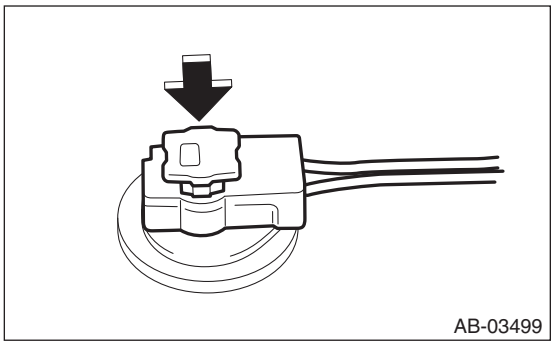
Holding the connector, push it in securely until a clicking sound is heard.

5. DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER

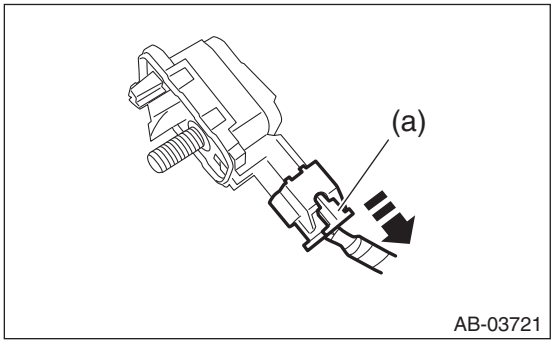


1) How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.
(2) Pull the connector to disconnect from the airbag module assembly or the retractor assembly.

2) How to connect:

CAUTION:
- **Be sure to insert the connector in until it is locked.**
- **Press in the push lock securely. Then pull it gently to make sure that it is locked.**



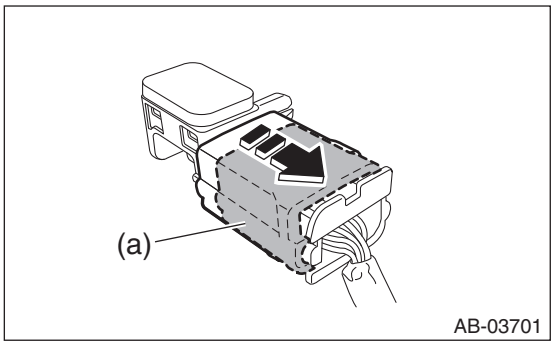
Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

6. FRONT SUB SENSOR AND FRONT DOOR IMPACT SENSOR

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the lock arm (a).
(2) Hold the outer part of connector, and disconnect the connector.

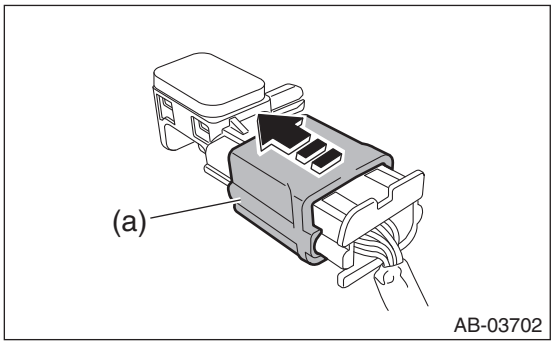


2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Insert the connector, and push the lock arm securely until a clicking sound is heard.

7. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1) How to disconnect:

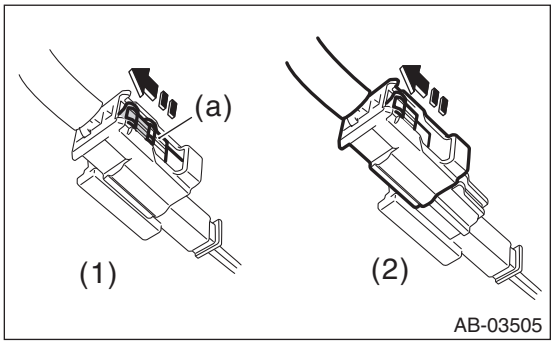


CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
Holding outer part (a), pull it in the direction of arrow.

2) How to connect:

CAUTION:
- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
- **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.



8. FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND FRONT DOOR HARNESS)

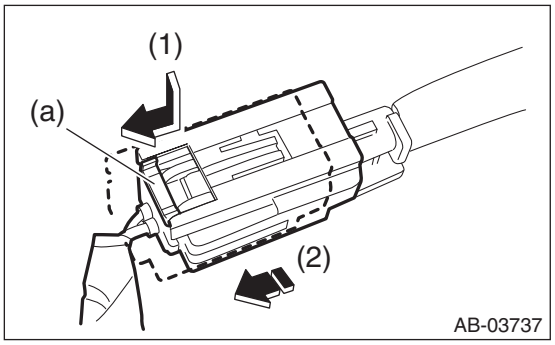
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.

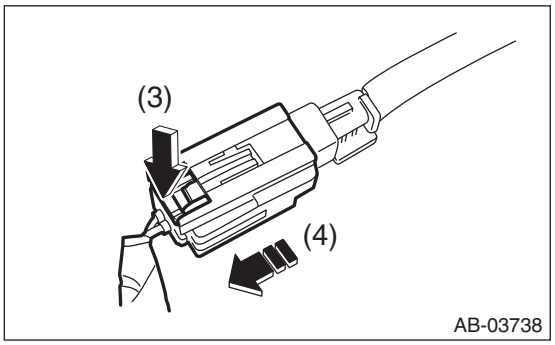
2) How to connect:

CAUTION:
- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
- **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**



Holding the connector, push it in securely until a clicking sound is heard.

9. SIDE AIRBAG MODULE



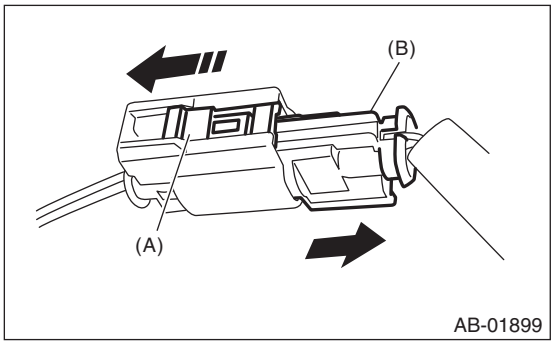
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the lock arm (a) one step while pushing.
(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.
(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

2) How to connect:



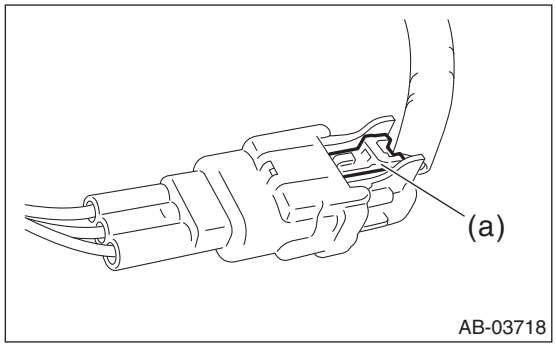
CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

10.SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Move the slide lock (A) in the direction of arrow and hold it.
(2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

11.BELT TENSION SENSOR

1) How to disconnect:
Press the lock arm (a) and disconnect the connector.

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:
Holding the connector, push it in securely until a clicking sound is heard.

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

12.OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

Refer to “OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)” section. <Ref. to OD(diag)-17, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>

3. Inspection Locations after a Collision

A: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE ASSEMBLY

1) Frontal collision (driver's airbag module assembly activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Passenger's airbag module (if deployed)
   - Seat cushion airbag module
   - Side airbag module (right and left / if deployed)
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
   - Steering wheel
   - Column assembly - steering
   - Roll connector
   - Trim panel - roof assembly (if the curtain airbag is deployed)
   - Trim panel of each pillar (if the curtain airbag is deployed)
2. Visually inspect the following items and replace any damaged part with a new one.
   - Cover COMPL - front seat backrest
   - Pad assembly - front seat backrest
   - Frame assembly - front seat backrest
   - Frame assembly - front seat cushion
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (driver's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Passenger's airbag module
- Seat cushion airbag module
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

2. PASSENGER'S AIRBAG MODULE

1) Frontal collision (passenger's airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Seat cushion airbag module
   - Passenger's airbag module
   - Side airbag module (right and left / if deployed)
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module)
   - Steering wheel
   - Column assembly - steering
   - Roll connector
   - Trim panel - roof assembly (if the curtain airbag is deployed)
   - Trim panel of each pillar (if the curtain airbag is deployed)
2. Visually inspect the following items and replace any damaged part with a new one.
   - Cover COMPL - front seat backrest
   - Pad assembly - front seat backrest
   - Frame assembly - front seat backrest
   - Frame assembly - front seat cushion
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (passenger's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Seat cushion airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3. SEAT CUSHION AIRBAG MODULE

1) Frontal collision (seat cushion airbag module activated)

1. Replace the following parts with new ones.
   - Frame assembly - front seat cushion (driver's seat side only)
   - Panel - front seat (driver's seat side only)
   - Seat cushion pad and frame assembly (passenger's seat side only)
   - Airbag control module

- Driver's airbag module
- Seat cushion airbag module
- Passenger's airbag module
- Side airbag module (right and left / if deployed)
- Curtain airbag module (right and left / if deployed)
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
- Steering wheel
- Column assembly - steering
- Roll connector
- Trim panel - roof assembly (if the curtain airbag is deployed)
- Trim panel of each pillar (if the curtain airbag is deployed)

2. Visually inspect the following items and replace any damaged part with a new one.
   - Side airbag module
   - Seat belt inner - front
   - Harness assembly - power seat
   - Cover COMPL - front seat cushion
   - Pad assembly - front seat cushion
   - Seat heater module - front seat cushion
   - Headrest assembly
   - Bushing - lock headrest
   - Slide rail assembly - OUT
   - Slide rail assembly - INN
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (seat cushion airbag module not activated)
Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Seat cushion airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

4. SIDE AIRBAG MODULE

1) Side impact (side airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module

- Seat cushion airbag module (collision side)
- Front door impact sensor (collision side)
- Seat belt pretensioner (if triggered or damaged)
- Side airbag module (collision side)
- Side airbag sensor (collision side)
- Curtain airbag module (collision side)
- Curtain airbag sensor (collision side)
- Cover COMPL - front seat backrest (collision side)
- Pad assembly - front seat backrest (collision side)
- Frame assembly - front seat backrest (collision side)
- Frame assembly - front seat cushion (collision side)
- Trim panel - roof assembly
- Trim panel for each pillar (collision side)

2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Headrest assembly
   - Bushing - lock headrest
   - Slide rail assembly - OUT
   - Slide rail assembly - INN
   - Cover - hinge front seat
   - Knob - lifter
   - Lever - reclining
   - Seat belt pretensioner (if deployed)
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Side impact (side airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one. Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Cover COMPL - front seat backrest
- Pad assembly - front seat backrest
- Frame assembly - front seat backrest
- Frame assembly - front seat cushion
- Front door impact sensor
- Side airbag module
- Side airbag sensor
- Curtain airbag module
- Curtain airbag sensor
- Seat belt pretensioner
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No side impact

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

5. CURTAIN AIRBAG MODULE

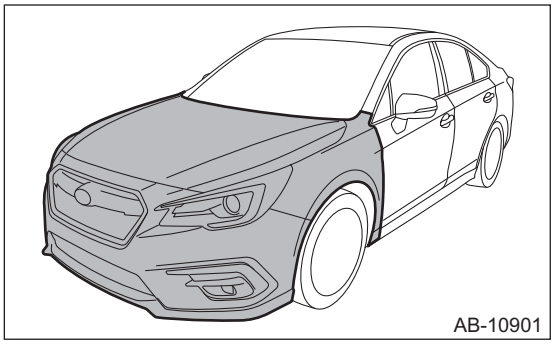
1) Side impact or roll over (curtain airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Seat cushion airbag module (collision side)
   - Side airbag module (collision side)

- Curtain airbag module (collision side)
- Seat belt pretensioner (if triggered or damaged)
- Front door impact sensor (collision side)
- Side airbag sensor (collision side)
- Curtain airbag sensor (collision side)
- Cover COMPL - front seat backrest (collision side)
- Pad assembly - front seat backrest (collision side)
- Frame assembly - front seat backrest (collision side)
- Frame assembly - front seat cushion (collision side)
- Trim panel - roof assembly
- Trim panel for each pillar (collision side)

2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Assist rail - front and rear
   - Bracket - assist rail front and rear
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

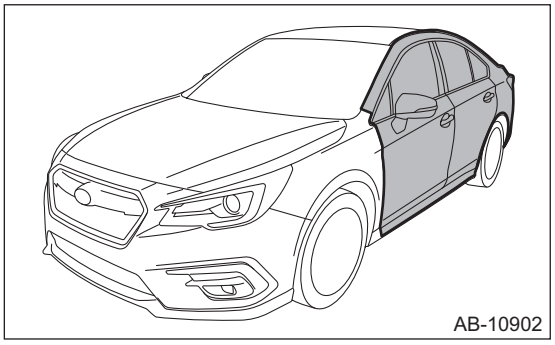
2) Side impact (curtain airbag module not activated)
Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one. Specially inspect the damage of airbag module body, mounting bracket and harness connector.
- Trim panel - roof assembly
- Trim panel for each pillar
- Curtain airbag module
- Front door impact sensor
- Side airbag sensor
- Curtain airbag sensor
- Seat belt pretensioner (if deployed)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>



3) No side impact
- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

6. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.
- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module has been activated.
- Passenger's airbag module has been activated.
- Seat cushion airbag module has been activated.
- Side airbag module has been activated.
- Curtain airbag module has been activated.
- Seat belt pretensioner has been activated.



7. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module, passenger's airbag module or seat cushion airbag module has been activated.

8. FRONT DOOR IMPACT SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

- Front door impact sensor, side airbag sensor and curtain airbag sensor are cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag module or curtain airbag module has been activated. (Operating side)
- Front door is dented or deformed. (Operating side)

9. ROLL CONNECTOR

Check for the following, and replace the damaged parts such as cracks, deformation, etc. with new parts.

- Combination switch
- Steering roll connector

10.CHECK STEERING SYSTEM

For steering wheel, column assembly - steering, universal joint assembly - steering, and steering gearbox, check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

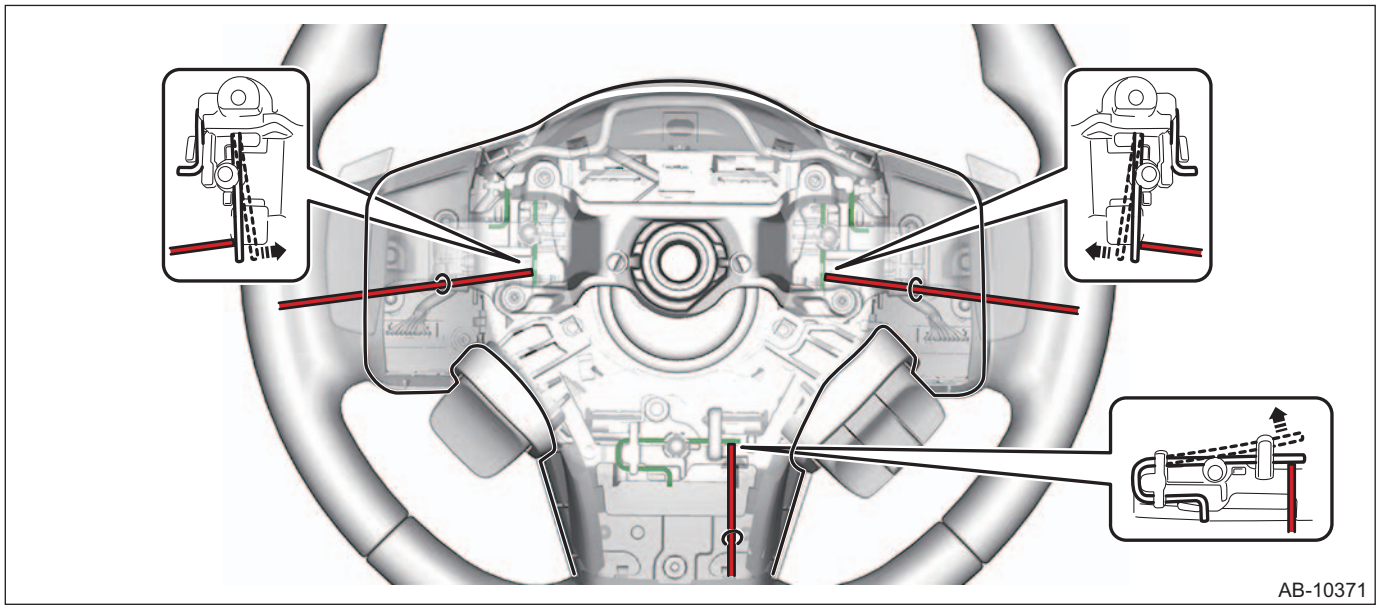
- Check the following items for the column assembly - steering. <Ref. to PS-29, INSPECTION, Steering Column.>
  - – Mounting conditions and deflection of front and rear, upward and downward directions of the steering wheel and column assembly - steering.
  - – Deflection of front and rear, upward and downward directions, and mounting condition to vehicle body of the column assembly - steering. (After a collision, absorbing part of the column assembly - steering may have been operated.)
- Check for deflection and the swing load of the universal joint assembly - steering. <Ref. to PS-24, INSPECTION, Universal Joint.>
- Check the following items for the steering gearbox. <Ref. to PS-37, INSPECTION, Electric Power Steering Gearbox.>
  - – Rack sliding resistance and deflection

– Input shaft play
– Rotational resistance of gearbox

11.PASSENGER'S SEAT

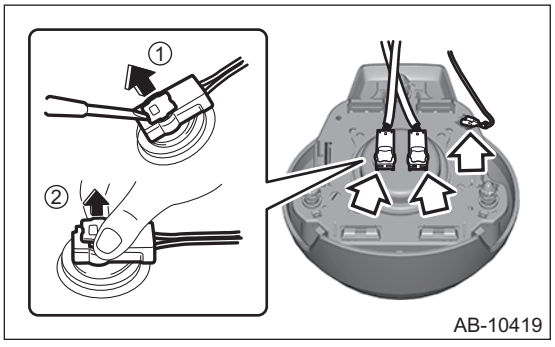
CAUTION:
If any of the following applies, replace the pad assembly - front seat cushion & frame assembly - front cushion as a unit. Do not disassemble.
• The frame assembly - front cushion or the pad assembly - front seat cushion is cracked or deformed.
• Scratches, cracks, or deformation found on the occupant detection system sensor mat or occupant detection control module, or attachment brackets of the control module.
• Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
1) Check for the following, and replace the damaged parts with new parts.
• Body or bracket of the seat belt inner - front is scratched, cracked or deformed.
• Frame assembly - front backrest is cracked or deformed.
• Headrest assembly for deformation or play
• If the cover - front cushion and the cover COMPL - front backrest is damaged or frayed, replace the cover with a new part.
• If the cover - front cushion and the seat heater are replaced, replace the cover hang wire with a new part.
2) When the passenger's seat cover COMPL - front seat has been removed or replaced, make sure that the occupant detection system operates normally.
3) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

12.INSPECTION OF OTHER PARTS

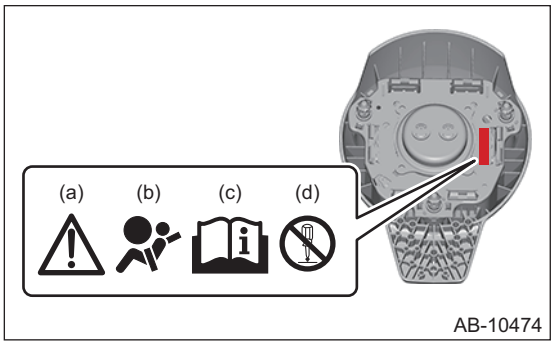


Check for the following parts, and replace the damaged parts with new parts.
1) Check the following parts equipped with the direct type connector for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.
• Driver's airbag module
• Curtain airbag module
• Pretensioner
2) Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.
3) If any break or fray is found in the cover COMPL - front backrest of the driver's seat or passenger's seat, the side airbag system may not operate normally. In this case, replace the cover COMPL - front backrest with a new part.
4) If the securing clip mounting area of curtain airbag module or the bracket - assist rail is deformed or cracked, replace the defective part.

4. Driver's Airbag Module



A: REMOVAL



CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Position the front wheels straight ahead.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the driver's airbag module.
   (1) Using a hexagon wrench etc. wrapped by protective tape, insert the snap pins and release the locks (three locations).

   (2) Disconnect the horn harness and airbag connector, and remove the driver's airbag module. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.

(b) Indicates that this part is an airbag module.

(c) Before handling, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" in the service manual. For the disposal procedures of the airbag modules, refer to "Airbag Module Disposal".

(d) Do not disassemble the airbag module.

B: INSTALLATION

CAUTION:

• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

• Do not allow harness and connectors to interfere or get tangled up with other parts.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.

2) Install the driver's airbag module.

CAUTION:

• Make sure that the snap pin is securely placed inside the guide before installing the airbag module.

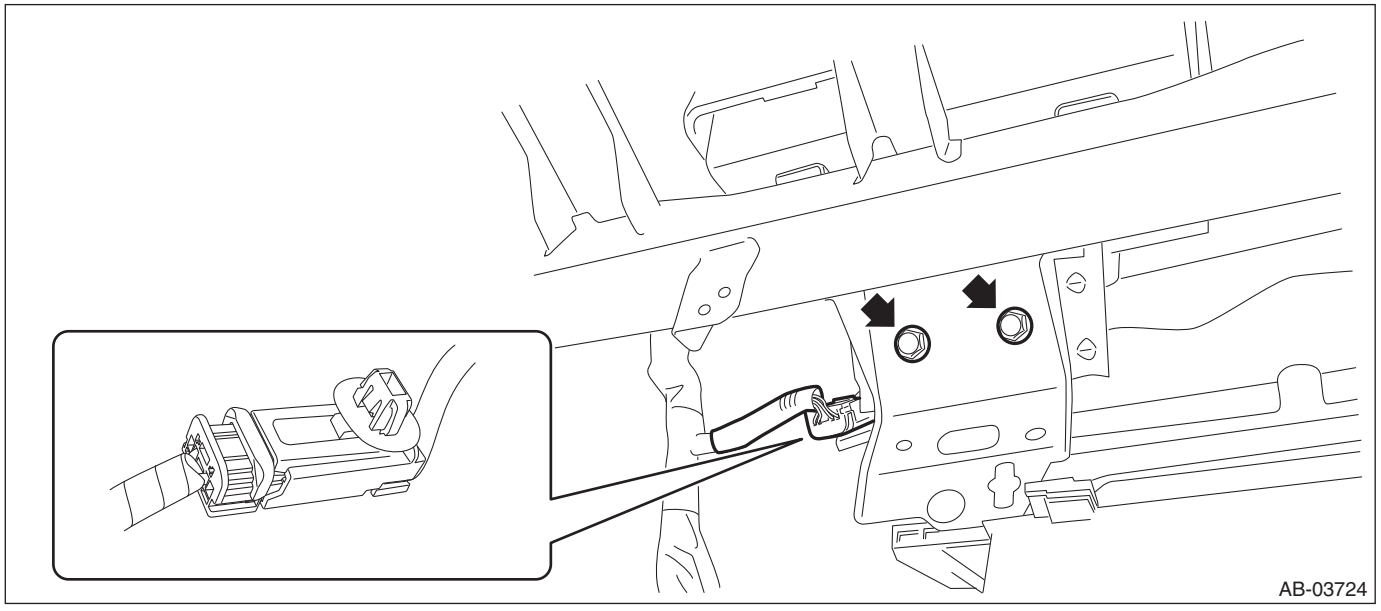
• Be sure to insert the connector in completely until it is locked.

• Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.

• After the airbag module is installed, make sure that the airbag module locks (three positions) are securely locked.

(1) Connect the airbag connector to the airbag module securely.
(2) Connect the horn harness.
(3) Press in the locks (three positions) to install the airbag module.

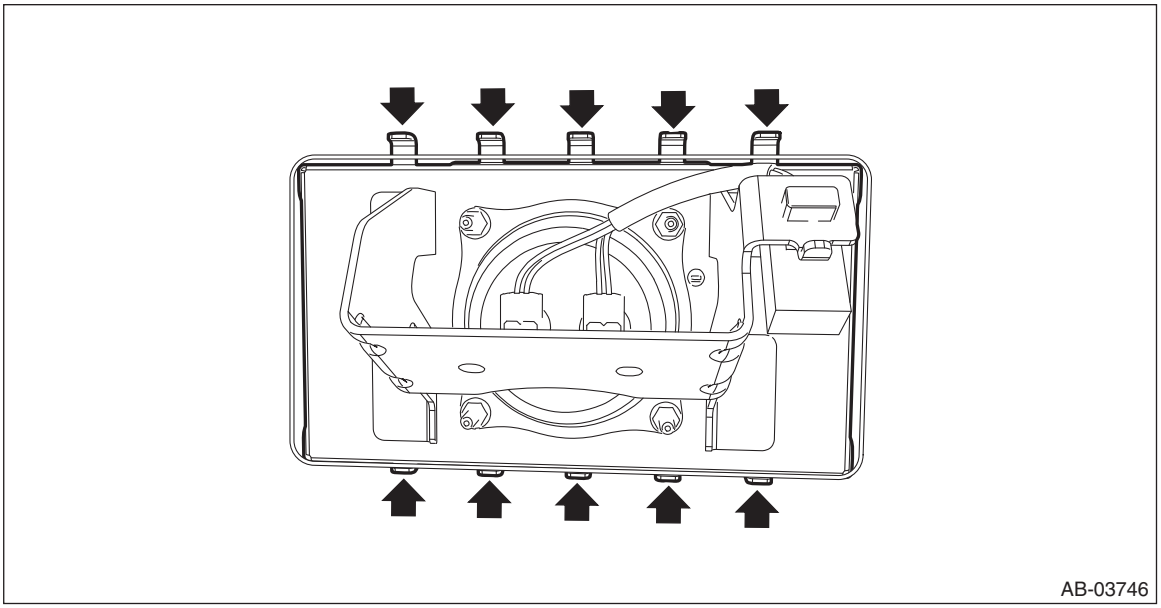
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



5. Passenger's Airbag Module

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
- For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>
4) Remove the ornament panel - console, cover assembly - front, console box assembly and the panel center LWR. <Ref. to EI-80, REMOVAL, Console Box.>
5) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
6) Remove the left and right grille speaker side and the trim panel - front pillar UPR. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
7) Remove the glove box assembly. <Ref. to EI-77, REMOVAL, Glove Box.>
8) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
9) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
10) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>
11) Remove the pocket assembly - CTR. <Ref. to ETM-50, REMOVAL, External Connection Terminal.>
12) Remove the panel - switch and combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
13) Remove the keyless access CM. <Ref. to SL-101, REMOVAL, Keyless Access CM.>
14) Disconnect the bolts and connectors of passenger's airbag module. <Ref. to AB-19, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>

15) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>
16) Remove the column assembly - steering. <Ref. to PS-26, REMOVAL, Steering Column.>
17) Remove the cover side sill - front and the front cover - side sill on the left and right sides. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
18) Remove the body side weather strip - flange front.

19) Remove the panel COMPL - instrument. <Ref. to EI-82, REMOVAL, Instrument Panel Assembly.>
20) Remove the claws, and remove the passenger's airbag module.

21) For handling of the removed airbag module, refer to "CAUTION". <Ref. to AB-10, CAUTION, General Description.>

B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off. Be sure to replace it with a new clip.
1) Before installation, inspect the following items and replace any faulty part with a new one.
- Passenger's airbag lid (instrument panel surface) is cracked or deformed.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket is cracked or deformed.

2) Install the instrument panel assembly. <Ref. to EI-86, INSTALLATION, Instrument Panel Assembly.>
3) Install the cover side sill - front and the front cover - side sill on the left and right sides.
4) Install the column assembly - steering. <Ref. to PS-28, INSTALLATION, Steering Column.>
5) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.
6) Install the keyless access CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) Install the combination meter assembly.
8) Install the pocket assembly - CTR.
9) Install the audio assembly or navigation assembly.

10) Install the heater control assembly.
11) Install the center grille assembly.
12) Install the panel center assembly.
13) Install the glove box assembly.
14) Install the trim panel - front pillar UPR on the RH and LH sides. <Ref. to EI-95, INSTALLATION, Upper Inner Trim.>
15) Install the grille speaker side on the RH and LH sides.
16) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

17) Install the panel - switch.
18) Install the cover assembly - instrument panel LWR driver.
19) Install the panel center LWR on the RH and LH sides.
20) Install the cover - shift lever and the console box assembly.

Tightening torque:
Console box assembly: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

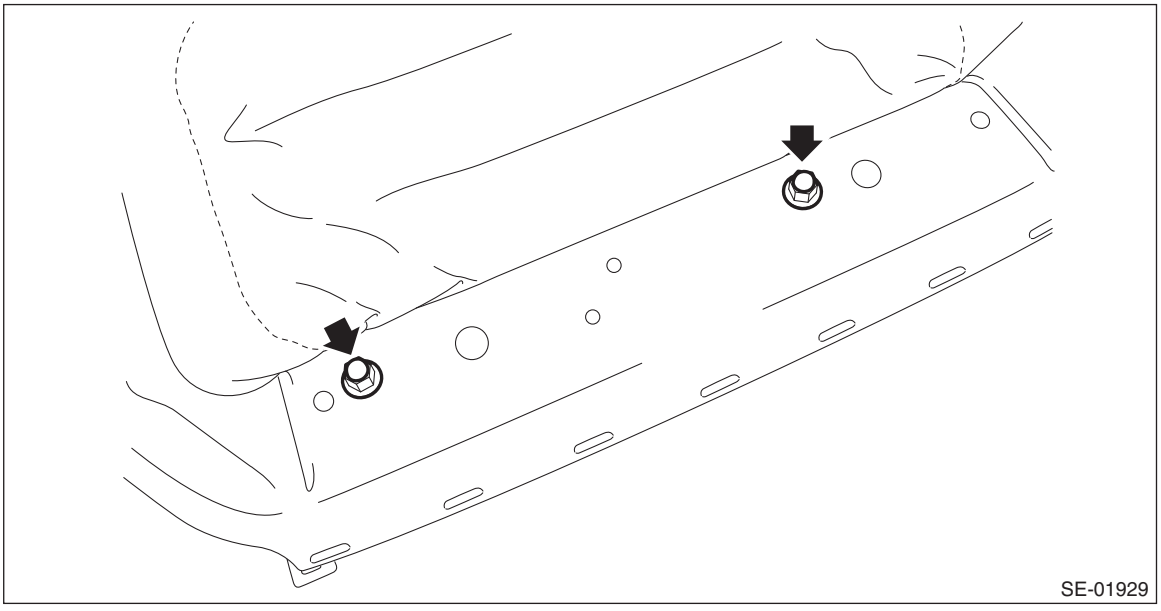
21) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the "P" position.

6. Seat Cushion Airbag Module

A: REMOVAL

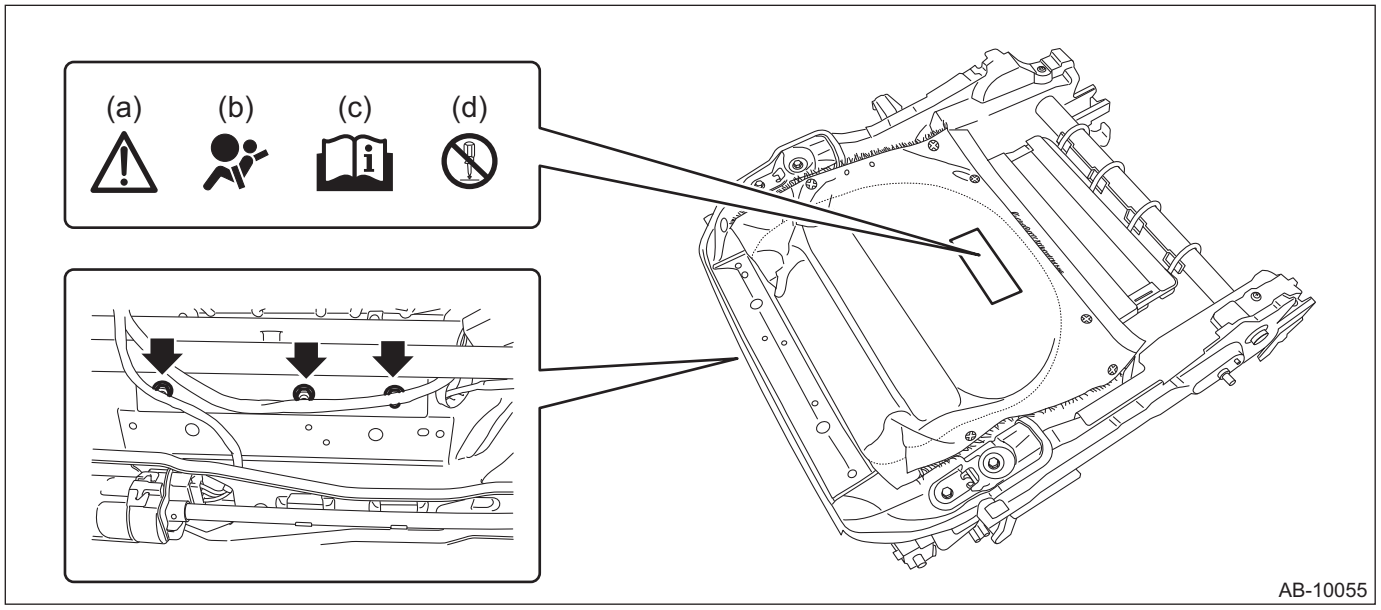
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
3) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>
4) Separate the backrest assembly and the seat cushion assembly. <Ref. to SE-13, DISASSEMBLY, Front Seat.>
5) Remove the seat cushion airbag module.

CAUTION:
• Passenger's seat cushion airbag module is integrated in the seat cushion pad & frame assembly. Do not remove it unless when discarding the seat cushion airbag module.
• If the protection felt for the seat cushion airbag module is broken or damaged, replace the seat cushion airbag module with a new part.

(1) Remove the hook, and remove the pad assembly - front seat cushion and the cover - front cushion.



NOTE:
Turn over the rear side of the seat, and remove the hook on the front side of the seat cushion frame.

(2) Remove the hexagon cap nuts, and remove the power seat control module. (Model with power seats with memory function)

(3) Remove the seat cushion airbag connector clamp.

(4) Remove the nuts and then remove the seat cushion airbag module.

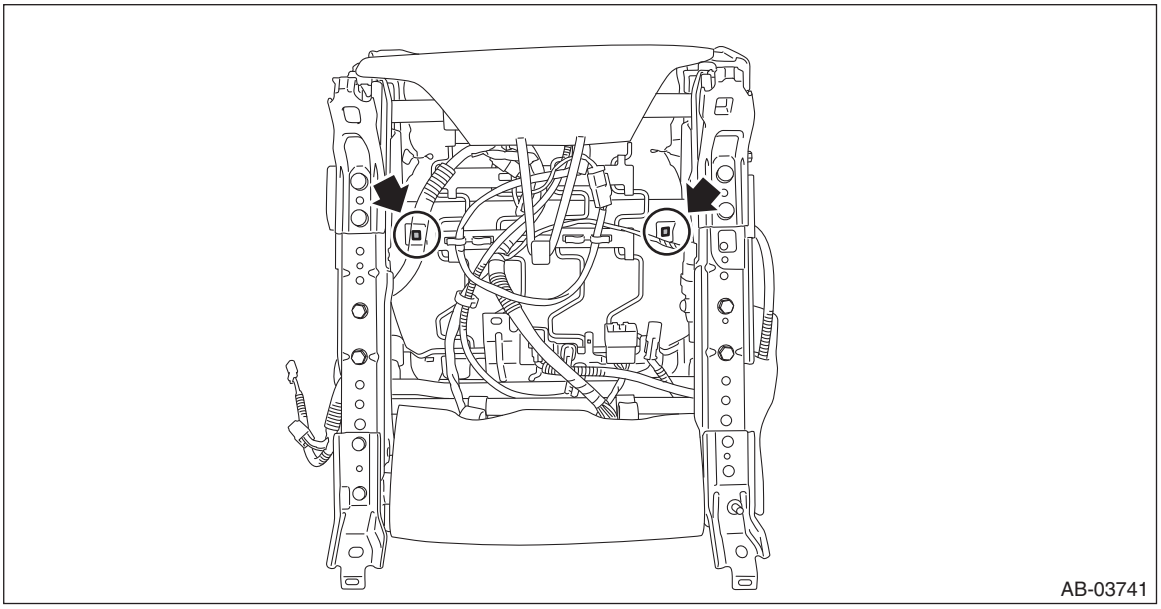
*1 Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.
(b) Indicates that this part is an airbag module.
(c) Before handling, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” in the service manual. For the disposal procedures of the airbag modules, refer to “Airbag Module Disposal”.
(d) Do not disassemble the airbag module.

B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.

1) Before installation, inspect the following items and replace any faulty part with a new one.
• Airbag module is cracked or deformed.
• Frame assembly - front seat cushion is cracked or deformed.
• Harness and/or connector is cracked, deformed or open.
• Harness wire is exposed.
• Installation of seat cushion airbag module is difficult due to the condition of the frame assembly - front seat cushion.



2) Install the seat cushion airbag module.

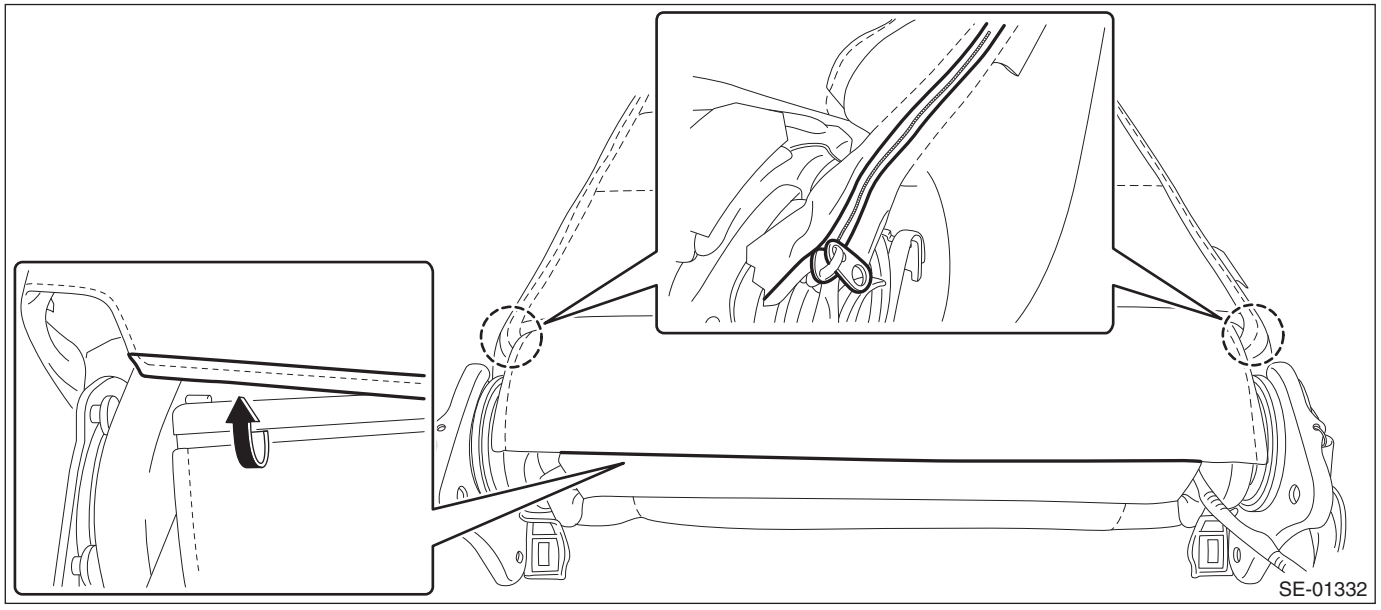
CAUTION:
• Be careful that the end of airbag module is not turned over.
• Be sure to insert the connector in until it is locked.
• Press in the connector securely. Then pull it gently to make sure that it is locked.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

3) Assemble the front seat. <Ref. to SE-26, ASSEMBLY, Front Seat.>

CAUTION:
• After assembling the seat cushion, make sure that the two-dimensional codes (two positions) attached on the seat cushion airbag module can be seen. If it is not assembled correctly, the seat cushion airbag may not operate properly.

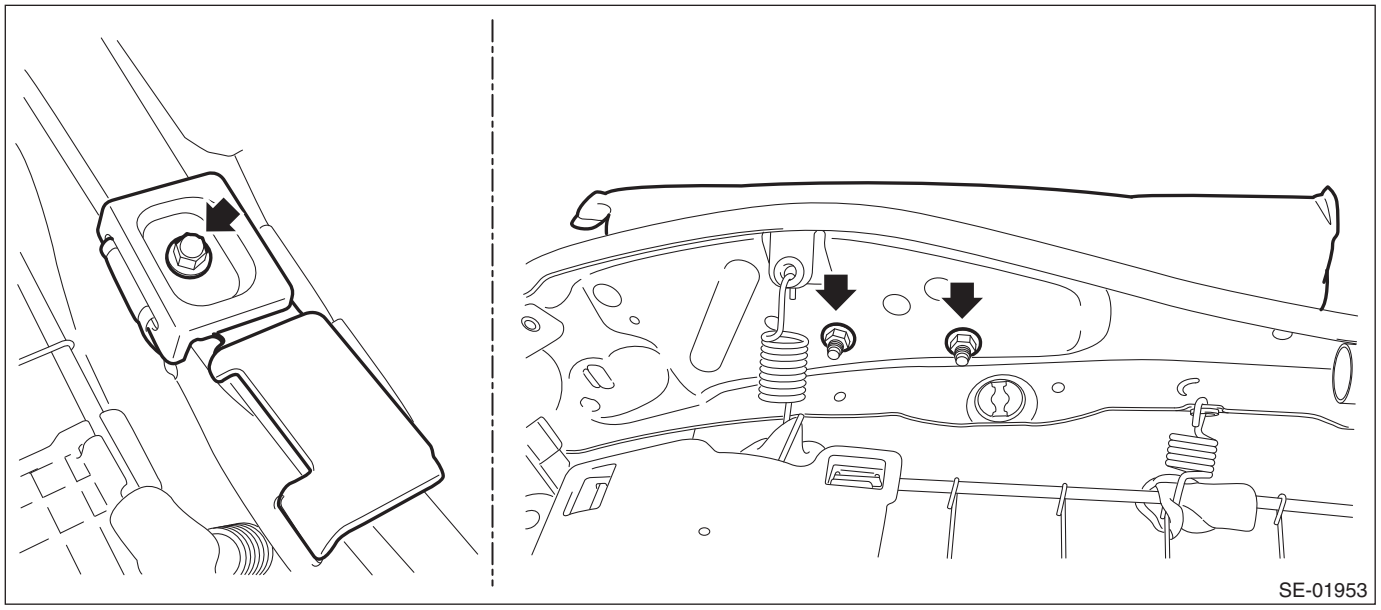
• After assembling the seat, operate the reclining and sliding mechanisms to check that the airbag harness is not caught.
4) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



7. Side Airbag Module

A: REMOVAL

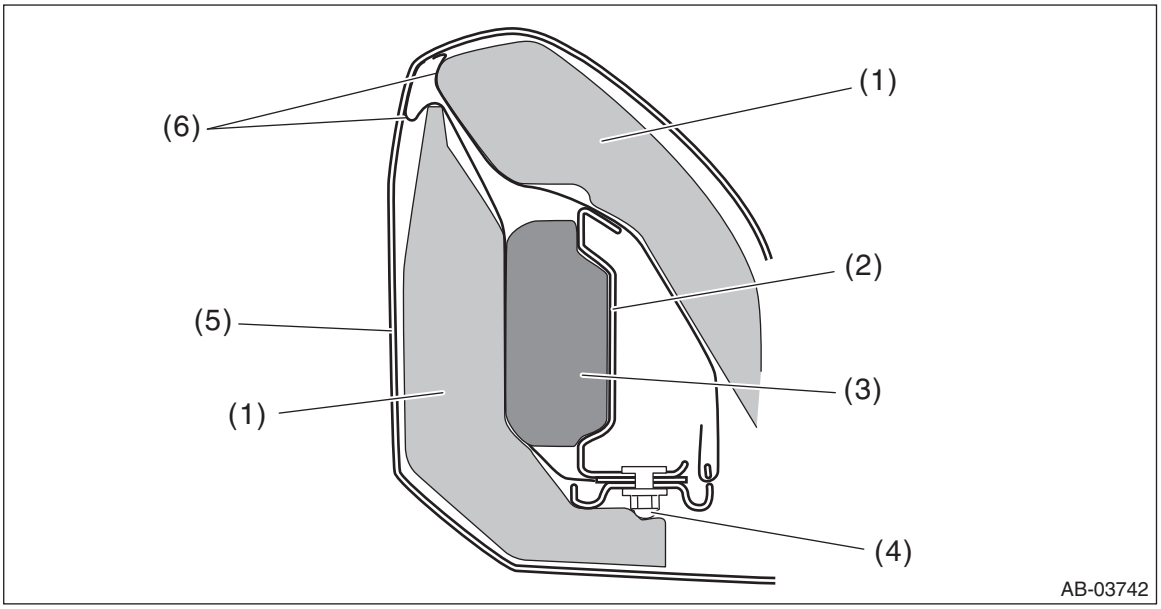
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
3) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>
4) Separate the backrest assembly and the seat cushion assembly. <Ref. to SE-13, DISASSEMBLY, Front Seat.>
5) Remove the side airbag module.

CAUTION:
Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hexagon cap nut and nuts.



(4) While taking care not to damage the airbag protective cover, remove the side airbag module.

B: INSTALLATION

CAUTION:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**
- **Make sure that the side airbag module is installed as shown in the figure.**

(1)	Pad ASSY - front seat backrest	(3)	Side airbag module	(5)	Cover COMPL - front backrest
(2)	Frame ASSY - front backrest	(4)	Hexagon cap nut	(6)	Side airbag guide cloth

- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse hog rings.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

1) Before installation, inspect the following items and replace any faulty part with a new one.

- Make sure that there is no foreign matter on side airbag module.
- Front seat, airbag module and mounting bracket are damaged or deformed.

- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.

2) Install the side airbag module to the frame assembly - front backrest.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

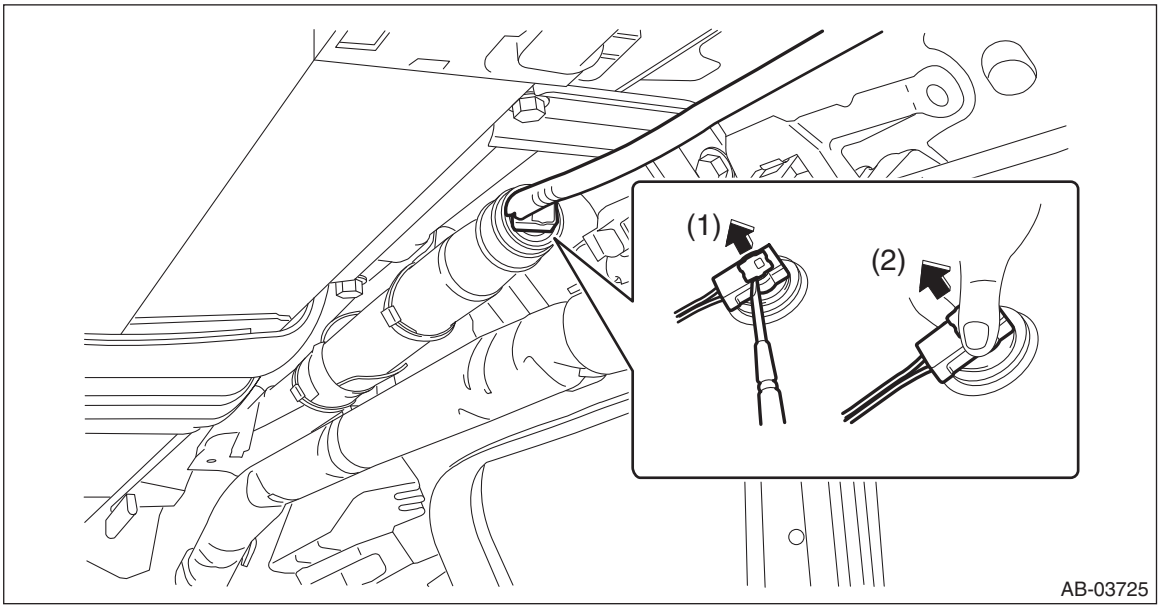
3) Assemble the front seat. <Ref. to SE-26, ASSEMBLY, Front Seat.>

CAUTION:
After restoring the seat, operate the reclining and sliding mechanisms to check that the airbag harness is not caught.

4) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

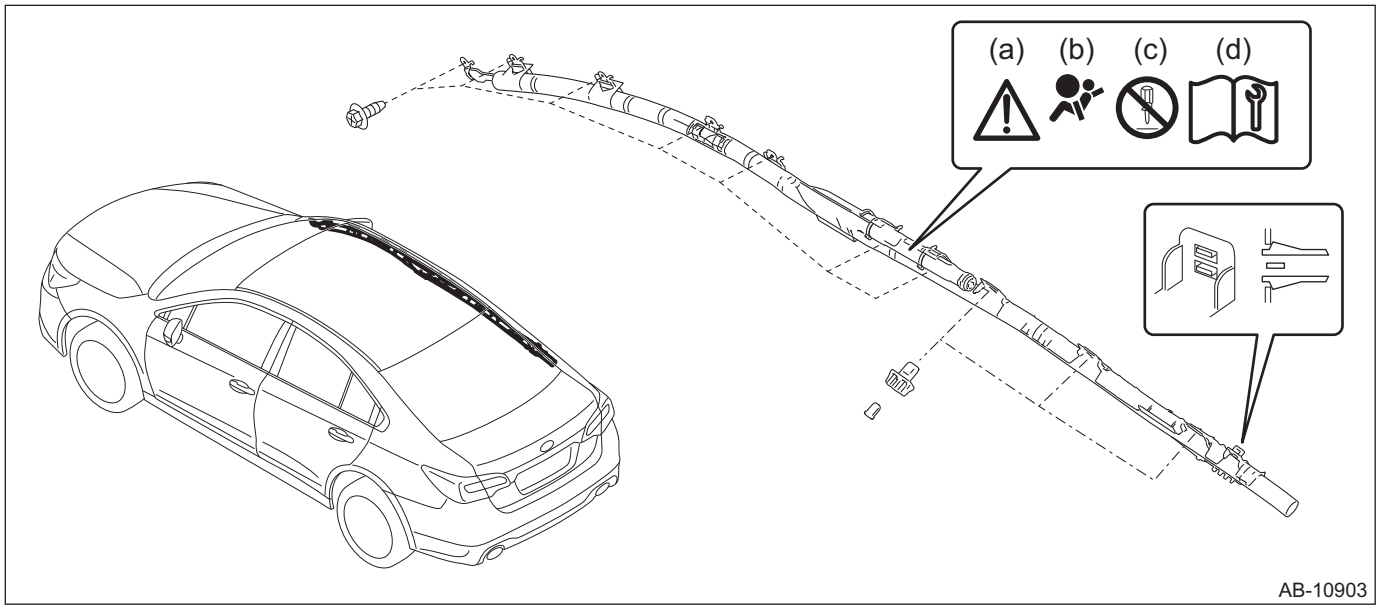
8. Curtain Airbag Module

A: REMOVAL



1. SEDAN MODEL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

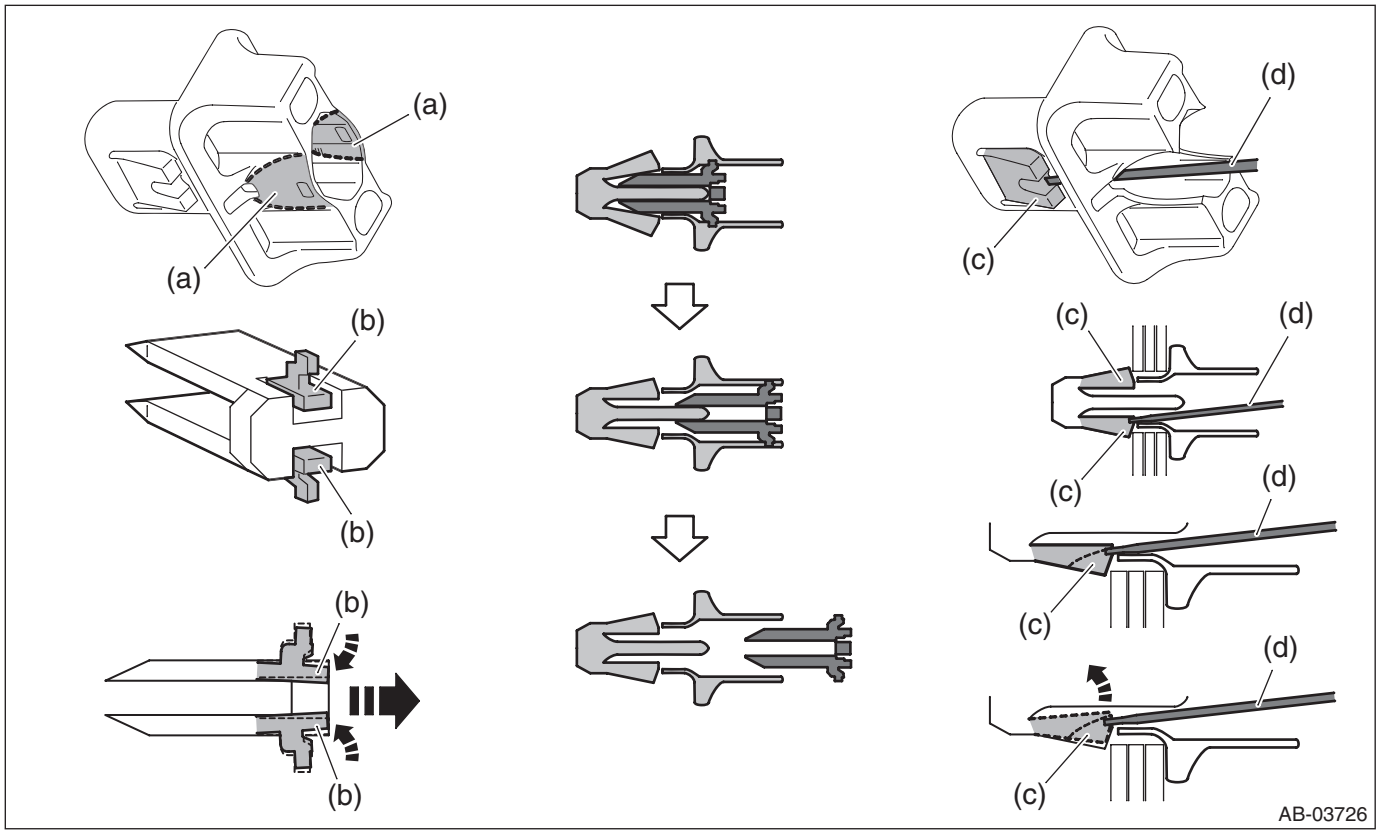


NOTE:
On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
3) Remove the trim panel - roof assembly. <Ref. to EI-111, REMOVAL, Roof Trim.>
4) Remove the curtain airbag module.

CAUTION:
- **Be careful not to damage the curtain airbag module during removal.**
- **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
- **Do not reuse the clip securing the curtain airbag module.**
- **Remove the modules in order starting from the vehicle front.**

(1) Disconnect the curtain airbag module connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

(2) Remove all the bolts and clips, and remove the curtain airbag module.



*1 Meaning of pictograms indicated on the label

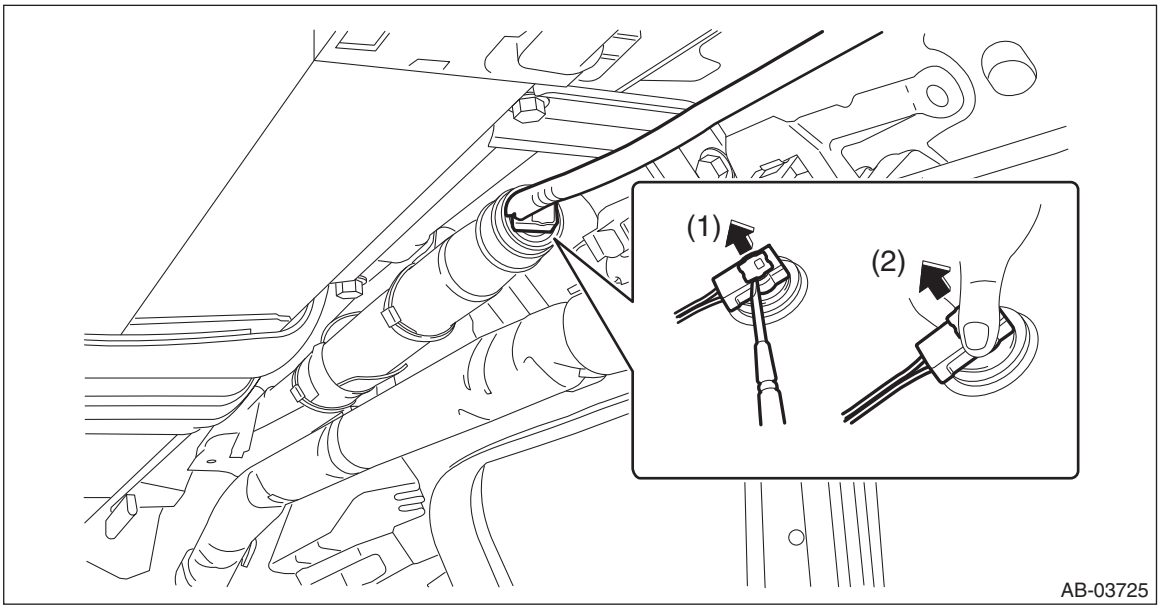
(a) Flammable explosive substance encapsulated parts; be careful of handling.
(b) Indicates that this part is an airbag module.
(c) Do not disassemble the airbag module.
(d) Before handling, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” in the service manual. For the disposal procedures of the airbag modules, refer to “Airbag Module Disposal”.

NOTE:
Remove the securing clip of curtain airbag module in the following procedures.
1. Using a pair of nippers, cut off the clip base (a).
2. Remove the clip - pin while holding the lock (b) with needle nose pliers.

3. Release the locks (c) of the clips - bushing at two locations at the top and bottom completely using thin flat head screwdriver (d), and remove the clip - bushing.

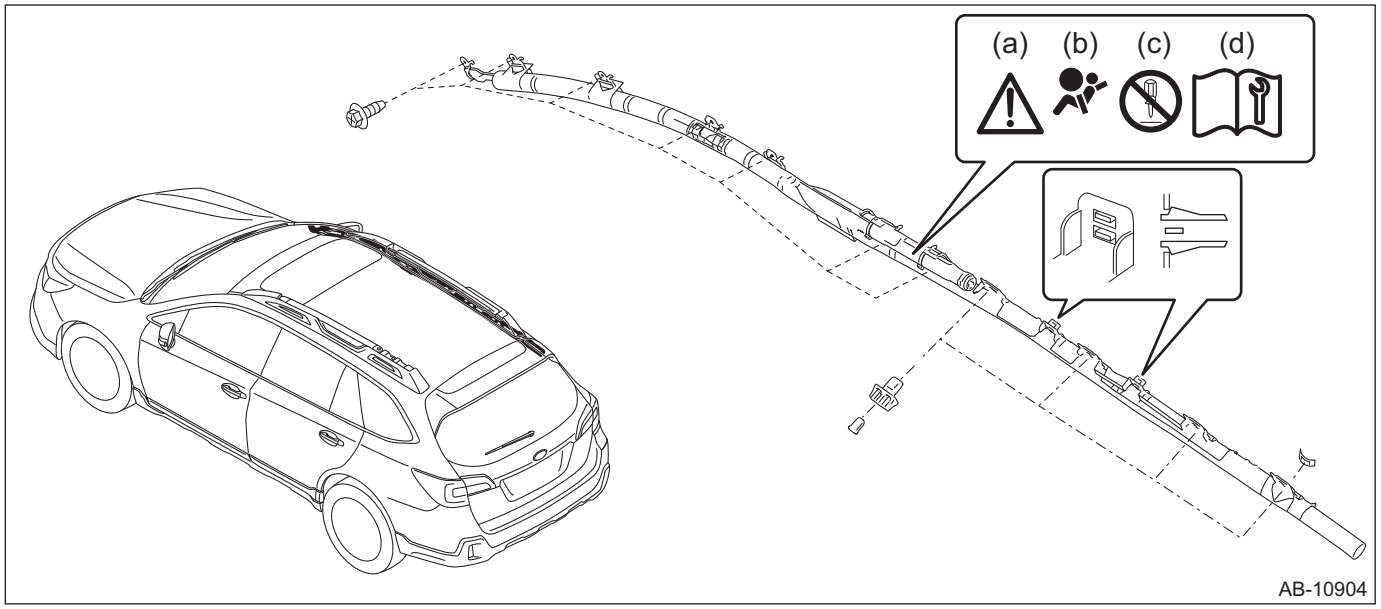
2. OUTBACK MODEL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.

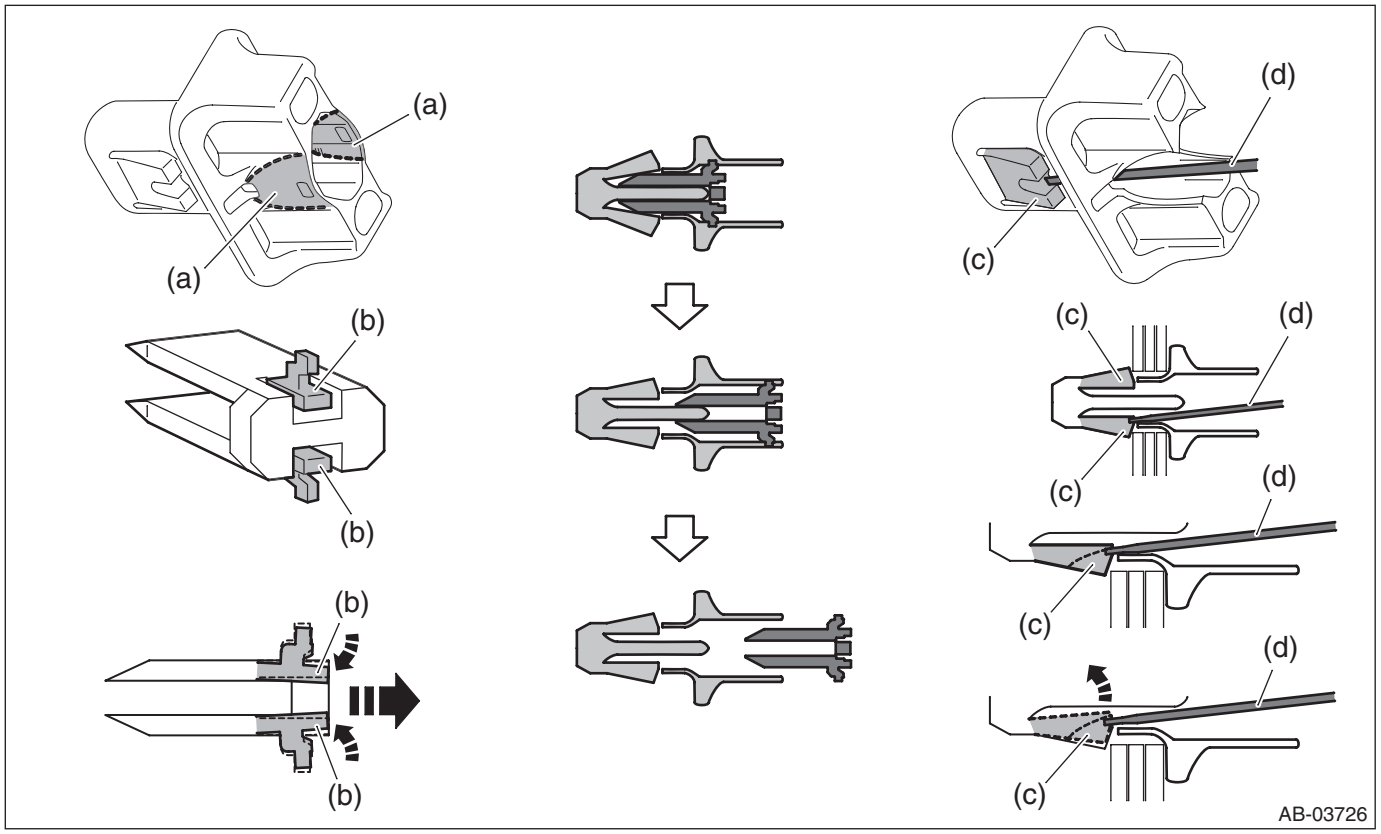


3) Remove the trim panel - roof assembly. <Ref. to EI-111, REMOVAL, Roof Trim.>
4) Remove the curtain airbag module.

CAUTION:
- **Be careful not to damage the curtain airbag module during removal.**
- **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
- **Do not reuse the clip securing the curtain airbag module.**
- **Remove the modules in order starting from the vehicle front.**

(1) Disconnect the curtain airbag module connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

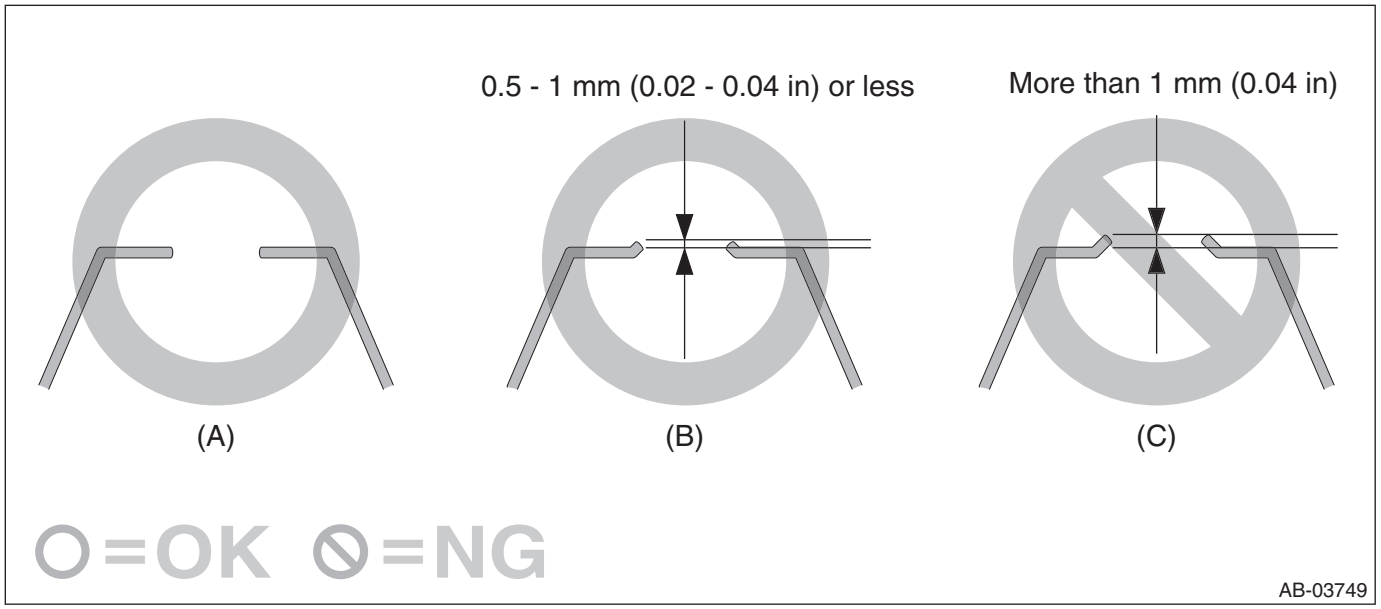
(2) Remove all the bolts and clips, and remove the curtain airbag module.



*1 Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.
(b) Indicates that this part is an airbag module.
(c) Do not disassemble the airbag module.
(d) Before handling, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" in the service manual. For the disposal procedures of the airbag modules, refer to "Airbag Module Disposal".

NOTE:
Remove the securing clip of curtain airbag module in the following procedures.
1. Using a pair of nippers, cut off the clip base (a).
2. Remove the clip - pin while holding the lock (b) with needle nose pliers.



3. Release the locks (c) of the clips - bushing at two locations at the top and bottom completely using thin flat head screwdriver (d), and remove the clip - bushing.

B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• When installing the curtain airbag module, install a specified part at specified place.
• Be careful not to damage the curtain airbag module during installation.
• Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.
• Make sure that there are no foreign matter on airbag module.
• Do not reuse the clip securing the curtain airbag module.
• If deformation or crack is found in the bracket - assist rail by visual check, replace the defective part.

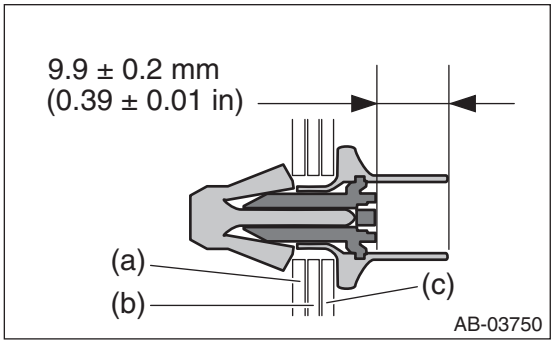
• If deformation is found in the clip mounting holes of the side rail and rear quarter metal sections, repair or replace the defective part.

(A) If no deformation is found, install the curtain airbag module with a new securing clip.

(B) If deformation is 0.5 - 1 mm (0.02 - 0.04 in), correct the deformed section to be flat and install the curtain airbag module with a new securing clip.

(C) If deformation is 1 mm (0.04 in) or more, replace the deformed part together with the panel. Refer to the repair manual for body panel replacement.

• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.



• For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-9, INSTALLATION, Stereo Camera.>

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

2) Install the curtain airbag module.

CAUTION:
• Be sure to insert the connector in completely until it is locked.
• Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.
• Do not reuse the clip securing the curtain airbag module.

- **Install a new clip - bushing securely, and press the clip - pin securely into the clip - bushing. After pressing the clip - pin securely, make sure that the heights of clip - bushing top surface and the clip - pin top surface are 9.9±0.2 mm (0.39±0.01 in).**

(a) Body panel
(b) Plastic cover or plastic spacer
(c) Airbag module tab portion

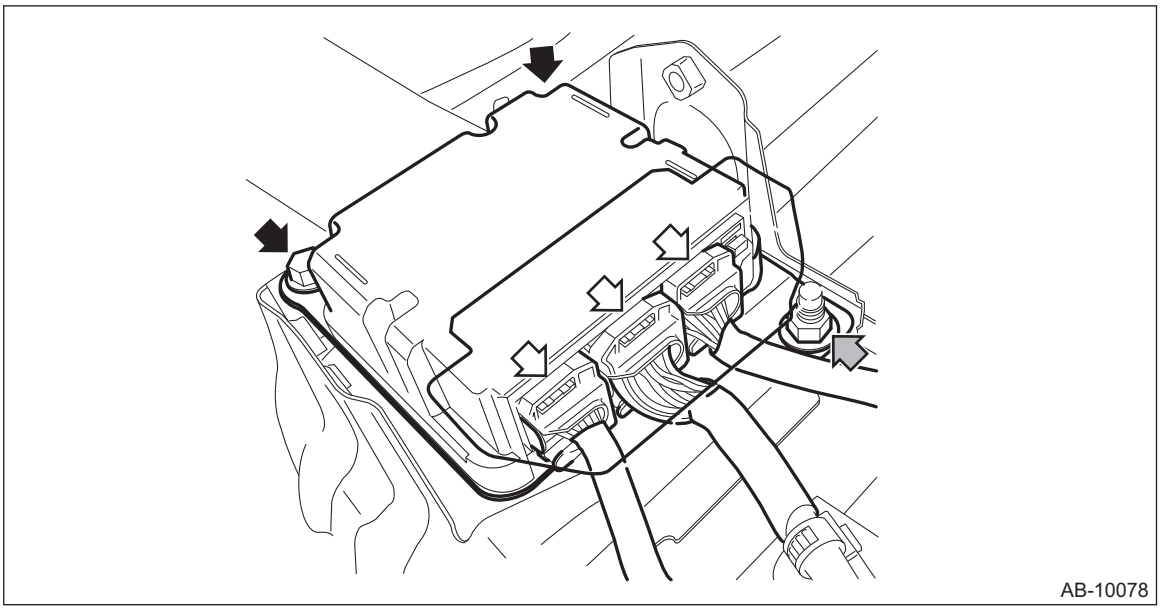
The plastic spacer is installed only to the rearmost position of OUTBACK model.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the trim panel - roof assembly. <Ref. to EI-115, INSTALLATION, Roof Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

9. Airbag Control Module



A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not disassemble the airbag control module.
• If the airbag control module is deformed or if there is any trace of water on the module, replace the airbag control module with a new one.
• Do not drop the airbag control module.
• After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.

3) Remove the cover - shift lever and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
4) Remove the airbag control module.
   (1) Disconnect the connector from airbag control module. <Ref. to AB-18, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>
   (2) Remove the bolt and nuts and remove the airbag control module.

B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- Control module is deformed.
- Control module connector is damaged.
- Control module mounting bracket is damaged.

2) Install the airbag control module.

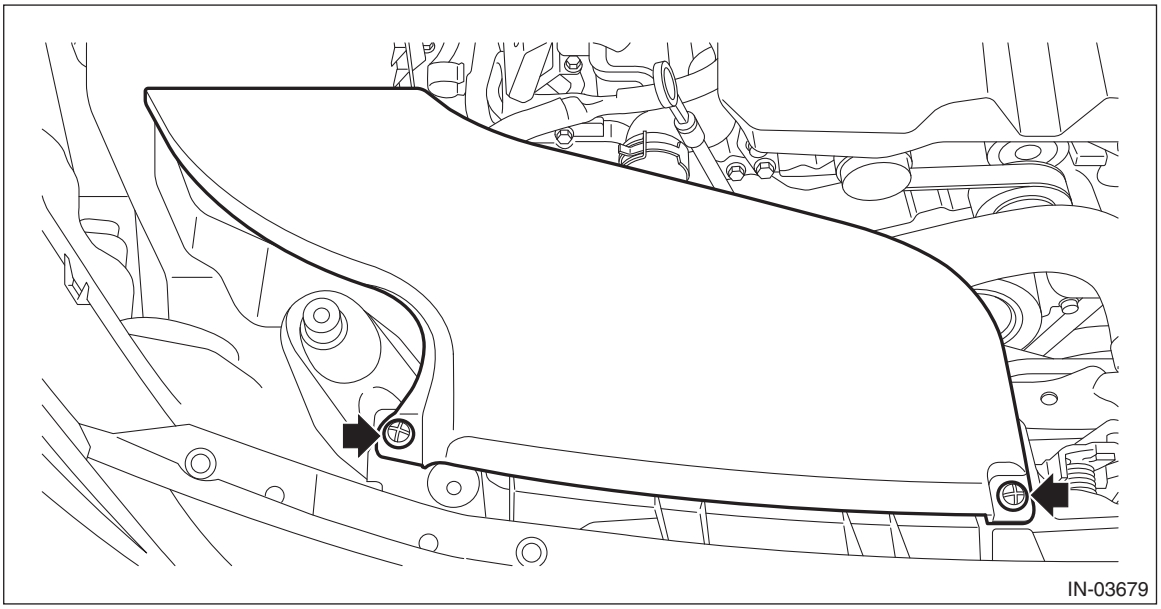
CAUTION:
Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the cover - shift lever and the console box assembly.

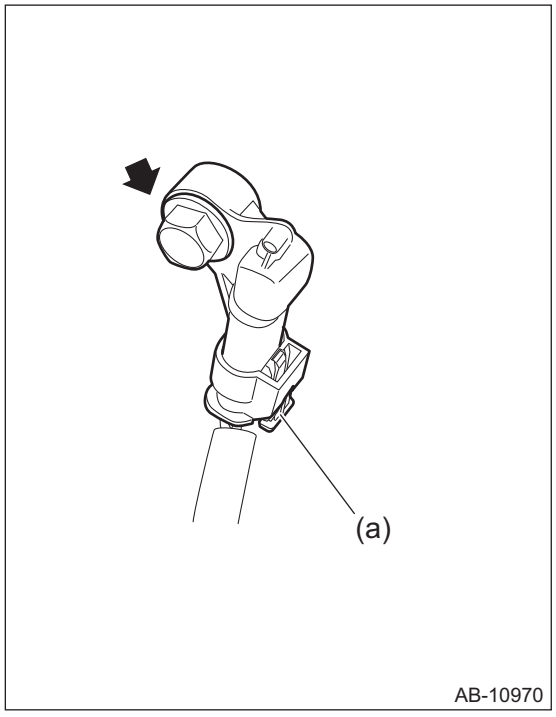
Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

10.Front Sub Sensor



A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the front sub sensor.
   (1) Remove the clips and remove the air intake duct. (When removing the sensor RH)

   (2) Remove the bolt, and then detach the front sub sensor.
   (3) Pull the lock arm (a) and disconnect the airbag connector to remove the front door impact sensor. <Ref. to AB-20, FRONT SUB SENSOR AND FRONT DOOR IMPACT SENSOR, PROCEDURE, Airbag Connector.>

B: INSTALLATION

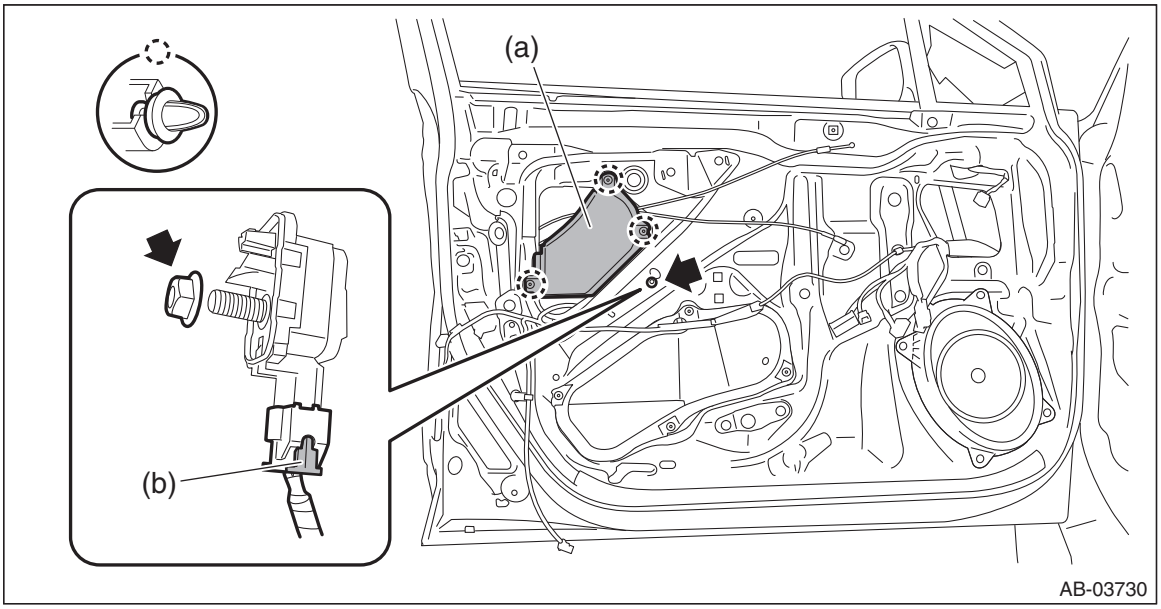
CAUTION:
- **If the airbag has been activated, replace the front sub sensor with a new part.**
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

1) Before installation, inspect the following items and replace any faulty part with a new part.
- Front sub sensor or connector is damaged.

2) Install the front sub sensor.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)



3) Install the air intake duct. (When removing the sensor RH)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

11.Front Door Impact Sensor

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• When the front door impact sensor is removed, always replace it with a new front door impact sensor. If it is reused, sealing capability on the contacting surface of door panel may be insufficient and impact pressure may not be detected correctly.
1) Operate the power window switch to close the front door glass.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the trim panel - front door. (On the side where airbag door sensor is removed) <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
5) Remove the sealing cover. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
6) Remove the front door impact sensor.

CAUTION:
If it is removed with an excessive force, the panel assembly - front door may be deformed. Also, if the clip is damaged, replace it with a new clip.
(1) Remove the plate - door (a).
(2) Remove the nuts and then remove the front door impact sensor.
(3) Pull the lock arm (b) and disconnect the airbag connector to remove the front door impact sensor. <Ref. to AB-20, FRONT SUB SENSOR AND FRONT DOOR IMPACT SENSOR, PROCEDURE, Airbag Connector.>

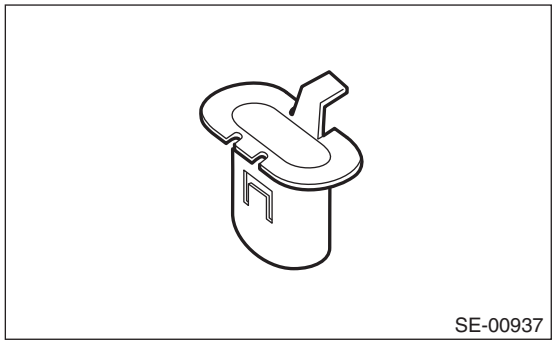
B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The front door impact sensor or connector is damaged.
- Inner panel area of the panel assembly - front door is deformed.
- Plate - door is deformed.
- Side airbag module has been activated.

2) Install the front door impact sensor.

CAUTION:
• Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

- **Thoroughly clean the sensor mounting area before installing the front door impact sensor.**
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

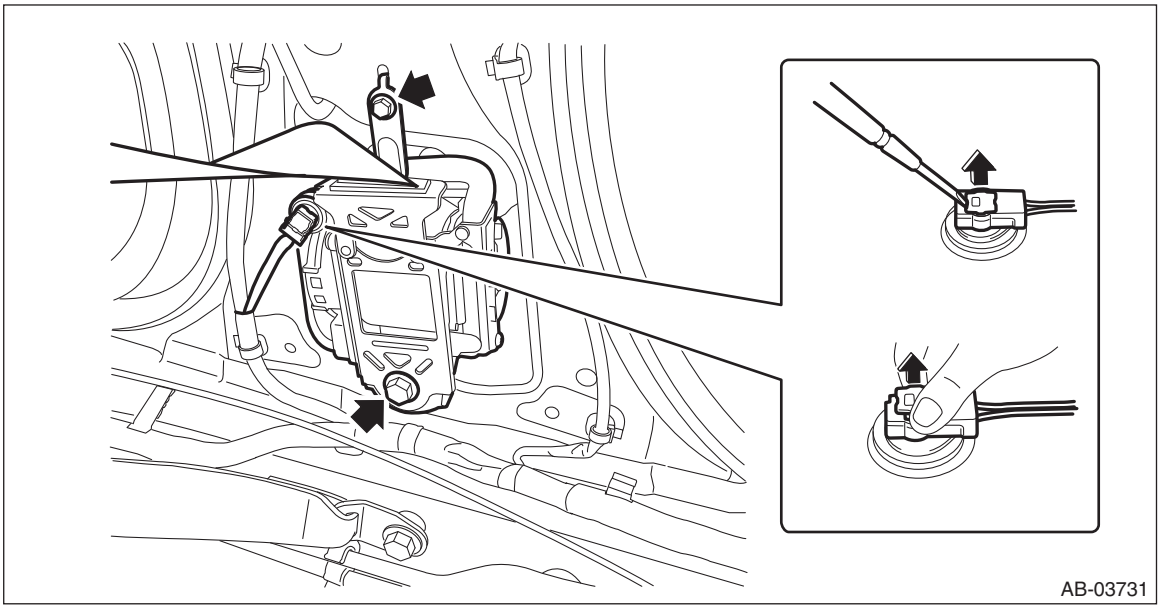


Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the sealing cover.
4) Install the trim panel - front door.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

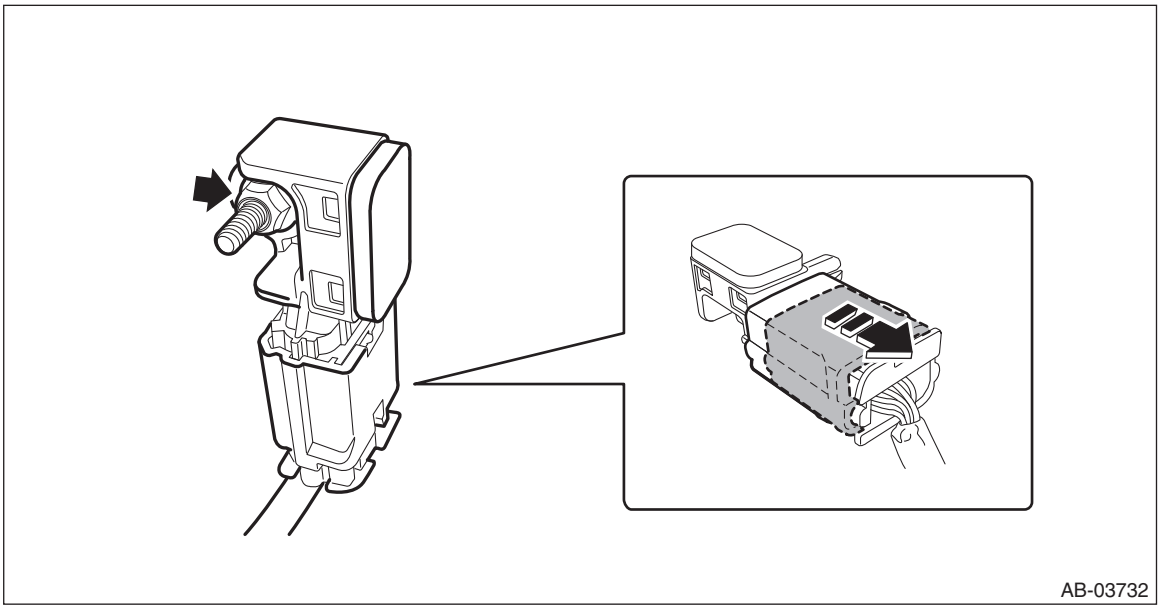
12.Side Airbag Sensor

A: REMOVAL



CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

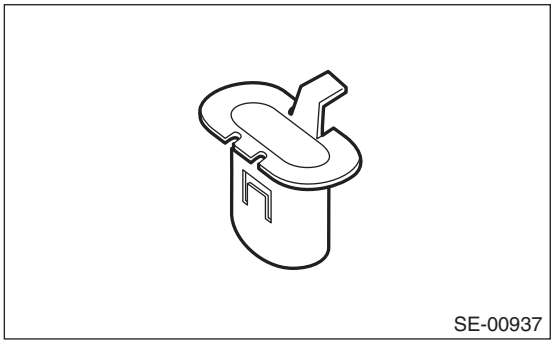
SE-00937



1) Move the seat all the way forward, from which the side airbag sensor is to be removed.

NOTE:
This is to remove the seat belt retractor assembly.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
4) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
5) Remove the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR. (On the side where the side airbag sensor is removed) <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
6) Remove the seat belt retractor. (On the side where the side airbag sensor is removed)
(1) Disconnect connector of the pretensioner. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>
(2) Remove the bolt to remove the seat belt retractor.



AB-03731

7) Remove the nuts and then remove the side airbag sensor. <Ref. to AB-20, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The side airbag sensor or connector are damaged.
- Side airbag module has been activated.

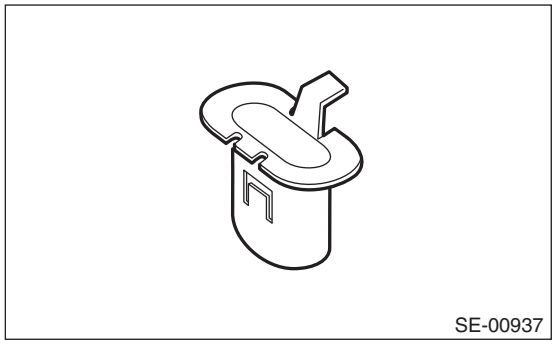
2) Install the side airbag sensor.

CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

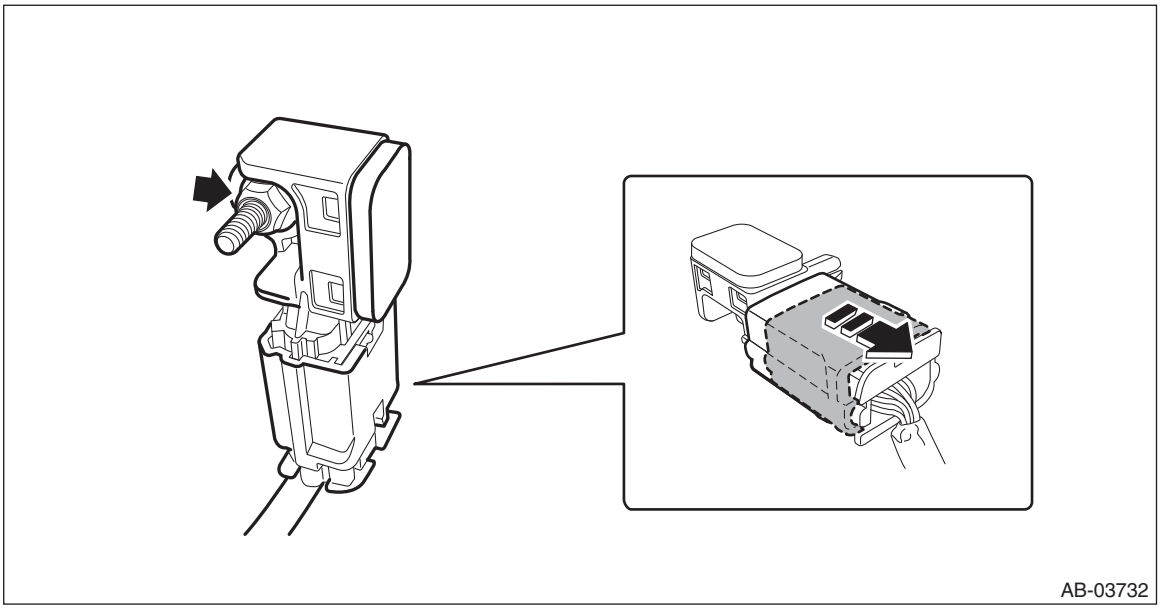
3) Install the seat belt retractor.



Tightening torque:
Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

4) Install the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR.
5) Install the rear seat cushion assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

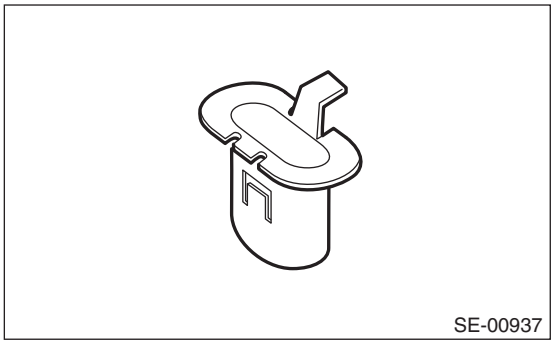
13.Curtain Airbag Sensor



A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937



1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly and the side pad assembly - backrest (on the side where curtain airbag sensor is removed). <Ref. to SE-34, REMOVAL, Rear Seat.>
- Sedan model: <Ref. to SE-34, SEDAN MODEL, REMOVAL, Rear Seat.>
- OUTBACK model: <Ref. to SE-36, OUTBACK MODEL, REMOVAL, Rear Seat.>

4) Remove the cover side sill - rear. (On the side where the curtain airbag sensor is removed) <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
5) Remove the nuts and then remove the curtain airbag sensor. <Ref. to AB-20, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

AB-03732

B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Curtain airbag sensor or connector is damaged.
- Curtain airbag module has been activated.

2) Install the curtain airbag sensor.

CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

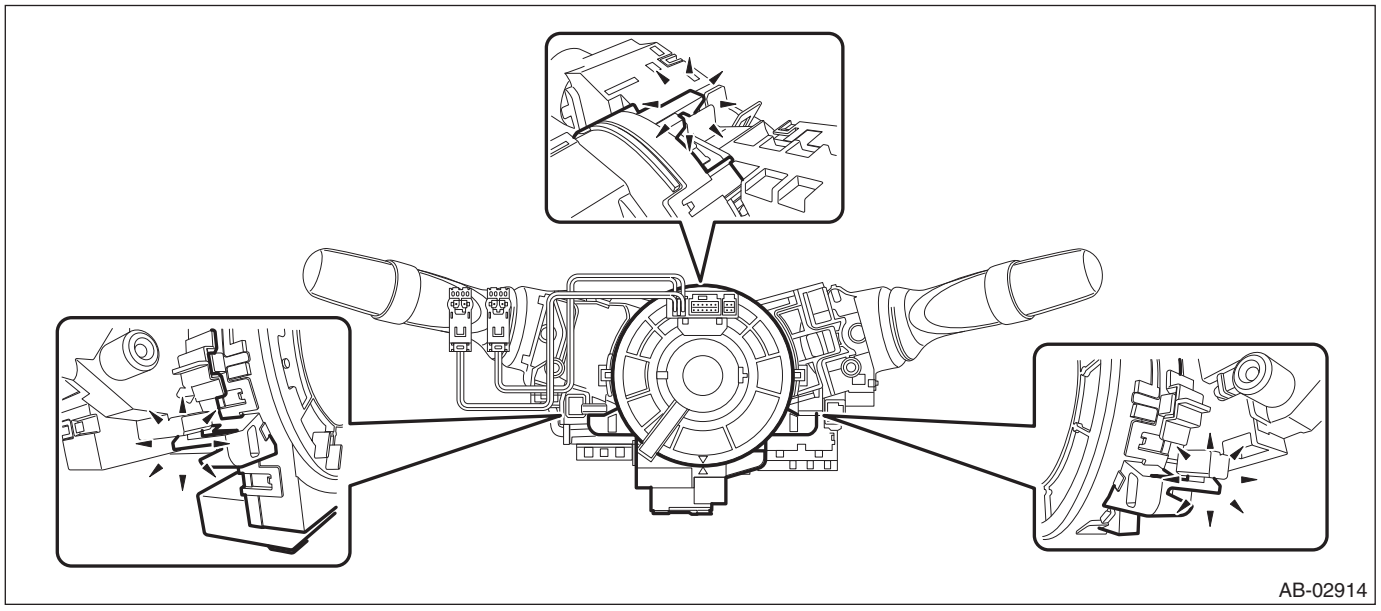
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the cover side sill - rear and the trim panel - rear pillar LWR.
4) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

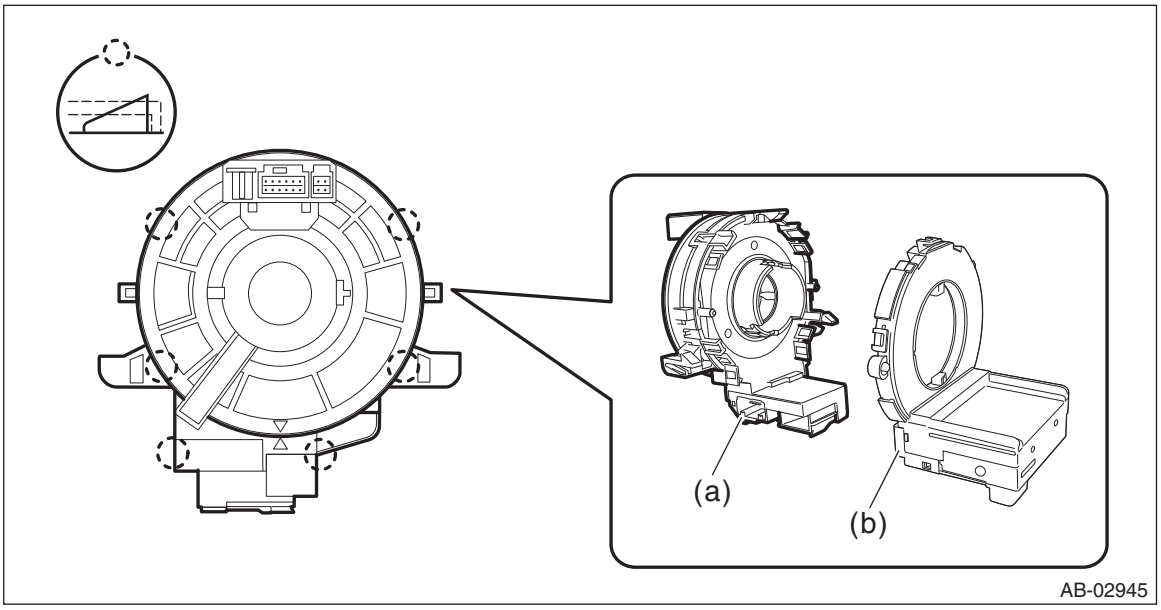
5) Install the rear seat cushion assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

14.Roll Connector



A: REMOVAL

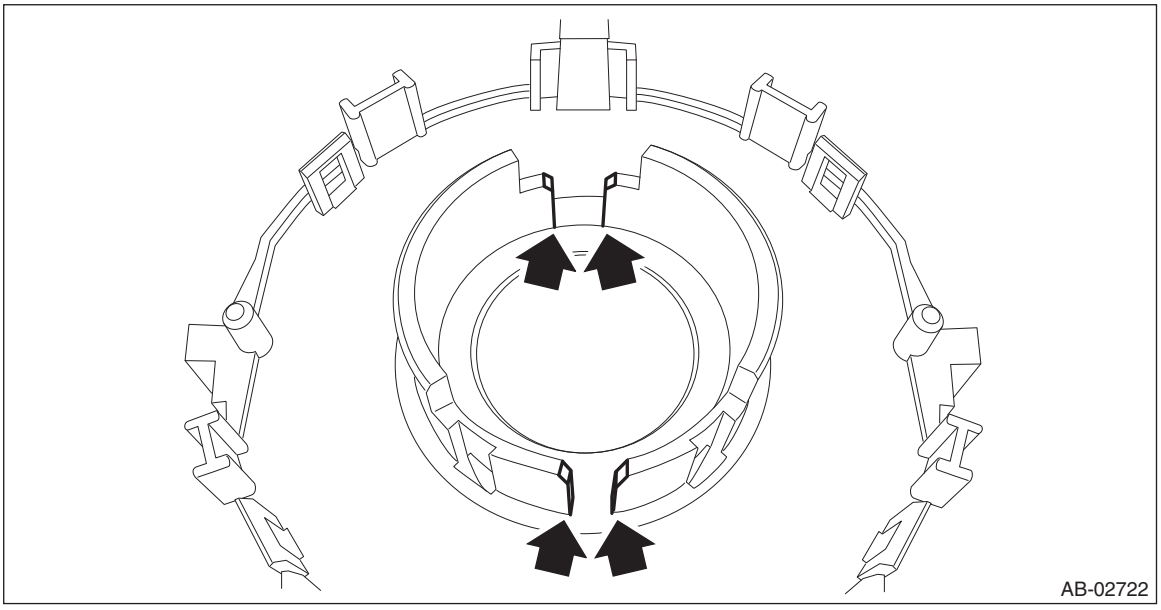
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Position the front wheels straight ahead.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
5) Remove the steering wheel. <Ref. to PS-11, REMOVAL, Steering Wheel.>
6) Remove the cover assembly - column. <Ref. to PS-26, REMOVAL, Steering Column.>
7) Remove the roll connector.

CAUTION:
Make sure that the roll connector is not turned from the original position.

(1) Disconnect the connector under the roll connector.
(2) Release the claws and remove the roll connector.



(3) Release the claws and separate the roll connector (a) and steering angle sensor (b).

B: INSTALLATION

CAUTION:
If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.
- **Align the center position of the steering roll connector.**
- **Perform the midpoint setting of the steering angle sensor.**

1) Before attaching a new roll connector, apply a thin coat of grease contained in the connector onto the areas shown by the arrows.

2) Install the cover assembly - column.
3) Install the roll connector.
4) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
5) Install the steering wheel.

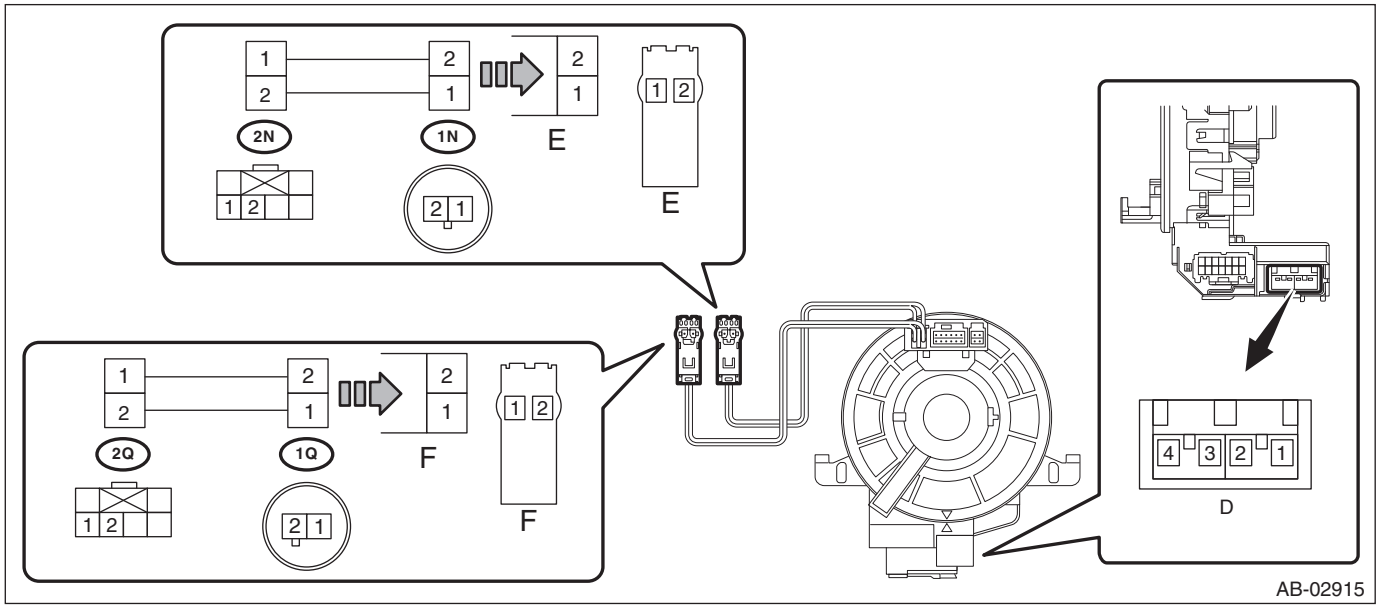
Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
6) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Perform the centering setting for the steering angle sensor. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace the damaged parts with new parts.
- Combination switch is cracked or deformed.
- Roll connector is cracked or deformed.



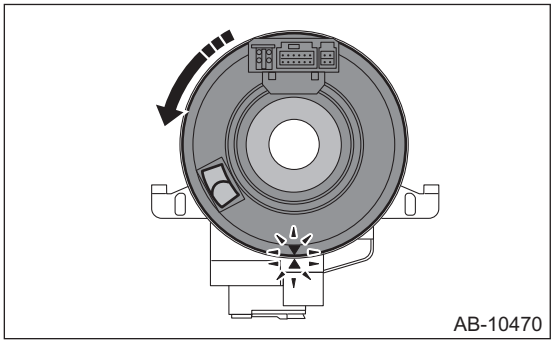
2. UNIT INSPECTION OF ROLL CONNECTOR

CAUTION:
• Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
• When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.
1) Adjust the roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
2) Set the roll connector to the central position.
3) Connect the test harness to the connector E and connector F.

Preparation tool:
Test harness N (98299SA000)
Test harness Q (98299SA040)
- Connector E - Test harness N (1N)
- Connector F - Test harness Q (1Q)

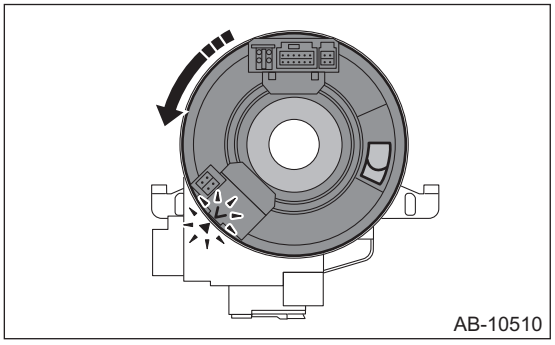
4) With the following conditions, check the resistance between the test harness connector terminals.
- Perform the check with the roll connector centered (front wheels direct straightforward).
- Rotate the roll connector counterclockwise from the center (front wheels direct straightforward) to an end stop. Then, perform the check while rotating it clockwise to approximately 4.5 turns.

Preparation tool:
Circuit tester



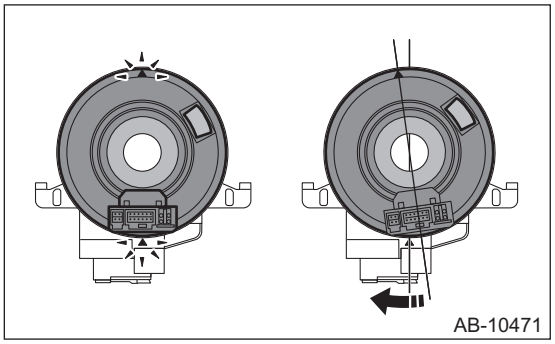
Terminal No.	Inspection conditions	Standard
(2N) No. 1 — (2N) No. 2	Always	Less than 1 Ω

Terminal No.	Inspection conditions	Standard
(2Q) No. 1 — (2Q) No. 2	Always	Less than 1 Ω

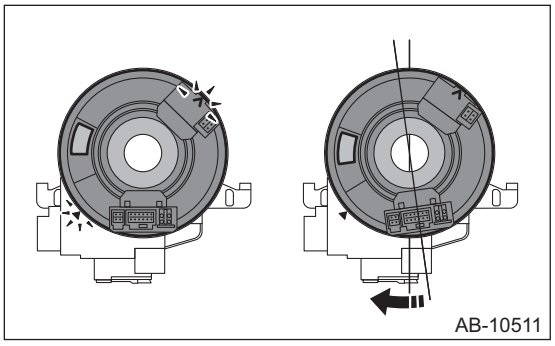


NOTE:
The connector D is designed to short the terminals D1/D2 and D3/D4 when disconnected.
5) Replace the roll connector with a new part if the inspection result is not within the standard value.

D: ADJUSTMENT

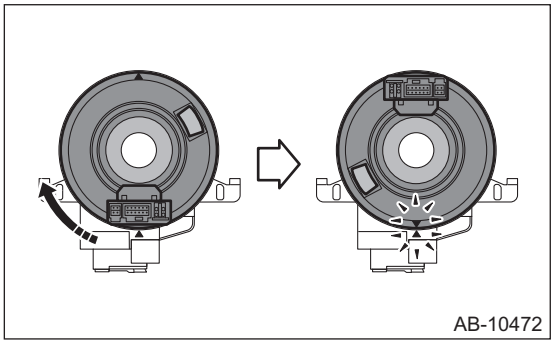


CAUTION:
• Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
• When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.
1) Check that front wheels are positioned in straight ahead direction.
2) Be sure to rotate the roll connector counterclockwise until it stops.
– Without steering heater

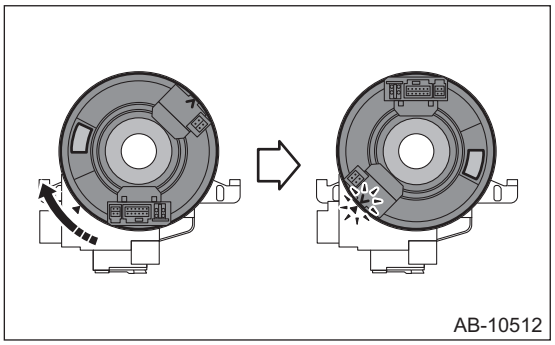


– With steering heater

3) If the connector passes the bottom position when the rotation stops, return the connector to the bottom position.
– Without steering heater

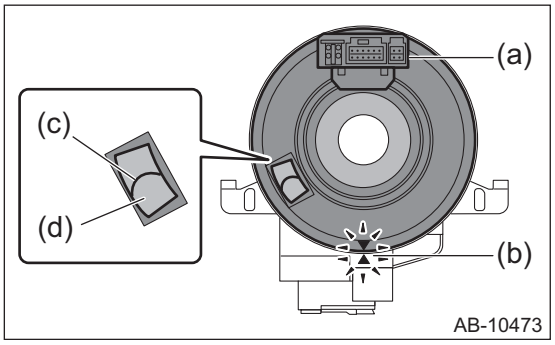


– With steering heater

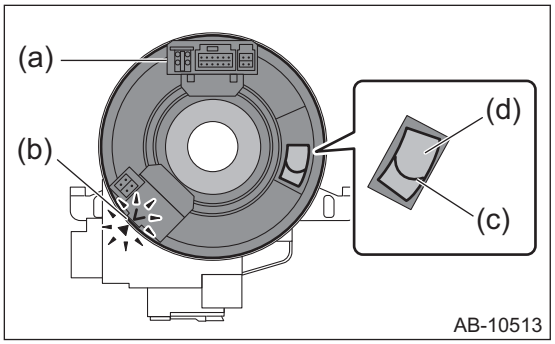


4) Check that the connector is at the bottom position. Then rotate back the roll connector clockwise by approx. 2.5 turns so that the connector is at the top position, and align "▲" marks.

– Without steering heater



– With steering heater



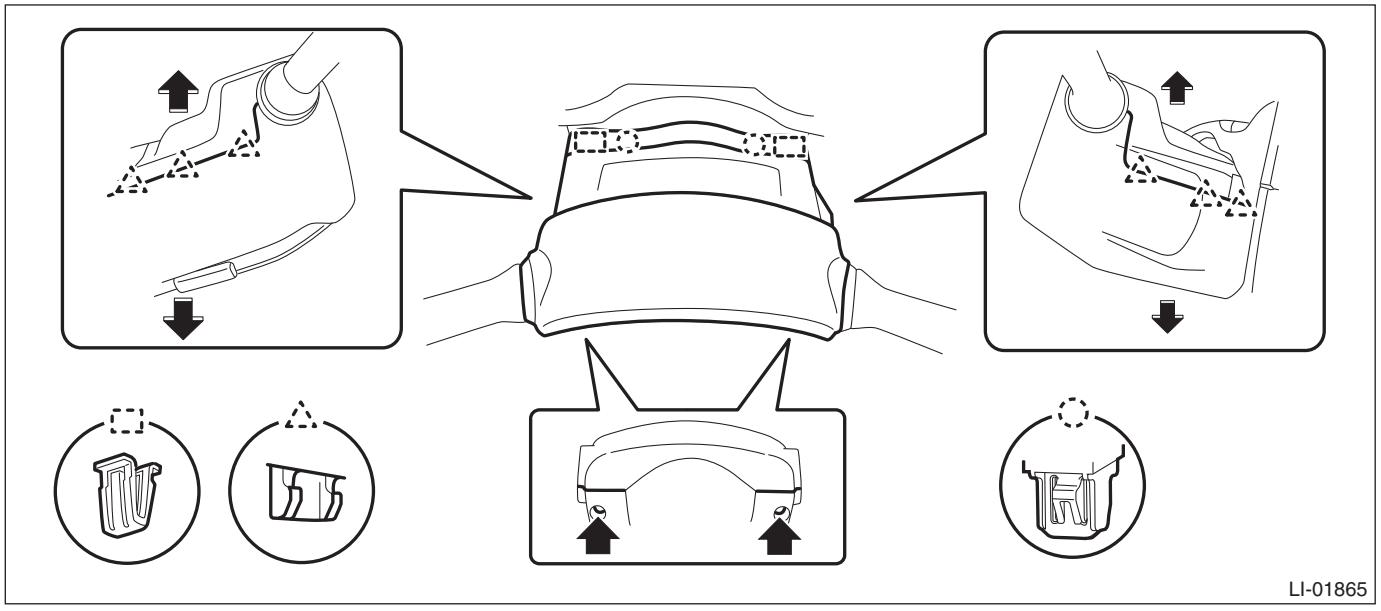
5) Use the following items to check that the spiral cable sub assembly is at the neutral position.

- Connector (a) is at the top position.
- Combination marks (b) are aligned.
- The peak (c) of the U turn section on the flat cable can be seen from the inspection window (d).

– Without steering heater

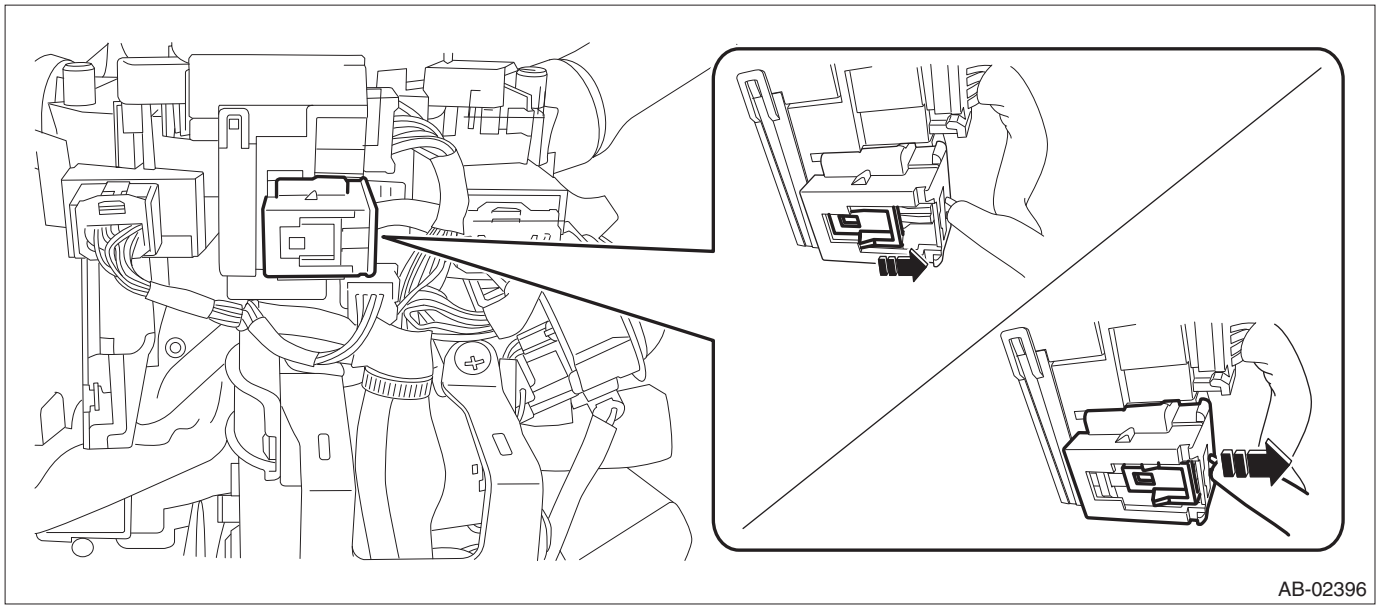
– With steering heater

15.Airbag Module Disposal (Deployment Processing on Vehicle)



A: PROCEDURE

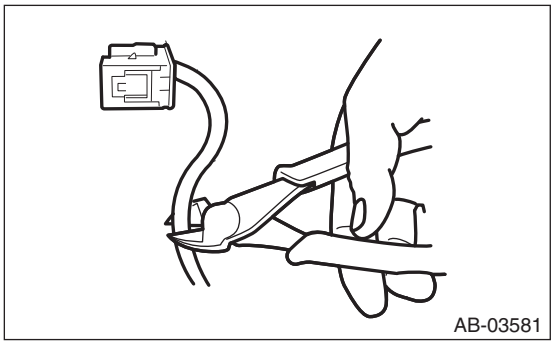
WARNING:
Make sure to follow the instructions below. Otherwise, personal injuries may occur.
• Before discarding an airbag module, always perform an operation process to prevent any false activation.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not touch the airbag module just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.



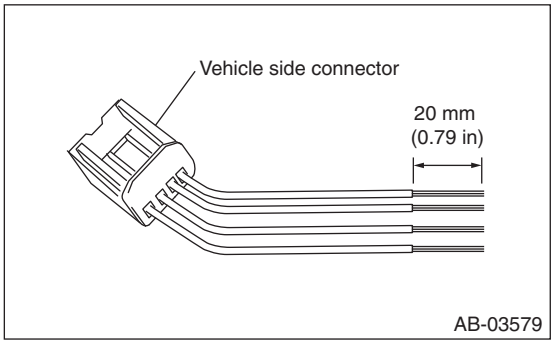
CAUTION:
• Airbag module operation process should be performed on a flat place in safety area. Do not perform the process outdoors when there is rain or strong wind.
• Activating an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within 5 m (16 ft) radius of the disposal site.
• After activating the airbag module, smoke may arise. Therefore, it must be activated in a well-ventilated place with no smoke detector nearby.
• Do not expose the activated airbag module to water.
• Wrap the activated airbag module in a sealed vinyl bag when discarding.
• If it is impossible to perform an airbag module operation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.

1. DRIVER'S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column.
   (2) Remove the screws.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

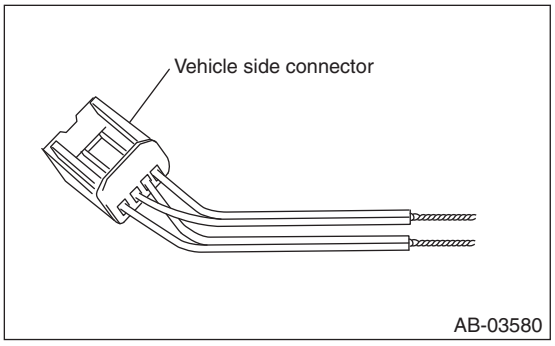


4) Disconnect the driver's airbag module connector.

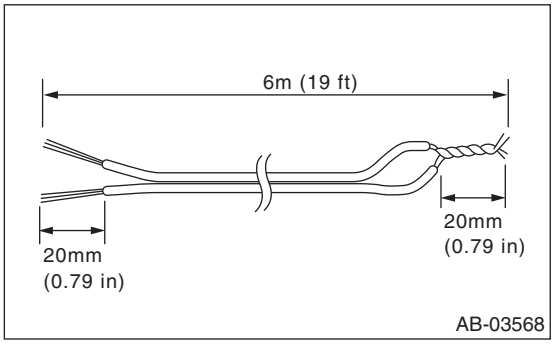


5) Cut off the harness on the body side of the removed connector approx. 70 mm (2.76 in) from the edge of the connector.

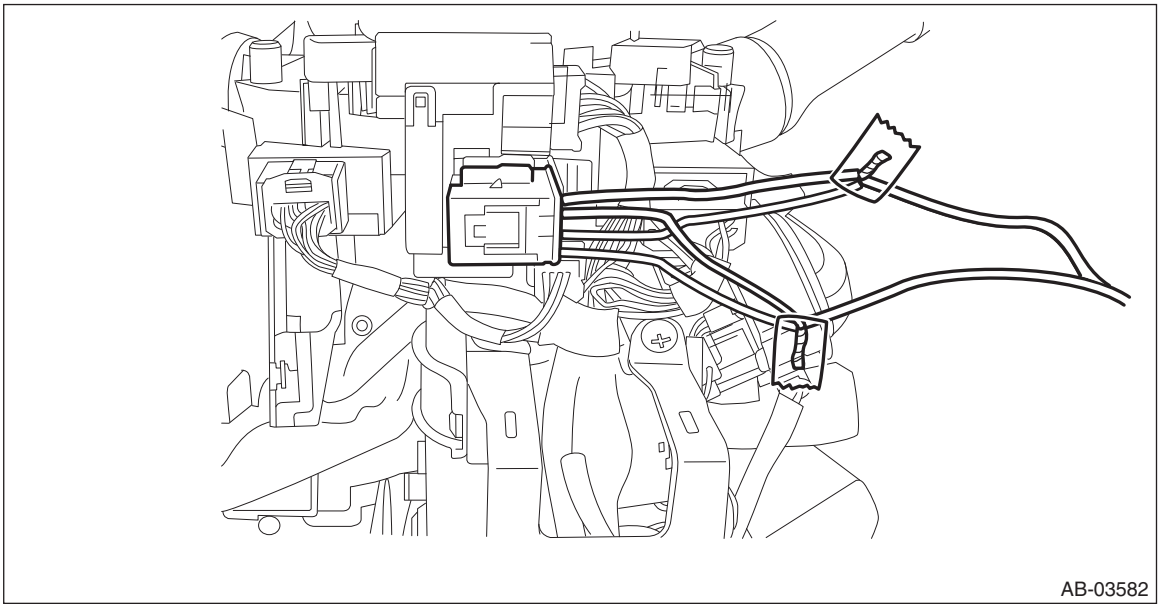
Preparation tool:
Nippers



6) Peel off the shield approx. 20 mm (0.79 in) from the two harnesses of the removed body side connector.

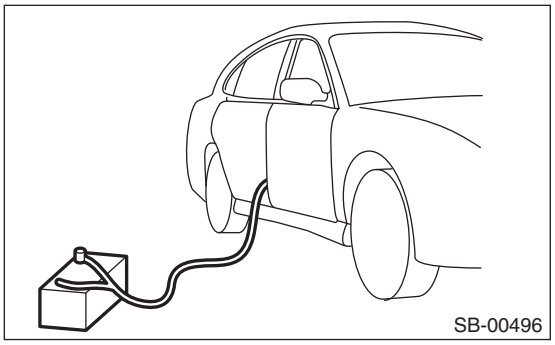


Preparation tool:
Wire stripper

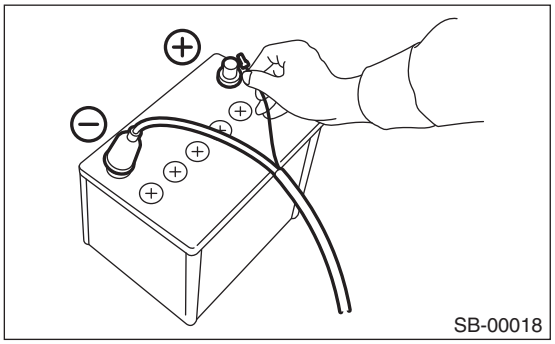


7) Twist the end of harness as shown in the figure.

8) Prepare a six-meter (19 ft) long vinyl-shielded parallel wire. Peel off the shield of both ends approx. 20 mm (0.79 in) and twist one end together into shorted condition.
9) The other end, not shorted, will be connected to harnesses of repaired body connector as shown in the figure, and insulated with vinyl tape.

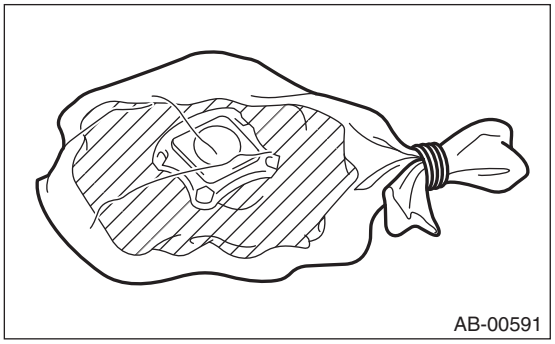


NOTE:
No concern about polarity.
10) After completing the connecting work, connect the body side connector to the connector of the airbag connector lower side again.



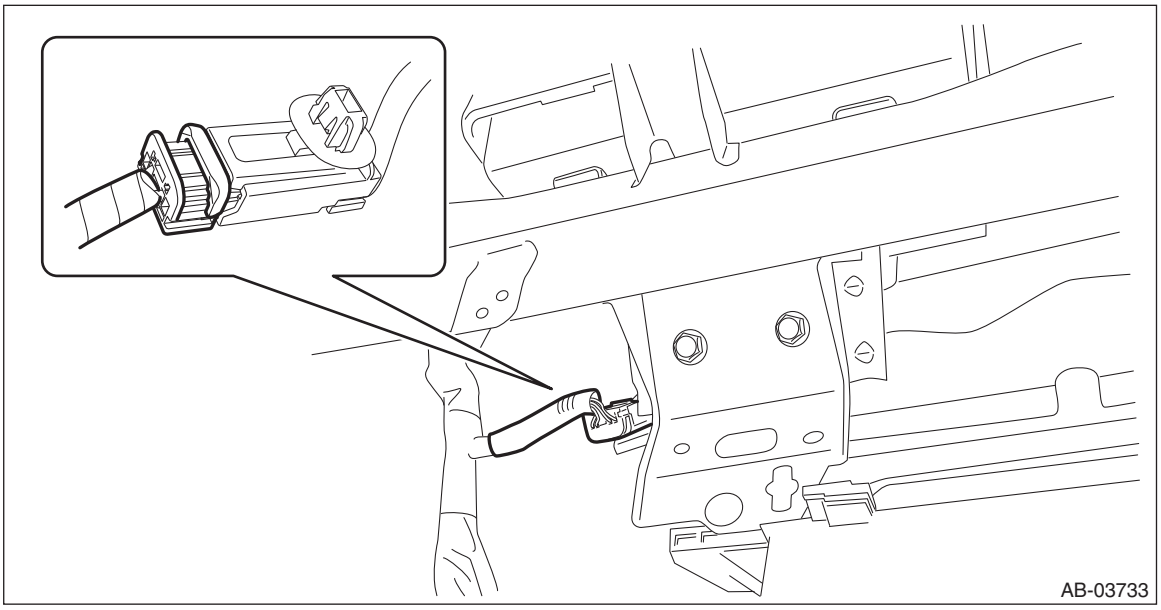
11) Bring the vinyl wire for operation out of the vehicle and make sure there is no person in the vehicle.

12) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



13) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
14) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
15) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

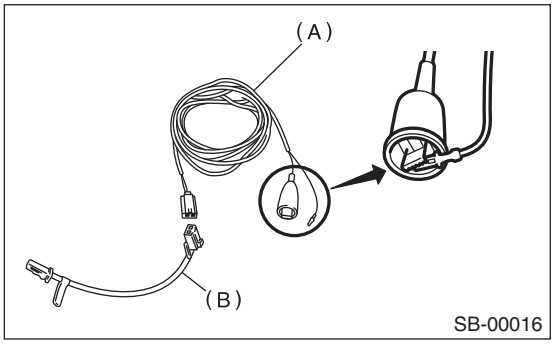


16) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
17) Place the activated airbag module in a sealed vinyl bag, then discard.

2. PASSENGER'S AIRBAG MODULE

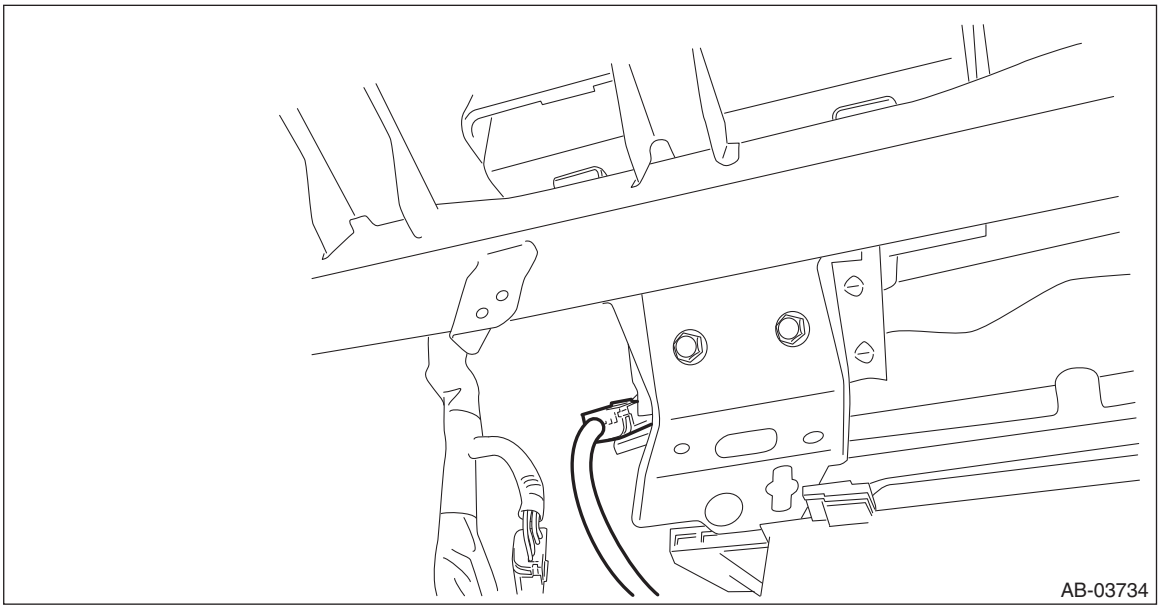
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the glove box assembly. <Ref. to EI-77, REMOVAL, Glove Box.>

4) Disconnect the passenger's airbag module connector.



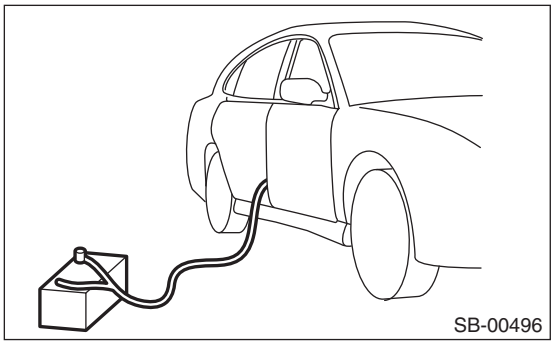
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.



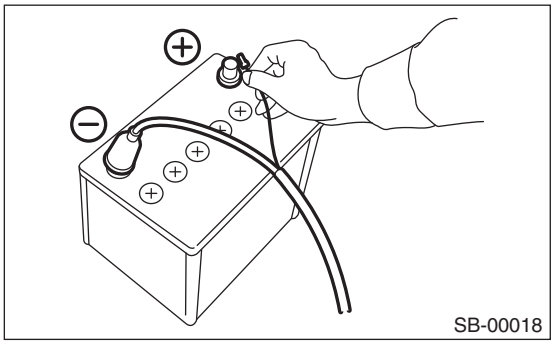
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect airbag deployment tool (A) and test harness adapter AM (B).

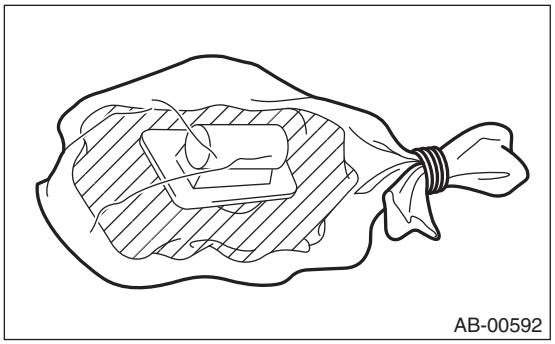


Preparation tool:
ST: TEST HARNESS ADAPTER AM (98299FJ000)

7) Connect test harness adapter AM to airbag connector.



8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



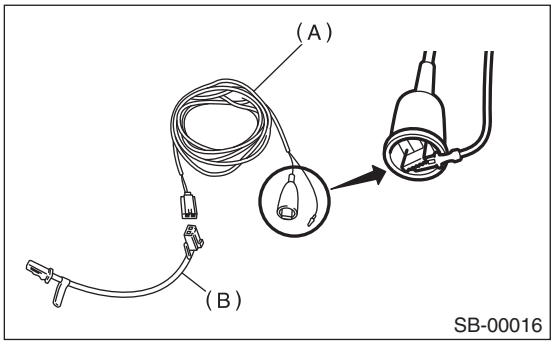
10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

13) Remove the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>

14) Place the activated airbag module in a sealed vinyl bag, then discard.

3. SEAT CUSHION AIRBAG MODULE



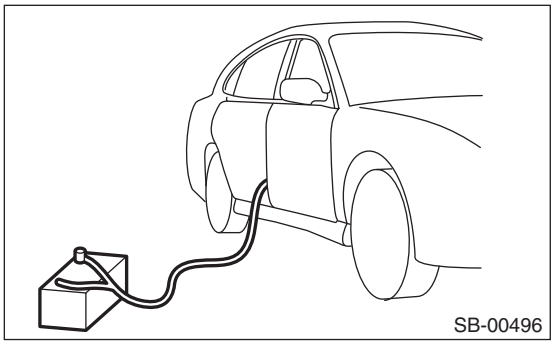
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Disconnect the seat cushion airbag module connector under the front seat cushion. <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>
4) Adjust both the front seat and front seat backrest to the center positions.
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

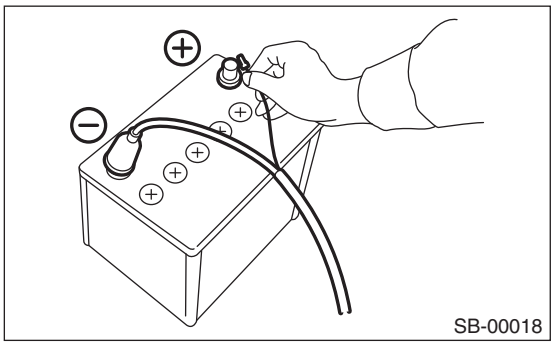
6) Connect airbag deployment tool (A) and test harness adapter AU (B).

Preparation tool:
ST: TEST HARNESS ADAPTER AU (98299AL000)



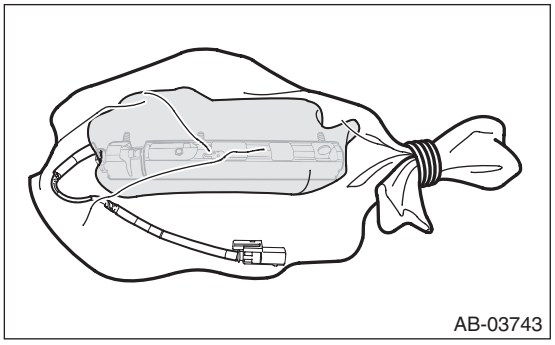
7) Connect the test harness adapter AU to the seat cushion airbag module connector (yellow).

CAUTION:
Do not place any object on front seat.



8) Make sure there is no one inside the vehicle.

9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

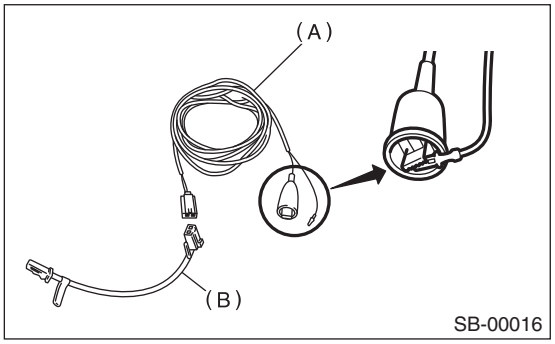


10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

13) Remove the seat cushion airbag module. <Ref. to AB-36, REMOVAL, Seat Cushion Airbag Module.>
14) Place the activated airbag module in a sealed vinyl bag, then discard.

4. SIDE AIRBAG MODULE

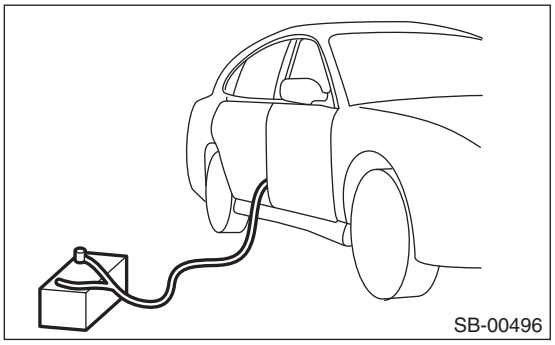


1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Disconnect the side airbag module connector under the front seat cushion. <Ref. to AB-21, FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND FRONT DOOR HARNESS), PROCEDURE, Airbag Connector.>
4) Adjust both the front seat and front seat backrest to the center positions.
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

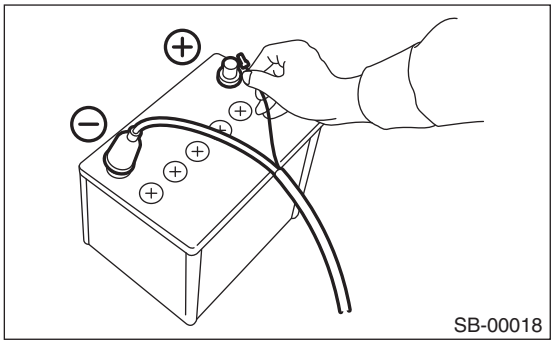
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect airbag deployment tool (A) and test harness adapter AR (B).



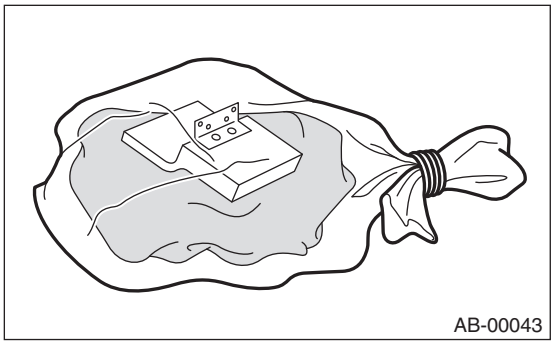
Preparation tool:
ST: TEST HARNESS ADAPTER AR (98299CA000)

7) Connect the test harness adapter AR to the side airbag module connector (yellow).



CAUTION:
Do not place any object on front seat.

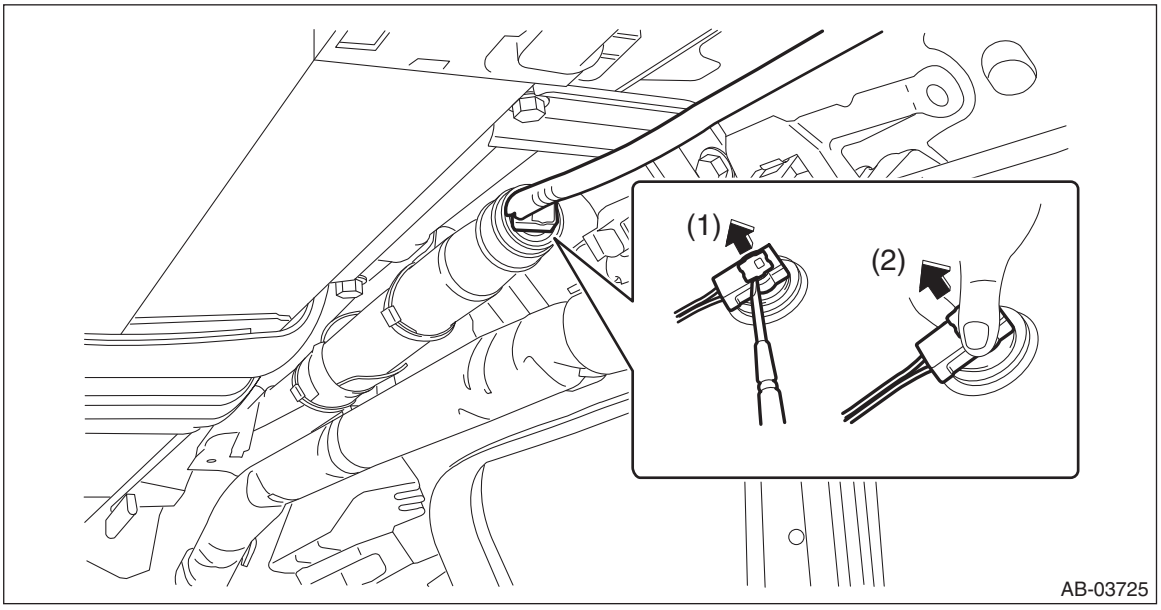
8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

13) Remove the side airbag module. <Ref. to AB-39, REMOVAL, Side Airbag Module.>

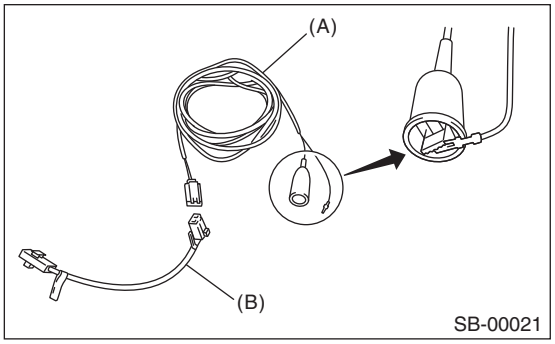


14) Place the activated airbag module in a sealed vinyl bag, then discard.

5. CURTAIN AIRBAG MODULE

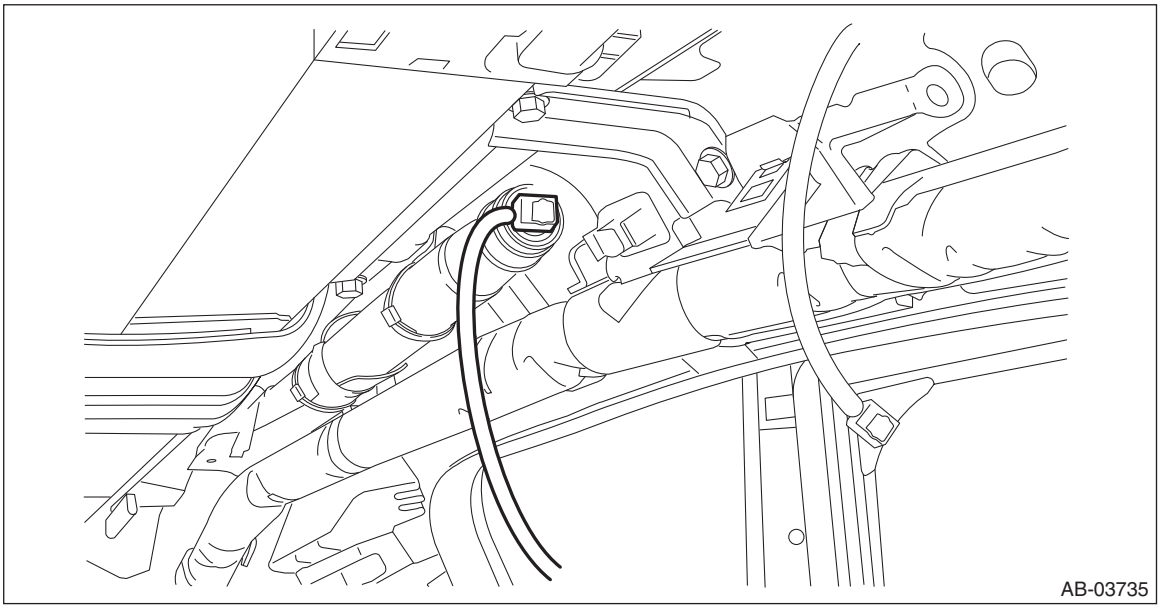
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the roof trim.
- Sedan model: <Ref. to EI-111, SEDAN MODEL, REMOVAL, Roof Trim.>
- OUTBACK model: <Ref. to EI-113, OUTBACK MODEL, REMOVAL, Roof Trim.>

4) Disconnect the curtain airbag harness. <Ref. to AB-18, PROCEDURE, Airbag Connector.>



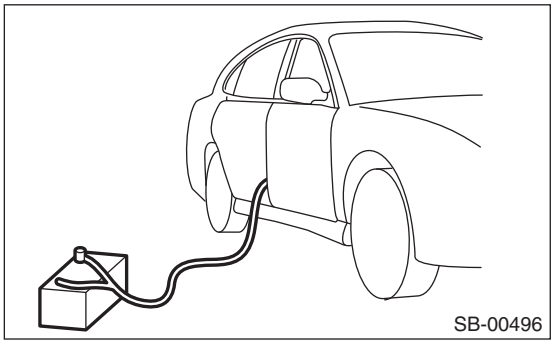
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.



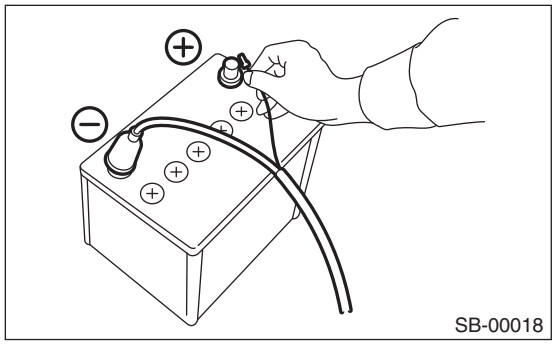
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect the airbag deployment tool (A) and test harness adapter D (B).

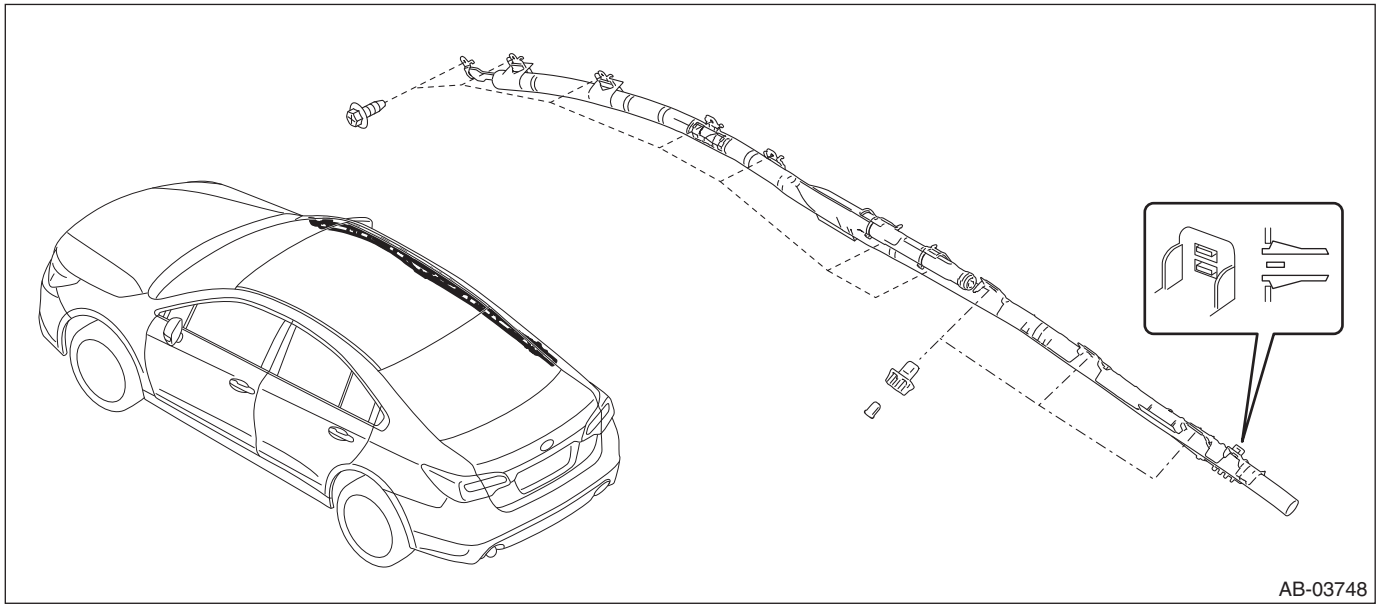


Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

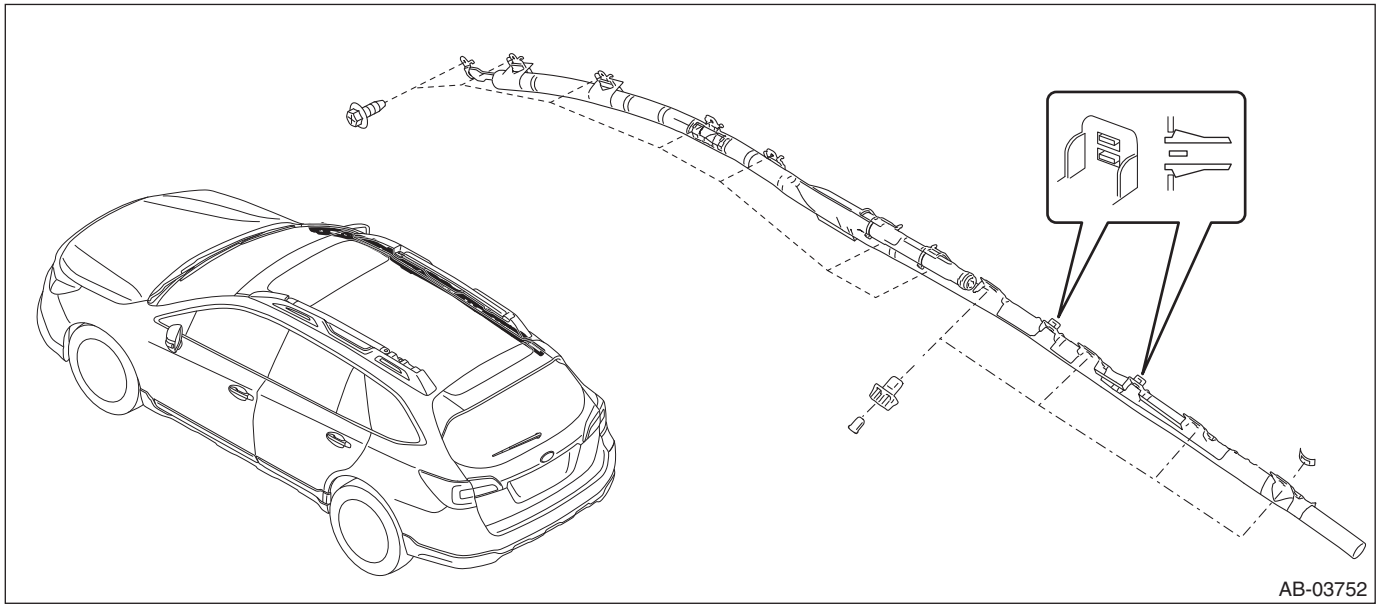
7) Connect the test harness adapter D to the curtain airbag module.



8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

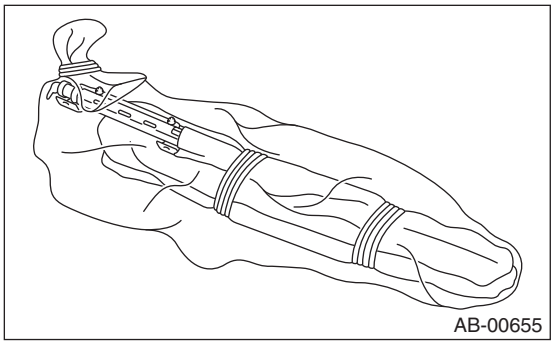


10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.



CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.

- **Do not expose the activated airbag module to water.**



13) Remove the bolts and clips, and remove the curtain airbag module.

14) Place the activated airbag module in a sealed vinyl bag, then discard.

NOTE:
When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK WARNING LIGHT.** Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step **2**.	Perform the diagnosis according to phenomenon of the problem.
2	**READ DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-29, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Is DTC displayed?	Go to step **3**.	Go to “Airbag Warning Light Failure” <Ref. to AB(diag)-39, Airbag Warning Light Failure.>.
3	**PERFORM DIAGNOSIS.** 1) Determine the possible cause from “List of Diagnostic Trouble Code (DTC)” <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Customer's Name		Inspector's Name	
Date Vehicle Brought in	/ /	Registration No.	
Odometer reading	km miles	V.I.N.	
Date Problem Occurred	/ /	Registration Year	/ /
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:		
Temperature	°C (°F)		
Road Condition	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Others:		
Vehicle Operation	❑ Starting ❑ Idling ❑ Driving ❑ Constant speed ❑ Accelerating ❑ Decelerating ❑ Turning ❑ Others:		
Details of Problem			
Airbag Warning Light Operation	❑ Normal (After turning the ignition switch to ON, lit for approximately 6 seconds and goes off.) ❑ Remains ON ❑ Remains OFF		
DTC output	❑ OK code ❑ DTC: (Code:)		

3. General Description

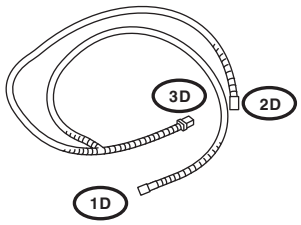
A: CAUTION

Refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-10, CAUTION, General Description.>

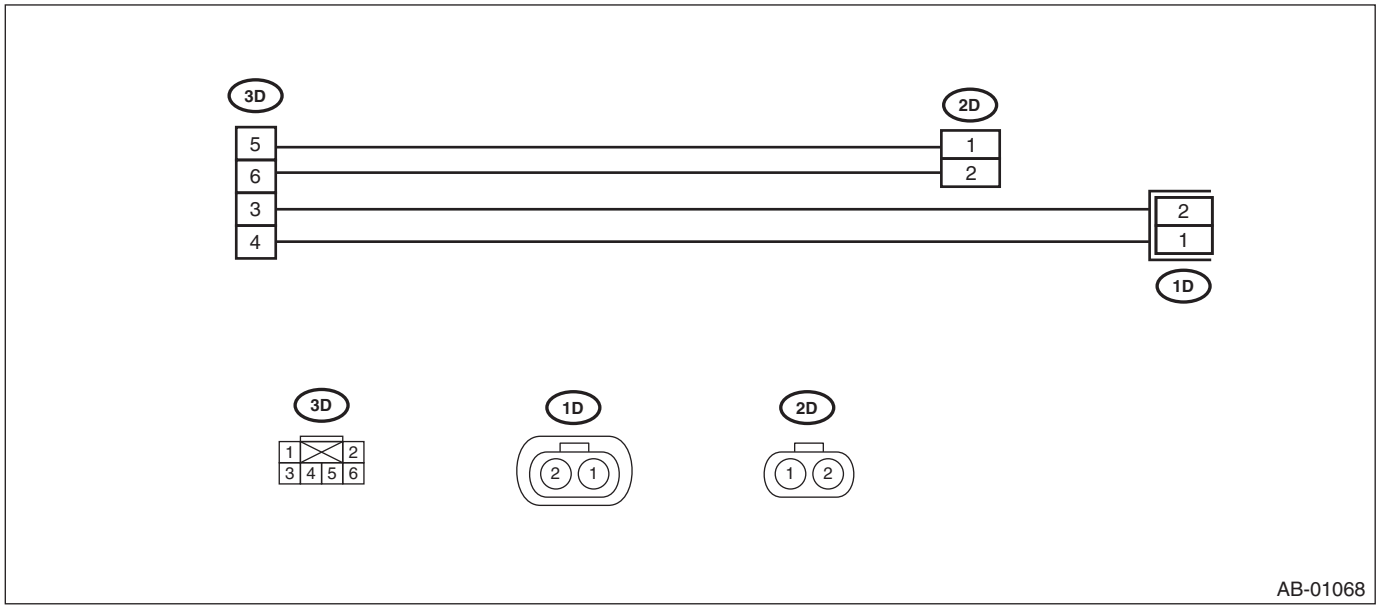
B: INSPECTION

Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>

C: PREPARATION TOOL



CAUTION:
To measure the voltage and resistance of airbag system component, be sure to use the specified test harness.



1. SPECIAL TOOL

- Subaru Select Monitor

- TEST HARNESS AD AV

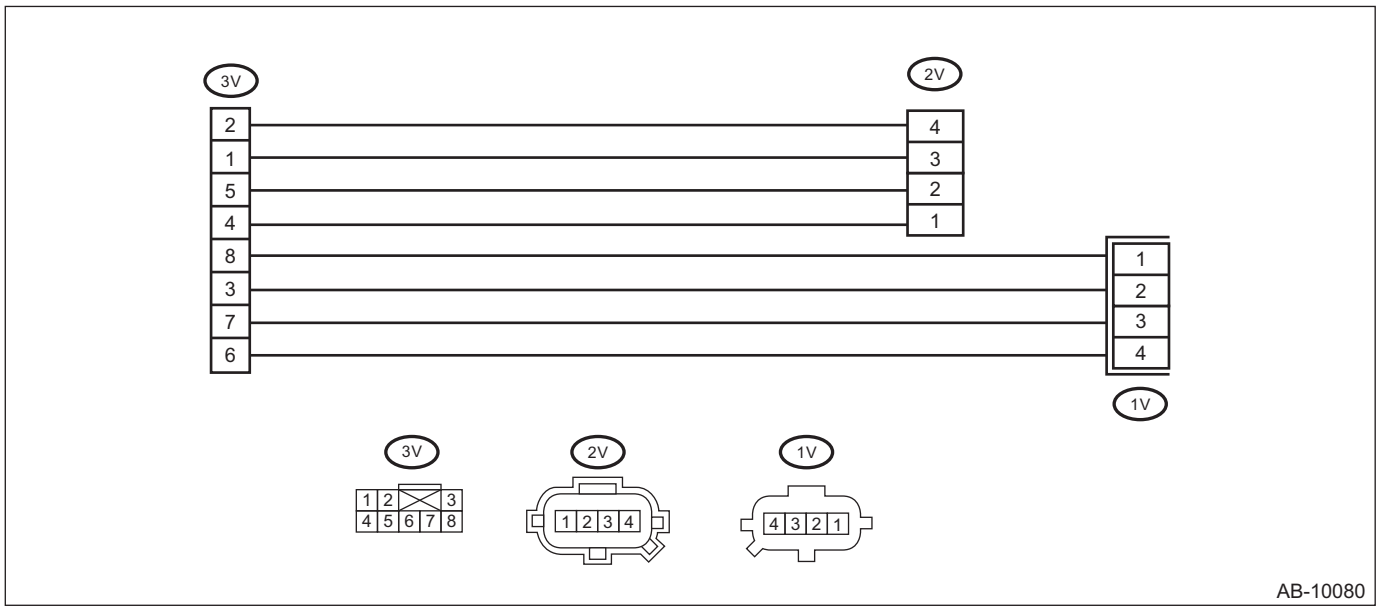

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
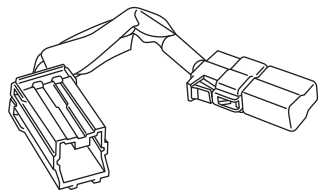
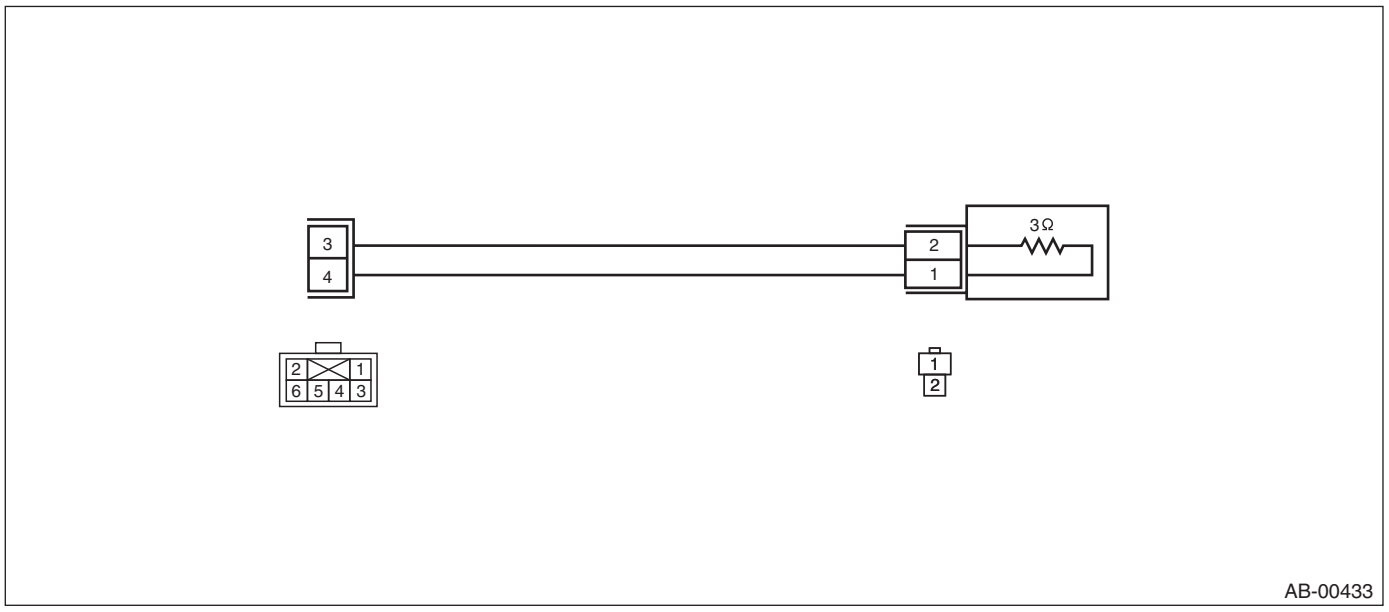
 ST98299AL010	98299AL010	TEST HARNESS AD AV	Used together with test harness AG when measuring voltage and resistance of the airbag control module.

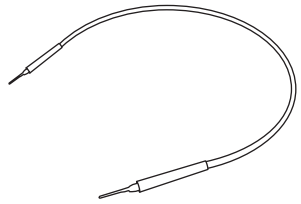


AB-03610



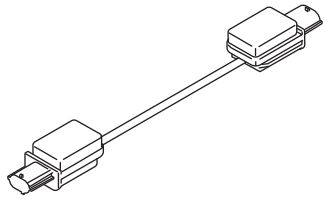
- TEST HARNESS V

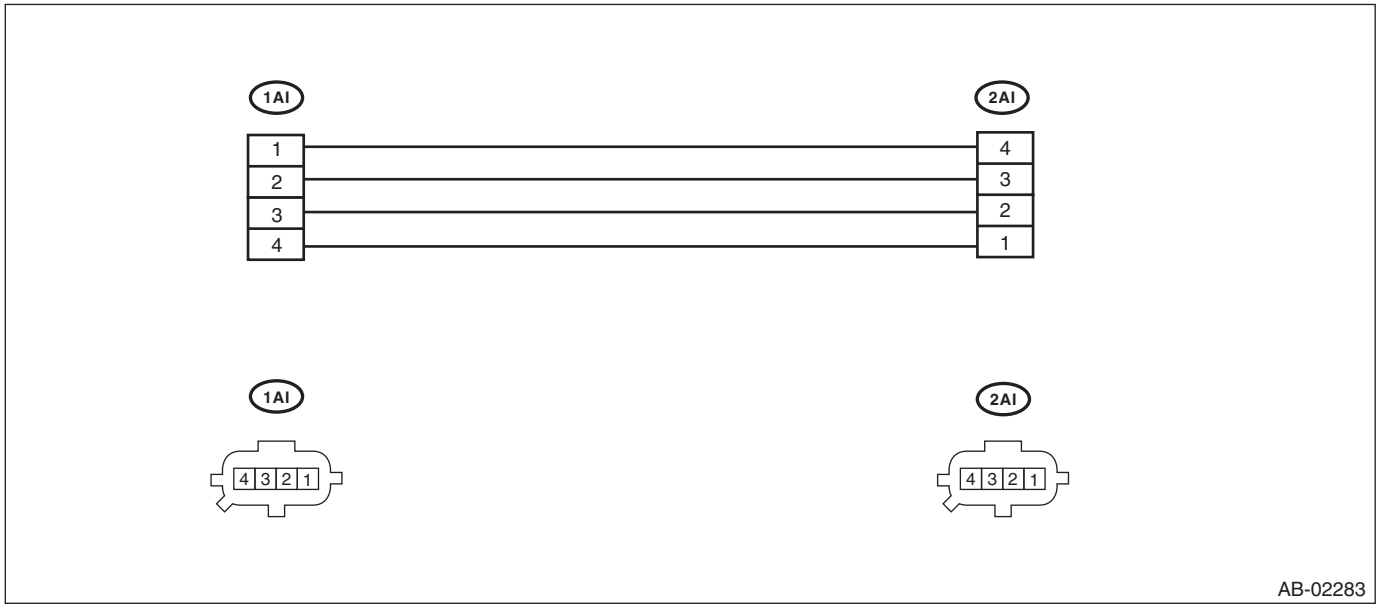
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG010	98299AG010	TEST HARNESS V	Used when measuring voltage and resistance of side airbag sensor and curtain airbag sensor.



- AIRBAG RESISTOR

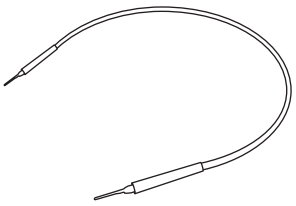
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module. Two STs are required for diagnosis of two-stage inflator type airbag module.

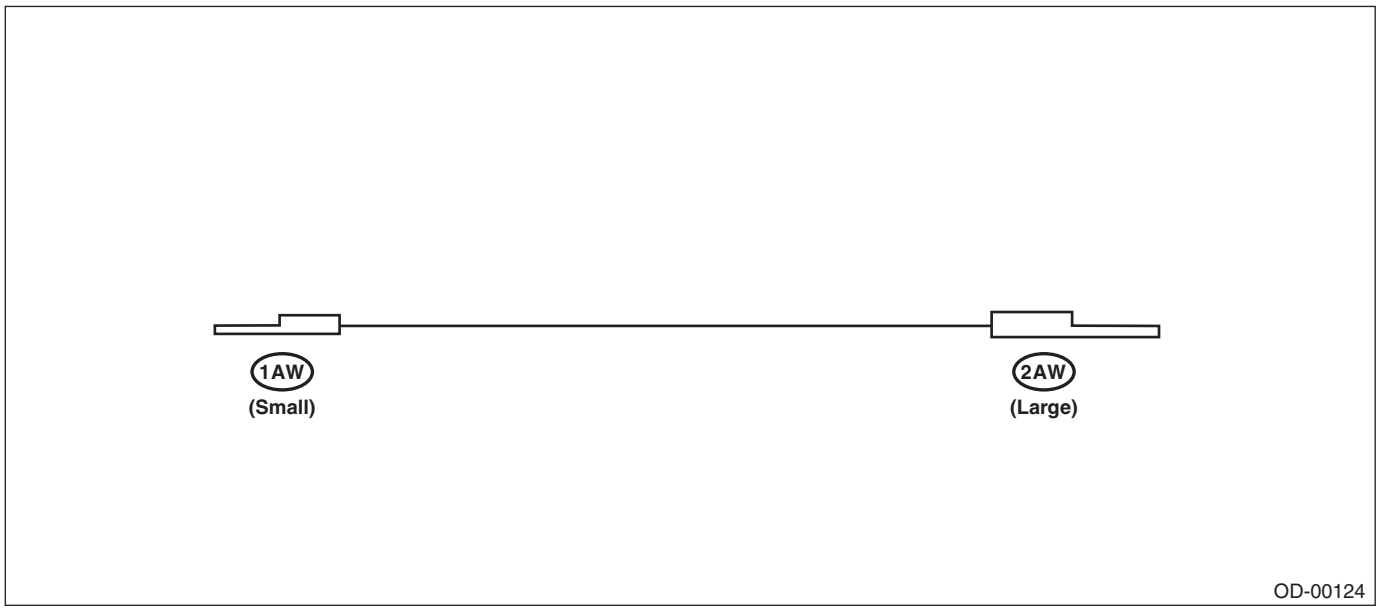




- TEST HARNESS AT

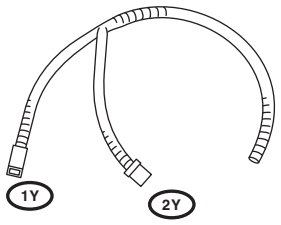
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299CA020	98299CA020	TEST HARNESS AT	Used when measuring power supply and resistance of side airbag harness. Two sets may be required.

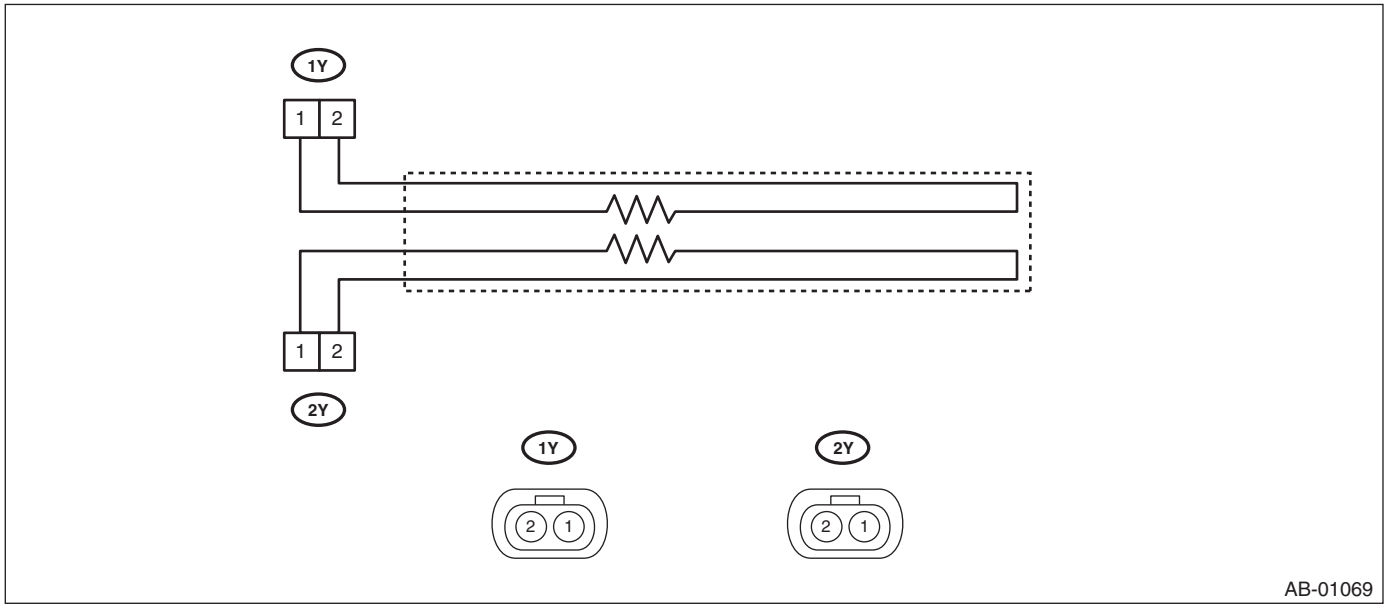




- TEST HARNESS AI

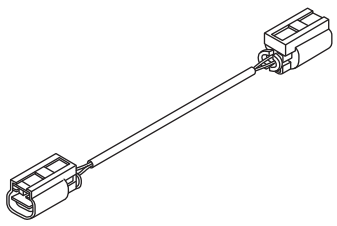
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG090	98299AG090	TEST HARNESS AI	• Used for diagnoses of side airbag sensor and curtain airbag sensor. • Used together with test harness V.





- TEST HARNESS AW

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AL020	98299AL020	TEST HARNESS AW	Used when diagnosing occupant detection system.



- TEST HARNESS Y

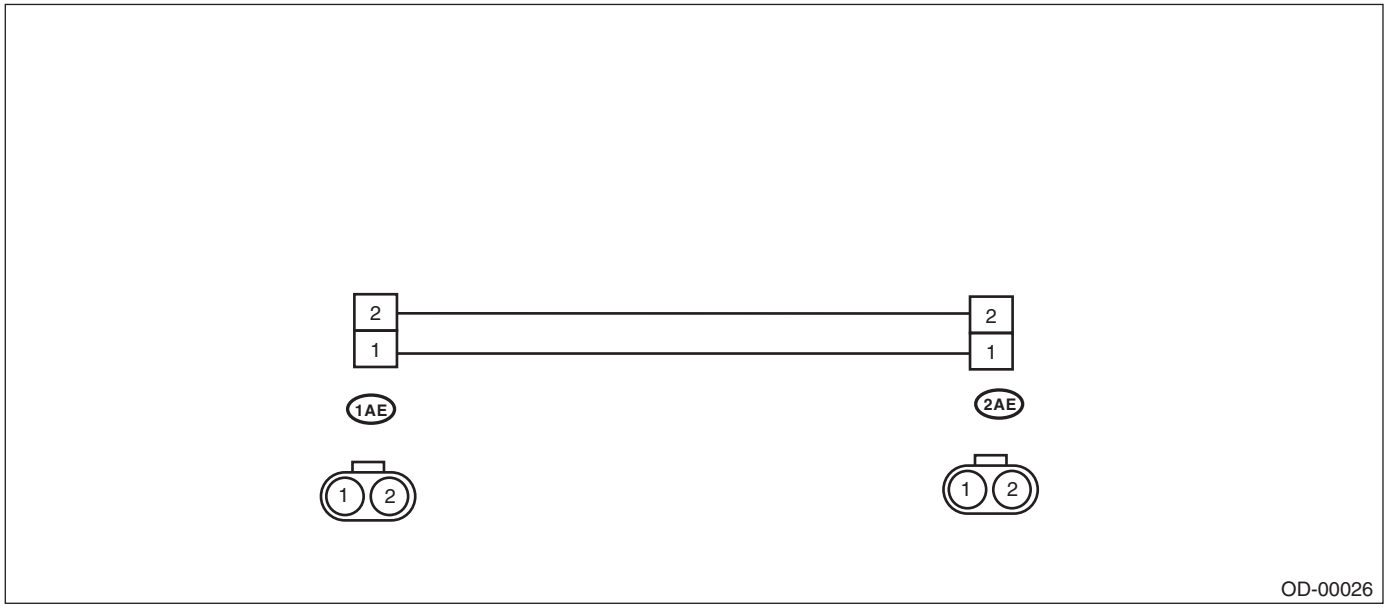


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
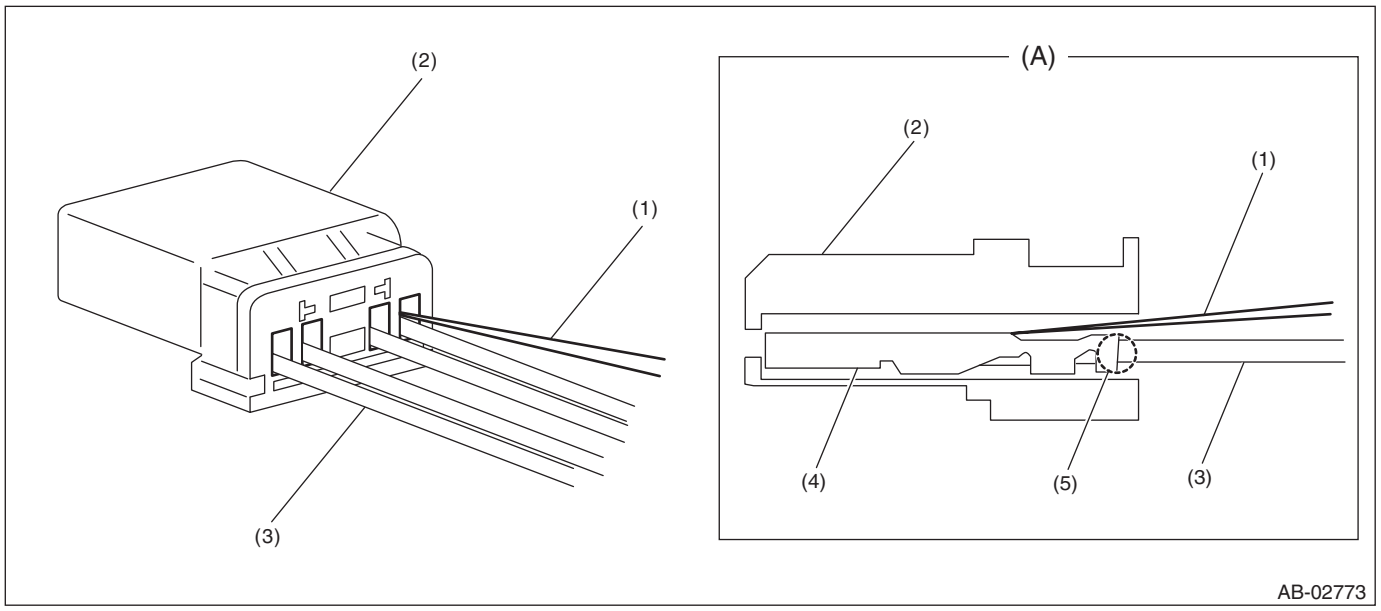
 ST98299AG040	98299AG040	TEST HARNESS Y	Used for troubleshooting seat belt buckle switch.

AB-01069

- TEST HARNESS AE

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299XA030	98299XA030	TEST HARNESS AE	TEST HARNESS Y adapter harness. Used for troubleshooting seat belt buckle switch.



2. GENERAL TOOL

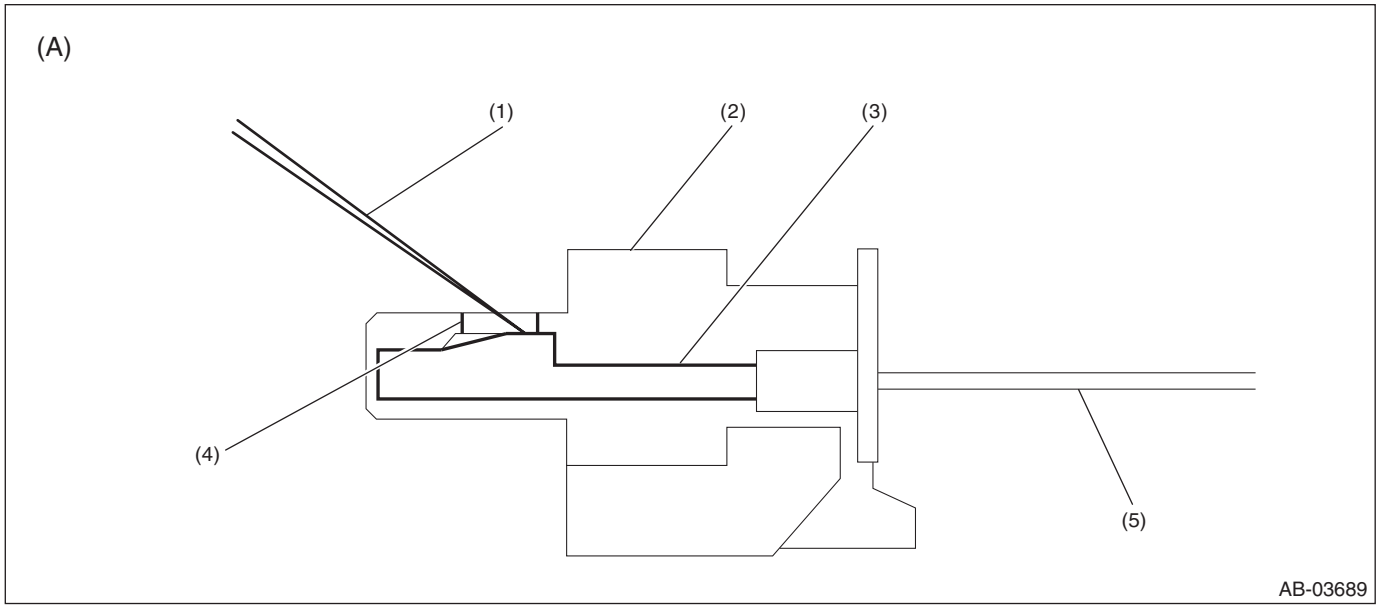
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Probe	Used when measuring voltage and resistance of passenger's airbag module and front door impact sensor.
DST-i	Used together with Subaru Select Monitor 4.

3. HOW TO USE PROBE

• Passenger's airbag module

Insert the probe into the harness hole, and contact it with the terminal.

(A) Cross section



(1) Probe
(2) Connector (housing)
(3) Harness
(4) Terminal
(5) Connection

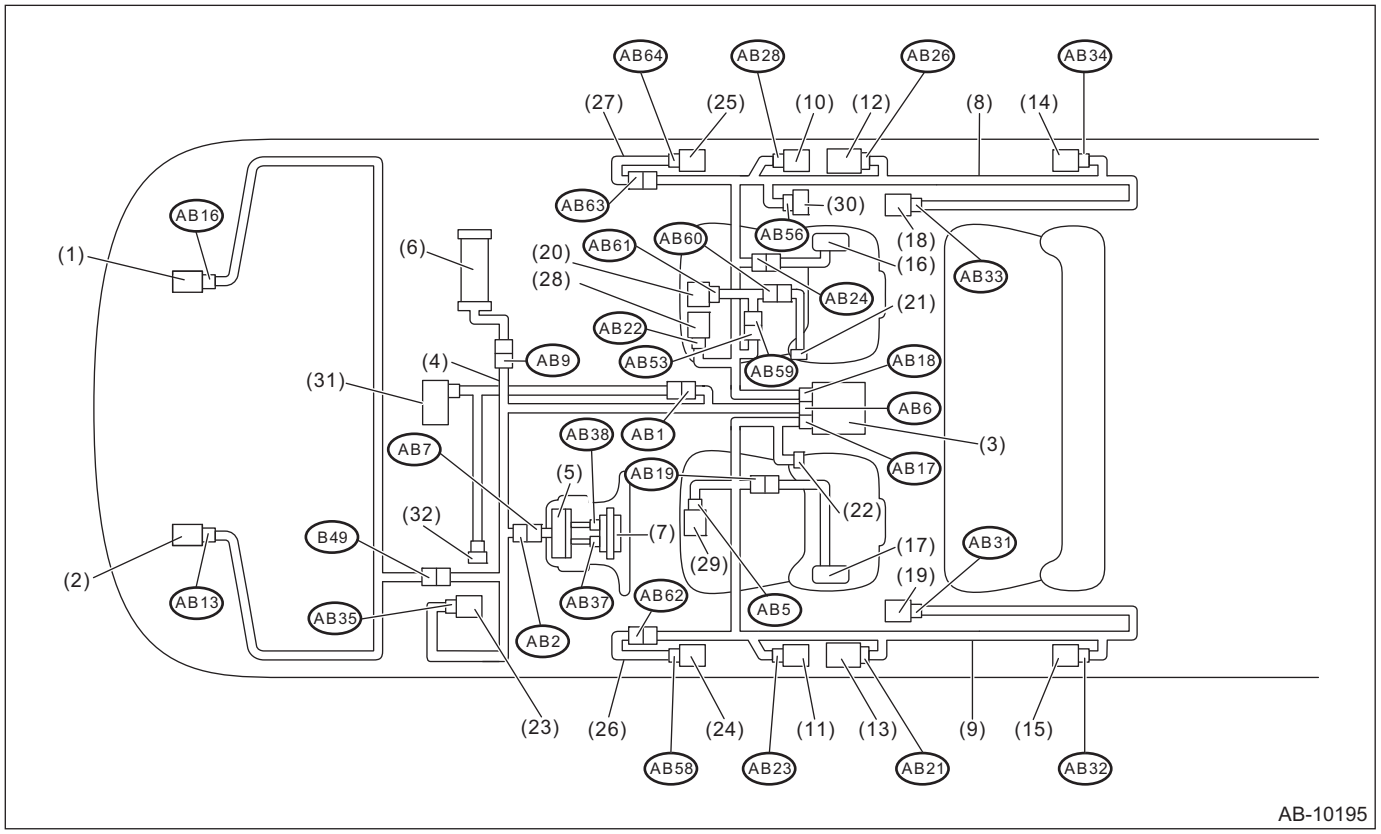
CAUTION:

- **Do not insert the probe forcibly.**
- **Be careful not to contact it to the connection (5) between the terminal and harness. (Harness will come off easily from connector if doing so.)**

- Front door impact sensor, front sub sensor

Insert the probe into the inspection hole to contact with the terminal.

(A) Cross section



(1) Probe
(2) Connector (housing)
(3) Terminal
(4) Inspection hole
(5) Harness

CAUTION:

- **Do not push the probe with excessive force against the terminal. (Terminal will come off easily from housing if doing so.)**
- **Do not insert the probe anywhere other than inspection hole. (Waterproof property will be lost if doing so.)**

4. Electrical Component Location

A: LOCATION

(1)	Front sub sensor RH	(12)	Seat belt pretensioner RH	(23)	Fuse box
(2)	Front sub sensor LH	(13)	Seat belt pretensioner LH	(24)	Front door impact sensor LH

B: WIRING DIAGRAM

Refer to “Airbag System” in WI section. <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

7. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

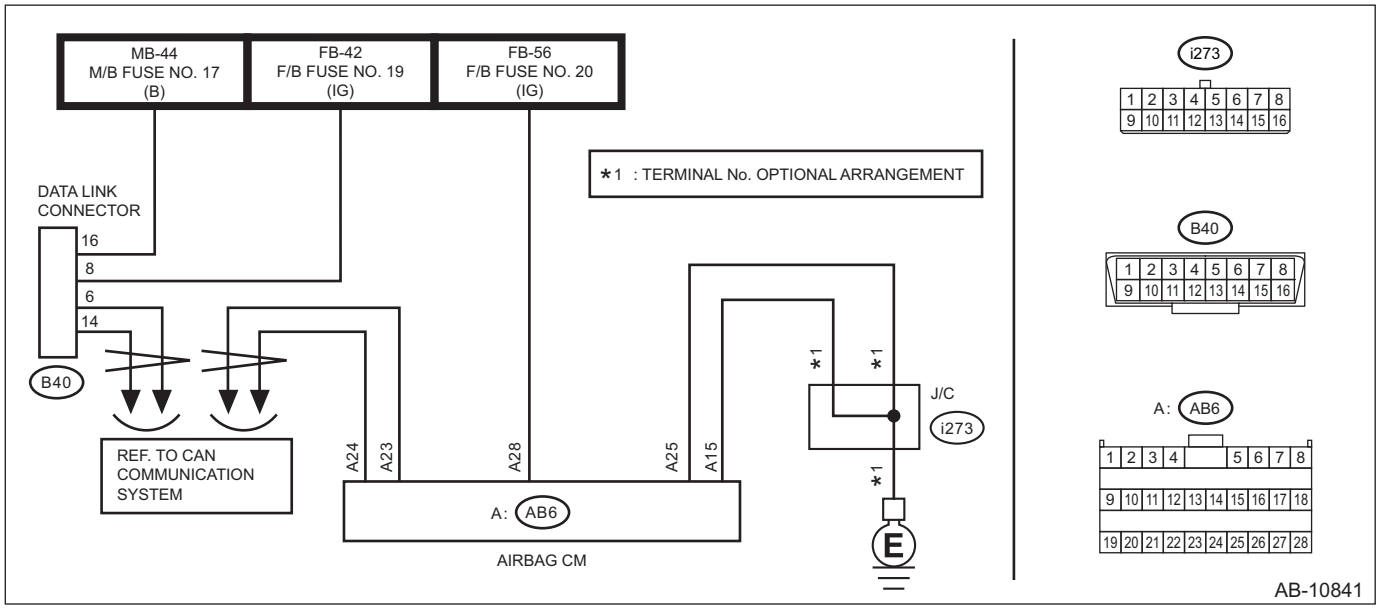
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DTC detecting condition:

- Defective harness connector
- Defective CAN communication

Trouble symptom:



Communication is impossible between the airbag control module and the Subaru Select Monitor.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK SUBARU SELECT MONITOR.** Connect the Subaru Select Monitor to another vehicle, and check for the communication with «Airbag».	Is the check result OK?	Go to step **2**.	Replace or repair the Select Monitor.
2	**CHECK IGNITION SWITCH.** Check that the ignition switch is ON.	Is the check result OK?	Go to step **3**.	Turn the ignition switch to ON, and select «Airbag» from «Each System» on the Subaru Select Monitor.
3	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **4**.	Charge or replace the battery.
4	**CHECK BATTERY TERMINAL.** Check the battery terminal.	Is the check result OK?	Go to step **5**.	Replace or tighten the battery terminal.

	Step	Check	Yes	No
5	**CHECK HARNESS OF DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 16 (+) — Chassis ground (–):*** ***(B40) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Go to step **6**.
6	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove a fuse in the data link connector and visually check the fuse.	Is the check result OK?	Repair the harness between the battery and the data link connector.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
7	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Select a system other than «Airbag» from «Each System» on the Subaru Select Monitor.	Is communication possible?	Go to step **10**.	Go to step **8**.
8	**CHECK AIRBAG CONTROL MODULE CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the check result OK?	Go to step **9**.	Connect the connector of the airbag control module.
9	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Select «Airbag» from «Each System» on the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **10**.
10	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) of the airbag control module. 3) Connect the battery ground terminal. 4) Turn the ignition switch to ON. 5) Select a system other than «Airbag» from «Each System» on the Subaru Select Monitor.	Is communication possible?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **11**.
11	**CHECK CAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **12**.	Repair it according to the diagnosis for LAN system.

	Step	Check	Yes	No
12	**CHECK FUSE.** Remove fuse No. 20 from the fuse & relay box, and perform visual inspection.	Is the check result OK?	Go to step **13**.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
13	**CHECK AIRBAG CONTROL MODULE CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check that the connectors (AB6, AB17, AB18) of the airbag control module are securely connected.	Is the check result OK?	Go to step **14**.	Connect the connector of the airbag control module.
14	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 3) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 4) Turn the ignition switch to ON. 5) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **15**.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
15	**CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 4 — Chassis ground:*** ***(2AG) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **16**.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.
16	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the control module power supply, ground circuit and data link connector?	Repair the connector. (Replace the harness without repairing the airbag system connector.)	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

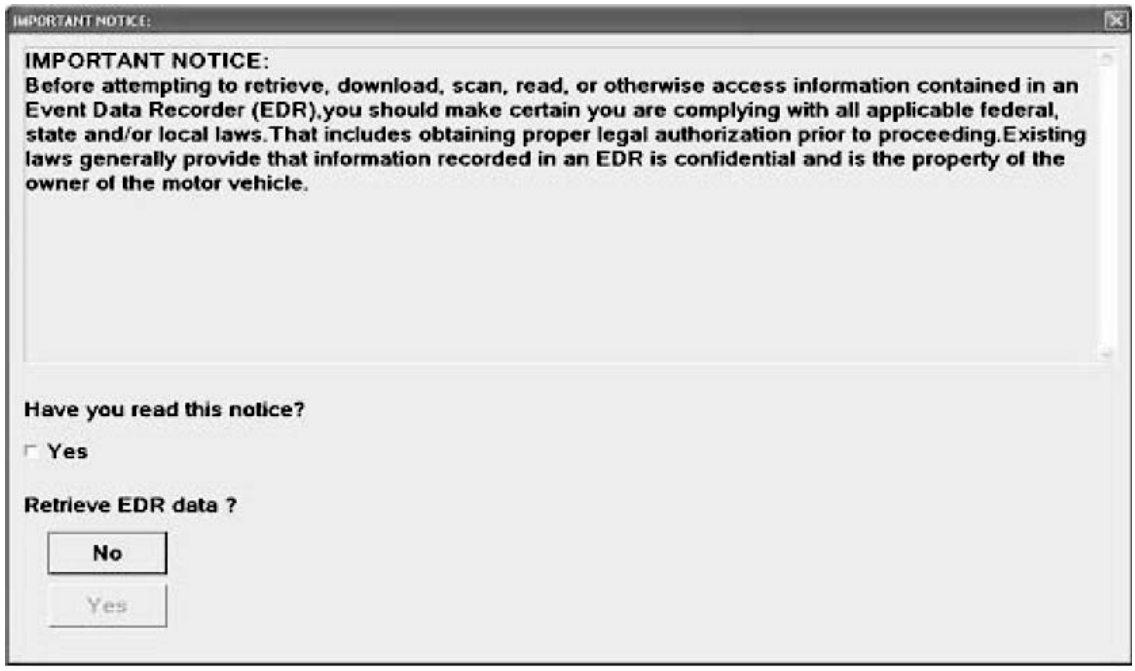
NOTE:
- For detailed operation procedures, refer to “Application help”.
- Clear the DTC stored in the airbag control module after repairing the airbag system.

11.Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «Data monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.



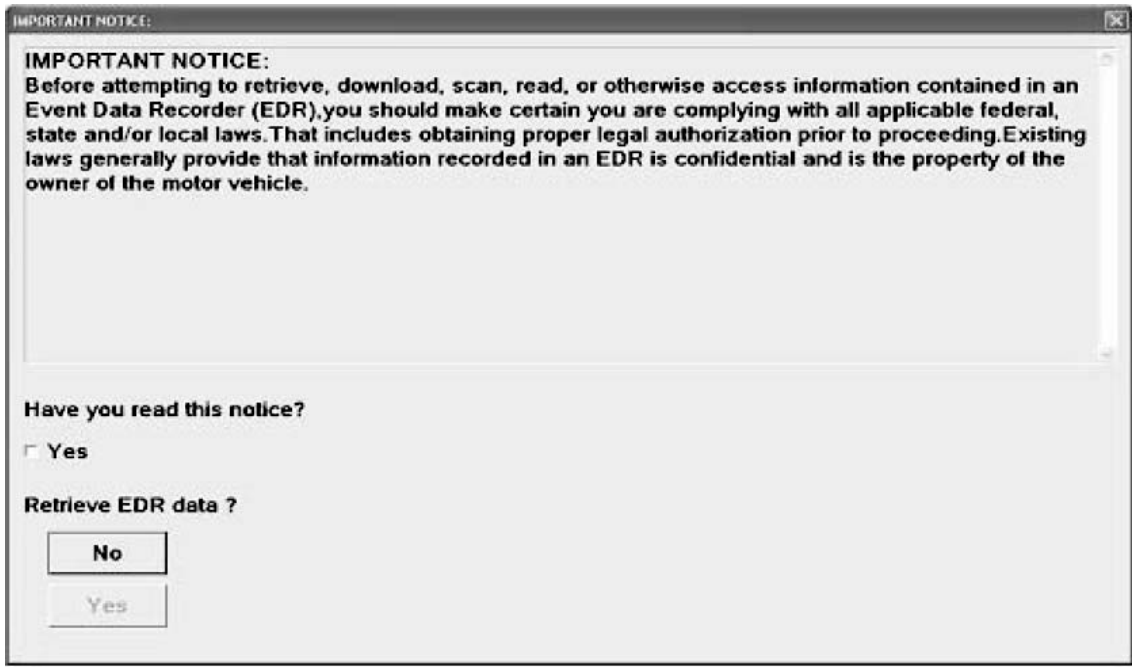
B: LIST

Item	Display	Note
Trip Count [count]	—	<Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>
Count	—	
Time Count	—	
Belt Buckle Switch LH	Unbelted/Belted/Other	“Belted” when the left side seat belt is fastened “Unbelted” when the left side seat belt is not fastened “Other” in other cases
Belt Buckle Switch RH	Unbelted/Belted/Other	“Belted” when the right side seat belt is fastened “Unbelted” when the right side seat belt is not fastened “Other” in other cases
Passenger Occupant Status	Occupied/Adult/Child/Empty or CRS	“Occupied” when the occupant is present “Adult” “Child” “Empty or CRS” when the seat is unoccupied or when child restraint seat is installed **CAUTION:** **When checking the operating status, be careful of the followings.** **• When the seat is unoccupied: Do not place anything on the seat.** **• Child restraint seat: Install the seat according to its instruction manual.** **• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lb) must be seated during the check.**
Passenger Airbag Status	ON/OFF	“ON” when the passenger occupant status is “Occupied” “OFF” when the status is “Empty or CRS”
Data record No.	Undefined/1	Displays “1” when any EDR data is recorded.

12.Event Record Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «Work Support».
6) On «Work Support item» display, select «Event Record Data». After selection, «IMPORTANT NOTICE» screen is displayed.
7) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
8) If the applicable law is not violated, click the «Yes» button to display the EDR data.



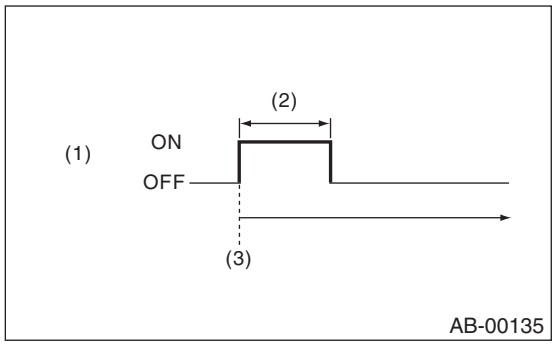
AB-02847

9) Select the items to be checked from each event record data.
10) Select the record data to be checked from each record data.
11) The selected record data is displayed. If there is no data recorded, «Event Record Data is not recorded» is displayed.
12) Select «Exit» to return to each event record data screen.

13.Batch save of Event record data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «Work Support».
6) On «Work Support item» display, select «Batch save of Event record data». After selection, «IMPORTANT NOTICE» screen is displayed.
7) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
8) If the applicable law is not violated, click the «Yes» button to display the EDR data.



AB-02847

9) Specify the destination for the event record data to save the data there.
10) After saving the file, click the «OK» button to return the menu screen.

14.Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

15.Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

Detecting condition:

- Airbag warning light is faulty.
- Airbag control module to combination meter circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connections of (AB6, AB17, AB18) to airbag control module are improper.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Repair it according to diagnosis of LAN system.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check the connection status of airbag CM connector.	Is there poor contact of connector?	Reconnect the connector. Or repair the connector.	Go to step **3**.
3	**CHECK FOR POOR CONTACT.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the airbag CM. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

B: AIRBAG WARNING LIGHT REMAINS OFF

NOTE:
For the diagnostic procedure, refer to “AIRBAG WARNING LIGHT REMAINS ON”. <Ref. to AB(diag)-39, AIRBAG WARNING LIGHT REMAINS ON, Airbag Warning Light Failure.>

16.List of Diagnostic Trouble Code (DTC)

17.Diagnostic Chart with Trouble Code

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DIAGNOSIS START CONDITION:
Ignition voltage remains at 10 V or more for 1 second.
DTC DETECTING CONDITION:
Detected when malfunction occurs in CAN line.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

DTC DETECTING CONDITION:
Detected when CAN data from ECM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

DTC DETECTING CONDITION:
Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from body integrated unit does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

DTC DETECTING CONDITION:
Detected when CAN data from ECM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC DETECTING CONDITION:
This is detected when CAN data from TCM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from VDC CM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from body integrated unit is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from combination meter is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC B1000 AIRBAG ECU MALFUNCTION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is «Airbag ECU Malfunction» displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-34, Clear Memory Mode.>

M: DTC B1003 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1003, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

N: DTC B1004 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1004, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

O: DTC B1005 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1005, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

P: DTC B1006 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1006, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Q: DTC B111A AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B111A, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

R: DTC B111B AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B111B, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

S: DTC B1125 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1125, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

T: DTC B1126 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1126, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

U: DTC B1135 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1135, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

V: DTC B1136 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1136, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

W: DTC B113A AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B113A, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

X: DTC B1145 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1145, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Y: DTC B1146 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1146, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Z: DTC B117A AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B117A, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AA:DTC B1185 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1185, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AB:DTC B1195 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1195, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AC:DTC B1196 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1196, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AD:DTC B1197 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1197, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AE:DTC B1198 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1198, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AF:DTC B1199 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1199, refer to DTC B1000. <Ref. to AB(diag)-49, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AG:DTC B11E0 ROLLOVER DEPLOYMENT HISTORY

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
This DTC is indicated when the curtain airbag module and the seat belt pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-49, Airbag Control Module.>
- Curtain airbag module (operating side) <Ref. to AB-42, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-57, Curtain Airbag Sensor.>
- Front outer seat belt with pretensioner (operating side) <Ref. to SB-19, Front Seat Belt.>

AH:DTC B11F0 DISPOSAL PROCESS COMPLETE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Disposal process of airbag control module is completed.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B11F0 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Perform memory clear. <Ref. to AB(diag)-34, Clear Memory Mode.>

AI: DTC B11F3 FRONT IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front impact ignition, ignition delay (on the 2nd stage ignition)
This DTC is indicated when the front airbag module and the pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module <Ref. to AB-49, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-31, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-33, Passenger's Airbag Module.>
- Front sub sensor of both sides <Ref. to AB-51, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides <Ref. to SB-19, Front Seat Belt.>
- Steering roll connector <Ref. to AB-59, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-12, Front Seat.>
- Curtain airbag module (if deployed) <Ref. to AB-42, Curtain Airbag Module.>
- Seat cushion airbag module <Ref. to AB-36, Seat Cushion Airbag Module.>

AJ:DTC B11F4 FRONT IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front impact ignition, ignition delay (on the 1st stage ignition)

NOTE:
For details on DTC B11F4, refer to DTC B11F3. <Ref. to AB(diag)-52, DTC B11F3 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AK:DTC B11F5 FRONT IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front impact ignition, ignition delay (when ignited simultaneously)

NOTE:
For details on DTC B11F5, refer to DTC B11F3. <Ref. to AB(diag)-52, DTC B11F3 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AL:DTC B11F7 SIDE IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.

DTC DETECTING CONDITION:
Side impact ignition, side airbag sensor RH ignited
This DTC is displayed when the side airbag module and curtain airbag module are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.
- Airbag control module <Ref. to AB-49, Airbag Control Module.>
- Side airbag module (operating side) <Ref. to AB-39, Side Airbag Module.>
- Side airbag sensor (operating side) <Ref. to AB-55, Side Airbag Sensor.>
- Curtain airbag module (operating side) <Ref. to AB-42, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-57, Curtain Airbag Sensor.>
- Front door impact sensor (operating side) <Ref. to AB-53, Front Door Impact Sensor.>
- Front outer seat belt with pretensioner (operating side) <Ref. to SB-19, Front Seat Belt.>

AM:DTC B11F8 SIDE IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, side airbag sensor LH ignited

NOTE:
For details on DTC B11F8. refer to DTC B11F7. <Ref. to AB(diag)-52, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AN:DTC B11F9 SIDE IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, curtain airbag sensor RH ignited

NOTE:
For details on DTC B11F9, refer to DTC B11F7. <Ref. to AB(diag)-52, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AO:DTC B11FA SIDE IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, curtain airbag sensor LH ignited

NOTE:
For details on DTC B11FA, refer to DTC B11F7. <Ref. to AB(diag)-52, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AP:DTC B11FB SIDE IMPACT DEPLOYMENT

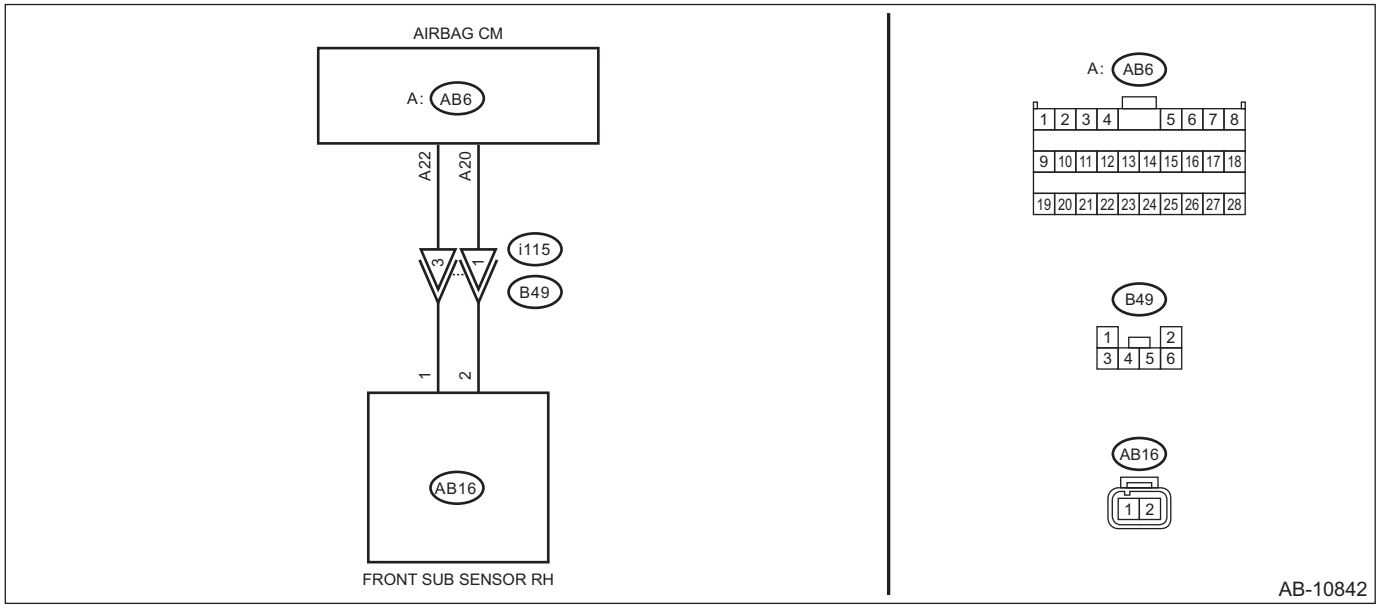
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, door sensor RH ignited

NOTE:
For details on DTC B11FB, refer to DTC B11F7. <Ref. to AB(diag)-52, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AQ:DTC B11FC SIDE IMPACT DEPLOYMENT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, door sensor LH ignited

NOTE:
For details on DTC B11FC, refer to DTC B11F7. <Ref. to AB(diag)-52, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>



AR:DTC B1610 FRONT SUB SENSOR RH FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor RH unit internal malfunction
If DTC B1610 is displayed, the circuit within the front sub sensor RH is faulty.
Replace the front sub sensor RH. <Ref. to AB-51, Front Sub Sensor.>

AS:DTC B1612 FRONT SUB SENSOR RH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor RH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB16) from front sub sensor RH. 8) Using a probe, measure the resistance between the connector (4AG) in test harness AG and connector (AB16). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(4AG) No. 12 — (AB16) No. 1:*** ***(4AG) No. 14 — (AB16) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 12 — Chassis ground:*** ***(4AG) No. 14 — Chassis ground:*** ***(4AG) No. 12 — (4AG) No. 14:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1612 displayed?	Replace the front sub sensor RH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AT:DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR

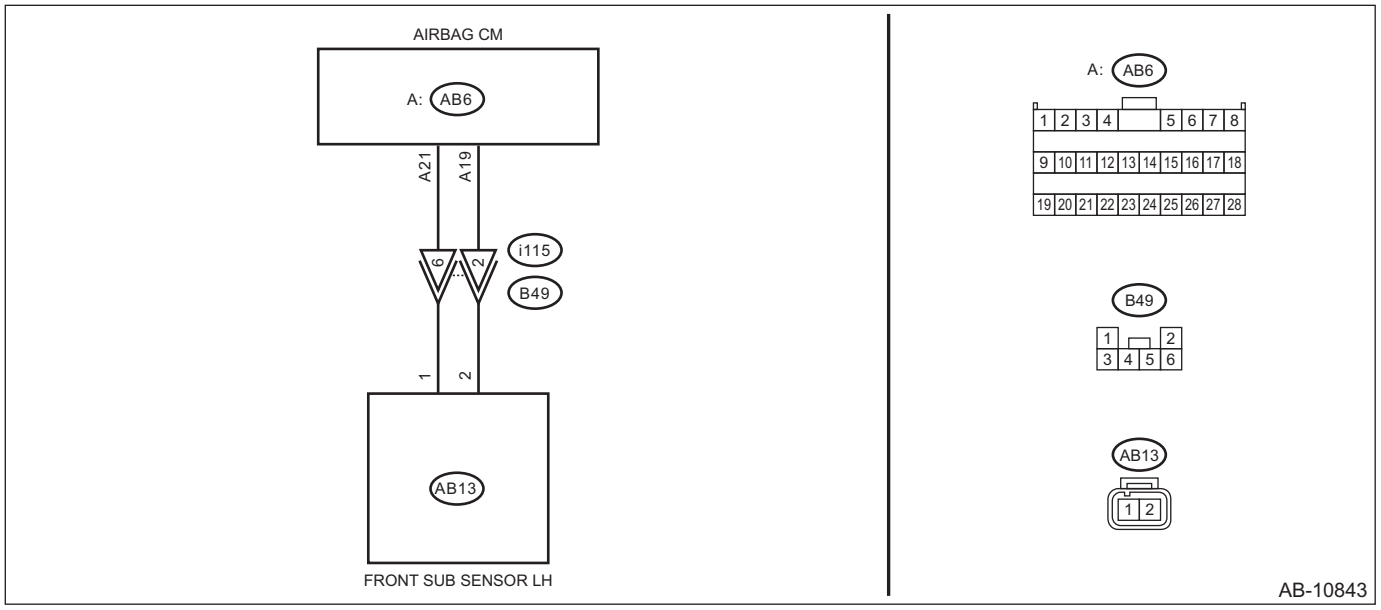
Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**CHECK FRONT SUB SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor RH by the front sub sensor LH. <Ref. to AB-51, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1613 displayed?	Go to step **3**.	Replace the front sub sensor RH. <Ref. to AB-51, Front Sub Sensor.>

	Step	Check	Yes	No
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front sub sensors RH and LH back to their original position. <Ref. to AB-51, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1613 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AU:DTC B1615 FRONT SUB SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor LH unit internal malfunction
If DTC B1615 is displayed, the circuit within the front sub sensor LH is faulty.
Replace the front sub sensor LH. <Ref. to AB-51, Front Sub Sensor.>

AV:DTC B1617 FRONT SUB SENSOR LH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor LH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:

Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB13) from front sub sensor LH. 8) Using a probe, measure the resistance between the connector (4AG) in test harness AG and connector (AB13). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(4AG) No. 9 — (AB13) No. 1:*** ***(4AG) No. 7 — (AB13) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.

	Step	Check	Yes	No
3	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 7 — Chassis ground:*** ***(4AG) No. 9 — Chassis ground:*** ***(4AG) No. 7 — (4AG) No. 9:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1617 displayed?	Replace the front sub sensor LH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

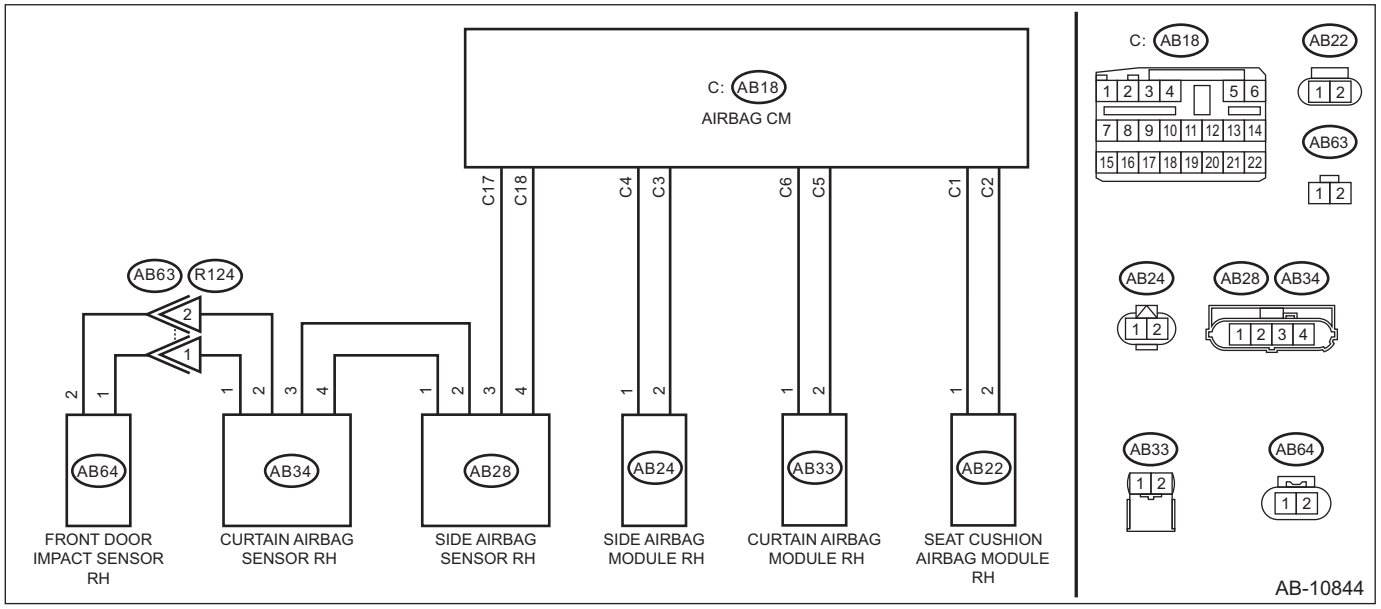
AW:DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**CHECK FRONT SUB SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor LH by the front sub sensor RH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1618 displayed?	Go to step **3**.	Replace the front sub sensor LH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.>

	Step	Check	Yes	No
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front sub sensors LH and RH back to their original position. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1618 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



AX:DTC B1620 SIDE AIRBAG SENSOR RH FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor RH unit internal malfunction
When DTC B1620 is displayed, the circuit within the side airbag sensor RH is faulty.
Replace the side airbag sensor RH. <Ref. to AB-55, Side Airbag Sensor.>

AY:DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor RH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 1:*** ***(5AG) No. 10 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 displayed?	Go to step **5**.	Go to step **8**.

	Step	Check	Yes	No
5	**CHECK SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH by the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 displayed?	Go to step **6**.	Replace the side airbag sensor RH. <Ref. to AB-55, Side Airbag Sensor.>
6	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 displayed?	Go to step **7**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
7	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AZ:DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.

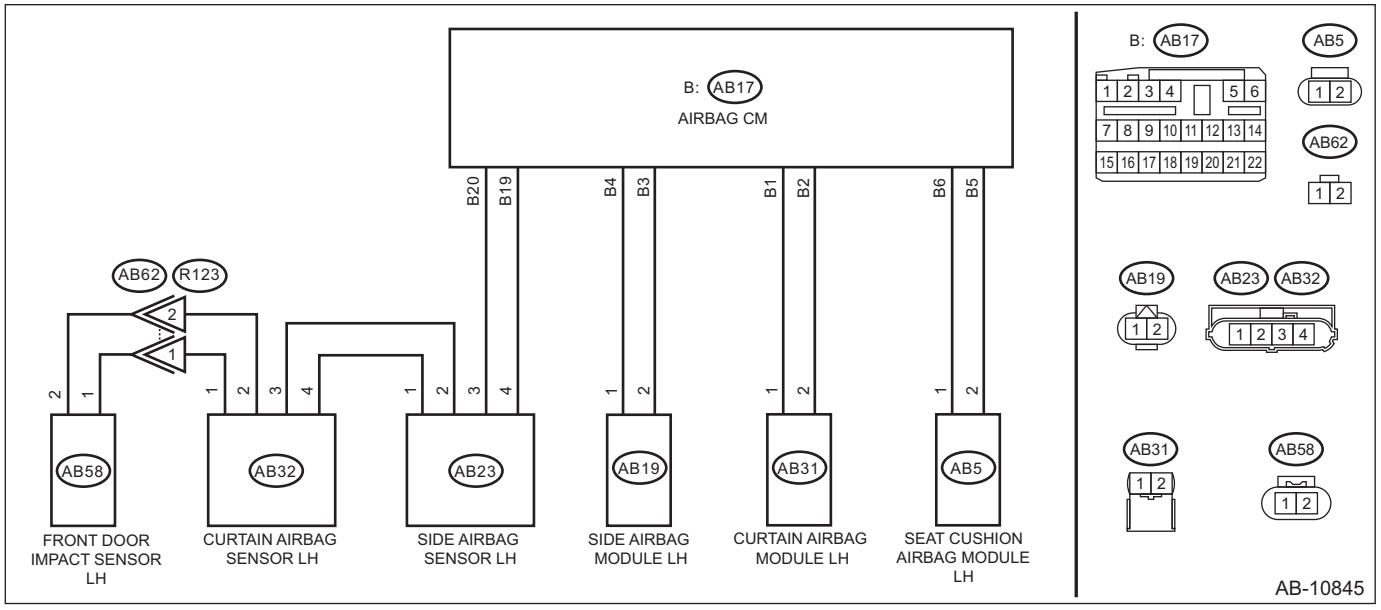
DTC detecting condition:
Side airbag sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH by the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1623 displayed?	Go to step **3**.	Replace the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>

	Step	Check	Yes	No
3	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1623 displayed?	Go to step **4**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
4	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1623 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BA:DTC B1625 SIDE AIRBAG SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor LH unit internal malfunction
When DTC B1625 is displayed, the circuit within the side airbag sensor LH is faulty.
Replace the side airbag sensor LH. <Ref. to AB-55, Side Airbag Sensor.>

BB:DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor LH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 2:*** ***(5AG) No. 16 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 displayed?	Go to step **5**.	Go to step **8**.
5	**CHECK SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH by the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 displayed?	Go to step **6**.	Replace the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
6	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors LH and RH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 displayed?	Go to step **7**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

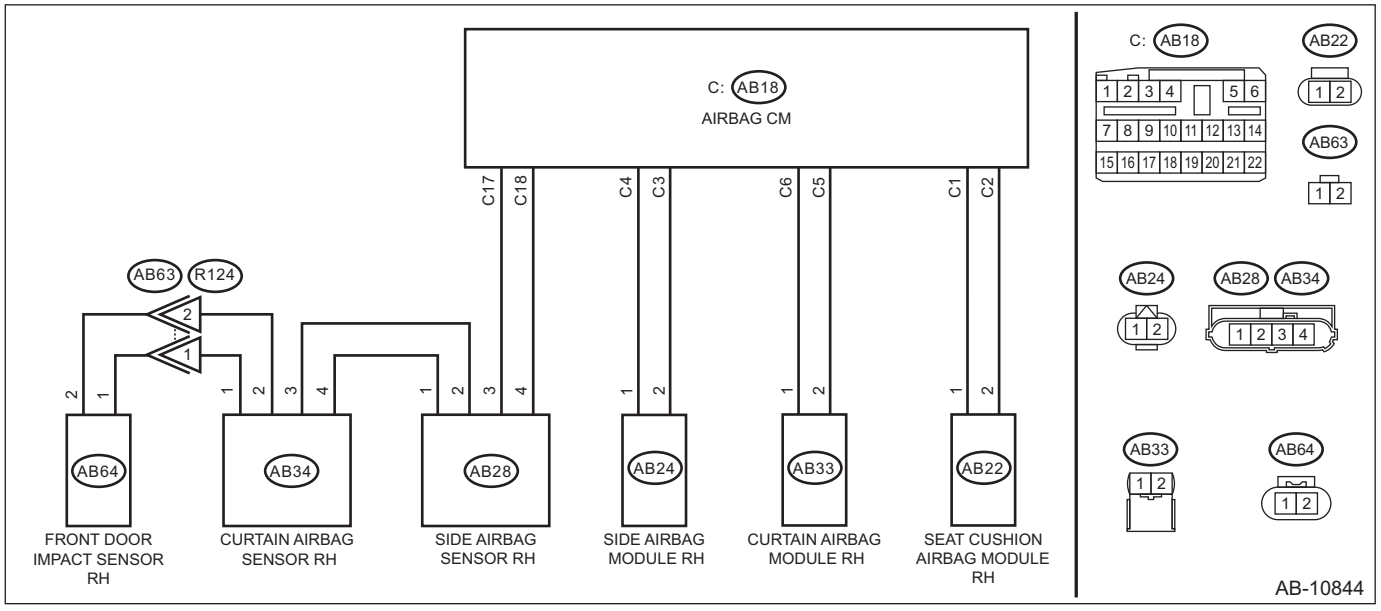
	Step	Check	Yes	No
7	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BC:DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH by the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1628 displayed?	Go to step **3**.	Replace the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
3	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors LH and RH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1628 displayed?	Go to step **4**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
4	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1628 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



BD:DTC B1630 CURTAIN AIRBAG SENSOR RH FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor RH unit internal malfunction
If DTC B1630 is displayed, the circuit within the curtain airbag sensor RH is faulty.
Replace the curtain airbag sensor RH. <Ref. to AB-57, Curtain Airbag Sensor.>

BE:DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Curtain airbag sensor RH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connector (AB28) of side airbag sensor RH. 7) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — (3V) No. 1:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632 displayed?	Go to step **6**.	Go to step **9**.

	Step	Check	Yes	No
6	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632 displayed?	Go to step **7**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
7	**CHECK SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Replace the side airbag sensor RH by the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632 displayed?	Go to step **8**.	Replace the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
8	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **9**.
9	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BF:DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.

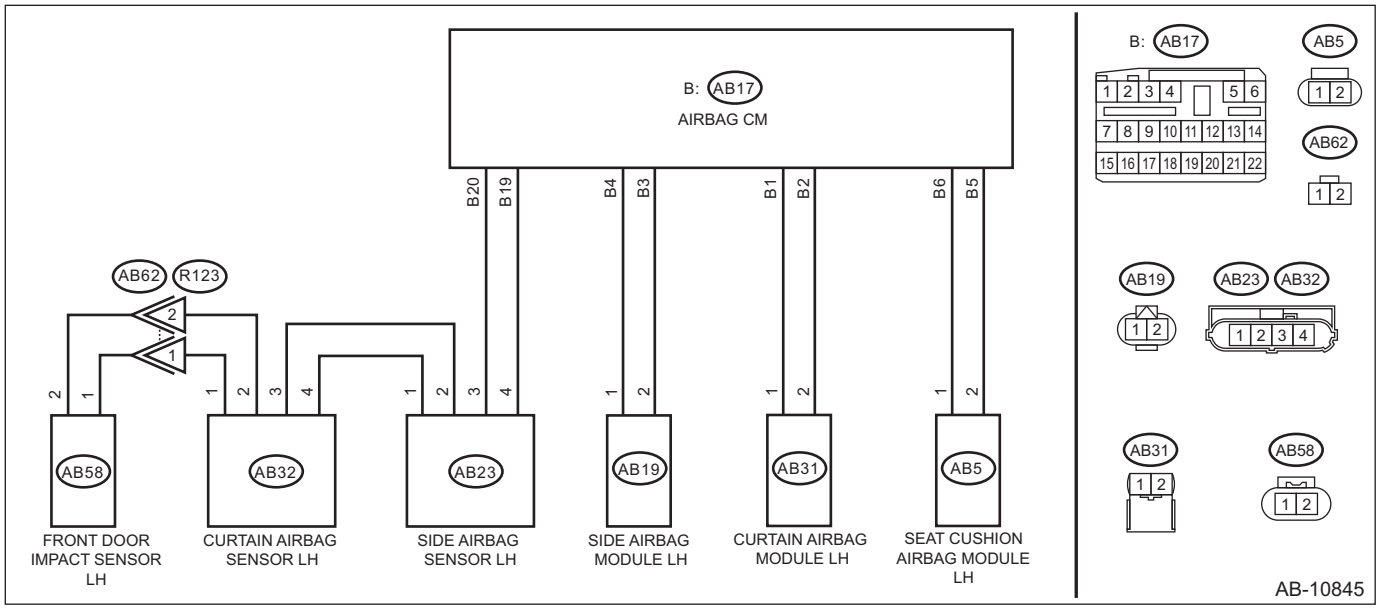
DTC detecting condition:
Curtain airbag sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1633 displayed?	Go to step **3**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

Step		Check	Yes	No
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1633 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BG:DTC B1635 CURTAIN AIRBAG SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor LH unit internal malfunction
If DTC B1635 is displayed, the circuit within the curtain airbag sensor LH is faulty.
Replace the curtain airbag sensor LH. <Ref. to AB-57, Curtain Airbag Sensor.>

BH:DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Curtain airbag sensor LH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

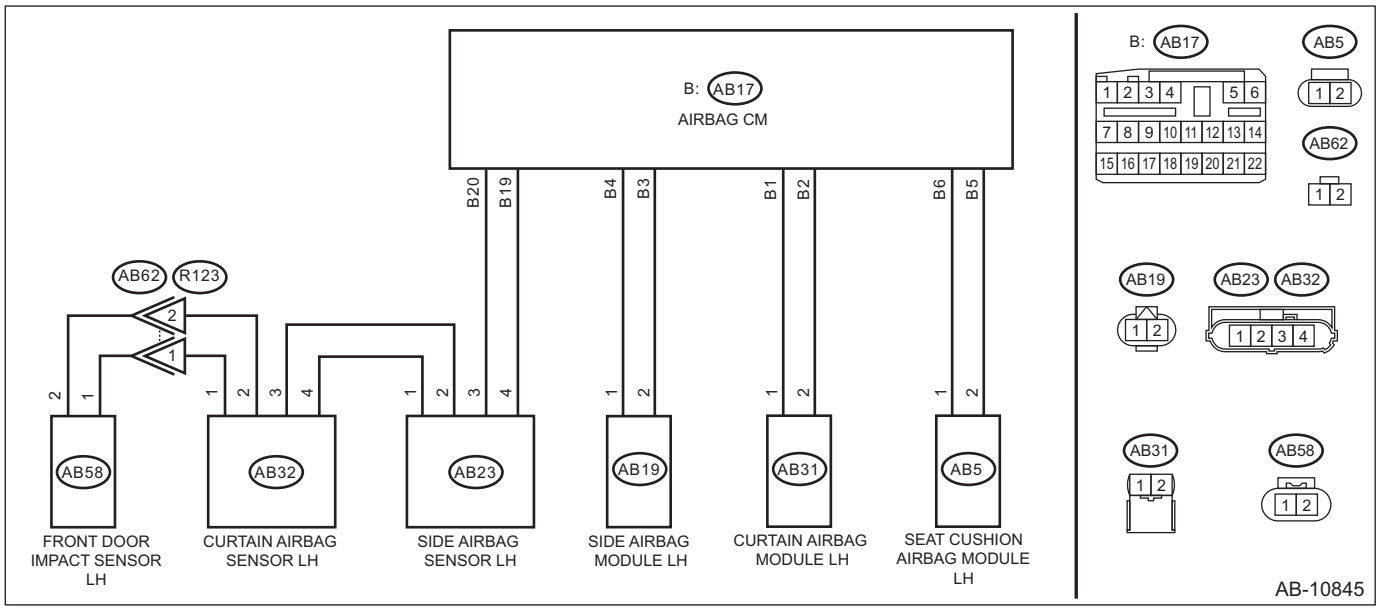
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:

Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connector (AB23) in the side airbag sensor LH. 7) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect it to the connector (2V) in test harness V. 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 displayed?	Go to step **6**.	Go to step **7**.

	Step	Check	Yes	No
6	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 displayed?	Go to step **7**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
7	**CHECK SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors LH and RH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Replace the side airbag sensor LH by the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 displayed?	Go to step **8**.	Replace the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
8	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **9**.
9	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



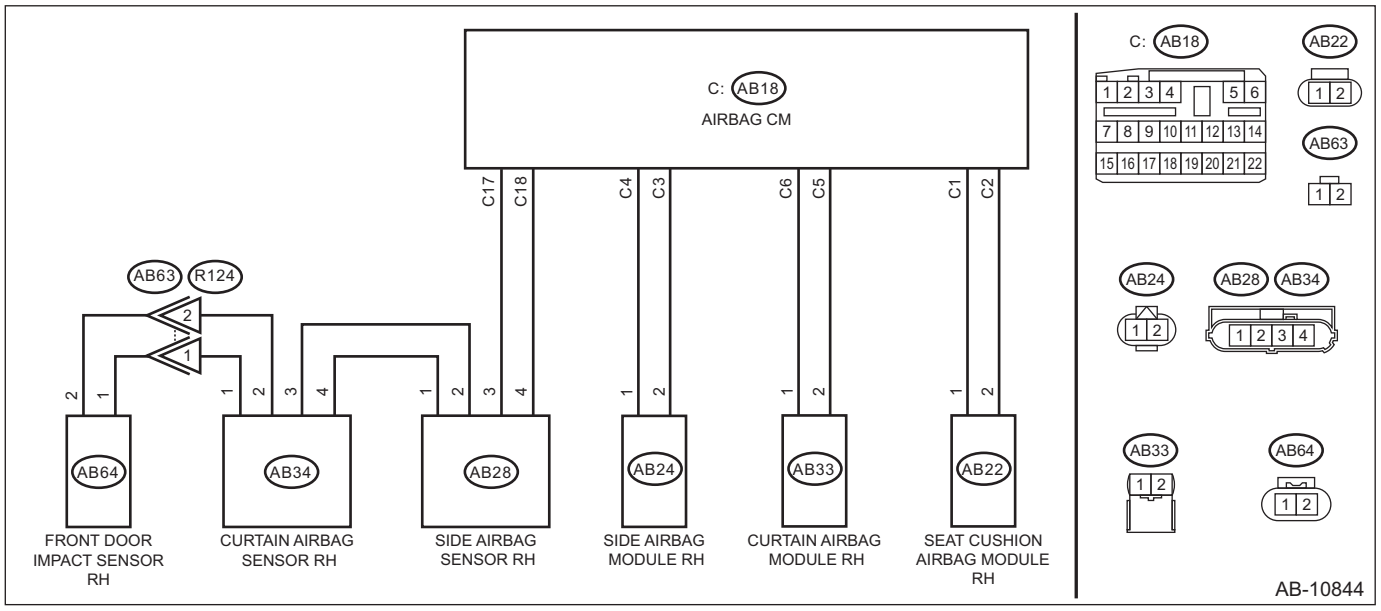
BI: DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.

Diagnostic Chart with Trouble Code

DTC detecting condition:
Curtain airbag sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1638 displayed?	Go to step **3**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

	Step	Check	Yes	No
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1638 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BJ:DTC B1643 SIDE SATELLITE SENSOR BUS RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side sensor RH bus line communication initialization error (open/short circuit or connector connection failure between airbag CM and side airbag sensor RH, open/short circuit or connector connection failure between side airbag sensor RH and curtain airbag sensor RH, open/short circuit or connector connection failure between curtain airbag sensor RH and front door impact sensor RH, side airbag sensor RH internal communication circuit failure, curtain airbag sensor RH internal communication circuit failure, front door impact sensor RH internal communication circuit failure, ECM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622, B1623 or B16EA displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632, B1633 or B16EC displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1692 or B1693 displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Connect the connector (2V) in the test harness V to the connector (AB28). 11) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 1:*** ***(5AG) No. 10 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **6**.	Replace the airbag rear harness along with body harness.
6	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the airbag rear harness along with body harness.

Step		Check	Yes	No
7	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH) (OPEN CIRCUIT).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB28) of side airbag sensor RH. 2) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 5) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 1 — (3V) No. 7:*** ***(3V) No. 2 — (3V) No. 6:***	Is the resistance less than 10 Ω?	Go to step **8**.	Replace the airbag rear harness along with body harness.
8	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH) (OPEN CIRCUIT).** 1) Disconnect the connector (AB64) from front door impact sensor RH. 2) Using a probe, measure the resistance between the connector (3V) in test harness V and connector (AB64). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB64) No. 1:*** ***(3V) No. 5 — (AB64) No. 2:***	Is the resistance less than 10 Ω?	Go to step **10**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
11	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 displayed?	Go to step **12**.	Go to step **16**.
12	**CHECK SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH by the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 displayed?	Go to step **13**.	Replace the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
13	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 displayed?	Go to step **14**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

	Step	Check	Yes	No
14	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Disconnect the connector (AB64) from front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 4) Temporarily connect a new front door impact sensor to the connector (AB64). 5) Connect all connectors. 6) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 7) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 displayed?	Go to step **15**.	Replace the front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
15	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor RH back to the original position. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **16**.
16	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BK:DTC B1648 SIDE SATELLITE SENSOR BUS LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side sensor LH bus line communication initialization error (open/short circuit or connector connection failure between airbag CM and side airbag sensor LH, open/short circuit or connector connection failure between side airbag sensor LH and curtain airbag sensor LH, open/short circuit or connector connection failure between curtain airbag sensor LH and front door impact sensor LH, side airbag sensor LH internal communication circuit failure, curtain airbag sensor LH internal communication circuit failure, front door impact sensor LH internal communication circuit failure, ECM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627, B1628 or B16EB displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637, B1638 or B16ED displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1697 or B1698 displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Connect the connector (2V) in the test harness V to the connector (AB23). 11) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 2:*** ***(5AG) No. 16 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **6**.	Replace the airbag rear harness along with body harness.
6	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
7	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH) (OPEN CIRCUIT).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB23) of side airbag sensor LH. 2) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 5) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 1 — (3V) No. 7:*** ***(3V) No. 2 — (3V) No. 6:***	Is the resistance less than 10 Ω?	Go to step **8**.	Replace the airbag rear harness along with body harness.
8	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH) (OPEN CIRCUIT).** 1) Disconnect the connector (AB58) from front door impact sensor LH. 2) Using a probe, measure the resistance between the connector (3V) in test harness V and connector (AB58). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB58) No. 1:*** ***(3V) No. 5 — (AB58) No. 2:***	Is the resistance less than 10 Ω?	Go to step **10**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
11	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 displayed?	Go to step **12**.	Go to step **16**.
12	**CHECK SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH by the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 displayed?	Go to step **13**.	Replace the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
13	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 displayed?	Go to step **14**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

	Step	Check	Yes	No
14	**CHECK FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Disconnect the connector (AB58) from front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 4) Temporarily connect a new front door impact sensor to the connector (AB58). 5) Connect all connectors. 6) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 7) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 displayed?	Go to step **15**.	Replace the front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
15	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor LH back to the original position. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **16**.
16	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BL:DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Occupant detection sensor malfunction, communication failure between airbag CM and occupant detection sensor, rear harness malfunction, seat harness malfunction, blown out of fuse for occupant detection system

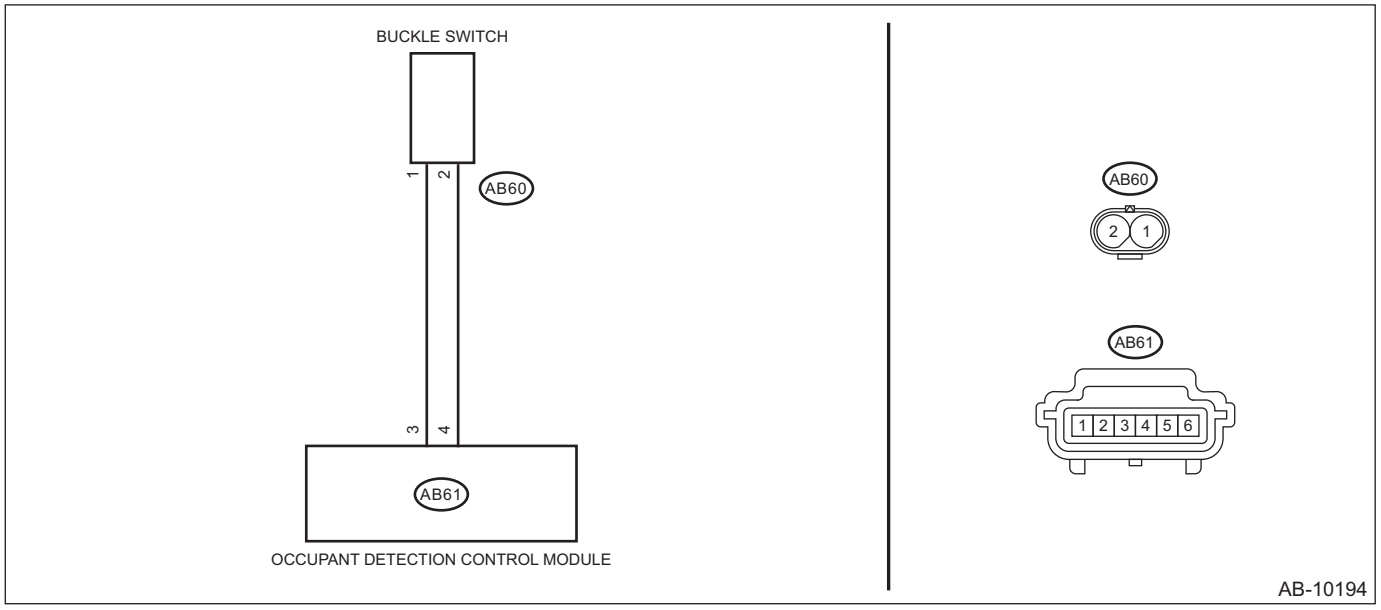
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1650 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **3**.
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BM:DTC B1652 HALF CONNECTION IN AIRBAG SENSOR ASSEMBLY CONNECTOR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Connection failure of airbag CM connector



CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check for poor contact of the airbag control module connector.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CONNECTOR.** Check the airbag main harness connector and the airbag rear harness connector.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

BN:DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Buckle switch RH failure (open, short, unit failure), seat harness malfunction (open, short), occupant detection system failure
Wiring diagram:
Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. (Current malfunction)	Is DTC other than B1650 and B1655 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the occupant detection harness.	Go to step **3**.

Step		Check	Yes	No
3	**CHECK BUCKLE SWITCH.** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-19, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Check the occupant detection harness, and if any fault is found, replace the occupant detection harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

BO:DTC B1656 FRONT BUCKLE SWITCH LH FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Buckle switch LH failure (open, short, unit failure), seat harness malfunction (open, short), occupant detection system failure
WIRING DIAGRAM:
Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC other than B1656 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the buckle switch.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the airbag rear harness together with body harness, if the connector is faulty.	Go to step **3**.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND BUCKLE SWITCH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the buckle switch connector (R108). 10) Measure the resistance between connector (6AG) in the test harness AG and connector (R108). **CAUTION:** **Connect terminal (1AW) in test harness AW to connector (R108) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(6AG) No. 17 — (R108) No. 1:*** ***(6AG) No. 2 — (R108) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND BUCKLE SWITCH) (SHORTED TO GROUND).** Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 17 — Chassis ground:*** ***(6AG) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.

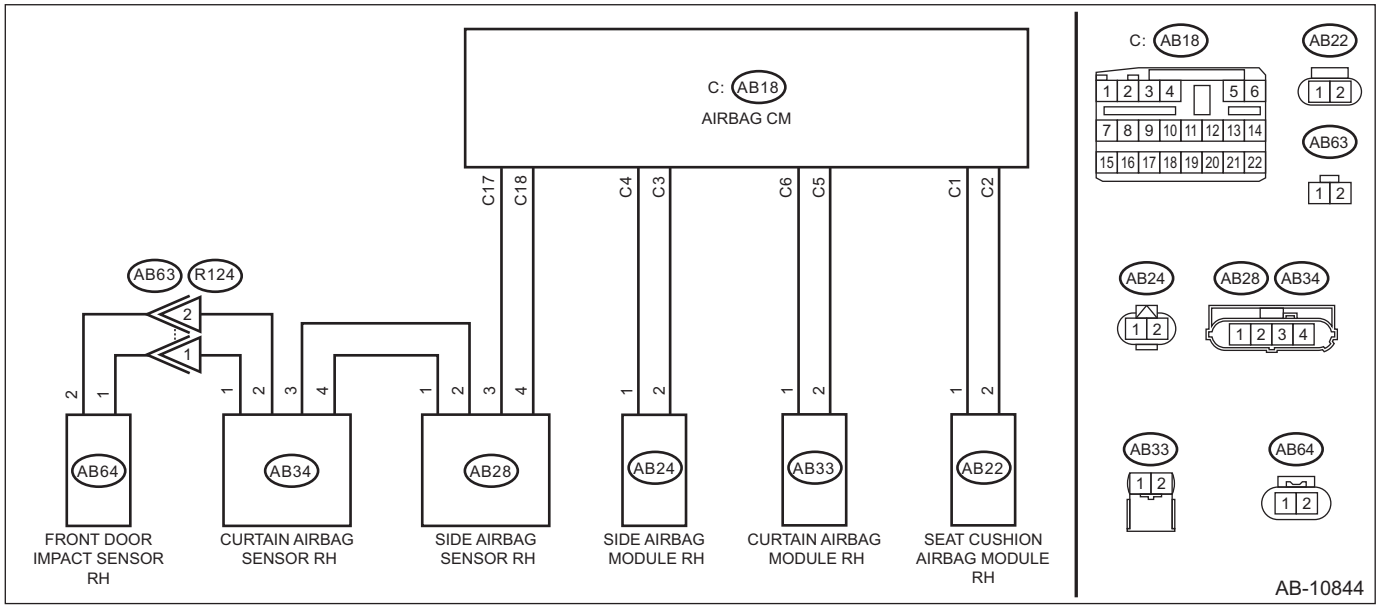
	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND BUCKLE SWITCH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 17 (+) — Chassis ground (–):*** ***(6AG) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Replace the airbag main harness along with body harness.
6	**REPLACE BUCKLE SWITCH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the buckle switch. <Ref. to SB-19, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1656 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **7**.
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BP:DTC B1661 PASSENGER'S AIRBAG ON/OFF INDICATOR FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Passenger’s airbag indicator failure received (CAN signal from combination meter)

NOTE:
Perform the diagnosis for combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

BQ:DTC B1690 DOOR SENSOR RH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor RH unit internal malfunction
If DTC B1690 is displayed, the circuit within the front door impact sensor RH is faulty.
Replace the front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>

BR:DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

Front door impact sensor RH communication error (open/short circuit or connector connection failure between airbag CM and front door impact sensor, front door impact sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 or B1632 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 7) Disconnect the connector (AB64) from front door impact sensor RH. 8) Using a probe, measure the resistance between the connector (3V) in test harness V and connector (AB64). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB64) No. 1:*** ***(3V) No. 5 — (AB64) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
4	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1692 displayed?	Go to step **6**.	Go to step **9**.

	Step	Check	Yes	No
6	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB64) from front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Temporarily connect a new front door impact sensor to the connector (AB64). 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1692 displayed?	Go to step **7**.	Replace the front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
7	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor RH back to the original position. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1692 displayed?	Go to step **8**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
8	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1692 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **9**.
9	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BS:DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE

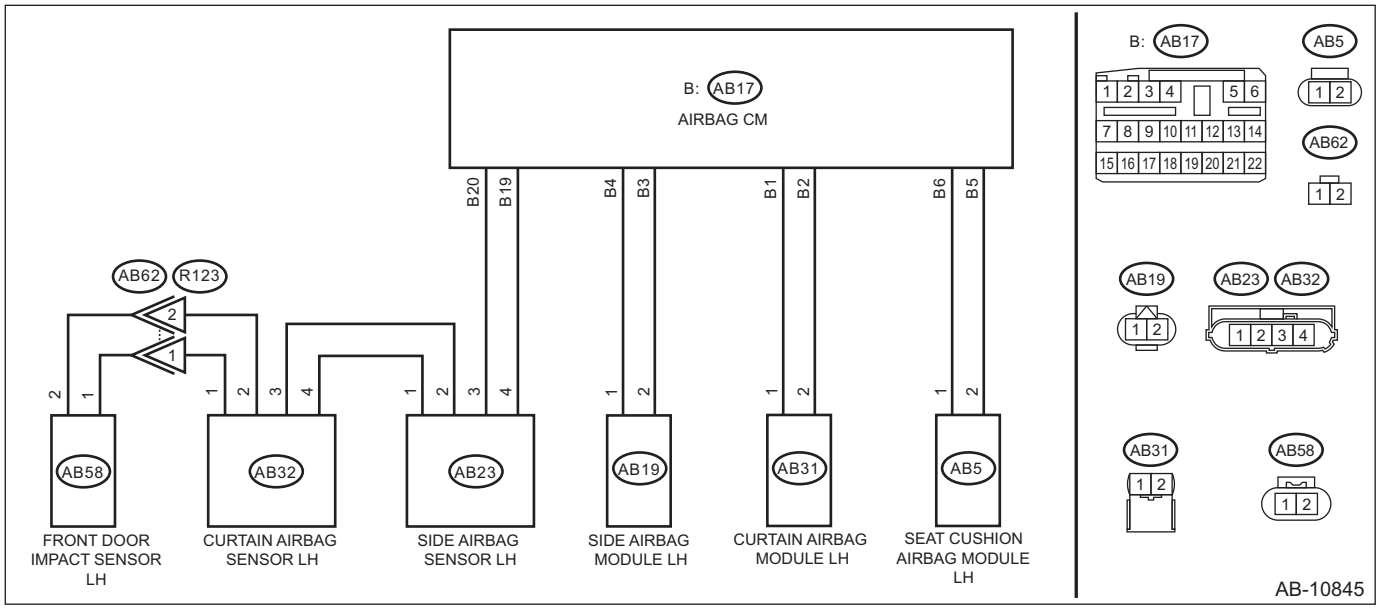
Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front door impact sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **2**.
2	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB64) from front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Temporarily connect a new front door impact sensor to the connector (AB64). 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1693 displayed?	Go to step **3**.	Replace the front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>

Step		Check	Yes	No
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor RH back to the original position. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1693 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BT:DTC B1695 DOOR SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor RH unit internal malfunction
If DTC AB is displayed, the circuit within the front door impact sensor LH is faulty.
Replace the front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>

BU:DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front door impact sensor LH communication error (open/short circuit or connector connection failure between airbag CM and front door impact sensor, front door impact sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:

Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 or B1637 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) from side airbag module LH. 6) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 7) Disconnect the connector (AB58) from front door impact sensor LH. 8) Using a probe, measure the resistance between the connector (3V) terminal in test harness V and connector (AB58) terminal. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB58) No. 1:*** ***(3V) No. 5 — (AB58) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
4	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1697 displayed?	Go to step **6**.	Go to step **9**.

	Step	Check	Yes	No
6	**CHECK FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB58) from front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Temporarily connect a new front door impact sensor to the connector (AB58). 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1697 displayed?	Go to step **7**.	Replace the front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
7	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor LH back to the original position. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1697 displayed?	Go to step **8**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
8	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1697 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **9**.
9	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BV:DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE

Diagnosis start condition:

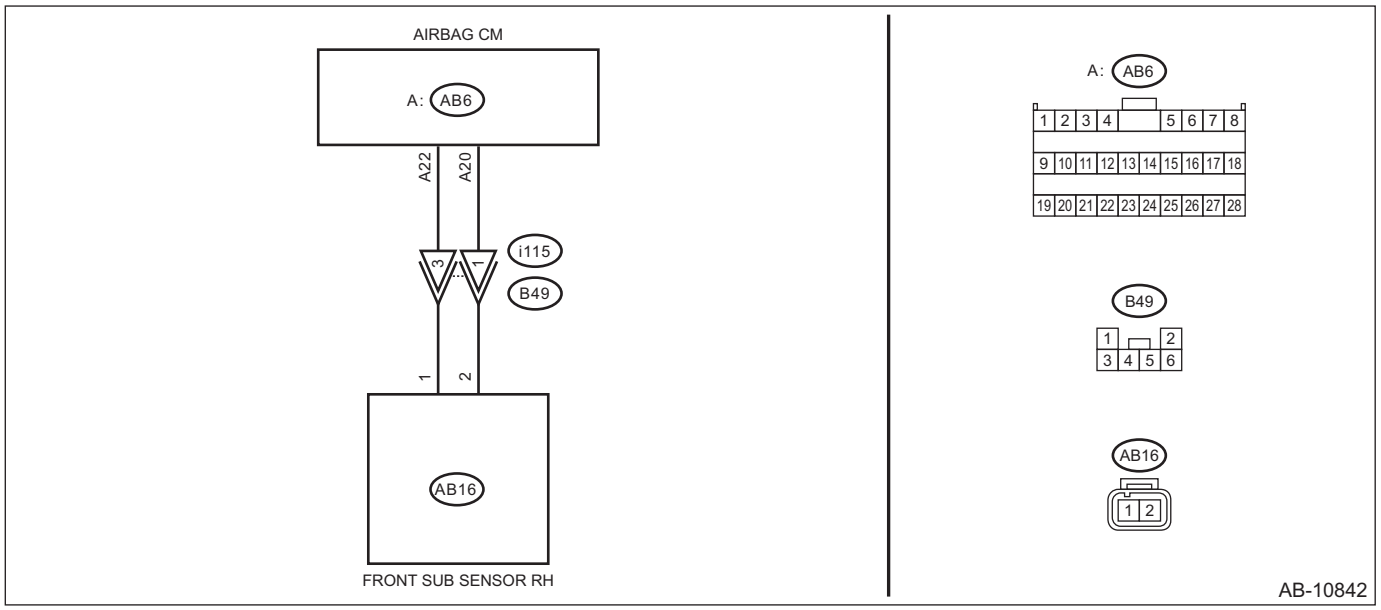
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front door impact sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **2**.
2	**CHECK FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB58) from front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Temporarily connect a new front door impact sensor to the connector (AB58). 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1698 displayed?	Go to step **3**.	Replace the front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>

	Step	Check	Yes	No
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor LH back to the original position. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1698 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **3**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BW:DTC B169F DOOR SENSOR FAILURE: ABNORMAL PRESSURE



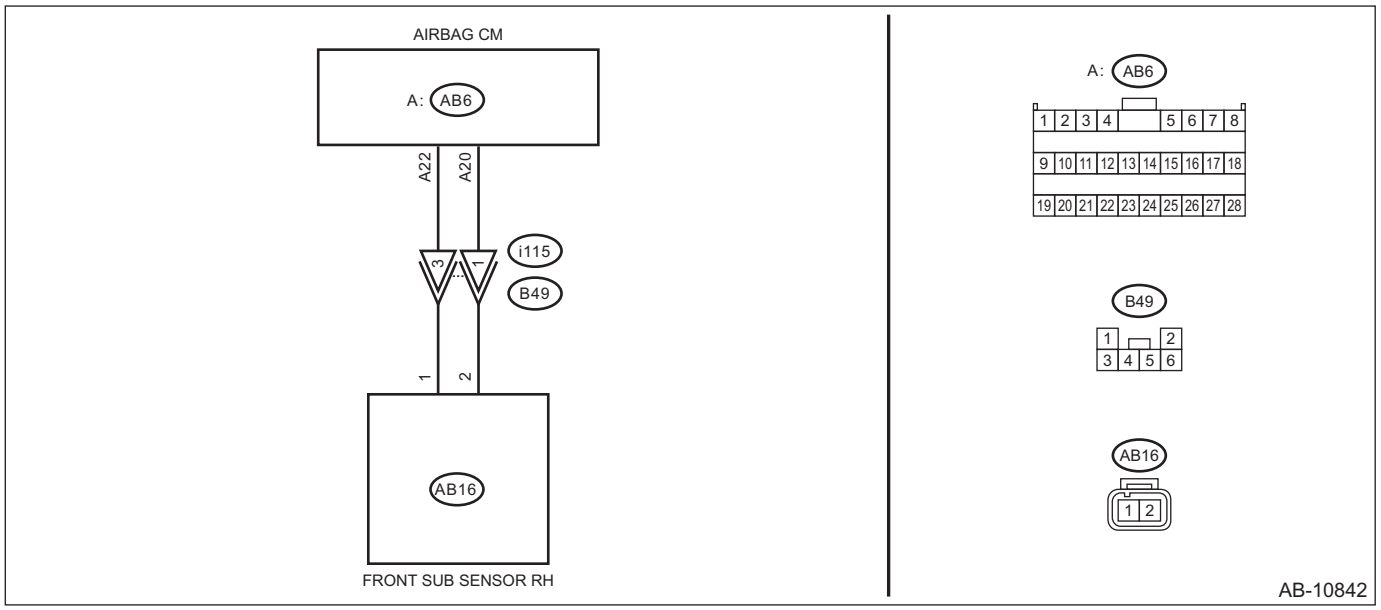
Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front door impact sensor detected value abnormal (difference of the detected pressure values between front door impact sensor RH and LH exceeds a predetermined value), airbag CM process failure

	Step	Check	Yes	No
1	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB64) from front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 3) Connect a new front door impact sensor RH to connector (AB64). 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B169F displayed?	Go to step **2**.	Replace the front door impact sensor RH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
2	**CHECK FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor RH back to the original position. 3) Disconnect the connector (AB58) from front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.> 4) Connect a new front door impact sensor LH to connector (AB58). 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B169F displayed?	Go to step **3**.	Replace the front door impact sensor LH. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front door impact sensor LH back to the original position. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B169F displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BX:DTC B16A2 SHORT IN FRONT SUB SENSOR RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between front sub sensor RH circuit and GND circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



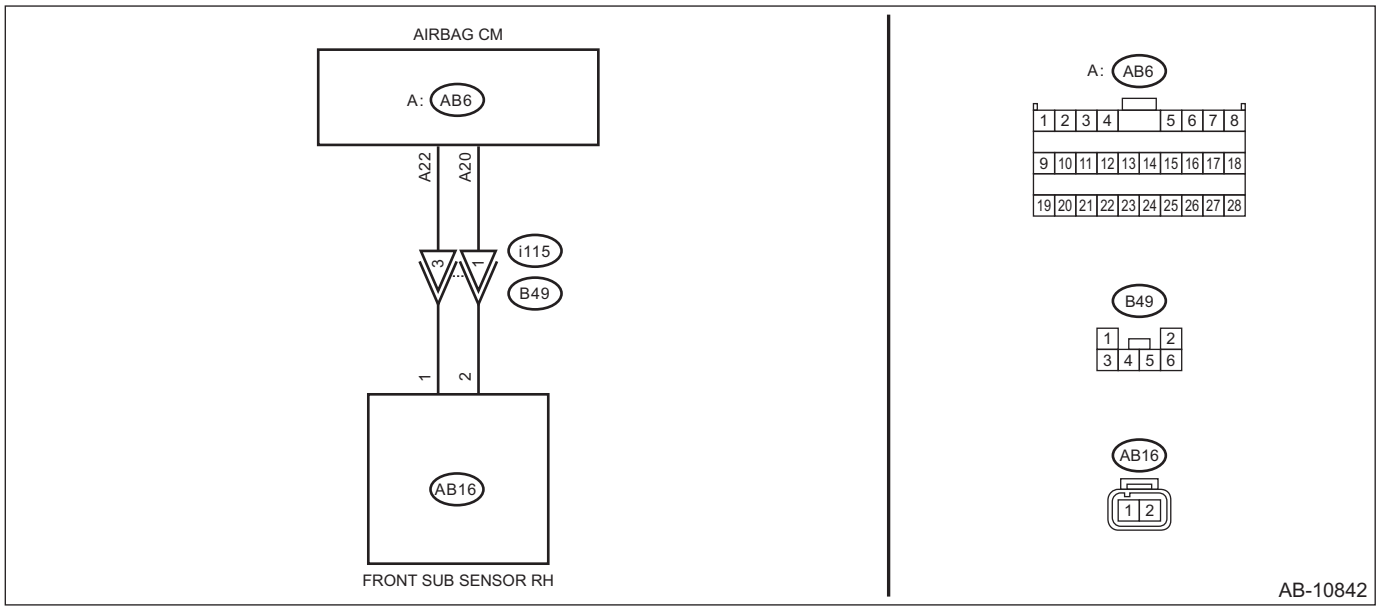
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the connector (AB16) from front sub sensor RH. 6) Using a probe, measure the resistance between the connector (AB16) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB16) No. 1 — Chassis ground:*** ***(AB16) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK FRONT SUB SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor RH by the front sub sensor LH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16A2 displayed?	Go to step **4**.	Replace the front sub sensor RH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.>
4	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front sub sensors RH and LH back to their original position. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16A2 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BY:DTC B16A3 SHORT IN FRONT SUB SENSOR RH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between front sub sensor RH circuit and power supply circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

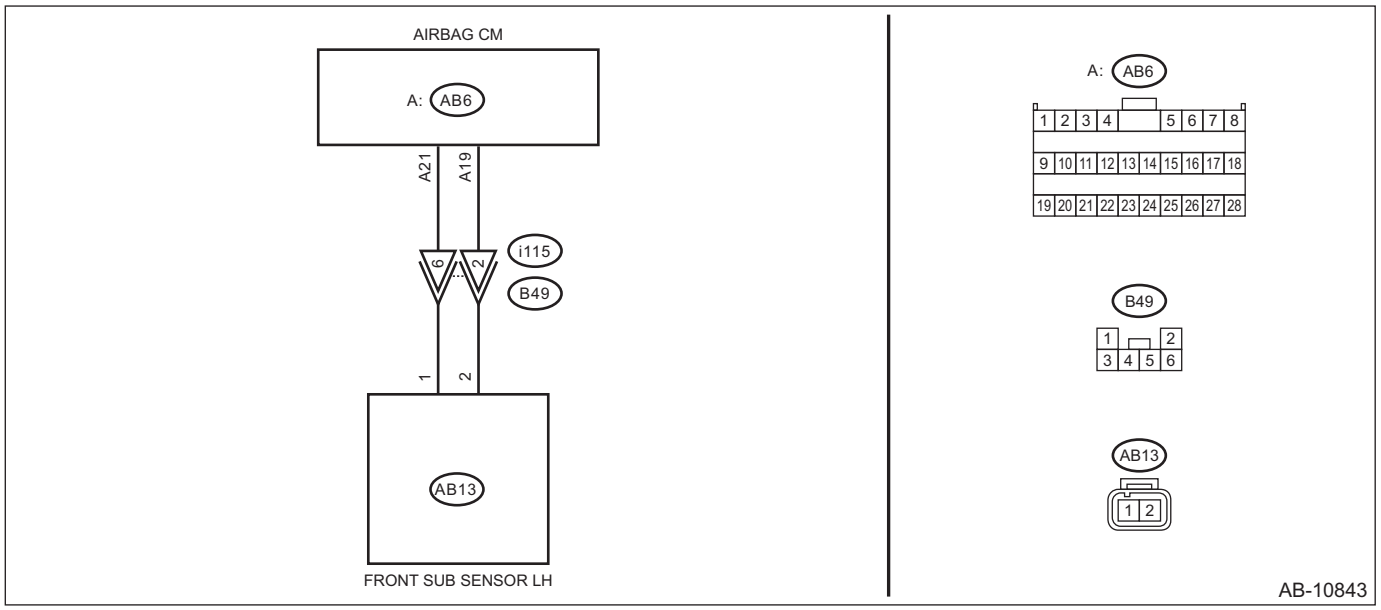


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the connector (AB16) from front sub sensor RH. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Using a probe, measure the voltage between the connector (AB16) and chassis ground. **CAUTION:** **When measuring the voltage, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.>** ***Connector & terminal*** ***(AB16) No. 1 (+) — Chassis ground (–):*** ***(AB16) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16A3 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BZ:DTC B16A4 SHORT IN FRONT SUB SENSOR RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between front sub sensor RH circuit and other sensor circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

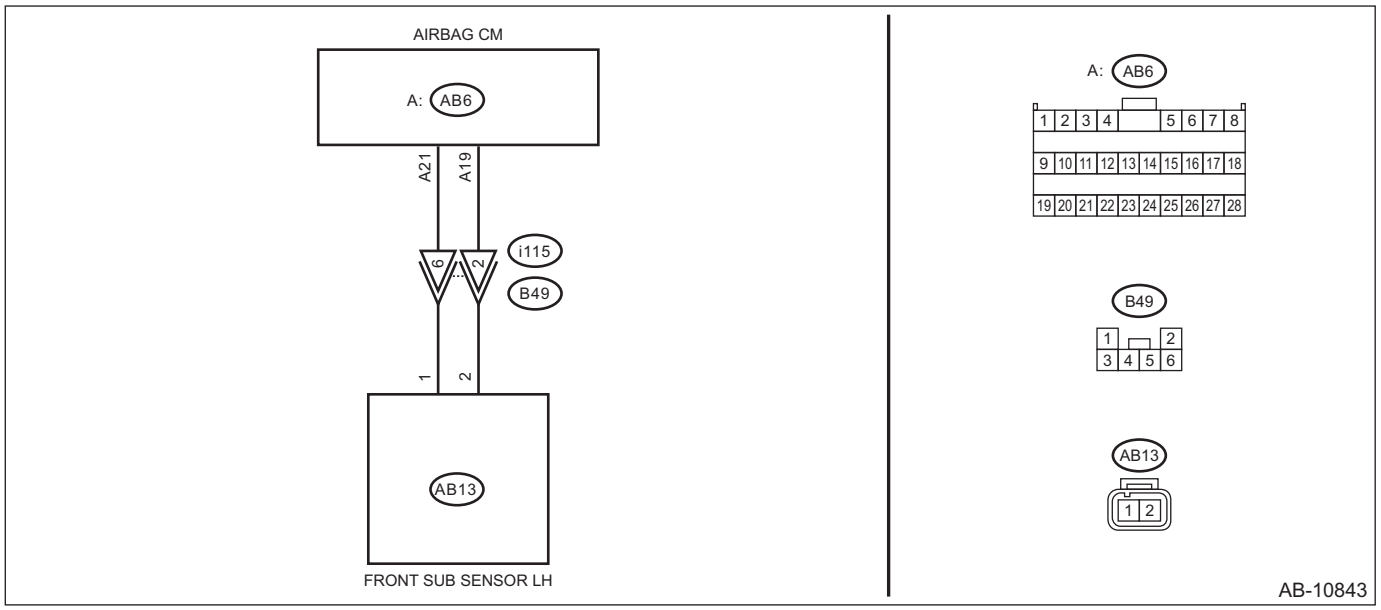


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB16) from front sub sensor RH. 8) Measure the resistance between connector (4AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 14 — All terminals in test harness AG:*** ***(4AG) No. 12 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

CA:DTC B16A7 SHORT IN FRONT SUB SENSOR LH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between front sub sensor LH circuit and GND circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



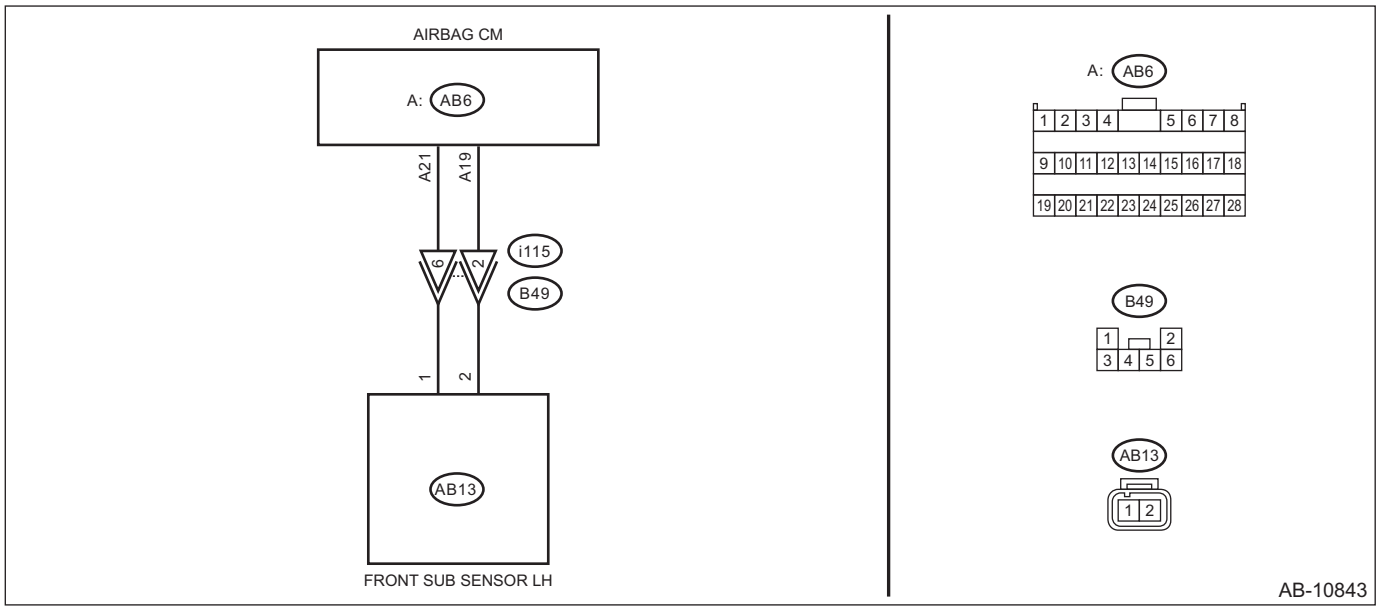
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the connector (AB13) from front sub sensor LH. 6) Using a probe, measure the resistance between the connector (AB13) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB13) No. 1 — Chassis ground:*** ***(AB13) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK FRONT SUB SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor LH by the front sub sensor RH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16A7 displayed?	Go to step **4**.	Replace the front sub sensor LH. <Ref. to AB-51, REMOVAL, Front Sub Sensor.>
4	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the front sub sensors RH and LH back to their original position. <Ref. to AB-51, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16A7 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CB:DTC B16A8 SHORT IN FRONT SUB SENSOR LH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between front sub sensor LH circuit and power supply circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

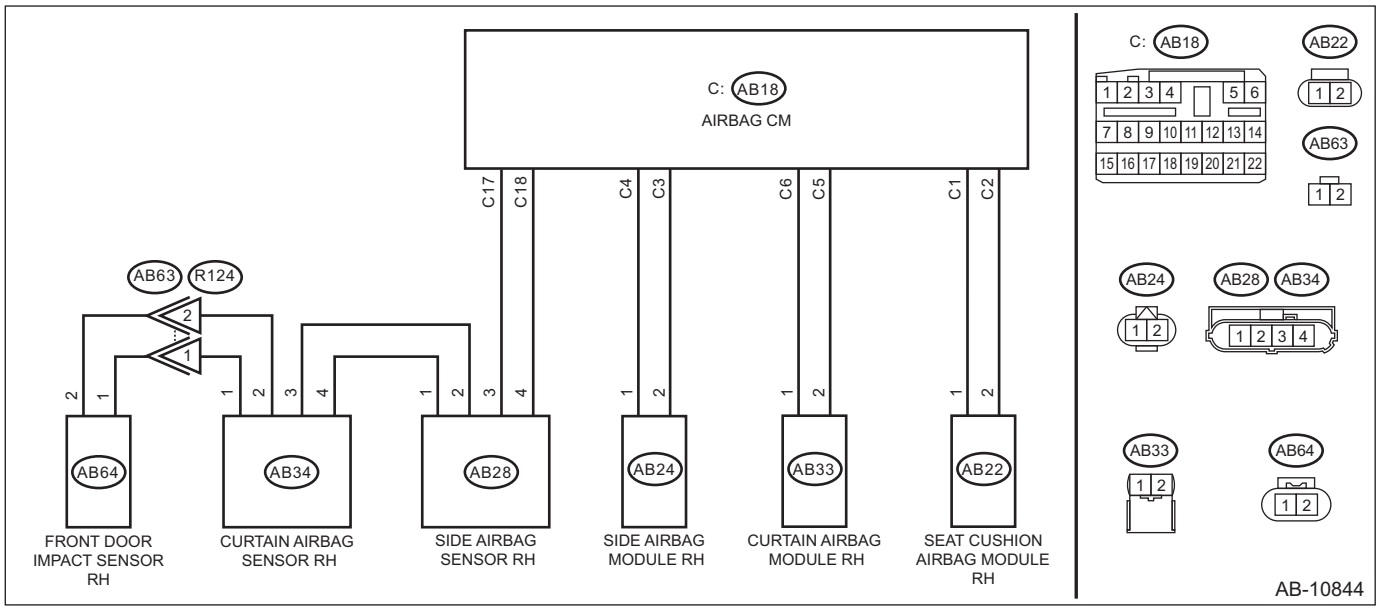


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the connector (AB13) from front sub sensor LH. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Using a probe, measure the voltage between the connector (AB13) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB13) No. 1 (+) — Chassis ground (–):*** ***(AB13) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16A8 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CC:DTC B16A9 SHORT IN FRONT SUB SENSOR LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between front sub sensor LH circuit and other sensor circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

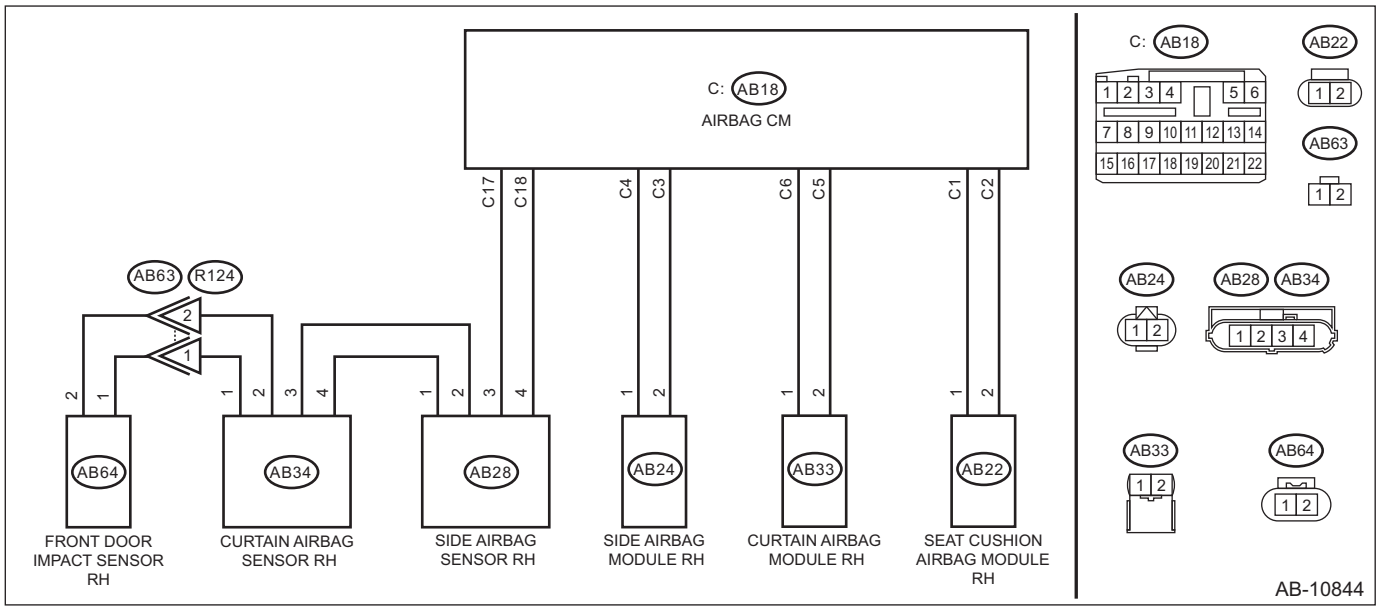


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB13) from front sub sensor LH. 8) Measure the resistance between connector (4AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 7 — All terminals in test harness AG:*** ***(4AG) No. 9 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

CD:DTC B16B2 SHORT IN SIDE SATELLITE SENSOR BUS RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between side sensor RH circuit and GND circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



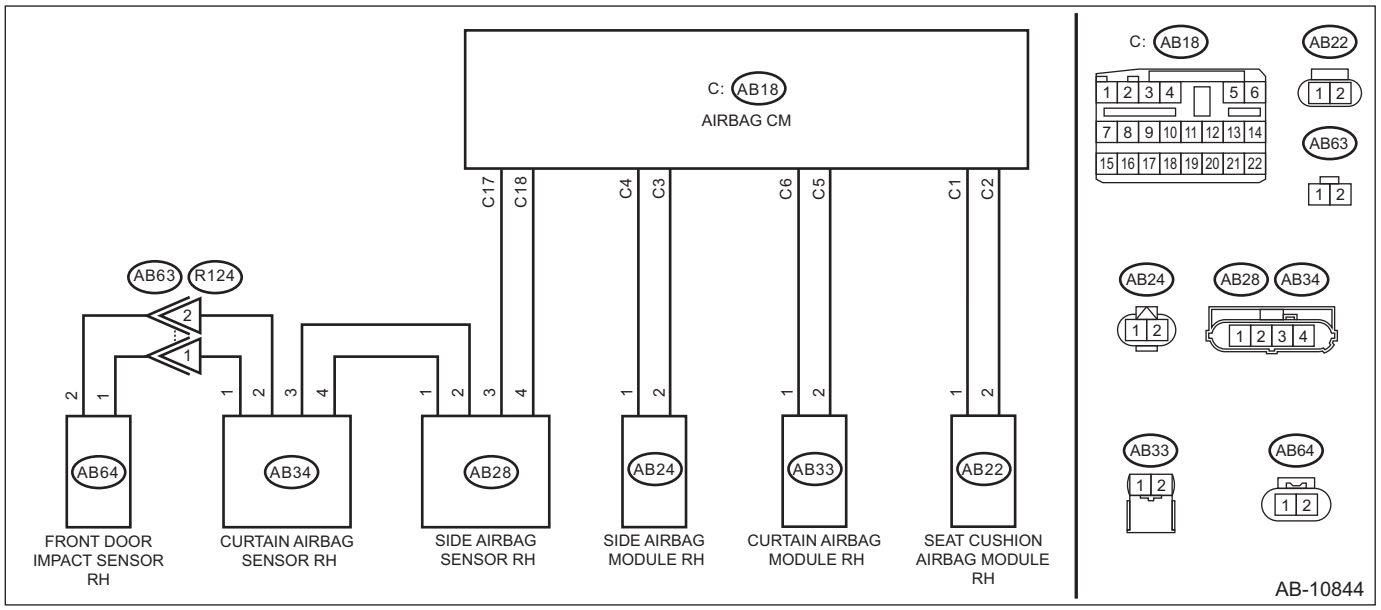
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor RH, curtain airbag sensor RH, or front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS RH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Disconnect the connector (AB34) from curtain airbag sensor RH. 11) Disconnect the connector (AB64) from front door impact sensor RH. 12) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 8 — Chassis ground:*** ***(5AG) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B2 displayed?	Go to step **4**.	Go to step **7**.
4	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B2 displayed?	Go to step **5**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

	Step	Check	Yes	No
5	**CHECK SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Replace the side airbag sensor RH by the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B2 displayed?	Go to step **6**.	Replace the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
6	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B2 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **7**.
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CE:DTC B16B3 SHORT IN SIDE SATELLITE SENSOR BUS RH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between side sensor RH circuit and power supply circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

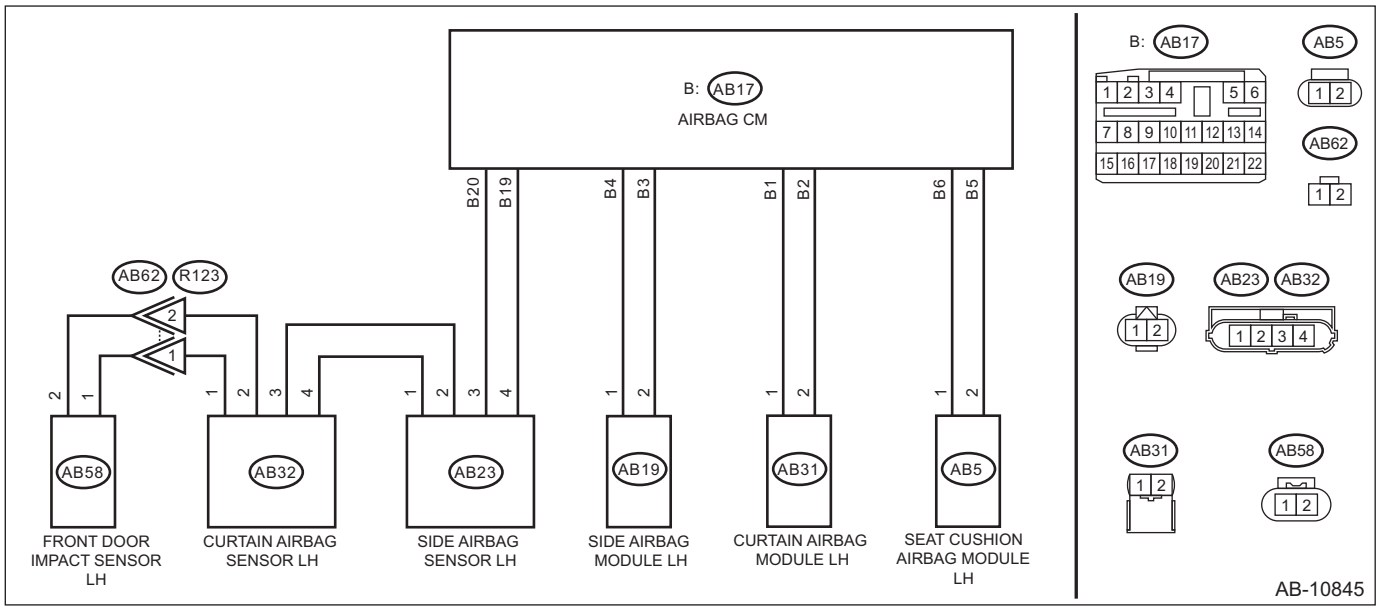


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor RH, curtain airbag sensor RH, or front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS RH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Disconnect the connector (AB34) from curtain airbag sensor RH. 11) Disconnect the connector (AB64) from front door impact sensor RH. 12) Turn the ignition switch to ON. 13) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 8 (+) — Chassis ground (–):*** ***(5AG) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B3 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CF:DTC B16B4 SHORT IN SIDE SATELLITE SENSOR BUS RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between side sensor RH circuit and other sensor circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

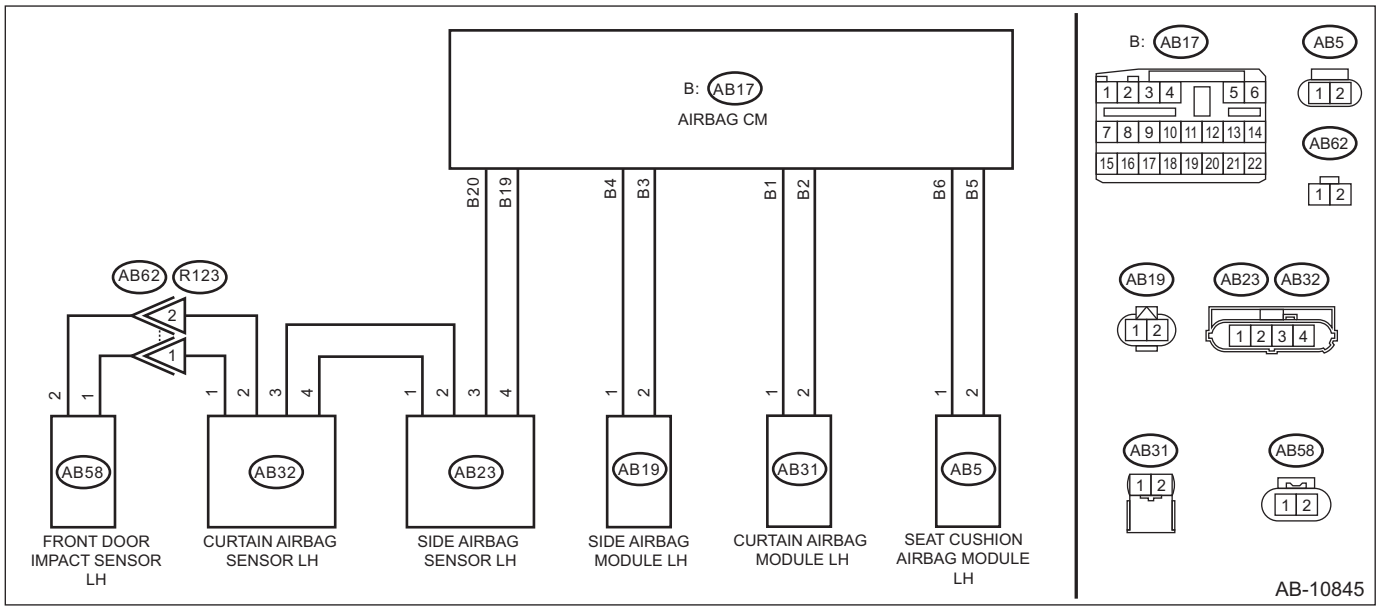


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor RH, curtain airbag sensor RH, or front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Disconnect the connector (AB34) from curtain airbag sensor RH. 11) Disconnect the connector (AB64) from front door impact sensor RH. 12) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 8 — All terminals in test harness AG:*** ***(5AG) No. 10 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B4 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CG:DTC B16B7 SHORT IN SIDE SATELLITE SENSOR BUS LH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between side sensor LH circuit and GND circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



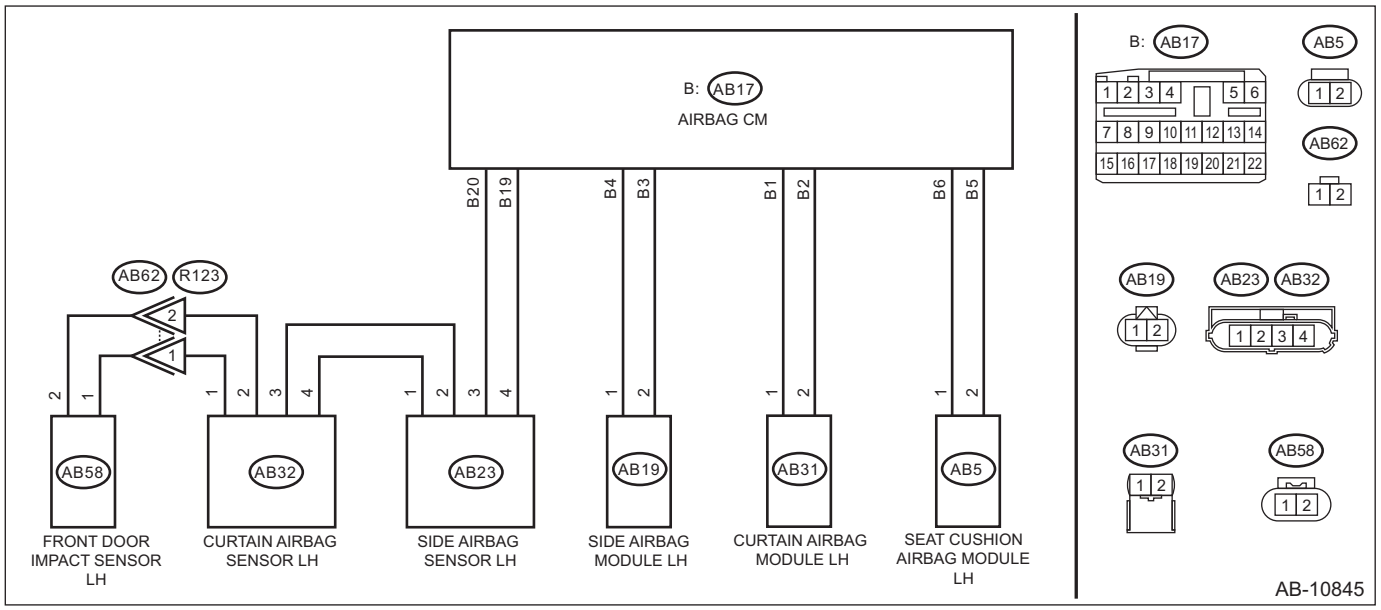
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor LH, curtain airbag sensor LH, or front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS LH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Disconnect the connector (AB32) from curtain airbag sensor LH. 11) Disconnect the connector (AB58) from front door impact sensor LH. 12) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 14 — Chassis ground:*** ***(5AG) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B7 displayed?	Go to step **4**.	Go to step **7**.
4	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B7 displayed?	Go to step **5**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>

	Step	Check	Yes	No
5	**CHECK SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Replace the side airbag sensor LH by the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 4) Connect all connectors. 5) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B7 displayed?	Go to step **6**.	Replace the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
6	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors LH and RH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B7 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **7**.
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CH:DTC B16B8 SHORT IN SIDE SATELLITE SENSOR BUS LH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between side sensor LH circuit and power supply circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

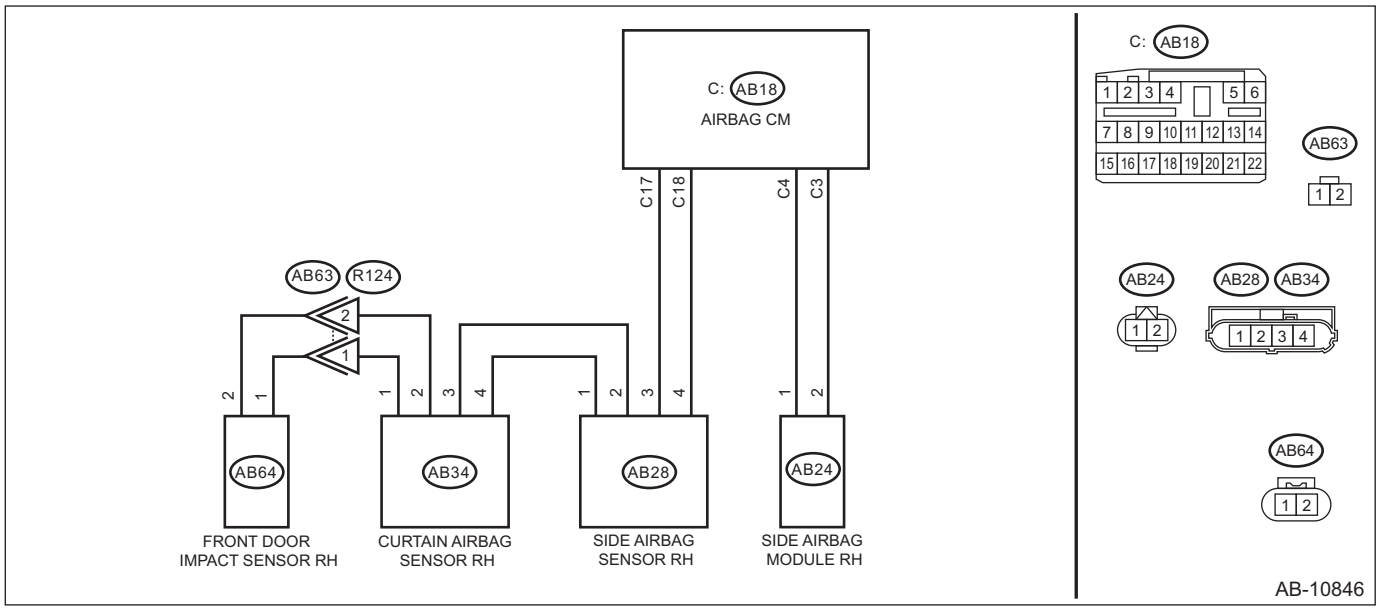


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor LH, curtain airbag sensor LH, or front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS LH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Disconnect the connector (AB32) from curtain airbag sensor LH. 11) Disconnect the connector (AB58) from front door impact sensor LH. 12) Turn the ignition switch to ON. 13) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 14 (+) — Chassis ground (–):*** ***(5AG) No. 16 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B8 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CI: DTC B16B9 SHORT IN SIDE SATELLITE SENSOR BUS LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between side sensor LH circuit and other sensor circuit
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

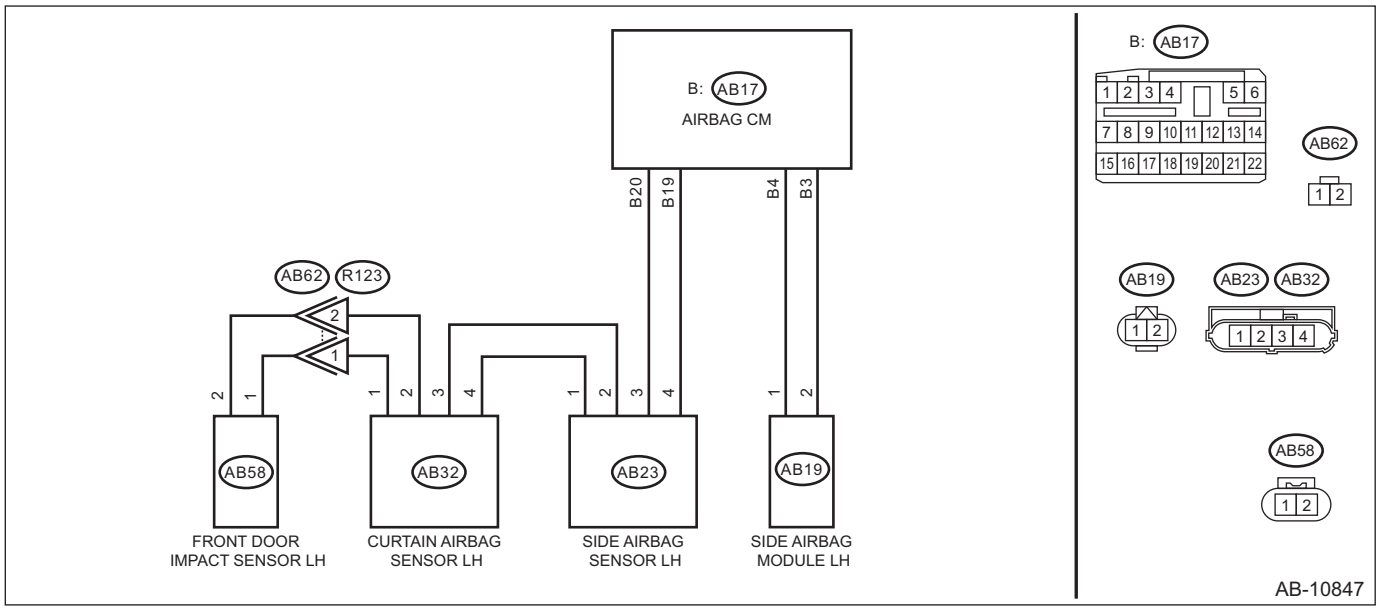


Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor LH, curtain airbag sensor LH, or front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Disconnect the connector (AB32) from curtain airbag sensor LH. 11) Disconnect the connector (AB58) from front door impact sensor LH. 12) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 14 — All terminals in test harness AG:*** ***(5AG) No. 16 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16B9 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CJ:DTC B16EA SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor RH initialization error
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



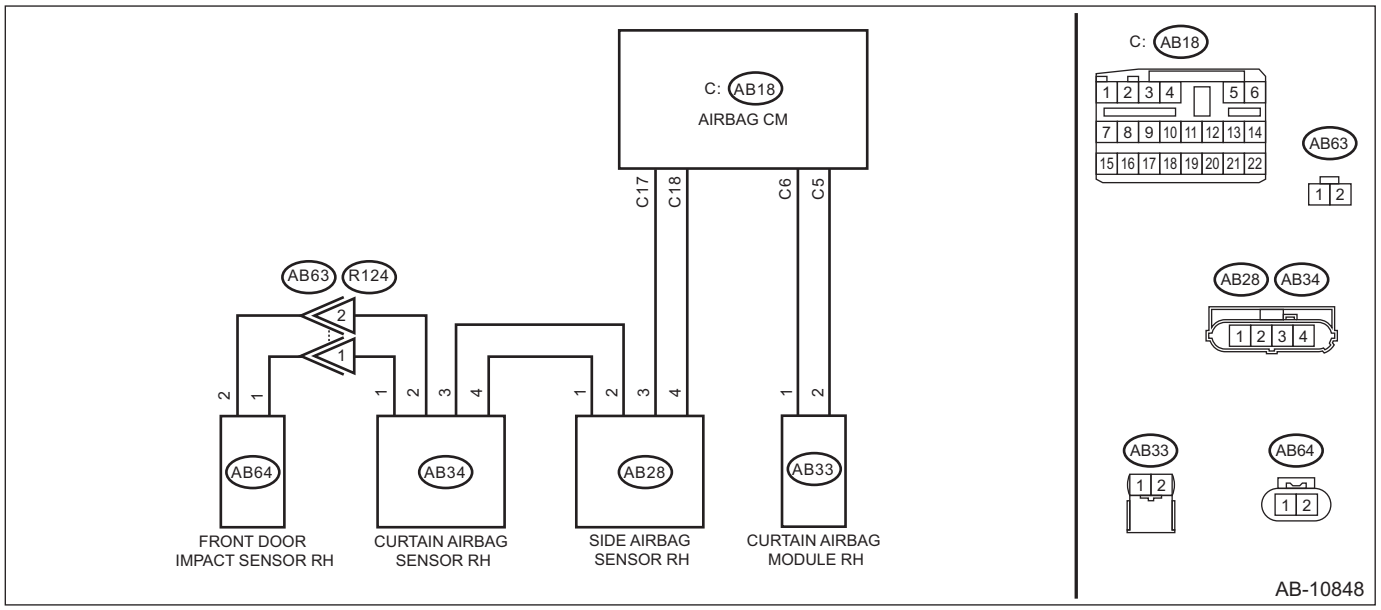
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 1:*** ***(5AG) No. 10 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EA displayed?	Go to step **5**.	Go to step **7**.

	Step	Check	Yes	No
5	**CHECK SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH by the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EA displayed?	Go to step **6**.	Replace the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
6	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EA displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **7**.
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CK:DTC B16EB SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor LH initialization error
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



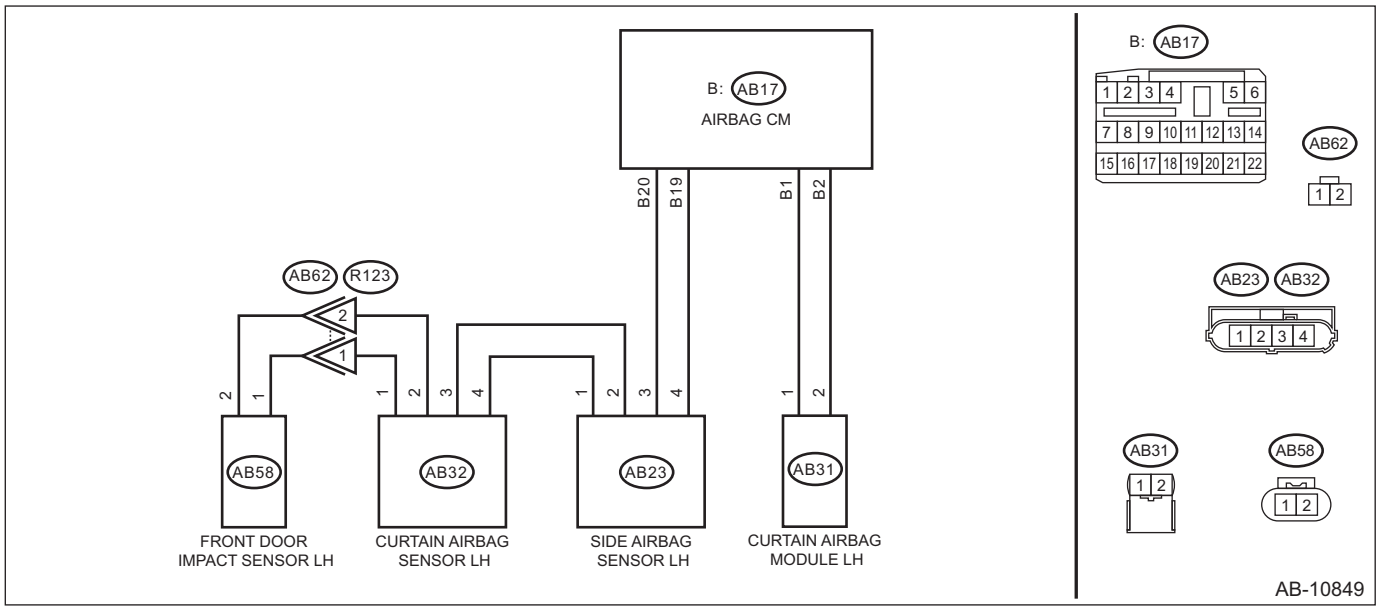
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) from side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 2:*** ***(5AG) No. 16 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EB displayed?	Go to step **5**.	Go to step **7**.

	Step	Check	Yes	No
5	**CHECK SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH by the side airbag sensor RH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EB displayed?	Go to step **6**.	Replace the side airbag sensor LH. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.>
6	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the side airbag sensors RH and LH back to their original position. <Ref. to AB-55, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EB displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **7**.
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CL:DTC B16EC CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Curtain airbag sensor RH initialization error
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connector (AB28) from side airbag sensor RH. 7) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — (3V) No. 1:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EC displayed?	Go to step **6**.	Go to step **8**.

	Step	Check	Yes	No
6	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH by the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EC displayed?	Go to step **7**.	Replace the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
7	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Restore the curtain airbag sensors RH and LH back to their original position. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16EC displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CM:DTC B16ED CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Curtain airbag sensor LH initialization error
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.**	Is DTC B1627 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) from side airbag module LH. 6) Disconnect the connector (AB23) from the side airbag sensor LH. 7) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH) (SHORTED TO GROUND AND SHORTED BETWEEN LINES).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16ED displayed?	Go to step **6**.	Go to step **8**.

	Step	Check	Yes	No
6	**CHECK CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH by the curtain airbag sensor RH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16ED displayed?	Go to step **7**.	Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.>
7	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-57, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B16ED displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CN:DTC B1800 SHORT IN DRIVER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between roll connector lines, shorted between driver's airbag lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal*** ***(2Q) No. 1 — (2Q) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal*** ***(3AG) No. 1 — (3AG) No. 3:***	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-59, Roll Connector.>	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1800 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CO:DTC B1801 OPEN IN DRIVER'S AIRBAG

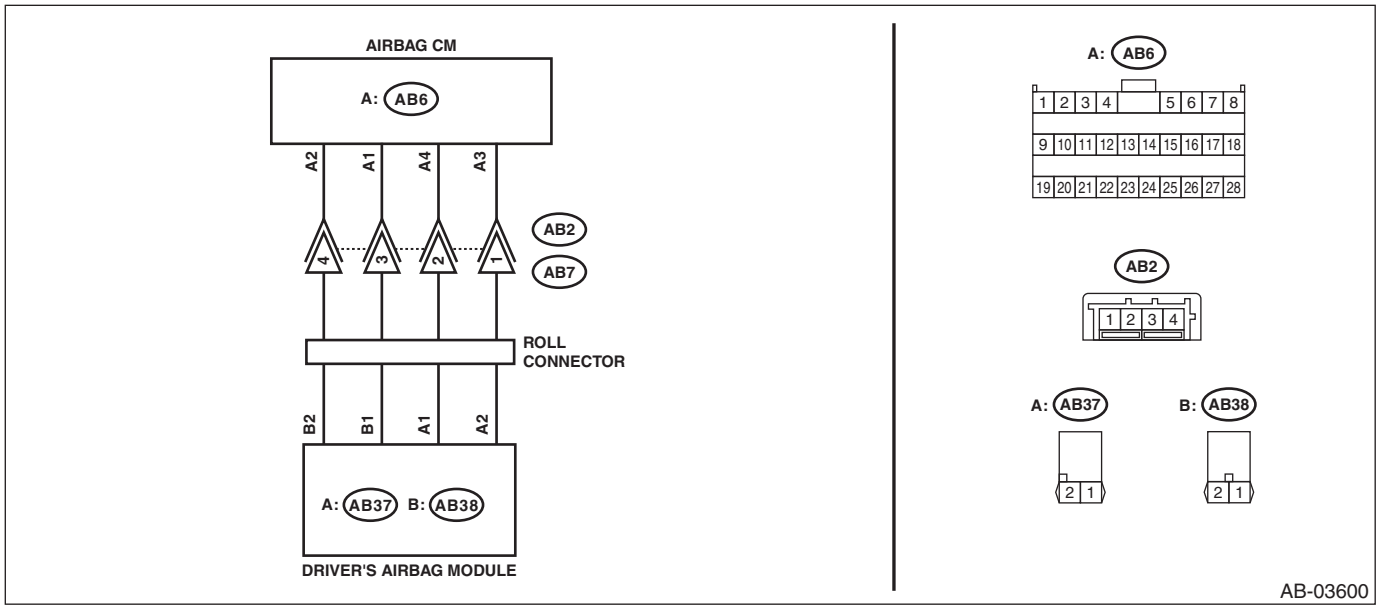
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in roll connector, open circuit in driver's airbag, open circuit in airbag CM internal circuit, connectors connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N. 4) Disconnect the airbag resistor from the connector (2Q) of test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance less than 10 Ω?	Go to step **5**.	Go to step **4**.
4	**CHECK ROLL CONNECTOR (SHORTED BETWEEN LINES).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance less than 10 Ω?	Replace the airbag main harness along with body harness.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1801 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



CP:DTC B1802 SHORT IN DRIVER'S AIRBAG (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in roll connector, shorted to ground in driver's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:

Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.
3	**CHECK ROLL CONNECTOR (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the resistance between connector (2Q) in the test harness Q and chassis ground. ***Connector & terminal*** ***(2Q) No. 1 — Chassis ground:*** ***(2Q) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>

	Step	Check	Yes	No
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED TO GROUND).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 1 — Chassis ground:*** ***(3AG) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1802 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CQ:DTC B1803 SHORT IN DRIVER'S AIRBAG (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in roll connector power supply, shorted in driver's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the voltage between connector (2Q) in the test harness Q and chassis ground. ***Connector & terminal*** ***(2Q) No. 1 (+) — Chassis ground (–):*** ***(2Q) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED TO POWER SUPPLY).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 1 (+) — Chassis ground (–):*** ***(3AG) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1803 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CR:DTC B1804 SHORT IN DRIVER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between driver's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 8) Measure the resistance between connector (2Q) in the test harness Q and all connector terminals in the test harness AG. ***Connector & terminal*** ***(2Q) No. 1 — All terminals in test harness AG (except for (3AG) No. 3):*** ***(2Q) No. 2 — All terminals in test harness AG (except for (3AG) No. 1):***	Is the resistance 1 MΩ or more?	Go to step **4**.	Roll connector <Ref. to AB-59, Roll Connector.> and faulty harness need to be replaced. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 3 (+) — All terminals in test harness AG:*** ***(3AG) No. 1 (+) — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

CS:DTC B1805 SHORT IN PASSENGER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between passenger's airbag lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Disconnect the test harness AD AV from the connectors (AB6, AB17, AB18). 2) Connect the connector other than passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CT:DTC B1806 OPEN IN PASSENGER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in passenger's airbag, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1806 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CU:DTC B1807 SHORT IN PASSENGER'S AIRBAG (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in passenger's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the connector (AB9) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — Chassis ground:*** ***(AB9) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1807 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CV:DTC B1808 SHORT IN PASSENGER'S AIRBAG (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in passenger's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the voltage between the connector (AB9) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 (+) — Chassis ground (–):*** ***(AB9) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1808 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CW:DTC B1809 SHORT IN PASSENGER'S AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between passenger's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the connector (AB9) and terminals of all connectors in test harness AG. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — All terminals in test harness AG (except for (3AG) No. 9):*** ***(AB9) No. 2 — All terminals in test harness AG (except for (3AG) No. 7):***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1809 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CX:DTC B1810 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in main harness, open circuit in roll connector, open circuit in driver's airbag, open circuit in airbag CM internal circuit, connectors connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal (2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 2 — (3AG) No. 4:***	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-59, Roll Connector.>	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1810 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CY:DTC B1811 OPEN IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

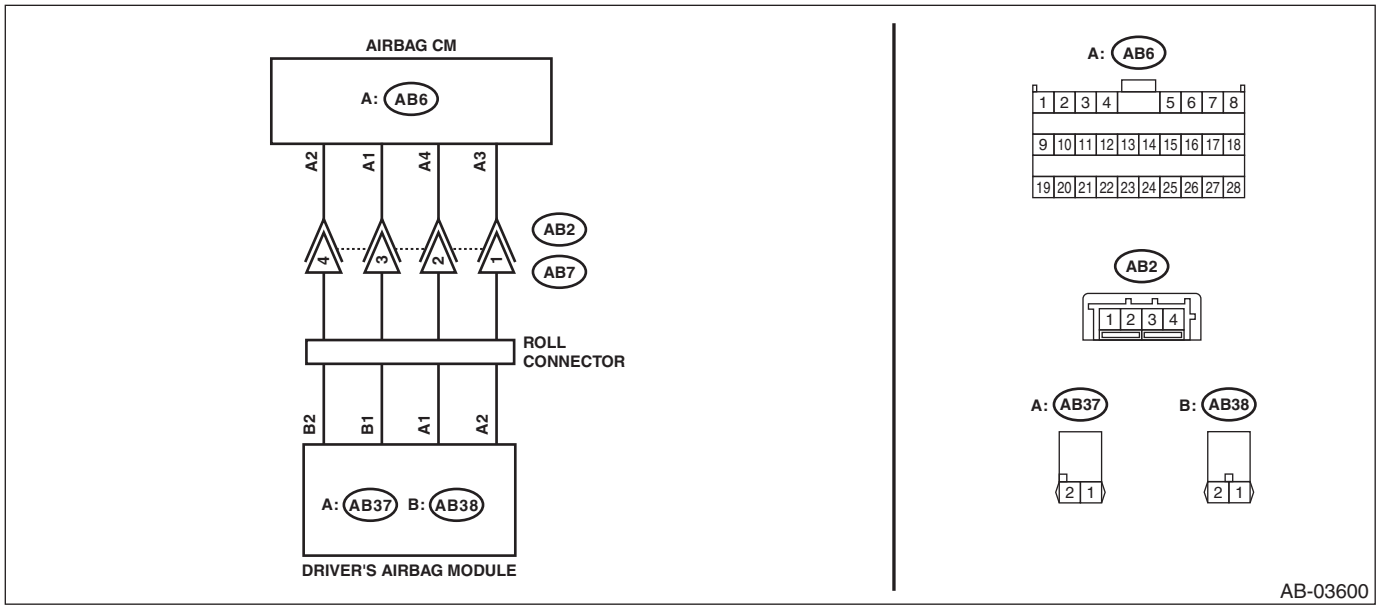
Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in main harness, open circuit in roll connector, open circuit in driver's airbag, open circuit in airbag CM internal circuit, connectors connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N. 4) Disconnect the airbag resistor from the connector (2Q) of test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **5**.	Go to step **4**.
4	**CHECK ROLL CONNECTOR.** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Replace the airbag main harness along with body harness.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1811 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



CZ:DTC B1812 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in roll connector, shorted to ground in driver's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:

Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.
3	**CHECK ROLL CONNECTOR (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>

	Step	Check	Yes	No
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED TO GROUND).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 2 — Chassis ground:*** ***(3AG) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1812 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DA:DTC B1813 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit failure in power supply (shorted in main harness power supply, shorted in roll connector power supply, shorted in driver's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the roll connector. <Ref. to AB-59, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED TO POWER SUPPLY).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 2 (+) — Chassis ground (–):*** ***(3AG) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1813 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DB:DTC B1814 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between driver's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 7) Measure the resistance between connector (2N) in the test harness N and all connector terminals in the test harness AG. ***Connector & terminal*** ***(2N) No. 1 — All terminals in test harness AG (except for (3AG) No. 4):*** ***(2N) No. 2 — All terminals in test harness AG (except for (3AG) No. 2):***	Is the resistance 1 MΩ or more?	Go to step **4**.	Roll connector <Ref. to AB-59, Roll Connector.> and faulty harness need to be replaced. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 2 — All terminals in test harness AG:*** ***(3AG) No. 4 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

DC:DTC B1815 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between passenger's airbag lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Disconnect the test harness AD AV from the connectors (AB6, AB17, AB18). 2) Connect the connector other than passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DD:DTC B1816 OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

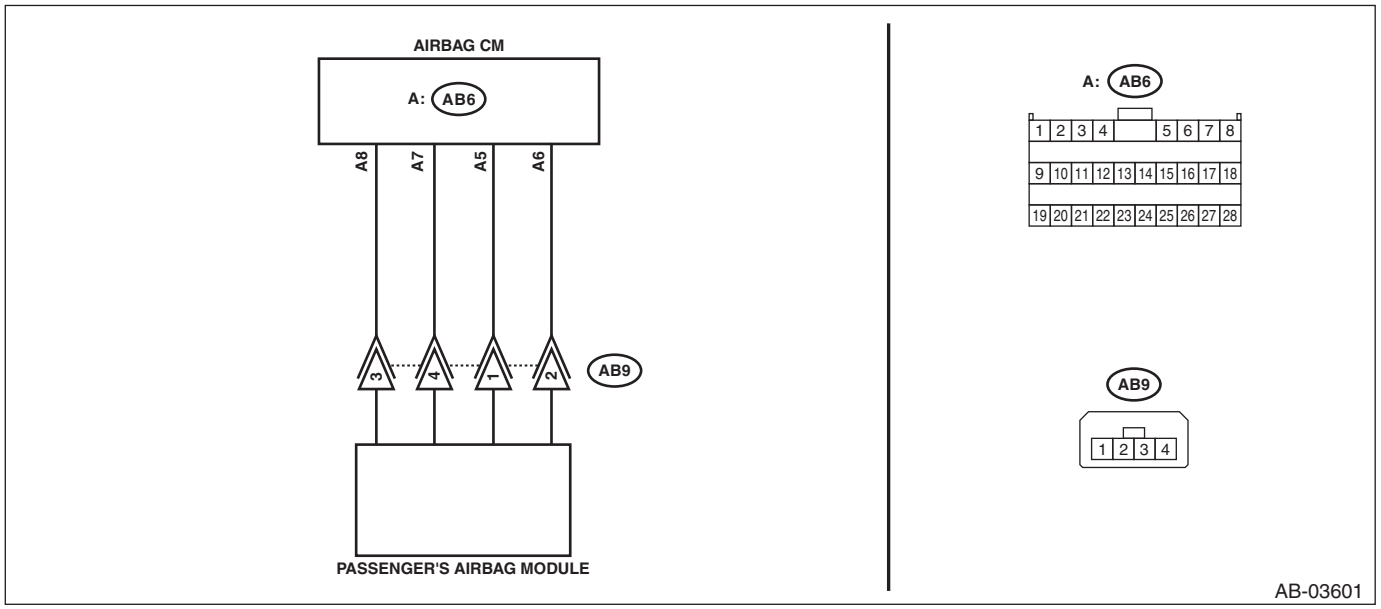
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in passenger's airbag, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1816 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.



Step		Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DE:DTC B1817 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in passenger's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the connector (AB9) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — Chassis ground:*** ***(AB9) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE (SHORTED TO GROUND).** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1817 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DF:DTC B1818 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in passenger's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the voltage between the connector (AB9) and chassis ground. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 (+) — Chassis ground (–):*** ***(AB9) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1818 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DG:DTC B1819 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between passenger's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the connector (AB9) and terminals of all connectors in test harness AG. <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — All terminals in test harness AG (except for (3AG) No. 8):*** ***(AB9) No. 4 — All terminals in test harness AG (except for (3AG) No. 6):***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-21, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Go to step **4**.	Replace the airbag control module. <Ref. to AB-49, REMOVAL, Airbag Control Module.>

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1819 displayed?	Replace the passenger's airbag module. <Ref. to AB-33, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DH:DTC B1820 SHORT IN SIDE AIRBAG RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between +/– lines (shorted between main harness lines, shorted between front seat side airbag RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between terminals of connector (AB24) of side airbag module RH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal (AB24) No. 1 — (AB24) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1820 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1820 displayed?	Replace the side airbag module RH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.

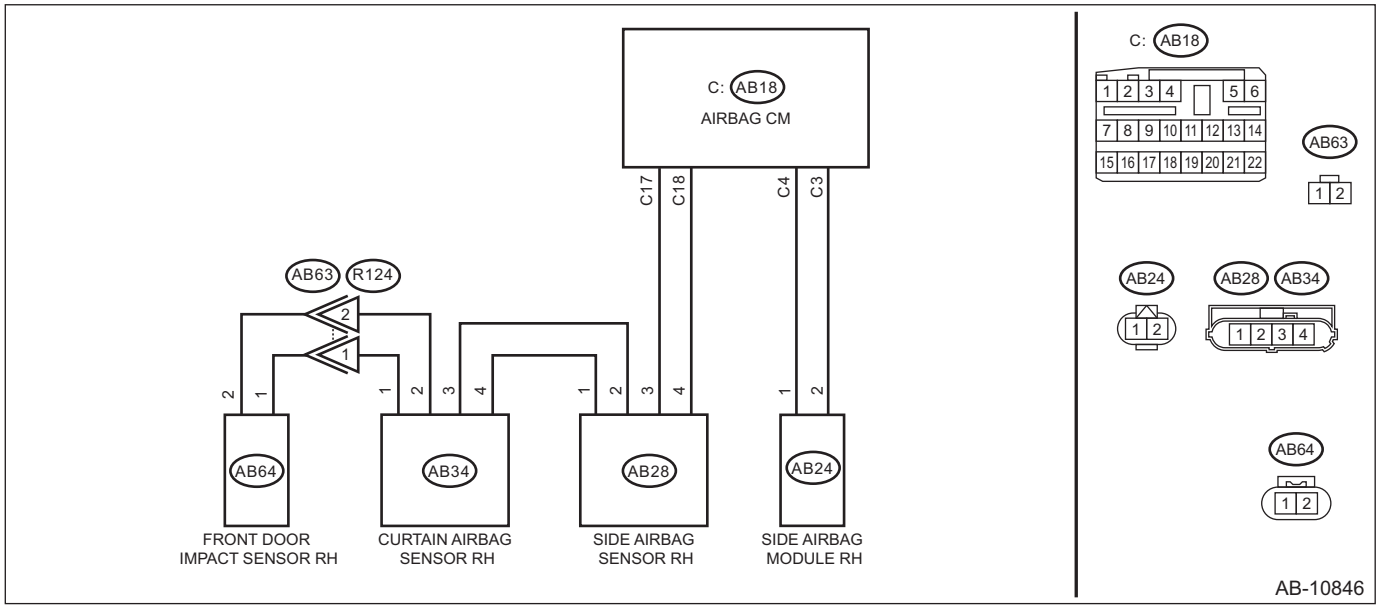
	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DI: DTC B1821 OPEN IN SIDE AIRBAG RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in main harness, open circuit in front seat side airbag RH, open circuit in airbag CM internal circuit, connector connection failure)

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



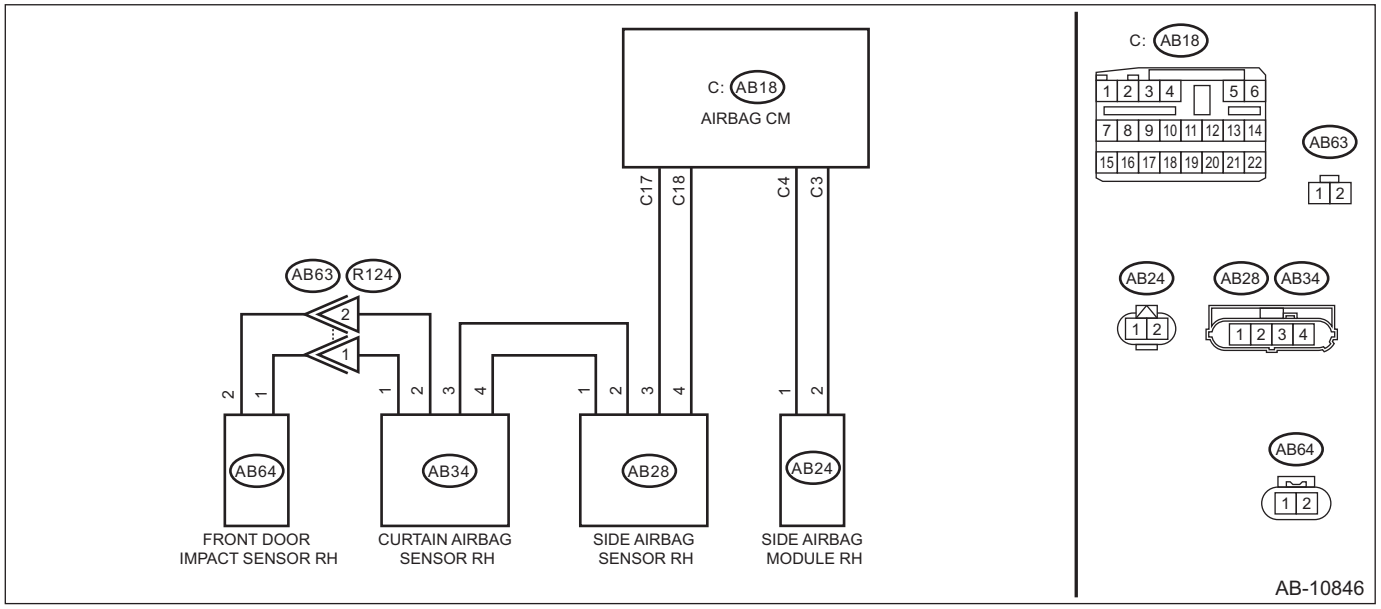
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between terminals of connector (AB24) of side airbag module RH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal*** ***(AB24) No. 1 — (AB24) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1821 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1821 displayed?	Replace the side airbag module RH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DJ:DTC B1822 SHORT IN SIDE AIRBAG RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat side airbag RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



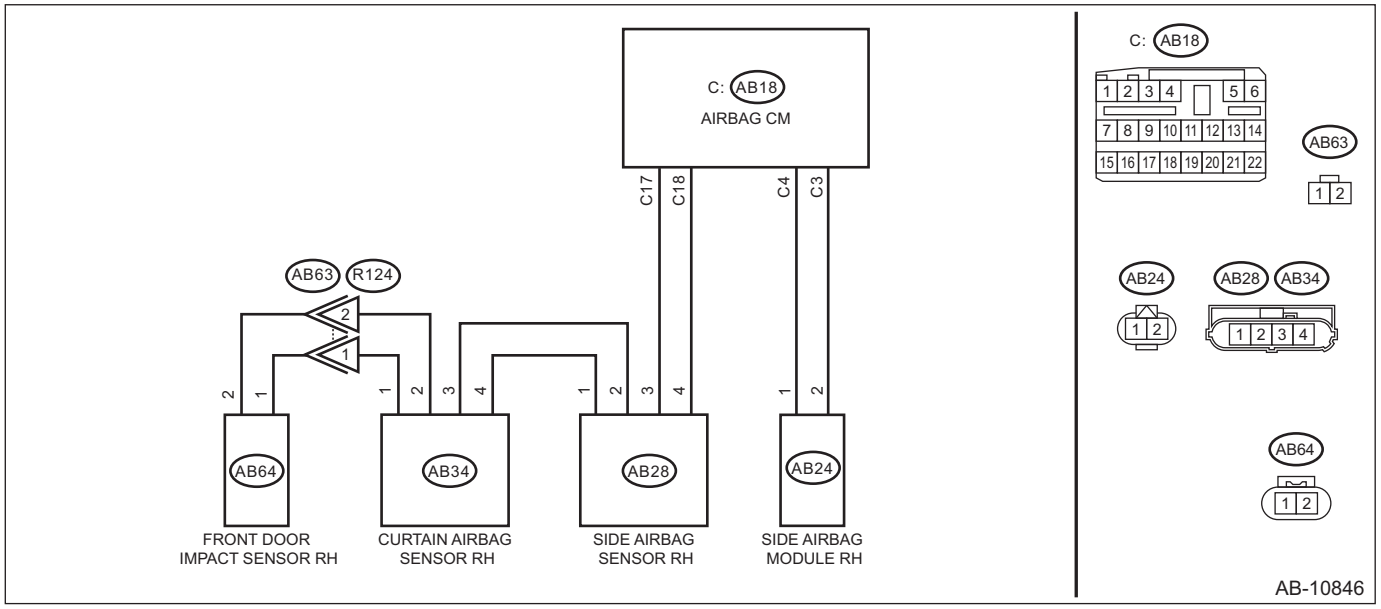
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between connector (AB24) of side airbag module RH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB24) No. 1 — Chassis ground:*** ***(AB24) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1822 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1822 displayed?	Replace the side airbag module RH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DK:DTC B1823 SHORT IN SIDE AIRBAG RH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat side airbag RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the voltage between connector (AB24) of side airbag module RH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB24) No. 1 (+) — Chassis ground (–):*** ***(AB24) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1823 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1823 displayed?	Replace the side airbag module RH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DL:DTC B1824 SHORT IN SIDE AIRBAG RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between front seat side airbag RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 1 — All terminals in test harness AG:*** ***(5AG) No. 3 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1824 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1824 displayed?	Replace the side airbag module RH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DM:DTC B1825 SHORT IN SIDE AIRBAG LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between +/– lines (shorted between main harness lines, shorted between front seat side airbag LH lines, shorted between airbag CM internal lines)

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between terminals of connector (AB19) of side airbag module LH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal (AB19) No. 1 — (AB19) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1825 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1825 displayed?	Replace the side airbag module LH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.

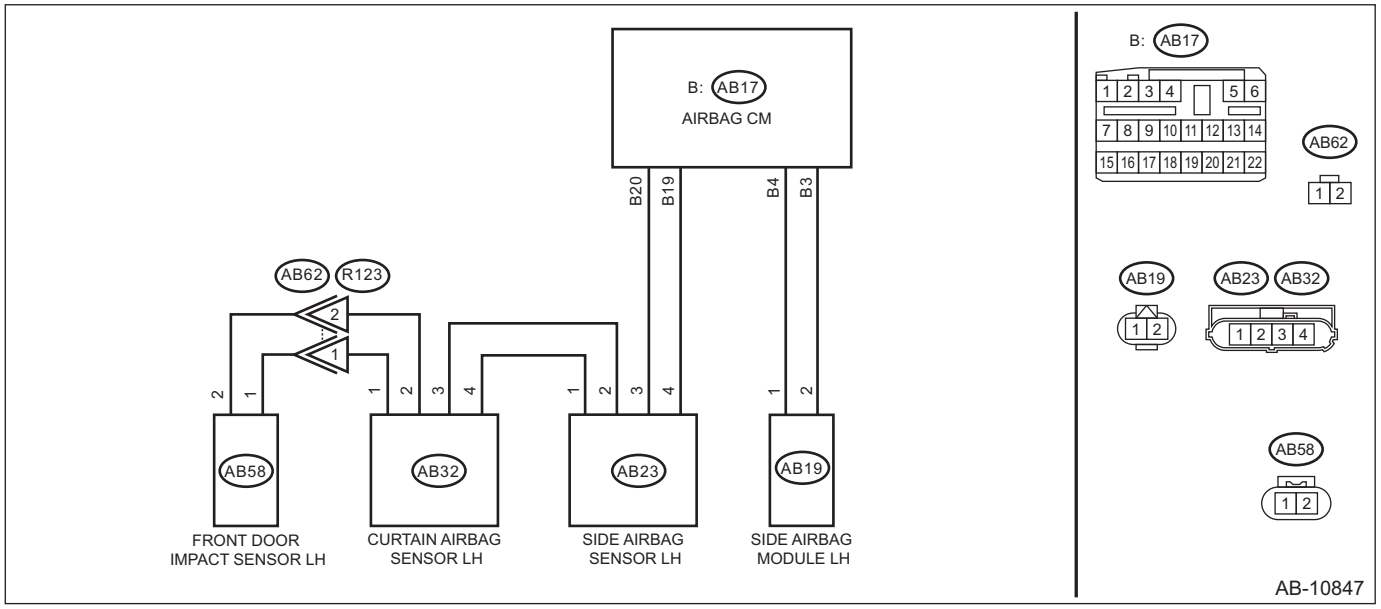
	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DN:DTC B1826 OPEN IN SIDE AIRBAG LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in main harness, open circuit in front seat side airbag LH, open circuit in airbag CM internal circuit, connector connection failure)

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



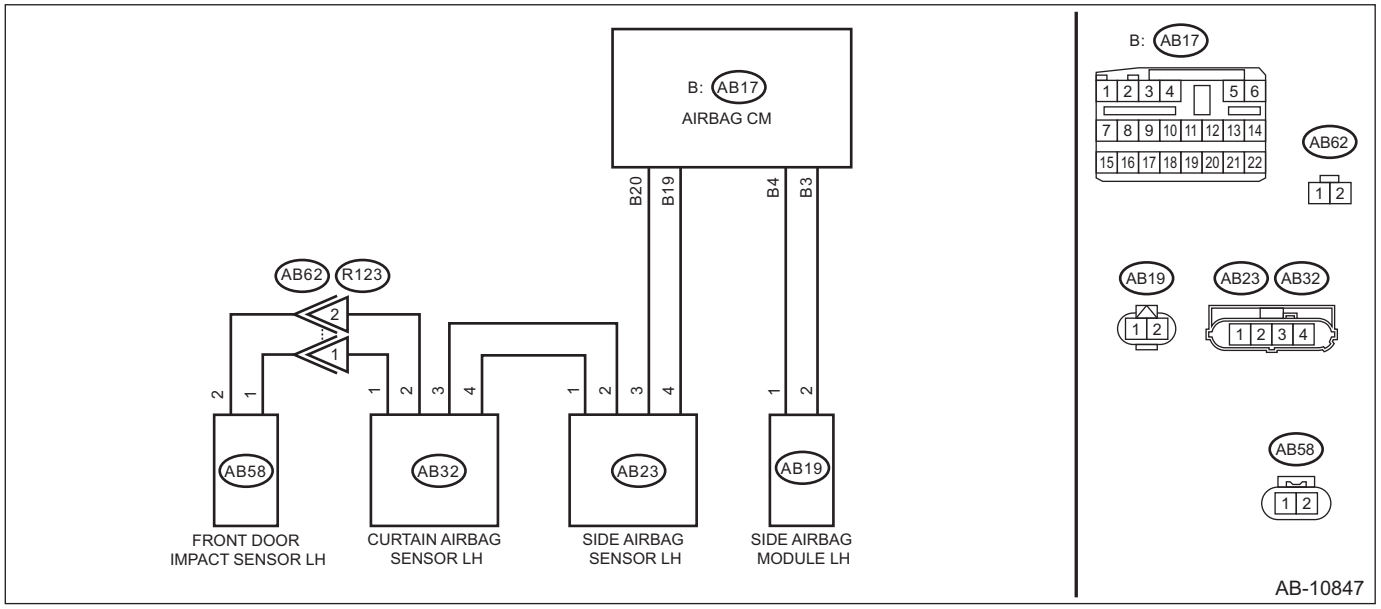
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between terminals of connector (AB19) of side airbag module LH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal*** ***(AB19) No. 1 — (AB19) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1826 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1826 displayed?	Replace the side airbag module LH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DO:DTC B1827 SHORT IN SIDE AIRBAG LH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat side airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



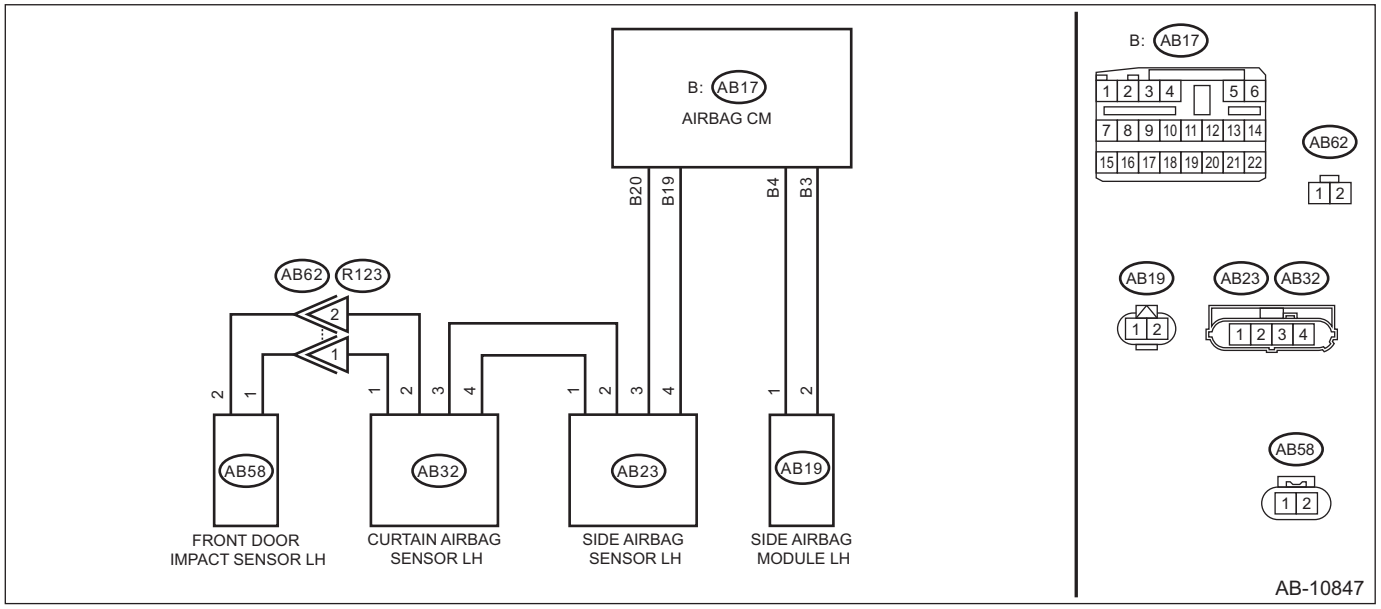
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between connector (AB19) of side airbag module LH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB19) No. 1 — Chassis ground:*** ***(AB19) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1827 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1827 displayed?	Replace the side airbag module LH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DP:DTC B1828 SHORT IN SIDE AIRBAG LH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat side airbag LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the voltage between connector (AB19) of side airbag module LH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB19) No. 1 (+) — Chassis ground (–):*** ***(AB19) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1828 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1828 displayed?	Replace the side airbag module LH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DQ:DTC B1829 SHORT IN SIDE AIRBAG LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between front seat side airbag LH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

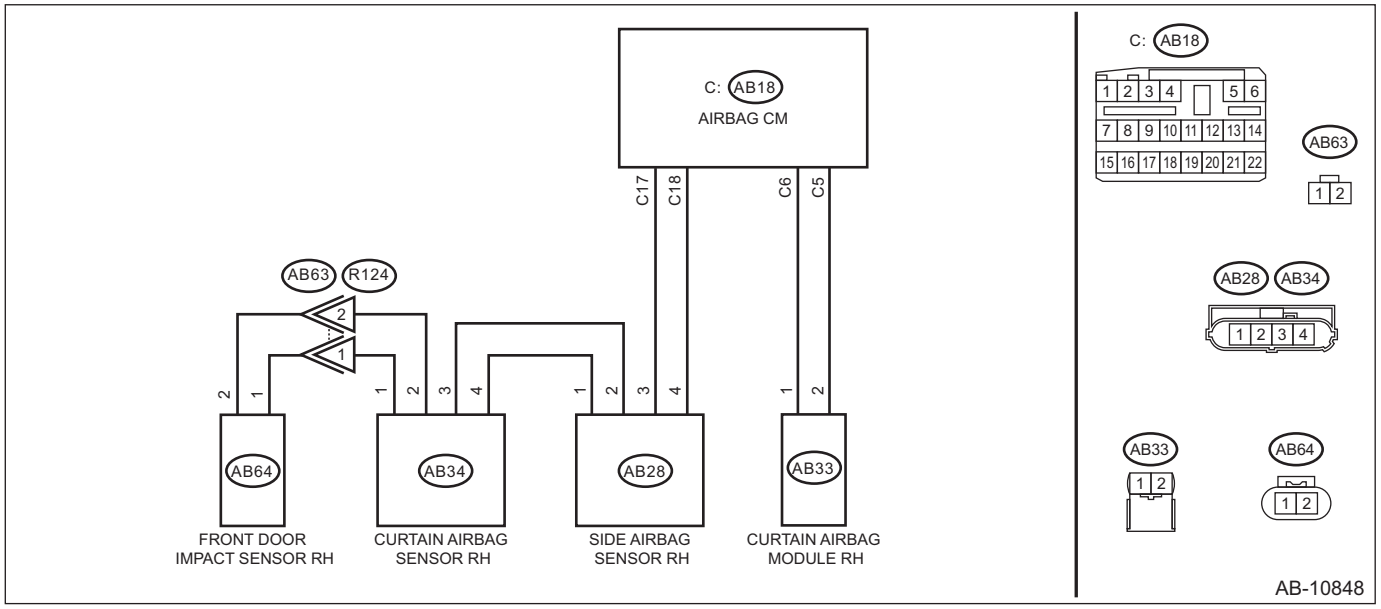
	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 5 — All terminals in test harness AG:*** ***(5AG) No. 7 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1829 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1829 displayed?	Replace the side airbag module LH. <Ref. to AB-39, REMOVAL, Side Airbag Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DR:DTC B1830 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between +/– lines (shorted between main harness lines, shorted between curtain airbag RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



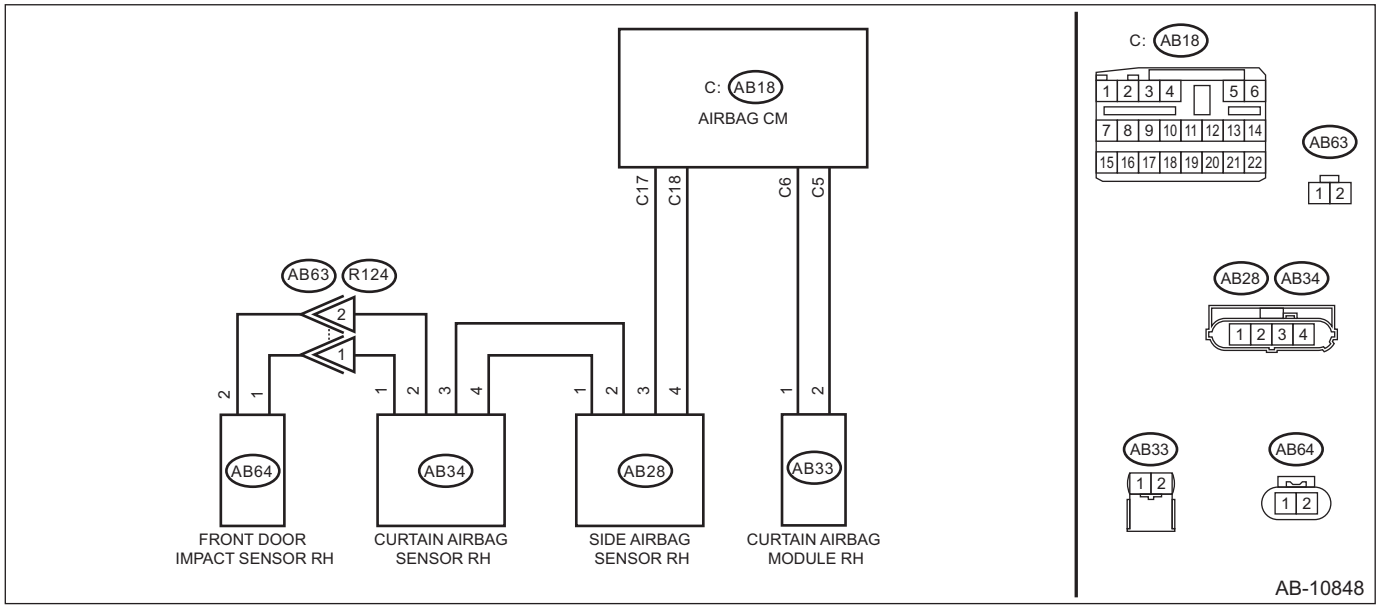
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module RH. 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal (2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1830 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DS:DTC B1831 OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in main harness, open circuit in curtain airbag RH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



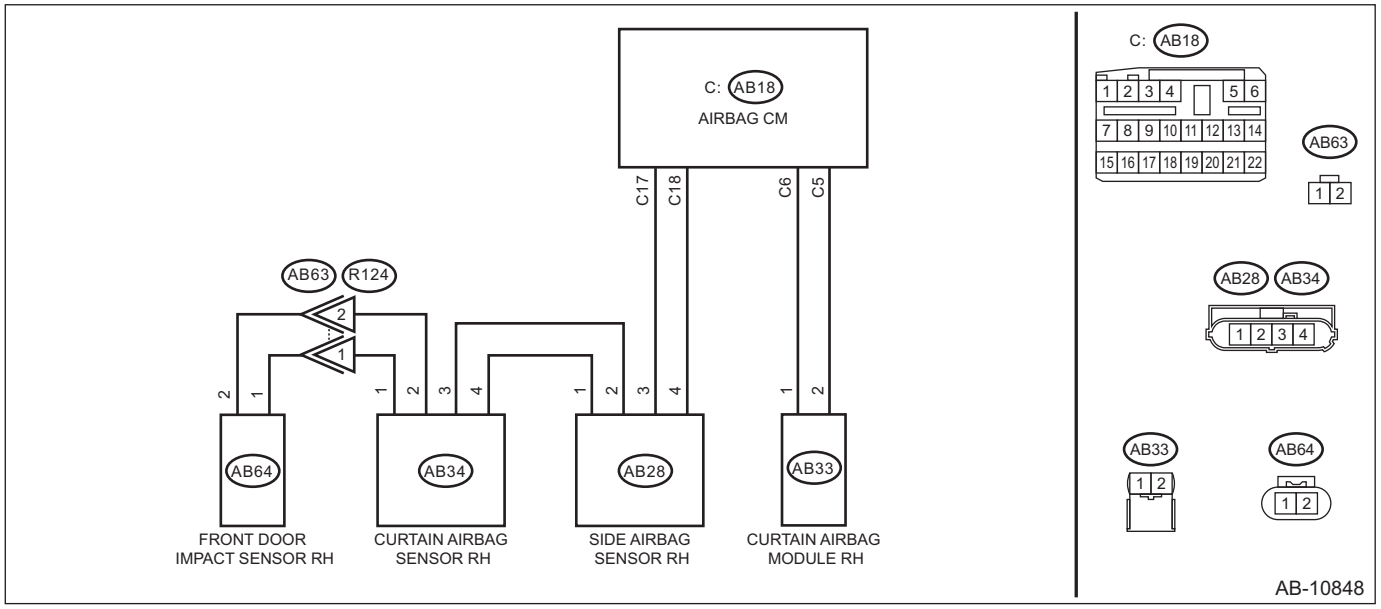
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module RH. 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(6AG) No. 1 — (2N) No. 2:*** ***(6AG) No. 3 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1831 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DT:DTC B1832 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in curtain airbag RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



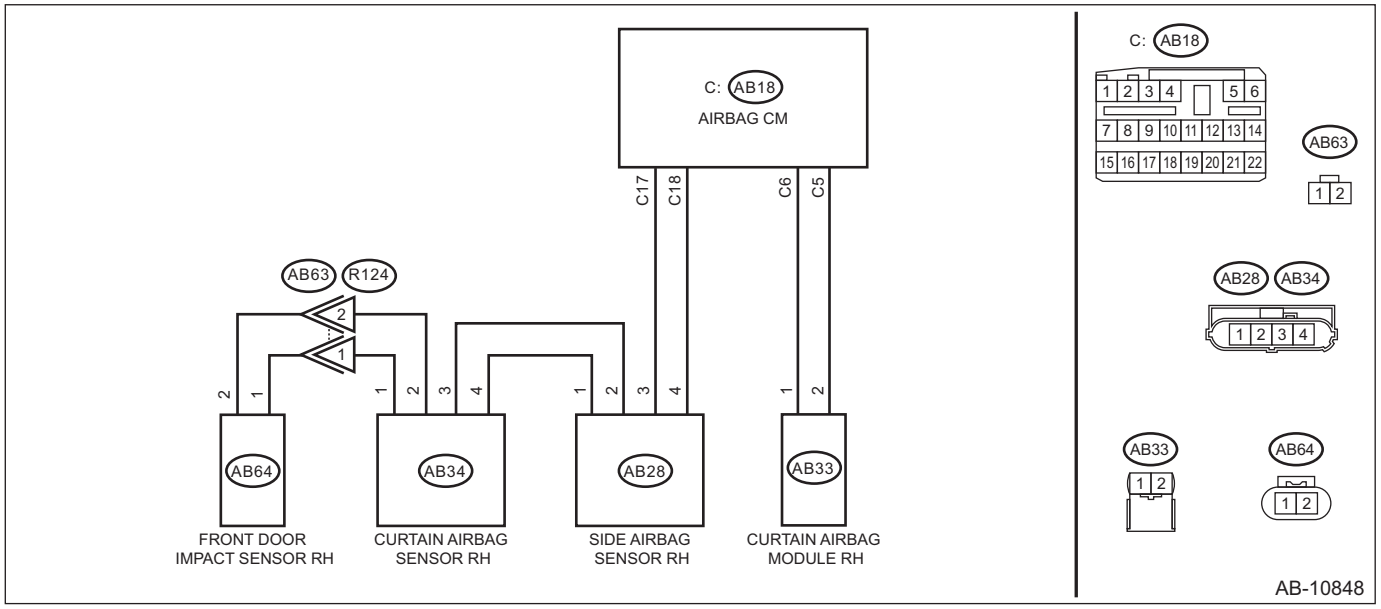
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1832 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DU:DTC B1833 SHORT IN CURTAIN SHIELD AIRBAG RH SQUIB CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit failure in power supply (shorted in main harness power supply, shorted in curtain airbag RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



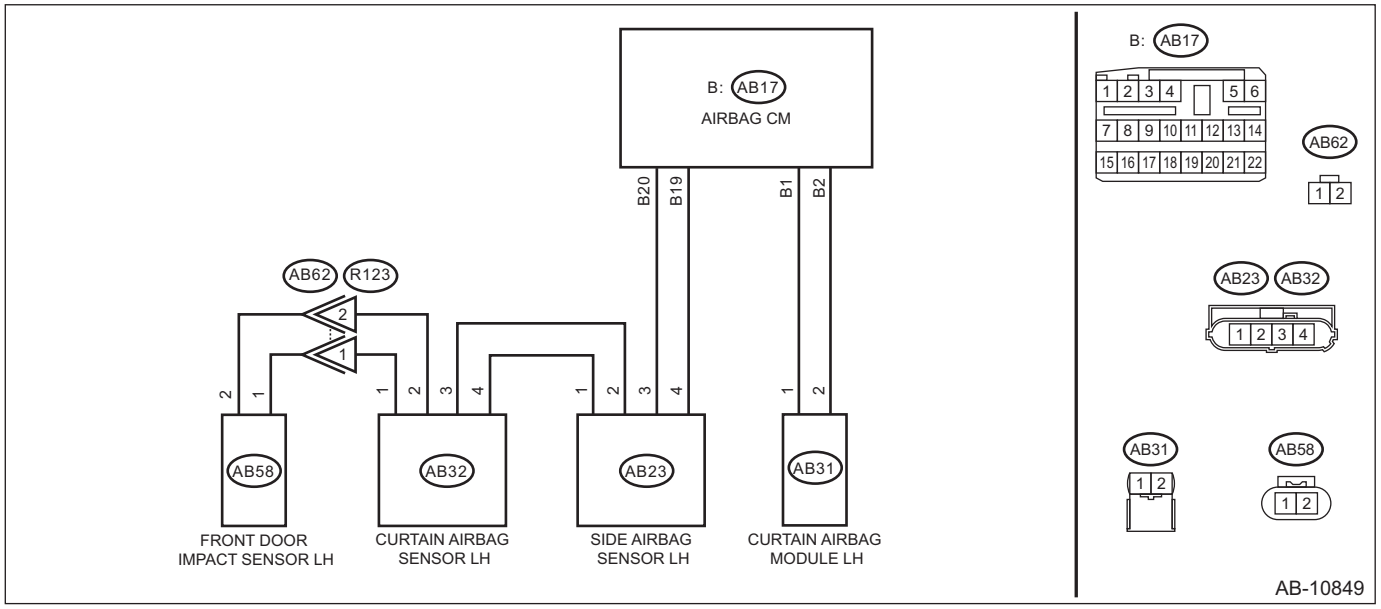
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1833 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DV:DTC B1834 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit between curtain airbag RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



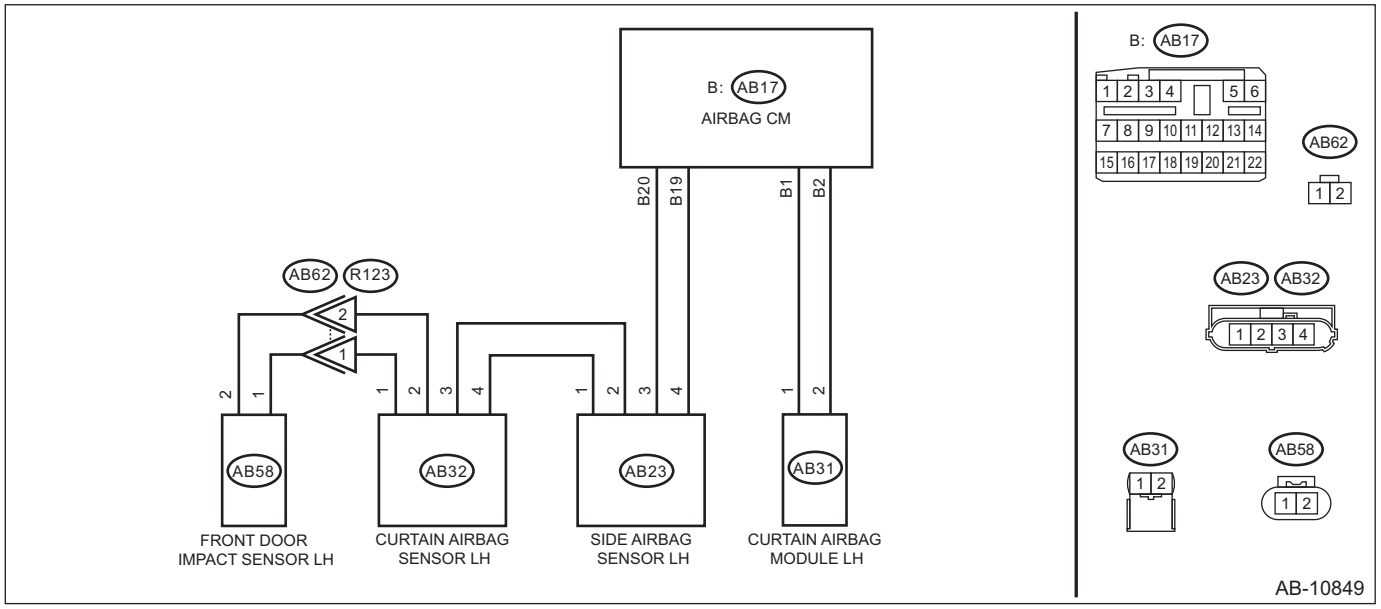
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(6AG) No. 1 — All terminals in test harness AG:*** ***(6AG) No. 3 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1834 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DW:DTC B1835 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Shorted between +/– lines (shorted between main harness lines, shorted between curtain airbag LH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



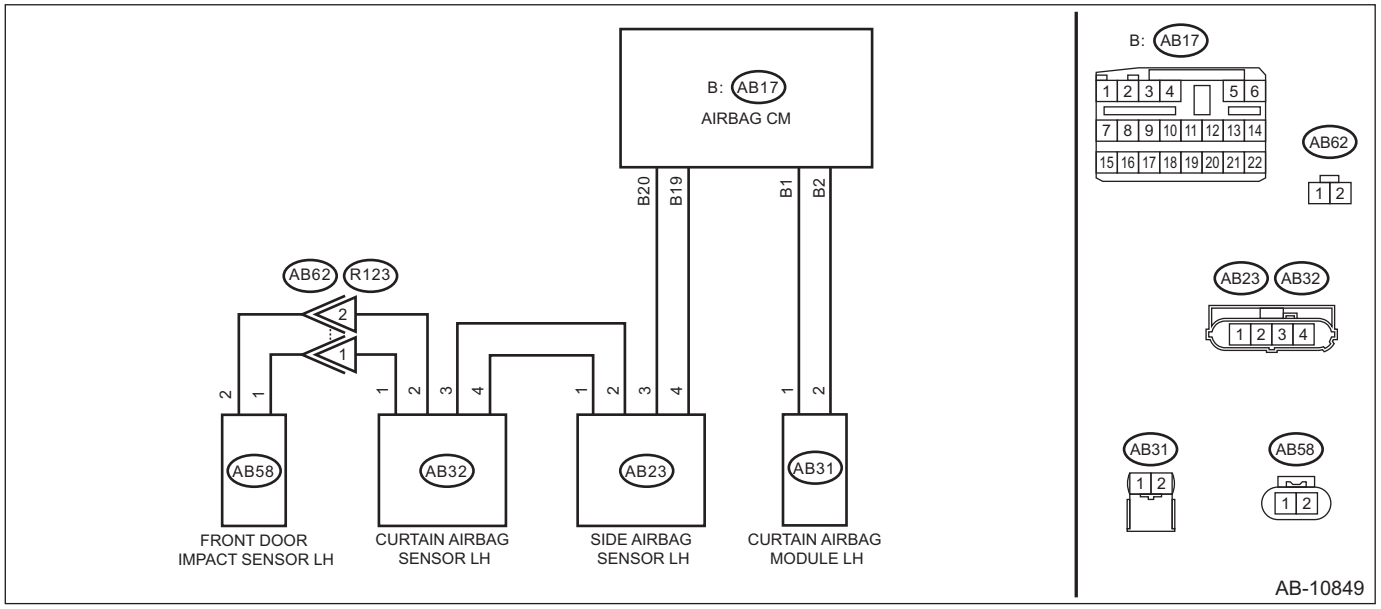
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31) from curtain airbag module LH. 3) Connect the connector (1N) in the test harness N to the connector (AB31). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal (2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1835 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DX:DTC B1836 OPEN IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in main harness, open circuit in curtain airbag LH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



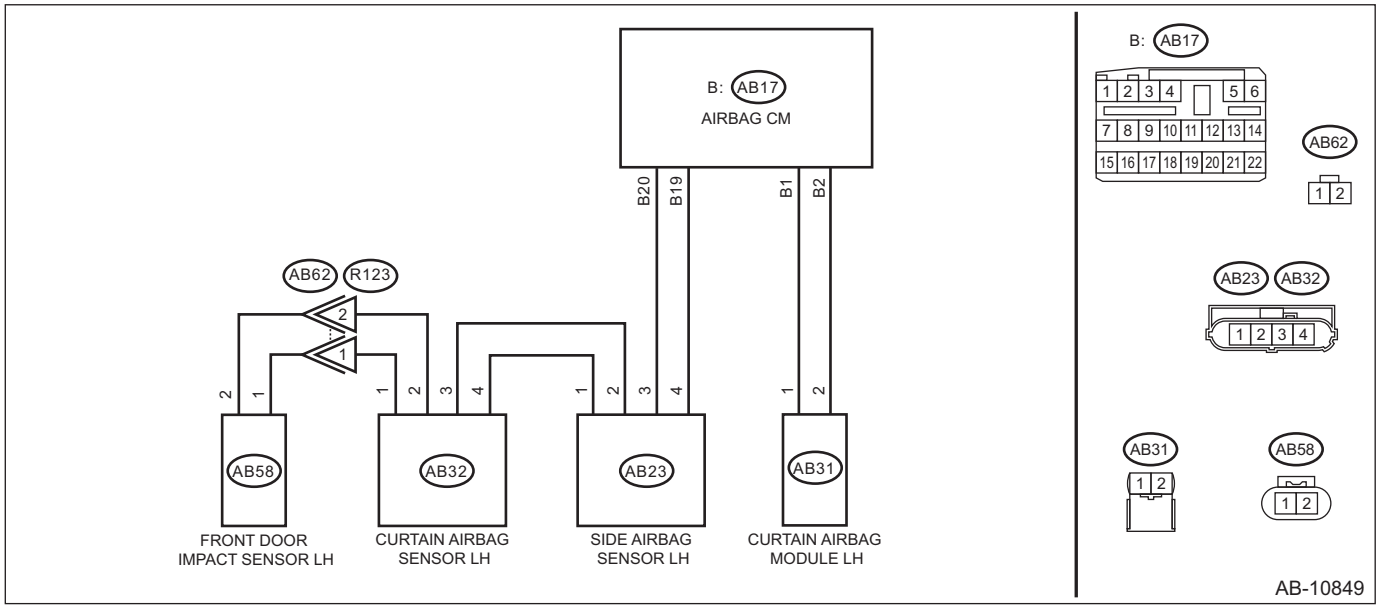
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31) from curtain airbag module LH. 3) Connect the connector (1N) in the test harness N to the connector (AB31). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(6AG) No. 8 — (2N) No. 2:*** ***(6AG) No. 6 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1836 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DY:DTC B1837 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in curtain airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



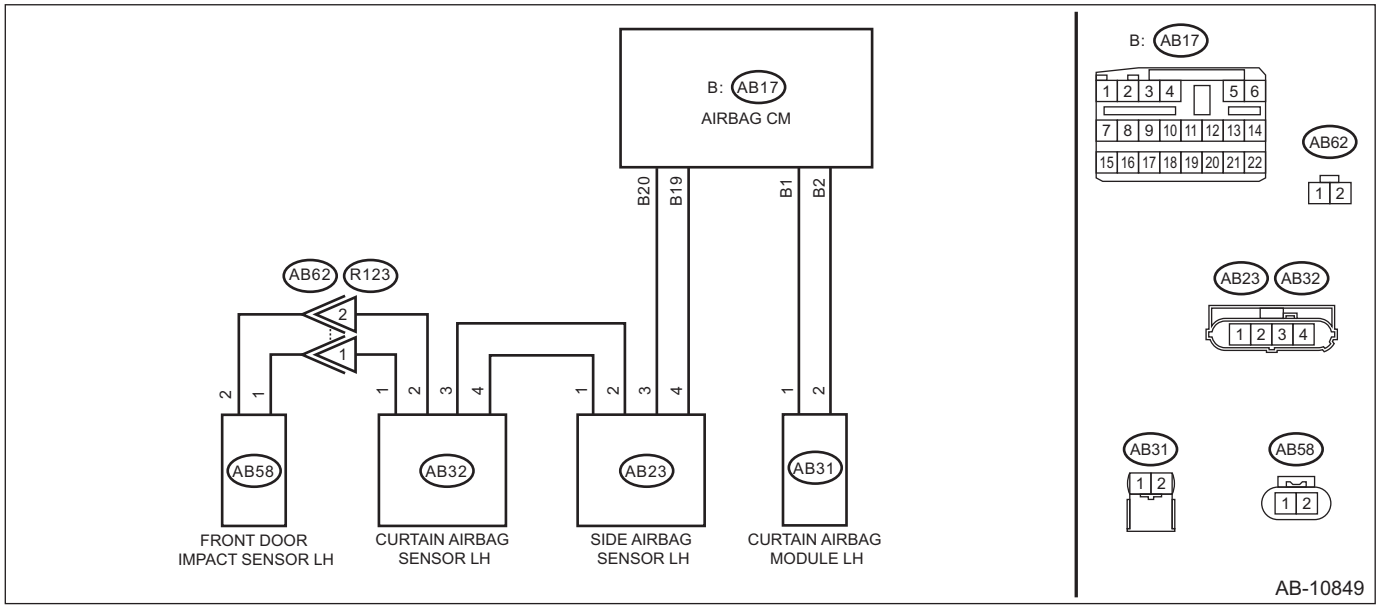
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1837 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DZ:DTC B1838 SHORT IN CURTAIN SHIELD AIRBAG LH SQUIB CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Short circuit failure in power supply (shorted in main harness power supply, shorted in curtain airbag LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



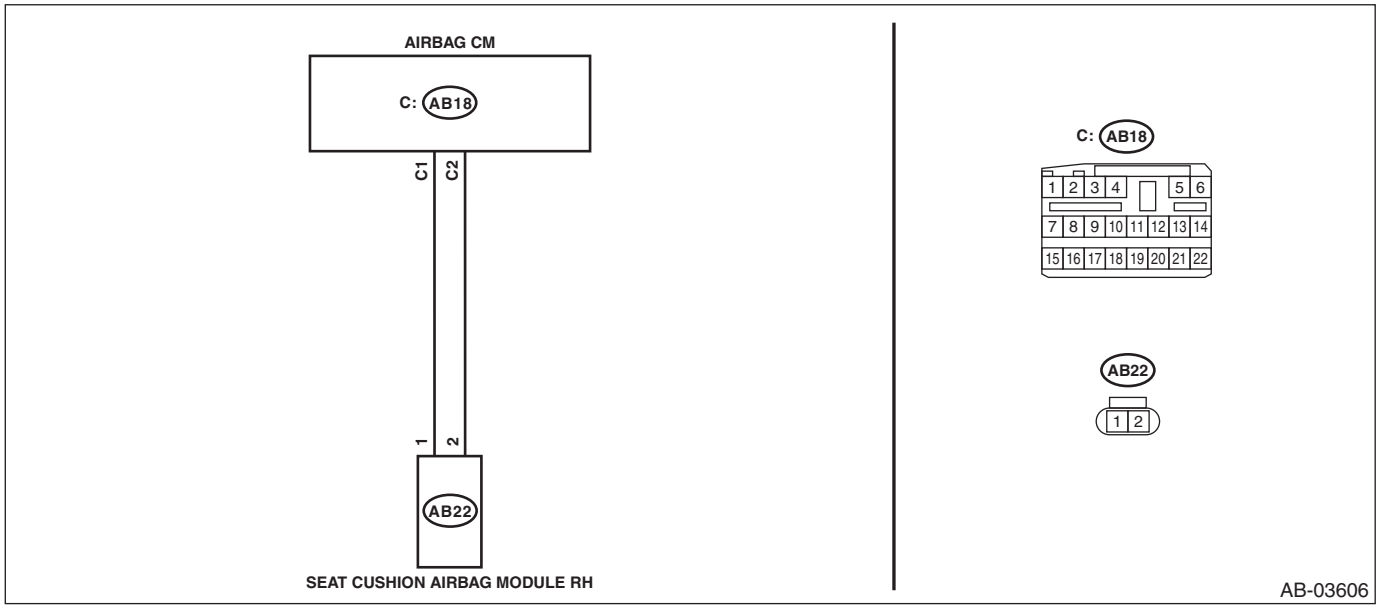
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1838 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EA:DTC B1839 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in curtain airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-42, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(6AG) No. 8 — All terminals in test harness AG:*** ***(6AG) No. 6 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1839 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EB:DTC B1870 SHORT IN FRONT SEAT CUSHION AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat cushion airbag RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) of side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) terminals in test harness D. ***Connector & terminal (3D) No. 3 — (3D) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1870 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EC:DTC B1871 OPEN IN FRONT SEAT CUSHION AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in rear harness, open circuit in front seat cushion airbag RH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) of side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (3D) in the test harness D. ***Connector & terminal*** ***(3AG) No. 11 — (3D) No. 4:*** ***(3AG) No. 13 — (3D) No. 3:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1871 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ED:DTC B1872 SHORT IN FRONT SEAT CUSHION AIRBAG RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat side airbag RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) from side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 — Chassis ground:*** ***(3D) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1872 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EE:DTC B1873 SHORT IN FRONT SEAT CUSHION AIRBAG RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat side airbag RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) from side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 (+) — Chassis ground (–):*** ***(3D) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1873 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EF:DTC B1874 SHORT IN FRONT SEAT CUSHION AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat side airbag RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) from side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 11 — All terminals in test harness AG:*** ***(3AG) No. 13 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1874 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EG:DTC B1875 SHORT IN FRONT SEAT CUSHION AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat cushion airbag LH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) terminals in test harness D. ***Connector & terminal (3D) No. 3 — (3D) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1875 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EH:DTC B1876 OPEN IN FRONT SEAT CUSHION AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in rear harness, open circuit in front seat cushion airbag LH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (3D) in the test harness D. ***Connector & terminal*** ***(3AG) No. 17 — (3D) No. 3:*** ***(3AG) No. 19 — (3D) No. 4:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1876 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EI: DTC B1877 SHORT IN FRONT SEAT CUSHION AIRBAG LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat cushion airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 — Chassis ground:*** ***(3D) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1877 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EJ: DTC B1878 SHORT IN FRONT SEAT CUSHION AIRBAG LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat cushion airbag LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 (+) — Chassis ground (–):*** ***(3D) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1878 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EK:DTC B1879 SHORT IN FRONT SEAT CUSHION AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat cushion airbag LH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-36, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 17 — All terminals in test harness AG:*** ***(3AG) No. 19 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1879 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EL:DTC B1900 SHORT IN FRONT P/T RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat pretensioner RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 10 — (3AG) No. 12:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1900 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EM:DTC B1901 OPEN IN FRONT P/T RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in rear harness, open circuit in front seat pretensioner RH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 10 — (2N) No. 1:*** ***(3AG) No. 12 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1901 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EN:DTC B1902 SHORT IN FRONT P/T RH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in rear harness, shorted to ground in front seat pretensioner RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 10 — Chassis ground:*** ***(3AG) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1902 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EO:DTC B1903 SHORT IN FRONT P/T RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in rear harness power supply, shorted in front seat pretensioner RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 10 (+) — Chassis ground (–):*** ***(3AG) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1903 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EP:DTC B1904 SHORT IN FRONT P/T RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat pretensioner RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 10 — All terminals in test harness AG:*** ***(3AG) No. 12 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1904 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EQ:DTC B1905 SHORT IN FRONT P/T LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat pretensioner LH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 18 — (3AG) No. 20:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1905 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ER:DTC B1906 OPEN IN FRONT P/T LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Open circuit failure (open circuit in rear harness, open circuit in front seat pretensioner LH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 18 — (2N) No. 2:*** ***(3AG) No. 20 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1906 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ES:DTC B1907 SHORT IN FRONT P/T LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in rear harness, shorted to ground in front seat pretensioner LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH) (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 18 — Chassis ground:*** ***(3AG) No. 20 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1907 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ET:DTC B1908 SHORT IN FRONT P/T LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in rear harness power supply, shorted in front seat pretensioner LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH) (SHORTED TO POWER SUPPLY).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 18 (+) — Chassis ground (–):*** ***(3AG) No. 20 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1908 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EU:DTC B1909 SHORT IN FRONT P/T LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat pretensioner LH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-19, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH) (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 18 — All terminals in test harness AG:*** ***(3AG) No. 20 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-34, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-33, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is DTC B1909 displayed?	Replace the airbag control module. <Ref. to AB-49, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK WARNING LIGHT.** Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step **2**.	Perform the diagnosis according to phenomenon of the problem.
2	**READ DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to OD(diag)-19, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step **3**.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-39, Airbag Warning Light Failure.>.
3	**PERFORM DIAGNOSIS.** 1) Determine the possible cause from "List of Diagnostic Trouble Code (DTC)" <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-24, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-23, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Customer's Name		Inspector's Name	
Date Vehicle Brought in	/ /	Registration No.	
Odometer reading	km miles	V.I.N.	
Date Problem Occurred	/ /	Registration Year	/ /
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:		
Temperature	°C (°F)		
Road Condition	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Others:		
Vehicle Operation	❑ Starting ❑ Idling ❑ Driving ❑ Constant speed ❑ Accelerating ❑ Decelerating ❑ Turning ❑ Others:		
Details of Problem			
Airbag Warning Light Operation	❑ Normal (After turning the ignition switch to ON, illuminates for 6 seconds then goes off.) ❑ Remains ON ❑ Remains OFF		
Passengers airbag ON/OFF indicator operation	❑ Normal (After turning the ignition switch to ON, illuminates for 6 seconds then goes off for 2 seconds; Lights ON (adult) or OFF (children/unoccupied).) ❑ Both remain ON ❑ Both remain OFF		
DTC output	❑ OK code ❑ DTC: (Code:)		

3. General Description

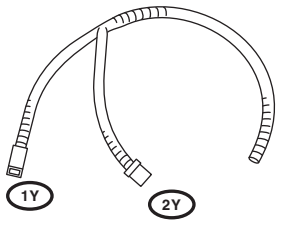
A: CAUTION

1) When replacing the occupant detection system, or removing or disassembling the passenger's seat, always perform «Rezero» of the occupant detection system after installing a seat in the vehicle. <Ref. to OD(diag)-26, Rezero.>
2) The occupant detection system (passenger seat only) control module and the occupant detection sensor are fixed to the seat cushion frame. Never remove the occupant detection control module or the occupant detection sensor from the seat cushion frame.
3) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the occupant detection system may not operate properly.
4) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
5) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.
6) Do not disconnect the battery terminals while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.
7) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 60 seconds or more. Occupant detection control module may be damaged.
8) Every occupant detection system-related part is a precision part. Do not drop them.

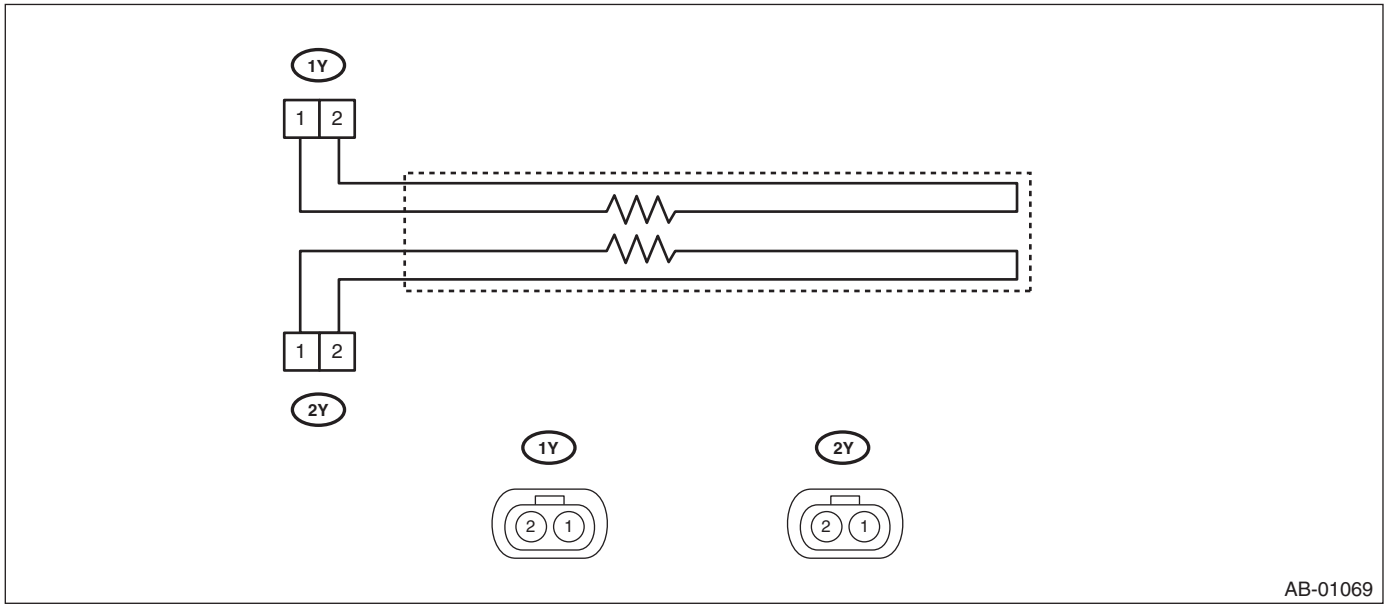
CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
• Refer to CAUTION in Airbag System when repairing the occupant detection system. <Ref. to AB-10, CAUTION, General Description.>

B: INSPECTION

Check the battery. <Ref. to SC(H4DO)-49, Battery.> <Ref. to SC(H6DO)-58, Battery.>



C: PREPARATION TOOL



CAUTION:
To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.

1. SPECIAL TOOL

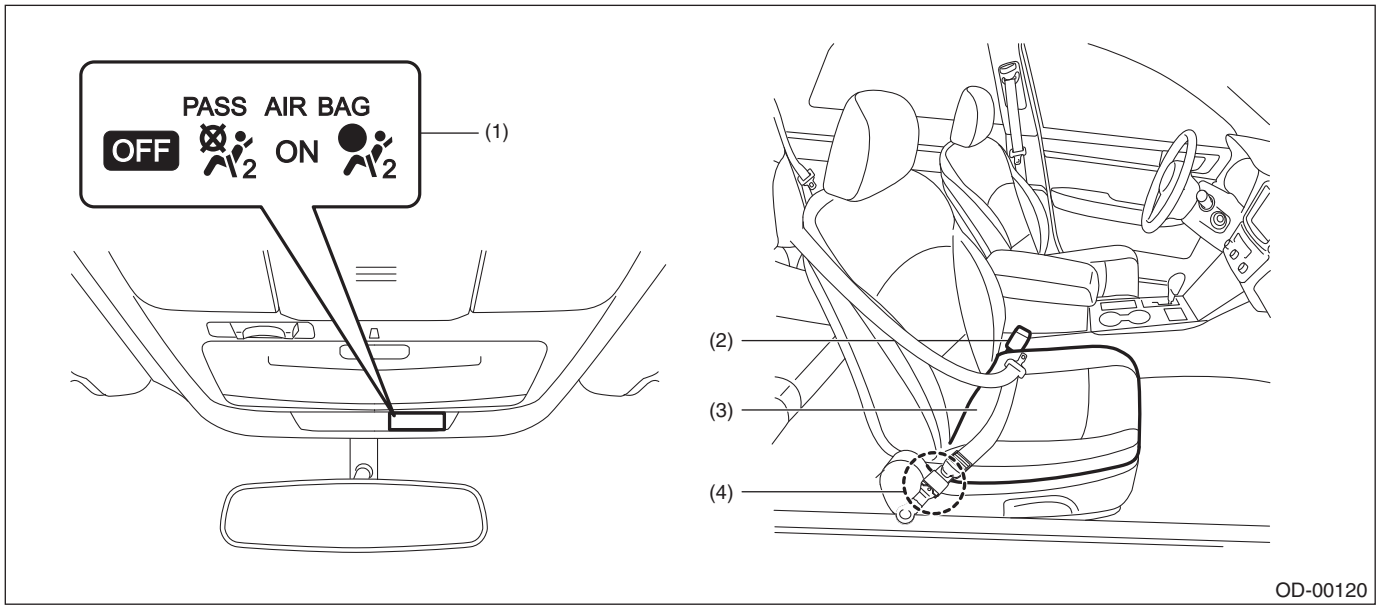
- TEST HARNESS AX

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AL030	98299AL030	TEST HARNESS AX	Used when measuring voltage and resistance of the seat belt tension sensor.



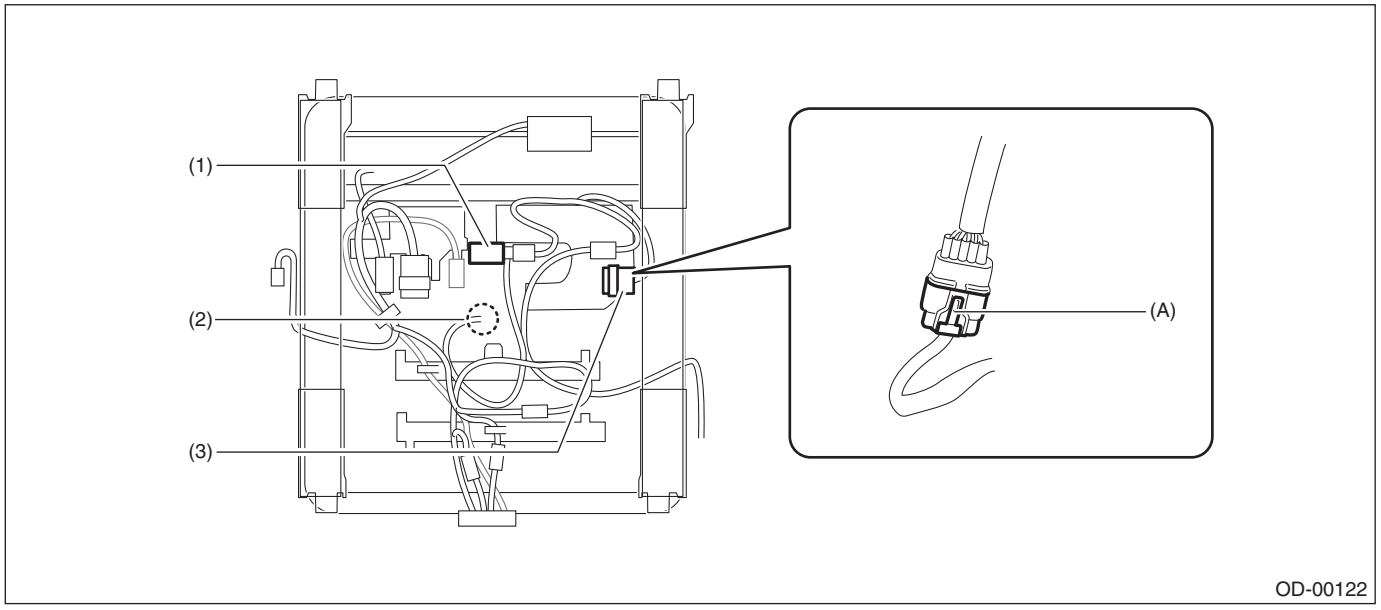
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION

(1) Airbag ON/OFF indicator light
(2) Buckle switch (passenger's seat)
(3) Seat cushion & frame ASSY (occupant detection control module & occupant detection sensor)
(4) Belt tension sensor



5. Airbag Connector

A: PROCEDURE

1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

1) How to disconnect:
Press the lock arm (A) and disconnect the connector.

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(A) Lock arm

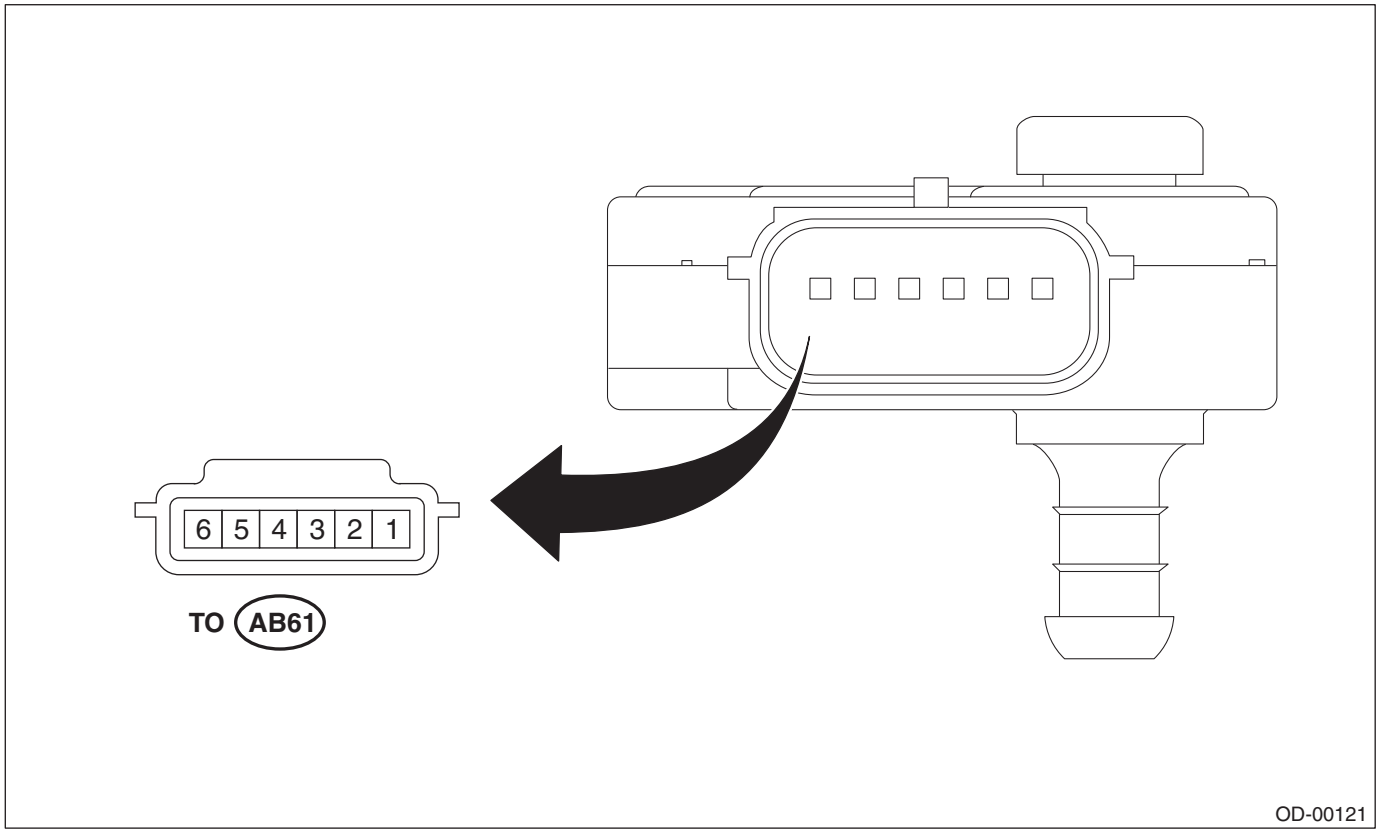
(1) Occupant detection control module
(2) Occupant detection sensor
(3) Occupant detection connector & harness

2) How to connect:
Holding the connector, push it in securely until a clicking sound is heard.

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

2. AIRBAG CONTROL MODULE

Refer to the airbag system section. <Ref. to AB-18, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>



3. BUCKLE SWITCH RH

Refer to the airbag system section. <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

6. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

CAUTION:
Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.

Terminal No.	Description
1	Belt tension sensor output
2	Belt tension sensor power supply
3	GND
4	Seat belt buckle switch output
5	LIN communication line (airbag CM)
6	Ignition power supply

B: WIRING DIAGRAM

Refer to “Occupant Detection System” in the wiring diagram. <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

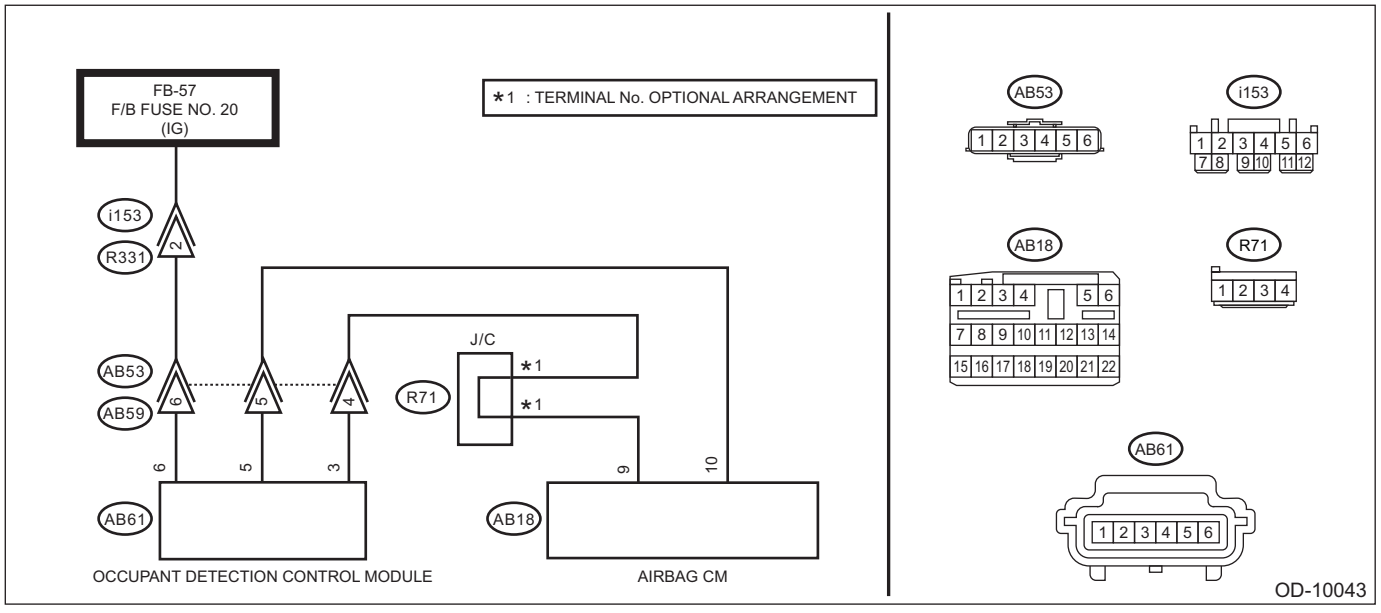
7. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING THE AIRBAG SYSTEM IS IMPOSSIBLE



DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between the airbag control module and the Subaru Select Monitor.

NOTE:
Refer to “Communication for Initializing Impossible” in AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-29, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

2. COMMUNICATION FOR INITIALIZING ONLY THE OCCUPANT DETECTION SYSTEM IS IMPOSSIBLE

NOTE:
The occupant detection system communicates with the Subaru Select Monitor via the airbag control module.
Detecting condition:
Defective harness connector between airbag control module and occupant detection control module
Trouble symptom:
Communication is impossible between the airbag control module and the occupant detection control module.

CAUTION:
Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness. Or replace the occupant detection harness (seat harness).)	Go to step **2**.
2	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 4) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 5) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 6) Measure the resistance between connector (6AG) in the test harness AG and connector (AB53). **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(6AG) No. 10 — (AB53) No. 5:*** ***(6AG) No. 12 — (AB53) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS.** Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 10 — Chassis ground:*** ***(6AG) No. 12 — Chassis ground:*** ***(6AG) No. 10 — (6AG) No. 12:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
4	**CHECK OCCUPANT DETECTION HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order. <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness together with body harness.

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

Read out DTCs stored in the airbag system and the occupant detection system.

1. AIRBAG SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM. <Ref. to AB(diag)-41, List of Diagnostic Trouble Code (DTC).>

2. OCCUPANT DETECTION SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Occupant Detection» and then select «Enter».
5) On «Occupant Detection» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

After repairing the occupant detection system, clear the DTCs stored in the airbag control module and the occupant detection control module.

1. AIRBAG SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

2. OCCUPANT DETECTION SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Occupant Detection» and then select «Enter».
5) On «Occupant Detection» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

11.Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

NOTE:
For detailed operation procedures, refer to “Application help”.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Occupant Detection».
5) On «Occupant Detection» display, select «Data Monitor».

B: LIST

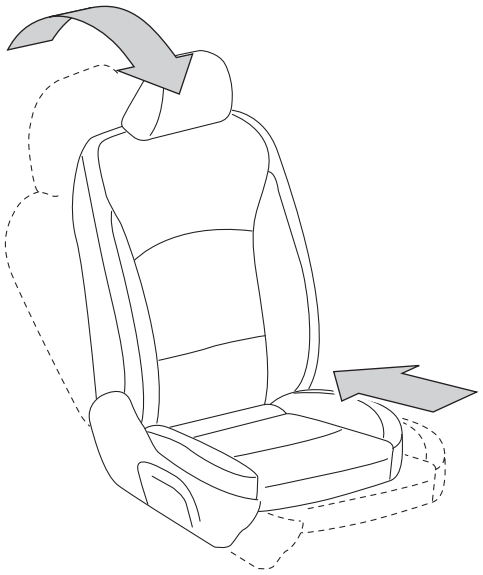
Item	Display	Note
Trip Count	—	<Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>
Count	—	
Time Count [msec]	—	
Belt Buckle Switch LH	Unbelted/Belted/Other	“Belted” when the left side seat belt is fastened “Unbelted” when the left side seat belt is not fastened “Other” in other cases
Belt Buckle Switch RH	Unbelted/Belted/Other	“Belted” when the right side seat belt is fastened “Unbelted” when the right side seat belt is not fastened “Other” in other cases
Passenger Occupant Status	Occupied/Adult/Child/Empty or CRS	“Occupied” when the occupant is present “Adult” “Child” “Empty or CRS” when the seat is unoccupied or when child restraint seat is installed **CAUTION:** **When checking the operating status, be careful of the followings.** **• When the seat is unoccupied: Do not place anything on the seat.** **• Child restraint seat: Install the seat according to its instruction manual.** **• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lb) must be seated during the check.**
Passenger Airbag Status	ON/OFF	“ON” when the passenger occupant status is “Occupied” “OFF” when the status is “Empty or CRS”
Data record No.	No Definition/1	Displays “1” when any EDR data is recorded.
Data record No.	No Definition/1	Displays “1” when any EDR data is recorded.

12.Rezero

A: OPERATION

NOTE:
When replacing the occupant detection system, or removing or disassembling the passenger's seat, always perform «Rezero» after installing a seat in the vehicle.

CAUTION:
When the trouble occurs in the system during «Rezero», «DTC B1762 OCCUPANT DETECTION MODULE CALIBRATION NOT INITIALIZED» of the occupant detection system is detected, and the airbag warning light illuminates. In this case, turn the ignition switch to OFF, and then perform «Rezero» again. Or, fix the fault, and then perform «Rezero».



1) Park empty vehicle on a level surface.
2) Check that all harness and connectors are connected.
3) Check the following items to adjust the condition of the vehicle.
- Adjust the seat backrest to be fully upright. (For models with power seats, press the power seat button until the backrest comes to a stop.)
- Adjust the seat slide position all the way back. (For models with power seats, press the power seat button until the seat slide does not move any further.)
- Do not place anything on the top of the seat cushion.
- Sit on the seat cushion to smooth the seat surface.
- Check that the passenger's seat belt is not inserted into the buckle, not tense or not stuck.
- Check that ambient temperature is in a range from 0 to 40°C (32 to 104°F).

4) Turn the ignition switch to OFF, then turn it to ON again.

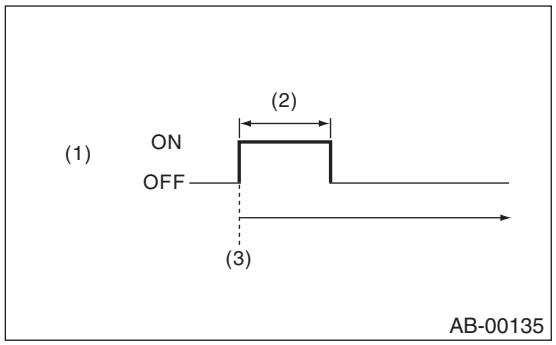
NOTE:
- This operation is performed to readjust the standard of occupant detection sensor.
- Do not touch the seat until the Rezero is completed. If you have touched the seat even if only once, perform operations from the step 3) again.

5) On «Start» display, select «Diagnosis».
6) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
7) On «Main Menu» display, select «Each System».
8) On «Select System» display, select «Occupant Detection».
9) On «Occupant Detection» display, select «Work Support».
10) On «Work Support» display, select «Rezero».
11) When «See service manual. And check vehicle condition for successfully completing» is displayed, check the condition of the vehicle.

12) The message, «Rezero Adjust the passenger seat to the condition shown in service manual.», is displayed on the screen. Slide the passenger's seat all the way to the back, check that the backrest is adjusted to the most upright position, and select «YES».

OD-00130

13) When «Rezero Unbelt the passenger seatbelt.» is displayed, make sure the passenger's seat belt is disconnected from the buckle, and select «YES».
14) When «Rezero Confirm seat temperature between 0 and 40°C (32 and 104°F)» is displayed, check that ambient temperature of the seat is in a range from 0 to 40°C (32 to 104°F), and select «YES».
15) When «Rezero Empty the passenger seat. Turn Ignition OFF, and within» is displayed, turn the ignition switch to OFF and then ON again while the passenger's seat is empty, make sure that airbag OFF indicator illuminates and airbag ON indicator does not illuminate, and then select «YES».

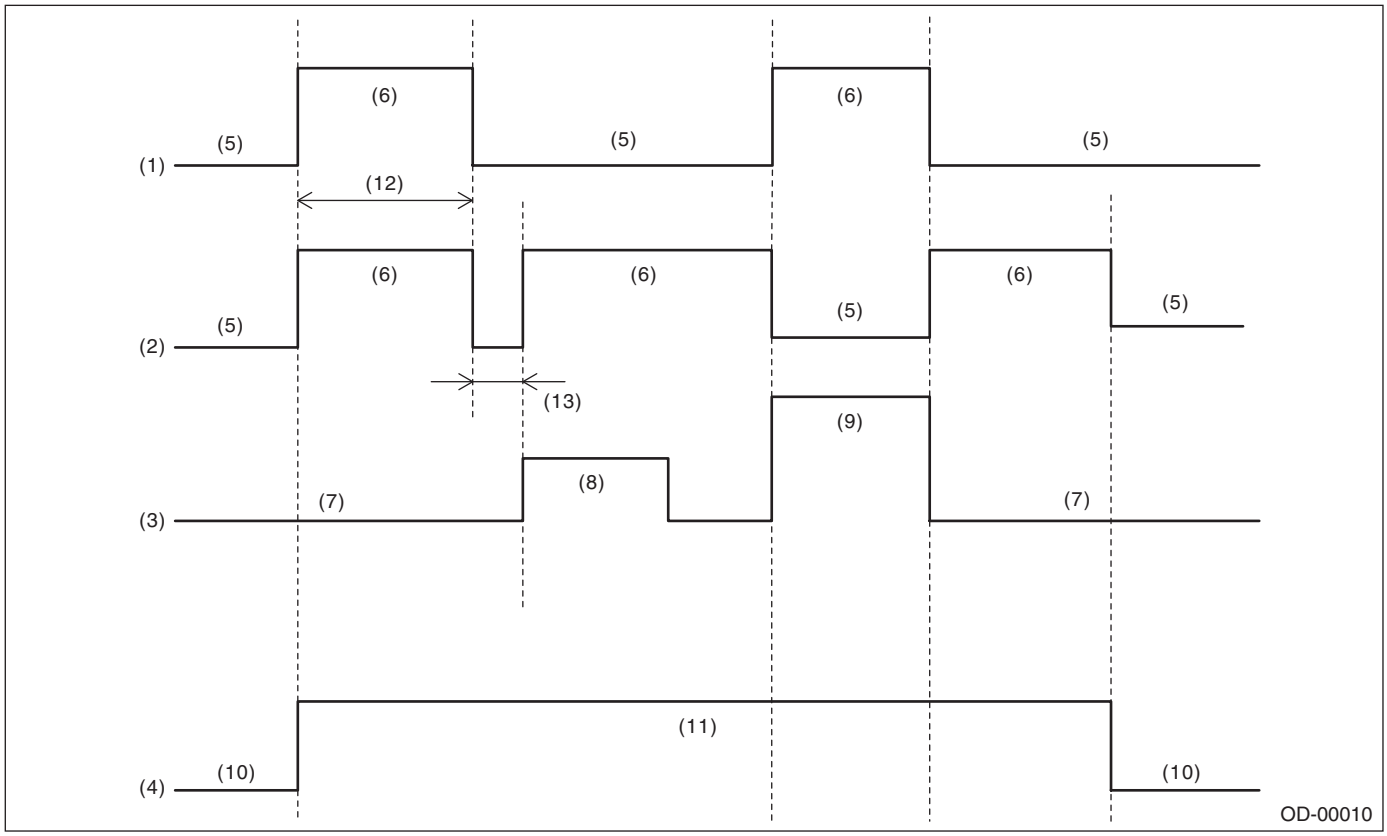


NOTE:
• After selecting «YES», «In process... Please wait for a while without touching vehicle.» is displayed. Do not touch or rock the vehicle while the message is displayed.
• During the Rezero process, if «Rezero is unsuccessful See service manual. Press "OK" to END» is displayed, go to step 17.
16) When the Rezero is ended normally, «Rezero is successfully completed Press "OK" to END» is displayed. And then turn the ignition switch to OFF to finish the diagnosis.
17) During the Rezero process, if «Rezero is unsuccessful See service manual. Press "OK" to END» is displayed, turn the ignition switch to OFF and ON again, and then read the DTC of the airbag system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>
When DTC is input, fix the fault and then perform the Rezero process. When DTC is not input, check the seat and vehicle status and then perform the Rezero process again. <Ref. to OD(diag)-26, Rezero.>

NOTE:
When the Rezero is unsuccessful, there could be occupant detection system failure or improper seat and vehicle status. When the airbag warning light illuminates, read the DTC of the airbag system, and perform the diagnosis while referring to List of Diagnostic Trouble Code (DTC). <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>

13.Airbag Warning Light Illumination Pattern

A: INSPECTION



Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

14.Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

A: INSPECTION

(1)	Passenger's airbag ON indicator light	(6)	Light ON	(10)	OFF
(2)	Passenger's airbag OFF indicator light	(7)	Empty	(11)	ON
(3)	Occupant seating	(8)	Child	(12)	Approx. 6 seconds
(4)	Ignition switch	(9)	Adult	(13)	Approx. 2 seconds
(5)	Light OFF				

15.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
B1762	OCCUPANT DETECTION MODULE CALIBRATION NOT INITIALIZED	<Ref. to OD(diag)-32, DTC B1762 OCCUPANT DETECTION MODULE CALIBRATION NOT INITIALIZED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1763	OCCUPANT DETECTION MODULE CALIBRATION CHECKSUM	<Ref. to OD(diag)-32, DTC B1763 OCCUPANT DETECTION MODULE CALIBRATION CHECKSUM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1764	OCCUPANT DETECTION MODULE CALIBRATION UNCOMPLETED	<Ref. to OD(diag)-33, DTC B1764 OCCUPANT DETECTION MODULE CALIBRATION UNCOMPLETED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B177E	BUCKLE SWITCH RANGE	<Ref. to OD(diag)-41, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1795	OCCUPANT DETECTION MODULE INTERNAL CIRCUIT	<Ref. to OD(diag)-42, DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

16.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1762 OCCUPANT DETECTION MODULE CALIBRATION NOT INITIALIZED

DTC detecting condition:

- «Rezero» of the occupant detection system is not completed normally.
- Occupant detection control module is faulty.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1762 displayed for the occupant detection system?	Perform the diagnosis for the displayed DTCs. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**PERFORM RE-ZEROING.** Perform «Rezero». <Ref. to OD(diag)-26, Rezero.>	Did «Rezero» complete properly?	Go to step **3**.	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>
3	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to OD(diag)-24, Clear Memory Mode.> 2) Turn the ignition switch to OFF, and wait for 60 seconds or more. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC B1762 displayed?	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	When DTC other than B1762 is displayed for the occupant detection system, perform the diagnosis for the displayed DTC. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).> When DTC is not displayed, end the diagnosis.

B: DTC B1763 OCCUPANT DETECTION MODULE CALIBRATION CHECKSUM

DTC detecting condition:

- Malfunction is detected on vehicle delivery or at memory writing for «Rezero».
- Occupant detection control module is faulty.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1762 and B1763 displayed for the occupant detection system?	Perform the diagnosis for the displayed DTCs. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**PERFORM RE-ZEROING.** Perform «Rezero». <Ref. to OD(diag)-26, Rezero.>	Did «Rezero» complete properly?	Go to step **3**.	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>
3	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to OD(diag)-24, Clear Memory Mode.> 2) Turn the ignition switch to OFF, and wait for 60 seconds or more. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC B1763 displayed?	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	When DTC other than B1763 is displayed for the occupant detection system, perform the diagnosis for the displayed DTC. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).> When DTC is not displayed, end the diagnosis.

C: DTC B1764 OCCUPANT DETECTION MODULE CALIBRATION UNCOMPLETED

DTC DETECTING CONDITION:

- Memory writing is incomplete on the front seat delivery.
- Calibration of occupant detection control module is incomplete.
- Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty. Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

D: DTC B1765 OCCUPANT DETECTION MODULE ROM CHECKSUM

DTC DETECTING CONDITION:

Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty.

Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

E: DTC B1766 OCCUPANT DETECTION MODULE STACK OVERFLOW

DTC DETECTING CONDITION:

Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty.

Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

F: DTC B1767 OCCUPANT DETECTION MODULE EEPROM INITIALIZING

DTC DETECTING CONDITION:

Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty.

Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

G: DTC B1768 OCCUPANT DETECTION MODULE EEPROM STATE

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

H: DTC B1769 OCCUPANT DETECTION SENSOR TEMPERATURE CIRCUIT OPEN

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

I: DTC B176A OCCUPANT DETECTION SENSOR PRESSURE CIRCUIT OPEN

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

J: DTC B176B OCCUPANT DETECTION SENSOR PRESSURE TOO LOW

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

K: DTC B176C OCCUPANT DETECTION SENSOR PRESSURE TOO HIGH

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

L: DTC B176D OCCUPANT DETECTION SENSOR INPUT VOLTAGE LOW AT IG-SW ON

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

M: DTC B176E OCCUPANT DETECTION SENSOR GEL RUN OUT

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

N: DTC B176F OCCUPANT DETECTION SENSOR INPUT VOLTAGE LOW

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

O: DTC B1770 OCCUPANT DETECTION SENSOR TEMPERATURE TOO HIGH

DTC DETECTING CONDITION:

Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty.

Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

P: DTC B1772 OCCUPANT DETECTION SENSOR TEMPERATURE TOO LOW

DTC DETECTING CONDITION:

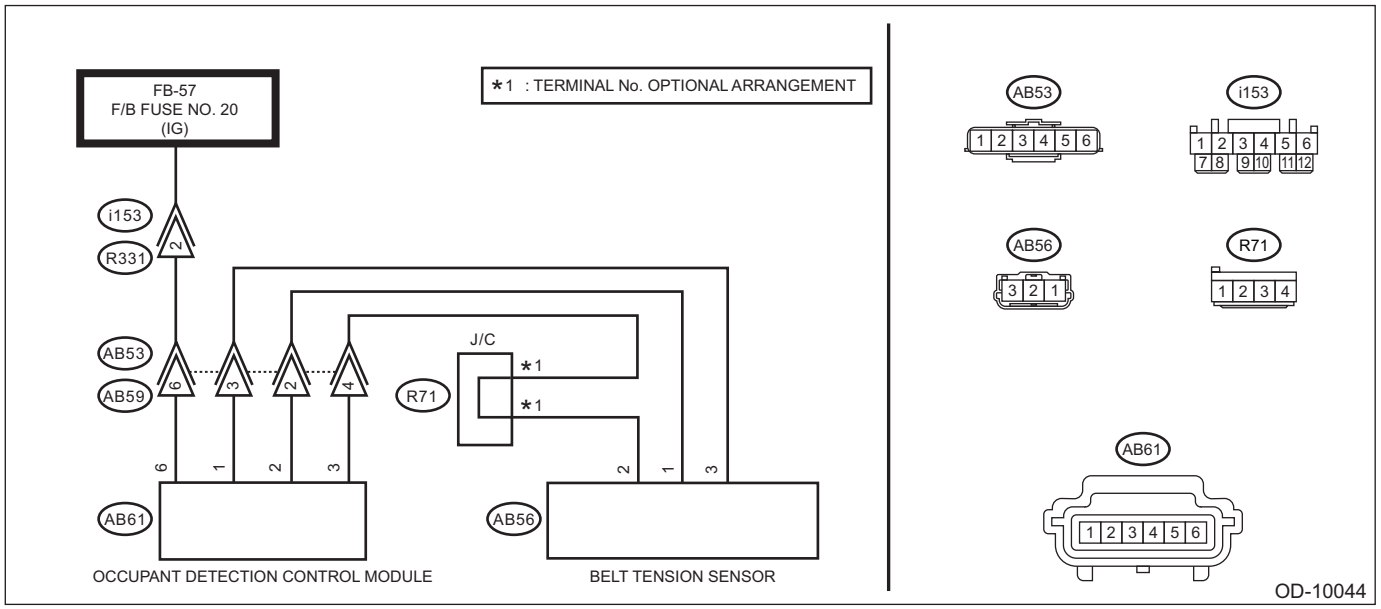
Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty.

Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

Q: DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN

DTC detecting condition:



- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and belt tension sensor.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness, or replace the occupant detection harness (seat harness).)	Go to step **2**.
2	**CHECK BELT TENSION SENSOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the belt tension sensor connector (AB56) from the airbag harness. 3) Connect the connector (1AX) in the test harness AX to the connector (AB56). 4) Connect the connector (2AX) in the test harness AX and the test harness AC. 5) Connect the ground cable to battery.	Does the airbag warning light illuminate for approximately 6 seconds and go off?	Replace the seat belt outer. <Ref. to SB-19, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Go to step **3**.
3	**CHECK AIRBAG HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness AC from the connector (2AX) in test harness AX. 3) Connect the connector (2AX) in test harness AX and the connector (1AD) in test harness AD. 4) Disconnect the airbag harness connector (AB53), and connect the connector (1AW) of test harness AW. 5) Measure the resistance between connector (2AD) in test harness AD and connector (AB53). **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 2 — (2AD) No. 3:*** ***(AB53) No. 4 — (2AD) No. 2:*** ***(AB53) No. 3 — (2AD) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag harness along with chassis harness.

	Step	Check	Yes	No
4	**CHECK AIRBAG HARNESS.** Measure the resistance between connector (AB53) terminals and between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 2 — (2AD) No. 2:*** ***(AB53) No. 2 — (2AD) No. 1:*** ***(AB53) No. 3 — (2AD) No. 3:*** ***(AB53) No. 3 — (2AD) No. 2:*** ***(AB53) No. 4 — (2AD) No. 3:*** ***(AB53) No. 4 — (2AD) No. 1:*** ***(AB53) No. 2 — Chassis ground:*** ***(AB53) No. 3 — Chassis ground:*** ***(AB53) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag harness along with chassis harness.
5	**CHECK AIRBAG HARNESS.** 1) Connect the battery ground terminal and turn the ignition switch to ON. 2) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(2AD) No. 1 (+) — Chassis ground (–):*** ***(2AD) No. 3 (+) — Chassis ground (–):***	Is the voltage 1 V or less?	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Replace the airbag harness along with chassis harness.

R: DTC B1774 BELT TENSION SENSOR OUTPUT TOO HIGH

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-35, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC B1775 BELT TENSION SENSOR OUTPUT TOO LOW

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-35, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC B1776 BELT TENSION SENSOR INPUT VOLTAGE HIGH

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-35, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U: DTC B1777 BELT TENSION SENSOR INPUT VOLTAGE LOW

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-35, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

V: DTC B1778 BELT TENSION SENSOR CONTROL MODULE

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-35, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

W: DTC B1779 BUCKLE SWITCH CIRCUIT OPEN

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B177E. <Ref. to OD(diag)-41, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

X: DTC B177A BUCKLE SWITCH CIRCUIT LOW

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

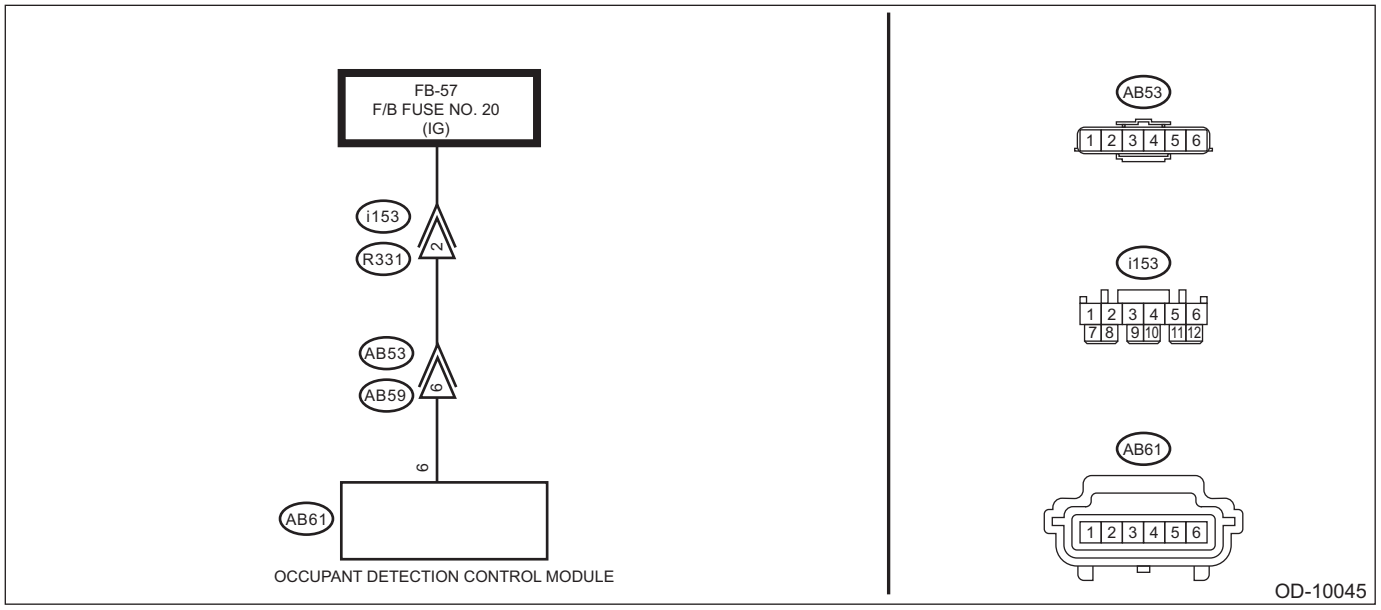
For the diagnostic procedure, refer to DTC B177E. <Ref. to OD(diag)-41, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Y: DTC B177B BUCKLE SWITCH CIRCUIT HIGH

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B177E. <Ref. to OD(diag)-41, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



Z: DTC B177C IGNITION POWER SUPPLY HIGH VOLTAGE

DTC detecting condition:

- Power supply voltage of occupant detection control module is faulty.
- Occupant detection control module is faulty.
- Seat harness circuit is open, shorted or shorted to ground.

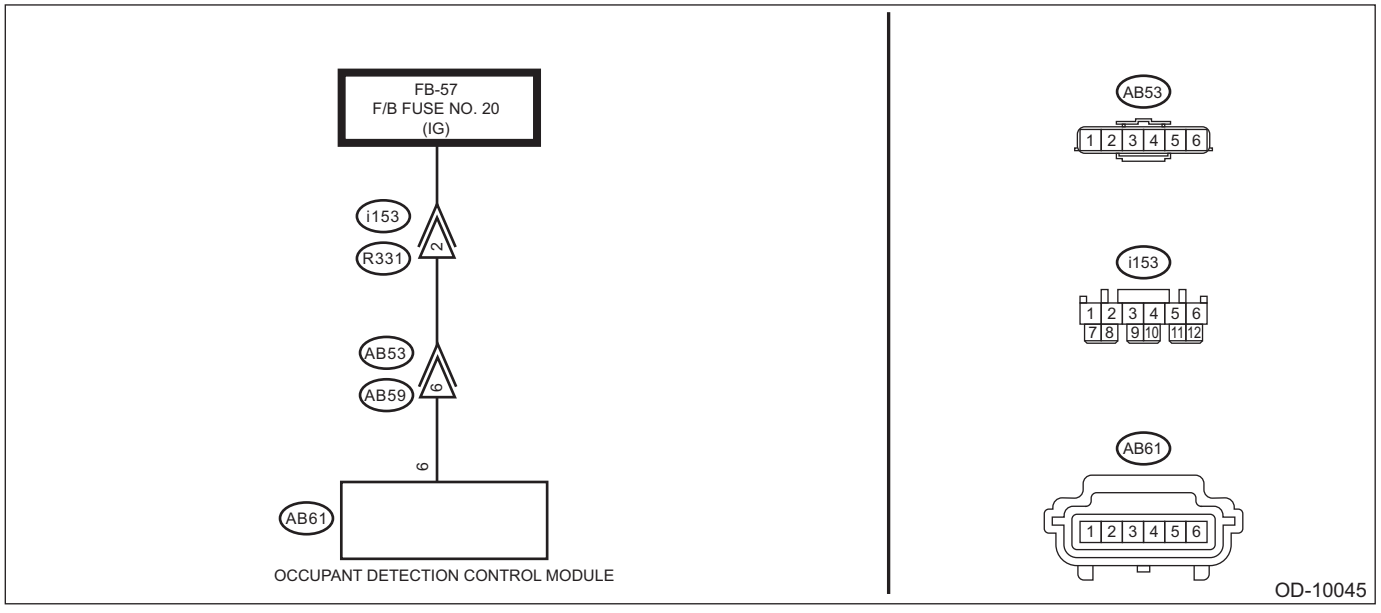
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:

Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

Step		Check	Yes	No
1	**CHECK BATTERY VOLTAGE.** Measure the battery voltage.	Is the battery voltage 16 V or more?	Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>	Go to step **2**.
2	**CHECK FUSE.** Check the fuse. (F/B fuse No. 20)	Is the fuse OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and occupant detection CM.
3	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness, or replace the occupant detection harness (seat harness).)	Go to step **4**.

Step		Check	Yes	No
4	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 16 V or less?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly) <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>, and then the airbag control module <Ref. to AB-49, REMOVAL, Airbag Control Module.> in this order.	Replace the airbag rear harness along with body harness.

AA:DTC B177D IGNITION POWER SUPPLY LOW VOLTAGE



DTC detecting condition:

- Power supply voltage of occupant detection control module is faulty.
- Occupant detection control module is faulty.
- Seat harness circuit is open, shorted or shorted to ground.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Wiring diagram:

Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK BATTERY VOLTAGE.** Measure the battery voltage.	Is the battery voltage 8 V or less?	Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>	Go to step **2**.
2	**CHECK FUSE.** Check the fuse. (F/B fuse No. 20)	Is the fuse OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and occupant detection CM.
3	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness, or replace the occupant detection harness (seat harness).)	Go to step **4**.
4	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly) <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>, and then the airbag control module <Ref. to AB-49, REMOVAL, Airbag Control Module.> in this order.	Replace the airbag rear harness along with body harness.

AB:DTC B177E BUCKLE SWITCH RANGE

DTC detecting condition:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Occupant detection system <Ref. to WI-304, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC other than DTC B177E, B1779, B177A or B177B displayed for the occupant detection system?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the occupant detection harness (seat harness) if the connector is faulty.	Go to step **3**.
3	**CHECK BUCKLE SWITCH.** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-19, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Check the occupant detection harness, and if any fault is found, replace the occupant detection harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

AC:DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT

DTC detecting condition:
When the following DTCs are detected:

B1763, B1764, B1765, B1766, B1767, B1768, B1769, B176A, B176B, B176C, B176D, B176E, B176F, B1770, B1772, B1776, B1777, B1778

NOTE:
DTC B1795 is detected at the same time when any of the DTCs above is detected. When the detected DTC is eliminated, DTC B1795 is cleared at the same time.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is any of B1763, B1764, B1765, B1766, B1767, B1768, B1769, B176A, B176B, B176C, B176D, B176E, B176F, B1770, B1772, B1776, B1777, or B1778 displayed for the occupant detection system?	Perform the diagnosis for the displayed DTCs. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to OD(diag)-24, Clear Memory Mode.> 2) Turn the ignition switch to OFF, and wait for 60 seconds or more. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC B1795 displayed?	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-26, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	When DTC other than B1795 is displayed for the occupant detection system, perform the diagnosis according to the DTC. <Ref. to OD(diag)-30, List of Diagnostic Trouble Code (DTC).> When DTC is not displayed, end the diagnosis.

SEAT BELT SYSTEM

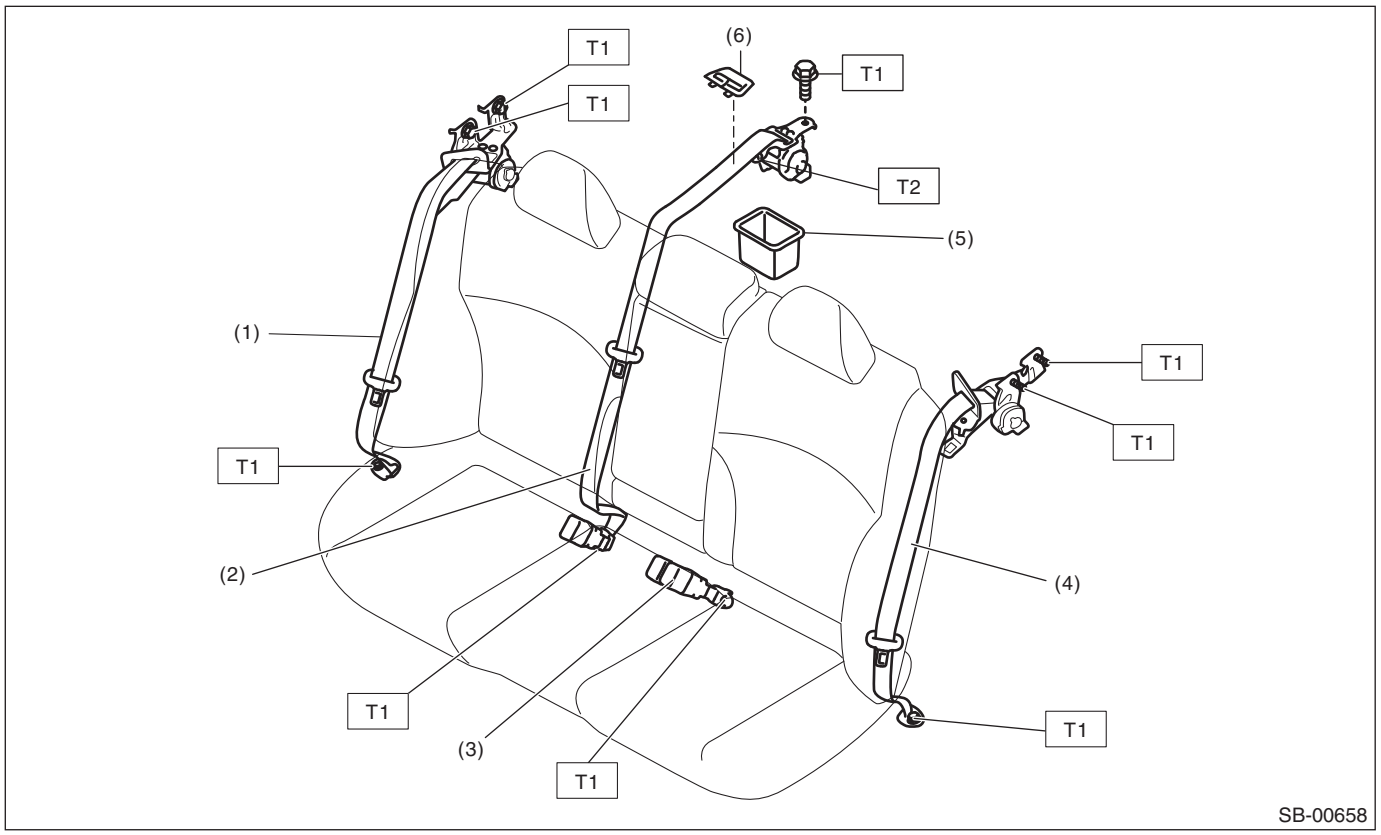
Page

1. General Description 2
2. Pretensioner Connector 14
3. Inspection Locations after a Collision 15
4. Seat Belt Warning System 16
5. Front Seat Belt 19
6. Rear Seat Belt 26
7. Disposal of Pretensioner 36

1. General Description

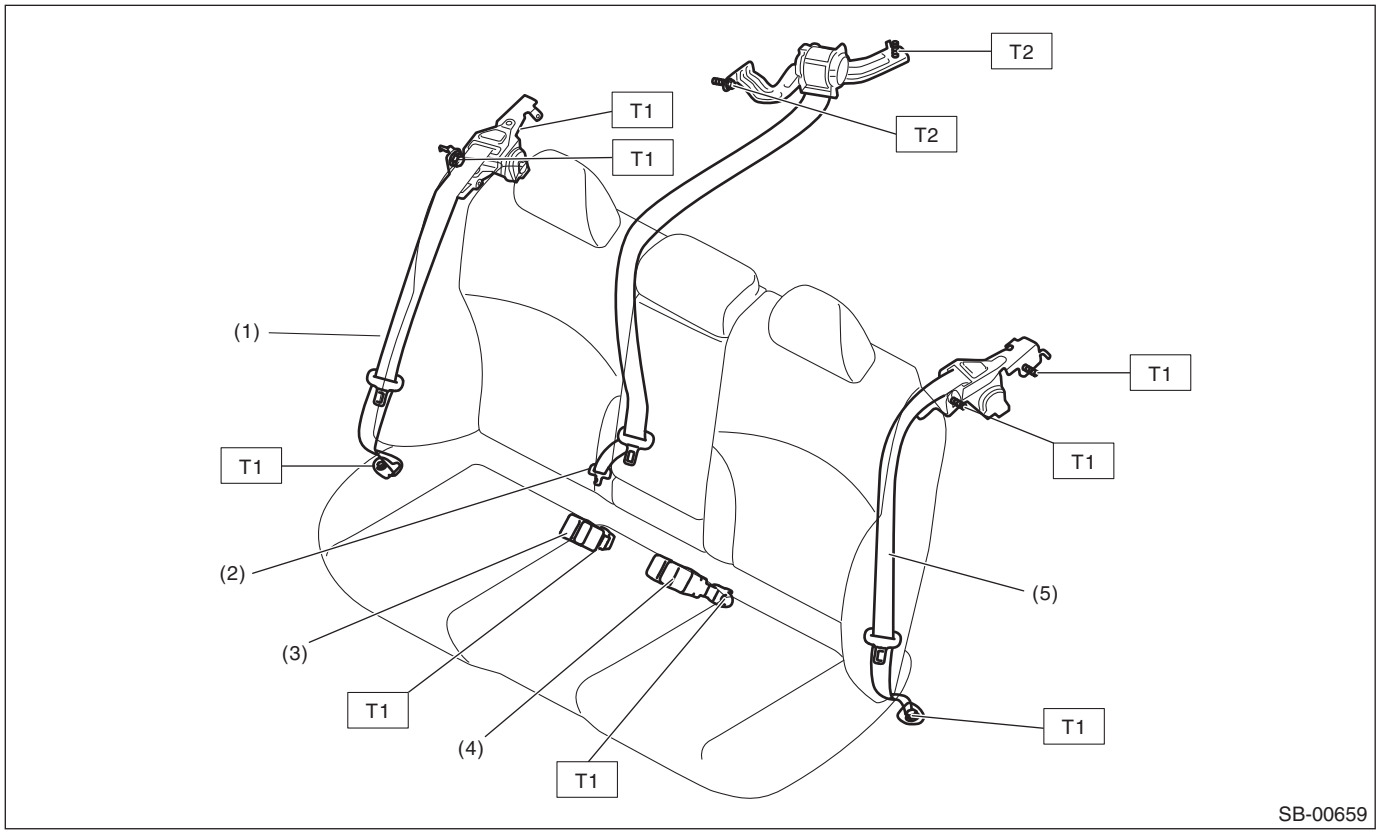
A: COMPONENT



1. FRONT SEAT BELT

(1) Adjuster ASSY - seat belt
(2) Trim panel - center pillar UPR
(3) Seat belt outer - front
(4) Wave washer
(5) Seat belt inner - front
(6) Seat belt outer - front (only on passenger's side with belt tension sensor)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 30 (3.1, 22.1)
T3: 38 (3.9, 28)
T4: 53 (5.4, 39.1)



2. REAR SEAT BELT (SEDAN MODEL)

(1) Seat belt outer - rear RH
(2) Seat belt - rear shoulder CTR
(3) Seat belt - CTR LH
(4) Seat belt outer - rear LH
(5) Cover - ELR
(6) Cover - belt rear

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 53 (5.4, 39.1)

3. REAR SEAT BELT (OUTBACK MODEL)

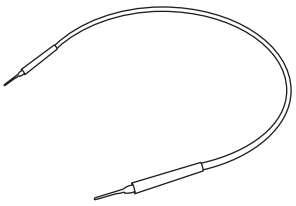
(1) Seat belt outer - rear RH
(2) Seat belt - rear shoulder CTR
(3) Seat belt - CTR RH
(4) Seat belt - CTR LH
(5) Seat belt outer - rear LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 53 (5.4, 39.1)

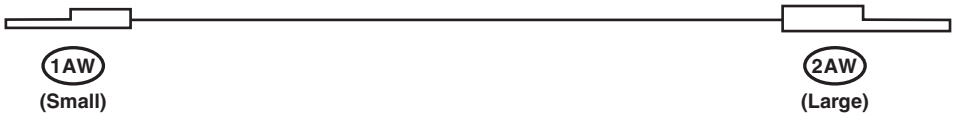
B: CAUTION

For details of the following precautions for seat belt pretensioner, refer to “AIRBAG SYSTEM” section. <Ref. to AB-10, CAUTION, General Description.>

- Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
  - For model with battery sensor, disconnect the ground terminal from battery sensor.
- Do not drop or apply any impact to the pretensioner.
- If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new genuine part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new genuine parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.
- Before disposal, make sure to perform an operation process to the pretensioners. <Ref. to SB-36, PROCEDURE, Disposal of Pretensioner.>
- If material from the pretensioner enters the eyes or contacts skin during operation process, wash it away with clean water, and then consult a doctor.



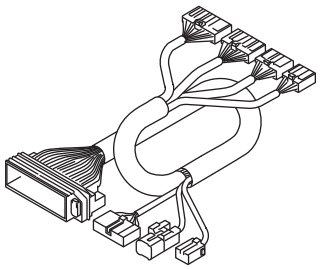
C: PREPARATION TOOL



1. SPECIAL TOOL

- SUBARU SELECT MONITOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.



- TEST HARNESS AW

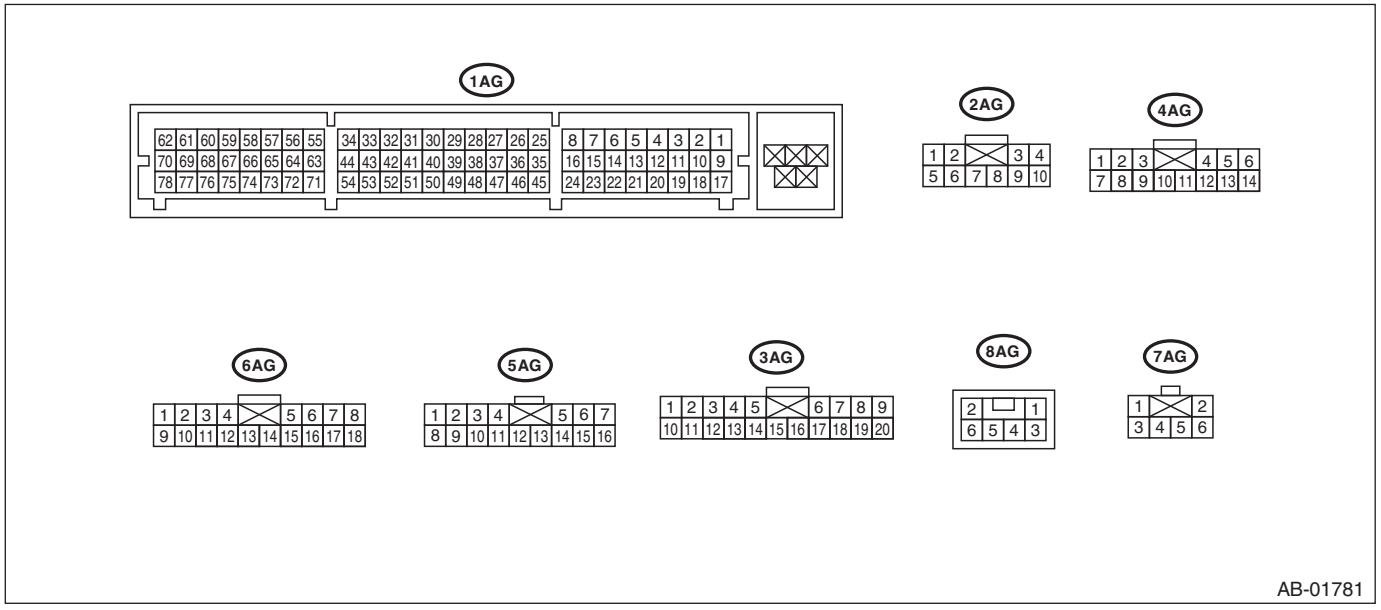


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
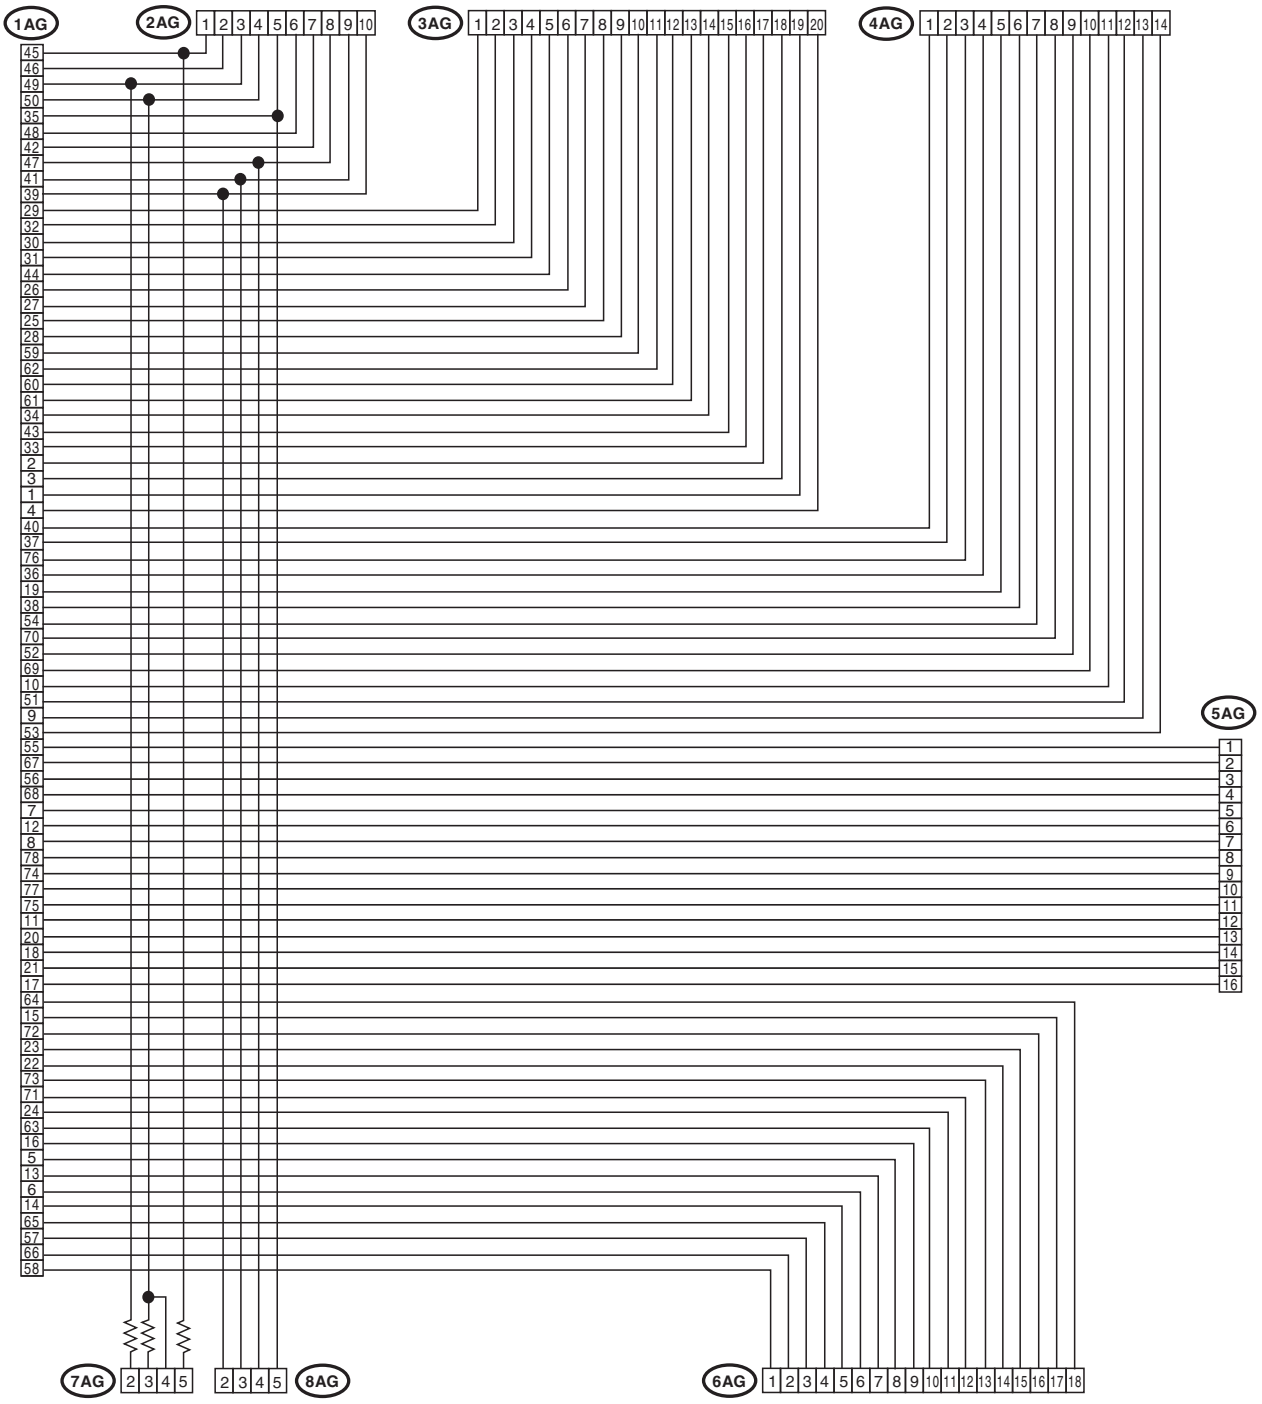
 ST98299AL020	98299AL020	TEST HARNESS AW	Used when measuring voltage and resistance of occupant detection system.



OD-00124

- TEST HARNESS AG

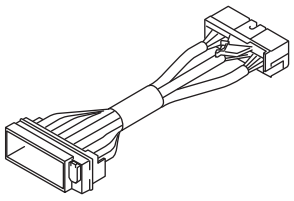


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG070	98299AG070	TEST HARNESS AG	• Used when measuring voltage and resistance of airbag control module. • Used together with TEST HARNESS AD AV. (98299AL010)

- AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module.

- TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of pretensioner. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of pretensioner. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Pretensioner Connector

A: PROCEDURE

For connectors of seat belt pretensioner and buckle switch RH, refer to “Airbag Connector” of “AIRBAG SYSTEM” section or “OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)” section.

- Airbag system: <Ref. to AB-18, PROCEDURE, Airbag Connector.>
- Occupant detection system (diagnostics): <Ref. to OD(diag)-17, PROCEDURE, Airbag Connector.>

3. Inspection Locations after a Collision

A: INSPECTION

Refer to “Inspection Locations after a Collision” of “AIRBAG SYSTEM” section. <Ref. to AB-24, Inspection Locations after a Collision.>

4. Seat Belt Warning System

A: WIRING DIAGRAM

Refer to “Seat Belt Warning System” in the wiring diagram. <Ref. to WI-348, WIRING DIAGRAM, Seat Belt Warning System.>

B: INSPECTION

CAUTION:
• Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
• When inspecting the airbag main harness, disconnect the driver’s seat airbag module connector and passenger’s seat airbag module connector for safety reasons.
• When inspecting the airbag rear harness, disconnect the side airbag module connector, seat cushion airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.
Trouble symptom
- Driver’s side seat belt warning light does not illuminate or it remains illuminating.
- Warning buzzer does not beep.

	Step	Check	Yes	No
1	**CHECK FUNCTION.** 1) Sit on the driver’s seat and passenger’s seat and disconnect the seat belts of the both. 2) Turn the ignition switch to ON (engine OFF). 3) Check the illumination of the driver’s seat belt warning light in the combination meter, and the passenger’s seat belt warning light in the warning box, and the sounding of the buzzer.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step **2**.	Go to step **9**.
2	**CHECK FUNCTION.** 1) Wait until the buzzer sound stops in step 1. (For approximately six seconds after starting sounding) 2) Connect and disconnect the seat belts of the driver’s and passenger’s. 3) Check the illumination of the driver’s seat belt warning light in the combination meter and the passenger’s seat belt warning light in the warning box.	Do the seat belts warning light illuminate ←→ go off according to the operation?	Go to step **3**.	Go to step **5**.
3	**CHECK FUNCTION.** 1) Wait until the buzzer sound stops in step 2. (For approximately six seconds after starting sounding) 2) Start the engine, and set the vehicle speed at 20 km/h (12 MPH) or more. 3) Check the seat belt warning lights of the driver’s and the passenger’s, and if the warning buzzer sounds.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step **4**.	Go to step **10**.

	Step	Check	Yes	No
4	**CHECK DATA MONITOR.** Check for poor contact of the connectors between the airbag control module and the seat belt buckle switch LH. 1) Sit in the driver's seat. 2) Select «Data monitor» in the combination meter using Subaru Select Monitor, and display the data of «Belt Buckle Switch LH». NOTE: For detailed operation procedures, refer to "Application help". 3) Fasten and detach the driver's side seat belt buckle, and read the data of the seat belt switch. <Ref. to AB(diag)-35, OPERATION, Read Current Data.>	Does the seat belt switch display change Belted ←→ Unbelted according to the operation of the seat belt buckle?	Go to step **6**.	Go to step **5**.
5	**CHECK BUCKLE SWITCH LH.** Perform the check in accordance with the diagnostic procedure DTC B1656 of the airbag system. <Ref. to AB(diag)-94, DTC B1656 FRONT BUCKLE SWITCH LH FAILURE, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Go to step **6**.	Repair or replace with new parts according to DTC B1656.
6	**CHECK DATA MONITOR.** 1) Sit in the passenger's seat. 2) Select «Data monitor» in the combination meter using Subaru Select Monitor, and display the data of «Belt Buckle Switch RH». 3) Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. <Ref. to AB(diag)-35, OPERATION, Read Current Data.>	Does the seat belt switch display change Belted ←→ Unbelted according to the operation of the seat belt buckle?	Go to step **8**.	Go to step **7**.
7	**CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM.** Perform the check in accordance with the diagnostic procedure DTC B1650 of the airbag system. <Ref. to AB(diag)-91, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Go to step **8**.	Repair or replace with new parts according to DTC B1650.
8	**CHECK BUCKLE SWITCH RH.** Perform the check in accordance with the diagnostic procedure DTC B1655 of the airbag system. <Ref. to AB(diag)-93, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Go to step **9**.	Repair or replace with new parts according to DTC B1655.
9	**CHECK AIRBAG CONTROL MODULE AND COMBINATION METER COMMUNICATION CIRCUIT.** Perform the inspection according to the basic diagnostic procedure for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the inspection result normal?	Go to step **10**.	Repair or replace with new parts according to DTC U0151.
10	**CHECK WARNING BOX POWER SUPPLY VOLTAGE.** 1) Disconnect the warning box connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ignition power supply and the warning box. ***Connector & terminal*** ***(R161) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Check the harness for open or short between the fuse and the warning box.

	Step	Check	Yes	No
11	**CHECK WARNING BOX GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the warning box and chassis ground. ***Connector & terminal*** ***(R161) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **12**.	Repair or replace the harness.
12	**CHECK HARNESS BETWEEN WARNING BOX AND COMBINATION METER.** 1) Disconnect the harness of the warning box and the combination meter. 2) Measure the resistance between warning box and combination meter. ***Connector & terminal*** ***(R161) No. 3 — (i10) No. 12:***	Is the resistance less than 10 Ω?	Go to step **13**.	Repair or replace the harness.
13	**CHECK COMMUNICATION STATUS BETWEEN WARNING BOX AND COMBINATION METER.** 1) Remove the warning box, and install a properly operating warning box (new warning box). 2) Connect the connector and then turn the ignition switch to ON.	Is the warning box properly displayed?	Replace the warning box.	Replace the combination meter case assembly.

5. Front Seat Belt

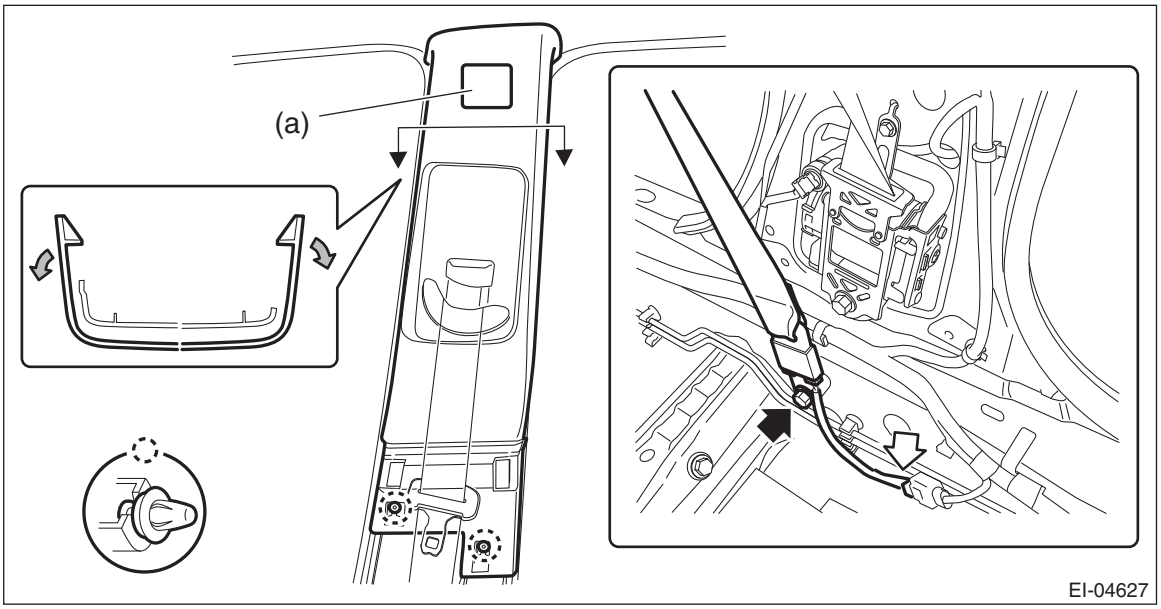
A: REMOVAL

1. SEAT BELT OUTER - FRONT

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not drop or subject the pretensioner to any impact.
• Since the pretensioner and bracket are integrated as a unit, do not disassemble them.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

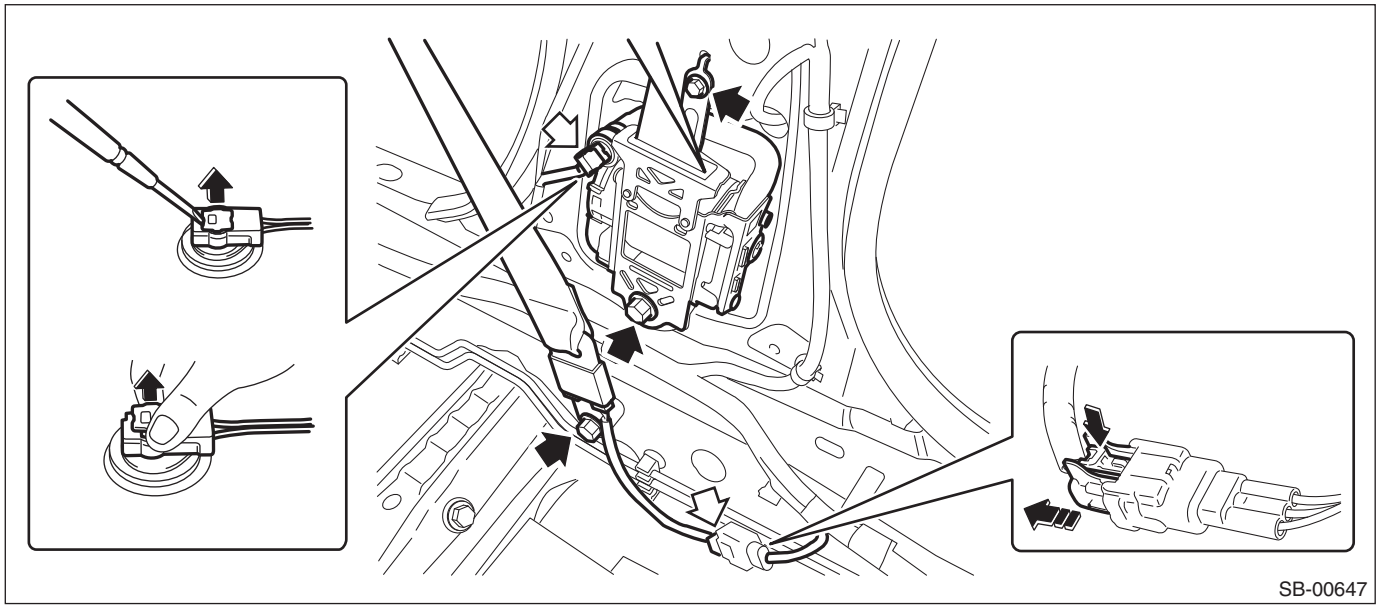
SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



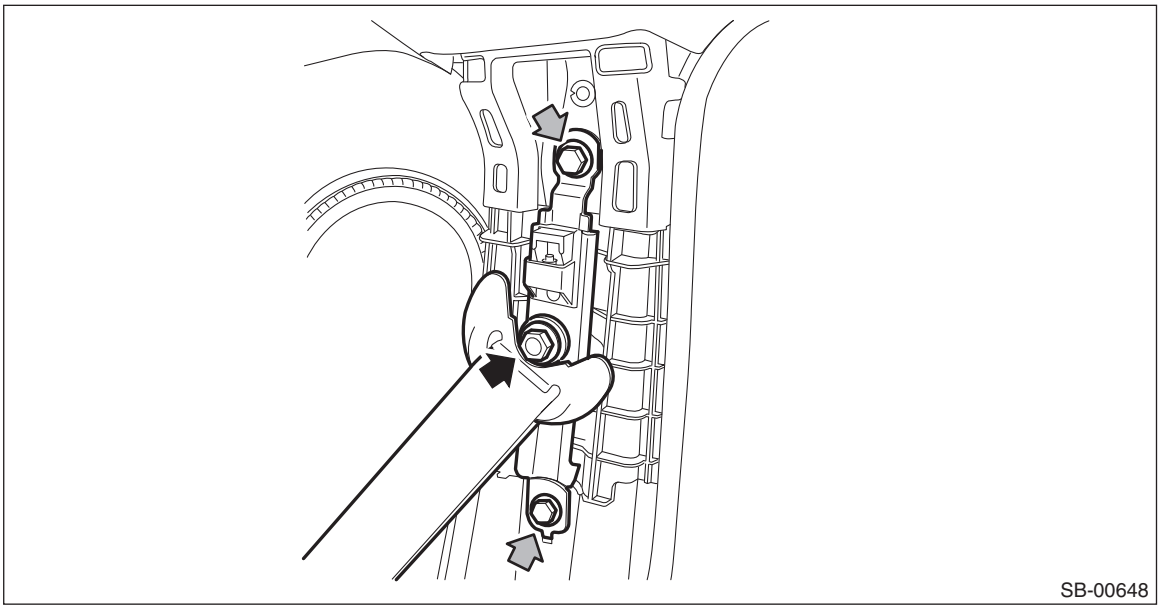
NOTE:
For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
3) Tilt the front seat backrest assembly forward, and move the front seat all the way forward.

CAUTION:
For the power seat, move the seat, disconnect the battery ground cable, and then wait for 60 seconds or more before starting work.
4) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
5) Remove the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
6) Remove the trim panel - center pillar UPR. (On the side where seat belt assembly is removed)
(1) Remove the cap (a), and remove the bolts.
(2) Remove the lower anchor bolt of the seat belt outer - front.

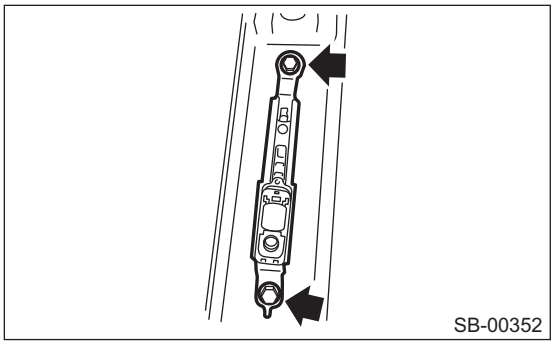


NOTE:
On passenger's side, disconnect the connector of the seat belt tension sensor. <Ref. to AB-23, BELT TENSION SENSOR, PROCEDURE, Airbag Connector.>
(3) Release the clip by pulling the lower part of the trim toward you.
(4) Expand the claws outward, and remove the trim panel - center pillar UPR.

CAUTION:
• Do not expand the trim panel - center pillar UPR excessively. Doing so may damage the trim.



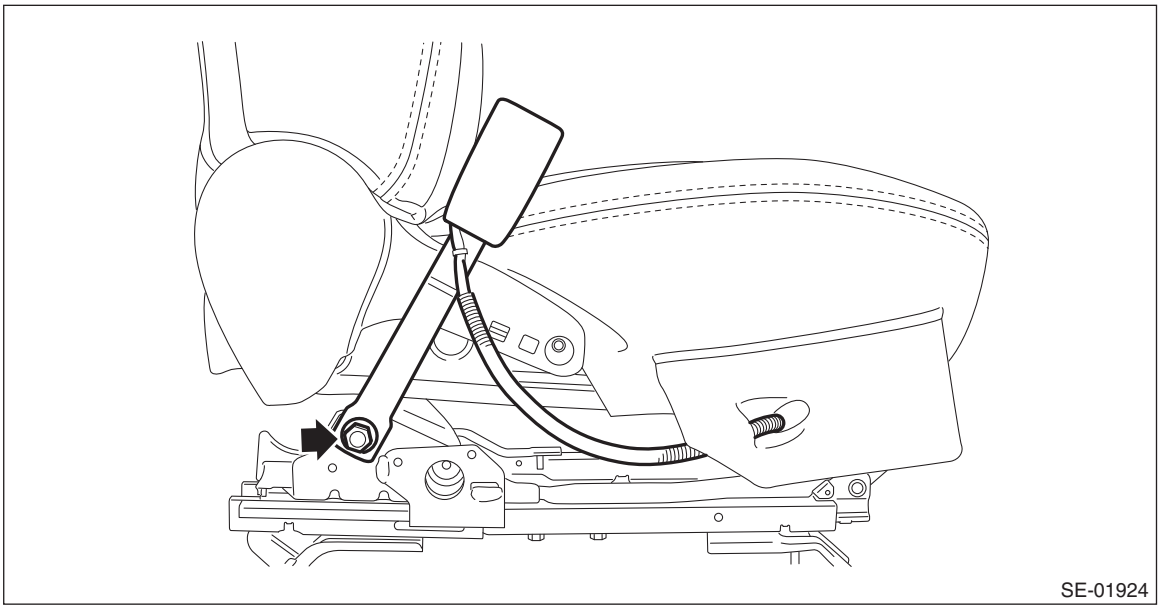
• If the claw is damaged, always replace the trim panel - center pillar UPR with a new part, because the damaged claw cannot hold the part sufficiently.



7) Remove the seat belt outer - front.
   (1) Disconnect connector of the pretensioner. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>
   (2) Remove the bolt to remove the seat belt retractor.

(3) Remove the upper anchor bolt, and remove the seat belt outer - front.

NOTE:
Remove the bolts and remove the adjuster assembly - seat belt as necessary.



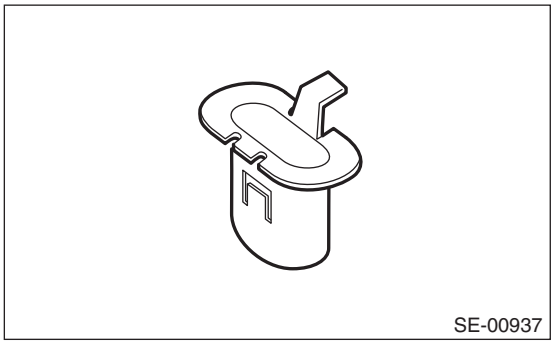
2. SEAT BELT INNER - FRONT

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
- For driver's side, lift the seating face before removing the seat.
- For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>

4) Remove the nut, and remove the seat belt inner - front.



NOTE:
For driver's side, remove the metal clip holding the inner belt harness to the slide rail.

B: INSTALLATION

1. SEAT BELT OUTER - FRONT

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• The parts of the driver and passenger sides are not the same. Before installation, make sure that the correct part is used.
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belt can be pulled out and retracted smoothly.
• Make sure that the seat belt harness is not caught anywhere. Wrong harness rooting may cause the harness short from pinch.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-23, INSPECTION, Front Seat Belt.>
2) Install the adjuster assembly - seat belt and the seat belt outer - front.

Tightening torque:
Refer to "COMPONENT" of "General Description".: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>
3) Install the trim panel - rear pillar UPR.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the trim panel - center pillar LWR, cover side sill - front, and cover side sill - rear.
5) Install the rear seat cushion assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.
- The adjuster assembly - seat belt can be moved smoothly.
- Check that the airbag warning light lights up for approximately 6 seconds and then turns off when connecting the battery ground cable and turning the ignition switch to ON.

2. SEAT BELT INNER - FRONT

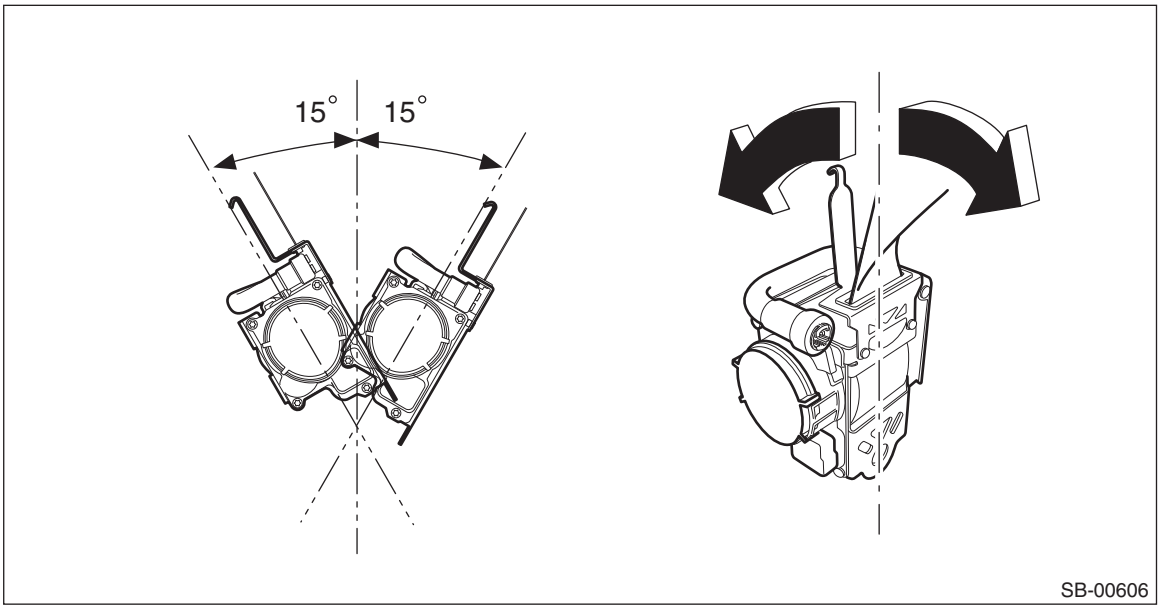
CAUTION:
- **Before installation, make sure that the correct part is used.**
- **During installation, make sure that the seat belts are not twisted.**
- **Check that there is no pinching of the seat belt harness. Wrong harness rooting may cause the harness short from pinch.**
- **Do not forget the wave washer, when installing front seat inner belt assembly.**

1) Install the seat belt inner - front.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

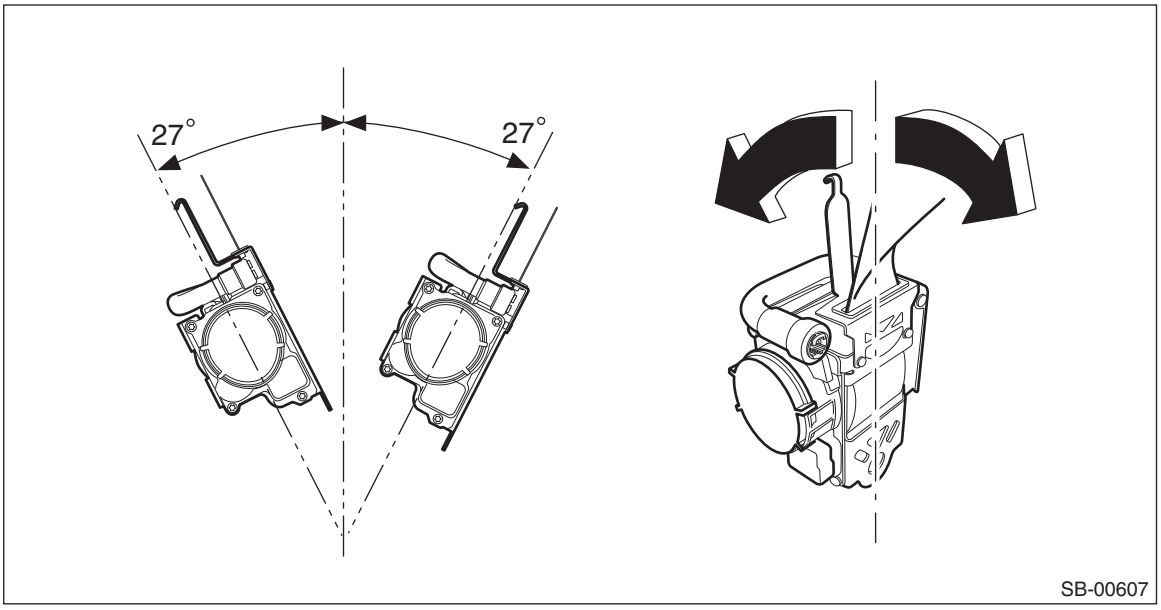
2) Install the seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. VISUAL INSPECTION

Check for the following, and replace with new parts if necessary.
- Pretensioner is cracked or deformed.
- Adjuster assembly - seat belt is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - front is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

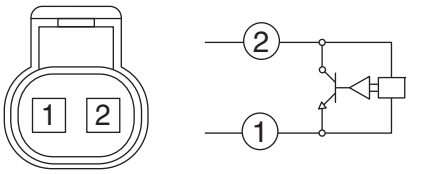


2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2) Tilt the retractor from the upright posture and check the following points.

- It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.



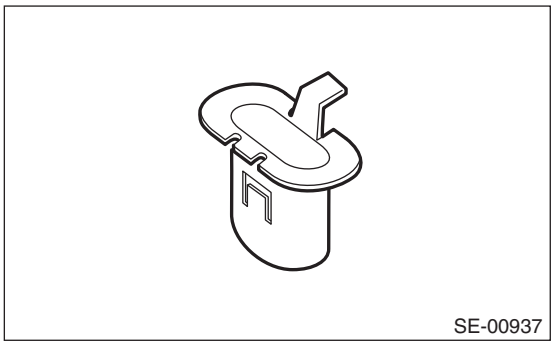
3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - front with a new part.

3. SEAT BELT SWITCH INSPECTION

Preparation tool:
Circuit tester

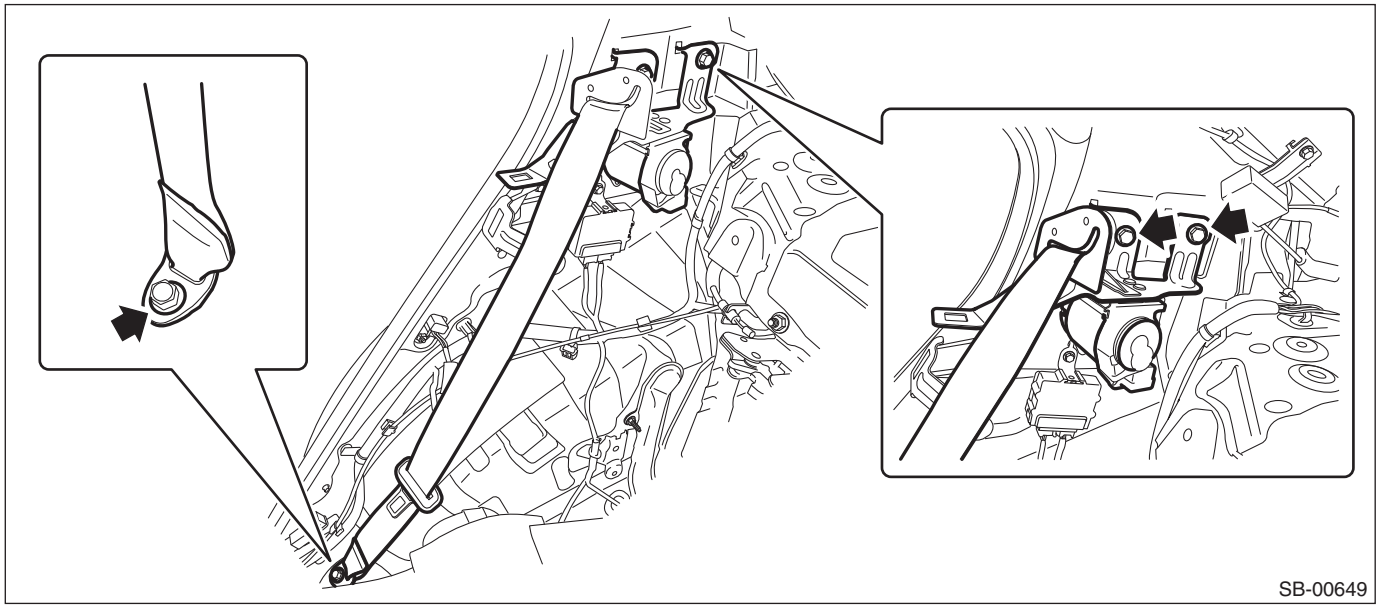
Measure the current value between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Tongue plate inserted	12 — 18 mA	 SB-00482
1 — 2	Tongue plate detached	4 — 7 mA	



Replace the seat belt inner - front if the inspection result is not within the standard.

6. Rear Seat Belt

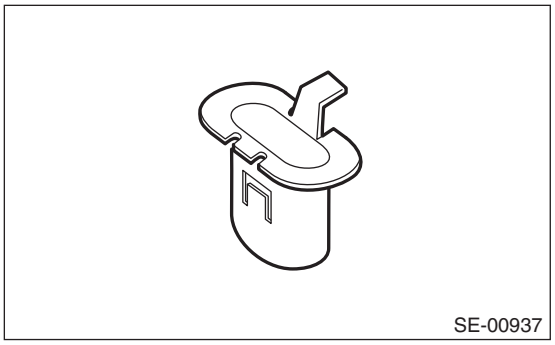


A: REMOVAL

1. SEAT BELT OUTER - REAR RH & LH (SEDAN MODEL)

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

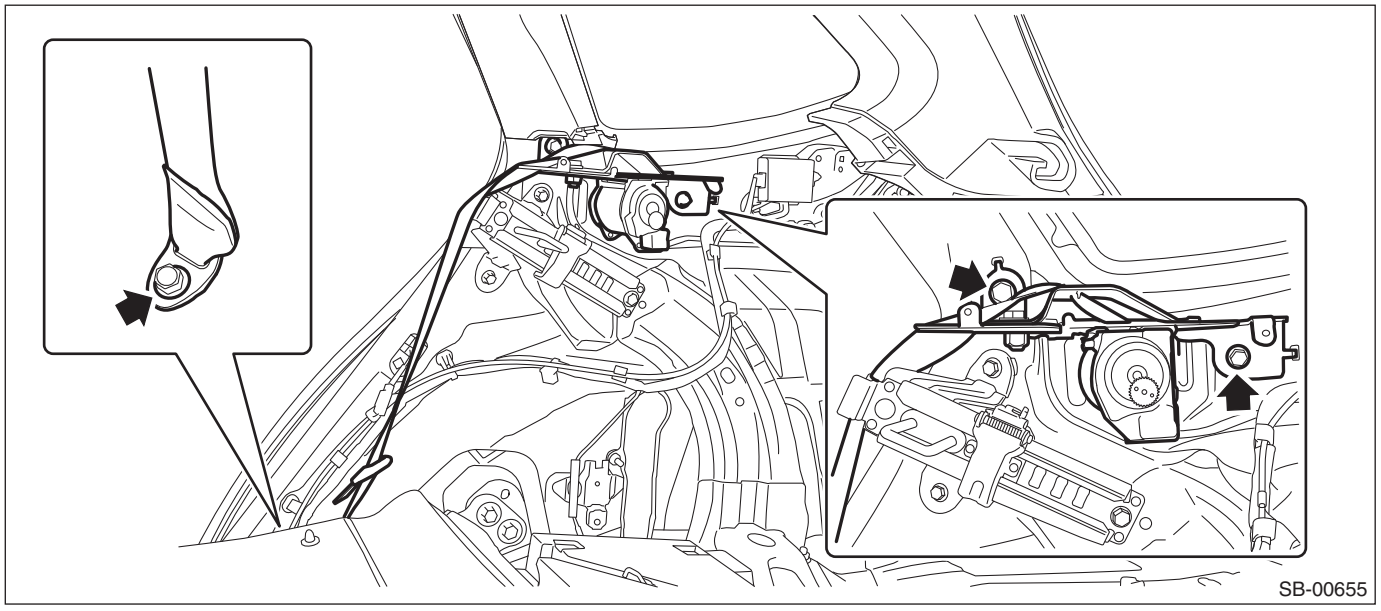
SE-00937



1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly and side pad assembly - backrest. (On the side where seat belt assembly is removed) <Ref. to SE-34, SEDAN MODEL, REMOVAL, Rear Seat.>
4) Remove the trim panel - rear pillar UPR. (On the side where seat belt assembly is removed) <Ref. to EI-97, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
5) Remove the bolts, and remove the seat belt outer - rear.

SB-00649

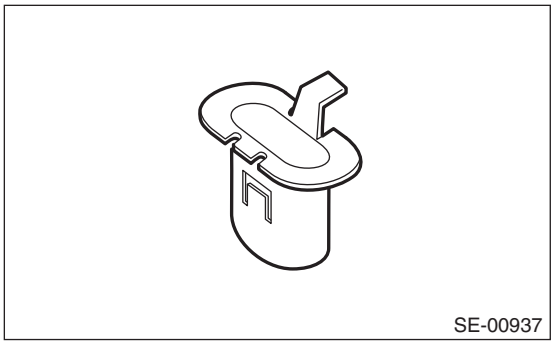
2. SEAT BELT OUTER - REAR RH & LH (OUTBACK MODEL)



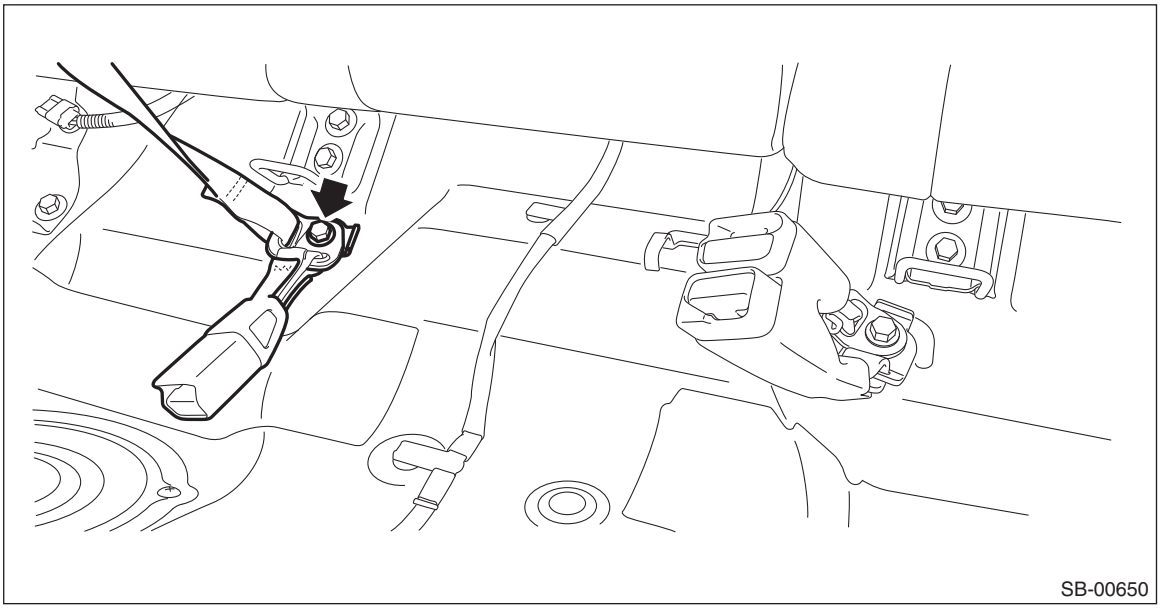
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly and side pad assembly - backrest. (On the side where seat belt assembly is removed) <Ref. to SE-36, OUTBACK MODEL, REMOVAL, Rear Seat.>
4) Remove the following parts. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
- Trim panel - rear skirt
- Trim panel - rear apron
- Mat - rear floor, box - sub trunk
- Spacer - rear floor



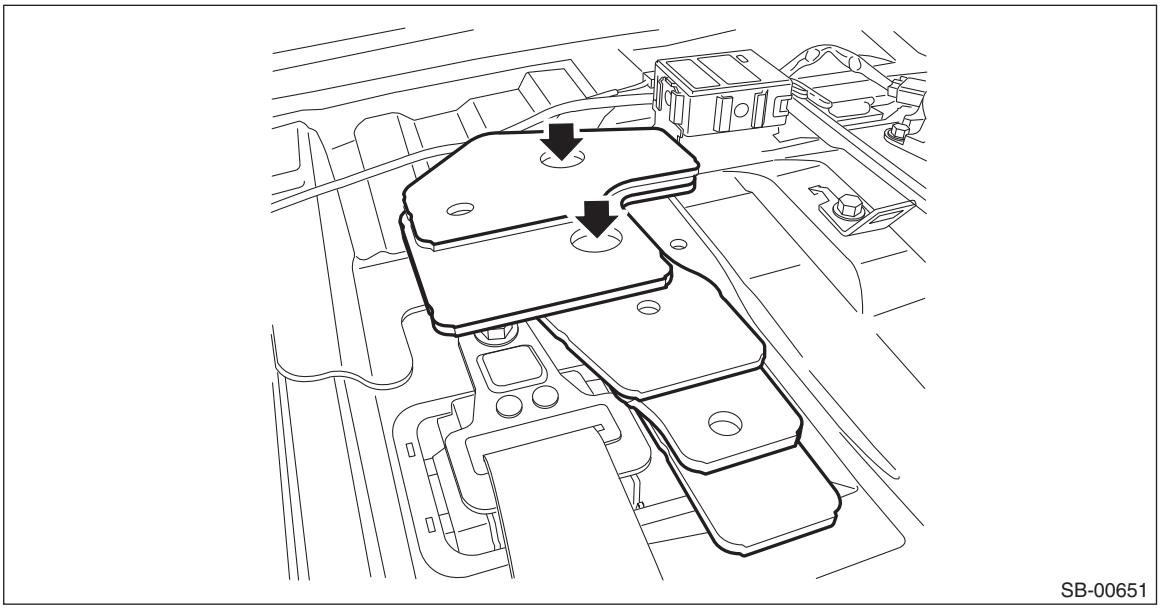
5) Remove the bolts, and remove the seat belt outer - rear.



3. SEAT BELT - REAR SHOULDER CTR (SEDAN MODEL)

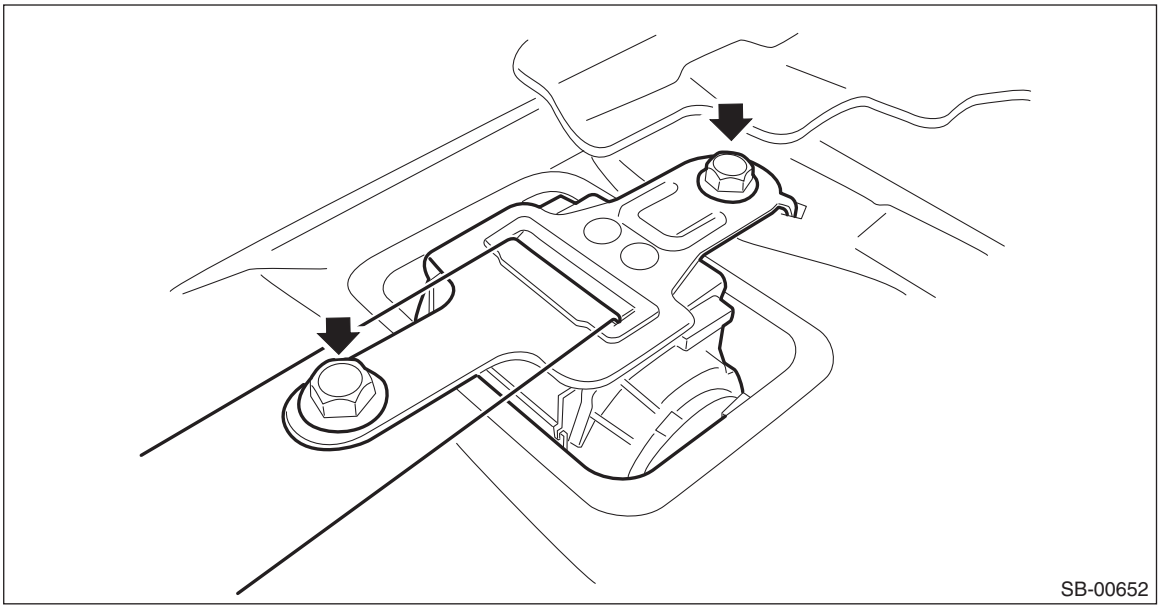
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly. <Ref. to SE-34, SEDAN MODEL, REMOVAL, Rear Seat.>
4) Remove the side sill covers - rear and the trim panels - rear pillar UPR from the left and right sides. <Ref. to EI-97, REMOVAL, Rear Quarter Trim.>
5) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.

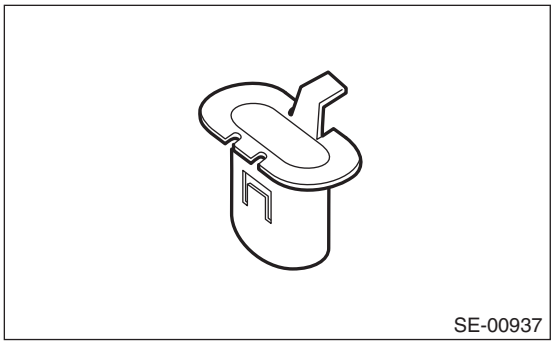


SB-00650

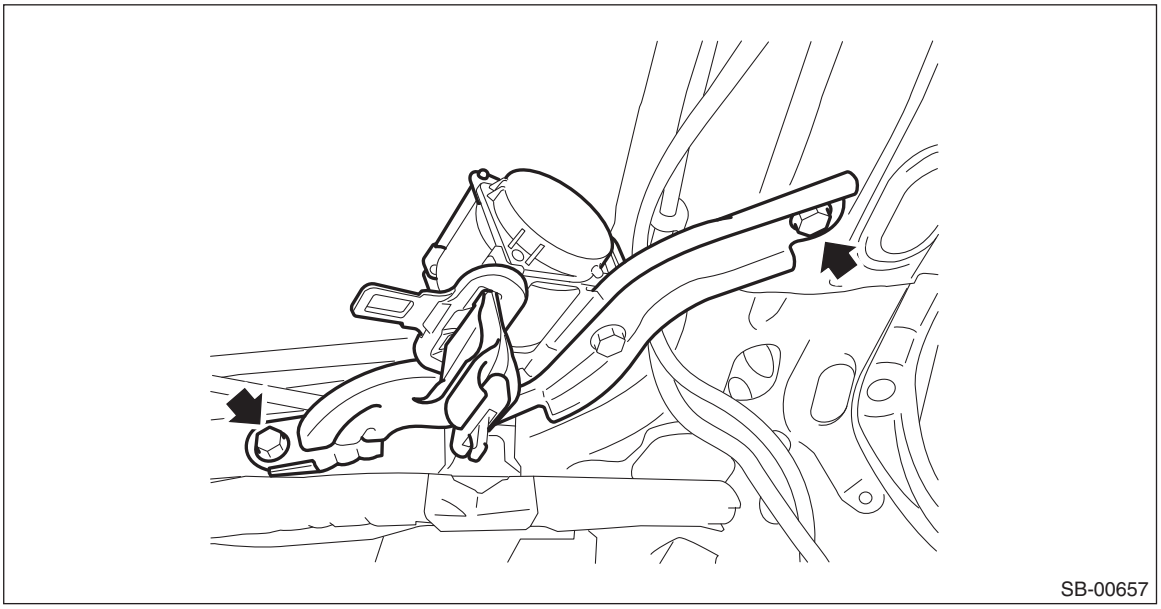
6) Remove the high-mounted stop light. <Ref. to LI-73, REMOVAL, High-mounted Stop Light.>
7) Remove the trim panel - rear shelf assembly. <Ref. to EI-103, REMOVAL, Rear Shelf Trim.>
8) Remove the seat belt - rear shoulder CTR.

(1) Remove the bolts and remove the plate - mass damper.

(2) Remove the bolts, and remove the seat belt - rear shoulder CTR.



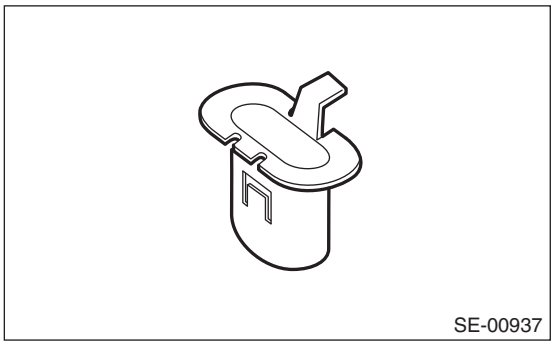
4. SEAT BELT - REAR SHOULDER CTR (OUTBACK MODEL)



CAUTION:

• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

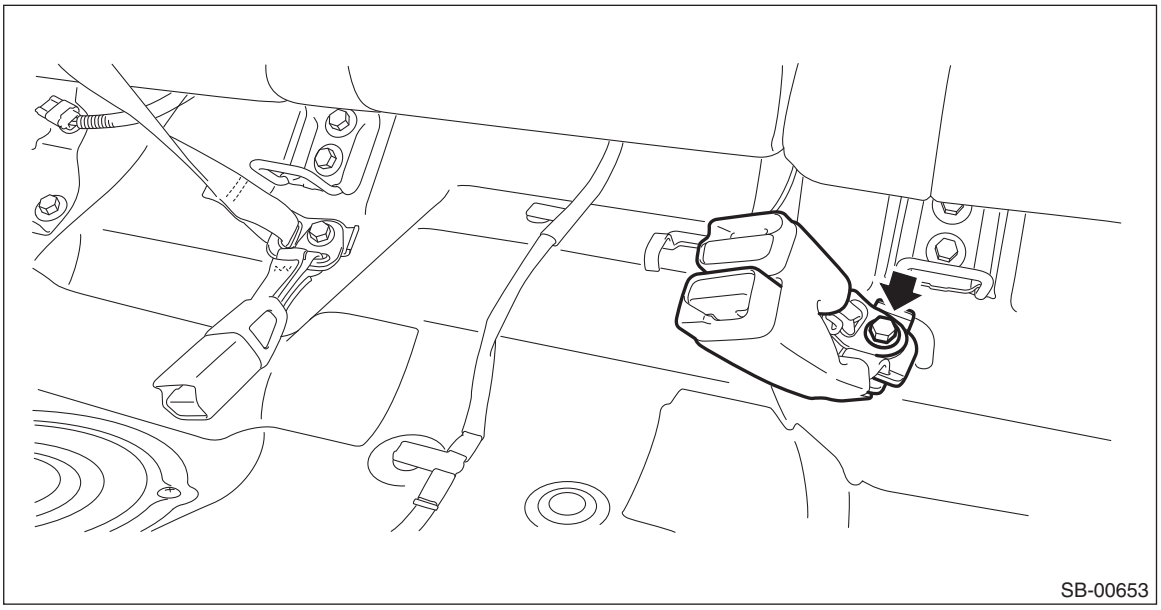
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



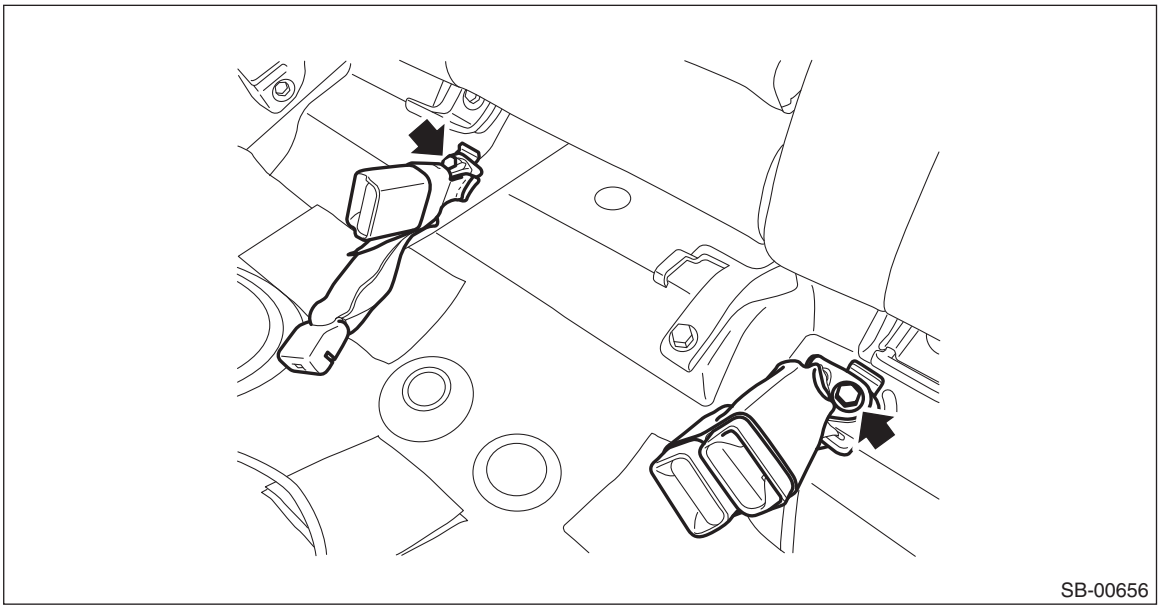
SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly. <Ref. to SE-36, OUTBACK MODEL, REMOVAL, Rear Seat.>
4) Remove the trim panel - roof assembly. <Ref. to EI-113, OUTBACK MODEL, REMOVAL, Roof Trim.>
5) Remove the bolts, and remove the seat belt - rear shoulder CTR.

SB-00657



5. SEAT BELT - CTR RH AND LH

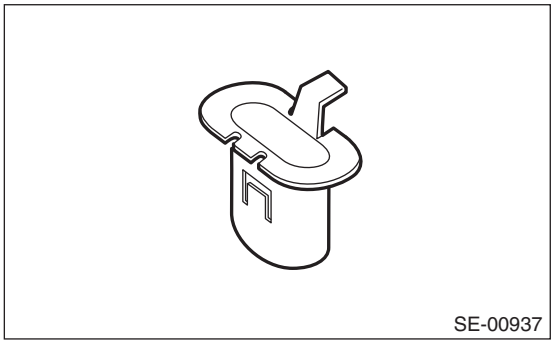


CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>

4) Remove the bolts, and remove the seat belt - CTR RH and LH.



SB-00653

SB-00656

B: INSTALLATION

1. SEAT BELT OUTER - REAR RH & LH (SEDAN MODEL)

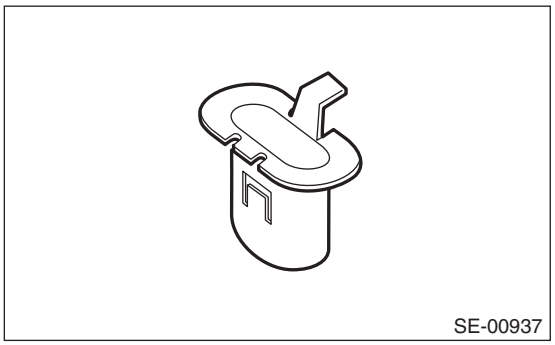
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-34, INSPECTION, Rear Seat Belt.>
2) Install the seat belt outer - rear.

CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-3, REAR SEAT BELT (SEDAN MODEL), COMPONENT, General Description.>



3) Install the side pad assembly - backrest and the trim panel - rear pillar UPR.

Tightening torque:
Side pad assembly - backrest: 53 N·m (5.4 kgf-m, 39.1 ft-lb)

4) Install the rear seat cushion assembly.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

2. SEAT BELT OUTER - REAR RH & LH (OUTBACK MODEL)

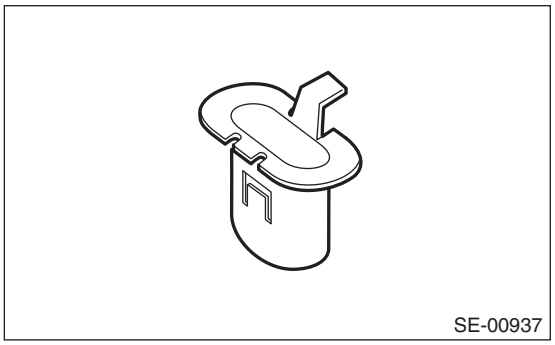
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-34, INSPECTION, Rear Seat Belt.>
2) Install the seat belt outer - rear.

CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-4, REAR SEAT BELT (OUTBACK MODEL), COMPONENT, General Description.>



3) Install the trim panel - rear skirt and the trim panel - rear apron.
4) Install the mat - rear floor, spacer - rear floor, and sub trunk box.
5) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

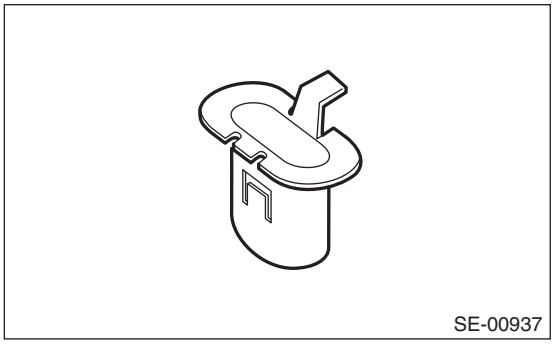
6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

3. SEAT BELT - REAR SHOULDER CTR (SEDAN MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the retractor of seat belt - rear shoulder CTR.

Tightening torque:
Refer to "COMPONENT" of "General Description".: <Ref. to SB-3, REAR SEAT BELT (SEDAN MODEL), COMPONENT, General Description.>
2) Install the trim panel assembly - rear shelf.
3) Install the high-mounted stop light.
4) Install the lower anchor of seat belt - rear shoulder CTR.



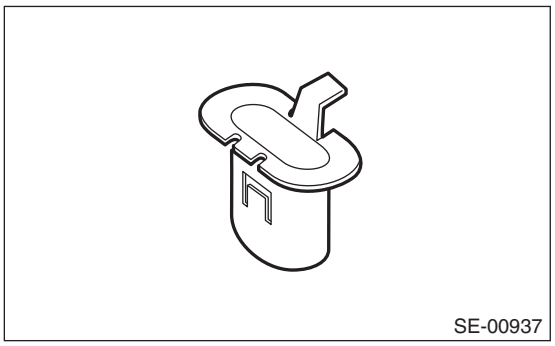
CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
5) Install the side pad assembly - backrest and the trim panel - rear pillar UPR.

Tightening torque:
Side pad assembly - backrest: 53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

4. SEAT BELT - REAR SHOULDER CTR (OUTBACK MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



1) Install the retractor of seat belt - rear shoulder CTR.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-4, REAR SEAT BELT (OUTBACK MODEL), COMPONENT, General Description.>

2) Install the trim panel - roof assembly.
3) Install the rear seat cushion assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

5. SEAT BELT - CTR RH AND LH

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

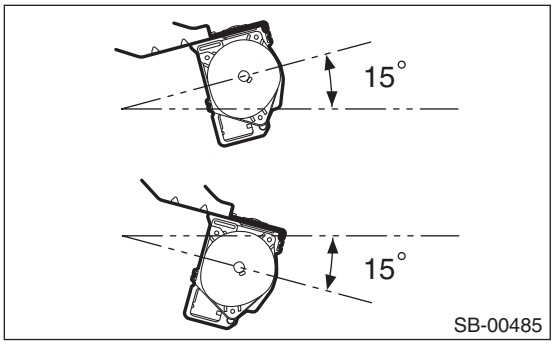
SE-00937

1) Install the seat belt - CTR RH & LH.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

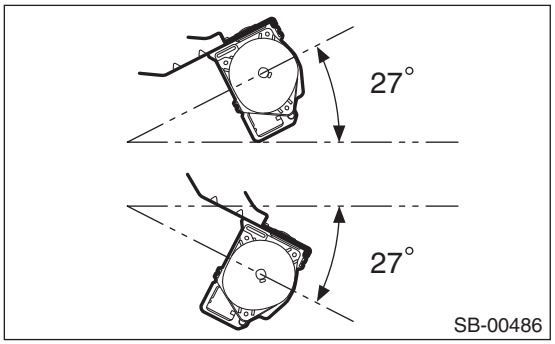
2) Install the rear seat cushion assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt buckle is pulled out properly, and seat belt engagement can be performed smoothly.

C: INSPECTION



1. VISUAL INSPECTION

Check for the following, and replace with new parts if necessary.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - rear is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

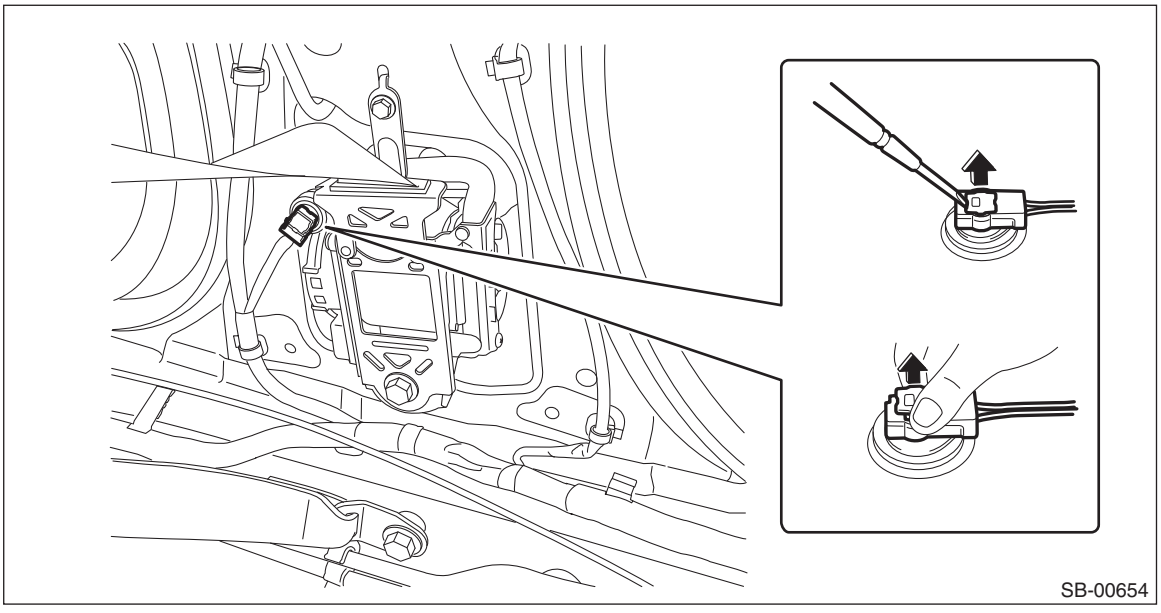


2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2) Tilt the retractor from the upright posture and check the following points.

- It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.



3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - rear with a new part.

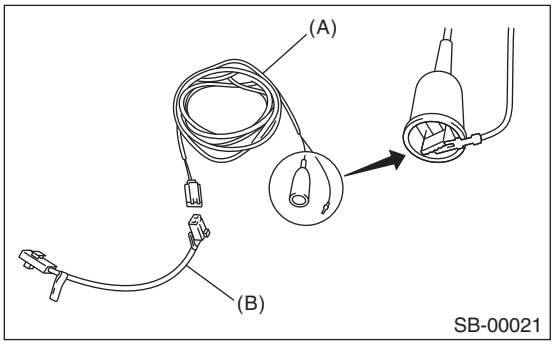
7. Disposal of Pretensioner

A: PROCEDURE

WARNING:
Make sure to follow the instructions below. Otherwise, personal injuries may occur.
• Before discarding a pretensioner, always perform an activation process to prevent any false activation.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not touch the pretensioner just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.

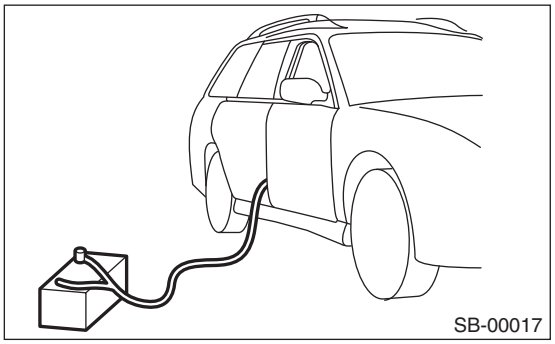
CAUTION:
• Perform a pretensioner operation process in a safe, level place. Do not perform the process outdoors when there is a strong rain or wind.
• Do not drop or damage the pretensioner.
• A large explosive noise will occur when the pretensioner is deployed. Warn persons in the area, and do not allow anyone to approach a radius of 5 m (16 ft) from the discard location.
• After activating the pretensioner, smoke may arise. Therefore, always perform an operation process in a well-ventilated place without any smoke sensor.
• Do not expose the activated pretensioner to water.
• Wrap the activated pretensioner in a sealed vinyl bag when discarding.
• If it is impossible to perform a pretensioner activation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.
1) Fold the backrest all the way forward, and move the front seat all the way forward.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.> <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
5) Disconnect connector of the pretensioner.

SB-00654



6) Short the alligator clip and terminal of the airbag deployment tool together.

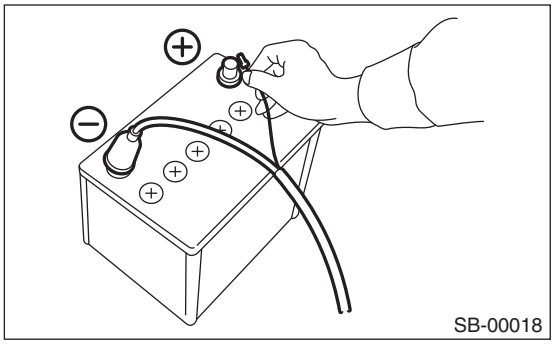
CAUTION:
Short the airbag deployment tool terminals until just before the pretensioner operation process.



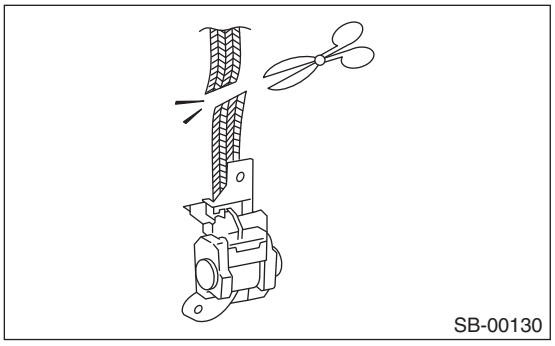
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

7) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

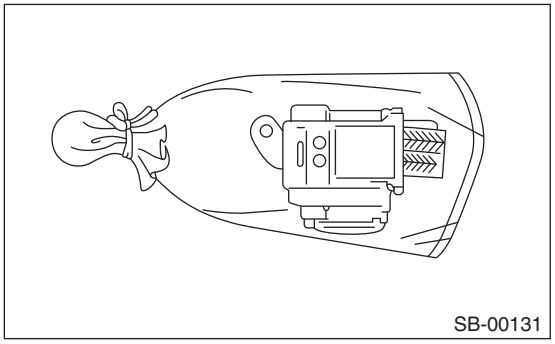


8) Connect the test harness adapter D connector to the pretensioner.
9) Make sure there is no one inside the vehicle.
10) Extend the wiring of airbag deployment tool to the limit, and close all the windows and rear gate completely.



11) Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.
12) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
13) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

CAUTION:
• After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated pretensioner to water.



14) Remove the seat belt outer - front. <Ref. to SB-19, REMOVAL, Front Seat Belt.>

15) Cut the seat belt at a position as close as possible to the seat belt retractor.

16) Place the activated pretensioner in a sealed vinyl bag, then discard.

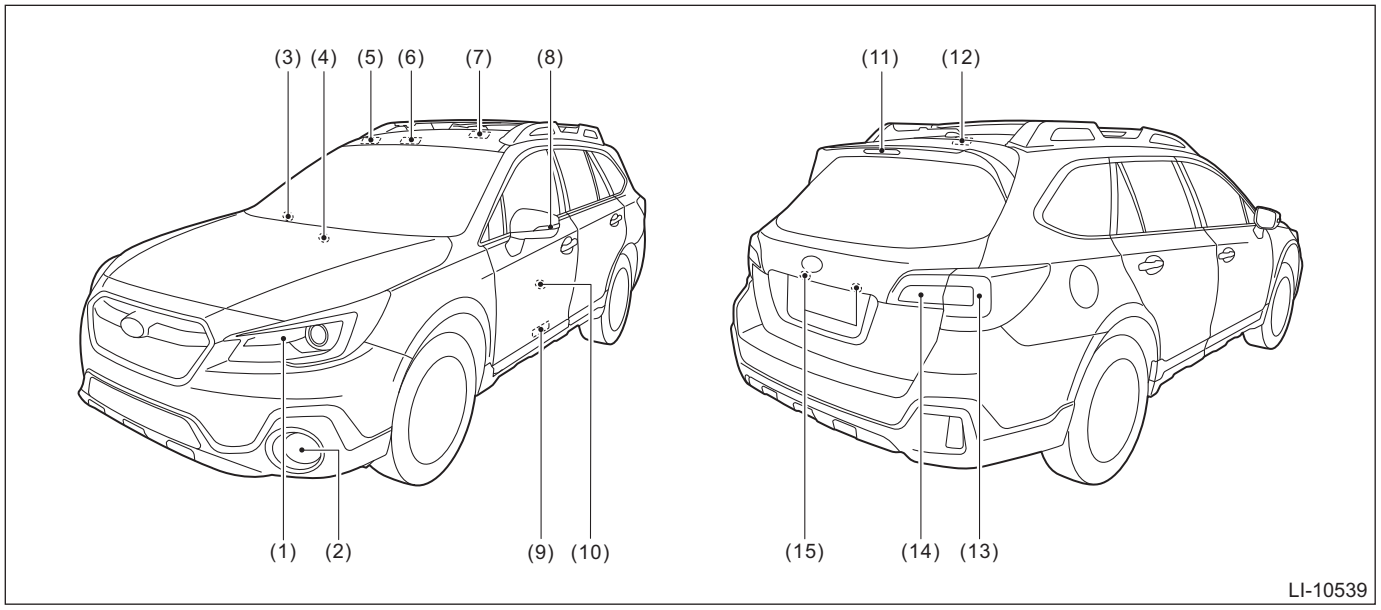
1. General Description

A: SPECIFICATION



- Sedan model

No.	Description		Capacity and wattage	Type
(1)	Headlight (halogen type)	Low beam	12 V — 55 W	H11
		High beam	12 V — 60 W	HB3
		Front turn signal light	12 V — 28 W	7444NA
		Daytime running light/parking light	13.5 V — 22/1.1 W (LED)	*
		Side marker light	13.5 V — 2.7 W (LED)	*
	Headlight (LED type)	Low beam/high beam	13.5 V — 29/32 W (LED)	*
		Front turn signal light	12 V — 28 W	7444NA
		Daytime running light/parking light	13.5 V — 22/1.1 W (LED)	*
		Side marker light	13.5 V — 2.7 W (LED)	*
(2)	Front fog light		12 V — 5.4 W (LED)	*
(3)	Glove box light		12 V — 1.4 W (LED)	*
(4)	Pocket light		12 V — 1.4 W (LED)	*
(5)	Vanity mirror light		14 V — 1.4 W	—
(6)	Spot map light		12 V — 8 W	—
(7)	Room light		12 V — 8 W	—
(8)	Side turn signal light		12 V — 0.4 W (LED)	*
(9)	Door step light		12 V — 5 W	W5W
(10)	Door pocket light		12 V — 1.4 W (LED)	*
(11)	High-mounted stop light		12 V — 0.8 W (LED)	*
(12)	Trunk room light		12 V — 3.8 W	SAE#194
(13)	Rear combination light	Tail & stop light	12 V — 0.4/4.7 W (LED)	*
		Turn signal light	12 V — 21 W	WY21W
		Side marker light	12 V — 5 W	W5W
(14)	Rear finisher light	Back-up light	12 V — 16 W	W16W
(15)	License plate light		12 V — 5 W	W5W

*: Non-disassembly type

- OUTBACK model

No.	Description		Capacity and wattage	Type
(1)	Headlight	Low beam	12 V — 55 W	H11
		High beam	12 V — 60 W	HB3
		Front turn signal light	12 V — 28 W	7444NA

(15)	License plate light		12 V — 5 W	W5W

*: Non-disassembly type

B: COMPONENT

1. HIGH BEAM ASSIST SYSTEM

For components related to the high beam assist system, refer to the following items.

- Halogen headlight model: <Ref. to GW-7, REARVIEW MIRROR, COMPONENT, General Description.>

• LED headlight model: <Ref. to ES-2, STEREO CAMERA, COMPONENT, General Description.>

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• Always replace with a bulb that is the same model and wattage as those of the old one.

D: PREPARATION TOOL

1. SPECIAL TOOL

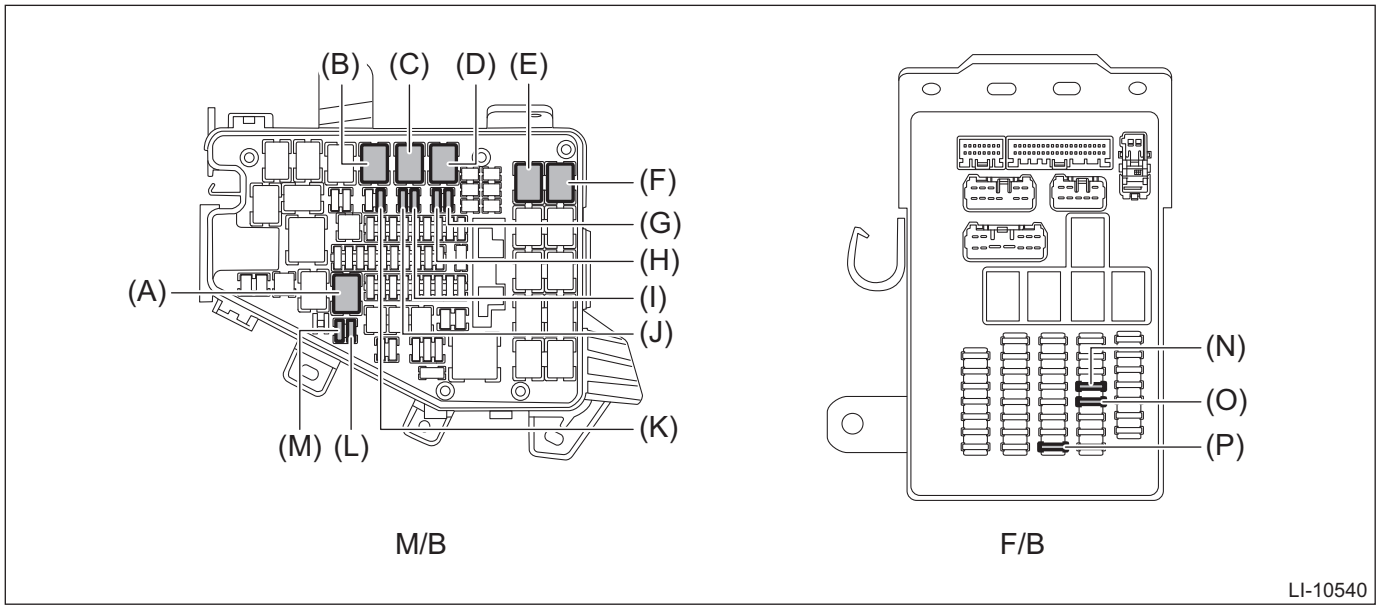

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

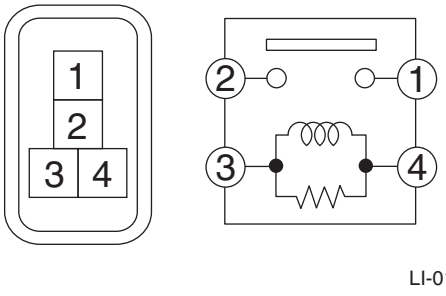
2. Relay and Fuse

A: LOCATION

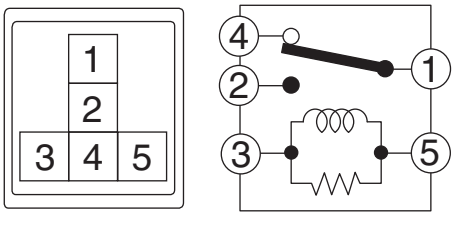
Main fuse box (M/B)	Front fog light relay	(A)
	Tail and illumination relay	(B)
	Headlight relay LO	(C)
	Headlight relay HI (LH)	(D)
	Daytime running light relay (RH)	(E)
	Daytime running light relay (LH)	(F)
	Fuse 10 A (front combination light (LH))	(G)
	Fuse 10 A (front combination light (RH))	(H)
	Fuse 15 A (front combination light (LH))	(I)
	Fuse 15 A (front combination light (RH))	(J)
	Fuse 10 A (license light (LH/RH), rear combination light (LH/RH))	(K)
	Fuse 10 A (front fog light (LH))	(L)
	Fuse 10 A (front fog light (RH))	(M)
Fuse & relay box (F/B)	Fuse 7.5 A (front combination light (LH), front combination light (RH), rear vehicle height sensor, inhibitor switch, auto headlight beam leveler control module)	(N)
	Fuse 10 A (daytime running light relay (LH), daytime running light relay (RH))	(O)
	Fuse 7.5 A (stop light and brake switch)	(P)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION



1. CHECK FUSE



1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01274
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Headlight System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. CHECK HALOGEN HEADLIGHT SYSTEM

Trouble symptom:
Headlight does not illuminate.

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the headlight and tail light illuminate?	The headlight system is normal.	Go to step **2**.
2	**CHECK BULB.** Check the headlight bulb.	Is the bulb normal?	Go to step **3**.	Replace the headlight bulb.
3	**CHECK CURRENT DATA.** Display the data of «Lighting I Switch Input» and «Lighting II Switch Input» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Go to step **6**.	Go to step **4**.
4	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition switch to OFF. 2) Check the combination switch (light). <Ref. to LI-33, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **5**.	Replace the combination switch (light). <Ref. to LI-32, Combination Switch (Light).>
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.
6	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Display the data of «Lighting I Lamp Output» and «Lighting II Lamp Output» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Go to step **7**.	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>

	Step	Check	Yes	No
7	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Check the harness between body integrated unit and headlight and between body integrated unit and tail light.	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

2. CHECK LED HEADLIGHT SYSTEM

Trouble symptom:
Headlight does not illuminate, or headlight is weak.

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the headlight and tail light illuminate?	The headlight system is normal.	Go to step **2**.
2	**CHECK CURRENT DATA.** Display the data «LED HEADLAMP(RH) error Signal» and «LED HEADLAMP(LH) error Signal» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is «Light On» displayed?	Go to step **3**.	Replace the headlight assembly. <Ref. to LI-37, Headlight Assembly.>
3	**CHECK CONNECTOR CONNECTION.** Check that the headlight connector is connected.	Is the connector connected?	Go to step **4**.	Connect the connector. When it does not illuminate even though the switch is turned to ON: Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the headlight connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the headlight connector and chassis ground. ***Connector & terminal*** ***LH side*** ***(B477) No. 1 (+) — Chassis ground (–):*** ***(B477) No. 2 (+) — Chassis ground (–):*** ***RH side*** ***(B487) No. 1 (+) — Chassis ground (–):*** ***(B487) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 — 13.5 V?	Go to step **5**.	Go to step **6**.

Step		Check	Yes	No
5	**CHECK HEADLIGHT.** Apply battery voltage between headlight unit connector terminals. ***Terminals*** ***Low beam*** ***No. 1 (+) — No. 4 (–):*** ***High beam*** ***No. 1 (+), No. 2 (+) — No. 4 (–):***	Does the headlight (low beam and high beam) come on at normal brightness?	Go to step **6**.	Replace the headlight assembly. <Ref. to LI-37, Headlight Assembly.> If «LED HEADLAMP(RH) error Signal» and «LED HEADLAMP(LH) error Signal» indicate no illumination in step 2), check the malfunction signal line. If short circuit to power supply occurs, repair or replace the harness.
6	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Display the data of «Lighting I Switch Input» and «Lighting II Switch Input» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Go to step **9**.	Go to step **7**.
7	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition switch to OFF. 2) Check the combination switch (light). <Ref. to LI-33, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **8**.	Replace the combination switch (light). <Ref. to LI-32, Combination Switch (Light).>
8	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.
9	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Display the data of «Lighting I Lamp Output» and «Lighting II Lamp Output» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Go to step **10**.	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>

Step		Check	Yes	No
10	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and the headlight and tail light connectors. 3) Check the harness between body integrated unit and headlight and between body integrated unit and tail light.	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

3. AUTO HEADLIGHT SYSTEM CHECK

NOTE:
Check the headlight system before checking the auto headlight system.
• Halogen headlight: <Ref. to LI-7, CHECK HALOGEN HEADLIGHT SYSTEM, INSPECTION, Headlight System.>
• LED headlight: <Ref. to LI-8, CHECK LED HEADLIGHT SYSTEM, INSPECTION, Headlight System.>

Step		Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Make the light control sensor vicinity dark. 3) Set the lighting switch to AUTO position. 4) Make the light control sensor vicinity bright. 5) Turn the lighting switch to the OFF position and turn to the AUTO position again.	Do the parking light, headlight and tail light illuminate?	The auto headlight system is normal.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, display the data of «Illumination Sensor Output». 2) Measure the voltage when the area around the light control sensor, which was dark, becomes bright. NOTE: For detailed operation procedures, refer to “Application help”. ***Illumination sensor output*** ***Dark condition: Approx. 0.6 V or less*** ***Bright condition: Approx. 3 V or more***	Is the voltage output according to the brightness?	Go to step **5**.	Go to step **3**.
3	**CHECK LIGHT CONTROL SENSOR.** Check the light control sensor. <Ref. to LI-36, INSPECTION, Light Control Sensor.>	Is the light control sensor normal?	Go to step **4**.	Replace the light control sensor.
4	**CHECK HARNESS.** 1) Disconnect the connectors from body integrated unit and light control sensor. 2) Check the harness between body integrated unit and light control sensor. ***Connector & terminal*** ***(i171) No. 8 — (i89) No. 1:*** ***(i171) No. 28 — (i89) No. 2:*** ***(i171) No. 27 — (i89) No. 3:***	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

	Step	Check	Yes	No
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Lighting AUTO input».	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the AUTO position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Go to step **6**.
6	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition switch to OFF. 2) Check the combination switch (light). <Ref. to LI-33, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **7**.	Replace the combination switch (light). <Ref. to LI-32, Combination Switch (Light).>
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

4. AUTO DIMMER CANCEL

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Auto Dimmer Cancel Setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting ON (except for 0)?	Go to step **2**.	Turn the setting to ON (except for 0).
2	**AUTO HEADLIGHT SYSTEM CHECK.** Check the operation of auto headlight system.	Is the auto headlight system normal?	Go to step **3**.	Check and repair the auto headlight system. <Ref. to LI-10, AUTO HEADLIGHT SYSTEM CHECK, INSPECTION, Headlight System.>
3	**CHECK ILLUMINATION CONTROL SYSTEM.** Check the operation of illumination control system.	Is the illumination control system normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Check and repair the illumination control system. <Ref. to IDI-9, SWITCH, INSPECTION, Combination Meter System.>

5. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:
Welcome lighting does not illuminate.

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is it turned to the setting other than «OFF»?	Go to step **2**.	Turn to the setting other than «OFF».
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Illumination Sensor Setting» using Subaru Select Monitor.	Is the setting «ON»?	Go to step **3**.	Turn the setting to «ON».
3	**CHECK AUTO HEADLIGHT.** 1) Set the lighting switch to AUTO position. 2) Make the light control sensor vicinity dark. 3) Turn the ignition switch to ON.	Do the parking light, tail light and headlight illuminate?	Go to step **4**.	Check the auto headlight system. <Ref. to LI-10, AUTO HEADLIGHT SYSTEM CHECK, INSPECTION, Headlight System.>
4	**CHECK DOOR LOCK.** Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Go to step **5**.	• Check keyless entry system. <Ref. to SL-18, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>
5	**CHECK BODY INTEGRATED UNIT.** 1) Display the data of «IGN voltage» using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is the voltage 10 — 15 V?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

6. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:
Welcome lighting does not go off.

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the illumination time setting correct?	Go to step **2**.	Set the illumination time.
2	**CHECK THE LIGHTS.** Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the parking light, tail light and headlight illuminate?	Go to step **3**.	Check the combination switch (light) and each light circuit.

	Step	Check	Yes	No
3	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Driver's door SW input».	Does the display switch between «OFF» ←→ «ON» when driver's door is opened/closed?	Go to step **4**.	Check the door switch. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
4	**CHECK DOOR LOCK.** Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	• Check keyless entry system. <Ref. to SL-18, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

7. CHECK WIPER INTERLOCK HEADLIGHT SYSTEM

Trouble symptom:
The headlights do not go off when the wiper is deactivated, or the headlights do not turn on when the wiper is activated.

	Step	Check	Yes	No
1	**CHECK HEADLIGHT SYSTEM.** Check the operation of the headlight system.	Is the headlight system normal?	Go to step **2**.	Check and repair the headlight system. • Halogen headlight: <Ref. to LI-7, CHECK HALOGEN HEADLIGHT SYSTEM, INSPECTION, Headlight System.> • LED headlight: <Ref. to LI-8, CHECK LED HEADLIGHT SYSTEM, INSPECTION, Headlight System.>
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Illumination Sensor Setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the setting «ON»?	Go to step **3**.	Turn the setting to «ON».
3	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Wiper link Auto Light Setup» using Subaru Select Monitor.	Is the setting «ON»?	Go to step **4**.	Turn the setting to «ON».
4	**CHECK BODY INTEGRATED UNIT.** 1) Display the data of «IGN voltage» using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is the voltage 10 — 15 V?	Go to step **7**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Measure the voltage between F/B fuse No. 5 and chassis ground.	Is the voltage 10 V or more?	Repair or replace the harness between the body integrated unit and the ignition switch.	Go to step **6**.
6	**CHECK CONNECTOR.** Check the connector or terminal of the body integrated unit for poor contact.	Is there any fault?	Repair or replace the connector and harness.	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>
7	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Lighting AUTO input».	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the AUTO position?	Go to step **12**.	Go to step **8**.
8	**CHECK BODY INTEGRATED UNIT.** Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i81) No. 20 (+) — Chassis ground (–):***	Does the voltage switch between OFF (9 to 16 V) ←→ ON (less than 1 V) when the lighting switch is moved from OFF position to the AUTO position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Go to step **9**.
9	**CHECK HARNESS.** 1) Disconnect the connectors of the combination switch (light) and the body integrated unit. 2) Check the harness between the combination switch (light) and the body integrated unit. ***Connector & terminal*** ***(i73) No. 12 — (i81) No. 20:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair or replace the harness between the combination switch (light) and the body integrated unit.
10	**CHECK HARNESS.** Check the harness between the combination switch (light) and chassis ground. ***Connector & terminal*** ***(i73) No. 19 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **11**.	Repair or replace the harness between the combination switch (light) and chassis ground.
11	**CHECK COMBINATION SWITCH (LIGHT).** Check the combination switch (light). <Ref. to LI-33, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal when the combination switch (light) is moved to AUTO position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Replace the combination switch (light).

	Step	Check	Yes	No
12	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Fr wiper input».	Does the display switch between «OFF» ←→ «ON» when the combination switch (wiper) is operated from OFF position to INT/LO/HI?	Go to step **17**.	Go to step **13**.
13	**CHECK BODY INTEGRATED UNIT.** Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 1 (+) — Chassis ground (–):***	Does the voltage switch between OFF (less than 1 V) ←→ ON (9 to 16 V) when the combination switch (wiper) is operated from the OFF position to INT/LO/HI?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Go to step **14**.
14	**CHECK HARNESS.** 1) Disconnect the connectors of the front wiper motor and the body integrated unit. 2) Check the harness between the front wiper motor and the body integrated unit. ***Connector & terminal*** ***(B8) No. 1 — (B280) No. 1:***	Is the resistance less than 10 Ω?	Go to step **15**.	Repair or replace the harness between the front wiper motor and the body integrated unit.
15	**CHECK HARNESS.** Check the harness between the front wiper motor and chassis ground. ***Connector & terminal*** ***(B8) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **16**.	Repair or replace the harness between the he front wiper motor and chassis ground.
16	**CHECK FRONT WIPER MOTOR.** Check the continuity between front wiper motor terminals. ***Connector & terminal*** ***(B8) No. 3 — (B8) No. 5:***	Is there continuity?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Replace the front wiper motor. <Ref. to WW-31, Front Wiper Motor and Link.>
17	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Front washer switch input».	Does the display switch between «OFF» ←→ «ON» when the front washer switch on the combination switch (wiper) is operated from OFF position?	Check the connection status of the harness and connector that may have a temporary poor contact.	Go to step **18**.
18	**CHECK BODY INTEGRATED UNIT.** Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i81) No. 12 (+) — Chassis ground (–):***	Does the voltage switch between OFF (less than 1 V) ←→ ON (9 to 16 V) when the front washer switch on the combination switch (wiper) is operated from the OFF position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-83, Body Integrated Unit.>	Go to step **19**.

	Step	Check	Yes	No
19	**CHECK HARNESS.** 1) Disconnect the connectors of the combination switch (wiper) and the body integrated unit. 2) Check the harness between the combination switch (wiper) and the body integrated unit. ***Connector & terminal*** ***(i68) No. 3 — (i81) No. 12:***	Is the resistance less than 10 Ω?	Go to step **20**.	Repair or replace the harness between the combination switch (wiper) and the body integrated unit.
20	**CHECK HARNESS.** Check the harness between the combination switch (wiper) and chassis ground. ***Connector & terminal*** ***(i68) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **21**.	Repair or replace the harness between the combination switch (wiper) and chassis ground.
21	**CHECK COMBINATION SWITCH (WIPER).** Check the continuity between terminals when the front washer switch on the combination switch (wiper) is pressed. ***Connector & terminal*** ***(i68) No. 3 — (i68) No. 2:***	Is there continuity?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Replace the combination switch (wiper). <Ref. to WW-11, Combination Switch (Wiper).>

8. CHECK STEERING RESPONSIVE HEADLIGHT SYSTEM

Refer to “Basic Diagnostic Procedure” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-2, Basic Diagnostic Procedure.>

9. CHECK LIGHTING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-33, INSPECTION, Combination Switch (Light).>

10.CHECK DIMMER & PASSING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-33, INSPECTION, Combination Switch (Light).>

C: NOTE

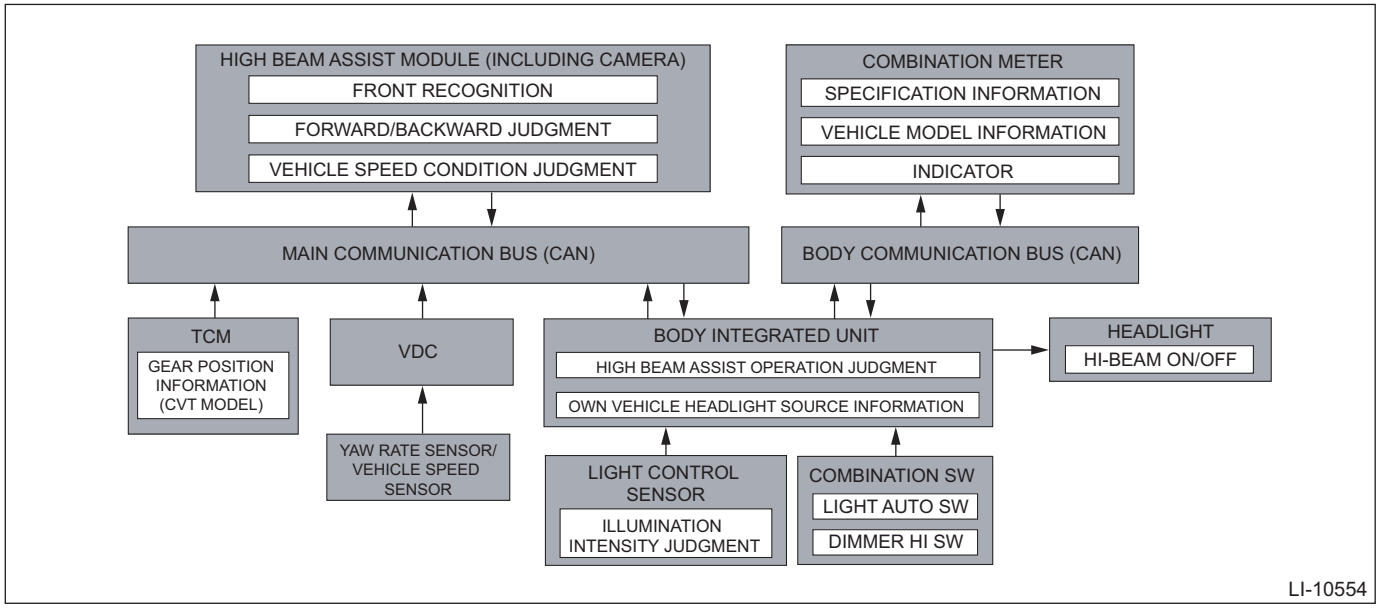
For operation procedures of each component of the headlight system, refer to the respective section.

- Headlight Assembly: <Ref. to LI-37, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-45, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-32, Combination Switch (Light).>
- Light control sensor: <Ref. to LI-35, Light Control Sensor.>

4. High Beam Assist System

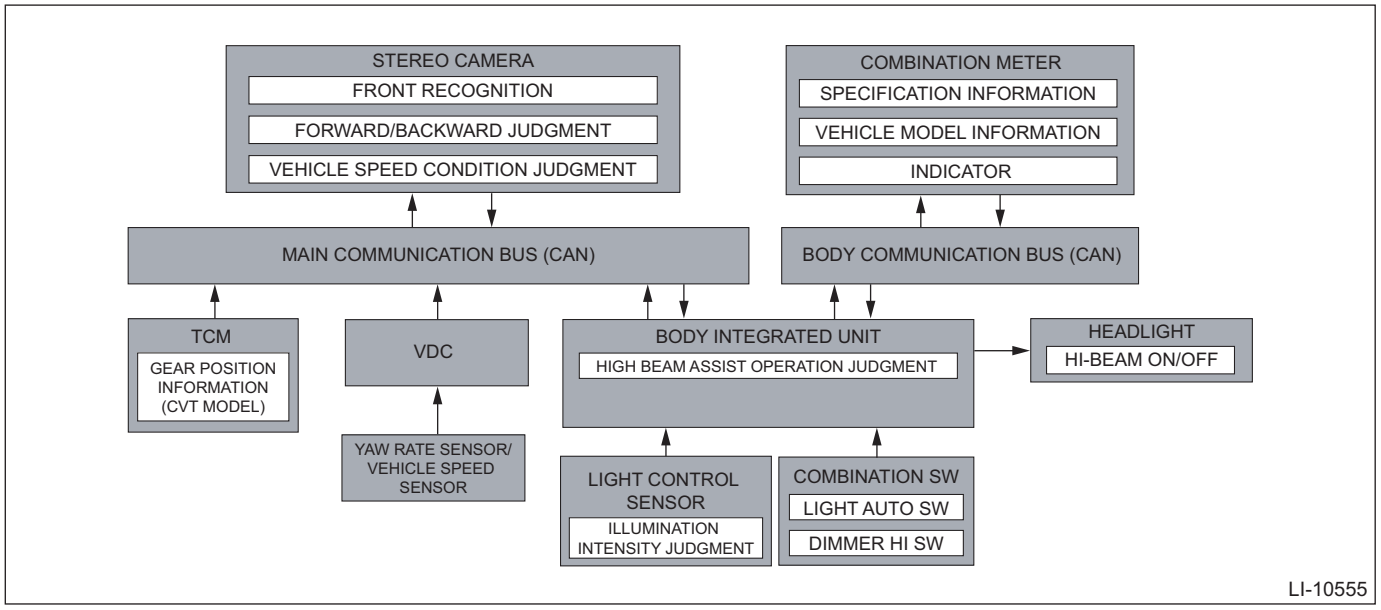
A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>



B: INSPECTION

1. BASIC INSPECTION



Refer to “Basic Diagnostic Procedure” of “BODY CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

2. SYSTEM BLOCK DIAGRAM

- Halogen headlight model

- LED headlight model

C: NOTE

For procedure of each component in the high beam assist system, refer to the respective section.

- Headlight assembly: <Ref. to LI-37, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-45, Headlight Bulb.>

- Combination switch (light): <Ref. to LI-32, Combination Switch (Light).>
- Light control sensor: <Ref. to LI-37, Headlight Assembly.>
- Rearview mirror (integrated with high beam assist module and camera) (halogen headlight model): <Ref. to GW-68, Rearview Mirror.>
- Stereo camera (LED headlight model): <Ref. to ES-7, Stereo Camera.>

5. Day Time Running Light System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. DAYTIME RUNNING LIGHT MODULE CHECK

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse upstream of the daytime running light relay.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK RELAY.** Check the daytime running light relay. <Ref. to LI-5, INSPECTION, Relay and Fuse.>	Is the relay OK?	Go to step **3**.	Replace the relay.
3	**CHECK BODY INTEGRATED UNIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-17, Read Diagnostic Trouble Code (DTC).> NOTE: For detailed operation procedures, refer to “Application help”.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-41, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK CURRENT DATA.** Display the following items using Subaru Select Monitor. • «Parking Brake Switch Input» • «EPB Operating status» • «Shift position» • «Lighting II Switch Input»	Is the input signal normal?	Go to step **5**.	Check the defective part.
5	**CHECK CURRENT DATA.** 1) Start the engine. 2) Release the parking brake and place the shift position to other than P range. 3) Display the data of «Daytime Running Light Alternate System (R)Output» and «Daytime Running Light Alternate System (L)Output» using Subaru Select Monitor.	Do the displays of «Daytime Running Light Alternate System (R)Output» and «Daytime Running Light Alternate System (L)Output» switch «OFF» ←→ «ON» when switching the lighting switch from OFF position to II (HEAD) position?	Go to step **6**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>
6	**CHECK DAYTIME RUNNING LIGHT ILLUMINATION.** 1) Disconnect the headlight connector. 2) Apply battery voltage on the headlight unit DRL terminal input. ***Terminals*** ***Halogen type*** ***No. 4 (+) — No. 3 (–):*** ***LED type*** ***No. 12 (+) — No. 16 (–):***	Does the daytime running light illuminate?	Go to step **7**.	Replace the headlight. <Ref. to LI-37, Headlight Assembly.>
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit, daytime running light relay and headlight. 2) Check each harness.	Is harness normal?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

C: NOTE

For operation procedures of each component of the daytime running light system, refer to the respective section.

- Headlight assembly: <Ref. to LI-37, Headlight Assembly.>

- Combination switch (light): <Ref. to LI-32, Combination Switch (Light).>

6. Clearance Light and Illumination Light System

A: WIRING DIAGRAM

Refer to “Clearance Light and Illumination Light System” in the wiring diagram. <Ref. to WI-146, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

B: INSPECTION

1. CHECK LIGHTING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-33, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the clearance light & illumination light system, refer to the respective sections.

- Headlight Assembly: <Ref. to LI-37, Headlight Assembly.>
- Combination switch (light): <Ref. to LI-32, Combination Switch (Light).>
- Parking light bulb: <Ref. to LI-49, Clearance/Parking Light Bulb.>
- Front side marker light bulb: <Ref. to LI-50, Front Side Marker Light Bulb.>
- Rear combination light assembly: <Ref. to LI-59, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-63, Tail/Stop Light Bulb.>
- Rear side marker light bulb: <Ref. to LI-65, Rear Side Marker Light Bulb.>
- License plate light: <Ref. to LI-70, License Plate Light.>
- Ignition switch illumination: <Ref. to LI-89, Ignition Switch Illumination.>

7. Front Fog Light System

A: WIRING DIAGRAM

Refer to “Front Fog Light System” in the wiring diagram. <Ref. to WI-244, WIRING DIAGRAM, Front Fog Light System.>

B: INSPECTION

1. CHECK FRONT FOG LIGHT SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-33, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the front fog light system, refer to the respective section.

- Combination switch (light): <Ref. to LI-32, Combination Switch (Light).>
- Front fog light assembly: <Ref. to LI-51, Front Fog Light Assembly.>
- Front fog light bulb: <Ref. to LI-56, Front Fog Light Bulb.>

8. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

Refer to “Turn Signal Light and Hazard Light System” in the wiring diagram. <Ref. to WI-376, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. CHECK HAZARD LIGHT SYSTEM

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT OPERATION.** 1) Turn the hazard switch to ON. 2) Check that the hazard light operates properly.	Does the hazard light blink?	The hazard light system is normal.	Go to step **2**.
2	**CHECK BULB.** Check the hazard (turn signal) light bulb.	Is the bulb normal?	Go to step **3**.	Replace the hazard (turn signal) light bulb.
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Hazard switch Input». NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between «OFF» ←→ «ON» when the hazard switch is operated from the OFF position to ON?	Go to step **6**.	Go to step **4**.
4	**CHECK HAZARD SWITCH.** Check the hazard switch. <Ref. to LI-46, INSPECTION, Hazard Switch.>	Is the hazard switch normal?	Go to step **5**.	Replace the hazard switch. <Ref. to LI-46, Hazard Switch.>
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and hazard switch. 2) Check the harness between body integrated unit and hazard switch.	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.
6	**CHECK CURRENT DATA.** Display the data of «Left turn signal output» and «Right turn signal output» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the hazard switch is operated from the OFF position to ON?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Go to step **7**.
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and each turn signal light. 2) Check the harness between body integrated unit and each turn signal light.	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

2. CHECK TURN SIGNAL LIGHT SYSTEM

	Step	Check	Yes	No
1	**CHECK TURN SIGNAL LIGHT OPERATION.** 1) Turn the ignition switch to ON. 2) Turn the turn signal light switch LH and RH to ON.	Does the turn signal light blink?	The turn signal light system is normal.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Display the data of «Left turn signal input» and «Right turn signal input» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Does the display switch between «OFF» ←→ «ON» when the turn signal switch is operated from OFF position?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK TURN SIGNAL SWITCH.** Check the turn signal switch. <Ref. to LI-33, INSPECTION, Combination Switch (Light).>	Is the turn signal switch OK?	Go to step **4**.	Replace the combination switch (light). <Ref. to LI-32, Combination Switch (Light).>
4	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

3. CHECK OF LANE CHANGE SIGNAL

Trouble symptom:
Lane change signal function does not operate.

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT SYSTEM.** Check the hazard light system. <Ref. to LI-23, CHECK HAZARD LIGHT SYSTEM, INSPECTION, Turn Signal Light and Hazard Light System.>	Is the hazard light system normal?	Go to step **2**.	Repair the hazard light system.
2	**CHECK TURN SIGNAL LIGHT SYSTEM.** Check the turn signal light system. <Ref. to LI-23, CHECK TURN SIGNAL LIGHT SYSTEM, INSPECTION, Turn Signal Light and Hazard Light System.>	Is the turn signal light system normal?	Go to step **3**.	Repair the turn signal light system.
3	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Lane change signal setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the setting «ON»?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Turn the setting to «ON».

4. CHECK TURN SIGNAL SWITCH

Refer to "Combination Switch (Light)". <Ref. to LI-33, INSPECTION, Combination Switch (Light).>

5. CHECK HAZARD SWITCH

Refer to "Hazard Switch". <Ref. to LI-46, INSPECTION, Hazard Switch.>

C: NOTE

For operation procedures of each component of the turn signal and hazard light system, refer to the respective sections.

- Headlight Assembly: <Ref. to LI-37, Headlight Assembly.>
- Combination switch (light): <Ref. to LI-32, Combination Switch (Light).>
- Front turn signal light bulb: <Ref. to LI-48, Front Turn Signal Light Bulb.>
- Side turn signal light assembly: <Ref. to LI-58, Side Turn Signal Light Assembly.>
- Rear combination light assembly: <Ref. to LI-59, Rear Combination Light Assembly.>

- Rear turn signal light bulb: <Ref. to LI-64, Rear Turn Signal Light Bulb.>
- Hazard switch: <Ref. to LI-46, Hazard Switch.>

9. Back-up Light System

A: WIRING DIAGRAM

Refer to “Back-up Light System” in the wiring diagram. <Ref. to WI-131, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. CHECK INHIBITOR SWITCH (CVT MODEL)

Refer to “Inhibitor Switch” in “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-107, Inhibitor Switch.>
- H6 model: <Ref. to CVT(TR690)-105, Inhibitor Switch.>

C: NOTE

For operation procedures of each component of the back-up light system, refer to the respective section.

- Rear finisher light assembly: <Ref. to LI-66, Rear Finisher Light Assembly.>
- Back-up light bulb: <Ref. to LI-68, Back-up Light Bulb.>

10.Stop Light System

A: WIRING DIAGRAM

Refer to “Stop Light System” in the wiring diagram. <Ref. to WI-363, WIRING DIAGRAM, Stop Light System.>

B: INSPECTION

1. CHECK STOP LIGHT SWITCH

Refer to “Stop Light Switch” in “BRAKE” section. <Ref. to BR-70, INSPECTION, Stop Light Switch.>

C: NOTE

For operation procedures of each component of the stop light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-59, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-63, Tail/Stop Light Bulb.>
- High-mounted stop light: <Ref. to LI-73, High-mounted Stop Light.>

11.Interior Light System

A: WIRING DIAGRAM

Refer to “Interior Light System” in the wiring diagram. <Ref. to WI-265, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. CHECK DOOR SWITCH

Refer to “Door Switch”. <Ref. to LI-95, INSPECTION, Door Switch.>

2. CHECK TRUNK LID LATCH SWITCH

Refer to “Trunk Lid Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. <Ref. to SL-53, ACTUATOR, INSPECTION, Trunk Lid Latch and Actuator Assembly.>

3. CHECK REAR GATE LATCH SWITCH

Refer to the following for “Rear gate latch and actuator assembly”.

- Model without power rear gate: <Ref. to SL-50, ACTUATOR, INSPECTION, Rear Gate Latch and Actuator Assembly.>
- Model with power rear gate: <Ref. to PRG-13, ACTUATOR, INSPECTION, Power Rear Gate Auto Closer.>

C: NOTE

For operation procedures of each component of the interior light system, refer to the respective section.

- Spot map light: <Ref. to LI-76, Spot Map Light.>
- Room light: <Ref. to LI-78, Room Light.>
- Trunk room light: <Ref. to LI-82, Trunk Room Light.>
- Luggage room light: <Ref. to LI-80, Luggage Room Light.>
- LED illumination light: <Ref. to LI-85, LED Illumination Light.>
- Vanity mirror light: <Ref. to LI-88, Vanity Mirror Light.>
- Door step light: <Ref. to LI-84, Door Step Light.>
- Door switch: <Ref. to LI-95, Door Switch.>

12.Auto Headlight Beam Leveler System

A: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

B: SPECIFICATION

1. TERMINAL ARRANGEMENT OF AUTO HEADLIGHT BEAM LEVELER CM

Refer to “Control Module I/O Signal” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “Basic Diagnostic Procedure” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-2, Basic Diagnostic Procedure.>

D: PROCEDURE

When parts related to the auto headlight beam leveler system are removed or replaced, perform the following procedures to initialize or reinitialize.

NOTE:
Before performing initialization or reinitialization, check the following:
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.
- Refer to the following chart to determine whether to initialize or reinitialize.

Initialization	When the auto headlight beam leveler CM was replaced with a new module.
Reinitialization	• When the auto headlight beam leveler CM was replaced with a part from another vehicle. • When suspension parts have been removed or replaced. (Cradle, front arm, sub frame, lateral link, housing, strut, etc.) • When the vehicle height sensor has been replaced or removed.

CAUTION:
If the indicator does not flash three times or the headlight beam does not operate, it can be assumed that there is an open circuit or faulty wiring in the harness of the auto headlight beam leveler CM, vehicle height sensors or headlight assembly. Perform inspection and repair according to the inspection results, then perform initialization/reinitialization again.
- **Initialization: <Ref. to LI-30, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>**
- **Reinitialization: <Ref. to LI-30, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>**

1. INITIALIZATION

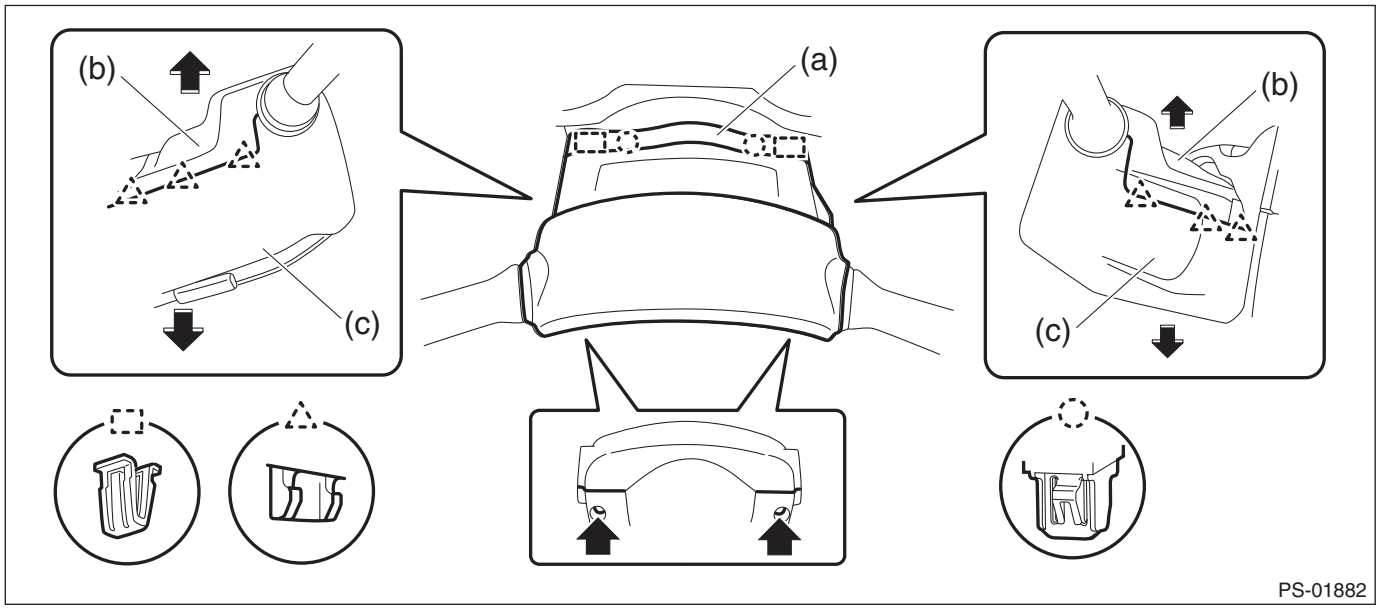
1) Check that the indicator in the meter is flashing twice repeatedly with the ignition switch ON.
2) Turn the ignition switch to OFF.
3) Install the backup fuse. <Ref. to RC-7, BACKUP/POWER SUPPLY FUSE, NOTE, Repair Contents.>
4) Bounce the vehicle several times to normalize the suspension.
5) Make certain that someone is seated in the driver's seat.
6) Turn the ignition switch to ON, and within 1.5 to 20 seconds, turn the lighting switch OFF → ON for three successive times.
7) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that initialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
8) Pull out the backup fuse from the fuse holder.
9) Perform beam adjustment for the headlight. <Ref. to LI-42, ADJUSTMENT, Headlight Assembly.>

2. REINITIALIZATION

1) Install the backup fuse. <Ref. to RC-7, BACKUP/POWER SUPPLY FUSE, NOTE, Repair Contents.>
2) Bounce the vehicle several times to normalize the suspension.
3) Make certain that someone is seated in the driver's seat.
4) Turn the ignition switch to ON, and, within 1.5 to 10 seconds, turn the lighting switch OFF → ON five or more successive times.
5) Check that the headlight beam drops once, then returns to normal.
6) After confirming 5), turn the ignition switch to OFF within 30 seconds.
7) Turn the ignition switch to ON again, and within 1.5 to 10 seconds, turn the lighting switch OFF → ON five or more successive times.
8) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that reinitialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
9) Pull out the backup fuse from the fuse holder.
10) Perform beam adjustment for the headlight. <Ref. to LI-42, ADJUSTMENT, Headlight Assembly.>

E: NOTE

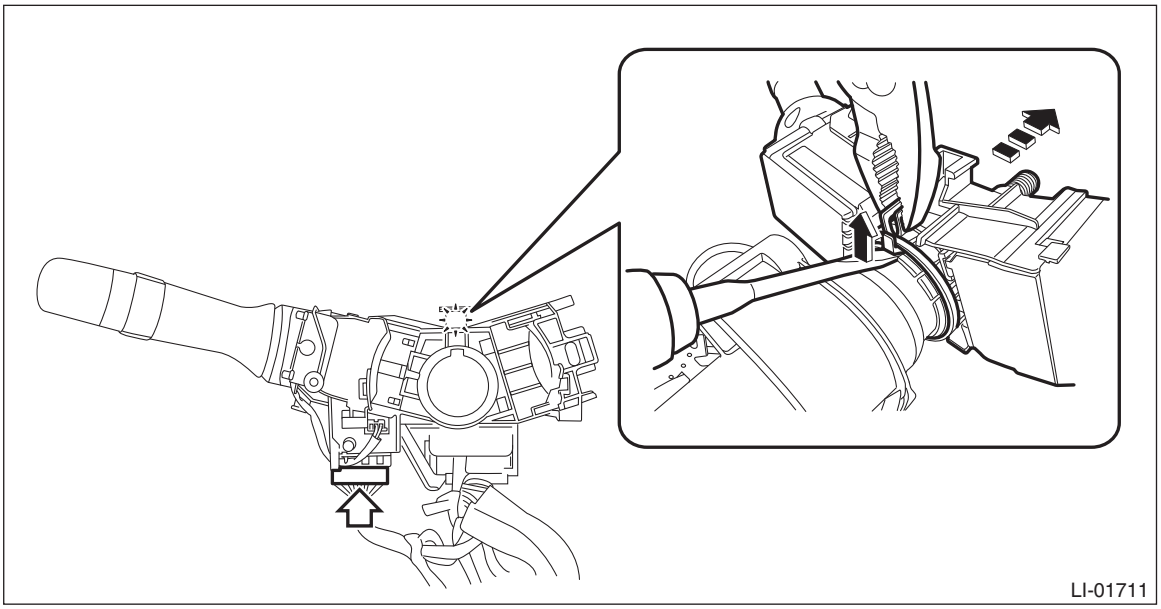
For operation procedures of each component of the auto headlight beam leveler system, refer to the respective section.



- Auto headlight beam leveler CM: <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>
- Vehicle height sensor: <Ref. to LI-93, Rear Height Sensor.>

13.Combination Switch (Light)

A: REMOVAL



CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-11, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column (a).
   (2) Remove the screws.
   (3) Release the claws, and remove the cover assembly - column UPR (b) and the cover assembly - column LWR (c).

6) Remove the steering roll connector. <Ref. to AB-59, REMOVAL, Roll Connector.>
7) Remove the switch assembly - combination wiper select. <Ref. to WW-11, REMOVAL, Combination Switch (Wiper).>
8) Remove the switch assembly - combination turn dimmer.
   (1) Disconnect the connector.
   (2) Using pliers, loosen the clamp.

(3) With the clamp loosened, release the claw using a flat tip screwdriver, and remove the switch assembly - combination turn dimmer.

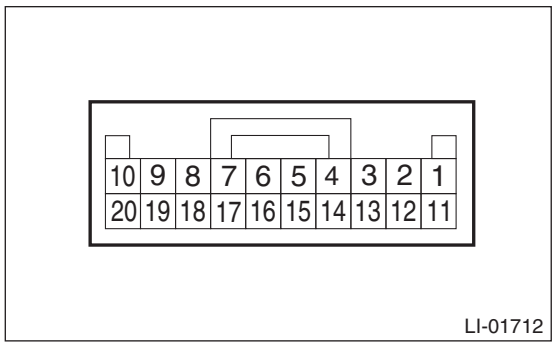
B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Install the switch assembly - combination turn dimmer.
   (1) Using pliers, loosen the clamp.
   (2) Insert the switch assembly - combination turn dimmer so that the claw is engaged with the cutout of the column assembly - steering while the clamp is loose.
   (3) Install the clamp, then connect the connector.

NOTE:
If it is replaced with a new part, engage the claw before pulling out the fixing pin of the clamp.
2) Install the switch assembly - combination wiper select.
3) Install the steering roll connector. <Ref. to AB-60, INSTALLATION, Roll Connector.>
4) Install the cover assembly - column.
5) Install the steering wheel.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)



Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

6) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

- Lighting switch

Terminal No.	Inspection conditions	Standard
18 — 12 19 — 12 20 — 12	Switch OFF	1 MΩ or more
19 — 12	Switch AUTO	Less than 1 Ω
18 — 12	Switch 1 (TAIL/PARKING)	Less than 1 Ω
18 — 12 20 — 12	Switch 2 (HEAD)	Less than 1 Ω

- Dimmer & passing switch

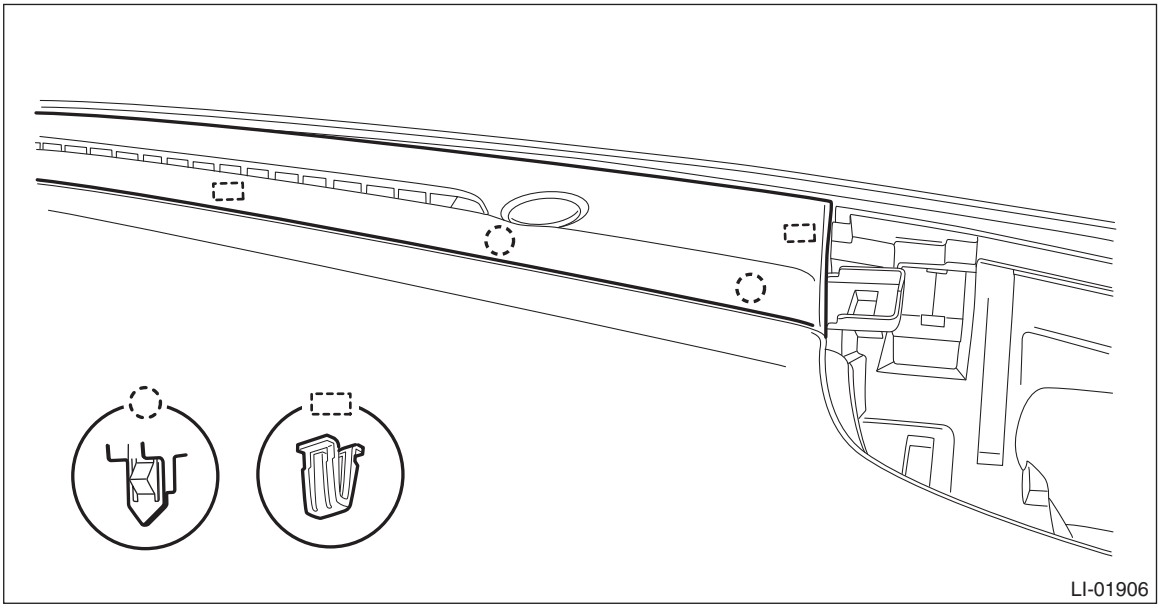
Terminal No.	Inspection conditions	Standard
11 — 12 17 — 12	Switch PASS	Less than 1 Ω
11 — 12	Switch UP	Less than 1 Ω

- Turn signal switch

Terminal No.	Inspection conditions	Standard
13 — 12	Switch TURN (RH)	Less than 1 Ω
15 — 12	Switch TURN (LH)	Less than 1 Ω

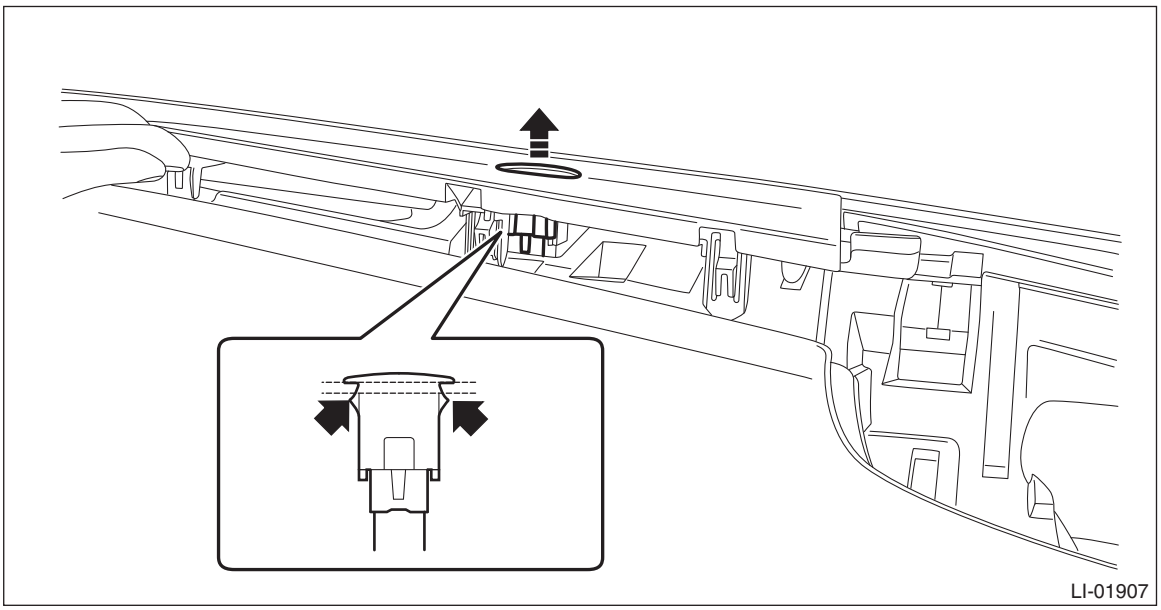
- Front fog light switch

Terminal No.	Inspection conditions	Standard
4 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω



2) Replace the switch assembly - combination turn dimmer if the inspection result is not within the standard value.

14.Light Control Sensor



A: REMOVAL

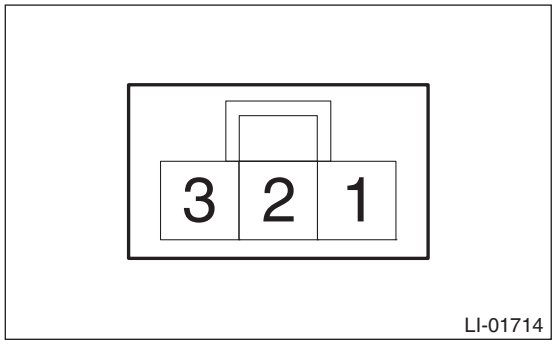
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
3) Release the clips and claws, then detach the grille speaker side. <Ref. to ETM-13, TWEETER, REMOVAL, Front Speaker.>
4) Remove the sensor - automatic light.
   (1) Release the claws of the grille - front defroster.

CAUTION:
• Secure minimum space for performing the operation. Do not remove the grille - front defroster. If the grille - front defroster is removed, it cannot be reinstalled unless the instrument panel is removed.
• Be careful not to damage the sensor and interior trim.

LI-01906

   (2) Release the claws, and then pull out the sensor - automatic light from the grille - front defroster.
   (3) Disconnect the connector and remove the sensor - automatic light.

LI-01907



B: INSTALLATION

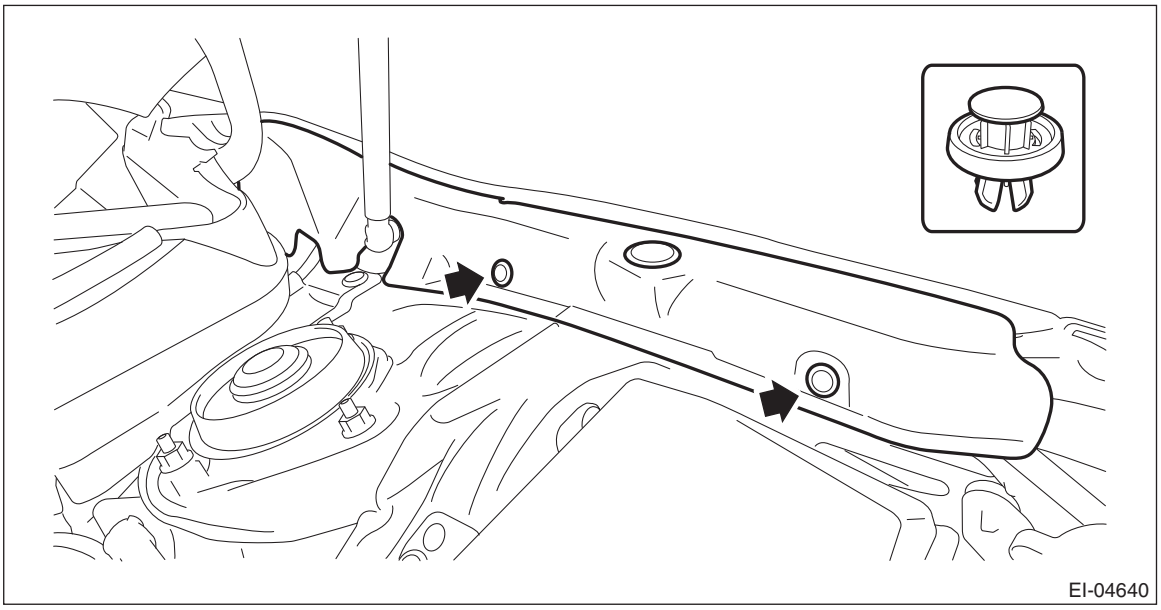
1) Install the sensor - automatic light.
2) Install the grille - front defroster.
3) Install the grille speaker side.
4) Install the trim panel - front pillar UPR. <Ref. to EI-95, INSTALLATION, Upper Inner Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Connect the connector.
2) Turn the ignition switch to ON, and set the lighting switch to the AUTO position.
3) Measure the voltage between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	Measure the voltage when the area around the sensor - automatic light, which was dark, becomes bright.	Dark condition: Approx. 0.6 V or less
		Bright condition: Approx. 3 V or more

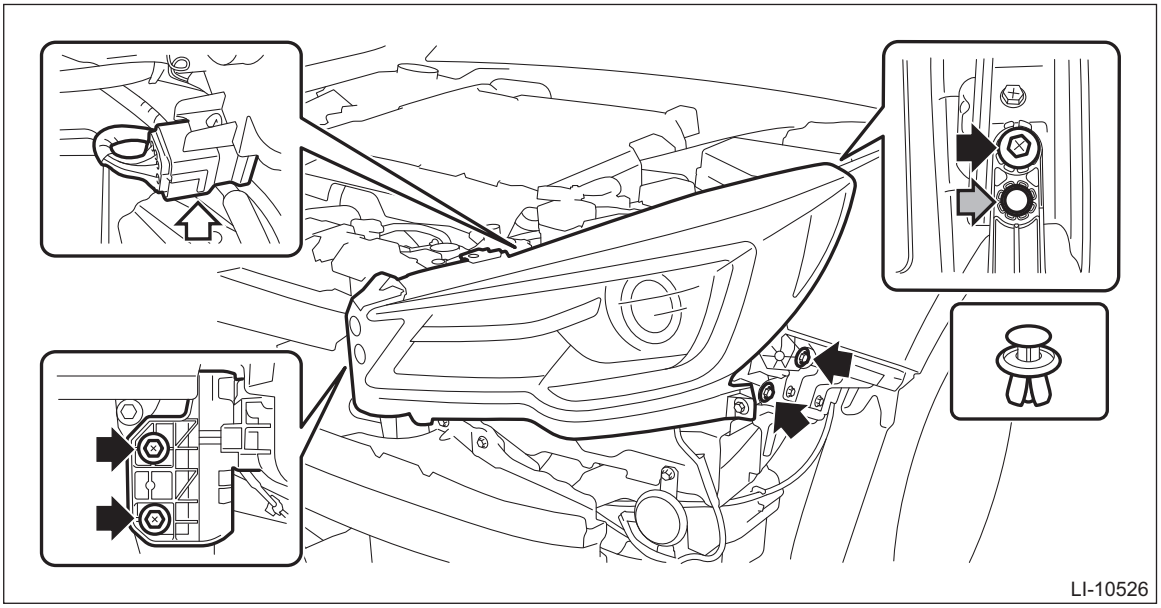


4) Replace the sensor - automatic light if the inspection result is not within the standard value.

15.Headlight Assembly

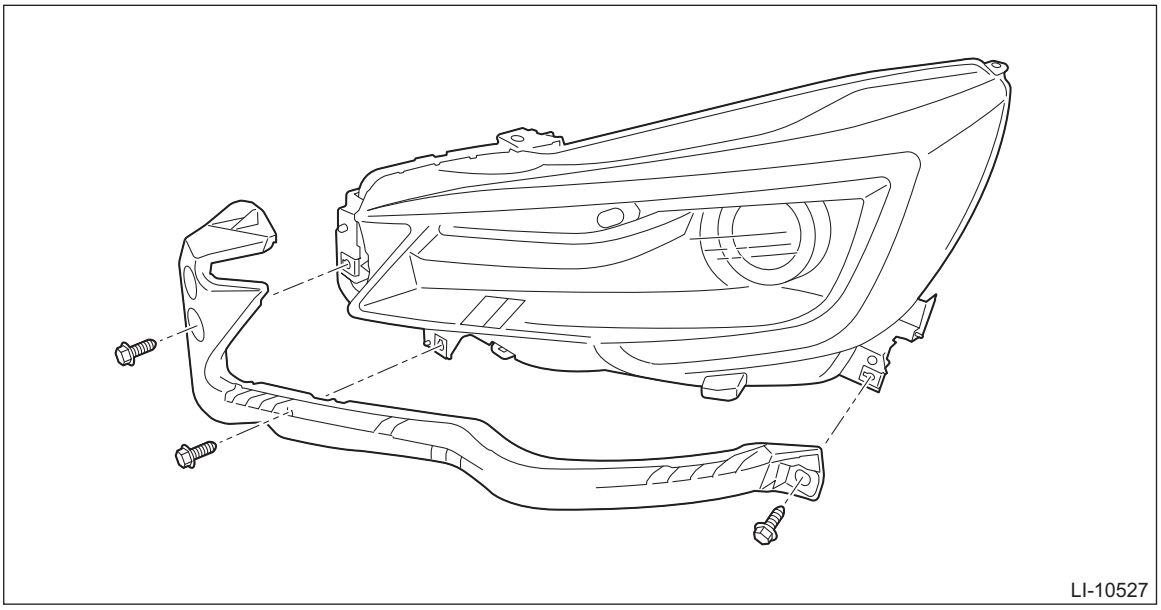
A: REMOVAL

CAUTION:
Do not perform work with wet hands, because there is a possibility of electrical shock.



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>
3) Remove the cover - front fender.
   (1) Remove the clip.
   (2) Release the claws, and then remove the cover - front fender UPR.

EI-04640

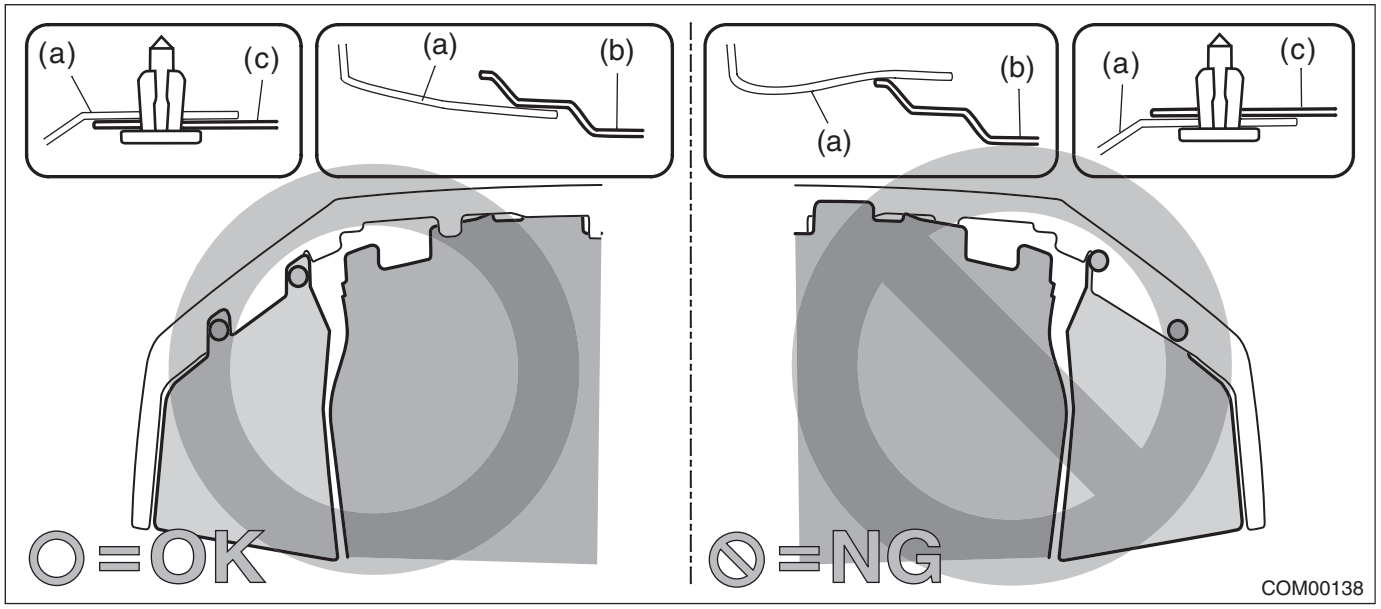


4) Remove the light assembly - head.

CAUTION:
Be careful not to damage the light assembly - head and the fender COMPL - front.

   (1) Disconnect the connector.
   (2) Remove the bolts and clips, and remove the light assembly - head.

LI-10526



(3) Remove the bolts, and then remove the bracket - front bumper corner.

B: INSTALLATION

CAUTION:

• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Install the bracket - front bumper corner.

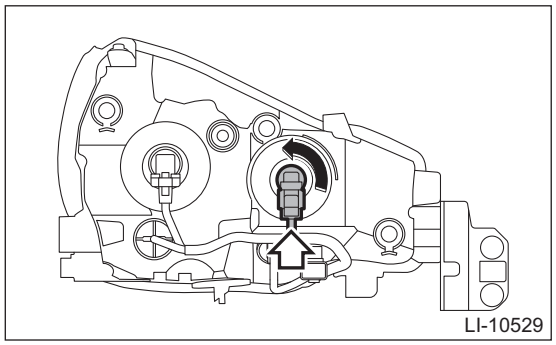
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the light assembly - head.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the cover - front fender UPR.
4) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>

5) Check and adjust the clearance between the hood COMPL - front and the light assembly - head. <Ref. to EB-15, ADJUSTMENT, Front Hood.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Adjust the headlight beam and fog light beam.
• Adjust the headlight beam. <Ref. to LI-42, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
• Adjust the fog light beam. (Model with fog light) <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>



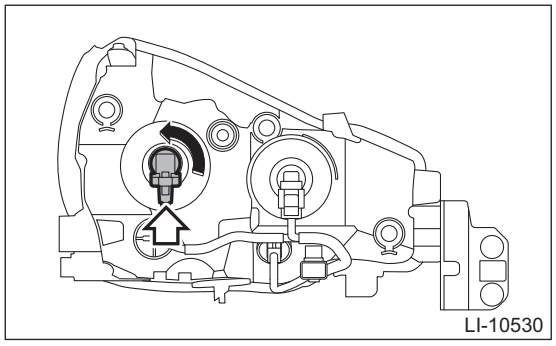
C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. HIGH BEAM BULB

• Halogen type

1) Disconnect the connector.
2) Rotate in the direction of arrow shown in the figure to remove the high beam bulb.



• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

2. LOW BEAM BULB

• Halogen type

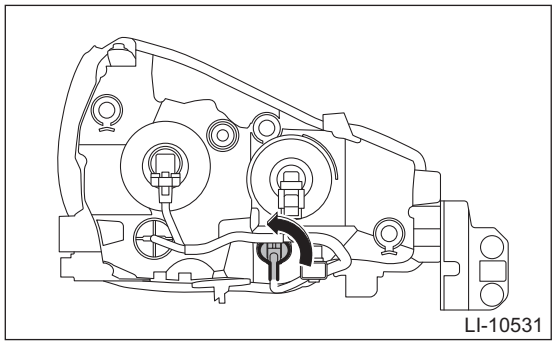
1) Disconnect the connector.
2) Rotate in the direction of arrow shown in the figure to remove the low beam bulb.

• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

3. PARKING LIGHT BULB

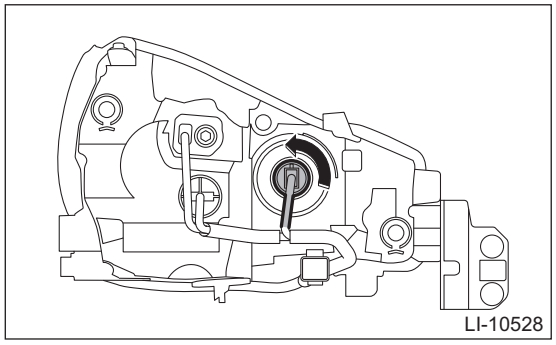
NOTE:
Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.



4. SIDE MARKER LIGHT BULB

NOTE:
Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

5. TURN SIGNAL LIGHT BULB



• Halogen type

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.

• LED type

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.

D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. HIGH BEAM BULB

• Halogen type

1) Install the high beam bulb.
2) Connect the connector.

• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

2. LOW BEAM BULB

• Halogen type

1) Install the low beam bulb.
2) Connect the connector.

• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

3. PARKING LIGHT BULB

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

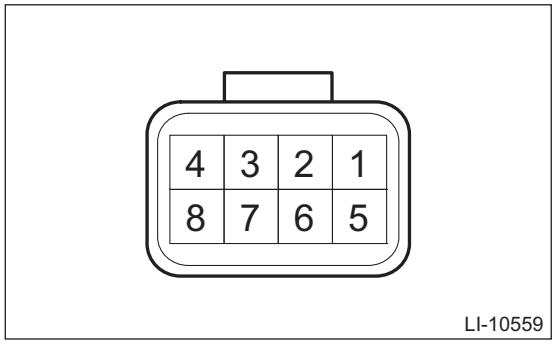
4. SIDE MARKER LIGHT BULB

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

5. TURN SIGNAL LIGHT BULB

• Halogen type

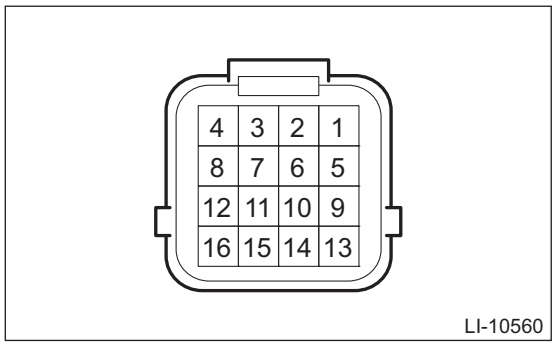
1) Install the turn signal light bulb.
2) Install the bulb socket.



• LED type

1) Install the turn signal light bulb.
2) Install the bulb socket.

E: INSPECTION



1) Apply battery voltage between the connector terminals to check the lighting condition of the light.

• Halogen headlight

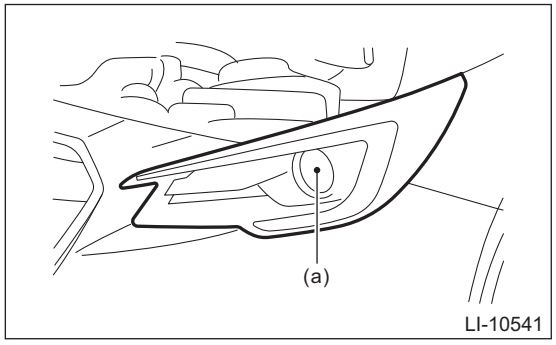
Terminal No.	Inspection conditions	Specification
6 (+) — 2 (–)	Apply battery voltage.	Headlight low beam illuminates.
5 (+) — 1 (–)		Headlight high beam illuminates.
7 (+) — 3 (–)		Clearance / side marker light illuminates.
4 (+) — 3 (–)		Daytime running light illuminates.
8 (+) — 3 (–)		Turn signal light on

• LED headlight

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (–)	Apply battery voltage.	Headlight low beam illuminates.
1, 2 (+) — 4 (–)		Headlight high beam illuminates.
11 (+) — 16 (–)		Clearance / side marker light illuminates.
12 (+) — 16 (–)		Daytime running light illuminates.
10 (+) — 16 (–)		Turn signal light on

2) Replace the harness and bulb if it is found defective.

NOTE:
When the LED (Light Emitting Diode) burns out, replace the light assembly - head.

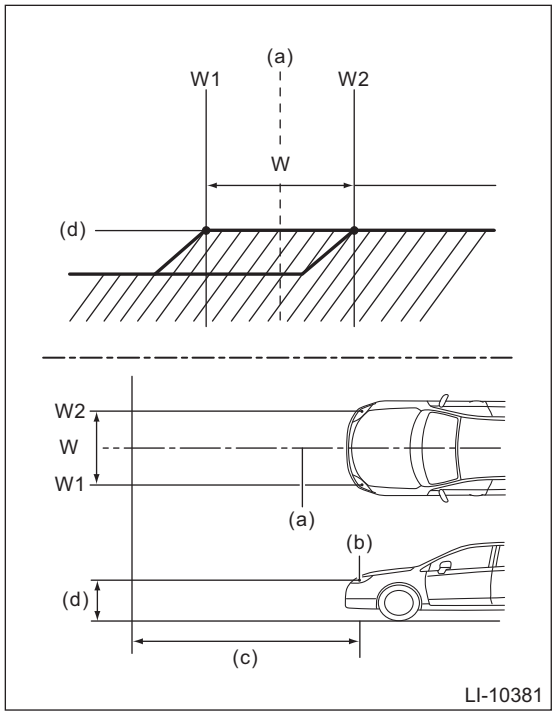


F: ADJUSTMENT

1. HEADLIGHT BEAM ADJUSTMENT

CAUTION:
• Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.
• When blocking the light emitted from the headlight, use a light shield or equivalent.
Do not apply the tape on the lens or place the cloth over it. It may raise the temperature in the light and cause deformation/bubble formations of the plastic lens.

1) Before checking the headlight beam level, be sure of the following:
- Check the area around the headlight for any scratches or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

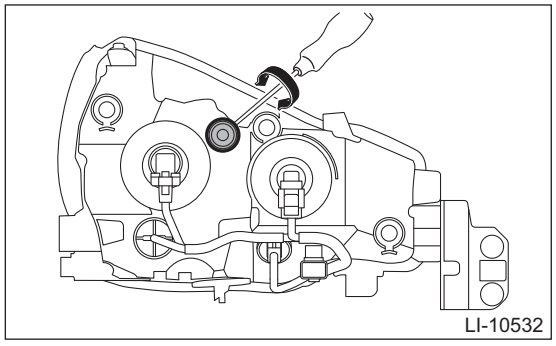


2) Bounce the vehicle several times to normalize the suspension.
3) Make certain that someone is seated in the driver's seat.
4) Measure the distance between the light source centers and the height of the light source centers for the low beam.

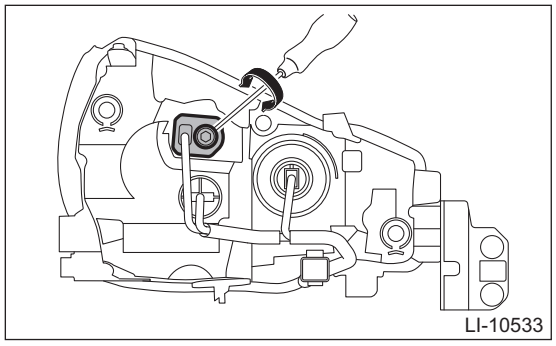
(a) Center of light source

5) Adjust the headlight beam.

(1) Place the vehicle with the front end facing to the measurement panel, open the front hood, and then illuminate the low beam.



(a) Vehicle center
(b) Center of light source
(c) 3 m (10 ft)
(d) Height of light source center



W mm (in)
1,426 (56.14)

(2) Adjust the beam level by turning the aiming screw.

- Halogen type

- LED type

16.Headlight Bulb

A: REMOVAL

NOTE:
Since the LED type headlight bulb is integrated into the headlight assembly, it cannot be removed.

1. HIGH BEAM

CAUTION:
- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air intake duct. (When removing the high beam bulb RH)
- H4 model: <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
- H6 model: <Ref. to IN(H6DO)-12, REMOVAL, Air Intake Duct.>

3) Remove the high beam bulb. <Ref. to LI-39, HIGH BEAM BULB, DISASSEMBLY, Headlight Assembly.>

2. LOW BEAM

CAUTION:
- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air intake duct. (When removing the low beam bulb RH)
- H4 model: <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
- H6 model: <Ref. to IN(H6DO)-12, REMOVAL, Air Intake Duct.>

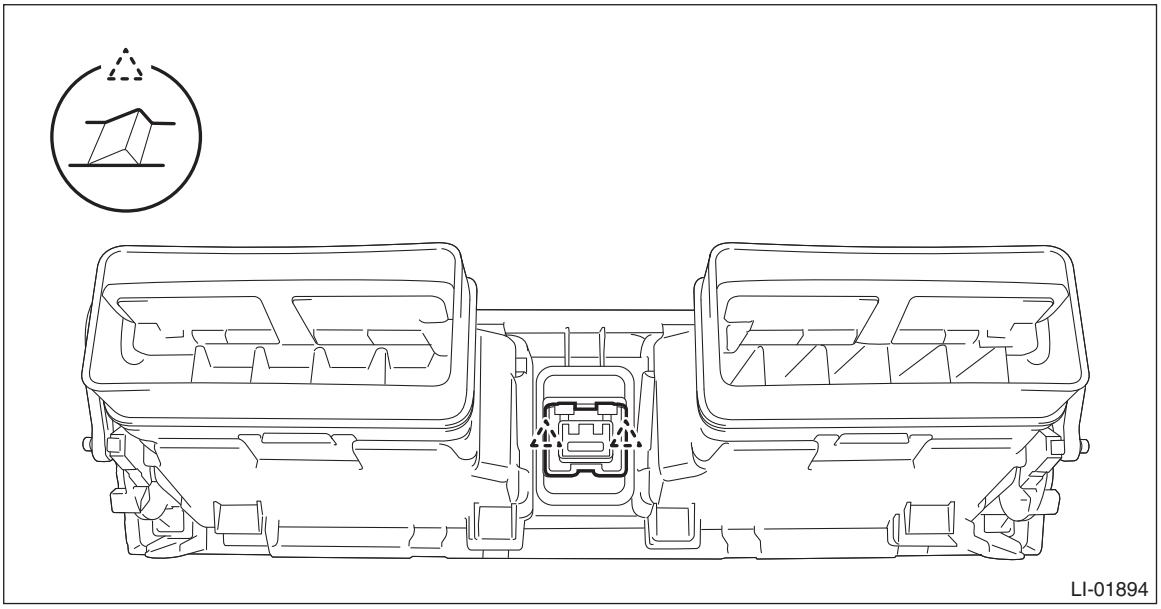
3) Remove the low beam bulb. <Ref. to LI-39, LOW BEAM BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

NOTE:
Since the LED type headlight bulb is integrated into the headlight assembly, it cannot be removed.

1. HIGH BEAM

1) Install the high beam bulb. <Ref. to LI-40, HIGH BEAM BULB, ASSEMBLY, Headlight Assembly.>
2) Install the air intake duct. (When the high beam bulb RH was removed)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



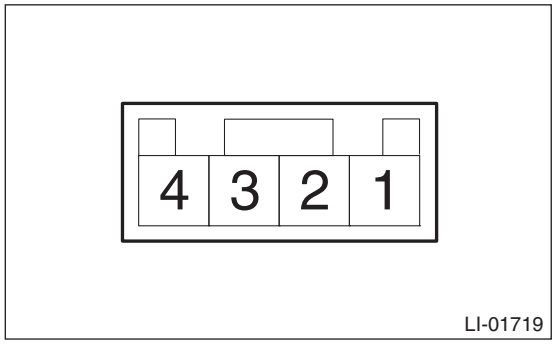
2. LOW BEAM

1) Install the low beam bulb.
2) Install the air intake duct. (When the low beam bulb RH is removed)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

17.Hazard Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Release the claws, and then remove the switch - hazard.



B: INSTALLATION

CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
1) Install the switch - hazard.
2) Install the center grille assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the switch - hazard if it is found defective.

18.Front Turn Signal Light Bulb

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air intake duct. (When removing the front turn signal light bulb RH)
- H4 model: <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
- H6 model: <Ref. to IN(H6DO)-12, REMOVAL, Air Intake Duct.>

3) Remove the front turn signal light bulb. <Ref. to LI-40, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

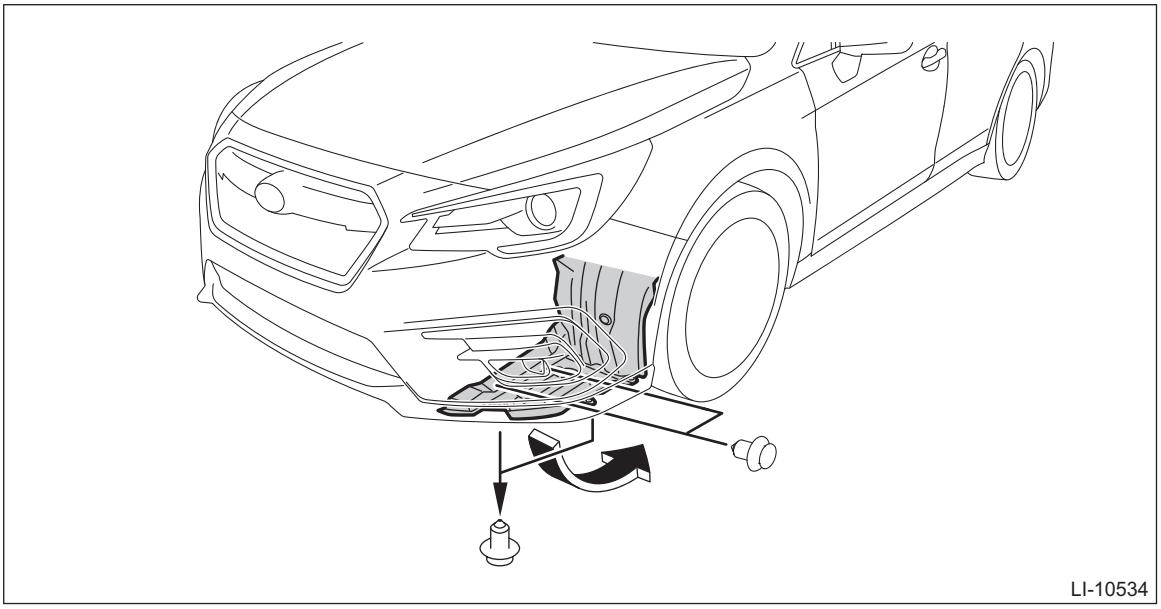
1) Install the front turn signal light bulb. <Ref. to LI-41, TURN SIGNAL LIGHT BULB, ASSEMBLY, Headlight Assembly.>
2) Install the air intake duct. (When the front turn signal light bulb RH is removed)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

19.Clearance/Parking Light Bulb

A: NOTE

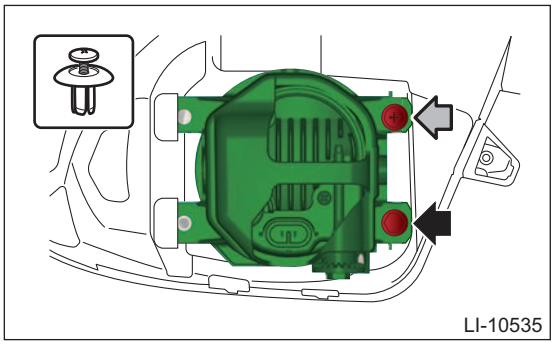
Since the parking light bulb is integrated into the light assembly - head, it cannot be removed.

20.Front Side Marker Light Bulb



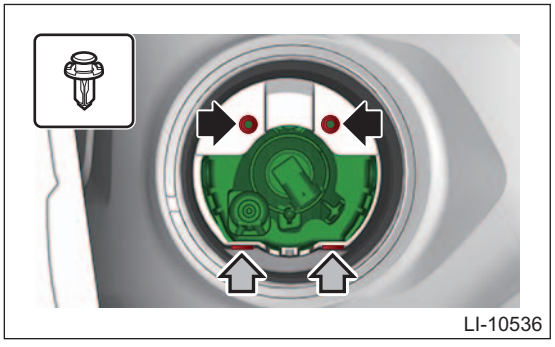
A: NOTE

Since the front side marker light bulb is integrated into the light assembly - head, it cannot be removed.



21.Front Fog Light Assembly

A: REMOVAL



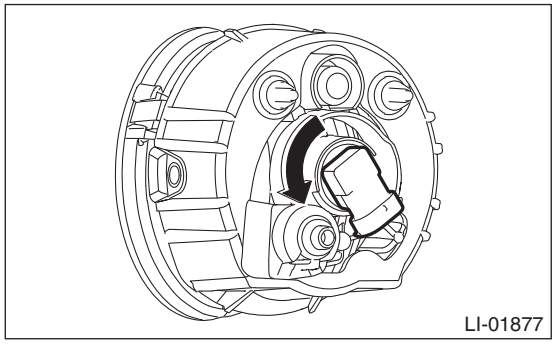
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the clips, and turn over the mud guard - front.

4) Remove the fog light assembly - front.
   (1) Disconnect the connector.
   (2) Remove the bolts, nuts and clips, and remove the fog light assembly - front.
   - Sedan model

   - OUTBACK model

B: INSTALLATION

CAUTION:
• Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



• After connecting the connector, make sure that the bulb is locked securely.
1) Install the fog light assembly - front.

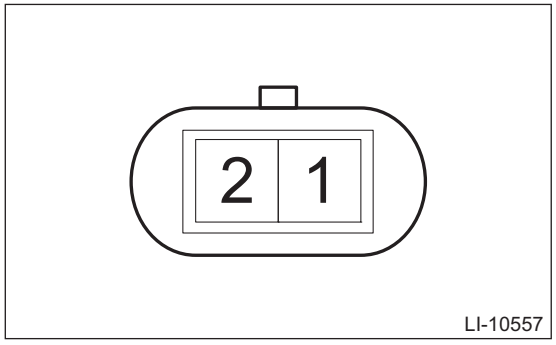
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the mud guard - front.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Adjust the fog light beam. <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Rotate in the direction of arrow shown in the figure to remove the front fog light bulb.
• Sedan model

NOTE:
Since it is a non-disassembled part, it cannot be removed. Replace the fog light assembly - front if faulty.
• OUTBACK model

D: ASSEMBLY



CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Install the front fog light bulb.

NOTE:
Since the LED type is a non-disassembled part, it cannot be removed. Replace the fog light assembly - front if faulty.

E: INSPECTION

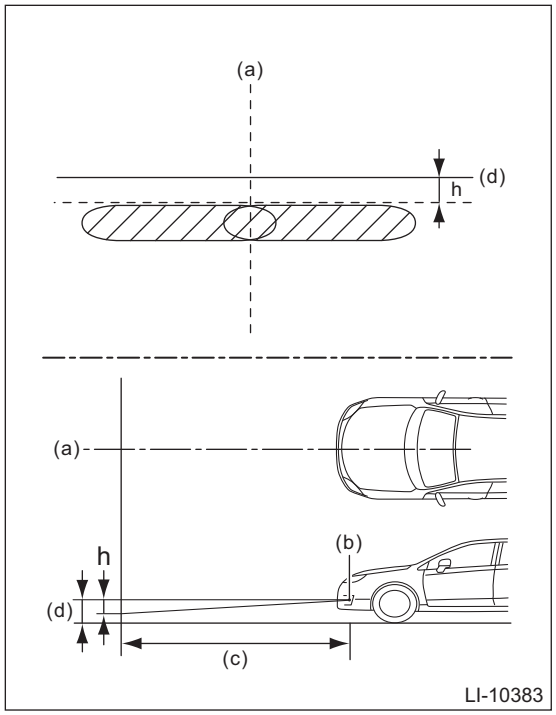
1. LED TYPE

1) Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
2 (+) — 1 (–)	Apply battery voltage.	Light ON

2) Replace the fog light assembly - front if faulty is found in the inspection.

NOTE:
When the LED (Light Emitting Diode) burns out, replace the fog light assembly - front because it is a non-disassembled part.

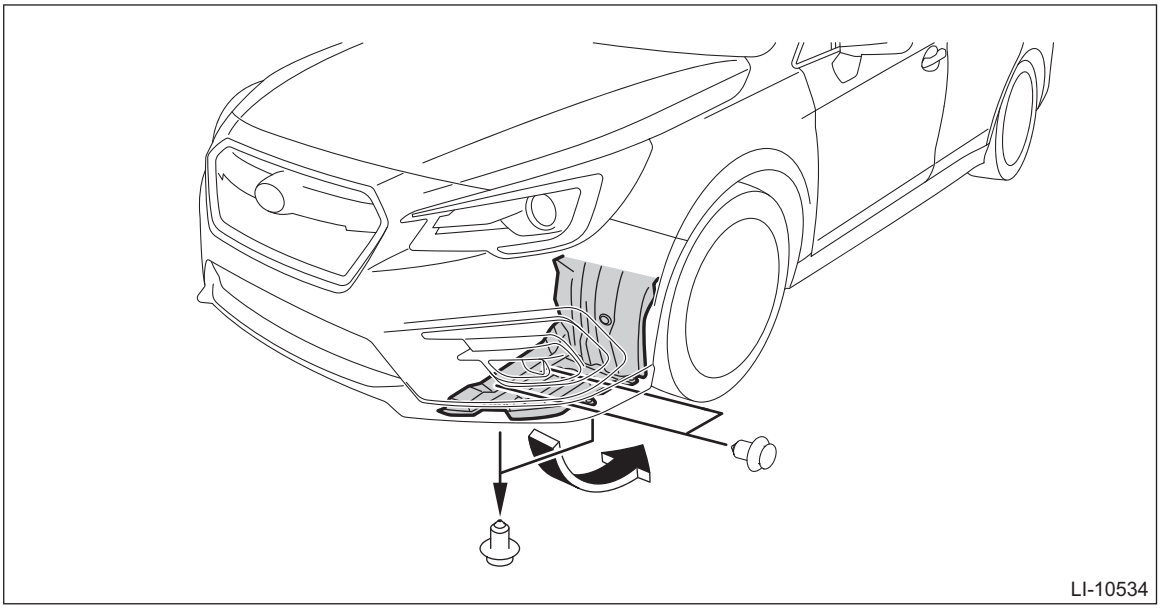


F: ADJUSTMENT

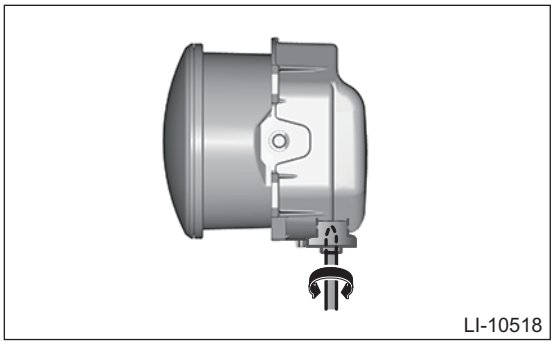
1. FOG LIGHT AIMING

1) Before checking the fog light beam level, be sure of the following:
- Check the area around the fog light for any scratches, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Bounce the vehicle several times to normalize the suspension.
3) Make certain that someone is seated in the driver's seat.



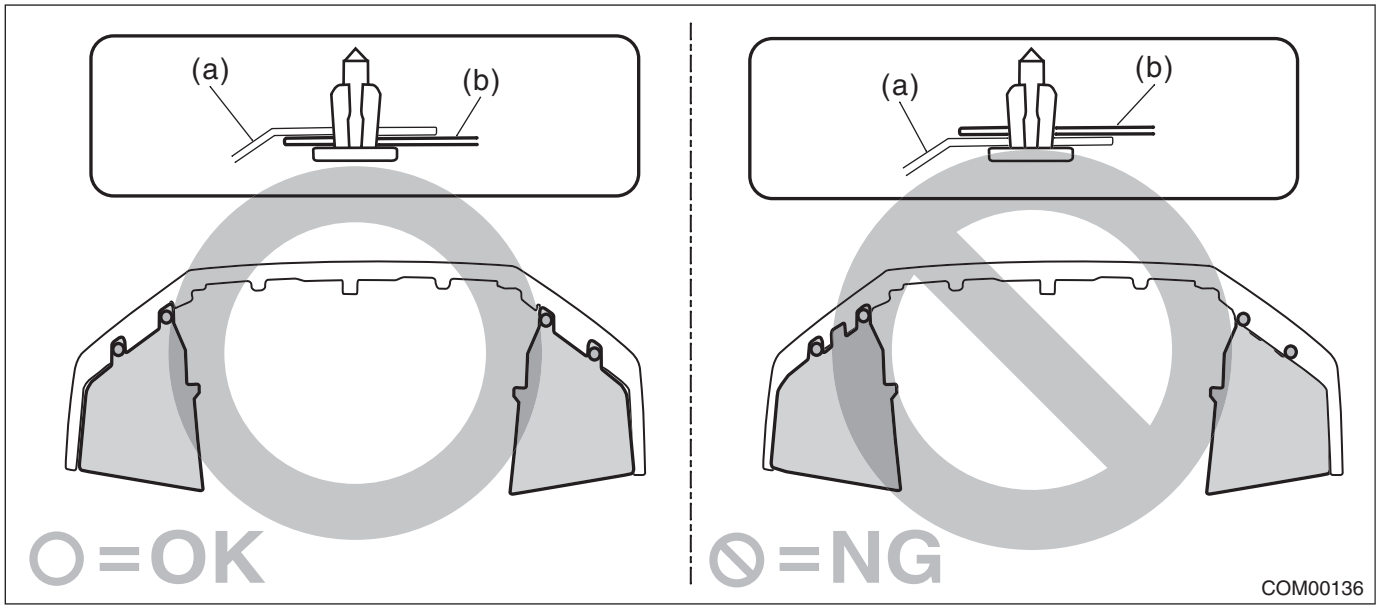
4) Place the vehicle with the front end facing to the measurement panel.



(a) Vehicle center
(b) Center of light source
(c) 3 m (10 ft)
(d) Height of light source center

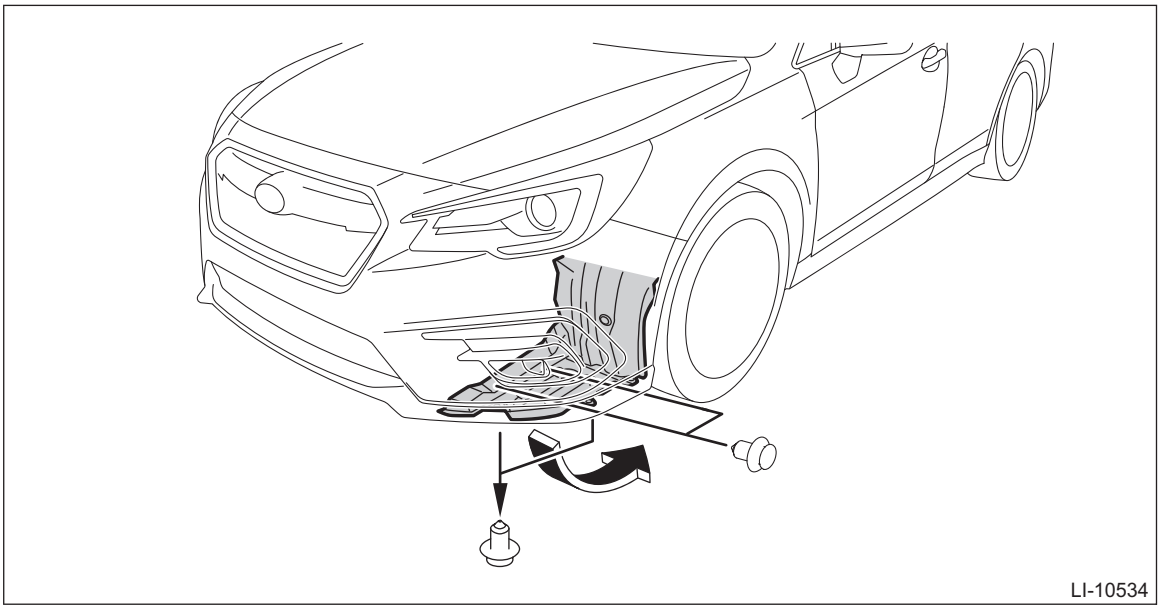
h mm (in) at 3 m (10 ft)
40 (1.58)

5) Adjust the fog light beam.
(1) Remove the clips, and turn over the mud guard - front.



(2) Adjust the beam level by turning the aiming screw.

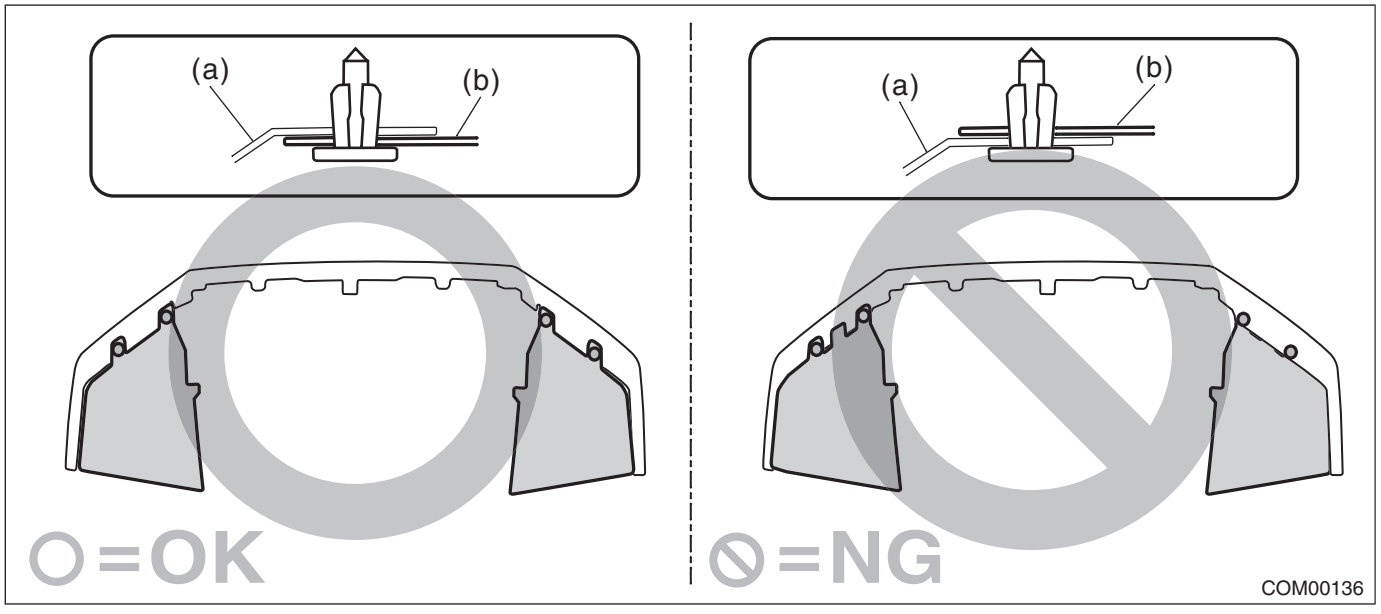
(3) Install the mud guard - front.



CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

22.Front Fog Light Bulb

A: REMOVAL



NOTE:
Since the LED type front fog light bulb is integrated into the front fog light assembly, it cannot be removed.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and turn over the mud guard - front.

3) Remove the front fog light bulb. <Ref. to LI-52, DISASSEMBLY, Front Fog Light Assembly.>

B: INSTALLATION

CAUTION:
• Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

• After connecting the connector, make sure that the bulb is locked securely.

NOTE:
Since the LED type front fog light bulb is integrated into the front fog light assembly, it cannot be removed.
1) Install the front fog light bulb. <Ref. to LI-53, ASSEMBLY, Front Fog Light Assembly.>

2) Install the mud guard - front.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

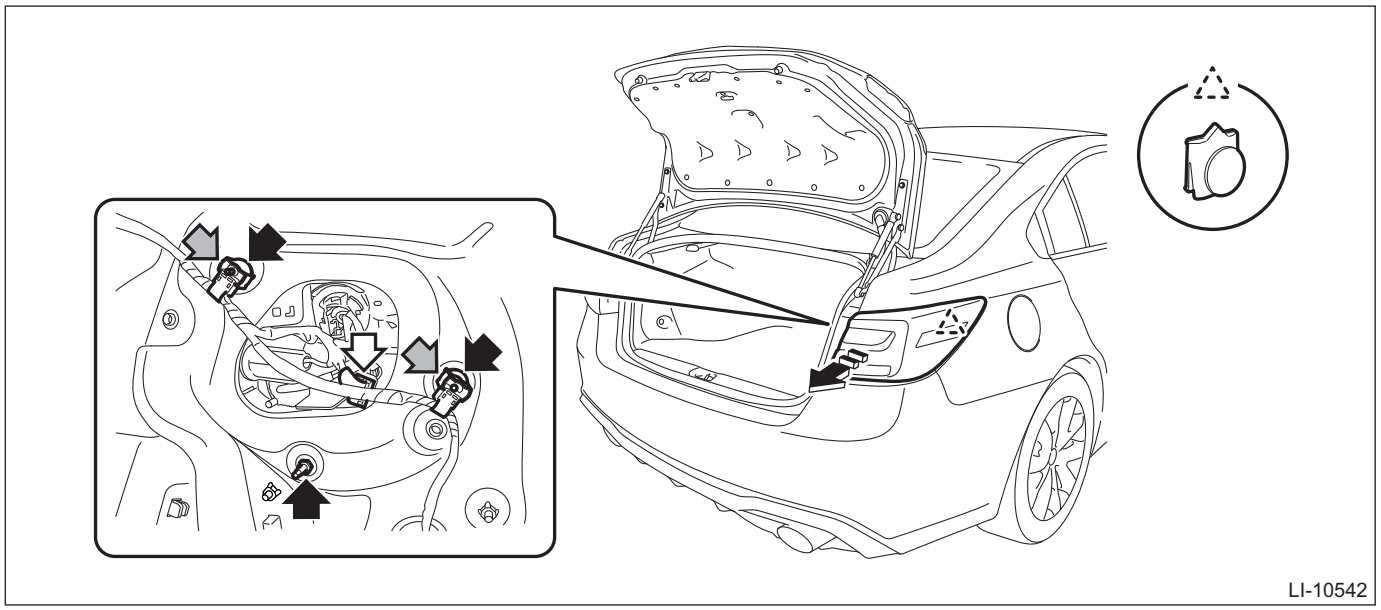
23.Side Turn Signal Light Assembly

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the side turn signal light assembly. <Ref. to GW-30, DISASSEMBLY, Outer Mirror Assembly.>

B: INSTALLATION

1) Install the side turn signal light assembly. <Ref. to GW-32, ASSEMBLY, Outer Mirror Assembly.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

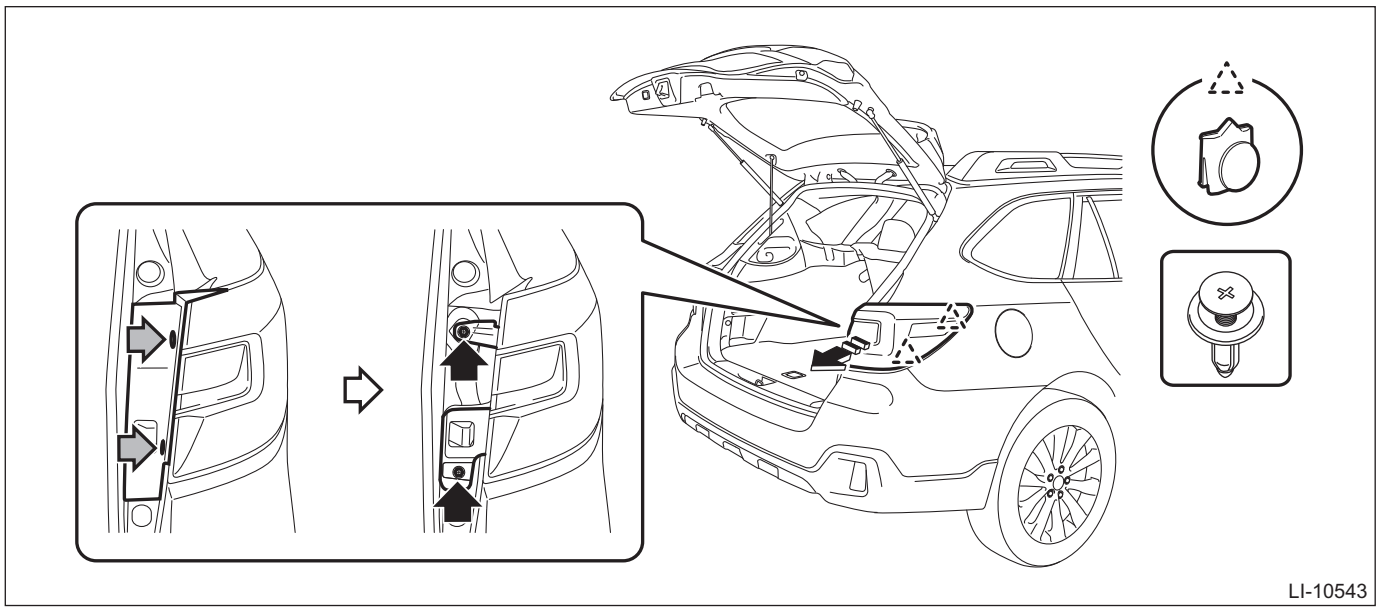


24.Rear Combination Light Assembly

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk trim panel - side. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the light assembly - rear combination.
   (1) Remove the harness clip and connector.
   (2) Release the nuts and clips, then remove the light assembly - rear combination.



CAUTION:
Be careful not to damage the clips.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination.
   (1) Remove the clips and detach the rear combination light covers.
   (2) Remove the bolt and release the clip.
   (3) Disconnect the connector and remove the light assembly - rear combination.

CAUTION:
Be careful not to damage the clips.

B: INSTALLATION

1. SEDAN MODEL

1) Replace the light assembly gasket with a new part.
2) Install the light assembly - rear combination.

CAUTION:
Be careful not to catch the harness in between the parts.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

3) Install the trunk trim panel - side.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the light assembly - rear combination.

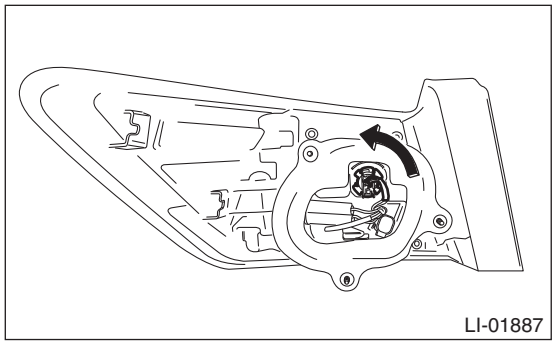
CAUTION:
Be careful not to catch the harness in between the parts.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

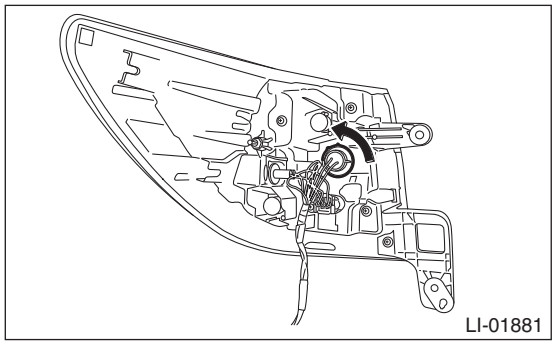
C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



1. TAIL LIGHT/STOP LIGHT BULB

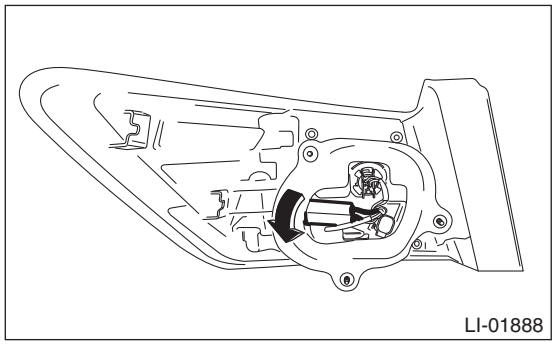
NOTE:
Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - rear combination if faulty.



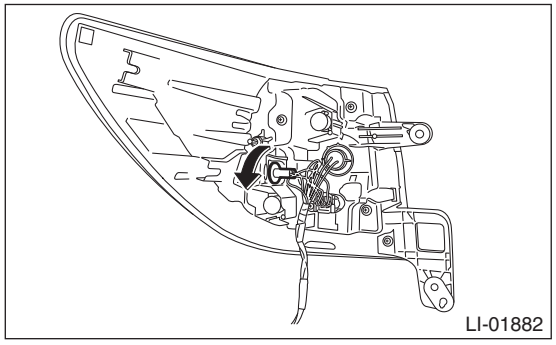
2. TURN SIGNAL LIGHT BULB

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.

• Sedan model



• OUTBACK model



3. SIDE MARKER LIGHT BULB

1) Rotate the bulb socket in the direction of arrow shown in the figure to remove the side marker light bulb.

• Sedan model

• OUTBACK model

D: ASSEMBLY

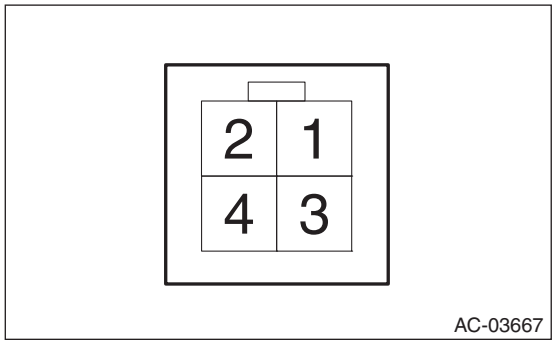
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. TAIL LIGHT/STOP LIGHT BULB

NOTE:
Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - rear combination if faulty.

2. TURN SIGNAL LIGHT BULB

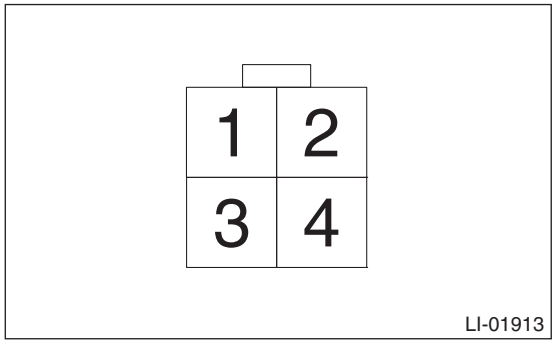
1) Install the turn signal light bulb.
2) Install the bulb socket.



3. SIDE MARKER LIGHT BULB

1) Install the side marker light bulb.
2) Install the bulb socket.

E: INSPECTION



1) Apply battery voltage between the connector terminals to check the lighting condition of the light.

- Sedan model

Terminal No.	Inspection conditions	Specification
3 (+) — 2 (–)	Apply battery voltage.	Stop light on
4 (+) — 2 (–)		Tail / side marker light on
1 (+) — 2 (–)		Turn signal light on

- OUTBACK model

Terminal No.	Inspection conditions	Specification
4 (+) — 3 (–)	Apply battery voltage.	Stop light on
2 (+) — 3 (–)		Tail / side marker light on
1 (+) — 3 (–)		Turn signal light on

2) Replace the harness and bulb if it is found defective.

NOTE:
Since LED (Light Emitting Diode) is used for the tail & stop light, replace the light assembly - rear combination if the LED burns out.

25.Tail/Stop Light Bulb

A: NOTE

Since the tail / stop light is integrated into the light assembly - rear combination, it cannot be removed.

26.Rear Turn Signal Light Bulb

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk trim panel - side. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the rear turn signal light bulb. <Ref. to LI-60, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination. <Ref. to LI-59, OUTBACK MODEL, REMOVAL, Rear Combination Light Assembly.>
3) Remove the rear turn signal light bulb. <Ref. to LI-60, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

B: INSTALLATION

1. SEDAN MODEL

1) Install the rear turn signal light bulb. <Ref. to LI-62, TURN SIGNAL LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk trim panel - side.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the rear turn signal light bulb. <Ref. to LI-62, TURN SIGNAL LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the light assembly - rear combination.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

27.Rear Side Marker Light Bulb

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk trim panel - side. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the rear side marker light bulb. <Ref. to LI-61, SIDE MARKER LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination. <Ref. to LI-59, OUTBACK MODEL, REMOVAL, Rear Combination Light Assembly.>
3) Remove the rear side marker light bulb. <Ref. to LI-61, SIDE MARKER LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

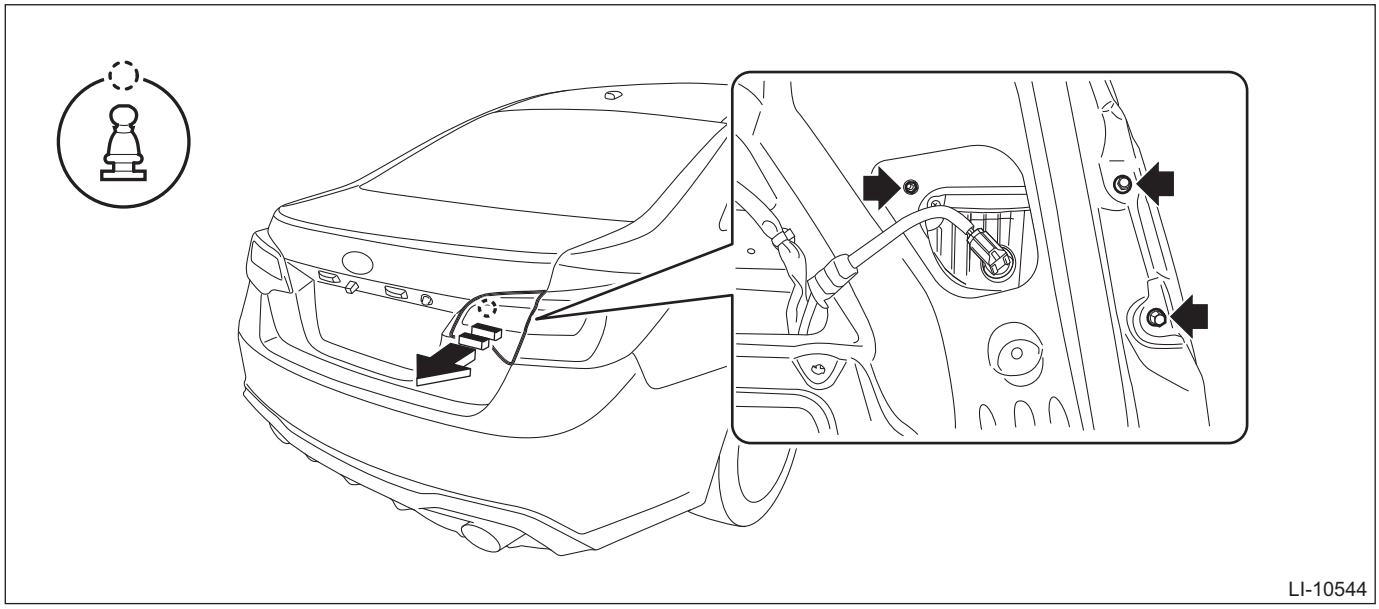
B: INSTALLATION

1. SEDAN MODEL

1) Install the rear side marker light bulb. <Ref. to LI-62, SIDE MARKER LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk trim panel - side.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

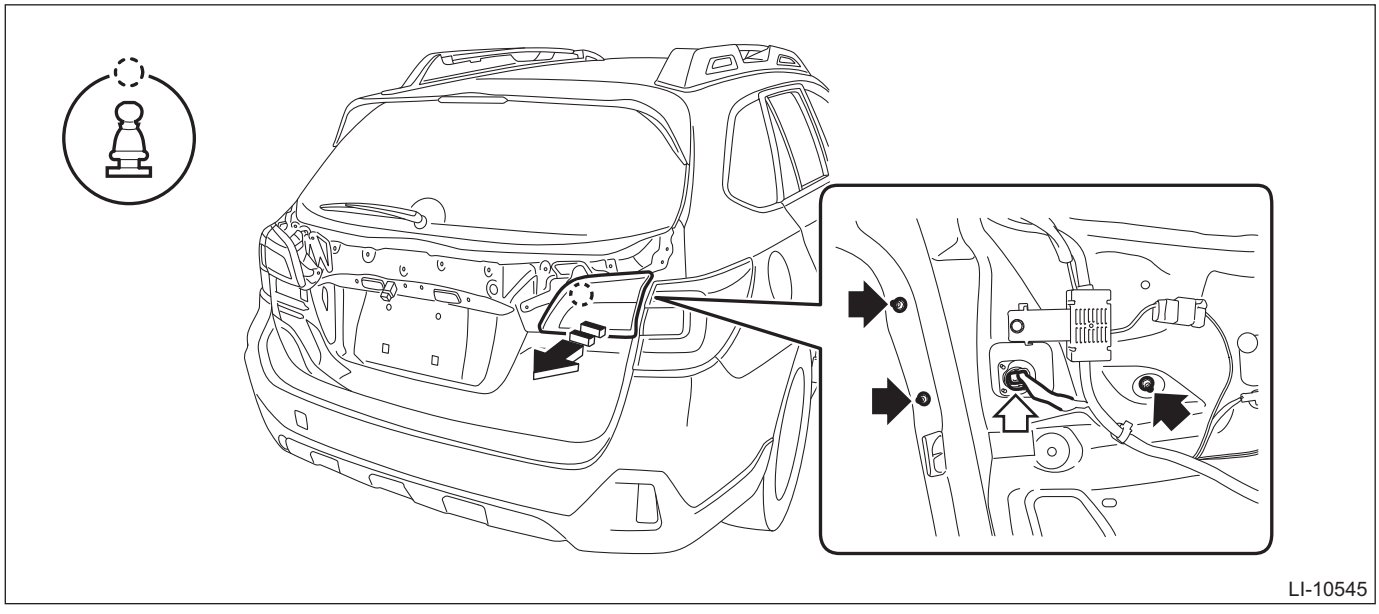
1) Install the rear side marker light bulb. <Ref. to LI-62, SIDE MARKER LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the light assembly - rear combination.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

28.Rear Finisher Light Assembly

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-62, REMOVAL, Trunk Lid Garnish.>
4) Remove the rear finisher light assembly.
   (1) Disconnect the connector.
   (2) Remove the nuts and release the pin, then remove the rear finisher light assembly.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-63, REMOVAL, Rear Gate Garnish.>
4) Remove the rear finisher light assembly.
   (1) Disconnect the connector.
   (2) Remove the nuts and release the pin, then remove the rear finisher light assembly.

B: INSTALLATION

1. SEDAN MODEL

1) Replace the light assembly gasket with a new part.
2) Install the rear finisher light assembly.
3) Install the garnish - trunk.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

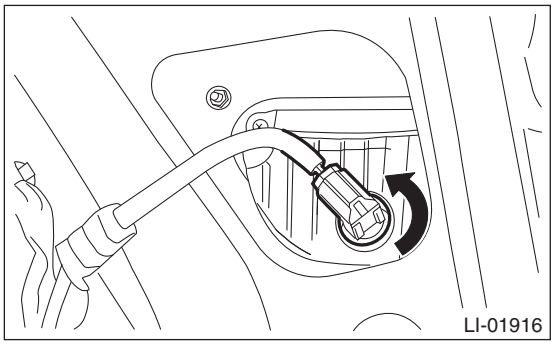
4) Install the trim panel - trunk lid.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Replace the light assembly gasket with a new part.
2) Install the rear finisher light assembly.
3) Install the garnish assembly - rear gate.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

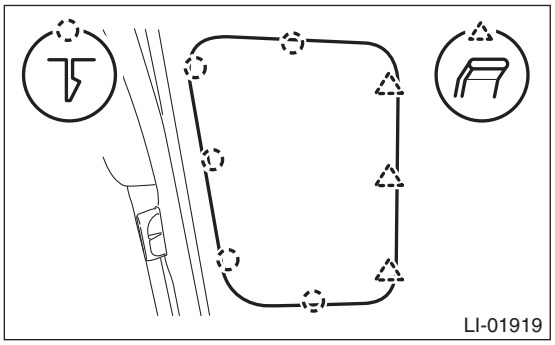
4) Install the trim panel - rear gate.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



29.Back-up Light Bulb

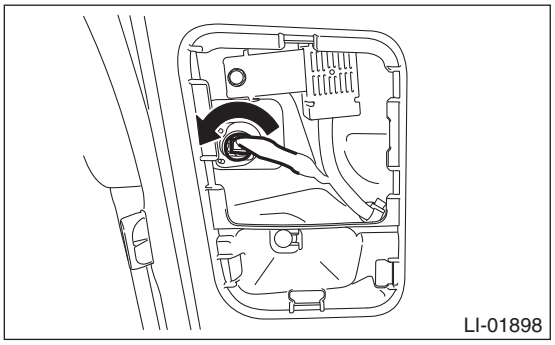
A: REMOVAL

1. SEDAN MODEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the bulb socket and back-up light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the claws and remove the bulb inspection cover of rear gate trim.

3) Remove the bulb socket and back-up light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

1. SEDAN MODEL

1) Install the back-up light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

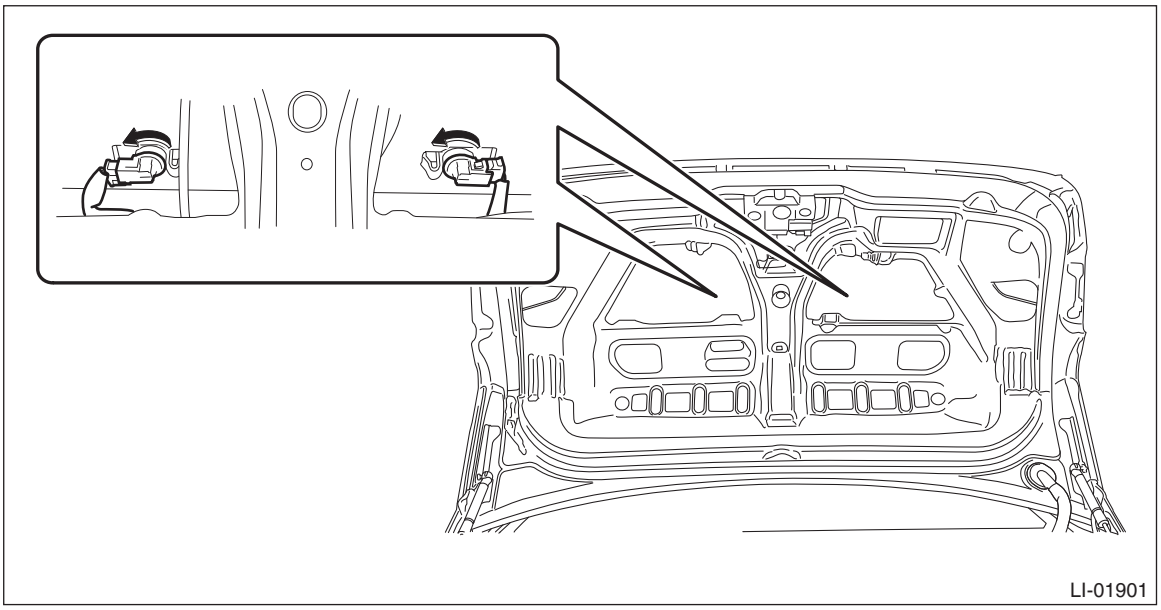
2) Install the trim panel - trunk lid.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the back-up light bulb.

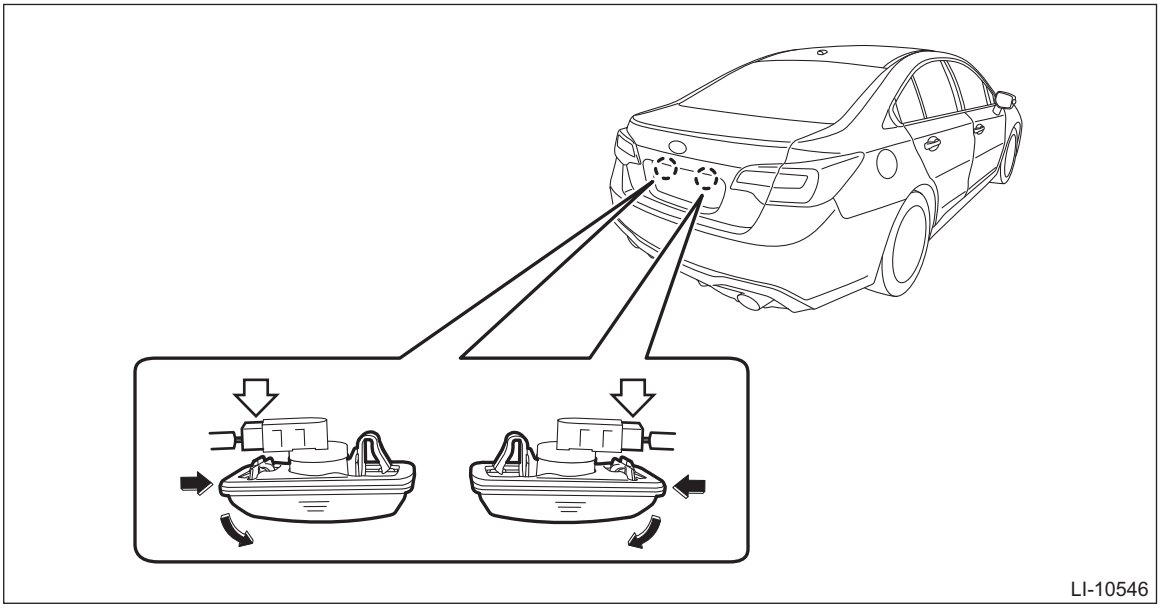
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the bulb inspection cover.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

30.License Plate Light



A: REMOVAL

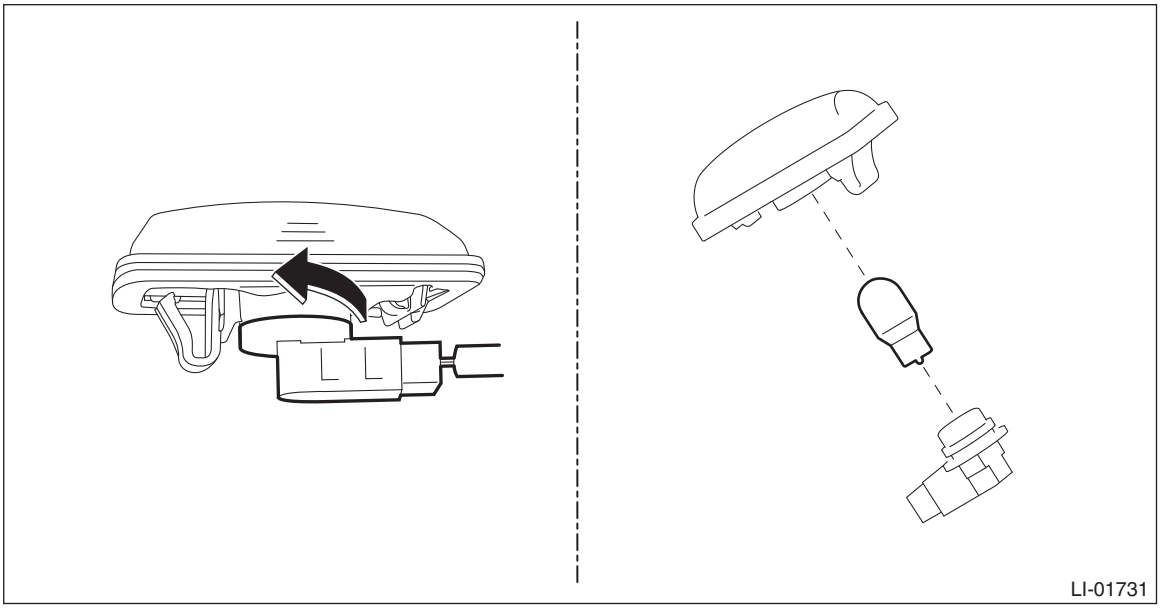
1. SEDAN MODEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>

NOTE:
When removing the bulb only, remove the trim panel - trunk lid, then remove the bulb socket and the bulb.

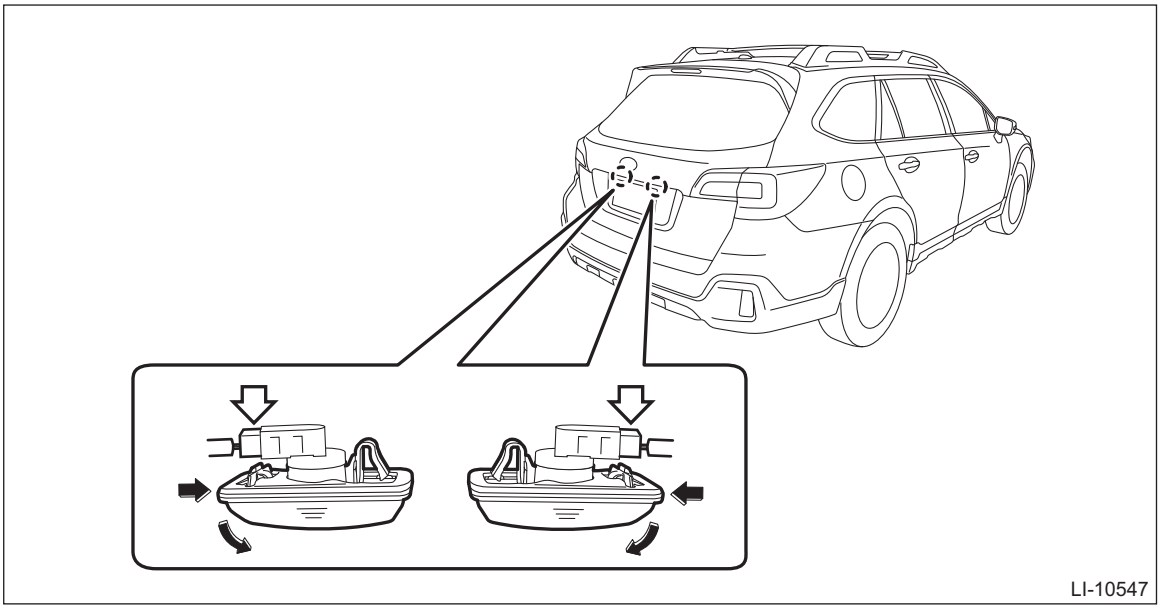
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



LI-01901

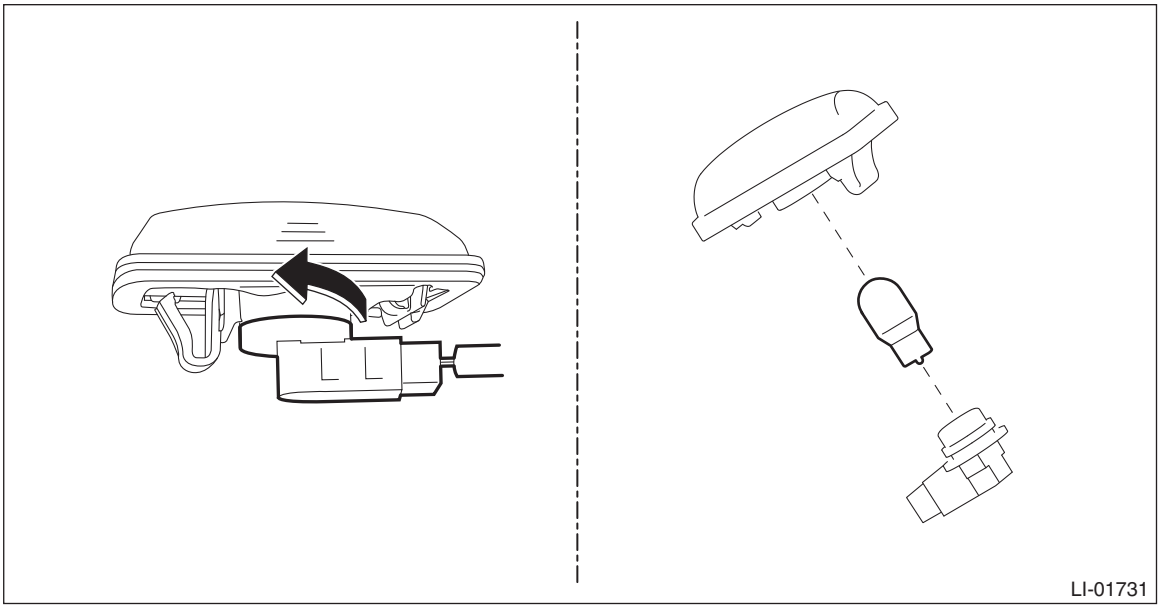
3) Remove the garnish - trunk. <Ref. to EI-62, REMOVAL, Trunk Lid Garnish.>
4) Remove the license plate light.
   (1) Release the claws and pull out the license plate light.
   (2) Disconnect the connector, and remove the license plate light.

LI-10546



5) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the license plate light.
   (1) Release the claws and pull out the license plate light.
   (2) Disconnect the connector, and remove the license plate light.

3) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

1. SEDAN MODEL

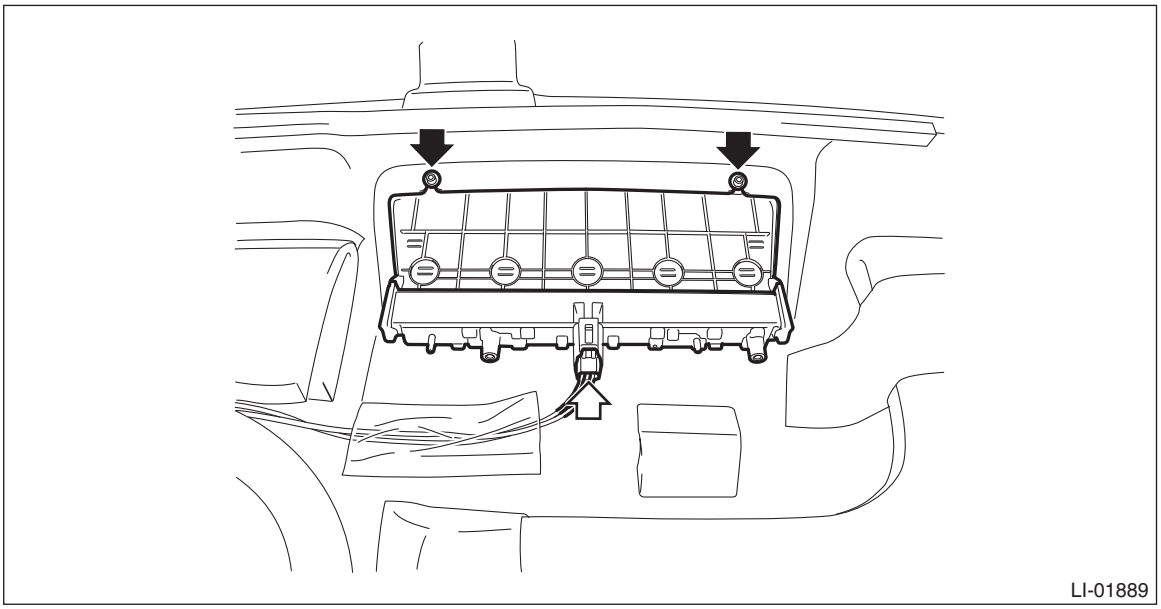
1) Install the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the license plate light.
3) Install the garnish - trunk. <Ref. to EI-62, INSTALLATION, Trunk Lid Garnish.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
4) Install the trim panel - trunk lid.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

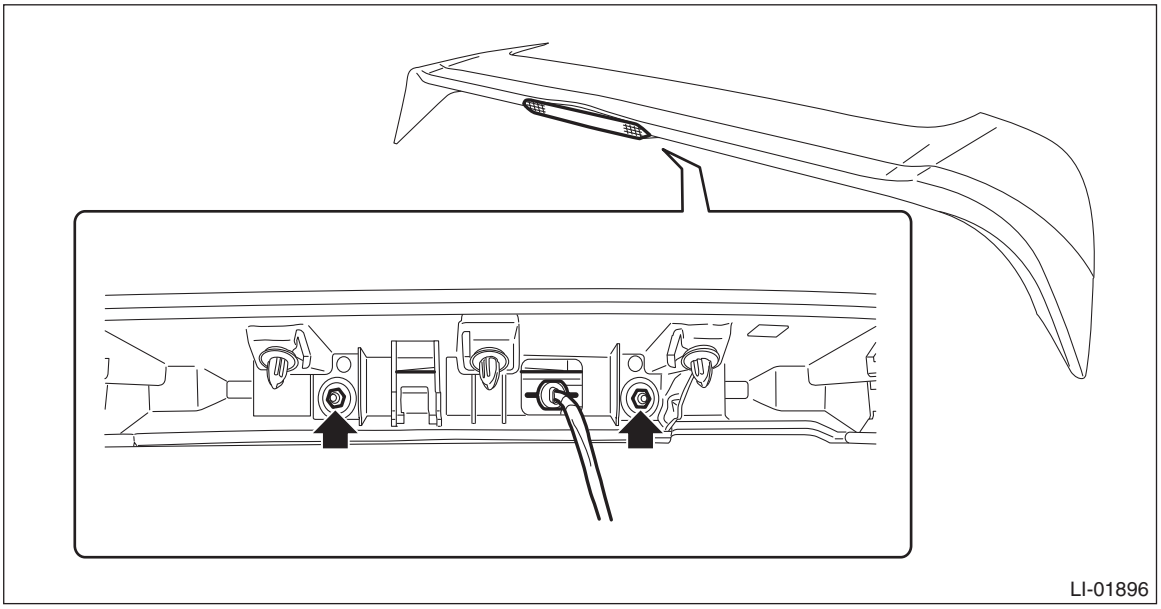
1) Install the license plate light bulb.



CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the license plate light.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

31.High-mounted Stop Light

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-103, REMOVAL, Rear Shelf Trim.>
3) Remove the light assembly - high-mounted.
   (1) Disconnect the connector.
   (2) Remove the lock washers and remove the high-mounted stop light.

2. OUTBACK MODEL

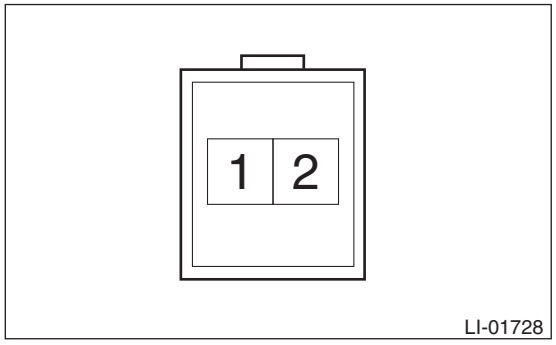
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the roof spoiler. <Ref. to EI-67, REMOVAL, Roof Spoiler.>
4) Remove the nuts and remove the light assembly - high-mounted.

B: INSTALLATION

1. SEDAN MODEL

1) Install the light assembly - high-mounted.
2) Install the trim panel assembly - rear shelf. <Ref. to EI-105, INSTALLATION, Rear Shelf Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

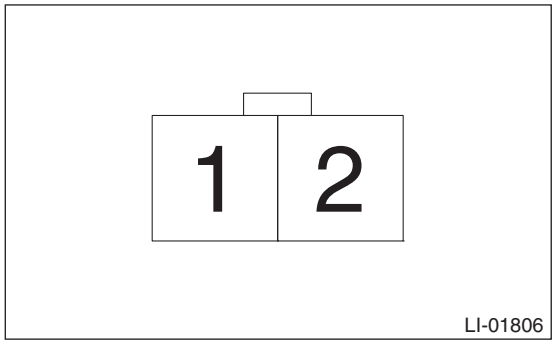
2. OUTBACK MODEL



CAUTION:
Make sure the bolt is tightened securely because improper roof spoiler installation may cause water leakage.
1) Install the light assembly - high-mounted.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the roof spoiler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the trim panel - rear gate.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



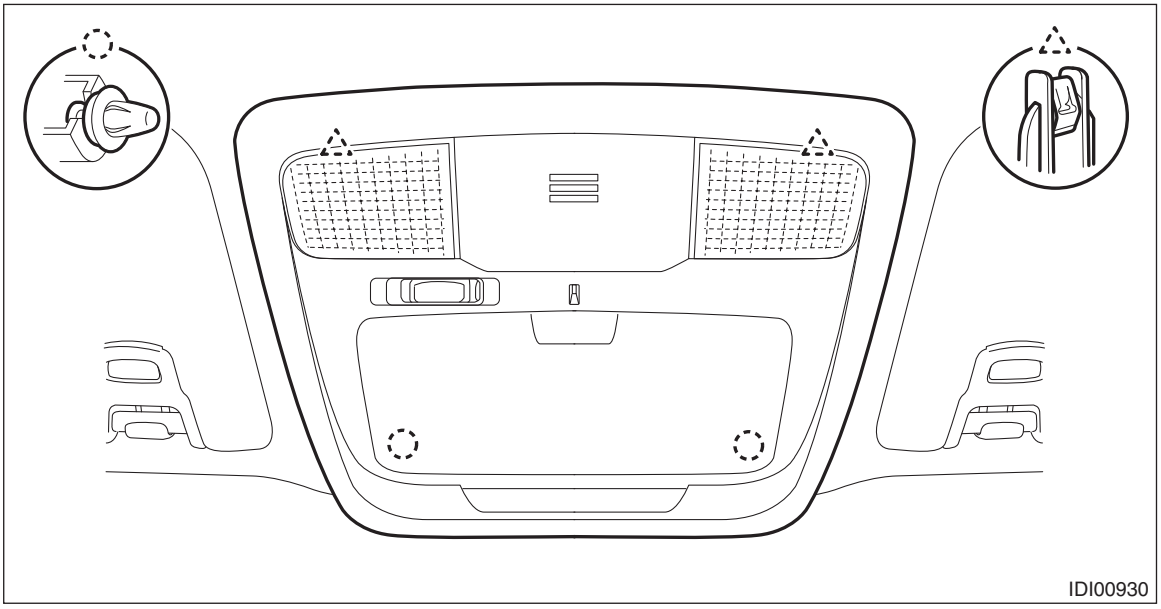
C: INSPECTION

1) Apply battery voltage between the connector terminals to check the lighting condition of the light.
- Sedan model

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Apply battery voltage.	Light ON

- OUTBACK model

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Apply battery voltage.	Light ON

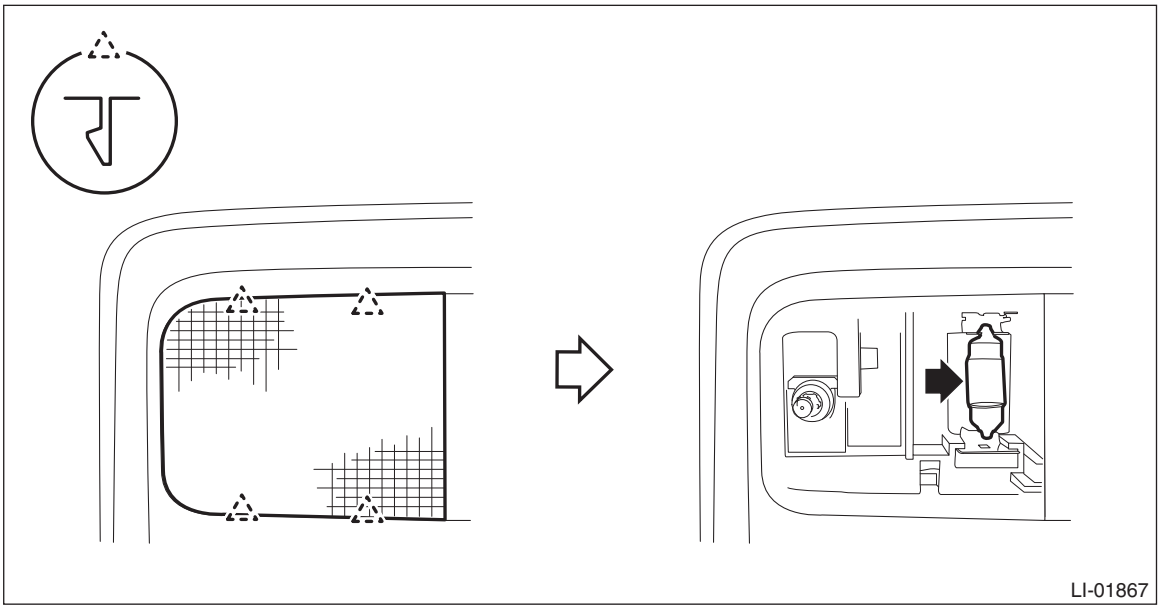


2) Replace the light assembly - high-mounted if faulty is found in the inspection.

NOTE:
Since LED (Light Emitting Diode) is used for the high-mounted stop light, replace the light assembly - high-mounted if the LED burns out.

32.Spot Map Light

A: REMOVAL



NOTE:
• The spot map light is a single unit with the overhead console or stereo camera cover. Replace the overhead console or stereo camera cover if faulty.
• Do not remove the spot map light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the overhead console. (Models without EyeSight)
(1) Release the clips and claws.
(2) Disconnect the connector, and remove the overhead console.

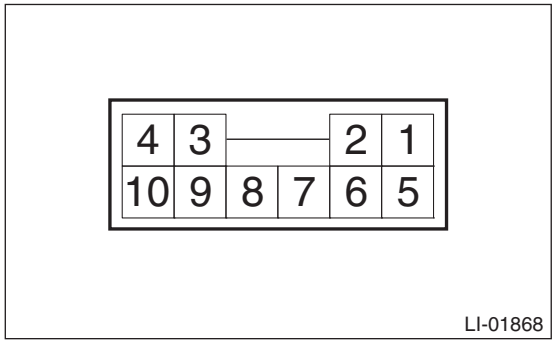
3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
4) Release the claws, then detach the spot map light cover and bulb.

CAUTION:
• **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**

• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

B: INSTALLATION

1) Install the spot map light cover and bulb.



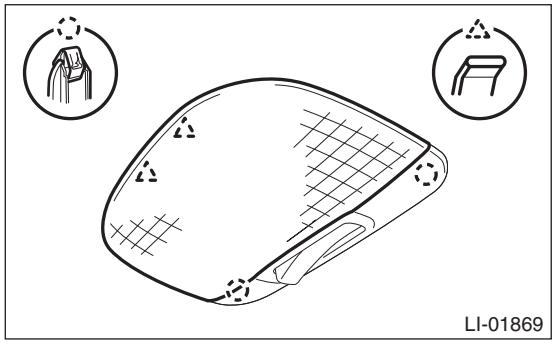
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2) Install the overhead console. (Models without EyeSight)
3) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

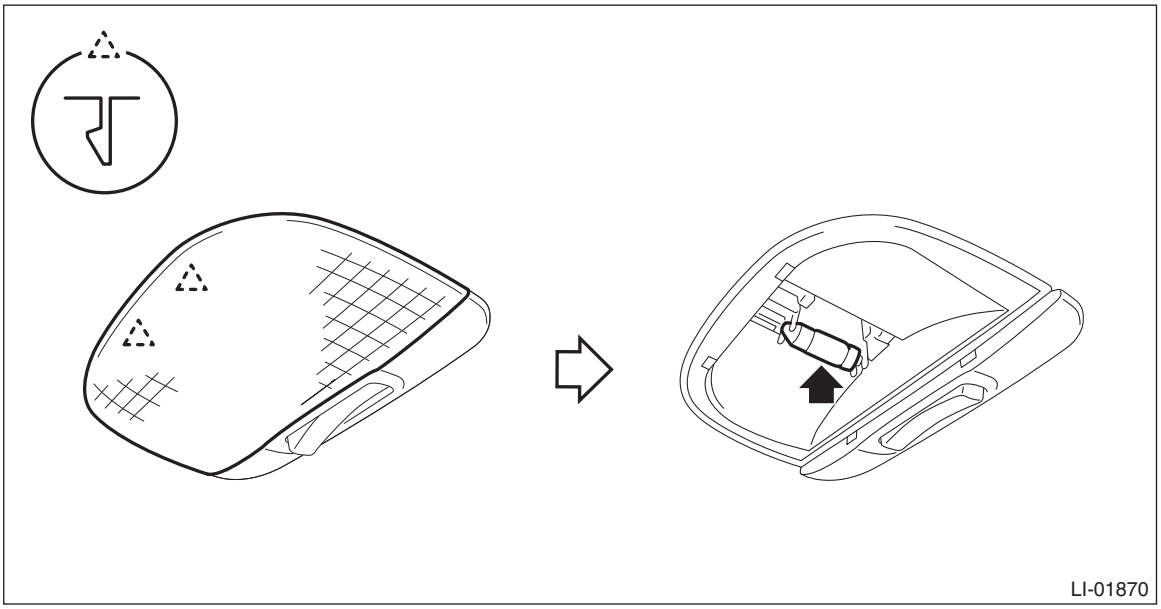
Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
5 — 6	Switch OFF	1 MΩ or more
	Switch ON	Approx. 18 Ω

2) Replace the overhead console or stereo camera cover if the inspection result is not within the standard value.

33.Room Light



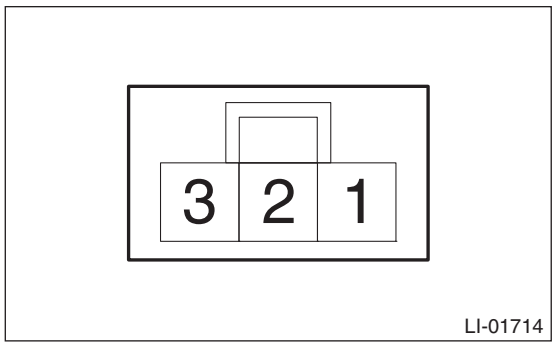
A: REMOVAL

NOTE:
Do not remove the room light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - room.
(1) Remove the clips, and then remove the hook.

(2) Disconnect the connector and remove the light assembly - room.
3) Release the claws, and detach the lens and bulb.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

B: INSTALLATION



1) Install the lens and bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the light assembly - room.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

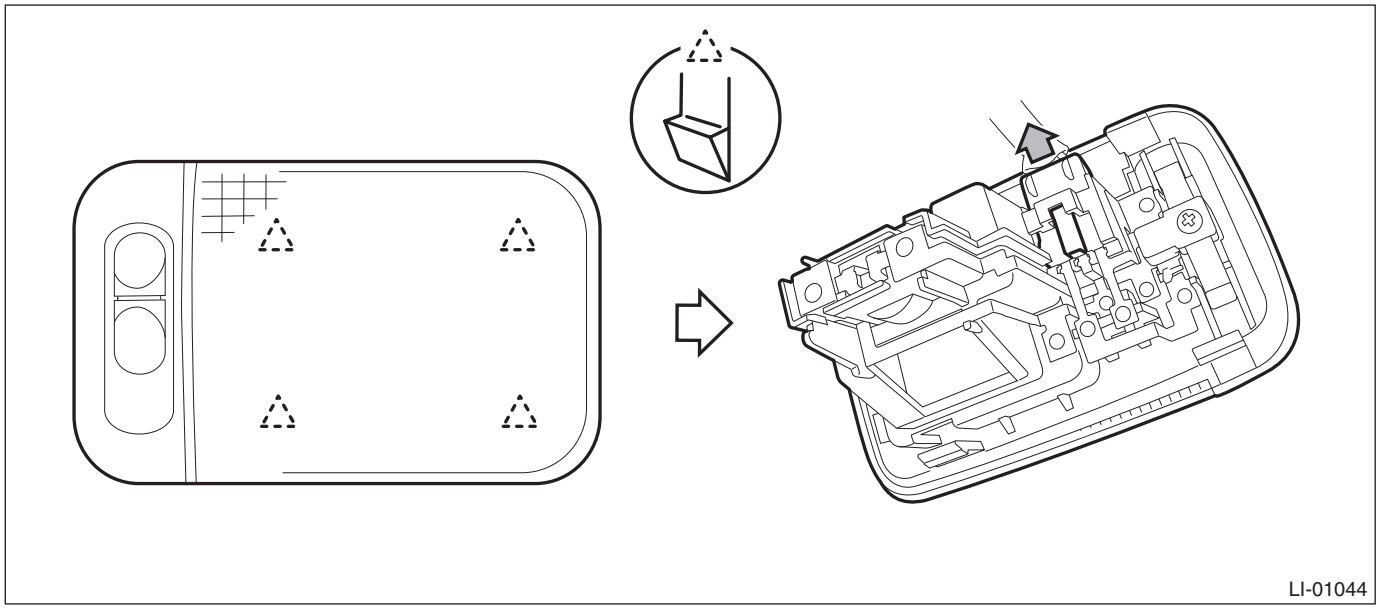
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2 — 3	Switch door	Less than 1 Ω

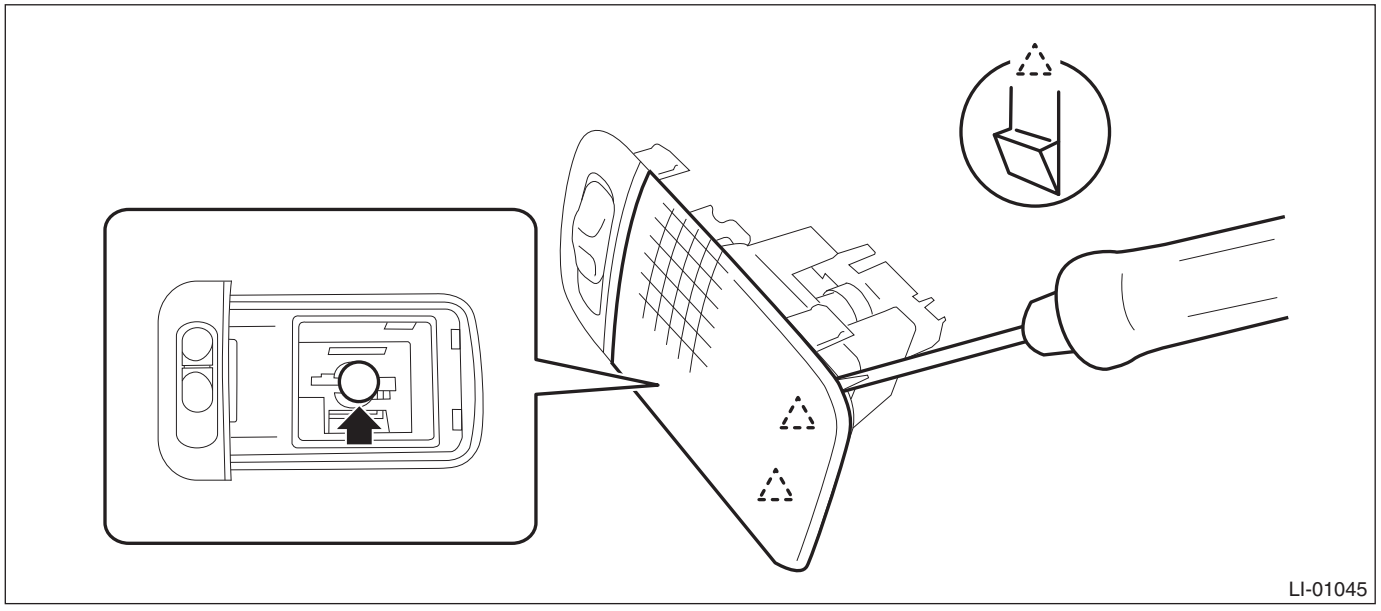
2) Apply battery voltage between the connector terminals to check the lighting condition of the light.



Terminal No.	Inspection conditions	Specification
3 (+) — 1 (–) 3 (+) — 2 (–)	Switch OFF	Light OFF
	Switch ON	Light ON
	Switch door	Light ON

3) Replace the light assembly - room if faulty is found in the inspection.

34.Luggage Room Light



A: REMOVAL

NOTE:
Do not remove the luggage room light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the luggage room light.
   (1) Release the claws.
   (2) Disconnect the connector and remove the light assembly - luggage room.

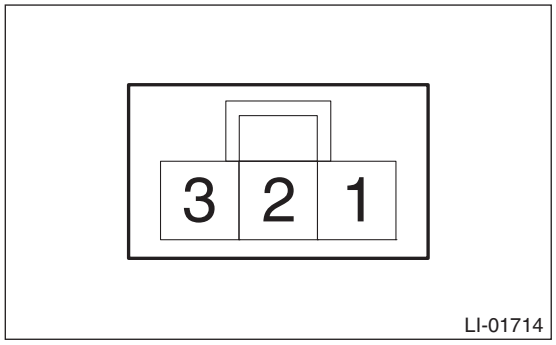
LI-01044

3) Release the claws, and detach the lens and bulb.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

LI-01045

B: INSTALLATION



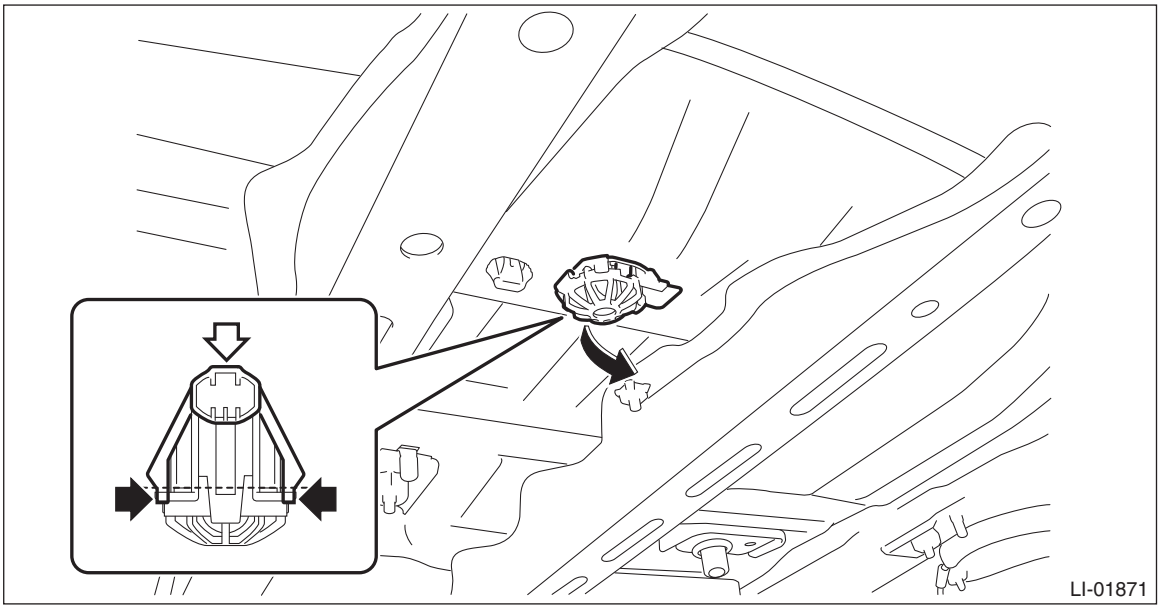
1) Install the lens and bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the light assembly - luggage room.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

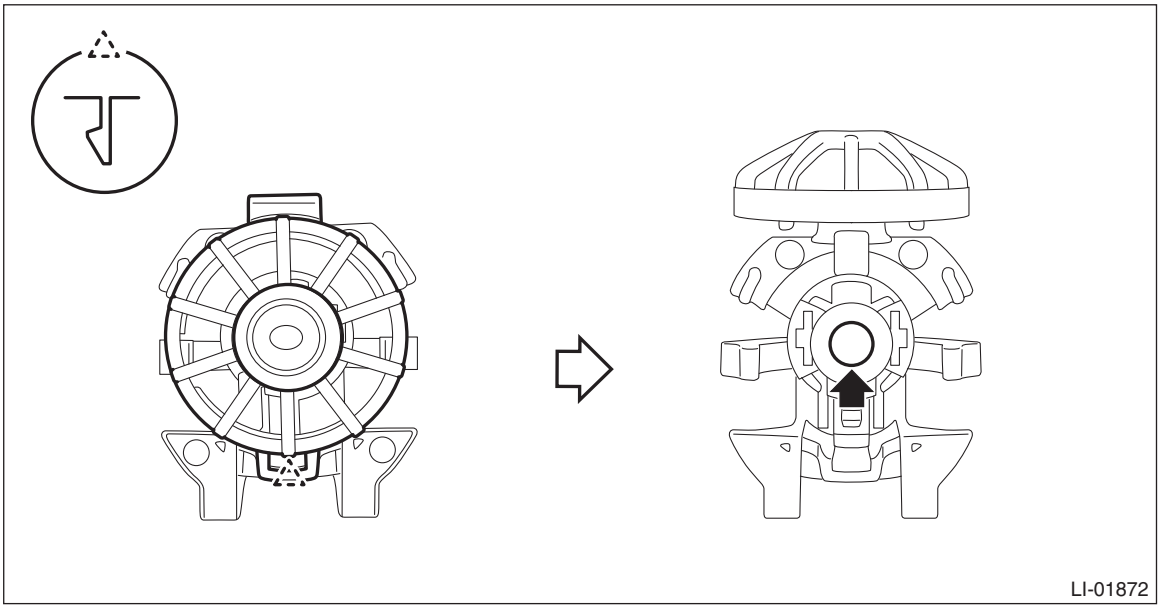
Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2 — 3	Switch door	Less than 1 Ω

2) Replace the light assembly - luggage room if the inspection result is not within the standard value.

35.Trunk Room Light



A: REMOVAL

NOTE:
Do not remove the trunk room light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - trunk room.
   (1) Release the claws.
   (2) Disconnect the connector and remove the light assembly - trunk room.

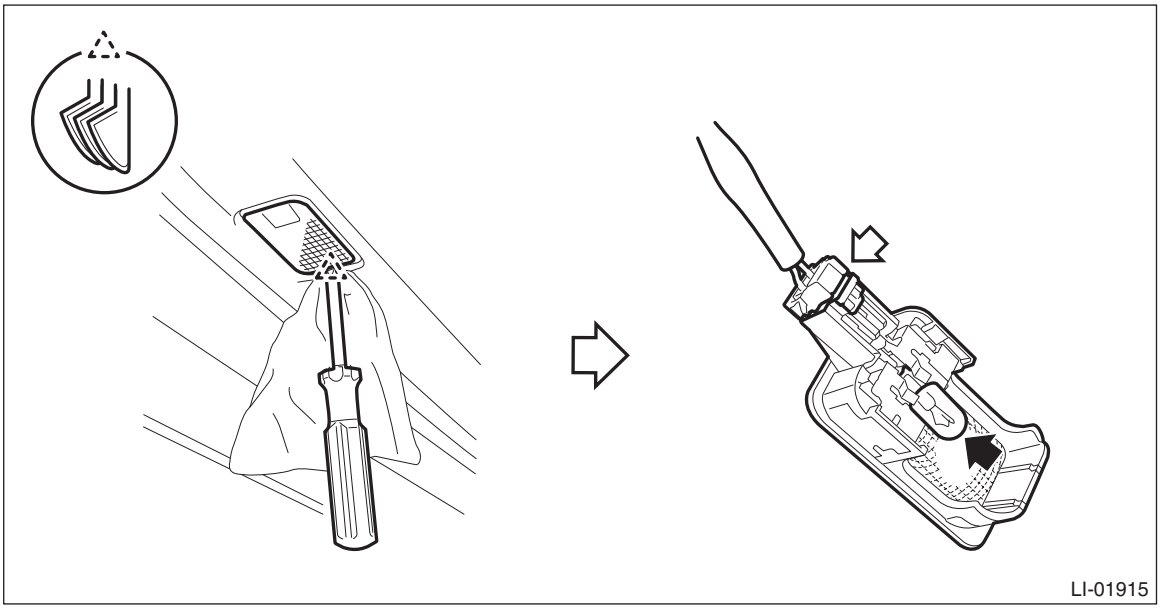
3) Release the claws to open the bulb cover, then remove the bulb.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

B: INSTALLATION

1) Install the bulb and bulb cover.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the light assembly - trunk room.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



36.Door Step Light

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - door step.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Insert a flat tip screwdriver into the slit of the light assembly - door step to release the claw.
(2) Disconnect the connector and remove the light assembly - door step and the bulb.

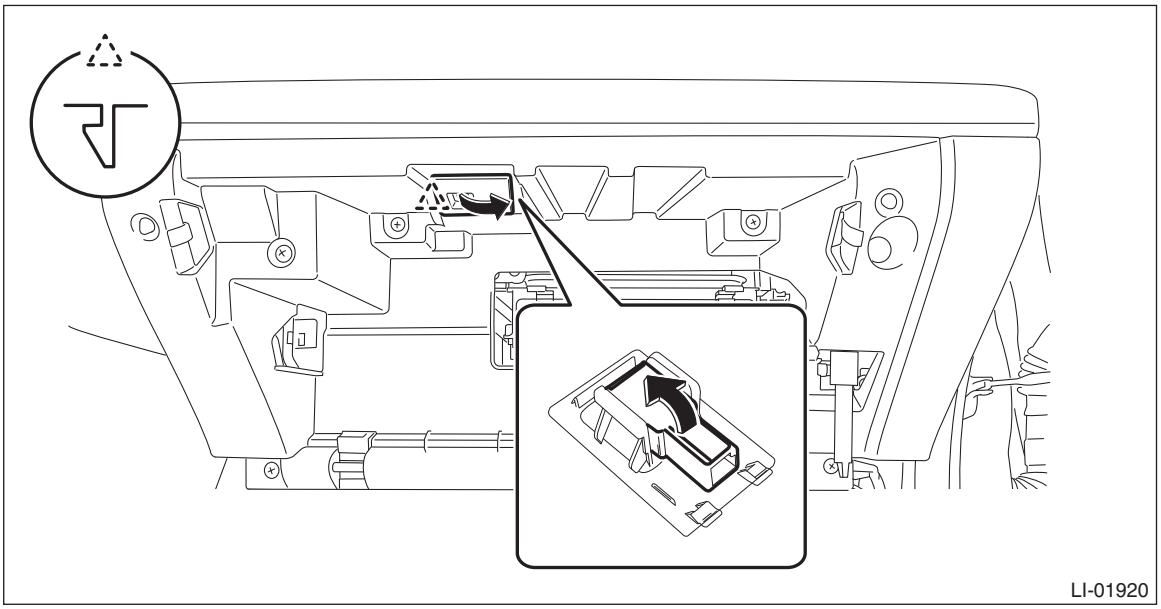
B: INSTALLATION

1) Install the bulb and light assembly - door step.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

37.LED Illumination Light

A: REMOVAL



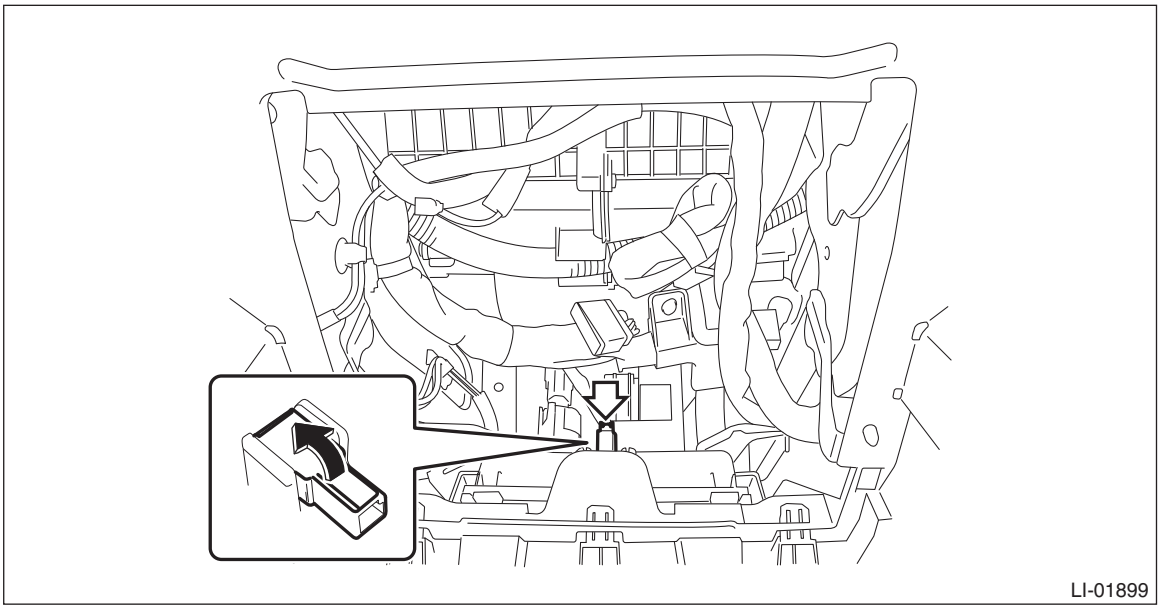
1. GLOVE BOX LIGHT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the pocket assembly. <Ref. to EI-77, REMOVAL, Glove Box.>
3) Remove the light - pocket cover.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Release the claws.
(2) Disconnect the connector, and remove the light - pocket cover.

4) Release the claws, and remove the light - pocket.

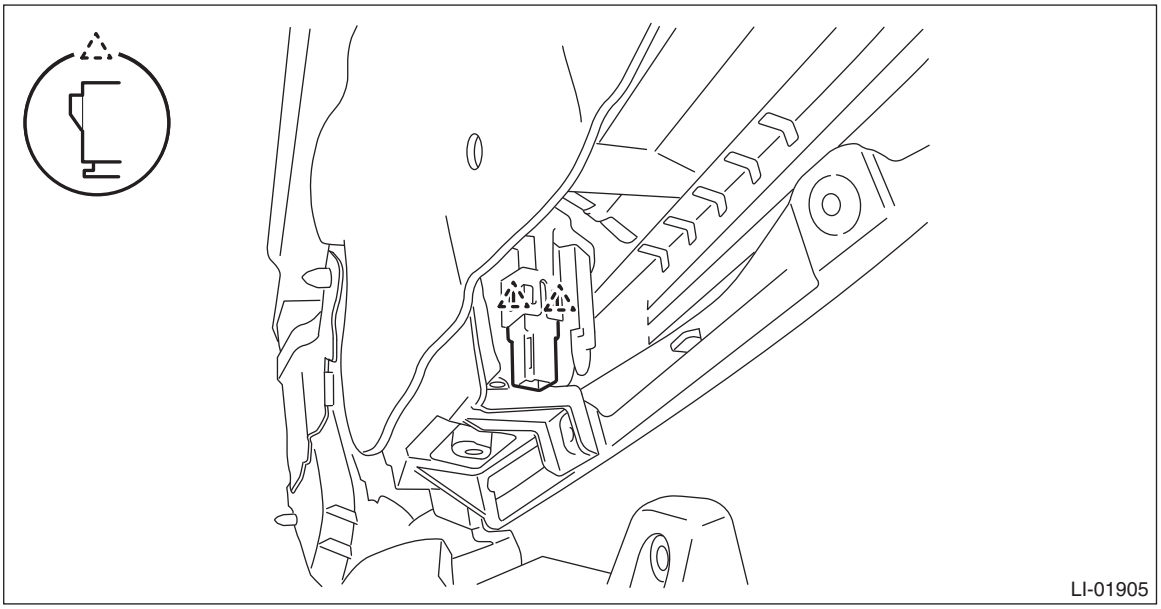


2. POCKET LIGHT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
3) Remove the light - pocket.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Disconnect the connector.



(2) Release the claws, and remove the light - pocket.

3. DOOR POCKET LIGHT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, REMOVAL, Door Trim.>
3) Release the claws, and remove the light - door pocket.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

B: INSTALLATION

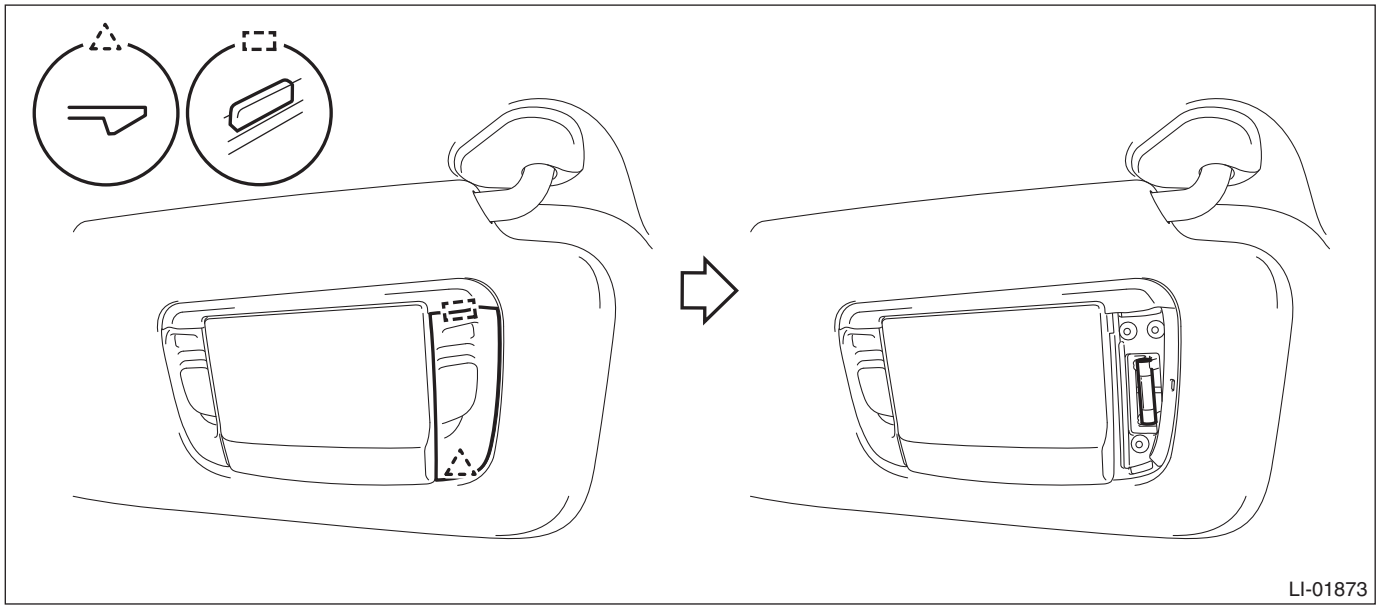
1. GLOVE BOX LIGHT

1) Install the light - pocket.
2) Install the light - pocket cover.
3) Install the pocket assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. POCKET LIGHT

1) Install the light - pocket.
2) Install the heater control assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. DOOR POCKET LIGHT



1) Install the light - door pocket.
2) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

38.Vanity Mirror Light

A: REMOVAL

NOTE:
• The vanity mirror light is integrated into the sun visor assembly. Replace the sun visor assembly if faulty. <Ref. to EI-109, REMOVAL, Sun Visor.>
• Do not remove the sun visor assembly if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the sun visor assembly. <Ref. to EI-109, REMOVAL, Sun Visor.>
3) Release the claws and remove the lens and vanity mirror light bulb.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

B: INSTALLATION

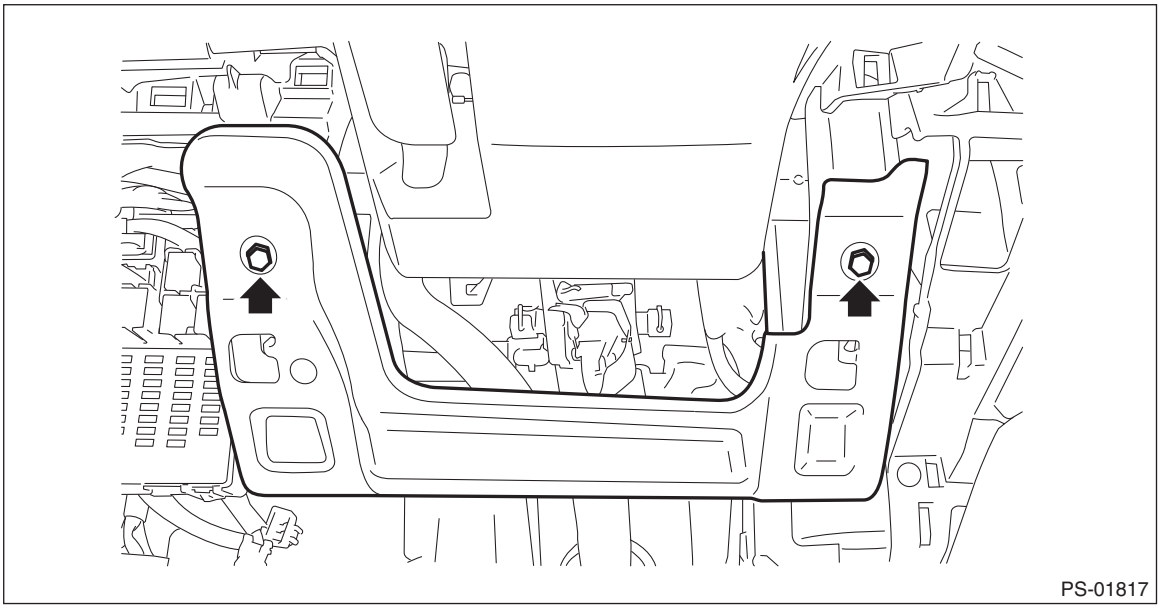
1) Install the bulb and lens.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the sun visor assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

39.Ignition Switch Illumination

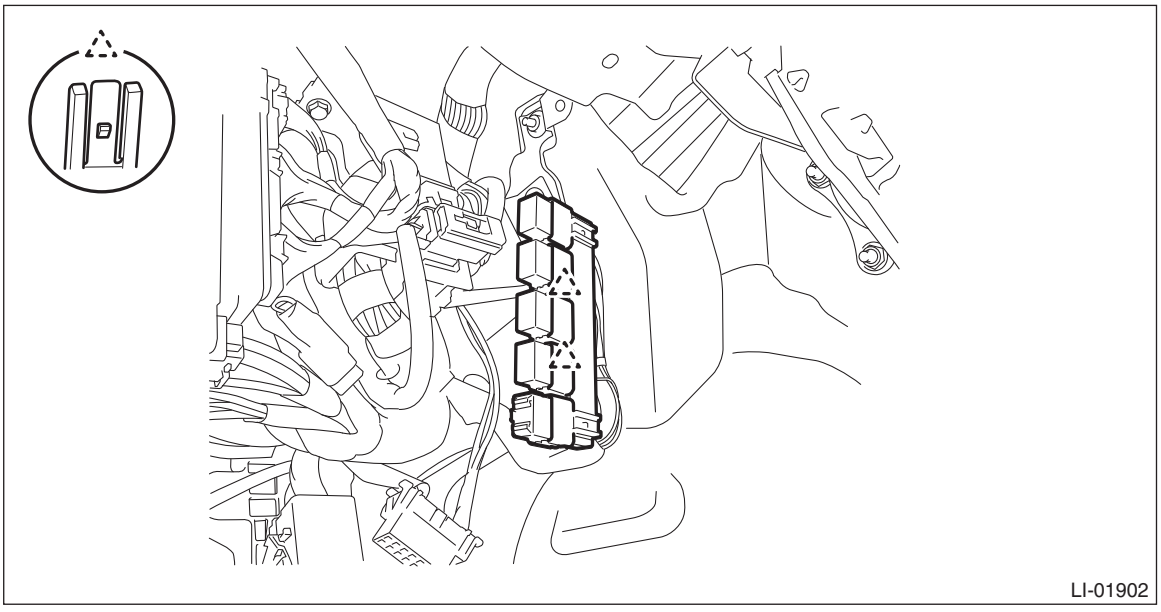
A: NOTE

The ignition switch illumination is integrated into the immobilizer antenna assembly. For operation procedures, refer to the “SECURITY AND LOCKS” section. <Ref. to SL-90, Immobilizer Antenna.>



B: INSPECTION

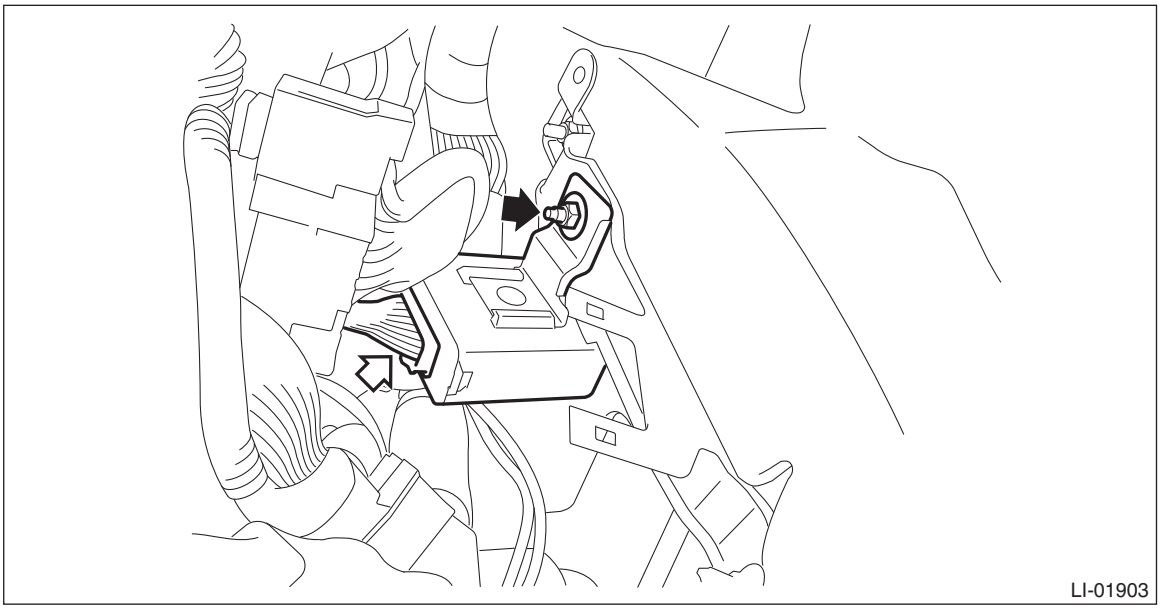
	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Check the lighting condition of the ignition switch illumination.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to BC(diag)-80, General Diagnostic Table.>	Go to step **2**.
2	**CHECK IGNITION SWITCH ILLUMINATION OPERATION.** 1) Turn the ignition switch to OFF. 2) Open and close the driver’s side door.	When door is opened/closed, does the ignition switch illumination switch between ON ←→ OFF?	Ignition switch illumination is normal.	Go to step **3**.
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Driver’s door SW input». NOTE: For detailed operation procedures, refer to “Application help”.	Does the display change to «ON» ←→ «OFF», when the door is opened/closed?	Go to step **4**.	Check the door switch circuit. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
4	**CHECK CURRENT DATA.** Display the data of «key illumination lamp o/p» using Subaru Select Monitor.	Does the display change to «ON» ←→ «OFF», when the door is opened/closed?	CHECK THE IGNITION SWITCH ILLUMINATION CIRCUIT. <Ref. to SL-25, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>



40.Auto Headlight Beam Leveler Control Module

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts, and then remove the panel - knee guard.



PS-01817

4) Release the lock and remove the relay holder.

LI-01902

5) Remove the auto headlight beam leveler CM.
(1) Remove the nut.

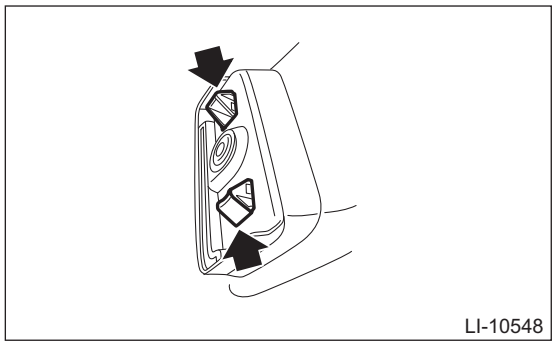
(2) Disconnect the connector and remove the auto headlight beam leveler CM.

B: INSTALLATION

1) Install the auto headlight beam leveler CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the relay holder.
3) Install the panel - knee guard.



Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Perform initialization and reinitialization of the auto headlight beam leveler system. <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>

41.Reflex Reflector

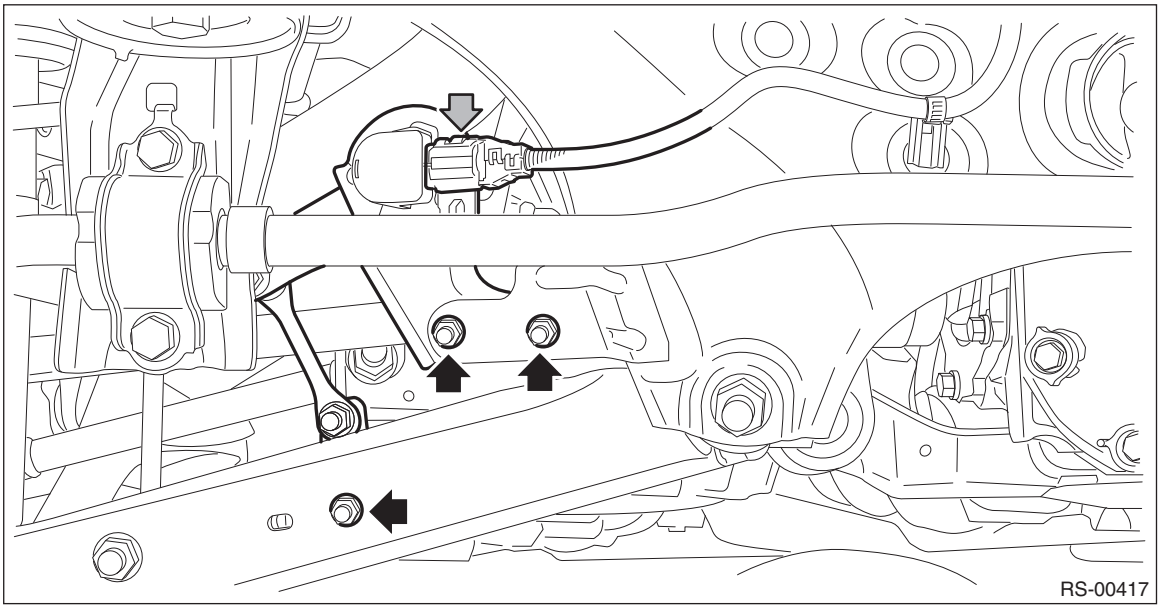
A: REMOVAL

Release the claws and then remove the reflex reflector.

B: INSTALLATION

Install the reflex reflector.

42.Rear Height Sensor



A: REMOVAL

CAUTION:
Always remove the sensor assembly - headlight beam leveler before removing any parts related to the suspension.
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the rear wheel on the left side.
4) Remove the sensor assembly - headlight beam leveler.

CAUTION:
Do not disassemble the sensor and lever.

(1) Disconnect the connector.
(2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

B: INSTALLATION

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

1) Install the sensor assembly - headlight beam leveler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

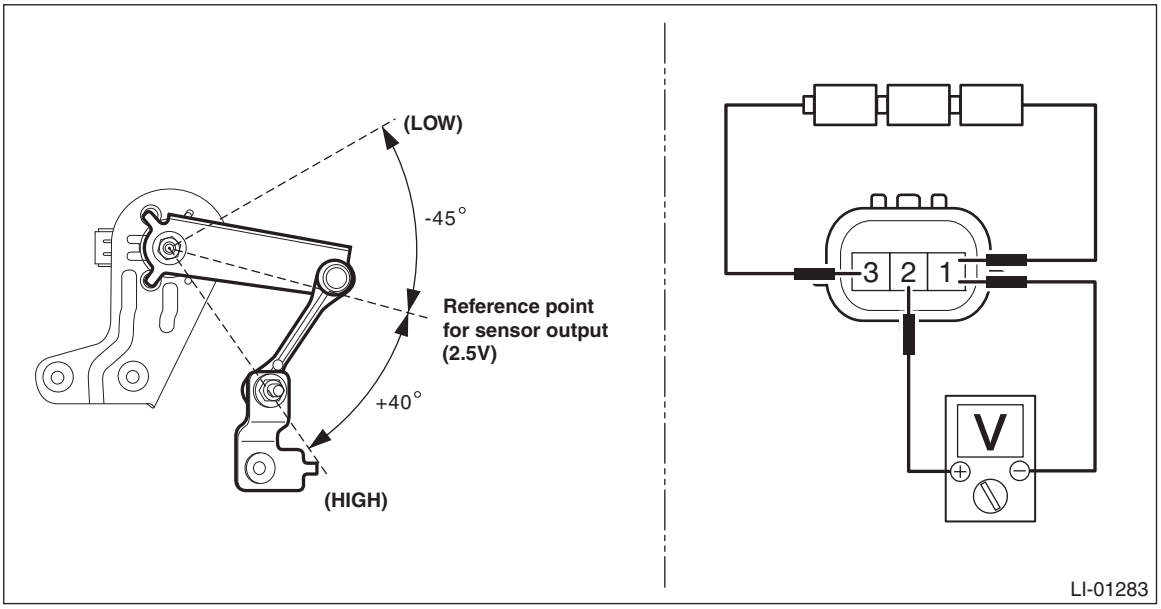
2) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Perform reinitialization of the auto headlight beam leveler system. <Ref. to LI-30, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

NOTE:
When replacing the rear vehicle height sensor with a new part, perform the initialization. <Ref. to LI-30, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: INSPECTION



1) Connect three dry cell batteries (1.5 V) in series.

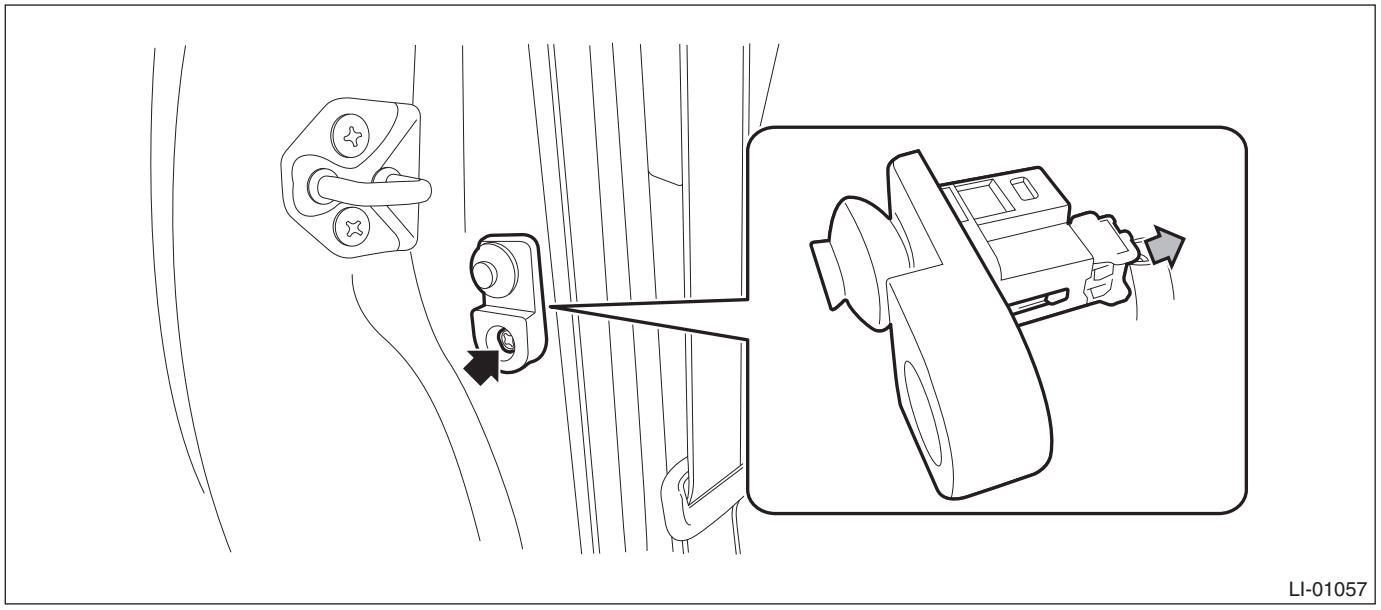
NOTE:
- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC constant voltage power source can also be used.

2) Connect the cell battery positive terminal to the connector terminal No. 3, and the cell battery negative terminal to the connector terminal No. 1.

3) With voltage applied, measure the voltage between connector terminals when the sensor link is moved slowly up and down.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	Move the link within the operation range.	Approx. 0.5 — 4.1 V



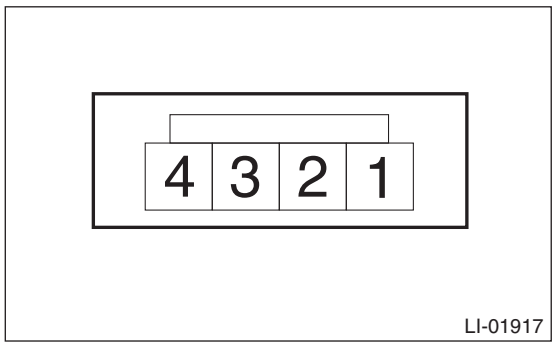
NOTE:
When the link is moved upward from the standard output position, the sensor output varies to the 0.5 V side. When the link is moved downward, the sensor output varies to the 4.1 V side.

4) Replace the sensor assembly - headlight beam leveler if the inspection result is not within the standard value.

43.Door Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the switch assembly - door.
   (1) Remove the screws, and pull out the switch assembly - door toward you.
   (2) Disconnect the connector and remove the switch assembly - door.



B: INSTALLATION

1) Install the switch assembly - door.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
Front LH: 1 — 2 Except for front LH: 1 — 4	When the switch is not pressed	Less than 1 Ω
	When the switch is pressed	1 MΩ or more

2) Replace the switch assembly - door if the inspection result is not within the standard value.

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to AL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Perform the interview, and Go to step **2**.
2	**BASIC INSPECTION.** Perform the basic inspection. <Ref. to AL(diag)-5, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair the failures from the basic inspection, and Go to step **3**.
3	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select «Headlight / Foglight». NOTE: For detailed operation procedures, refer to “Application help”.	Is communication possible?	Go to step **4**.	Check the communication circuit.
4	**CHECK DTC.** Read DTC of «Headlight / Foglight» using the Subaru Select Monitor. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).> 1) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed? (Current malfunction)	Record the DTC, time stamp and freeze frame data, and Go to step **5**.	Perform diagnosis according to the procedures in the diagnostics with phenomenon. <Ref. to AL(diag)-36, Diagnostics with Phenomenon.>
5	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis according to the displayed DTC. 2) Repair or replace the cause of trouble. 3) Perform the clear memory of «Headlight / Foglight» using the Subaru Select Monitor. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Execute the inspection mode. <Ref. to AL(diag)-15, Inspection Mode.> 5) Read DTC of «Headlight / Foglight» using the Subaru Select Monitor. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. AUTO HEADLIGHT BEAM LEVELER SYSTEM

Inspect the following items regarding the vehicle's state.

Auto Headlight Beam Leveler System Check List for Interview Received Year Month Day		Date the Vehicle is	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions		Occurrence location	
Accessory installation condition			
Confirmation of trouble condition			
❑ Diagnostic code			

2. STEERING RESPONSIVE HEADLIGHT

Inspect the following items regarding the vehicle's state.

Steering Responsive Headlight Check List for Interview Received Year Month Day		Date the Vehicle is	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions			

Check List for Interview

Accessory installation condition	
Confirmation of trouble condition	
Curve of trouble occurrence	❑ Right-hand curve ❑ Left-hand curve ❑ Both
Information on curve of trouble occurrence NOTE: Check the location and curve on the map.	❑ Specific location ❑ Gentle curve ❑ Sharp curve ❑ Uphill ❑ Downhill ❑ Other
Vehicle speed at trouble occurrence	Approximately km/h (MPH)
SRH OFF indicator status	❑ Light OFF ❑ Light ON ❑ Flashing
Headlight switch operation	❑ Lo-Hi switch available ❑ Lo-Hi switch unavailable
Range inspection for CVT vehicle	❑ Shift indicator operates according to the shift position ❑ Shift indicator does not operate according to the shift position
❑ Diagnostic code	

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Before performing diagnosis, refer to “CAUTION” in “General Description” in Airbag System. <Ref. to AB-10, CAUTION, General Description.>

2. AUTO HEADLIGHT BEAM LEVELER SYSTEM/STEERING RESPONSIVE HEADLIGHT/LED HEADLIGHT SYSTEM

Before performing diagnosis, refer to “CAUTION” in “General Description” in Lighting System. <Ref. to LI-4, CAUTION, General Description.>

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to LI-5, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

2. FUNCTION CHECK

- AUTO HEADLIGHT BEAM LEVELER SYSTEM
  1. Turn the ignition switch to ON.
  2. Turn on the headlight low beam.
  3. Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
- LED headlight system
  1. Turn the ignition switch to ON.
  2. Turn on the headlight low beam.
  3. Check that the headlight Low beam illuminates with normal brightness.
  4. Check that the LED headlight indicator on the combination meter does not illuminate.
- Steering responsive headlight (the initialize function)
  1. Stop the vehicle at approximately 1 m (3.3 ft) away and perpendicular to the wall.
  2. Make the vehicle vicinity dark.
  3. Set the vehicle headlight switch to Low beam.
  4. Make sure that the headlight cut line moves to the vehicle inside immediately after the engine started.

C: PREPARATION TOOL

1. SPECIAL TOOL

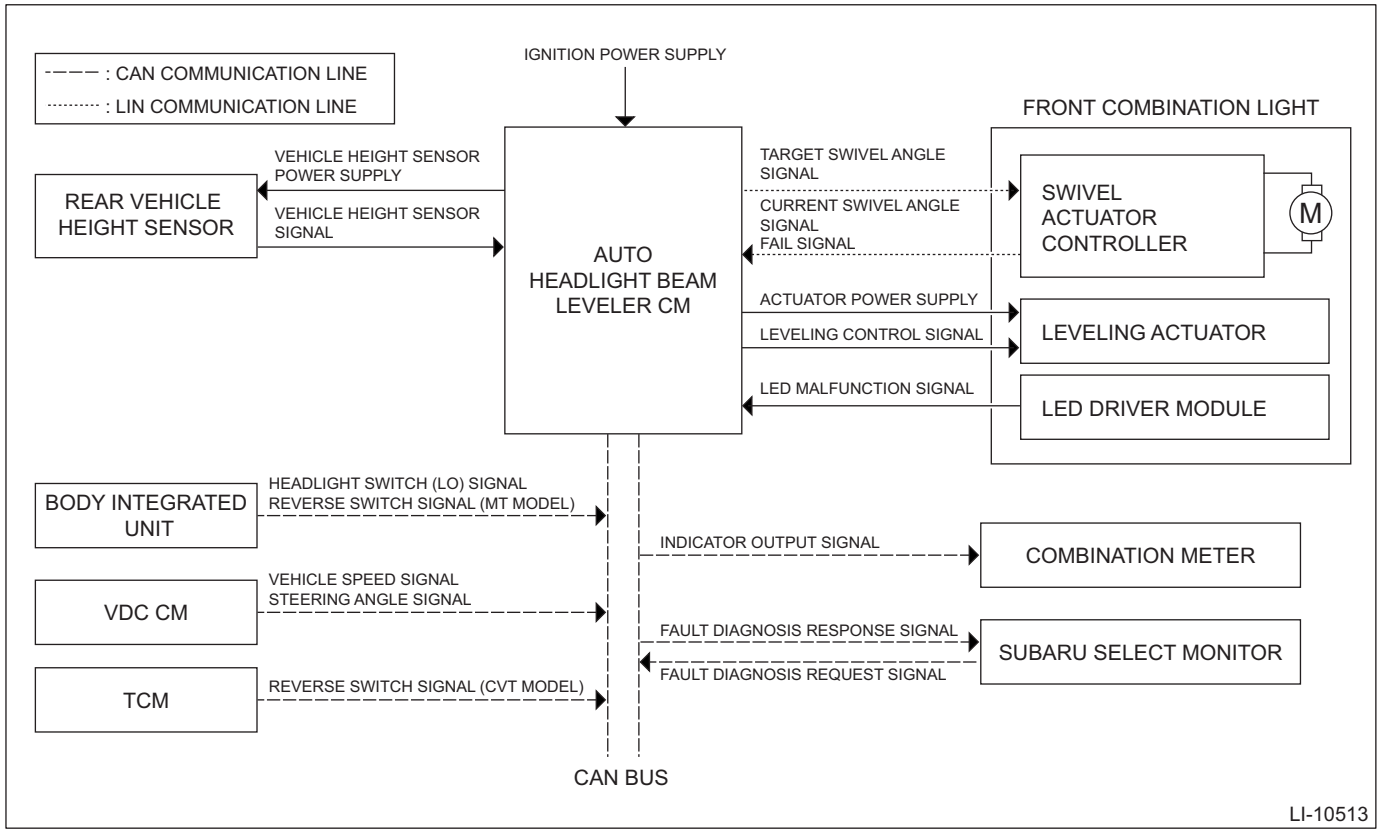

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
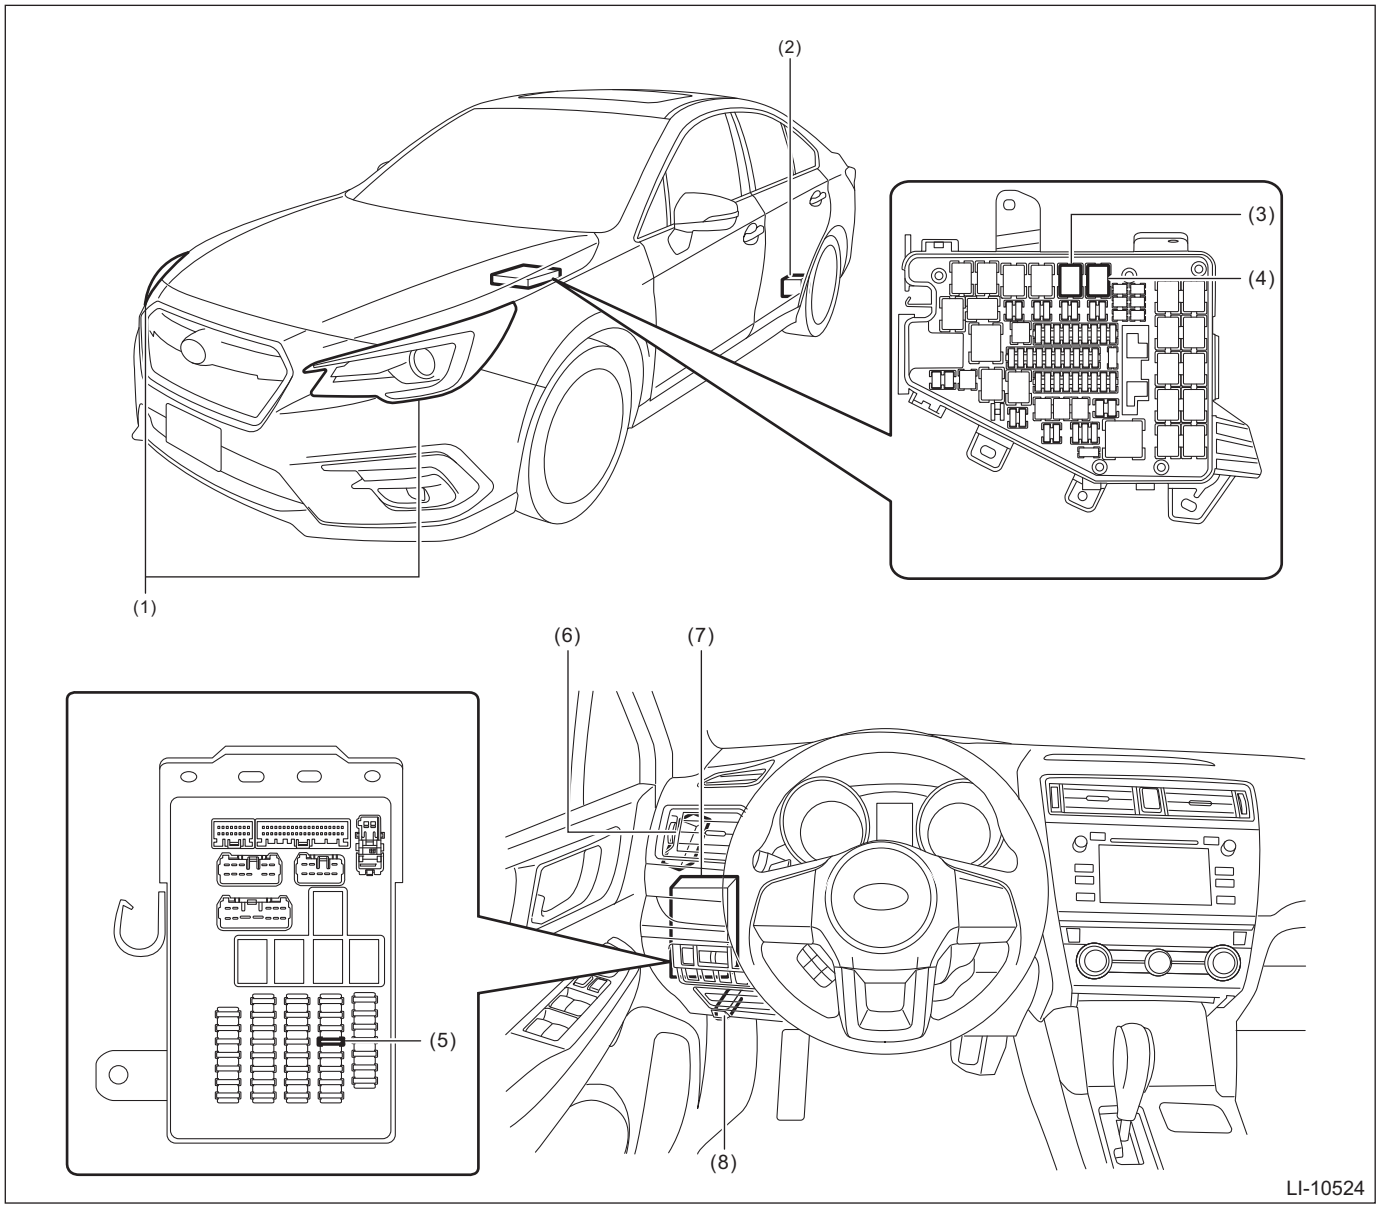
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.



D: SYSTEM BLOCK DIAGRAM

• The auto headlight beam leveler is a system that automatically adjusts the headlight beam level (vertical directions) according to the longitudinal inclination angle of the vehicle due to heavy load or passengers' getting in/off a car.
• The steering responsive headlight is a system that calculates the corner R from the steering angle and vehicle speed to illuminate beyond the corner by moving the headlight beam to left and right.

4. Electrical Component Location

A: LOCATION

(1) Headlight ASSY
– Headlight beam leveler actuator
– SRH swivel actuator

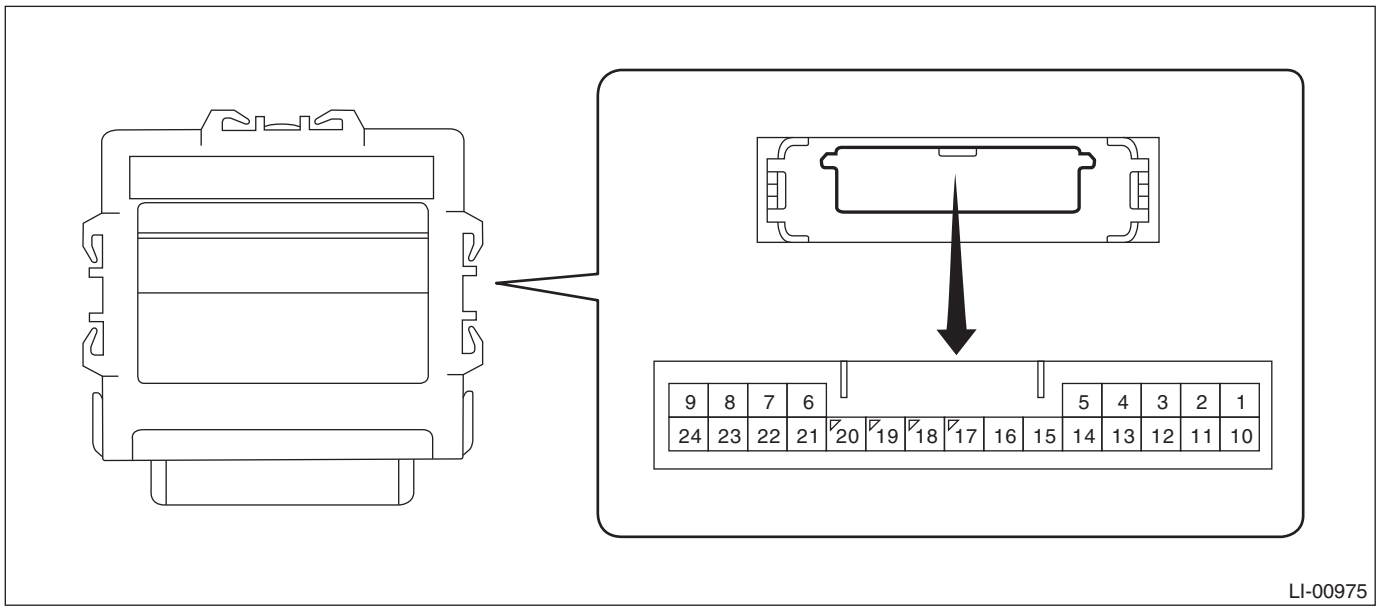
(2) Rear vehicle height sensor

(3) Headlight relay Lo

(4) Headlight relay Hi

(5) Fuse 7.5A (auto headlight beam leveler CM)

(6) Auto headlight beam leveler CM



(7) Body integrated unit

(8) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

Terminal No.	Contents	Measuring condition	Standard
1 ←→ Chassis ground	IG power supply	Ignition switch ON	8 — 16 V
2 ←→ Chassis ground	GND	Always	Less than 1 Ω
3 ←→ Chassis ground	Rr vehicle height sensor GND	Always	Less than 1 Ω
4	—	—	—
5 ←→ Chassis ground	RH headlight malfunction signal	Always	1 MΩ or more
6	—	—	—
7 ←→ Chassis ground	SRH signal (LIN)	Always	1 MΩ or more
8	—	—	—
9 ←→ Chassis ground	SRH GND	Always	Less than 1 Ω
10 ←→ Chassis ground	Leveling actuator power supply	Ignition switch ON	10 — 16 V
11 ←→ Chassis ground	Leveling actuator GND	Always	Less than 1 Ω
12 ←→ 3	Rr vehicle height sensor power supply	Ignition switch ON	4.75 — 5.25 V
13	—	—	—

Terminal No.	Contents	Measuring condition	Standard
14	—	—	—
15	—	—	—
16 ←→ Chassis ground	LH headlight malfunction signal	Always	1 MΩ or more
17 ←→ Chassis ground	Leveling actuator signal	Headlight off → on	Less than 1 V → 1.0 — 14.4 V (for 17 seconds)
		Headlight on, no vehicle height change → change and hold vehicle height for 3 seconds or more	
18	—	—	—
19 ←→ Chassis ground	Rr sensor signal	IG ON (with no passenger, no load and vehicle stopped)	Approx. 2.5 V (changes according to vehicle condition)
20	—	—	—
21	—	—	—
22	—	—	—
23	CAN-H	Cannot be measured (CAN communication line)	—
24	CAN-L	Cannot be measured (CAN communication line)	—

B: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- If the auto headlight beam leveler CM can not communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to AL(diag)-11, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

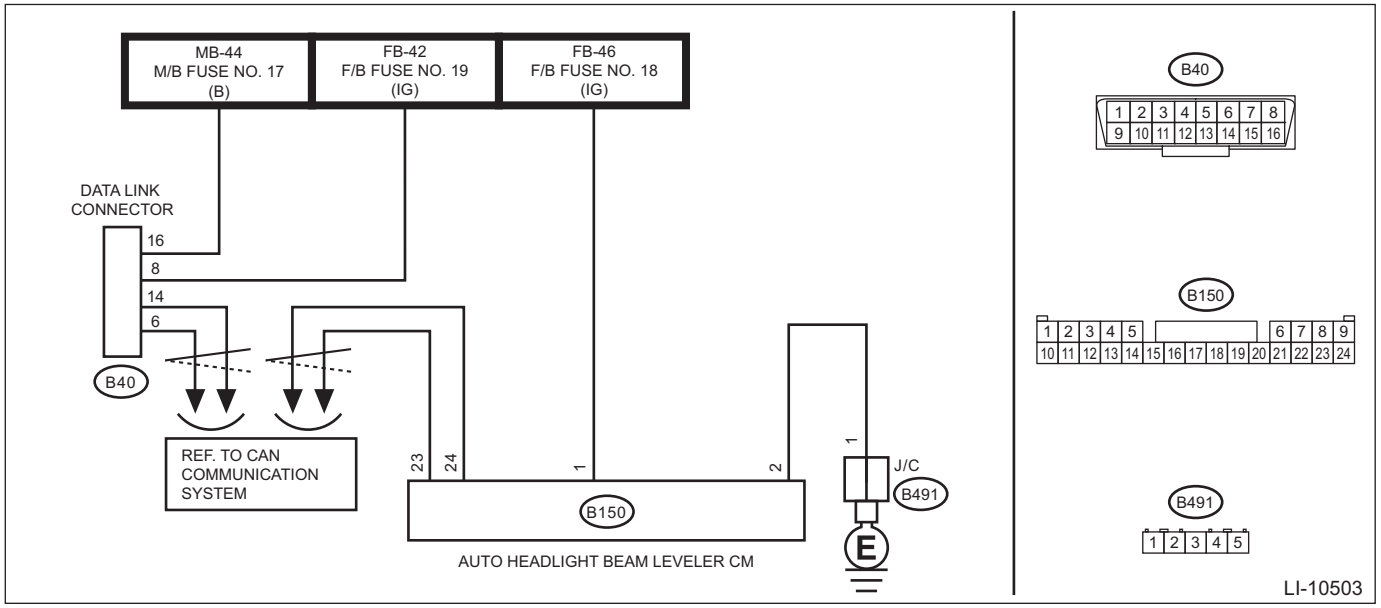
1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with auto headlight beam leveler CM

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective auto headlight beam leveler CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:



Communication is impossible between auto headlight beam leveler CM and Subaru Select Monitor.

CAUTION:

Initialization is required after replacing the auto headlight beam leveler CM.

Wiring diagram:

Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

Step		Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the auto headlight beam leveler CM using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(diag)-13, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.

	Step	Check	Yes	No
3	**CHECK FOR POOR CONTACT.** 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler CM connector. 3) Connect the disconnected connectors. 4) Communicate with the auto headlight beam leveler CM using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
4) Read the DTC of «Headlight / Foglight» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item Name	Contents	Standard	Note
Trip Count [count]	Time stamp information, trip counter	—	—
Count	Time stamp information, original counter identification information	—	—
Time Count	Time stamp information, time counter	—	—
F Sensor Signal	Output voltage value from front vehicle height sensor Display range: 0.00 — 5.00 V	5 V	Fixed at 5 V because front vehicle height sensor is not equipped.
R Sensor Signal	Output voltage value from rear vehicle height sensor Display range: 0.00 — 5.00 V	Approx. 2.5 V	Changes according to vehicle condition.
Actuator Signal	Power supply voltage value to headlight beam leveler actuator Display range: 0% — 100%	Not in operation: 0% In operation: 10 — 90% (17 seconds)	Changes according to vehicle condition.
ECU ACC	IG voltage condition of auto headlight beam leveler CM Display range: 0.00 — 25.76 V	8 — 16 V	—
Indicator Signal	Meter indicator condition Display range: Light off / Light up / Blink three times at 2 Hz / Blink twice at 2 Hz / Valve check	Light off: Normal Light up: Abnormal Blinks 3 times at 2 Hz.: Blinks 2 times at 2 Hz.: Check Bulb:	—
Vehicle Speed Signal	Vehicle speed condition Display range: 0.00 — 3686.34 km/h	Show vehicle speed	—
H/L Lo Signal	Headlight (Lo) lighting condition Display range: Light off/ Light up	OFF: Light switch OFF ON: When light sensor is operated and light switch is set to HEAD or AUTO	—
LED HEADLAMP(LH) error Signal	Open circuit detection signal status Display range: Light off/ Light up	OFF: Open circuit not detected ON: Open circuit detected	—
LED HEADLAMP(RH) error Signal	Open circuit detection signal status Display range: Light off/ Light up	OFF: Open circuit not detected ON: Open circuit detected	—

Item Name	Contents	Standard	Note
Headlight High Beam Signal	Headlight (Hi) lighting condition	OFF: Head Light (Hi) OFF ON: Head Light (Hi) ON	—
Steering Angle Signal	Steering angle status	–3276.7 — 3276.7 deg	—
Shift Position Signal	Shift lever position	P, R, N, D, D-S, 3 range, 2 range, 1 range	—
MT Reverse Switch	Reverse switch status (MT) is displayed.	ON: shift lever in reverse position OFF: shift lever other than in reverse position	—
Engine RPM	Engine speed signal	0 — 65535 rpm	—
Vehicle Height	Vehicle height signal	Unclear: Other than follows SDN/WGN: when SDN/WGN	—
Left Steering Responsive Headlight Current Angle	SRH swivel actuator current angle (LH) signal	–3276.7 — 3276.7 deg	—
Right Steering Responsive Headlight Current Angle	SRH swivel actuator current angle (RH) signal	–3276.7 — 3276.7 deg	—
Left Steering Responsive Headlight Target Angle	SRH swivel actuator target angle (LH) signal	–3276.7 — 3276.7 deg	—
Right Steering Responsive Headlight Target Angle	SRH swivel actuator target angle (RH) signal	–3276.7 — 3276.7 deg	—
Left Steering Responsive Headlight Power Supply Failure	SRH swivel actuator power supply failure (LH) signal	Normal: when normal Abnormal: when abnormal	—
Right Steering Responsive Headlight Power Supply Failure	SRH swivel actuator power supply failure (RH) signal	Normal: when normal Abnormal: when abnormal	—
Left Steering Responsive Headlight Motor Failure	SRH swivel actuator motor failure (LH) signal	Normal: when normal Abnormal: when abnormal	—
Right Steering Responsive Headlight Motor Failure	SRH swivel actuator motor failure (RH) signal	Normal: when normal Abnormal: when abnormal	—
Left Steering Responsive Headlight Sensor Failure	SRH swivel actuator sensor error (LH) signal	Normal: when normal Abnormal: when abnormal	—
Right Steering Responsive Headlight Sensor Failure	SRH swivel actuator sensor error (RH) signal	Normal: when normal Abnormal: when abnormal	—

11.Active Test

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Display	Note
Right Steering Responsive Headlight	—	SRH swivel actuator on the right side operates. NOTE: Used for unit inspection etc. of the SRH swivel actuator.
Left Steering Responsive Headlight	—	SRH swivel actuator on the left side operates. NOTE: Used for unit inspection etc. of the SRH swivel actuator.

12.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Initial setting value	Customize setting	Note
SRH/ADB Setup	ON	ON	—
		OFF	—
Initial Drive Setting	ON	ON	—
		OFF	—

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
U0074	CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF	<Ref. to AL(diag)-21, DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	<Ref. to AL(diag)-21, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to AL(diag)-21, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	<Ref. to AL(diag)-21, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	<Ref. to AL(diag)-21, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to AL(diag)-21, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	<Ref. to AL(diag)-21, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2900	AHL CONTROL	<Ref. to AL(diag)-21, DTC B2900 AHL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2902	REAR HEIGHT SENSOR CIRCUIT	<Ref. to AL(diag)-22, DTC B2902 REAR HEIGHT SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2904	LED HEADLIGHT CIRCUIT RH	<Ref. to AL(diag)-24, DTC B2904 LED HEADLIGHT CIRCUIT RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2905	LED HEAD LIGHT CIRCUIT LH	<Ref. to AL(diag)-26, DTC B2905 LED HEAD LIGHT CIRCUIT LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2908	STEERING RESPONSIVE HEADLIGHT ACTUATOR RH	<Ref. to AL(diag)-28, DTC B2908 STEERING RESPONSIVE HEADLIGHT ACTUATOR RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2909	STEERING RESPONSIVE HEADLIGHT ACTUATOR LH	<Ref. to AL(diag)-30, DTC B2909 STEERING RESPONSIVE HEADLIGHT ACTUATOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2910	STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH	<Ref. to AL(diag)-32, DTC B2910 STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2911	STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH	<Ref. to AL(diag)-33, DTC B2911 STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data (reverse switch signal) is not received from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data (vehicle speed signal) is not received from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data (headlights ON signal) is not received from the body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0402 INVALID DATA RECEIVED FROM TCM

Detected when CAN data (reverse switch signal) from TCM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Detected when data (vehicle speed signal) from VDC CM is abnormal.
Trouble symptom:
The auto headlight beam leveler does not operate.

NOTE:
Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

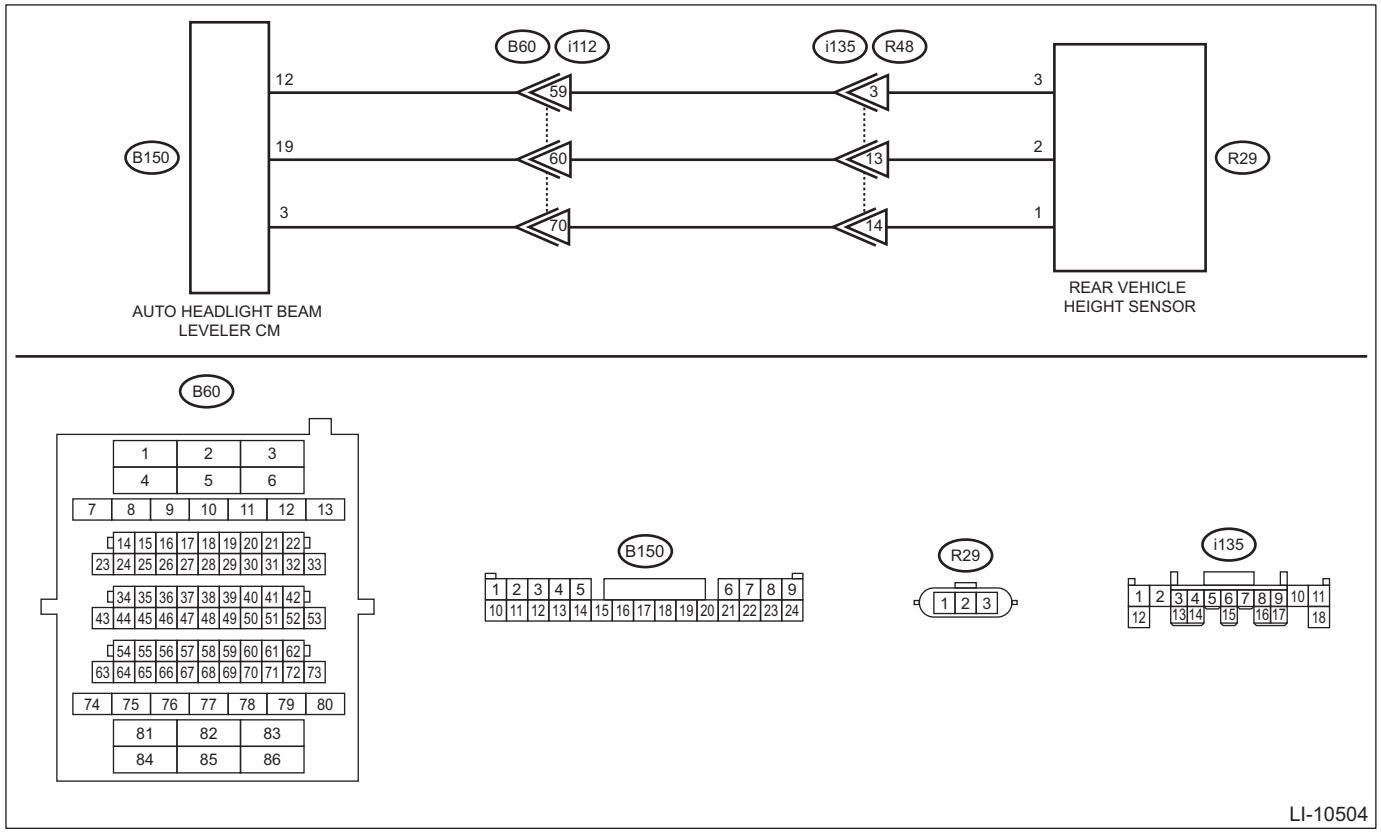
G: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data (headlights ON signal) is invalid.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC B2900 AHL CONTROL

Detected when internal malfunction occurs in the auto headlight beam leveler CM.
Trouble symptom:
The auto headlight beam leveler does not operate.



CAUTION:
Initialization is required after replacing the auto headlight beam leveler CM.

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Turn the ignition switch to OFF → ON. 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2900 displayed? (Current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

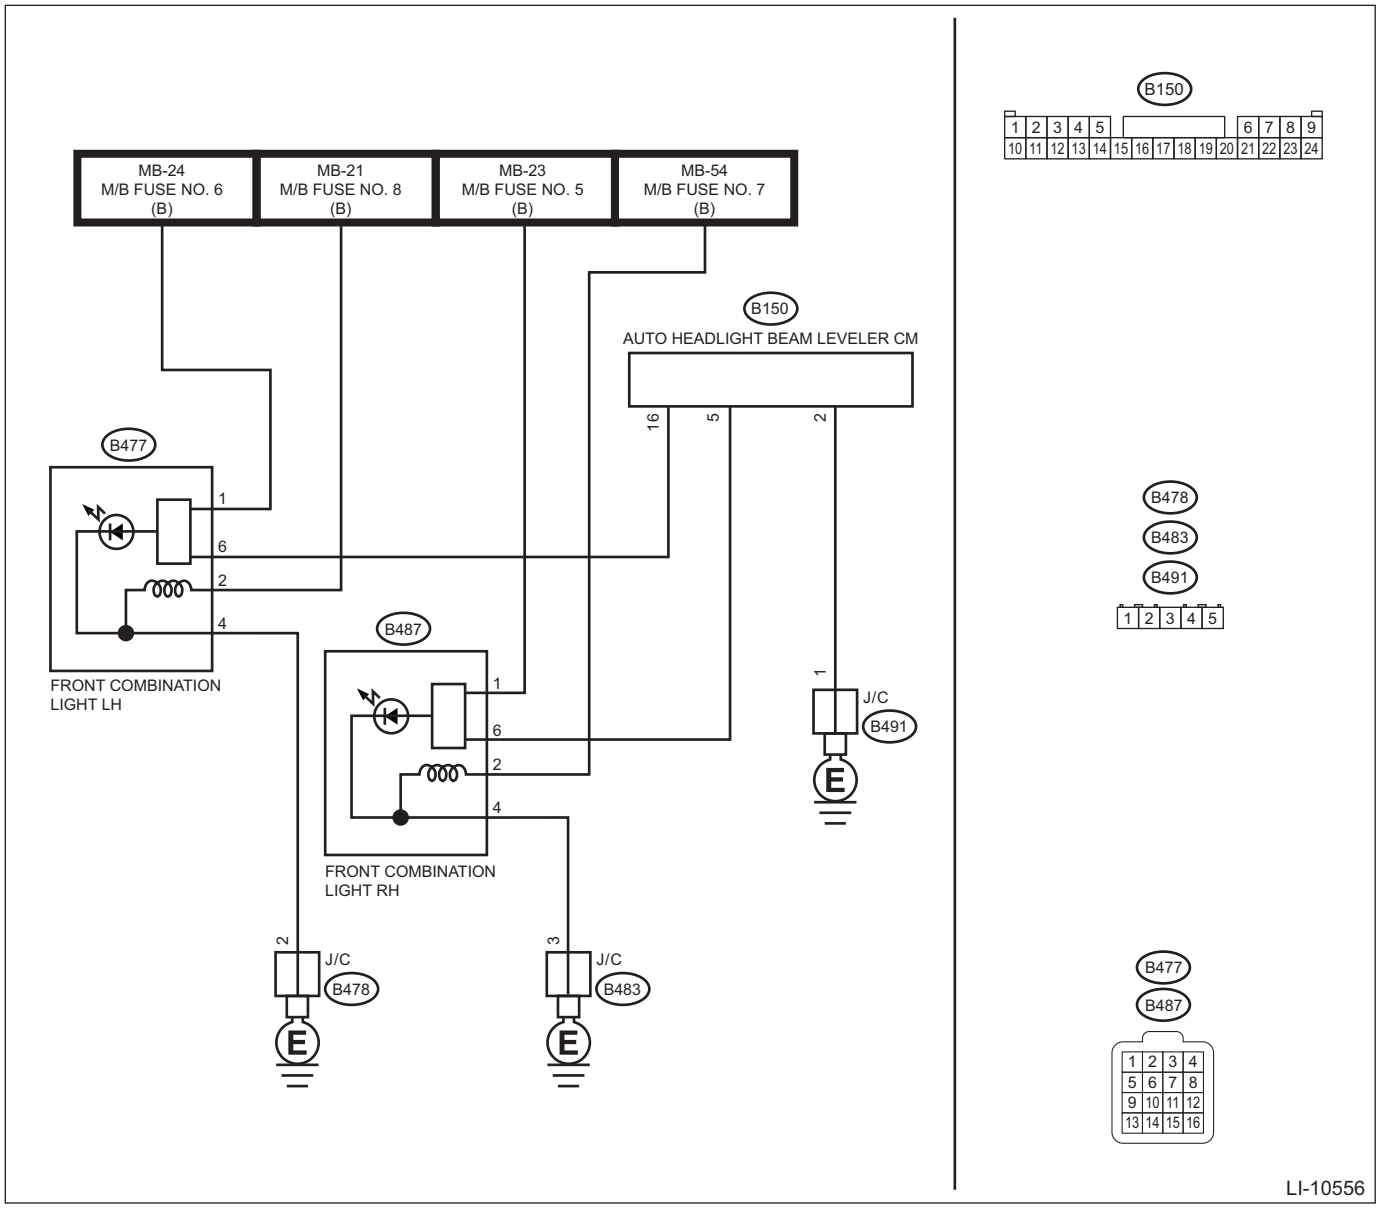
I: DTC B2902 REAR HEIGHT SENSOR CIRCUIT

DTC detecting condition:
Detected when error occurs in the rear height sensor.
Trouble symptom:
The auto headlight beam leveler does not operate.

CAUTION:
Initialization is required after replacing the auto headlight beam leveler CM.
Wiring diagram:
Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Turn the ignition switch to OFF → ON. 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2902 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Display «R Sensor Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the data indicate the standard value (approx. 2.5 V when on a level road with one person in the vehicle)?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Display «R Sensor Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.> 2) Change the vehicle posture.	Does the data change?	Go to step **6**.	Go to step **4**.
4	**CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND VEHICLE HEIGHT SENSOR.** 1) Disconnect the vehicle height sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the vehicle height sensor connector and chassis ground. ***Connector & terminal*** ***(R29) No. 3 (+) — Chassis ground (–):***	Is the voltage 5±0.25 V?	Go to step **5**.	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>
5	**CHECK REAR HEIGHT SENSOR.** 1) Remove the rear vehicle height sensor. 2) Perform the inspection of rear height sensor unit. <Ref. to LI-94, INSPECTION, Rear Height Sensor.>	Is the check result OK?	Go to step **6**.	Replace the rear height sensor. <Ref. to LI-93, Rear Height Sensor.>
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between the auto headlight beam leveler CM connector and rear height sensor connector. ***Connector & terminal*** ***(B150) No. 3 — (R29) No. 1:*** ***(B150) No. 19 — (R29) No. 2:*** ***(B150) No. 12 — (R29) No. 3:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 3 — Chassis ground:*** ***(B150) No. 19 — Chassis ground:*** ***(B150) No. 12 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Repair or replace the short circuit of the harness.



J: DTC B2904 LED HEADLIGHT CIRCUIT RH

DTC detecting condition:
LED headlight (RH) malfunction signal line error is detected for 2 seconds or more.
Trouble symptom:
LED headlight malfunction, LED headlight indicator illuminates.

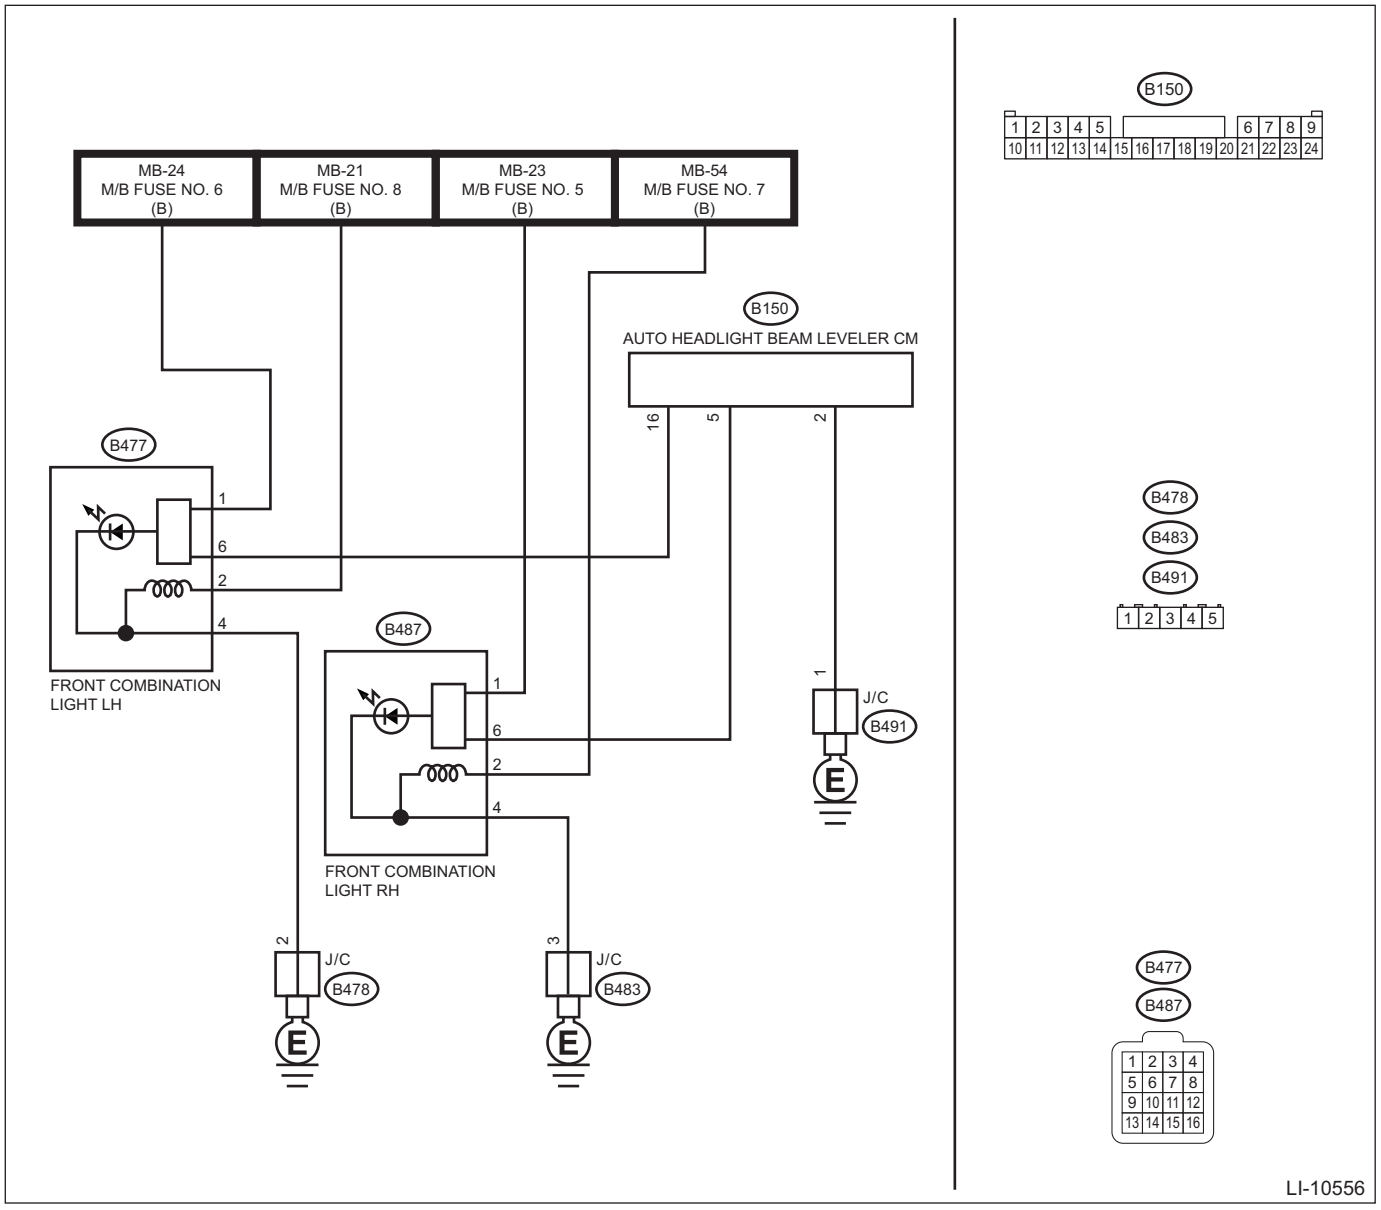
CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Turn the lighting switch to 2 (HEAD). 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2904 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Display «LED HEADLAMP(RH) error Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the data indicate «Light off»?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.
3	**CHECK THE HEADLIGHT SYSTEM POWER SUPPLY CIRCUIT.** 1) Disconnect the headlight assembly RH connector. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD). 4) Using a tester, measure the voltage between headlight assembly RH connector and chassis ground. ***Connector & terminal*** ***(B487) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **4**.	Repair the headlight system.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between headlight assembly RH connector and chassis ground. ***Connector & terminal*** ***(B487) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HEADLIGHT SYSTEM.** 1) Connect the headlight assembly RH connector. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD).	Does the headlight come on?	Go to step **6**.	Replace the headlight. <Ref. to LI-37, Headlight Assembly.>
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector. ***Connector & terminal*** ***(B150) No. 5 — (B487) No. 6:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Repair or replace the open circuit of harness.



K: DTC B2905 LED HEAD LIGHT CIRCUIT LH

DTC detecting condition:
LED headlight (LH) malfunction signal line error is detected for 2 seconds or more.
Trouble symptom:
LED headlight malfunction, LED headlight indicator illuminates.

CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Turn the lighting switch to 2 (HEAD). 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2905 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

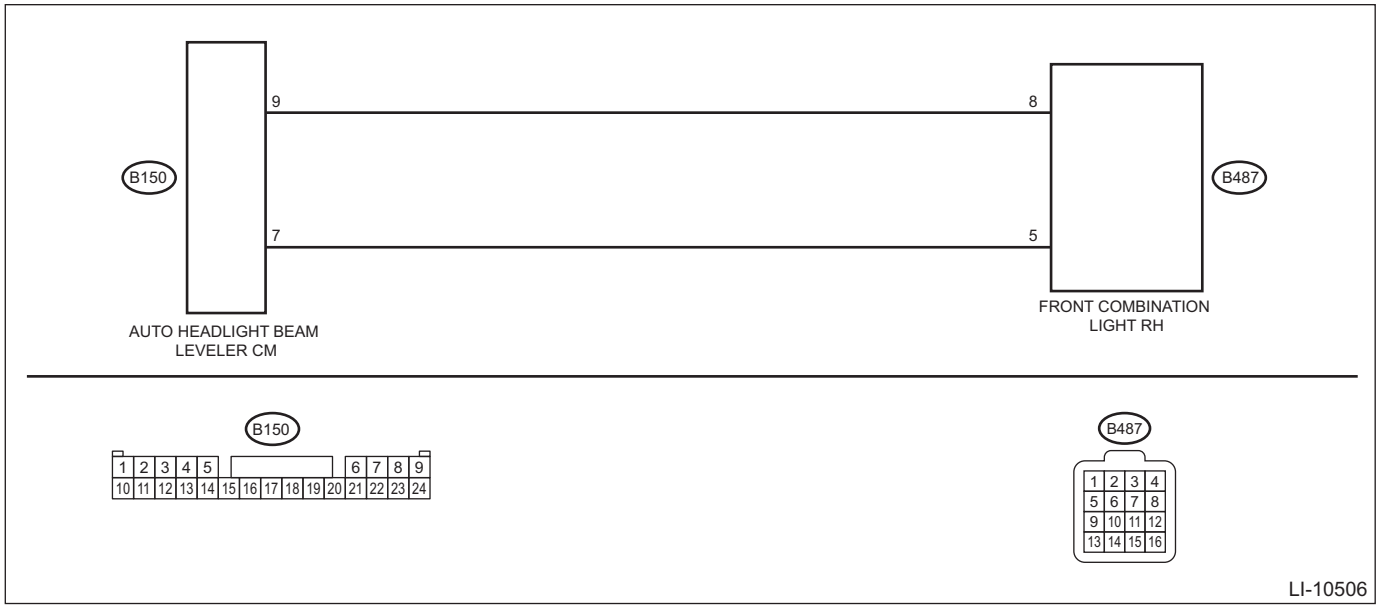
	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Display «LED HEADLAMP(LH) error Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the data indicate «Light off»?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.
3	**CHECK THE HEADLIGHT SYSTEM POWER SUPPLY CIRCUIT.** 1) Disconnect the headlight assembly LH connector. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD). 4) Using a tester, measure the voltage between headlight assembly LH connector and chassis ground. ***Connector & terminal*** ***(B477) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **4**.	Repair the headlight system.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between headlight assembly LH connector and chassis ground. ***Connector & terminal*** ***(B477) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HEADLIGHT SYSTEM.** 1) Connect the headlight assembly LH connector. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD).	Does the headlight come on?	Go to step **6**.	Replace the headlight. <Ref. to LI-37, Headlight Assembly.>
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector. ***Connector & terminal*** ***(B150) No. 16 — (B477) No. 6:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Repair or replace the open circuit of harness.

L: DTC B2908 STEERING RESPONSIVE HEADLIGHT ACTUATOR RH

DTC detecting condition:

Fail flag (failures shown below) of the SRH actuator is detected for 1 second or more.

- Overheating of the actuator driving IC is detected.
- Short circuit, open circuit of the motor coil is detected.
- Abnormality of the motor position sensor is detected.
- Motor lock is detected.



Trouble symptom:

The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:

- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2908 displayed? (current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK OTHER DTCS.** Check whether or not other DTCs are stored in the auto headlight beam leveler system.	Are DTCs other than DTC B2908 stored?	Perform the diagnosis for DTC other than B2908 first.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly RH connector. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector. ***Connector & terminal*** ***(B150) No. 7 — (R487) No. 5:*** ***(B150) No. 9 — (R487) No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK FORCED OPERATION OF SWIVEL ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Start the engine. 4) Perform «Right Steering Responsive Headlight» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly RH. <Ref. to LI-37, Headlight Assembly.>

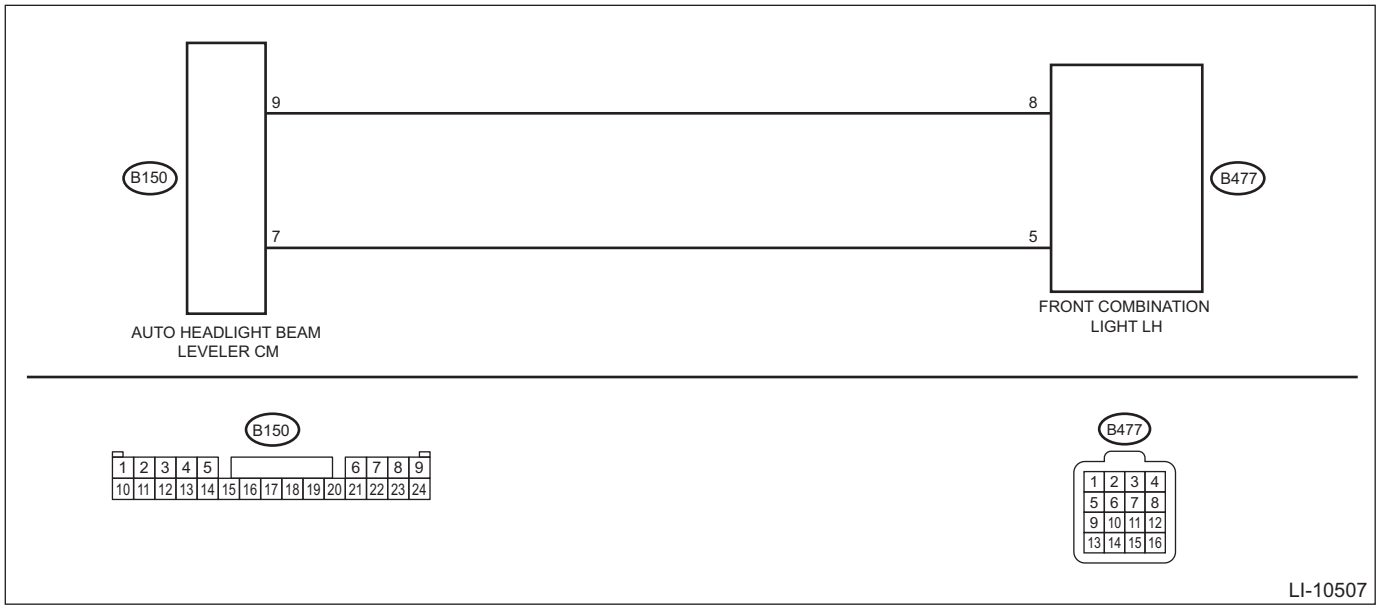
M: DTC B2909 STEERING RESPONSIVE HEADLIGHT ACTUATOR LH

DTC detecting condition:

Fail flag (failures shown below) of the SRH actuator is detected for 1 second or more.

- Overheating of the actuator driving IC is detected.
- Short circuit, open circuit of the motor coil is detected.
- Abnormality of the motor position sensor is detected.
- Motor lock is detected.

Trouble symptom:



The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:

- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:

Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2909 displayed? (current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK OTHER DTCS.** Check whether or not other DTCs are stored in the auto headlight beam leveler system.	Are DTCs other than DTC B2909 stored?	Perform the diagnosis for DTC other than B2909 first.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly LH connector. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector. ***Connector & terminal*** ***(B150) No. 7 — (B477) No. 5:*** ***(B150) No. 9 — (B477) No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK FORCED OPERATION OF SWIVEL ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Start the engine. 4) Perform «Left Steering Responsive Headlight» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly LH. <Ref. to LI-37, Headlight Assembly.>

N: DTC B2910 STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH

DTC detecting condition:
LIN data no-receive or data abnormal of the SRH actuator is detected (1 or more).
Trouble symptom:
The steering responsive headlight does not operate. SRH indicator blinks.

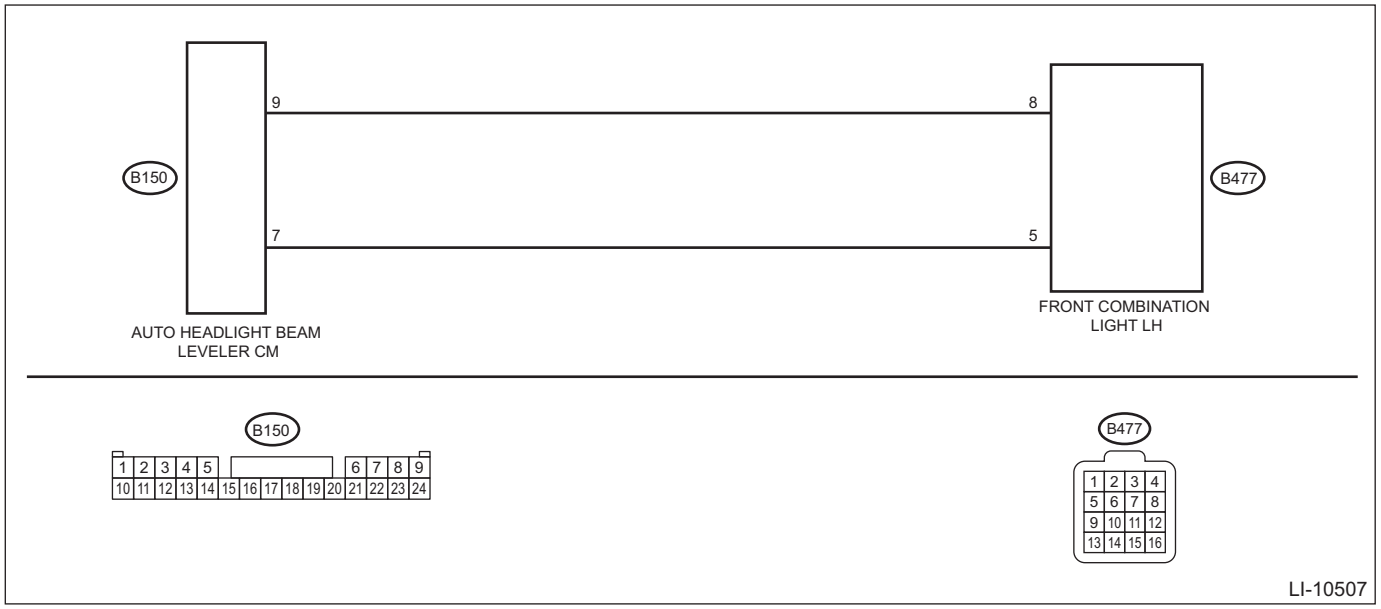
CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2910 displayed? (current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly RH connector. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector. ***Connector & terminal*** ***(B150) No. 7 — (R487) No. 5:*** ***(B150) No. 9 — (R487) No. 8:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Turn the ignition switch to ON. 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2911 displayed? (current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly RH. <Ref. to LI-37, Headlight Assembly.>

O: DTC B2911 STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH

DTC detecting condition:



LIN data no-receive or data abnormal of the SRH actuator is detected (1 or more).

Trouble symptom:

The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

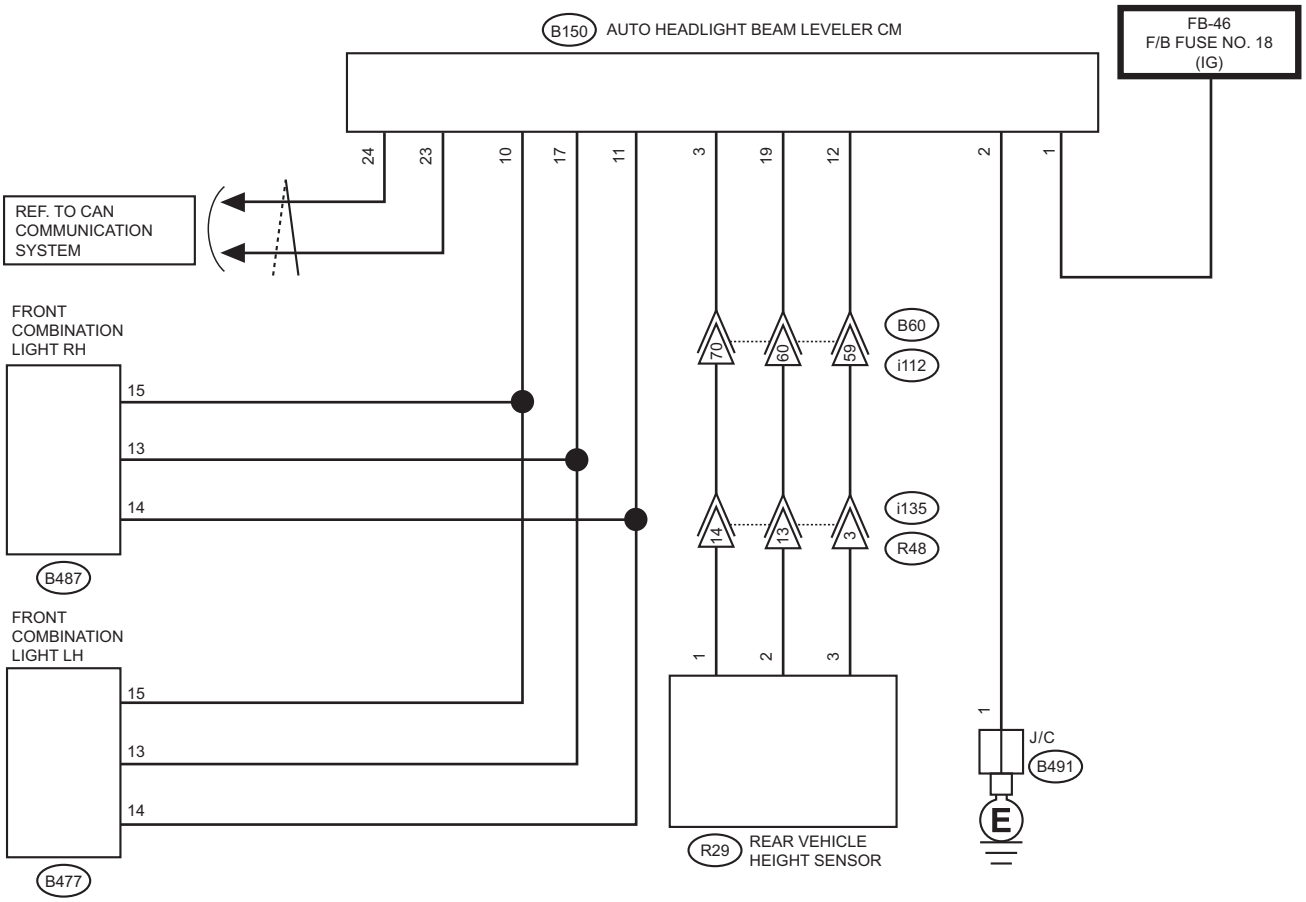
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2911 displayed? (current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly LH connector. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector. ***Connector & terminal*** ***(B150) No. 7 — (B477) No. 5:*** ***(B150) No. 9 — (B477) No. 8:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Turn the ignition switch to ON. 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2910 displayed? (current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly LH. <Ref. to LI-37, Headlight Assembly.>

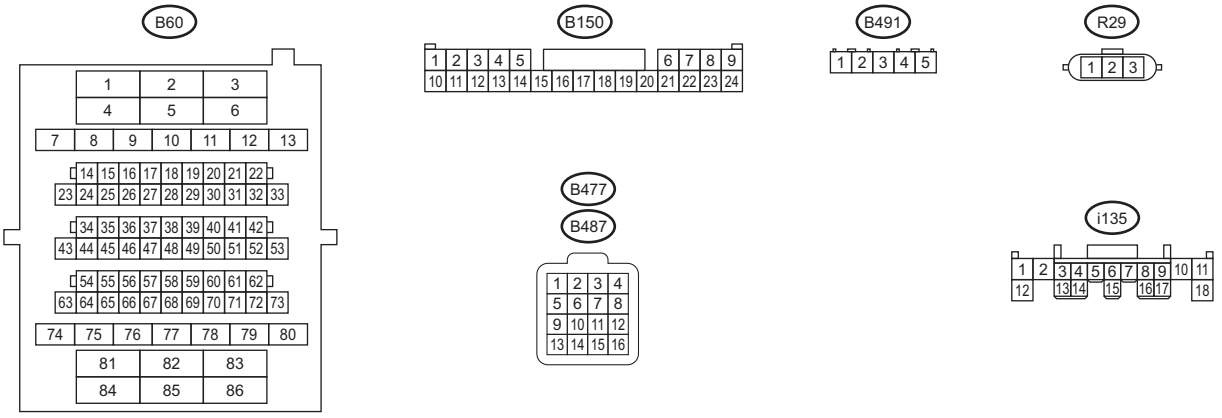
15.Diagnostics with Phenomenon

A: LIST

Symptoms	Reference
1. The auto headlight beam leveler does not operate.	<Ref. to AL(diag)-36, THE AUTO HEADLIGHT BEAM LEVELER DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
2. The steering responsive headlight does not operate.	<Ref. to AL(diag)-39, THE STEERING RESPONSIVE HEADLIGHT DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
3. The steering responsive headlight operates in a direction different from the target.	<Ref. to AL(diag)-42, THE STEERING RESPONSIVE HEADLIGHT OPERATES IN A DIRECTION DIFFERENT FROM THE TARGET, INSPECTION, Diagnostics with Phenomenon.>



B: INSPECTION



1. THE AUTO HEADLIGHT BEAM LEVELER DOES NOT OPERATE

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**

Wiring diagram:

Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

LI-10553

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the current data indicate the standard value?	Go to step **3**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN POWER SUPPLY — AUTO HEADLIGHT BEAM LEVELER CM.** 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 1 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Repair or replace the harness.
3	**CHECK INDICATOR OUTPUT.** Turn the ignition switch to ON.	Does the warning indicator turn on for three seconds?	Go to step **5**.	Go to step **4**.
4	**CHECK CURRENT DATA.** 1) Display «Indicator Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.> 2) Turn the ignition switch to ON.	Is it set as ON for 3 seconds?	Check the combination meter. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>
5	**CHECK INDICATOR OUTPUT.** Leave the ignition switch to ON for 10 seconds.	Does the warning indicator light go off?	Go to step **6**.	Go to step **10**.
6	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE.** 1) Connect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the headlight switch operation of OFF → Low beam for 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the headlight beam drop down once, and then return?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Go to step **7**.
7	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT.** 1) Display «Actuator Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.> 2) Turn the ignition switch to ON, and within 10 seconds, repeat the headlight switch operation of OFF → Low beam for 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the current data indicate the standard value? (Does the value change at 10 — 90%?)	Go to step **8**.	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>
8	**CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 10 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the headlight assembly. <Ref. to LI-37, Headlight Assembly.>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND HEADLIGHT ASSEMBLY (ACTUATOR) (OPEN CIRCUIT).** 1) Disconnect the connector of headlight assembly. 2) Measure the continuity between the auto headlight beam leveler CM connector and headlight assembly (actuator) connector. ***Connector & terminal*** ***• Headlight beam leveler RH*** ***(B150) No. 10 — (B487) No. 15:*** ***(B150) No. 17 — (B487) No. 13:*** ***(B150) No. 11 — (B487) No. 14:*** ***• Headlight beam leveler LH*** ***(B150) No. 10 — (B477) No. 15:*** ***(B150) No. 17 — (B477) No. 13:*** ***(B150) No. 11 — (B477) No. 14:***	Is there continuity?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Repair the open circuit or poor contact of the connector in the harness between headlight assembly and auto headlight beam leveler CM.
10	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to AL(diag)-20, LIST, List of Diagnostic Trouble Code (DTC).>	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>

2. THE STEERING RESPONSIVE HEADLIGHT DOES NOT OPERATE

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is the auto headlight beam leveler system DTC displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read all the DTCs. <Ref. to LAN(diag)-39, Read Diagnostic Trouble Code (DTC).>	Is a U-code DTC displayed? (Current malfunction)	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DTC.** Check DTC of VDC.	Is any DTC related to the vehicle speed and steering angle sensor detected?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK INITIALIZE FUNCTION.** Perform the function check (the initialize function) for the steering responsive headlight. <Ref. to AL(diag)-5, FUNCTION CHECK, INSPECTION, General Description.>	Do the left and right headlights operate?	Go to step **6**.	• Only one side does not operate: Go to step **5**. • Both sides do not operate: Go to step **6**.

	Step	Check	Yes	No
5	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.	Go to step **10**.
6	**CHECK REVERSE SIGNAL.** 1) Display «Shift Position Signal» using Subaru Select Monitor. 2) Place the shift in reverse.	Is «R» displayed?	Perform the diagnosis for CVT. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.> When DTC is not stored, check the inhibitor switch or inhibitor switch harness. <Ref. to CVT(TR690)-105, Inhibitor Switch.>	Go to step **7**.
7	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Go to step **8**.	Go to step **9**.
8	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(B487) No. 7 (+) — Chassis ground (–):*** ***(B477) No. 7 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Go to step **9**.	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
9	**CHECK SRH OPERATION.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Drive the vehicle to verify on which side, LH side or RH side, the SRH improper operation occurred. NOTE: At night, drive a curve of steering wheel angle approximately 45 degrees or more with vehicle speed at 40 km/h (25 MPH) or more, or drive a curve of steering wheel angle approximately 80 degrees or more with vehicle speed at 15 km/h (9 MPH) or more to check the SRH operation.	Is the improper operation occurring on either left or right side only?	Perform «VSC(VDC) Centering Mode». <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	If the fault is not fixed even after the process: Go to step **10**.

	Step	Check	Yes	No
10	**PERFORM ACTIVE TEST FOR SWIVEL ACTUATOR.** Perform «Right Steering Responsive Headlight» «Left Steering Responsive Headlight» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position? (Within 1.2 seconds)	Go to step **12**.	When the value is not the same on one side only, replace the headlight assembly of the side where the same value is not achieved. <Ref. to LI-37, Headlight Assembly.> When the value is not the same on both sides, Go to step **11**.
11	**CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.
12	**DRIVING CHECK.** Perform the road test to make sure there is no yawing.	Is it yawing?	Check the vehicle alignment. <Ref. to FS-10, Wheel Alignment.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

3. THE STEERING RESPONSIVE HEADLIGHT OPERATES IN A DIRECTION DIFFERENT FROM THE TARGET

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-249, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-251, WIRING DIAGRAM, Headlight System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is the auto headlight beam leveler system DTC displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** 1) Using the Subaru Select Monitor, read all the DTCs. <Ref. to LAN(diag)-39, Read Diagnostic Trouble Code (DTC).>	Is a U-code DTC displayed? (Current malfunction)	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DTC.** Check DTC of VDC.	Is any DTC related to the vehicle speed and steering angle sensor detected?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK INITIALIZE FUNCTION.** Perform the function check (the initialize function) for the steering responsive headlight. <Ref. to AL(diag)-5, FUNCTION CHECK, INSPECTION, General Description.>	Do the left and right headlights operate?	Go to step **5**.	• Only one side does not operate: Go to step **13**. • Both sides do not operate: Go to step **12**.

	Step	Check	Yes	No
5	**CHECK INPUT SIGNAL.** Display «Vehicle Speed Signal» and «Steering Angle Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is «Vehicle Speed Signal» 8 km/h (5 MPH) or less, and «Steering Angle Signal» 8.5 degree or less?	Go to step **6**.	Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>
6	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Target Angle» «Right Steering Responsive Headlight Target Angle». <Ref. to AL(diag)-16, Read Current Data.>	Is the target angle 0 degree?	Go to step **9**.	Go to step **7**.
7	**CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is the voltage 8 — 16 V?	Go to step **8**.	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.
8	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(B487) No. 7 (+) — Chassis ground (–):*** ***(B477) No. 7 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
9	**CHECK SRH SWIVEL ACTUATOR CURRENT ANGLE.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Current Angle» «Right Steering Responsive Headlight Current Angle». <Ref. to AL(diag)-16, Read Current Data.>	Is the current angle 0 degree?	Go to step **12**.	Go to step **10**.
10	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.	Go to step **11**.
11	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(B487) No. 7 (+) — Chassis ground (–):*** ***(B477) No. 7 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the headlight assembly. <Ref. to LI-37, Headlight Assembly.>	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

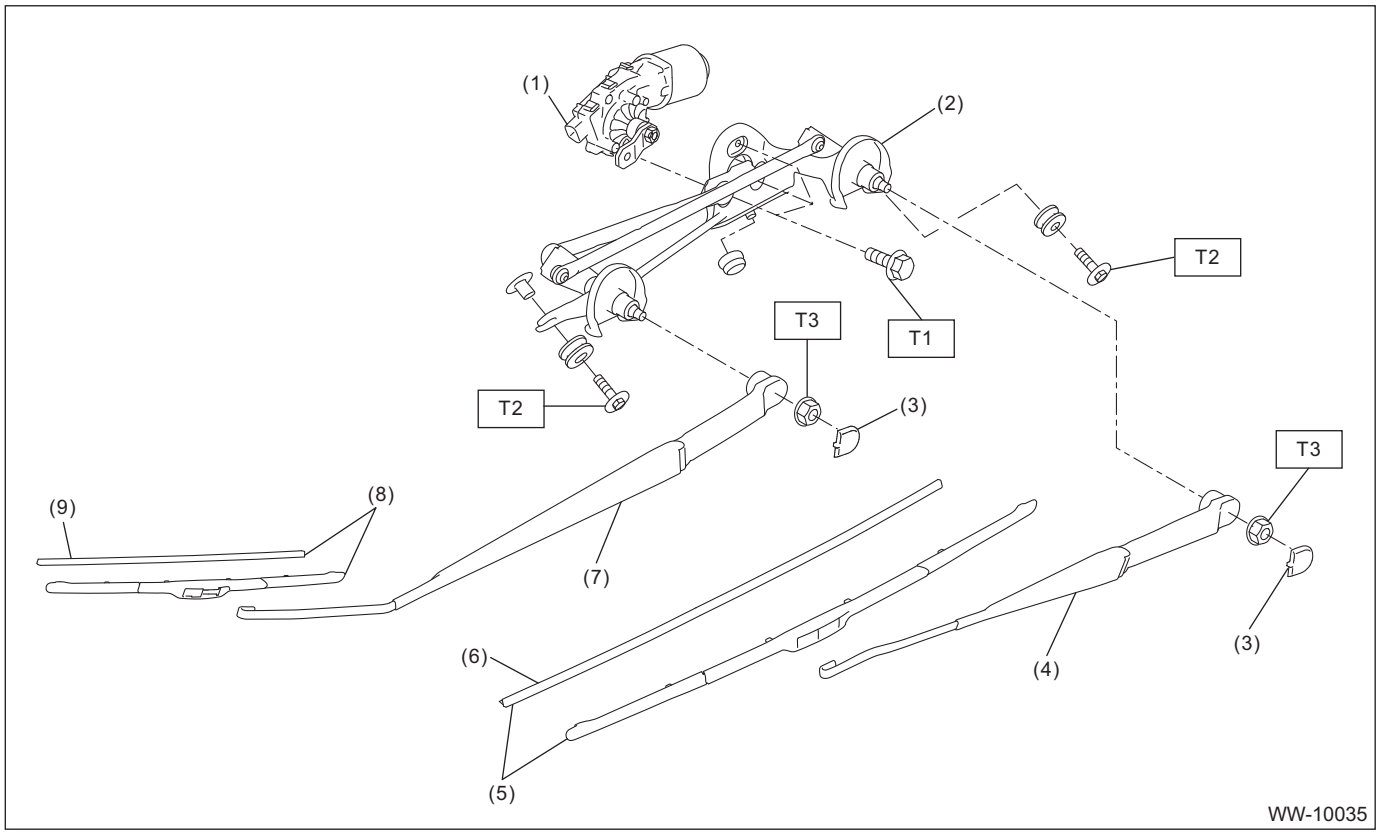
	Step	Check	Yes	No
12	**CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is the voltage 8 — 16 V?	Go to step **13**.	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.
13	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.	Go to step **14**.
14	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(B487) No. 7 (+) — Chassis ground (–):*** ***(B477) No. 7 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Go to step **15**.	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
15	**PERFORM ACTIVE TEST FOR SWIVEL ACTUATOR.** Perform «Active Test» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position? (Within 1.2 seconds)	Go to step **16**.	When the value is not the same on one side only, replace the headlight assembly of the side where the same value is not achieved. <Ref. to LI-37, Headlight Assembly.> When the value is not the same on both sides, replace the auto headlight beam leveler CM. <Ref. to LI-90, Auto Headlight Beam Leveler Control Module.>

Step		Check	Yes	No
16	**DRIVING CHECK.** Perform the road test to make sure there is no yawing.	Is it yawing?	Check the vehicle alignment. <Ref. to FS-10, Wheel Alignment.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

WIPER AND WASHER SYSTEMS

WW

		Page
1.	General Description	2
2.	Relay and Fuse	8
3.	Wiper and Washer System	10
4.	Combination Switch (Wiper)	11
5.	Wiper Blade	16
6.	Washer Tank and Motor	21
7.	Front Wiper Arm	29
8.	Front Wiper Motor and Link	31
9.	Front Washer Nozzle and Hose	34
10.	Rear Wiper Arm	39
11.	Rear Wiper Motor	41
12.	Rear Washer	44



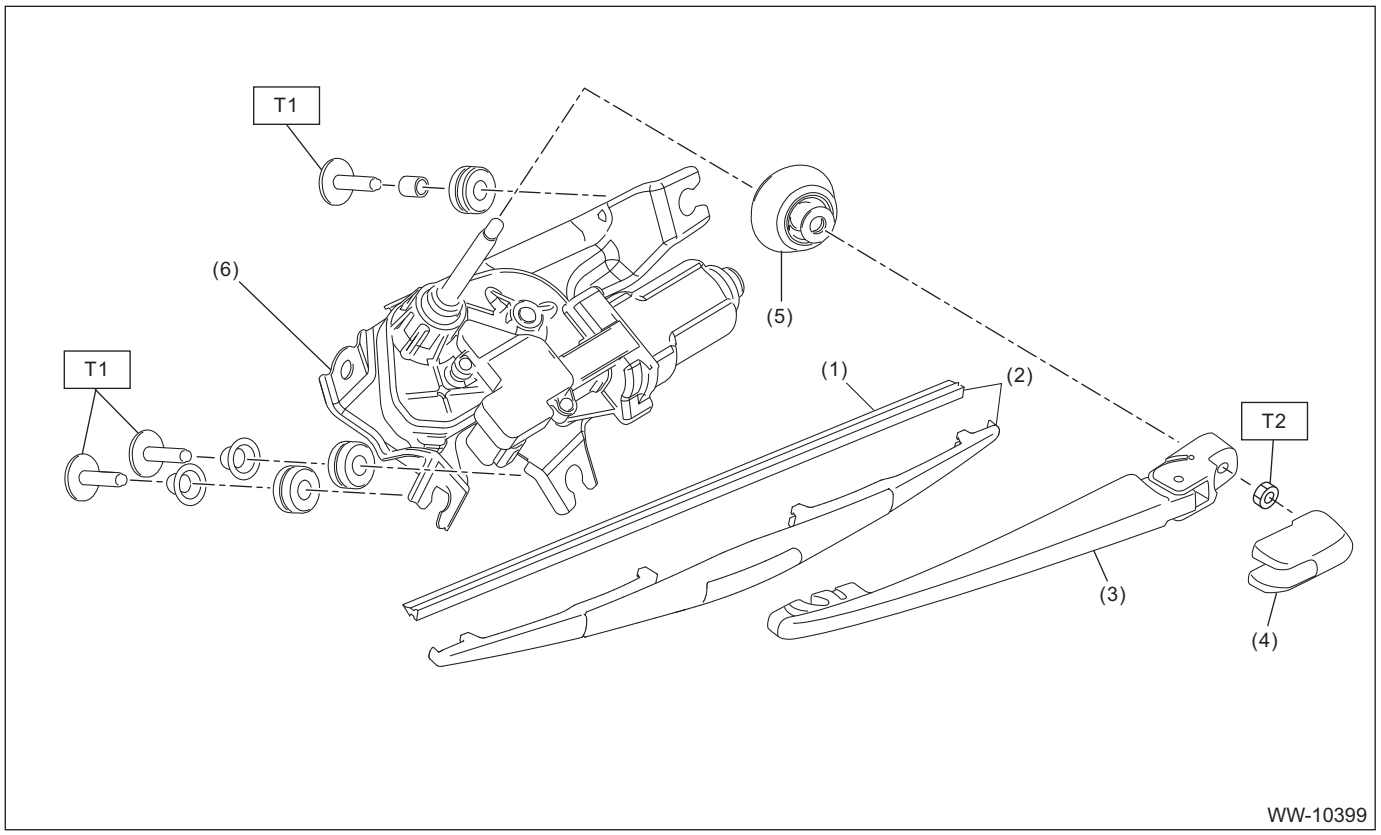
1. General Description

A: SPECIFICATION

Front wiper motor	Input	12 V — 72 W or less
Rear wiper motor	Input	12 V — 42 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 60 W or less
Rear washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less

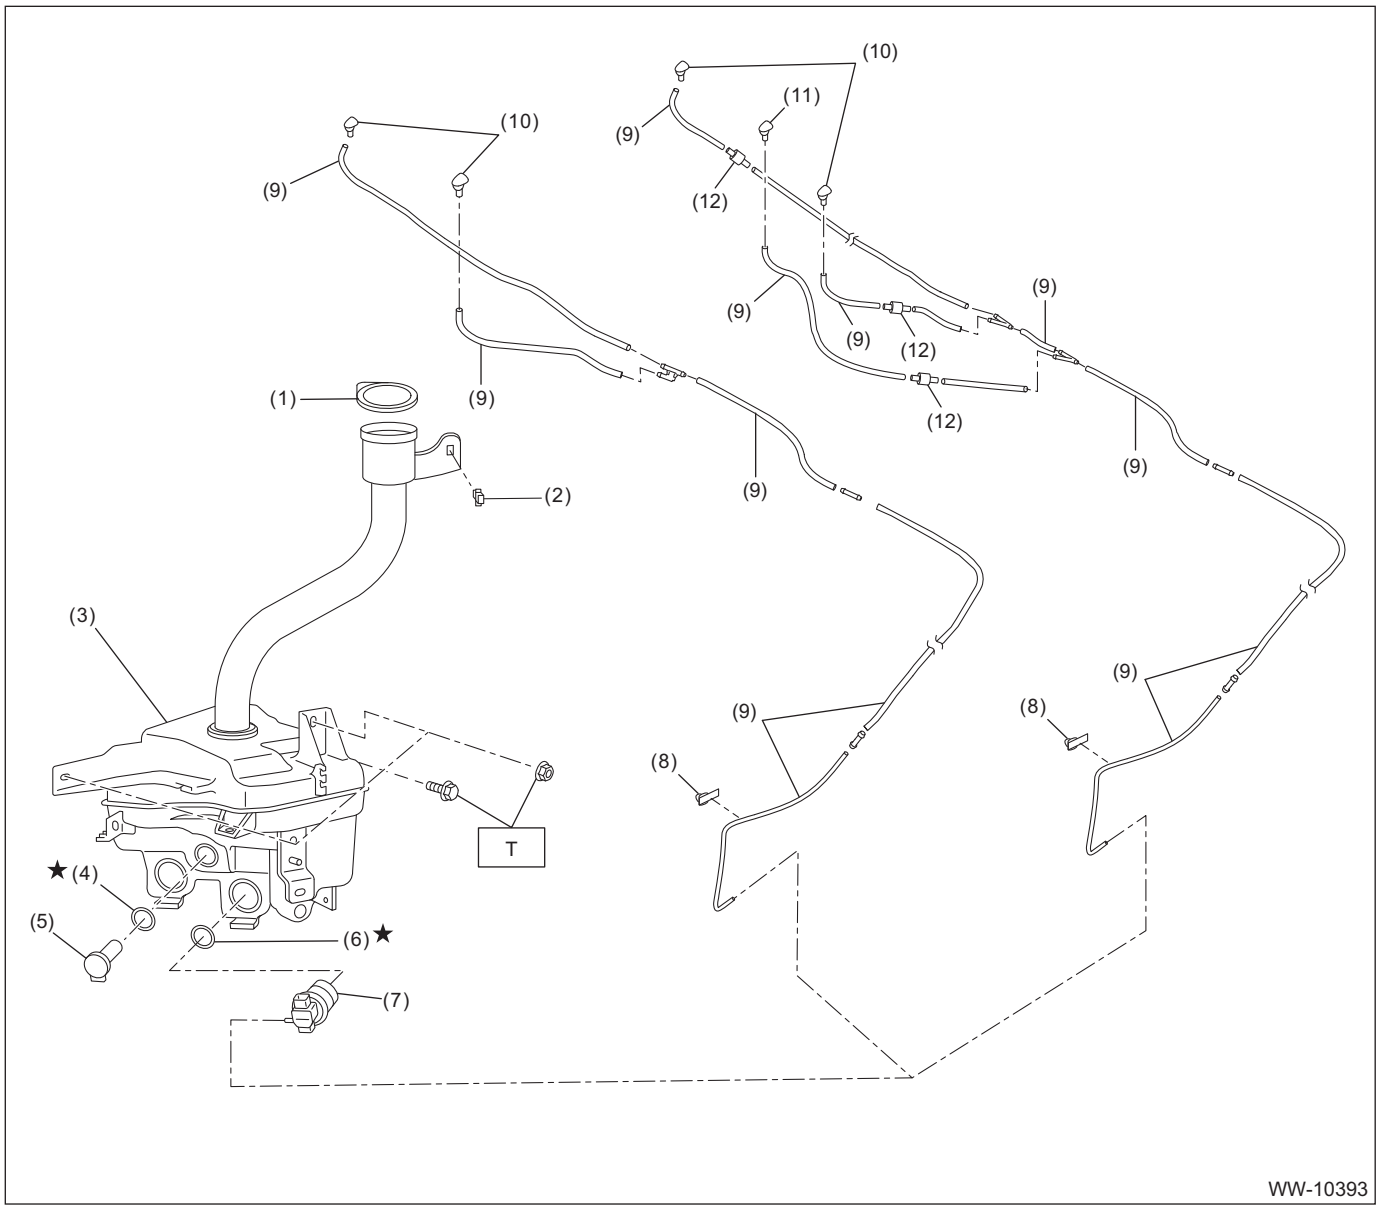
B: COMPONENT

1. FRONT WIPER



(1) Motor ASSY - windshield wiper
(2) Link ASSY - windshield wiper
(3) Cover - windshield wiper arm
(4) Arm ASSY - windshield wiper driver
(5) Blade ASSY - windshield wiper driver
(6) Rubber ASSY - windshield wiper driver
(7) Arm ASSY - windshield wiper assistor
(8) Blade ASSY - windshield wiper assistor
(9) Rubber ASSY - windshield wiper assistor

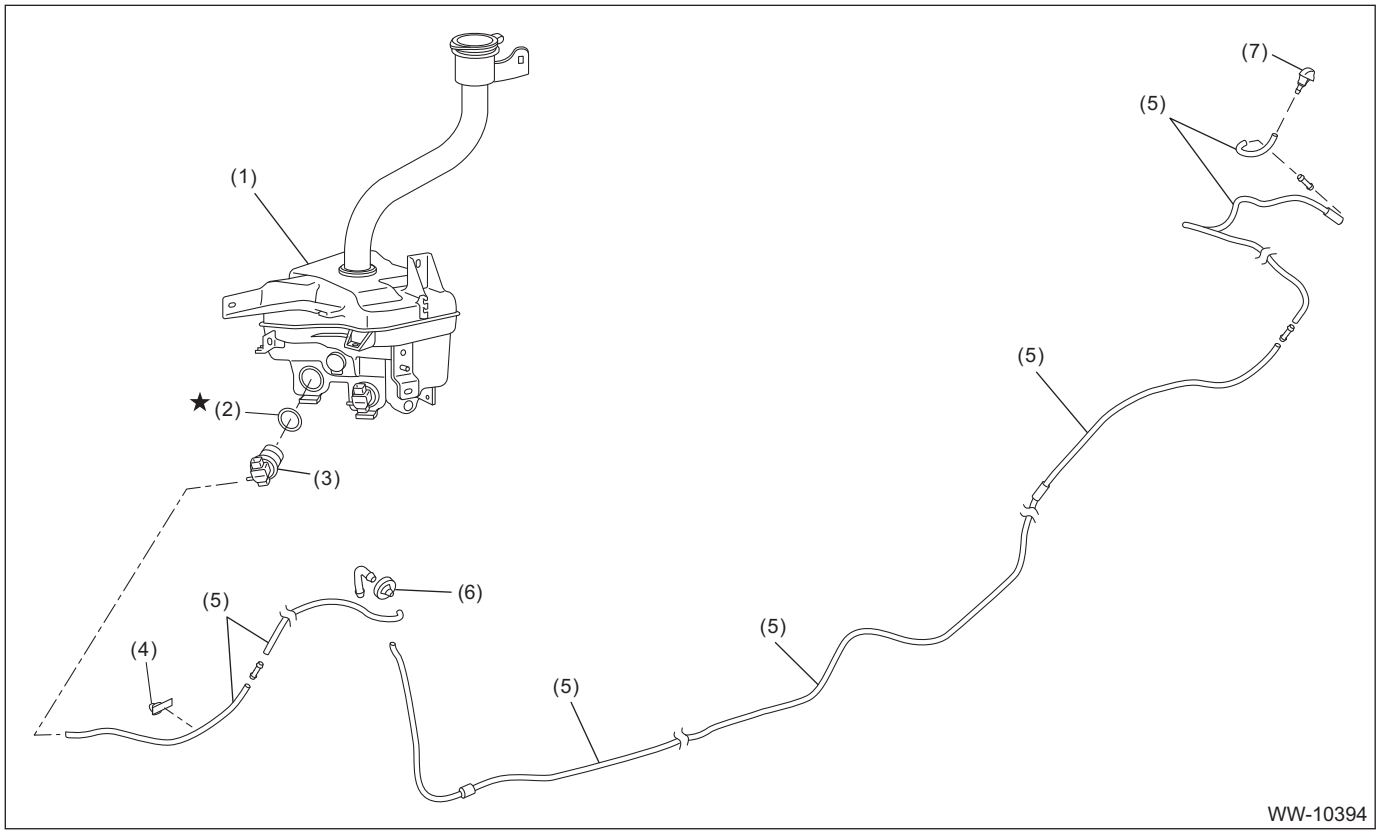
Tightening torque: N·m (kgf-m, ft-lb)



T1: 5.4 (0.6, 4)
T2: 6 (0.6, 4.4)
T3: 26 (2.7, 19.2)

2. REAR WIPER

(1)	Rubber ASSY - rear wiper	(4)	Cover - rear wiper arm	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Blade ASSY - rear wiper	(5)	Cap - pivot wiper	***T1: 7 (0.7, 5.2)***
(3)	Arm ASSY - rear wiper	(6)	Motor ASSY - rear wiper	***T2: 8 (0.8, 5.9)***



3. WASHER TANK (FRONT)

(1)	Cap - washer tank	(6)	Packing - motor pump	(11)	Nozzle - windshield washer Eye-Sight (model with EyeSight)
(2)	Clip	(7)	Motor pump ASSY - washer front	(12)	Valve - windshield washer
(3)	Tank - washer	(8)	Holder - hose		
(4)	Packing - sensor	(9)	Hose - windshield washer		
(5)	Sensor - washer tank	(10)	Nozzle - windshield washer		

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

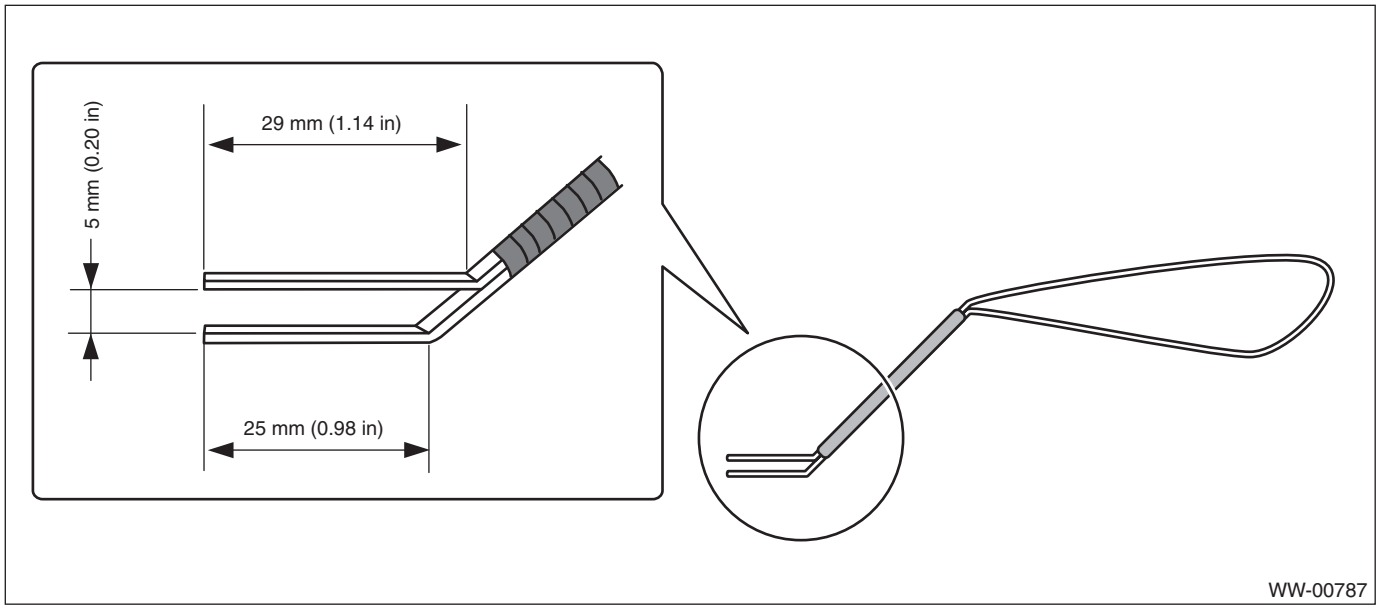
4. WASHER TANK (REAR)

(1) Tank - washer
(2) Packing - motor pump
(3) Motor pump ASSY - washer rear
(4) Holder - hose
(5) Hose ASSY - rear washer
(6) Grommet - washer hose
(7) Nozzle - rear washer

C: CAUTION

- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When connecting the pipe hoses, be careful not to cause bend or blockage.
- If even a small amount of silicon oil or grease enters the tank - washer and the washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

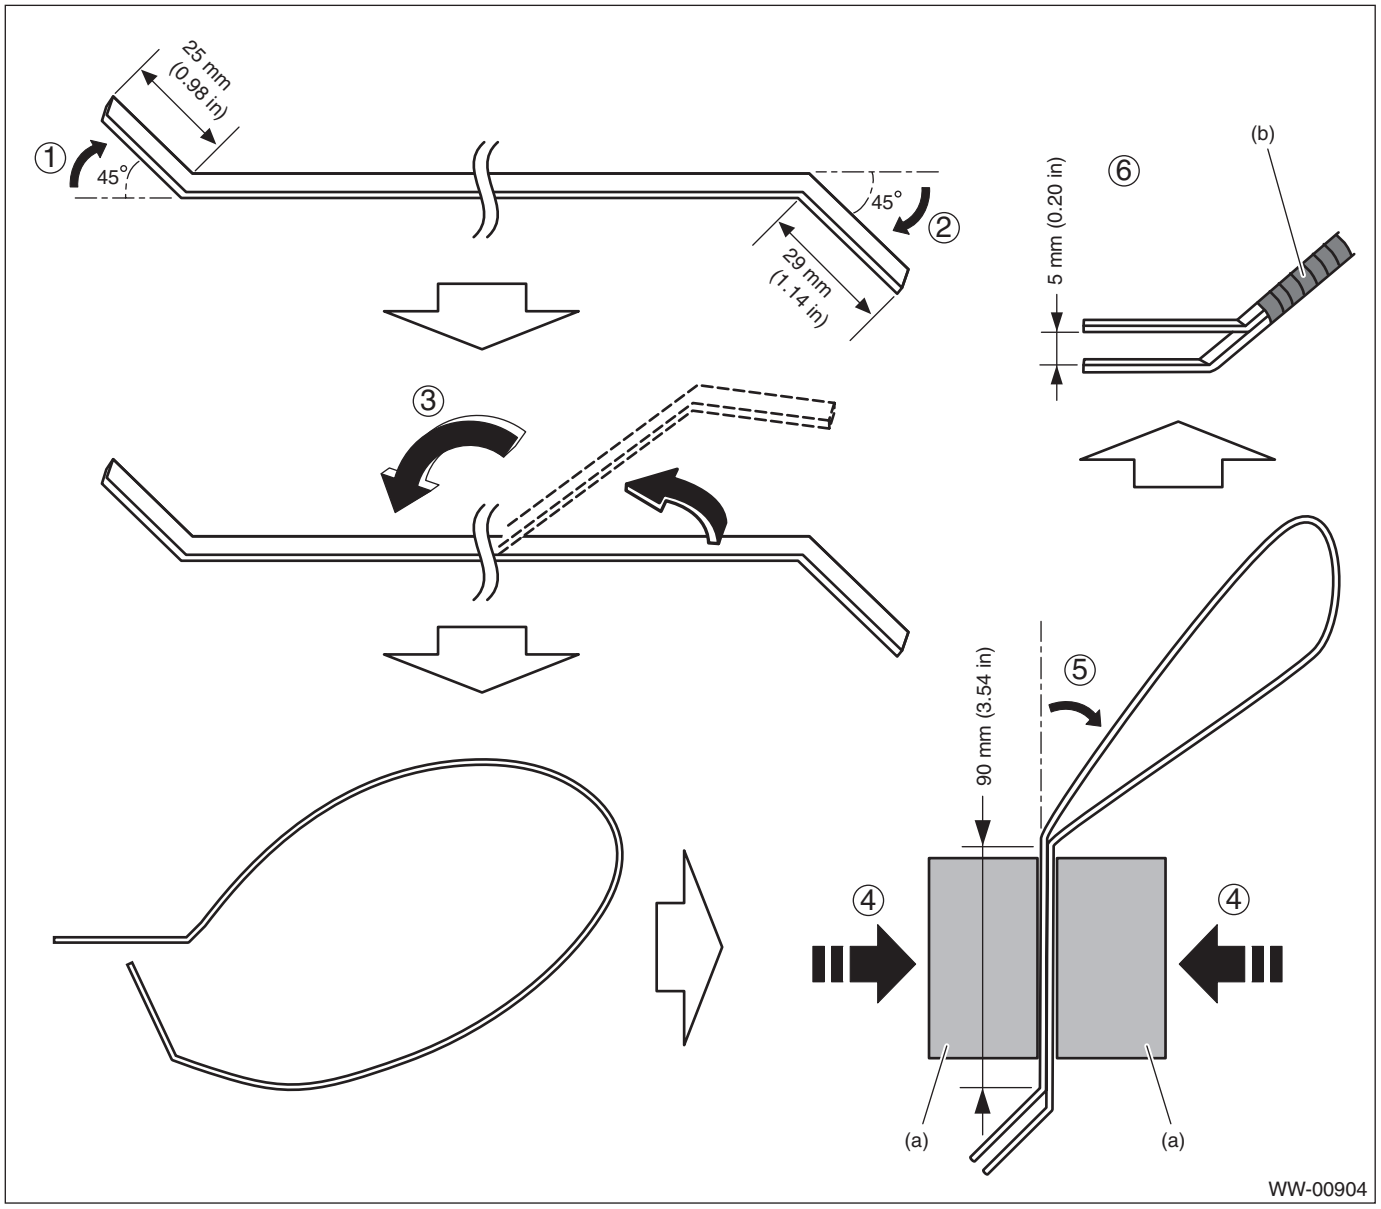
D: PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

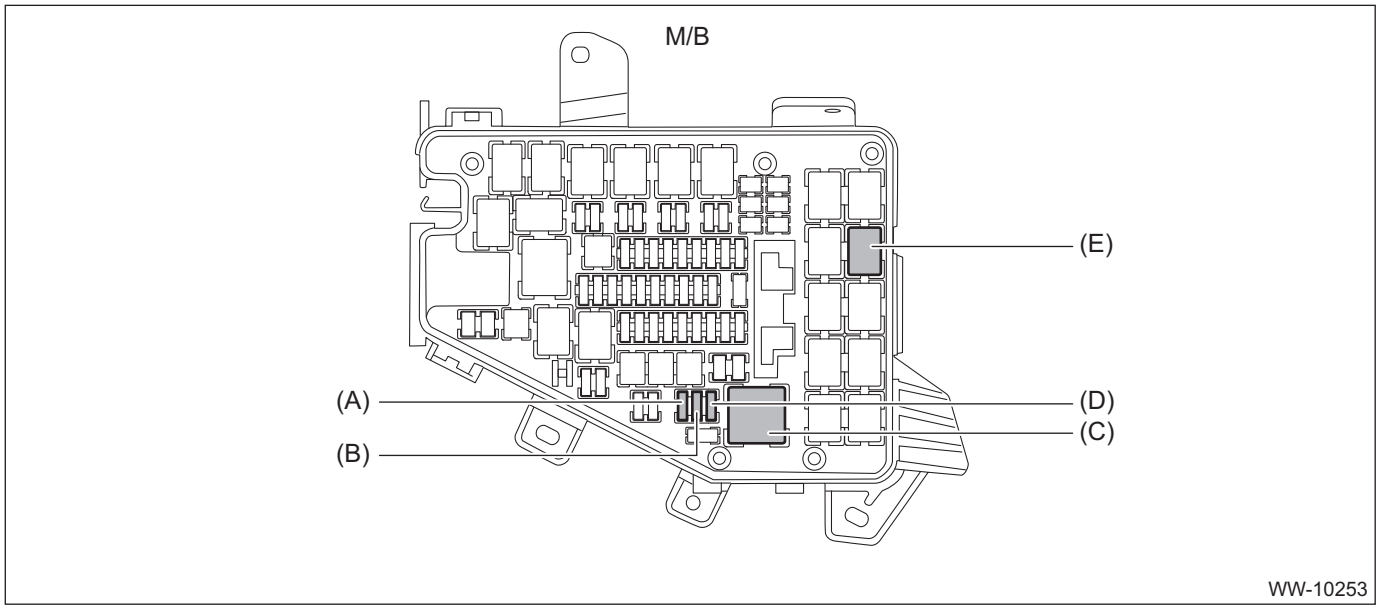
2. GENERAL TOOL



TOOL NAME	REMARKS
DST-i	Used together with Subaru Select Monitor 4.
Circuit tester	Used for measuring resistance, voltage and current.

NOTE:
Referring to the data described below, prepare the materials to make a nozzle - windshield washer adjustment tool.

Materials
- Vertebra of wiper blade which is to be discarded
- Vinyl tape



Steps of making a front washer nozzle adjustment tool

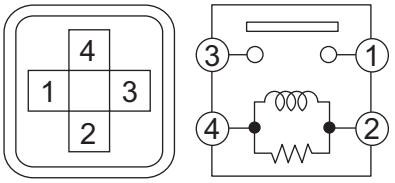
1. Bend the vertebra at the position 25 mm (0.98 in) away from its end by 45°.
2. Bend the vertebra at the position 29 mm (1.14 in) away from the other end by 45°.
3. Double up the vertebra so that the longer end (29 mm (1.14 in)) comes upward.
4. Secure the vertebra with a vise (a) so that the tip clearance becomes 5 mm (0.2 in).
5. Bend the vertebra at the position approximately 90 mm (3.54 in) away from the bending point for the longer end.
6. Check that the tip clearance is 5 mm (0.2 in), and secure the vertebra with vinyl tape (b).

2. Relay and Fuse

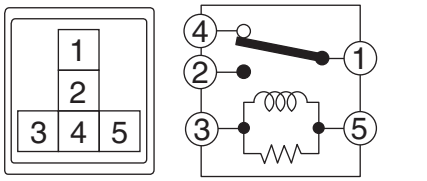
A: LOCATION

Main fuse box (M/B)	Fuse 15 A (rear wiper, rear washer)	(A)
	Fuse 15 A (front washer)	(B)
	Wiper relay	(C)
	Fuse 30 A (front wiper)	(D)
	Rear wiper relay	(E)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>



B: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 3	Always	1 MΩ or more	 WW-10039
1 — 3	Apply battery voltage between terminals 4 and 2.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01085
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Wiper and Washer System

A: WIRING DIAGRAM

1. WIPER AND WASHER (FRONT)

Refer to “Front Wiper and Washer System” in the wiring diagram. <Ref. to WI-246, WIRING DIAGRAM, Front Wiper and Washer System.>

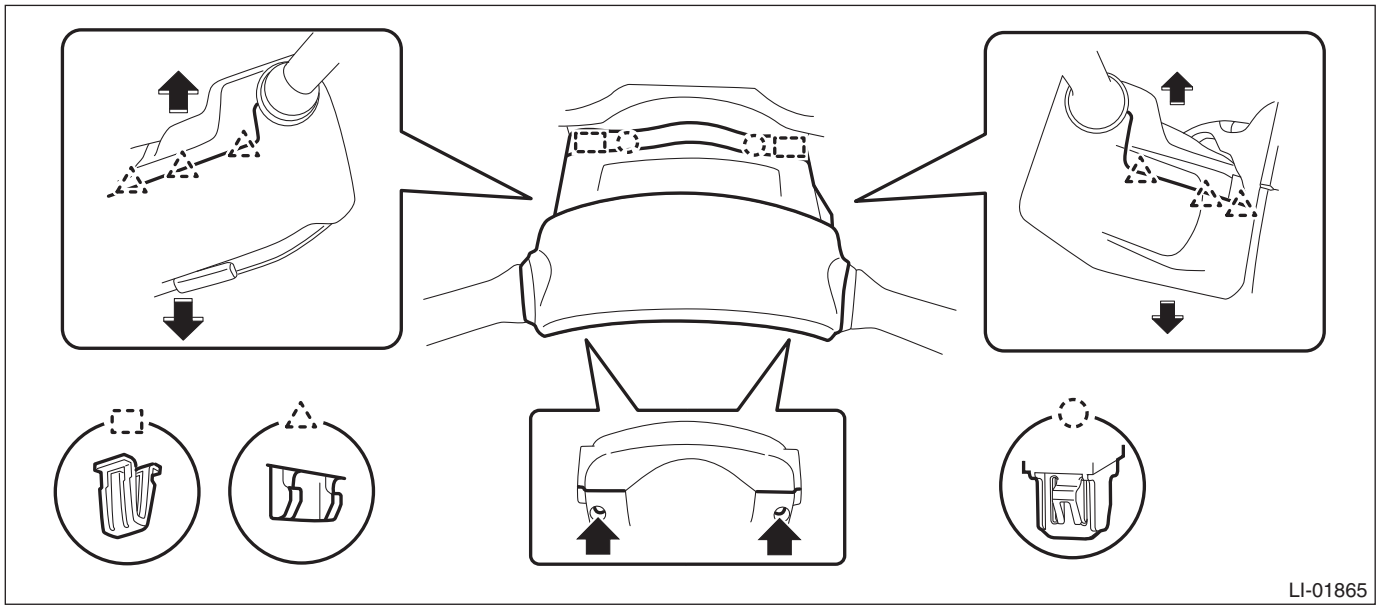
2. WIPER AND WASHER (REAR)

Refer to “Rear Wiper and Washer System” in the wiring diagram. <Ref. to WI-339, WIRING DIAGRAM, Rear Wiper and Washer System.>

B: INSPECTION

Symptoms	Repair order
Wiper and washers do not operate.	1. Wiper fuse 2. Combination switch (wiper) 3. Motor assembly - wiper 4. Wiring harness
Wipers do not operate in LO or HI.	1. Combination switch (wiper) 2. Motor assembly - wiper 3. Wiring harness
Wipers do not operate in INT.	1. Combination switch (wiper) 2. Motor assembly - wiper 3. Wiring harness
Washer motor does not operate.	1. Combination switch (wiper) 2. Motor pump assembly - washer 3. Wiring harness
Wipers do not operate when washer switch is ON.	1. Motor assembly - wiper 2. Wiring harness
Washer fluid spray does not operate properly.	1. Motor pump assembly - washer 2. Hose assembly - washer 3. Nozzle - washer
Wiper chatters or judders during operation.	1. Oil film and dirt on the glass 2. Arm assembly - windshield wiper 3. Motor assembly - wiper

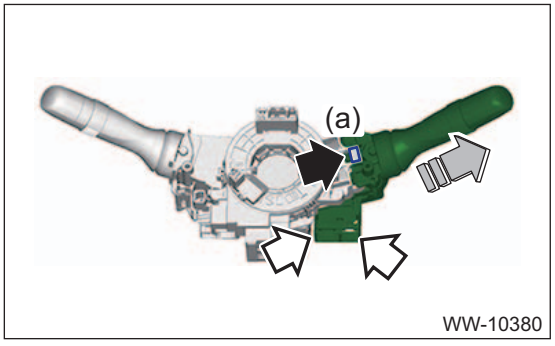
C: NOTE



For procedure of each component of the wiper and washer system, refer to the respective sections.

