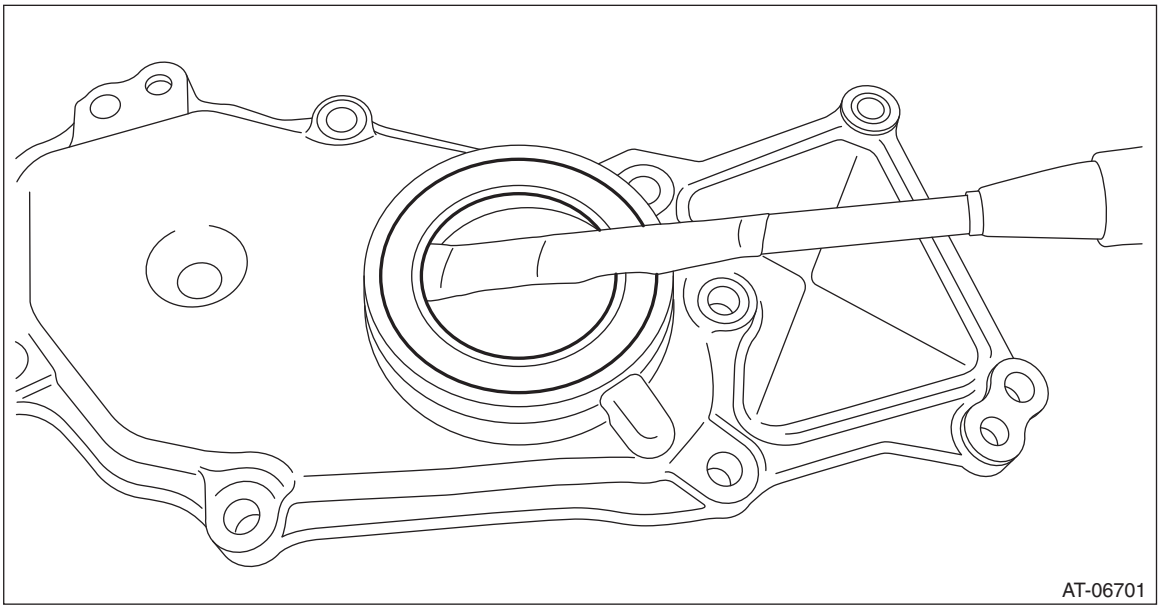
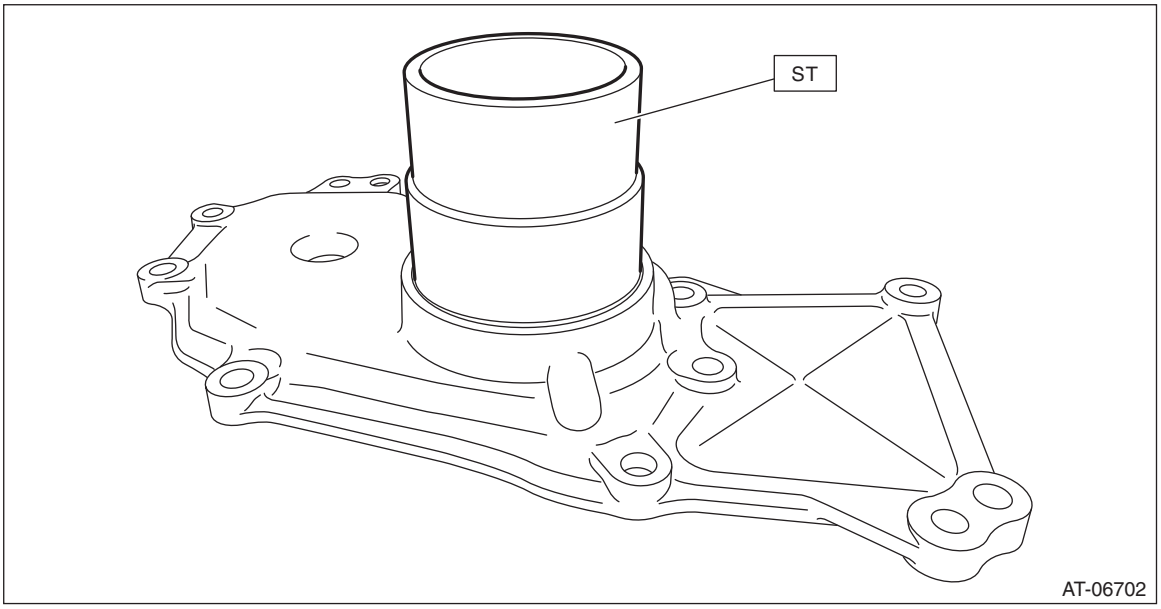
- The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.
- If the ball bearing is removed from the driven sprocket, replace with a new part.



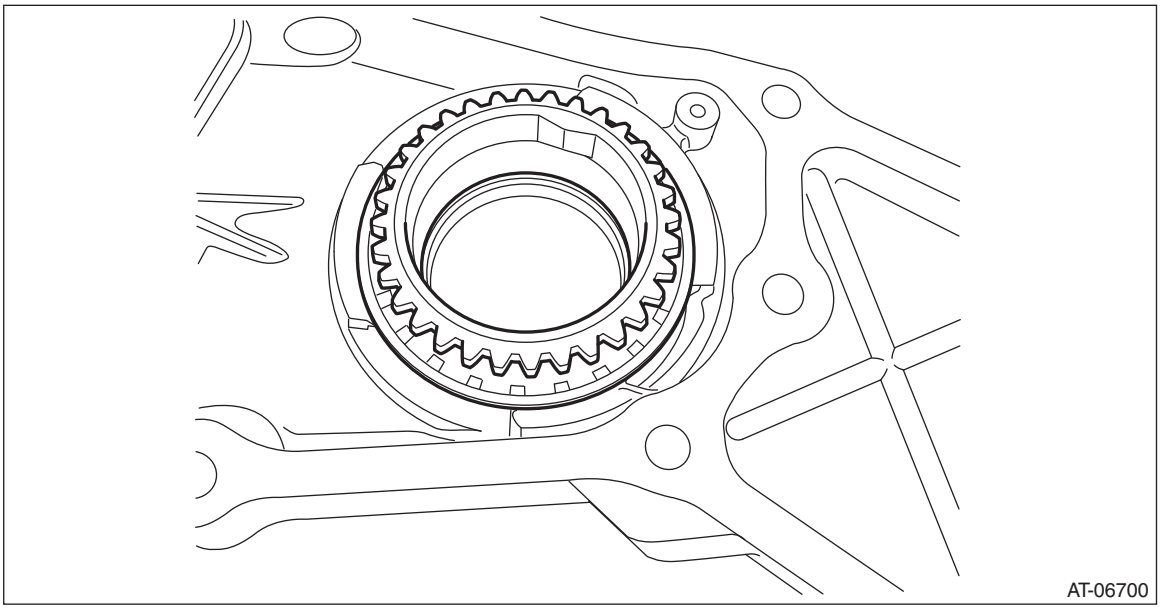
6) Remove the snap ring.

7) Remove the drive sprocket.

8) Remove the oil seal from the oil pump chain cover.

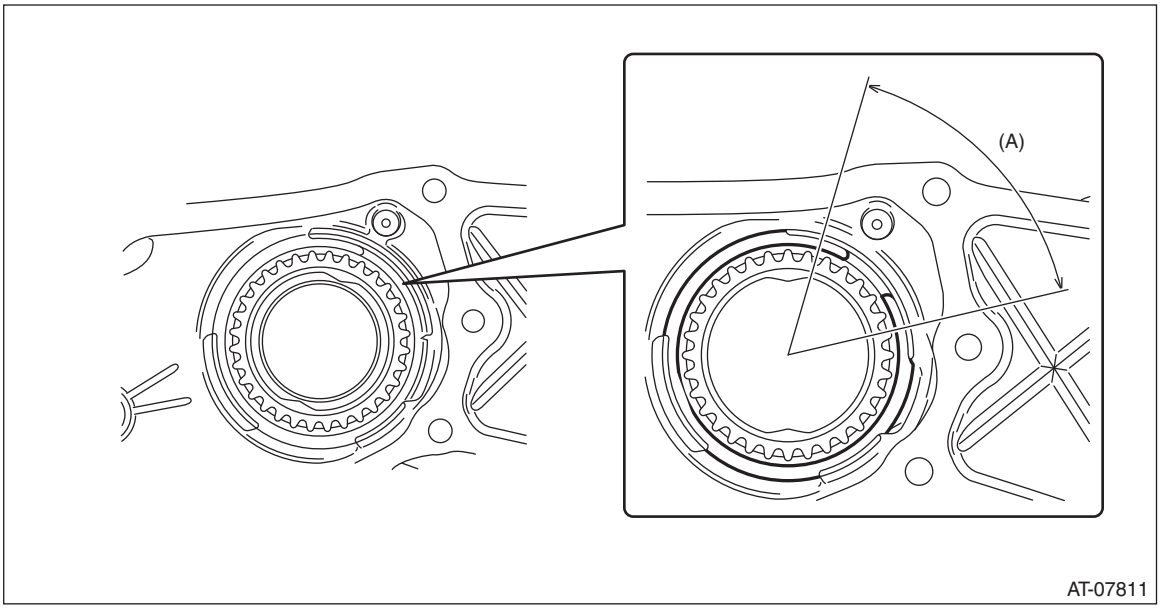


B: INSTALLATION



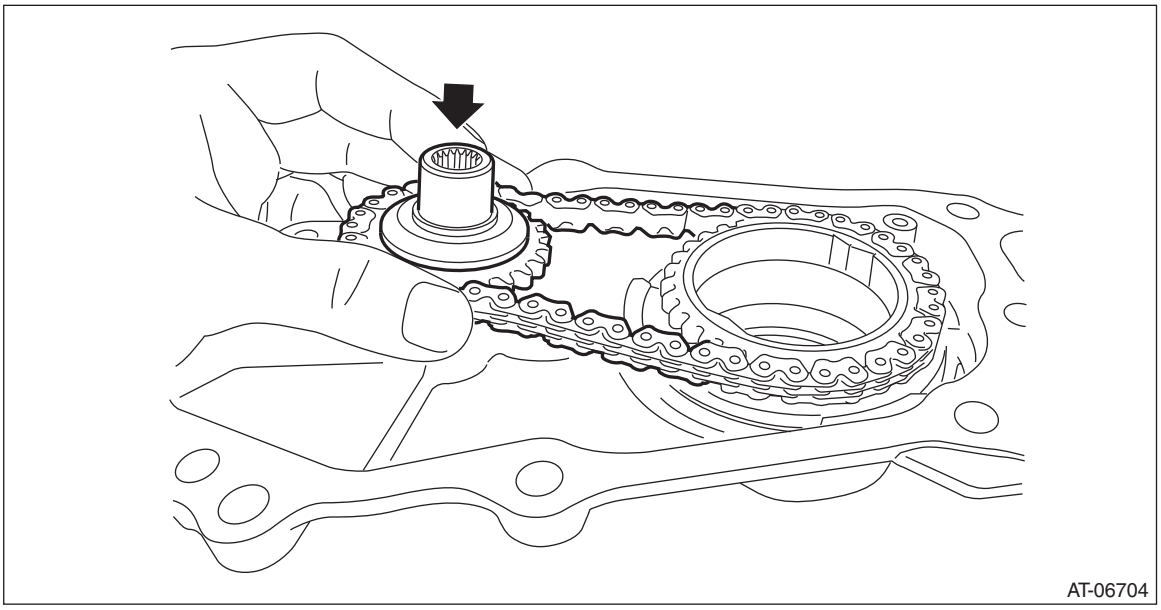
1) Clean the mating surface of oil pump chain cover and converter case.
2) Using the ST, install the oil seal.

NOTE:
- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.



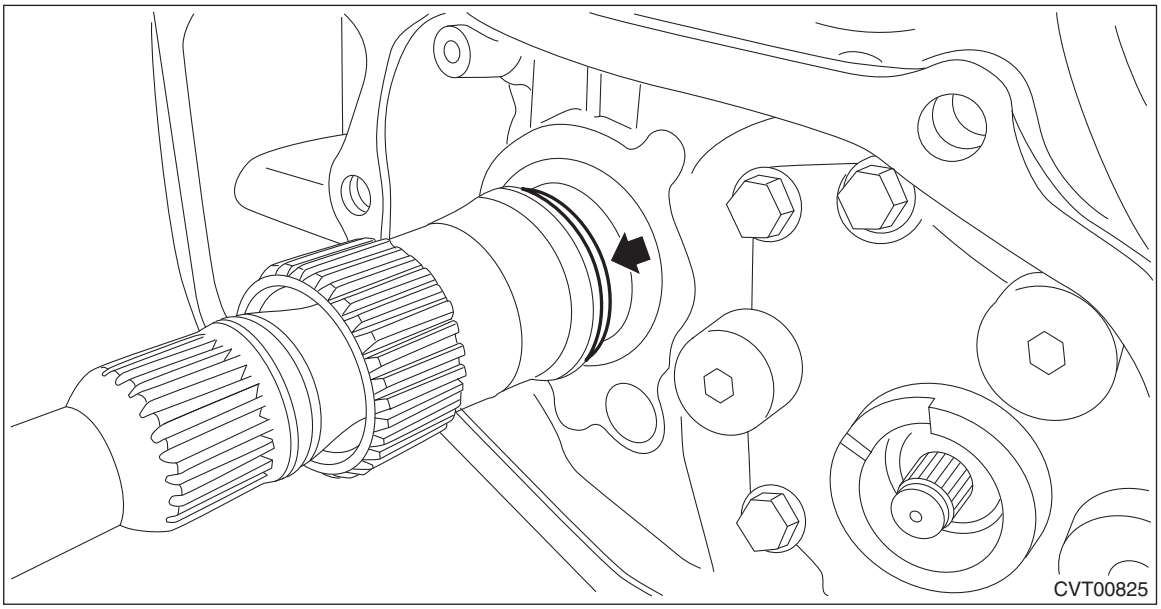
ST 499755602 PRESS SNAP RING

3) Install the drive sprocket.



4) Install the snap ring so that its cutout portion is securely fitted into the snap ring groove of the oil pump chain cover.

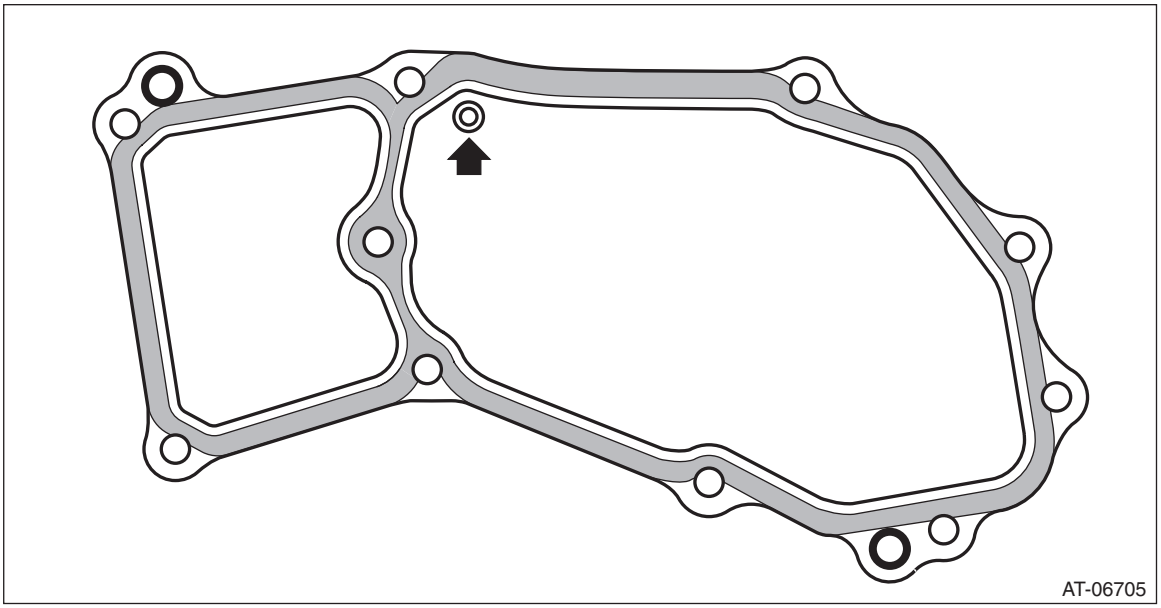
(A) Installation range of cutout portion for snap ring



5) Place the oil pump chain on drive sprocket.

