTC	Freeze Frame
88-12 ABS Activation Time Too Long		

1. Tire check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **CHECK ALL FOUR TIRES FOR SIZE, INFLATION, AND WEAR** .

Are all four tires the correct size, properly inflated, and worn evenly?

YES : Go to step 2.

NO : Install the correct tires, a known-good set of tires, or set the tires to the correct pressure, and retest by test-driving.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle at 31 mph (50 km/h) or more for 10 seconds or more under these conditions:
     - Accelerator pedal pressed.
     - Brake pedal released.

     NOTE: Drive the vehicle on the road, not on a lift.

   - Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
88-12 ABS Activation Time Too Long		

Is DTC 88-12 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. Wheel speed sensor performance check:
   - 1. Test-drive the vehicle at 31 mph (50 km/h) or more.

     NOTE: Drive the vehicle on the road, not on a lift.

   - 2. Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
RIGHT FRONT WHEEL SPEED		
LEFT FRONT WHEEL SPEED		
RIGHT REAR WHEEL SPEED		
LEFT REAR WHEEL SPEED		

Is any one of the four values different?

YES : Go to step 4.

NO : Go to step 6.

4. Wheel speed sensor check (substitution):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **Substitute a known-good wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

Appropriate Wheel Speed Sensor
Right-front
Left-front
Right-rear
Left-rear

   - 3. Turn the ignition switch to ON (II).
   - 4. Clear the DTC with the HDS.
   - 5. Turn the ignition switch to LOCK (0).
   - 6. Test-drive the vehicle at 31 mph (50 km/h) or more for 10 seconds or more under these conditions:
     - Accelerator pedal pressed.
     - Brake pedal released.

NOTE: Drive the vehicle on the road, not on a lift.

   - Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
88-12 ABS Activation Time Too Long		

Is DTC 88-12 indicated?

YES : Go to step 5.

NO : **Replace the original wheel speed sensor** See **FRONT WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** or **REAR WHEEL SPEED SENSOR REMOVAL AND INSTALLATION** .

5. Magnetic encoder check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Inspect the magnetic encoder for damage, debris, and correct installation.

- Front: **REMOVE THE DRIVESHAFT OUTBOARD JOINT FROM THE APPROPRIATE WHEEL HUB** .
- Rear: **REMOVE THE HUB BEARING UNIT** .

Is the magnetic encoder surface OK?

YES : Go to step 6.

NO : Clean debris from the appropriate magnetic encoder surface on the wheel bearing or the hub bearing unit. If the DTC is still present, replace the appropriate **WHEEL BEARING** or the **HUB BEARING UNIT** .

6. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA SENSOR NEUTRAL POSITION MEMORIZATION**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle at 31 mph (50 km/h) or more for 10 seconds or more under these conditions:
     - Accelerator pedal pressed.
     - Brake pedal released.

     NOTE: Drive the vehicle on the road, not on a lift.

   - Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 88-12 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC 91-1: VSA ACTIVATION TIME TOO LONG

Fig. 67: VSA DTC Troubleshooting Flow Chart (91-1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **BEFORE YOU TROUBLESHOOT, RECORD ALL FREEZE DATA AND ANY ON-BOARD SNAPSHOT, AND REVIEW THE HOW TO TROUBLESHOOT THE VSA SYSTEM .**

DTC Description	DTC	Freeze Frame
91-1 VSA Activation Time Too Long		

1. Brake system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the brake system for leaks or mechanical problems.

   Is the brake system OK? (No brake fluid leakage, no air trapped in the brake system, no brake pads worn out.)

   YES : Go to step 2.

   NO : Repair the brake system.

2. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Turn the ignition switch to LOCK (0).
   - 4. Test-drive the vehicle in a straight line. Accelerate the vehicle up to 6 mph (10 km/h) or more, and stop, then accelerate up to 6 mph (10 km/h) or more.

NOTE:

- **Do the test-driving in a safe area.**
- **Drive the vehicle on the road, not on a lift.**

- 5. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
91-1 VSA Activation Time Too Long		

Is DTC 91-1 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time. Refer to intermittent failures troubleshooting.

3. VSA modulator-control unit check (update):
   - 1. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Test-drive the vehicle in a straight line. Accelerate the vehicle up to 6 mph (10 km/h) or more, and stop, then accelerate up to 6 mph (10 km/h) or more.

NOTE:

- **Do the test-driving in a safe area.**
- **Drive the vehicle on the road, not on a lift.**

- 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC 91-1 indicated?

YES : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.

NO : Troubleshooting is complete. If any other DTCs are indicated, go to the indicated DTCs troubleshooting.

VSA MODULATOR-CONTROL UNIT CONNECTOR FOR INPUTS AND

OUTPUTS

Terminal side of female terminals

Fig. 68: Identifying VSA Modulator-Control Unit Connector For Inputs And Outputs

VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Honda Diagnostic System (HDS)
	Honda Interface Module (HIM) and an iN workstation with the latest HDS software version

	HDS pocket tester

	GNA600 and an iN workstation with the latest HDS software version
	MVCI unit with the latest control module (CM) update software installed

Any one of the above updating tools can be used.

REMOVAL

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

NOTE:

- **Be careful not to damage or deform the brake lines during removal.**
- **To prevent the brake fluid from dripping, plug and cover the hose ends and joints with a shop towel.**
- **The yaw rate-acceleration sensor is built into the VSA modulator-control unit.**
- **Do not damage or drop the VSA modulator-control unit as it is sensitive.**
- **Do not use power tools with the VSA modulator-control unit.**

1. VSA Modulator-Control Unit Assembly

1. Turn the ignition switch to LOCK (0).
2. Disconnect the 10 mm brake lines (A).
3. Disconnect the 12 mm brake lines (B).

Fig. 69: Identifying VSA Modulator-Control Unit Assembly Brake Lines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connector (A) by pushing the lock (B) and pulling up the lever (C); the connector disconnects itself.

Fig. 70: Disconnecting Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the VSA modulator-control unit (A) with the bracket (B) from the body.

Fig. 71: Identifying VSA Modulator-Control Unit, Bracket And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. VSA Modulator-Control Unit Bracket
    1. Remove the VSA modulator-control unit (A) from the bracket (B).