- Combination switch (wiper): <Ref. to WW-11, Combination Switch (Wiper).>
- Wiper blade: <Ref. to WW-16, Wiper Blade.>
- Front wiper arm: <Ref. to WW-29, Front Wiper Arm.>
- Front wiper motor and link: <Ref. to WW-31, Front Wiper Motor and Link.>
- Rear wiper arm: <Ref. to WW-39, Rear Wiper Arm.>
- Rear wiper motor: <Ref. to WW-41, Rear Wiper Motor.>
- Washer tank and motor: <Ref. to WW-21, Washer Tank and Motor.>
- Front washer nozzle & hose: <Ref. to WW-34, Front Washer Nozzle and Hose.>
- Rear washer nozzle: <Ref. to WW-44, Rear Washer.>

4. Combination Switch (Wiper)



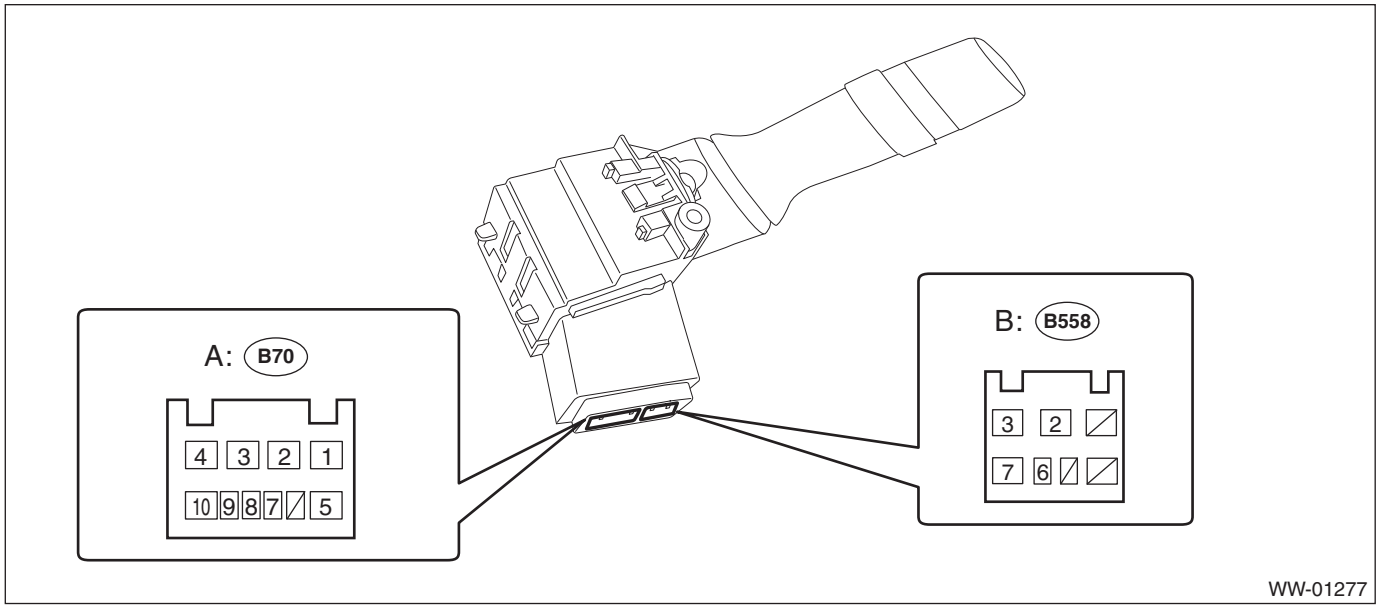
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column.
   (2) Remove the screws by turning the steering wheel to right and left.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

3) Remove the switch assembly - combination wiper select.
   (1) Disconnect the connector.
   (2) Release the claw (a), and pull out the switch assembly - combination wiper select.

CAUTION:
Do not press the claws with excessive force. They may be damaged.

B: INSTALLATION



1) Install the switch assembly - combination wiper select.
2) Install the cover assembly - column.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. INSPECTION OF SWITCH UNIT

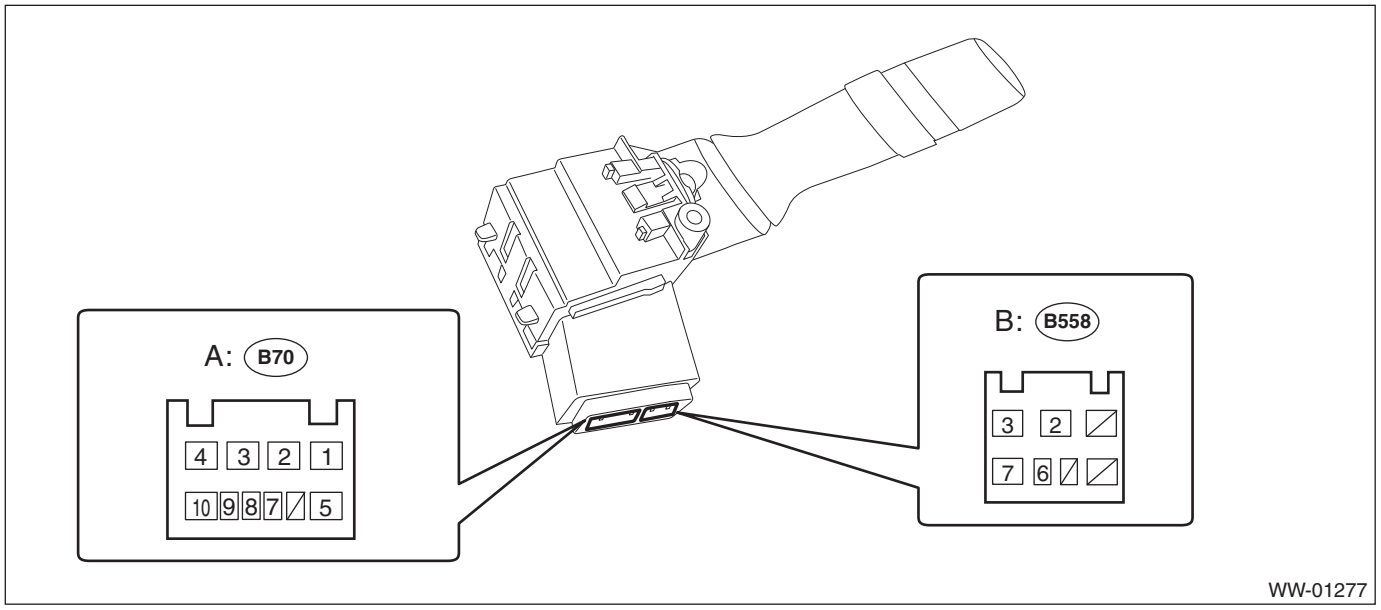
1) Operate the switches to check the continuity between terminals.

Preparation tool:
Circuit tester

Switch position	Terminal No.	Standard
OFF	A1 and A3	Less than 1 Ω
INT	A1 and A3	Less than 1 Ω
LO	A2 and A3	Less than 1 Ω
HI	A2 and A4	Less than 1 Ω
Washer ON	B2 and B3	Less than 1 Ω

2) Replace the switch if the inspection result is not within the standard value.
3) Install the switch assembly - combination wiper select. <Ref. to WW-11, INSTALLATION, Combination Switch (Wiper).>

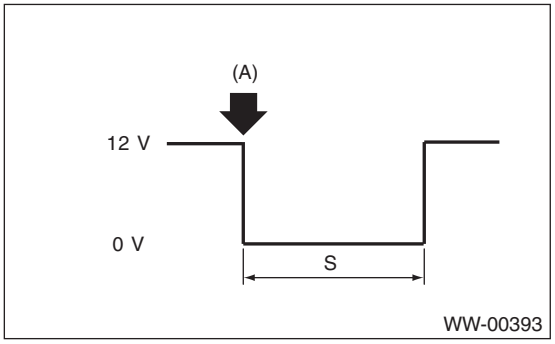
2. FRONT WIPER



1) Check with Subaru Select Monitor

NOTE:
For detailed operation procedures, refer to “Application help”.

(1) Check the input signal when the switch assembly - combination wiper select is turned to LO or HI, using the «Data monitor» display.
(2) Does the input signal change corresponding to the switch operation?



- **Yes** → Finish the diagnosis.
- **No** → Check the harness.

2) Check the intermittent operation (inspection of the wiper switch alone)

(1) Set the voltmeter between terminals No. A2 (+) and No. B2 (–).
(2) Connect the battery to connector. (Terminal No. A2 (+), terminal No. B2 & A3 (–))
(3) Turn the switch assembly - combination wiper select to INT.
(4) Connect the battery (+) to the terminal No. A2 for 5 seconds.
(5) Connect the battery (–) to the terminal No. B2, and check the voltage between terminals No. A2 and No. A3 during intermittent operation.
(6) Perform step (1) to (5) above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

Intermittent stationary time
MIN: Approx. 2 seconds
MAX: Approx. 16 seconds

(A): Connect the battery (–) to the terminal No. B2.
S: Intermittent downtime (sec.)

3. REAR WIPER

1) Check input of body integrated unit
Check the input signal when the rear wiper switch is operated using Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) Turn the ignition switch to ON.
(2) Operate the rear wiper switch to ON and Washer ON.
(3) Does the input signal change corresponding to the switch operation?
- **Yes** → Go to step 4.
- **No** → Go to step 2.

2) Check harness
(1) Turn the ignition switch to OFF, disconnect the ground cable from battery.
(2) Disconnect the connector of body integrated unit and wiper switch.
(3) Measure the resistance between body integrated unit and wiper switch.

Connector & terminal
(i81) No. 1 — (i69) No. 5:
(i81) No. 3 — (i68) No. 6:
(i81) No. 19 — (i68) No. 7:
(4) Is the resistance less than 10 Ω?
- **Yes** → Go to step 3.
- **No** → Repair the harness between the body integrated unit and wiper switch.

3) Check input voltage of body integrated unit
(1) Connect the ground cable to battery.
(2) Turn the ignition switch to ON and check the input voltage of body integrated unit.

Connector & terminal
(B280) No. 4 (+) — Chassis ground (–):
(B280) No. 7 (+) — Chassis ground (–):
(B281) No. 32 (+) — Chassis ground (–):
(3) Is the voltage 10 V or more?
- **Yes** → Go to step 4.
- **No** → Check the harness and fuse.

4) Check output of body integrated unit
Check the output signal when the rear wiper switch is operated using Subaru Select Monitor.
(1) Turn the ignition switch to ON.
(2) Operate the rear wiper switch to ON and Washer ON.
(3) When the operation in step (2) is performed, check the output signal of body integrated unit to rear wiper motor.
(4) When the rear wiper switch is set to ON, is ON output continuous? Also, when the washer is set to ON, is ON output?
- **Yes** → Go to step 5.
- **No** → Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>

5) Check harness between body integrated unit and rear wiper motor
(1) Turn the ignition switch to OFF, disconnect the ground cable from battery.
(2) Disconnect the connector of body integrated unit and wiper switch.
(3) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor.

Connector & terminal
(i81) No. 1 — (B147) No. 1:
(4) Is the resistance less than 10 Ω?
- **Yes** → Go to step 6.
- **No** → Repair the open circuit of the harness between body integrated unit and rear wiper motor.

6) Check power supply circuit of the rear wiper motor
(1) Disconnect the harness connector of the rear wiper motor.
(2) Turn the ignition switch to ON.
(3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground.

Connector & terminal
(B147) No. 2 (+) — Chassis ground (–):
(4) Is the voltage 10 V or more?
- **Yes** → Go to step 7.
- **No** → Check the fuse (No. 42 in main fuse box).

7) Check ground circuit of rear wiper motor
(1) Turn the ignition switch to OFF.

(2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground.

Connector & terminal
(B147) No. 1 — Chassis ground:
(3) Is the resistance less than 10 Ω?
- **Yes** → Go to step 8.
- **No** → Repair the open circuit of the rear wiper motor ground circuit.

8) Check harness between body integrated unit and rear wiper motor
(1) Turn the ignition switch to OFF.
(2) Disconnect the harness connector of body integrated unit.
(3) Disconnect the harness connector of the rear wiper motor.
(4) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor.

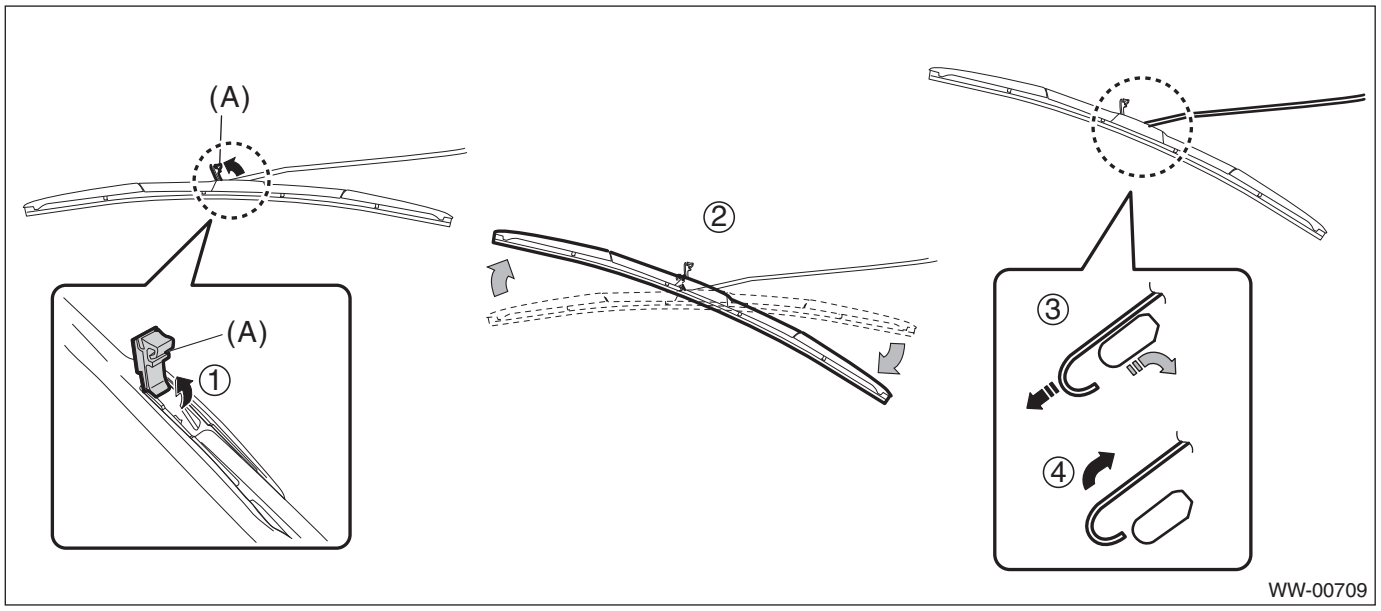
Connector & terminal
(i81) No. 1 — (B147) No. 1:
(5) Is the resistance less than 10 Ω?
- **Yes** → Go to step 9.
- **No** → Repair the open circuit of the harness between body integrated unit and rear wiper motor.

9) Check output of body integrated unit
(1) Connect the harness connector of body integrated unit.
(2) Disconnect the connector of the rear wiper motor.
(3) Turn the ignition switch to ON.
(4) Measure the voltage between rear wiper motor connector and chassis ground.

Connector & terminal
(B147) No. 2 (+) — Chassis ground (–):
(5) Is the voltage less than 1.5 V when the rear wiper switch is OFF, and is the voltage 10 V or more when the rear wiper switch is ON?
- **Yes** → Go to step 10.
- **No** → Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>

10) Check operation of rear wiper motor
(1) Remove the rear wiper motor.
(2) Check the rear wiper motor. <Ref. to WW-42, INSPECTION, Rear Wiper Motor.>
(3) Does the rear wiper motor rotate normally?
- **Yes** → Finished.
- **No** → Replace the rear wiper motor assembly.

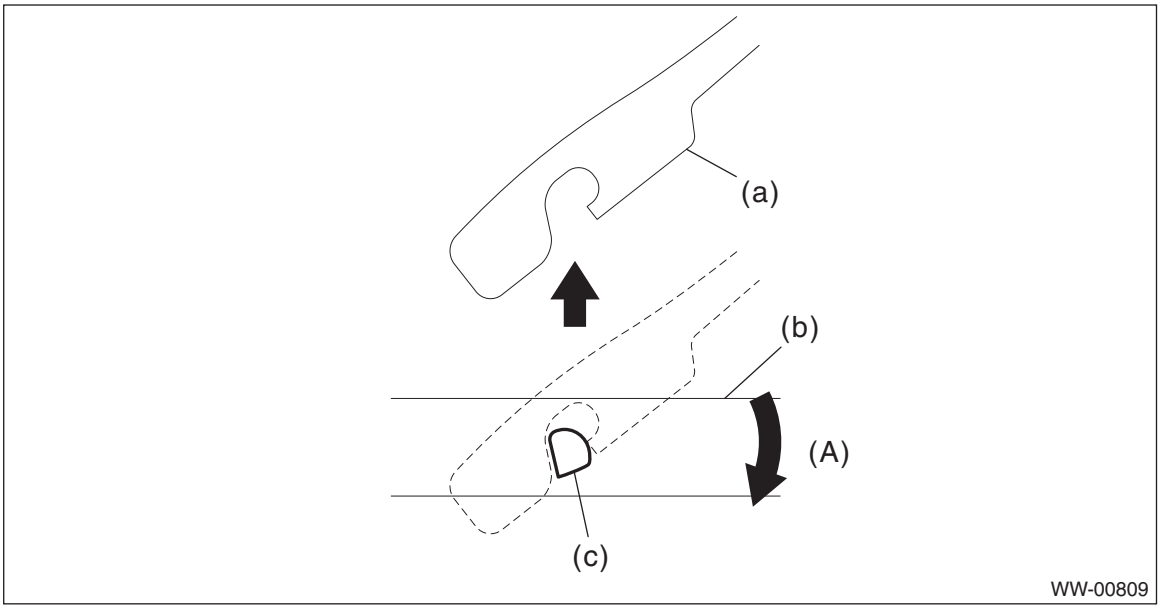
NOTE:
Rear wiper intermittent time



Select lever position	Vehicle speed (km/h (MPH))	Intermittent stopping time (sec.)
Rev.	—	Continuous operation
Except for reverse mode	80 — (50 —)	3
	50 — 80 (31 — 50)	6
	20 — 50 (12 — 31)	9
	0 — 20 (0 — 12)	12

5. Wiper Blade

A: REMOVAL



1. FRONT

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, remove the driver's side first.
1) Lift up the locking clip (A).
2) Turn the blade assembly - windshield wiper in the arrow direction.
3) Push in the arm assembly - windshield wiper.
4) Pull out the arm assembly - windshield wiper while pulling it up, and remove the blade assembly - windshield wiper from the arm assembly - windshield wiper.

2. REAR

Turn the blade assembly - rear wiper in the direction of arrow (A) and remove it from the arm assembly - rear wiper.

(A) Rotate the blade ASSY - rear wiper.

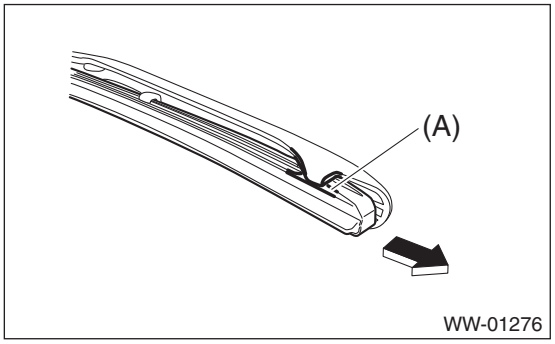
(a) Arm ASSY - rear wiper

(b) Blade ASSY - rear wiper

(c) Blade ASSY - rear wiper installation portion

B: INSTALLATION

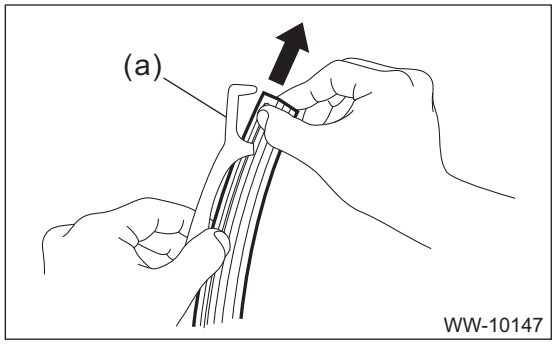
Install each part in the reverse order of removal.



CAUTION:
Make sure the locking clip is secured.

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, install the passenger's side first.

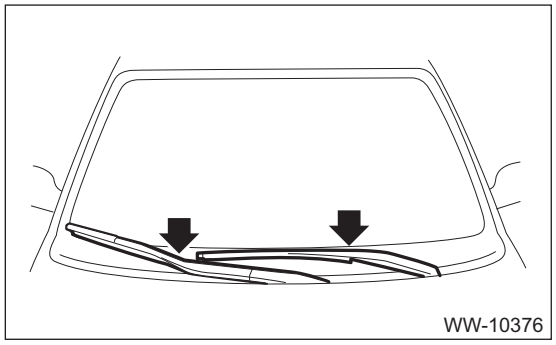
C: DISASSEMBLY



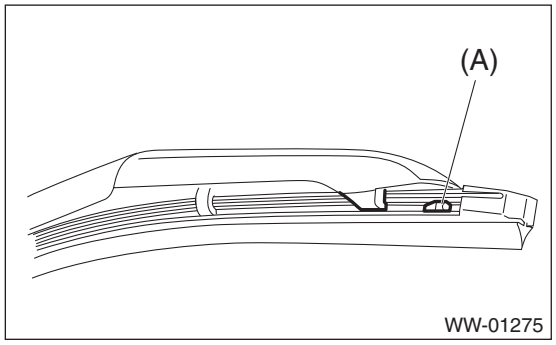
1. FRONT

Pull side (A) of the wiper rubber stopper, and remove the rubber assembly - windshield wiper from the blade assembly - windshield wiper.

2. REAR



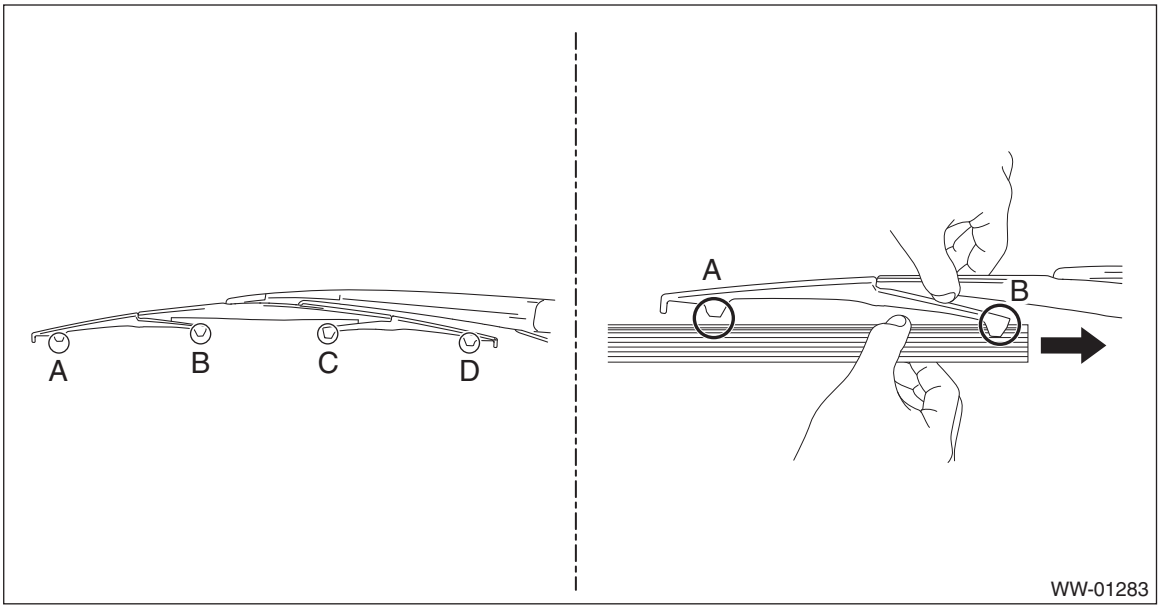
Slightly pull the top of the rubber assembly - rear wiper from the stopper (a), and pull out completely.



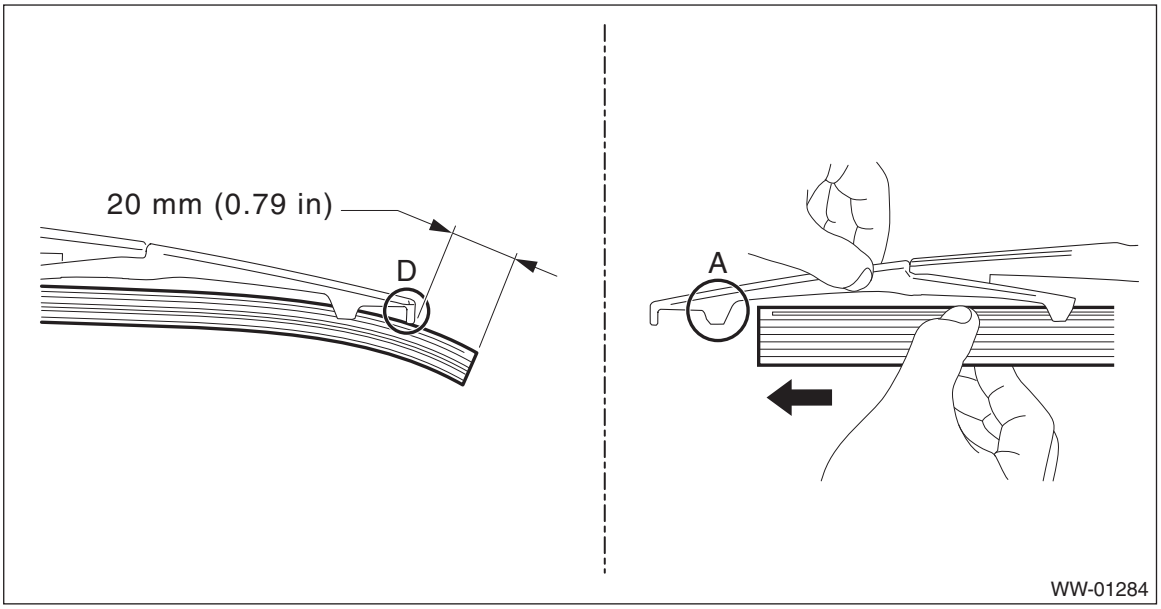
D: ASSEMBLY

1. FRONT

1) Insert the rubber assembly - windshield wiper onto the blade - windshield wiper so that the stopper is in the position shown in the figure.



2) Make sure the rubber assembly - windshield wiper is securely fastened to the pull stopper (A).



2. REAR

1) Insert the rubber assembly - rear wiper into claw (B).

2) Insert the rubber assembly - rear wiper until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).
3) Insert the rubber assembly - rear wiper into claw (A).

E: INSPECTION

1) Check and clean the rubber assembly - wiper.

CAUTION:
• Do not use organic solvent-based cleaner when cleaning rubber parts in order to avoid rubber part deterioration.
• Do not continue to use damaged blade rubber.
The windshield glass may be damaged. If the wiping performance decreases or any distinct streak is found, replace it as soon as possible.
• Clean rubber parts using a soft cloth or paper towel dampened with windshield washer fluid or mild synthetic detergent.

- **Use Subaru genuine part only for wiper blade body and blade rubber.**

For model with EyeSight, using the part other than genuine part will affect the recognition of the stereo camera, which may cause the function not to operate correctly.

Replace the rubber assembly - wiper if rubber part hardening, deformation or damage is found.

2) Operate the washer system to check if a chattering sound or insufficient wiping occurs.

3) If a chattering sound or insufficient wiping occurs, perform the following procedures.

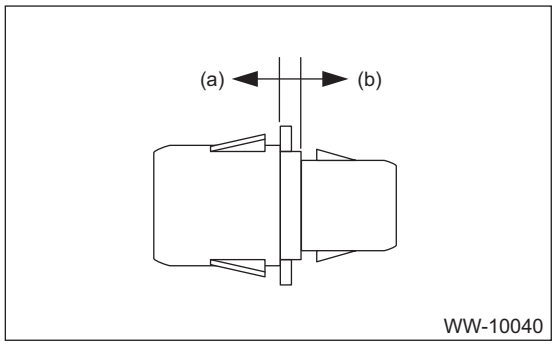
(1) Make sure that the blade assembly - wiper is not deformed and the movable part moves smoothly.

(2) Remove oil film and dirt from the glass.

CAUTION:

- **When powder-type glass cleaner is used, use after having been dissolved in water sufficiently. If it is used in less water, the glass surface may be damaged.**
- **Clean the glass surface using a soft cloth or sponge with glass cleaner.**

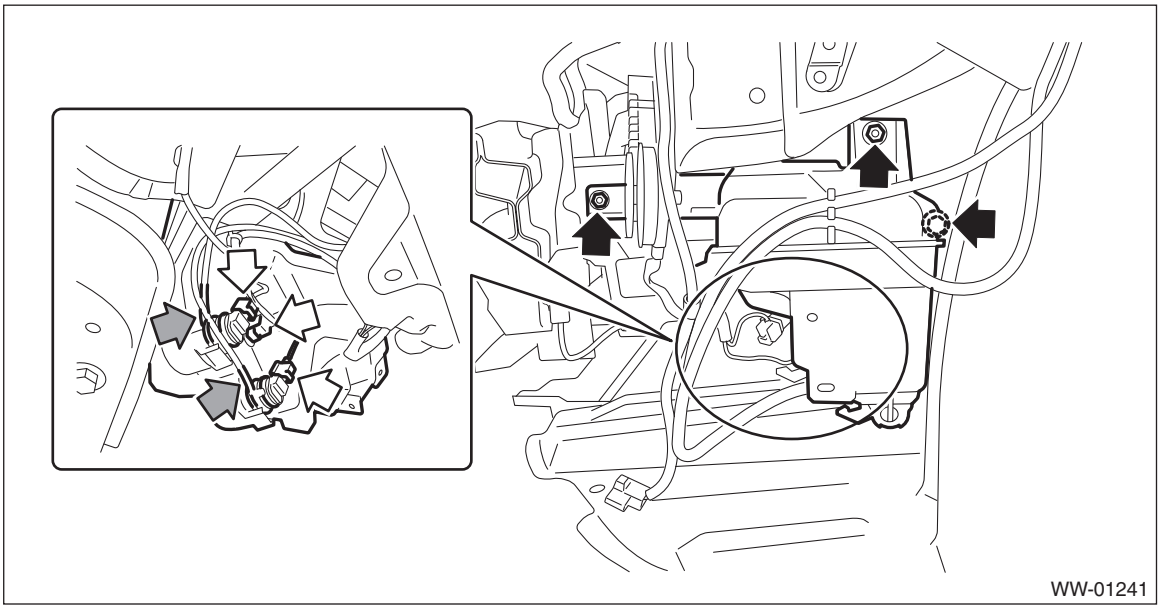
(3) Operate the windshield wiper again. If a chattering sound or insufficient wiping occurs, perform the procedures again.



4) If defective is not improved after performing step 1) to step 3), replace the blade assembly - wiper with a new part.

6. Washer Tank and Motor

A: REMOVAL

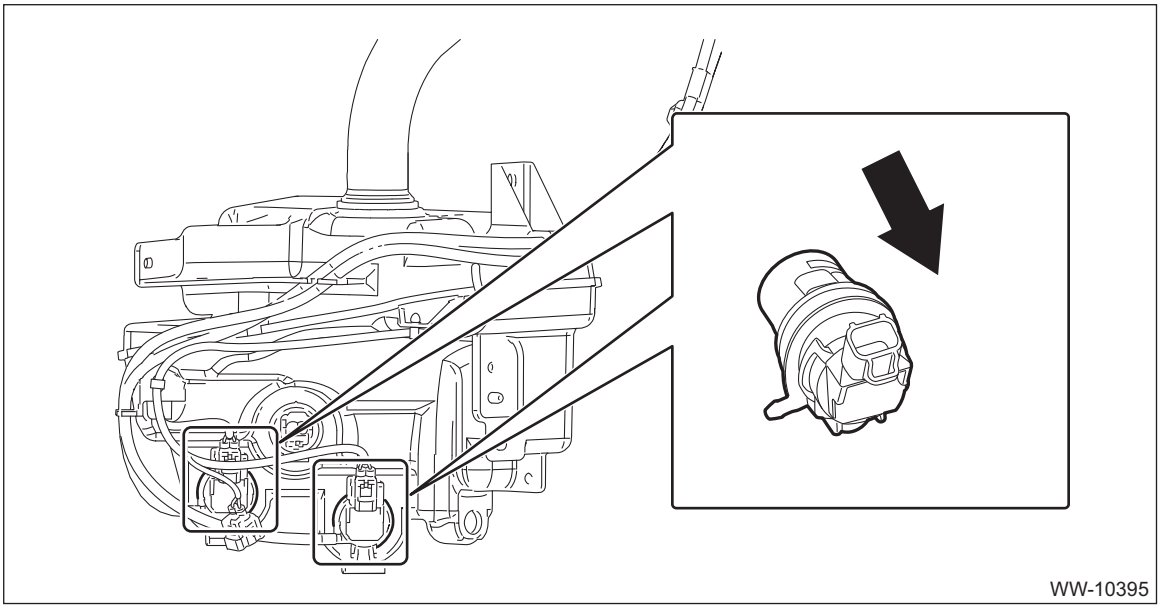


1. WASHER TANK

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>
3) Remove the tank - washer assembly.
   (1) Press the claw and remove the clip of the holder - windshield washer tank.

(a) Vehicle body side
(b) Washer tank side

   (2) Disconnect the connector from the motor pump assembly - washer and the sensor - washer tank, and then remove the harness clip.
   (3) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
   (4) Remove the bolt and nuts and remove the tank - washer assembly.

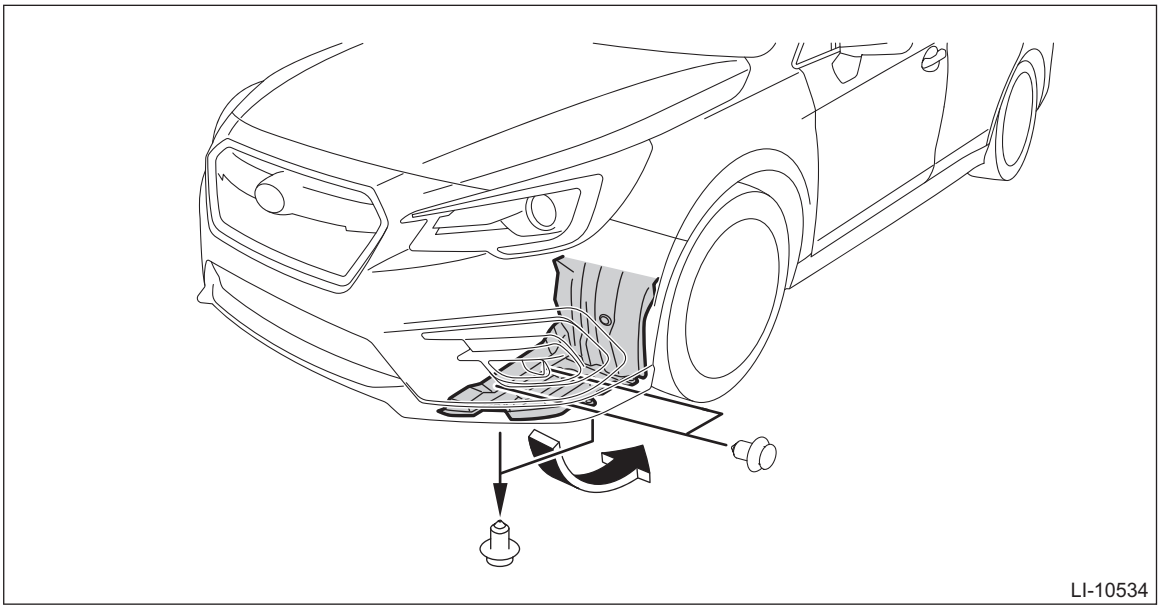


2. WASHER MOTOR AND HOSE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

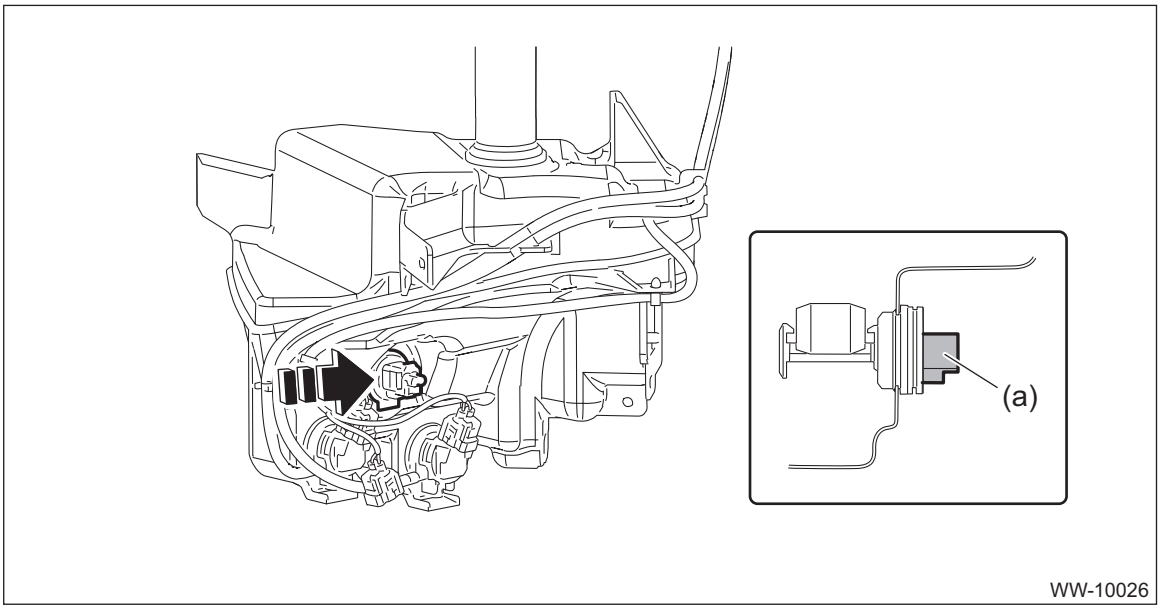
2) Remove the clips, and turn over the mud guard - front LH.

3) Disconnect the connector from the motor pump assembly - washer and remove the harness clip.
4) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
5) Remove the motor pump assembly - washer.



6) Replace the washer hose if necessary.

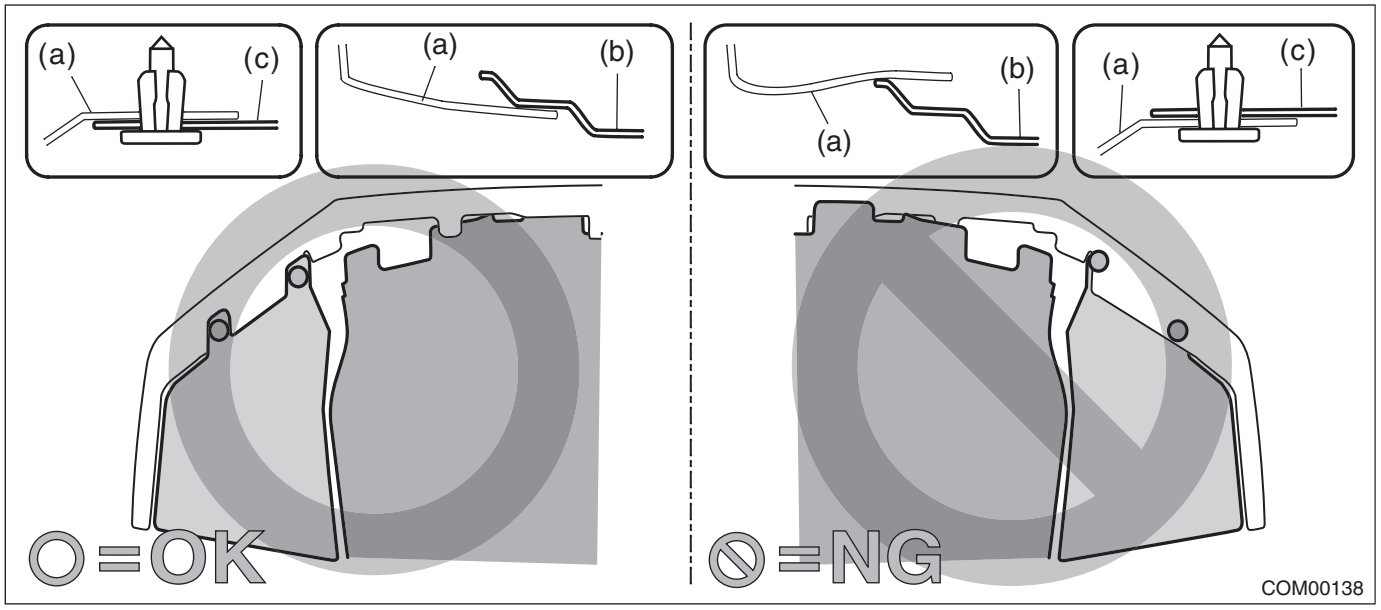
3. WASHER FLUID LEVEL SENSOR



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2) Remove the clips, and turn over the mud guard - front LH.

3) Disconnect the connector from the sensor - washer tank, and remove the harness clip.
4) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
5) Push the section (a) in the direction of the arrow with a thick towel or the like to remove the sensor - washer tank.

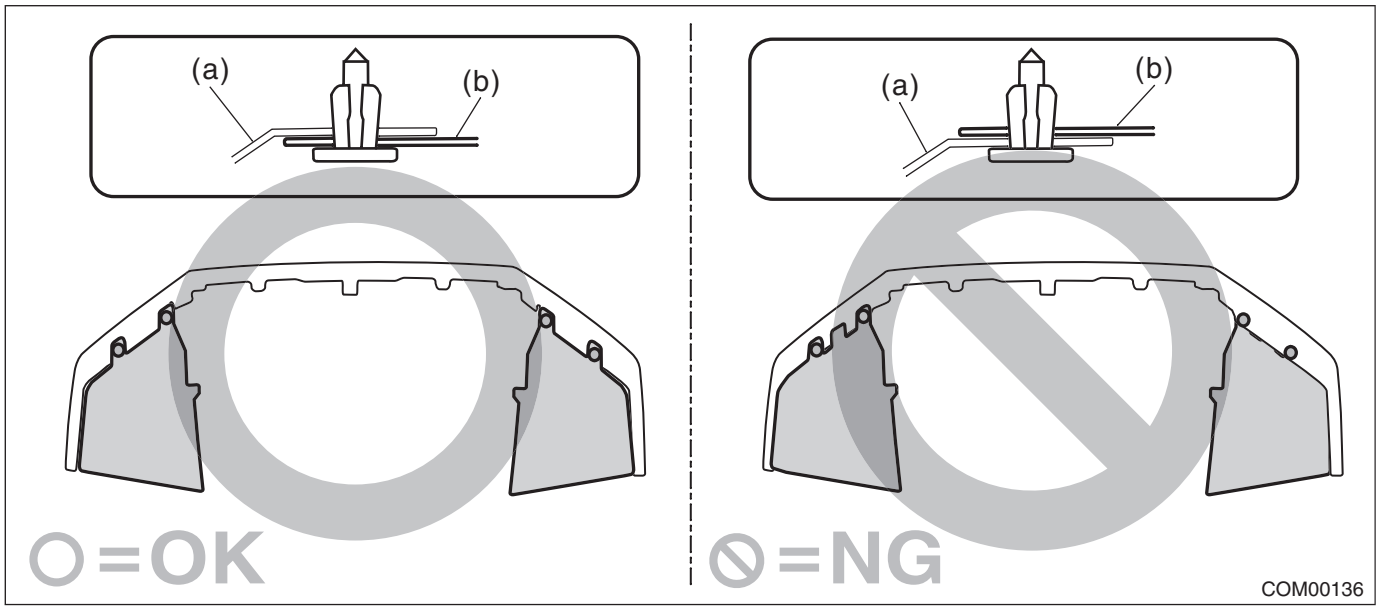


CAUTION:
Do not hit or apply any impact to the sensor - washer tank, because it has a poor resistance to impact. Sensor internal parts may be damaged when an impact is applied.

B: INSTALLATION

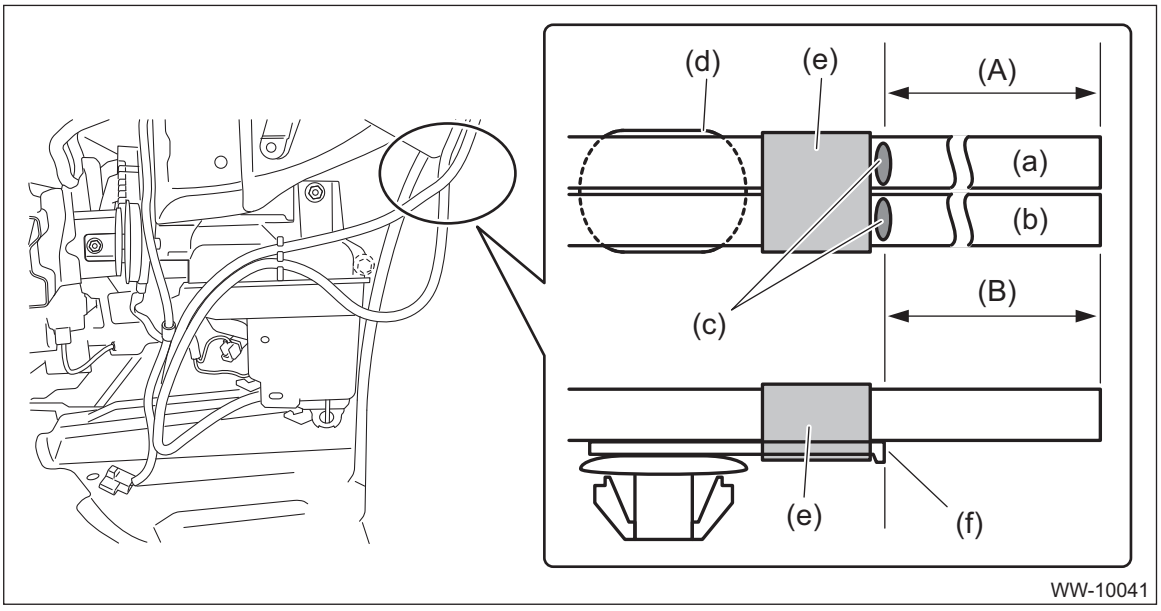
1. WASHER TANK

CAUTION:
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install the tank - washer assembly.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Connect the hose - washer.
3) Connect each connector and install the harness clip.
4) Install the mud guard - front.
5) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Add new washer fluid.
8) Adjust the fog light beam. (Model with fog light) <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

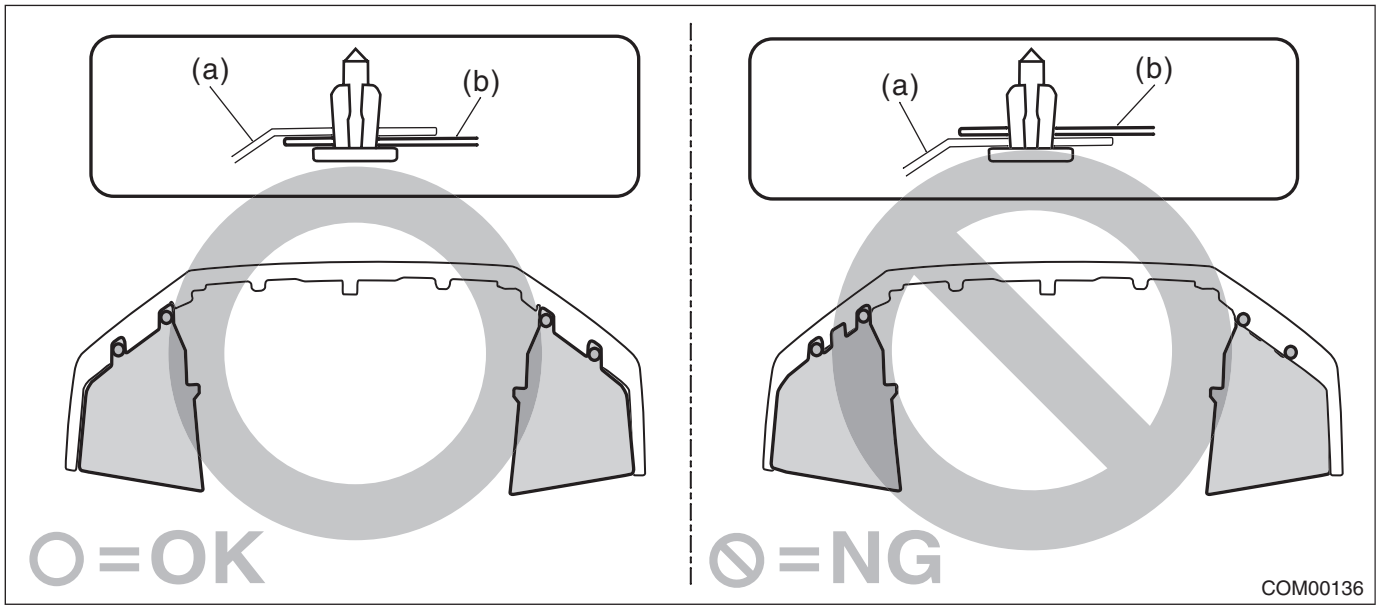


2. WASHER MOTOR AND HOSE

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

1) When the washer hose or the holder - hose is replaced, install the holder - hose in the following position.
   (1) Add a marking (c) at the positions (A) and (B) from the hose end.
   (2) Align the marking (c) with the holder end (f), and affix with tape.

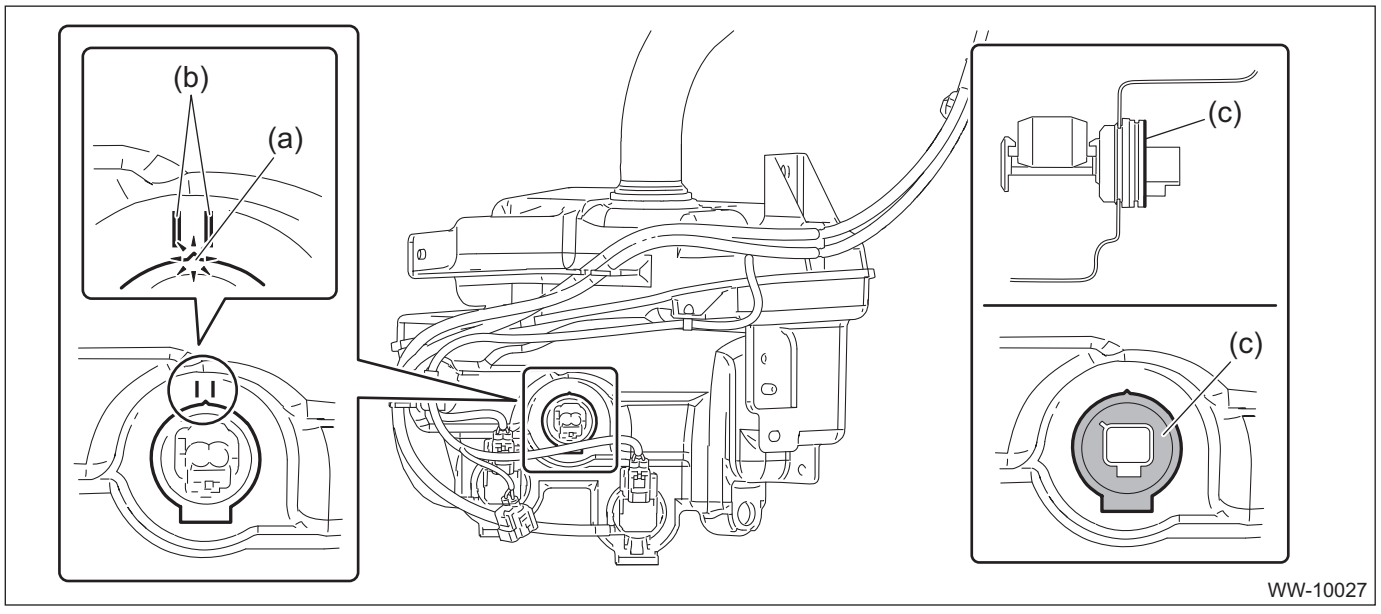
Preparation items:
Tape: NITTO DENKO No. 21 or equivalent



(A)	Washer hose - front: 258 mm (10.2 in)	(B)	Washer hose - rear: 543 mm (21.4 in)		
(a)	Washer hose - front	(c)	Position alignment marking	(e)	Tape
(b)	Washer hose - rear	(d)	Holder - hose	(f)	Holder end

2) Install the motor pump assembly - washer to the tank - washer.
3) Connect the hose - washer.

4) Connect each connector and install the harness clip.
5) Install the mud guard - front LH.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Add new washer fluid.
8) Adjust the fog light beam. (Model with fog light) <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>



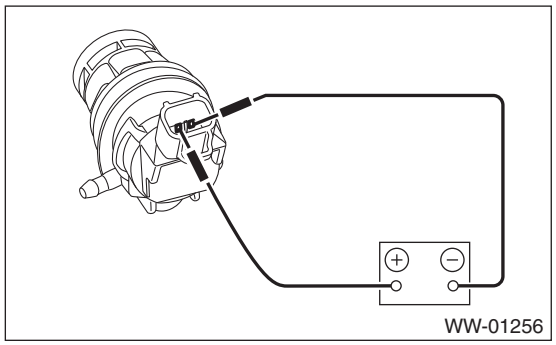
3. WASHER FLUID LEVEL SENSOR

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

1) Align the protrusion (a) of the sensor - washer tank with a center position of double line marks (b) on the tank - washer side, and push the flat surface (c) to install.

CAUTION:
• Do not hit or apply any impact to the sensor - washer tank when it is reused, because it has a poor resistance to impact.
• When the installation is difficult, apply washer fluid to the packing. Do not use silicone grease.

2) After installing the sensor - washer tank, perform the following confirmations.



- There is no gap between the tank - washer and the packing.
- There is no gap between the packing and the sensor - washer tank.
- There is no turn over to the packing and its peripheral area.

3) Connect each connector and install the harness clip.
4) Install the mud guard - front LH.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Add new washer fluid.
7) Adjust the fog light beam. (Model with fog light) <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

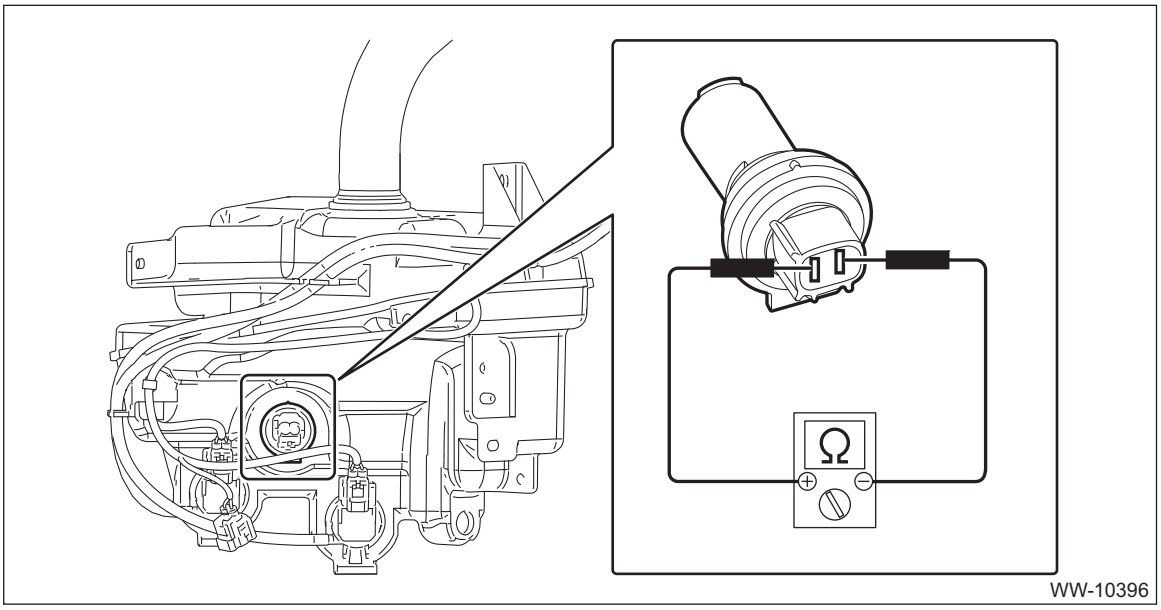
1. WASHER PUMP

Apply battery voltage to the connector terminal of the motor pump assembly - washer, and make sure that the motor operates.

2. WASHER FLUID LEVEL SENSOR

1) Check the connection status of washer fluid level sensor connector.
2) Does the low washer fluid warning light illuminate after draining the washer fluid? And does the low washer fluid warning light go off after refilling the washer fluid?

- **Yes → Normal operation.**
- **No → Perform step 3.**



3) Using a tester, measure the voltage of the washer fluid level sensor connector.
   (1) Is the voltage approx. 8.5 V or more?
   - **Yes → Perform step 4.**
   - **No → Check harness, meter and integrated unit, and replace if necessary.**

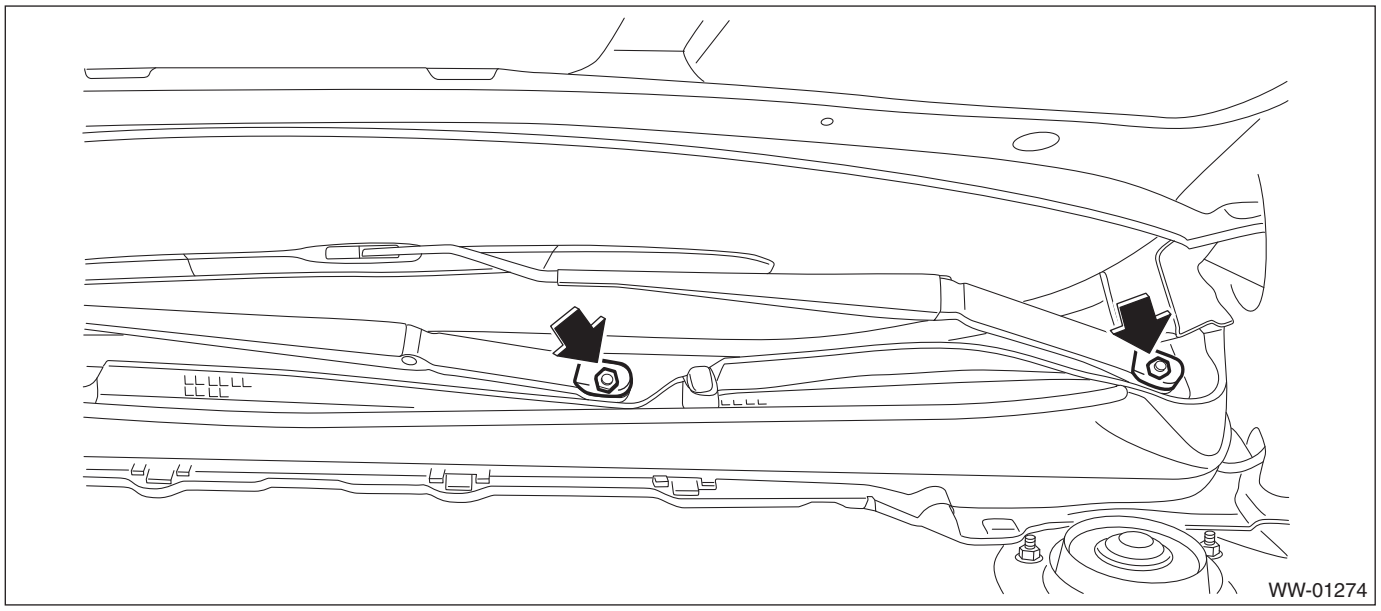
4) Does the meter indicator illuminate if you short the washer fluid level sensor connector?

- **Yes → Perform step 5.**
- **No → Check meter and integrated unit, and replace if necessary.**

5) Using a tester, measure the resistance of the washer fluid level sensor.
   (1) Turn over the mud guard.

(2) Measure the resistance of the washer fluid level sensor.

Amount of washer fluid in the tank	Standard
No remaining quantity (ON)	Less than 10 Ω
There is remaining quantity (OFF)	1 MΩ or more



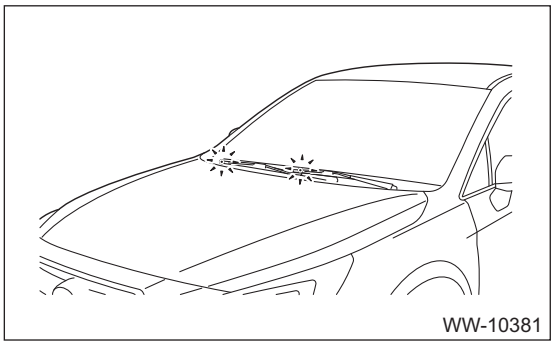
(3) Is the resistance within the standard?
- **Yes → Normal operation.**
- **No → Replace the washer level sensor.**

7. Front Wiper Arm

A: REMOVAL

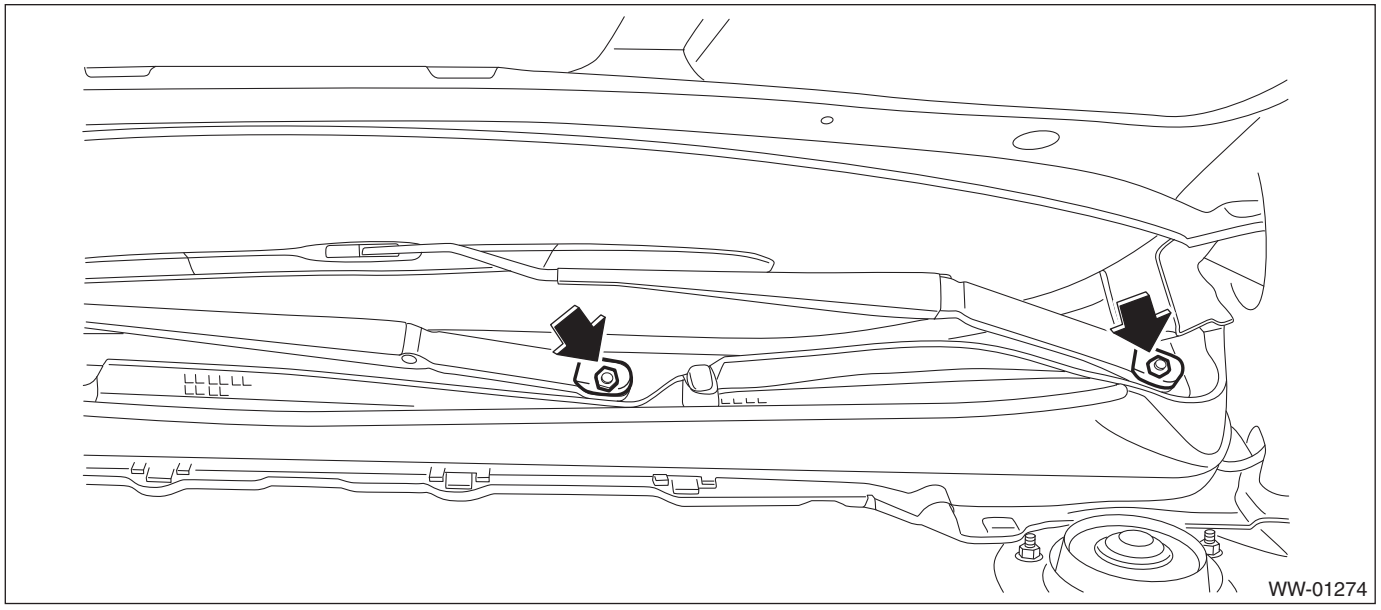
1) Remove the cover - windshield wiper arm.
2) Remove the nuts, and remove the arm assembly - windshield wiper.

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, remove the driver's side first.



B: INSTALLATION

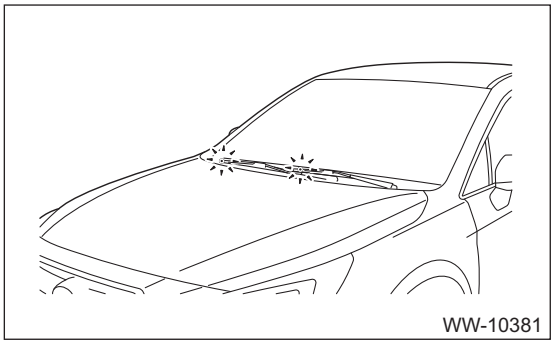
1) Install the arm assembly - windshield wiper.



NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, install the passenger's side first.

(1) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

(2) Tighten the arm assembly - windshield wiper to specified torque and install the cap.



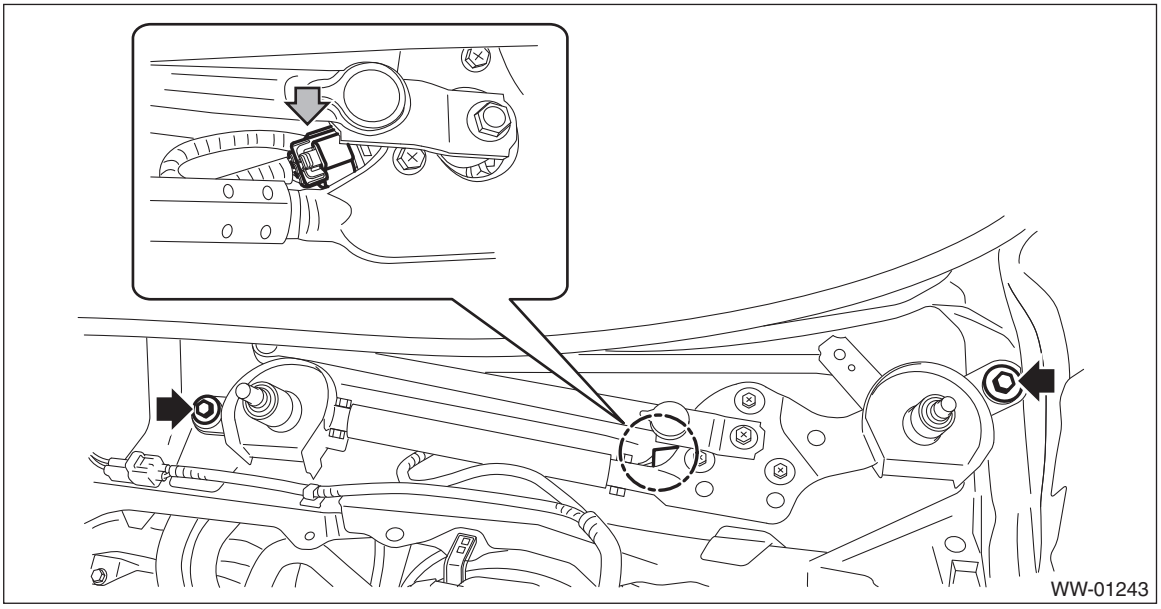
Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)

2) Check the position of windshield wiper. <Ref. to WW-30, ADJUSTMENT, Front Wiper Arm.>

C: ADJUSTMENT

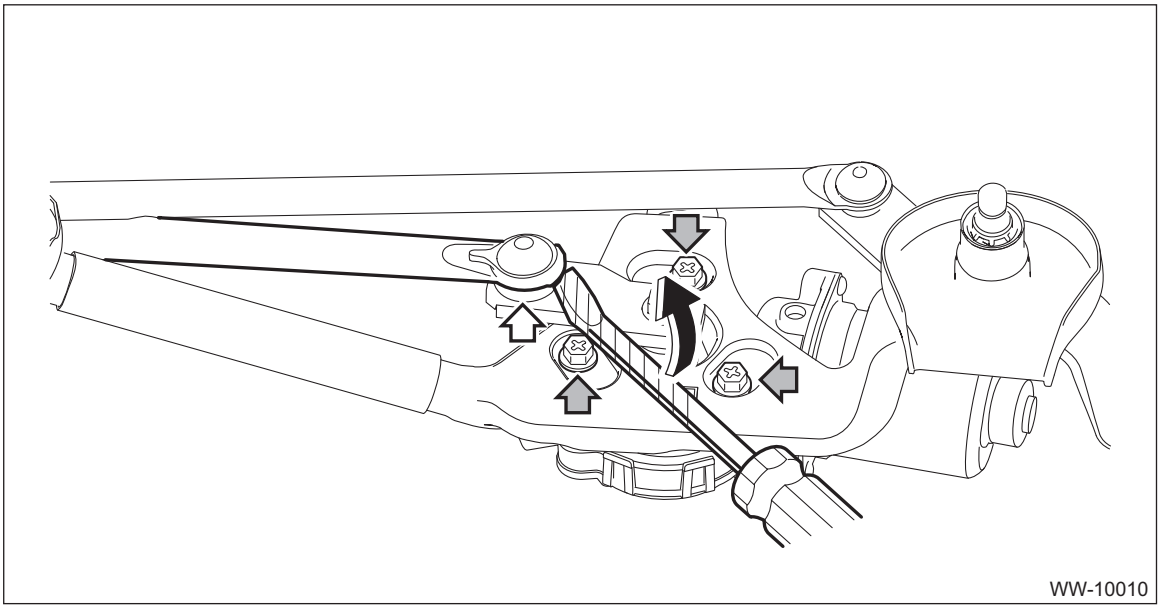
1) Operate the windshield wiper once.
2) Check that the wiper blade is aligned with the point mark.

3) If the wiper blade is not aligned with the point mark, perform the removal and installation of the windshield wiper. <Ref. to WW-29, REMOVAL, Front Wiper Arm.>



8. Front Wiper Motor and Link

A: REMOVAL

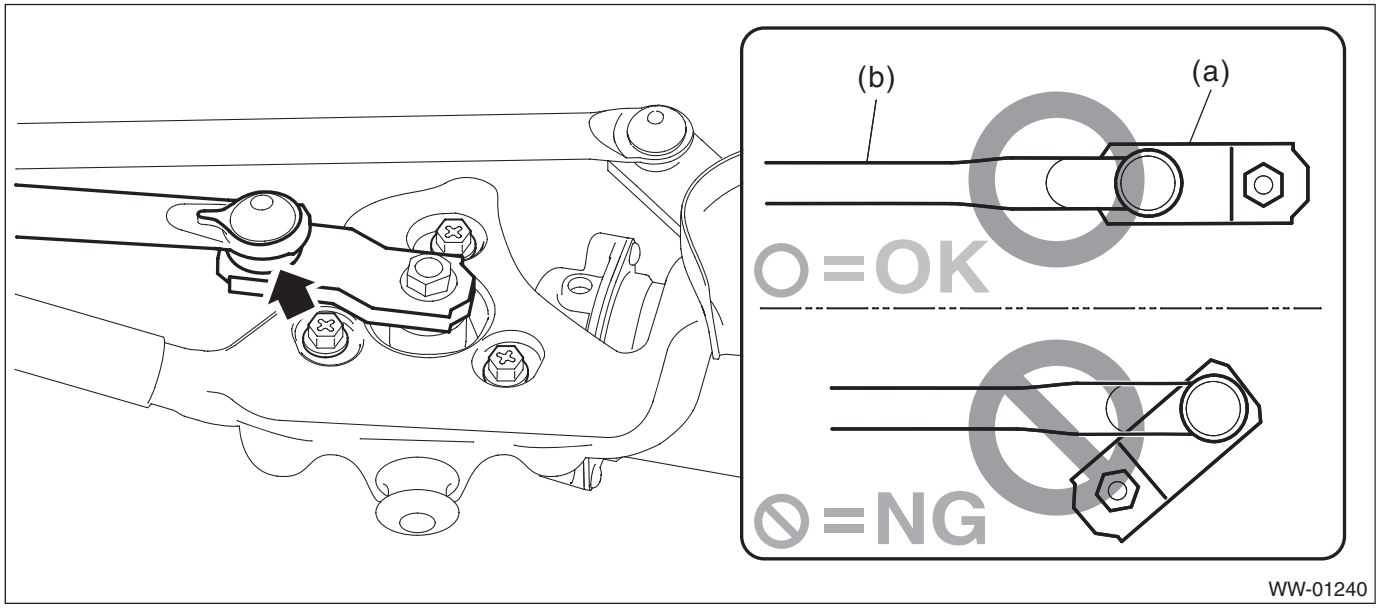


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the arm assembly - windshield wiper. <Ref. to WW-29, REMOVAL, Front Wiper Arm.>
3) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-51, REMOVAL, Cowl Panel.>

CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

4) Remove the link assembly - windshield wiper.
   (1) Disconnect the connector of the motor assembly - windshield wiper.
   (2) Remove the bolts and harness clips, and remove the link assembly - windshield wiper.

5) Remove the motor assembly - windshield wiper.
   (1) Using a crowbar wrapped with protective tape, disconnect the link assembly - windshield wiper from the link plate.
   (2) Remove the bolts, and remove the motor assembly - windshield wiper.



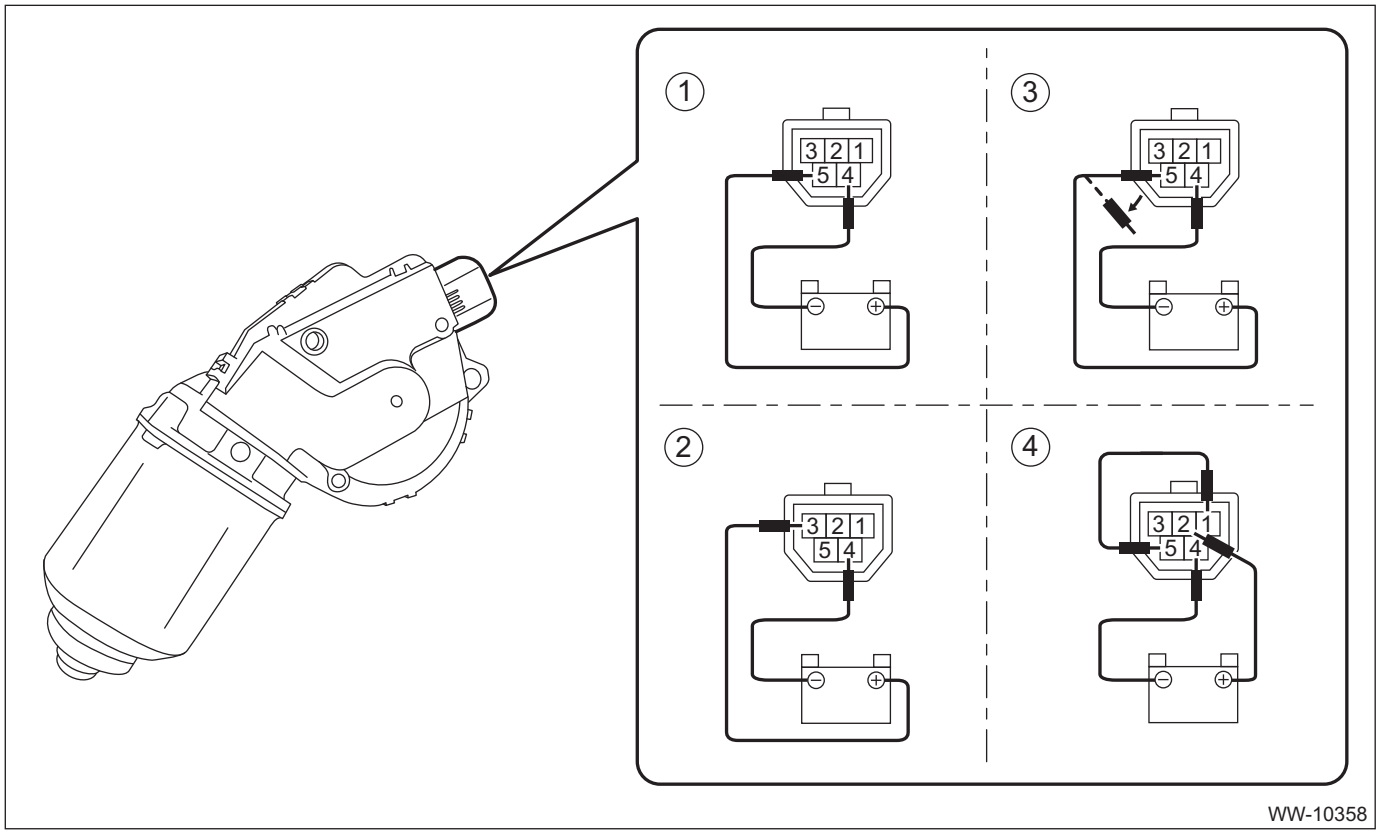
B: INSTALLATION

CAUTION:
• If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.
• Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.
1) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Check that the motor assembly - windshield wiper is at the auto stop position.

CAUTION:
During motor operation, do not touch the movable part.
(1) Connect the harness of front wiper to the motor assembly - windshield wiper.
(2) Switch the wiper switch to ON/OFF once.
3) Disconnect the ground terminal from battery sensor again. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Install the motor assembly - windshield wiper.

Tightening torque:
5.4 N·m (0.6 kgf-m, 4 ft-lb)
5) Install the link assembly - windshield wiper.

CAUTION:
Set the component where the rod (b) and link plate (a) are aligned in a straight line.



6) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-52, INSTALLATION, Cowl Panel.>
7) Install the arm assembly - windshield wiper. <Ref. to WW-29, INSTALLATION, Front Wiper Arm.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
9) Check the position of windshield wiper. <Ref. to WW-30, ADJUSTMENT, Front Wiper Arm.>

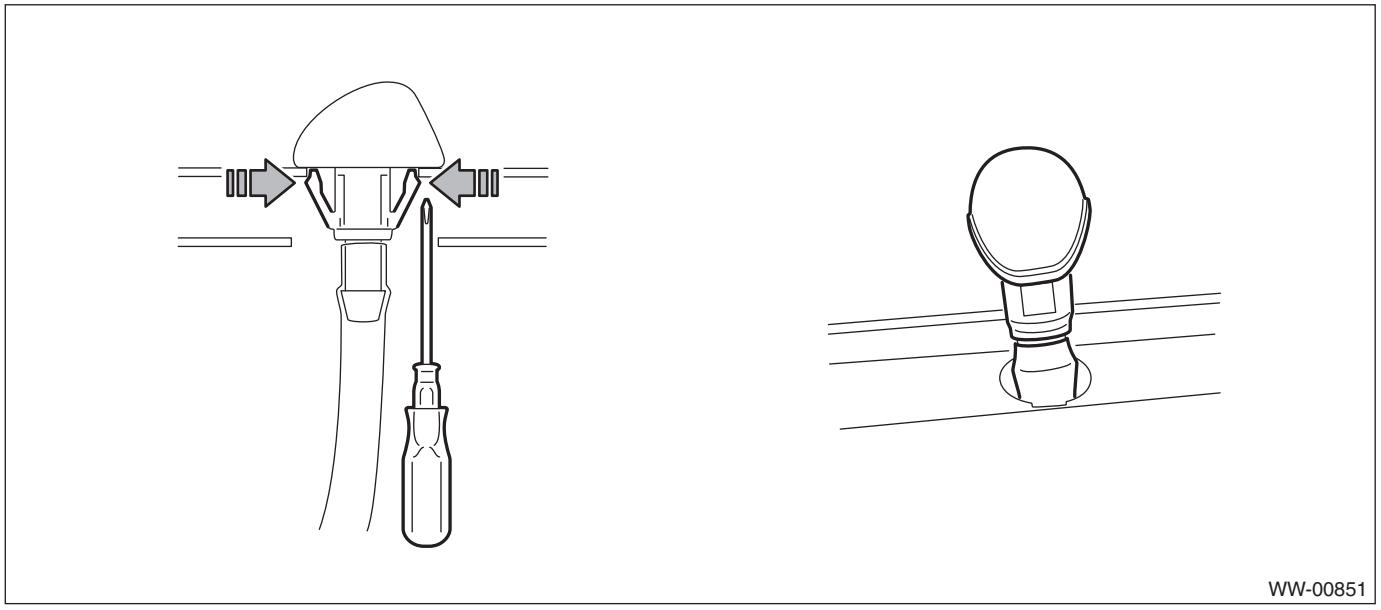
C: INSPECTION

1) Check that the following operations perform normally.

CAUTION:
Fix the motor to prevent the motor from being shorted by moving during operation.
(1) When the battery is connected to the terminal of connectors, confirm that the motor operates at low speed.
(2) When the battery is connected to the terminal of connectors, confirm that the motor operates at high speed.
(3) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating at low speed, and stop the motor assembly - windshield wiper in mid-operation.

(4) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.

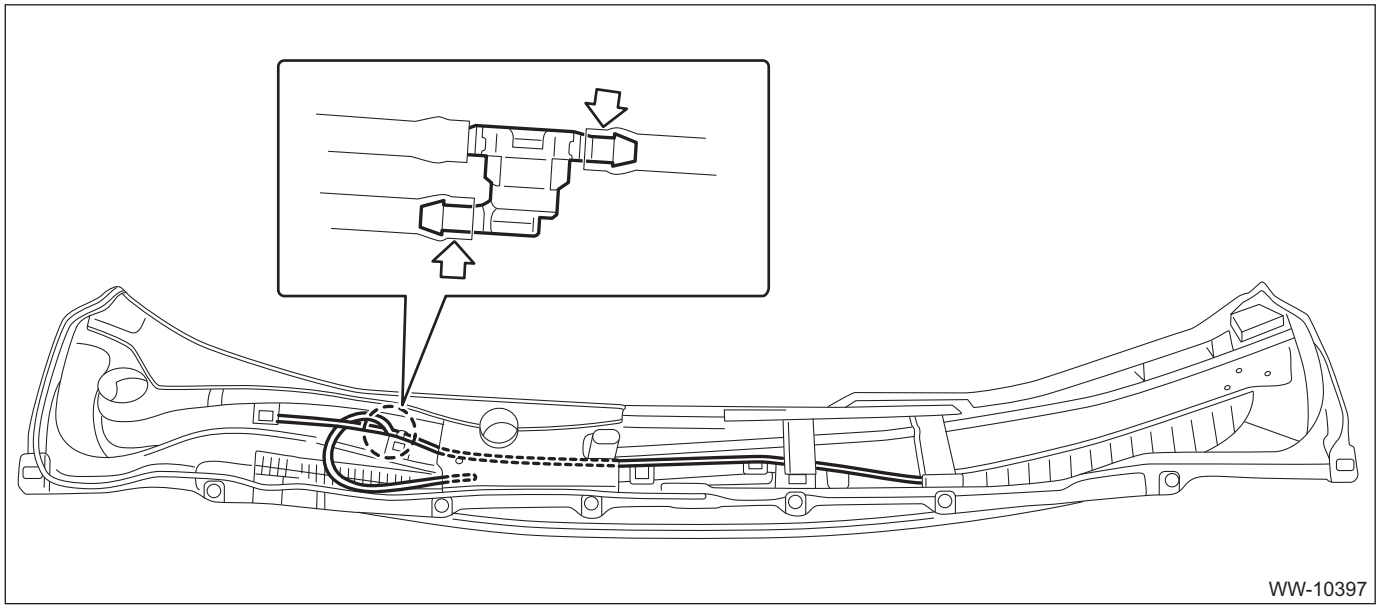
NOTE:
Replace the motor assembly - windshield wiper if the inspection result is not within the standard.
2) Install the motor assembly - windshield wiper. <Ref. to WW-32, INSTALLATION, Front Wiper Motor and Link.>



9. Front Washer Nozzle and Hose

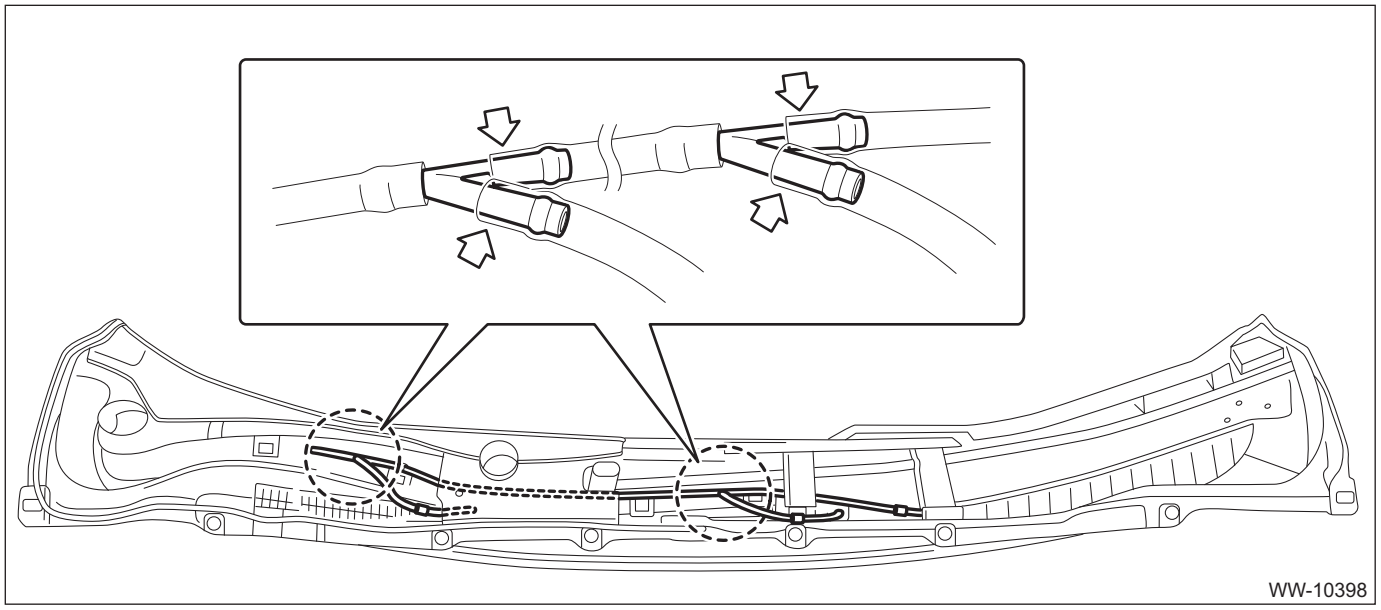
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the arm assembly - windshield wiper. <Ref. to WW-29, REMOVAL, Front Wiper Arm.>
3) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-51, REMOVAL, Cowl Panel.>



CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

4) Remove the nozzle - windshield washer.
   (1) Push the claw using a flat tip screwdriver, etc.
   (2) When the nozzle - windshield washer lifts up, pull out the nozzle - windshield washer using a clip remover, etc.
   (3) Disconnect the hose - windshield washer, and remove the nozzle - windshield washer.



5) Disconnect the hose - windshield washer as necessary.

- Models without EyeSight

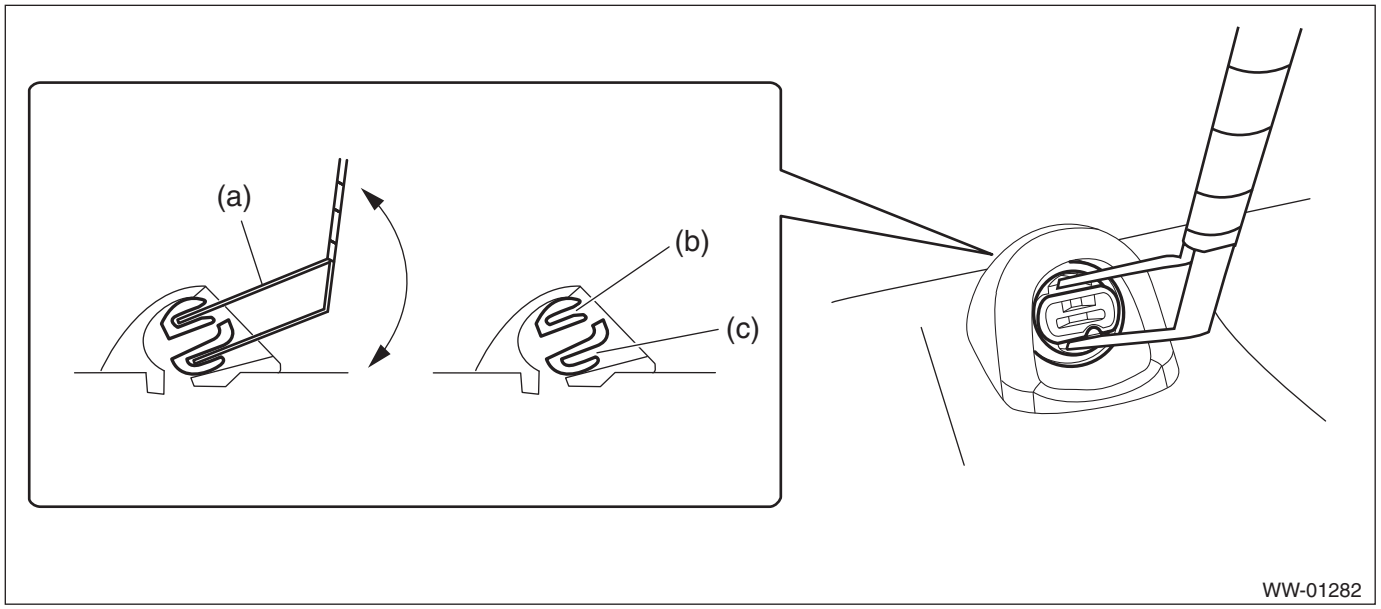
- Models with EyeSight

B: INSTALLATION

CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

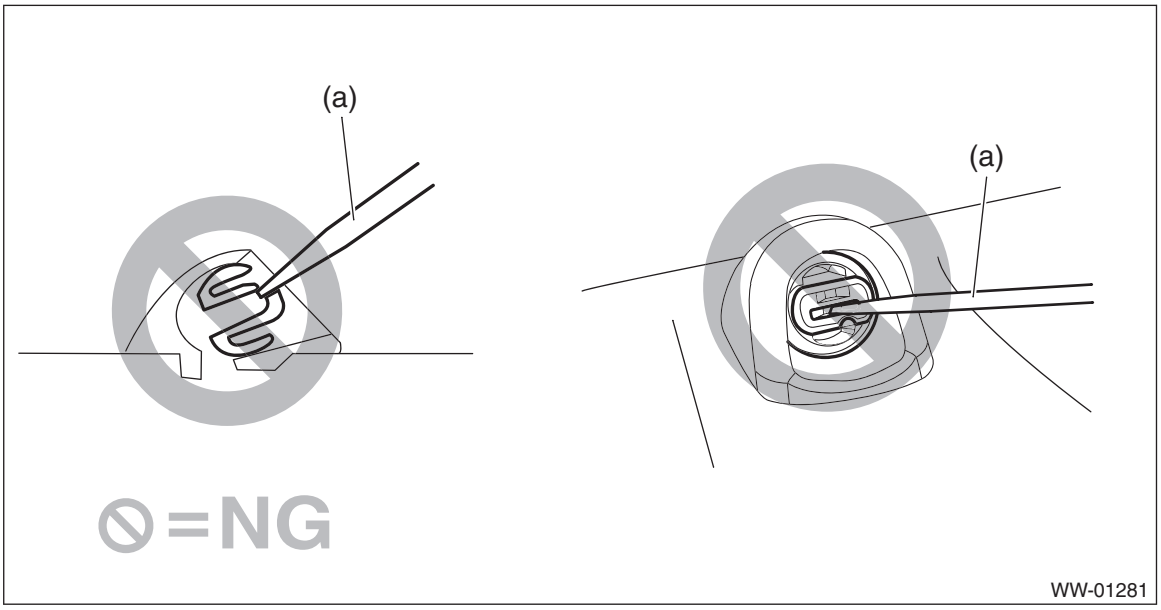
1) Install the nozzle - windshield washer.
   (1) Install the nozzle - windshield washer.
   (2) Install the hose - windshield washer.
2) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-52, INSTALLATION, Cowl Panel.>
3) Install the arm assembly - windshield wiper. <Ref. to WW-29, INSTALLATION, Front Wiper Arm.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Adjust the position of the nozzle - windshield washer. <Ref. to WW-35, ADJUSTMENT, Front Washer Nozzle and Hose.>
6) Operate the windshield wiper to check that the stop position is aligned with the point mark.
If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-29, REMOVAL, Front Wiper Arm.>

C: INSPECTION



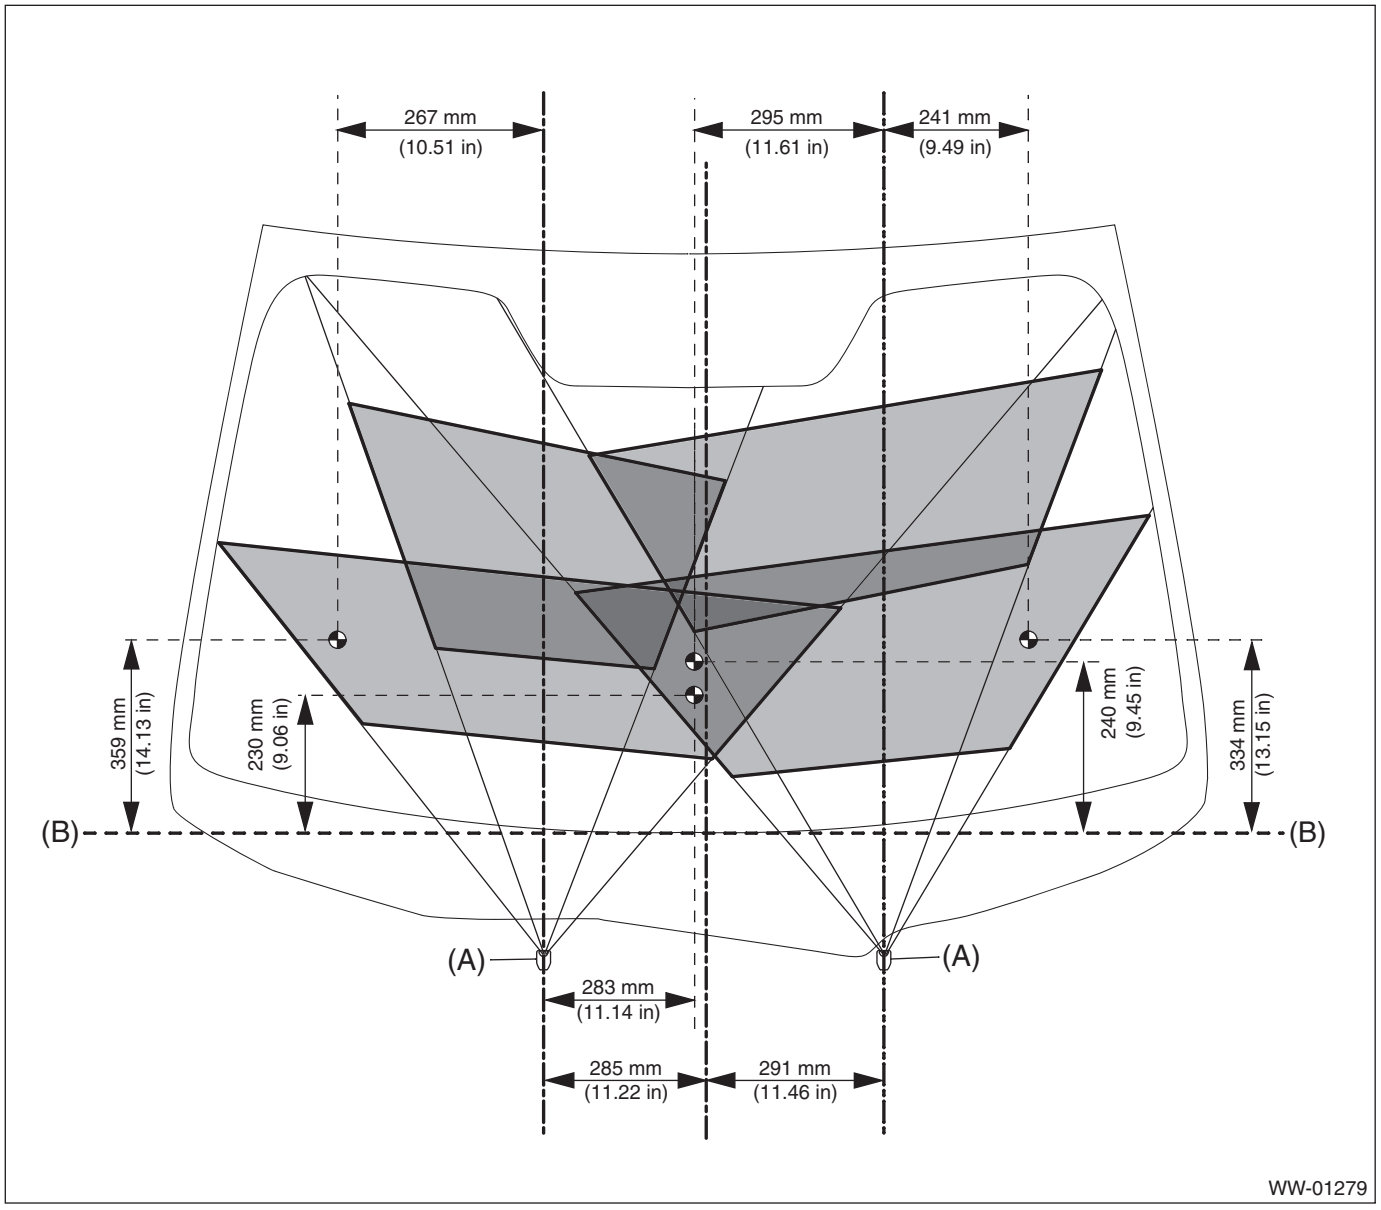
- Make sure the nozzle - windshield washer and the hose - windshield washer are not clogged.
- Make sure the hose - windshield washer is not bent.
- Check the position of the nozzle - windshield washer. <Ref. to WW-35, ADJUSTMENT, Front Washer Nozzle and Hose.>

D: ADJUSTMENT



1. NOZZLE - WINDSHIELD WASHER

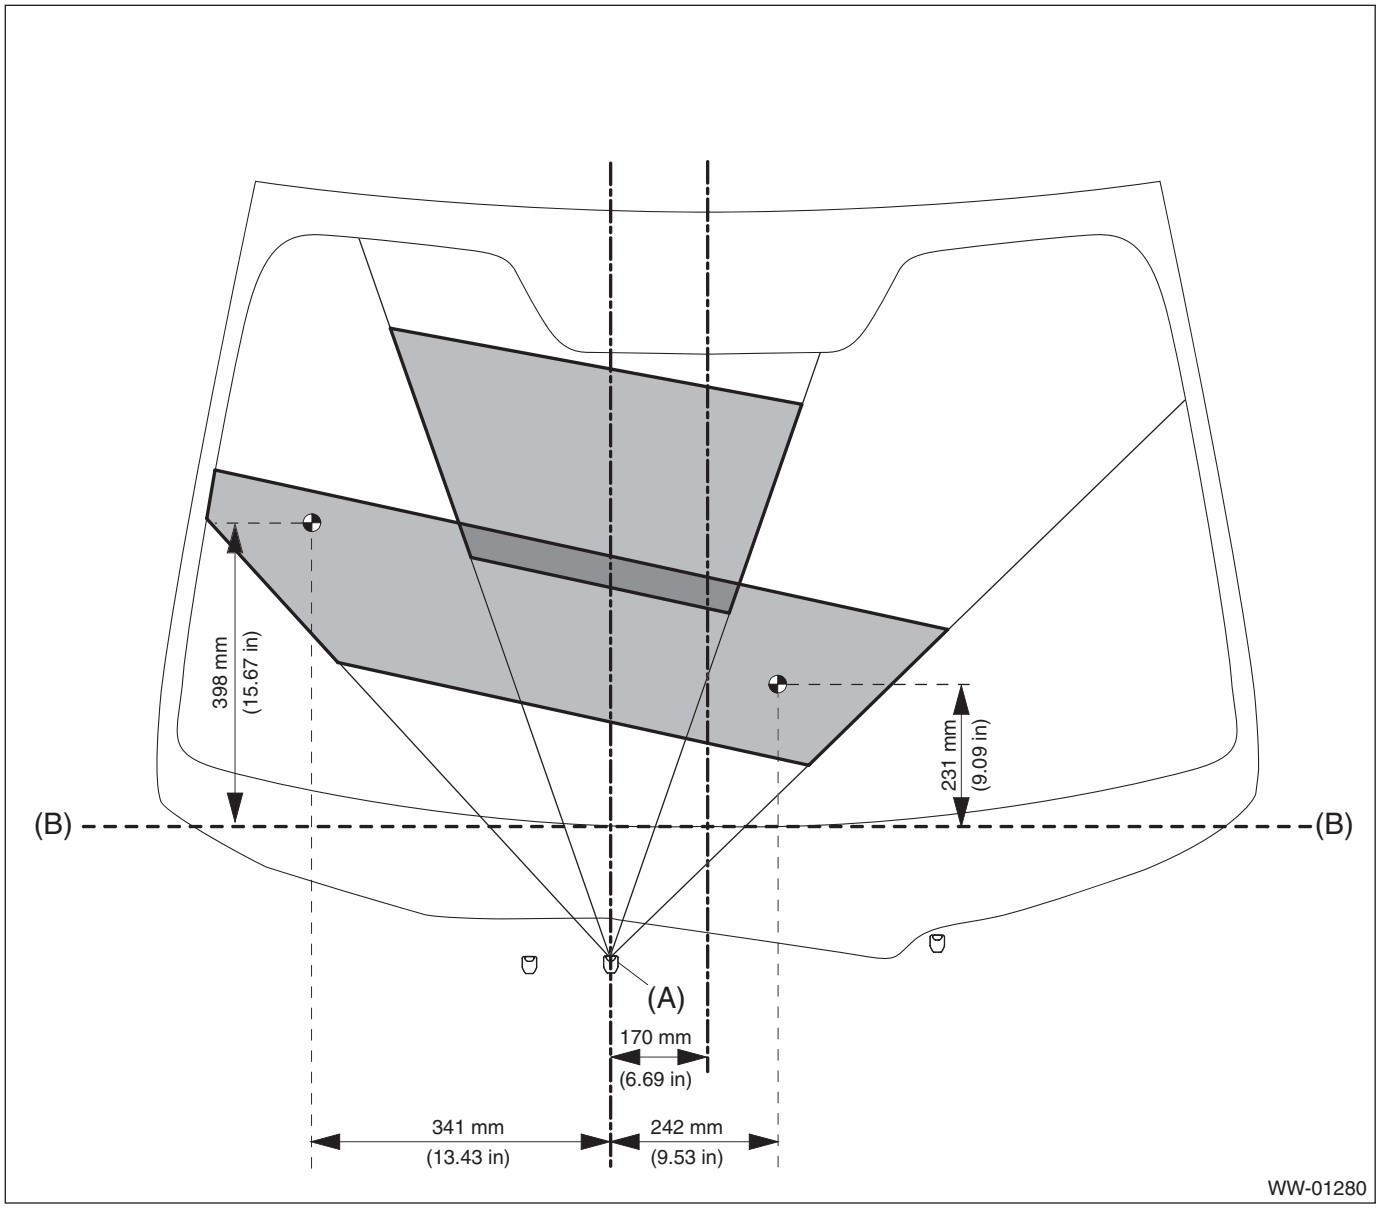
1) Turn the wiper switch to OFF position.



2) While the vehicle is at a standstill, insert the washer nozzle adjustment tool (a) into upper side (b) and lower side (c) of the nozzle - windshield washer to perform necessary adjustment.

CAUTION:
Washer nozzle is made of resin. If precision screwdriver (a) or equivalent is inserted into discharge port for adjustment, the discharge port can be deformed, and washer fluid cannot be sprayed.

3) Adjust the washer injection position as shown in the figure.

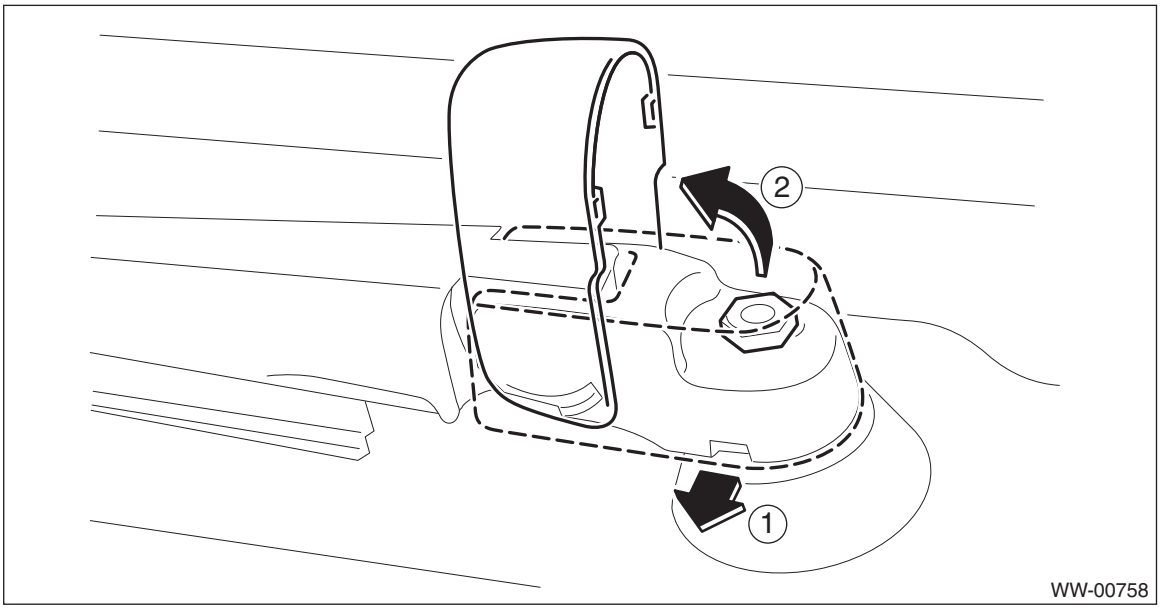


(A) Nozzle - windshield washer (B) Ceramic line

2. NOZZLE - WINDSHIELD WASHER EyeSight (MODEL WITH EyeSight ONLY)

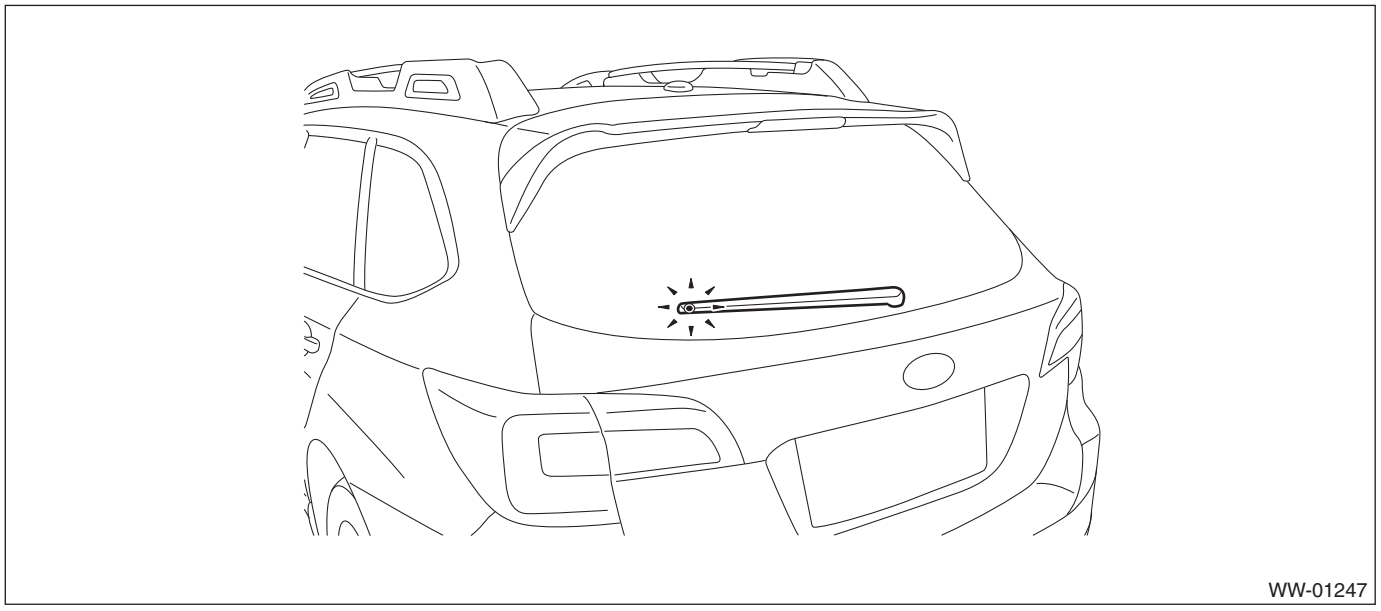
1) Turn the wiper switch to OFF position.

2) Adjust the washer injection position as shown in the figure.



(A) Nozzle - windshield washer Eye-Sight
(B) Ceramic line

10.Rear Wiper Arm



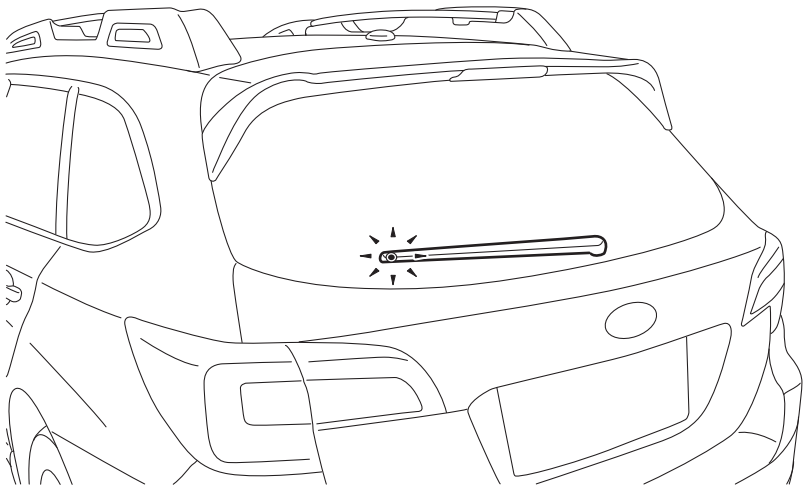
A: REMOVAL

1) Pull up the cover - rear wiper arm.
2) Remove the nut, and remove the arm assembly - rear wiper.

B: INSTALLATION

1) Install the arm assembly - rear wiper.
   (1) Assemble the blade assembly - rear wiper aligning it with the marking on the glass.

   (2) Tighten the arm assembly - rear wiper to the specified torque, and install the cover - rear wiper arm.



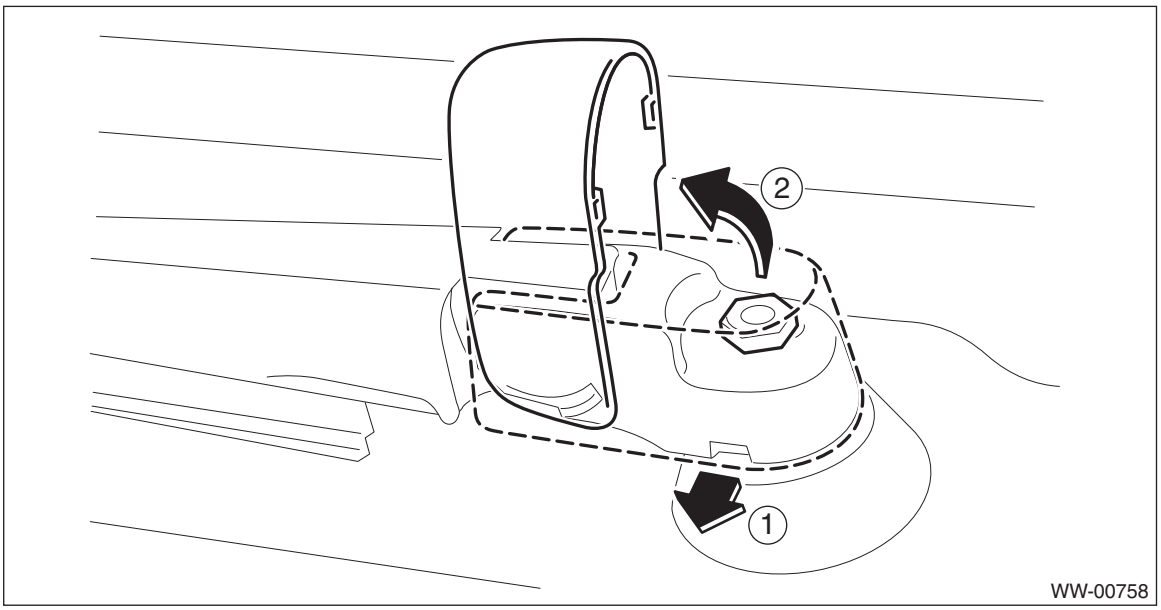
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

2) Check the position of rear wiper. <Ref. to WW-39, ADJUSTMENT, Rear Wiper Arm.>

C: ADJUSTMENT

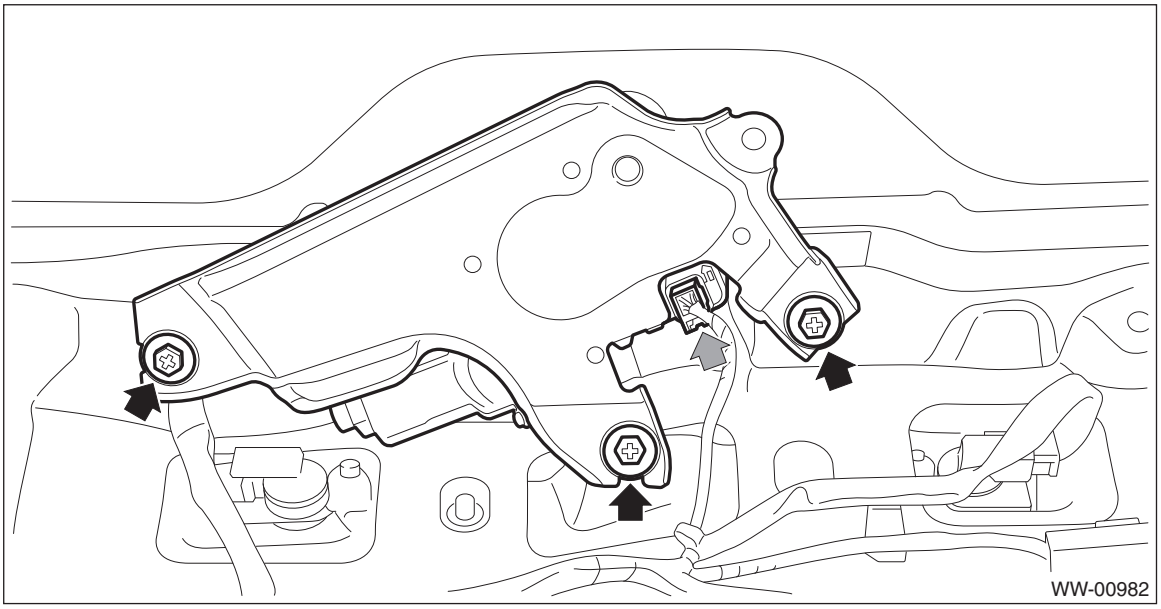
1) Operate the rear wiper once.

2) Check that the wiper blade is aligned with the point mark.



WW-01247

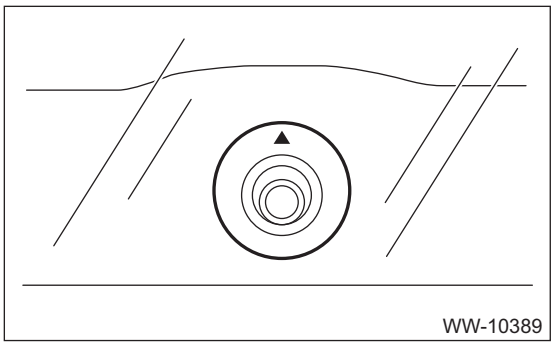
3) If the wiper blade is not aligned with the point mark, perform the removal and installation of the rear wiper. <Ref. to WW-39, REMOVAL, Rear Wiper Arm.>



11.Rear Wiper Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear gate trim. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the arm assembly - rear wiper.
   (1) Remove the cover - rear wiper arm.
   (2) Remove the nut, and remove the arm assembly - rear wiper.



4) Remove the motor assembly - rear wiper.
   (1) Disconnect the harness connector of the motor assembly - rear wiper.
   (2) Remove the bolts, and remove the motor assembly - rear wiper.

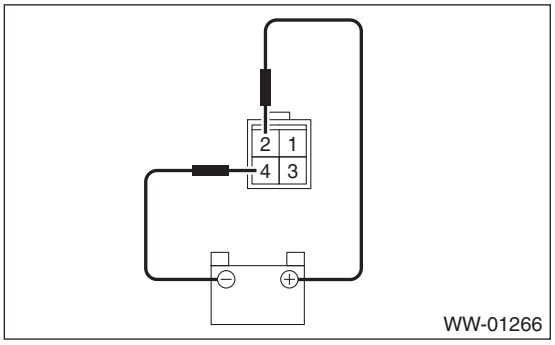
B: INSTALLATION

1) Check that the mark on the cap - pivot wiper faces up.

2) Install the motor assembly - rear wiper.
   (1) Install the bolts, and install the motor assembly - rear wiper.

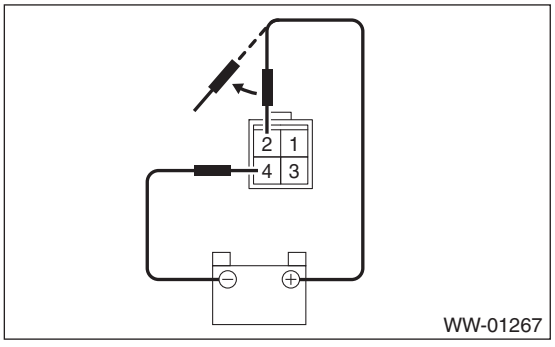
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

   (2) Install the harness connector of the motor assembly - rear wiper.
3) Install the arm assembly - rear wiper.
   (1) Install the nuts, and install the arm assembly - rear wiper.



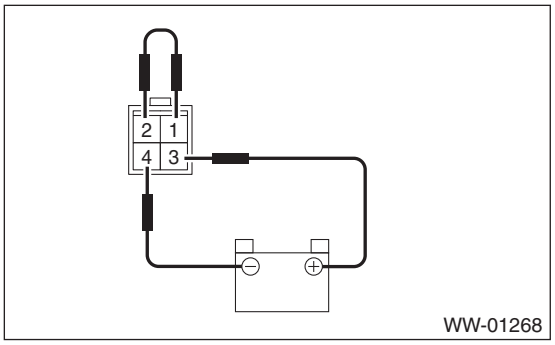
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

   (2) Install the cover - rear wiper arm.
4) Install the rear gate trim. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

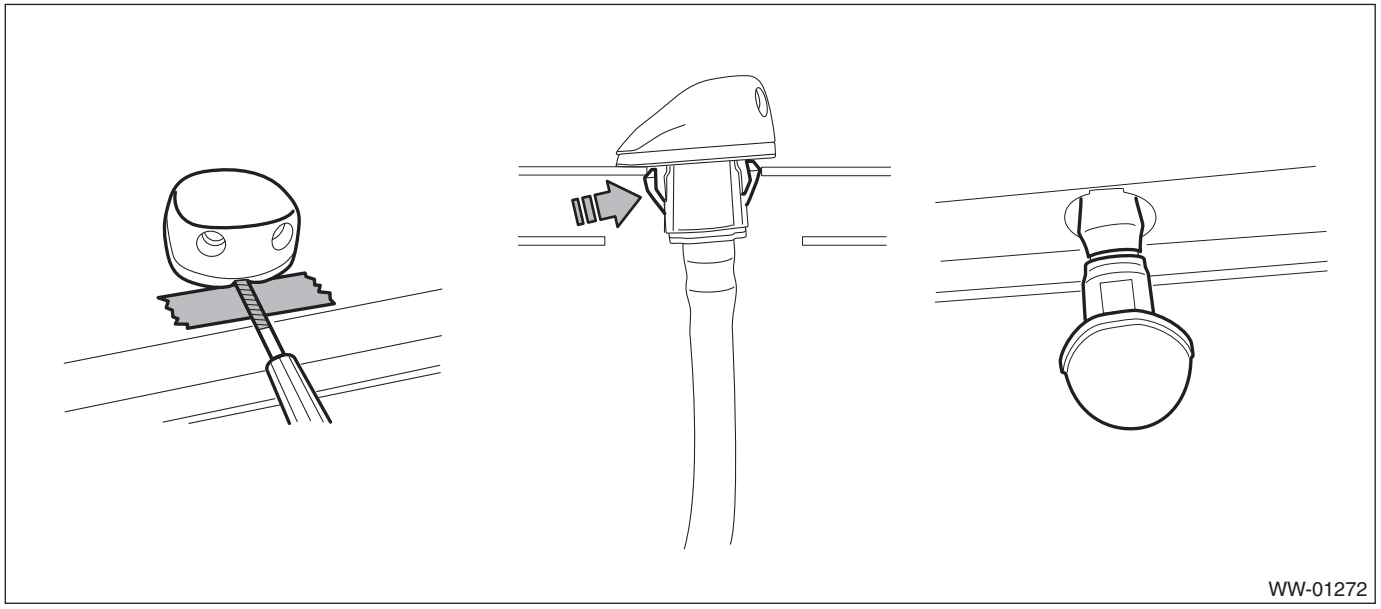
CAUTION:
Fix the motor to prevent the motor from being shorted by moving during operation.



1) Connect the battery to the motor assembly - rear wiper connector, and check that the motor assembly - rear wiper operates.

2) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating, and stop the motor in mid-operation.

3) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.



12.Rear Washer

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the roof spoiler. <Ref. to EI-67, REMOVAL, Roof Spoiler.>
3) Remove the nozzle - rear washer.

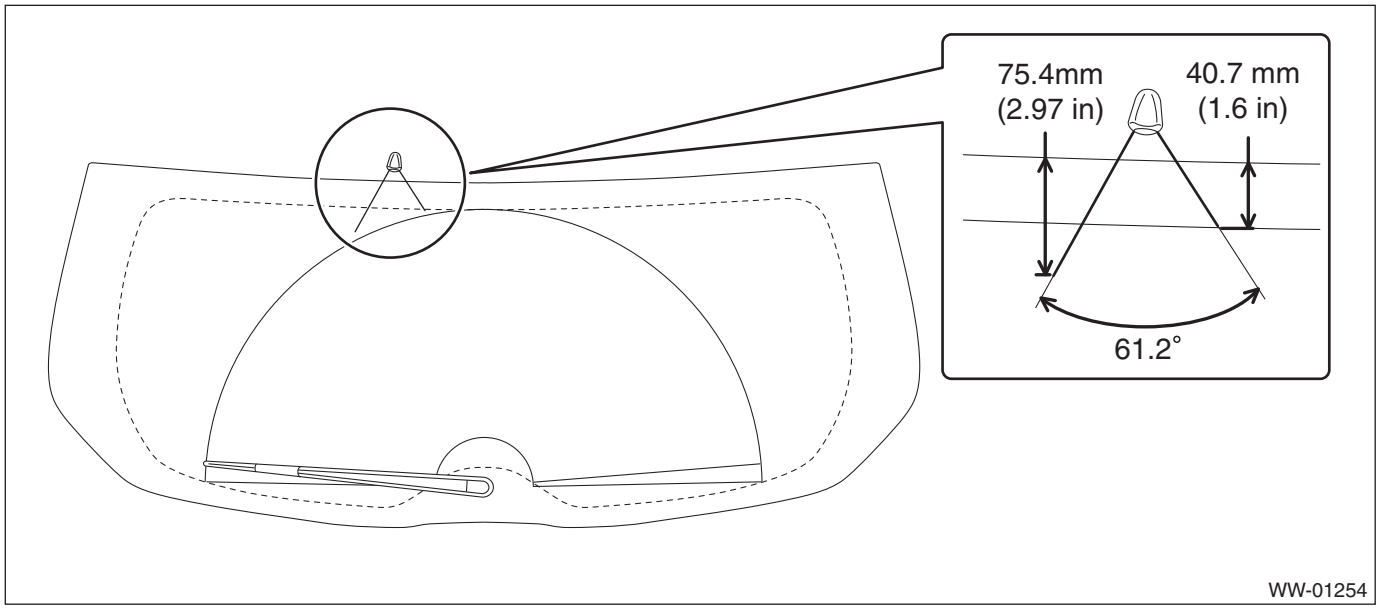
CAUTION:
Before removing, apply protective tape to the body panel and used tools not to damage the panel - rear gate.

(1) Push the claw using a precision screwdriver, etc.
(2) When the nozzle - rear washer lifts up, pull out the nozzle - rear washer using a clip remover, etc.
(3) Disconnect the hose assembly - rear washer, and remove the nozzle - rear washer.

B: INSTALLATION

1) Connect the hose assembly - rear washer, and install the nozzle - rear washer.
2) Install the roof spoiler. <Ref. to EI-67, INSTALLATION, Roof Spoiler.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. VISUAL INSPECTION

Check for the following items, and if any malfunction is found, replace the corresponding part.
- Make sure the nozzle - rear washer and the hose - rear washer are not clogged.
- Make sure the hose - rear washer is not bent.

2. INSPECTING THE SPRAY POSITION

1) Turn the wiper switch to OFF position.
2) While the vehicle is stopped, check that the washer spray position is as shown in the figure.

3) After inspection, if the spray position is significantly out of the specified range, replace the nozzle - rear washer with a new part.

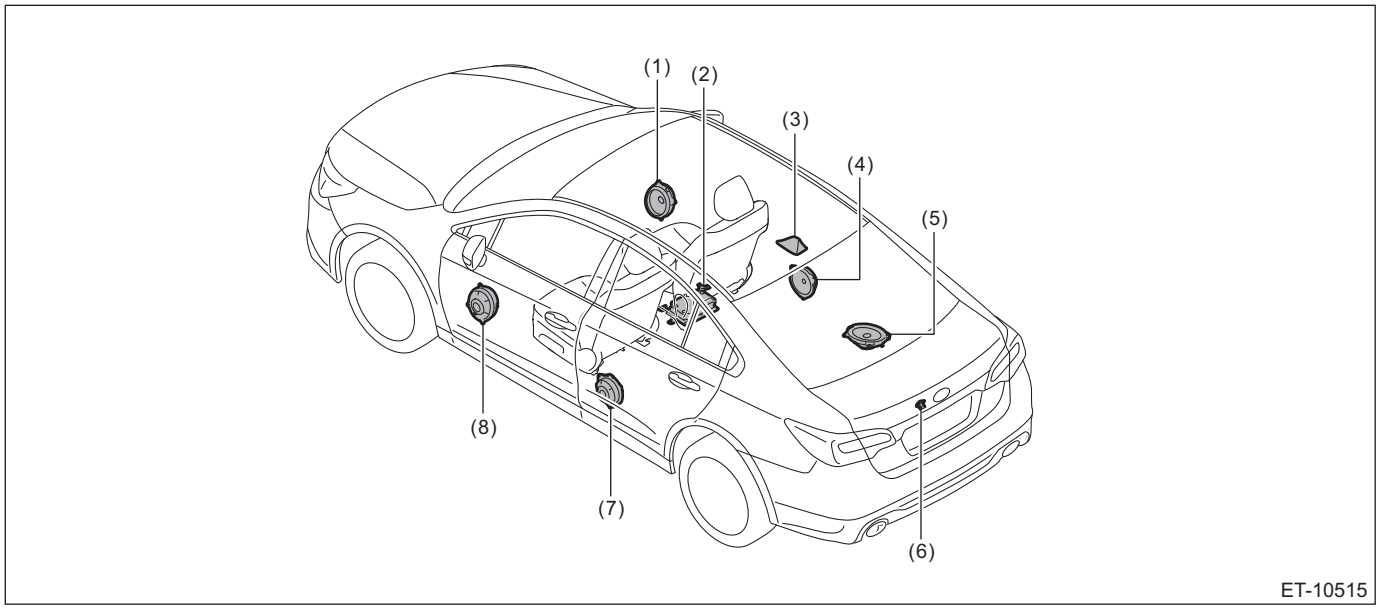
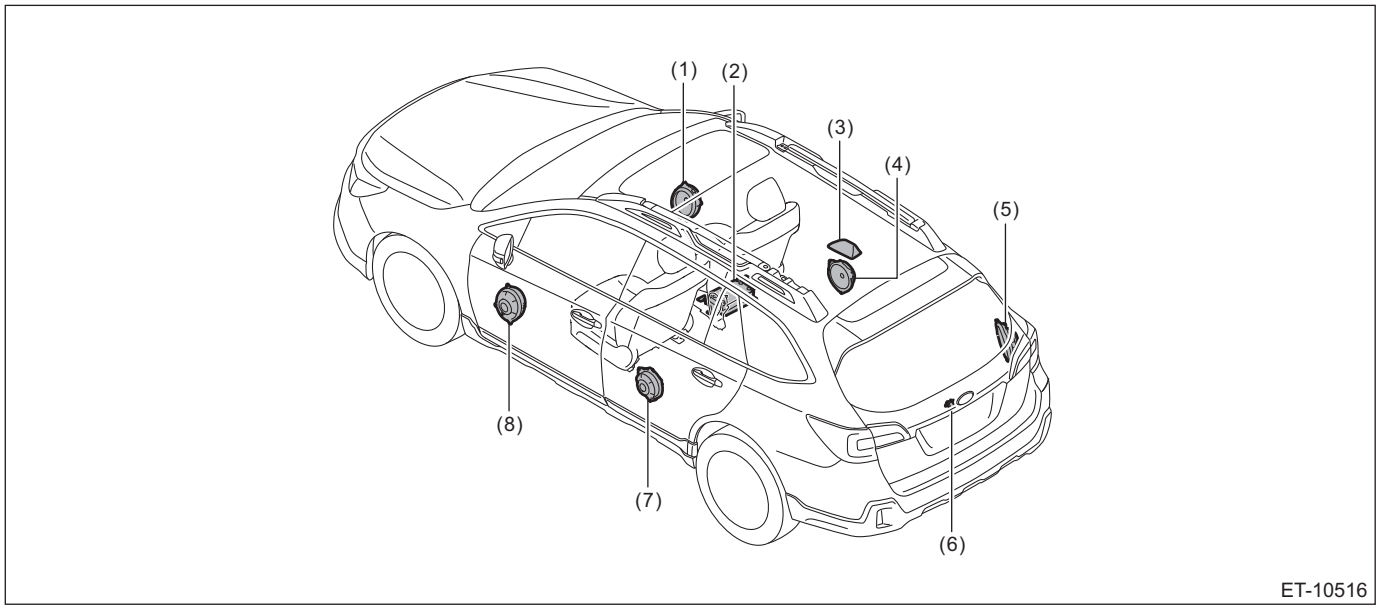
1. General Description

A: LOCATION



1. AUDIO AND NAVIGATION SYSTEM

ET-10514

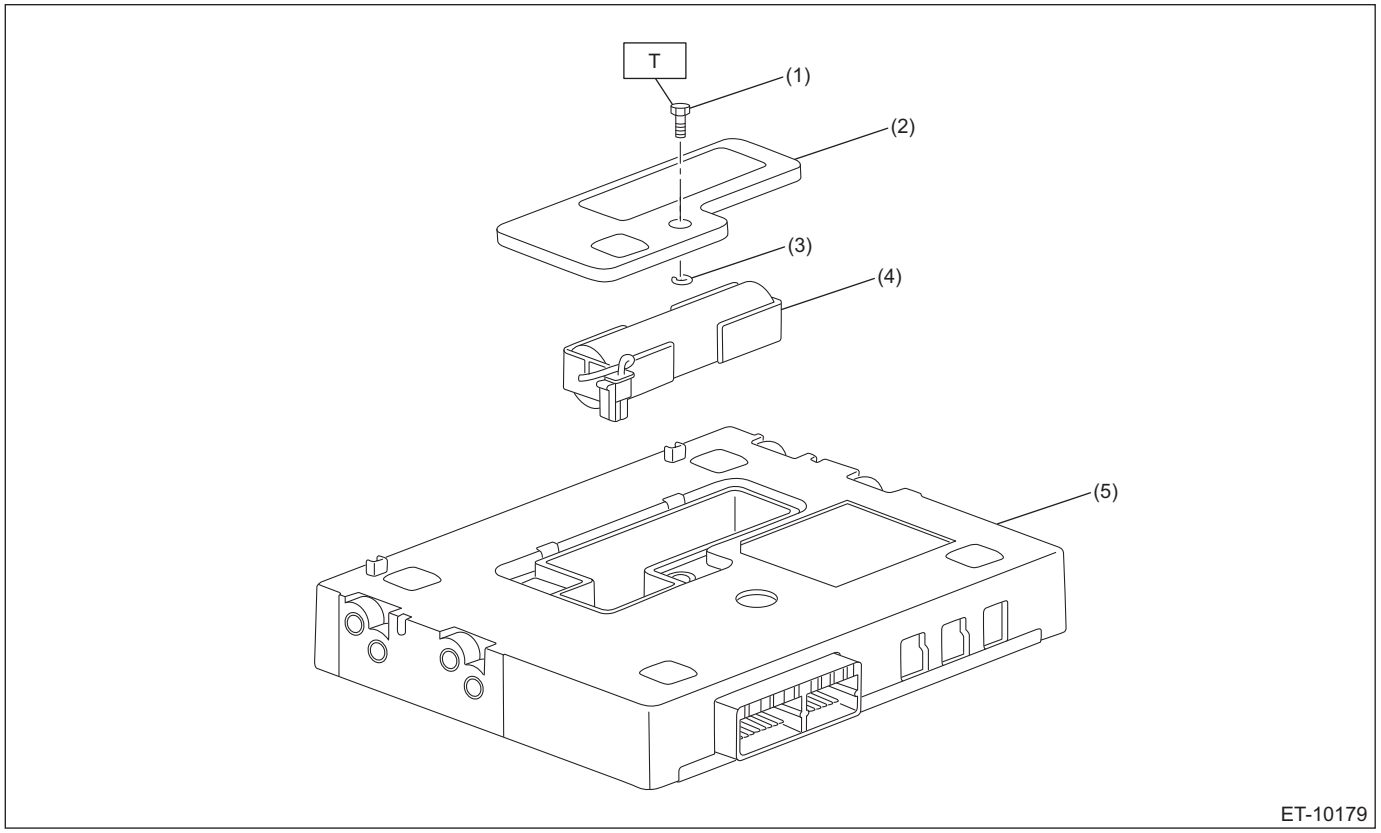


(1) Speaker ASSY - tweeter LH
(2) Speaker ASSY - center
(3) Speaker ASSY - tweeter RH
(4) Audio ASSY or navigation ASSY
(5) Satellite switch ASSY

- Sedan model

(1) Speaker ASSY - front RH
(2) Power amplifier ASSY
(3) Antenna ASSY - roof
(4) Speaker ASSY - rear RH
(5) Speaker ASSY - woofer
(6) Rearview camera ASSY
(7) Speaker ASSY - rear LH
(8) Speaker ASSY - front LH

- OUTBACK model



(1) Speaker ASSY - front RH
(2) Power amplifier ASSY
(3) Antenna ASSY - roof
(4) Speaker ASSY - rear RH
(5) Speaker ASSY - woofer
(6) Rearview camera ASSY
(7) Speaker ASSY - rear LH
(8) Speaker ASSY - front LH

2. TELEMATICS SYSTEM

Refer to “LOCATION” of “TELEMATICS SYSTEM (DIAGNOSTICS)” section. <Ref. to TEL(diag)-6, LOCATION, Electrical Component Location.>

B: COMPONENT

1. DATA COMMUNICATION MODULE

(1) Cap screw
(2) Backup battery cover
(3) Circlip
(4) Backup battery
(5) Data communication module

Tightening torque: N·m (kgf-m, ft-lb)
T: 0.3 (0.03, 0.2)

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

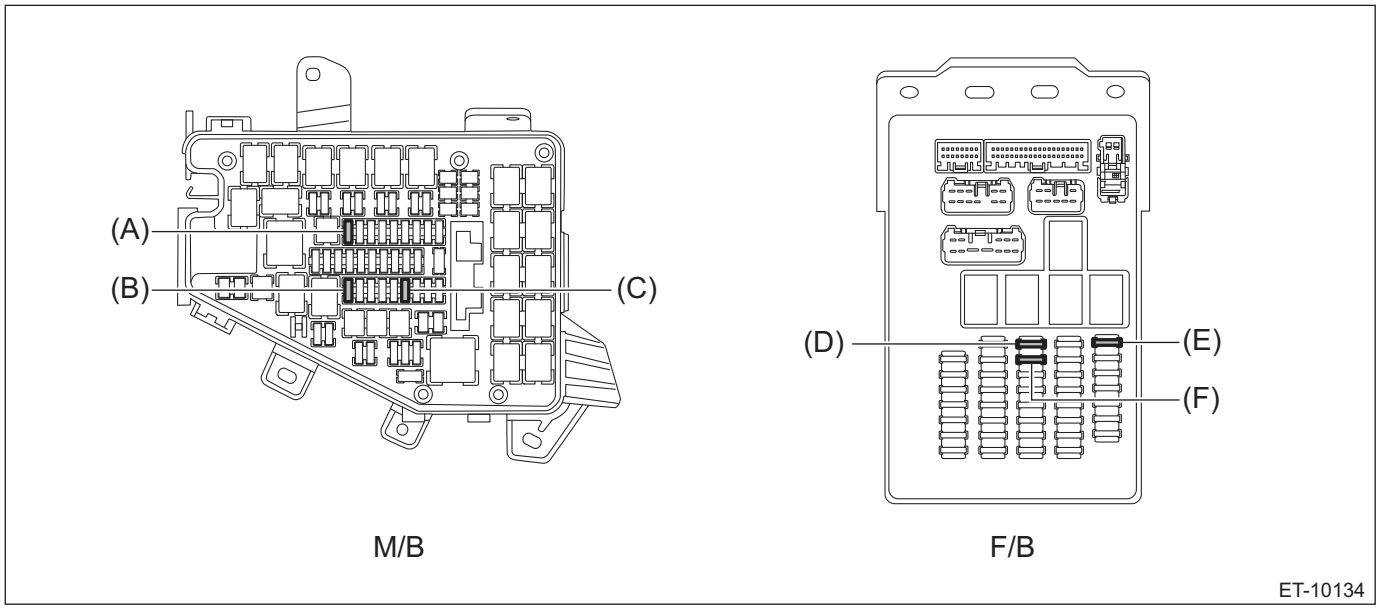


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 7.5 A (data communication module*1)	(A)
	Fuse 30 A (audio, navigation unit)	(B)
	Fuse 20 A (audio amplifier)	(C)
Fuse & relay box (F/B)	Fuse 20 A (rear accessory power supply socket)	(D)
	Fuse 15 A (audio, navigation unit, audio amplifier, external connection terminal, data communication module*1)	(E)
	Fuse 10 A (front accessory power supply socket)	(F)

*1: Model with telematics

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

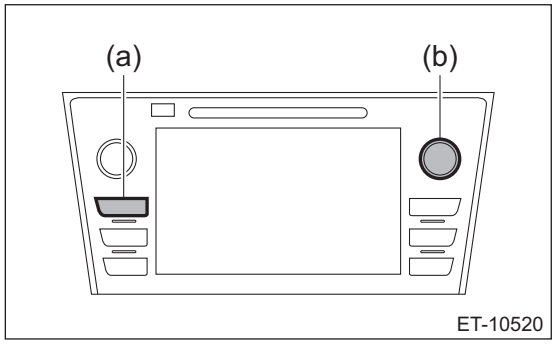
B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

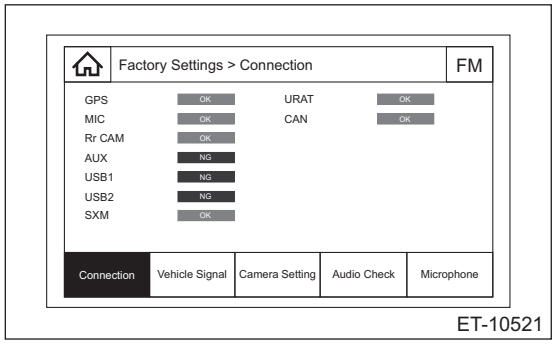
NOTE:
If the fuse is blown again, check the system wiring harness.

3. Audio System



A: WIRING DIAGRAM

Refer to “Audio System” in the wiring diagram. <Ref. to WI-106, WIRING DIAGRAM, Audio System.>

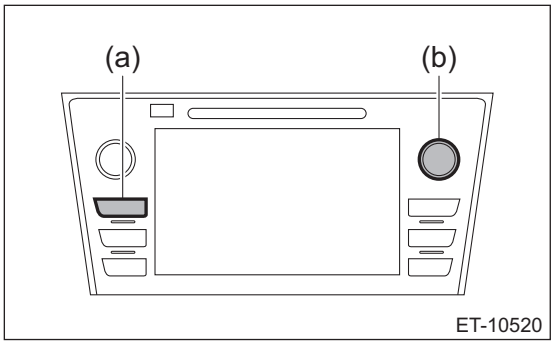


B: OPERATION

1. CHECK CONNECTIONS WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.

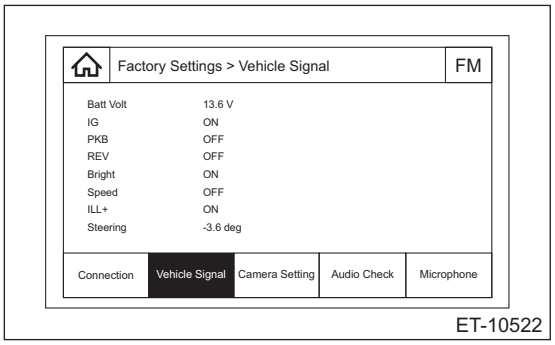
NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.
3) {Line Diag} screen is displayed.
4) Check the connection status with the {Connection} in the {Line Diag} screen.



Item	Contents	Inspection
GPS	GPS antenna connection	Confirm that the indication is OK. (With GPS antenna only)
MIC	MIC connection	Confirm that the indication is OK.
Rr CAM	Rr CAM Video connection	Confirm that the indication is OK.
AUX	AUX connection	Connect the pin jack for check to AUX terminal and check that the indication is OK.
USB1	USB connection	Connect the memory for check to USB terminal and check that the indication is OK.
USB2		
SXM	SXM connection	Confirm that the indication is OK. (With SXM only)
UART	UART connection	Connect the measurement equipment and check that the indication is OK. (With auto A/C only)
CAN	CAN connection	Confirm that the indication is OK.

2. CHECK VEHICLE SIGNALS WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.

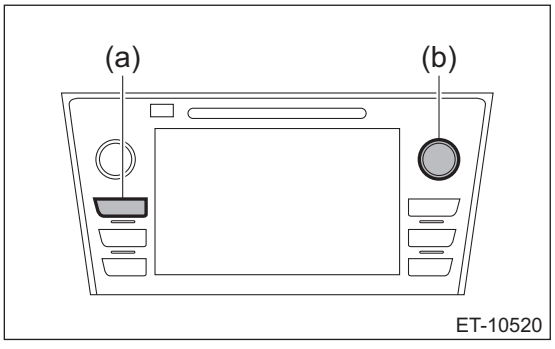


2) Press the button (b) twice with the button (a) pressed.

NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.

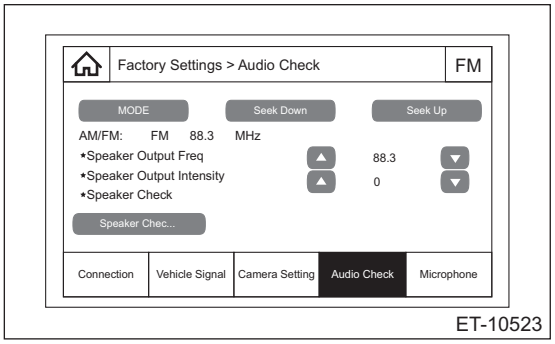
3) {Line Diag} screen is displayed.

4) Check the signal status with the {Vehicle Signal} in the {Line Diag} screen.



Item	Contents	Inspection
ILL+	Illumination signal	Turn the lighting switch to ON, and check that the indication turns ON.
Speed	Speed pulse signal	Input the vehicle speed and check that the vehicle speed is displayed.
PKB	Parking brake signal	Pull the parking brake lever, and check that the indication turns ON.
REV	Reverse signal	Place the select lever in reverse and check that the indication turns ON.
IG	IGN signal	Confirm that the indication is ON.
Batt Volt	Battery voltage	Check that the battery voltage is displayed.
Steering	Steering angle	Check that the indication reflects the steering operation.
Bright	Bright signal	Turn the bright switch to ON, and check that the indication turns ON.

3. CHECK SPEAKER OUTPUT AND ANTENNA CONNECTION WITH LINE DIAG MODE

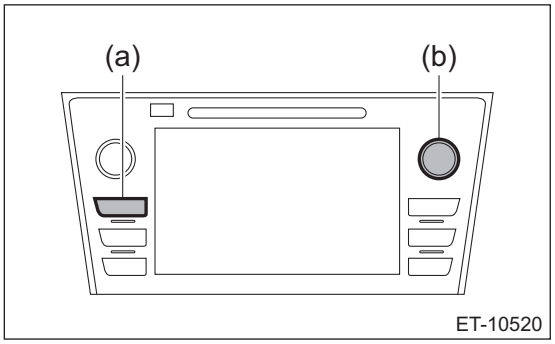


1) Turn the ignition switch to ACC.

2) Press the button (b) twice with the button (a) pressed.

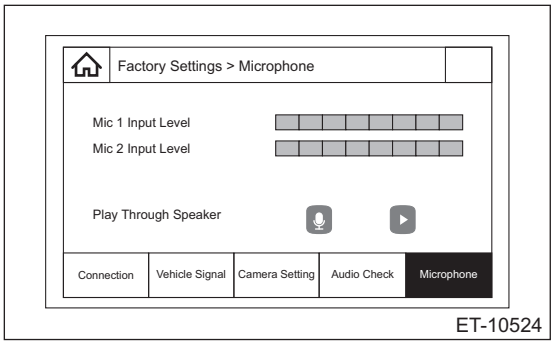
NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.

3) {Line Diag} screen is displayed.
4) On {Audio Check} in {Line Diag} screen, check the speaker output check and antenna connection check.



Item	Contents	Inspection
MODE	Radio band switching	Check that the radio band (AM/FM) can be switched.
Seek Up/Down	Seek Up/Down operation	Check that Seek Up/Down adjustment can be performed.
Speaker Check	Speaker check operation	• Four-speaker: Front left → rear left → rear right → front right will sound in order for 0.5 seconds each. • Six-speaker: Tweeter left → front left → rear left → rear right → front right → tweeter right will sound in order for 0.5 seconds each.

NOTE:
The sound volume of speaker check depends on the speakers.
- Standard speaker: Sounds at the maximum value.
- Brand speaker: Sounds by 30 steps.



4. CHECK MICROPHONE WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.

NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.
3) {Line Diag} screen is displayed.

4) Check the microphone level with the {Microphone} in the {Line Diag} screen.

Check that the microphone input level changes in response to sound and voice.

C: INSPECTION

1. BASIC INSPECTION

For basic inspection, refer to “Basic Diagnostic Procedure” in “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. <Ref. to INF(diag)-2, Basic Diagnostic Procedure.>

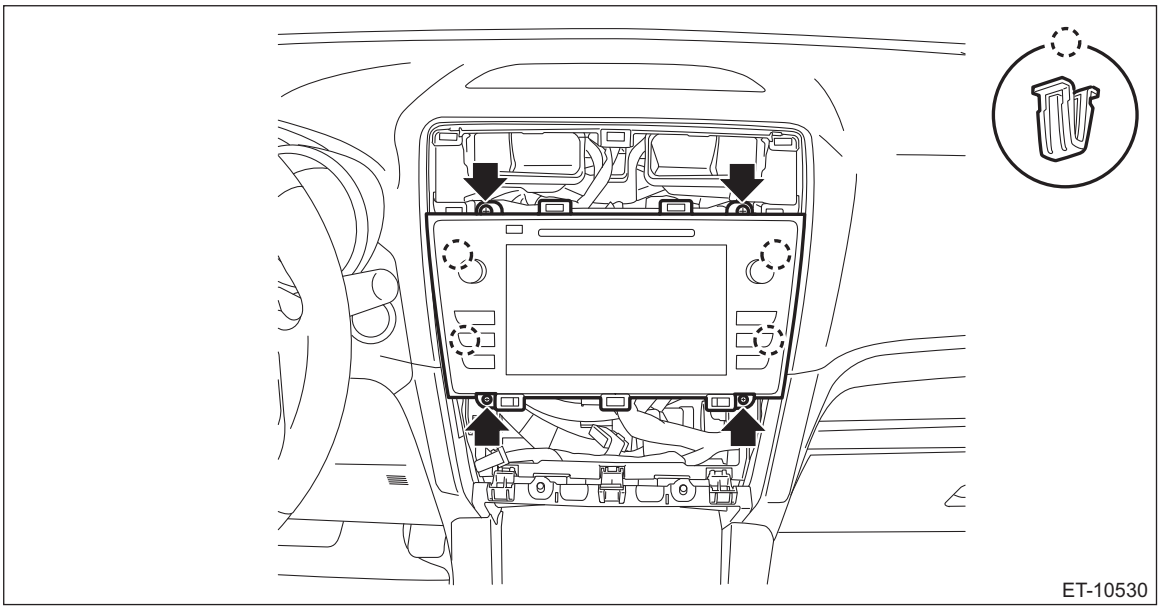
2. SYSTEM BLOCK DIAGRAM

For system block diagram, refer to “System Block Diagram” in “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. <Ref. to INF(diag)-7, SYSTEM BLOCK DIAGRAM, General Description.>

3. MODULE I/O SIGNAL

For module I/O signals, refer to “Control Module I/O Signal” in “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. <Ref. to INF(diag)-9, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

D: NOTE



For procedure of each component in the audio system, refer to the respective sections.

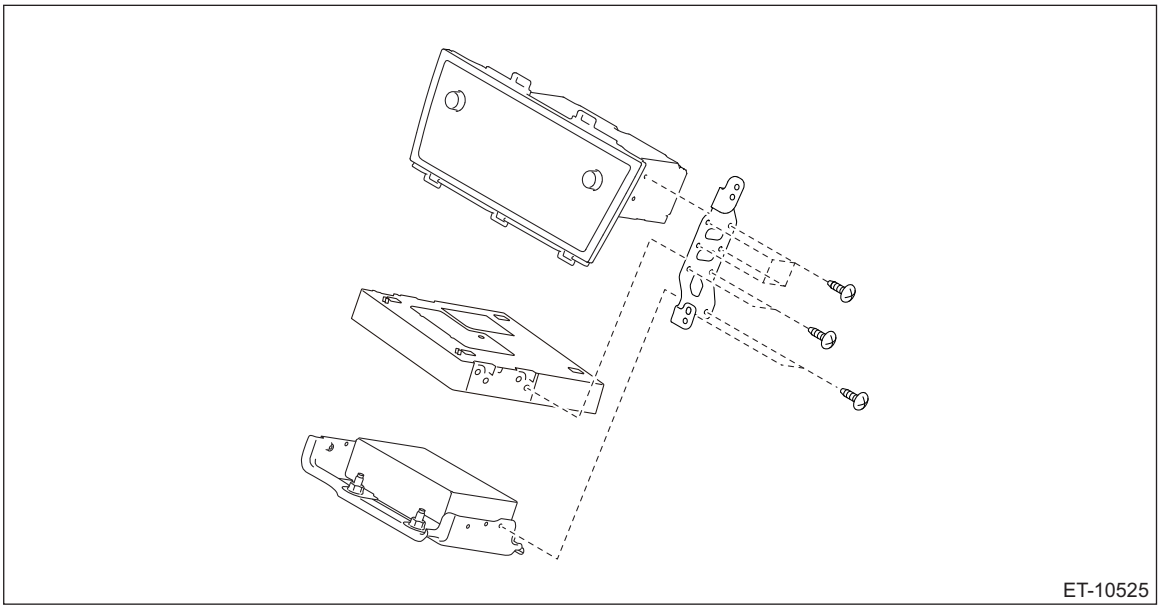
- Audio unit: <Ref. to ETM-11, Audio.>
- Front speaker
  - Tweeter (instrument panel): <Ref. to ETM-13, TWEETER, REMOVAL, Front Speaker.>
  - Door speaker: <Ref. to ETM-14, DOOR SPEAKER, REMOVAL, Front Speaker.>
- Rear speaker: <Ref. to ETM-16, Rear Speaker.>
- Woofer: <Ref. to ETM-17, Woofer.>
- Power amplifier: <Ref. to ETM-19, Power Amplifier.>
- Antenna: <Ref. to ETM-20, Antenna.>
- Noise suppressor: <Ref. to ETM-30, Noise Suppressor.>
- Satellite switch assembly: <Ref. to ETM-32, Switches and Harness.>
- External connection terminal: <Ref. to ETM-50, External Connection Terminal.>

4. Audio

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
4) Remove the audio assembly.
   (1) Remove the screws and release the clip.
   (2) Disconnect the connector and remove the audio assembly.

NOTE:
The model with telematics is equipped with the data communication module under the audio assembly.

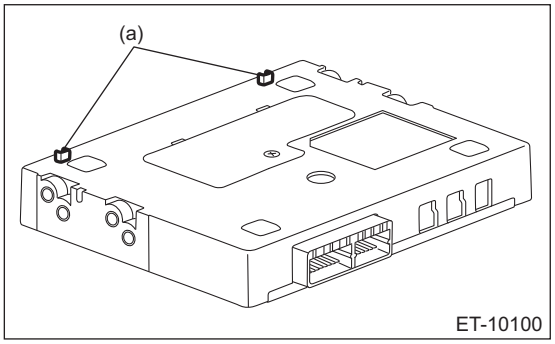


B: INSTALLATION

CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
1) Install the audio assembly.
2) Install the heater control assembly.
3) Install the center grille assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

CAUTION:
Do not drop or apply any impact to the backup module assembly and data communication module.
1) Remove the backup module assembly and data communication module.
   (1) Remove the screws.



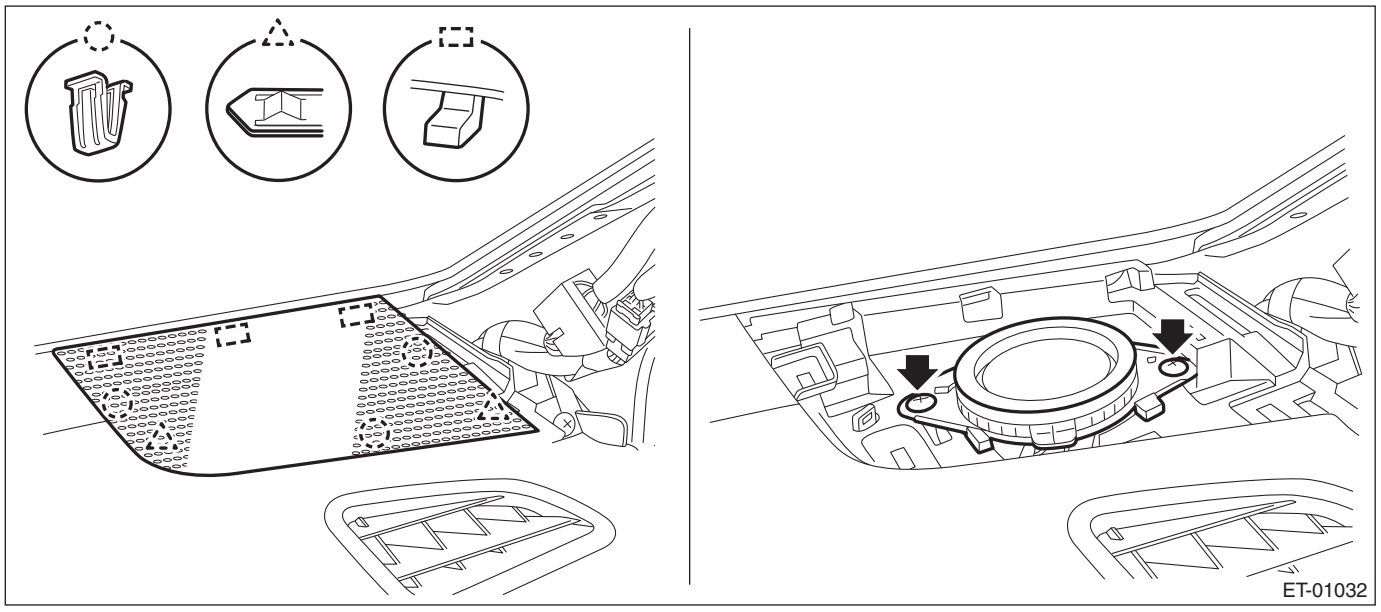
(2) Remove the backup module assembly and data communication module.

D: ASSEMBLY

1) Install the backup module assembly and data communication module.

NOTE:
Align the positioning pin (a) of the data communication module with the positioning hole of the audio assembly or navigation assembly.

5. Front Speaker



A: REMOVAL

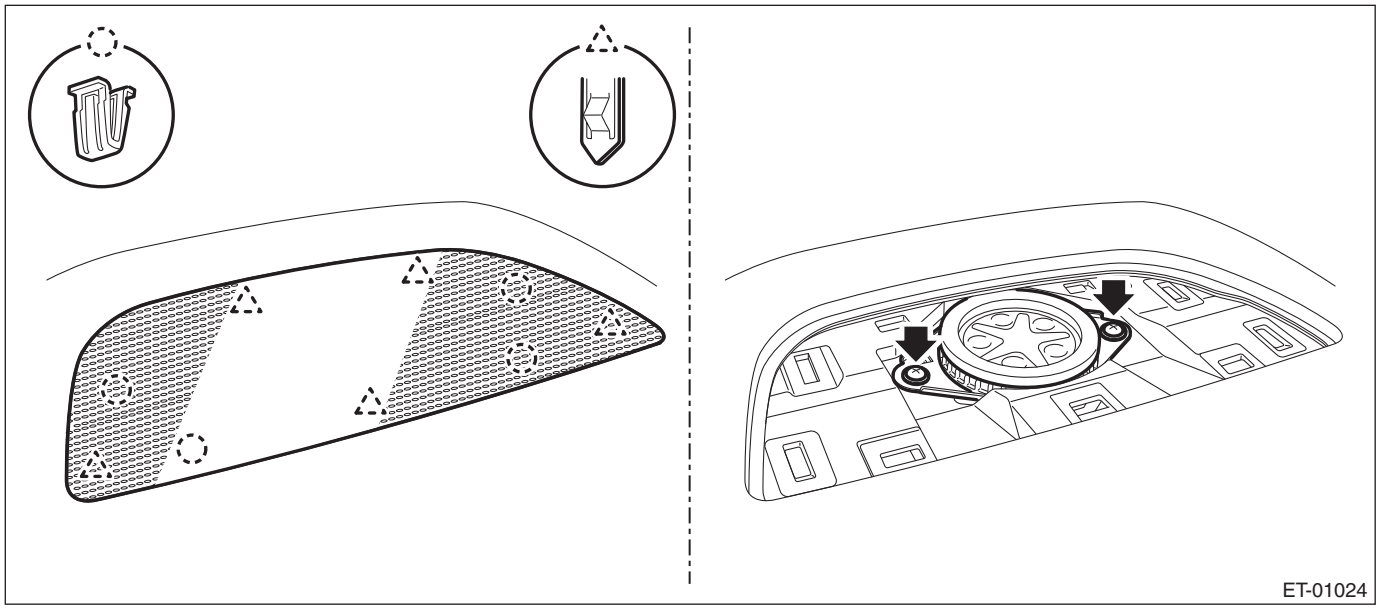
1. TWEETER

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
3) Remove the speaker assembly - tweeter.
   (1) Release the clips and claws, then detach the grille speaker side.
   (2) Remove the screws.

Preparation tool:
Stubby screwdriver

   (3) Disconnect the connector and remove the speaker assembly - tweeter.

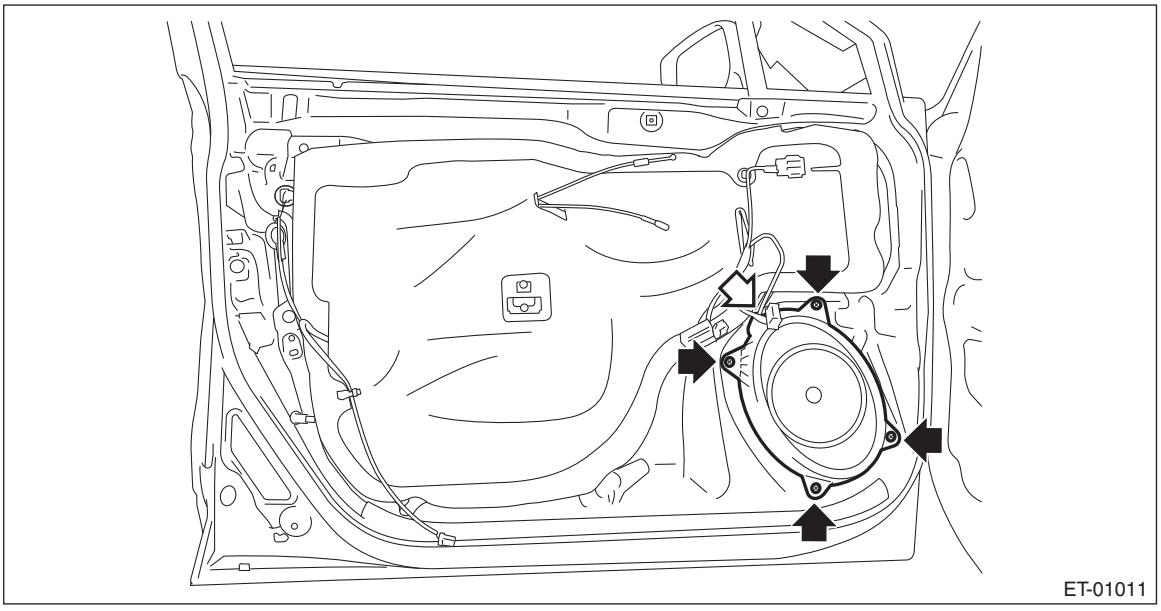
2. CENTER SPEAKER



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the speaker assembly - center.
   (1) Release the clips and claws, then detach the grille speaker center.

NOTE:
Remove the grille speaker center by using a plastic remover.

   (2) Remove the screws.



Preparation tool:
Stubby screwdriver

(3) Disconnect the connector and remove the speaker assembly - center.

3. DOOR SPEAKER

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the speaker assembly - front.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the speaker assembly - front.

B: INSTALLATION

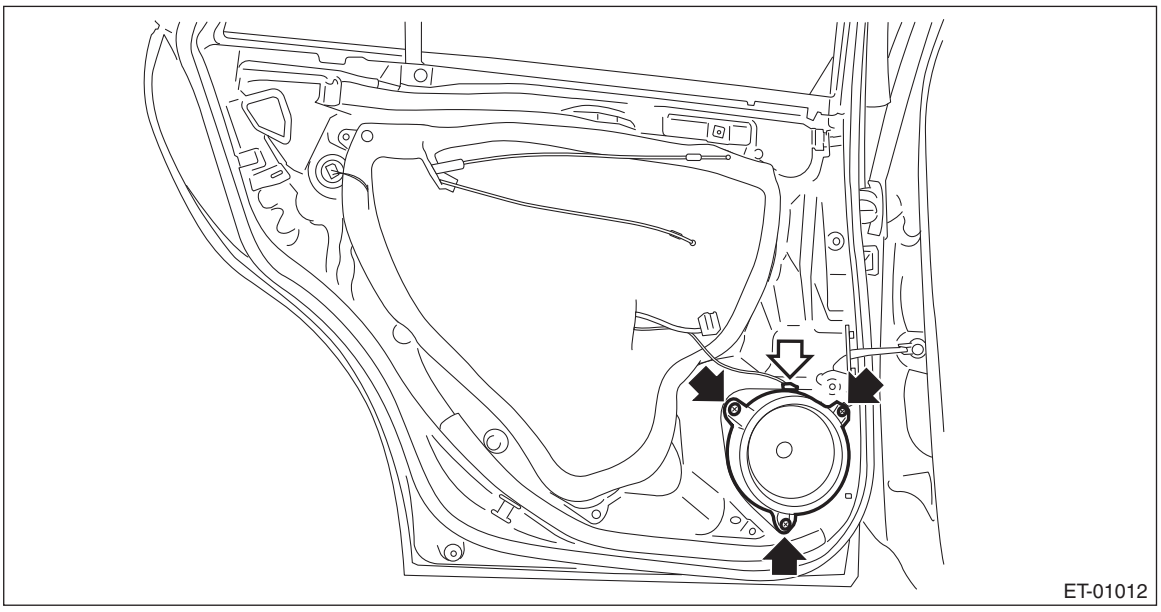
1. TWEETER

1) Install the speaker assembly - tweeter.
2) Install the grille speaker side.
3) Install the trim panel - front pillar UPR. <Ref. to EI-95, INSTALLATION, Upper Inner Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. CENTER SPEAKER

1) Install the speaker assembly - center.

2) Install the grille speaker center.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



3. DOOR SPEAKER

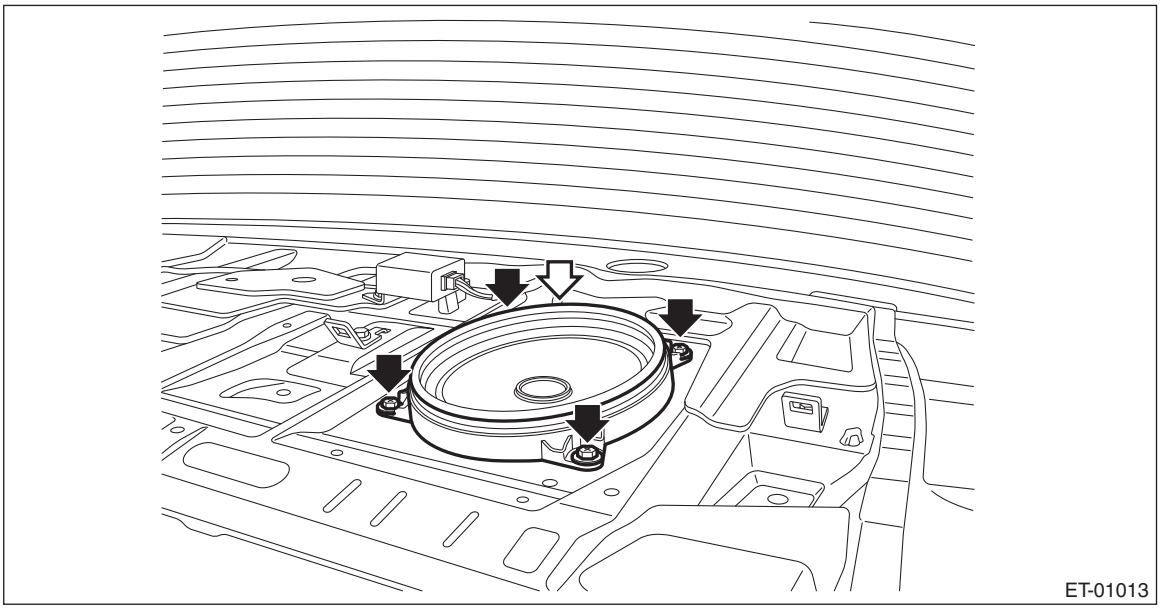
1) Install the speaker assembly - front.
2) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Rear Speaker

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the speaker assembly - rear.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the speaker assembly - rear.

B: INSTALLATION

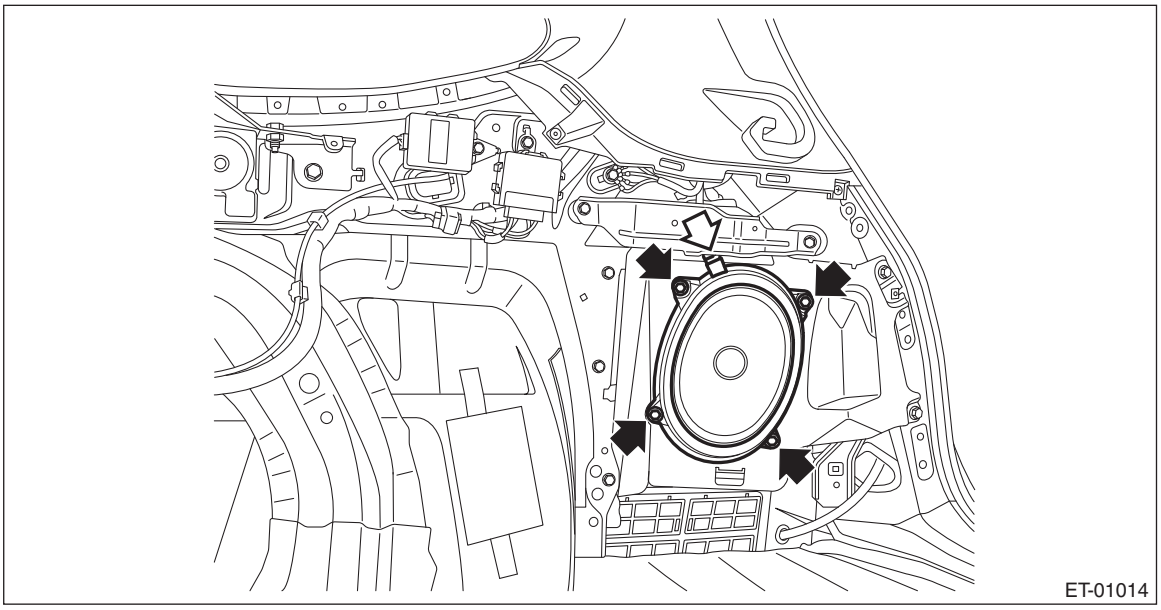


1) Install the speaker assembly - rear.
2) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

7. Woofer

A: REMOVAL

1. SEDAN MODEL



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-103, REMOVAL, Rear Shelf Trim.>
3) Remove the speaker assembly - woofer.
   (1) Disconnect the connector.
   (2) Remove the bolts and remove the speaker assembly - woofer.

2. OUTBACK MODEL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron RH. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the speaker assembly - woofer.
   (1) Disconnect the connector.

(2) Remove the bolts and remove the speaker assembly - woofer.

B: INSTALLATION

1. SEDAN MODEL

1) Install the speaker assembly - woofer.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

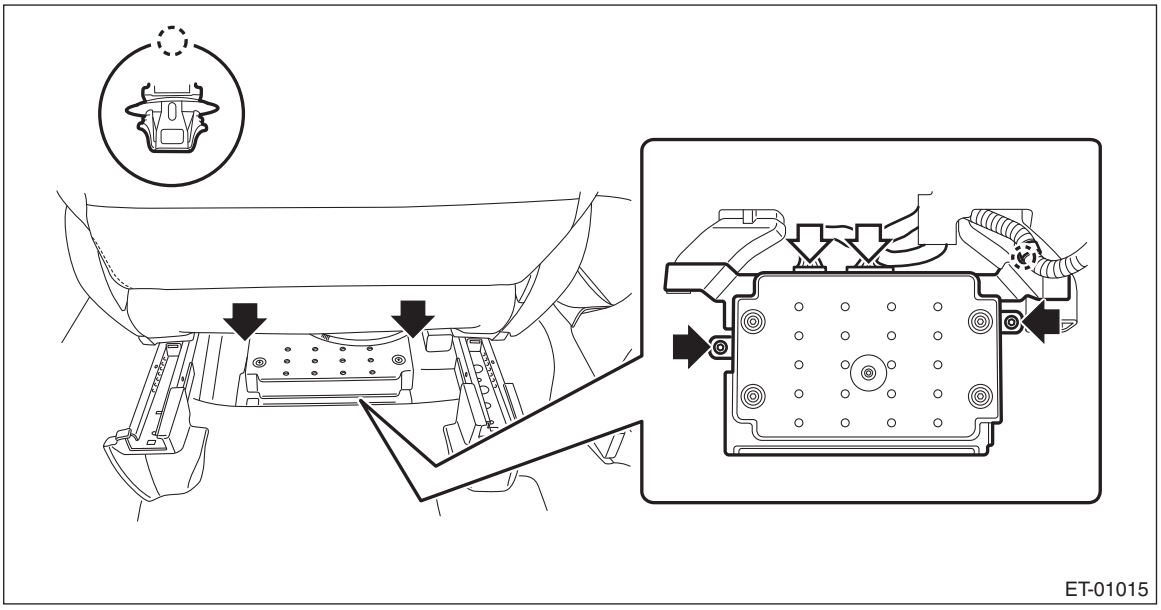
2) Install the trim panel assembly - rear shelf. <Ref. to EI-105, INSTALLATION, Rear Shelf Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the speaker assembly - woofer.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the trim panel - rear apron RH.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

8. Power Amplifier

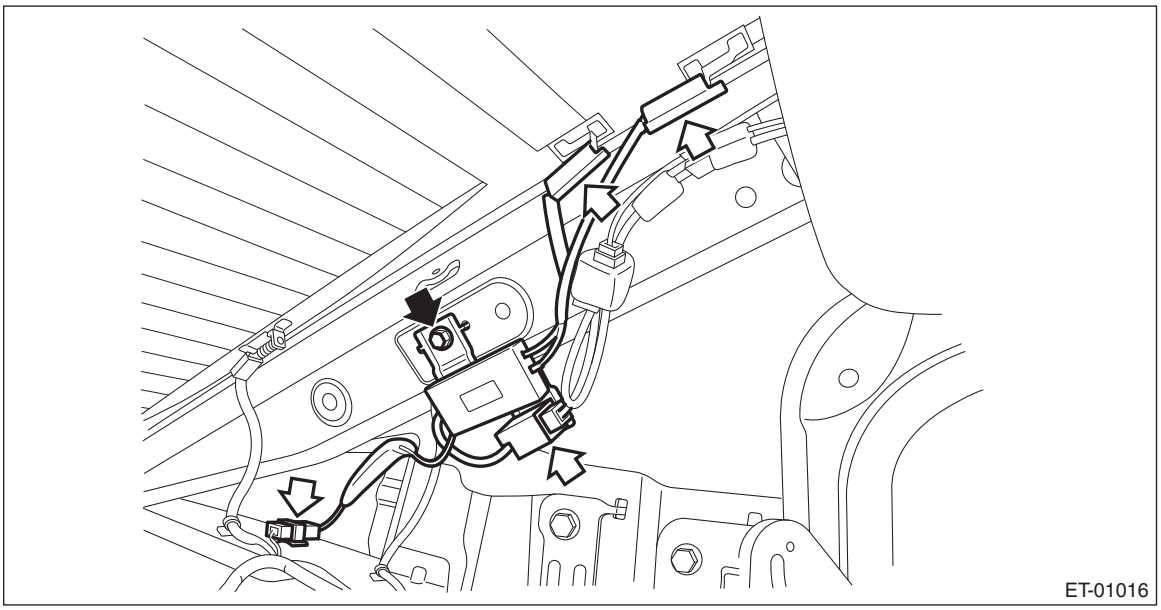
A: REMOVAL

NOTE:
Remove the power amplifier assembly after sliding the passenger's seat back and forth as necessary.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the power amplifier assembly.
   (1) Remove the harness clip, and disconnect each connector.
   (2) Remove the nut and remove the power amplifier assembly.

B: INSTALLATION

1) Install the power amplifier assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

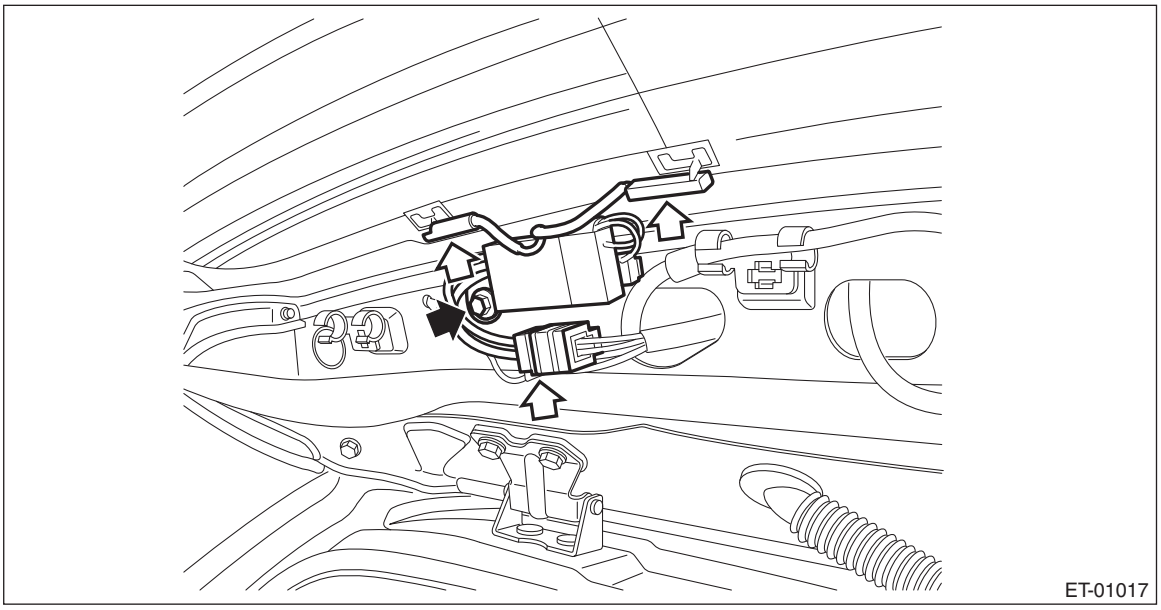


9. Antenna

A: REMOVAL

1. RADIO ANTENNA AMPLIFIER

• Sedan model

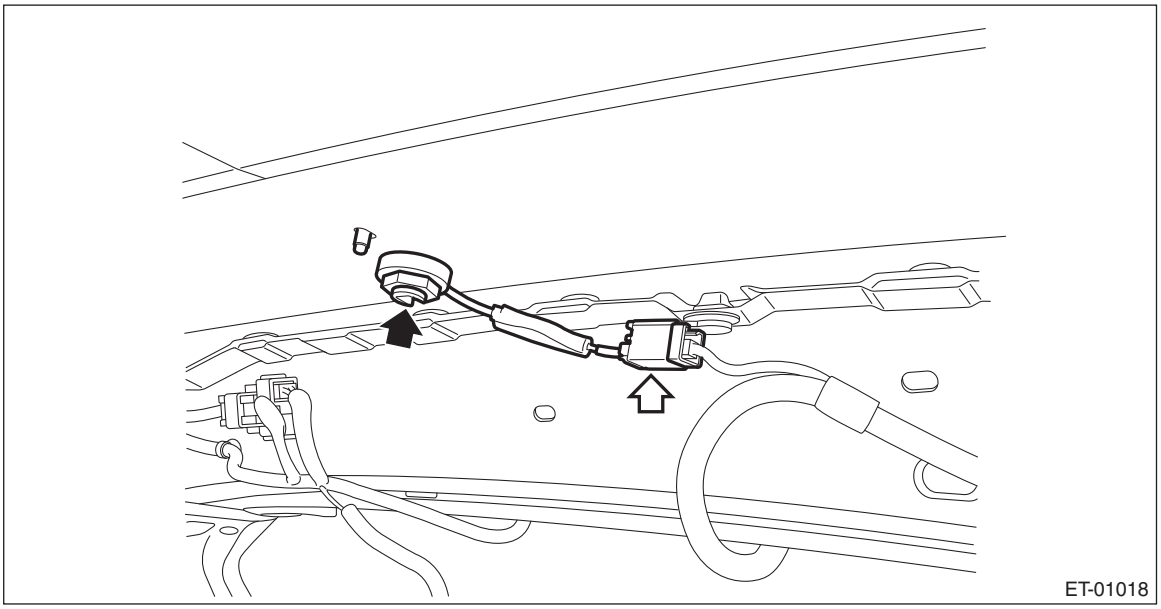


1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR LH. <Ref. to EI-97, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the amplifier assembly - antenna.
   (1) Disconnect the connector.
   (2) Remove the bolts, and remove the amplifier assembly - antenna.

• OUTBACK model

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate UPR. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the amplifier assembly - antenna.
   (1) Disconnect the connector.

(2) Remove the bolts, and remove the amplifier assembly - antenna.



2. XM SATELLITE RADIO/TELEMATICS ANTENNA

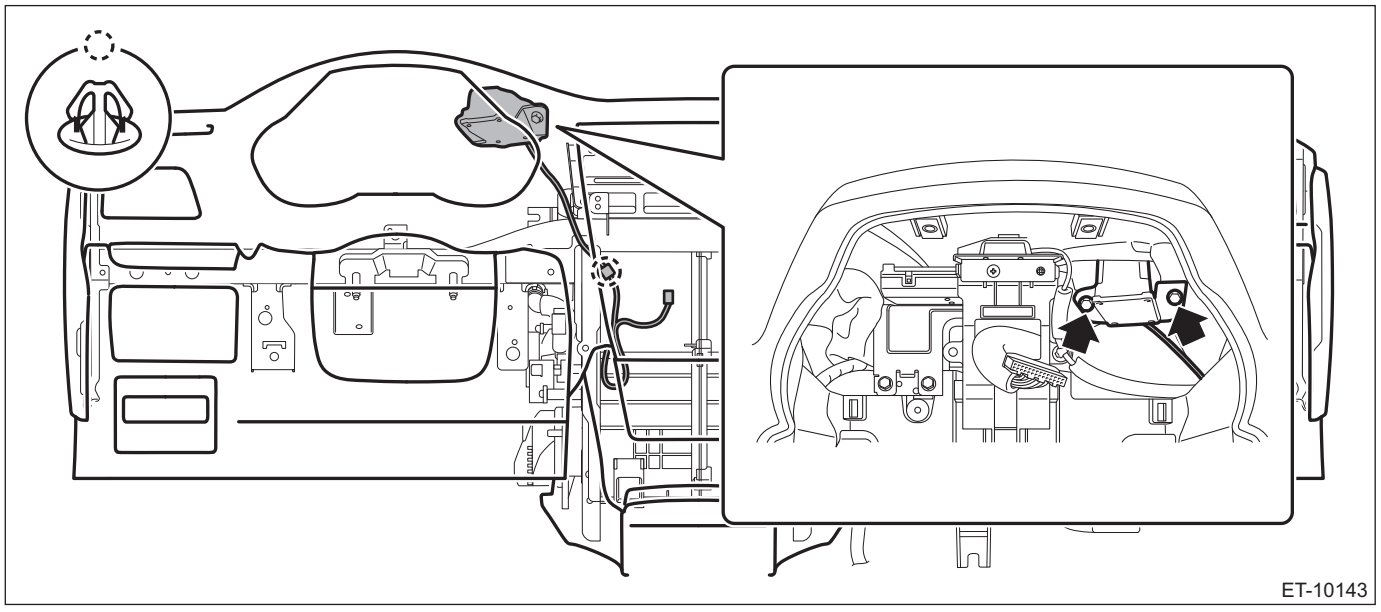
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lower the trim panel - roof assembly.
- Sedan model: <Ref. to EI-111, SEDAN MODEL, REMOVAL, Roof Trim.>
- OUTBACK model: <Ref. to EI-113, OUTBACK MODEL, REMOVAL, Roof Trim.>

NOTE:
Procedures for the trim panel - roof assembly is performed inside the vehicle.
3) Remove the antenna assembly - roof.
(1) Disconnect the connector.

NOTE:
For sedan model with telematics, disconnect the two connectors.
(2) Remove the nut, and remove the antenna assembly - roof.

3. ANTENNA FEEDER CORD

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Remove the heater control assembly. <Ref. to EI-79, REMOVAL, Center Console.>
4) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>
5) Remove the cover assembly - front and the console box assembly. <Ref. to EI-79, REMOVAL, Center Console.>
6) Remove the passenger's seat. <Ref. to SE-12, REMOVAL, Front Seat.>
7) Remove the front cover - side sill and the cover side sill - front.
8) Lower the trim panel - roof assembly in the same manner as the removal procedure of XM satellite radio antenna.
- Sedan model: <Ref. to EI-111, SEDAN MODEL, REMOVAL, Roof Trim.>
- OUTBACK model: <Ref. to EI-113, OUTBACK MODEL, REMOVAL, Roof Trim.>



9) Turn over the floor mat, and remove the cord assembly - antenna feeder.

4. TELEMATICS SUB ANTENNA

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
3) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
4) Remove the heater control assembly. <Ref. to EI-79, REMOVAL, Center Console.>
5) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>
6) Remove the telematics sub antenna.
   (1) Disconnect the telematics sub antenna connector on the data communication module side, and tie a string to the connector.

NOTE:
A string makes operation easier during installation.

   (2) Remove the screw and harness clamp, and pull out the telematics sub antenna from the combination meter side.

   (3) After the telematics sub antenna has been pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

1. RADIO ANTENNA AMPLIFIER

1) Install the amplifier assembly - antenna.

Tightening torque:
12±3 N·m (1.2±0.3 kgf-m, 8.9±2.2 ft-lb)

2) Install the trim panel - rear pillar UPR LH. (Sedan model)
3) Install the trim panel - rear gate UPR. (OUTBACK model)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. XM SATELLITE RADIO/TELEMATICS ANTENNA

1) Install the antenna assembly - roof.

Tightening torque:
4.5±1 N·m (0.5±0.1 kgf-m, 3.3±0.7 ft-lb)

2) Install the trim panel - roof assembly. <Ref. to EI-115, INSTALLATION, Roof Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. ANTENNA FEEDER CORD

1) Install the cord assembly - antenna feeder and the trim panel - roof assembly. <Ref. to EI-115, INSTALLATION, Roof Trim.>
2) Install the floor mat.
3) Install the front cover - side sill and the cover side sill - front.
4) Install the passenger's seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Install the cover assembly - front and the console box assembly.

Tightening torque:
6.5 N·m (0.6 kgf-m, 4.8 ft-lb)

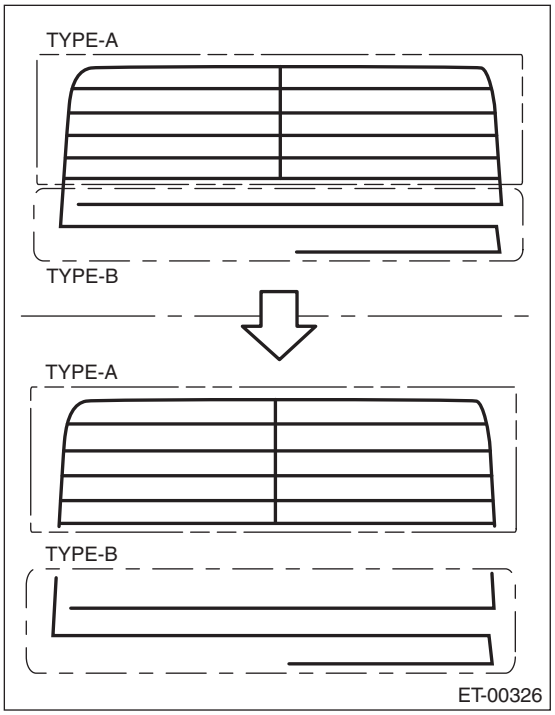
6) Install the audio assembly or navigation assembly.
7) Install the heater control assembly.
8) Install the center grille assembly.
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

4. TELEMATICS SUB ANTENNA

CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.

1) Install the telematics sub antenna.
2) Install the audio assembly or navigation assembly.
3) Install the heater control assembly.
4) Install the center grille assembly.
5) Install the combination meter assembly.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

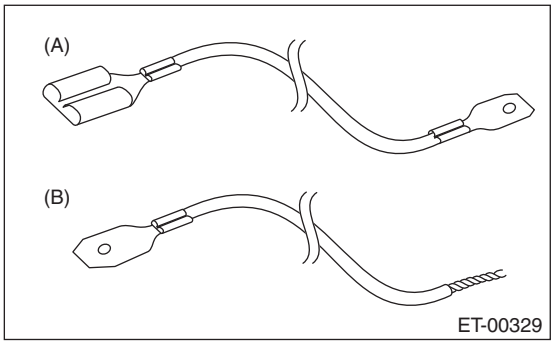


6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

CAUTION:
When wiping dirt off of the glass to avoid heat wire damage, be careful of the following.

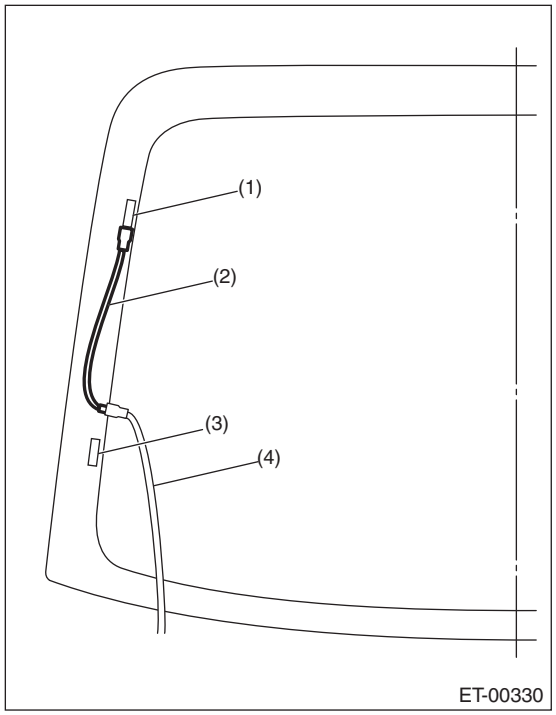
- **Use a dry and soft cloth.**
- **Move the cloth along the heat wire.**



Inspection method of antenna, it is different from printing pattern of antenna.

TYPE-A Printing pattern of grid
TYPE-B Printing pattern of straight

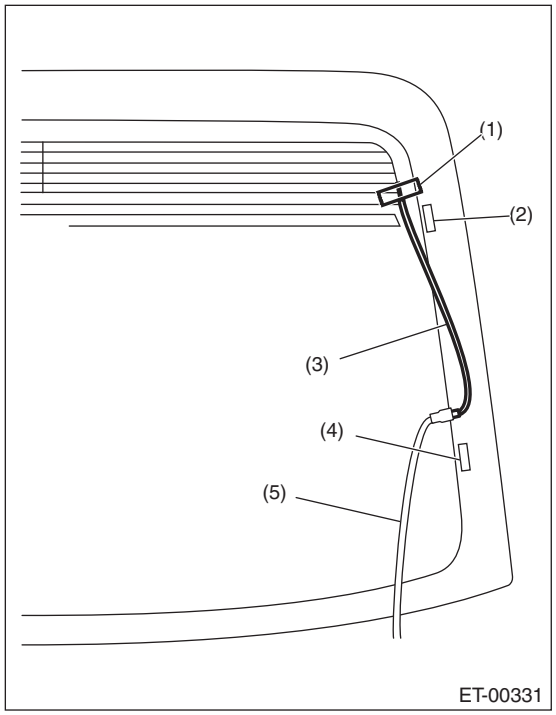
1. TYPE A



1) Prepare the extension harness (A), (B).

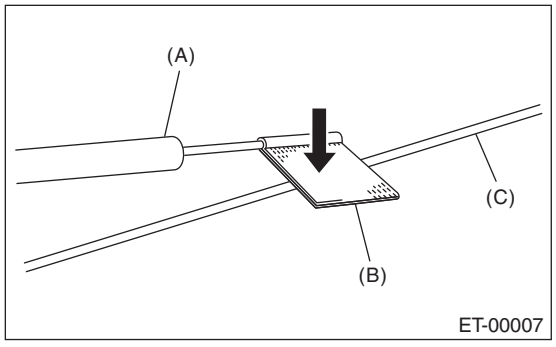
(A) Attach the flat terminals (male and female) to both ends of the harness of approx. 2 m (6.56 ft) length (electrical wire unit dimensions: approx. 2 mm^2 (0.0032 sq in)).
(B) Attach the flat terminal (female) to one side of the harness, another side to twist the harness of approx. 2 m (6.56 ft) length (electrical wire unit dimensions: approx. 2 mm^2 (0.0032 sq in)).

2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



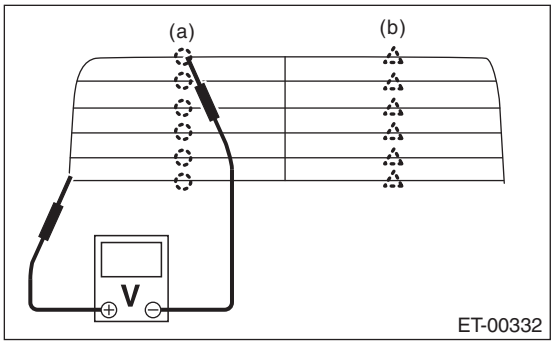
3) Connect the extension harness (A) to rear defogger harness (power supply side) terminal and antenna terminal.

(1) Antenna terminal
(2) Extension harness (A)
(3) Rear defogger terminal
(4) Rear defogger harness (power supply side - red blue)



4) Connect the extension harness (B) to rear defogger harness (ground side) terminal.

5) Fasten the another side of extension harness (B) to end of antenna pattern of grid with tape.



(1) Tape
(2) Antenna terminal
(3) Extension harness (B)
(4) Rear defogger terminal
(5) Rear defogger harness (ground side - black)

6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Turn the ignition to ON.
8) Turn the rear defogger switch to ON.
9) Wrap a piece of aluminum foil around the tip of tester probe and press foil against antenna wire with your finger.

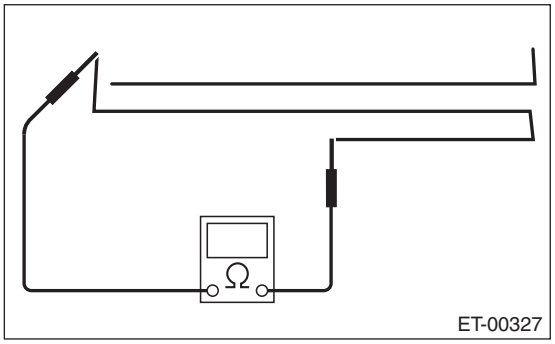
(A) Tester probe
(B) Aluminum foil
(C) Antenna wire

10) Measure the voltage around an antenna wire (a) and (b).

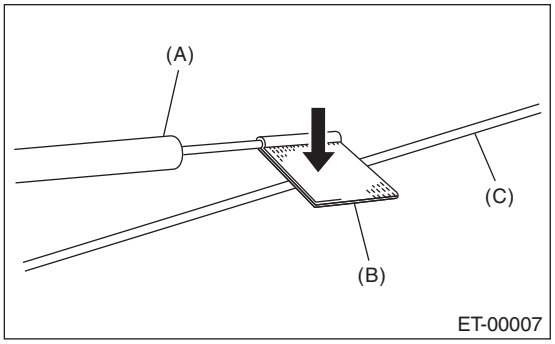
	Measured voltage value	Criteria
(a)	Approx. 3 V (standard value)	Normal
	Approx. 6 V or 0 V	Open
(b)	Approx. 9 V (standard value)	Normal
	Approx. 12 V or 6 V	Open

NOTE:
Measuring point (a)
- If the measured value is 6 V, heat wire is open between antenna wire center and positive (+) side of probe.
- If it is 0 V, the circuit is open between antenna wire center and ground.

Measuring point (b)
- If the measured value is 12 V, heat wire is open between antenna wire center and positive (+) side of probe.
- If it is 6 V, the circuit is open between antenna wire center and ground.



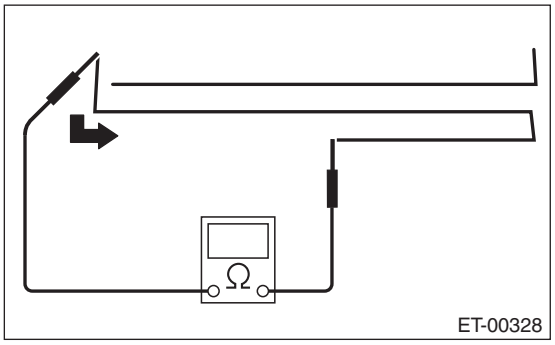
11) Fasten the voltmeter positive (+) side and negative (–) side to end of open harness positive side of step 12).
12) Move the negative (–) probe along antenna wire slowly to search a point where the voltage changes from 0 V.



13) Repair the antenna wire if the place of the open circuit is identified. <Ref. to ETM-28, REPAIR, Antenna.>

2. TYPE B

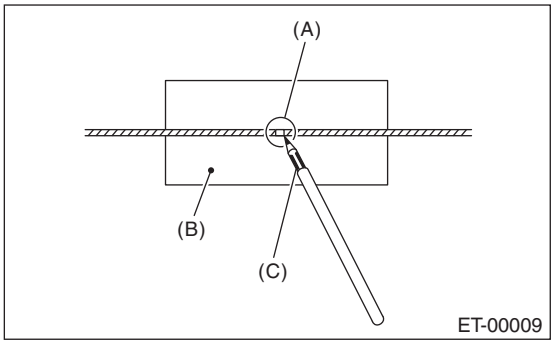
Measure the resistance between the antenna terminal and each antenna wire.



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Wrap a piece of aluminum foil around the tip of probe and press foil against antenna wire with your finger.

(A) Tester probe
(B) Aluminum foil
(C) Antenna wire

3) To locate the broken point, move the probe along antenna wire.



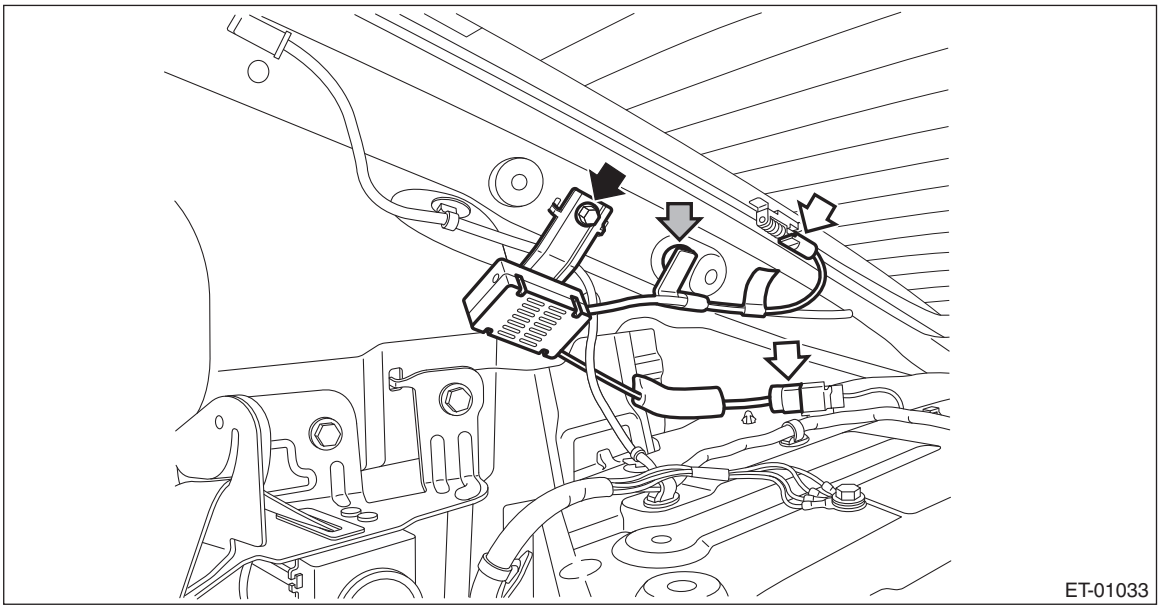
NOTE:
If an antenna wire is OK, resistance will be less than 20 Ω.
If an antenna wire is broken, resistance will be more than 1 MΩ.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Repair the antenna wire if the place of the open circuit is identified. <Ref. to ETM-28, REPAIR, Antenna.>

D: REPAIR

1) Clean the external circumference of antenna wire and around with alcohol or appropriate cleaning solvent.
2) Paste a thin masking film on the glass along broken wire.
3) Apply the conductive silver composition on the broken portion with a drawing pen.

Preparation items:
Conductive silver composition: DUPONT No. 4817 or equivalent

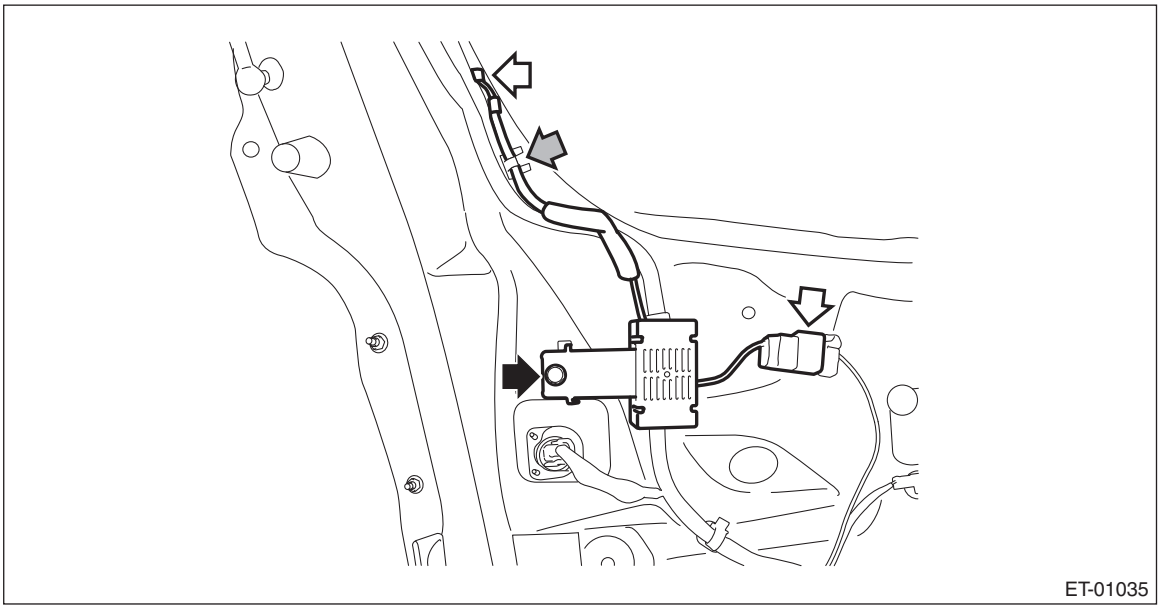
(A) Broken portion
(B) Masking film
(C) Conductive silver composition



4) Dry out the deposited portion.
5) After repair has been completed, measure the resistance in repaired wire and check that it is normal.

10.Noise Suppressor

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR. <Ref. to EI-97, REMOVAL, Rear Quarter Trim.>
3) Remove the noise suppressor assembly.
   (1) Remove the connector and harness clip.
   (2) Remove the bolts, then remove the noise suppressor assembly.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the noise suppressor assembly.
   (1) Remove the connector and harness clip.
   (2) Remove the bolts, then remove the noise suppressor assembly.

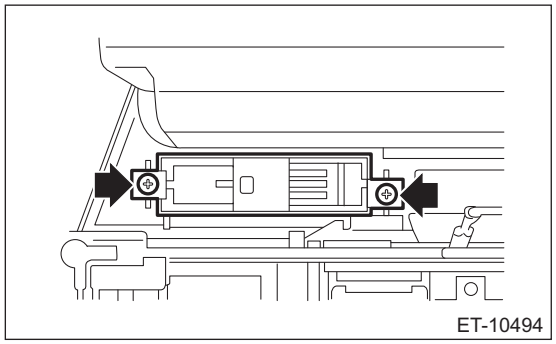
B: INSTALLATION

1) Install the noise suppressor assembly.

Tightening torque:
12±3 N·m (1.2±0.3 kgf-m, 8.9±2.2 ft-lb)

2) Install the trim panel - rear pillar UPR. (Sedan model) <Ref. to EI-101, INSTALLATION, Rear Quarter Trim.>
3) Install the trim panel - rear gate. (OUTBACK model) <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

11.Switches and Harness



A: REMOVAL

1. SATELLITE SWITCH ASSEMBLY

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-11, REMOVAL, Steering Wheel.>
5) Remove the satellite switch assembly. <Ref. to PS-12, DISASSEMBLY, Steering Wheel.>

2. TELEMATICS BUTTON

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - map. <Ref. to LI-76, REMOVAL, Spot Map Light.>
3) Remove the screw to remove the telematics button.

B: INSTALLATION

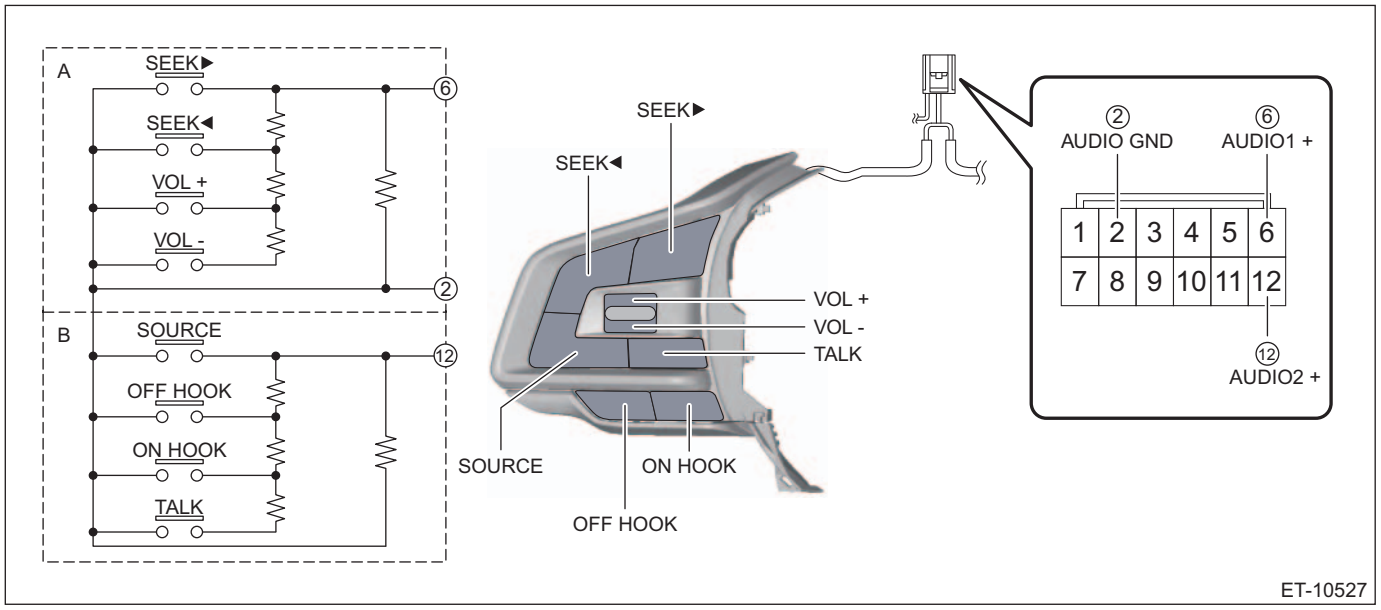
1. SATELLITE SWITCH ASSEMBLY

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the satellite switch assembly. <Ref. to PS-12, DISASSEMBLY, Steering Wheel.>
2) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
3) Install the steering wheel.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. TELEMATICS BUTTON



1) Install the telematics button.
2) Install the light assembly - map. <Ref. to LI-77, INSTALLATION, Spot Map Light.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

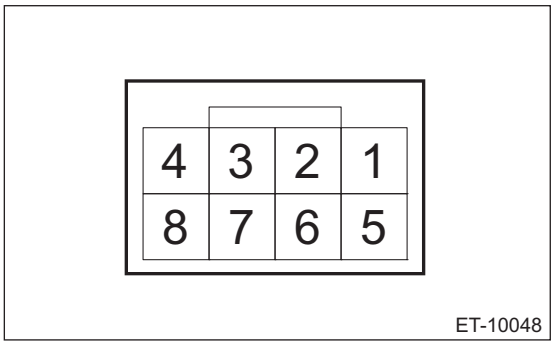
1. SATELLITE SWITCH ASSEMBLY

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
6 — 2	SEEK (>) SEEK (<) VOL (+) VOL (–)	A circuit is all OFF.	Approx. 100 kΩ
	SEEK (>)	ON	Less than 1 Ω
	SEEK (<)	ON	Approx. 330 Ω
	VOL (+)	ON	Approx. 1,000 Ω
	VOL (–)	ON	Approx. 3,210 Ω
12 — 2	SOURCE ON HOOK OFF HOOK TALK	B circuit is all OFF.	Approx. 100 kΩ
	SOURCE	ON	Less than 1 Ω
	OFF HOOK	ON	Approx. 330 Ω
	ON HOOK	ON	Approx. 1,000 Ω
	TALK	ON	Approx. 3,210 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) If it is found to be defective as a result of the measurement, replace the satellite switch assembly.

2. TELEMATICS BUTTON

1) Check the button.
(1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

- SOS button

Terminal No.	Inspection conditions	Standard
6 — 1	OFF	Approx. 1.6 kΩ
	ON	Less than 1 Ω

- i-button

Terminal No.	Inspection conditions	Standard
3 — 1	OFF	Approx. 1.6 kΩ
	ON	Less than 1 Ω

(2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
8 (+) — 2 (–)	Apply battery voltage.	Light ON

2) Check the indicator.
(1) Apply battery voltage between the connector terminals to check the lighting condition of the indicator.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Green illumination
7 (+) — 1 (–)		Red illumination

3) Replace the telematics button if it is found defective.

12.Microphone

A: NOTE

The microphone is integrated in the spot map light or stereo camera cover.
For operation procedures, refer to “LIGHTING SYSTEM” section. <Ref. to LI-76, Spot Map Light.>

13.Navigation System

A: WIRING DIAGRAM

Refer to “Navigation System” in the wiring diagram. <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

B: OPERATION

For the operation, refer to “Audio System”. <Ref. to ETM-7, OPERATION, Audio System.>

C: INSPECTION

For the inspection, refer to “Audio System”. <Ref. to ETM-10, INSPECTION, Audio System.>

D: NOTE

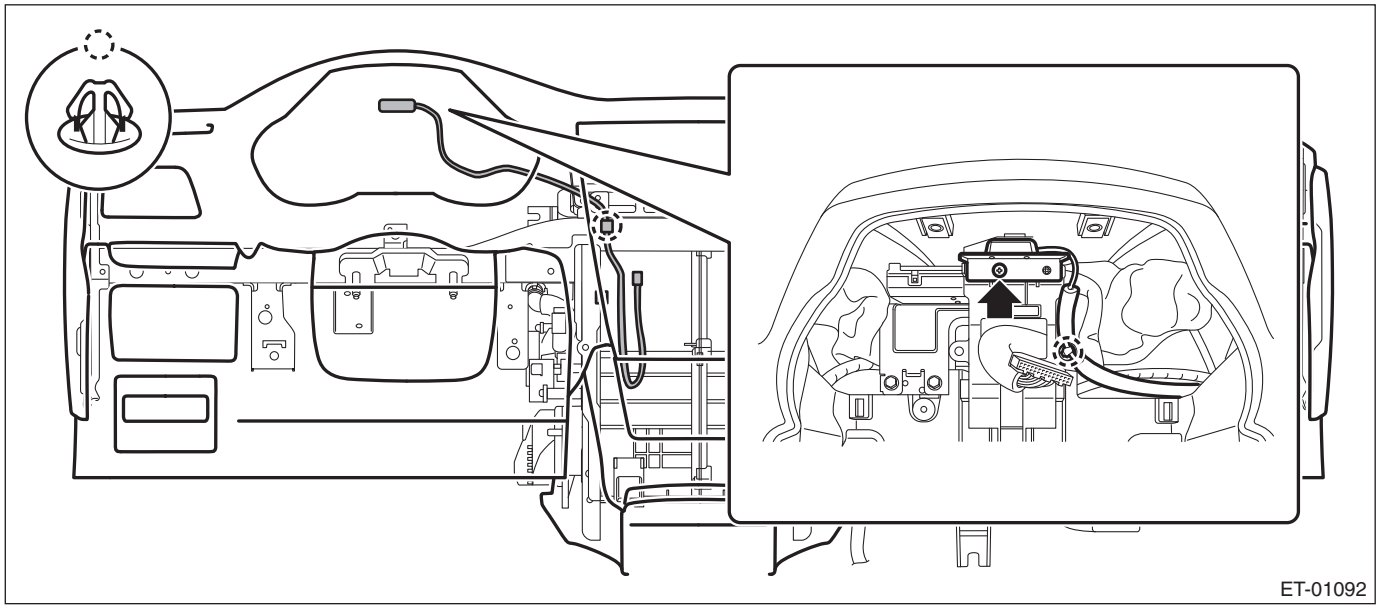
For procedure of each component in the navigation system, refer to the respective section.

- Navigation unit: <Ref. to ETM-37, Navigation Body.>
- GPS antenna: <Ref. to ETM-38, GPS Antenna.>

14.Navigation Body

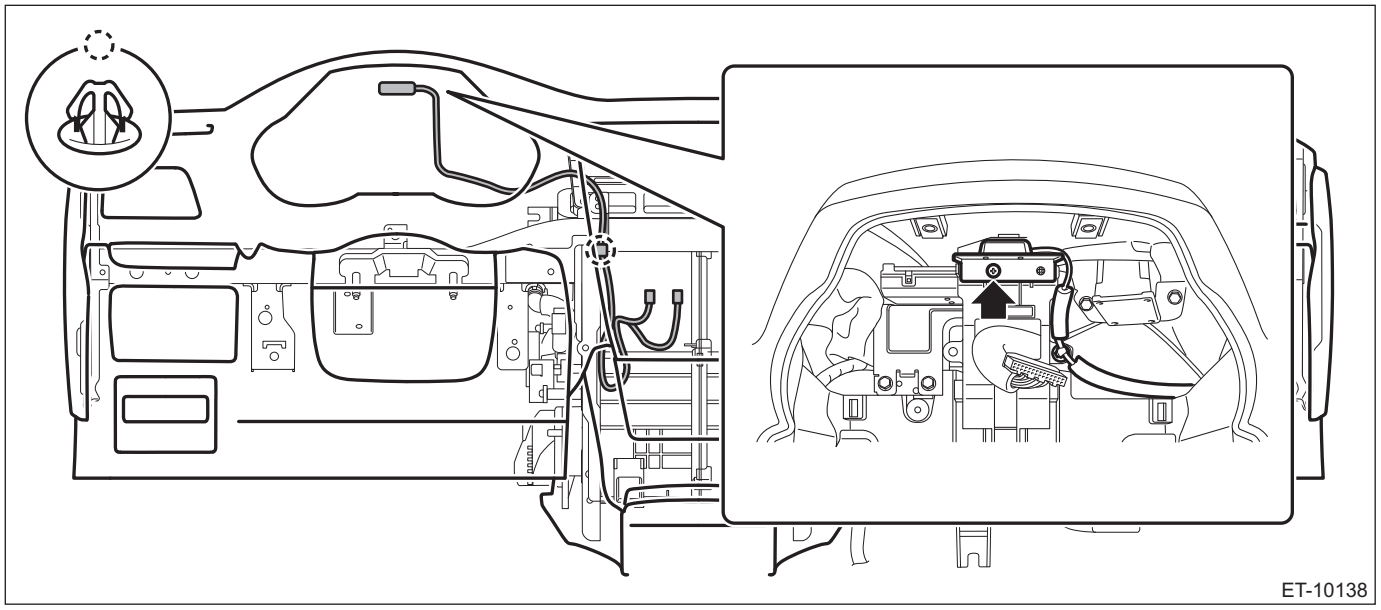
A: NOTE

For the operation procedures for navigation assembly, refer to “Audio”. <Ref. to ETM-11, Audio.>



15.GPS Antenna

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
3) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
4) Remove the heater control assembly. <Ref. to EI-79, REMOVAL, Center Console.>
5) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>
6) Remove the GPS antenna assembly.
   (1) Disconnect the GPS antenna assembly connector on the audio unit or navigation unit side, and tie a string to the connector.

NOTE:
- A string makes operation easier during installation.
- For the model with telematics, also tie a string to the connector on the data communication module side.

   (2) Remove the screw and harness clamp, and pull out the GPS antenna assembly from the combination meter side.
   - Model without telematics

- Model with telematics

(3) When the GPS antenna assembly is pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.

1) Install the GPS antenna assembly.
2) Install the audio assembly or navigation assembly.
3) Install the heater control assembly.
4) Install the center grille assembly.
5) Install the combination meter assembly.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

16.Telematics System

A: WIRING DIAGRAM

Refer to “Telematics System” in the wiring diagram. <Ref. to WI-368, WIRING DIAGRAM, Telematics System.>

B: OPERATION

1. REGISTRATION (COMM CHECK)

CAUTION:
Do not press and hold the i-button for more than two seconds during communication check, or settings will return to factory mode in poor radio wave environment. If the settings has returned to factory mode, perform the communication check again. To check the mode status, see “Subscription Status” in the current data display on Subaru Select Monitor.

1) Replace the data communication module with a new part.
2) Check that the LED of the telematics button illuminates green.
3) Press and hold the i-button for 2 seconds or more.

NOTE:
When the subscription is completed, the telematics system will automatically activate.

C: INSPECTION

Refer to “Basic Diagnostic Procedure” in “TELEMATICS SYSTEM (DIAGNOSTICS)”. <Ref. to TEL(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

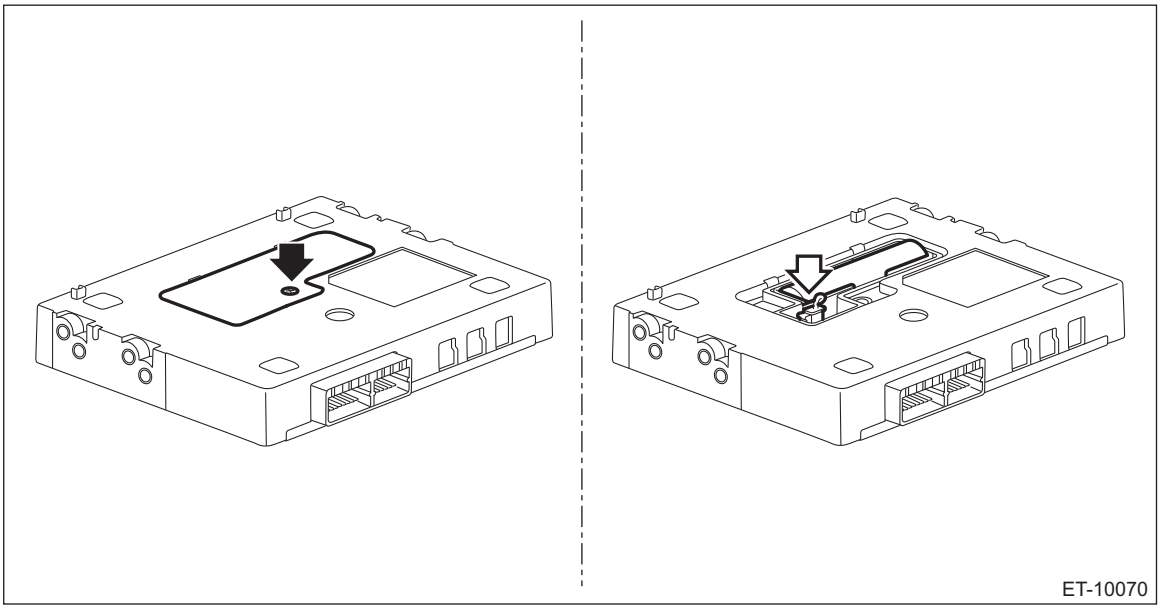
For procedure of each component in the telematics system, refer to the respective section.

- Data communication module: <Ref. to ETM-41, Data Communication Module.>
- Antenna: <Ref. to ETM-20, Antenna.>
- GPS antenna: <Ref. to ETM-38, GPS Antenna.>
- Telematics button: <Ref. to ETM-32, Switches and Harness.>

17.Data Communication Module

A: REMOVAL

1. DATA COMMUNICATION MODULE



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
4) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>
5) Remove the data communication module. <Ref. to ETM-11, DISASSEMBLY, Audio.>

2. BACKUP BATTERY

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the data communication module. <Ref. to ETM-41, DATA COMMUNICATION MODULE, REMOVAL, Data Communication Module.>
3) Remove the backup battery.
(1) Remove the screws, and then remove the battery cover.

Preparation tool:
TORX® T10

(2) Disconnect the connector and remove the backup battery.

B: INSTALLATION

1. DATA COMMUNICATION MODULE

CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.

1) Install the data communication module. <Ref. to ETM-12, ASSEMBLY, Audio.>
2) Install the audio assembly or navigation assembly.
3) Install the heater control assembly.
4) Install the center grille assembly.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Perform the registration if the data communication module is replaced with a new part. <Ref. to ETM-40, OPERATION, Telematics System.>
7) Check the LED lighting condition of the telematics button. <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>

2. BACKUP BATTERY

1) Install the backup battery.
2) Install the battery cover.

Tightening torque:
0.3 N·m (0.03 kgf-m, 0.2 ft-lb)

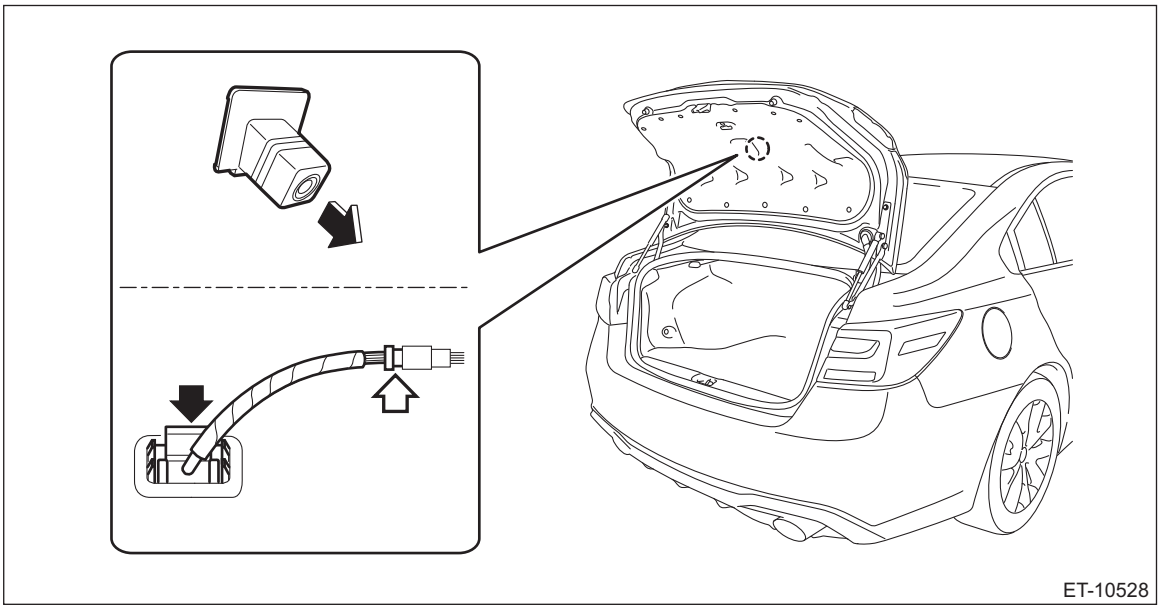
3) Install the data communication module. <Ref. to ETM-41, DATA COMMUNICATION MODULE, INSTALLATION, Data Communication Module.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

18.Camera

A: WIRING DIAGRAM

Refer to “Rearview Camera System” in the wiring diagram. <Ref. to WI-333, WIRING DIAGRAM, Rearview Camera System.>

B: REMOVAL



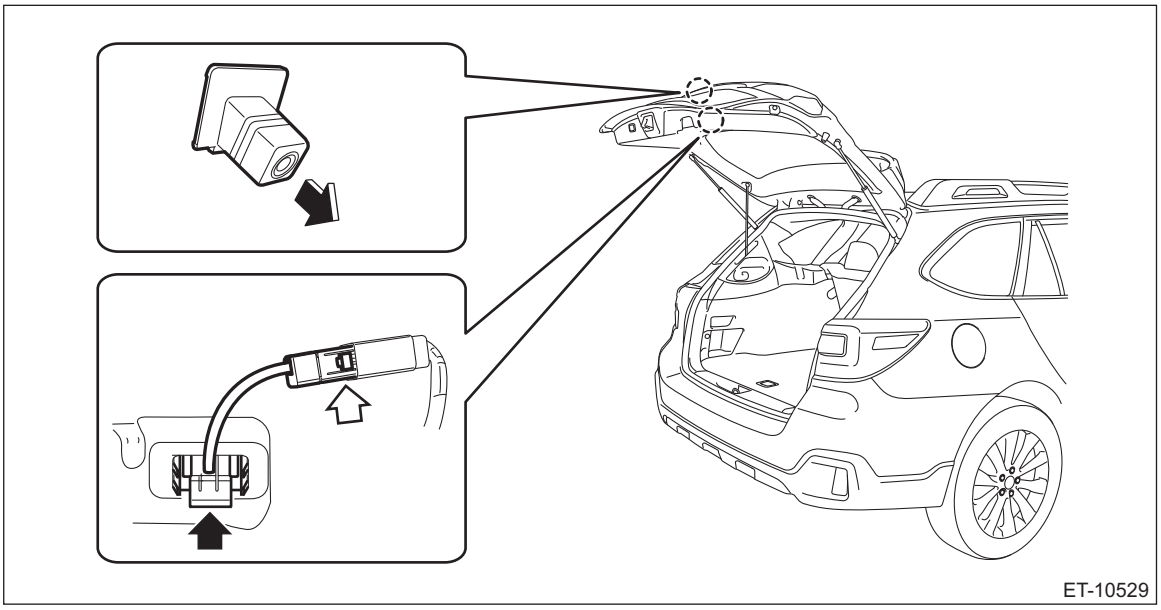
1. REAR

• Sedan model

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-62, REMOVAL, Trunk Lid Garnish.>
4) Remove the rearview camera assembly.

CAUTION:
Do not drop or apply any impact to the rearview camera because it is a precision equipment.

(1) Disconnect the connector.
(2) Release the claw and hook, and then remove the rearview camera assembly.



• OUTBACK model

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-63, REMOVAL, Rear Gate Garnish.>
4) Remove the rearview camera assembly.

CAUTION:
Do not drop or apply any impact to the rearview camera because it is a precision equipment.

(1) Disconnect the connector.

(2) Release the claw and hook, and then remove the rearview camera assembly.

C: INSTALLATION

1. REAR

• Sedan model

1) Install the rearview camera assembly.
2) Install the garnish - trunk.

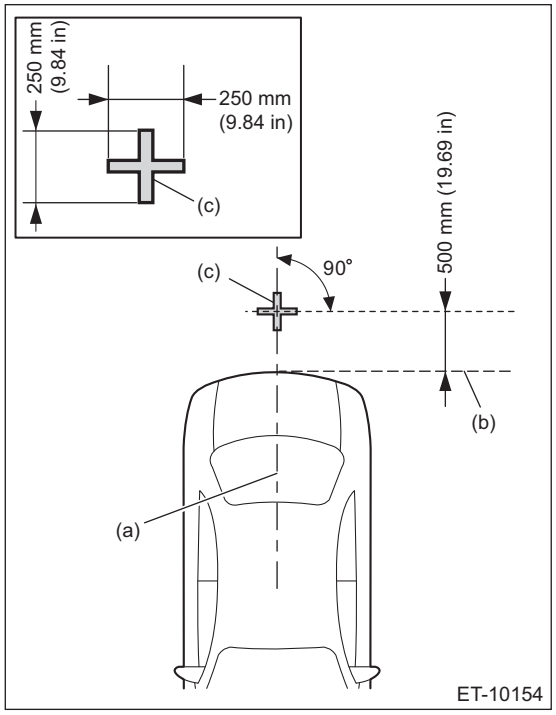
Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

3) Install the trim panel - trunk lid.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Check the screen display and the guide line position. <Ref. to ETM-44, INSPECTION, Camera.>

• OUTBACK model

1) Install the rearview camera assembly.
2) Install the garnish assembly - rear gate.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)



3) Install the trim panel - rear gate.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Check the screen display and the guide line position. <Ref. to ETM-44, INSPECTION, Camera.>

D: INSPECTION

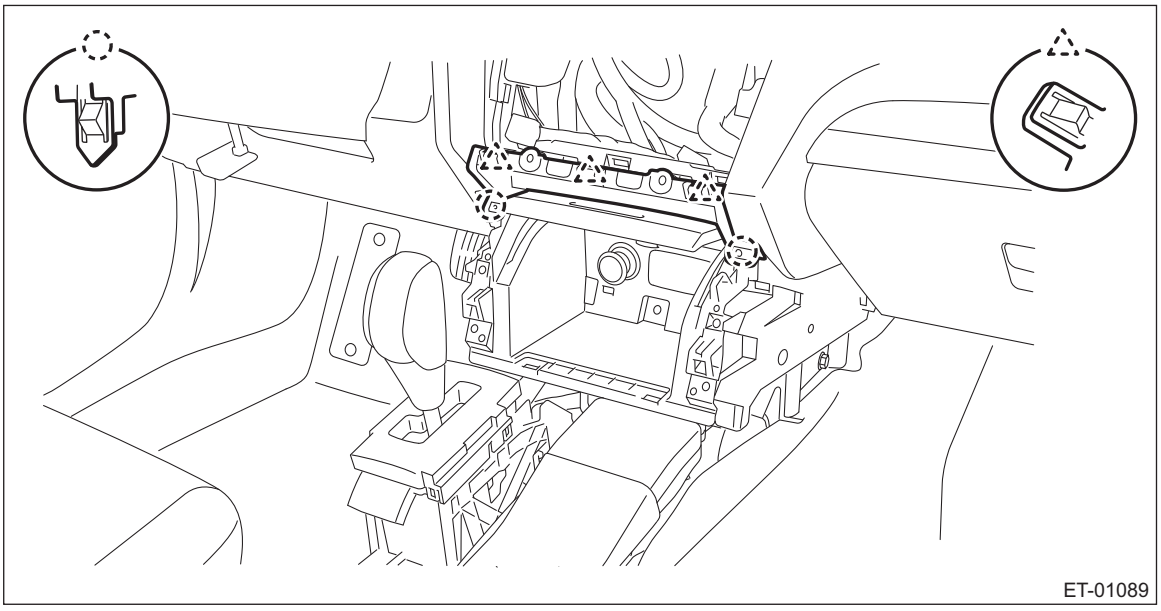
1. REAR

1) Park the vehicle at a level place where there are enough area at the rear of the vehicle.
2) Attach the tape as the target point for standard at the floor rearward of the vehicle as shown in the figure below.

NOTE:
Standard tape width is about 30 — 50 mm (1.18 — 1.97 in) and brilliant color shall be used.

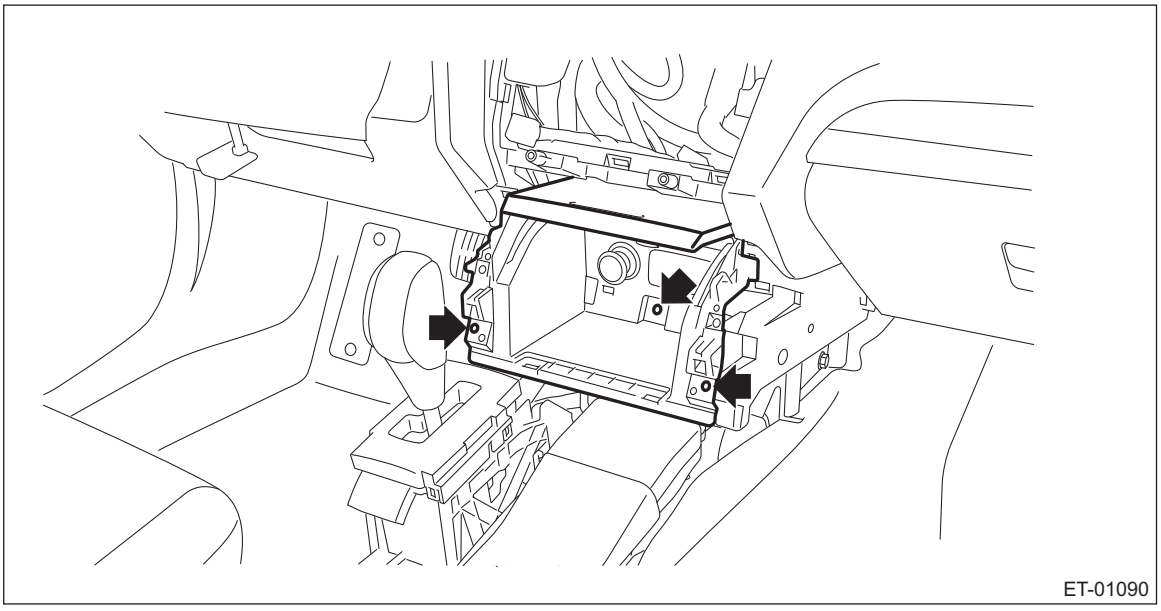
(a) Vehicle body center line
(b) Rear edge of bumper
(c) Target point

3) Confirm the following before checking the corresponding items.
(1) Rearview camera image is not displayed. (Camera screen alone is not displayed normally)
1. Check the reverse signal using {Vehicle Signal} in Line Diag mode. <Ref. to ETM-7, CHECK VEHICLE SIGNALS WITH LINE DIAG MODE, OPERATION, Audio System.>
2. Check the connecting condition of the rearview camera using {Connection} in Line Diag mode. <Ref. to ETM-7, CHECK CONNECTIONS WITH LINE DIAG MODE, OPERATION, Audio System.>
(2) Guide line cannot be displayed or the position of the guide line is wrong.
The rearview camera may be defective, or its installation location on the vehicle may be deformed. Check the rearview camera and its installation location on the vehicle, and repair or replace if necessary.



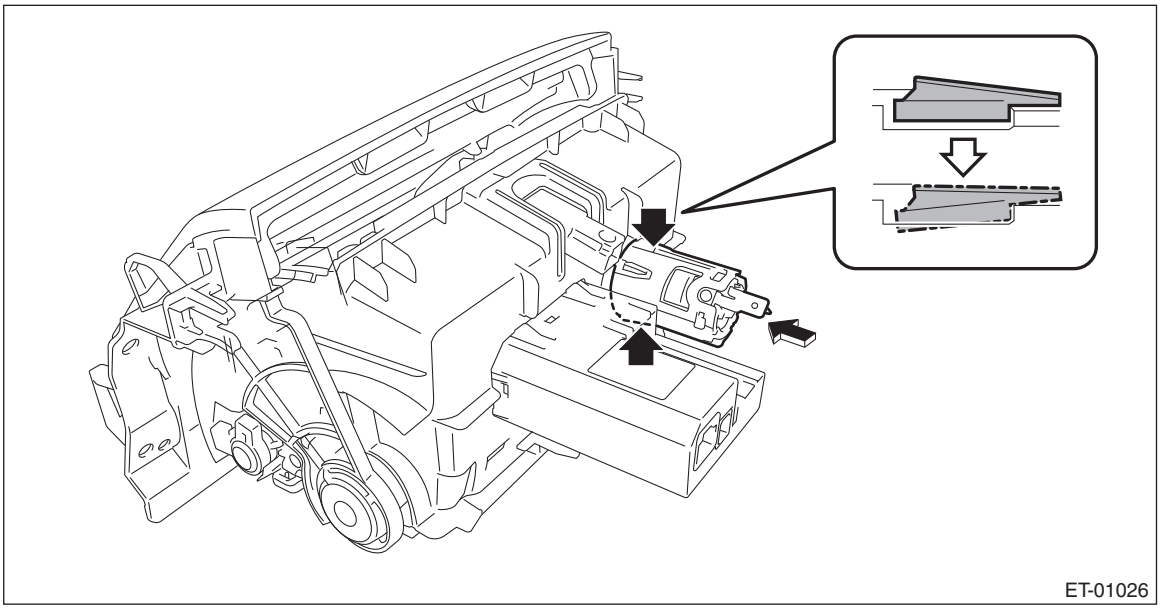
19.Front Accessory Power Supply Socket

A: WIRING DIAGRAM



Refer to “Front Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-243, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

B: REMOVAL



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
3) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
4) Release the claws, and then remove the panel center LWR.

5) Remove the screws and remove the pocket assembly - CTR.

6) While releasing the claw, press it in from the rear to remove the socket assembly.

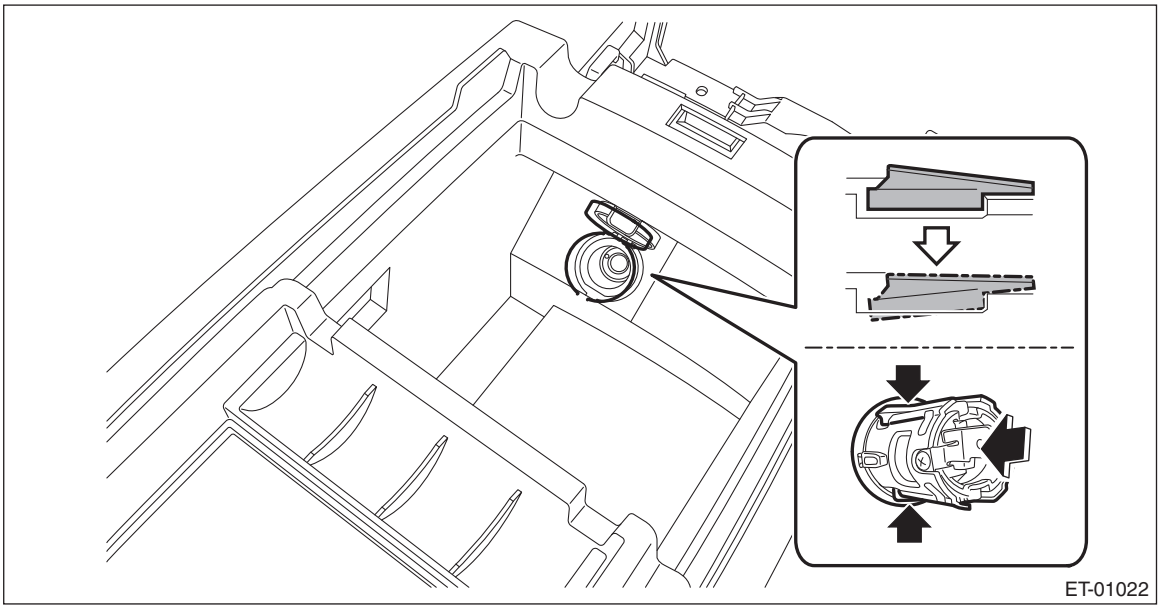
C: INSTALLATION

1) Install the socket assembly.

NOTE:
Align the groove of the pocket assembly - CTR with the claw of the socket assembly.
2) Install the pocket assembly - CTR.
3) Install the panel center LWR.
4) Install the cover assembly - front and the console box assembly.

Tightening torque:
6.5 N·m (0.6 kgf-m, 4.8 ft-lb)
5) Install the heater control assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

20.Rear Accessory Power Supply Socket

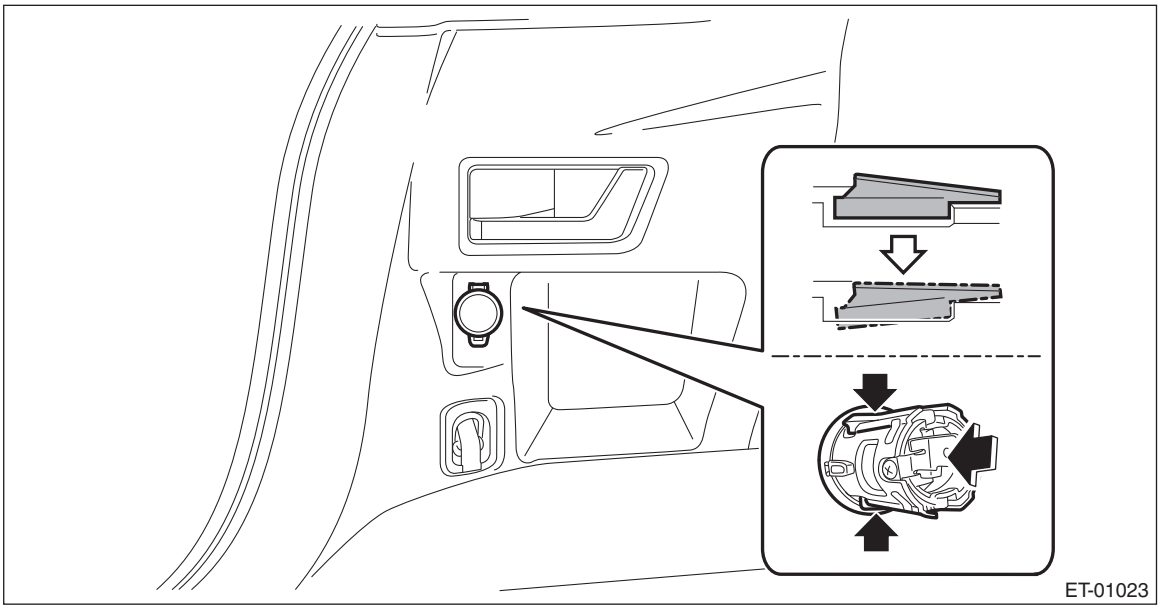


A: WIRING DIAGRAM

Refer to “Rear Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-331, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

B: REMOVAL

1. CONSOLE



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) While releasing the claw inside, press it in from the rear to remove the socket assembly.

2. LUGGAGE ROOM

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron LH. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>

3) While releasing the claw inside, press it in from the rear to remove the socket assembly.

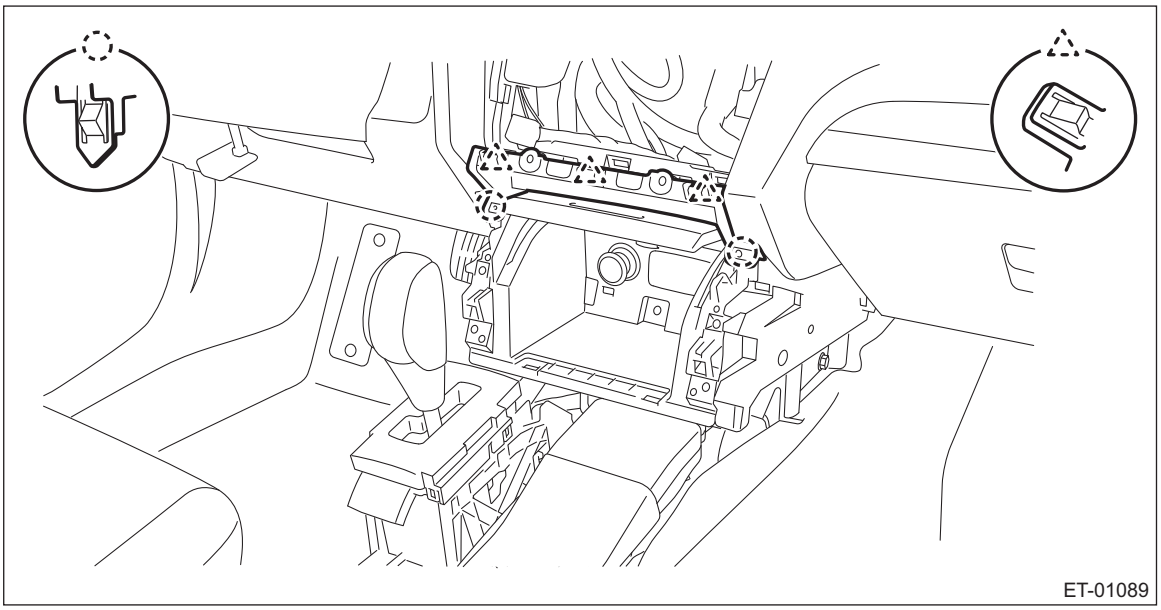
C: INSTALLATION

1) Install the socket assembly.

NOTE:
Align the groove of the console box assembly or the trim panel - rear apron LH with the claw of the socket assembly.

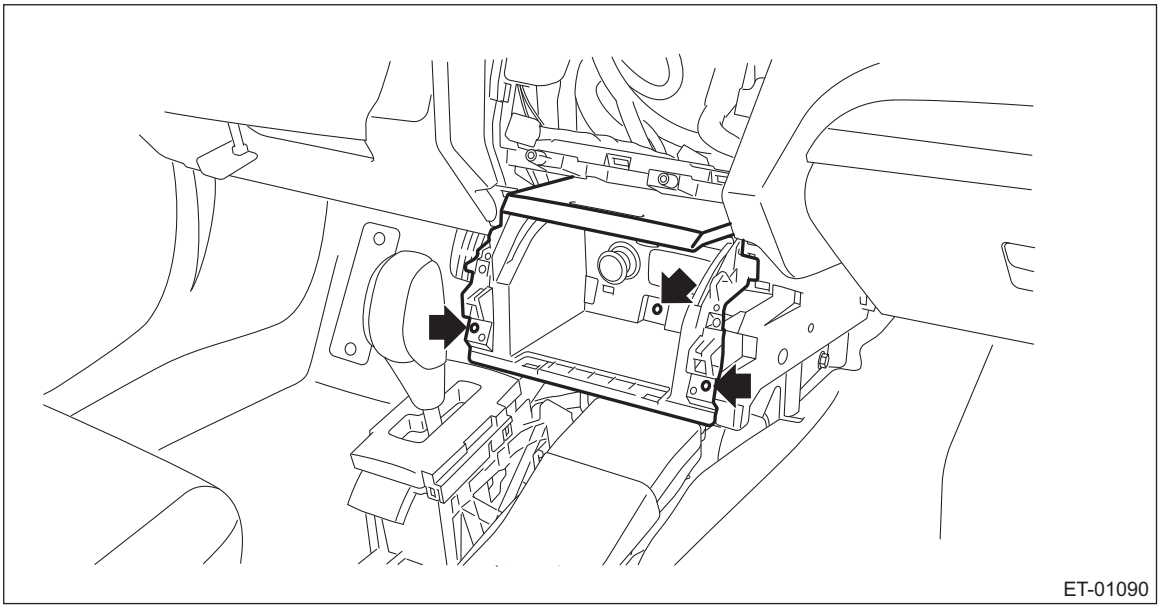
2) Install the cover assembly - front console box assembly. (Console type)

Tightening torque:
6.5 N·m (0.6 kgf-m, 4.8 ft-lb)



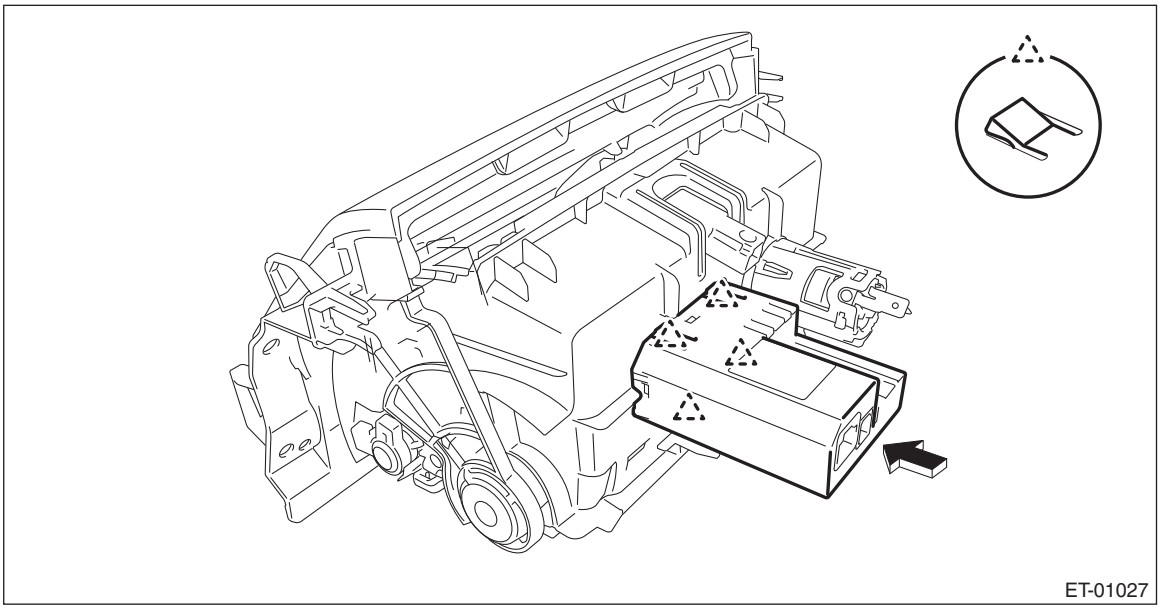
3) Install the trim panel - rear apron LH. (Luggage room type)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

21.External Connection Terminal



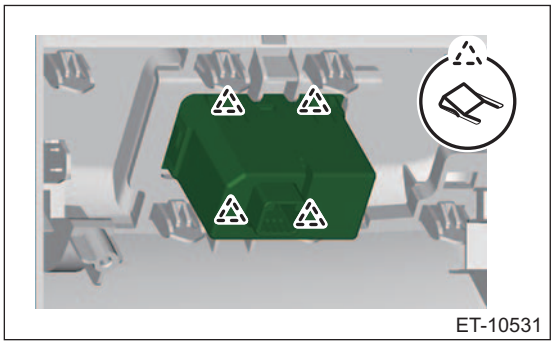
A: REMOVAL

1. FRONT



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
3) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
4) Release the claws, and then remove the panel center LWR.

5) Remove the screws and remove the pocket assembly - CTR.



6) While pressing the claw, press it in from the rear to remove the unit assembly - AUX.

2. REAR

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the duct - console rear. (Models with rear seat air conditioning) <Ref. to AC-103, CONSOLE DUCT, REMOVAL, Heater Duct.>
4) Remove the grille assembly - rear heater. (Models with rear seat air conditioning) <Ref. to AC-101, REAR GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>

NOTE:
For models without rear seat air conditioning, remove the end cover - console box.
5) Remove the unit assembly - AUX.
(1) Disconnect connectors.
(2) While pressing the claw, press it in from the rear to remove the unit assembly - AUX.

NOTE:
If it is difficult to remove, remove the connector clip to remove the end cover - console box.

B: INSTALLATION

1. FRONT

1) Install the unit assembly - AUX.
2) Install the pocket assembly - CTR.
3) Install the panel center LWR.
4) Install the cover assembly - front and the console box assembly.

Tightening torque:
6.5 N·m (0.6 kgf-m, 4.8 ft-lb)

5) Install the heater control assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR

1) Install the unit assembly - AUX.
2) Install the grille assembly - rear heater. (Models with rear seat air conditioning)
3) Install the end cover - console box.
4) Install the duct - console rear. (Models with rear seat air conditioning)
5) Install the cover assembly - front and the console box assembly.

Tightening torque:
6.5 N·m (0.6 kgf-m, 4.8 ft-lb)

6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

22.Diagnostics with Phenomenon

A: NOTE

For the diagnostics with phenomenon, refer to the “INFOTAINMENT SYSTEM (DIAGNOSTICS)” section. <Ref. to INF(diag)-49, Diagnostics with Phenomenon.>

23.Service Diagnostics Mode

A: NOTE

For the service diagnostic mode, refer to the “INFOTAINMENT SYSTEM (DIAGNOSTICS)” section. <Ref. to INF(diag)-66, Service Diagnostics Mode.>

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to INF(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Perform the interview, and Go to step **2**.
2	**PERFORM BASIC INSPECTION.** Perform the basic inspection. <Ref. to INF(diag)-6, BASIC INSPECTION, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair the failures from the basic inspection, and Go to step **3**.
3	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select «Infotainment». NOTE: For detailed operation procedures, refer to “Application help”.	Is communication possible?	Go to step **4**.	Check the communication circuit. <Ref. to INF(diag)-15, Diagnostic Procedure for Subaru Select Monitor Communication.>
4	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Record the DTC, time stamp and freeze frame data, and Go to step **5**.	Perform diagnosis according to the procedures in the diagnostics with phenomenon. <Ref. to INF(diag)-49, Diagnostics with Phenomenon.>
5	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis for the displayed DTCs. <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).> 2) Repair or replace the cause of trouble. 3) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». 4) Execute the inspection mode. 5) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Repeat step 5 until DTC is not shown. Go to step **5**.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="2">Check List for Interview</td><td colspan="2">Date of Vehicle Bring-in Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•
•</td></tr>
<tr><td rowspan="3">Product information</td><td>Part No.</td><td>Manufacturer model number</td><td>Serial No.</td></tr>
<tr><td colspan="3">Software version*1</td></tr>

Check List for Interview

INFOTAINMENT(DIAGNOSTICS)

Occurrence location	❑ Unknown ❑ Any Place ❑ Driving around open areas like in the country ❑ Driving around hills or mountains ❑ Driving around cities with large buildings ❑ Driving around residential areas or no large buildings ❑ Driving around areas with power
Error message content (error message displayed)	
Display trouble	❑ Black screen ❑ White screen ❑ Blue screen ❑ Dim ❑ Vertical/horizontal noise (lines) ❑ Poor color tone ❑ Unclear ❑ Display corruption ❑ No picture ❑ Others
Occurrence conditions (screen display related problems)	❑Navigation ❑CD ❑Radio ❑External devices ❑Others ( )
Operating problems	❑ Display does not switch ❑ Display changes unexpectedly ❑ Response is dull/slow ❑ Does not respond to key entry ❑ Does not respond to steering switch entry ❑ Does not change to night mode screen ❑ Discs cannot be inserted or ejected ❑ Others
Display/touch switch malfunction	❑ Brightness / Contrast ❑ Discoloration ❑ No rear camera ❑ Partial Display ❑ Lines in screen ❑ No Audio Control Screen ❑ No Navi Map on Screen ❑ Others
Voice recognition malfunction	❑ Voice recognition is not ready ❑ Not recognize commands ❑ Others
BEEP on operation entry	❑ Present ❑ None
Radio malfunction	❑ AM: Station (Hz)❑ FM: Station (Hz)❑ SXM: Station (channel) (only for North America) ❑ HD: Station (channel) (only for North America)❑ No Sound ❑ No / Poor Sound ❑ Noise / Static ❑ Sound cuts in / out ❑ Others
SW color change at operation	❑ Present ❑ None
Audio malfunction	❑ Does not sound ❑ Front (❑ R ❑ L) ❑ Rear (❑ R ❑ L) ❑ Others ( ) ❑ Operation related problems ❑ Cannot adjust volume level ❑ Cannot use tone control or adjust tone range ❑ Cannot record ❑ Sound skipping ❑ CD ❑ DVD ❑ Others ( ) • Specific mode/disc ( )
CD/USB/SD/iPod malfunction	❑ Will not accept ❑ Will not eject (CD)❑ Will not play ❑ Skips / Jump Chapter ❑ No Sound ❑ Noise / Static ❑ Sound cuts in / out ❑ Shows Error ❑ Others
Fault in navigation system	❑ Cursor or map rotating❑ Wrong location of vehicle ❑ Cursor hopping during driving ❑ Map image incomplete ❑ No GPS marks displayed ❑ Incorrect time display ❑ Guide not initiated ❑ No route search ❑ Caution remains on navigation screen ❑ Unexpected return back to opening screen ❑ No Voice Guidance ❑ Guidance Volume too Low ❑ Will Not Read Data ❑ Will Not Update ❑ Destination / Route Problem ❑ Display Does Not Change (Frozen) ❑ Overall Navi Operation Slow ❑ No GPS reception ❑ Others
Bluetooth Audio related malfunction	❑ Will Not Pair ❑ Will Not Play ❑ No Sound ❑ Noise / Static ❑ Disconnect on its own ❑ Others
Bluetooth handsfree related malfunction	❑ Will Not Pair ❑ Cannot Hear (Receiver) ❑ Cannot Hear (Caller) ❑ Sounds Garbled ❑ Address Book Will Not Transfer ❑ Disconnect on its own
SUBARU STARLINK malfunction	❑ Bluetooth connection not established ❑ SUBARU STARLINK app disabled ❑ Communication gets out of service❑ Pandora disabled❑ MirrorLink disabled❑ AHA disabled❑ USB connection not established❑ Others
Check result	Reproductivity ❑ Reproduced ❑ Always ❑ Sometimes ❑ Cannot be reproduced ❑ Others
	Condition ❑ Cold ❑ Warm ❑ At starting ❑ Immediately after starting ❑ During warm-up ❑ At idling ❑ When start driving ❑ While driving ❑ At acceleration ❑ At deceleration ❑ When applying brake

*1: For each confirmation procedure, refer to Service Diagnostic Mode. <Ref. to INF(diag)-66, OPERATION, Service Diagnostics Mode.>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-10, CAUTION, General Description.>

2. INFOTAINMENT SYSTEM

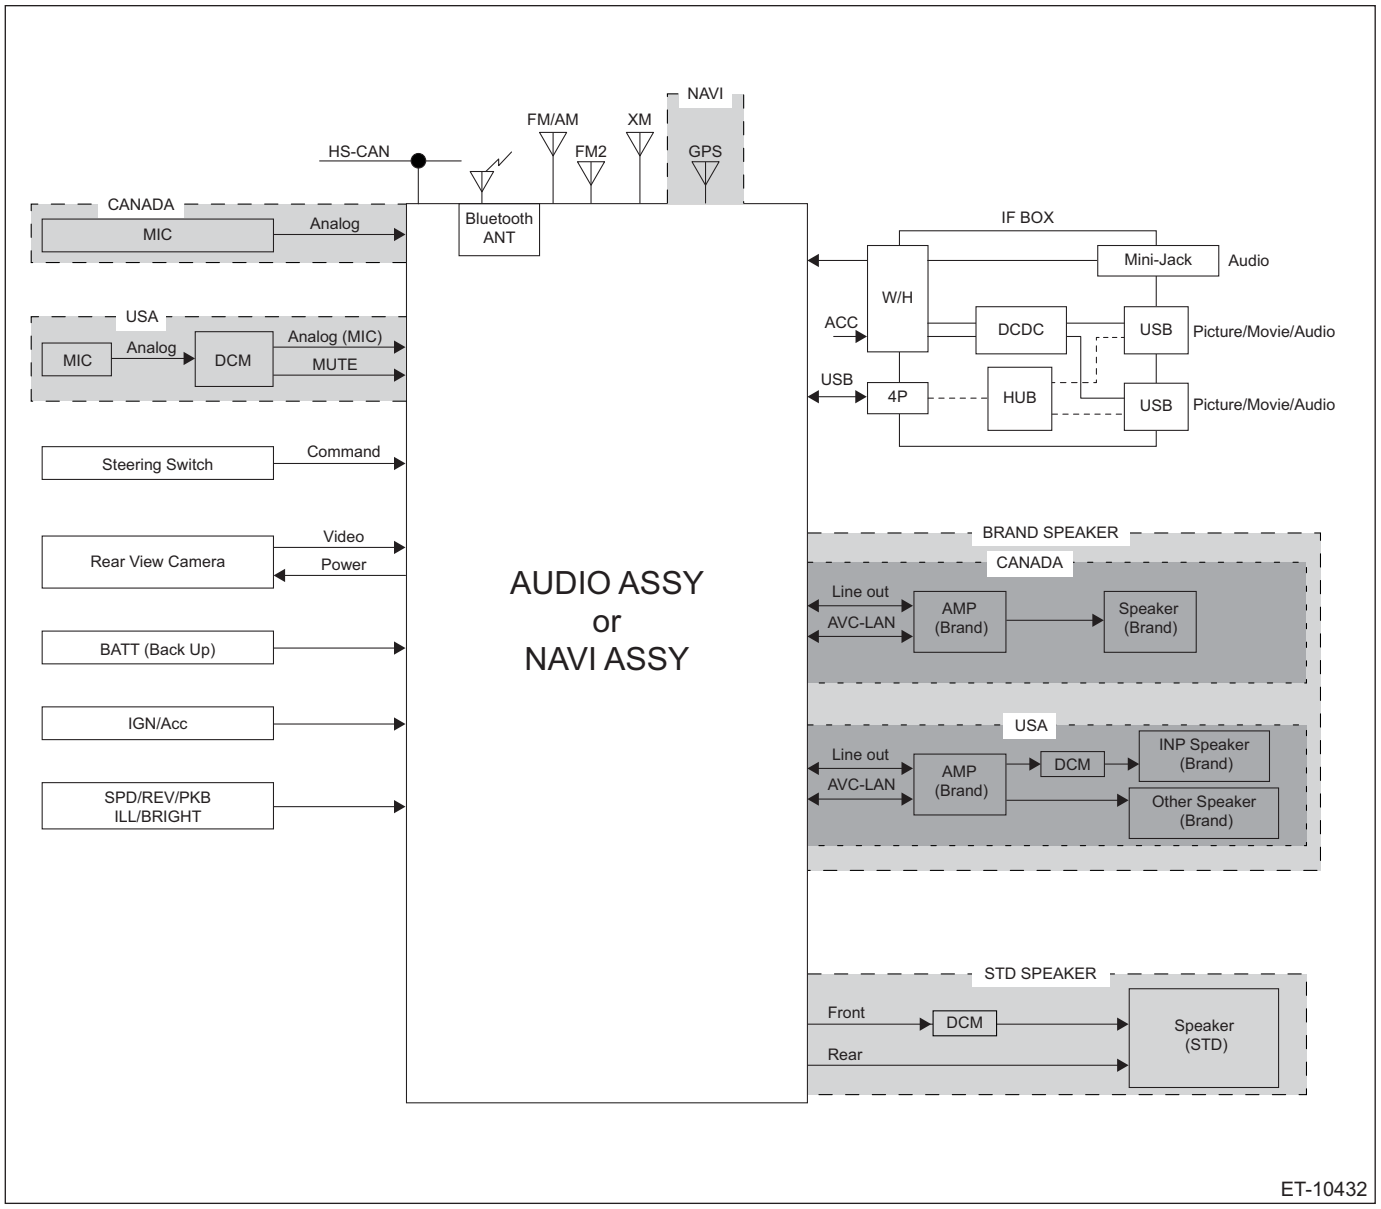
Refer to “CAUTION” in “General Description” in ENTERTAINMENT. <Ref. to ETM-4, CAUTION, General Description.>

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to infotainment system.
1) Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to ETM-6, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

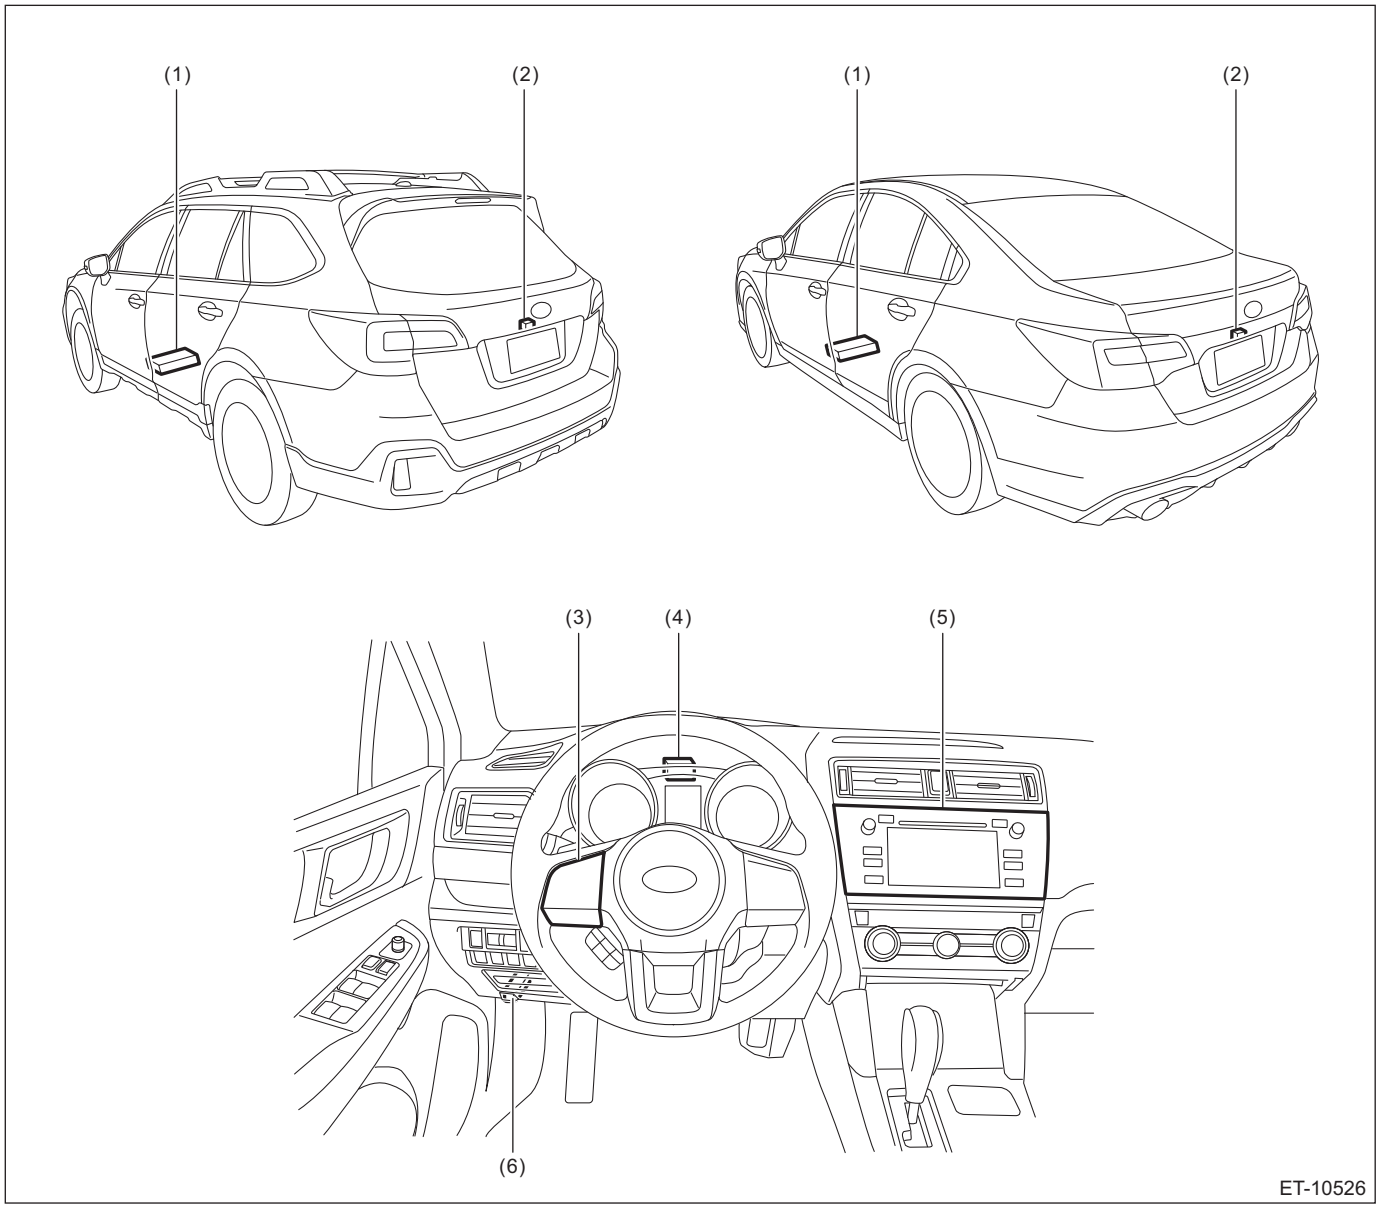
C: PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

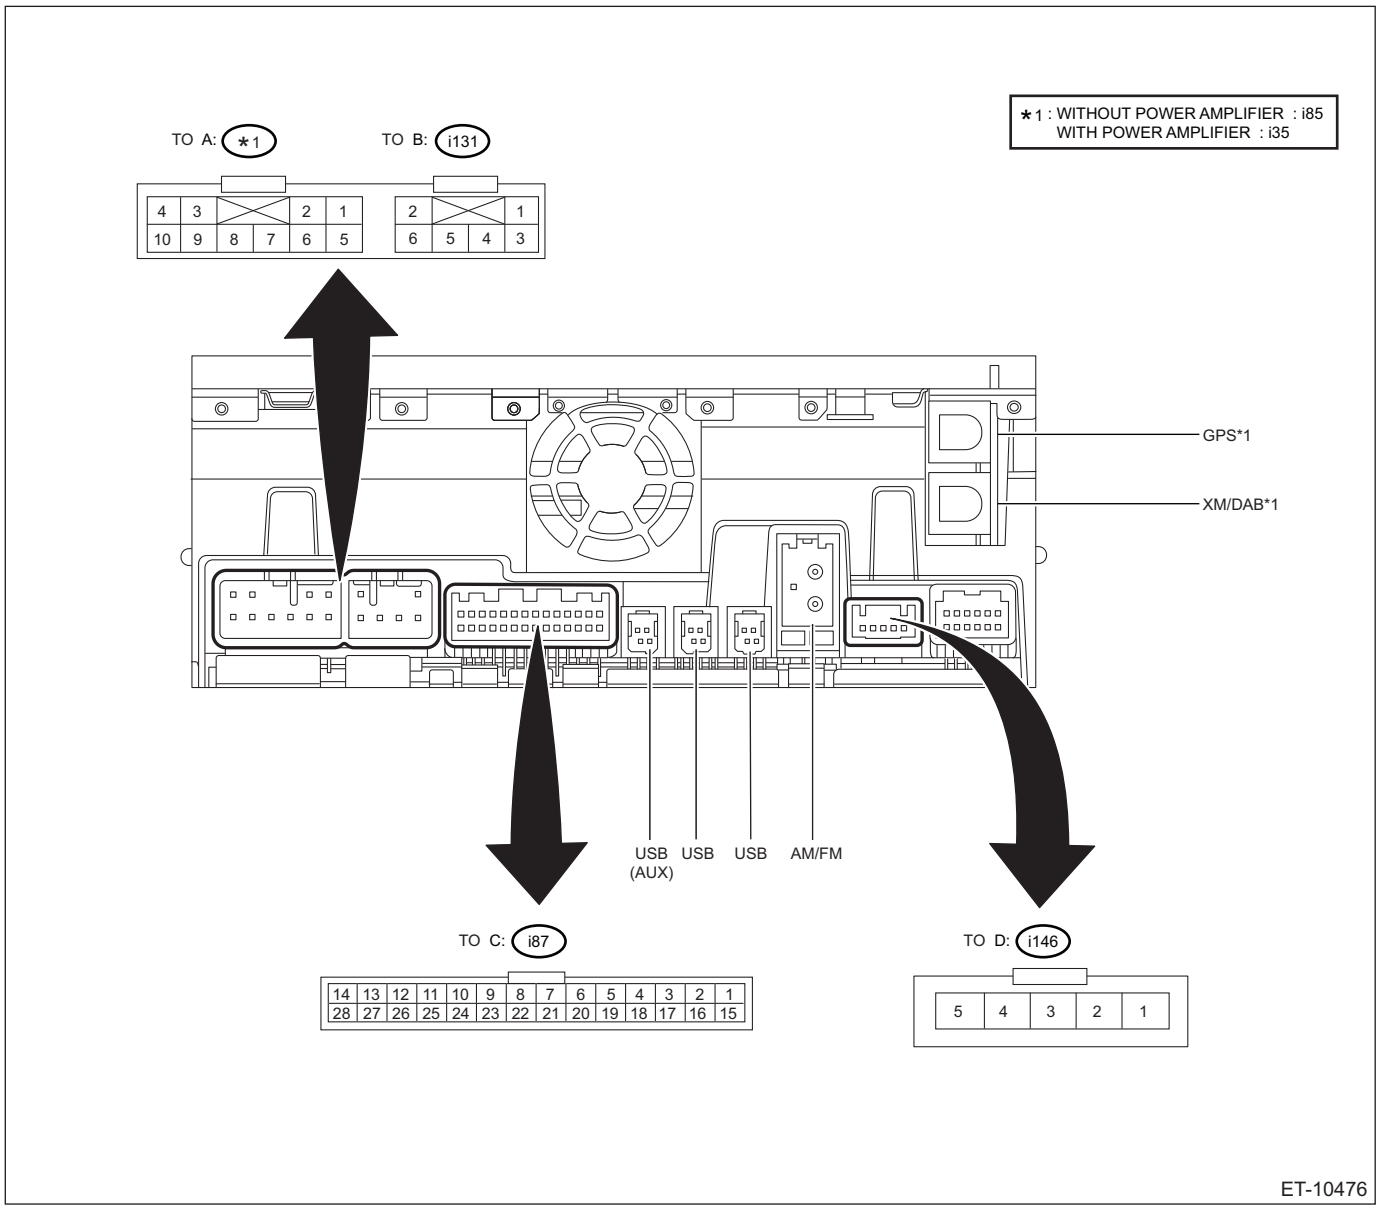


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

D: SYSTEM BLOCK DIAGRAM

4. Electrical Component Location

A: LOCATION



(1) Audio amplifier (if equipped)
(2) Rearview camera (if equipped)
(3) Satellite switch
(4) GPS antenna (if equipped)
(5) Audio or navigation unit
(6) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. AUDIO OR NAVIGATION UNIT

*1: Models with navigation system

- Power supply and speaker output terminal

Terminal No.	Contents	Measuring condition	Standard
(i35) or (i85) No. 1	FR+	—	—
(i35) or (i85) No. 2	FL+	—	—
(i35) or (i85) No. 3 ←→ Chassis ground	+ACC	ACC ON	11 — 15 V

6. Inspection Mode

A: OPERATION

DTC can be diagnosed by executing the Inspection Mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.
1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.>
2) Read the DTC of «Infotainment» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, wait for one minute or more.
4) Read the DTC of «Infotainment» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>

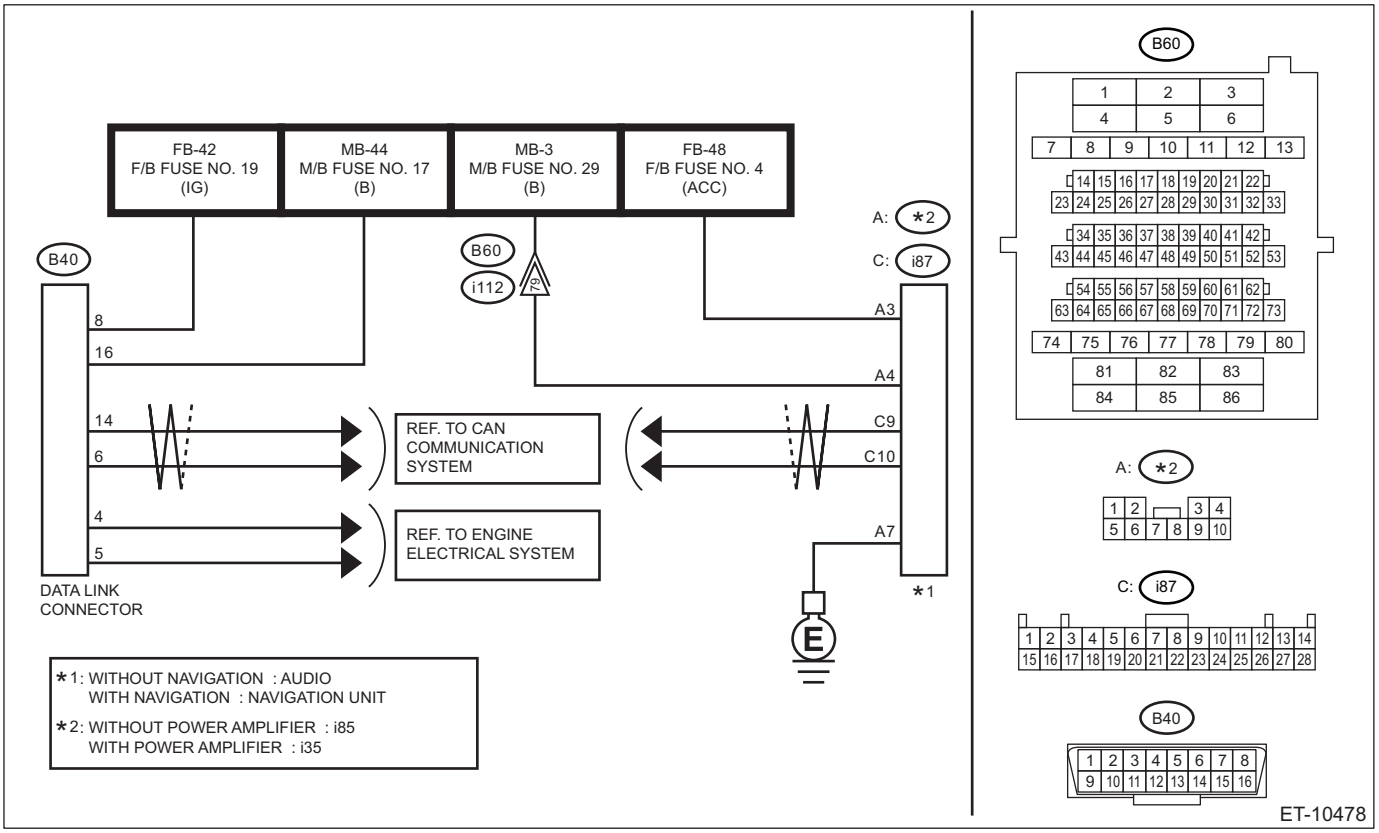
NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

7. Diagnostic Procedure for Subaru Select Monitor Communication

A: INSPECTION

When communication with the audio or navigation unit is impossible

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Malfunction of audio or navigation unit
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication between audio or navigation unit and Subaru Select Monitor is impossible.

Wiring diagram:

- Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
- Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

Step		Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the infotainment using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the "Communication for Initializing Impossible" of LAN system.
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.

	Step	Check	Yes	No
3	**CHECK FUSE.** Check the fuse of the infotainment. <Ref. to ETM-6, LOCATION, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit of the harness between the battery and audio connector, or between the navigation unit connectors.
4	**CHECK HARNESS (POWER SUPPLY CIRCUIT).** 1) Turn off the audio or navigation unit. 2) Disconnect the audio connector or navigation unit connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***Without power amplifier*** ***(i85) No. 3 (+) — Chassis ground (–):*** ***(i85) No. 4 (+) — Chassis ground (–):*** ***With power amplifier*** ***(i35) No. 3 (+) — Chassis ground (–):*** ***(i35) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness between audio connector or navigation unit connector and fuse.
5	**CHECK HARNESS (GROUND CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between audio connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***Without power amplifier*** ***(i85) No. 7 — Chassis ground:*** ***With power amplifier*** ***(i35) No. 7 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit between audio connector or navigation unit connector and chassis ground.
6	**CHECK INFOTAINMENT.** 1) Turn the ignition switch to OFF. 2) Connect the audio connector or navigation unit connector. 3) Perform the communication with the infotainment system.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

8. Data Monitor

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Infotainment» and select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Contents	Standard/unit	Note
Trip Count [count]	Number of IG ON judged by the body integrated unit (CAN communication data)	—	—
Count	Number of IG ON, synchronous/ asynchronous identification information of the elapsed time after IG ON	—	—
Time Count	Elapsed time (detail) after IG ON calculated by the infotainment system	—	—
ACC Power connection state	ACC power supply connection status	ON: When connected OFF: When not connected	—
IGN Power connection state	IGN power supply connection status	ON: When connected OFF: When not connected	—
Reverse connection state	Reverse signal connection status	ON: When connected OFF: When not connected	—
SPEED signal connection state	Vehicle speed signal open circuit status	ON: When connected OFF: When not connected	—
PKB connection state	Parking brake signal connection status	ON: When connected OFF: When not connected	—
Illumi connection state	Illumination signal connection status	ON: When connected OFF: When not connected	—
RADIO ant connection state	Antenna (radio) connection status	ON: When connected OFF: When not connected	—
XM ant connection state	Antenna (XM) connection status	ON: When connected OFF: When not connected	For North America only
GPS ant connection state	Antenna (GPS) connection status	ON: When connected OFF: When not connected	Only for models with navigation
MIC connection state	Microphone connection status	ON: When connected OFF: When not connected	—
Steering switch connection state	Steering switch connection status	ON: When connected OFF: When not connected	—
Rear camera connection state	Rear camera connection status	ON: When connected OFF: When not connected	—
AUX connection state	AUX connection status	ON: When connected OFF: When not connected	—
USB1 connection state	USB1 connection status	ON: When connected OFF: When not connected	—
CAN connection state	CAN connection status	ON: When connected OFF: When not connected	—

Item	Contents	Standard/unit	Note
Steering Switch2 Connection State	Steering switch 2 connection status	ON: When connected OFF: When not connected	—
BATT voltage	Battery voltage	0 — 21.50 V	—
BRIGHT Connection State	BRIGHT connection status	ON: When connected OFF: When not connected	—
Speed	Speed	0 — 300	—
Driver's Door SW Connection State	Driver's side door connection status	ON: When connected OFF: When not connected	—
Steering Angle Sensor	Steering angle sensor	–3276.8 — 3276.8 deg	—
AMP(MUTE) Connection State	AMP (MUTE) connection status	ON: When connected OFF: When not connected	Only for model with H/K AMP

10.Active Test

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Infotainment» and select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Contents
FM Seek Up/Down	Checks the FM SEEK operation.
AM Seek Up/Down	Checks the AM SEEK operation.
Speaker Output Volume Adjustment	Checks the speaker output (sound volume) operation.
Speker Output Check	Checks the speaker output.
Diag Recorder Data Delete	Initializes the log for manufacturer’s analysis.

11.Customize

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Infotainment» and select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Initial setting value	Setting value	Contents
Camera Guide Line Settings	ON	ON/OFF	Sets the fixed guide line display.
Camera Caution Display Settings	ON	ON/OFF	Sets the warning indicator display.
Diag Recorder Settings	ON	ON/OFF	Software debug analysis (for analysis by manufacturer)

12.Work Support

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Infotainment» and select «Enter».
5) On «Select Function» display, select «Work Support».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Contents
ECU Part Number	Displays the item number of audio or navigation.
Software information	Displays software information.
Memory Initialization	Resets to the factory settings.

13.Clear Memory

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Infotainment» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

14.Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Infotainment» and select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to INF(diag)-26, LIST, Diagnostic Trouble Code (DTC).>

B: LIST

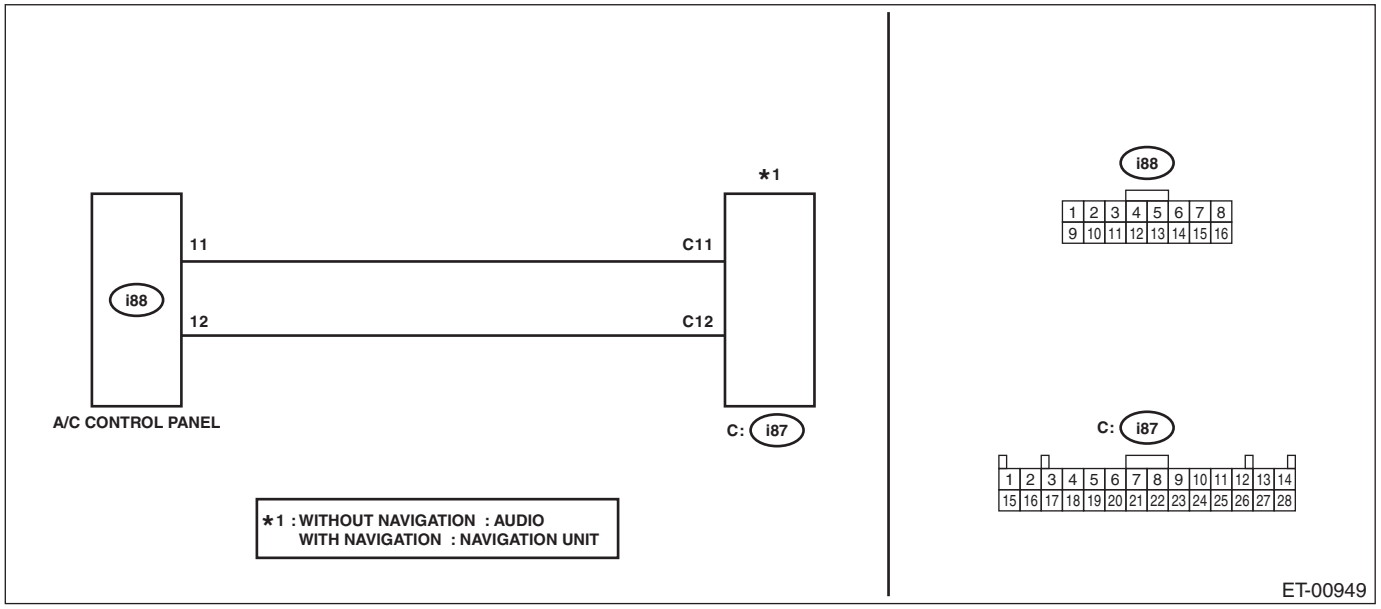
15.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2240 CAN COMMUNICATION (AUDIO) STUCK

DTC detecting condition:
Detected when the resistor is stuck during the CAN bus communication process.
Trouble symptom:
Screen display does not link with combination meter or vehicle.

	Step	Check	Yes	No
1	**CHECK DTC.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the diagnosis according to diagnosis for LAN system.
2	**CHECK NAVIGATION UNIT.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2240 displayed? (Current malfunction)	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

B: DTC B2241 CAN COMMUNICATION



DTC detecting condition:
Detected when there has been no proper communication in 10 seconds with the driver control of serial communication between CAN microcomputer and main microcomputer.
Trouble symptom:
Screen display does not link with combination meter or vehicle.

	Step	Check	Yes	No
1	**CHECK DTC.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the diagnosis according to diagnosis for LAN system.
2	**CHECK AUDIO OR NAVIGATION UNIT.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2241 displayed? (Current malfunction)	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

C: DTC B2242 UART COMMUNICATION

DTC detecting condition:
Regular communication with A/C panel (20 ms) cannot be established for 10 seconds.
Trouble symptom:
- A/C operation cannot be activated using the voice control.
- Time displayed on the A/C panel cannot be corrected.

Wiring diagram:
Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK A/C SYSTEM.** Check the A/C system. <Ref. to AC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the diagnosis according to diagnosis for A/C system.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio connector or navigation unit connector. 2) Disconnect the A/C panel connector. 3) Using the tester, measure the resistance of harness between audio connector or navigation unit connector and A/C panel connector. ***Connector & terminal*** ***(i88) No. 11 — (i87) No. 11:*** ***(i88) No. 12 — (i87) No. 12:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between audio connector or navigation unit connector and A/C panel connector.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between audio connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i87) No. 11 — Chassis ground:*** ***(i87) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the ground short circuit of the harness between audio connector or navigation unit connector and A/C panel connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i87) No. 11 (+) — Chassis ground (–):*** ***(i87) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and A/C panel connector.
5	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 3) Turn the ignition switch OFF → ON. 4) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2242 displayed? (Current malfunction)	Replace the A/C panel.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B2244 AMPLIFIER COMMUNICATION

DTC detecting condition:
Detected when no connection is established because there is no communication with the audio amplifier after the ACC is ON.
Trouble symptom:
Sound does not come out from the speaker.
Wiring diagram:
Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to ETM-6, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and audio amplifier.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio connector or navigation unit connector. 2) Disconnect the amplifier connector. 3) Using the tester, measure the resistance of harness between audio connector or navigation unit connector and audio amplifier connector. ***Connector & terminal*** ***(i87) No. 7 — (i262) No. 8:*** ***(i87) No. 8 — (i262) No. 7:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between audio connector or navigation unit connector and audio amplifier.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between audio connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i87) No. 7 — Chassis ground:*** ***(i87) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the ground short circuit of the harness between audio connector or navigation unit connector and audio amplifier.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i87) No. 7 (+) — Chassis ground (–):*** ***(i87) No. 8 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and audio amplifier.
5	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 3) Turn the ignition switch OFF → ON. 4) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2244 displayed? (Current malfunction)	Replace the audio amplifier. <Ref. to ETM-19, Power Amplifier.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B2247 CD MECHANICAL

DTC detecting condition:

- If EJECT error is detected
- If over-current is detected
- If DSP error is detected
- If playback failure is detected

Trouble symptom:

- CD and DVD cannot be played back.
- Cannot be inserted or ejected.

	Step	Check	Yes	No
1	**CHECK MEDIA.** 1) Check for dirt on the disc surface of the media, and clean the disc softly using soft and dry cloth such as a plastic eyeglasses cleaning cloth. When cleaning, make sure that wiping direction is from the center to the edge of the disc. **CAUTION:** **To avoid any scratch on the surface, do not apply excessive force with hand or do not use a rough cloth. Do not use solvent such as alcohol, benzene, thinner, etc. as well as chemical cloth to avoid damaging the disc.** 2) Insert the media and make sure that it can be played back.	Is the check result OK?	There were some problems with the media.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK MEDIA.** Insert another media which is properly functioning. NOTE: Supported media type: Audio CD, CD-R, CD-RW	Is the check result OK?	There were some problems with the media.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

F: DTC B2249 BLUETOOTH MODULE

DTC detecting condition:

• Detected when a connection between the Bluetooth module is lost (or there has already been no connection) and the connection cannot be established even after trying to reset the Bluetooth module hardware three times.

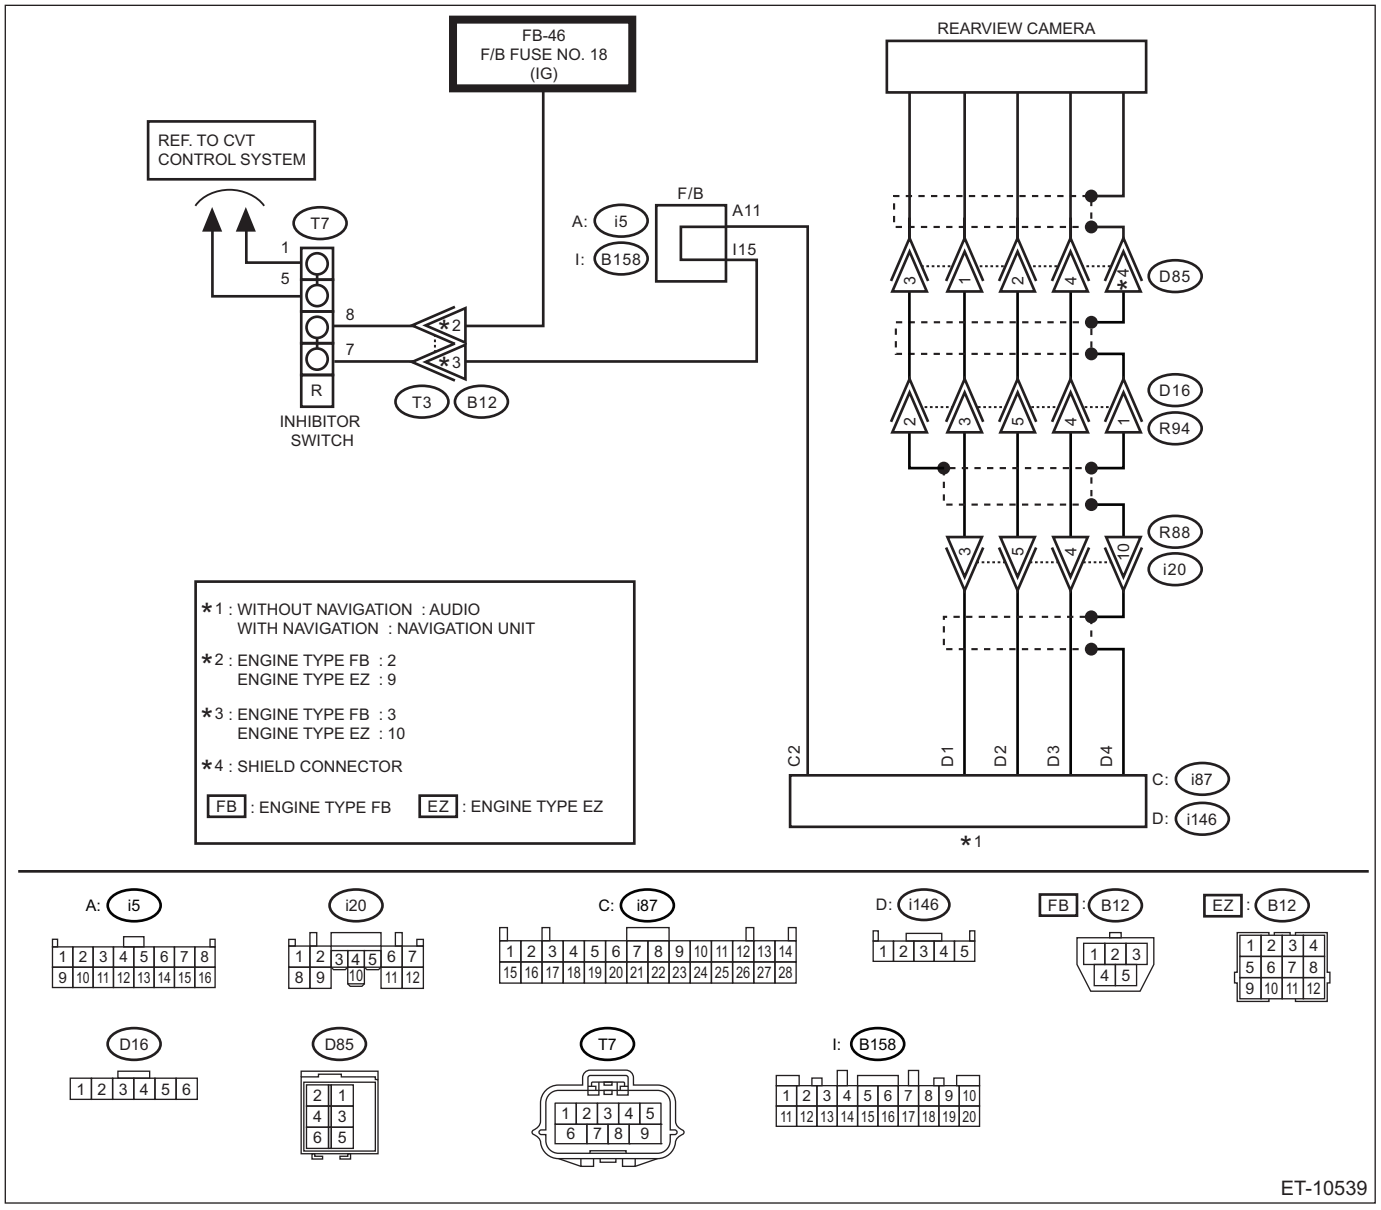
• Detected when the connection with the Bluetooth module has established but the module does not respond to the initialization request, and there is no response from the module even after trying to reset the Bluetooth module three times.

Trouble symptom:

Cannot connect with the Bluetooth device.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2249 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK BLUETOOTH DEVICE.** 1) Restart the Bluetooth device, and connect again. 2) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 3) Turn the ignition switch OFF → ON. 4) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2249 displayed? (Current malfunction)	Go to step **3**.	Bluetooth device was faulty.

	Step	Check	Yes	No
3	**CHECK BLUETOOTH DEVICE.** 1) Connect another Bluetooth device. NOTE: Supported network type: Ver. 3.0 +EDR compatible • Bluetooth Phone Profile – HFP: Ver. 1.6 – OPP: Ver. 1.1 – PBAP: Ver. 1.1.1 – MAP: Ver. 1.1 – SPP: Ver. 1.1 • Bluetooth Audio Device Profile – A2DP: Ver. 1.3 – AVRCP: Ver. 1.5 2) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 3) Turn the ignition switch OFF → ON. 4) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2249 displayed? (Current malfunction)	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Bluetooth device was faulty.



G: DTC B224A BACKUP CAMERA

DTC detecting condition:
Detected when the synchronization error occurs in the condition of the picture input.
Trouble symptom:
Camera image does not appear.
Wiring diagram:
Rearview camera system <Ref. to WI-333, WIRING DIAGRAM, Rearview Camera System.>
Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>
Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
Back-up light system <Ref. to WI-131, WIRING DIAGRAM, Back-up Light System.>

- Sedan model

- OUTBACK model

Step		Check	Yes	No
1	**CHECK DATA MONITOR.** Using Subaru Select Monitor, check the following items in «Data Monitor» of «Infotainment». <Ref. to INF(diag)-17, Data Monitor.> • «Rear camera connection condition»	Is «ON» displayed?	Go to step **2**.	Go to step **3**.
2	**CHECK DATA MONITOR.** Using Subaru Select Monitor, check the following items in «Data Monitor» of «Infotainment». <Ref. to INF(diag)-17, Data Monitor.> • «Reverse signal connection condition»	Is «ON» displayed when the shift lever is set to the reverse range?	Go to step **3**.	Go to step **6**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio connector or navigation unit connector. 2) Disconnect the rearview camera connector. 3) Using the tester, measure the resistance of harness between rearview camera connector and audio connector or navigation unit connector. ***Connector & terminal*** ***Sedan model*** ***(i146) No. 1 — (R330) No. 4:*** ***(i146) No. 2 — (R330) No. 3:*** ***(i146) No. 3 — (R330) No. 1:*** ***(i146) No. 4 — (R330) No. 2:*** ***OUTBACK model*** ***(i146) No. 1 — (D85) No. 1:*** ***(i146) No. 2 — (D85) No. 2:*** ***(i146) No. 3 — (D85) No. 4:*** ***(i146) No. 4 — (D85) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between audio connector or navigation unit connector and rearview camera.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance of harness between audio connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i146) No. 1 — Chassis ground:*** ***(i146) No. 2 — Chassis ground:*** ***(i146) No. 3 — Chassis ground:*** ***(i146) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of the harness between audio connector or navigation unit connector and rearview camera.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i146) No. 1 (+) — Chassis ground (–):*** ***(i146) No. 2 (+) — Chassis ground (–):*** ***(i146) No. 3 (+) — Chassis ground (–):*** ***(i146) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and rearview camera.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio connector or navigation unit connector. 2) Disconnect the inhibitor switch connector. 3) Using the tester, measure the resistance of the harness between inhibitor switch connector or back-up light switch connector and audio connector or navigation unit connector. ***Connector & terminal*** ***(i87) No. 2 — (T7) No. 7:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between audio connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.

	Step	Check	Yes	No
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance of harness between audio connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i87) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair the ground short circuit of the harness between audio connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.
8	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i87) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **9**.	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.
9	**CHECK REARVIEW CAMERA.** Check the rearview camera according to the instructions of rearview camera operation manual.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Replace the rearview camera. <Ref. to ETM-43, Camera.>

H: DTC B224B RADIO ANTENNA FAULTS(SHORTED OR OPEN)

Trouble symptom:
Radio cannot be received.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B224B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK RADIO ENVIRONMENT.** Select the stations in the environment where the radio can be received.	Can radio be received?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK RADIO ANTENNA.** Perform visual check of the radio antenna and check of the connector.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Replace the radio antenna. <Ref. to ETM-20, Antenna.>

I: DTC B224D XM / SATELLITE DIGITAL AUDIO RADIO SERVIE ANTENNA FAULTS(SHORTED OR OPEN)

Trouble symptom:
SXM cannot be received.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B224D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK RECEPTION CONTRACT.** Check that the contract of SXM is in effect.	Is SXM contract in effect?	Go to step **3**.	Reception is impossible due to no contract.
3	**CHECK SXM ENVIRONMENT.** Select the stations in the environment where the SXM can be received.	Can SXM be received?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK XM ANTENNA.** Perform visual check of the XM antenna and check of the connector.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Replace the XM antenna. <Ref. to ETM-20, Antenna.>

J: DTC B2250 USB-BOX OVERCURRENT FAULTS

Trouble symptom:
Connected USB devices cannot be detected.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2250 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK USB CHARGE STATUS.** Check that USB can be charged.	Can USB be charged?	Go to step **3**.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>
3	**CHECK OTHER USB DEVICES.** Connect the connection-proven USB device and perform inspection.	Is the USB device detected?	USB device was faulty.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

K: DTC B2251 SPEAKER LINE SHORTS TO +B

Trouble symptom:
Sound is absent.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2251 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CONNECTOR.** Check the harness between audio connector or navigation unit connector and audio amplifier.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Repair or replace the harness.

L: DTC B2252 SPEAKER LINE SHORTS TO GND

Trouble symptom:
Sound is absent.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2252 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CONNECTOR.** Check the harness between audio connector or navigation unit connector and audio amplifier.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Repair or replace the harness.

M: DTC B2253 DAMAGING A COIL DUE TO THE ELECTRIC CURRENT TO THE SPEAKER COIL

Trouble symptom:
Sound is absent.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2253 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CONNECTOR.** Check the harness between audio connector or navigation unit connector and audio amplifier.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Repair or replace the harness.

N: DTC B2254 GPS ANTENNA FAULTS

Trouble symptom:
Navigation does not operate.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Infotainment». <Ref. to INF(diag)-25, Clear Memory.> 2) Turn the ignition switch OFF → ON. 3) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2254 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DATA MONITOR.** Using Subaru Select Monitor, check the following items in «Data Monitor» of «Infotainment». <Ref. to INF(diag)-17, Data Monitor.> • «GPS current position: Latitude°» • «GPS current position: Longitude°»	Is the indicated data received properly?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK GPS ANTENNA.** Perform visual check of the GPS antenna and check of the connector.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Replace the GPS antenna. <Ref. to ETM-20, Antenna.>

O: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

16.Diagnostics with Phenomenon

A: LIST

1. AUDIO SYSTEM

Symptoms	Reference
Power will not turn ON.	<Ref. to INF(diag)-53, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
The screen freezes and does not accept any operation entry.	<Ref. to INF(diag)-55, THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY, INSPECTION, Diagnostics with Phenomenon.>
The screen is blacked out, or the screen is not displayed.	<Ref. to INF(diag)-56, THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
System is reset.	<Ref. to INF(diag)-57, SYSTEM IS RESET, INSPECTION, Diagnostics with Phenomenon.>
CDs cannot be played back.	<Ref. to INF(diag)-58, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.>
Sound does not come out from the speaker.	<Ref. to INF(diag)-59, SOUND DOES NOT COME OUT FROM THE SPEAKER, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth connection cannot be established.	<Ref. to INF(diag)-60, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth does not operate.	<Ref. to INF(diag)-61, BLUETOOTH DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
Radio volume is low or interference noise occurs.	<Ref. to INF(diag)-62, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.>
Error message is displayed.	<Ref. to INF(diag)-53, ERROR MESSAGE IS DISPLAYED, LIST, Diagnostics with Phenomenon.>
SUBARU STARLINK is faulty.	<Ref. to INF(diag)-50, CHECK ABNORMALITY OF SUBARU STARLINK, LIST, Diagnostics with Phenomenon.>

2. NAVIGATION SYSTEM

Symptoms	Reference
Power will not turn ON.	<Ref. to INF(diag)-53, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
The screen freezes and does not accept any operation entry.	<Ref. to INF(diag)-55, THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY, INSPECTION, Diagnostics with Phenomenon.>
The screen is blacked out, or the screen is not displayed.	<Ref. to INF(diag)-56, THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
System is reset.	<Ref. to INF(diag)-57, SYSTEM IS RESET, INSPECTION, Diagnostics with Phenomenon.>
CDs cannot be played back.	<Ref. to INF(diag)-58, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.>
Sound does not come out from the speaker.	<Ref. to INF(diag)-59, SOUND DOES NOT COME OUT FROM THE SPEAKER, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth connection cannot be established.	<Ref. to INF(diag)-60, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth does not operate.	<Ref. to INF(diag)-61, BLUETOOTH DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

Symptoms	Reference
Radio volume is low or interference noise occurs.	<Ref. to INF(diag)-62, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.>
Wrong location of vehicle, or no GPS reception.	<Ref. to INF(diag)-63, WRONG LOCATION OF VEHICLE, NO GPS RECEPTION, INSPECTION, Diagnostics with Phenomenon.>
Error message is displayed.	<Ref. to INF(diag)-53, ERROR MESSAGE IS DISPLAYED, LIST, Diagnostics with Phenomenon.>
SUBARU STARLINK is faulty.	<Ref. to INF(diag)-50, CHECK ABNORMALITY OF SUBARU STARLINK, LIST, Diagnostics with Phenomenon.>

3. CHECK ABNORMALITY OF SUBARU STARLINK

Symptoms	Counter-measure
SUBARU STARLINK app was terminated.	Perform the procedures described on “Check connection between smartphone and unit”. <Ref. to INF(diag)-63, CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT, INSPECTION, Diagnostics with Phenomenon.>
Smartphone was powered off while connecting via the SUBARU STARLINK.	
Bluetooth connection stops while connecting via the SUBARU STARLINK.	
Communication gets out of service while connecting via the SUBARU STARLINK.	
Radio wave reception becomes worse while connecting via the SUBARU STARLINK.	

NOTE:
Possible error messages with relation to the above symptoms. When the message below is displayed, perform inspection according to “Inspection when an error message is displayed (SUBARU STARLINK)”. <Ref. to INF(diag)-50, INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK), LIST, Diagnostics with Phenomenon.>

Details of message
Please disconnect mobile device and install the STARLINK application on your mobile device and try again. Bluetooth disconnected, please reconnect and try again. Smartphone data connection is poor, please try to connect again.

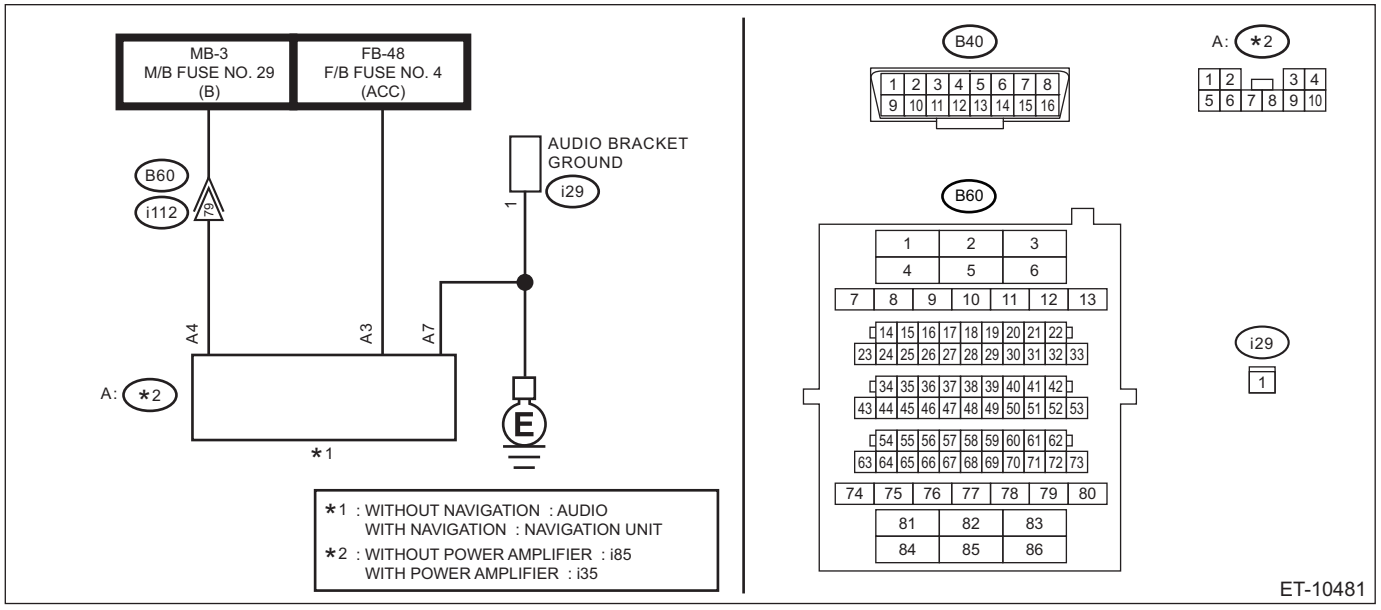
4. INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK)

No.	Inspection	Possible cause	Action 1	Action 2
1	Check internet connection of smartphone	Check that the Internet sites can be viewed with a web browser of the smartphone. NOTE: Make sure that the displayed contents are not from previously loaded screen (cache) and that new contents can be reloaded.	When connection to the Internet fails, confirm that connection can be established where the radio wave condition is good, and go to No. 2.	Check that the smartphone can perform communication.
2	Activate SUBARU STARLINK application for the smartphone	Activate the “SUBARU STARLINK” application for the smartphone.	Check that the SUBARU STARLINK application is activated, and go to No. 5.	If the SUBARU STARLINK application is not installed, go to No. 3 and 4.
3	Install the SUBARU STARLINK application (Android)	Search the SUBARU STARLINK on Google Play, and install the application.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)

No.	Inspection	Possible cause	Action 1	Action 2
4	Install the SUBARU STARLINK application (iPhone)	Search the SUBARU STARLINK on APP Store, and install the app.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)
5	Check connection to the SUBARU STARLINK server	Select “SETTING” tab from the SUBARU STARLINK application for the smartphone, and select “Press to check network status”.	When “The network connection is good” is displayed, go to No. 8.	For the case other than shown on the left, go to No. 6 or No. 7.
6		When “NETWORK PROBLEMS” is displayed.	Move to a location where the radio wave condition is good, and go to No. 5.	—
7		When “SERVER MAINTENANCE” is displayed.	Wait until the server maintenance completes, and go to No. 5.	—
8	Check the smartphone type	Check the phone type (iPhone or Android).	For iPhone, go to No. 10 or 12.	For Android, go to No. 10.
9	Check Bluetooth connection between smartphone — on-vehicle device	On the on-vehicle device, select [HOME]-[SETTINGS]-Bluetooth tab-“BT devices Connection”, and check that Bluetooth setting at the upper right is ON.	When the setting is OFF, switch to ON and go to No. 10.	When the setting is ON, switch to OFF once and to ON again, then go to No. 10.
10		From the Setting app for the smartphone, select Bluetooth and check that it is set to ON. (Note that procedures vary depending on a device.)	When the setting is OFF, switch to ON and go to No. 11.	When the setting is ON, switch to OFF once and to ON again, then go to No. 11.
11		Check that Bluetooth pairing is established between the smartphone and on-vehicle device. • The selected smartphone icon is displayed on the on-vehicle device. • The smartphone BT is connected to the on-vehicle device.	If the connection cannot be confirmed, go to No. 9.	—
12	Check USB connection between smartphone — on-vehicle device (with iPhone)	Check that the smartphone and on-vehicle device are connected via USB.	After connecting via USB, go to No. 13.	—
13	Check the SUBARU STARLINK initial screen	On the on-vehicle device, press down [APPS] — [SUBARU STARLINK], and check that the SUBARU STARLINK initial screen is displayed.	If the activation cannot be confirmed, go to No. 14.	—

No.	Inspection	Possible cause	Action 1	Action 2
14	Delete the SUBARU STARLINK connection information inside the on-vehicle device.	Clear the Browser cache on the on-vehicle device. (Select the tool tab from the SETTING menu, select Browser cache “Delete”, and select “OK”. Then, press [SETTINGS] from the APPS screen. From SETTING, select the Bluetooth-tab, and select BT Devices Connection. Select the “Trash can” icon of the registered device. Select “OK” on the confirmation pop-up screen.)	For Android, go to No. 15. For iPhone, go to No. 15 or 17.	—
15		Clear the Bluetooth connection information inside the on-vehicle device.	Go to No. 16.	—
16		Turn OFF the power supply of the on-vehicle device, and wait for 30 seconds or more before turning ON the power supply again.	Go to No. 17.	—
17	Delete the SUBARU STARLINK connection information inside the smartphone.	Delete data in the SUBARU STARLINK app. (Click the “SETTING” icon of the “SUBARU STARLINK” application. Then, press [CONFIG] from the APPS list screen. Select “Delete the SUBARU STARLINK application data” to delete the data in the application. Activate the Setting app for the smartphone. From SETTING, select the Bluetooth-tab, and select BT Devices Connection. Select the Bluetooth setting item. Select the connection information. Select the “Trash can” icon of the registered device. Select “Forget This Device” to delete the connection information.)	Go to No. 18.	—
18		Delete the Bluetooth connection information.	Go to No. 19.	—
19		Turn OFF the power of the smartphone, then turn it ON again.	Go to No. 20.	—
20	Re-connect SUBARU STARLINK	Establish connection according to the SUBARU STARLINK connection procedure.	—	—

5. ERROR MESSAGE IS DISPLAYED



Mode	Message	Cause	Action
aha	“Information acquisition error. (Information acquisition error.)”	When not able to get the requested information.	Please try again (Refresh etc.) later or reconnect it.
	“Poor wireless reception. (Poor wireless reception.)”	When a communication error has been detected.	Please try again in a better communications environment.
	“Entry not recognized. (Entry not recognized.)”	When an invalid operation has been executed.	Please try again (Refresh etc.) later or reconnect it.
	“The station list cannot be acquired. (The station list cannot be acquired.)”	When not able to get the station information.	Please try again (Refresh etc.) later or reconnect it.
	“The content cannot be acquired. (The content cannot be acquired.)”	• When not able to get the content information. • When not able to switch to the Top content when touching.	• Please try again (Refresh etc.) later or reconnect it. • Select the desired station again when the station list appears.
	“Action not available. (Action not available.)”	When content-specific operations such as “fast forward” or “reverse” are not available.	Please try again (Refresh etc.) later or reconnect it.
	“Failed. (Failed.)”	When data transmission failed when touching.	Please try again later.
	“aha communication error - Please check Owner's Manual. (aha communication error - Please check Owner's Manual.)”	• When invalid data is received from the aha application or there is no response. • When the connection to the aha application via Bluetooth is not available. • When the data reception from this unit is rejected.	Please try again (Refresh etc.) later or reconnect it. If it is still not improved, restart the aha application.
	“Please select the type of connection in “aha Settings”. (Please select the type of connection in “aha Settings”.)”	When aha radio setting is set to (USB) when the Android device is going to be paired via Bluetooth.	When you want to connect to the aha application with the Android device, select (Bluetooth) in the aha radio setting from the setting screen.
Pandora	“No stations have been added to your list. (No stations have been added to your list.)”	When no stations have been registered.	Please register stations.
	“Your ratings information was not saved. (Your ratings information was not saved.)”	When ratings information has not been updated to the Pandora server.	Please try again later.
	“Bookmark not saved. (Bookmark not saved.)”	When bookmark registration information has not been updated to the Pandora server.	Please try again later.
	“Pandora is not available at your current location. (Pandora is not available at your current location.)”	When Pandora is used in an area where it is not available.	Please try again at a different location.
	“The selected Pandora station is no longer available. (The selected Pandora station is no longer available.)”	When the selected station has been deleted, or has expired.	Please select another station.
	“Pandora Error. (Pandora Error.)”	When the Pandora server is undergoing maintenance, or another error has occurred.	Please try again later.

B: INSPECTION

1. POWER WILL NOT TURN ON

Possible cause:
Power supply circuit malfunction or unit malfunction.
Wiring diagram:

- Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
- Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR CONNECTION.** Check that the connector is connected to the unit.	Is the check result OK?	Go to step **2**.	Connect the connector.
2	**CHECK CONNECTOR.** Check for poor contact of connectors or terminals.	Is the check result OK?	Go to step **3**.	Repair or replace the harness.
3	**CHECK POWER SUPPLY VOLTAGE.** 1) Disconnect the connector. 2) Turn the ignition switch to ACC. 3) Using a tester, measure the voltage between connector and chassis ground. NOTE: Turn the electrical parts to OFF. ***Connector & terminal*** ***Without power amplifier*** ***(i85) No. 3 (+) — Chassis ground (–):*** ***(i85) No. 4 (+) — Chassis ground (–):*** ***With power amplifier*** ***(i35) No. 3 (+) — Chassis ground (–):*** ***(i35) No. 4 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **8**.	Go to step **4**.
4	**CHECK FUSE.** 1) Turn the ignition to OFF. 2) Check the fuse No. 29 inside the main fuse box.	Is the check result OK?	Go to step **5**.	Replace the fuse. If the fuse is blown again, check or replace the short circuit of the power supply harness.
5	**CHECK HARNESS (POWER SUPPLY).** Measure the resistance between main fuse box and connector. ***Connector & terminal*** ***Without power amplifier*** ***F/B fuse No. 29 — (i85) No. 4:*** ***With power amplifier*** ***F/B fuse No. 29 — (i35) No. 4:***	Is the resistance 1 Ω or less?	Go to step **6**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
6	**CHECK HARNESS (GROUND).** Measure the resistance between connector and chassis ground. ***Connector & terminal*** ***Without power amplifier*** ***(i85) No. 7 — Chassis ground:*** ***With power amplifier*** ***(i35) No. 7 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK BATTERY.** Check the battery. <Ref. to SC(H4DO)-49, Battery.> <Ref. to SC(H6DO)-58, Battery.>	Is the check result OK?	Go to step **8**.	Charge or replace the battery.
8	**CHECK OPERATION.** 1) Connect all connectors. 2) Turn the ignition switch to ACC and the power supply switch of the unit to ON.	Does the power turn ON?	Currently no failure is found.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

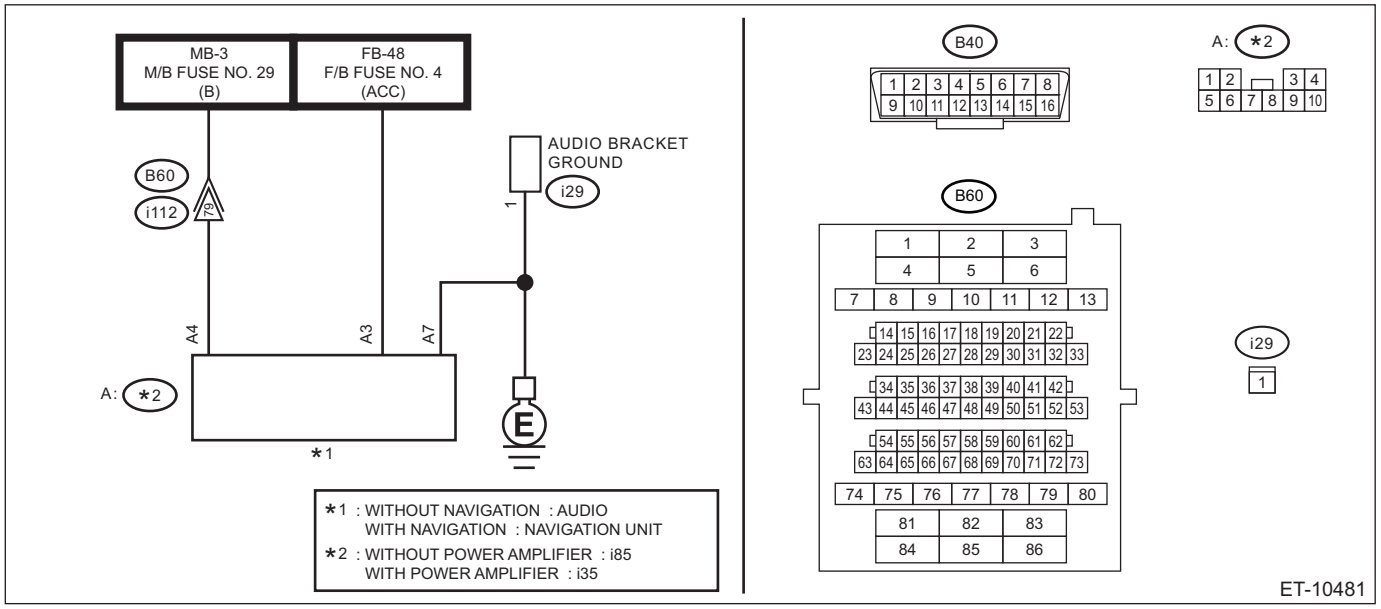
2. THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY

Possible cause:
External device malfunction/influence or unit malfunction.

	Step	Check	Yes	No
1	**CHECK RESTARTING DISPLAY.** Turn the ignition OFF → ACC after waiting for three minutes or more with the display turned off. (The doors must be closed)	Is the screen freeze eliminated?	Go to step **5**.	Go to step **2**.
2	**REMOVE OTHER MEDIA OR EXTERNAL DEVICES.** Remove the external devices connected to CD/USB. Also, remove the external devices with Bluetooth.	Is the screen freeze eliminated?	Go to step **3**.	Go to step **6**.
3	**CHECK OTHER EXTERNAL DEVICE CONNECTION.** When screen freeze is eliminated, connect external devices one by one to identify the device that causes screen freeze.	Is the device that reproduces screen freeze identified?	Go to step **4**.	Go to step **5**.
4	**CHECK OTHER EXTERNAL DEVICE CONNECTION.** 1) Replace the identified device with the one that has the same performance. 2) Turn the ignition switch to ACC.	Does the screen freeze occur?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	The external device may be defective.
5	**CHECK OPERATION PROCEDURE.** Ask how the user operates when screen freeze occurs, and perform using the same procedure.	Is the check result OK?	Currently no failure is found.	Go to step **6**.
6	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Go to step **7**.	Remove the external device and perform the inspection from step 2 again. If the fault is not fixed: Go to step **7**.

	Step	Check	Yes	No
7	**PERFORM INITIALIZATION PROCEDURE.** Perform the initialization procedure for the unit. **CAUTION:** **When the initialization procedure is performed, the data, telephone directory, etc. recorded in the unit body will be deleted. Before initialization, obtain permission from the user. <Ref. to INF(diag)-66, SERVICE INSPECTION, OPERATION, Service Diagnostics Mode.>**	Is the screen freeze eliminated?	Go to step **5**. If the screen freeze occurs again, replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

3. THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED



Possible cause:
Power supply circuit malfunction, illumination circuit malfunction or unit malfunction.

	Step	Check	Yes	No
1	**CHECK RESTARTING DISPLAY.** Turn the ignition OFF → ACC after waiting for three minutes or more with the display turned off. (The doors must be closed)	Is the screen properly displayed?	Currently no failure is found.	Go to step **2**.
2	**CHECK POWER SUPPLY BUTTON.** Check if the screen OFF mode is turned on by pressing the power supply button of the unit body.	Is the screen properly displayed?	The screen OFF mode might be activated. Currently no failure is found.	Go to step **3**.
3	**CHECK BUTTON ILLUMINATION.** Turn the ignition switch to ACC.	Do the buttons located beside the screen illuminate?	Go to step **4**.	Perform "Power will not turn ON" in Diagnostics with Phenomenon. <Ref. to INF(diag)-53, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
4	**CHECK INDICATION WITH ILLUMINATION ON.** Turn the lighting switch to ON.	Does the screen brightness change?	Go to step **7**.	Go to step **5**.
5	**CHECK HARNESS.** Check for poor contact of the harnesses, connectors and terminals that are connected to the unit body.	Is the check result OK?	Go to step **6**.	Repair or replace the harness.
6	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». • «Lighting I Switch Input»	Is the input signal OK?	Go to step **7**.	Replace the integrated unit. <Ref. to SL-83, Body Integrated Unit.>
7	**CHECK UNDER OVERLOAD CONDITION.** 1) Turn the ignition to OFF. 2) Leave as is for 10 minutes (cooling down), and then turn the ignition to ACC to check the operation.	Is the screen properly displayed?	Go to step **8**.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>
8	**OPERATIONAL CHECK.** Obtain the information about the audio device that the user used (SD, Bluetooth, CD, etc.), and connect the same device. Then play the device for 10 minutes or more.	Is the screen properly displayed?	Currently no failure is found.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK EXTERNAL DEVICE.** 1) Replace the external device that might cause trouble with another device. (If trouble occurs while using a CD, replace the CD with another one. If trouble occurs while using an external device that is connected via USB, replace the external device with another device.) 2) Operate for 10 minutes or more.	Is the screen properly displayed?	The external device might have trouble, resulting in the overload state.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

4. SYSTEM IS RESET

Possible cause:
External device influence, power supply circuit malfunction or unit malfunction.
Wiring diagram:
- Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
- Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Go to step **2**.	Remove the external device to check the operation. If the fault is not fixed: Go to step **2**.
2	**CHECK CONNECTOR CONNECTION.** Check that the connector is connected to the unit.	Is the check result OK?	Go to step **3**.	Connect the connector.
3	**CHECK CONNECTOR.** Check for poor contact of connectors or terminals.	Is the check result OK?	Go to step **4**.	Repair or replace the harness.

	Step	Check	Yes	No
4	**CHECK POWER SUPPLY VOLTAGE.** 1) Turn the ignition switch to ACC. 2) Using a tester, measure the voltage between connector and chassis ground. NOTE: Turn the electrical parts to OFF. ***Connector & terminal*** ***Without power amplifier*** ***(i85) No. 3 (+) — Chassis ground (–):*** ***(i85) No. 4 (+) — Chassis ground (–):*** ***With power amplifier*** ***(i35) No. 3 (+) — Chassis ground (–):*** ***(i35) No. 4 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **8**.	Go to step **5**.
5	**CHECK OPEN CIRCUIT IN HARNESS (POWER SUPPLY).** Using the tester, measure the voltage between connector and chassis ground while shaking the harness. ***Connector & terminal*** ***Without power amplifier*** ***(i85) No. 3 (+) — Chassis ground (–):*** ***(i85) No. 4 (+) — Chassis ground (–):*** ***With power amplifier*** ***(i35) No. 3 (+) — Chassis ground (–):*** ***(i35) No. 4 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK OPEN CIRCUIT IN HARNESS (GROUND).** Using the tester, measure the resistance between connector and chassis ground while shaking the harness. Connector & terminal ***Without power amplifier*** ***(i85) No. 7 — Chassis ground:*** ***With power amplifier*** ***(i35) No. 7 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK BATTERY.** Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.>	Is the check result OK?	Go to step **8**.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>
8	**CHECK UNIT OPERATION.** 1) Connect all connectors. 2) Turn the ignition switch to ACC and the power supply switch of the unit to ON.	Is the reset eliminated?	Currently no failure is found.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

5. CDS CANNOT BE PLAYED BACK

Possible cause:
CD malfunction or unit malfunction.

	Step	Check	Yes	No
1	**CONFIRM CD INSERTION CONDITION.** Check that the CD is inserted properly.	Is the check result OK?	Go to step **2**.	Insert the CD properly.
2	**CHECK CD.** Check the CD surfaces are free from scratches or dirt.	Is the check result OK?	Go to step **3**.	The CD is defective.

	Step	Check	Yes	No
3	**CHECK CD.** Replace the CD with another one. (Use a playable CD. Refer to owner's manual for details.)	Is the CD played back?	The CD is defective.	Go to step **4**.
4	**CHECK DEW CONDENSATION IN UNIT.** 1) After starting the engine, turn ON the air conditioner and dry inside the vehicle for 10 minutes or more. 2) Check the CD operation.	Is the CD played back?	Dew condensation occurred inside the unit.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

6. SOUND DOES NOT COME OUT FROM THE SPEAKER

Possible cause:
Speaker malfunction, amplifier malfunction or unit malfunction.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch OFF → ON. 2) Using the Subaru Select Monitor, read DTC of «Infotainment». <Ref. to INF(diag)-26, Diagnostic Trouble Code (DTC).>	Is DTC B2244 displayed? (Current malfunction)	Perform the diagnosis for the displayed DTC B2244. <Ref. to INF(diag)-32, DTC B2244 AMPLIFIER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK THE MODE IN WHICH NO SOUND COME OUT.** Check if sound comes out in each mode such as CD, radio, etc.	Does it have no sound in all modes?	Go to step **3**.	Check each mode in which no sound come out. For CD: <Ref. to INF(diag)-58, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.> For radio: <Ref. to INF(diag)-62, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.> For Bluetooth audio: <Ref. to INF(diag)-60, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
3	**CHECK DIAGNOSTIC MODE.** Perform {Audio Check} on the {Line Diag} screen. • Audio system: <Ref. to ETM-7, Audio System.> • Navigation system: <Ref. to ETM-36, Navigation System.>	Does it have no sound in all speakers?	Go to step **4**.	Model with power amplifier: Check the harnesses between the unit and power amplifier and between power amplifier and speaker for open circuit or short circuit. If no fault is found, replace the speaker. Model without power amplifier: Check the harness between the unit and speaker for open circuit or short circuit. If no fault is found, replace the speaker.
4	**CHECK MUTE MODE.** Check if the MUTE mode is turned on when the MUTE button is installed.	Is the volume level set to the minimum?	Since the MUTE mode is on or the volume level is set to the minimum, sound does not come out.	Go to step **5**.
5	**CHECK DTC (MODEL WITH TELEMATICS).** Using the Subaru Select Monitor, read DTC of «Telematics». <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Are B2A0E (mute line circuit), B2A05 (left speaker/audio circuit) and B2A06 (right speaker/audio circuit) displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to INF(diag)-26, LIST, Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK CONNECTOR.** Check for poor contact in the connector of the unit and the connector of each speaker. Check for poor contact in the amplifier connector for models with amplifier.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Repair or replace the harness.

7. BLUETOOTH CONNECTION CANNOT BE ESTABLISHED

Possible cause:
Bluetooth device malfunction or unit malfunction.

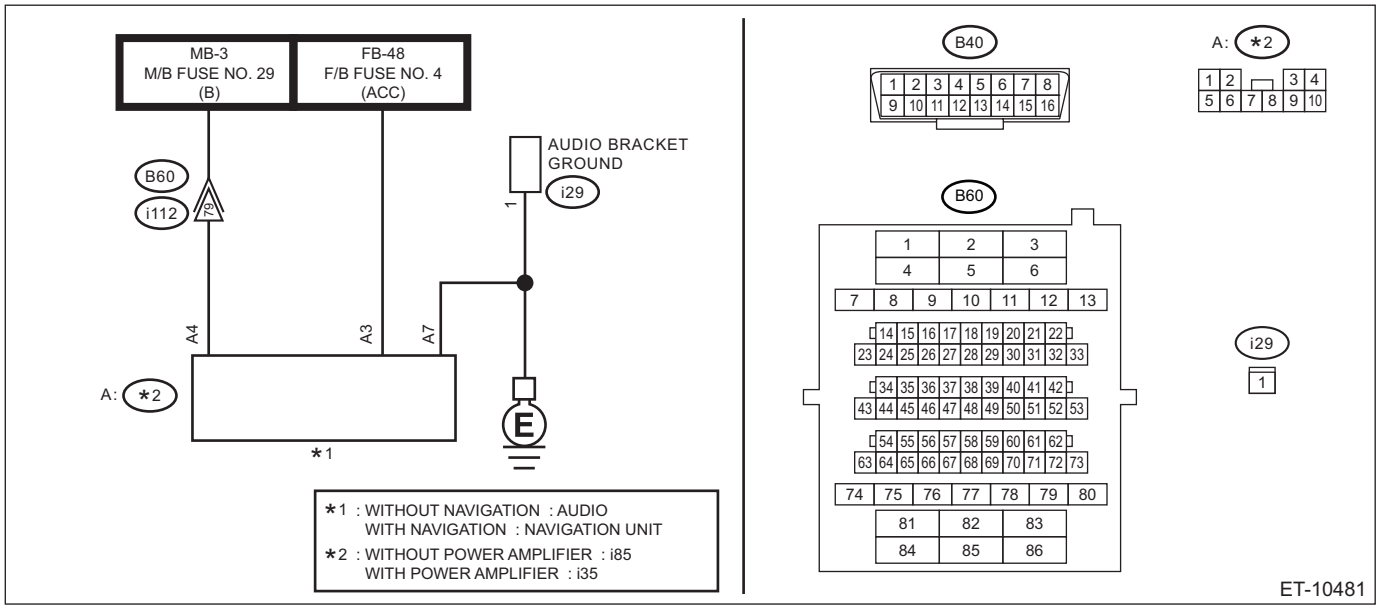
	Step	Check	Yes	No
1	**CHECK BLUETOOTH DEVICE.** Restart the Bluetooth device, and connect again.	Does it start properly?	Currently no failure is found.	Go to step **2**.
2	**CHECK BLUETOOTH DEVICE.** Re-register the Bluetooth device, and connect again.	Is communication successful?	Currently no failure is found.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK BLUETOOTH DEVICE.** Connect another Bluetooth device. NOTE: Supported Bluetooth standards: Ver. 3.0 +EDR compatible • Bluetooth Phone Profile – HFP: Ver. 1.6 – OPP: Ver. 1.1 – PBAP: Ver. 1.1.1 – MAP: Ver. 1.1 – SPP: Ver. 1.1 • Bluetooth Audio Device Profile – A2DP: Ver. 1.3 – AVRCP: Ver. 1.5	Is communication successful?	Bluetooth device which cannot be connected might be faulty.	Go to step **4**.
4	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Remove the external device and perform the inspection from step 1 again.

8. BLUETOOTH DOES NOT OPERATE

Possible cause:
Bluetooth device malfunction, external device influence or unit malfunction.

	Step	Check	Yes	No
1	**CHECK BLUETOOTH DEVICE.** Restart the Bluetooth device, and connect again.	Does it start properly?	Currently no failure is found.	Go to step **2**.
2	**CHECK BLUETOOTH DEVICE.** Re-register the Bluetooth device, and connect again.	Is communication successful?	Currently no failure is found.	Go to step **3**.
3	**CHECK BLUETOOTH DEVICE.** Connect another Bluetooth device. NOTE: Supported Bluetooth standards: Ver. 3.0 +EDR compatible • Bluetooth Phone Profile – HFP: Ver. 1.6 – OPP: Ver. 1.1 – PBAP: Ver. 1.1.1 – MAP: Ver. 1.1 – SPP: Ver. 1.1 • Bluetooth Audio Device Profile – A2DP: Ver. 1.3 – AVRCP: Ver. 1.5	Is communication successful?	Bluetooth device which cannot be connected might be faulty.	Go to step **4**.
4	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Remove the external device and perform the inspection from step 1 again.



9. RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS

Possible cause:
Reception environment, antenna circuit malfunction, external device influence, ground circuit malfunction or unit malfunction.

CAUTION:
- **If non-genuine electrical parts are installed, they may cause interference noise.**
- **Refer to the following diagnostic procedure if equipped with the digital radio using the Internet connection.**
  - **– Check SUBARU STARLINK service: <Ref. to INF(diag)-65, CHECK SUBARU STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>**
  - **– Bluetooth connection cannot be established: <Ref. to INF(diag)-60, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>**
  - **– Check connection between smartphone and unit: <Ref. to INF(diag)-63, CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT, INSPECTION, Diagnostics with Phenomenon.>**

NOTE:
When the volume of AHA and Pandora is low, connect the smartphone to the Internet, and check that AHA and Pandora is audible on the smartphone itself. When it is inaudible, or the volume is too low, there is a problem with the smartphone, Internet connection or service provider. When it is audible with the smartphone without any troubles, there is a problem with connection to the vehicle (USB connection or Bluetooth connection).

Wiring diagram:
- Audio system <Ref. to WI-106, WIRING DIAGRAM, Audio System.>
- Navigation system <Ref. to WI-284, WIRING DIAGRAM, Navigation System.>

Step		Check	Yes	No
1	**CHECK SYMPTOM.** Check in which condition (place) the noise occurs.	Does it occur in any places?	Go to step **2**.	Radio wave reception condition is poor. (In tunnel, buildings, etc.) There is no failure on the vehicle.
2	**CHECK ANTENNA.** Check for poor contact of connectors or terminals.	Is the check result OK?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Check the antenna harness for an open or short circuit, and check the booster.	Is the check result OK?	Go to step **4**.	Repair or replace the harness.

	Step	Check	Yes	No
4	**CHECK UNIT GROUND CIRCUIT.** Check the unit ground connector (1P on back side).	Is the check result OK?	Go to step **5**.	Repair or replace the ground circuit.
5	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Go to step **6**.	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to step **6**.
6	**CHECK NOISE OCCURRENCE CONDITION.** Stop the engine, and turn the ignition switch to ON to check for noise occurrence.	Does the noise occur while the engine stops?	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>	Check that the engine ignition system, generator, engine ground circuit and chassis ground circuit are connected securely.

10.WRONG LOCATION OF VEHICLE, NO GPS RECEPTION

Possible cause:
External device influence, GPS antenna circuit malfunction, vehicle speed sensor circuit malfunction or unit malfunction.

	Step	Check	Yes	No
1	**CHECK SYMPTOM.** Check in which condition (place) the vehicle is located out of position.	Does it occur in any places?	Go to step **2**.	Go to step **4**.
2	**CHECK EXTERNAL DEVICE INSTALLATION.** Check if an external device is installed near the GPS antenna or unit.	Is the check result OK?	Go to step **3**.	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to step **3**.
3	**CHECK DIAGNOSTIC MODE.** Check the GPS item on the {Line Diag} screen. • Navigation system: <Ref. to ETM-36, Navigation System.>	Is the display OK?	Go to step **5**.	Go to step **4**.
4	**CHECK GPS ANTENNA.** Check that the GPS antenna connector is connected.	Is the connector connected?	Replace the navigation assembly. <Ref. to ETM-37, Navigation Body.>	Replace the GPS antenna. <Ref. to ETM-38, GPS Antenna.>
5	**INSPECTION OF VEHICLE SPEED SENSOR.** Read the DTC of «Brake Control System» using the Subaru Select Monitor. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to VDC(diag)-40, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK VEHICLE SPEED SIGNAL.** Using Subaru Select Monitor, check the following items in «Data Monitor» of «Infotainment». <Ref. to INF(diag)-17, Data Monitor.> • «Speed»	Is the check result OK?	Replace the navigation assembly. <Ref. to ETM-37, Navigation Body.>	Check the VDC CM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

11.CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT

Possible cause:
Smart phone malfunction or unit malfunction.

	Step	Check	Yes	No
1	**CHECK COMPATIBILITY OF SMARTPHONE.** Check that the customer's smartphone is compatible with the system. • iPhone: iOS 4.3.5 or later • Android: Android 4.0 or later	Is it compatible?	Go to step **2**.	The smartphone is not compatible; therefore, it does not work with the system.
2	**ACTIVATION OF APP.** Check the SUBARU STARLINK app of the smartphone.	Is it installed?	Go to step **4**.	Go to step **3**.
3	**INSTALLATION OF APP.** Install SUBARU STARLINK app to smartphone.	Is installation successful?	Go to step **4**.	Reboot the smartphone, and install the SUBARU STARLINK.
4	**ACTIVATION OF APP.** Activate SUBARU STARLINK app.	Is SUBARU STARLINK app activated?	Go to step **5**.	Reinstall the app and activate it. If you still fail to activate it, the smartphone may be defective.
5	**CHECK BLUETOOTH CONNECTION.** Confirm the Bluetooth connection with the unit.	Is Bluetooth connection established?	Go to step **6**.	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>
6	**REBOOT THE SMARTPHONE.** 1) Reboot the smartphone. 2) Reinstall the SUBARU STARLINK app.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **7**.
7	**CHECK POWER SUPPLY.** Turn the ignition to OFF → ACC ON.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **8**.

	Step	Check	Yes	No
8	**DELETE CACHE INFORMATION OF THE UNIT.** Delete cache information of the unit. Refer to the Notes in the margin. NOTE: 1. Select SUBARU STARLINK from the APPS screen. 2. On the SUBARU STARLINK display (including an error message screen), press and hold the right bottom corner of the screen for 30 seconds or more. 3. Lift your finger off the screen. If the message [Select Audio Source] appears when you lift your finger off the screen, the cache information is successfully deleted.	Is it operating normally?	Cache information temporary stored in the unit was corrupted. Currently, it is normal.	Perform the procedures described on "Check SUBARU STARLINK service". <Ref. to INF(diag)-65, CHECK SUBARU STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>

12.CHECK SUBARU STARLINK SERVICE

Possible cause:

Smart phone malfunction, radio wave environment influence, STAR LINK side influence or unit malfunction.

	Step	Check	Yes	No
1	**CHECK SMARTPHONE.** Check the smartphone connection.	Can the smartphone connect the Internet?	Go to step **4**.	Go to step **2**.
2	**CHECK RADIO WAVE CONDITION.** Move to a location where the radio wave condition is good, and confirm the connection.	Can the smartphone connect the Internet?	Go to step **4**.	Go to step **3**.
3	**CHECK RADIO WAVE CONDITION.** Communication network gets busy at times even in a good radio wave location. In this case, wait for some time and then try again.	Can the smartphone connect the Internet?	Go to step **4**.	The smartphone may be defective.
4	**CHECK SUBARU STARLINK.** Check service provision status with SUBARU STARLINK.	Is there any problem in the service provision status?	Try to connect after the problem in service provision is solved.	Replace the audio or navigation unit. <Ref. to ETM-11, Audio.> <Ref. to ETM-37, Navigation Body.>

17.Service Diagnostics Mode

A: OPERATION

NOTE:
Contents indicated in this section generally describe inspection procedures to be performed when Subaru Select Monitor cannot be used. However, some of the inspections described here cannot be performed with Subaru Select Monitor.
For the items that Subaru Select Monitor is not supporting, perform the inspections by referring to information indicated in this section.

1. PROCEDURE TO SWITCH TO SERVICE DIAGNOSTICS MODE

1) Turn the ignition switch to ACC.
2) Press “TUNE/SCROLL” knob six times while pressing “HOME” button.

2. SERVICE INSPECTION

Connection

On Service Menu, click “Connection” to display the following items.
OK: Each connection device is connected properly.
NG: Connection is not established, or connection status (including harness) is faulty.

NOTE:
Check the external connection terminals (USB 1, USB 2 and AUX) by connecting memory or a pin jack for inspection.
Check the connection status of the connector and harness. If there are no problems, the connection device or unit could be faulty.
The following shows information to be displayed and its description.

Item	Item detection method	OK judgment condition	Note
GPS	Direct line	GPS antenna is connected. (NG is displayed when short circuit is detected.)	With navigation only
MIC	Direct line	(i87) No. 6 falls to GND level.	—
Rr_CAM	Direct line	Synchronized signals from the camera are input to (i146) No. 3.	—
AUX	Direct line	(i87) No. 25 falls to GND level.	—
USB1	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
USB2	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
SXM	Direct line	XM-ANT is connected. (NG is displayed when short circuit is detected.)	It takes approx. 30 seconds to become recognizable.
UART	Communication	A/C control panel: UART communication is completed properly. A/C CM: A/C CM connection notice is received through UART communication from the A/C control panel.	—
CAN	Communication	CAN communication is completed properly.	—

Function Check

1) Panel & Steering Switch Check Mode
Once the screen is displayed, press the push switches to check that the number of pushed switches matches the number shown in pushed SW.
If the number of SW does not match, SW conditions are not properly recognized. Therefore, perform inspection for unrecognized switches.
In addition, turn the rotary switch clockwise or counterclockwise to check that the screen indicates correct status according to the operation. If the screen display does not match the actual operation, the rotary SW may be faulty. Perform inspection for the rotary SW.

NOTE:
The following shows information to be displayed and its description.

Item	Display	Contents
Result	Pressed	Pressing of switch is detected.
Number of switch pushed	1	One pressed switch is detected.
	2	Two pressed switches are detected.
	3	Three pressed switches are detected.
	4	Four pressed switches are detected.
Direction of switch rotation	+ direction	The rotary switch is turned clockwise.
	– direction	The rotary switch is turned counterclockwise.

2) Touch Switch Check

NOTE:
The Subaru Select Monitor does not have the Touch Switch Check function.
Once the screen appears, touch the screen. + (cursor) appears where you touched.

NOTE:
The following shows information to be displayed and its description.

Item	Contents
+ (Cursor)	Appears when the screen is touched. The displayed white-outlined + (cursor) stays on, even when a touching finger is removed, until the screen is switched.

3) Microphone Check
With the microphone input level screen displayed, make sound toward the microphone.
Fluctuate the sound volume to check that the microphone input level changes accordingly.
If the input level does not become green or the input level does not change even when the sound volume is fluctuated, the microphone may be faulty.

NOTE:
The microphone input function is enabled while this screen is displayed.
- The sound volume is indicated in eight levels.

The maximum input volume of microphone is equally divided into eight levels from level 0 to level 7.
- The microphone input level is sampled every 100 ms, and the result is indicated in eight levels.

Display of the input level is also updated every 100 ms.
The microphone input level gauge is updated even during recording.
4) System Sensors Check
GPS related check: Status of the GPS signal reception can be checked. When there is faulty in reception status, position detection or date indication, re-check the reception status at a location with a fine view and no obstacles around that will interrupt the signal reception. When normal condition is still not obtained, the GPS antenna may be faulty.
- GPS/Reception number: Normal when it is indicated in blue.
- GPS/Status: Normal when OK is indicated.
- GPS/Measurement ratio 3D:
- GPS/Measurement ratio 2D:

• GPS/Date: Normal when current time is indicated. When current date/time is not indicated, click the Date Setting button to set the current date on the displayed date setting screen.
• GPS/Position: Normal when longitude and latitude of the current position are indicated.

SPD check: Status of the vehicle speed sensor signal can be checked.

1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
2. When VDC CM detected DTC, clear the DTC.
3. Drive the vehicle at 9 km/h (6 MPH) or more.
4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
5. Vehicle speed is not displayed. Or, when different vehicle speed is indicated, check if CAN system DTC is stored. If so, perform the diagnosis according to the DTC. When CAN system DTC is not stored, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the CAN system and vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.

Gyro sensor related check: Status of the Gyro sensor signal can be checked. If fault is found with the Gyro sensor related indications, the main unit could be faulty.

• Gyro sensor/Gyro Voltage: Shake the vehicle to the left and right to check that the voltage changes.
• Gyro/Distance correction study situation: Study situation can be checked.
• Reset: Press and hold the Reset button for three seconds to reset the pulse count of SPD, relative bearing of Gyro sensor, relative angle of inclined angle sensor.

NOTE:
The following shows information to be displayed and its description.

Item	Display	Contents
GPS/Reception number	Blue	When notification of “Positioning with collected data is used” is received from the GPS reception device. (Status: In-use)
	Yellow	When notification of “Tracking in progress” is received from the GPS reception device. (Status: Reception in progress)
	Transparent	When notification of “Positioning with collected data is not used” or “Searching in progress” is received from the GPS reception device. (Status: Not used)
GPS/Status	OK (H3D)	When three-dimensional positioning (Hyper 3D positioning) using satellites with less accuracy degradation is used.
	OK (H2D)	When two-dimensional positioning (Hyper 2D positioning) using satellites with less accuracy degradation is used.
	OK (3D)	When three-dimensional positioning is used.
	OK (2D)	When two-dimensional positioning is used.
	NG	When the positioning data is not available.
	error	When a reception error occurred.
	—	For cases other than above.
GPS/Measurement ratio 3D		Displays ratio of three-dimensional positioning satellites.
GPS/Measurement ratio 2D		Displays ratio of two-dimensional positioning satellites.
GPS/Measurement ratio NG		Displays ratio of non-positioning satellites.
GPS/Date	Current date and time	Displays date information obtained from GPS in four digits for year and 24-hour clock for time. Date information is displayed as [Y/M/D].
GPS/Position (latitude)	Current position, latitude information.	Displays latitude information of the current position in “degree”, “minute” and “second”. When positioning information is not obtained, it appears as 00° 00’ 00”.

Item	Display	Contents
GPS/Position (longitude)	Current position, longitude information.	Displays longitude information of the current position in “degree”, “minute” and “second”. When positioning information is not obtained, it appears as 00° 00’ 00”.
SPD/Pulse Count	Pulse count.	Displays SPD signal status in the following format. • The number of input pulses accumulated since this screen is displayed. (Indicated in four-digit DEC code.) • The number returns to 0 after 9999. • Reset with ACC OFF/ON.
SPD/Speed	Speed.	Displays SPD signal status in the following format. • LSB: Displays in km-per-hour as 1 [km/h]. • Displays 255 [km/h] for MAX value or more, and 0 [km/h] for MIN value or less.
Gyro sensor/Gyro Voltage	Voltage value.	Voltage value (unit: V, LSB: 1 mV).
Gyro sensor/0 point Voltage	Unit: 0 point voltage.	Displays 0 point voltage of the Gyro sensor used by each company.
Gyro sensor/Relative bearing	Relative bearing.	–360.0° — +360.0°
Inclined angle sensor/relative angle	Relative angle.	Displays longitudinal inclination angle of the vehicle in the relative angle (unit: °, LSB: 1°, no sign for elevation angle, negative sign for depression angle: –), while the position when this screen appears is set as [0°].
Gyro/Distance correction study situation	Gyro/Distance correction study situation.	
Reset	Reset the following display items to [0]. • SPD pulse count • Relative bearing of Gyro sensor • Relative angle of inclined angle sensor	Press and hold the reset button for three seconds or more.

Vehicle Signal

On Service Menu, click “Vehicle Signal” to display the following items.

- Battery: Status of the battery voltage signal input can be checked.

Measure the battery voltage using a tester. System is normal when the indicated voltage is almost equivalent to the tester value. When the indicated voltage is different from the tester value, perform inspection for the power supply circuit of main unit.

- Vehicle speed: Status of the vehicle speed signal input can be checked.
  1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
  2. When VDC CM detected DTC, clear the DTC.
  3. Drive the vehicle at 9 km/h (6 MPH) or more.
  4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
  5. Vehicle speed is not displayed. Or, when different vehicle speed is indicated, check if CAN system DTC is stored. If so, perform the diagnosis according to the DTC. When CAN system DTC is not stored, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the CAN system and vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.
- IG: Status of the IG signal input can be checked.

Turn the ignition switch to ON, and check that the IG indication appears as ON. If the indication does not appear as ON, check the IG signal line.

- ILL+: Status of the illumination signal input can be checked.
  1. Before starting inspections, turn the ignition switch to ON.
  2. Set the lighting switch to TAIL (small) position.

  Make sure that the bright switch is not turned ON at this time.

3. Check that ON lights in ILL+ and then the screen becomes dim.
   ON: Normal.
   OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

- PKB: Status of the parking brake signal input can be checked.
- GPS/Position: Normal when longitude and latitude of the current position are indicated.

Pull the parking brake switch. Check that ON is displayed in PKB.
ON: Normal.
OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

- Bright: Status of the Bright signal input can be checked.

Operate the dial-type bright switch next to the wheel steering. System is normal when the signal indicates ON.
If the signal does not indicate ON, check the bright switch.

- REV: Status of the reverse range signal input can be checked.

1. Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition switch to ON.
2. Pull the parking brake switch and depress the brake pedal, then place the select lever in reverse.
3. Check that ON is displayed in REV.
   ON: Normal.
   OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

NOTE:
The following shows information to be displayed and its description.

Item	Display	Contents
Battery voltage	Status of battery voltage	0 [V] — 24.0 [V] (Minimum unit: 0.1 [V])
Vehicle speed	Status of vehicle speed	0 [km/h] — 255 [km/h] (Minimum unit 1 [km/h])
IG	ON	IG power supply ON
	OFF	IG power supply OFF
ILL+	ON	ILL+ signal ON
	OFF	ILL+ signal OFF
PKB	ON	PKB signal ON
	OFF	PKB signal OFF
Bright	ON	Bright with dimmer
	OFF	Bright without dimmer
REV	ON	REV signal ON
	OFF	REV signal OFF

System Information

On Service Menu, click “System Information” to display the following items.

- Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.
- Memory Initialization: This function is used to initialize information stored in the main unit memory.

CAUTION:
When this function is used, music information and navigation setting information saved in the main unit will be deleted. Therefore, obtain permission from the user before using this function.
When initializing the memory, perform procedures by following the indicated messages. Also, when clicking the OK button, press and hold it.

Product Information

On Service Menu, click “Product Information” to display the following items.

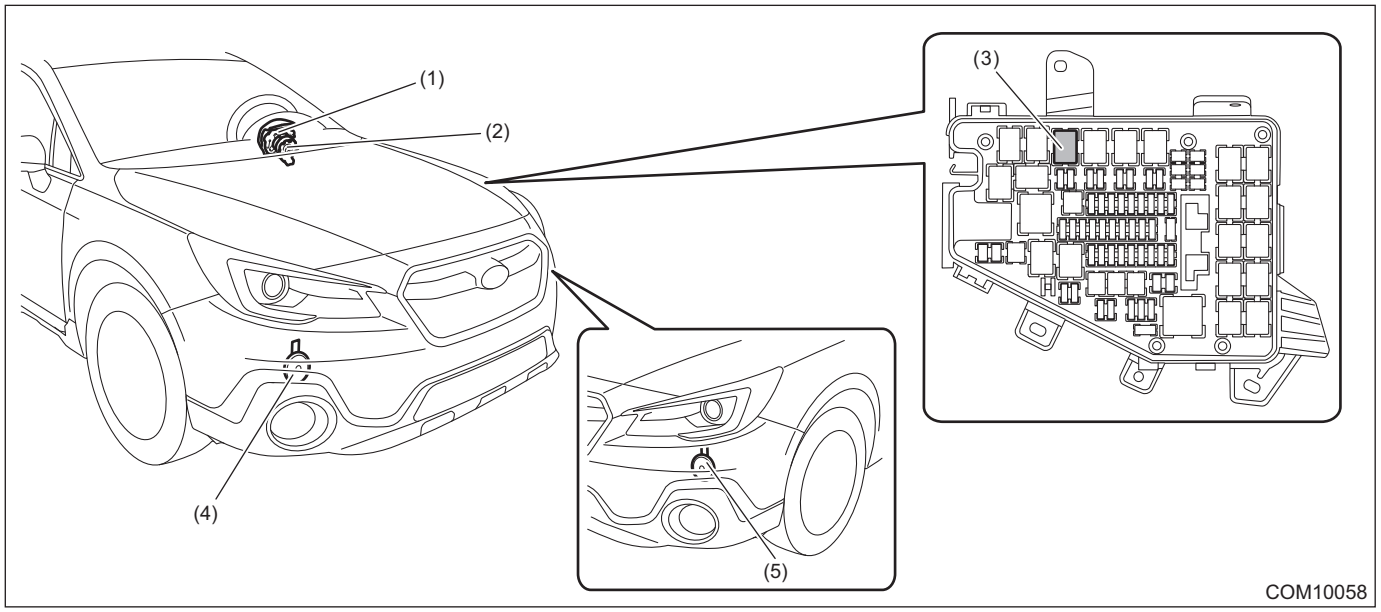
- Product Information: Displays the product number of the main unit.
- Connectivity ID: ID that is required upon using the STARLINK functions. When this ID is not indicated, the STARLINK functions are not accessible.

• Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.

Diagnostic Recorder

On Service Menu, click “Diagnostic Recorder” to display the following items.
• ON/OFF: Set ON/OFF for the diagnostic recorder function.
• Data download: Output the data of the diagnostic recorder to USB.

COMMUNICATION SYSTEM



COM

Page

1. General Description 2
2. Relay and Fuse 3
3. Horn System 4
4. Horn 5
5. Horn Switch 8

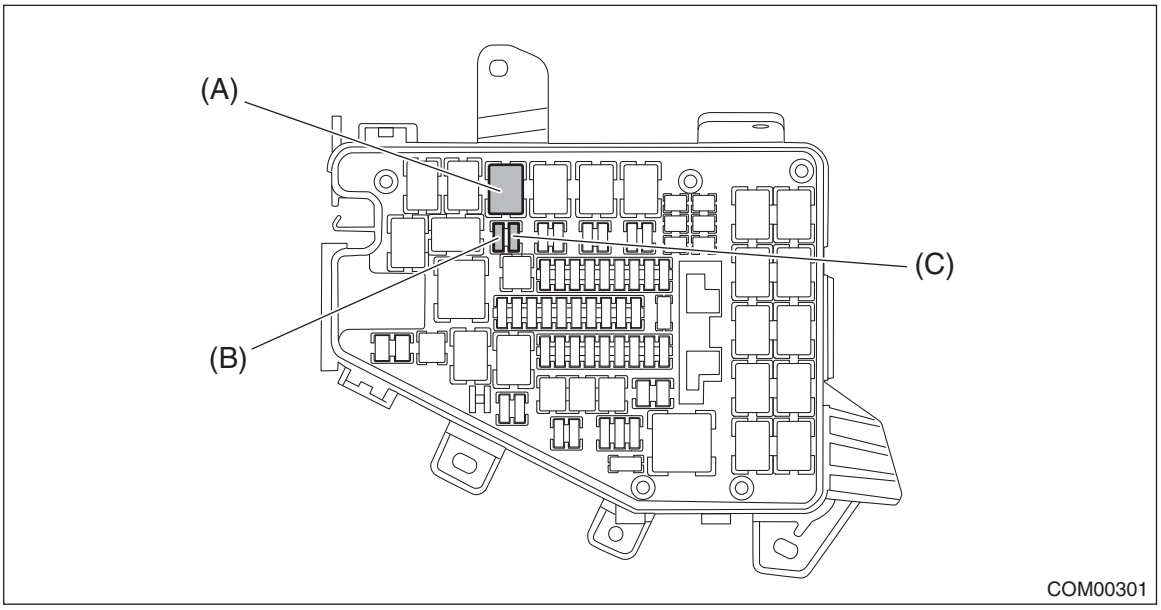
1. General Description

A: COMPONENT

(1) Horn switch (driver's airbag module ASSY)
(2) Roll connector
(3) Horn relay
(4) Horn ASSY - Lo
(5) Horn ASSY - Hi

B: CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- When replacing the parts provided with memory functions such as audio, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



C: PREPARATION TOOL

1. GENERAL TOOL

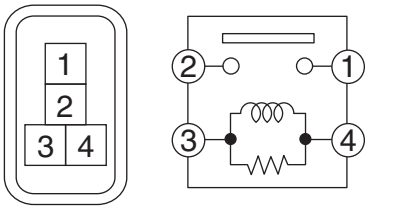
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Horn relay	(A)
	Fuse 7.5 A (horn ASSY - Lo)	(B)
	Fuse 7.5 A (horn ASSY - Hi)	(C)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>



B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Horn System

A: WIRING DIAGRAM

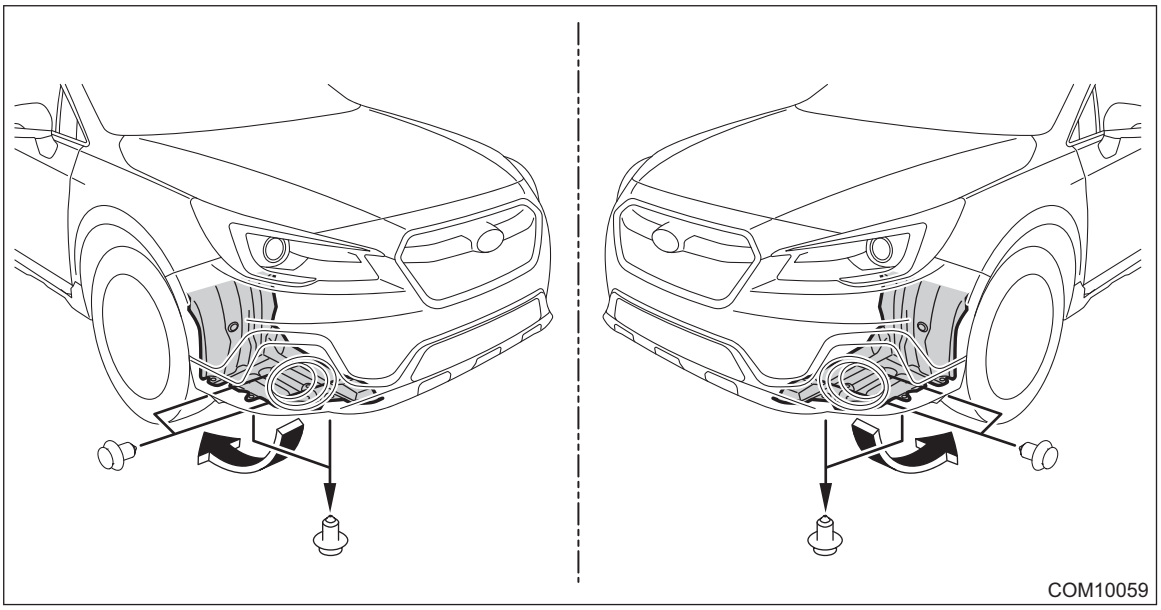
Refer to “Horn System” in the wiring diagram. <Ref. to WI-259, WIRING DIAGRAM, Horn System.>

B: INSPECTION

Symptoms	Inspection steps
Horn does not sound	1. Check the fuse.
	2. Check the horn relay.
	3. Check the roll connector.
	4. Check the horn switch.
	5. Check the horn assembly.
	6. Check the harness.

C: NOTE

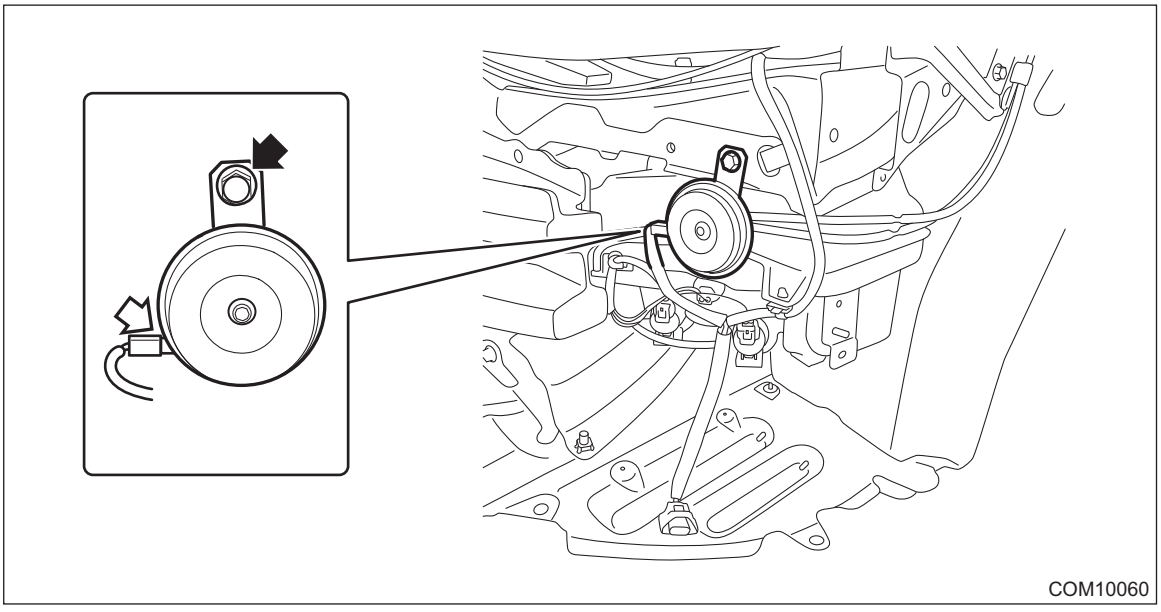
For procedure of each component in the horn system, refer to the respective section.



- Horn assembly: <Ref. to COM-5, Horn.>
- Horn switch: <Ref. to COM-8, Horn Switch.>

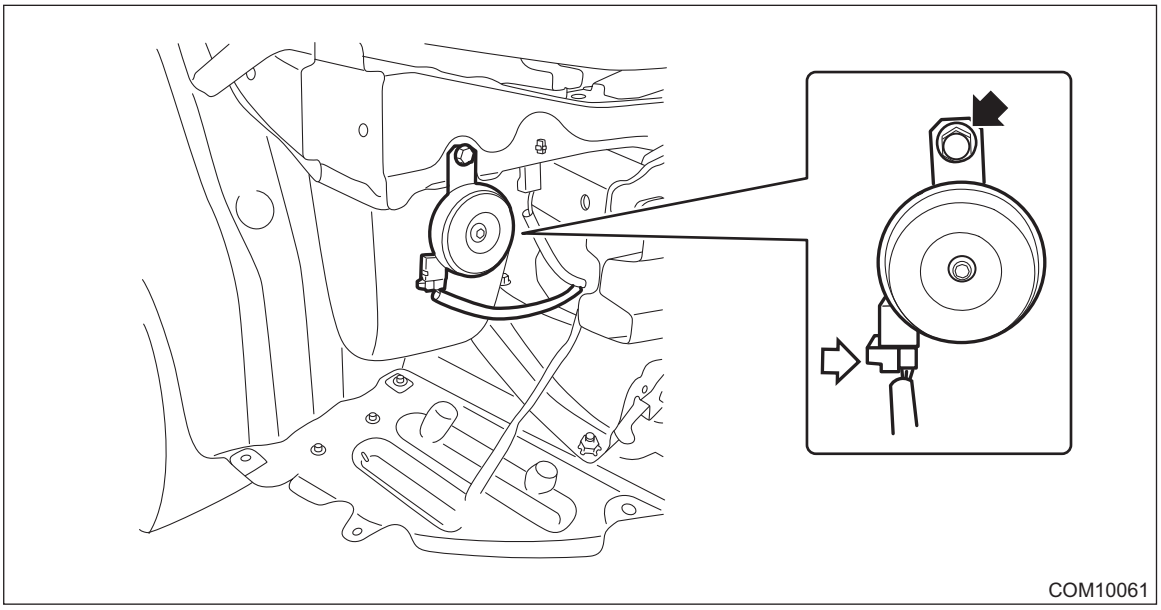
4. Horn

A: REMOVAL



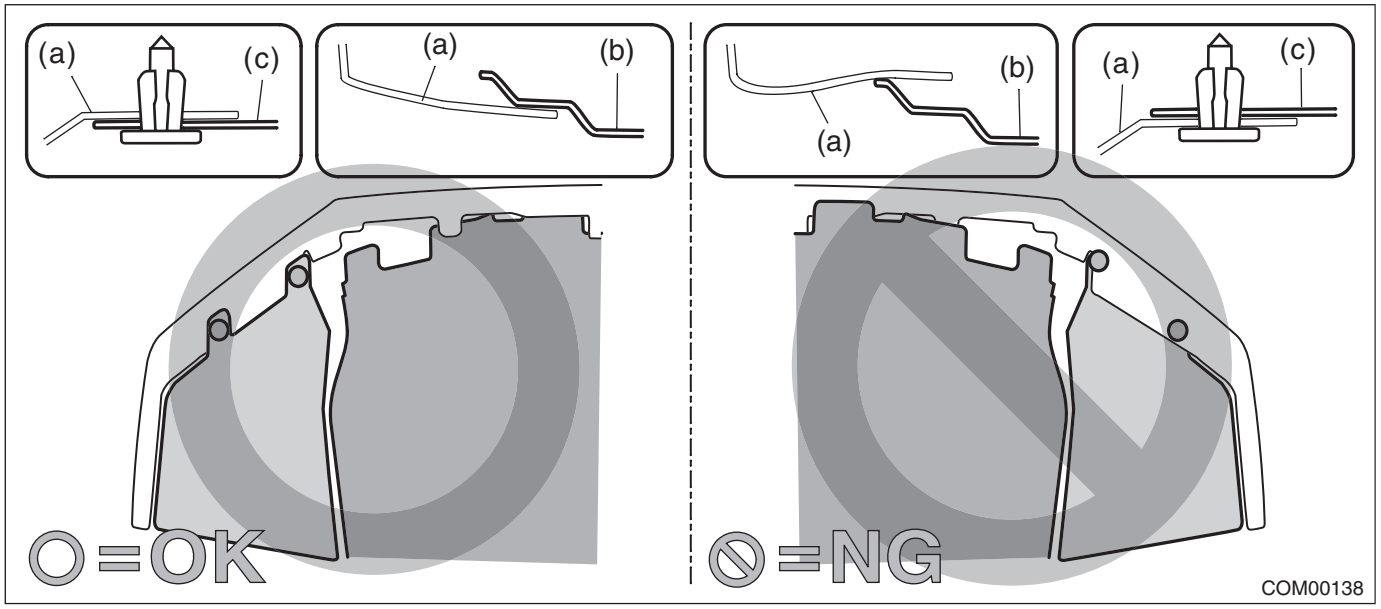
CAUTION:
When removing the horn, do not remove the bumper face - front. Bracket connection portion of the bumper face may become damaged.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the clips, and turn over the mud guard - front.



NOTE:
- Hi side: Turn over the mud guard - front LH.
- Lo side: Turn over the mud guard - front RH.

4) Remove the horn assembly - Hi.
   (1) Disconnect the connector.
   (2) Remove the horn bracket mounting bolt, and remove the horn assembly - Hi.

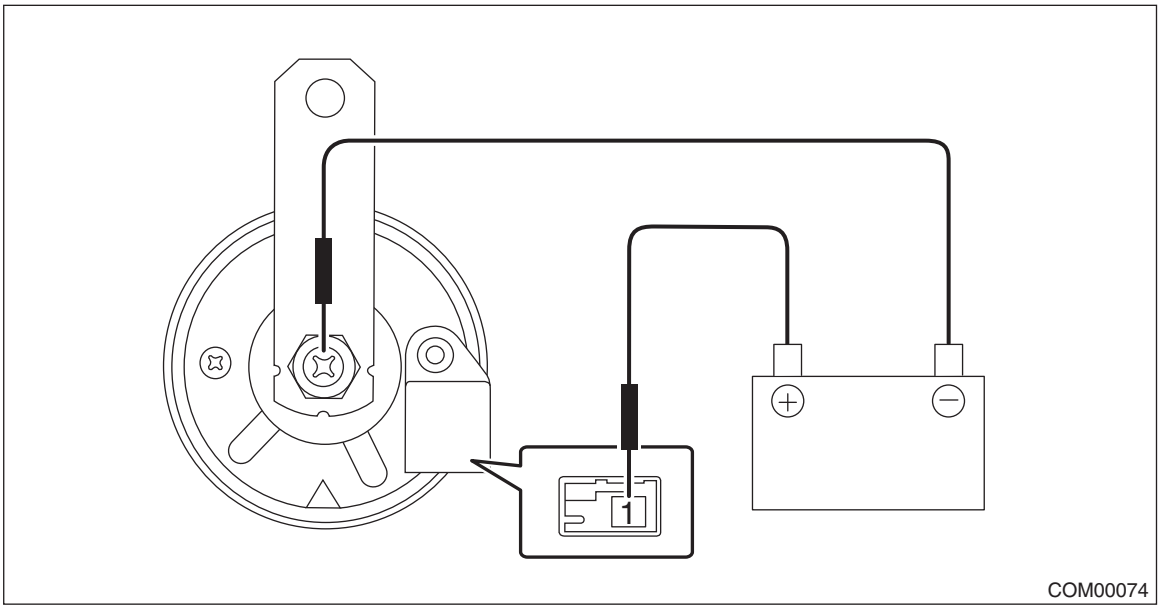


5) Remove the horn assembly - Lo.
   (1) Disconnect the connector.

(2) Remove the horn bracket mounting bolt, and remove the horn assembly - Lo.

B: INSTALLATION

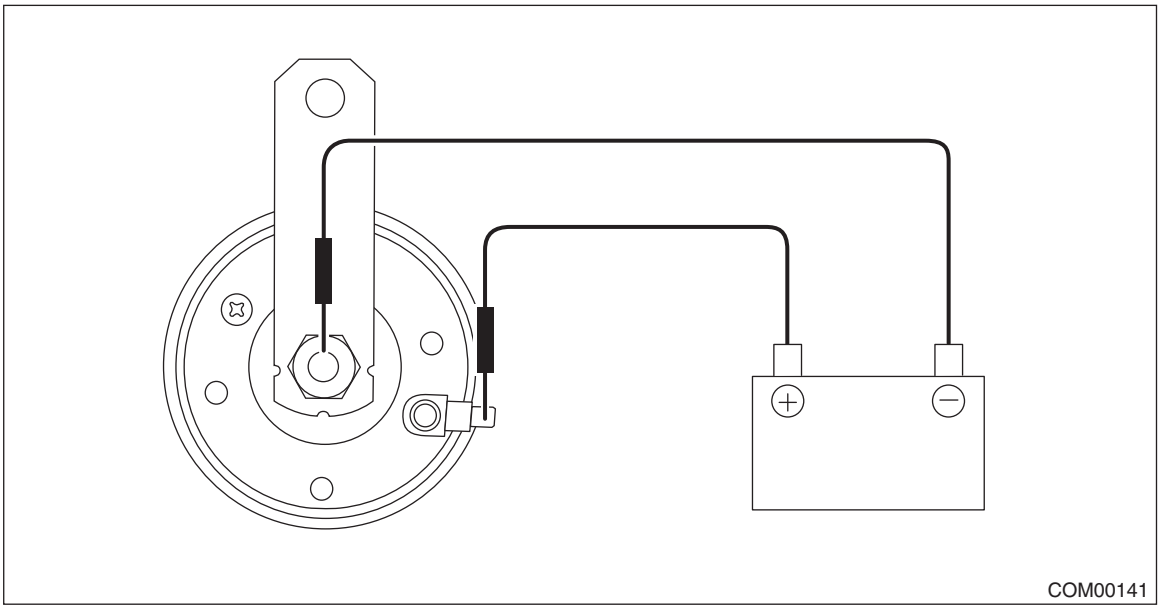
CAUTION:
Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the horn assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the mud guard - front.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Remove the horn assembly (Hi side & Lo side). <Ref. to COM-5, REMOVAL, Horn.>
2) Check the horn sounds when applying the battery voltage to the horn assembly.

- Horn assembly - Lo side

Terminal No.	Inspection conditions	Specification
1 (+) — Horn case (–)	Connect battery to the terminals	Sounds

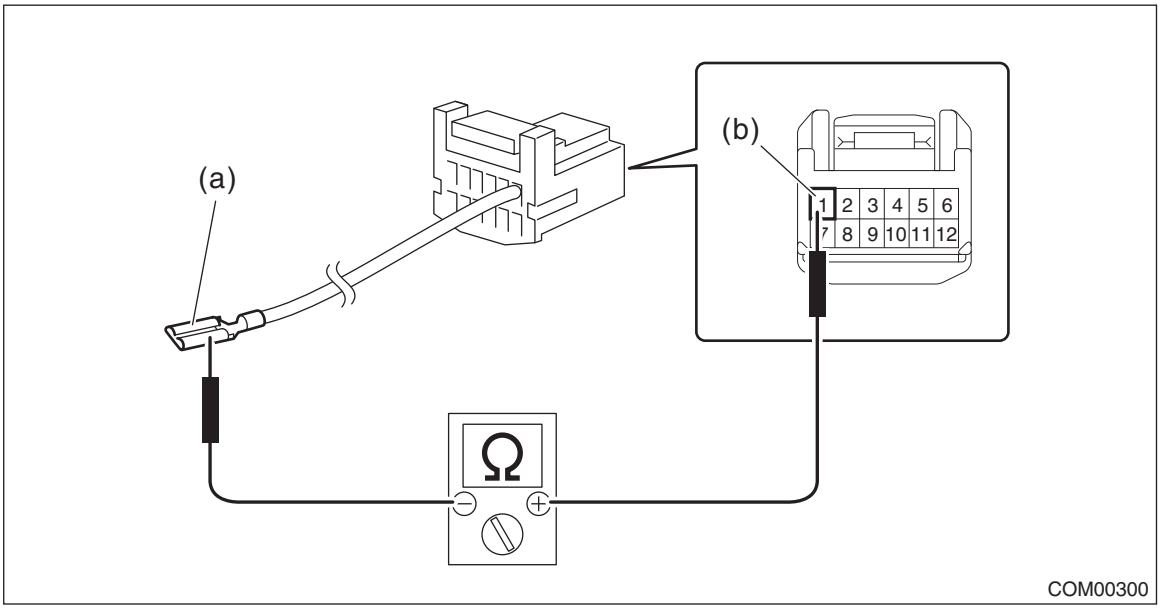
- Horn assembly - Hi side

Terminal No.	Inspection conditions	Specification
1 (+) — Horn case (–)	Connect battery to the terminals	Sounds

3) If it does not operate normally, replace the horn assembly.

5. Horn Switch

A: NOTE



- Horn switch is a unit with the driver's airbag module.
- Refer to "Airbag System" for removal and installation procedures of the driver's airbag module. <Ref. to AB-31, Driver's Airbag Module.>

B: INSPECTION

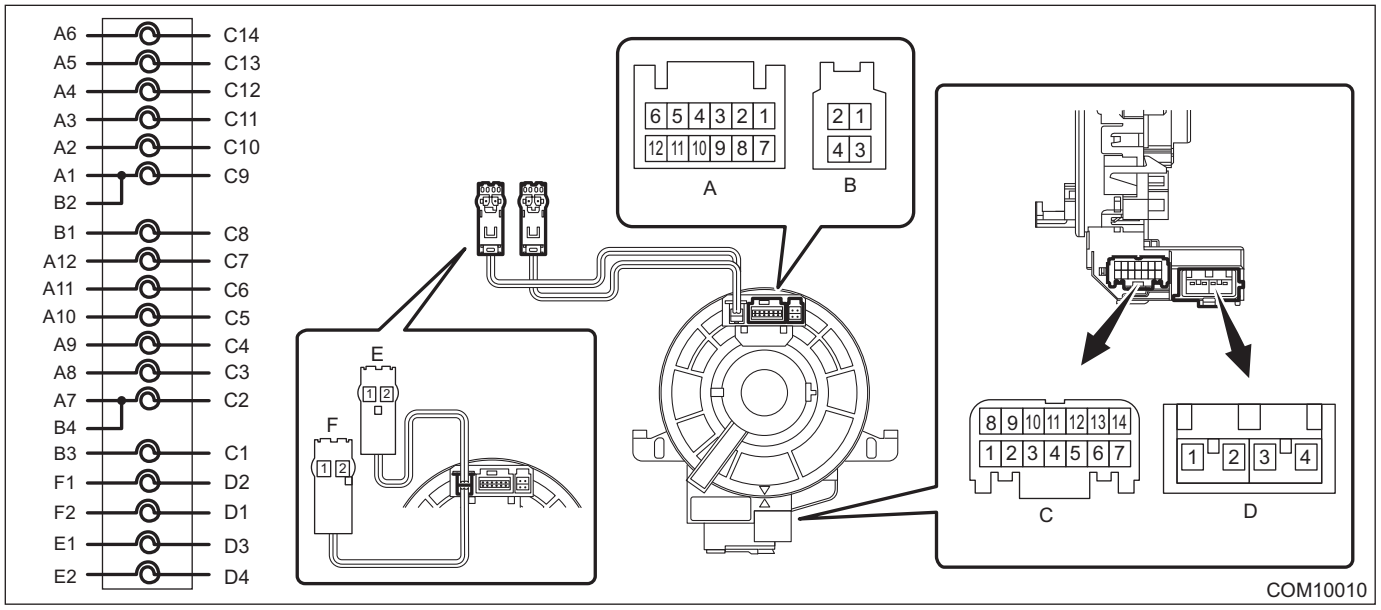
1. CHECK HORN SWITCH

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
3) Check that the connection of the horn switch harness connector is correct.
4) Measure the resistance between connectors.

Preparation tool:
Circuit tester

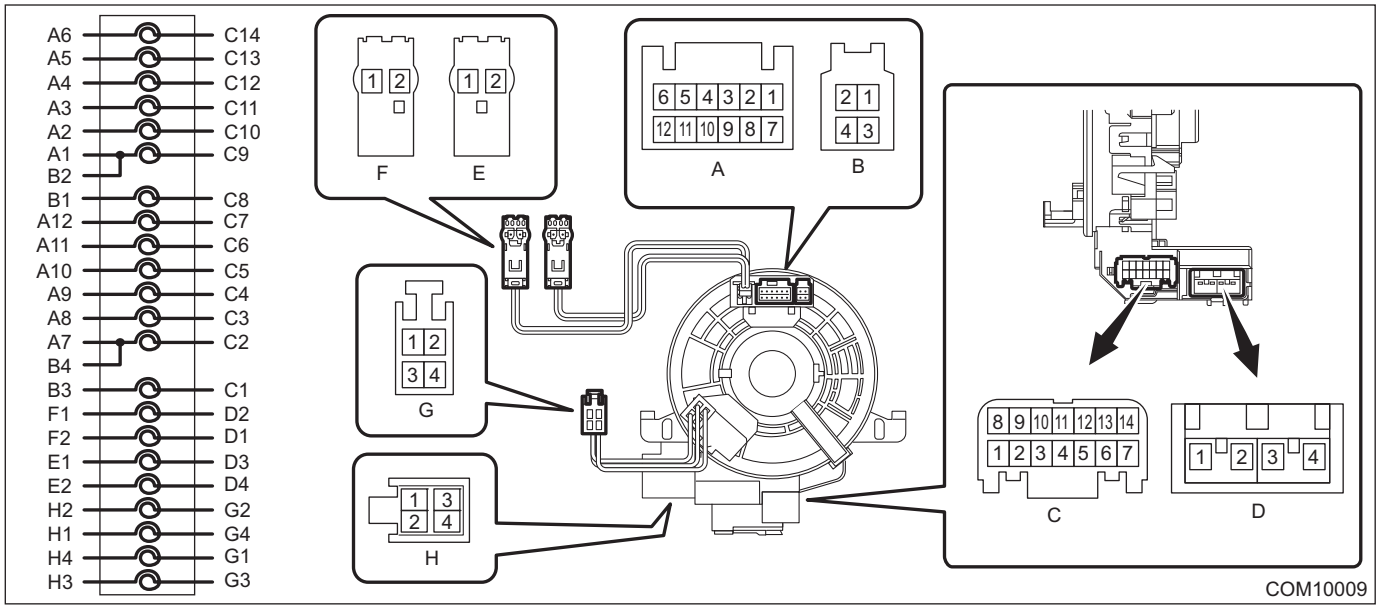
(a) Ground terminal (b) Horn switch terminal

Terminal No.	Standard
Horn switch terminal — ground terminal	Less than 1 Ω



5) Replace the driver's airbag module if the inspection result is not within the standard value.

2. CHECK ROLL CONNECTOR



CAUTION:
If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Remove the roll connector. <Ref. to AB-59, REMOVAL, Roll Connector.>
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

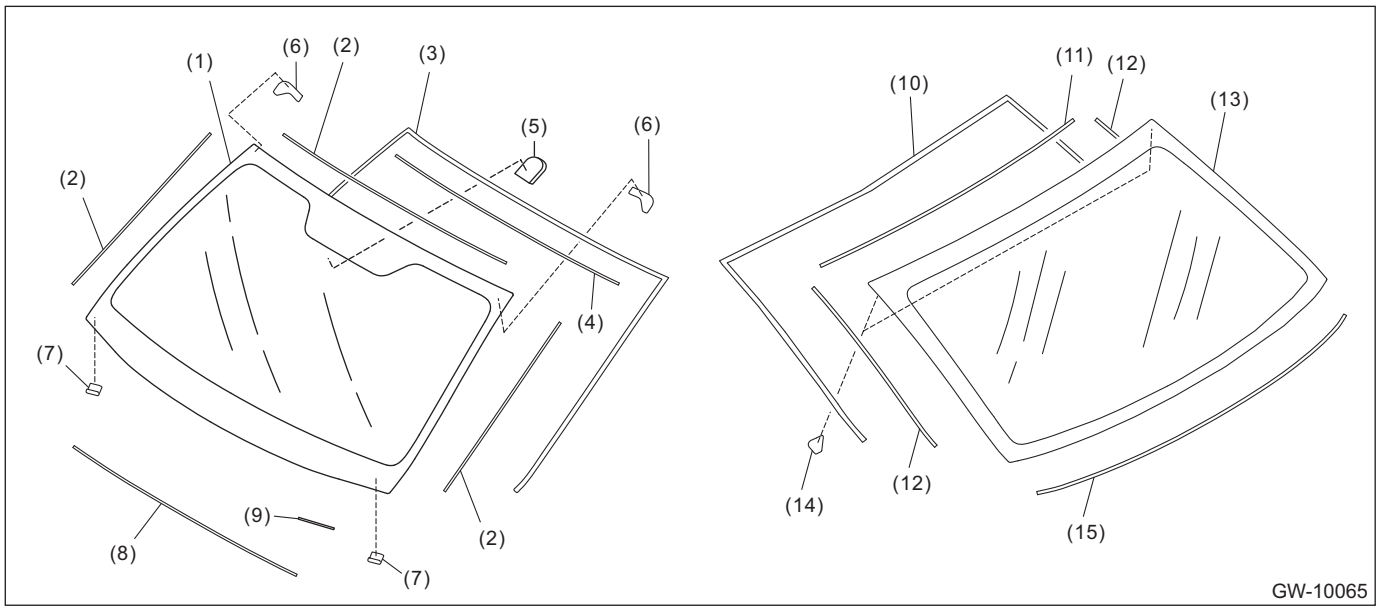
- Without steering heater

- With steering heater

Terminal No.	Inspection conditions	Standard
A1 — C9	Always	Less than 1 Ω

3) Replace the roll connector if the inspection result is not within the standard value.

GLASS/WINDOWS/MIRRORS

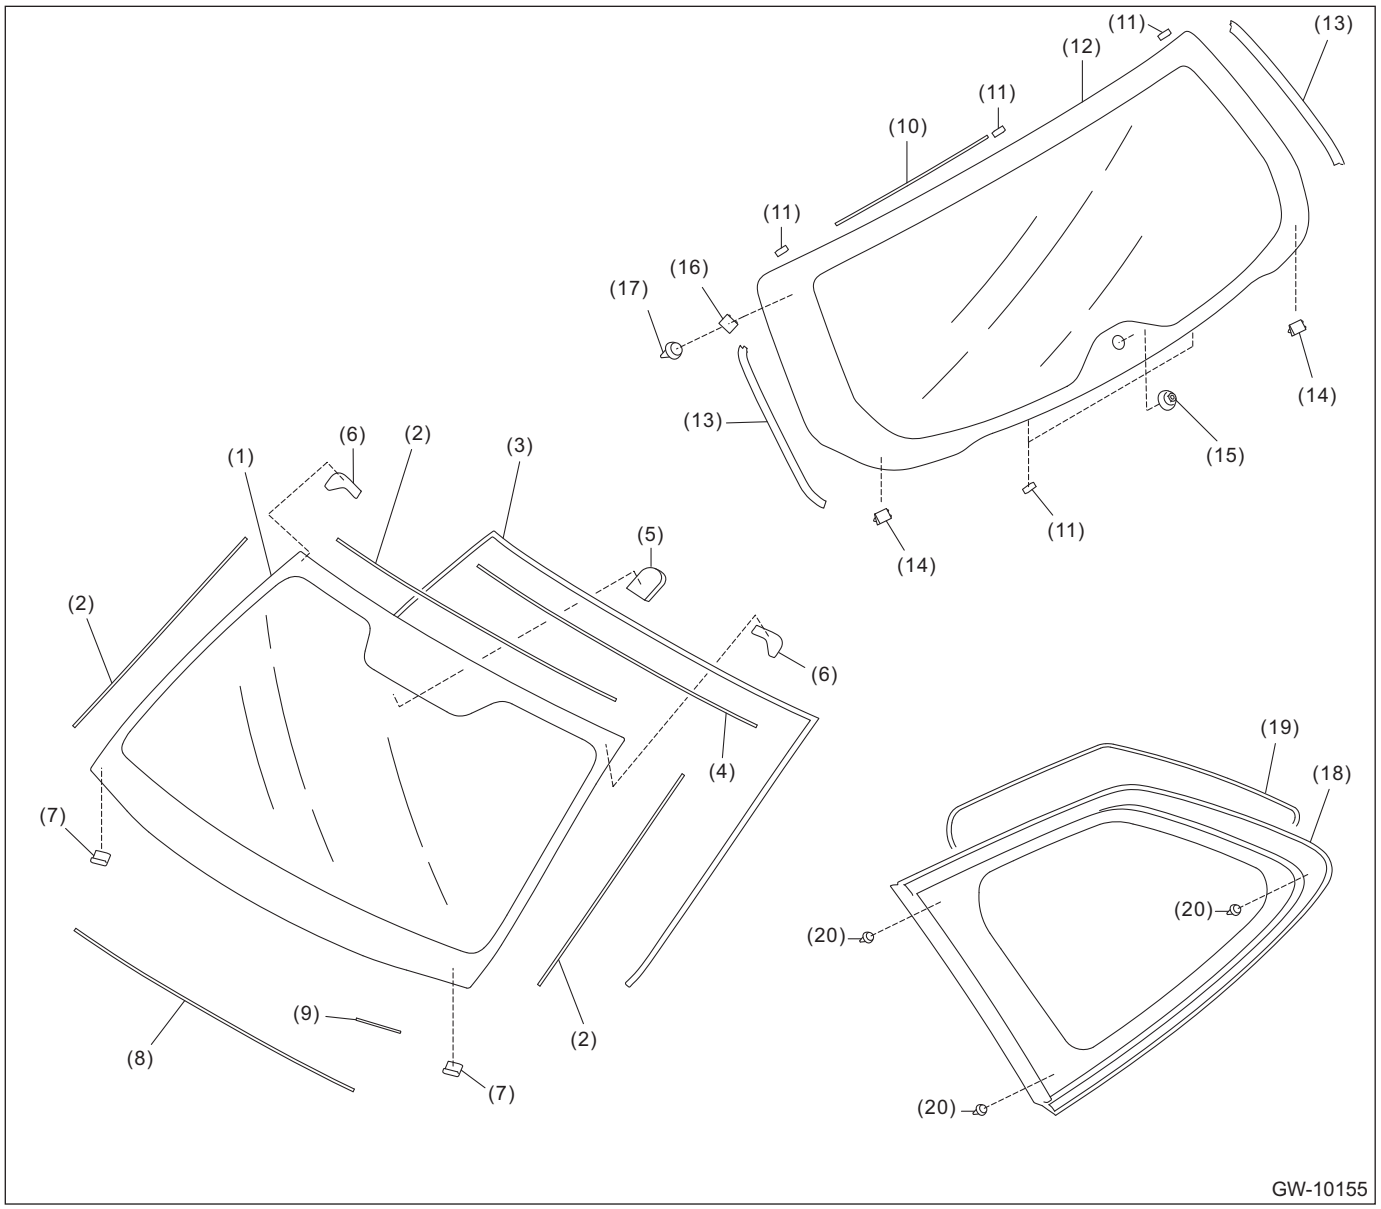


GW

		Page
1.	General Description	2
2.	Relay and Fuse	9
3.	Power Window System	11
4.	Power Window Control Switch	13
5.	Front Door Glass	22
6.	Front Regulator and Motor Assembly	26
7.	Remote Control Mirror System	28
8.	Outer Mirror Assembly	29
9.	Remote Control Mirror Switch	34
10.	Rear Door Glass	36
11.	Rear Regulator and Motor Assembly	39
12.	Windshield Glass	41
13.	Rear Gate Glass	55
14.	Rear Window Glass	59
15.	Rear Window Defogger System	62
16.	Rear Quarter Glass	65
17.	Rearview Mirror	68
18.	Wiper Deicer System	77

1. General Description

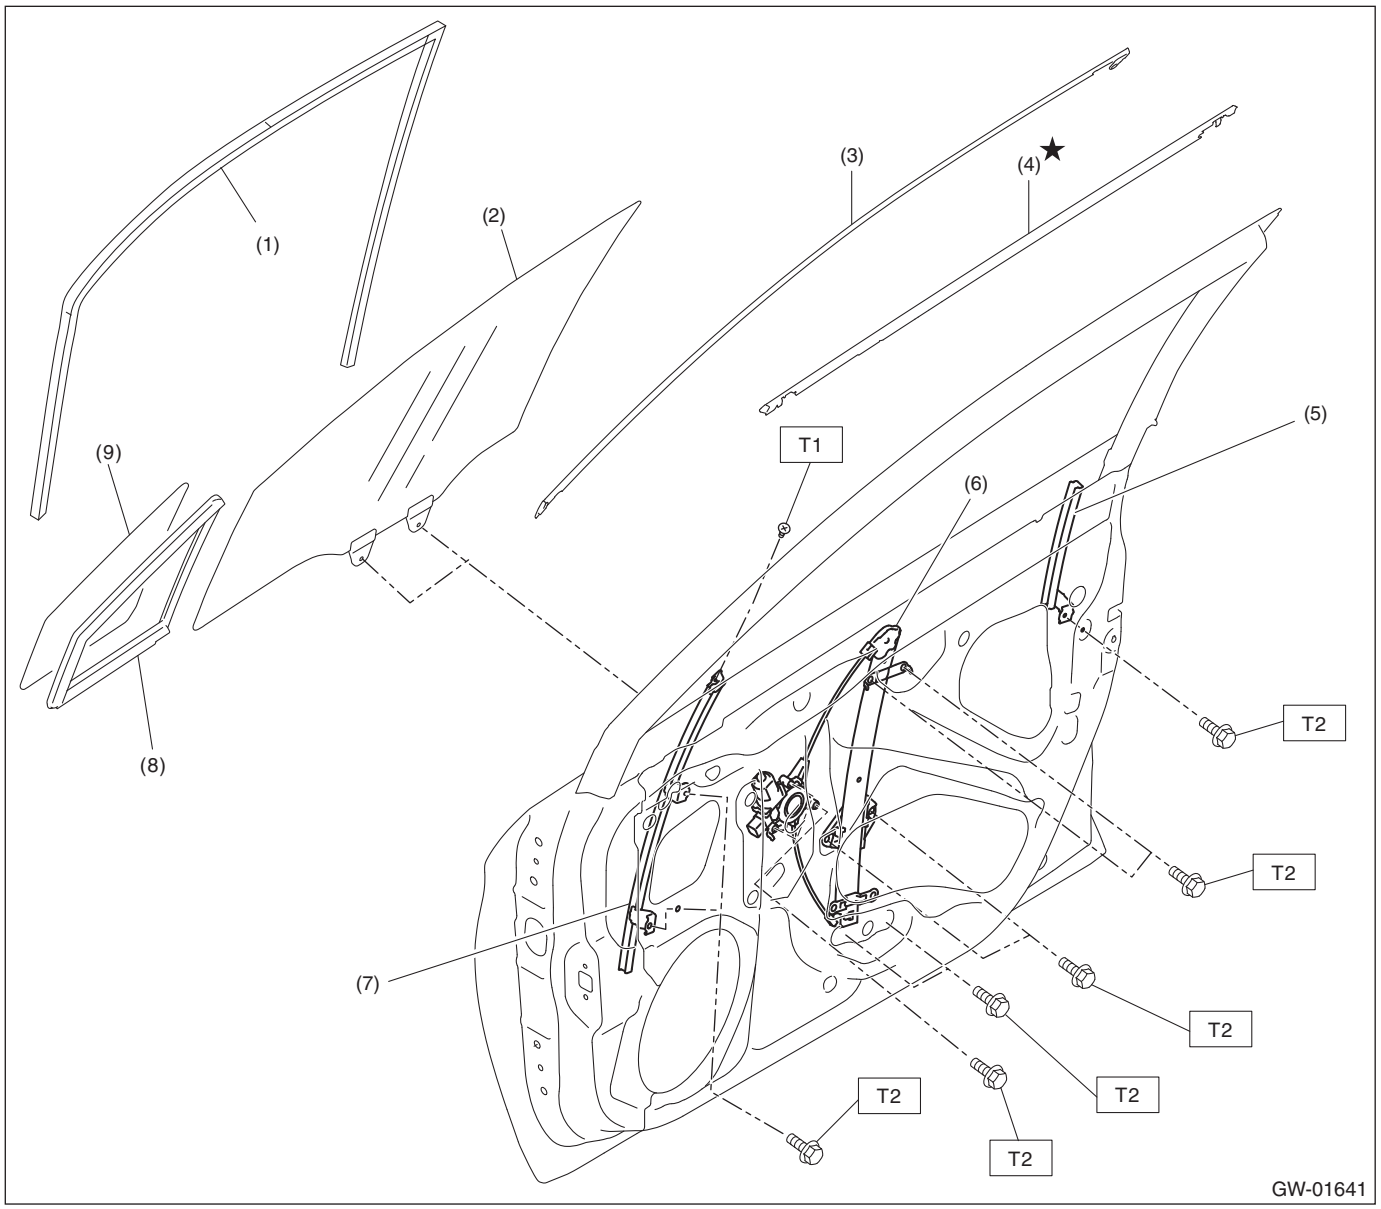
A: COMPONENT



1. FIXED GLASS (SEDAN MODEL)

(1)	Glass - front window	(6)	Locating pin - front window	(11)	Dam rubber - rear UPR
(2)	Dam rubber - front UPR	(7)	Seal - LWR	(12)	Dam rubber - rear side
(3)	Molding - front window	(8)	Dam rubber - front LWR	(13)	Glass - rear window
(4)	Seal - front window UPR	(9)	Dam rubber - front VIN	(14)	Locating pin - rear window
(5)	Base - inner mirror	(10)	Molding - rear window	(15)	Dam rubber - rear LWR

NOTE:
Base - inner mirror cannot be removed from the glass - front window.