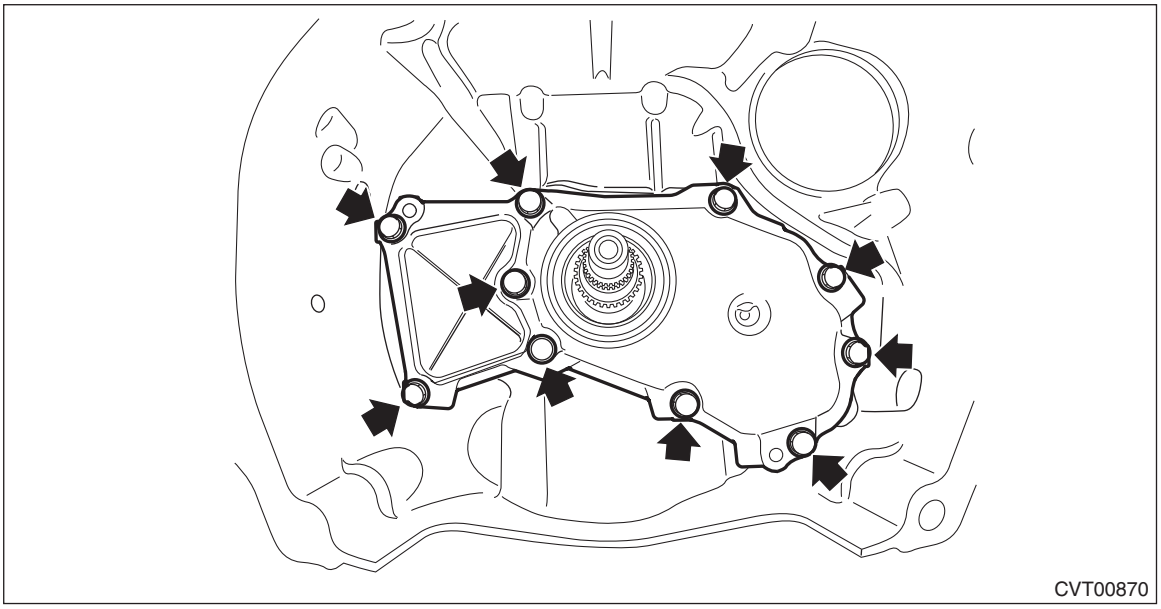
6) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.

7) Install the seal rings.



NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.
- When installing the seal rings, do not expand the seal rings too much.

8) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

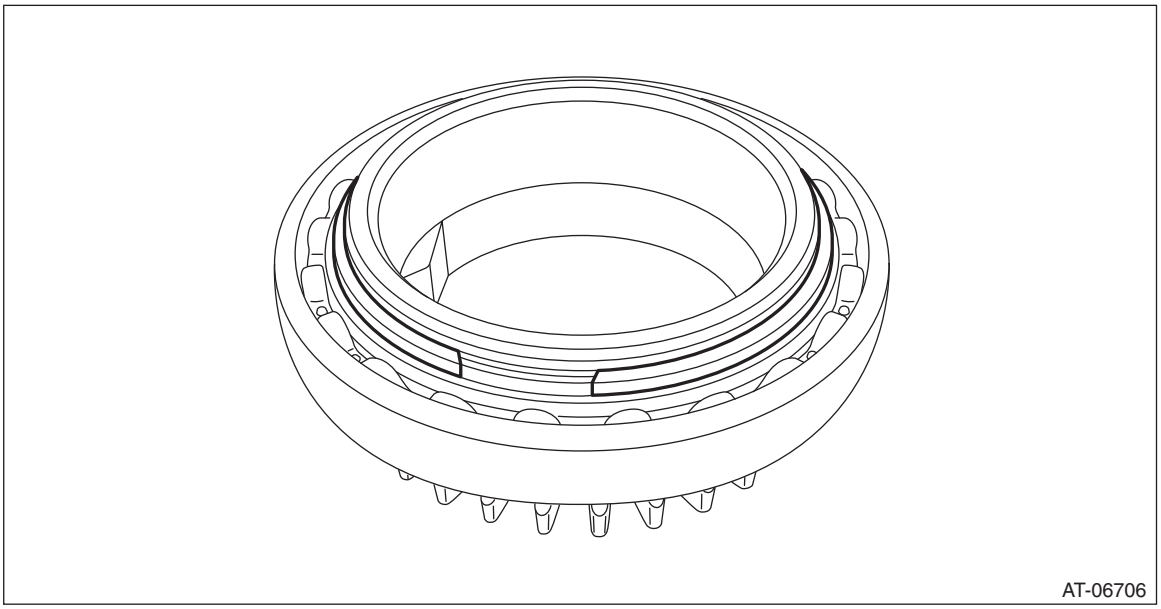


CAUTION:
Do not apply liquid gasket at the arrowed hole.

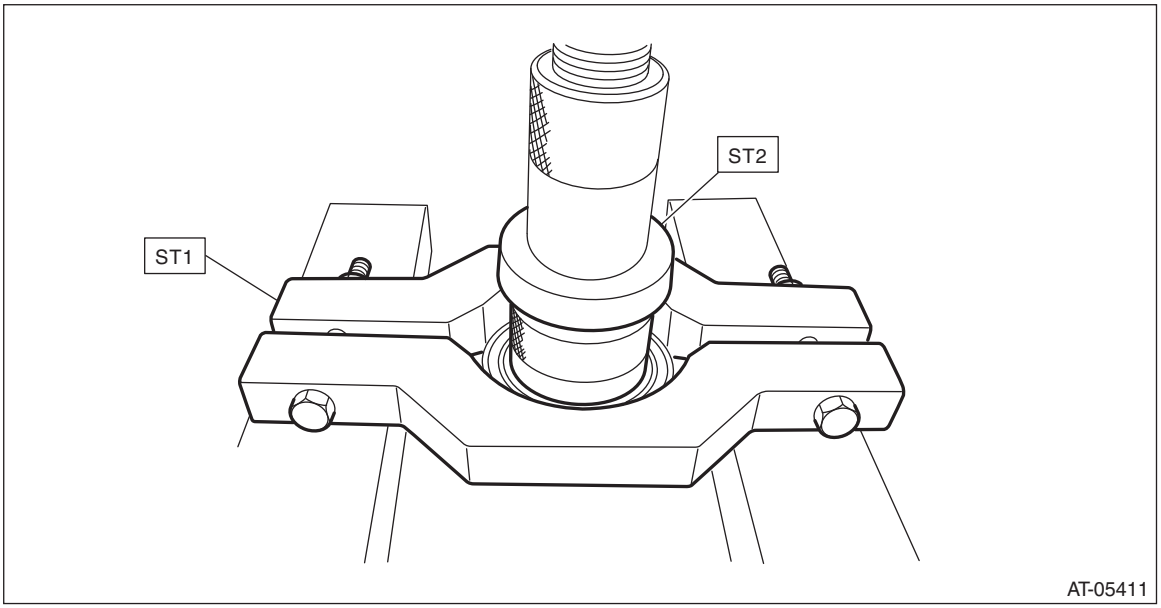
Liquid gasket:
THREE BOND 1215B or equivalent

9) Install the oil pump chain cover.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



10) Install the torque converter assembly. <Ref. to CVT(TR580)-202, INSTALLATION, Torque Converter Assembly.>
11) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

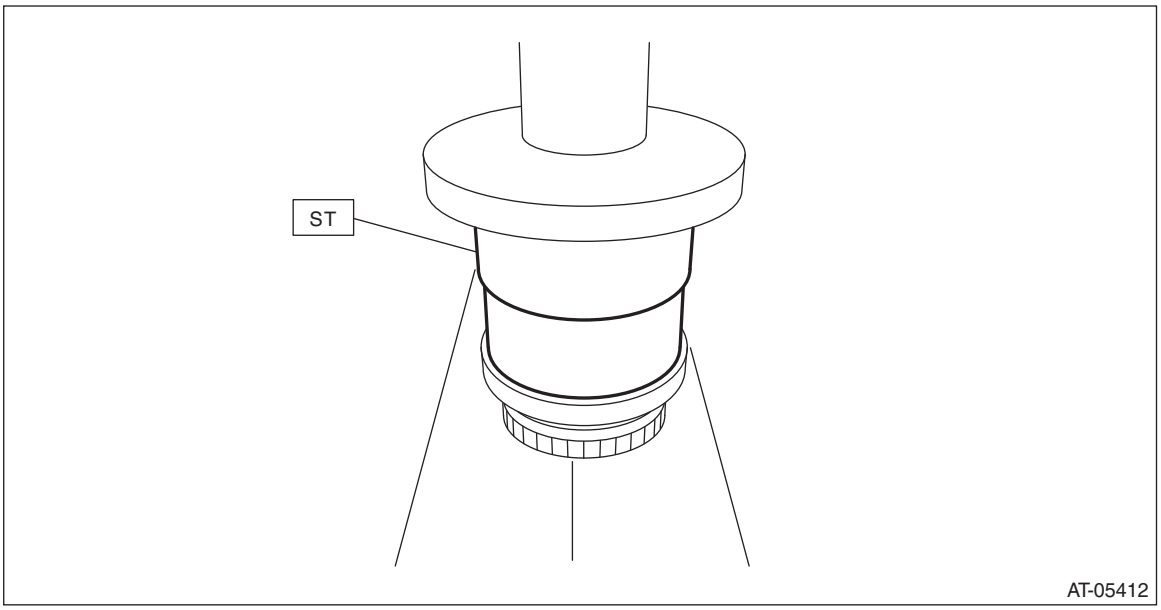


C: DISASSEMBLY

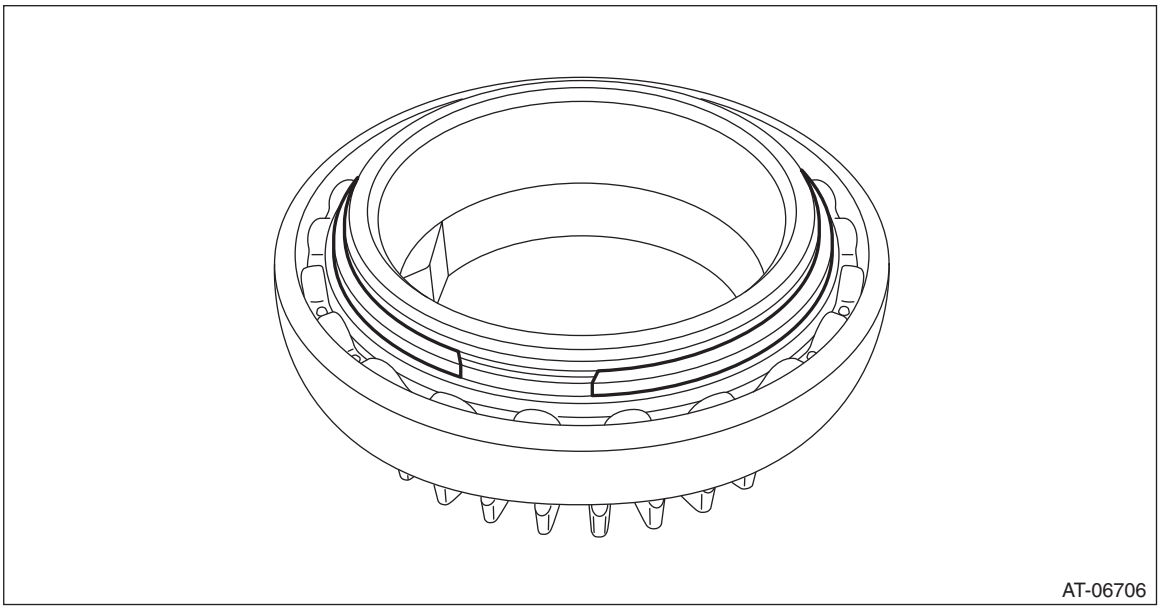
1. DRIVE SPROCKET

1) Remove the snap ring.

2) Remove the ball bearing using ST.
ST1 498077600 REMOVER
ST2 399513600 INSTALLER



D: ASSEMBLY

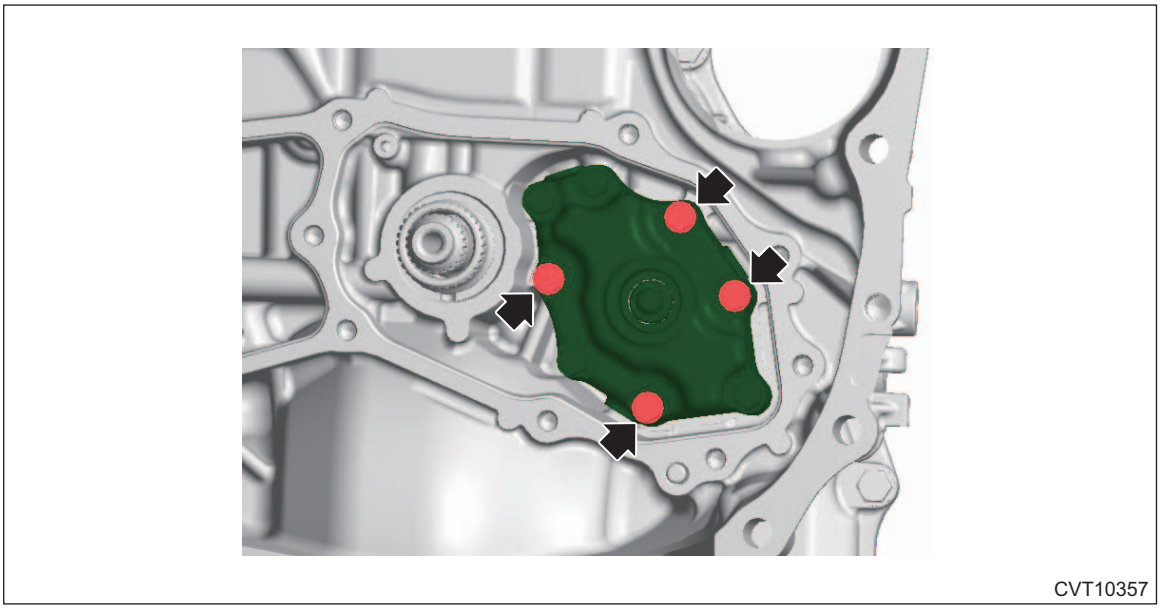


1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

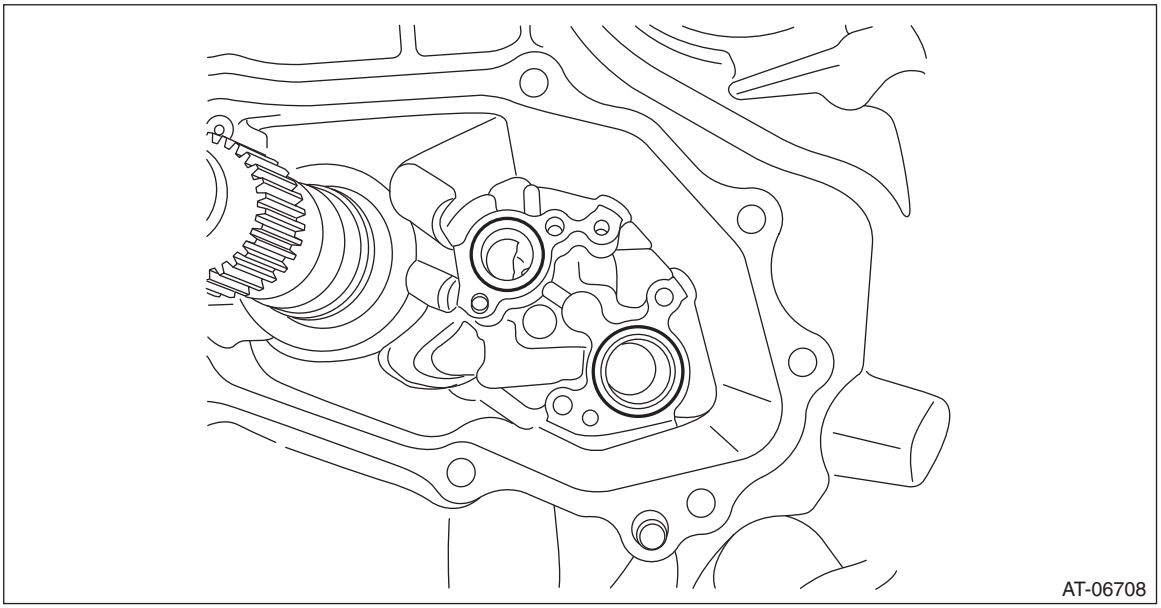
NOTE:
Use a new ball bearing.
ST 499755502 PRESS SNAP RING

2) Install the snap ring.



E: INSPECTION

- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.



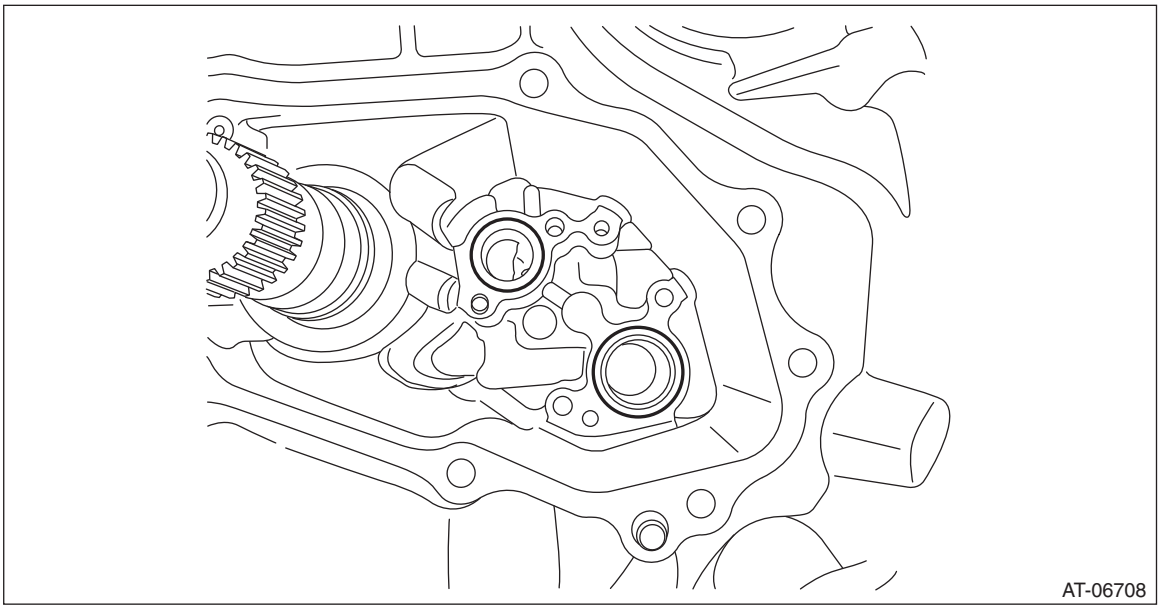
48.Oil Pump

A: REMOVAL

1) Remove the transmission assembly. <Ref. to CVT(TR580)-64, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR580)-202, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover. <Ref. to CVT(TR580)-372, REMOVAL, Oil Pump Chain.>
4) Remove the oil pump and the plate.