Fig. 72: Identifying VSA Modulator-Control Unit And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. VSA Modulator-Control Unit Bracket
    1. Install the VSA modulator-control unit (A) onto the bracket (B).

Fig. 73: Identifying VSA Modulator-Control Unit, Bracket And Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. VSA Modulator-Control Unit Assembly
    1. Install the VSA modulator-control unit (A) with the bracket (B) to the body.

Fig. 74: Identifying VSA Modulator-Control Unit, Bracket And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Align the connecting surface of the connector (A).
    3. Pull down the lever (B) of the connector, then confirm the connector is fully seated.

Fig. 75: Pulling Down Connector Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the 10 mm brake lines.
5. Connect the 12 mm brake lines.

NOTE: **Brake lines are connected to the master cylinder (A), the left-rear (B), the right-front (C), the left-front (D), and the right-rear (E) brake systems.**

Fig. 76: Identifying Master Cylinder, Left-Rear, Right-Front, Left-Front And Right-Rear Brake Lines With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
4. Brake System - Bleeding

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid does contact the paint, wash it off immediately with water.**

Fig. 77: Identifying MAX (Upper) Level Line On Reservoir Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not reuse the drained fluid. Use only new Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.**
- **There are three different methods used for bleeding brake systems. The method shown here is the preferred manual method for removing the air from the system. For pressure or vacuum bleeding, refer to tool manufacturer's instructions included with the tool.**

1. Make sure the brake fluid level in the reservoir tank (A) is at the MAX (upper) level line (B).

Fig. 78: Identifying Bleeding Sequence Of Front Brake System Driver's Side Calipers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers in the sequence shown.

3. Attach a length of clear drain tube (A) to the bleed screw (B).
4. Submerge the other end of the drain tube into a clear plastic catch bottle of brake fluid (C).
5. Have an assistant slowly pump the brake pedal several times then apply steady continuous pressure.
6. Loosen the bleed screw slowly to bleed the fluid into the plastic catch bottle. The brake pedal will travel toward the floor as the fluid is bled from the system.

Front

Fig. 79: Bleeding Brake Fluid Into Clear Plastic Catch Bottle Using Drain Tube (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 80: Bleeding Brake Fluid Into Clear Plastic Catch Bottle Using Drain Tube (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. When the brake pedal reaches the floor, have the assistant hold the pedal in that position, then tighten the bleed screw. The brake pedal can now be released.
8. Check and refill the master cylinder reservoir tank to the MAX (upper) level line. Be sure to reinstall the master cylinder reservoir cap.
9. Repeat steps 5 thru 8 until the brake fluid in the clear drain tube appears fresh and there are no air bubbles in the fluid.
10. Repeat this procedure for each brake in the bleeding sequence.

5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 81: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. VSA Modulator-Control Unit - Update

NOTE: Check any official Honda service website for more service information about updating the MVCI and control units.

7. VSA Sensor Neutral Position - Memorization
   1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
   2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

8. Steering Angle Sensor Neutral Position - Clear
   1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

9. Acceleration Neutral Position Sensor - Memorization (With Real Time AWD System)
   1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
   2. Select the G SENSOR LEARNING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

VSA MODULATOR-CONTROL UNIT UPDATE

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	MVCI unit with the latest control module (CM) update software installed

PROCEDURE

NOTE: **High temperature in the engine compartment might cause the VSA modulator-control unit to become too hot to run the update. If the engine has been running before this procedure, open the hood and cool the engine compartment. High temperature in the engine compartment might cause the VSA modulator-control unit to become too hot to run the update. If the engine has been running before this procedure, open the hood and cool the engine compartment.**

1. VSA Modulator-Control Unit - Update

   NOTE: **Check any official Honda service website for more service information about updating the MVCI and control units.**

2. HDS DLC - Connection

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 82: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. VSA Sensor Neutral Position - Memorization
   1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
   2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

      NOTE: See the HDS Help menu for specific instructions.

4. Steering Angle Sensor Neutral Position - Clear
   1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

      NOTE: See the HDS Help menu for specific instructions.

VSA OFF SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Driver's Dashboard Panel Assembly
   1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).

2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 83: Identifying Driver's Dashboard Panel Assembly, Connector And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 84: Identifying Driver's Dashboard Undercover, Holder, Lock Knob And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

Fig. 85: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. VSA Off Switch
    1. Remove the VSA OFF switch (A) from the driver's dashboard lower cover (B).

Fig. 86: Identifying VSA OFF Switch And Driver's Dashboard Lower Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. VSA Off Switch Bulb (If necessary)
    1. Remove the cover (A).
    2. Remove the bulb (B).

Fig. 87: Identifying VSA Off Switch Bulb And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. VSA Off Switch - Test
    1. On the switch side, check for continuity between the connector terminal in each switch position according to the table.
        - If the switch does not work as described in the table, replace the switch.
        - If the switch tests OK, go to step 2.

VSA OFF SWITCH 5P CONNECTOR

Terminal side of male terminals

Terminal / Position	4	5
PRESSED	○	○
RELEASED		

Fig. 88: VSA Off Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 89: Checking Continuity Between Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. On the switch side, check for continuity between connector terminals No. 1 and No. 2. There should be continuity at all times.
    - If the continuity is not as specified, remove the cover, and replace the bulb.

INSTALLATION

1. VSA Off Switch Bulb (If necessary)
    1. Install the bulb (A).
    2. Install the cover (B).

Fig. 90: Identifying VSA Off Switch Bulb And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. VSA Off Switch

1. Install the VSA OFF switch (A) to the driver's dashboard lower cover (B).

<u>Fig. 91: Identifying VSA OFF Switch And Driver's Dashboard Lower Cover</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Lower Cover
    1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 92: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 93: Identifying Driver's Dashboard Undercover, Holder, Lock Knob, Pin And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 94: Identifying Driver's Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VSA SENSOR NEUTRAL POSITION MEMORIZATION

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 95: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

3. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

VSA SYSTEM COMPONENT LOCATION INDEX

ABS INDICATOR, BRAKE SYSTEM INDICATOR, AND VSA INDICATOR DO NOT GO OFF

Fig. 98: VSA System Symptom Troubleshooting/ABS Indicator, Brake System Indicator Flow Chart

(VSA Indicator Do Not Go Off)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Are there DTCs indicated?