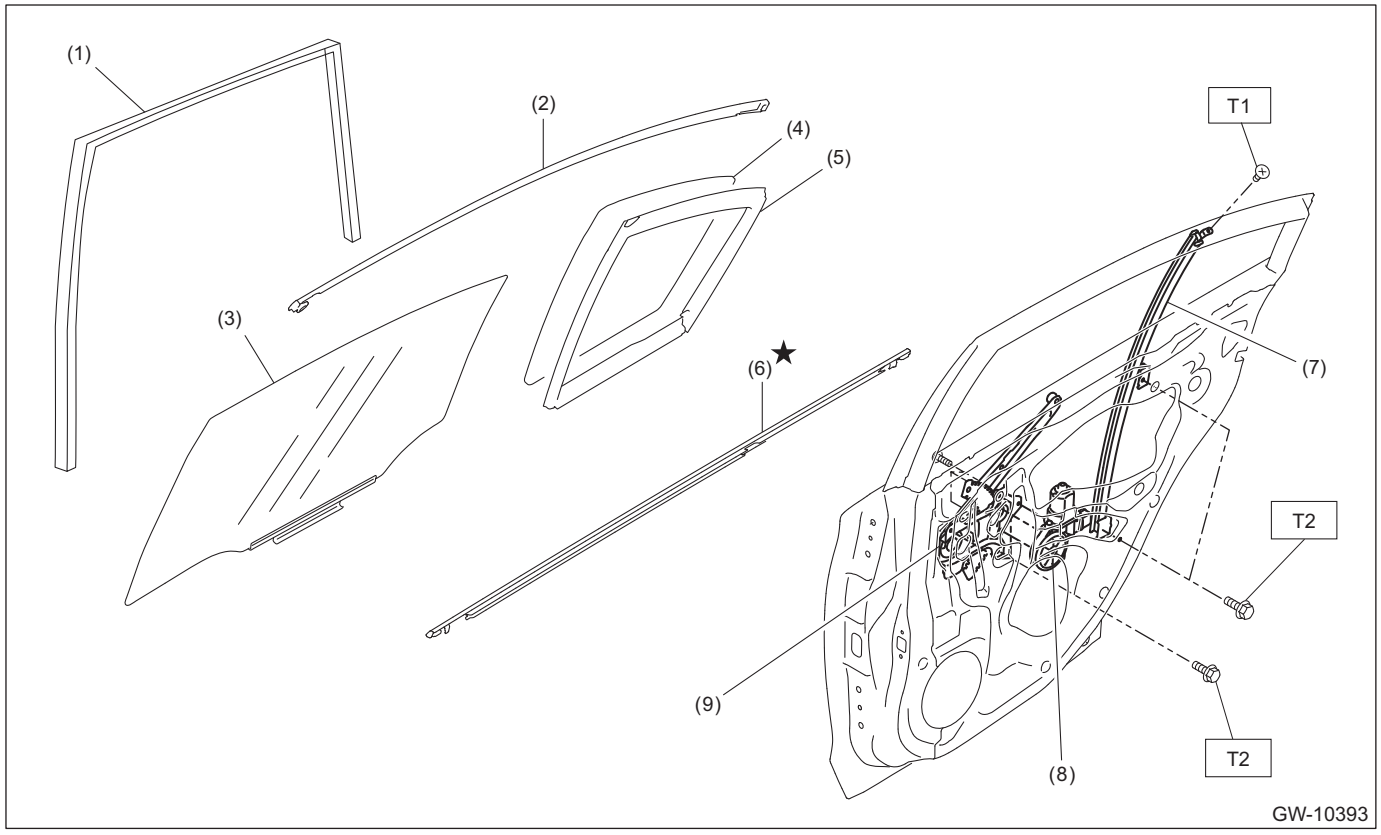


2. FIXED GLASS (OUTBACK MODEL)

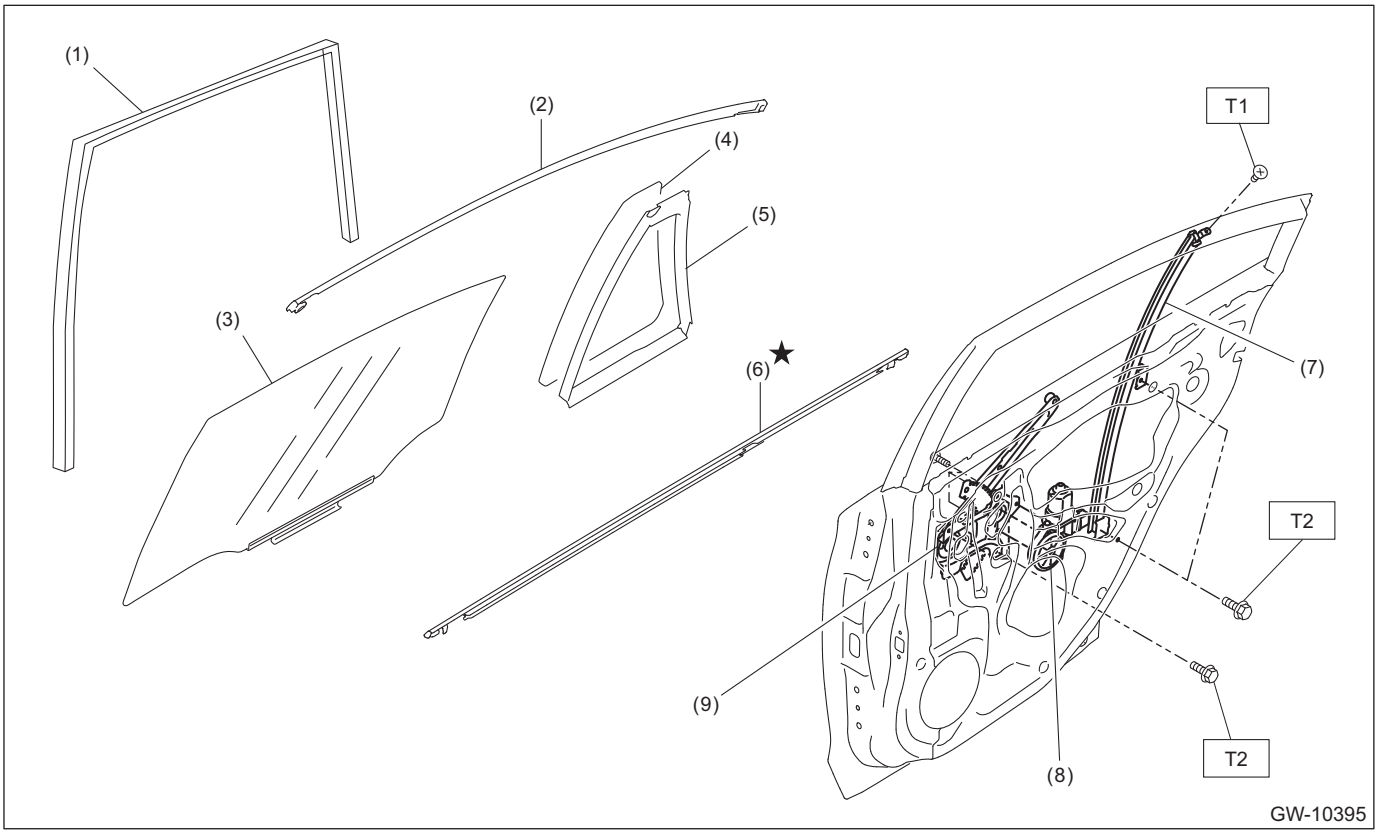
(1)	Glass - front window	(8)	Dam rubber - front LWR	(15)	Cap - pivot
(2)	Dam rubber - front UPR	(9)	Dam rubber - front VIN	(16)	Holder - rear gate upper
(3)	Molding - front window	(10)	Dam rubber - rear gate	(17)	Holder - clip rear gate
(4)	Seal - front window UPR	(11)	Spacer - rear gate	(18)	Glass - rear quarter
(5)	Base - inner mirror	(12)	Glass - rear gate	(19)	Dam rubber - rear quarter
(6)	Locating pin - front window	(13)	Molding - rear gate side (model without power rear gate)	(20)	Clip
(7)	Seal - LWR	(14)	Locating pin - rear gate		

NOTE:
Base - inner mirror cannot be removed from the glass - front window.

3. FRONT DOOR GLASS



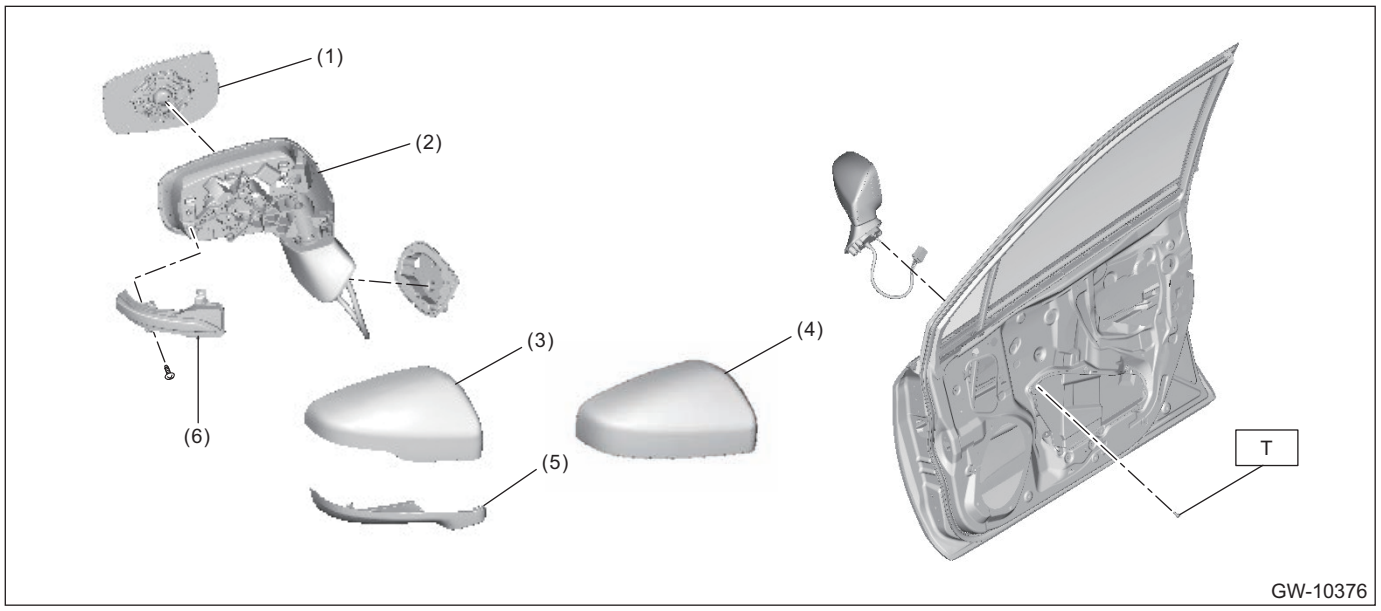
(1) Running channel - front door
(2) Glass ASSY - front door
(3) Molding - door sash front
(4) Weather strip outer - front door
(5) Sash ASSY - lower
(6) Regulator & motor ASSY - front
(7) Sash ASSY - partition
(8) Weather strip - front door partition
(9) Glass - front door partition



Tightening torque: N·m (kgf-m, ft-lb)
T1: 2.2 (0.2, 1.6)
T2: 7.5 (0.8, 5.5)

4. REAR DOOR GLASS

- Sedan model

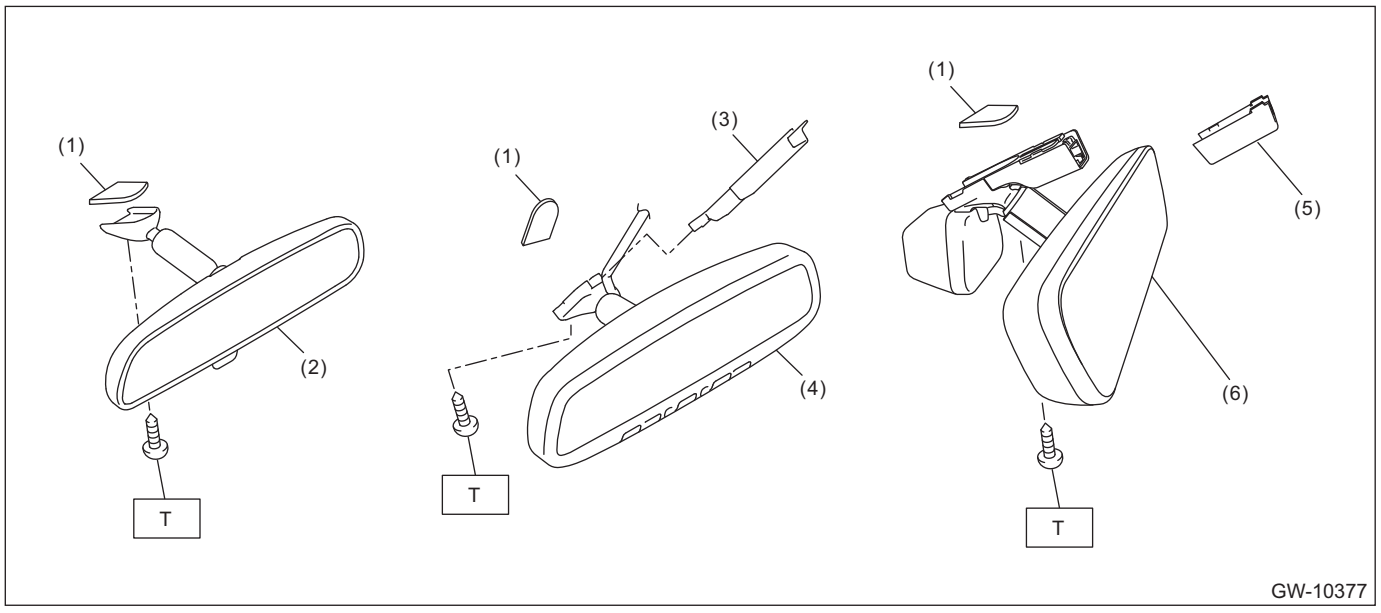


- OUTBACK model

(1) Running channel - rear door
(2) Molding - door sash rear
(3) Glass ASSY - rear door
(4) Glass - rear door partition
(5) Weather strip - rear door partition
(6) Weather strip outer - rear door
(7) Sash ASSY - rear partition
(8) Motor - rear
(9) Regulator - rear

Tightening torque: N·m (kgf-m, ft-lb)
T1: 2.2 (0.2, 1.6)
T2: 7.5 (0.8, 5.5)

5. OUTER MIRROR



(1) Mirror - repair
(2) Mirror unit - door
(3) Cover - cap outer mirror (model with side turn)
(4) Cover - cap outer mirror (model without side turn)
(5) Cover - cap outer mirror lower
(6) Light ASSY - side turn mirror (model with side turn)

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

6. REARVIEW MIRROR

(1) Base - inner mirror
(2) Mirror ASSY - inner rearview (normal type)
(3) Harness cover
(4) Mirror ASSY - inner rearview (home link type)
(5) Mirror ASSY - inner HBA
(6) Harness cover - HBA

Tightening torque: N·m (kgf-m, ft-lb)

T: 2 (0.2, 1.5)

NOTE:
Base - inner mirror cannot be removed from the glass - front window.

B: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Avoid impact and damage to the glass.

C: PREPARATION TOOL

1. SPECIAL TOOL

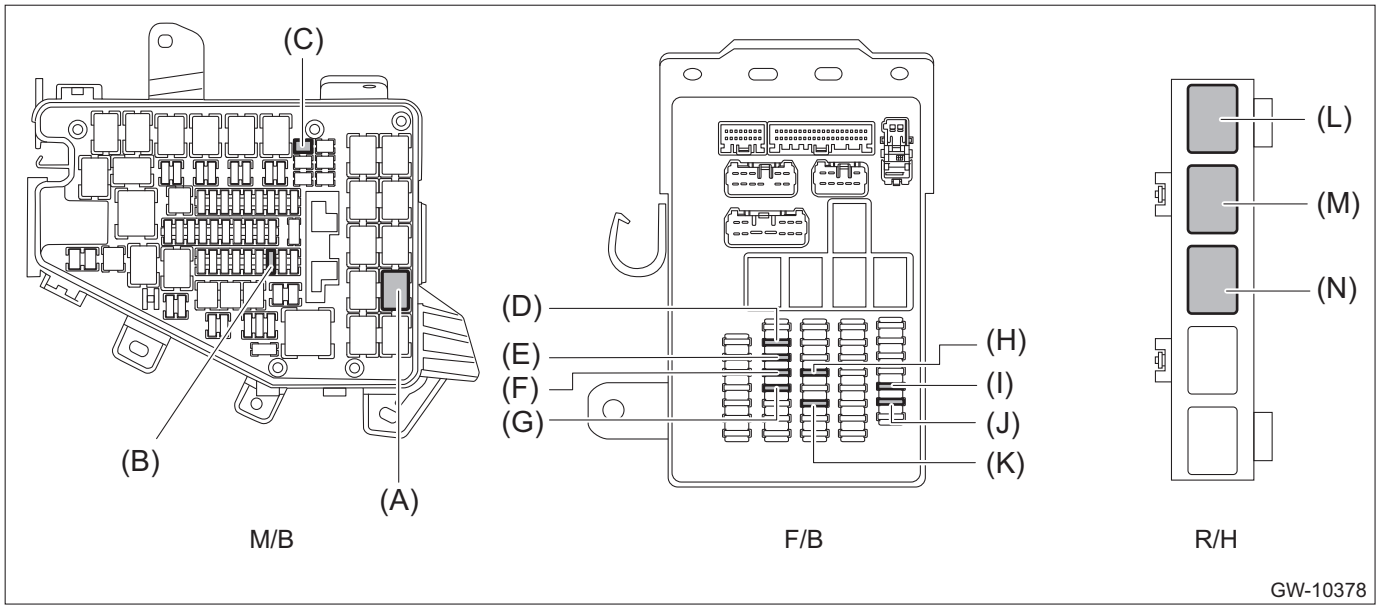


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

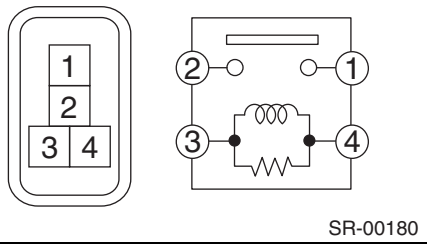
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.
Carpenter's square	Used for measuring the installation size of the dam rubber - front LWR.
TORX® T20	Used to remove and install the rearview mirror.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Rear defogger relay	(A)
	Fuse 25 A (rear defogger)	(B)
	Slow blow fuse (power window)	(C)
Fuse & relay box (F/B)	Fuse 20 A (power window sub switch)	(D)
	Fuse 30 A (power window main switch)	(E)
	Fuse 20 A (power window sub switch)	(F)
	Fuse 7.5 A (remote control mirror, rearview mirror)	(G)
	Fuse 20 A (power window sub switch)	(H)
	Fuse 20 A (power window main switch)	(I)
	Fuse 15 A (mirror heater, wiper deicer)	(J)
	Fuse 20 A (power window sub switch)	(K)
Relay holder (R/H)	Power window relay	(L)
	Wiper deicer relay	(M)
	Mirror heater relay	(N)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>



B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Power Window System

A: WIRING DIAGRAM

Refer to “Power Window System” in the wiring diagram. <Ref. to WI-317, WIRING DIAGRAM, Power Window System.>

B: INSPECTION

Symptoms	Inspection order
All power windows do not operate.	1. Check the fuse. 2. Check the power window relay. 3. Check the wiring harness.
Particular window does not operate.	1. Check the fuse. 2. Check the switch - power window main. 3. Check the switch - power window sub. 4. Check the power window motor. 5. Check the wiring harness.
“Window Lock” does not operate.	Check the switch - power window main.
Driver’s side window moves slightly (approx. 20 mm (0.79 in)).	1. Check the motor - front. 2. Check the switch - power window main. 3. Check the wiring harness.
Driver’s side window moves slightly (approx. 50 mm (1.97 in)). (This status is not a failure.)	Perform reset operation A. <Ref. to GW-11, RESET OPERATION A, OPERATION, Power Window System.>
Driver’s side window does not close completely. (Using AUTO UP allows the window to fully close first and then move in reverse resulting in slightly opening.)	Perform reset operation B. <Ref. to GW-11, RESET OPERATION B, OPERATION, Power Window System.>

C: OPERATION

1. RESET OPERATION A

1) Sit in the driver’s seat and close the door.
2) Turn the ignition switch to ON.
3) Operate the switch - power window main to open the glass assembly - front door halfway.
4) Operate the switch - power window main in “UP” direction to fully close the glass assembly - front door on the driver’s side.
5) While the glass assembly - front door is fully closed, hold down the switch - power window main in “UP” direction for one second.
6) Operate the switch - power window main in “AUTO DOWN” direction to check whether the window fully opens properly.

NOTE:
If the window does not fully open properly, repeat steps 1) to 6).

2. RESET OPERATION B

1) Sit in the driver’s seat and close the door.
2) Turn the ignition switch to ON.
3) On the glass assembly - front door of the driver’s side, operate the “AUTO UP” function (fully pull up the switch) using the switch - power window main, and perform auto-reverse operations 10 times in a row (after the window fully closes, it slightly opens).
4) Check that the “AUTO UP” function no longer operates.
5) Perform reset operation A.
6) Check that the window operates properly by operating the “AUTO UP” and “AUTO DOWN” switch.

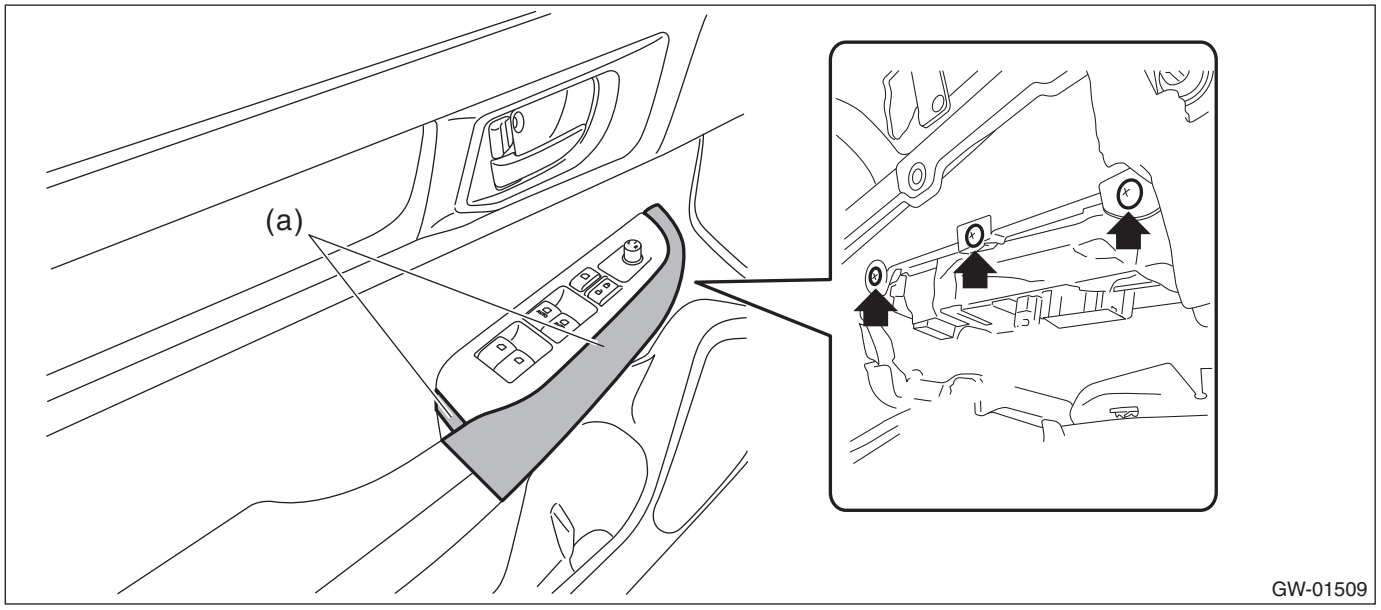
NOTE:
If the window does not fully open/close properly, repeat steps 1) to 6).

D: NOTE

For procedure of each component in the power window system, refer to the respective section.
- Power window control switch: <Ref. to GW-13, Power Window Control Switch.>

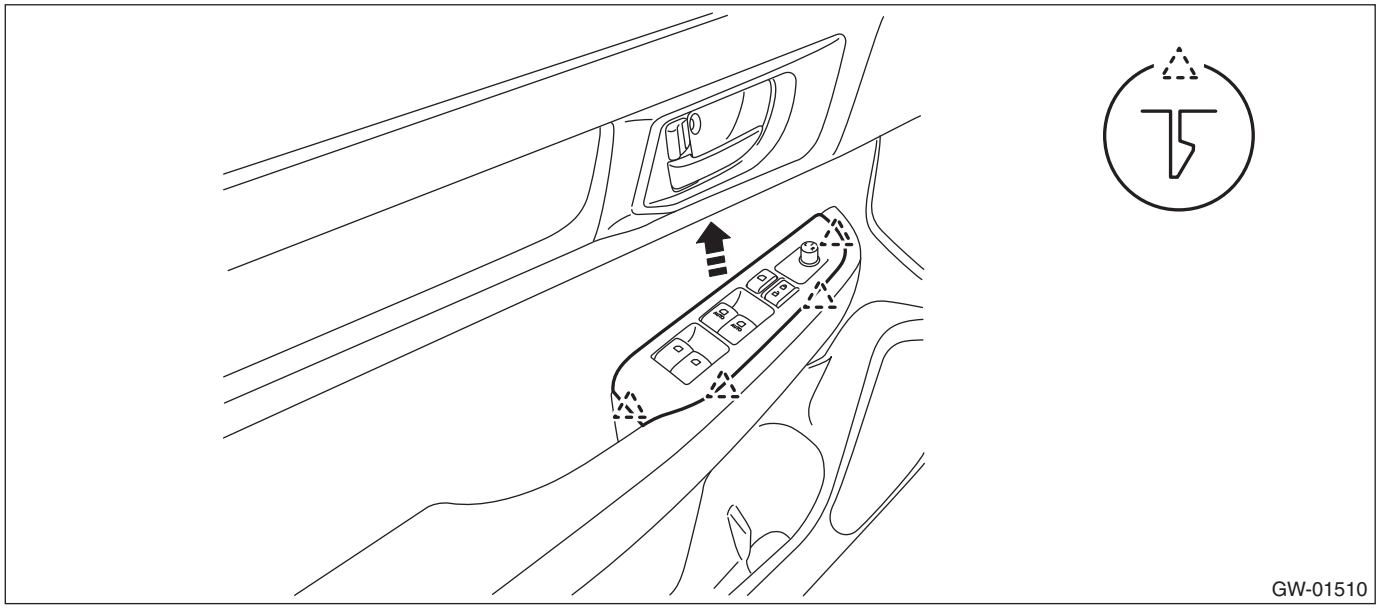
- Front door glass: <Ref. to GW-22, Front Door Glass.>
- Front regulator and motor assembly: <Ref. to GW-26, Front Regulator and Motor Assembly.>
- Rear door glass: <Ref. to GW-36, Rear Door Glass.>
- Rear regulator and motor assembly: <Ref. to GW-39, Rear Regulator and Motor Assembly.>

4. Power Window Control Switch



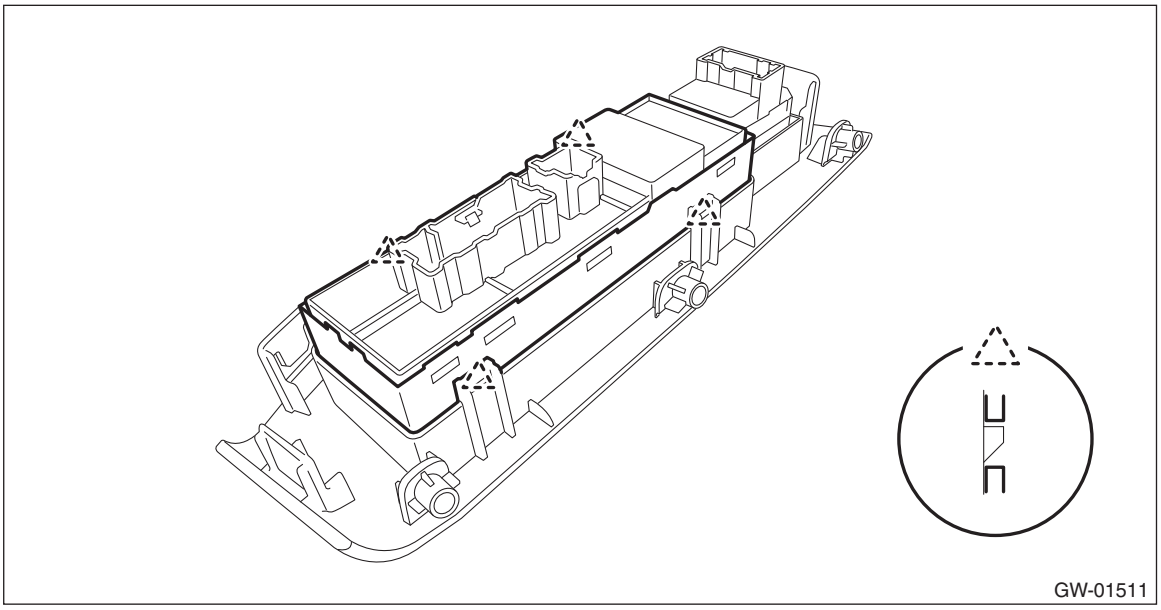
A: REMOVAL

1. MAIN SWITCH



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window main switch.

CAUTION:
Be careful not to damage the trim panel - front door with the panel - power window main switch.



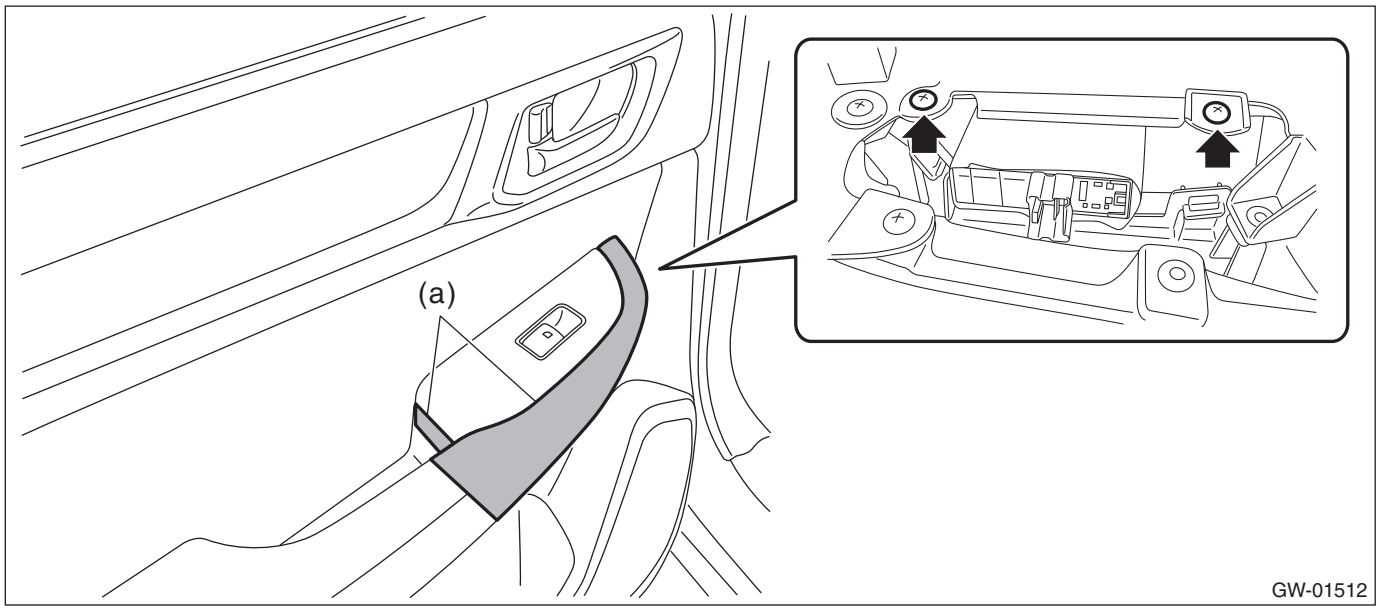
(1) Insert a sheet of protective paper (a) between panel - power window main switch and trim panel - front door.
(2) Remove the screws.

(3) Release the claws, and then remove the panel - power window main switch.

(4) Release the claws, and then remove the switch - power window main.

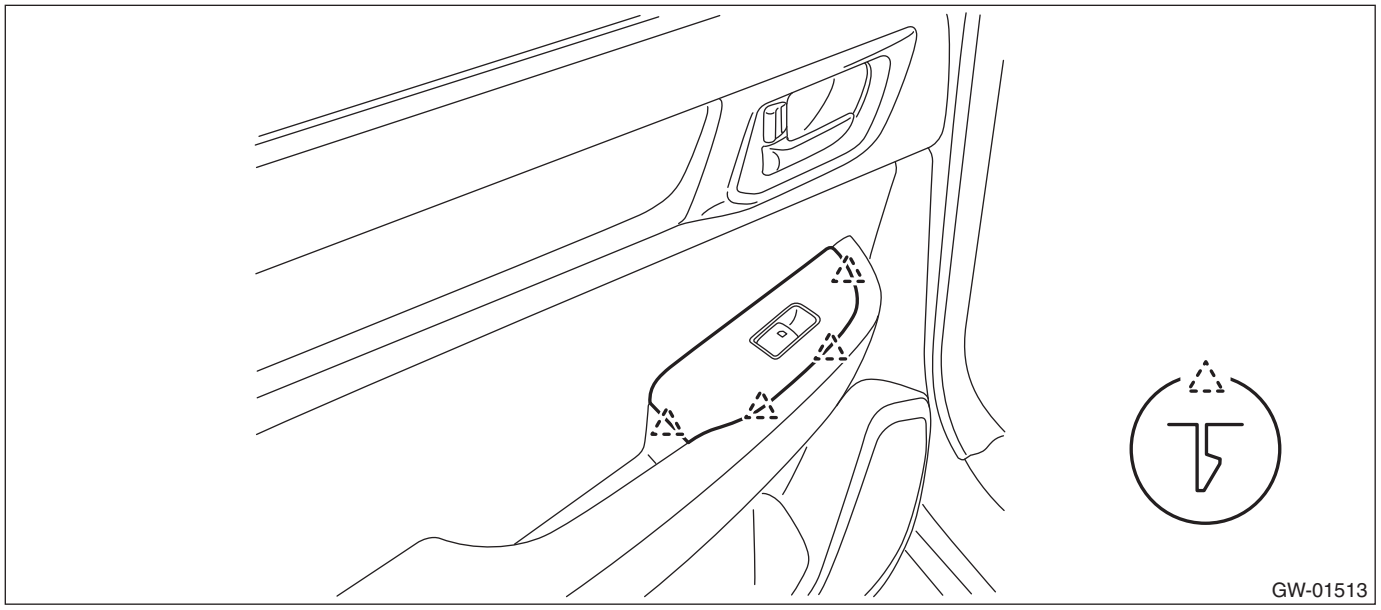
2. SUB-SWITCH

Switch - power window sub front



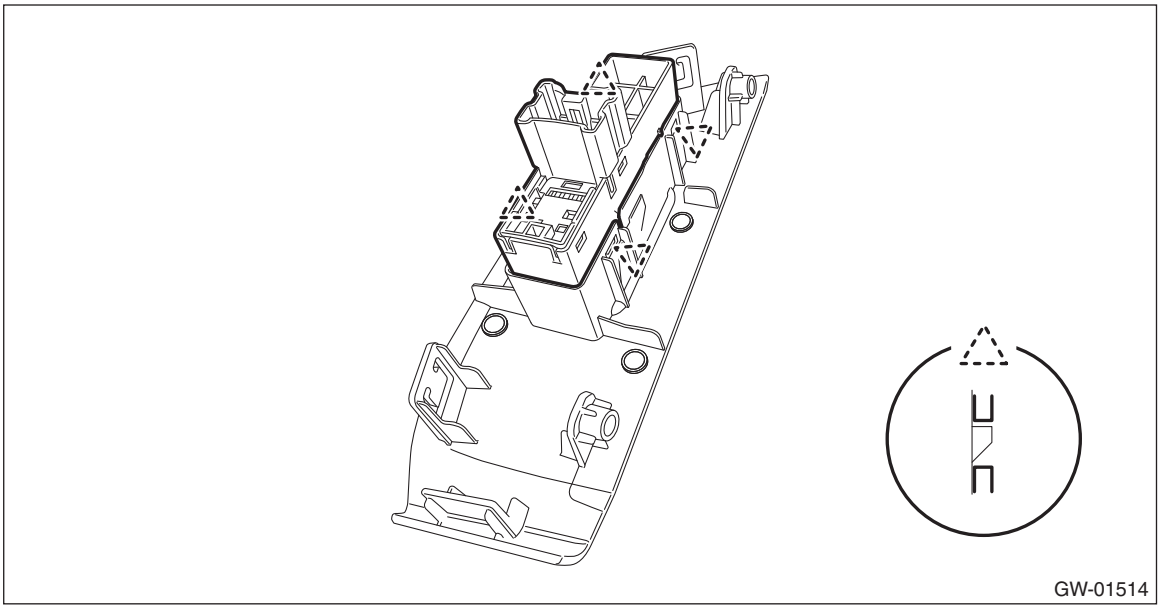
For removal of the switch - power window sub front on the passenger's seat, refer to the removal procedure of the switch - power window main. <Ref. to GW-13, MAIN SWITCH, REMOVAL, Power Window Control Switch.>

Switch - power window sub rear



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window sub switch rear.

CAUTION:
Be careful not to damage the trim panel - rear door with the panel - power window sub switch rear.



(1) Insert a sheet of protective paper (a) between panel - power window sub switch rear and trim panel - rear door.
(2) Remove the screws.

(3) Release the claws, and then remove the panel - power window sub switch rear.

4) Release the claws, and then remove the switch - power window sub rear.

B: INSTALLATION

1. MAIN SWITCH

CAUTION:

- **After installing the switch - power window main, always perform the initial setting.**

Failure to do so may cause the improper activation of auto-reverse operation for pinching hazard prevention.

- **Use protective paper to avoid damage to the trim panel.**

1) Install the panel - power window main switch to the trim panel - front door.
2) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Perform initial setting operation (reset operation A). <Ref. to GW-11, RESET OPERATION A, OPERATION, Power Window System.>

2. SUB-SWITCH

CAUTION:
Use protective paper to avoid damage to the trim panel.

Switch - power window sub front

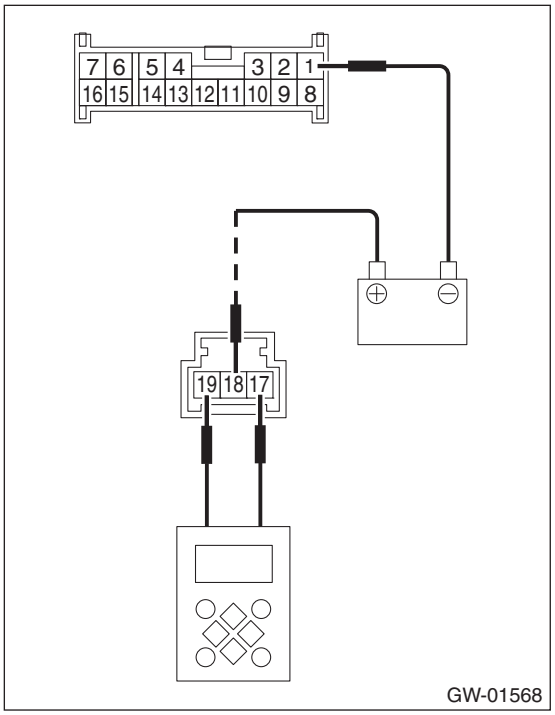
For installation of the switch - power window sub front on the passenger's seat, refer to the installation procedure of the switch - power window main. <Ref. to GW-15, MAIN SWITCH, INSTALLATION, Power Window Control Switch.>

Switch - power window sub rear

1) Install the panel - power window sub switch rear to the trim panel - rear door.
2) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. MAIN SWITCH



• Driver's seat (model with AUTO)

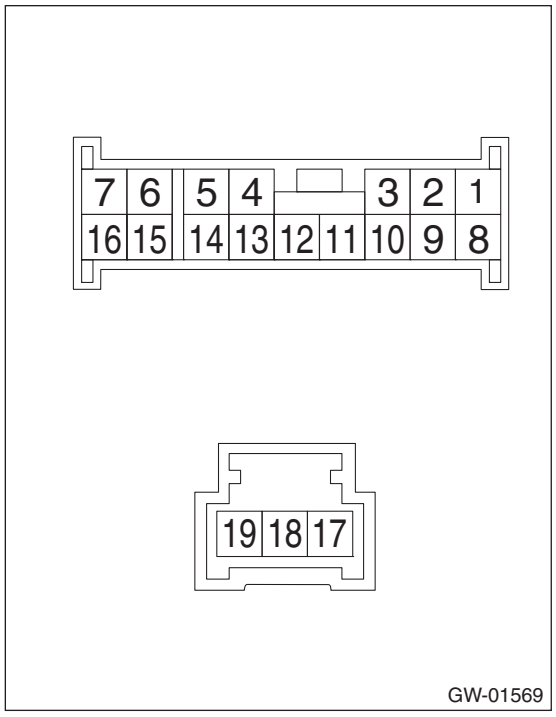
CAUTION:
• Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.
• Since the passenger's seat switch cannot be checked by using the switch - power window main, use the switch - power window sub. (model with auto function)
Check output from the switch - power window main to the driver's side motor using the oscilloscope function in the Subaru Select Monitor.
1) Remove the switch - power window main.
2) Connect the battery and the Subaru Select Monitor to the switch - power window main terminal.

CAUTION:
Never mix up the terminals when connecting the harness connector of the switch - power window main and the battery. If the connection is wrong, the switch - power window main may be damaged.

NOTE:
• When the battery is connected to the switch - power window main terminal, the letters "AUTO" on the driver's side knob illuminates.

- For detailed procedures, refer to “Subaru Select Monitor Operation Manual”.

3) Operate the switch - power window main and check the output.



NOTE:
Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

4) If the inspection result is not within the standard, replace the switch - power window main.

- **Passenger's seat and rear seat**

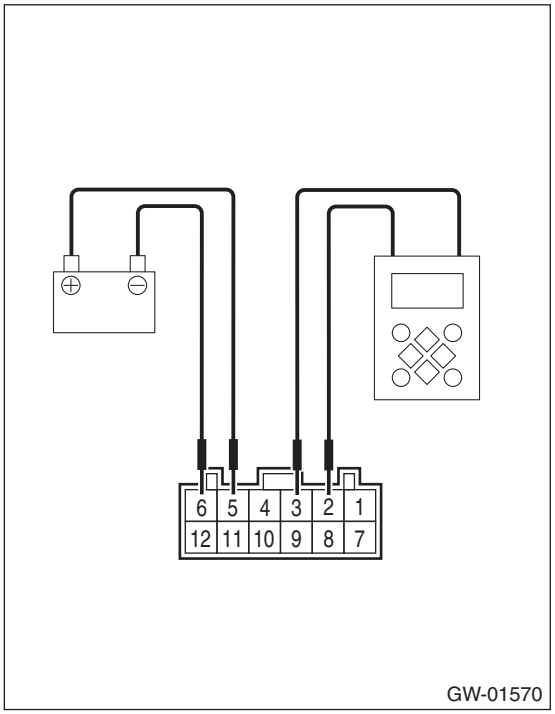
1) Check the resistance between connector terminals.

	Terminal No.	Inspection conditions	Standard
Passenger's seat (Model without AUTO)	14 — 8 2 — 1	UP	Less than 1 Ω
	14 — 2 14 — 8	OFF	1 MΩ or more
	1 — 2 1 — 8 2 — 8		Less than 1 Ω
	14 — 2 1 — 8	DOWN	Less than 1 Ω
Rear LH (Model without AUTO)	14 — 15 1 — 16	UP	Less than 1 Ω
	14 — 15 14 — 16	OFF	1 MΩ or more
	1 — 15 1 — 16 15 — 16		Less than 1 Ω
	14 — 16 1 — 15	DOWN	Less than 1 Ω
Rear RH (Model without AUTO)	14 — 7 1 — 6	UP	Less than 1 Ω
	14 — 6 14 — 7	OFF	1 MΩ or more
	1 — 6 1 — 7 6 — 7		Less than 1 Ω
	14 — 6 7 — 1	DOWN	Less than 1 Ω

2) If the inspection result is not within the standard, replace the switch - power window main.

2. SUB-SWITCH

Passenger's seat and rear seat (model with AUTO)



CAUTION:
Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.

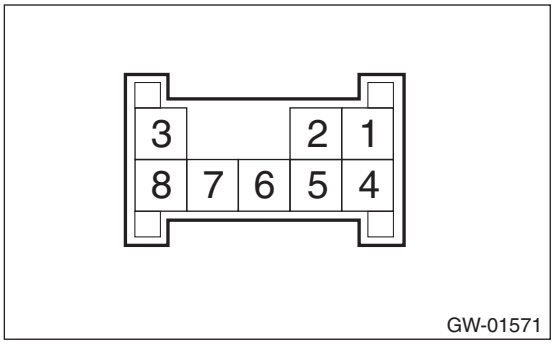
Check output from the switch - power window sub to the passenger's side and rear seat side motors using the oscilloscope function in the Subaru Select Monitor.

1) Remove the switch - power window sub.
2) Connect the battery and the Subaru Select Monitor to the switch - power window sub terminal.

CAUTION:
Never mix up the terminals when connecting the harness connector of the switch - power window sub and the battery. If the connection is wrong, the switch - power window sub may be damaged.

NOTE:
- When the battery is connected to the switch - power window sub terminal, the letters "AUTO" on the passenger's side and rear seat side knobs illuminate.
- For detailed procedures, refer to "Subaru Select Monitor Operation Manual".

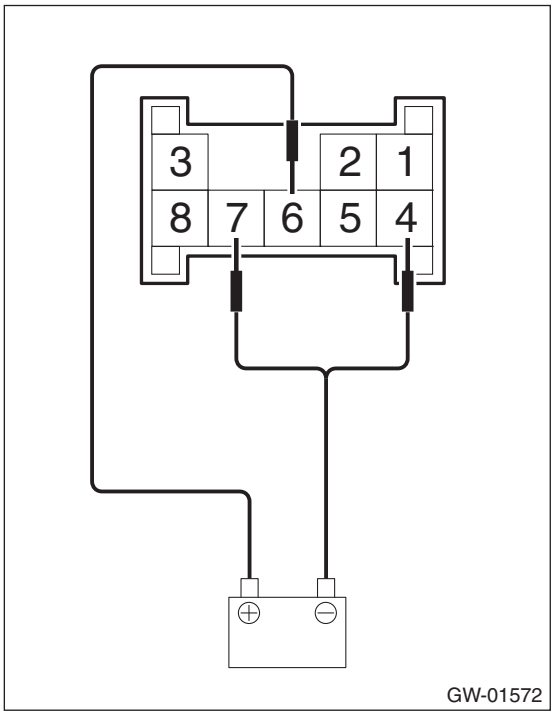
3) Operate the switch - power window sub and check the output.



NOTE:
Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

4) If the inspection result is not within the standard, replace the switch - power window sub.



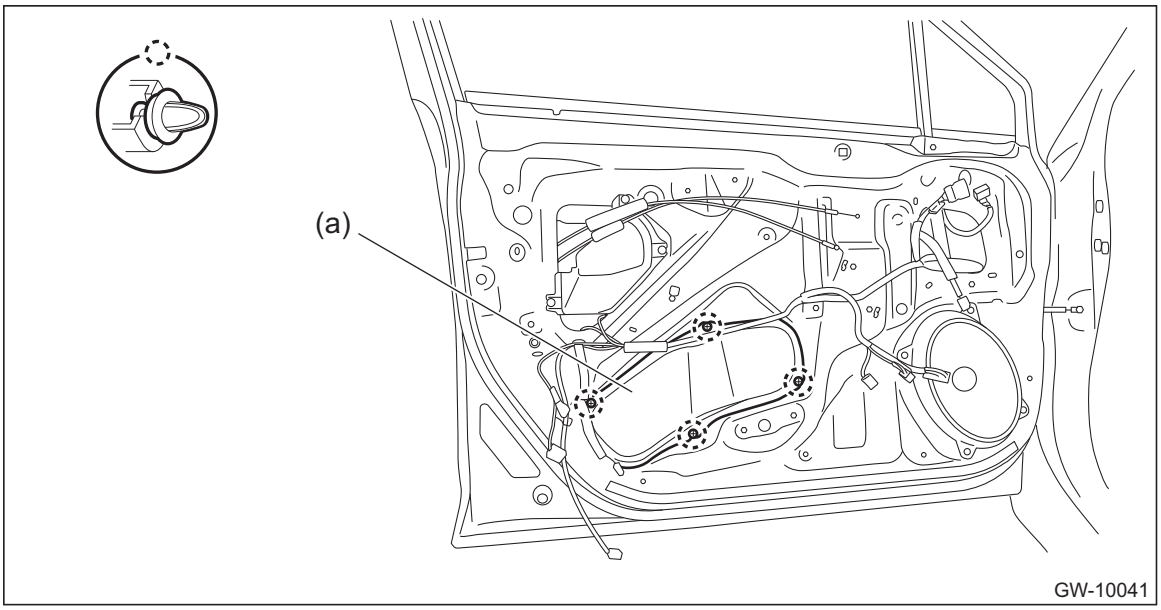
Passenger's seat and rear seat (model without AUTO)

1) Remove the switch - power window sub.
2) Check the resistance between connector terminals.

	Terminal No.	Inspection conditions	Standard
Passenger seat, rear	4 — 5 7 — 8	OFF	Less than 1 Ω
	5 — 6 6 — 8		1 MΩ or more
	5 — 6 7 — 8	UP	Less than 1 Ω
	4 — 5 4 — 8		1 MΩ or more
	4 — 5 6 — 8	DOWN	Less than 1 Ω
	4 — 6 7 — 8		1 MΩ or more

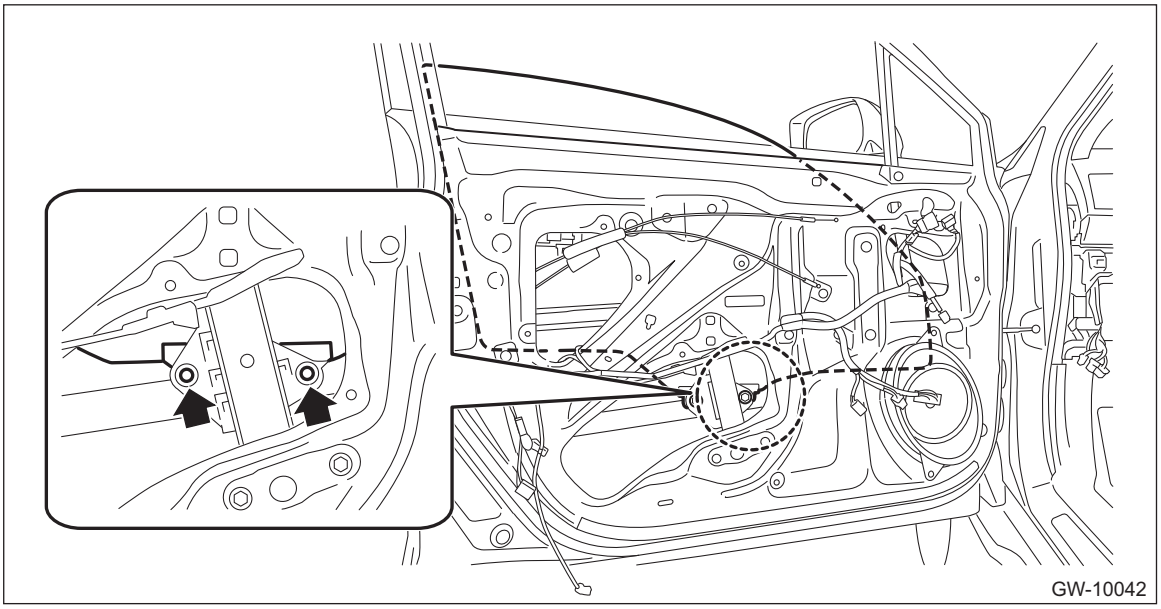
3) Check the switch light illumination condition.

	Terminal No.	Inspection conditions	Specification
Passenger seat, rear	6 — 7, 4	Battery connection between terminals	Light ON



4) Replace the switch - power window sub if it is found defective.

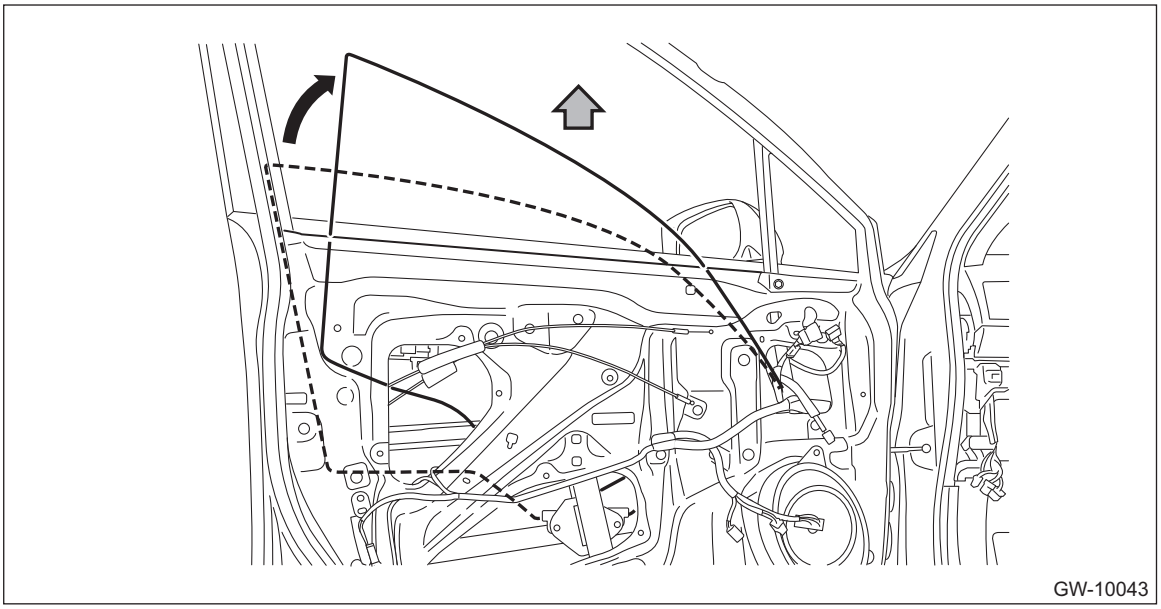
5. Front Door Glass



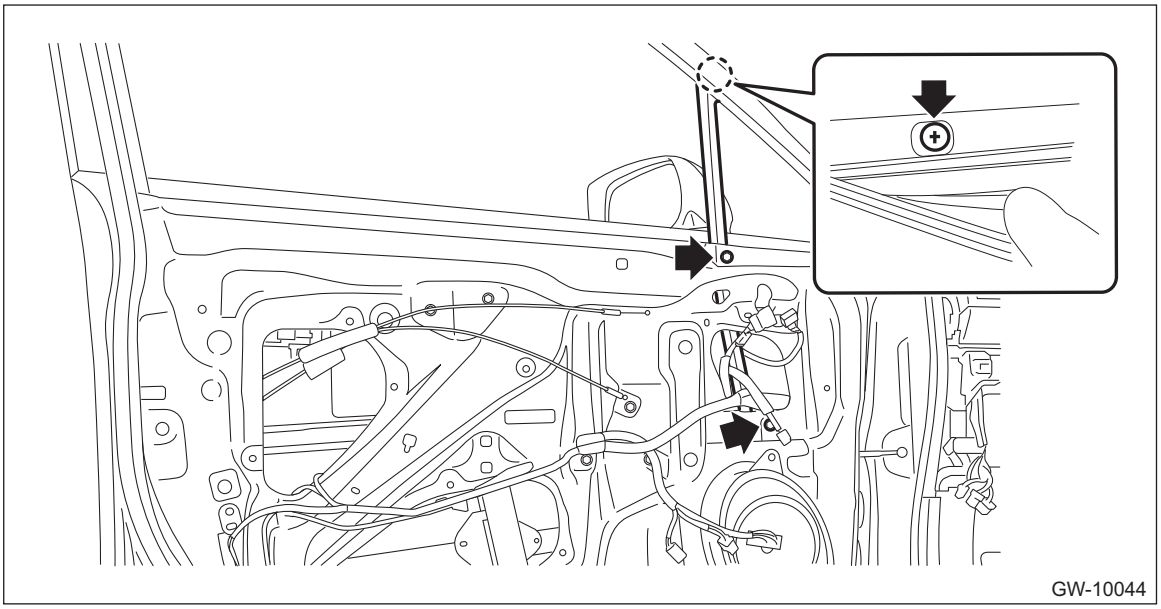
A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
4) Remove the front door inner pad (a).

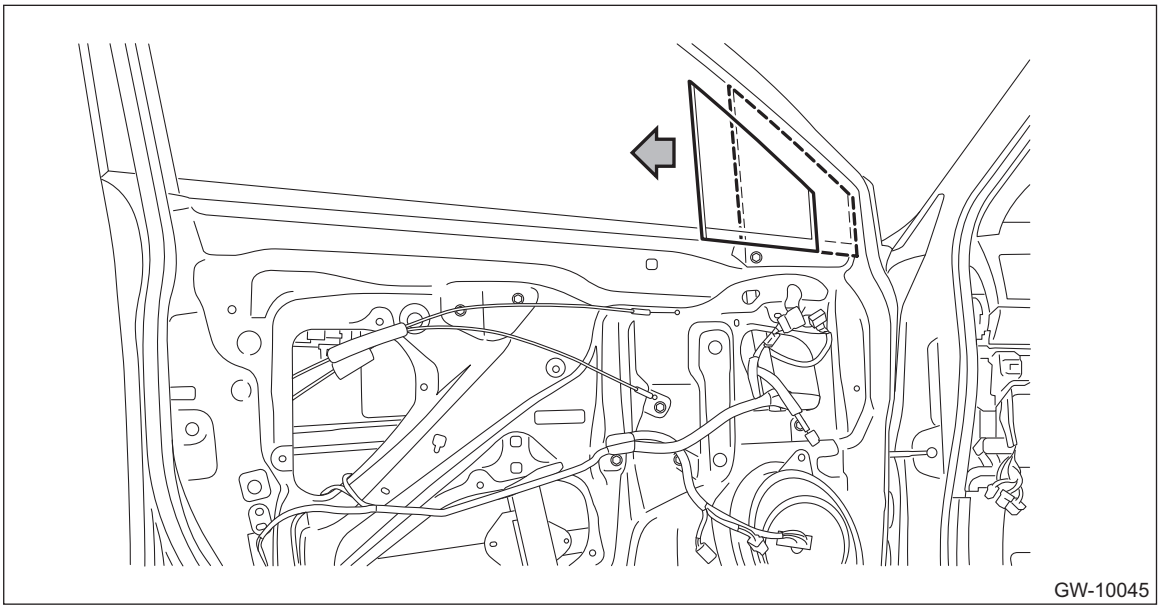
CAUTION:
If it is removed with an excessive force, the panel assembly - front door may be deformed. Also, if the clip is damaged, replace it with a new clip.



5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Remove the glass assembly - front door.
   (1) Connect the switch - power window and then turn the ignition switch to ON.
   (2) Operate the switch - power window to move the glass assembly - front door to the position where the mounting bolts can be seen.
   (3) Remove the mounting bolts from the glass assembly - front door.



(4) While tilting the glass, remove the glass assembly - front door.



CAUTION:
Avoid impact and damage to the glass assembly - front door.

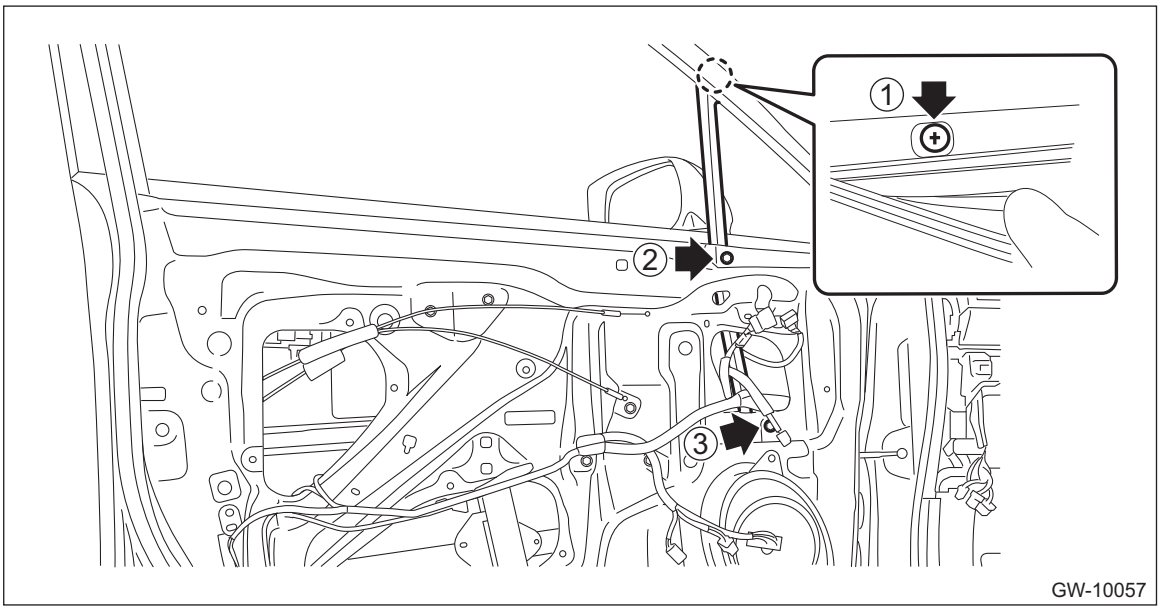
GW-10043

7) Remove the glass - front door partition.
(1) Remove the bolts and screws, and then remove the running channel - front door and the sash assembly - partition.

GW-10044

(2) Remove the glass - front door partition.

GW-10045



B: INSTALLATION

1) Install the glass - front door partition.
2) Install the running channel - front door and the sash assembly - partition.

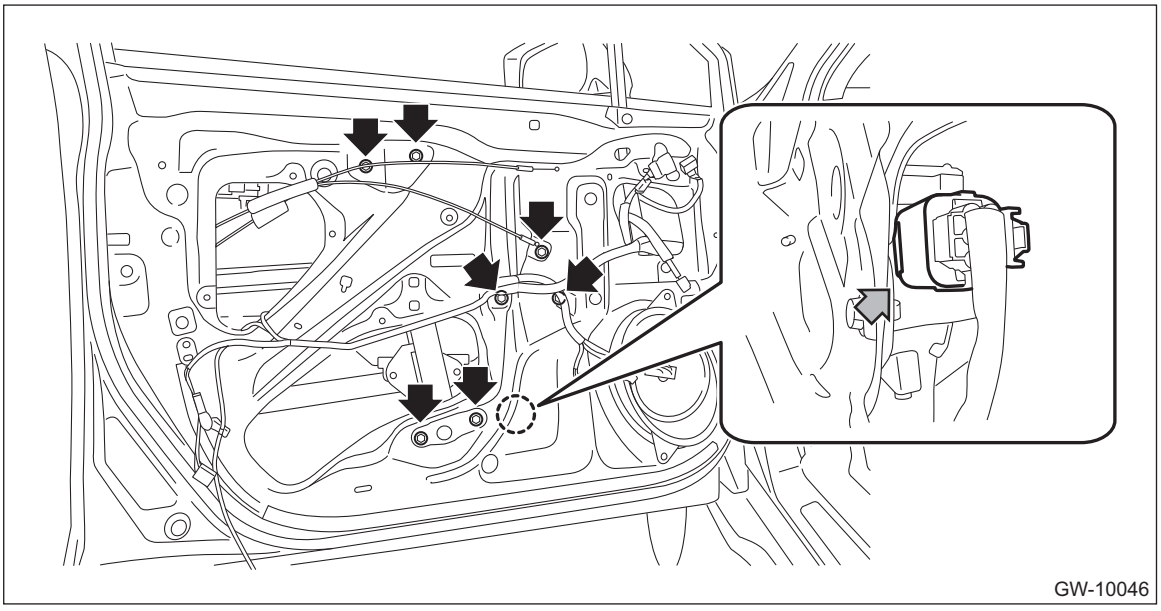
CAUTION:
Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash assembly - partition.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>

NOTE:
Tighten the sash assembly - partition in the following order.

GW-10057

3) Install the glass assembly - front door.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the front door inner pad.

5) Install the sealing cover - front door.
6) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

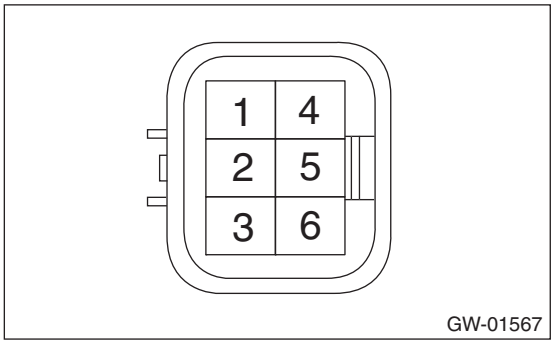
6. Front Regulator and Motor Assembly

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
4) Remove the glass assembly - front door. <Ref. to GW-22, REMOVAL, Front Door Glass.>
5) Remove the regulator and motor assembly - front.
   (1) Disconnect the motor - front connector.
   (2) Remove the bolts, and then remove the regulator and motor assembly - front.

GW-10046

B: INSTALLATION



1) Install the regulator and motor assembly - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the glass assembly - front door. <Ref. to GW-24, INSTALLATION, Front Door Glass.>
3) Install the sealing cover - front door.
4) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.

GW-01567

- LH side

Terminal No.	Inspection conditions	Specification
6 (+) — 3 (–)	Apply battery voltage between terminals.	Increase
3 (+) — 6 (–)	Apply battery voltage between terminals.	Decrease

- RH side

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (–)	Apply battery voltage between terminals.	Increase
4 (+) — 1 (–)	Apply battery voltage between terminals.	Decrease

2) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - front.

7. Remote Control Mirror System

A: WIRING DIAGRAM

Refer to “Remote Control Mirror System” in the wiring diagram. <Ref. to WI-341, WIRING DIAGRAM, Remote Control Mirror System.>

B: INSPECTION

1. SYMPTOM CHART

Symptoms	Inspection order
All function does not operate.	1. Check the fuse. 2. Check the remote control mirror switch. 3. Check the wiring harness.
One side of the mirror motor does not operate.	1. Check the remote control mirror switch. 2. Check the mirror motor. 3. Check the wiring harness.
Mirror heater does not operate.	1. Check the rear defogger switch. 2. Check the rear defogger relay. 3. Check the mirror heater. 4. Check the wiring harness. 5. Check body integrated unit.

NOTE:
The mirror heater operates with the rear window defogger at the same time. Refer to “INSPECTION” of “Rear Window Defogger System” for details. <Ref. to GW-62, INSPECTION, Rear Window Defogger System.>

C: NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Outer mirror assembly: <Ref. to GW-29, Outer Mirror Assembly.>
- Remote control mirror switch: <Ref. to GW-34, Remote Control Mirror Switch.>

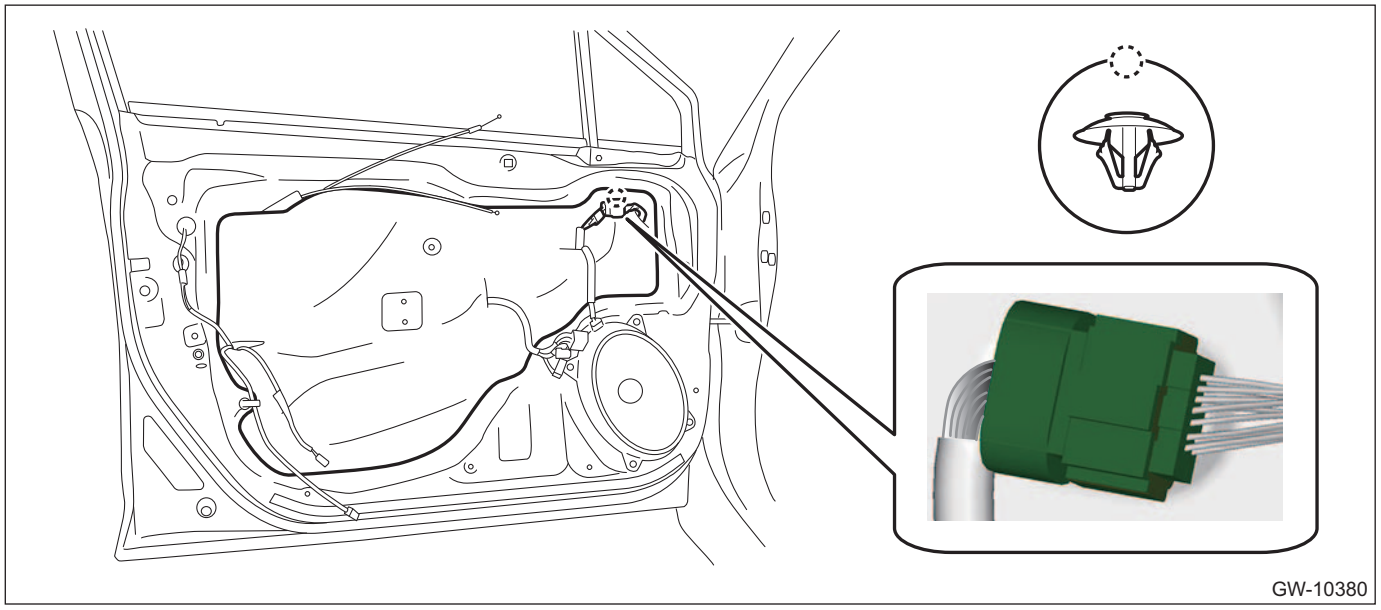
8. Outer Mirror Assembly

A: REMOVAL

Refer to “DISASSEMBLY” for removal procedures of scalp cap and mirror face. <Ref. to GW-30, DISASSEMBLY, Outer Mirror Assembly.>

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

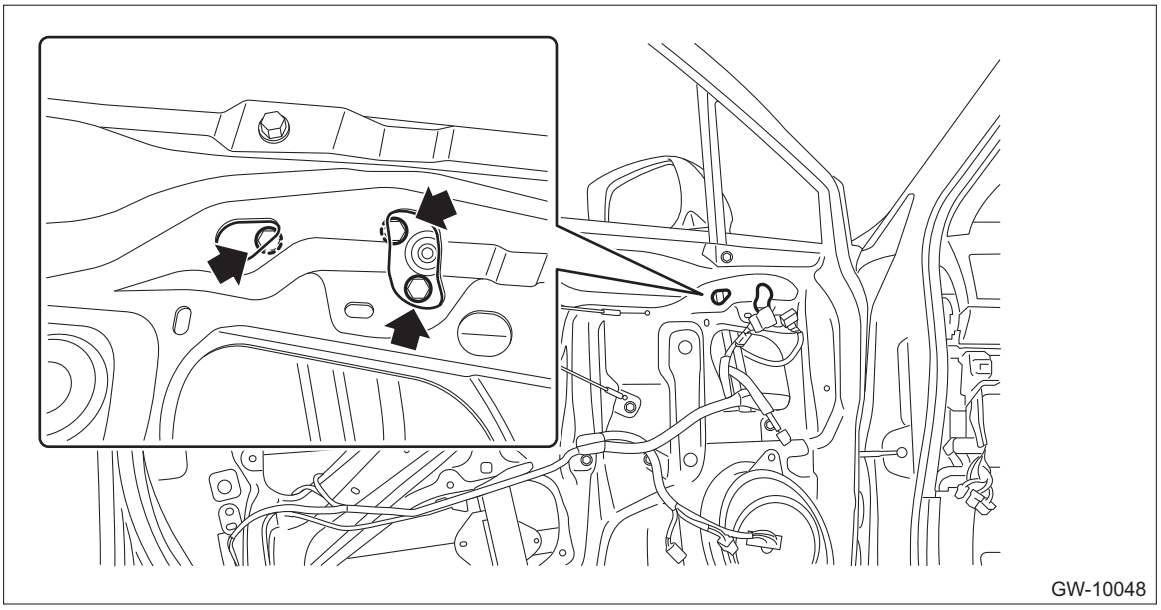
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>



3) Turn over the sealing cover - front door.

CAUTION:

- **Carefully remove the butyl tape. Excessive force will easily break the sealing cover - front door.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**



(1) Remove the connector clip that is installed on the panel assembly - front door, and disconnect the connector.

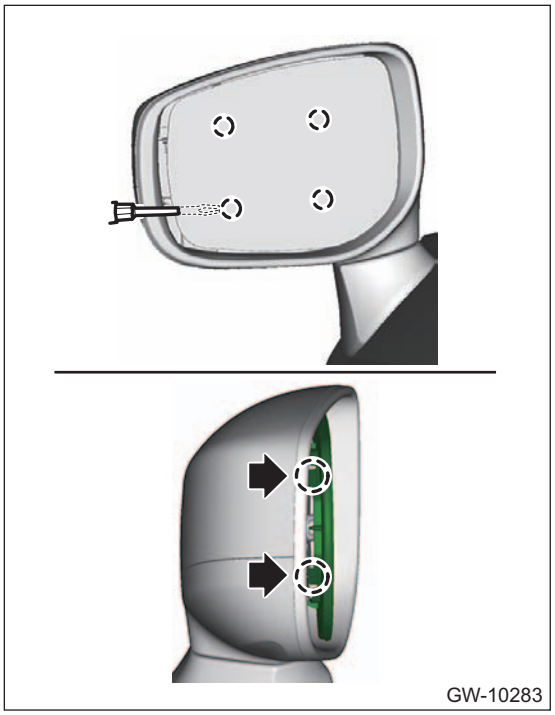
(2) Carefully remove and turn over the sealing cover - front door within the area where the operation can be performed.

GW-10380

4) Remove the bolts to remove outer mirror assembly.

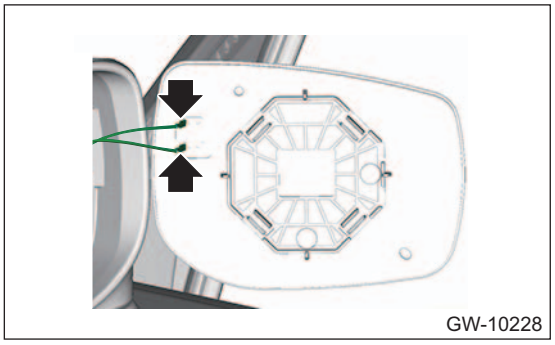
B: INSTALLATION

CAUTION:
Be careful not to catch the harness in between the parts.
1) Install the outer mirror assembly.



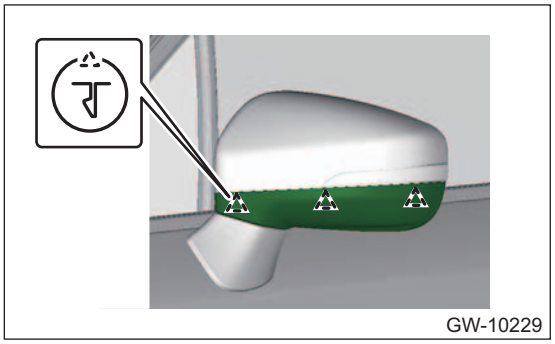
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the sealing cover - front door.
3) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY



CAUTION:
- **When removing the mirror - repair, be careful not to damage the back surface of mirror - repair with a flat tip screwdriver.**
- **When installing the mirror - repair, insert the connector and clip securely.**

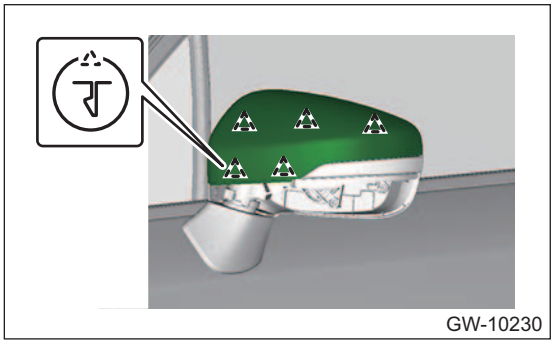
1) Operate the remote control mirror switch to face the mirror - repair upward.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the mirror - repair.



(1) Using a flat tip screwdriver or similar tool, release the engagement shown in the figure, and slide the mirror - repair downward to remove.

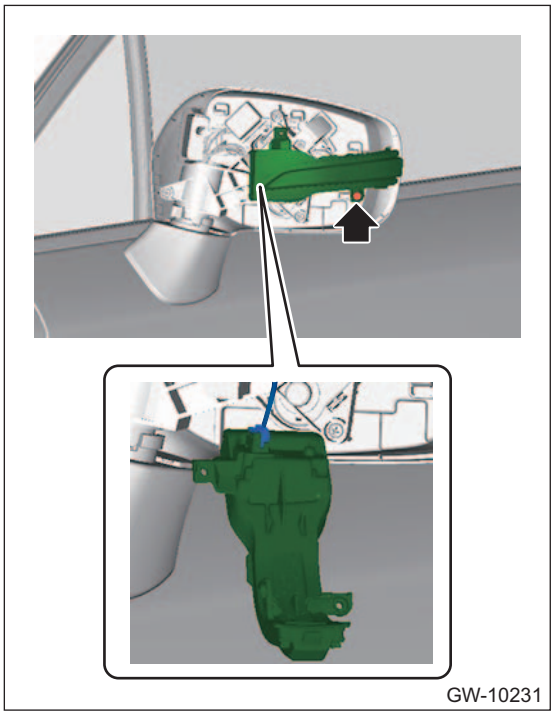
GW-10283

(2) Disconnect the connector. (Model with mirror heater)



GW-10228

4) Release the claws, and then remove the cover - cap outer mirror lower.



GW-10229

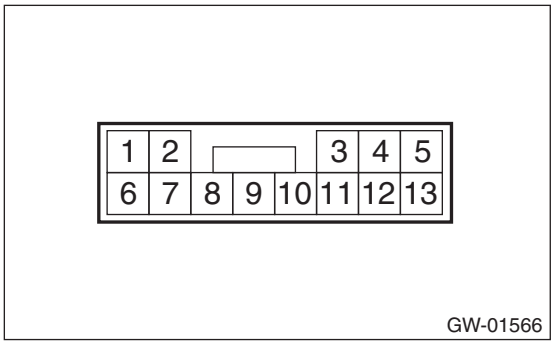
5) Release the claws, and then remove the cover - cap outer mirror.

CAUTION:
Be careful not to apply excessive force when removing the cover - cap outer mirror, as the lower hooks may become damaged.

GW-10230

6) Remove the light assembly - side turn mirror. (Model with side turn signal light)
   (1) Remove the screws and pull out the light assembly - side turn mirror to the front of the vehicle.
   (2) Disconnect the connector and remove the light assembly - side turn mirror.

GW-10231



D: ASSEMBLY

CAUTION:
Be careful not to catch the harness in between the parts.
1) Install the light assembly - side turn mirror.
2) Install the cover - cap outer mirror.
3) Install the cover - cap outer mirror lower.
4) Check that all the claws are securely engaged.
5) Install the mirror - repair.

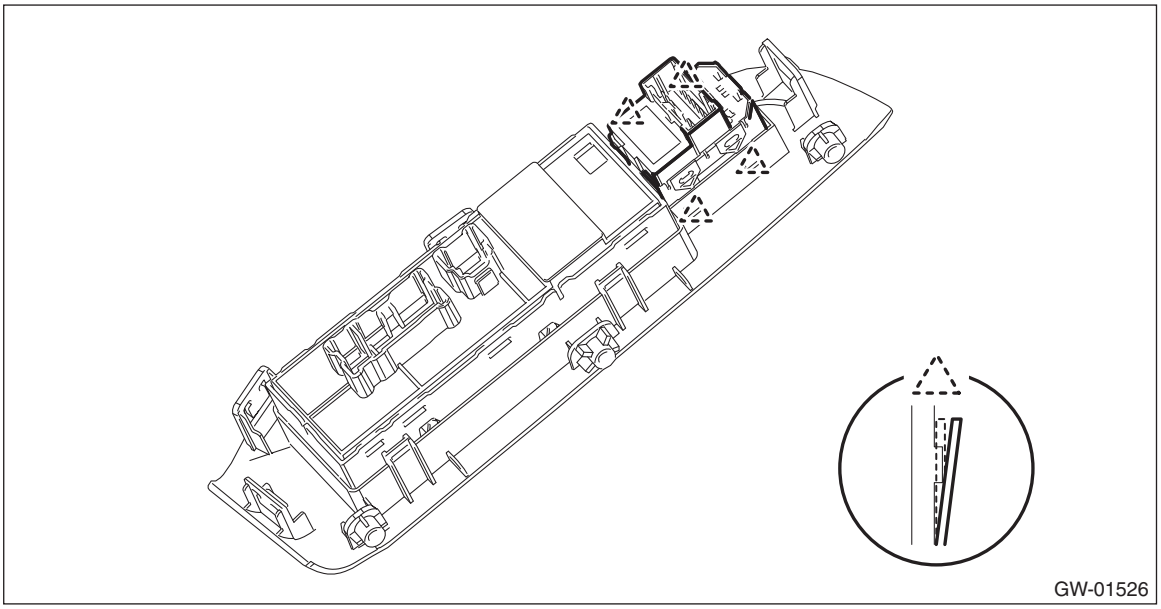
E: INSPECTION

1. CHECK OPERATION

1) Check the mirror operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Switch position
—	—	OFF
4 (+) — 3 (–)	Apply battery voltage between terminals.	UP
3 (+) — 4 (–)	Apply battery voltage between terminals.	DOWN
5 (+) — 4 (–)	Apply battery voltage between terminals.	LEFT
4 (+) — 5 (–)	Apply battery voltage between terminals.	RIGHT

2) If it does not operate normally, replace the outer mirror assembly.



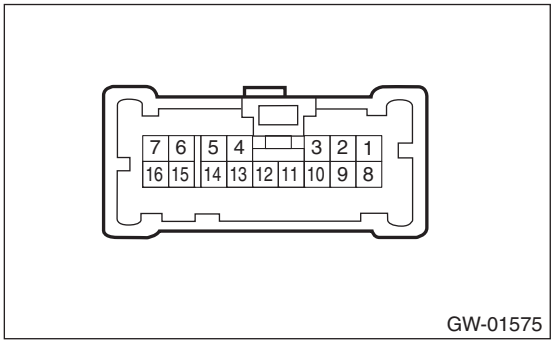
2. CHECK OPERATION OF Subaru Rear Vehicle Detection INDICATOR

1) Check the Subaru Rear Vehicle Detection system. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>
2) Check the outer mirror assembly.
   (1) Check that the BSD/RCTA indicator of the outer mirror assembly illuminates normally when the BSD/RCTA OFF switch is turned ON while it is installed to the vehicle.
   (2) If it does not illuminate normally, replace the outer mirror assembly.

9. Remote Control Mirror Switch

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window main switch. <Ref. to GW-13, REMOVAL, Power Window Control Switch.>
4) Release the claws, and then remove the switch - door mirror from the panel - power window main switch.



B: INSTALLATION

1) Install the switch - door mirror to the panel - power window main switch.
2) Install the panel - power window main switch to the trim panel - front door.
3) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the resistance between connector terminals.

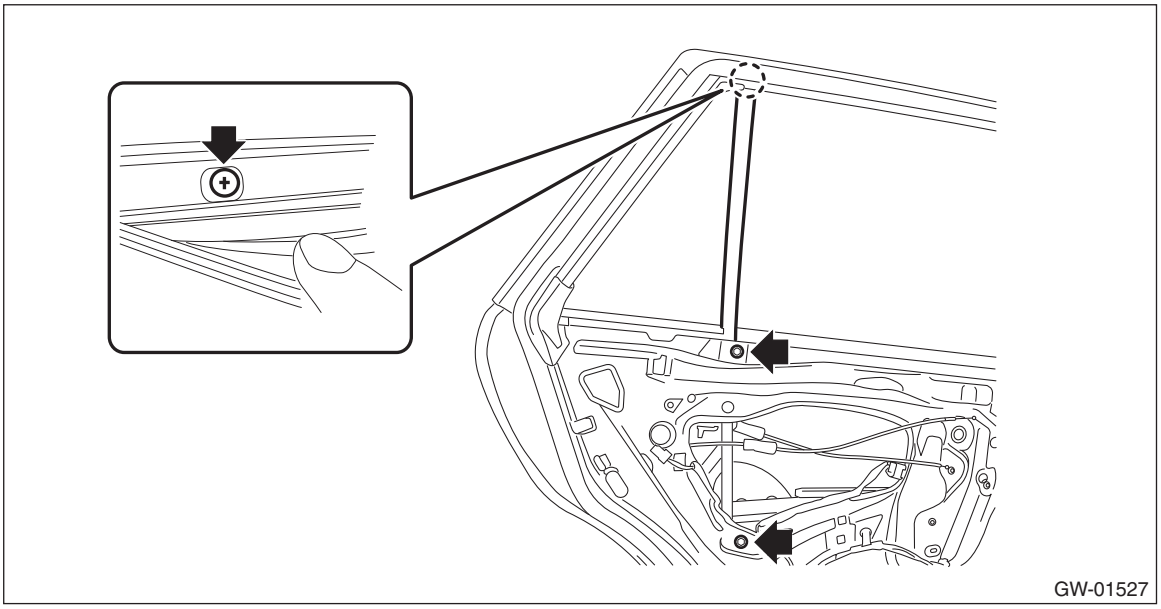
Preparation tool:
Circuit tester

- Changeover switch RH

Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
1 — 12 9 — 7	UP	Less than 1 Ω

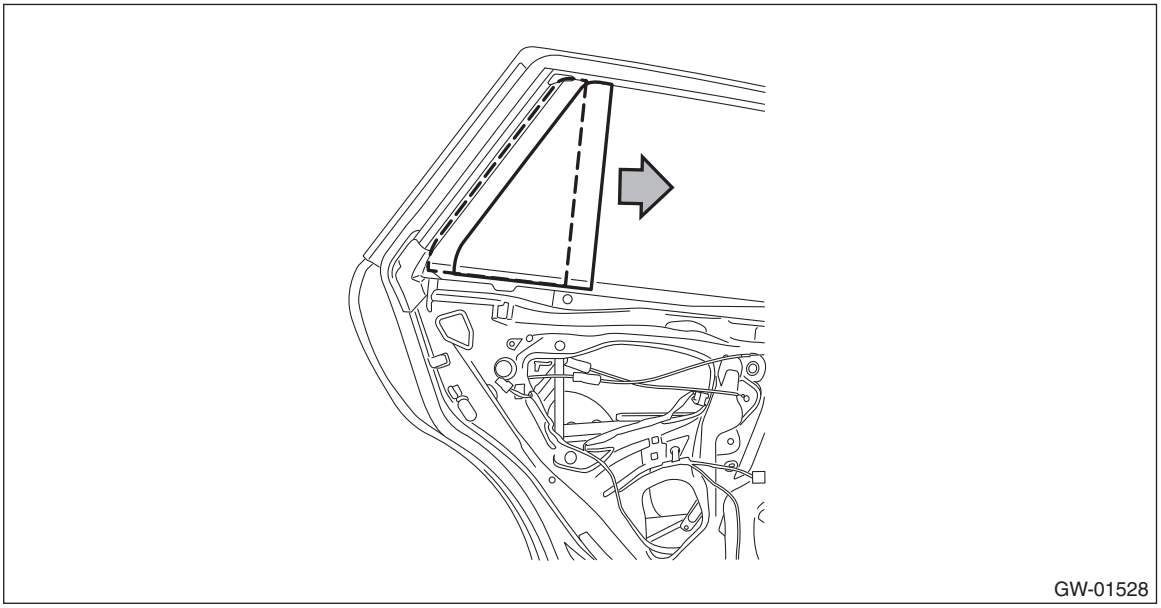
Terminal No.	Inspection conditions	Standard
1 — 9 12 — 7	DOWN	Less than 1 Ω
1 — 11 12 — 7	LEFT	Less than 1 Ω
1 — 12 11 — 7	RIGHT	Less than 1 Ω

- Changeover switch LH



Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
1 — 14 8 — 7	UP	Less than 1 Ω
1 — 8 14 — 7	DOWN	Less than 1 Ω
1 — 10 14 — 7	LEFT	Less than 1 Ω
1 — 14 10 — 7	RIGHT	Less than 1 Ω

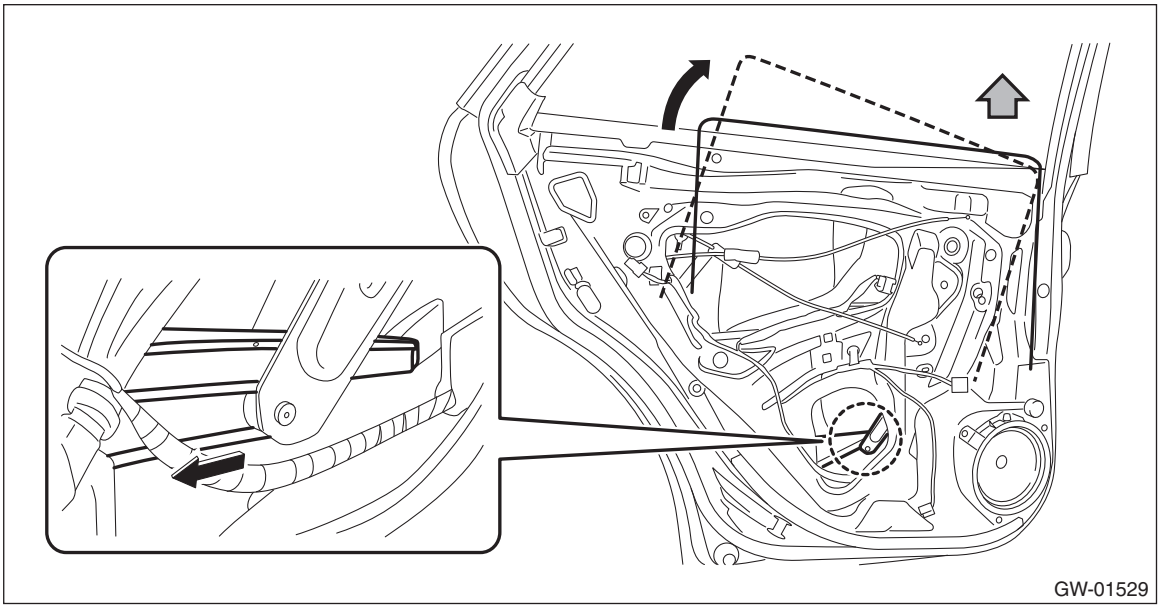
2) If the inspection result is not within the standard, replace the switch - door mirror.



10.Rear Door Glass

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-38, REMOVAL, Rear Sealing Cover.>
4) Reconnect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the glass assembly - rear door.
   (1) Install the switch - power window and then turn the ignition switch to ON.
   (2) Operate the switch - power window sub rear to move the glass assembly - rear door to the lowest position.
   (3) Remove the running channel - rear door.
   (4) Remove the screws and bolts, and then remove the sash assembly - rear partition.



GW-01527

   (5) Remove the glass - rear door partition.

GW-01528

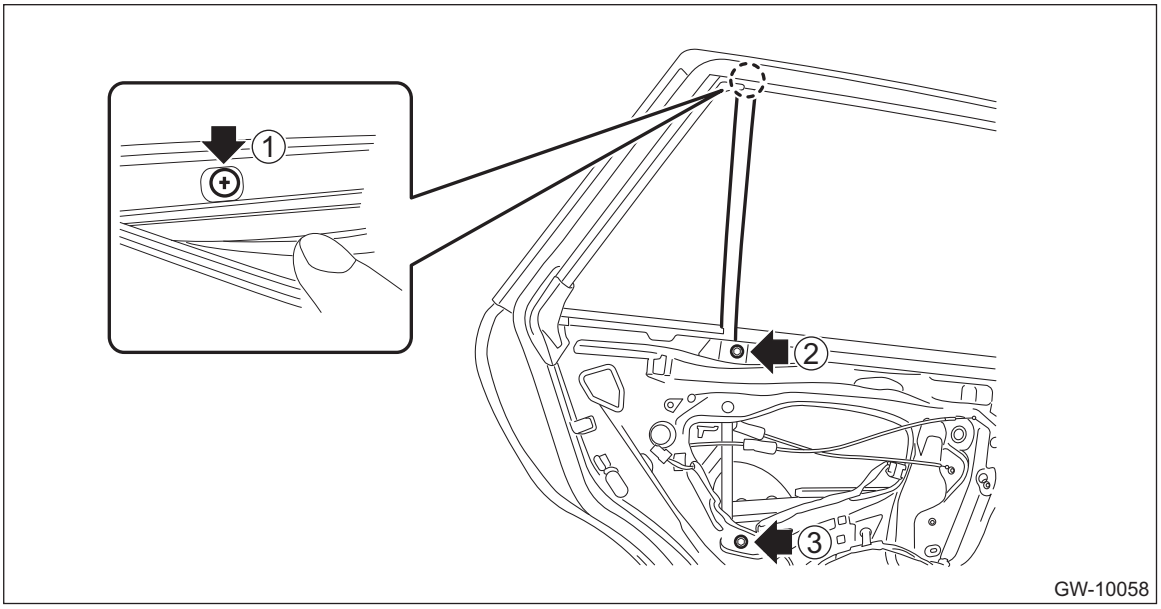
   (6) While tilting the glass assembly - rear door, remove the guide from the roller of the regulator and motor assembly - rear, then remove the glass assembly - rear door.

CAUTION:
Avoid impact and damage to the glass assembly - rear door.

B: INSTALLATION

1) Install the running channel - rear door to the panel assembly - rear door.

CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash assembly - rear partition.



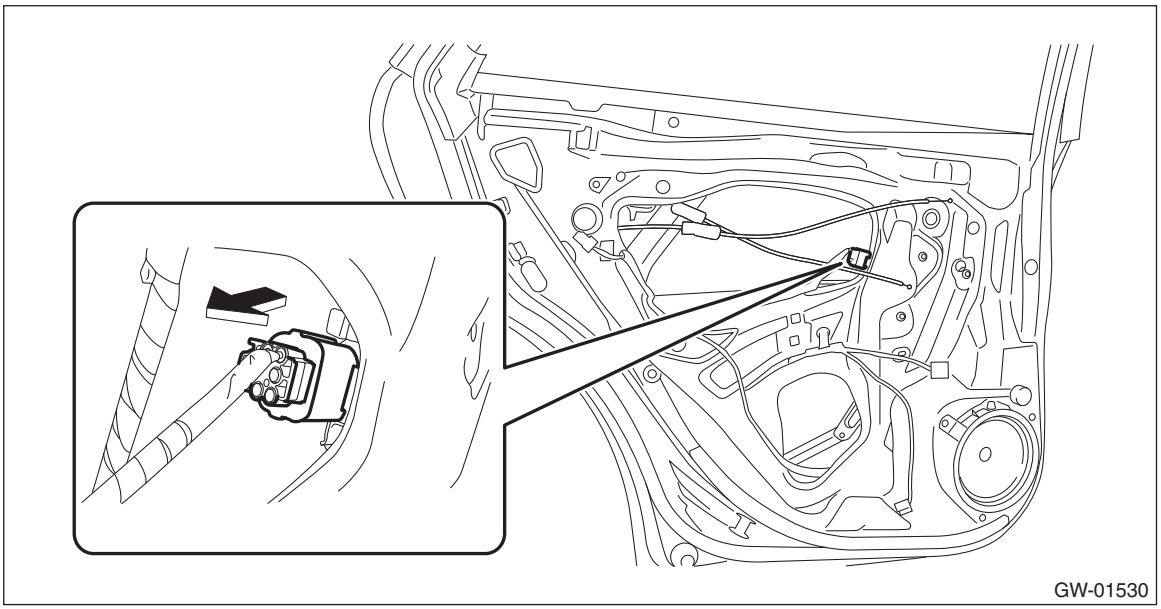
2) Install the glass assembly - rear door.

CAUTION:
Avoid impact and damage to the glass assembly - rear door.

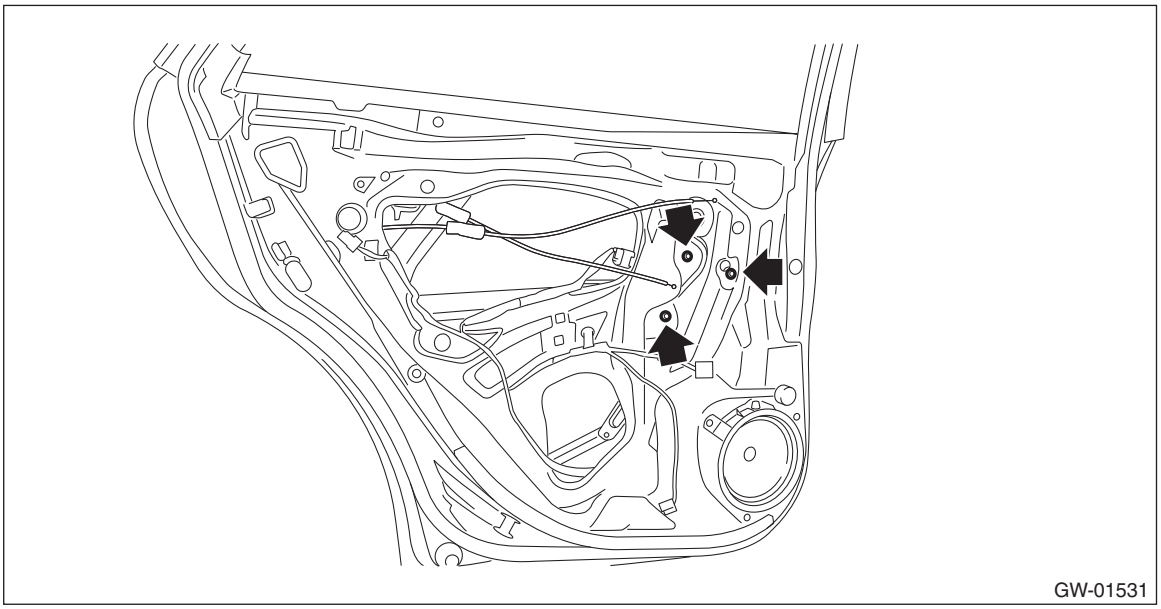
3) Install the glass - rear door partition and the sash assembly - rear partition.

NOTE:
- Tighten the sash assembly - rear partition in the following order.
- Install the running channel - rear door before installing the sash assembly - rear partition, and then install to the panel assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>



4) Install the sealing cover - rear door. <Ref. to EB-38, INSTALLATION, Rear Sealing Cover.>
5) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



11.Rear Regulator and Motor Assembly

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.
4) Remove the glass assembly - rear door. <Ref. to GW-36, REMOVAL, Rear Door Glass.>
5) Remove the rear regulator and motor assembly.
   (1) Disconnect the connector of the motor - rear.

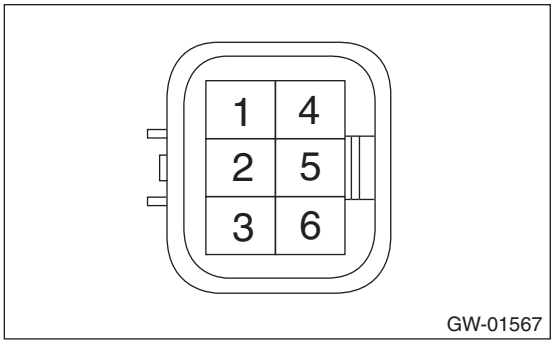
GW-01530

   (2) Remove the bolts, and then remove the regulator and motor assembly - rear.

GW-01531

B: INSTALLATION

1) Install the regulator and motor assembly rear.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the glass assembly - rear door. <Ref. to GW-37, INSTALLATION, Rear Door Glass.>
3) Install the sealing cover - rear door.
4) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>

5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.

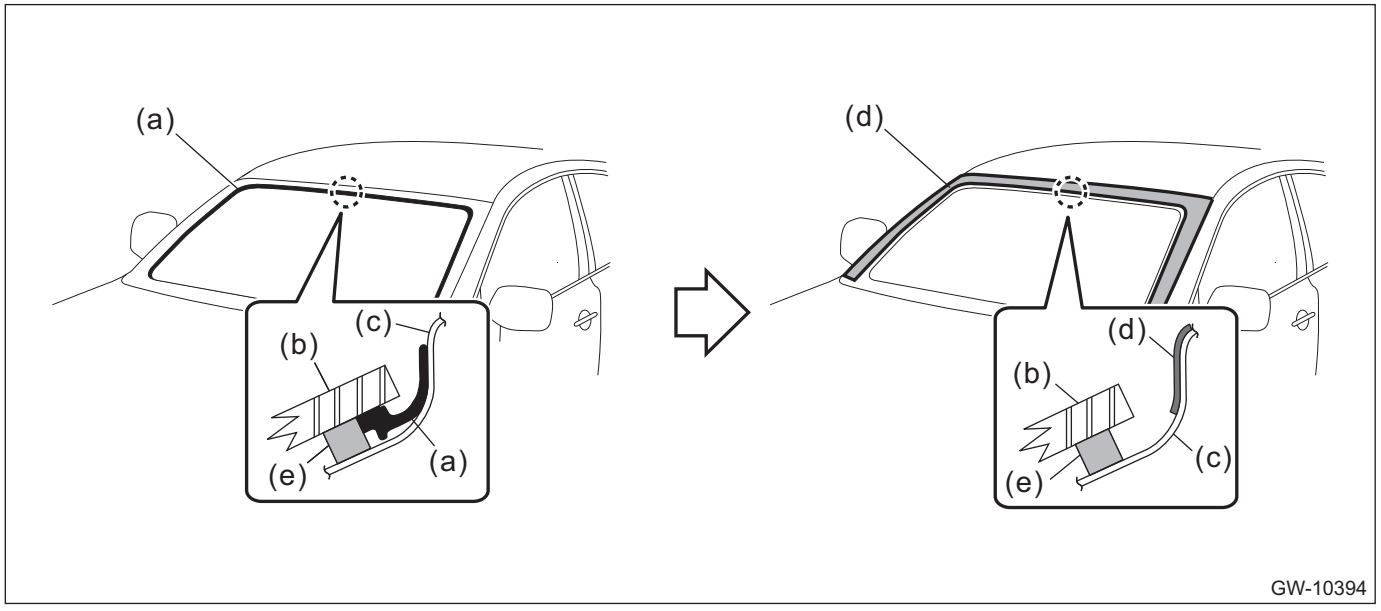
- LH side

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage between terminals.	Increase
1 (+) — 4 (–)	Apply battery voltage between terminals.	Decrease

- RH side

Terminal No.	Inspection conditions	Specification
3 (+) — 6 (–)	Apply battery voltage between terminals.	Increase
6 (+) — 3 (–)	Apply battery voltage between terminals.	Decrease

2) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - rear.



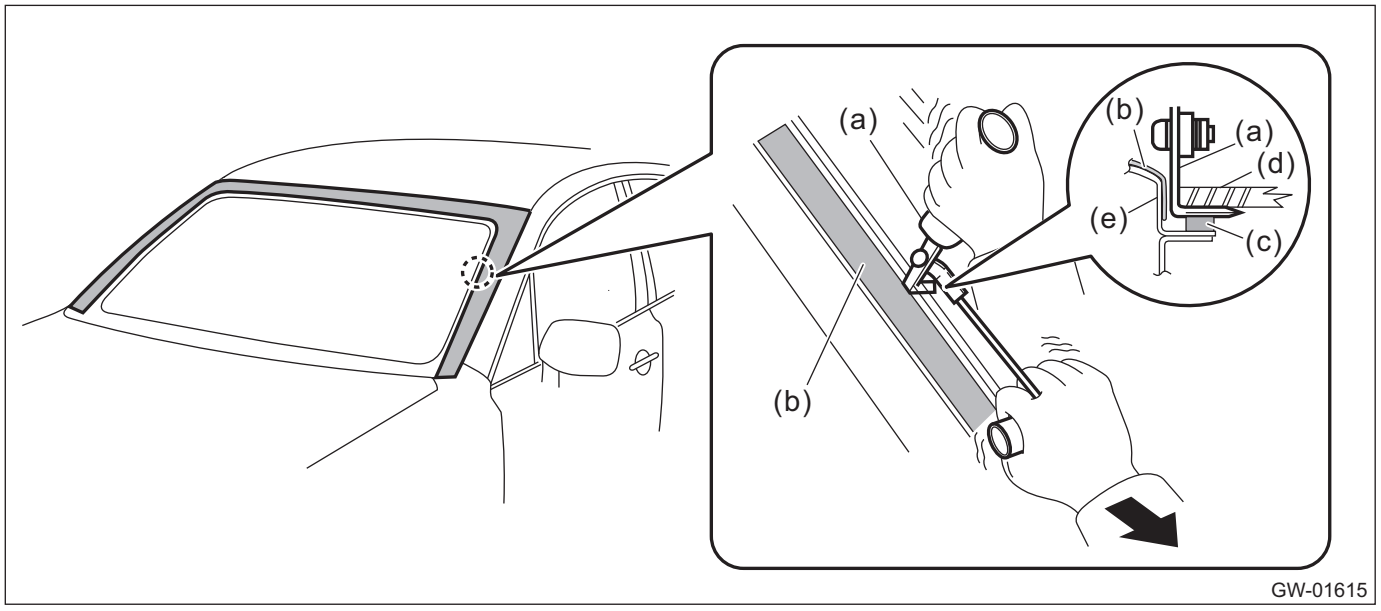
12.Windshield Glass

A: REMOVAL

CAUTION:
• For model with EyeSight, always remove the glass - front window after the stereo camera is removed.
• For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
• For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.
Inspection: <Ref. to ES(diag)-9, INSPECTION, General Description.>
Adjustment and check: <Ref. to ES-11, Camera Adjustment, Inspection.>
• If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of each camera, and thereby the EyeSight and high beam assist functions may not operate properly. <Ref. to PC-8, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight, CAUTION, Precaution.>

1. WHEN USING WINDSHIELD GLASS KNIFE

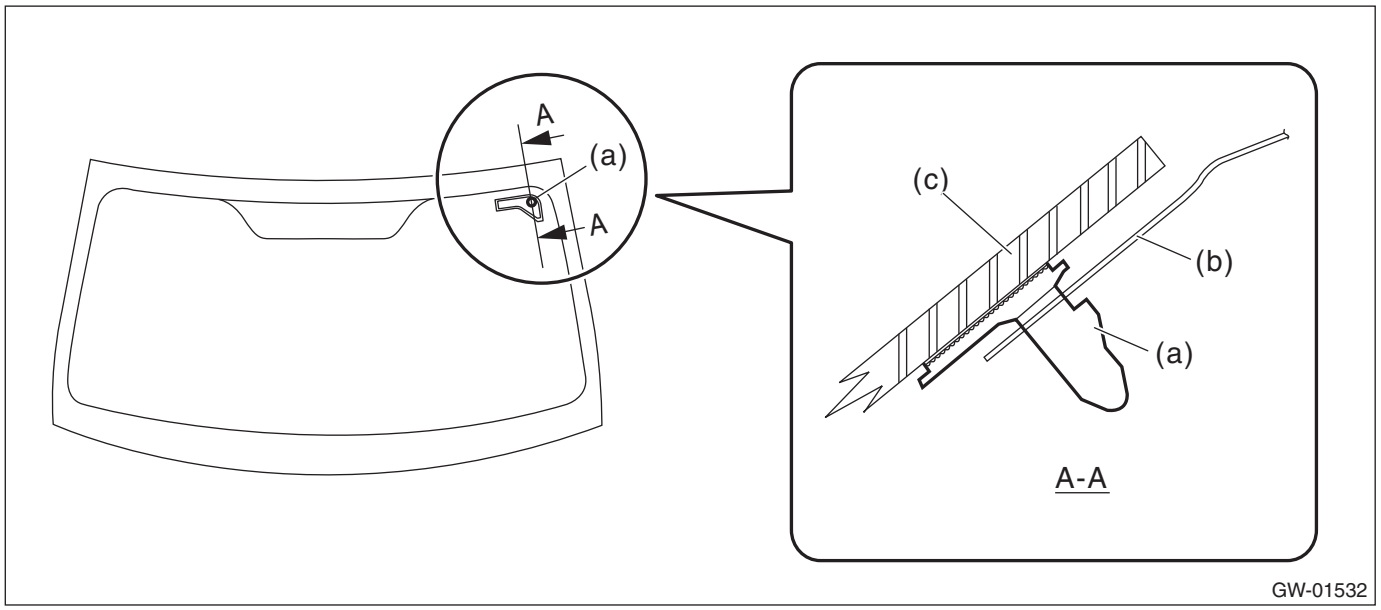
1) Disconnect the ground terminal from battery sensor. (Models with wiper deicer) <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
3) Remove the cowl panel assembly. <Ref. to EI-51, REMOVAL, Cowl Panel.>
4) Remove the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
5) Disconnect the connector of automatic anti-glare mirror. (Model with automatic anti-glare mirror and model with HBA)
6) Disconnect the wiper deicer connector. (Models with wiper deicer)
7) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.



(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

8) Remove the glass - front window.
(1) Apply sufficient amount of soapy water to the adhesive part and insert the windshield glass knife.

(2) While holding the edges of the knife and the glass - front window at a right angle, move the windshield glass knife parallel to the edge of the glass - front window, and cut the adhesive along the surface and the edge of the glass - front window.

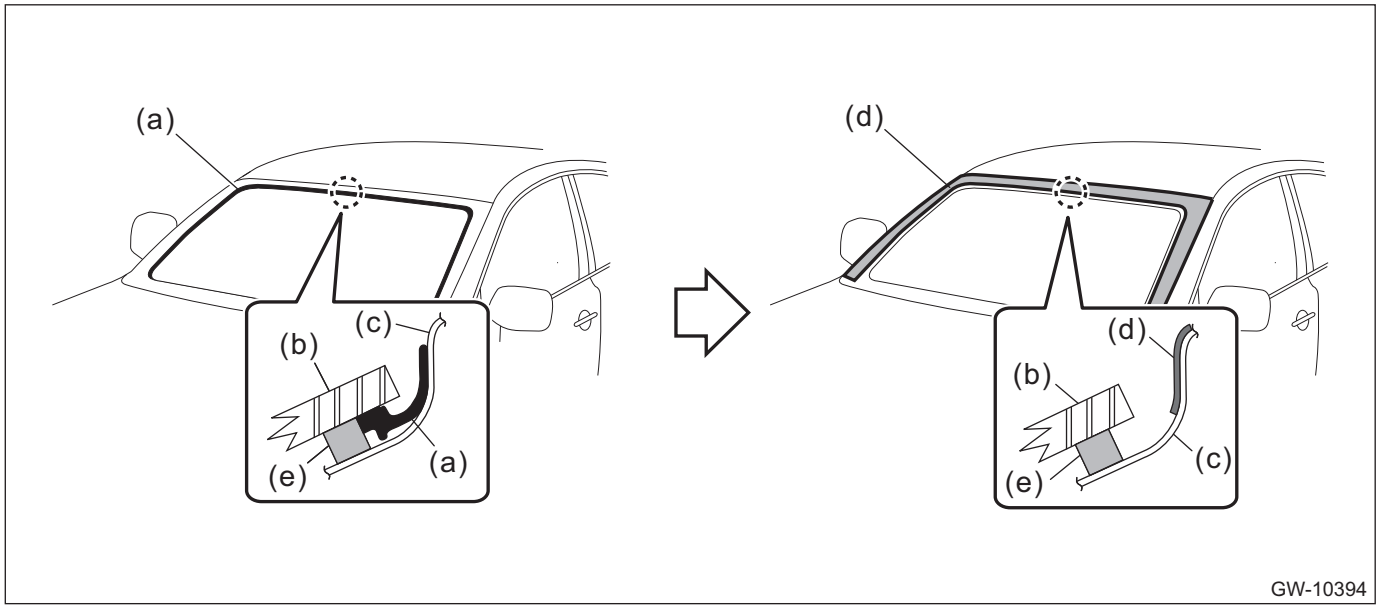


CAUTION:
• Cutting of adhesive part should be started from an area with wider gap between the glass - front window and the body.
• Never twist the windshield glass knife.

(a) Windshield glass knife
(b) Protective tape
(c) Adhesive
(d) Glass - front window
(e) Body panel

(3) Disconnect the locating pin - front window, and remove the glass - front window.

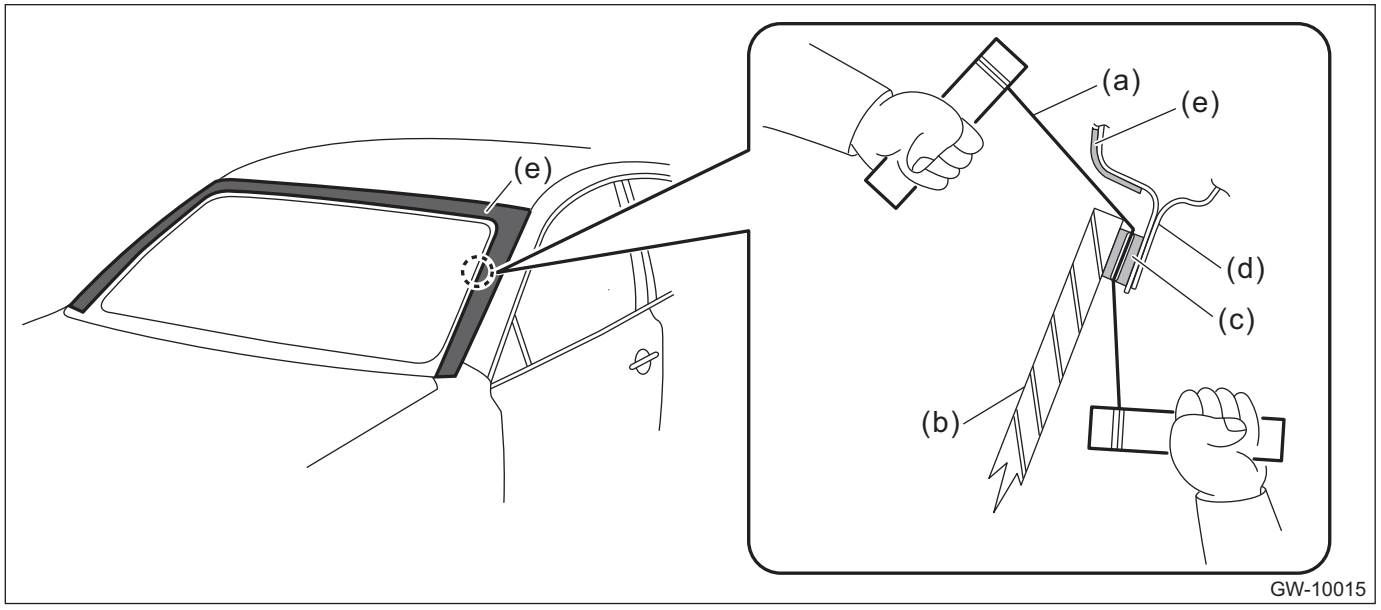
NOTE:
The locating pin - front window are bonded to the corners of the glass - front window. Use piano wire to disconnect the pins.



(a) Locating pin - front window
(b) Body panel
(c) Glass - front window

2. WHEN USING PIANO WIRE

CAUTION:
- **Do not tightly pull the piano wire against the glass - front window edge.**
- **Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.**
- **Do not cross piano wires. Otherwise they may be cut.**

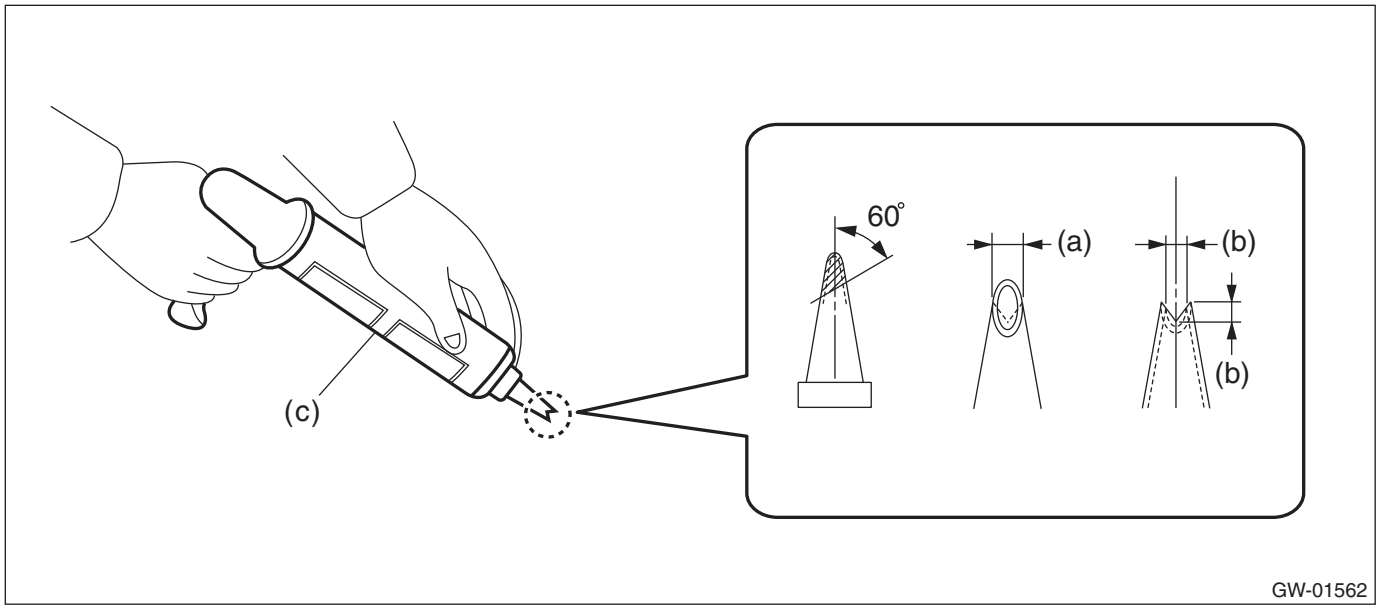


1) Disconnect the ground terminal from battery sensor. (Models with wiper deicer) <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
3) Remove the cowl panel assembly. <Ref. to EI-51, REMOVAL, Cowl Panel.>
4) Disconnect the wiper deicer connector. (Models with wiper deicer)
5) Remove the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
6) Disconnect the connector of automatic anti-glare mirror. (Model with automatic anti-glare mirror and model with HBA)
7) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

8) Remove the glass - front window.
   (1) Using a drill, make a hole in the adhesive part.
   (2) Pass the piano wire through the hole, and pull the wire ends alternately to cut off the adhesive part and the locating pin - front window.

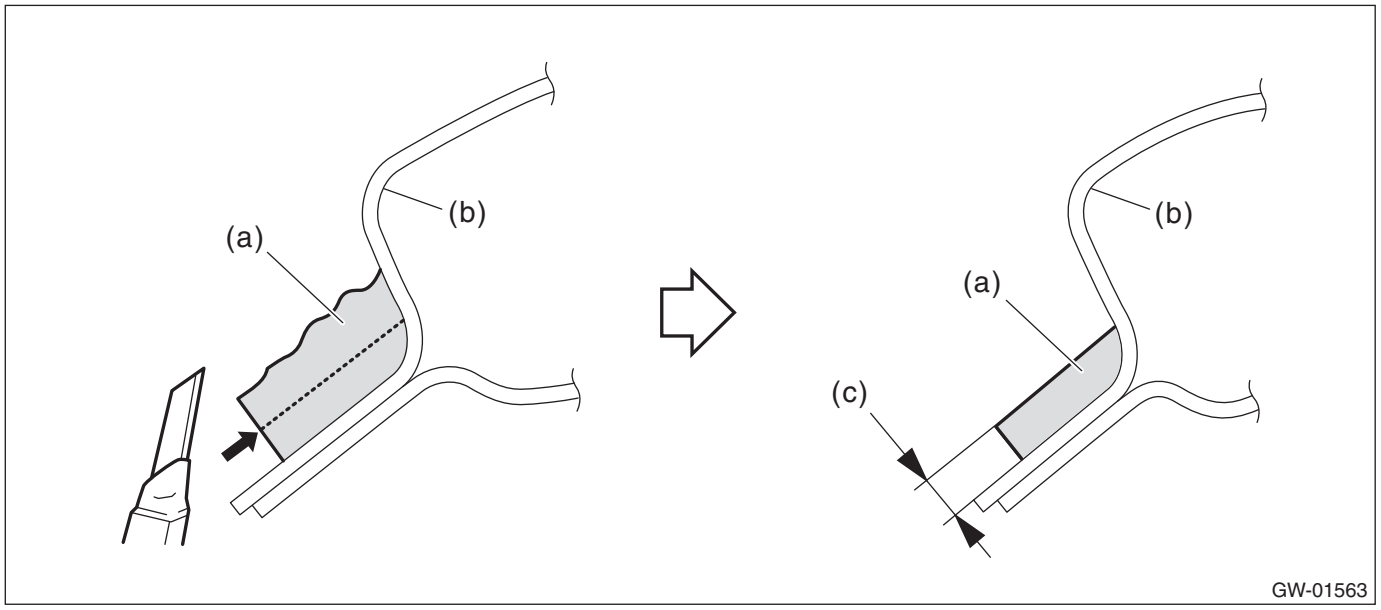
CAUTION:
Attach a piece of wood to both piano wire ends.



(a) Piano wire
(b) Glass - front window
(c) Adhesive
(d) Body panel
(e) Protective tape

B: INSTALLATION

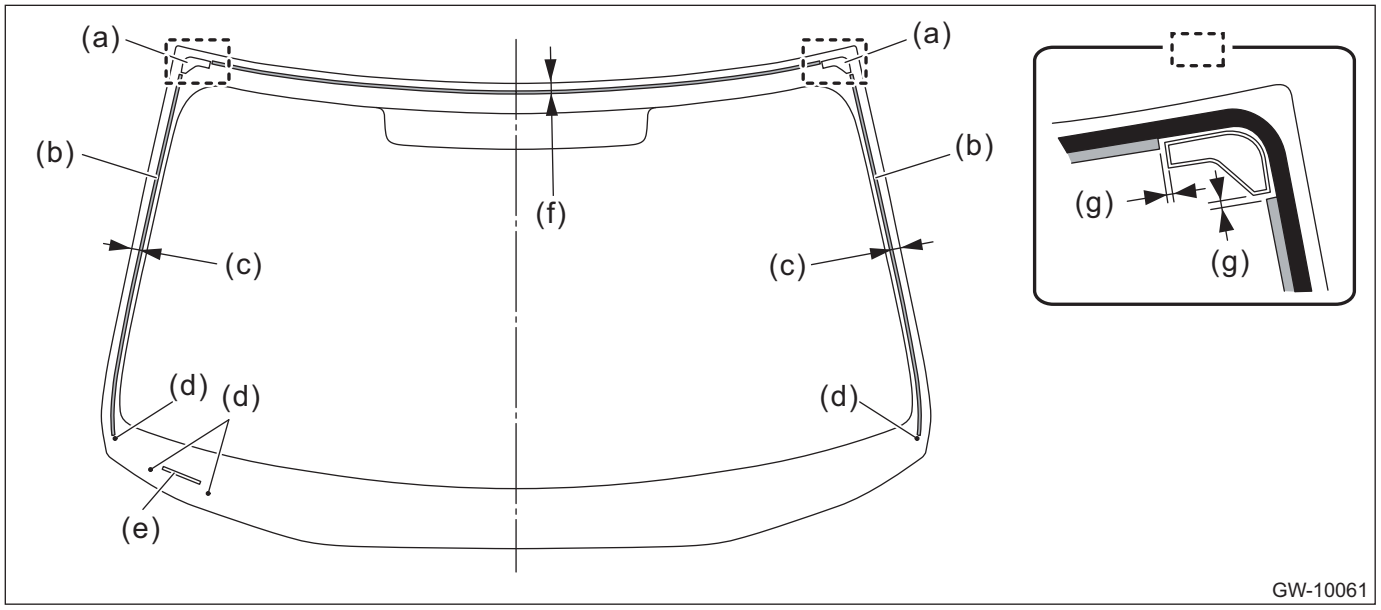
CAUTION:
• For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
• For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.
Inspection: <Ref. to ES(diag)-9, INSPECTION, General Description.>
Adjustment and check: <Ref. to ES-11, Camera Adjustment, Inspection.>
• If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of each camera, and thereby the EyeSight and high beam assist functions may not operate properly. <Ref. to PC-8, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight, CAUTION, Precaution.>



1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

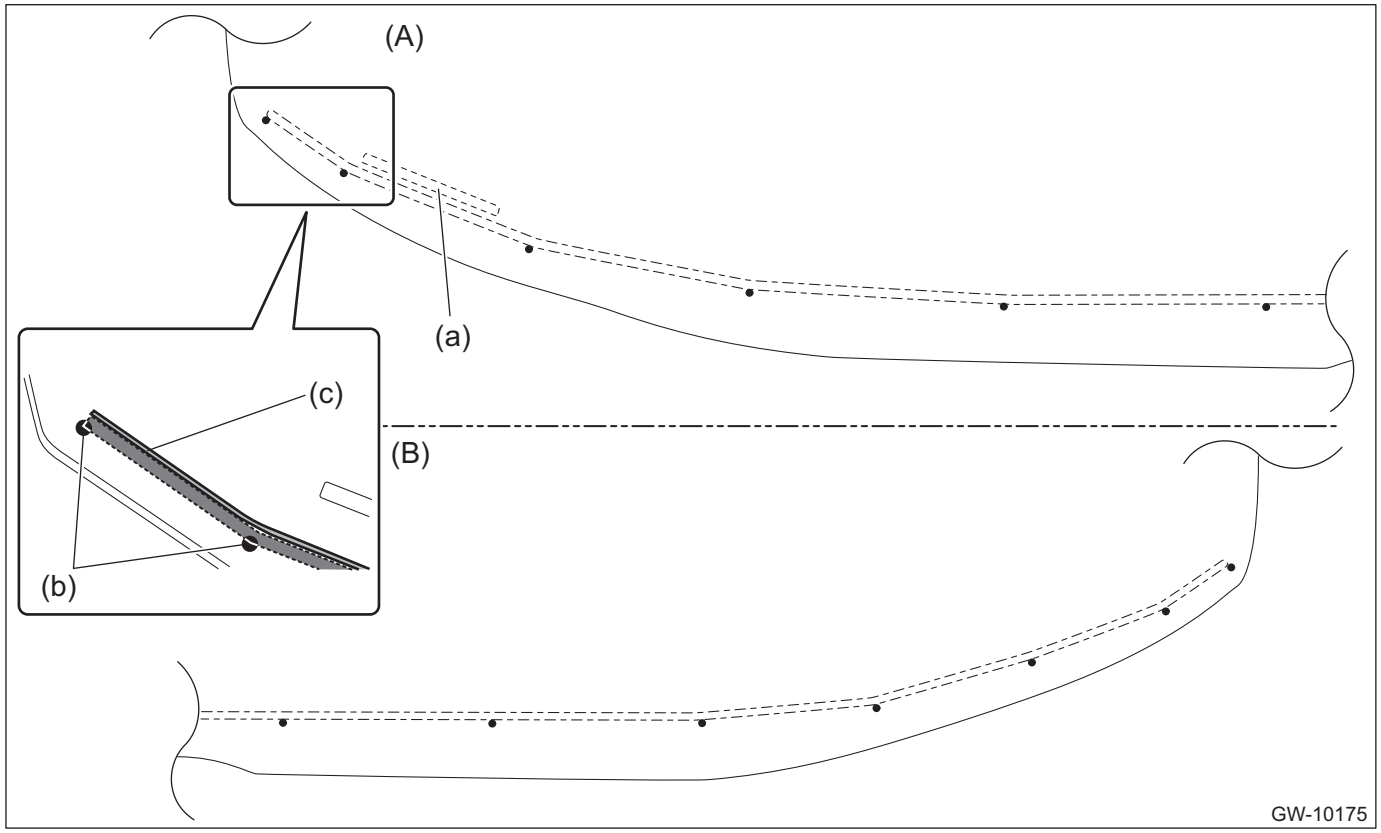


CAUTION:
- **Be careful not to damage the body and paint surface.**
- **Be sure to keep some amount of old adhesive.**

(a) Adhesive (b) Body panel (c) 2 mm (0.08 in)

3) Clean the glass - front window and the body with alcohol or appropriate cleaning solvent to completely eliminate cutting powder, dust and dirt.

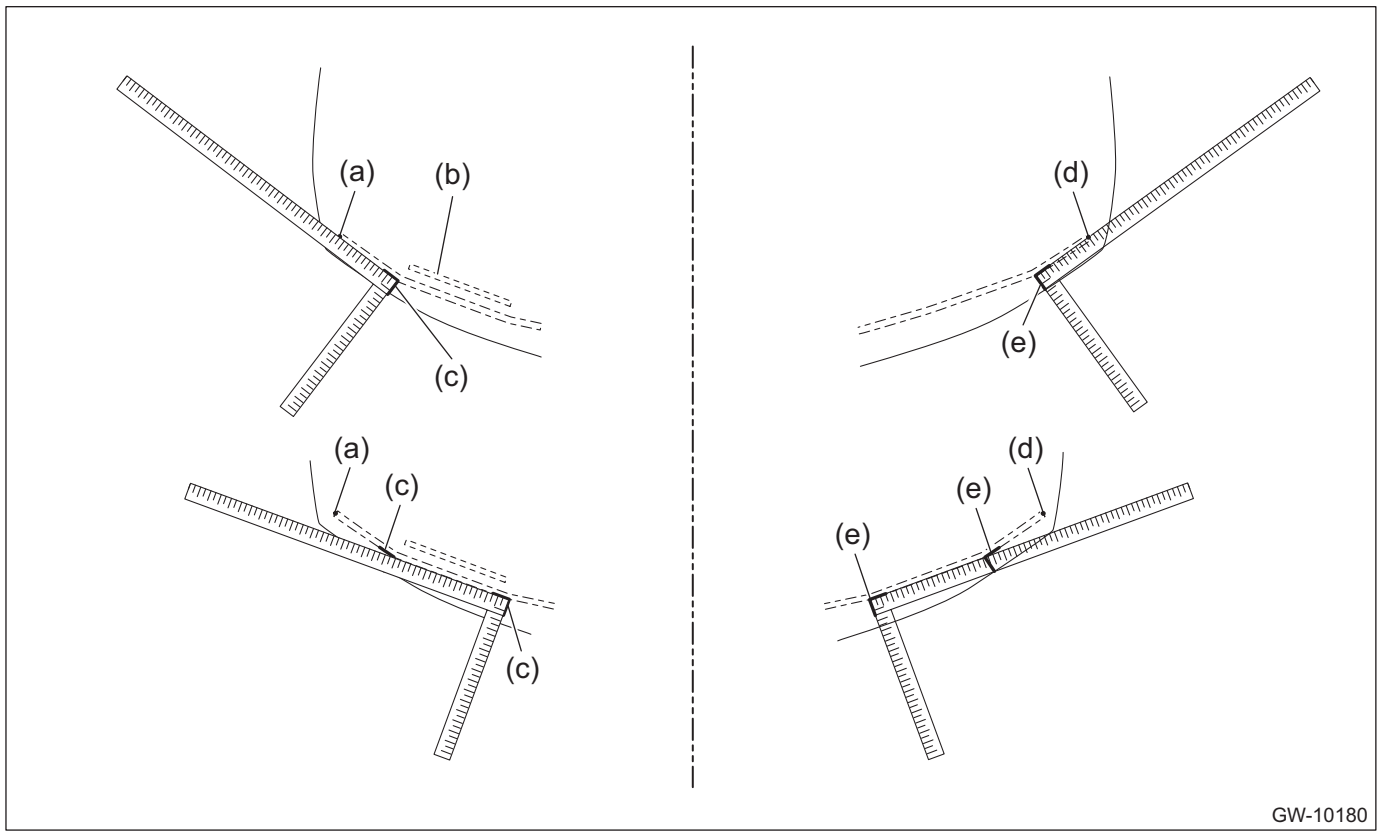
4) Attach the upper side and lateral side dam rubbers - front UPR to the glass - front window.



(a) Locating pin - front window
(b) Dam rubber - front upper
(c) 19.8 mm (0.78 in)
(d) Dam rubber set mark
(e) VIN plate confirmation window
(f) 20.3 mm (0.8 in)
(g) 0+3 mm (0+0.12 in)

5) To install the dam rubber - front LWR, follow the procedure below.
- For Type A (dam rubber set mark: 13 points), go to step 6).
- For Type B (dam rubber set mark: 2 points), go to step 7).

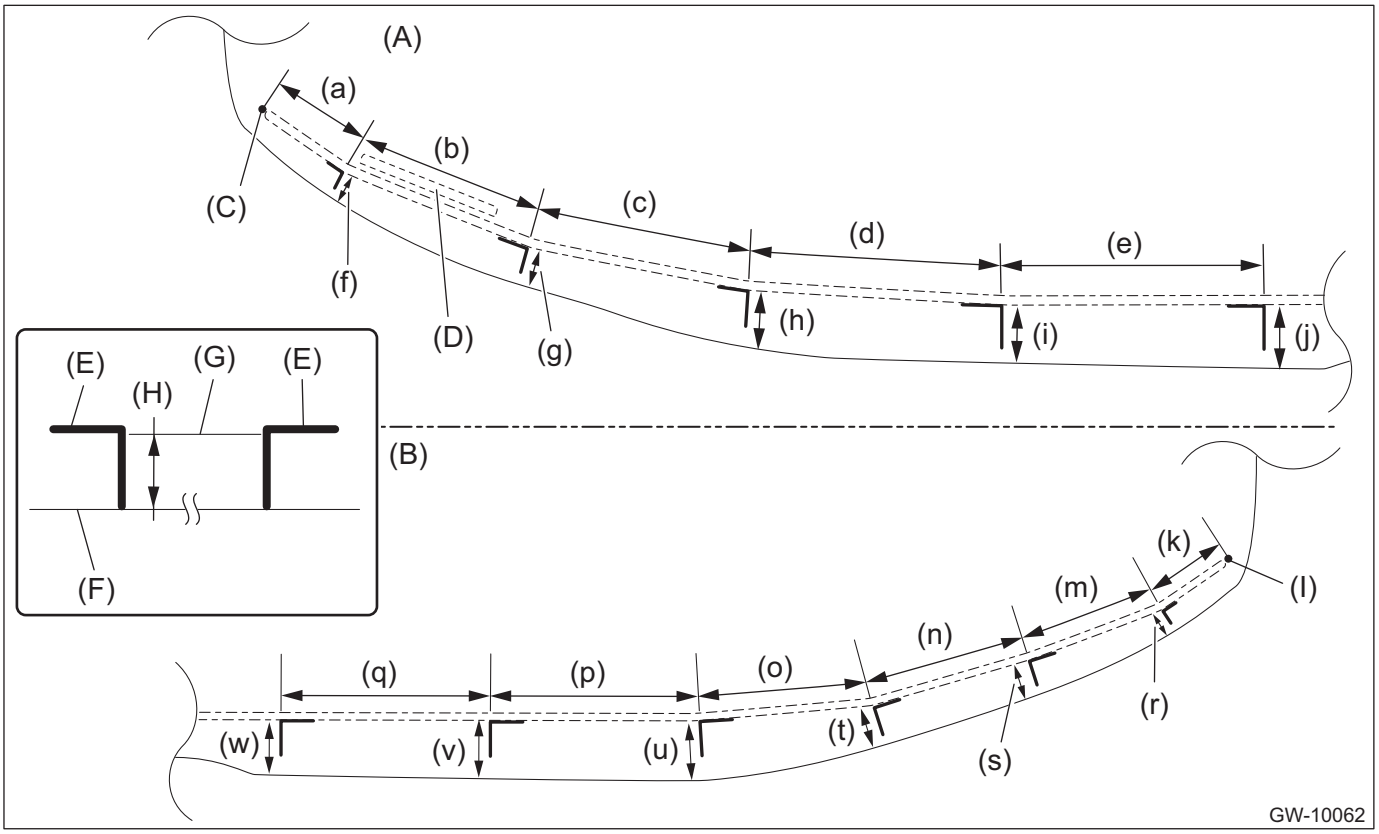
6) Attach the lower side dam rubber - front LWR to the glass - front window.



CAUTION:
While aligning the lower edge of the dam rubber with the dam rubber set marks, adhere in a straight position. Attach it so that it does not project up from the dam rubber set line.

(A) Driver's side (B) Passenger's side
(a) VIN plate confirmation window (b) Dam rubber set mark (c) Dam rubber set line

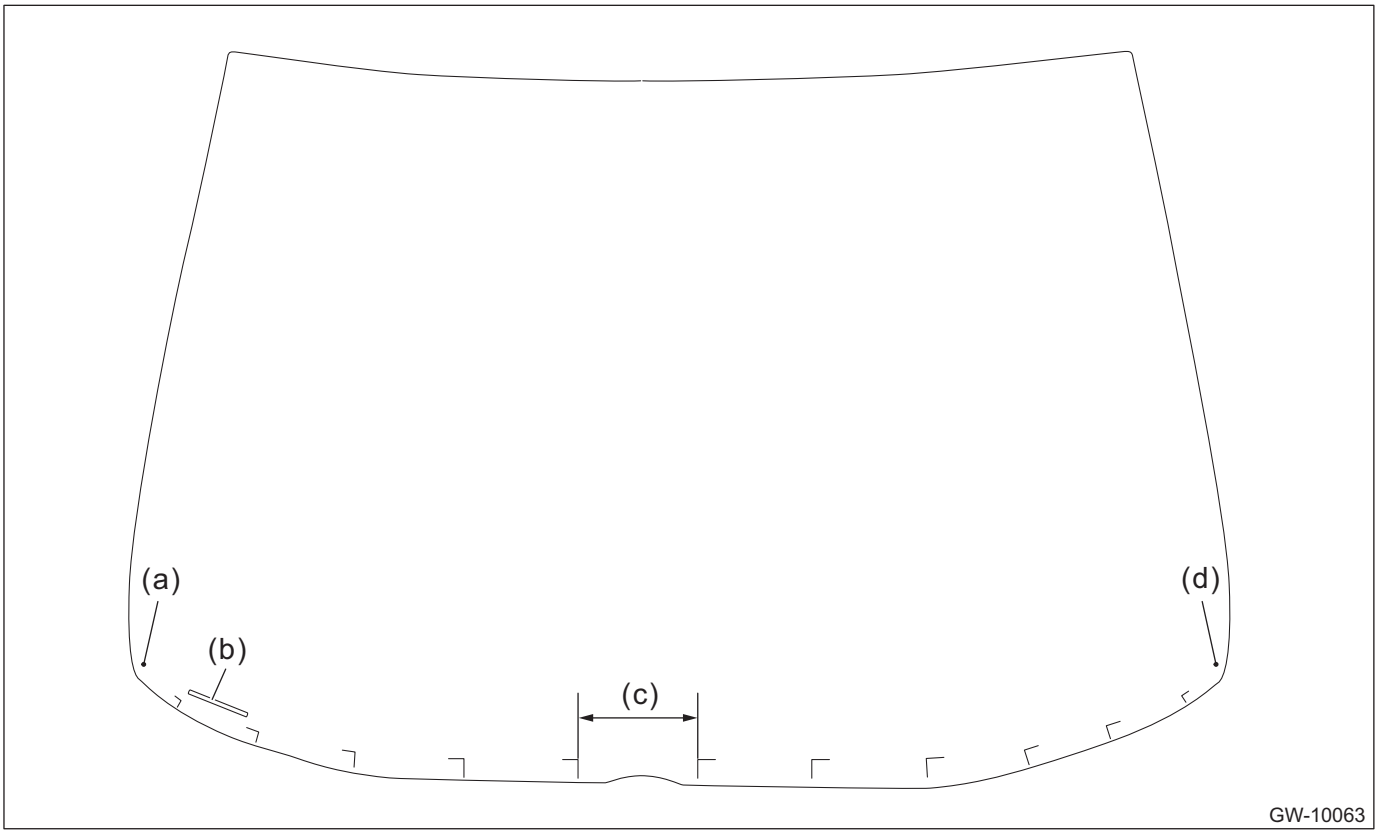
7) After marking the attaching area with a pencil, attach the lower side dam rubber - front LWR to the glass - front window.



NOTE:
Perform the marking on the glass - front window in the following procedure.

(a) Driver's side dam rubber set mark
(b) VIN plate confirmation window
(c) Driver's side marking
(d) Passenger's side dam rubber set mark
(e) Passenger's side marking

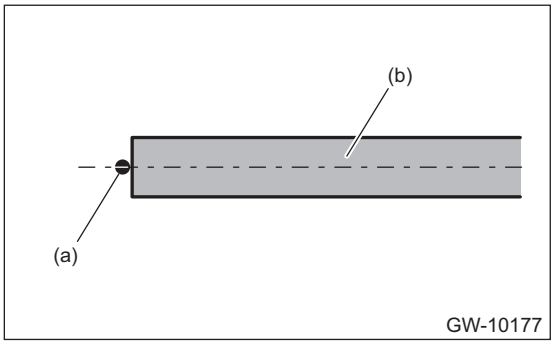
(1) Mark the attachment position of dam rubber - front LWR from the position (a) to (j) on the glass - front window using a carpenter's square.



(2) Mark the attachment position of dam rubber - front LWR from the position (k) to (w) on the glass - front window using a carpenter's square.

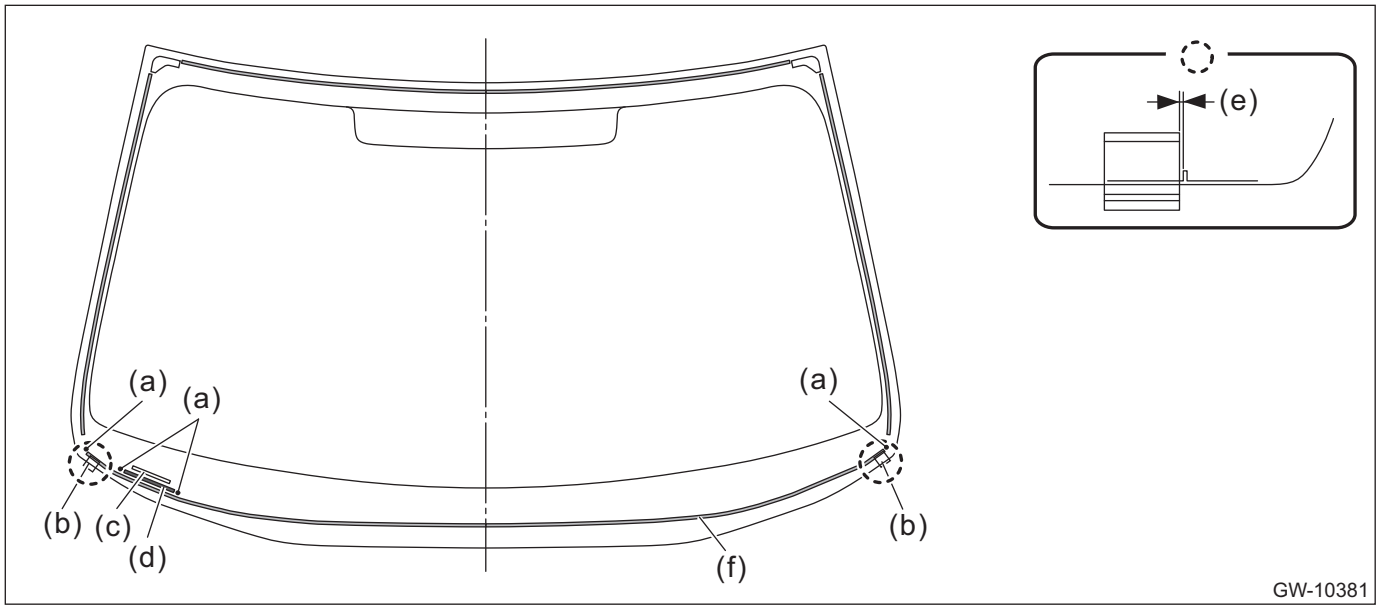
(A)	Driver's side	(D)	VIN plate confirmation window	(G)	Carpenter's square extended line
(B)	Passenger's side	(E)	Marking	(H)	Distance to the glass edge for each marking
(C)	Driver's side dam rubber set mark	(F)	Edge of glass - front window	(I)	Passenger's side dam rubber set mark

(a)	65 mm (0.51 in)	(i)	31 mm (1.22 in)	(r)	16 mm (0.63 in)
(b)	110 mm (4.33 in)	(j)	36 mm (1.42 in)	(s)	27 mm (1.06 in)
(c)	130 mm (5.12 in)	(k)	58 mm (2.28 in)	(t)	29 mm (1.14 in)
(d)	144 mm (5.67 in)	(m)	107 mm (4.21 in)	(u)	44 mm (1.73 in)
(e)	150 mm (5.91 in)	(n)	115 mm (4.53 in)	(v)	43 mm (1.69 in)
(f)	13 mm (0.51 in)	(o)	130 mm (5.12 in)	(w)	40 mm (1.57 in)
(g)	21 mm (0.83 in)	(p)	150 mm (5.91 in)		
(h)	30 mm (1.18 in)	(q)	150 mm (5.91 in)		



(3) Check the distance (c) after marking on the glass - front window.

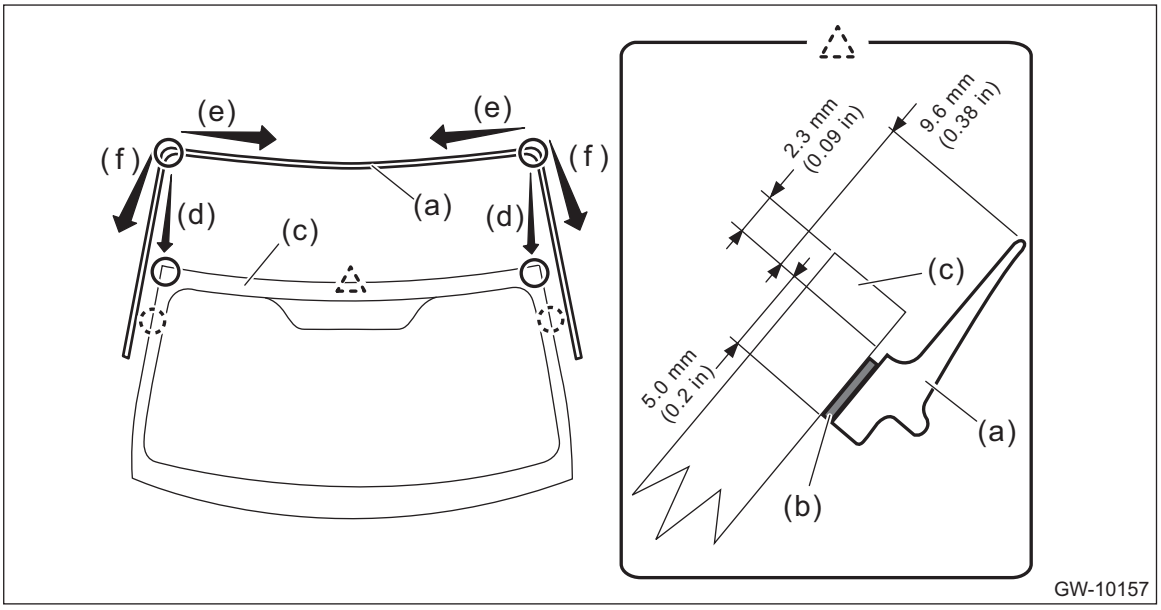
(a) Driver's side dam rubber set mark
(b) VIN plate confirmation window
(c) 145 mm (5.71 in)
(d) Passenger's side dam rubber set mark



(4) Align the dam rubber - front LWR with the marking, then attach it.

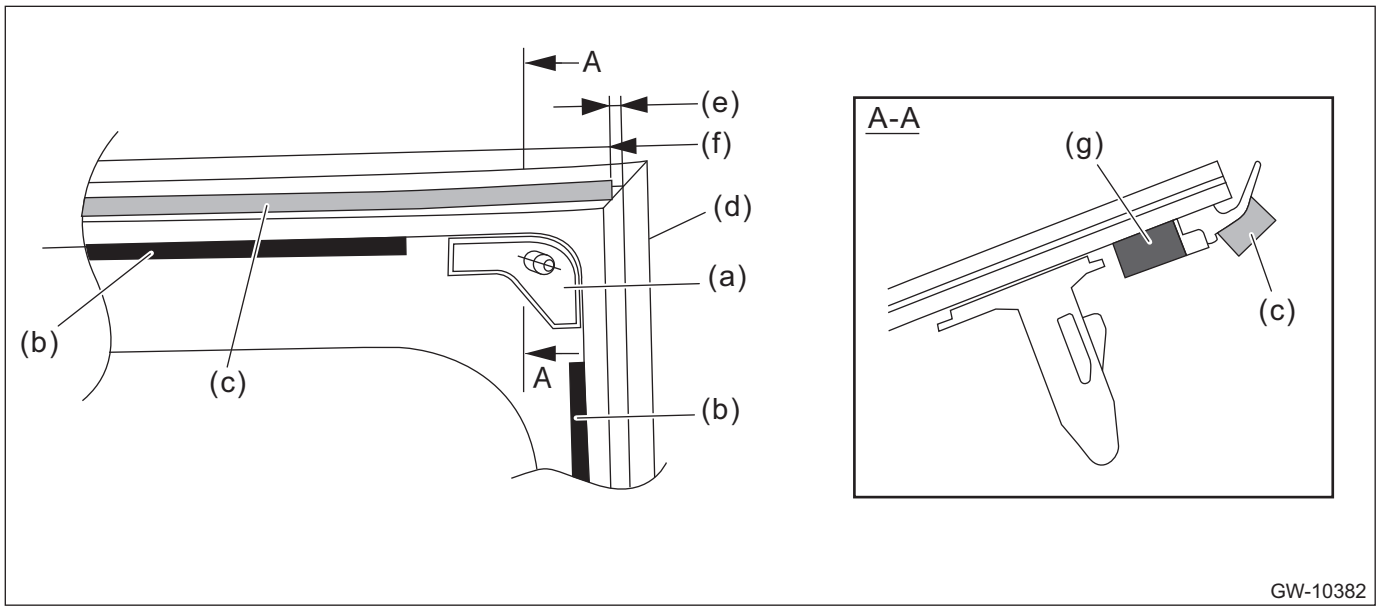
CAUTION:
Set the application start position of the dam rubber so that the dam rubber set mark is aligned with the center of the dam rubber.

(a) Dam rubber set mark
(b) Dam rubber



8) Attach the seal - LWR and the dam rubbers - front VIN to the glass - front window.

(a)	Dam rubber set mark	(c)	VIN plate confirmation window	(e)	0+5 mm (0+0.2 in)
(b)	Seal - LWR	(d)	Dam rubber - front VIN	(f)	Dam rubber - front LWR



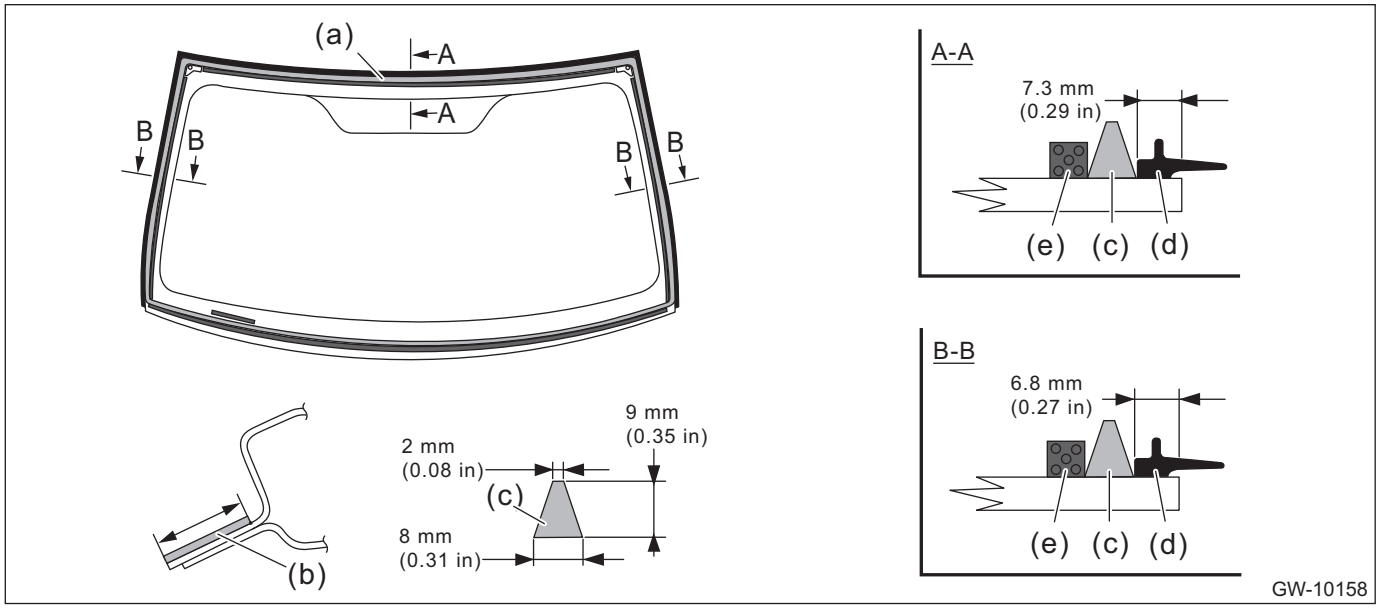
9) Attach the molding - front window to the glass - front window.

CAUTION:
Be careful to attach the molding - front window so that the molding has no loose or undulating part.

(1) Align the molding - front window (a) to the upper ends (d) of the glass - front window (c).
(2) Install the molding - front window from both corners of the upper edge toward the center. (e)
(3) Install the molding - front window from both corners of the upper edge toward the bottom. (f)
(4) Firmly apply the double sided tape (b) of the molding - front window evenly to the surface of the glass - front window.

10) Attach the seal - front window UPR to the molding - front window.

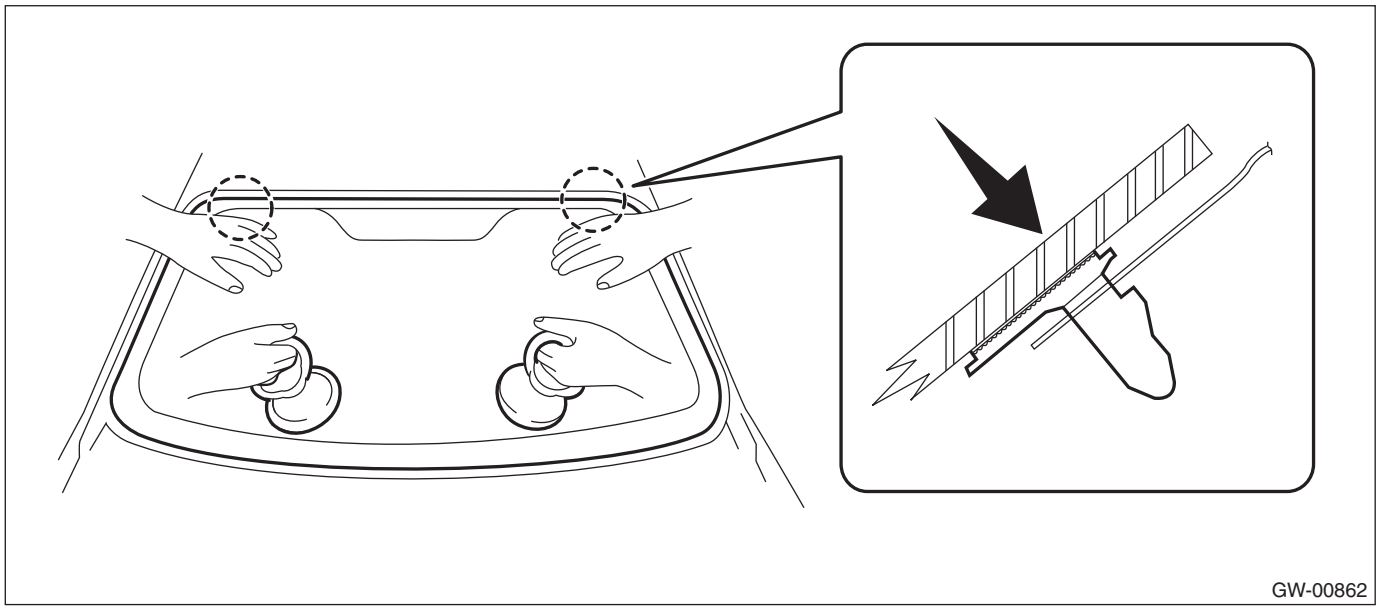
(a) Locating pin - front window
(b) Dam rubber - front UPR
(c) Seal - front window UPR
(d) Molding - front window
(e) 0+3 mm (0+0.12 in)
(f) 165 mm (6.50 in)
(g) Adhesive



11) Install the glass - front window.
(1) Apply the primer to the adhesive surface of glass - front window side and body side using sponge.

CAUTION:
Do not apply primer to adhesive remaining on the body side.

Preparation items:
Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent
Painted surface primer: Dow Automotive ESSEX U-413 or equivalent



NOTE:
• Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
• Let primer dry for about ten minutes before installing the glass - front window.
• Do not touch the surface coated with primer.
(2) Apply adhesive to the end back surface of the glass - front window.

Preparation items:
Adhesive: Dow Automotive ESSEX U-400HV or equivalent

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - front window
(e) Dam rubber - front UPR

(3) Fit the locating pins - front window to the vehicle body using suction rubber cups to install the windshield glass.

(4) Lightly press the entire perimeter of the glass - front window for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

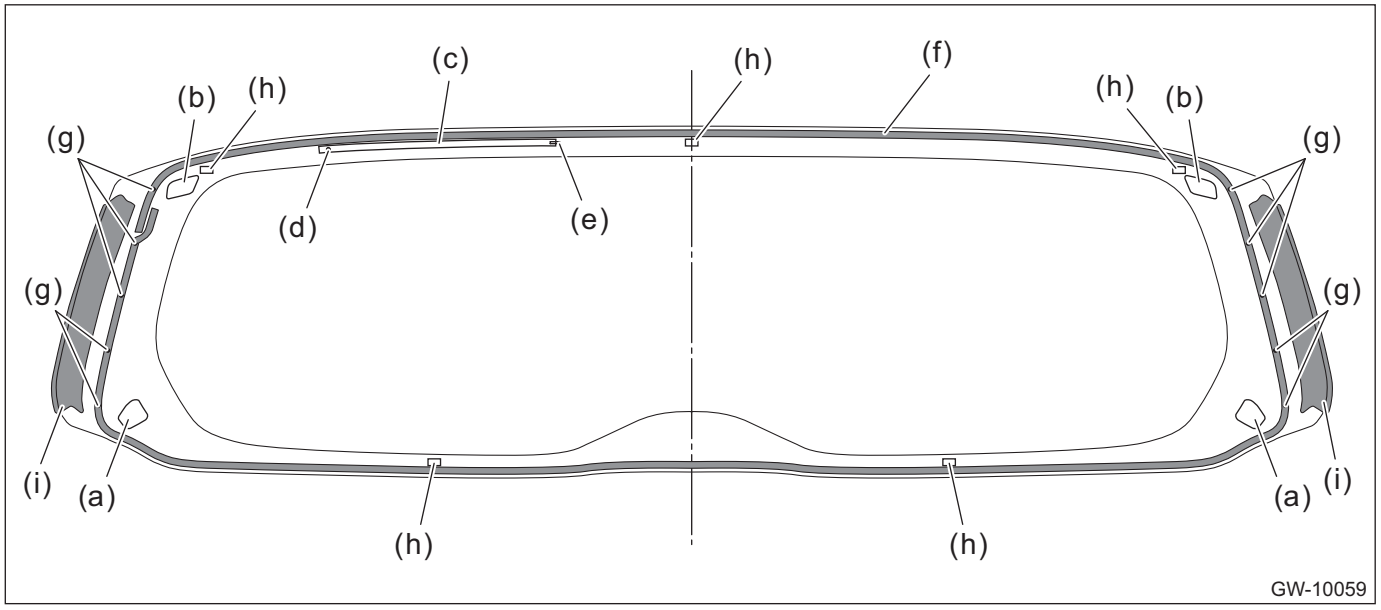
12) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - front window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

13) Connect the wiper deicer connector. (Models with wiper deicer)

14) Install the cowl panel assembly. <Ref. to EI-52, INSTALLATION, Cowl Panel.>
15) Install the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>
16) Connect the automatic anti-glare mirror connector. (Model with automatic anti-glare mirror and model with HBA)
17) Install the trim panel - front pillar UPR. <Ref. to EI-95, INSTALLATION, Upper Inner Trim.>
18) Connect the ground terminal to battery sensor. (Models with wiper deicer) <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
19) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

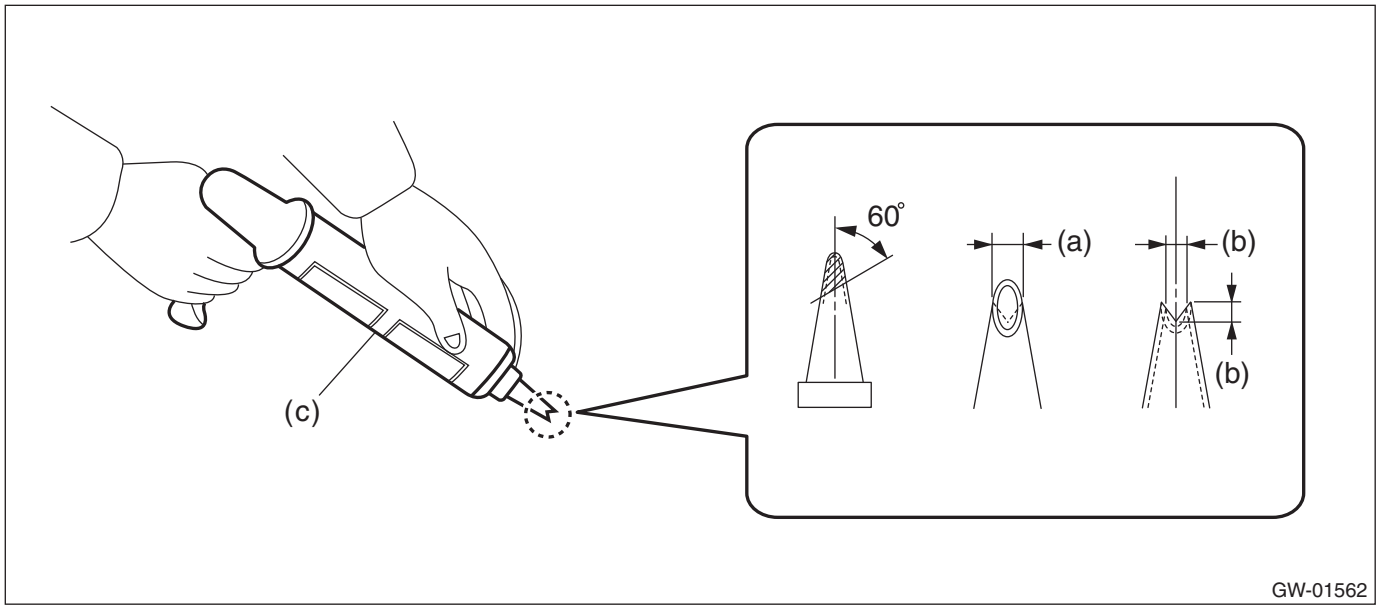
NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.



13.Rear Gate Glass

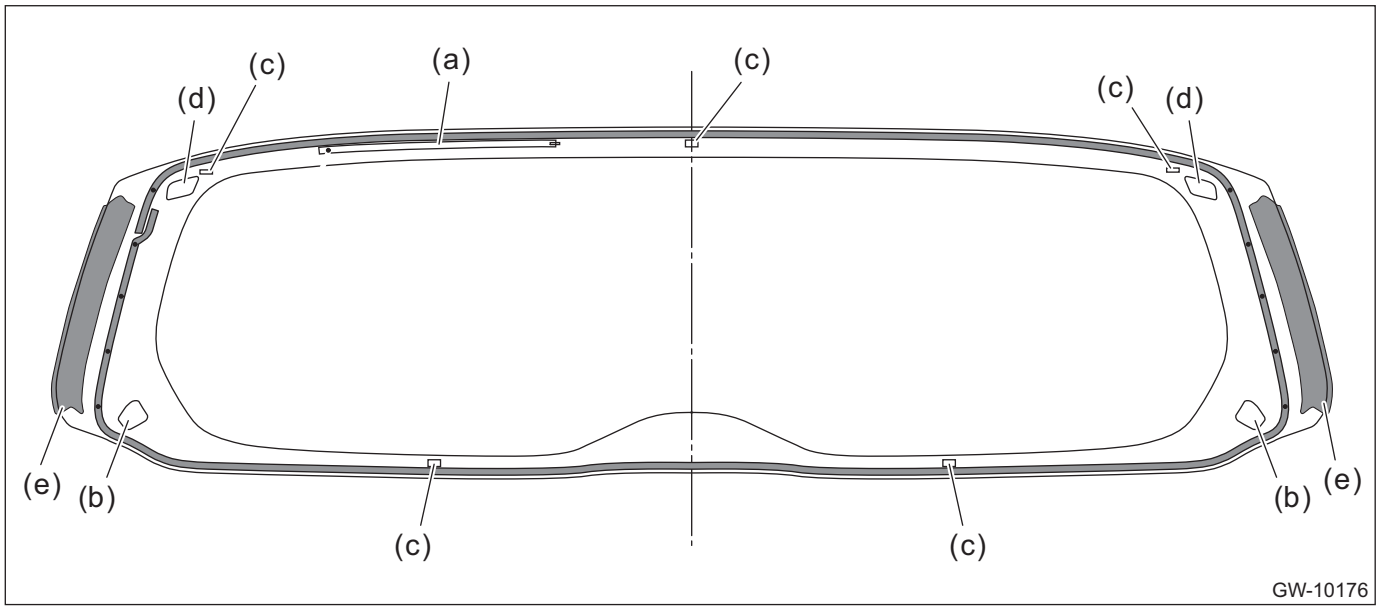
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the roof spoiler. <Ref. to EI-67, REMOVAL, Roof Spoiler.>
3) Remove the trim panel - rear gate and the motor assembly - rear wiper. <Ref. to WW-41, REMOVAL, Rear Wiper Motor.>
4) Disconnect the rear defogger connector.
5) Remove the touch sensor LWR. (Model with power rear gate) <Ref. to PRG-17, TOUCH SENSOR LWR, REMOVAL, Power Rear Gate Touch Sensor.>
6) Remove the glass - rear gate in the same procedure as for the glass - front window. <Ref. to GW-41, REMOVAL, Windshield Glass.>



B: INSTALLATION

NOTE:
Use the markings on the glass to apply adhesive and primer, and to install the dam rubber - rear gate and the spacer - rear gate.

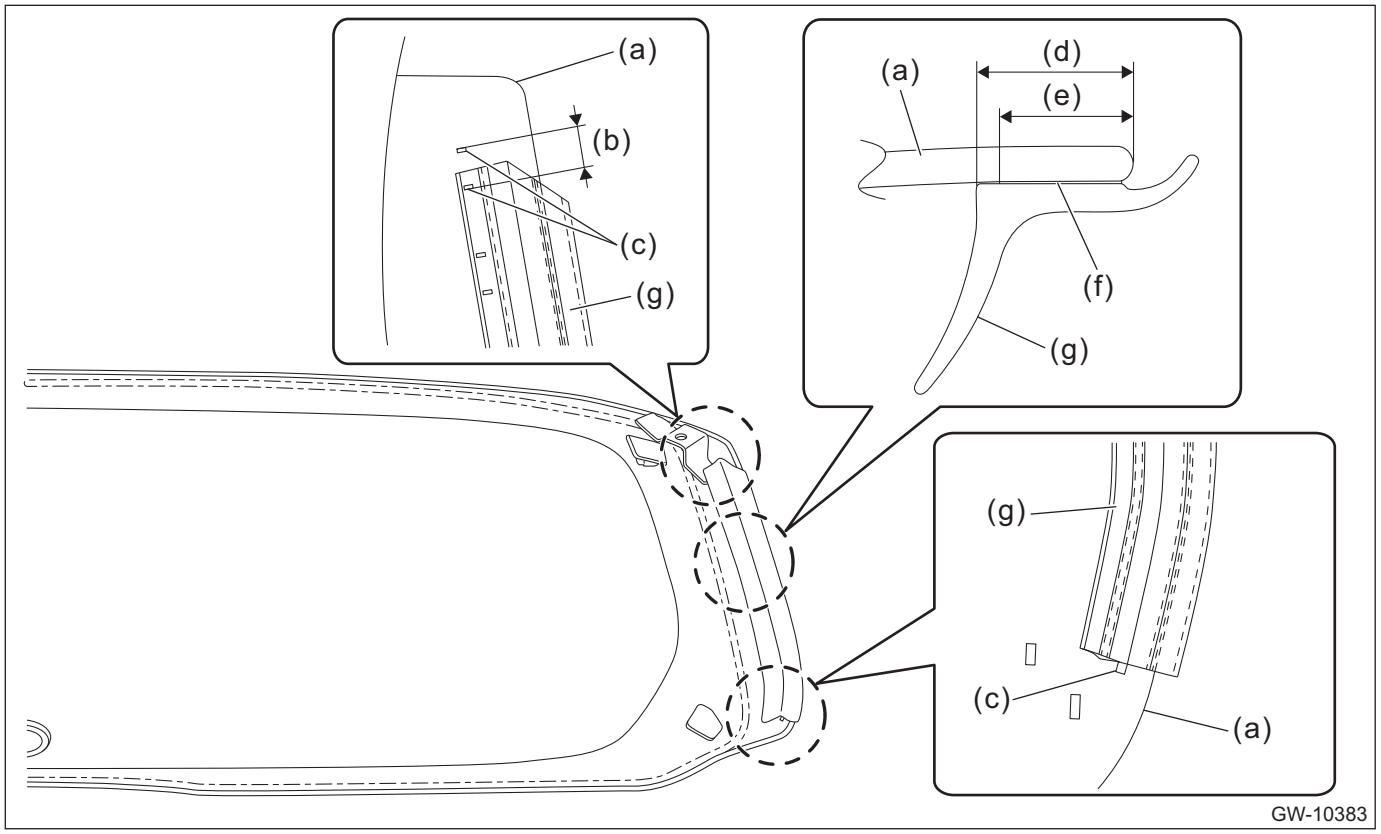


(a)	Locating pin - rear gate	(d)	Marking for dam rubber - rear gate application (Ag print)	(g)	Adhesive application area
(b)	Holder - rear gate upper	(e)	Origin of attachment	(h)	Spacer - rear gate
(c)	Dam rubber - rear gate	(f)	Adhesive line	(i)	Molding - rear gate side (model without power rear gate)

1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in)
(b) 8 mm (0.31 in)
(c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear gate and body using the same procedures as for the glass - front window. <Ref. to GW-44, INSTALLATION, Windshield Glass.>
3) Attach the dam rubber - rear gate to the glass - rear gate.

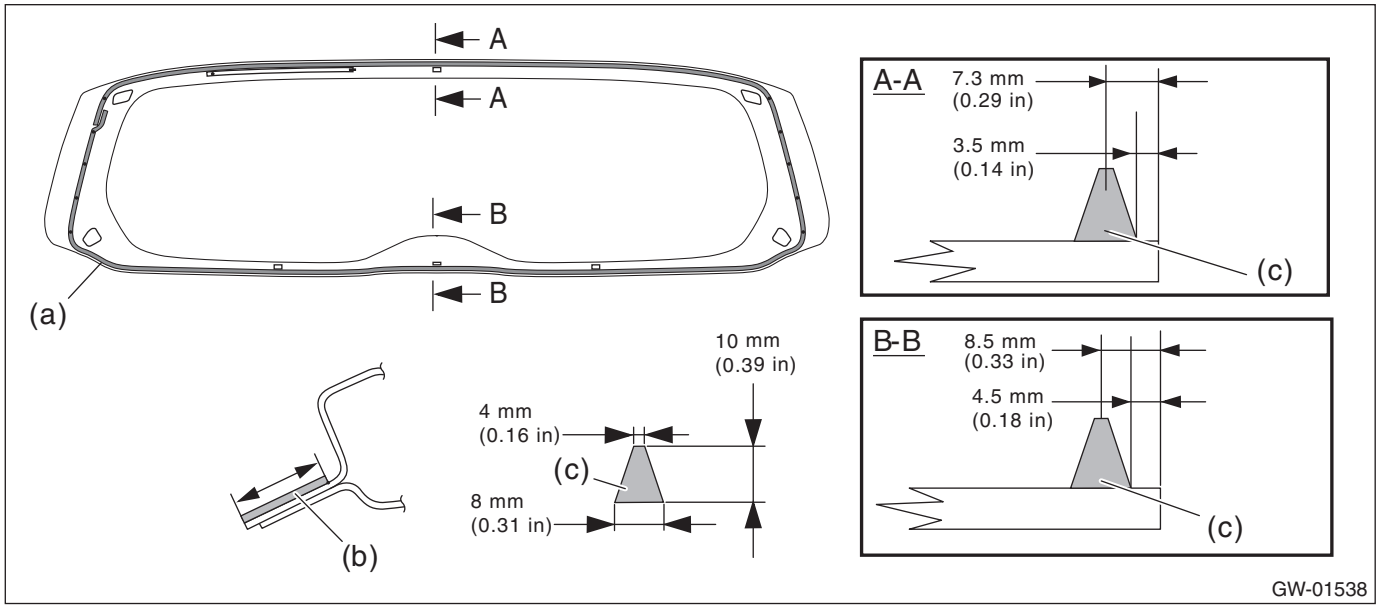


(a) Dam rubber - rear gate
(b) Locating pin - rear gate
(c) Spacer - rear gate
(d) Holder - rear gate upper
(e) Molding - rear gate side (model without power rear gate)

4) Attach the molding - rear gate side to the glass - rear gate. (Model without power rear gate)

CAUTION:
Be careful to attach the molding - rear gate side so that the molding has no loose or undulating part.

NOTE:
- Install the molding - rear gate side so that its upper end is within (b).



- Use the Ag print as a reference when installing the molding - rear gate side.

(a)	Glass - rear gate	(d)	13.7 mm (0.54 in)	(g)	Molding - rear gate side
(b)	10 mm (0.39 in)	(e)	11.7 mm (0.46 in)		
(c)	Marking for molding - rear gate side application (Ag print)	(f)	Double-sided tape		

5) Install the glass - rear gate.
   (1) Apply the primer to the adhesive surface of glass - rear gate side and body side using sponge.
   (2) Apply adhesive to the glass - rear gate end back surface.

CAUTION:
Do not apply primer to adhesive.

(a) Application of primer (glass side) (b) Application of primer (body side) (c) Adhesive

(3) Attach the holder - clip rear gate to the holder - rear gate upper of the glass - rear gate.
(4) Insert the locating pins - rear gate into the rear gate panel holes, and install the glass - rear gate.
(5) Lightly press the entire perimeter of the glass - rear gate for tight fit.
(6) Make flush the adhesive surface jutted out using spatula.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - rear gate was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) Connect the rear defogger connector.
8) Install the motor assembly - rear wiper and the arm assembly - rear wiper. <Ref. to WW-42, INSTALLATION, Rear Wiper Motor.>

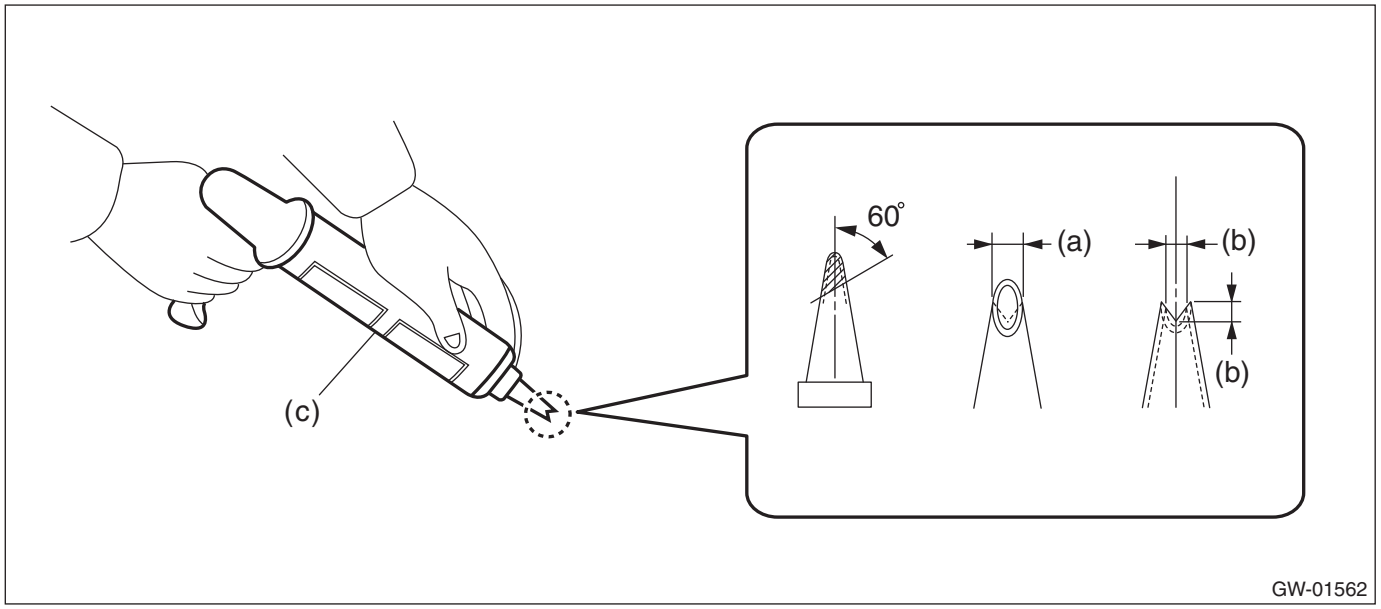
Tightening torque:
Motor assembly - rear wiper and arm assembly - rear wiper: <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

9) Install the roof spoiler. <Ref. to EI-63, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

10) Install the touch sensor LWR. <Ref. to PRG-18, TOUCH SENSOR LWR, INSTALLATION, Power Rear Gate Touch Sensor.>
11) Install the trim panel - rear gate. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
13) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

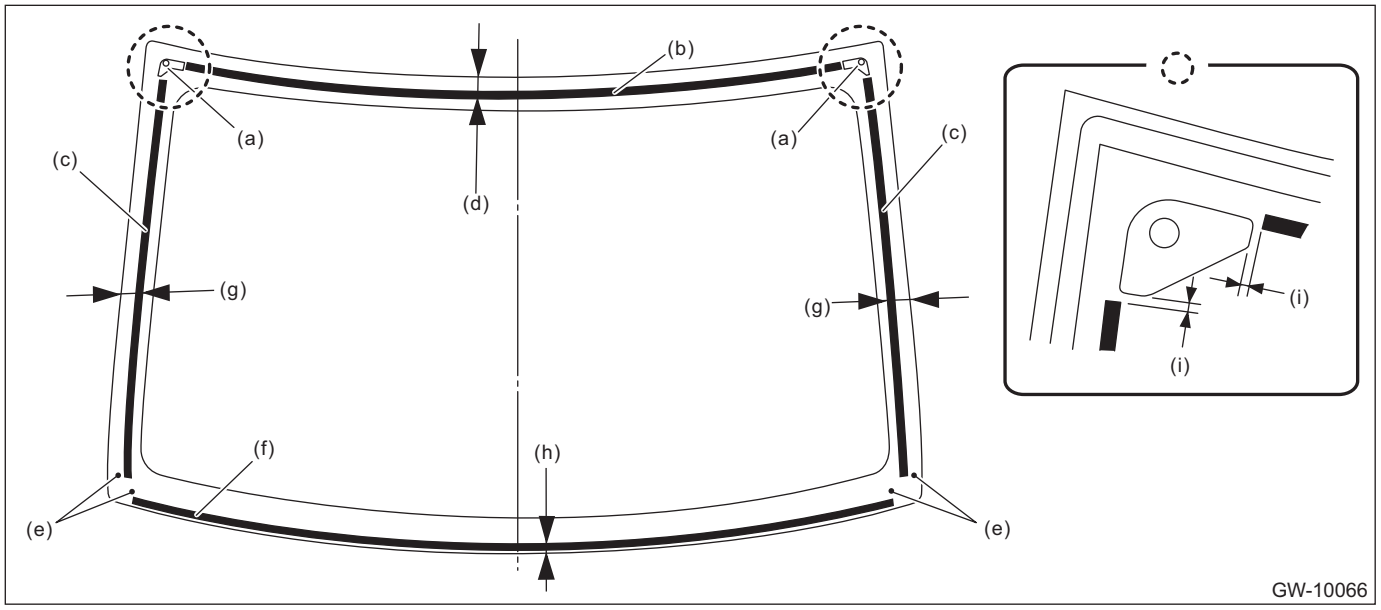


14.Rear Window Glass

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Disconnect the rear defogger connector.
3) Remove the glass - rear window in the same procedure as for the glass - front window. <Ref. to GW-41, REMOVAL, Windshield Glass.>

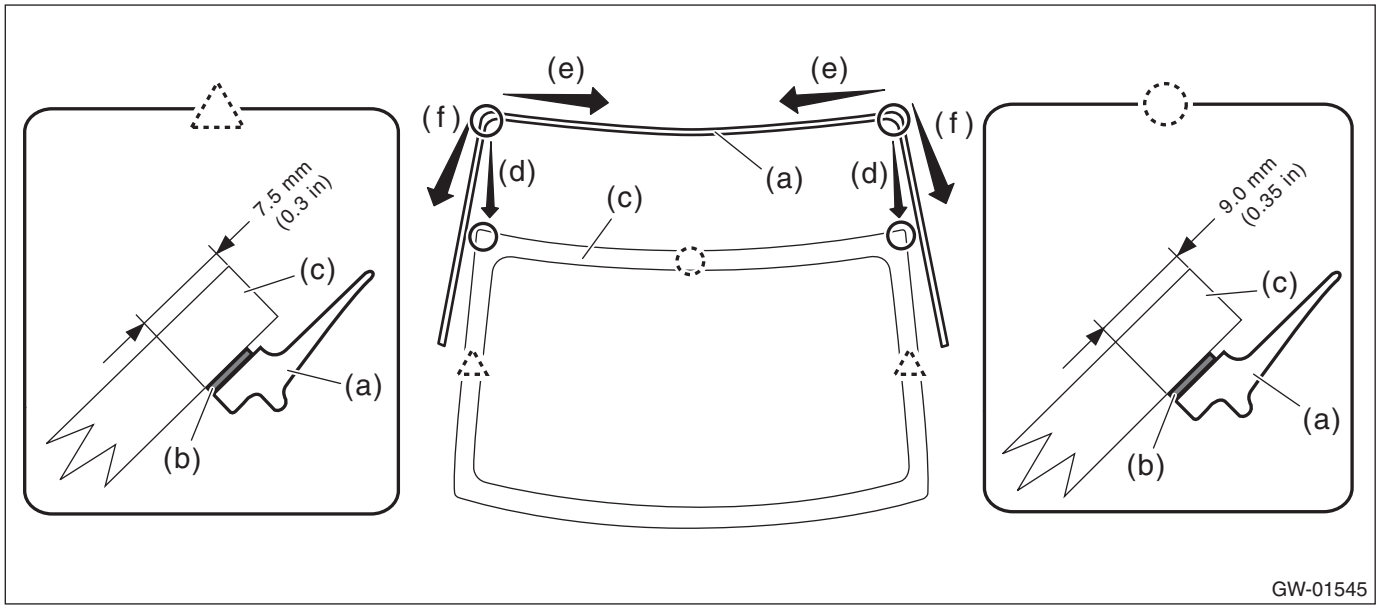
B: INSTALLATION



1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

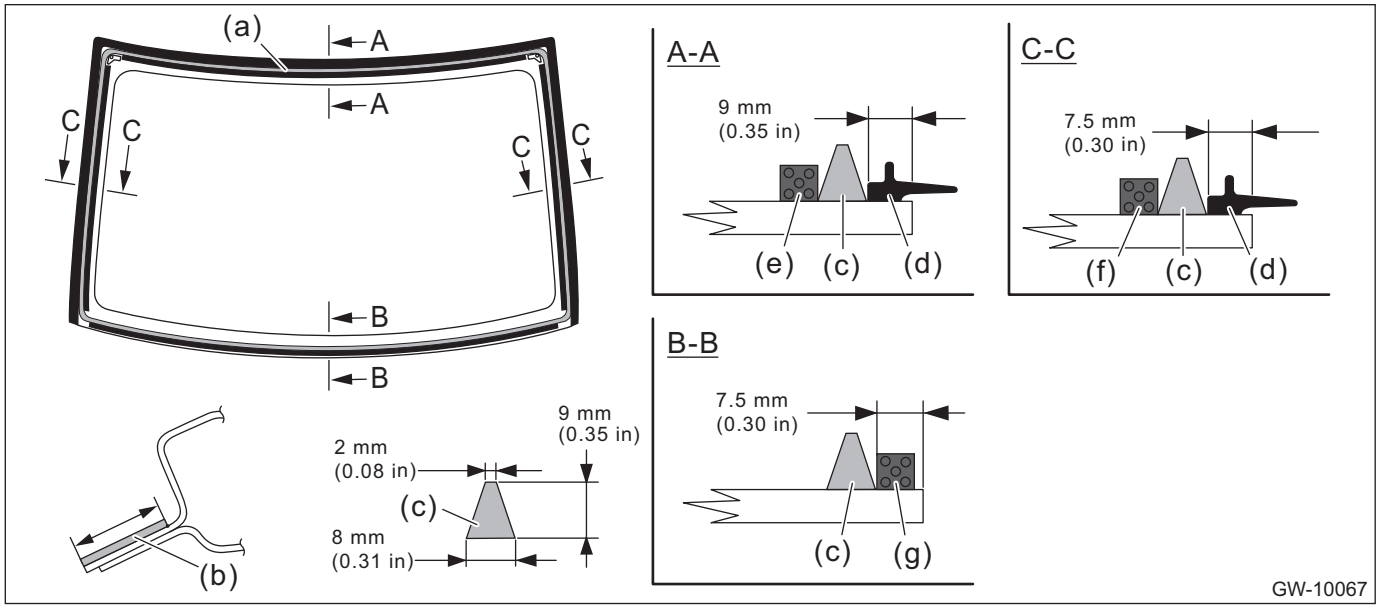
2) Smoothen and clean the adhesive surfaces of the glass - rear window and body using the same procedures as for the glass - front window. <Ref. to GW-44, INSTALLATION, Windshield Glass.>



3) Attach the dam rubber - rear to the glass - rear window.

(a)	Locating pin - rear window	(d)	23.5 mm (0.93 in)	(g)	22 mm (0.87 in)
(b)	Dam rubber - rear UPR	(e)	Dam rubber set mark	(h)	7.5 mm (0.3 in)
(c)	Dam rubber - rear side	(f)	Dam rubber - rear LWR	(i)	3 mm (0.12 in)

4) Attach the molding - rear window to the glass - rear window.



CAUTION:
Be careful to attach the molding - rear window so that the molding has no loose or undulating part.

(1) Align the molding - rear window (a) to the upper ends (d) of the glass - rear window (c).
(2) Install the molding - rear window from both corners of the upper edge toward the center. (e)
(3) Install the molding - rear window from both corners of the upper edge toward the bottom. (f)
(4) Firmly apply the double sided tape (b) of the molding - rear window evenly to the surface of the glass - rear window.

5) Install the glass - rear window in the same procedure as for the glass - front window. <Ref. to GW-44, INSTALLATION, Windshield Glass.>
(1) Apply the primer to the adhesive surface of glass - rear window side and body side using sponge.
(2) Apply adhesive to the end back surface of the glass - rear window.

CAUTION:
Do not apply primer to adhesive remaining on the body side.

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - rear window
(e) Dam rubber - rear UPR
(f) Dam rubber - rear side
(g) Dam rubber - rear LWR

(3) Insert the locating pins - rear window into the rear panel holes, and install the glass - rear window.
(4) Lightly press the entire perimeter of the glass - rear window for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - rear window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) Connect the rear defogger connector.
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
9) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

15.Rear Window Defogger System

A: WIRING DIAGRAM

Refer to “Rear Defogger System” in the wiring diagram. <Ref. to WI-332, WIRING DIAGRAM, Rear Defogger System.>

B: INSPECTION

1. SYSTEM INSPECTION

Symptoms	Inspection order
Rear window defogger does not operate.	1. Check the fuse. 2. Check the rear defogger relay. 3. Check the rear window defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:
Rear window defogger system can be customized using the Subaru Select Monitor, when the customize setting {Auto A/C Setting} of the body integrated unit is set to {support}.

System name	Initial setting	Customize setting
Rear defogger operation mode	Normal	Continuous*

* When the battery voltage remains at 10 V or less for 30 seconds, the continuous operation is suspended and turned to the normal operation.

2. CHECK WITH SUBARU SELECT MONITOR

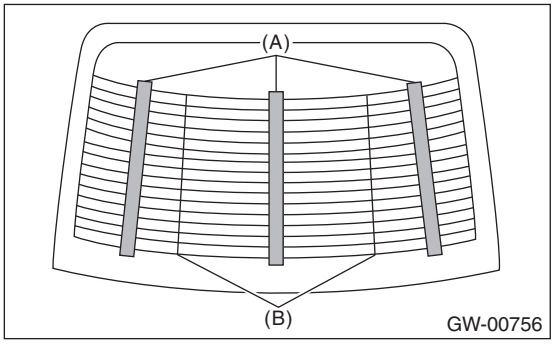
CAUTION:
Check whether the Rr Defogger op. mode setting is in initial setting or customize setting before performing inspection.

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Body Control» and then select «Enter».
   (7) On «Select Function» display, select «Data Monitor».
   (8) From the data monitor item list, select «Auto A/C Setting».
   (9) Check the vehicle equipment and the settings of body integrated unit.
   If correct, go to (10).
   If not correct, go to (13).
   (10) From the data monitor item list, select «Rr Defogger output».
   (11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
   (12) On «Select Function» display, select «Customize».
   (13) From the Customize item list, select «Auto A/C Setting» and match the auto A/C ECM setting to the actual vehicle equipment.

2) Check the operation with rear window defogger switch ON.
• When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
• When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
3) When the operation in 2) above fails, replace the body integrated unit.



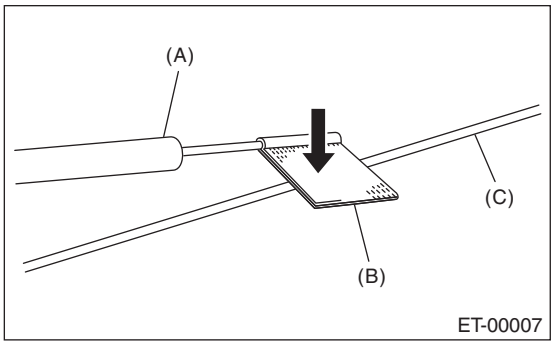
3. HEAT WIRE INSPECTION

CAUTION:
Use a dry soft cloth to wipe off dirt on the glass along the heat wires with care not to damage the heat wires.

1) Prepare the following checking items.
- Liquid crystal thermograph sheet (approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))
- Aluminum foil

2) Turn the ignition switch to ON.
3) Turn the defogger switch to ON.
4) Push the liquid crystal thermograph sheet from the outside of the glass.

NOTE:
Use the liquid crystal thermograph sheet every range it is separated with the separate line.

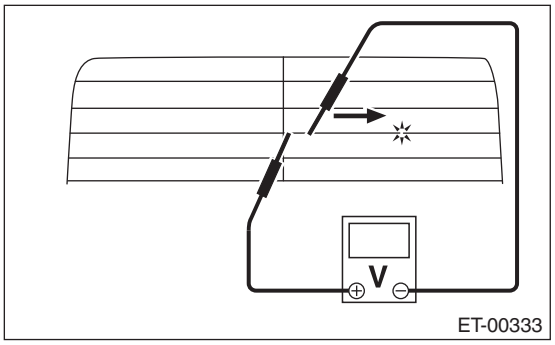


(A) Liquid crystal thermograph sheet
(B) Separate line

5) Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

NOTE:
- Check from the inside of the glass - rear window if the liquid crystal thermograph sheet does not change.
- The time for the color change may differ depends on the surface temperature of the glass.

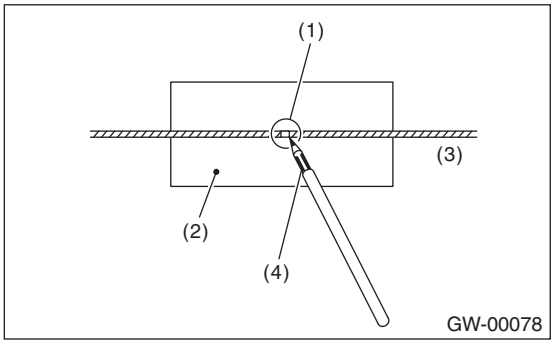


6) Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.

(A) Tester probe
(B) Aluminum foil
(C) Heat wire

7) To both ends of the section that has been found to include an open in the step 5), apply the tester positive (+) probe and the negative (–) probe.

8) Move the tester probe on the negative (–) side slowly along the heat wire. If voltage changes from zero while moving the tester probe, heat wire is open at the voltage change point.



9) Repair the heat wire that determines the place of the open circuit. <Ref. to GW-64, REPAIR, Rear Window Defogger System.>

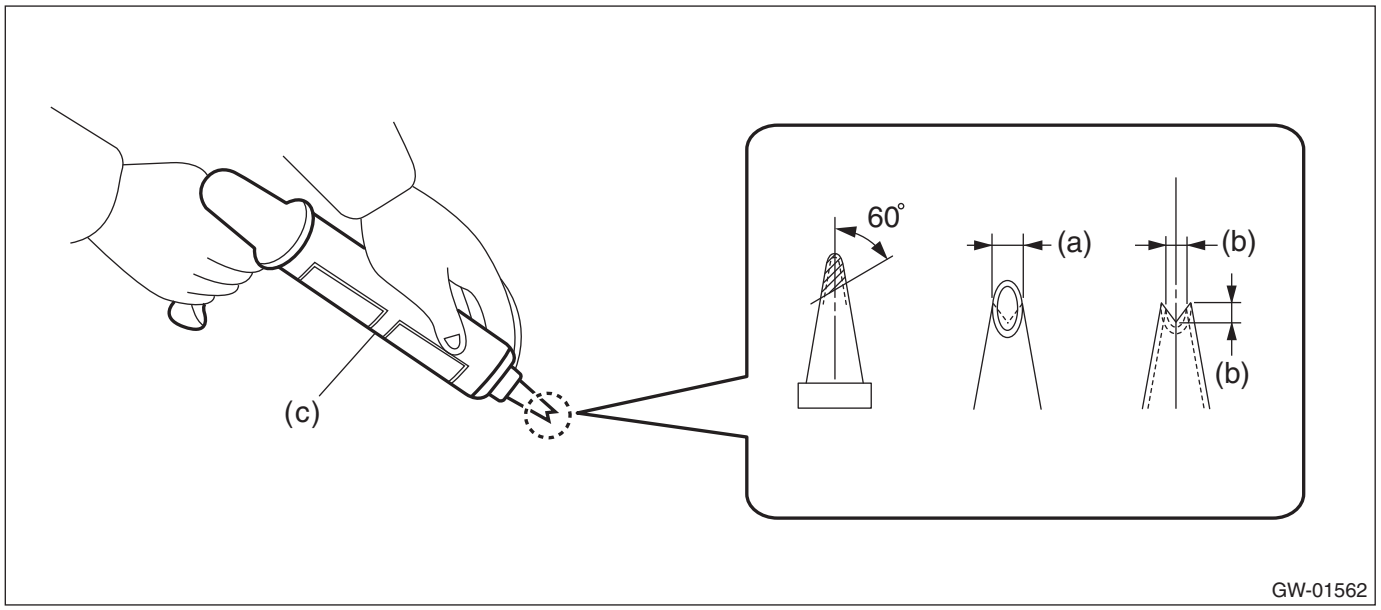
C: REPAIR

1) Clean the broken portion with alcohol or appropriate cleaning solvent.
2) Mask both side of wire with masking tape.
3) Apply the conductive silver composition to the broken portion.

Preparation items:
Conductive silver composition: Permatex QUICK GRID

(1) Broken portion
(2) Masking tape
(3) Broken wire
(4) Conductive silver composition

4) Dry using a dryer after applying the composition.
5) After repair, check the wire.

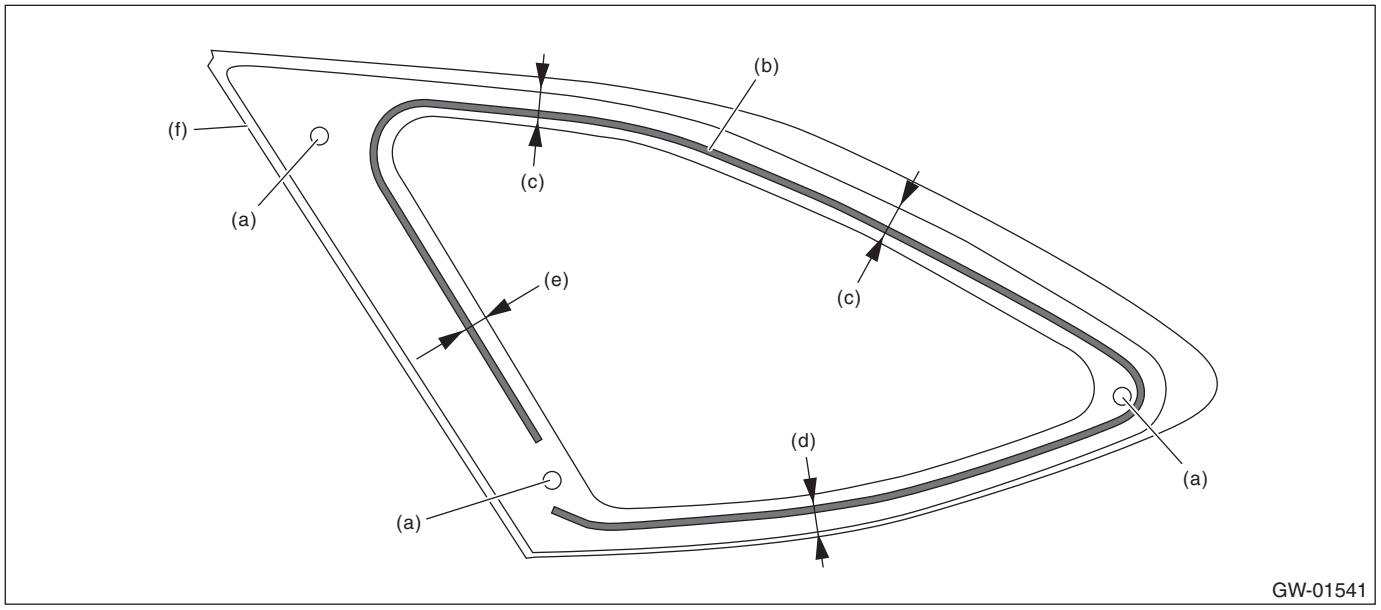


16.Rear Quarter Glass

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the glass - rear quarter in the same procedure as for the glass - front window. <Ref. to GW-41, REMOVAL, Windshield Glass.>

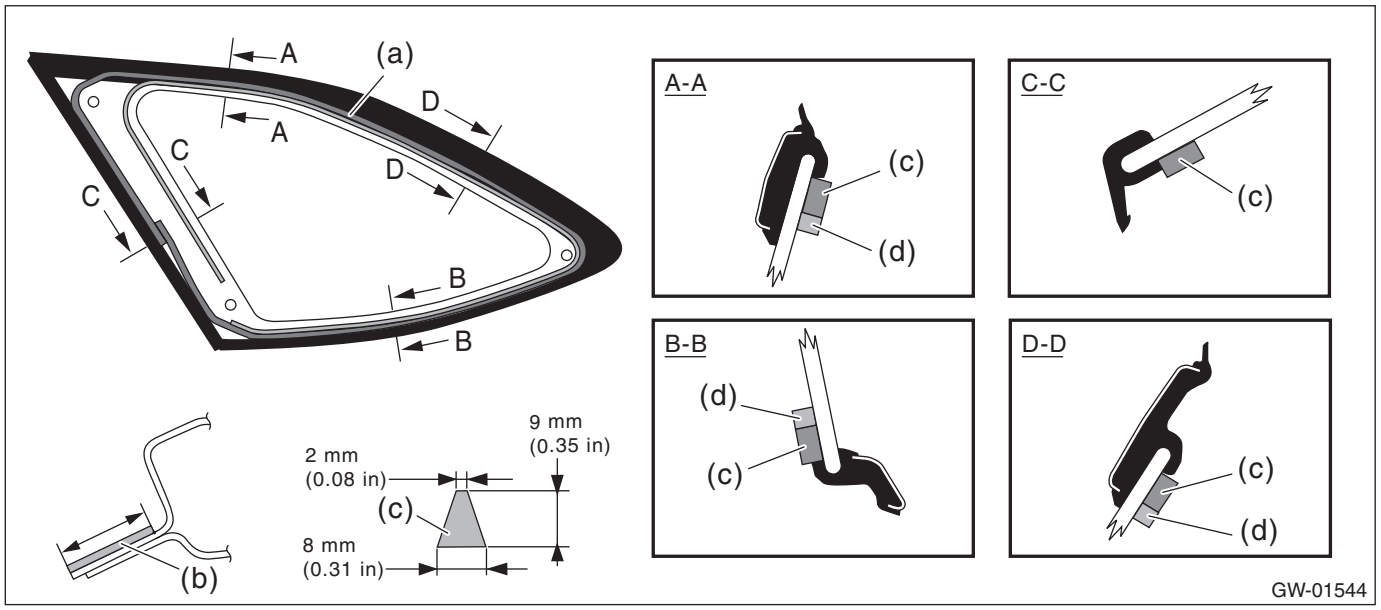
B: INSTALLATION



1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear quarter and body using the same procedures as for the glass - front window. <Ref. to GW-44, INSTALLATION, Windshield Glass.>



3) Attach the dam rubber - rear to the glass - rear quarter.

(a) Clip
(b) Dam rubber - rear quarter
(c) 18 mm (0.71 in)
(d) 16.2 mm (0.64 in)
(e) 17 mm (0.67 in)
(f) Molding

4) Install the glass - rear quarter in the same procedure as for the glass - front window. <Ref. to GW-44, INSTALLATION, Windshield Glass.>
(1) Apply the primer to the adhesive surface of glass - rear quarter side and body side using sponge.
(2) Apply adhesive to the glass - rear quarter end back surface.

CAUTION:
Do not apply primer to adhesive remaining on the body side.

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Dam rubber - rear quarter

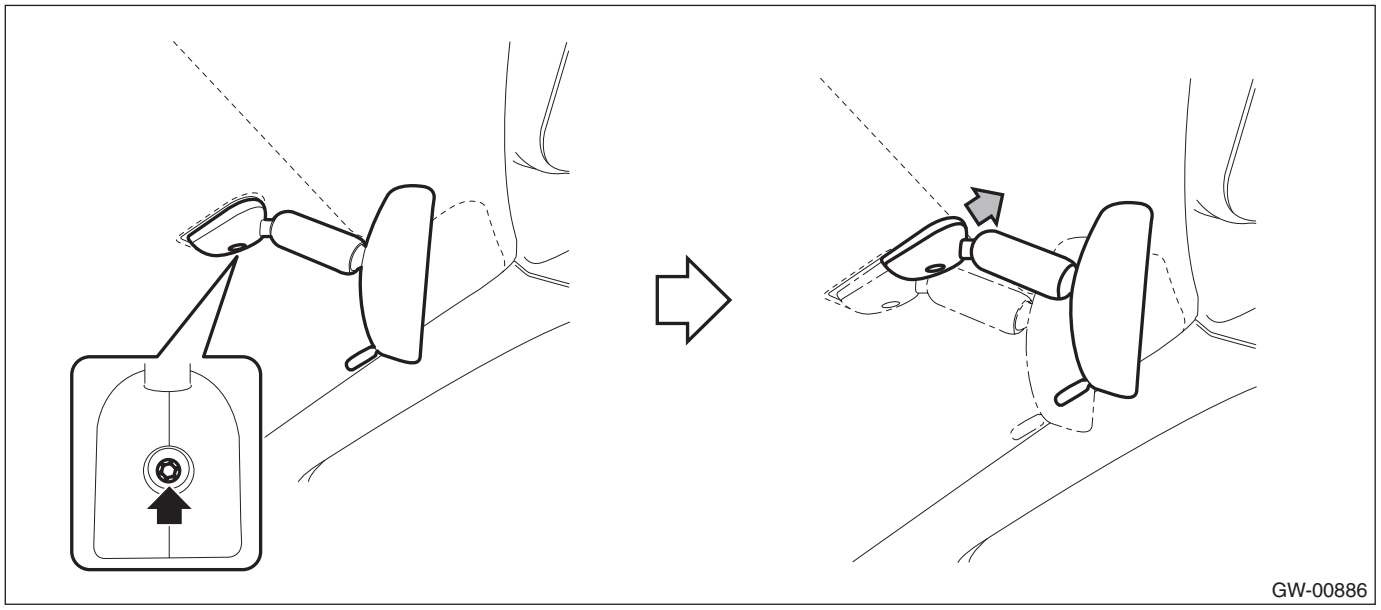
(3) Insert the clips in the side panel holes and install the glass - rear quarter.
(4) Lightly press the entire perimeter of the glass - rear quarter for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

5) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - rear quarter was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

6) Install the trim panel - rear pillar UPR. <Ref. to EI-101, INSTALLATION, Rear Quarter Trim.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.



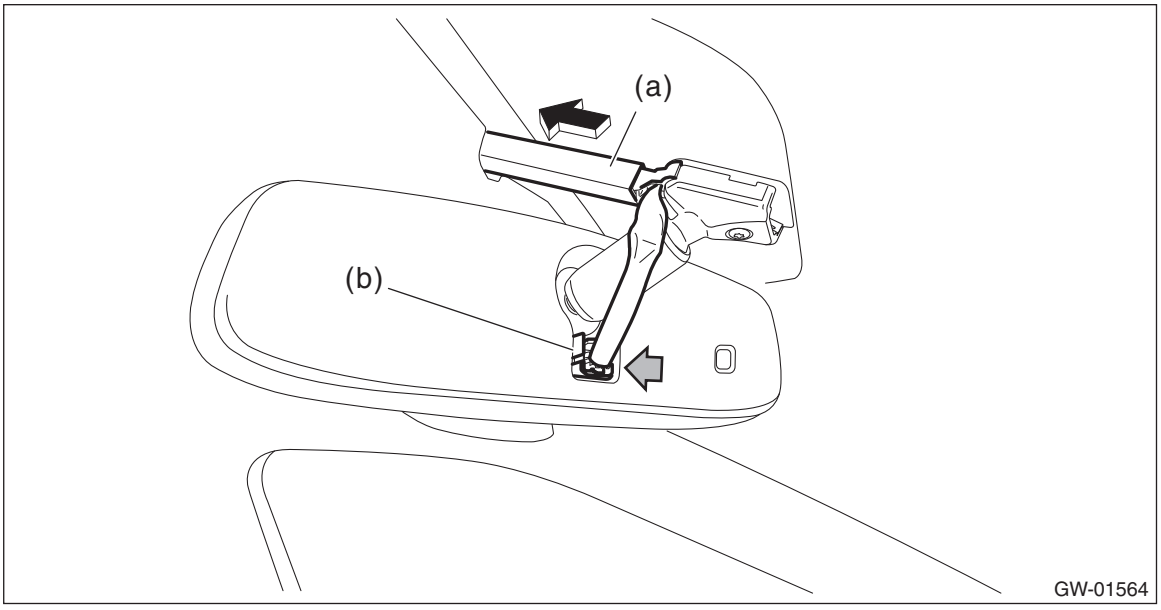
17.Rearview Mirror

A: REMOVAL

1. NORMAL MIRROR TYPE

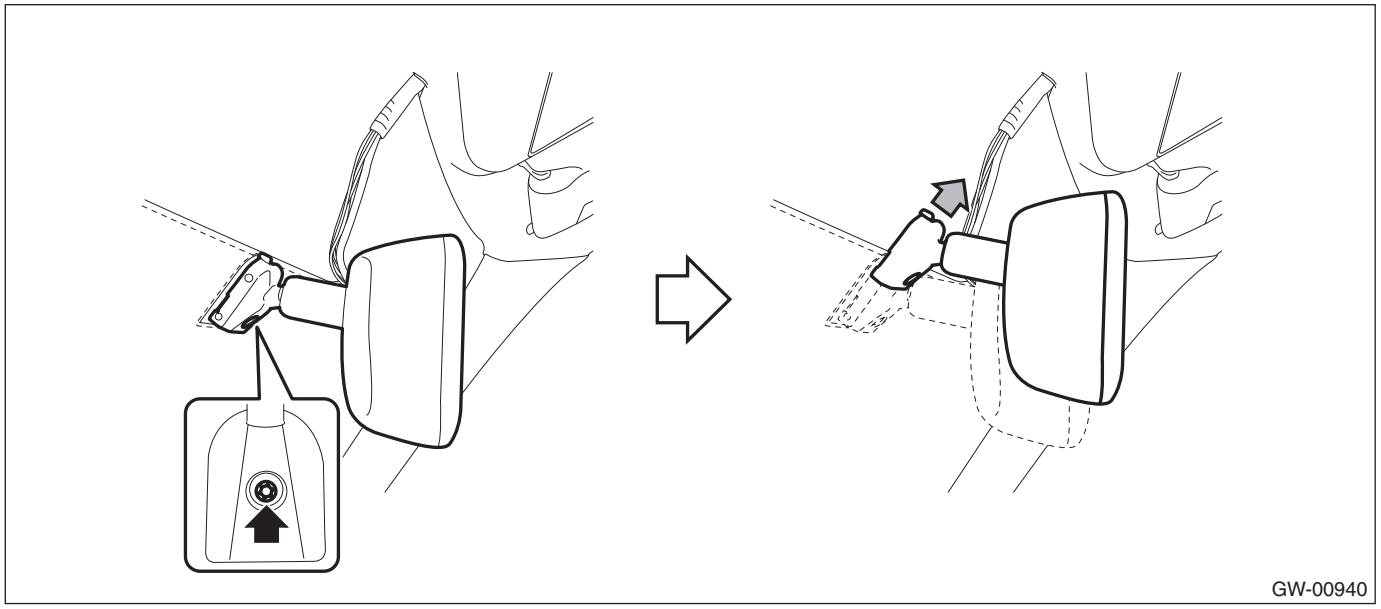
CAUTION:
Be careful not to damage the mirror surface and windshield glass.
1) Remove the TORX® screw, and slide the mirror assembly - inner rearview to remove.

Preparation tool:
TORX® T20



2) If the mirror mounting is damaged, replace the windshield glass.

2. AUTOMATIC ANTI-GLARE MIRROR (HOME LINK TYPE)

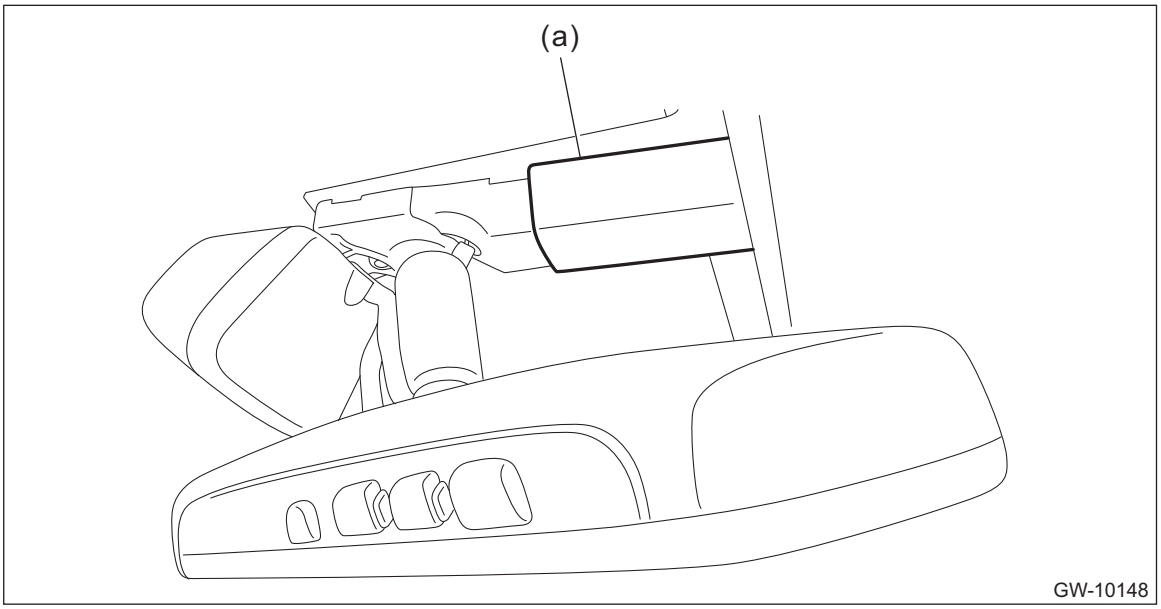


CAUTION:
Be careful not to damage the mirror surface and windshield glass.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rearview mirror.
   (1) Slide the upper section of the cover, and release the claws in the lower section, then remove the harness cover (a).
   (2) Disconnect the rearview mirror connector (b).

CAUTION:
Be careful not to pull the harness.

(3) Remove the TORX® screw, and then slide the rear view mirror to remove.

Preparation tool:
TORX® T20



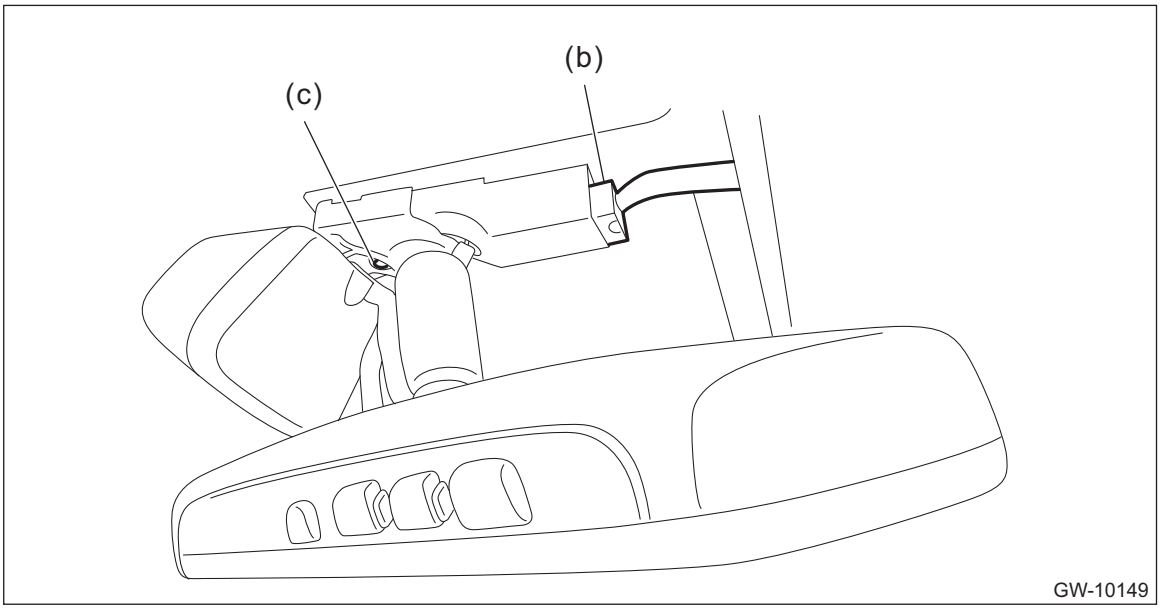
3) If the mirror mounting is damaged, replace the windshield glass.

3. AUTOMATIC ANTI-GLARE MIRROR (HIGH BEAM ASSIST, HOME LINK & COMPASS TYPE)

CAUTION:
- **Be careful not to damage the mirror surface and the glass - front window.**
- **Be careful not to touch the camera lens. If touched, perform the camera lens maintenance. <Ref. to BC(diag)-8, CAMERA LENS MAINTENANCE, INSPECTION, General Description.>**

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the mirror assembly - inner HBA.

(1) Slide the upper section of the cover, and release the claws in the lower section, then remove the harness cover - HBA (a).



(2) Disconnect the mirror assembly - inner HBA connector (b).

CAUTION:
Be careful not to pull the harness.

(3) Remove the TORX® screw (c), and slide the mirror assembly - inner HBA to remove.

Preparation tool:
TORX® T20

3) Replace the glass - front window if the base - inner mirror is damaged.

B: INSTALLATION

CAUTION:
When tightening the mounting TORX® screw, be sure to observe the tightening torque. Otherwise, the mount may be damaged in over-torque conditions.

1. NORMAL MIRROR TYPE

1) Slide the mirror assembly - inner rearview to the mirror mount to install, and tighten the TORX® screw.

NOTE:
If the mirror mounting is damaged, replace the windshield glass.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-7, OUTER MIRROR, COMPONENT, General Description.>

2. AUTOMATIC ANTI-GLARE MIRROR (HOME LINK TYPE)

1) Slide the mirror assembly - inner rearview to the mirror mount to install, and tighten the TORX® screw.

NOTE:
If the mirror mounting is damaged, replace the windshield glass.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-7, OUTER MIRROR, COMPONENT, General Description.>

2) Attach the harness cover (a).
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Perform calibration and zone setting of the rearview mirror. (With compass)
- Calibration <Ref. to GW-74, CALIBRATION, ADJUSTMENT, Rearview Mirror.>
- Zone setting <Ref. to GW-75, ZONE SETTING, ADJUSTMENT, Rearview Mirror.>

3. AUTOMATIC ANTI-GLARE MIRROR (HIGH BEAM ASSIST, HOME LINK & COMPASS TYPE)

CAUTION:
- **Be careful not to damage the mirror surface and the glass - front window.**
- **Be careful not to touch the camera lens. If touched, perform the camera lens maintenance. <Ref. to BC(diag)-8, CAMERA LENS MAINTENANCE, INSPECTION, General Description.>**

1) Slide the mirror assembly - inner HBA to the mirror mount to install, and tighten the TORX® screw.

NOTE:
If the mirror mounting is damaged, replace the windshield glass.

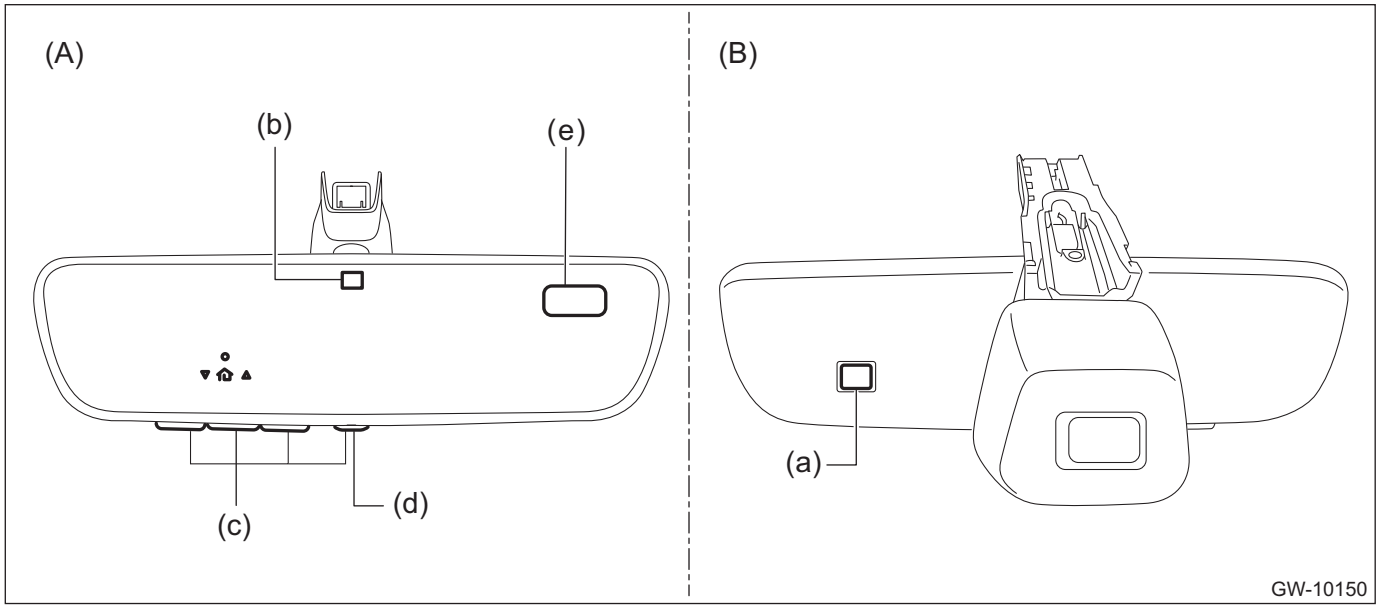
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-7, OUTER MIRROR, COMPONENT, General Description.>

2) Attach the connector and install the harness cover - HBA.
3) Connect the battery ground terminal. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Perform calibration and zone setting of the rearview mirror. (With compass)
- Calibration <Ref. to GW-74, CALIBRATION, ADJUSTMENT, Rearview Mirror.>
- Zone setting <Ref. to GW-75, ZONE SETTING, ADJUSTMENT, Rearview Mirror.>

C: INSPECTION

1. VISUAL INSPECTION

1) Check that the mirror assembly - inner and base - inner mirror for damage.

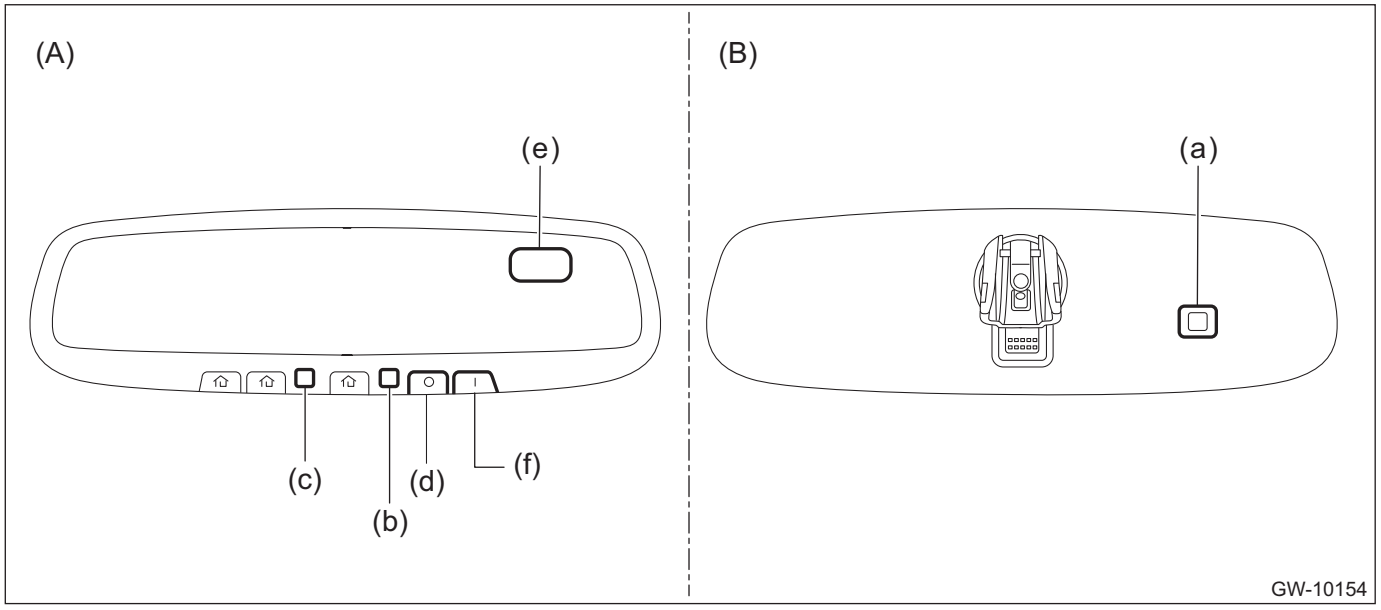


2. CHECK OPERATION (AUTOMATIC ANTI-GLARE MIRROR)

CAUTION:
- **Perform the inspection indoors.**
- **Depending on the mirror surface direction or surrounding circumstances, mirror surface reflection may not be switched. Therefore, perform the inspection several times by changing the mirror surface direction or surrounding circumstances.**

1) Check mirror assembly - inner HBA operation.
   (1) Turn the ignition switch to ON, and check that the indicator light illuminates and the mirror surface is bright.
   (2) Check that the power supply of mirror assembly - inner HBA can be switched ON and OFF.
   (3) Cover the front light sensor (a) with hand, and check that the mirror surface will switch from the bright state to the dark state by exposing the rear light sensor (b) to fluorescent light.

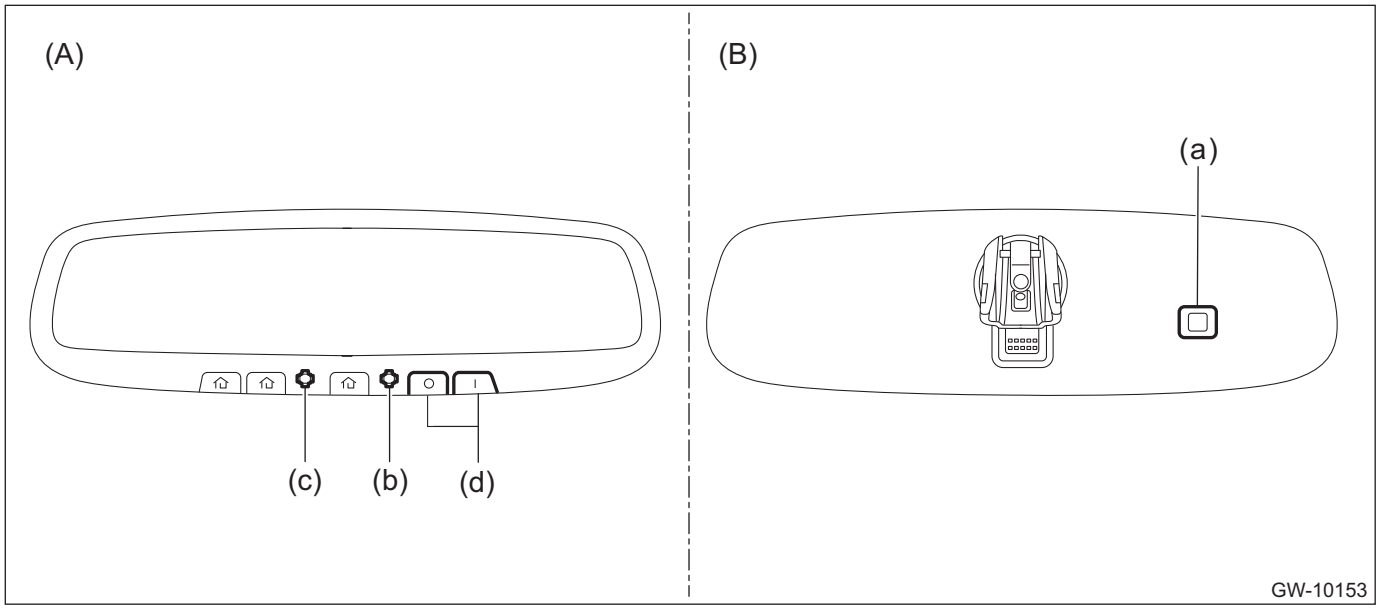
(4) Take your hand off the front light sensor (a), and check that the mirror surface will switch from the dark state to the bright state.



HBA type

(A) Mirror surface side (B) Body reverse side

(a) Front light sensor (b) Rear light sensor (c) indicator light
(d) Power supply switch (e) Compass display

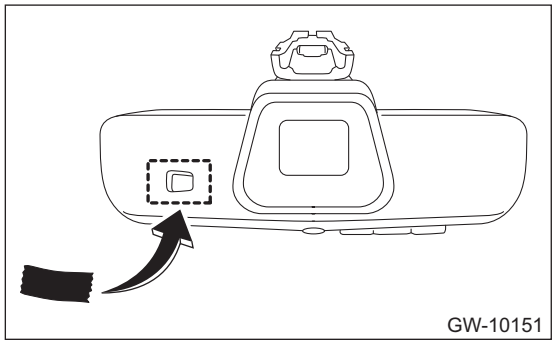


Type with home link & with compass

(A) Mirror surface side (B) Body reverse side

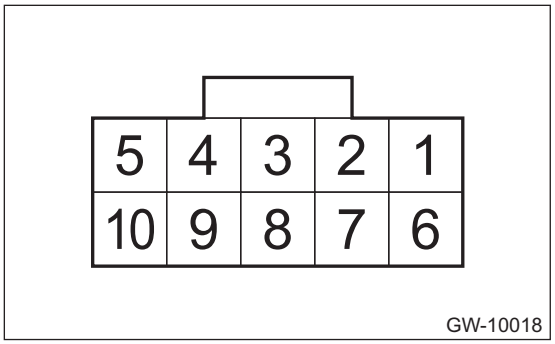
(a) Front light sensor (b) Rear light sensor (c) indicator light
(d) Power supply switch (e) Compass display (f) Compass switch

Type with home link & without compass



(A) Mirror surface side (B) Body reverse side

(a) Front light sensor (b) Rear light sensor (c) indicator light
(d) Power supply switch



2) Perform the inspection procedures above, and replace the mirror assembly - inner HBA if defective.

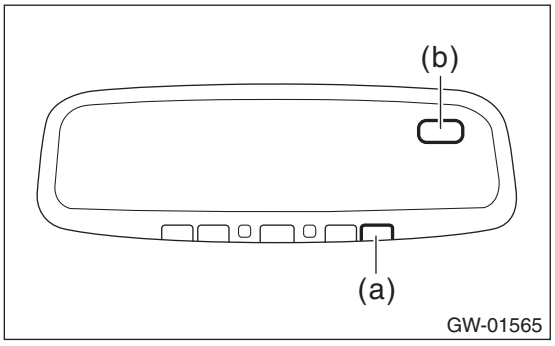
3. UNIT INSPECTION (AUTOMATIC ANTI-GLARE MIRROR)

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the mirror assembly - inner HBA. <Ref. to GW-68, AUTOMATIC ANTI-GLARE MIRROR (HOME LINK TYPE), REMOVAL, Rearview Mirror.>
3) Apply black vinyl tape to the sensor (a) of removed mirror assembly - inner HBA.

4) Check the operation when battery voltage is applied to the connector terminal.

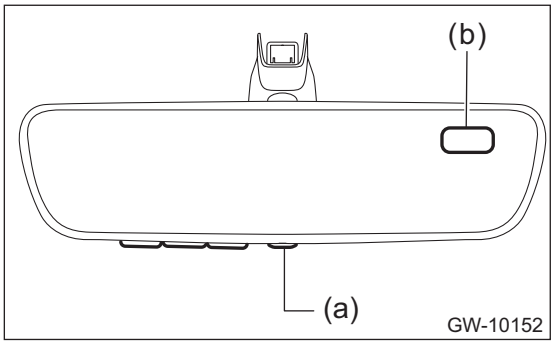
Terminal No.	Light condition of fluorescent light	Mirror surface condition
1 (+) — 2 (–)	Mirror surface is not exposed to light.	No change
1 (+) — 2 (–)	Mirror surface is exposed to light.	Mirror surface becomes dark.

D: ADJUSTMENT



CAUTION:
• When the rearview mirror with compass and home link is removed or replaced, perform calibration and zone setting by following the procedures below.
• The zone setting of the vehicle is set to zone "8" at factory setting.

1. CALIBRATION

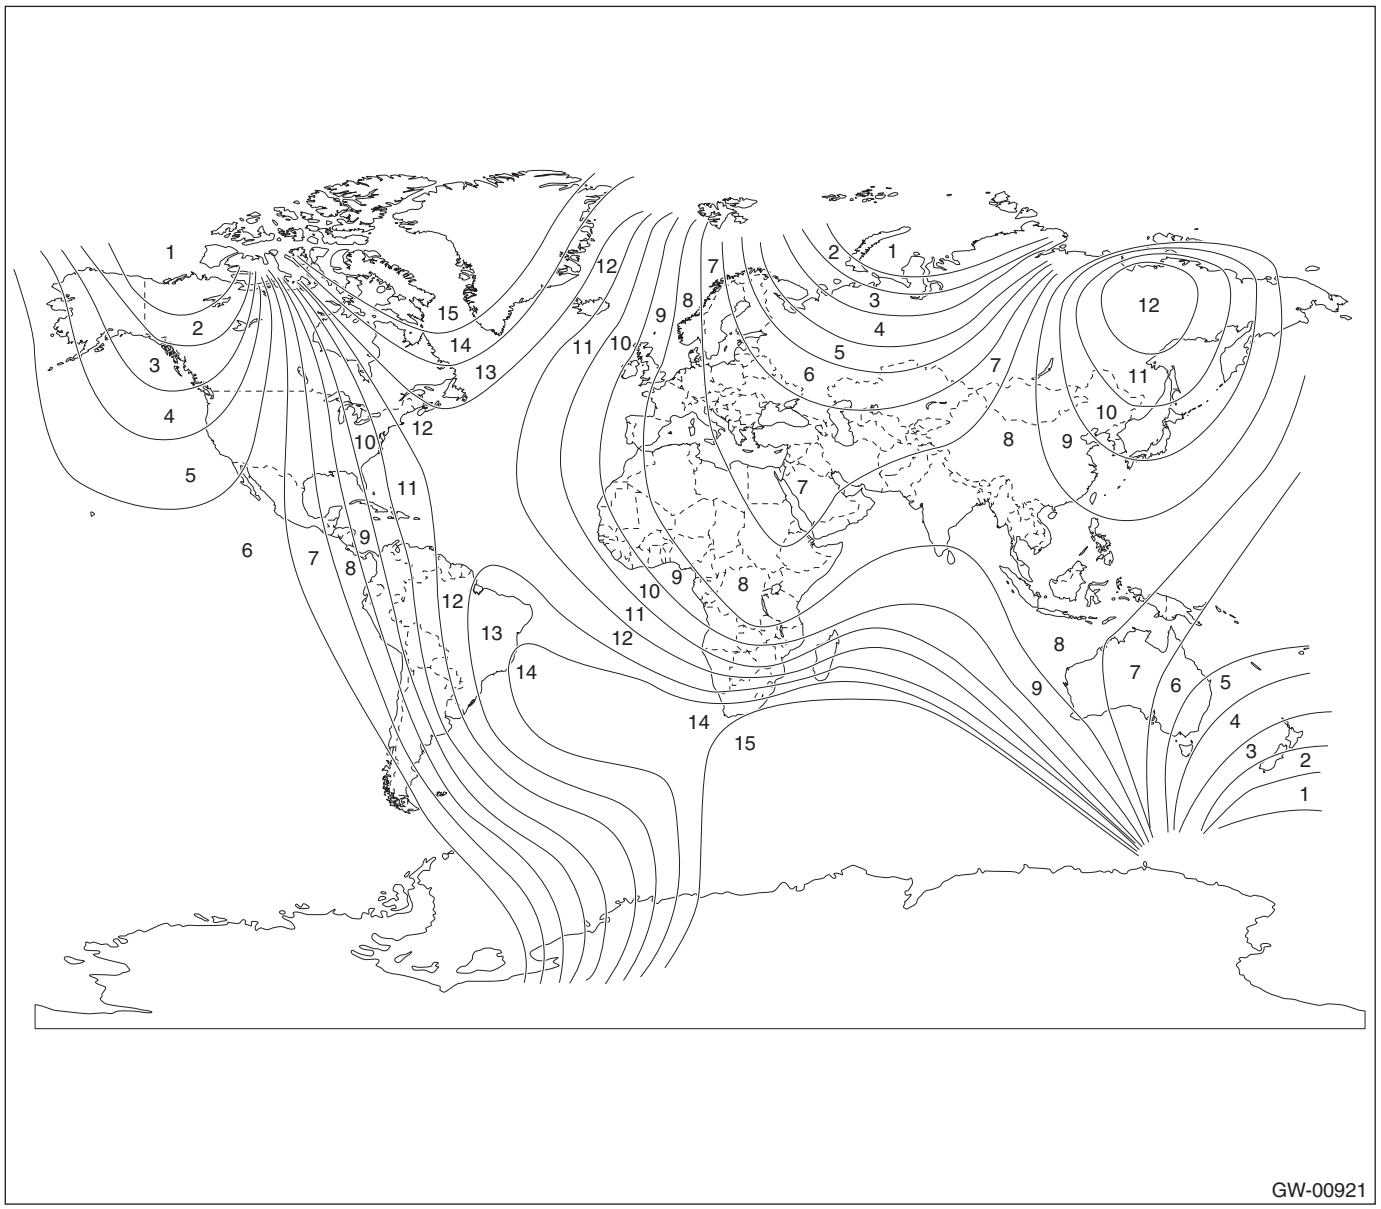


1) Before performing calibration, check the following items.
- There is a sufficient distance from a big metal object or a building.
- Vehicle is parked on a level surface.
- The switch of unnecessary accessories (A/C system, audio system and lighting system) is turned to "OFF".
- All doors are closed.

2) Start the engine.
3) Hold down the multi-function button (a) for six to nine seconds. Once calibration mode starts, "C" is displayed on the screen (b).

Type with home link & with compass

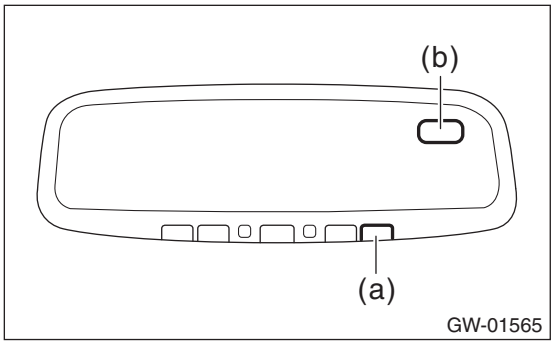
HBA type



4) Drive the vehicle in a circle until the display of "C" on the screen goes off. (Approx. two or three times)

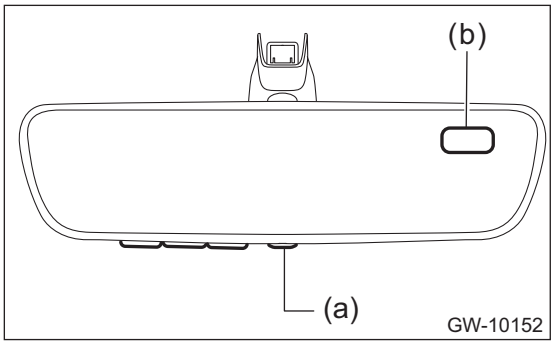
5) Display the compass to check the operation.

CAUTION:
The mirror may not be able to perform the reading correctly. Therefore, when the compass operates only to the specific direction, repeat steps 3) to 5).



2. ZONE SETTING

1) Refer to the compass zone map to check the zone number of area you use the vehicle.
Compass zone map



2) Turn the ignition switch to ON.
3) Hold down the multi-function button (a) for three to six seconds. Once zone setting mode starts, the zone number that is already set is displayed on the screen (b).

Type with home link & with compass

HBA type

4) Push the multi-function button repeatedly until the zone number you want to set is displayed.

NOTE:
If you leave the multi-function button for three seconds, the zone setting mode is completed.

18.Wiper Deicer System

A: WIRING DIAGRAM

Refer to “Wiper Deicer System” in the wiring diagram. <Ref. to WI-383, Wiper Deicer System.>

B: INSPECTION

1. SYSTEM INSPECTION

NOTE:
- The wiper deicer does not operate when the ambient temperature becomes 5°C (41°F) or more.
- The wiper deicer operates with the rear window defogger at the same time.
- It is possible to perform a forced operation if you keep holding the rear window defogger switch for 3 seconds or more.

Symptoms	Inspection order
Wiper deicer does not operate.	1. Check the fuse. 2. Check the wiper deicer relay. 3. Check the wiper deicer switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:
- Wiper deicer system can be customized using the Subaru Select Monitor, when the customize setting «Auto A/C ECU Setting» of the body integrated unit is set to {support}.
- Set the system using the Rr Defogger op. mode, and setting will be the same as rear defogger system setting.

System name	Initial setting	Customize setting
Rear defogger operation mode	Normal	Continuous operation*

*: When one of the following conditions occurs, the continuous operation is suspended and turned to the normal operation.
- Ambient temperature at 5°C (41°F) or more continues for 10 seconds.
- Malfunction occurs on ambient sensor.
- Vehicle speed of 15 km/h (9 MPH) or less continues 15 minutes (OFF when conditions are met)
- Malfunction occurs in CAN communication.
- Battery voltage remains at 10 V or less for 30 seconds.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:
Before performing the inspection, check the following settings.
- **Wiper deicer setting → “support”. If “no support”, set to “support” using customize setting.**
- **Rr Defogger op. mode setting → Initial setting or customize setting.**

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Body Control» and then select «Enter».
   (7) On «Select Function» display, select «Data Monitor».
   (8) From the data monitor item list, select «Auto A/C Setting».
   (9) Check the vehicle equipment and the settings of body integrated unit.
   If correct, go to (10).
   If not correct, go to (13).
   (10) From the data monitor item list, select «Rr Defogger output».

(11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
(12) On «Select Function» display, select «Customize».
(13) From the Customize item list, select «Auto A/C Setting» and match the auto A/C ECM setting to the actual vehicle equipment.

2) Check the operation with rear window defogger switch ON.
• When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
• When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
3) When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

Refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. <Ref. to GW-63, HEAT WIRE INSPECTION, INSPECTION, Rear Window Defogger System.>

NOTE:
Heat wire inspection needs removing/installing procedure of instrument panel assembly.

C: REPAIR

Refer to “REPAIR” of “Rear Window Defogger System”. <Ref. to GW-64, REPAIR, Rear Window Defogger System.>

NOTE:
Heat wire repair needs removing/installing procedure of instrument panel assembly.

B: LOCATION

Refer to "LOCATION" of "COMBINATION METER (DIAGNOSTICS)" section. <Ref. to MET(diag)-5, LOCATION, Electrical Component Location.>

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Use gloves to avoid damage to and get fingerprints on the glass surface. Wipe off using a soft cloth, if the part is contaminated.
• For the model without keyless access with push button start except for C0 and C5 models, when the combination meter assembly is replaced, perform the registration of immobilizer. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

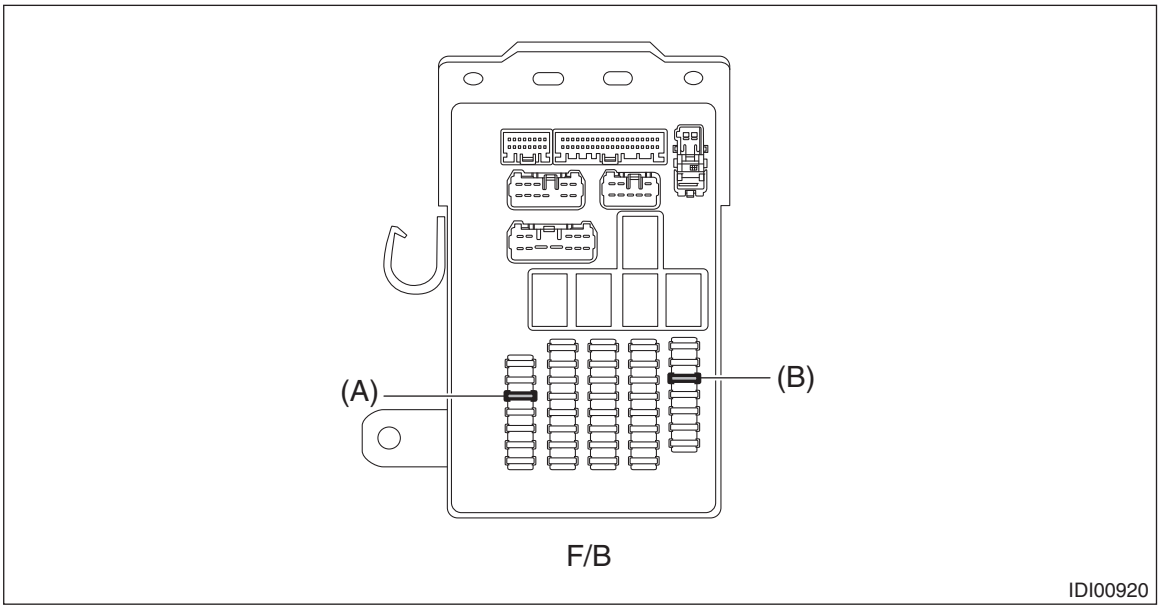

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 7.5 A (combination meter)	(A)
	Fuse 7.5 A (combination meter)	(B)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Combination Meter System

A: WIRING DIAGRAM

Refer to “Combination Meter System” in the wiring diagram. <Ref. to WI-154, WIRING DIAGRAM, Combination Meter System.>

B: ELECTRICAL SPECIFICATION

1. COMBINATION METER ASSEMBLY

Refer to “Control Module I/O Signal” of “COMBINATION METER (DIAGNOSTICS)” section. <Ref. to MET(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. SELF-DIAGNOSIS DISPLAY MODE

The combination meter self-diagnosis can be performed as a single unit according to the following procedure.
When the self-diagnosis display mode operates, it switches in the order of [1. Meter pointer operation check] → [2. Meter pointer indication check] → [3. TFT display check].
1) Procedure

CAUTION:
Perform the steps described in (1) through (4) within 10 seconds.

(1)	Within 3 seconds after turning the ignition switch to ON, set the parking light switch or the headlight switch to ON.
(2)	While the switch is in ON, press the trip reset switch three times.
(3)	Turn the parking light switch or the headlight switch to OFF, and press the trip reset switch three times.
(4)	Turn the parking light switch or the headlight switch to ON, and press the trip reset switch three times.

2) Go to the self-diagnosis display mode.

CAUTION:
If the procedure is not performed properly, turn the ignition switch from ON to OFF to stop the operation halfway, and then proceed from step (1) to (4).

NOTE:
• Turn the ignition switch to OFF (ACC OFF) to cancel the self-diagnosis function.
• When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once the vehicle starts driving, the self-diagnosis function is deactivated automatically.
• If the self-diagnosis function is not deactivated, the check items in operation are displayed. After the check items 1 to 3 are displayed, the check item 1 is displayed repeatedly.
• The buzzer sounds when the check item is switched, to indicate that the item is switched and make sure that the buzzer sounds.

1. Meter pointer operation check

In meter pointer operation check, the meter operation, warning /indicator light, illumination and TFT are checked.
1) After a buzzer sounds for 0.5 seconds and “STEP1” is displayed on TFT, the meter pointer operation check mode is initiated.

Time (sec)	Meter indicator	TFT display, illumination	Warning/indicator light
6	MIN indication ↓ MAX indication	ILL1 (Min. brightness) ↓*3 ILL6 (Max. brightness)	*1, *2
6	MAX indication ↓ MIN indication	ILL6 (Max. brightness) ↓*3 ILL1 (Min. brightness)	

*1: Warning lights and indicator lights controlled by the meter drive circuit are illuminated. <Ref. to IDI-2, SPECIFICATION, General Description.>
*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
*3: Displays each level for one second.

2. Meter pointer indication check

In meter pointer indication check, the meter operation, warning /indicator light and fuel level warning light are checked.

NOTE:
ILL indication illuminates at the same brightness as immediately before entering “Meter pointer indication check”.
1) Press the trip reset switch.
2) After a buzzer sounds for 0.5 seconds and “STEP2” is displayed on TFT, the meter pointer indication check mode is initiated.

Time (sec)	Speedometer (km/h)	Tachometer (r/min)	Fuel gauge	Engine coolant temperature gauge	Fuel level warning light	Warning/indicator light
1.5	0	0	Lowest point	Lowest point	Light ON	Fuel level warning light (around E) illuminates. *
1.5	40	1,000	E	C	Light ON	
1.5	100	4,000	1/2	Starting point of the red line	Light OFF	
1.5	140	8,000	F	H	Light OFF	
1.5	100	4,000	1/2	Starting point of the red line	Light OFF	
1.5	40	1,000	E	C	Light ON	

*: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>

3. TFT display check

Check the TFT display.

NOTE:
- The meter needle indicate 0 or the lowest position.
- ILL indication illuminates at the same brightness as immediately before entering “TFT display check”.
- After No. 6 is displayed in the illumination order, display is repeated from No. 1 again.
- The version display contents of the illumination order No. 1 varies depending on the vehicle.

1) Press the trip reset switch.
2) After a buzzer sounds for 0.5 seconds and “STEP3” is displayed on TFT, the TFT display check mode is initiated.

Order	TFT display	Warning/indicator light	Time (sec)
1	Version display & black	Light OFF	10
2	Red	Light OFF	10
3	Green	Light OFF	10
4	Blue	Light OFF	10
5	White	Light OFF	10
6	Color gradation	Light OFF	10

2. DEMONSTRATION MODE

The demonstration mode screen of the combination meter can be displayed according to the following procedure.

CAUTION:
- **To avoid battery discharge, perform the operation under the following condition.**

– Perform the operation while the battery is being charged.
– While performing the operation and displaying the demonstration mode, close all doors and do not operate any electrical parts.
• If the battery voltage is low, the demonstration mode is not initiated.
• To display the demonstration mode, set the Demonstration mode permission / fault permission of the user customize mode to permission. For operation procedures, refer to "Application help".
• When the demonstration mode display is completed, make sure to set "Demonstration mode permission / fault permission" of the user customize mode to "fault permission". Do not deliver the vehicle to the customer with "Demonstration mode permission / fault permission" set to "permission".
• Even if the backup fuse is removed, the demonstration mode can be initiated.
1) Procedure

CAUTION:
While the ignition switch is OFF (ACC OFF) and the odo/trip meter is not displayed, perform the steps described in 1) through 4) within 10 seconds.

(1)	Press the trip reset switch once.
(2)	Press the i/SET switch three times within three seconds after the operation (1) above is performed.
(3)	Press the trip reset switch once, and press the i/SET switch three times.
(4)	Press the trip reset switch once, and press the i/SET switch three times.

2) The demonstration mode is initiated.

CAUTION:
If the procedure is not performed properly, turn the ignition switch from ON to OFF to stop the operation halfway, and then proceed from step (1) to (4).

NOTE:
The demonstration mode will be cancelled in the following condition.
When resuming the operation after cancellation, the demonstration mode is displayed. However, the resuming can only be accepted after approx. 1 minute.
• At the completion of the "goodbye screen" display that is shown 60 minutes after the demonstration mode is initiated
• When the ignition switch is turned to ON
• When the i/SET switch is turned to ON for two seconds
• When the battery voltage is low
• When the push button ignition switch is pressed with the access key out of the passenger room
• When any request switch is pressed with the access key in the passenger room

3. VARIANT WORK

Perform when replacing the combination meter assembly.
• When communication with Subaru Select Monitor is possible («Read Control module setting information» is workable): Perform the operation procedure A.
• When communication with Subaru Select Monitor is not possible («Read Control module setting information» is not workable): Perform the operation procedure B.

CAUTION:
• Subaru Select Monitor is required for variant work.
• If an error is displayed during the work, click the «OK» button and perform the variant work again.

Operation procedure A

1) Connect the Subaru Select Monitor.
2) On «Start» display, select «Diagnosis».
3) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
4) On «Main Menu» display, select «Each System».
5) On «Select System» display, select «Combination Meter» and then select «Enter».
6) On «Select Function» display, select «Work Support».
7) From the work support list, select «Read Control module setting information».
8) Save and close the file.

9) Replace the combination meter assembly with a new part.
10) On «Main Menu» display, select «Each System».
11) On «Select System» display, select «Combination Meter» and then select «Enter».
12) On «Select Function» display, select «Work Support».
13) Select «Write ECU setting save data», and open the file stored in «Read Control module setting information».
14) When the confirmation screen indicating the vehicle information appears, check that the correct information is displayed and click the «OK» button.
15) Confirm that «Write operation was completed.» is displayed, and click the «OK» button.

Operation procedure B

1) Replace the combination meter assembly with a new part.
2) Connect the Subaru Select Monitor.
3) On «Start» display, select «Diagnosis».
4) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
5) On «Main Menu» display, select «Each System».
6) On «Select System» display, select «Combination Meter» and then select «Enter».
7) On «Select Function» display, select «Work Support».
8) From the work support list, select «Write ECU setting 12 columns of models». Enter the applied model and click the «OK» button. <Ref. to ID-2, IDENTIFICATION NUMBER & LABEL LOCATIONS, IDENTIFICATION, Identification.>
9) Enter the option code and click the «OK» button. <Ref. to ID-2, IDENTIFICATION NUMBER & LABEL LOCATIONS, IDENTIFICATION, Identification.>
10) Confirm the vehicle information on «Write ECU setting 12 columns of models» display and click the «OK» button.
11) When «Write?» is shown on the screen, click the «Yes» button.
12) Confirm that «Write operation was completed.» is displayed, and click the «OK» button.

D: INSPECTION

1. COMBINATION METER

Refer to “Basic Diagnostic Procedure” of “COMBINATION METER (DIAGNOSTICS)” section. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

2. SWITCH

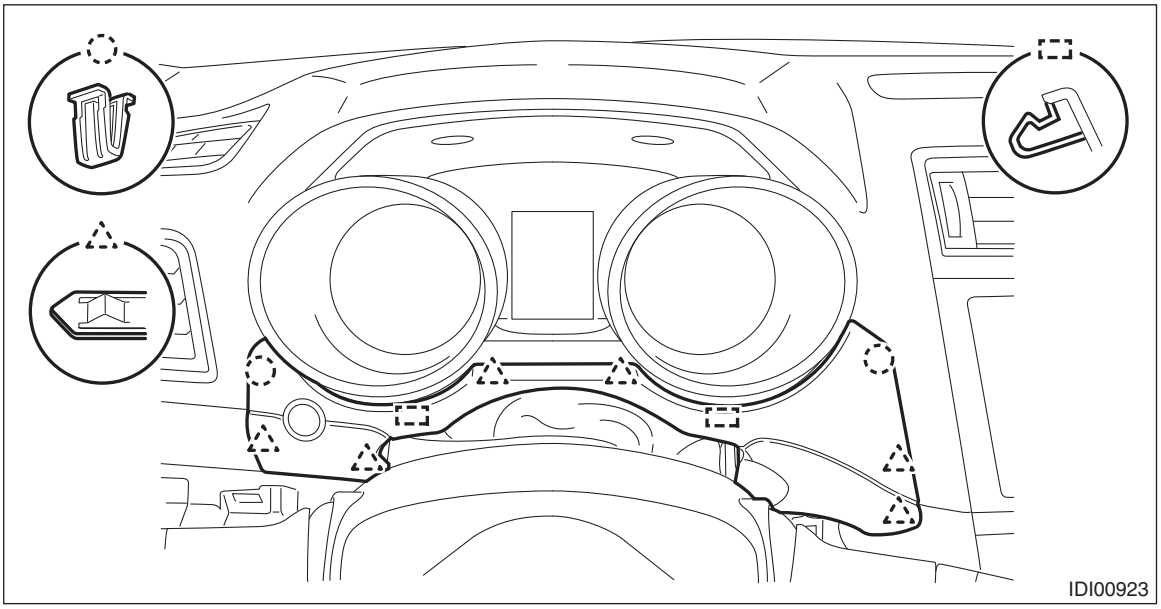
Illumination intensity does not change even when the illumination control switch is operated.

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Display the data of «Bright switch input state» and «Illumination control switch input state» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Do the display switch between OFF ←→ ON and the value range from 0 to 100 when the bright switch and illumination control switch are operated?	Replace the combination meter.	Go to step **2**.
2	**CHECK ILLUMINATION CONTROL SWITCH UNIT.** Check the illumination control switch. <Ref. to IDI-21, ILLUMINATION CONTROL SWITCH, INSPECTION, Switches and Harness.>	Is the switch normal?	Go to step **3**.	Replace the illumination control switch.

Step		Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the connectors of combination meter assembly and illumination control switch. 2) Measure the resistance between the combination meter assembly and the illumination control switch. ***Connector & terminal*** ***(i10) No. 29 — (i79) No. 6:*** ***(i10) No. 30 — (i79) No. 5:*** ***(i10) No. 31 — (i79) No. 4:*** ***(i10) No. 32 — (i79) No. 1:***	Is the resistance less than 1 Ω?	Replace the combination meter.	Repair or replace the harness.

E: NOTE

For procedure of each component in the combination meter system, refer to the respective section.
- Combination meter assembly: <Ref. to IDI-11, Combination Meter.>
- Speedometer: <Ref. to IDI-14, Speedometer.>
- Tachometer: <Ref. to IDI-15, Tachometer.>
- Fuel gauge: <Ref. to IDI-16, Fuel Gauge.>
- Engine coolant temperature gauge: <Ref. to IDI-17, Engine Coolant Temperature Gauge.>
- Switches and harness: <Ref. to IDI-18, Switches and Harness.>
- Warning box: <Ref. to IDI-23, Warning Box.>

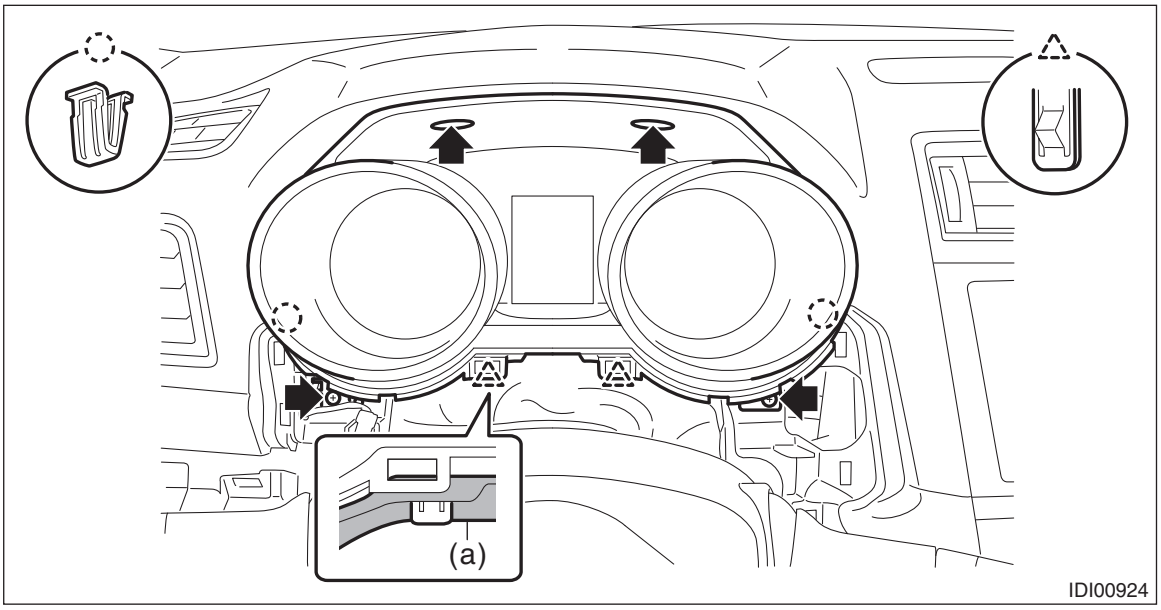


4. Combination Meter

A: REMOVAL

CAUTION:
When the combination meter is replaced, perform the variant work. <Ref. to IDI-8, VARIANT WORK, OPERATION, Combination Meter System.>

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the lock, tilt the steering column to the lowest end and fully extend the column by the telescopic system.
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.



CAUTION:
• Being careful not to damage the visor assembly - lower, slowly remove the clips and claws one by one from the right and left edges of visor assembly - lower.
• When using a clip remover, wrap it with protective tape or cloth.

5) Remove the combination meter assembly.

CAUTION:
Be careful not to damage the combination meter assembly, lens or instrument panel.
   (1) Release the claws and remove the cover - column (a).

(2) Remove the bolt, screw and clip.

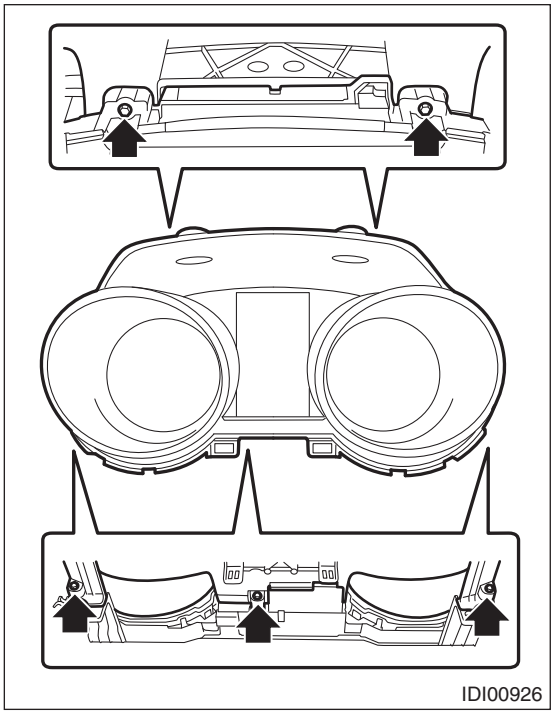
(3) Pull the combination meter assembly toward you and disconnect the connector.

B: INSTALLATION

CAUTION:
- **Make sure the electrical connector is connected securely.**
- **Make sure that each meter operates normally.**
- **For the model without keyless access with push button start except for C0 and C5 models, when the combination meter assembly is replaced, perform the registration of immobilizer. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **When the combination meter is replaced, perform the variant work. <Ref. to IDI-8, VARIANT WORK, OPERATION, Combination Meter System.>**

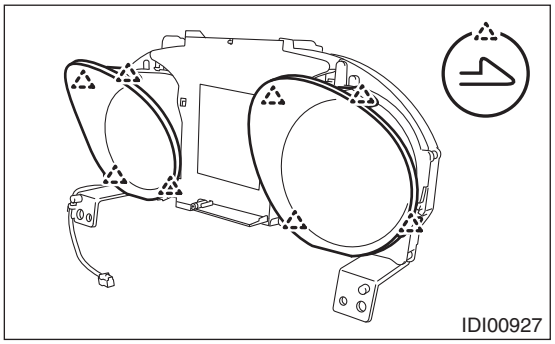
1) Install the combination meter assembly.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



2) Install the visor assembly - lower.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY



CAUTION:
- **Use gloves to avoid damage and putting fingerprints on the lens surface and meter surfaces.**
- **Be sure not to touch the meter indicator needle.**
- **Because LEDs are used for all of warning lights and indicator lights, they are not removable from the meter - main assembly.**

1) Remove the screws, and then remove the outer mask.

Preparation tool:
TORX® T10

IDI00926

2) Release the claws and remove the lens.

IDI00927

D: ASSEMBLY

1) Install the lens.
2) Install the outer mask.

5. Speedometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back surface.)

6. Tachometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

7. Fuel Gauge

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

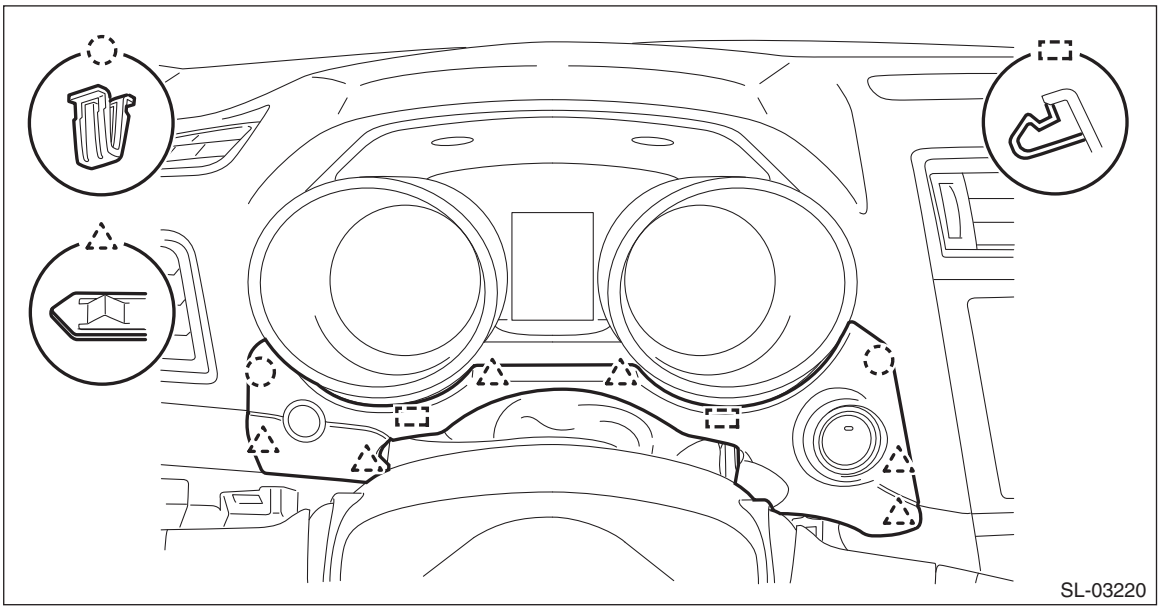
8. Engine Coolant Temperature Gauge

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the engine coolant temperature gauge alone. (Do not remove the cover on the back surface.)

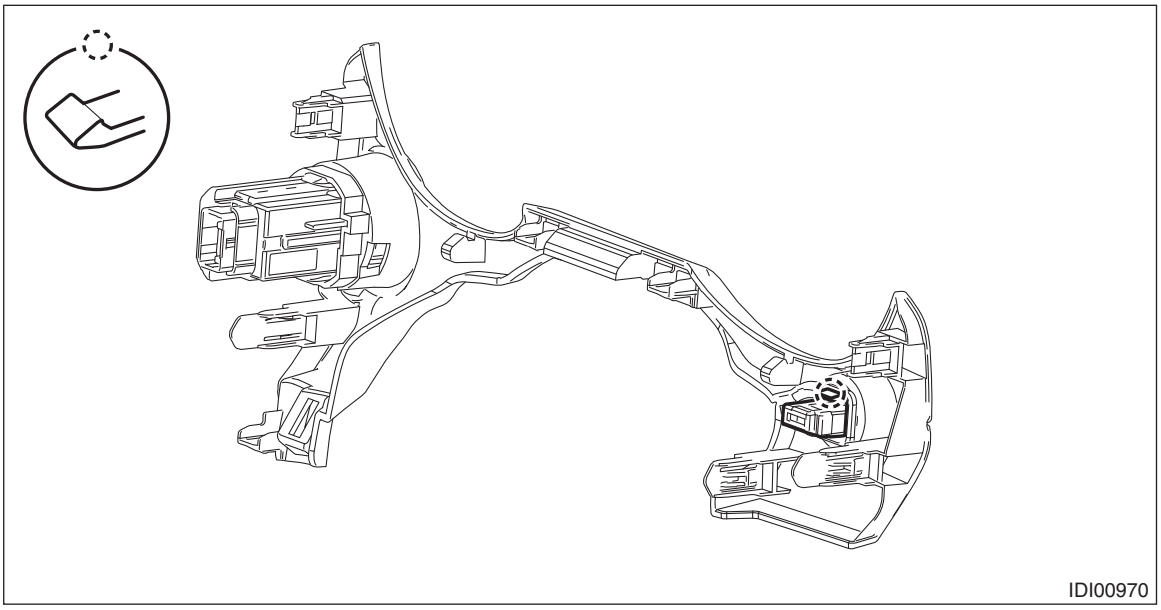
9. Switches and Harness

A: REMOVAL



1. MID SWITCH

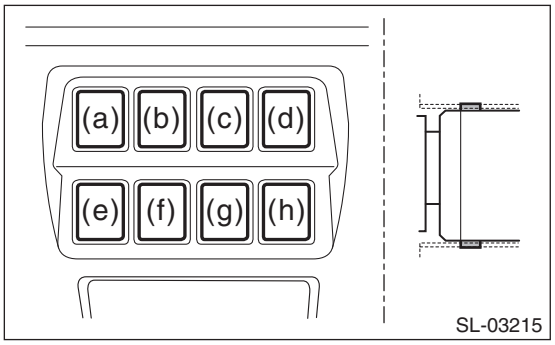
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-11, REMOVAL, Steering Wheel.>
5) Remove the MID switch. <Ref. to PS-12, DISASSEMBLY, Steering Wheel.>



2. TRIP RESET SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.

CAUTION:
• Being careful not to damage the visor assembly - lower, slowly remove the clips and claws one by one from the right and left edges of visor assembly - lower.
• When using a clip remover, wrap it with protective tape or cloth.



4) Release the claws, and remove the switch assembly - trip reset.

3. ILLUMINATION CONTROL SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the illumination control switch.

(b) Model without SRF
(d) Model with SRF

B: INSTALLATION

1. MID SWITCH

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the MID switch.
2) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>

3) Install the steering wheel.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

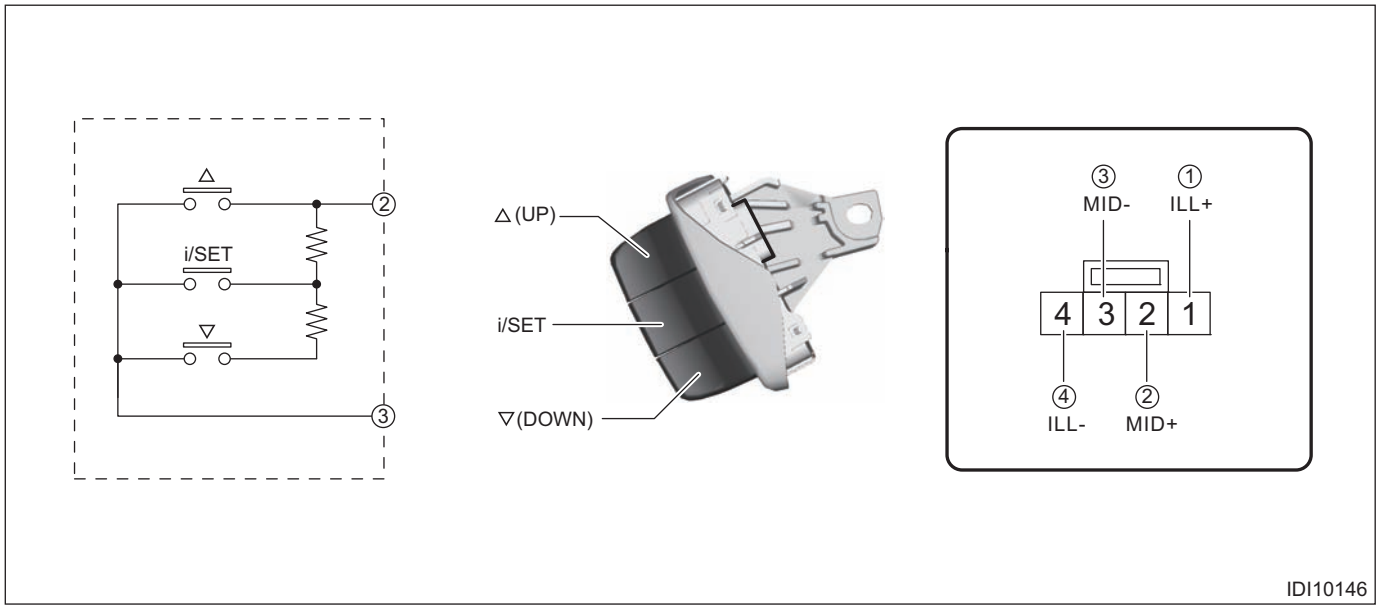
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. TRIP RESET SWITCH

1) Install the switch assembly - trip reset.
2) Install the visor assembly - lower.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. ILLUMINATION CONTROL SWITCH



1) Install the illumination control switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-2, NOTE, Repair Contents.>

C: INSPECTION

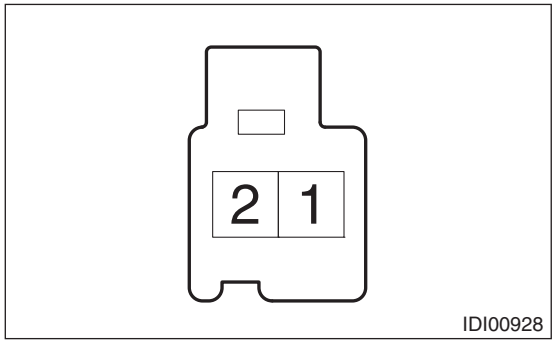
1. MID SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 2	△ (UP) i/SET ▽ (DOWN)	All OFF	Approx. 1 MΩ or more
	△ (UP)	ON	Less than 1 Ω
	i/SET	ON	Approx. 1,000 Ω
	▽ (DOWN)	ON	Approx. 3,700 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



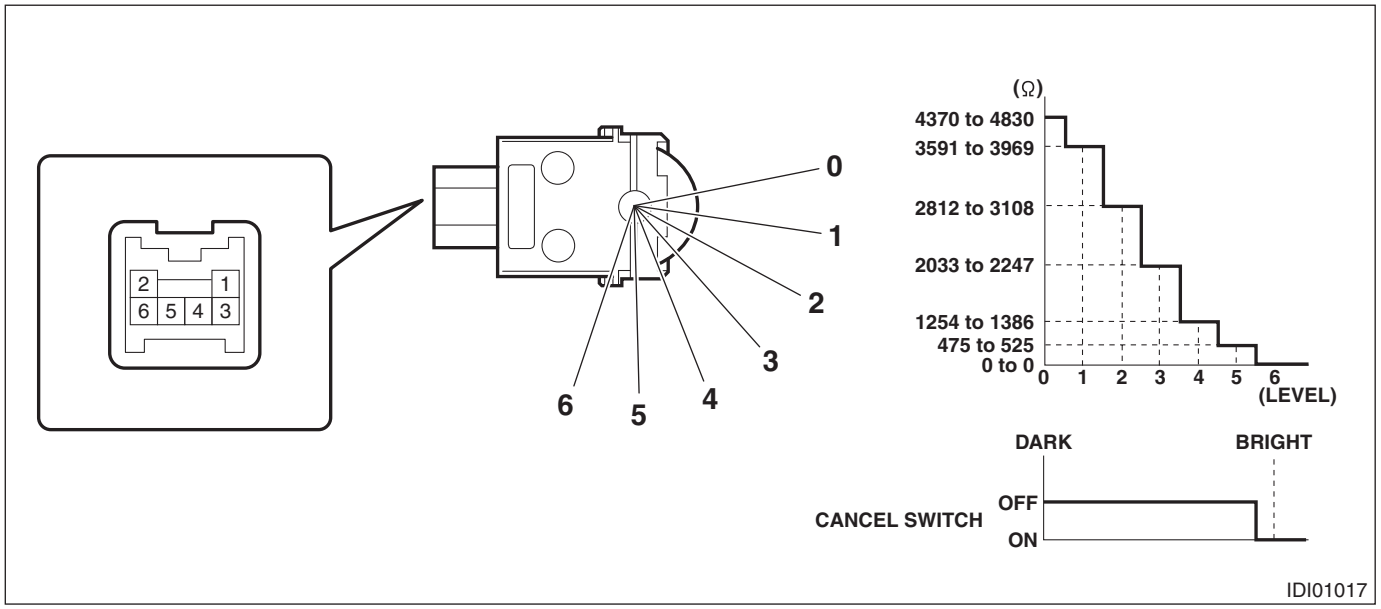
Terminal No.	Inspection conditions	Specification
1 (+) — 4 (–)	Apply battery voltage.	Light ON

3) Replace the MID switch if it is found defective.

2. TRIP RESET SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Replace the switch assembly - trip reset if the inspection result is not within the standard.

3. ILLUMINATION CONTROL SWITCH

1) Measure the resistance between connector terminals.

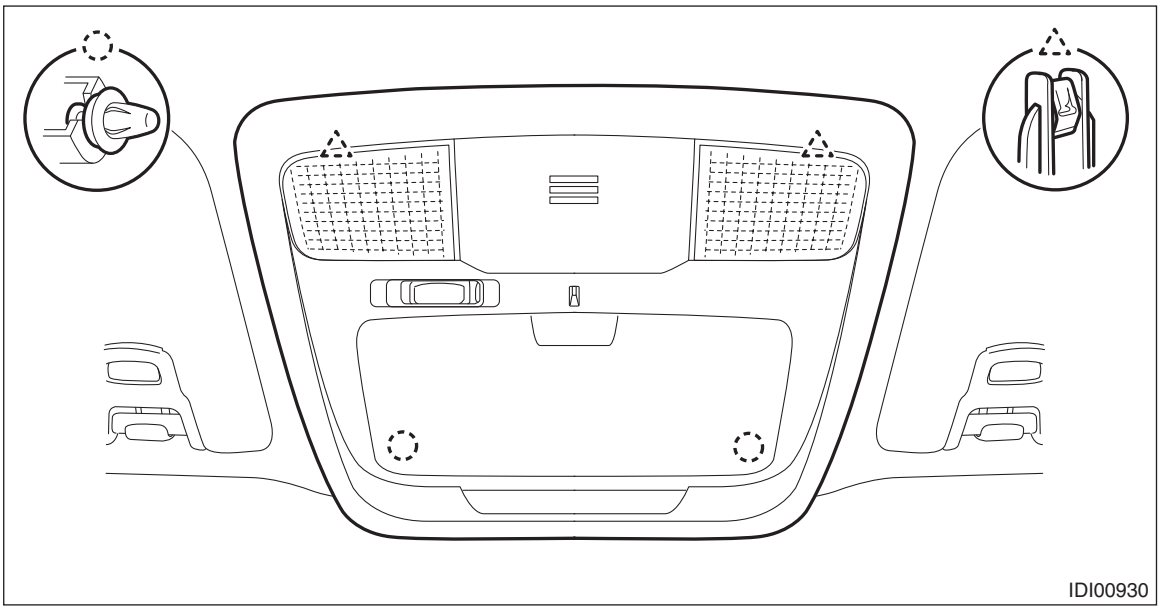
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 6	Bright switch OFF	10 kΩ or more
	Bright switch ON	Less than 1 Ω

Terminal No.	Inspection conditions	Standard
4 — 6	Always	4,465 to 4,935 Ω
5 — 6	Illumination control switch upward fully open	475 to 525 Ω
	Illumination control switch downward fully open	4,370 to 4,830 Ω

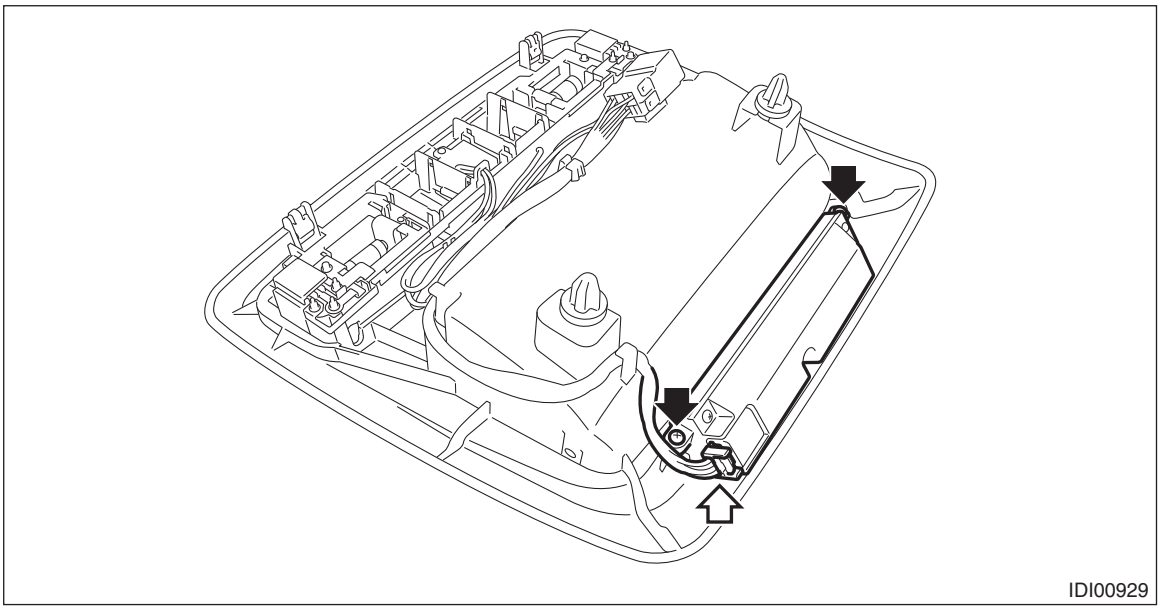
2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON



3) Replace the illumination control switch if it is found defective.

10.Warning Box

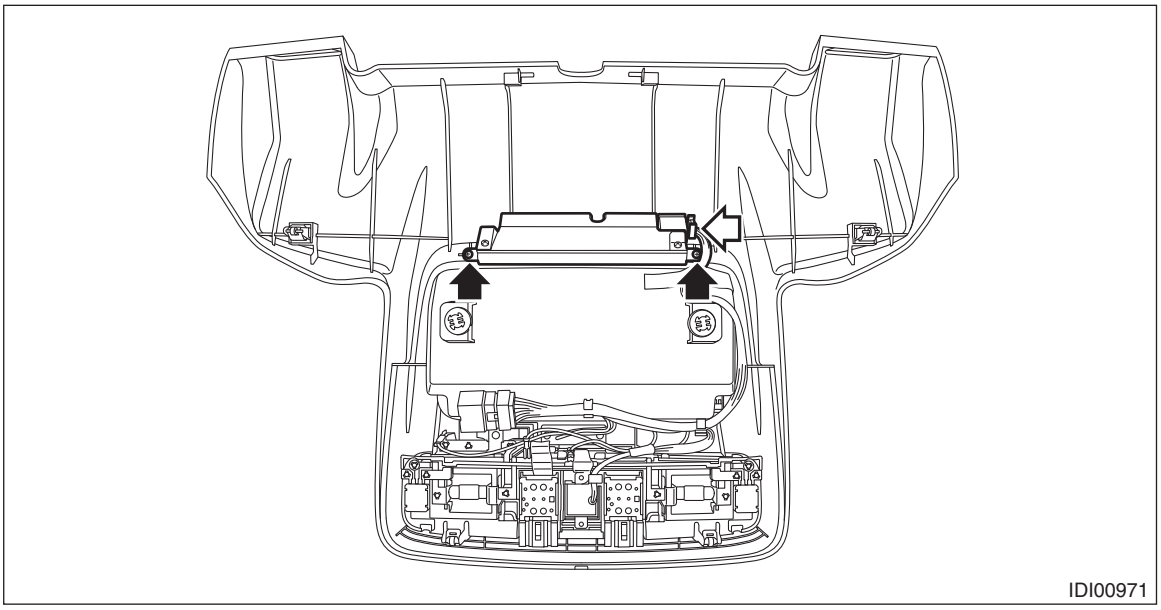


A: REMOVAL

1. MODELS WITHOUT EyeSight

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the overhead console.
   (1) Release the clips and claws.
   (2) Disconnect the connector, and remove the overhead console.

IDI00930



3) Remove connector and screw, and remove the warning box.

IDI00929

2. MODELS WITH EyeSight

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the stereo camera cover assembly. <Ref. to ES-7, REMOVAL, Stereo Camera.>

3) Remove connector and screw, and remove the warning box.

B: INSTALLATION

CAUTION:
- **Make sure the electrical connector is connected securely.**
- **Make sure that each indicator operates normally.**

1) Install the warning box.
2) Install the overhead console. (Models without EyeSight)
3) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

COMBINATION METER (DIAGNOSTICS)

MET(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	4
4.	Electrical Component Location	5
5.	Control Module I/O Signal	6
6.	Subaru Select Monitor	8
7.	Read Diagnostic Trouble Code (DTC)	11
8.	Clear Memory Mode	12
9.	Inspection Mode	13
10.	Read Current Data	14
11.	System Operation Check Mode	16
12.	User Customizing	20
13.	List of Diagnostic Trouble Code (DTC)	21
14.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	22

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs. <Ref. to MET(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to MET(diag)-3, CHECK, Check List for Interview.>
2	**CHECK CAN COMMUNICATION.** Read the DTC of the CAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-39, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to LAN(diag)-124, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Using the Subaru Select Monitor, read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Record the DTCs and time stamps, and perform the diagnosis for the displayed DTCs. <Ref. to MET(diag)-21, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> Go to step **5**.	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the operation of combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Is the check result OK?	System is normal.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to MET(diag)-12, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to MET(diag)-13, Inspection Mode.> 3) Using the Subaru Select Monitor, read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Combination Meter Check List for Interview
Received Year Month Day</td><td colspan="2">Date the Vehicle is</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>
2) Check the fuse condition.
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

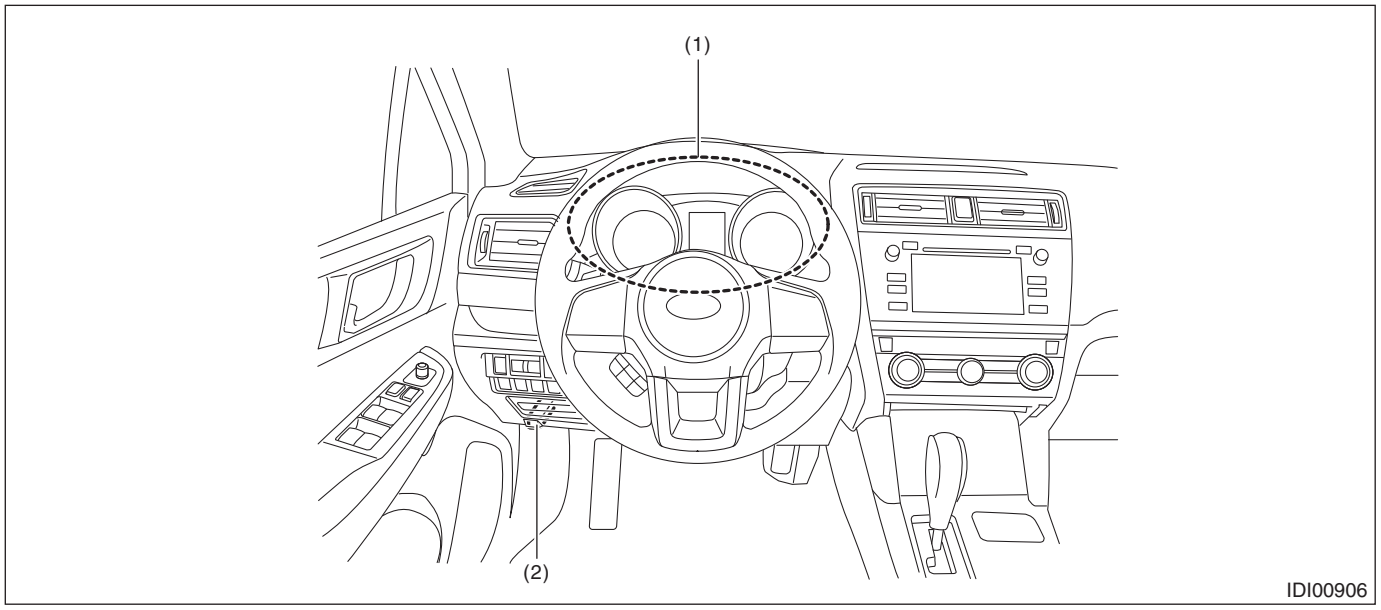

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
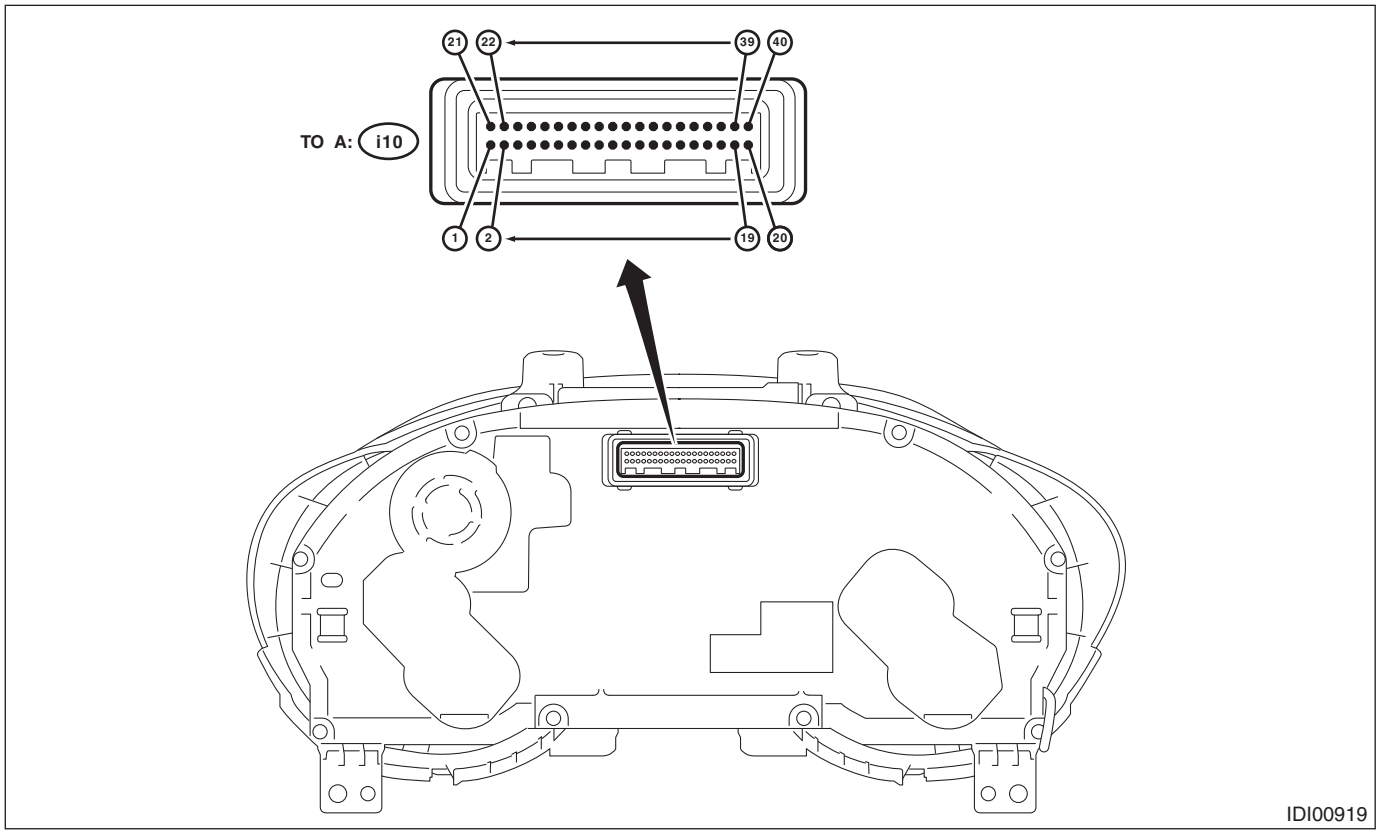
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location



A: LOCATION

(1) Combination meter
(2) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

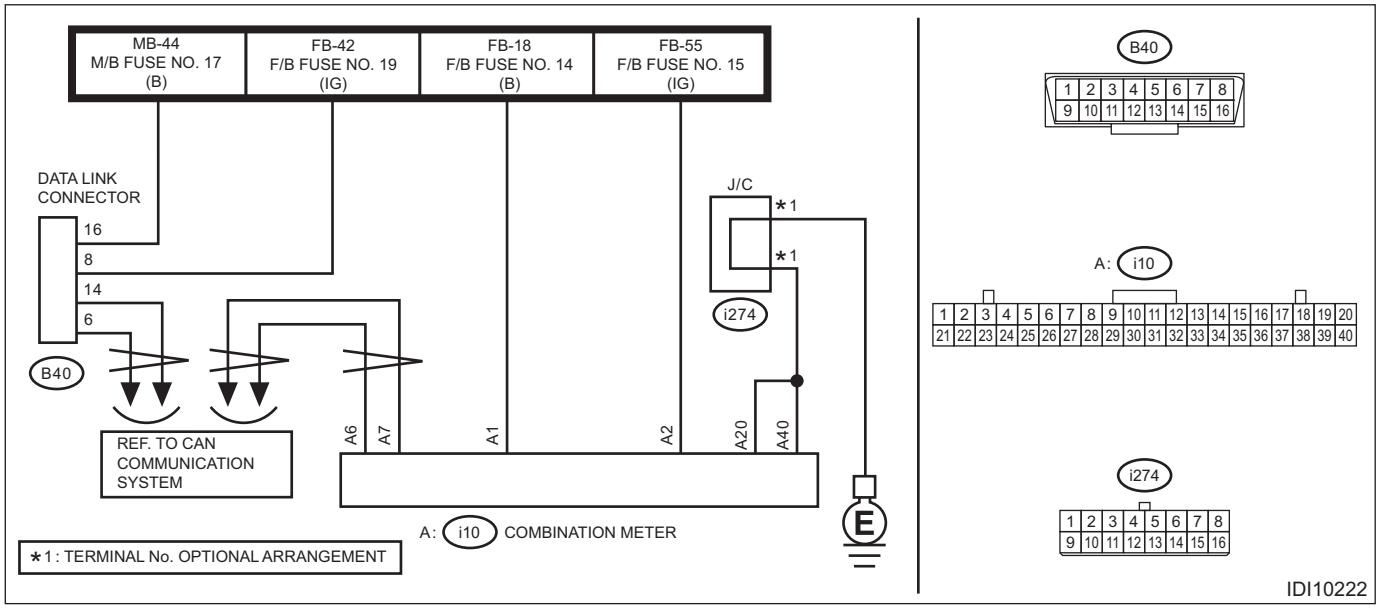
40	GND	Always	Less than 1 Ω

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When the combination meter cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to MET(diag)-9, INSPECTION, Subaru Select Monitor.>

If the DTCs related to the LAN system are not displayed, perform the inspection by connecting the Subaru Select Monitor to another vehicle which is operating properly and by establishing the communication.



B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective combination meter
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:
Communication is impossible between combination meter and Subaru Select Monitor.

Wiring diagram:
- Combination meter system <Ref. to WI-154, WIRING DIAGRAM, Combination Meter System.>
- CAN communication system <Ref. to WI-141, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and combination meter.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of combination meter. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 1 (+) — Chassis ground (–):*** ***(i10) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between combination meter connector and fuse.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Use a tester to measure the resistance between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 20 — Chassis ground:*** ***(i10) No. 40 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between combination meter connector and chassis ground.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK COMBINATION METER.** 1) Turn the ignition switch to OFF. 2) Connect the combination meter connector. 3) Communicate with the combination meter using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to MET(diag)-21, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: OPERATION

After the ignition switch is ON, wait for 10 seconds.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Content / display range	Standard	Note
IG on trip number	Time stamp information	—	—
IG on supply system	Time stamp information	—	—
past time after IG on	Time stamp information	—	—

LED headlamp presence information	LED headlight equipment information is displayed	No function: when not equipped Function effective: when equipped	—

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) On «Active Test» display, select an item to be checked.

NOTE:
- For detailed operation procedures, refer to “Application help”.
- If not equipped (depending on destination area or vehicle equipment condition), process will not go on.

CAUTION:
After executing the system operation check mode, execute the Clear Memory Mode. <Ref. to MET(diag)-12, Clear Memory Mode.>

12.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «Customize».
6) On «Customize» display, select an item to be customized.

NOTE:
- For detailed operation procedures, refer to “Application help”.
- If not equipped (depending on destination area or vehicle equipment condition), some items are not displayed.

B: LIST

Items to be displayed	Initial setting value	Customize setting	Note
Air temperature correction	±0°C	–5°C — +5°C	Temperature compensation can only be performed by 1°C (1°C change = 1.8°F) interval.
Mean fuel efficiency correction	±0%	+10% — –10%	—
Demonstration mode permission / fault permission	OFF	Demonstration mode permission / fault permission	Demonstration mode must not be permitted when used by a customer.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to MET(diag)-22, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	<Ref. to MET(diag)-22, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	<Ref. to MET(diag)-22, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to MET(diag)-22, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0128	LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE	<Ref. to MET(diag)-22, DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	<Ref. to MET(diag)-22, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U0162	LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE	<Ref. to MET(diag)-22, DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0181	LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE	<Ref. to MET(diag)-23, DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0327	SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE	<Ref. to MET(diag)-23, DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1232	LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE	<Ref. to MET(diag)-23, DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	<Ref. to MET(diag)-23, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	<Ref. to MET(diag)-23, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1500	FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION	<Ref. to MET(diag)-23, DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1502	WARNING BOX COMMUNICATION MALFUNCTION	<Ref. to MET(diag)-25, DTC B1502 WARNING BOX COMMUNICATION MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1507	EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION	<Ref. to MET(diag)-26, DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data is not received from electric power steering CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE

Detected when CAN data from AVN does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

Detected when CAN data is not received from auto headlight beam leveler CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

Detected when CAN data is not received from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from the radar sensor does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

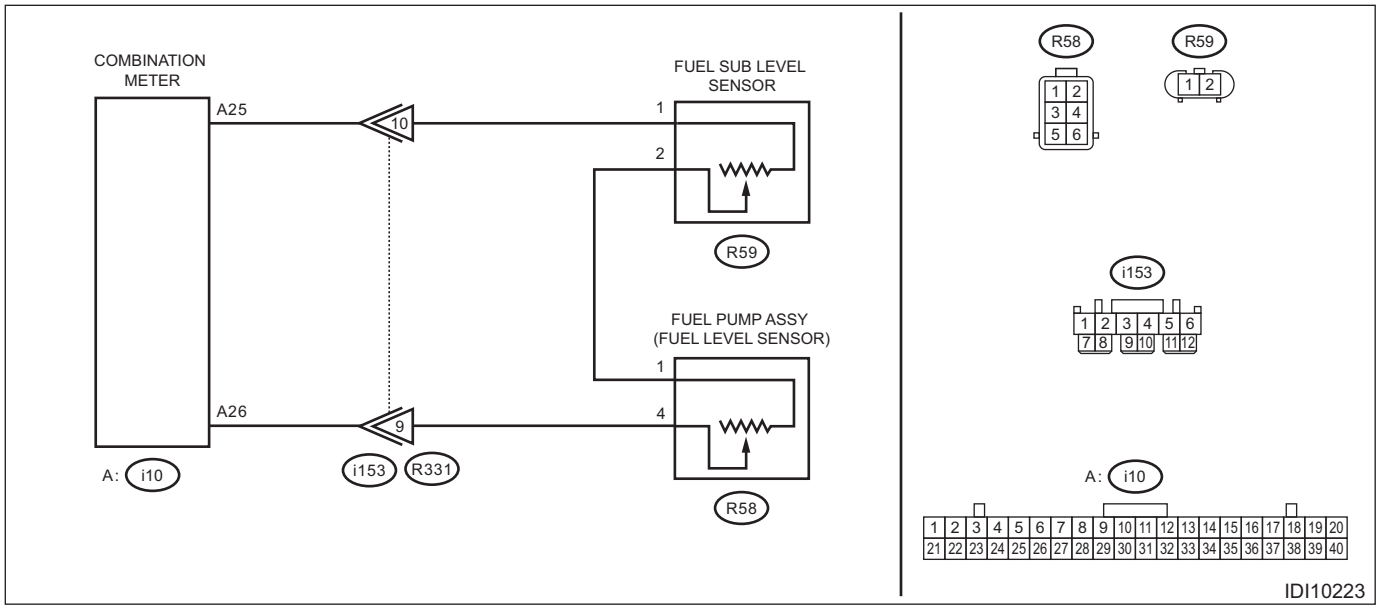
M: DTC U1235 LOST COMMUNICATION WITH EyeSight

Detected when CAN data from the stereo camera does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

Detected when CAN data from the stereo camera does not arrive.



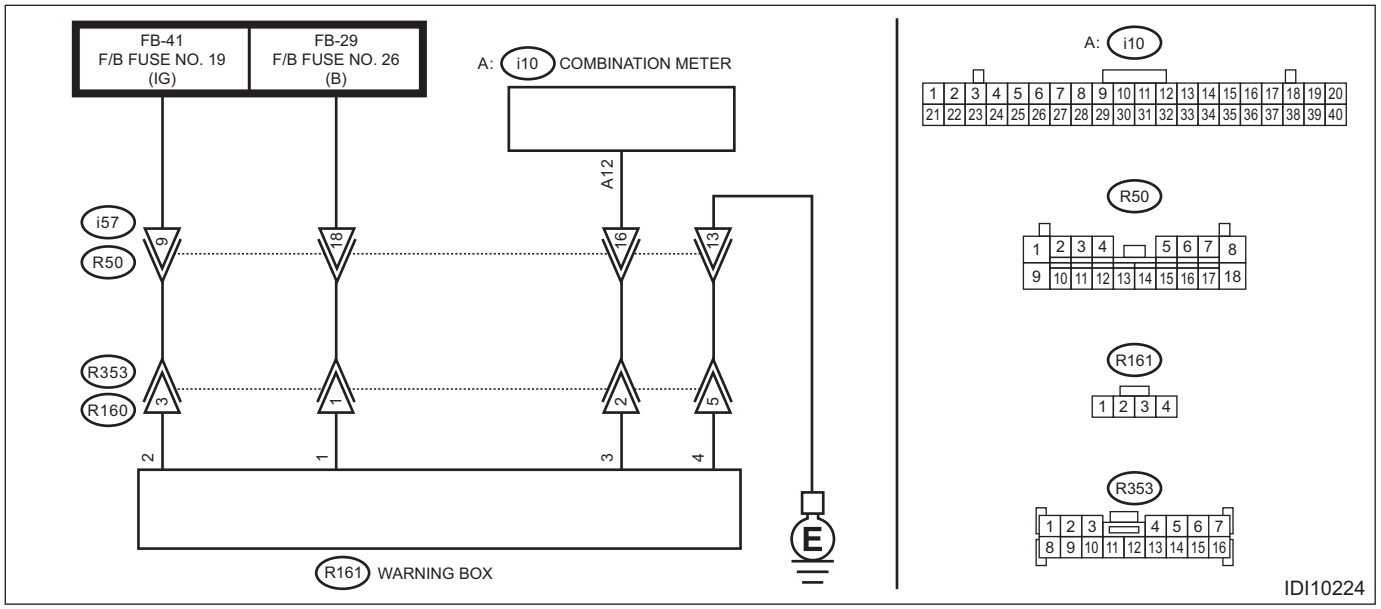
NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION

DTC detecting condition:
The fuel gauge circuit is open or shorted.
Trouble symptom:
- Defective fuel gauge.
- Fuel level warning light blinks.

Wiring diagram:

Fuel gauge system <Ref. to WI-248, WIRING DIAGRAM, Fuel Gauge System.>



Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK COMBINATION METER.** 1) Check the operation of combination meter using Subaru Select Monitor. 2) From the «System Operation Check Mode», select «Fuel Meter Operation» and «Remaining fuel warning». <Ref. to MET(diag)-16, System Operation Check Mode.>	Is the operation of combination meter OK?	Go to step **3**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the meter connector and the fuel sub level sensor connector and the fuel level sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 25 — (R59) No. 1:*** ***(i10) No. 26 — (R58) No. 4:*** ***(R59) No. 2 — (R58) No. 1:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 25 — Chassis ground:*** ***(i10) No. 26 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.
5	**CHECK FUEL SUB LEVEL SENSOR.** Check the fuel sub level sensor as a single part. <Ref. to FU(H4DO)-125, Fuel Sub Level Sensor.> <Ref. to FU(H6DO)-128, Fuel Sub Level Sensor.>	Is the check result OK?	Go to step **6**.	Replace the sensor. <Ref. to FU(H4DO)-125, Fuel Sub Level Sensor.> <Ref. to FU(H6DO)-128, Fuel Sub Level Sensor.>

	Step	Check	Yes	No
6	**CHECK FUEL LEVEL SENSOR.** Check the fuel level sensor as a single part. <Ref. to FU(H4DO)-122, Fuel Level Sensor.> <Ref. to FU(H6DO)-125, Fuel Level Sensor.>	Is the check result OK?	Go to step **7**.	Replace the sensor. <Ref. to FU(H4DO)-122, Fuel Level Sensor.> <Ref. to FU(H6DO)-125, Fuel Level Sensor.>
7	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Go to step **8**.
8	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display «Fuel level resistance» from «Data monitor». <Ref. to MET(diag)-14, Read Current Data.>	Does the data display 10 — 570 Ω?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

P: DTC B1502 WARNING BOX COMMUNICATION MALFUNCTION

DTC detecting condition:
Communication error between combination meter and spot map light
Trouble symptom:
Malfunction of the warning light inside the spot map light
Wiring diagram:
Combination meter system <Ref. to WI-154, WIRING DIAGRAM, Combination Meter System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Turn the ignition switch to ON, and make sure that the combination meter operates properly.	Is the check result OK?	Go to step **2**.	Check the combination meter power supply circuit.
2	**CHECK DTC.** Read the DTC. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B1502 displayed? (Current malfunction)	Go to step **3**.	Go to step **4**.
3	**CHECK COMMUNICATION CIRCUIT (HARNESS) (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Disconnect the warning box connector. 4) Measure the resistance between combination meter connector and warning box connector. ***Connector & terminal*** ***(i10) No. 12 — (R161) No. 3:***	Is the resistance less than 10 Ω?	Replace the warning box. <Ref. to IDI-23, Warning Box.>	Repair the open circuit of harness between combination meter connector and warning box connector.
4	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Disconnect the warning box connector.	Is there any fault in the connector?	Repair or replace the connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Q: DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION

DTC detecting condition:
Open or short circuit in ambient sensor
Trouble symptom:
- Defective ambient temperature display
- Defective air conditioner operation

Wiring diagram:

Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the meter using the Subaru Select Monitor. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B1507 displayed? (Current malfunction)	Go to step **2**.	Go to step **6**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display «Ambient air temperature» from «Data monitor». <Ref. to MET(diag)-14, Read Current Data.>	Is data displayed?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the meter connector and ambient sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 23 — (B480) No. 2:*** ***(i10) No. 24 — (B480) No. 1:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:*** ***(i10) No. 24 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AMBIENT SENSOR.** Perform the inspection of ambient sensor unit. <Ref. to AC-79, Ambient Sensor.>	Is the check result OK?	Go to step **6**.	Replace the sensor. <Ref. to AC-79, Ambient Sensor.>
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

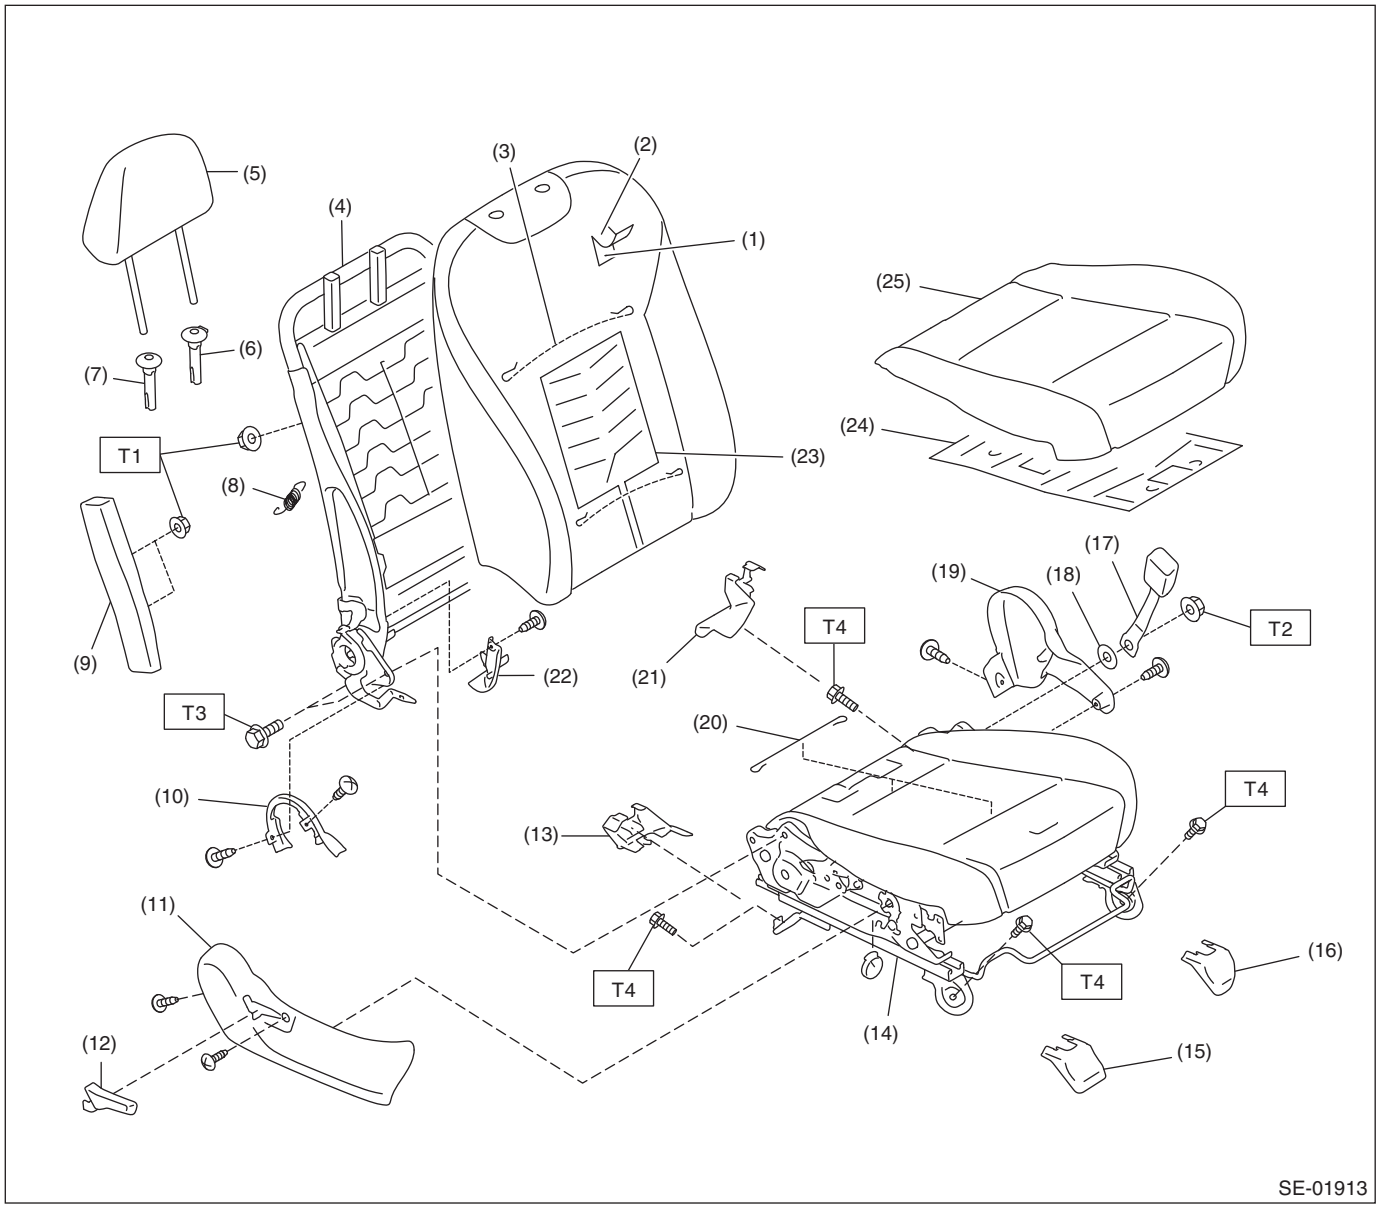
1. General Description

A: COMPONENT

1. FRONT SEAT

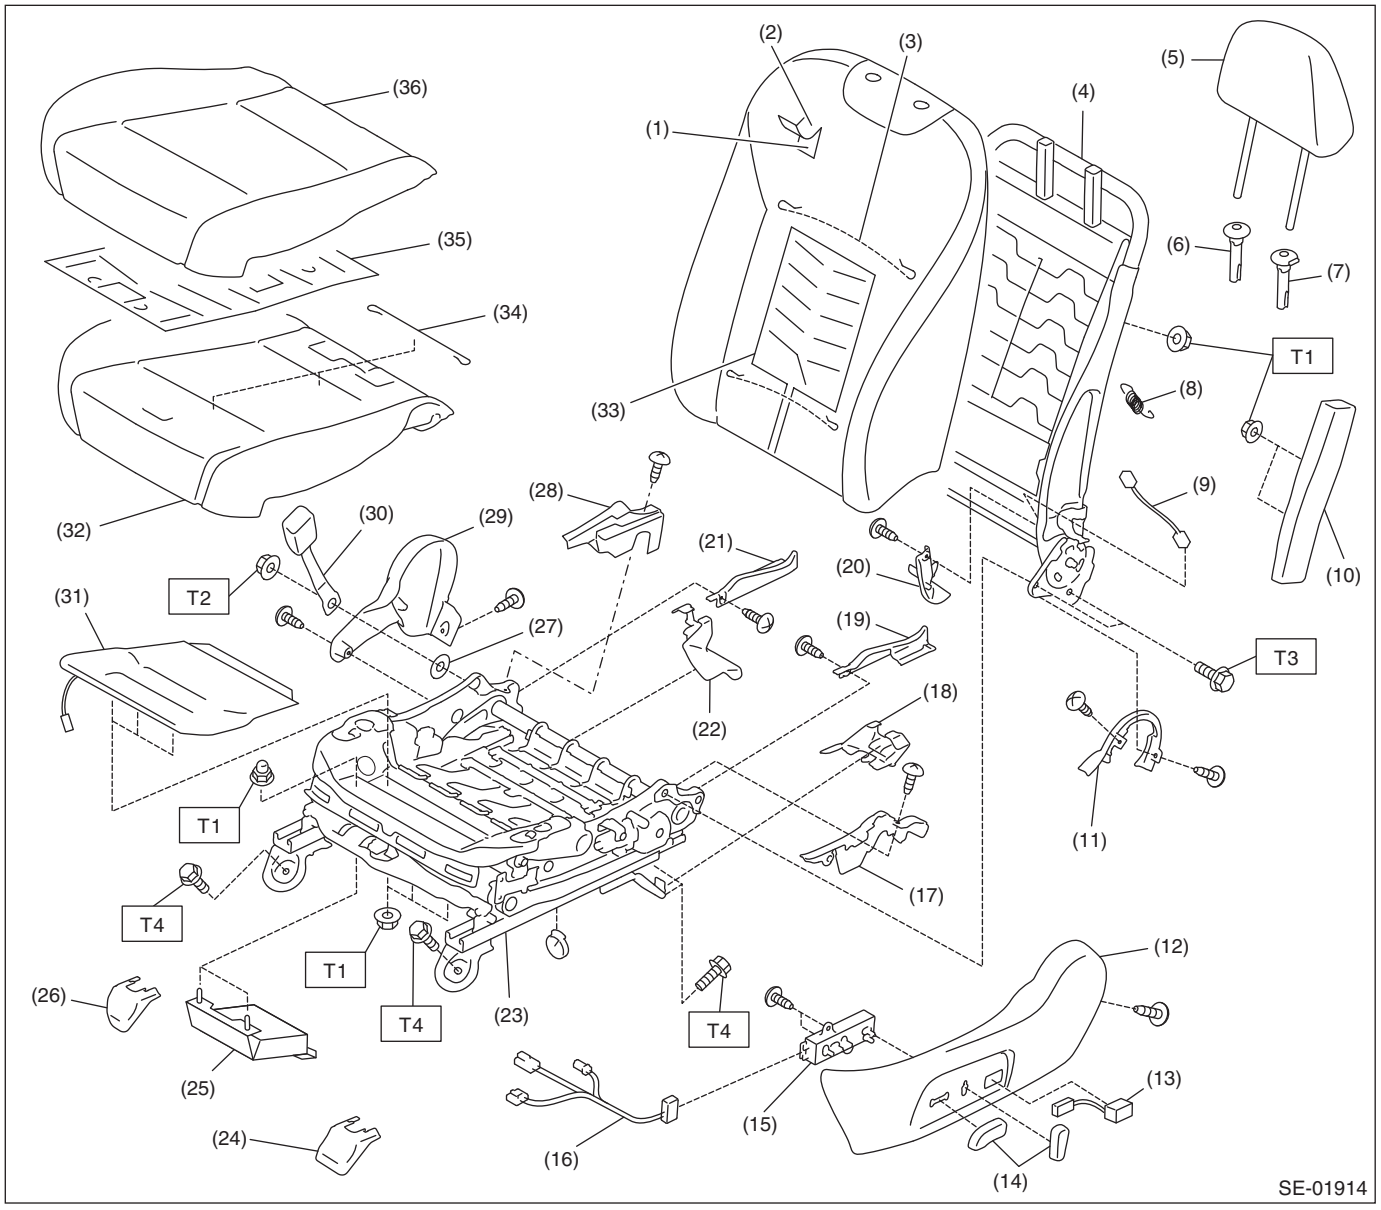
- Manual seat - driver's seat



(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front seat backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front seat backrest
(5) Headrest ASSY - front
(6) Bushing - free headrest
(7) Bushing - lock headrest
(8) Hook spring - backrest front
(9) Side airbag module
(10) Cover - hinge base front seat
(11) Cover - hinge front seat OUT
(12) Lever - reclining
(13) Cap - lifter lever
(14) Knob - lifter
(15) Cover - bolt rear OUT
(16) TORX® bolt
(17) Inner cover - slide rail OUT
(18) Inner cover - slide rail INN
(19) Slide rail ASSY - OUT
(20) Lever - towel bar
(21) Cover - bolt front OUT
(22) Cover - bolt front INN
(23) Slide rail ASSY - INN
(24) Cover - bolt rear INN
(25) Wave washer
(26) Seat belt inner - front
(27) Frame ASSY - front seat cushion
(28) Cover - frame front seat cushion OUT
(29) Cover inner - front
(30) Cover - frame front seat cushion INN
(31) Cover - hinge front seat INN
(32) Heater module - front seat backrest
(33) Panel - front seat
(34) Seat cushion airbag module
(35) Pad ASSY - front seat cushion
(36) Wire set - front seat cushion
(37) Heater module - front seat cushion
(38) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 15 (1.5, 11.1)
T3: 38 (3.9, 28)
T4: 52 (5.3, 38.4)
T5: 53 (5.4, 39.1)

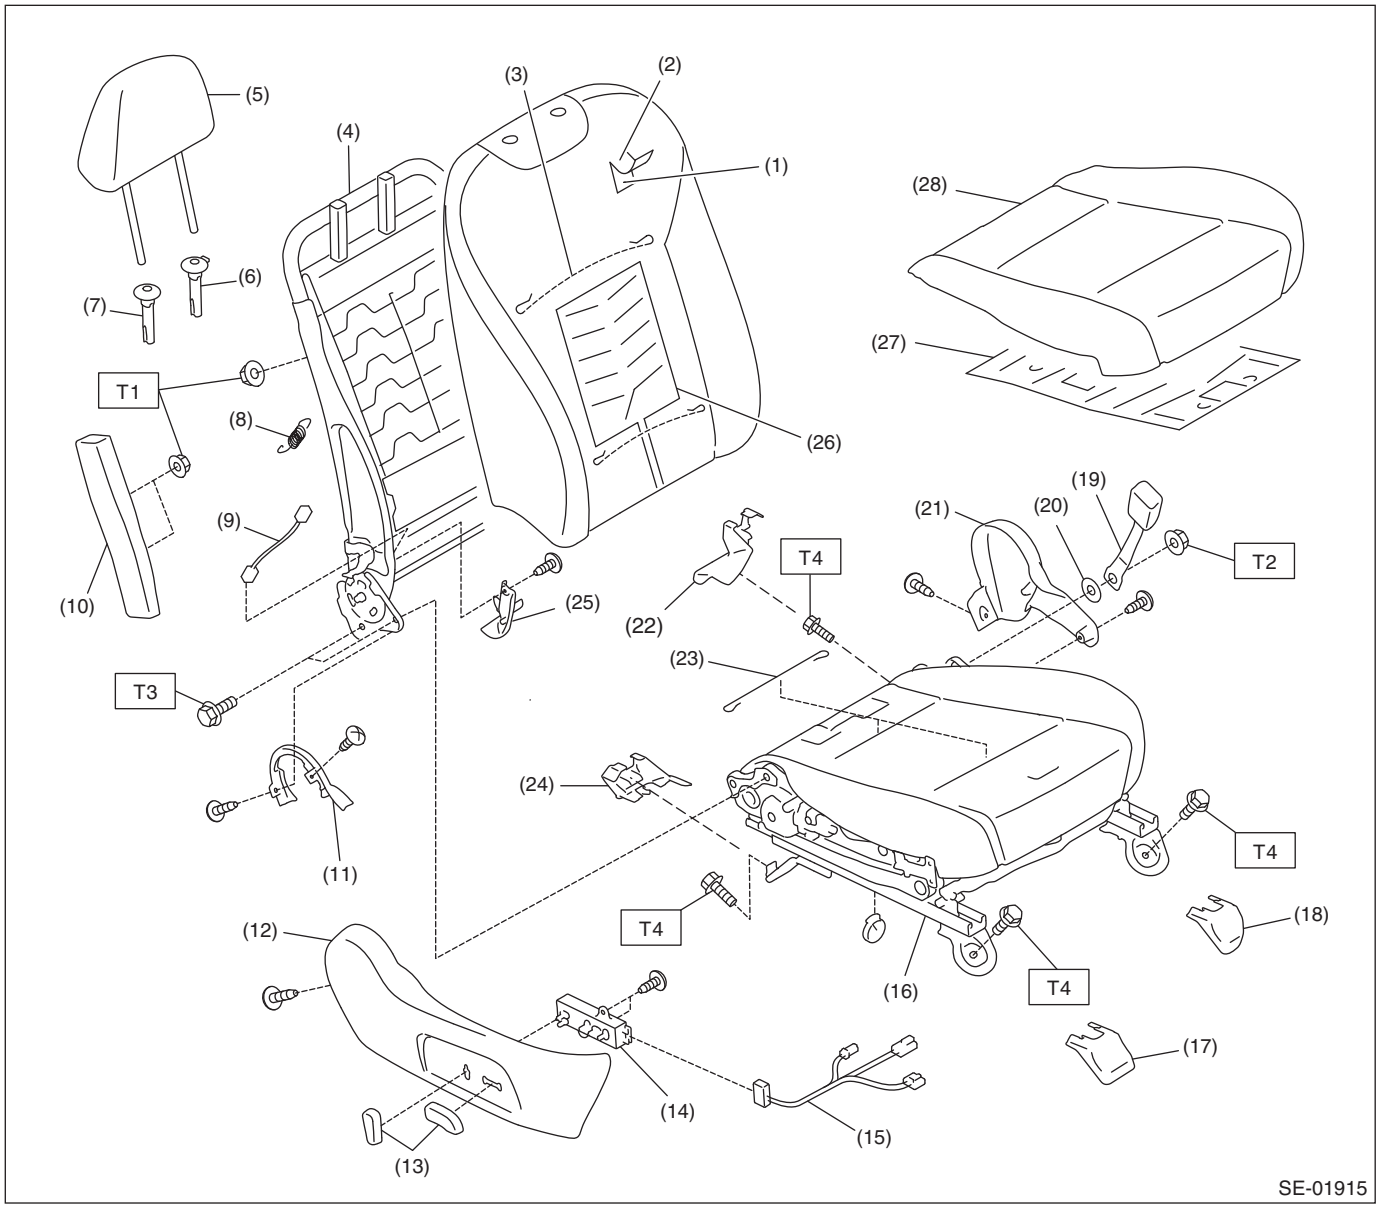


- Manual seat - passenger's seat

(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front seat backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front seat backrest
(5) Headrest ASSY - front
(6) Bushing - lock headrest
(7) Bushing - free headrest
(8) Hook spring - backrest front
(9) Side airbag module
(10) Cover - hinge base front seat
(11) Cover - hinge front seat OUT
(12) Lever - reclining
(13) Cover - bolt rear OUT
(14) Seat cushion pad and frame ASSY
(15) Cover - bolt front OUT
(16) Cover - bolt front INN
(17) Seat belt inner - front
(18) Wave washer
(19) Cover - hinge front seat INN
(20) Wire set - front seat cushion
(21) Cover - bolt rear INN
(22) Cover - inner front
(23) Seat heater module - front seat backrest
(24) Seat heater module - front seat cushion
(25) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6 (0.6, 4.4)
T2: 38 (3.9, 28)
T3: 52 (5.3, 38.4)
T4: 53 (5.4, 39.1)

- Power seat - driver's seat



(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front seat backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front seat backrest
(5) Headrest ASSY - front
(6) Bushing - lock headrest
(7) Bushing - free headrest
(8) Hook spring - backrest front
(9) Harness ASSY - reclining
(10) Side airbag module
(11) Cover - hinge base front seat
(12) Cover - hinge front seat OUT
(13) Switch ASSY - lumbar
(14) Knob - power seat
(15) Switch ASSY - power seat
(16) Harness ASSY - power seat
(17) Cover - frame front seat cushion OUT
(18) Cover - bolt rear OUT
(19) Cover - slide rail OUT
(20) Cover - inner front
(21) Cover - slide rail INN
(22) Cover - bolt rear INN
(23) Frame ASSY - front seat cushion
(24) Cover - bolt front OUT
(25) Seat memory unit
(26) Cover - bolt front INN
(27) Wave washer
(28) Cover - frame front seat cushion INN
(29) Cover - hinge front seat INN
(30) Seat belt inner - front
(31) Seat cushion airbag module
(32) Pad ASSY - front seat cushion
(33) Seat heater module - front seat backrest
(34) Wire set - front seat cushion
(35) Seat heater module - front seat cushion
(36) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)

T2: 24.5 (2.5, 18.1)
T3: 33 (3.4, 24.3)
T4: 53 (5.4, 39.1)

B: CAUTION

When removing the front seat from the vehicle, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-10, CAUTION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

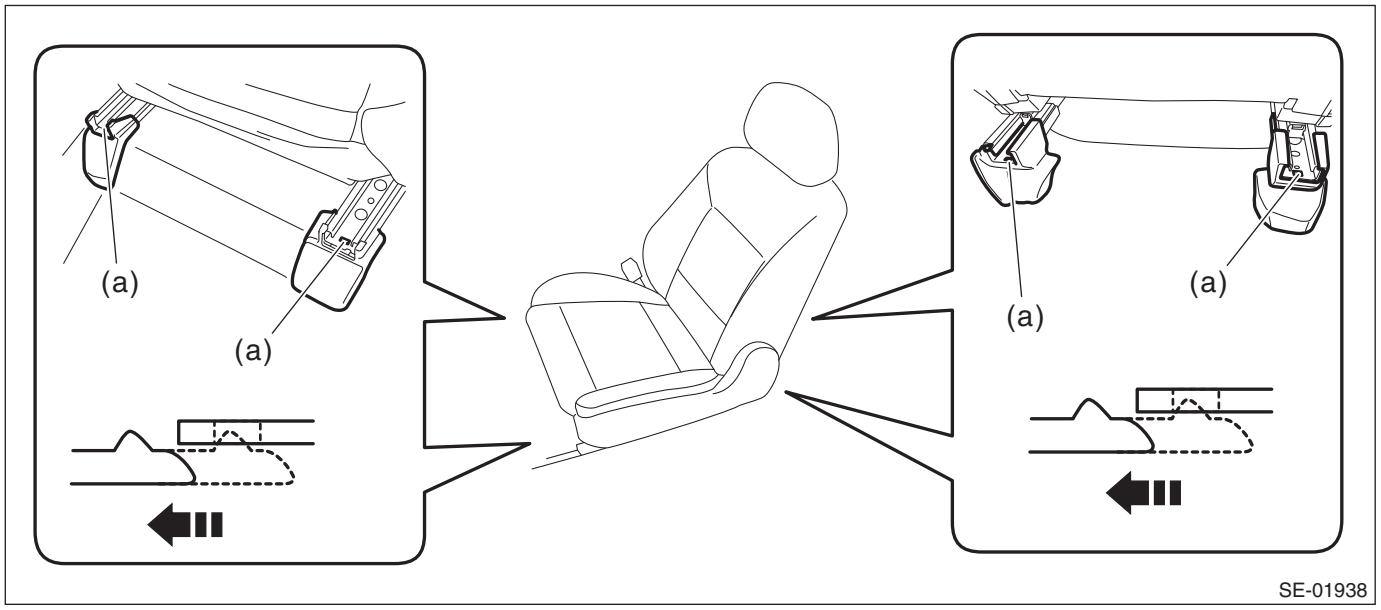
SUBARU SELECT MONITOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Long nose pliers	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Front Seat



A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Remove the headrest assembly - front.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

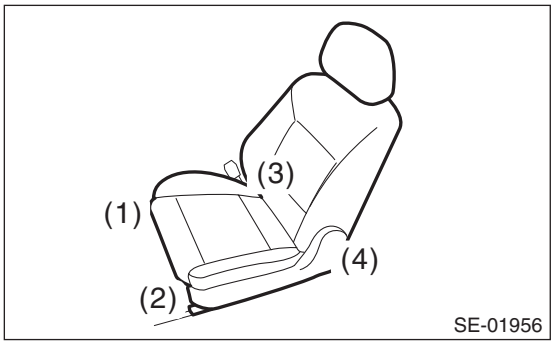
NOTE:
For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the slide rail assembly installing bolt.
   (1) Tilt the backrest assembly forward.
   (2) Press the bolt cover claw (a) to remove the bolt cover.
   (3) Remove the slide rail installing bolt.

4) Disconnect the connector under the front seat.
- Seat belt warning light connector (driver's seat)
- Occupant detection system harness connector (passenger's seat) <Ref. to OD(diag)-17, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>
- Side airbag connector <Ref. to AB-22, SIDE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
- Seat cushion airbag connector <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>
- Seat heater connector (model with seat heater)
- Buckle switch RH connector (passenger's seat) <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

5) Take out the front seat from the vehicle.

CAUTION:
Be careful not to damage the body.



B: INSTALLATION

1) Bring the front seat inside the vehicle.

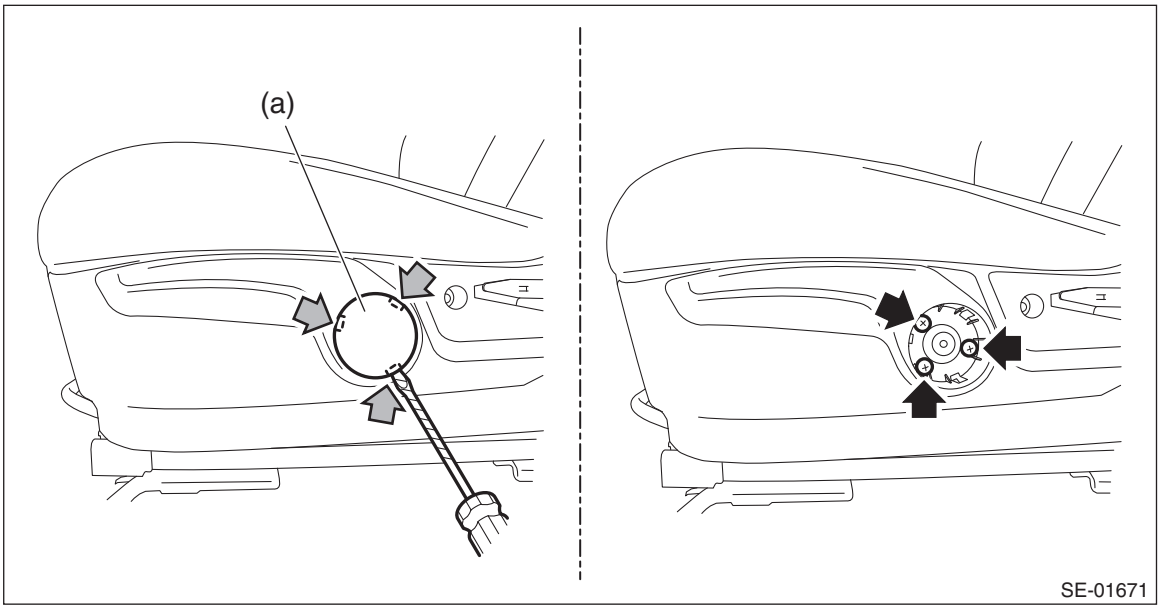
CAUTION:
Be careful not to damage the body.

2) Connect the connectors located under the front seat.
3) Install the seat assembly.

CAUTION:
Tighten the slide rail assembly installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.

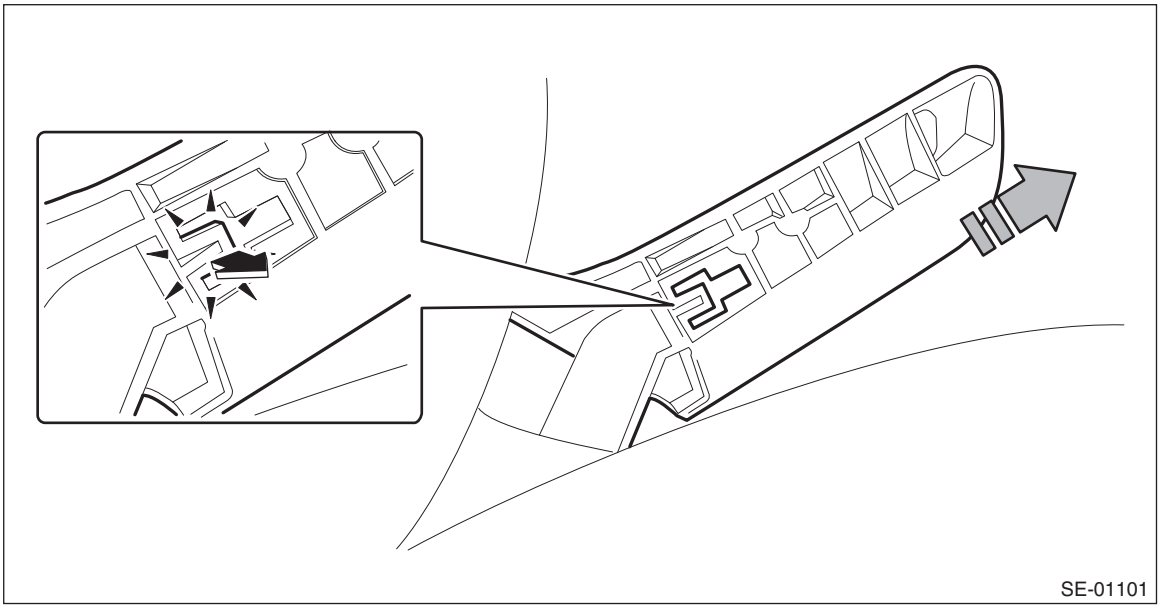
Tightening torque:
Front seat assembly: 53 N·m (5.4 kgf-m, 39.1 ft-lb)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Install the headrest assembly - front.

C: DISASSEMBLY



1. MANUAL SEAT (DRIVER'S SEAT)

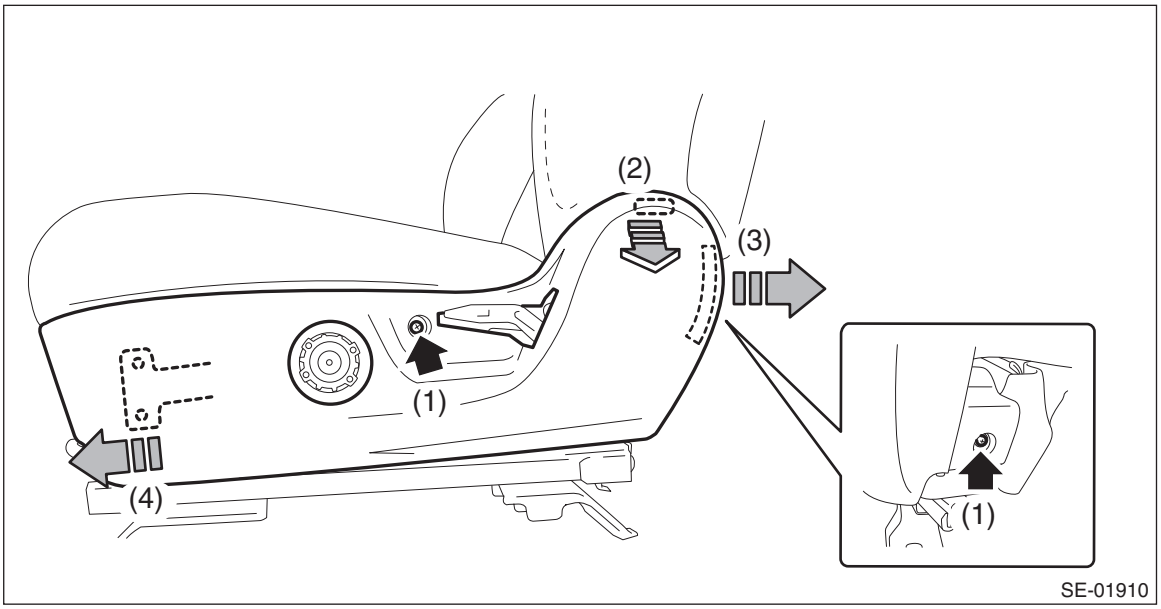
CAUTION:
• Before assembling, make sure how the harnesses are routed behind the seat cushion in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• Do not reuse hog rings.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
• Before removing the seat, raise the seating face.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
3) Remove the front seat from vehicle. <Ref. to SE-12, REMOVAL, Front Seat.>
4) Remove the knob - lifter.
(1) Remove the cap - lifter lever (a).

NOTE:
Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap (shown with arrow) between the cap - lifter lever and the knob - lifter.

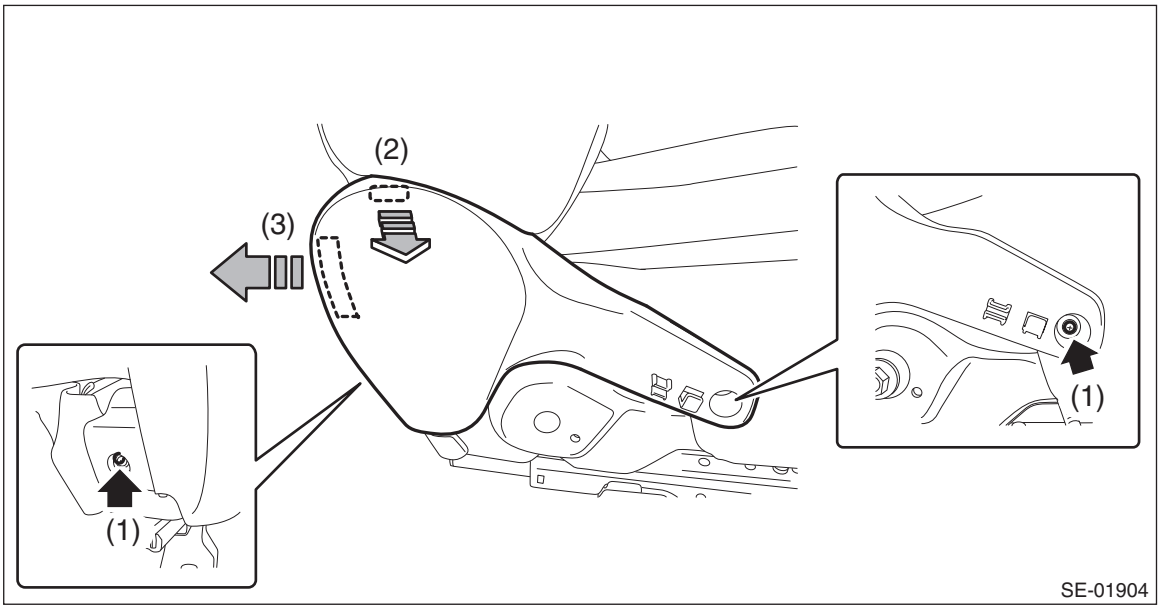
(2) Remove the screws and remove the knob - lifter.



5) Remove the lever - reclining.
(1) Pull up the lever - reclining and release the claws on the back.
(2) Pull out the lever - reclining.

6) Remove the cover - hinge front seat OUT.
(1) Remove the screws.
(2) Release the claw in the upper section of the cover - hinge front seat OUT.
(3) Release the claw in the rear section of the cover - hinge front seat OUT.

(4) Release the claw in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.



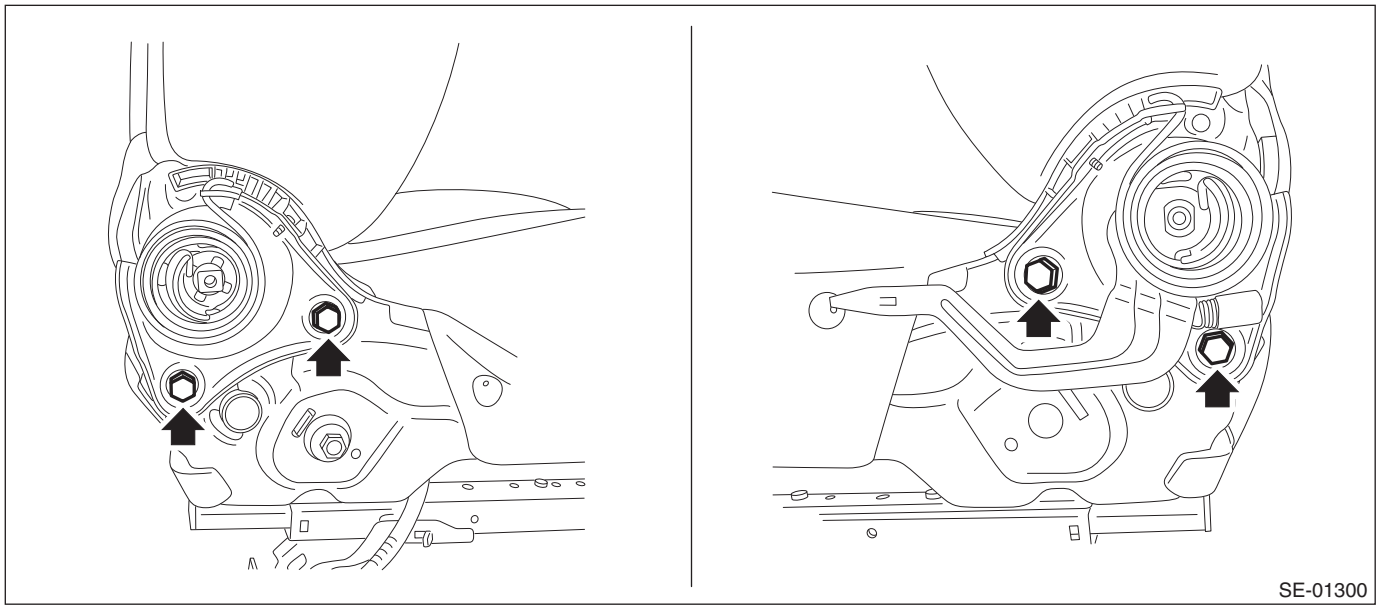
7) Remove the seat belt inner - front. <Ref. to SB-21, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>

8) Remove the cover - hinge front seat INN.

(1) Remove the screws.

(2) Release the claw in the upper section of the cover - hinge front seat INN.

(3) Release the claw in the rear section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.

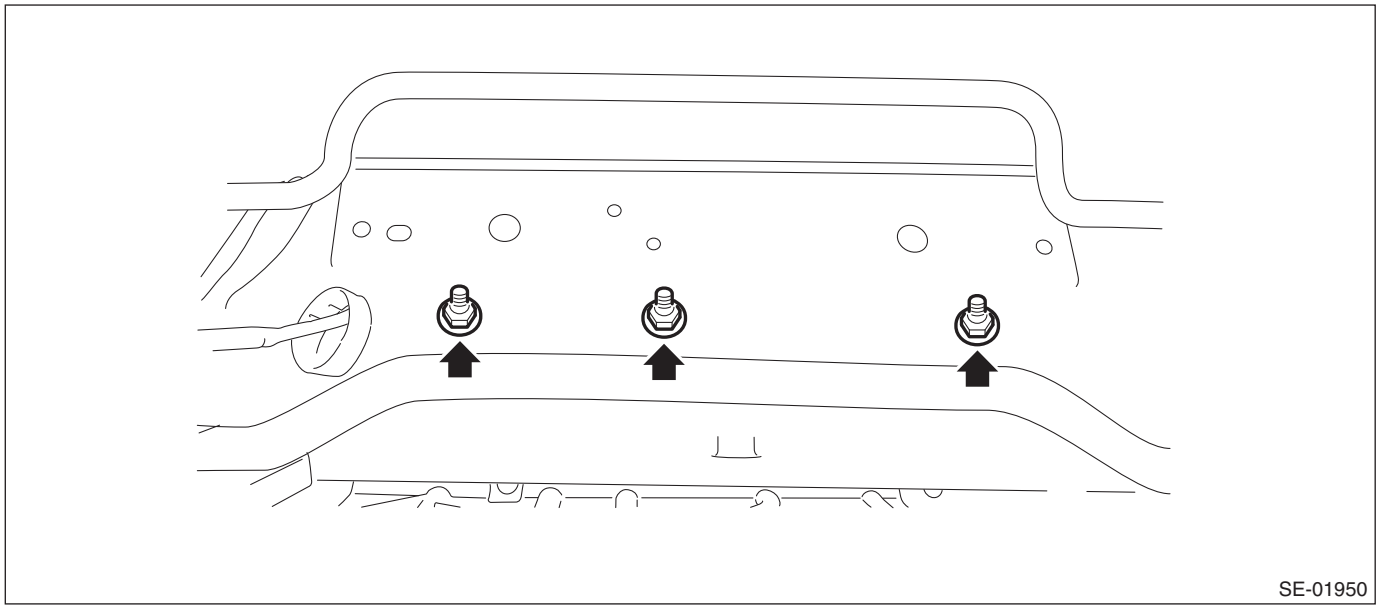


9) Separate the backrest assembly and the seat cushion assembly.

(1) Remove the following harnesses and connector clamps from the reverse side of the seat cushion assembly.

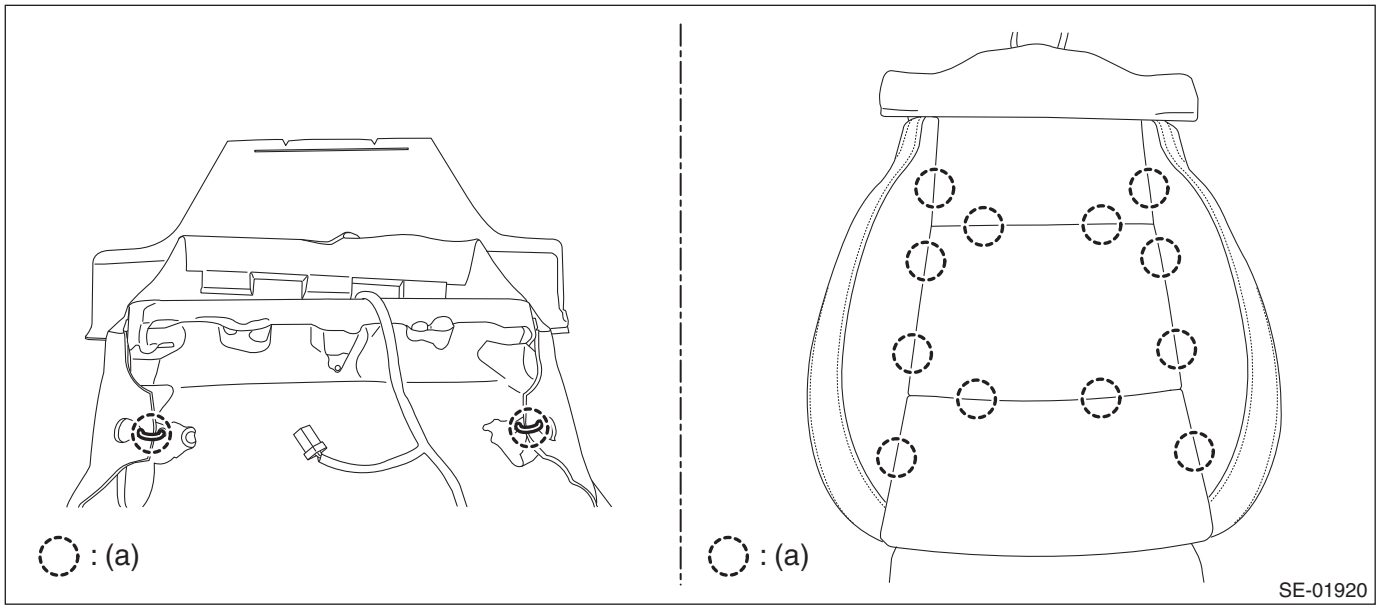
- Side airbag harness
- Seat cushion airbag harness
- Seat heater harness (with seat heater)

(2) Remove the bolts from reclining hinge of both sides.



(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.

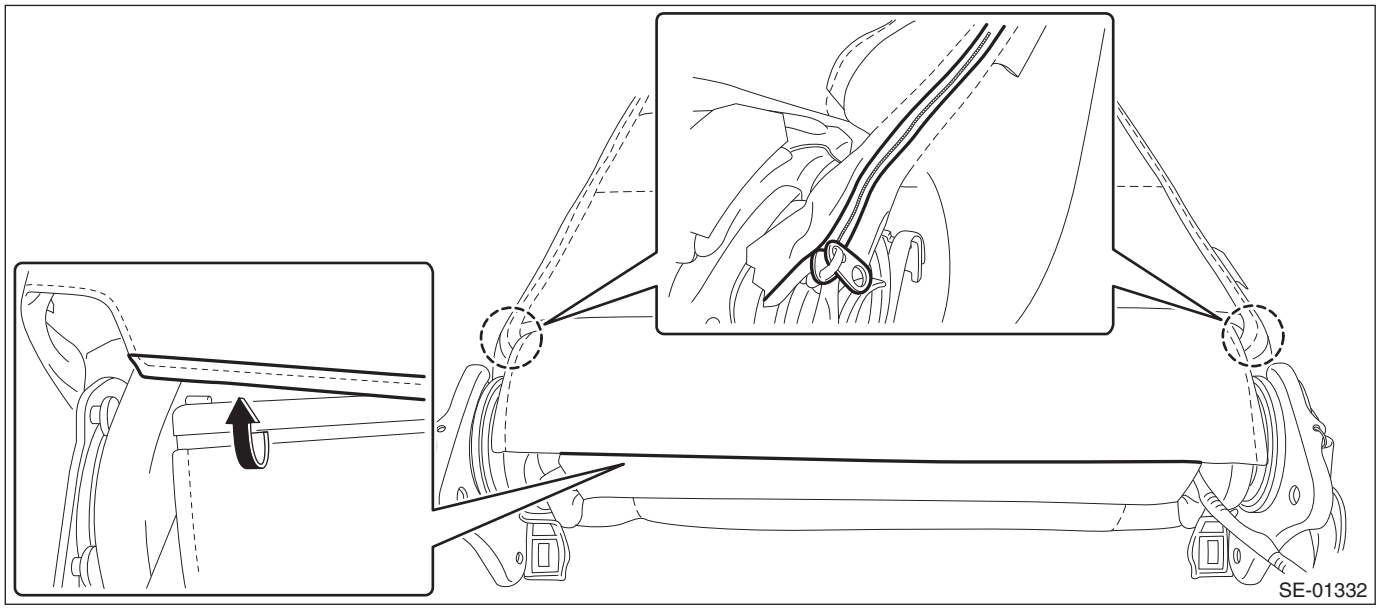
10) Release the hook and detach the touch fastener on the lower front side, and then remove the pad assembly - front seat cushion and the cover - front seat cushion.



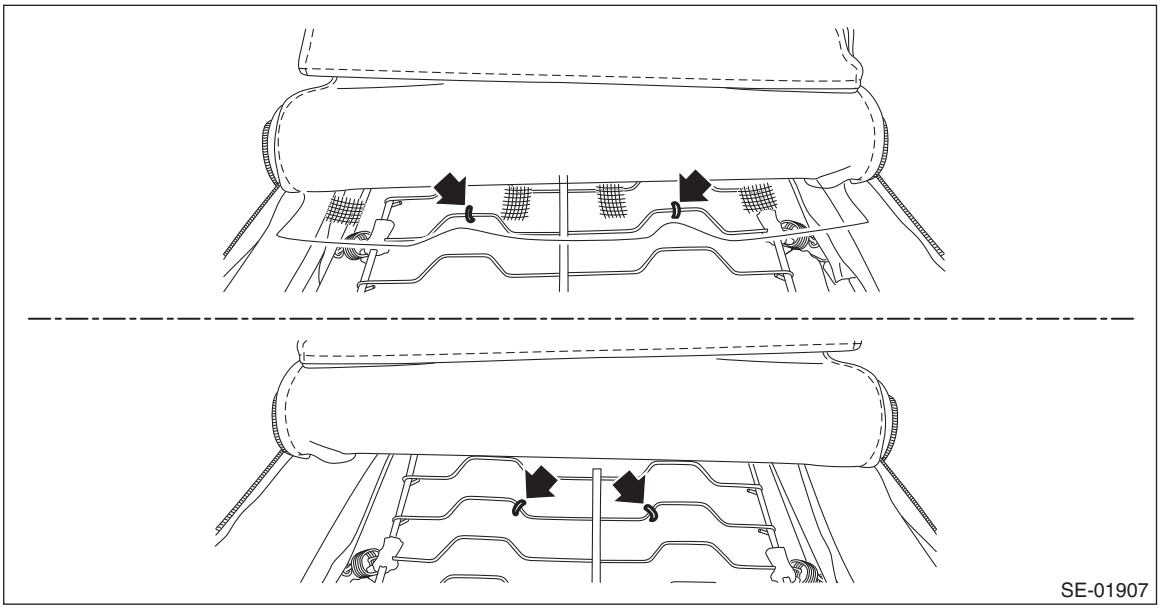
NOTE:
Turn over the rear side of the seat, and remove the hook on the front side of the seat cushion frame.

11) Remove the nuts and then remove the seat cushion airbag module.

12) Remove the cover - front cushion.



(1) Remove the hog ring (a).

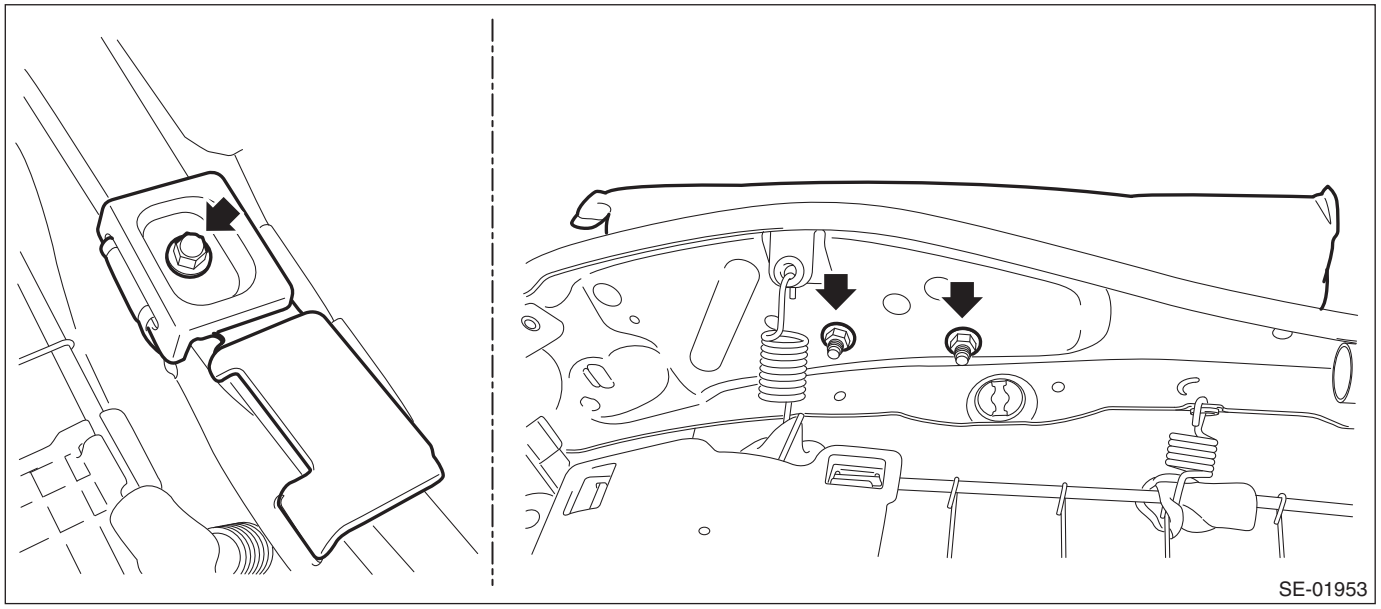


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

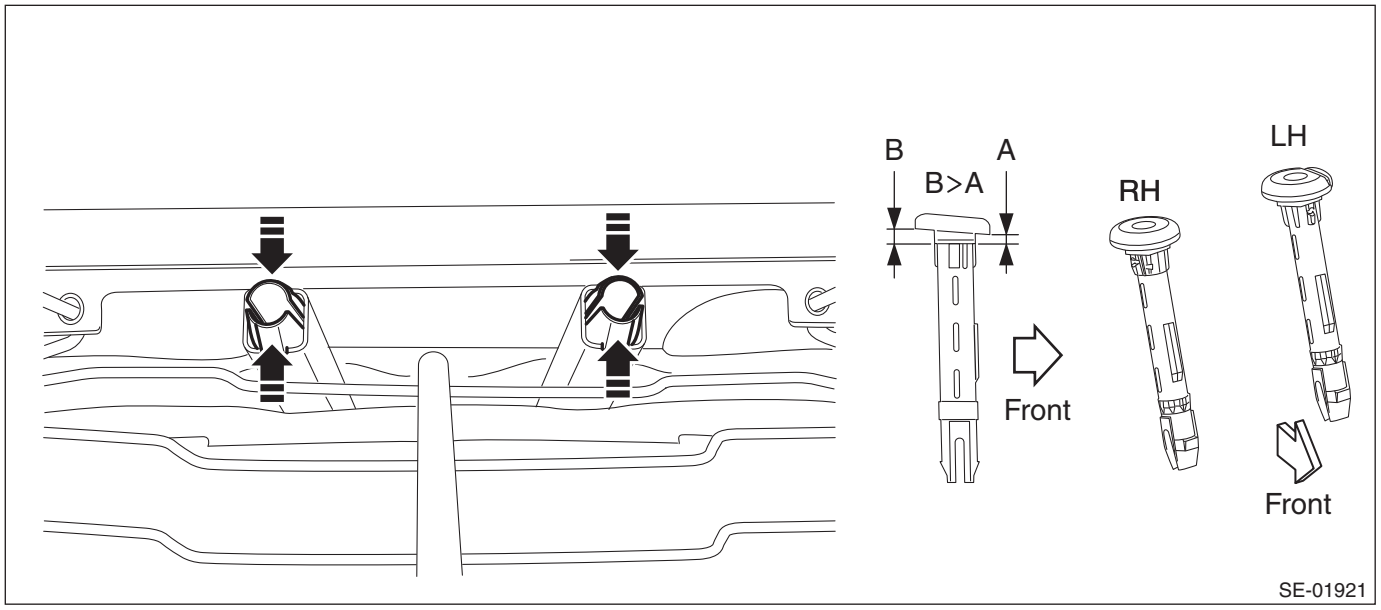
CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

13) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hog ring. (4 pieces)

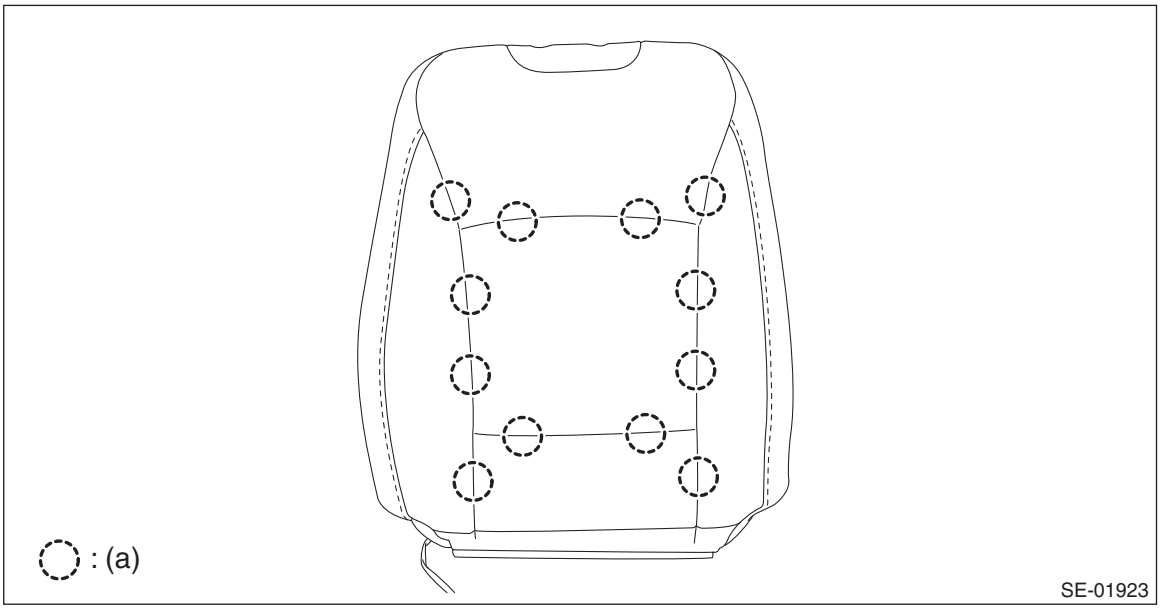


(4) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest from the backrest assembly.



14) Remove the side airbag module.

CAUTION:
Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.



(1) Remove the hexagon cap nut and nuts.
(2) While taking care not to damage the airbag protective cover, remove the side airbag module.

15) Remove the bushing - headrest.

NOTE:
Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.
16) Pull out the frame assembly - front backrest.
17) Remove the cover COMPL - front backrest.
(1) Remove the hog ring (a).

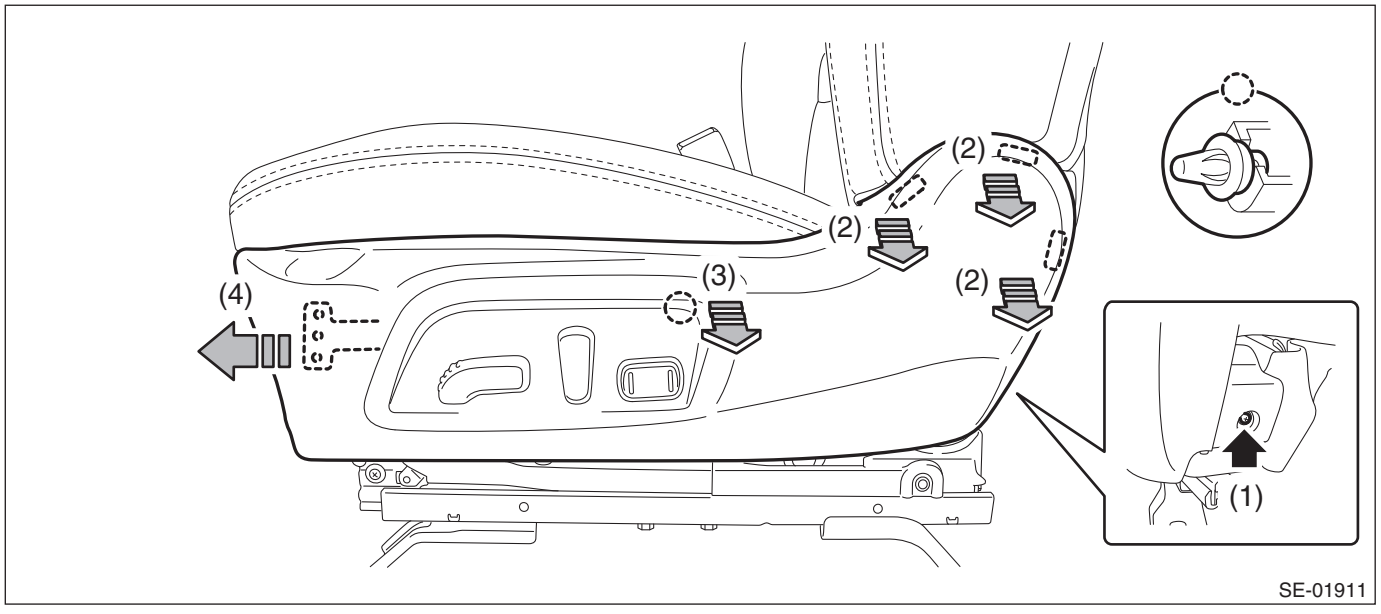
(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.
(3) Remove the seat heater module from the pad assembly as necessary.

CAUTION:
• If the seat heater module is removed, replace the pad assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

2. POWER SEAT (DRIVER'S SEAT)

CAUTION:
• Before assembling, make sure how the harnesses are routed behind the seat cushion in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.

- **Do not reuse hog rings.**
- **Do not disassemble the backrest frame assembly and seat cushion frame and slide rail assembly.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

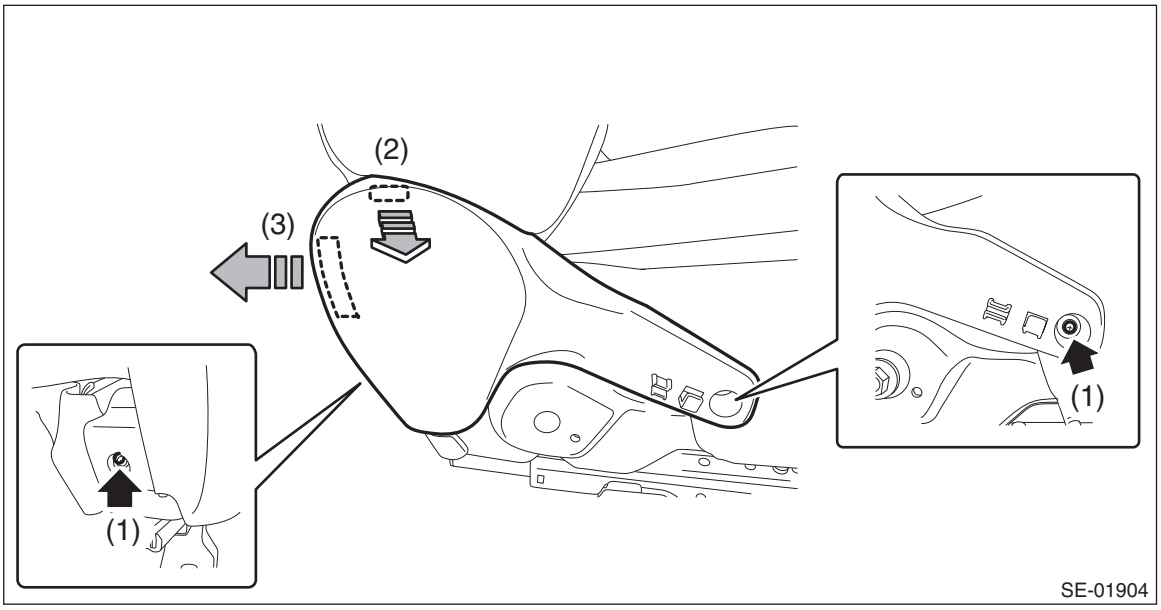


1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
- Before removing the seat, raise the seating face.
- For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the seat from vehicle. <Ref. to SE-12, REMOVAL, Front Seat.>
4) Remove the following harnesses and connector clamps from the reverse side of the seat cushion.
- Seat belt inner - front connector
- Side airbag module connector
- Seat cushion airbag module connector
- Seat heater harness (with seat heater)
- Power seat connector (with power seat)
- Reclining motor (with power seat)
- Lumbar support motor (with lumbar support)

5) Remove the cover - hinge front seat OUT.
   (1) Remove the screws in the rear section of the cover - hinge front seat OUT.
   (2) Release the claw in the upper section of the cover - hinge front seat OUT.

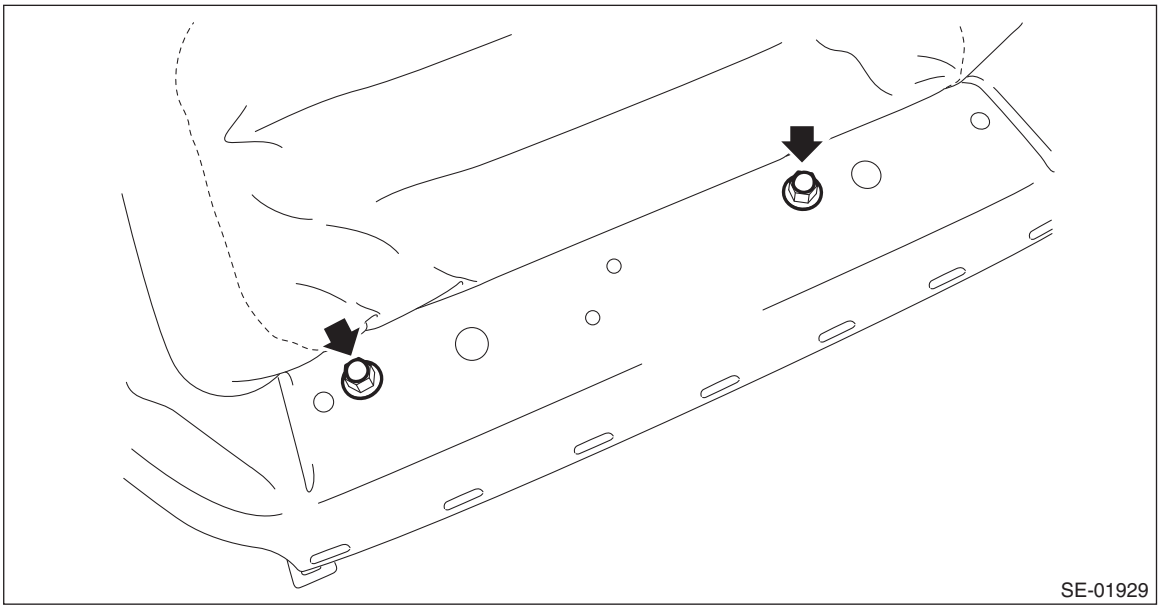


NOTE:
Use a plastic clip remover.
   (3) Remove the clip in the center of the cover - hinge front seat OUT.
   (4) Release the claw in the front section of the cover - hinge front seat OUT.

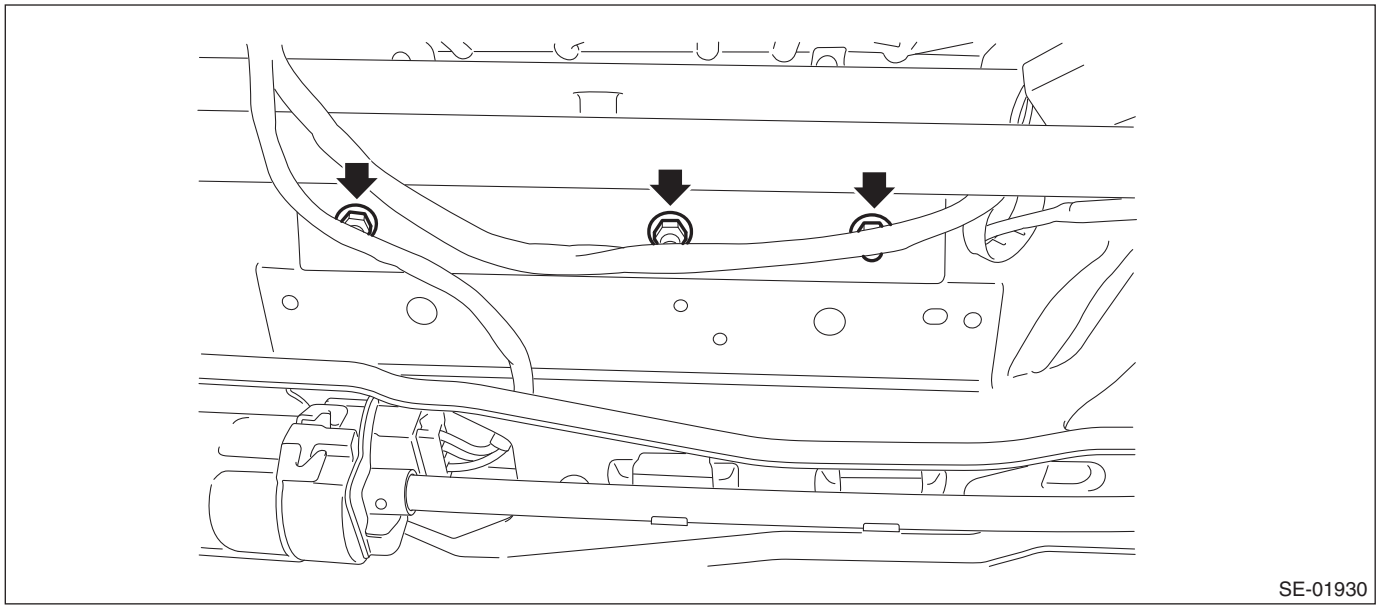
   (5) Disconnect the power seat switch and lumbar switch connector and remove the cover - hinge front seat OUT.

6) Remove the seat belt inner - front. <Ref. to SB-21, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>
7) Remove the cover - hinge front seat INN.
   (1) Remove the screws.
   (2) Release the claw in the upper section of the cover - hinge front seat INN.

(3) Remove the cover - hinge front seat INN by pulling it backward.



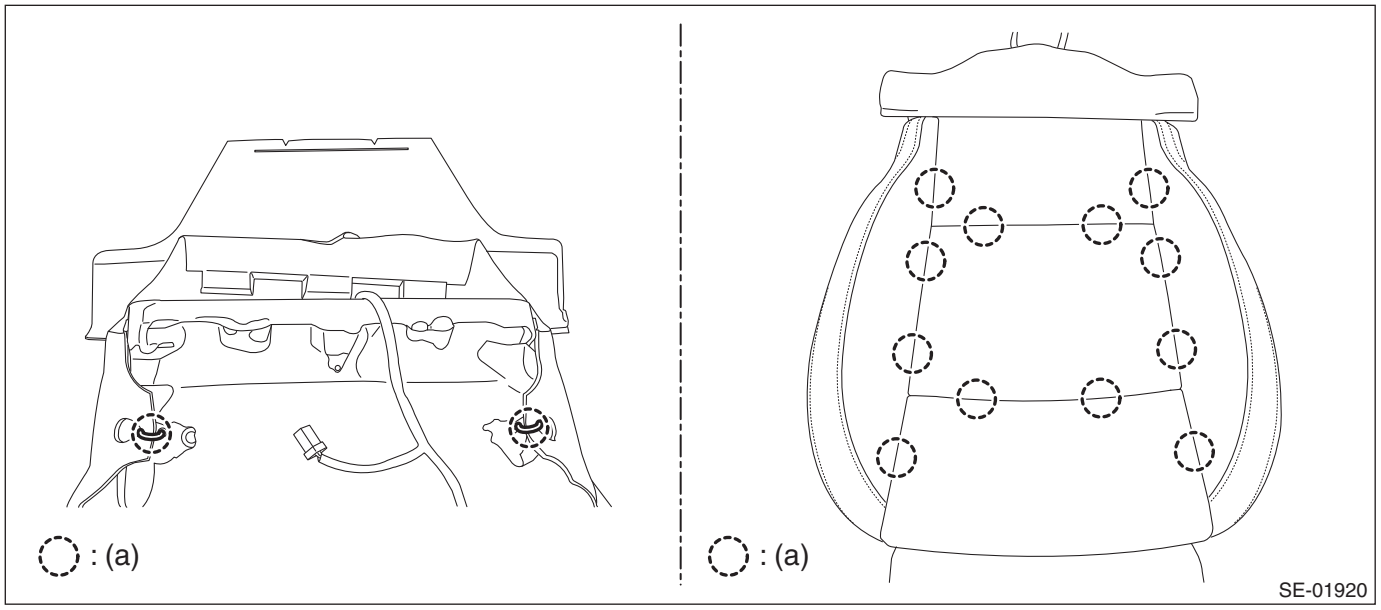
8) Separate the backrest assembly and the seat cushion assembly.
(1) Remove the bolts from reclining hinge of both sides.
(2) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.



9) Remove the hook, and remove the pad assembly - front seat cushion and the cover - front cushion.

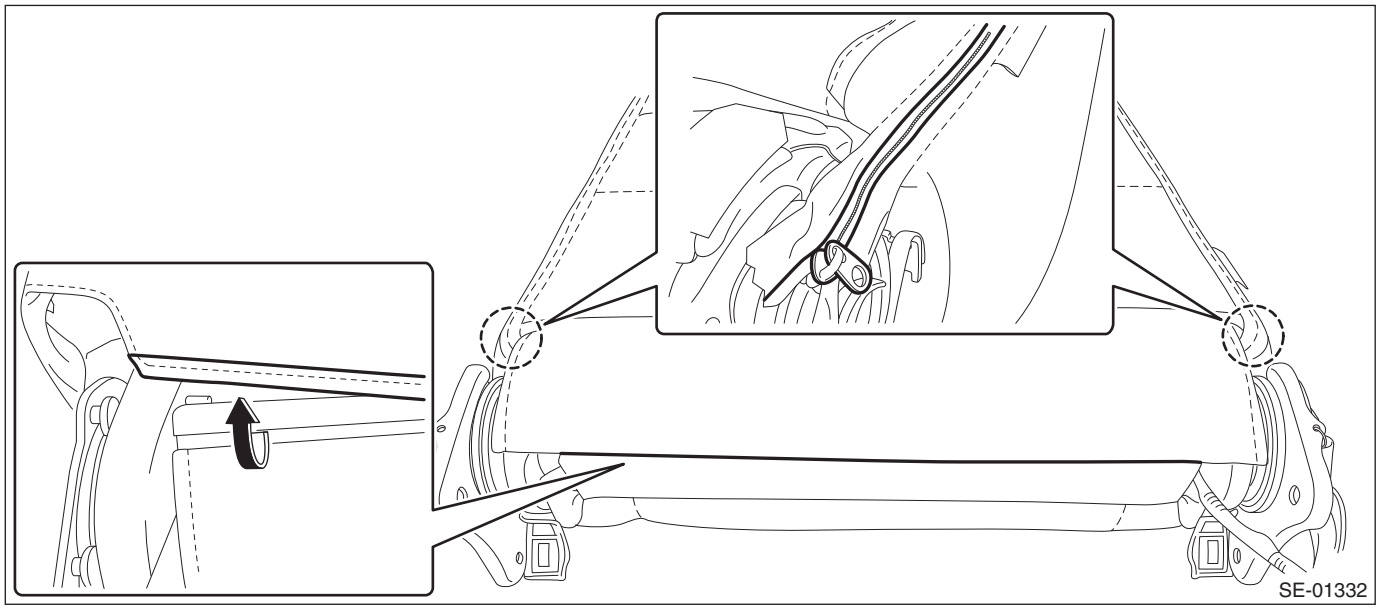
NOTE:
Turn over the rear side of the seat, and remove the hook on the front side of the seat cushion frame.

10) Remove the hexagon cap nuts, and remove the power seat control module. (Model with power seats with memory function)

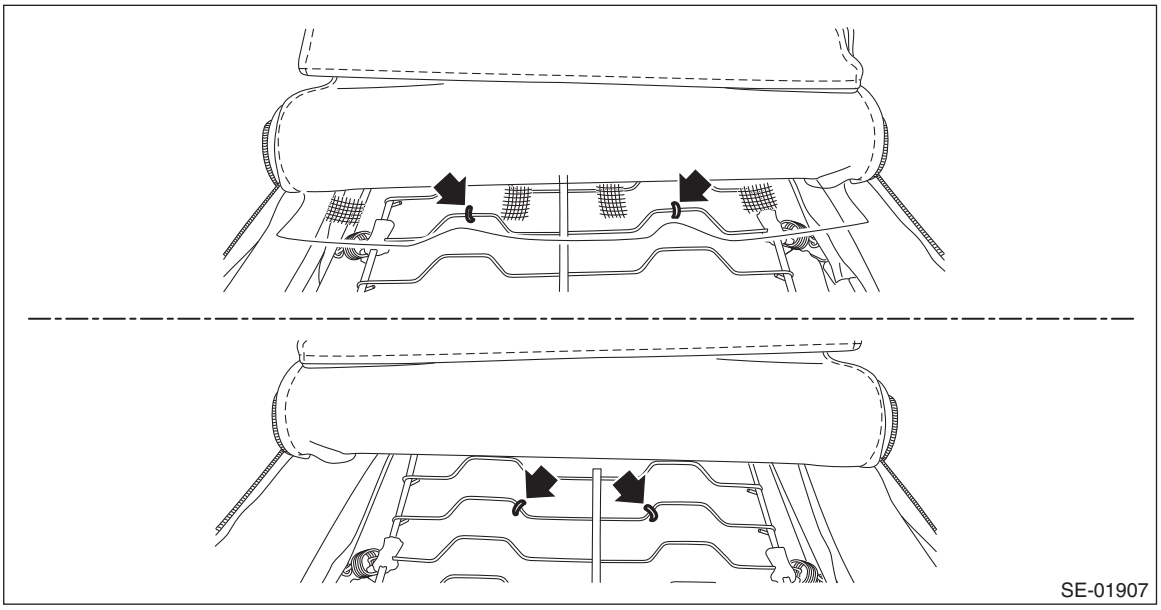


11) Remove the nuts and then remove the seat cushion airbag module.

12) Remove the cover - front cushion.



(1) Remove the hog ring (a).

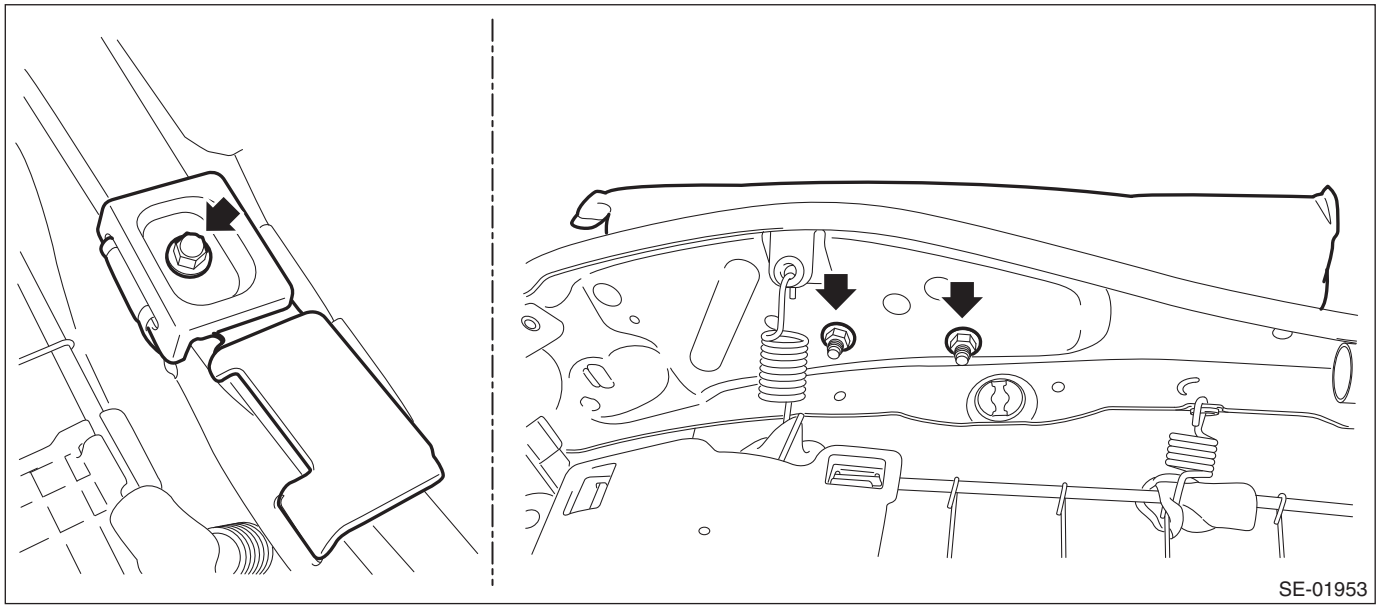


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

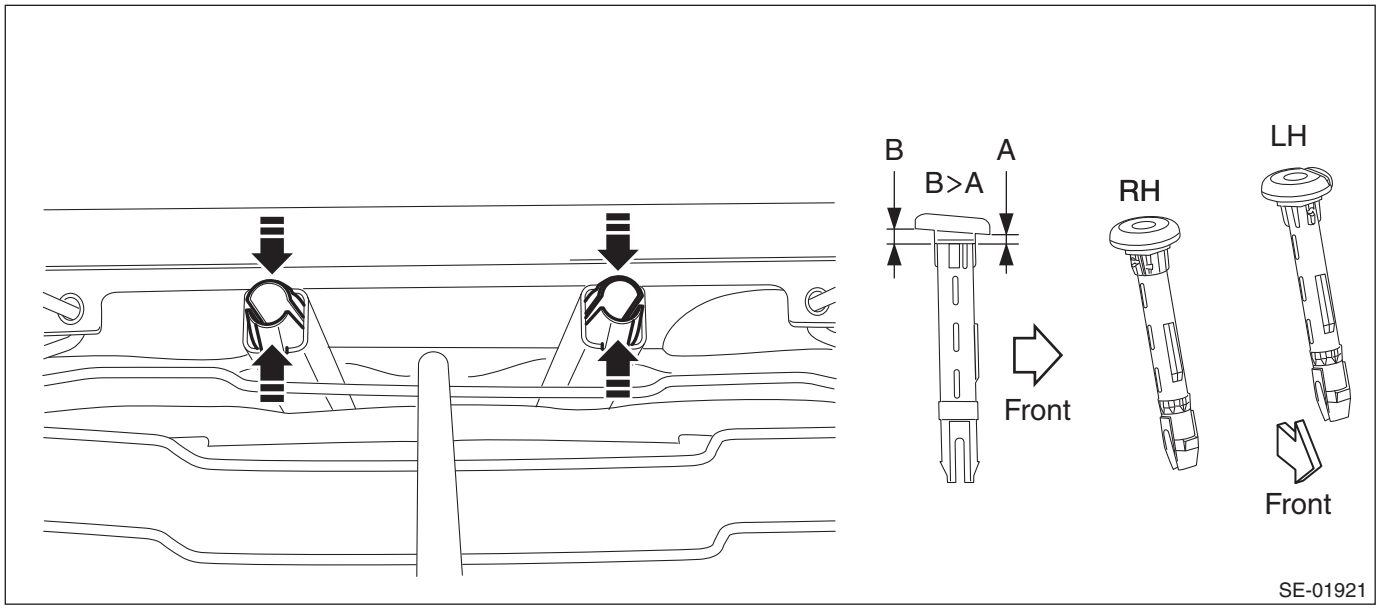
13) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hog ring. (4 pieces)



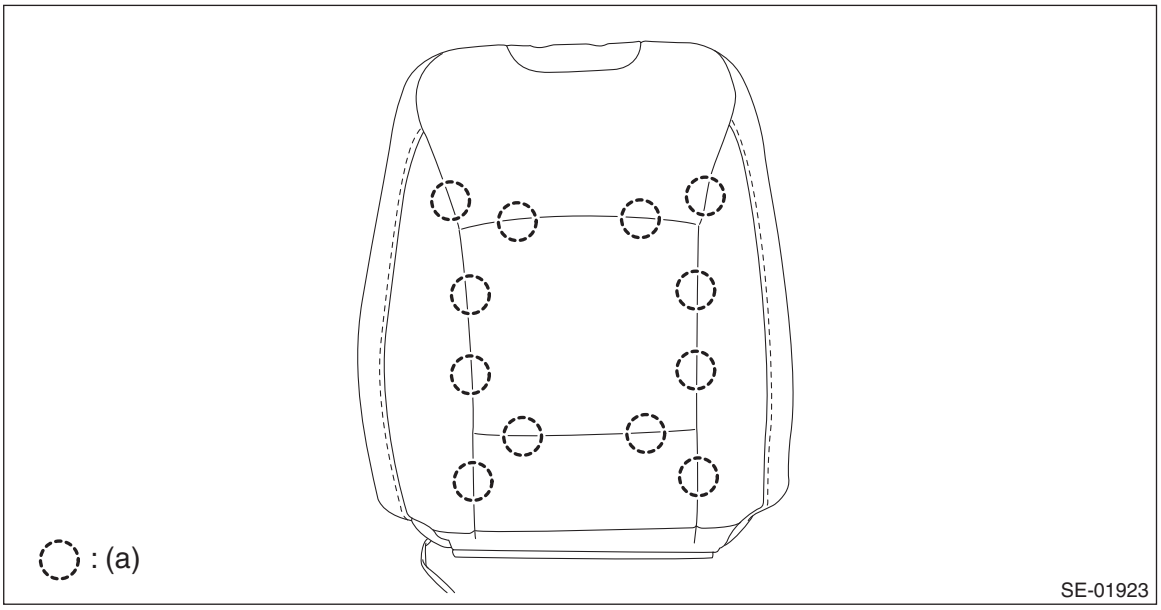
(4) Remove the backrest pad & cover from backrest assembly.

14) Remove the side airbag module.



CAUTION:
Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the hexagon cap nut and nuts.

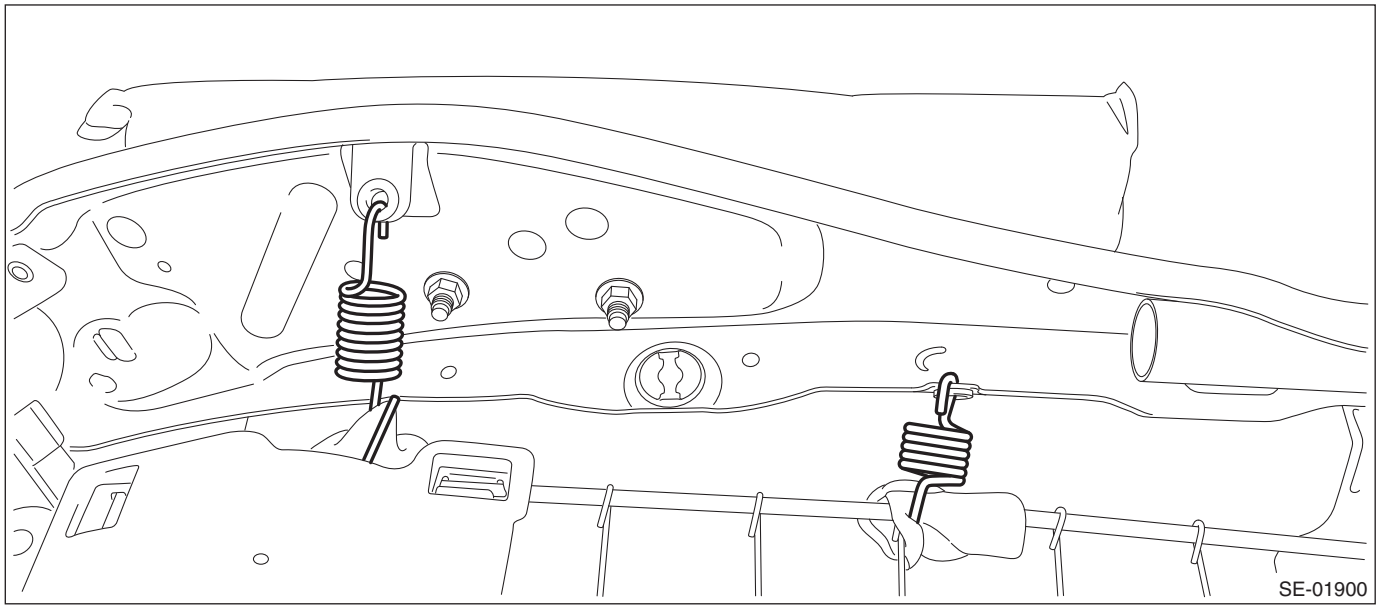


(2) While taking care not to damage the airbag protective cover, remove the side airbag module.

15) Remove the headrest bushing.

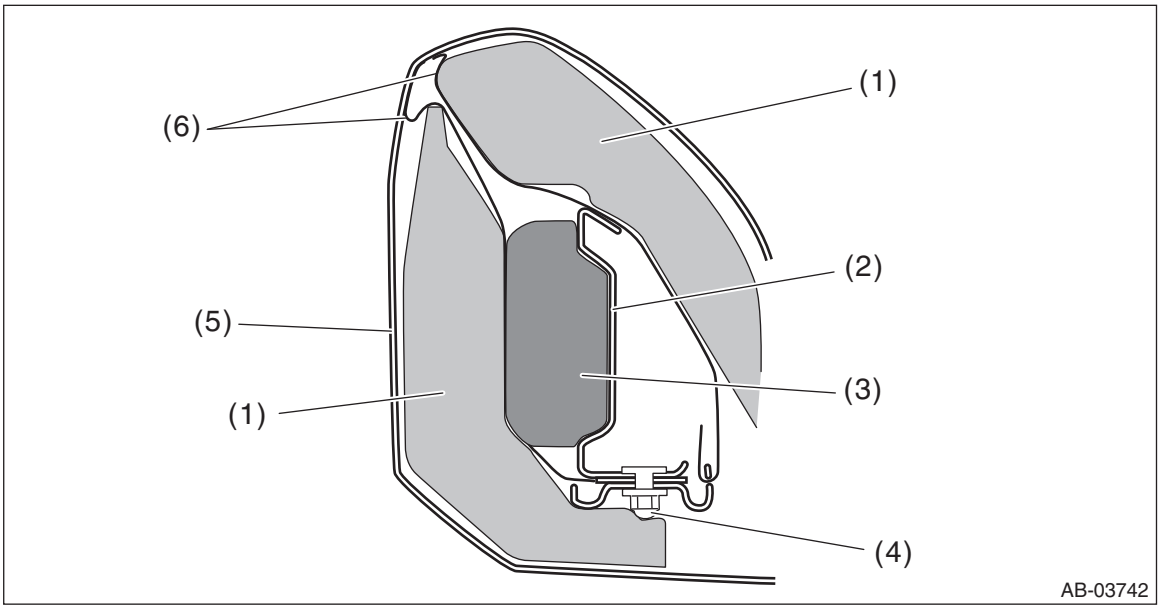
NOTE:
Catch the tip of headrest bushing with pliers and push it from inside seat to outside to remove it.
16) Pull out the frame assembly - front backrest.
17) Remove the cover COMPL - front backrest.
(1) Remove the hog ring (a).

(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.
(3) Remove the seat heater module from the pad assembly as necessary.



CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

3. PASSENGER'S SEAT



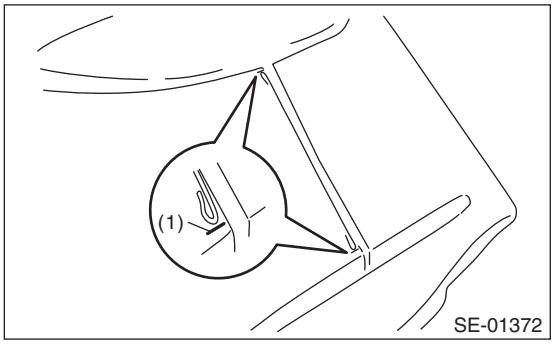
CAUTION:
• The occupant detection system (passenger's seat only) control module, the occupant detection sensor, the seat cushion airbag module, the pad assembly - front seat cushion and the frame assembly - front cushion are considered as a single seat cushion pad & frame assembly. Never remove the occupant detection control module or the occupant detection sensor from the frame assembly - front cushion.
• If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.
• Never remove the occupant detection sensor connector from the occupant detection control module.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
• When removing or replacing the seat cover, perform "Occupant Detection System Inspection" after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-20, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
• If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.
1) Remove the front seat (passenger's side) from vehicle. <Ref. to SE-12, REMOVAL, Front Seat.>
2) Refer to the disassembly procedures for the driver's seat.
• Manual seat: <Ref. to SE-13, MANUAL SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
• Power seat: <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>

D: ASSEMBLY

CAUTION:
• Do not confuse the harness routing in the reverse side of the seat cushion. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• If the hook - spring of the frame assembly - front backrest is deformed or comes off due to the deformation, replace the hook - spring with a new part.

- **Make sure that the side airbag module is installed as shown in the figure.**

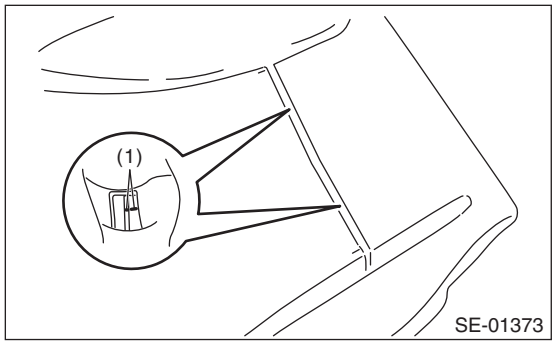
(1) Pad ASSY - front seat backrest
(2) Frame ASSY - front backrest
(3) Side airbag module
(4) Hexagon cap nut
(5) Cover COMPL - front backrest
(6) Side airbag guide cloth



Besides, if the cover COMPL - front backrest is not installed securely, the side airbag may not be activated properly, therefore keep strictly to the following procedures.
- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse hog rings.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

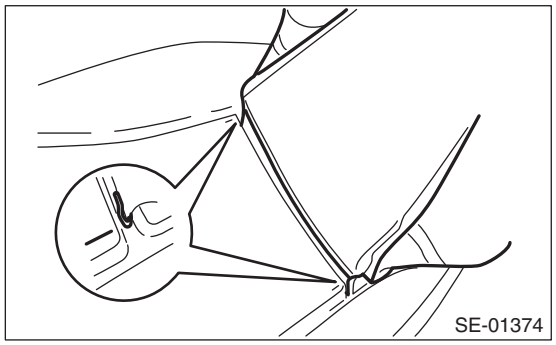
1) Install the seat heater module.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part. (Driver's seat)**
- **If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part. (Passenger's seat)**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.**



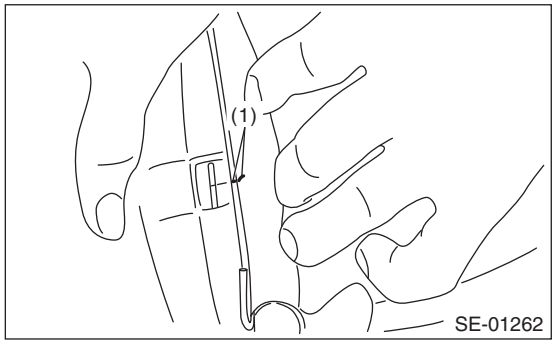
Preparation items:
Double-sided tape: NITTO DENKO 501L or equivalent

2) Make sure that there is no foreign matter on airbag module.
3) Assemble the seat cover.
   (1) Adjust so that the left and right clearances between wire and seat pad become equal, and mark the seat pad.



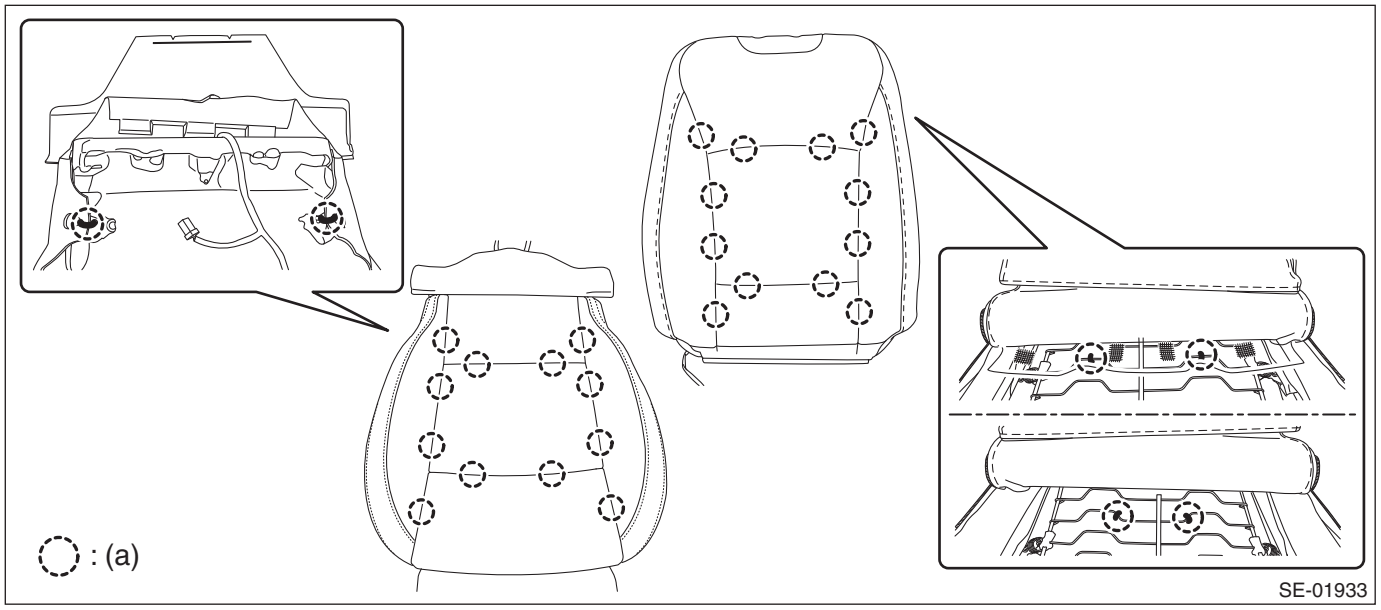
(1) Marking

(2) Mark the center of the wire on the pad side to which the hog ring is attached.



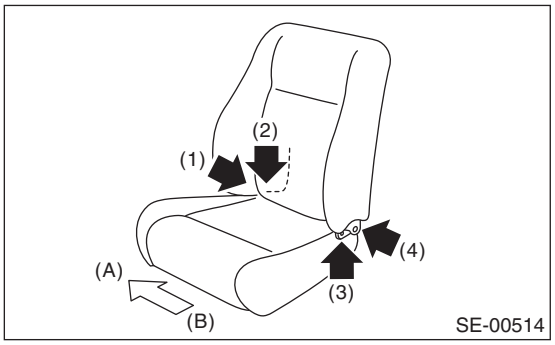
(1) Marking

(3) Insert the wire into the seat cover, and align the wire with the position marked in step 1).



(4) Mark the wire on the seat cover side according to the markings on the seat pad.

(1) Marking



(5) Perform steps 1) — 4) to all sections to which the hog rings are attached.

(6) Make sure that all hog rings (a) are attached securely.

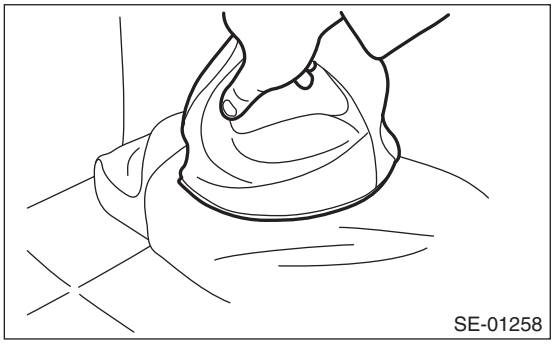
4) Assemble remaining parts in the reverse order of disassemble.

NOTE:
• When installing the seat belt inner - front, follow the procedures described in the “SEAT BELT SYSTEM” section. <Ref. to SB-22, INSTALLATION, Front Seat Belt.>
• When installing the seat cushion airbag module, follow the procedures described in the “AIRBAG SYSTEM” section. <Ref. to AB-37, INSTALLATION, Seat Cushion Airbag Module.>
• Install the backrest assembly and seat cushion assembly in the following procedure.
1. Temporarily tighten the four reclining hinge bolts.
2. Place the backrest in the most upright position.
3. Tighten the reclining hinge bolts in order from (1) to (4) two or three times, until they reach the specified torque.

(A) Vehicle inside
(B) Vehicle outside

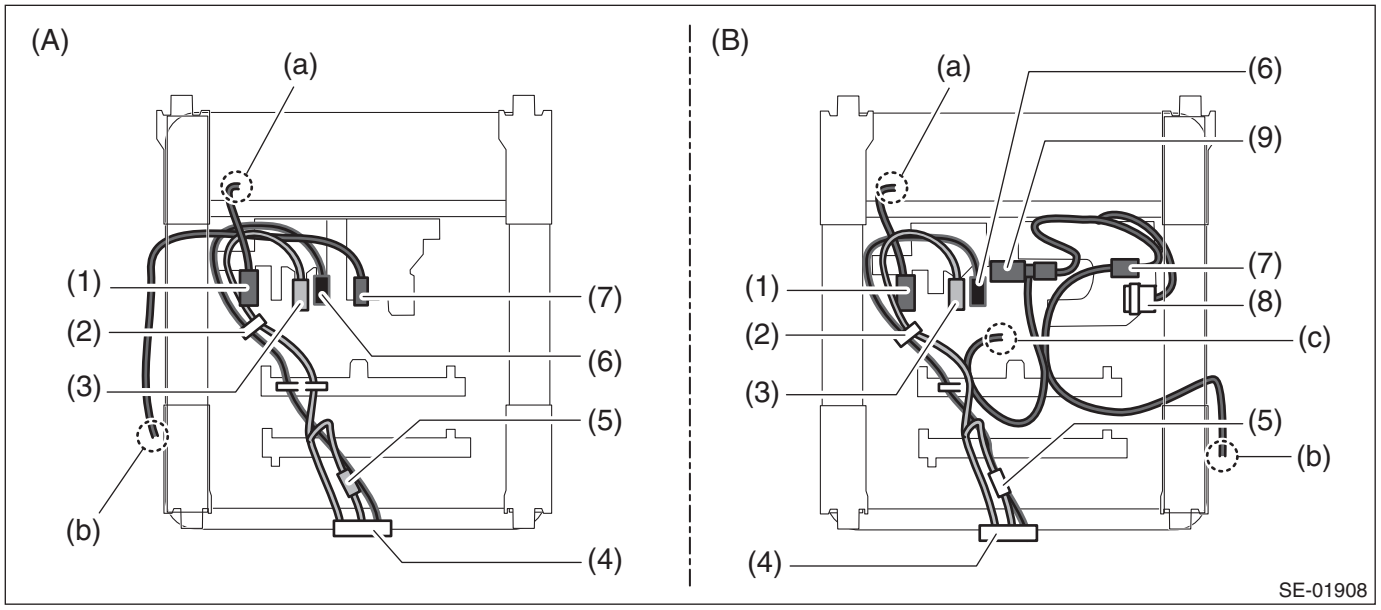
Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

5) If any wrinkles are found after the assembly of the seat cover, finish the seat cover with iron.



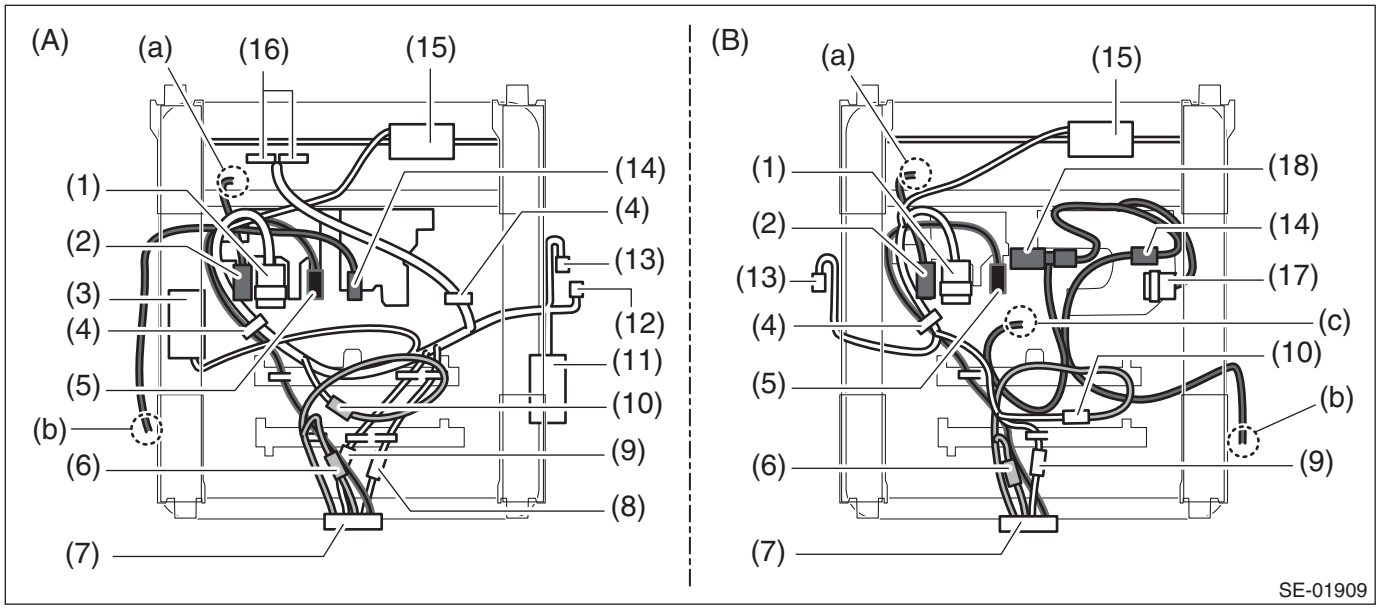
(1) Place the wet towel on wrinkles.

(2) Touch up with warm iron.



CAUTION:
Keep moving the iron, otherwise the seat cover surface can be damaged.

NOTE:
This method is available for genuine leather, synthetic leather, cloth, etc.



6) Install connectors located under the front seat.

- Manual seat

(A)	Driver's seat	(B)	Passenger's seat		
(1)	Seat cushion airbag connector & harness	(4)	Touch fastener	(7)	Seat belt INN - front connector & harness
(2)	Band A	(5)	Backrest heater connector & harness	(8)	Occupant detection connector & harness
(3)	Seat heater harness connector & seat cushion heater harness	(6)	Side airbag connector & harness	(9)	Occupant detection control module
(a)	Seat cushion airbag module	(b)	Seat belt INN - front	(c)	Occupant detection sensor

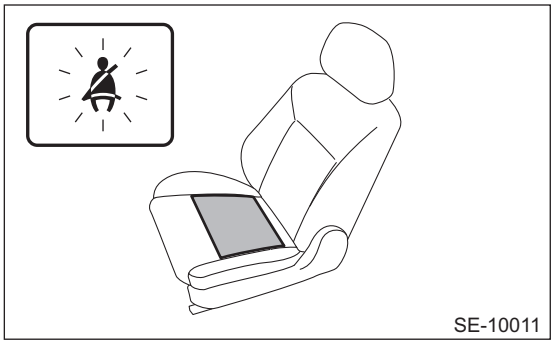
- Power seat

(A)	Driver's seat	(B)	Passenger's seat		
(1)	Power seat switch connector	(7)	Touch fastener seat cushion - heater harness	(13)	Power seat switch connector
(2)	Seat cushion airbag connector & harness	(8)	Lumbar motor connector & harness (model with lumbar only)	(14)	Seat belt INN - front connector & harness
(3)	Tilt motor	(9)	Reclining motor connector & harness	(15)	Slide motor
(4)	Band A	(10)	Seat heater harness connector & seat cushion heater harness	(16)	Memory seat unit connector
(5)	Side airbag connector & harness	(11)	Lifter motor	(17)	Occupant detection connector & harness
(6)	Backrest heater connector & harness	(12)	Lumbar switch connector (model with lumbar only)	(18)	Occupant detection control module
(a)	Seat cushion airbag module	(b)	Seat belt INN - front	(c)	Occupant detection sensor

7) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

E: INSPECTION

1. SEAT COVER



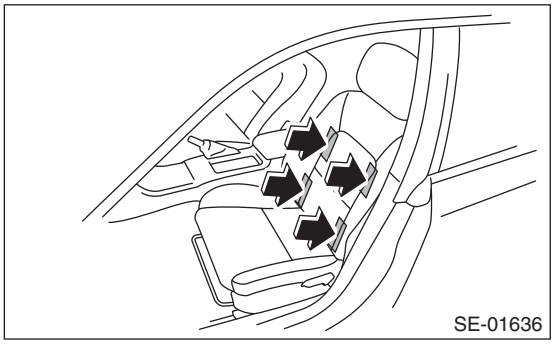
Check that there is no tear or fray on the cover COMPL - front backrest and the cover - front seat cushion.

NOTE:

- If the door side of the cover COMPL - front backrest is torn or frayed, the side airbag may not be deployed properly. In this case, replace the cover COMPL - front backrest with a new part.
- If there are tears or loosening in the cover - front seat cushion, it may interfere with the proper operation of the seat cushion airbag. Replace the cover - front seat cushion with a new part.

2. CHECK ILLUMINATION OF PASSENGER'S SEAT BELT WARNING LIGHT

Check that the passenger's seat belt warning light illuminates when the passenger's seat is occupied.



If it does not illuminate, check the seat belt warning system and the occupant detection system.

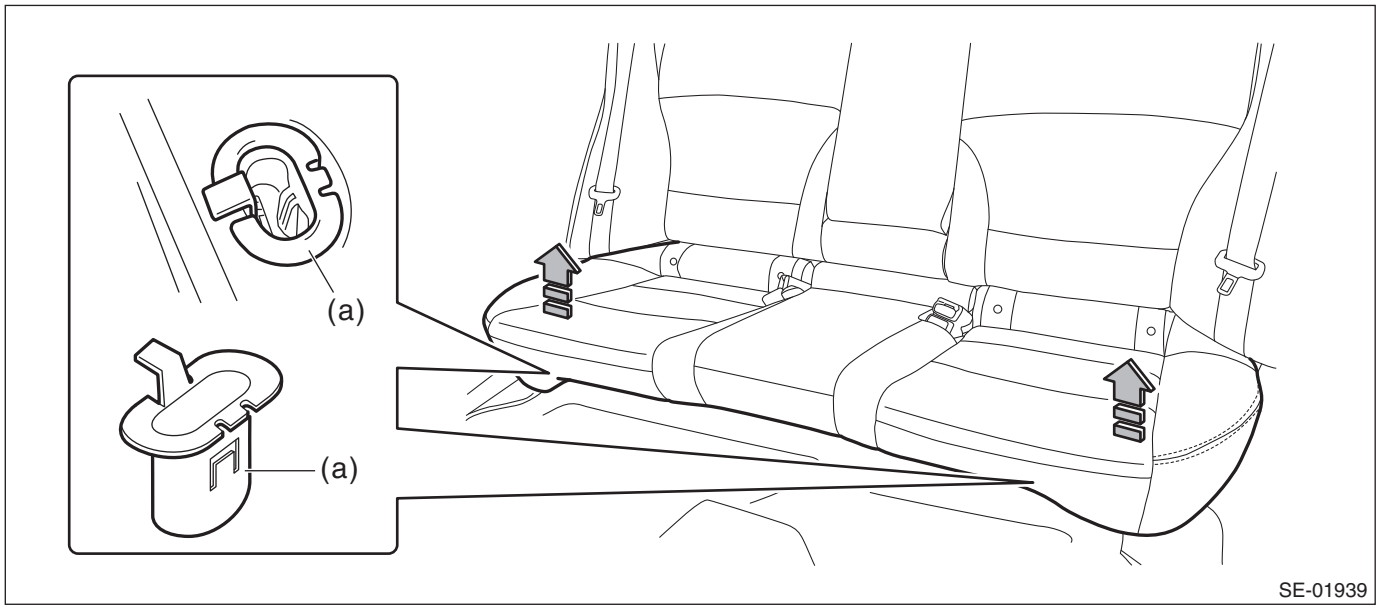
- Seat belt warning system: <Ref. to SB-16, Seat Belt Warning System.>
- Occupant detection system: <Ref. to OD(diag)-2, Basic Diagnostic Procedure.>

3. HOOK - SPRING

Check the hook - spring by applying weight to the backrest assembly.

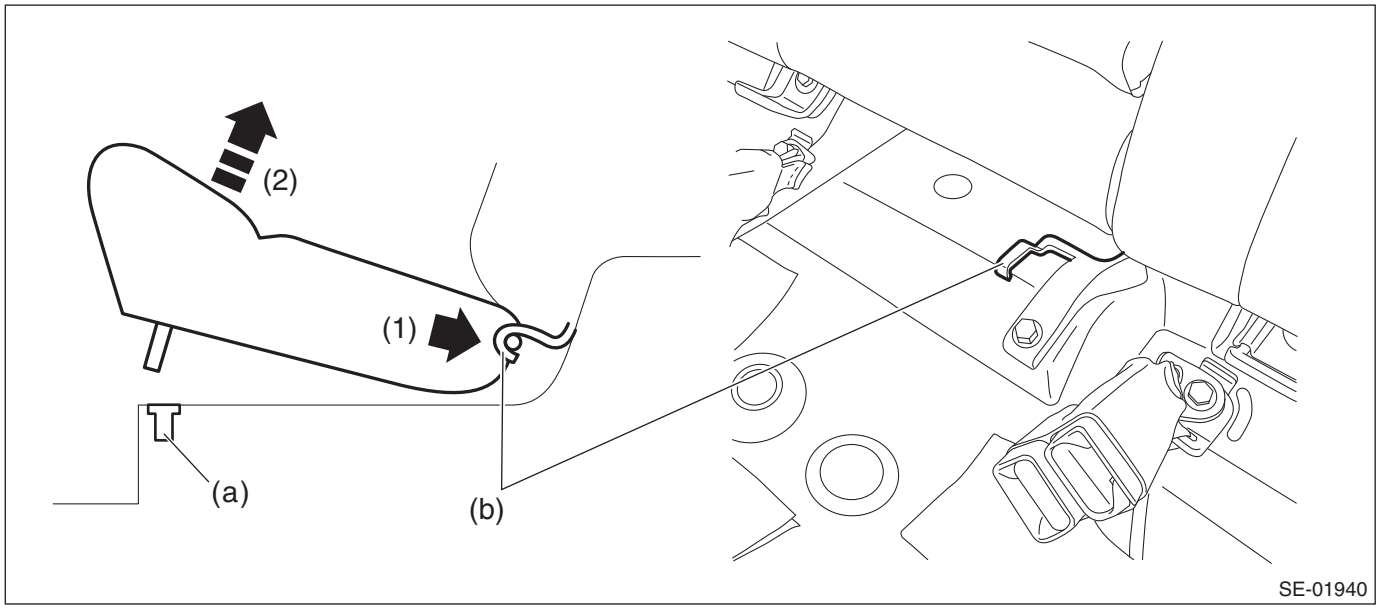
NOTE:
If the appropriate stiffness is not obtained by applying weight to the backrest assembly, the hook - spring may be disengaged.
If it is due to the deformation of the hook - spring, replace the hook - spring with a new part.

3. Rear Seat



A: REMOVAL

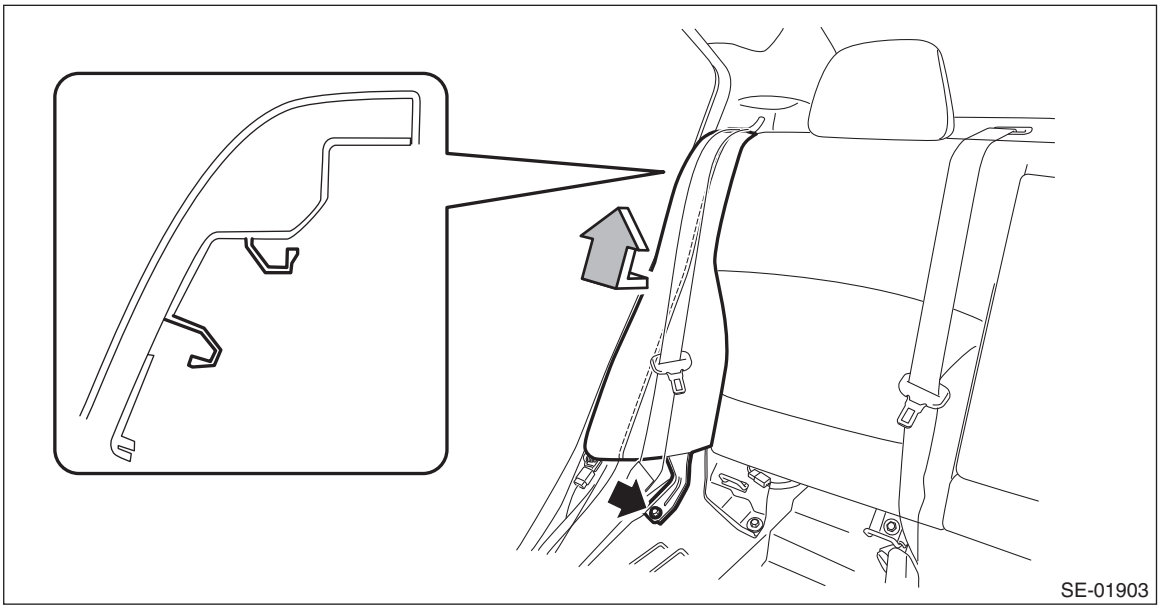
1. SEDAN MODEL



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion.

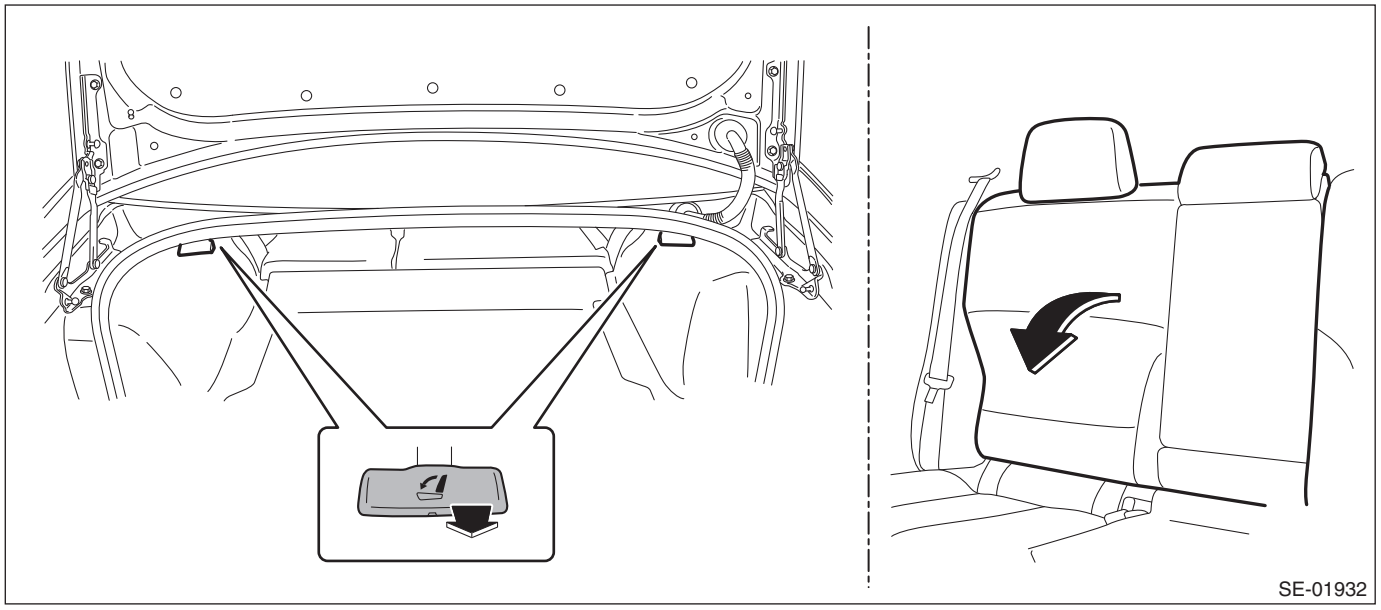
CAUTION:
If the hook - rear seat (a) is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

(1) Pull up the seat cushion and release the hook - rear seat (a).



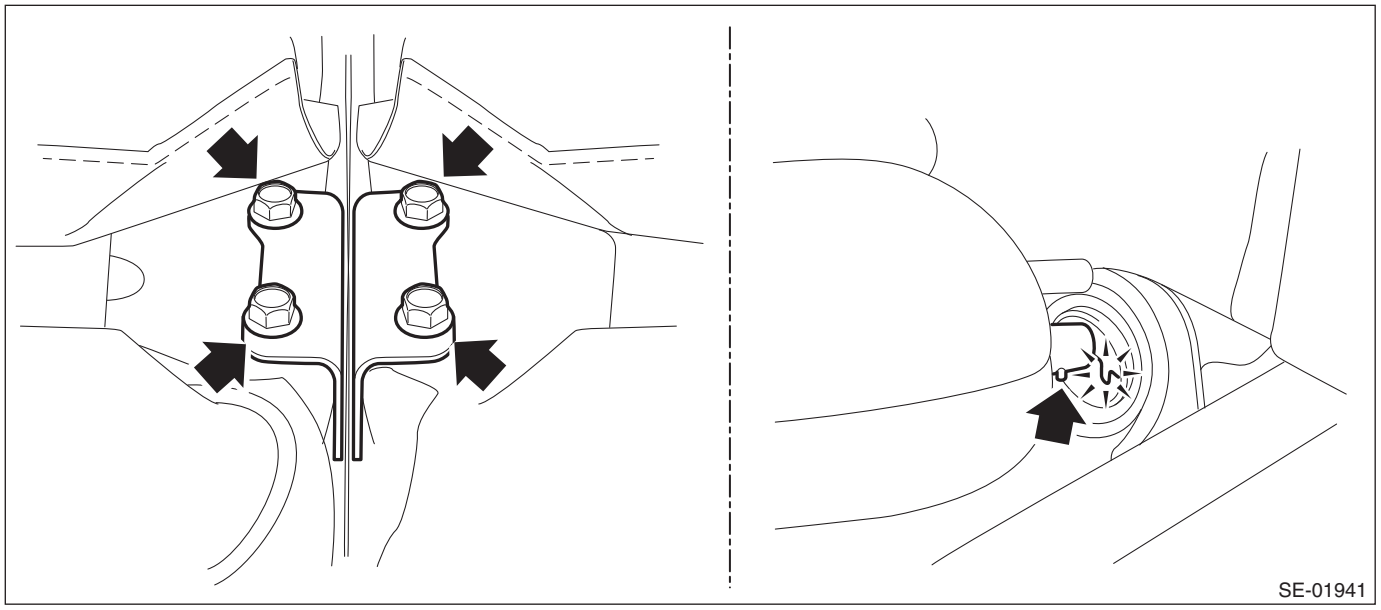
(2) Remove the hook (b) of the hinge assembly CTR by pushing it back while lifting the front side of the seat cushion, and remove the seat cushion.

NOTE:
For models with seat heater, disconnect the connector.



3) Remove the bolts, and pull up the side pad assembly - backrest to remove.

4) Remove the backrest assembly.

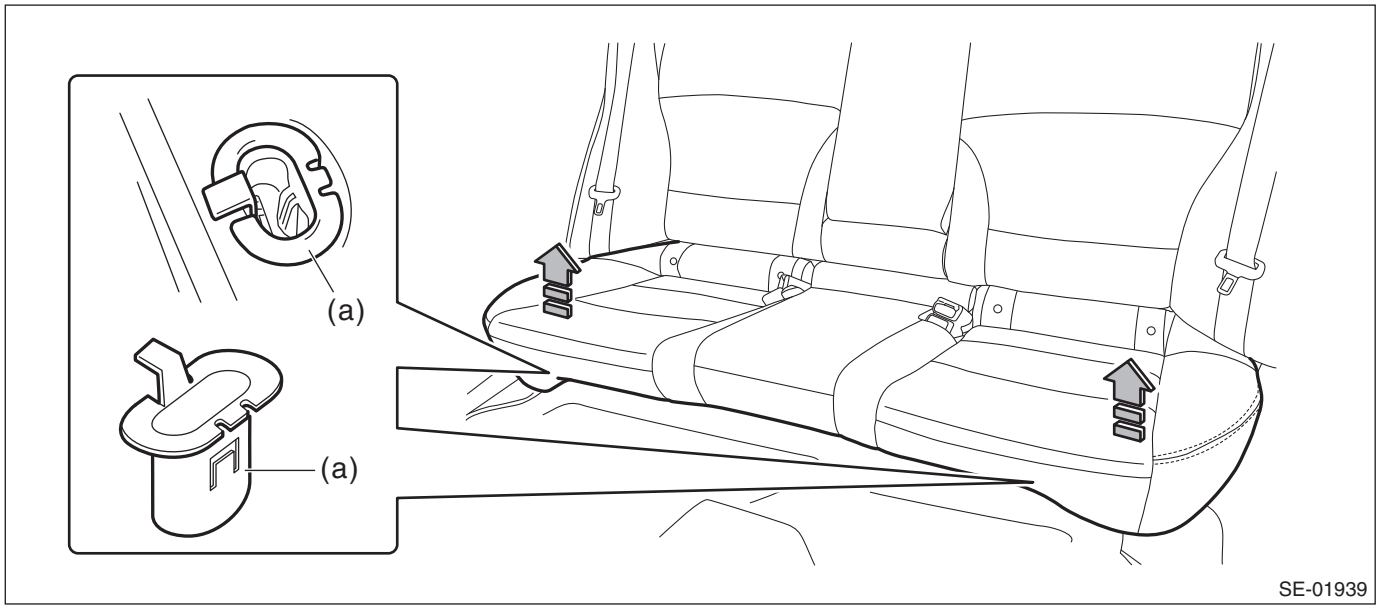


NOTE:
The backrest assembly can be removed without removing the side pad assembly - backrest.

(1) Pull the release lever in the trunk room, and then tilt the backrest forward.

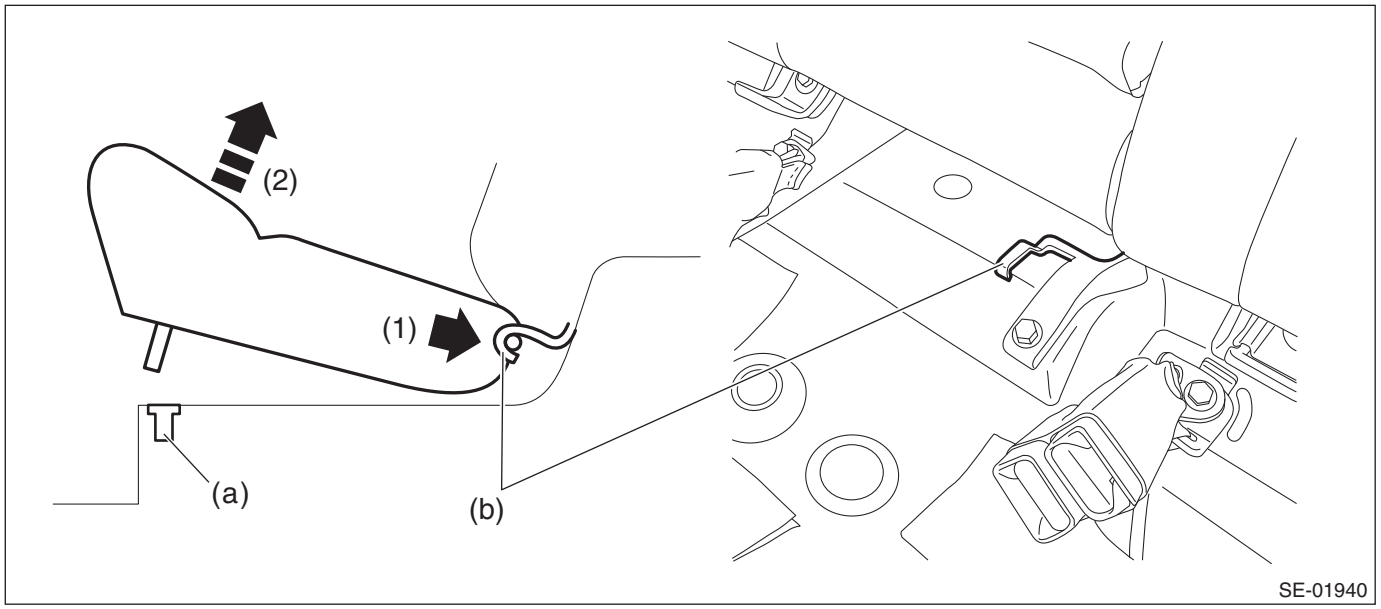
(2) Turn over the backrest mat, and remove the bolts on the rear side of the hinge assembly CTR.

(3) Remove the backrest assembly from the hinge assembly.



NOTE:
The backrests cannot be detached while pin positions of the hinge assembly and backrests are not aligned.
5) Remove the bolts, and then remove each hinge assembly.

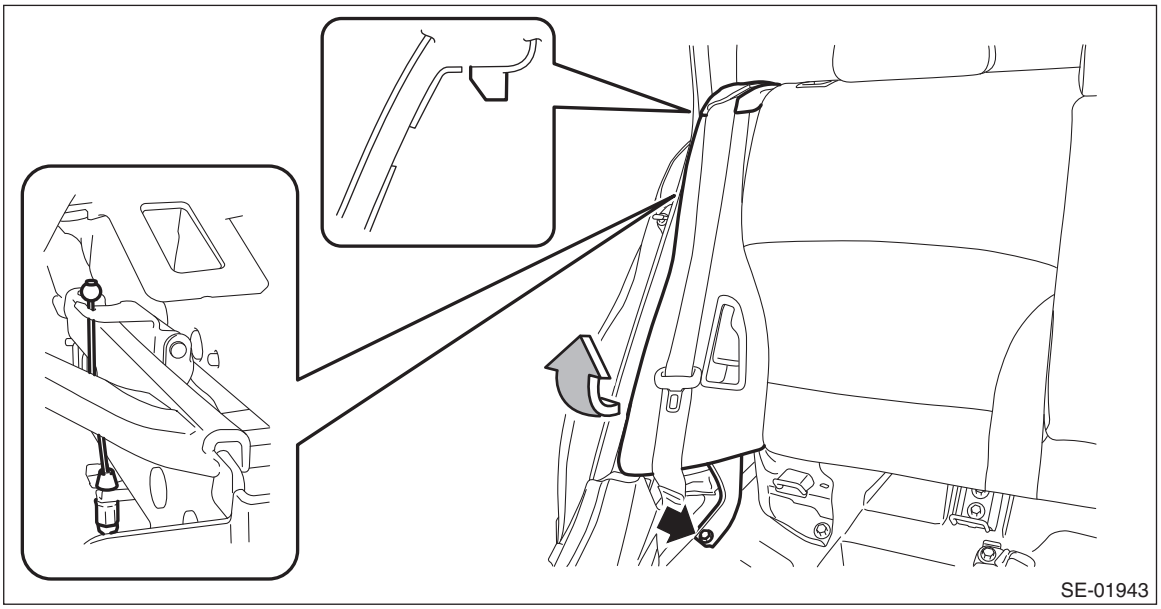
2. OUTBACK MODEL



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion.

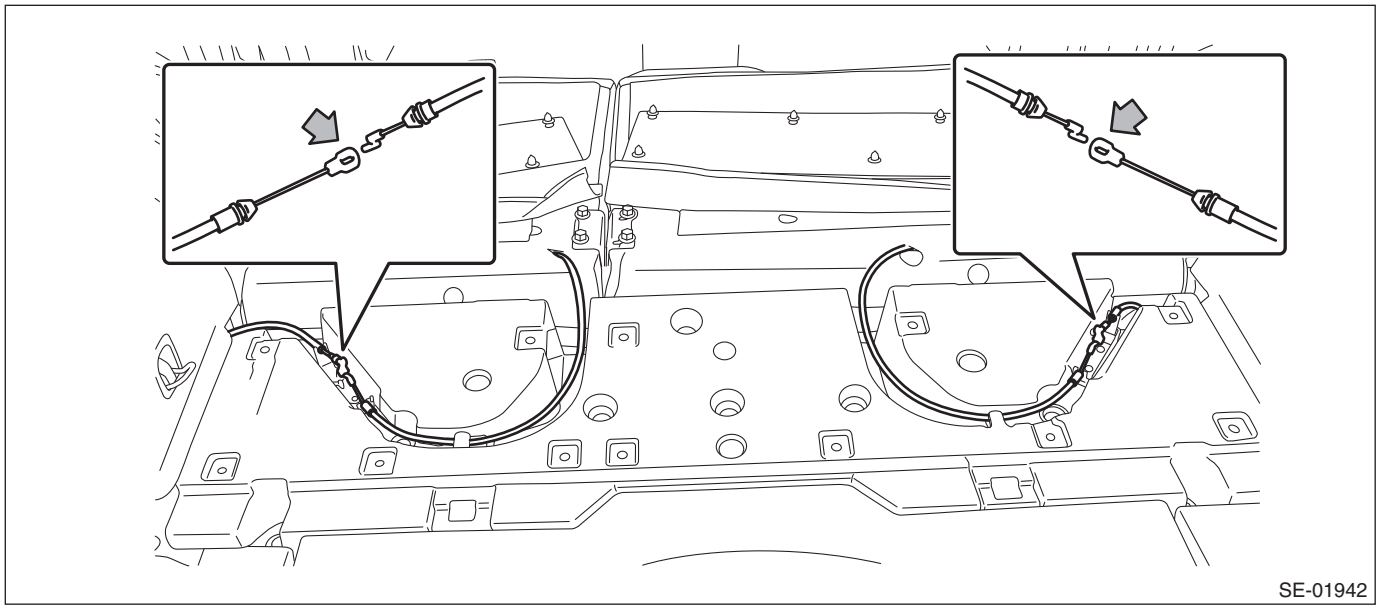
CAUTION:
If the hook - rear seat (a) is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

(1) Pull up the seat cushion and release the hook - rear seat (a).

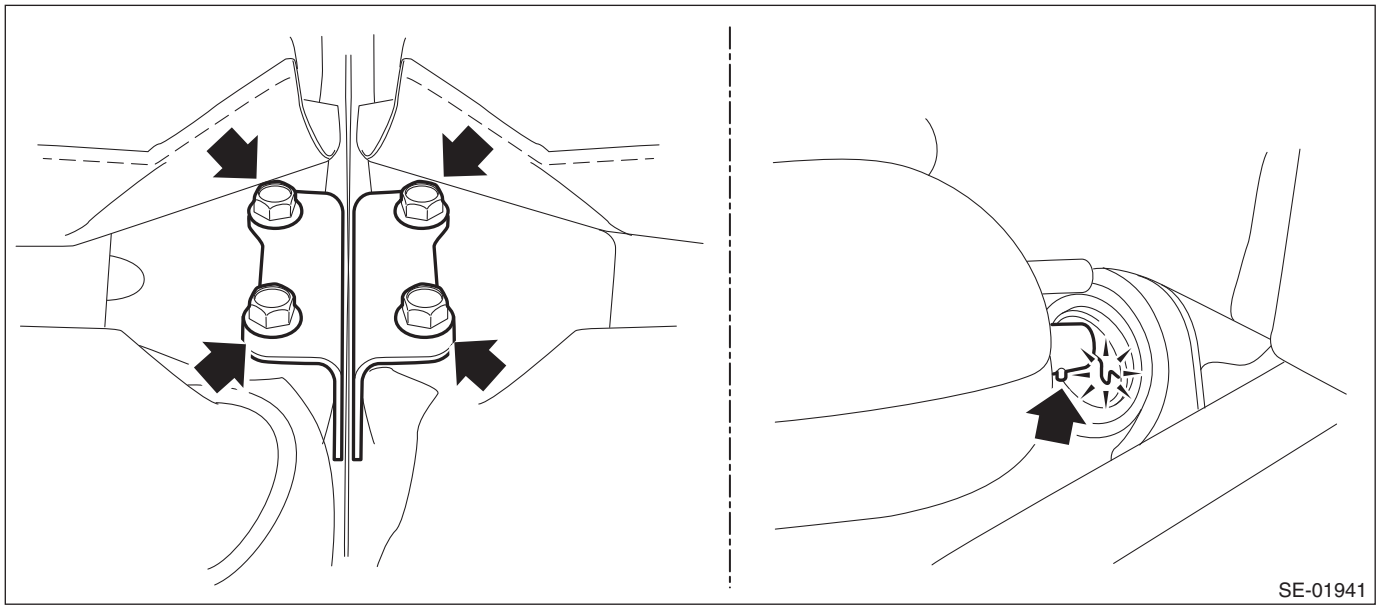


(2) Release the hook (b) of the hinge assembly CTR by lifting the front side of the seat cushion while pushing it backward, and remove the seat cushion.

NOTE:
For models with seat heater, disconnect the connector.



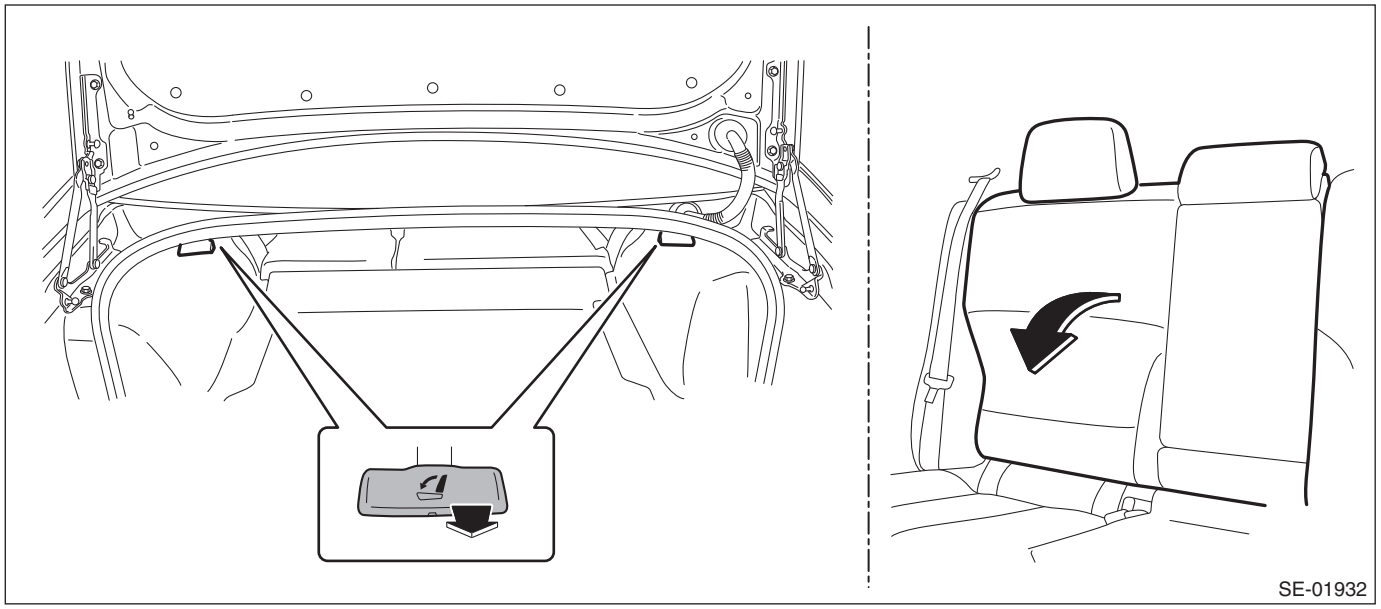
3) Remove the side pad assembly - backrest.
(1) Remove the bolts, and pull up the side pad assembly - backrest to remove.
(2) Disconnect the reclining, and remove the side pad assembly - backrest.



4) Remove the backrest assembly.

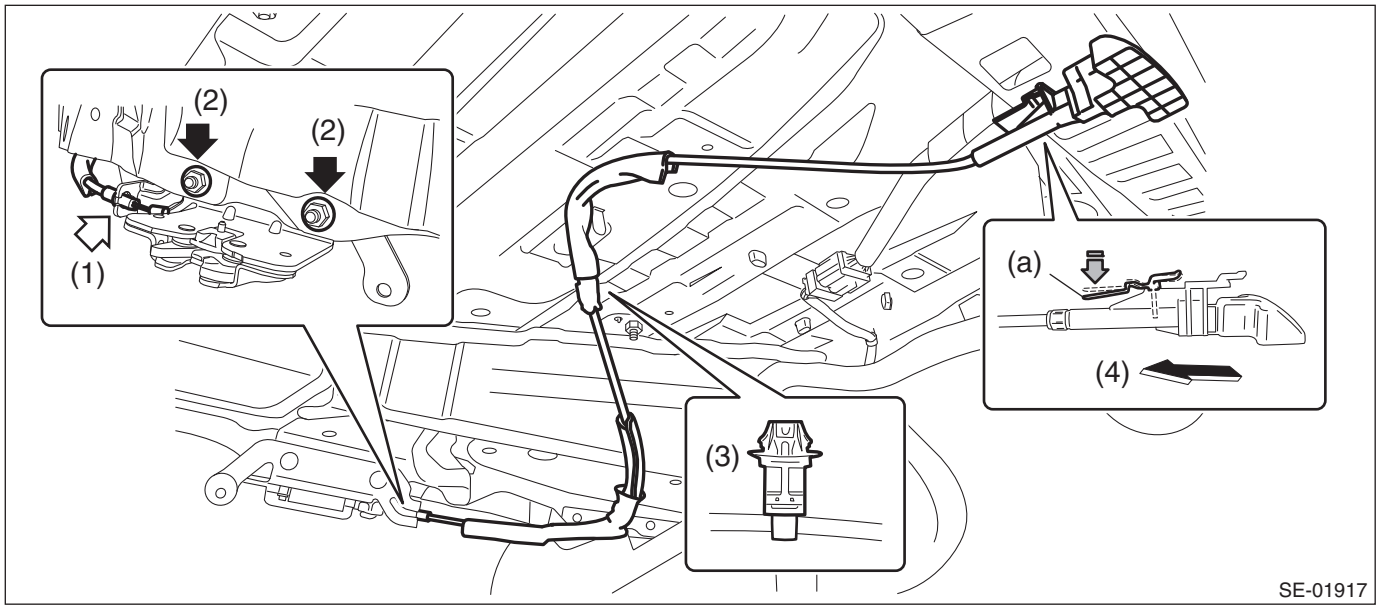
NOTE:
The backrest assembly can be removed without removing the side pad assembly - backrest.
(1) Tilt the backrest forward, and then turn over the backrest backside mat.

(2) Disconnect the backrest cable and the hold down cable.

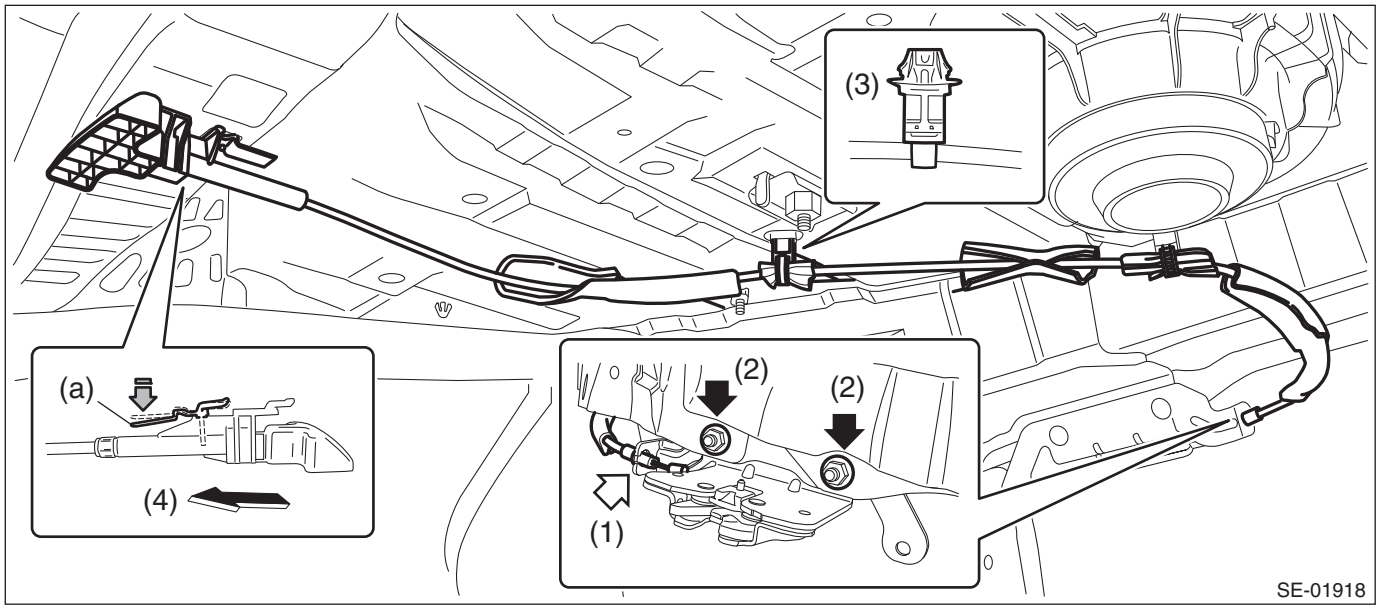


(3) Remove the bolts at the rear of backrest hinge.
(4) Remove the backrest assembly from the hinge assembly.

NOTE:
The backrests cannot be detached while pin positions of the hinge assembly and backrests are not aligned.
5) Remove the bolts, and then remove each hinge assembly.



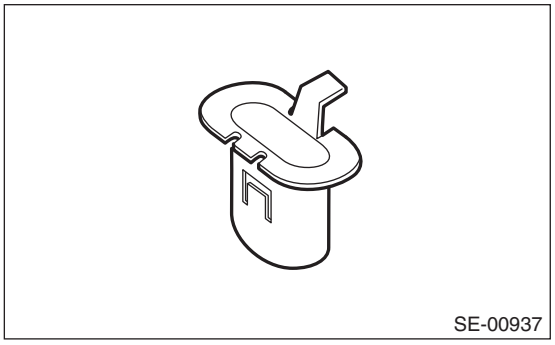
3. BACKREST TILT MECHANISM (SEDAN MODEL)

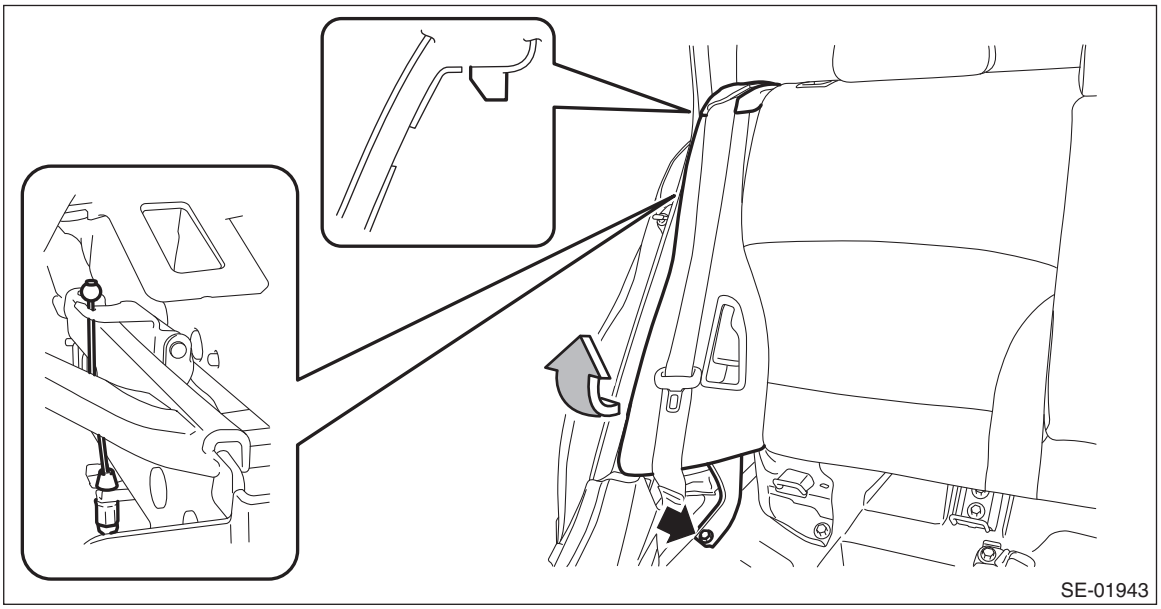


1) Pull the release lever in the trunk room, and then tilt the backrest forward.

2) Remove the release lever assembly and the lock assembly - backrest.
   (1) Disconnect the wire cable from the lock assembly - backrest.
   (2) Remove the nuts, and then remove the lock assembly - backrest.
   (3) Remove the wire cable holder.

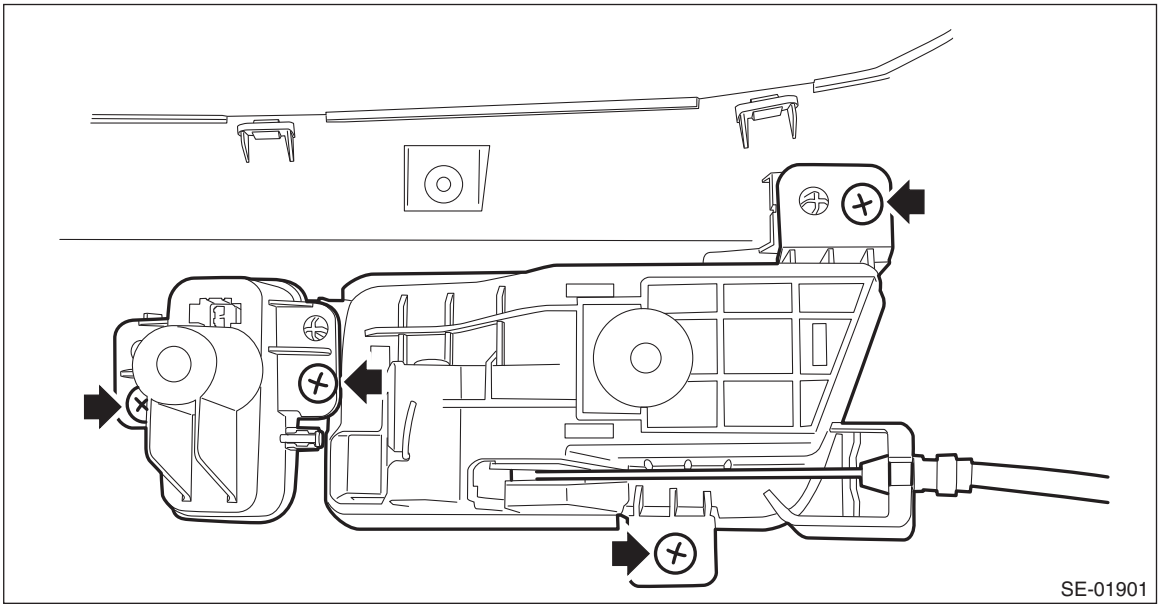
(4) Press the stopper portion (a), and remove the release lever assembly while sliding it forward.





4. BACKREST TILT MECHANISM (OUTBACK MODEL)

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion. <Ref. to SE-36, OUTBACK MODEL, REMOVAL, Rear Seat.>



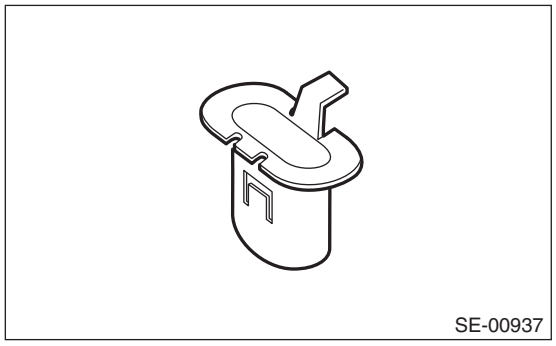
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

3) Remove the side pad assembly - backrest.
(1) Remove the bolts, and pull up the side pad assembly - backrest to remove.
(2) Disconnect the reclining cable, and remove the side pad assembly - backrest.

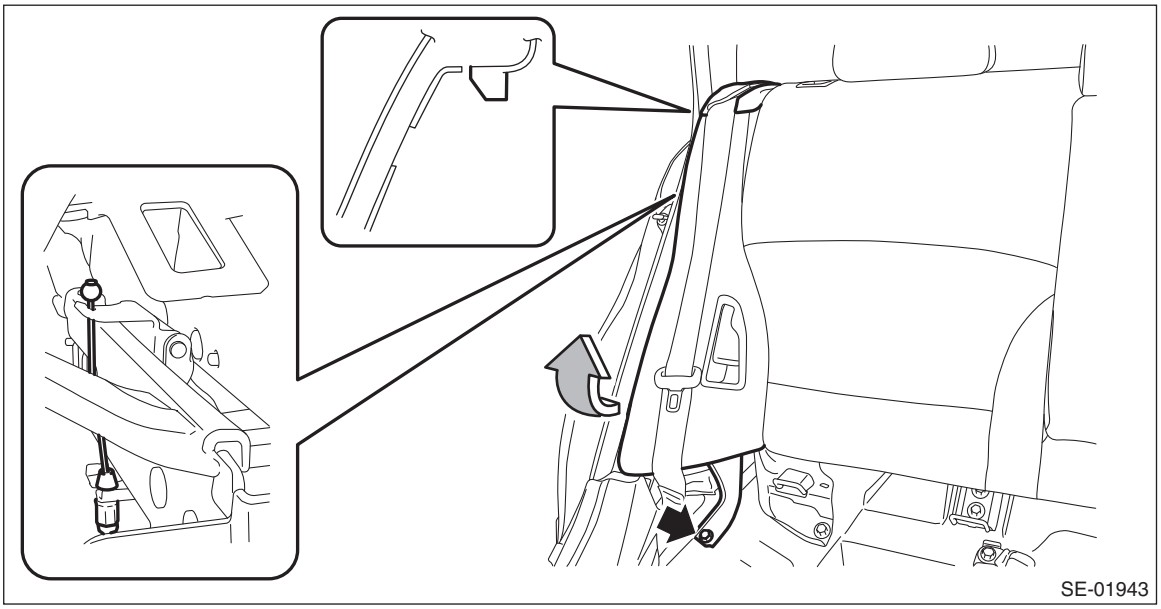
SE-01943

4) Remove the trim panel - rear apron. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
5) Remove the screw, and remove the lever assembly - rear backrest.



SE-01901

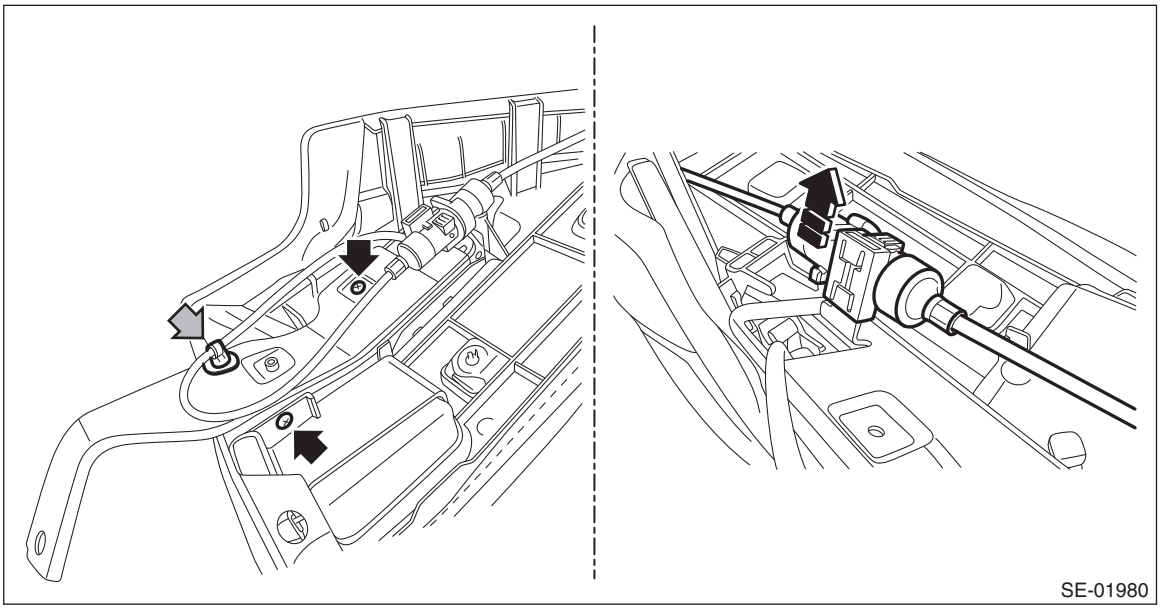
6) Remove the rear backrest assembly, and remove the release button - rear backrest and the remote lever cable. <Ref. to SE-47, DISASSEMBLY, Rear Seat.>



5. RECLINING MECHANISM (OUTBACK MODEL)

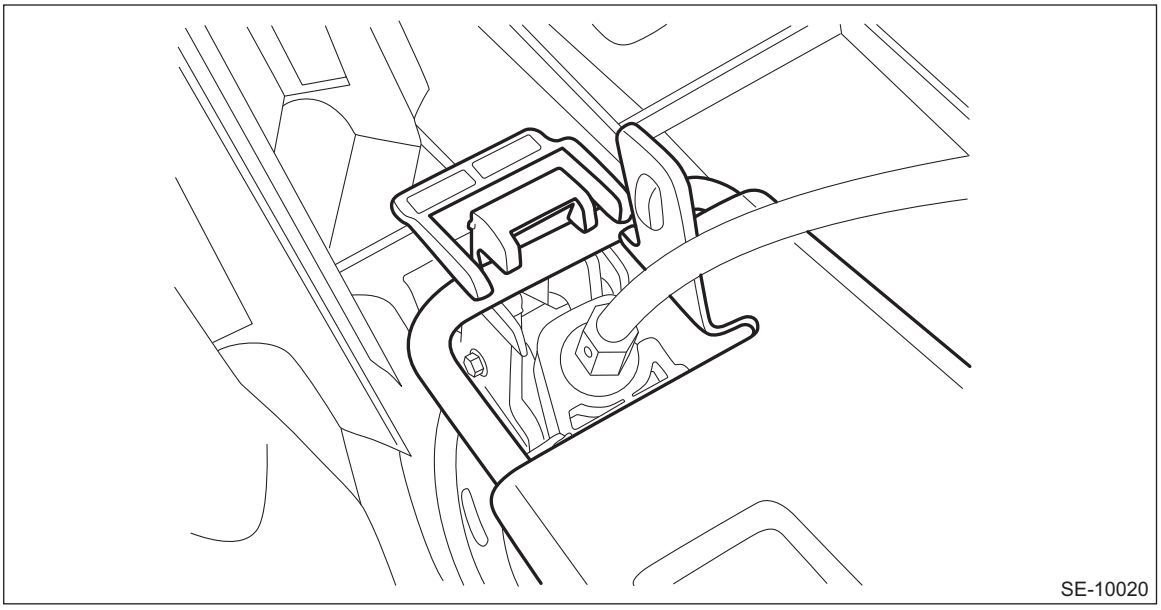
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion. <Ref. to SE-36, OUTBACK MODEL, REMOVAL, Rear Seat.>

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

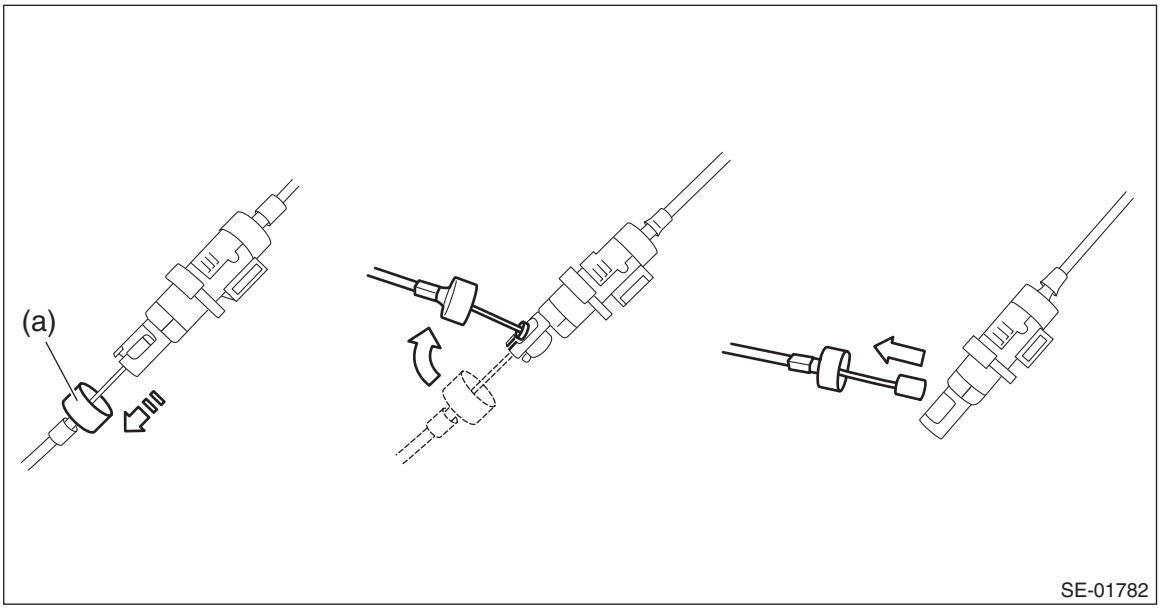
3) Remove the side pad assembly - backrest.
(1) Remove the bolts, and pull up the side pad assembly - backrest to remove.
(2) Disconnect the reclining cable, and remove the side pad assembly - backrest.



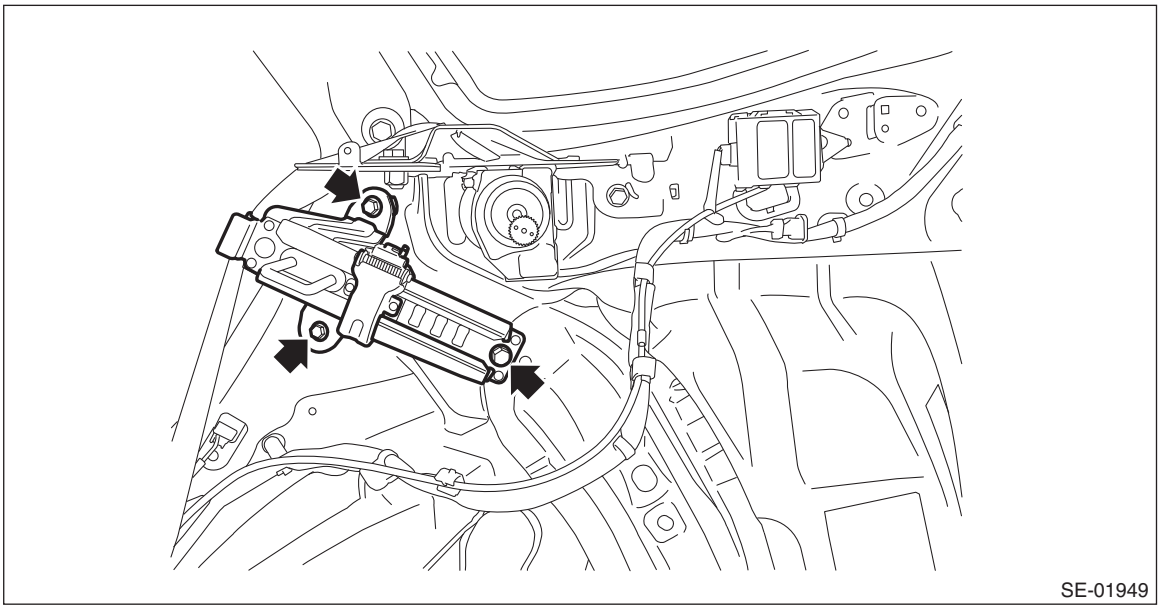
SE-01943

4) Remove the lever assembly - rear reclining.

(1) Remove the screw and clamp, and remove the cable connector bracket.

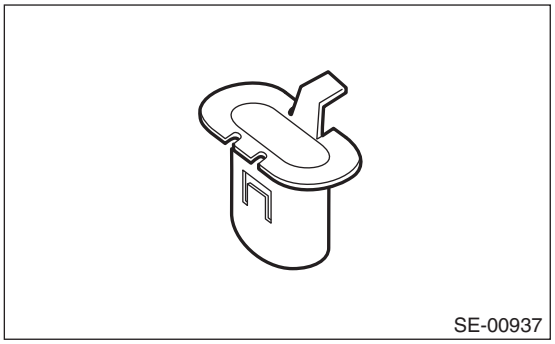


(2) Release the bracket and lever, then remove the lever assembly - rear reclining.



(3) Disconnect the reclining cable.
1. Remove the outer case (a).

2. Disconnect the striker cable through the cutout.

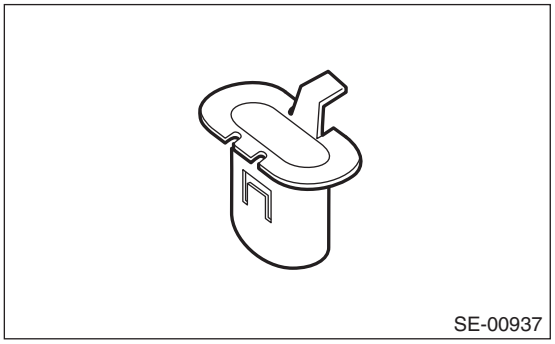


5) Remove the trim panel - rear apron. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
6) Remove the bolts, and then remove the striker - backrest rear.

B: INSTALLATION

1. SEDAN MODEL

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



1) Install the backrest assembly - rear seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
2) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
3) Install the rear seat cushion.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

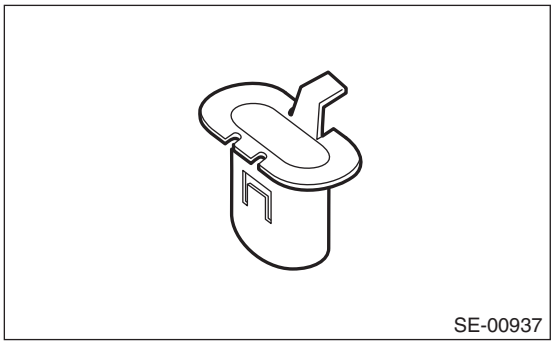
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the backrest assembly - rear seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
2) Install the backrest side pad.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
3) Install the rear seat cushion.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. BACKREST TILT MECHANISM (SEDAN MODEL)



1) Install the lock assembly - backrest.

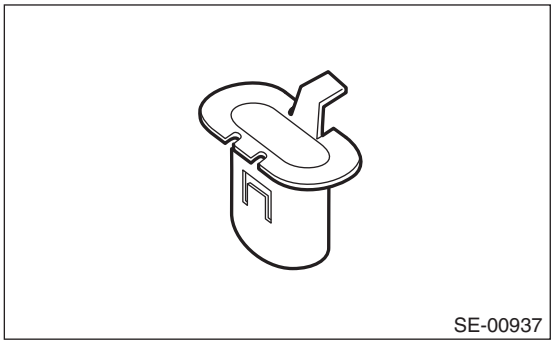
Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

2) Install the release lever assembly.
3) Return the backrest to the original position, and move the release lever to check the operation.

4. BACKREST TILT MECHANISM (OUTBACK MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937



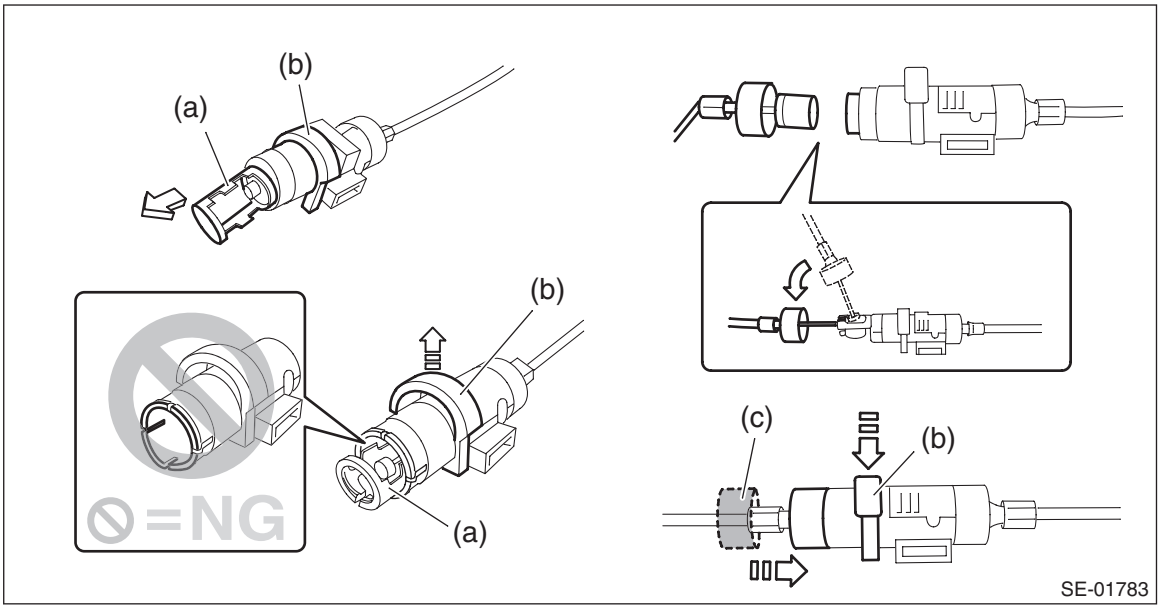
1) Install the release button - rear backrest and the remote lever cable.
2) Install the backrest assembly - rear seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
3) Install the lever assembly - rear backrest.
4) Install the trim panel - rear apron.
5) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Install the rear seat cushion.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

5. RECLINING MECHANISM (OUTBACK MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



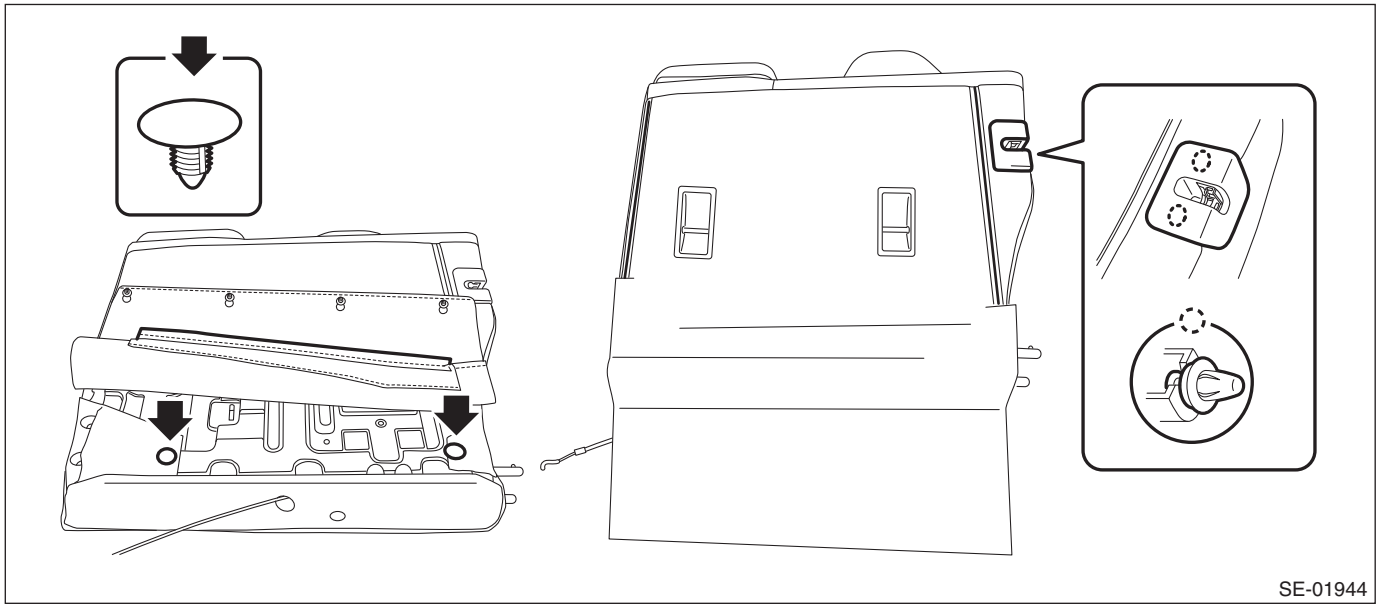
SE-00937

1) Install the striker - backrest rear.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
2) Install the trim panel - rear apron.
3) Install the lever assembly - reclining.
   (1) Connect the reclining cable.
   1. With the lock (b) down, pull out the connecting portion (a).
   2. With the connecting portion (a) pulled out, pull up the lock (b).

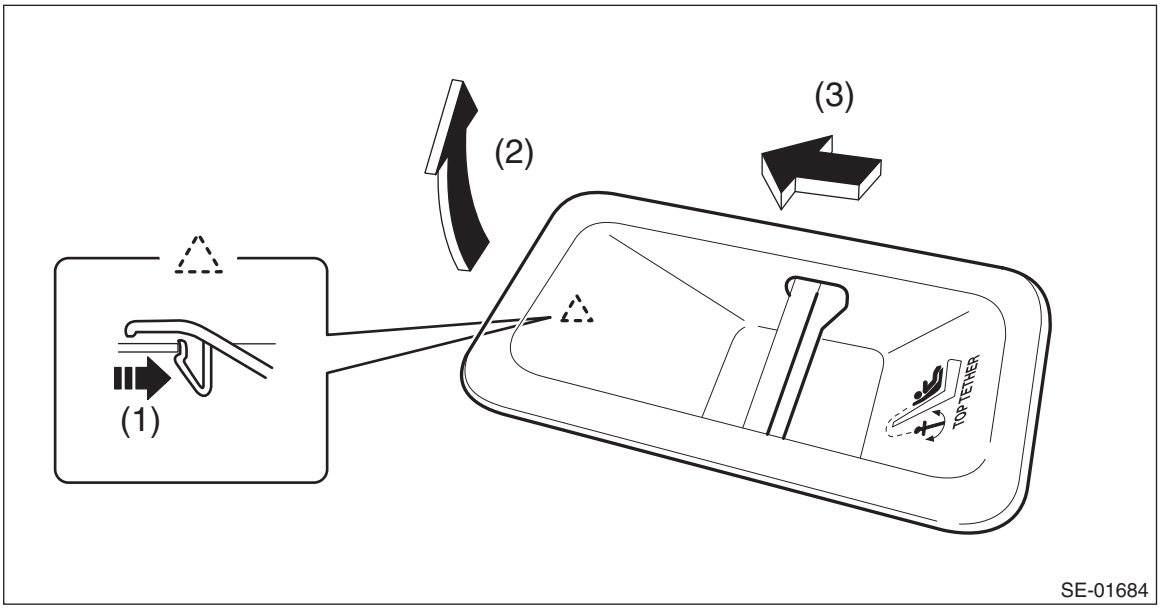
NOTE:
The connection cannot be completed, even if the lock (b) is pulled up while the connecting portion (a) is in the case.

3. Connect the cables, attach the case (c), and push down the lock (b).



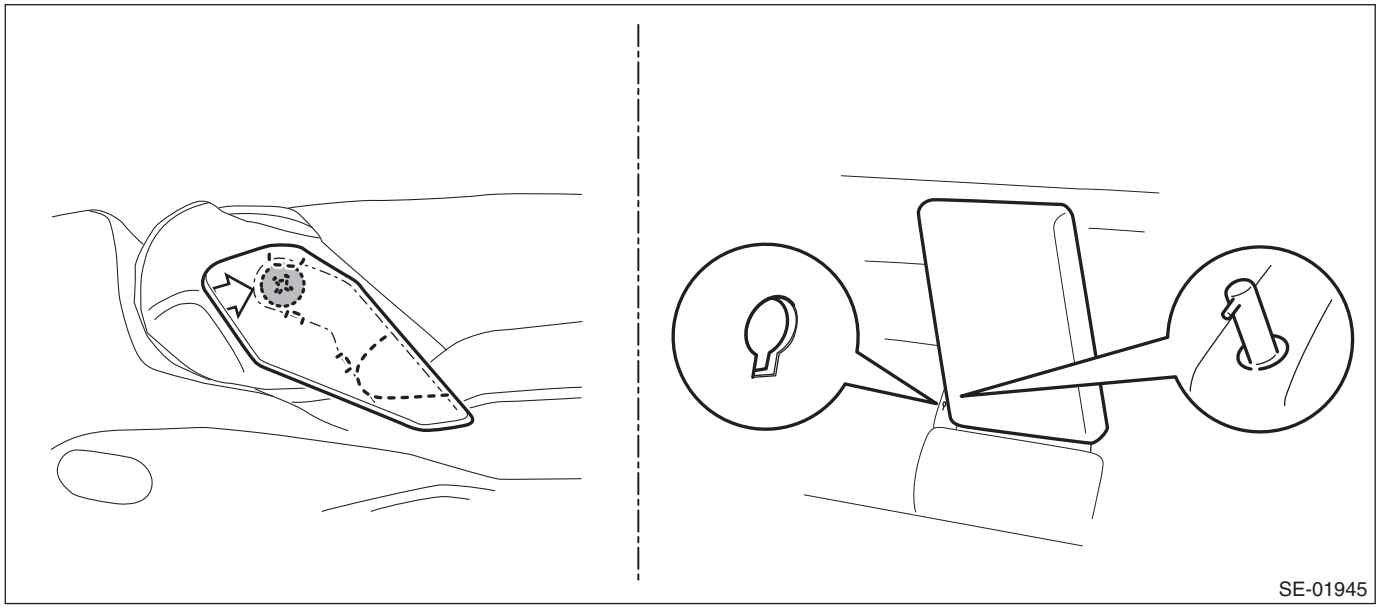
4) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)



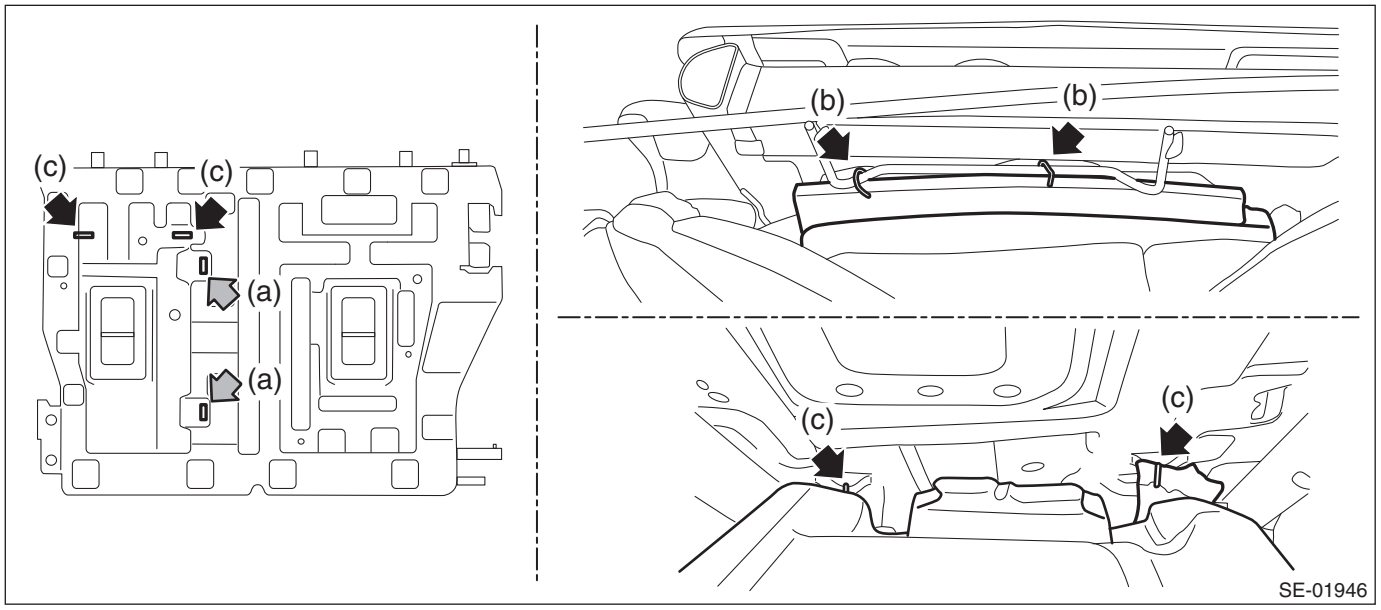
5) Install the rear seat cushion.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

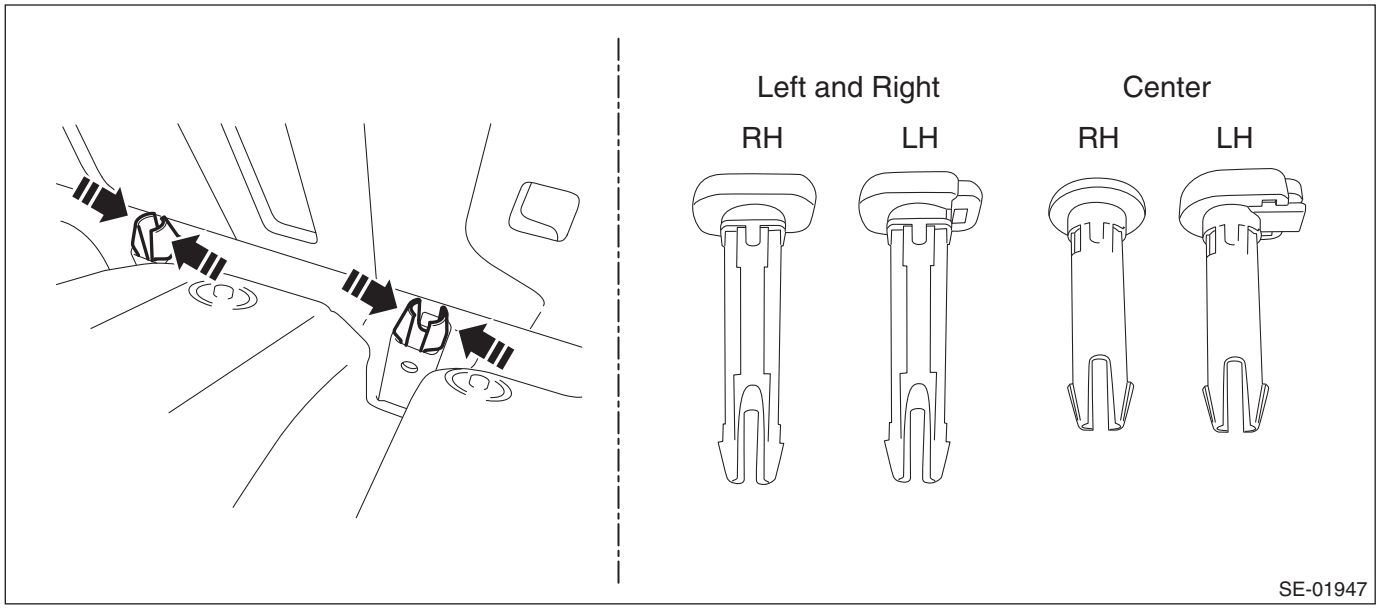


1) Remove the rear seat. <Ref. to SE-34, REMOVAL, Rear Seat.>
2) Remove the headrest assembly - rear.
3) Remove the resin fasteners on the lower of the backrest assembly, and remove the clip.
4) Release the clips to remove the lock cover. (OUTBACK model)
5) Open the fastener and turn over the cover COMPL - rear backrest.

6) Pull up the pad and cover, and remove the tether anchor cover from the inside of back board. (OUTBACK model)

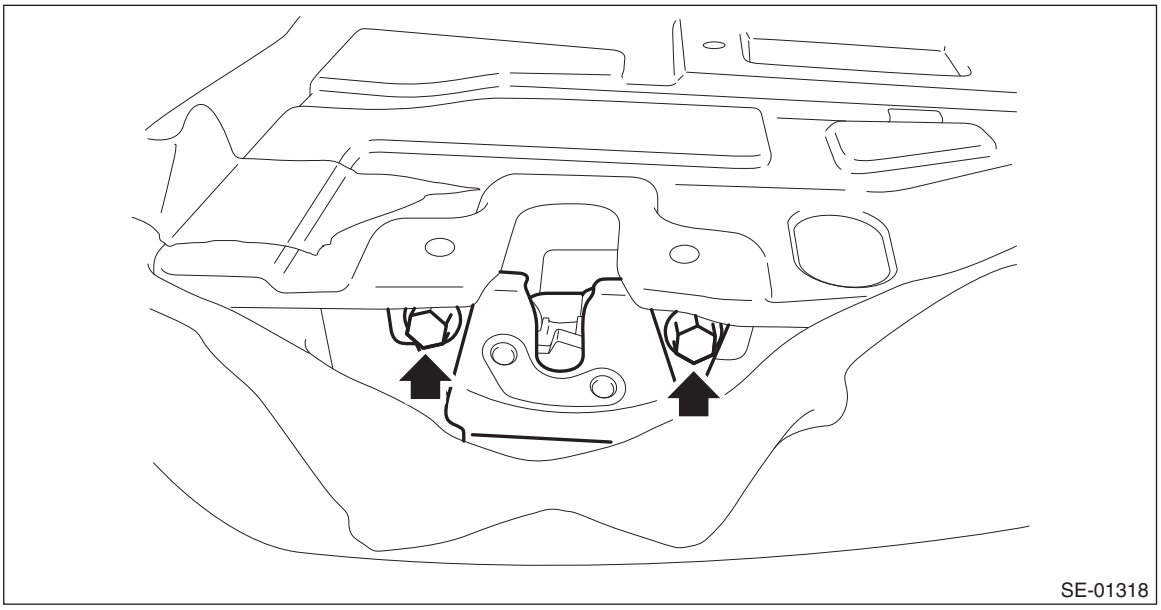


7) Remove the armrest assembly.
   (1) Remove the cover - armrest hinge OUT.
   (2) Remove the screws, and remove the armrest.



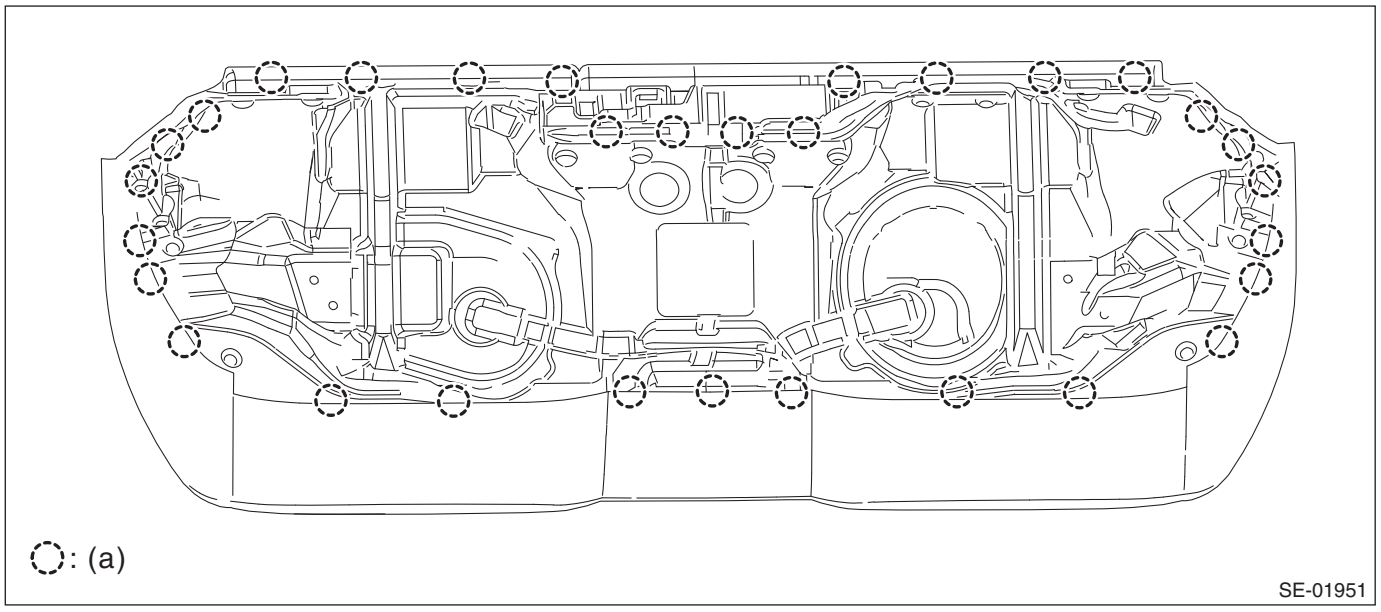
NOTE:
The armrests cannot be detached while the backrest assembly RH and armrest side pin positions are not aligned.

8) Remove the wire clamp (a) and the hog rings (b) and (c).

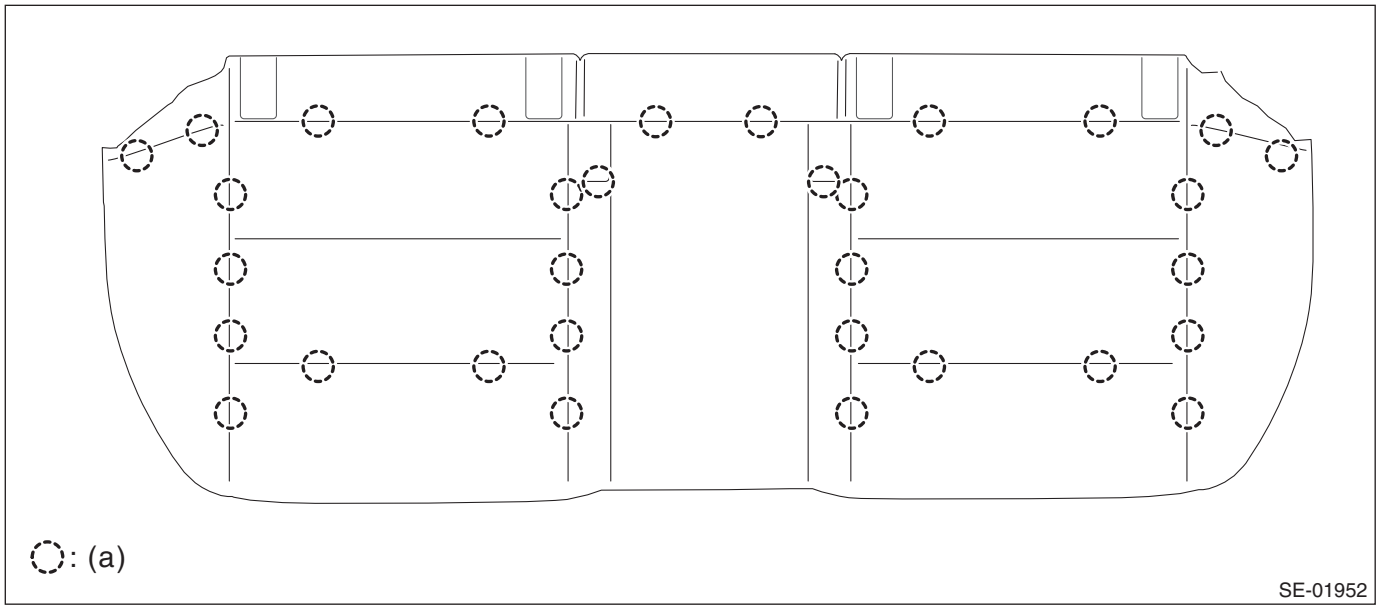


9) Remove the bushing - headrest.

10) Remove the lock button. (OUTBACK model)
(1) Remove the cover - lock button.
(2) Remove the screw, disconnect the rod and the wire, and remove the cover - lock button.



11) Remove the lock assembly - rear backrest rear LH.



12) Remove the pad assembly - main from the frame assembly - rear backrest.
13) Remove the seat heater module from the pad assembly as necessary.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

14) Referring to the above steps, disassemble the backrest assembly RH.
15) Remove the hog rings (a) on the back side of the rear seat cushion assembly.

16) Remove the hog rings (a), then remove the cover - rear cushion.

17) Remove the seat heater module from the pad assembly as necessary.

CAUTION:
• If the seat heater module is removed, replace the pad assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

D: ASSEMBLY

CAUTION:
• Do not reuse hog rings.
• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - rear backrest.
1) Install the seat heater module.

CAUTION:
• If the seat heater module and seating sensor are removed, replace the pad assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.

Preparation items:
Double-sided tape: NITTO DENKO 501L or equivalent
2) Assemble the cover COMPL - rear backrest and the cover - rear cushion in the same manner as for the front seat. <Ref. to SE-26, ASSEMBLY, Front Seat.>
3) Install the hog rings on the back side of the rear seat cushion assembly.
4) Install the hog rings and wire clip, then install the cover COMPL - rear backrest LH.

NOTE:
• Do not contaminate or damage the cover COMPL - rear backrest and the cover - rear cushion.
• While installing the hog rings, prevent the cover COMPL - rear backrest and the cover - rear cushion from getting wrinkled.
5) Install the plastic fastener and hog ring, and then install the headrest cover.
6) Install the pad assembly - main LH.
7) Install the bushing - headrest and the bushing - lock assembly.
8) Install the lock assembly - rear backrest rear LH.

Tightening torque:
22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

9) Install the plastic hooks on the back side of the backrest assembly LH.
10) Install the tether anchor cover.
11) Install the clips on the backside of the cover COMPL - rear backrest LH.
12) Install the knob - backrest. (Screw-in type)
13) Referring to the above steps, install the pad assembly - main RH.

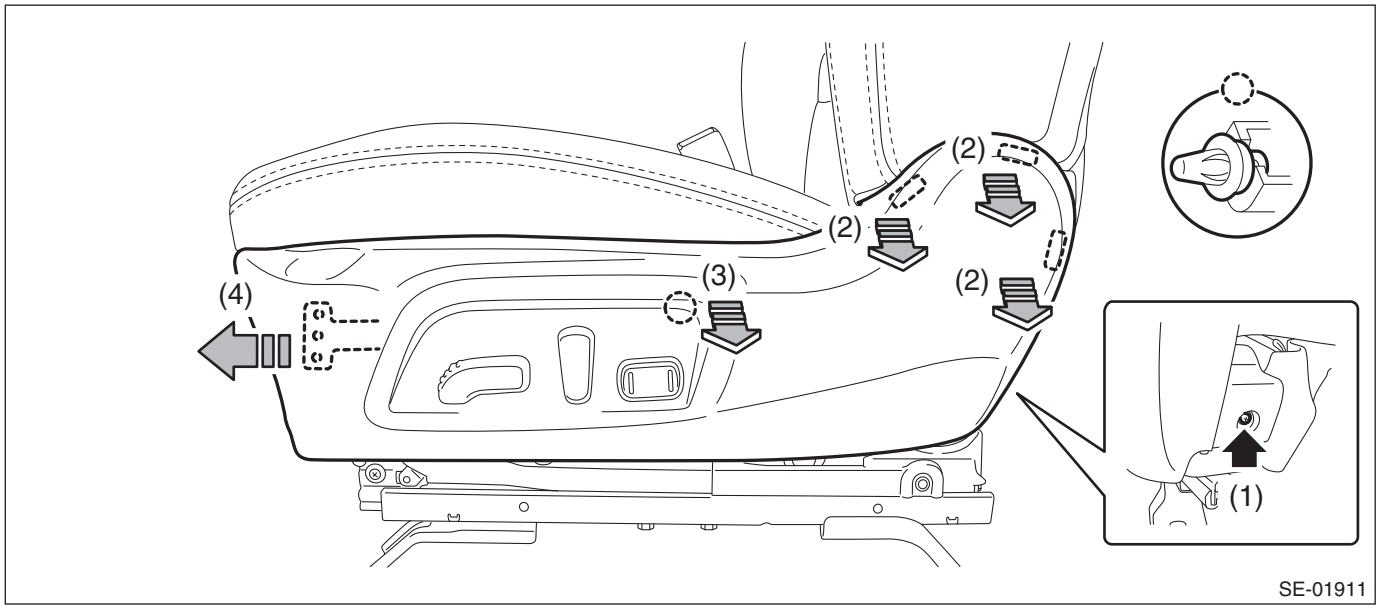
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-8, REAR SEAT, COMPONENT, General Description.>

14) Install the headrest assembly - rear.
15) Before installation, check the following items.
- No tear and fray on the cover COMPL - rear backrest and the cover - rear cushion.
- No fray or deformation on each wire cable.

16) Install the rear seat. <Ref. to SE-45, INSTALLATION, Rear Seat.>

4. Power Seat System

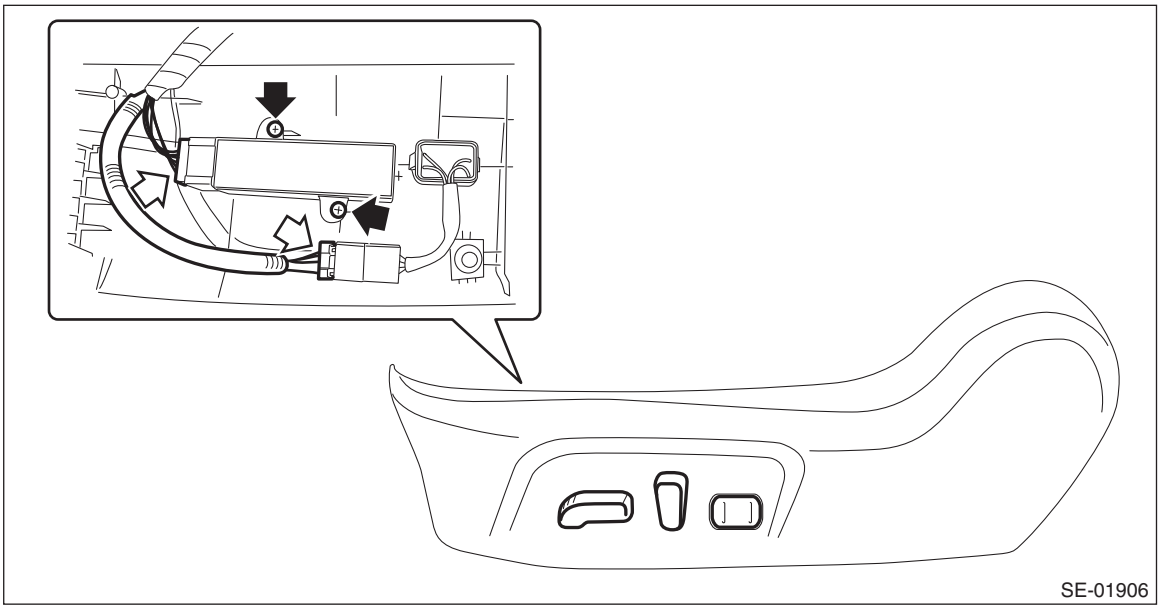
A: REMOVAL



CAUTION:
When removing the front seat, disconnect the ground cable from the battery before disconnecting the airbag system and the occupant detection system harness connector, and wait for 60 seconds before starting the operation.

1. POWER SEAT SWITCH

1) Remove the seat from vehicle. <Ref. to SE-12, REMOVAL, Front Seat.>
2) Remove the cover - hinge front seat OUT.
   (1) Remove the screws in the rear section of the cover - hinge front seat OUT.
   (2) Release the claw in the upper section of the cover - hinge front seat OUT.

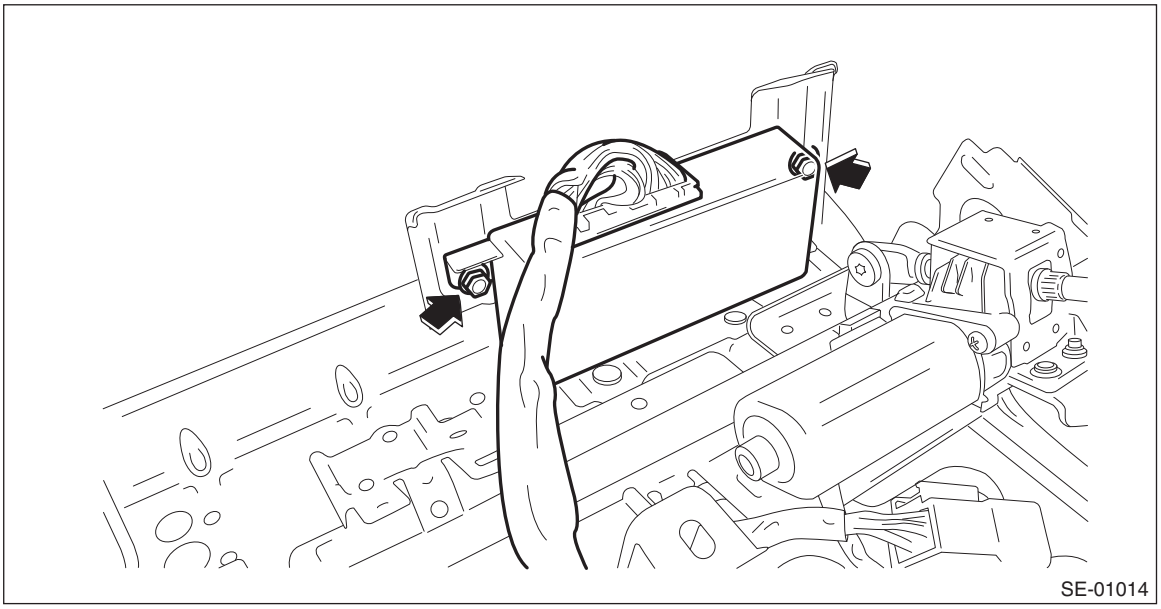


NOTE:
Use a plastic clip remover.

   (3) Remove the clip in the center of the cover - hinge front seat OUT.
   (4) Release the claw in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.

   (5) Disconnect the power seat switch and lumber switch connector and remove the cover - hinge front seat OUT.
3) Remove the switch assembly - power seat.
   (1) Disconnect the connectors for power seat switch and lumbar switch.
   (2) Remove the knob - power seat.
   (3) Remove the screws to remove the switch assembly - power seat.

(4) Remove the switch assembly - lumber. (Model with lumber support)



2. SEAT MEMORY SWITCH

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Release the claws, and remove the seat memory switch assembly.

3. POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION)

1) Raise the seat cushion by operating the switch.
2) Remove the front seat from the vehicle.
3) Remove the power seat control module.
   (1) Release the hooks on seat front and turn over the cushion cover.
   (2) Remove the nuts, and remove the power seat control module.

B: INSTALLATION

1. POWER SEAT SWITCH

1) Install the switch assembly - power seat.
2) Install the switch assembly - lumber. (Model with lumber support)

3) Install the knob - power seat.
4) Install the cover - hinge front seat OUT.
5) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

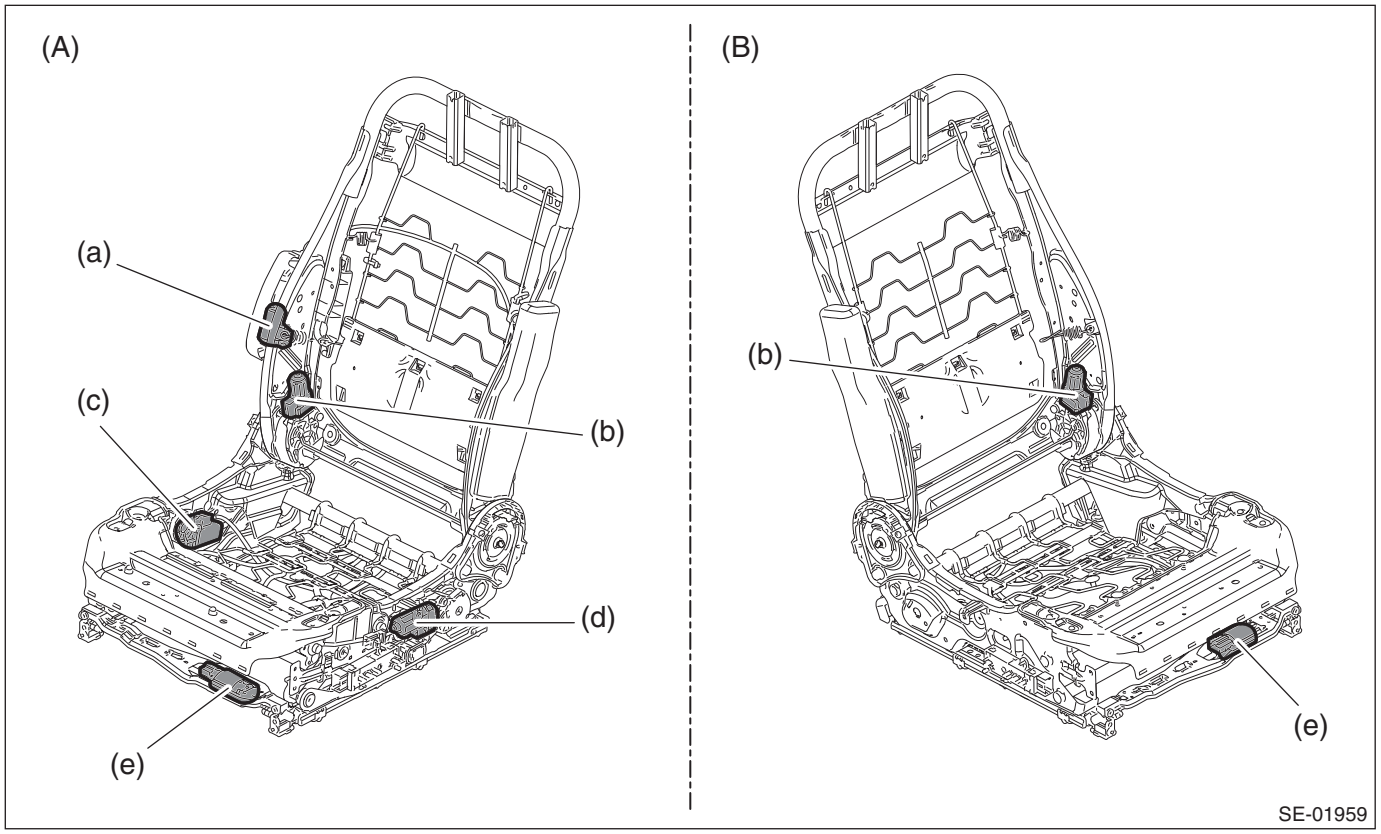
2. SEAT MEMORY SWITCH

1) Release the claws, and install the seat memory switch assembly.
2) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION)

1) Install the power seat control module.

Tightening torque:
5.9 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>



NOTE:
• The seat with memory function must be initialized after installed. <Ref. to SE-73, ADJUSTMENT, Power Seat System.>
• After replacing a seat with memory function and the power seat control module, check the following items.
1. Memory is reloaded by pressing the seat memory switch, when the ignition is ON and the select lever is set to the “P” range.
2. Memory is not reloaded even if the seat memory switch is pressed, when the ignition is ON and the select lever is set to other than “P” range.
3. Memory is reloaded when the ignition is OFF and the seat memory switch located inside the driver’s door is pressed within 45 seconds after the door is opened.
4. Memory is reloaded automatically when the ignition is OFF and the driver’s door is opened after unlocked by access key. (Model with smart key interlock function)

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Power Seat” in WI section.
• Driver’s seat (without memory): <Ref. to WI-312, DRIVER'S SEAT (WITHOUT MEMORY), WIRING DIAGRAM, Power Seat System.>
• Driver’s seat (with memory): <Ref. to WI-313, DRIVER'S SEAT (WITH MEMORY), WIRING DIAGRAM, Power Seat System.>
• Passenger’s seat: <Ref. to WI-316, PASSENGER'S SEAT, WIRING DIAGRAM, Power Seat System.>

2. NOTE

(A) Driver's seat
(B) Passenger's seat

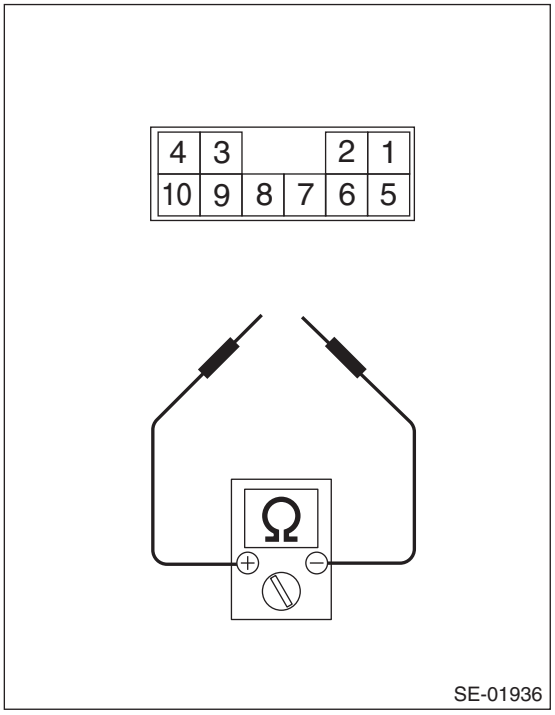
(a) Lumber motor
(b) Reclining motor
(c) Tilt motor
(d) Lifter motor
(e) Slide motor

3. TROUBLE SYMPTOM

- Without memory function

Symptoms	Criteria
All functions do not operate. <Ref. to SE-60, ALL FUNCTIONS DO NOT OPERATE (WITHOUT MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Body harness
A part of function does not operate. <Ref. to SE-61, SOME MOTORS DO NOT OPERATE (WITHOUT MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Relevant motor

- With memory function



Symptoms	Criteria
Does not operate by manual operation. <Ref. to SE-64, IT DOES NOT FUNCTION WITH MANUAL OPERATION. (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Body harness • Relevant motor and encoder

Symptoms	Criteria
A part of function does not operate. <Ref. to SE-65, SOME MOTORS DO NOT OPERATE. (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Relevant motor and encoder • Power seat control module
Fails to store the location to the memory <Ref. to SE-71, UNABLE TO SET POSITIONS INTO MEMORY (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Memory switch • Power seat harness • Power seat control module
Restoring operation is impossible <Ref. to SE-72, UNABLE TO PERFORM RELOADING OPERATION (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Memory switch • Power seat control module • Motor and encoder • Power seat harness
No interlock with smart keyless <Ref. to SE-72, NO INTERLOCK WITH SMART KEYLESS (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Body integrated unit • Power seat control module • Motor and encoder • Power seat harness
Initial setting is impossible <Ref. to SE-73, UNABLE TO PERFORM INITIALIZATION (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	• Power seat harness • Power seat control module

4. CHECK POWER SEAT SWITCH

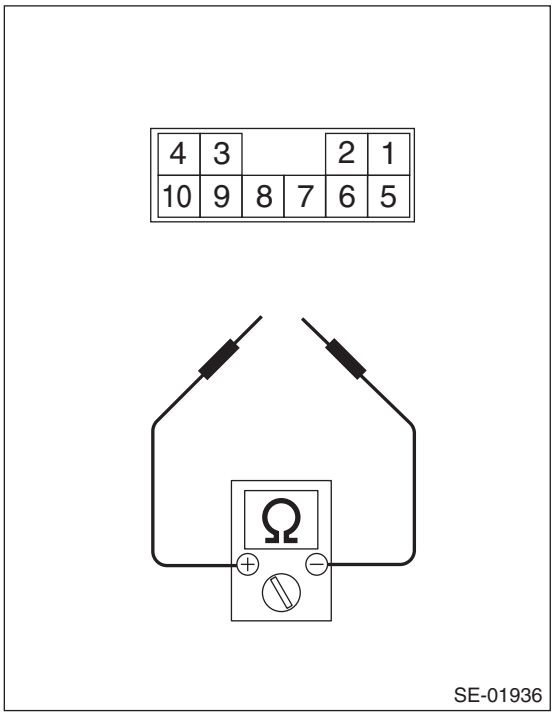
• Without memory function

Measure resistance between terminals while operating each switch.

• Driver's seat

Switch position	Terminal No.	Standard
Slide forward	1 and 8 4 and 7	Less than 10 Ω
Slide rearward	1 and 7 4 and 8	Less than 10 Ω
Tilt up	1 and 3 4 and 2	Less than 10 Ω

Switch position	Terminal No.	Standard
Tilt down	1 and 2 4 and 3	Less than 10 Ω
Lifter up	1 and 6 4 and 9	Less than 10 Ω
Lifter down	1 and 9 4 and 6	Less than 10 Ω
Reclining forward	1 and 10 4 and 5	Less than 10 Ω
Reclining rearward	1 and 5 4 and 10	Less than 10 Ω



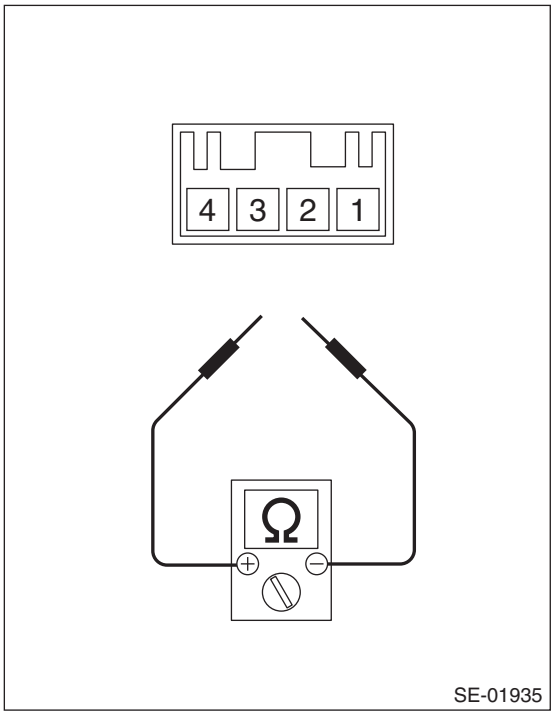
- Passenger's seat

Switch position	Terminal No.	Standard
Slide forward	1 and 8 4 and 7	Less than 10 Ω
Slide rearward	1 and 7 4 and 8	Less than 10 Ω
Reclining forward	1 and 10 4 and 5	Less than 10 Ω
Reclining rearward	1 and 5 4 and 10	Less than 10 Ω

Replace the power seat switch if the inspection result is not within the standard value.

- **With memory function**

Measure resistance between terminals while operating each switch.



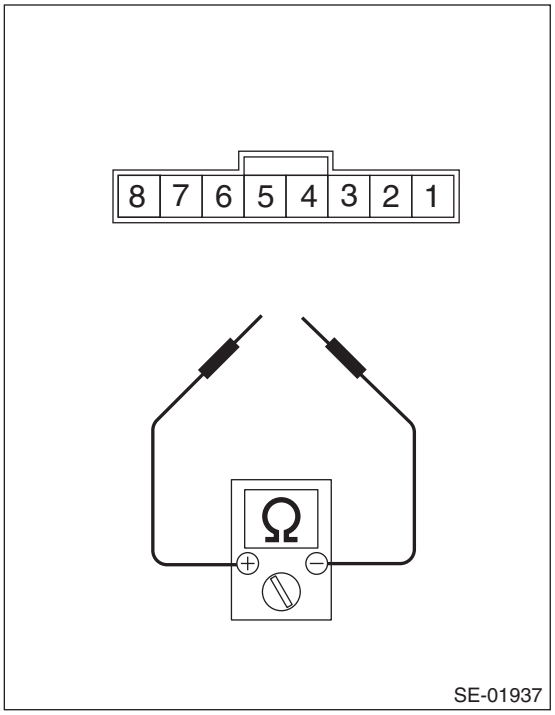
Switch position	Terminal No.	Standard
Slide forward	8 and 1	Less than 10 Ω
Slide rearward	7 and 1	Less than 10 Ω
Tilt up	3 and 1	Less than 10 Ω
Tilt down	2 and 1	Less than 10 Ω
Lifter up	6 and 1	Less than 10 Ω

Switch position	Terminal No.	Standard
Lifter down	9 and 1	Less than 10 Ω
Reclining forward	10 and 1	Less than 10 Ω
Reclining rearward	5 and 1	Less than 10 Ω

Replace the power seat switch if the inspection result is not within the standard value.

5. CHECK LUMBAR SWITCH

Measure resistance between terminals while operating each switch.



Switch position	Terminal No.	Standard
Lumbar forward	1 and 4 2 and 3	Less than 10 Ω
Lumbar backward	1 and 3 2 and 4	Less than 10 Ω

Replace the lumbar switch if the inspection result is not within the standard value.

6. CHECK MEMORY SWITCH (DRIVER'S SEAT WITH MEMORY FUNCTION)

Measure resistance between terminals while operating each switch.

Switch position	Terminal No.	Standard
Memory 1	2 and 1	Less than 10 Ω
Memory 2	3 and 1	Less than 10 Ω
Set	8 and 1	Less than 10 Ω

Replace the memory switch if the inspection result is not within the standard value.

7. ALL FUNCTIONS DO NOT OPERATE (WITHOUT MEMORY FUNCTION)

	Step	Check	Yes	No
1	**CHECK SEAT FUNCTIONS.** Operate each power seat switch and check that each power seat function operates normally.	Does all function fail to operate?	Go to step **2**.	Check the motor which does not operate. <Ref. to SE-61, SOME MOTORS DO NOT OPERATE (WITHOUT MEMORY FUNCTION), INSPECTION, Power Seat System.>
2	**CHECK FUSE.** Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step **3**.
3	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***Driver's seat*** ***(R200) No. 1 (+) — Chassis ground (–):*** ***Passenger's seat*** ***(R190) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check body harness.

	Step	Check	Yes	No
4	**CHECK POWER SUPPLY CIRCUIT.** Measure the resistance between power seat switch harness connector and chassis ground. ***Connector & terminal*** ***Driver's seat*** ***(R200) No. 4 — Chassis ground:*** ***Passenger's seat*** ***(R190) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the power seat switch assembly.	Check body harness.

8. SOME MOTORS DO NOT OPERATE (WITHOUT MEMORY FUNCTION)

• Slide operation failure

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the slide motor connector. 2) Measure the resistance between power seat switch connector and slide motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R202) No. 5 — (R200) No. 8:*** ***(R202) No. 1 — (R200) No. 7:*** ***Passenger's seat*** ***(R192) No. 5 — (R190) No. 8:*** ***(R192) No. 1 — (R190) No. 7:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK SLIDE MOTOR.** 1) Connect the power seat switch connector and slide motor connector. 2) Apply 12 V to the slide motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R202) No. 5 (+) — (R202) No. 1 (–):*** ***(R202) No. 1 (+) — (R202) No. 5 (–):*** ***Passenger's seat*** ***(R192) No. 5 (+) — (R192) No. 1 (–):*** ***(R192) No. 1 (+) — (R192) No. 5 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in slide rail.	Slide motor problem. Replace the seat cushion frame assembly.

• Malfunction of tilt operation

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the tilt motor connector. 2) Measure the resistance between power seat switch connector and tilt motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R203) No. 4 — (R200) No. 2:*** ***(R203) No. 6 — (R200) No. 3:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK TILT MOTOR.** 1) Connect the power seat switch connector and tilt motor connector. 2) Apply 12 V to the tilt motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R203) No. 4 (+) — (R203) No. 6 (–):*** ***(R203) No. 6 (+) — (R203) No. 4 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in tilt mechanism.	Tilt motor problem. Replace the seat cushion frame assembly.

- **Malfunction of lifter operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the lifter motor connector. 2) Measure the resistance between power seat switch connector and lifter motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R204) No. 6 — (R200) No. 6:*** ***(R204) No. 4 — (R200) No. 9:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LIFTER MOTOR.** 1) Connect the power seat switch connector and lifter motor connector. 2) Apply 12 V to the lifter motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R204) No. 6 (+) — (R204) No. 4 (–):*** ***(R204) No. 4 (+) — (R204) No. 6 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lifter mechanism.	Lifter motor problem. Replace the seat cushion frame assembly.

- **Malfunction of reclining operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the reclining motor connector. 2) Measure the resistance between power seat switch connector and reclining motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R201) No. 6 — (R200) No. 10:*** ***(R201) No. 4 — (R200) No. 5:*** ***Passenger's seat*** ***(R191) No. 6 — (R190) No. 10:*** ***(R191) No. 4 — (R190) No. 5:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK RECLINING MOTOR.** 1) Connect the power seat switch connector and reclining motor connector. 2) Apply 12 V to the reclining motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R201) No. 6 (+) — (R201) No. 4 (–):*** ***(R201) No. 4 (+) — (R201) No. 6 (–):*** ***Passenger's seat*** ***(R191) No. 6 (+) — (R191) No. 4 (–):*** ***(R191) No. 4 (+) — (R191) No. 6 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in reclining hinge.	Reclining motor problem. Replace the backrest frame assembly.

- **Malfunction of lumbar operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the lumbar switch connector. 2) Measure the resistance between connector terminals when moving the switch to lumbar forward and lumbar backward. <Ref. to SE-59, CHECK LUMBAR SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the lumbar switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the lumbar motor connector. 2) Measure the resistance between lumbar switch connector and lumbar motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R198) No. 1 — (R195) No. 4:*** ***(R198) No. 2 — (R195) No. 3:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LUMBAR MOTOR.** 1) Connect the lumbar switch connector and lumbar motor connector. 2) Apply 12 V to the lumbar motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R198) No. 1 (+) — (R198) No. 2 (–):*** ***(R198) No. 2 (+) — (R198) No. 1 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lumbar mechanism.	Lumbar motor problem. Replace the backrest frame assembly.

9. IT DOES NOT FUNCTION WITH MANUAL OPERATION. (DRIVER'S SEAT WITH MEMORY FUNCTION)

	Step	Check	Yes	No
1	**CHECK SEAT FUNCTIONS.** Operate each power seat switch and check that each power seat function operates normally.	Does all function fail to operate?	Go to step **2**.	Check the motor which does not operate. <Ref. to SE-65, SOME MOTORS DO NOT OPERATE. (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>
2	**CHECK FUSE.** Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step **3**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Check the DTC relating the power seat control module using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is DTC detected?	Perform the diagnosis according to the "POWER SEAT MEMORY SYSTEM (DIAGNOSTICS)" section.	Go to step **4**.
4	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Display «Battery Terminal Voltage» on «Data monitor» of the power seat control module using Subaru Select Monitor.	Is the voltage 10 V or more?	Go to step **7**.	Go to step **5**.
5	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the power seat control module connector. 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check body harness.
6	**CHECK POWER SUPPLY CIRCUIT.** Measure the resistance between power seat control module harness connector and chassis ground. ***Connector & terminal*** ***(R156) No. 14 — Chassis ground:*** ***(R156) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check body harness.

	Step	Check	Yes	No
7	**CHECK HARNESS.** 1) Disconnect the power seat control module connector. 2) Measure the resistance of the following harnesses. ***Connector & terminal*** ***Slide:*** ***(R156) No. 15 — Chassis ground:*** ***(R156) No. 16 — Chassis ground:*** ***Tilt:*** ***(R156) No. 5 — Chassis ground:*** ***(R156) No. 4 — Chassis ground:*** ***Lifter:*** ***(R156) No. 2 — Chassis ground:*** ***(R156) No. 1 — Chassis ground:*** ***Reclining:*** ***(R156) No. 7 — Chassis ground:*** ***(R156) No. 6 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Replace the power seat control module.	Check the harnesses between power seat motor and each motor and between power seat control module connector and each motor.

10.SOME MOTORS DO NOT OPERATE. (DRIVER'S SEAT WITH MEMORY FUNCTION)

- **Slide operation failure**

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the slide motor rotation while moving the switch to slide forward and slide backward.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the slide motor rotation while moving the switch to slide forward and slide backward.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Display «Slide SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: • For detailed operation procedures, refer to "Application help". • Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Connect the power seat switch connector. 2) Turn the ignition switch to ON. 3) Display «Slide SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.

Step		Check	Yes	No
6	**CHECK HARNESS.** 1) Disconnect the power seat control module connector and power seat switch connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 6 — (R200) No. 8:*** ***(R155) No. 7 — (R200) No. 7:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK SLIDE MOTOR.** 1) Disconnect the slide motor connector. 2) Apply 12 V to the slide motor connector and check the motor rotation. ***Connector & terminal*** ***(R202) No. 1 (+) — (R202) No. 5 (–):*** ***(R202) No. 5 (+) — (R202) No. 1 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Slide motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** Measure the resistance between power seat control module and slide motor connector. ***Connector & terminal*** ***(R202) No. 2 — (R155) No. 19:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 15 — Chassis ground:*** ***(R156) No. 16 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector and power seat switch connector. 2) Measure the voltage between power seat control module connector and chassis ground when the slide switch is operated. ***Connector & terminal*** ***(R156) No. 15 (+) — Chassis ground (–):*** ***(R156) No. 16 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Slide motor problem. Replace the seat cushion frame assembly.

- **Malfunction of tilt operation**

Step		Check	Yes	No
1	**CHECK OPERATION.** Check the tilt motor rotation while moving the switch to tilt up and tilt down.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the tilt motor rotation while moving the switch to tilt up and tilt down.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Display «Tilt SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: • For detailed operation procedures, refer to “Application help”. • Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Connect the power seat switch connector. 2) Turn the ignition switch to ON. 3) Display «Tilt SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.
6	**CHECK HARNESS.** 1) Disconnect the power seat control module connector and power seat switch connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 5 — (R200) No. 3:*** ***(R155) No. 4 — (R200) No. 2:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK TILT MOTOR.** 1) Disconnect the tilt motor connector. 2) Apply 12 V to the tilt motor connector and check the motor rotation. ***Connector & terminal*** ***(R203) No. 6 (+) — (R203) No. 4 (–):*** ***(R203) No. 4 (+) — (R203) No. 6 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Tilt motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** Measure the resistance between power seat control module and tilt motor connector. ***Connector & terminal*** ***(R203) No. 1 — (R155) No. 18:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 5 — Chassis ground:*** ***(R156) No. 4 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector and power seat switch connector. 2) Measure the voltage between power seat control module connector and chassis ground when the tilt switch is operated. ***Connector & terminal*** ***(R156) No. 5 (+) — Chassis ground (–):*** ***(R156) No. 4 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Tilt motor problem. Replace the seat cushion frame assembly.

- **Malfunction of lifter operation**

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the lifter motor rotation while turning the switch to lifter up and lifter down.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the lifter motor rotation while turning the switch to lifter up and lifter down.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Display «Lifter SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: • For detailed operation procedures, refer to "Application help". • Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Connect the power seat switch connector. 2) Turn the ignition switch to ON. 3) Display «Lifter SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.
6	**CHECK HARNESS.** 1) Disconnect the power seat control module connector and power seat switch connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 3 — (R200) No. 6:*** ***(R155) No. 2 — (R200) No. 9:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK LIFTER MOTOR.** 1) Disconnect the lifter motor connector. 2) Apply 12 V to the lifter motor connector and check the motor rotation. ***Connector & terminal*** ***(R204) No. 4 (+) — (R204) No. 6 (–):*** ***(R204) No. 6 (+) — (R204) No. 4 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Lifter motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** Measure the resistance between power seat control module and lifter motor connector. ***Connector & terminal*** ***(R204) No. 1 — (R155) No. 16:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.

	Step	Check	Yes	No
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 2 — Chassis ground:*** ***(R156) No. 1 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector and power seat switch connector. 2) Measure the voltage between power seat control module connector and chassis ground when the lifter switch is operated. ***Connector & terminal*** ***(R156) No. 2 (+) — Chassis ground (–):*** ***(R156) No. 1 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Lifter motor problem. Replace the seat cushion frame assembly.

- **Malfunction of reclining operation**

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the reclining motor rotation while moving the switch to reclining forward and reclining backward.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the reclining motor rotation while moving the switch to reclining forward and reclining backward.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Display «Reclining SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: • For detailed operation procedures, refer to “Application help”. • Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Connect the power seat switch connector. 2) Turn the ignition switch to ON. 3) Display «Reclining SW» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.

	Step	Check	Yes	No
6	**CHECK HARNESS.** 1) Disconnect the power seat control module connector and power seat switch connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 8 — (R200) No. 10:*** ***(R155) No. 9 — (R200) No. 5:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK RECLINING MOTOR.** 1) Disconnect the reclining motor connector. 2) Apply 12 V to the reclining motor connector and check the motor rotation. ***Connector & terminal*** ***(R201) No. 4 (+) — (R201) No. 6 (–):*** ***(R201) No. 6 (+) — (R201) No. 4 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Reclining motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** Measure the resistance between power seat control module and reclining motor connector. ***Connector & terminal*** ***(R201) No. 1 — (R155) No. 17:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 7 — Chassis ground:*** ***(R156) No. 6 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector and power seat switch connector. 2) Measure the voltage between power seat control module connector and chassis ground when the reclining switch is operated. ***Connector & terminal*** ***(R156) No. 7 (+) — Chassis ground (–):*** ***(R156) No. 6 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Reclining motor problem. Replace the backrest frame assembly.

- **Malfunction of lumbar operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of lumbar switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lumbar forward and lumbar backward. <Ref. to SE-59, CHECK LUMBAR SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the lumbar switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the lumbar motor connector. 2) Measure the resistance between lumbar switch connector and lumbar motor connector. ***Connector & terminal*** ***(R195) No. 4 — (R198) No. 1:*** ***(R195) No. 3 — (R198) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.

	Step	Check	Yes	No
3	**CHECK LUMBAR MOTOR.** 1) Connect the lumbar switch connector and lumbar motor connector. 2) Apply 12 V to the lumbar motor and check the motor rotation. ***Connector & terminal*** ***(R195) No. 4 (+) — (R195) No. 3 (–):*** ***(R195) No. 3 (+) — (R195) No. 4 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lumbar mechanism.	Lumbar motor problem. Replace the backrest frame assembly.

11.UNABLE TO SET POSITIONS INTO MEMORY (DRIVER'S SEAT WITH MEMORY FUNCTION)

	Step	Check	Yes	No
1	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Display «Set SW» «Memory SW1» «Memory SW2» on «Data monitor» of the power seat control module using Subaru Select Monitor. NOTE: • For detailed operation procedures, refer to "Application help". • Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **5**.	Go to step **2**.
2	**CHECK SWITCH.** 1) Disconnect the memory switch connector. 2) Check memory switch. <Ref. to SE-60, CHECK MEMORY SWITCH (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **3**.	Replace the memory switch assembly.
3	**CHECK HARNESS.** 1) Disconnect the power seat control module connector. 2) Measure the resistance between the memory switch connector and power seat control module connector. ***Connector & terminal*** ***(R155) No. 13 — (D143) No. 3:*** ***(R155) No. 14 — (D143) No. 2:*** ***(R155) No. 29 — (D143) No. 8:***	Is the resistance less than 10 Ω?	Go to step **4**.	Check power seat harness.
4	**CHECK GROUND CIRCUIT.** Measure the resistance between the memory switch connector and chassis ground. ***Connector & terminal*** ***(R143) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Check body harness.
5	**SYSTEM INITIALIZATION.** Initialize memory seat system. <Ref. to SE-73, ADJUSTMENT, Power Seat System.>	Is the initialization completed successfully?	Replace the power seat control module.	<Ref. to SE-73, UNABLE TO PERFORM INITIALIZATION (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>

12.UNABLE TO PERFORM RELOADING OPERATION (DRIVER'S SEAT WITH MEMORY FUNCTION)

	Step	Check	Yes	No
1	**CHECK MEMORY FUNCTIONS.** Perform the memory operation of the seat position, and check the memory replay operation.	Does the seat position memory replay correctly?	Memory function is normal. It is considered that the memory was cleared because the voltage falls below the operation-ensured voltage temporarily during memory restoration or manual operation. It operates normally by registering a memory.	Go to step **2**.
2	**CHECK MEMORY FUNCTIONS.** At the memory operation of step 1, check the beep sound (once).	Was it possible to confirm the beep sound?	Go to step **3**.	<Ref. to SE-71, UNABLE TO SET POSITIONS INTO MEMORY (DRIVER'S SEAT WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>
3	**CHECK OPERATION.** Operate all power seat switches to check operation of each motor.	Does each motor rotate for one second or more when operating each switch?	Replace the power seat control module.	Check the motor which does not operate.

13.NO INTERLOCK WITH SMART KEYLESS (DRIVER'S SEAT WITH MEMORY FUNCTION)

	Step	Check	Yes	No
1	**CHECK DTC.** Check the DTC of body integrated unit using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is a DTC detected?	Perform a check according to the DTC.	Go to step **2**.
2	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Check «Keyless Access Key Information» on «Data monitor» of the power seat control module using Subaru Select Monitor. 3) Check the status of key No. shown in «Keyless Access Key Information» using «Keyless Access & Start Link * Memorized». NOTE: Perform the inspection after an item is selected in the data select display.	Is "Yes" displayed for the status of registered key No.?	Go to step **3**.	If "No" displayed, register the keyless access key again.

	Step	Check	Yes	No
3	**CHECK MEMORY FUNCTIONS.** Perform the memory operation of the seat position, and check the memory replay operation.	Does the seat position memory replay correctly?	Function is normal. It is considered that the memory was cleared because the voltage falls below the operation-ensured voltage temporarily during memory restoration or manual operation. It operates normally by registering a memory.	Perform the check item for "UNABLE TO PERFORM THE RELOADING OPERATION (DRIVER'S SEAT WITH MEMORY FUNCTION)".

14.UNABLE TO PERFORM INITIALIZATION (DRIVER'S SEAT WITH MEMORY FUNCTION)

	Step	Check	Yes	No
1	**CHECK OPERATION.** Operate all power seat switches to check operation of each motor.	Does each motor rotate for one second or more when operating each switch?	Go to step **2**.	Check the motor which does not operate.
2	**CHECK SWITCH.** 1) Disconnect the power seat switch connector. 2) Measure resistance between all terminals of power seat switch assembly. <Ref. to SE-57, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Replace the power seat control module.	Replace the power seat switch assembly.

D: ADJUSTMENT

NOTE:
System calibration is necessary for driver's side seat with memory function only.

1. CONDITIONS FOR INITIALIZATION

The power seat control module must be initialized if the following conditions are met.
- The seat is removed from vehicle.
- Power seat control module is replaced.
- Slide rail assembly or backrest frame assembly is removed or replaced.
- Pulse generated when seat is moved do not match with the amount of actual travel. (When memory is not correctly reloaded.)

2. INITIALIZATION PROCEDURES

NOTE:
- Initialize the records inside the module by performing all the following steps regardless the item order.
- With each seat locked*, operating switches for 3 seconds make the buzzer sound once.
- If initialization is done after completing all items, the buzzer sounds three times when the last operation is completed and the switch is turned on then off.

1) Move the seat rearward using the slide switch, and keep the seat lock* status for three seconds or more.
2) Move the seat downward using tilt switch, and keep the seat lock* status for three seconds or more.
3) Move the seat downward using lifter switch, and keep the seat lock* status for three seconds or more.
4) Move the seat forward using reclining switch, and keep the seat lock* status for three seconds or more.

*: Seat lock is the status that there is no pulse output from the encoder within the specified period of time with the switch operated though the seat reaches the movable position end.

NOTE:
When the following conditions are met, the initializing operation is cancelled even though the procedure is carried out halfway.

- Interval between each initialization procedure of 1) to 4) exceeds 10 seconds.
- If any of initialization procedures 1) to 4) are not performed.
- The battery runs out or the voltage to the power seat control module falls out of the operation range during initialization.

5. Seat Heater System

A: REMOVAL

1. SEAT HEATER MODULE - FRONT

1) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>
2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-13, DISASSEMBLY, Front Seat.>
3) Remove the seat heater module - front from the pad assembly.

CAUTION:
If the seat heater module is removed, replace the pad assembly with a new part.

2. SEAT HEATER SWITCH - FRONT

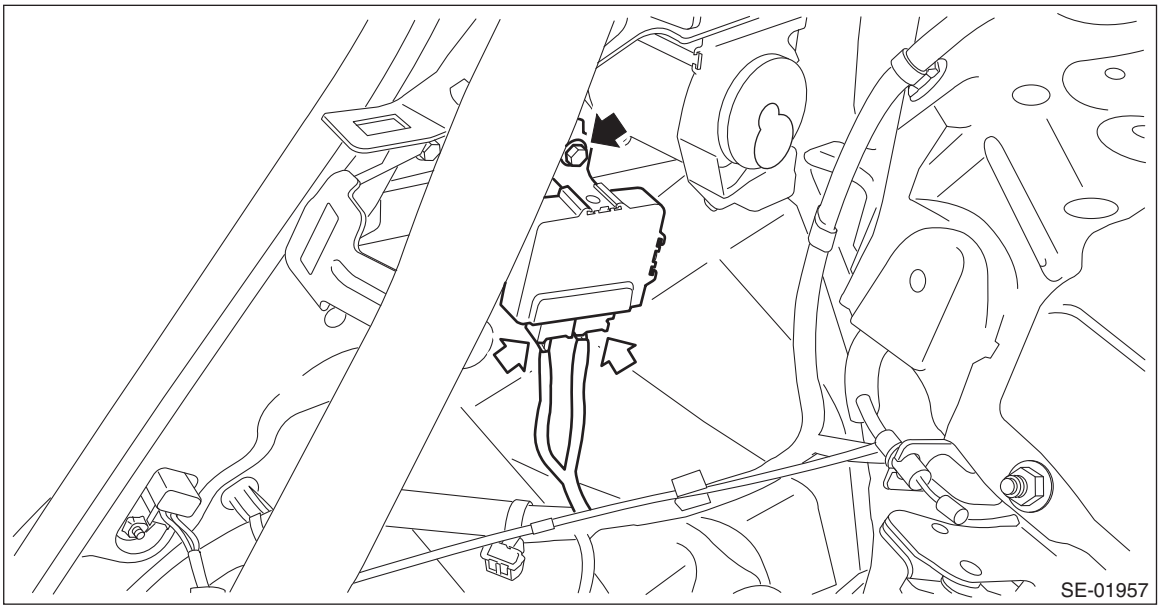
Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>

3. SEAT HEATER MODULE - REAR

1) Remove the rear seat cushion assembly. <Ref. to SE-12, REMOVAL, Front Seat.>
2) Remove the backrest cover and seat cushion cover from the rear seat. <Ref. to SE-47, DISASSEMBLY, Rear Seat.>
3) Remove the seat heater module - front from the pad assembly.

CAUTION:
If the seat heater module is removed, replace the pad assembly with a new part.

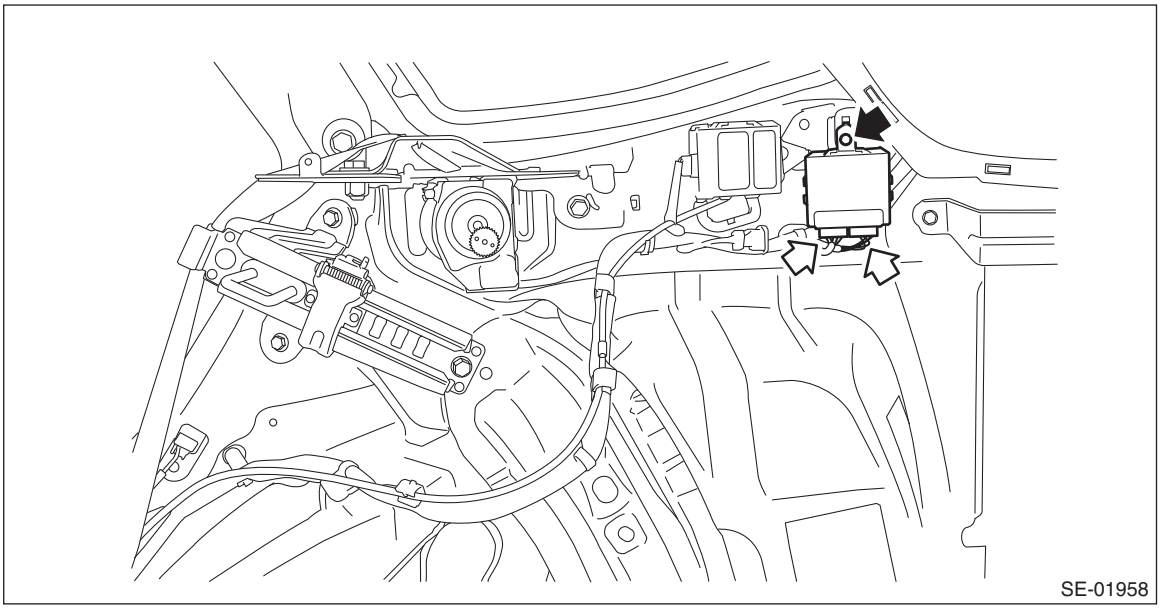
4. SEAT HEATER SWITCH - REAR



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the end cover - console box.
3) Remove the seat heater switch - rear.
   (1) Remove the heater duct - rear. (Model with rear seat heater)
   (2) Release the claws, and remove the seat heater switch - rear.

5. SEAT HEATER UNIT - REAR

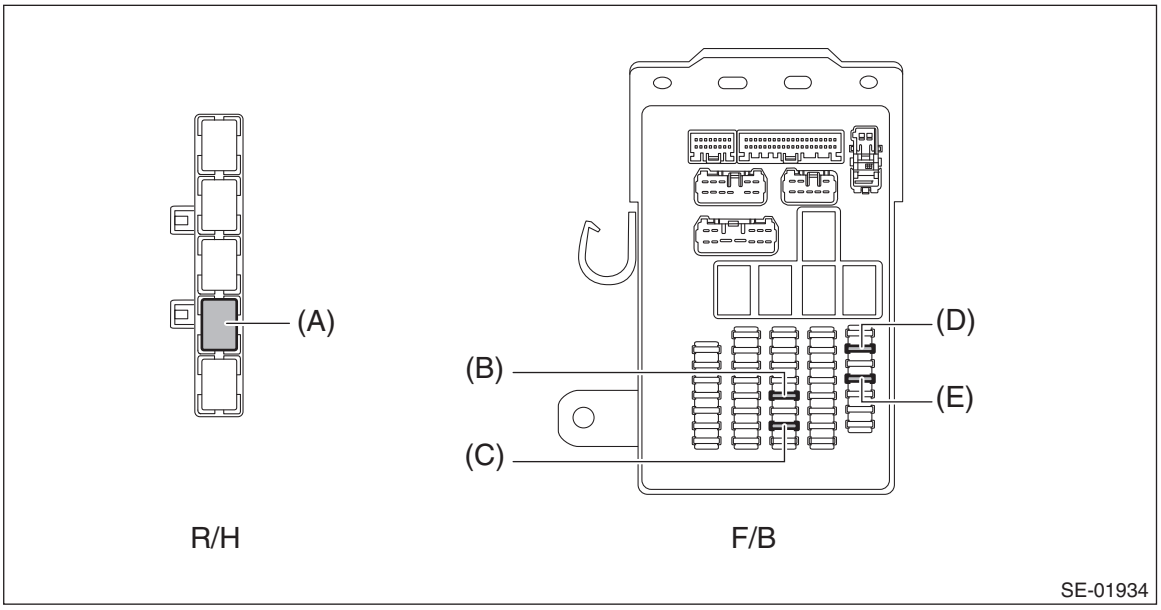
Sedan model



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR RH. <Ref. to EI-97, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>

3) Remove the bolt, disconnect the connector and remove the seat heater unit - rear.

OUTBACK model



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron RH. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the bolt, disconnect the connector and remove the seat heater unit - rear.

6. SEAT HEATER RELAY AND FUSE

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the seat heater relay and fuse.
    (1) Remove the relay & fuse box bolts.

(2) Remove the seat heater relay from the relay holder.

Relay holder (R/H)	Seat heater relay (seat heater - front)	(A)
Relay & fuse box (F/B)	Fuse 15A (seat heater - rear)	(B)
	Fuse 15A (seat heater - front)	(C)
	Fuse 7.5A (ACC)	(D)
	Fuse 7.5A (IG)	(E)

B: INSTALLATION

1. SEAT HEATER MODULE - FRONT

1) Affix the seat heater module - front to the pad assembly.

CAUTION:
• If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.
• When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
• When removing or replacing the seat cover, perform "Occupant Detection System Inspection" after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-20, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
• If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

Preparation items:
Double-sided tape: NITTO DENKO 501L or equivalent
2) Assemble the front seat. <Ref. to SE-26, ASSEMBLY, Front Seat.>
3) Install the front seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

2. SEAT HEATER SWITCH - FRONT

Install the heater control assembly. <Ref. to AC-46, INSTALLATION, Control Panel.>

3. SEAT HEATER MODULE - REAR

1) Affix the seat heater module - rear to the pad assembly.

CAUTION:
• If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

Preparation items:
Double-sided tape: NITTO DENKO 501L or equivalent
2) Assemble the rear seat. <Ref. to SE-51, ASSEMBLY, Rear Seat.>
3) Install the rear seat. <Ref. to SE-45, INSTALLATION, Rear Seat.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

4. SEAT HEATER SWITCH - REAR

1) Install the seat heater switch - rear.
2) Install the end cover - console box.
3) Install the battery sensor to the ground terminal. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

5. SEAT HEATER UNIT - REAR

Sedan model

1) Install the seat heater module - rear.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - rear pillar UPR RH. <Ref. to EI-101, SEDAN MODEL, INSTALLATION, Rear Quarter Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

OUTBACK model

1) Install the seat heater module - rear.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - rear apron RH. <Ref. to EI-102, OUTBACK MODEL, INSTALLATION, Rear Quarter Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. SEAT HEATER RELAY AND FUSE

1) Install the seat heater relay & fuse.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Seat Heater System” in the wiring diagram.
- Front: <Ref. to WI-349, FRONT SEAT, WIRING DIAGRAM, Seat Heater System.>
- Rear: <Ref. to WI-350, REAR SEAT, WIRING DIAGRAM, Seat Heater System.>

2. DIAGNOSTIC CHART

Symptoms	Repair order
Front seat heater does not operate.	Refer to “HVAC SYSTEM (DIAGNOSTICS)”. <Ref. to AC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Symptoms	Repair order
Rear seat heater does not operate.	1. Check the fuse. <Ref. to SE-79, CHECK SEAT HEATER FUSE, INSPECTION, Seat Heater System.>
	2. Check the seat heater system power supply and ground circuit. <Ref. to SE-79, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Seat Heater System.>
	3. Check the seat heater module. <Ref. to SE-80, SEAT HEATER MODULE (REAR), INSPECTION, Seat Heater System.>
	4. Check the rear seat heater switch. <Ref. to SE-80, CHECK REAR SEAT HEATER SWITCH, INSPECTION, Seat Heater System.>
	5. Check the rear seat heater control module. <Ref. to SE-81, CHECK REAR SEAT HEATER CONTROL MODULE, INSPECTION, Seat Heater System.>

3. CHECK SEAT HEATER FUSE

Remove the seat heater fuse, and then visually check.
Is the fuse blown out?
- **Yes** → Replace the fuse.
- **No** → Check the power supply and ground circuits.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

1) Check power supply circuit
   (1) Disconnect the seat heater control module harness connector.
   (2) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal
(R49) No. 14 (+) — Chassis ground (–):
Is the voltage 10 V or more?
- **Yes** → Go to step 2.
- **No** → Repair or replace the harness.

2) Check power supply circuit
   (1) Turn the ignition switch to ON.
   (2) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal
(R49) No. 5 (+) — Chassis ground (–):
Is the voltage 10 V or more?
- **Yes** → Go to step 3.
- Repair or replace the harness.

3) Check ground circuit
Measure the resistance between harness connector terminal and chassis ground.

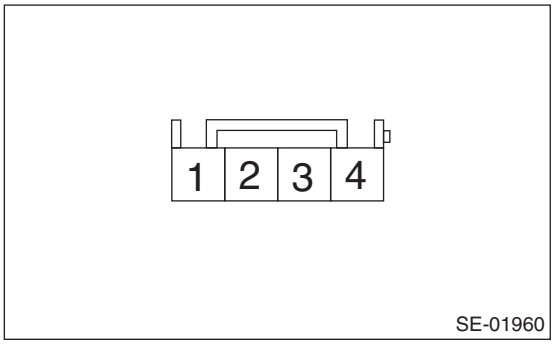
Connector & terminal
(R49) No. 7 — Chassis ground:
(R138) No. 9 — Chassis ground:
Is the resistance less than 10 Ω?
- **Yes** → Go to step 4.
- **No** → Repair the harness.

4) Check harness
Measure the resistance between seat heater control module terminal and seat heater switch - rear terminal.

Connector & terminal
(R53) No. 14 — (R138) No. 1:
(R53) No. 16 — (R138) No. 6:
(R53) No. 6 — (R138) No. 2:
(R53) No. 4 — (R138) No. 5:
(R53) No. 2 — (R138) No. 13:
(R53) No. 8 — (R138) No. 4:
Is the resistance less than 10 Ω?

- **Yes** → Go to step 5.
- **No** → Repair the harness.

5) Check seat heater module (rear)
Check the seat heater module (rear) as a single part.



Connector & terminal
(R49) No. 7 — Chassis ground:
(R138) No. 9 — Chassis ground:

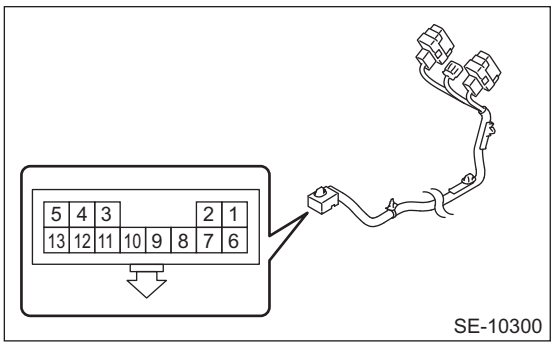
Is the inspection result normal?

- **Yes** → Replace the seat heater switch - rear or seat heater control module.
- **No** → Replace the seat heater module (rear).

5. SEAT HEATER MODULE (REAR)

1) Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

Connector & terminal
Seat cushion:
LH side No. 4 — No. 3:
RH side No. 2 — No. 1:
Backrest LH:
No. 4 — No. 3:
Backrest RH:
No. 4 — No. 3:



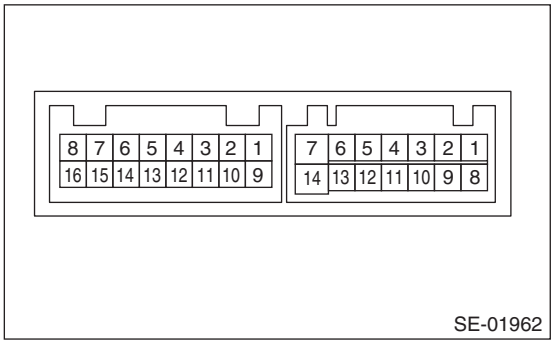
Inspection conditions	Standard	
Heater temperature 20°C (68°F)	Seat cushion	Approx. 4.7 Ω
	Backrest	Approx. 7.46 Ω

2) If no continuity exists, replace the seat heater module with a new part.

6. CHECK REAR SEAT HEATER SWITCH

1) Remove the rear seat heater switch and measure the resistance between switch terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
4 — 9	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2 — 9	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

NOTE:
If the light does not illuminate properly even though the continuity check result is normal, replace the switch.
2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
11 (+) — 10 (–)	Apply battery voltage.	Light ON

3) Replace the rear seat heater switch if the inspection result is not within the standard.

7. CHECK REAR SEAT HEATER CONTROL MODULE

1) Disconnect the connector of rear seat heater control module.
2) Check the continuity between the connectors.

Connector & terminal
5 — 7
14 — 7
Is there continuity?
- **Yes** → Repair or replace the harness.
- **No** → Replace the rear seat heater control module.

POWER SEAT MEMORY SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PSM(diag)-3, CHECK, Check List for Interview.>
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.
3	**CHECK POWER SEAT MEMORY SYSTEM.** Using the Subaru Select Monitor, read DTC of power seat memory system. <Ref. to PSM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to PSM(diag)-19, LIST, List of Diagnostic Trouble Code (DTC).> After the repair, Go to step **5**.	Go to step **4**.
4	**CHECK THE LIST OF TROUBLE SYMPTOMS.** Check “TROUBLE SYMPTOM” for the power seat system. <Ref. to SE-56, TROUBLE SYMPTOM, INSPECTION, Power Seat System.>	Does the symptom apply?	Perform the diagnosis according to the inspection procedures.	Currently, system is normal. The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
5	**PERFORM INSPECTION MODE.** Perform the Inspection Mode. <Ref. to PSM(diag)-14, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to PSM(diag)-19, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

Power Seat Memory System Check List for Interview Received Year Month Day		Date the Vehicle is	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date when problem occurred	Year Month Date	Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions		Occurrence location	
Accessory installation condition			
Confirmation of trouble condition			
Diagnostic code			

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

2. POWER SEAT MEMORY SYSTEM

CAUTION:
• During inspection of the power seat memory system, be careful not to catch objects in.
• Perform communication with Subaru Select Monitor with IG ON.
(With IG OFF, communication cannot be established between the body integrated unit and seat memory CM.)

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to power seat memory system.
1) Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>
2) Check the relay and fuse condition.
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

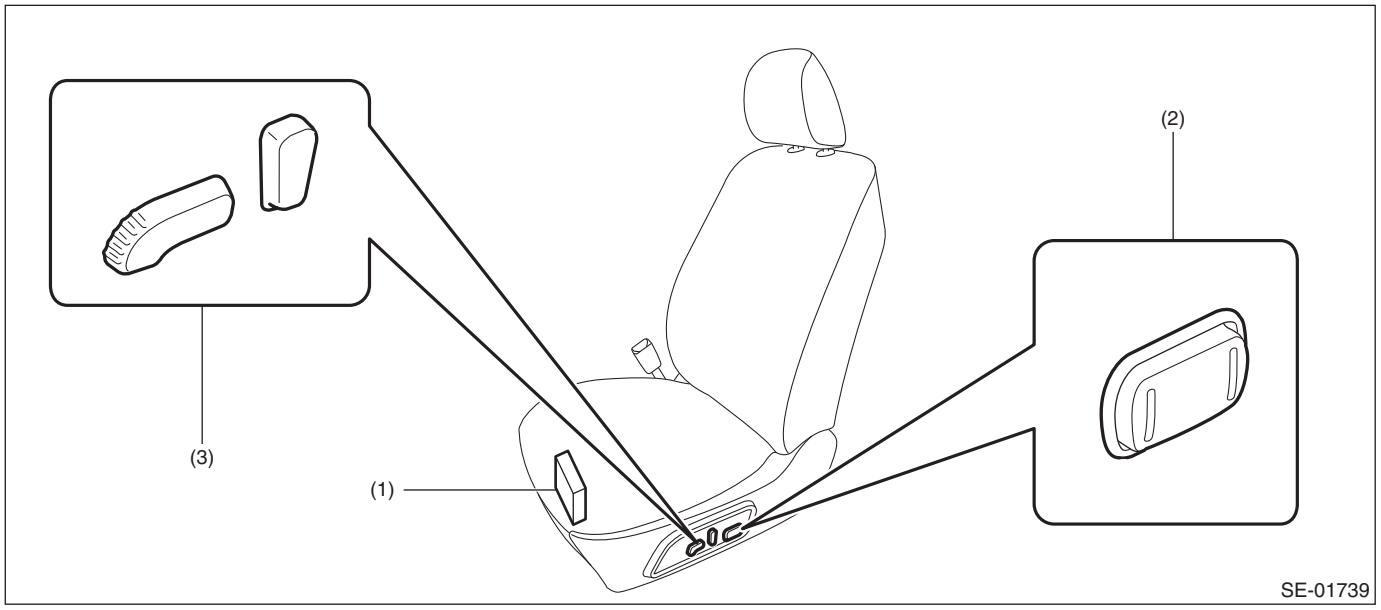

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
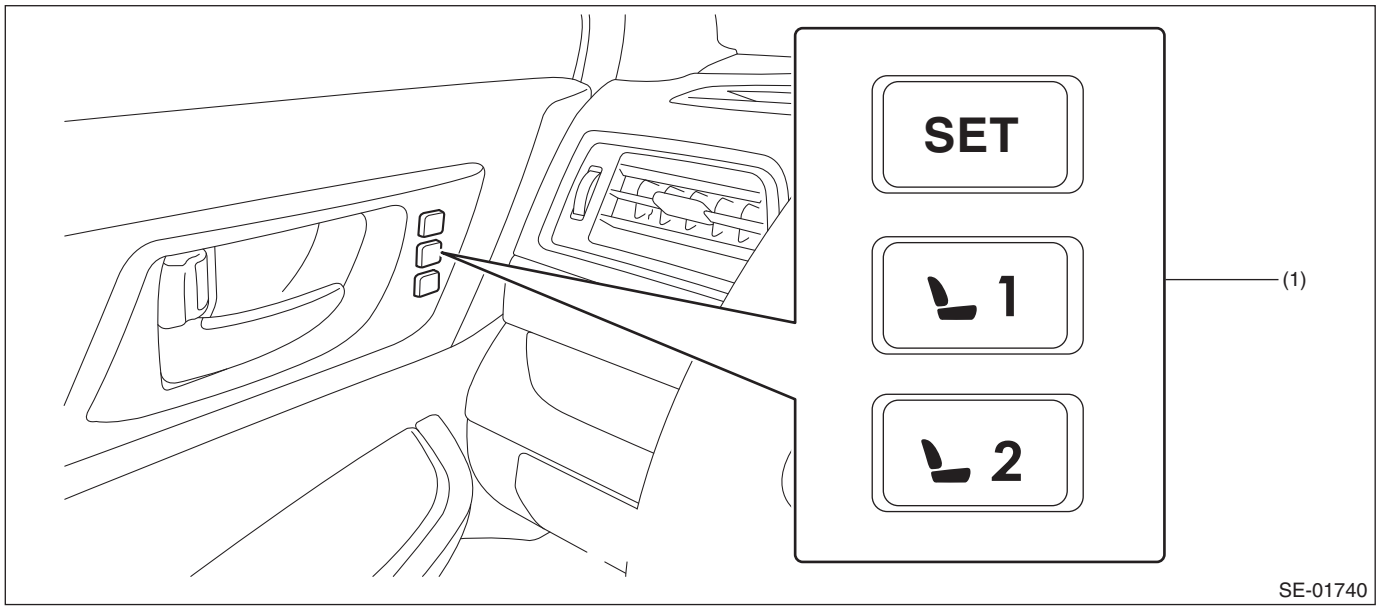
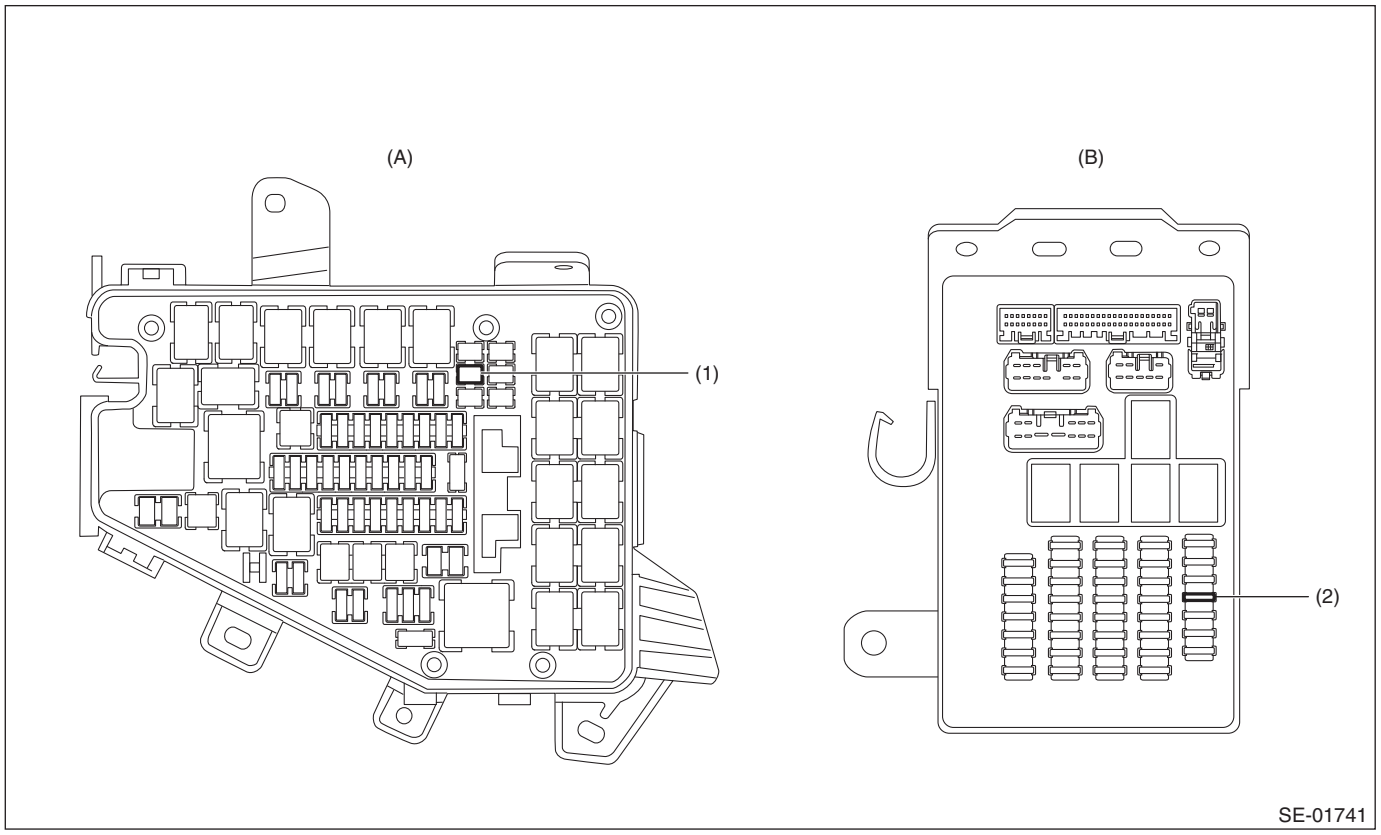
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

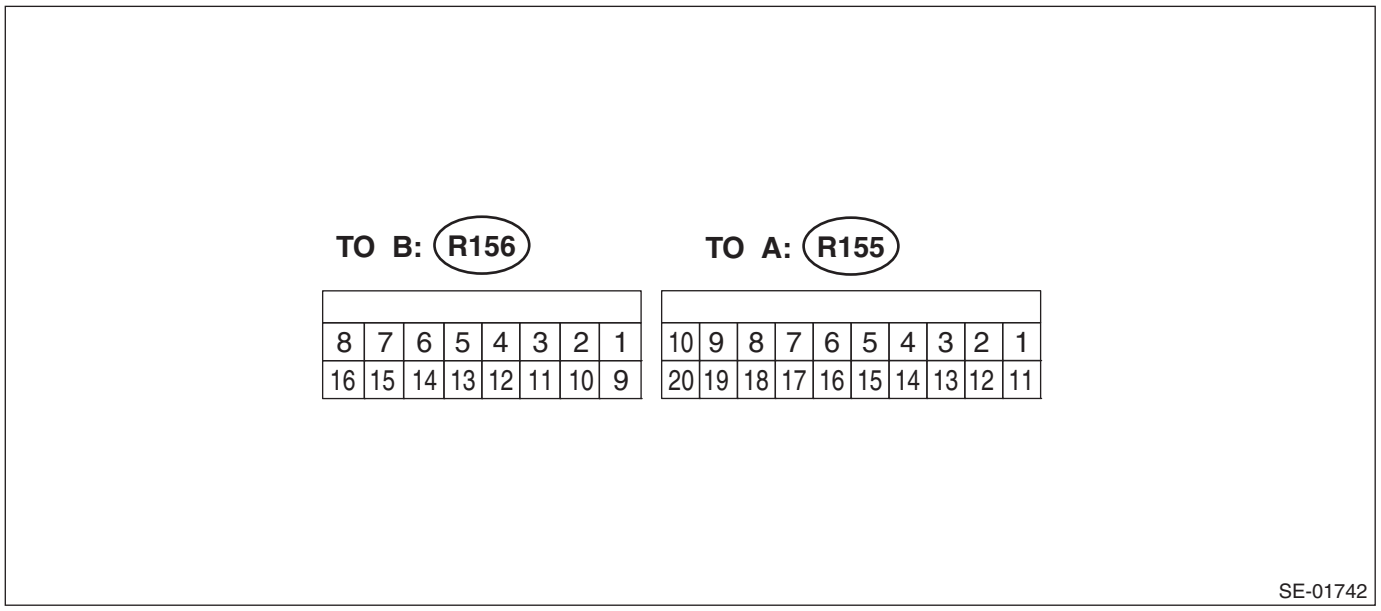
4. Electrical Component Location



A: LOCATION

(1) Power seat control module (2) Lumbar switch (3) Power seat switch

(1) Seat memory switch



(A) Engine compartment fuse box
(B) Interior fuse & relay box
(1) Fuse (30 A)
(2) Fuse (7.5 A)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. POWER SEAT CONTROL MODULE

Terminal No.	Content	Measuring condition	Standard
(R155) No. 1	—	—	—
(R155) No. 2 ←→ Chassis ground	Lifter switch (down)	Switch ON	1.5 V or less
(R155) No. 3 ←→ Chassis ground	Lifter switch (up)	Switch ON	1.5 V or less
(R155) No. 4 ←→ Chassis ground	Tilt switch (down)	Switch ON	1.5 V or less
(R155) No. 5 ←→ Chassis ground	Tilt switch (up)	Switch ON	1.5 V or less
(R155) No. 6 ←→ Chassis ground	Slide switch (forward)	Switch ON	1.5 V or less
(R155) No. 7 ←→ Chassis ground	Slide switch (rearward)	Switch ON	1.5 V or less
(R155) No. 8 ←→ Chassis ground	Reclining switch (forward)	Switch ON	1.5 V or less
(R155) No. 9 ←→ Chassis ground	Reclining switch (backward)	Switch ON	1.5 V or less
(R155) No. 10 ←→ Chassis ground	Battery power supply	Always	10 — 16 V
(R155) No. 11 ←→ Chassis ground	Ignition power supply	When ignition switch is ON	10 — 16 V
(R155) No. 12	LIN communication line	Unmeasurable	—
(R155) No. 13 ←→ Chassis ground	Memory switch 1	Switch ON	1 V or less
(R155) No. 14 ←→ Chassis ground	Memory switch 2	Switch ON	1 V or less
(R155) No. 15 ←→ Chassis ground	SET switch	Switch ON	1 V or less

(R155) No. 17 ←→ (R155) No. 20	Tilt pulse signal	When the motor is in operation	Pulse output
(R155) No. 18 ←→ (R155) No. 20	Lifter pulse signal	When the motor is in operation	Pulse output
(R155) No. 19 ←→ (R155) No. 20	Slide pulse signal	When the motor is in operation	Pulse output
(R155) No. 20 ←→ Chassis ground	Pulse signal GND	Always	1 Ω or less
(R156) No. 1 ←→ Chassis ground	Lifter motor up	When the motor is in operation	9.5 — 16 V
(R156) No. 2 ←→ Chassis ground	Lifter motor down	When the motor is in operation	9.5 — 16 V
(R156) No. 3 ←→ Chassis ground	Battery power supply	Always	10 — 16 V
(R156) No. 4 ←→ Chassis ground	Tilt motor up	When the motor is in operation	9.5 — 16 V
(R156) No. 5 ←→ Chassis ground	Tilt motor down	When the motor is in operation	9.5 — 16 V
(R156) No. 6 ←→ Chassis ground	Reclining motor forward	When the motor is in operation	9.5 — 16 V
(R156) No. 7 ←→ Chassis ground	Reclining motor backward	When the motor is in operation	9.5 — 16 V
(R156) No. 8 ←→ Chassis ground	Battery power supply	Always	10 — 16 V

Terminal No.	Content	Measuring condition	Standard
(R156) No. 9 ←→ Chassis ground	Encoder power supply output	Always	1 MΩ or more
(R156) No. 10	—	—	—
(R156) No. 11	—	—	—
(R156) No. 12 ←→ Chassis ground	GND	Always	1 Ω or less
(R156) No. 13	—	—	—
(R156) No. 14 ←→ Chassis ground	GND	Always	1 Ω or less
(R156) No. 15 ←→ Chassis ground	Slide motor rearward	When the motor is in operation	9.5 — 16 V
(R156) No. 16 ←→ Chassis ground	Slide motor forward	When the motor is in operation	9.5 — 16 V

B: WIRING DIAGRAM

Refer to “Power Seat System” in the wiring diagram. <Ref. to WI-312, WIRING DIAGRAM, Power Seat System.>

6. Subaru Select Monitor

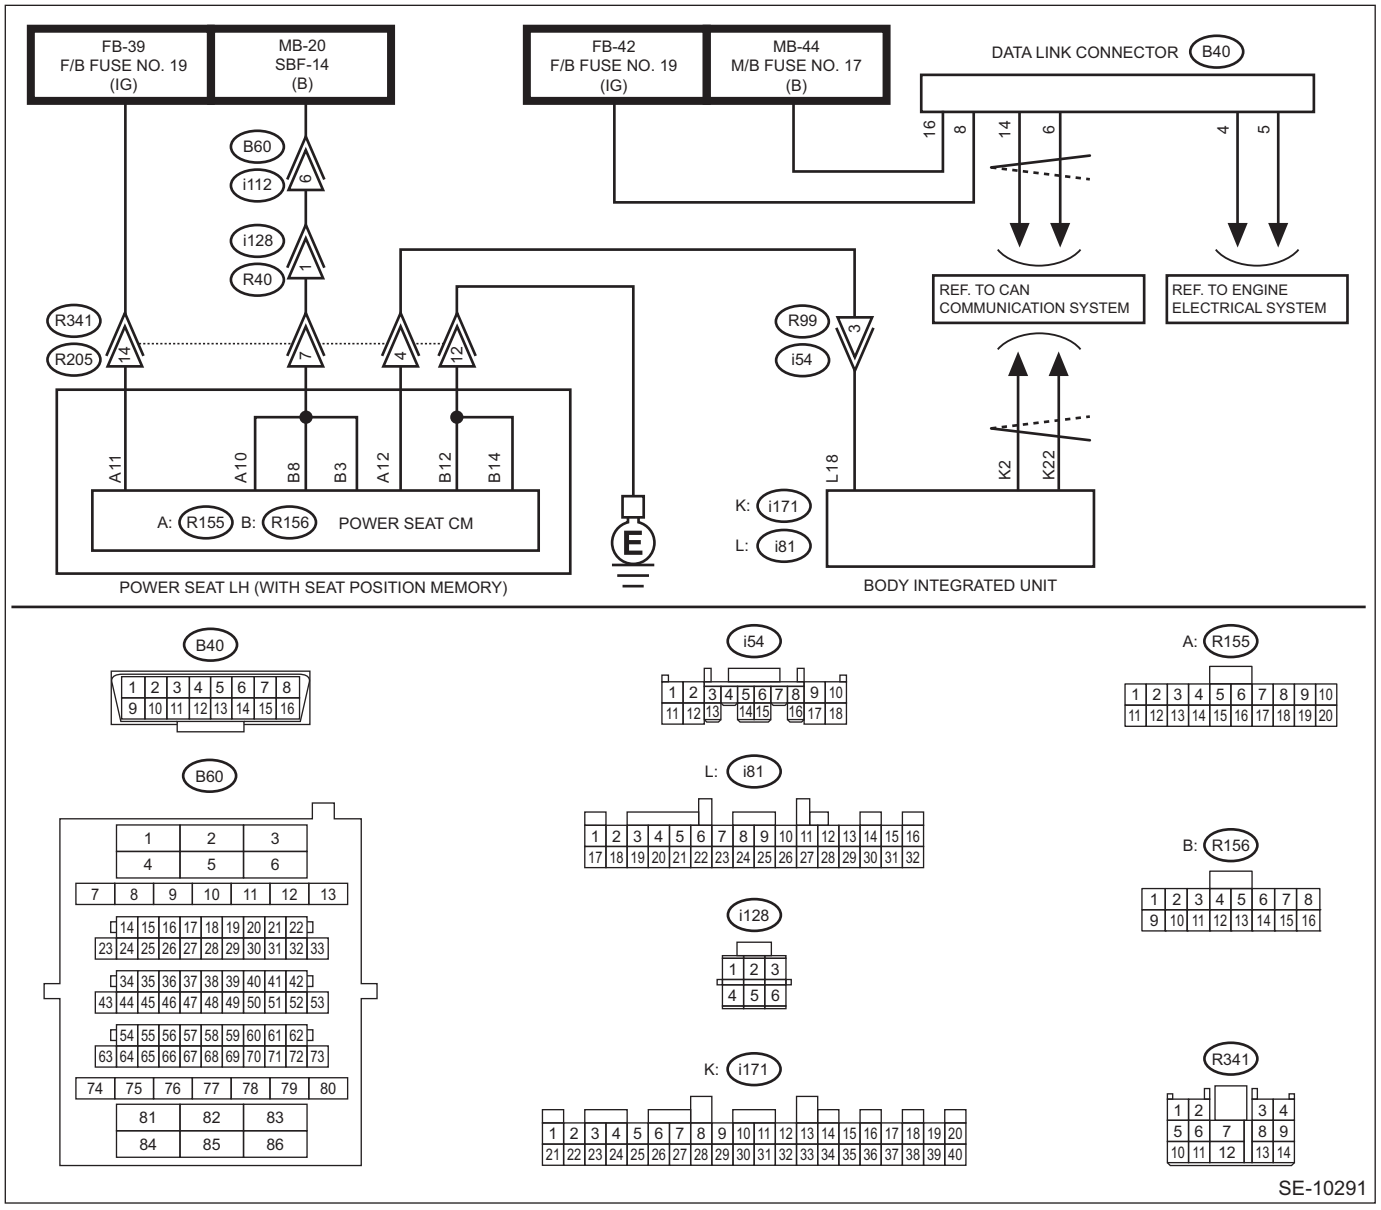
A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to PSM(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
If the communication with the body integrated unit is not possible either, refer to LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-13, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective power seat control module
- Body integrated unit malfunctioning
- Defective LIN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

Power seat system <Ref. to WI-312, WIRING DIAGRAM, Power Seat System.>

Step		Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Perform communication with the system other than the power seat control module using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK LAN SYSTEM.** Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the diagnosis according to the inspection for LAN system.

	Step	Check	Yes	No
3	**CHECK FOR POOR CONTACT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of power seat control module. 3) Disconnect the connector of body integrated unit. 4) Connect the disconnected connectors. 5) Turn the ignition switch to ON. 6) Perform communication with the power seat control module using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat control module connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R155) No. 11 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit in harness between power seat control module connector and fuse.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 12 — Chassis ground:*** ***(R156) No. 14 — Chassis ground:***	Is the resistance less than 1 Ω?	Replace the power seat control module. <Ref. to SE-53, REMOVAL, Power Seat System.>	Repair the open circuit of harness between power seat control module connector and chassis ground.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Seat Memory» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to PSM(diag)-19, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Seat Memory» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B2600	LIN COMMUNICATION	—
B2601	LIN CIRCUIT LOW	—
B2602	VEHICLE SPEED CONTROL	—
B2603	EPB CONTROL	—
B2605	BATTERY CONTROL LOW	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to PSM(diag)-13, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>
3) Turn the ignition switch ON → OFF, and wait for 45 seconds or more.
4) Turn the ignition switch OFF → ON, and wait for 5 seconds or more.
5) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B2604	POWER SEAT MEMORY EEPROM	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to PSM(diag)-13, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>
3) Initialize the power seat system. <Ref. to SE-73, INITIALIZATION PROCEDURES, ADJUSTMENT, Power Seat System.>
4) Turn the ignition switch ON → OFF, and wait for 45 seconds or more.
5) Turn the ignition switch OFF → ON, and wait for 5 seconds or more.
6) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

DTC	Item	Note
B2606	POWER SEAT POSITION SENSOR CIRCUIT LOW	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to PSM(diag)-13, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>
3) Operate the power seat switch. (Any of slide/reclining/lifter/tilt)

4) Turn the ignition switch ON → OFF, and wait for 45 seconds or more.
5) Turn the ignition switch OFF → ON, and wait for 5 seconds or more.
6) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Seat Memory» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Display	Description	Standard	Note
Battery Terminal Voltage	Battery voltage is displayed.	0 — 25.5 V	—
Ignition switch	Ignition switch status is displayed.	ON: when ignition switch is ON OFF: when ignition switch is OFF	—
Set SW	Status of the set switch in seat memory switch is displayed.	ON: when set switch is ON OFF: when set switch is OFF	—
Memory SW1	Status of the memory switch 1 in seat memory switch is displayed.	ON: when memory switch 1 is ON OFF: when memory switch 1 is OFF	—
Memory SW2	Status of the memory switch 2 in seat memory switch is displayed.	ON: when memory switch 2 is ON OFF: when memory switch 2 is OFF	—
Slide SW	Status of the slide switch in power seat switch is displayed.	OFF: when slide switch is OFF FRONT: when slide switch (forward) is ON REAR: when slide switch (rearward) is ON	—
Reclining SW	Status of the reclining switch in power seat switch is displayed.	OFF: when reclining switch is OFF FRONT: when reclining switch (forward) is ON FRONT: when reclining switch (rearward) is ON	—
Lifter SW	Status of the lifter switch in power seat switch is displayed.	OFF: when lifter switch is OFF UP: when lifter switch (upward) is ON DOWN: when lifter switch (downward) is ON	—
Tilt SW	Status of the tilt switch in power seat switch is displayed.	OFF: when tilt switch is OFF UP: when tilt switch (upward) is ON DOWN: when tilt switch (downward) is ON	—
Pulse Power Circuit	Motor pulse sensor power supply circuit status is displayed.	Normal: when normal Abnormal: when abnormal	—
Slide Output	Power seat control module output status is displayed. (Slide motor)	OFF: when OFF FRONT: when moved in the front direction REAR: when moved in the rear direction	—

Display	Description	Standard	Note
Reclining Output	Power seat control module output status is displayed. (Reclining motor)	OFF: when OFF FRONT: when moved in the front direction REAR: when moved in the rear direction	—
Lifter Output	Power seat control module output status is displayed. (Lifter motor)	OFF: when OFF UP: when moved in the upper direction DOWN: when moved in the lower direction	—
Tilt Output	Power seat control module output status is displayed. (Tilt motor)	OFF: when OFF UP: when moved in the upper direction DOWN: when moved in the lower direction	—
Memory SW1 Memorized	Registration status of the memory switch 1 in seat memory switch	ON: when registered OFF: when not registered	—
Memory SW2 Memorized	Registration status of the memory switch 2 in seat memory switch	ON: when registered OFF: when not registered	
Keyless Access & Start Link 1 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	Seat memory operates when the key No. displayed in the «Keyless Access Key Information» is ON in the item shown on the left.
Keyless Access & Start Link 2 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 3 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 4 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 5 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 6 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 7 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access Key Information	Key No. currently identified by the vehicle is displayed.	OFF: when no key is registered Keyless Access & Start Link 1: Keyless Access & Start Link 2: Keyless Access & Start Link 3: Keyless Access & Start Link 4: Keyless Access & Start Link 5: Keyless Access & Start Link 6: Keyless Access & Start Link 7:	—
Slide Position	Slide motor position is displayed.	–32768 — 32767	—
Reclining Position	Reclining motor position is displayed.	–32768 — 32767	—
Lifter Position	Lifter motor position is displayed.	–32768 — 32767	—
Tilt Position	Tilt motor position is displayed.	–32768 — 32767	—

11.Freeze Frame Data Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Seat Memory» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Display	Content	Note
Battery Terminal Voltage	Battery voltage is displayed.	—
Slide Output	Power seat control module output status is displayed. (Slide motor)	—
Reclining Output	Power seat control module output status is displayed. (Reclining motor)	—
Lifter Output	Power seat control module output status is displayed. (Lifter motor)	—
Tilt Output	Power seat control module output status is displayed. (Tilt motor)	—

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
B2600	LIN COMMUNICATION	<Ref. to PSM(diag)-20, DTC B2600 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2601	LIN CIRCUIT LOW	<Ref. to PSM(diag)-21, DTC B2601 LIN CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2602	VEHICLE SPEED CONTROL	<Ref. to PSM(diag)-22, DTC B2602 VEHICLE SPEED CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2603	EPB CONTROL	<Ref. to PSM(diag)-23, DTC B2603 EPB CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2604	POWER SEAT MEMORY EEPROM	<Ref. to PSM(diag)-24, DTC B2604 POWER SEAT MEMORY EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2605	BATTERY CONTROL LOW	<Ref. to PSM(diag)-25, DTC B2605 BATTERY CONTROL LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2606	POWER SEAT POSITION SENSOR CIRCUIT LOW	<Ref. to PSM(diag)-27, DTC B2606 POWER SEAT POSITION SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2600 LIN COMMUNICATION

DTC detecting condition:

No signal is received from body integrated unit for a certain period of time (2100 ms) or more. Or, transmission from the power seat control module is not possible for a certain period of time (2100 ms) or more.

Trouble symptom:

- Seat operation is possible with manual operation, but not with memory function.
- Registration is possible with memory switch, but not with keyless access push button start system.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2600 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-17, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Perform the diagnosis of DTC U0208. <Ref. to BC(diag)-71, DTC U0208 LOST COMMUNICATION WITH SEAT MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Replace with a power seat control module working properly. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 3) Turn the ignition switch to ON. 4) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2600 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	There was an abnormality in power seat control module.

B: DTC B2601 LIN CIRCUIT LOW

DTC detecting condition:
LIN communication circuit with the body integrated unit is shorted for a certain period of time (4000 ms) or more.

Trouble symptom:
Seat operation is possible with manual operation, but not with memory function.
Registration is possible with memory switch, but not with keyless access push button start system.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2601 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-17, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Perform the diagnosis of DTC U0208. <Ref. to BC(diag)-71, DTC U0208 LOST COMMUNICATION WITH SEAT MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Replace with a power seat control module working properly. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 3) Turn the ignition switch to ON. 4) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2601 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	There was an abnormality in power seat control module.

C: DTC B2602 VEHICLE SPEED CONTROL

DTC detecting condition:
Detection of 300 km/h or more continued for a certain period of time (2100 ms) or more.
Trouble symptom:
Seat operation is possible with manual operation, but not with memory function.
(Memory registration is possible.)

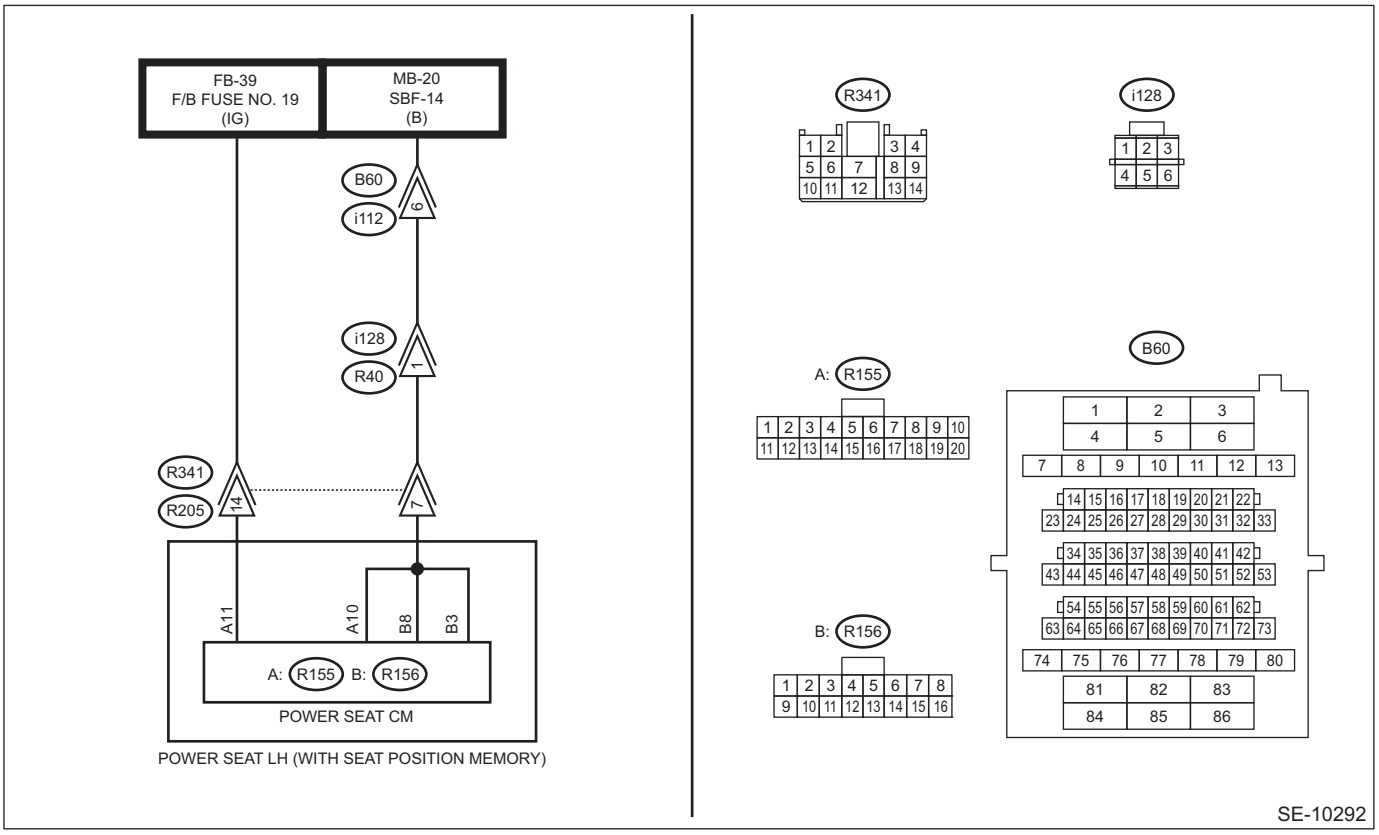
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2602 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.
3	**CHECK VEHICLE SPEED SIGNAL OF VDC MODULE.** Stop the vehicle, and read the current data values «FR Wheel Speed» «FL Wheel Speed» «RR Wheel Speed» «RL Wheel Speed» of VDC module using Subaru Select Monitor. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the displayed value abnormal?	Replace the VDC module, or inspect the vehicle speed sensor harness circuit.	Go to step **4**.
4	**CHECK BODY INTEGRATED UNIT VEHICLE SPEED SIGNAL.** Stop the vehicle, and read the current data «Front Wheel Speed» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-24, Read Current Data.>	Is the displayed value abnormal?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Go to step **5**.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Replace with a power seat control module working properly. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 3) Turn the ignition switch to ON. 4) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2602 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	There was an abnormality in power seat control module.

D: DTC B2603 EPB CONTROL

DTC detecting condition:
Detection of EPB abnormal signal continued for a certain period of time (2100 ms) or more.
Trouble symptom:
Seat operation is possible with manual operation, but not with memory function.
(Memory registration is possible.)

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2603 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.
3	**CHECK BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Replace with a power seat control module working properly. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 3) Turn the ignition switch to ON. 4) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2603 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	There was an abnormality in power seat control module.

E: DTC B2604 POWER SEAT MEMORY EEPROM



DTC DETECTING CONDITION:
There is a difference between writing value and reading value of power seat control module EEPROM.
TROUBLE SYMPTOM:
Seat operation is possible with manual operation, but not with memory function.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2604 displayed? (Current malfunction)	Replace the power seat control module. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B2605 BATTERY CONTROL LOW

DTC detecting condition:
During the motor operation, voltage for power seat control module drops for a moment. (7.5 V or less)
Trouble symptom:
- Seat positions cannot be memorized.
- Seat operation is possible with manual operation, but not with memory function.

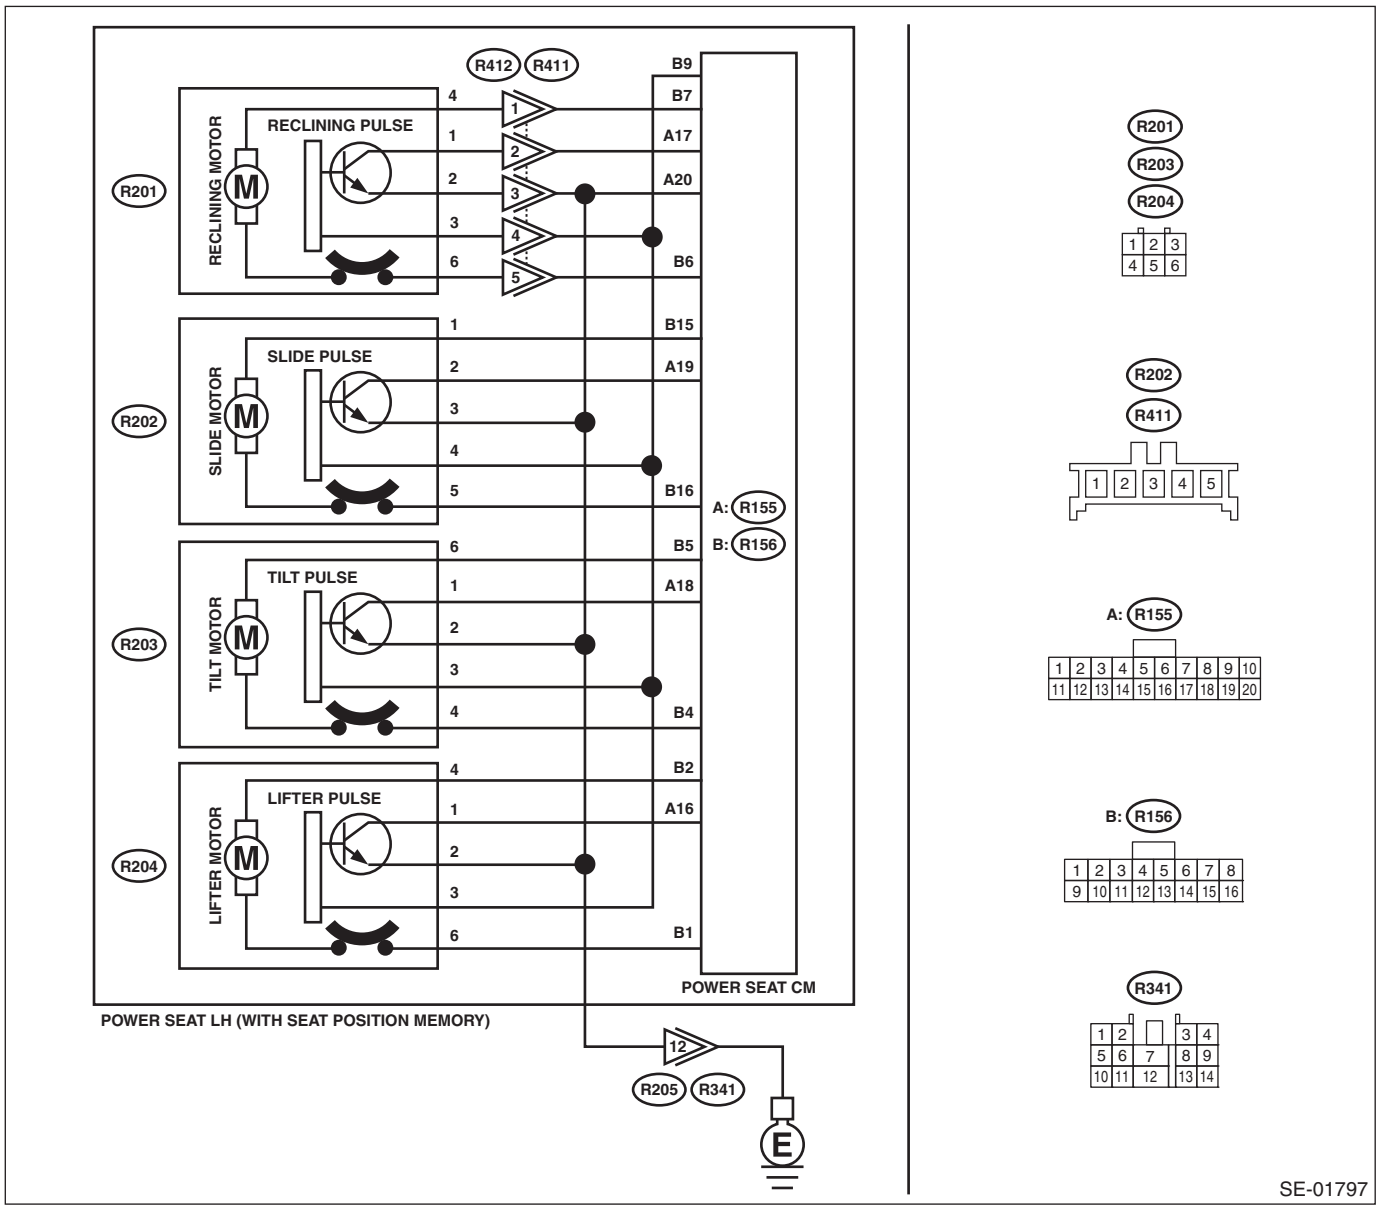
Wiring diagram:
Power seat system <Ref. to WI-313, DRIVER'S SEAT (WITH MEMORY), WIRING DIAGRAM, Power Seat System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2605 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Perform the clear memory operation. <Ref. to PSM(diag)-13, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect, and then connect the power seat control module connector. 4) Turn the ignition switch to ON. 5) Move the power seat. 6) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2605 displayed? (Current malfunction)	Go to step **3**.	Repair or replace the poor contact of connector.
3	**CHECK POWER SEAT CONTROL MODULE.** Using Subaru Select Monitor, check the display of power seat control module current data «Battery Terminal Voltage». <Ref. to PSM(diag)-16, OPERATION, Read Current Data.>	Is the voltage 8.5 — 16.5 V?	Go to step **5**.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat control module connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R155) No. 11 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the power seat control module. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Repair the open circuit in harness between power seat control module connector and fuse.
5	**CHECK BATTERY VOLTAGE.** Measure the battery voltage while the power seat is in operation.	Is the voltage 8.5 — 16.5 V?	Ask the user if the power window or passenger's power seat was operated or cranking was performed while the driver's power seat is in operation. NOTE: Even when the battery voltage is normal under ordinary circumstance, the voltage may drop to 7.5 V or less in some cases, for example at cranking.	Check the battery. <Ref. to SC(H4DO)-49, Battery.> <Ref. to SC(H6DO)-58, Battery.>

G: DTC B2606 POWER SEAT POSITION SENSOR CIRCUIT LOW

DTC detecting condition:



Short circuit in the pulse sensor is detected during the motor operation for a certain period of time (12 ms) or more.

Trouble symptom:

- Seat memory does not operate.
- Seat operation stops immediately after manual operation is performed.

Wiring diagram:

Power seat system <Ref. to WI-313, DRIVER'S SEAT (WITH MEMORY), WIRING DIAGRAM, Power Seat System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the clear memory operation. <Ref. to PSM(diag)-13, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect, and then connect the power seat control module connector. 4) Turn the ignition switch to ON. 5) Move the power seat. 6) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2606 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat control module connector. 3) Disconnect the connectors of all motors (slide/tilt/lifter/reclining). 4) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit to ground in harness between power seat control module connector and motor connector.
3	**CHECK SLIDE MOTOR.** 1) Connect the slide motor connector. 2) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the seat cushion frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
4	**CHECK TILT MOTOR.** 1) Disconnect the slide motor connector. 2) Connect the tilt motor connector. 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the seat cushion frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
5	**CHECK LIFTER MOTOR.** 1) Disconnect the tilt motor connector. 2) Connect the lifter motor connector. 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the seat cushion frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>

	Step	Check	Yes	No
6	**CHECK RECLINING MOTOR.** 1) Disconnect the lifter motor connector. 2) Connect the reclining motor connector. 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the power seat control module. <Ref. to SE-54, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Replace the backrest frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>

14.Diagnostics with Phenomenon

A: INSPECTION

Refer to “TROUBLE SYMPTOM” for the power seat system. <Ref. to SE-56, TROUBLE SYMPTOM, INSPECTION, Power Seat System.>

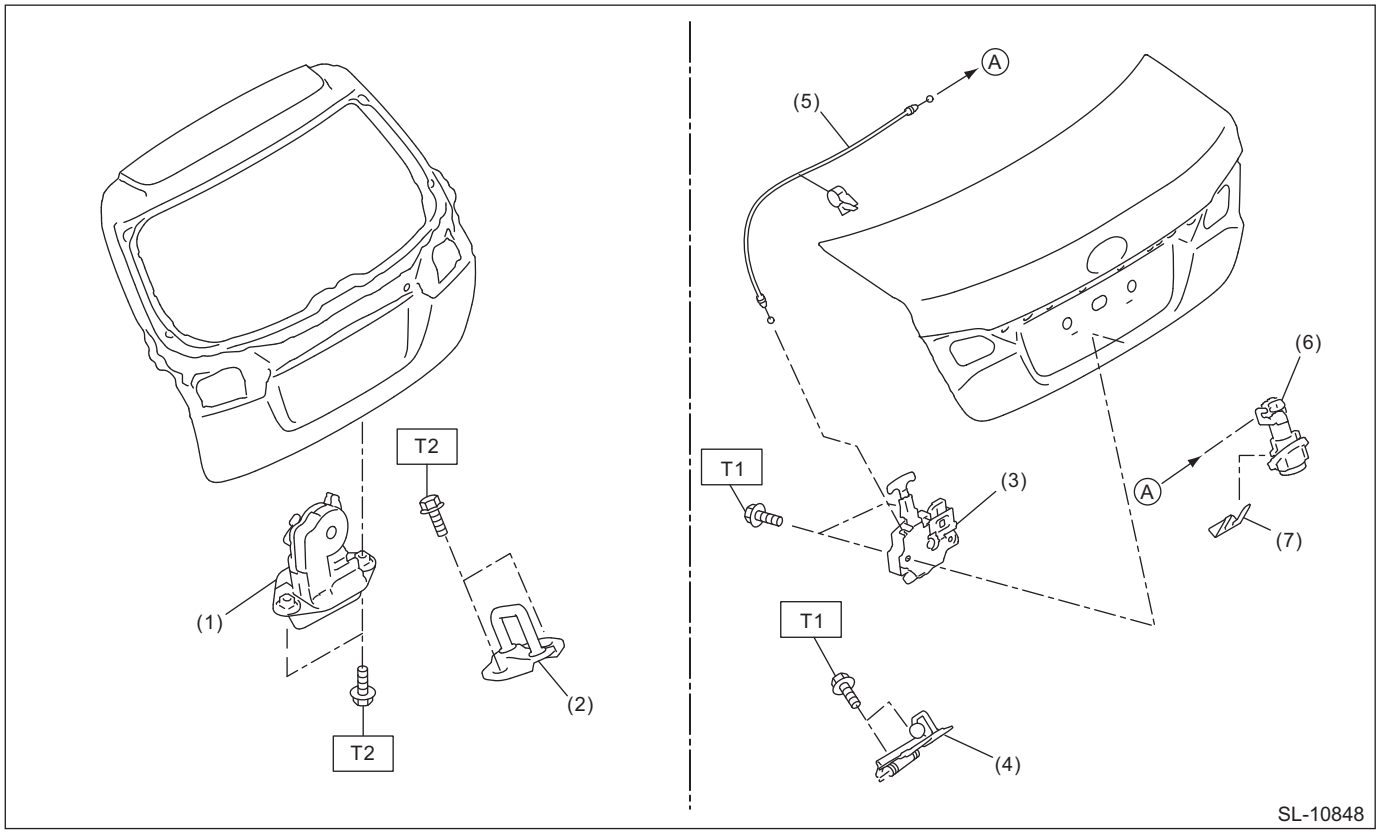
1. General Description

A: COMPONENT

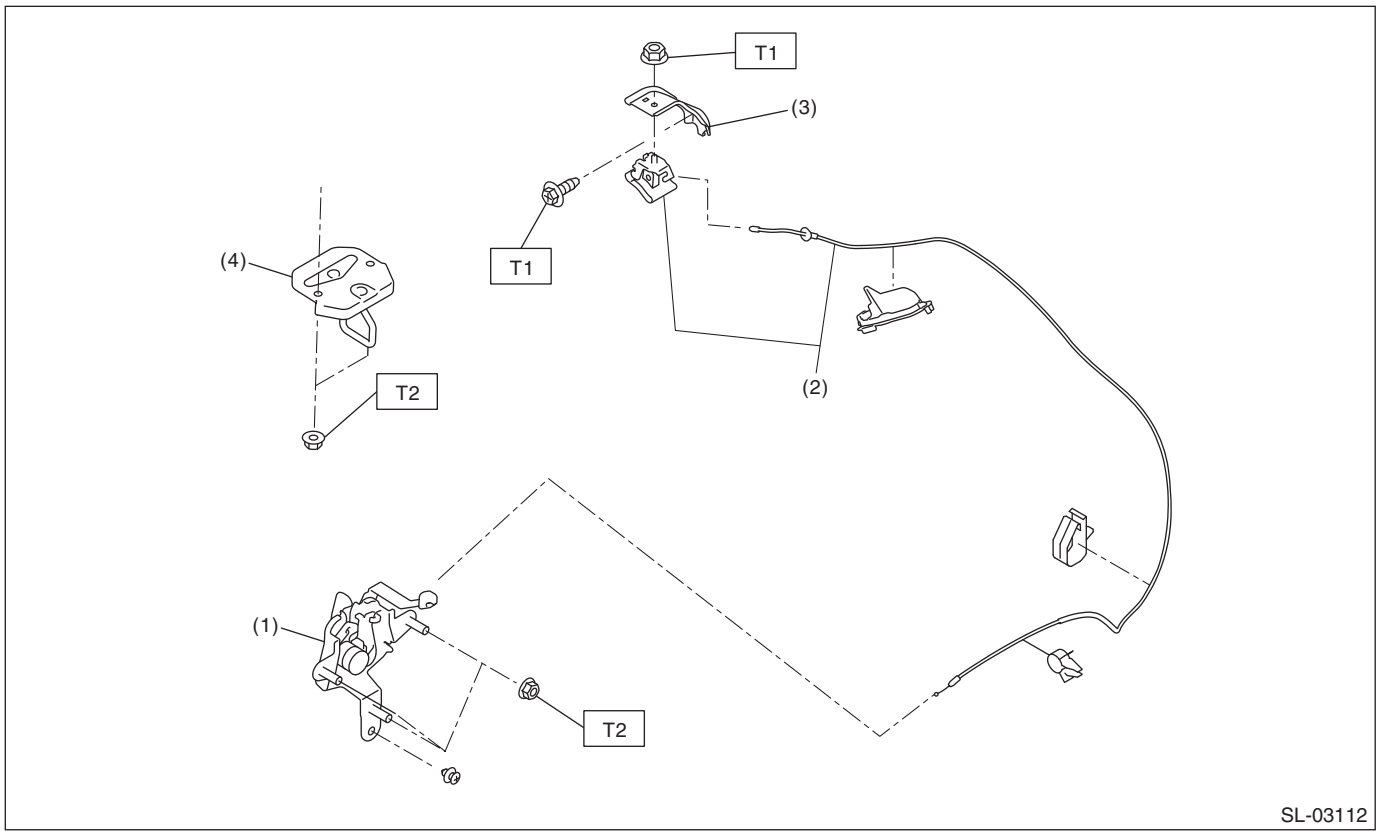
1. DOOR LOCK ASSEMBLY



(A) Front
(B) Rear

(1) Grommet - screw
(2) Remote ASSY - door
(3) Cap remote
(4) Latch & actuator ASSY - front
(5) Handle - door outer (model with keyless access with push button start)
(6) Cover - handle front outer (passenger's seat)
(7) Handle - door outer (model without keyless access with push button start)
(8) Cover - handle front outer (driver's seat)
(9) Key lock - door (driver's seat only)
(10) Spacer - door handle outer B
(11) Spacer - door handle outer A
(12) Frame ASSY - front door outer
(13) Striker - door
(14) TORX® bolt
(15) Screw
(16) Latch & actuator ASSY - rear
(17) Cover - handle rear outer
(18) Frame ASSY - rear door outer

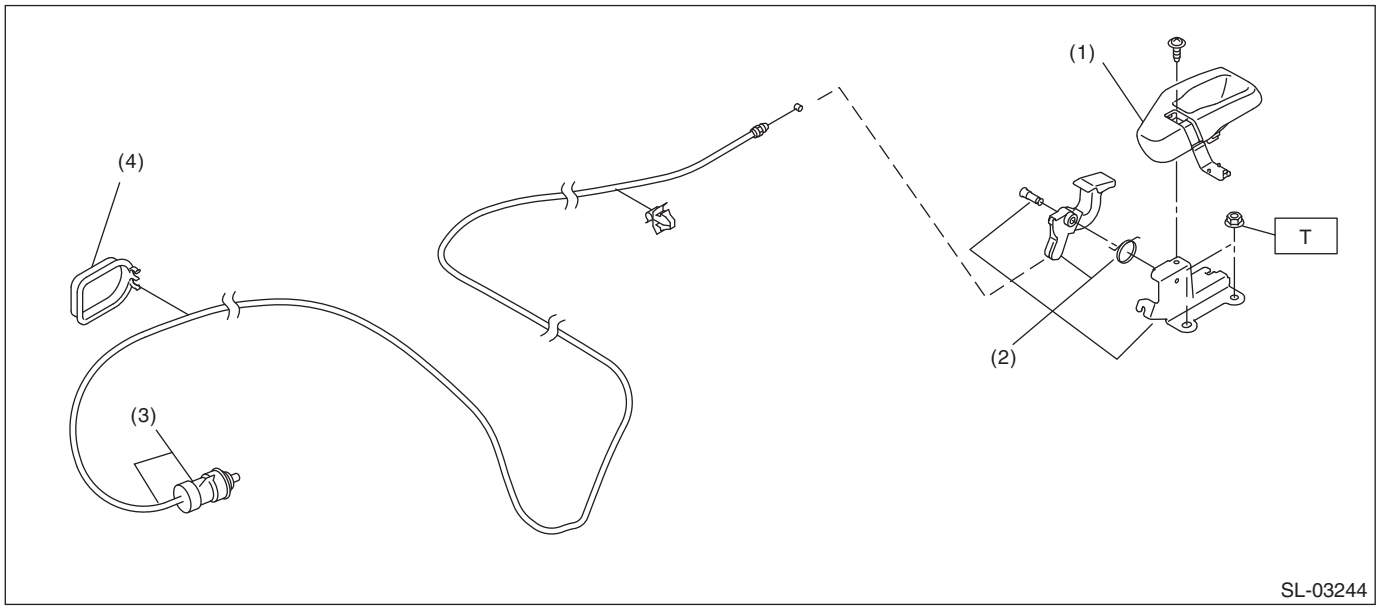
Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.5 (0.7, 4.8)
T2: 7.5 (0.8, 5.5)
T3: 18 (1.8, 13.3)



2. REAR GATE LOCK AND TRUNK LID LOCK

(1) Latch & actuator - rear gate
(2) Striker - rear gate
(3) Lock ASSY - trunk lid
(4) Striker - trunk lid
(5) Cable ASSY - trunk lid
(6) Key cylinder (trunk lid only)
(7) Clamp - key trunk lid

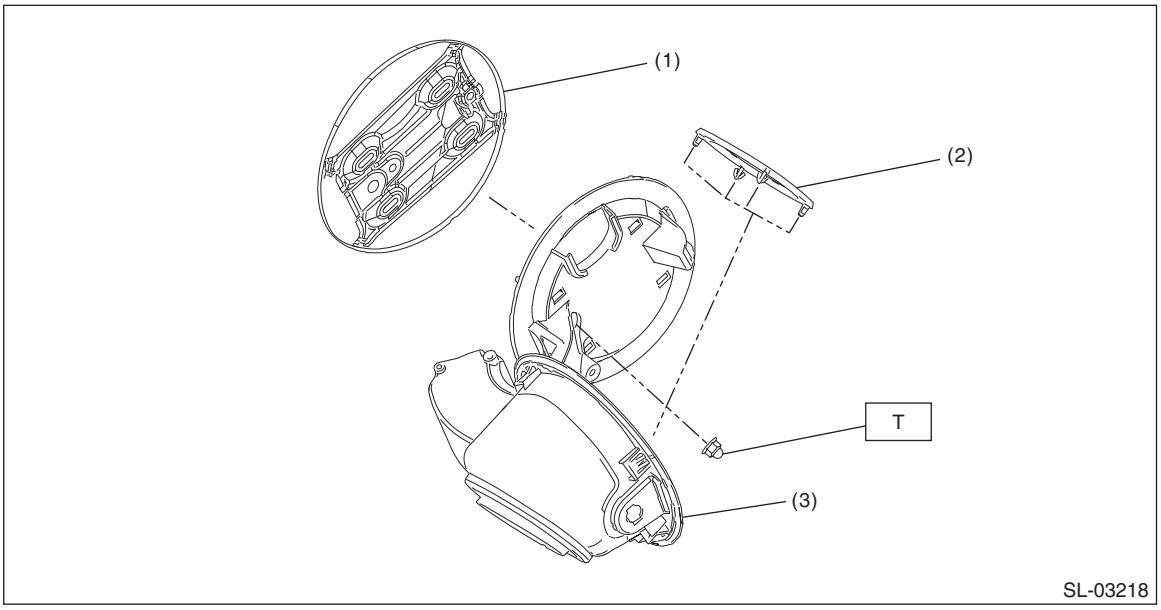
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)



3. FRONT HOOD LOCK

(1) Lock ASSY - front hood
(2) Cable - front hood
(3) Bracket - opener handle
(4) Striker - front hood

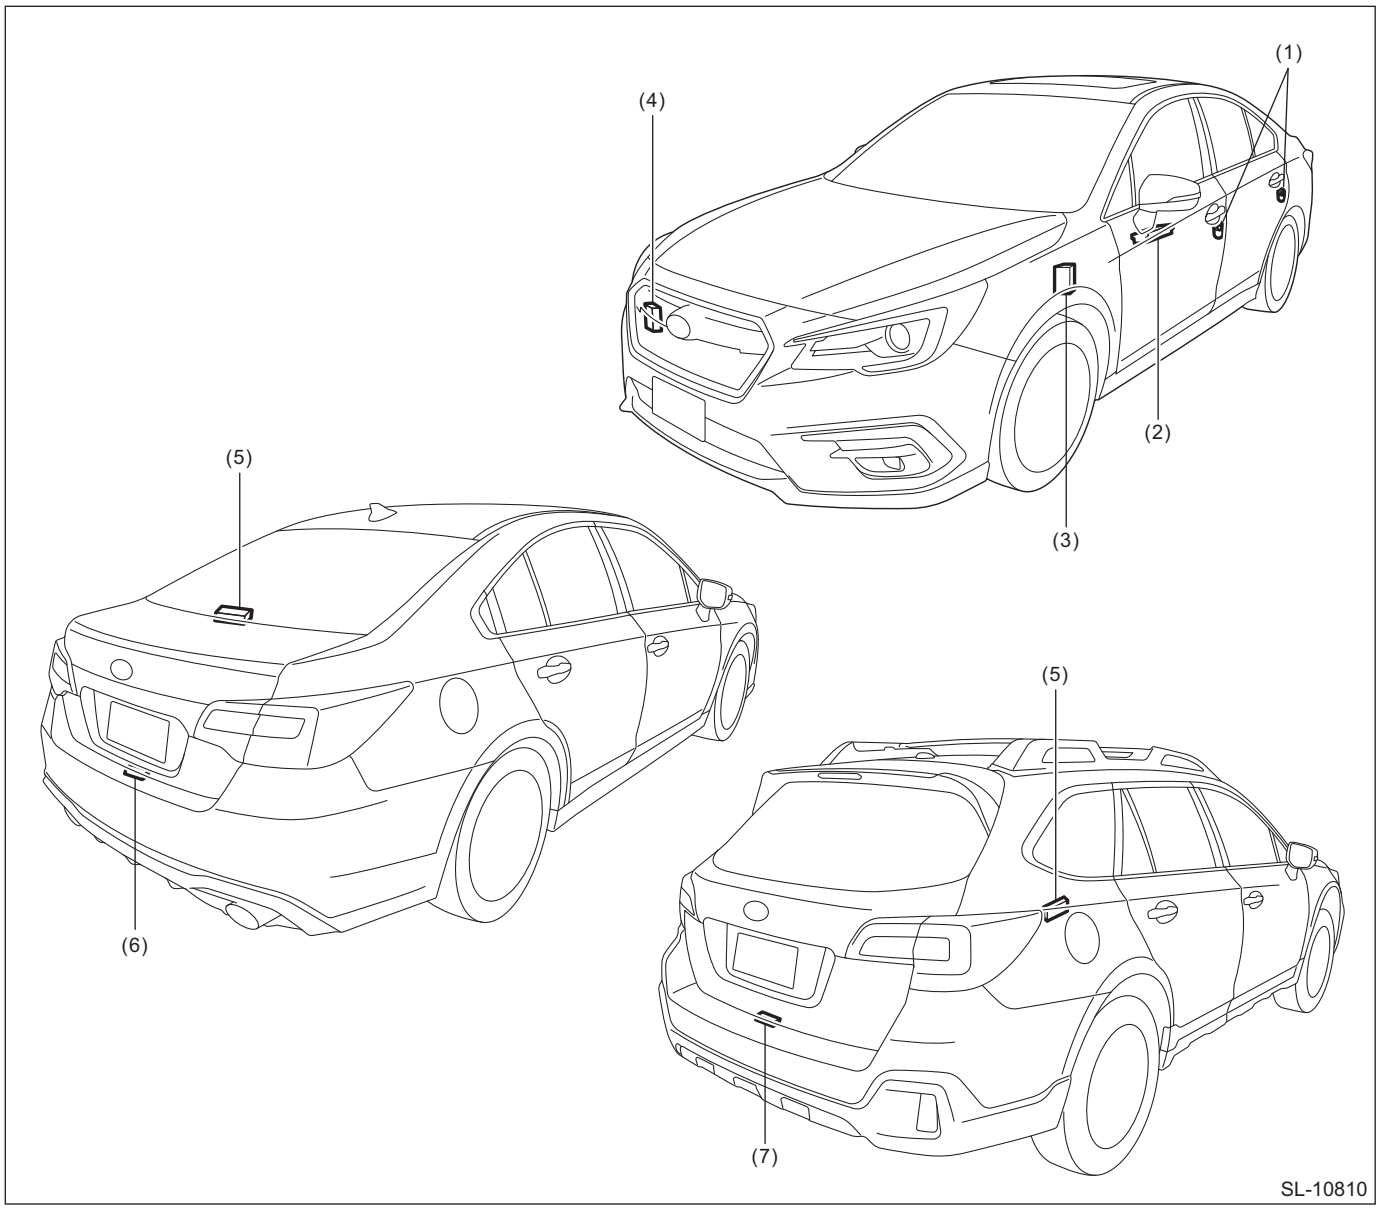
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 33 (3.4, 24.3)



4. REMOTE OPENER

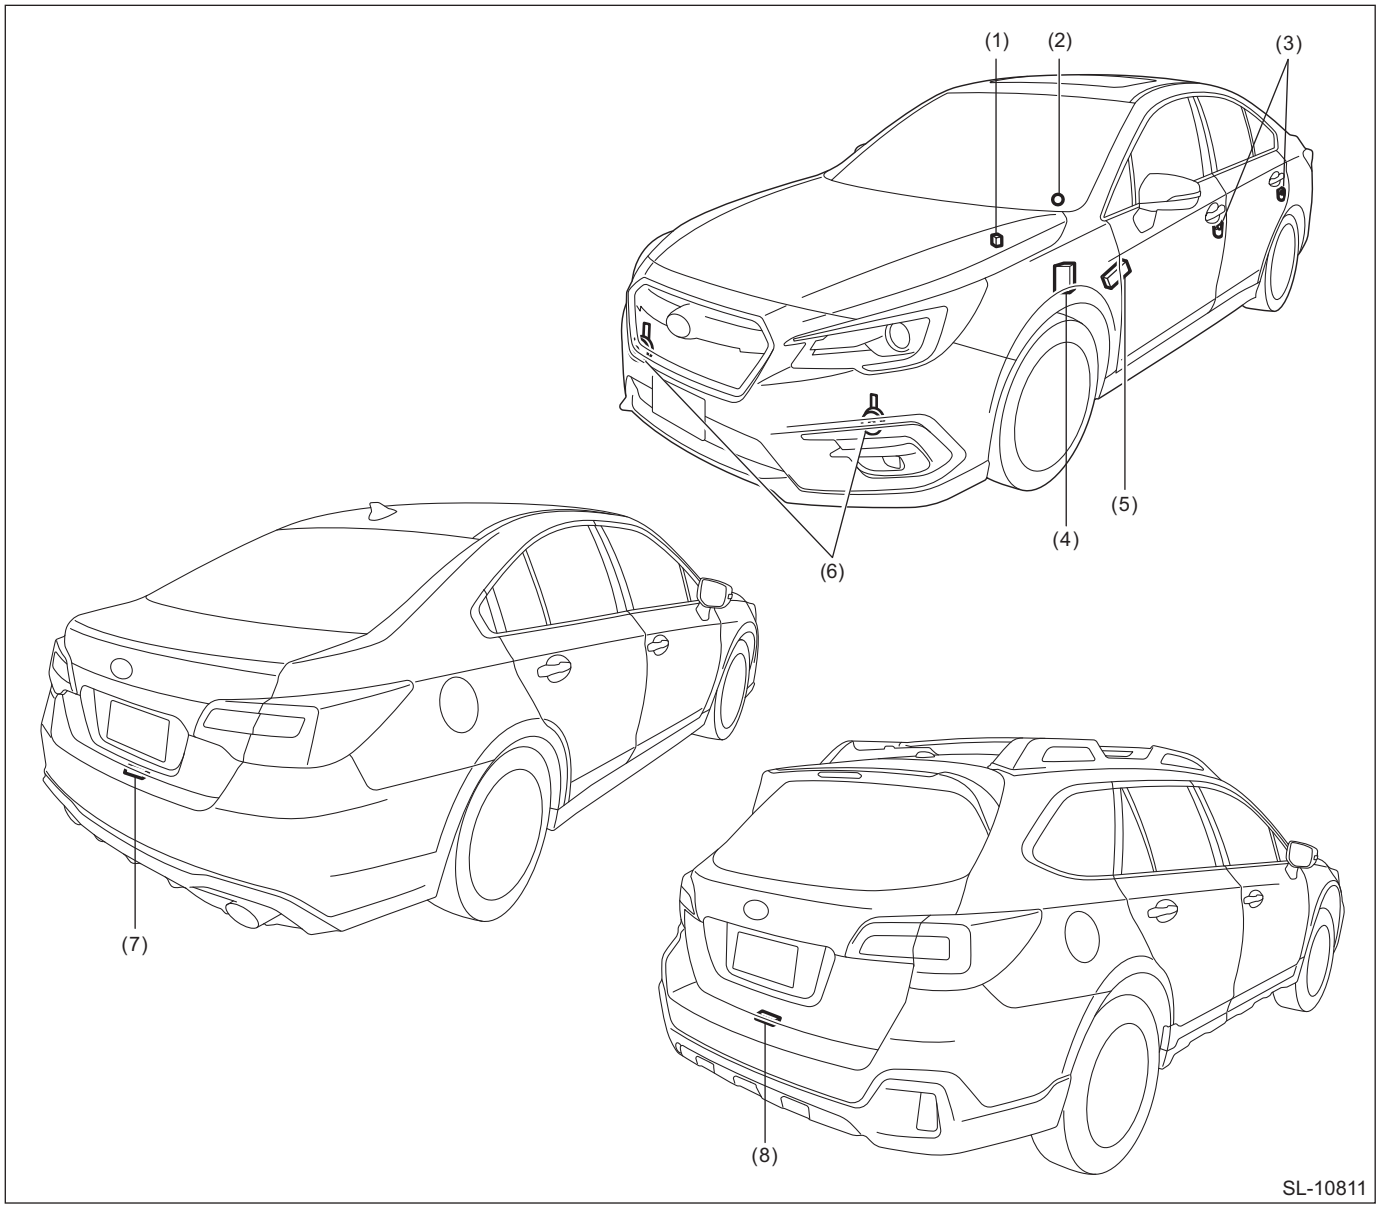
(1) Cover - handle
(2) Pull handle - opener
(3) Cable ASSY - fuel
(4) Protector - cable (OUTBACK model)

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



5. FUEL FLAP

(1) Flap - COMPL fuel
(2) Ring clip
(3) Saucer - COMPL



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

6. KEYLESS ENTRY SYSTEM

(1) Door switch
(2) Power window main switch
(3) Body integrated unit
(4) Keyless buzzer
(5) Keyless entry control module
(6) Trunk lid latch switch (sedan model)
(7) Rear gate latch switch (OUTBACK model)

7. SECURITY SYSTEM

(1)	Horn relay (in main fuse box)	(4)	Body integrated unit	(7)	Trunk lid latch switch (sedan model)
(2)	Security indicator light (in combination meter)	(5)	Impact sensor (driver's seat instrument panel side) (dealer option)	(8)	Rear gate latch switch (OUTBACK model)
(3)	Door switch	(6)	Horn		

8. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
- Except for model without keyless access with push button start
- Refer to "Electrical Component Location" of "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-11, Electrical Component Location.>

9. BACKUP UNIT

NOTE:
For exploded view of the backup unit, refer to "Instrument Panel" of "EXTERIOR/INTERIOR TRIM" section. <Ref. to EI-15, INSTRUMENT PANEL, COMPONENT, General Description.>

B: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• If any immobilizer related part has been replaced, make sure to register the immobilizer.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

1. SPECIAL TOOL

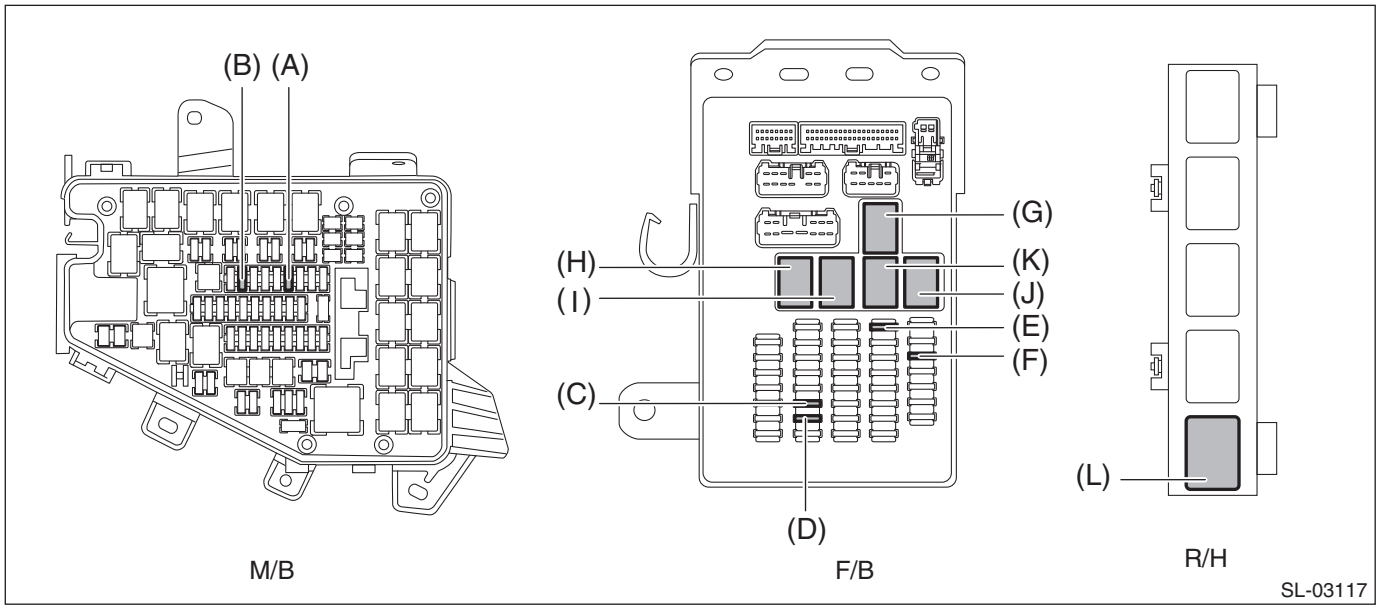


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Drill	Used for replacing ignition key lock.
Reverse tap	Used for replacing ignition key lock.
TORX® T30	Used for removing and installing the door lock actuator, door outer handle cover and frame assembly.
Clip remover	Used for removing trim clip.

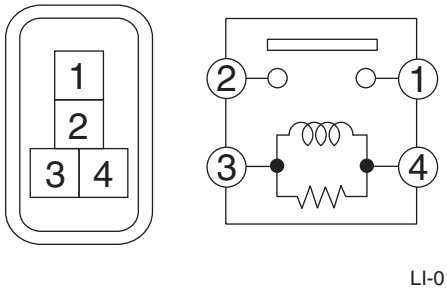
2. Relay and Fuse

A: LOCATION

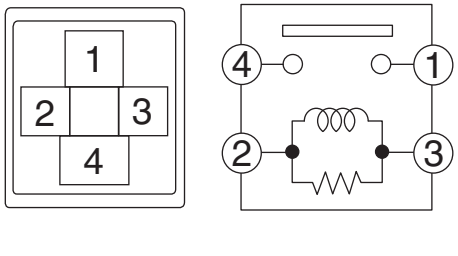
Main fuse box (M/B)	Fuse 15 A (backup unit)	(A)
	Fuse 15 A (body integrated unit)	(B)
Fuse & relay box (F/B)	Fuse 10 A (body integrated unit, keyless entry CM)	(C)
	Fuse 7.5 A (immobilizer antenna)	(D)
	Fuse 7.5 A (immobilizer CM)	(E)
	Fuse 7.5 A (immobilizer CM, backup unit)	(F)
	IG relay 1	(G)
	IG relay 2	(H)
	Starter relay	(I)
	Accessory relay 1	(J)
	Accessory relay 2	(K)
Relay holder (R/H)	Starter cut relay	(L)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

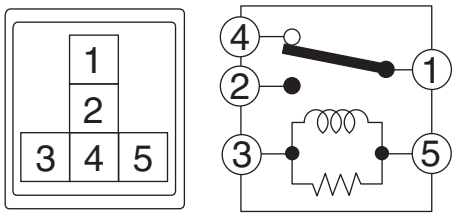
B: INSPECTION



1. CHECK FUSE



1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.



NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	 AC-02796
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01566
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Door Lock Control System

A: WIRING DIAGRAM

For wiring diagrams related to the door lock control system, refer to the following items.
- Keyless entry system: <Ref. to WI-279, WIRING DIAGRAM, Keyless Entry System.>
- Keyless access with push button start system: <Ref. to WI-269, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

B: ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-11, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
The door lock control system does not operate.	1. Remove and visually inspect the following fuses. • No. 14 (in fuse & relay box) • No. 26 (in fuse & relay box) • No. 14 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-12, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the rear gate/trunk opener button and the circuit.	<Ref. to SL-15, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>
	5. Check the door lock actuator and the circuit.	<Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY.** 1) Disconnect the connector of body integrated unit. 2) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **2**.	Check the harness for open or short circuit between body integrated unit and fuse.

	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT.** Measure the resistance between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 4 — Chassis ground:*** ***(B280) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair or replace the harness.

3. CHECK DOOR LOCK SWITCH

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «Manual lock SW input». NOTE: For detailed operation procedures, refer to "Application help".	Does the display change to OFF ←→ ON, when the door lock switch is moved to LOCK?	Go to step **2**.	Go to step **3**.
2	**CHECK DOOR LOCK SWITCH.** From the condition in step 1), operate the door lock switch (driver's and passenger's) in the UNLOCK direction.	Does the display switch between OFF ←→ ON?	The door lock switch is OK.	Go to step **4**.
3	**CHECK POWER WINDOW MAIN SWITCH.** 1) Disconnect the power window main switch connector. 2) Measure the resistance between terminals when moving the power window switch (door lock switch) to LOCK direction. ***Terminals*** ***Driver's side*** ***No. 3 — No. 1:*** ***Passenger's side*** ***No. 4 — No. 5:***	Does the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step **4**.	Replace the power window main switch. <Ref. to GW-13, Power Window Control Switch.>
4	**CHECK POWER WINDOW MAIN SWITCH.** Measure the resistance between terminals when moving the power window switch (door lock switch) to UNLOCK direction. ***Terminals*** ***Driver's side*** ***No. 9 — No. 1:*** ***Passenger's side*** ***No. 2 — No. 5:***	Does the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step **5**.	Replace the power window main switch. <Ref. to GW-13, Power Window Control Switch.>
5	**CHECK HARNESS.** Measure the resistance between the power window main switch connector and chassis ground. ***Connector & terminal*** ***Driver's side*** ***(D7) No. 3 — Chassis ground:*** ***Passenger's side*** ***(D125) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the harness.

	Step	Check	Yes	No
6	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and power window main switch. ***Connector & terminal*** ***Driver's side*** ***(D7) No. 3 — (i171) No. 32:*** ***(D7) No. 9 — (i171) No. 12:*** ***Passenger's side*** ***(D125) No. 4 — (i171) No. 32:*** ***(D125) No. 2 — (i171) No. 12:***	Is harness normal?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

4. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

	Step	Check	Yes	No
1	**CHECK HARNESS (DOOR LOCK).** 1) Disconnect the body integrated unit and each door lock actuator connector. 2) Check the harness between body integrated unit and each door lock actuator. ***Connector & terminal*** ***Front door LH*** ***(i265) No. 6 — (D72) No. 4:*** ***Front door RH*** ***(i265) No. 7 — (D18) No. 4:*** ***Rear door LH*** ***(i266) No. 5 — (D26) No. 4:*** ***Rear door RH*** ***(i266) No. 4 — (D32) No. 4:***	Is harness normal?	Go to step **2**.	Repair or replace the harness.
2	**CHECK HARNESS (DOOR UNLOCK).** Check the harness between body integrated unit and each door lock actuator. ***Connector & terminal*** ***Front door LH*** ***(i84) No. 6 — (D72) No. 1:*** ***Front door RH*** ***(i265) No. 2 — (D18) No. 1:*** ***Rear door LH*** ***(i266) No. 9 — (D26) No. 1:*** ***Rear door RH*** ***(i266) No. 3 — (D32) No. 1:***	Is harness normal?	Sedan model: Go to step **5**. OUTBACK model: Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS (REAR GATE UNLOCK).** Check the harness between the body integrated unit and rear gate lock actuator. ***Connector & terminal*** ***(i266) No. 7 — (D46) No. 1:***	Is harness normal?	Go to step **4**.	Repair or replace the harness.
4	**CHECK HARNESS (REAR GATE UNLOCK).** Measure the resistance between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D46) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness.
5	**CHECK HARNESS (TRUNK UNLOCK).** Check the harness between the body integrated unit and trunk lid lock actuator. ***Connector & terminal*** ***(i266) No. 7 — (R186) No. 1:***	Is harness normal?	Go to step **6**.	Repair or replace the harness.

	Step	Check	Yes	No
6	**CHECK HARNESS (TRUNK UNLOCK).** Measure the resistance between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness.
7	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** 1) Connect the body integrated unit connector. 2) Measure the voltage between terminals of the body integrated unit when operating the door lock switch to LOCK direction. ***Connector & terminal*** ***Except for front door LH*** ***(i265) No. 7 (+) — (i265) No. 2 (–):*** ***Front door LH*** ***(i265) No. 6 (+) — (i84) No. 6 (–):***	Does the voltage change from less than 1 V → 9 V or more? (During lock output)	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>
8	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** Measure the voltage between terminals of the body integrated unit when operating the door lock switch to UNLOCK direction. ***Connector & terminal*** ***Except for front door LH*** ***(i265) No. 2 (+) — (i265) No. 7 (–):*** ***Front door LH*** ***(i84) No. 6 (+) — (i265) No. 6 (–):***	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step **9**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>
9	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** Measure the voltage between body integrated unit and chassis ground when operating the rear gate opener button. ***Connector & terminal*** ***(i266) No. 7 (+) — Chassis ground (–):***	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step **10**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>
10	**CHECK DOOR LOCK ACTUATOR.** Check the door lock actuator. • Front door lock actuator: <Ref. to SL-38, INSPECTION, Front Door Latch and Door Lock Actuator Assembly.> • Rear door lock actuator: <Ref. to SL-46, INSPECTION, Rear Door Latch and Door Lock Actuator Assembly.>	Is the door lock actuator OK?	• Sedan model: Go to step **12**. • OUTBACK model: Go to step **11**.	Replace the door latch and door lock actuator assembly.
11	**CHECK REAR GATE LOCK ACTUATOR.** Check the rear gate lock actuator. <Ref. to SL-49, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the rear gate latch and actuator assembly.
12	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-52, Trunk Lid Latch and Actuator Assembly.>	Is trunk lid lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the trunk lid latch & actuator assembly.

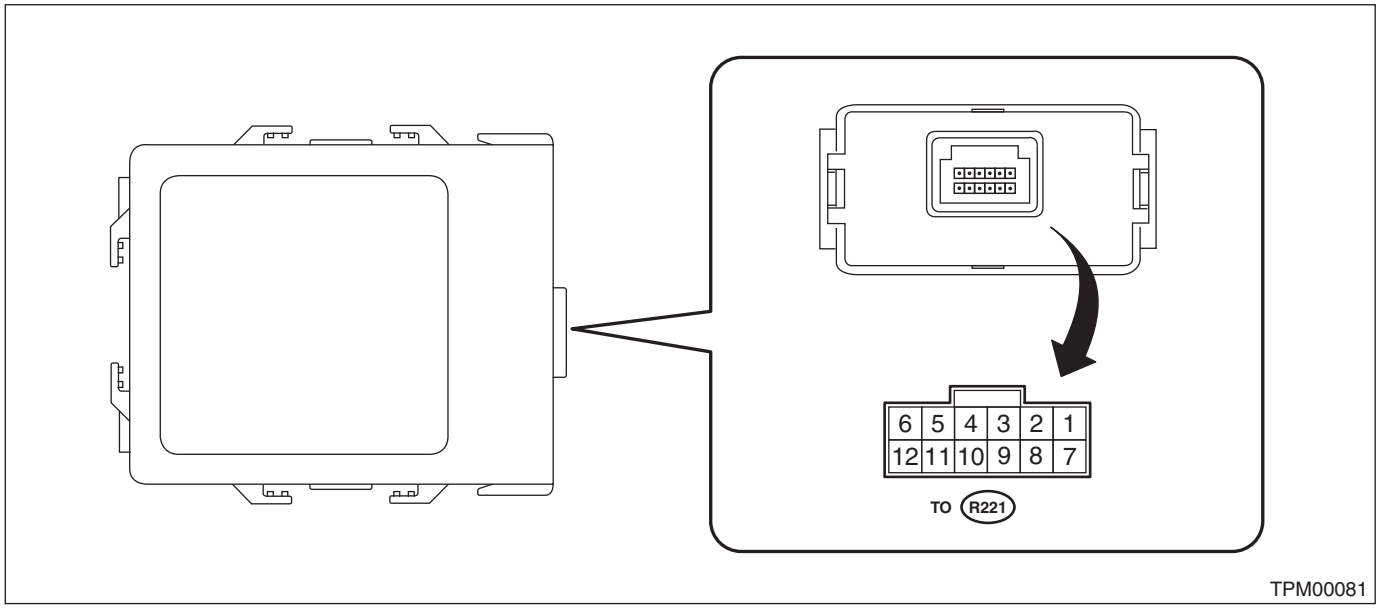
5. CHECK REAR GATE OPENER BUTTON CIRCUIT

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «R Gate Release SW input». <Ref. to BC(diag)-24, OPERATION, Read Current Data.> NOTE: For detailed operation procedures, refer to "Application help".	Does the display change to OFF ←→ ON, when the rear gate opener button is operated?	Rear gate opener button is normal.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and rear gate opener button. 2) Check the harness between the body integrated unit connector and rear gate opener button. ***Connector & terminal*** ***Model without keyless access with push button start*** ***(i171) No. 6 — (D47) No. 1:*** ***Model with keyless access with push button start*** ***(i171) No. 6 — (D77) No. 1:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the rear gate opener button connector and chassis ground. ***Connector & terminal*** ***Model without keyless access with push button start*** ***(D47) No. 2 — Chassis ground:*** ***Model with keyless access with push button start*** ***(D77) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK REAR GATE OPENER BUTTON.** Measure the resistance between terminals both when the rear gate opener button is pressed and when not pressed. ***Terminals*** ***Model without keyless access with push button start*** ***No. 1 — No. 2:*** ***Model with keyless access with push button start*** ***No. 1 — No. 2:***	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Replace the rear gate opener button.

6. CHECK TRUNK OPENER SWITCH CIRCUIT

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «R Gate Release SW input». <Ref. to BC(diag)-24, OPERATION, Read Current Data.> NOTE: For detailed operation procedures, refer to "Application help".	Does the display switch between OFF ←→ ON when the trunk opener switch is operated?	The trunk opener switch is normal.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and trunk opener switch. 2) Check the harness between the body integrated unit connector and trunk opener switch. ***Connector & terminal*** ***(i171) No. 6 — (i258) No. 1:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the trunk opener switch connector and chassis ground. ***Connector & terminal*** ***(i258) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK TRUNK OPENER SWITCH.** Measure the resistance between terminals both when trunk opener switch is pressed and when not pressed. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Replace the trunk opener switch.



4. Keyless Entry System

A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-279, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. KEYLESS ENTRY CONTROL MODULE

Terminal No.	Item	Measuring condition	Standard
1 (CAN-L)	—	Cannot be measured	—
2 (CAN-H)	—	Cannot be measured	—
6 (IG) ←→ Chassis ground	Voltage	IG OFF → ON	0 V → 10 — 14 V
7 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω
12 (+B) ←→ Chassis ground	Voltage	Always	10 — 14 V

2. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-11, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the DTC.	<Ref. to KLE(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	2. Check the keyless transmitter battery.	<Ref. to SL-19, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	3. Remove and visually inspect the following fuses. • No. 14 (in fuse & relay box) • No. 26 (in fuse & relay box) • No. 14 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-12, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the keyless entry control module.	<Ref. to SL-20, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	5. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-20, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	6. Check the key warning switch.	<Ref. to SL-22, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	7. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the keyless transmitter battery.	<Ref. to SL-19, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-22, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the keyless entry control module.	<Ref. to SL-20, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-11, INSPECTION, Door Lock Control System.>	1. Check the keyless transmitter battery.	<Ref. to SL-19, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-22, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the door switch signal.	<Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the keyless entry control module.	<Ref. to SL-20, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

Symptoms	Repair order	Reference
The keyless buzzer and hazard light do not operate.	1. Check the keyless buzzer operation.	<Ref. to SL-23, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the hazard light operation.	<Ref. to SL-23, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-23, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-25, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

CAUTION:
Be sure to reset keyless transmitter of other vehicles registered to the inspection target vehicle, and vehicles to which keyless transmitters were registered for inspection, to the condition before performing the inspection. (Re-register the keyless transmitters.)

	Step	Check	Yes	No
1	**CHECK KEYLESS TRANSMITTER BATTERY.** 1) Remove the battery from the keyless transmitter. <Ref. to SL-85, REMOVAL, Keyless Transmitter.> 2) Check the battery voltage. <Ref. to SL-86, INSPECTION, Keyless Transmitter.>	Is the voltage 2.5 V or more?	Go to step **2**.	Replace the keyless transmitter battery.
2	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-86, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.> 1) Close all doors and rear gate or trunk lid of inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors and rear gate, or unlock the trunk lid.	Can lock and unlock of the doors and rear gate, or unlock of the trunk lid be performed properly on the inspection target vehicle?	Go to step **3**.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
3	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter of the inspected vehicle to another vehicle whose keyless system operates normally. <Ref. to SL-86, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>	Is the keyless transmitter registered correctly?	Go to step **4**.	Replace the keyless transmitter and perform registration.

	Step	Check	Yes	No
4	**CHECK KEYLESS TRANSMITTER.** Check the registered keyless transmitter. 1) Close all doors and rear gate or trunk lid of the vehicle on which keyless system operates normally. 2) Using the keyless transmitter, lock and unlock the doors and rear gate, or unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the vehicle?	Keyless transmitter is OK.	Replace the keyless transmitter and perform registration.

3. CHECK KEYLESS ENTRY CONTROL MODULE

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is LAN system normal?	Keyless entry control module is normal.	Go to step **2**.
2	**CHECK POWER SUPPLY.** 1) Disconnect the keyless entry control module connector. 2) Measure the voltage between keyless entry control module connector and chassis ground. ***Connector & terminal*** ***(R221) No. 12 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Check the harness for open or short circuits between the keyless entry control module and the fuse.
3	**CHECK GROUND CIRCUIT.** Measure the resistance between keyless entry control module connector and chassis ground. ***Connector & terminal*** ***(R221) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the keyless entry control module.	Repair or replace the harness.

4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Refer to the “CHECK POWER SUPPLY AND GROUND LINE” of “Door Lock Control System” for detailed procedures. <Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>

5. CHECK DOOR SWITCH

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Display the following items using Subaru Select Monitor. • «Driver’s door SW input» • «P-door SW input» • «Rear right door SW input» • «Rear left door SW input» • «R Gate SW input» NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between OFF ←→ ON when each door, trunk lid, or rear gate is opened/closed?	The door switches, trunk lid latch switch or rear gate latch switch are normal.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Disconnect the connector of the door switch, trunk lid latch switch or rear gate latch switch that the display does not change. 3) Check the harness between body integrated unit and defective switch. ***Connector & terminal*** ***Front door LH*** ***(i171) No. 33 — (R9) No. 2:*** ***Front door RH*** ***(i171) No. 13 — (R12) No. 4:*** ***Rear door LH*** ***(i171) No. 14 — (R22) No. 4:*** ***Rear door RH*** ***(i171) No. 34 — (R16) No. 4:*** ***Trunk lid*** ***(i171) No. 15 — (R186) No. 3:*** ***Rear gate (model without power rear gate)*** ***(i171) No. 15 — (D46) No. 3:*** ***Rear gate (model with power rear gate)*** ***(i171) No. 15 — (D153) No. 3:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the faulty switch connector and chassis ground. ***Connector & terminal*** ***Front door LH*** ***(R9) No. 1 — Chassis ground:*** ***Front door RH*** ***(R12) No. 1 — Chassis ground:*** ***Rear door LH*** ***(R22) No. 1 — Chassis ground:*** ***Rear door RH*** ***(R16) No. 1 — Chassis ground:*** ***Trunk lid*** ***(R186) No. 2 — Chassis ground:*** ***Rear gate (model without power rear gate)*** ***(D46) No. 4 — Chassis ground:*** ***Rear gate (model with power rear gate)*** ***(D153) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.

Step		Check	Yes	No
4	**CHECK DOOR SWITCH.** Measure the resistance between faulty switch terminals. ***Terminals*** ***Front LH door switch*** ***No. 2 — No. 1:*** ***Front RH door switch*** ***No. 4 — No. 1:*** ***Rear LH door switch*** ***No. 4 — No. 1:*** ***Rear RH door switch*** ***No. 4 — No. 1:*** ***Trunk lid latch switch*** ***No. 3 — No. 2:*** ***Rear gate latch switch (model without power rear gate)*** ***No. 3 — No. 4:*** ***Rear gate latch switch (model with power rear gate)*** ***No. 3 — No. 4:***	Is the resistance 1 MΩ or more when the door switch is pushed or the trunk lid and rear gate is closed?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Replace the faulty parts. • Door switches • Trunk lid latch and actuator assembly • Rear gate latch and actuator assembly

6. CHECK KEY WARNING SWITCH

Step		Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «key-lock warning SW». NOTE: For detailed operation procedures, refer to “Application help”.	Is the normal input signal displayed when the key is inserted in/removed from the ignition switch?	The key warning switch is OK.	Go to step **2**.
2	**CHECK FUSE.** Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step **3**.
3	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Disconnect the connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 10 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Remove the key from ignition switch. 2) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1.5 V?	The key warning switch is OK.	Go to step **5**.
5	**CHECK KEY WARNING SWITCH.** 1) Disconnect the connector of key warning switch. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Replace the key warning switch.

	Step	Check	Yes	No
6	**CHECK KEY WARNING SWITCH.** 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse. • Harness for open or short between the body integrated unit and key warning switch.	Replace the key warning switch.

7. CHECK ROOM LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK ROOM LIGHT OPERATION.** Make sure the room light illuminates when the room light switch is ON, and goes off when the switch is OFF.	Does the room light illuminate or go off?	Go to step **2**.	Check the room light circuit. <Ref. to LI-78, INSPECTION, Room Light.>
2	**CHECK ROOM LIGHT OPERATION.** 1) Turn the room light switch to the "DOOR" position. 2) Open and close any door.	Does the room light illuminate ←→ go off (including off delay) when the door is opened and closed?	Go to step **3**.	Go to step **4**.
3	**CHECK KEYLESS ENTRY OPERATION.** Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Room light is normal.	Check keyless entry system. <Ref. to SL-18, SYMPTOM CHART, INSPECTION, Keyless Entry System.>
4	**CHECK ROOM LIGHT.** Check the room light. <Ref. to LI-78, INSPECTION, Room Light.>	Is room light normal?	Go to step **5**.	Replace the bulb or room light assembly.
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and room light. 2) Check the harness between body integrated unit and room light. ***Connector & terminal*** ***(i84) No. 9 — (R52) No. 2:***	Is harness normal?	Go to step **6**.	Repair or replace the harness.
6	**CHECK HARNESS.** Measure the voltage between the room light connector and chassis ground. ***Connector & terminal*** ***(R52) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Repair or replace the harness.

8. CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT OPERATION.** Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step **2**.	Check the hazard light circuit.

	Step	Check	Yes	No
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Abnormal warning lamp flashing setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the setting ON?	Go to step **3**.	Turn the setting to ON.
3	**CHECK DATA MONITOR.** Display the data of «Left turn signal output» and «Right turn signal output» using Subaru Select Monitor.	Is output signal present when operating the transmitter LOCK/UNLOCK button?	Go to step **4**.	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK KEYLESS ENTRY OPERATION.** Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Check keyless entry system. <Ref. to SL-18, SYMPTOM CHART, INSPECTION, Keyless Entry System.>

9. CHECK KEYLESS BUZZER

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Ans.-back Buzzer» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the setting "ON"?	Go to step **2**.	Turn the setting to ON.
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Keyless Buzzer Volume» using Subaru Select Monitor. Turn the setting to "7".	Does the keyless buzzer sound?	Set to the volume that the customer requested.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** Select and perform the «Keyless Buzzer Output» using Subaru Select Monitor.	Does the keyless buzzer sound?	Check the keyless control module.	Go to step **4**.
4	**CHECK KEYLESS BUZZER CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Check the harness between body integrated unit and keyless buzzer. ***Connector & terminal*** ***(B281) No. 10 — (B490) No. 1:***	Is harness normal?	Go to step **5**.	Repair or replace the harness.
5	**CHECK HARNESS.** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B490) No. 1 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS BUZZER CIRCUIT.** Measure the resistance between the keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B490) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness.

	Step	Check	Yes	No
7	**CHECK BODY INTEGRATED UNIT.** 1) Connect the connector of body integrated unit. 2) Select and perform the «Keyless Buzzer Output» using Subaru Select Monitor. 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. ***Connector & terminal*** ***(B281) No. 10 (+) — Chassis ground (–):***	Is the frequency 2 kHz or the voltage 9 V or more?	Replace the keyless buzzer.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>

10.CHECK DOOR LOCK SWITCH

For procedures, refer to the “INSPECTION OF DOOR LOCK SWITCH” of the “Door Lock Control System”. <Ref. to SL-12, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

11.CHECK IGNITION SWITCH ILLUMINATION

	Step	Check	Yes	No
1	**CHECK IGNITION CIRCUIT.** Check the ignition circuit. <Ref. to SL-31, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>	Is the switch circuit normal?	Go to step **2**.	Repair or replace.
2	**CHECK DOOR SWITCH CIRCUIT.** Inspect door switch circuit. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>	Is the switch circuit normal?	Go to step **3**.	Repair or replace.
3	**CHECK FUSE.** Remove fuse No. 31 (fuse & relay box), and perform visual check.	Is the fuse blown out?	Replace the fuse with a new part.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the ignition switch illumination connector. NOTE: The ignition switch illumination is integrated into the immobilizer antenna. 2) Measure the voltage between ignition switch illumination connector and chassis ground. ***Connector & terminal*** ***(i60) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Check the harness for open or short circuits between the ignition switch illumination and fuse.
5	**CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and ignition switch illumination. ***Connector & terminal*** ***(i171) No. 9 — (i60) No. 6:***	Is harness normal?	Go to step **6**.	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.
6	**CHECK IGNITION SWITCH ILLUMINATION BULB.** Apply battery voltage between terminals of the bulb. ***Terminals*** ***No. 2 (+) — No. 6 (–):***	Does the bulb illuminate?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Replace the immobilizer antenna. <Ref. to SL-90, REMOVAL, Immobilizer Antenna.>

5. Keyless Access With Push Button Start System

A: WIRING DIAGRAM

Refer to “Keyless Access With Push Button Start System” in WI section. <Ref. to WI-269, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-13, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

Refer to “Basic Diagnostic Procedure” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

2. PUSH BUTTON START SYSTEM

Ignition/ACC change function check

1) Check push button ignition switch function
   (1) Check the change control through push button ignition switch, brake pedal operation, and shift position.

Shift lever position	Brake pedal operation	Push button ignition switch operation
P	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → Ignition switch OFF
P	Released	Engine running → Ignition switch OFF
P	Depressed	Ignition switch OFF → Engine started
P	Depressed	ACC ON → Engine started
P	Depressed	Ignition switch ON → Engine started
P	Depressed	Engine running → Ignition switch OFF
N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
N	Released	Engine running → ACC ON
N	Depressed	Ignition switch OFF → Engine started
N	Depressed	ACC ON → Engine started
N	Depressed	Ignition switch ON → Engine started
N	Depressed	Engine running → ACC ON
Other than P or N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
Other than P or N	Released	Engine running → ACC ON
Other than P or N	Depressed	Ignition switch OFF → Ignition switch ON
Other than P or N	Depressed	ACC ON → Ignition switch ON
Other than P or N	Depressed	Engine running → ACC ON

   (2) Check the changeover functions other than push button ignition switch operation.
   With ACC ON or the ignition switch ON, and the shift lever in “P” position, check that ACC is ON or Ignition switch is ON → Ignition switch is OFF when the vehicle is left for 1 hour or more.
   (3) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-110, POWER SUPPLY SWITCHING SYSTEM, LIST, Diagnostics with Phenomenon.>
2) Check power status display
   (1) Check the power indicator display of the push button ignition switch.

NOTE:
*1: Key collation is normal, and the stop light switch (AT) is ON.
Indicator display

Push button ignition switch status	Indicator lighting status
Ignition switch OFF (except for condition *1)	Light OFF
ACC ON (except for condition *1)	Orange light
Ignition switch ON (except for condition *1)	Orange light
Engine start standby (*1)	Green light
After engine is started	Light OFF

(2) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-110, POWER SUPPLY SWITCHING SYSTEM, LIST, Diagnostics with Phenomenon.>

NOTE:
The indicator blinks if any of the following malfunctions are detected.

Detected malfunction	Indicator lighting status
Steering lock stuck	Green blinking
Steering lock CM internal malfunction	Orange blinking
Keyless access CM internal malfunction	Orange blinking
Vehicle speed signal malfunction	Orange blinking

6. Security System

A: WIRING DIAGRAM

Refer to “Security System” in the wiring diagram. <Ref. to WI-352, WIRING DIAGRAM, Security System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-11, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. BASIC DIAGNOSTIC PROCEDURE

	Step	Check	Yes	No
1	**INITIAL CHECK.** Check the keyless entry system or keyless access system operation.	Does the keyless entry system or keyless access system operate normally?	Go to step **2**.	Check the keyless entry system or keyless access system. • Keyless entry system: <Ref. to SL-18, INSPECTION, Keyless Entry System.> • Keyless access system: <Ref. to KPS(diag)-4, KEYLESS ACCESS WITH PUSH BUTTON START, CAUTION, General Description.>
2	**CHECK SECURITY ON/OFF SETTING.** 1) Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors. 2) Check the status of security indicator light. 3) Press the LOCK button of the keyless transmitter or access key. 4) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? • Before pressing the LOCK button: Blinks once every three seconds. • After pressing the LOCK button: When monitoring lag is set to 0 seconds: Blinks twice every 0.5 seconds at 2 second intervals. When monitoring lag is set to 30 seconds: Blinks once every 0.4 seconds continuously for 30 seconds, then blinks twice every 0.5 seconds at 2 second intervals.	Go to step **4**.	Go to step **3**.
3	**CHANGE SETTING OF SECURITY SYSTEM.** Change the setting of security system to ON using Subaru Select Monitor. <Ref. to SL-30, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step **4**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>
4	**CHECK SECURITY SYSTEM OPERATION.** 1) Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors. 2) Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds. 3) Check the security indicator light blinking patterns.	Does the security indicator light blink twice within 0.5 seconds in 2 second intervals?	Go to step **5**.	Check the security indicator light. <Ref. to SL-31, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>

	Step	Check	Yes	No
5	**CHECK SECURITY ALARM OPERATION.** 1) Operate the driver's door lock switch to the UNLOCK side. 2) Open any door, trunk lid or rear gate.	Does the security alarm operate when opening any door, trunk lid, or rear gate?	Go to step **6**.	Check the following parts. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> • Door switches • Trunk lid latch switch • Rear gate latch switch
6	**CHECK SECURITY ALARM OPERATION.** Check the security alarm operation status.	During the operation, does the horn keep sounding and the hazard light blink?	Go to step **7**.	Check the following parts. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> • Horn: <Ref. to SL-31, CHECK HORN, INSPECTION, Security System.> • Hazard light: <Ref. to SL-31, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.>
7	**CHECK SECURITY ALARM CANCEL OPERATION.** Press any button of the transmitter or access key while the security alarm is operating.	Do the horn sound and the blinking of the hazard light stop?	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>
8	**CHECK IMPACT SENSOR (DEALER OPTION).** Check the sensibility of impact sensor. <Ref. to SL-77, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.> * For models not equipped: Go to step **9**.	Is the sensibility set properly?	Go to step **9**.	Adjust the sensitivity. <Ref. to SL-77, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>
9	**CHECK SECURITY SYSTEM CONDITION MEMORY.** 1) Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors. 2) Open the front hood. 3) Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds. 4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.> 5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.> 6) Check the status of security indicator light.	Does the security indicator light blinks twice within 0.5 seconds at 2 second intervals?	Go to step **10**.	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>

Step		Check	Yes	No
10	**CHECK SECURITY SYSTEM MANUAL ON/OFF SETTING.** 1) Press the UNLOCK button of the keyless transmitter or access key. 2) Change the setting of security system. <Ref. to SL-30, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Restore the security system settings to those before the diagnosis and finish the diagnosis.	Check the following parts. • Ignition switch circuit: <Ref. to SL-71, INSPECTION, Ignition Key Lock.> • Door lock switch circuit: <Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

NOTE:
If the horn sounds when the security is turned on (monitor condition) using the keyless transmitter or access key, check the function setting of the body integrated unit. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor. <Ref. to BC(diag)-34, User Customizing.>

2. CHECK SECURITY SYSTEM CONDITION MEMORY

1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2) Close all the doors, trunk lid or rear gate.
3) Open the front hood.
4) Press the LOCK button of the keyless transmitter or access key.

NOTE:
Wait until the security indicator light blinks twice within 0.5 seconds at 2 second intervals.
If the 30 second monitoring lag has been set, wait for 30 seconds.
5) Disconnect the ground terminal from the battery sensor, and reconnect the ground terminal to the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit.

3. SECURITY SYSTEM ON/OFF SETTING

NOTE:
It can be set by «Security Alarm Setup» in unit customizing using Subaru Select Monitor.
For detailed operation procedures, refer to “Application help”.
1) Close all doors, trunk lid or rear gate, and sit down on the driver seat. Press the UNLOCK button of the keyless transmitter or access key.
2) Turn the ignition switch to ON.
3) Press the central door unlock switch and open the driver’s door simultaneously. (Keep the central door unlock switch pressed down.)
4) When the condition in step 3) continues for 10 seconds, the system switches to a mode reverse to the current mode.

Setting	Horn activation	Meter display
ON → OFF	Twice	[AL_OF]
OFF → ON	Once	[AL_ON]

4. CHECK DOOR SWITCH

For operation procedure, refer to “CHECK DOOR SWITCH” of “Keyless Entry System”. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>

5. CHECK SECURITY INDICATOR LIGHT CIRCUIT

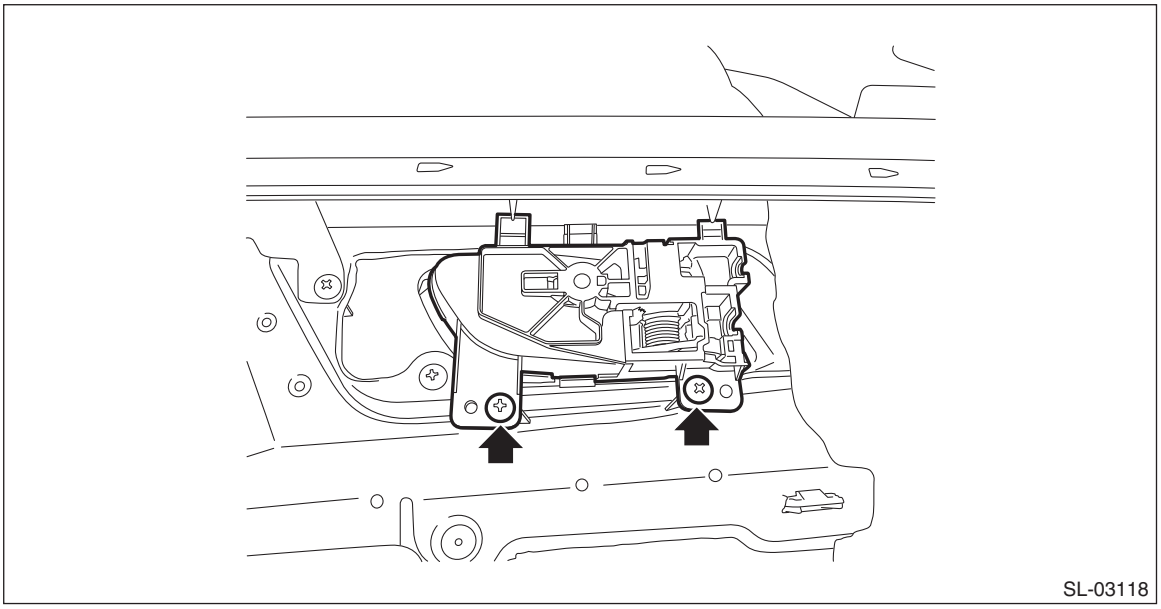
For operation procedures, refer to “CHECK SECURITY INDICATOR LIGHT CIRCUIT” of “IMMOBILIZER (DIAGNOSTICS)” section. <Ref. to IM(diag)-17, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>

6. CHECK HORN

	Step	Check	Yes	No
1	**CHECK HORN OPERATION.** Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step **2**.	Check the horn circuit.
2	**CHECK BODY INTEGRATED UNIT.** Select and perform the «Horn Output» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the horn sound?	Horn circuit is OK.	Go to step **3**.
3	**CHECK HORN RELAY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of body integrated unit. 3) Remove the horn relay. 4) Check the harness between body integrated unit and horn relay. ***Connector & terminal*** ***(B281) No. 20 — Horn relay No. 4:***	Is harness normal?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

7. CHECK HAZARD LIGHT OPERATION

For operation procedure, refer to “CHECK HAZARD LIGHT OPERATION” of “Keyless Entry System”. <Ref. to SL-23, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>



8. CHECK IGNITION SWITCH CIRCUIT

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Display the data of «BATT voltage (control)» and «IGN voltage» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the «IGN voltage» indicate 0 V when the ignition switch is OFF, and fall within a range of ±1 V from the «BATT voltage (control)» when the ignition switch is ON?	The ignition switch input circuit is OK.	Go to step **2**.
2	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between body integrated unit and fuse.

7. Front Inner Remote

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the screw, and remove the remote assembly - door.

B: INSTALLATION

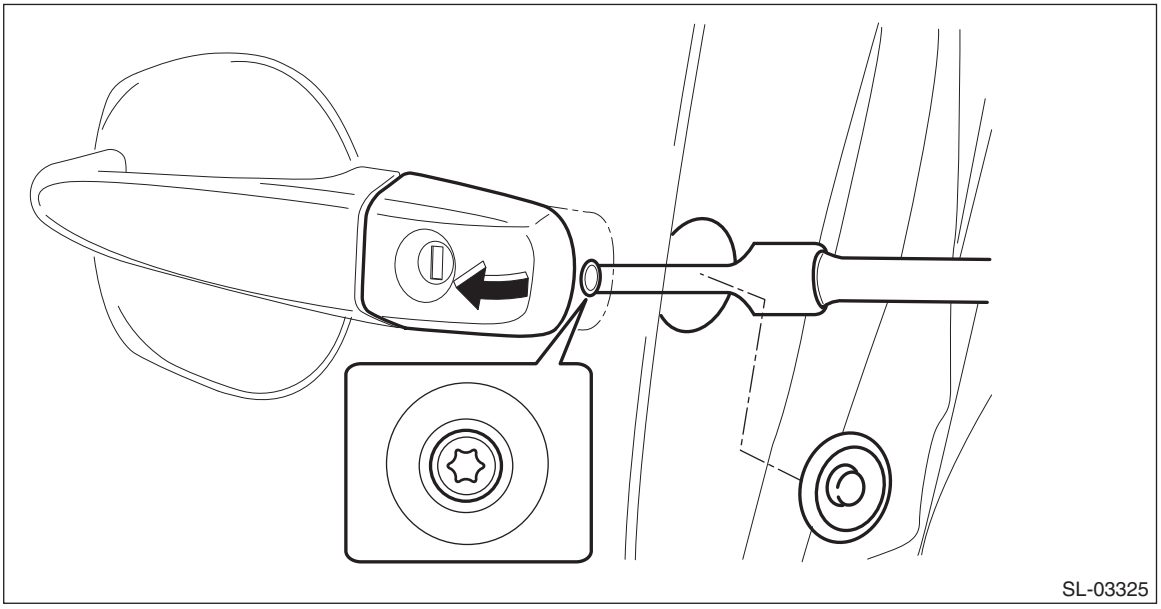
1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
- If the lever is faulty, replace the front inner remote handle.

2) Install the remote assembly - door.
3) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

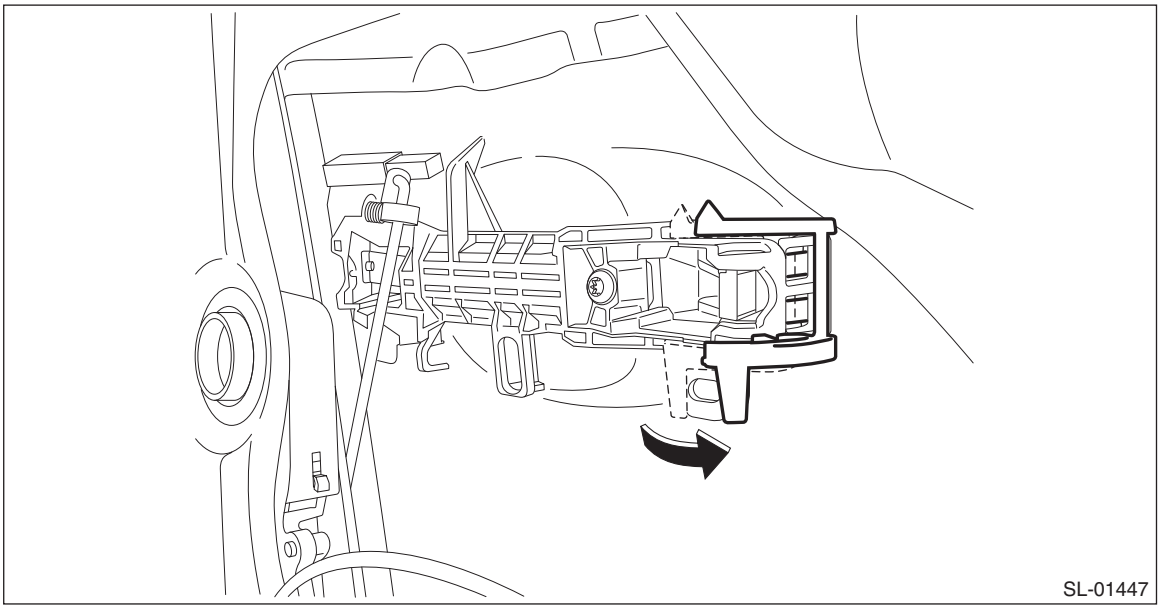
C: INSPECTION

Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
- If the cable is deformed, replace the latch & actuator assembly - front.



8. Front Outer Handle

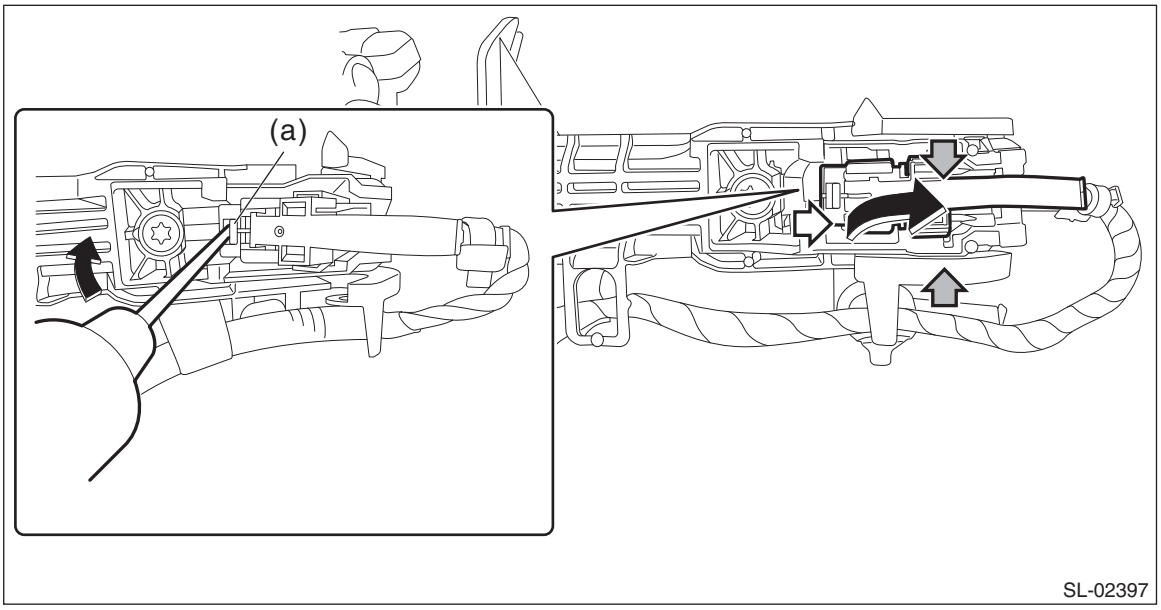
A: REMOVAL



1) Raise the glass assembly - front door to the top position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
5) Remove the cover - handle front outer.

Preparation tool:
TORX® T30

(1) Remove the plug at the rear end of the panel assembly - front door.
(2) Loosen the TORX® bolt and remove the cover - handle front outer.

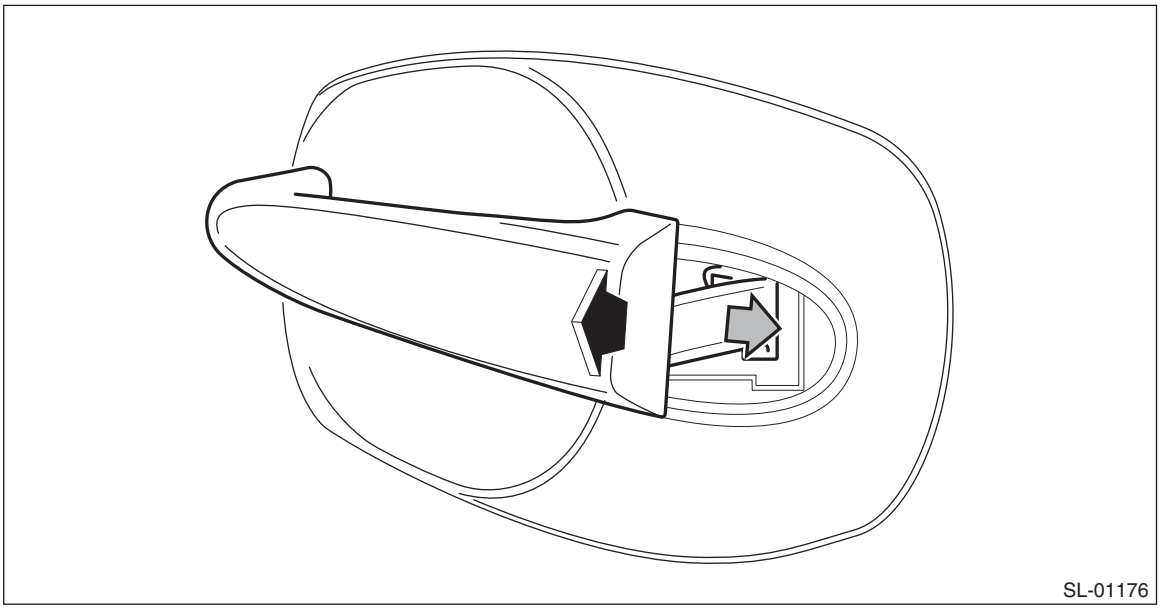


SL-03325

6) Remove the holder of the frame assembly - front door outer.

SL-01447

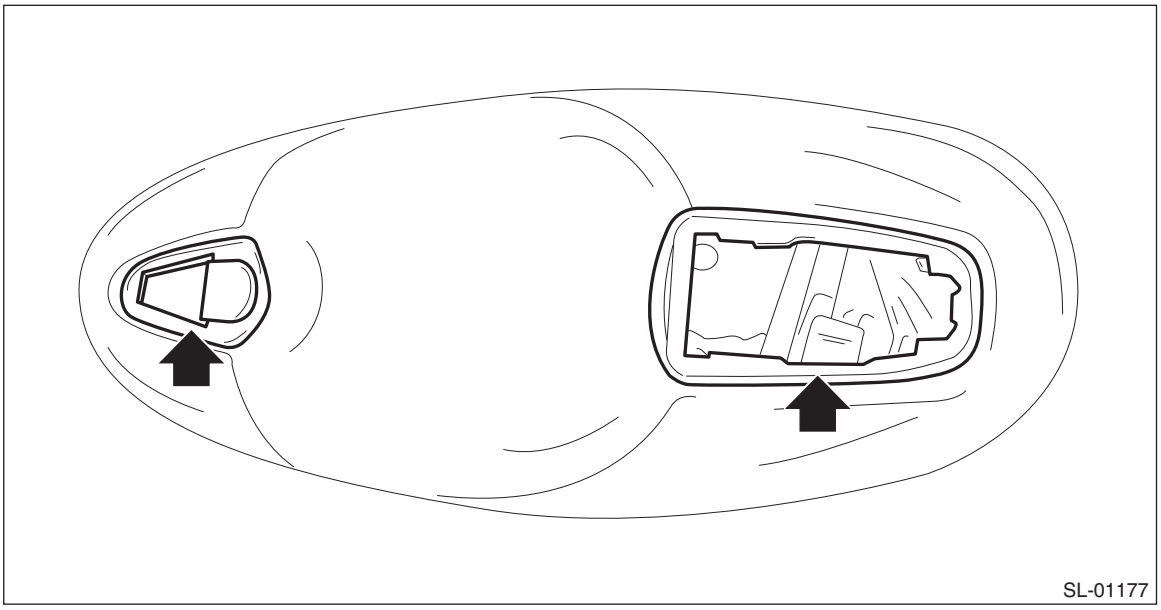
NOTE:
• For model with keyless access with push button start, disconnect the harness clip and exterior antenna (touch sensor) connector.



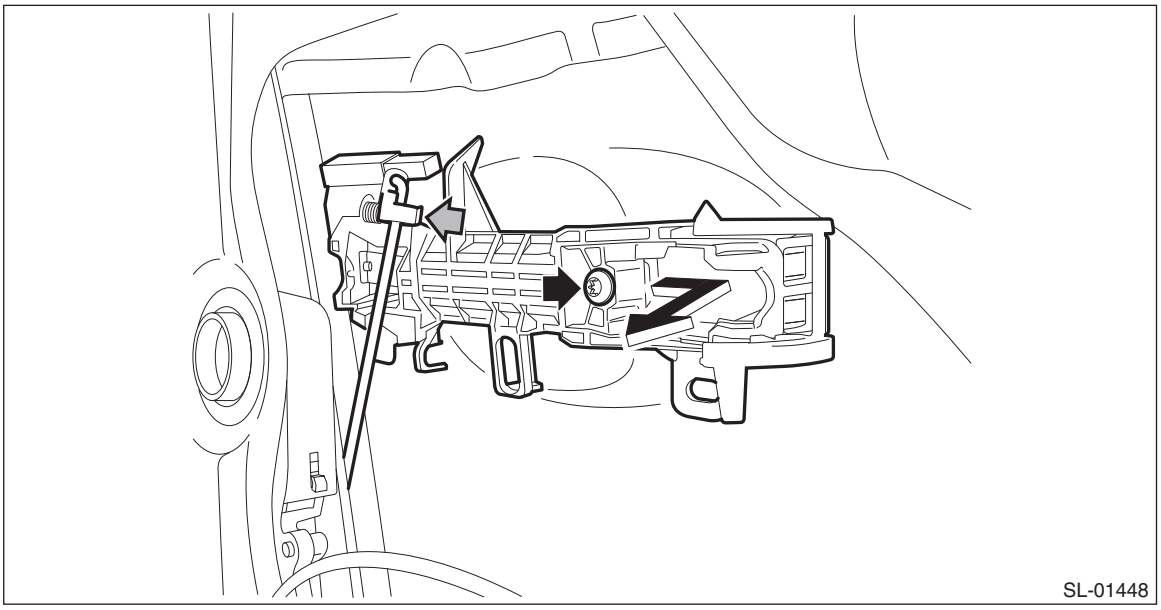
- Using (a) shown in the figure as a supporting point, pry it with a flat tip screwdriver to remove.

7) Remove the handle - door outer.

CAUTION:
Do not apply excessive force to remove the handle - door outer from the frame assembly - front door.



(1) Pull the handle - door outer rearward to release engagement of the frame assembly - front door outer.
(2) Pull the handle - door outer towards yourself to remove the handle - door outer.



8) Remove the frame assembly - front door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.

(2) Remove the rod clamp and remove the rod.
(3) Loosen the TORX® bolt and remove the frame assembly - front door outer.

B: INSTALLATION

1) Before installation, check the following items.
- Rod is free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.
- If the rod is deformed, replace the latch & actuator assembly - front.

2) Install the frame assembly - front door outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the spacer - door handle outer.
4) Install the handle - door outer.

NOTE:
For model with keyless access with push button start, connect the harness clip and exterior antenna (touch sensor) connector.

(1) Insert the end of the handle - door outer to the frame assembly - front door outer.
(2) Push forward while inserting the rear end of the handle - door outer to the frame assembly - front door outer.

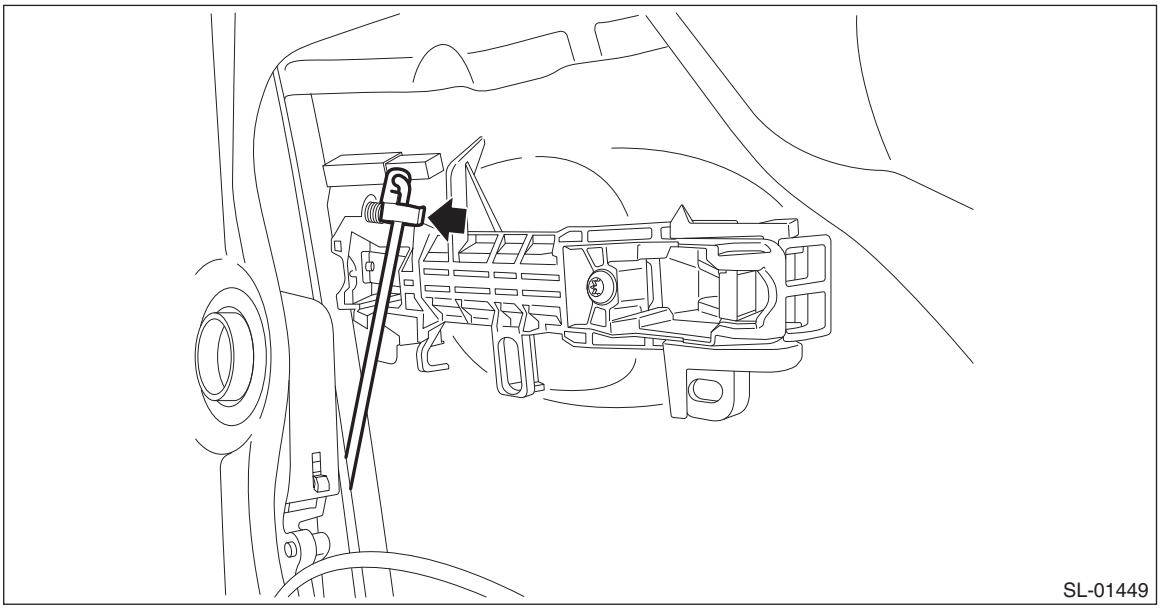
5) Install the cover - handle front outer.

CAUTION:
When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Preparation tool:
TORX® T30

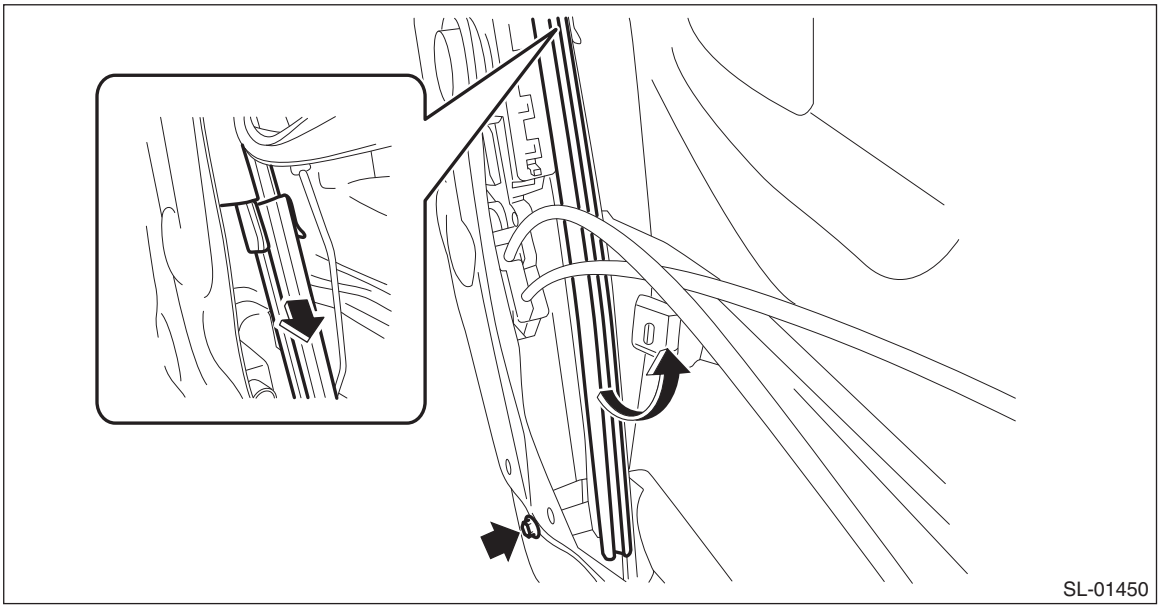
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the sealing cover - front door.
7) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

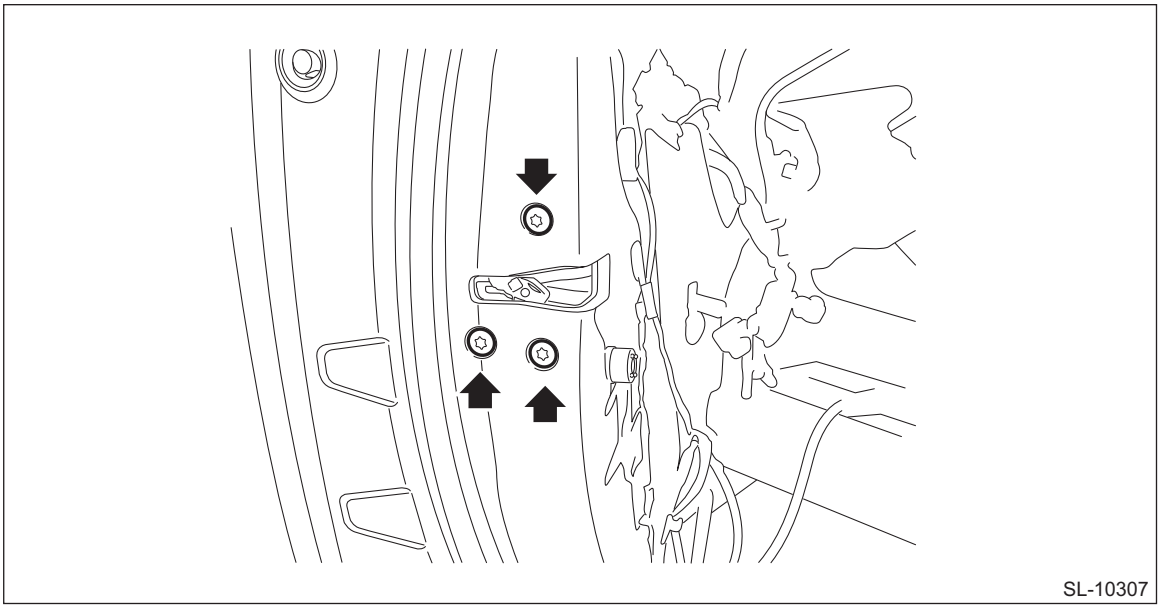
1) Check if the outer handle operates normally. If the rod is deformed, replace the door latch & actuator assembly - front.



9. Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL

1) Raise the glass assembly - front door to the top position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
5) Remove the rod clamp and remove the rod.



6) Remove the sash COMPL - lower.
   (1) Remove the lower side of the running channel - front door.
   (2) Remove the bolts, and remove the sash COMPL - lower.

7) Remove the TORX® bolt to remove the latch & actuator assembly - front.

Preparation tool:
TORX® T30

B: INSTALLATION

1) Before installation, check the following items.
- Cable and rod are free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.
- If the rod is deformed, replace the latch & actuator assembly - front.

2) Install the latch and actuator assembly - front.

CAUTION:
Do not reuse the TORX® bolt. Always replace with a new part.

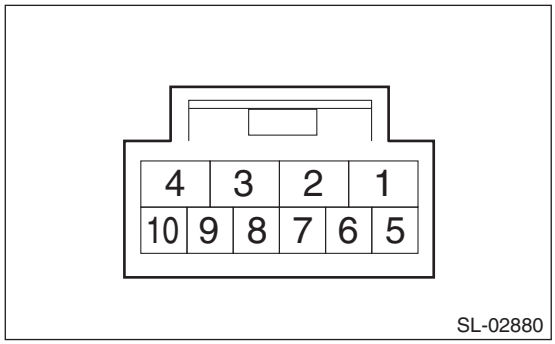
Preparation tool:
TORX® T30

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)

3) Install the rod clamp to the frame assembly - front door outer.
4) Install the sash COMPL - lower.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the sealing cover - front door.
6) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1. LATCH

Check if the latch operates normally.
If the cable or rod is faulty, replace the latch & actuator assembly - front.

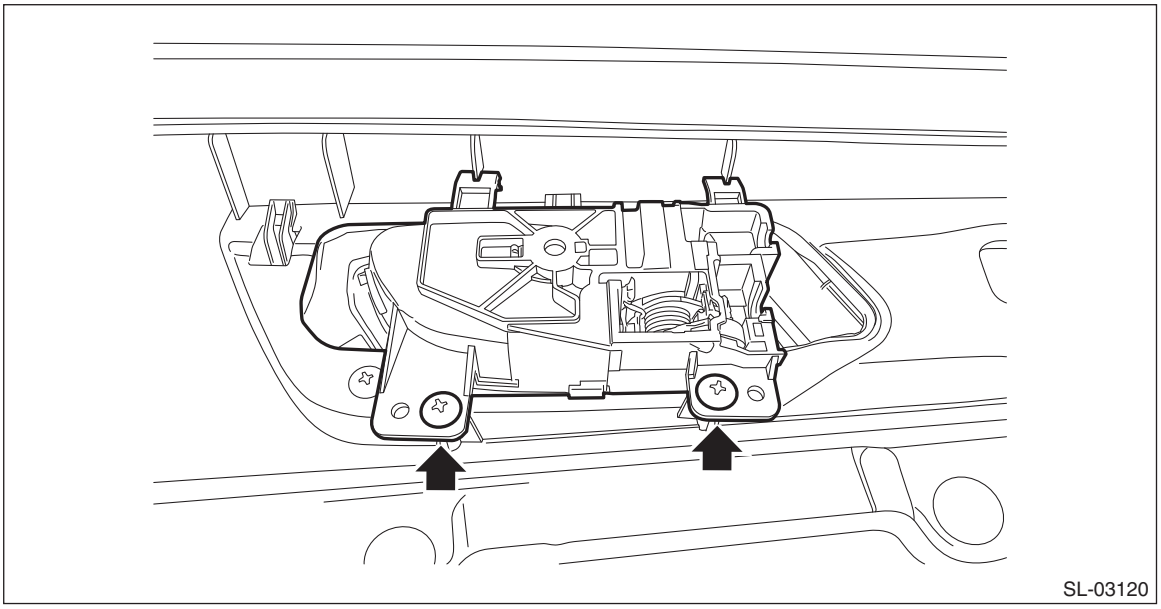
2. LOCK ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	LOCK
1 (+) — 4 (–)		UNLOCK

2) Check position switch
Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
8 — 7	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

3) Replace the latch & actuator assembly - front if it is found defective.

10.Rear Inner Remote

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the screw, and remove the remote assembly - door.

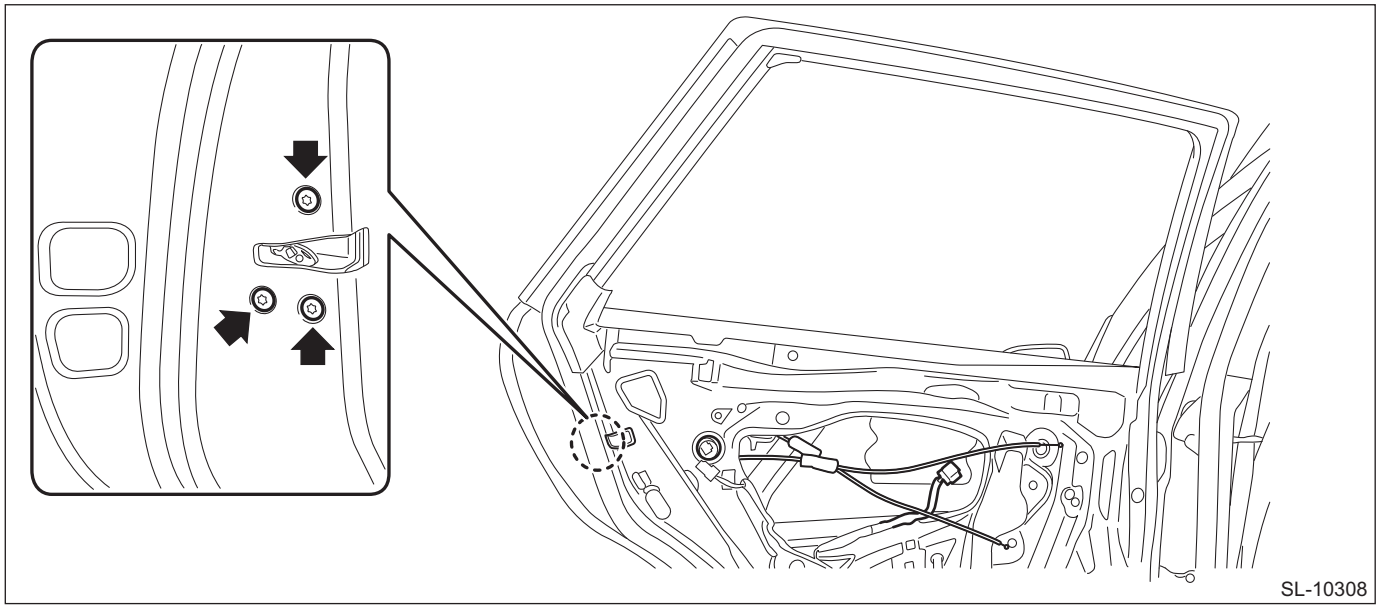
B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
- If the lever is faulty, replace the rear inner remote handle.

2) Install the remote assembly - door.
3) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

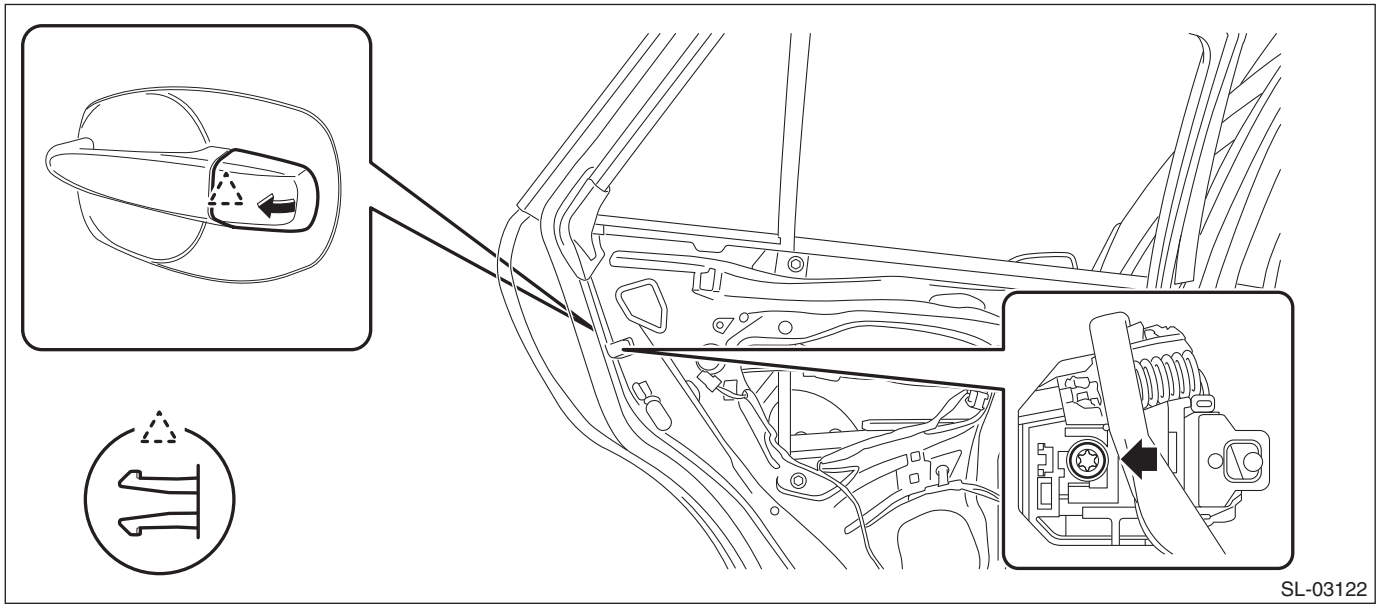
C: INSPECTION



Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
- If the cable is deformed, replace the latch & actuator assembly - rear.

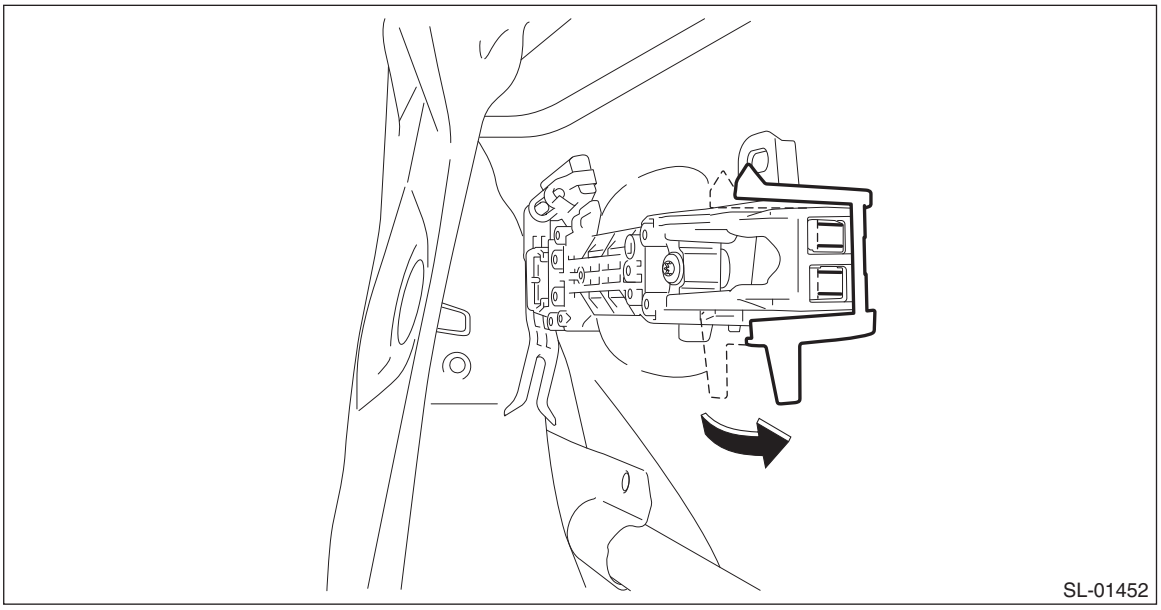
11.Rear Outer Handle

A: REMOVAL



1) Raise the glass assembly - rear door to the top position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-38, REMOVAL, Rear Sealing Cover.>
5) Remove the TORX® bolt and move downward the latch & actuator assembly - rear.

Preparation tool:
TORX® T30

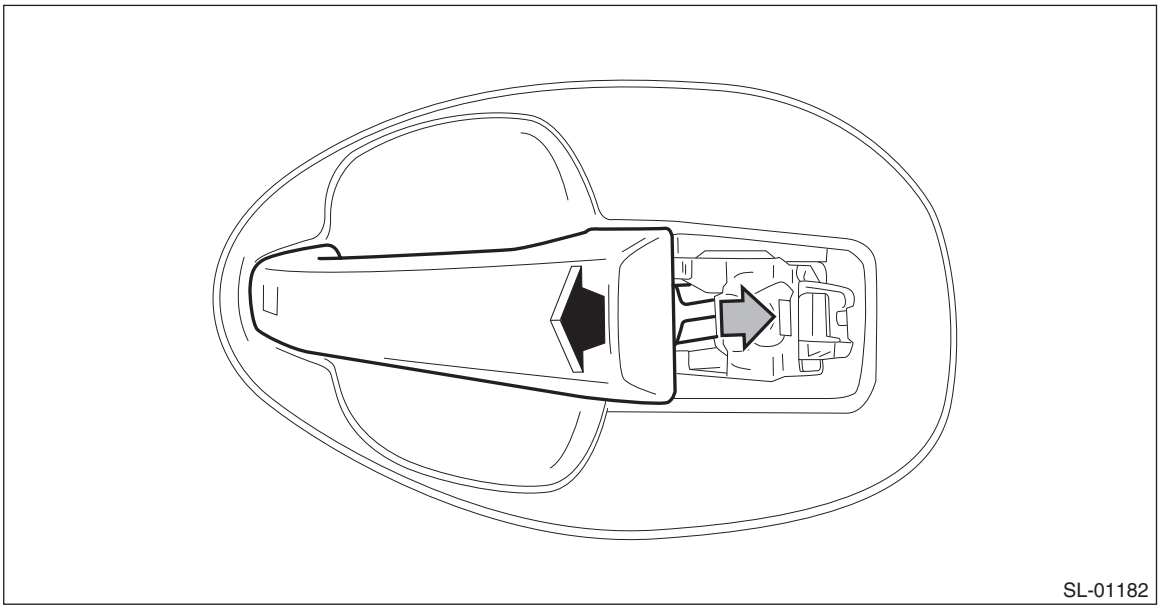


SL-10308

6) Remove the cover - handle rear outer.

Preparation tool:
TORX® T30
(1) Loosen the TORX® bolt.
(2) Release the claws, and then remove the cover - handle rear outer.

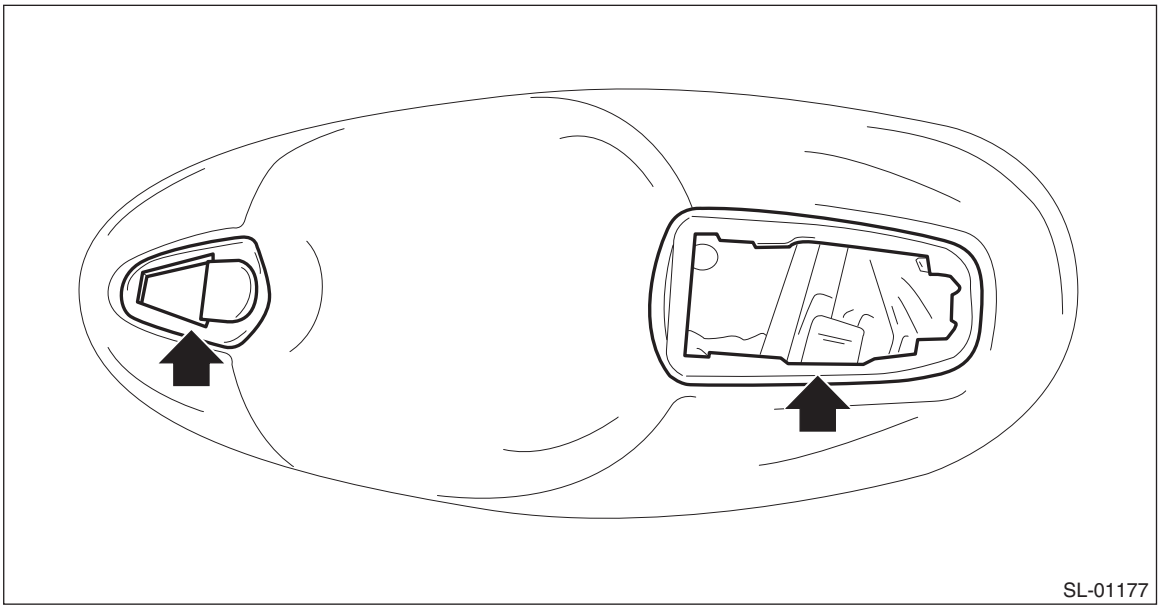
SL-03122



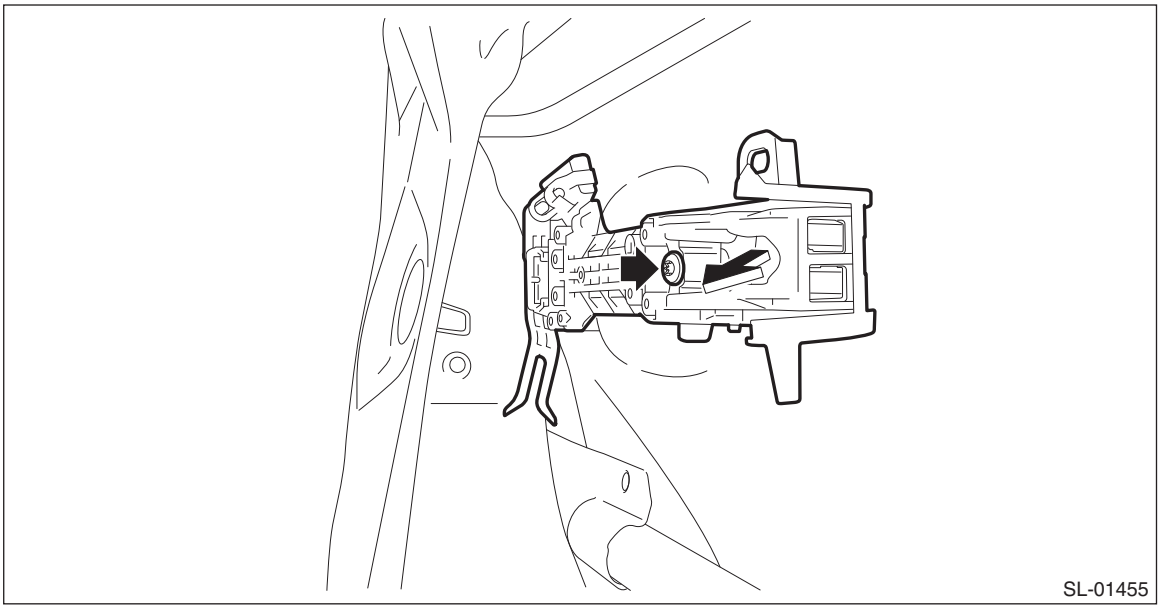
7) Remove the holder of the frame assembly - rear door outer.

8) Remove the handle - door outer.

CAUTION:
Do not apply excessive force to remove the handle - door outer from the frame assembly - rear door.



(1) Pull the handle - door outer rearward to release engagement of the frame assembly - rear door outer.
(2) Pull the handle - door outer towards yourself to remove the handle - door outer.



9) Remove the frame assembly - rear door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.

(2) Loosen the TORX® bolt and remove the frame assembly - rear door outer.

B: INSTALLATION

1) Before installation, check the following items.
- Lever is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.
- If the lever is faulty, replace the rear outer handle.

2) Install the frame assembly - rear door outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the spacer - door handle outer.
4) Install the handle - door outer.
(1) Insert the end of the handle - door outer to the frame assembly - rear door outer.

(2) Push forward while inserting the rear end of the handle - door outer to the frame assembly - rear door outer.

5) Install the cover - handle rear outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the latch and actuator assembly - rear.

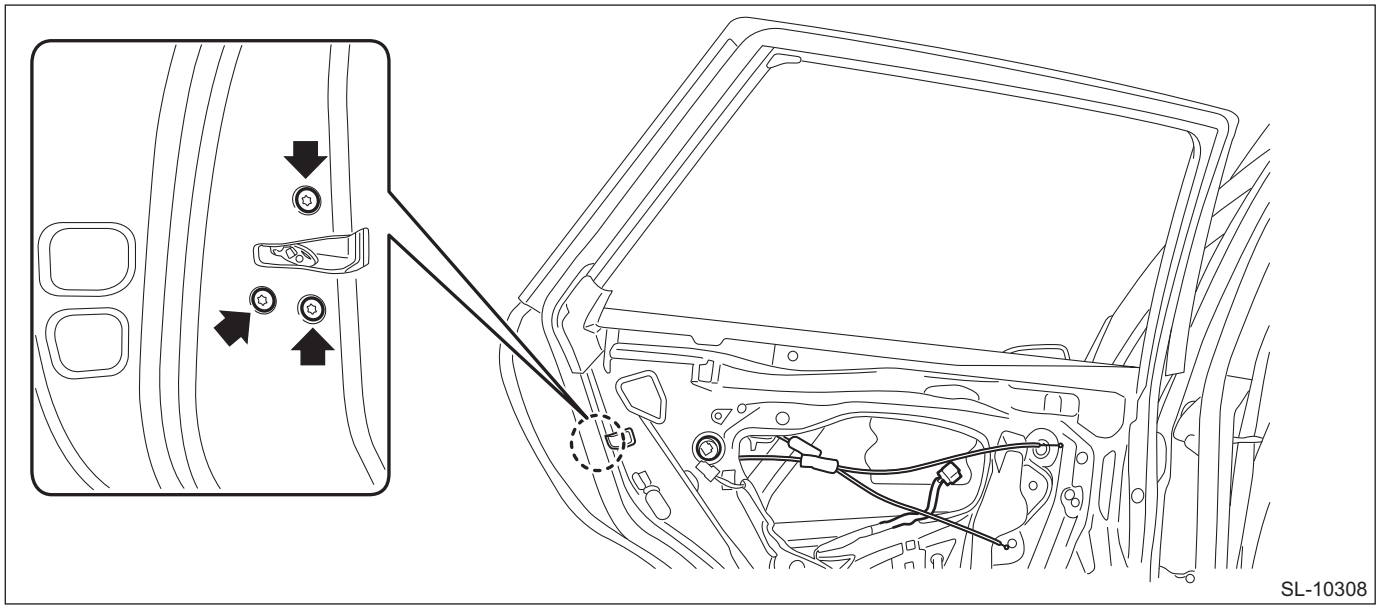
CAUTION:
Do not reuse the TORX® bolt. Always replace with a new part.

Preparation tool:
TORX® T30

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)

7) Install the sealing cover - rear door.
8) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



Check if the outer handle operates normally.
If the lever is faulty, replace the handle - door outer.

12.Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL

1) Raise the glass assembly - rear door to the top position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-38, REMOVAL, Rear Sealing Cover.>
5) Remove the glass assembly - rear door. <Ref. to GW-36, REMOVAL, Rear Door Glass.>
6) Remove the TORX® bolt to remove the latch & actuator assembly - rear.

Preparation tool:
TORX® T30

B: INSTALLATION

NOTE:
Make sure the child safety lock works correctly after installation.
1) Before installation, check the following items.
- Cable is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.
- If the lever is deformed, replace the latch & actuator assembly - rear.

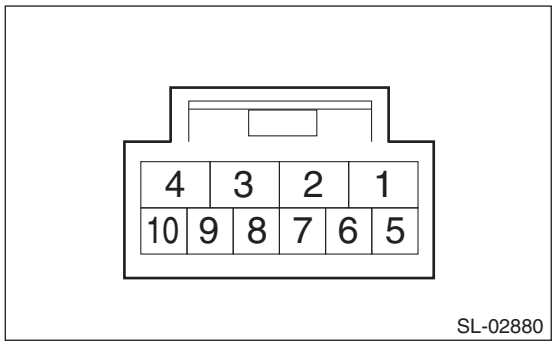
2) Install the latch and actuator assembly - rear.

CAUTION:
Do not reuse the TORX® bolt. Always replace with a new part.

Preparation tool:
TORX® T30

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)

3) Install the glass assembly - rear door. <Ref. to GW-37, INSTALLATION, Rear Door Glass.>
4) Install the sealing cover - rear door.
5) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

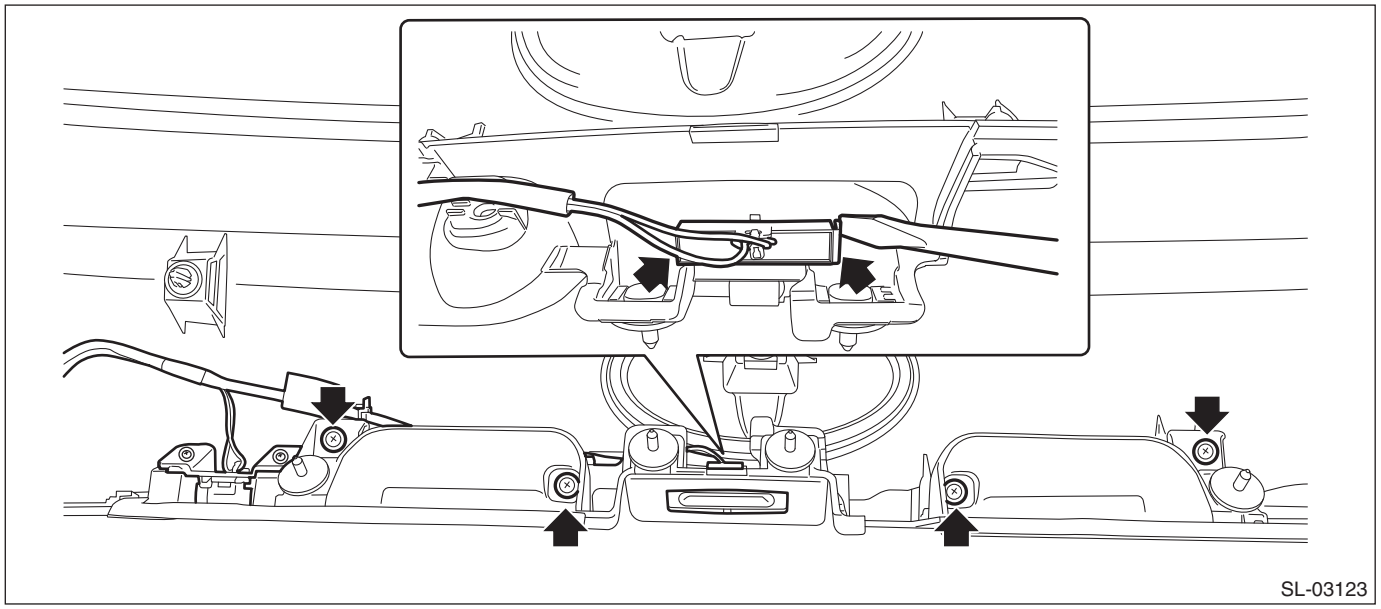
1. LATCH

Check if the latch operates normally.
If the cable is faulty, replace the latch & actuator assembly - rear.

2. ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	LOCK
1 (+) — 4 (–)		UNLOCK



2) If it does not operate properly as a result of inspection, replace the latch & actuator assembly - rear.

13.Rear Gate Opener Button

A: REMOVAL

NOTE:
- The button - opener rear gate is integrated with the rear lock button.
- Open the panel - rear gate before disconnecting the ground terminal from battery sensor.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-63, REMOVAL, Rear Gate Garnish.>
4) Remove the button - opener rear gate.
   (1) Remove the garnish switch bracket from the garnish assembly - rear gate.
   (2) While pushing the locks at both ends of the button - opener rear gate with a flat tip screwdriver, remove the button - opener rear gate together with the rear lock button.

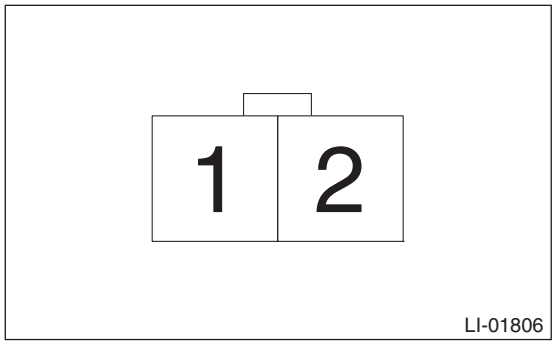
SL-03123

B: INSTALLATION

CAUTION:
Make sure that the harness grommet is securely installed.
If not properly installed, this may cause leaks.

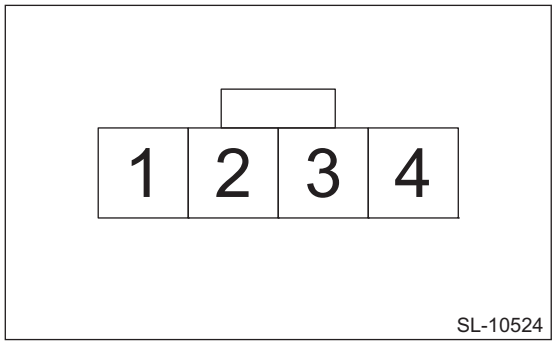
1) Install the button - opener rear gate and rear lock button.
2) Install the garnish switch bracket to the garnish assembly - rear gate.
3) Install the garnish assembly - rear gate. <Ref. to EI-63, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
4.5 N·m (0.4 kgf-m, 3.3 ft-lb)



4) Install the trim panel - rear gate. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

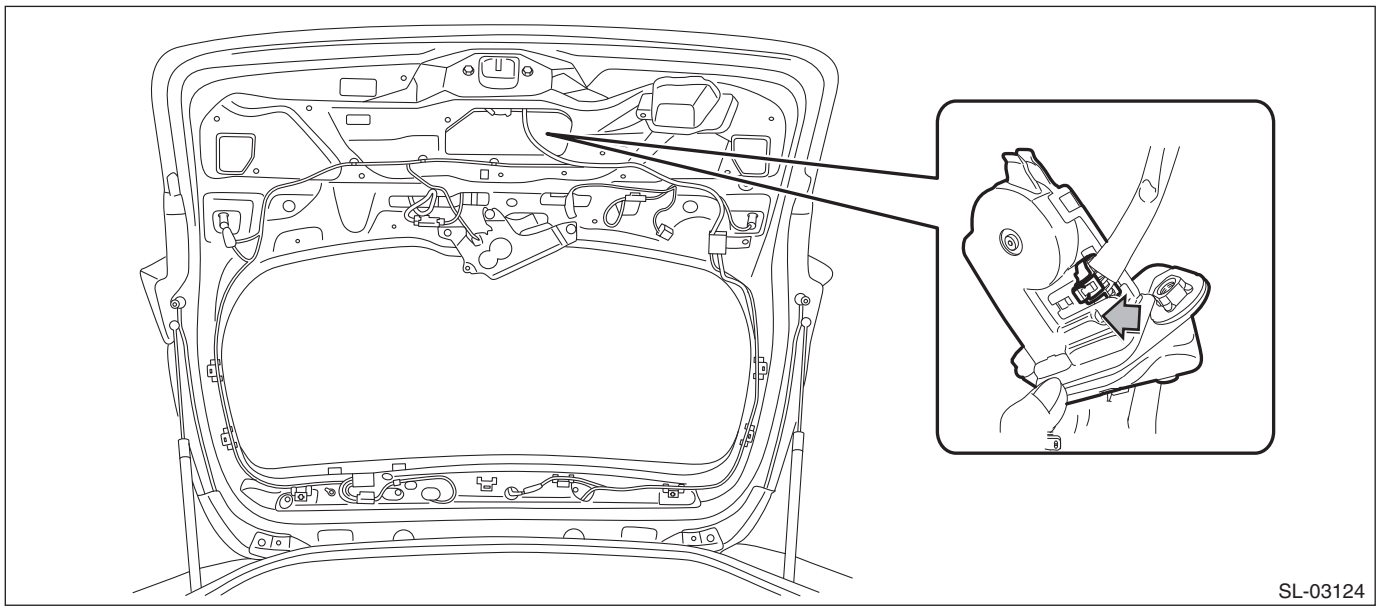


1) Check the resistance between connector terminals.

Preparation tool:
Circuit tester

- Model without lock/unlock button

- Model with lock/unlock button



Terminal No.	Inspection conditions	Standard
1 — 2	OPEN	Less than 5 Ω
	CLOSE	1 MΩ or more

2) If the inspection result is not within the standard, replace the button - opener rear gate.

14.Rear Gate Latch and Actuator Assembly

A: REMOVAL

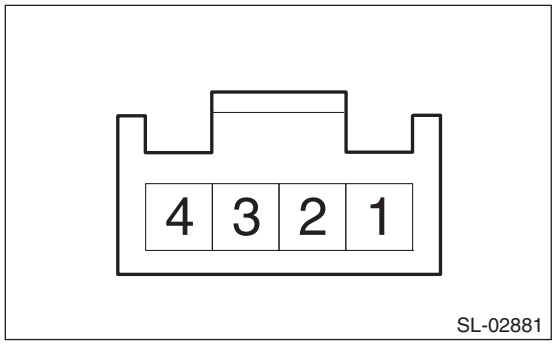
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the latch and actuator - rear gate.
   (1) Disconnect the connector.
   (2) Remove the bolts, and remove the latch and actuator - rear gate.

B: INSTALLATION

1) Install the latch and actuator - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

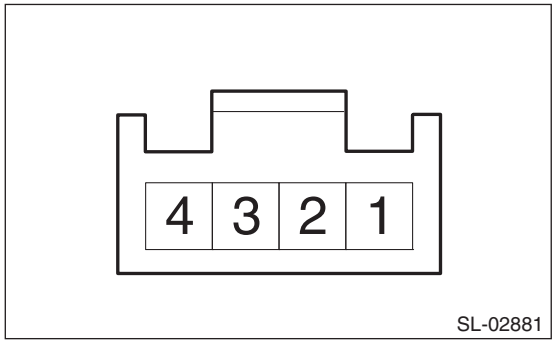


C: INSPECTION

1. LATCH

Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the latch and actuator - rear gate.

2. ACTUATOR

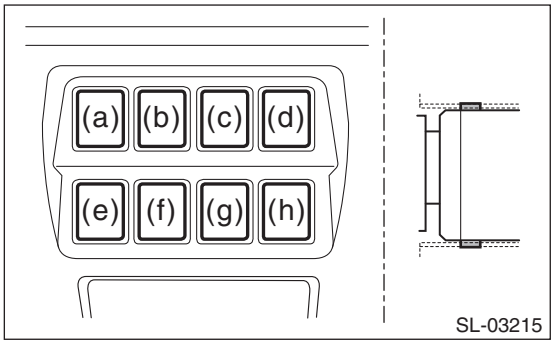


1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Connect battery to the terminals	OPEN

2) Check switch
Check the resistance between connector terminals.

Preparation tool:
Circuit tester



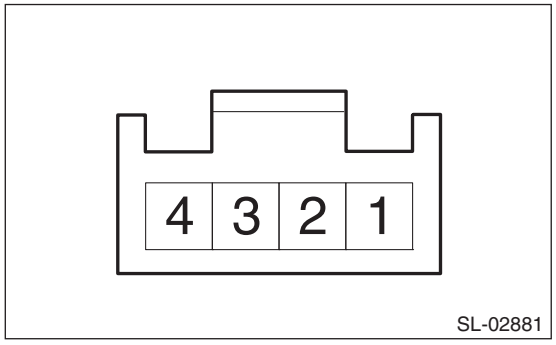
Terminal No.	Inspection conditions	Standard
3 — 4	OPEN	Less than 1.5 Ω
	CLOSE	1 MΩ or more

3) Replace the latch and actuator assembly - rear gate if it is found defective.

15.Trunk Opener Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the trunk opener switch.
(1) Release the claws and remove the trunk opener button (a).



B: INSTALLATION

1) Install the switch - trunk opener.
2) Install the cover assembly - instrument panel LWR driver. <Ref. to EI-76, INSTALLATION, Instrument Panel Lower Cover.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

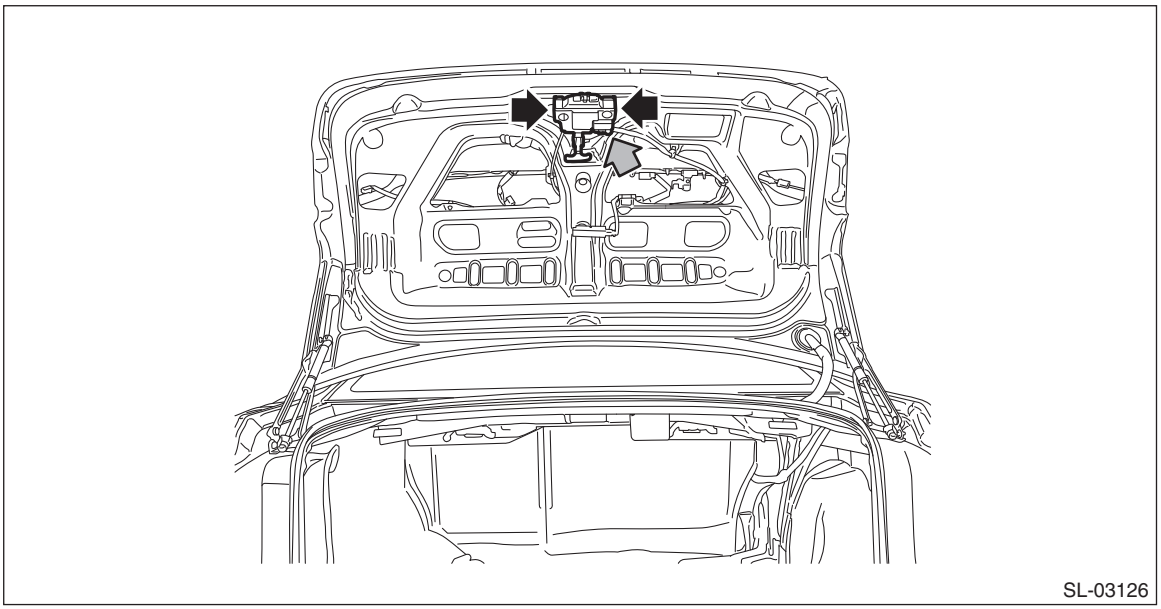
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the switch - trunk opener if it is found defective.

16.Trunk Lid Latch and Actuator Assembly

A: REMOVAL

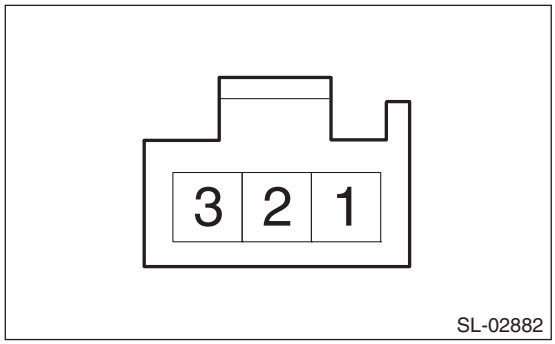
1) Open the trunk lid COMPL.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
4) Remove the lock assembly - trunk lid.
   (1) Disconnect the connector.
   (2) Remove the bolts, then remove the lock assembly - trunk lid.

B: INSTALLATION

1) Install the lock assembly - trunk lid.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the trim panel - trunk lid. <Ref. to EI-108, INSTALLATION, Trunk Room Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1. LATCH

Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - trunk lid.

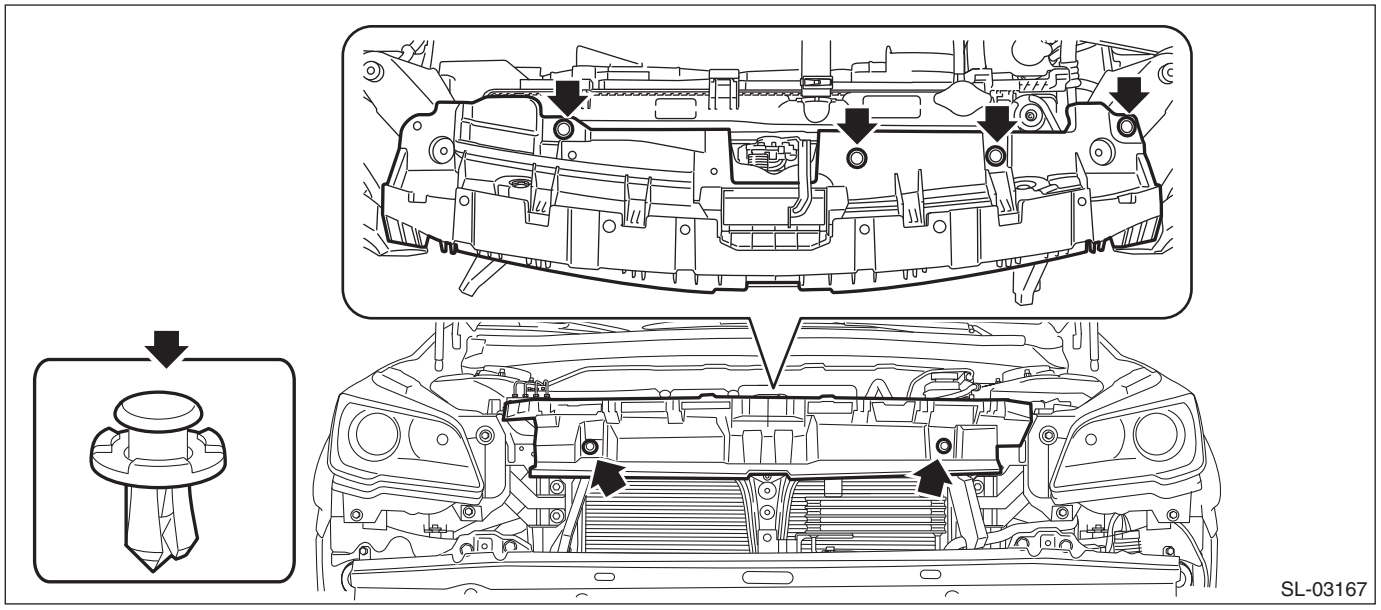
2. ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Connect battery to the terminals	LOCK → UNLOCK

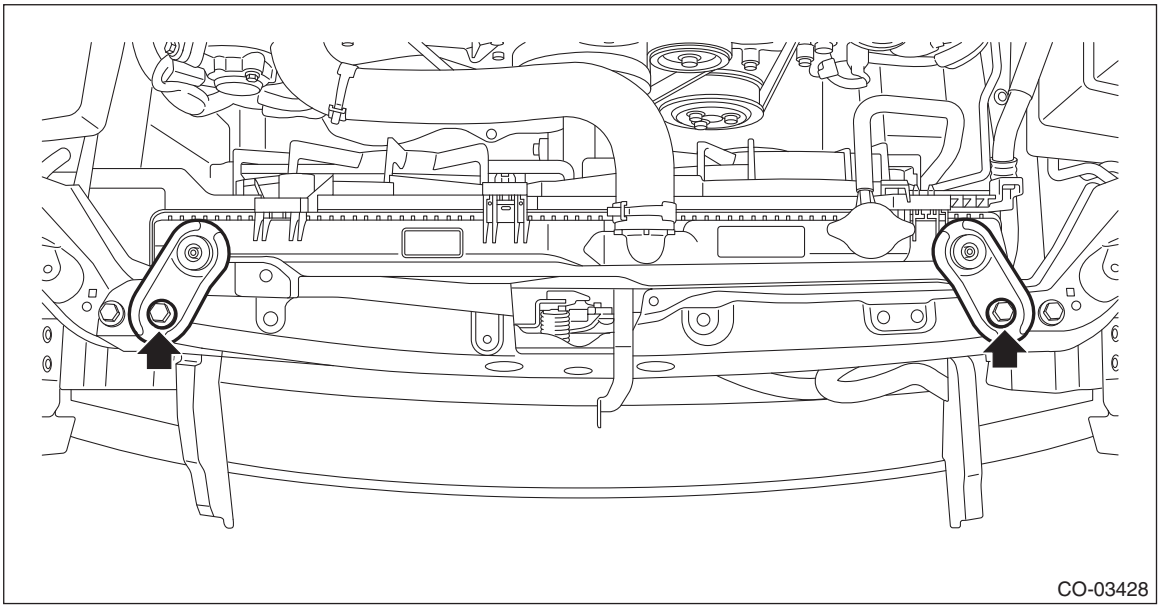
2) Check switch
Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 — 3	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

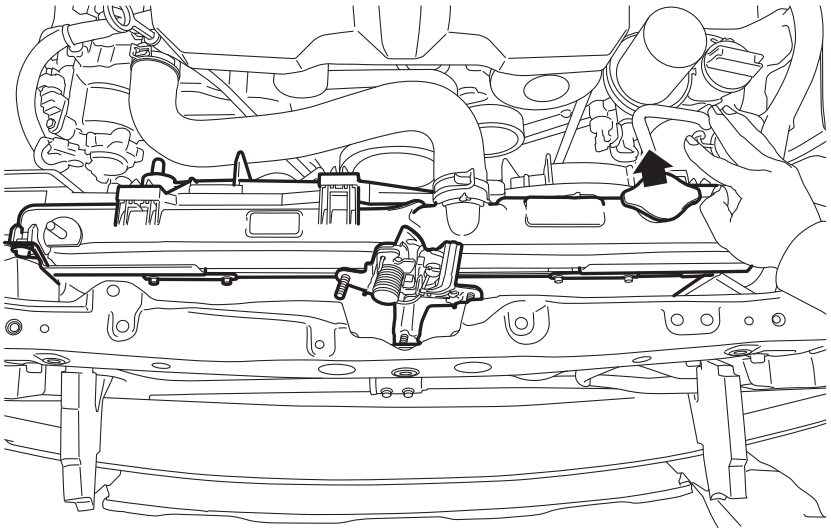
3) Replace the lock assembly - trunk lid if faulty is found in the inspection.



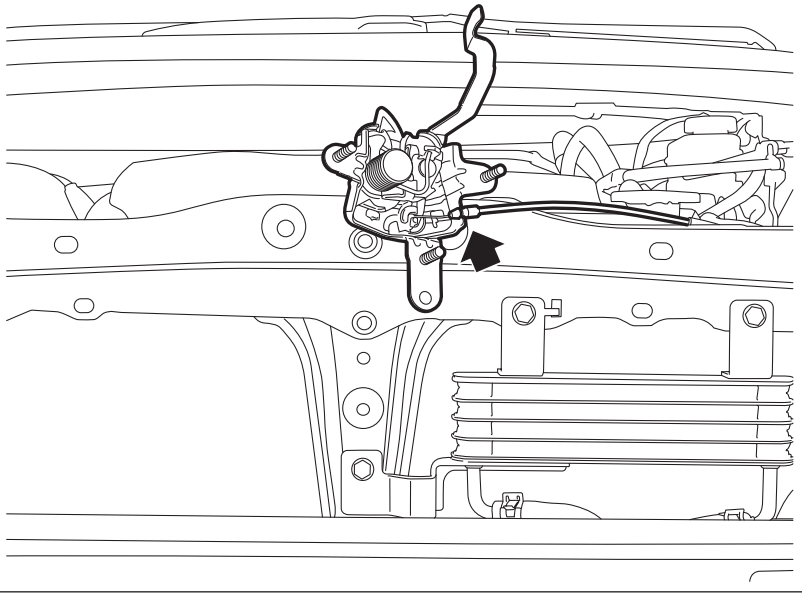
17.Front Hood Lock Assembly

A: REMOVAL

1) Open the front hood.
2) Remove the air intake duct. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
3) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>
4) Remove the bracket - grille.



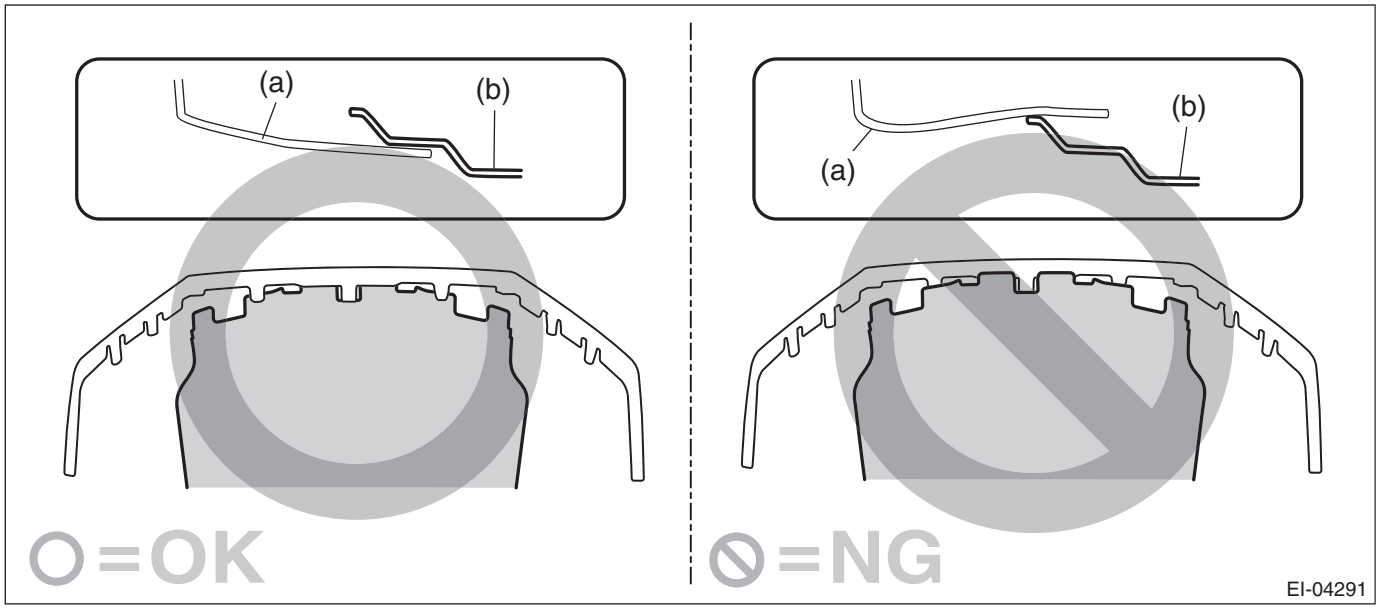
5) Remove the radiator upper brackets.



6) Remove the lock assembly - front hood.

(1) Remove the nuts and clips, and push the radiator to the rear to pull out the lock assembly - front hood through the clearance.

SL-03127



(2) Disconnect the release cable, and detach the lock assembly - front hood.

SL-03128

NOTE:
When disconnecting the release cable, refer to “FRONT HOOD OPENER” of “Remote Openers”. <Ref. to SL-58, FRONT HOOD OPENER, REMOVAL, Remote Openers.>

B: INSTALLATION

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Before installation, check the following items.
- Is the cable deformed?
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
2) Adjust and install the lock assembly - front hood.

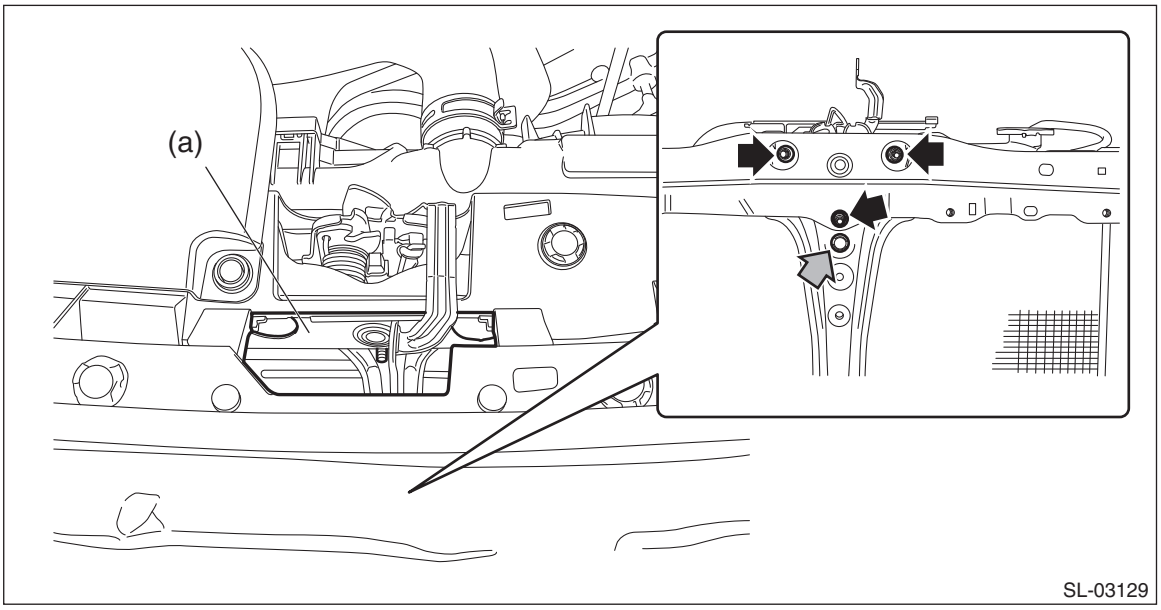
NOTE:
Refer to “ADJUSTMENT” for adjustment of the lock assembly - front hood. <Ref. to SL-56, ADJUSTMENT, Front Hood Lock Assembly.>

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
3) Install the radiator upper brackets.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)
4) Attach the bracket - grille.
5) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
6) Install the air intake duct. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Duct.>

C: ADJUSTMENT

1) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>



NOTE:
Remove the bumper face - front only at the first adjustment.
2) Remove the center ring clip from the lock assembly - front hood.

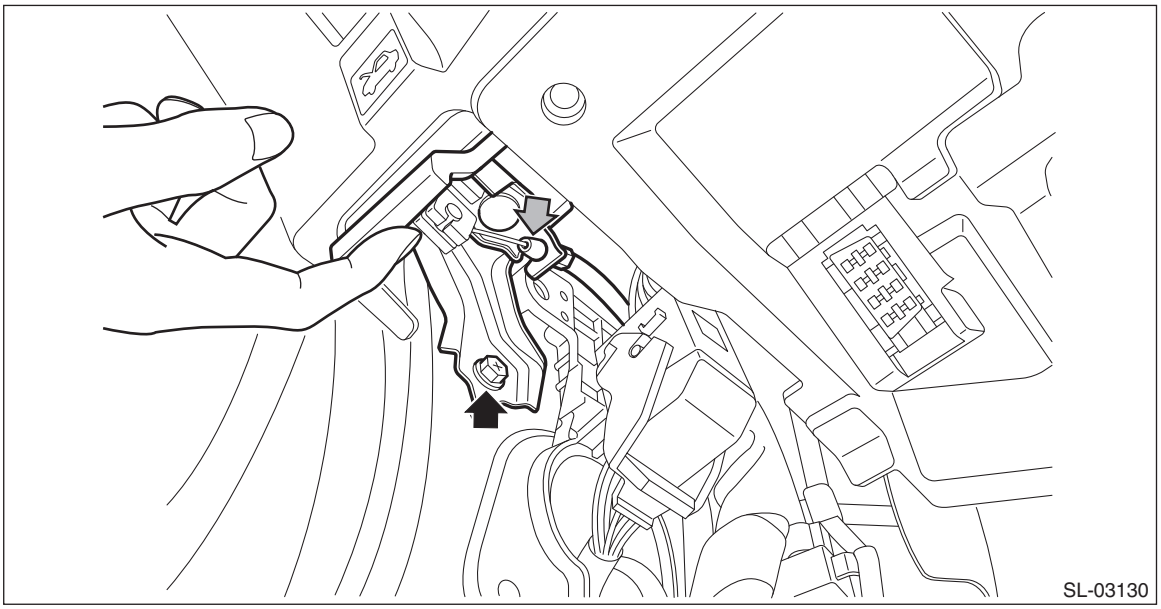
NOTE:
Remove the center ring clip only at the first adjustment.
After adjusting the lock assembly - front hood, dispose the clips since they are no longer needed.
The clips cannot be inserted because the clip holes become smaller due to adjustment.

3) Loosen the nuts through the adjustment window (a) of the lock assembly - front hood, and adjust the lock assembly - front hood while moving it up and down.

CAUTION:
After adjustment, tighten the bolts securely.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

D: INSPECTION



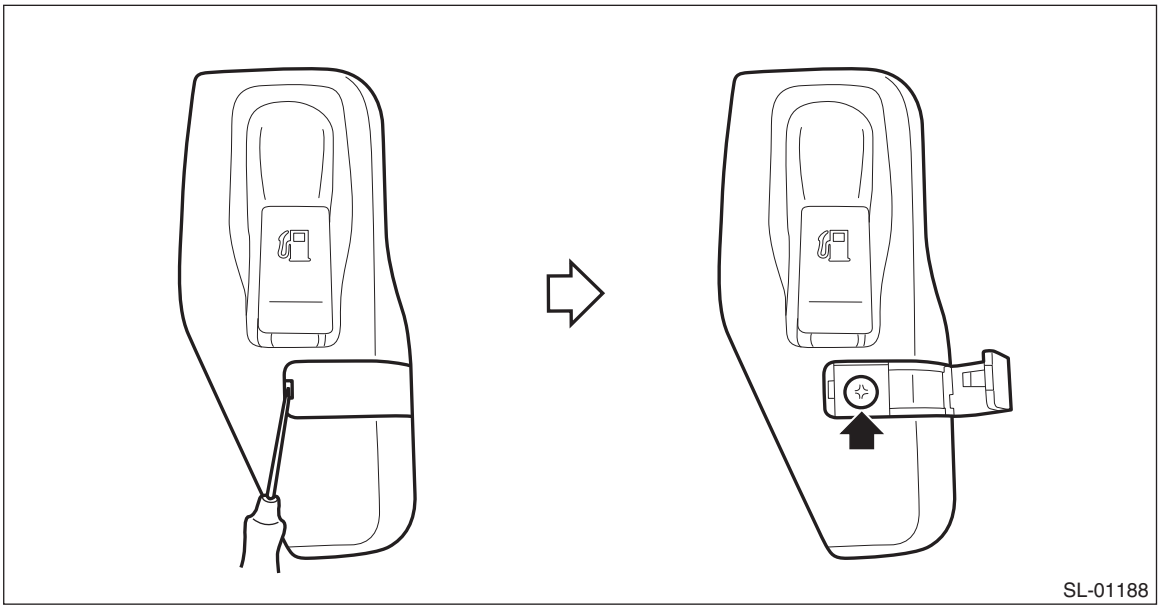
Check if the lock assembly operates normally.
If lever deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - front hood.

18.Remote Openers

A: REMOVAL

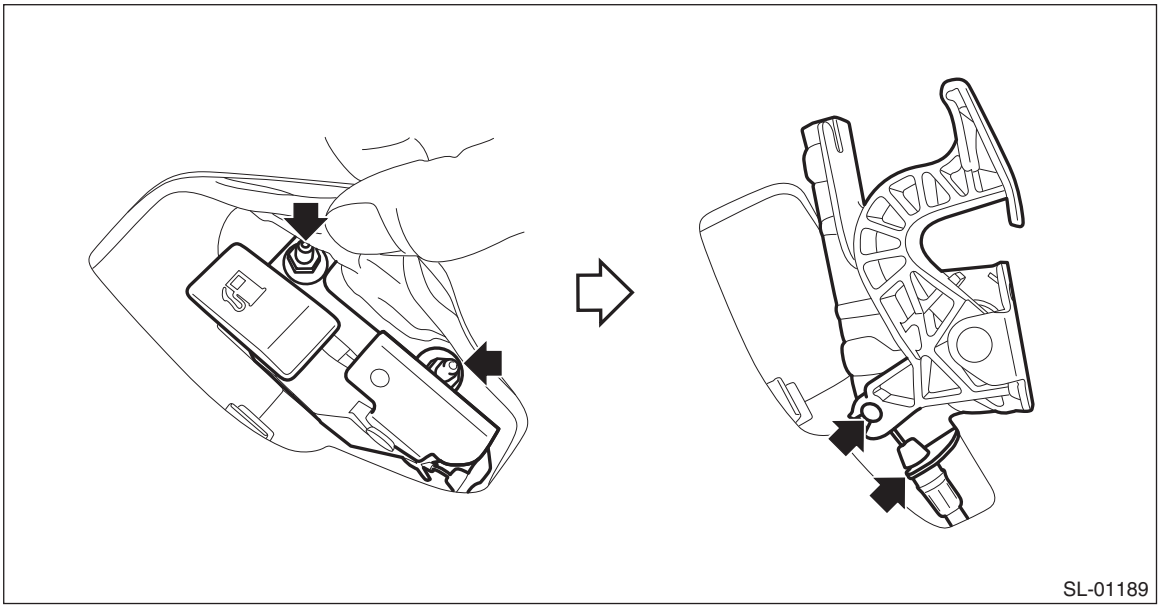
1. FRONT HOOD OPENER

1) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
2) Remove the cover side sill - front LH and front cover - side sill LH. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
3) Remove the opener handle.
   (1) Remove the cable - front hood.
   (2) Remove the bolt, and remove the opener handle.



4) Remove the mud guard - front LH. <Ref. to EI-28, REMOVAL, Mud Guard.>
5) Remove the lock assembly - front hood. <Ref. to SL-54, REMOVAL, Front Hood Lock Assembly.>
6) Attach a string to the end of cable - front hood, and remove the cable clip and cable - front hood.

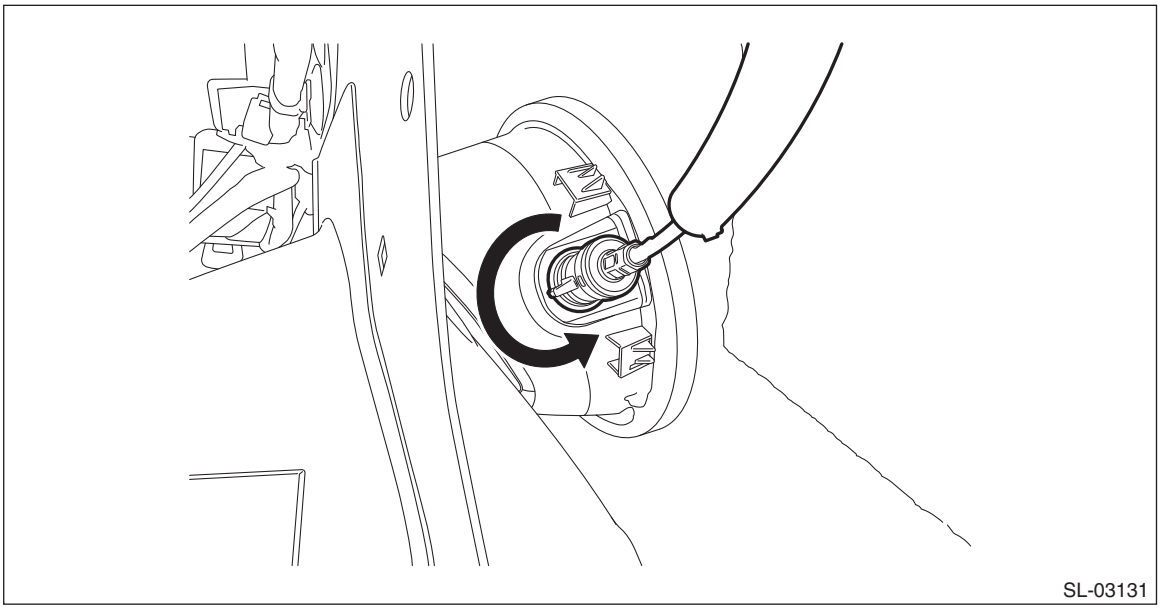
NOTE:
Leave the string attached to the body, and use it during installation.



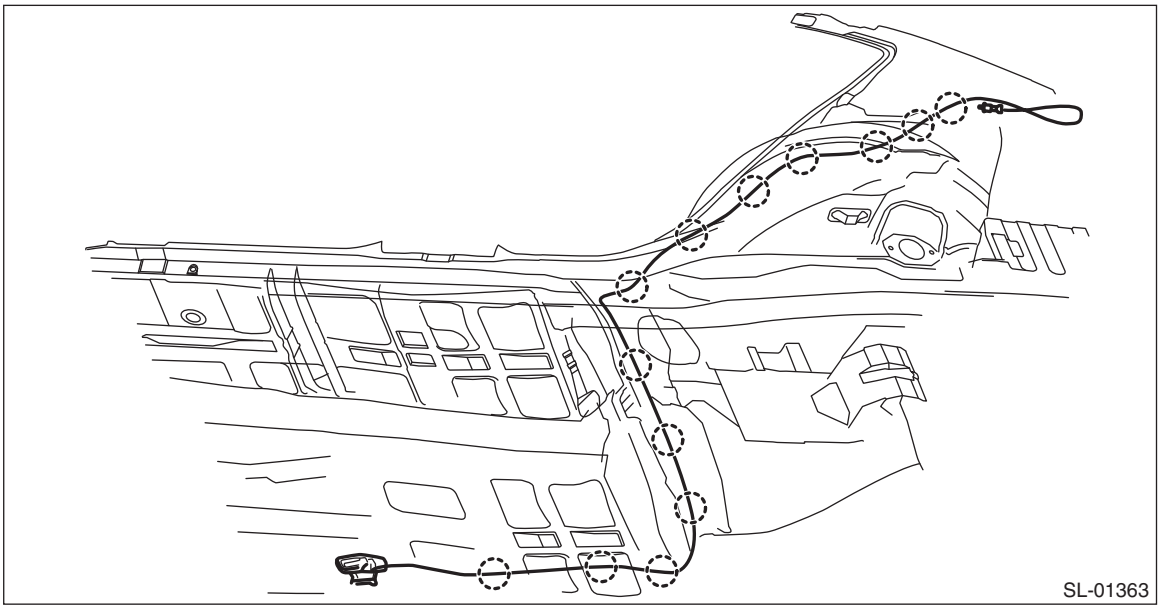
2. FUEL FLAP OPENER

1) Remove the lower inner trim. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
2) Remove the cover - handle.
   (1) Open the cover by using a flat tip screwdriver.

(2) Remove the screws and detach the cover - handle.

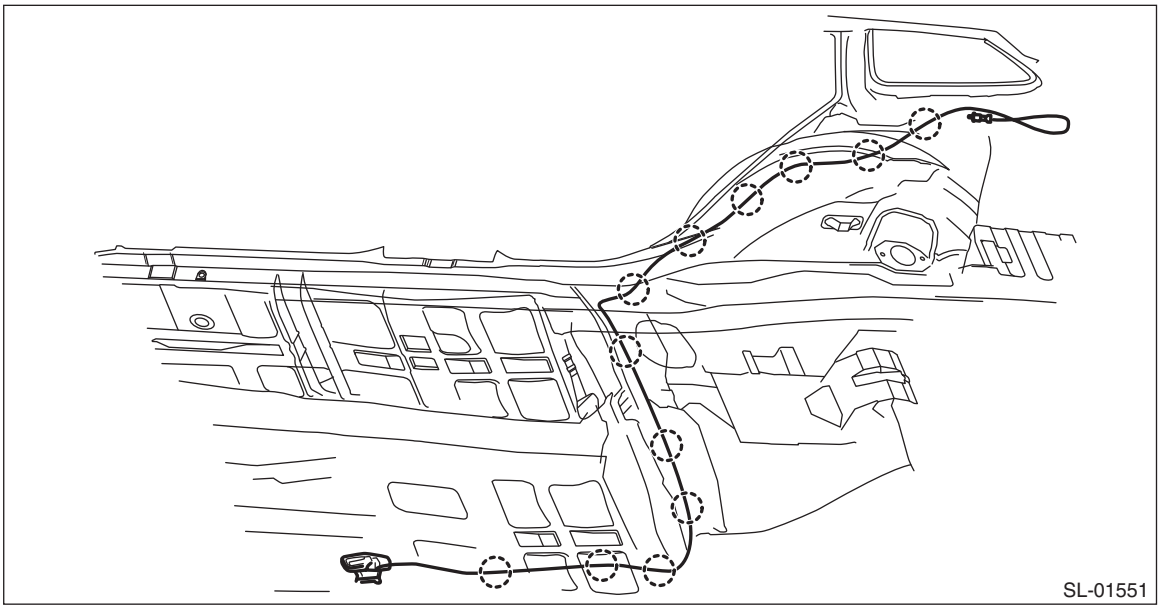


3) Remove the pull handle - opener.
(1) Remove the nut.
(2) Remove the cable from pull handle - opener.



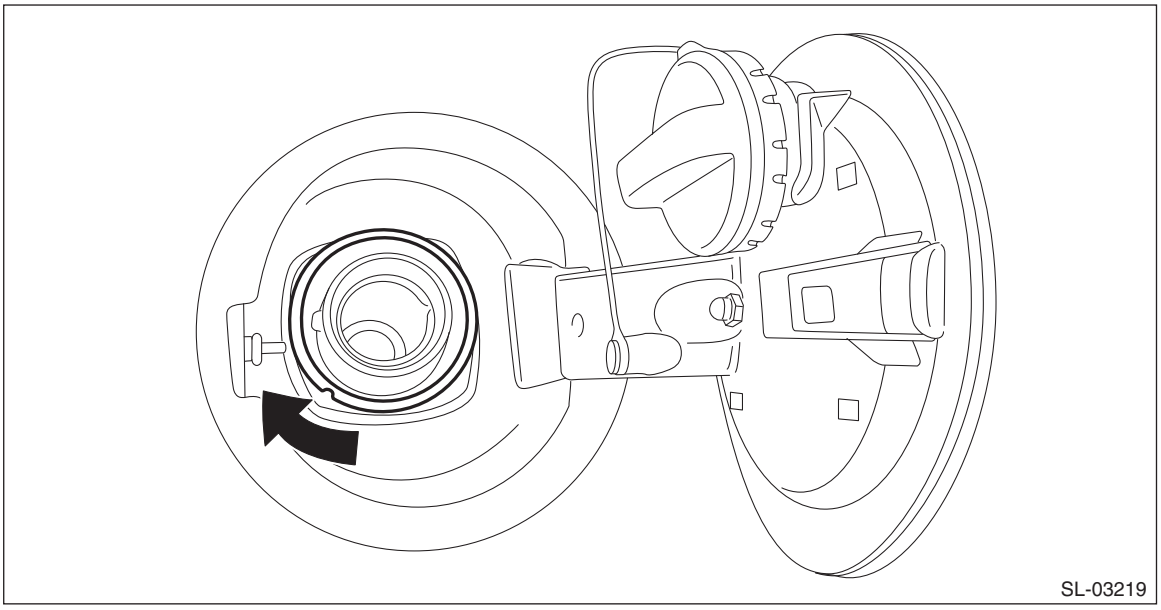
4) Remove the trim panel - rear apron RH. (OUTBACK model) <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
5) Remove the trim panel - trunk side RH. (Sedan model) <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
6) Remove the cable assembly - fuel inside the quarter panel.

(1) Turn the cable assembly - fuel counterclockwise and pull toward vehicle rear.

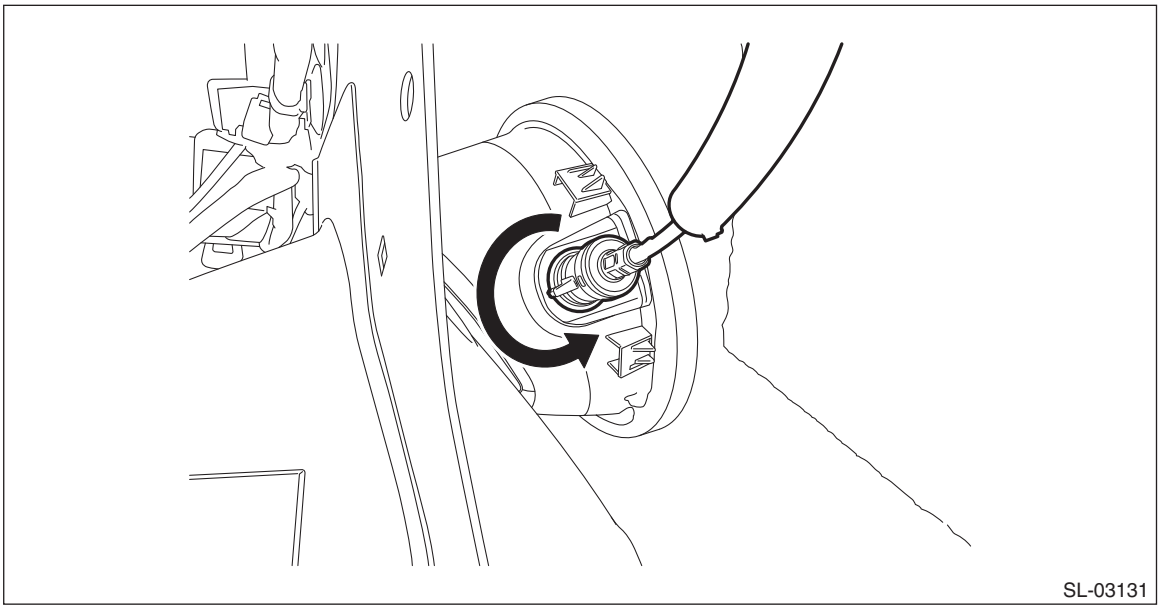


7) Remove the cable clip, and remove the cable.

- Sedan model

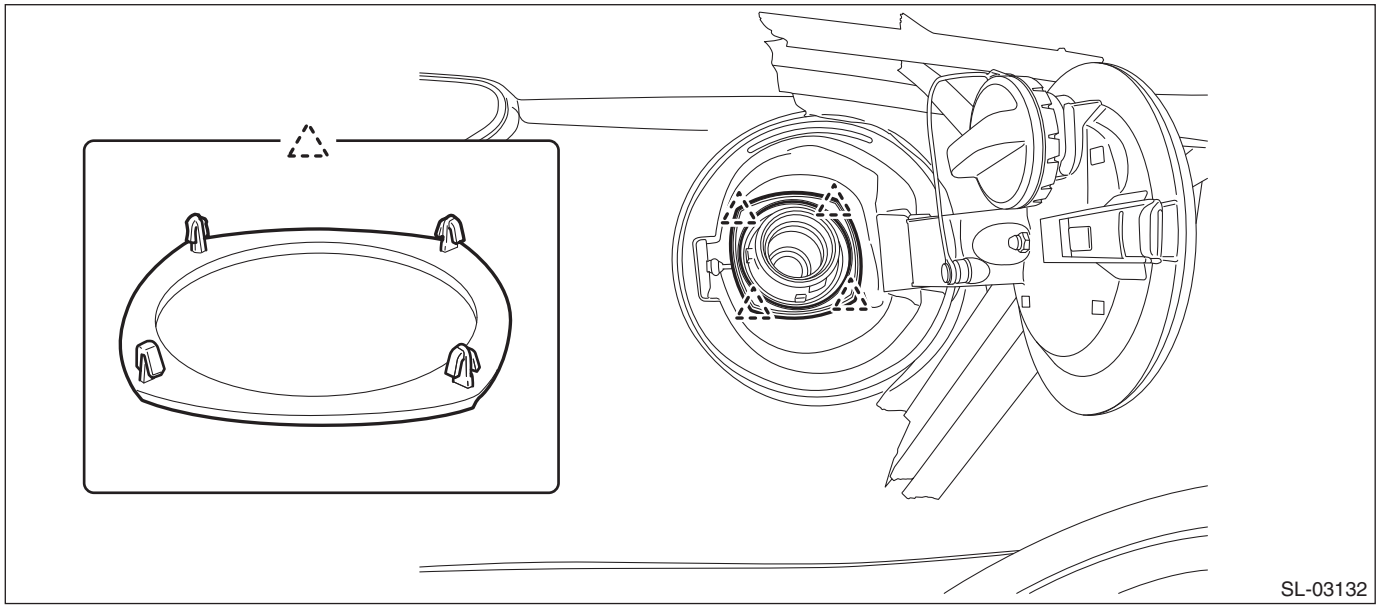


- OUTBACK model



3. FUEL FLAP

1) Open the fuel flap and remove the fuel filler cap.
2) Turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.

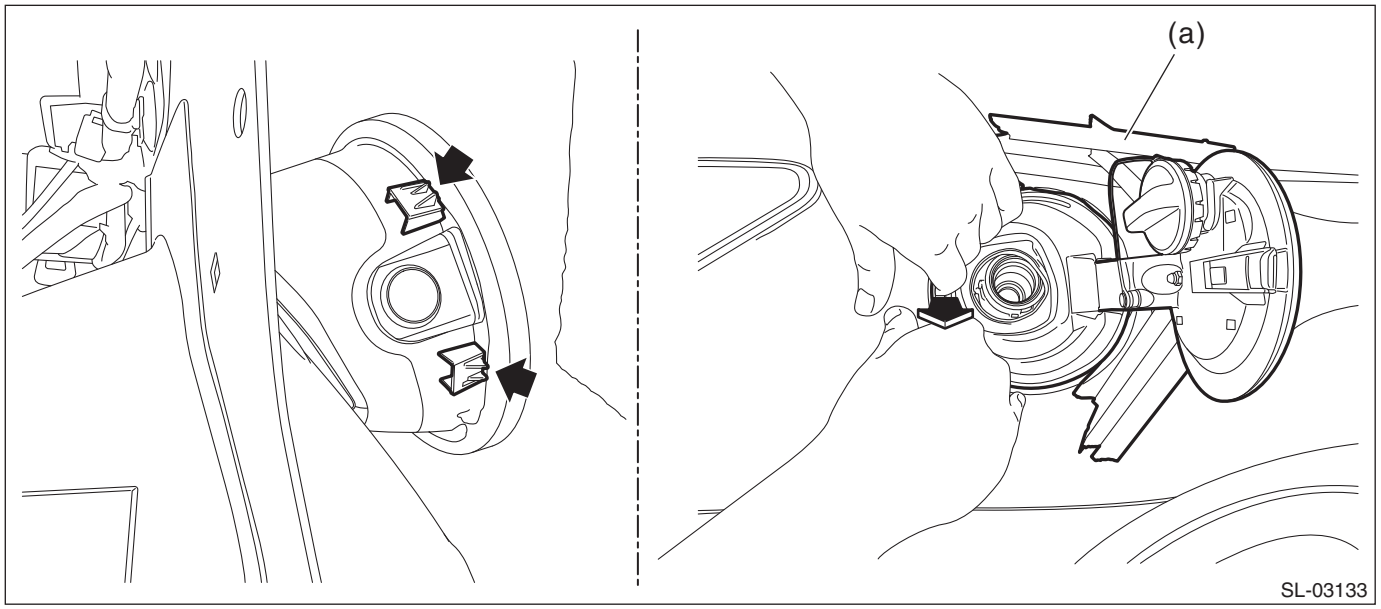


3) Remove the trim panel - rear apron RH. (OUTBACK model) <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
4) Remove the trim panel - trunk side RH. (Sedan model) <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
5) Remove the cable assembly - fuel inside the quarter panel.

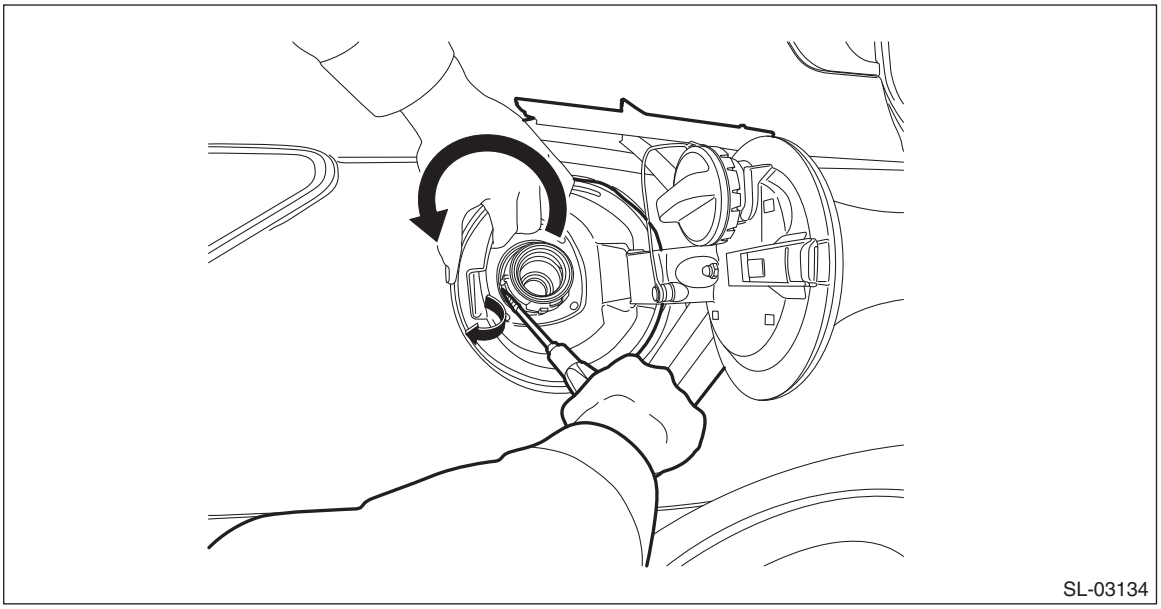
(1) Turn the cable assembly - fuel counterclockwise and pull toward vehicle rear.

6) Disconnect the ring clips.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

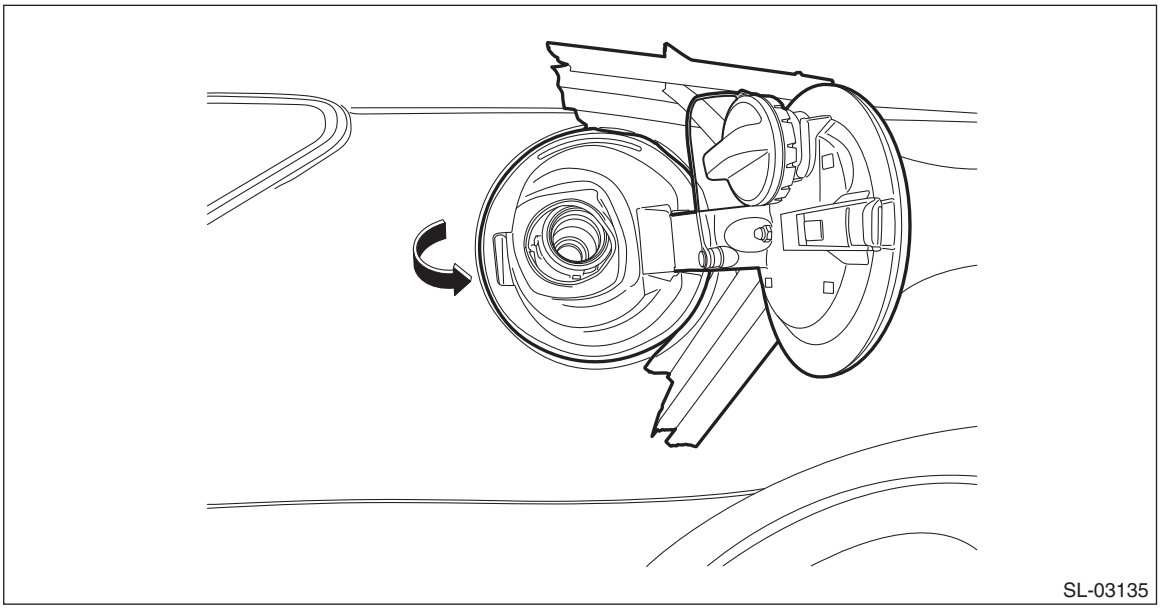


7) Remove the saucer - COMPL.

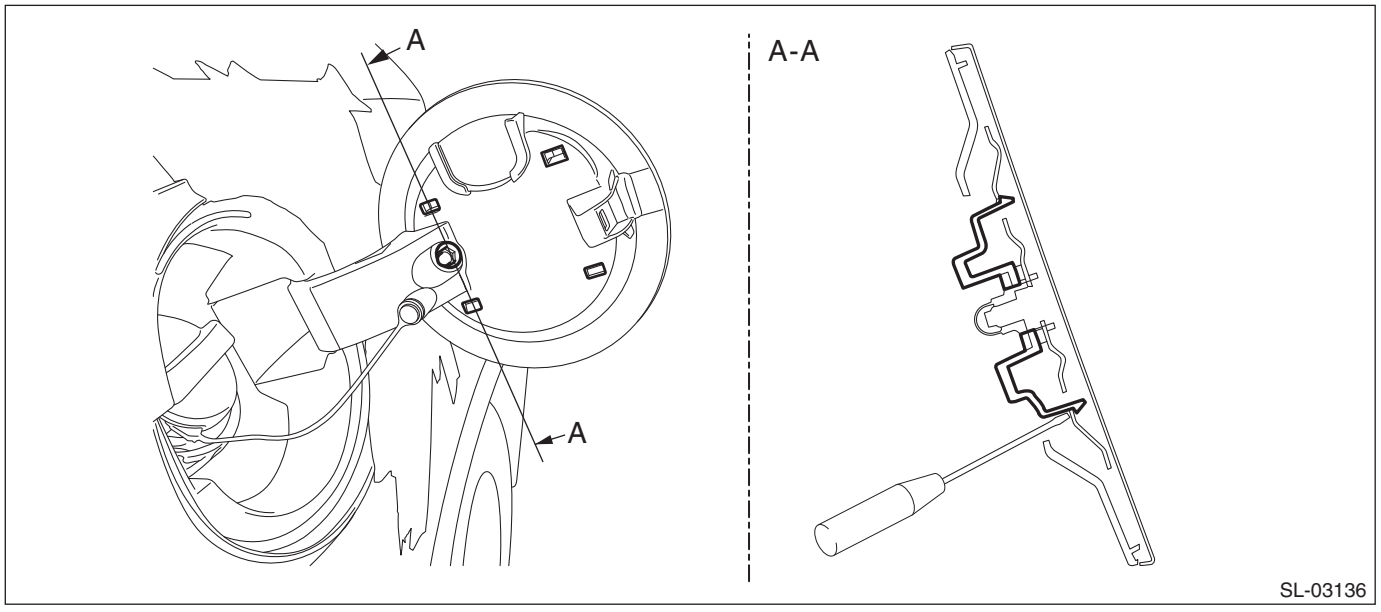


CAUTION:
Be careful not to damage by forcibly prying at the rubber portion with a flat tip screwdriver or similar tool.

(1) Attach the protective tape (a) to the panel side outer.

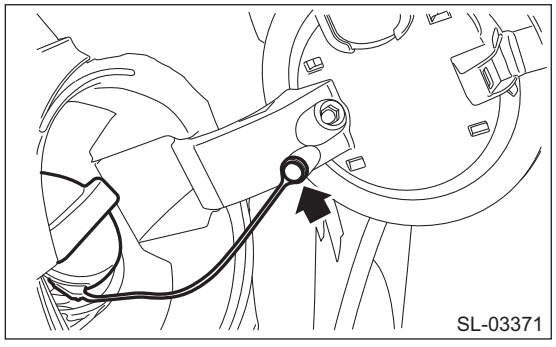


(2) Hold the position shown in the figure with your hands, push the claw from vehicle inside and pull out toward yourself.



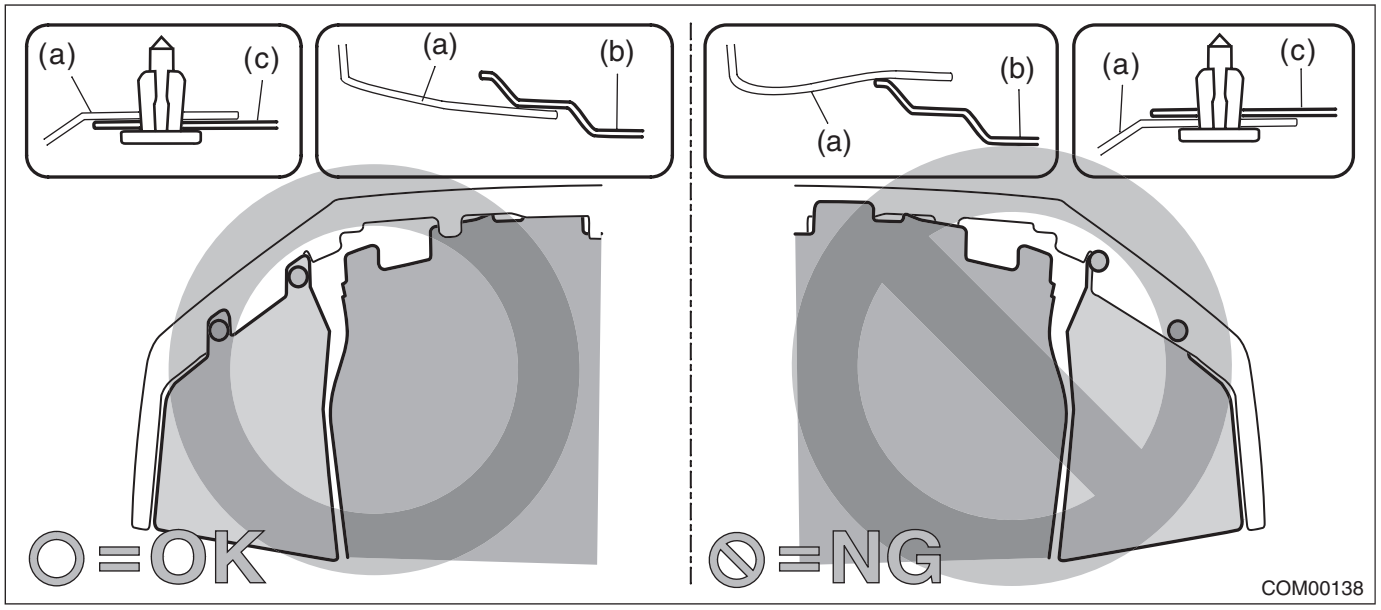
(3) While pulling out toward yourself, remove the rubber portion from the fuel filler pipe using a flat tip screwdriver or similar tool wrapped with a protection tape.

(4) Pull out while tilting toward the front of vehicle.



8) Remove the flap - COMPL fuel from the saucer - COMPL.
(1) Remove the nut and release the claws using a flat tip screwdriver or similar tool wrapped with protection tape.

9) Remove the clips, and remove the fuel filler cap from the saucer - COMPL.



CAUTION:
Always replace with a new clip, because engagement of the claw weakens.

B: INSTALLATION

1. FRONT HOOD OPENER

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Before installation, check the following items.
• Cable is free from deformation such as fray.
2) Pull the string attached to the body into the vehicle, and install the cable clip and cable - front hood.
3) Install the lock assembly - front hood. <Ref. to SL-56, INSTALLATION, Front Hood Lock Assembly.>
4) Install the opener handle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the cover side sill - front and the front cover - side sill.
6) Install the cover assembly - instrument panel LWR driver.
7) Install the mud guard - front LH.

2. FUEL FLAP OPENER

1) Install the cable assembly - fuel.
2) Install the pull handle - opener and cover - handle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the trim panel - trunk side RH. (Sedan model)
4) Install the trim panel - rear apron RH. (OUTBACK model)
5) Install the lower inner trim.

3. FUEL FLAP

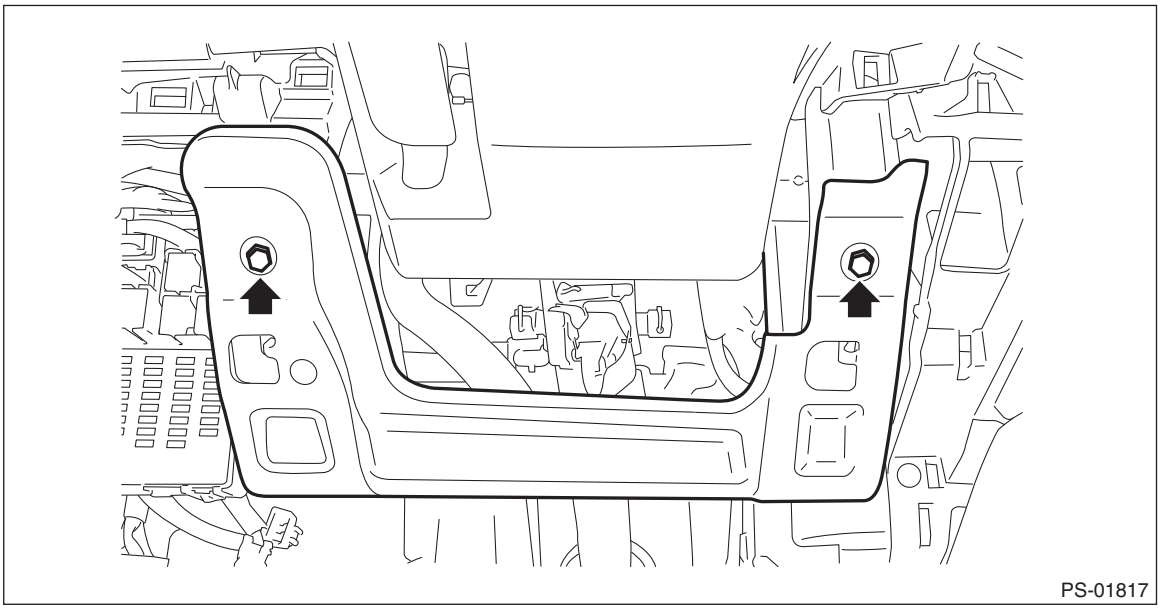
1) Install the flap - COMPL fuel to the saucer - COMPL.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the saucer - COMPL.

NOTE:
Securely install the rubber portion of the saucer - COMPL to the fuel filler pipe assembly.
3) Install the fuel filler cap to the saucer - COMPL.

CAUTION:
Always replace with a new clip, because engagement of the claw weakens.
4) Attach the ring clips.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.
5) Install the fuel filler pipe protector.
6) Install the cable assembly - fuel.
7) Install the trim panel - trunk side RH. (Sedan model)
8) Install the trim panel - rear apron RH. (OUTBACK model)

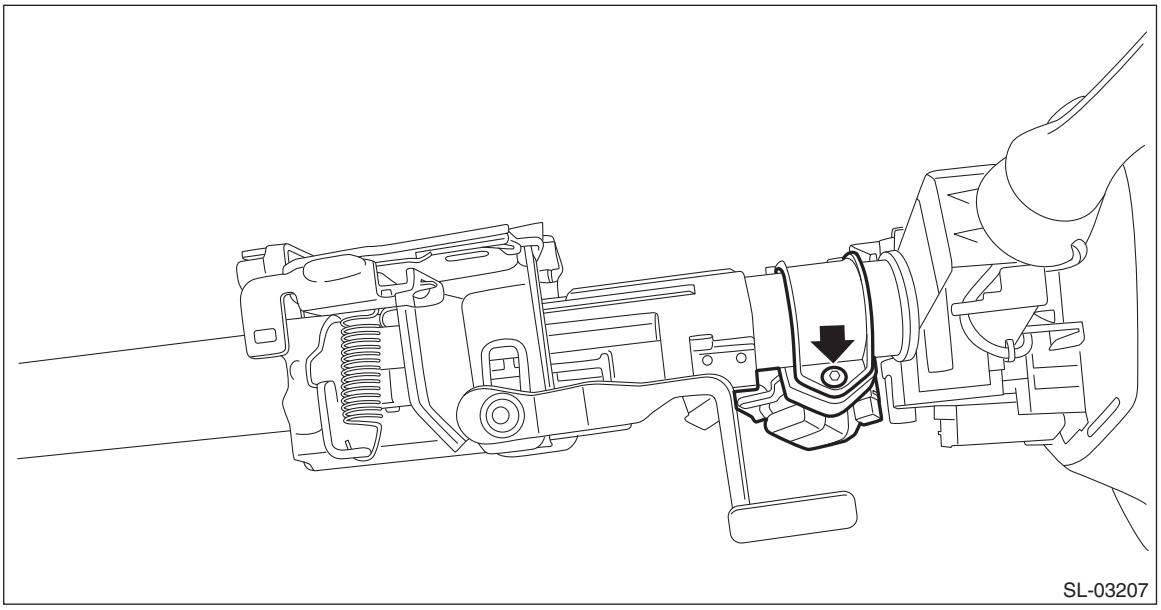


C: INSPECTION

Check if the front hood and fuel flap operate normally.

19.Ignition Key Lock

A: REPLACEMENT

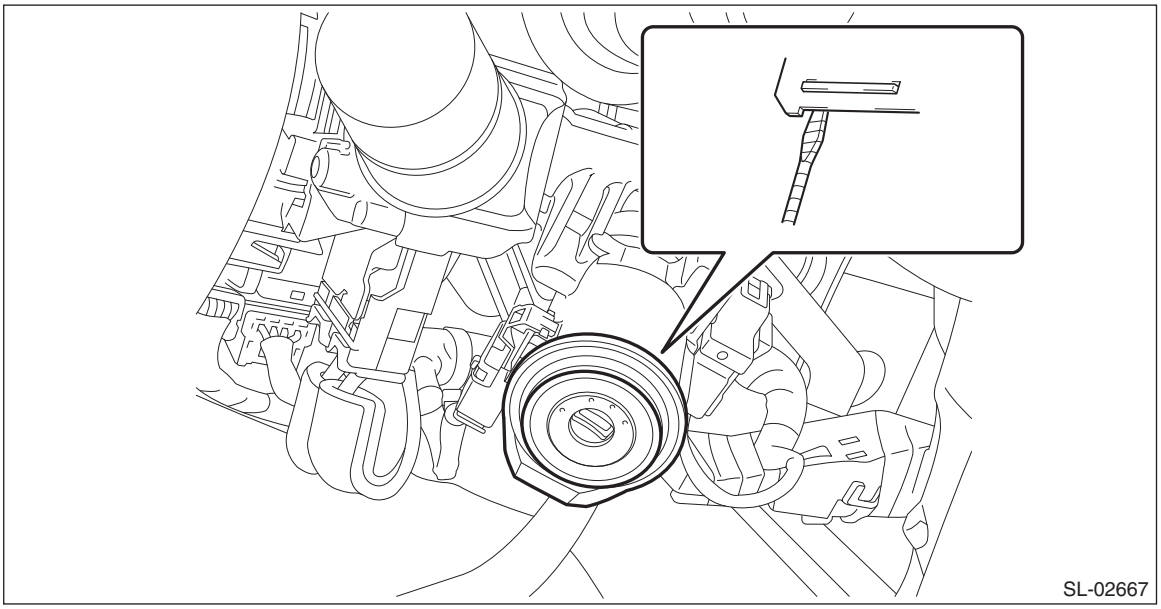


CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard.

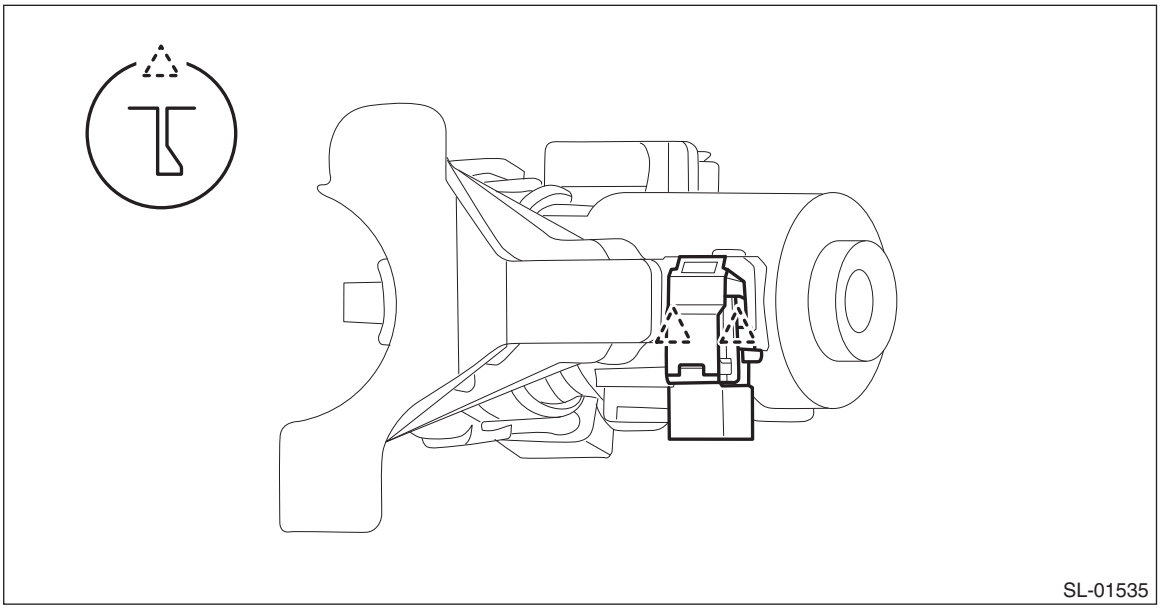
4) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
5) Remove the column assembly - steering. <Ref. to PS-26, REMOVAL, Steering Column.>
6) Remove the ignition key lock.
(1) Secure the column assembly - steering in a vise.

(2) Use the reverse tap and drill to remove the set bolt and remove the ignition key lock.

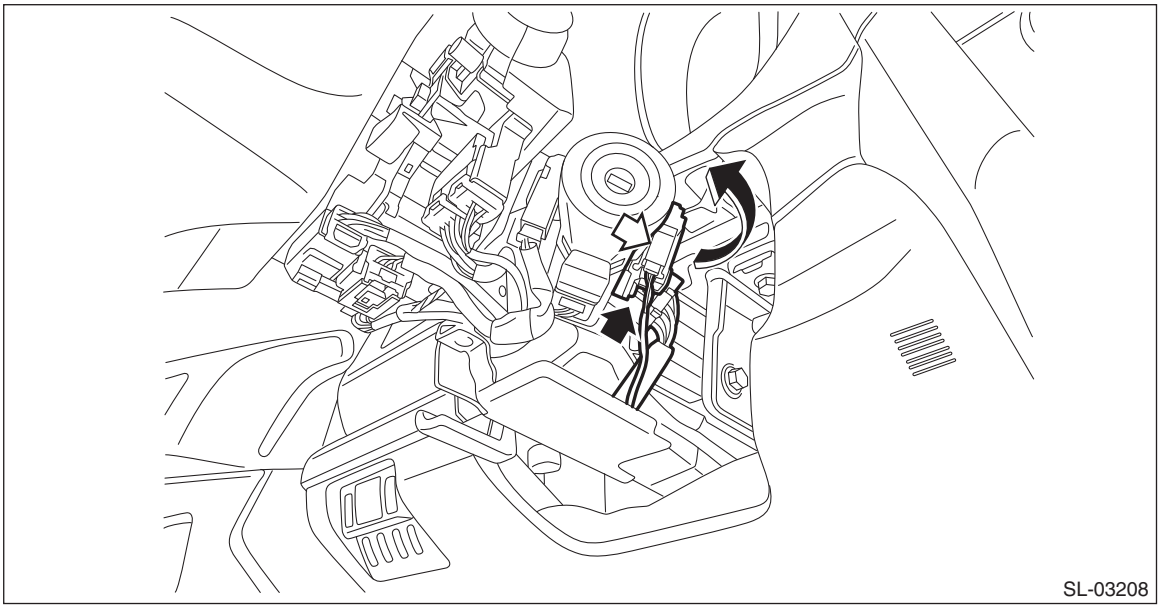


7) Install the ignition key lock.
   (1) Secure the ignition key lock to the column assembly - steering.
   (2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
8) Install the column assembly - steering. <Ref. to PS-28, INSTALLATION, Steering Column.>
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



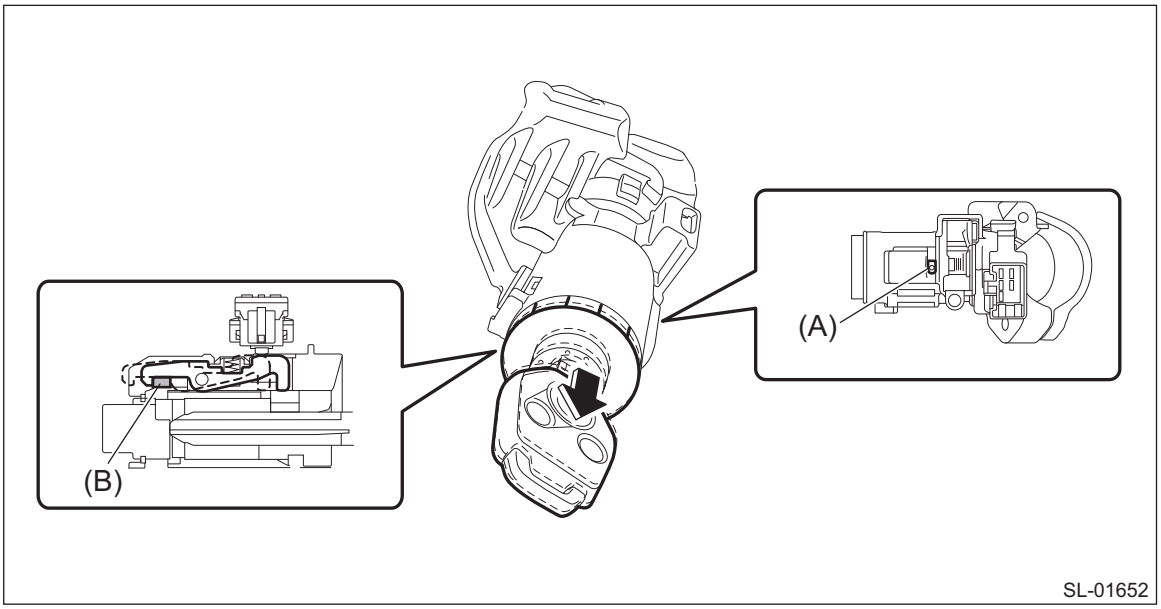
B: DISASSEMBLY

1) Remove the immobilizer antenna assembly.
   (1) Disconnect the connector.
   (2) Release two claws using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the immobilizer antenna assembly.