CVT10357

5) Remove the O-rings.

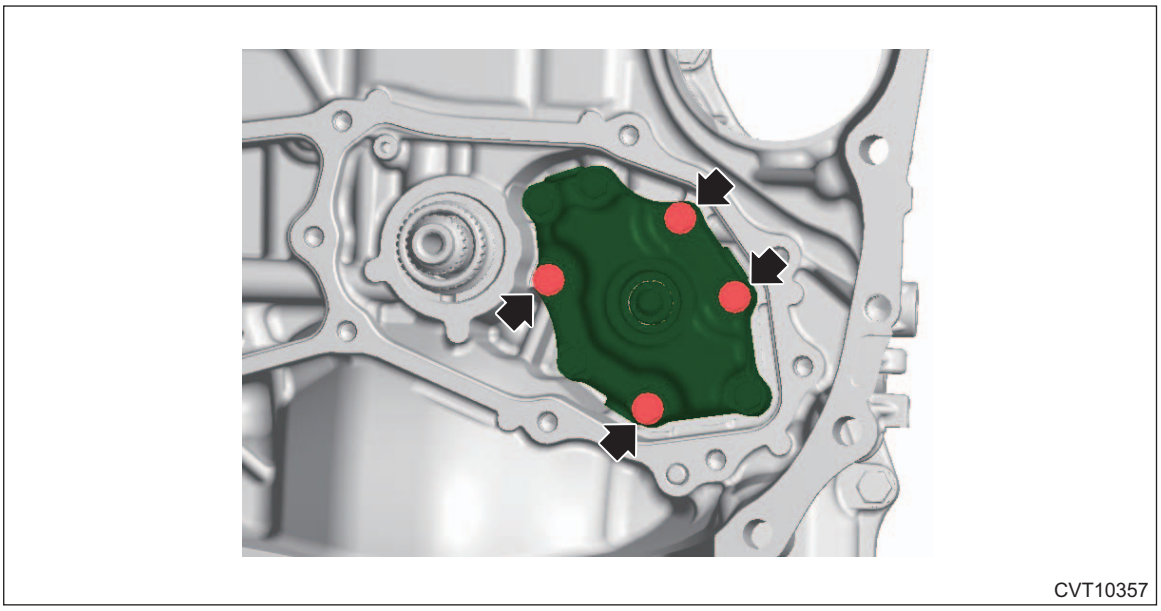


AT-06708

B: INSTALLATION

1) Install the O-rings.

NOTE:
- Use new O-rings.



- Apply CVTF to the O-rings.

2) Install the plate and the oil pump.

NOTE:
Apply CVTF to the bolt.

Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

3) Install the oil pump chain cover. <Ref. to CVT(TR580)-375, INSTALLATION, Oil Pump Chain.>
4) Install the torque converter assembly. <Ref. to CVT(TR580)-202, INSTALLATION, Torque Converter Assembly.>
5) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

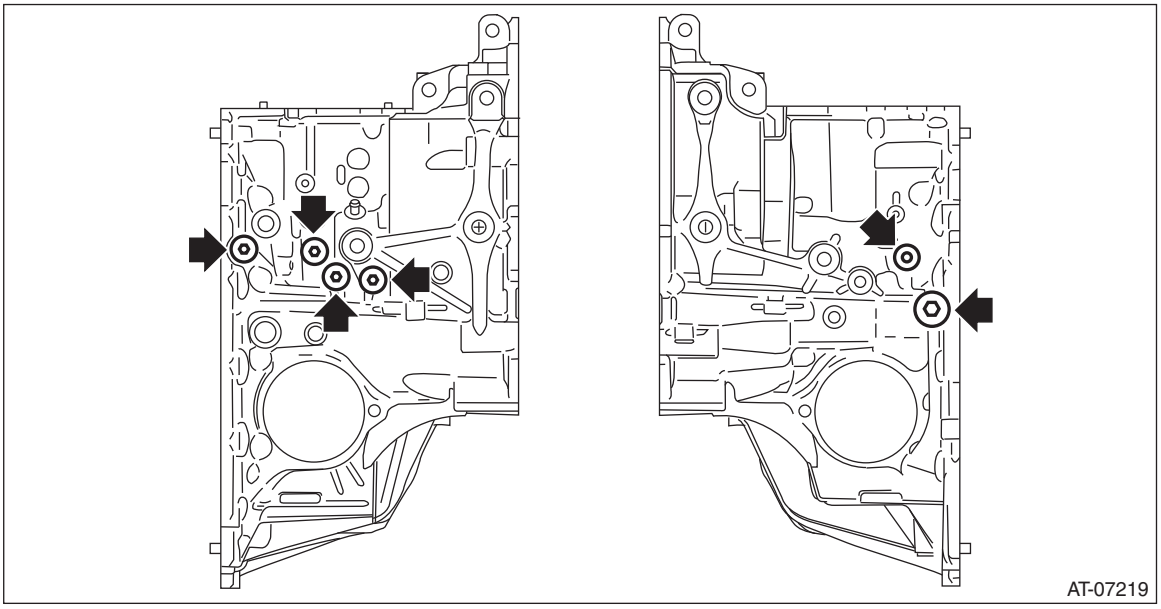
Check the following items.
- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.

1) Measure the secondary pressure. <Ref. to CVT(TR580)-52, INSPECTION, Secondary Pressure (Line Pressure) Test.>
2) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
3) Check oil strainer for clogging.
When oil strainer has no clogging, replace the oil pump.

49.Converter Case

A: REMOVAL

1) Remove the transmission assembly. <Ref. to CVT(TR580)-64, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR580)-196, REMOVAL, Air Breather Hose.>
3) Remove the control valve body. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR580)-152, REMOVAL, Transmission Harness.>
5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-118, REMOVAL, Turbine Speed Sensor.>
6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-123, REMOVAL, Secondary Speed Sensor.>
7) Remove the primary speed sensor. <Ref. to CVT(TR580)-128, REMOVAL, Primary Speed Sensor.>
8) Remove the inhibitor switch. <Ref. to CVT(TR580)-112, REMOVAL, Inhibitor Switch.>
9) Remove the extension case. <Ref. to CVT(TR580)-206, REMOVAL, Extension Case.>
10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-210, REMOVAL, Transfer Clutch.>
11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-224, REMOVAL, Transfer Driven Gear.>
12) Remove the parking pawl. <Ref. to CVT(TR580)-227, REMOVAL, Parking Pawl.>
13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-229, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
15) Remove the transmission control device. <Ref. to CVT(TR580)-236, REMOVAL, Transmission Control Device.>
16) Remove the transmission case. <Ref. to CVT(TR580)-242, REMOVAL, Transmission Case.>
17) Remove the reduction drive gear. <Ref. to CVT(TR580)-261, REMOVAL, Reduction Drive Gear.>
18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-266, REMOVAL, Primary Pulley and Secondary Pulley.>
19) Remove the reverse brake assembly. <Ref. to CVT(TR580)-285, REMOVAL, Reverse Brake Assembly.>
20) Remove the forward clutch assembly. <Ref. to CVT(TR580)-300, REMOVAL, Forward Clutch Assembly.>
21) Remove the drive pinion shaft assembly. <Ref. to CVT(TR580)-320, REMOVAL, Drive Pinion Shaft Assembly.>
22) Remove the front differential assembly. <Ref. to CVT(TR580)-353, REMOVAL, Front Differential Assembly.>
23) Remove the oil pump chain cover. <Ref. to CVT(TR580)-372, REMOVAL, Oil Pump Chain.>
24) Remove the oil pump. <Ref. to CVT(TR580)-381, REMOVAL, Oil Pump.>



B: INSTALLATION

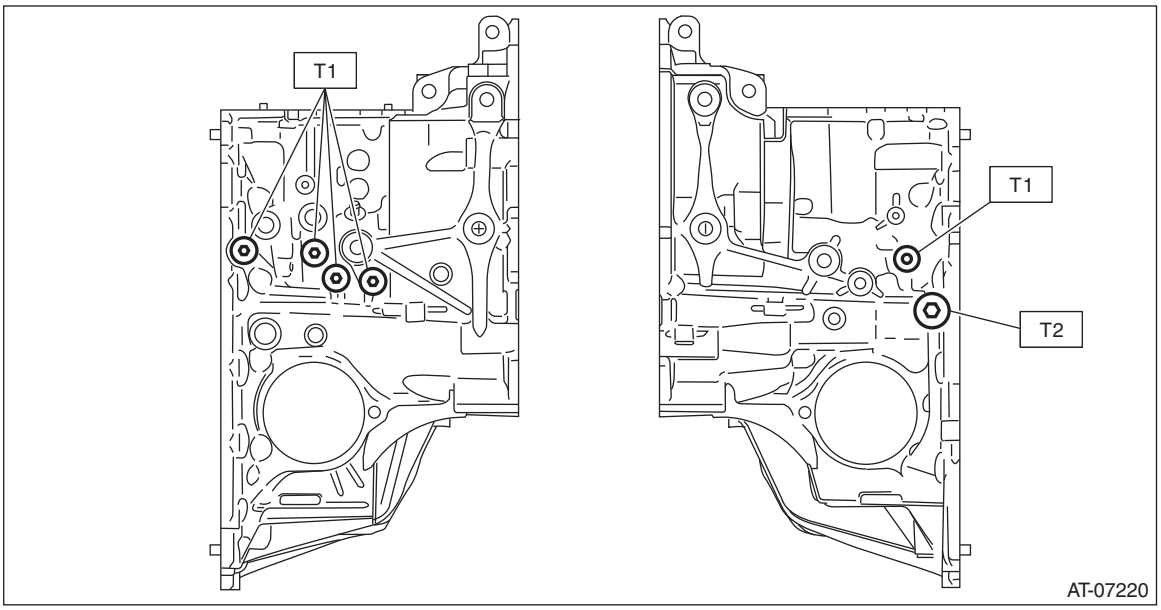
1) Install the oil pump. <Ref. to CVT(TR580)-381, INSTALLATION, Oil Pump.>
2) Install the oil pump chain cover. <Ref. to CVT(TR580)-375, INSTALLATION, Oil Pump Chain.>
3) Install the front differential assembly. <Ref. to CVT(TR580)-355, INSTALLATION, Front Differential Assembly.>
4) Install the drive pinion shaft assembly. <Ref. to CVT(TR580)-321, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the forward clutch assembly. <Ref. to CVT(TR580)-303, INSTALLATION, Forward Clutch Assembly.>
6) Install the reverse brake assembly. <Ref. to CVT(TR580)-287, INSTALLATION, Reverse Brake Assembly.>
7) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-272, INSTALLATION, Primary Pulley and Secondary Pulley.>
8) Install the reduction drive gear. <Ref. to CVT(TR580)-262, INSTALLATION, Reduction Drive Gear.>
9) Install the transmission case. <Ref. to CVT(TR580)-245, INSTALLATION, Transmission Case.>
10) Install the transmission control device. <Ref. to CVT(TR580)-238, INSTALLATION, Transmission Control Device.>
11) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>

12) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-229, INSTALLATION, Reduction Driven Gear.>
13) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-224, INSTALLATION, Transfer Driven Gear.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR580)-211, INSTALLATION, Transfer Clutch.>
15) Install the parking pawl. <Ref. to CVT(TR580)-227, INSTALLATION, Parking Pawl.>
16) Install the extension case. <Ref. to CVT(TR580)-206, INSTALLATION, Extension Case.>
17) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
18) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
19) Install the primary speed sensor. <Ref. to CVT(TR580)-128, INSTALLATION, Primary Speed Sensor.>
20) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
21) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
22) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
23) Install the air breather hose. <Ref. to CVT(TR580)-198, INSTALLATION, Air Breather Hose.>
24) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the transmission hanger and transmission radio ground cord, if mounted.
2) Remove the filler plug, oil drain plug and overflow drain plug. <Ref. to CVT(TR580)-44, REPLACEMENT, Differential Gear Oil.>
3) Remove all plugs.

D: ASSEMBLY



1) Install the oil drain plug.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
2) Install the overflow drain plug.

NOTE:
Overflow plug of differential gear oil is temporarily attached.
3) Install all plugs.

NOTE:
Use new O-rings.

Tightening torque:
T1: 22 N·m (2.2 kgf-m, 16.2 ft-lb)
T2: 22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

4) Install the transmission hanger and transmission radio ground cord.

CAUTION:
Be careful not to deform or damage the terminal of transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

50.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in “D” or “R” range.	• Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

1. General Description

A: SPECIFICATION

1. TORQUE CONVERTER

Model		3.6 L non-turbo
Type		Symmetric, 3-element, single stage, 2-phase torque converter
Stall torque ratio		1.80
Nominal	mm (in)	246 (9.69)
Stall speed (at sea level)	r/min	1,870 — 2,900 (D range) 1,750 — 2,750 (R range)
One-way clutch		Sprag type one-way clutch

2. OIL PUMP

Type		Internal gear pump
Driving method		Driven by chain
Number of teeth	Inner rotor	8
	Outer rotor	9

3. TRANSMISSION CONTROL ELEMENT

Type	Forward continuously variable speed change, 1 reverse, planetary gear
Multi-plate clutch	1 set
Multi-plate brake	1 set

4. TRANSMISSION GEAR RATIO

Forward	3.105 — 0.482
Rev	3.018

5. PLATE

Number of input clutch drive plates	5
Number of forward clutch drive plates	6
Number of reverse brake drive plates	5

6. SELECTOR POSITION

P (Park)	Transmission neutral, output shaft locked, engine start enabled
R (Reverse)	Rev
N (Neutral)	Transmission neutral, engine start enabled
D (Drive)	Forward continuously variable speed change
M (Manual mode) (paddle shift +side)	Manual gear change 1st → 2nd → 3rd → 4th → 5th → 6th
M (Manual mode) (paddle shift –side)	Manual gear change 1st ← 2nd ← 3rd ← 4th ← 5th ← 6th

7. HYDRAULIC CONTROL AND LUBRICATION

Type	Electronic hydraulic control (speed changed by signals of vehicle speed and accelerator opening angle)
Fluid	Specified fluid: Subaru High Torque CVT Fluid **CAUTION:** **Always use specified CVTF. Using other fluid will cause malfunction.**
Fluid capacity L (US qt, Imp qt)	12.45 — 12.95 (13.2 — 13.7, 11.0 — 11.4)
Lubrication system	Forced feed lubrication with oil pump