YES : Do the DTC troubleshooting.

NO : Go to step 2.

2. Fuse check 1:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B24 (7.5 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Reinstall the fuse, then go to step 3.

NO : Replace the fuse. Turn the ignition switch to ON (II), then turn it to LOCK (0) again. If the fuse blows again, repair the short to ground on the No. B24 (7.5 A) fuse circuit.

3. Fuse check 2:
   - 1. Check the following fuse.

     Fuse No. A1-4 (20 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Reinstall the fuse, then go to step 4.

NO : Replace the fuse. If the fuse blows again, repair the short to ground on the No. A1-4 (20 A) fuse circuit.

4. Gauge control module operation check:
    - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

    Is the gauge control module OK?

    YES : Go to step 5.

    NO : **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

5. Open wire check (IG1 VSA/ABS line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      VSA modulator-control unit 38P connector

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      VSA modulator-control unit 38P connector: disconnected

      Test circuit IG1 VSA/ABS

      Test point 1 VSA modulator-control unit 38P connector No. 36 (PUR)

      Test point 2 Body ground

Fig. 99: Measuring Voltage Between VSA Modulator-Control Unit 38P Connector No. 36 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 VSA/ABS wire is OK. Go to step 6.

NO : Repair an open in the wire between the No. B24 (7.5 A) fuse in the under-dash fuse/relay box and the VSA modulator-control unit.

6. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Test circuit GND

     Test point 1 VSA modulator-control unit 38P connector No. 3 (BLK)

     Test point 2 Body ground

Fig. 100: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 3 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 7.

NO : Repair an open in the wire between the VSA modulator-control unit and body ground (G201).

7. Open wire check (+B ABS/VSA FSR line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

Test circuit +B ABS/VSA FSR

Test point 1 VSA modulator-control unit 38P connector No. 4 (WHT)

Test point 2 Body ground

Fig. 101: Measuring Voltage Between VSA Modulator-Control Unit 38P Connector No. 4 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B ABS/VSA FSR wire is OK. Go to step 8.

NO : Repair an open in the wire between the No. A1-4 (20 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

8. Open wire check (F CAN-L, F CAN-H lines):
   - 1. Disconnect the following connector.

     Gauge control module 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA modulator-control unit 38P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit F CAN-L

     Test point 1 VSA modulator-control unit 38P connector No. 26 (RED)

     Test point 2 Gauge control module 32P connector No. 20 (RED)

Test circuit F CAN-H

Test point 1 VSA modulator-control unit 38P connector No. 38 (WHT)

Test point 2 Gauge control module 32P connector No. 19 (WHT)

Fig. 102: Checking Continuity Between VSA Modulator-Control Unit 38P Connector No. 26 (RED) And Gauge Control Module 32P Connector No. 20 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L, F CAN-H wires are OK. Go to step 9.

NO : Repair an open in the wire between the gauge control module and the VSA modulator-control unit.

9. VSA modulator-control unit check (update):
   - 1. Reconnect the following connectors.

     VSA modulator-control unit 38P connector

     Gauge control module 32P connector

   - 2. **Update the VSA modulator-control unit if it does not have the latest software** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION** or **VSA MODULATOR-CONTROL UNIT UPDATE**.
   - 3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again.
   - 4. Check the ABS indicator, the brake system indicator, and the VSA indicator for several seconds

when the ignition switch to ON (II).

Do the indicators come on then go off?

YES : Troubleshooting is complete.

NO : Check for loose terminals in the VSA modulator-control unit 38P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, **replace the VSA modulator-control unit** See **VSA SENSOR NEUTRAL POSITION MEMORIZATION**, **VSA MODULATOR-CONTROL UNIT UPDATE** or **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**.

VSA CANNOT BE TURNED OFF

Fig. 103: VSA System Symptom Troubleshooting Flow Chart (VSA Cannot Be Turned Off)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **If the low tire pressure indicator turns ON, the VSA cannot be turned OFF. Check the tire pressure first.**

1. VSA OFF switch check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **CHECK THE VSA OFF SWITCH**.

Is the VSA OFF switch OK?

YES : Go to step 2.

NO : **<u>REPLACE THE VSA OFF SWITCH</u>**.

2. Open wire check (VSA OFF SW line):
    - 1. Disconnect the following connectors.

      VSA OFF switch 5P connector

      Gauge control module 32P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      VSA OFF switch 5P connector: disconnected

      Gauge control module 32P connector: disconnected

      Test circuit VSA OFF SW

      Test point 1 VSA OFF switch 5P connector No. 4 (GRN)

      Test point 2 Gauge control module 32P connector No. 29 (GRN)

<u>Fig. 104: Checking Continuity Between VSA OFF Switch 5P Connector No. 4 (GRN) And Gauge Control Module 32P Connector No. 29 (GRN)</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The VSA OFF SW wire is not open. Go to step 3.

NO : Repair an open in the wire between the gauge control module and the VSA OFF switch.

3. Shorted wire check (VSA OFF SW line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA OFF switch 5P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit VSA OFF SW

     Test point 1 VSA OFF switch 5P connector No. 4 (GRN)

     Test point 2 Body ground

Fig. 105: Checking Continuity Between VSA OFF Switch 5P Connector No. 4 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the gauge control module and the VSA OFF switch.

NO : The VSA OFF SW wire is OK. Go to step 4.

4. Open wire check (GND line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     VSA OFF switch 5P connector: disconnected

Gauge control module 32P connector: disconnected

Test circuit GND

Test point 1 VSA OFF switch 5P connector No. 5 (BLK)

Test point 2 Body ground

Fig. 106: Checking Continuity Between VSA OFF Switch 5P Connector No. 5 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. **Replace the gauge control module** See **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** or **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** .

NO : Repair an open in the wire between the VSA OFF switch and body ground (G501).