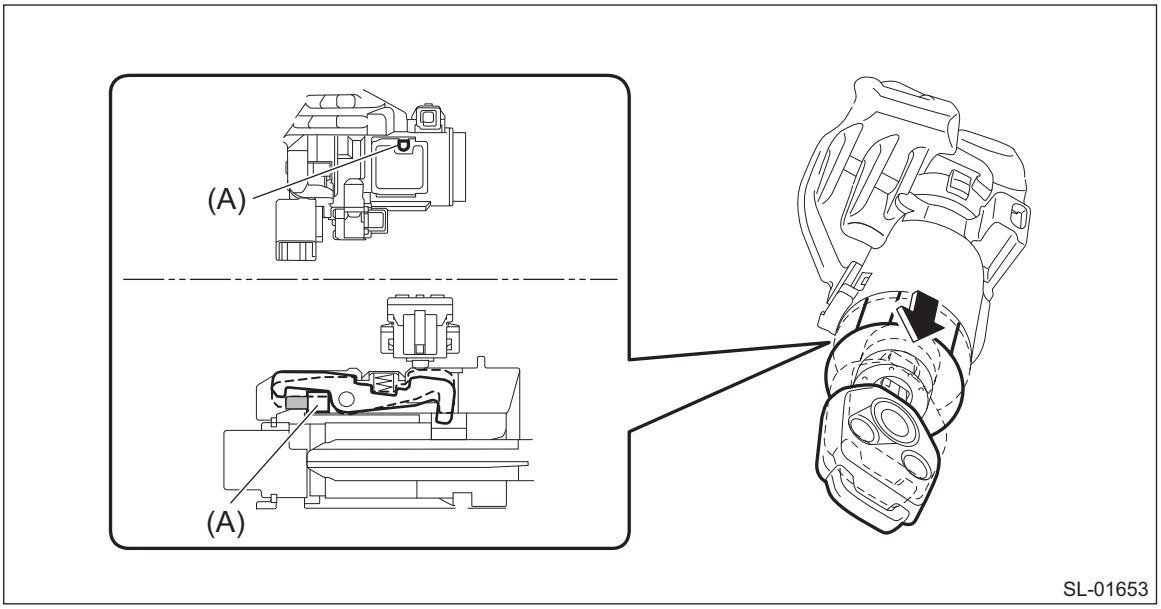


CAUTION:
Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.

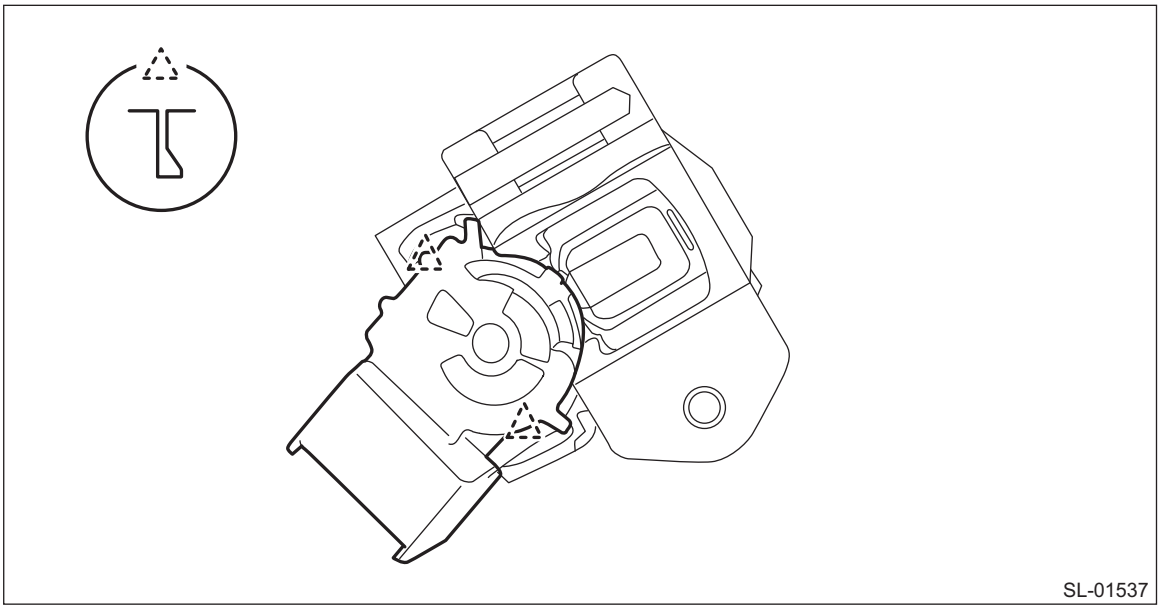
2) Release the claws, and pull the key warning switch downwards to remove.



3) Remove the key lock solenoid.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the key lock solenoid.

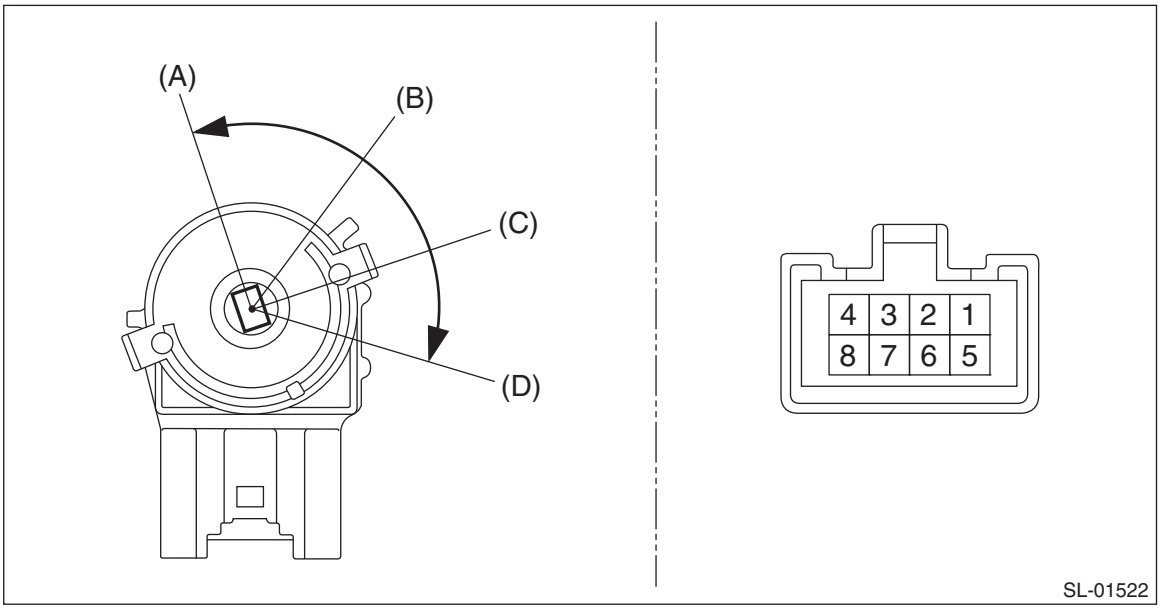


4) Replace the key cylinder.
   (1) Insert the key into the key cylinder, and turn the key to the ACC position.



(2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).

(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.



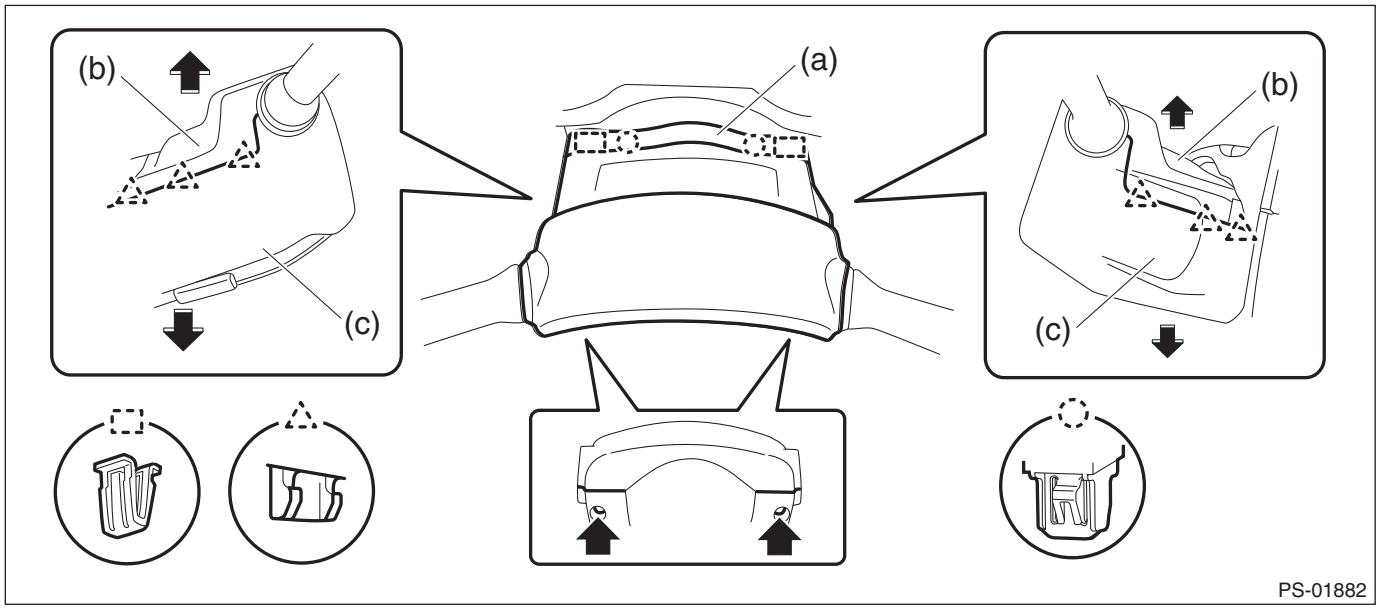
5) Release the claws and remove the ignition switch assembly.

C: INSPECTION

1) Measure the resistance between connector terminals.

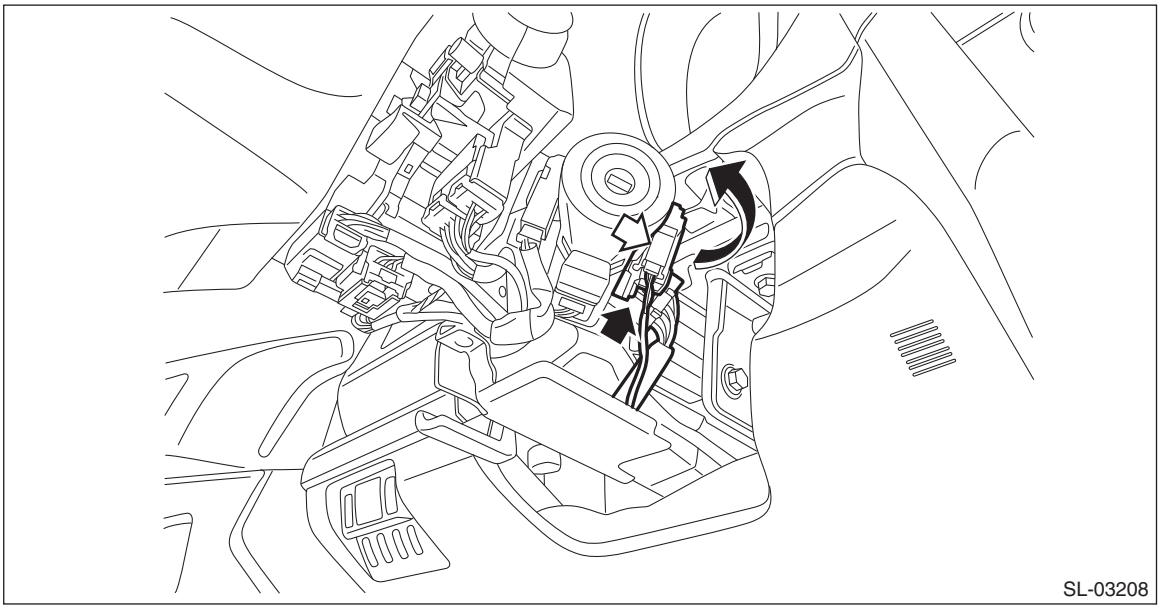
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
Between all terminals	(A)	LOCK	1 MΩ or more
2 — 4	(B)	ACC	Less than 1 Ω
1 — 2 — 4 5 — 6	(C)	ON	Less than 1 Ω
1 — 3 — 4 5 — 6 — 7	(D)	ST	Less than 1 Ω



2) Replace the ignition switch assembly if the inspection result is not within the standard.

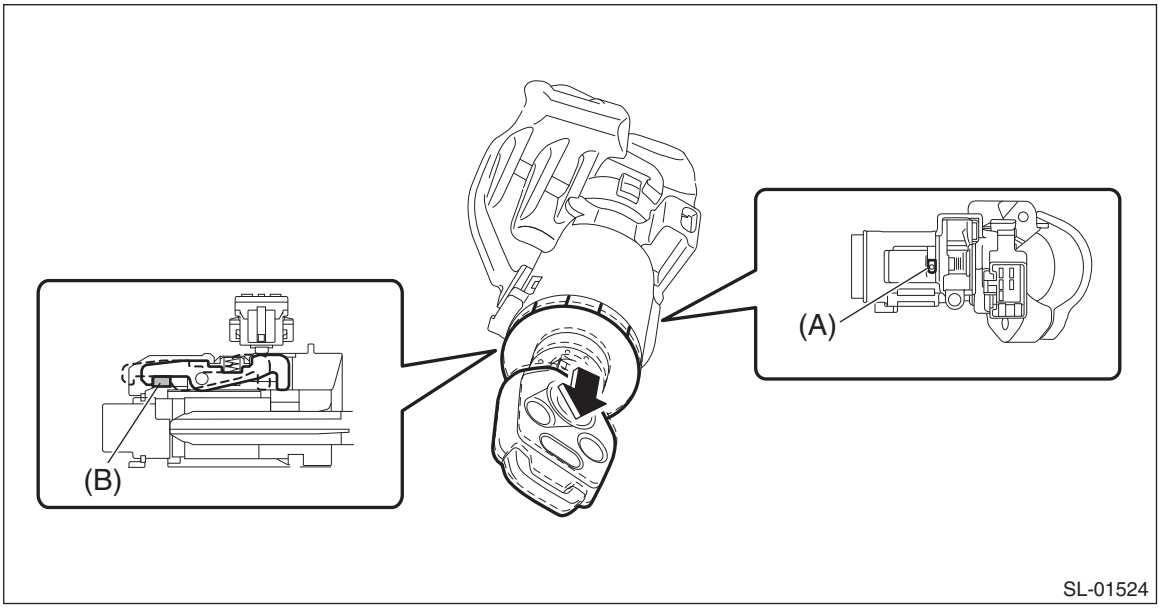
20.Key Lock Cylinders



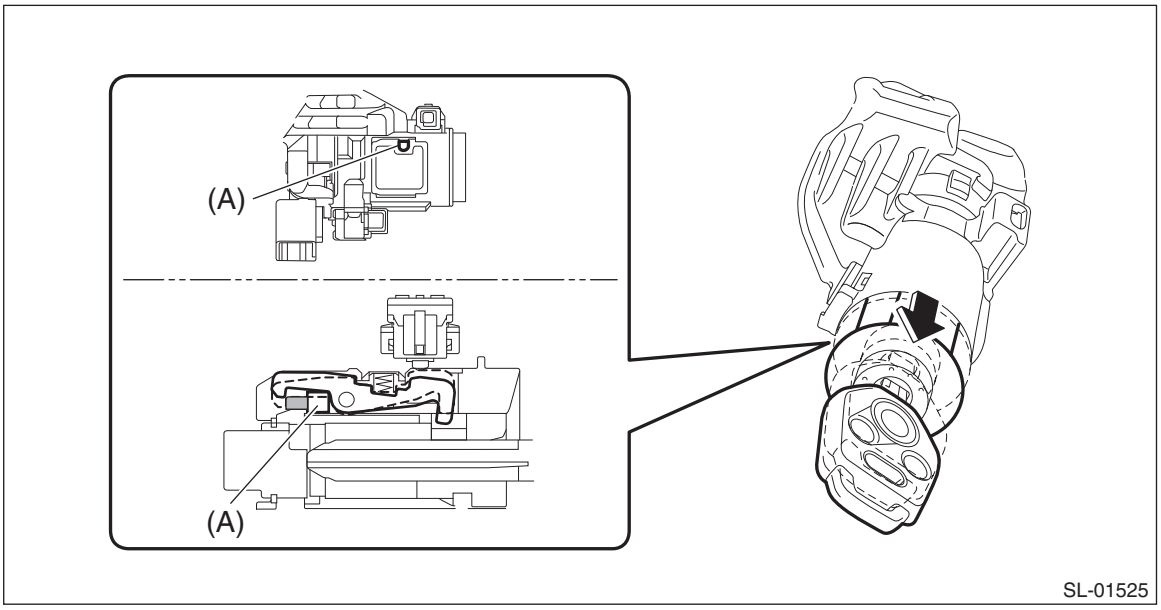
A: REPLACEMENT

1. STEERING LOCK

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column (a).
   (2) Remove the screws.
   (3) Release the claws, and remove the cover assembly - column UPR (b) and the cover assembly - column LWR (c).



3) Remove the immobilizer antenna assembly or the ignition switch illumination. <Ref. to SL-90, REMOVAL, Immobilizer Antenna.>
4) Remove the key lock solenoid.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the key lock solenoid.

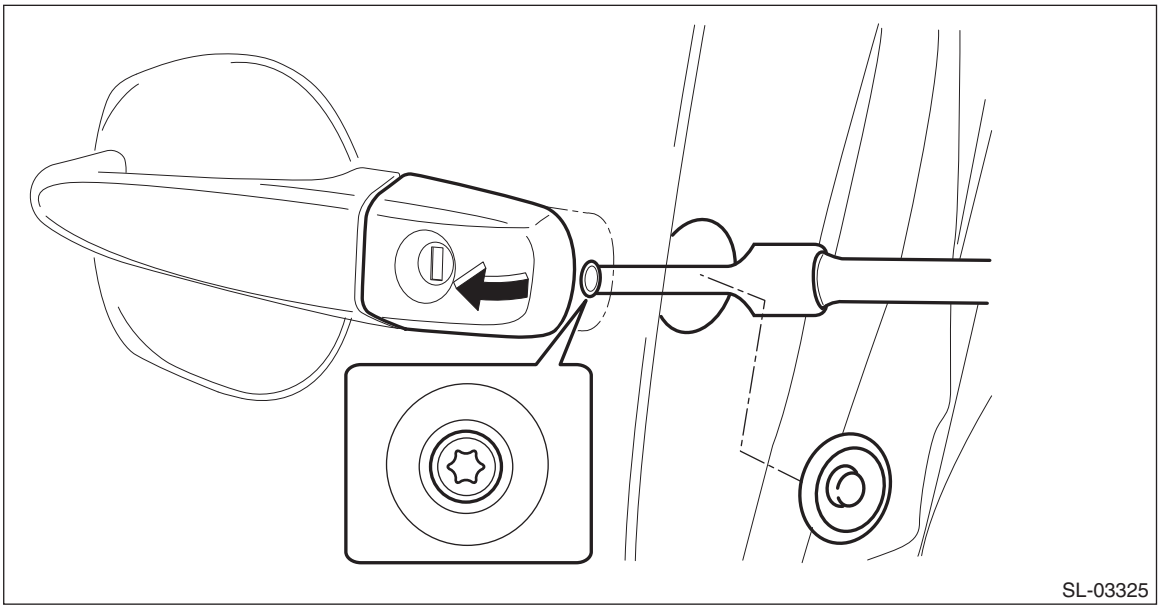


5) Replace the key cylinder.

(1) Insert the key into the key cylinder, and turn the key to the ACC position.
(2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).

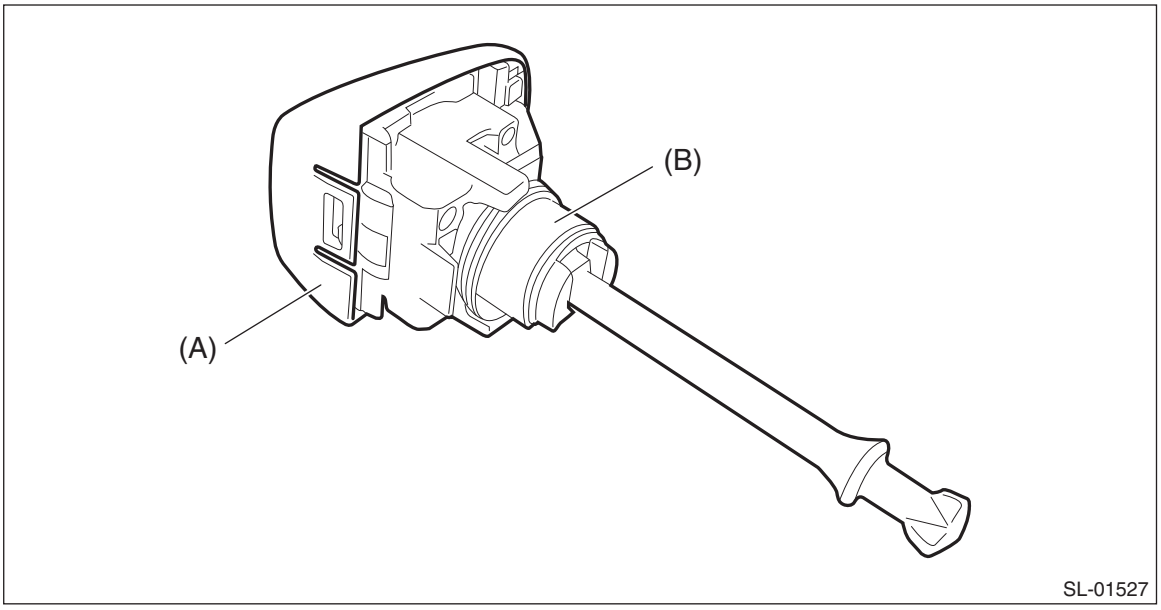
(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.

6) Install each part in the reverse order of removal.
7) Connect the battery ground terminal. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



2. FRONT DOOR

1) Raise the glass assembly - front door to the top position.
2) Remove the cover - handle front outer.



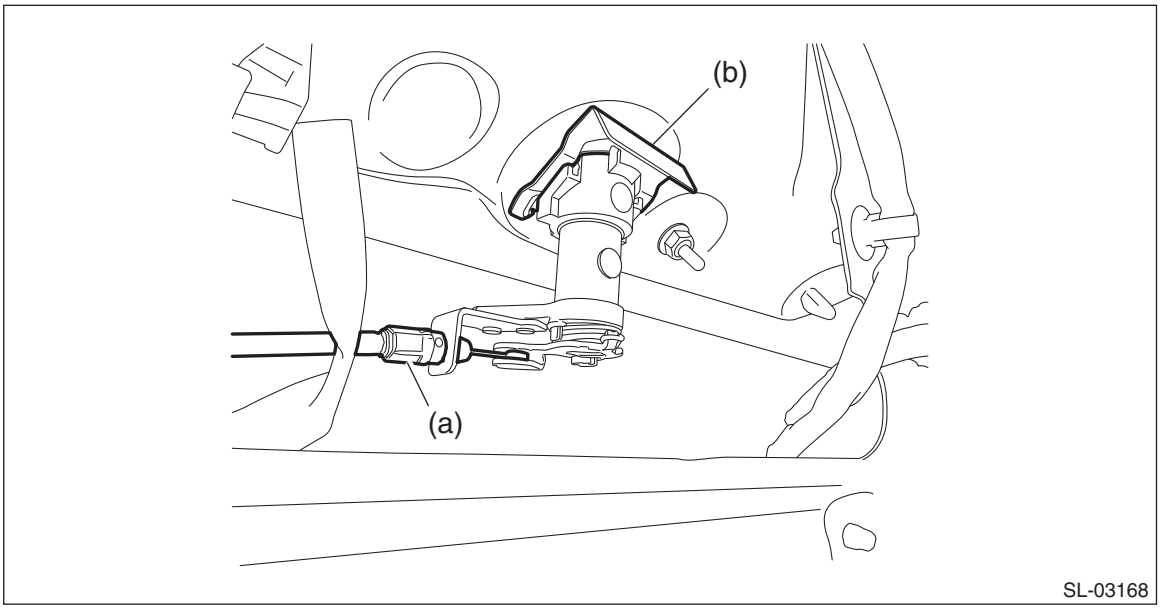
Preparation tool:
TORX® T30

(1) Remove the plug at the rear end of the panel assembly - front door.

(2) Loosen the TORX® bolt and remove the cover - handle front outer.

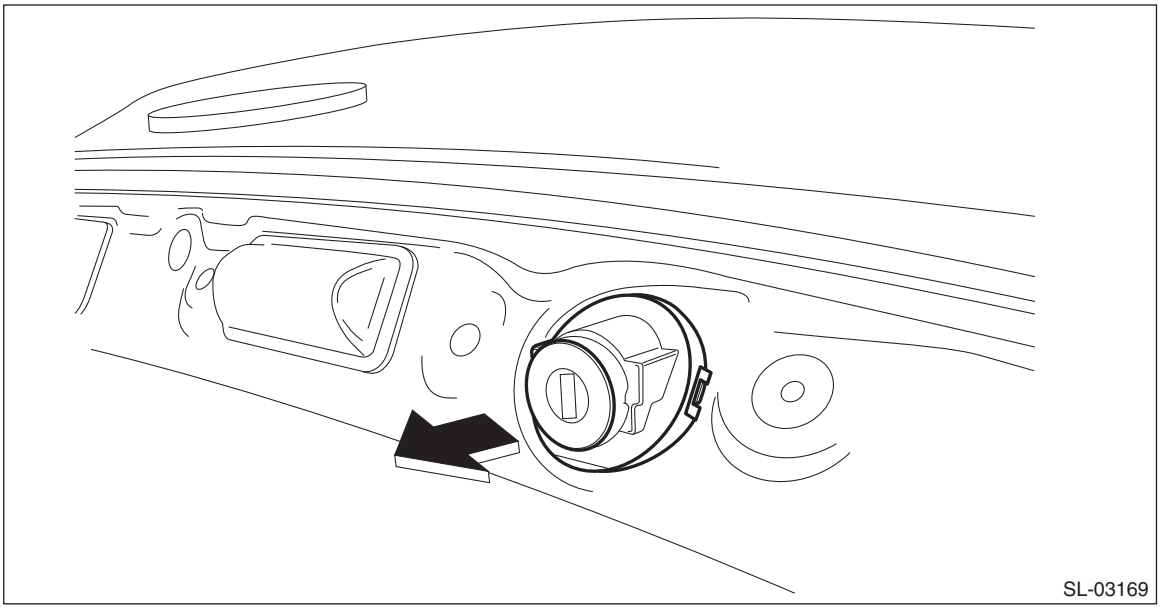
3) Remove the key cylinder (B) from the cover - handle front outer (A), and replace the key cylinder.

4) Install each part in the reverse order of removal.



CAUTION:
When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

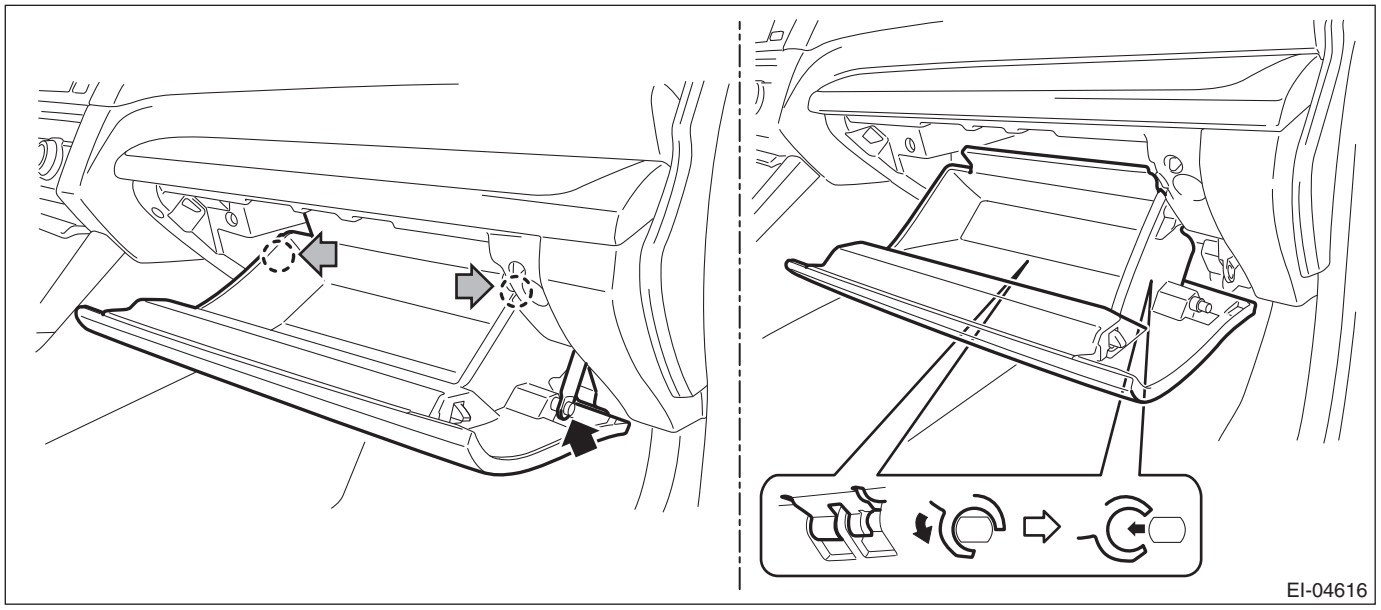
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>



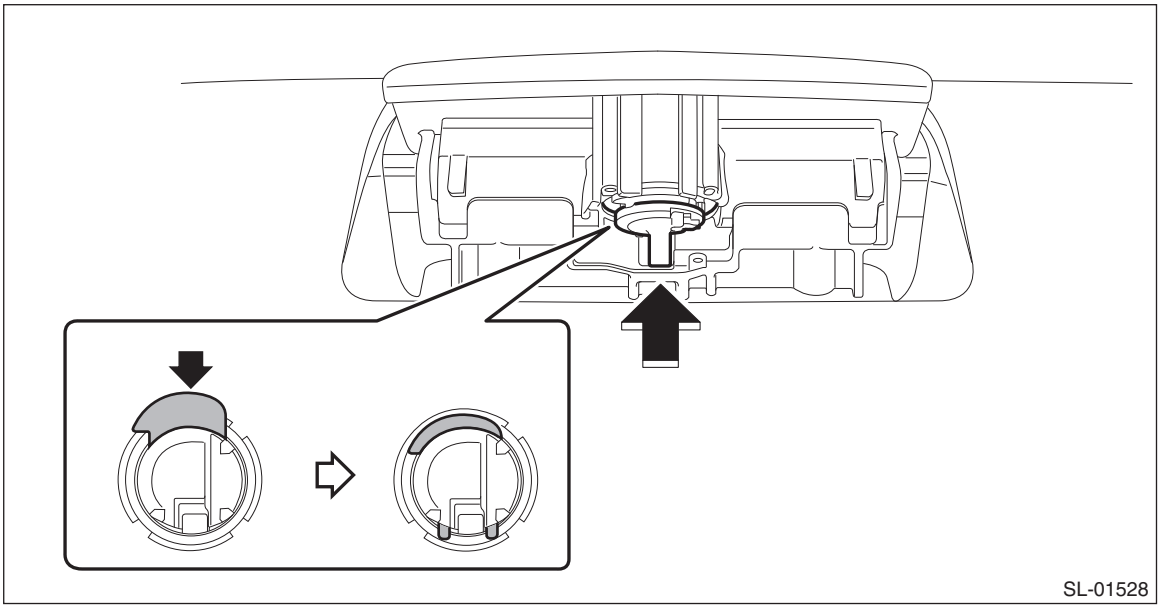
3. TRUNK LID

1) Remove the garnish assembly - trunk. <Ref. to EI-62, REMOVAL, Trunk Lid Garnish.>
2) Remove the key cylinder.

(1) Remove the cable (a) and clip (b).



(2) Remove the key cylinder from the trunk lid, and replace the key cylinder.



4. GLOVE BOX LID

1) Remove the pocket assembly.
   (1) Remove the damper COMPL - pocket.

(2) Release the stoppers and remove the pocket assembly by pulling it toward you.

2) Replace the key cylinder.
(1) Pull up the lock knob.
(2) Push out the key cylinder from the pocket assembly while pressing in the metal plate.

3) Install each part in the reverse order of removal.

21.Impact Sensor

A: REMOVAL

1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2) Close all the doors, trunk lid and rear gate.
3) Press the UNLOCK button of the keyless transmitter or access key.
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the impact sensor.
6) Change the setting of impact sensor using Subaru Select Monitor.

B: INSTALLATION

1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2) Close all the doors, trunk lid and rear gate.
3) Press the UNLOCK button of the keyless transmitter or access key.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Install the impact sensor.
6) Change the setting of impact sensor using Subaru Select Monitor.

C: OPERATION

1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

1) Make an impact sensor setting.
   (1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Body Control» and then select «Enter».
   (7) On «Select Function» display, select «Customize».
   (8) From the Customize item list, select «Impact sensor» and «Impact Sensor Setup».
   (9) Make an impact sensor setting.
   - When installing: ON
   - When removing: OFF

   (10) Make an impact sensor ON/OFF setting.
   - When installing: ON
   - When removing: OFF

   (11) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

D: ADJUSTMENT

1. CHECK IMPACT SENSOR

1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2) Close all the windows.
3) Close all the doors, trunk lid and rear gate. Leave open the front hood.
4) Press the LOCK button of the keyless transmitter or access key from outside of vehicle.
5) Check that the security indicator light blinks twice within 0.5 seconds in 2 second cycles immediately after door lock or after 30 seconds.
6) Hit all windows with the palm with force repeatedly, to check for whether the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in) or more, and then drop it off to check the operation of security alarm.
7) If NG, adjust the impact sensitivity.

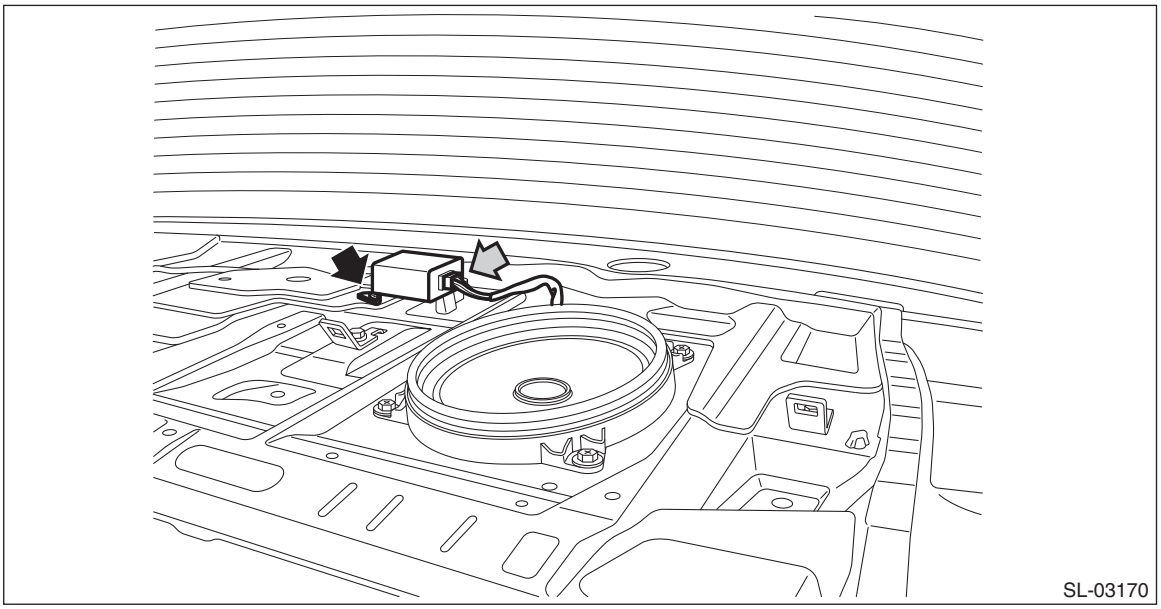
2. IMPACT SENSITIVITY ADJUSTMENT

1) Adjust the impact sensitivity.
   (1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.

(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Impact Sensor» and then «Enter».
(7) On «Select Function» display, select «Work Support».
(8) From the work support item list, select «Sensitivity Adjustment Mode».
(9) Perform the sensitivity adjustment.
- Sensitivity can be adjusted in 11 levels (0 to 10).
- Initial setting is 5.
- Smaller number means more sensitive.
- Larger number means less sensitive.

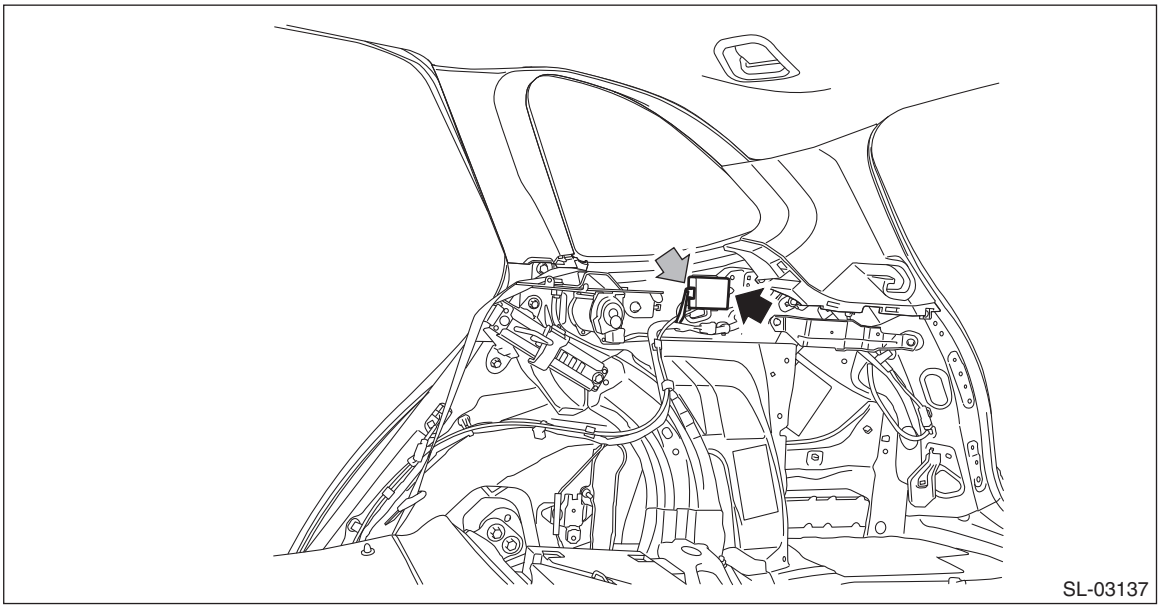
(10) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.



NOTE:
- Set the sensor so that it is not triggered by normal vibrations (someone reclining on the door, hit by a ball, etc.).
- Set the sensor to operate the alarm when the windshield glass or door is hit hard repeatedly, etc, where it can be assumed that there is an attempt to damage the car by a burglar, etc.
- Even if there is no burglary attempt, if there is vibration (road construction, elevated parking lots, passage of trains or boarding of ferries), the alarm can be triggered. Because of this, ask the customer about their parking conditions, and set an appropriate sensitivity level after discussion.
- If the sensitivity setting was not performed properly, a buzzer will sound four times. In this case, check that there is no error in CAN communication.

22.Keyless Entry Control Module

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-103, REMOVAL, Rear Shelf Trim.>
3) Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron RH. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

B: INSTALLATION

1. SEDAN MODEL

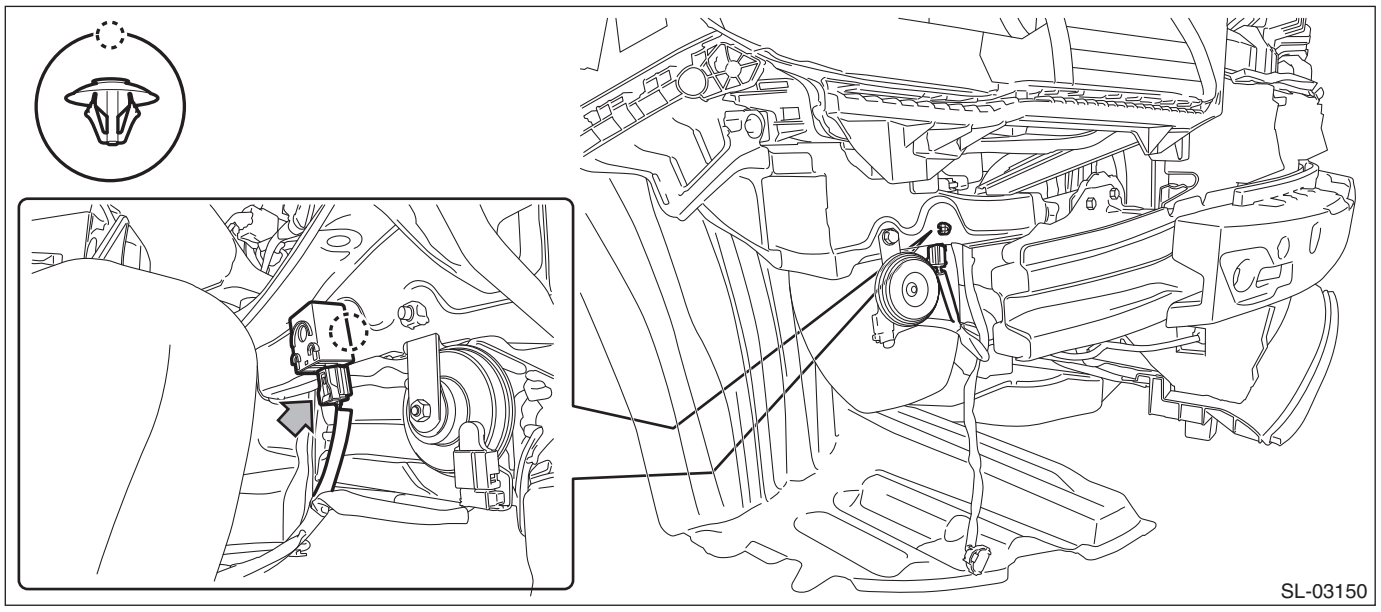
1) Install the keyless entry control module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the trim panel assembly - rear shelf. <Ref. to EI-105, INSTALLATION, Rear Shelf Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

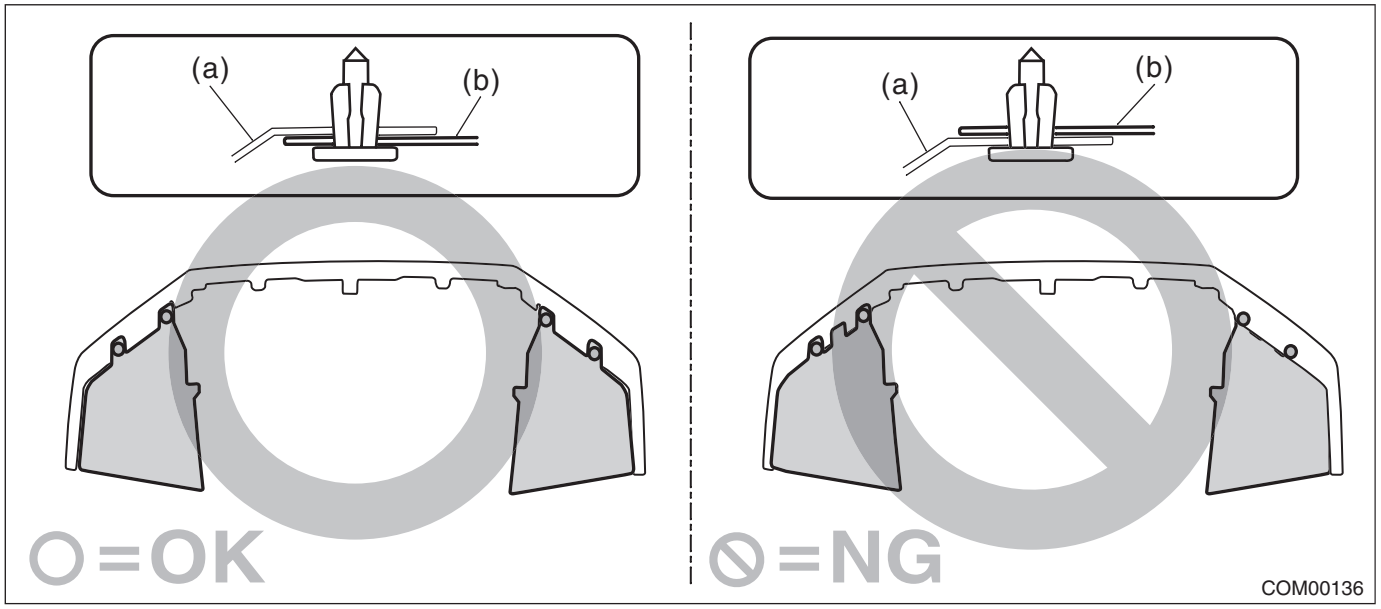
1) Install the keyless entry control module.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the trim panel - rear apron RH. <Ref. to EI-102, OUTBACK MODEL, INSTALLATION, Rear Quarter Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

23.Keyless Buzzer



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the keyless buzzer.
   (1) Remove the clips, and turn over the mud guard - front.
   (2) Disconnect the connector.
   (3) Remove the clip and detach the keyless buzzer.

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

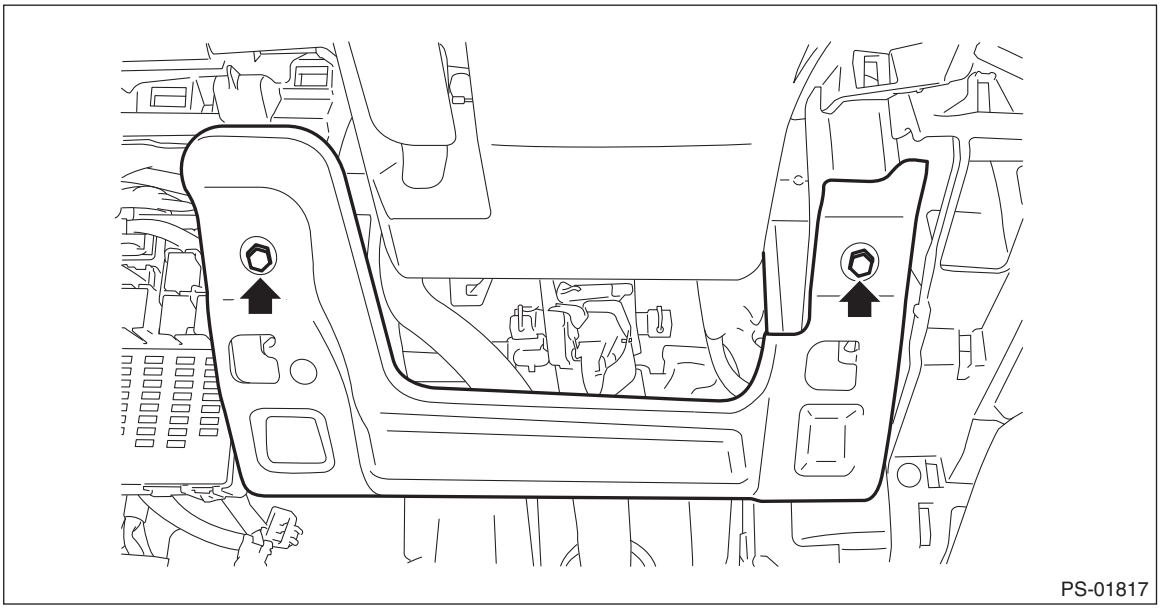
1) Install the keyless buzzer.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

• Using the Subaru Select Monitor, set the volume of the keyless buzzer. <Ref. to BC(diag)-34, OPERATION, User Customizing.>
• Using the Subaru Select Monitor, perform forced operation of the keyless buzzer. <Ref. to BC(diag)-40, OPERATION, Function Check.>
If the buzzer does not sound, replace the keyless buzzer.

24.Body Integrated Unit

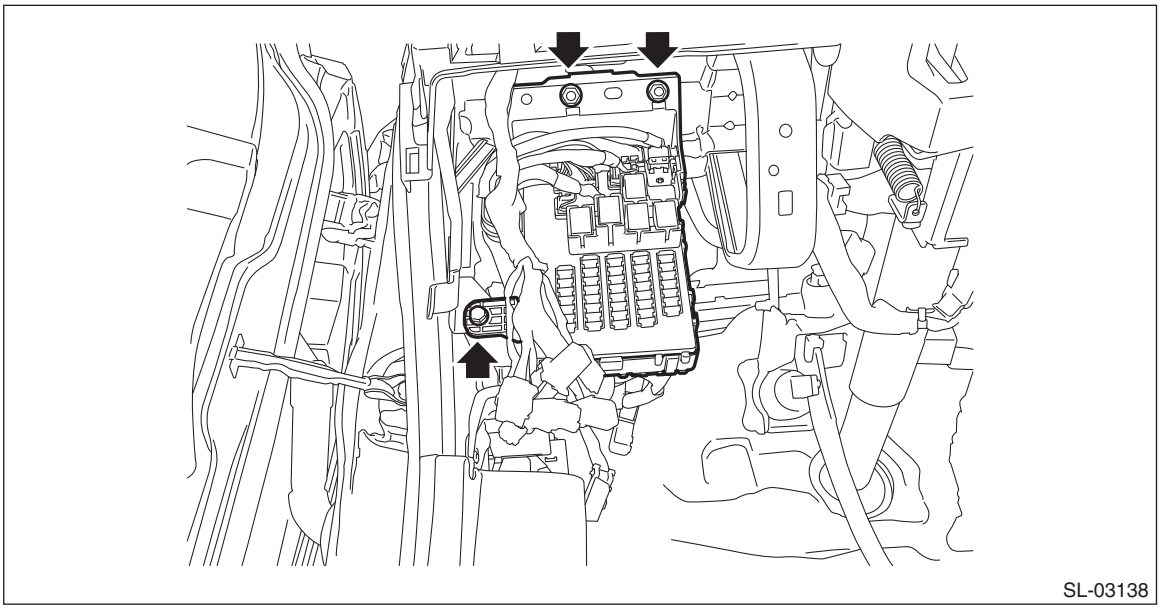
A: NOTE



1. REPLACE BODY INTEGRATED UNIT

1) Check and record the current setting. <Ref. to BC(diag)-37, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.>
2) Prepare all immobilizer keys already registered. (Models without the keyless access with push button start)
3) Replace the body integrated unit with a new part.
- Removal: <Ref. to SL-83, REMOVAL, Body Integrated Unit.>
- Installation: <Ref. to SL-84, INSTALLATION, Body Integrated Unit.>

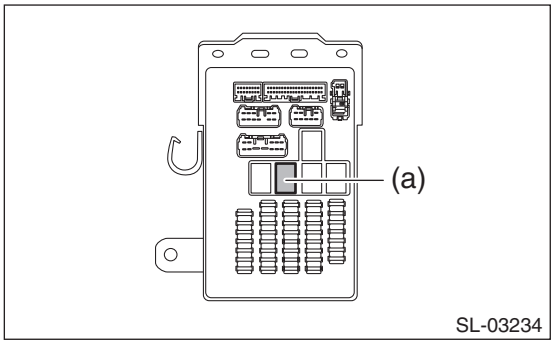
4) Set the current settings as recorded. <Ref. to BC(diag)-38, REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING), OPERATION, Registration Body Integrated Unit.>
5) Register the immobilizer. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.



B: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard.

4) Disconnect the body integrated unit (fuse & relay box).
   (1) Disconnect the connector.



(2) Remove the bolts and nuts, and remove the body integrated unit (fuse & relay box).

C: INSTALLATION

CAUTION:

- **When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **When replacing the body integrated unit, install the starter relay (a) to the relay holder.**

1) Install the body integrated unit (fuse & relay box).

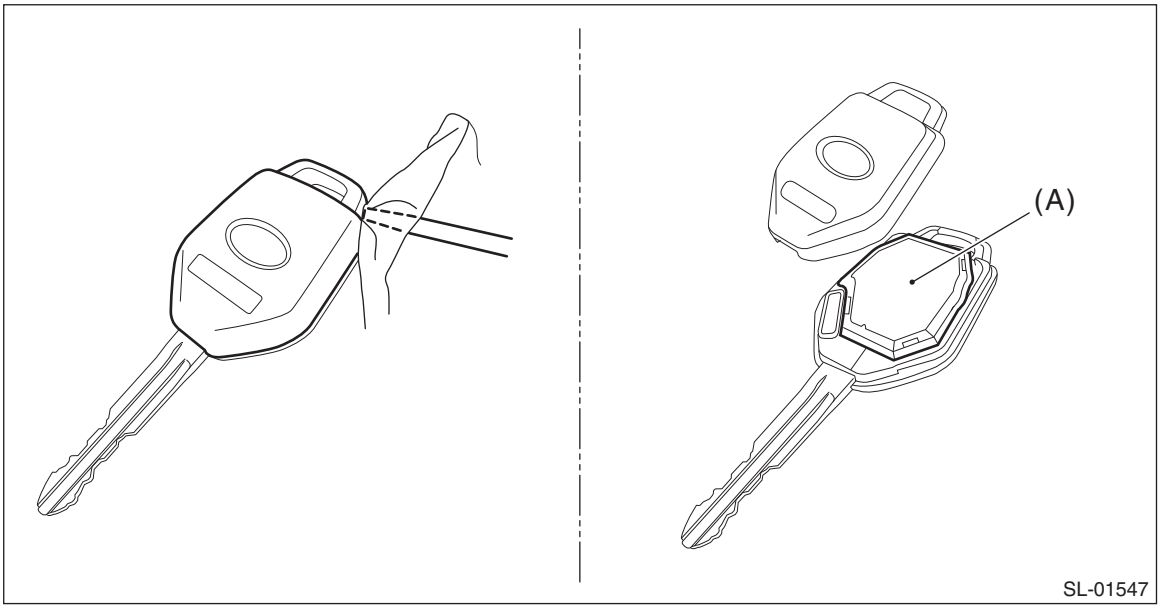
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

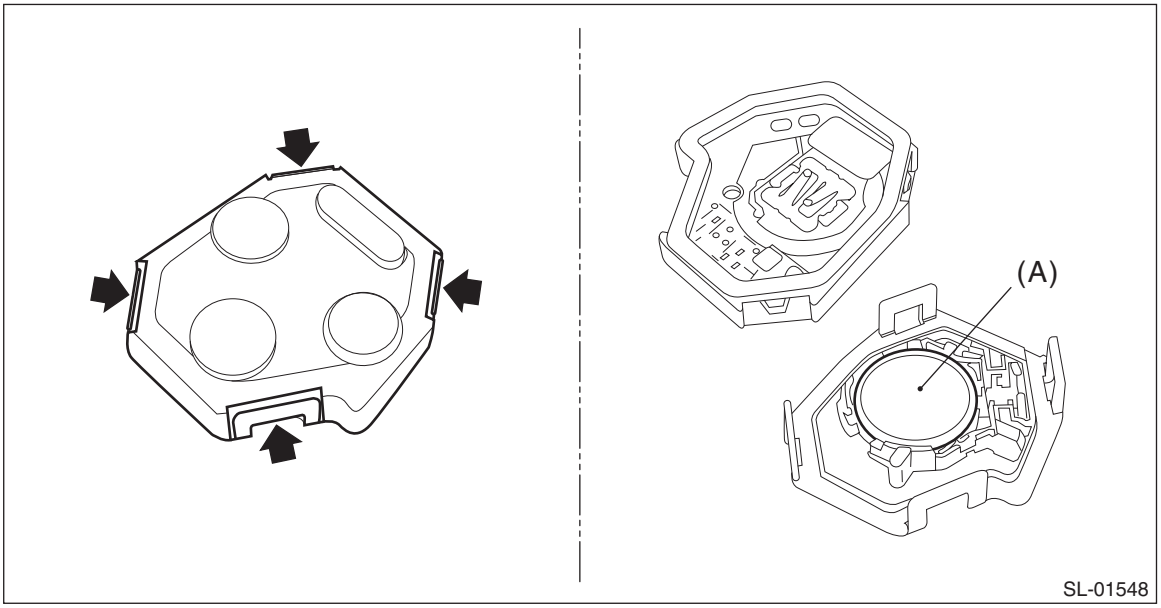
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

25.Keyless Transmitter



A: REMOVAL

1. KEYLESS TRANSMITTER BATTERY



CAUTION:
To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

1) Remove the keyless transmitter cover, and take out the transmitter case (A).

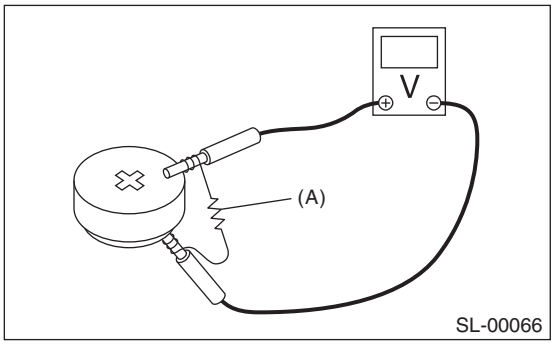
CAUTION:
Use a flat tip screwdriver with protective tape or cloth in order not to damage the components.

2) Release the claws to open the transmitter case, then remove the battery (A).

B: INSTALLATION

1. KEYLESS TRANSMITTER BATTERY

Install each part in the reverse order of removal.



C: INSPECTION

1. KEYLESS TRANSMITTER BATTERY

1) Measure the keyless transmitter battery voltage.

Preparation tool:
Circuit tester

NOTE:
Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection conditions	Standard
(+) — (–)	Connect resistor (A) 47 Ω	2.5 — 3 V

2) Replace the battery if the inspection result is not within the standard value. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

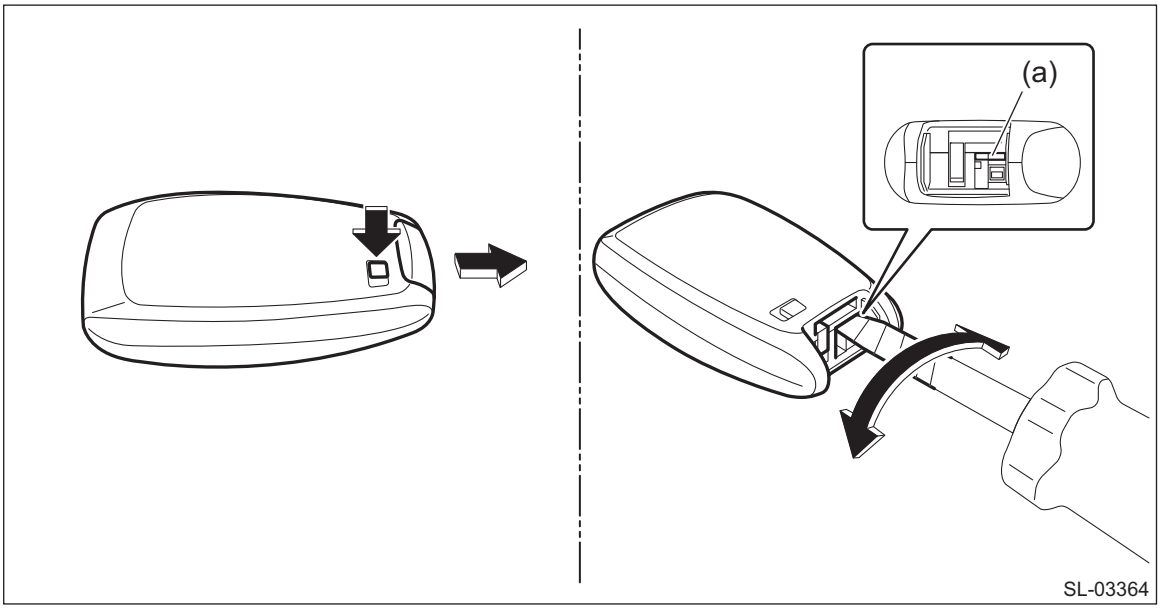
NOTE:
- A maximum of four keyless transmitters can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Register the transmitter.
(1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Keyless Entry» and select «Enter».
(7) On «Select Function» display, select «Work Support».
(8) From the work support item list, select «Keyless ID registration».
(9) According to the directions on the screen, press the button of the transmitter to be registered in order of Lock → Unlock. (When registration is completed, outside buzzer sounds once.)

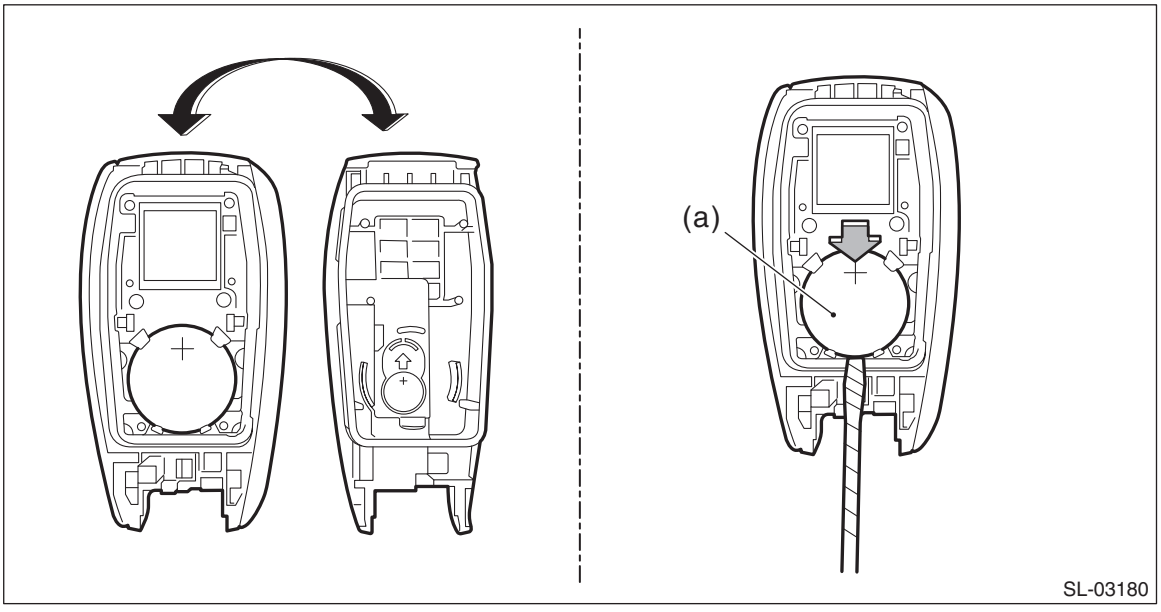
NOTE:
- Repeat the procedure as many times as the number of transmitters to be registered.
- When attempting to register a key that has already been registered, the external buzzer sounds twice.

(10) Press the [Exit] button to finish the operations.



26.Access Key

A: REMOVAL



NOTE:
Refer to keyless transmitter for model without keyless access with push button start. <Ref. to SL-85, KEYLESS TRANSMITTER BATTERY, REMOVAL, Keyless Transmitter.>

1. ACCESS KEY BATTERY

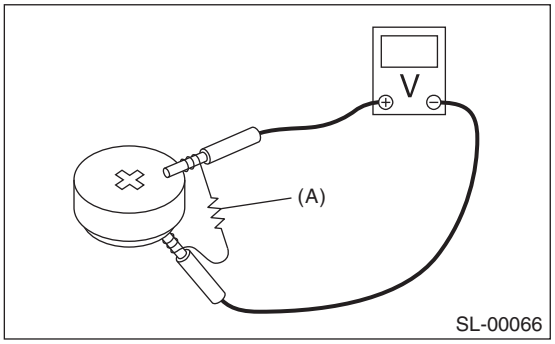
CAUTION:
To prevent static electricity damage to the access key printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the access key.
1) Push the lock button and remove the mechanical key from the access key.
2) Insert a flat tip screwdriver end wrapped with insulating tape etc. into the slit (a) of the access key to open the case.

3) Insert a flat tip screwdriver wrapped with insulating tape, and while holding the upper side of the battery (a), remove the battery (a) from the case.

B: INSTALLATION

1. ACCESS KEY BATTERY

Install each part in the reverse order of removal.



C: INSPECTION

1. ACCESS KEY BATTERY

Measure the access key battery voltage.

Preparation tool:
Circuit tester

NOTE:
Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection conditions	Standard
(+) — (–)	Connect resistor (A) 47 Ω	2.5 — 3 V

Replace the battery if the inspection result is not within the standard value. (Use CR2032 or equivalent.)

D: REPLACEMENT

1. ACCESS KEY REGISTRATION

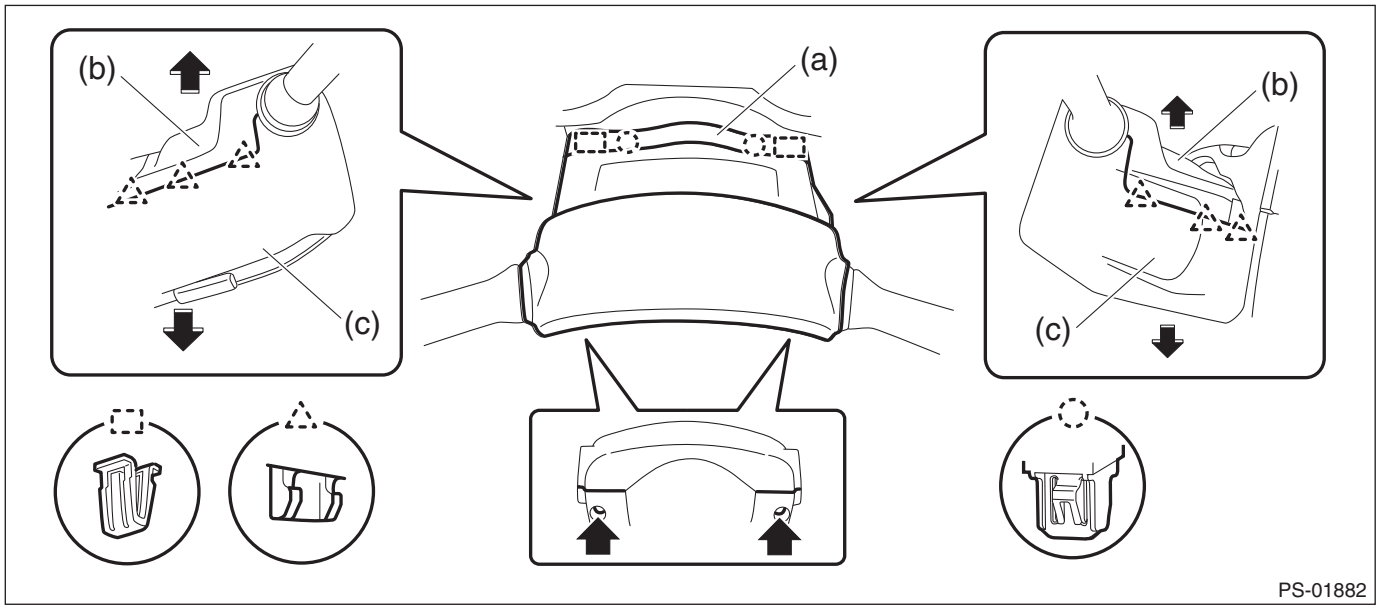
NOTE:
- A maximum of seven access keys can be registered for each individual vehicle.
- When replacing or adding an access key, new registration of the access key is necessary.
- When the access key has been newly added, it is registered to the immobilizer system at the same time.

2. CLEARING ACCESS KEY REGISTRATION

For detailed access key registration clear, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

27.Immobilizer Control Module

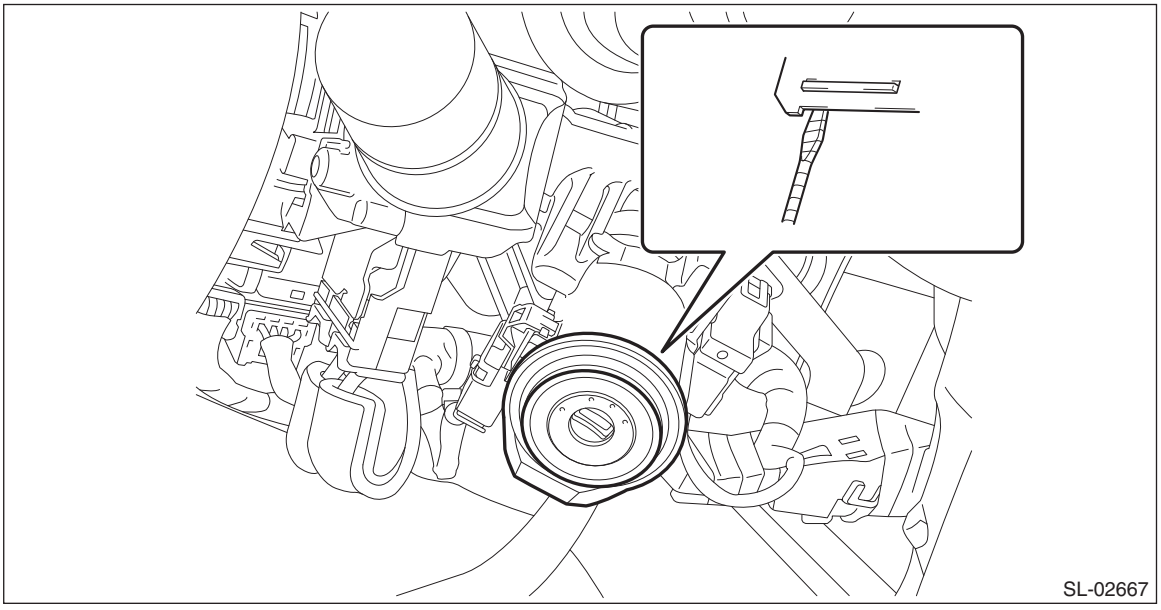
A: NOTE



CAUTION:
When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type E” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
For removal/installation procedures of immobilizer control module, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.

28.Immobilizer Antenna

A: REMOVAL



1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column (a).
   (2) Remove the screws.
   (3) Release the claws, and remove the cover assembly - column UPR (b) and the cover assembly - column LWR (c).

3) Remove the immobilizer antenna assembly.
   (1) Disconnect the connector.
   (2) Release two claws using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the immobilizer antenna assembly.

CAUTION:
Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

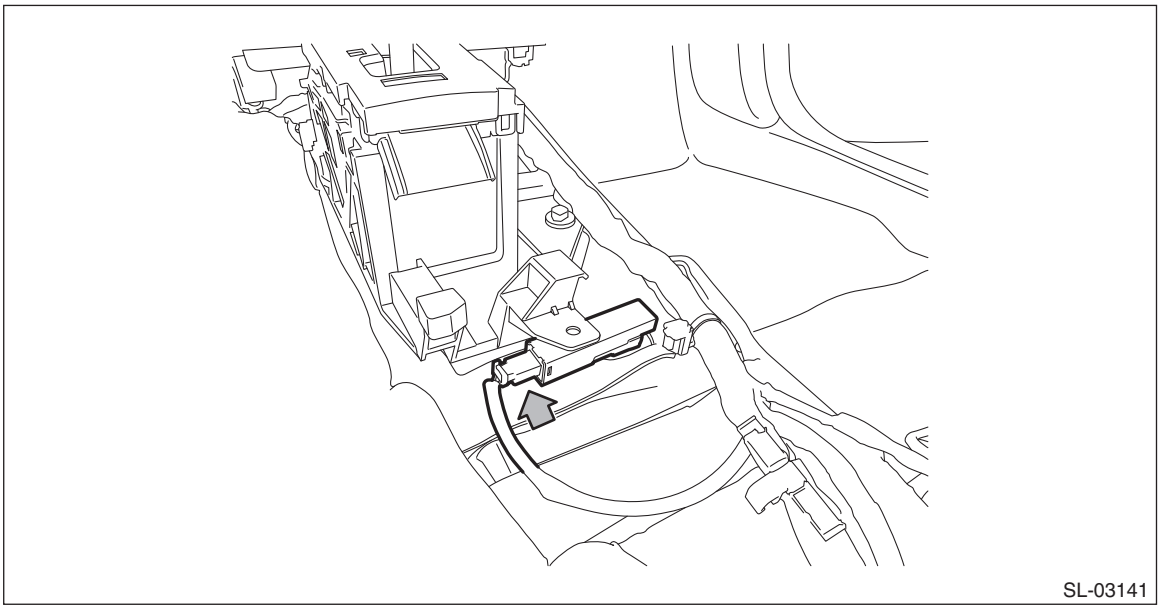
NOTE:
- Immobilizer antenna is integrated with the push button ignition switch.
- For removal of immobilizer antenna, refer to the push button ignition switch. <Ref. to SL-105, REMOVAL, Push Button Ignition Switch.>

B: INSTALLATION

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1) Install the immobilizer antenna assembly.
2) Install the cover assembly - column.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START



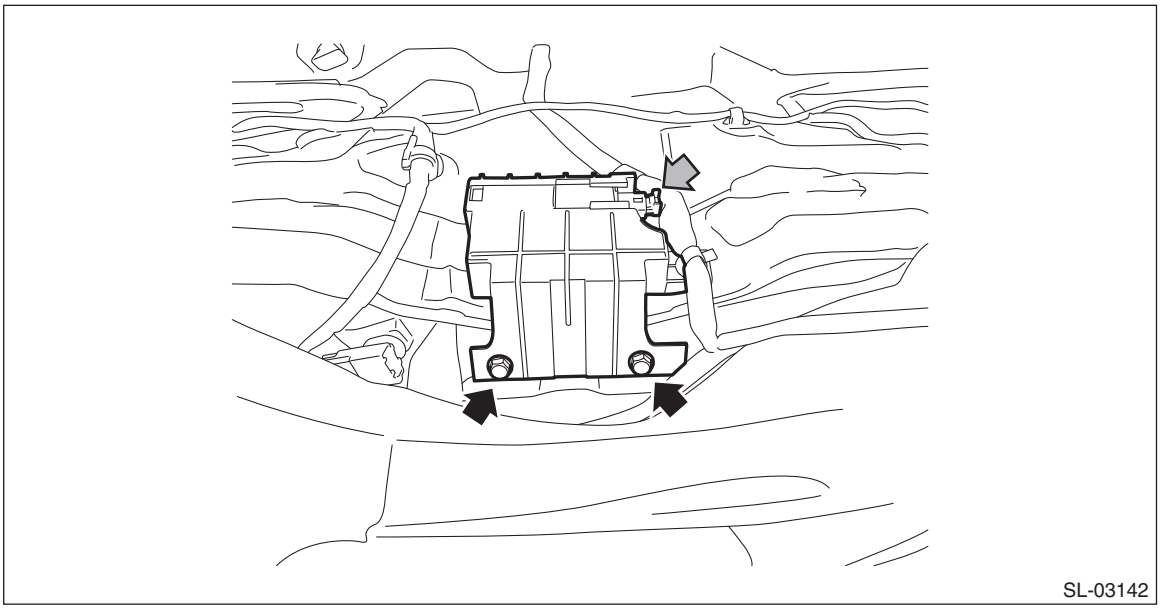
NOTE:
For installation of immobilizer antenna, refer to the push button ignition switch. <Ref. to SL-105, INSTALLATION, Push Button Ignition Switch.>

29.Keyless Access Indoor Antenna

A: REMOVAL

1. FRONT ANTENNA

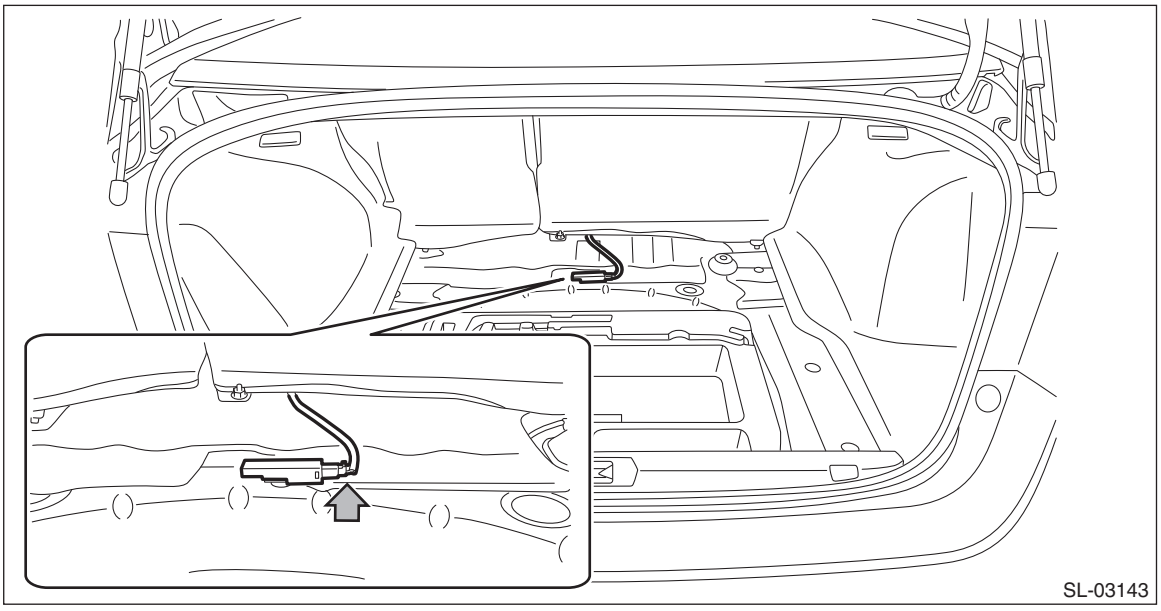
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the panel center assembly. <Ref. to EI-79, REMOVAL, Center Console.>
4) Remove the console front duct. <Ref. to AC-103, REMOVAL, Heater Duct.>
5) Disconnect the connector and remove the front antenna assembly - interior.



2. CENTER ANTENNA

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
3) Remove the center antenna assembly - interior.

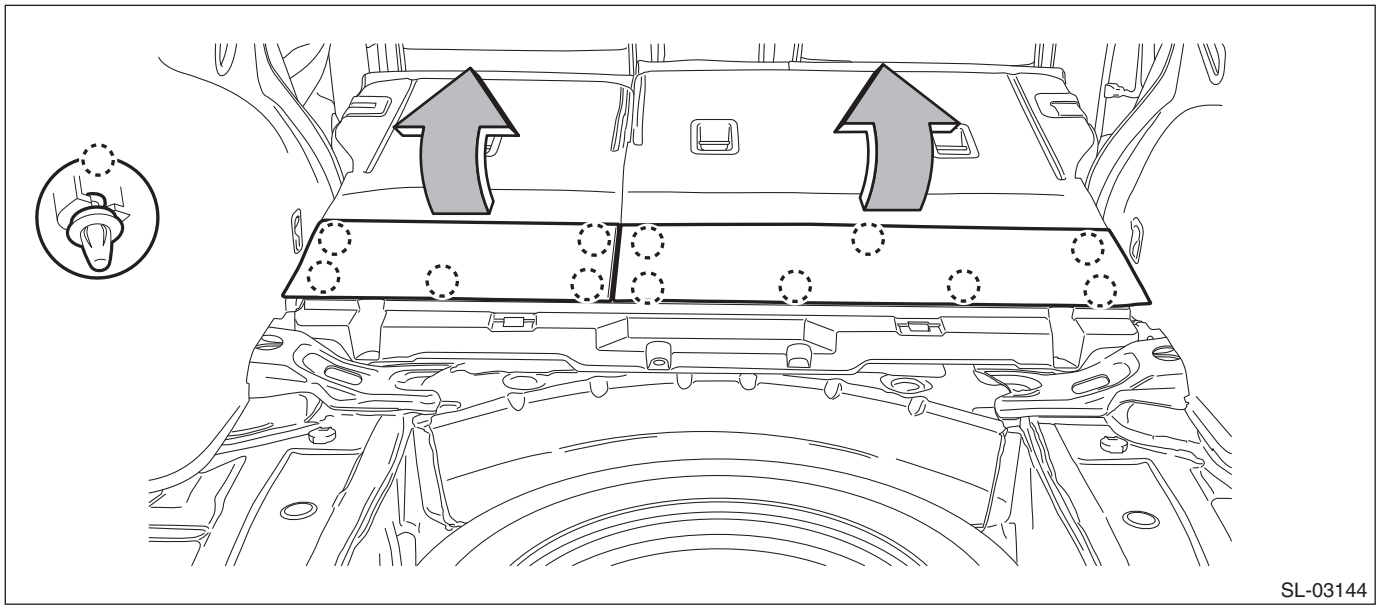
NOTE:
Do not remove the antenna assembly from the cover. If removed, the antenna assembly and cover mounting becomes loose, causing abnormal noises.



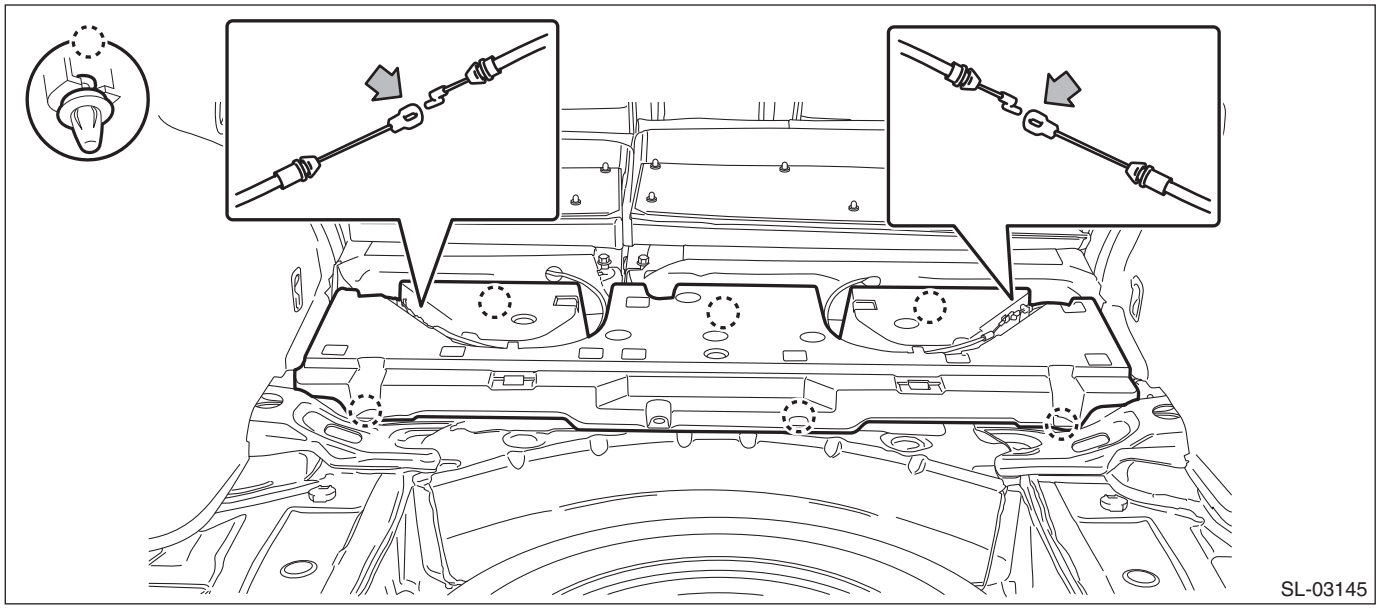
(1) Disconnect the connector.

(2) Turn over the floor mat, and remove the center antenna assembly - interior.

3. REAR ANTENNA (SEDAN MODEL)

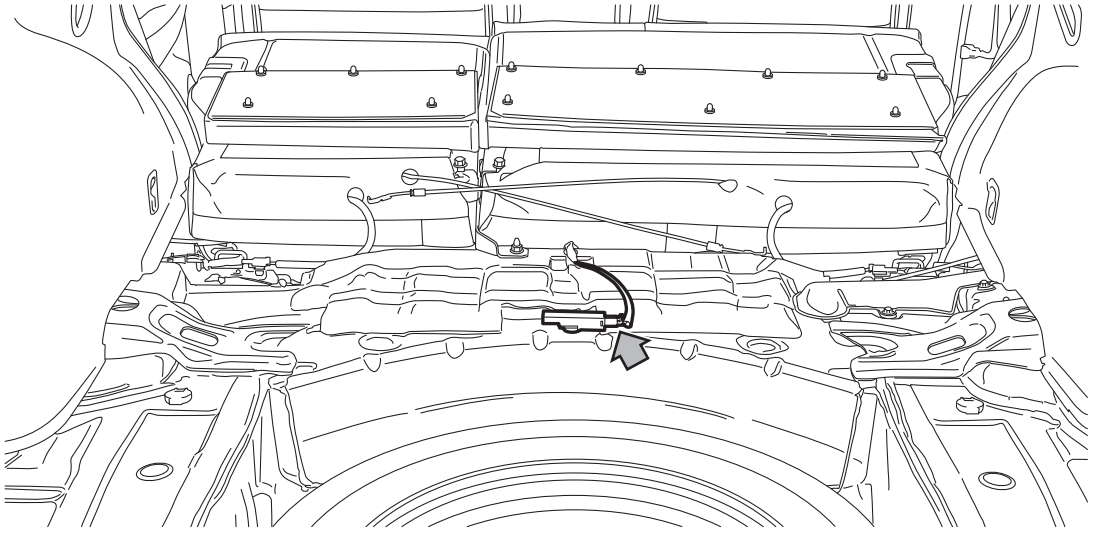


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the mat - trunk.
3) Disconnect the connector and remove the rear antenna assembly - interior.



4. REAR ANTENNA (OUTBACK MODEL)

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the spacer - rear floor front.
   (1) Remove the mat - rear floor RH, mat - rear floor LH, and mat - rear floor CTR.
   (2) Remove the spacer - rear floor side RH, spacer - rear floor side LH, and sub trunk assembly.



(3) Tilt the backrest assembly forward, and remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH.

(4) Remove the reclining cable, and remove the spacer - rear floor front.

3) Disconnect the connector and remove the rear antenna assembly - interior.

SL-03146

B: INSTALLATION

1. FRONT ANTENNA

1) Install the front antenna assembly - interior.
2) Install the console front duct.
3) Install the pocket assembly - CTR.
4) Install the console box assembly.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. CENTER ANTENNA

1) Install the center antenna assembly - interior.
2) Install the rear seat cushion assembly. <Ref. to SE-45, INSTALLATION, Rear Seat.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

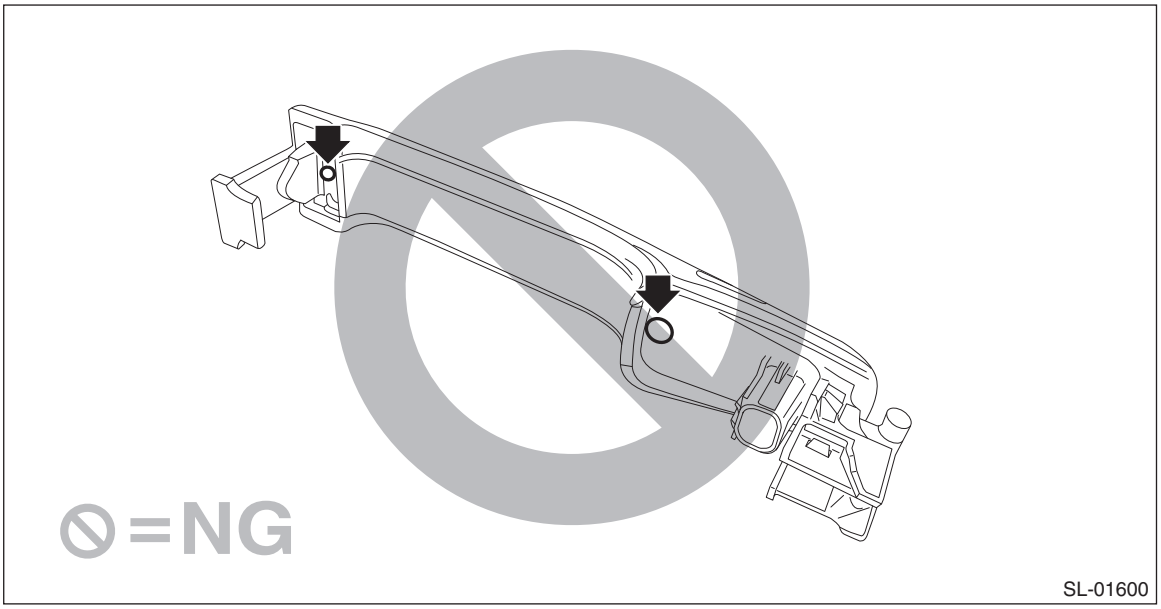
3. REAR ANTENNA (SEDAN MODEL)

1) Install the rear antenna assembly - interior.
2) Install the mat - trunk.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

4. REAR ANTENNA (OUTBACK MODEL)

1) Install the rear antenna assembly - interior.
2) Install the spacer - rear floor front.
3) Install the spacer - rear floor side RH, spacer - rear floor side LH, and sub trunk assembly.
4) Install the mat - rear floor RH, mat - rear floor LH, and mat - rear floor CTR.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



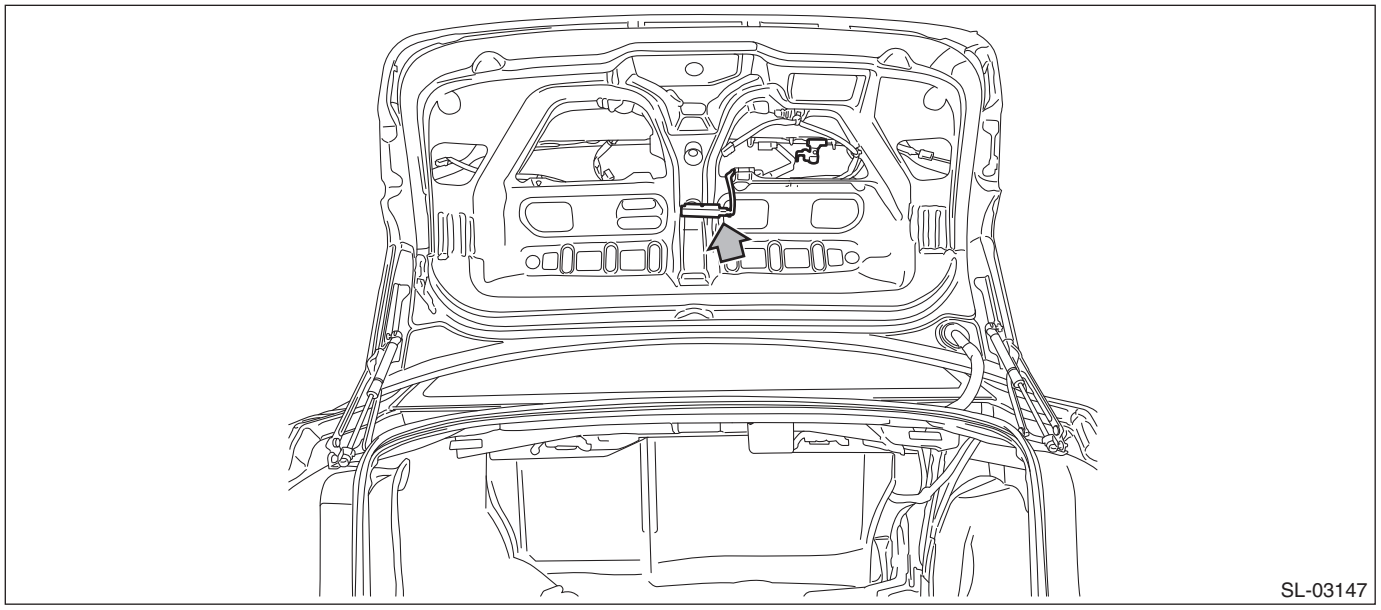
1) Check the setting by performing Keyless access with push button start check using the Subaru Select Monitor. <Ref. to KPS(diag)-40, OPERATION, Keyless Access with Push Button Start Check.>
2) Disconnect the Subaru Select Monitor. After placing the access key near the changed antenna, operate the push button ignition switch to check that the power can be switched.
3) If the system does not operate normally as the result of inspection, refer to “Diagnostics with Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-109, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

30.Keyless Access Outdoor Antenna

A: REMOVAL

1. FRONT ANTENNA

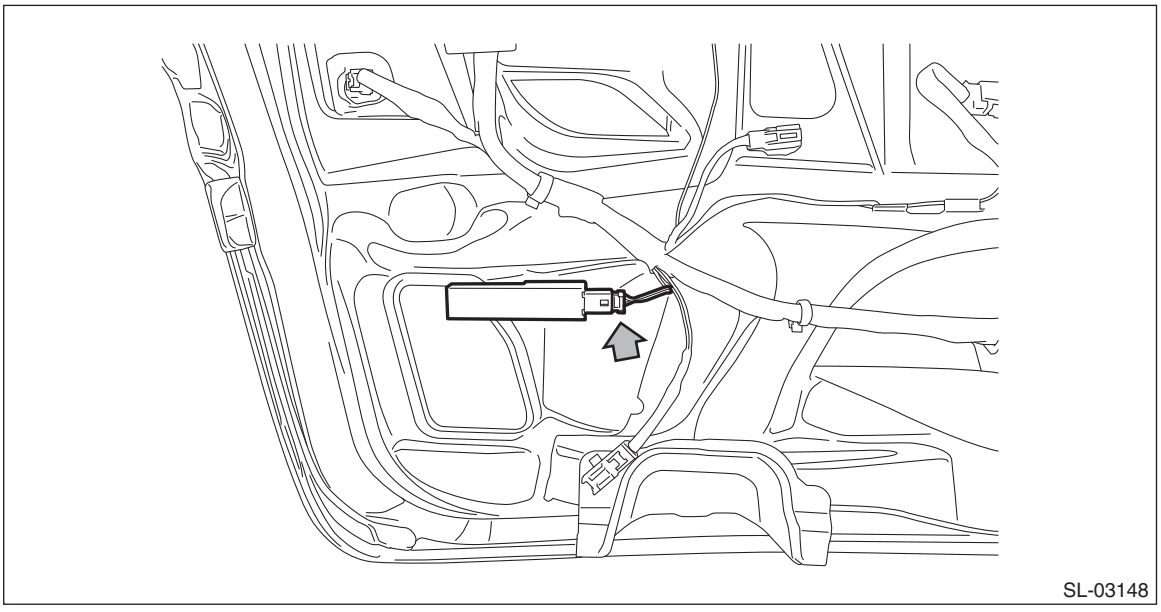
CAUTION:
Do not detach the antenna from the front door outer handle.
If replacement is required, replace the front outer handle assembly as a whole.



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the handle - door outer. <Ref. to SL-33, REMOVAL, Front Outer Handle.>

2. REAR ANTENNA (SEDAN MODEL)

CAUTION:
Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>

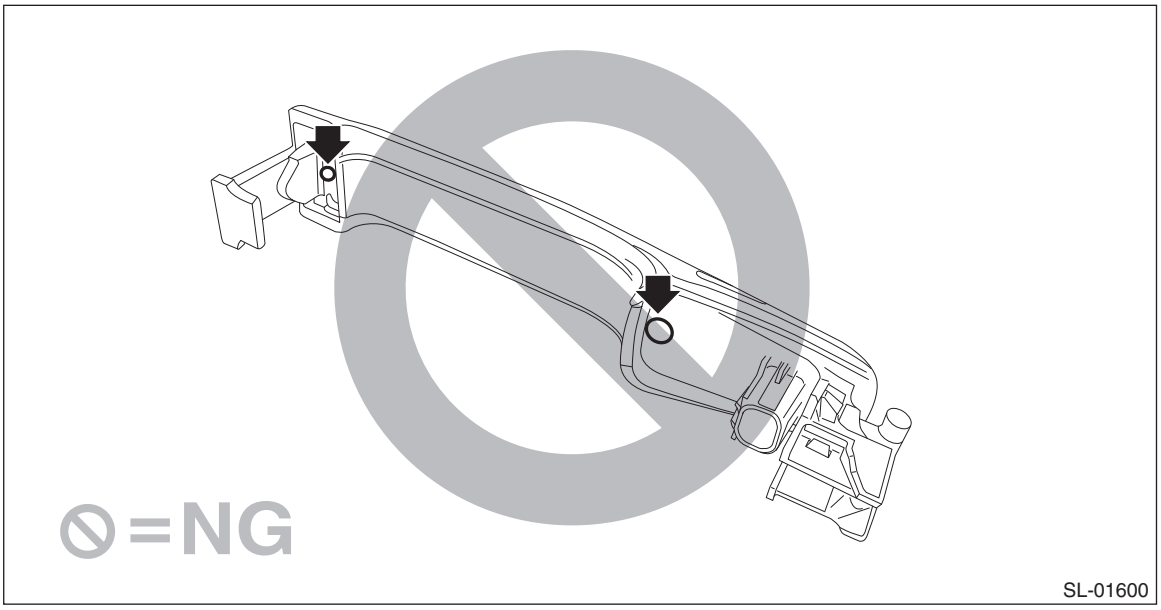


3) Disconnect the connector and remove the rear antenna assembly - exterior.

3. REAR ANTENNA (OUTBACK MODEL)

CAUTION:
Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Disconnect the connector and remove the rear antenna assembly - exterior.



B: INSTALLATION

1. FRONT ANTENNA

CAUTION:
Do not detach the antenna from the front door outer handle.

If replacement is required, replace the front outer handle assembly as a whole.

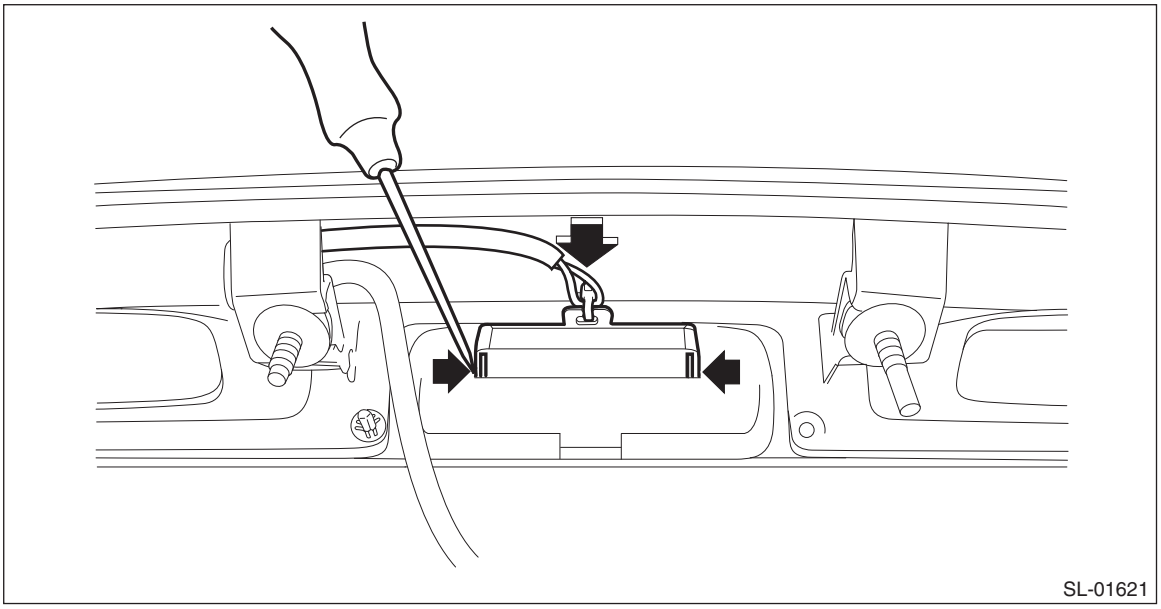
1) Install the handle - door outer. <Ref. to SL-35, INSTALLATION, Front Outer Handle.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR ANTENNA (SEDAN MODEL)

1) Install the rear antenna assembly - exterior.
2) Install the trim panel - trunk lid. <Ref. to EI-108, INSTALLATION, Trunk Room Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. REAR ANTENNA (OUTBACK MODEL)

1) Install the rear antenna assembly - exterior.
2) Install the trim panel - rear gate. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1) Check the setting by performing Keyless access with push button start check using the Subaru Select Monitor. <Ref. to KPS(diag)-40, OPERATION, Keyless Access with Push Button Start Check.>
2) Disconnect the Subaru Select Monitor. While bringing the access key, operate the touch sensor on door handle to check if door lock or unlock operates.
3) Disconnect the Subaru Select Monitor. While bringing the access key, operate the opener switch on the rear gate and the lock request switch to check if the door lock or lock operates. (OUTBACK model)
4) Disconnect the Subaru Select Monitor. While bringing the access key, operate the trunk opener button to check if the trunk is opened. (Sedan model)
5) If the system does not operate normally as the result of inspection, refer to “Diagnostics with Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-109, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

31.Trunk Opener Button

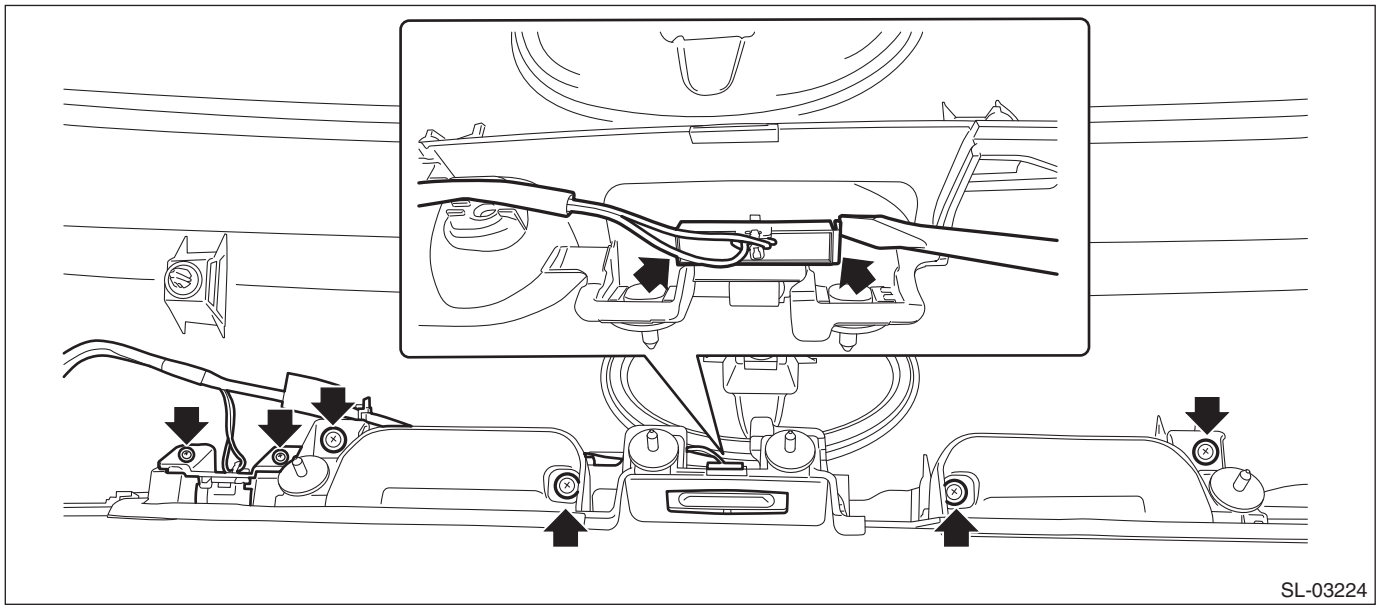
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish - trunk. <Ref. to EI-62, REMOVAL, Trunk Lid Garnish.>
3) Release the locks at both ends of the trunk opener button by pushing them with a flat tip screwdriver.

B: INSTALLATION

1) Install the trunk opener button to the garnish - trunk.
2) Install the garnish - trunk.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Using the Subaru Select Monitor, display «Rear gate/Trunk UNLOCK output» from the data monitor item list.
2) Check that the display changes when the trunk opener button is operated.
3) If the display is not correct as the result of inspection, refer to “Diagnostics with Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-109, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

32.Rear Lock Button

A: REMOVAL

NOTE:
- The rear lock button is integrated with the switch - opener rear gate.
- Open the panel - rear gate before disconnecting the ground terminal from battery sensor.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-63, REMOVAL, Rear Gate Garnish.>
4) Remove the rear lock button.
   (1) Remove the garnish switch bracket from the garnish assembly - rear gate.
   (2) Release the locks at both ends of the button - opener rear gate by pushing them with a flat tip screwdriver, and remove the button - opener rear gate.
   (3) Remove the screws and detach the rear lock button.

B: INSTALLATION

CAUTION:
Make sure that the harness grommet is securely installed.
If not properly installed, this may cause leaks.

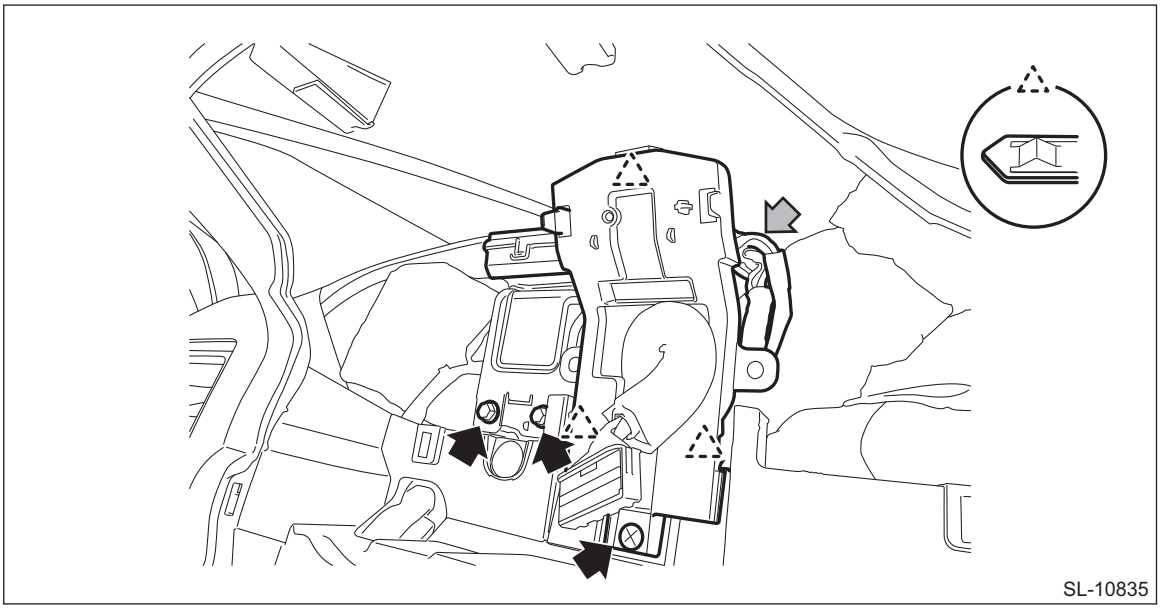
1) Install the rear lock button and the switch - opener rear gate.
2) Install the garnish assembly - rear gate. <Ref. to EI-63, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
4.5 N·m (0.4 kgf-m, 3.3 ft-lb)

3) Install the trim panel - rear gate. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Using the Subaru Select Monitor, display «Rear gate/Trunk UNLOCK output» from the data monitor item list.
2) Check if the display changes when the rear lock button is operated.
3) If the display is not correct as the result of inspection, refer to “Diagnostics with Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-109, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>



33.Keyless Access CM

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
3) Remove the keyless access CM.
    (1) Remove the reinforcement - combination meter.

NOTE:
For model with navigation and model with telematics, remove the GPS antenna assembly. <Ref. to ETM-38, REMOVAL, GPS Antenna.>

    (2) Disconnect the connector and remove the bolt.

B: INSTALLATION

CAUTION:
When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

1) Install the reinforcement - combination meter and keyless access CM.

NOTE:
For model with navigation, install the GPS antenna assembly. <Ref. to ETM-39, INSTALLATION, GPS Antenna.>

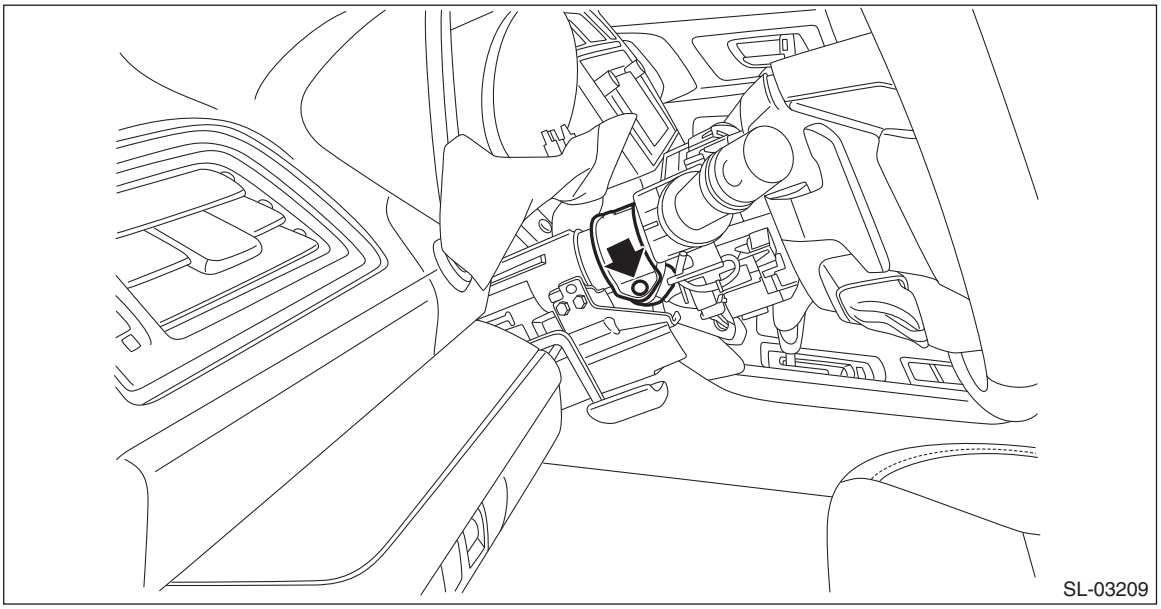
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the combination meter assembly. <Ref. to IDI-12, INSTALLATION, Combination Meter.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

34.ID Code Box

A: NOTE

CAUTION:
When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
For removal/installation procedures of ID code box, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.



35.Steering Lock CM

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
4) Remove the column assembly - steering. <Ref. to PS-26, REMOVAL, Steering Column.>
5) Remove the steering lock CM.
(1) Secure the column assembly - steering in a vise.
(2) Use the reverse tap or drill to remove the set bolt and remove the steering lock CM.

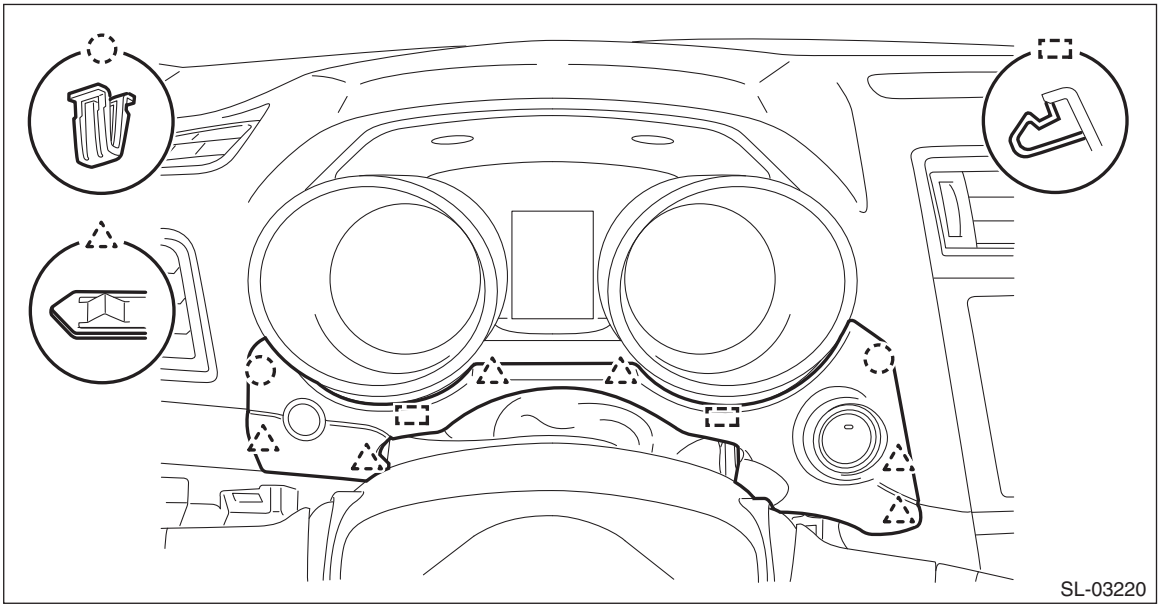
CAUTION:
Do not apply any impact to the set bolt by a chisel or punch. Doing so may damage the CM.

B: INSTALLATION

CAUTION:
• When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

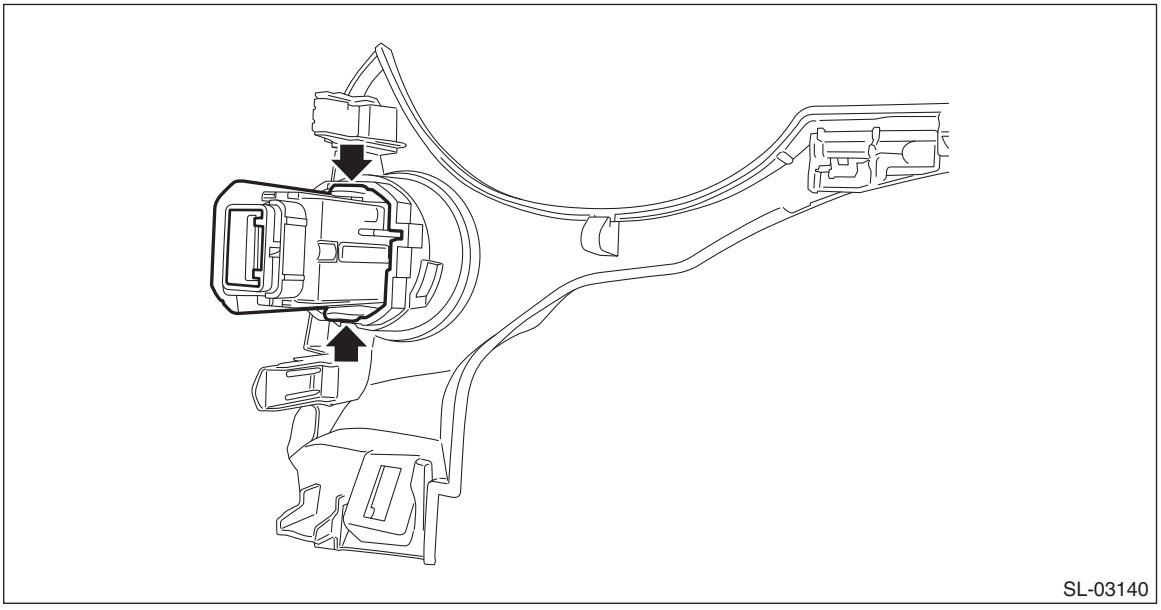
1) Secure the steering lock CM to the steering column.
2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
3) Install the column assembly - steering.
4) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>
5) Install the cover assembly - instrument panel LWR driver. <Ref. to EI-76, INSTALLATION, Instrument Panel Lower Cover.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Check if the steering lock is released when you start the engine using the push button ignition switch.
2) If the system does not operate normally as the result of inspection, refer to “Diagnostics with Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-110, STEERING LOCK SYSTEM, LIST, Diagnostics with Phenomenon.>

36.Push Button Ignition Switch



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.

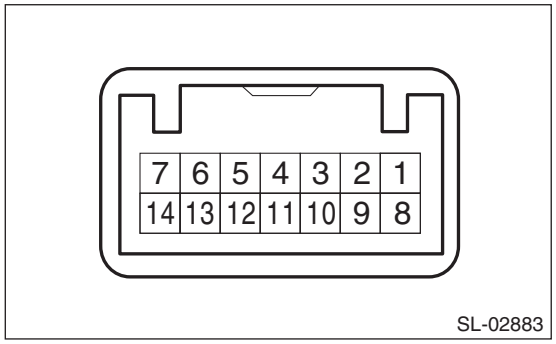
CAUTION:
• Being careful not to damage the visor assembly - lower, slowly remove the clips and claws one by one from the right and left edges of visor assembly - lower.
• When using a clip remover, wrap it with protective tape or cloth.

SL-03220

4) Remove the push button ignition switch.
   (1) Release the claws and remove the push button ignition switch from the visor assembly - lower.

SL-03140

B: INSTALLATION



1) Install the push button ignition switch to the visor assembly - lower.

2) Install the visor assembly - lower.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

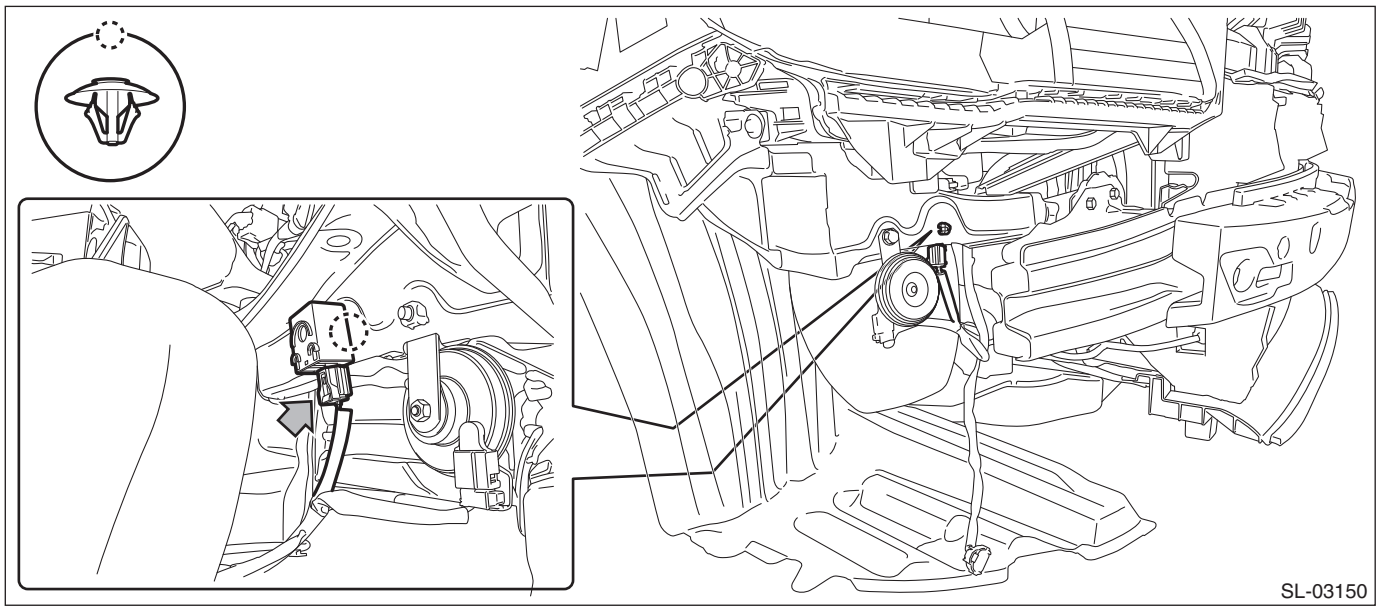
C: INSPECTION

1) Check the continuity between the connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Specification
4 (COM) — 5 (GND)	Always	Continuity exists
7 (SSW1) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists
2 (SSW2) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists

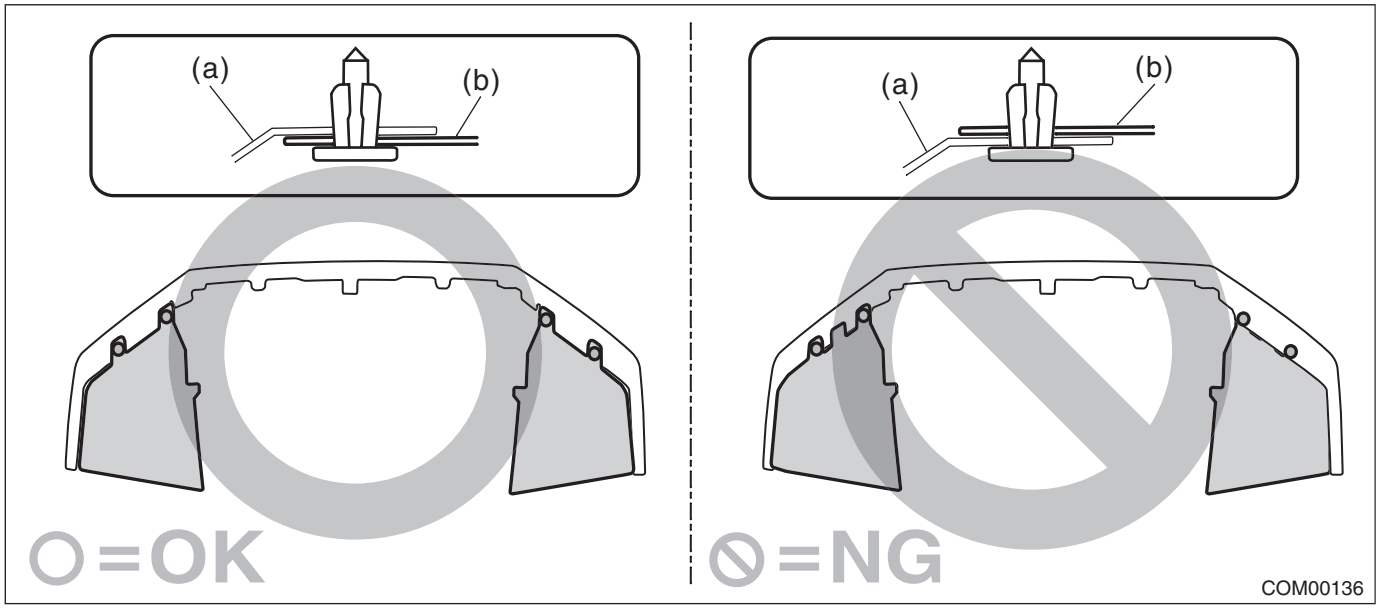
2) Check the push button ignition switch operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
11 (SWIL) — 5 (GND)	Connect battery to the terminals	Goes off → Red switch illumination light
12 (INDS) — 5 (GND)		Turns off → Switch indicator lights in green
13 (INDW) — 5 (GND)		Turns off → Switch indicator lights in orange

3) Replace the push button ignition switch if it is found defective.

37.Access Buzzer



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the access buzzer.
   (1) Remove the clips, and turn over the mud guard - front.
   (2) Disconnect the connector.
   (3) Remove the clip and detach the access buzzer.

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

1) Install the access buzzer.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

• Using the Subaru Select Monitor, set the volume of the access buzzer. <Ref. to BC(diag)-34, OPERATION, User Customizing.>
• Using the Subaru Select Monitor, perform forced operation of the access buzzer. <Ref. to BC(diag)-40, OPERATION, Function Check.>
If the buzzer does not sound, replace the access buzzer.

38.Backup Unit

A: NOTE

Refer to “Audio” section of “ENTERTAINMENT” for removal and installation of the backup unit assembly. <Ref. to ETM-11, Audio.>

39.Function Setting (Customize)

A: OPERATION

Disabling/Activating the keyless access system

The following functions are disabled when the keyless access system functions are disabled:

- LOCK function performed by the operation of touch sensor on the door outer handle
- Rear gate LOCK function by rear lock button operation
- UNLOCK function by holding the door handle
- Rear gate open function by rear gate opener button operation in the rear gate lock condition
- Trunk lid open function by trunk opener button operation in the trunk lid lock condition
- Lockout prevention feature
- Warning function
- Engine starting control using keyless access collation

B: PROCEDURE

1. STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY DOOR OPEN/CLOSE PROCEDURE

1) Check that the vehicle status is as follows:
- Ignition switch OFF
- One window is completely open
- Keyless access system is activated (or disabled if re-activating)

2) Sit in the driver's seat with the door closed and press the door lock switch to UNLOCK once.
3) Open the driver's door within five seconds.
4) Within 5 seconds, with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
5) Within 10 seconds after finishing step 4), perform the closing → opening operation of the driver's door twice.
6) Within 10 seconds after finishing step 5), with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
7) Within 10 seconds after finishing step 6), perform the closing → opening operation of the driver's door once.
8) Within five seconds after finishing step 7), close the drivers door.

NOTE:
- Perform the same procedures to re-activate the keyless access system from the disabled condition.
- In step 4) and step 6), press the door lock switch completely. The function may not work properly if the switch is pressed shortly.

2. STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY USING ACCESS KEY

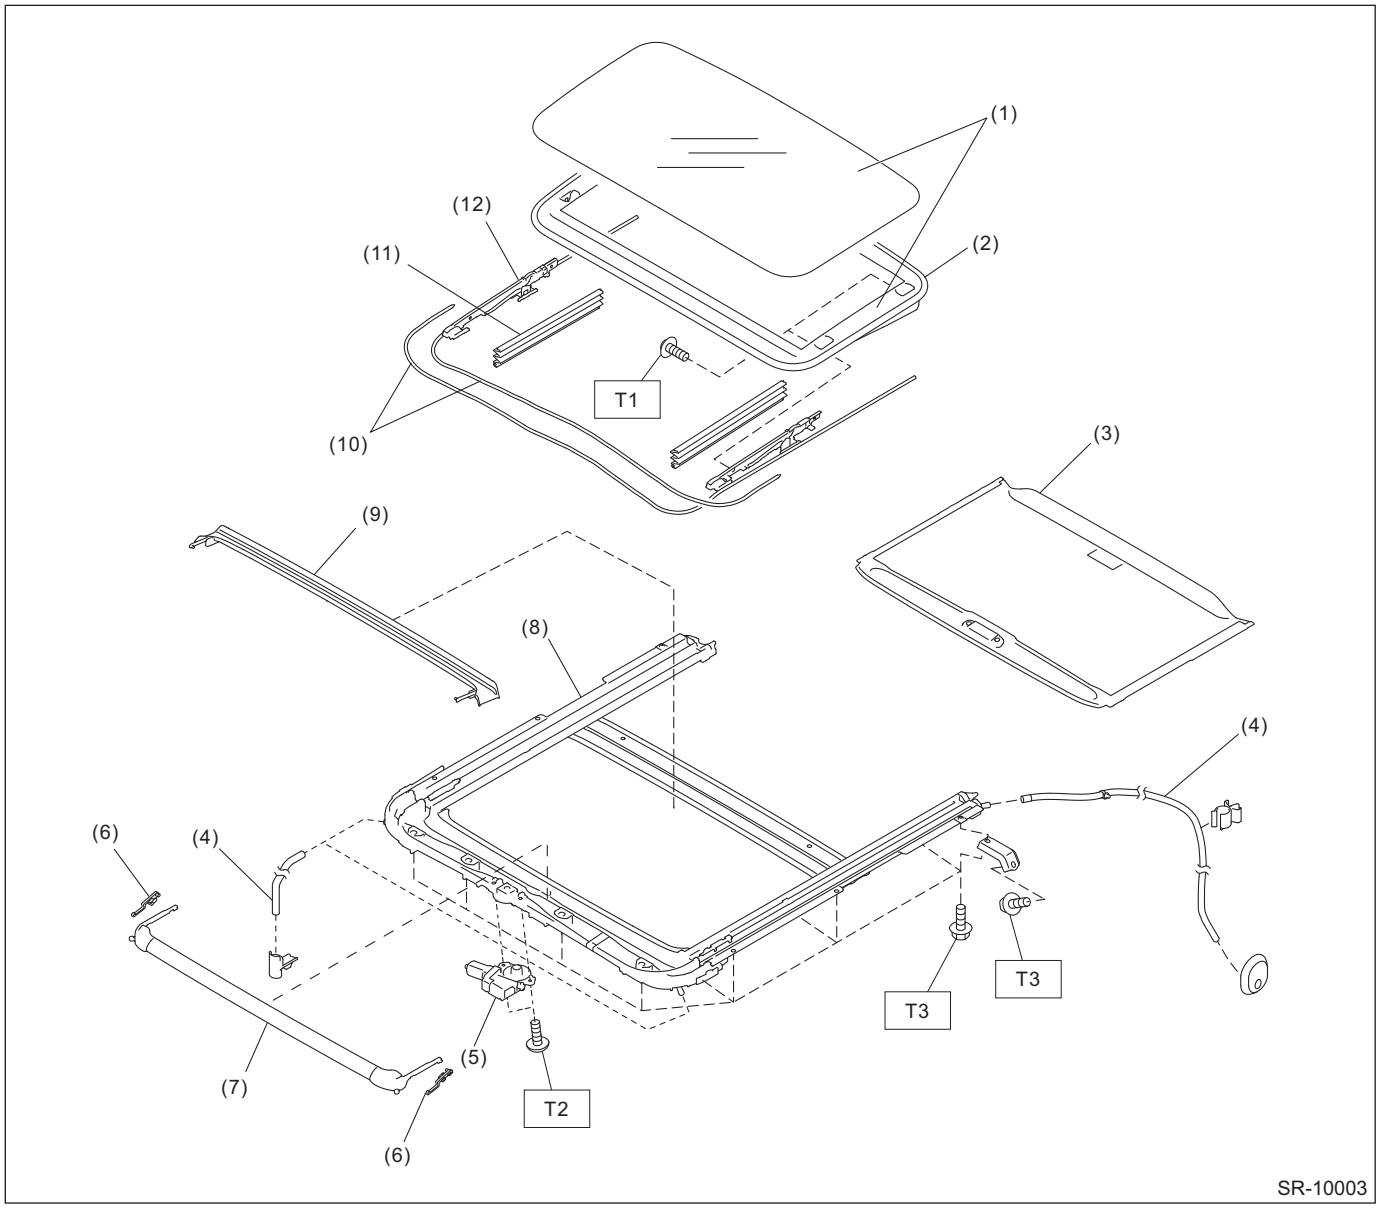
1) Open the driver's door, and then push the door lock knob forward (LOCK direction).
2) Press the lock button of access key and trunk/rear gate button simultaneously for five seconds or more.
3) The buzzer sounds for two seconds, and the function stops.

NOTE:
Perform the same procedures to re-activate the keyless access system from the disabled condition.

40.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-109, Diagnostics with Phenomenon.>



SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

SR

		Page
1.	General Description	2
2.	Relay and Fuse	4
3.	Sunroof Control System	5
4.	Glass Lid	7
5.	Sunroof Assembly	12
6.	Sunroof Motor	19
7.	Sunroof Switch	21
8.	Sunshade	23

1. General Description

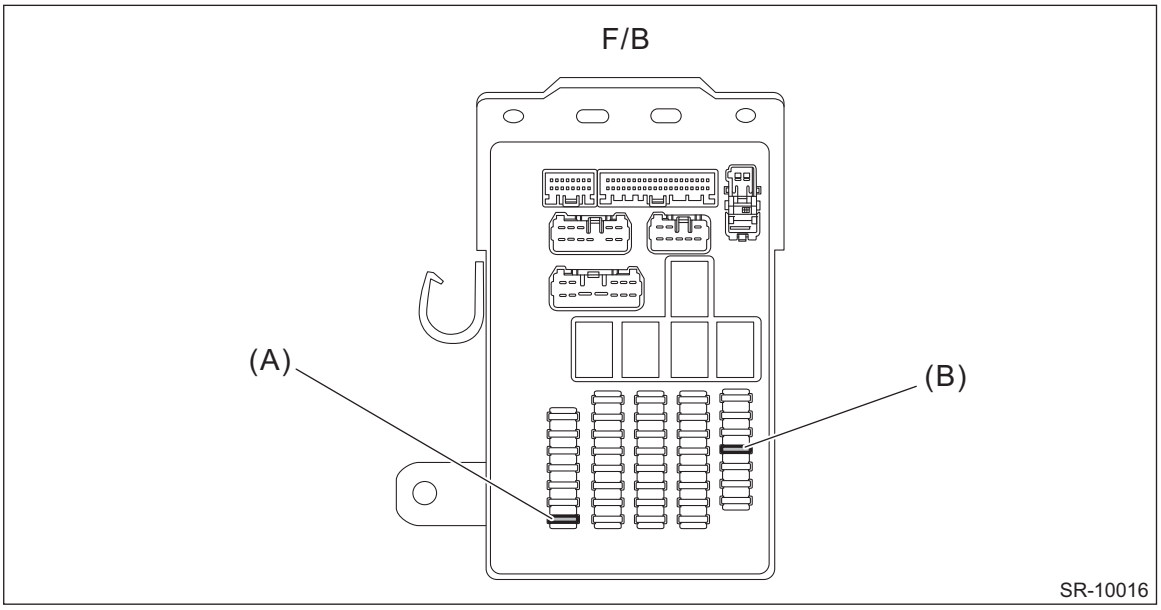
A: COMPONENT

(1)	Lid ASSY - sunroof	(7)	Deflector ASSY - sunroof
(2)	Weather strip	(8)	Rail ASSY - sunroof
(3)	Sunshade ASSY	(9)	Drain ASSY - sunroof
(4)	Drain tube - sunroof	(10)	Cable ASSY
(5)	Motor ASSY - sunroof	(11)	Lid cover
(6)	Hook	(12)	Link - drain sunroof

Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.5 (0.5, 3.3)
T2: 5.4 (0.6, 4)
T3: 6 (0.6, 4.4)

B: CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.



C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
TORX® T25	Used for removing and installing the lid assembly - sunroof and motor assembly - sunroof.

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 20 A	(A)
	Fuse 7.5 A	(B)

NOTE:
For details concerning other fuses and relays, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

3. Sunroof Control System

A: WIRING DIAGRAM

Refer to “Sunroof Control System” in the wiring diagram. <Ref. to WI-367, WIRING DIAGRAM, Sunroof Control System.>

B: INSPECTION

Symptoms	Inspection steps
Water leakage	1. Check the roof panel and the lid assembly - sunroof for improper or poor sealing. 2. Check the drain tube - sunroof for clogging. 3. Check the joints of the rail assembly - sunroof for improper sealing and for proper installation to the body.
Booming noise, wind noise and other noise	1. Check the lid assembly - sunroof and the roof panel for improper clearance. 2. Check the sunshade assembly and the trim panel - roof assembly for improper clearance.
Abnormal motor noise	1. Check installing part of motor for looseness. 2. Check gears and bearings for wear. 3. Check cable assembly for wear. 4. Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	1. Check guide rail for foreign particles. 2. Check guide rail for improper installation. 3. Check parts for mutual interference. 4. Check cable slider for improper clinching. 5. Check cable assembly for improper installation.
Motor does not rotate or it does not rotate normally.	1. Check fuse for blown out. 2. Check switch for improper function. 3. Check motor assembly for incorrect terminal voltage. 4. Check the relay for improper operation. 5. Check harness for open or short and terminals for poor connections.
Incorrect reverse operation of the lid assembly - sunroof	Check guide rail for foreign particles.

Incorrect reverse operation of the lid assembly - sunroof while driving on rough road

The lid assembly - sunroof has auto-reverse function. When the lid assembly - sunroof is pushed in the opening direction with a force of 110±10 N (11.2 kgf, 24.7 lbf±1 kgf, 2.2 lbf), the glass lid moves in reverse and stops.

Therefore, if you operate (open or close) the lid assembly - sunroof while driving on rough road, the vibration may be judged as a force and the lid may incorrectly move in the reverse direction.

When the incorrect reverse operation is occurred repeatedly, perform inspection around the sunroof frame. If there are no problems, perform the initialization operation with following procedure.

C: OPERATION

1. INITIALIZE OPERATION

CAUTION:

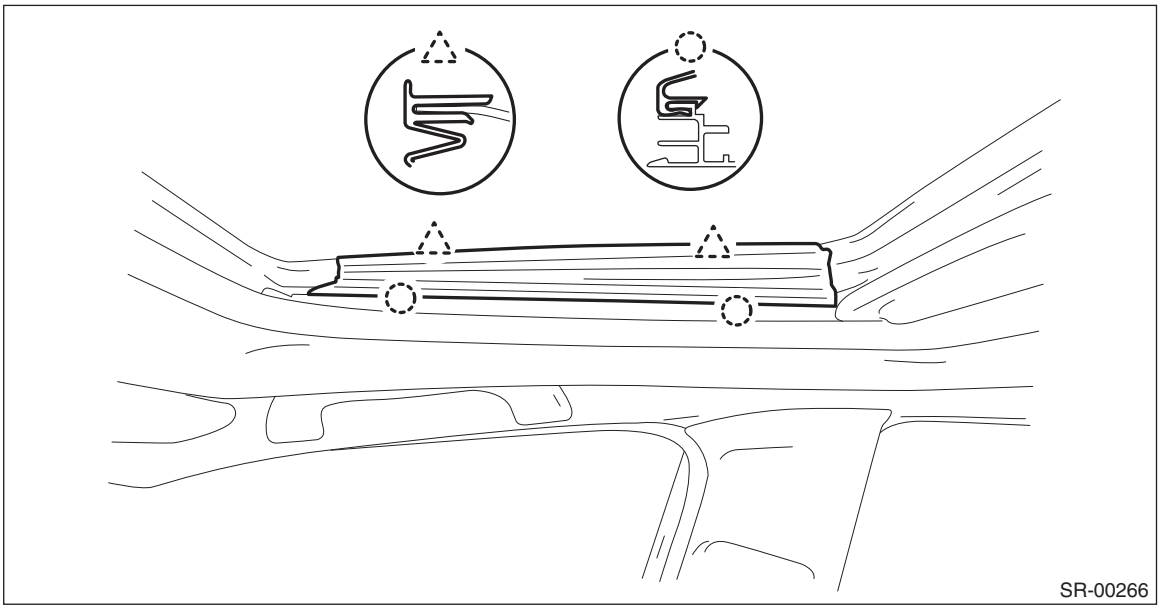
If the switch is released during initialization operation, perform the procedure over again.

1) Turn the ignition switch to ON.
2) Completely tilt open the lid assembly - sunroof.
3) Release the switch once, and press and hold the tilt up switch or close switch again for approx. 3 minutes.
4) Initial learning mode will start to operate until the fully tilt closed position. The lid assembly - sunroof moves to the fully closed position, fully open position, and the fully closed position successively, and stops at the fully closed position.
5) Release the tilt up switch or the close switch, and turn the ignition switch to OFF.
6) Initial learning is completed.

D: NOTE

For procedure of each component in the sunroof control system, refer to the respective section.

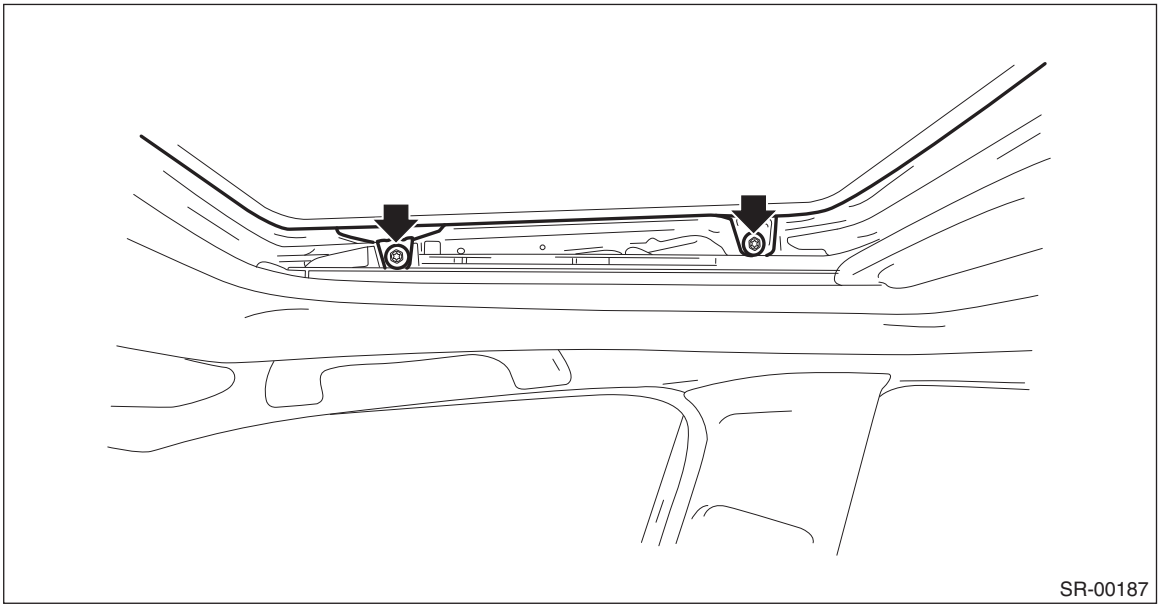
- Glass lid: <Ref. to SR-7, Glass Lid.>
- Sunroof assembly: <Ref. to SR-12, Sunroof Assembly.>
- Sunroof motor: <Ref. to SR-19, Sunroof Motor.>
- Sunroof switch: <Ref. to SR-21, Sunroof Switch.>
- Sunshade: <Ref. to SR-23, Sunshade.>



4. Glass Lid

A: REMOVAL

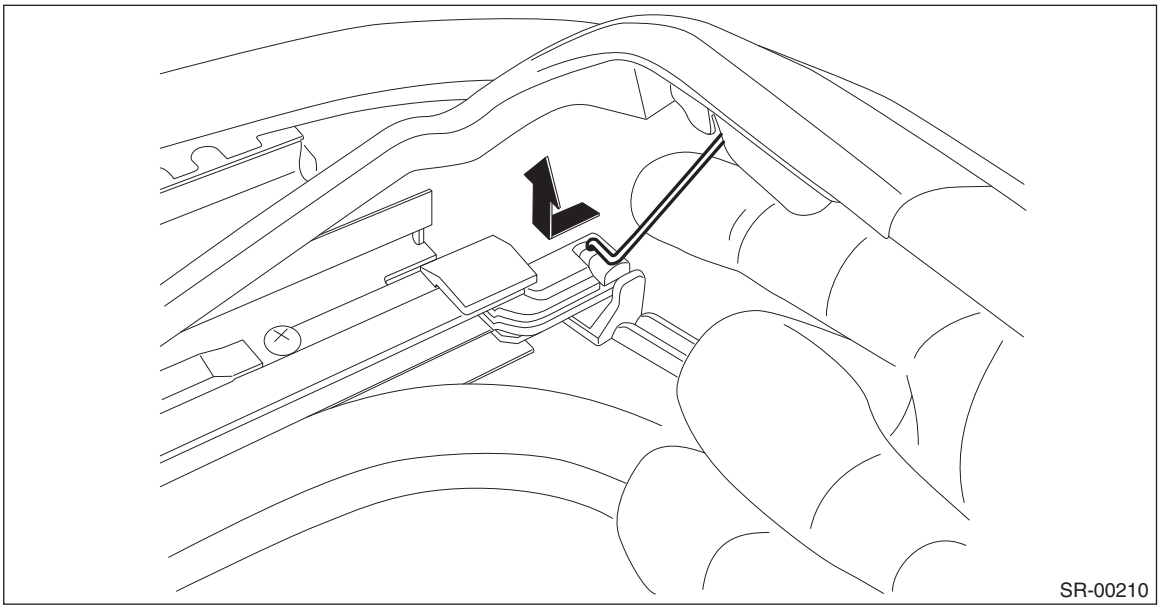
1. GLASS LID



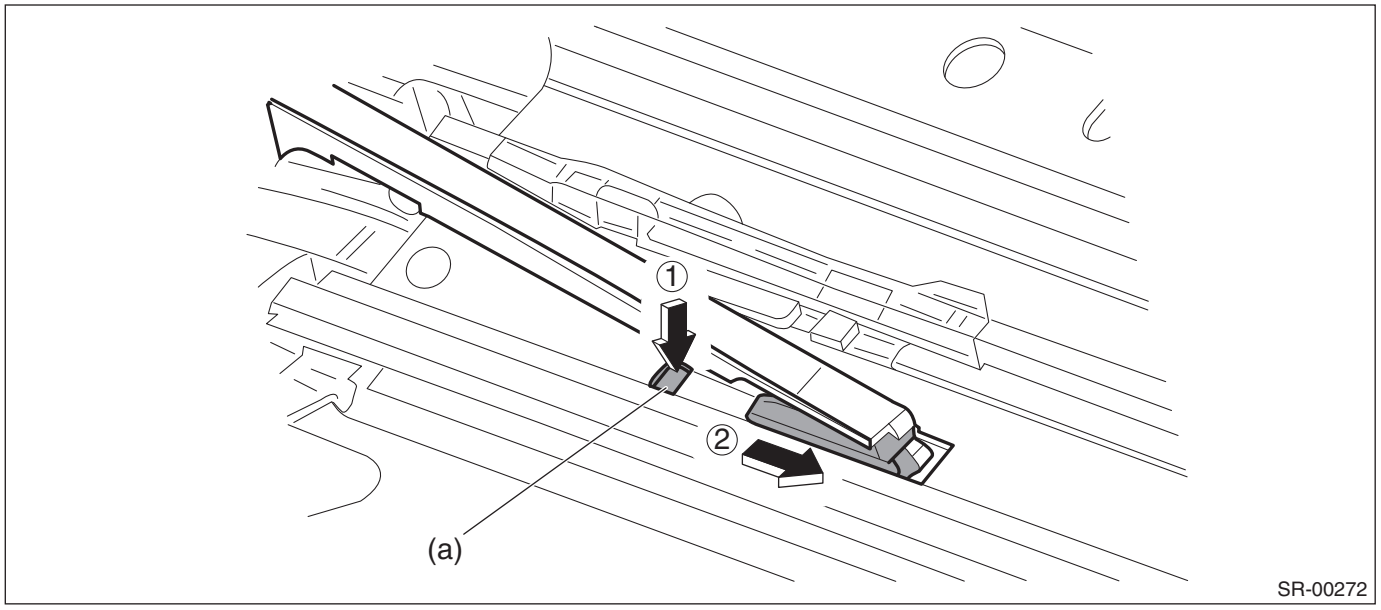
CAUTION:
Be careful not to damage the lid assembly - sunroof.

1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
2) Disconnect the claws and then remove the lid cover.

3) Remove the lid assembly - sunroof.

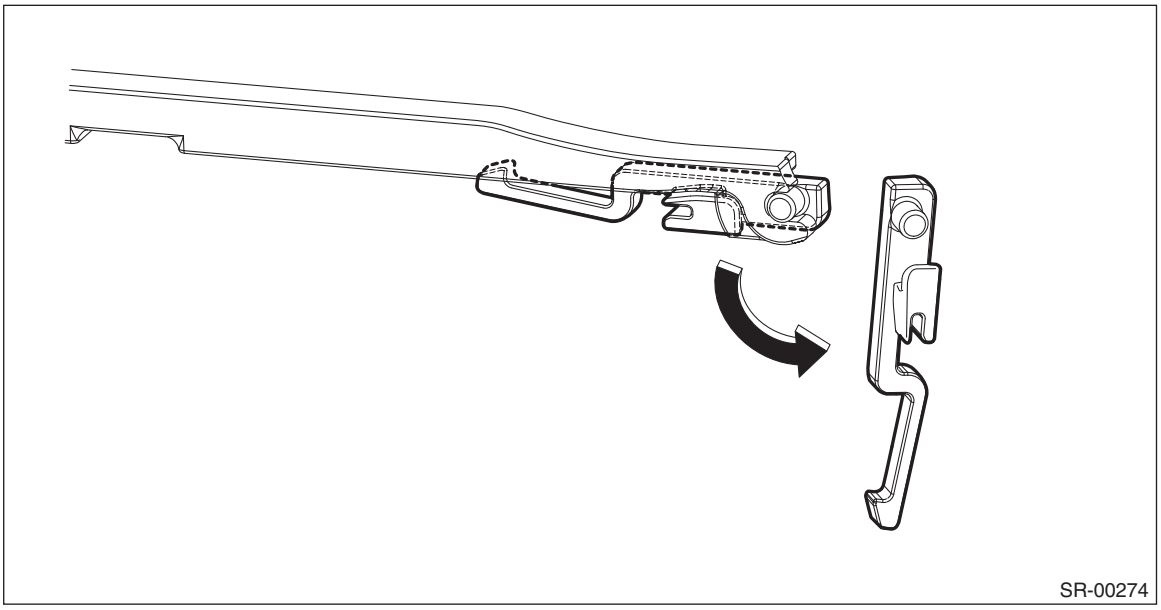


Preparation tool:
TORX® T25



2. DEFLECTOR ASSEMBLY

1) Open the lid assembly - sunroof and the sunshade assembly.
2) Remove the deflector assembly - sunroof.



(1) Remove the spring from the rail assembly - sunroof.

(2) While pressing down the hook (a) of rail assembly - sunroof, slide it to the rail rear direction to remove.

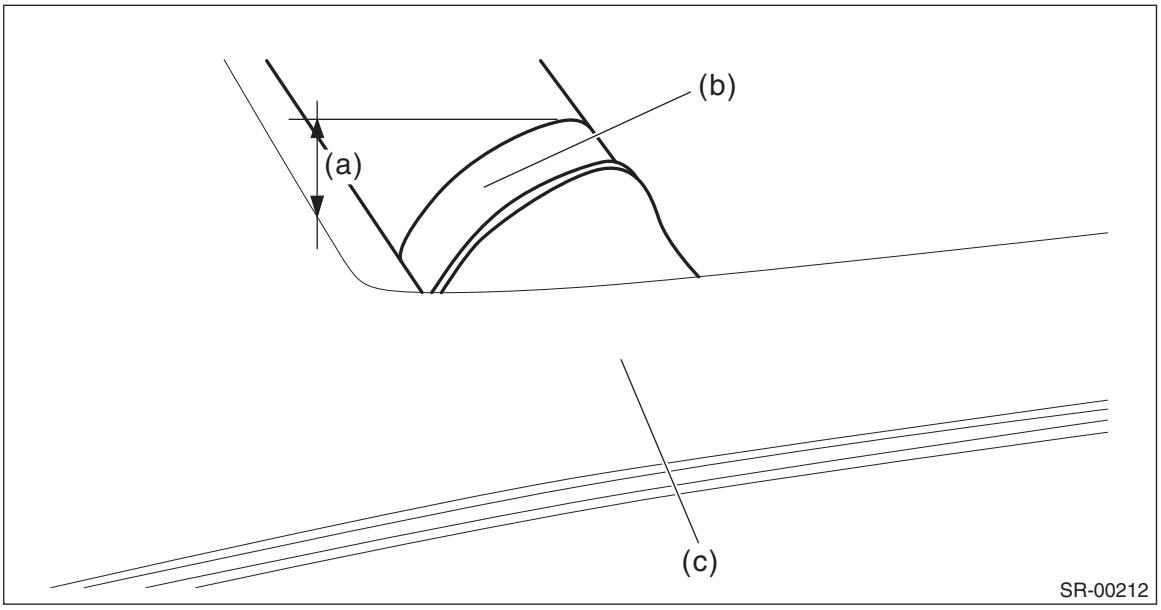
(3) Remove the deflector assembly - sunroof from the hook of rail assembly - sunroof.

B: INSTALLATION

1. GLASS LID

1) Install the lid assembly - sunroof.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)



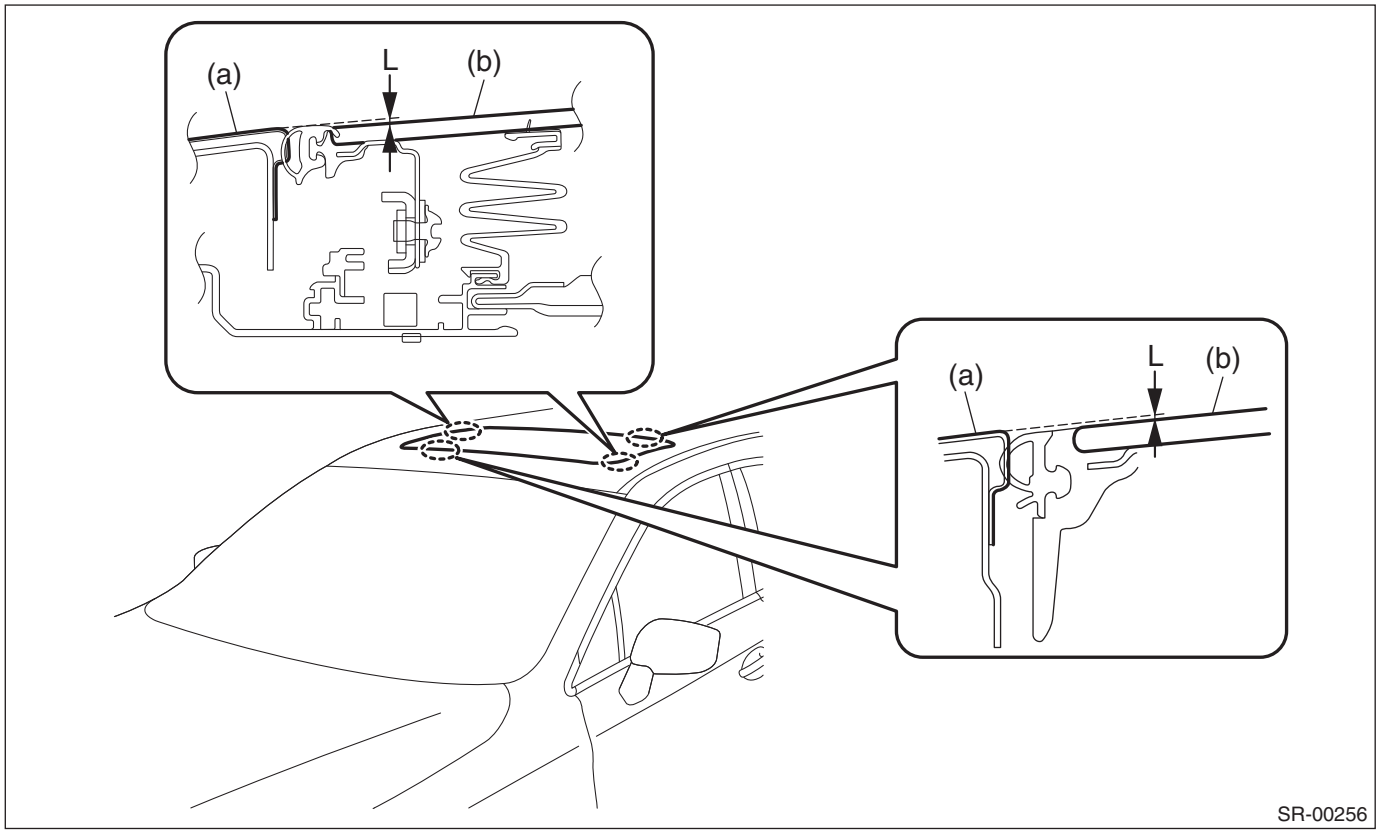
2) Perform the open/close operation checks for the glass lid.
3) Check the height of the lid assembly - sunroof and the roof panel, and perform adjustment when there is a difference between up and down, and left and right. <Ref. to SR-10, ADJUSTMENT, Glass Lid.>
4) Install the lid cover.

2. DEFLECTOR ASSEMBLY

1) Install the deflector assembly - sunroof.

CAUTION:
When the hook is removed, be careful of the hook direction.

2) After installation, measure the height from the roof panel when deflector assembly - sunroof is activated.



(a) 14 mm (0.55 in) (b) Deflector ASSY - sunroof (c) Roof panel

C: ADJUSTMENT

1) Adjust the height of the lid assembly - sunroof and the roof panel.
2) Loosen the lid assembly - sunroof mounting bolts, and then adjust the height by moving the lid assembly - sunroof side.

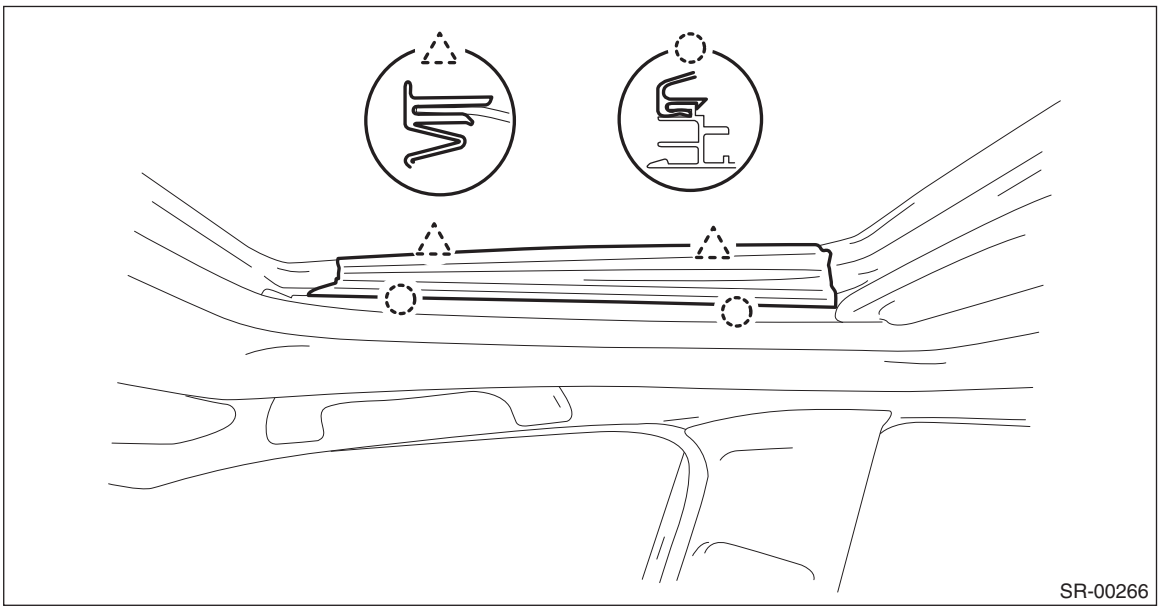
Lid assembly - sunroof height difference L:
Lid assembly - sunroof to Roof panel: 0±1 mm (0±0.04 in)

(a) Roof panel (b) Lid ASSY - sunroof

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

D: FORCED DRIVE

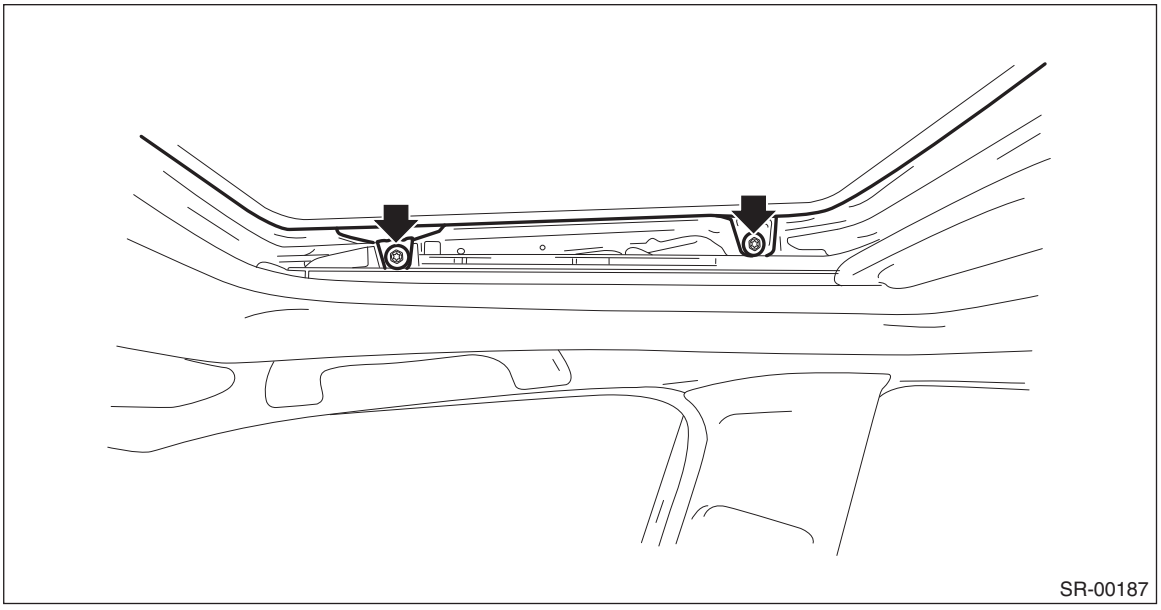
CAUTION:
After a forced operation, make sure to perform an initialize operation. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
If the lid assembly - sunroof does not operate or the motor assembly is not supplied with power, remove the motor assembly to move the lid assembly - sunroof manually.
1) Remove the overhead console. (Models without EyeSight) <Ref. to LI-76, REMOVAL, Spot Map Light.>
2) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
3) Remove the connector and bolt to remove the motor assembly.
4) Move the lid assembly - sunroof by hand.
5) Install the connector and bolt.
6) Install the overhead console. (Models without EyeSight) <Ref. to LI-77, INSTALLATION, Spot Map Light.>
7) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>



5. Sunroof Assembly

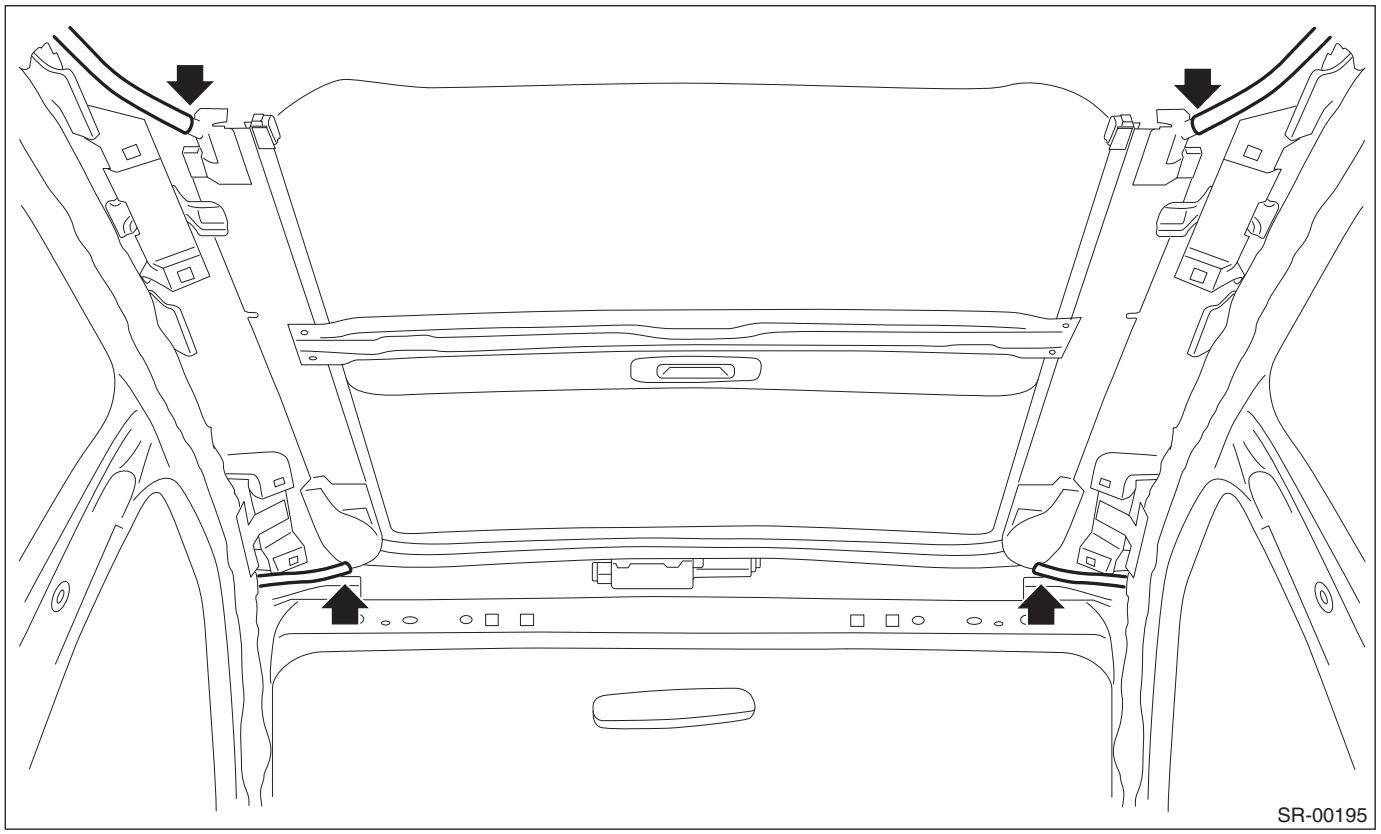
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



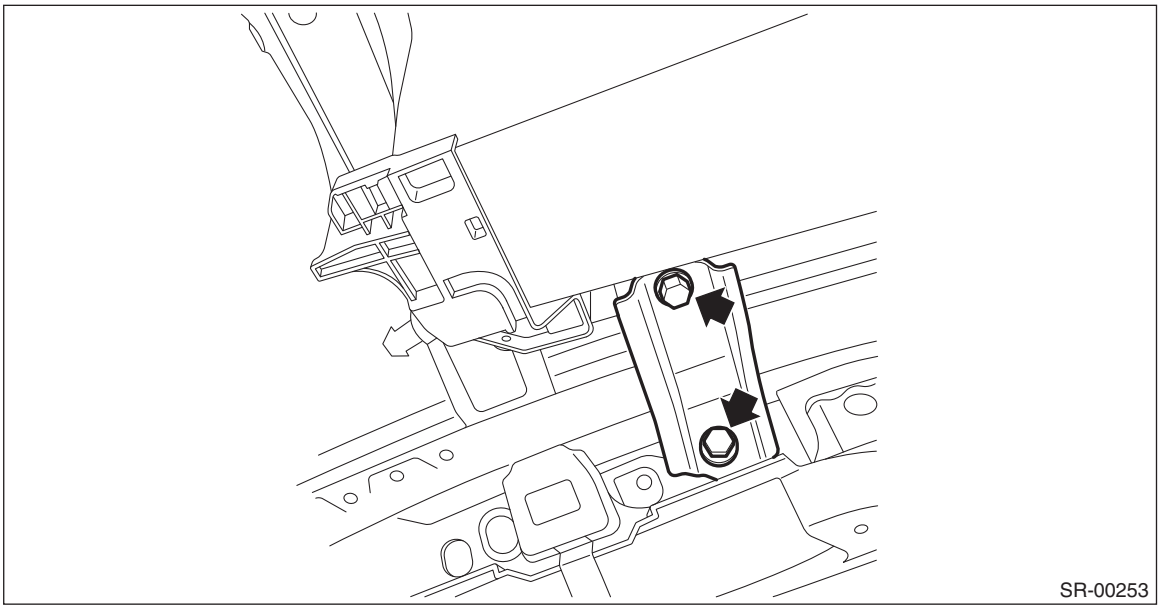
NOTE:
Completely close the lid assembly - sunroof, then disconnect the ground terminal from battery sensor.
2) Remove the lid assembly - sunroof.

CAUTION:
Be careful not to damage the lid assembly - sunroof.
(1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
(2) Disconnect the claws and then remove the lid cover.



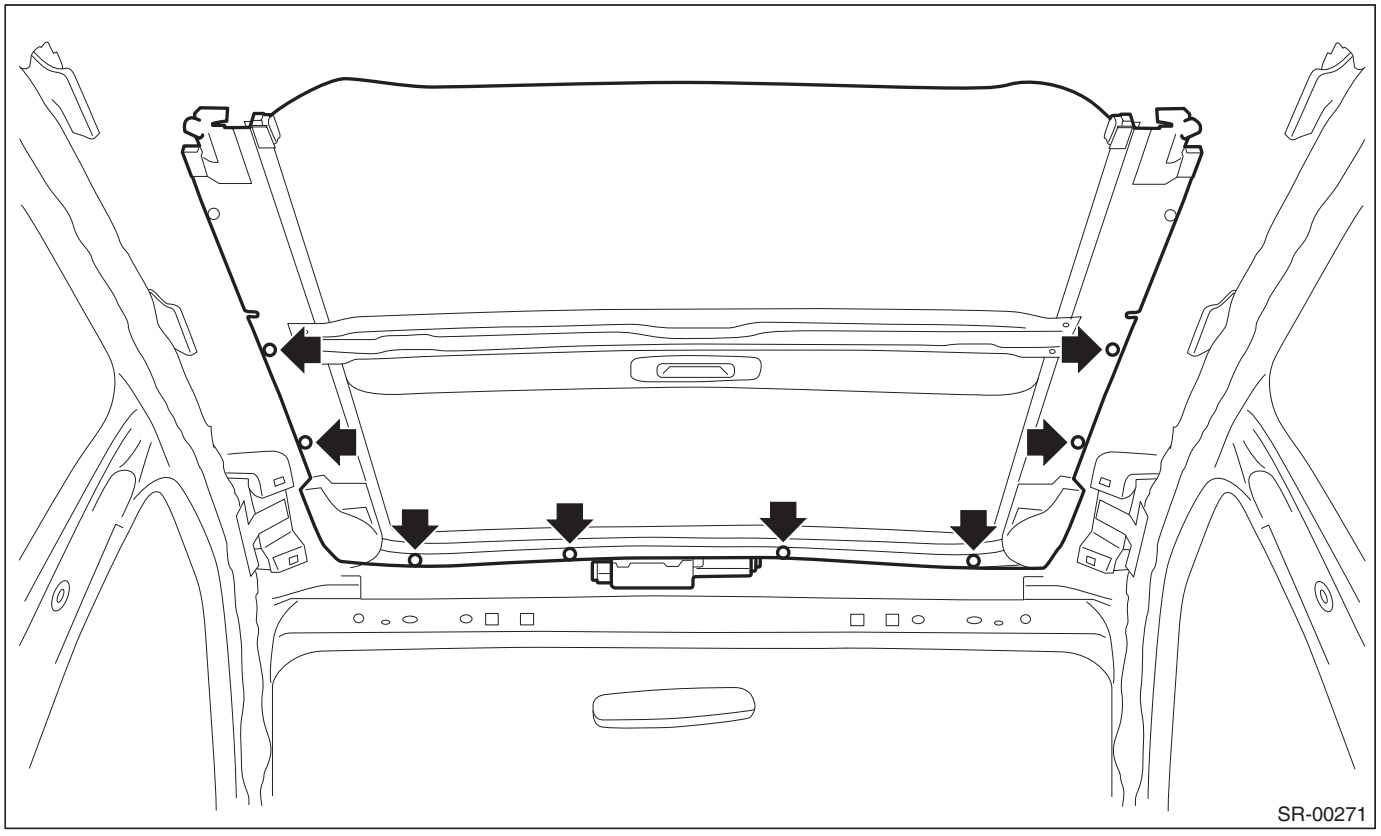
(3) Remove the lid assembly - sunroof.

Preparation tool:
TORX® T25



3) Remove the trim panel - roof assembly. <Ref. to EI-111, REMOVAL, Roof Trim.>
4) Disconnect the connector of the motor assembly - sunroof.
5) Remove the rail assembly - sunroof.

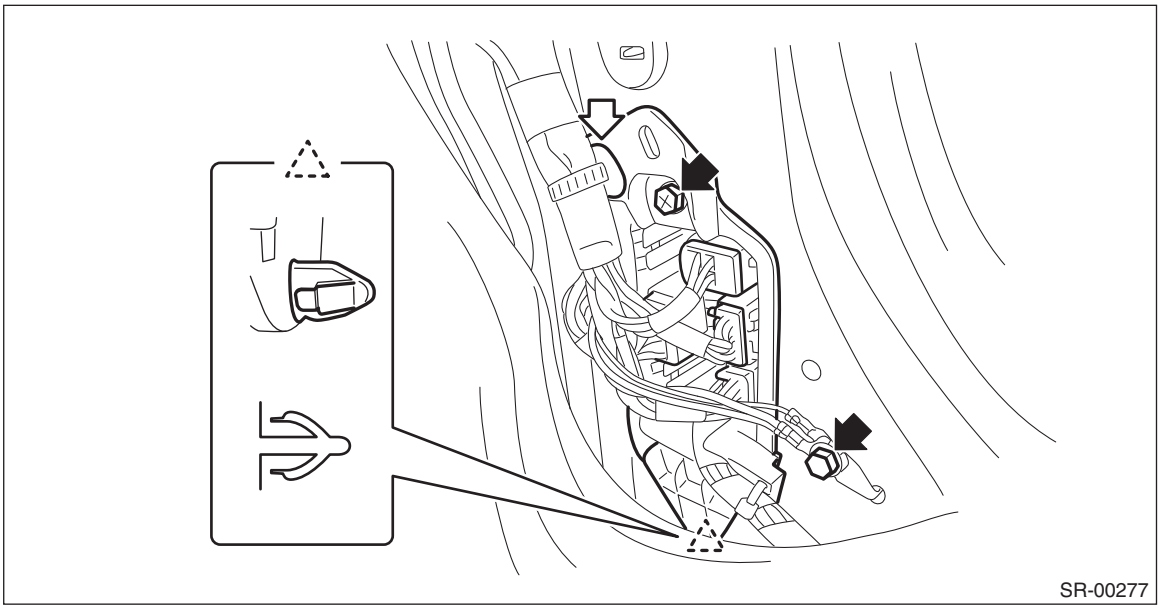
NOTE:
When removing the drain tube - sunroof, perform the step 7) or 8).



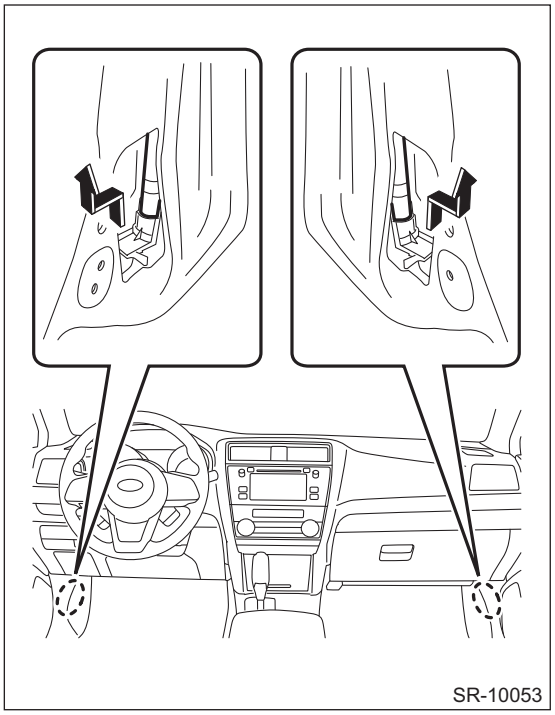
6) Remove the curtain airbag module. <Ref. to AB-42, REMOVAL, Curtain Airbag Module.>
7) Remove the rail assembly - sunroof.

(1) Remove the bolts and then remove the sunroof bracket.

(2) Remove the bolts, then remove the rail assembly.



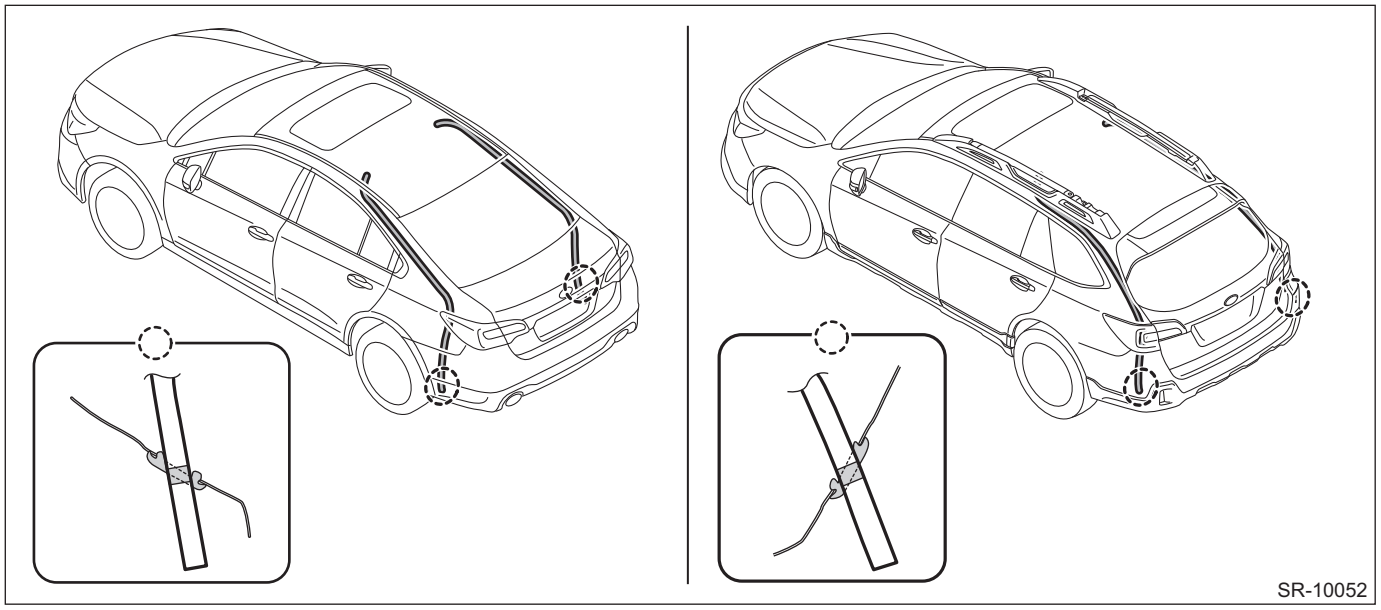
8) Remove the front side of drain tube - sunroof.



NOTE:
For easy replacement work, attach a string when pulling the drain tube - sunroof.

(1) Remove the cover side sill - front and the front cover - side sill. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>

(2) Disconnect each connector, and remove the bolt and clip.



(3) Remove the front side of drain tube - sunroof.

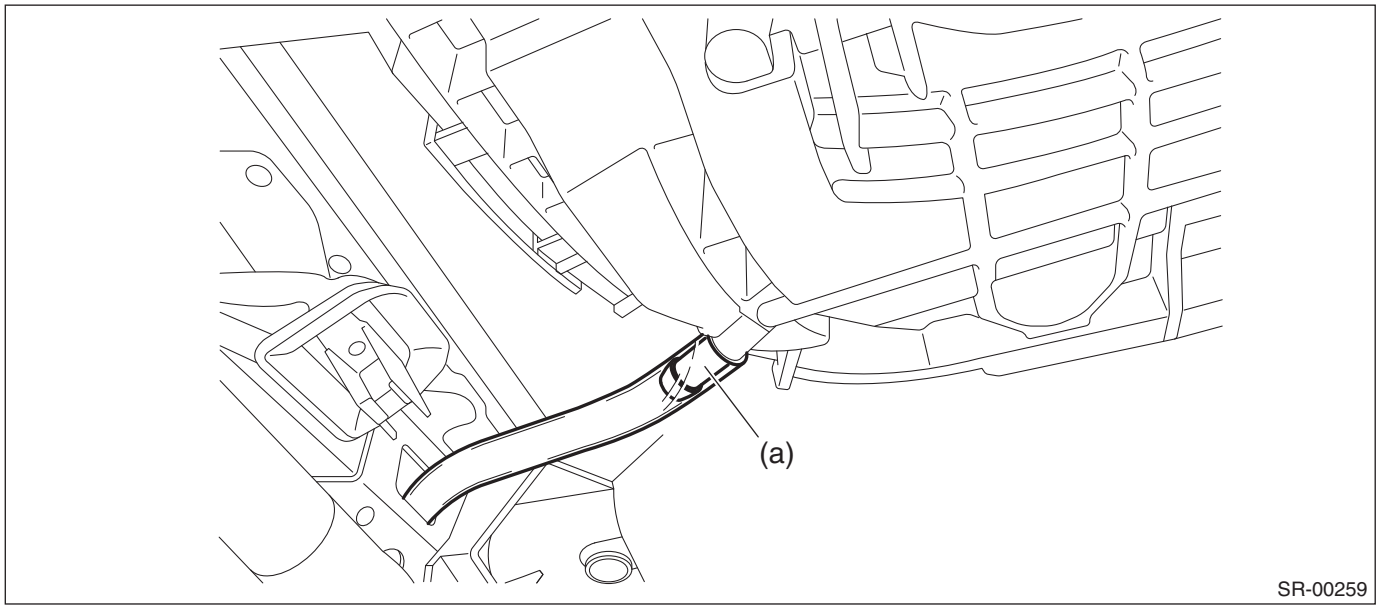
9) Remove the rear side of drain tube - sunroof.
(1) Remove the mat - rear floor and the spacer - rear floor.

(2) Remove the drain tube - sunroof.

B: INSTALLATION

CAUTION:
Be careful not to snag the harness.

1) Install each connector and the drain tube - sunroof.



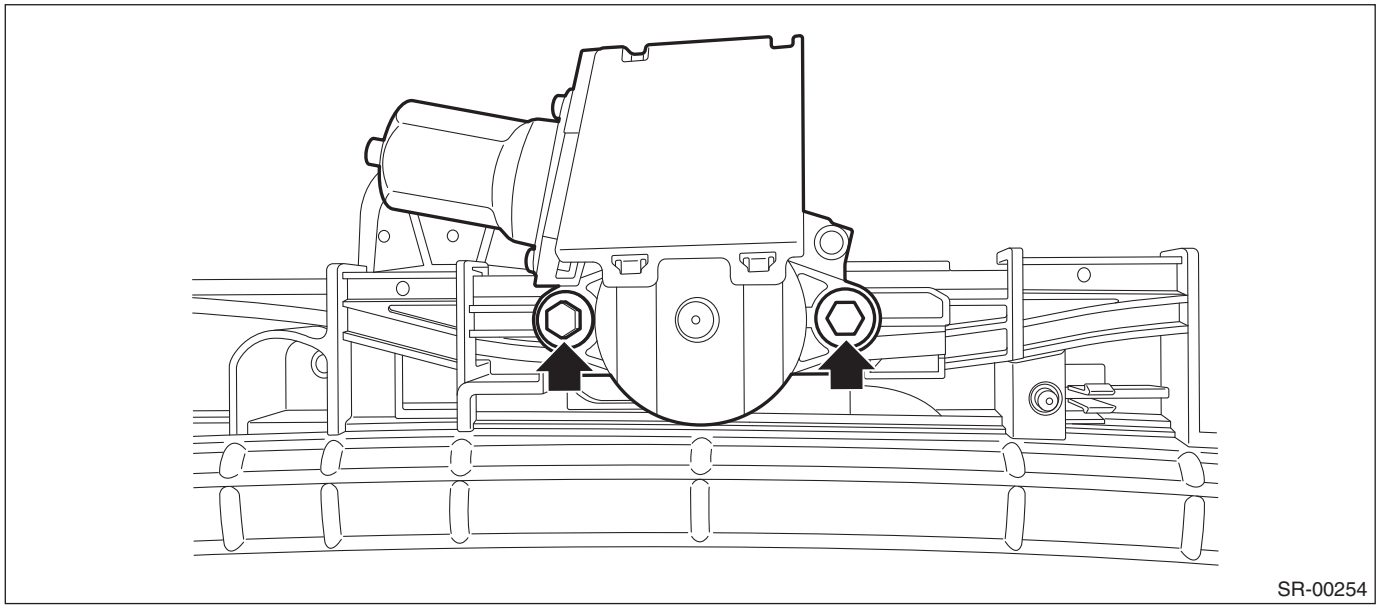
Tightening torque:
Connector holder: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Ground bolt: 13 N·m (1.3 kgf-m, 9.6 ft-lb)

2) Install the cover side sill - front and the front cover - side sill.
3) Install the rail assembly - sunroof.

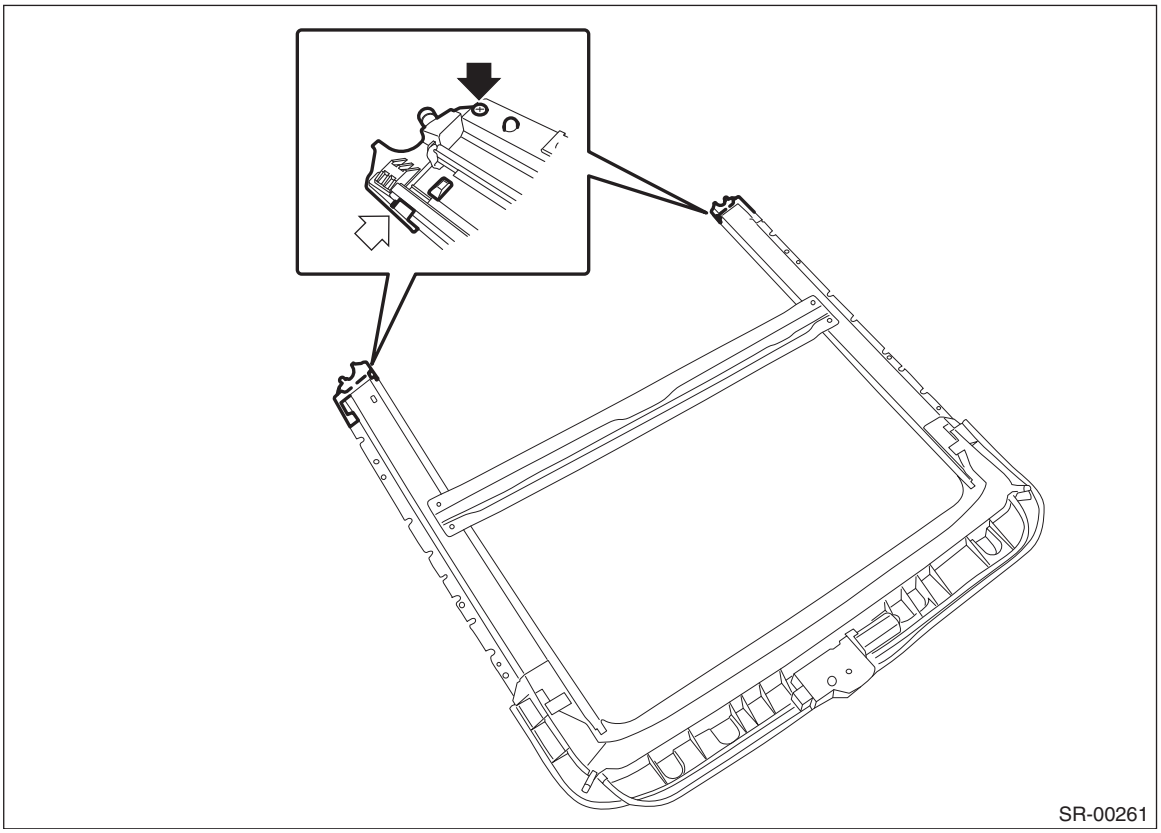
Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

4) Install the curtain airbag module. <Ref. to AB-46, INSTALLATION, Curtain Airbag Module.>
5) Connect the harness connector of the drain tube - sunroof and the motor assembly.

CAUTION:
Insert the four drain tubes 15 mm (0.59 in) or more into the drain pipes (a).

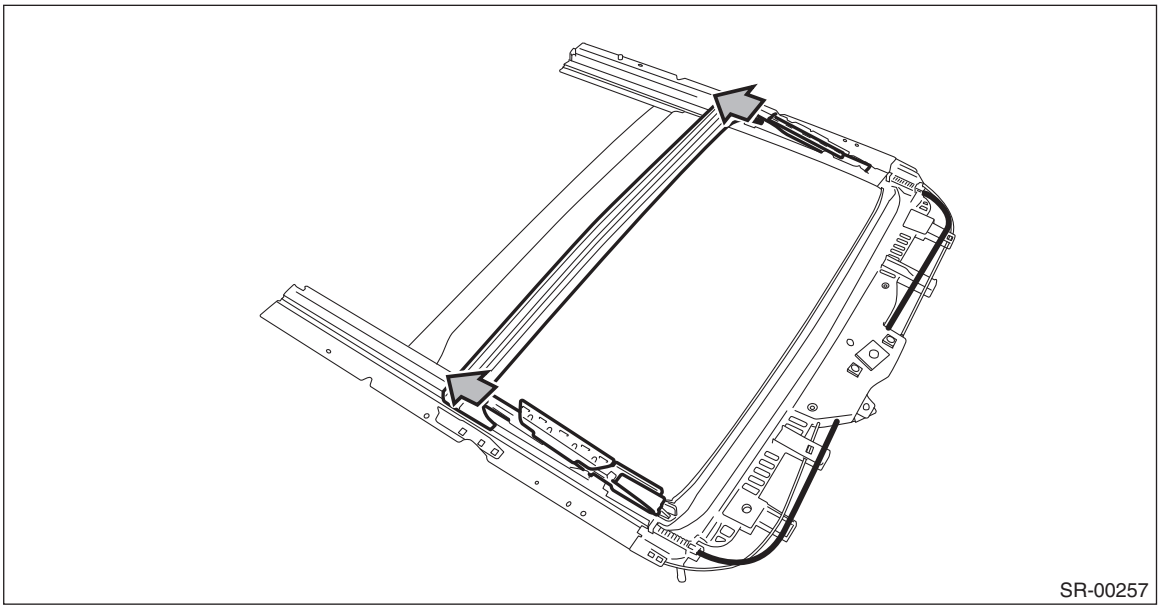


6) Install the trim panel - roof assembly. <Ref. to EI-115, INSTALLATION, Roof Trim.>
7) Install the lid assembly - sunroof.



Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

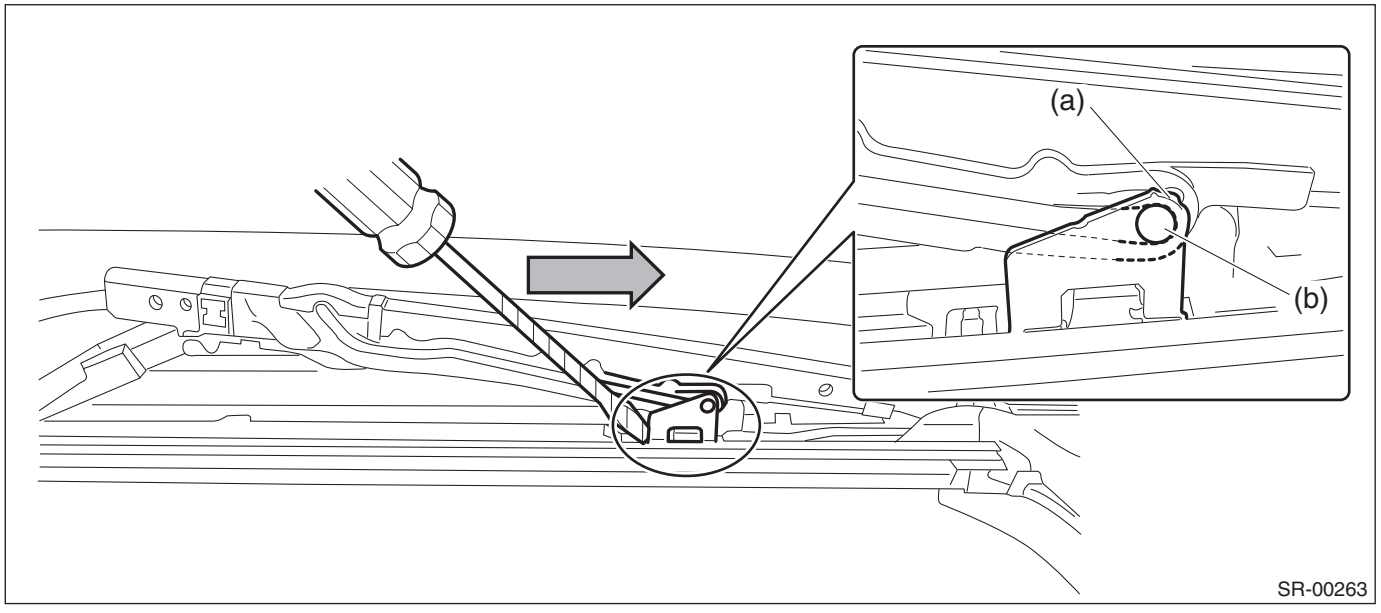
C: DISASSEMBLY



1) Remove the bolt, and then remove the motor assembly - sunroof.

SR-00254

2) Remove the screws and release the claws, then detach the drain holder.



SR-00261

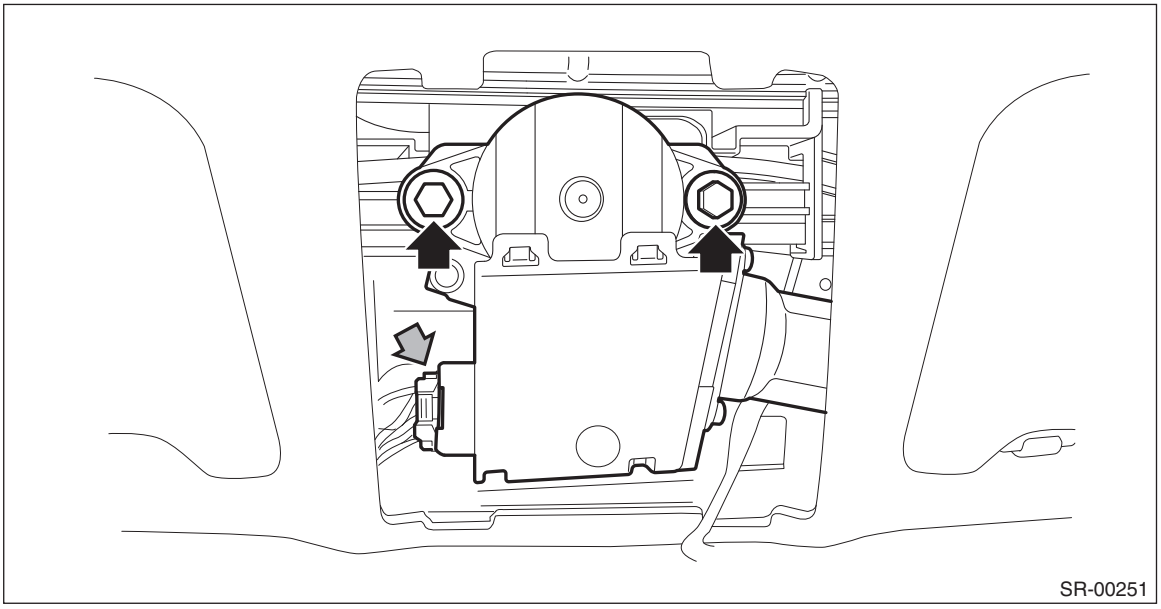
3) Remove the sunshade assembly together with the cable assembly from the rail assembly - sunroof.

D: ASSEMBLY

1) Insert the cable assembly and sunshade assembly into the rail assembly - sunroof.
2) Install the drain holder.
3) Using a flat tip screwdriver wrapped with protective tape, move the link - drain sunroof to the foremost position of the lid assembly - sunroof.

(a) Lid ASSY - sunroof side (b) Link - drain sunroof side

4) Install the motor assembly - sunroof.



Tightening torque:
5.4 N·m (0.6 kgf-m, 4 ft-lb)

6. Sunroof Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the overhead console. (Models without EyeSight) <Ref. to LI-76, REMOVAL, Spot Map Light.>
3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
4) Remove the motor assembly - sunroof.
   (1) Disconnect the harness connector.
   (2) Remove the bolt, and then remove the motor assembly - sunroof.

CAUTION:
When removing the motor assembly - sunroof, do not allow the cable assembly to move.

B: INSTALLATION

CAUTION:
- **When installing the motor assembly - sunroof, do not allow the cable assembly to move.**
- **For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-9, INSTALLATION, Stereo Camera.>**

1) Install the motor assembly - sunroof.

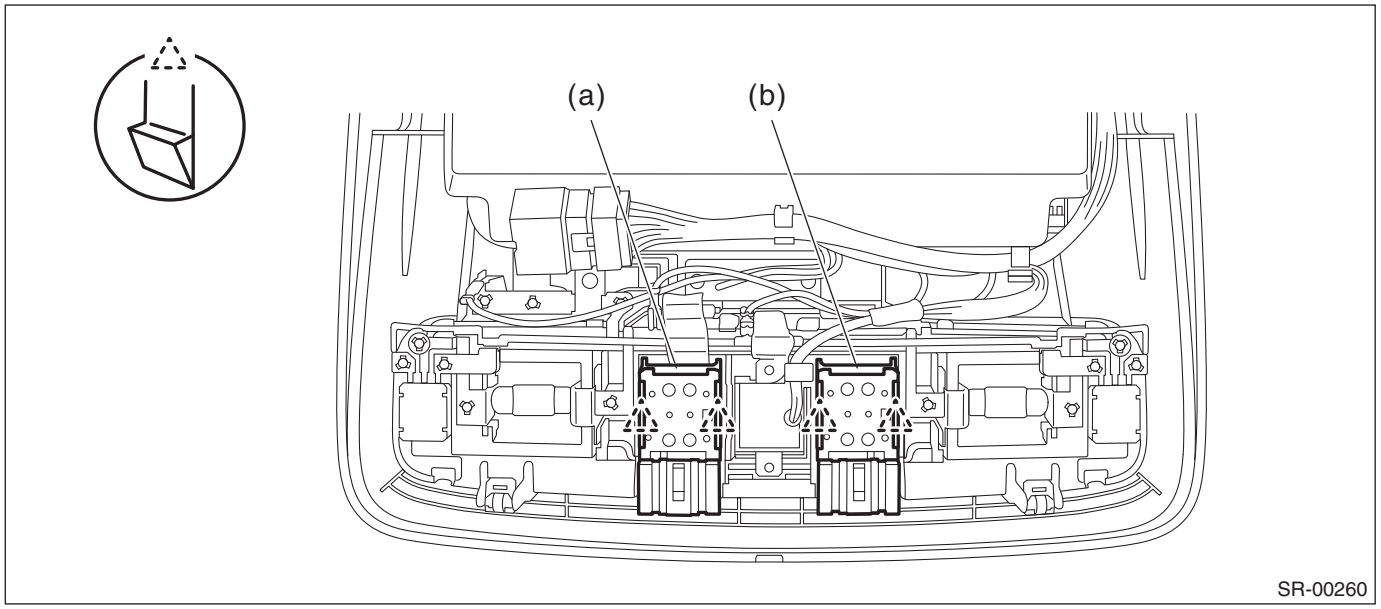
Tightening torque:
5.4 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Install the overhead console. (Models without EyeSight) <Ref. to LI-77, INSTALLATION, Spot Map Light.>
3) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Perform the initialize operation. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
6) Check the operation of sunroof by following the table below.

Operation	Switch position
(1) Lid assembly - sunroof closes completely.	Close
(2) Lid assembly - sunroof is tilted up to the top position.	Tilt up
(3) Lid assembly - sunroof closes completely.	Tilt down
(4) Lid assembly - sunroof opens 368 mm (14.49 in) away from completely closed position.	Open

Operation	Switch position
(5) Lid assembly - sunroof opens completely.	Open
(6) Lid assembly - sunroof closes completely.	Close

C: INSPECTION

Check the auto-reverse mechanism.



CAUTION:
Do not place objects in the way to check the auto-reverse mechanism.
1) Open the lid assembly - sunroof.
2) Push the lid assembly - sunroof in the opening direction with a force of 110±10 N (11.2 kgf, 24.7 lbf±1 kgf, 2.2 lbf) during the auto-closing operation, and check whether the window auto-reverse mechanism functions.

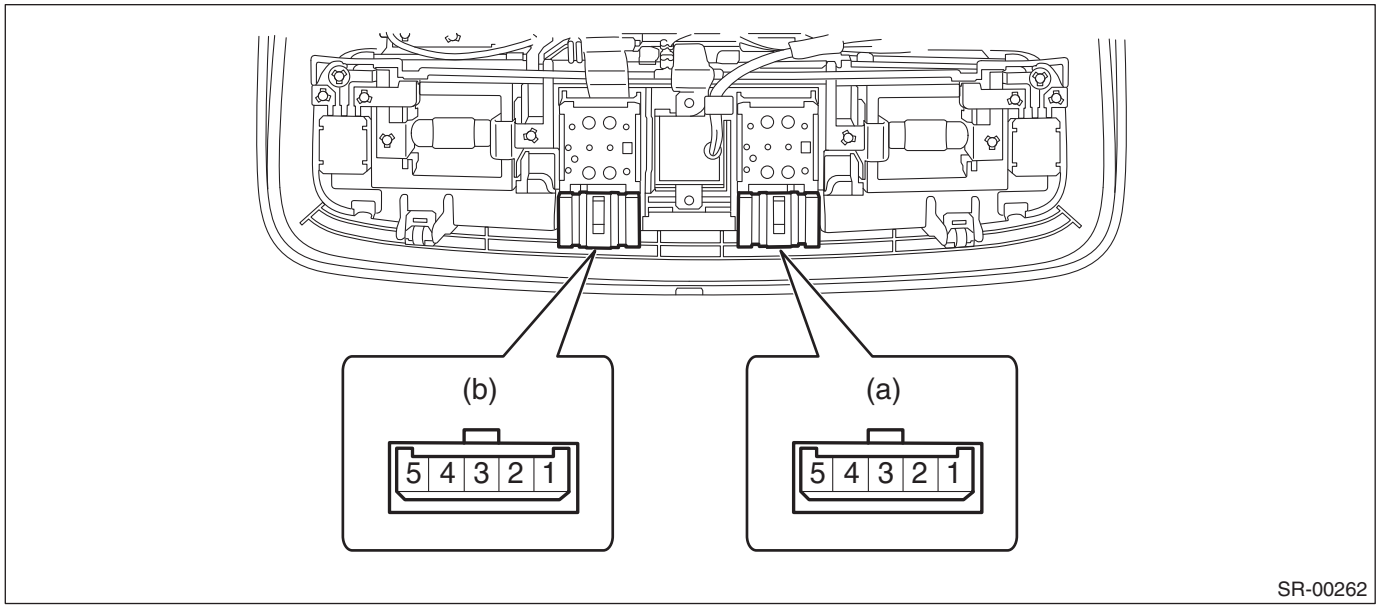
NOTE:
If the auto function is cancelled, perform the initialize operation. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>

7. Sunroof Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the overhead console. (Models without EyeSight) <Ref. to LI-76, REMOVAL, Spot Map Light.>
3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
4) Release the claws and remove the sunroof switch from the light assembly - map.

(a) Sunroof switch (tilt)
(b) Sunroof switch (slide)



B: INSTALLATION

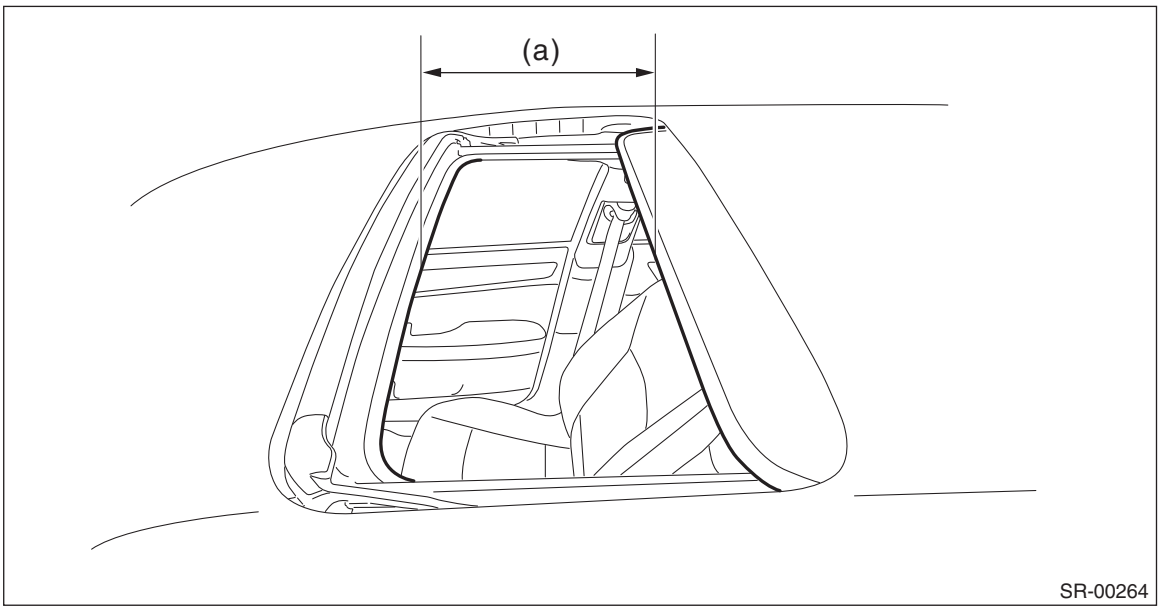
CAUTION:
For installation of the stereo camera cover assembly, refer to “INSTALLATION”, “Stereo Camera” in the “EyeSight” section and observe the precautions for installation. <Ref. to ES-9, INSTALLATION, Stereo Camera.>
1) Install the sunroof switch.
2) Install the overhead console. (Models without EyeSight) <Ref. to LI-77, INSTALLATION, Spot Map Light.>
3) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Connector	Terminal No.	Inspection conditions	Standard
(a)	1 — 3	Open	Less than 1 Ω
	4 — 3	Close	Less than 1 Ω
(b)	4 — 3	Tilt up	Less than 1 Ω
	1 — 3	Tilt down	Less than 1 Ω



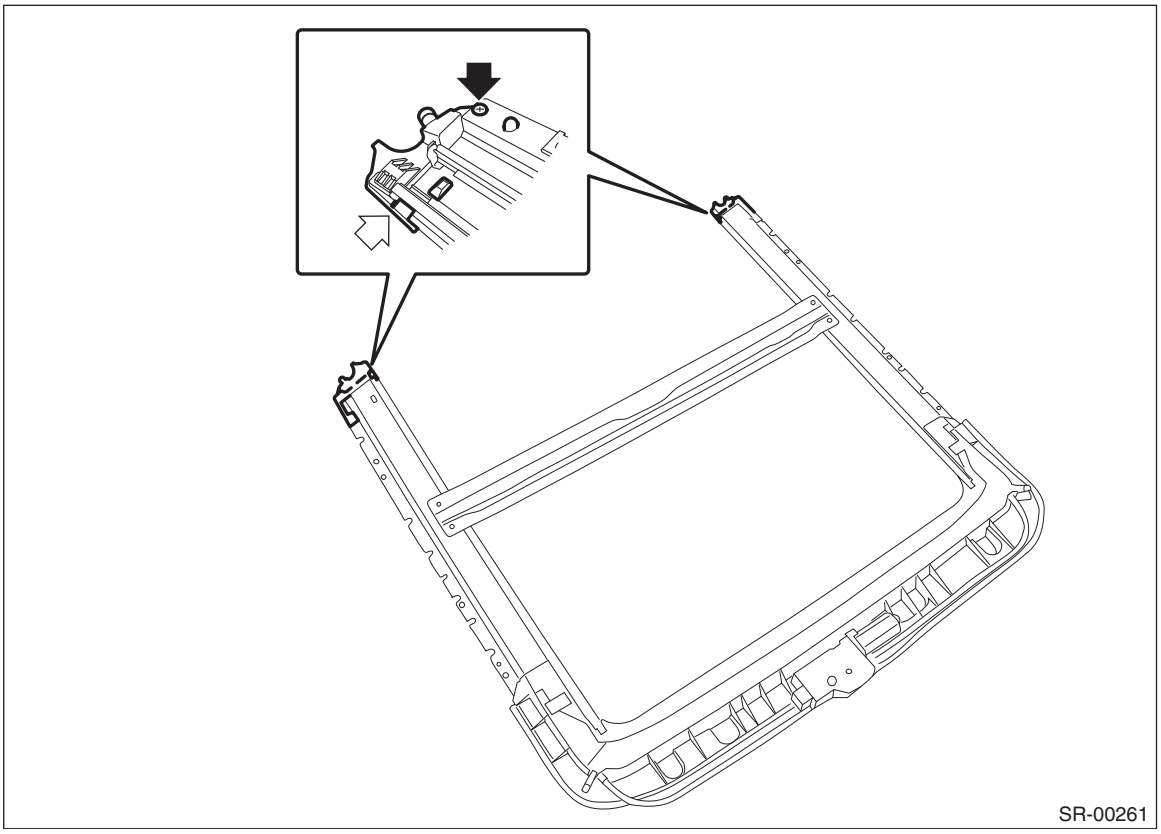
2) Replace the sunroof switch if the inspection result is not within the standard value.

8. Sunshade

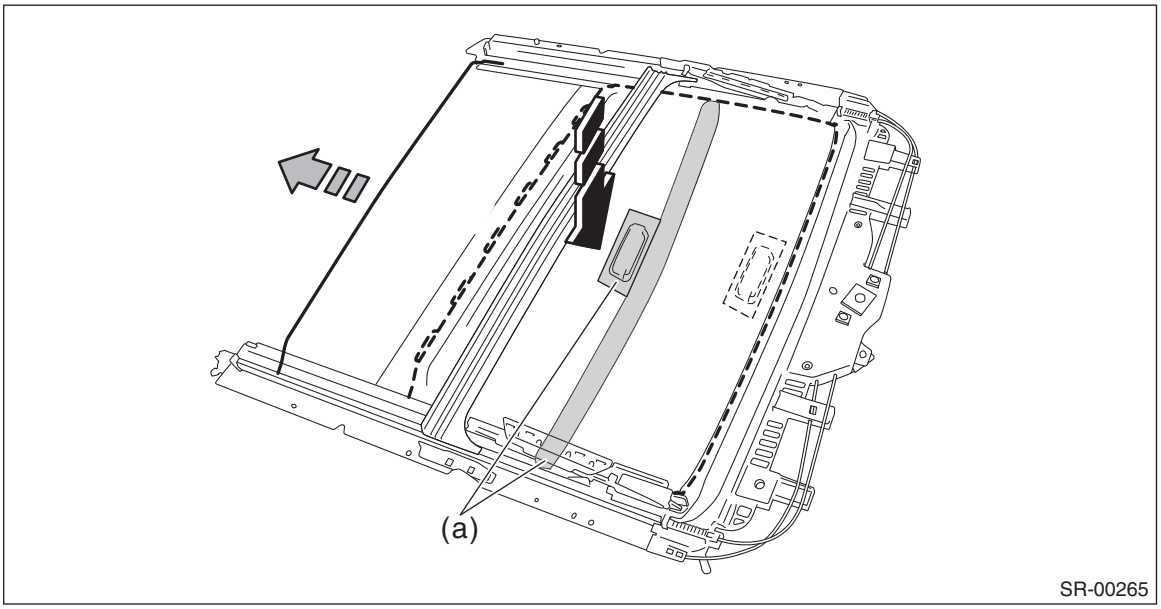
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Remove the lid assembly - sunroof. <Ref. to SR-7, REMOVAL, Glass Lid.>
2) Operate the sunroof switch with the sunshade fully closed to open the sunshade to the position (a) indicated below.



(a) 170 mm (6.69 in): Clearance between sunroof opening and front edge of sunshade



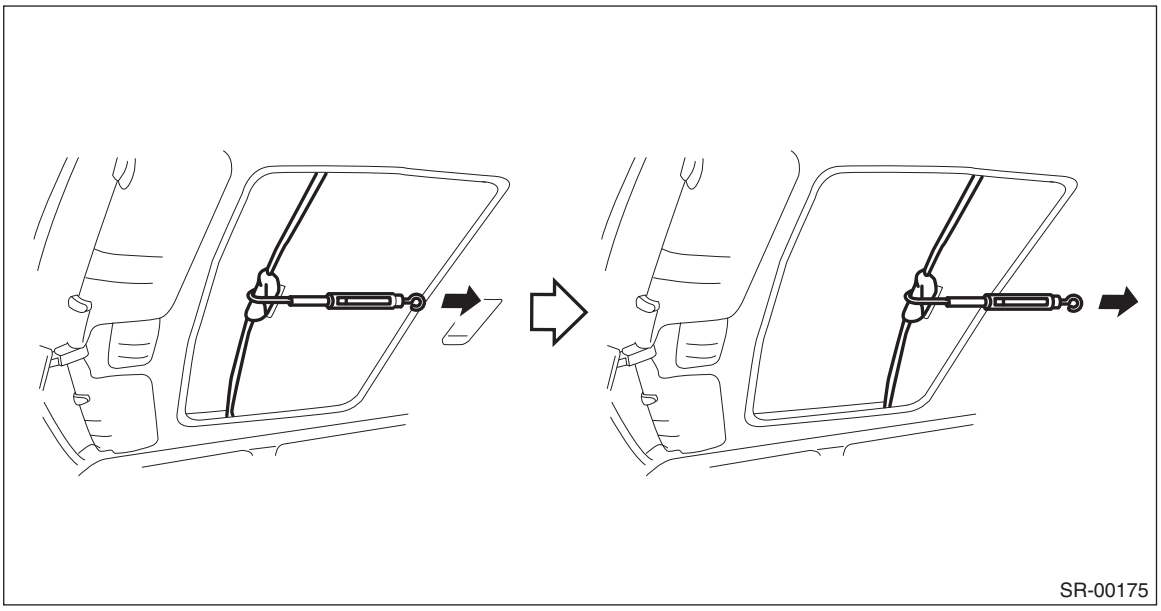
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the trim panel - roof assembly. <Ref. to EI-111, REMOVAL, Roof Trim.>
5) Remove the rail assembly - sunroof. <Ref. to SR-12, REMOVAL, Sunroof Assembly.>
6) Remove the sunshade assembly.

CAUTION:
Be careful not to damage the sunshade assembly.

(1) Remove the screws and release the claws, then detach the drain holder.

(2) Attach protective tape (a) on the handle and the edge surface of the sunshade assembly.
(3) At the center of the brace, remove the sunshade assembly while pushing it downward slightly.

B: INSTALLATION



1) Attach protective tape on the handle and the edge surface of the sunshade assembly, and install the sunshade assembly.
2) Install the drain holder.
3) Install the rail assembly - sunroof. <Ref. to SR-16, INSTALLATION, Sunroof Assembly.>
4) Install the trim panel - roof assembly. <Ref. to EI-115, INSTALLATION, Roof Trim.>
5) Install the lid assembly - sunroof. <Ref. to SR-9, INSTALLATION, Glass Lid.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. MOVING LOAD OF SUNSHADE ASSEMBLY

1) Attach a spring scale together with a cloth to the edge of sunshade assembly.
2) Pull the spring scale to check the moving load of the sunshade assembly.

Moving load of sunshade assembly:
17±8.5 N (1.73 kgf, 3.8 lbf±0.87 kgf, 1.9 lbf)

NOTE:
Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while the sunshade assembly is sliding smoothly.
3) If the inspection result exceeds the standard, check that the sunshade assembly or the rail assembly - sunroof is installed properly. If necessary, replace the sunshade assembly or the rail assembly - sunroof.

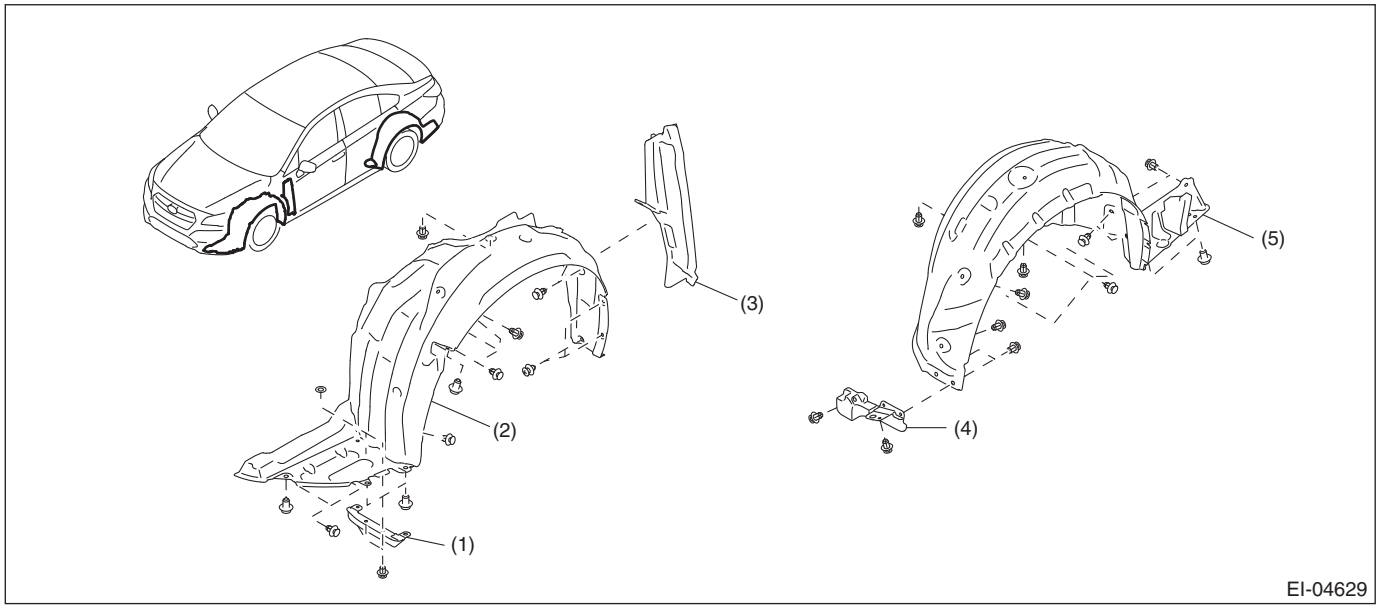
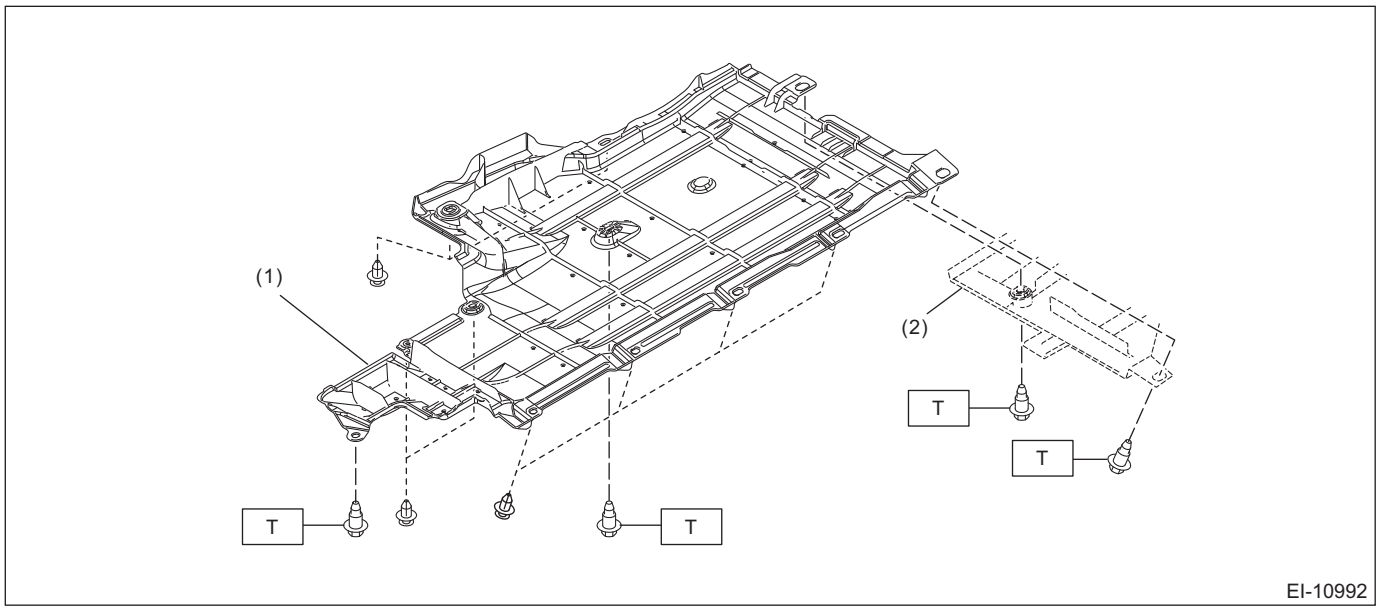
1. General Description

A: COMPONENT



1. FRONT UNDER COVER

(1) Under cover - front (2.5 L model)
(2) Under cover - front (3.6 L model)



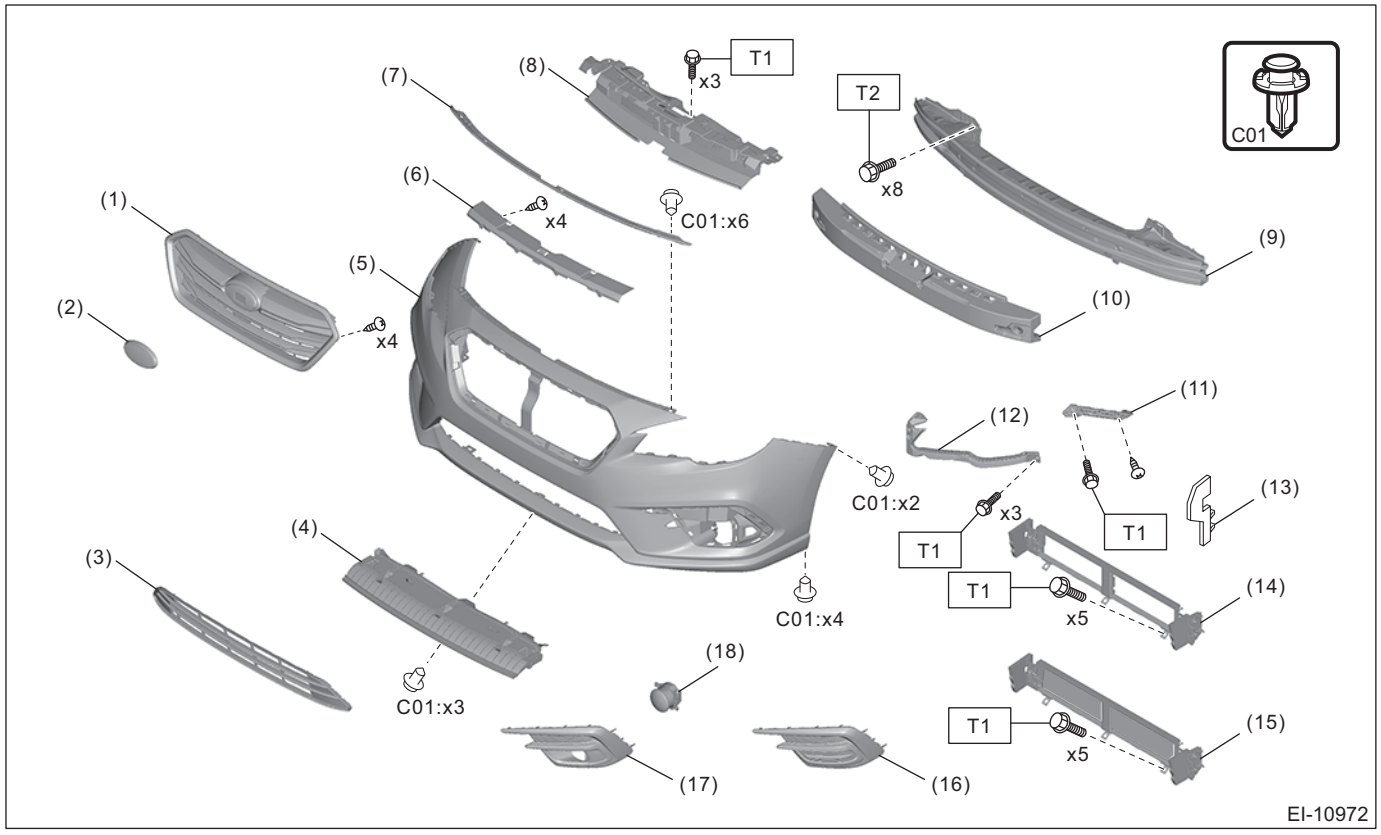
Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

2. MUD GUARD

(1) Air flap - front
(2) Mud guard - front
(3) Cover - fender LWR
(4) Air flap - rear
(5) Mud guard - rear

3. FLOOR UNDER PROTECTOR

(1) Floor under protector
(2) Fuel tank protector



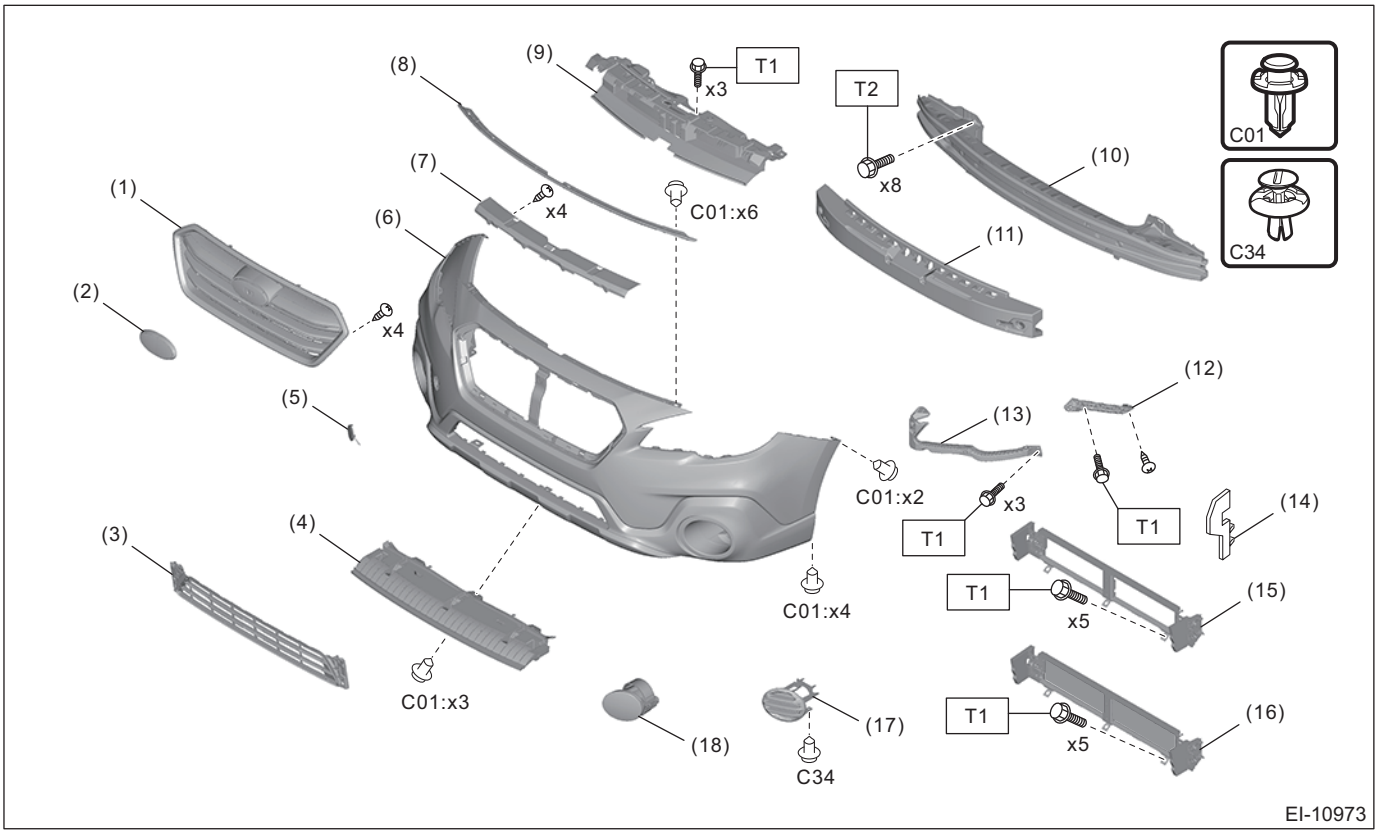
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

4. FUEL TANK PROTECTOR

For exploded view of the fuel tank protector, refer to “Fuel Tank Protector” of “FUEL INJECTION” section.
- H4 model: <Ref. to FU(H4DO)-96, REMOVAL, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

5. FRONT BUMPER

- Sedan model



(1)	Grille ASSY - front	(9)	Bumper beam COMPL - front	(17)	Cover - fog light (model with fog light)
(2)	Ornament	(10)	Energy absorber foam	(18)	Light ASSY - fog (model with fog light)
(3)	Cover intake - front	(11)	Bracket - front bumper side		
(4)	Bracket center lower - front	(12)	Bracket - front bumper corner		
(5)	Bumper face - front	(13)	Gasket - radiator panel		
(6)	Energy absorber plate UPR front	(14)	Frame ASSY - active grille shutter (H6 model)		
(7)	Sealing bumper - front	(15)	Active grille shutter (H4 model)		
(8)	Bracket - grille	(16)	Cover - fog light (model without fog light)		

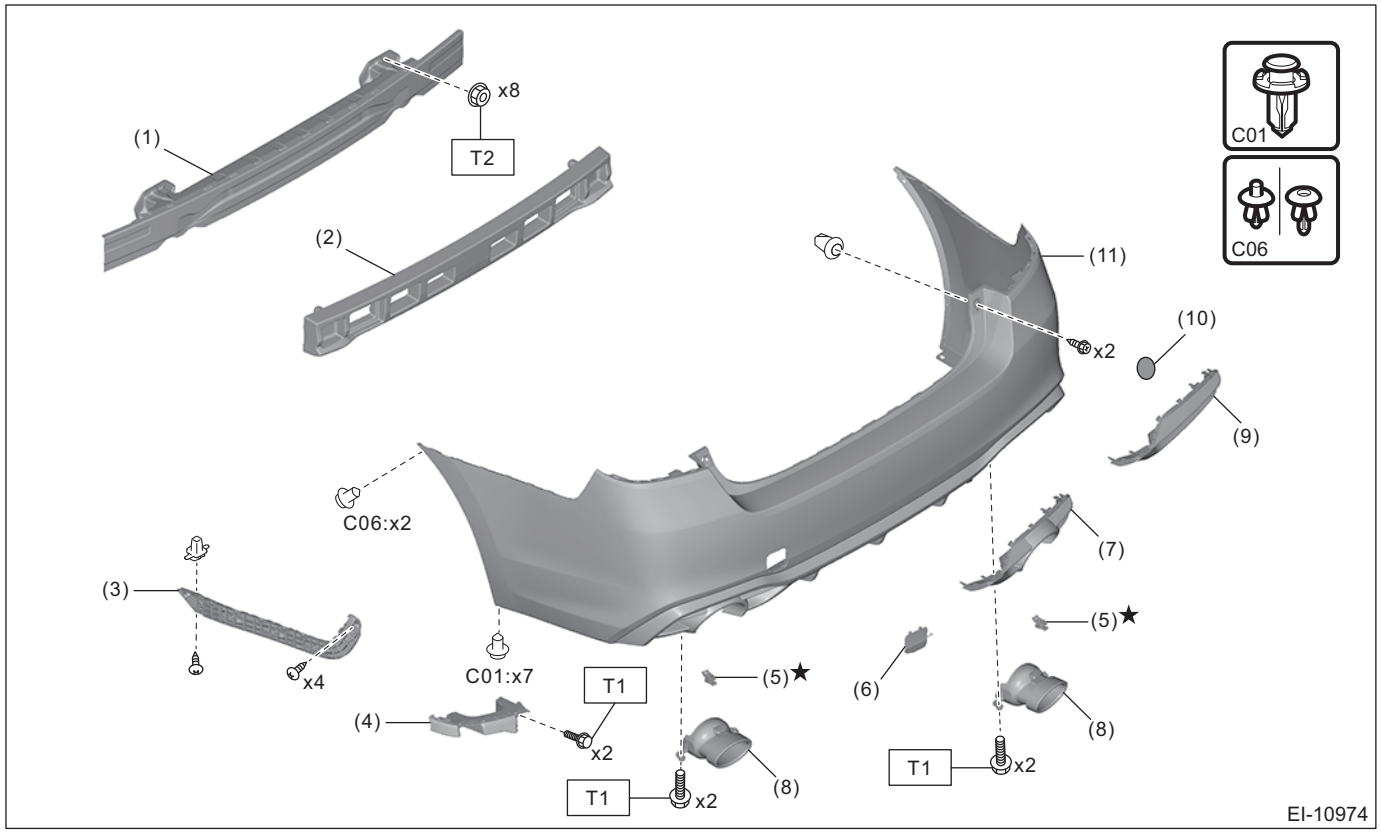
Tightening torque: N·m (kgf-m, ft-lb)

T1: 7.5 (0.8, 5.5)

T2: 33 (3.4, 24.3)

- OUTBACK model

(1)	Grille ASSY - front	(9)	Bracket - grille	(17)	Cover - fog light (model without fog light)
(2)	Ornament	(10)	Bumper beam COMPL - front	(18)	Light ASSY - fog (model with fog light)
(3)	Cover intake - front	(11)	Energy absorber foam		
(4)	Bracket center lower - front	(12)	Bracket - front bumper side		
(5)	Cover - hook - front	(13)	Bracket - front bumper corner		
(6)	Bumper face - front	(14)	Gasket - radiator panel		
(7)	Energy absorber plate UPR front	(15)	Frame ASSY - active grille shutter (H6 model)		
(8)	Sealing bumper - front	(16)	Active grille shutter (H4 model)		



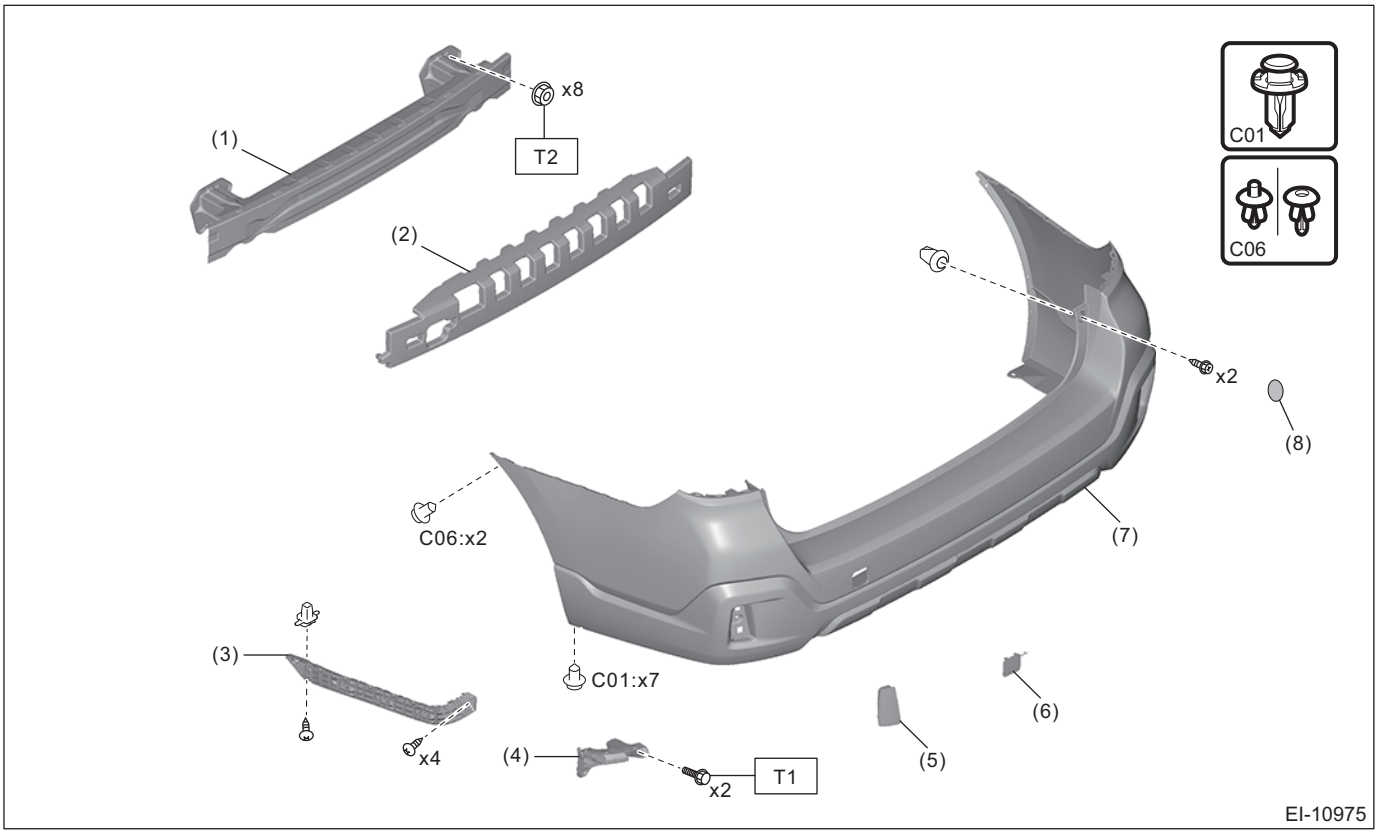
Tightening torque: N·m (kgf-m, ft-lb)

T1: 7.5 (0.8, 5.5)

T2: 33 (3.4, 24.3)

6. REAR BUMPER

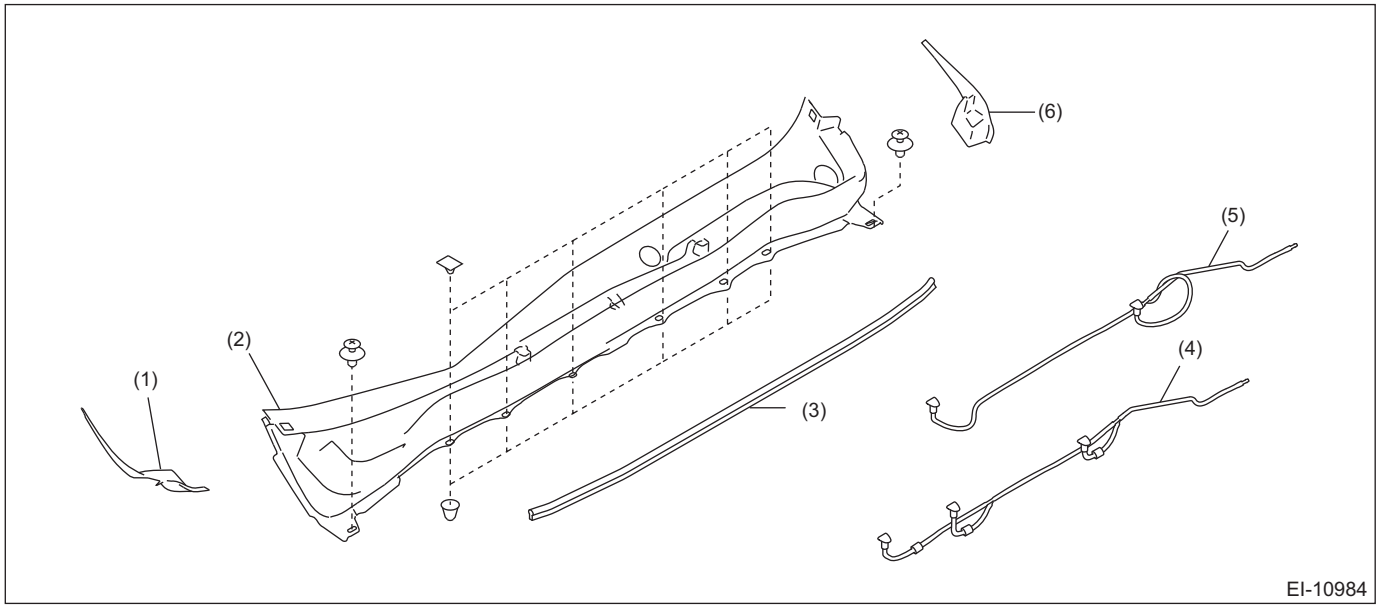
- Sedan model



(1)	Bumper beam COMPL - rear	(7)	Cover - bumper (H6 model)
(2)	Energy absorber foam	(8)	Bumper diffuser*
(3)	Bracket - rear bumper side	(9)	Cover - bumper (H4 model)
(4)	Bracket - rear bumper corner	(10)	Cap
(5)	Clip*	(11)	Cover - rear bumper
(6)	Cover - hook - rear		

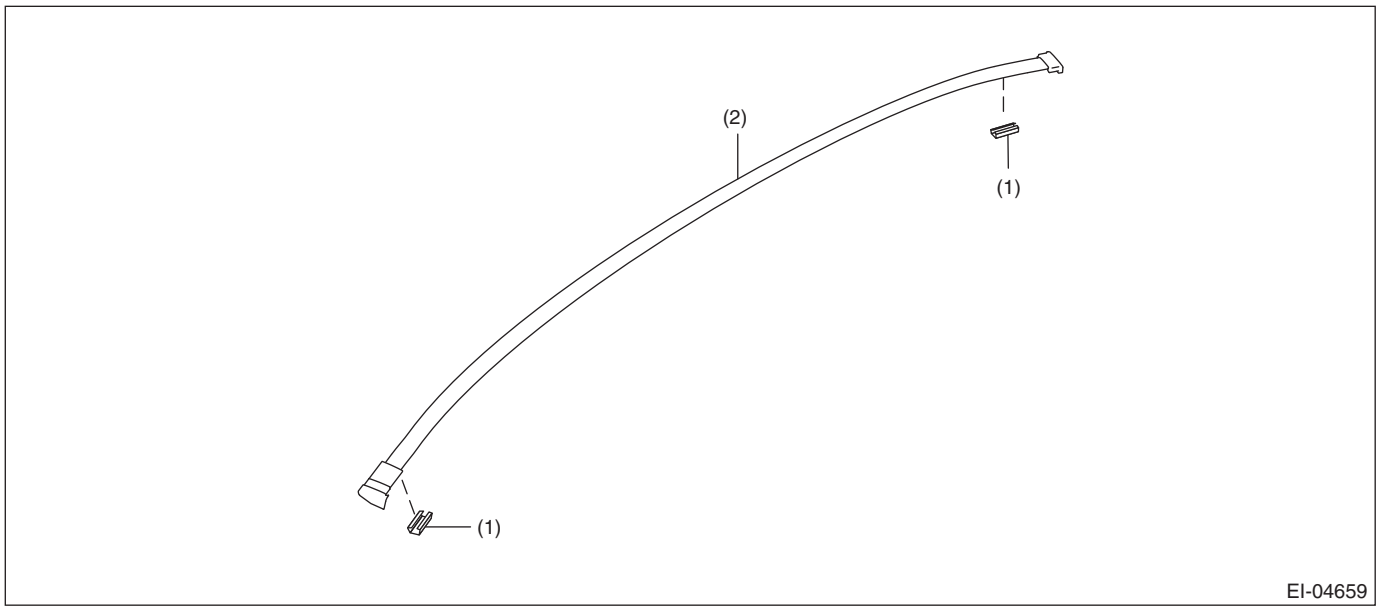
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 53 (5.4, 39.1)

*
- H4 model: left side only (model with bumper diffuser)
- H6 model: right and left



- OUTBACK model

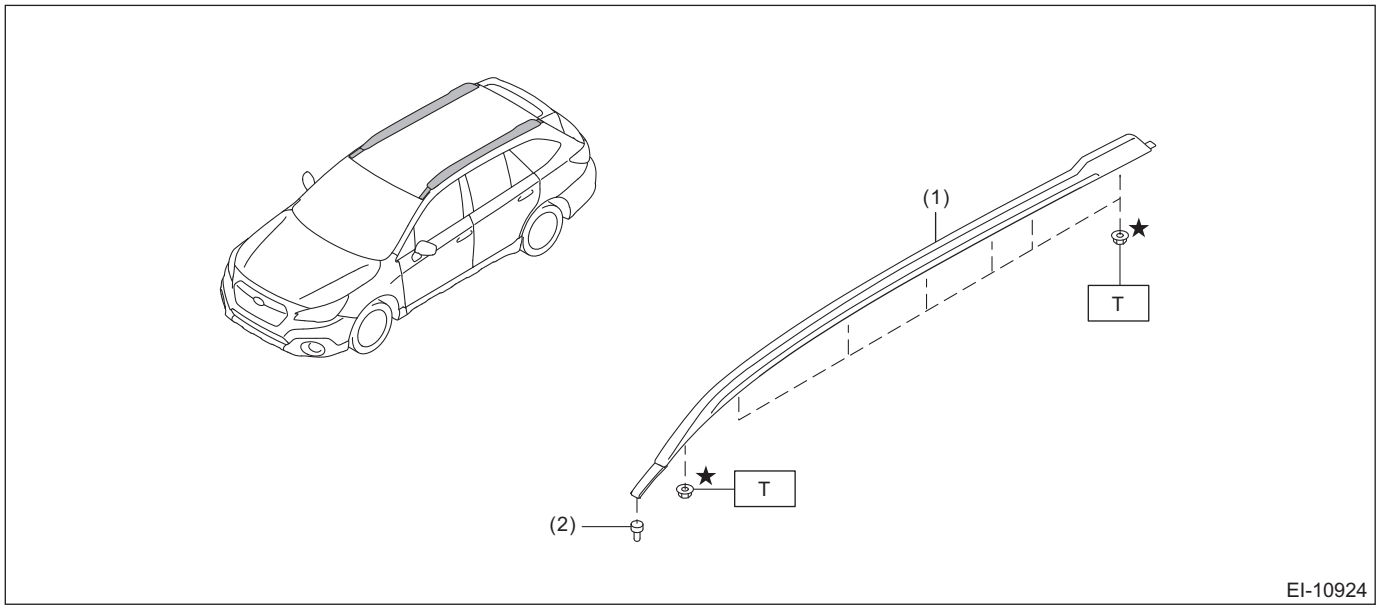
(1) Bumper beam COMPL - rear
(2) Energy absorber foam
(3) Bracket - rear bumper side
(4) Bracket - rear bumper corner
(5) Reflex reflector
(6) Cover - hook - rear
(7) Cover - rear bumper
(8) Cap



Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 53 (5.4, 39.1)

7. COWL PANEL

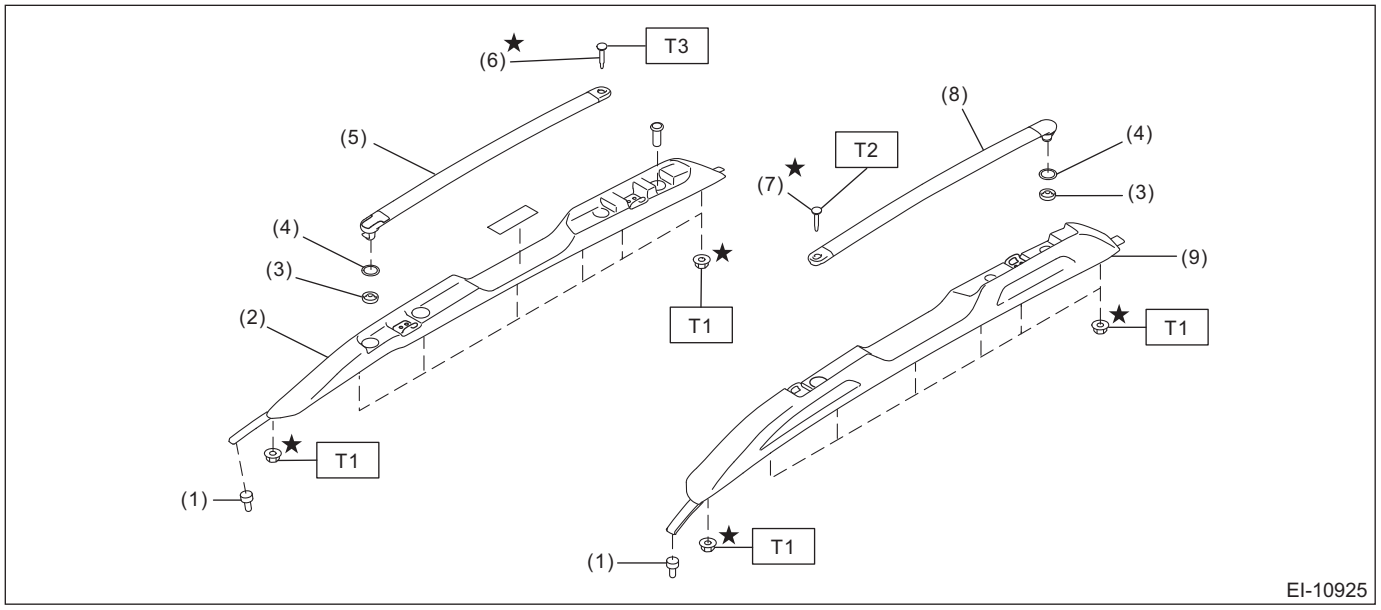
(1) Cowl panel - side RH
(2) Cowl panel ASSY
(3) Seal - cowl panel
(4) Hose ASSY - washer (model with EyeSight)
(5) Hose ASSY - washer
(6) Cowl panel - side LH



8. ROOF MOLDING

(1) Clip - roof molding
(2) Molding - roof

9. ROOF RAIL

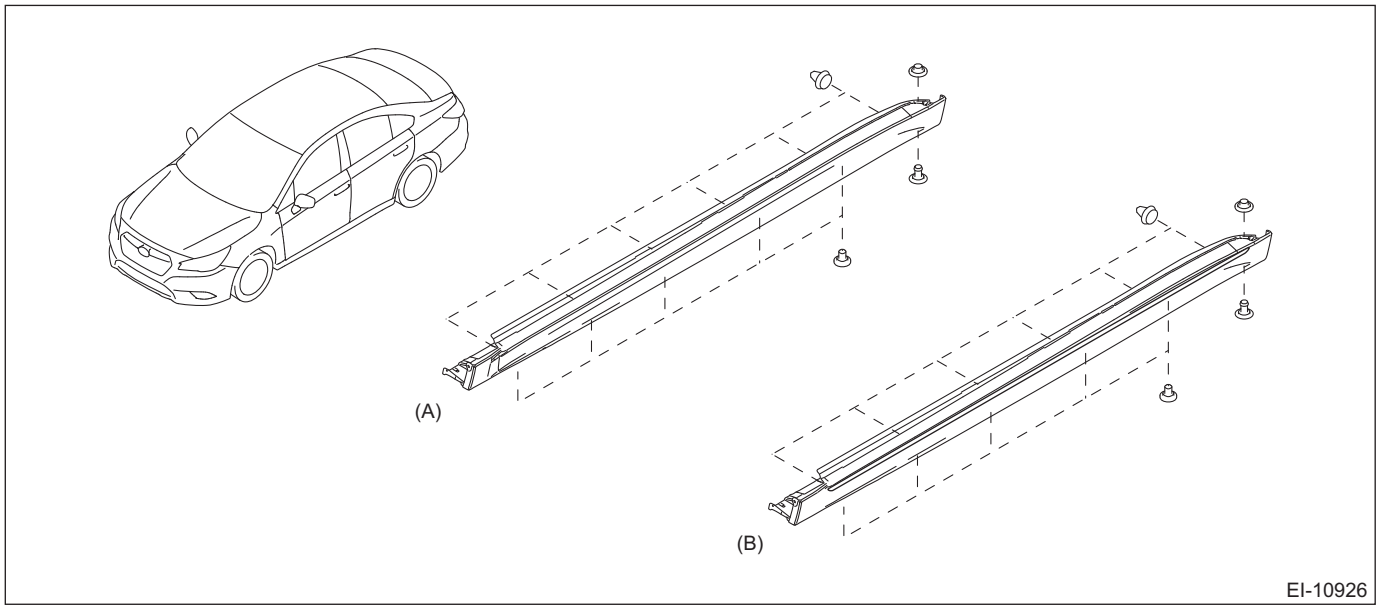


- Type A

(1) Roof rail ASSY
(2) Rivet

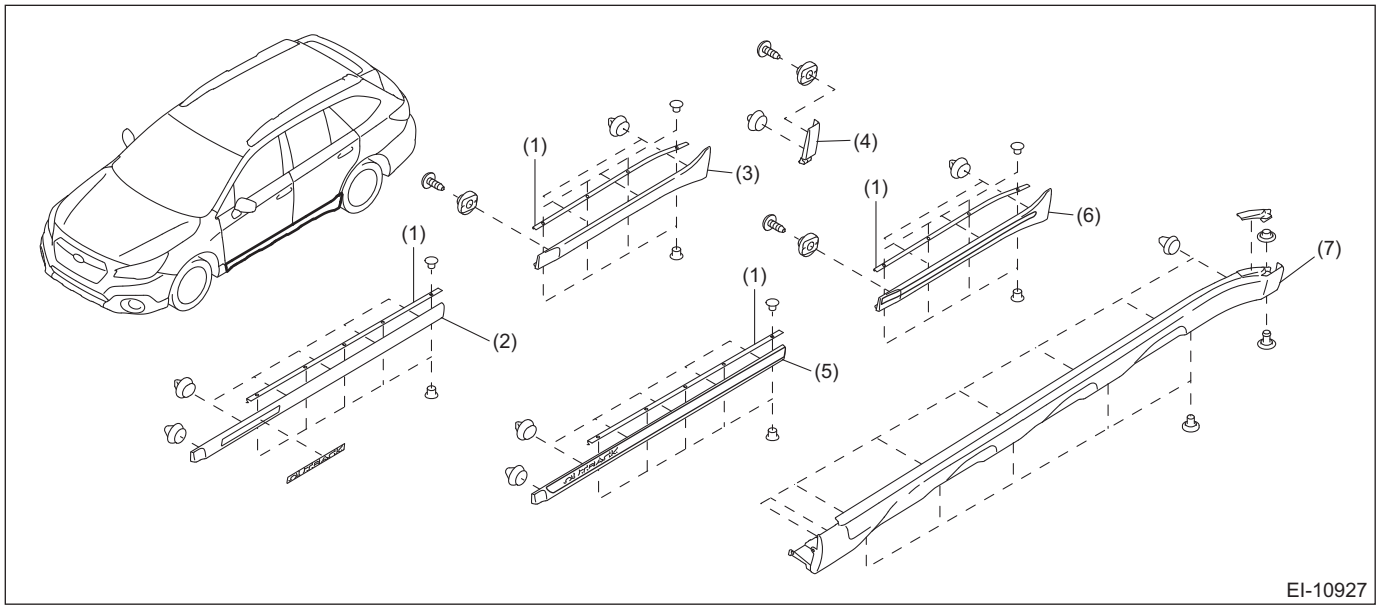
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

• Type B



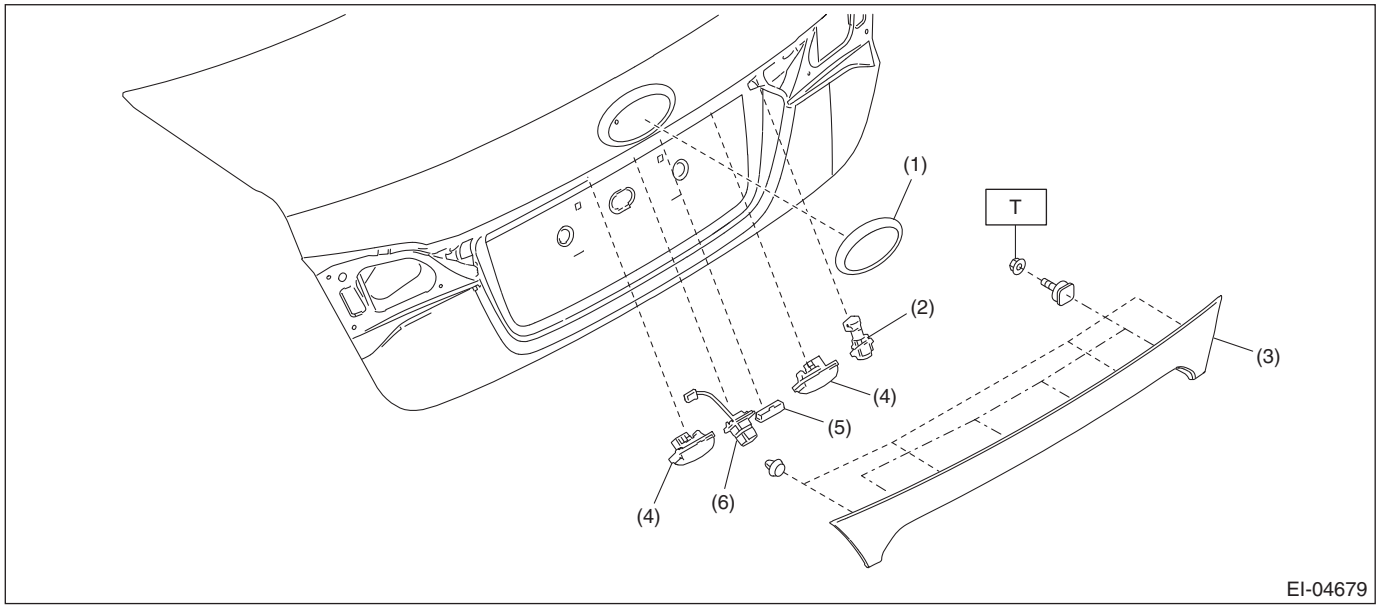
(1) Rivet
(2) Roof rail ASSY RH
(3) Support - bump rubber
(4) Spacer - latch
(5) Crossbar ASSY RH
(6) Stopper bolt M8
(7) Stopper bolt M6
(8) Crossbar ASSY LH
(9) Roof rail ASSY LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 8 (0.8, 5.9)
T3: 10 (1, 7.4)



10.SIDE GARNISH

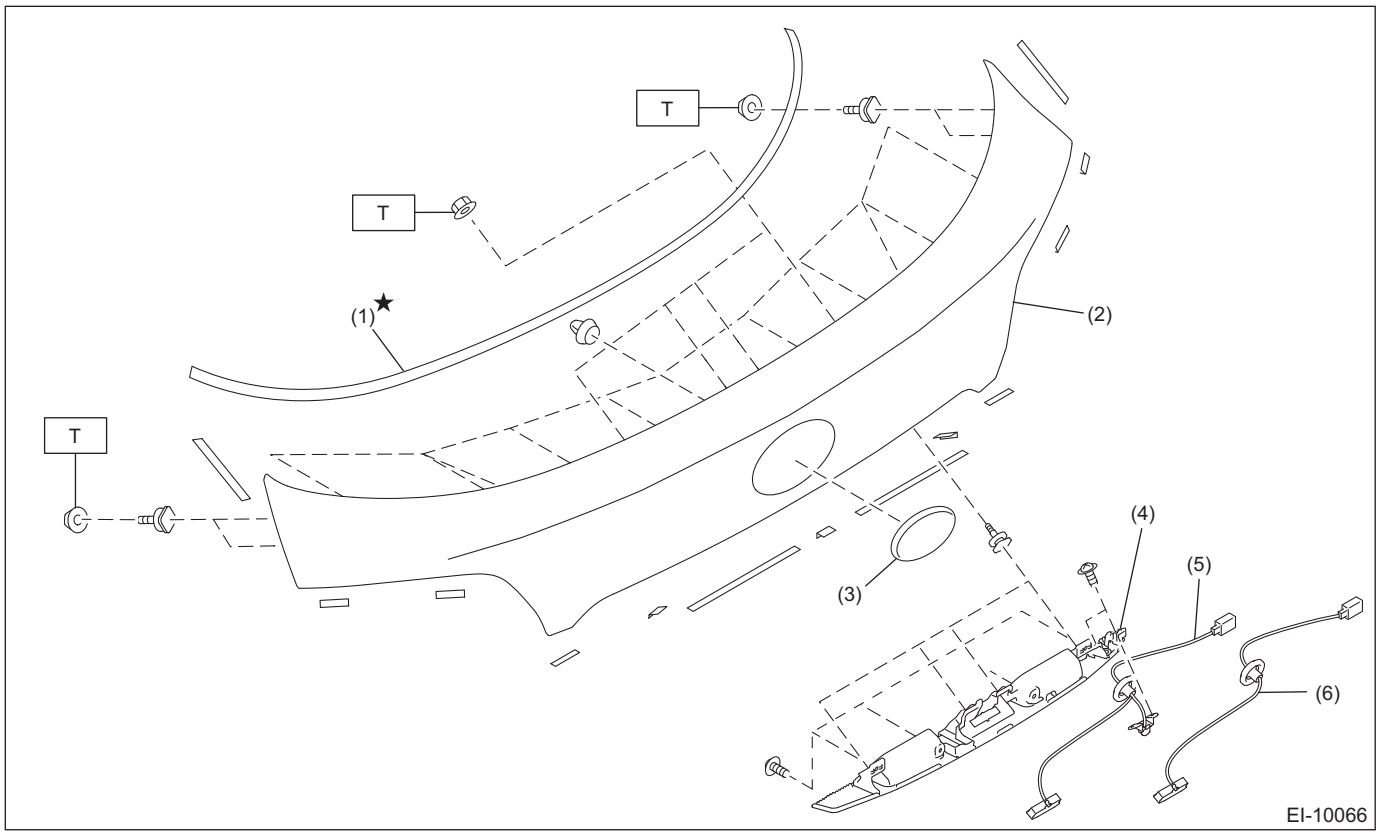
• Sedan model



(A) Type A
(B) Type B

- OUTBACK model

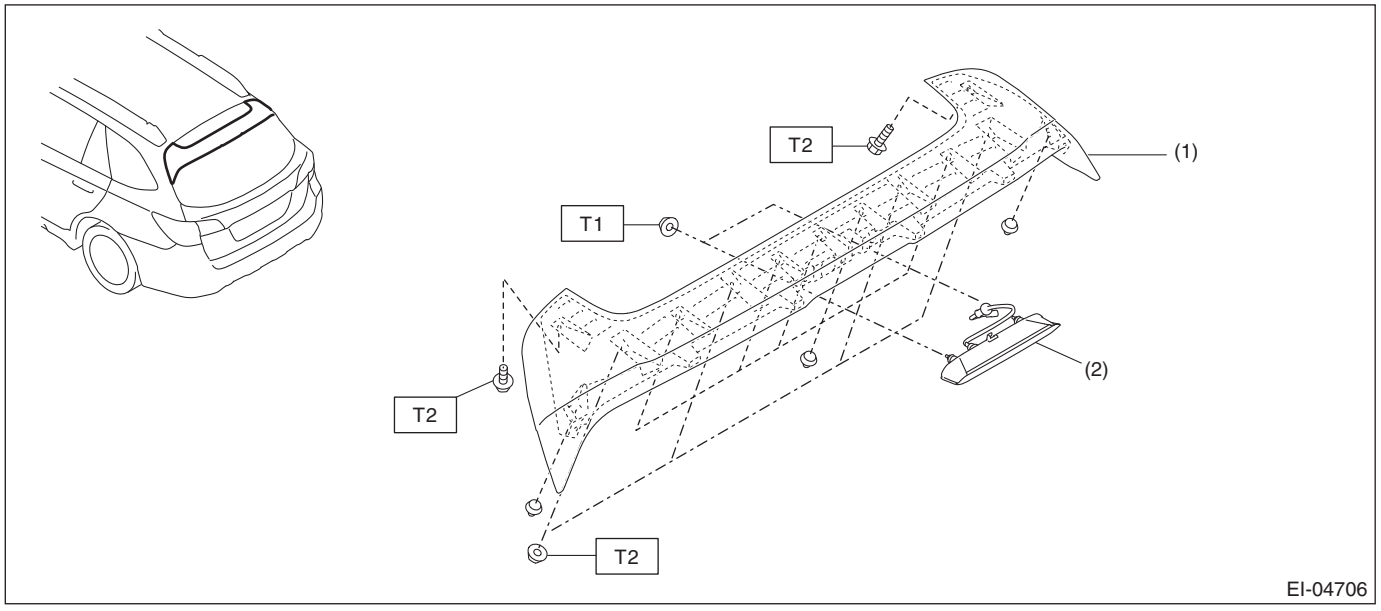
(1) Double-sided tape
(2) Garnish ASSY front door (Type A)
(3) Garnish ASSY rear door (Type A)
(4) Garnish ASSY rear quarter
(5) Garnish ASSY front door (Type B)
(6) Garnish ASSY rear door (Type B)
(7) Side sill garnish ASSY



11.TRUNK LID GARNISH

(1) Ornament
(2) Key cylinder
(3) Garnish ASSY - trunk
(4) License plate light
(5) Trunk opener button
(6) Rearview camera ASSY

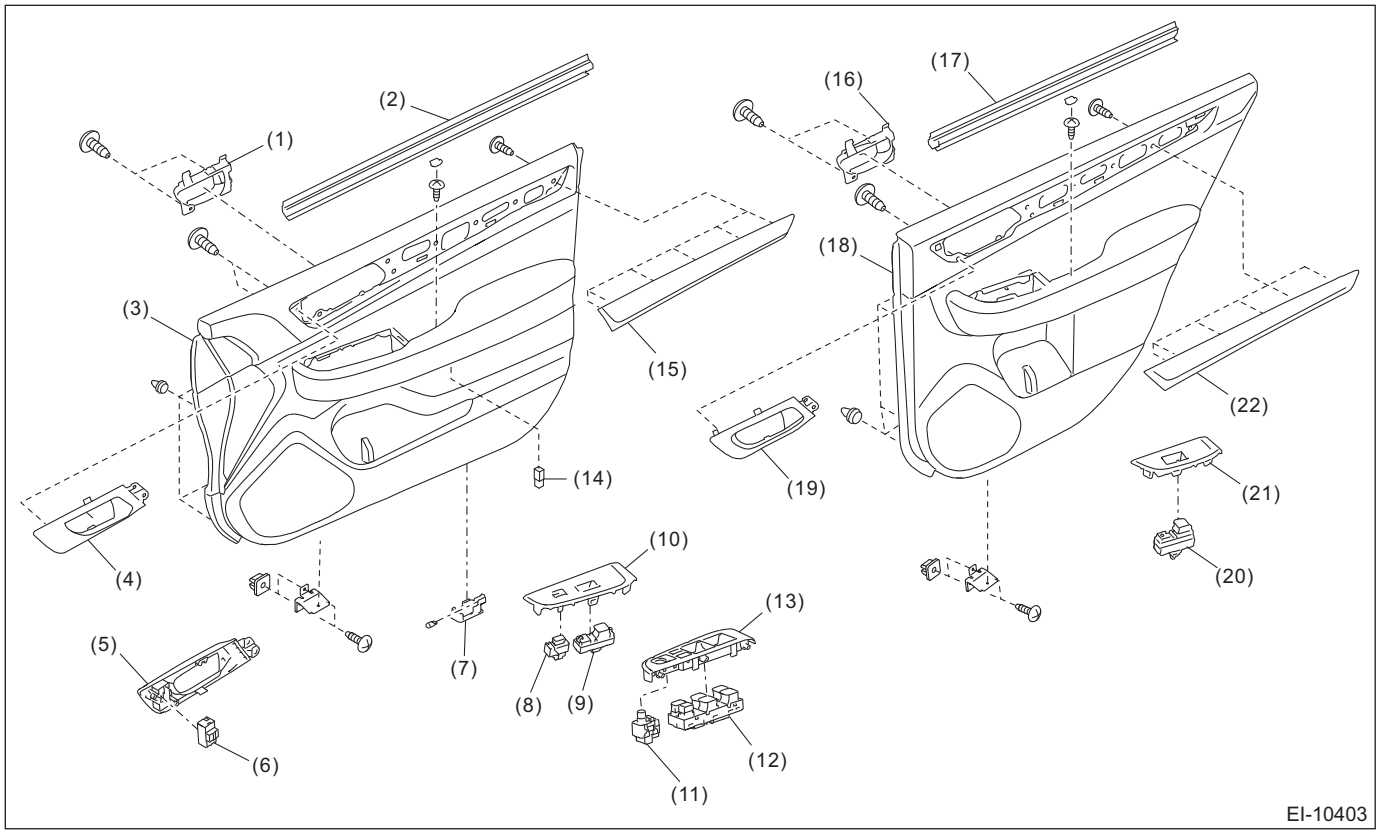
Tightening torque: N·m (kgf-m, ft-lb)
T: 4.5 (0.5, 3.3)



12.REAR GATE GARNISH

(1) Protector UPR
(2) Rear gate garnish
(3) Ornament
(4) Garnish LWR
(5) Rear gate opener ASSY harness (with request switch)
(6) Rear gate opener ASSY harness

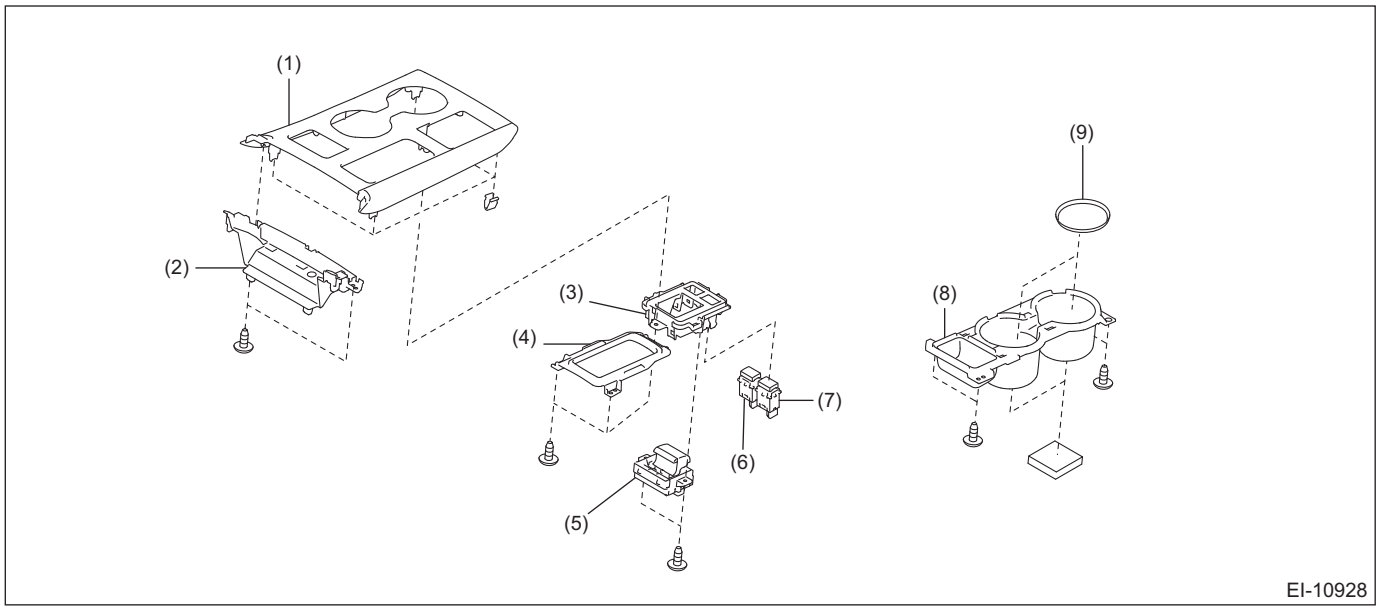
Tightening torque: N·m (kgf-m, ft-lb)
T: 4.5 (0.5, 3.3)



13.ROOF SPOILER

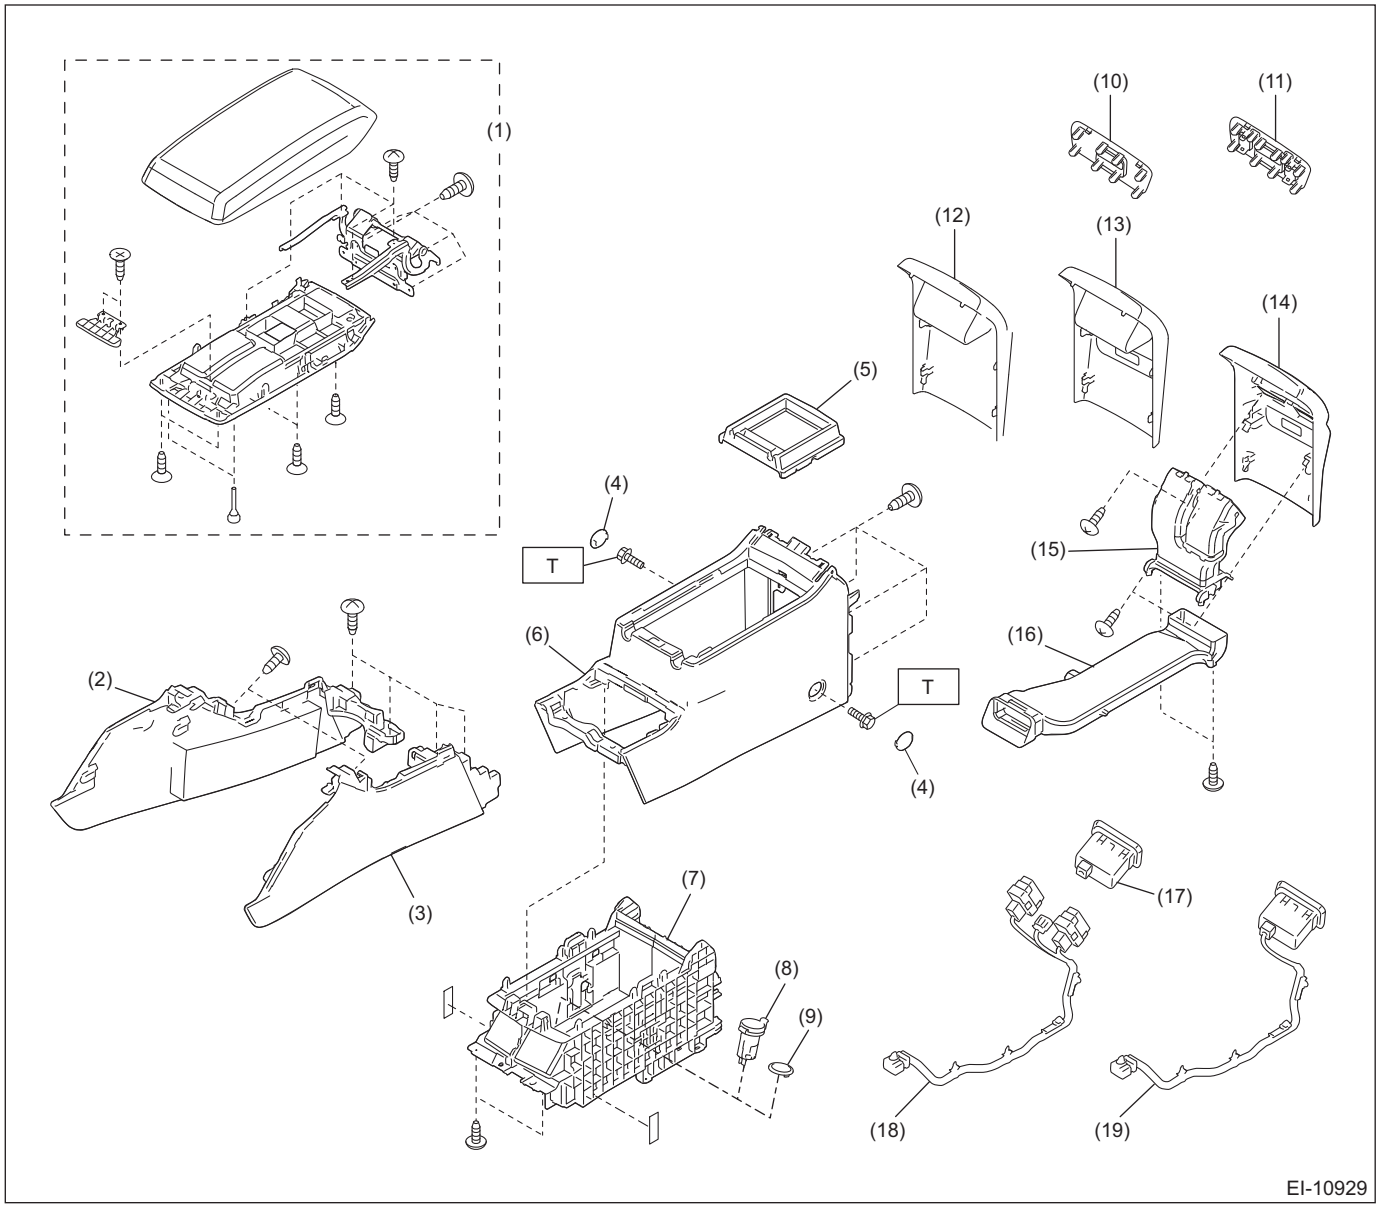
(1) Roof spoiler
(2) Light ASSY - high-mounted

Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.5 (0.5, 3.3)
T2: 7.5 (0.8, 5.5)



14.DOOR TRIM

(1)	Remote ASSY - front door	(9)	Switch ASSY - power window sub front	(17)	Weather strip - door rear INN
(2)	Weather strip - door front INN	(10)	Panel - power window sub-switch front	(18)	Trim panel - rear door
(3)	Trim panel - front door	(11)	Switch - remote control mirror	(19)	Cover - remote rear door
(4)	Cover - remote front door RH	(12)	Switch - power window main	(20)	Switch - power window sub rear
(5)	Cover - remote front door LH	(13)	Panel - power window main switch	(21)	Panel - power window sub-switch rear
(6)	Switch ASSY - seat memory	(14)	Light ASSY - door pocket	(22)	Ornament panel - rear door
(7)	Light ASSY - door step	(15)	Ornament panel - front door		
(8)	Switch ASSY - door lock RH	(16)	Remote ASSY - rear door		

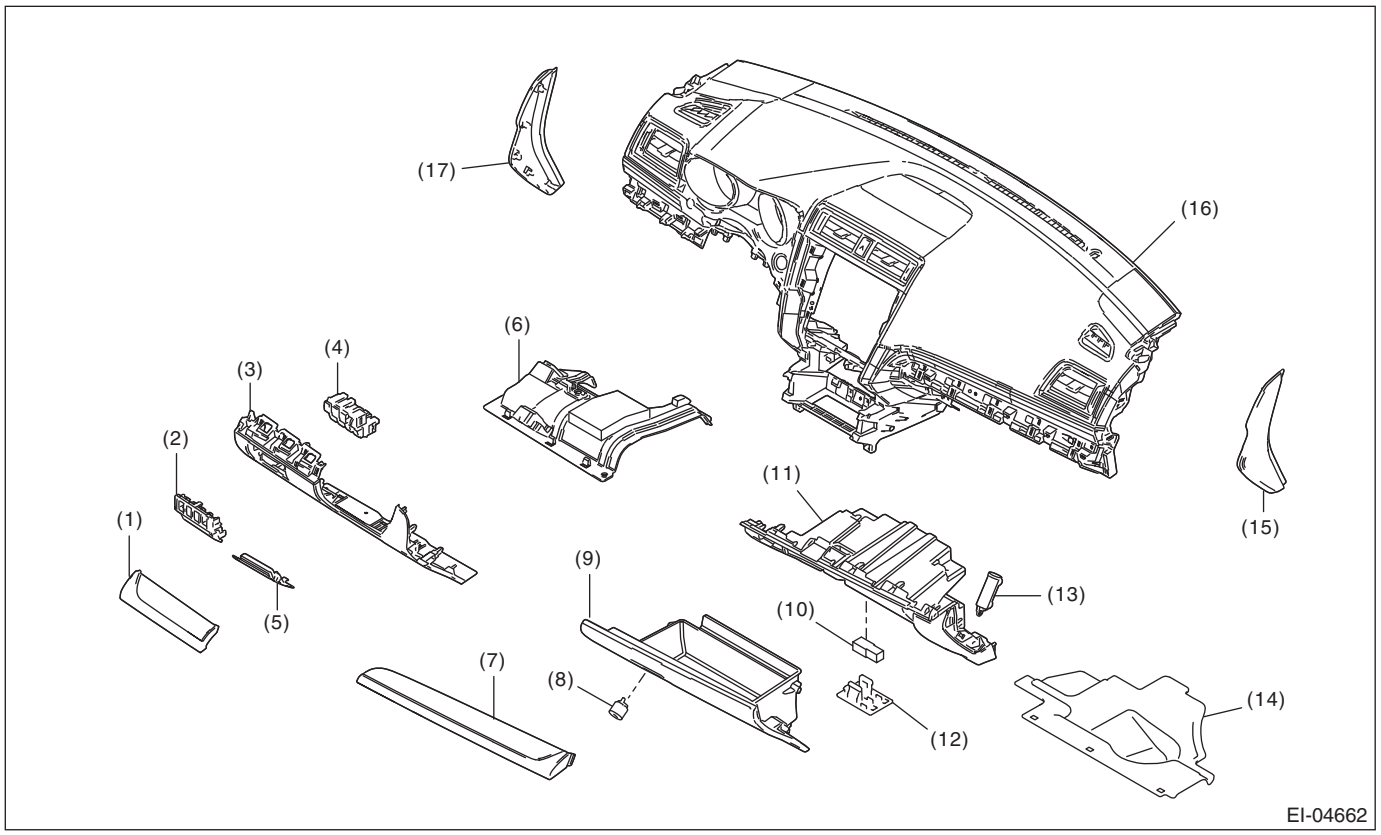


15.CONSOLE BOX

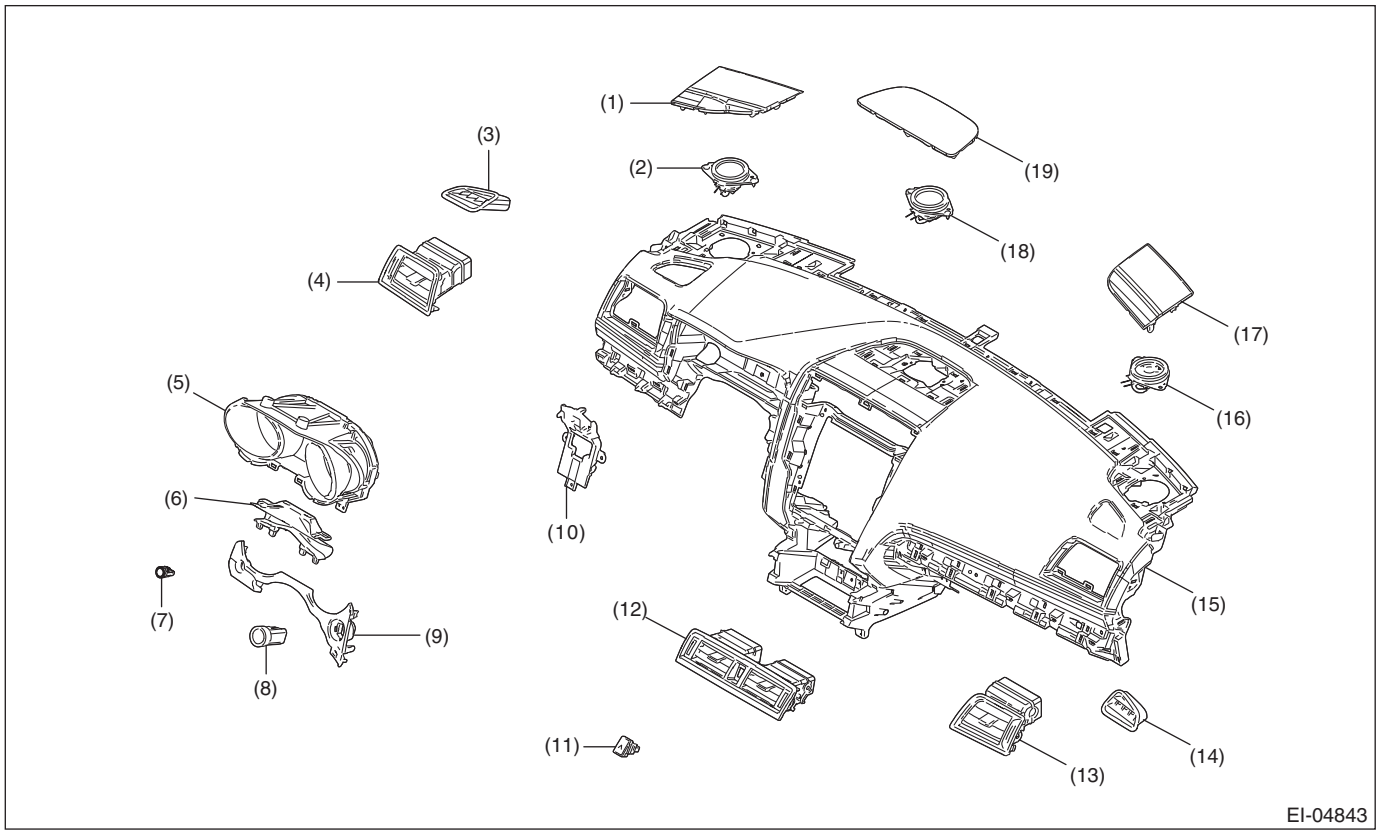
Console - front

(1) Cover ASSY - front
(2) Tray - cover front
(3) Holder - parking switch
(4) Ring - selector lever
(5) Switch ASSY - parking
(6) Switch ASSY - hill hold
(7) Switch ASSY - X mode
(8) Cup holder ASSY
(9) Mat - cup holder

Console - rear

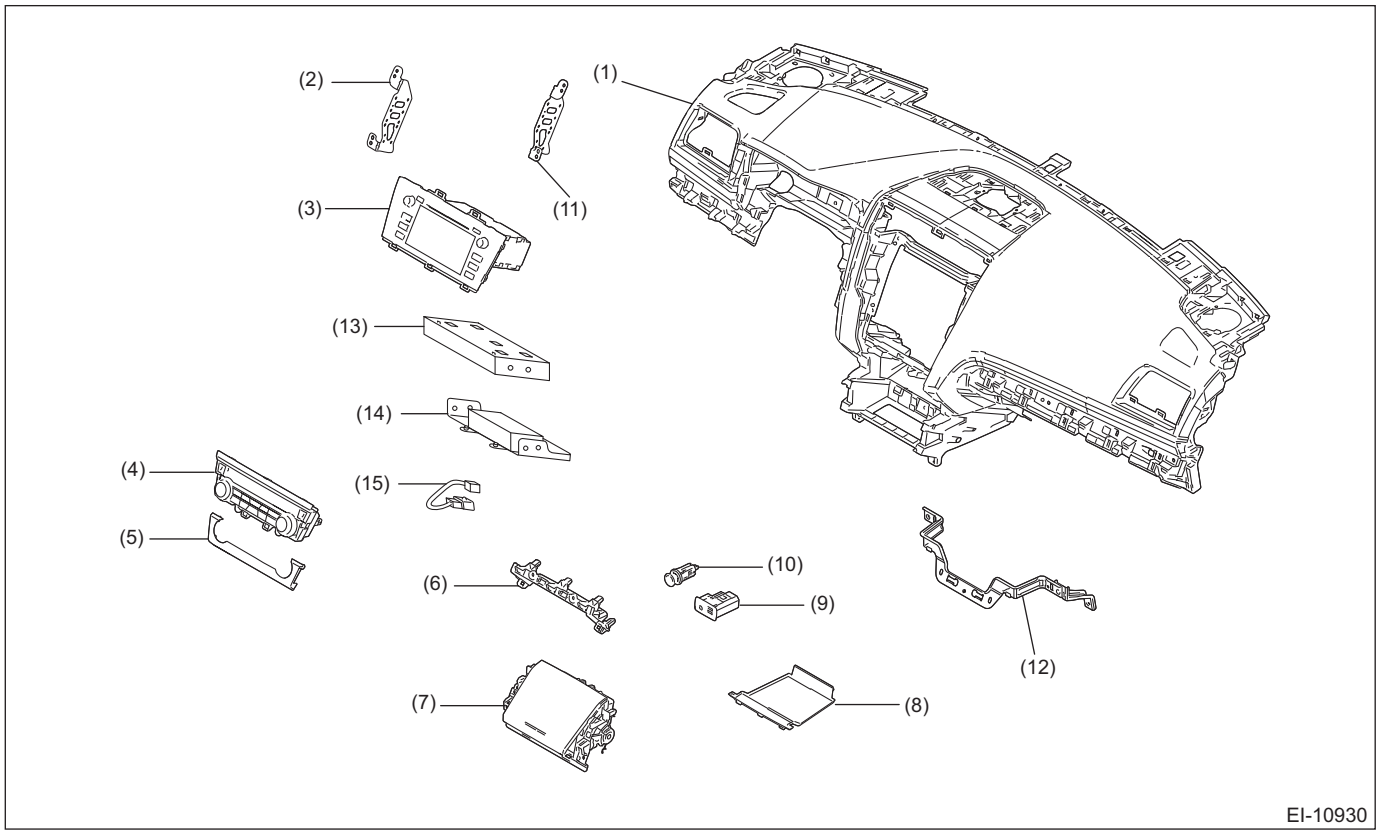


(1) Lid ASSY - console
(2) Panel center LWR RH
(3) Panel center LWR LH
(4) Cap - console box
(5) Tray
(6) Console box outer
(7) Pocket - console
(8) Accessory socket
(9) Cap
(10) Panel switch ASSY (without rear seat heater)
(11) Panel switch ASSY (with rear seat heater)
(12) End cover - console box
(13) End cover - console box (with power supply socket)
(14) End cover - console box (with power supply socket, with rear heater duct)
(15) Grille ASSY - rear heater
(16) Duct - console rear
(17) Power supply socket
(18) Harness ASSY - console (with rear seat heater)
(19) Harness ASSY - console (without rear seat heater)

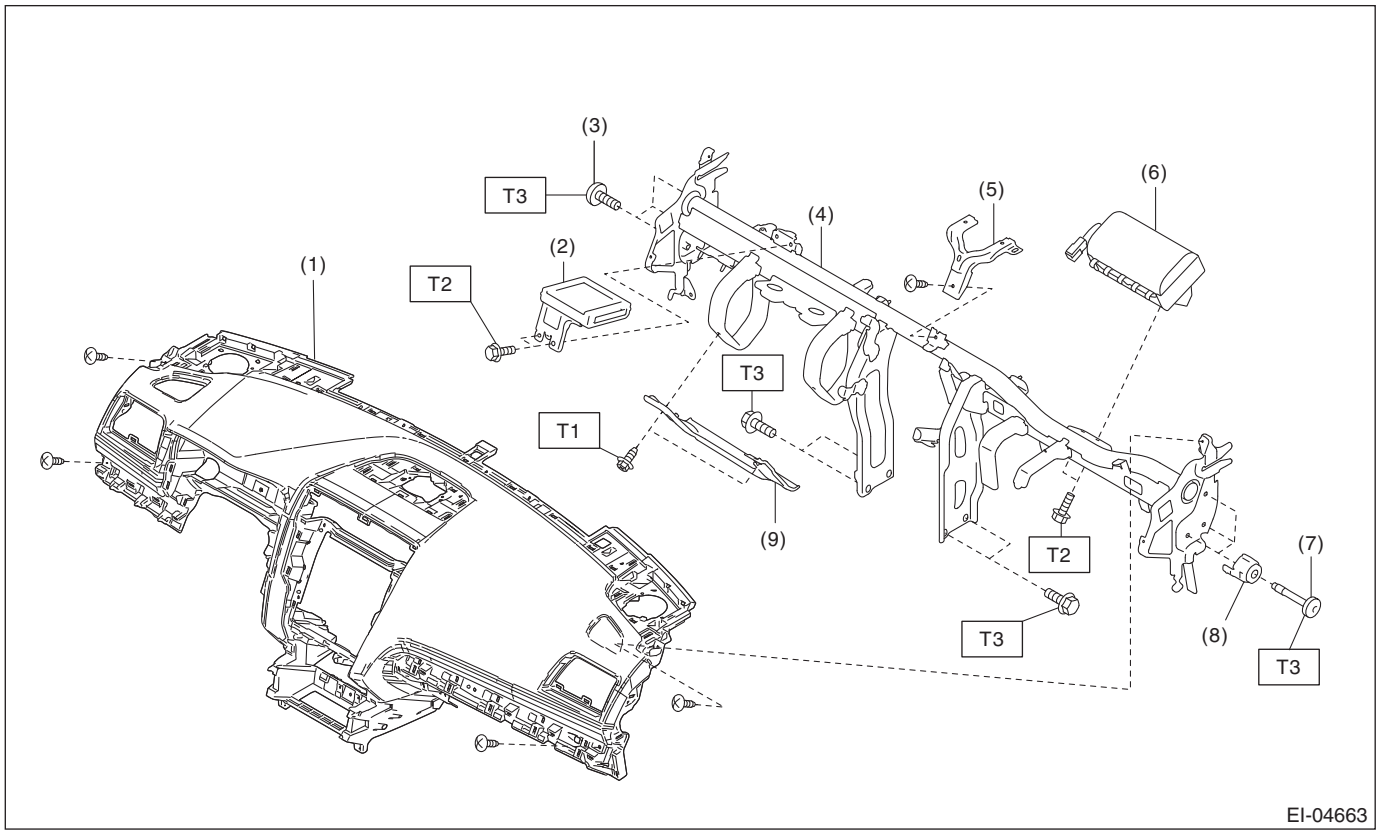


Tightening torque: N·m (kgf-m, ft-lb)

T: 6.5 (0.7, 4.8)

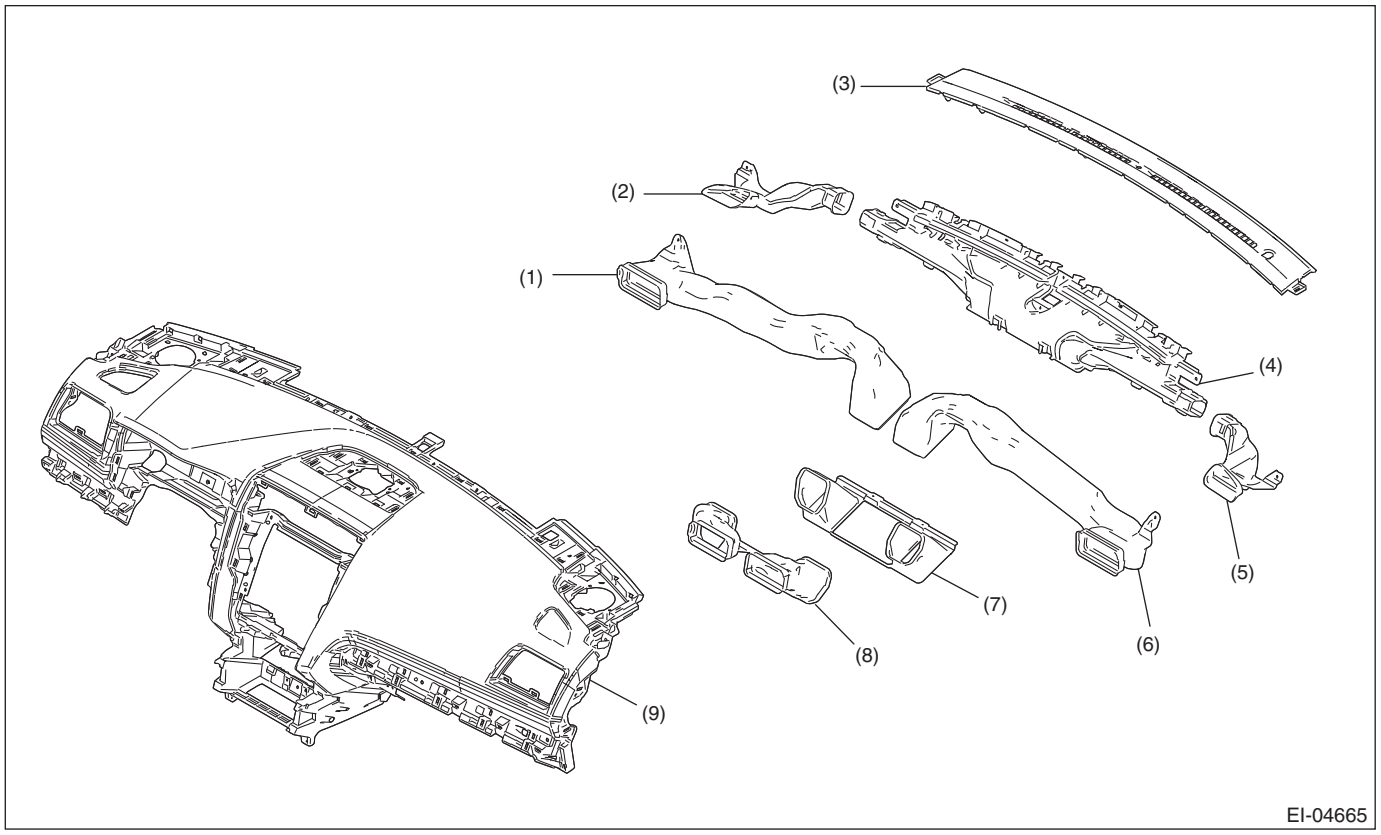


16.INSTRUMENT PANEL



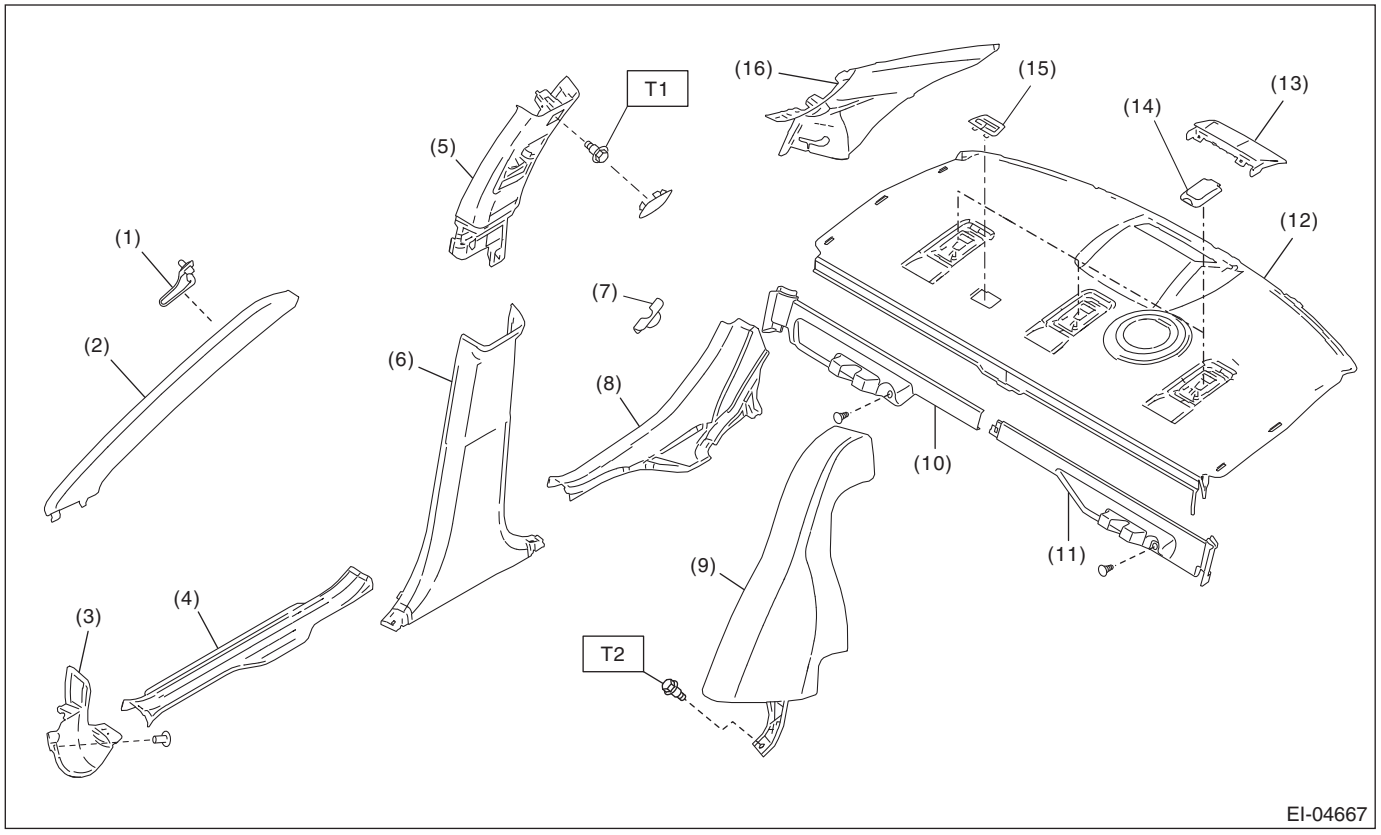
(1)	Ornament panel ASSY - driver	(7)	Ornament panel ASSY - passenger	(13)	Damper COMPL - pocket
(2)	Panel - switch	(8)	Key cylinder - pocket	(14)	Under cover ASSY - passenger
(3)	Cover ASSY - instrument panel LWR driver	(9)	Pocket ASSY	(15)	Cover - instrument panel side RH
(4)	Switch holder	(10)	Light - pocket	(16)	Panel COMPL - instrument
(5)	Lid ASSY - fuse box	(11)	Back panel - pocket	(17)	Cover - instrument panel side LH
(6)	Under cover ASSY - driver	(12)	Holder		

(1) Grille speaker side LH
(2) Speaker ASSY - tweeter LH
(3) Grille defroster - front LH
(4) Grille ASSY - ventilation LH
(5) Combination meter ASSY
(6) Cover - column
(7) Switch ASSY - trip reset
(8) Push button ignition switch
(9) Visor ASSY - lower
(10) Reinforcement - combination meter
(11) Switch - hazard
(12) Grille ASSY - CTR ventilation
(13) Grille ASSY - ventilation RH
(14) Grille defroster - front RH
(15) Panel COMPL - instrument
(16) Speaker ASSY - tweeter RH
(17) Grille speaker side RH
(18) Speaker ASSY - center
(19) Grille speaker center



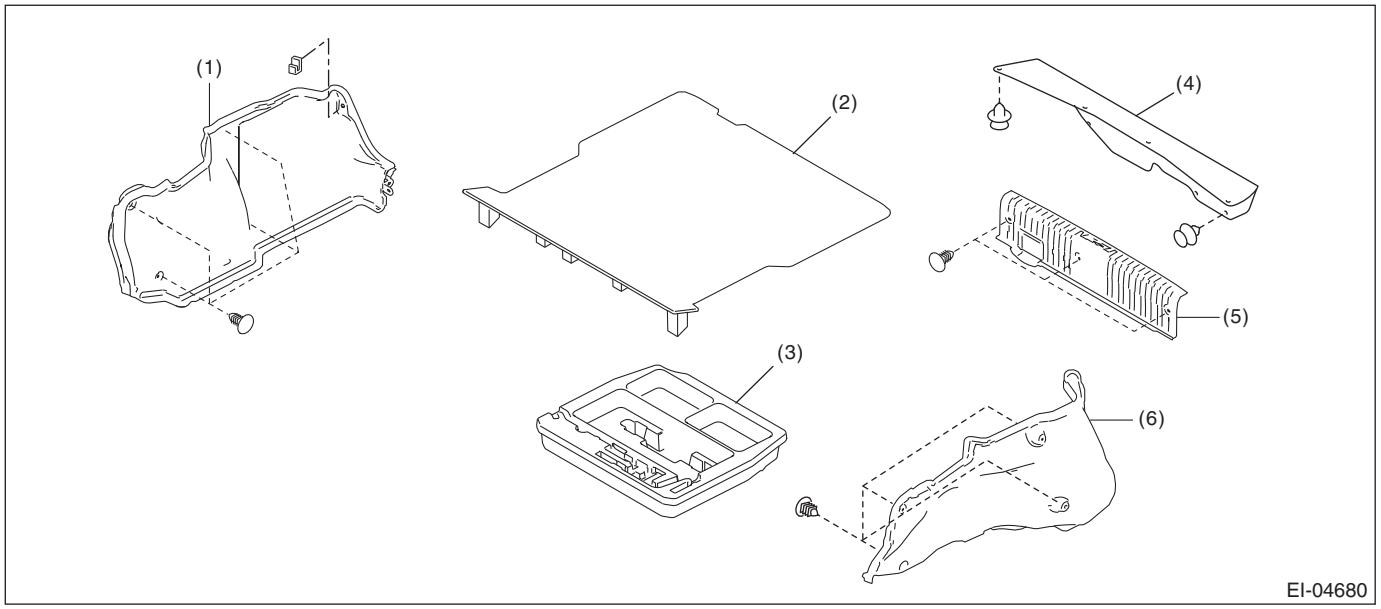
(1) Panel COMPL - instrument
(2) Bracket - audio LH
(3) Audio ASSY/Navigation ASSY
(4) Heater control ASSY
(5) Panel - heater control
(6) Panel center LWR
(7) Pocket ASSY - CTR
(8) Mat
(9) AUX UNIT
(10) Socket ASSY
(11) Bracket - audio RH
(12) Reinforcement CTR - COMPL
(13) Data communication module
(14) Backup unit ASSY
(15) Harness ASSY - backup unit

(1) Panel COMPL - instrument
(2) Keyless access CM
(3) TORX® bolt (M8 × 37)
(4) Beam COMPL - steering
(5) Bracket - center UPR
(6) Passenger's airbag module
(7) TORX® bolt (M8 × 57)
(8) Adjuster - clip space
(9) Panel - knee guard



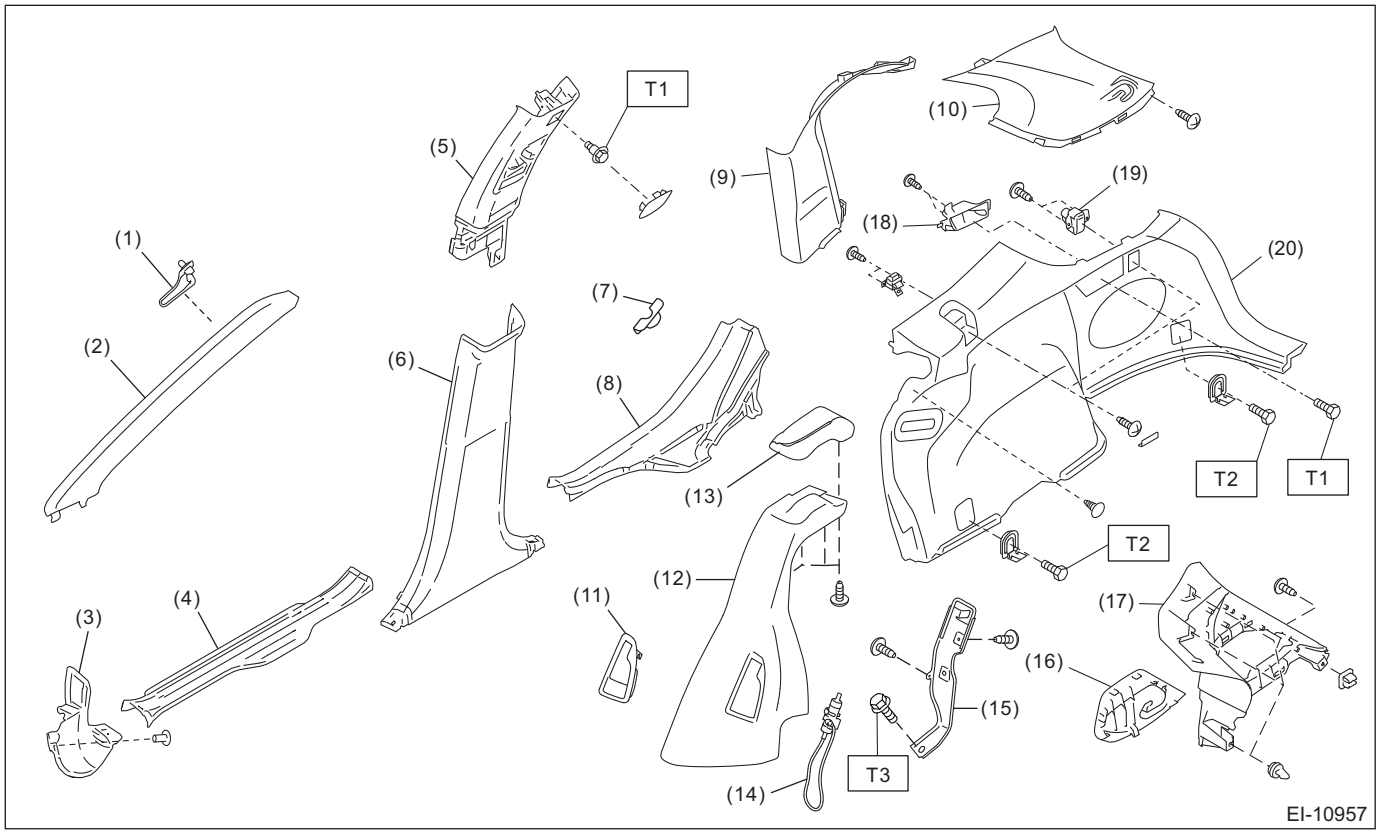
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7 (0.7, 5.2)
T2: 7.5 (0.8, 5.5)
T3: 25 (2.5, 18.4)

(1) Duct - side ventilation LH
(2) Duct - side defroster LH
(3) Grille - front defroster
(4) Nozzle - front defroster
(5) Duct - side defroster RH
(6) Duct - side ventilation RH
(7) Duct - center vent
(8) Duct - center vent front
(9) Panel COMPL - instrument



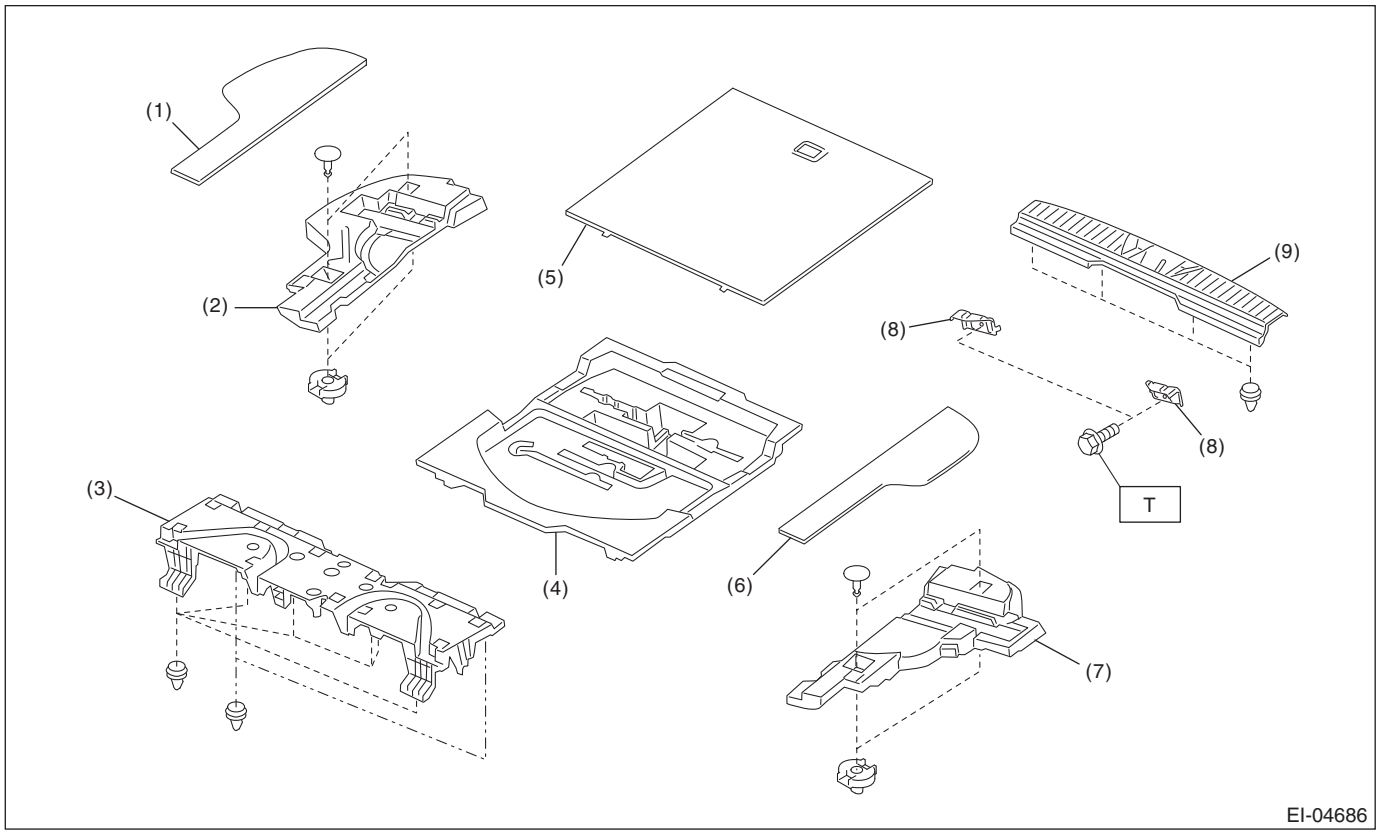
17.INNER TRIM

- Sedan model



(1) Tether clip
(2) Trim panel - front pillar UPR
(3) Front cover - side sill
(4) Cover side sill - front
(5) Trim panel - center pillar UPR
(6) Trim panel - center pillar LWR
(7) Cover - catcher
(8) Cover side sill - rear
(9) Side pad ASSY - backrest
(10) Trim panel ASSY - trunk front RH
(11) Trim panel ASSY - trunk front LH
(12) Trim panel ASSY - rear shelf
(13) Cover - high-mounted
(14) Cover - tether anchor
(15) Belt guide
(16) Trim panel - rear pillar UPR

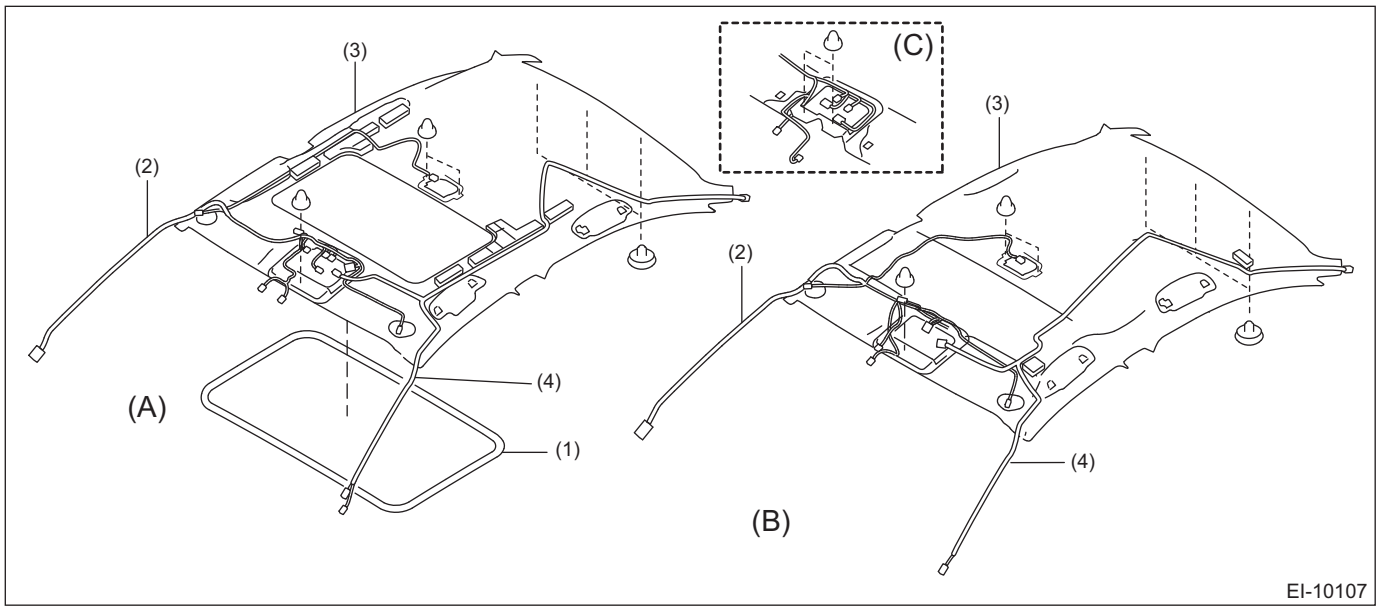
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 53 (5.4, 39.1)



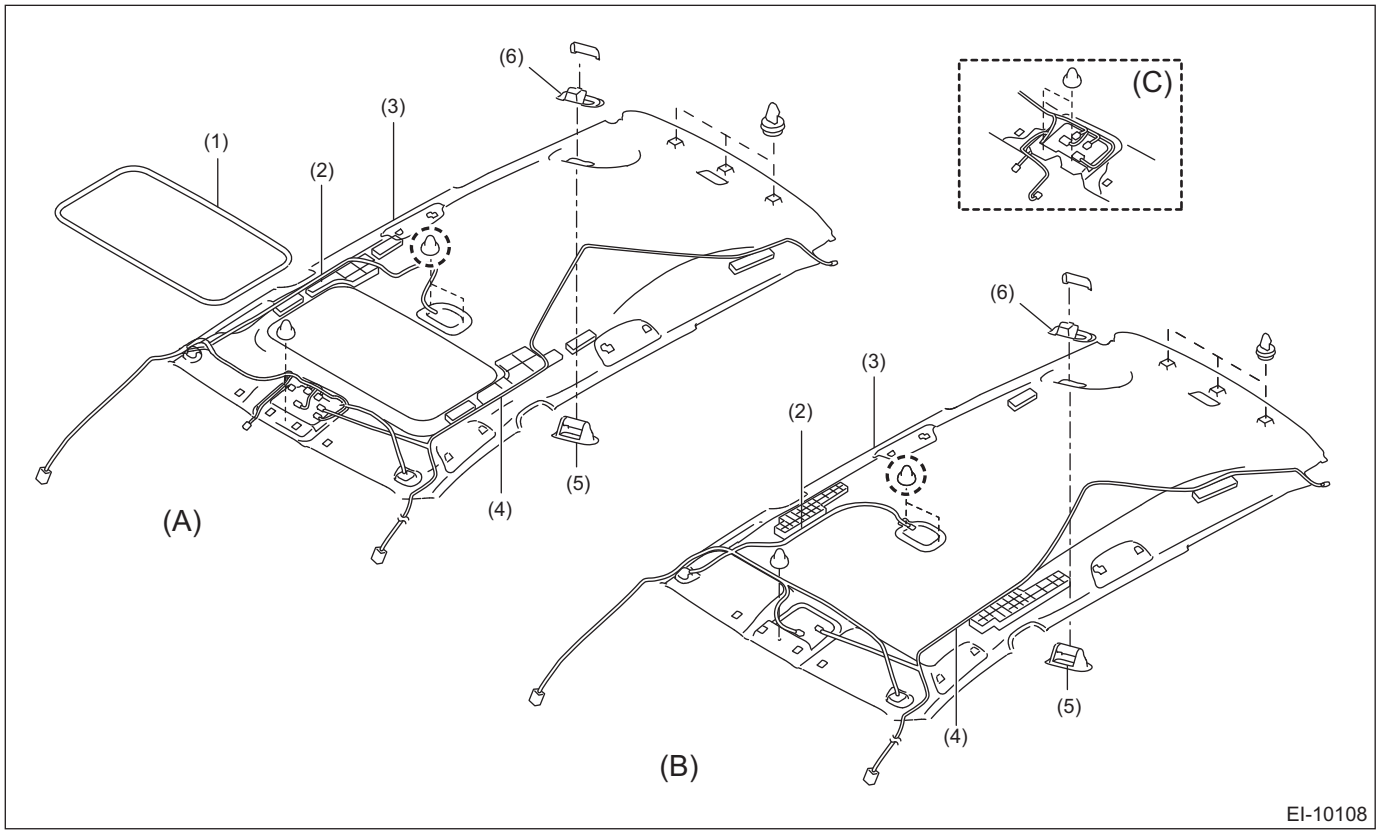
(1) Trim panel - trunk side RH
(2) Mat - trunk
(3) Box - sub trunk
(4) Trim panel - trunk lid
(5) Trim panel - trunk rear
(6) Trim panel - trunk side LH

- OUTBACK model

(1) Tether clip
(2) Trim panel - front pillar UPR
(3) Front cover - side sill
(4) Cover side sill - front
(5) Trim panel - center pillar UPR
(6) Trim panel - center pillar LWR
(7) Cover - catcher
(8) Cover side sill - rear
(9) Trim panel - rear quarter pillar UPR front
(10) Trim panel - rear quarter pillar UPR rear RH
(11) Lever ASSY - reclining
(12) Side pad ASSY - backrest
(13) Cover - backrest side pad
(14) Reclining cable
(15) Cable connector bracket
(16) Cover - rear quarter pillar PRG
(17) Trim panel - rear quarter pillar UPR rear LH PRG
(18) Lever ASSY - rear backrest
(19) Hook - rear apron
(20) Trim panel - rear apron

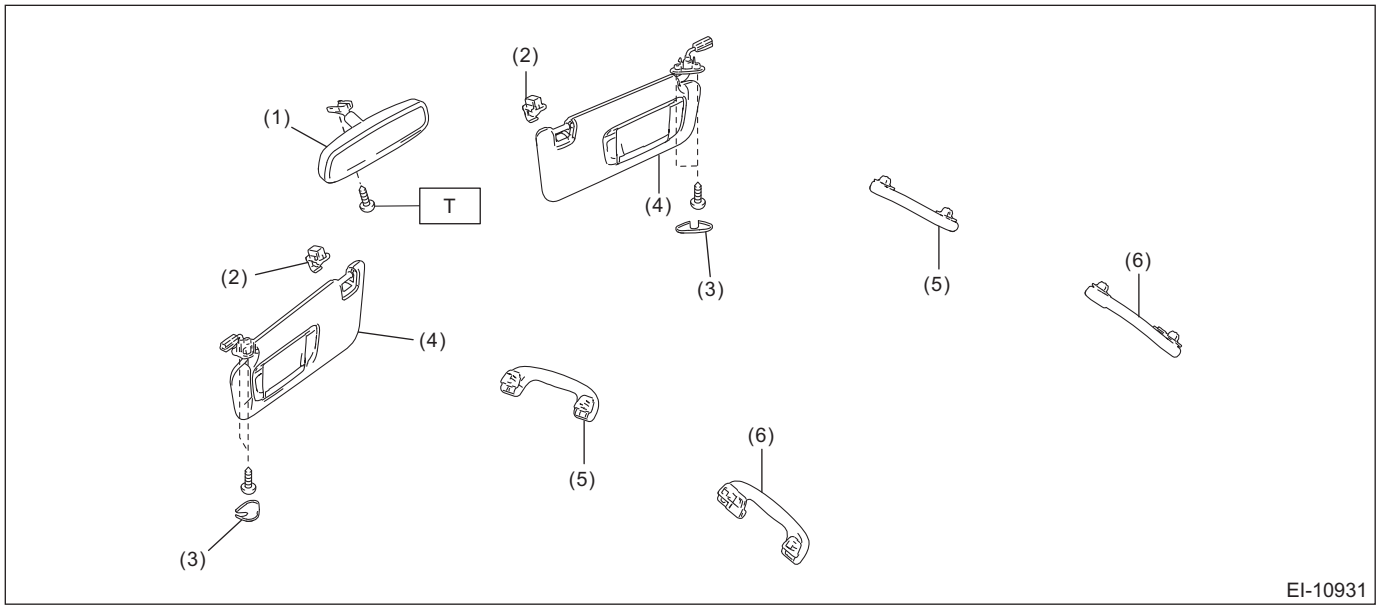


Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.5 (0.5, 3.3)
T2: 7.5 (0.8, 5.5)
T3: 53 (5.4, 39.1)



(1) Mat floor - rear RH
(2) Spacer - rear floor side RH
(3) Spacer - rear floor front
(4) Box - sub trunk
(5) Mat floor - rear CTR
(6) Mat floor - rear LH
(7) Spacer - rear floor side LH
(8) Bracket - rear skirt
(9) Trim panel - rear skirt

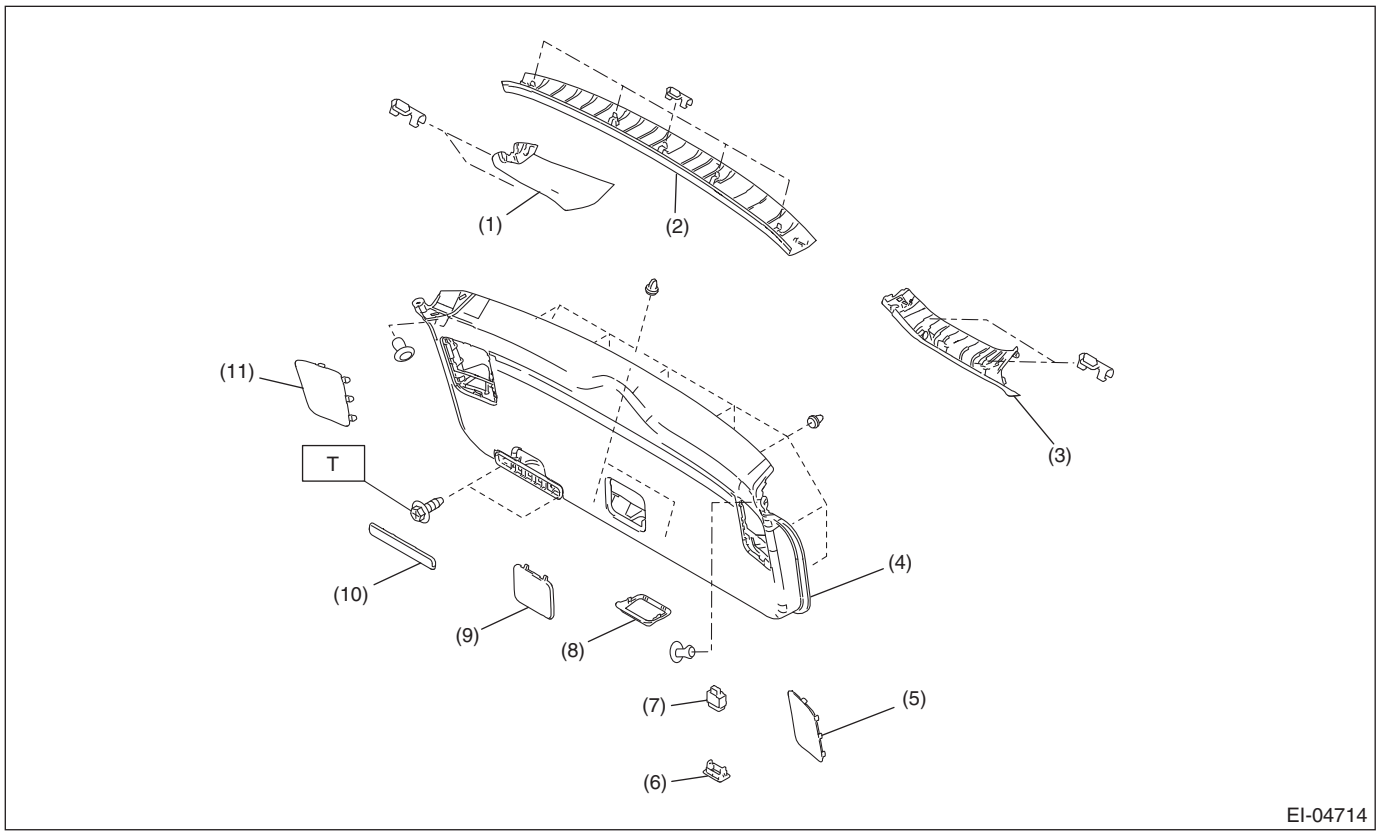
Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)



18.ROOF TRIM

(A)	Sunroof type	(B)	Normal roof type	(C)	Models with EyeSight
(1)	Garnish - roof	(3)	Trim panel - roof ASSY	(5)	Cover - seat belt holder
(2)	Cord - roof	(4)	Cord ASSY - antenna feeder	(6)	Base - seat belt holder

19.ROOM INNER PARTS



(1)	Mirror ASSY - inner rearview	(4)	Sun visor ASSY
(2)	Hook - sun visor	(5)	Assist rail - front
(3)	Cover - sun visor	(6)	Assist rail - rear

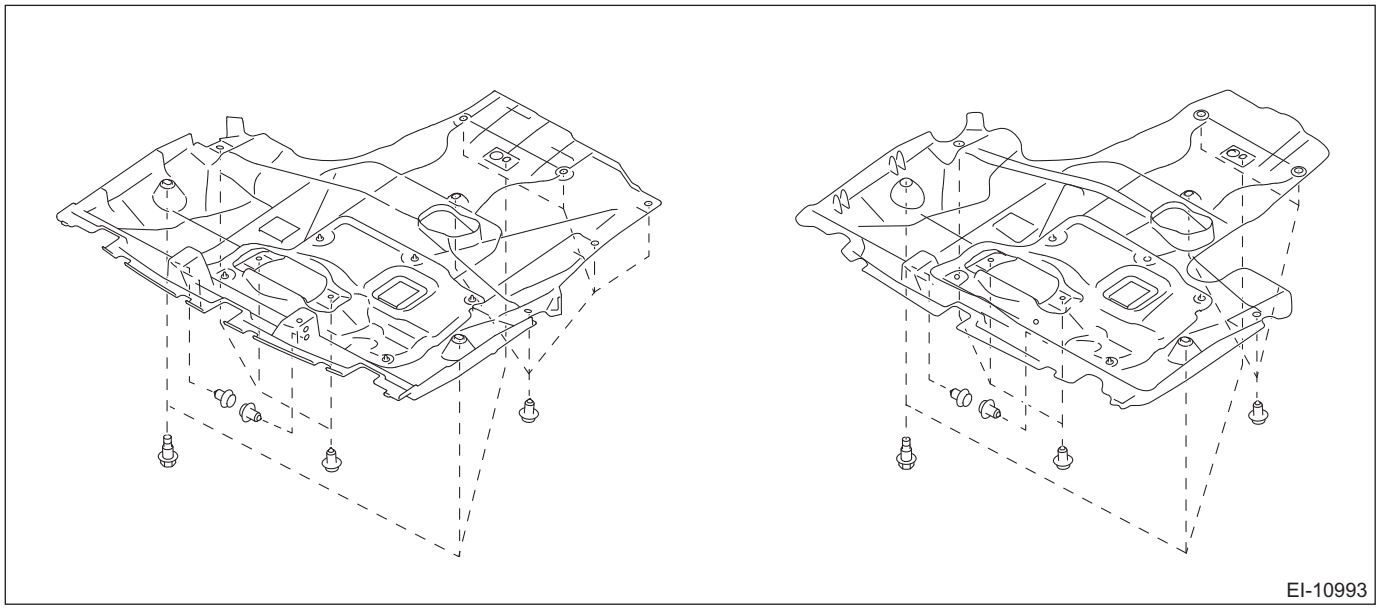
Tightening torque: N·m (kgf-m, ft-lb)
T: 2 (0.2, 1.5)

NOTE:
For exploded view of the inner mirror, refer to “REAR VIEW MIRROR” in “GLASS/WINDOWS/MIRRORS” section. <Ref. to GW-7, REARVIEW MIRROR, COMPONENT, General Description.>

20.REAR GATE TRIM

(1) Trim panel - rear gate pillar RH
(2) Trim panel - rear gate UPR
(3) Trim panel - rear gate pillar LH
(4) Trim panel - rear gate LWR
(5) Cap ASSY - rear gate LWR LH
(6) Holder - power rear gate inner switch
(7) Power rear gate inner switch
(8) Cover - rear gate latch
(9) Cap - rear gate LWR
(10) Cover - rear gate grip
(11) Cap ASSY - rear gate LWR RH

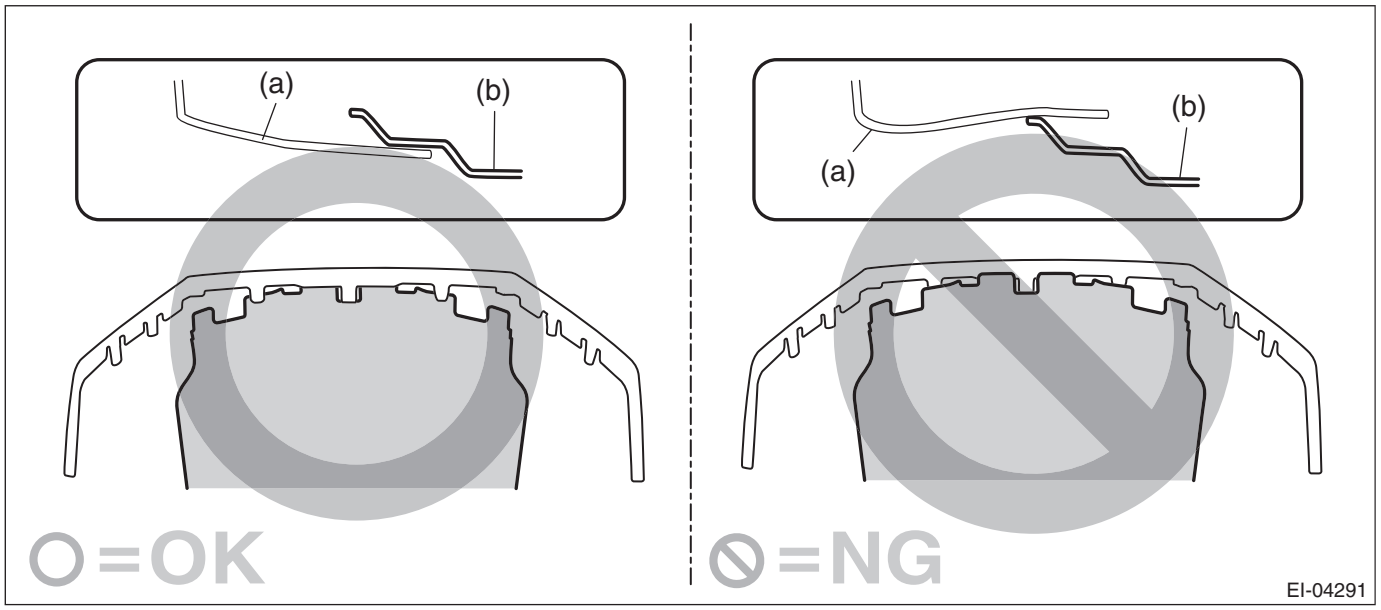
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim. • KTC AP201-10A • KTC AP201-CN • KTC AP201-CF • KTC AP201-HF • KTC AP201-HN • KTC AP201-HS • KTC AP203-10A • KTC AP20L-10B Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. • KTC CCP-190 • KTC AP202A • KTC AP202B Or equivalent.

2. Front Under Cover

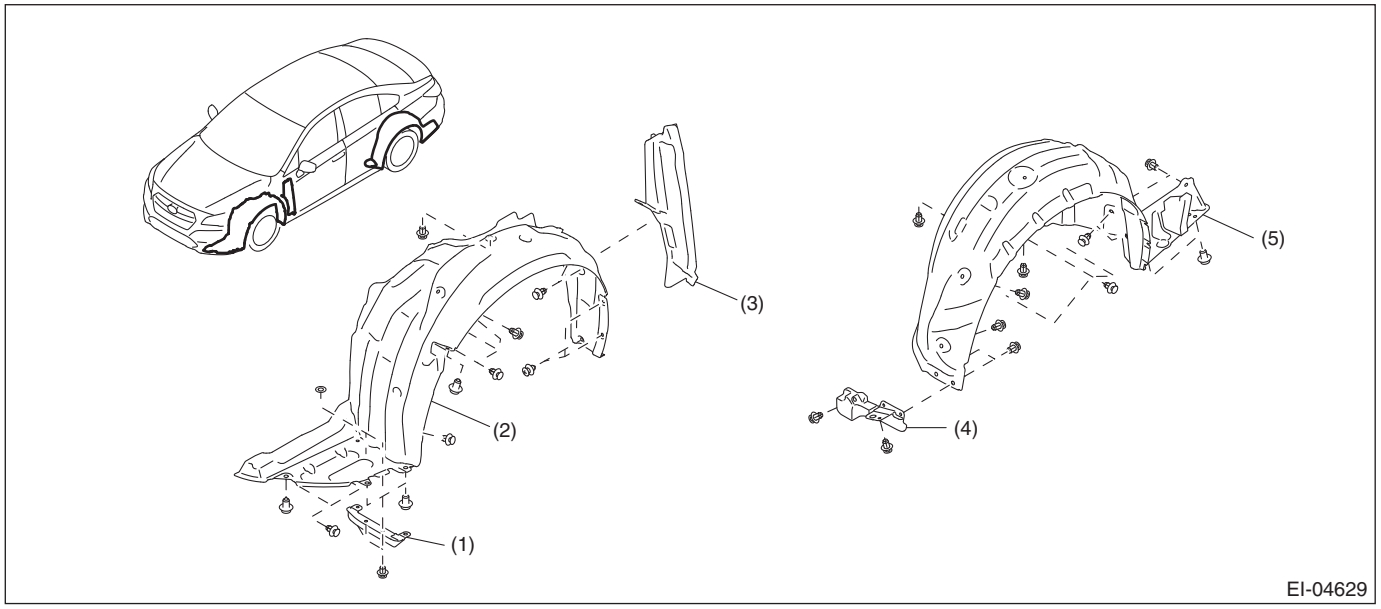


A: REMOVAL

1) Lift up the vehicle.
2) Remove the bolts and clips, and remove the under cover - front.

B: INSTALLATION

CAUTION:
Install the under cover so that the under cover front end (b) comes inside of the bumper face - front (a).



1) Install the under cover - front.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EI-2, FRONT UNDER COVER, COMPONENT, General Description.>
2) Lower the vehicle.

3. Mud Guard

A: REMOVAL

1) Lift up the vehicle.
2) Remove the wheels.
3) Remove the clips, then remove the mud guard.

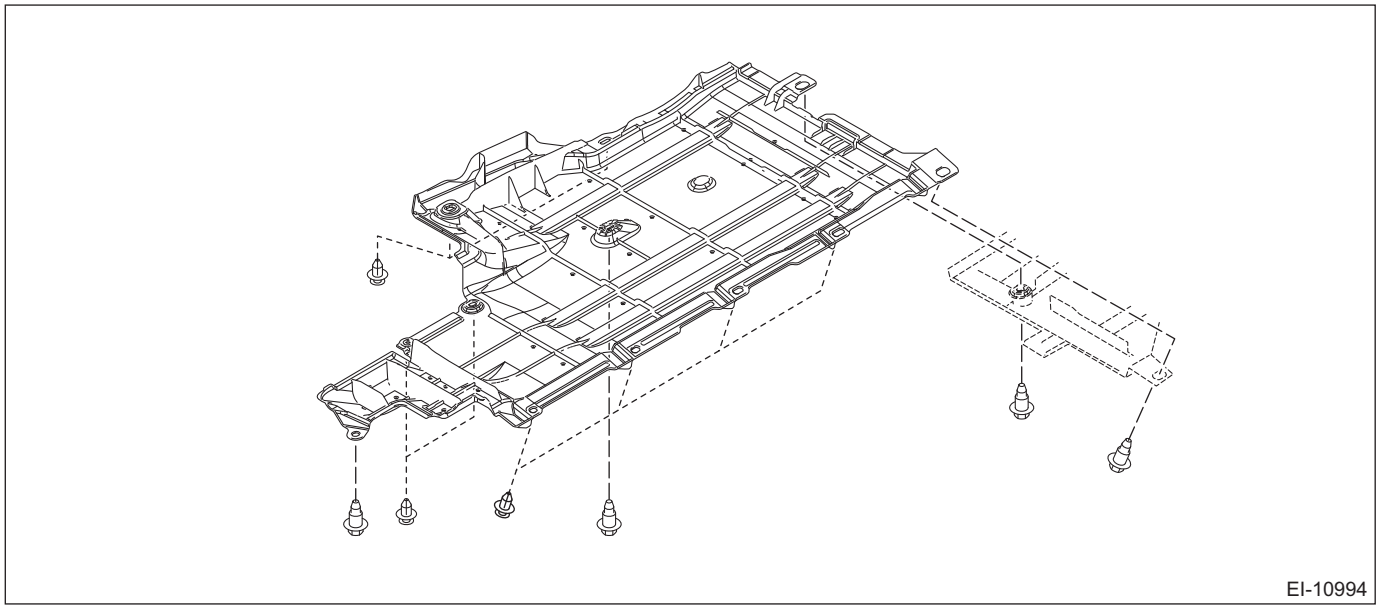
(1) Air flap - front
(2) Mud guard - front
(3) Cover - fender LWR
(4) Air flap - rear
(5) Mud guard - rear

B: INSTALLATION

1) Install the mud guard.
2) Install the wheel.

Tightening torque:
Wheel nut: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
3) Lower the vehicle.

4. Floor Under Protector



A: REMOVAL

1) Lift up the vehicle.

NOTE:
A plate type lift cannot be used.

2) Remove the fuel tank protector.
- H4 model: <Ref. to FU(H4DO)-96, REMOVAL, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

3) Remove the bolts and clips, and remove the floor under protector.

EI-10994

B: INSTALLATION

1) Install the floor under protector.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the fuel tank protector.
- H4 model: <Ref. to FU(H4DO)-96, INSTALLATION, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, INSTALLATION, Fuel Tank Protector.>

3) Lower the vehicle.

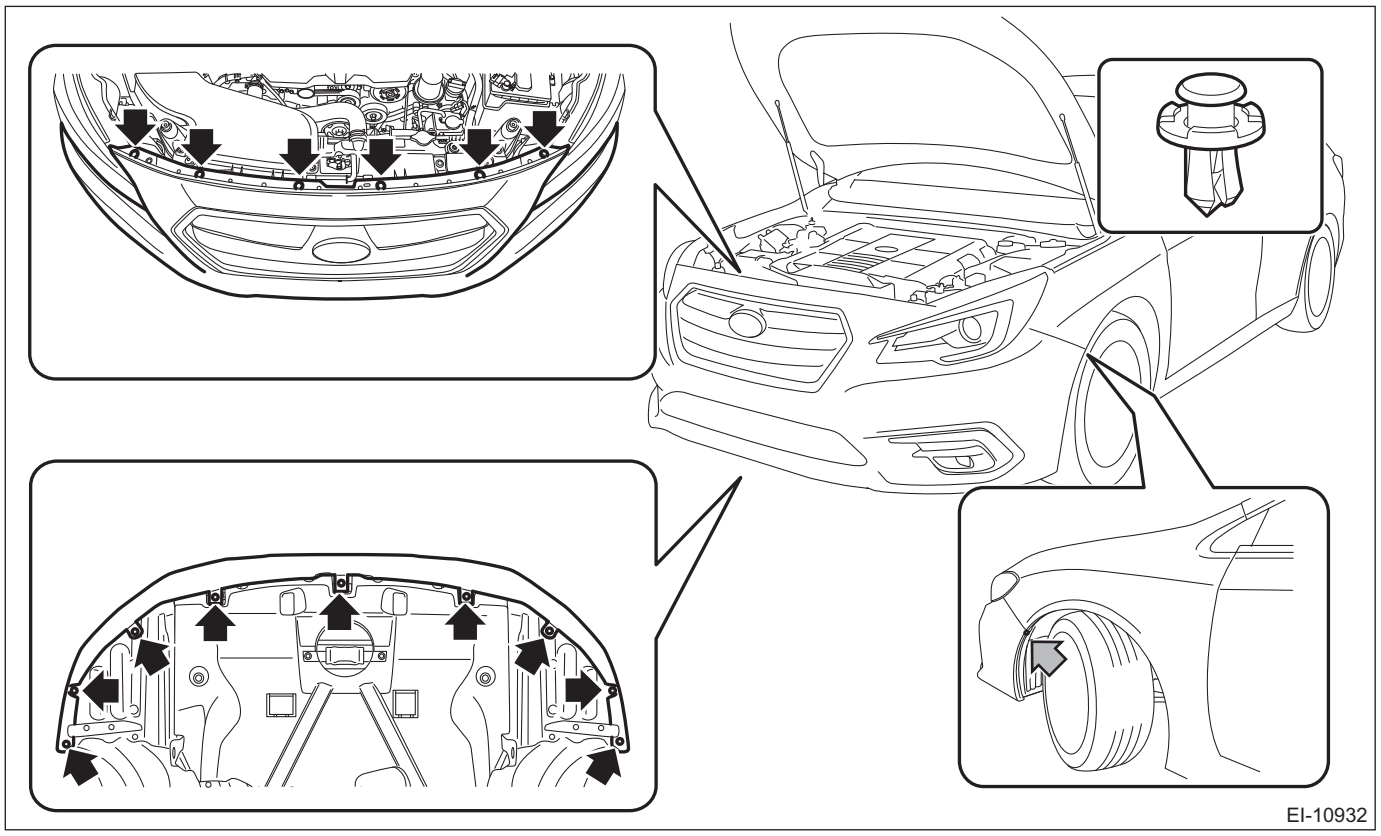
5. Fuel Tank Protector

A: NOTE

Refer to “FUEL INJECTION” section for removal and installation procedure of the fuel tank protector.

- H4 model: <Ref. to FU(H4DO)-96, REMOVAL, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

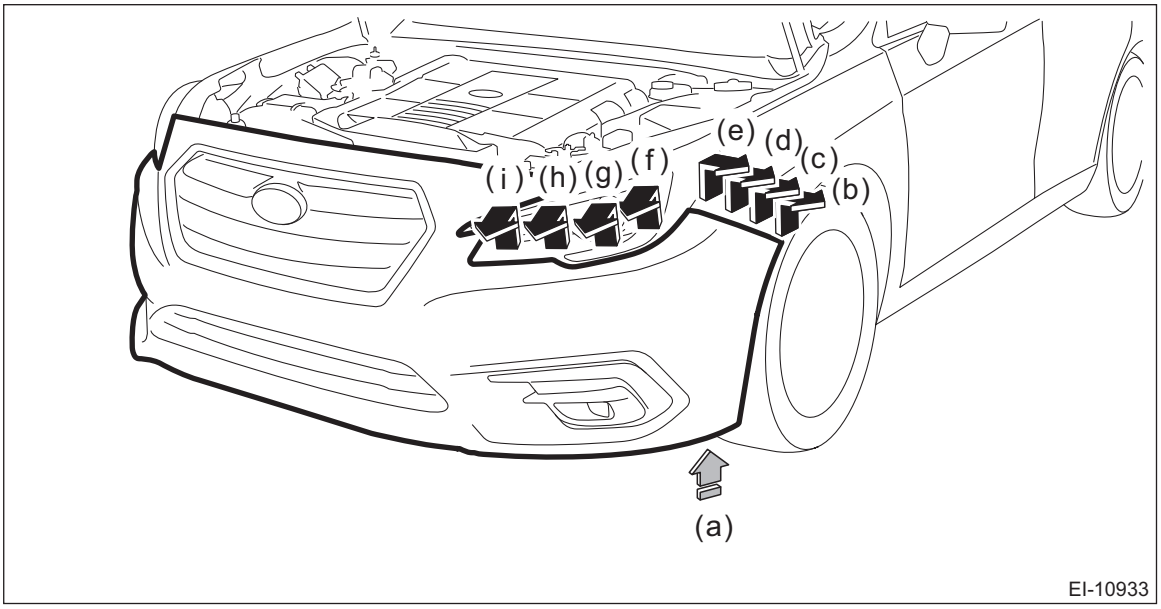
6. Front Grille



A: NOTE

For removal and assembly of front grille assembly, refer to “DISASSEMBLY” and “ASSEMBLY” in “Front Bumper”.

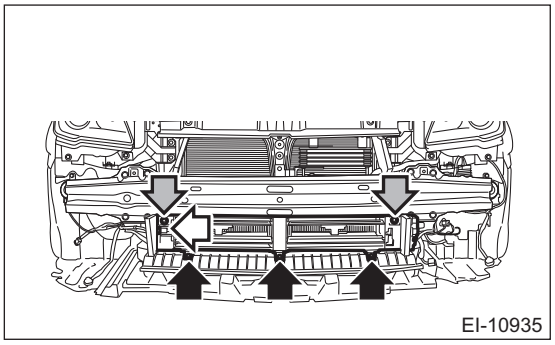
7. Front Bumper



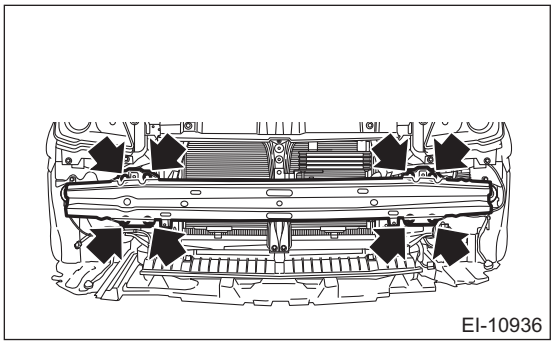
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front.
   (1) Remove the clips at the upper side of the bumper face - front.
   (2) Remove the clips from the fender.
   (3) Remove the clips at the lower side of the bumper face - front.

   (4) Disconnect the fog light assembly connector.
   (5) While pushing up the lower side (a) of the bumper face - front, release the engagement in the order from (b) to (i).

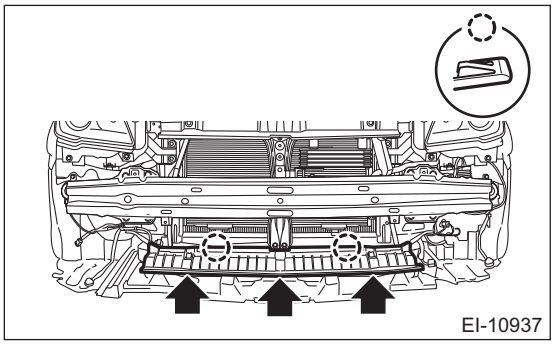


CAUTION:
Do not pull forcibly. It may damage the flange section on the bumper face - front side when it comes off from the claws of the bracket - front bumper.



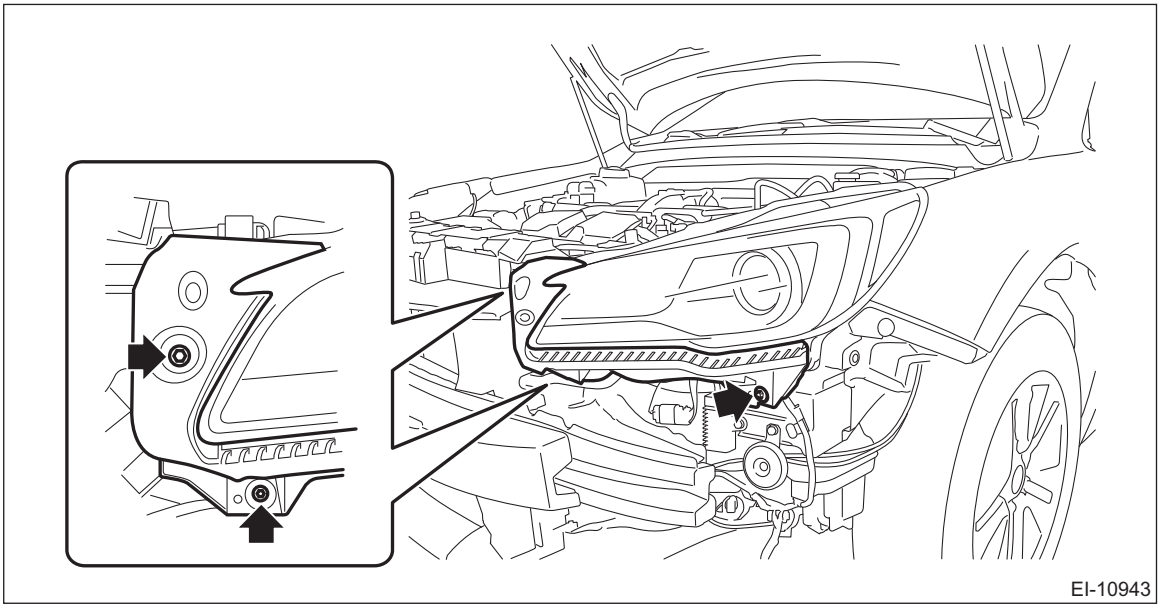
NOTE:
Detach the opposite side in the same manner.
3) Remove the energy absorber foam - front.

4) Remove the bolts and clips, disconnect the connector and remove the active grille shutter. (H4 model)



5) Remove the bolts, and remove the bumper beam COMPL - front.

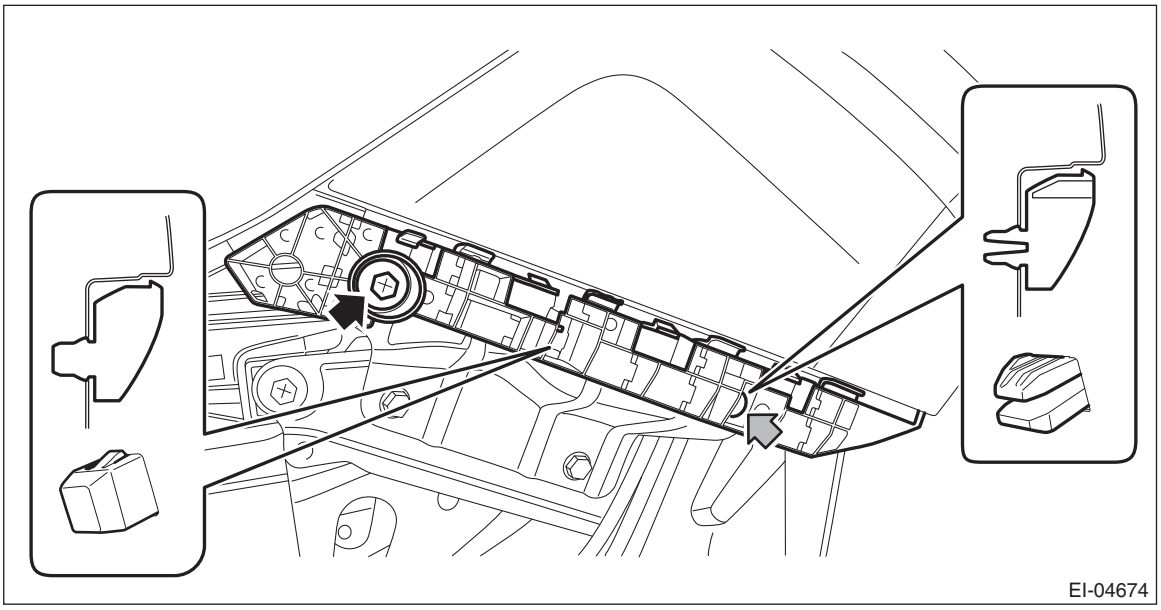
EI-10936



NOTE:
After the bolts are removed, raise the bumper beam COMPL - front a little to remove it from vehicle body.

6) Remove the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>

7) Remove the bolts, and pull the bracket - front center LWR to remove.



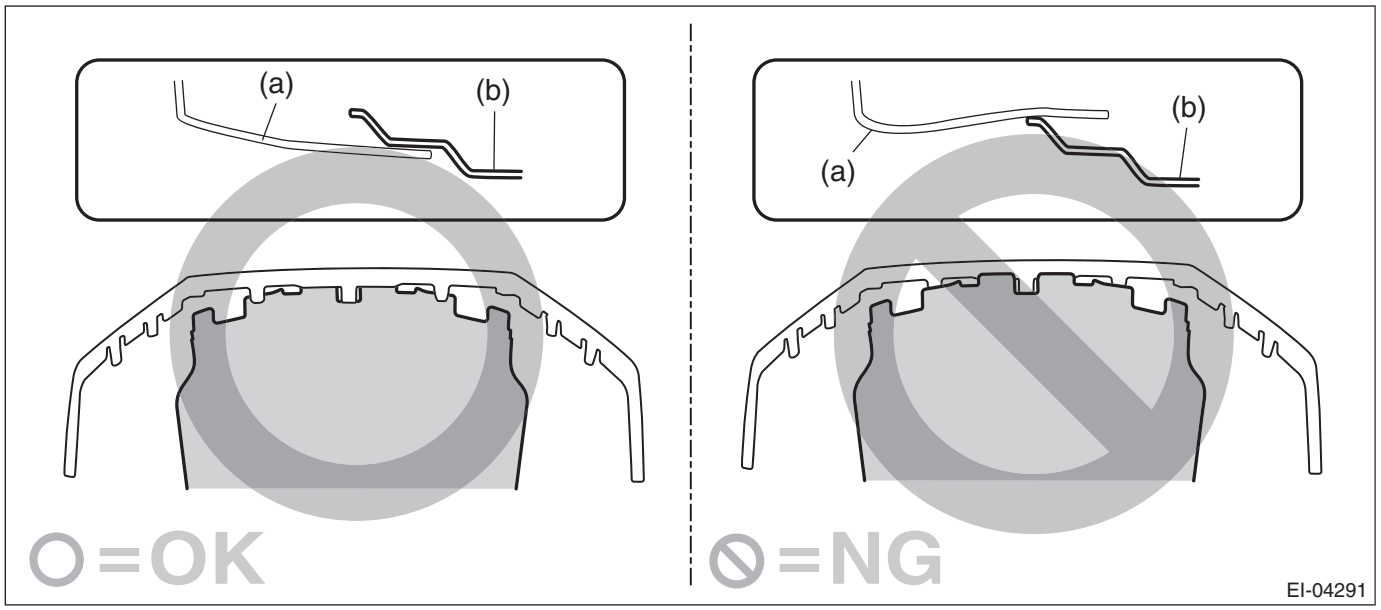
EI-10937

8) Remove the bolts and clips, and remove the bracket - front bumper corner.

EI-10943

9) Remove the bracket - front bumper side.
   (1) Remove the bolts and screws.

(2) Remove the claws from behind the fender COMPL - front, and remove the bracket - front bumper side.



10) Remove the fog light assembly - front. <Ref. to LI-51, REMOVAL, Front Fog Light Assembly.>

B: INSTALLATION

CAUTION:

• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Install the fog light assembly - front.
2) Install the bracket - front bumper side.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the bracket - front bumper corner.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the bracket - front center LWR.

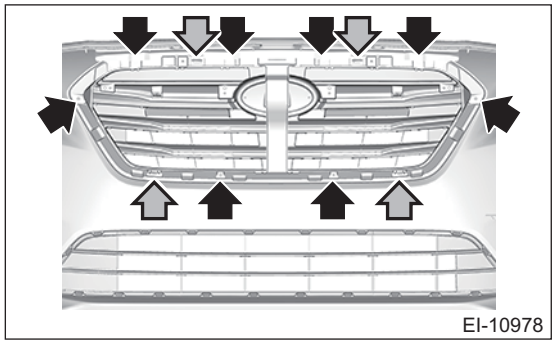
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>
6) Install the bumper beam COMPL - front.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

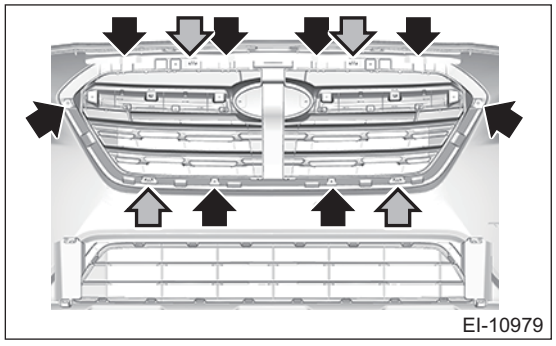
7) Install the active grille shutter. (H4 model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



8) Install the energy absorber foam - front.
9) Install the bumper face - front.

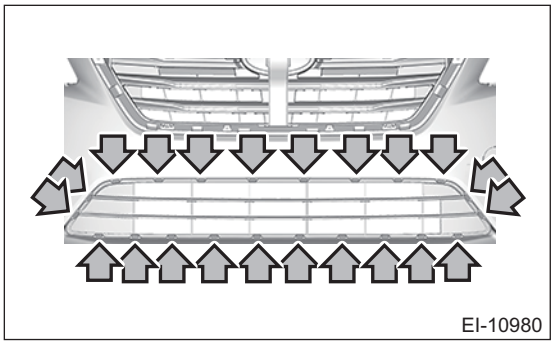
NOTE:
Secure the flange section of the bumper face - front to the bracket - front bumper side.



10) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
11) Adjust the fog light beam. <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

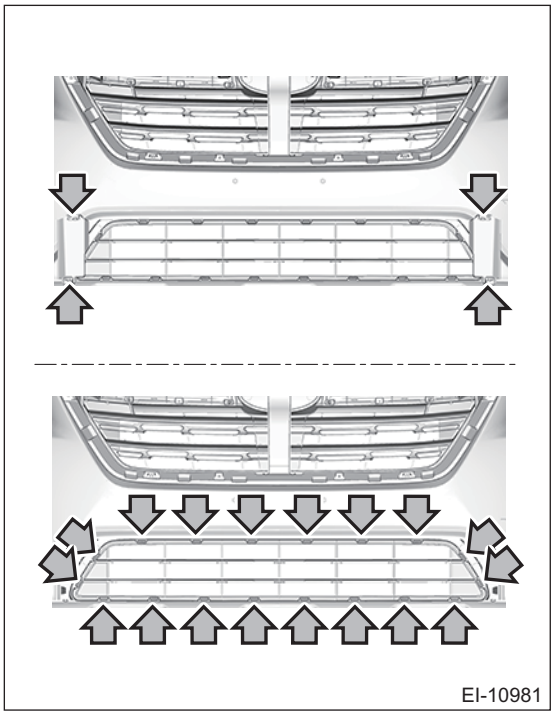
C: DISASSEMBLY

1) Remove the front grille assembly.
(1) Remove the screws on the back side.
(2) Release the claws, and remove the front grille assembly.
- Sedan model



EI-10978

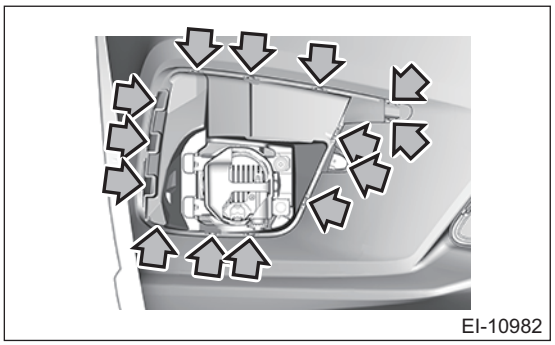
- OUTBACK model



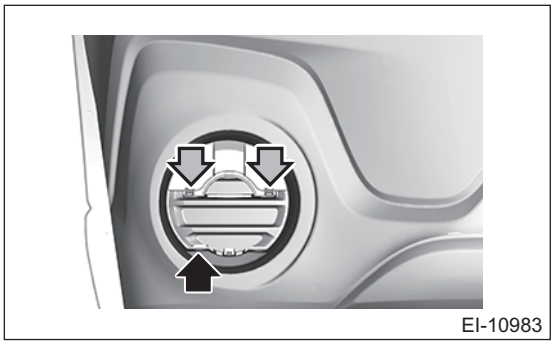
EI-10979

2) Remove the cover intake - front.

- Sedan model



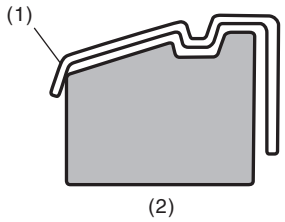
- OUTBACK model



3) Remove the fog light cover.

- Sedan model

- OUTBACK model



EI-10983

D: ASSEMBLY

1) Install the fog light cover.
2) Install the cover intake - front.
3) Install the front grille assembly.

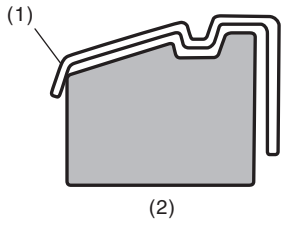
E: REPAIR

1. COATING METHOD FOR PP BUMPER

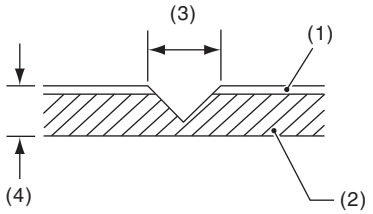
Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	Cross section of bumper  (1) (2) EI-00234 (1) Bumper (2) Paint worktable
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP.	
3	Degreasing/cleaning	Clean all parts to be painted with appropriate cleaning solvent, normal alcohol, etc. to remove dirt, oil, grease, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature. [10 — 15 min. at 20°C (68°F)] In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)	Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.

Process No.	Process name	Job contents	
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minute intervals. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If the temperature is higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of masking	Remove the masking tape applied in procedure 2.	

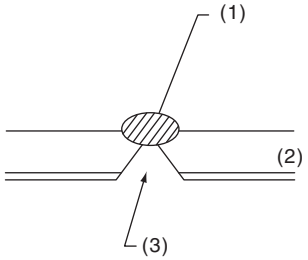
2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER



NOTE:
All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter.
Repair methods are outlined below, based on a classification of the extent of damage.
1) Minor damage causing only a change in the luster of the bumper due to a light touch
Almost restorable.

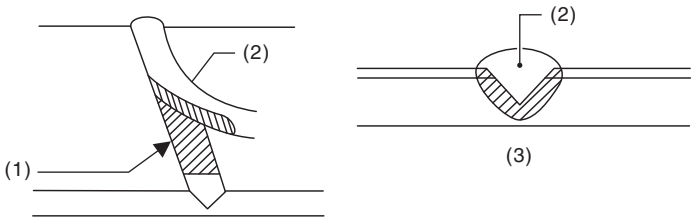


Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a “feathering” motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: Tire wax or equivalent	Perform either the same procedures as for the resin section or process No. 18 and subsequent in section 3), depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	



2) Deep damage caused by scratching with fences etc.
A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 — #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as process No. 3 in section “1)”.	Perform process No. 12 and subsequent operations in section “3)”.



3) Deep damage such as a break or hole that requires filling
Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

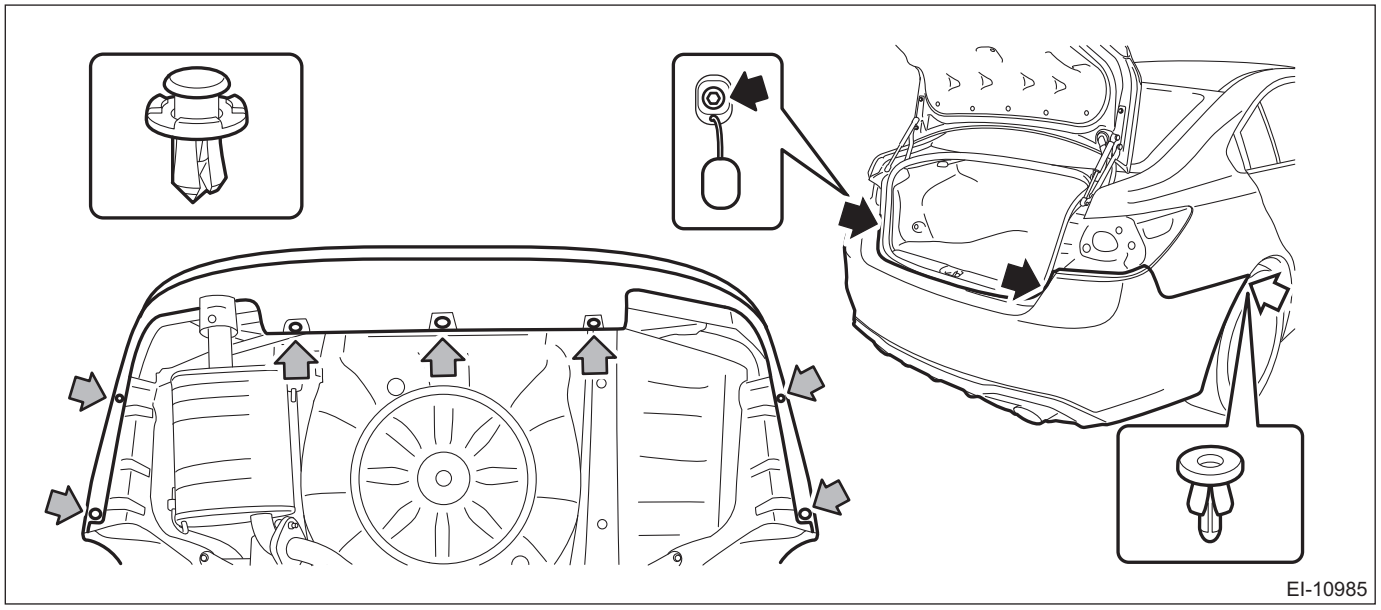
<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Bumper removal</td><td colspan="2">Remove the bumper as required.</td></tr>
<tr><td>2</td><td>Removal of parts</td><td colspan="2">Remove the parts built into bumper as required.</td></tr>
<tr><td>3</td><td>Bumper placement</td><td>Place the bumper on a paint worktable as required.
It is recommended to use the paint worktable conforming to internal shape of bumper.</td><td>Cross section of bumper

EI-00234
(1) Bumper
(2) Paint worktable</td></tr>
<tr><td>4</td><td>Surface preparation</td><td colspan="2">Remove dust, oil, etc. from areas to be repaired and surrounding areas, using an appropriate solvent (appropriate cleaning solvent or alcohol, etc.).</td></tr>
<tr><td>5</td><td>Cutting</td><td>If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.</td><td>

EI-00235
(1) Paint surface
(2) PP base surface
(3) 20 — 30 mm (0.79 — 1.18 in)
(4) 3 mm (0.12 in)</td></tr>
<tr><td>6</td><td>Sanding (I)</td><td colspan="2">Grind beveled surface with sand paper (#40 — #60) to smooth finish.</td></tr>
<tr><td>7</td><td>Cleaning</td><td colspan="2">Clean the sanded surface with the same solvent as used in process No. 4.</td></tr>
<tr><td rowspan="2">8</td><td rowspan="2">Temporary welding</td><td colspan="2">Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent.
Temporarily spot-weld the side, using PP welding rod and heater gun.</td></tr>
<tr><td colspan="2">

EI-00236
(1) Welded point (Use heater gun and PP welding rod)
(2) PP base surface
(3) Beveled section
NOTE:
• Do not melt welding rod until it flows out. This results in reduced strength.
• Leave the welded spot unattended until it cools completely.</td></tr>
</table>

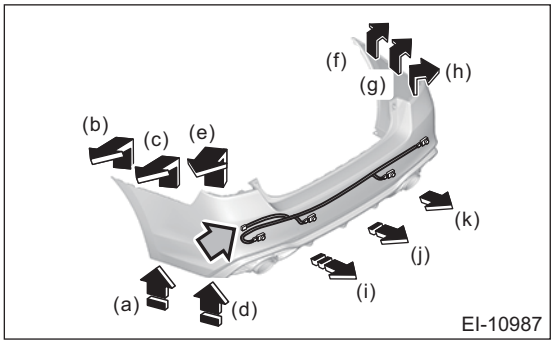
Process No.	Process name	Job contents
9	Welding	Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.
		 EI-00237 (1) Welding rod (2) Melt hatched area (3) Section NOTE: • Melt the sections indicated by hatched area. • Do not melt the welding rod until it flows out, in order to provide strength. • Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot. • Leave the welded spot unattended until it cools completely.
10	Sanding (II)	Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at less than 1,500 r/min and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.
		 EI-00042
		Sand the welded spot smooth with #240 sand paper.
11	Masking	Mask the black substrate section using masking tape.
12	Cleaning/degreasing	Completely clean the entire coated area, using solvent similar to that used in process No. 4.
13	Primer coating	Apply a coat of primer for bumpers to the repaired surface and its surrounding areas. Mask these areas, if necessary. NOTE: Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi).
14	Leave unattended	Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry. NOTE: If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since it could melt the coated area.)
15	Surfacer coating	Apply a coat of surfacer for PP bumpers to the repaired area two or three times at an interval of 3 — 5 minutes. For surfacer/hardener mixture, viscosity and paint thickness, observe the specifications of the surfacers to be used.
16	Drying	Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].
17	Sanding (III)	Sand the coated surface and its surrounding areas using #400 sand paper and water.
18	Cleaning/degreasing	Same as process No. 12.



Process No.	Process name	Job contents	
		Non-colored	Metallic paint
19	Top coat (I)	Use a “block” coating method. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 40 — 50 µ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)	Use a “block” coating method. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 µ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
20	Leave unattended	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. NOTE: Be careful to keep dust or dirt from coming in contact with the affected area.
21	Top coat (II)	Not required.	Apply a clear coat three times at an interval of 3 to 5 minutes. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 µ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F). NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.	
23	Inspection	Carefully check the condition of the repaired area.	
24	Removal of masking	Remove the masking tape applied in process No. 11 and 13.	
25	Parts installation	Install parts on the bumper in reverse order of removal.	
26	Bumper installation	Install the bumper.	

8. Rear Bumper

A: REMOVAL



1. SEDAN MODEL

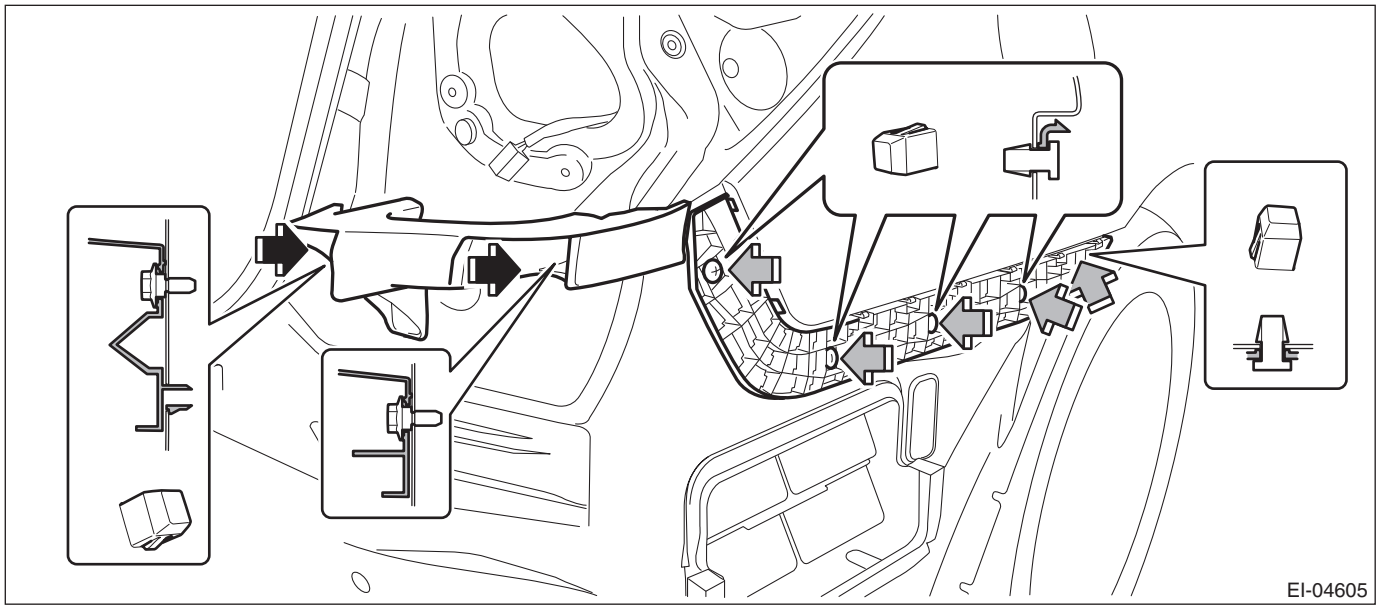
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk room mat.
3) Remove the light assembly - rear combination. <Ref. to LI-59, REMOVAL, Rear Combination Light Assembly.>
4) Remove the bumper face - rear.
   (1) Remove the clips inside the wheel housing.
   (2) Remove the screws from trunk opening.
   (3) Remove the clips at the lower side of the bumper face - rear.

   (4) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
   (5) Detach (e) while pulling up (d) of the bumper face - rear.
   (6) Perform the same procedures when detaching (f) to (h) on the opposite side.
   (7) Detach in order from (i) to (k) by carefully pulling toward you while pulling up the center of bumper face - rear.

CAUTION:
• Pulling with excessive force may damage the bracket.
• For models with Reverse Automatic Braking, be careful not to damage the connector located on the gray arrow position.

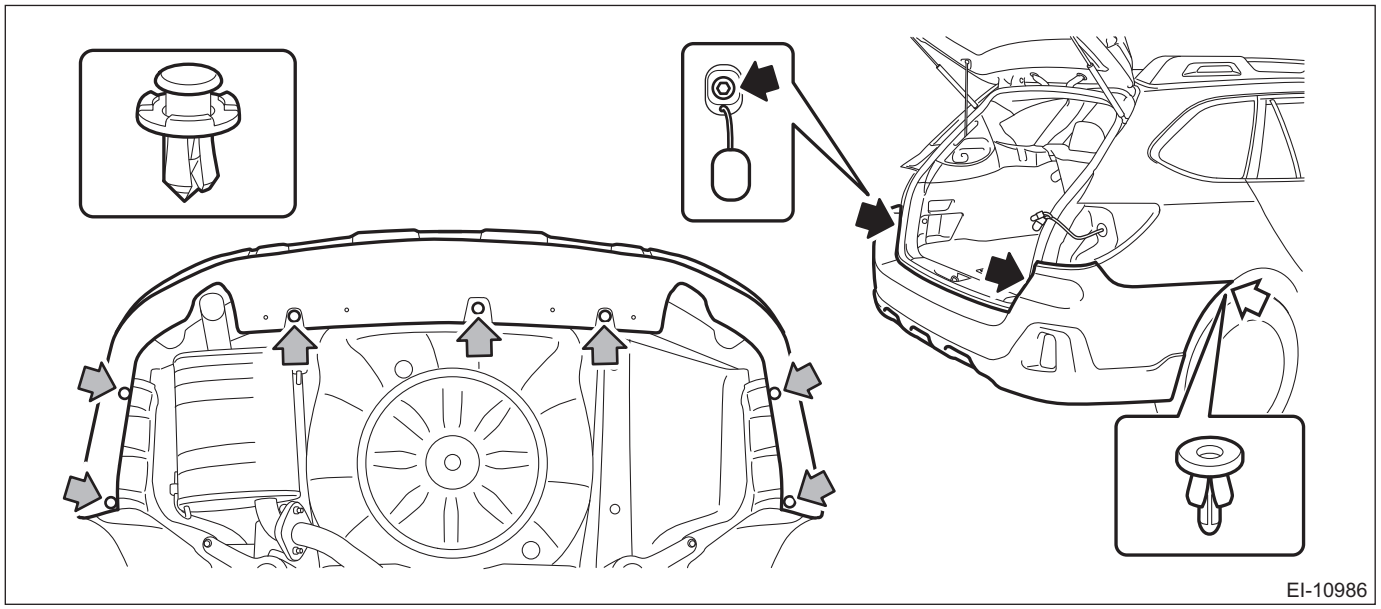
   (8) For models with Reverse Automatic Braking, disconnect the connector of the cord assembly - sonar.

5) Remove the energy absorber foam - rear.



6) Remove the nuts, and remove the bumper beam COMPL - rear.

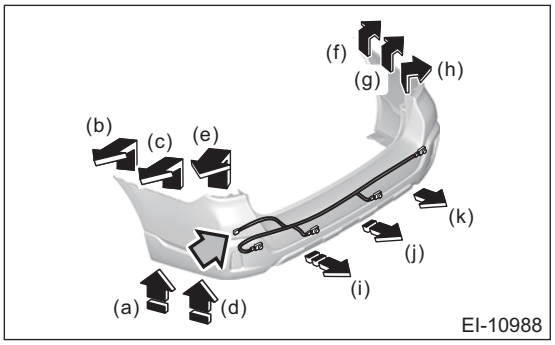
7) Remove bumper brackets.
(1) Remove the bolts and screws.



(2) Turn over the trim panel - trunk side, and detach the claw of the clip from the back side.

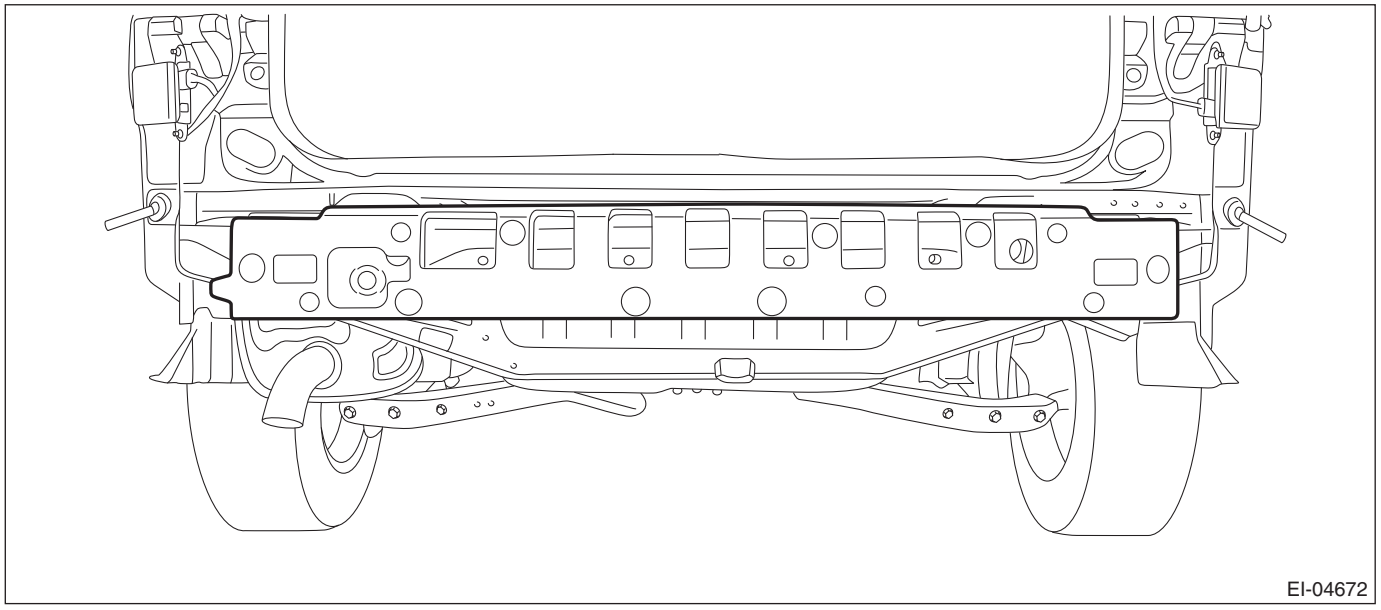
8) If removing the following parts, refer to “Sensor & Harness” of the “Reverse Automatic Braking” section. <Ref. to RAB-7, REMOVAL, Sensor and Harness.>
- Cord assembly - sonar
- Sonar - sensor

2. OUTBACK MODEL



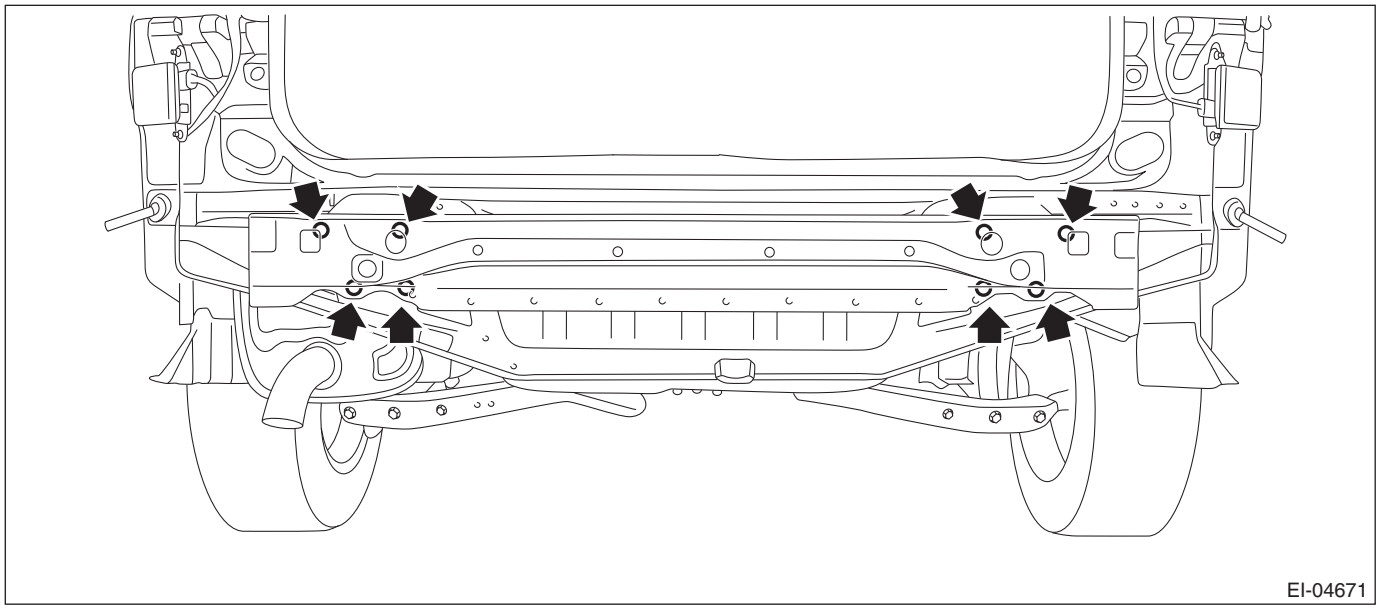
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination. <Ref. to LI-59, REMOVAL, Rear Combination Light Assembly.>
3) Remove the bumper face - rear.
(1) Remove the clips inside the wheel housing.
(2) Remove the screws from rear gate opening.
(3) Remove the clips at the lower side of the bumper face - rear.

(4) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
(5) Detach (e) while pulling up (d) of the bumper face - rear.
(6) Perform the same procedures when detaching (f) to (h) on the opposite side.



(7) Detach in order from (i) to (k) by carefully pulling toward you while pulling up the center of bumper face - rear.

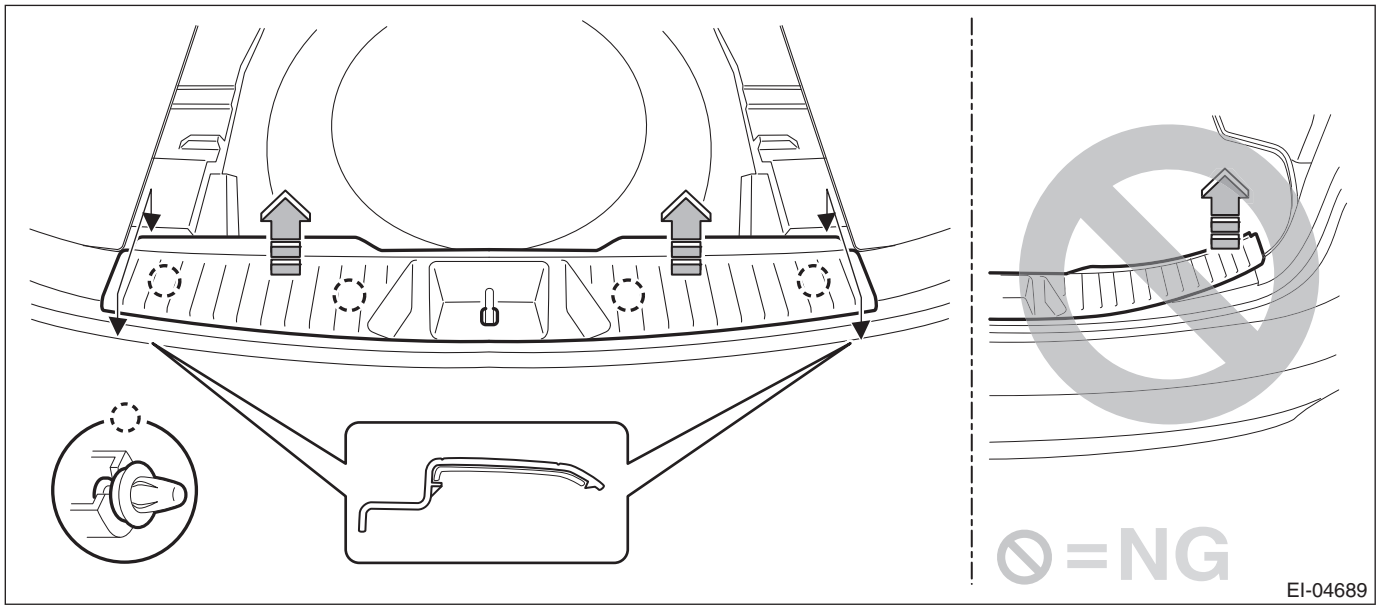
CAUTION:
- **Pulling with excessive force may damage the bracket.**
- **For models with Reverse Automatic Braking, be careful not to damage the connector located on the gray arrow position.**



(8) For models with Reverse Automatic Braking, disconnect the connector of the cord assembly - sonar.

4) Remove the energy absorber foam - rear.

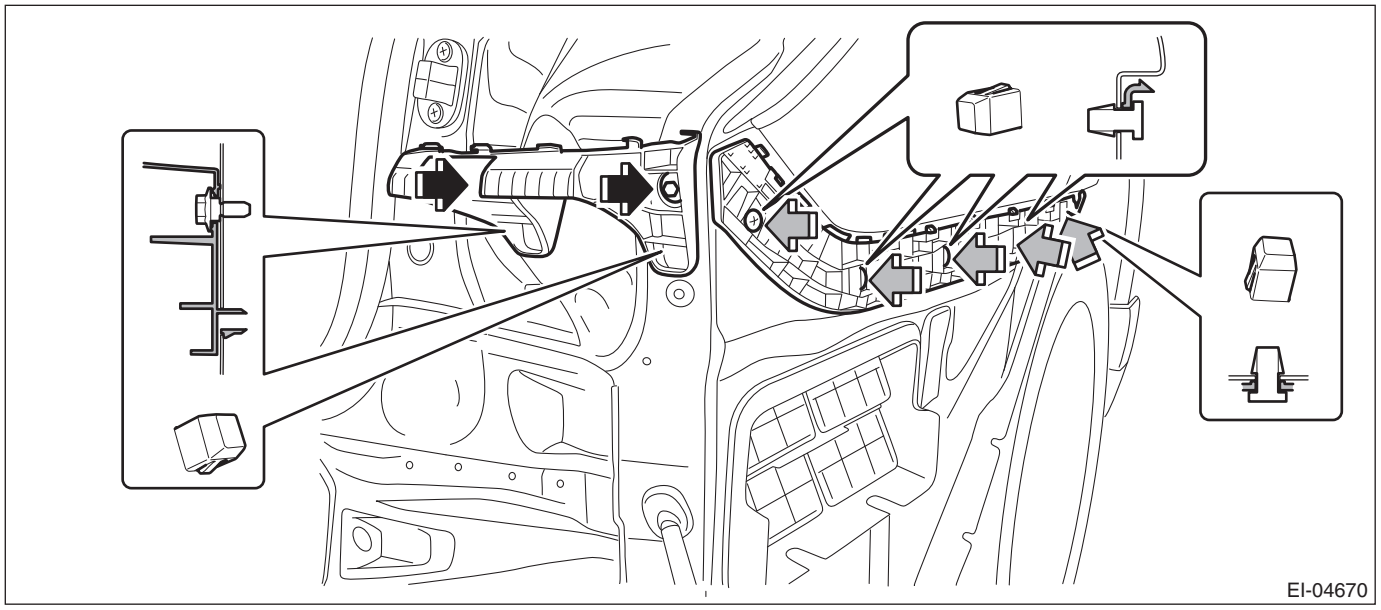
5) Remove the nuts, and remove the bumper beam COMPL - rear.



6) Remove bumper brackets.

(1) Remove the mat floor - rear, and remove the trim panel - rear skirt.

CAUTION:



- **Do not lift the trim panel - rear skirt from the edge. Doing so may damage the part.**
- **Do not reuse the clips. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**

(2) Remove the trim panel - rear apron. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>

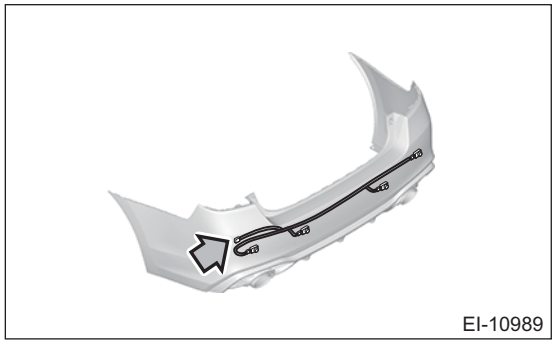
(3) Remove the bolts and screws.

(4) Detach the claw of the clip from the back side.

7) If removing the following parts, refer to “Sensor & Harness” of the “Reverse Automatic Braking” section. <Ref. to RAB-7, REMOVAL, Sensor and Harness.>
- Cord assembly - sonar
- Sonar - sensor

B: INSTALLATION

1. SEDAN MODEL



CAUTION:
Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) If installing the following parts, refer to “Sensor & Harness” of the “Reverse Automatic Braking” section. <Ref. to RAB-8, INSTALLATION, Sensor and Harness.>
- Sonar - sensor
- Cord assembly - sonar
- Holder - sonar

2) Install each bumper bracket.
3) Install the bumper beam COMPL - rear.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

4) Install the energy absorber foam - rear.
5) Install the bumper face - rear.

CAUTION:
For models with Reverse Automatic Braking, securely fasten the harness clamp (gray arrow) of the cord assembly - sonar.

EI-10989

NOTE:
If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.
6) Replace the light assembly gasket with a new part.
7) Install the light assembly - rear combination.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8) Install the trunk room mat.
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

CAUTION:
Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) If installing the following parts, refer to “Sensor & Harness” of the “Reverse Automatic Braking” section. <Ref. to RAB-8, INSTALLATION, Sensor and Harness.>
- Sonar - sensor
- Cord assembly - sonar
- Holder - sonar

2) Install each bumper bracket.
3) Install the bumper beam COMPL - rear.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
4) Install the energy absorber foam - rear.
5) Install the bumper face - rear.

CAUTION:
For models with Reverse Automatic Braking, securely fasten the harness clamp (gray arrow) of the cord assembly - sonar.

EI-10990

NOTE:
If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.