WHEEL ALIGNMENT

INSPECTION

1. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
2. Vehicle Lift
   1. Raise the vehicle on a lift, and make sure it is securely supported.
3. Wheel Runout - Inspection

   NOTE: When measuring the front wheel runout, turn the wheel slowly by hand.

   1. Check for bent or deformed wheels.
   2. Set up the dial gauge as shown.
   3. Measure the axial runout by turning the wheel.

      Front and rear wheel axial runout:

      Standard:

      Steel wheel: 0-0.5 mm (0-0.020 in)

      Aluminum wheel: 0-0.3 mm (0-0.012 in)

      Service limit: 2.0 mm (0.079 in)

Fig. 1: Measuring Front Wheel Axial Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Reset the dial gauge to the position shown.
5. Measure the radial runout.

   Front and rear wheel radial runout:

   Standard:

   Steel wheel: 0-0.7 mm (0-0.028 in)

   Aluminum wheel: 0-0.3 mm (0-0.012 in)

   Service limit: 1.5 mm (0.059 in)

6. If the wheel runout is not within the specification, check the wheel bearing end play, and make sure the mating surfaces between the brake disc or the brake drum and the inside of the wheel are clean.
7. If the bearing end play is within the specification but the wheel runout is more than the service limit, replace the wheel.

Fig. 2: Measuring Radial Runout Using Dial Gauge

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Suspension Ball Joints - Check
    1. Check the suspension ball joints (Raise and support the vehicle. Hold a tire with your hands, and move it up and down and right and left to check for movement).
    2. Before doing alignment inspections, be sure to remove all extra weight from the vehicle, and no one should be inside the vehicle (driver or passengers).
    3. Lower the vehicle to the ground. Bounce the vehicle up and down several times to stabilize the suspension.
    4. Check that the steering column is set at the center tilt position and the center telescopic position.

Fig. 3: Checking Suspension Ball Joints
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

        Caster angle:

        2WD:

        With 16 inch wheel: 2 ° 44 '±30 '

        Without 16 inch wheel: 2 ° 50 '±30 '

        AWD/4WD:

        With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

6. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

7. Rear Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Release the parking brake to avoid an incorrect measurement.
   2. Check the toe.

      Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

      - If adjustment is required, go to the rear toe adjustment.
      - If no adjustment is required, go to front toe inspection.

8. Front Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Set the steering column to the middle tilt position and telescopic positions.
   2. Center the steering wheel spokes, and install a steering wheel holder tool.
   3. Check the toe with the wheels pointed straight ahead.

      Front toe-in: 0±2 mm (0±0.08 in)

      - If adjustment is required, go to the front toe adjustment.
      - If no adjustment is required, remove the alignment equipment.

9. Turning Angle - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

      Turning angle:

      2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

Fig. 4: Measuring Turning Angle Of Wheels
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

The suspension can be adjusted for front camber, front toe, and rear toe. However, each of these adjustments are related to each other. For example, when you adjust camber, the toe will change.

NOTE: After adjusting the wheel alignment, do the VSA sensor neutral position memorization and steering angle sensor neutral position clear.

1. Front Camber - Adjustment

   The front camber can be adjusted by exchanging one or both of the damper pinch bolts with a smaller diameter adjusting bolt. The difference between the adjusting bolt diameter and the pinch bolt hole diameter allows for a small range of adjustment.

   NOTE: Refer to the Parts Catalog for the camber adjusting bolts.

Fig. 5: Identifying Damper Pinch Bolts And Adjusting Bolt Set
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Raise and support the vehicle.
2. Remove the front wheels.
3. Loosen the damper pinch bolts (A), and adjust the camber angle by moving the bottom of the damper within the range of the damper pinch bolt free play.
4. Tighten the damper pinch bolts to the specified torque.
5. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the front wheels.
6. Lower the vehicle to the ground, and bounce the front of the vehicle up and down several times to stabilize the suspension.
7. Measure the camber angle.
   - If the measurement is within specification, measure the toe-in.
   - If the measurement is not within specification, go to step 8.

Fig. 6: Identifying Damper Pinch Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Raise and support the vehicle.
9. Remove the front wheels.
10. Replace the damper pinch bolts with the adjusting bolts (A), and adjust the camber angle.

NOTE:

- **The camber angle can be adjusted up to ±20 ' (center of tolerance) by replacing one damper pinch bolt with the adjusting bolt.**
- **The camber angle can be adjusted up to ±40 ' by replacing both damper pinch bolts with the adjusting bolts.**

11. Tighten the damper pinch bolts holding the self-locking nuts (B) to the specified torque.
12. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the front wheels.
13. Lower the vehicle to the ground, and bounce the front of the vehicle up and down several times to stabilize the suspension.
14. Measure the camber angle. If the camber angle is not within specification, repeat step 8 through 13 to readjust the camber angle. If the camber measurement is correct, measure toe-in, and adjust it if necessary.

Fig. 7: Tightening Damper Pinch Bolts Holding Self-Locking Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Toe - Adjustment
    1. Hold the adjusting bolt (A) on the trailing arm (B), and loosen the self-locking nut (C).
    2. Replace the self-locking nut with a new one, and lightly tighten it.

NOTE:

- **Always use a new self-locking nut whenever it has been tightened to the specified torque.**
- **Reassemble the adjusting bolt and adjusting cam plate with the eccentric facing up.**

    3. Adjust the rear toe by turning the adjusting bolt until the toe is correct.
    4. Tighten the self-locking nut to the specified torque while holding the adjusting bolt.

Fig. 8: Identifying Adjusting Bolt, Trailing Arm And Self-Locking Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Toe - Adjustment
    1. Loosen the tie-rod end locknuts (A) while holding the flat surface sections (B) of the tie-rod end with a wrench, and turn both tie-rods (C) until the front toe is within specifications.
    2. After adjusting, tighten the tie-rod end locknuts to the specified torque. Reposition the rack-end boot if it is twisted or displaced.

Fig. 9: Tightening Tie-Rod End Locknuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).

3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 10: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

6. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

WHEEL RUNOUT INSPECTION

INSPECTION

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Wheel Runout - Inspection

    NOTE: When measuring the front wheel runout, turn the wheel slowly by hand.

    1. Check for bent or deformed wheels.

2. Set up the dial gauge as shown.
3. Measure the axial runout by turning the wheel.

   Front and rear wheel axial runout:

   Standard:

   Steel wheel: 0-0.5 mm (0-0.020 in)

   Aluminum wheel: 0-0.3 mm (0-0.012 in)

   Service limit: 2.0 mm (0.079 in)

Fig. 11: Measuring Front Wheel Axial Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Reset the dial gauge to the position shown.
5. Measure the radial runout.

   Front and rear wheel radial runout:

   Standard:

   Steel wheel: 0-0.7 mm (0-0.028 in)

   Aluminum wheel: 0-0.3 mm (0-0.012 in)

   Service limit: 1.5 mm (0.059 in)

6. If the wheel runout is not within the specification, check the wheel bearing end play, and make sure the mating surfaces between the brake disc or the brake drum and the inside of the wheel are clean.
7. If the bearing end play is within the specification but the wheel runout is more than the service limit, replace the wheel.

Fig. 12: Measuring Front Wheel Radial Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WASHER FLUID LEVEL SWITCH TEST

REMOVAL

1. Right Front Inner Fender As Needed
    1. Remove the bolt (A), the screws (B), and the clip (C, D, E) securing the front inner fender (F), then remove the front inner fender as needed.

Fig. 1: Identifying Right Front Inner Fender Bolts, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Washer Fluid Level Switch
    1. Disconnect the connector.
    2. Remover the washer fluid level switch (A).

NOTE: Fluid may flow out of the opening.

Fig. 2: Identifying Washer Fluid Level Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Washer Fluid Level Switch - Test
    1. Check for continuity between terminals No. 1 and No. 2 in each float position:
        - There should be continuity when the float is down.
        - There should be no continuity when the float is up.
    2. If the continuity is not as specified, replace the washer fluid level switch (A).

Fig. 3: Identifying Washer Fluid Level Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Washer Fluid Level Switch

1. Inspect the gasket (A); replace it if it is distorted or stays compressed.
2. Install the washer fluid level switch (B) with the gasket.
3. Connect the connector.

Fig. 4: Identifying Washer Fluid Level Switch And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Right Front Inner Fender As Needed
    1. Install the front fender (A), then install the bolt (B), the screws (C), and the clips (D, E, F). Make sure the clips snap into the place securely.

Fig. 5: Identifying Right Front Inner Fender Bolts, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WASHER MOTOR REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Right Front Inner Fender As Needed
    1. Remove the bolt (A), the screws (B), and the clip (C, D, E) securing the front inner fender (F), then remove the front inner fender as needed.

Fig. 6: Identifying Right Front Inner Fender Bolts, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Washer Motor
    1. Disconnect the connector.
    2. Remove the washer motor (A).

NOTE: **Fluid may flow out of the opening.**

Capacity 2.5 L (2.6 US qt): USA and Mexico models

Fig. 7: Identifying Washer Motor (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Capacity 4.5 L (4.76 US qt): Canada models

Fig. 8: Identifying Washer Motor (Capacity 4.5 L, Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Washer Motor - Test
    1. Check the washer motor operation by connecting power and ground according to the table.

- If the motor does not run or fails to run smoothly, replace it.
- If the motor runs smoothly, but little or no washer fluid is pumped, check for a disconnected or blocked washer hose, or a clogged washer motor outlet.

Capacity 2.5 L (2.6 US qt): USA and Mexico models

Fig. 9: Identifying Washer Motor And Connector Terminals (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Capacity 4.5 L (4.76 US qt): Canada models

Terminal / Position	1	2
WINDSHIELD	⊕	⊖
REAR WINDOW	⊖	⊕

Fig. 11: Washer Motor Terminals Position Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Washer Motor
    1. Inspect the gasket (A); replace it if it is distorted or stays compressed.
    2. Install the washer motor (B) with the gasket.
    3. Connect the connector.

Capacity 2.5 L (2.6 US qt): USA and Mexico models

Fig. 12: Identifying Washer Motor And Gasket (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Capacity 4.5 L (4.76 US qt): Canada models

Fig. 13: Identifying Washer Motor And Gasket (Capacity 4.5 L, Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Right Front Inner Fender As Needed
    1. Install the front fender (A), then install the bolt (B), the screws (C), and the clips (D, E, F). Make sure the clips snap into the place securely.

Fig. 14: Identifying Right Front Inner Fender Bolts, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WASHER RESERVOIR REMOVAL AND INSTALLATION

REMOVAL

1. Right Front Fender Trim
    1. Remove the right front fender trim (A).

Fig. 15: Identifying Right Front Fender Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

Fig. 16: Removing Front Grille Lower Trim Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

Fig. 17: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 18: Disconnecting Front Grille Clip Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

Fig. 19: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Wheel Arch Protector Front Side As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the screws (A) and the clips (B) securing the front wheel arch protector (C).
2. Carefully pry out the clip portions of the wheel arch protector with the appropriate trim tool to detach the clips (D, E), then detach the wheel arch protector front side as needed.
3. Put a shop towel (F) in the opening between the front wheel arch protector and the front fender.

Fig. 20: Disconnecting Wheel Arch Protector Clips Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 21: Inserting Shop Towel Between Front Wheel Arch Protector And Front Fender
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Bumper
    1. Remove the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

Fig. 22: Identifying Front Bumper Screws, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the front bumper (A) from the side spacer (B). Repeat this step on the opposite side.

Fig. 23: Removing Front Bumper From Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clip (A). Repeat this step on the opposite side.

Fig. 24: Disconnecting Front Bumper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the help of an assistant, pull out both sides of the front bumper (A) from the upper beam (B).

Fig. 25: Removing Front Bumper From Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, disconnect the connectors (A), then remove the front bumper (B).

Fig. 26: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Right Front Inner Fender As Needed
    1. Remove the bolt (A), the screws (B), and the clip (C, D, E) securing the front inner fender (F), then remove the front inner fender as needed.

Fig. 27: Identifying Right Front Inner Fender, Bolts, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Washer Motor
    1. Disconnect the connector.
    2. Remove the washer tubes (A).
    3. Remove the washer motor (B).