6) Install the light assembly - rear combination.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the trim panel - rear skirt, mat floor - rear and the trim panel - rear apron.
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

For removal procedure of bumper diffuser, refer to “Muffler” of “EXHAUST” section. (Model with bumper diffuser)

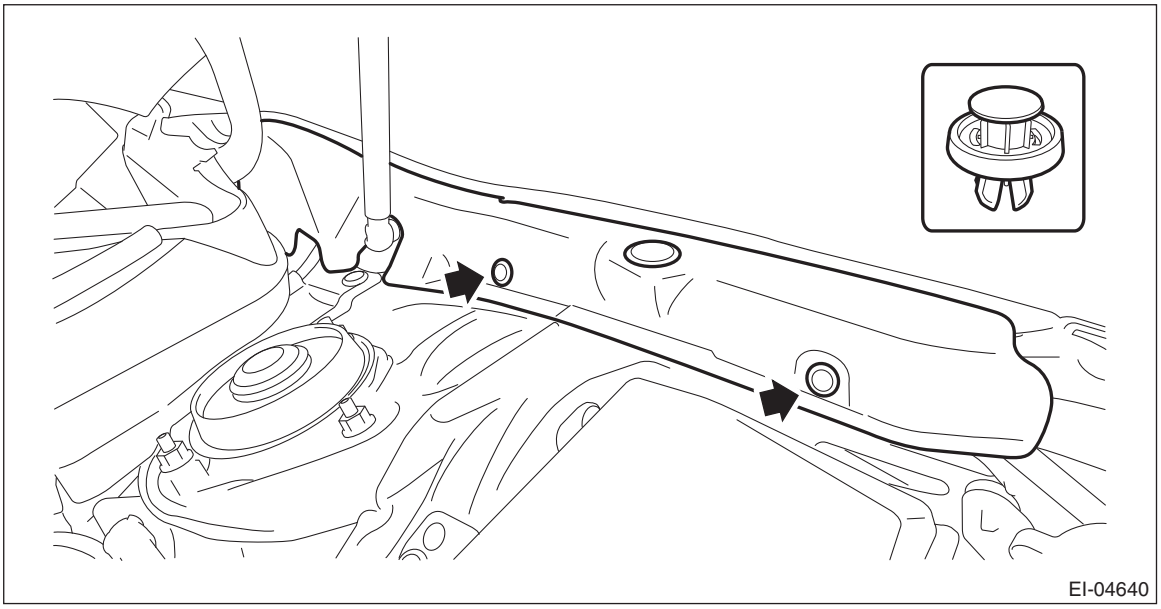
- H4 model: <Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- H6 model: <Ref. to EX(H6DO)-13, REMOVAL, Muffler.>

D: ASSEMBLY

For assembly procedure of bumper diffuser, refer to “Muffler” of “EXHAUST” section. (Model with bumper diffuser) (sedan model)

- H4 model: <Ref. to EX(H4DO)-20, REMOVAL, Muffler.>
- H6 model: <Ref. to EX(H6DO)-13, REMOVAL, Muffler.>

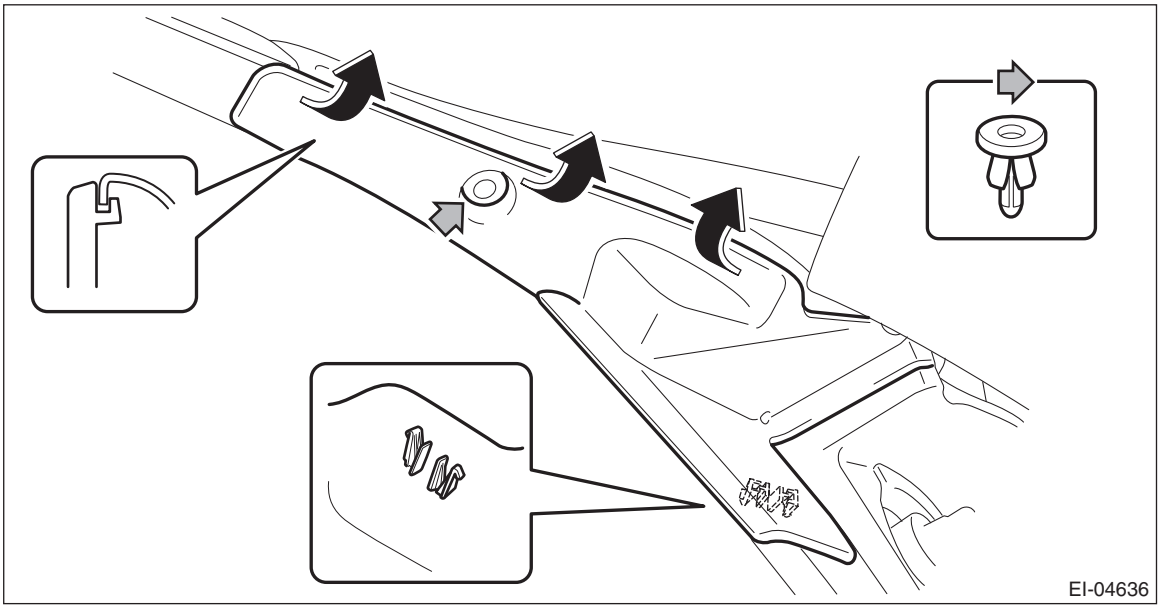
E: REPAIR



Refer to the description concerning repair in “Front Bumper” section. <Ref. to EI-38, REPAIR, Front Bumper.>

9. Cowl Panel

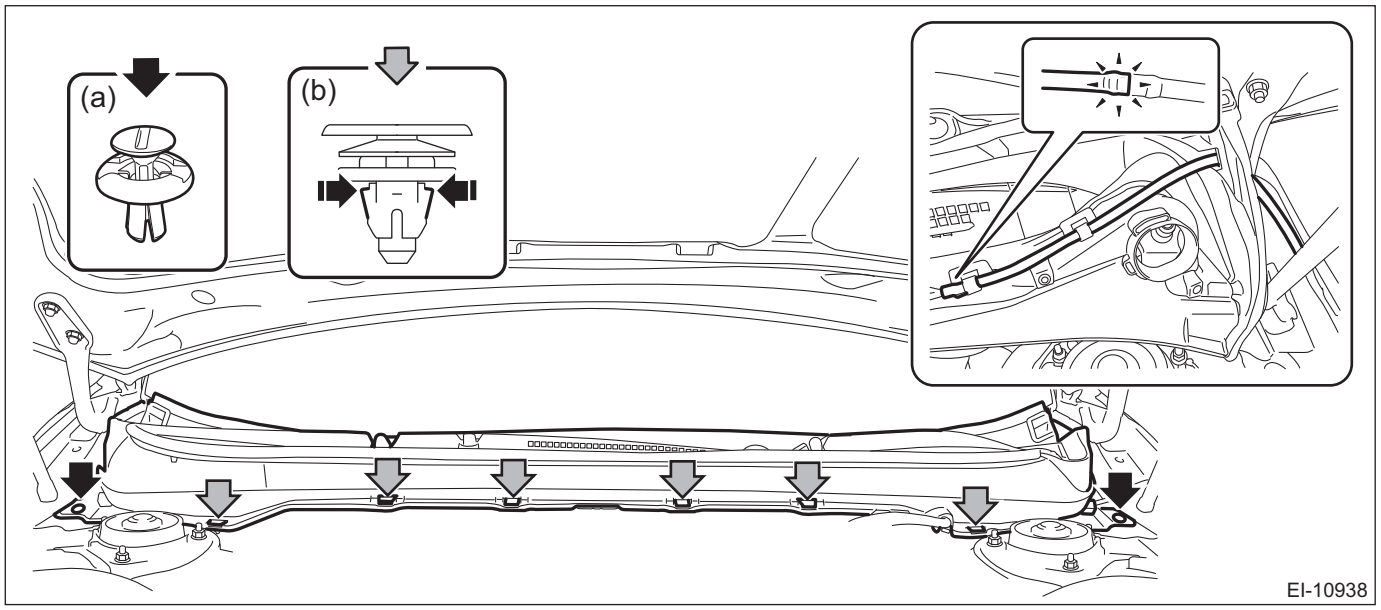
A: REMOVAL



1) Remove the arm assembly - windshield wiper. <Ref. to WW-29, REMOVAL, Front Wiper Arm.>
2) Remove the cover - front fender UPR.
   (1) Remove the clip.
   (2) Release the claws by pulling them forward, and remove the cover - front fender UPR.

CAUTION:
Forcibly removing the part may cause creases.

EI-04640

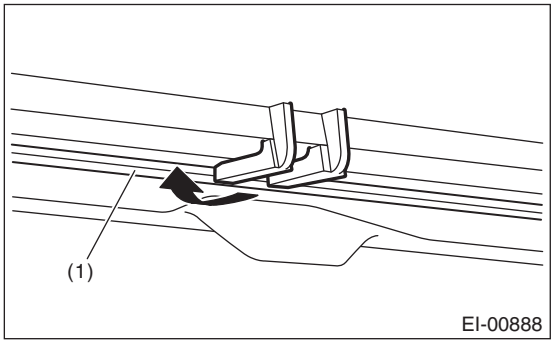


3) Remove the cowl panel - side.
   (1) Remove the clips.
   (2) Release the claws, and then remove the cowl panel - side.

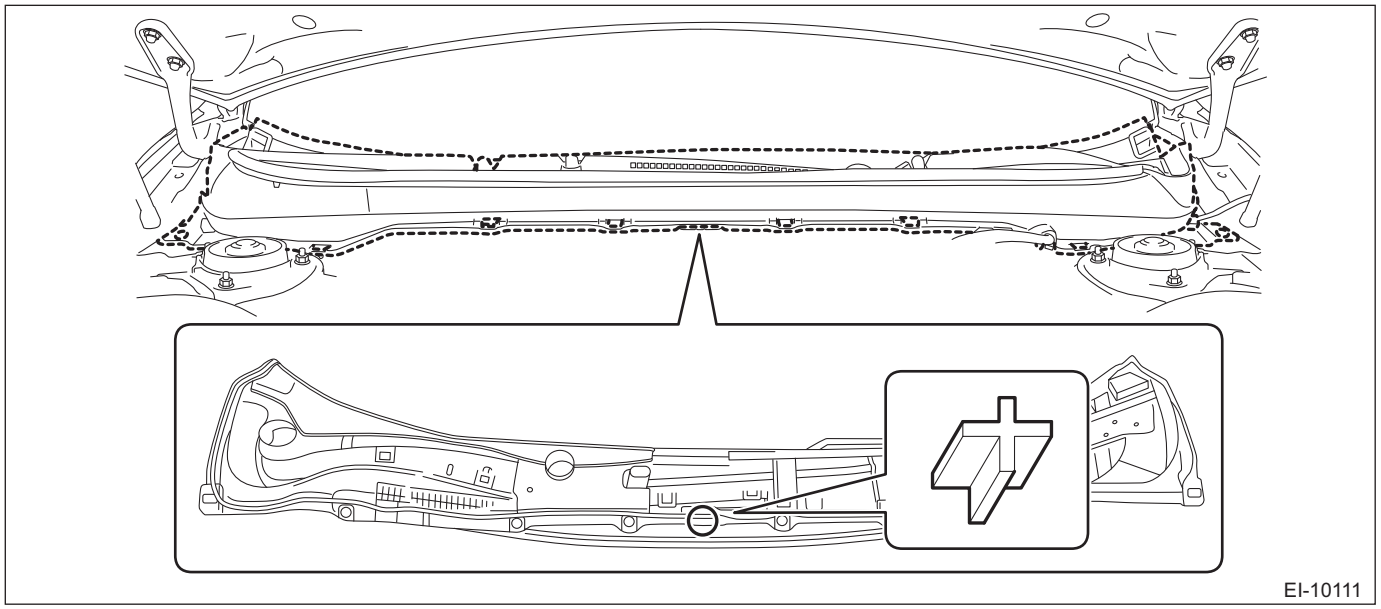
CAUTION:
Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.

EI-04636

4) Remove the cowl panel assembly.



CAUTION:
• Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
• When removing the clip (b), push the claws of the clip first.
Be careful not to apply excessive force when pulling the clip (b), as the clip may become damaged.
(1) Remove the clips (a).
(2) Check the direction of the clip (b), and push the claws from both sides to remove it.
(3) Remove the cowl panel assembly by pulling it out towards the front of the vehicle.
(4) Disconnect the washer hose.



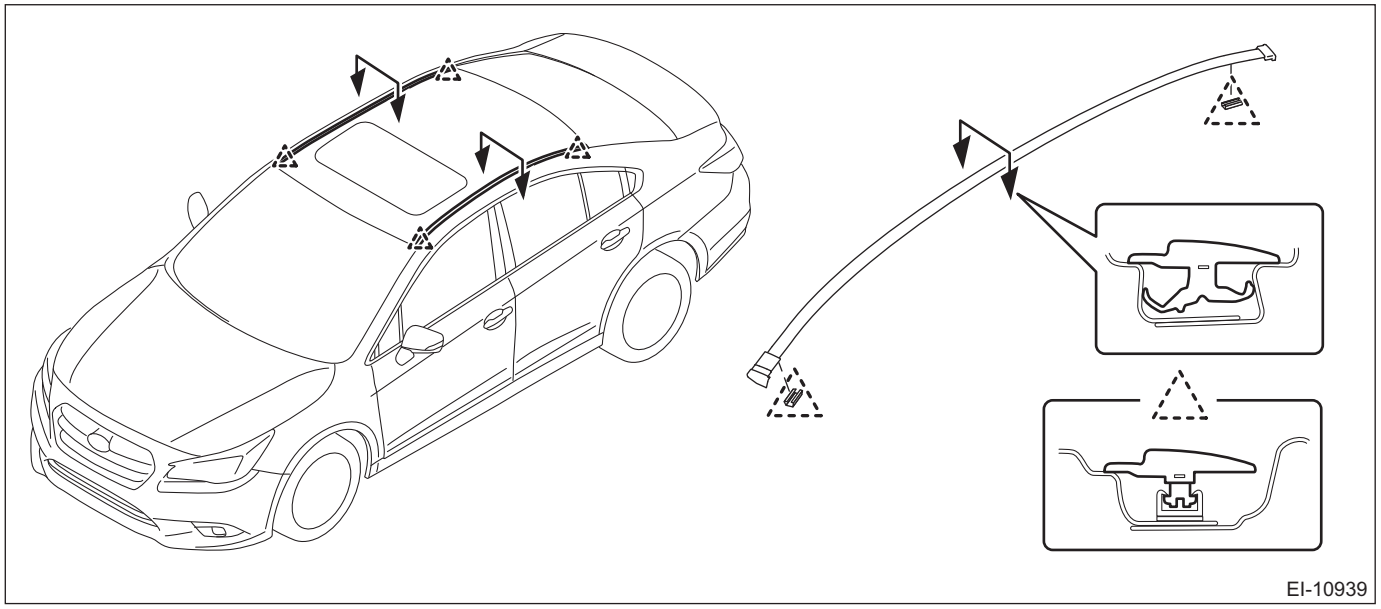
B: INSTALLATION

CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.
1) Install the cowl panel assembly.

CAUTION:
If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.
(1) Hook the claw of the cowl panel on the lower end (1) of the windshield glass.

(2) Align the center protrusion of the cowl panel assembly to the cutout portion of the vehicle side, then install the cowl panel assembly.

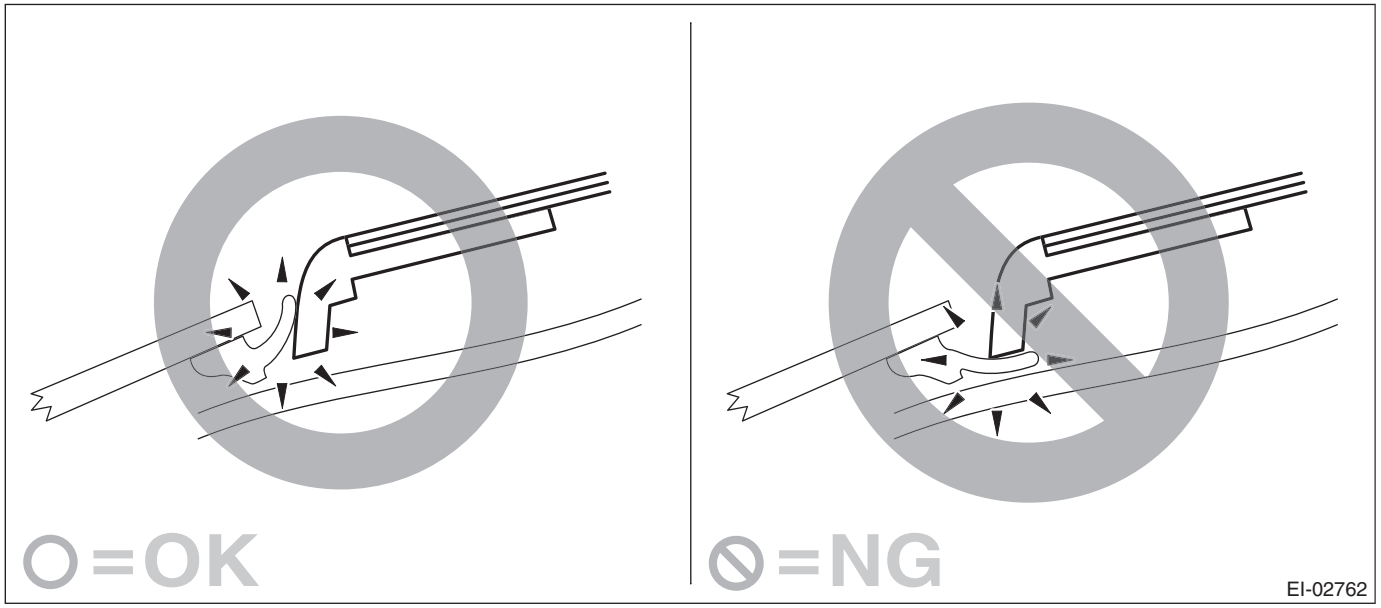
(3) Attach the clip and connect the washer hose.



2) Install the cowl panel - side.
3) Install the cover - front fender.
4) Install the arm assembly - windshield wiper. <Ref. to WW-29, INSTALLATION, Front Wiper Arm.>
5) If the washer nozzles have been removed from the cowl panel assembly, adjust the washer spray positions. <Ref. to WW-35, ADJUSTMENT, Front Washer Nozzle and Hose.>

10.Roof Molding

A: REMOVAL



CAUTION:
- **Be careful not to damage the body.**
- **Do not remove the clip - roof molding.**
- **If the clip - roof molding is damaged, replace it with a new clip.**

Release the clips, and remove the molding - roof.

B: INSTALLATION

CAUTION:
- **Always replace the clips that were damaged during removal of the molding - roof with new parts.**
- **While installing the molding - roof, be careful not to catch the glass molding with the tip of the front side and rear side.**

- **When installing the clip - roof molding, remove adhesive remaining on the installation surface of vehicle body side, then clean the body side.**
- **Use the primer provided with the adhesive. (Do not allow the primer to dry. It is two-liquid type adhesive though it is named as such.)**

1) Loosen the clip - roof molding by applying hot air, and let the thermal adhesive tape become hard to eliminate adhesive force.

CAUTION:
If it is possible that hot air from the dryer may cause paint surface discoloration, use the dryer with a narrow nozzle.

Preparation tool:
Industrial dryer

2) Remove the clip - roof molding with a longnose pliers.

CAUTION:
Be careful not to scratch the paint surface with the edge of clip - roof molding.

NOTE:
If it is hard to remove, soften the clip - roof molding again.

3) Remove adhesive remaining on the vehicle body side by scraping it with a plastic spatula while applying hot air using a dryer, and clean the area where adhesive has been removed.

4) Install the clip - roof molding.

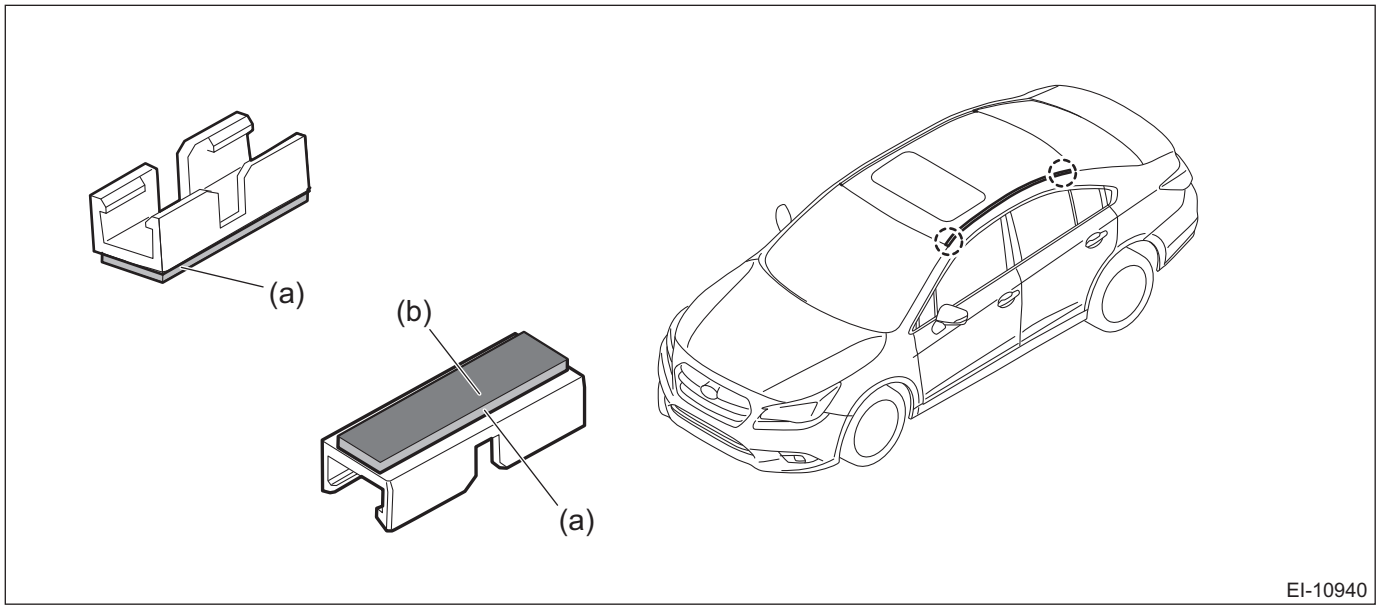
(1) Apply approx. 0.5 mm (0.02 in) thickness of adhesive evenly on the clip - roof molding.

CAUTION:
If sealant has been applied when the body was repaired, smoothen the sealant on the clip installation area.

Preparation items:
Adhesive: 3M DP-100 or equivalent

(2) Apply primer to the body side of the clip - roof molding installation area.

CAUTION:
Do not allow primer to dry.



Preparation items:
Primer: Item contained in 3M DP-100 or equivalent

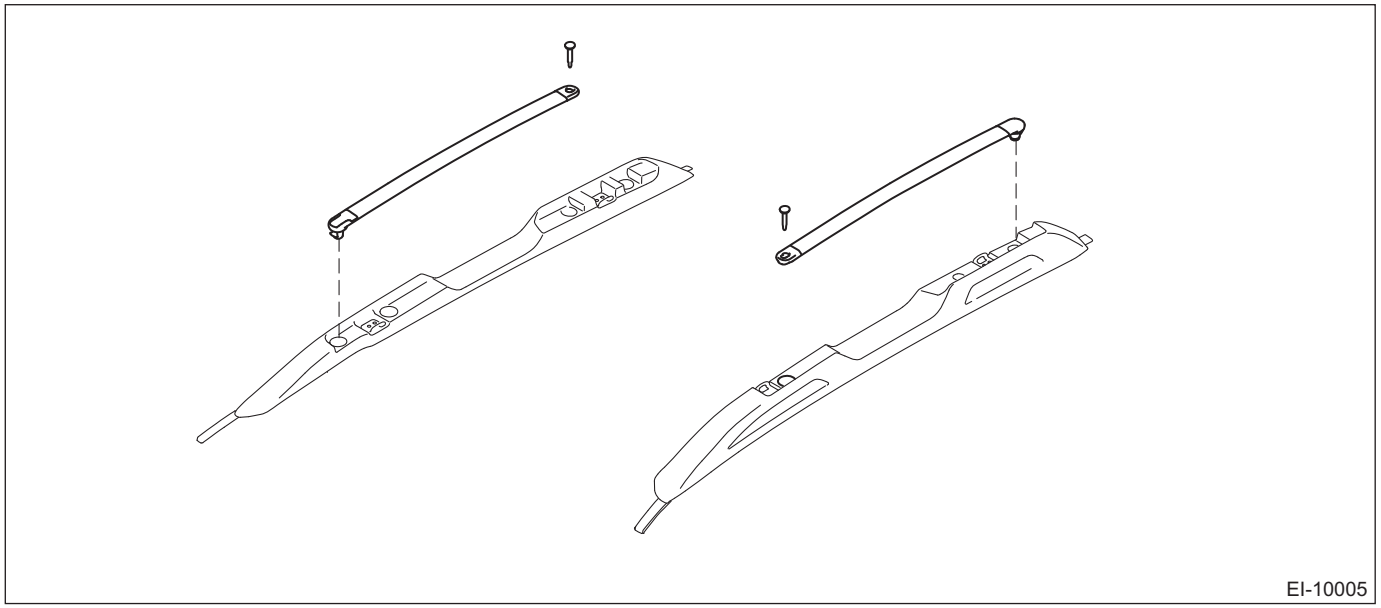
(3) After primer is applied, affix the clip according to the position shown in the figure.

CAUTION:
Install the molding - roof when 40 minutes or more have passed after the clip - roof molding was press-fit.

1. Gently rub the clip - roof molding to make adhesive and primer fit in.

2. Press-fit the clip - roof molding firmly.

(a) Thermal adhesive tape



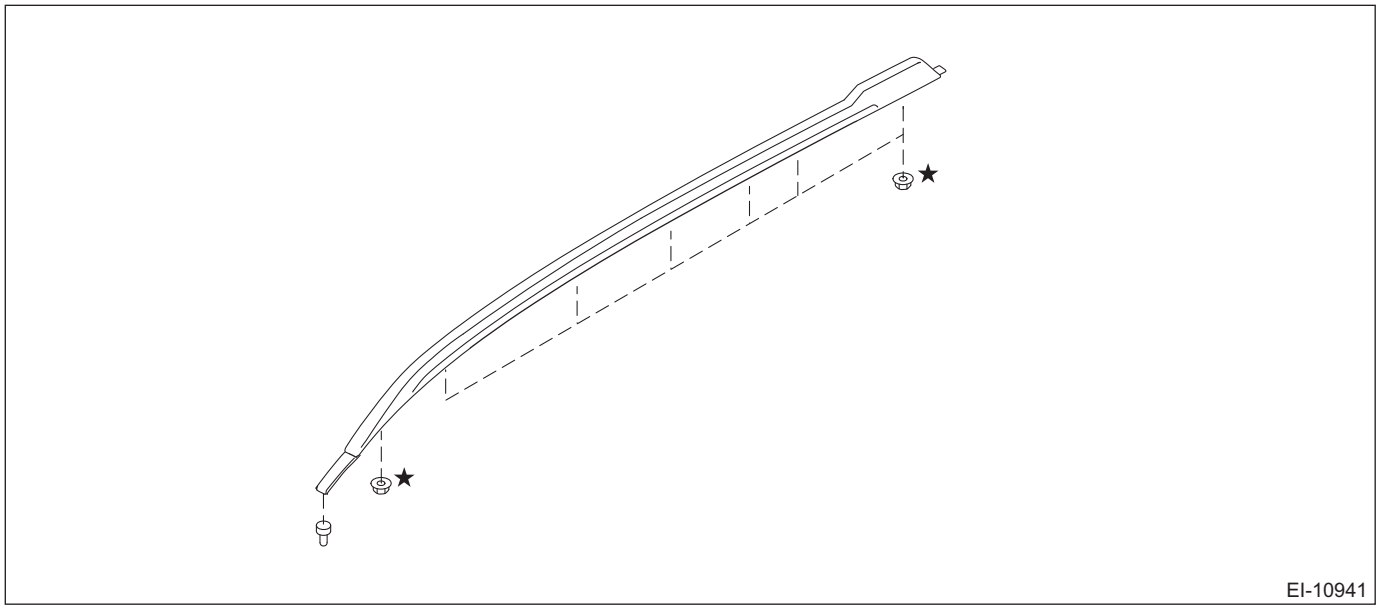
(b) Adhesive: Apply approx. 0.5 mm (0.02 in) thickness of adhesive evenly.

5) Install the molding - roof.
(1) Fit the molding - roof in the clip on the front side.
(2) While pressing the center of the molding - roof to the body side, fit the clip on the rear side.

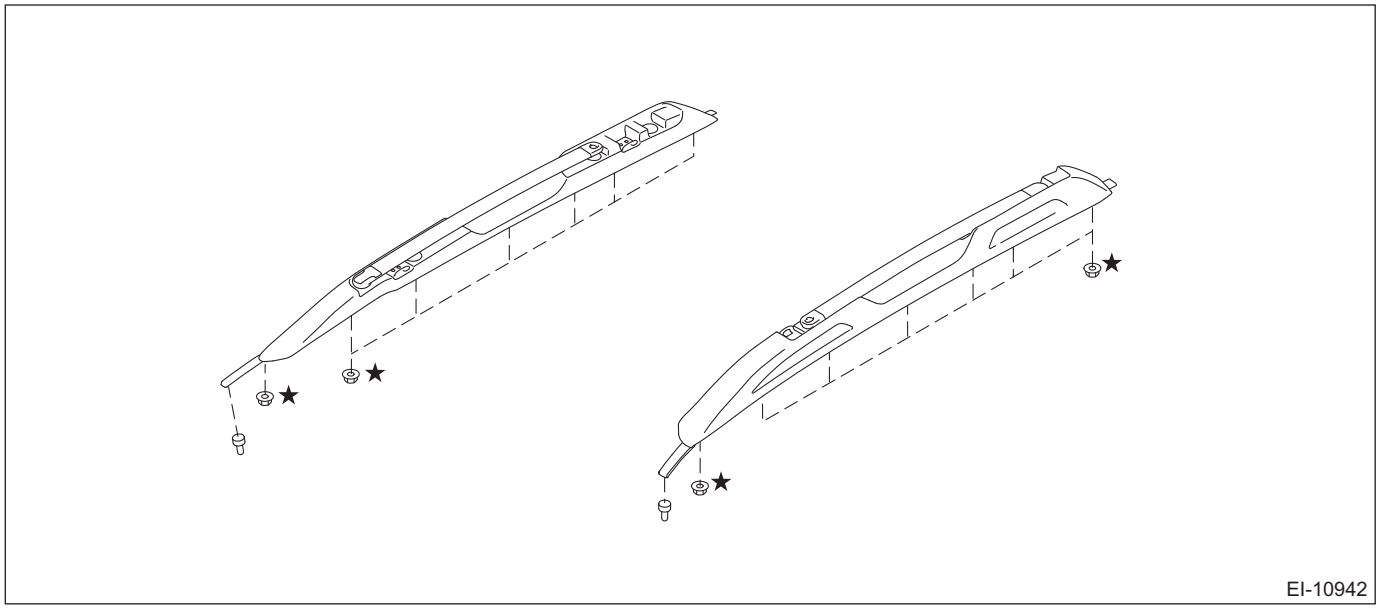
11.Roof Rail

A: REMOVAL

NOTE:
Remove the stopper bolt first when removing the crossbar assembly only.



CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the roof trim. <Ref. to EI-113, OUTBACK MODEL, REMOVAL, Roof Trim.>
3) Remove the curtain airbag module. <Ref. to AB-44, OUTBACK MODEL, REMOVAL, Curtain Airbag Module.>



CAUTION:
- **When removing and installing the curtain airbag module, observe the operation procedures in the "AIRBAG SYSTEM" section.**
- **Be careful not to damage the curtain airbag module during removal and installation.**

4) Remove the roof rail assembly.
   (1) Remove the nut.
   (2) Release the rivet on the tip portion, and remove the roof rail assembly.

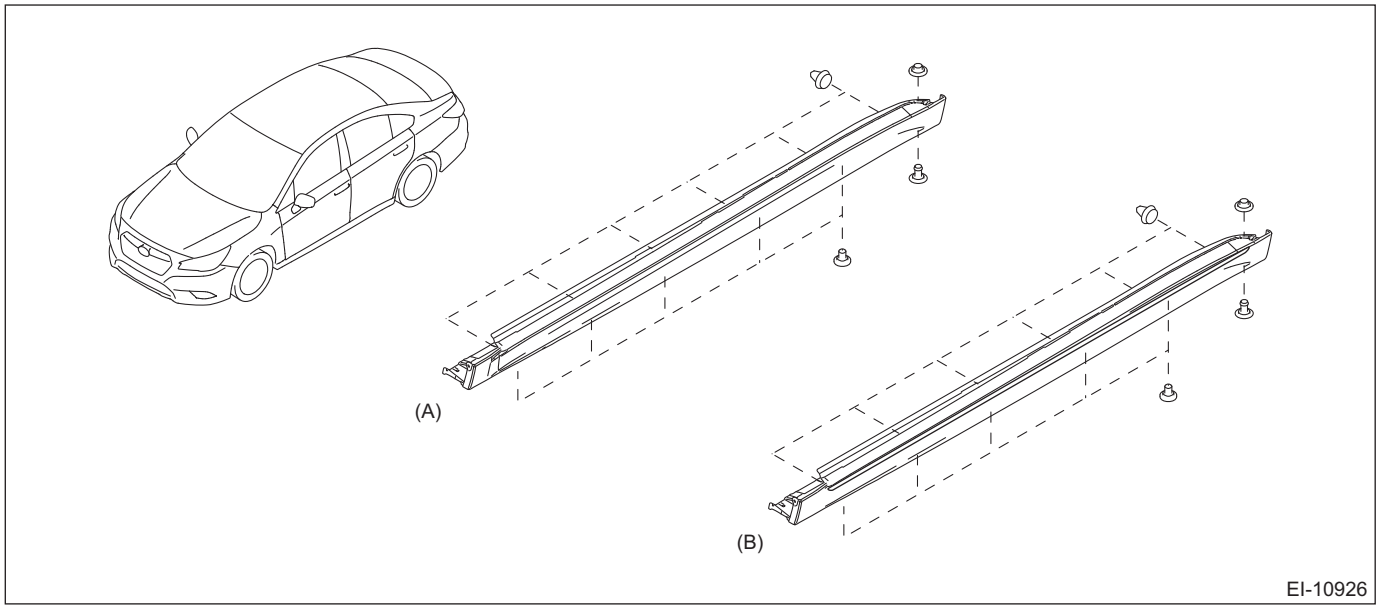
- Type A

- Type B

B: INSTALLATION

CAUTION:
• When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• When removing and installing the curtain airbag module, observe the operation procedures in the "AIRBAG SYSTEM" section.
• Do not reuse the clip securing the curtain airbag module.
• Be careful not to damage the curtain airbag module during removal and installation.
• When the roof rail is removed, always replace the stopper bolts and flange nuts with new parts. If the stopper bolts and flange nuts are reused, water leaks may occur.
1) Install the roof rail assembly.

Tightening torque:
Flange nut: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Stopper bolt M6: 8 N·m (0.8 kgf-m, 5.9 ft-lb)
Stopper bolt M8: 10 N·m (1 kgf-m, 7.4 ft-lb)

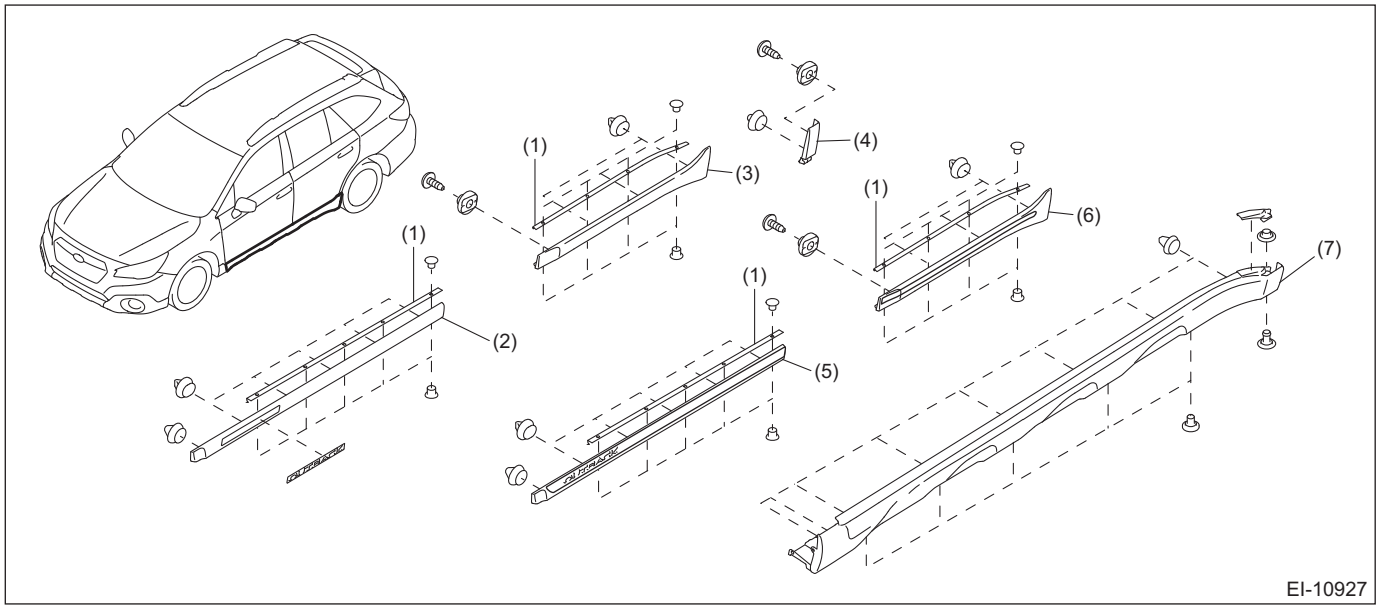


2) Install the curtain airbag module. <Ref. to AB-46, INSTALLATION, Curtain Airbag Module.>
3) Install the roof trim. <Ref. to EI-115, INSTALLATION, Roof Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

12.Side Garnish

A: REMOVAL

1. SEDAN MODEL



Remove the clips and detach the side garnish assembly.

(A) Type A (B) Type B

2. OUTBACK MODEL

1) Remove the clips and detach the side garnish assembly.

(1) Double-sided tape
(2) Garnish ASSY front door (Type A)
(3) Garnish ASSY rear door (Type A)
(4) Garnish ASSY rear quarter
(5) Garnish ASSY front door (Type B)
(6) Garnish ASSY rear door (Type B)
(7) Side sill garnish ASSY

2) Remove the garnish assembly - door and the garnish assembly - rear quarter.
(1) Attach the protective tape to the periphery of the garnish.

(2) Heat the garnish section for 3 — 5 minutes at 40°C — 60°C (104°F — 140°F) using a heat light or a drier.

CAUTION:
Be careful not to burn yourself.

(3) Separate the bonded part of double sided tape with a nylon cord or equivalent.
(4) Release the clips, and remove the garnish assembly.

B: INSTALLATION

1. SEDAN MODEL

CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.

Install the side garnish assembly.

2. OUTBACK MODEL

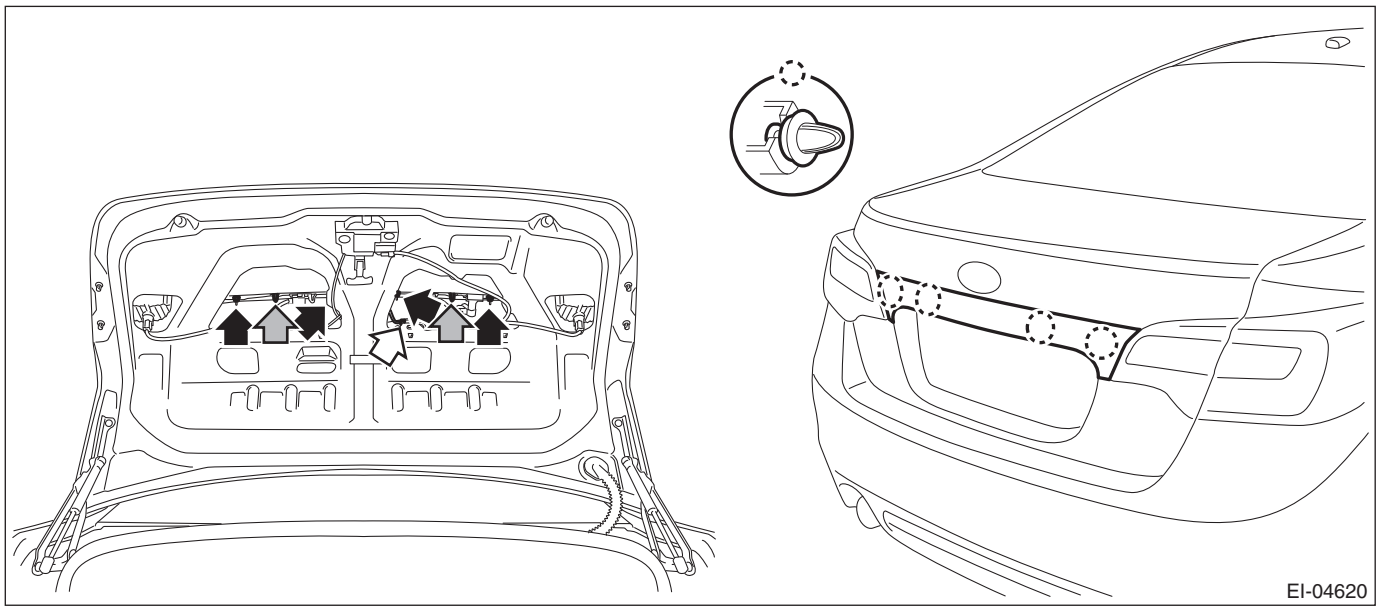
CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.

1) Install the side garnish assembly.
2) Install the garnish assembly - door and the garnish assembly - rear quarter.
   (1) Remove the double-sided tape remaining on the vehicle body, then clean the adhesive surface.

CAUTION:
If even a slight amount of double-sided tape remains on the adhesive surface, it may lead to improper adhesion.

(2) Heat the vehicle body and the garnish for 1 — 3 minutes using a heat light or a drier.

CAUTION:
Be careful not to burn yourself.



(3) Apply primer to the installation surfaces of garnish, and wait till the primer dries.
(4) Attach new double-sided tape on garnish.
(5) Peel off the backing papers, engage the clips, and adhere the garnish assembly to the vehicle body.

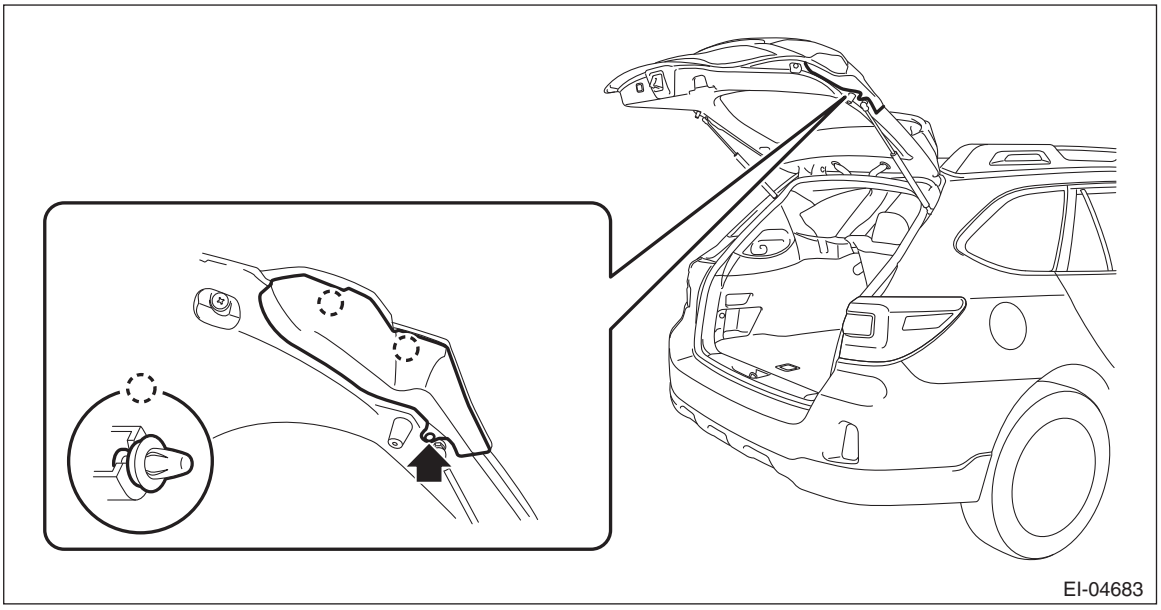
CAUTION:
Press-fit the garnish assembly to adhere securely.

13.Trunk Lid Garnish

A: REMOVAL

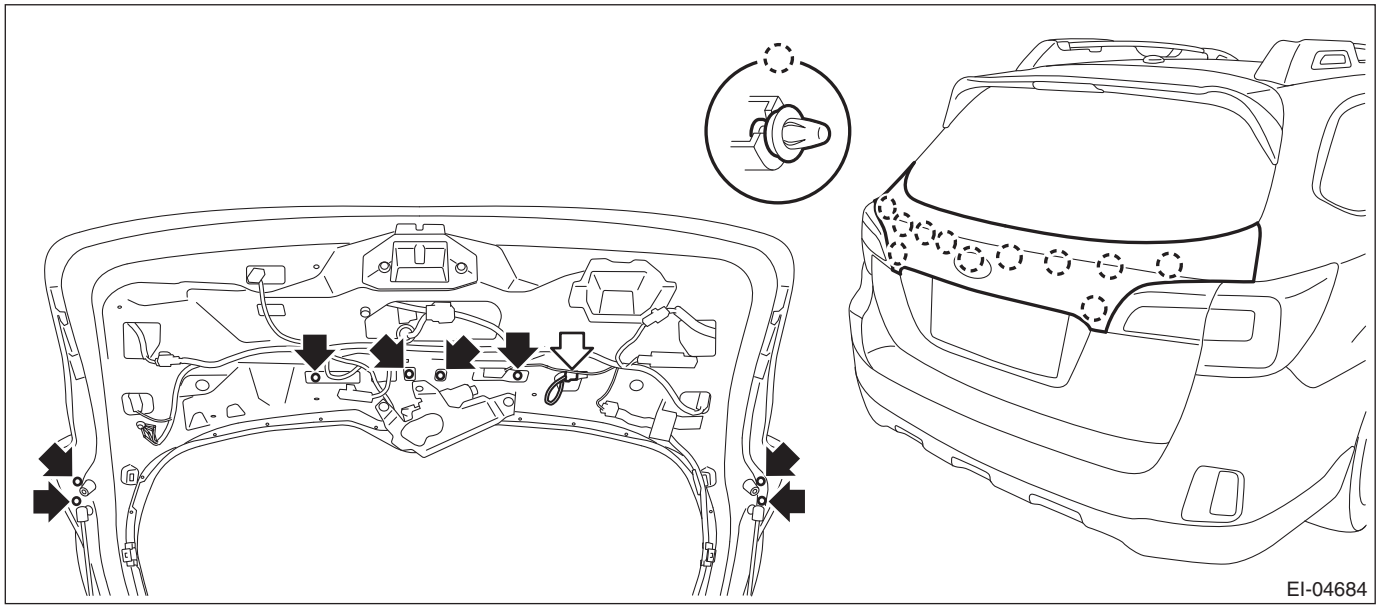
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk.
   (1) Remove the nut.
   (2) Disconnect the clips and connectors, and remove the garnish - trunk.

B: INSTALLATION



CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.
1) Install the garnish - trunk.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the trim panel - trunk lid.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



14.Rear Gate Garnish

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear gate trim. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate.
   (1) Remove the bolts and clips, and remove the cover - rear gate RH and LH.

EI-04683

   (2) Remove the power rear gate touch sensor LWR. (Model with power rear gate) <Ref. to PRG-17, REMOVAL, Power Rear Gate Touch Sensor.>
   (3) Disconnect the request switch harness connector.
   (4) Remove the nuts.
   (5) Remove the clips and remove the garnish assembly - rear gate.

EI-04684

B: INSTALLATION

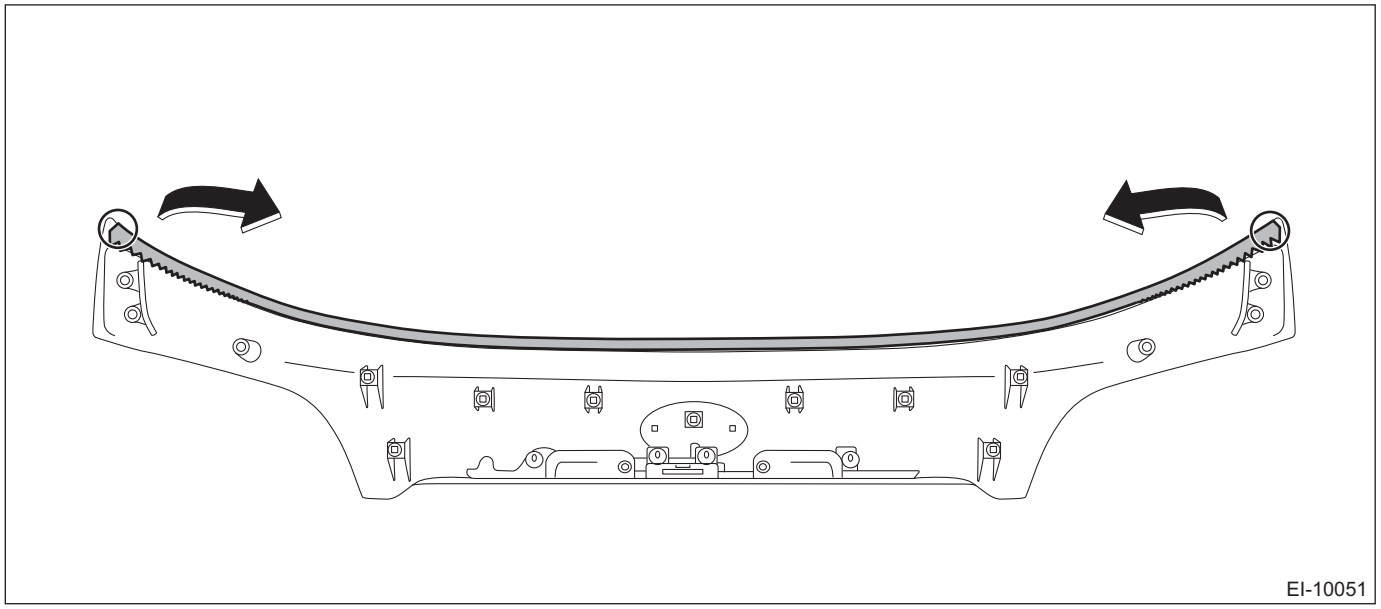
CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.
1) Install the garnish assembly - rear gate.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the cover - rear gate.

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)
3) Install the power rear gate touch sensor LWR. (Model with power rear gate) <Ref. to PRG-18, INSTALLATION, Power Rear Gate Touch Sensor.>
4) Install the rear gate trim.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

1) Remove the protector UPR. <Ref. to EI-64, REPLACEMENT, Rear Gate Garnish.>
2) Remove the button - opener rear gate. <Ref. to SL-47, REMOVAL, Rear Gate Opener Button.>
3) Remove the garnish LWR as required.



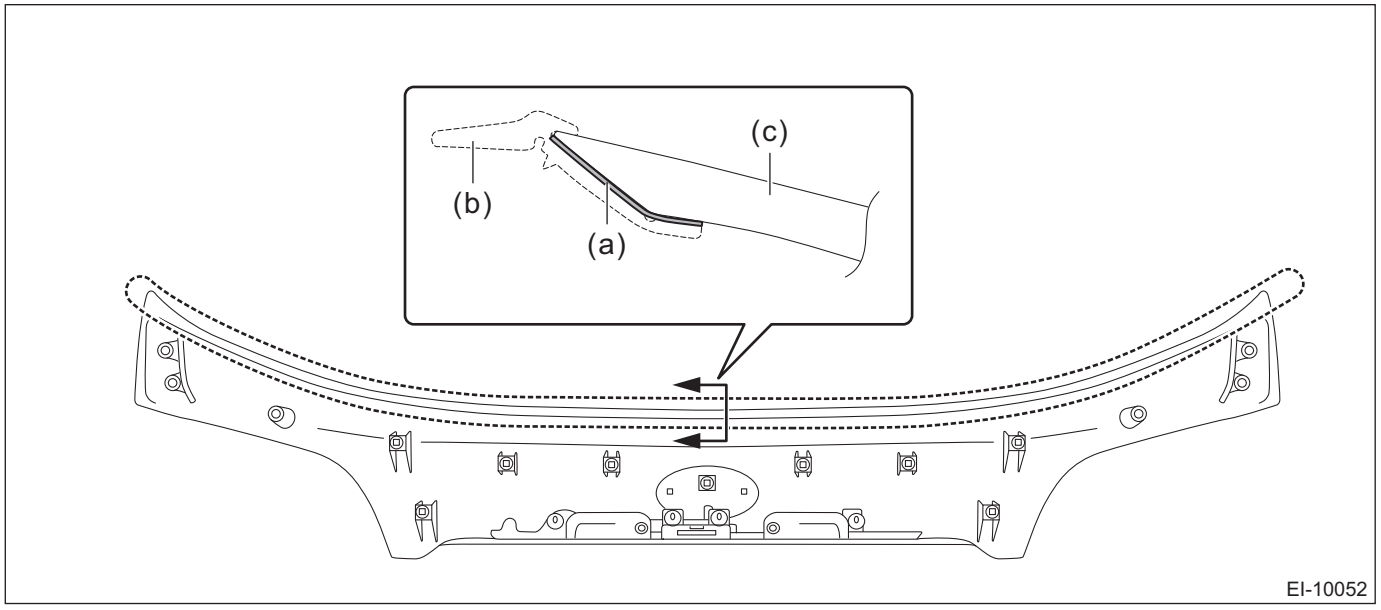
D: ASSEMBLY

1) Install the garnish LWR.
2) Install the switch - opener rear gate. <Ref. to SL-47, INSTALLATION, Rear Gate Opener Button.>
3) Install the protector UPR.

E: REPLACEMENT

1) Slowly remove the protector UPR from the end of right and left protectors.

CAUTION:
- **Be careful not to damage the surface of garnish assembly during operation.**
- **Do not reuse the protector UPR.**



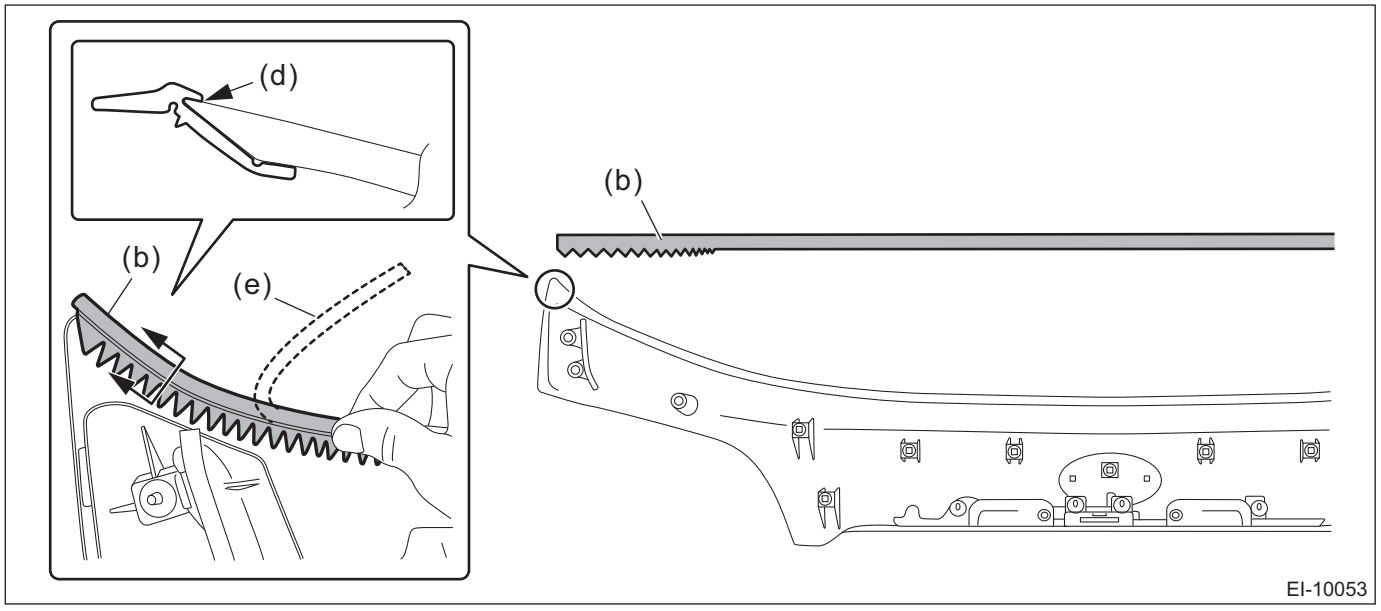
2) Remove the double-sided tape remaining on the garnish side, then clean the adhesive surface.

CAUTION:
- **If even a slight amount of double-sided tape remains on the adhesive surface, it may lead to improper adhesion.**

Completely remove the double-sided tape from the overlapped portion with the end of inner garnish, where the double-sided tape easily remains.
- **Do not use any solvents that may damage the garnish coating.**

3) Degrease the mounting surface of protector with appropriate cleaning solvent or alcohol.
4) Apply primer to the mounting surfaces of garnish.

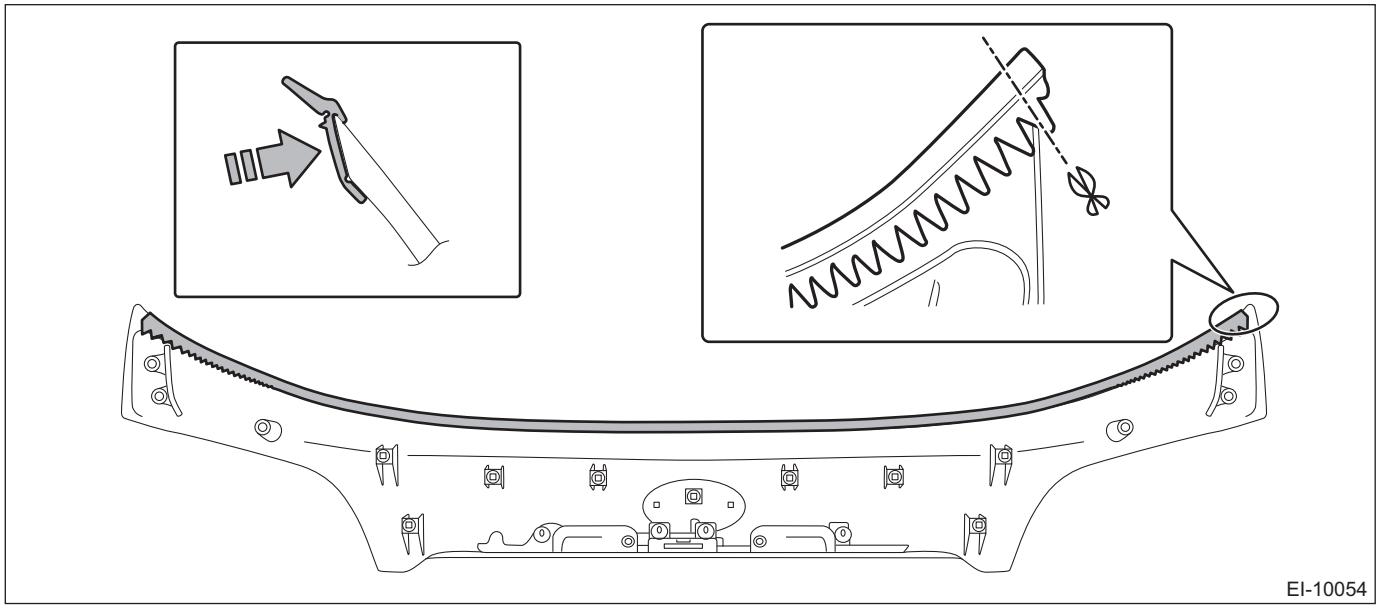
Preparation items:
Primer: 3M K-520, K-500 or equivalent



(a) Application of primer (b) Protector UPR (c) Garnish ASSY

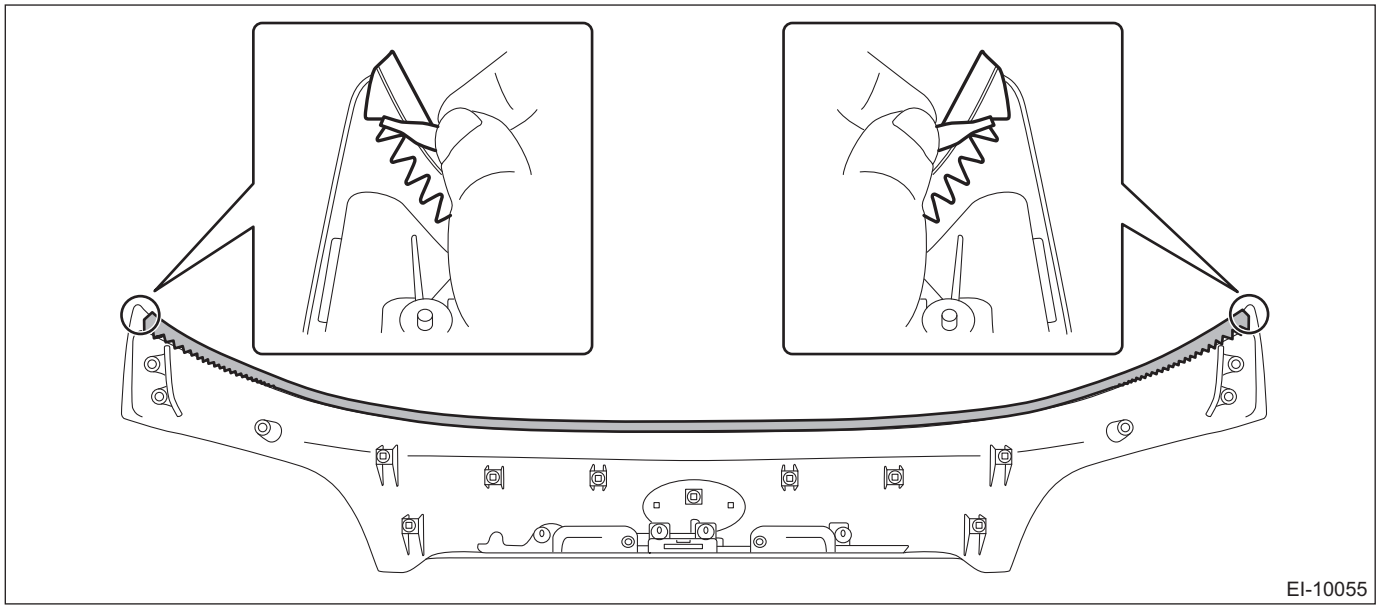
5) Affix the protector UPR.

CAUTION:
Affix so that there should be no gap (d) between garnish assembly and protector UPR.



(1) Confirm that primer is dried, and check the protector UPR installation conditions.
(2) Remove a part of backing sheet (e) from the right end of protector UPR (left side viewing from garnish assembly reverse side), and affix by aligning the both ends of protector and garnish.

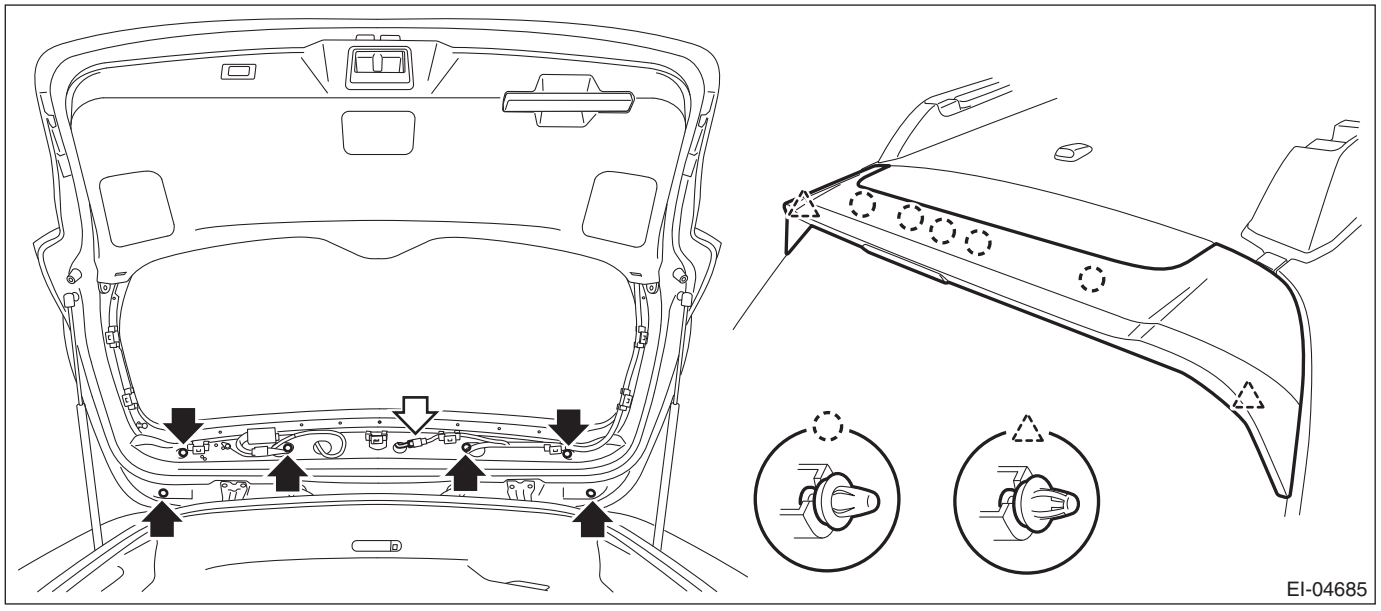
(b) Protector UPR (d) Gap between garnish assembly and protector UPR (e) Backing sheet



(3) After this, affix the protector UPR securely while peeling it away from the backing sheet.

NOTE:
If there is an extra end of protector, cut the extra portion projecting from the garnish assembly after aligning the cutting positions and angles at both sides with the end shape.

(4) Press-fit the protector UPR, and then apply instant glue to both ends of protector UPR to affix.



CAUTION:
Be careful not to spread instant glue over the design face.

15.Roof Spoiler

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate UPR and the trim panel - rear gate pillar side. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the drip - rear gate. (Except for model with power rear gate)
4) Remove the roof spoiler.
   (1) Disconnect the connector of high-mounted stop light.
   (2) Remove the bolts and nuts.
   (3) Remove the clips, and remove the roof spoiler.

B: INSTALLATION

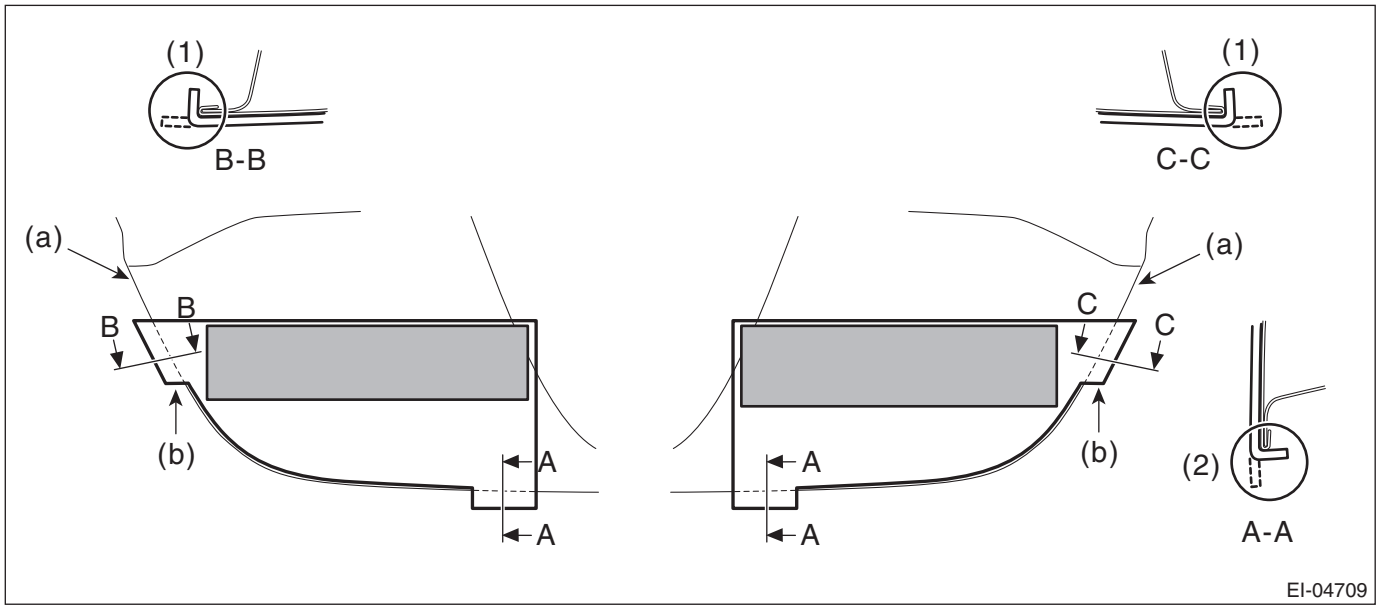
CAUTION:
• Make sure that packings are attached on the clips of the roof spoiler assembly. If a gasket is not attached, water leakage may occur.
• Connect the connector of the light assembly - high-mounted securely.
1) Install the roof spoiler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the drip - rear gate. (Except for model with power rear gate)
3) Install the trim panel - rear gate UPR and the trim panel - rear gate pillar side. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

16.Heat Shield Cover

A: NOTE

Refer to “EXHAUST” section for removal and installation procedure of the heat shield cover.



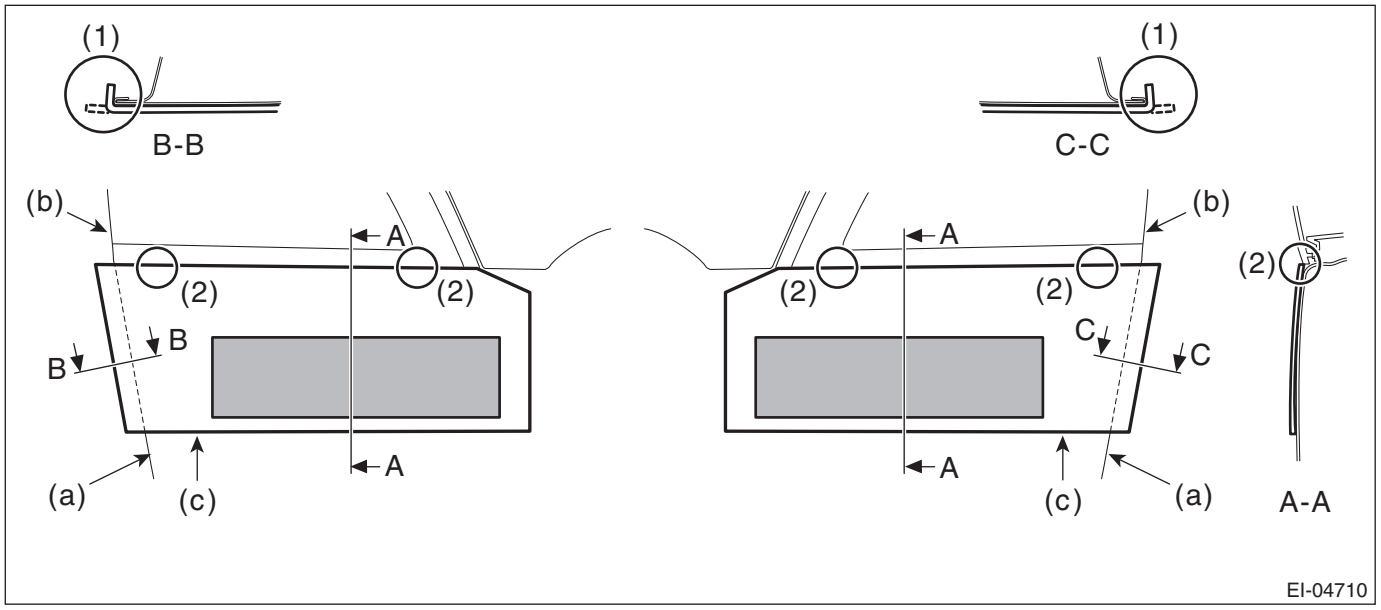
17.Ornament

A: INSTALLATION

1. LETTER MARK

Align the application tape to the following position, and adhere the letter mark.

- Sedan model



(a) Trunk lid panel end

(b) Application tape end

(1) Bend the end of the application tape to fit along the end of the trunk lid panel.

(2) Bend the end of the application tape to fit along the end of the trunk lid panel.

- OUTBACK model

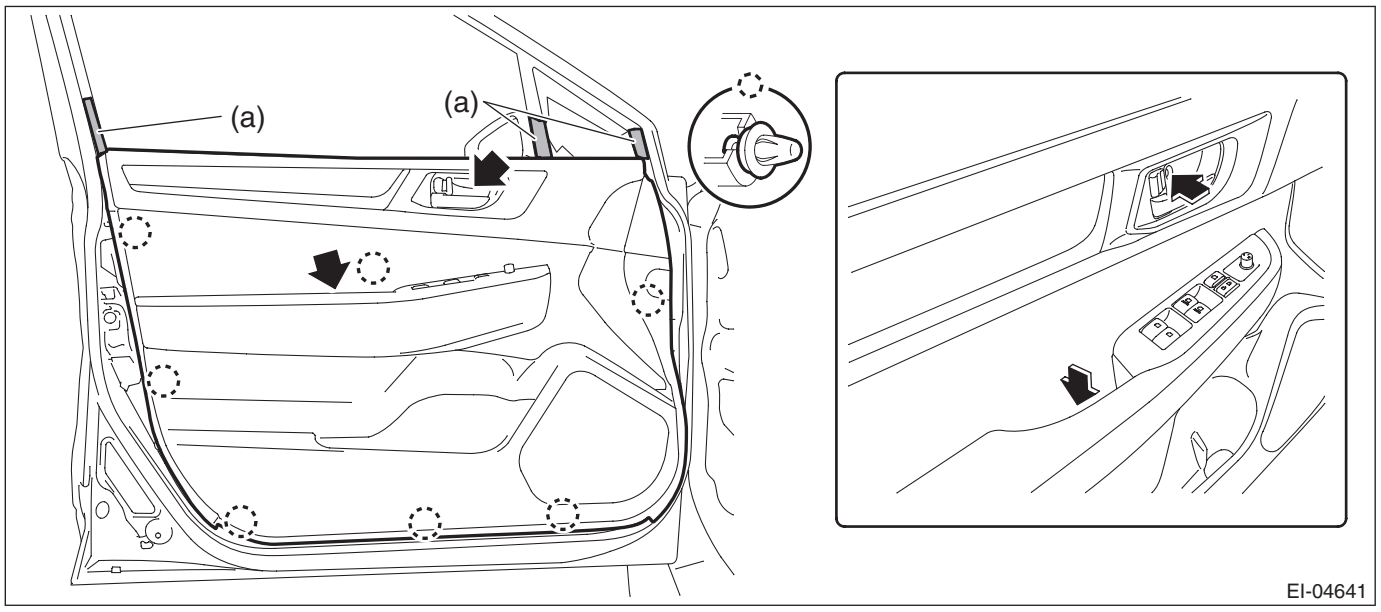
(a) End of rear gate panel

(b) End of rear finisher light

(c) Application tape end

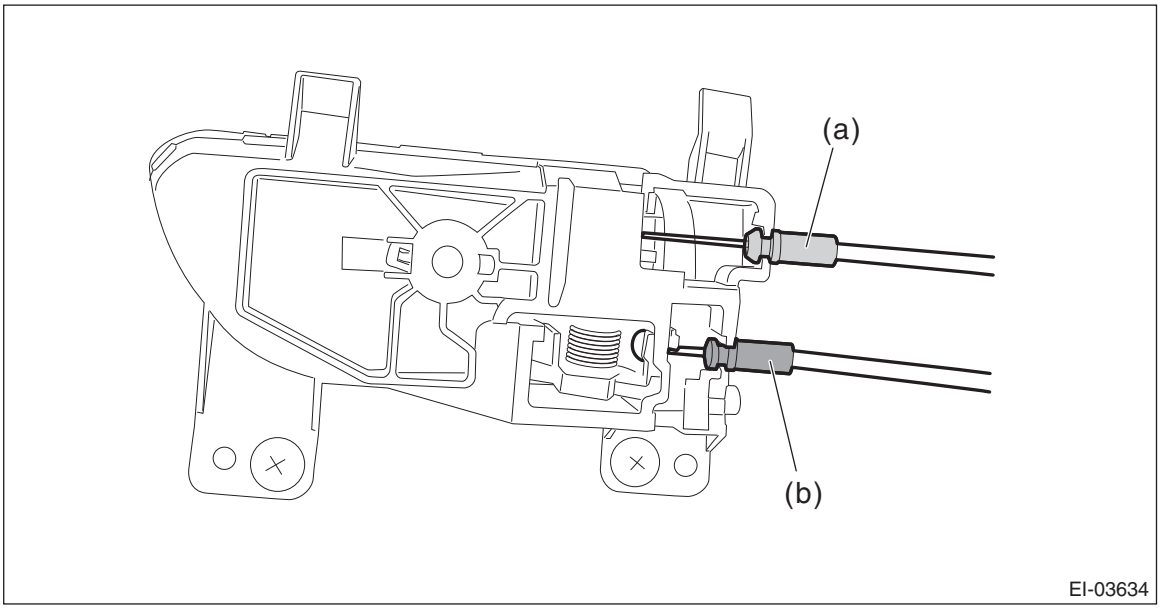
(1) Bend the end of the application tape to fit along the end of the rear gate panel.

(2) Align the top end of application tape to the bottom of the rear finisher light.



18.Door Trim

A: REMOVAL



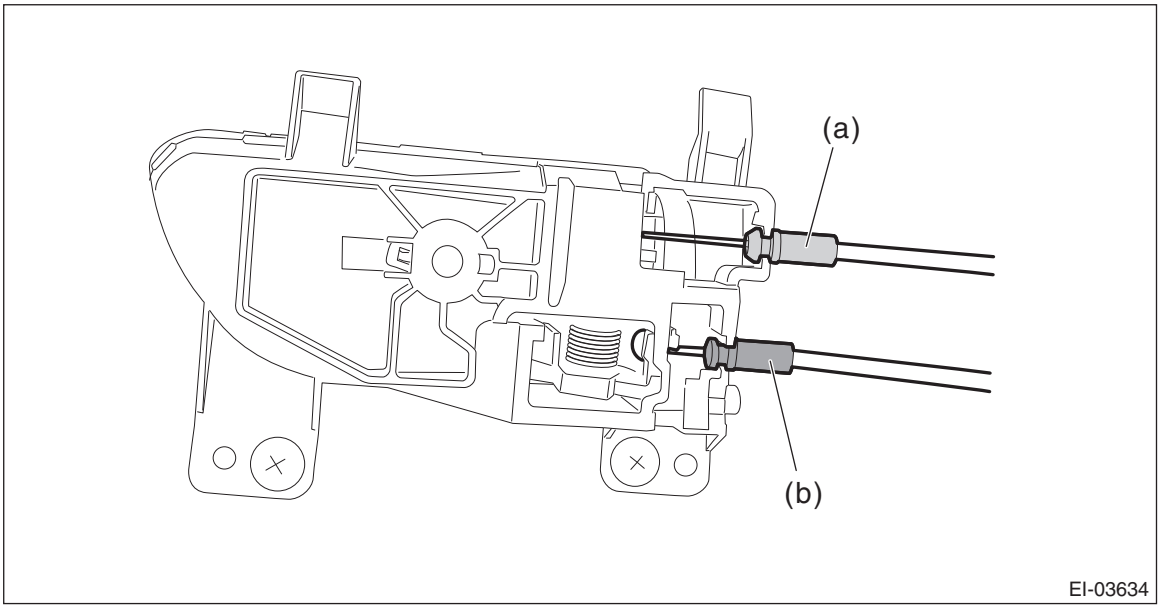
1. FRONT DOOR

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door.
   (1) Attach the protective tape (a).
   (2) Open the cover and remove the screw.
   (3) Remove the clips, and remove the trim panel - front door from the panel assembly - front door.

   (4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

   (5) Disconnect the harness connector and remove the trim panel - front door.
3) Remove each part as required.
- Remote assembly - door: <Ref. to SL-32, REMOVAL, Front Inner Remote.>



• Switch - power window main: <Ref. to GW-13, MAIN SWITCH, REMOVAL, Power Window Control Switch.>
• Weather strip - door INN: <Ref. to EI-73, DISASSEMBLY, Door Trim.>

2. REAR DOOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door.
   (1) Attach the protective tape (a).
   (2) Open the cover and remove the screw.
   (3) Remove the clips, and remove the trim panel - rear door from the panel assembly - rear door.

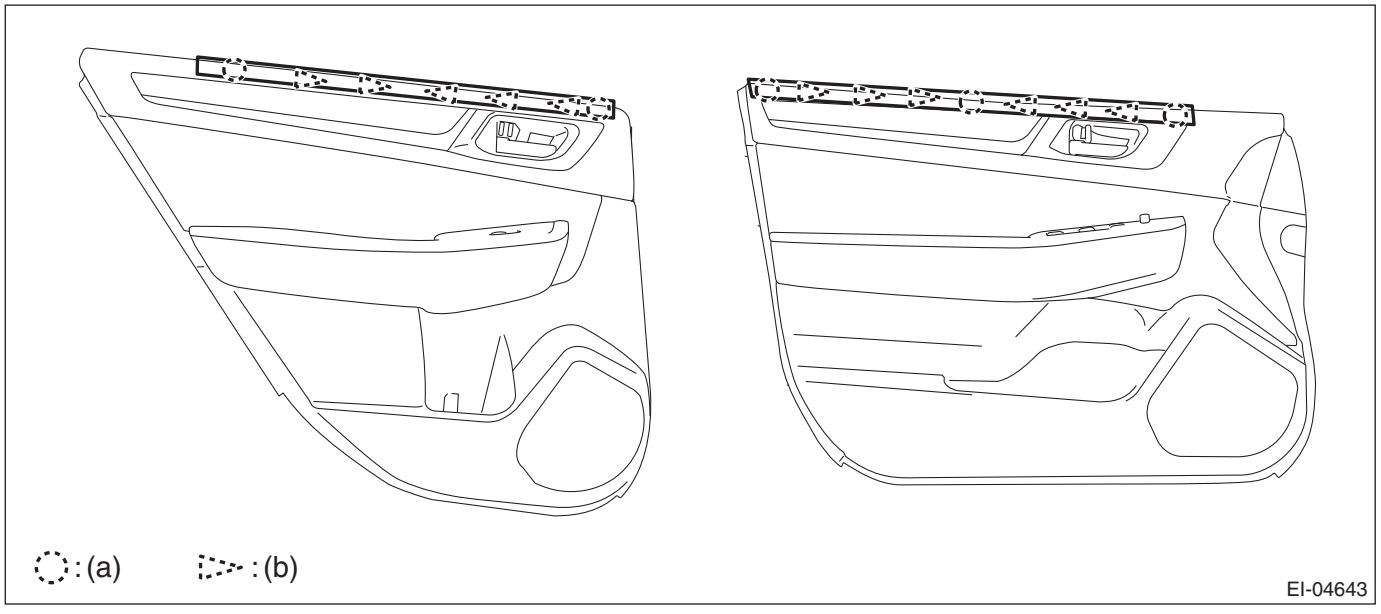
   (4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

   (5) Disconnect the harness connector and remove the trim panel - rear door.
3) Remove each part as required.
• Remote assembly - door: <Ref. to SL-40, REMOVAL, Rear Inner Remote.>
• Switch - power window sub: <Ref. to GW-14, SUB-SWITCH, REMOVAL, Power Window Control Switch.>
• Weather strip - door INN: <Ref. to EI-73, DISASSEMBLY, Door Trim.>

B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
2) Install the removed parts to the trim panel - door.
3) Install the trim panel - door.

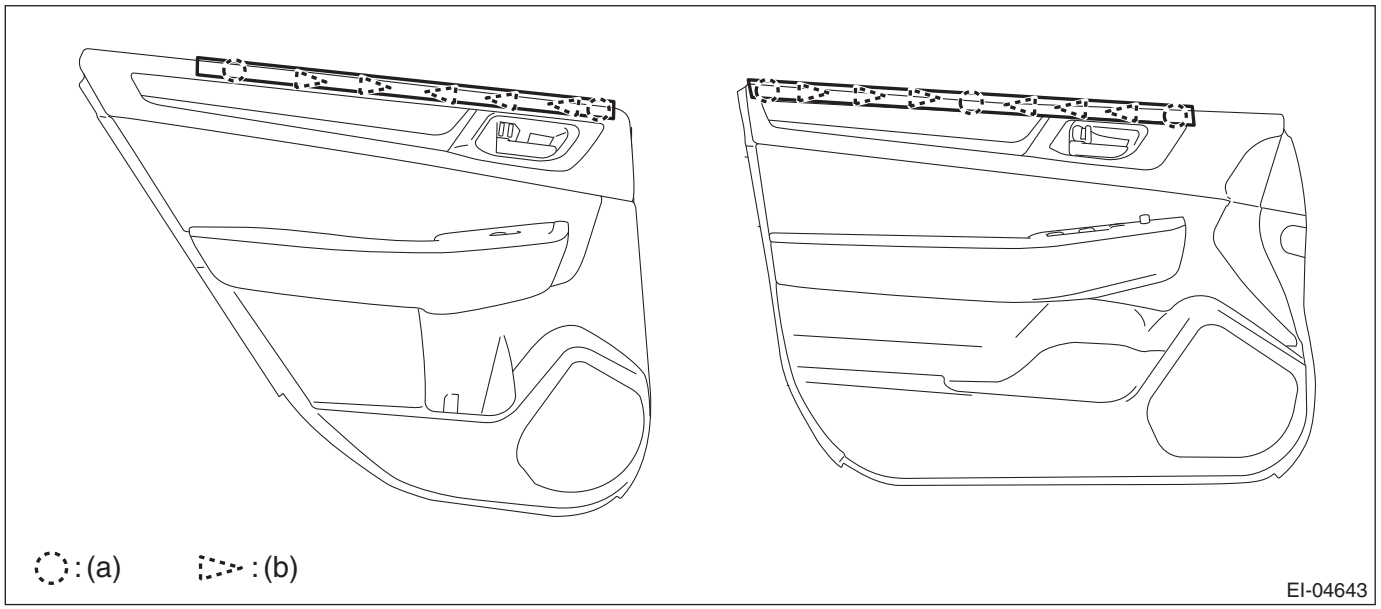


NOTE:
Attach the door lock cable (a - end ball: small) to the upper side, and attach the door open cable (b - end ball: large) to the lower side.

4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

1) Remove the trim panel - door.
2) Disengage the rivets and claws, and remove the weather strip - door INN from the trim panel - door.



(a) Rivet (b) Claw

NOTE:
Remove the rivets with a rivet cutter or nipper, etc.

D: ASSEMBLY

1) Bend the claws while pushing the weather strip - door INN against the trim panel - door so that there is no gap.

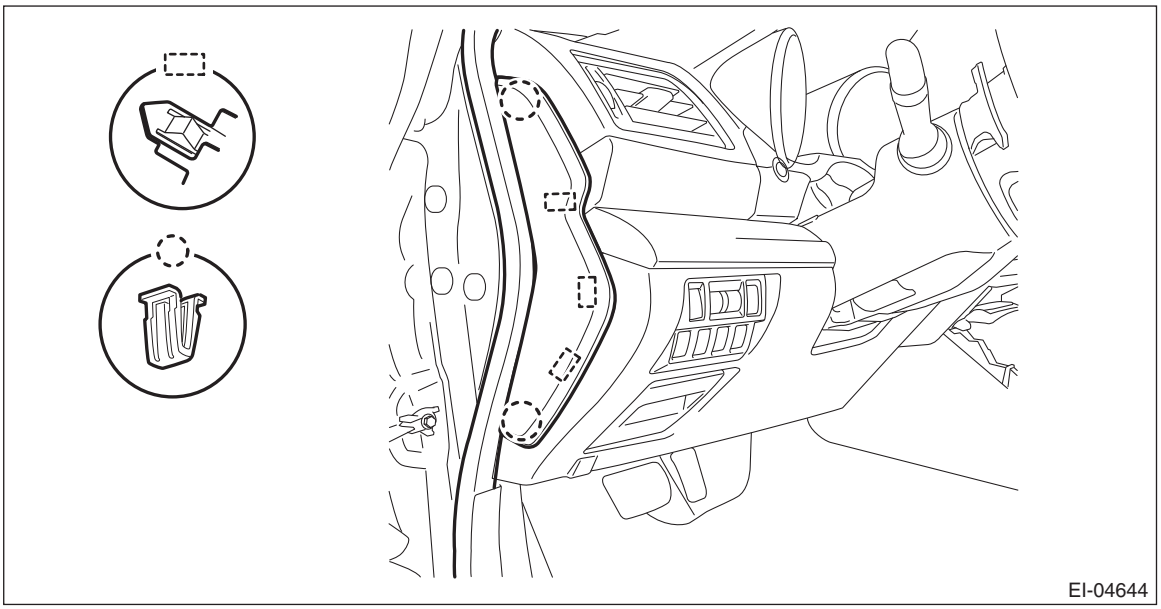
CAUTION:
Beware of the direction of folding the claws.

(a) Rivet (b) Direction of folding claws

2) Install the rivet, and apply unwoven cloth tape over the rivet crimped section.

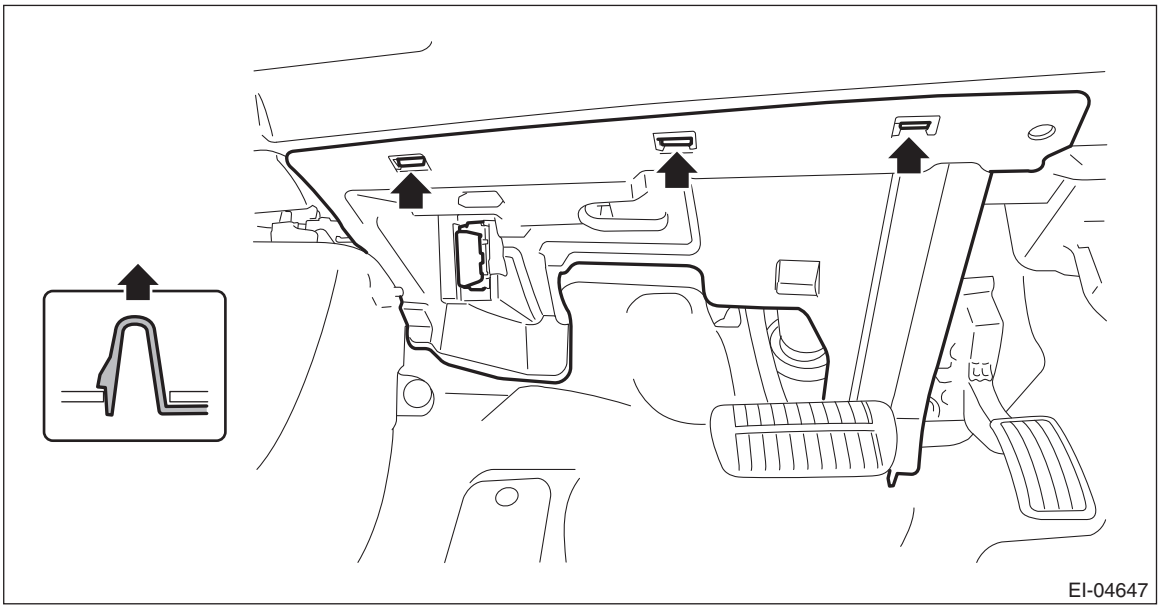
CAUTION:
• Set the height of rivet crimped section as 3 mm (0.12 in). If the crimp is not sufficient, press it with pliers, etc. in order not to interfere the trim panel - door.
• Apply unwoven cloth tape so that the rivet crimped section is covered. If unwoven cloth tape is not applied, a knocking noise may occur when the door panel contacts the rivet crimped section.

Preparation tool and item:
Hand riveter (corresponding to ϕ3.2 mm (0.13 in))
Rivet
Unwoven cloth (cut into 15 x 15 mm (0.59 x 0.59 in))



3) After installing the weather strip - door INN, perform the following checks.
• Make sure there are no gaps between the weather strip - door INN and the trim panel - door.
• Make sure there are no looseness when pulling the weather strip - door INN lightly.

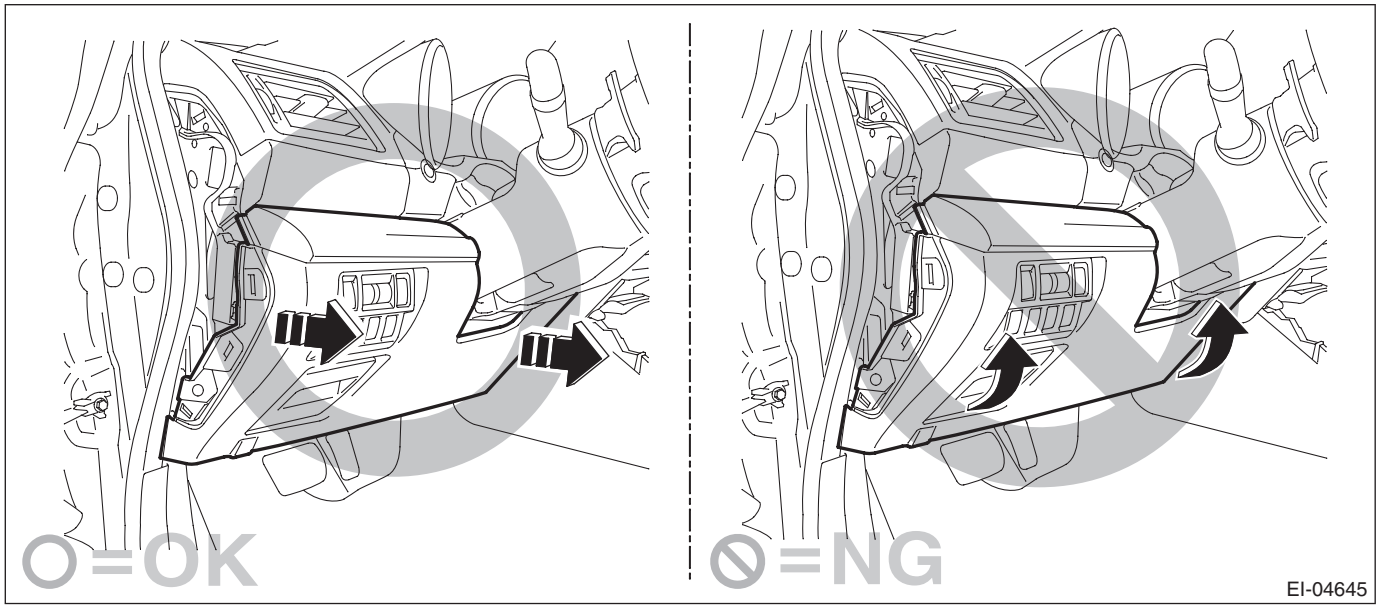
19.Instrument Panel Lower Cover



A: REMOVAL

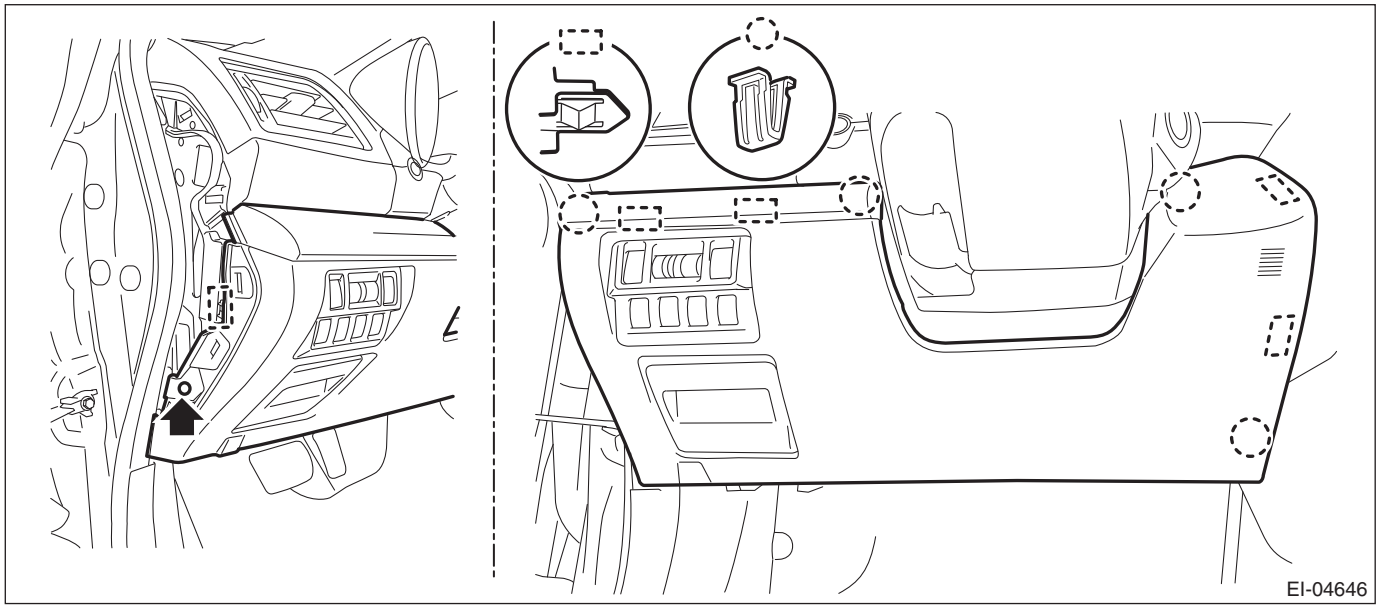
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and remove the cover - instrument panel side LH.

CAUTION:
When removing with a tool, use a plastic remover so that no scratches occur.



EI-04644

NOTE:
Remove the weather strip - body side flange to facilitate the work.
3) Remove the data link connector and release the hook, and then remove the under cover assembly - driver.



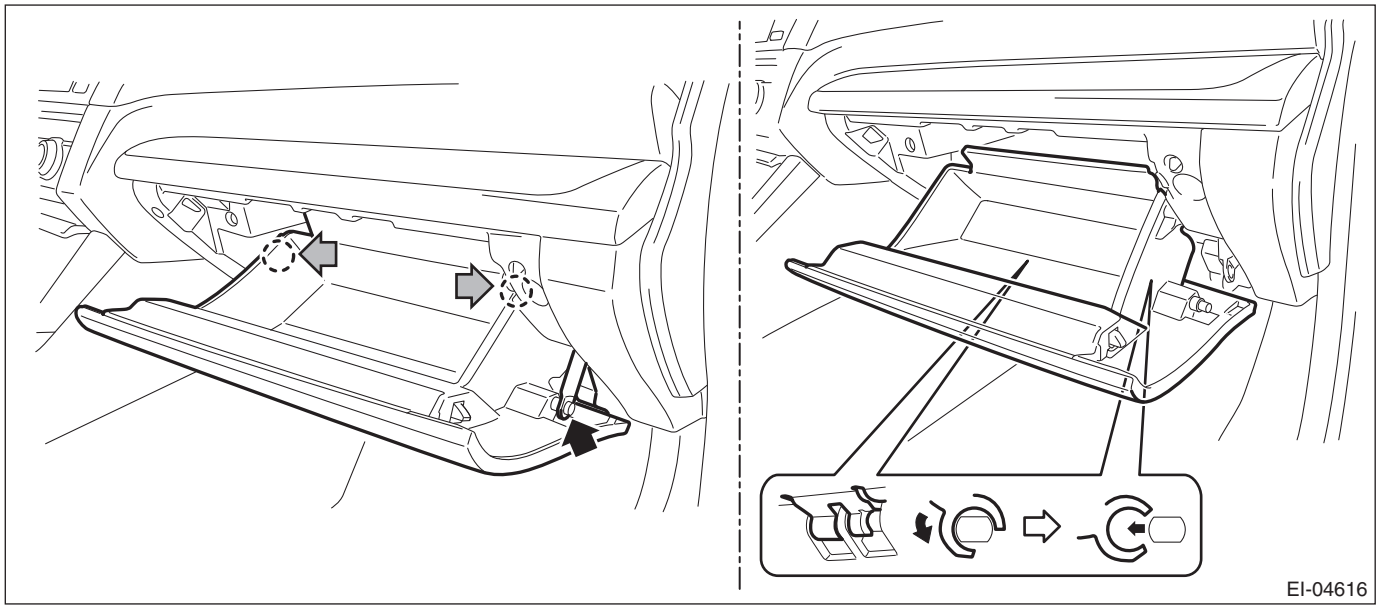
EI-04647

4) Remove the cover assembly - instrument panel LWR driver.

CAUTION:
When removing the cover assembly - instrument panel LWR driver, be sure to pull it toward you. If attempting to remove by turning it upward, the claws may be damaged.

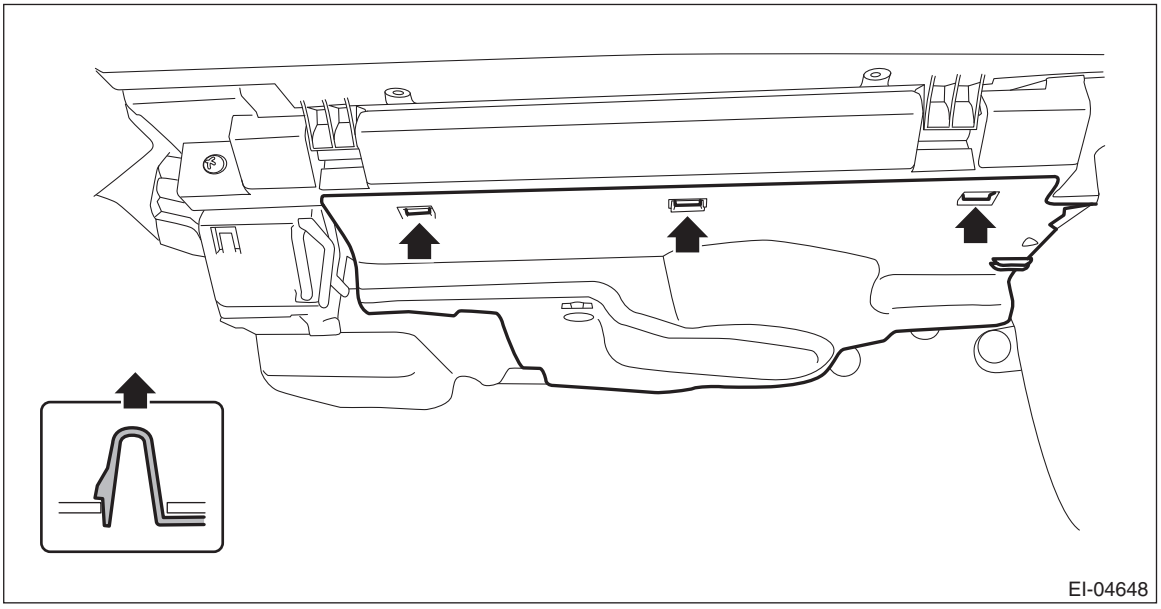
(1) Remove the screws and release the clips and claws.
(2) Disconnect the harness connectors, and remove the cover assembly - instrument panel LWR driver.

B: INSTALLATION



1) Install the cover assembly - instrument panel LWR driver.
2) Install the data link connector, and install the under cover assembly - driver.
3) Install the cover - instrument panel side LH.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

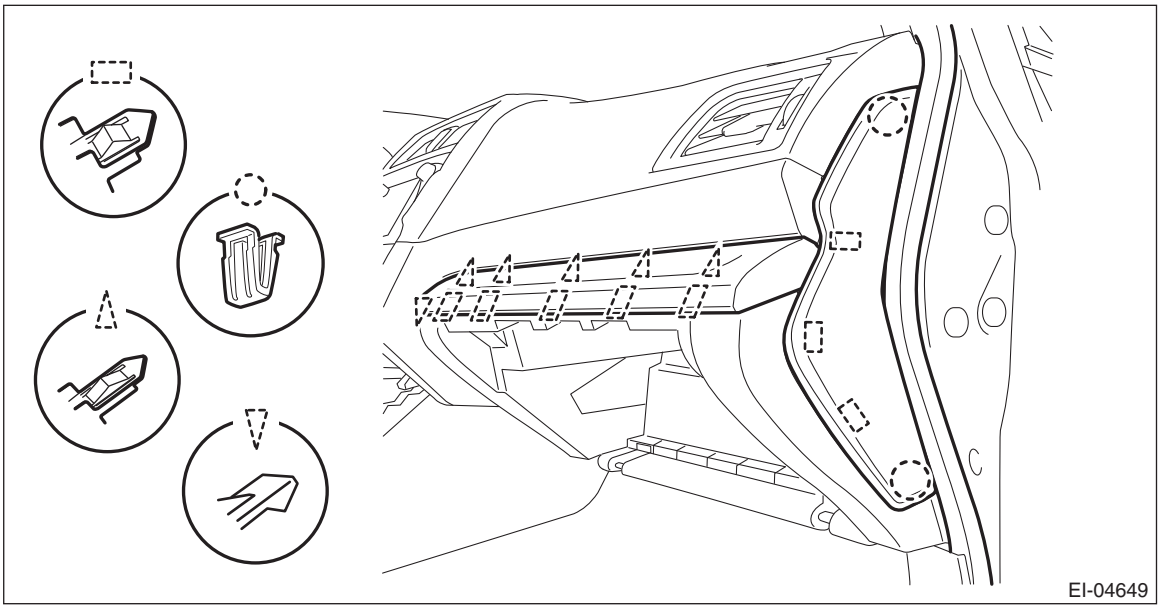
20.Glove Box



A: REMOVAL

NOTE:
Refer to “Security and Locks” section for key cylinder replacement. <Ref. to SL-75, GLOVE BOX LID, REPLACEMENT, Key Lock Cylinders.>

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the pocket assembly.
   (1) Remove the damper COMPL - pocket.
   (2) Release the stoppers and remove the pocket assembly by pulling it toward you.



3) Remove the cover side sill - front and the front cover - side sill. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
4) Remove the back panel - pocket.
   (1) Release the hook, and remove the under cover assembly - passenger.

   (2) Remove the clips, and remove the cover - instrument panel side RH.

(3) Release the clips, and remove the ornament - panel assembly passenger.

(4) Disconnect the glove box light LED connector.
(5) Remove the screws, claws and harness clamp, then remove the back panel - pocket.

B: INSTALLATION

1) Install the back panel - pocket.
2) Connect the glove box light LED connector.
3) Install the ornament - panel assembly passenger.
4) Install the under cover assembly - passenger.
5) Install the cover side sill - front and the front cover - side sill.
6) Install the pocket assembly.
7) Install the cover - instrument panel side RH.
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

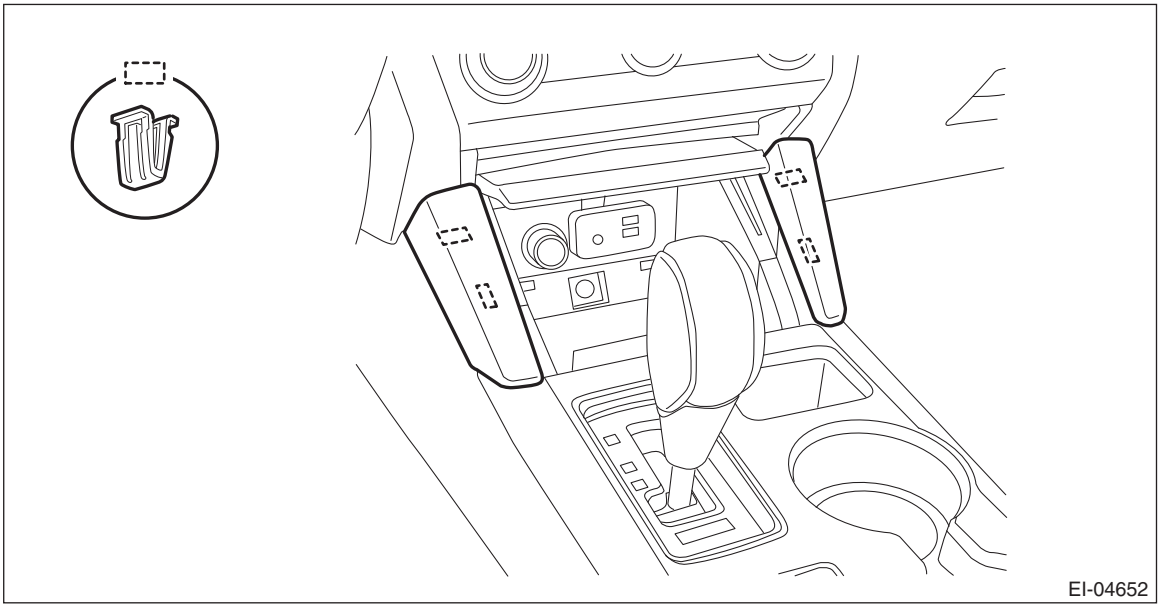
21.Center Console

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
4) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>

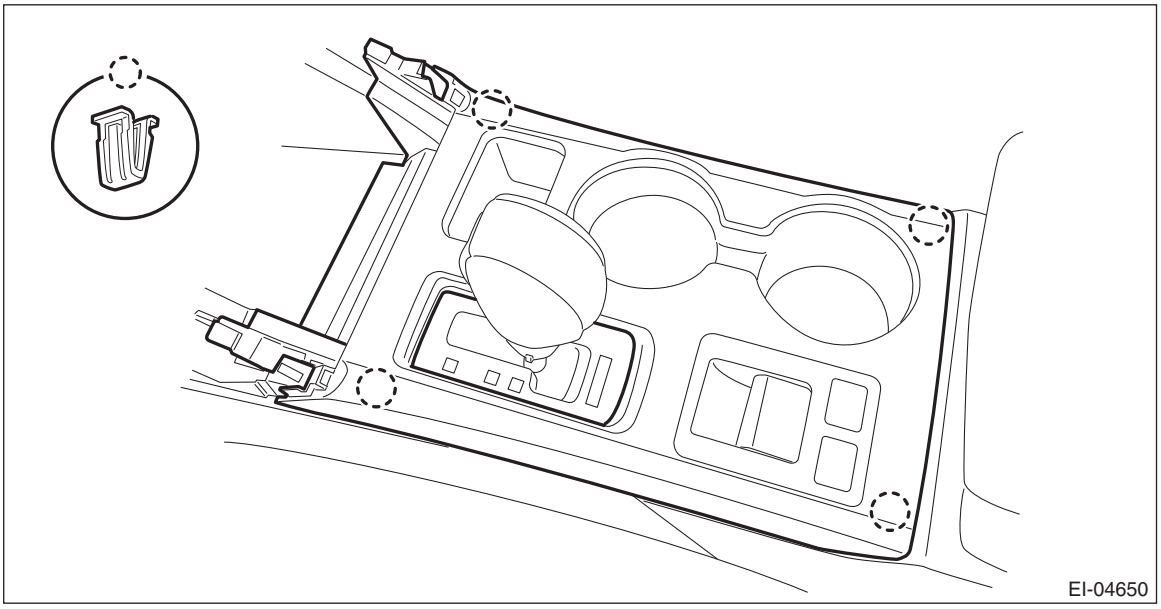
B: INSTALLATION

CAUTION:
Make sure that the center grille assembly is inserted into the air vent duct correctly.
1) Install the audio assembly or navigation assembly.
2) Install the heater control assembly.
3) Install the center grille assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



22.Console Box

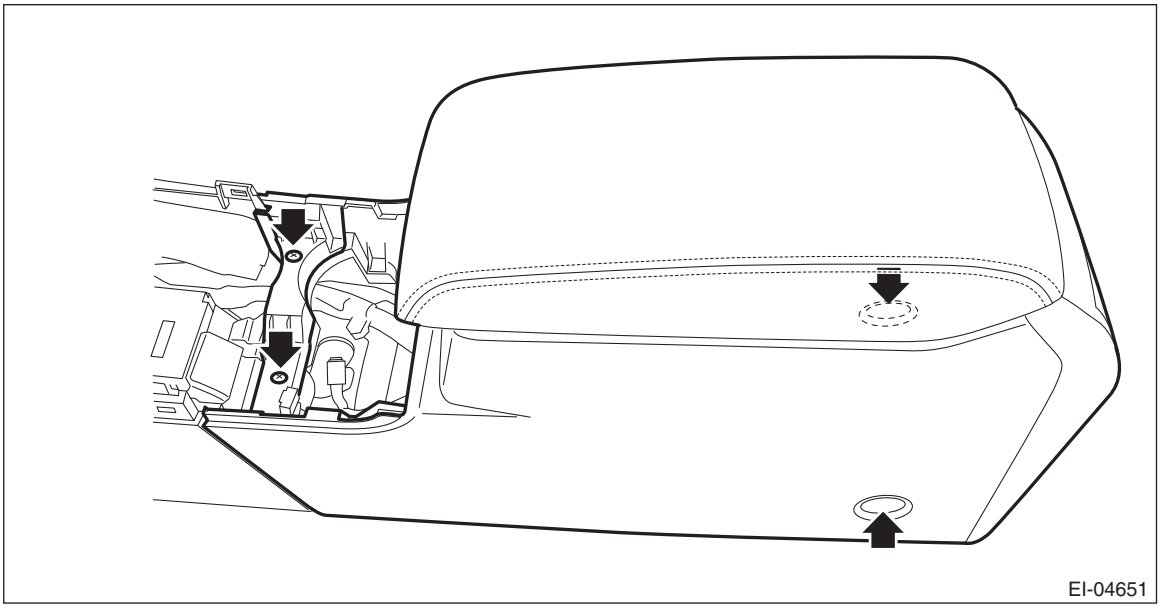
A: REMOVAL



CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

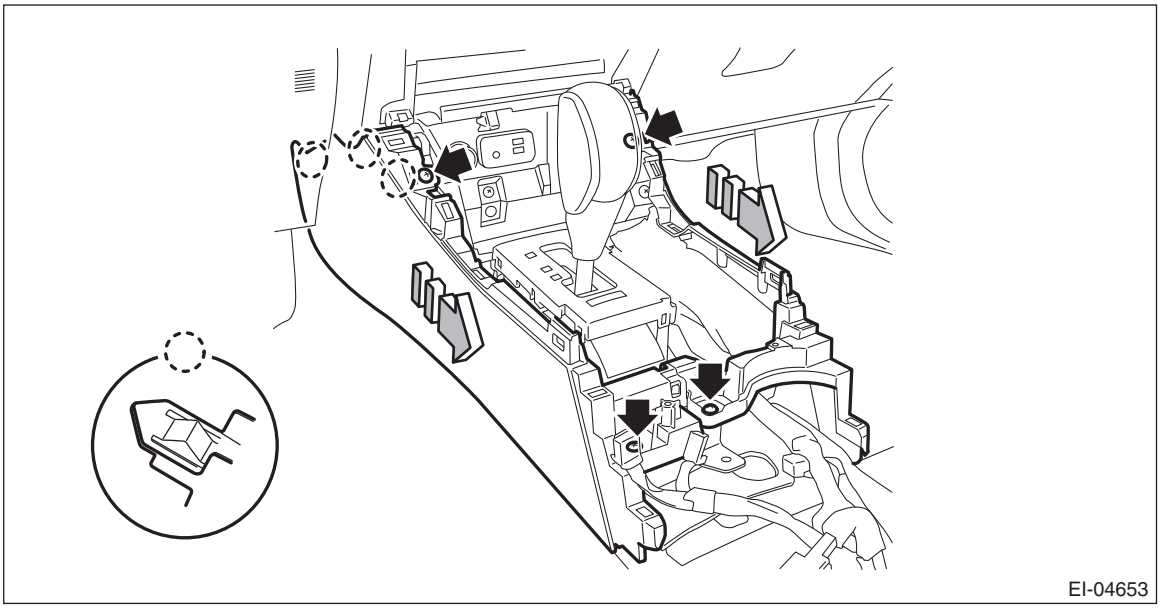
NOTE:
- Shift the select lever into "N" before disconnecting the battery ground terminal.
- On power seat models, move the front seat all the way forward before disconnecting the battery ground cable.

2) Release the clips, and remove the ornament panel - console.



EI-04652

3) Remove the cover assembly - front.
   (1) Pull up the cover assembly - front, and release the clips.
   (2) Disconnect the connectors, and remove the cover assembly - front.



EI-04650

4) Remove the console box assembly.

(1) Remove the caps, and remove the bolts.
(2) Remove the screws, disconnect the harness connector and remove the console box assembly.

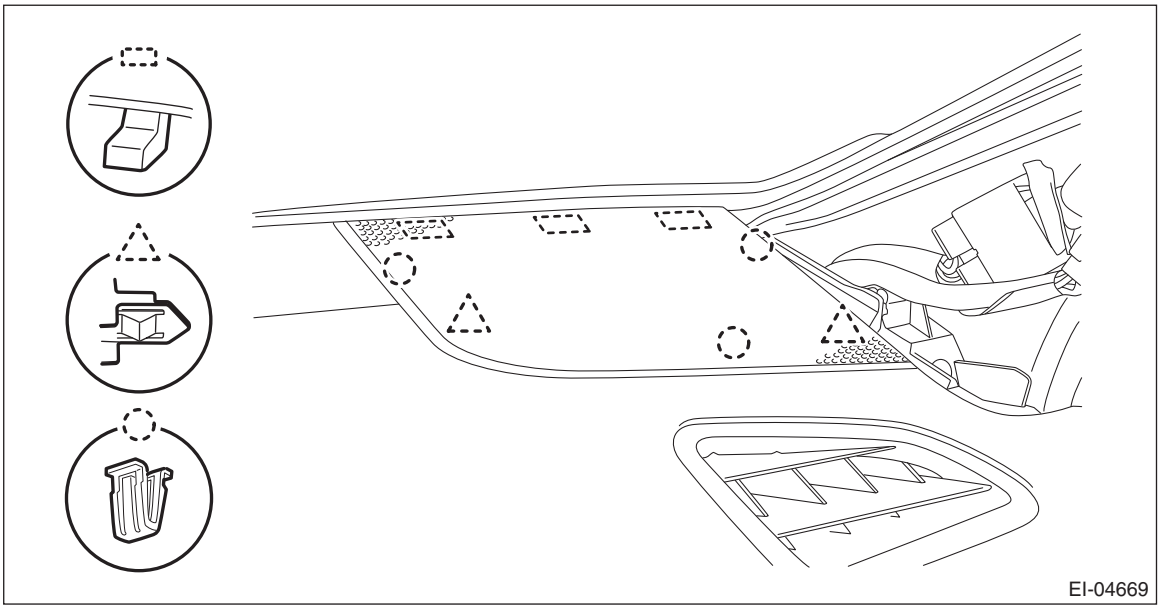
EI-04651

5) Remove the left and right panel center LWR.
(1) Remove the screws and clips.
(2) Release the claws, and then pull the panel center LWR to remove.

EI-04653

B: INSTALLATION

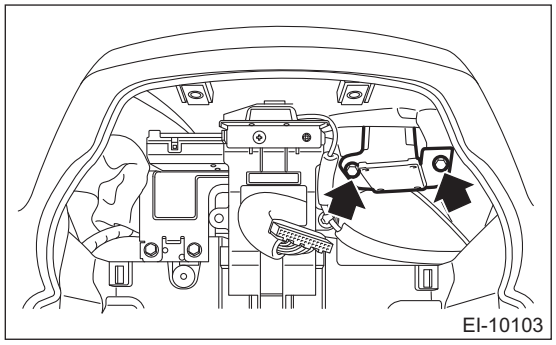
1) Install the panel center LWR.
2) Install the console box assembly.
3) Install the cover assembly - front.
4) Install the ornament panel - console.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

23.Instrument Panel Assembly

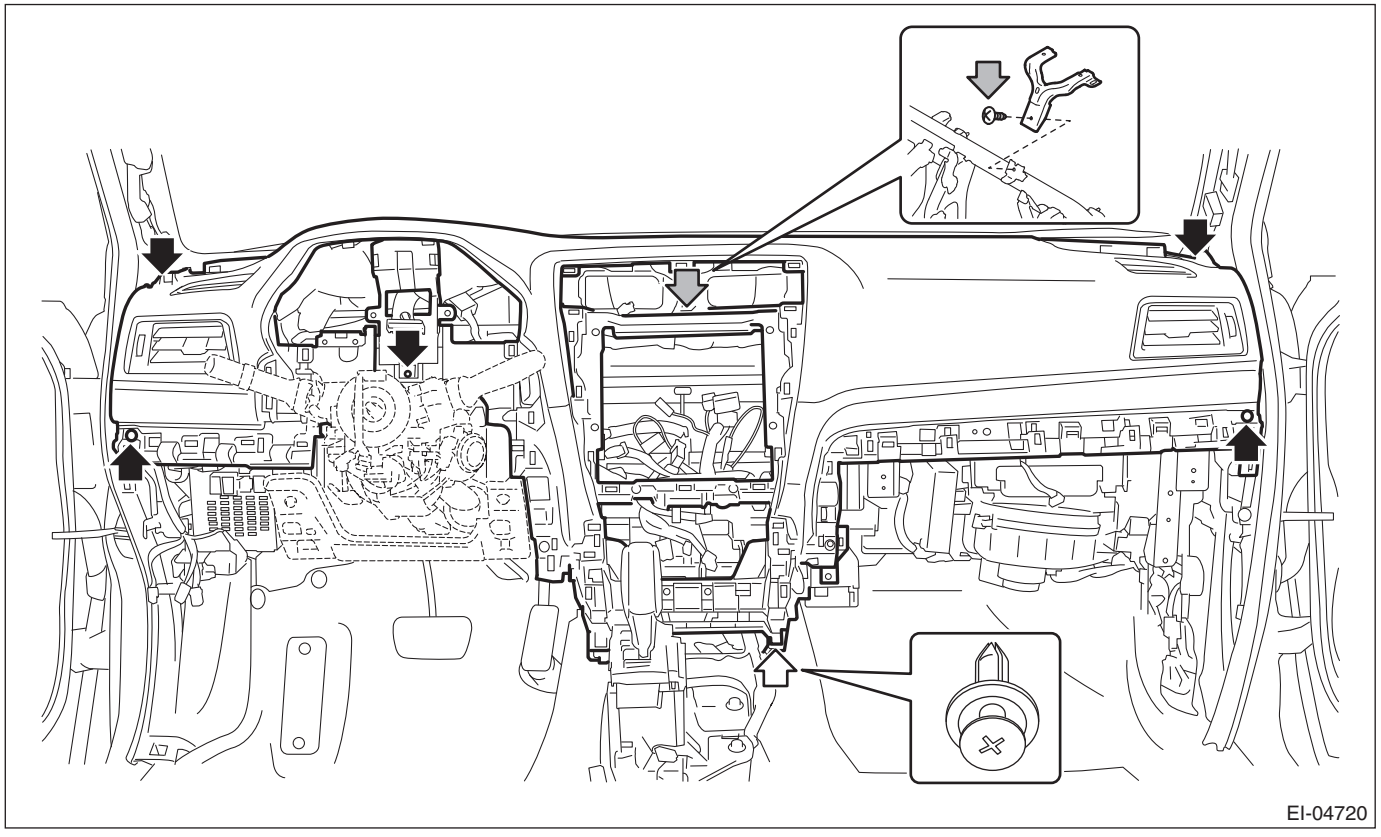
A: REMOVAL



CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
• Shift the select lever into "N" before disconnecting the battery ground terminal.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
2) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>
3) Remove the ornament panel - console, cover assembly - front, console box assembly and the panel center LWR. <Ref. to EI-80, REMOVAL, Console Box.>
4) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
5) Remove the visor assembly - lower. <Ref. to IDI-18, TRIP RESET SWITCH, REMOVAL, Switches and Harness.>
6) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
7) Remove the keyless access CM. <Ref. to SL-101, REMOVAL, Keyless Access CM.>
8) Remove the trim panel - front pillar UPR on the left and right sides. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
9) Release the clips and claws, then detach the left and right grille speaker side.

NOTE:
Remove the grille speaker side by using a plastic remover.
10) Remove the glove box assembly. <Ref. to EI-77, REMOVAL, Glove Box.>
11) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
12) Remove the heater control assembly. <Ref. to AC-46, REMOVAL, Control Panel.>
13) Remove the audio assembly or navigation assembly. <Ref. to ETM-11, REMOVAL, Audio.>
14) Remove the pocket assembly - CTR. <Ref. to ETM-50, REMOVAL, External Connection Terminal.>
15) Remove the speaker assembly. <Ref. to ETM-11, REMOVAL, Audio.>
• Tweeter: <Ref. to ETM-13, TWEETER, REMOVAL, Front Speaker.>

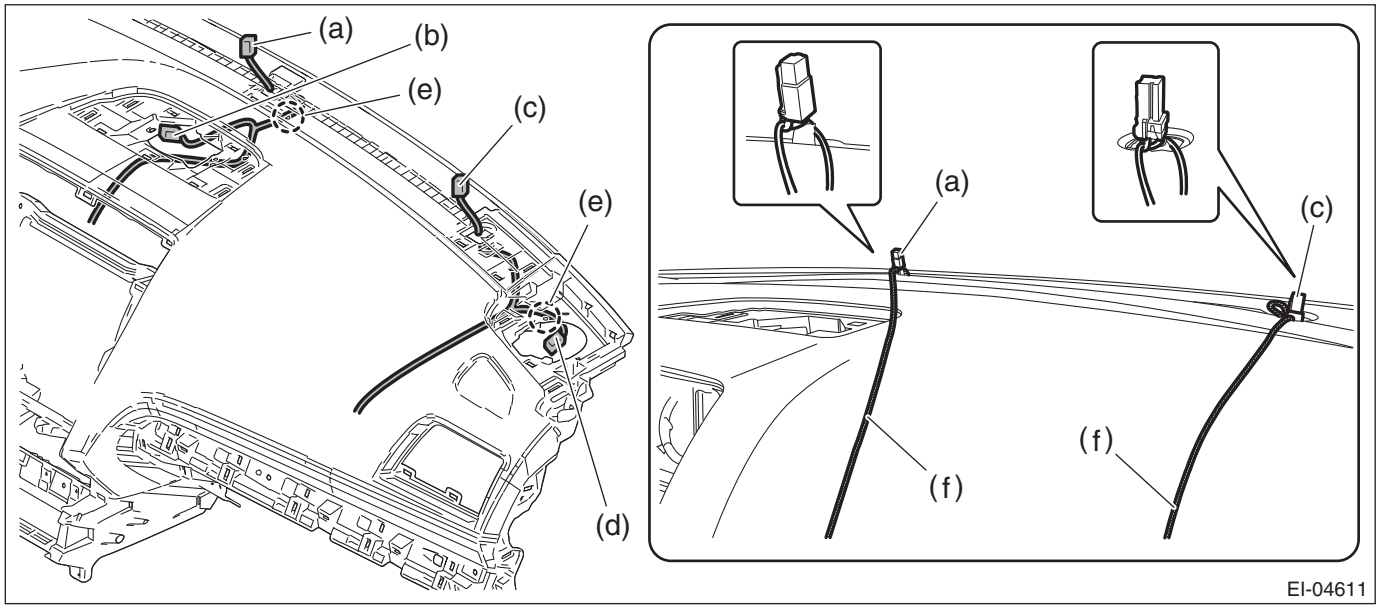


• Center speaker: <Ref. to ETM-13, CENTER SPEAKER, REMOVAL, Front Speaker.>
16) Disconnect the passenger's airbag module connector. <Ref. to AB-19, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>
17) Remove the column assembly - steering. <Ref. to PS-26, REMOVAL, Steering Column.>
18) Remove the cover side sill - front and the front cover - side sill on the left and right sides. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
19) Remove the body side weather strip - flange front.
20) Remove the screws, and release the telematics sub antenna lock.

EI-10103

21) Secure the released telematics sub antenna to the beam COMPL - steering with a tape.

NOTE:
When removing the instrument panel assembly, do not remove the telematics sub antenna harness clamp from the beam COMPL - steering.
22) Remove the instrument panel assembly.

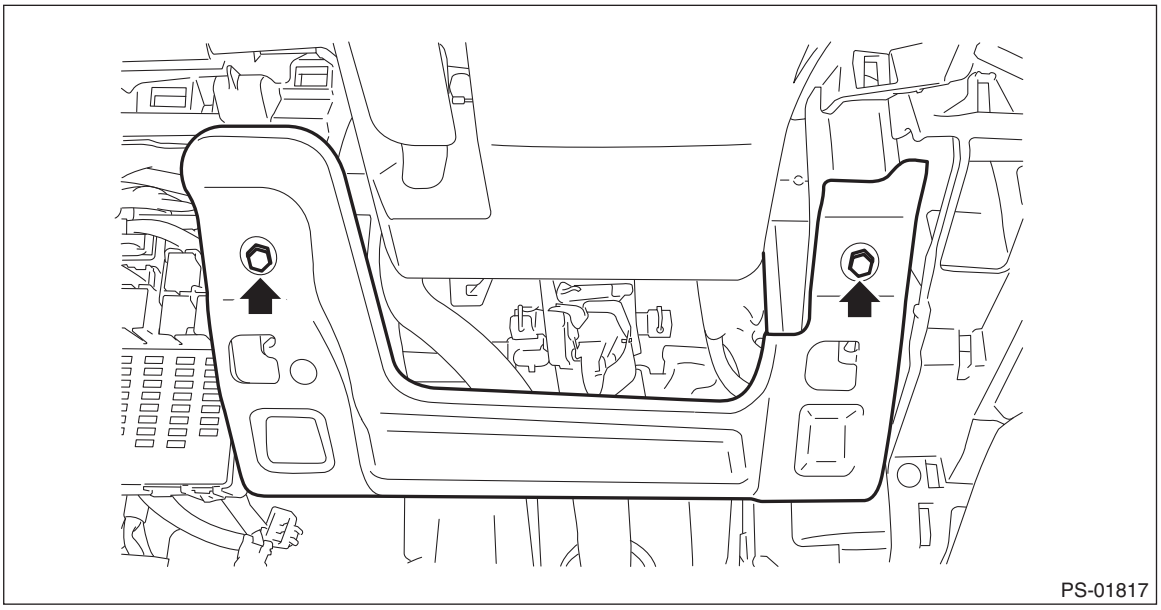


CAUTION:
• When taking the instrument panel assembly out of the vehicle, be careful not to allow the telematics sub antenna harness to be caught.
• Always work in a team of two persons when removing the instrument panel assembly from the vehicle, so as not to damage the vehicle interior.
(1) Remove the screws.

EI-04720

NOTE:
• Remove the screw indicated with a gray arrow after removing the harness clamp, and remove the bracket - center UPR.
• For models with rear heater, remove the clip indicated with white arrow.

(2) Prepare two strings of 2 m (78.7 in).
(3) Remove the sunload sensor and sensor - auto light.
• Sunload sensor: <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>
• Sensor - automatic light: <Ref. to LI-35, REMOVAL, Light Control Sensor.>
(4) Tie a string to the connector harness side, and remove the harness clamp.
(5) When the sensor connectors are pulled out to the lower side of the instrument panel by pulling the string, remove the string.

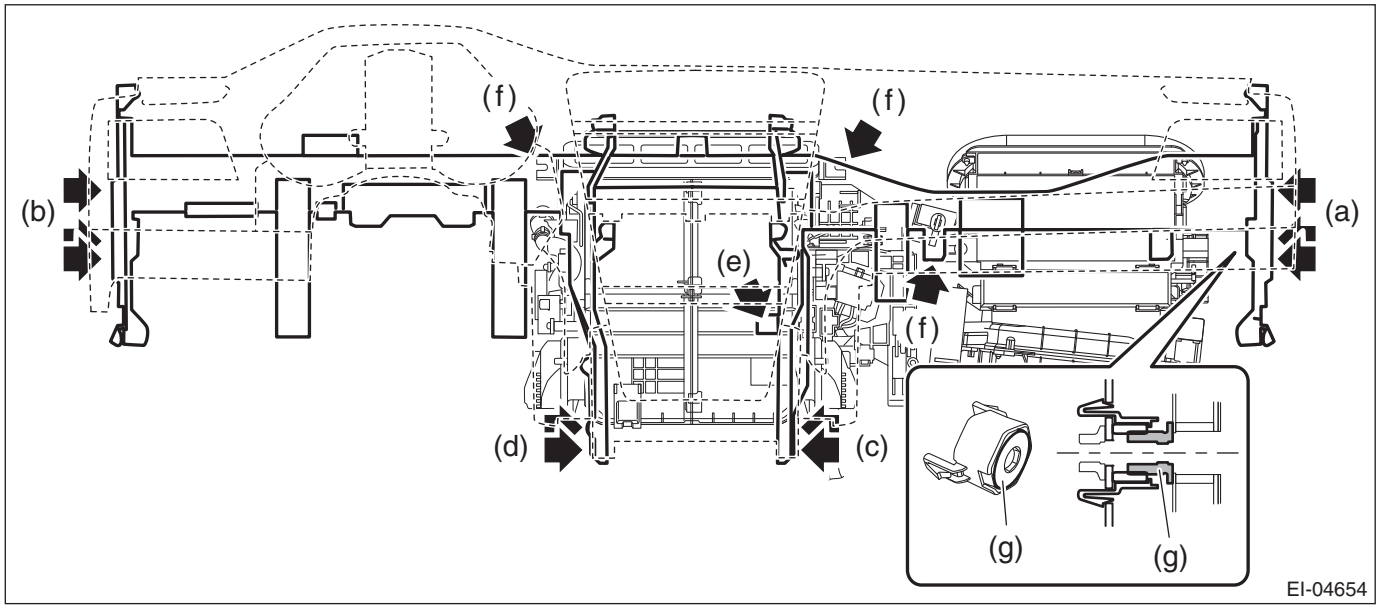


NOTE:
If the string falls out, the assembling work becomes very difficult. Therefore, secure the string on the instrument panel with an adhesive tape to prevent it from falling out.

(a)	Sunload sensor connector	(c)	Sensor - auto light connector	(e)	Harness clamp
(b)	Center speaker connector	(d)	Tweeter connector	(f)	String

(6) After confirming that all harness clamps and connectors of the instrument panel harness are disconnected, take it out of the vehicle.

23) Remove the bolts, and then remove the panel - knee guard.

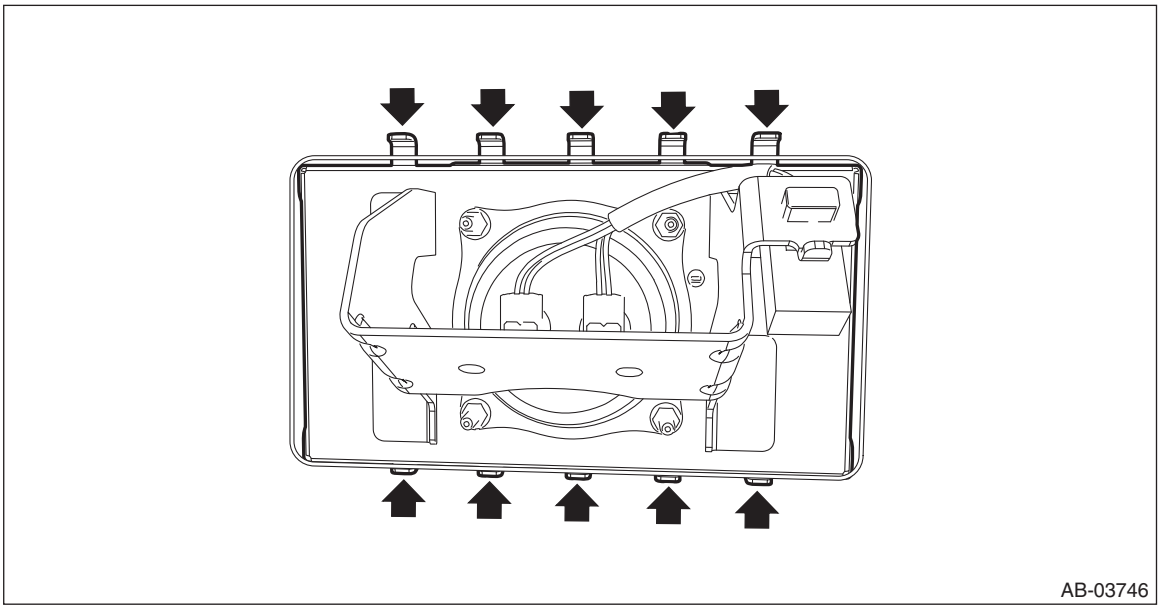


24) Remove the beam COMPL - steering.
(1) Remove the fuse box and relay box.
(2) Disconnect all harness clamps and connectors of the instrument panel harness.
(3) Remove the cap - bolt and remove the TORX® bolt. (a), (b)

Preparation tool:
TORX® T40

(4) Remove the bolts at the floor center. (c), (d)
(5) Remove the bolts and nuts, and disconnect the heater & cooling unit assembly. (e), (f)
(6) Loosen the adjuster portion (g) of the adjuster - clip space. (Only RH side of the beam COMPL - steering)

Preparation tool:
Hexagon wrench: 8 mm (0.31 in)

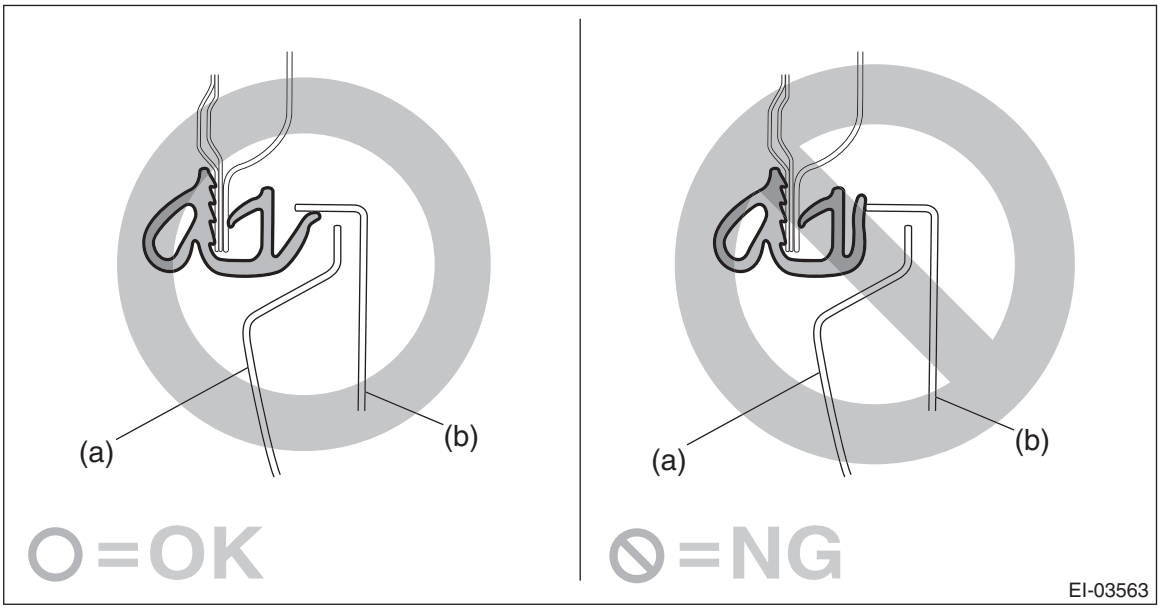


(7) Slightly lift the beam COMPL - steering to detach the left and right pins. Then pull it toward you to remove.

CAUTION:
- **Check that all harness clamps and connectors are detached.**

• When taking the beam COMPL - steering out of the vehicle, be careful not to damage the vehicle interior.

25) Remove the grille front defroster.
26) Remove the screws, and then remove each vent duct.
27) Remove the claws, and remove the passenger's airbag module.



B: INSTALLATION

CAUTION:

• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

• After installing the panel center assembly, check that the air vent grille of the panel center assembly is inserted correctly into the air vent duct.

• When installing the cover - instrument panel side (a), make sure that the body side weather strip - flange front does not come inside the panel COMPL - instrument (b).

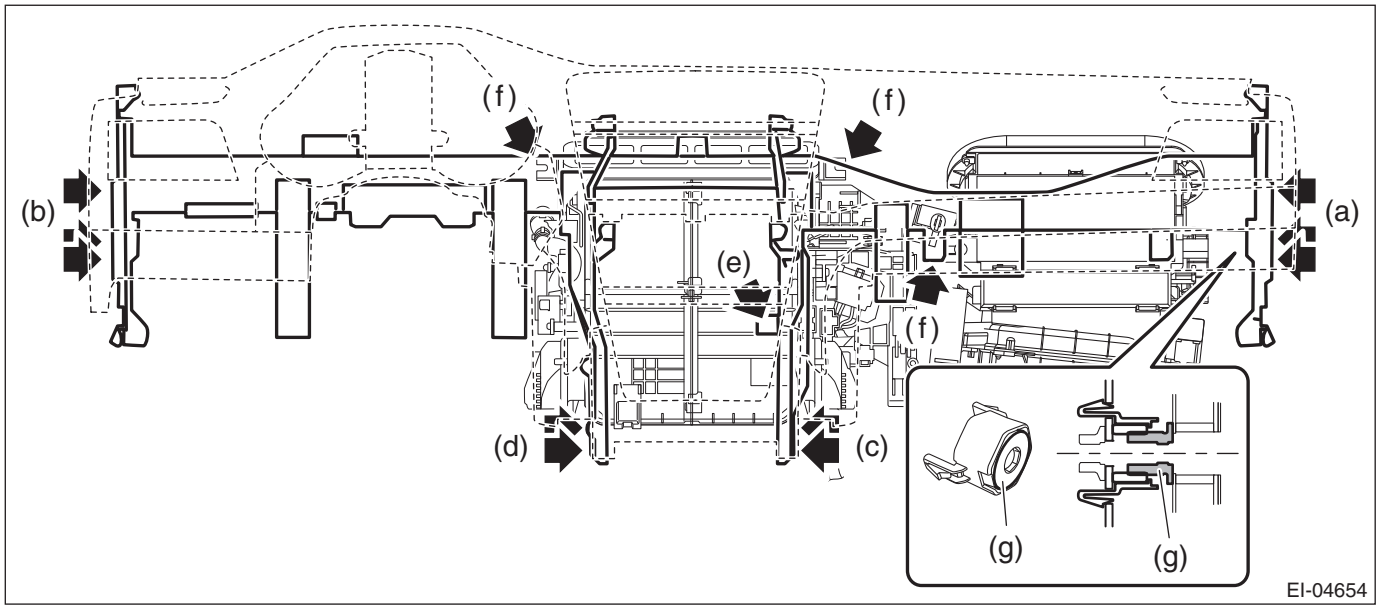
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.

• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.

1) Attach components until the instrument panel assembly is formed, in the reverse order of removal.

NOTE:
Method of installing insulator
• Adhesive
Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.
• Double-sided tape
Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

2) Install the beam COMPL - steering.
(1) Place the beam COMPL - steering on the vehicle, and check that the pins on both sides are inserted securely and the harness is routed properly. Connect each connector.
(2) Secure the beam COMPL - steering to the heater and cooling unit assembly. (e), (f)



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

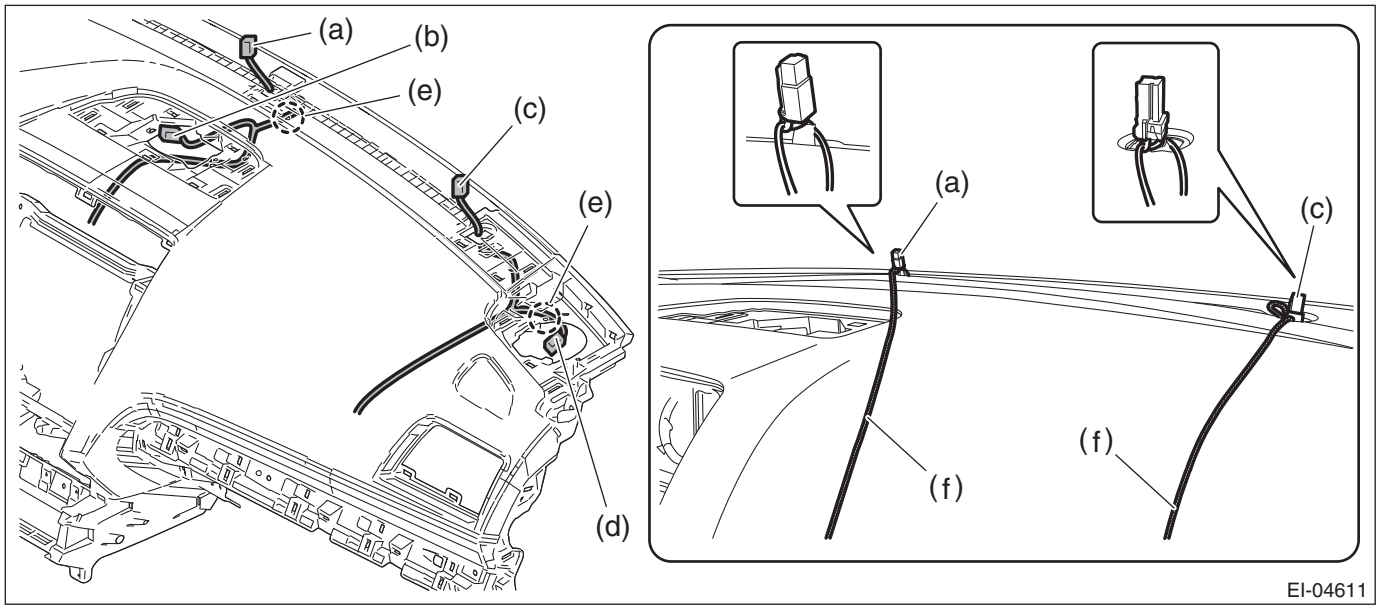
(3) Temporarily tighten the bolts (c) and (d) of the beam COMPL - steering.
(4) Tighten the adjuster portion (g) of the adjuster - clip space. (Only RH side of the beam COMPL - steering)

Preparation tool:
Hexagon wrench: 8 mm (0.31 in)

NOTE:
When the TORX® bolt is tightened after setting the adjuster portion (g) of the adjuster - clip space to the free position, the adjuster is secured at the position where there is no gap to the body, and then the TORX® bolt is tightened.

Tightening torque:
Adjuster - clip space: 0.8 — 4 N·m (0.08 — 0.4 kgf-m, 0.6 — 3 ft-lb)

(5) Tighten the beam COMPL - steering in the order from (a) to (d) to the specified torque.

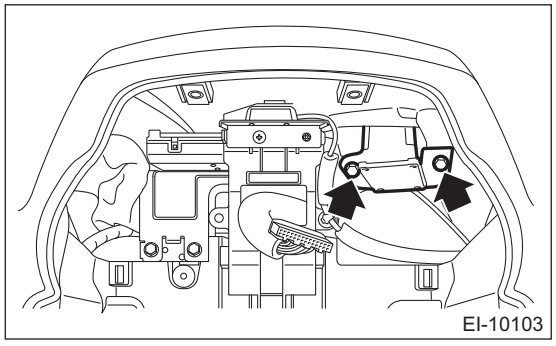


Preparation tool:
TORX® T40

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EI-15, INSTRUMENT PANEL, COMPONENT, General Description.>

3) Install the instrument panel assembly.

CAUTION:
Be careful not to allow the harness to be caught.



(1) Tie a string to the connector of sunload sensor - auto light, and then pull the string so that each connector is placed at the specified position.
(2) Secure the harness clamp.

(a)	Sunload sensor connector	(c)	Sensor - auto light connector	(e)	Harness clamp
(b)	Center speaker connector	(d)	Tweeter connector	(f)	String

(3) Install the sunload sensor and the sensor - auto light.
(4) Insert the matching pins on the body side (three locations - one in the center and the remaining two on both sides) into the instrument panel assembly and the beam COMPL - steering.
(5) Install the duct - center vent front, and secure the instrument panel assembly to the beam COMPL - steering with screws.

4) Insert the matching pins on the body side (three locations - one in the center and the remaining two on both sides) into the instrument panel assembly and the beam COMPL - steering.
5) Install the telematics sub antenna.

6) Install the passenger's airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the column assembly - steering.

Tightening torque:
Column assembly - steering: <Ref. to PS-3, STEERING WHEEL AND COLUMN, COMPONENT, General Description.>

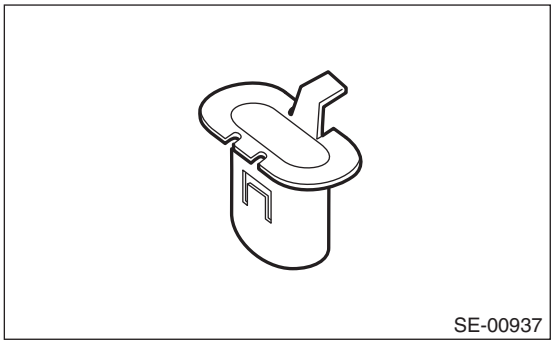
8) Install the cover side sill - front and the front cover - side sill on the left and right sides.
9) Install the speaker assembly.

10) Install the keyless access CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the combination meter assembly.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
12) Install the visor assembly - lower.
13) Install the audio assembly or navigation assembly.
14) Install the heater control assembly.
15) Install the center grille assembly.
16) Install the glove box assembly.
17) Install the trim panel - front pillar UPR on the RH and LH sides.
18) Install the grille speaker side on the RH and LH sides.
19) Install the panel - knee guard.

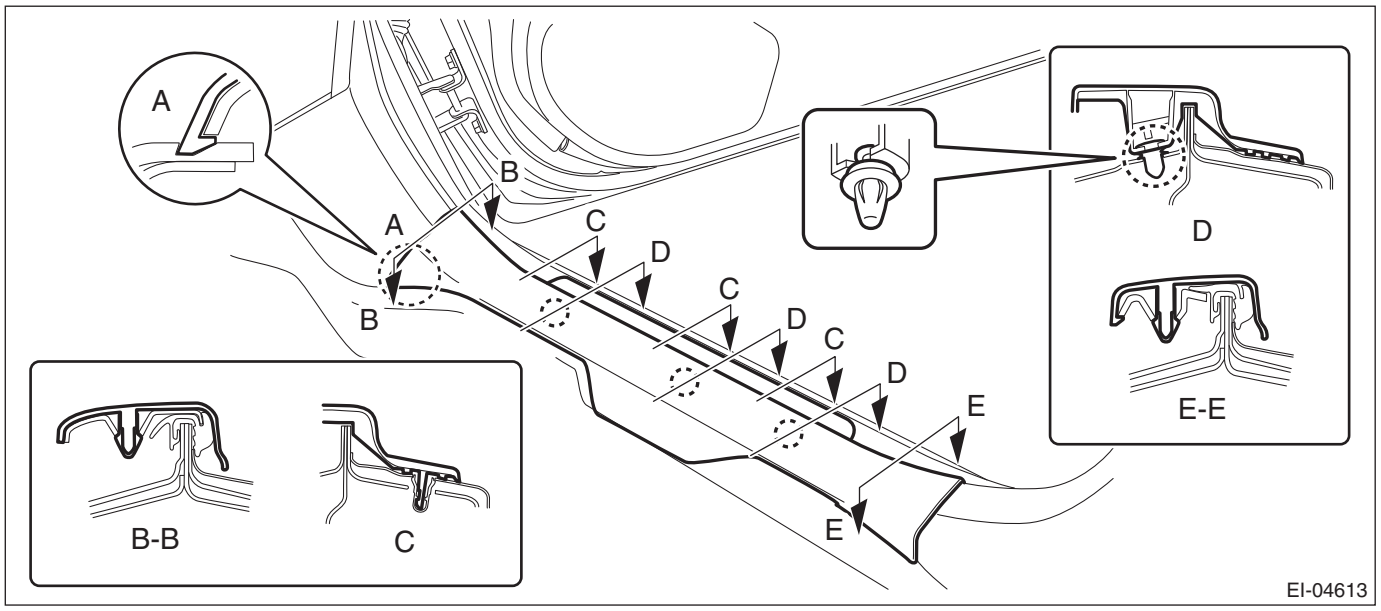
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
20) Install the cover assembly - instrument panel LWR driver.
21) Install the body side weather strip - flange front.
22) Install the ornament panel - console, cover assembly - front, console box assembly and the panel center LWR.



Tightening torque:
Console box assembly: 6.5 N·m (0.6 kgf-m, 4.8 ft-lb)
23) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
24) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

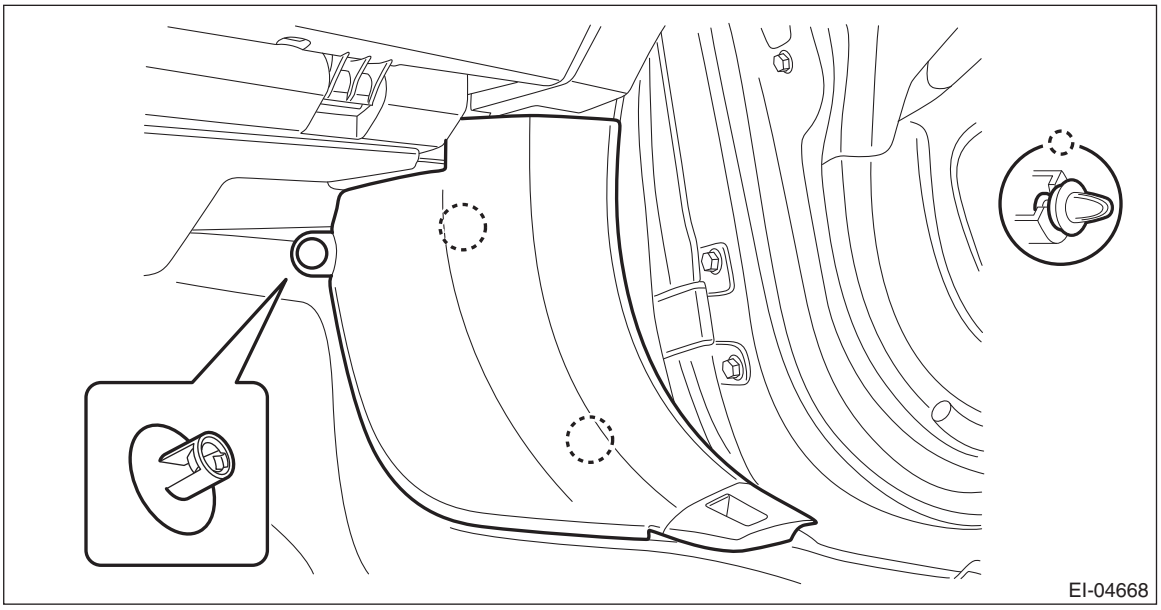
NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

24.Lower Inner Trim



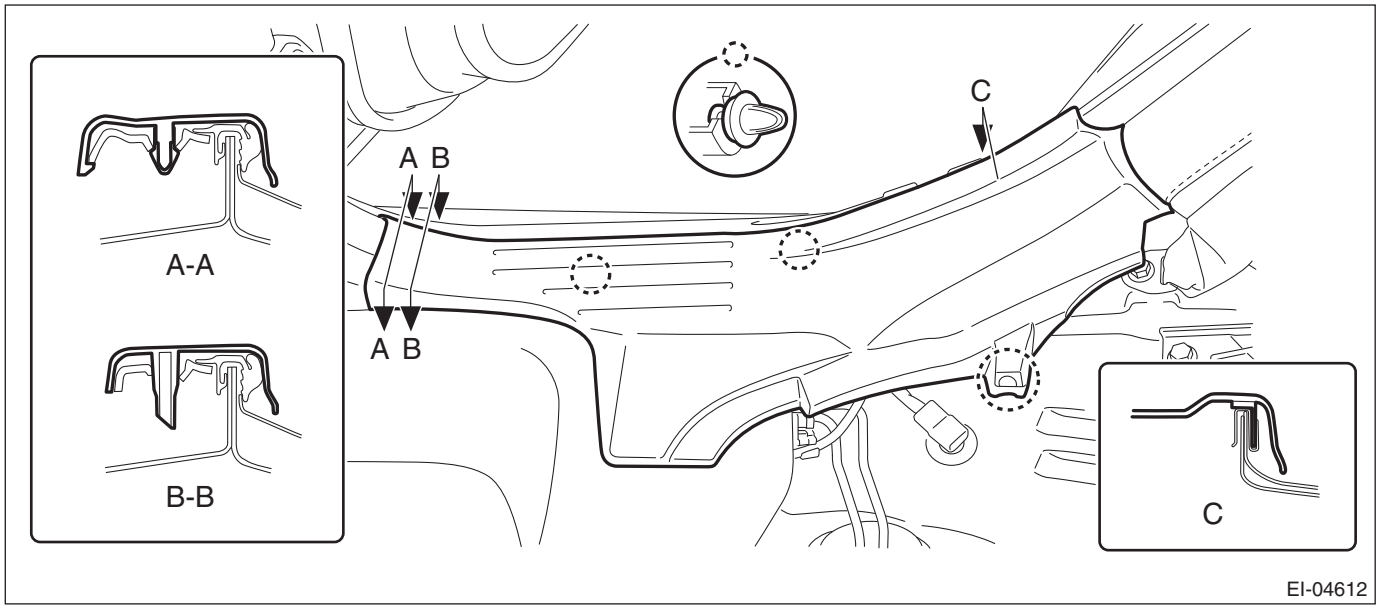
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



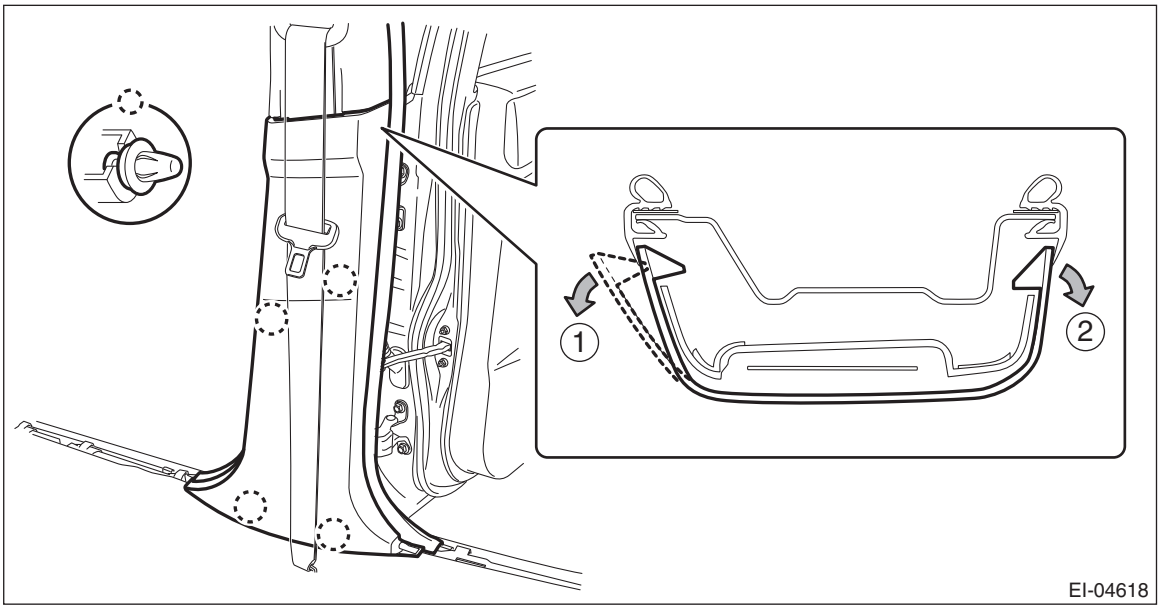
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the claws, and then remove the cover side sill - front.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - front.

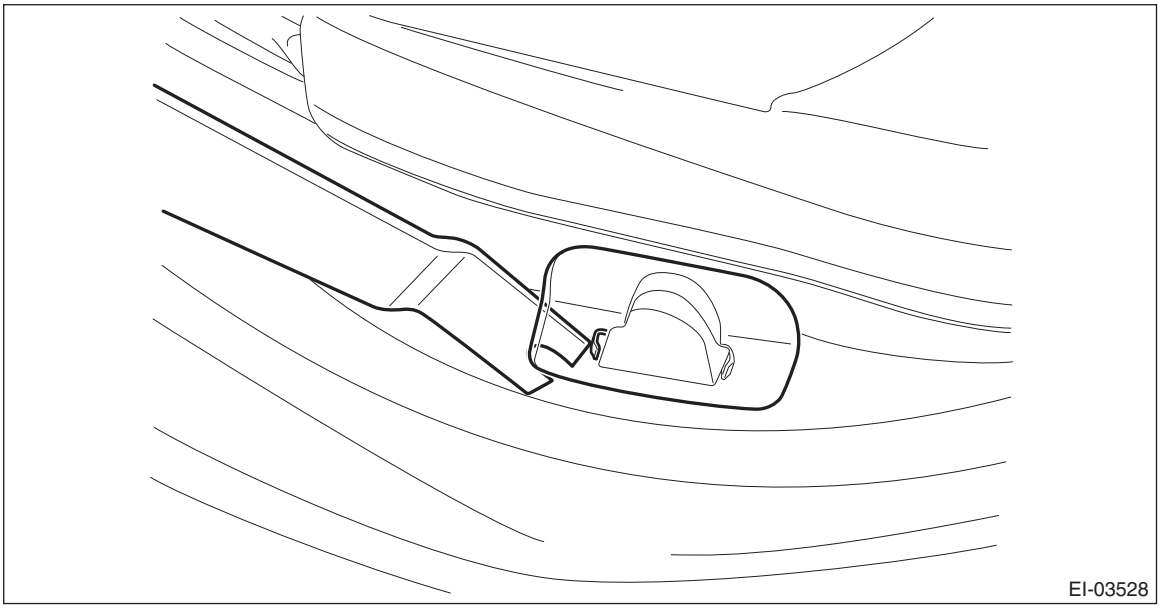


3) Remove the clips, and remove the front cover - side sill.

4) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
5) Release the clips and claws, and then remove the cover side sill - rear.



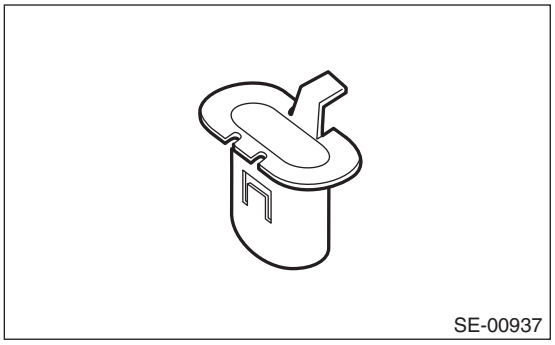
CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear.



6) Remove the trim panel - center pillar LWR.
(1) Release the clip by pulling the trim panel - center pillar LWR toward you.
(2) Expand the claws of the trim panel - center pillar LWR outward, and remove it from the trim panel - center pillar UPR.

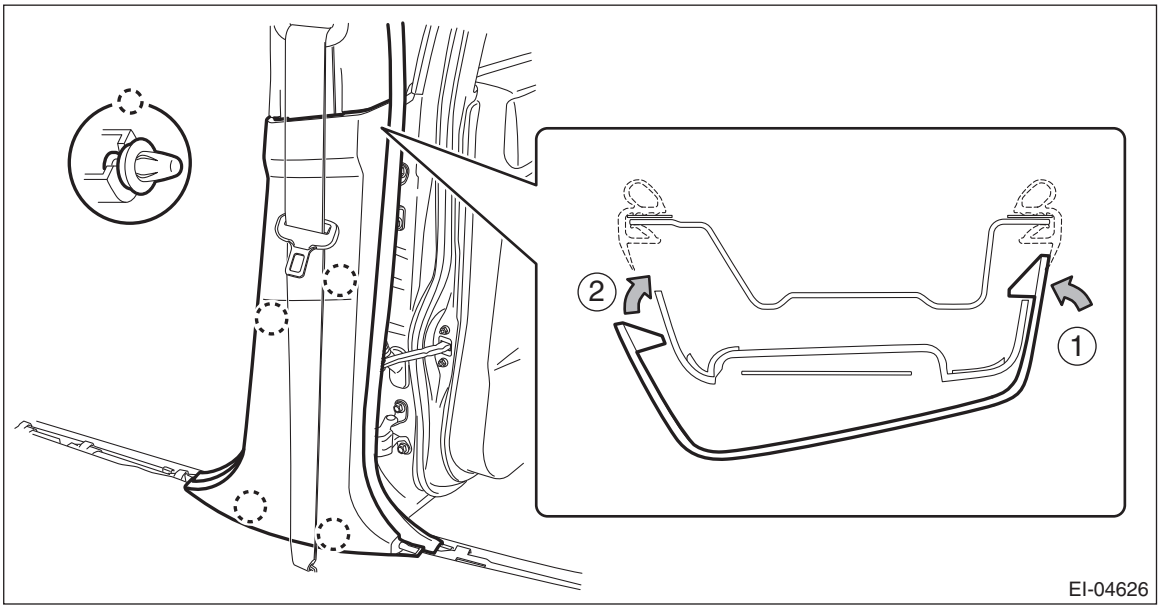
CAUTION:
- **Do not expand the trim panel - center pillar LWR excessively. Doing so may damage the trim.**

• If the claw is damaged, always replace the trim panel - center pillar LWR with a new part, because the damaged claw cannot hold the part sufficiently.



NOTE:
First release the claw located to the front of the vehicle.
7) Disconnect the claws and remove the cover - catcher.

NOTE:
Remove the cover - catcher by using a plastic remover.

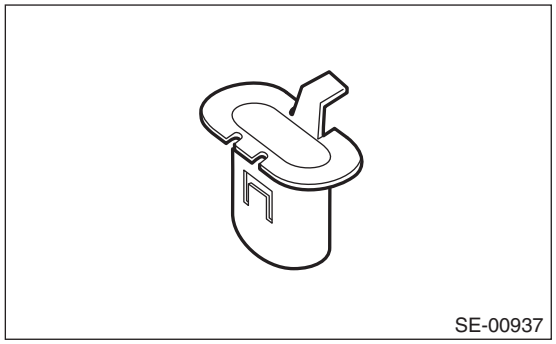


B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

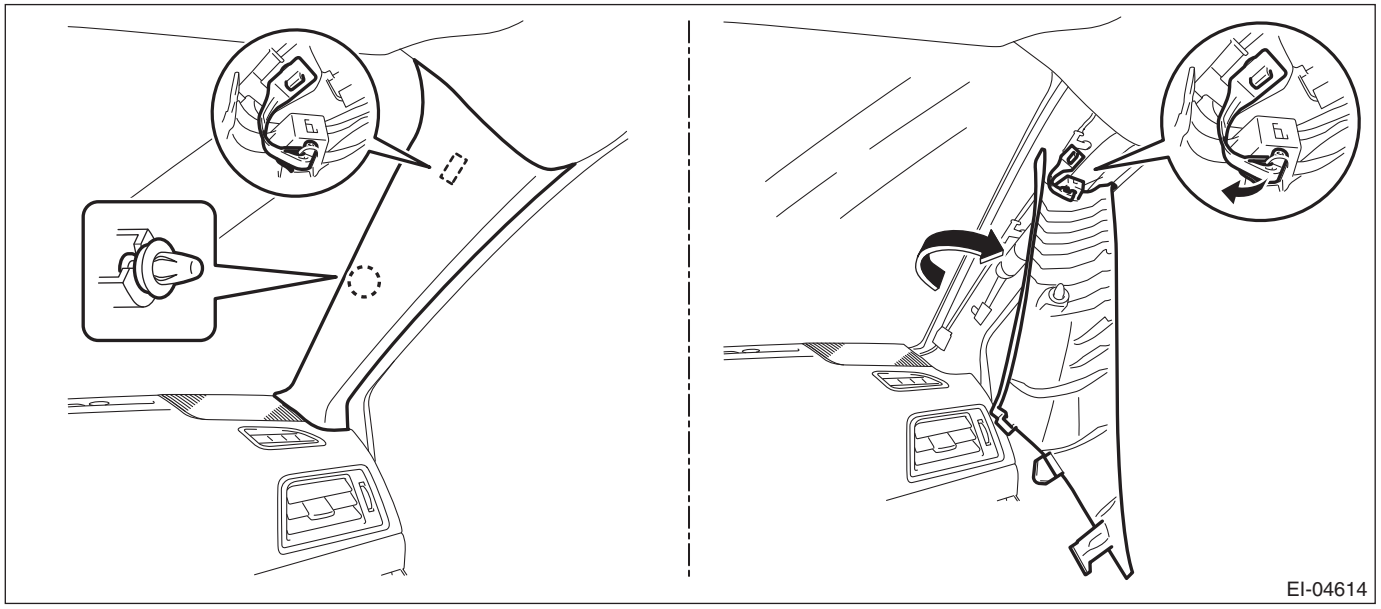
1) Install the cover - catcher.
2) Install the trim panel - center pillar LWR.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



3) Install the cover side sill - rear.
4) Install the rear seat cushion assembly.
5) Install the front cover - side sill.
6) Install the cover side sill - front.

25.Upper Inner Trim



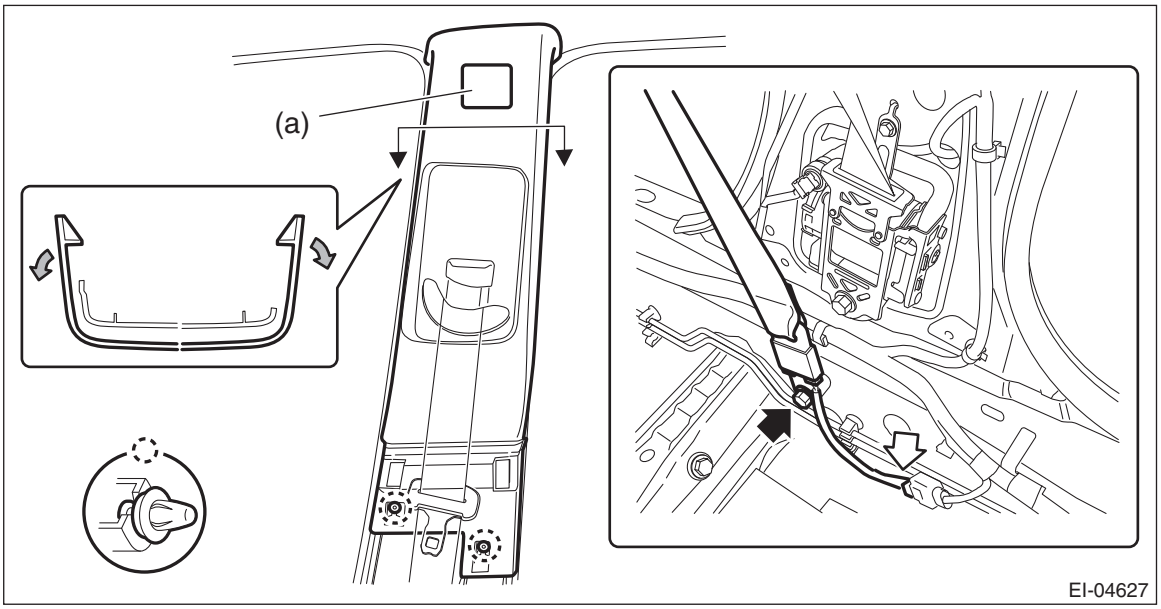
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR.
(1) Pull the trim panel - front pillar UPR towards the center of the vehicle to release the clips.
(2) Rotate the trim panel - front pillar UPR in the arrow direction.
(3) Release the hook at the end of the tether clip, and remove the trim panel - front pillar UPR.

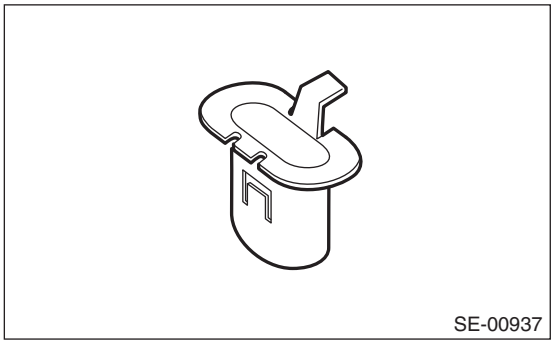
CAUTION:
• Do not use any tool when releasing the hook at the end of the trim panel - front pillar UPR.
• Be careful not to damage the surface of the trim panel - front pillar UPR and the curtain airbag module.



EI-04614

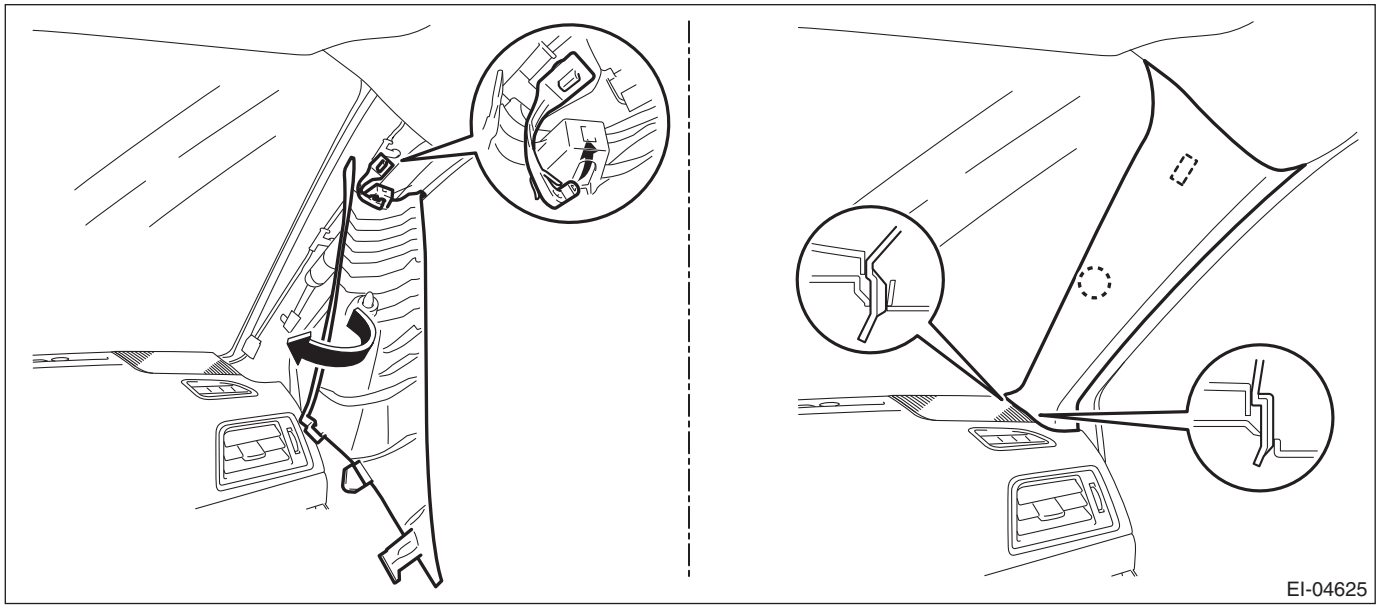
3) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
4) Remove the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
5) Remove the trim panel - center pillar UPR.
(1) Remove the cap (a), and remove the bolts.
(2) Remove the lower anchor bolt of the seat belt outer - front.

NOTE:
On passenger's side, disconnect the connector of the seat belt tension sensor. <Ref. to AB-23, BELT TENSION SENSOR, PROCEDURE, Airbag Connector.>



(3) Release the clip by pulling the lower part of the trim toward you.
(4) Expand the claws outward, and remove the trim panel - center pillar UPR.

CAUTION:
• Do not expand the trim panel - center pillar UPR excessively. Doing so may damage the trim.
• If the claw is damaged, always replace the trim panel - center pillar UPR with a new part, because the damaged claw cannot hold the part sufficiently.

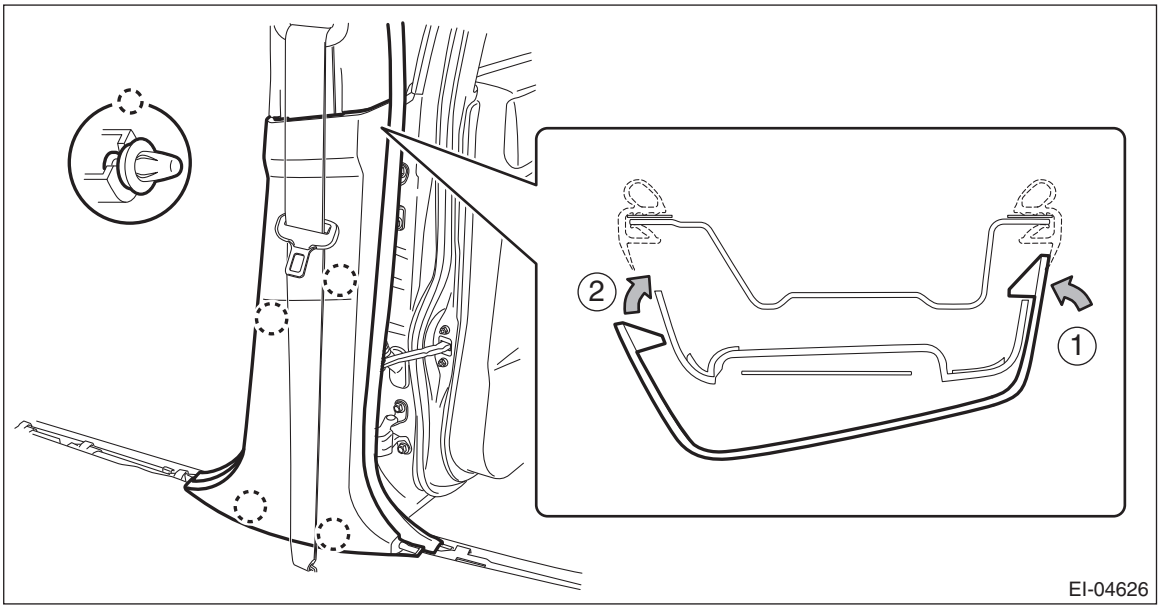


B: INSTALLATION

CAUTION:
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
• Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Remove the remaining tether clips from the vehicle body.
2) Install the trim panel - front pillar UPR.
(1) Hook the tip of the tether clip on the trim panel - front pillar UPR.

(2) Rotate the trim panel - front pillar UPR in the arrow direction as shown in the figure.
(3) Insert the claw at the end of the trim panel - front pillar UPR, and engage the clip.

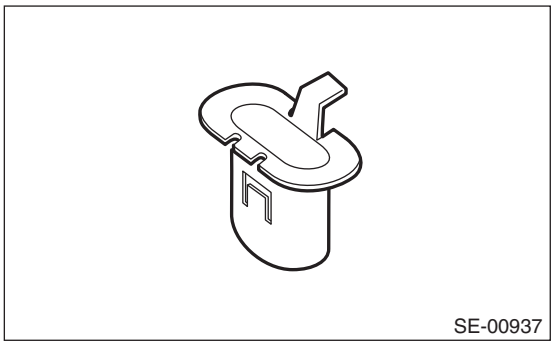


3) Install the trim panel - center pillar UPR.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

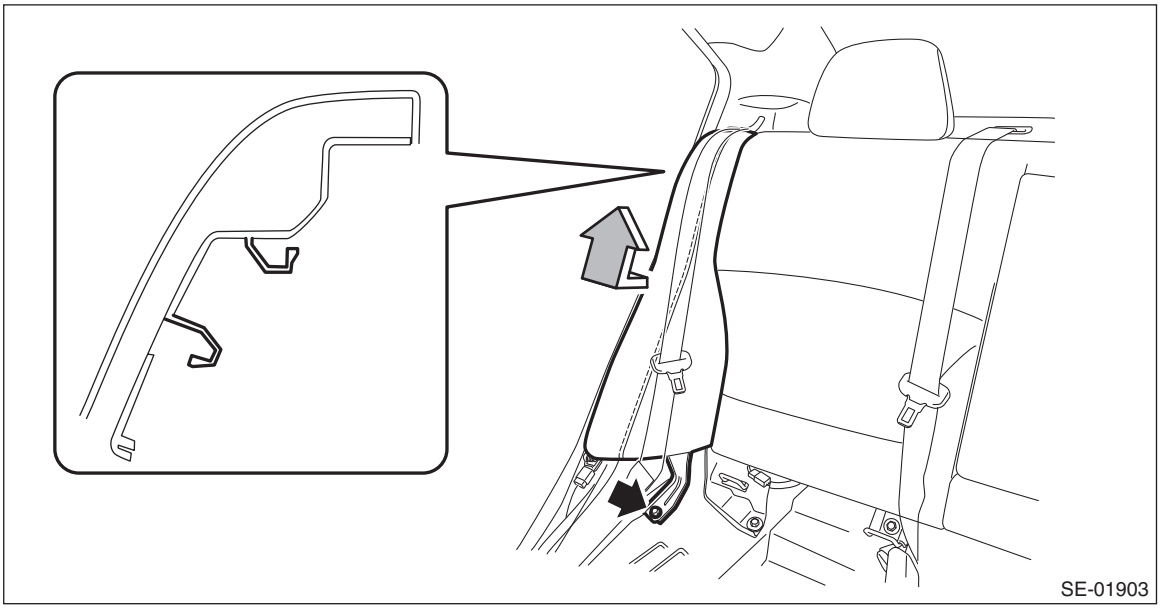
4) Install the trim panel - center pillar LWR, cover side sill - front, and cover side sill - rear.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



5) Install the rear seat cushion assembly.

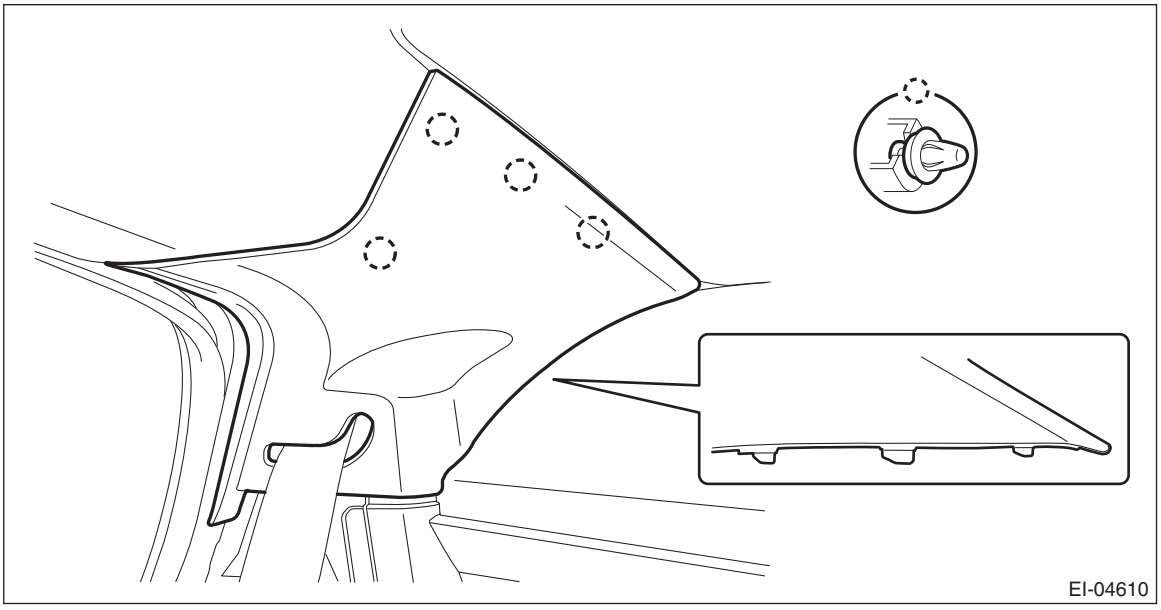
26.Rear Quarter Trim



A: REMOVAL

1. SEDAN MODEL

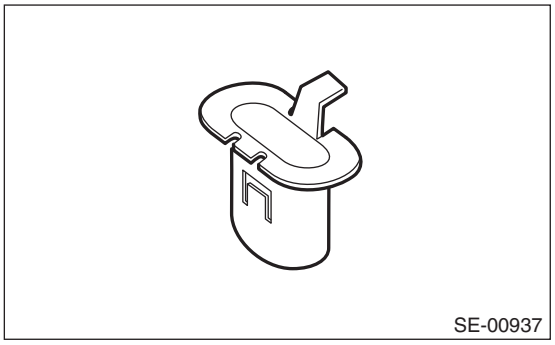
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

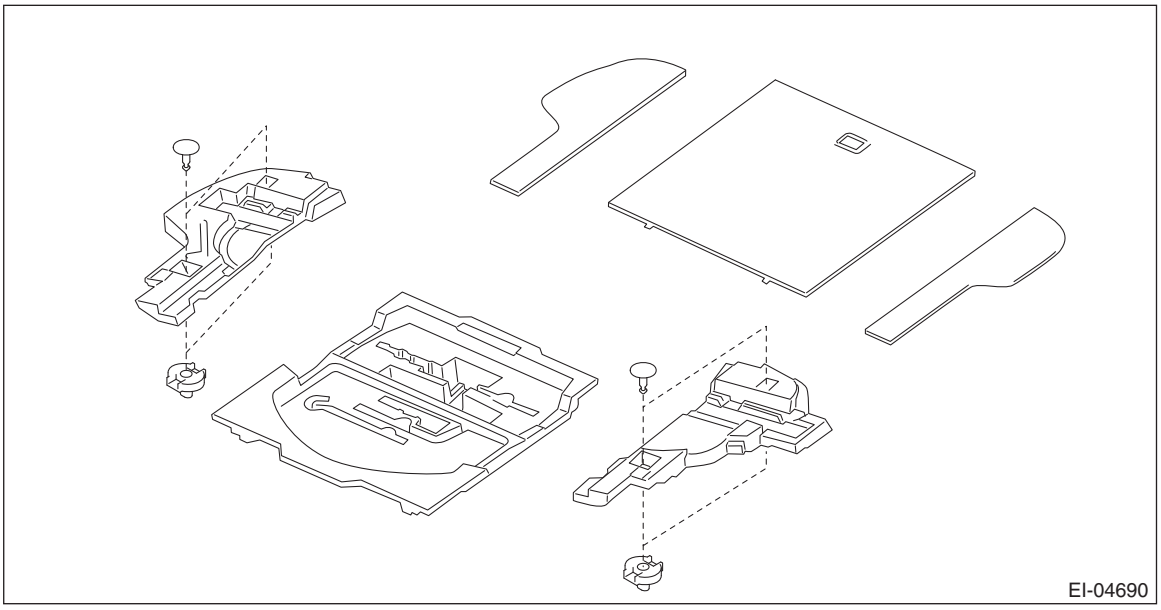
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
3) Remove the bolts, and pull up the side pad assembly - backrest to remove.

SE-01903



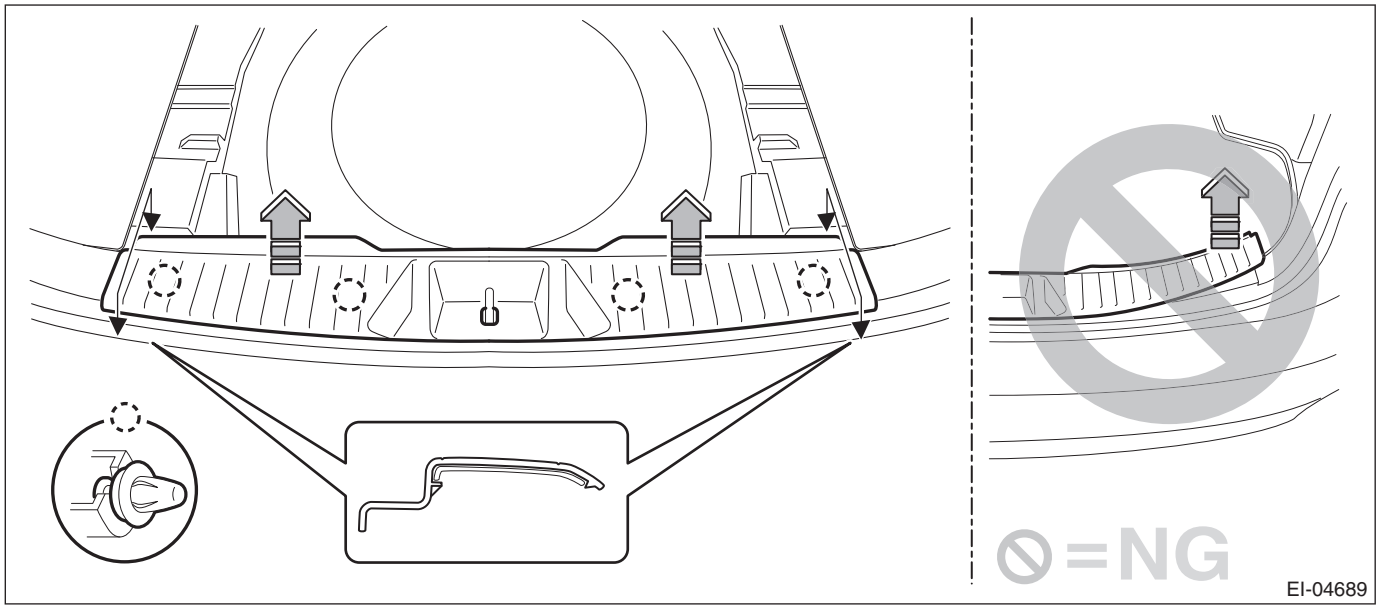
4) Remove the clips, and remove the trim panel - rear pillar UPR.

NOTE:
Remove the seat belt from the opening.



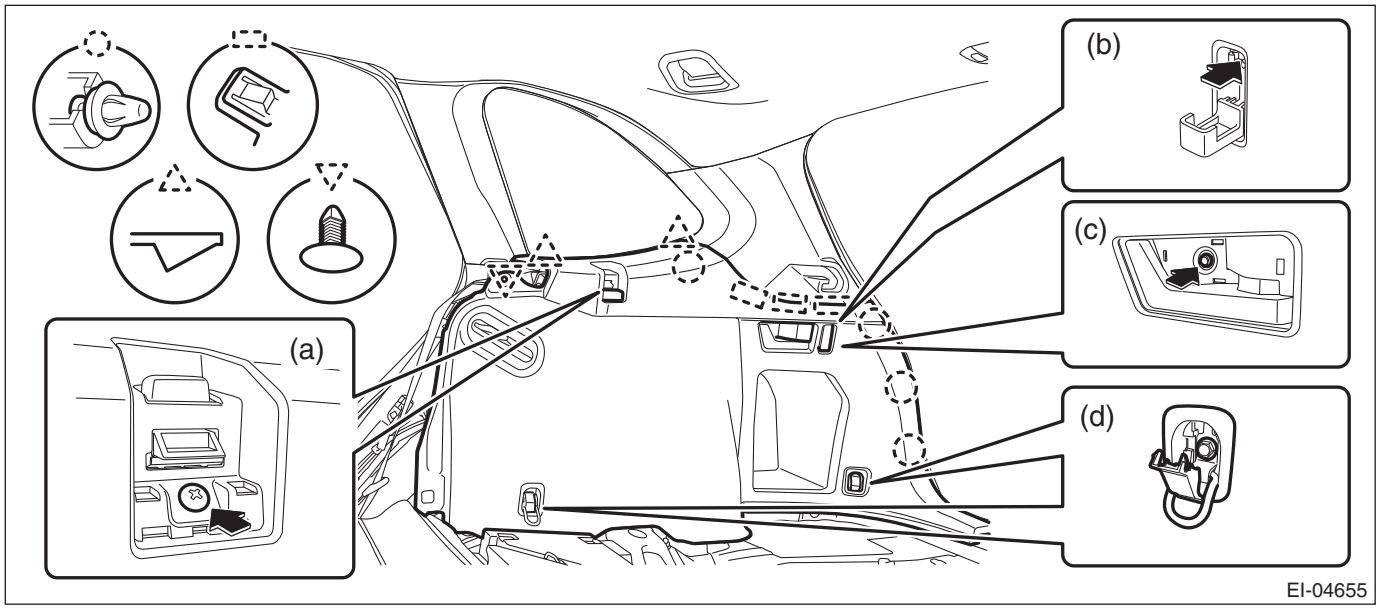
2. OUTBACK MODEL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly and side pad assembly - backrest. <Ref. to SE-36, OUTBACK MODEL, REMOVAL, Rear Seat.>

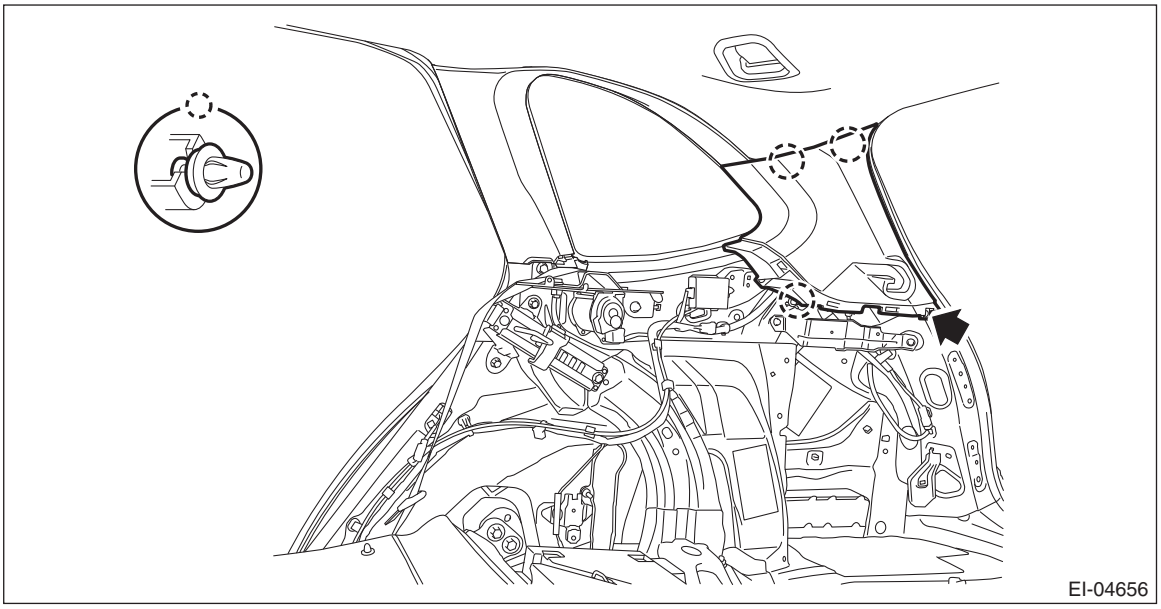
3) Remove the mat - rear floor, box - sub trunk, and spacer - rear floor.



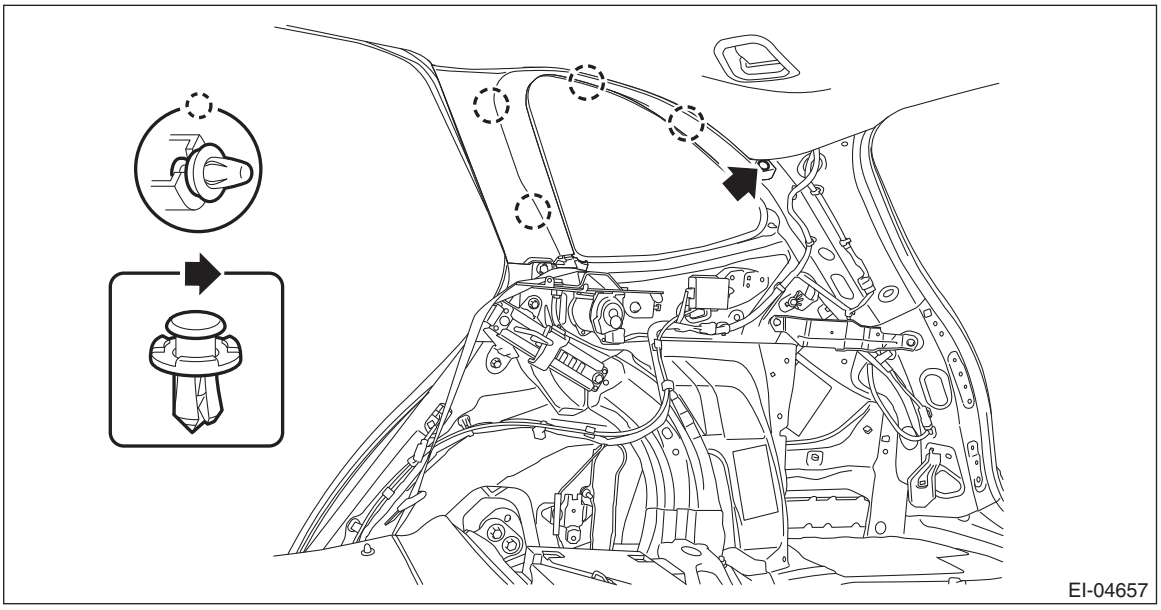
4) Remove the clips, and remove the trim panel - rear skirt.

CAUTION:
- **Do not lift the trim panel - rear skirt from the edge. Doing so may damage the part.**
- **Do not reuse the clips. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**

5) Remove the trim panel - rear apron.
   (1) Remove the covers, screws, and bolts. (a), (c), (d)
   (2) Take out the hook and remove the screw inside. (b)



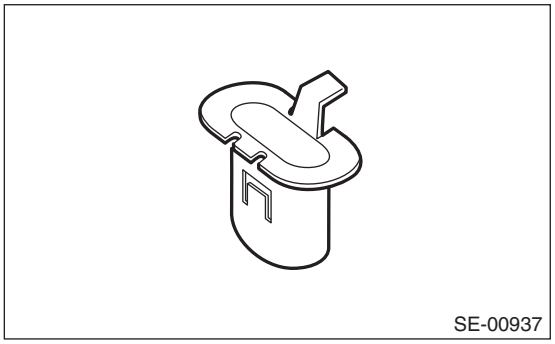
(3) Remove the clips, and remove the trim panel - rear apron.



NOTE:
For LH side, disconnect the accessory socket connector.

6) Remove the rear quarter trim UPR.

(1) Remove the screws and clips, and remove the rear quarter trim UPR - rear.

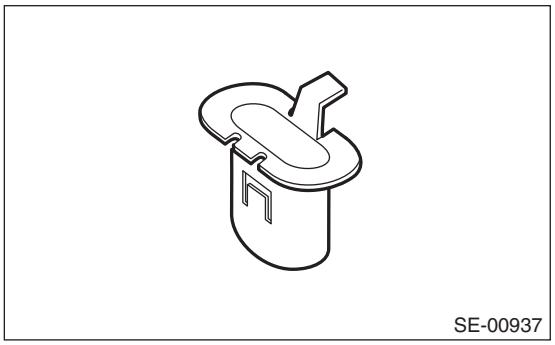


(2) Remove the clips, and remove the rear quarter trim UPR - front.

B: INSTALLATION

1. SEDAN MODEL

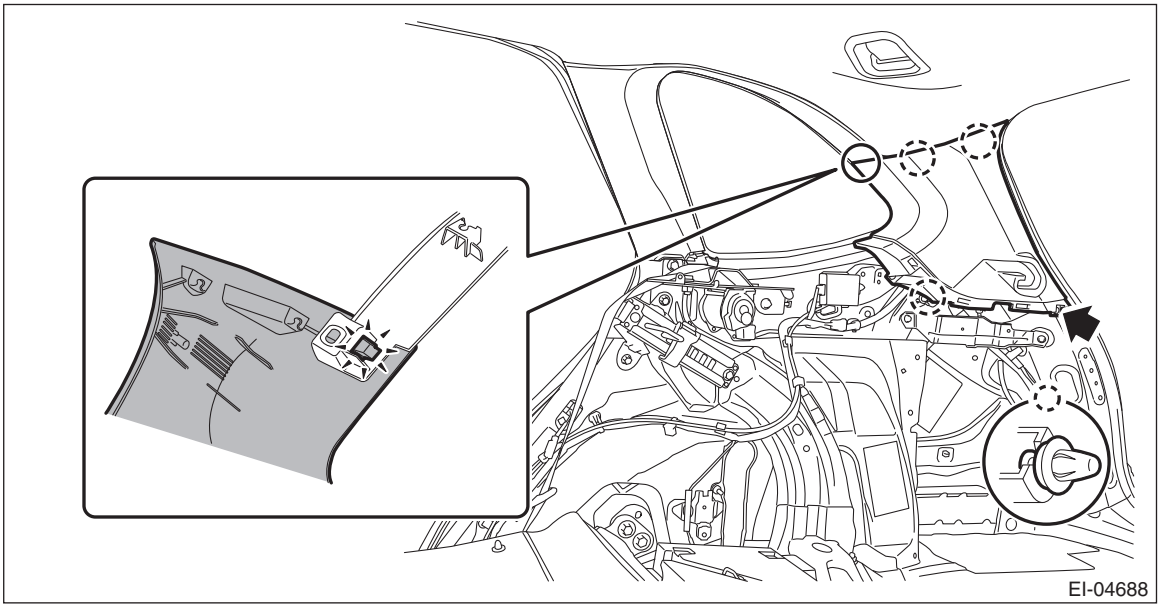
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



1) Install the trim panel - rear pillar UPR.
2) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

3) Install the rear seat cushion assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



2. OUTBACK MODEL

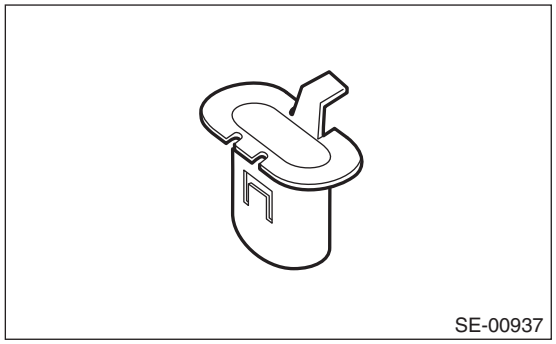
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Install the rear quarter trim UPR.

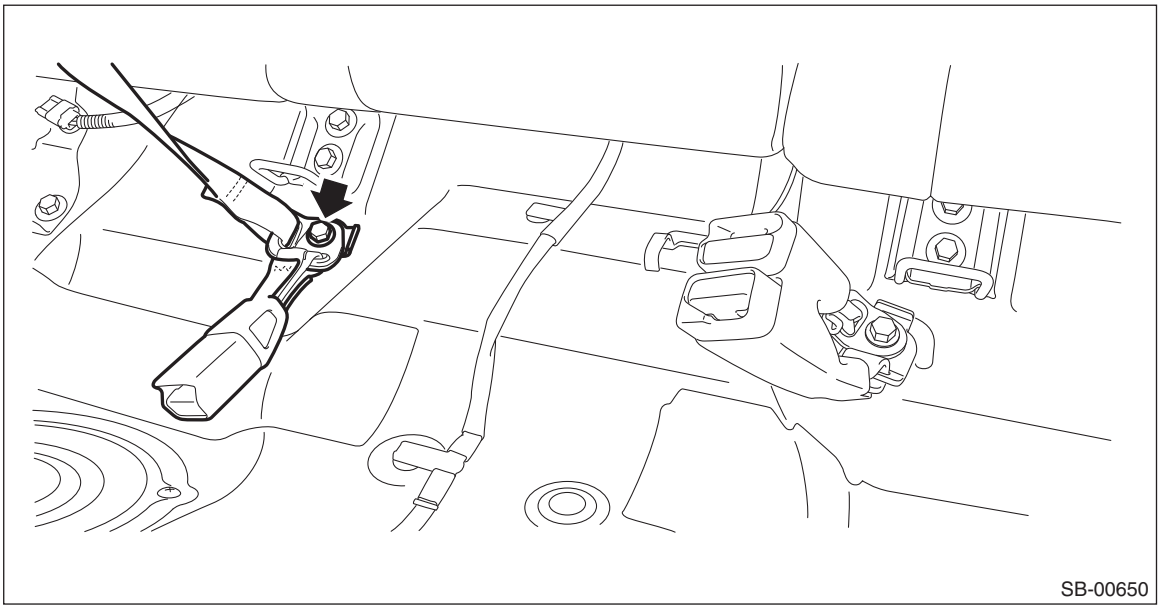
NOTE:
Insert the claw of the rear quarter trim UPR - rear into the rear quarter trim UPR - front.

EI-04688



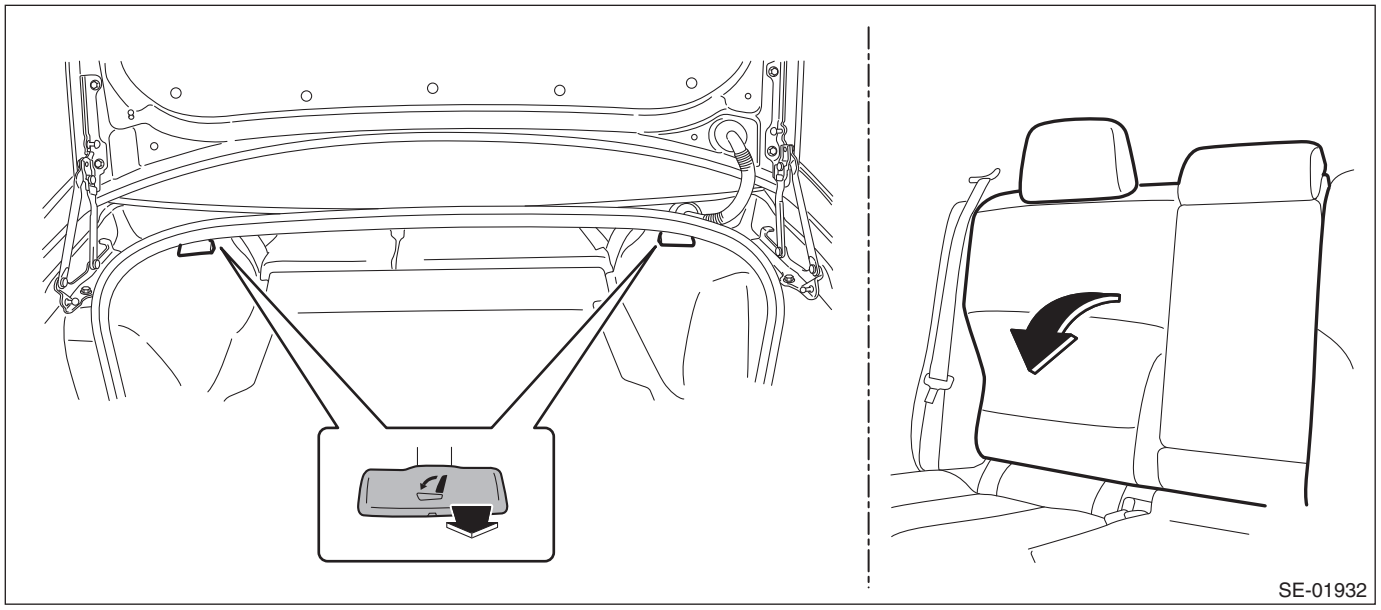
2) Install the trim panel - rear apron.
3) Install the mat - rear floor, box - sub trunk, and spacer - rear floor.
4) Remove the clips, and install the trim panel - rear skirt.
5) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



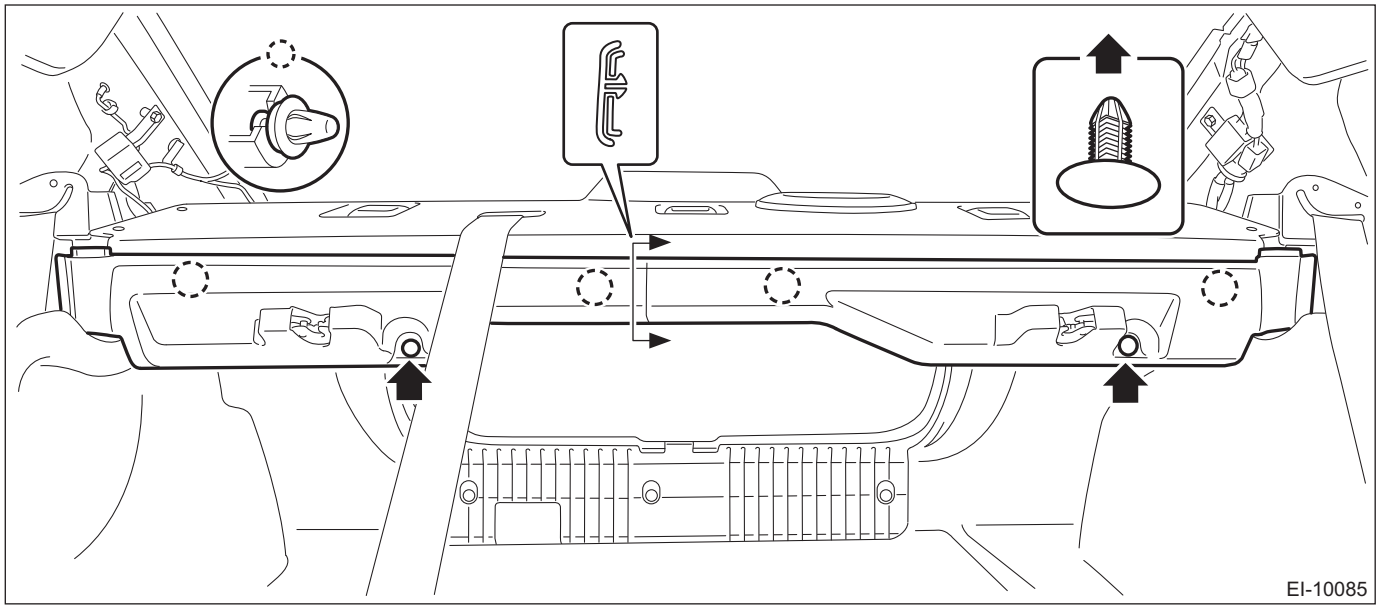
27.Rear Shelf Trim

A: REMOVAL



CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

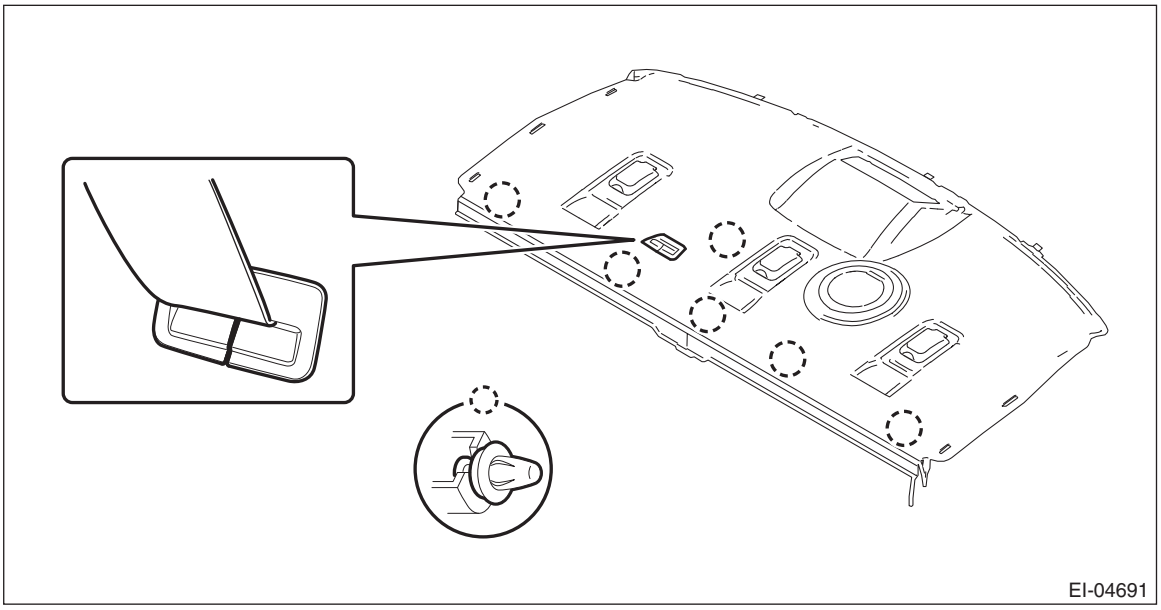
SE-00937



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
3) Remove the side pad assembly - backrest and the trim panel - rear pillar UPR on the left and right sides. <Ref. to EI-97, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
4) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.

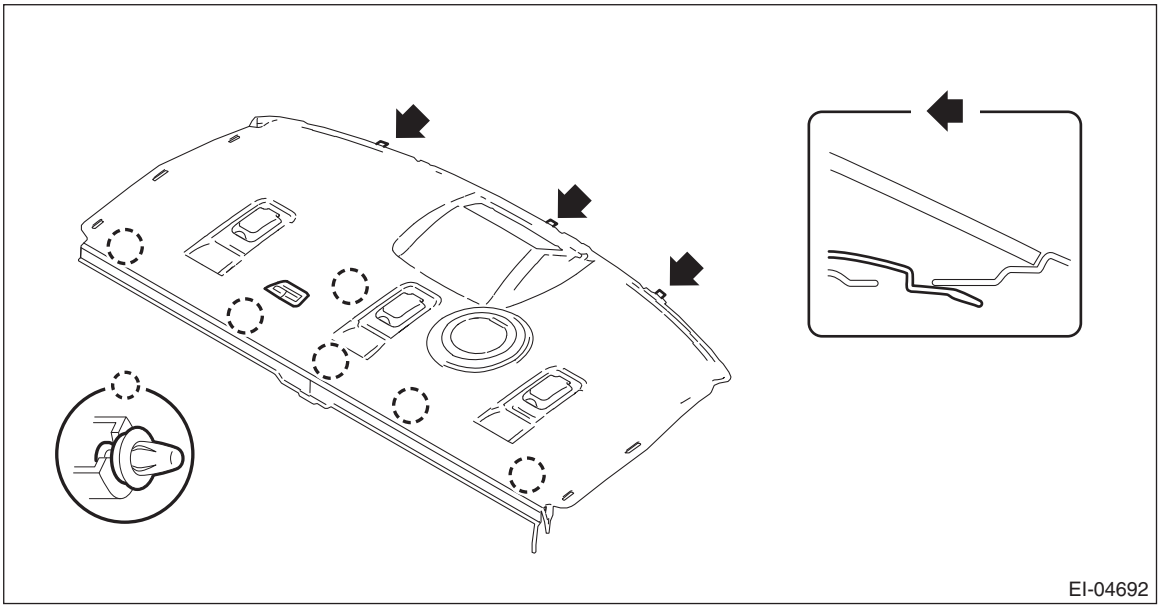
SB-00650

5) Pull the release lever in the trunk room, and then tilt the backrest forward.



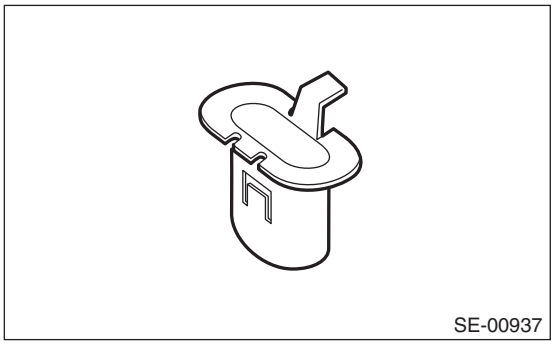
6) Release the clips and remove the trunk trim panel assembly - front on the left and right sides.

7) Remove the trim panel assembly - rear shelf.
   (1) Release the clips to float the trim panel assembly - rear shelf.
   (2) Release the belt guide, and guide the anchor of the seat belt - rear shoulder CTR to behind the trim panel - rear shelf assembly.
   (3) Disconnect the connector of the light assembly - high-mounted.



(4) Remove the trim panel assembly - rear shelf.

EI-04691



B: INSTALLATION

CAUTION:

• Make sure that the claw behind the trim panel assembly - rear shelf is securely attached to the hole of vehicle body.

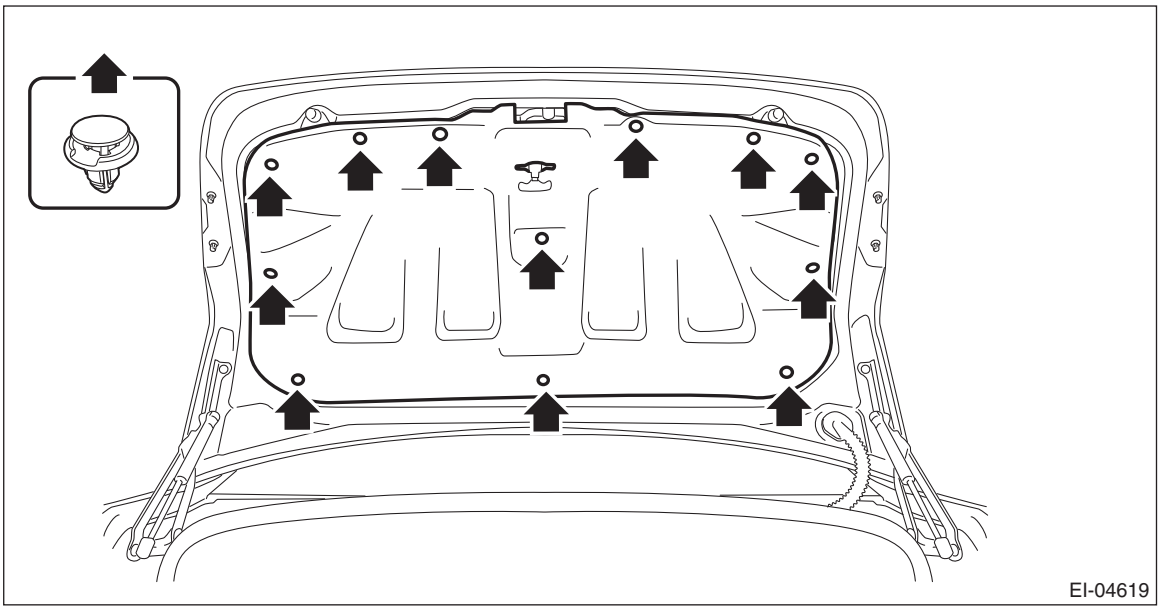
EI-04692

• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

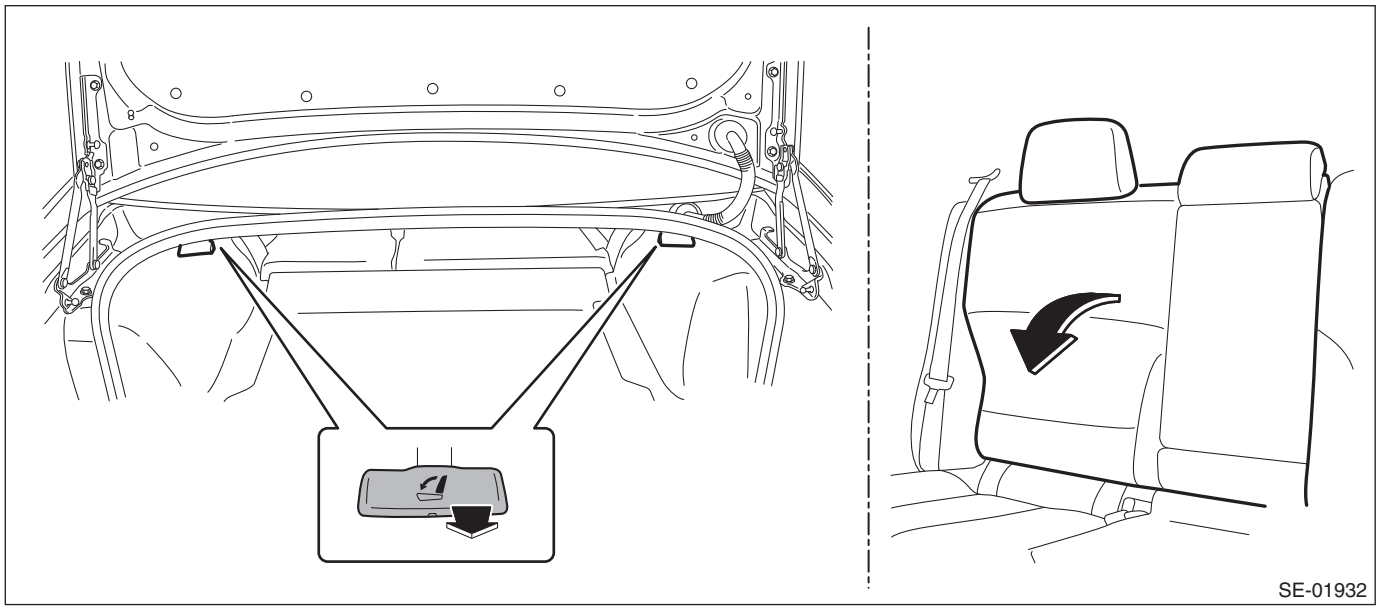
1) Install the trim panel assembly - rear shelf.
2) Install the high-mounted stop light.

CAUTION:
Make sure that the claw behind the light assembly - high-mounted is securely attached to the trim panel assembly - rear shelf.
3) Install the lower anchor of seat belt - rear shoulder CTR.



Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
4) Install the trim panel - rear pillar UPR.
5) Install the side pad assembly - backrest.

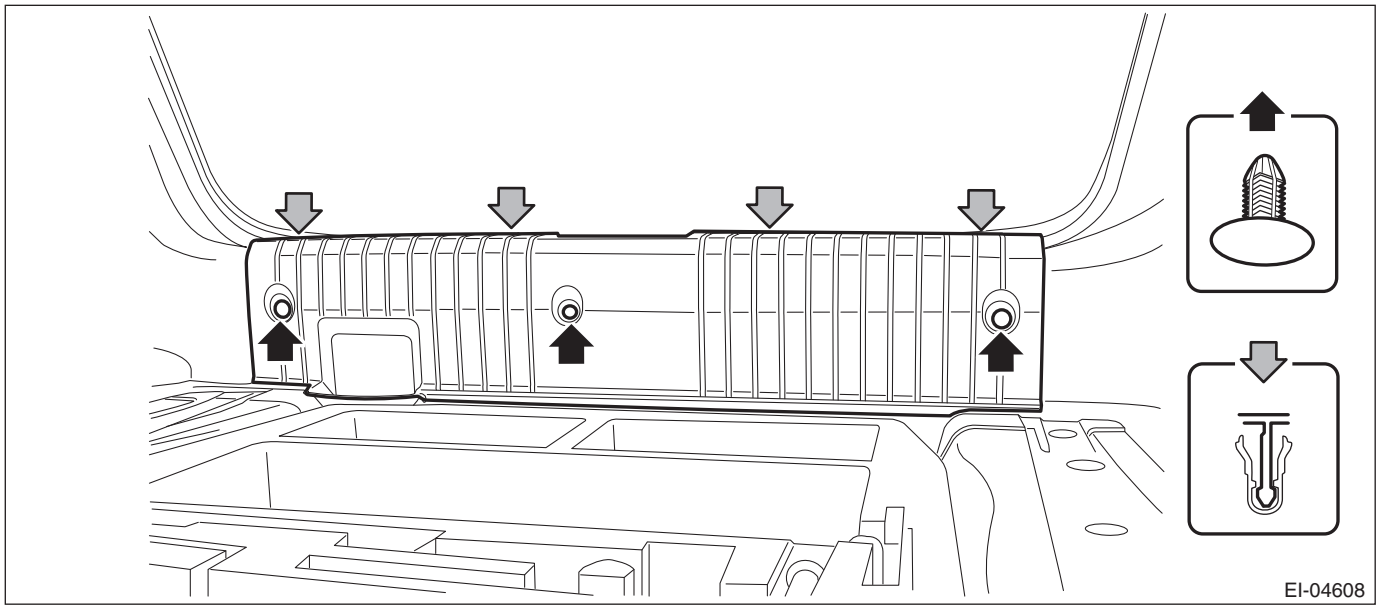
Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



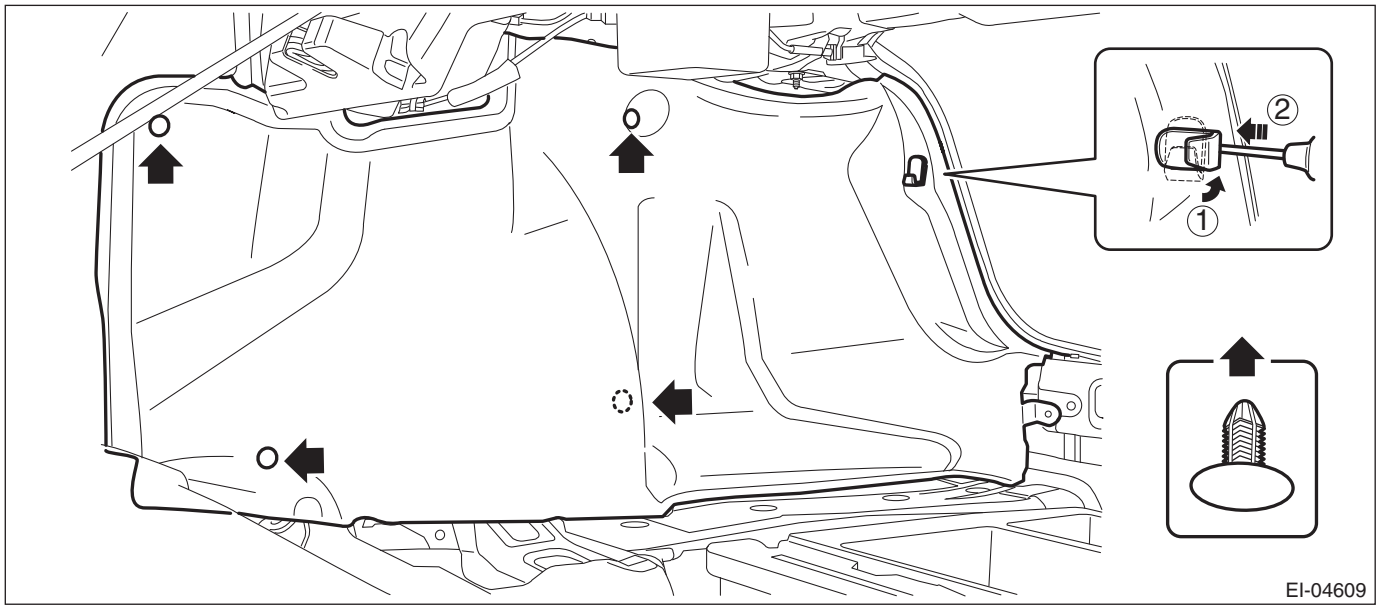
28.Trunk Room Trim

A: REMOVAL

1) Remove the clips, and remove the trim panel - trunk lid.



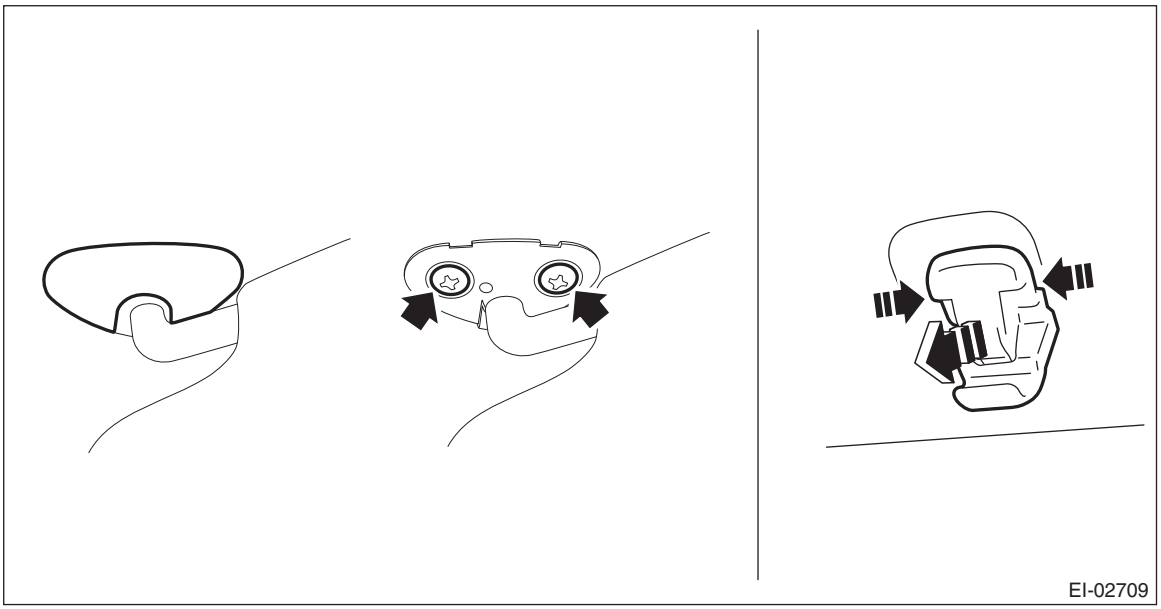
2) Pull the release lever in the trunk room, and then tilt the backrest forward.



3) Remove the mat - trunk.
4) Remove the trim panel - trunk rear.
   (1) Remove the clip.

(2) Release the claws, and remove the trim panel - trunk rear.

5) Remove the trunk trim panel - side.
(1) Remove the hook.
1. Turn the hook to 90°.
2. Press the claw using a screwdriver to detach the hook.
(2) Release the clips and remove the trunk trim panel - side.

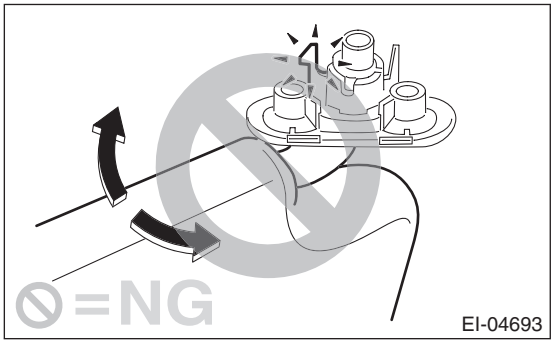


B: INSTALLATION

1) Install the trim panel - trunk lid.
2) Install the trunk room mat.
3) Install the trim panel - trunk rear.

29.Sun Visor

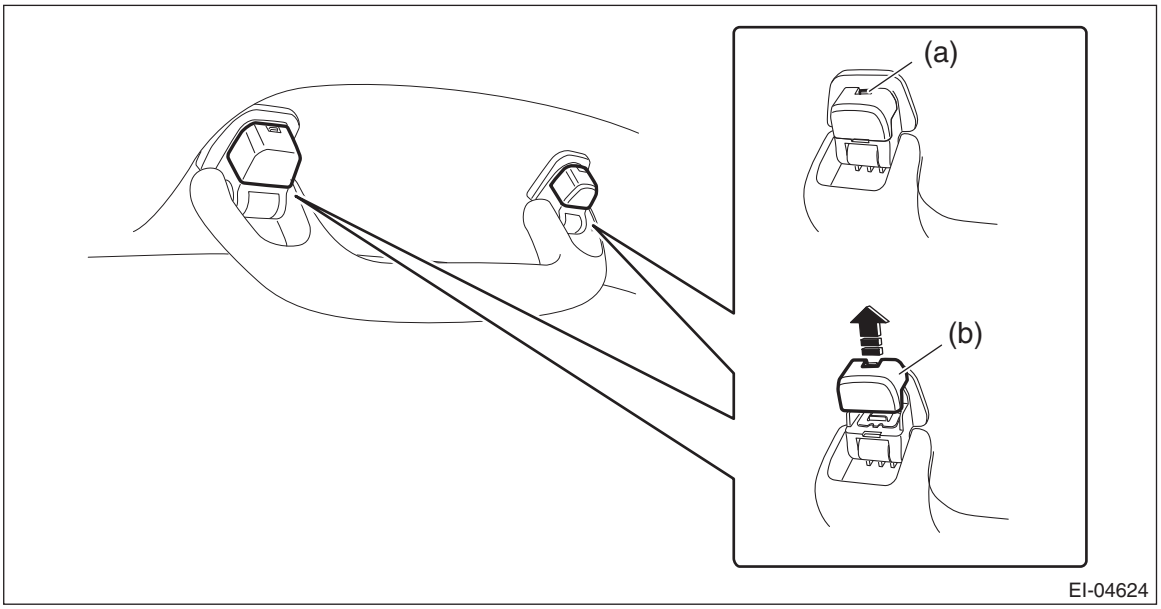
A: REMOVAL



1) Remove the sun visor assembly.
   (1) Detach the cover, and remove the screws.
   (2) Disconnect the connector, and remove the sun visor assembly.
2) Remove the hook - sun visor.
   (1) Press both sides using a flat tip screwdriver.
   (2) Remove the hook - sun visor by pulling it toward you.

B: INSTALLATION

1) Install the hook - sun visor.
2) Install the sun visor assembly.



CAUTION:
Do not rotate the sun visor assembly when it is temporarily installed. The claw for temporary installation may be damaged.

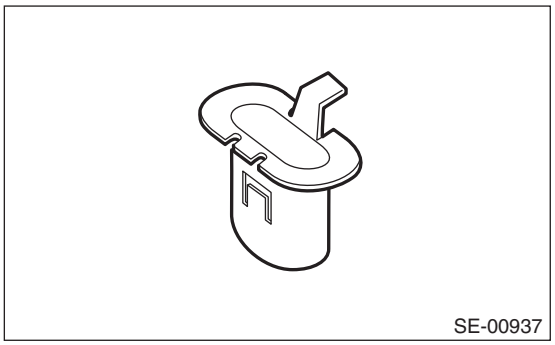
30.Assist Grip

A: REMOVAL

1) Pull up the cap (b) while pulling the knob (a) toward you with a flat tip screwdriver or similar tool wrapped with a protection tape.
2) Pull the assist grip toward yourself (toward the vehicle center) to remove.

B: INSTALLATION

1) Pinch the metal clip with pliers, and remove it from the assist grip BRKT.
2) Install the metal clip to the assist grip side.
3) Install the cap to the assist grip.

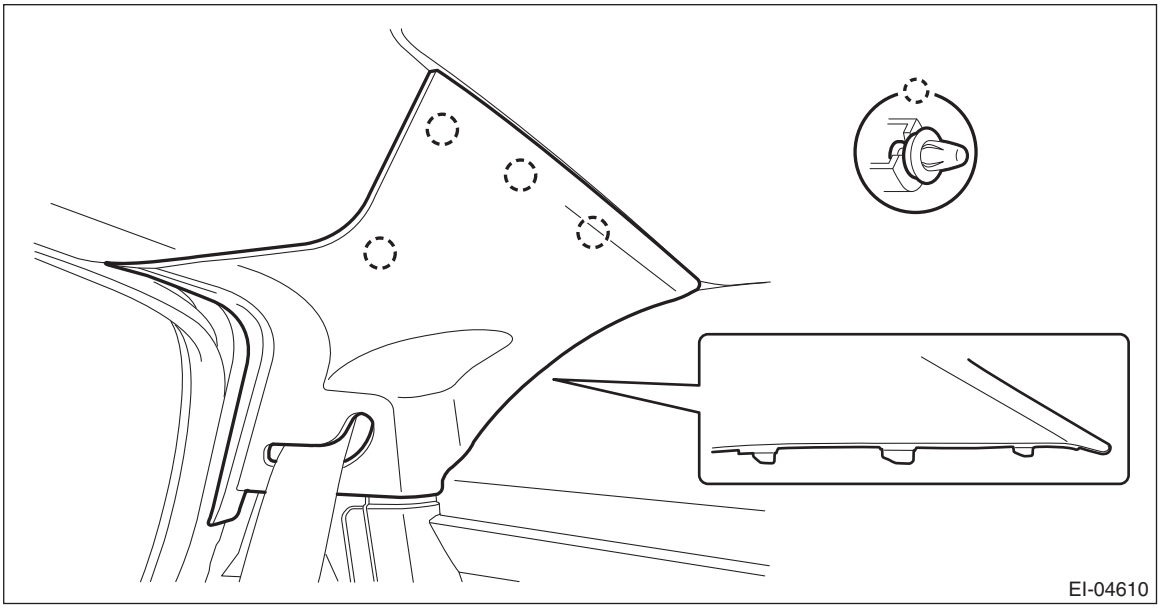


NOTE:
If the metal clip is not inserted to the end, the cap cannot be installed.
4) Install the assist grip to the vehicle.

31.Roof Trim

A: REMOVAL

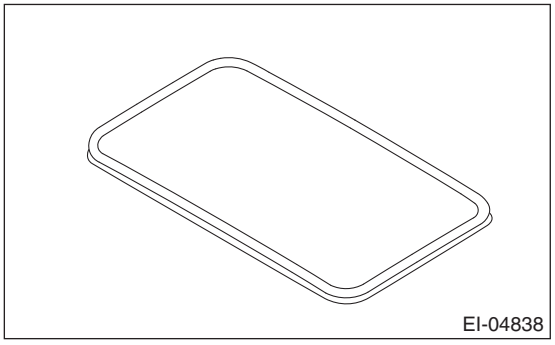
1. SEDAN MODEL



CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

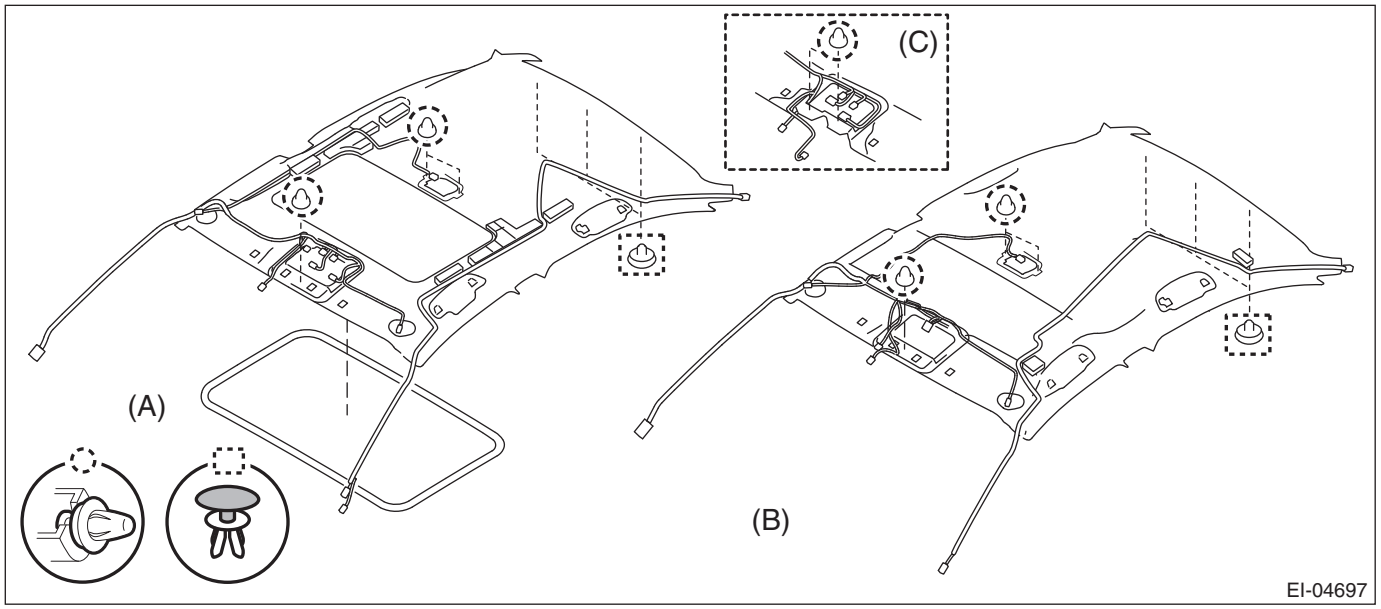
SE-00937

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
• Shift the select lever into "N" before disconnecting the battery ground terminal.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
2) Remove the front seats. <Ref. to SE-12, REMOVAL, Front Seat.>
3) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
4) Remove the console box assembly and the cover - shift lever. <Ref. to EI-80, REMOVAL, Console Box.>
5) Cover the following areas to protect from damage.
• Steering wheel
• Instrument panel surface
• Glove box surface
6) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
7) Remove the upper inner trim on the RH and LH sides. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
8) Remove the clips, and remove the trim panel - rear pillar UPR on the left and right sides.

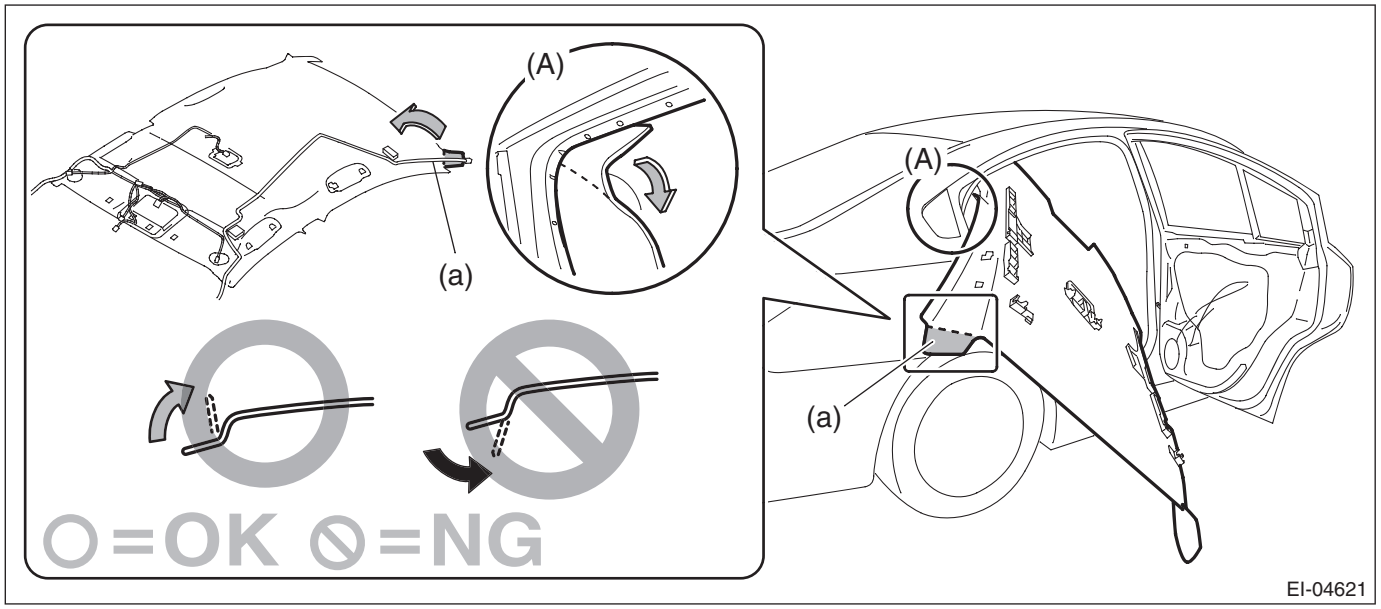
NOTE:
Remove the seat belt from the opening.



9) Remove the following parts from the passenger's side rear door.
- Rear door trim assembly: <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
- Rear speaker assembly: <Ref. to ETM-16, REMOVAL, Rear Speaker.>
- Checker assembly - rear door: <Ref. to EB-30, REAR DOOR PANEL, REMOVAL, Rear Door.>

10) Remove the overhead console assembly. (Models without EyeSight) <Ref. to LI-76, REMOVAL, Spot Map Light.>
11) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
12) Remove the left and right sun visor assembly. <Ref. to EI-109, REMOVAL, Sun Visor.>
13) Remove the light assembly - room. <Ref. to LI-78, REMOVAL, Room Light.>
14) Remove all assist grip assembly. <Ref. to EI-110, REMOVAL, Assist Grip.>
15) Remove the sunroof garnish. (Model with sunroof)

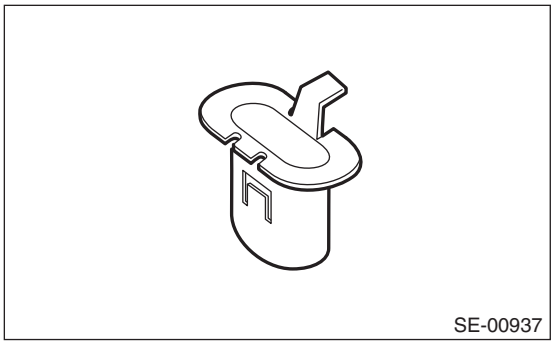
16) Remove the trim panel - roof assembly.
(1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.



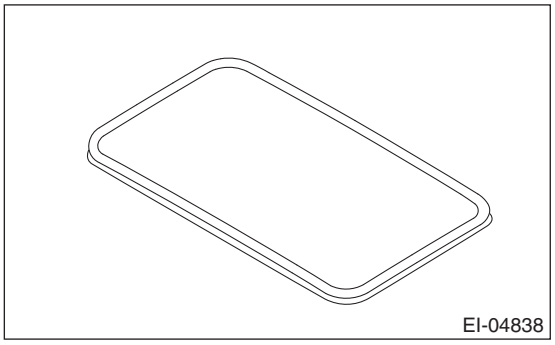
(2) Remove the clip and the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(A) Model with sunroof (B) Model without sunroof (C) Models with EyeSight

(3) Slightly bend the rear end of the trim panel - roof assembly along the character line, and take it out of the vehicle from the passenger's side rear door opening.



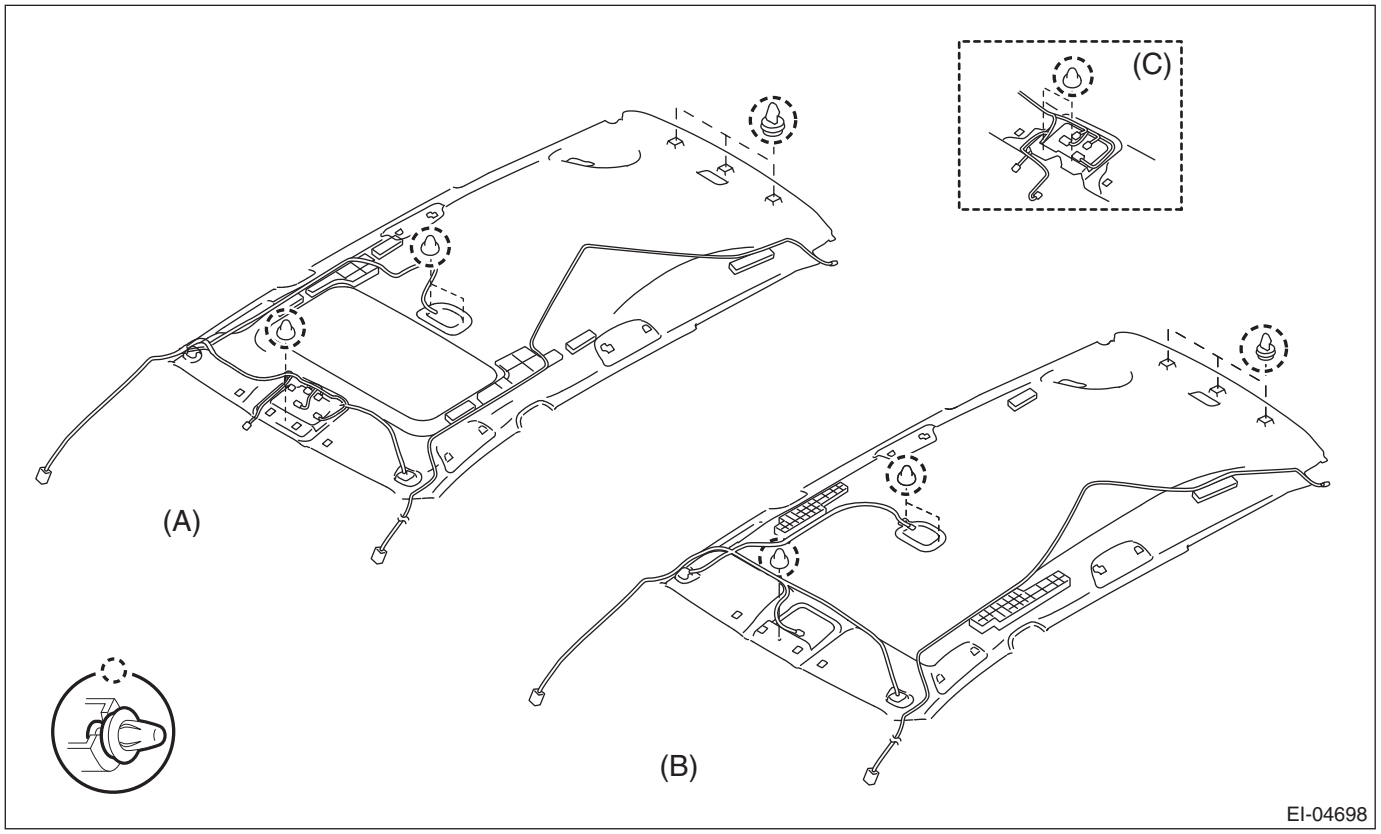
CAUTION:
Be careful of the bending direction. If the direction is wrong, the trim panel - roof assembly may be wrinkled.



2. OUTBACK MODEL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
3) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
4) Remove the upper inner trim on the RH and LH sides. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
5) Remove the side pad assembly - backrest, trim panel - rear apron and rear quarter trim UPR. <Ref. to EI-98, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
6) Remove the overhead console assembly. (Models without EyeSight) <Ref. to LI-76, REMOVAL, Spot Map Light.>
7) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
8) Remove the left and right sun visor assembly. <Ref. to EI-109, REMOVAL, Sun Visor.>
9) Remove the light assembly - room. <Ref. to LI-78, REMOVAL, Room Light.>
10) Remove all assist grip assembly. <Ref. to EI-110, REMOVAL, Assist Grip.>
11) Remove the sunroof garnish. (Model with sunroof)

EI-04838

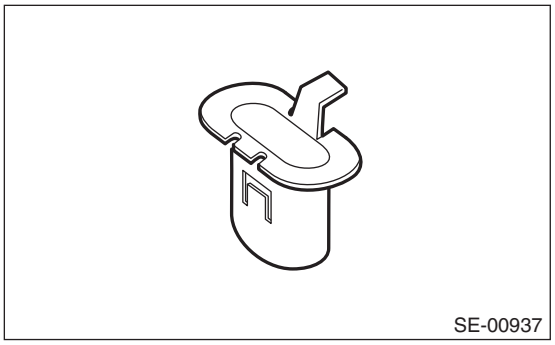
12) Remove the trim panel - roof assembly.
    (1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.

(2) Remove the clip and the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(A) Model with sunroof (B) Model without sunroof (C) Models with EyeSight

B: INSTALLATION

CAUTION:



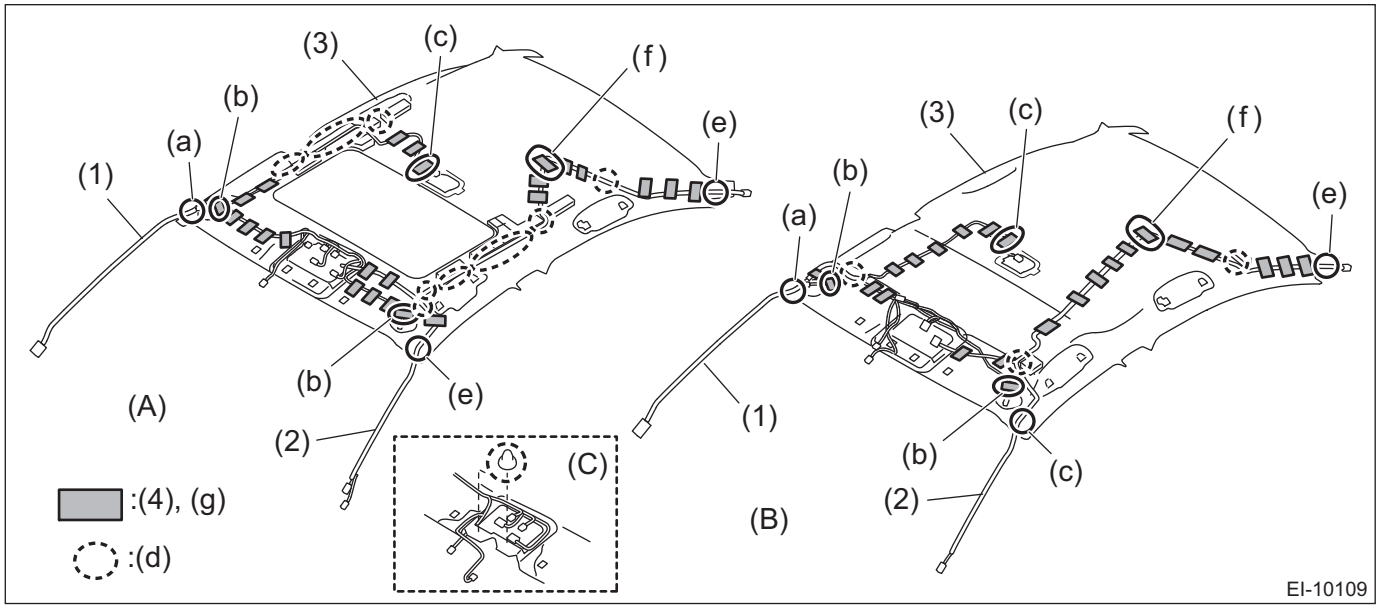
• For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-9, INSTALLATION, Stereo Camera.>

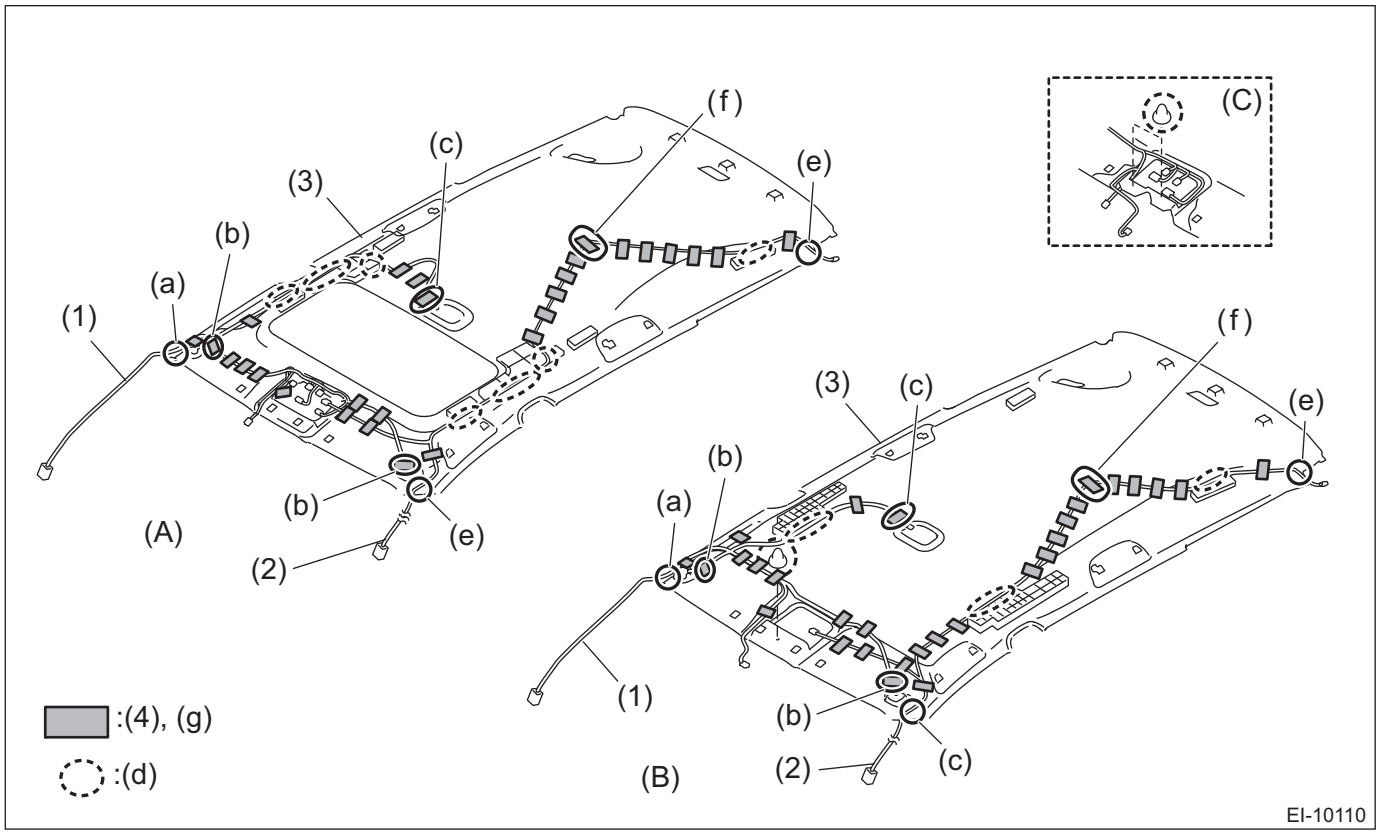
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.

• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.

• Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.

• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.





1) Install the trim panel - roof assembly.
   (1) Bring the trim panel - roof assembly inside the vehicle.
   (2) Attach the feeder cord and roof cord to the roof trim.

CAUTION:
Route each cord carefully. The cord may interfere, thus preventing normal deployment of the curtain airbag when necessary.

Preparation items:
Part No.: 86359SC000/TAPE

NOTE:
Use the tape (service parts) by cutting into 80 mm × 50 mm (3.1 in × 2 in).

(A) Model with sunroof
(B) Model without sunroof
(C) Models with EyeSight

(1) Roof cord
(2) Feeder cord
(3) Trim panel - roof
(4) Tape

(a) Secure the cord to the clamp.
(b) Secure the end of the spacer SV base with tape while aligning it with the mark-off line of the roof trim.
(c) Secure the end of the polyurethane section with tape while aligning it with the mark-off line of the roof trim.
(d) Secure it to the roof pad clamp.
(e) Secure the polyurethane section to the clamp.
(f) Fix with the tape by adjusting the excess portion of cord at the (f) position.
(g) Secure the cord with tape while avoiding any raised part.

(3) Secure the trim panel - roof assembly with the clips.
2) Install the garnish - roof. (Model with sunroof)
3) Install the assist rail.
4) Install the light assembly - room.
5) Install the sun visor assembly.
6) Install the overhead console. (Models without EyeSight)
7) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-9, INSTALLATION, Stereo Camera.>
8) Install the trim panel - rear pillar UPR.
9) Install the upper inner trim.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

10) Install the lower inner trim.
11) Install the side pad assembly - backrest.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

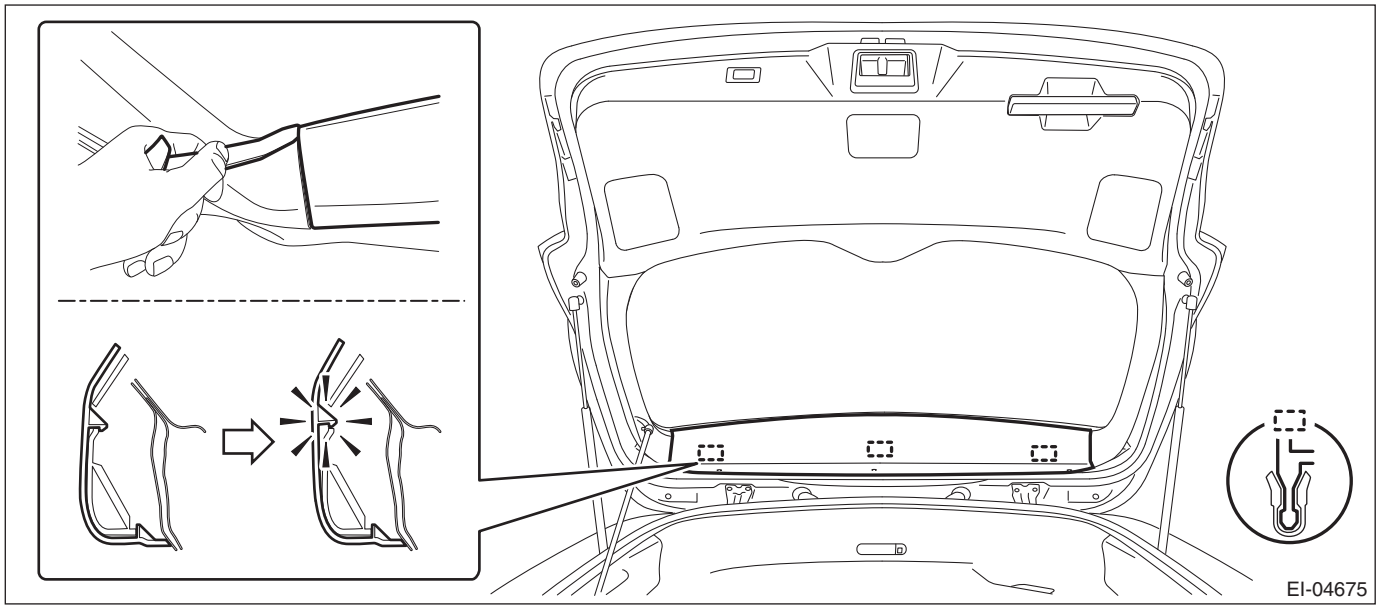
12) Install the rear seat cushion assembly.
13) Install the console box assembly and cover - shift lever. (Sedan model)

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

14) Install the front seat. (Sedan model) <Ref. to SE-12, INSTALLATION, Front Seat.>
15) Install each part of rear doors. (Sedan model)
- Checker ASSY - rear door

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

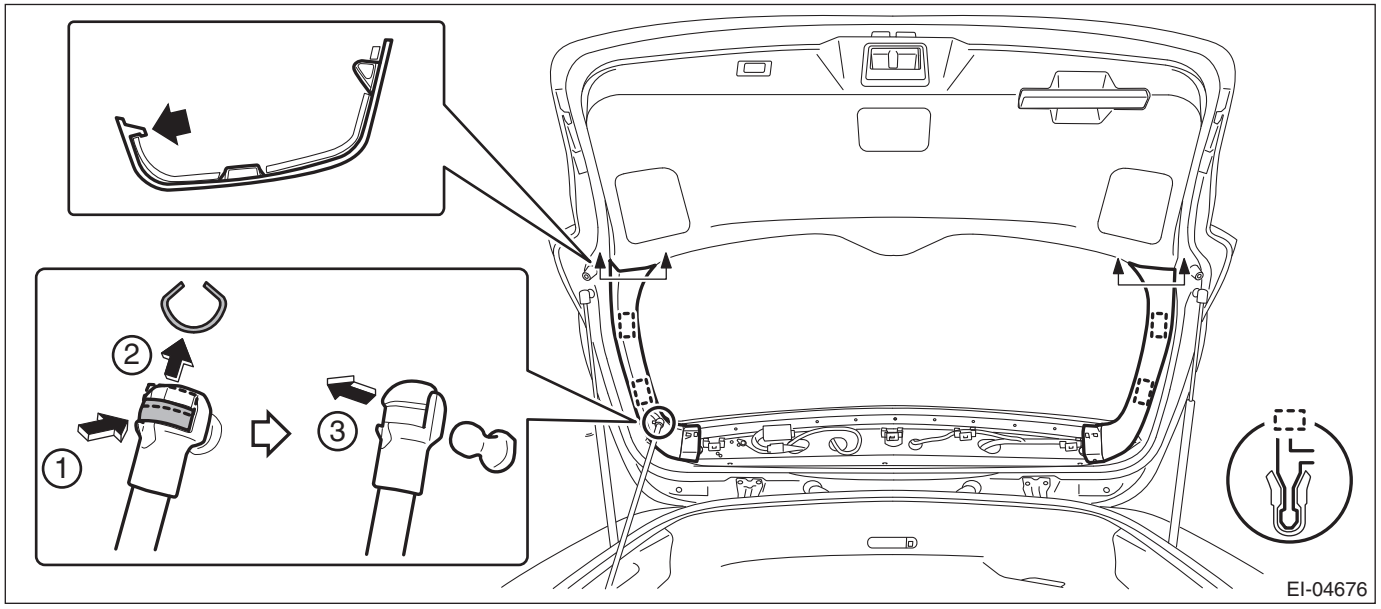
- Rear door trim assembly
- Rear speaker assembly



16) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position. (Sedan model)

32.Rear Gate Trim



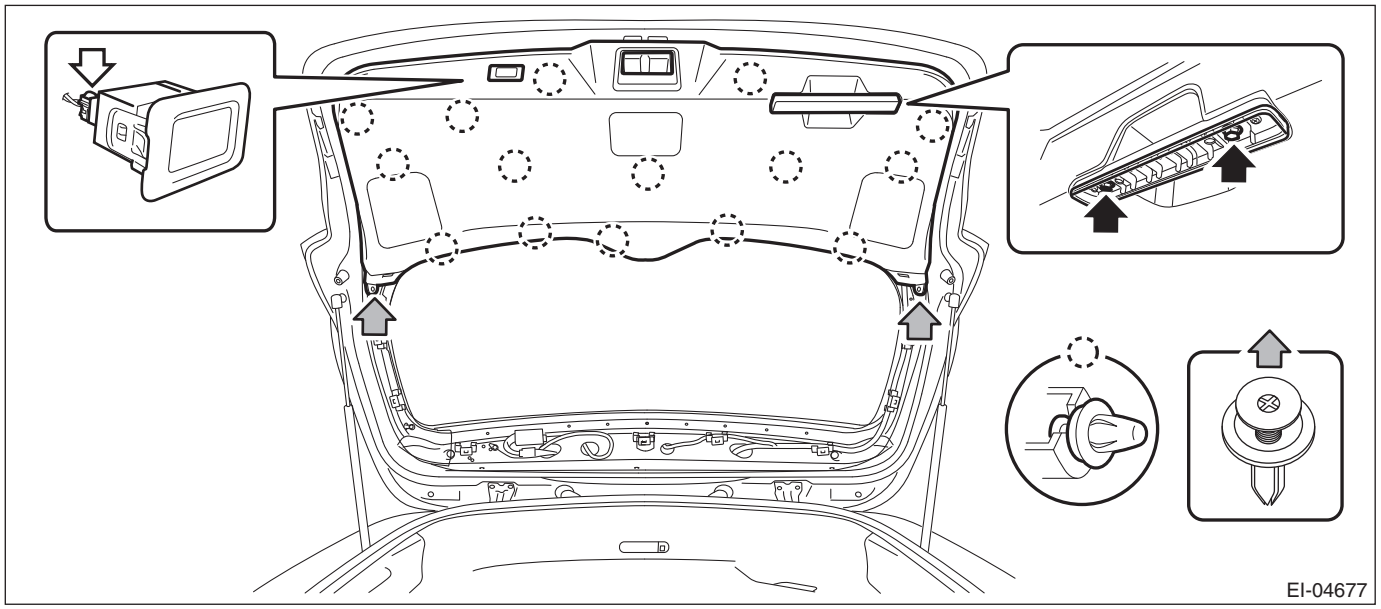
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate UPR.
   (1) Remove the claws on the trim edge.
   (2) Release the claws in the center of trim, and remove the trim panel - rear gate UPR.

3) Remove the trim panel - rear gate pillar side.
   (1) Disconnect the rod - power rear gate before removing the trim panel - rear gate pillar side LH. (Only for models with power rear gate)

CAUTION:
For the disconnection procedure of the rod - power rear gate, refer to "REMOVAL", "Power Rear Gate Rod" in the "POWER REAR GATE" section and observe the precautions for removal. <Ref. to PRG-10, REMOVAL, Power Rear Gate Rod.>
   (2) Release the claws.
   (3) Remove the claws on the bottom of trim, and remove the trim panel - rear gate pillar side.

4) Remove the trim panel - rear gate LWR.



(1) Remove the power rear gate inner switch and disconnect the connector. (Only for models with power rear gate)

NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the slit on the left.

(2) Remove the cover - grip, and remove the bolts.

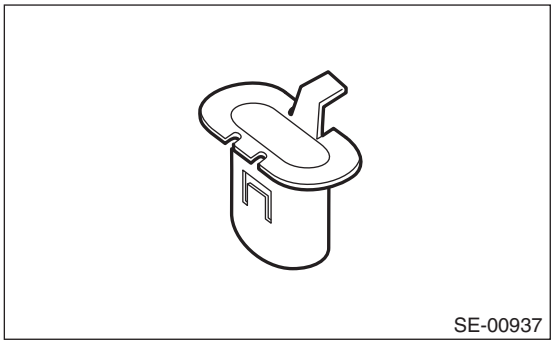
NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the side slit.

(3) Remove the clips, and remove the trim panel - rear gate LWR.

B: INSTALLATION

CAUTION:
For installation of the rod - power rear gate, refer to "INSTALLATION", "Power Rear Gate Rod" in the "POWER REAR GATE" section and observe the precautions for installation. <Ref. to PRG-11, INSTALLATION, Power Rear Gate Rod.>

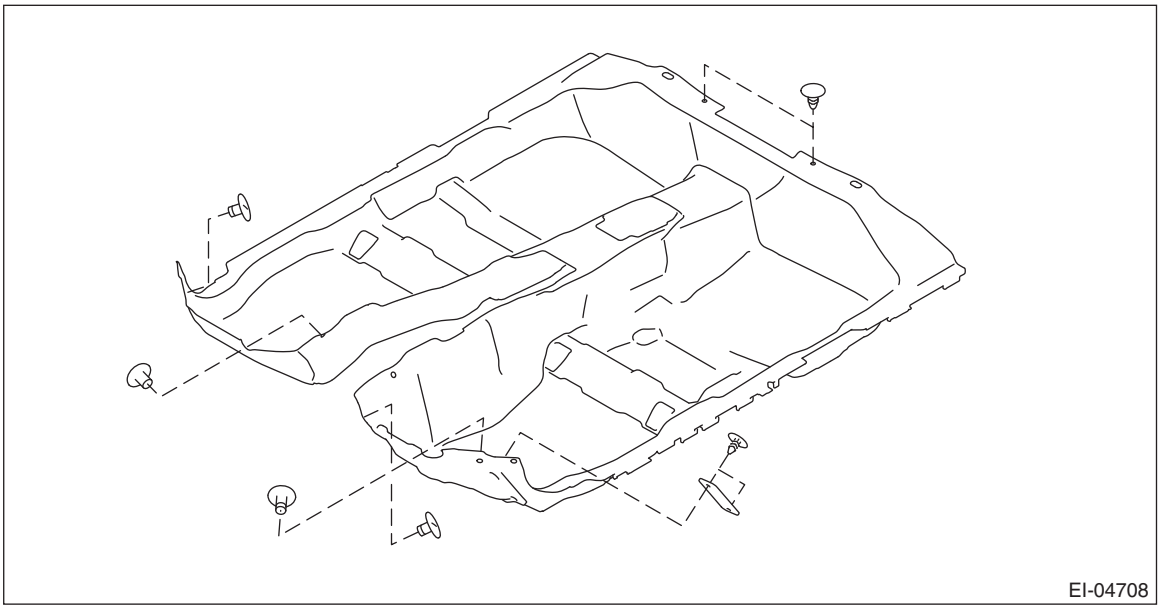
1) Install the trim panel - rear gate LWR.
   (1) Install the power rear gate inner switch.
   (2) Install the hand grip.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the trim panel - rear gate pillar side.
3) Install the trim panel - rear gate pillar UPR.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

33.Floor Mat

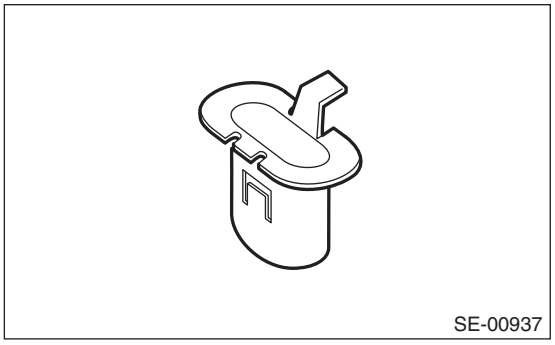


A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
• Shift the select lever into "N" before disconnecting the battery ground terminal.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
2) Remove the front seat assembly. <Ref. to SE-12, REMOVAL, Front Seat.>
3) Remove the rear seat cushion assembly. <Ref. to SE-34, REMOVAL, Rear Seat.>
4) Remove the console box assembly, the cover - shift lever and the panel center LWR. <Ref. to EI-80, REMOVAL, Console Box.>
5) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
6) Remove the pull handle cover. <Ref. to SL-61, FUEL FLAP, REMOVAL, Remote Openers.>
7) Take out the floor mat from the vehicle.
(1) Remove the clips from the floor mat using the remover.
(2) Remove the mat hook on both sides.
(3) Take out the floor mat after folding down.

EI-04708

B: INSTALLATION

1) Install the floor mat.

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

NOTE:
Secure the mat firmly with clips.
2) Install the pull handle cover.
3) Install the lower inner trim.
4) Install the console box assembly, the cover - shift lever and the panel center LWR.

Tightening torque:
Console box assembly: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
5) Install the rear seat cushion assembly.
6) Install the front seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

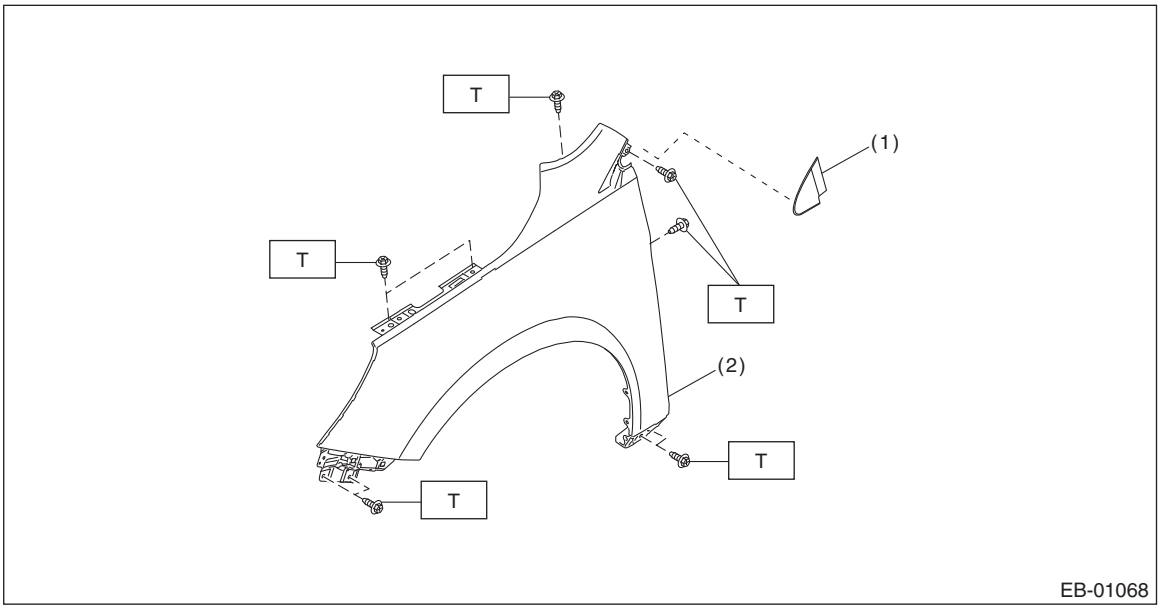
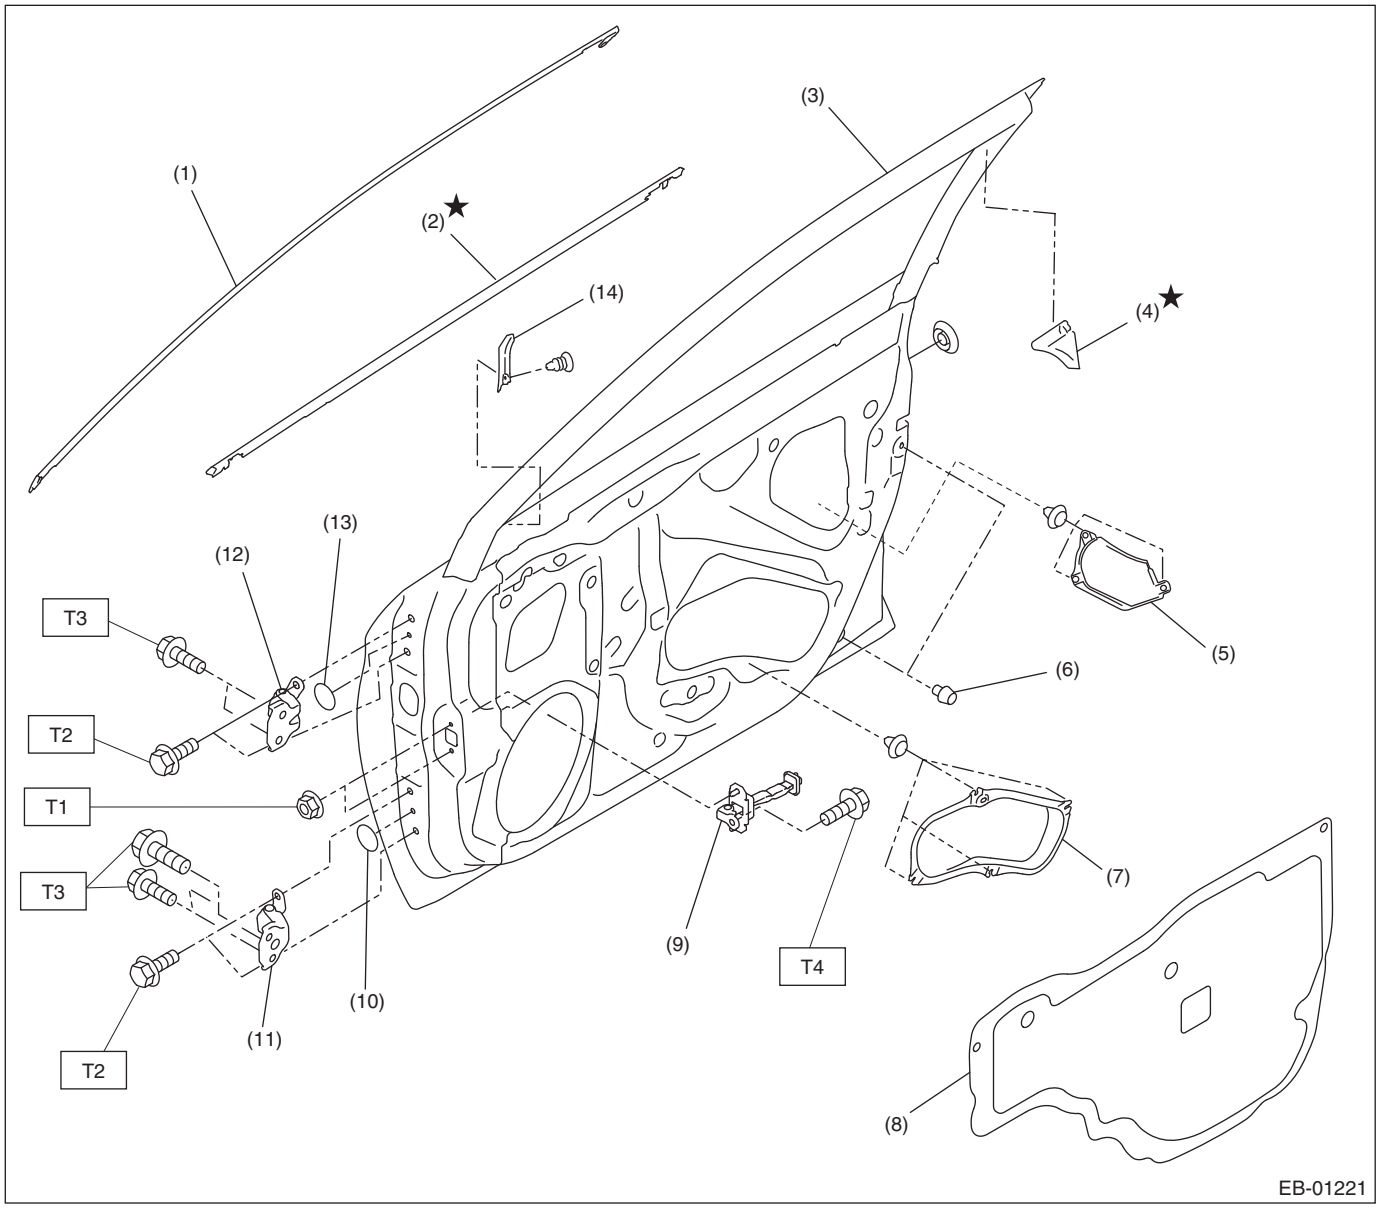
1. General Description



A: COMPONENT

1. FRONT HOOD

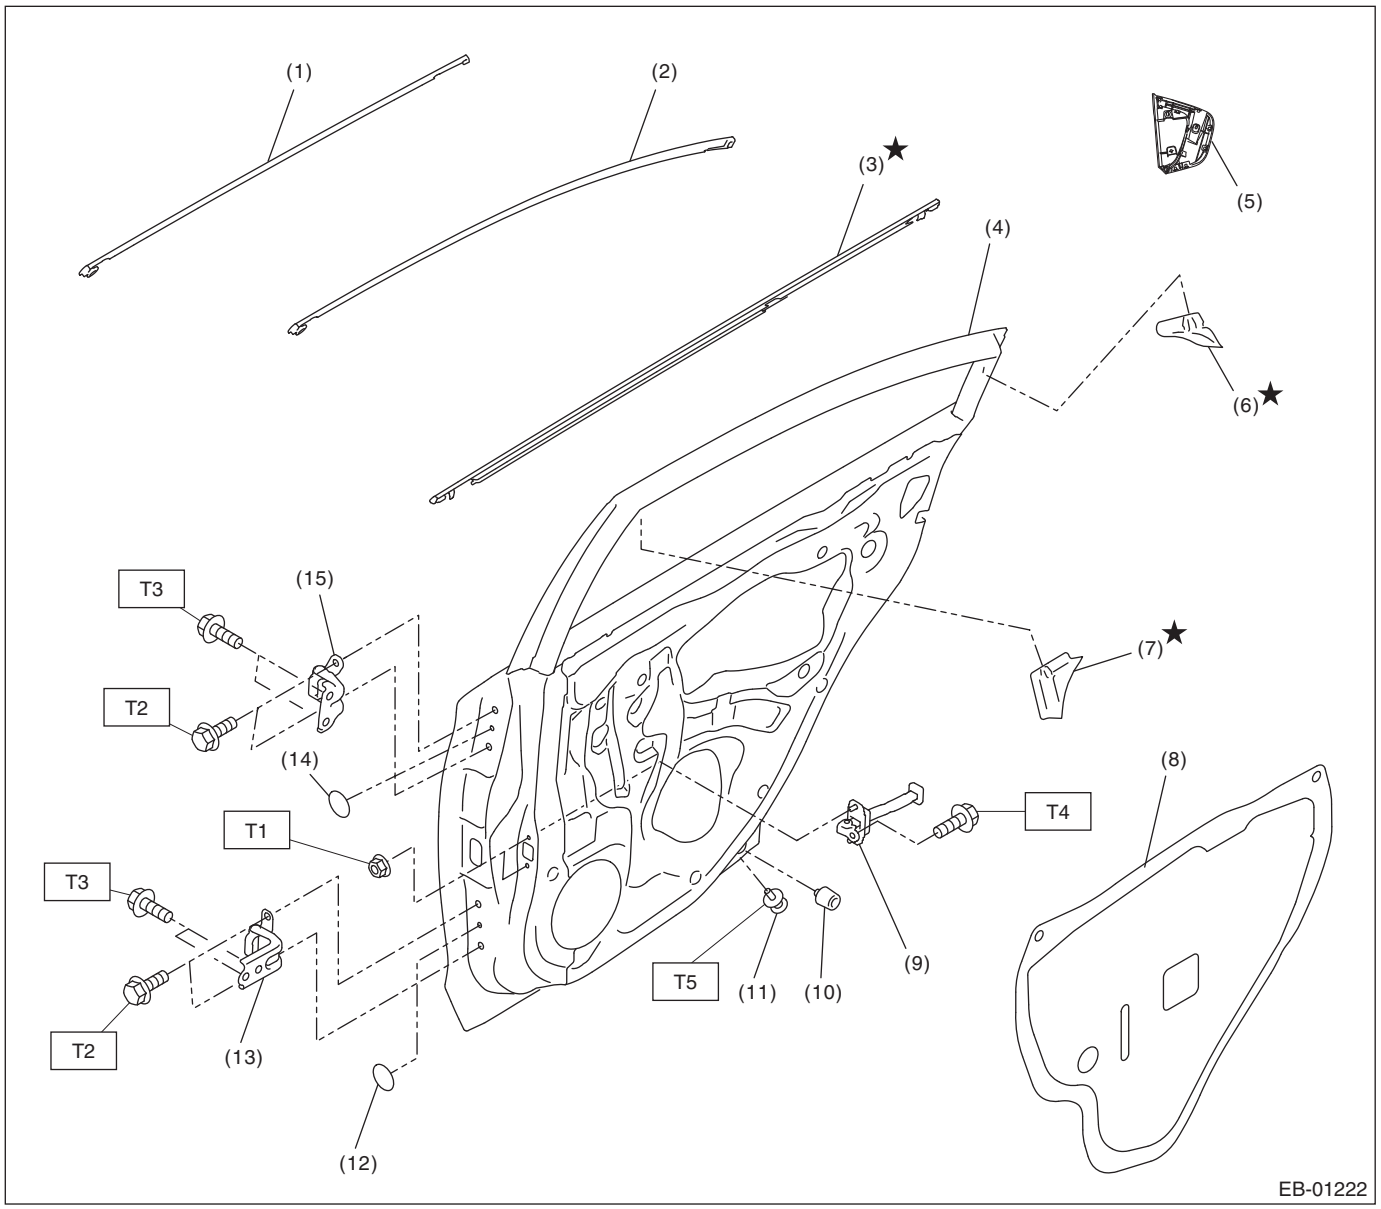
(1)	Hood COMPL - front	(5)	Cover - front fender UPR	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Striker - front hood	(6)	Stay ASSY - front hood	***T1: 20 (2, 14.8)***
(3)	Buffer - front hood	(7)	Stopper - front hood	***T2: 25 (2.5, 18.4)***
(4)	Insulator - front hood	(8)	Hinge COMPL - front hood	***T3: 33 (3.4, 24.3)***



2. FRONT FENDER

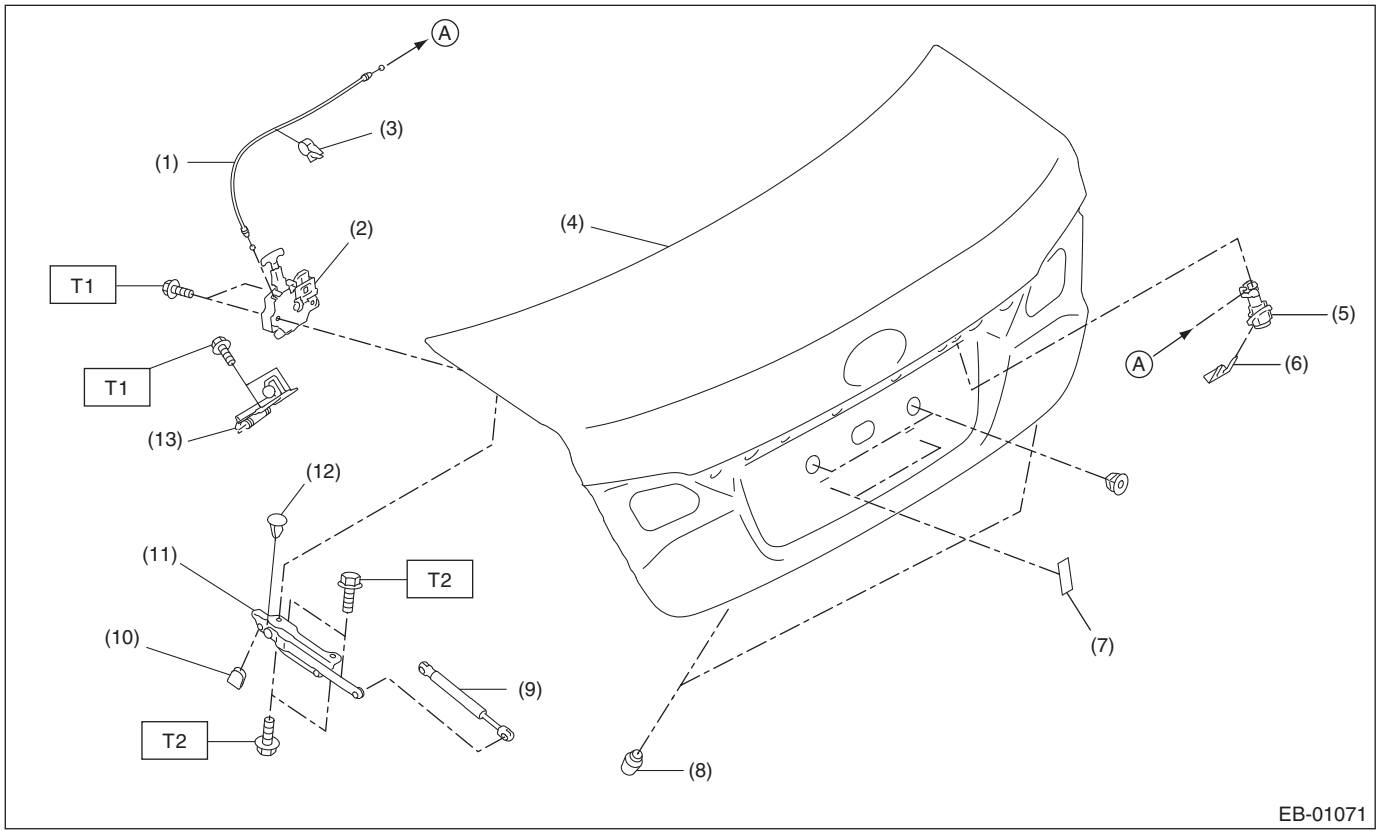
(1) Cover - A pillar ASSY
(2) Fender COMPL - front

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



3. FRONT DOOR

(1)	Molding - door sash front	(8)	Sealing cover - front door
(2)	Weather strip outer - front door	(9)	Checker ASSY - front door
(3)	Panel ASSY - front door	(10)	Grommet - lower
(4)	Cover B pillar - front door INN	(11)	Lower hinge - front door
(5)	Plate - door	(12)	Upper hinge - front door
(6)	Stopper - rubber	(13)	Grommet - upper
(7)	Front door inner pad	(14)	Cover sash - inner front

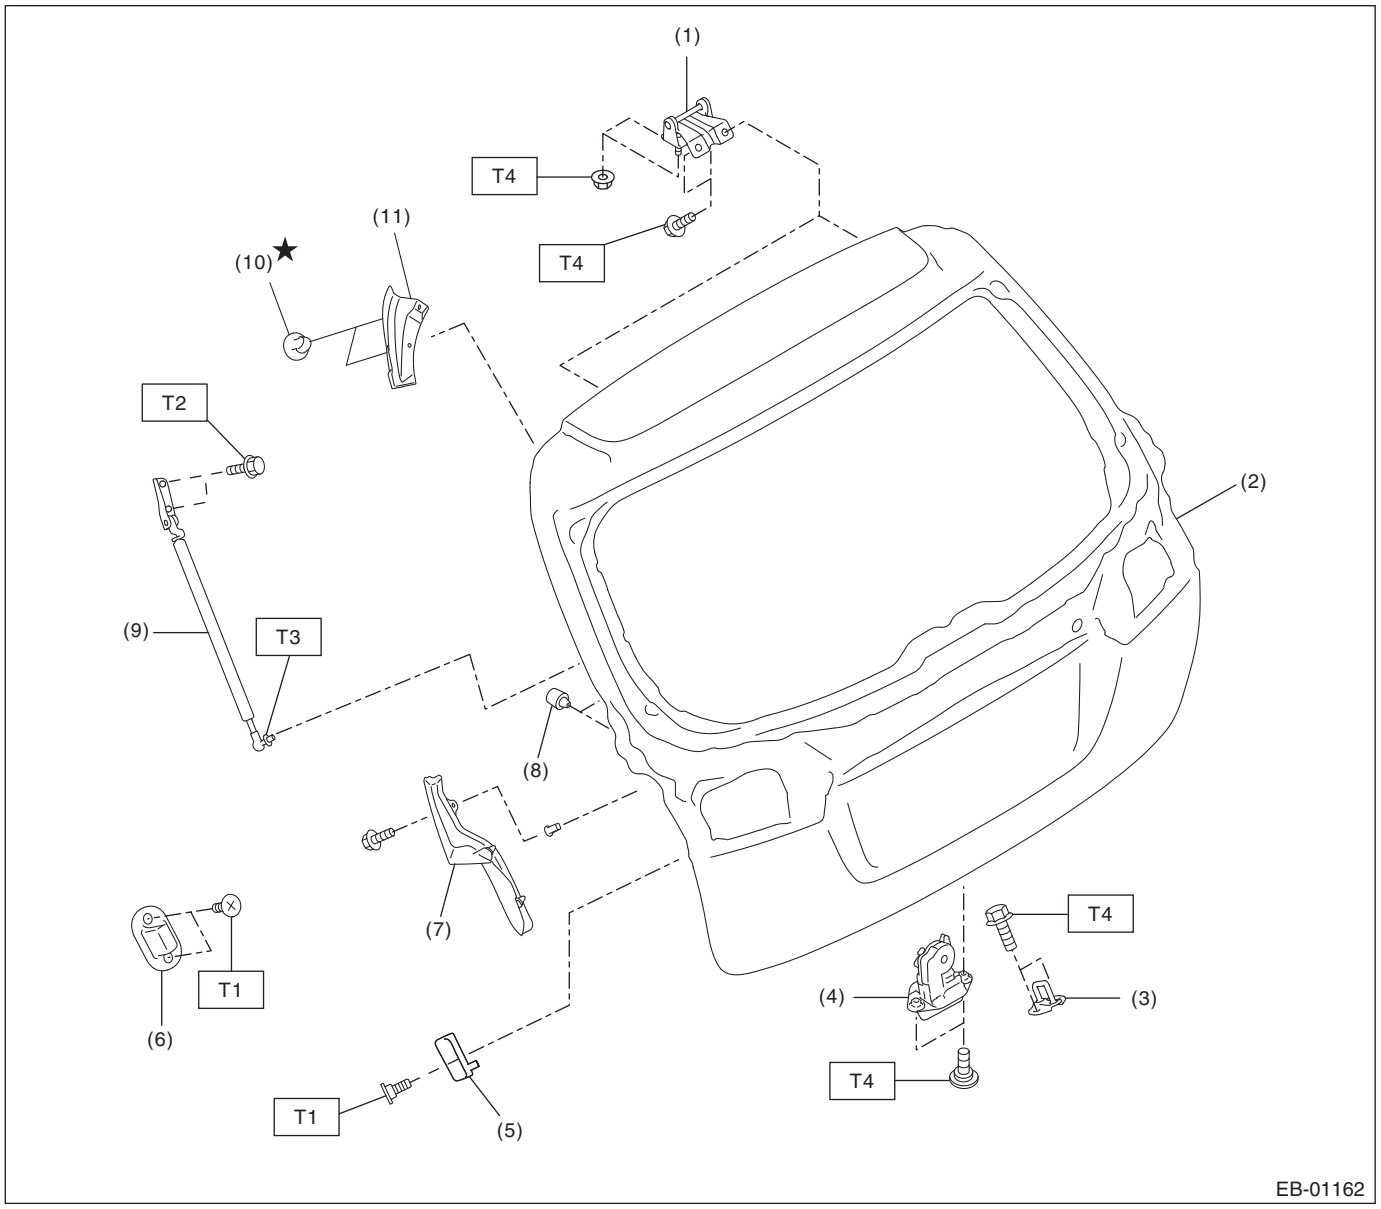


Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)
T3: 30 (3.1, 22.1)
T4: 33 (3.4, 24.3)

4. REAR DOOR

(1)	Molding - door sash rear (OUTBACK model)	(9)	Checker ASSY - rear door	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Molding - door sash rear (sedan model)	(10)	Stopper - rubber	***T1: 7.5 (0.8, 5.5)***
(3)	Weather strip outer - rear door	(11)	Catcher - rear door	***T2: 25 (2.5, 18.4)***
(4)	Panel ASSY - rear door	(12)	Grommet - lower	***T3: 30 (3.1, 22.1)***
(5)	Cover - C pillar ASSY (sedan model)	(13)	Lower hinge - rear door	***T4: 33 (3.4, 24.3)***
(6)	Cover C pillar - rear door INN	(14)	Grommet - upper	***T5: 38 (3.9, 28)***
(7)	Cover B pillar - rear door INN	(15)	Upper hinge - rear door	
(8)	Sealing cover - rear door			

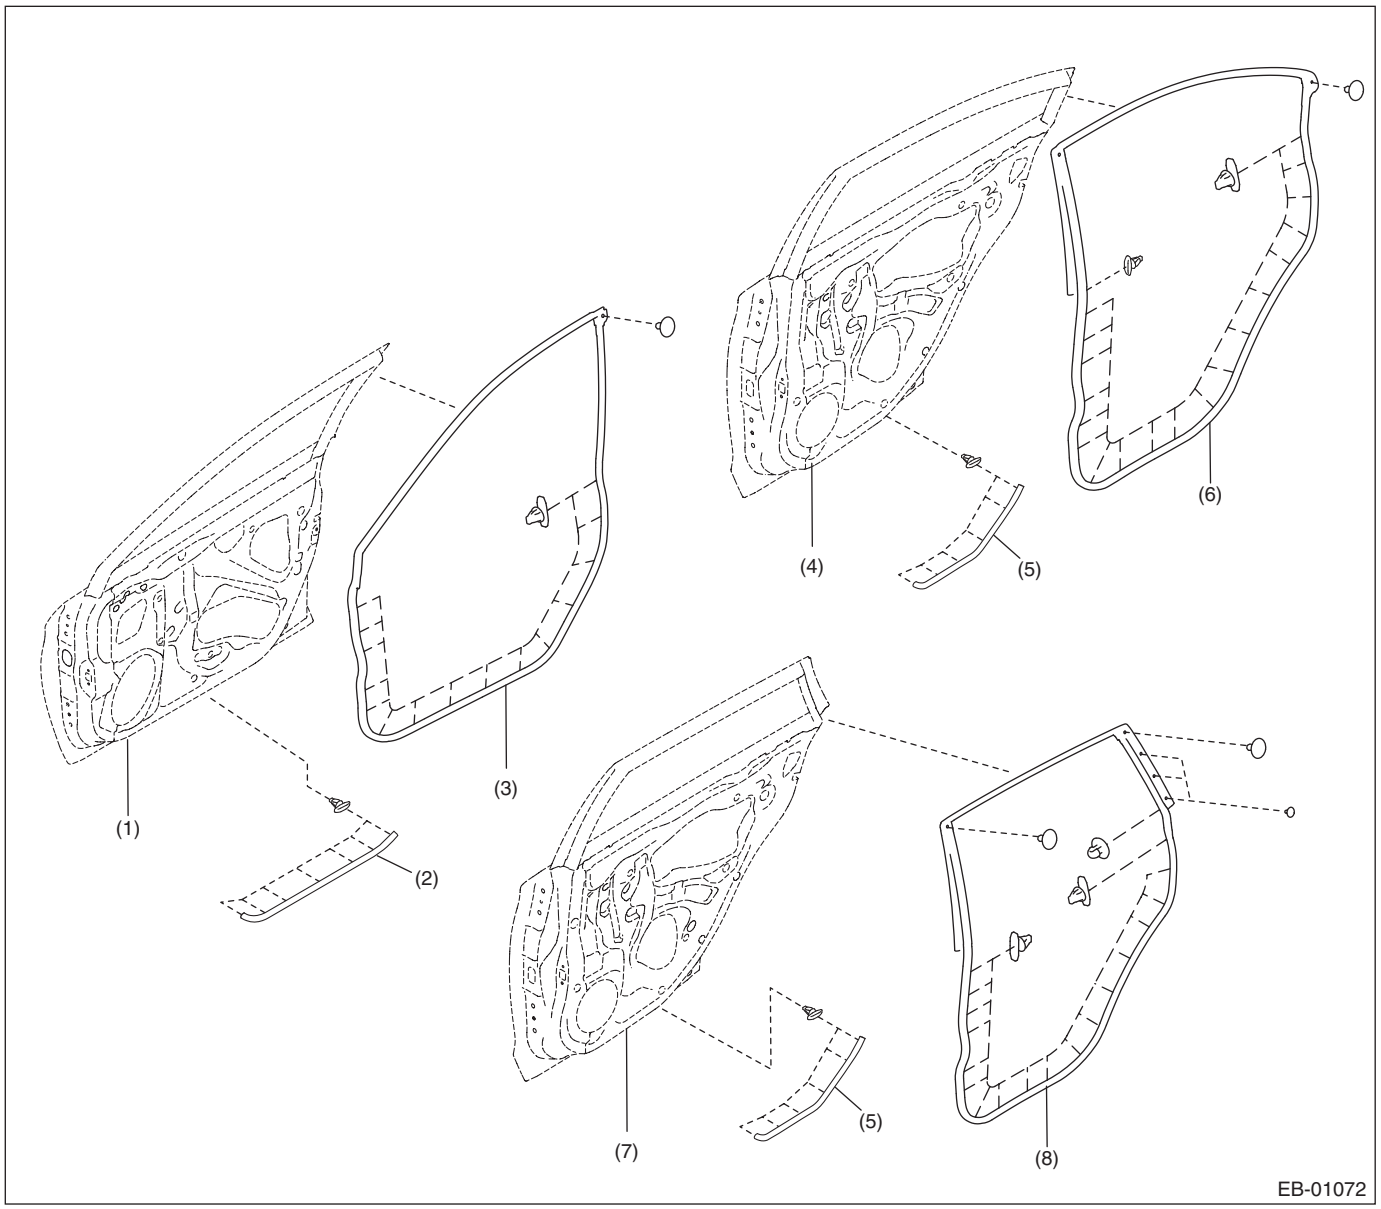
5. TRUNK LID PANEL



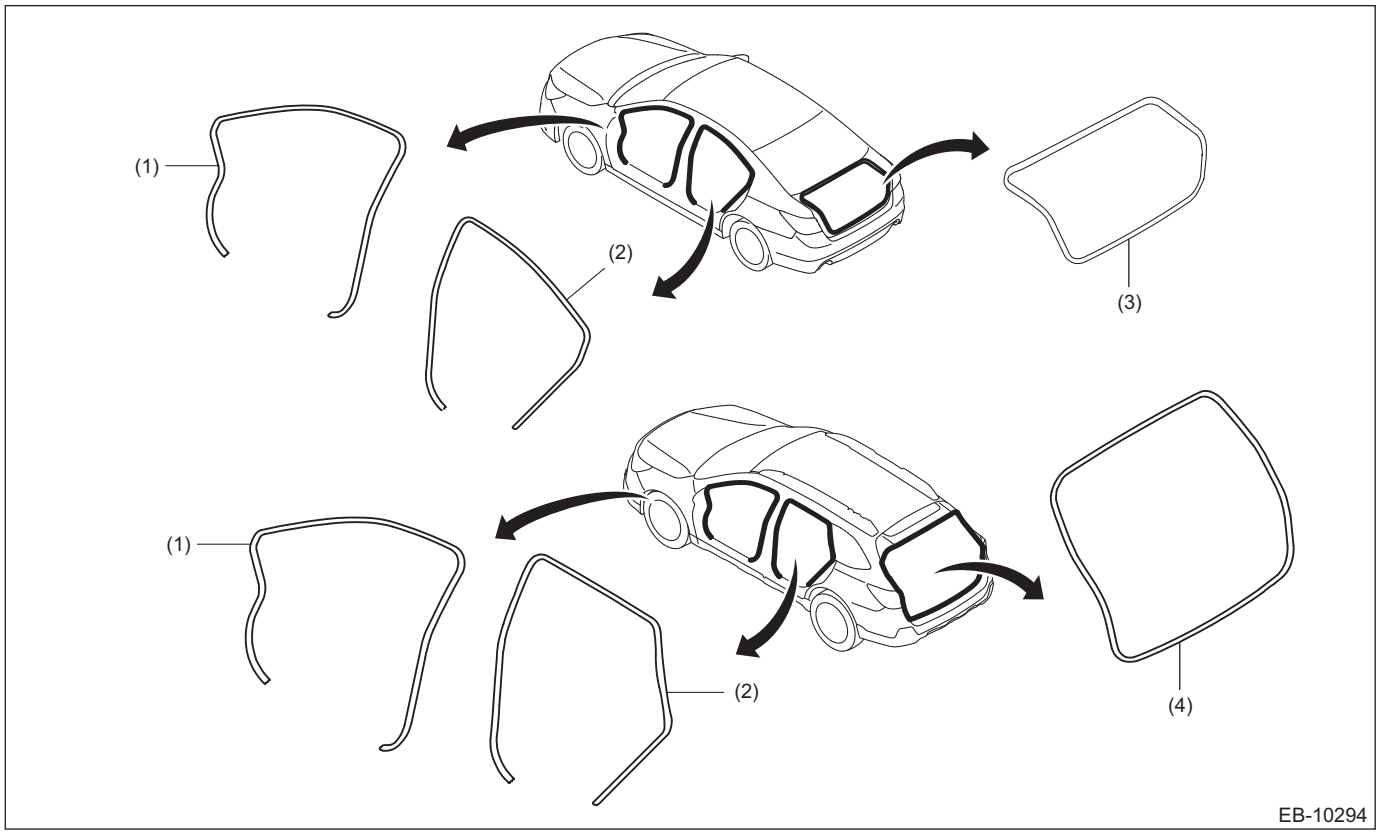
(1) Cable ASSY - trunk lid
(2) Lock ASSY - trunk lid
(3) Clip
(4) Trunk lid COMPL
(5) Key lock - trunk lid
(6) Clamp - key trunk lid
(7) Cushion - license
(8) Stopper - trunk lid LWR
(9) Stay ASSY - trunk lid
(10) Stopper - hinge
(11) Hinge ASSY - trunk lid
(12) Clip
(13) Striker - trunk lid

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)

6. REAR GATE



NOTE:
For the components of power rear gate, refer to the power rear gate system. <Ref. to PRG-3, UNIT AND REAR GATE, COMPONENT, General Description.>



(1) Hinge - rear gate
(2) Panel - rear gate
(3) Striker - rear gate
(4) Latch & actuator - rear gate
(5) Buffer - rear gate (panel - rear gate side)
(6) Buffer - rear gate (body side)
(7) Cover - rear gate
(8) Stopper rubber
(9) Stay ASSY - rear gate
(10) Clip
(11) Drip - rear gate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 16 (1.6, 11.8)
T3: 20 (2, 14.8)
T4: 25 (2.5, 18.4)

7. WEATHER STRIP

(1) Panel ASSY - front door
(2) Weather strip - front door LWR
(3) Weather strip - front door
(4) Panel ASSY - rear door (sedan model)
(5) Weather strip - rear door LWR
(6) Weather strip - rear door (sedan model)
(7) Panel ASSY - rear door (OUTBACK model)
(8) Weather strip - rear door (OUTBACK model)

(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid (sedan model)
(4) Weather strip - rear gate (OUTBACK model)

B: CAUTION

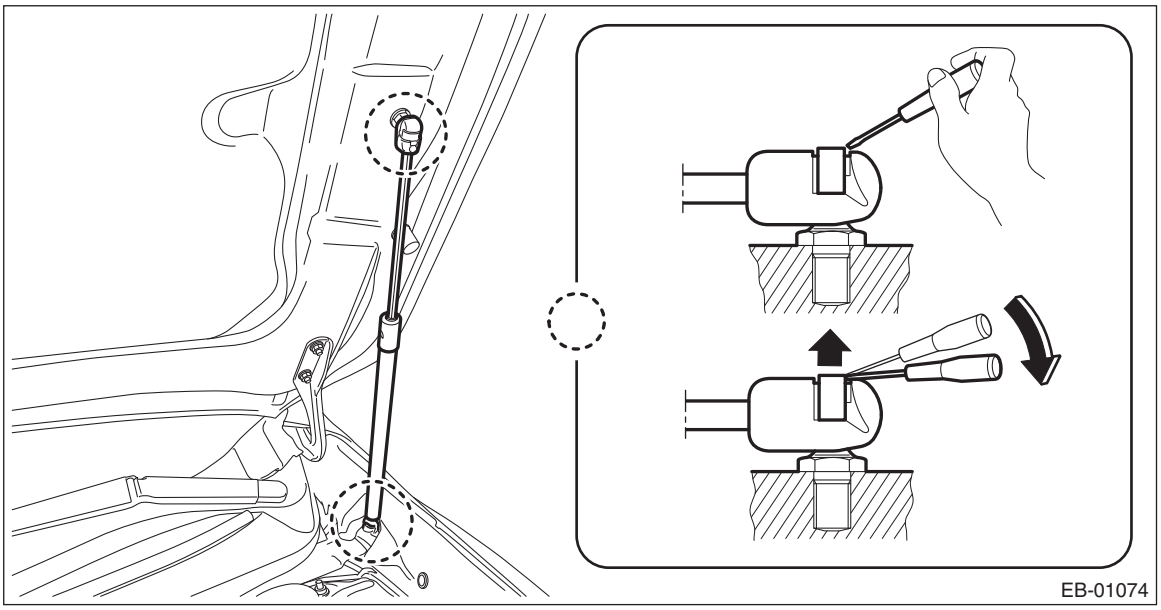
Exterior body panels are heavy. When removing or installing, do not drop and damage the panels. Do not damage the panel painting surface.

C: PREPARATION TOOL

1. GENERAL TOOL

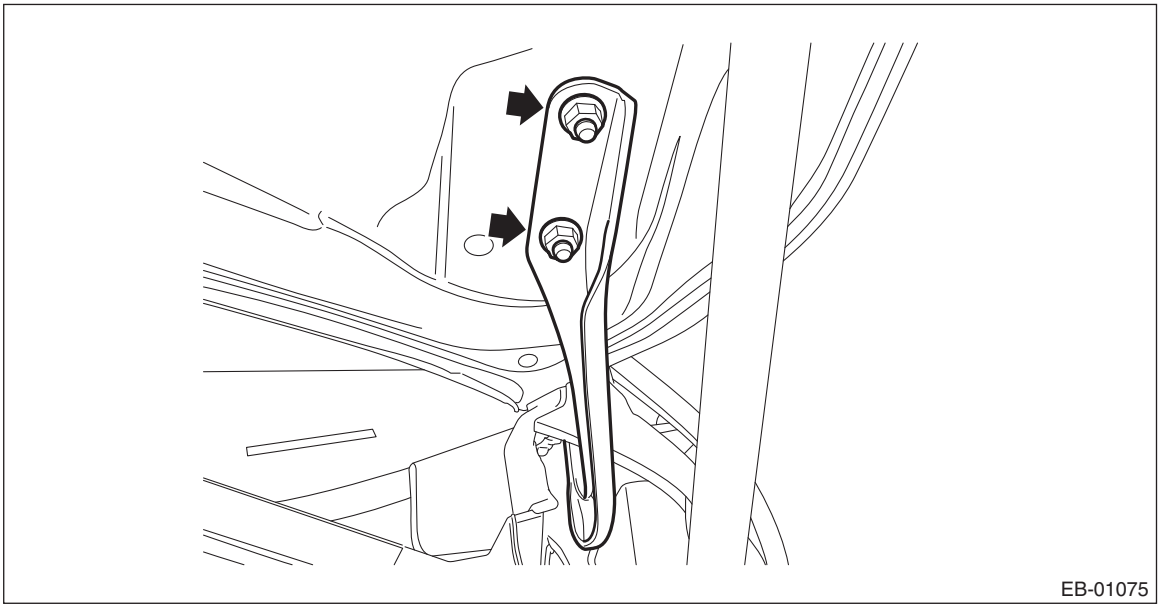
TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.

2. Front Hood



A: REMOVAL

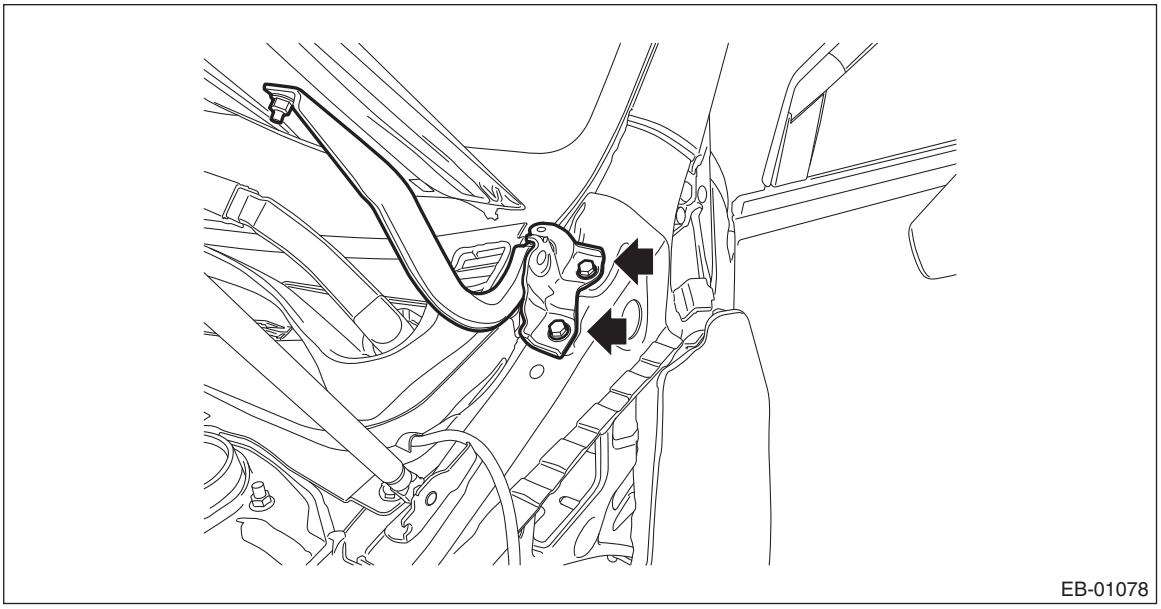
CAUTION:
The hood COMPL - front is heavy. When removing and installing it, always work in a team of two or more persons.



1) Open the hood COMPL - front.
2) Remove the stay assembly - front hood.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.



3) Remove the nut on the hood COMPL - front side, and remove the hood COMPL - front.

4) Remove the hinge COMPL - front hood from the body.

NOTE:
The hinge COMPL - front hood cannot be removed with the fender COMPL - front attached. Therefore, remove the fender COMPL - front beforehand.

B: INSTALLATION

1) Temporarily fit the hinge COMPL - front hood around the original position on the vehicle body.
2) Install the hood COMPL - front to the hinge COMPL - front hood.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

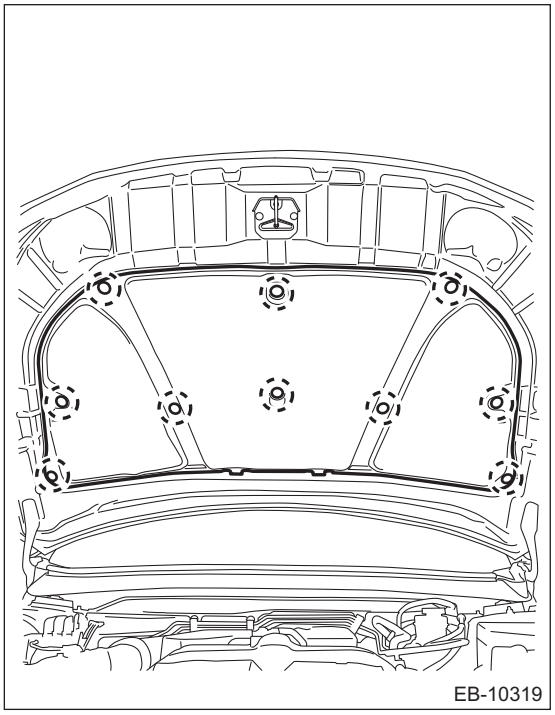
3) Install the stay assembly - front hood.
4) When temporarily fitting the fender COMPL - front and adjusting the clearance, make sure that a uniform clearance is created around the hood COMPL - front.

NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-27, ADJUSTMENT, Front Door.>

5) Install the hinge COMPL - front hood.
   (1) Tighten the bolts at the front side, and temporarily fit the bolts at the rear side.
   (2) Remove the fender COMPL - front.
   (3) Tighten the hinge COMPL - front hood to the specified torque.

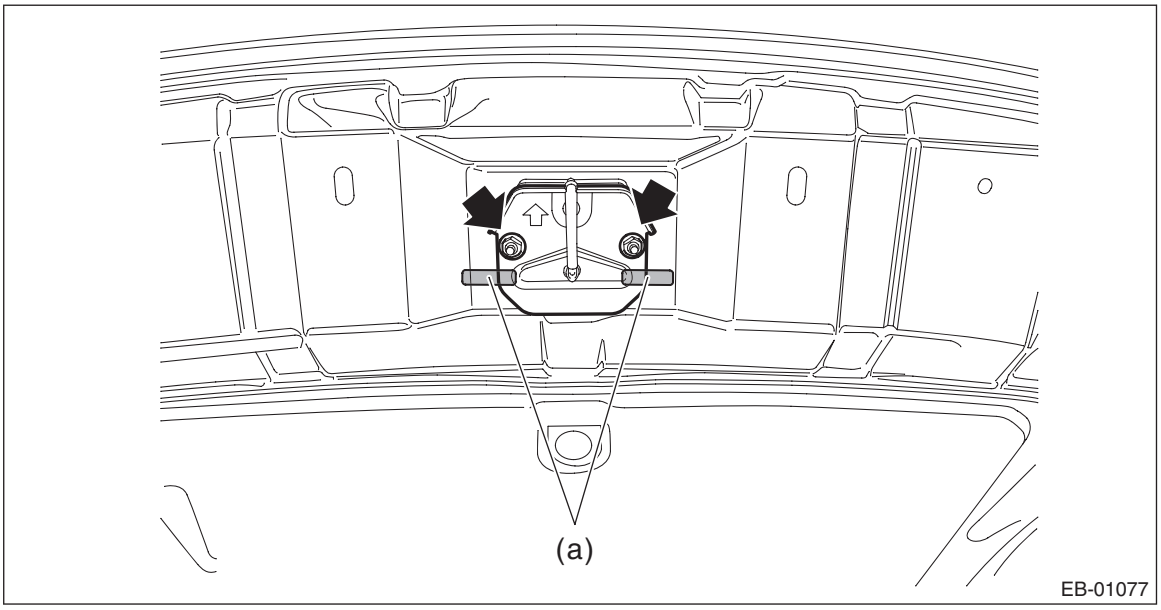
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

6) Readjust the fender COMPL - front to install.



NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-27, ADJUSTMENT, Front Door.>

C: DISASSEMBLY



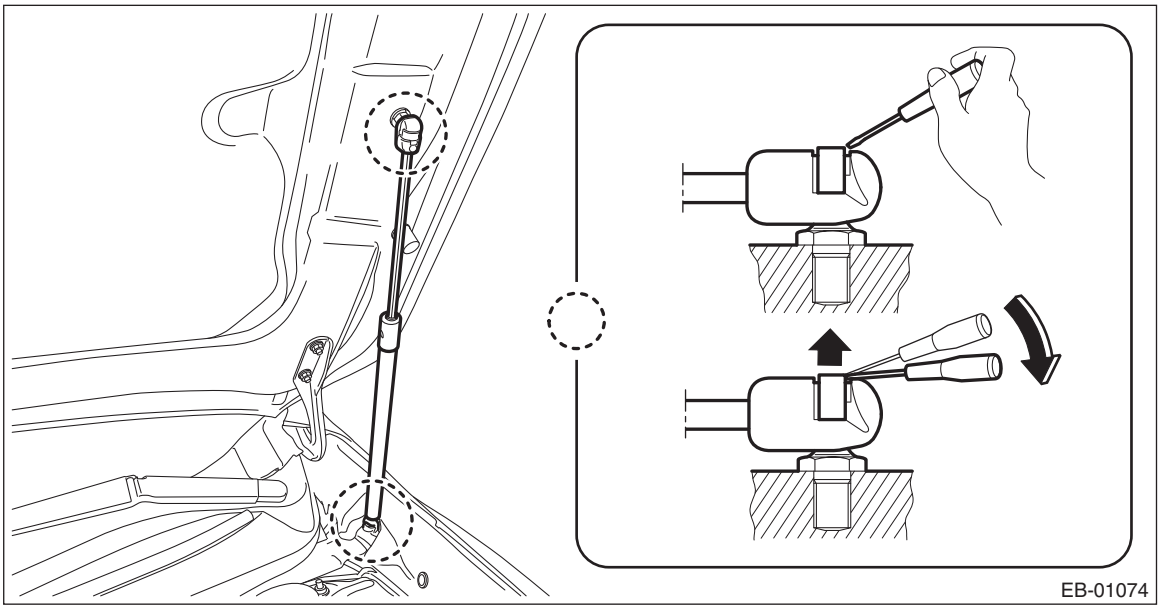
CAUTION:
- **Do not damage the piston rods and oil seals of stay assembly - front hood.**
- **Never disassemble the stay assembly - front hood: They contain gas.**
- **The hood COMPL - front is heavy. When removing or installing the hood COMPL - front, stay assembly - front hood, and hinge COMPL - front hood, be sure to work in a team of two or more persons.**

1) Remove the clips, and remove the insulator - front hood.

CAUTION:
Do not reuse the removed clip. The damaged clip cannot fix the insulator - front hood securely. Therefore, always replace with a new part.

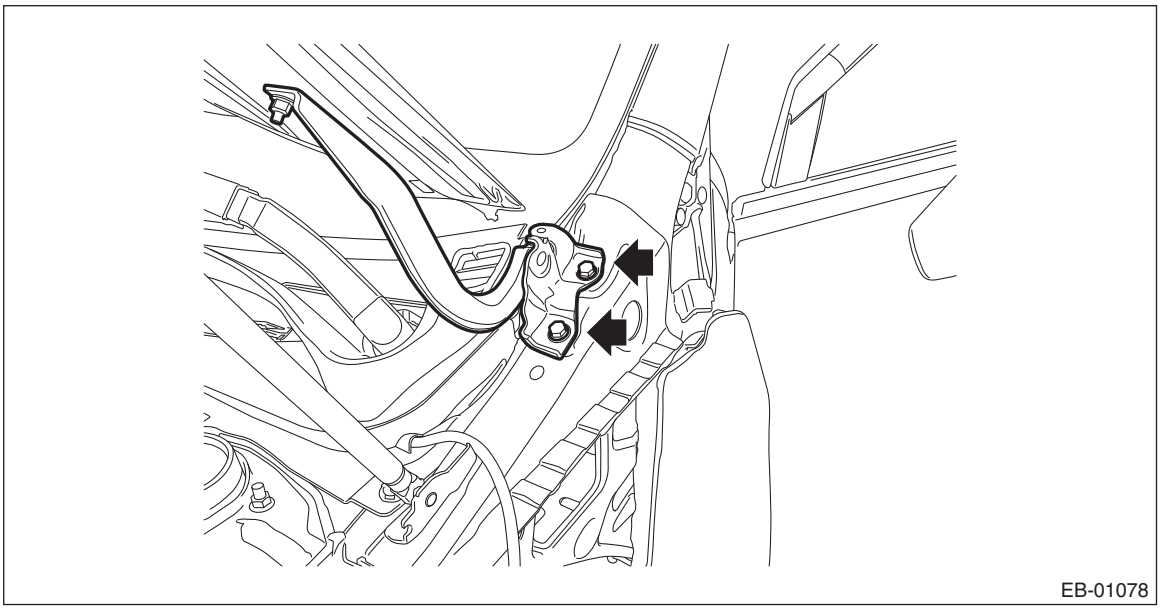
EB-10319

2) Make alignment marks (a), and remove the striker - front hood from the hood COMPL - front.



EB-01077

3) Remove the stay assembly - front hood.



CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.
(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.

(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.

4) Remove the hinge COMPL - front hood from the body.

NOTE:
The hinge COMPL - front hood cannot be removed with the fender COMPL - front attached. Therefore, remove the fender COMPL - front beforehand.

D: ASSEMBLY

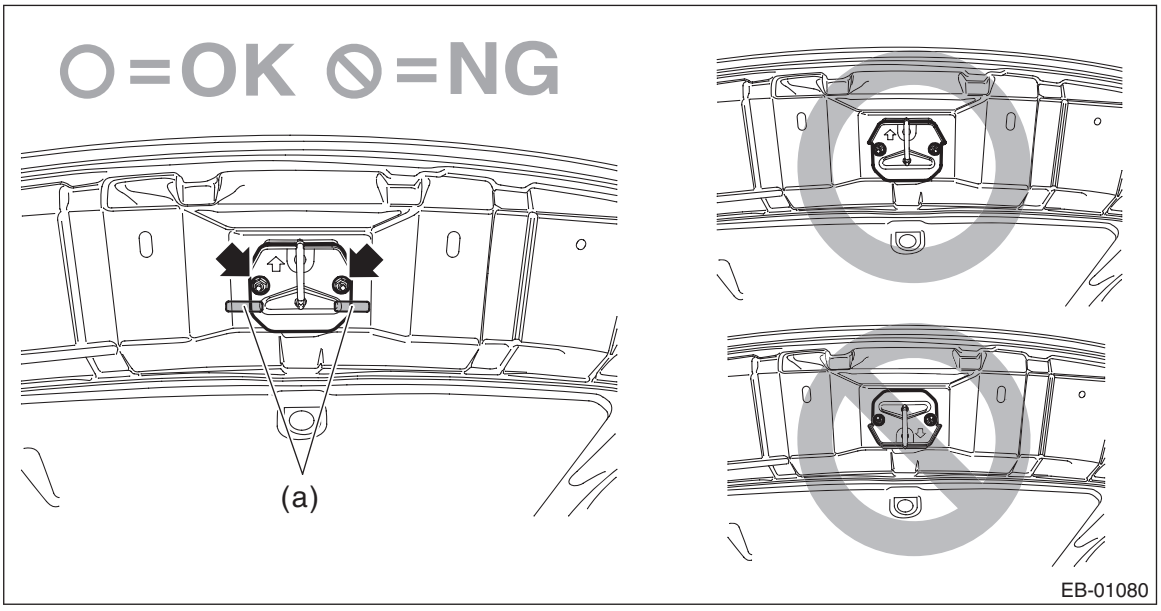
1) Install the hinge COMPL - front hood.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the stay assembly - front hood.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

3) Install the insulator - front hood.

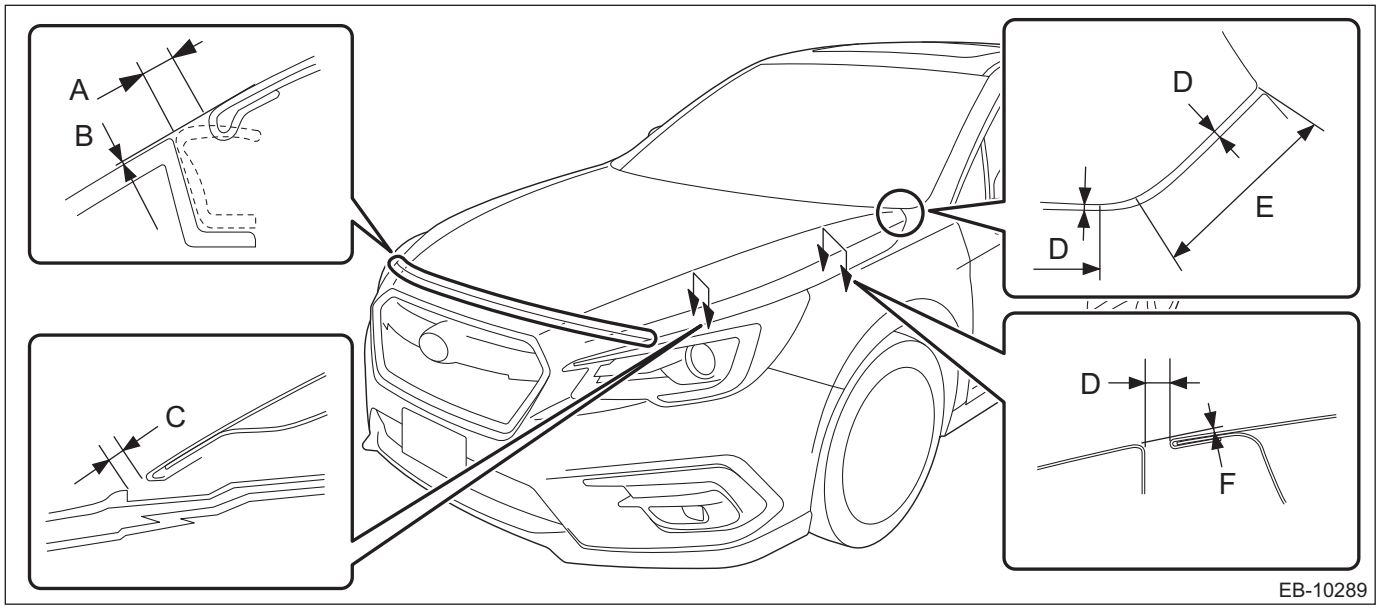


NOTE:
Securely insert the claws of the insulator - front hood.

4) Align the alignment marks (a), and install the striker - front hood to the hood COMPL - front.

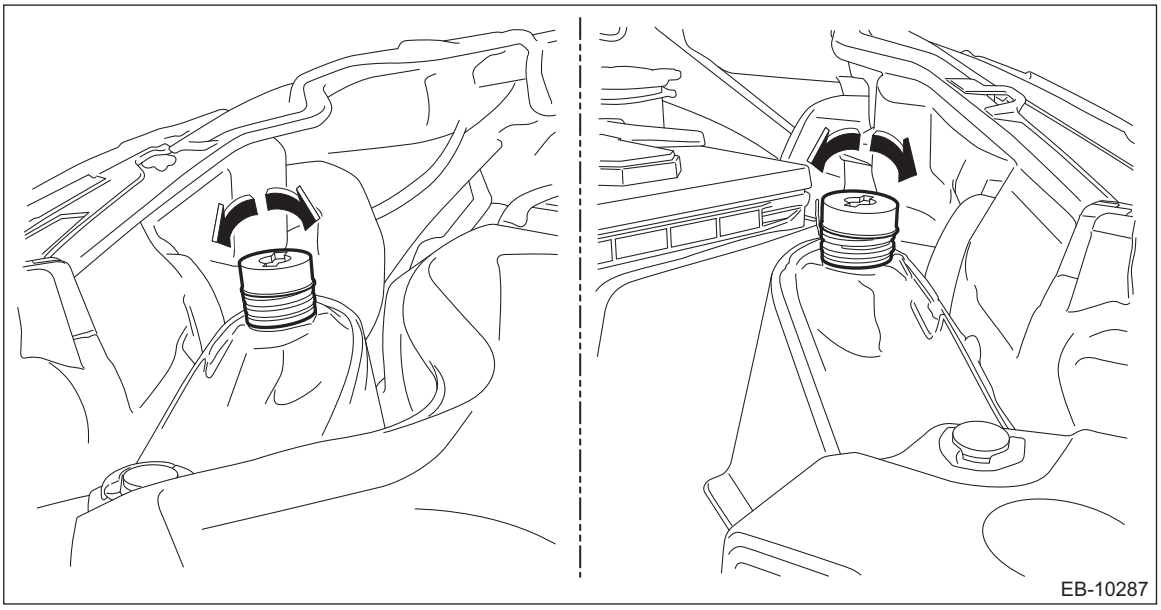
CAUTION:
When installing the striker - front hood, make sure that the front and rear sides are positioned in a correct direction.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



NOTE:
It is not necessary to adjust the striker - front hood because there is no span of adjustable range.

E: ADJUSTMENT

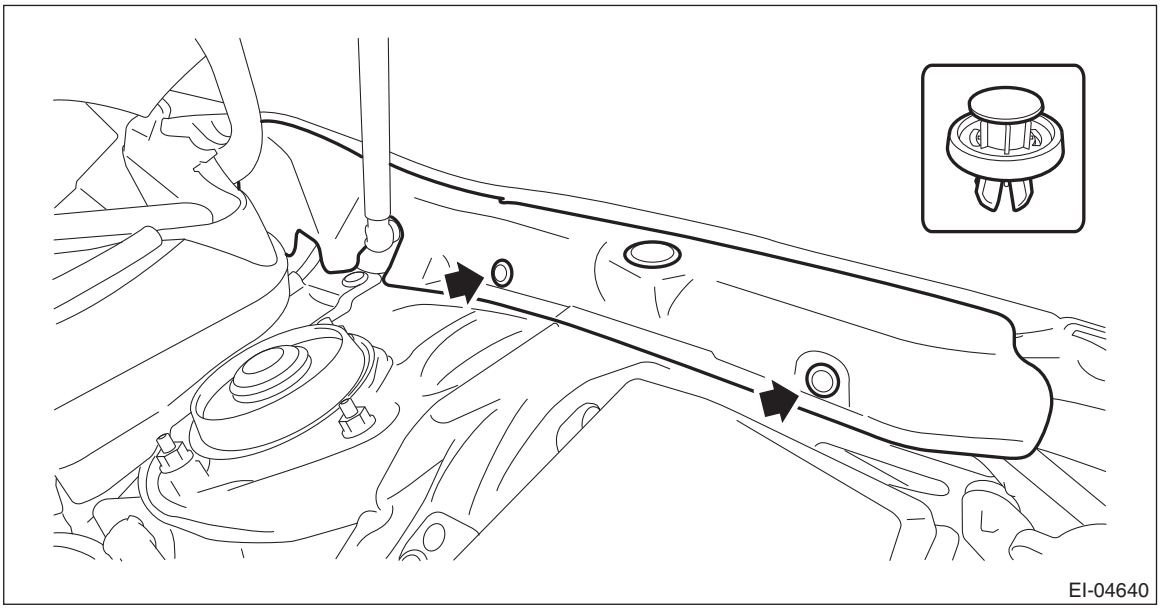


NOTE:
Adjustment should be performed on the fender COMPL - front, lock assembly - front hood and buffer - front hood, because adjustment cannot be performed on the hinge COMPL - front hood.

Adjust the clearance around the hood COMPL - front as follows.

Part		Standard
A	Hood COMPL - front to Bumper face front	4.2±1.7 mm (0.17±0.07 in)
B	Surface level gap between Hood COMPL - front and Bumper face front	–0.2+1.7, –1.2 mm (0.01+0.07, –0.05 in)
C	Hood COMPL - front to Light assembly - head	4±1.8 mm (0.16±0.07 in)
D	Hood COMPL - front to Fender COMPL - front (from front end to just before curved portion)	4±1.5 mm (0.16±0.06 in)
E	Hood COMPL - front to Fender COMPL - front (from rear end to just before curved portion)	4±1 mm (0.16±0.04 in)
F	Surface level gap: Hood COMPL - front to Fender COMPL - front	0.5±1 mm (0.02±0.04 in)

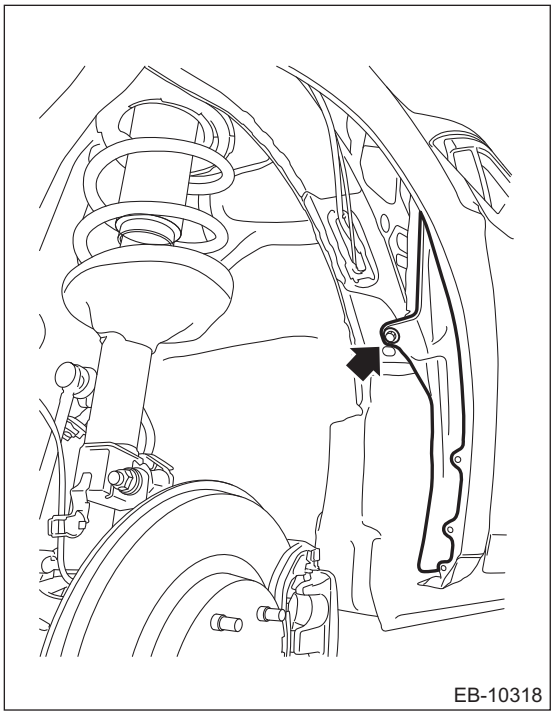
1) Adjust the front end height of the hood COMPL - front. <Ref. to SL-56, ADJUSTMENT, Front Hood Lock Assembly.>
2) Rotate the buffer - front hood to adjust the height.



3. Front Fender

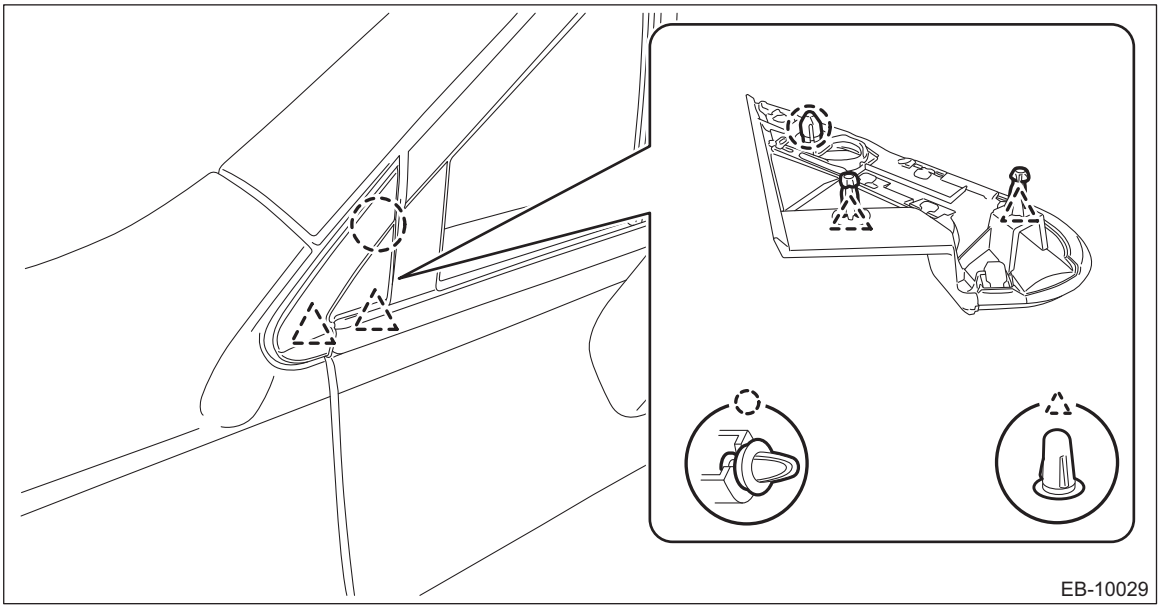
A: REMOVAL

1. FENDER PANEL

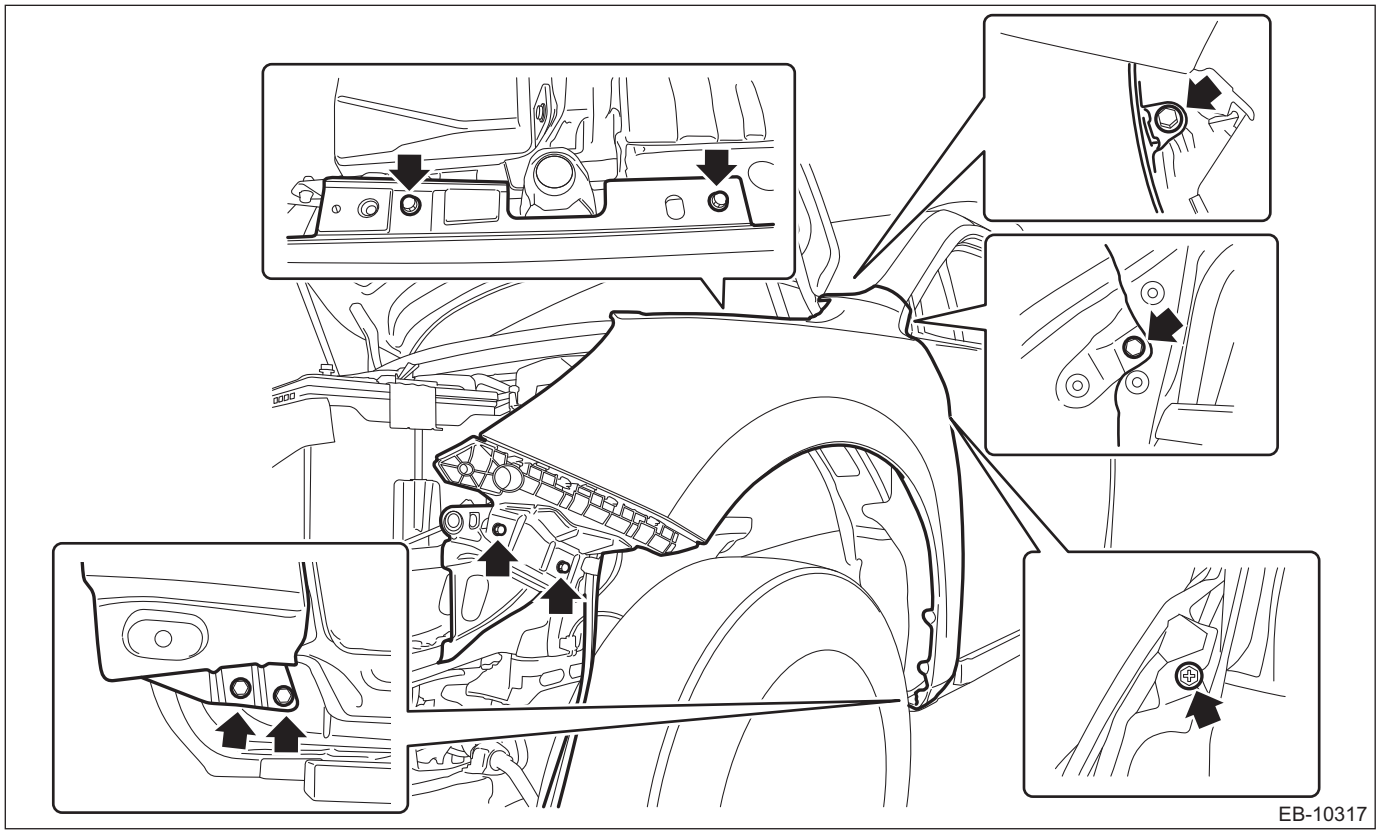


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>
3) Remove the light assembly - head. <Ref. to LI-37, REMOVAL, Headlight Assembly.>
4) Remove the cover - front fender UPR.
   (1) Remove the clip.
   (2) Release the claws by pulling them forward, and remove the cover - front fender UPR.

CAUTION:
Forcibly removing the part may cause creases.



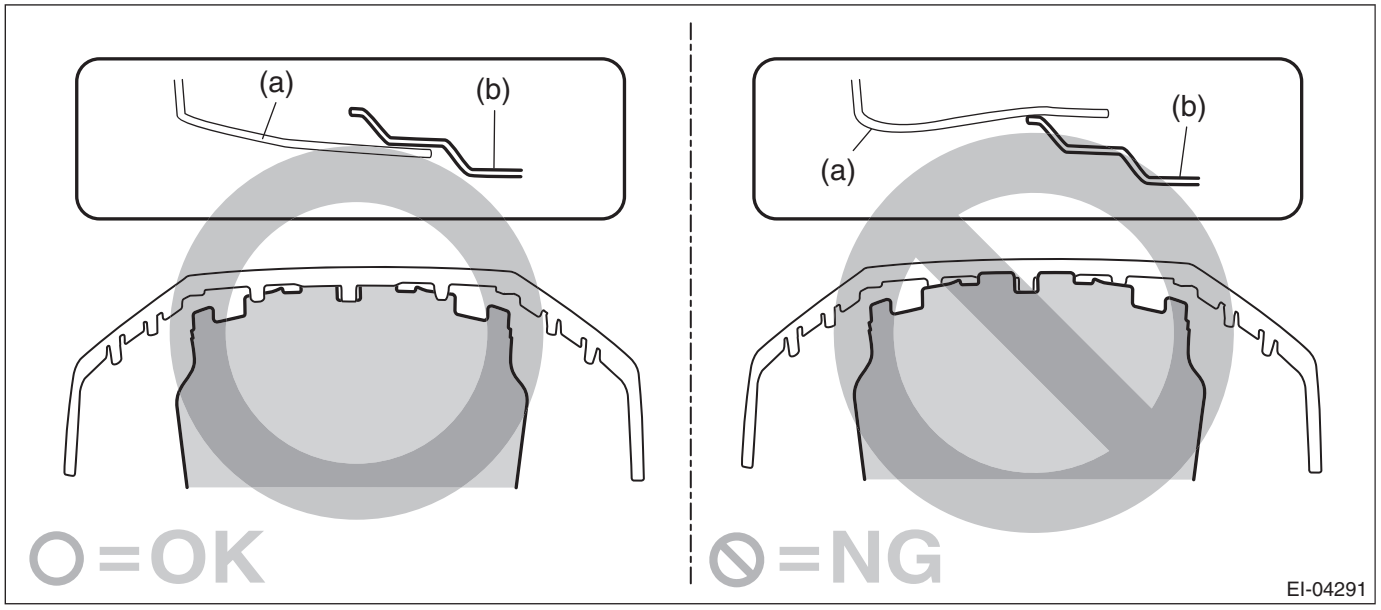
5) Remove the mud guard - front. <Ref. to EI-28, REMOVAL, Mud Guard.>
6) Remove the side garnish assembly. <Ref. to EI-60, REMOVAL, Side Garnish.>



7) Remove the cover - fender LWR.

8) Remove the cover - A pillar assembly.

9) Remove the fender COMPL - front.



B: INSTALLATION

1. FENDER PANEL

CAUTION:

- **After installing the fender COMPL - front, be sure to perform headlight beam adjustment.**
- **Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**

- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**

1) Install the fender COMPL - front.

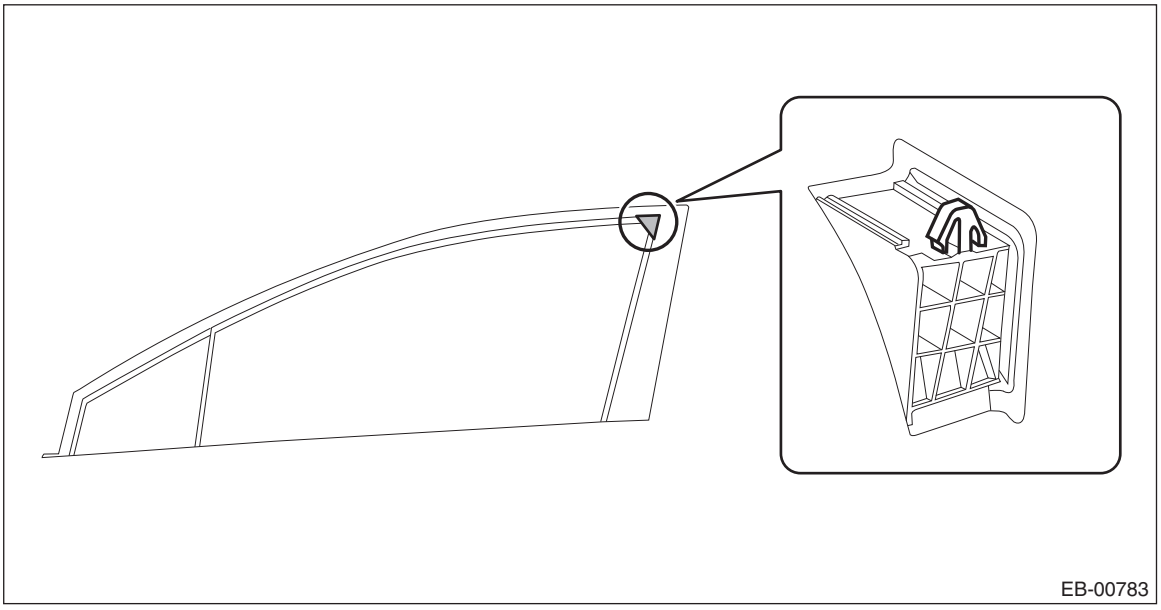
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-27, ADJUSTMENT, Front Door.>

2) Install the cover - A pillar assembly.
3) Install the spoiler assembly - side. <Ref. to EI-61, INSTALLATION, Side Garnish.>
4) Install the mud guard - front.
5) Install the light assembly - head.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Adjust the headlight beam and fog light beam.
- Adjust the headlight beam. <Ref. to LI-42, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
- Adjust the fog light beam. (Model with fog light) <Ref. to LI-53, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

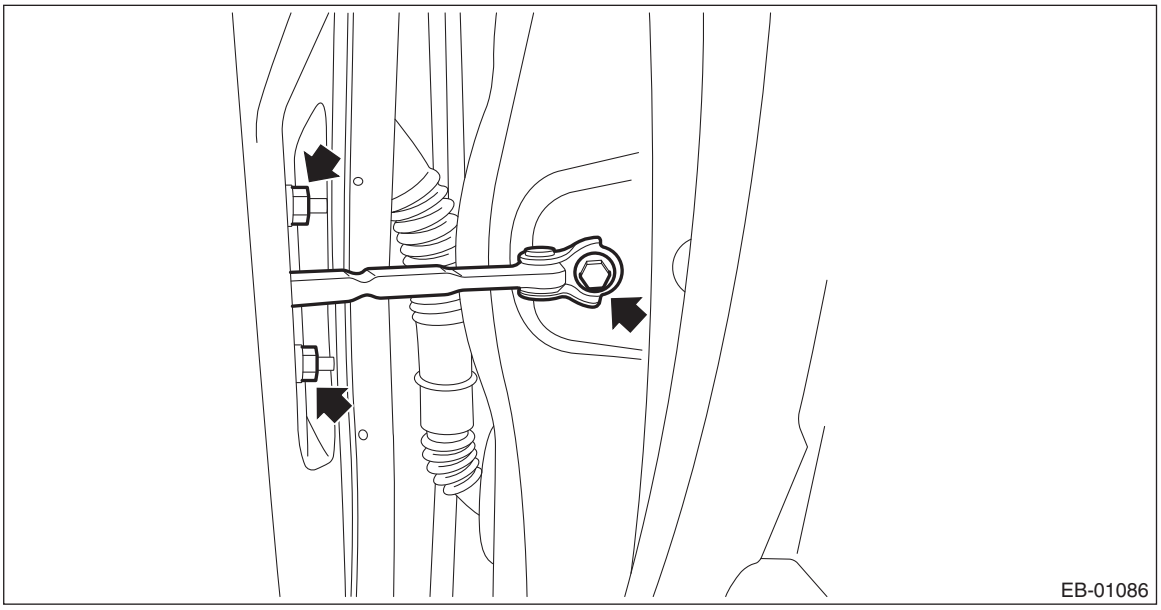


4. Front Door

A: REMOVAL

1. FRONT DOOR PANEL

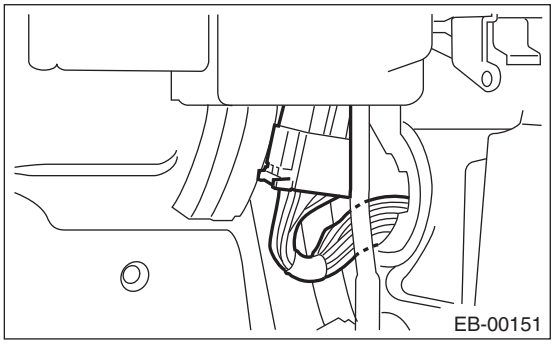
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-60, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
5) Remove the outer mirror assembly. <Ref. to GW-29, REMOVAL, Outer Mirror Assembly.>
6) Remove the front door speaker assembly. <Ref. to ETM-14, DOOR SPEAKER, REMOVAL, Front Speaker.>
7) Remove the cover B pillar - front door INN.



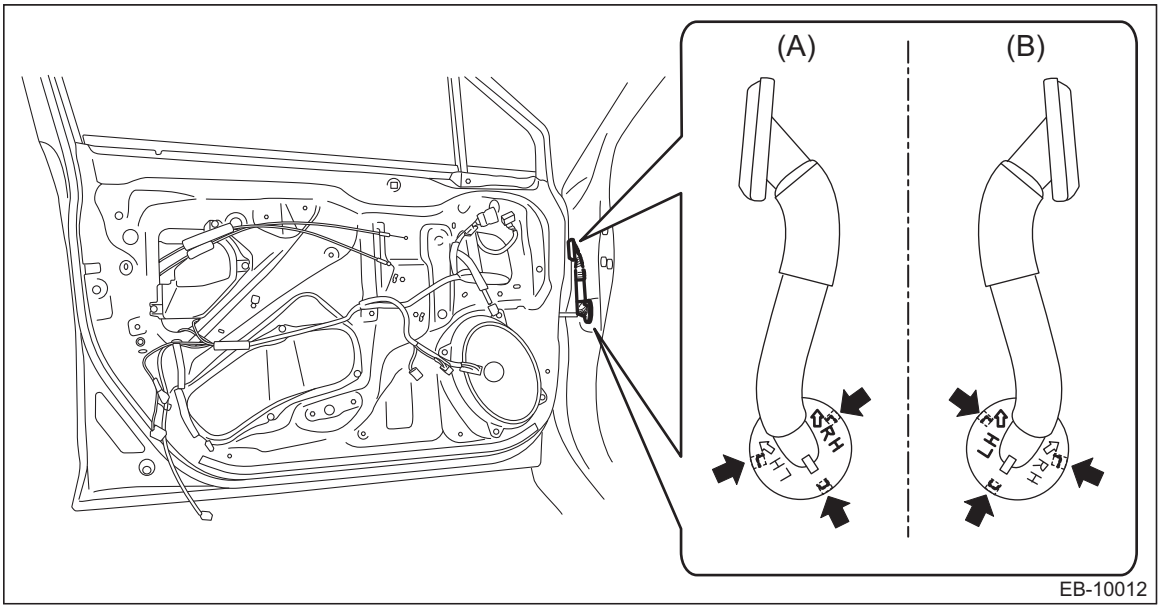
CAUTION:
Always replace with a new part, because engagement of the claw weakens.

8) Remove the front door impact sensor assembly. <Ref. to AB-53, REMOVAL, Front Door Impact Sensor.>
9) Remove the glass assembly - front door and the glass - front door partition. <Ref. to GW-22, REMOVAL, Front Door Glass.>
10) Remove the regulator & motor assembly - front of the front door. <Ref. to GW-26, REMOVAL, Front Regulator and Motor Assembly.>
11) Remove the door sash tape. <Ref. to EB-39, FRONT DOOR, REMOVAL, Door Sash Tape.>
12) Remove the latch and actuator assembly - front. <Ref. to SL-37, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
13) Remove the handle - door outer. <Ref. to SL-33, REMOVAL, Front Outer Handle.>
14) Remove the strip - front door. <Ref. to EB-64, REPLACEMENT, Weather Strip.>
15) Remove the clips and the upper hooks, and remove the cover sash - inner front.

CAUTION:
Do not forcibly pull the cover sash - inner front. Otherwise, the hook section of the cover sash - inner front may be damaged.



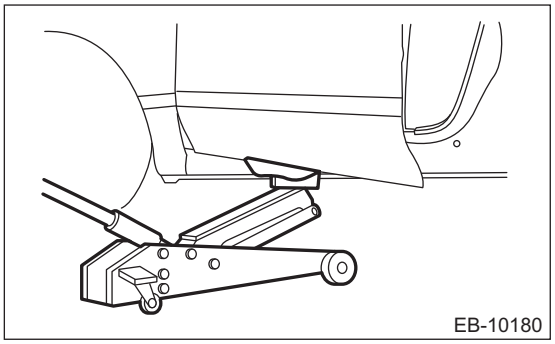
16) Remove the bolts and nuts, and then detach the checker assembly - front door.



17) Remove the cover side sill - front and the front cover - side sill. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>

18) Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.

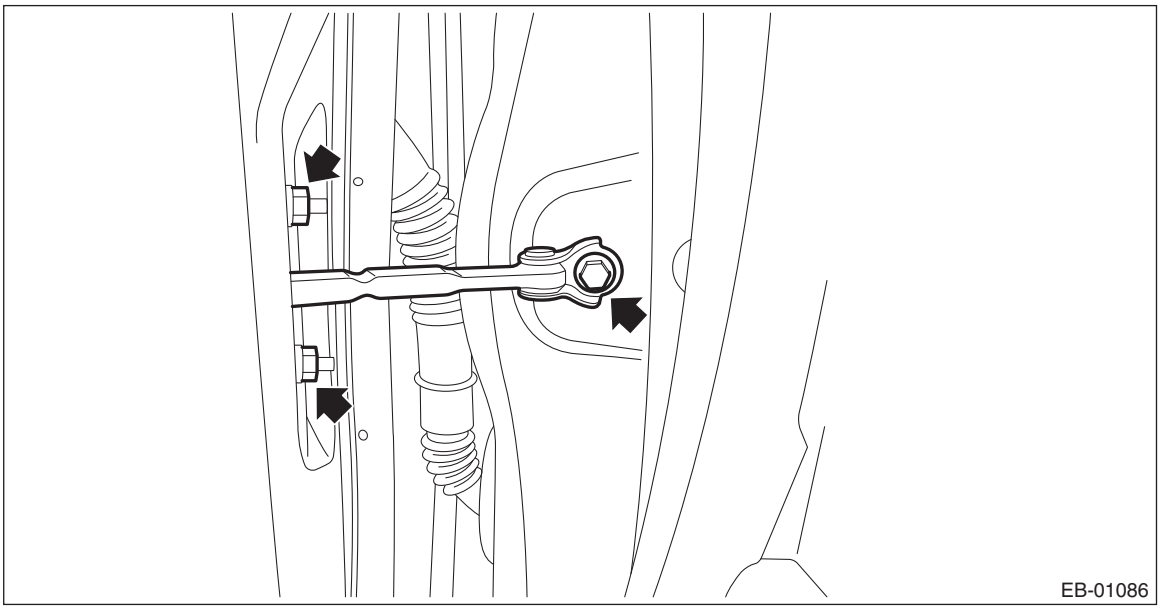


(2) Push in the claws to remove the grommet, and pull out the door harness connector.

(A) Driver's side (B) Passenger's side

19) Before removing the panel assembly - front door, make the following preparations.

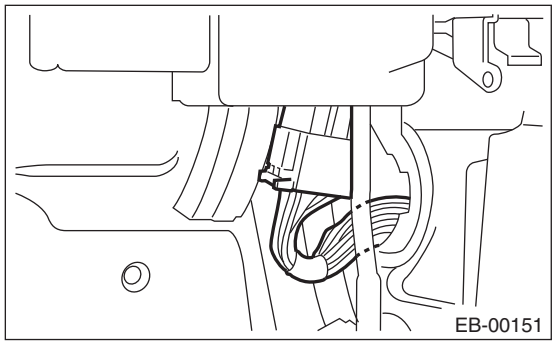
CAUTION:
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.



EB-10180

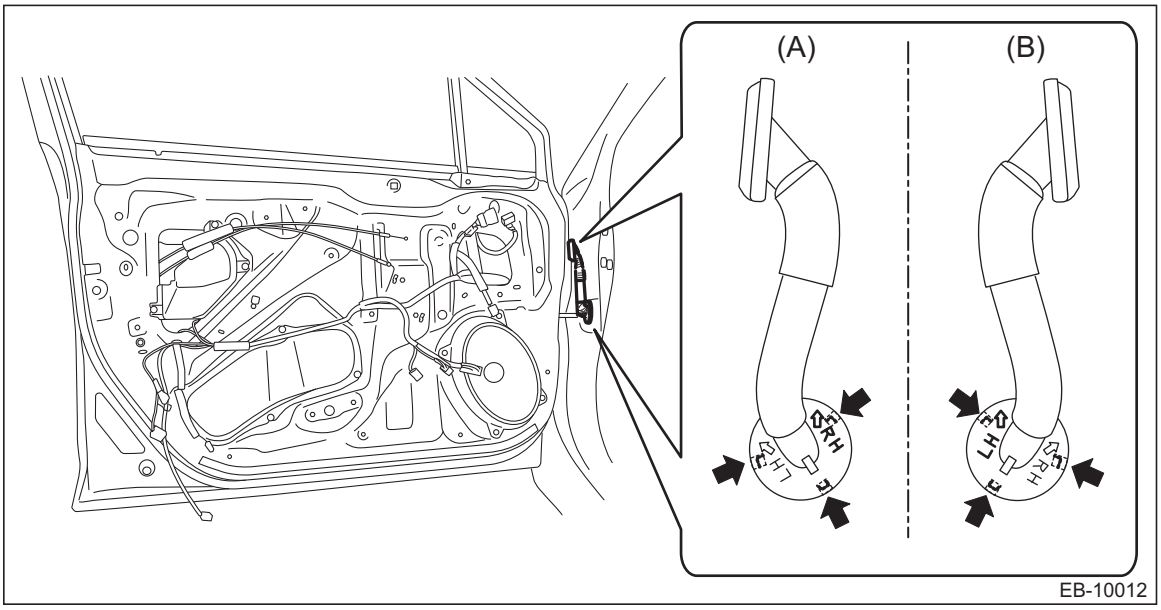
20) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door to remove the panel assembly - front door.

CAUTION:
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.



2. FRONT DOOR HINGE

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-60, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the bolts and nuts, and then detach the checker assembly - front door.

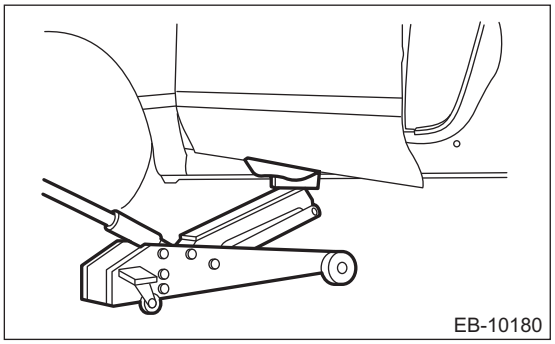


EB-01086

4) Remove the cover side sill - front and the front cover - side sill. <Ref. to EI-90, REMOVAL, Lower Inner Trim.>
5) Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.

(2) Push in the claws to remove the grommet, and pull out the door harness connector.



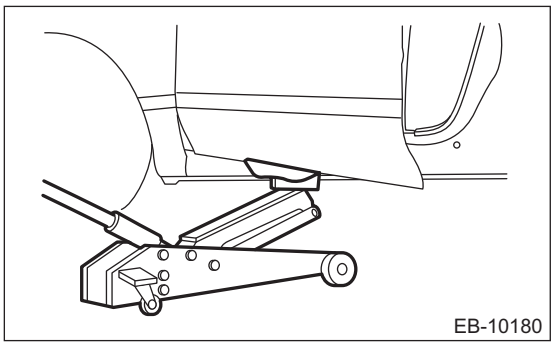
(A) Driver's side (B) Passenger's side

6) Before removing the panel assembly - front door, make the following preparations.

CAUTION:

- **Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.**
- **While removing or installing, do not use a jack, etc. on the garnish section.**

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.



7) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door to remove the panel assembly - front door.

CAUTION:
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.
8) Remove the bolts, and remove the upper hinge - front door and the lower hinge - front door from the vehicle.

B: INSTALLATION

1. FRONT DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - front door on it.

2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:
- When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
- Perform installation while paying attention to the assembly direction of the grommet.

3) Tighten the mounting bolts of the panel assembly - front door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

4) Connect door harness connector, and install the cover side sill - front and the front cover - side sill. <Ref. to EI-93, INSTALLATION, Lower Inner Trim.>
5) Tighten the bolts and nuts of the checker assembly - front door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

6) Attach the door sash tape. <Ref. to EB-43, FRONT DOOR, INSTALLATION, Door Sash Tape.>
7) Before installing each part, check the following items.
- Rod of the latch and actuator assembly - front is free from deformation.
- Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
- Cable of the latch and actuator assembly - front is free from deformation such as fray.
- Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.

8) Install door internal parts in the reverse order of removal.
- Weather strip - front door
- Handle - door outer

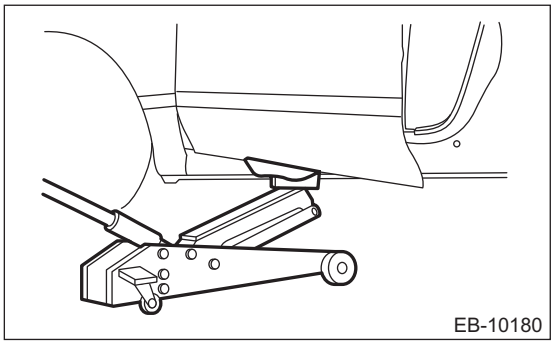
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Latch & actuator assembly - front

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
- Regulator & motor assembly - front for the front door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Running channel - front door

CAUTION:
Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash COMPL - partition.
- Glass assembly - front door, and glass - front door partition

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the front door impact sensor. <Ref. to AB-53, INSTALLATION, Front Door Impact Sensor.>
10) Install the cover B pillar - front door INN.



CAUTION:
Always replace with a new part, because engagement of the claw weakens.
11) Install the front door speaker assembly.
12) Install the outer mirror assembly. <Ref. to GW-30, INSTALLATION, Outer Mirror Assembly.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
13) Install the sealing cover. <Ref. to EB-29, INSTALLATION, Front Sealing Cover.>
14) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
15) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-61, OUTBACK MODEL, INSTALLATION, Side Garnish.>
16) Check that it fits properly. <Ref. to EB-27, ADJUSTMENT, Front Door.>
17) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. FRONT DOOR HINGE

1) Apply grease to the sliding area of the upper hinge - front door and the lower hinge - front door, and install to the vehicle.

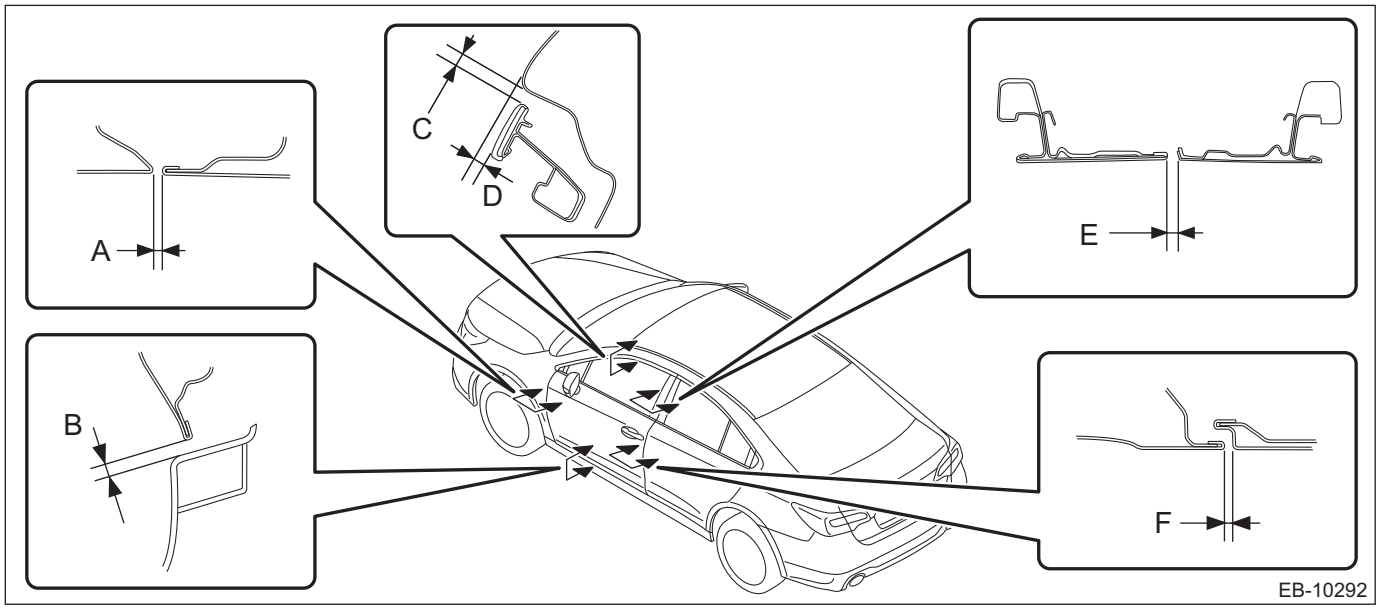
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
2) Put a wooden block and the like on a jack and place the panel assembly - front door on it.

EB-10180

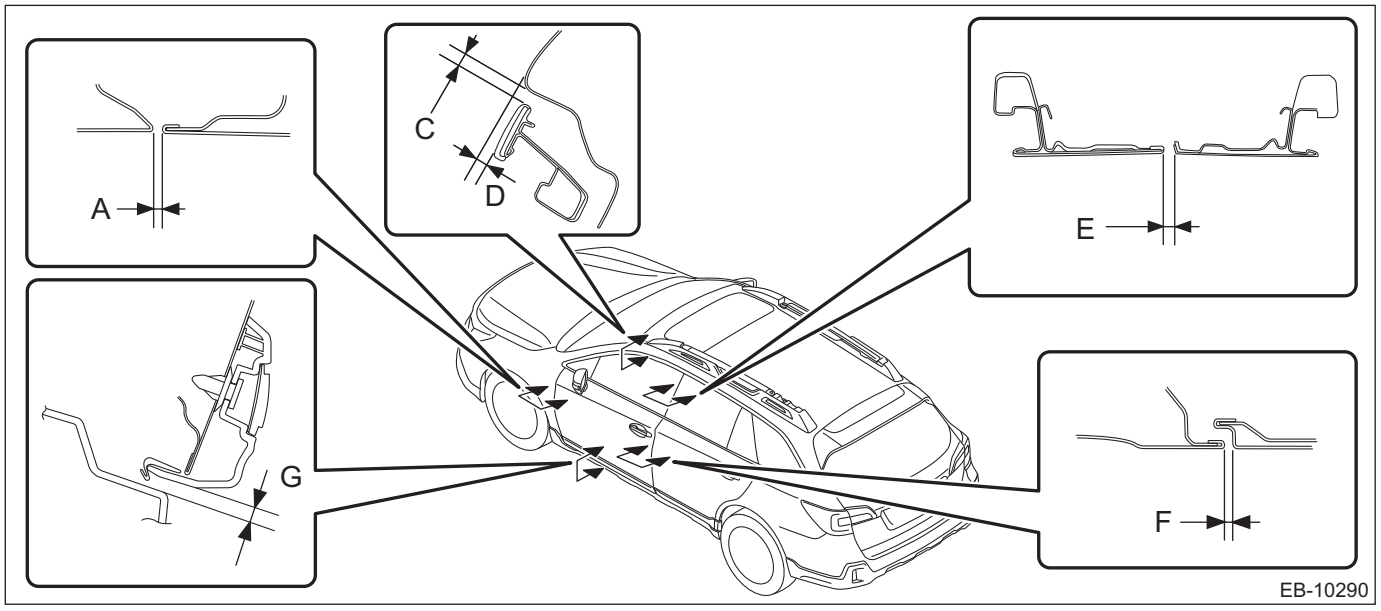
3) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:
- When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
- Perform installation while paying attention to the assembly direction of the grommet.

4) Tighten the bolts of the panel assembly - front door to the specified torque.



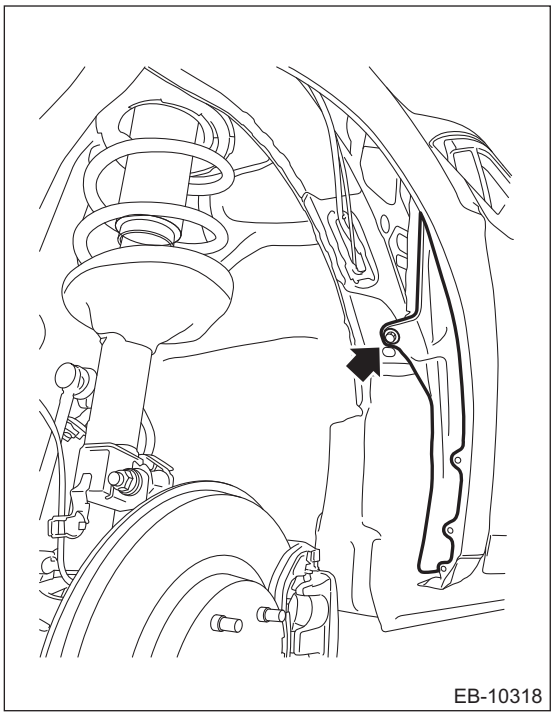
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Connect door harness connector, and install the cover side sill - front and the front cover - side sill. <Ref. to EI-93, INSTALLATION, Lower Inner Trim.>
6) Tighten the bolts on the vehicle side of the checker assembly - front door.



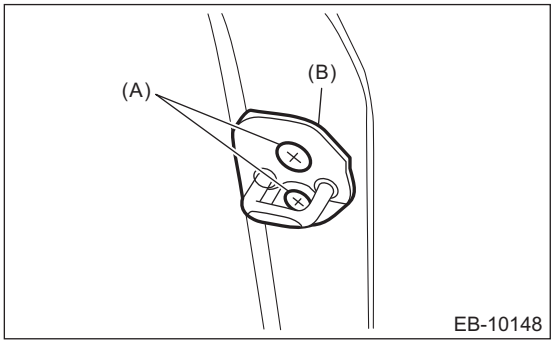
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

7) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-61, OUTBACK MODEL, INSTALLATION, Side Garnish.>
8) Check that it fits properly. <Ref. to EB-27, ADJUSTMENT, Front Door.>
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: ADJUSTMENT



Adjust the clearance around the panel assembly - front door as follows.



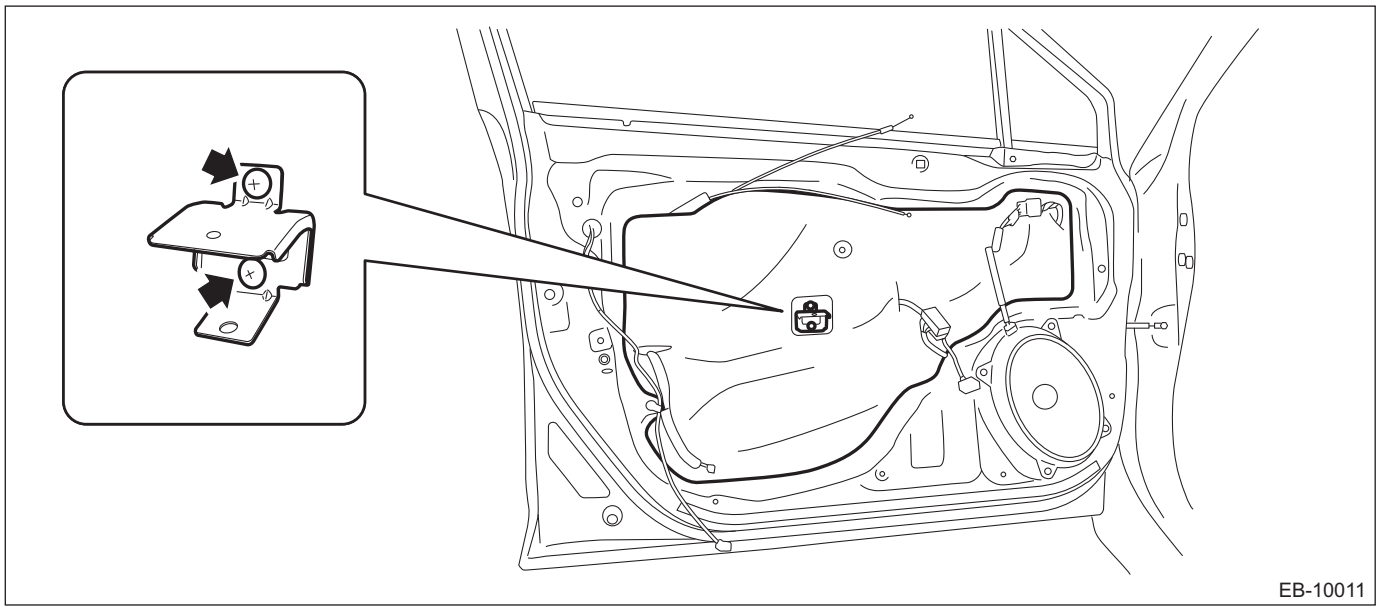
Part		Standard
A	Fender COMPL - front to Panel assembly - front door	4.2±1.25 mm (0.17±0.05 in)
B	Panel assembly - front door to Side sill garnish assembly (sedan model)	5.4±1.8 mm (0.21±0.07 in)
C	Panel side outer to Front door sash	5.2+1.5, –1 mm (0.2+0.06, –0.04 in)
D	Surface level gap between panel side outer and front door sash	4.9±1.5 mm (0.19±0.06 in)
E	Front door sash to Rear door sash	4.4+1.5, –1 mm (0.17+0.06, –0.04 in)
F	Panel assembly - front door to Panel assembly - rear door	4.2±1.25 mm (0.17±0.05 in)
G	Garnish assembly front door to Side sill garnish assembly (OUTBACK model)	4.4±1.8 mm (0.17±0.07 in)

1) Adjust the vertical and horizontal positions of the panel assembly - front door.
   (1) Turn over the mud guard - front. <Ref. to EI-28, REMOVAL, Mud Guard.>
   (2) Remove the cover - fender LWR.

   (3) Adjust the vertical and horizontal clearance of the panel assembly - front door.
2) Adjust the surface level gap between the panel assembly - front door and the panel assembly - rear door.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

   (1) Loosen the screws (A).
   (2) Tap the striker - front door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - front door and the front end of the panel assembly - rear door.



5. Front Sealing Cover

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim front.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - front door.

B: INSTALLATION

CAUTION:
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Apply a uniform bead of butyl tape.**
- **Attach the sealing cover - front door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

1) Install the sealing cover - front door.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

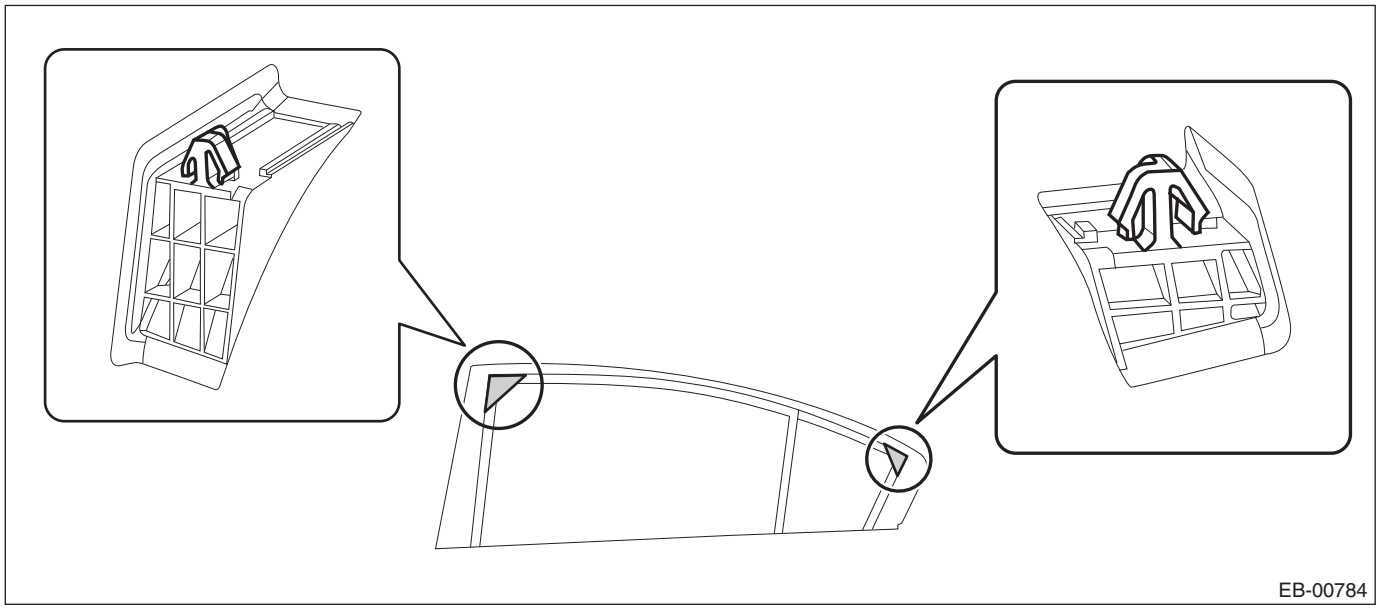
Preparation items:
Butyl tape: 3M Butyl Tape 8626 or equivalent

2) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

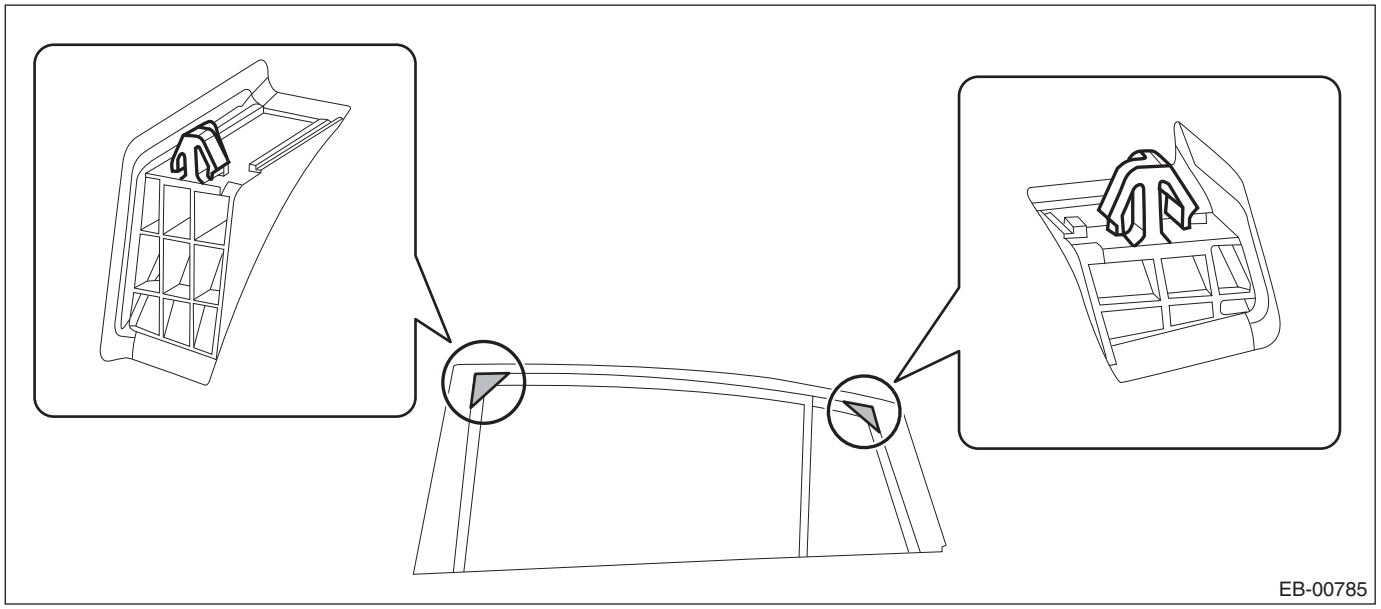
If the sealing cover - front door is broken, replace it with a new part.

6. Rear Door



A: REMOVAL

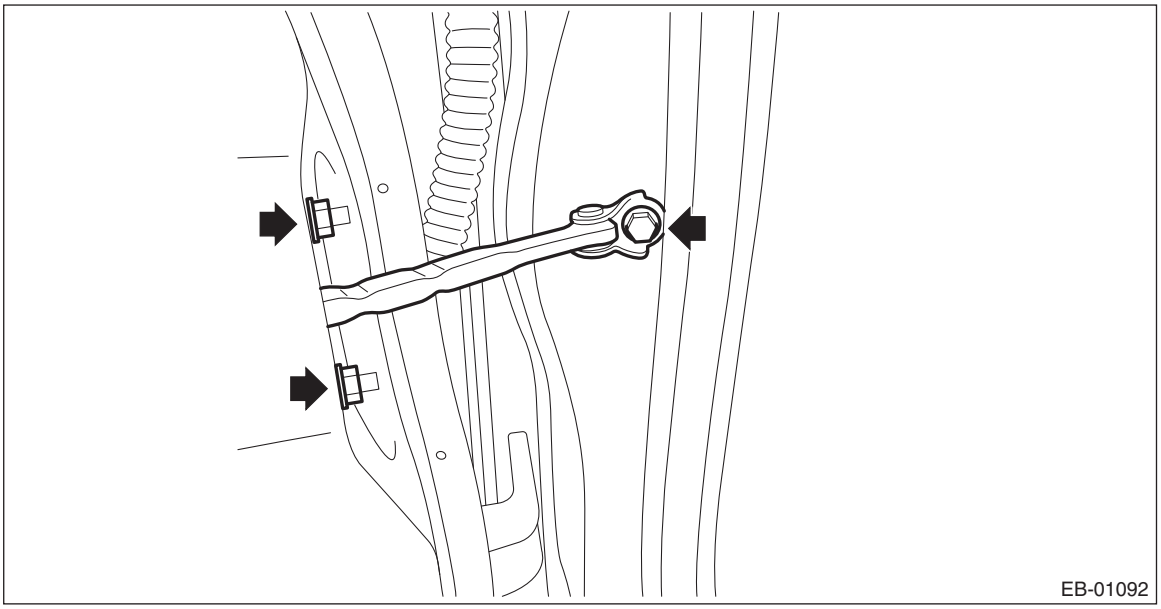
1. REAR DOOR PANEL



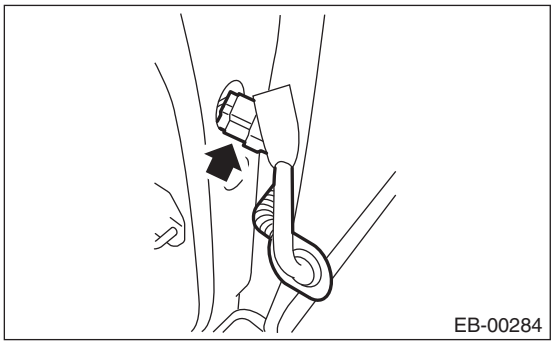
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-60, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-38, REMOVAL, Rear Sealing Cover.>
5) Remove the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

- Sedan model



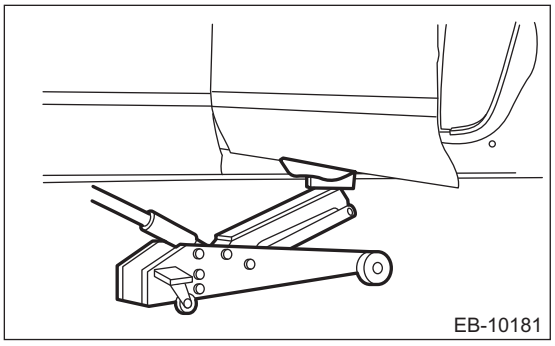
- OUTBACK model



6) Remove the rear door speaker assembly. <Ref. to ETM-16, REMOVAL, Rear Speaker.>
7) Remove the sash COMPL - rear partition and the glass assembly - rear door. <Ref. to GW-36, REMOVAL, Rear Door Glass.>

8) Remove the regulator - rear. <Ref. to GW-39, REMOVAL, Rear Regulator and Motor Assembly.>
9) Remove the door sash tape. <Ref. to EB-40, REAR DOOR, REMOVAL, Door Sash Tape.>
10) Remove the latch and actuator assembly - rear. <Ref. to SL-45, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
11) Remove the cover - handle rear outer. <Ref. to SL-41, REMOVAL, Rear Outer Handle.>
12) Remove the weather strip - rear door. <Ref. to EB-64, REPLACEMENT, Weather Strip.>
13) Remove the bolts and nuts, and then detach the checker assembly - rear door.

EB-01092

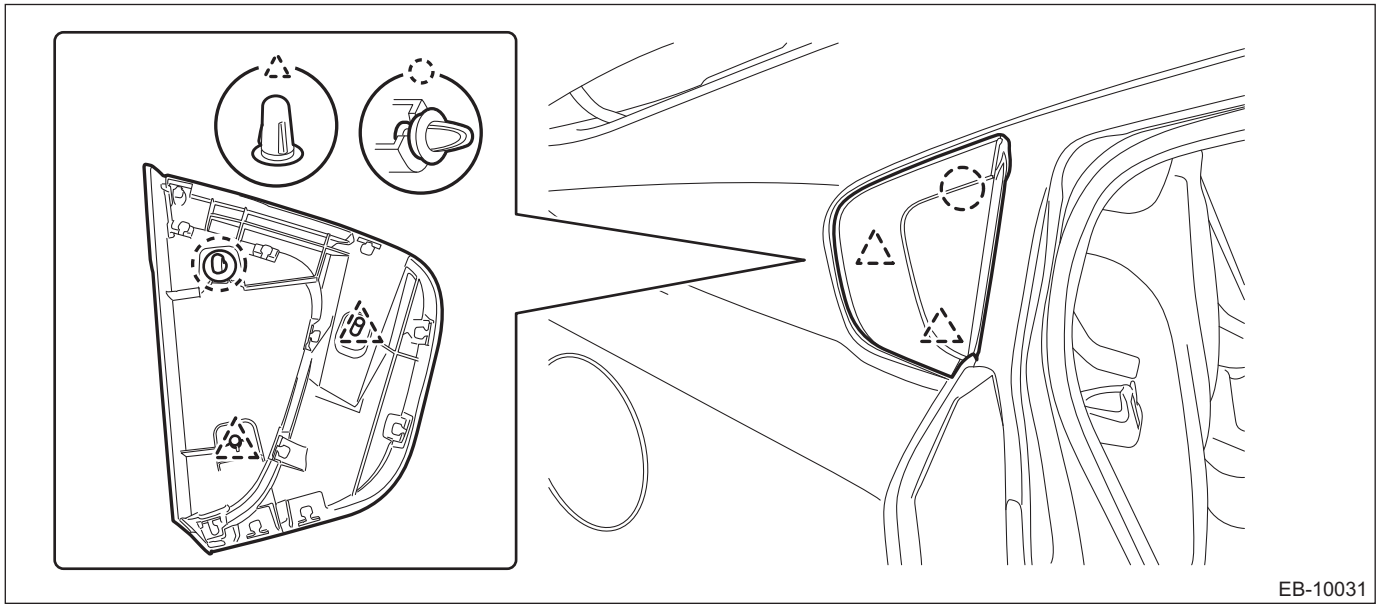


14) Disconnect the rear door harness connectors.
(1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.
(2) Disconnect the rear door harness connectors.

EB-00284

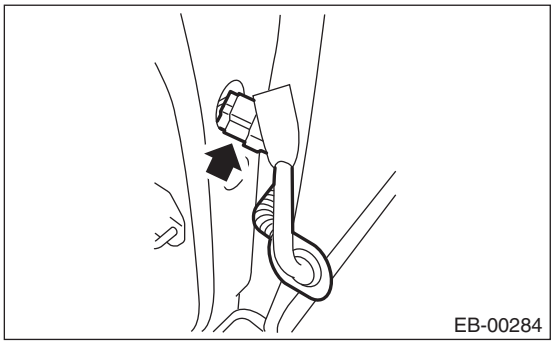
15) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
• Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.



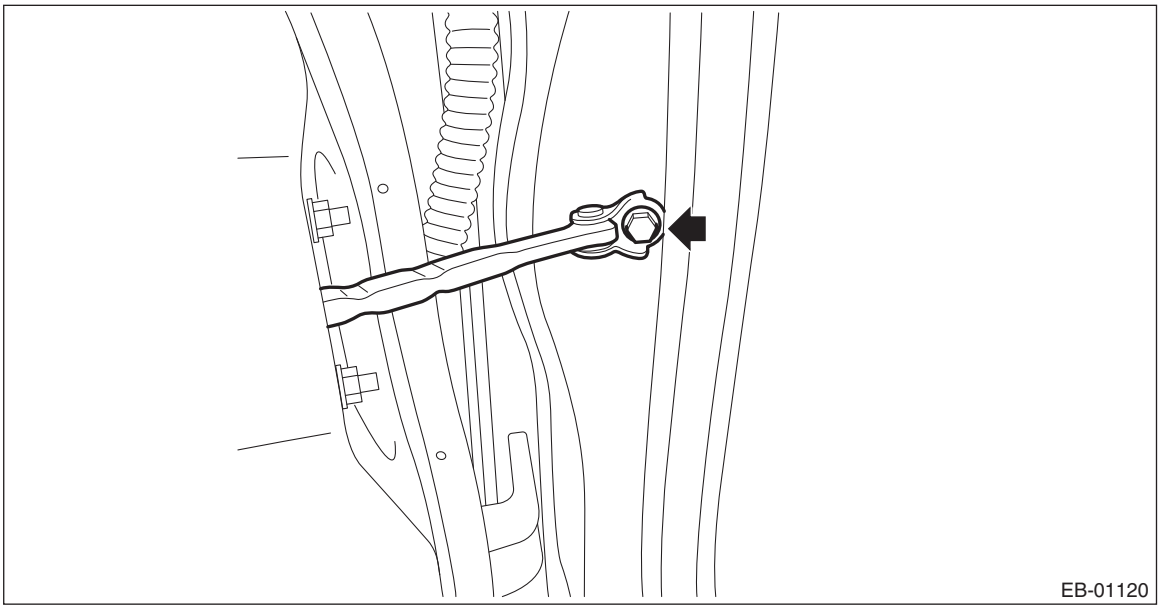
(2) Support the panel assembly - rear door with the jack to protect it from damage.

16) Remove the door-side bolts for the upper hinge - rear door and the lower hinge - rear door to remove the panel assembly - rear door.



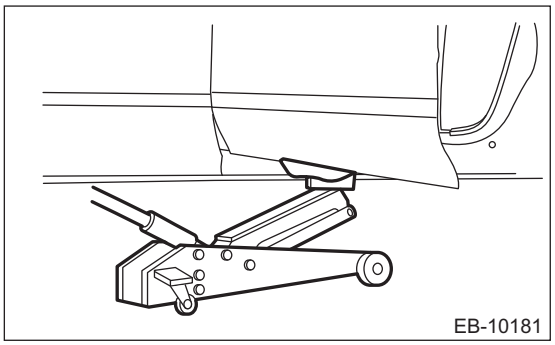
CAUTION:
The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.

17) Remove the cover - C pillar assembly. (Sedan model)



2. REAR DOOR HINGE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-60, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Disconnect the rear door harness connectors.
(1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.
(2) Disconnect the rear door harness connectors.



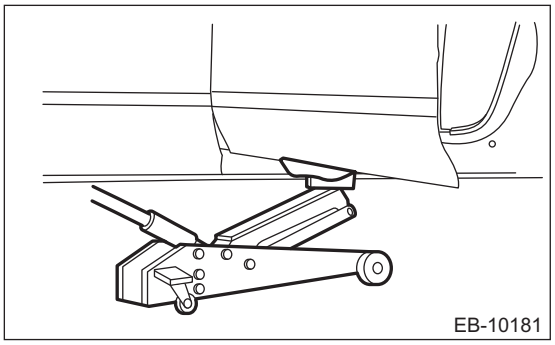
4) Remove the bolt on the vehicle side to disconnect the checker assembly - rear door.

5) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
• The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.
• Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
(2) Support the panel assembly - rear door with the jack to protect it from damage.

6) Remove the bolts on the side of the panel assembly - rear door of the upper hinge - rear door or the lower hinge - rear door.



CAUTION:
Do not remove the upper hinge - rear door and the lower hinge - rear door at the same time.

7) Remove the hinge - rear door from the vehicle.

B: INSTALLATION

1. REAR DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - rear door on it.

2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:
- When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
- Perform installation while paying attention to the assembly direction of the grommet.

3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-36, ADJUSTMENT, Rear Door.>
4) Tighten the mounting bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Tighten the bolts and nuts of the checker assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

6) Connect the door harness connector, and install the harness grommet.
7) Attach the door sash tape. <Ref. to EB-44, REAR DOOR, INSTALLATION, Door Sash Tape.>
8) Before installing each part, check the following items.
- Is the lever of the frame assembly - rear door outer is free from deformation?
- Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear?
- Is the cable of the latch and actuator assembly - rear free from deformation such as fray?
- Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?

9) Install door internal parts in the reverse order of removal.
- Weather strip - rear door
- Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Latch & actuator assembly - rear

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

NOTE:
Make sure the child safety lock works correctly after installation.

- Regulator & motor assembly - rear for the rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Sash COMPL - rear partition, and glass assembly - rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Running channel - rear door

CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash COMPL - partition.

10) Install the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

11) Install the rear door speaker assembly.
12) Install the sealing cover. <Ref. to EB-38, INSTALLATION, Rear Sealing Cover.>
13) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
14) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-61, OUTBACK MODEL, INSTALLATION, Side Garnish.>
15) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR DOOR HINGE

1) Apply grease to the sliding area of door hinges, and install to vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

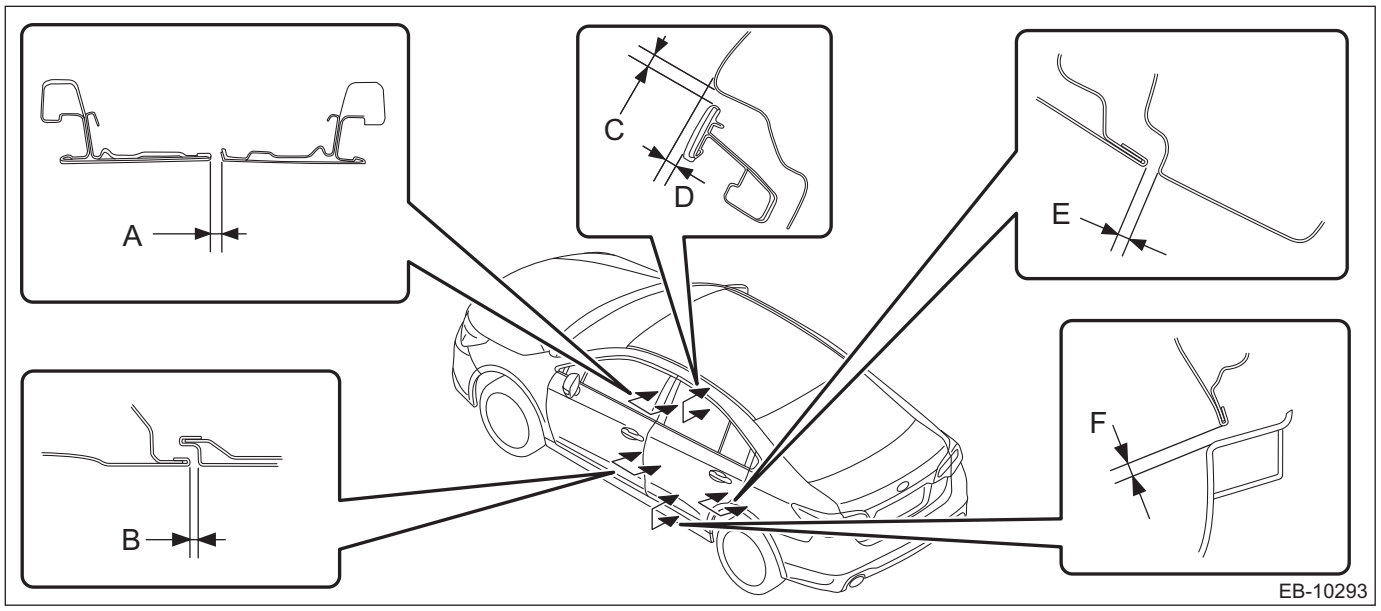
NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.

3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-36, ADJUSTMENT, Rear Door.>

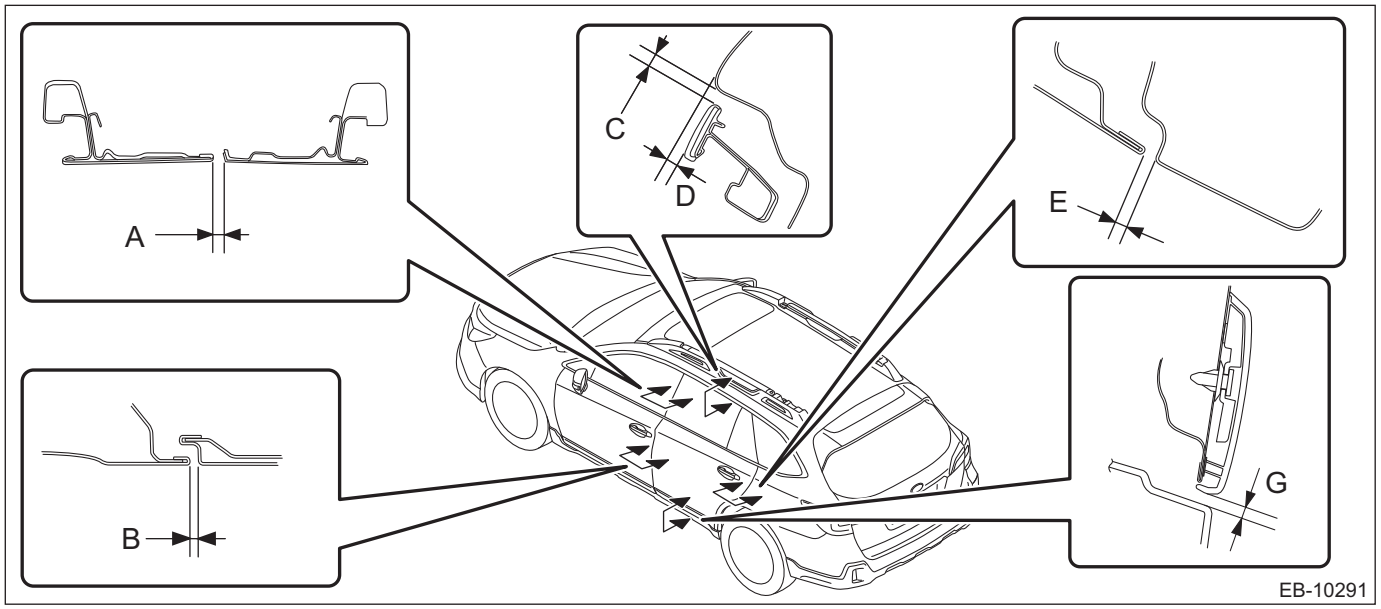
NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.

4) Tighten the bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



5) Connect the door harness connector, and install the harness grommet.
6) Tighten the bolts on the vehicle side of the checker assembly - rear door.

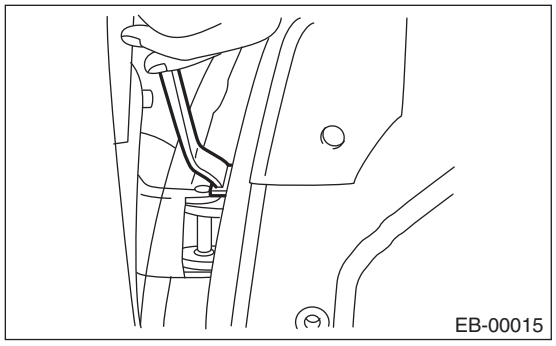


Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

7) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-61, OUTBACK MODEL, INSTALLATION, Side Garnish.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

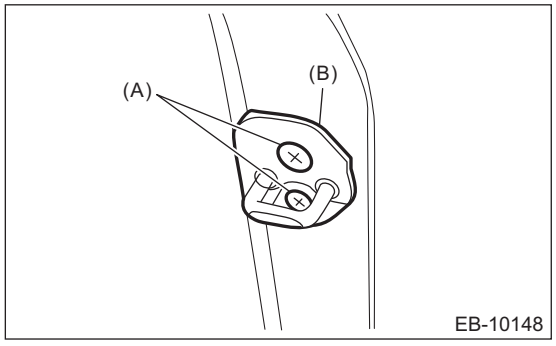
C: ADJUSTMENT

Adjust the clearance around the panel assembly - rear door as follows.



Part		Standard
A	Panel assembly - front door to Panel assembly - rear door	4.4+1.5, –1 mm (0.17+0.06, –0.04 in)
B	Front door sash to Rear door sash	4.2±1.25 mm (0.17±0.05 in)
C	Panel side outer to Rear door sash	5.2+1.5, –1 mm (0.2+0.06, –0.04 in)
D	Surface level gap between panel side outer and rear door sash	4.1±1.5 mm (0.16±0.06 in)
E	Panel assembly - rear door to Panel side outer	3.7±1.25 mm (0.15±0.05 in)
F	Panel assembly - rear door to Side sill garnish assembly (sedan model)	5.4±1.8 mm (0.21±0.07 in)
G	Panel assembly - rear door to Side sill garnish assembly (OUTBACK model)	4.4±1.8 mm (0.179±0.07 in)

1) Adjust the vertical and horizontal positions of the panel assembly - rear door.
   (1) Loosen the body side bolts of the upper hinge - rear door and the lower hinge - rear door.

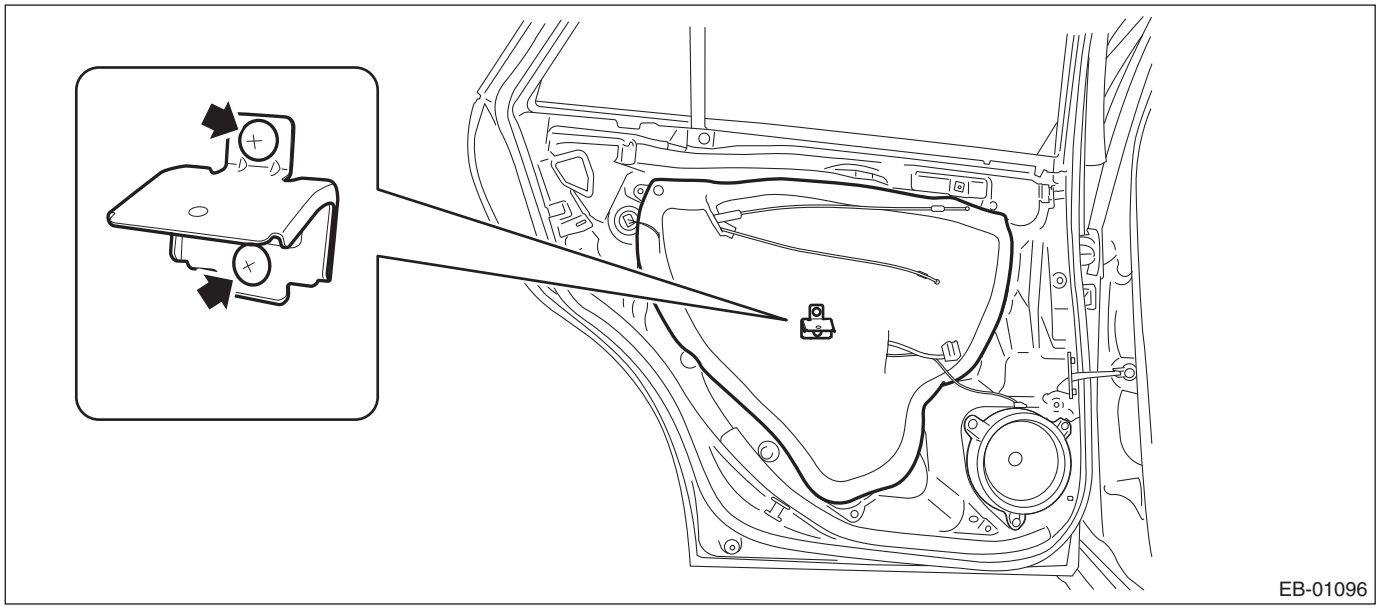


(2) Adjust the vertical and horizontal clearance of the panel assembly - rear door.

2) Adjust the surface level gap between the panel assembly - rear door and the body.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

(1) Loosen the screws (A).
(2) Tap the striker - rear door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - rear door and the rear quarter.



7. Rear Sealing Cover

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim rear.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - rear door.

B: INSTALLATION

CAUTION:
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Apply a butyl tape evenly.**
- **Attach the sealing cover - rear door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

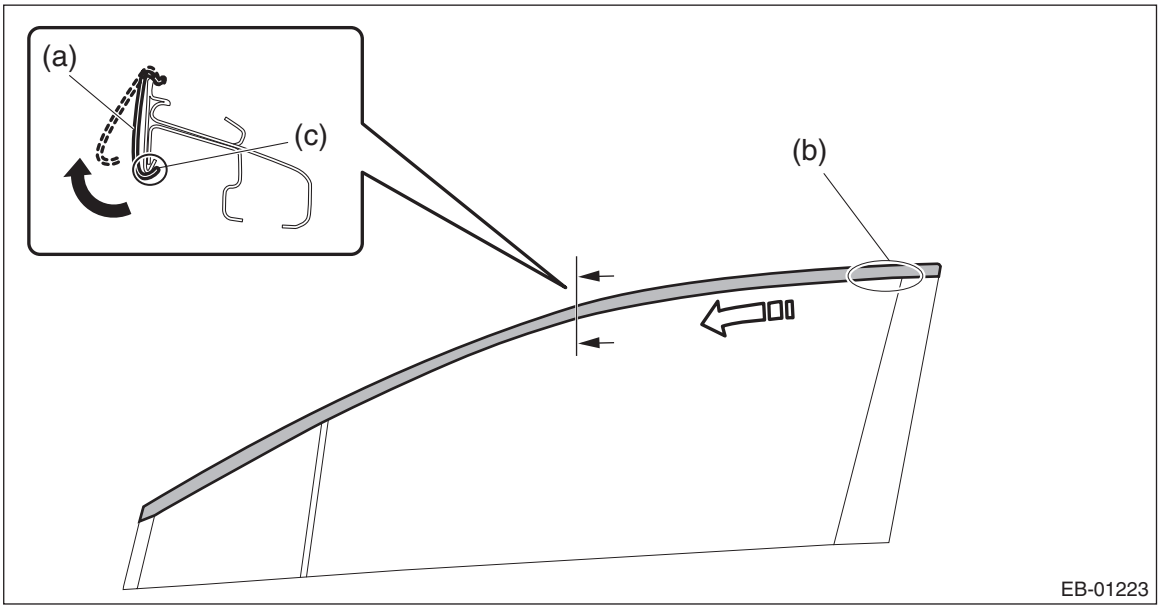
1) Install the sealing cover.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

Preparation items:
Butyl tape: 3M Butyl Tape 8626 or equivalent

2) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

If the sealing cover - rear door is broken, replace it with a new part.

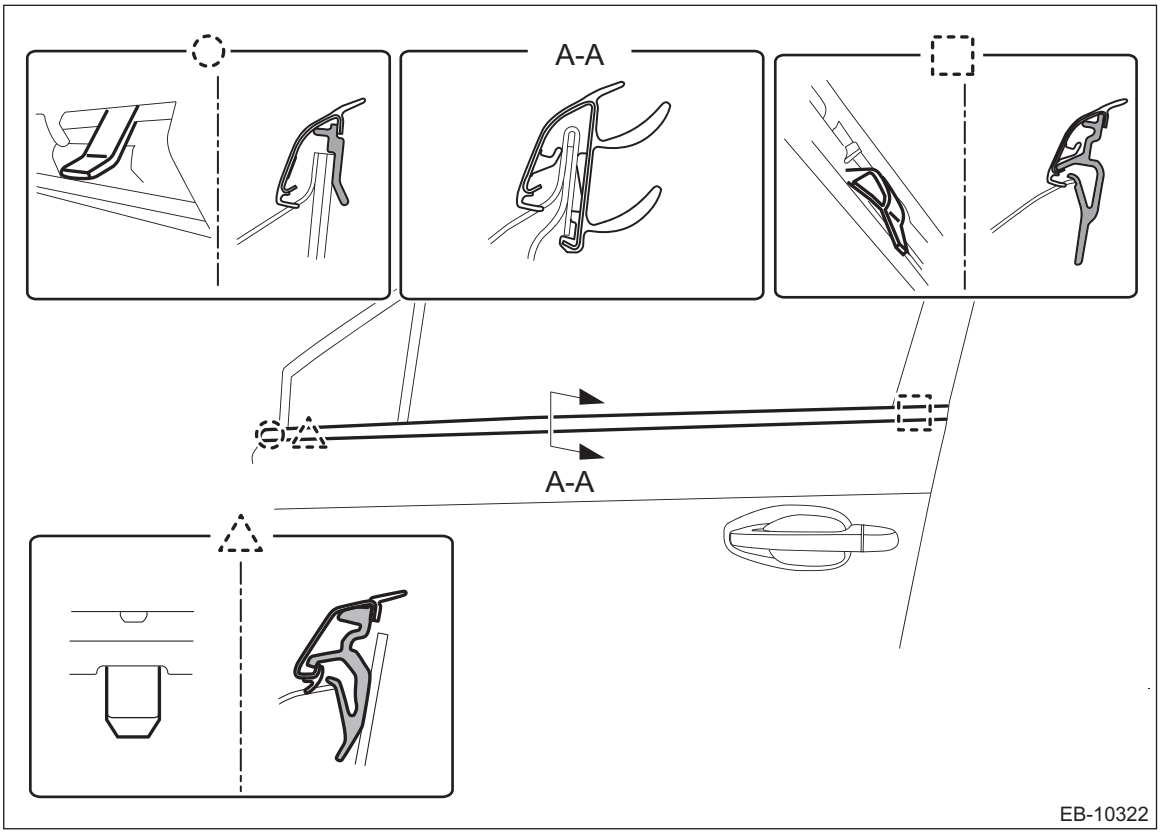


8. Door Sash Tape

A: REMOVAL

1. FRONT DOOR

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-71, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
4) Remove the glass assembly - front door. <Ref. to GW-22, REMOVAL, Front Door Glass.>
5) Remove the running channel - front door.
6) Remove the clip, and remove the weather strip - door upper side. <Ref. to EB-64, FRONT DOOR, REPLACEMENT, Weather Strip.>
7) Remove the molding - door sash front (a) by disengaging the bottom part (c) from the specified position (b) toward the front side of the vehicle.



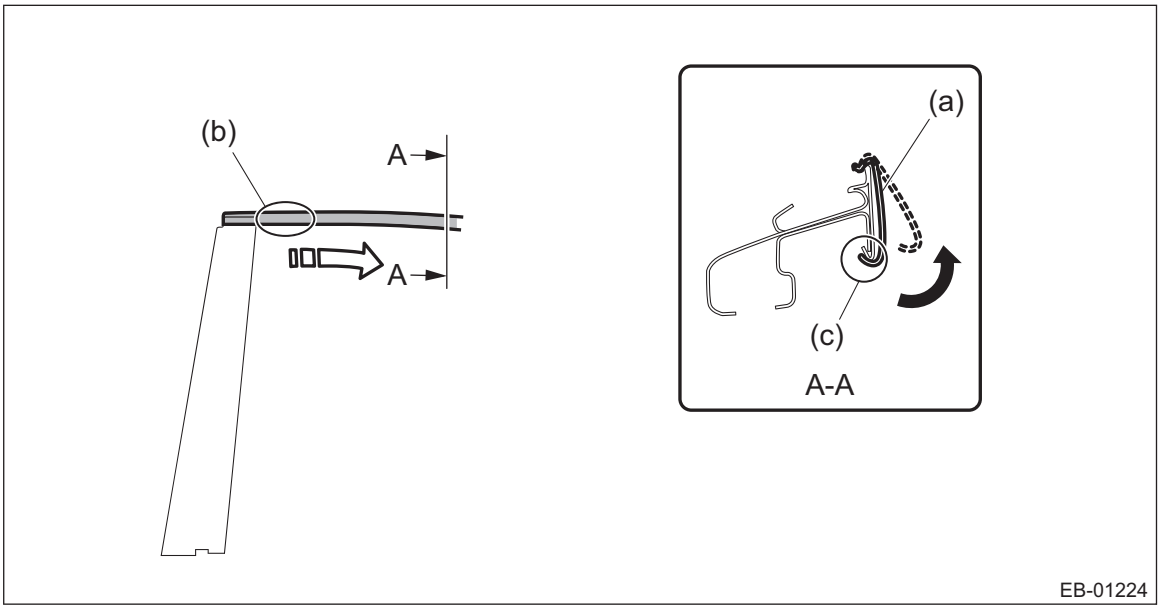
CAUTION:
- **When removing the molding - door sash, take special care to avoid the distortion.**
- **When distortion occurred to the molding - door sash, always replace it with a new part.**

8) Remove the weather strip outer - front door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**

- **Do not reuse the weather strip outer. Always replace with a new part.**

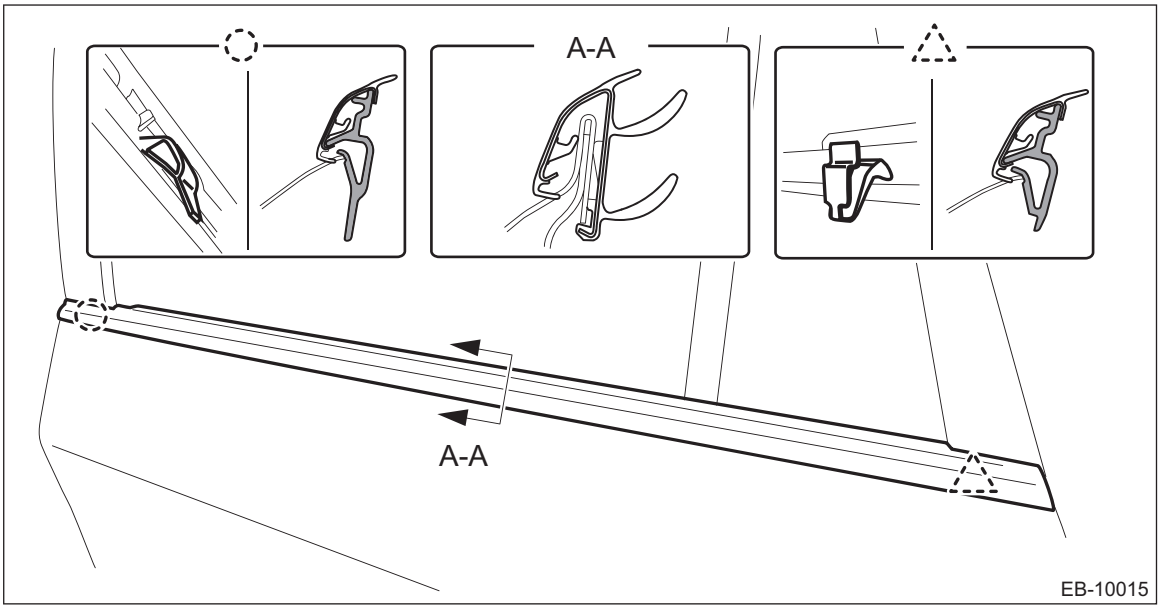
9) Peel the door sash tape from the door sash.



NOTE:
- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

2. REAR DOOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-38, REMOVAL, Rear Sealing Cover.>
4) Remove the glass assembly - rear door. <Ref. to GW-36, REMOVAL, Rear Door Glass.>
5) Remove the running channel - rear door.
6) Remove the clip, and remove the weather strip - door upper side. <Ref. to EB-64, FRONT DOOR, REPLACEMENT, Weather Strip.>
7) Remove the molding - door sash rear (a) by disengaging the bottom part (c) from the specified position (b) toward the rear side of the vehicle.

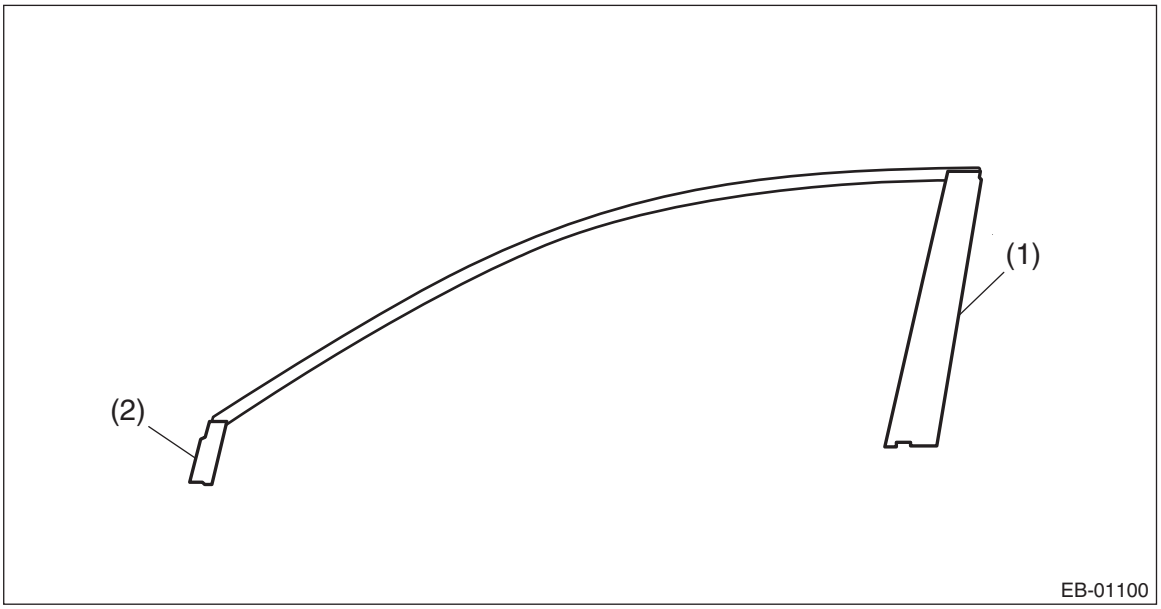


CAUTION:
- **When removing the molding - door sash, take special care to avoid the distortion.**

- **When distortion occurred to the molding - door sash, always replace it with a new part.**

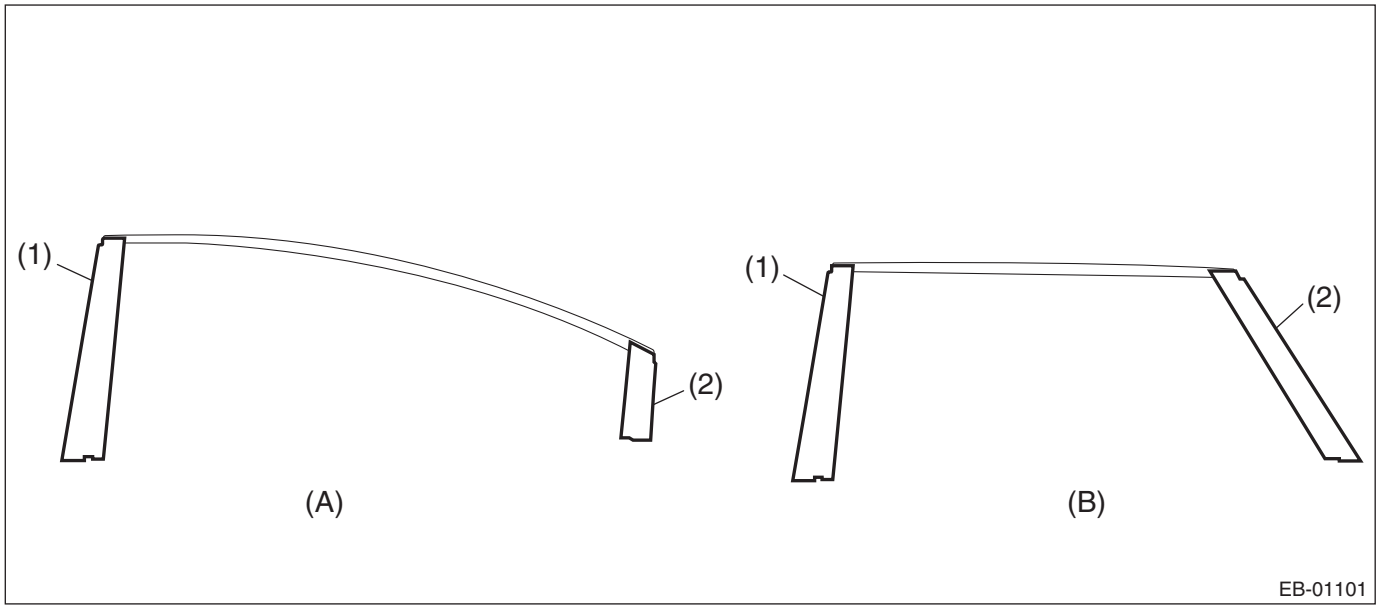
8) Remove the weather strip outer - rear door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**



9) Peel the door sash tape from the door sash.

NOTE:
- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

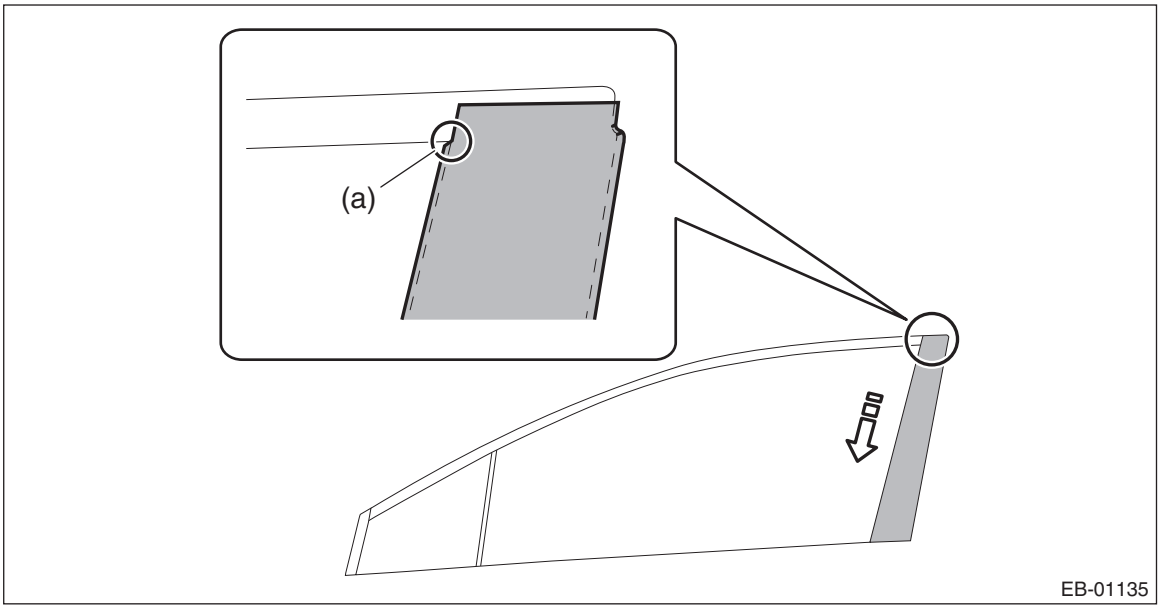


B: INSTALLATION

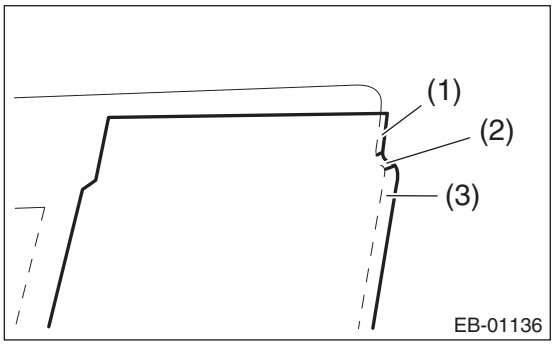
CAUTION:
- **Do not reuse the removed door sash tape. Replace it with a new tape.**
- **When applying tape, use a spatula, etc. to apply evenly, pushing it against the sash to make sure that no air bubbles are formed.**
If air bubbles are formed, reapply the tape.

- **If the tape is wrinkled, etc. during application, replace the tape.**
- **Turning points and ends of the tape will be a cause for peeling if the pressure is insufficient during application, so make sure to push down on the tape firmly when applying.**
- **There are locations where the tape ends will overlap each other. When applying the tape, be careful of the order of their application.**
  - **Front**

  - **Rear**

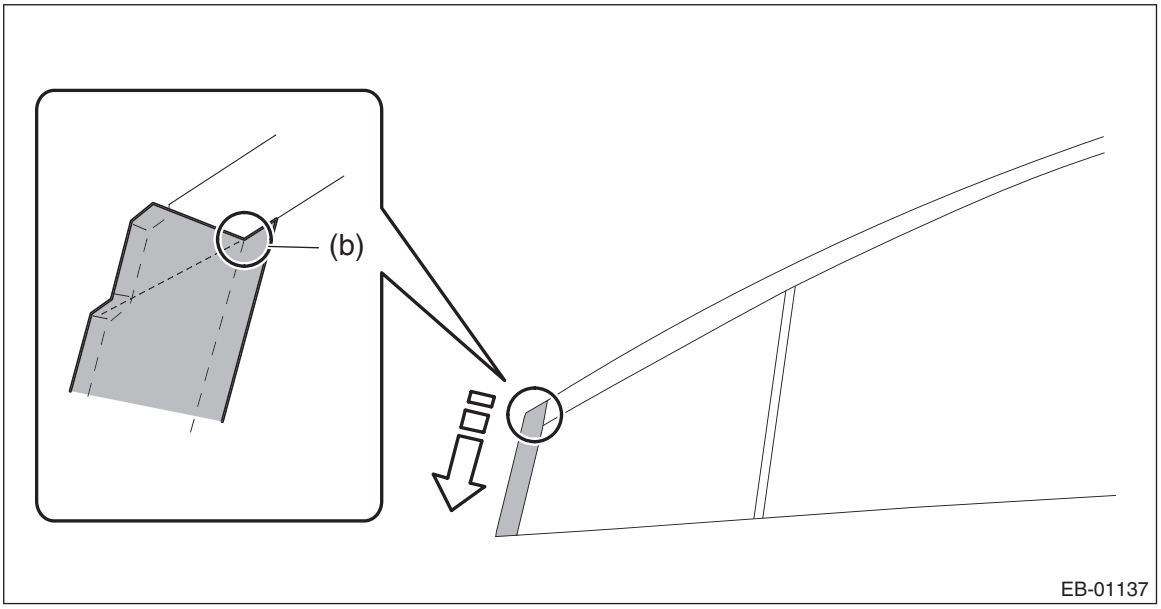


(A) Sedan model (B) OUTBACK model

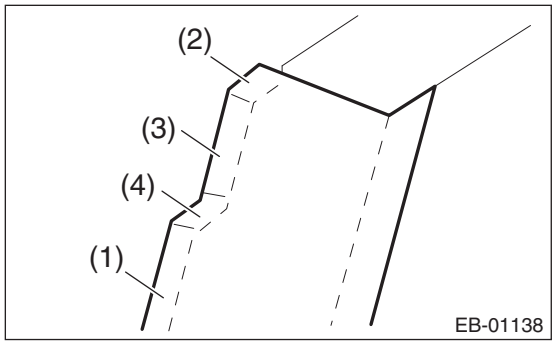


- **Do not reuse the weather strip outer. Always replace with a new part.**

1. FRONT DOOR

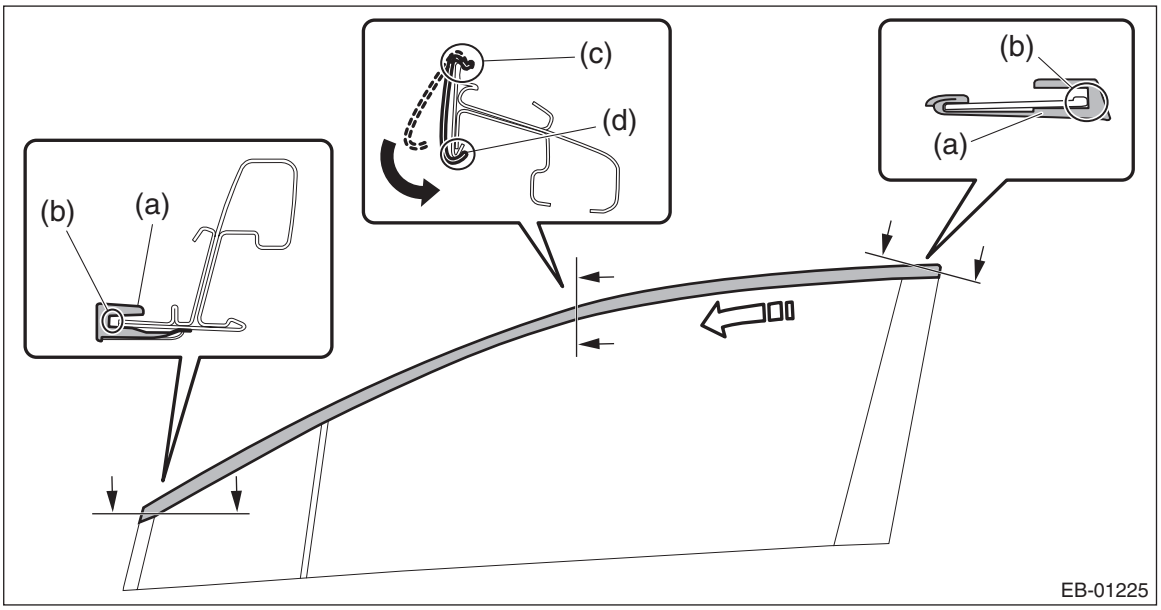


1) Apply the front door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (a).



2) Fold the corners at the door upper end area in the order of (1) — (3).

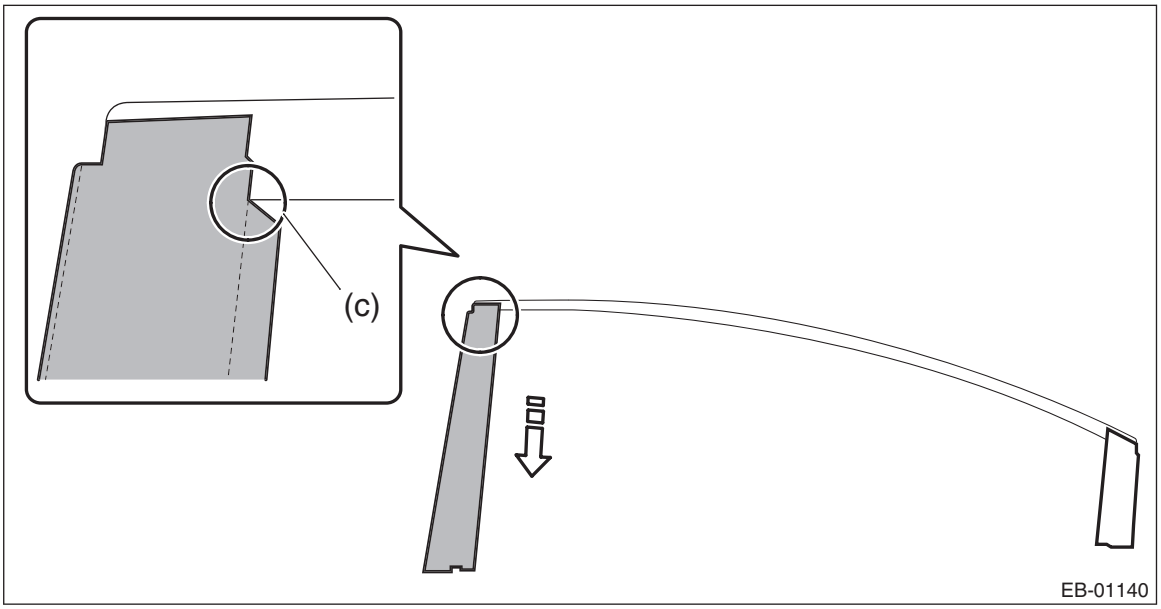
3) Apply the front door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (b).



4) Fold the corners at the door upper end area in the order of (1) — (4).

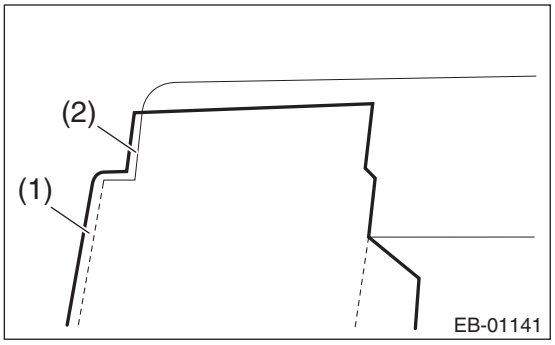
5) Install the molding - door sash front.
   (1) Align the molding - door sash front (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the rear side of vehicle toward the front side of the vehicle.

CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.



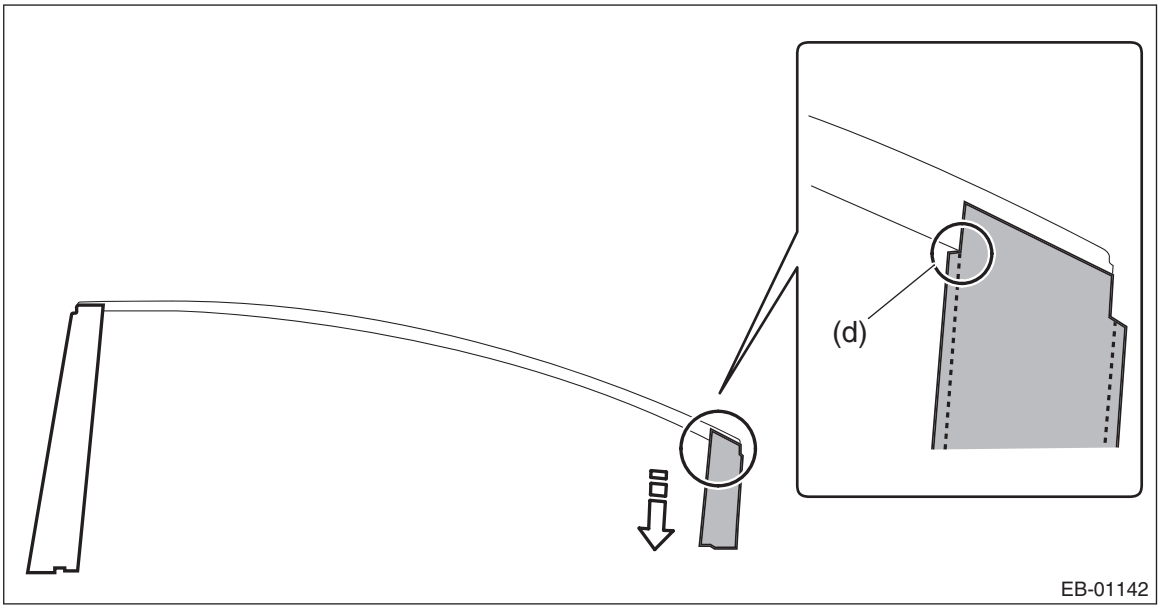
6) Install the weather strip outer - front door.
7) Install the running channel - front door.
8) Install the glass assembly - front door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - front door.
10) Install the sealing cover - front door.
11) Install the trim panel - front door. <Ref. to EI-73, INSTALLATION, Door Trim.>
12) Connect the ground terminal to the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

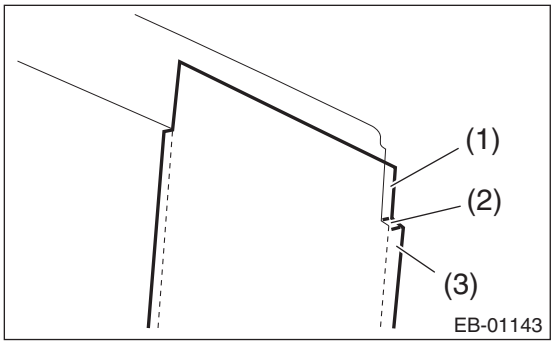


2. REAR DOOR

Sedan model

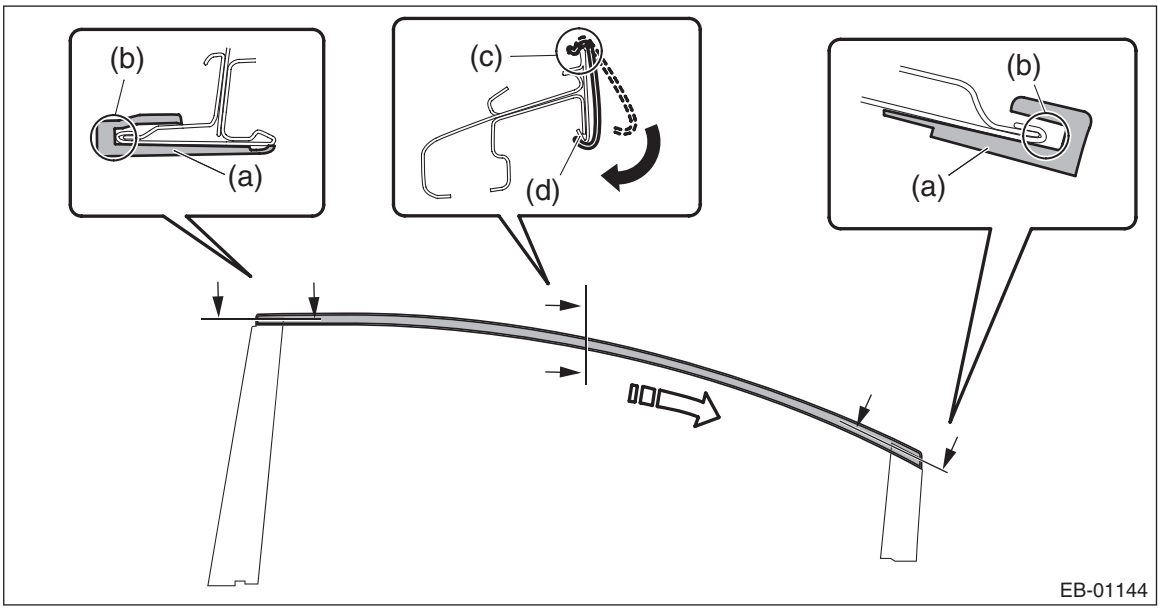


1) Apply the rear door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (c).



2) Fold the corners at the door upper end area in the order of (1) — (2).

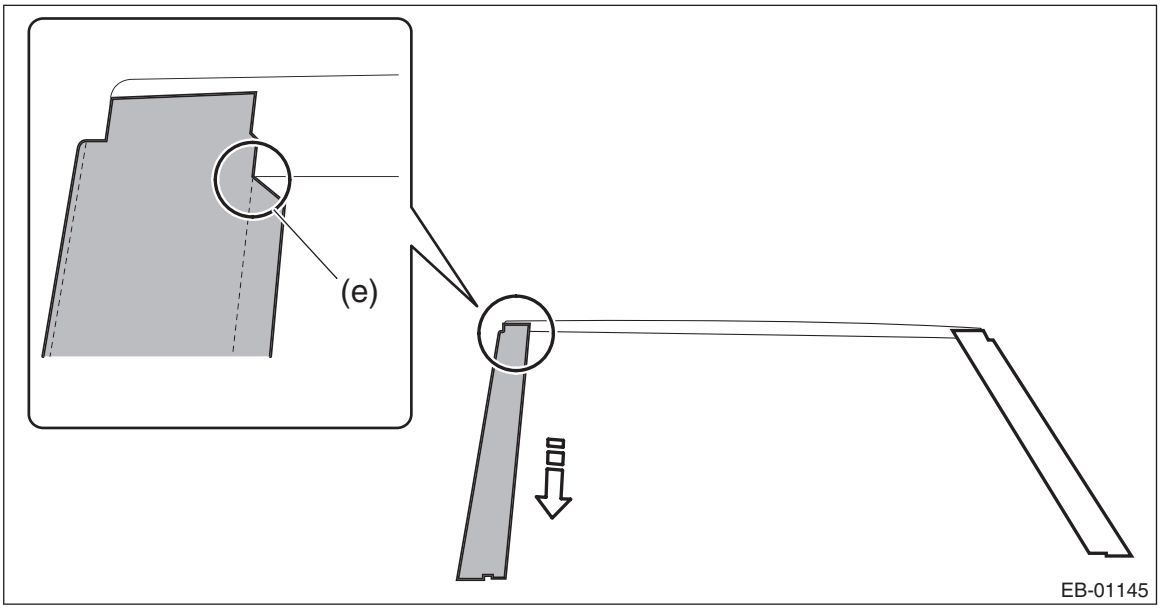
3) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (d).



4) Fold the corners at the door upper end area in the order of (1) — (3).

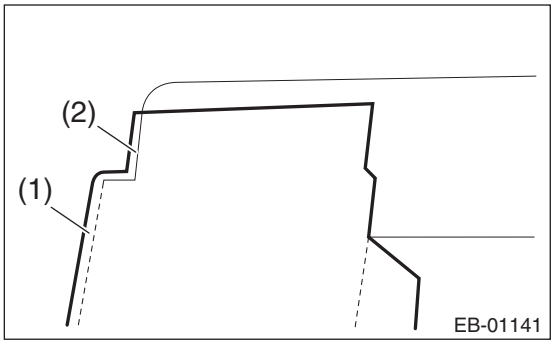
5) Install the molding - door sash rear.
   (1) Align the molding - door sash rear (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the front side of vehicle toward the rear side of the vehicle.

CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.



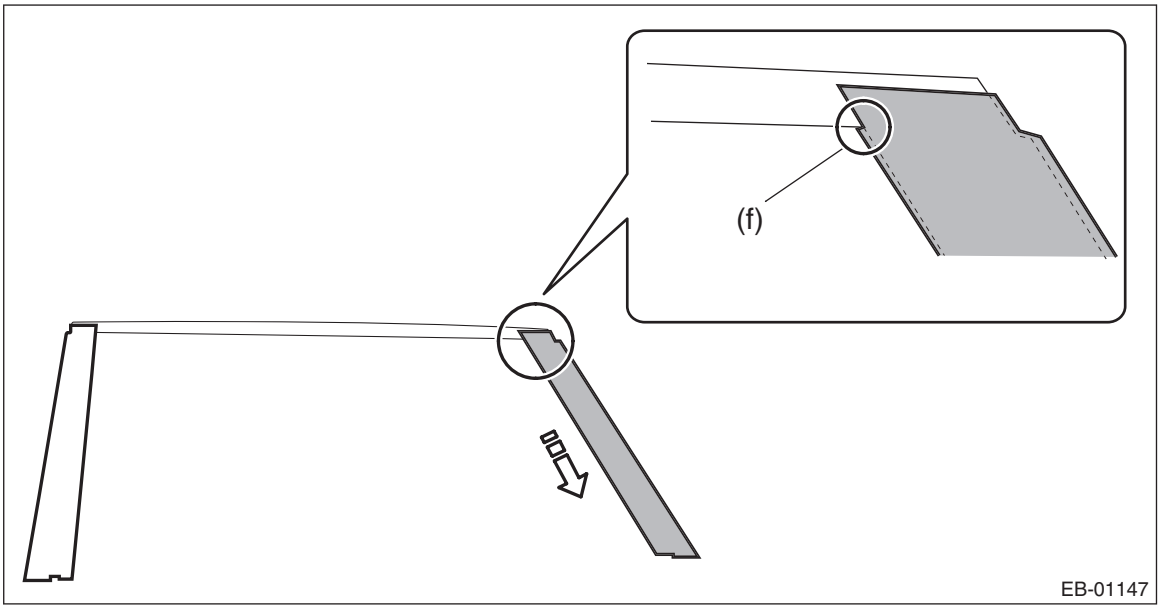
6) Install the weather strip outer - rear door.
7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - rear door.
10) Install the sealing cover - rear door.
11) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

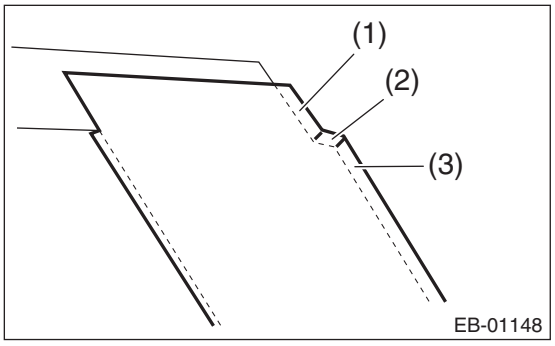


3. REAR DOOR

OUTBACK model

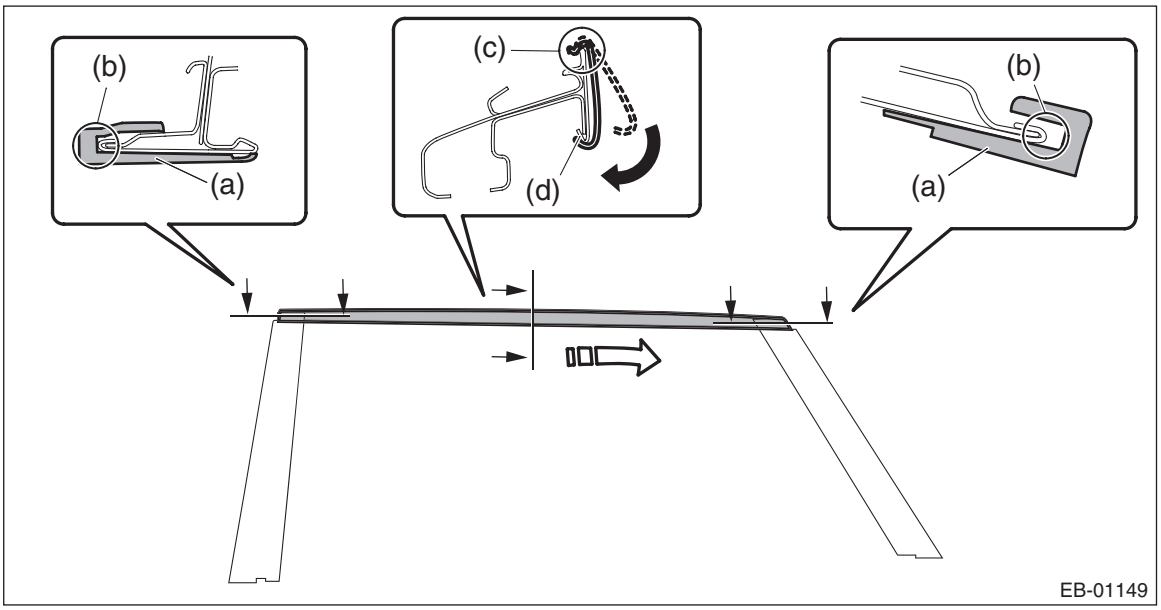


1) Apply the rear door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (e).



2) Fold the corners at the door upper end area in the order of (1) — (2).

3) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (f).



4) Fold the corners at the door upper end area in the order of (1) — (3).

5) Install the molding - door sash rear.
   (1) Align the molding - door sash rear (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the front side of vehicle toward the rear side of the vehicle.

CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.

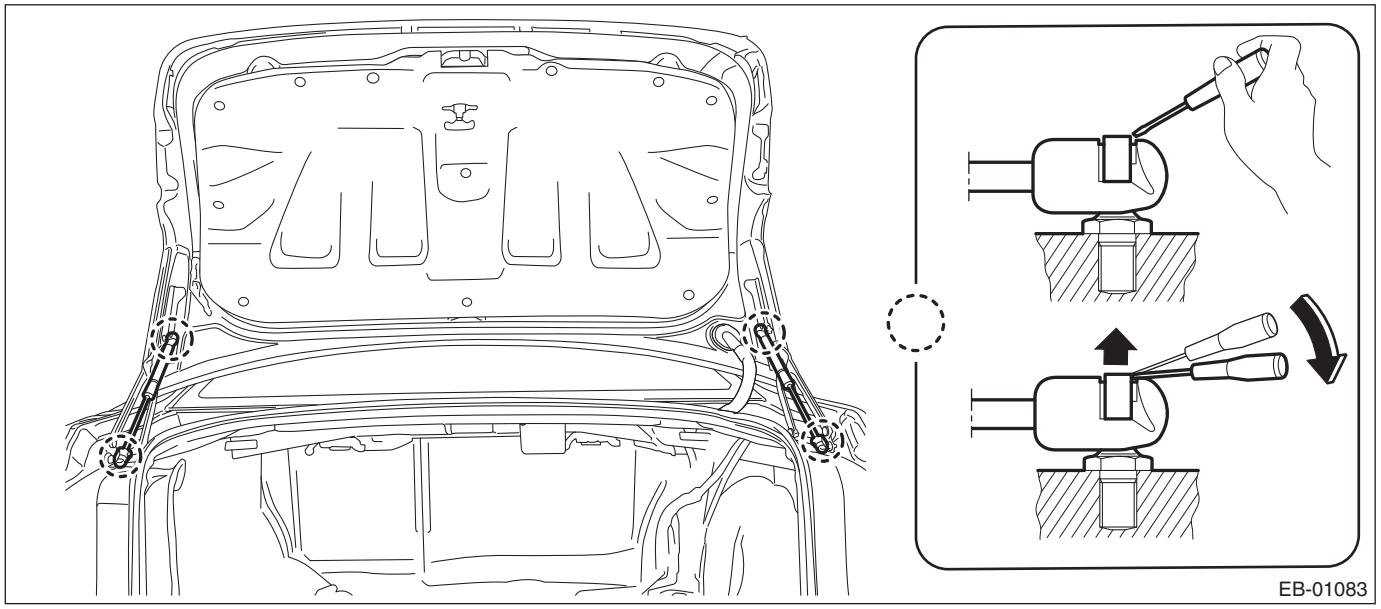
6) Install the weather strip outer - rear door.
7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9) Install the weather strip - rear door.
10) Install the sealing cover - rear door.
11) Install the trim panel - rear door. <Ref. to EI-73, INSTALLATION, Door Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

9. Trunk Lid

A: REMOVAL

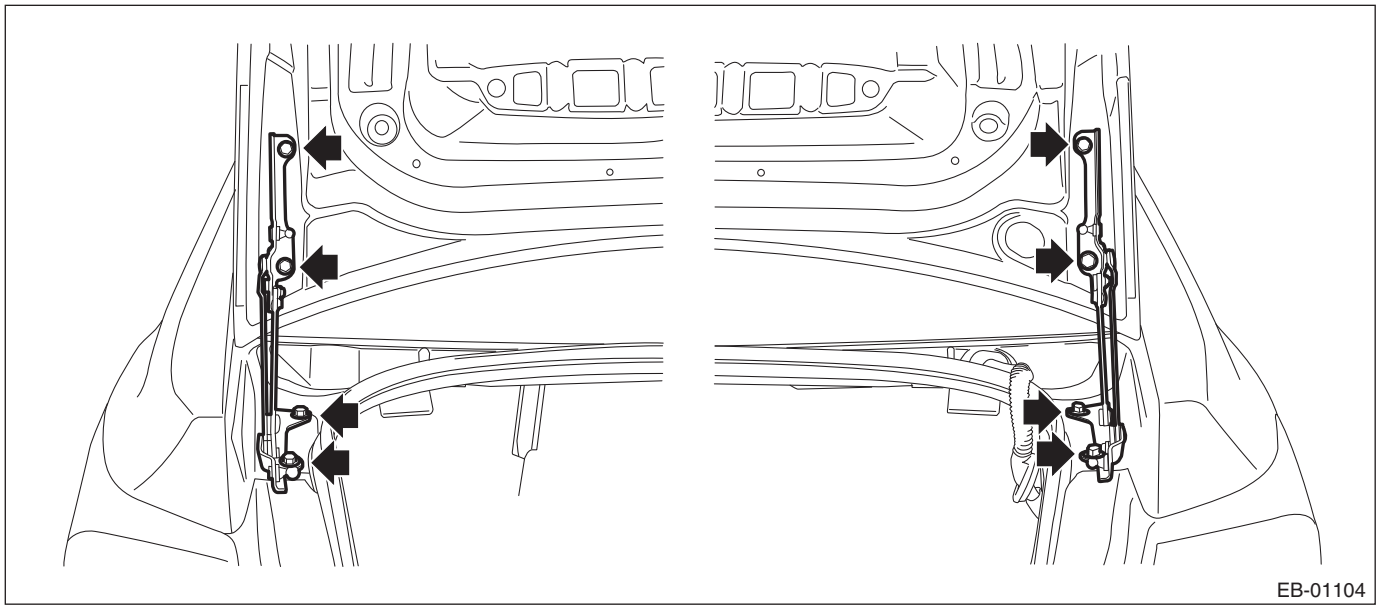


CAUTION:
Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.

1. TRUNK LID DAMPER STAY

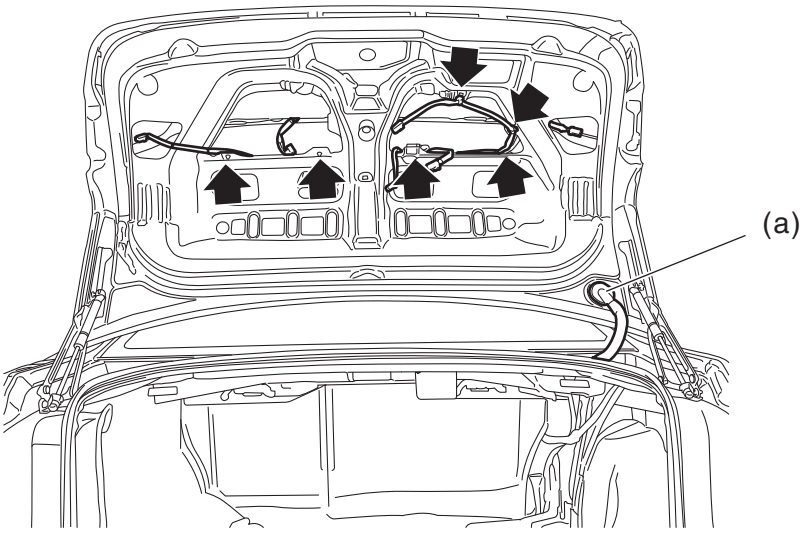
1) Open the trunk lid COMPL.
2) Remove the stay assembly - trunk lid.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.



(1) Remove the stopper - hinge.
(2) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(3) Pull the stay assembly - trunk lid toward you, and remove the stay assembly - trunk lid from the ball stud.

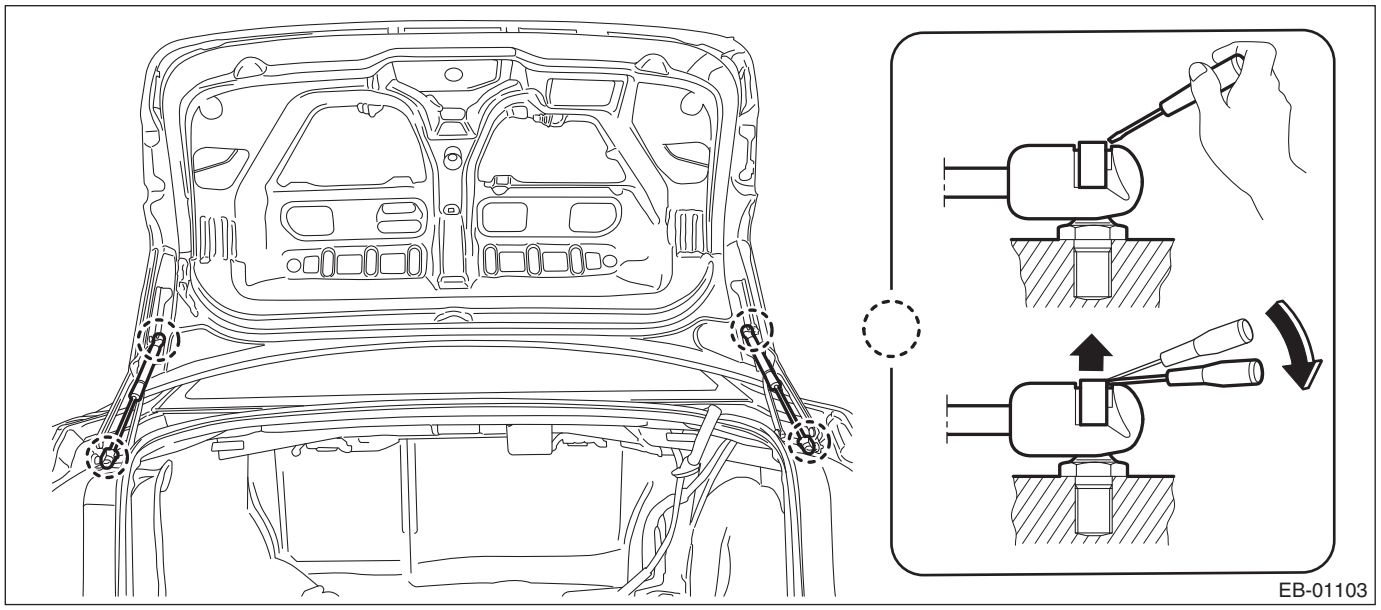
2. TRUNK LID HINGE



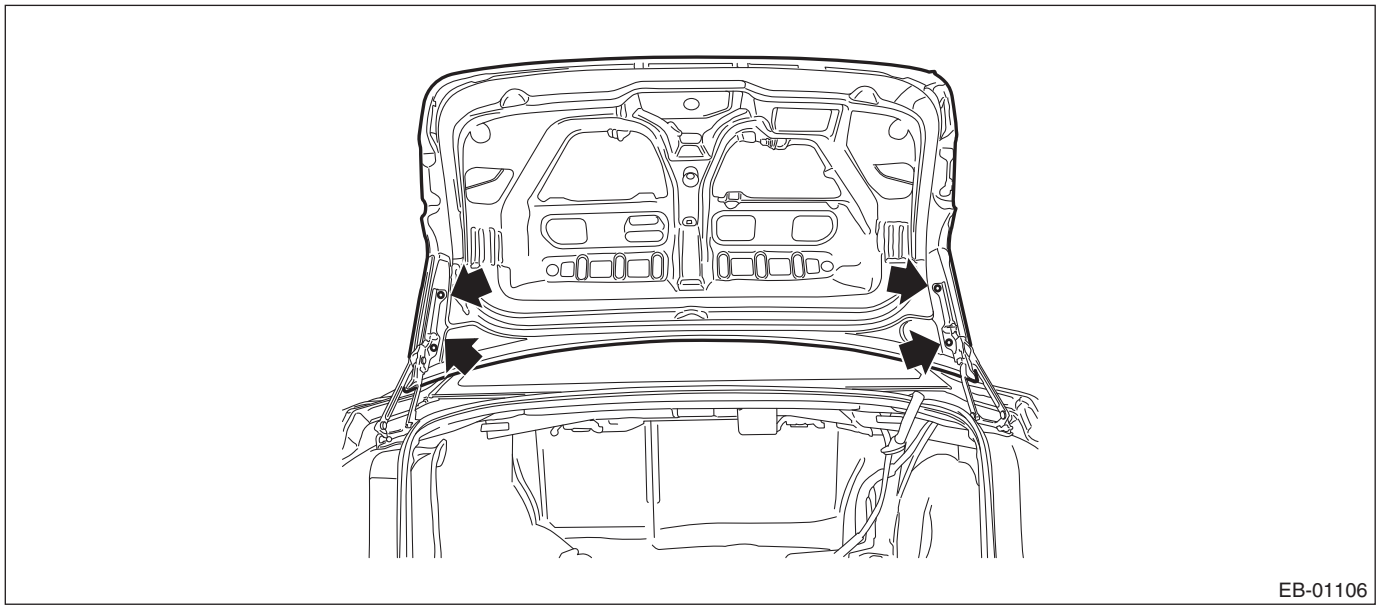
1) Open the trunk lid COMPL.
2) Remove the stay assembly - trunk lid. <Ref. to EB-49, TRUNK LID DAMPER STAY, REMOVAL, Trunk Lid.>

3) Remove the hinge assembly - trunk lid.

3. TRUNK LID PANEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-62, REMOVAL, Trunk Lid Garnish.>
4) Remove the key lock - trunk lid. <Ref. to SL-74, TRUNK LID, REPLACEMENT, Key Lock Cylinders.>
5) Remove the light assembly - rear finisher. <Ref. to LI-66, SEDAN MODEL, REMOVAL, Rear Finisher Light Assembly.>
6) Remove the license plate light. <Ref. to LI-70, SEDAN MODEL, REMOVAL, License Plate Light.>
7) Remove the rearview camera assembly. <Ref. to ETM-43, REMOVAL, Camera.>
8) Remove the rear antenna assembly - exterior. (Model with keyless access with push button start) <Ref. to SL-96, REAR ANTENNA (SEDAN MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
9) Remove the lock assembly - trunk lid. <Ref. to SL-52, REMOVAL, Trunk Lid Latch and Actuator Assembly.>
10) Remove the stopper - trunk lid LWR.
11) Disconnect the harness clip, and then pull out the harness as shown in the figure (a).



12) Remove the stay assembly - trunk lid.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Remove the stopper - hinge.
(2) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(3) Pull the stay assembly - trunk lid toward you, and remove the stay assembly - trunk lid from the ball stud.

13) Remove the trunk lid COMPL.

14) Remove the hinge assembly - trunk lid from the body.

B: INSTALLATION

1) Install the hinge assembly - trunk lid.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

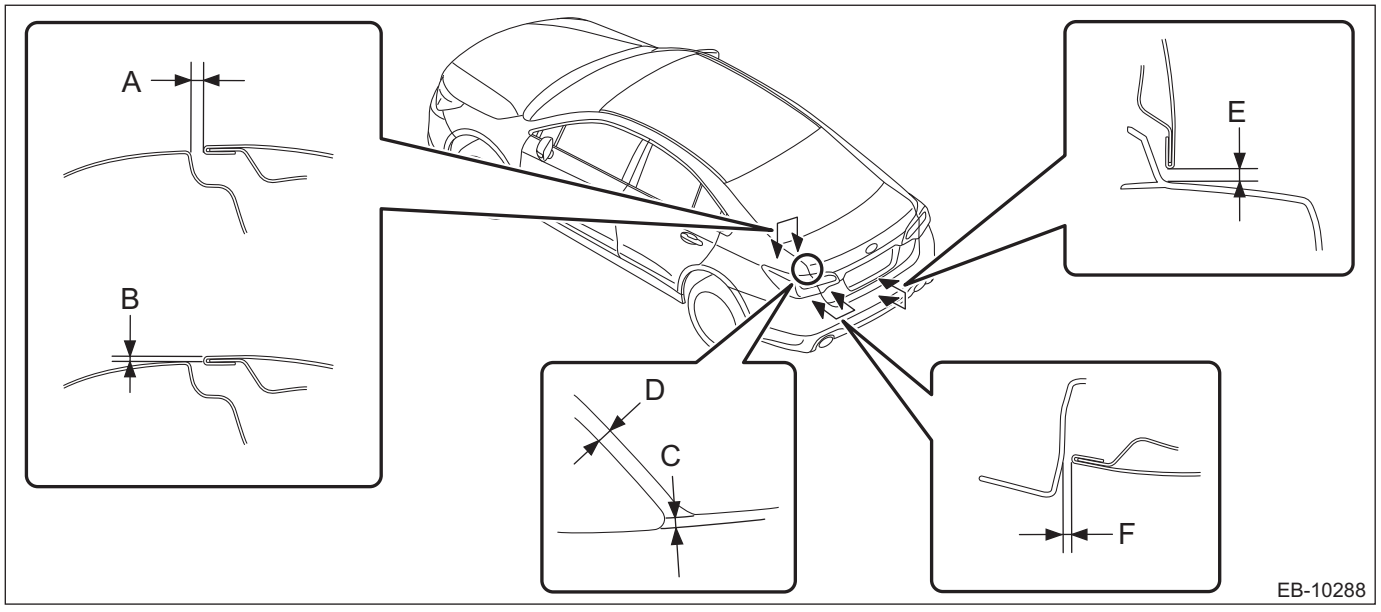
2) Install the trunk lid COMPL.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the stopper - trunk lid LWR.

4) Adjust while paying attention to make a uniform clearance around the trunk lid COMPL. <Ref. to EB-52, ADJUSTMENT, Trunk Lid.>
5) Install the stay assembly - trunk lid.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-6, TRUNK LID PANEL, COMPONENT, General Description.>
6) Install the stopper - hinge.
7) Install the harness clip and the harness.
8) Install the light assembly - rear finisher. <Ref. to LI-67, SEDAN MODEL, INSTALLATION, Rear Finisher Light Assembly.>

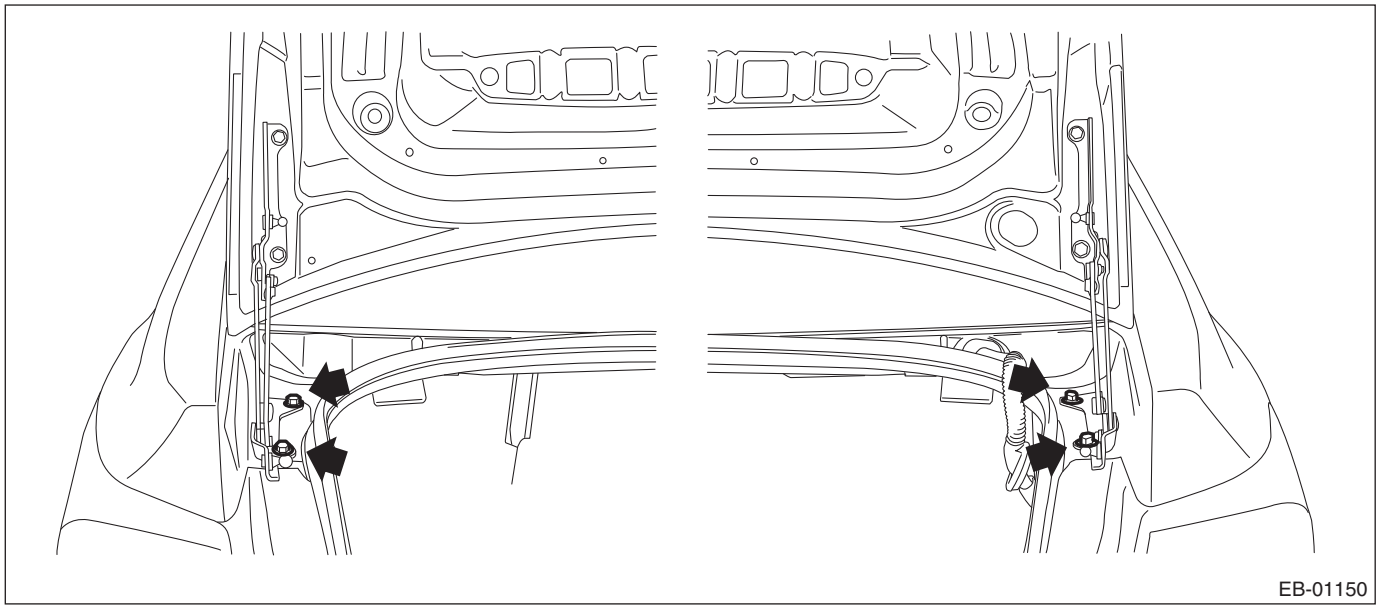


Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
9) Install the license plate light. <Ref. to LI-72, SEDAN MODEL, INSTALLATION, License Plate Light.>
10) Install the key lock - trunk lid.
11) Install the rearview camera assembly. <Ref. to ETM-44, INSTALLATION, Camera.>
12) Install the garnish - trunk. <Ref. to EI-62, INSTALLATION, Trunk Lid Garnish.>

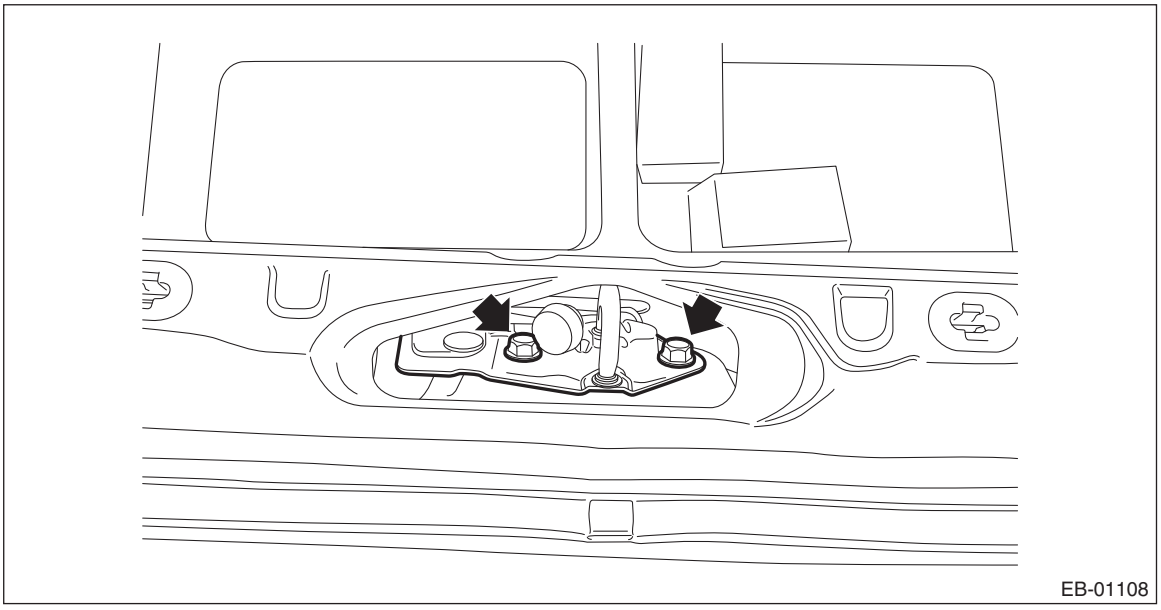
Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
13) Install the rear antenna assembly - exterior.
14) Install the lock assembly - trunk lid.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
15) Install the trim panel - trunk lid. <Ref. to EI-108, INSTALLATION, Trunk Room Trim.>
16) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: ADJUSTMENT



Adjust the clearance around the trunk lid COMPL as follows.

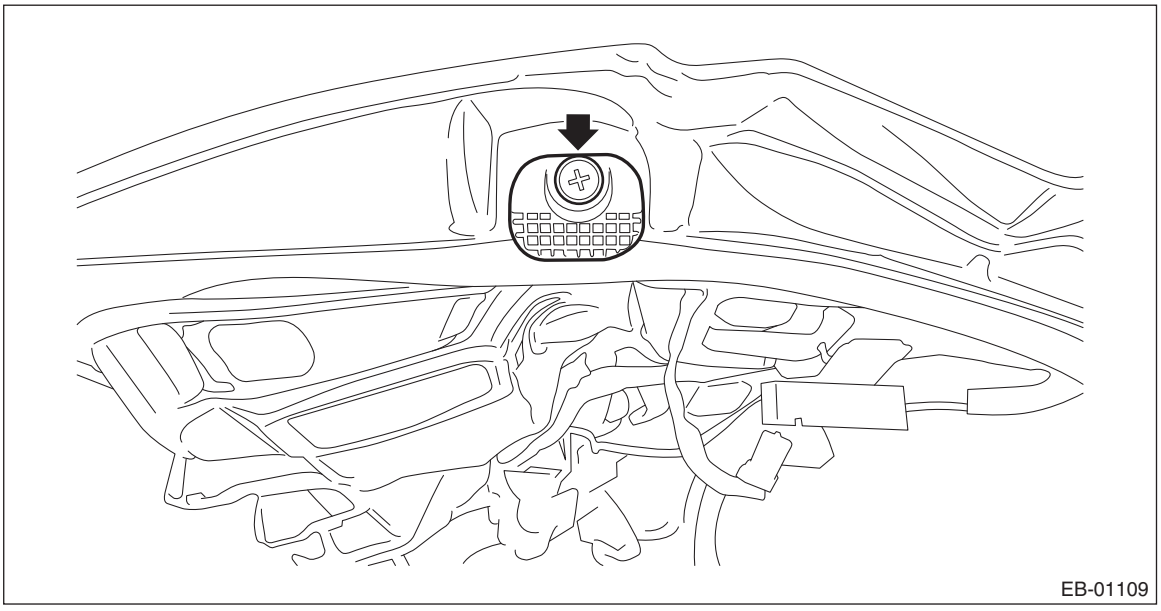


Part		Standard
A	Trunk lid COMPL and Panel - side outer	3.5±1 mm (0.14±0.04 in)
B	Surface level gap between Trunk lid COMPL and Panel - side outer	0±1 mm (0±0.04 in)
C	Surface level gap between Trunk lid COMPL and Panel - side outer	–0.5±1 mm (–0.02±0.04 in)
D	Trunk lid COMPL and Panel - side outer	4.5±1 mm (0.18±0.04 in)

Part		Standard
E	Trunk lid COMPL to Bumper face - rear	6.8±1.5 mm (0.27±0.06 in)
F	Trunk lid COMPL to Bumper face - rear	5±1.5 mm (0.2±0.06 in)

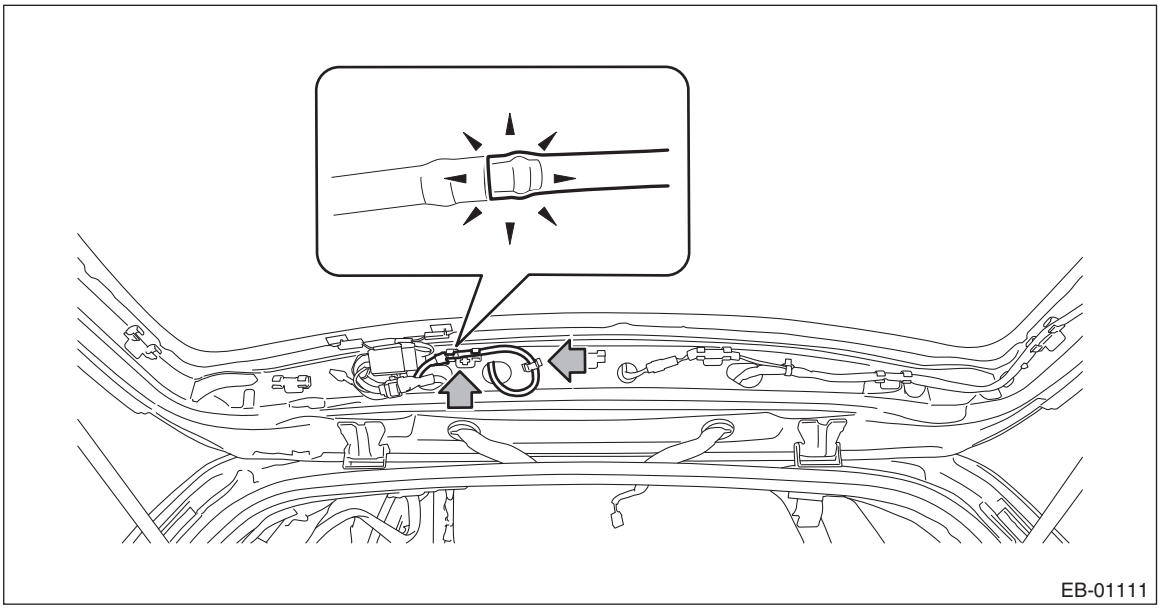
1) Adjust the horizontal position of the trunk lid COMPL.
   (1) Loosen the mounting bolt.
   (2) Adjust the horizontal clearance of the trunk lid COMPL.

2) Adjust the surface level gap between the trunk lid COMPL and the body.
   (1) Remove the trim panel - trunk rear.
   (2) Loosen the bolt.
   (3) Tap the striker - trunk using a plastic hammer to adjust the surface level gap between the trunk lid COMPL and the body.



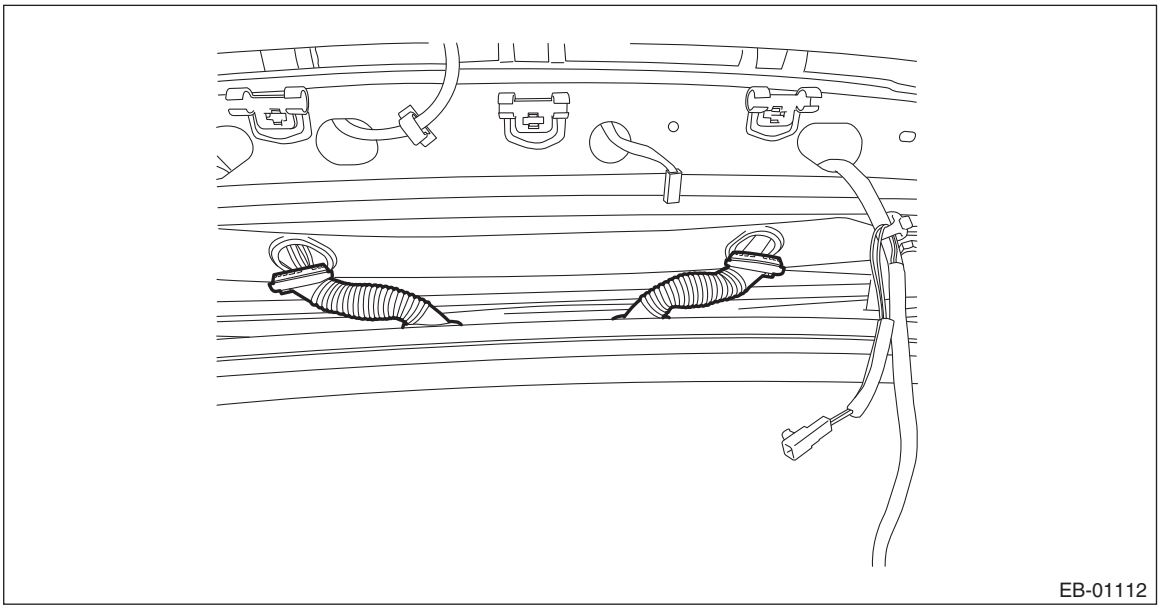
10.Rear Gate

A: REMOVAL



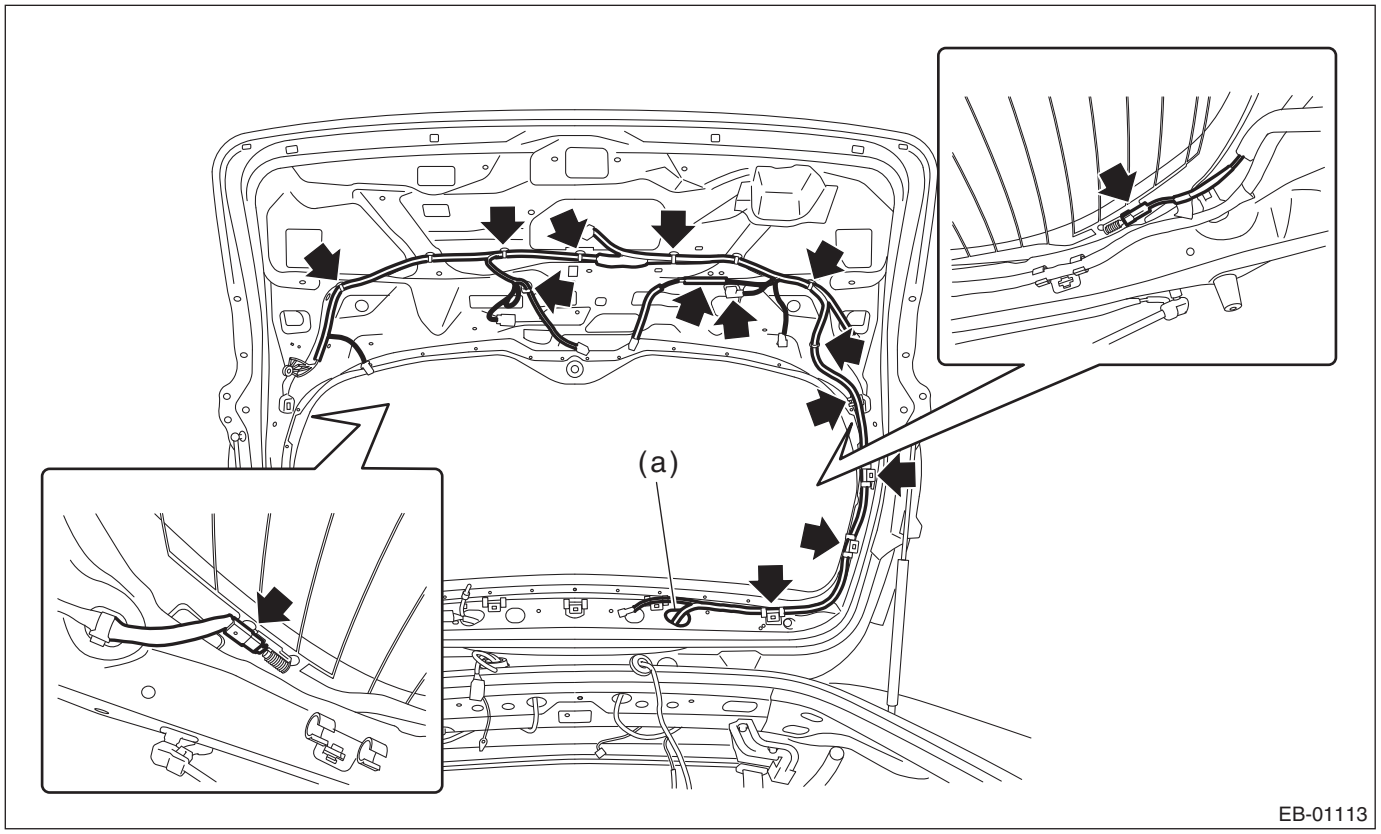
1. REAR GATE PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rod - power rear gate. (Model with power rear gate) <Ref. to PRG-10, REMOVAL, Power Rear Gate Rod.>
3) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
4) Remove the garnish assembly - rear gate. <Ref. to EI-63, REMOVAL, Rear Gate Garnish.>
5) Remove the power rear gate touch sensor. (Model with power rear gate) <Ref. to PRG-17, REMOVAL, Power Rear Gate Touch Sensor.>
6) Remove the light assembly - rear finisher. <Ref. to LI-66, OUTBACK MODEL, REMOVAL, Rear Finisher Light Assembly.>
7) Remove the license plate light. <Ref. to LI-71, OUTBACK MODEL, REMOVAL, License Plate Light.>
8) Remove the rearview camera assembly. <Ref. to ETM-43, REMOVAL, Camera.>
9) Remove the antenna assembly - radio. <Ref. to ETM-20, REMOVAL, Antenna.>
10) Remove the arm assembly - rear wiper and the motor assembly - rear wiper. <Ref. to WW-41, REMOVAL, Rear Wiper Motor.>
11) Remove the rear antenna assembly - exterior. (Model with keyless access with push button start) <Ref. to SL-97, REAR ANTENNA (OUTBACK MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
12) Remove the rear gate latch and actuator - rear gate. <Ref. to SL-49, REMOVAL, Rear Gate Latch and Actuator Assembly.>
13) Remove the buffer - rear gate.



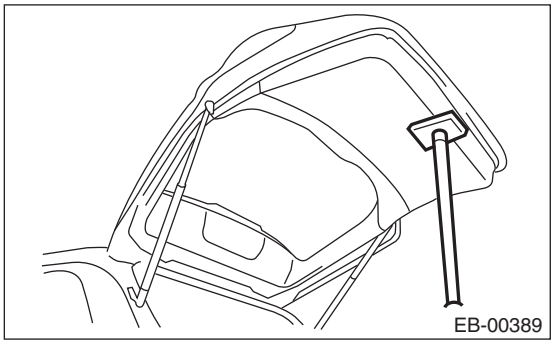
EB-01109

14) Remove the roof spoiler. <Ref. to EI-67, REMOVAL, Roof Spoiler.>
15) Disconnect the hose assembly - rear washer.
    (1) Disconnect the joint portion of the hose assembly - rear washer.

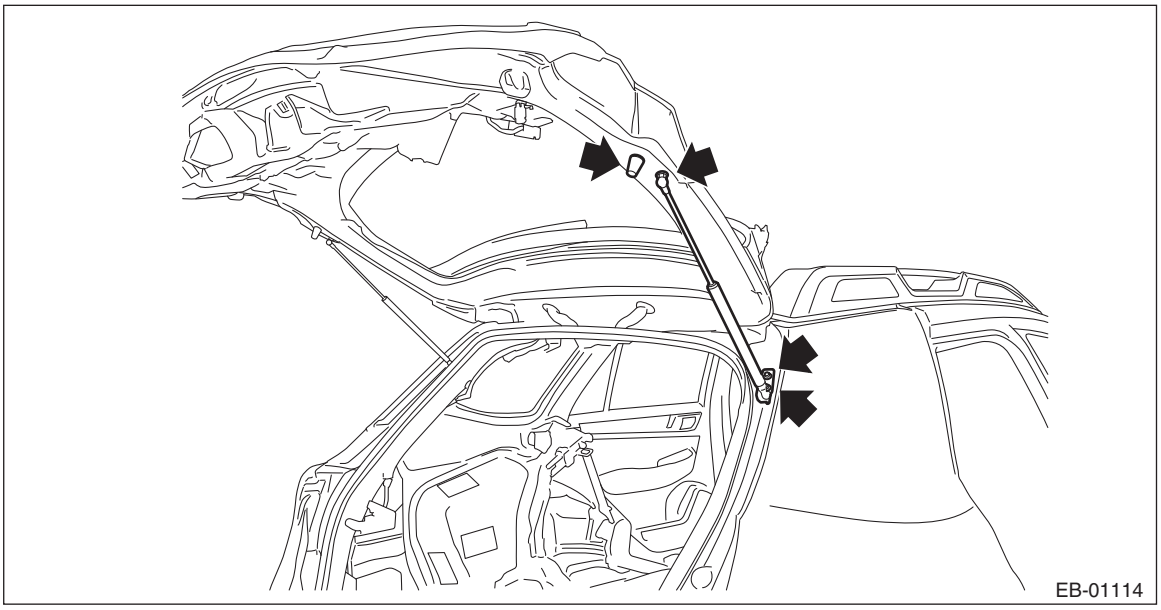


(2) Remove the clip.

16) Remove the nozzle - rear washer. <Ref. to WW-44, REMOVAL, Rear Washer.>
17) Remove the rubber duct connection.



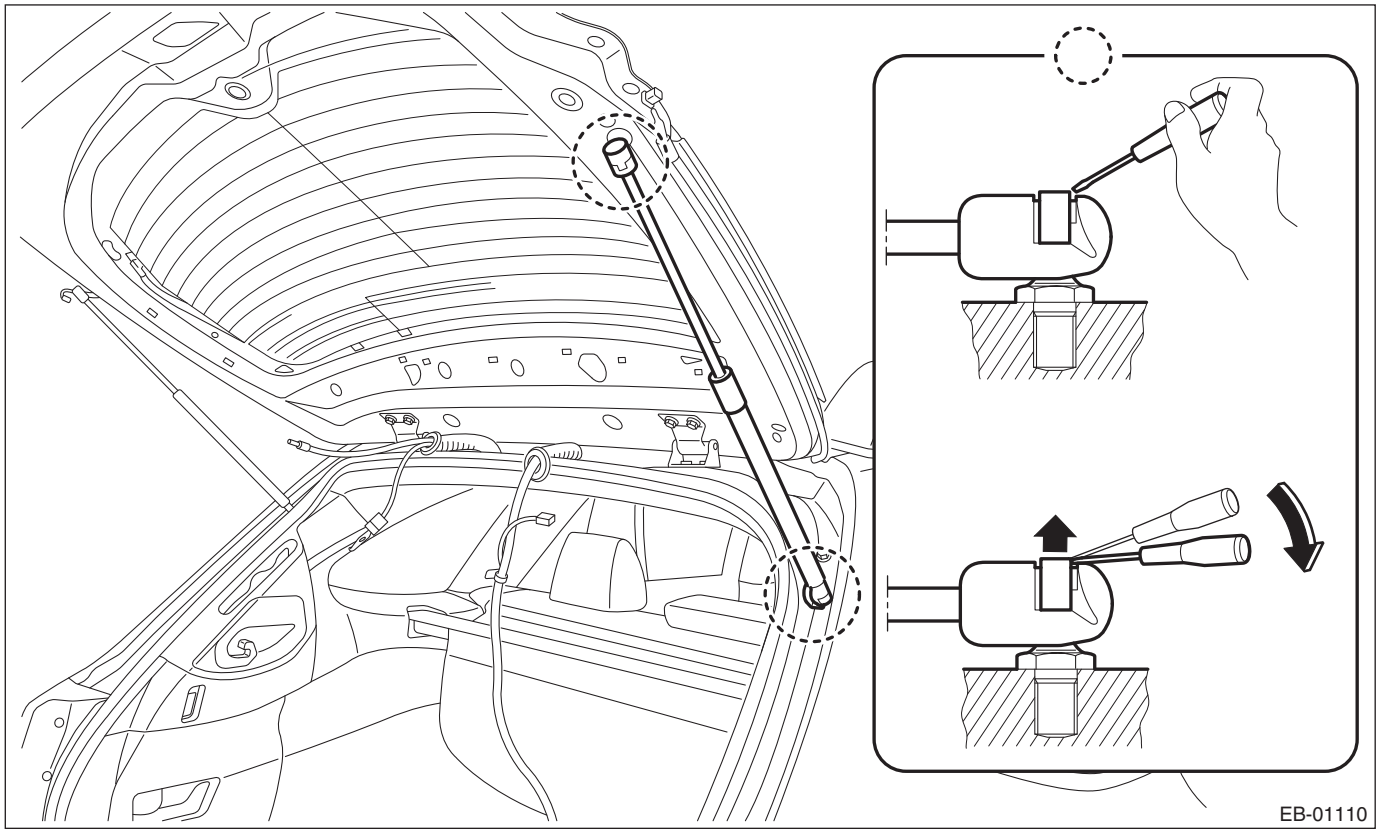
18) Disconnect the connector, and then pull out the harness from the panel - rear gate shown in the figure (a).



19) Remove the harness clip from the panel - rear gate.
20) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

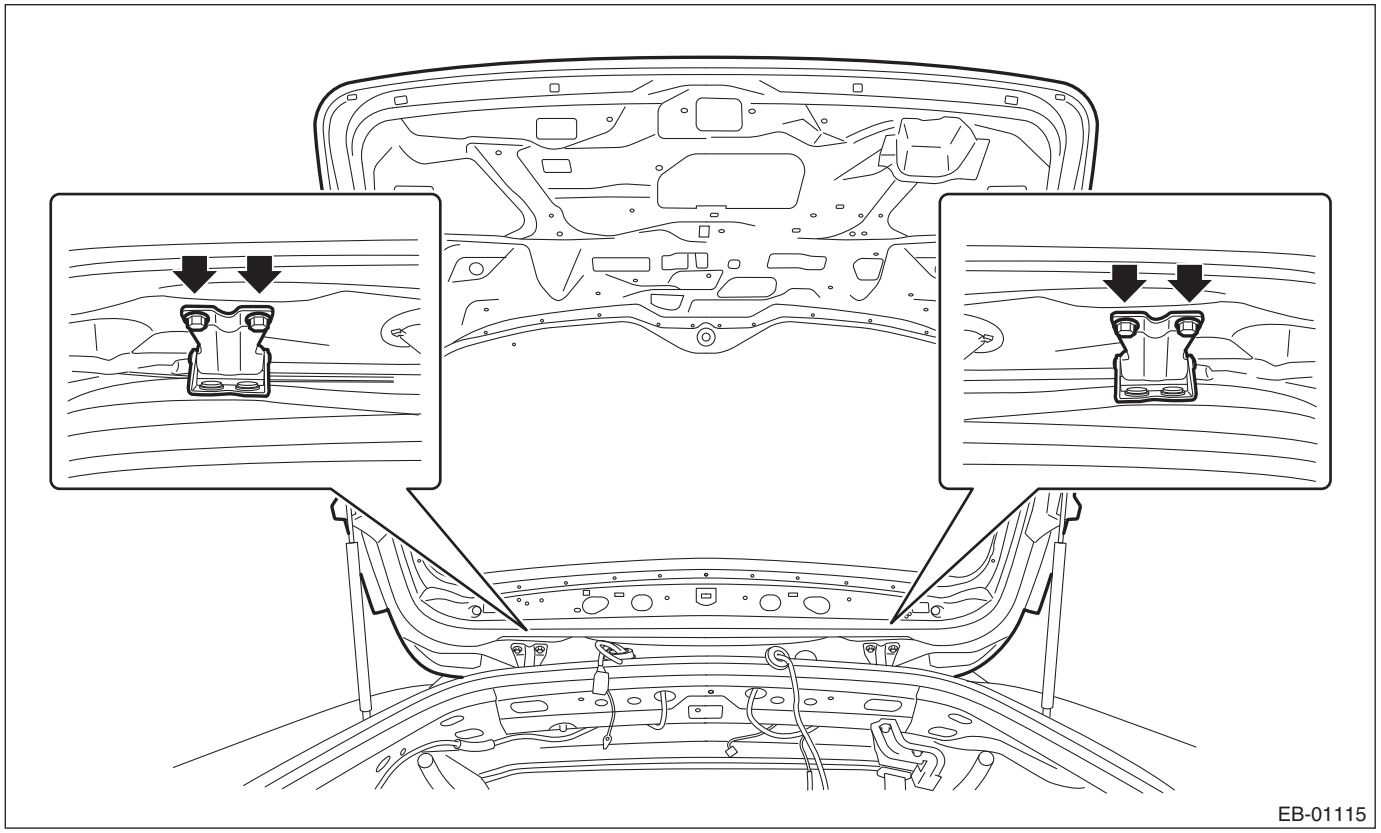
CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

21) Remove the stay assembly - rear gate.
- Model without power rear gate
  1. Remove the stopper - rear gate and remove the attachment section on the side of the stay assembly - rear gate.



2. Remove the mounting bolts on the body side.

- Model with power rear gate

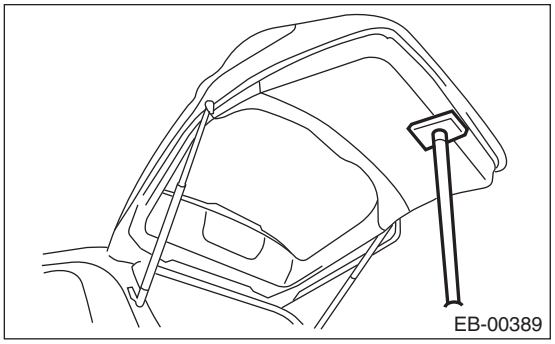


CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

1. Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
2. Pull the stay assembly - rear gate toward you, and remove the stay assembly - rear gate from the ball stud.

22) Remove the bolts of the hinge - rear gate, and remove the panel - rear gate.

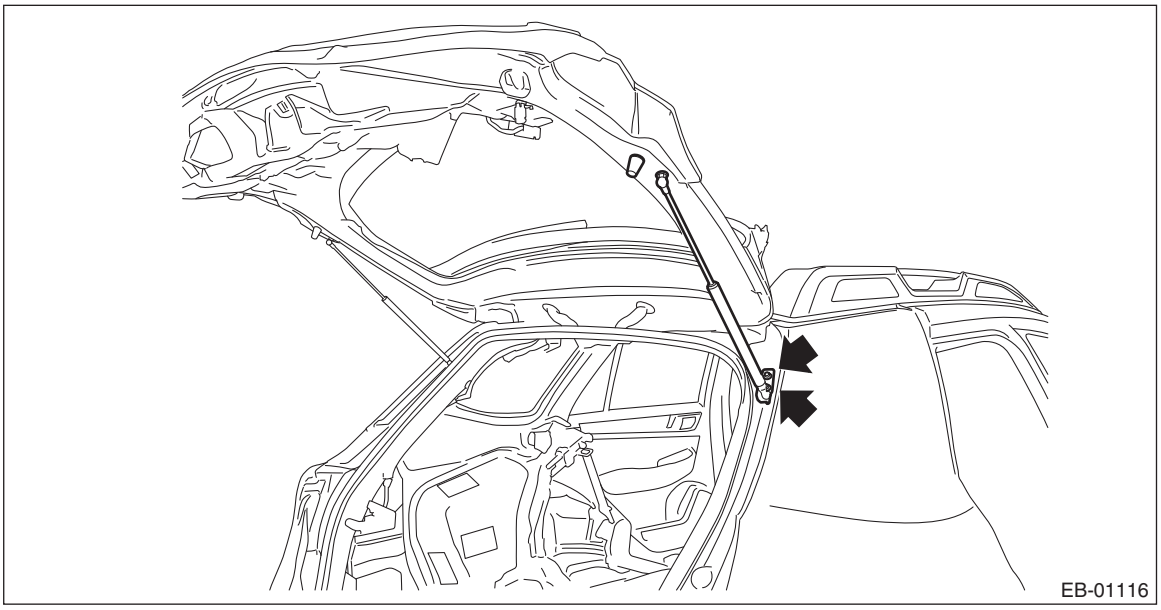
CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.



23) Remove the hinge - rear gate from the vehicle.

2. REAR GATE DAMPER STAY

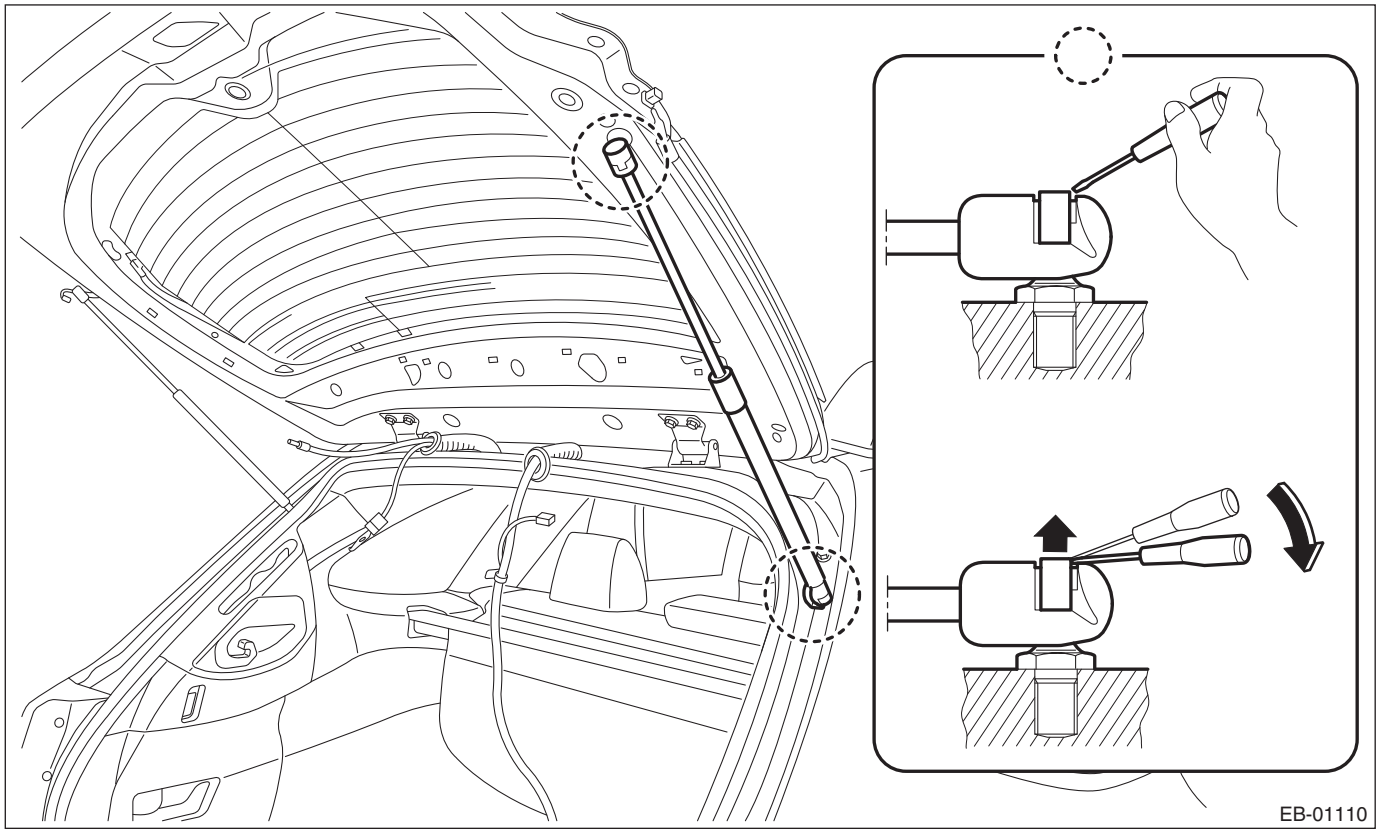
CAUTION:
- **Do not damage piston rods and oil seals.**
- **Never disassemble cylinders: They contain gas.**
- **The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.**



1) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

2) Remove the stay assembly - rear gate.
- Model without power rear gate
  1. Remove the mounting portion on the stay assembly - rear gate.



2. Remove the mounting bolts on the body side.

- Model with power rear gate

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

1. Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
2. Pull the stay assembly - rear gate toward you, and remove the stay assembly - rear gate from the ball stud.

B: INSTALLATION

1. REAR GATE PANEL

CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1) Install the hinge - rear gate to the vehicle body.
2) Temporarily install the panel - rear gate to the hinge - rear gate.

NOTE:
When installing, make sure that a uniform clearance is created around the panel - rear gate.

3) Adjust the clearance around the panel - rear gate. <Ref. to EB-61, ADJUSTMENT, Rear Gate.>
4) Tighten the bolts of the hinge - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Install the stay assembly - rear gate.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>

6) Install the harness clip and the harness.
7) Install the light assembly - rear finisher. <Ref. to LI-67, OUTBACK MODEL, INSTALLATION, Rear Finisher Light Assembly.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

8) Install the license plate light. <Ref. to LI-72, OUTBACK MODEL, INSTALLATION, License Plate Light.>
9) Install the rearview camera assembly. <Ref. to ETM-43, REMOVAL, Camera.>
10) Install the rear gate garnish. <Ref. to EI-63, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

11) Install the nozzle - rear washer.
12) Install the roof spoiler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

13) Install the antenna assembly - radio.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

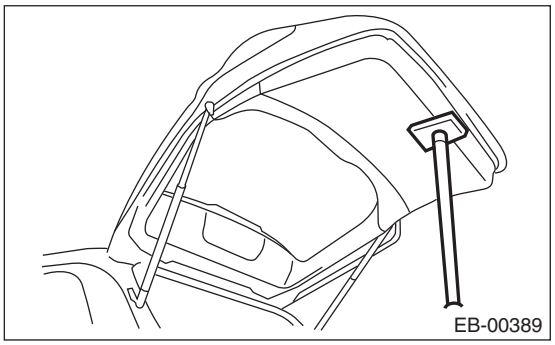
14) Install the power rear gate touch sensor. (Model with power rear gate) <Ref. to PRG-18, INSTALLATION, Power Rear Gate Touch Sensor.>
15) Install the motor assembly - rear wiper and the arm assembly - rear wiper. <Ref. to WW-42, INSTALLATION, Rear Wiper Motor.>

Tightening torque:
Motor assembly - rear wiper and arm assembly - rear wiper: <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

16) Install the rear antenna assembly - exterior. (Model with keyless access with push button start)
17) Attach the buffer - rear gate and the stopper - rear gate.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>

18) Install the latch and actuator - rear gate. <Ref. to SL-49, INSTALLATION, Rear Gate Latch and Actuator Assembly.>



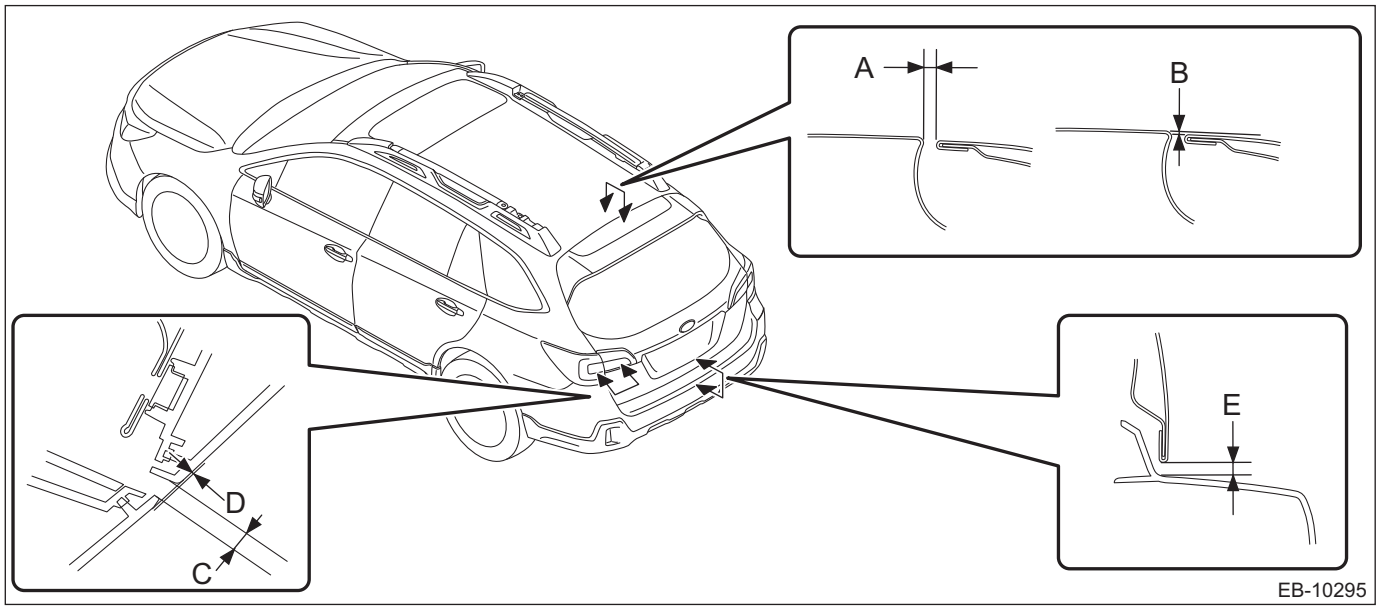
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

19) Install the trim panel - rear gate. <Ref. to EI-120, INSTALLATION, Rear Gate Trim.>
20) Install the rod - power rear gate. <Ref. to PRG-11, INSTALLATION, Power Rear Gate Rod.>
21) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR GATE DAMPER STAY

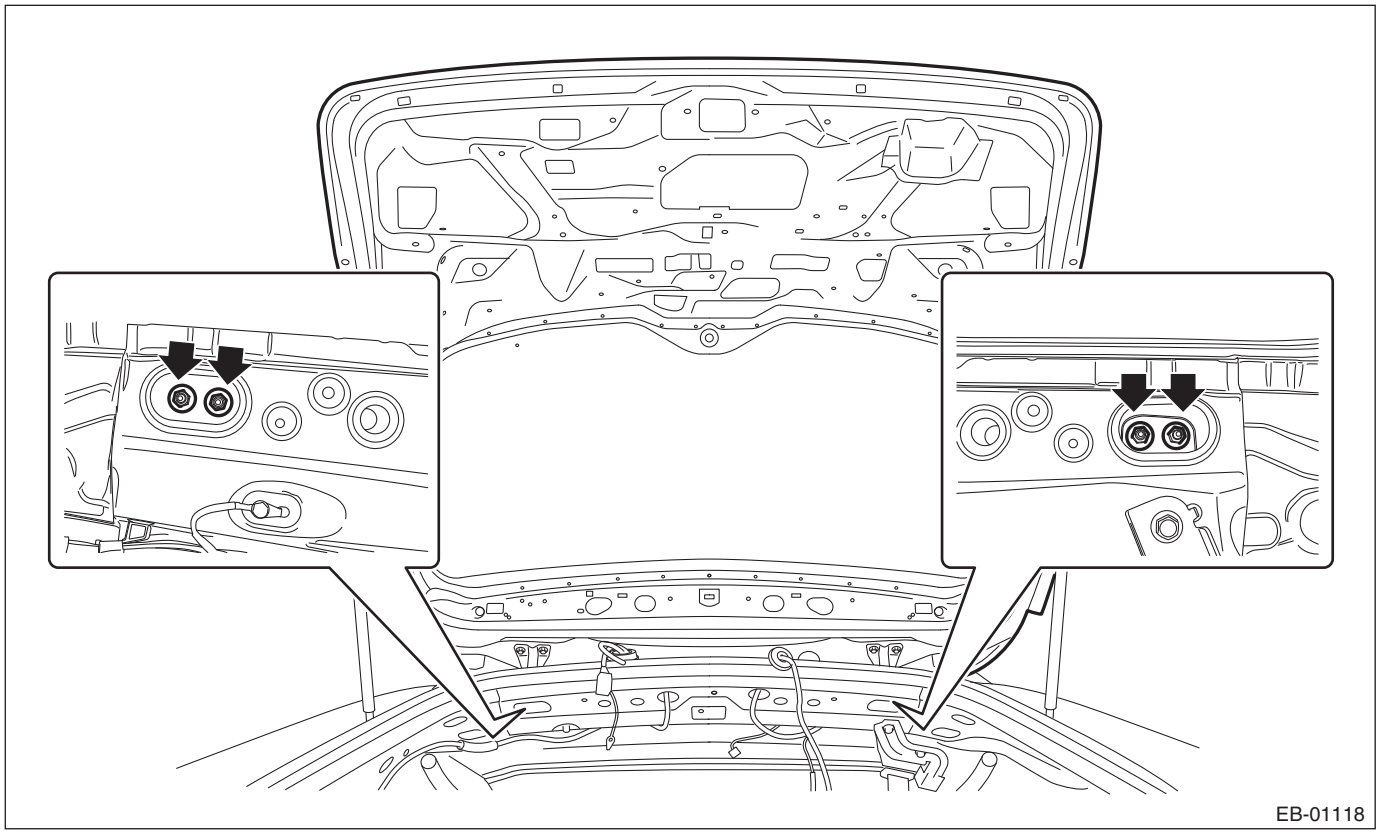
CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.
1) Prevent the panel - rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.



2) Install the stay assembly - rear gate.

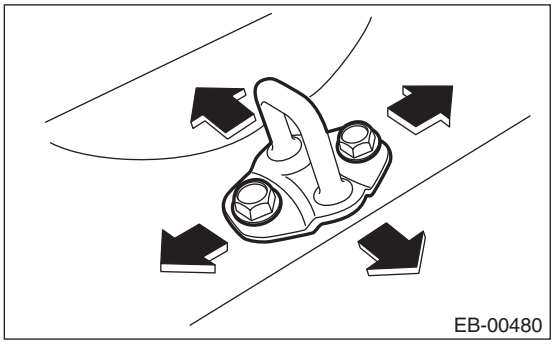
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>



C: ADJUSTMENT

Adjust the clearance around the panel - rear gate as follows.

	Part	Standard
A	Panel - rear gate to Roof panel	6.6+1.5, –1 mm (0.26+0.06, –0.04 in)
B	Surface level gap: Panel - rear gate to Roof panel	0.5+0.5, –1.5 mm (0.02+0.02, –0.06 in)
C	Finisher - light to Rear combination light	4.8±2 mm (0.19±0.08 in)
D	Surface level gap: Finisher - light to Rear combination light	0±1.6 mm (0±0.06 in)
E	Panel - rear gate to Bumper face - rear	8±1.5 mm (0.31±0.06 in)



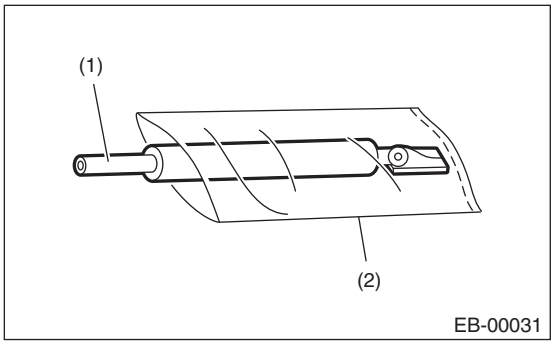
1) Adjust the vertical and horizontal positions of the panel - rear gate.

(1) Loosen the mounting bolts of the hinge - rear gate.
(2) Adjust the vertical and horizontal clearance of the panel - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Adjust the surface level gap between the panel - rear gate and the body.

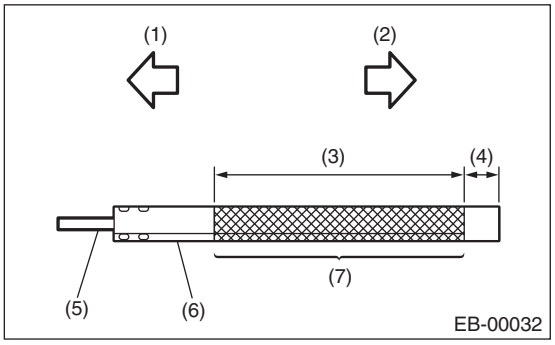
(1) Remove the trim panel - rear skirt.
(2) Loosen the bolt.
(3) Tap the striker - rear gate using a plastic hammer to adjust the surface level gap between the panel - rear gate and the body.



Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

D: DISPOSAL

1. REAR GATE DAMPER STAY



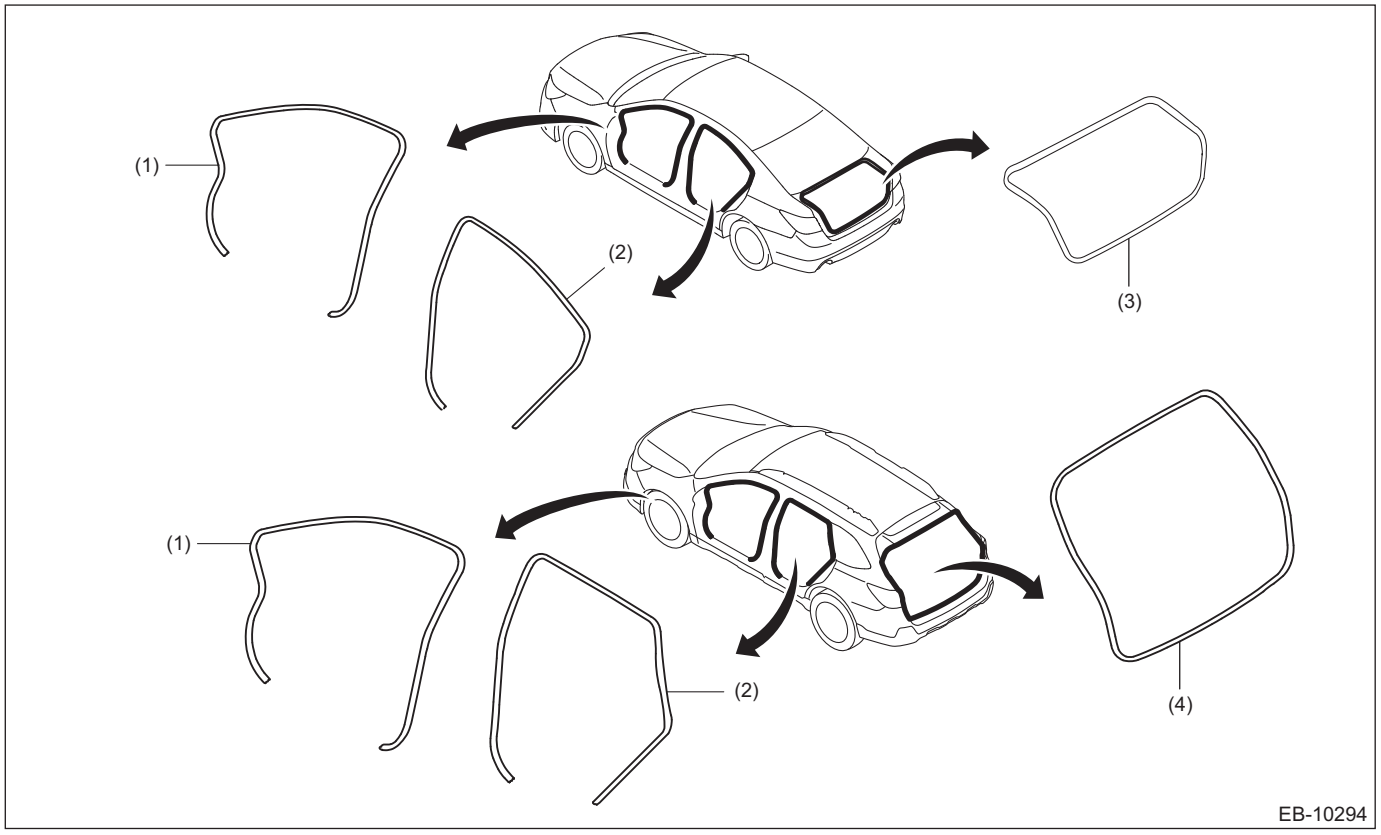
CAUTION:
Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

1) Cover with a vinyl sack as shown in the figure.

(1) Stay ASSY - rear gate
(2) Vinyl sack

NOTE:
Prevent the vinyl sack from being caught by drill cutting edge.
2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.
Drill a hole of 2 to 3 mm (0.08 to 0.12 in) diameter at a point 6 to 196 mm (0.24 to 7.72 in) from the body side, and bleed the gas in the rear gate damper stay completely.

(1) Door side
(2) Body side
(3) 196 mm (7.72 in)
(4) 6 mm (0.24 in)
(5) Piston rod
(6) Cylinder
(7) Portion to be drilled



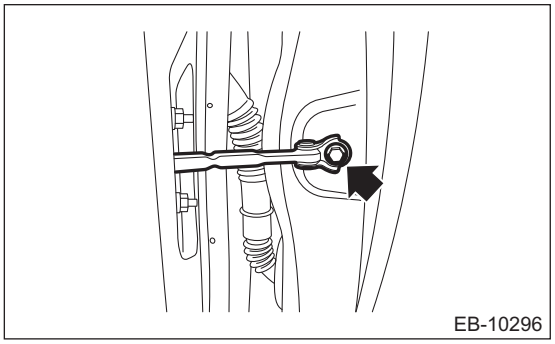
11.Weather Strip

A: REPLACEMENT

1. FLANGE

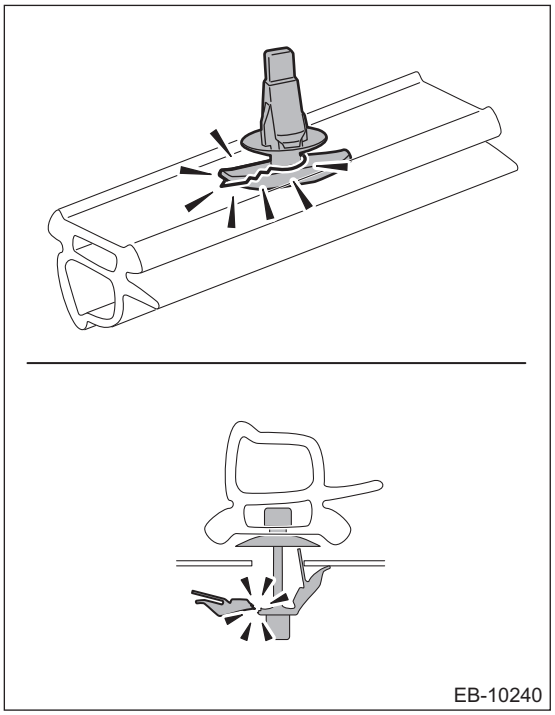
1) Remove the weather strip - body side flange while pulling the rubber. Be careful not to tear the rubber.
2) Replace the weather strip - trunk lid while pulling the rubber. Be careful not to tear the rubber.

NOTE:
While removing the weather strip - trunk lid, be careful not to allow adhesive to contact the trim panel - roof assembly and trim panel - trunk side.

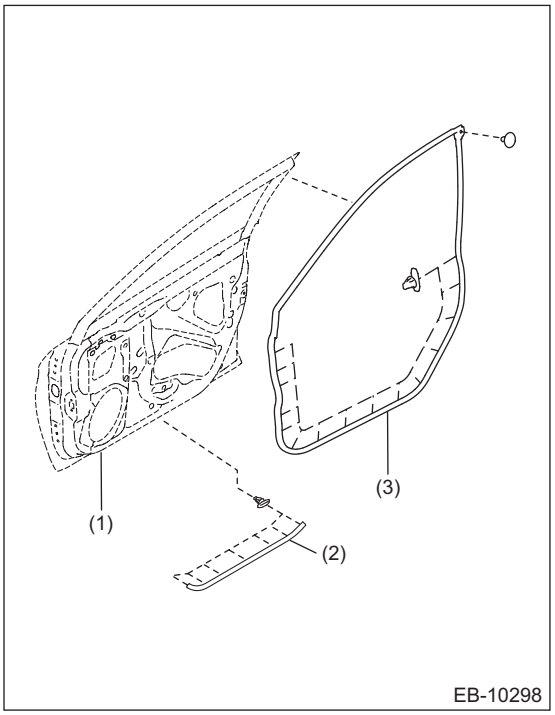


(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid (sedan model)
(4) Weather strip - rear gate (OUTBACK model)

2. FRONT DOOR



1) Remove the bolt from the checker assembly - front door.



CAUTION:
Cover the removed checker assembly - front door with a waste cloth to prevent scratching.

EB-10296

2) Remove the clips, and remove the each weather strips.

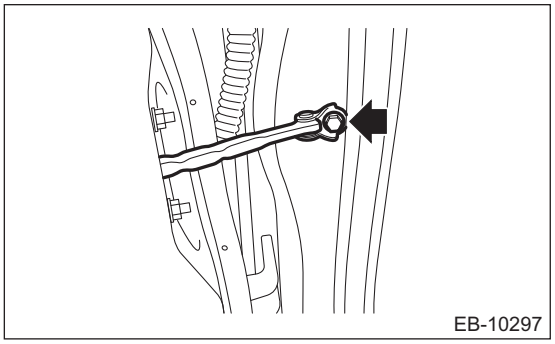
CAUTION:
Weather strip may be broken by pulling it. Forcibly removing the weather strip clips may also damage the weather strip clips.

EB-10240

EB-10298

(1) Panel ASSY - front door
(2) Weather strip - front door LWR
(3) Weather strip - front door

3) Install each weather strips.

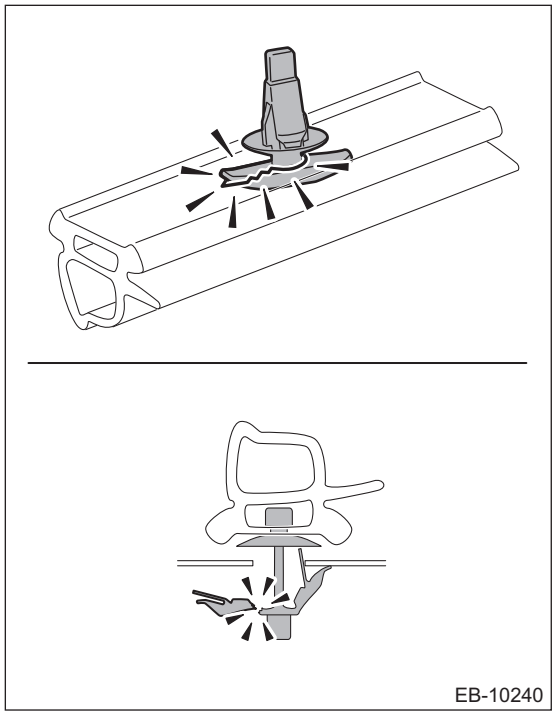


CAUTION:
If the weather strip clip was broken, replace it with a new part.
If the broken piece of the clip fall into the door panel, always remove it.
4) Install the checker assembly - front door.

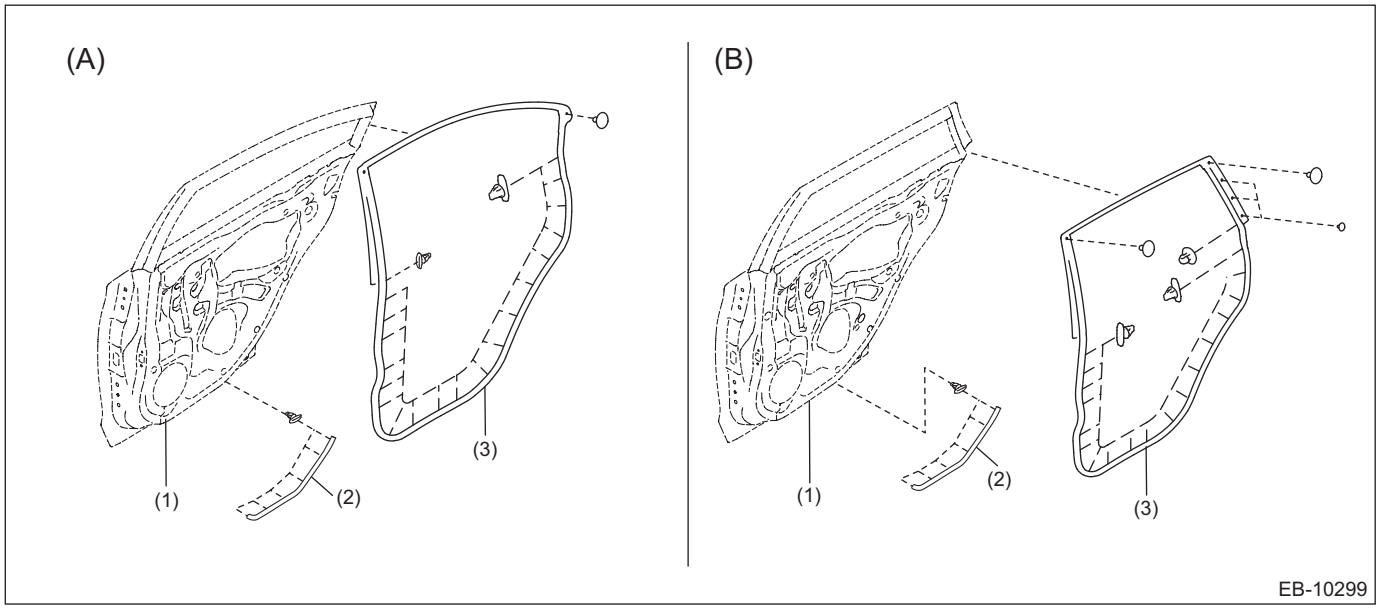
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

3. REAR DOOR

1) Remove the rear door trim. <Ref. to EI-72, REAR DOOR, REMOVAL, Door Trim.>
2) Remove the bolt from the checker assembly - rear door.



CAUTION:
Cover the removed checker assembly - rear door with a waste cloth to prevent scratching.



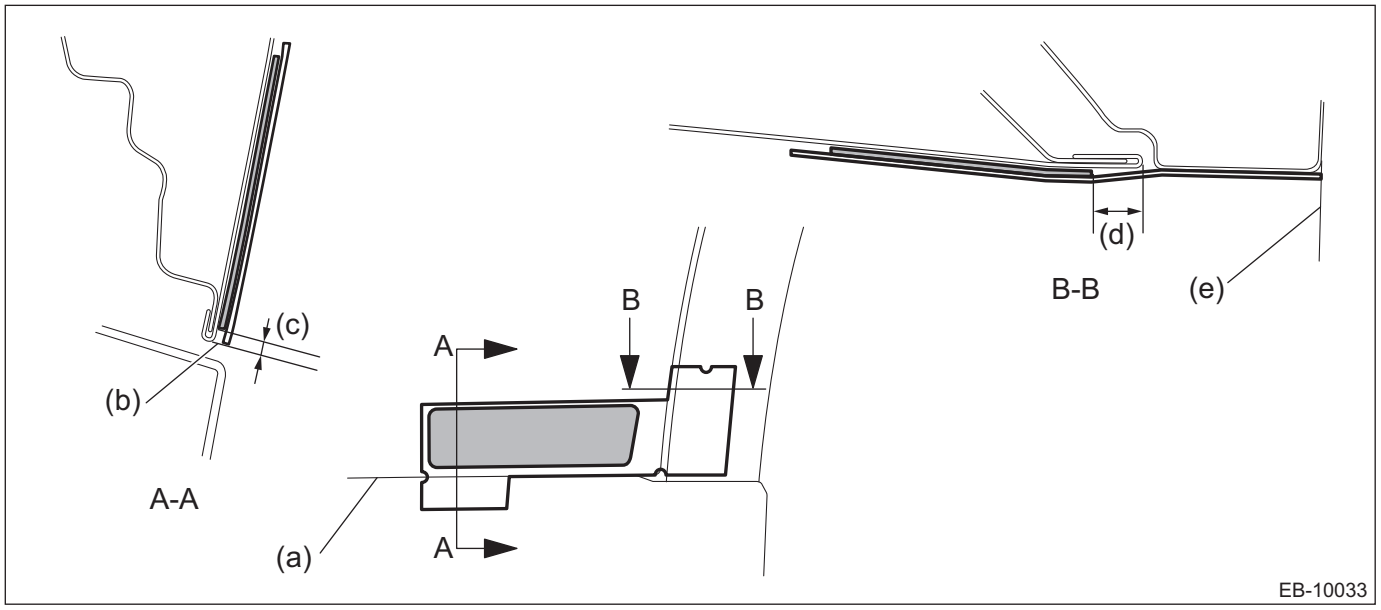
3) Remove the weather strip after removing the clip. Be careful not to tear the rubber.

CAUTION:
Weather strip may be broken by pulling it. Forcibly removing the weather strip clips may also damage the weather strip clips.

If the broken piece of the clip fall into the door panel, always remove it.

(A) Sedan model
(B) OUTBACK model
(1) Panel ASSY - rear door
(2) Weather strip - rear door LWR
(3) Weather strip - rear door

4) Install each weather strips.



CAUTION:
If the weather strip clip was broken, replace it with a new part.
If the broken piece of the clip fall into the door panel, always remove it.
5) Install the checker assembly - rear door.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
6) Install the rear door trim. <Ref. to EI-73, INSTALLATION, Door Trim.>

NOTE:
If the gap between the rear end of door trim upper and the weather strip is not even, refit the weather strips.

12.Protector Tape

A: INSTALLATION

(a)	Panel ASSY - rear door end	(c)	4 mm$^{+0\ mm}_{-4\ mm}$ (0.16 in$^{+0\ in}_{-0.16\ in}$)	(e)	Push the application tape end against the panel assembly - rear door end.
(b)	Push the application tape end against the panel assembly - rear door end.	(d)	14.4±4 mm (0.57±0.16 in)		

1) Clean the area around applying position to remove any foreign objects on body.
2) Detach the backing papers from the protector tape and moisten the attaching area and protector tape backside by spraying liquid (mild detergent solution at 3% concentration).
3) Apply the protector tape to the vehicle body.

CAUTION:
Remove the water or air bubbles out of the protector tape by using the plastic or rubber spatula.
4) Detach the application tape and temporary retention tape.

POWER REAR GATE SYSTEM

PRG

		Page
1.	General Description	2
2.	Relay and Fuse	5
3.	Power Rear Gate System	6
4.	Power Rear Gate Control Module	7

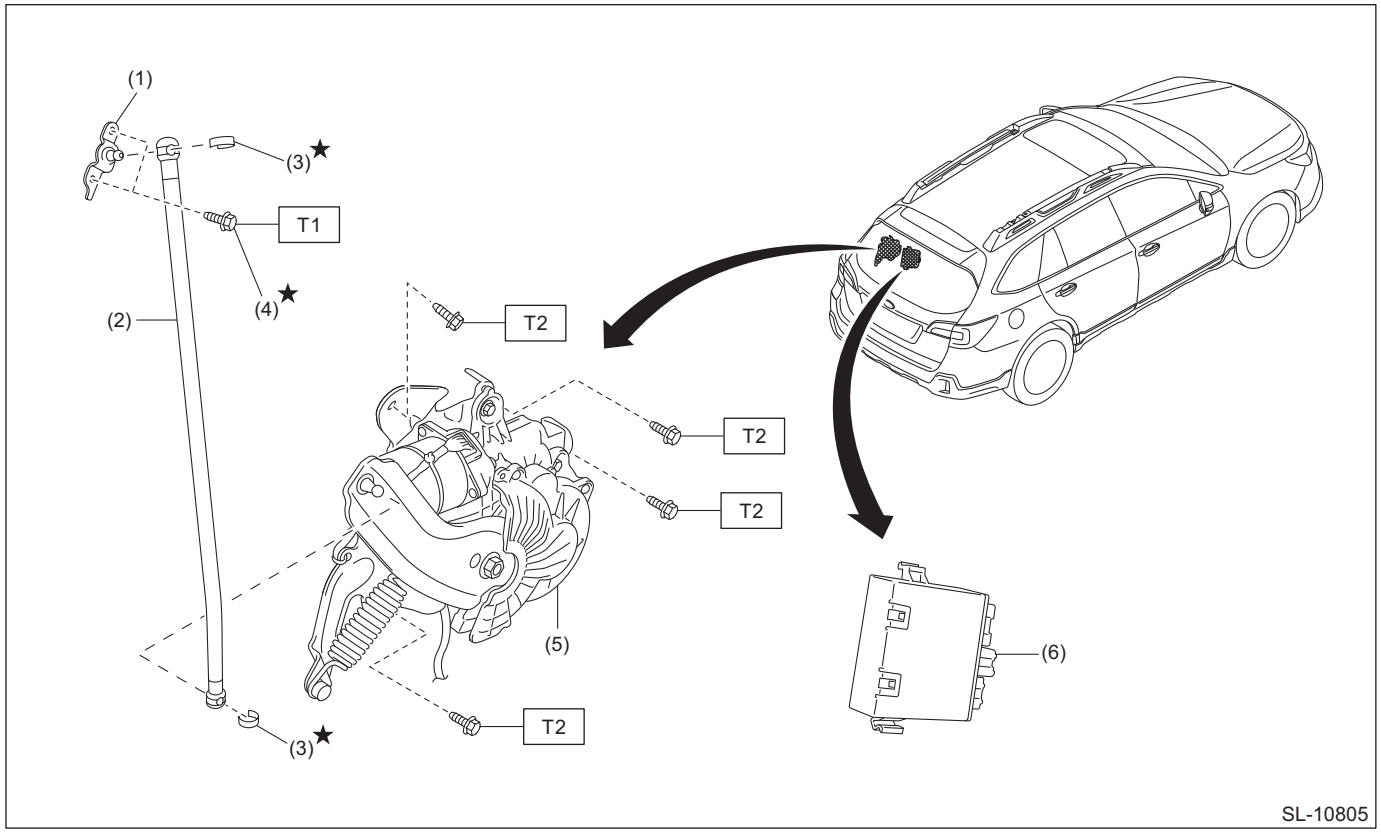
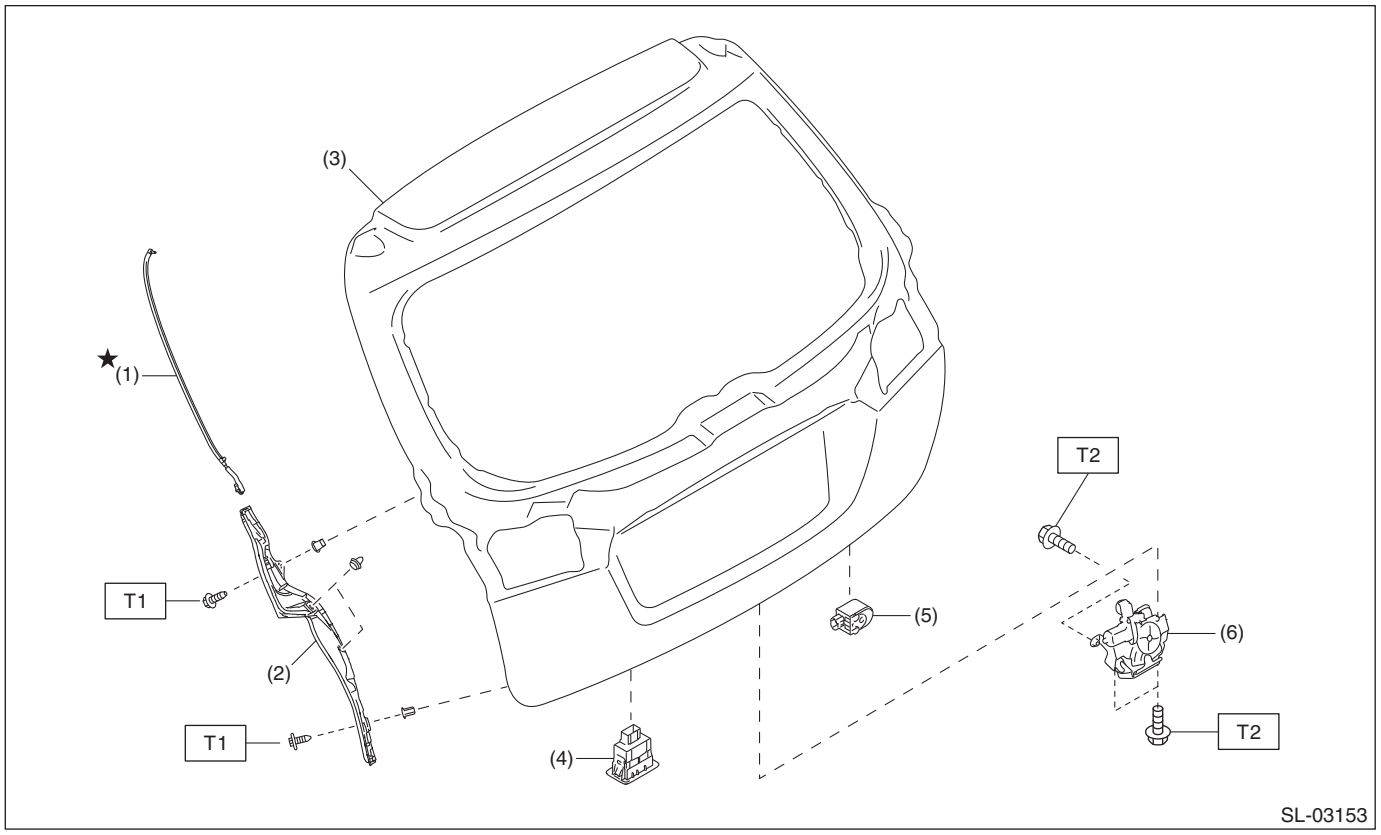
9.	Power Rear Gate Buzzer	19
10.	Power Rear Gate Inner Switch	20
11.	Power Rear Gate Driver's Switch	22
12.	Memory Height Switch	23
13.	Rear Gate Opener Button	24
14.	Body Integrated Unit	25
15.	Diagnostics with Phenomenon	26



1. General Description

A: LOCATION



Refer to “LOCATION” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-5, LOCATION, Electrical Component Location.>

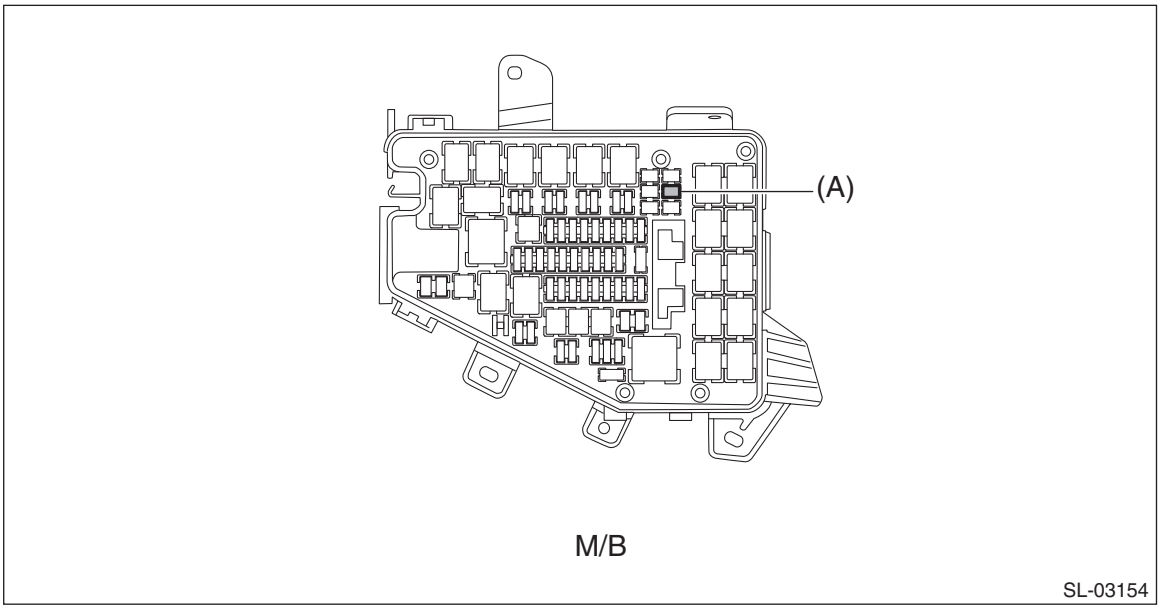
B: COMPONENT

1. UNIT AND REAR GATE

(1)	Bracket rod - power rear gate	(4)	Flange bolt	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rod - power rear gate	(5)	Power rear gate drive unit (PRG D/U)	***T1: 16 (1.6, 11.4)***
(3)	Stop ring	(6)	Power rear gate control module (PRG CM)	***T2: 25 (2.5, 18.4)***

(1)	Power rear gate touch sensor UPR	(4)	Power rear gate inner switch	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Power rear gate touch sensor LWR	(5)	Power rear gate buzzer	***T1: 1.5 (0.2, 1.1)***
(3)	Panel - rear gate	(6)	Power rear gate auto closer	***T2: 25 (2.5, 18.4)***

C: CAUTION



• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• After reassembly, close the rear gate and then connect the battery ground cable. Initialization of the power rear gate auto closer is necessary, when connection is performed with the rear gate open. <Ref. to PRG-6, INITIALIZATION, PROCEDURE, Power Rear Gate System.>

D: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	SBF 30 A (power rear gate control module)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Power Rear Gate System

A: WIRING DIAGRAM

Refer to “Power Rear Gate System” in the wiring diagram. <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

B: INSPECTION

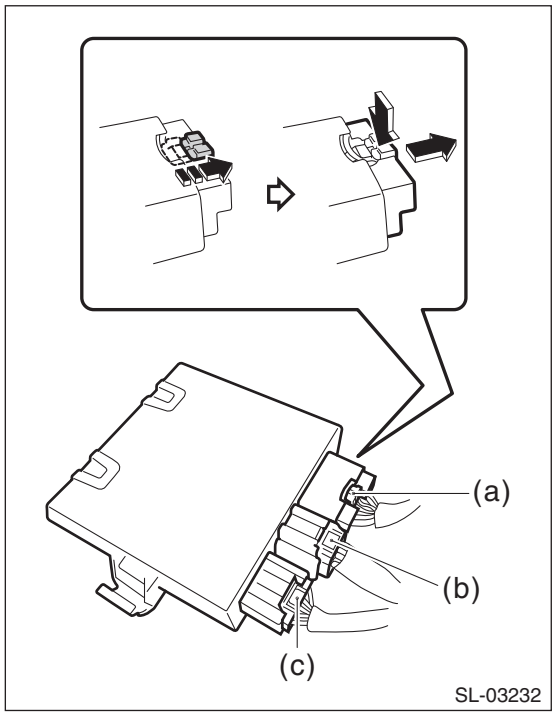
Refer to “Basic Diagnostic Procedure” of “POWER REAR GATE SYSTEM (DIAGNOSTICS)”. <Ref. to PRG(diag)-2, Basic Diagnostic Procedure.>

C: PROCEDURE

1. INITIALIZATION

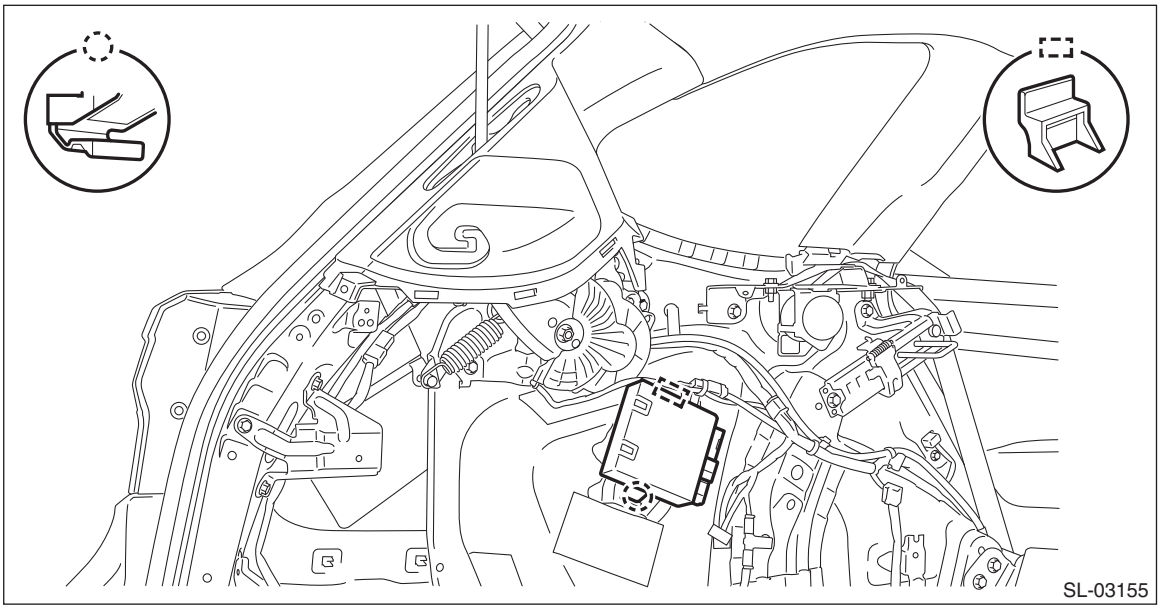
NOTE:
Perform the initialization of the power rear gate auto closer, if the battery ground cable is connected with the rear gate open. Initialization is not required when the battery ground cable is connected with the rear gate closed.
1) Turn the ignition switch to OFF.
2) Close the rear gate slowly, and release the hold of rear gate after a clicking sound is heard when the latch is engaged halfway.
3) The auto closer function then operates and pulls the rear gate to engage fully.
4) Operate the power rear gate switches after the rear gate is closed fully to check that automatic open/close of the power rear gate operates normally. If the power rear gate still does not operate properly, perform the following diagnostic procedures. <Ref. to PRG(diag)-2, Basic Diagnostic Procedure.>

D: NOTE



For procedure of each component in the power rear gate system, refer to the respective section.
- Power rear gate control module (PRG CM): <Ref. to PRG-7, Power Rear Gate Control Module.>
- Power rear gate drive unit (PRG D/U): <Ref. to PRG-9, Power Rear Gate Drive Unit.>
- Power rear gate rod: <Ref. to PRG-10, Power Rear Gate Rod.>
- Power rear gate auto closer: <Ref. to PRG-13, Power Rear Gate Auto Closer.>
- Power rear gate touch sensor: <Ref. to PRG-17, Power Rear Gate Touch Sensor.>
- Power rear gate buzzer: <Ref. to PRG-19, Power Rear Gate Buzzer.>
- Power rear gate inner switch: <Ref. to PRG-20, Power Rear Gate Inner Switch.>
- Power rear gate driver’s switch: <Ref. to PRG-22, Power Rear Gate Driver’s Switch.>
- Memory height switch: <Ref. to PRG-23, Memory Height Switch.>
- Rear gate opener button (PRG): <Ref. to PRG-24, Rear Gate Opener Button.>
- Body integrated unit: <Ref. to PRG-25, Body Integrated Unit.>

4. Power Rear Gate Control Module



A: REMOVAL

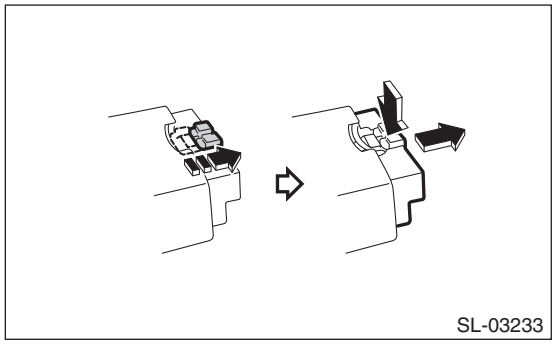
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron LH. <Ref. to EI-97, REMOVAL, Rear Quarter Trim.>
3) Remove the power rear gate control module (PRG CM).
   (1) Disconnect the connectors in the following order.
   1: Disconnect the connector (b).
   2: Pull the slide lock in the arrowed direction, and disconnect the connector (a) by pressing in the lock.
   3: Disconnect the connector (c).

NOTE:
When the connectors are not disconnected in the sequence, a diagnosis code (DTC) may be detected.

(2) Release the lock and hook, and remove the power rear gate control module (PRG CM).

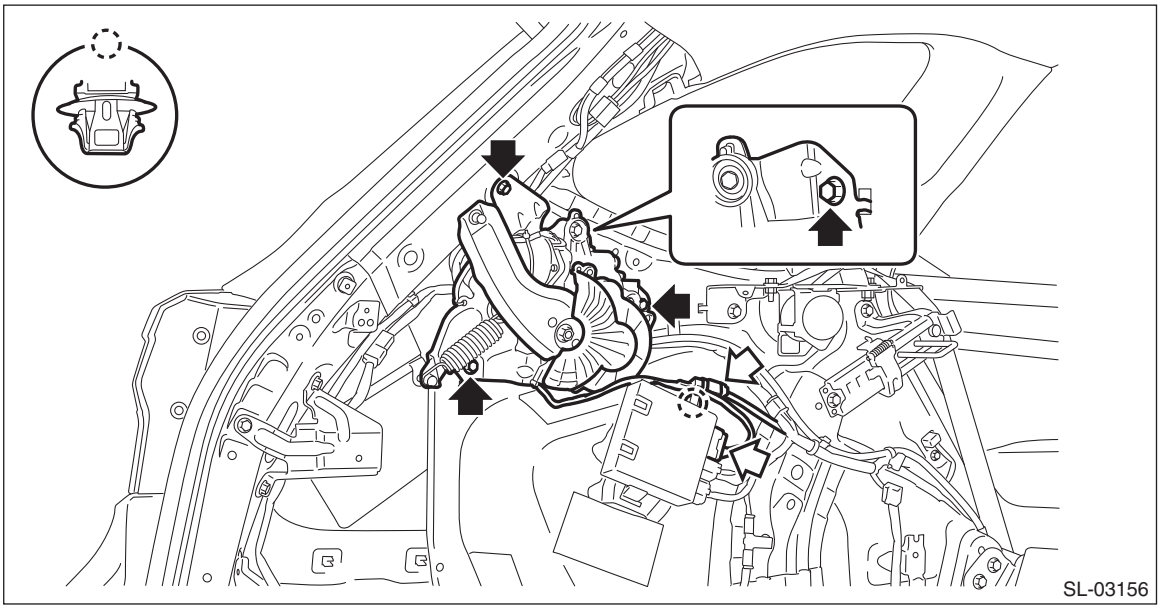
B: INSTALLATION

1) Install the power rear gate control module (PRG CM).



NOTE:
Connect the connectors in reverse order of removal.
2) Install the trim panel - rear apron LH.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

5. Power Rear Gate Drive Unit



A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rod - power rear gate. <Ref. to PRG-10, REMOVAL, Power Rear Gate Rod.>
3) Remove the trim panel - rear apron LH and trim panel - rear quarter pillar UPR rear LH PRG. <Ref. to EI-97, REMOVAL, Rear Quarter Trim.>
4) Remove the power rear gate drive unit (PRG D/U).
   (1) Remove the harness clip, and disconnect the connector.

NOTE:
Pull the slide lock in the arrowed direction, and disconnect the PRG CM connector by pressing in the lock.

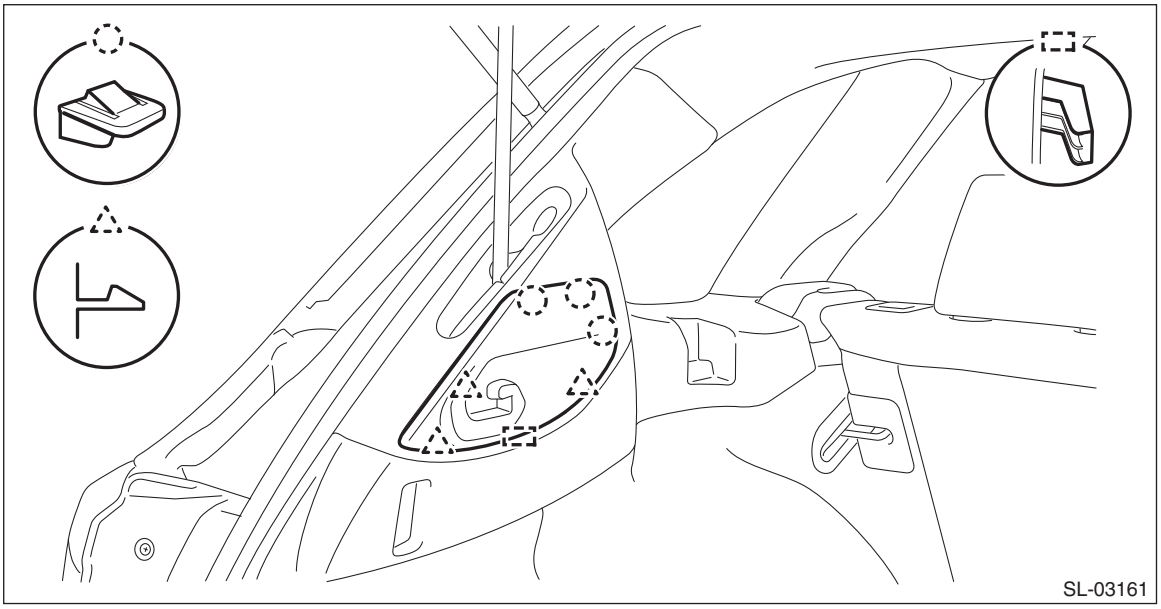
SL-03233

(2) Remove the bolts, and then remove the power rear gate drive unit (PRG D/U).

SL-03156

B: INSTALLATION

1) Install the power rear gate drive unit (PRG D/U).

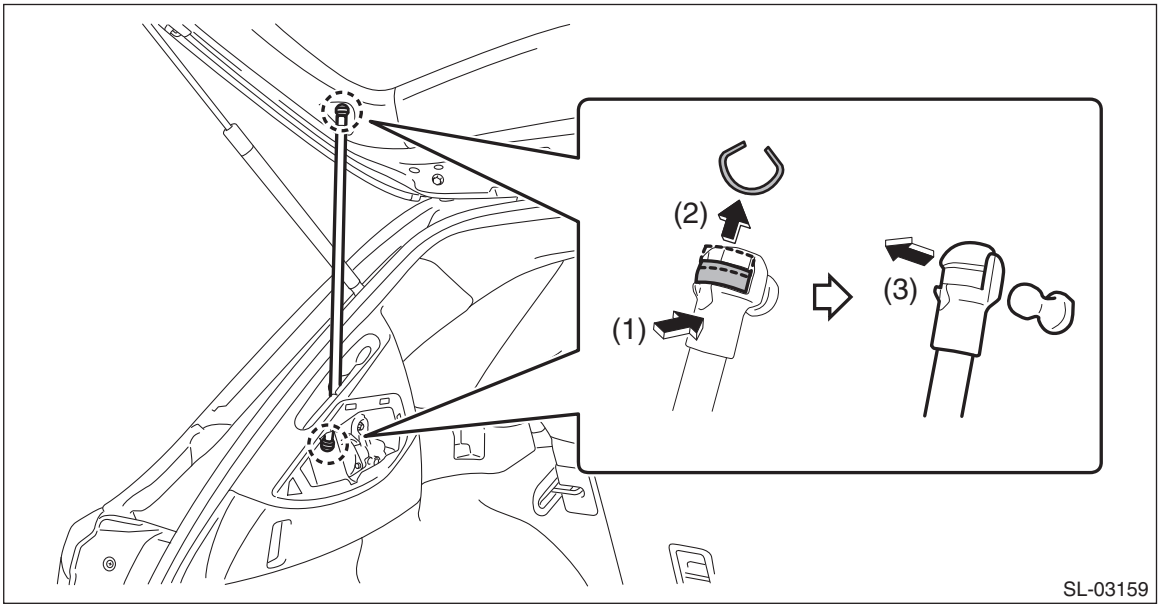


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear apron LH and trim panel - rear quarter pillar UPR rear LH PRG.
3) Install the rod - power rear gate. <Ref. to PRG-11, INSTALLATION, Power Rear Gate Rod.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Power Rear Gate Rod

A: REMOVAL

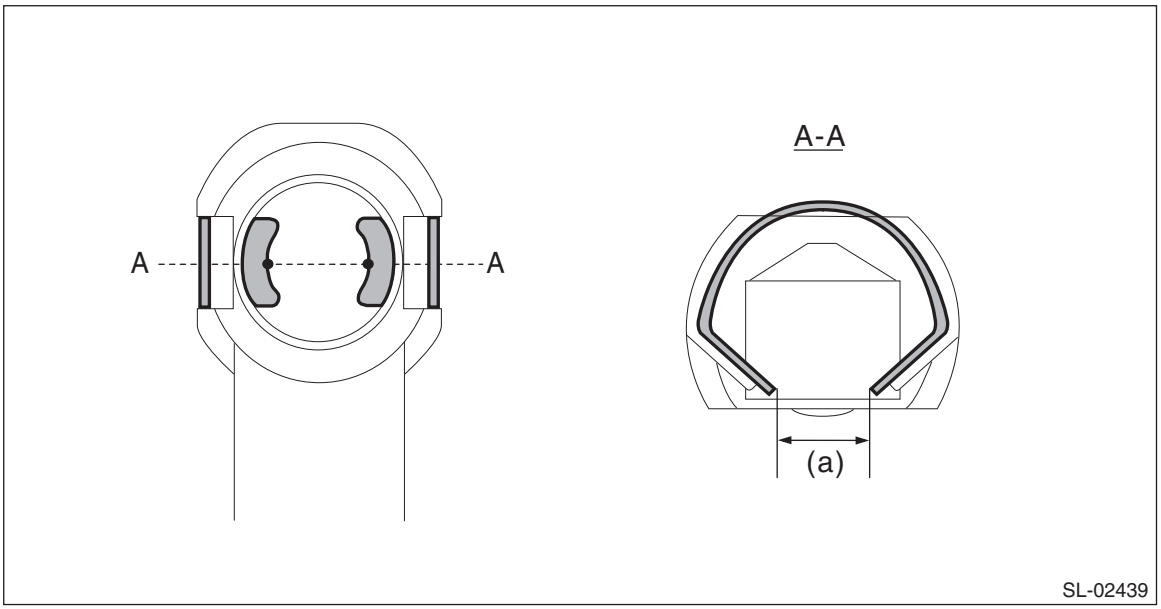


1) Hold the rear gate to the fully open position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Release the claws and then remove the cover - rear quarter pillar PRG.

4) Remove the rod - power rear gate.

CAUTION:
• Using a small flat tip screwdriver wrapped with protective tape, remove the part by gradually applying force.
• When the rod - power rear gate is removed, it could lead to abnormal play or noise. Therefore, always replace the stop ring with a new part. Also, be sure to check the clearance of the stop ring before installing. <Ref. to PRG-11, INSTALLATION, Power Rear Gate Rod.>

(1) Press down the rod - power rear gate to the ball stud (bracket rod - power rear gate).
(2) With the rod pressed, remove the stop ring while sliding along the ball housing groove.
(3) Disconnect the rod - power rear gate from the ball stud (bracket rod - power rear gate).

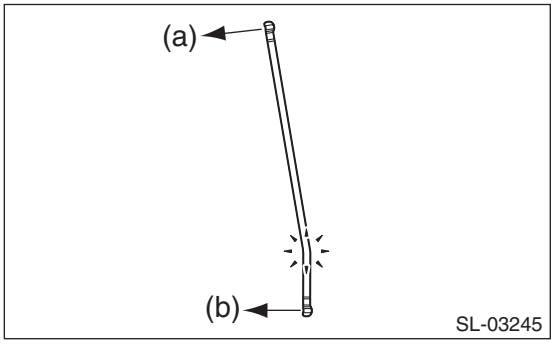


B: INSTALLATION

1) Install the new stop ring to the rod - power rear gate.

CAUTION:
- **Do not reuse the stop ring.**
- **Align the stop ring to the ball housing groove, and attach the ring by gradually applying force, while paying attention not to deform it.**

2) Check the clearance (a) of the stop ring.



Specification:
6.4 — 7.2 mm (0.25 — 0.28 in)

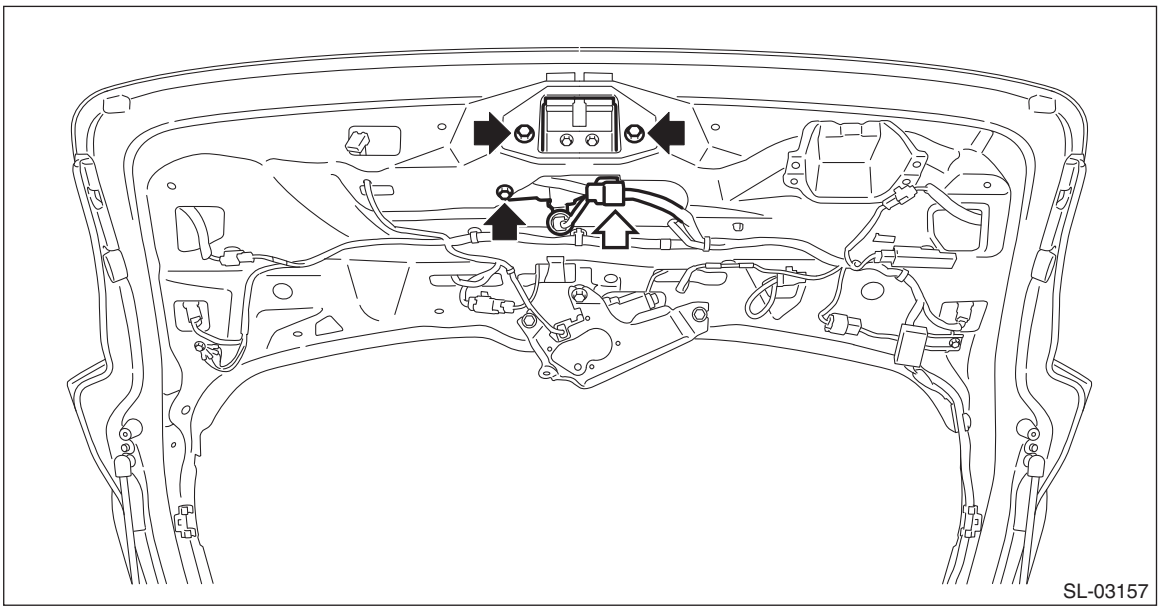
Replace the stop ring if the inspection result is not within the standard value.

3) Install the rod - power rear gate.

CAUTION:
- **Do not install the battery sensor ground terminal before installing the rod. If the power rear gate drive unit moves by wrong operation of the switch, the installation of the rod may be no longer possible.**
- **Check that the stop ring and ball stud (bracket rod - power rear gate) are vertically placed, and then slowly press in the rod.**
- **Install the rod with its angular end facing downward.**

(a) Rear gate side
(b) PRG D/U side

4) Install the cover - rear quarter pillar PRG.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

Check the ball housing and ball stud (bracket rod - power rear gate) of the rod - power rear gate for excessive play, wear or bent. Replace the rod - power rear gate if defective.

7. Power Rear Gate Auto Closer

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate auto closer.
   (1) Disconnect the connector.
   (2) Remove the bolts, and then remove the power rear gate auto closer.

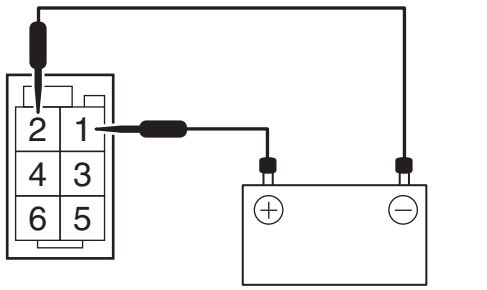
B: INSTALLATION

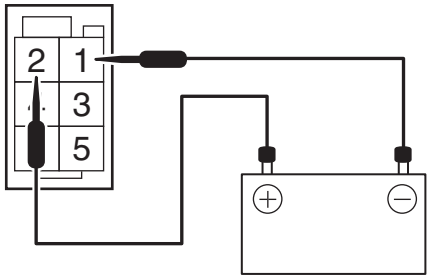
1) Install the power rear gate auto closer.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION





1. LATCH

Pull the emergency lever to check that the latch operates properly.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the power rear gate auto closer.

2. ACTUATOR

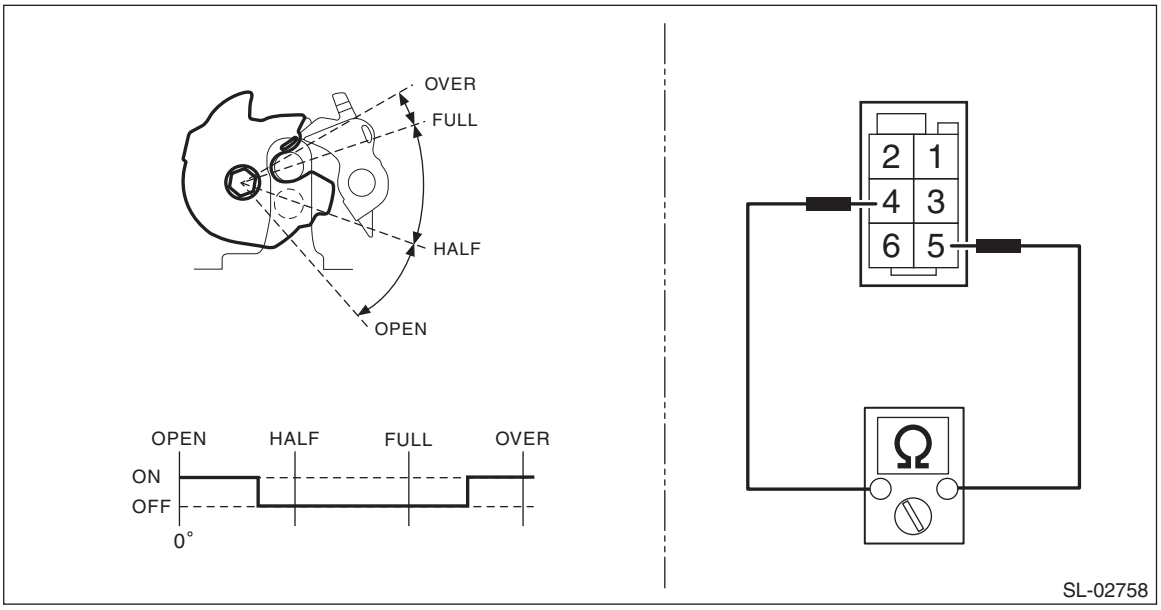
1) Check motor operation

(1) Check the motor operation when battery voltage is applied between the terminals of motor.

Terminal No.	Inspection conditions	Specification	Connection diagram
1 (+) — 2 (–)	Connect battery to the terminals	CLOSE rotation	 SL-02432
2 (+) — 1 (–)		OPEN rotation	 SL-02431

(2) After the motor operation check is completed, perform initialization of the sector switch in the following procedures.

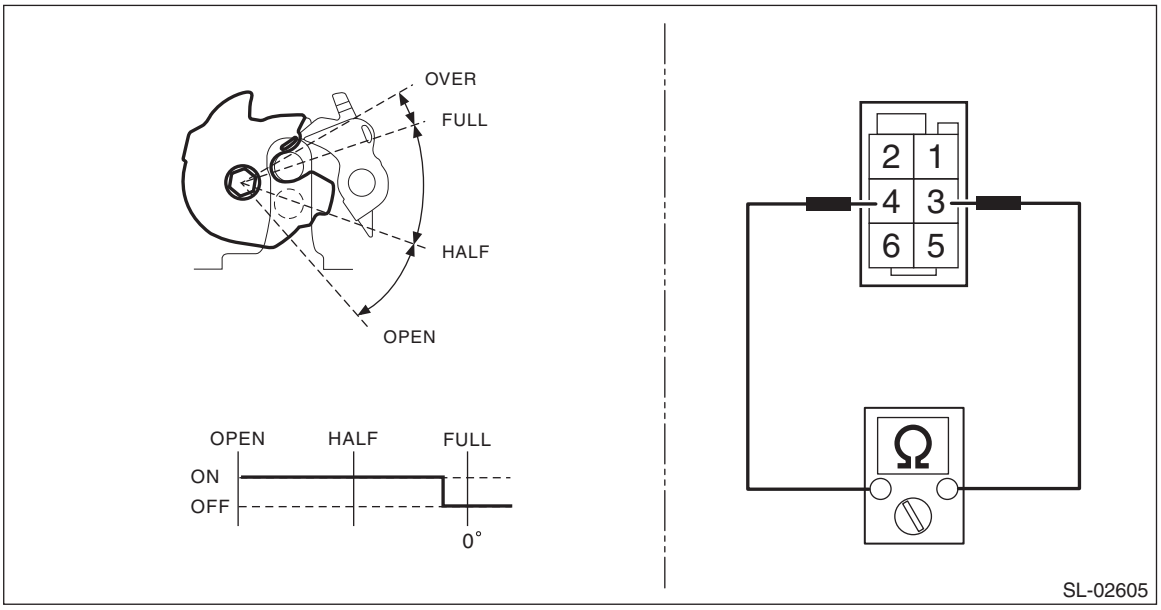
1. Operate the motor in the OPEN direction for approximately 2 seconds.
2. Connect the connector of power rear gate auto closer.
3. Connect the ground terminal to the battery sensor with the rear gate fully open.



2) Check switch

(1) Check the resistance between switch terminals.

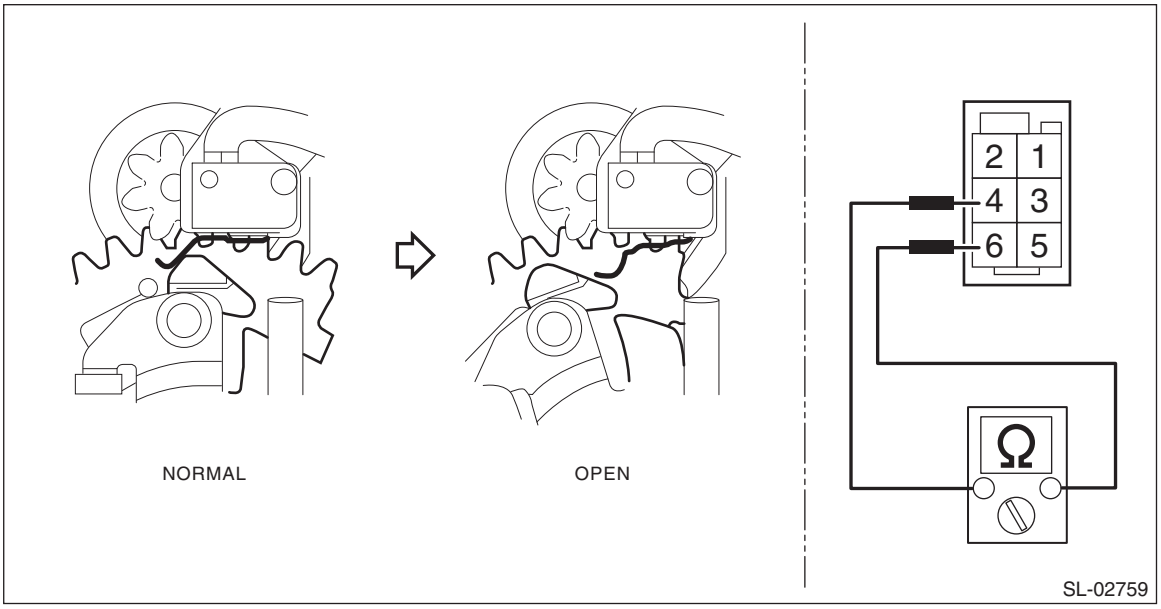
Preparation tool:



Circuit tester

- Latch switch

Terminal No.	Inspection conditions	Standard
5 — 4	OPEN	Less than 1 Ω
	HALF	10 kΩ or more
	FULL	10 kΩ or more
	OVER	Less than 1 Ω



- Courtesy switch

Terminal No.	Inspection conditions	Standard
3 — 4	OPEN	Less than 1 Ω
	HALF	Less than 1 Ω
	FULL	10 kΩ or more

- Sector switch

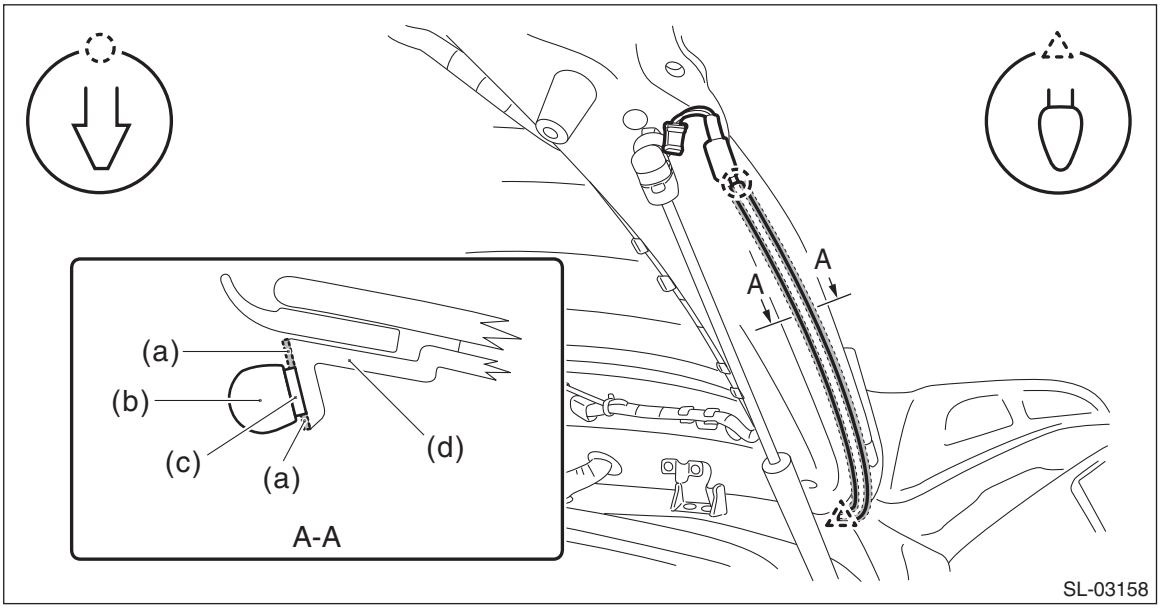
CAUTION:
Perform the check while operating the motor in the OPEN direction with the battery voltage applied between the terminals of motor. For detailed procedures, refer to 1) Check motor operation.

Terminal No.	Inspection conditions	Standard
4 — 6	Switch ON (NORMAL)	Less than 1 Ω
	Switch OFF (OPEN)	10 kΩ or more

(2) After the switch check is completed, perform initialization of the sector switch in the following procedures.
1. Operate the motor in the OPEN direction for approximately 2 seconds.
2. Connect the connector of power rear gate auto closer.
3. Connect the ground terminal to the battery sensor with the rear gate fully open.

3) Replace the power rear gate auto closer if it is found defective.

8. Power Rear Gate Touch Sensor



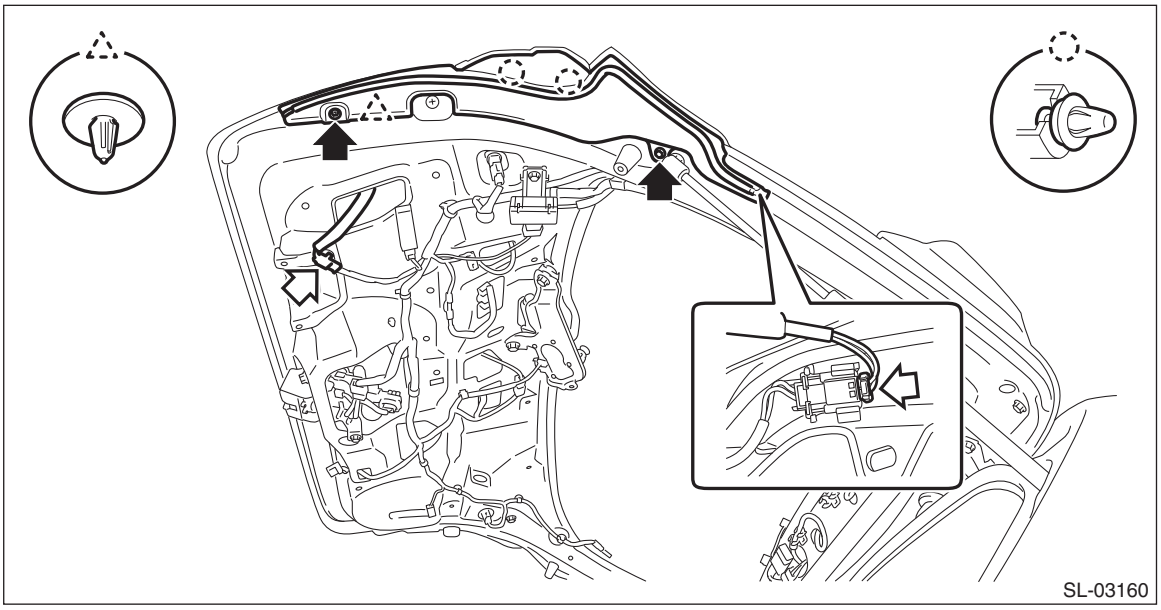
A: REMOVAL

1. TOUCH SENSOR UPR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the touch sensor LWR. <Ref. to PRG-17, TOUCH SENSOR LWR, REMOVAL, Power Rear Gate Touch Sensor.>
3) Remove the power rear gate touch sensor UPR.

CAUTION:
• The touch sensor UPR can be removed only when it is defective because it is secured with double-sided tape.
• When removing the touch sensor UPR, be careful not to deform the touch sensor UPR bracket.
• Always replace the touch sensor UPR with a new part after removal.

(1) Affix masking tape on the touch sensor UPR bracket so that the tape runs along the touch sensor UPR.
(2) Remove the rubber clip and remove the power rear gate touch sensor UPR.



(a) Masking tape (area covered with tape)
(b) Touch sensor UPR
(c) Double-sided tape
(d) Touch sensor UPR bracket

2. TOUCH SENSOR LWR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate touch sensor LWR.
(1) Remove the screws and clips.

(2) Disconnect the connector and remove the power rear gate touch sensor LWR.

B: INSTALLATION

1. TOUCH SENSOR UPR

1) Install the power rear gate touch sensor UPR.
(1) Clean the bracket surface of the touch sensor UPR to remove dust and dirt fully.
(2) Using a sponge, apply primer to the bracket surface of the touch sensor UPR that is not covered with masking tape.

CAUTION:
- **Do not apply primer beyond masking tape. This may cause discolored touch sensor UPR bracket.**
- **Dry the primered surface for approx. 10 minutes without touching it.**

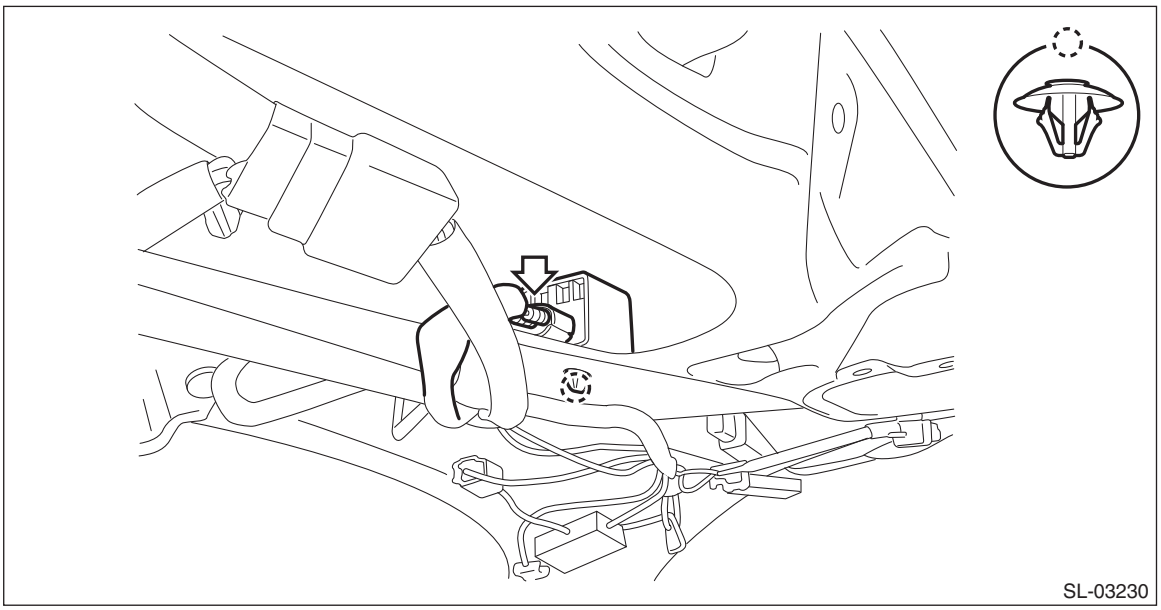
Preparation items:
Primer: 3M 4298-UV or equivalent
(3) Install the touch sensor UPR.

CAUTION:
When affix the touch sensor UPR, do not use tools.
1. Affix a new touch sensor UPR along the masking tape.
2. Press-fit the touch sensor UPR securely and remove the masking tape.

2) Install the power rear gate touch sensor LWR. <Ref. to PRG-18, TOUCH SENSOR LWR, INSTALLATION, Power Rear Gate Touch Sensor.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. TOUCH SENSOR LWR

1) Install the power rear gate touch sensor LWR.



CAUTION:
- **Make sure the electrical connector is connected securely.**
- **When installing the touch sensor LWR, be careful not to get the connector or harness crimped or deformed.**

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)
2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

9. Power Rear Gate Buzzer

A: REMOVAL

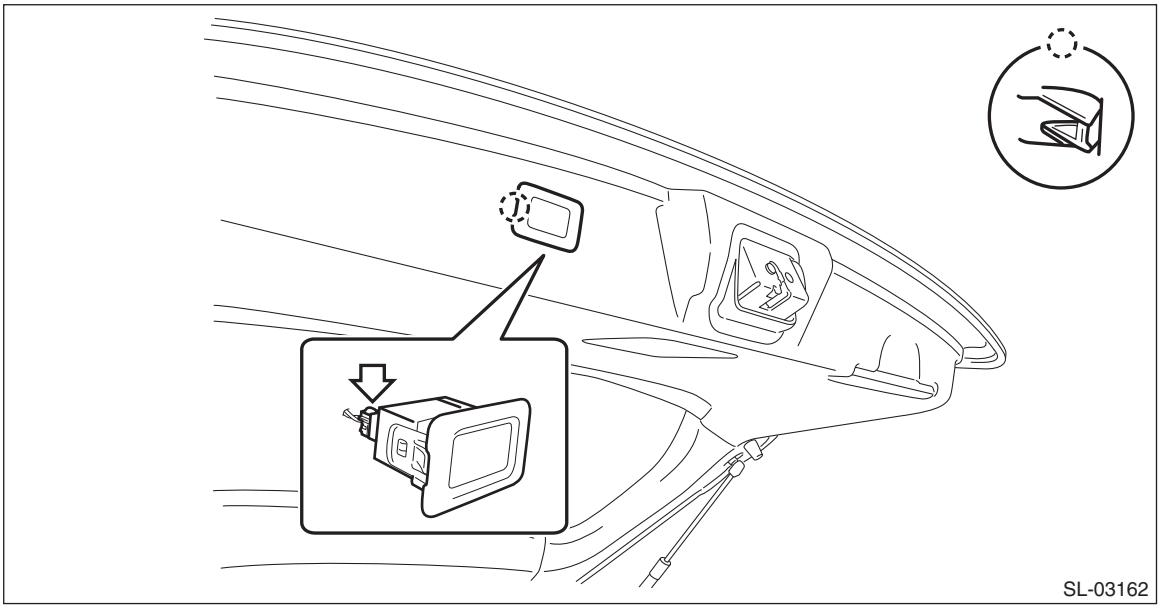
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-119, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate buzzer.
   (1) Disconnect the connector.
   (2) Release the claws, and then remove the power rear gate buzzer.

B: INSTALLATION

1) Install the power rear gate buzzer.
2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-44, THE BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>



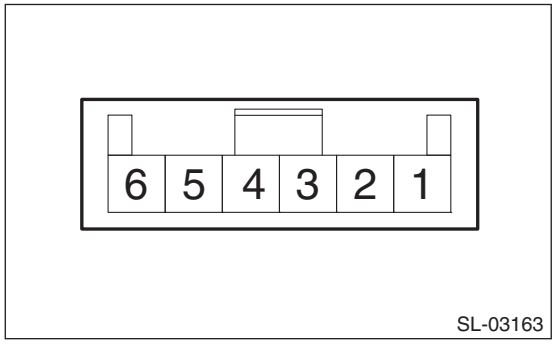
10.Power Rear Gate Inner Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the power rear gate inner switch.
   (1) Release the claws and pull out the power rear gate inner switch rearward.

NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the slit on the left.

   (2) Disconnect the connector and remove the power rear gate inner switch.



B: INSTALLATION

1) Install the power rear gate inner switch.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

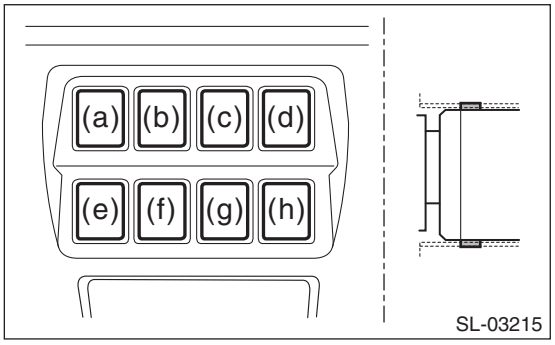
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



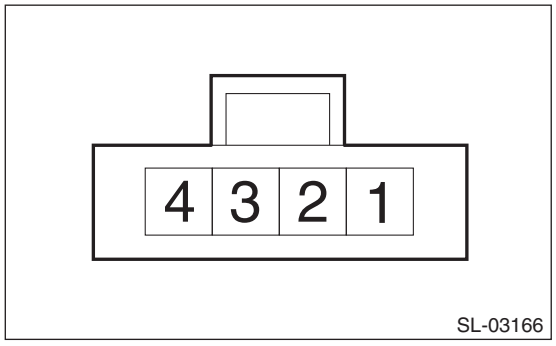
Terminal No.	Inspection conditions	Specification
3 (+) — 4 (–)	Apply battery voltage.	Light ON

3) Replace the power rear gate inner switch if it is found defective.

11.Power Rear Gate Driver's Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws, and then remove the power rear gate driver's switch (a).



B: INSTALLATION

1) Install the power rear gate driver's switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

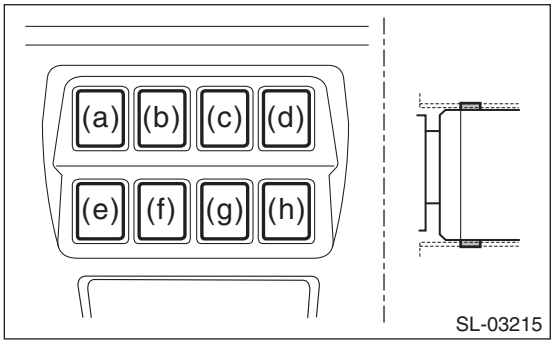
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

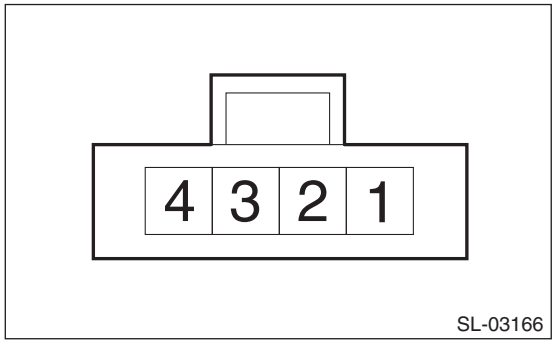
3) Replace the power rear gate driver's switch if it is found defective.

12.Memory Height Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the memory height switch.

(c) Model with SRF
(d) Model without SRF



B: INSTALLATION

1) Install the memory height switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between switch terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the memory height switch if it is found defective.

13.Rear Gate Opener Button

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the rear gate opener button (PRG). <Ref. to SL-47, Rear Gate Opener Button.>

14.Body Integrated Unit

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>

15.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-43, Diagnostics with Phenomenon.>

7.	Read Diagnostic Trouble Code (DTC)	11
8.	Clear Memory Mode	12
9.	Read Current Data	13
10.	List of Diagnostic Trouble Code (DTC)	16
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	17
12.	General Diagnostic Table	42
13.	Diagnostics with Phenomenon	43

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to PRG(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PRG(diag)-3, CHECK, Check List for Interview.>
2	**INITIALIZATION OF PRG SYS.** 1) Open the PRG manually. 2) Manually close PRG to the partially latched position, and operate the auto closer to fully close PRG. 3) Press any of the PRG operation switches to perform the automatic operation of PRG. <Ref. to PRG-6, INITIALIZATION, PROCEDURE, Power Rear Gate System.>	Is the initialization operation possible?	Go to step **4**.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **4**.	Perform the inspection according to the diagnosis for LAN system.
4	**CHECK POWER REAR GATE SYSTEM.** Using the Subaru Select Monitor, read DTC of power rear gate system. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PRG(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to PRG(diag)-16, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check “Diagnostics with Phenomenon”. <Ref. to PRG(diag)-43, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Currently, system is normal. A temporary poor contact may be a possible cause. Therefore, check the harness connector.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Power Rear Gate System Check List for Interview

</table>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect power rear gate related problems.
1) Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to PRG-5, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

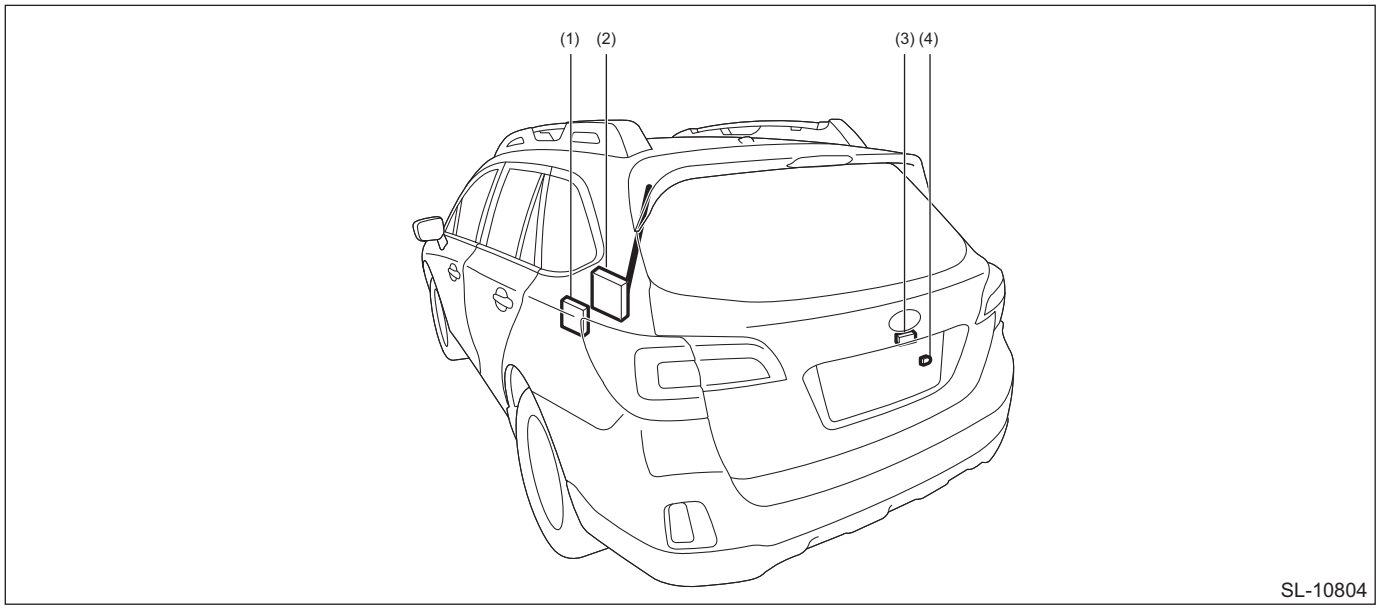

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
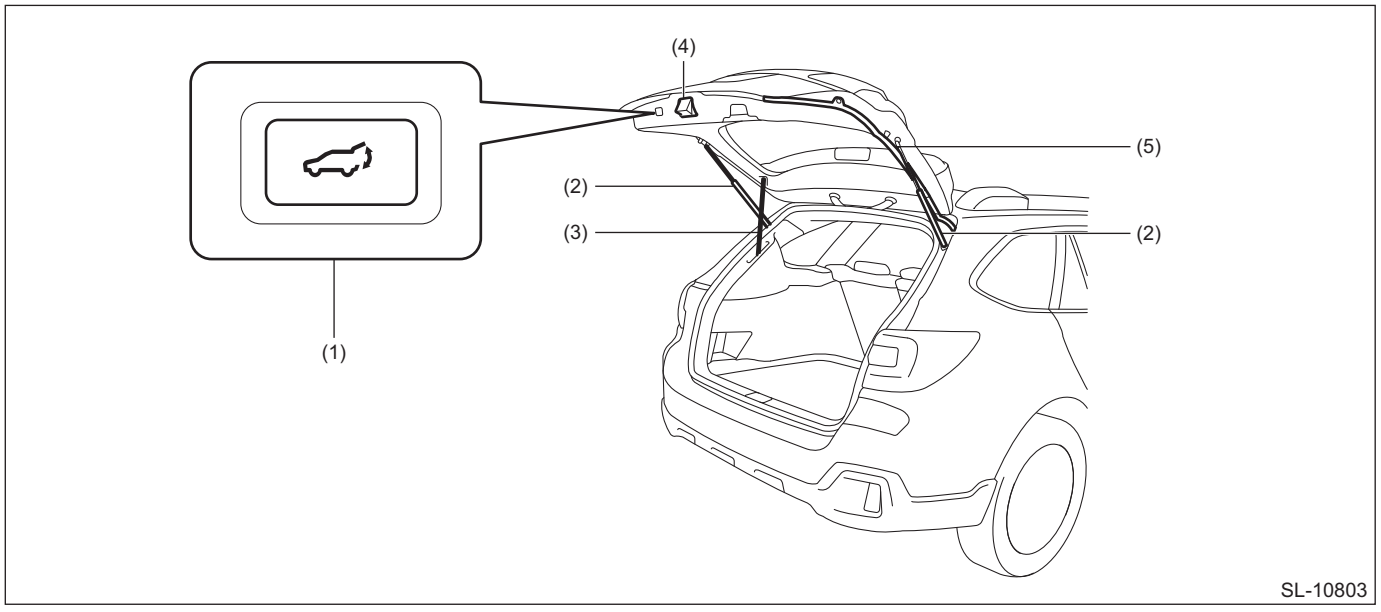
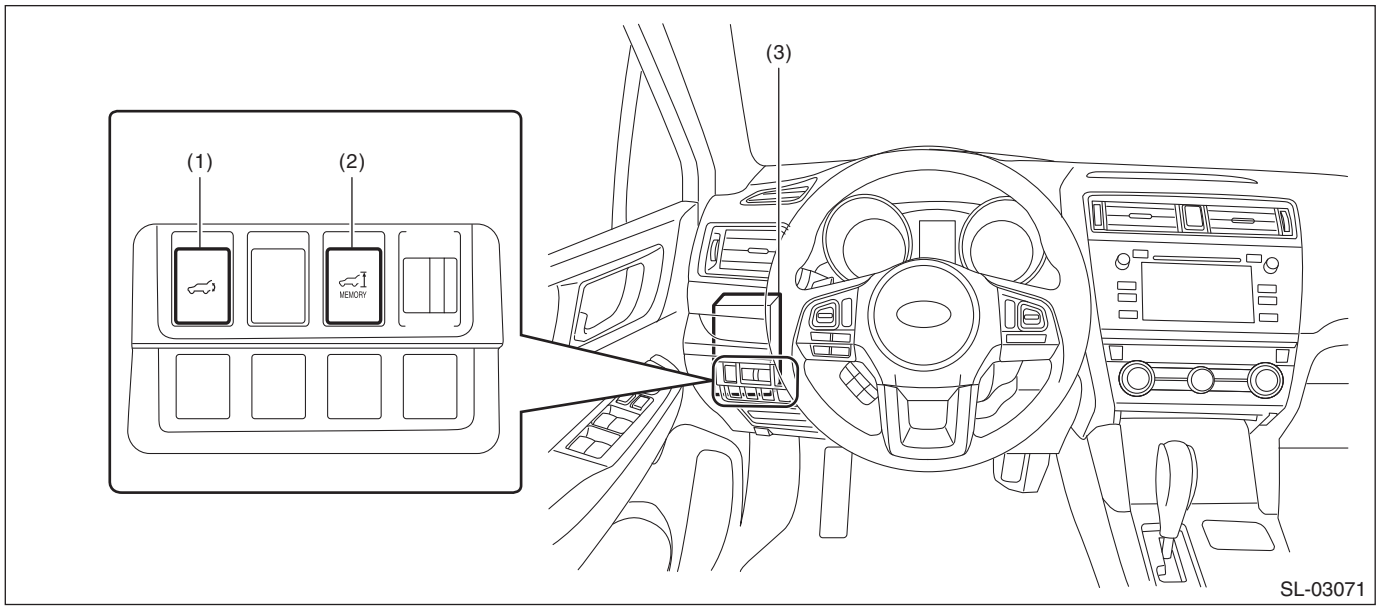
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

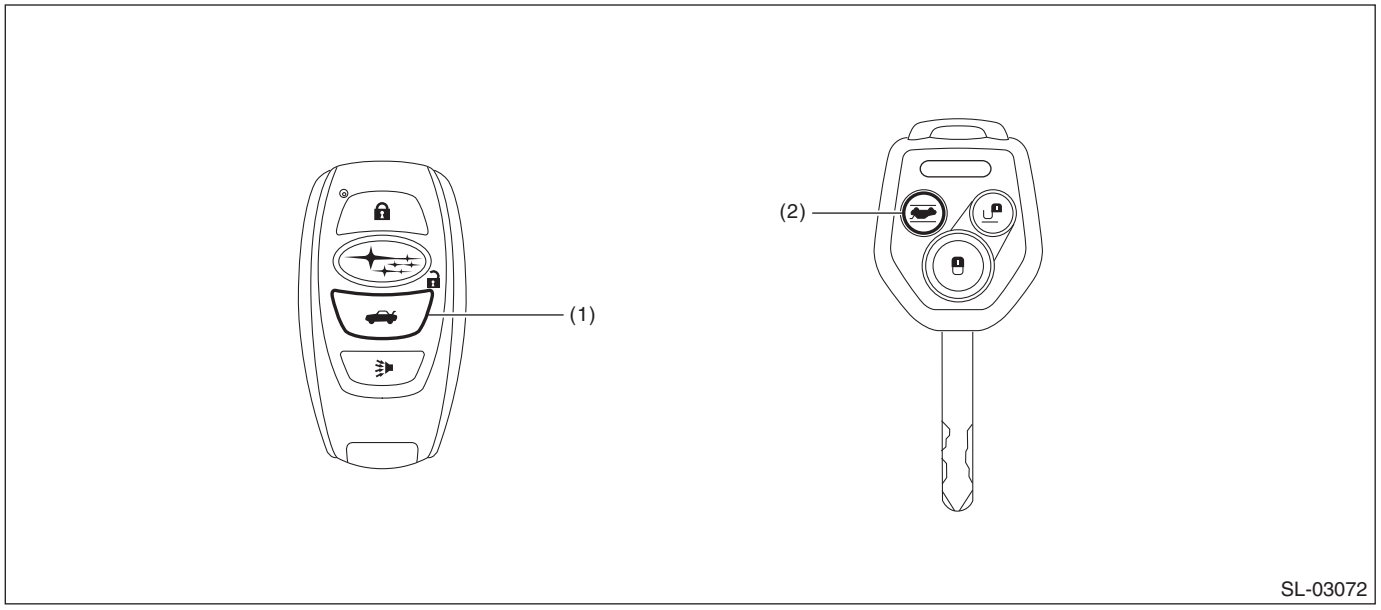


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location



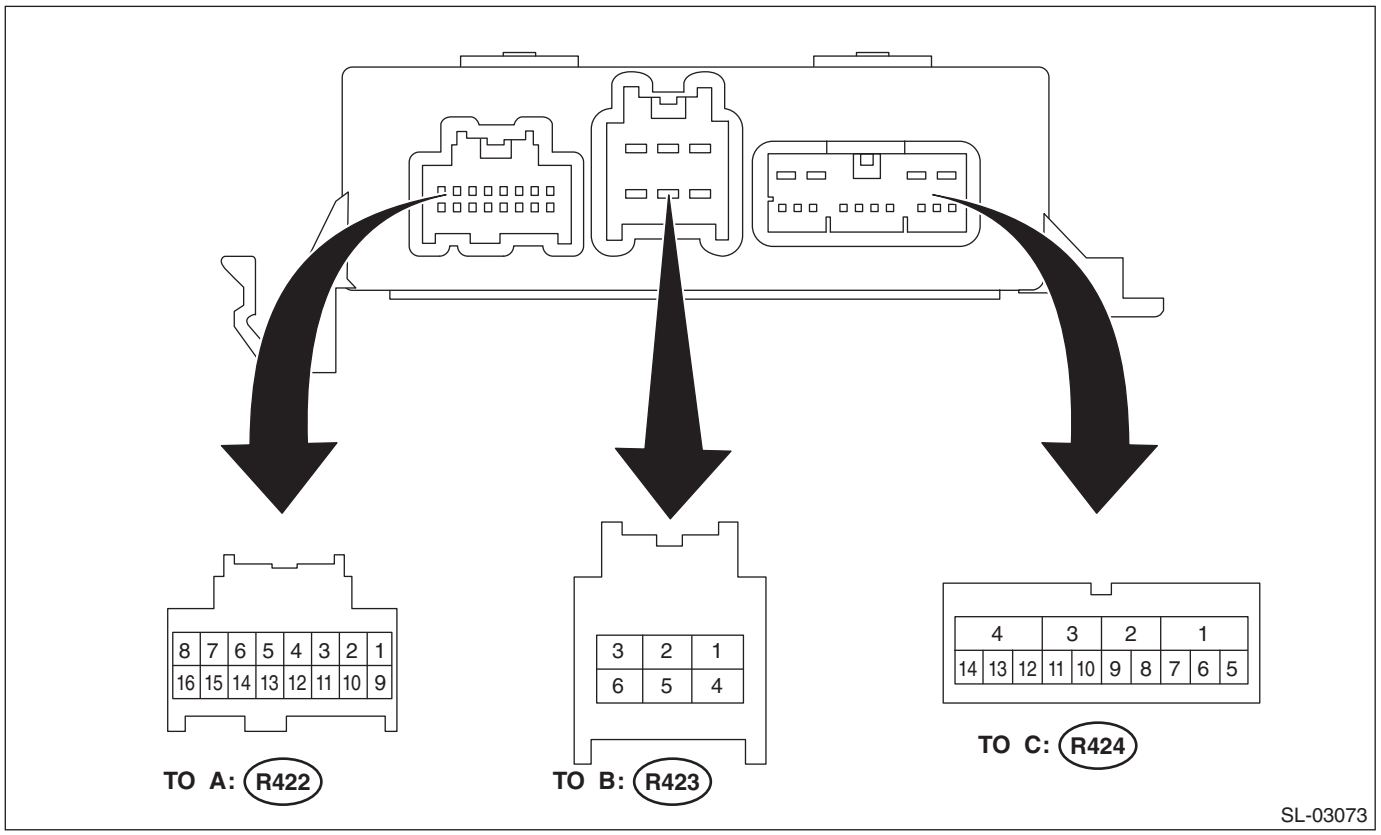
A: LOCATION



(1) Power rear gate drive unit (PRG DU)
(2) Power rear gate control module (PRG CM)
(3) Rear gate opener button
(4) Power rear gate buzzer

(1) Power rear gate inner switch
(2) Gas damper
(3) Rod - power rear gate
(4) Power rear gate auto closer
(5) Power rear gate touch sensor

(1) Power rear gate driver's switch (2) Memory height switch (3) Body integrated unit



(1) Rear gate/trunk SW (access key) (With keyless access with push button start system)

(2) Rear gate/trunk SW (keyless transmitter) (Without keyless access with push button start system)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. POWER REAR GATE CONTROL MODULE

Terminal No.	Content	Measuring condition	Standard
(R422) No. 1 ←→ (R422) No. 9	Touch sensor	When sensor is ON	2.7 V or less
(R422) No. 2 ←→ Chassis ground	—	—	—
(R422) No. 3 ←→ (R422) No. 9	Latch switch	When rear gate is fully closed	9 — 16 V
(R422) No. 4 ←→ (R422) No. 9	Courtesy switch	When rear gate is fully closed	9 — 16 V
(R422) No. 5 ←→ (R422) No. 9	Sector switch	When rear gate is fully closed	Less than 1 V

B: WIRING DIAGRAM

Refer to “Power Rear Gate System” in the wiring diagram. <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

6. Subaru Select Monitor

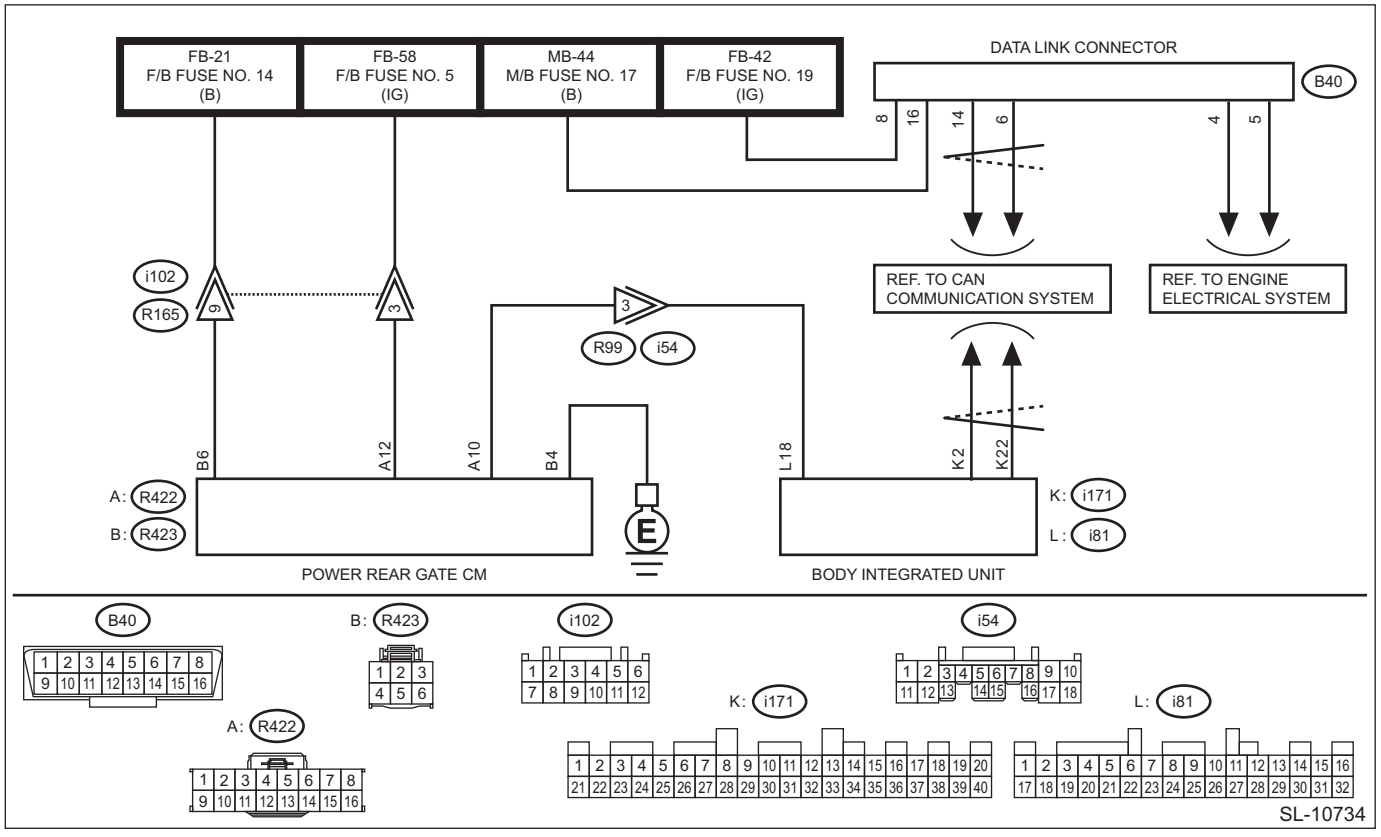
A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to PRG(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
If the communication with the body integrated unit is not possible either, refer to LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-13, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Body integrated unit malfunctioning
- Defective LIN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and power rear gate CM.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power rear gate CM connectors in the order of (R423) → (R422). 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the power rear gate CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between the power rear gate CM connector and fuse.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the power rear gate CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between the power rear gate CM connector and chassis ground.
4	**CHECK BODY INTEGRATED UNIT.** Check the body control system. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for body control system.
5	**CHECK POWER REAR GATE CM.** 1) Turn the ignition switch to OFF. 2) Connect the power rear gate CM connector in the order of (R422) → (R423). 3) Communicate with the power rear gate CM using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the power rear gate CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Rear Gate» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PRG(diag)-16, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Rear Gate» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PRG(diag)-16, List of Diagnostic Trouble Code (DTC).>

9. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Rear Gate» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Communication with PRG CM and Subaru Select Monitor takes time. It takes time to show all the items, and the status cannot be reflected on the display. Therefore, select items only that need to be checked or up to two to three items, when checking the status. (When displaying selected items only, place a check mark for the item to be displayed and press the “Select” button.)

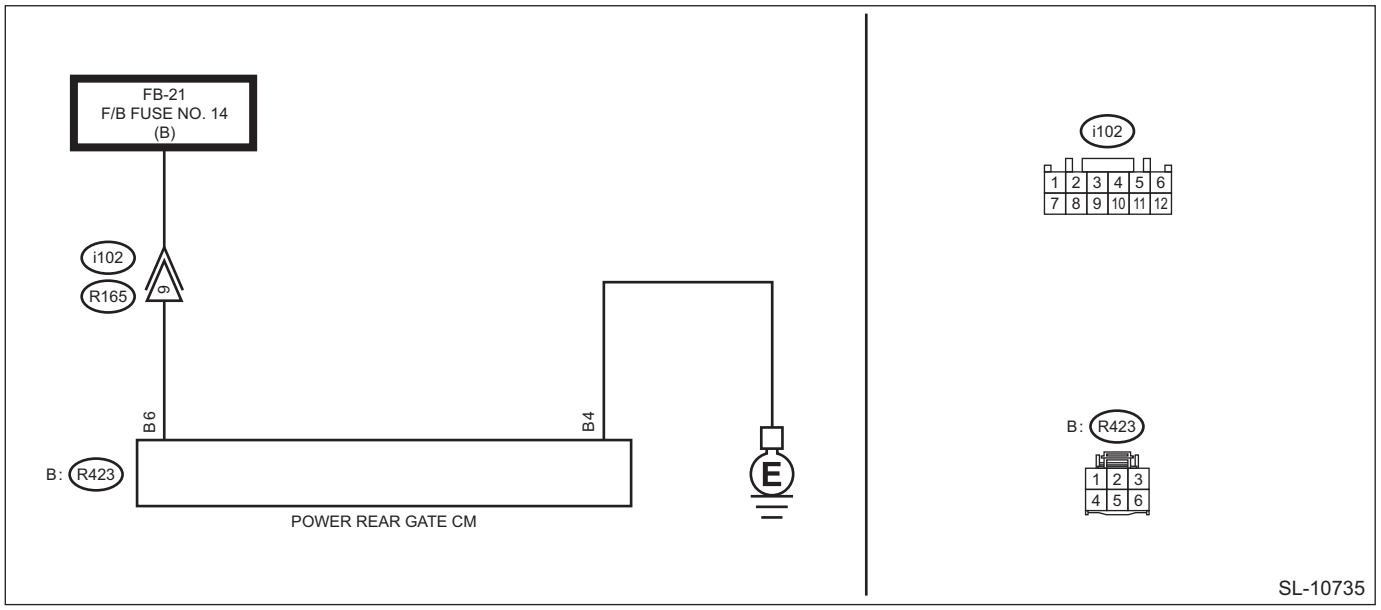
B: LIST

Item Name	Description	Standard	Note
+POWER B	Power supply voltage value	9 — 16 V	—
+ B	PRG CM power supply voltage value	9 — 16 V	—
IGN SW	Ignition switch status	ON: IGN ON OFF: IGN OFF	—
Memory stop SW	Memorized height switch status	ON: switch ON OFF switch OFF	—
D SW	Driver’s seat switch status	ON: switch ON OFF switch OFF	—
R/G inner SW	PRG inner switch status	ON: switch ON OFF switch OFF	—
COURTESY SW	Courtesy switch status	ON: switch ON OFF switch OFF	—
LATCH SW	Latch switch status	ON: switch ON OFF switch OFF	—
SECTOR SW	Sector switch status	ON: switch ON OFF switch OFF	—
PRG MOTOR (OPEN)	Output status of rear gate motor open signal	OPEN: when operating rear gate open OFF: OFF	—
PRG MOTOR (CLOSE)	Output status of rear gate motor close signal	CLOSE: when operating rear gate close OFF: OFF	—
CLOSER (OPEN)	Output status of auto power rear gate closer motor open signal	OPEN: when open output OFF: OFF	—
CLOSER (CLOSE)	Output status of auto power rear gate closer motor close signal	CLOSE: when close output OFF: OFF	—
Buzzer output	Buzzer output status	ON: when buzzer sounding OFF: when buzzer stopping	—
HAZARD	Hazard output status	ON: when hazard ON OFF: when hazard OFF	—
Connection Continuing Flag	Communication continuation request status	Flag: when communication continuation is requested not Flag: when no communication continuation is requested	—

Item Name	Description	Standard	Note
Idle Stop Cancel Flag	Auto Start Stop cancel request status	Flag: when Auto Start Stop cancellation not Flag: when Auto Start Stop	—
IGN	Ignition switch status (body integrated unit)	ON: IGN ON OFF: IGN OFF	—
R/G Open SW	PRG opener switch status	OFF: when OFF Short Push: when operating Short Push Long Push: when operating Long Push	—
Front Wheel Speed	Vehicle speed condition	Show vehicle speed	—
Normal Keyless R/G SW	Status of normal keyless R/G switch	OFF: when OFF Short Push: when operating Short Push Long Push: when operating Long Push	—
Smart Keyless R/G SW	Status of keyless access key R/G switch	OFF: when OFF Short Push: when operating Short Push Long Push: when operating Long Push	—
Idle Stop Control	Status of Auto Start Stop control	Idle Stop Control: when Idle Stop Control Idle Stop Uncontrol: other than Idle Stop Control	—
P range SW	Status of shift lever P	ON: when in P range OFF: when other than in P range	—
MT/AT	Vehicle information (body integrated unit)	MT: MT model AT: AT model	—
R/G Open Authorized State	Status of PRG permission	Authorized State: PRG Open Authorized State Unauthorized State: PRG Open Unauthorized State	—
Answer-Back Buzzer Information	Body integrated unit customizing information	ON: when buzzer sounding ON OFF: when buzzer sounding OFF	—
EPB Status	Electronic parking brake status	Error: when EPB error Release: when EPB is released Operate: when EPB is operated In operation: when EPB is in operation Releasing: when EPB is releasing Dynamic parking: When dynamic parking is operating	—
TOUCH SENSOR	Touch sensor status	ON: sensor ON OFF: sensor OFF	—
Rear Gate Target Speed	Rear gate target speed	Displays rear gate open/close target speed	—
Rear Gate Speed	Rear gate actual speed	Displays rear gate open/close speed	—
PRG MOTOR Duty	Rear gate motor DUTY output value	Displays rear gate motor DUTY output	—
Pulse-count 2	Rear gate motor pulse count output	Displays rear gate position	—

Item Name	Description	Standard	Note
Rear Gate Pos Init Flag	Rear gate position initialization status	ON: when pulse-count is recognized (when initialization is complete) OFF: when no pulse-count is recognized	—
PRG State 2	PRG status	Fully open: when pulse-count is more than fully open stop position Half Stop: when pulse-count is less than fully open stop position In operation: when PRG motor or closer motor is in operation Full Close: fully latched status	—

10.List of Diagnostic Trouble Code (DTC)



A: LIST

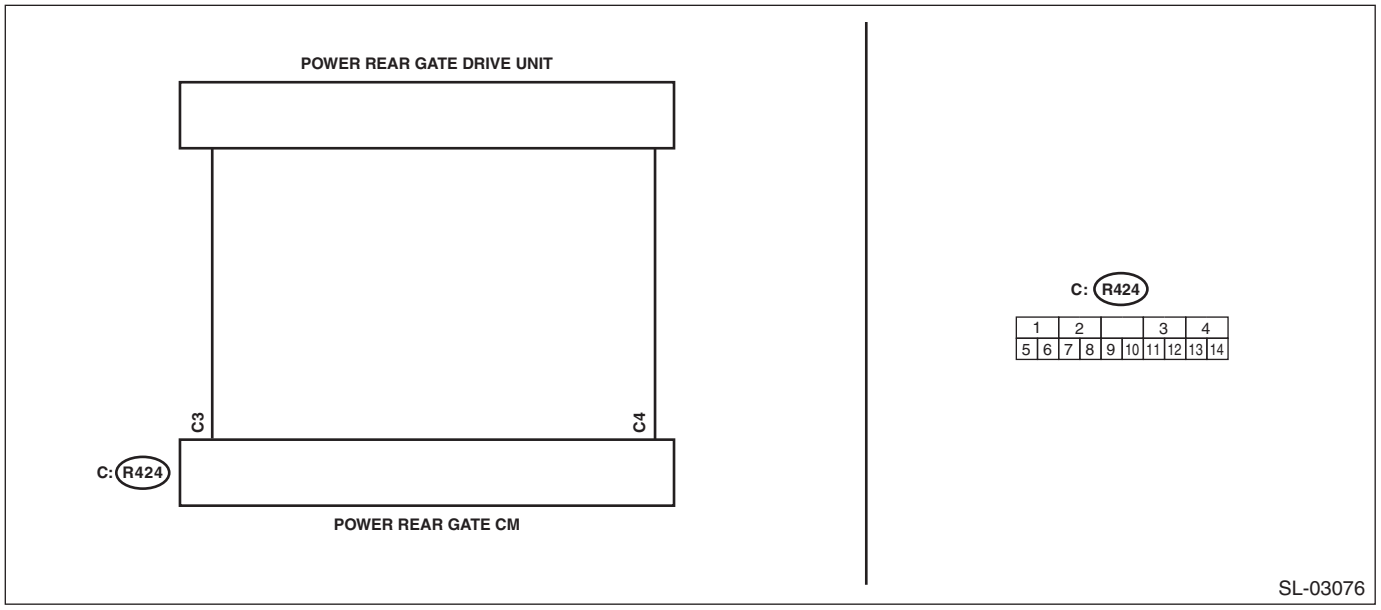
B2526	AUTO CLOSER MOTOR CIRCUIT OPEN	<Ref. to PRG(diag)-40, DTC B2526 AUTO CLOSER MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2527	AUTO CLOSER MOTOR CIRCUIT LAW	<Ref. to PRG(diag)-41, DTC B2527 AUTO CLOSER MOTOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2500 BATTERY POWER SUPPLY

DTC detecting condition:
Detected when the power supply voltage is less than 9 V or 16 V or more at starting PRG operation (when SW is operated).
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>



Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2500 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PRG-5, Relay and Fuse.>	Is the check result OK?	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the PRG CM connector (R423). 2) Using a tester, measure the voltage between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CONNECTOR.** Check the PRG CM connector (R423).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

B: DTC B2507 PRG MOTOR CIRCUIT OPEN

DTC detecting condition:
When the open circuit in motor is detected during the motor operation.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2507 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK POWER REAR GATE DRIVE UNIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R424). 3) Measure the resistance between PRG CM connectors. ***Connector & terminal (R424) No. 3 — (R424) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>
4	**CHECK CONNECTOR.** Check the PRG CM connector (R424).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>

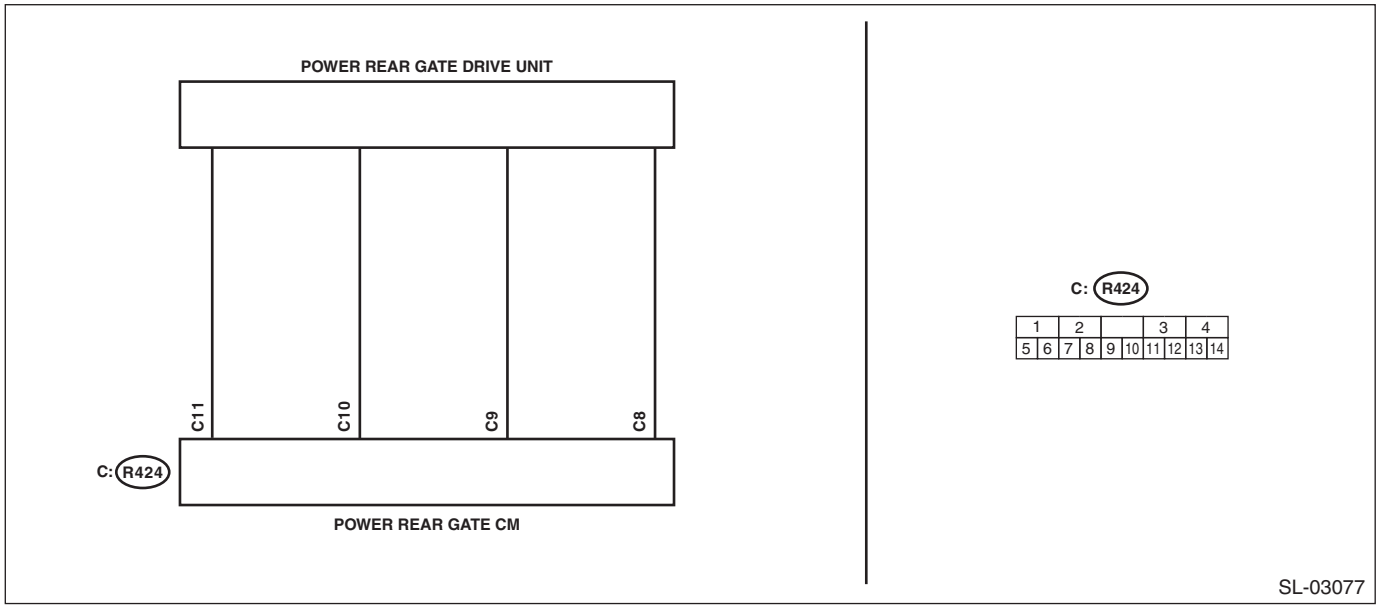
C: DTC B2508 PRG MOTOR CIRCUIT LOW

DTC detecting condition:
When the short to ground in motor circuit is detected.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2508 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R424). 3) Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R424) No. 3 — Chassis ground:*** ***(R424) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the PRG CM connectors. ***Connector & terminal*** ***(R424) No. 3 — (R424) No. 4:***	Is the resistance 0.1 Ω or more?	Go to step **5**.	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>
5	**CHECK CONNECTOR.** Check the PRG CM connector (R424).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

D: DTC B250B ROTATION SENSOR A STUCK

DTC detecting condition:

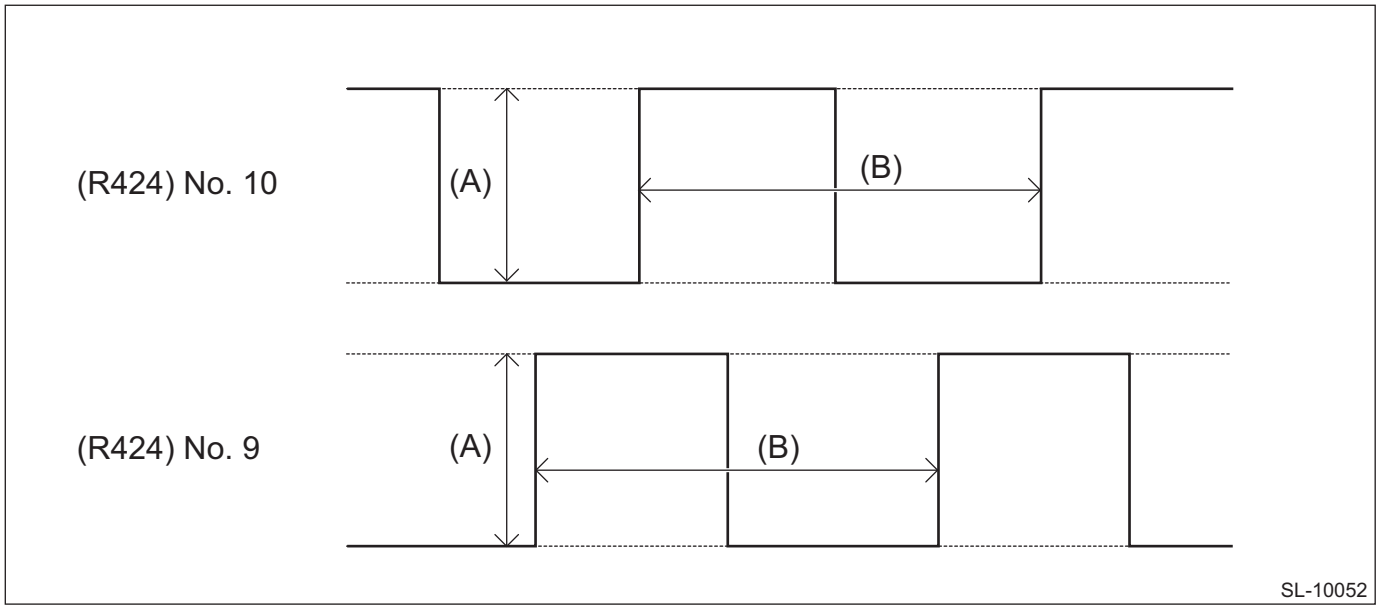


When output of drive unit rotation sensor does not last for 1 sec during the auto-operation.

Trouble symptom:

The power rear gate does not operate.

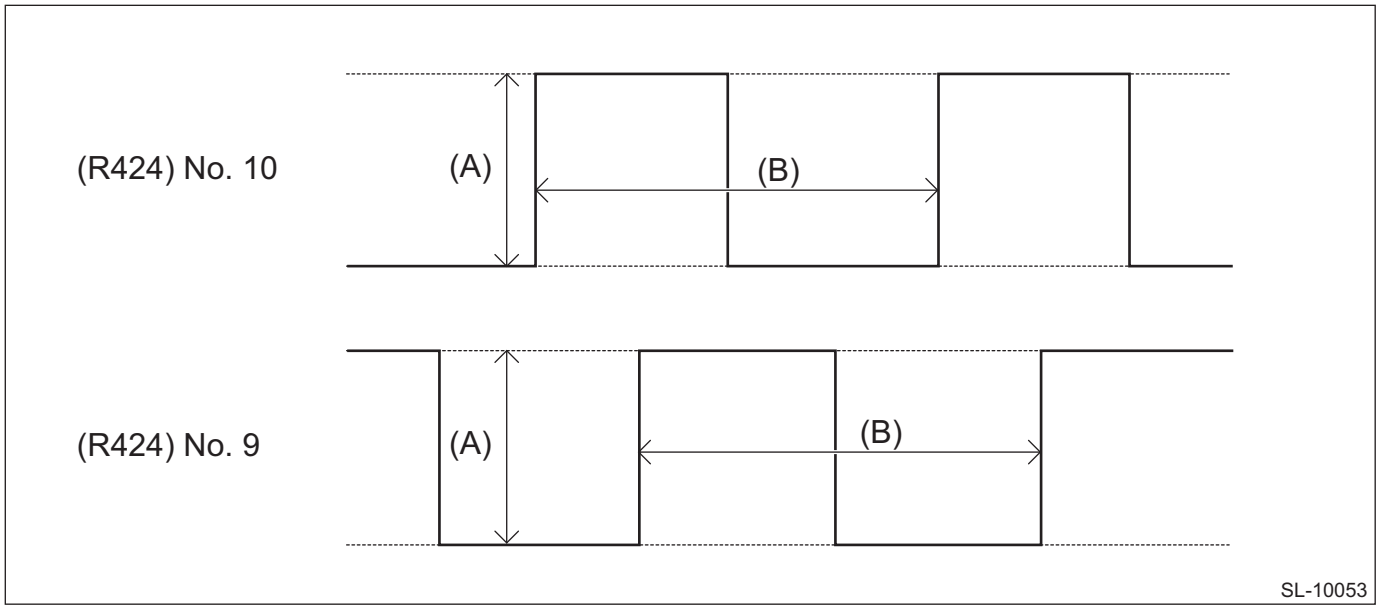
Wiring diagram:



Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B250B, B250D, or B2525 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK ROTATION SENSOR SIGNAL.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 8 (–):*** ***(R424) No. 10 (+) — (R424) No. 8 (–):***	Does the voltage change (approx. 0 V ←→ 12 V), when the power rear gate is manually opened/closed?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>



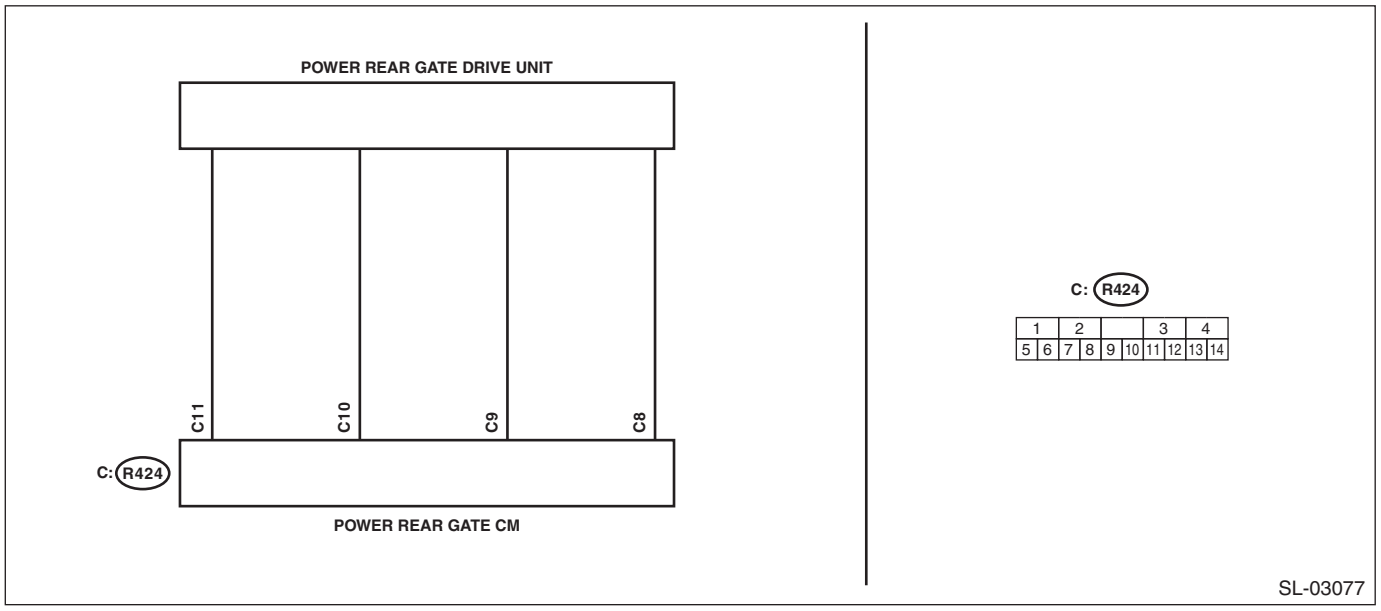
NOTE:
- When the power rear gate is open

(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

- When the power rear gate is closed

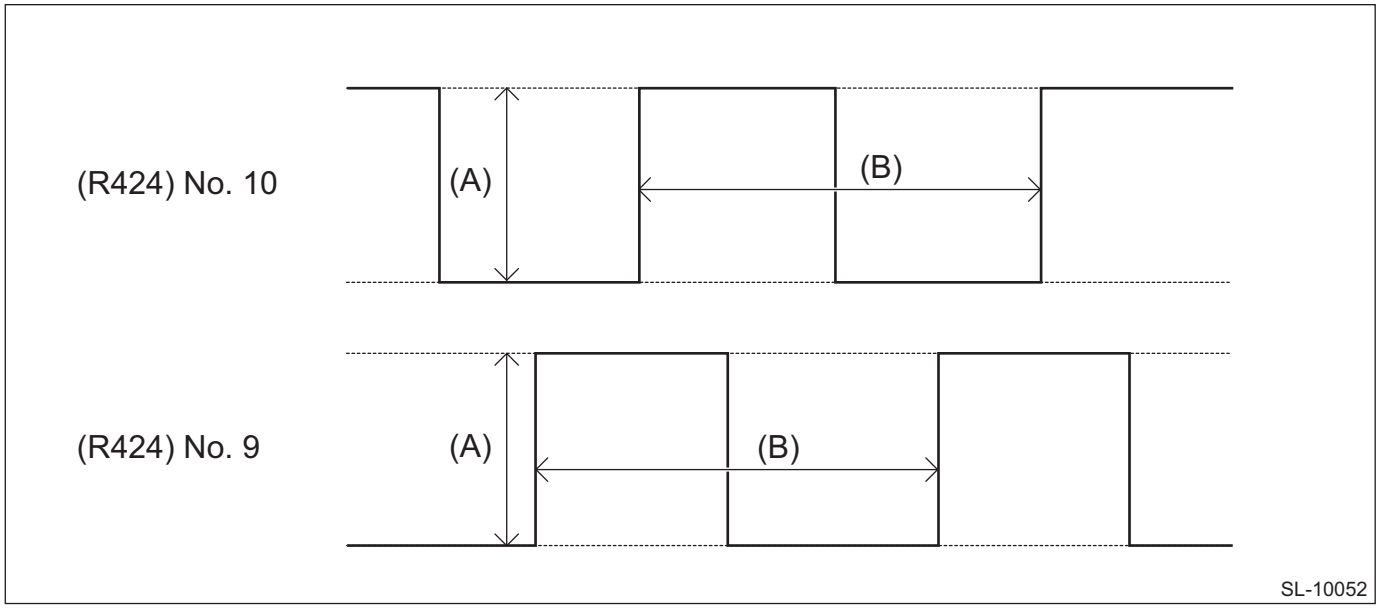
(A) Approx. 10 V



(B) Cycles change according to the time the power rear gate is opened/closed.

E: DTC B250D ROTATION SENSOR B STUCK

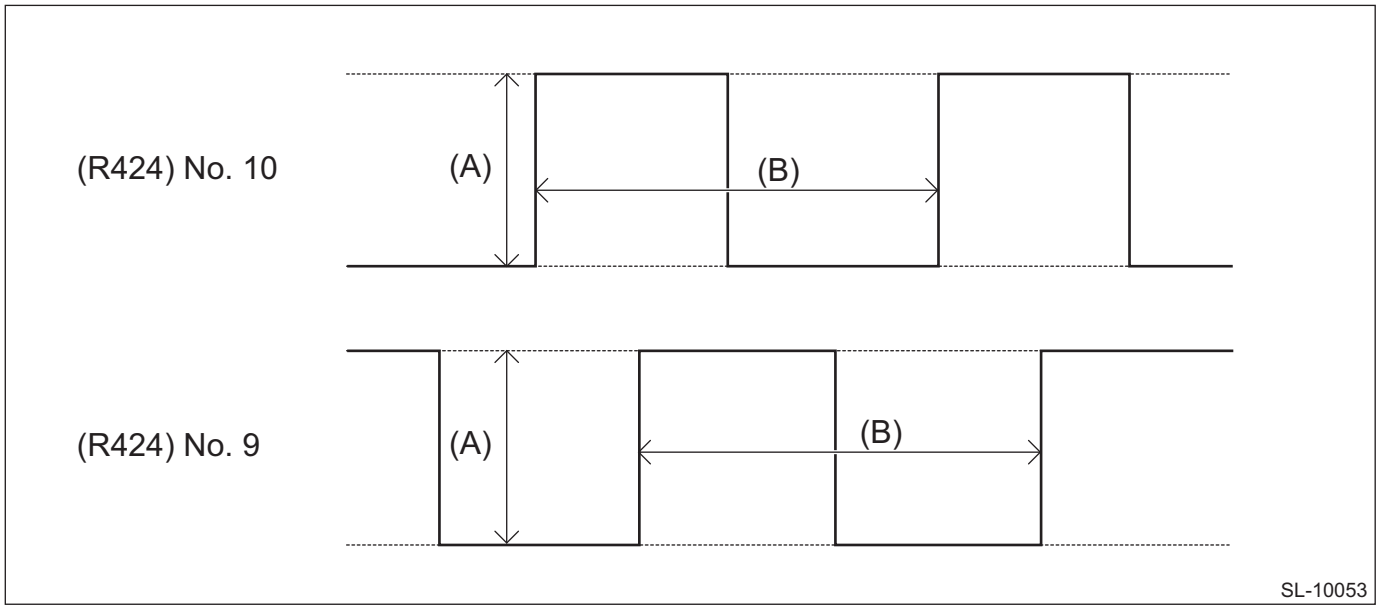
NOTE:
For the diagnostic procedure, refer to DTC B250B. <Ref. to PRG(diag)-21, DTC B250B ROTATION SENSOR A STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



F: DTC B250F ROTATION SENSOR PULSE/COUNT

DTC detecting condition:
Output of the power rear gate drive unit rotation sensor is out of specified range.
Trouble symptom:
Auto operation stops halfway.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B250F displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK CURRENT DATA.** 1) Activate the auto closer to a fully closed position. 2) Using the Subaru Select Monitor, confirm the «Pulse-count 2» when fully closed and fully open. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only one item to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	Does the value show six pulses when fully closed, and 1800 pulses when fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>

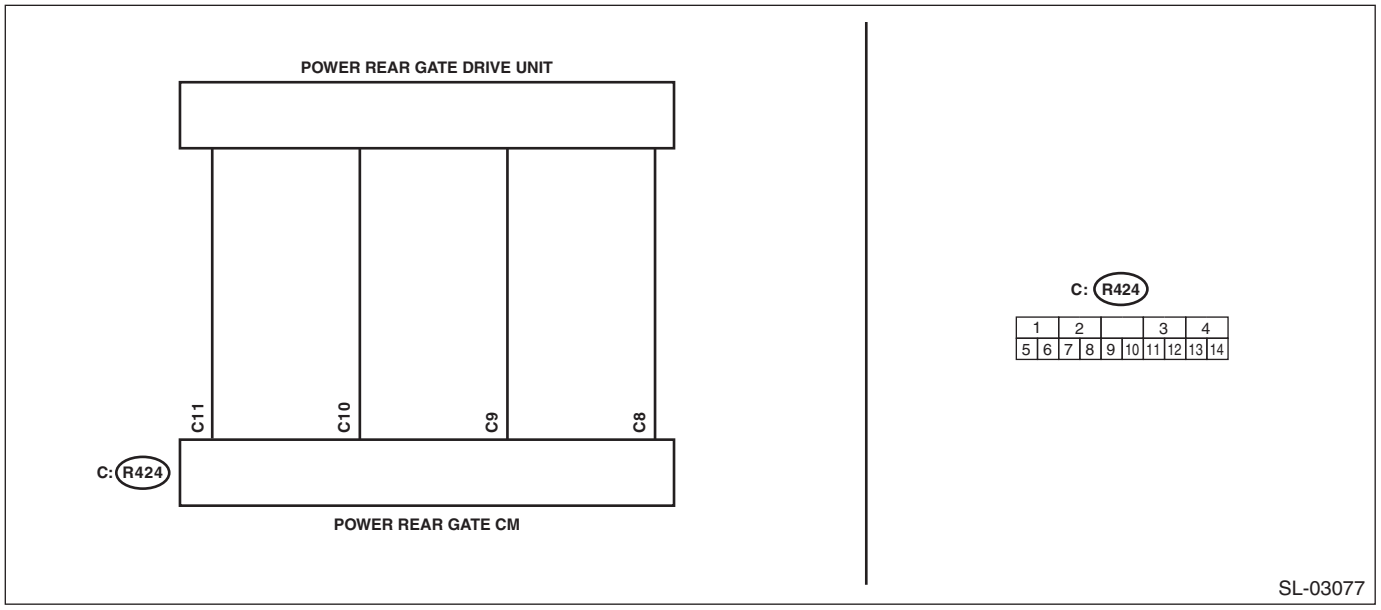


NOTE:
- When the power rear gate is open

(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

- When the power rear gate is closed

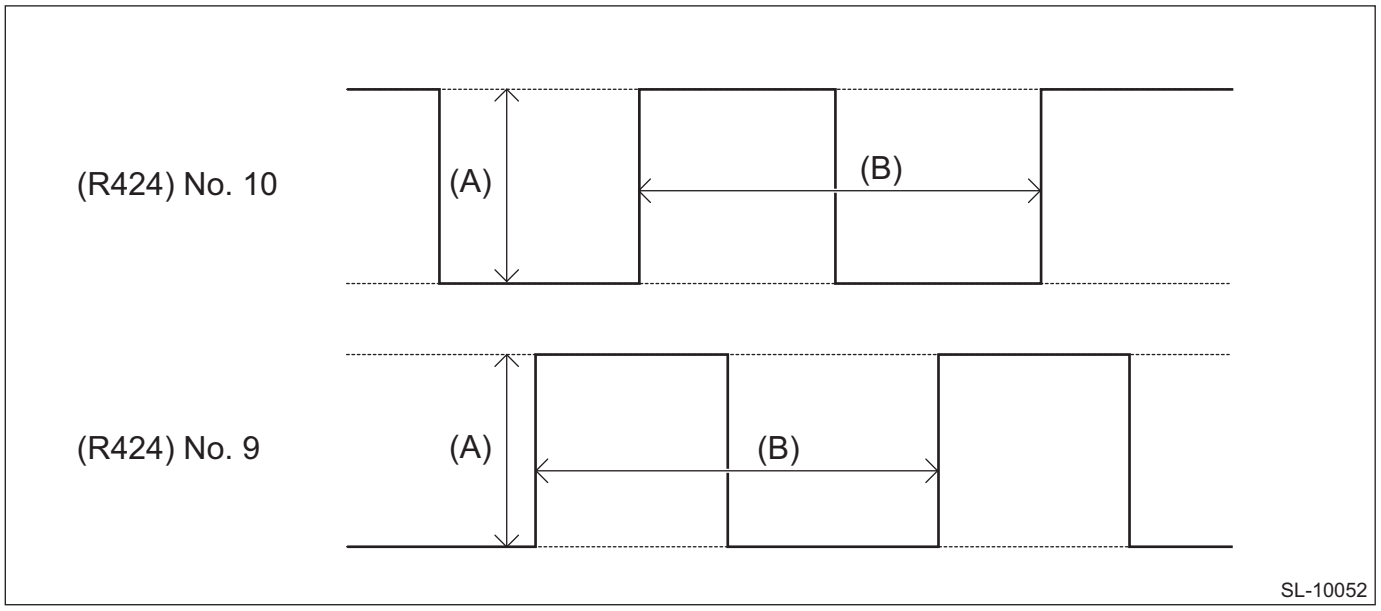


(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

G: DTC B2511 ROTATION SENSOR PULSE/REVERSE DIRECTION

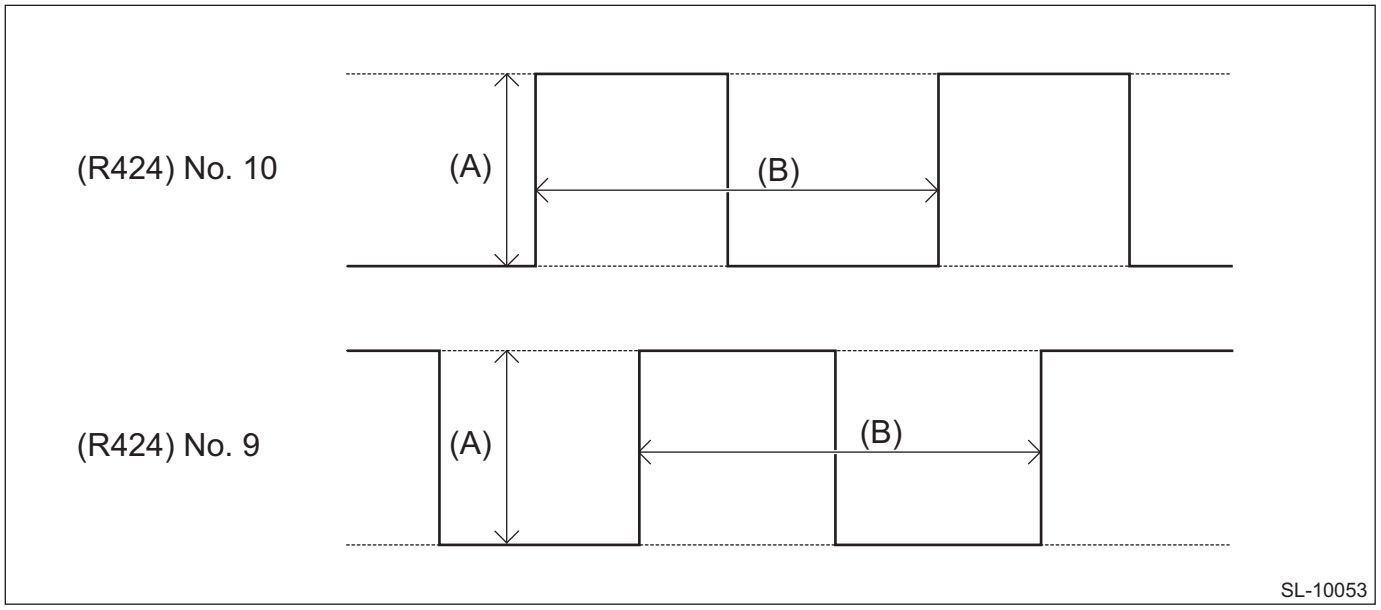
DTC detecting condition:
When output of the power rear gate drive unit rotation sensor is different from the direction that it should be.
Trouble symptom:
Auto-operation does not function.
Wiring diagram:



Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2511 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Activate the auto closer to a fully closed position. 2) Press the operation switch to perform the auto-open/close operation. 3) Using the Subaru Select Monitor, confirm the «Pulse-count 2» when fully closed and fully open. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only one item to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	Does the pulse count increase during the open operation? And does the pulse count decrease during the close operation?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-9, Power Rear Gate Drive Unit.>



NOTE:
- When the power rear gate is open

(A) Approx. 10 V

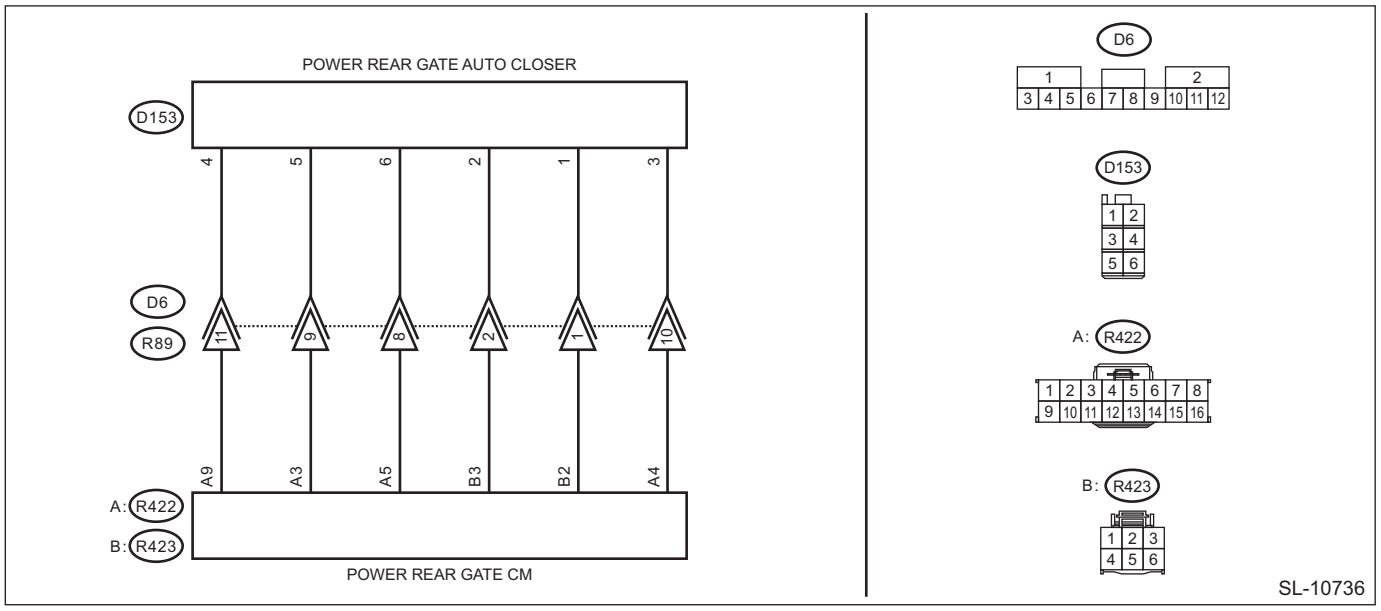
(B) Cycles change according to the time the power rear gate is opened/closed.

- When the power rear gate is closed

(A) Approx. 10 V

(B) Cycles change according to the time the power rear gate is opened/closed.

H: DTC B2512 DAMPER BREAKAGE



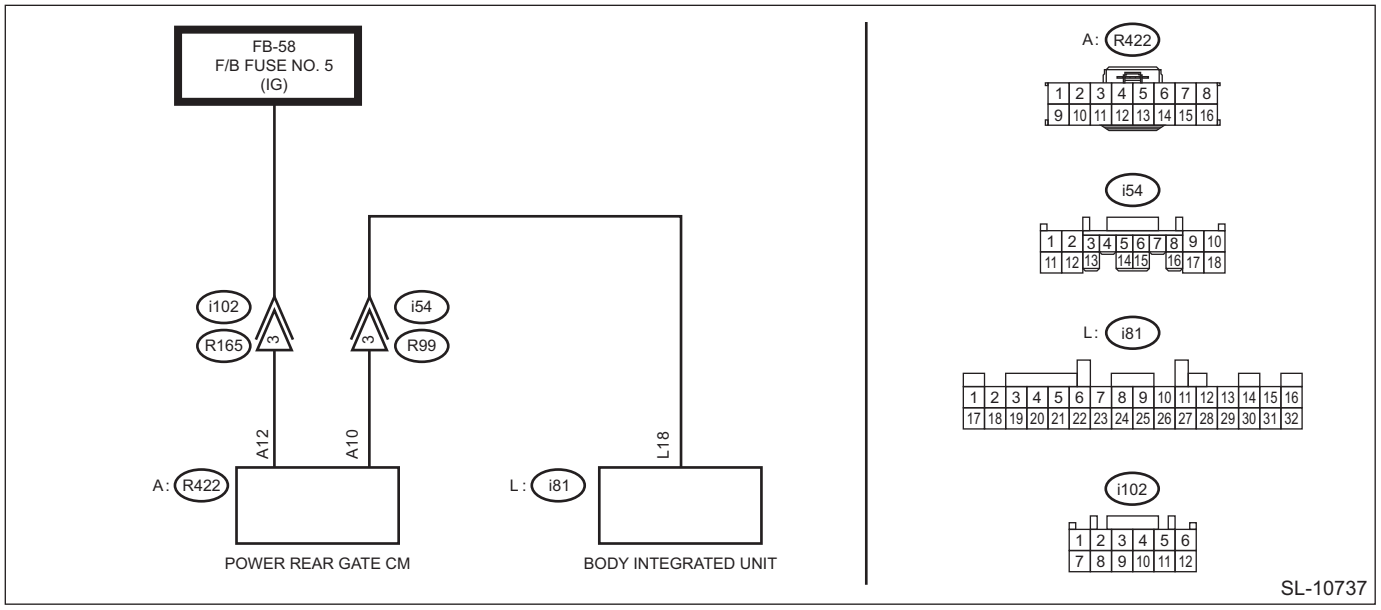
DTC DETECTING CONDITION:
Abrupt drop in the rear gate has been detected after PRG operation stopped.
TROUBLE SYMPTOM:
Does not hold at the full-open position.

	Step	Check	Yes	No
1	**CHECK REAR GATE CONDITION.** Check the rear gate.	Is there any non genuine parts equipped to the rear gate? Or does it have foreign objects such as snow?	Remove non genuine parts or foreign objects. Go to step **2**.	Go to step **2**.
2	**CHECK REAR GATE.** Hold the rear gate at the fully open position.	Does it hold at the fully open position?	Go to step **3**.	Replace the rear gate damper stay. <Ref. to EB-58, REAR GATE DAMPER STAY, REMOVAL, Rear Gate.>

Step		Check	Yes	No
3	**CHECK PRG CM.** 1) Close the rear gate fully. 2) Press the operation switch to perform the auto-open operation to a full open position. 3) Repeat the auto-open operation at least three times. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2512 displayed? (Current malfunction)	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B2513 LATCH CONDITION

DTC detecting condition:
When the status of power rear gate auto closer changes differently from normal condition.
Trouble symptom:
Auto-operation does not function.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>



Step		Check	Yes	No
1	**CHECK REAR GATE.** Visually inspect the rear gate.	Is it free from any foreign matters caught in and installed without misalignment?	Go to step **2**.	Remove the foreign matters. Adjust the alignment.

	Step	Check	Yes	No
2	**CHECK PRG AUTO CLOSER.** 1) Close the rear gate fully. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422). 3) Disconnect the PRG auto closer connector. 4) Check the continuity between PRG auto closer connectors. ***Terminals*** ***No. 5 — No. 4 (latch switch):*** ***No. 3 — No. 4 (courtesy switch):*** ***No. 6 — No. 4 (sector switch):***	Is the continuity condition as follows? Latch switch: No continuity Courtesy switch: No continuity Sector switch: Continuity present	Go to step **3**.	Replace the PRG auto closer. <Ref. to PRG-13, Power Rear Gate Auto Closer.>
3	**CHECK PRG AUTO CLOSER.** 1) Connect the disconnected connectors. Connect the PRG CM connector in the order of (R422) → (R423). 2) Press the operation switch to perform the auto-open operation to a full open position. 3) Disconnect the PRG CM connectors in the order of (R423) → (R422). 4) Disconnect the PRG auto closer connector. 5) Check the continuity between PRG auto closer connectors. ***Terminals*** ***No. 5 — No. 4 (latch switch):*** ***No. 3 — No. 4 (courtesy switch):*** ***No. 6 — No. 4 (sector switch):***	Is the continuity condition as follows? Latch switch: Continuity present Courtesy switch: Continuity present Sector switch: Continuity present	Go to step **4**.	Replace the PRG auto closer. <Ref. to PRG-13, Power Rear Gate Auto Closer.>
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 3 — Chassis ground:*** ***(R422) No. 4 — Chassis ground:*** ***(R422) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R422) No. 3 — (D153) No. 5:*** ***(R422) No. 4 — (D153) No. 3:*** ***(R422) No. 5 — (D153) No. 6:***	Is the resistance 10 Ω or less?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair or replace the open circuit of harness.

J: DTC B2514 IGNITION

DTC detecting condition:
When the LIN communication signal and direct line signal do not match.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Fully open the rear gate. 2) Turn the ignition switch to OFF. 3) Wait for five seconds or more. 4) Turn the ignition switch to ON. 5) Wait for five seconds or more. 6) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2514 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Check «Ignition Signal» and «IGN SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only 2 items to be checked at a time.	When the ignition switch is turned to ON/OFF, are these two data synchronized?	Go to step **3**.	When «Ignition Signal» is not synchronized: Go to step **4**. When «IGN SW» is not synchronized: Go to step **8**.

	Step	Check	Yes	No
3	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
4	**CHECK CURRENT DATA.** Check the current data «Voltage of IGN» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-24, Read Current Data.>	When the ignition switch is turned to ON/OFF, does the value change? (At ON: 10 — 15 V)	Go to step **5**.	Check the body control system. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the body integrated unit connector. 3) Measure the resistance between PRG CM connector and body integrated unit. ***Connector & terminal*** ***(i81) No. 18 — (R422) No. 10:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS (SHORT CIRCUIT IN LIN COMMUNICATION LINE).** 1) Turn the ignition switch to ON. 2) Measure the voltage between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **8**.	Repair or replace the short circuit of the harness.
8	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

K: DTC B2515 LATCH SW

NOTE:
For the diagnostic procedure, refer to DTC B2513. <Ref. to PRG(diag)-30, DTC B2513 LATCH CONDITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B2516 SECTOR SW

DTC detecting condition:
Change of sector SW cannot be detected.
Trouble symptom:
Auto-operation does not function.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the operation switch, fully open the power rear gate. 2) Turn the ignition switch to ON. 3) Check «SECTOR SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the «SECTOR SW» indicate ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK SECTOR SW.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422). 3) Disconnect the PRG auto closer connector. 4) Check the sector SW. <Ref. to PRG-13, INSPECTION, Power Rear Gate Auto Closer.>	Is the check result OK?	Go to step **3**.	Replace the PRG auto closer. <Ref. to PRG-13, Power Rear Gate Auto Closer.>

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 5 — Chassis ground:*** ***(R422) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK PRG CM (OPEN CIRCUIT).** Measure the resistance between PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R422) No. 5 — (D153) No. 6:***	Is the resistance 10 Ω or less?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair or replace the open circuit of harness.

M: DTC B2517 COURTESY SW

NOTE:
For the diagnostic procedure, refer to DTC B2513. <Ref. to PRG(diag)-30, DTC B2513 LATCH CONDITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B2519 POWER +B OPEN

DTC detecting condition:
When power supply malfunction is detected in power system.
Trouble symptom:
When SW is operated, buzzer sounds and PRG auto-operation does not function.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2519 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PRG-5, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.
4	**CHECK HARNESS.** 1) Disconnect the PRG CM connector (R423). 2) Using a tester, measure the voltage between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 1 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connector (R423).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

O: DTC B251A LIN CONNECTION NO-RECEIVE DATA

DTC DETECTING CONDITION:
When LIN communication failure is detected for two seconds or more.
TROUBLE SYMPTOM:
The power rear gate does not operate.

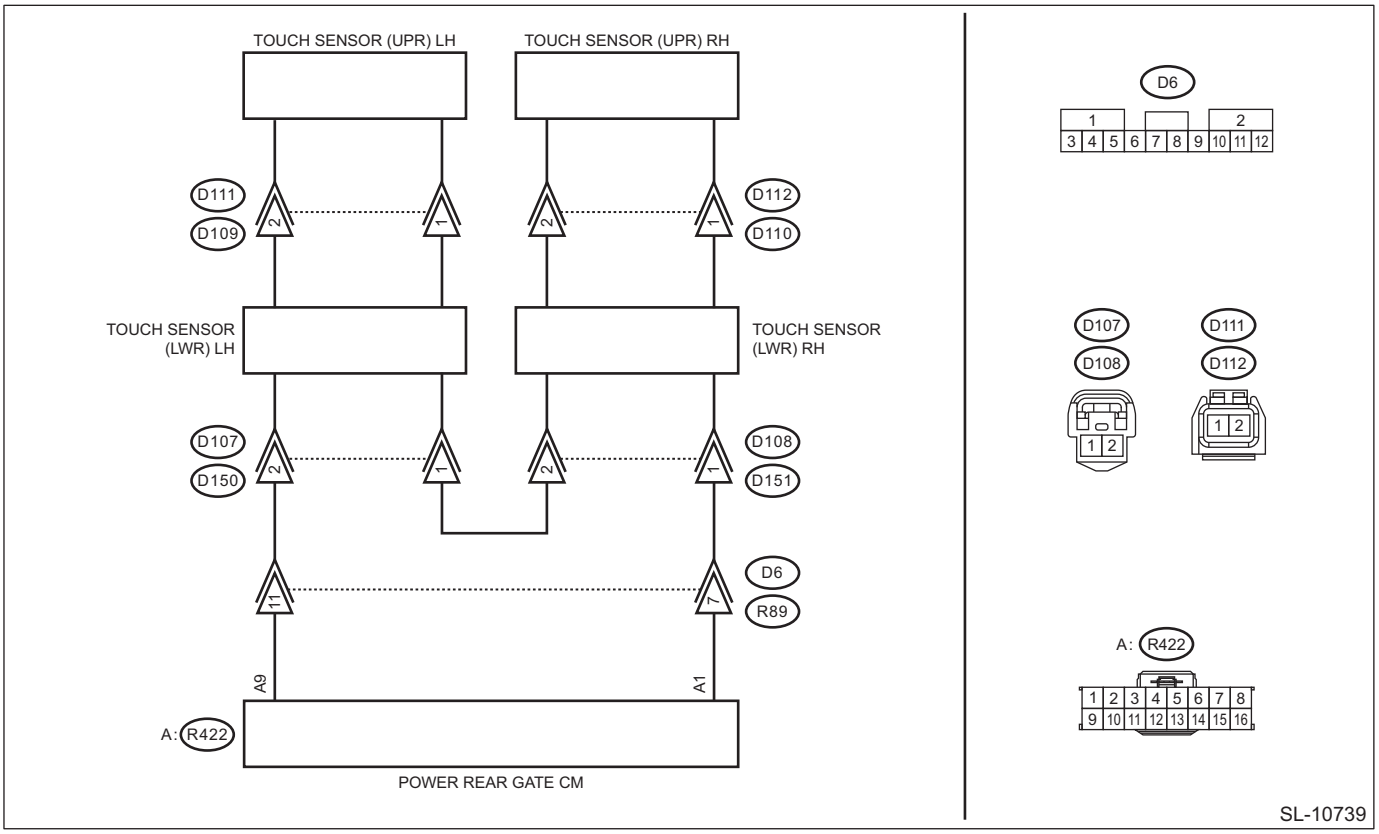
NOTE:
For diagnostic procedures, refer to DTC U0230 in BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-74, DTC U0230 LOST COMMUNICATION WITH POWER REAR GATE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC B251B LIN CONNECTION BUS PHYSICAL

DTC DETECTING CONDITION:
When LIN communication failure is detected.
TROUBLE SYMPTOM:
The power rear gate does not operate.

NOTE:
For diagnostic procedures, refer to DTC U1673 in BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-78, DTC U1673 LIN COMMUNICATION BUS ERROR BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC B2522 EEPROM



DTC DETECTING CONDITION:
When failure in PRG CM is detected.
TROUBLE SYMPTOM:
The memorized half-stop position is reset, and returned to the default setting.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Close all doors of the vehicle. 2) Turn the ignition switch to OFF. 3) Wait for one minute or more. 4) Turn the ignition switch to ON. 5) Repeat procedures from 1) to 4) at least three times. 6) Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B2522 displayed? (Current malfunction)	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

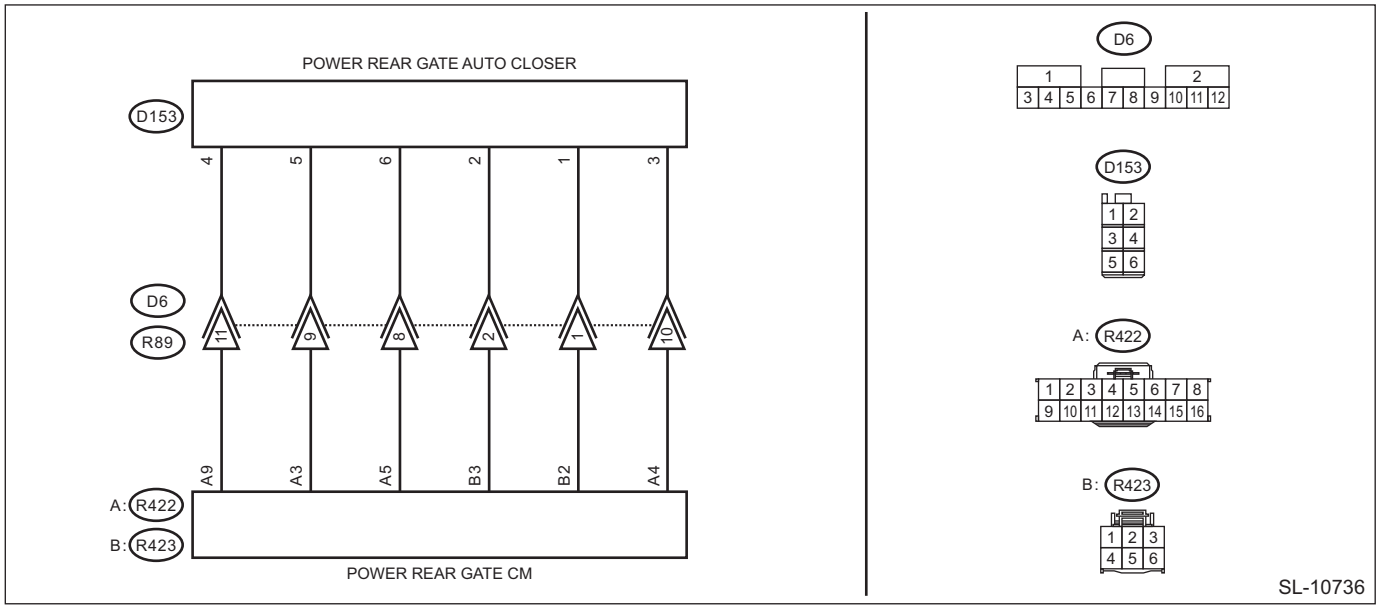
R: DTC B2524 TOUCH SENSOR CIRCUIT/OPEN

DTC detecting condition:
When malfunction in the touch sensor is detected.
Trouble symptom:
The power rear gate does not operate.
Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK TOUCH SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the touch sensor (LWR) RH / (LWR) LH connectors. 3) Measure the resistance between the touch sensor (LWR) RH / (LWR) LH connectors. ***Connector & terminal*** ***(D108) No. 1 — (D108) No. 2:*** ***(D107) No. 1 — (D107) No. 2:***	Is the resistance 2 kΩ or less while the sensor is touched, and approx. 10 kΩ when not touched?	Go to step **6**.	Go to step **2**.
2	**CHECK TOUCH SENSOR (UPR).** 1) Disconnect the touch sensor (UPR) RH / (UPR) LH connectors. 2) Measure the resistance between the touch sensor (UPR) RH / (UPR) LH connectors. ***Connector & terminal*** ***(D112) No. 1 — (D112) No. 2:*** ***(D111) No. 1 — (D111) No. 2:***	Is the resistance 2 kΩ or less while the sensor is touched, and approx. 10 kΩ when not touched?	Go to step **3**.	Replace the touch sensor (UPR) RH / (UPR) LH. <Ref. to PRG-17, Power Rear Gate Touch Sensor.>
3	**CHECK TOUCH SENSOR (LWR).** Measure the resistance between the touch sensor (LWR) RH / (LWR) LH connectors. ***Connector & terminal*** ***(D110) No. 1 — (D108) No. 1:*** ***(D110) No. 2 — (D108) No. 2:*** ***(D109) No. 1 — (D107) No. 1:*** ***(D109) No. 2 — (D107) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the open sensor. <Ref. to PRG-17, Power Rear Gate Touch Sensor.>

	Step	Check	Yes	No
4	**CHECK TOUCH SENSOR (LWR).** Measure the resistance between the touch sensor (LWR) RH / (LWR) LH connectors. ***Connector & terminal*** ***(D109) No. 1 — (D107) No. 2:*** ***(D109) No. 2 — (D107) No. 1:*** ***(D110) No. 1 — (D108) No. 2:*** ***(D110) No. 2 — (D108) No. 1:*** ***(D109) No. 1 — Chassis ground:*** ***(D109) No. 2 — Chassis ground:*** ***(D110) No. 1 — Chassis ground:*** ***(D110) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit to power supply of the harness.
5	**CHECK CONNECTOR.** Check the connector of each sensor.	Is there poor contact of connector?	Replace the defective sensor. <Ref. to PRG-17, Power Rear Gate Touch Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Measure the resistance between PRG CM connector and touch sensor connector. ***Connector & terminal*** ***(R422) No. 1 — (D151) No. 1:*** ***(R422) No. 9 — (D150) No. 2:*** ***(D150) No. 1 — (D151) No. 2:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (SHORT CIRCUIT).** Measure the resistance between PRG CM connector and touch sensor connector or chassis ground. ***Connector & terminal*** ***(R422) No. 1 — (D151) No. 2:*** ***(R422) No. 9 — (D151) No. 2:*** ***(R422) No. 1 — (R422) No. 9:*** ***(R422) No. 1 — Chassis ground:*** ***(R422) No. 9 — Chassis ground:*** ***(D150) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair or replace the short circuit of the harness.



Step		Check	Yes	No
8	**CHECK CONNECTOR.** Check each connector.	Is there poor contact of connector?	Replace the defective sensor or module.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

S: DTC B2525 ROTATION SENSOR POWER SUPPLY

NOTE:
For the diagnostic procedure, refer to DTC B250B. <Ref. to PRG(diag)-21, DTC B250B ROTATION SENSOR A STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC B2526 AUTO CLOSER MOTOR CIRCUIT OPEN

DTC detecting condition:
When malfunction in the power rear gate auto closer is detected.
Trouble symptom:
The pull-in/release operation of closer is not possible.
Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CLOSER UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connectors in the order of (R423) → (R422). 3) Disconnect the PRG auto closer connector. 4) Perform the operation check for the PRG auto closer motor. <Ref. to PRG-13, INSPECTION, Power Rear Gate Auto Closer.>	Is the check result OK?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R423) No. 2 — (D153) No. 1:*** ***(R423) No. 3 — (D153) No. 2:*** ***(R422) No. 9 — (D153) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 2 — Chassis ground:*** ***(R423) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

U: DTC B2527 AUTO CLOSER MOTOR CIRCUIT LOW

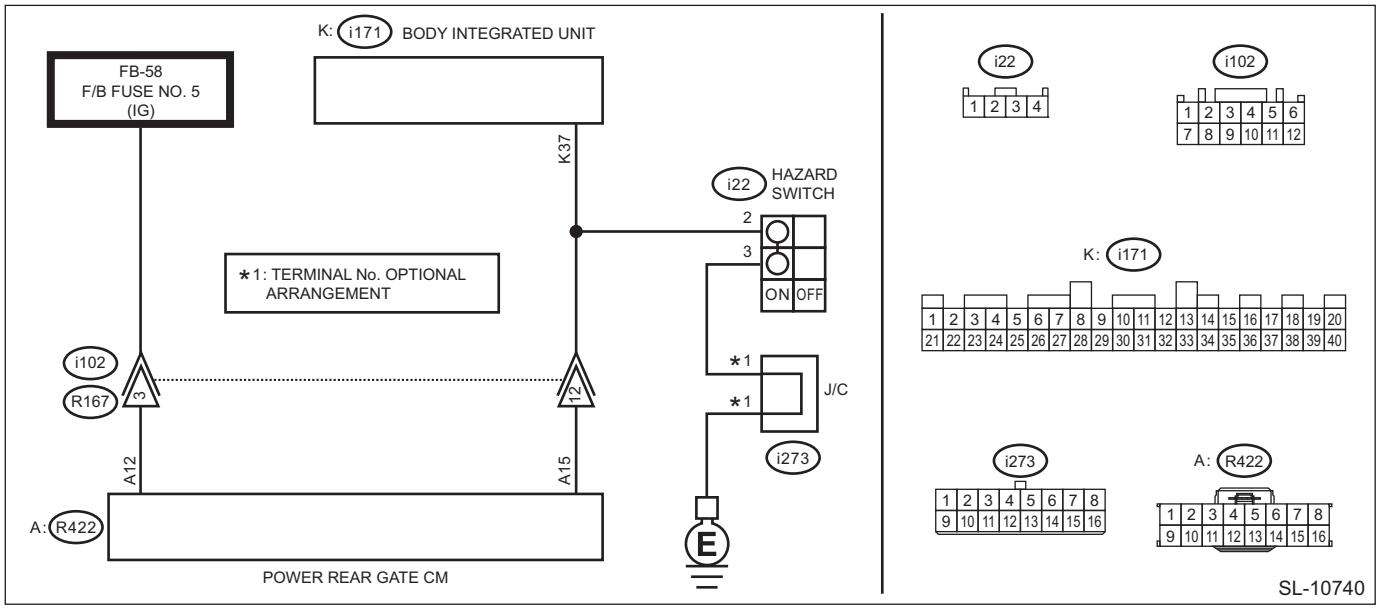
DTC DETECTING CONDITION:
When malfunction in the power rear gate auto closer is detected.
TROUBLE SYMPTOM:
The pull-in/release operation of closer is not possible.

NOTE:
For the diagnostic procedure, refer to DTC B2526. <Ref. to PRG(diag)-40, DTC B2526 AUTO CLOSER MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.General Diagnostic Table

A: INSPECTION

Symptoms	Note
Turn hazard lights do not illuminate	<Ref. to PRG(diag)-43, TURN HAZARD LIGHTS DO NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
The buzzer does not sound	<Ref. to PRG(diag)-44, THE BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Operation by the PRG driver's SW is not possible	<Ref. to PRG(diag)-48, OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.>
Memory height SW does not function.	<Ref. to PRG(diag)-45, CHECK MEMORY HEIGHT SW INPUT CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
PRG inner SW does not function	<Ref. to PRG(diag)-49, PRG INNER SW DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
PRG position cannot be memorized. Does not stop at a height registered in memory.	<Ref. to PRG(diag)-47, PRG POSITION CANNOT BE MEMORIZED, INSPECTION, Diagnostics with Phenomenon.>
PRG opener button does not function	<Ref. to PRG(diag)-47, PRG OPENER BUTTON DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Operation from keyless/keyless access mobile key is not possible.	<Ref. to PRG(diag)-47, OPERATION FROM KEYLESS/KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.>
PRG does not operate. Only operate in either auto-open or close operation.	<Ref. to PRG(diag)-50, PRG DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>



13.Diagnostics with Phenomenon

A: INSPECTION

1. TURN HAZARD LIGHTS DO NOT ILLUMINATE

Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT.** Check the hazard light illumination using the following procedures. • Turn the hazard switch to ON. • Perform lock/unlock operation using keyless key / access key.	Does the hazard light illuminate?	Go to step **2**.	Perform diagnosis for the body integrated unit. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK PRG CM.** 1) Unlock the vehicle. 2) Turn the ignition switch to ON. 3) Press and hold the power rear gate driver's switch to activate the power rear gate auto operation.	Does the hazard light illuminate during the power rear gate operation?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Disconnect the PRG CM connectors in the order of (R423) → (R422). 4) Measure the resistance between body integrated unit connector and PRG CM connector. ***Connector & terminal*** ***(R422) No. 15 — (i171) No. 37:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

2. THE BUZZER DOES NOT SOUND

Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CUSTOMIZATION SETTINGS.** Check the current data «Answer-Back Buzzer Information» of power rear gate using Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Is it ON?	Go to step **2**. (Buzzer sounds)	Go to step **3**. (Buzzer stops)
2	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) From full close position or full open position, press and hold the power rear gate driver's switch to open/close the power rear gate.	Does the buzzer sound during the auto operation?	System is normal.	Go to step **3**.

Step		Check	Yes	No
3	**CHECK FUNCTION.** 1) From the full open position, push the rear gate inner switch to perform the power rear gate auto close operation. 2) During the power rear gate auto close operation, press the sensor unit of the touch sensor to perform the reverse operation. NOTE: During the power rear gate reverse operation, beeping sound (warning sound) is made.	Does the buzzer sound?	System is normal.	Go to step **4**.
4	**CHECK CURRENT DATA.** 1) Check the current data «BUZZER» of power rear gate using Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.> 2) From the full open position, push the rear gate inner switch to perform the power rear gate auto close operation. 3) During the power rear gate auto close operation, press the sensor unit of the touch sensor to perform the reverse operation.	Is the change of ON ←→ OFF detected?	Go to step **5**.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>
5	**CHECK HARNESS.** 1) Disconnect the power rear gate buzzer connector. 2) Using an oscilloscope, measure the voltage between power rear gate buzzer connector and chassis ground. 3) From the full open position, push the rear gate inner switch to perform the power rear gate auto close operation. 4) During the power rear gate auto close operation, press the sensor unit of the touch sensor to perform the reverse operation. ***Connector & terminal*** ***(D152) No. 1 (+) — Chassis ground (–):***	Does the voltage waveform temporarily change between ON and OFF during the power rear gate reverse operation?	Replace the power rear gate buzzer. <Ref. to PRG-19, Power Rear Gate Buzzer.>	Go to step **6**.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R424). 2) Measure the resistance between PRG CM connector and power rear gate buzzer connector. ***Connector & terminal*** ***(R424) No. 5 — (D152) No. 2:*** ***(R424) No. 6 — (D152) No. 1:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Connect the power rear gate buzzer connector. 2) Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R424) No. 5 — Chassis ground:*** ***(R424) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

3. CHECK MEMORY HEIGHT SW INPUT CIRCUIT

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.
Wiring diagram:

Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Check «Memory stop SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between OFF ←→ ON according to memory height SW operation?	Input circuit is normal.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the memory height SW connector. 3) Measure the resistance between PRG CM connector and memory height SW connector. ***Connector & terminal*** ***(R422) No. 8 — (i93) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between memory height SW connector and chassis ground. ***Connector & terminal*** ***(i93) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK MEMORY HEIGHT SW.** Measure the resistance between switch terminals. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance 1 MΩ or more at OFF, and less than 1 Ω at ON?	Go to step **6**.	Replace the memory height SW. <Ref. to PRG-23, Memory Height Switch.>
6	**CHECK CONNECTOR.**	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

4. PRG POSITION CANNOT BE MEMORIZED

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

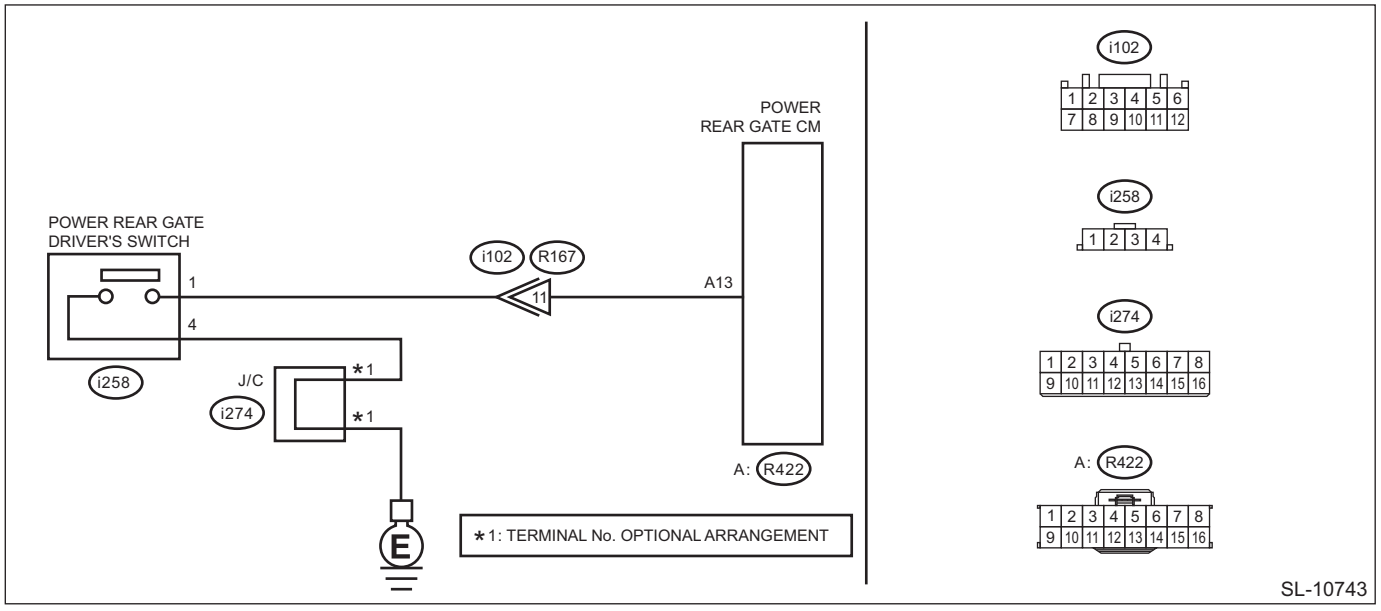
	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK MEMORY HEIGHT SW.**	Is the memory height SW ON?	Go to step **3**.	Set the memory height SW to ON.
3	**CHECK EACH SW.** Perform inspections described in "PRG INNER SW DOES NOT FUNCTION" and "CHECK MEMORY HEIGHT SW INPUT CIRCUIT". <Ref. to PRG(diag)-49, PRG INNER SW DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-45, CHECK MEMORY HEIGHT SW INPUT CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>	Is the check result OK?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair it according to each inspection.

5. PRG OPENER BUTTON DOES NOT FUNCTION

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Check «R/G Open SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between "OFF" "tap" "press and hold" according to PRG opener button operation?	Switch input signal is normal.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** • For models with keyless access Perform STEP 6 and subsequent procedures in "CANNOT UNLOCK WITH THE REAR GATE OPENER BUTTON" in KPS (DIAGNOSTICS). <Ref. to KPS(diag)-126, REAR GATE CANNOT BE UNLOCKED WITH THE REAR GATE OPENER BUTTON, INSPECTION, Diagnostics with Phenomenon.> • For models without keyless access Perform "CHECK REAR GATE OPENER BUTTON CIRCUIT" in Door Lock Control System. <Ref. to SL-15, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>	Is the check result OK?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair it according to each inspection.

6. OPERATION FROM KEYLESS/KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE



NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of PRG CM. <Ref. to PRG(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Check «Normal Keyless R/G SW» or «Smart Keyless R/G SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between "OFF" "tap" "press and hold" according to mobile key SW operation?	Switch input signal is normal.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** • For models with keyless access Perform "KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS" in KPS (DIAGNOSTICS). <Ref. to KPS(diag)-110, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.> • For models without keyless access Perform "NONE OF THE FUNCTIONS OF THE KEYLESS ENTRY SYSTEM OPERATE" in Door Lock Control System. <Ref. to SL-18, SYMPTOM CHART, INSPECTION, Keyless Entry System.>	Is the check result OK?	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>	Repair it according to each inspection.

7. OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Check «D SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between OFF ←→ ON according to PRG driver's SW operation?	Input circuit is normal.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the power rear gate driver's SW connector. 3) Measure the resistance between PRG CM connector and power rear gate driver's SW connector. ***Connector & terminal*** ***(R422) No. 13 — (i258) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between power rear gate driver's SW connector and chassis ground. ***Connector & terminal*** ***(i258) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK POWER REAR GATE DRIVER'S SW.** Measure the resistance between switch terminals. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance 1 MΩ or more at OFF, and less than 1 Ω at ON?	Go to step **6**.	Replace the memory height SW. <Ref. to PRG-23, Memory Height Switch.>
6	**CHECK CONNECTOR.**	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

8. PRG INNER SW DOES NOT FUNCTION

NOTE:
Before performing diagnosis, initialize PRG SYS by opening PRG in manual operation, and then operating the power rear gate auto closer from the partially latched state.

Wiring diagram:
Power rear gate system <Ref. to WI-309, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Check «R/G inner SW» using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display switch between OFF ←→ ON according to PRG inner SW operation?	Input circuit is normal.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the PRG CM connectors in the order of (R423) → (R422). 2) Disconnect the PRG inner SW connector. 3) Measure the resistance between PRG CM connector and PRG inner SW connector. ***Connector & terminal*** ***(R422) No. 6 — (D154) No. 1:*** ***(R422) No. 9 — (D154) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK PRG INNER SW.** Measure the resistance between switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more at OFF, and less than 1 Ω at ON?	Go to step **5**.	Replace the PRG inner SW. <Ref. to PRG-20, Power Rear Gate Inner Switch.>
5	**CHECK CONNECTOR.**	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

9. PRG DOES NOT OPERATE

NOTE:
When confirming the current data, display only the affected items to be checked. When the display items are too many, changes in the signals will not be reflected.

	Step	Check	Yes	No
1	**CHECK VEHICLE SPEED.** 1) Turn the ignition switch to ON. 2) Check «Front Wheel Speed» of the PRG CM using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Is the reading 0 km/h?	Go to step **2**.	VDC <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>, and the body integrated unit <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> must be checked, and if no fault is found, replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>

	Step	Check	Yes	No
2	**CHECK PARKING CONDITION.** Using the Subaru Select Monitor, check «P range SW» or «EPB operating status» for PRG CM. <Ref. to PRG(diag)-13, Read Current Data.>	Does «P range SW» indicate «ON» when the shift lever is in P position?	Go to step **3**.	VDC <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>, and the body integrated unit <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> must be checked, and if no fault is found, replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>
3	**CHECK R/G OPEN PERMISSION CONDITIONS.** Using the Subaru Select Monitor, check «R/G Open Authorized State» for the PRG CM. <Ref. to PRG(diag)-13, Read Current Data.> When the vehicle is in locked state: No permission When the vehicle is in unlocked state: Permission	Does display show as described on left at vehicle locked/unlocked state?	Go to step **4**.	Body integrated unit <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> must be checked, and if no fault is found, replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>
4	**CHECK Auto Start Stop STATUS.** Using the Subaru Select Monitor, check «Idle Stop Control» for the PRG CM. <Ref. to PRG(diag)-13, Read Current Data.>	Is «Idle Stop Uncontrol» displayed while not controlling the idling stop?	Go to step **5**.	Replace the PRG CM. <Ref. to PRG-7, Power Rear Gate Control Module.>
5	**CHECK TOUCH SENSOR CONDITIONS.** Check «TOUCH SENSOR» for the PRG CM using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Does the display change as ON ←→ OFF along with the ON/OFF operation of the touch sensor?	Go to step **6**.	Check the touch sensor with reference to DTC B2524. <Ref. to PRG(diag)-37, DTC B2524 TOUCH SENSOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
6	**CHECK LATCH CONDITIONS.** Using the Subaru Select Monitor, check «COURTESY SW» «LATCH SW» «SECTOR SW» for PRG CM. <Ref. to PRG(diag)-13, Read Current Data.> • Rear gate open state «COURTESY SW»: ON «LATCH SW»: ON «SECTOR SW»: ON • Rear gate closed state «COURTESY SW»: OFF «LATCH SW»: OFF «SECTOR SW»: ON	In a rear gate open/closed state, does the display indicate each combination of values described on the left?	Go to step **7**.	Check the closer with reference to DTC B2513. <Ref. to PRG(diag)-30, DTC B2513 LATCH CONDITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Step		Check	Yes	No
7	**CHECK PRG CM POWER SUPPLY.** Check «+ B» for the PRG CM using the Subaru Select Monitor. <Ref. to PRG(diag)-13, Read Current Data.>	Is the voltage 9 — 16 V?	Go to step **8**.	Check the power supply with reference to DTC B2500. <Ref. to PRG(diag)-17, DTC B2500 BATTERY POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Step		Check	Yes	No
8	**CHECK SW INPUT.** From a rear gate fully closed or fully open state, perform auto operation using the following operation switches. • Power rear gate driver's switch • Rear gate opener button • Power rear gate inner switch • Rear gate / trunk SW (keyless transmitter or access key)	Is the check result OK?	Currently, system is normal. Operation conditions are not met temporarily.	Perform inspection with reference to "OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE", "PRG INNER SW DOES NOT FUNCTION", "PRG OPENER BUTTON DOES NOT FUNCTION", "OPERATION FROM KEYLESS/ KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE". <Ref. to PRG(diag)-48, OPERATION BY THE PRG DRIVER'S SW IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-49, PRG INNER SW DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-47, PRG OPENER BUTTON DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.> <Ref. to PRG(diag)-47, OPERATION FROM KEYLESS/ KEYLESS ACCESS MOBILE KEY IS NOT POSSIBLE, INSPECTION, Diagnostics with Phenomenon.>

CRUISE CONTROL SYSTEM

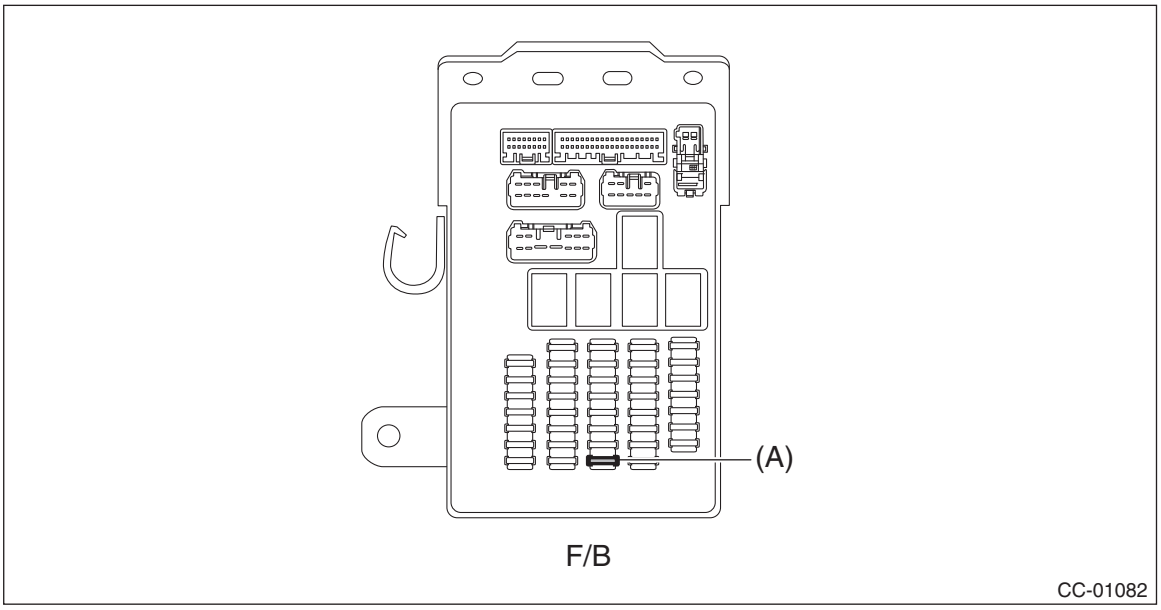
1. General Description

A: LOCATION

Refer to “LOCATION” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-6, LOCATION, Electrical Component Location.>

B: CAUTION



• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 7.5 A (stop light and brake switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Cruise Control System

A: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-161, WIRING DIAGRAM, Cruise Control System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to CC(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For operation procedures of each component of the cruise control system, refer to the respective section.

- Control module

NOTE:
System control of the cruise control is performed by each module. For procedure, refer to the following sections.

  - Engine control module (ECM)
    - H4 model: <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>
    - H6 model: <Ref. to FU(H6DO)-83, Engine Control Module (ECM).>
  - Transmission control module (TCM)
    - H4 model: <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>
    - H6 model: <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>
- Cruise control command switch: <Ref. to CC-6, Cruise Control Command Switch.>
- Combination meter: <Ref. to IDI-11, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-70, Stop Light Switch.>
- Inhibitor switch
  - H4 model: <Ref. to CVT(TR580)-107, Inhibitor Switch.>
  - H6 model: <Ref. to CVT(TR690)-105, Inhibitor Switch.>

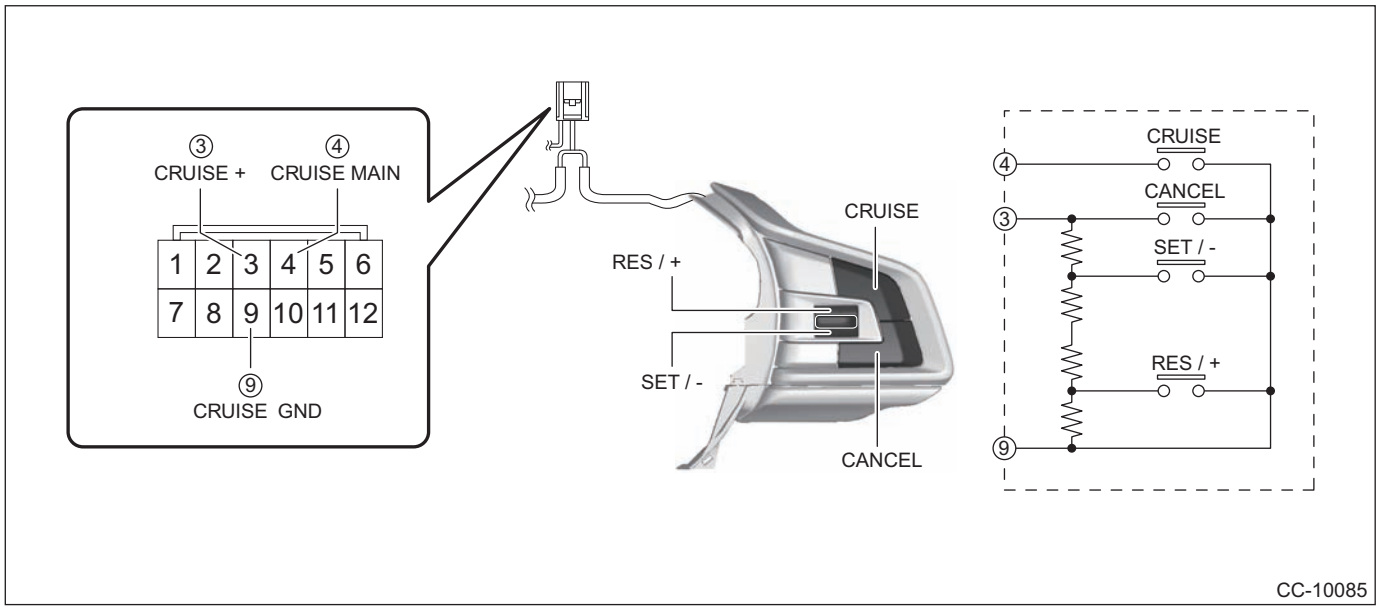
4. Control Unit

A: NOTE

System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM)
  - H4 model: <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>
  - H6 model: <Ref. to FU(H6DO)-83, Engine Control Module (ECM).>
- Transmission control module (TCM)
  - H4 model: <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>
  - H6 model: <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

5. Cruise Control Command Switch



A: NOTE

For the operation procedures for the cruise control command switch, refer to “EyeSight” section. <Ref. to ES-32, Switches and Harness.>

B: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	CANCEL SET/– RES/+	All OFF	Approx. 4,020 Ω
	CANCEL	ON	Less than 1 Ω
	SET/–	ON	Approx. 250 Ω
	RES/+	ON	Approx. 1,470 Ω
4 — 9	CRUISE (MAIN)	OFF	3 MΩ or more
		ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) Replace the cruise control command switch assembly if it is found defective.

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-11, Combination Meter.>

7. Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-70, Stop Light Switch.>

8. Inhibitor Switch

A: NOTE

For the operation procedures for inhibitor switch, refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-107, Inhibitor Switch.>
- H6 model: <Ref. to CVT(TR690)-105, Inhibitor Switch.>

9. Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>
- H6 model: <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

10.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-11, Diagnostics with Phenomenon.>

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

		Page
1.	Basic Diagnostic Procedure	2
2.	General Description	5
3.	Electrical Component Location	6
4.	Engine Control Module (ECM) I/O Signal	7
5.	Subaru Select Monitor	8
6.	Read Cancel Code	9
7.	Real-time Diagnosis	10
8.	Diagnostics with Phenomenon	11
9.	List of Cancel Code	13
10.	Diagnostic Procedure with Cancel Code	16

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• When performing diagnosis, observe the legal speed limit on the road.
• The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
• Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

	Step	Check	Yes	No
1	**CHECK MALFUNCTION INDICATOR LIGHT.** Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step **5**.	Go to step **2**.
2	**CHECK CRUISE INDICATOR LIGHT.** Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step **7**.	Go to step **3**.
3	**CHECK CRUISE SWITCH OPERATION.** Check the CRUISE switch operation. (Check the illumination of the CRUISE indicator.)	Is the CRUISE switch turned on? (Does the CRUISE indicator illuminate?)	Go to step **4**.	Go to phenomenon 1. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	**CHECK CRUISE CONTROL SET OPERATION.** Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step **8**.	Go to step **7**.
5	**CHECK DTC.** Read all DTCs using the Subaru Select Monitor.	Is an engine or ABS/VDC related DTC displayed?	Record the DTC. Go to step **6**.	Go to phenomenon 2. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.	Was the Freeze Frame Data or Information in Trouble State recorded?	Record the data. Perform the diagnosis according to the engine or ABS/VDC related DTC.	Perform the diagnosis according to the engine or ABS/VDC related DTC.
7	**CHECK CANCEL CODE.** Using the Subaru Select Monitor, read the cancel codes. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the cruise control command switch after the cruise control is deactivated. If the above is performed, the cancel code will be cleared.	Is it possible to read the cancel codes?	Perform the diagnosis according to the cancel code. <Ref. to CC(diag)-13, LIST, List of Cancel Code.>	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK SET INDICATOR.** Check the illumination of the SET indicator.	Does the SET indicator illuminate?	Go to step **9**.	Go to phenomenon 3. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	**CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.** Make sure the vehicle speed is held within set speed.	Is the vehicle speed kept within setting speed ±3 km/h (±2 MPH)? (Make sure that on a level road.)	Go to step **10**.	Go to phenomenon 4. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	**CHECK RES/+ OPERATION.** Check the RES/+ switch operation.	Does the vehicle speed increase or return to set speed after RES/+ switch has been pressed?	Go to step **11**.	Go to phenomenon 5. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK SET/– OPERATION.** Check the SET/– switch operation.	Does the vehicle speed decrease after SET/– switch has been pressed?	Go to step **12**.	Go to phenomenon 6. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	**CANCEL OPERATION CHECK.** Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step **13**.	Go to phenomenon 7. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step **14**.	Go to phenomenon 8. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
14	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step **15**.	Go to phenomenon 9. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
15	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

2. General Description

A: CAUTION

Airbag system wiring harness is routed near the cruise control command switch.

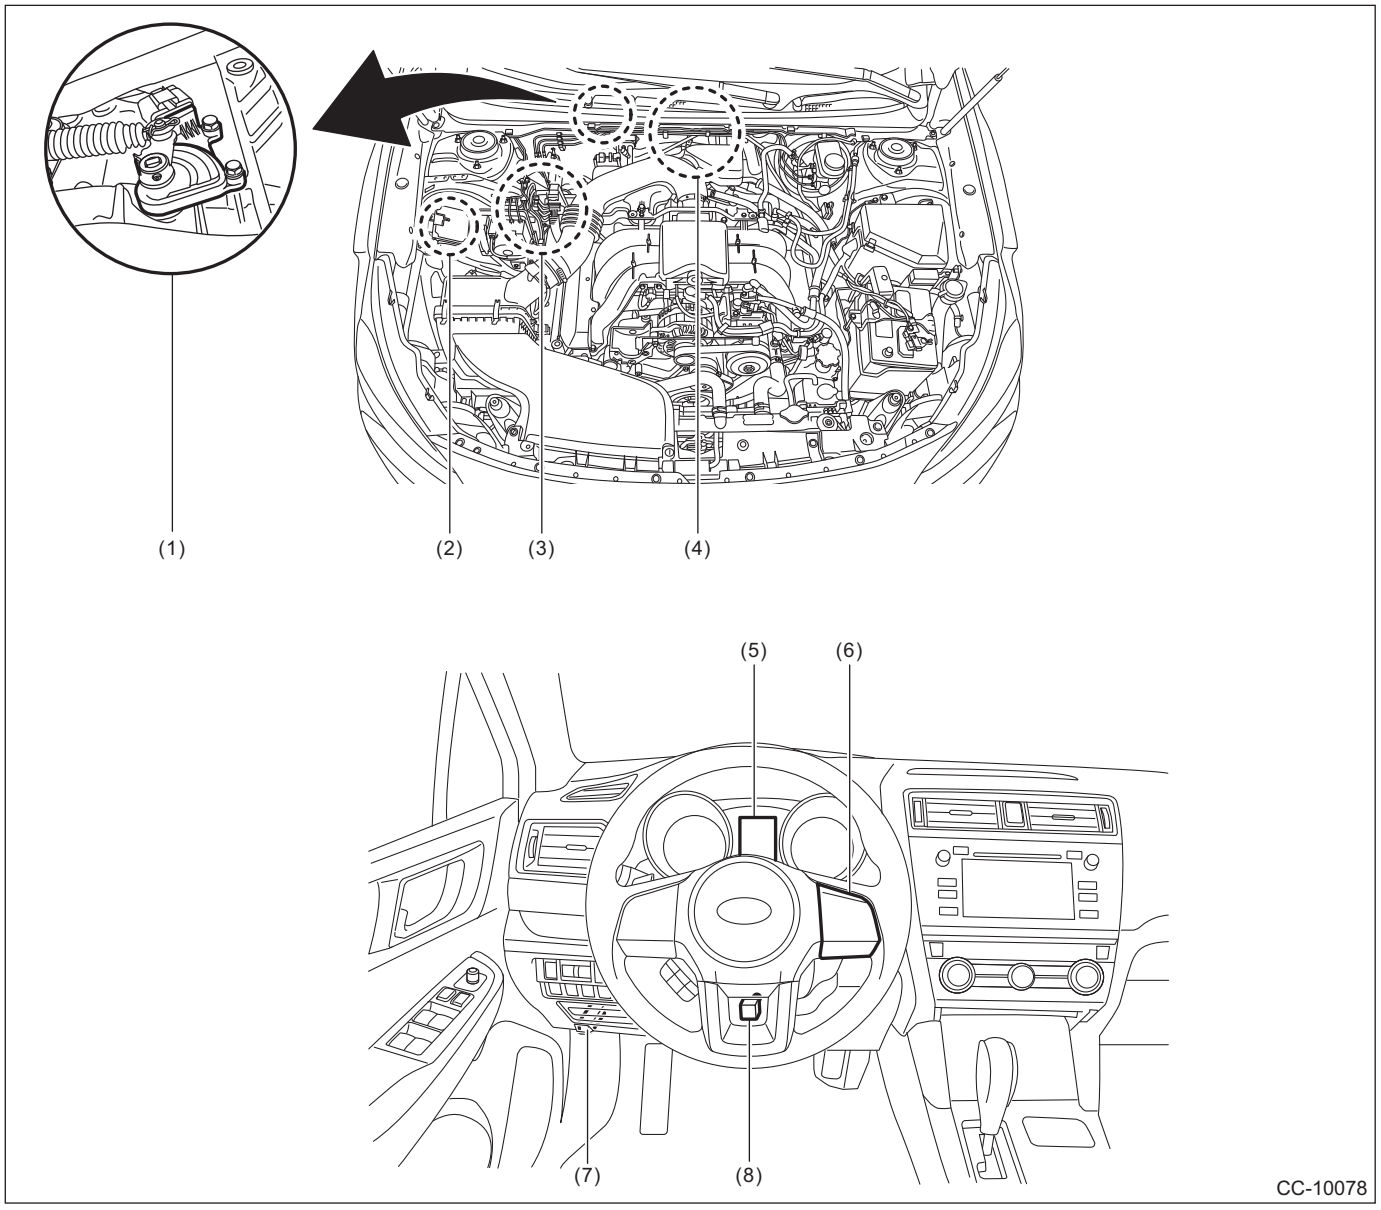
CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used for Subaru Select Monitor 4.

C: INSPECTION

Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>

3. Electrical Component Location

A: LOCATION

(1) Inhibitor switch
(2) TCM (engine type: EZ)
(3) ECM
(4) TCM (engine type: FB) (on the transmission)
(5) Cruise indicator light and cruise set indicator light
(6) Cruise control command switch
(7) Data link connector
(8) Stop light and brake switch

4. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H6DO)(diag)-22, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(H4DO)(diag)-21, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

B: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-161, WIRING DIAGRAM, Cruise Control System.>

5. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.
The on-board diagnosis function operates in two categories, which are used depending on the type of problems;
1) Cruise Control Cancel Conditions Diagnosis:
(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
(2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

CAUTION:
• In the cruise control memory, not only the cruise control "cancel" occurred (although the "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver is stored.
• The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.
2) Real-time Diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

For detailed operation procedures, refer to "Application help".

6. Read Cancel Code

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System».
5) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:
- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

6) When the set speed is cancelled by itself (when cancelled without a cancel operation such as applying the brake) or if the cruise control could not be set by performing the setting operation, selecting the «Cancel Code» on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

NOTE:
The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».
7) Perform Engine DTC Clear Memory operation. <Ref. to EN(H6DO)(diag)-96, Clear Memory Mode.> <Ref. to EN(H4DO)(diag)-90, Clear Memory Mode.>
Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:
- The latest code will be cleared by turning ignition switch to OFF.
- For detailed operation procedures, refer to “Application help”.
- For details on cancel codes, refer to List of Cancel Code. <Ref. to CC(diag)-13, List of Cancel Code.>

7. Real-time Diagnosis

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) On «Select Function» display, select «Data Monitor».
6) Make sure that normal display is shown when operated as follows:

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
- Turn the “CRUISE” switch to ON.
- Turn the “CANCEL” switch to ON.
- Turn the “SET/–” switch to ON.
- Turn the “RES/+” switch to ON.
- Depress or release the clutch switch.
- Place the shift lever in any position other than neutral.

NOTE:
For detailed operation procedures, refer to “Application help”.

8. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check Item	Note
1	CRUISE switch is not turned ON. (CRUISE indicator does not illuminate.) Or the cruise control is cancelled without CRUISE switch operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check the CRUISE indicator.	<Ref. to CC(diag)-11, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or cruise control is cancelled without releasing operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check stop light switch and brake switch.	<Ref. to BR-70, Stop Light Switch.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check the neutral position switch.	<Ref. to CC(diag)-19, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-23, 62, Diagnostic Procedure with Cancel Code.>
		(6) Check vehicle speed sensor.	<Ref. to CC(diag)-21, 22, Diagnostic Procedure with Cancel Code.>
3	SET indicator does not illuminate.	Check the SET indicator.	<Ref. to CC(diag)-11, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ±3 km/h (±2 MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-21, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the RES/+ switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
6	Vehicle speed does not decrease after SET/– switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the SET/– switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the CANCEL switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-70, INSTALLATION, Stop Light Switch.>
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the neutral position switch.	<Ref. to CC(diag)-19, 14, Diagnostic Procedure with Cancel Code.>

B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

TROUBLE SYMPTOM:

Cruise control can be set, but the CRUISE indicator and SET indicator do not illuminate.

	Step	Check	Yes	No
1	**CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.** Perform the combination meter operation check. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the CRUISE & SET indicators illuminate?	Go to step **2**.	Replace the meter case assembly. <Ref. to IDI-11, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to the diagnosis for LAN system.	Replace the ECM. <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>

9. List of Cancel Code

A: LIST

NOTE:
• The cancel code is registered even when cancel is performed intentionally by the driver.
• Cancel codes are cleared if the ignition switch is turned to OFF.
• If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
• If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
• To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

Cancel code	Item	Contents of diagnosis	Note
11	Main switch	CRUISE switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the CRUISE switch. <Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. <Ref. to CC(diag)-19, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This code is displayed without operating the cancel switch. <Ref. to CC(diag)-20, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition SW	Ignition switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the ignition switch. <Ref. to CC(diag)-20, 16, Diagnostic Procedure with Cancel Code.>
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-21, 21, Diagnostic Procedure with Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-21, 22, Diagnostic Procedure with Cancel Code.>

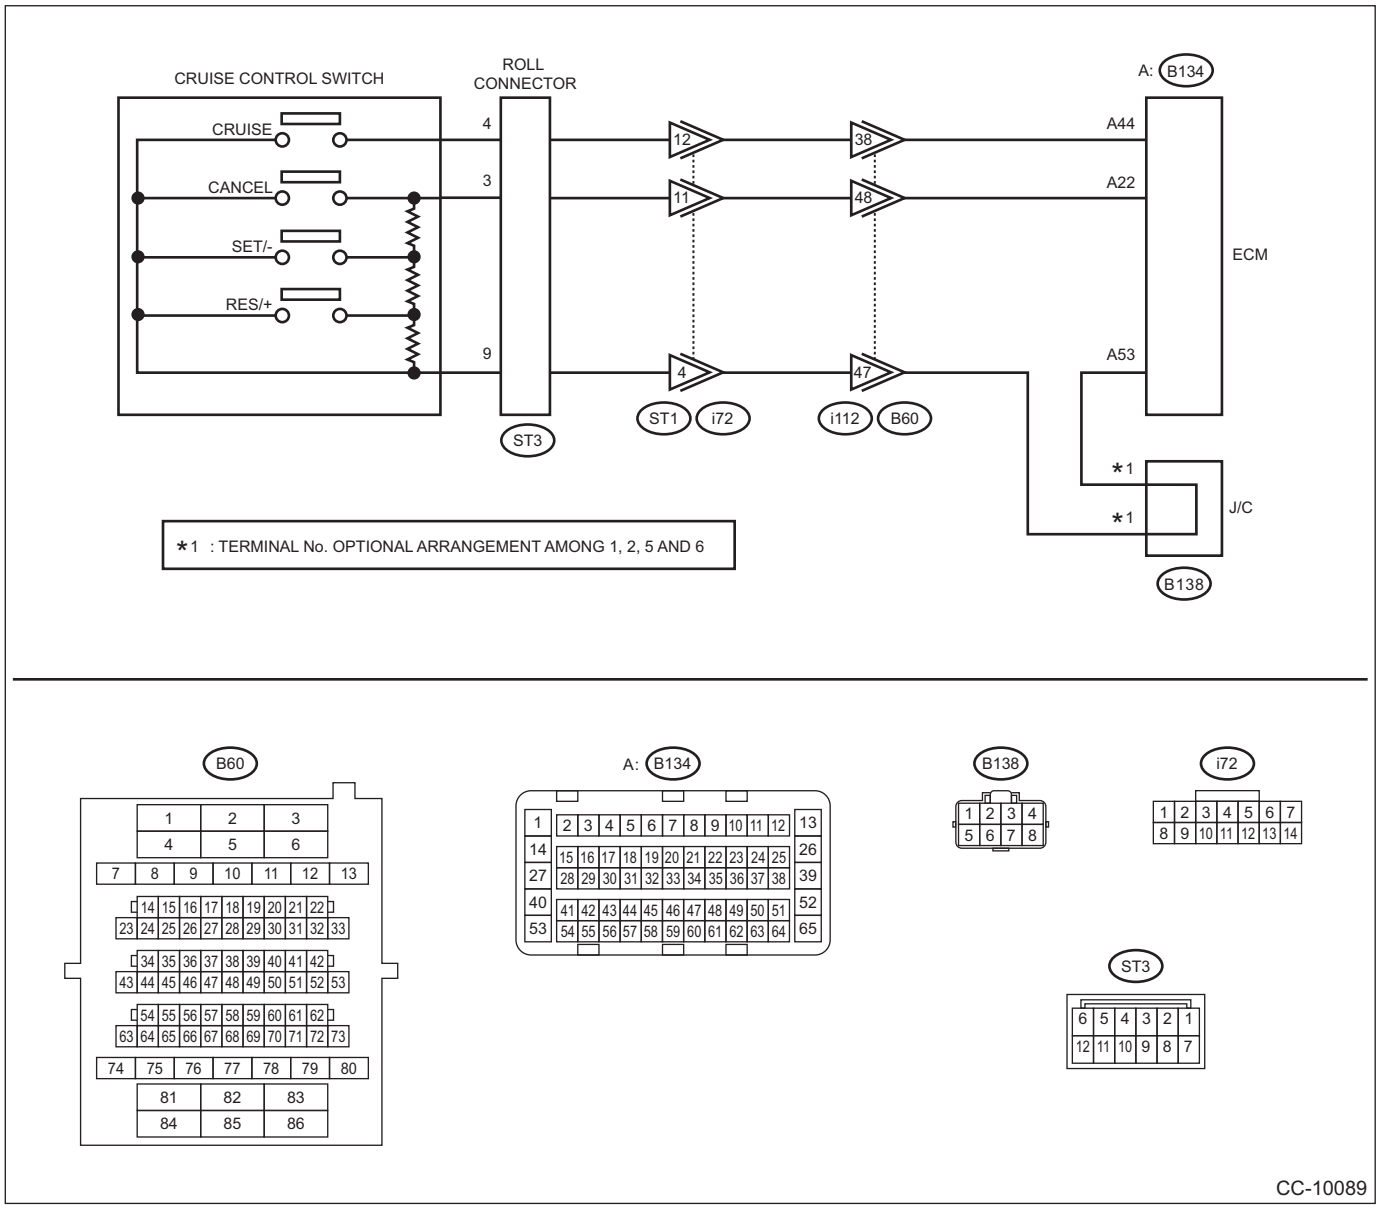
Cancel code	Item	Contents of diagnosis	Note
24	Abnormality of switches related to cruise control	Open circuit of the cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This code is displayed with normal operation. <Ref. to CC(diag)-22, 24, Diagnostic Procedure with Cancel Code.>
31	Abnormal engine speed Signal	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st (MT model only) or Reverse position.	Cruise in 2nd shift position or more. <Ref. to CC(diag)-22, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	• Controlled vehicle speed decreased under the limit during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed.	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-22, 32, Diagnostic Procedure with Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-22, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-22, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-22, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	ABS or Vehicle dynamics control (VDC) system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-22, 43, Diagnostic Procedure with Cancel Code.>
44	Body Integrated unit Failure	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-23, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-23, 45, Diagnostic Procedure with Cancel Code.>

List of Cancel Code

Cancel code	Item	Contents of diagnosis	Note
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-23, 49, Diagnostic Procedure with Cancel Code.>
61	Brake Switch Failure	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-23, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-23, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-23, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-23, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	<Ref. to CC(diag)-24, 66, Diagnostic Procedure with Cancel Code.>

10.Diagnostic Procedure with Cancel Code

A: 11



When CRUISE switch is pressed, or a malfunction related to CRUISE switch occurs, this is detected.

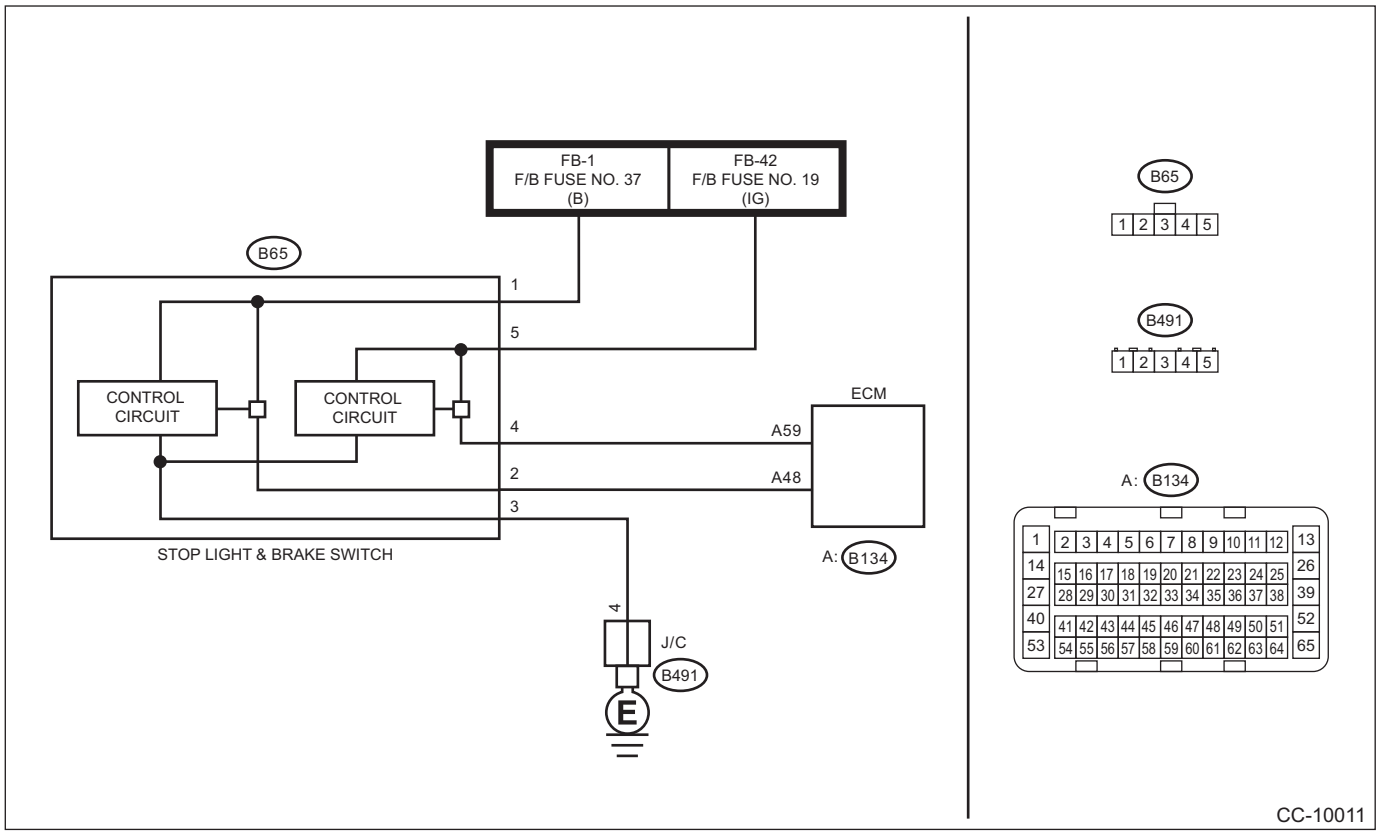
Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-161, WIRING DIAGRAM, Cruise Control System.>

	Step	Check	Yes	No
1	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 4 (+) — Chassis ground (–):*** ***(ST3) No. 3 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Go to step **2**.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
2	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, NOTE, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.
3	**CHECK CRUISE CONTROL COMMAND SWITCH.** Measure the resistance between switch terminals when the cruise control command switch is not depressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 4 kΩ?	Go to step **4**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
4	**CHECK CANCEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, NOTE, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals with the CANCEL switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. less than 1 Ω when the CANCEL switch is pressed?	Go to step **5**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
5	**CHECK SET/– SWITCH.** Measure the resistance between the switch terminals with the SET/– switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 250 Ω when the SET/– switch is pressed?	Go to step **6**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
6	**CHECK RES/+ SWITCH CIRCUIT.** Measure the resistance between the switch terminals with the RES/+ switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 1,500 Ω when the RES/+ switch is pressed?	Replace the ECM. <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>



B: 12

Detected when the brake pedal is depressed, or the error related to the stop light & brake switch occurred.
Trouble symptom:
- Cruise control cannot be set.

- Cruise control cannot be released.

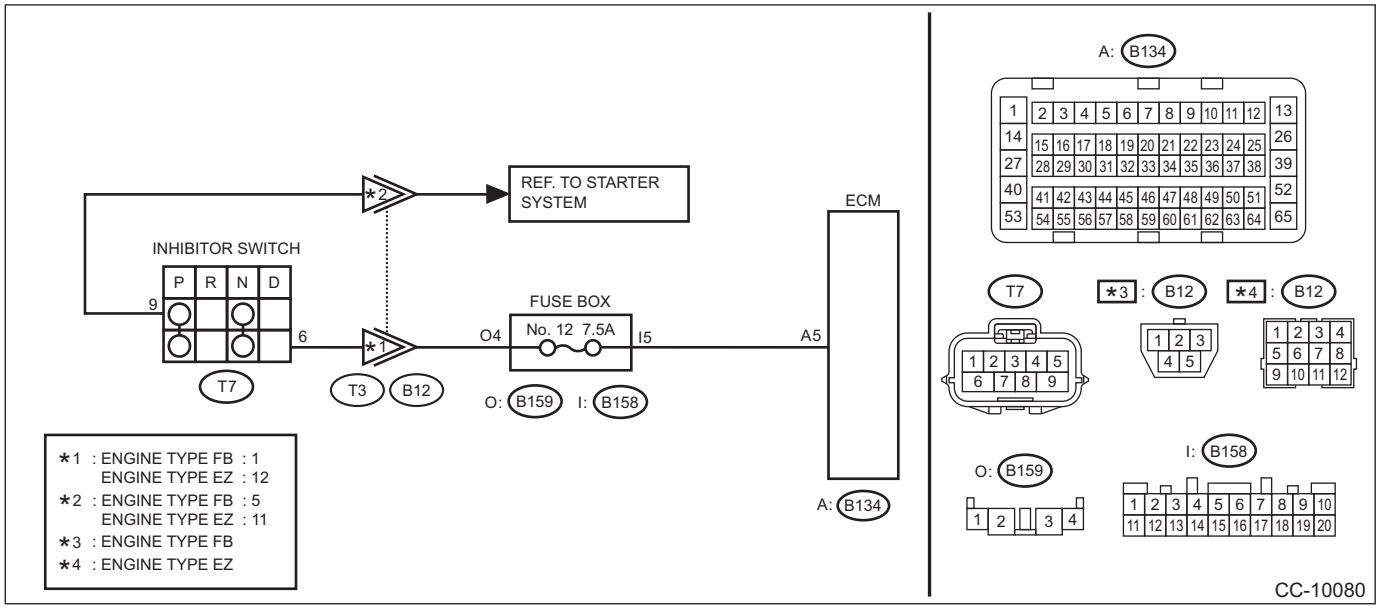
Wiring diagram:

Cruise control system <Ref. to WI-161, WIRING DIAGRAM, Cruise Control System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-8, Stop Light & Brake Switch.>	Is the check result for the stop light & brake switch installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse No. 37 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	• Check the fuse No. 19 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.

	Step	Check	Yes	No
4	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. ***Connector & terminal*** ***(B65) No. 4 — (B134) No. 59:*** ***(B65) No. 2 — (B134) No. 48:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness.
5	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Connect the stop light & brake switch harness connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM harness connector and chassis ground both when the brake pedal is depressed and when not depressed. ***Connector & terminal*** ***(B134) No. 59 (+) — Chassis ground (–):*** ***(B134) No. 48 (+) — Chassis ground (–):***	Does the voltage appear in (B134) No. 59 when the brake pedal is depressed? (0 V when the brake pedal is not depressed) Does the voltage appear in (B134) No. 48 when the brake pedal is not depressed? (0 V when the brake pedal is depressed)	Replace the ECM. <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>	Replace the stop light & brake switch. <Ref. to CC-8, Stop Light & Brake Switch.>

C: 14



Detected when the select lever is shifted to the neutral position, or when an error related to the neutral position switch occurs.

Trouble symptom:

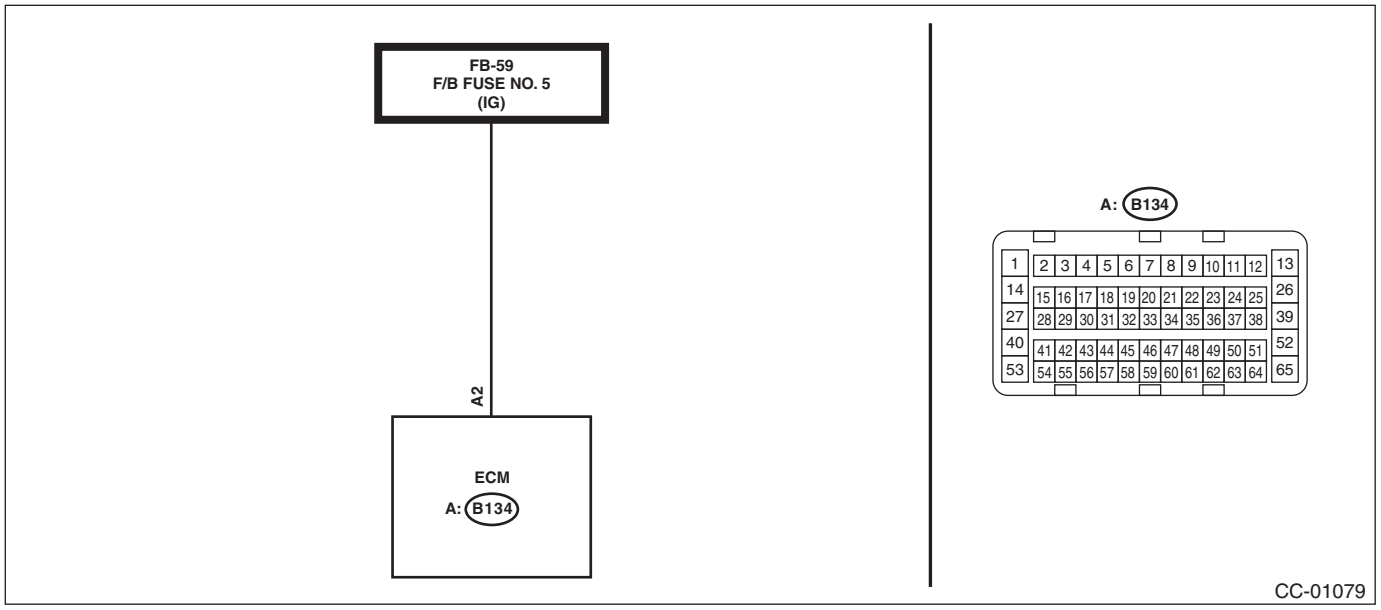
Cruise control cannot be set.

Wiring diagram:

Cruise control system <Ref. to WI-161, WIRING DIAGRAM, Cruise Control System.>

	Step	Check	Yes	No
1	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(T7) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	• Check the fuse. • Check for open or short circuit in the harness between inhibitor switch and ECM.
2	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between the inhibitor switch harness connector terminal and the starter motor. ***Connector & terminal*** ***(T7) No. 9 — Starter motor:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the harness.
3	**CHECK INHIBITOR SWITCH.** Remove and check the inhibitor switch. <Ref. to CC-9, Inhibitor Switch.>	Is the check result OK?	Replace the ECM. <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>	Replace the inhibitor switch.

D: 15



Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

E: 16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.
Trouble symptom:
Cruise control cannot be set.
Wiring diagram:

Cruise control system <Ref. to WI-161, WIRING DIAGRAM, Cruise Control System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B134) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	• Check the fuse No. 5 (fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

F: 21

Cruise control command switch malfunction is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

G: 22

Malfunction related to vehicle speed sensor is detected.
DIAGNOSIS:
Open or shorted circuit in vehicle speed sensor system.
TROUBLE SYMPTOM:
Cruise control cannot be set. (Cancelled immediately.)

Step		Check	Yes	No
1	**CHECK ABS OR VDC WARNING LIGHT.** 1) Turn the ignition switch to ON. 2) After the initial operation of combination meter is completed, check if ABS or VDC warning light continues to illuminate.	Does the warning light continue to illuminate?	Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC OF LAN COMMUNICATION CIRCUIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-17, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform inspection according to DTC.	Replace the ECM. <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to FU(H4DO)-83, Engine Control Module (ECM).>

H: 24

Malfunction in cruise control-related switch is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

I: 31

Engine speed signal malfunction is detected.
Abnormal increase of engine speed is detected.
Gear is placed in 1st (only for MT vehicles) or Reverse position.
After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

J: 32

Detected when the vehicle speed is out of the system controllable range.
Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.
If cancel code is still detected after setting cruise again, perform the diagnosis for DTC 22.
Refer to DTC 22 for diagnostic procedure.
<Ref. to CC(diag)-21, 22, Diagnostic Procedure with Cancel Code.>

K: 34

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.
This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.
Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

L: 35

Detected when it is impossible to perform the vehicle speed feedback.
Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving.
Cancel code is detected when driving condition is not suitable for cruise control.
Perform cruise set operation again after clearing the possible cause.

M: 41

VDC/TCS/EPB is operated.
Vehicle dynamics control (VDC) or TCS/EPB is operated during cruise driving or cruise setting.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: 43

ABS/VDC malfunction is detected.
VDC malfunction is detected during cruise driving or cruise setting.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: 44

Body integrated unit malfunction is detected.
Body integrated unit system malfunction is detected during cruise driving or cruise setting.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: 45

Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: 49

Automatic transmission malfunction is detected.
Automatic transmission malfunction is detected during cruise driving or cruise control setting.
<Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: 61

Malfunction in the stop light & brake switch is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to DTC 12 for diagnostic procedure.
<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>

S: 62

Neutral position switch malfunction is detected.
TROUBLE SYMPTOM:
Cruise control cannot be set.
Refer to DTC 14 for diagnostic procedure.
<Ref. to CC(diag)-19, 14, Diagnostic Procedure with Cancel Code.>

T: 63

Malfunction of vehicle speed signal variation is detected.
TROUBLE SYMPTOM:
Cruise control cannot be set. (Cancelled immediately.)
Refer to DTC 22 for diagnostic procedure.
<Ref. to CC(diag)-21, 22, Diagnostic Procedure with Cancel Code.>

NOTE:
When the vehicle was suddenly accelerated on low μ road surface while VDC is OFF, this cancel code may be stored. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

U: 64

Malfunction related to engine is detected.
Refer to the Engine Diagnostic Procedure for diagnostic procedure.
<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
<Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: 65

Cruise control command switch malfunction is detected.
While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.
TROUBLE SYMPTOM:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

W: 66

Cruise control calculation malfunction is detected.
Refer to the Engine Diagnostic Procedure for diagnostic procedure.
<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
<Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

IMMOBILIZER (DIAGNOSTICS)

IM(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	General Description	4

13.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	24

1. Basic Diagnostic Procedure

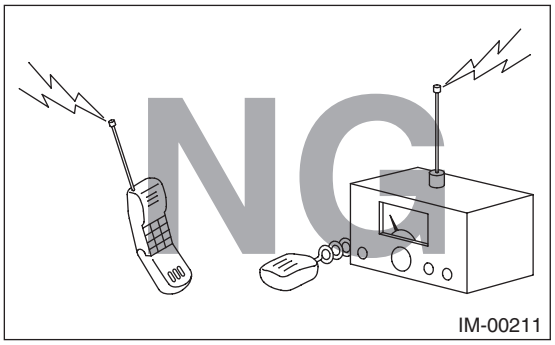
A: PROCEDURE

1. WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

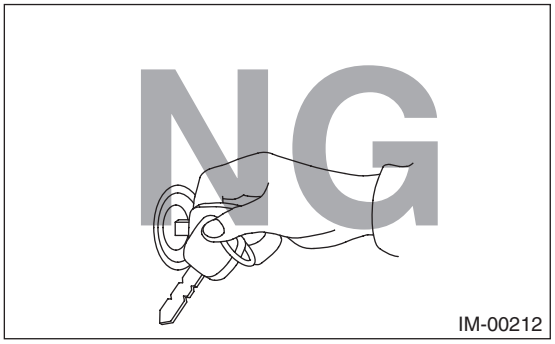
	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Register the immobilizer system.	Go to step **2**.
2	**CHECK SECURITY INDICATOR LIGHT.** 1) Remove the ignition key from ignition switch. 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step **3**.	Check the security indicator light circuit. <Ref. to IM(diag)-17, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3	**CHECK KEY SWITCH.** Insert the ignition key in the ignition switch. (OFF or ACC)	Does the security indicator light remain blinking?	Check the key switch circuit. <Ref. to IM(diag)-19, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>	Go to step **4**.
4	**CHECK SECURITY INDICATOR LIGHT.** Check the security indicator light status in the condition of step 3.	Does the security indicator light go off?	Go to step **7**.	Go to step **5**.
5	**CHECK SECURITY INDICATOR LIGHT.** Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step **7**.	Go to step **6**.
6	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **8**.
7	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK DTC.** Read the DTC and time stamp of the system(s) below. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Body integrated unit (except for C0 and C5 models) • Immobilizer CM (C0 and C5 models)	Are any DTCs displayed?	Go to step **10**.	Replace the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models). <Ref. to SL-83, Body Integrated Unit.>
9	**CHECK DTC.** Read the DTC and time stamp of the system(s) below. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • ECM	Are any DTCs displayed?	Go to step **10**.	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
10	**CHECK FREEZE FRAME DATA.** Check the freeze frame data.	Are the data recorded?	Record the data. Go to step **11**.	Go to step **11**.
11	**CHECK DTC.** Check the displayed DTC.	Are DTCs irrelevant to the immobilizer displayed?	Perform the diagnosis according to DTCs irrelevant to the immobilizer first.	Go to step **12**.
12	**PERFORM DIAGNOSIS.** 1) Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 4) Read DTCs again. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



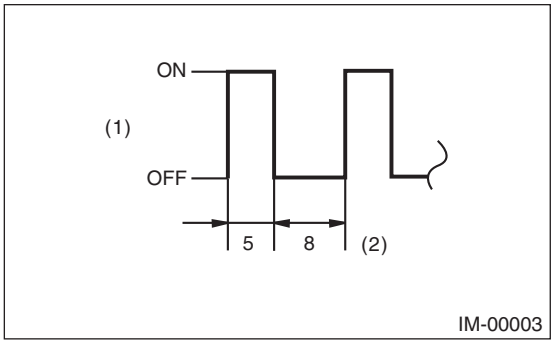
2. WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
For immobilizer diagnosis of model with the keyless access with push button start system, refer to "Keyless Access with Push Button Start System". <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>



2. General Description

A: CAUTION



CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.
• While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

• When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

• When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

(1) Ignition switch position
(2) Sec.

• If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
• Before performing the diagnostics, obtain all keys for the vehicle from the owner.

• Do not register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

B: PREPARATION TOOL

1. SPECIAL TOOL

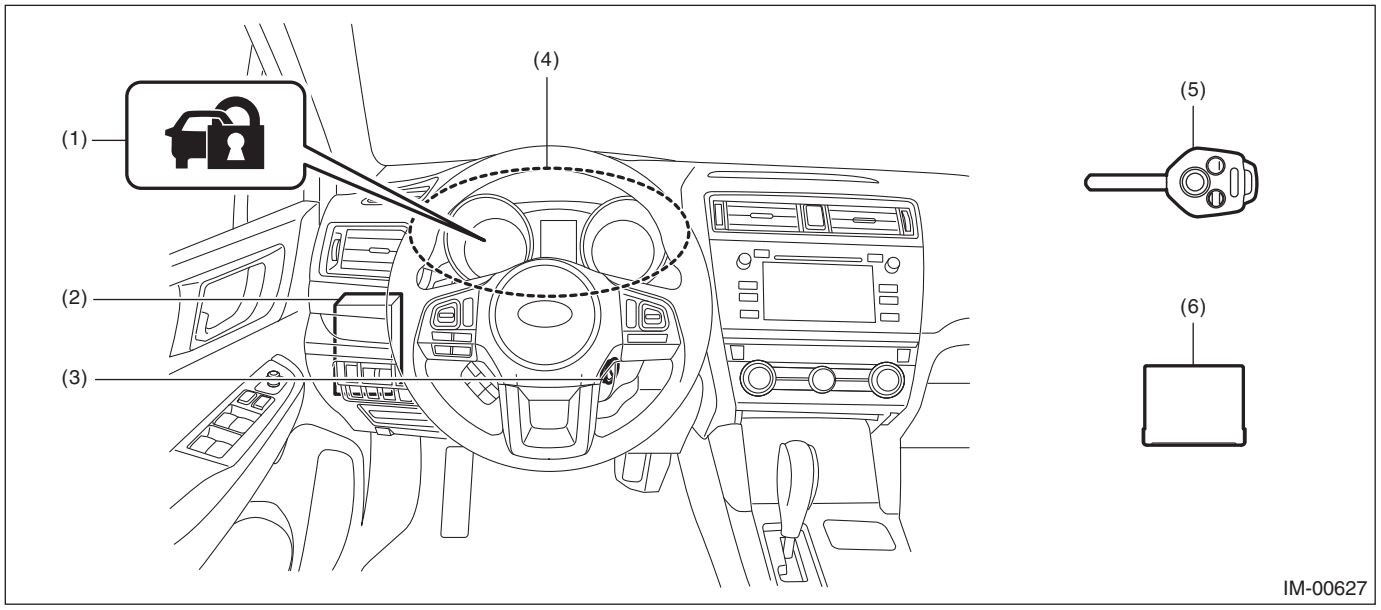


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. Electrical Component Location

A: LOCATION

(1) Security indicator light
(2) Body integrated unit
(3) Immobilizer antenna
(4) Combination meter
(5) Ignition key
(6) Immobilizer control module (C0 and C5 models)

4. Immobilizer Control Module I/O Signal

A: WIRING DIAGRAM

1. IMMOBILIZER

Refer to “Immobilizer System” in the wiring diagram. <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

5. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

1. ECM

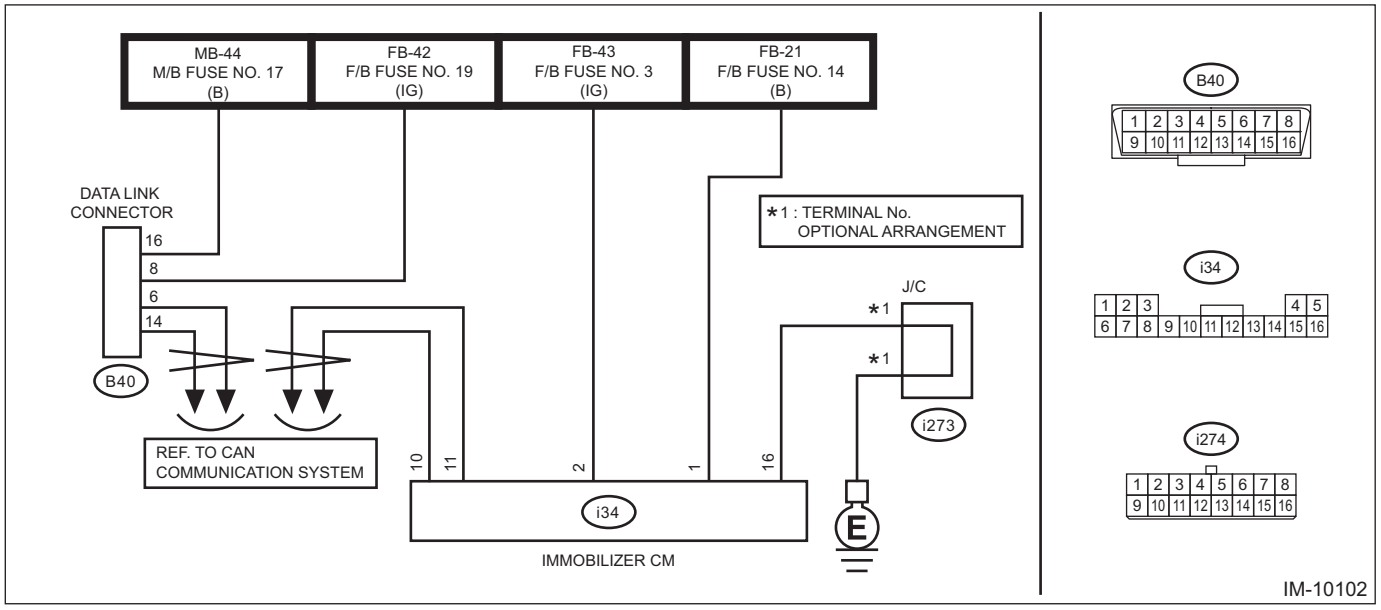
If the communication with ECM is not possible, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

2. BODY INTEGRATED UNIT

If the communication with the body integrated unit is not possible, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3. IMMOBILIZER CM

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective immobilizer CM
- Body integrated unit malfunctioning
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and immobilizer CM.

	Step	Check	Yes	No
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the immobilizer CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 2 (+) — Chassis ground (–):*** ***(i34) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **4**.	Repair the open circuit of harness between the immobilizer CM connector and fuse.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.
5	**CHECK IMMOBILIZER CM.** 1) Turn the ignition switch to OFF. 2) Connect the immobilizer CM connector. 3) Perform communication with the immobilizer CM.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to BC(diag)-41, List of Diagnostic Trouble Code (DTC).>

1. ECM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Engine Control System» display, select «DTC».

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Body Control» display, select «DTC».

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «DTC».

7. Clear Memory Mode

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. ECM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Engine Control System» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Body Control» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

8. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1401	METER COLLATION	—
B1402	IMMOBILIZER KEY COLLATION	—
B1407	MET COMMUNICATION	—
B1408	METER NON-VOLATILE MEMORY	—
B1410	TRANSPONDER COMMUNICATION	—
B1411	IMMOBILIZER ANTENNA	—
B1413	IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Remove the ignition key from the ignition switch, and insert again.
4) Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
5) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B1412	IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK	—
B1414	IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the battery, and then wait for one minute or more.
4) Turn the ignition switch to ON.
5) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

DTC	Item	Note
B1570	ANTENNA	—
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	—
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	—
B1574	KEY COMMUNICATION	—
B1575	INCORRECT IMMOBILIZER KEY	—
B1576	EGI CONTROL MODULE EEPROM	—
B1577	IMM CONTROL MODULE EEPROM	—
B1578	METER	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Start the engine, and then run the engine at idle for 10 seconds or more. Or, disconnect and reconnect the battery, then turn the ignition switch OFF → ON, and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

9. Read Current Data

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. ECM

For current data of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-46, Subaru Select Monitor.>

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit. <Ref. to BC(diag)-24, Read Current Data.>

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «Data Monitor».

B: LIST

1. ECM

For current data of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO)(diag)-46, Subaru Select Monitor.>

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models
Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit. <Ref. to BC(diag)-24, Read Current Data.>

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models

Item	Content / display range	Standard	Note
Trip Count [count]	Time stamp information	—	—
Count	Time stamp information	—	—
Time Count [msec]	Time stamp information	—	—

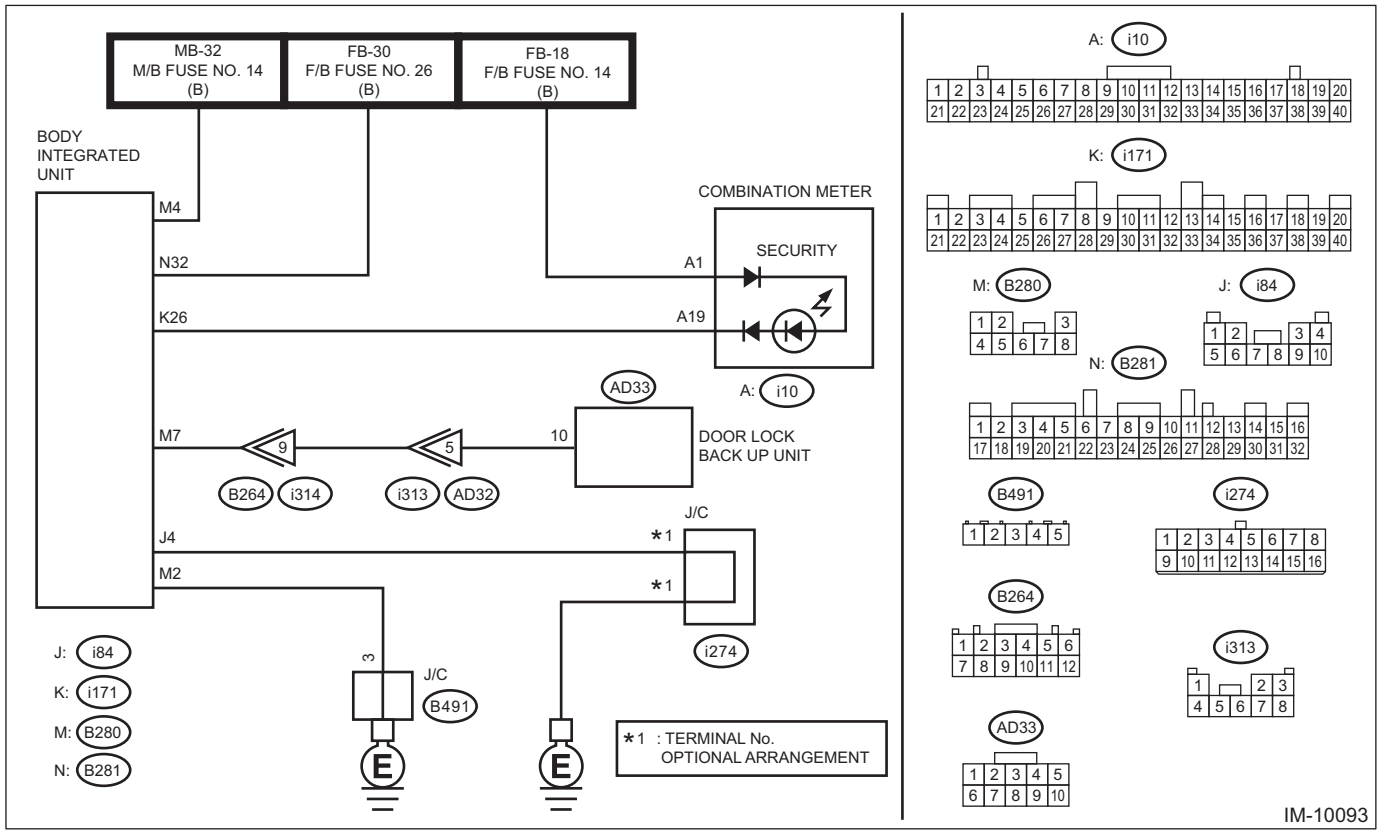
10.Freeze Frame Data Display

A: OPERATION

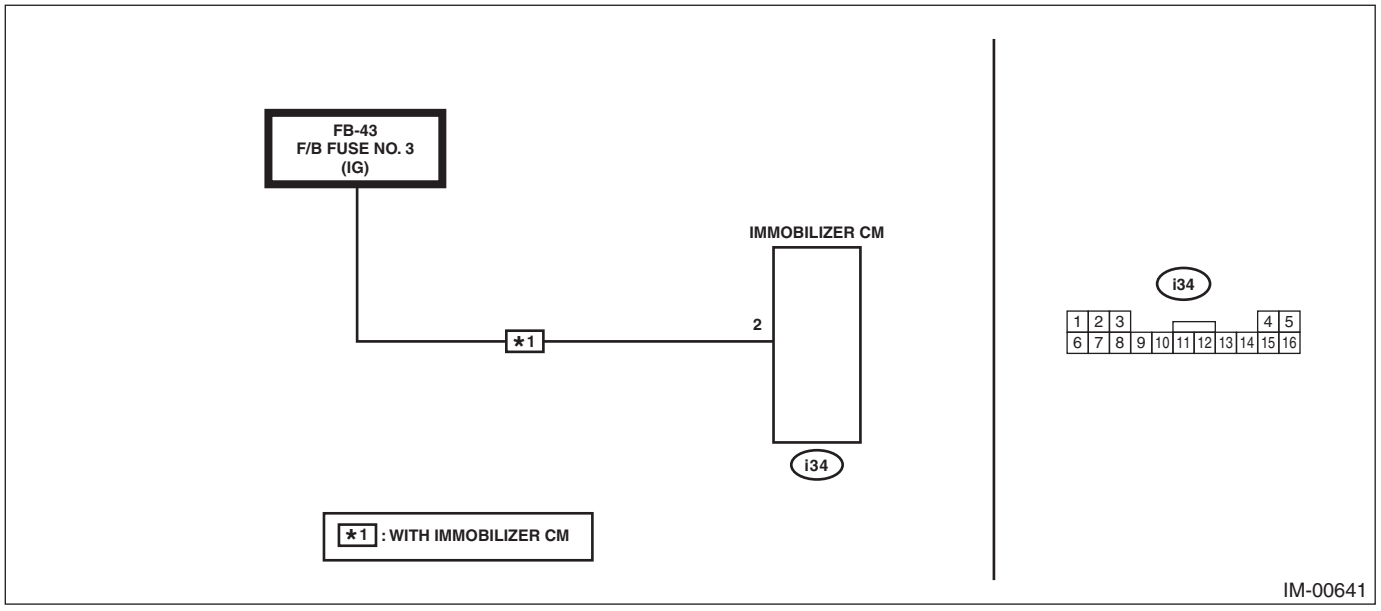
NOTE:
Displays only for vehicles with immobilizer CM
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Immobilizer» and then select «Enter».
5) On «Immobilizer» display, select «DTC».
6) On «DTC» display, select «FFD».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST



Item	Content / display range
Trip Count	Time stamp information <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>
Count	
Time Count	
BATT voltage	Immobilizer CM battery voltage
Ignition SW input	Ignition switch status
key-lock warning SW Input	Key warning switch status
Immobilizer indicator output	Security indicator output status
Immobilizer SET/ UNSET status	Immobilizer SET/UNSET status



11.Diagnostics Chart for Security Indicator Light

A: INSPECTION

1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Diagnostics Chart for Security Indicator Light

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Remove the ignition key from ignition switch. Or, turn off the power. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.
2	**CONFIRM DESTINATION.** Verify the destination of the vehicle.	Is destination for C0 or C5?	Go to step **3**.	Go to step **9**.
3	**CHECK IMMOBILIZER CM.** Check the current data «Ignition SW input» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Does the display change in accordance with the ignition switch OFF ←→ ON?	Go to step **7**.	Go to step **4**.
4	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the F/B fuse No. 3. 3) Measure the voltage between F/B fuse No. 3 (lower stream side) and chassis ground. ***Connector & terminal*** ***F/B fuse No. 3 (lower stream side) (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between the immobilizer CM and fuse.	Go to step **5**.
5	**CHECK IGNITION SWITCH CIRCUIT.** Check the current data «Ignition SW input» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is «ON» displayed?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	Go to step **6**.
6	**CHECK IGNITION SWITCH CIRCUIT.** 1) Disconnect the connector from immobilizer CM. 2) Measure the resistance between immobilizer CM connector terminal and fuse. ***Connector & terminal*** ***(i34) No. 2 — F/B fuse No. 3 (lower stream side):***	Is the resistance less than 10 Ω?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	Replace the open circuit of harness between the immobilizer CM and fuse.
7	**CHECK IMMOBILIZER CM.** Check the current data «key-lock warning SW» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Does the display change in accordance with the ignition key removal/insertion?	Go to step **8**.	Check the key switch circuit. <Ref. to IM(diag)-19, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
8	**CHECK IMMOBILIZER CM.** 1) Check the current data «Immobilizer indicator output» of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.> 2) Remove the ignition key from ignition switch. 3) Wait at least 60 seconds.	Is «Blink» displayed?	Go to step **9**.	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>
9	**CHECK SECURITY INDICATOR LIGHT.** 1) Disconnect the connector from body integrated unit. 2) Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 26 and chassis ground.	Does the security indicator light illuminate?	Go to step **10**.	Go to step **12**.

	Step	Check	Yes	No
10	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.** Measure the resistance between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 2 — Chassis ground:*** ***(i84) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **11**.	Repair the open circuit of the body integrated unit ground circuit.
11	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Check the harness for open or short circuit between body integrated unit and fuse.
12	**CHECK COMBINATION METER CIRCUIT.** 1) Remove the combination meter. <Ref. to IDI-11, Combination Meter.> 2) Measure the voltage between combination meter connector terminal and chassis ground. ***Connector & terminal*** ***(i10) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	Check for an open or short circuit in the harness between the combination meter and fuse.
13	**CHECK COMBINATION METER CIRCUIT.** Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal. ***Connector & terminal*** ***(i171) No. 26 — (i10) No. 19:***	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-12, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

2. CHECK KEY SWITCH CIRCUIT

CAUTION:
When the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

Diagnostics Chart for Security Indicator Light

Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connector from key warning switch. 2) Measure the voltage between key warning switch connector terminal and chassis ground. ***Connector & terminal*** ***(i63) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the harness for an open or short between the key warning switch and fuse.
2	**CHECK KEY WARNING SWITCH.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the key warning switch. <Ref. to SL-72, Key Lock Cylinders.>
3	**CHECK KEY WARNING SWITCH.** 1) Remove the ignition key from ignition switch. 2) Measure the resistance between key warning switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the key warning switch. <Ref. to SL-72, Key Lock Cylinders.>

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT (EXCEPT FOR C0 AND C5 MODELS) OR IMMOBILIZER CM (C0 AND C5 MODELS).** 1) Disconnect the connector from the body integrated unit (except for C0 and C5 models) or the immobilizer CM (C0 and C5 models). 2) Measure the resistance between key warning switch connector terminal and body integrated unit (except for C0 and C5 models) or immobilizer CM (C0 and C5 models) connector terminal. ***Connector & terminal*** ***Body integrated unit (except for C0 and C5 models)*** ***(i63) No. 2 — (i84) No. 10:*** ***Immobilizer CM (C0 and C5 models)*** ***(i63) No. 2 — (i34) No. 3:***	Is the resistance less than 10 Ω?	Body integrated unit (except for C0 and C5 models) <Ref. to SL-83, Body Integrated Unit.> or immobilizer CM (C0 and C5 models) <Ref. to SL-89, Immobilizer Control Module.>.	Repair harness between key warning switch and body integrated unit (except for C0 and C5 models) or immobilizer CM (C0 and C5 models).

12.List of Diagnostic Trouble Code (DTC)

A: LIST

NOTE:
If DTCs irrelevant to the immobilizer are displayed, perform diagnosis according to the DTCs irrelevant to the immobilizer first.

1. ECM

DTC	Item	Note
B1570	ANTENNA	<Ref. to IM(diag)-28, DTC B1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	<Ref. to IM(diag)-32, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	<Ref. to IM(diag)-34, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1574	KEY COMMUNICATION	<Ref. to IM(diag)-40, DTC B1574 KEY COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1575	INCORRECT IMMOBILIZER KEY	<Ref. to IM(diag)-42, DTC B1575 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	<Ref. to IM(diag)-43, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	<Ref. to IM(diag)-44, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1578	METER	<Ref. to IM(diag)-46, DTC B1578 METER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT

NOTE:
Except for C0 and C5 models

DTC	Item	Note	Relation between ECM and DTC
B1401	METER COLLATION	<Ref. to IM(diag)-24, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1402	IMMOBILIZER KEY COLLATION	<Ref. to IM(diag)-24, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1575
B1407	MET COMMUNICATION	<Ref. to IM(diag)-24, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1408	METER NON-VOLATILE MEMORY	<Ref. to IM(diag)-25, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1410	TRANSPONDER COMMUNICATION	<Ref. to IM(diag)-25, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1574
B1411	IMMOBILIZER ANTENNA	<Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1570

NOTE:
The starter relay control is performed in immobilizer system. When the body integrated unit detects a nonconformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.

3. IMMOBILIZER CM

NOTE:
For C0 and C5 models

DTC	Item	Note	Relation between ECM and DTC
B1402	IMMOBILIZER KEY COLLATION	<Ref. to IM(diag)-24, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1575
B1410	TRANSPONDER COMMUNICATION	<Ref. to IM(diag)-25, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1574
B1411	IMMOBILIZER ANTENNA	<Ref. to IM(diag)-25, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1570
B1412	IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK	<Ref. to IM(diag)-25, DTC B1412 IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	—
B1413	IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY	<Ref. to IM(diag)-26, DTC B1413 IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	—
B1414	IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY	<Ref. to IM(diag)-28, DTC B1414 IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1577

NOTE:
The starter relay control is performed in immobilizer system. When the immobilizer CM detects a nonconformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Therefore, check DTC on the immobilizer CM to identify the cause of the engine not starting.

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1401 METER COLLATION

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Reference code incompatibility between combination meter and body integrated unit

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER REGISTRATION.** Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Currently, it is normal. (Combination meter registration is not complete.)	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the combination meter. <Ref. to IDI-11, Combination Meter.>

B: DTC B1402 IMMOBILIZER KEY COLLATION

NOTE:
Refer to DTC B1575 for diagnostic procedure. <Ref. to IM(diag)-42, DTC B1575 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC B1407 MET COMMUNICATION

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Communication failure between body integrated unit and combination meter

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC of the body integrated unit except for DTC B1407 displayed?	Perform the diagnosis of DTCs other than B1407.	Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC B1408 METER NON-VOLATILE MEMORY

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
Defective combination meter

TROUBLE SYMPTOM:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER REGISTRATION.** 1) Perform the Clear Memory Mode. (Combination meter and body integrated unit) <Ref. to MET(diag)-12, Clear Memory Mode.> <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1408 displayed?	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B1410 TRANSPONDER COMMUNICATION

NOTE:
Refer to DTC B1574 for diagnostic procedure. <Ref. to IM(diag)-40, DTC B1574 KEY COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC B1411 IMMOBILIZER ANTENNA

NOTE:
Refer to DTC B1570 for diagnostic procedure. <Ref. to IM(diag)-28, DTC B1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC B1412 IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
- Defective immobilizer CM

- Failed to access the ROM of immobilizer CM.

TROUBLE SYMPTOM:

- The security indicator does not blink after the ignition key is turned to OFF.
- The security indicator remains off.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

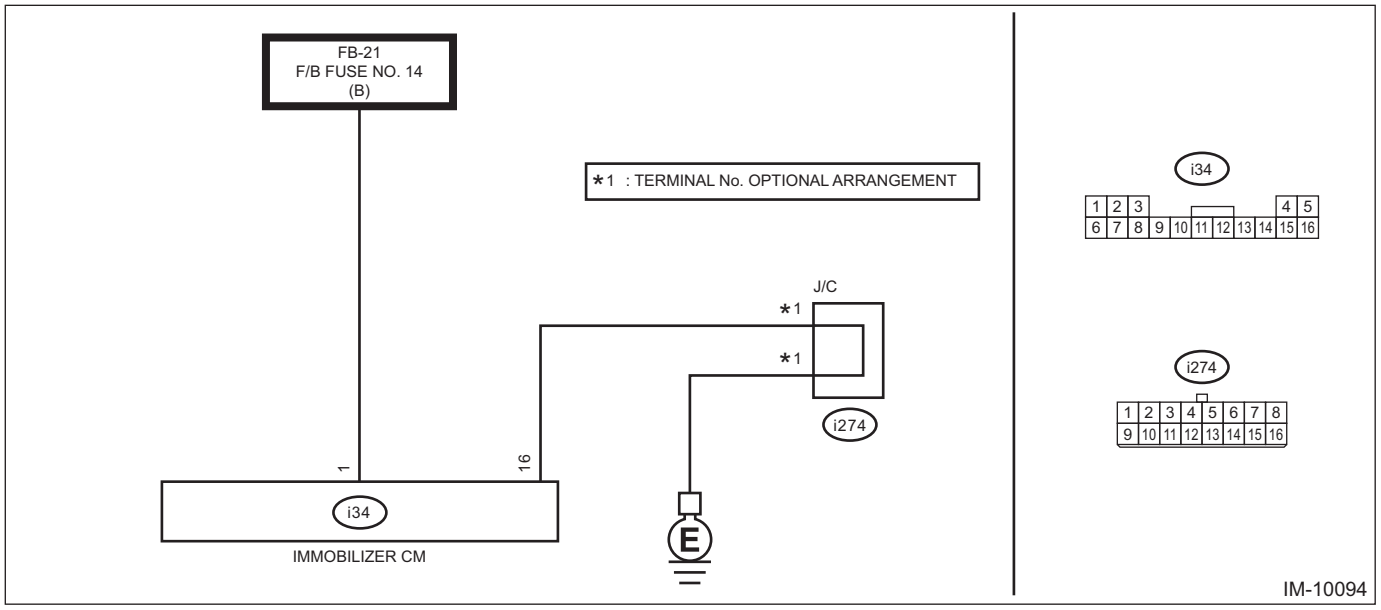
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1412 displayed?	Go to step **2**.	Currently, it is normal.
2	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1412 displayed?	Go to step **3**.	Currently, it is normal.
3	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1412 displayed?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	Currently, it is normal.

H: DTC B1413 IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:



Battery voltage for the immobilizer CM was outside the specification for a certain period of time.

Trouble symptom:

The security indicator does not blink after the ignition key is turned to OFF.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.
2	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage» display of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **3**.	Go to step **5**.
3	**CHECK CURRENT DATA.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Confirm the current data «BATT voltage» display of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK DTC.** Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1413 displayed?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
5	**CHECK IMMOBILIZER CM POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from immobilizer CM. 3) Measure the voltage between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the open circuit of harness between the immobilizer CM and fuse.
6	**CHECK IMMOBILIZER CM GROUND CIRCUIT.** Measure the resistance between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.

I: DTC B1414 IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY

DIAGNOSIS START CONDITION:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC DETECTING CONDITION:
- Defective immobilizer CM
- Failed to access the ROM in immobilizer CM.

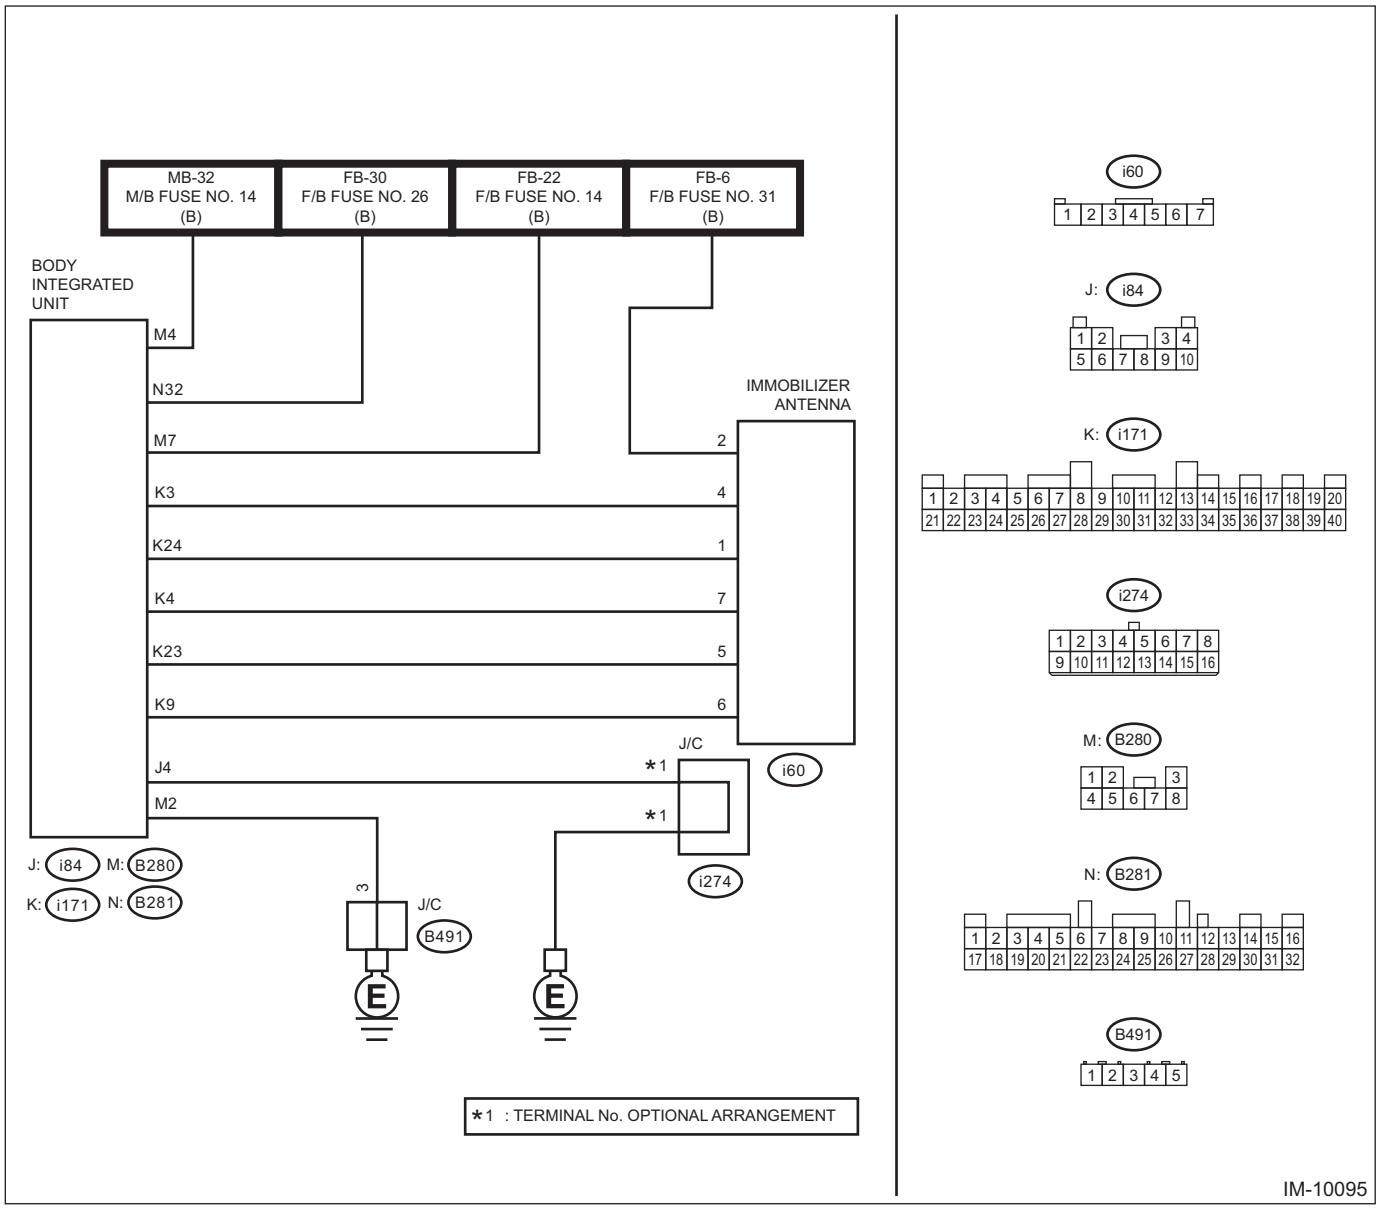
TROUBLE SYMPTOM:
Engine will not start.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Disconnect the ground cable from battery. 2) Wait for at least 10 seconds. 3) Connect the ground cable to battery. 4) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1414 displayed?	Go to step **2**.	The system has returned to a normal condition at this time. Finish the diagnosis.
2	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Disconnect the ground cable from battery. 3) Wait for at least 10 seconds. 4) Connect the ground cable to battery. 5) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1414 displayed?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	The system has returned to a normal condition at this time. Finish the diagnosis.

J: DTC B1570 ANTENNA

1. EXCEPT FOR C0 AND C5 MODELS



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Received an immobilizer antenna malfunction signal during unit collation

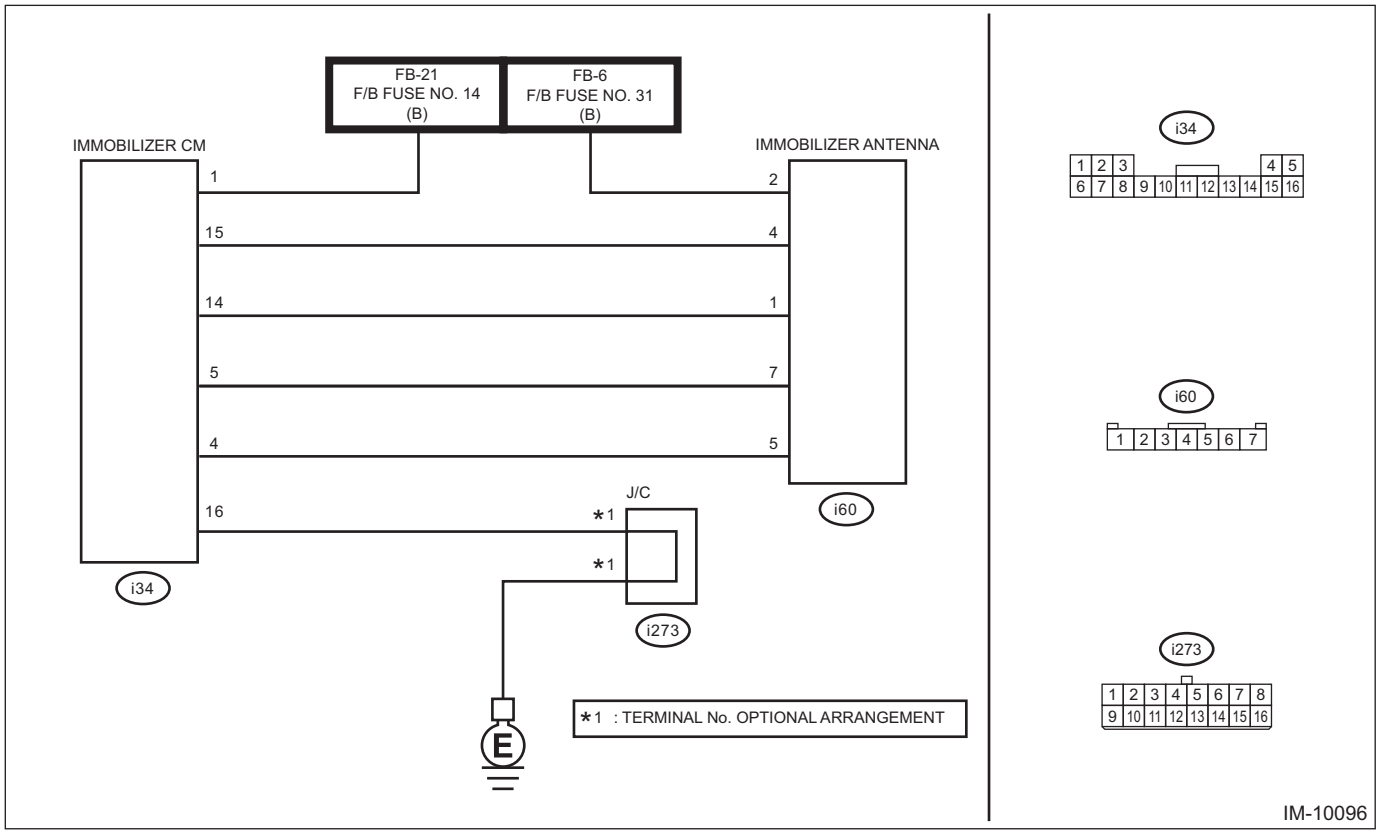
Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage (control)» display of body integrated unit. <Ref. to BC(diag)-24, Read Current Data.>	Is the display 10 V or more?	Go to step **3**.	Go to step **5**.
3	**CHECK POWER SUPPLY CIRCUIT FOR IMMOBILIZER ANTENNA.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from immobilizer antenna. 3) Insert the ignition key into the key cylinder, then measure the voltage between the immobilizer antenna connector and the chassis ground using an oscilloscope. ***Connector & terminal*** ***(i60) No. 1 (+) — Chassis ground (–):***	Is the voltage 5±0.5 V approx. 200 ms after inserting the ignition key into the key cylinder? And then, does the voltage return to 0 V within 2 s?	Go to step **4**.	Repair the open or short circuit of harness between the body integrated unit connector and immobilizer antenna connector.
4	**CHECK IMMOBILIZER ANTENNA GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance between immobilizer antenna connector and chassis ground. ***Connector & terminal*** ***(i60) No. 7 — Chassis ground:*** ***(i171) No. 4 — (i60) No. 7:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit in harnesses between the body integrated unit connector and the immobilizer antenna connector, and between the body integrated unit connector and the chassis ground.
5	**CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).** Measure the resistance between the body integrated unit connector and immobilizer antenna connector. ***Connector & terminal*** ***(i171) No. 23 — (i60) No. 5:*** ***(i171) No. 3 — (i60) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness between the body integrated unit connector and immobilizer antenna connector.
6	**CHECK IMMOBILIZER ANTENNA.** 1) Connect all connectors. 2) Insert the ignition key in the ignition switch. (OFF or ACC) 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the immobilizer antenna. <Ref. to SL-90, Immobilizer Antenna.> Go to step **7**.	Go to step **7**.
7	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Read the DTC of the body integrated unit. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Malfunction occurred in the immobilizer antenna.



2. FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Immobilizer antenna is faulty.

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.
2	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage» display of immobilizer CM. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **3**.	Go to step **5**.
3	**CHECK POWER SUPPLY CIRCUIT FOR IMMOBILIZER ANTENNA.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from immobilizer antenna. 3) Insert the ignition key into the key cylinder, then measure the voltage between the immobilizer antenna connector and the chassis ground using an oscilloscope. ***Connector & terminal*** ***(i60) No. 1 (+) — Chassis ground (–):***	Is the voltage 5±0.5 V approx. 200 ms after inserting the ignition key into the key cylinder? And then, does the voltage return to 0 V within 2 s?	Go to step **4**.	Repair the open or short circuit of harness between the immobilizer CM connector and immobilizer antenna connector.

	Step	Check	Yes	No
4	**CHECK IMMOBILIZER ANTENNA GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance between immobilizer antenna connector and chassis ground. ***Connector & terminal*** ***(i60) No. 7 — Chassis ground:*** ***(i34) No. 5 — (i60) No. 7:*** ***(i34) No. 16 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit in harnesses between the immobilizer CM connector and the immobilizer antenna connector, and between the immobilizer CM connector and the chassis ground.
5	**CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).** Measure the resistance between immobilizer CM connector and immobilizer antenna connector. ***Connector & terminal*** ***(i34) No. 4 — (i60) No. 5:*** ***(i34) No. 15 — (i60) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair the open circuit of harness between the immobilizer CM connector and immobilizer antenna connector.
6	**CHECK IMMOBILIZER ANTENNA.** 1) Connect all connectors. 2) Insert the ignition key in the ignition switch. (OFF or ACC) 3) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the immobilizer antenna. <Ref. to SL-90, Immobilizer Antenna.> Go to step **7**.	Go to step **7**.
7	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Read the DTC of the immobilizer CM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the immobilizer CM. <Ref. to SL-89, Immobilizer Control Module.>	Malfunction occurred in the immobilizer antenna.

K: DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

1. EXCEPT FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Reference code incompatibility between body integrated unit and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**PERFORM IMMOBILIZER SYSTEM REGISTRATION.** Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Read the DTC of the ECM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1571 displayed?	Perform the diagnosis of DTCs other than B1571.	Go to step **5**.
5	**PERFORM ECM REGISTRATION.** 1) Replace the ECM. <Ref. to FU(H4DO)-83, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>

2. FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Reference code incompatibility between immobilizer CM and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

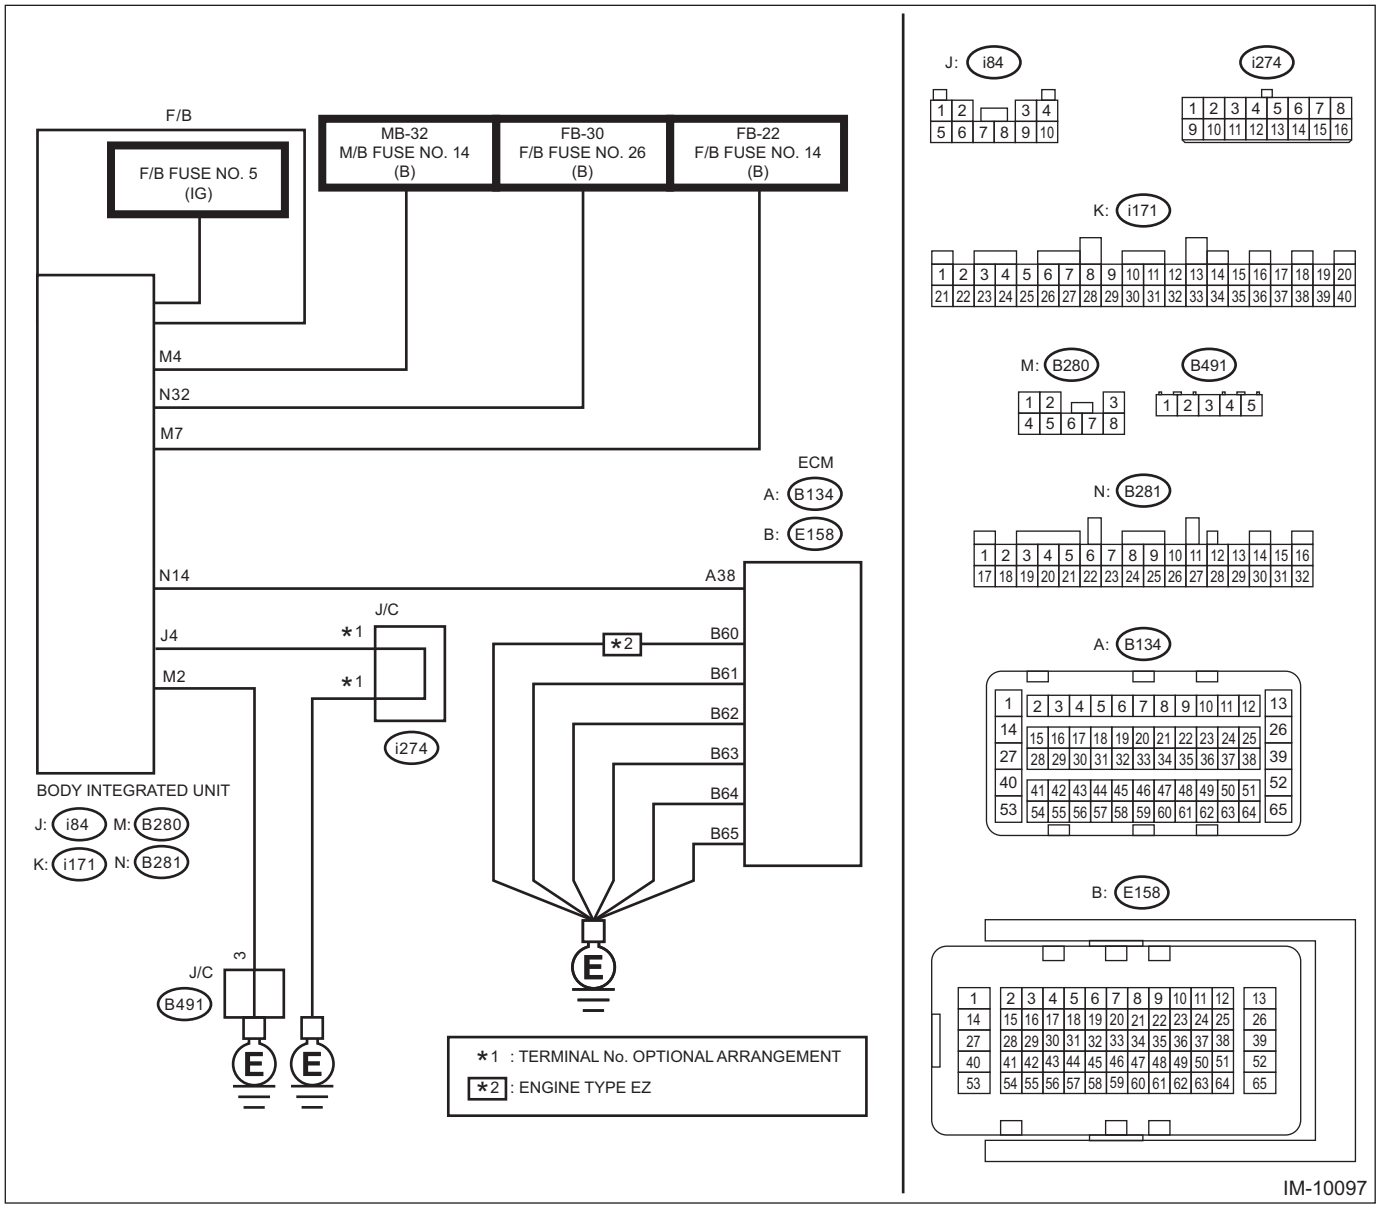
	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Go to step **2**.	Go to step **3**.
2	**PERFORM IMMOBILIZER SYSTEM REGISTRATION.** Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **3**.

Step		Check	Yes	No
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-11, Clear Memory Mode.> 2) Read the DTC of the ECM. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1571 displayed?	Perform the diagnosis of DTCs other than B1571.	Go to step **5**.
5	**PERFORM ECM REGISTRATION.** 1) Replace the ECM. <Ref. to FU(H4DO)-83, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the immobilizer CM. <Ref. to SL-83, Body Integrated Unit.>

L: DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C0 AND C5 MODELS

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.



DTC detecting condition:
Communication failure between body integrated unit and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the body integrated unit or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Wiring diagram:

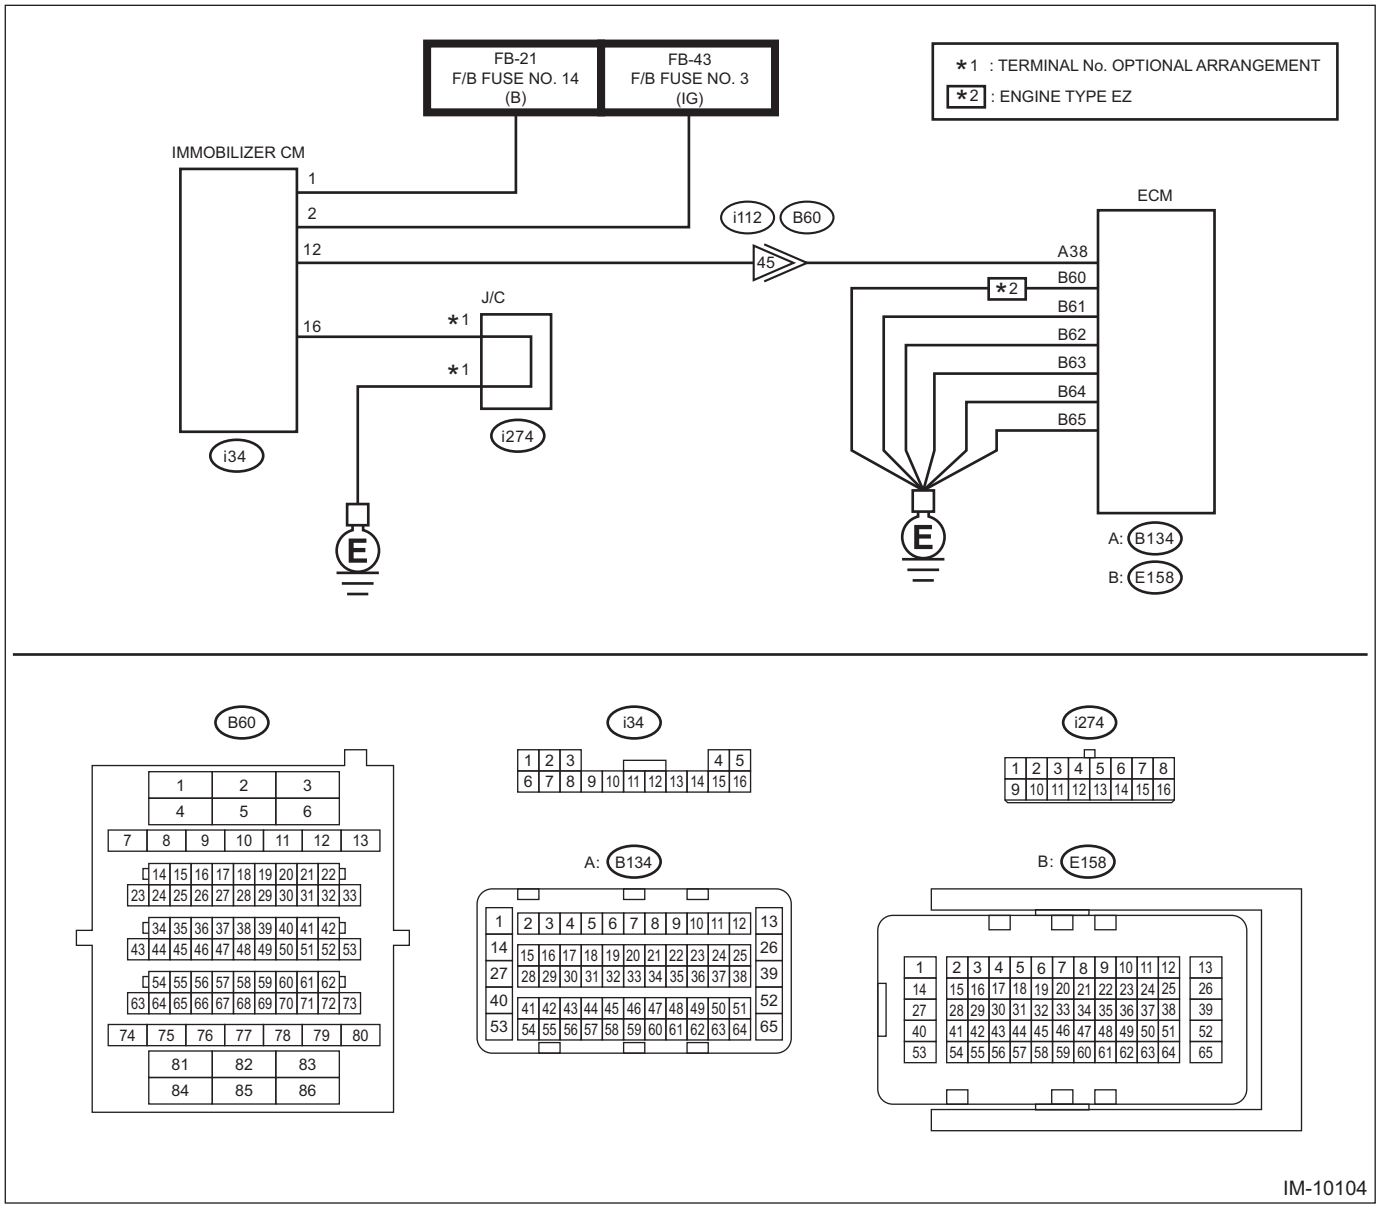
Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **3**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.
3	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage (control)» display of body integrated unit. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK CURRENT DATA.** Check the current data «Voltage of IGN» display of body integrated unit. <Ref. to IM(diag)-14, Read Current Data.>	Is the display 10 V or more?	Go to step **7**.	Go to step **6**.
5	**CHECK BODY INTEGRATED UNIT BATTERY POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the open or short circuit of harness between the body integrated unit connector and fuse.
6	**CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between F/B fuse No. 5 and chassis ground. ***Connector & terminal*** ***F/B fuse No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Repair the open or short circuit of harness between the body integrated unit connector and ignition switch.
7	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 2 — Chassis ground:*** ***(i84) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair the open circuit of harness between the body integrated unit connector and chassis ground.
8	**CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).** 1) Disconnect the ECM connector. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 60 — Engine ground (engine type EZ only):*** ***(E158) No. 61 — Engine ground:*** ***(E158) No. 62 — Engine ground:*** ***(E158) No. 63 — Engine ground:*** ***(E158) No. 64 — Engine ground:*** ***(E158) No. 65 — Engine ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit in harness between ECM connector and engine ground.

	Step	Check	Yes	No
9	**CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND ECM.** 1) Disconnect the ECM connector. 2) Measure the resistance between the body integrated unit connector and ECM. ***Connector & terminal*** ***(B281) No. 14 — (B134) No. 38:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the open circuit of harness between the body integrated unit connector and ECM.
10	**CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Disconnect the body integrated unit connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 38 (+) — Engine ground (–):***	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between body integrated unit connector and ECM connector.	Go to step **11**.
11	**CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the ECM connector and each ground. ***Connector & terminal*** ***(B134) No. 38 — Chassis ground:*** ***(B134) No. 38 — Engine ground:***	Is the resistance less than 10 Ω?	Repair the ground short circuit of harness between body integrated unit connector and ECM connector.	Go to step **12**.
12	**CHECK ECM.** 1) Replace the ECM. (Do not perform ECM registration.) <Ref. to FU(H4DO)-83, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read DTC of engine. <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1572 displayed?	Replace the body integrated unit. <Ref. to SL-83, Body Integrated Unit.>	Register the ECM. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

2. FOR C0 AND C5 MODELS



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Communication failure between immobilizer CM and ECM

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

CAUTION:
When the immobilizer CM or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

Immobilizer system <Ref. to WI-260, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-10, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **3**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.
3	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage» display of immobilizer system. <Ref. to BC(diag)-24, OPERATION, Read Current Data.>	Is the display 10 V or more?	Go to step **6**.	Go to step **4**.
4	**CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).** 1) Disconnect the ECM connector. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 60 — Engine ground (engine type EZ only):*** ***(E158) No. 61 — Engine ground:*** ***(E158) No. 62 — Engine ground:*** ***(E158) No. 63 — Engine ground:*** ***(E158) No. 64 — Engine ground:*** ***(E158) No. 65 — Engine ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the open circuit in harness between ECM connector and engine ground.
5	**CHECK IMMOBILIZER CM BATTERY POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the immobilizer CM connector. 3) Measure the voltage between immobilizer CM connector and chassis ground. ***Connector & terminal*** ***(i34) No. 1 (+) — Chassis ground (–):***	Is the display 10 V or more?	Go to step **6**.	Repair the open or short circuit of harness between the immobilizer CM connector and fuse.