NOTE: Fluid may flow out of the opening.

Capacity 2.5 L (2.6 US qt): USA and Mexico models

Fig. 28: Identifying Washer Motor And Tubes (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Capacity 4.5 L (4.76 US qt): Canada models

Fig. 29: Identifying Washer Motor And Tubes (Capacity 4.5 L, Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Washer Fluid Level Switch - Canada Model
    1. Disconnect the connector.
    2. Remove the washer fluid level switch (A).

NOTE: Fluid may flow out of the opening.

Fig. 30: Identifying Washer Fluid Level Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Washer Reservoir
    1. Remove the washer filler neck (A).

Fig. 31: Identifying Washer Filler Neck And Related Components (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 32: Identifying Washer Filler Neck And Related Components (Capacity 4.5 L, Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the washer reservoir (B).

INSTALLATION

1. Washer Reservoir
    1. Install the washer reservoir (A).

Fig. 33: Identifying Washer Reservoir And Related Components With Torque Specifications (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 34: Identifying Washer Reservoir And Related Components With Torque Specifications (Capacity 4.5 L, Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Install the washer filler neck (B).
2. Washer Fluid Level Switch - Canada Model
   1. Inspect the gasket (A); replace it if it is distorted or stays compressed.
   2. Install the washer fluid level switch (B) with the gasket.
   3. Connect the connector.

Fig. 35: Identifying Washer Fluid Level Switch And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Washer Motor
    1. Inspect the gasket (A); replace it if it is distorted or stays compressed.
    2. Install the washer motor (B).
    3. Install the washer tubes (C).
    4. Connect the connector.

Capacity 2.5 L (2.6 US qt): USA and Mexico models

Fig. 36: Identifying Washer Motor, Tube And Gasket (Capacity 2.5 L, USA And Mexico Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Capacity 4.5 L (4.76 US qt): Canada models

Fig. 37: Identifying Washer Motor, Tube And Gasket (Capacity 4.5 L, Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Right Front Inner Fender As Needed
    1. Install the front fender (A), then install the bolt (B), the screws (C), and the clips (D, E, F). Make sure the clips snap into the place securely.

<u>Fig. 38: Identifying Right Front Inner Fender, Bolts, Screws And Clips</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Bumper
    1. With the help of an assistant, connect the connectors (A), then install the front bumper (B).

Fig. 39: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install both sides of the front bumper (A) to the upper beam (B).

Fig. 40: Installing Front Bumper On Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push the front bumper (A) until the clip (B) snaps into place. Repeat this step on the opposite side.

Fig. 41: Pushing Front Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the front bumper (A) to the side spacer (B). Repeat this step on the opposite side.

Fig. 42: Installing Front Bumper On Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

Fig. 43: Identifying Front Bumper, Screws, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Wheel Arch Protector Front Side As Needed - Both Sides
    1. Install the front wheel arch protector (A), then install the screws (B) and the clips (C). Make sure the clips (D, E) snap into place securely. Repeat this step on the opposite side.

Fig. 44: Identifying Front Wheel Arch Protector, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Grille
    1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
    2. Install the clips (B).

Fig. 45: Installing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Right Front Fender Trim
    1. Install the right front fender trim (A).

Fig. 46: Identifying Right Front Fender Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WASHER TUBE REMOVAL AND INSTALLATION

REPLACEMENT

NOTE: **Steps 1-2 show replacing the windshield washer tube/nozzle, steps 3-4 show replacing the rear window washer tube/nozzle.**

1. Windshield Washer Tube Replacement
    1. Remove the washer nozzles and the clips, then remove the tubes.

Fig. 47: Identifying Washer Nozzles And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT**.
3. Rear Washer Tube Replacement
    1. Remove the washer nozzles and the clips, then remove the tubes.

Fig. 48: Identifying Rear Washer Nozzles And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Window Wiper Arm - Adjustment
    1. **Adjust the rear window wiper arm** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT**.

WIPER ARM REMOVAL AND INSTALLATION

REMOVAL

NOTE: Step 1 shows removing the windshield wiper arm, step 2 shows removing the rear window wiper arm.

1. Both Windshield Wiper Arm Assemblies

   NOTE: Set the wiper arms to the auto-stop position before removal.

   1. Remove the caps (A) and nuts (B).
   2. Remove the wiper arms (C).

Fig. 49: Identifying Wiper Arms, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Window Wiper Arm Assembly
   1. Raise the wiper arm (A) off the rear window, then remove the cover (B), the nut (C), and the wiper arm.

Fig. 50: Identifying Wiper Arm, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Steps 1-2 show installing the rear window wiper arm, steps 3 - 4 show installing the windshield wiper.**

1. Rear Window Wiper Arm Assembly
    1. Install the wiper arm (A), the nut (B), and the cover (C).

Fig. 51: Identifying Wiper Arm, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Window Wiper Arm - Adjustment
    1. **Adjust the rear window wiper arm** See **WIPER ARM REMOVAL AND INSTALLATION** or

WIPER ARM/NOZZLE ADJUSTMENT.

3. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 52: Identifying Wiper Arms, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Windshield Wiper Arm - Adjustment
   1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT**.

WIPER ARM/NOZZLE ADJUSTMENT

ADJUSTMENT

NOTE: Step 1 shows adjusting the windshield wiper arm/nozzle, step 2 shows adjusting the rear window wiper arm/nozzle.

1. Windshield Wiper Arm/Nozzle - Adjustment

NOTE:

- **Adjust the washer nozzles by gently gripping, and then moving, the outside of each nozzle (A).**
- **Do not insert tools into the nozzle hole (B), as it may cause the washer fluid to spray incorrectly.**

Wiper Arm Park Position

1. Turn the ignition switch to ON (II), then turn the wiper switch ON, and then back OFF.

<u>Fig. 53: Identifying Wiper Arm Park Position Dimensions</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. When the wiper arms stop at the auto-stop position, make sure that they are at the correct position:
   a. Position at about 42 mm (1.654 in) from the top of cowl cover (C).
   b. Position at about 26 mm (1.024 in) from the top of cowl cover (C).

Washer Nozzle Position

3. When you turn on the washer(s), make sure 50% or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzle(s):

   c: Position at about 171.4 mm (6.748 in) from the top of the black ceramic area (D).

d: Position at about 250 mm (9.843 in) from the windshield center line (E).

e: Position at about 54.2 mm (2.134 in) from the windshield center line (E).

2. Rear Window Wiper Arm/Nozzule - Adjustment

NOTE:

- **Adjust the washer nozzle by gently gripping, and then moving, the outside of the nozzle (A).**
- **Do not insert tools into the nozzle hole (B), as it may cause the washer fluid to spray incorrectly.**

Wiper Arm Park Position

1. Turn the ignition switch to ON (II), then turn the wiper switch ON, and then back OFF.

Fig. 54: Identifying Rear Window Wiper Arm Park Position Dimensions

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. When the wiper arm stops at the auto-stop position, make sure that it is at the correct position:
   a. Wiper arm stop position on the rear window defogger.

Washer Nozzle Position

3. When you turn on the washer, make sure 50% or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzle:

   b: Position at about 108.5 mm (4.27 in) from the rear window center line (C).

   c: Position at about 21.2 mm (0.83 in) from the top of the black ceramic area (D).

   d: Position at about 21.9 mm (0.86 in) from the position (c).

WIPER BLADE REMOVAL AND INSTALLATION

REMOVAL

NOTE: Step 1 shows removing the windshield wiper blade, step 2 shows removing the rear window wiper blade.

1. Windshield Wiper Blade
   1. Lift the wiper arm off the windshield, raising the driver's side first, then the passenger's side.
   2. Pull up the tab (A).
   3. Slide the wiper blade assembly (B) off the wiper arm.

Fig. 55: Sliding Wiper Blade Assembly From Wiper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   4. Find the blade holder labeled "SET" (A), then release the wiper blade from it.
   5. Pull back the end of the blade holder and slide out the old wiper blade (B).

Fig. 56: Removing Wiper Blade From Blade Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the rails (A).

Fig. 57: Removing Rails
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Window Wiper Blade
    1. Lift the wiper arm off the windshield, raising the driver's side first, then the passenger's side.
    2. Pull up the tab (A).
    3. Slide the wiper blade assembly (B) off the wiper arm.

Fig. 58: Sliding Wiper Blade Assembly From Wiper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the holder (A) from the groove (B), then remove the wiper blade (C).

Fig. 59: Removing Wiper Blade From Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Step 1 shows installing the rear window wiper blade, step 2 shows installing the windshield wiper blade.**

1. Rear Window Wiper Blade

1. Install the new wiper blade (A) and set the holder (B) into the groove (C).

Fig. 60: Installing Wiper Blade Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the wiper blade assembly (A) onto the rear window wiper arm (B).
3. Test by turning on the wipers. If the blades slip, turn off the wiper and seat the attachments more firmly.

Fig. 61: Installing Wiper Blade Assembly On Rear Window Wiper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Windshield Wiper Blade
    1. Align the groove (A) on each rail (B) with those on the new blade (C).

Fig. 62: Aligning Groove On Rail With Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new wiper blade (A) until the "SET" (B).

Fig. 63: Installing Wiper Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the wiper blade assembly (A) onto the windshield wiper arm (B).
4. Test by turning on the wipers. If the blades slip, turn off the wipers and seat the attachments more firmly.

Fig. 64: Installing Wiper Blade Assembly On Windshield Wiper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WIPER MOTOR REMOVAL AND INSTALLATION

REMOVAL

NOTE: Steps 1-8 show removing the windshield wiper motor, steps 9-13 show removing the rear window wiper.

1. Both Windshield Wiper Arm Assemblies

   NOTE: Set the wiper arms to the auto-stop position before removal.

   1. Remove the caps (A) and nuts (B).
   2. Remove the wiper arms (C).

Fig. 65: Identifying Wiper Arms, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim - Both Sides

NOTE: **Repeat on the opposite side.**

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 66: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cowl Top Cover - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 67: Identifying Cowl Top Cover, Hood Rear Seal And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

<u>Fig. 68: Releasing Hooks From Cowl Cover And Front Fender</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

Fig. 69: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Under-Cowl Panel
    1. Disconnect the connecter (A).
    2. Remove the bolts and the nuts, then remove the under-cowl panel (B).
    3. Remove the wire harness (C) from the under-cowl panel.

Fig. 70: Identifying Under-Cowl Panel, Connector And Wire Harness

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Windshield Wiper Linkage Assembly
    1. Remove the wiper linkage assembly (A).

Fig. 71: Identifying Wiper Linkage Assembly And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Windshield Wiper Motor
    1. Mark lines (A) to show the original position.
    2. Remove the connection rod (B) from the link (C).
    3. Disconnect the connector (D), then remove the windshield wiper motor subharness.
    4. Remove the wiper motor (E) from the linkage (F).

Fig. 72: Identifying Windshield Wiper Motor And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Window Wiper Arm Assembly
    1. Raise the wiper arm (A) off the rear window, then remove the cover (B), the nut (C), and the wiper arm.

Fig. 73: Identifying Wiper Arm, Cover And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the cap (A), the mounting nut (B), and the washer (C).

Fig. 74: Identifying Wiper Arm Cap, Mounting Nut And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 75: Identifying Tailgate Upper Trim Panel And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 76: Identifying Tailgate Side Trims, Tailgate Upper Trim Panel, Clips, Hook And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 77: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 78: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Window Wiper Motor
    1. Disconnect the connector.

2. Remove the rear window wiper motor (A).

Fig. 79: Identifying Rear Window Wiper Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Steps 1-6 show installing the rear window wiper motor, steps 7-15 show installing the windshield wiper motor.

1. Rear Window Wiper Motor
    1. Align the position marks when installing the seal (A), then install the washer (B) and rear window motor (C).
    2. Connect the connector.

NOTE: Before reinstalling the rear wiper arm, turn the rear window wiper switch ON, then OFF to return the wiper shaft to the park position.

Fig. 80: Identifying Rear Window Motor, Washer And Seal With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 81: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 82: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 83: Identifying Tailgate Side Trim, Hook, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 84: Identifying Tailgate Upper Trim Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Window Wiper Arm Assembly
    1. Install the washer (A), the mounting nut (B), and the cap (C).

Fig. 85: Identifying Rear Window Wiper Arm Assembly Washer, Mounting Nut And Cap With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the wiper arm (A), the nut (B), and cover (C).

Fig. 86: Identifying Wiper Arm, Nut And Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Window Wiper Arm - Adjustment

1. **Adjust the rear window wiper arm** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT**.

7. Windshield Wiper Motor

NOTE: **Screw threads are not tapped into the new wiper motor. Install the new wiper motor as follows, using the self-tapping bolts provided.**

1. Position the wiper motor (A) under the linkage (B) and tighten the self-tapping bolts until the bolt heads just make contact with the linkage.

NOTE:
- **Screw in the bolts, keeping them perfectly straight.**
- **Do not use the air tool or impact wrench to install the bolts.**
- **Use only the self-tapping bolts provided with the motor.**

2. Loosen the bolts, then retighten them to the specified torque.
3. Install the windshield wiper motor subharness, then connect the connector (C).
4. Install the link (D).
5. Align the mark (E) on the link with the mark (F) on the linkage.
6. Install the connection rod (G) to the link.

Fig. 87: Identifying Windshield Wiper Motor And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Windshield Wiper Linkage Assembly
    1. Install the wiper linkage assembly (A).
    2. Tighten the bolts in two or three steps. In the final step, tighten all bolts, in sequence, to 9.3 N.m (0.95 kgf.m, 6.9 lbf.ft).

Fig. 88: Identifying Wiper Linkage Assembly Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Under-Cowl Panel
    1. Install the under-cowl panel (A), then install the bolts and the nuts.
    2. Install the wire harness (B) to the under-cowl panel.
    3. Connect the connecter (C).

Fig. 89: Identifying Under-Cowl Panel, Connecter And Wire Harness With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 90: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

Fig. 91: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

Fig. 92: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

Fig. 93: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 94: Identifying Wiper Arms, Nut And Caps With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT**.

WIPER MOTOR TEST

REMOVAL

NOTE: Steps 1-5 show removing the windshield wiper motor, steps 6-8 show removing the rear window wiper motor.

1. Both Windshield Wiper Arm Assemblies

   NOTE: Set the wiper arms to the auto-stop position before removal.

   1. Remove the caps (A) and nuts (B).
   2. Remove the wiper arms (C).

Fig. 95: Identifying Wiper Arms, Nuts And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim - Both Sides

   NOTE: Repeat on the opposite side.

   1. Remove the clips (A, B).
   2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 96: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 97: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

<u>Fig. 98: Releasing Hooks From Cowl Cover And Front Fender</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

Fig. 99: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 100: Identifying Tailgate Upper Trim Panel, Hooks, Tabs And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 101: Identifying Tailgate Side Trim, Hook, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tailgate Lower Trim Panel
   1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 102: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 103: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Windshield Wiper Motor - Test
    1. Disconnect the connector.
    2. Test the wiper motor (A) by connecting battery power to terminal No. 1 and ground to terminal No. 2 of the wiper motor connector. The motor should run at low speed.
    3. Test the motor by connecting battery power to terminal No. 3 and ground to terminal No. 2 of the wiper motor connector. The motor should run at high speed.
    4. Connect an analog ohmmeter to terminals No. 4 and No. 2, and run the motor at low or high speed. The needle of the ohmmeter should pulse.
    5. If the motor does not run or fails to run smoothly, or there is no pulse, check for continuity of the windshield wiper motor subharness, if the wire harness is OK, replace the motor.

Fig. 104: Identifying Windshield Wiper Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Window Wiper Motor - Test
    1. Disconnect the connector.
    2. Test the wiper motor (A) by connecting battery power to terminal No. 4 and ground to terminal No. 3 of the wiper motor connector. The motor should run.
    3. Connect an analog ohmmeter to terminals No. 2 and No. 3, and run the motor. The needle of the ohmmeter should pulse. If the motor does not run or fails to run smoothly, or there is no pulse, replace the motor.

Fig. 105: Identifying Rear Window Wiper Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Steps 1-3 show installing the rear window wiper motor, steps 4-9 show installing the windshield wiper motor.

1. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 106: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

Fig. 107: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 108: Identifying Tailgate Side Trim, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 109: Identifying Tailgate Upper Trim Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 110: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

Fig. 111: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

Fig. 112: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

Fig. 113: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 114: Identifying Wiper Arms, Nut And Caps With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT**.

WIPER/WASHER SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 115: Identifying Dashboard Meter Visor Blind Cover, Hook And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Detach the hooks (A), then remove the upper column cover (B).

Fig. 116: Identifying Upper Column Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Column Cover
    1. Turn the steering wheel to the left. Remove the screw (A) securing the lower column cover (B) from the front side.
    2. Turn the steering wheel to the right. Remove the screw securing the lower column cover from the front side.

Fig. 117: Turning Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw (A), then remove the lower column cover (B).

Fig. 118: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wiper/Washer Switch
    1. Disconnect the connector.
    2. Remove the wiper/washer switch (A) by pushing the tabs.

Fig. 119: Removing Wiper/Washer Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Wiper/Washer Switch - Test
    1. Inspect the connector terminals to be sure they are all making good contact.
        - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
        - If the terminals are OK, go to step 2.
    2. Check for continuity between the terminals in each switch position according to the table.
    3. If the continuity is not as specified, replace the wiper/washer switch (A).

Windshield

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Wiper/Washer Switch
    1. Install the wiper/washer switch (A).
    2. Connect the connector.

Fig. 123: Identifying Wiper/Washer Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

Fig. 124: Engaging Column Cover With Locking Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the lower column cover (A), then install the screw (B).

Fig. 125: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the steering wheel to the left. Install the screw (A) securing the lower column cover (B) from

the front side.

4. Turn the steering wheel to the right. Install the screw securing the lower column cover from the front side.

Fig. 126: Turning Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Upper Column Cover
    1. Install the upper column cover (A). Make sure the hooks (B) snap into place securely.

Fig. 127: Identifying Upper Column Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely