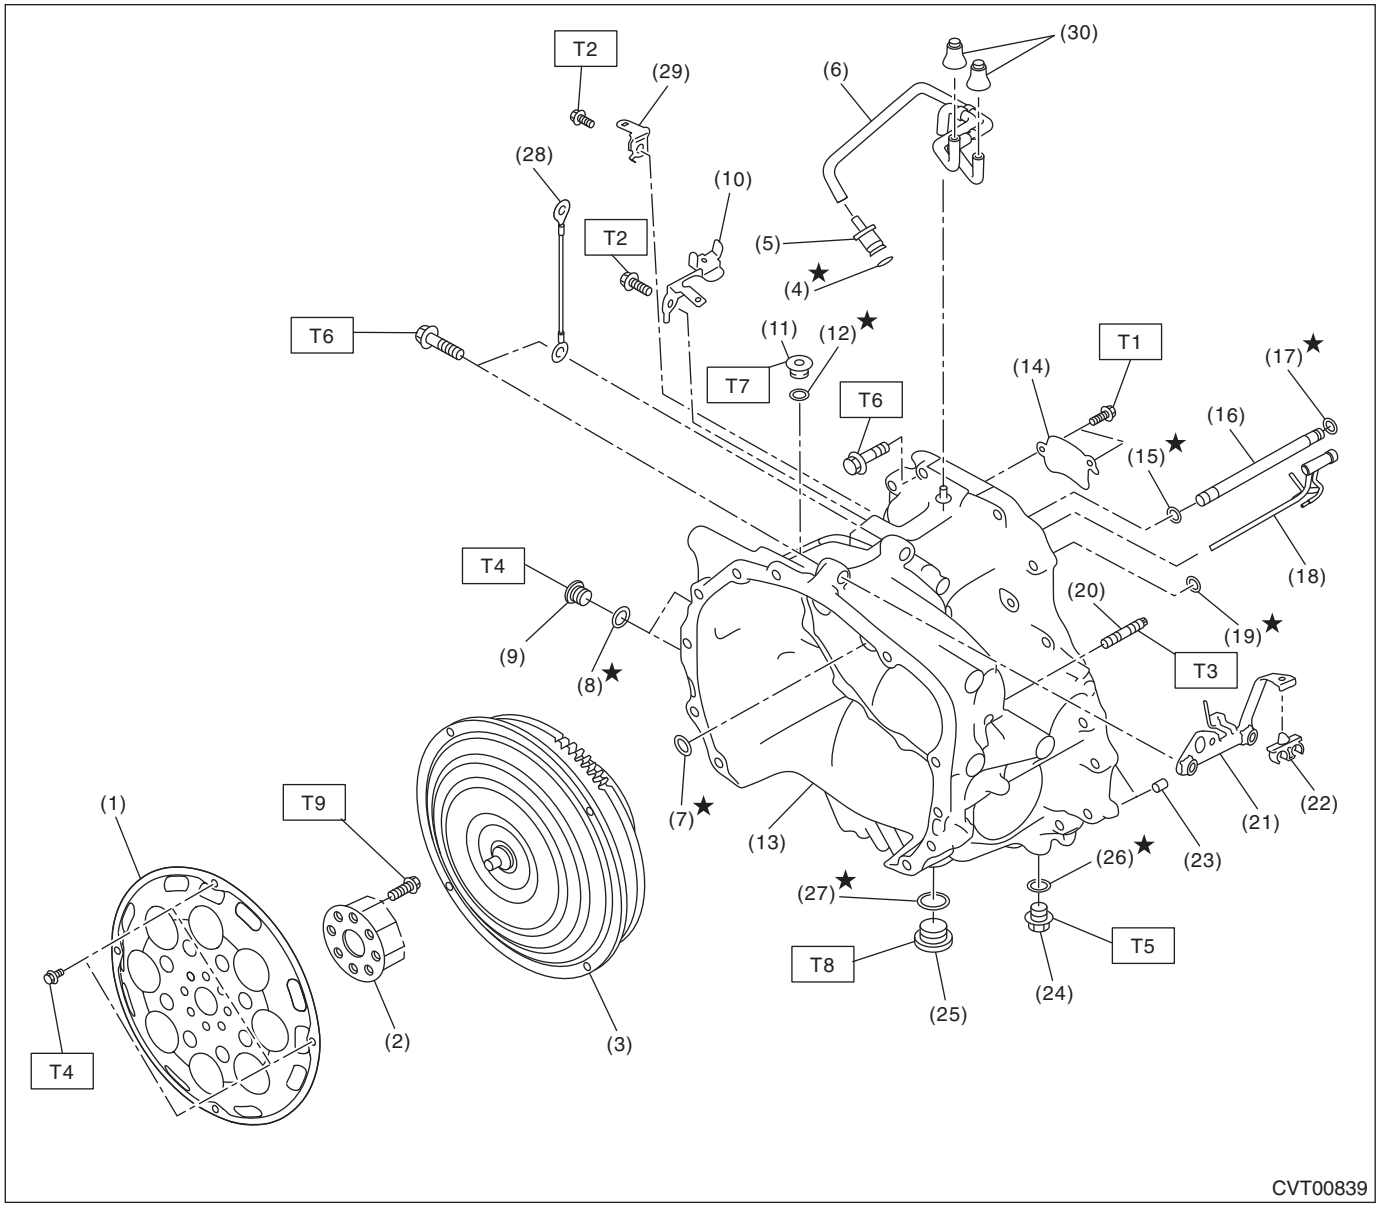
8. COOLING AND HARNESS

Model	Sedan	OUTBACK
Cooling system	Liquid-cooler incorporated in radiator	Liquid-cooler incorporated in radiator + CVTF cooler (air cool)
Inhibitor switch harness	12 poles	
Transmission harness	20 poles	

9. TRANSFER

Transfer type	Multi-plate transfer (MP-T)
Number of transfer clutch drives & driven plates	6
Control method	Electronic hydraulic type
Reduction gear ratio	1.000 (37/37)

10.REDUCTION GEAR RATIO

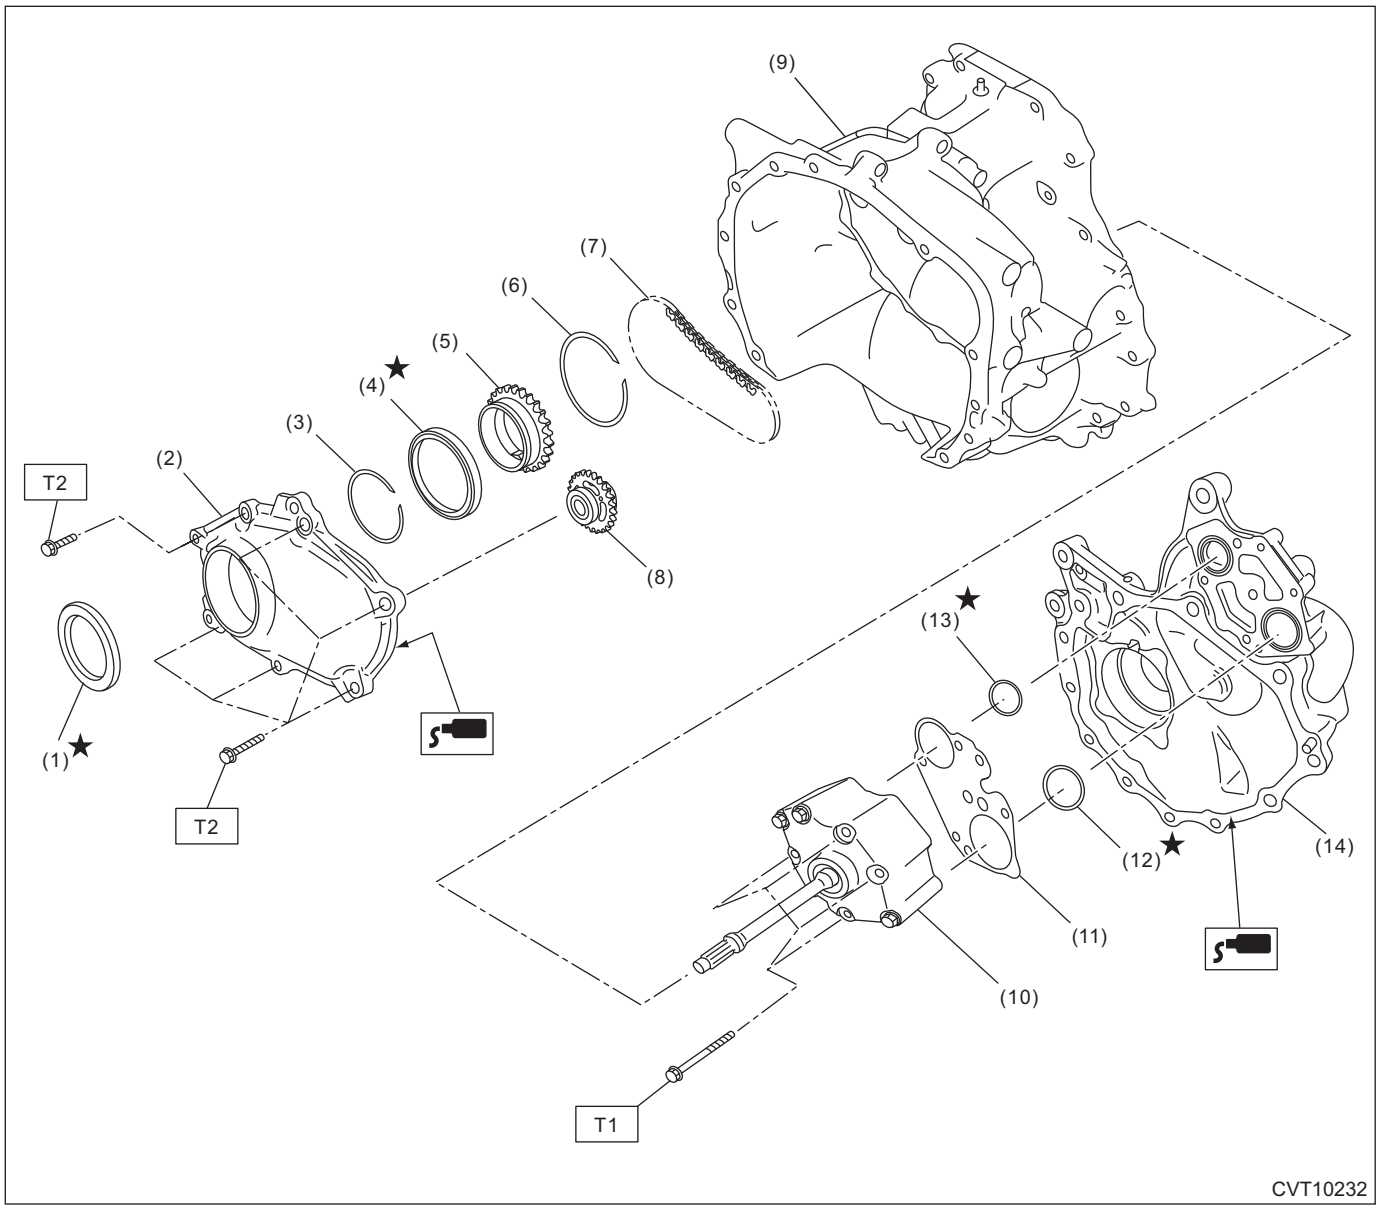


Front final reduction gear ratio	4.111

11.FRONT DIFFERENTIAL GEAR OIL

Fluid	Recommended fluid: SUBARU GEAR OIL EXTRA MT **CAUTION:** **If an alternative transmission oil is used, you may not have expected functionality and performance.** Alternative fluid: GL-5 (75W-90)
Fluid capacity L (US qt, Imp qt)	1.3 — 1.5 (1.4 — 1.6, 1.1 — 1.3)

B: COMPONENT



1. TORQUE CONVERTER ASSEMBLY AND CONVERTER CASE

(1) Drive plate
(2) Reinforcement drive plate
(3) Torque converter ASSY
(4) O-ring
(5) Oil charge pipe cap
(6) Air breather hose
(7) O-ring
(8) O-ring
(9) Plug
(10) Transmission harness stay
(11) Plug
(12) O-ring
(13) Converter case
(14) Oil stopper plate
(15) O-ring
(16) Lubrication pipe
(17) O-ring
(18) Lubrication pipe
(19) O-ring
(20) Stud bolt
(21) Transmission hanger
(22) Clip
(23) Straight pin
(24) Overflow drain plug
(25) Front differential gear oil drain plug
(26) Gasket
(27) Gasket
(28) Transmission radio ground cord
(29) Harness stay
(30) Air breather cap

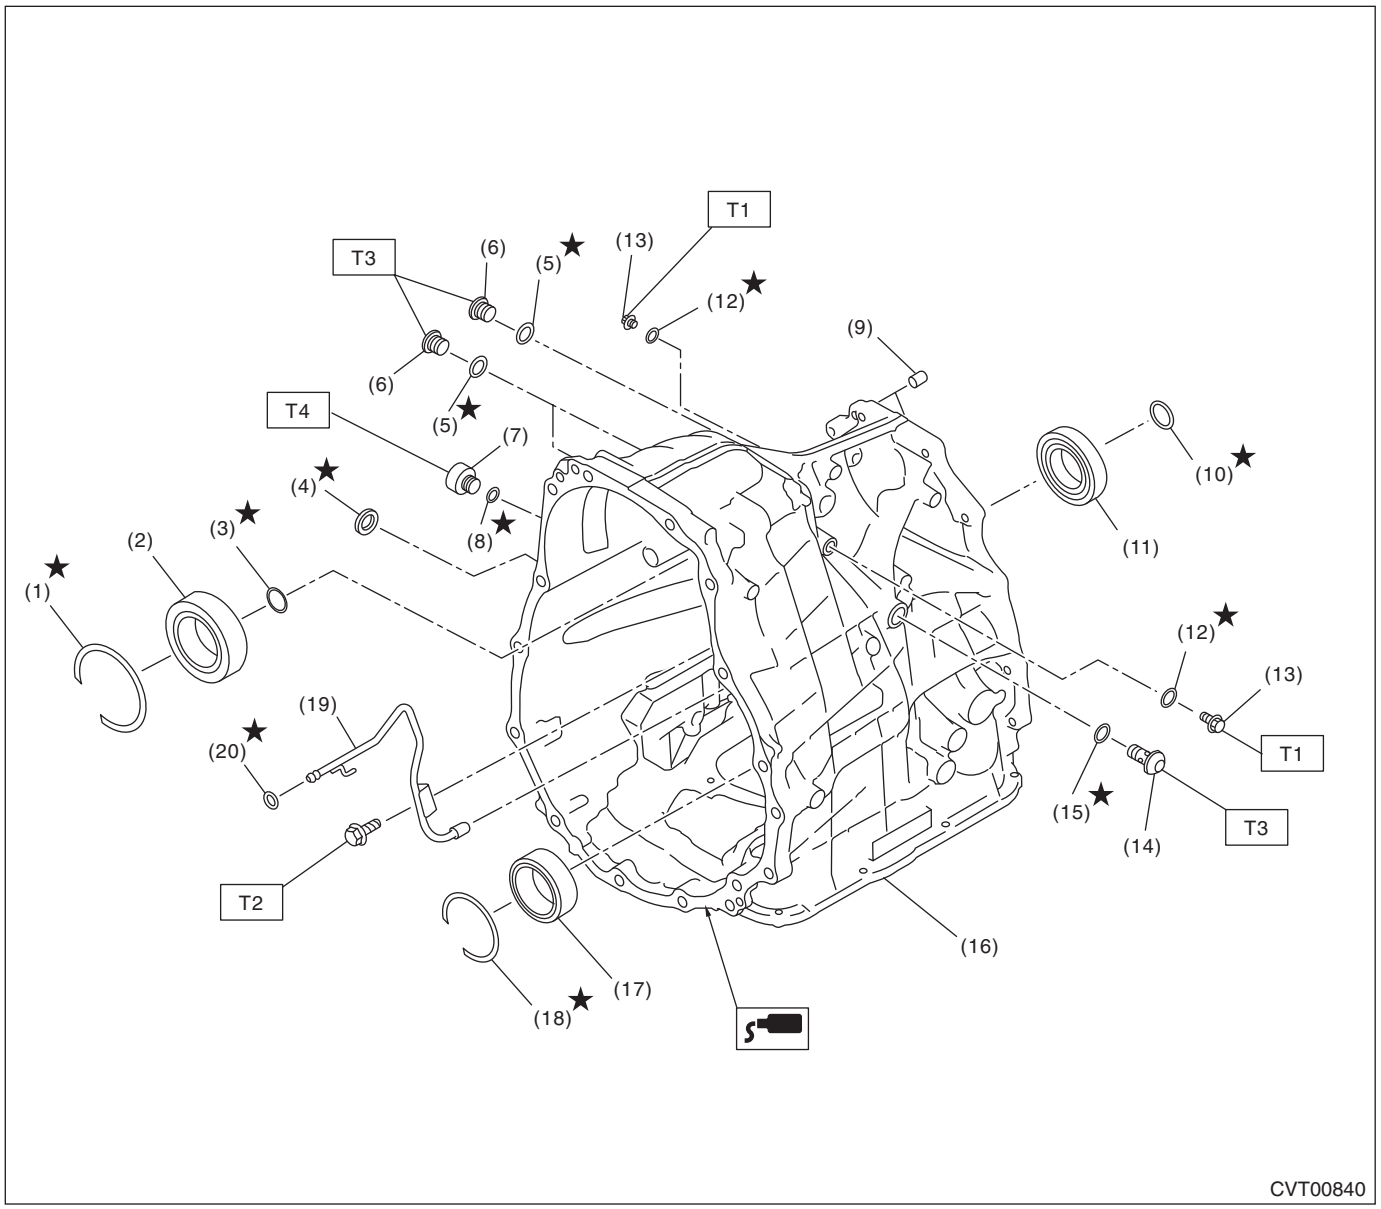
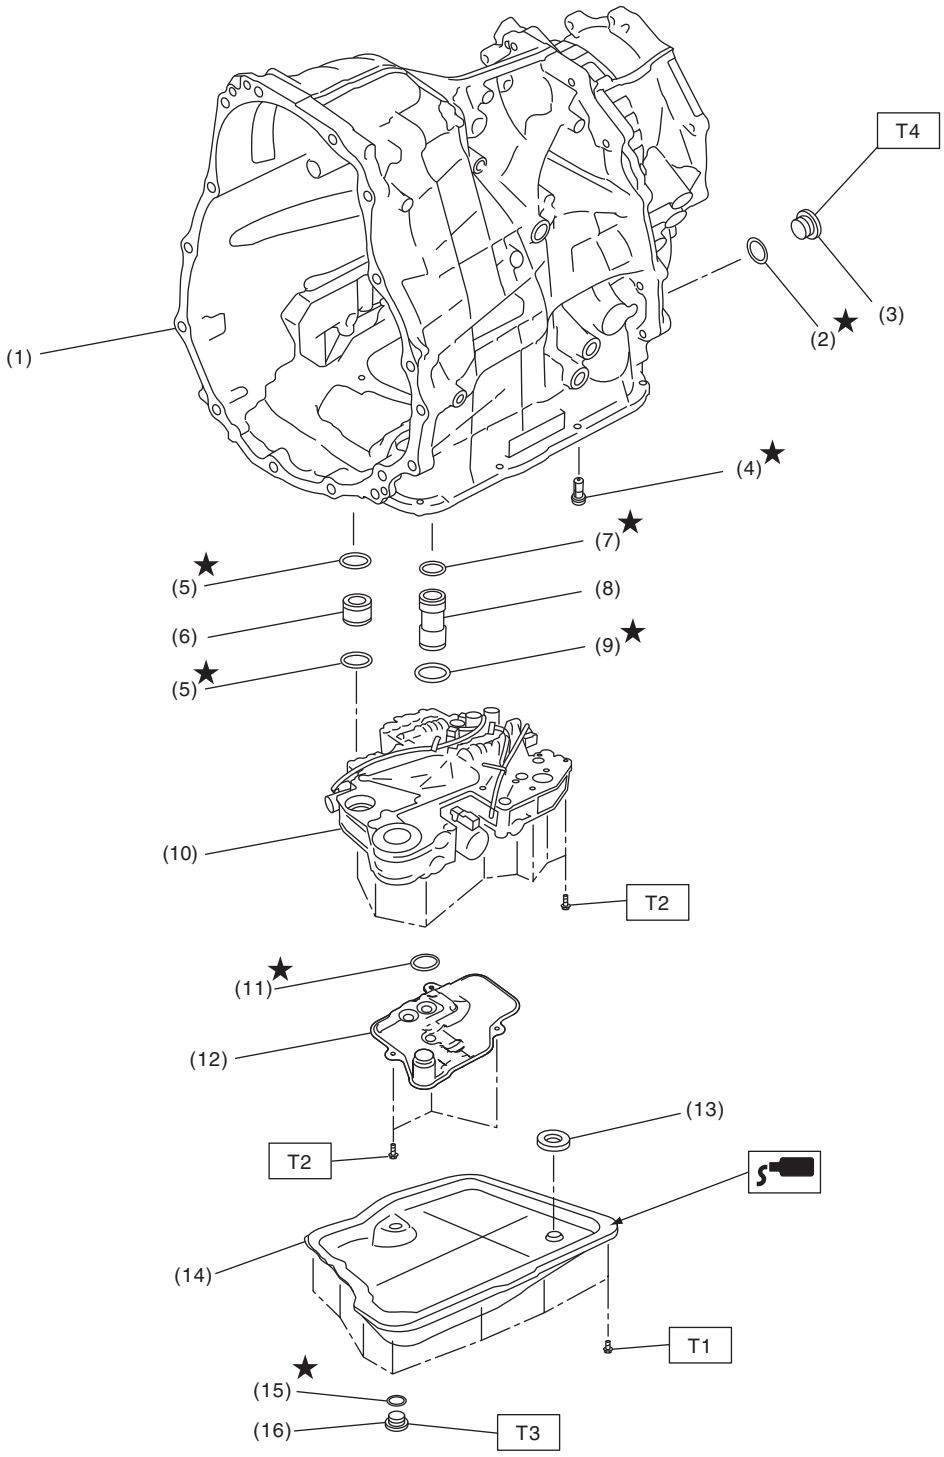
T5: 35 (3.6, 25.8)
T6: 41 (4.2, 30.2)
T7: 50 (5.1, 36.9)
T8: 70 (7.1, 51.6)
T9: <Ref. to CVT(TR690)-159, INSTALLATION, Drive Plate.>



2. OIL PUMP ASSEMBLY

(1) Oil seal
(2) Oil pump chain cover
(3) Snap ring
(4) Ball bearing
(5) Drive sprocket
(6) Snap ring
(7) Oil pump chain
(8) Driven sprocket
(9) Converter case
(10) Oil pump ASSY
(11) Plate
(12) O-ring (large)
(13) O-ring (small)
(14) Drive pinion retainer

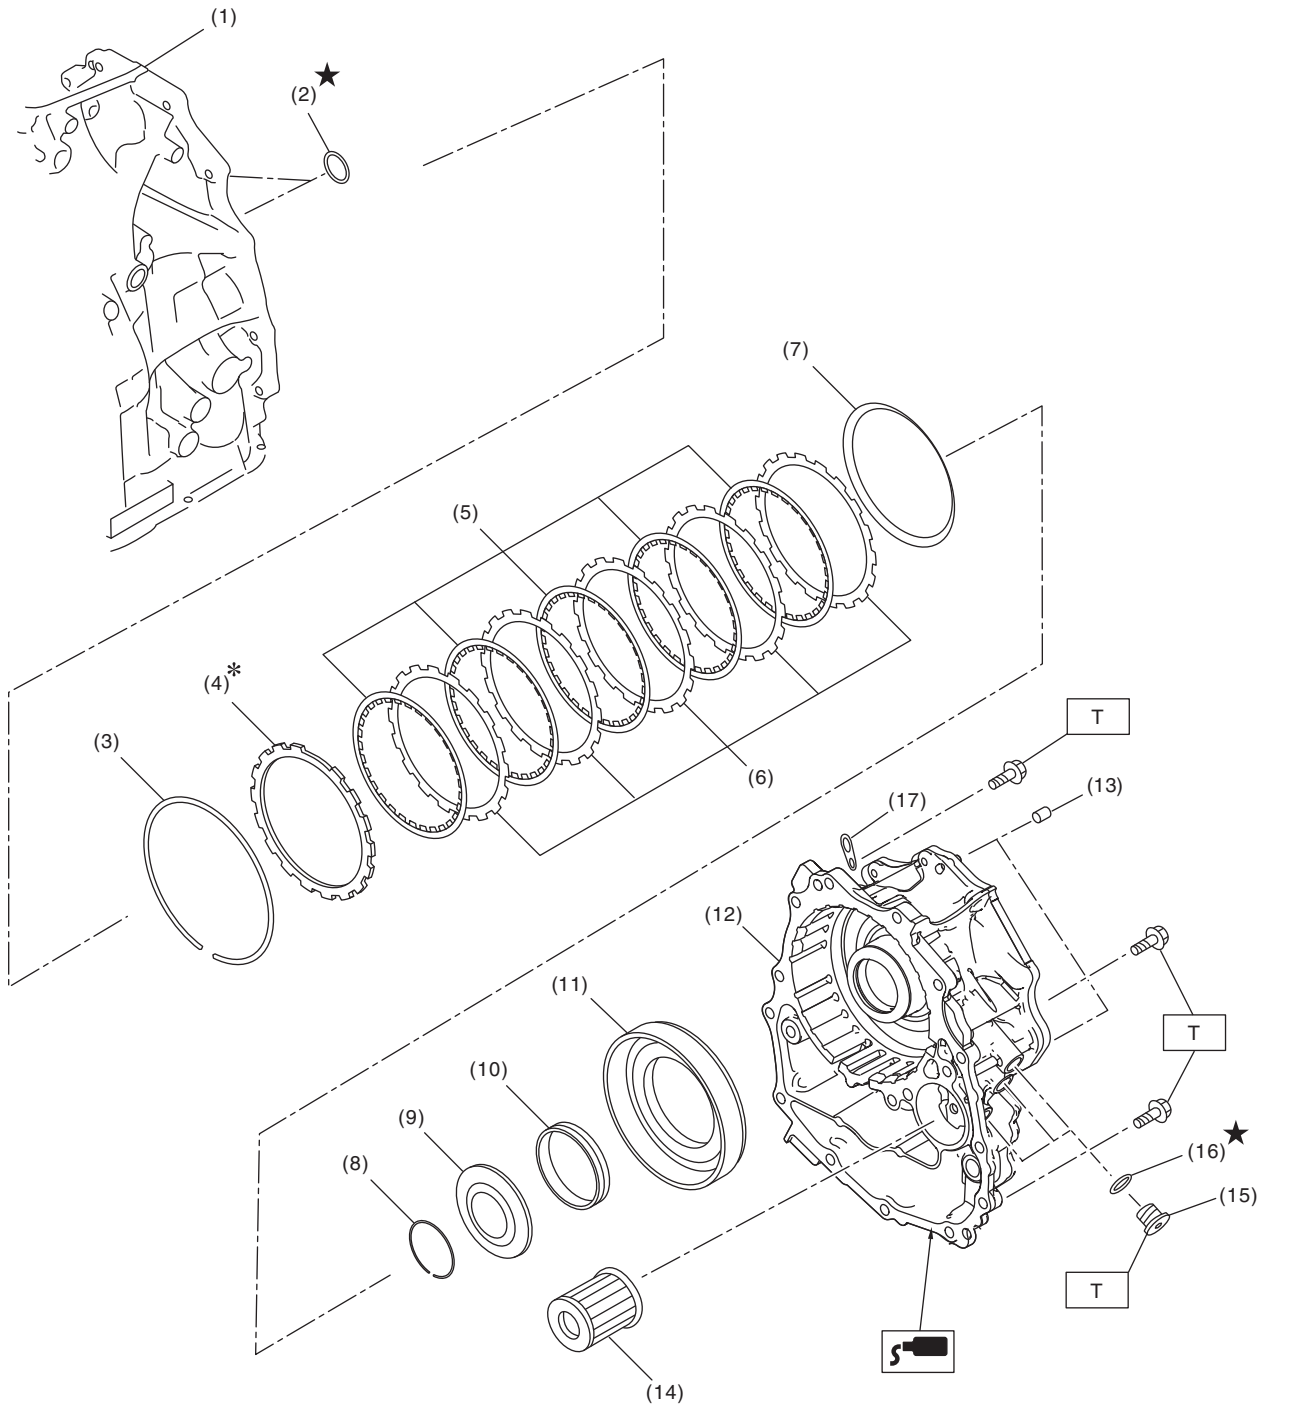
Tightening torque: N·m (kgf-m, ft-lb)
T1: 8.5 (0.9, 6.3)
T2: 24 (2.4, 17.7)



3. TRANSMISSION CASE

(1) Snap ring
(2) Roller bearing
(3) Seal ring
(4) Oil seal
(5) O-ring
(6) Plug
(7) Plug
(8) Gasket
(9) Straight pin
(10) Seal ring
(11) Ball bearing
(12) O-ring
(13) Plug
(14) Plug
(15) O-ring
(16) Transmission case
(17) Roller bearing
(18) Snap ring
(19) Lubrication pipe
(20) O-ring

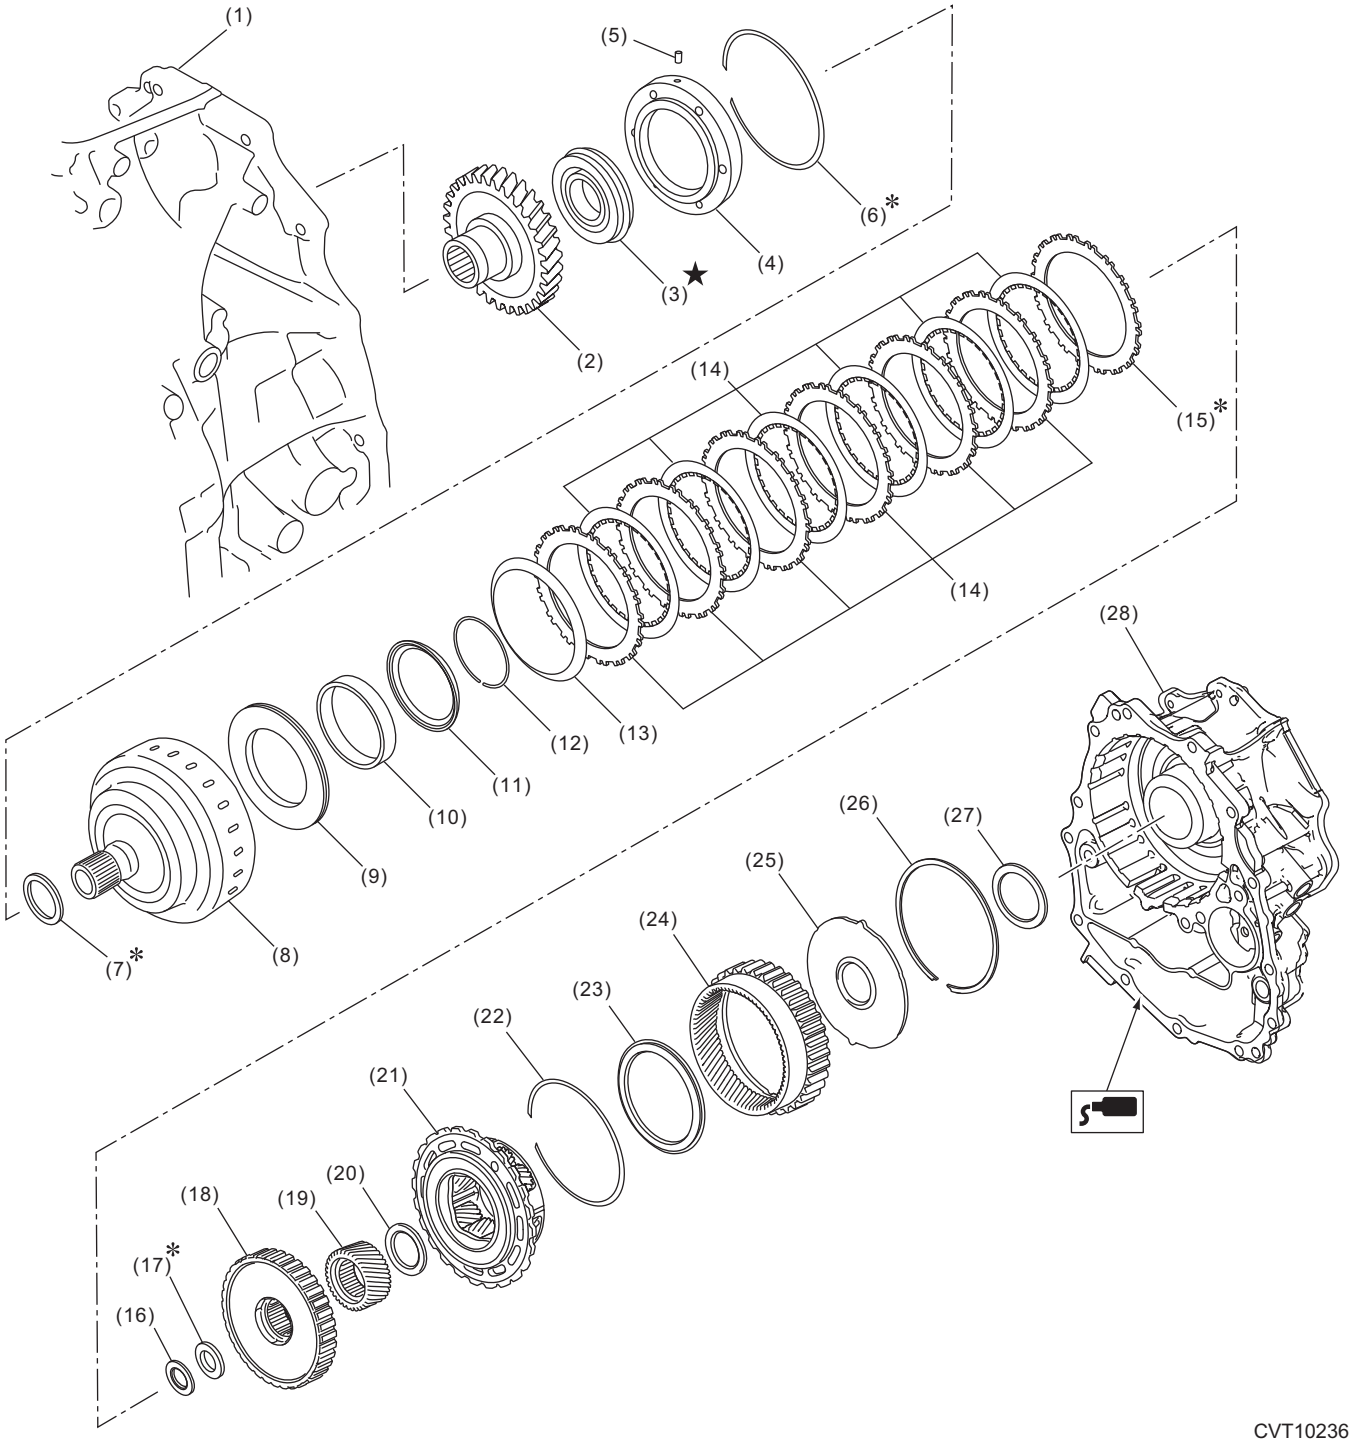
Tightening torque: N·m (kgf-m, ft-lb)
T1: 13 (1.3, 9.6)
T2: 16 (1.6, 11.8)
T3: 25 (2.5, 18.4)
T4: 35 (3.6, 25.8)



4. CONTROL VALVE BODY

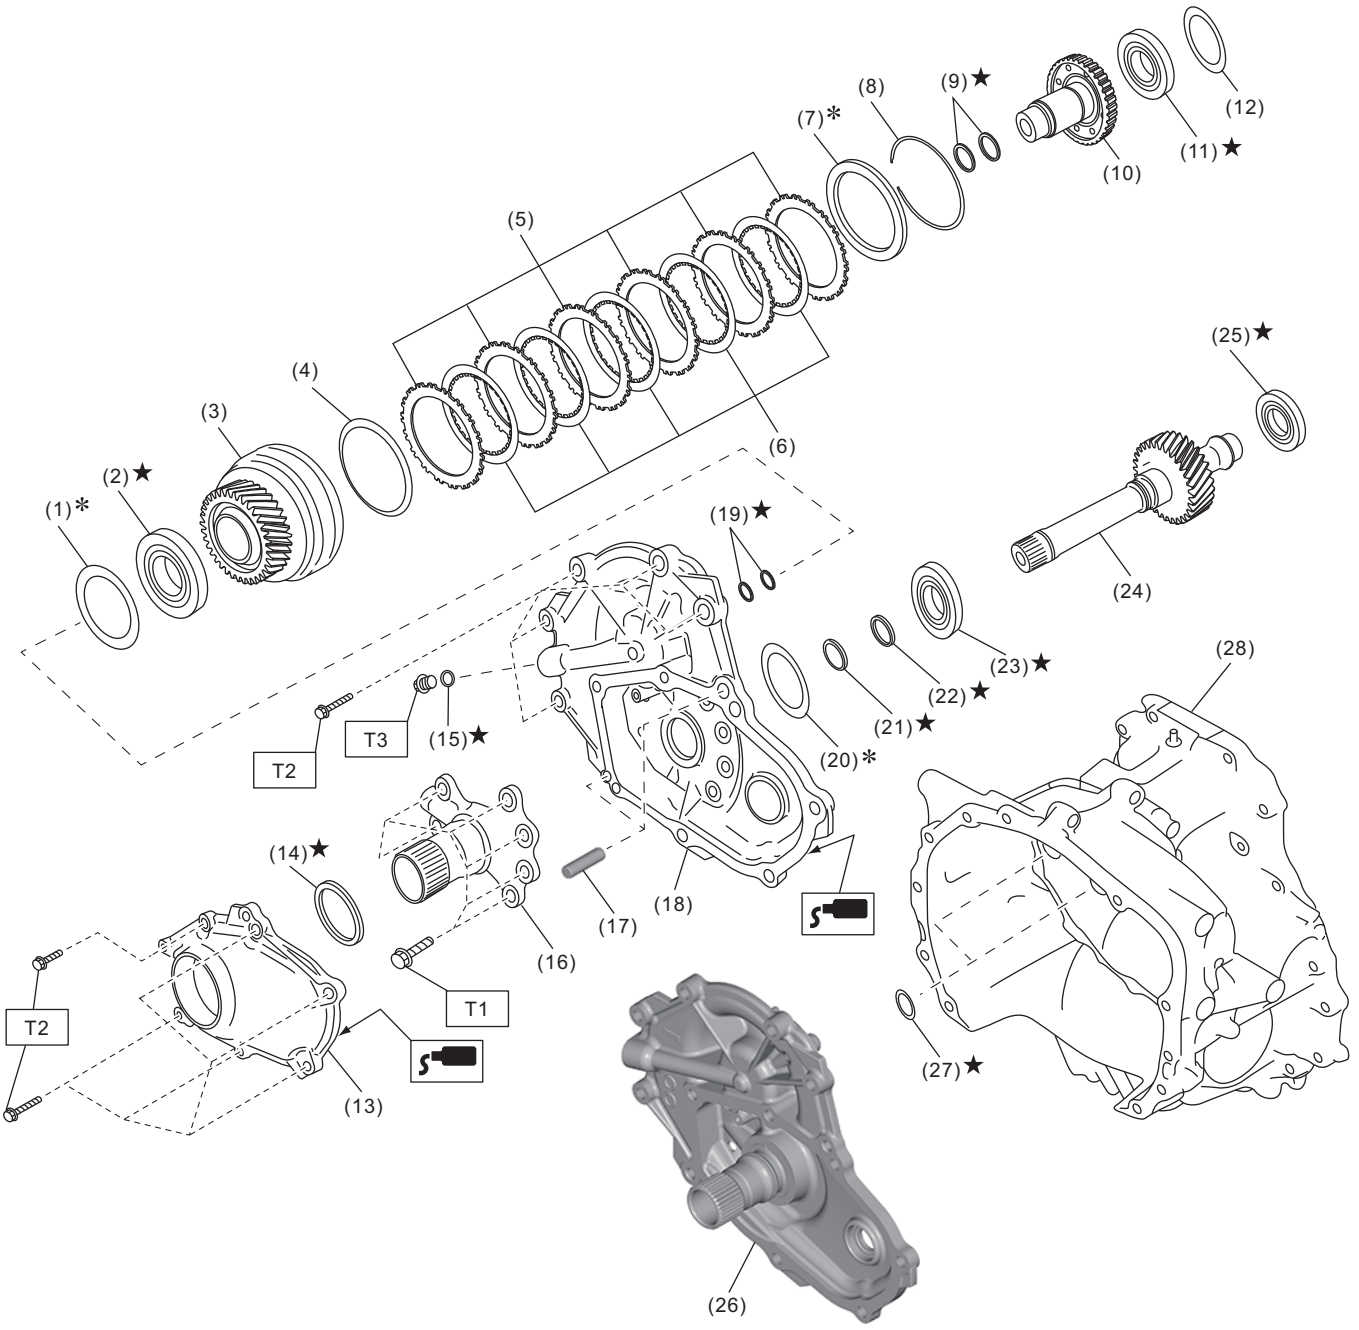
(1) Transmission case
(2) Gasket
(3) Filler plug
(4) CVTF filter
(5) O-ring
(6) Pressure pipe
(7) O-ring (small)
(8) CVTF pipe
(9) O-ring (large)
(10) Control valve body
(11) O-ring
(12) Oil strainer
(13) Magnet
(14) Oil pan
(15) Gasket
(16) CVTF drain plug

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 9 (0.9, 6.6)
T3: 39.2 (4.0, 28.9)
T4: 50 (5.1, 36.9)



5. REVERSE BRAKE ASSEMBLY AND INTERMEDIATE CASE

(1) Transmission case
(2) O-ring
(3) Snap ring
(4) Retaining plate
(5) Drive plate
(6) Driven plate
(7) Dish plate
(8) Snap ring
(9) Spring retainer
(10) Return spring
(11) Reverse brake piston
(12) Intermediate case
(13) Straight pin
(14) CVTF filter
(15) Plug
(16) O-ring
(17) Transmission hanger

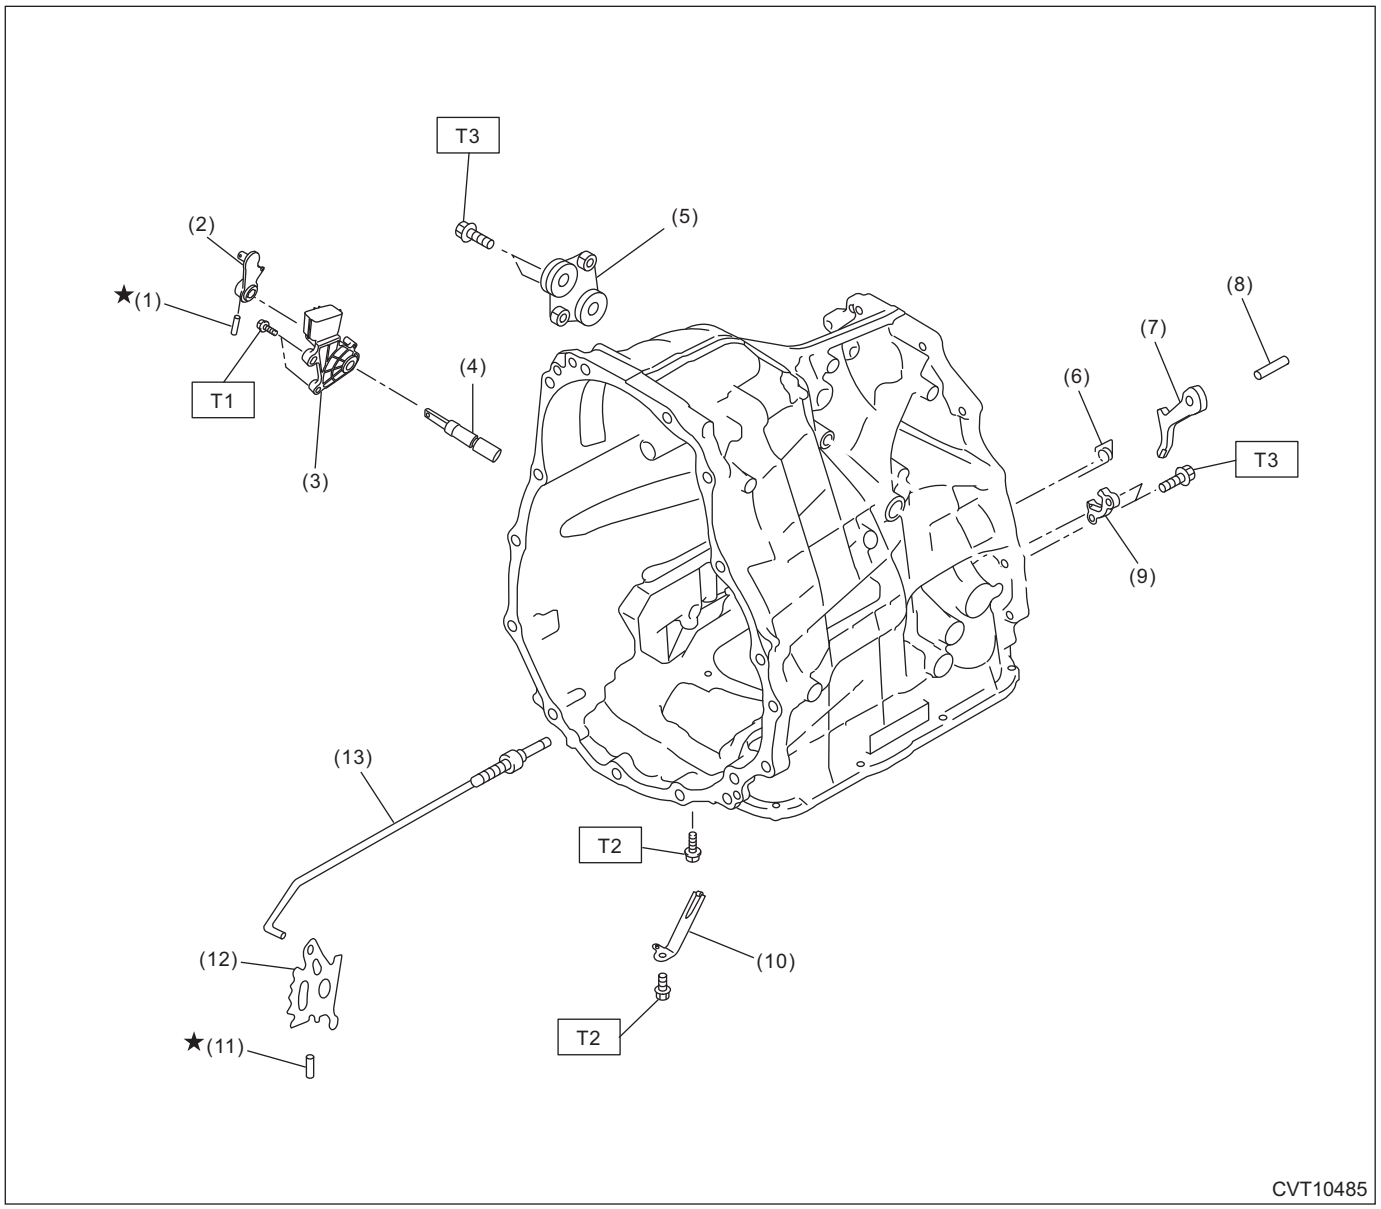


Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

6. FORWARD CLUTCH ASSEMBLY AND REDUCTION DRIVEN GEAR

(1) Transmission case
(2) Reduction driven gear
(3) Ball bearing
(4) Reduction driven gear retainer
(5) Straight pin
(6) Snap ring
(7) Washer
(8) Forward clutch drum
(9) Forward clutch piston
(10) Return spring
(11) Forward clutch piston retainer
(12) Snap ring
(13) Dish plate
(14) Forward clutch plate
(15) Retaining plate
(16) Thrust needle bearing
(17) Washer
(18) Forward clutch hub
(19) Sun gear
(20) Thrust needle bearing
(21) Planetary carrier ASSY
(22) Snap ring
(23) Thrust needle bearing
(24) Internal gear
(25) Thrust gear plate
(26) Snap ring
(27) Thrust needle bearing
(28) Intermediate case

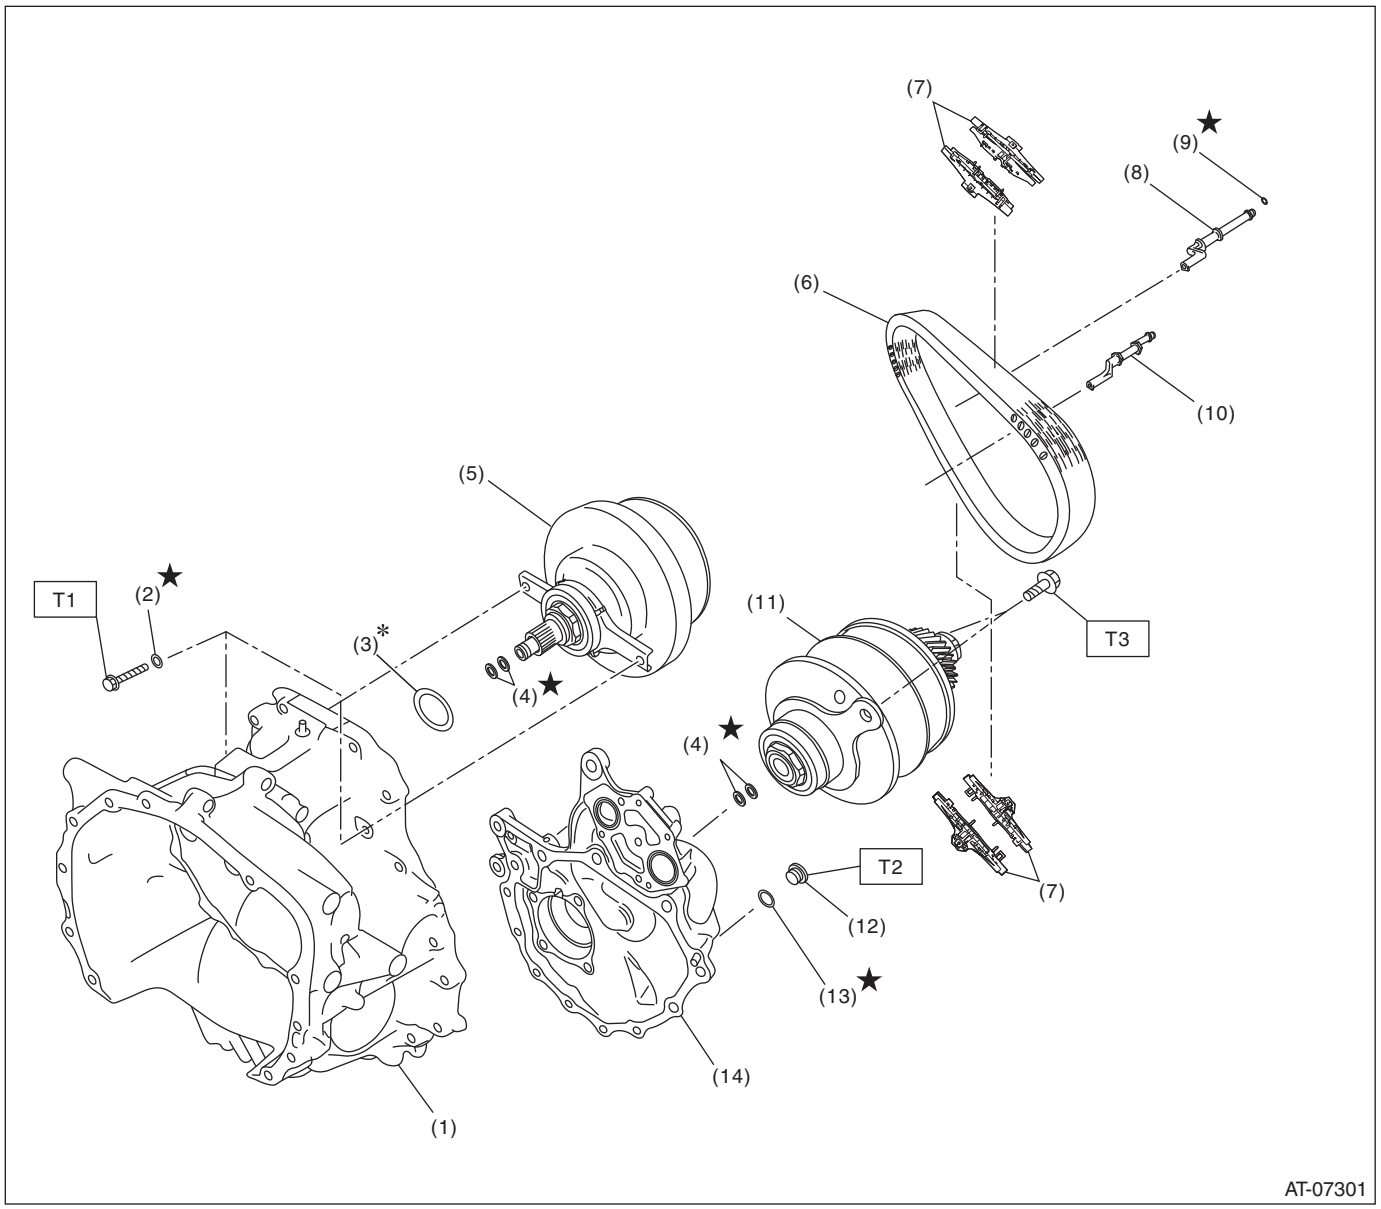
7. FRONT REDUCTION DRIVE GEAR AND FRONT REDUCTION DRIVEN GEAR



CVT10518

(1) Shim
(2) Ball bearing
(3) Front reduction driven gear
(4) Dish plate
(5) Driven plate
(6) Drive plate
(7) Retaining plate
(8) Snap ring
(9) Seal ring
(10) Front reduction driven shaft
(11) Ball bearing
(12) Shim
(13) Oil pump chain cover
(14) Seal ring
(15) O-ring
(16) Center support COMPL (bolt fixing type)
(17) Straight pin
(18) Converter case cover (bolt fixing type)
(19) Seal ring
(20) Shim
(21) O-ring
(22) Seal ring
(23) Ball bearing
(24) Front reduction drive gear
(25) Ball bearing
(26) Converter case cover (stator shaft press-fitting type)
(27) O-ring
(28) Converter case

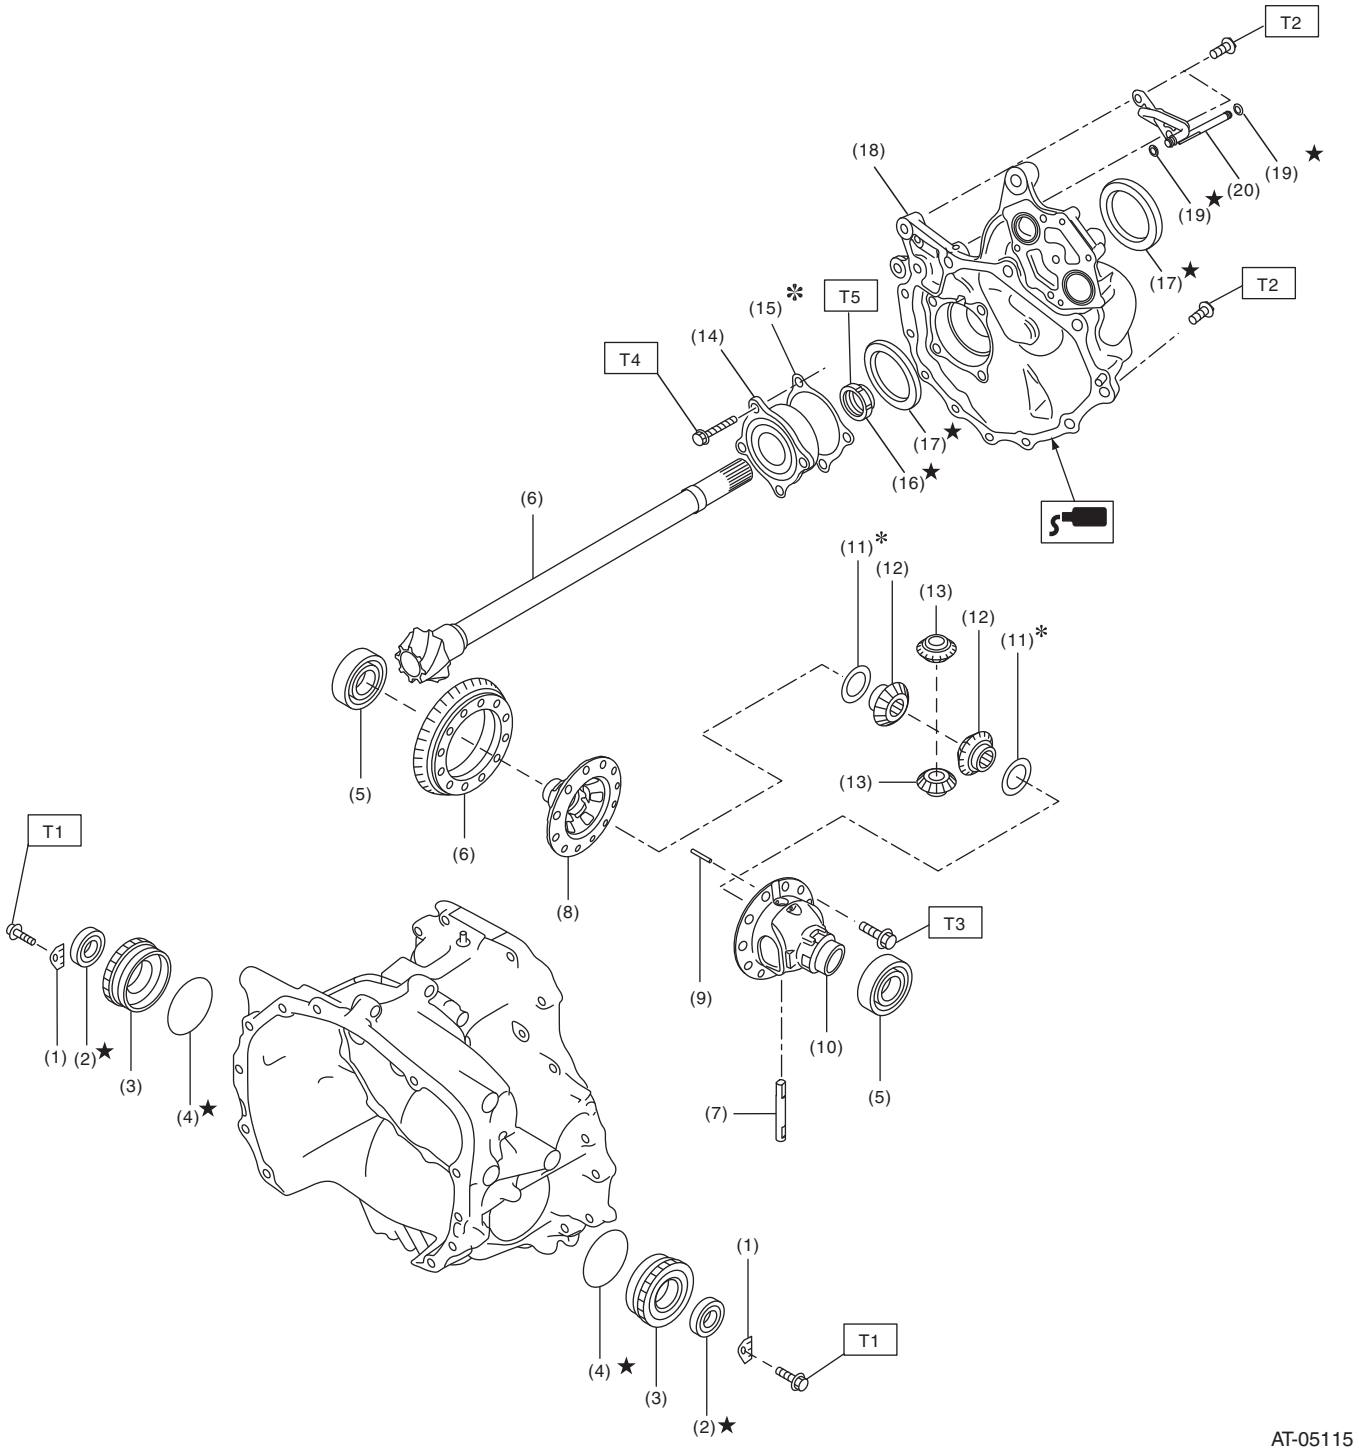
Tightening torque: N·m (kgf-m, ft-lb)
T1: 21.5 (2.2, 15.9)
T2: 24 (2.4, 17.7)
T3: 25 (2.5, 18.4)



8. TRANSMISSION CONTROL DEVICE

(1) Spring pin
(2) Shifter arm
(3) Inhibitor switch
(4) Shifter arm shaft
(5) Cable plate ASSY
(6) Return spring
(7) Parking pawl
(8) Shaft
(9) Parking support
(10) Detent spring
(11) Spring pin
(12) Manual plate
(13) Parking rod

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 7 (0.7, 5.2)
T3: 25 (2.5, 18.4)

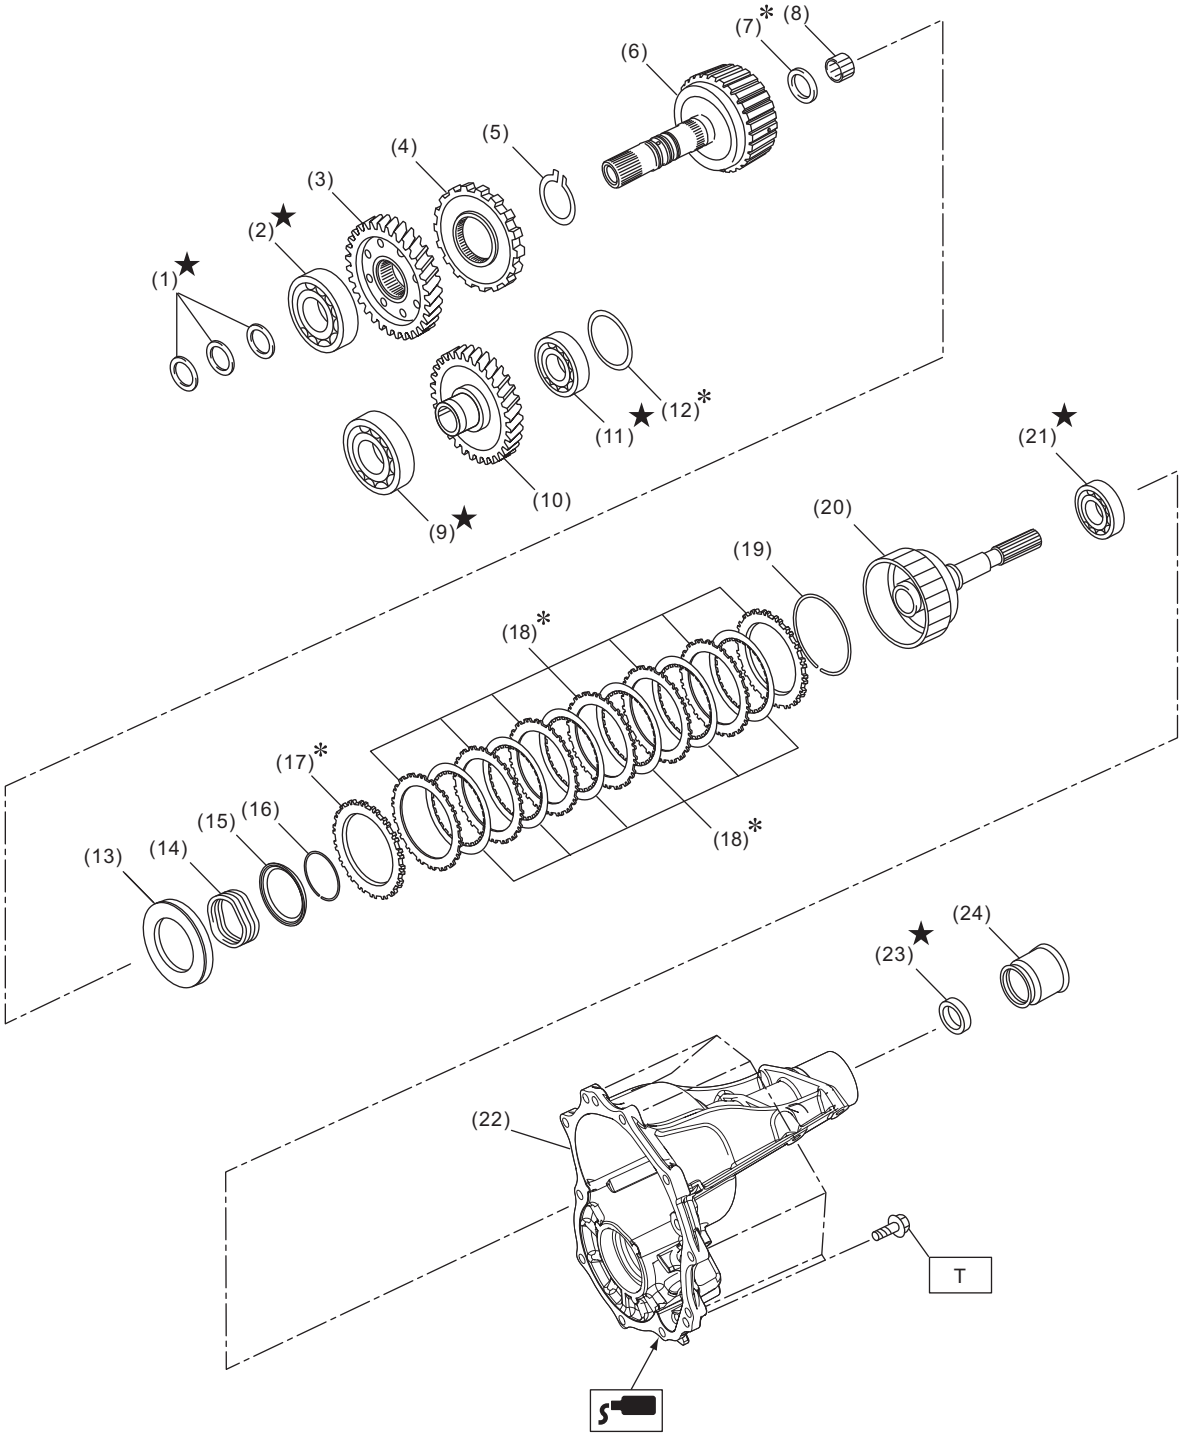


9. PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

(1) Converter case
(2) Seal washer
(3) Shim
(4) Seal ring
(5) Primary pulley ASSY
(6) Variator chain
(7) Chain guide
(8) Lubrication pipe
(9) O-ring
(10) Support rod
(11) Secondary pulley ASSY
(12) Plug
(13) O-ring
(14) Drive pinion retainer

Tightening torque: N·m (kgf-m, ft-lb)
T1: 21 (2.1, 15.5)
T2: 25 (2.5, 18.4)
T3: 33 (3.4, 24.3)

10.FRONT DIFFERENTIAL GEAR

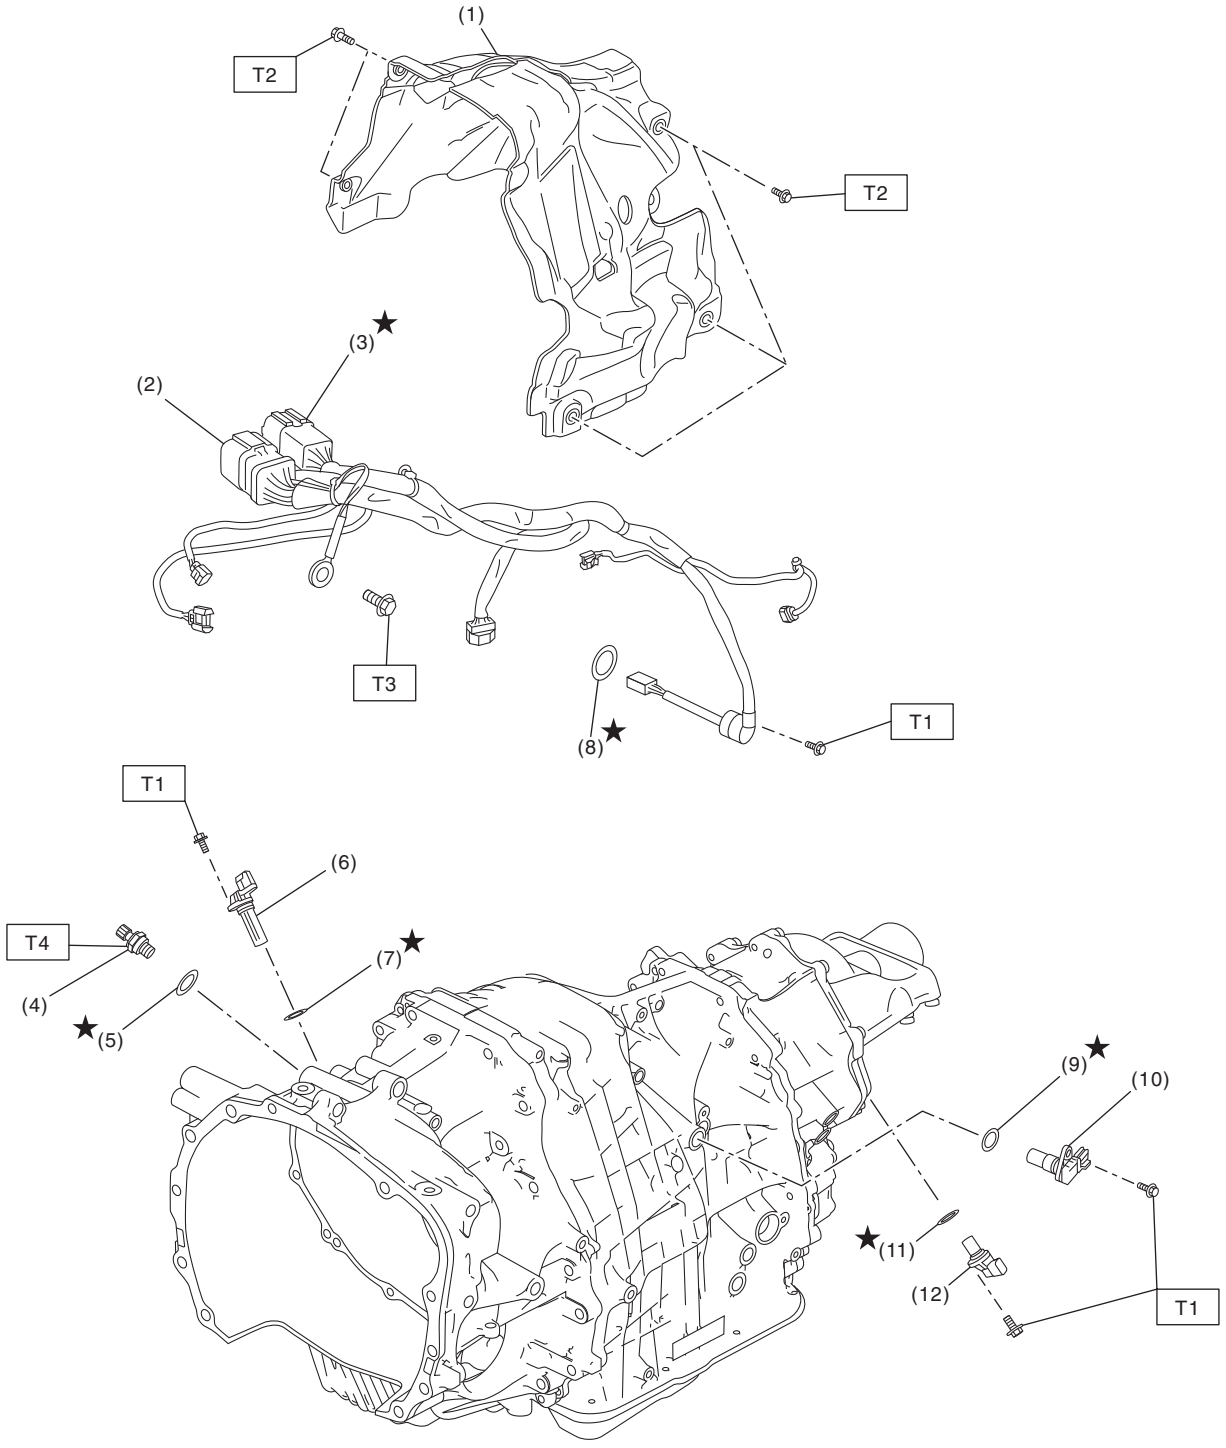


(1) Lock plate
(2) Oil seal
(3) Differential side retainer
(4) O-ring
(5) Taper roller bearing
(6) Drive pinion gear set
(7) Pinion shaft
(8) Differential case RH
(9) Straight pin
(10) Differential case LH
(11) Washer
(12) Differential bevel gear
(13) Differential bevel pinion
(14) Taper roller bearing
(15) Shim
(16) Lock nut
(17) Oil seal
(18) Drive pinion retainer
(19) O-ring
(20) Lubrication pipe

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 43 (4.4, 31.7)
T3: <Ref. to CVT(TR690)-308, DIFFERENTIAL CASE ASSEMBLY, ASSEMBLY, Front Differential Assembly.>
T4: 70 (7.1, 51.6)
T5: 130 (13.3, 95.9)

11.TRANSFER AND EXTENSION CASE

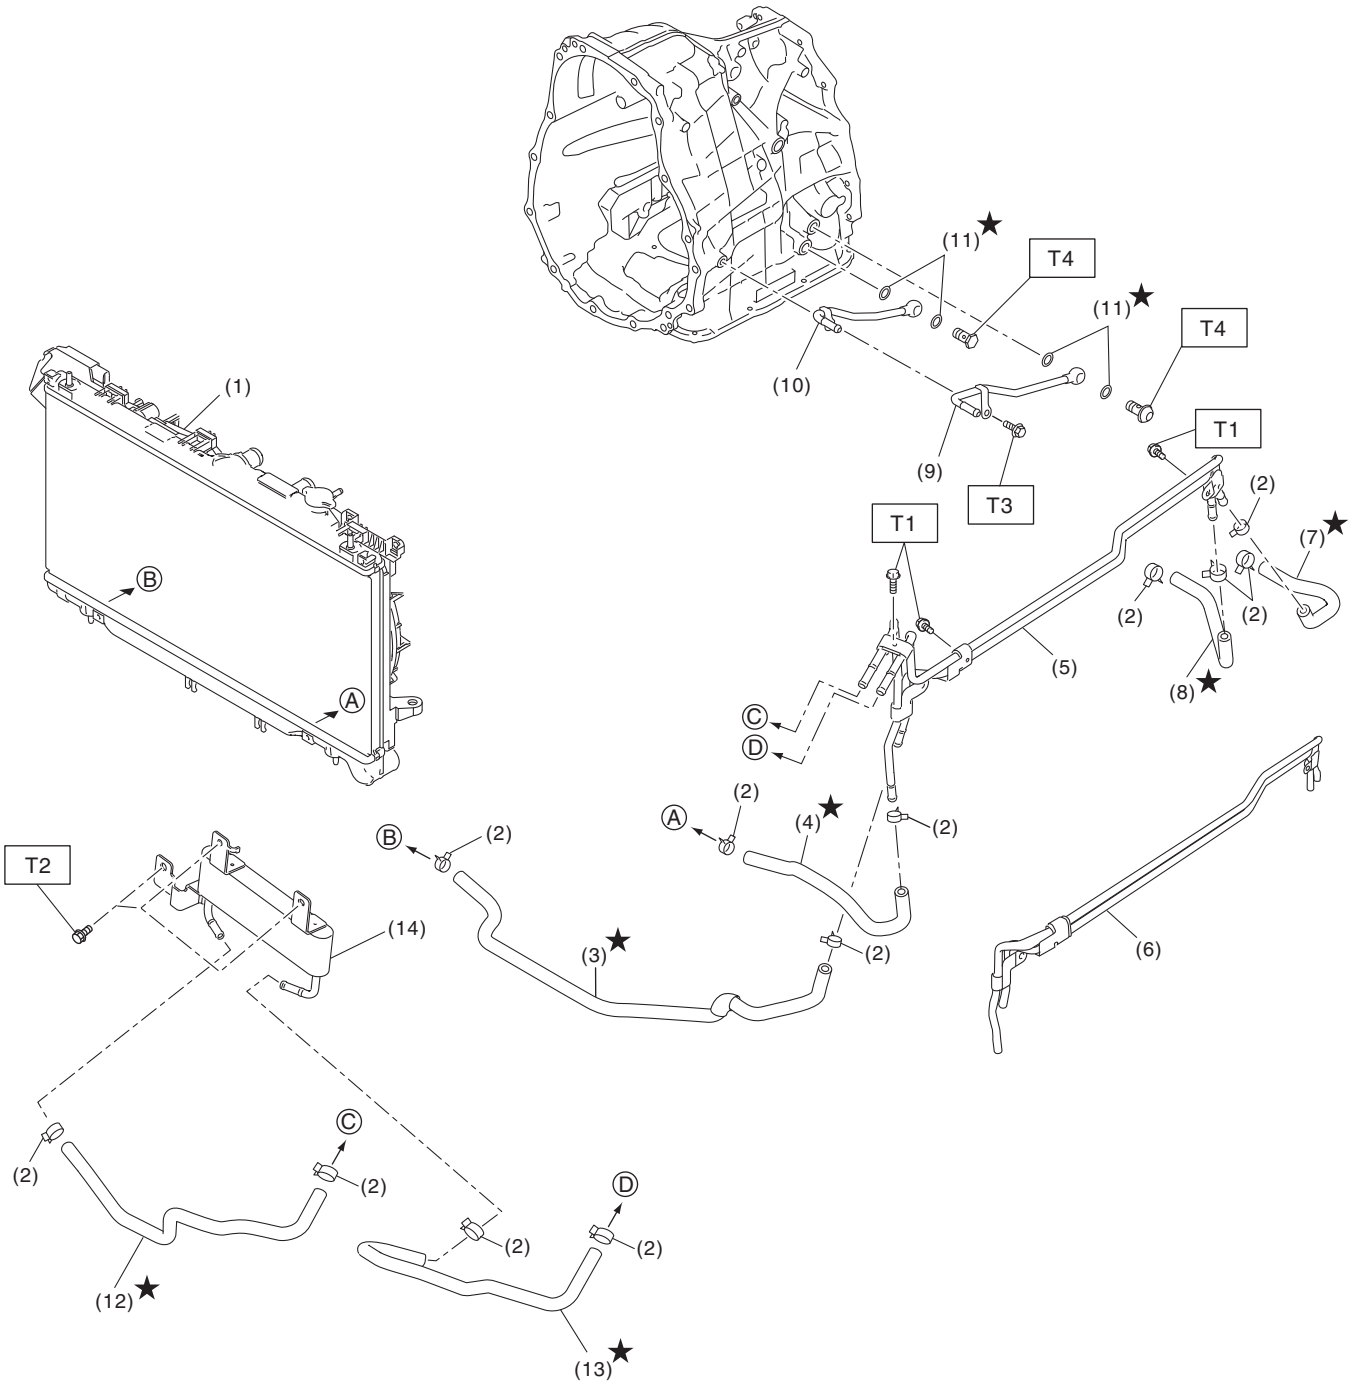


CVT10237

(1) Seal ring
(2) Ball bearing
(3) Transfer drive gear
(4) Parking gear
(5) Snap ring
(6) Reduction drive gear shaft
(7) Thrust needle bearing
(8) Needle bearing
(9) Ball bearing
(10) Transfer reduction driven gear
(11) Ball bearing
(12) Shim
(13) Transfer piston
(14) Return spring
(15) Transfer piston seal
(16) Snap ring
(17) Pressure plate
(18) Transfer clutch plate set
(19) Snap ring
(20) Rear drive shaft
(21) Ball bearing
(22) Extension case
(23) Oil seal
(24) Dust cover

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

12.TRANSMISSION HARNESS AND SENSOR



CVT00841

(1)	Transmission cover	(7)	O-ring

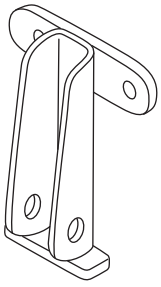
C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the oil pan with its inner side facing up until it is installed, to prevent intrusion of foreign matter into the control valve body.

• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry apart with screwdrivers or other tools.
• Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine CVTF and recommended grease. Do not mix CVTF, grease etc. of different grades or manufacturers.
• Be sure to tighten bolts and nuts to the specified torque.
• Place lifts, shop jacks or rigid racks at specified locations.
• Apply CVTF onto sliding or revolving surfaces before installation.
• Apply CVTF onto the press-fitting surface of the part before press-fitting the part using a press.
• Replace deformed or damaged snap rings with new parts.
• Before installing O-rings or oil seals, apply sufficient amount of CVTF to avoid damage and deformation.
• Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
• Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
• Avoid damaging the mating surface of the case.
• Before applying liquid gasket, completely remove the old liquid gasket.
• After removing the sensors, breather hose and plugs, plug the holes to avoid foreign materials intruding as necessary.
• During disassembly or assembly, be sure to use nylon gloves or paper towels. Do not use cloth gloves or waste cloth.

D: PREPARATION TOOL

1. SPECIAL TOOL



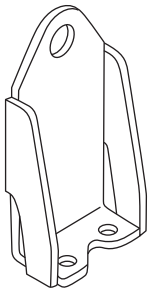


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
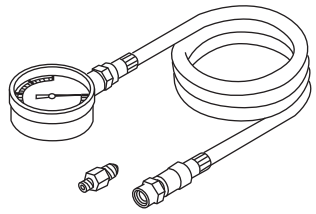
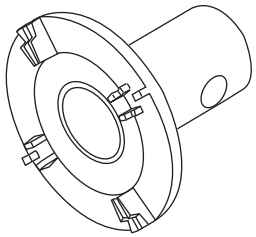
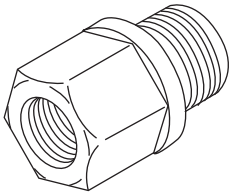
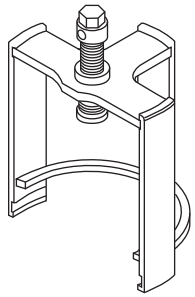
 ST41099AJ010	41099AJ010	SPECIAL TOOL H6	• Used for removing and installing transmission. • For H6 engine.
 ST18360AA020	18360AA020	HANGER	• Used for removing and installing transmission. • For H6 engine.









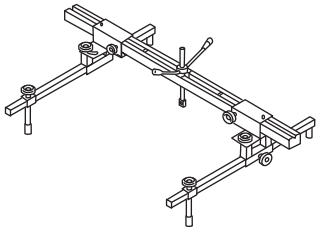


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
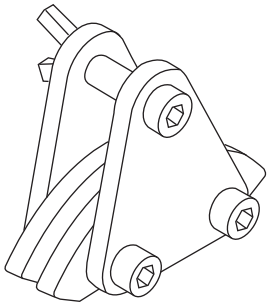
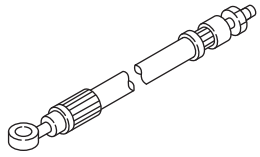
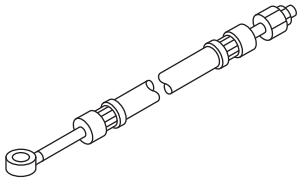
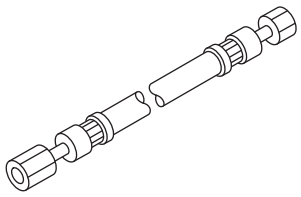
 ST18801AA000	18801AA000	OIL PRESSURE GAUGE ASSY	Used for measuring the secondary pressure (line pressure).
 ST18658AA020	18658AA020	WRENCH COMPL RETAINER	Used for removing and installing the differential side retainer.
 ST18681AA000	18681AA000	PRESSURE GAUGE ADAPTER	Used for measuring the secondary pressure (line pressure) and transfer clutch hydraulic pressure. NOTE: Used together with the genuine O-ring (part No. 806911080).
 ST18769AA000	18769AA000	EXPANDER PULLEY	Used for removing and installing the secondary pulley assembly.
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for removing and installing the automatic transmission assembly. • Used together with CHAIN BALANCER (99099AJ010).









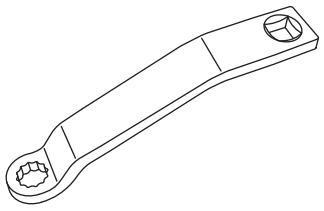


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
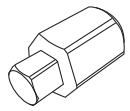
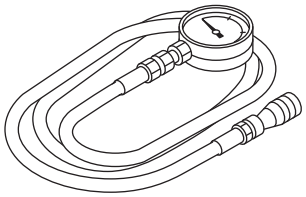
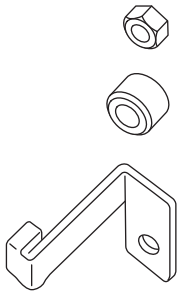
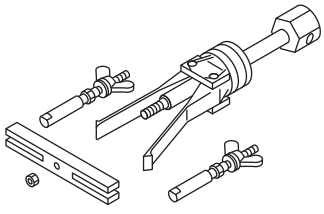
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for removing and installing the automatic transmission assembly. • Used together with ENGINE HANGER (99099AJ000).
 ST-498897700	498897700	OIL PRESSURE ADAPTER SET	Used for measuring the secondary pressure (line pressure) hydraulic pressure.
 ST34099AC020	34099AC020	ADAPTER HOSE B	Used for measuring the transfer clutch hydraulic pressure. NOTE: Used with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060).
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used for measuring the transfer clutch hydraulic pressure.
 ST73099SG000	73099SG000	SPECIAL TOOL CONDENSER	Used for installing the transfer clutch pressure test plug.









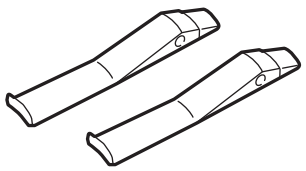


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
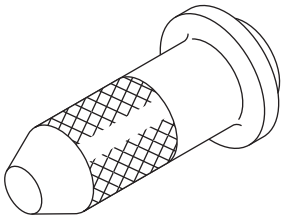
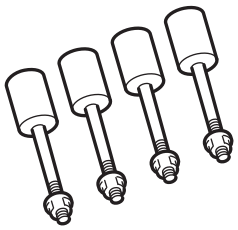
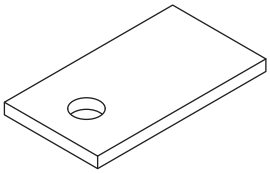
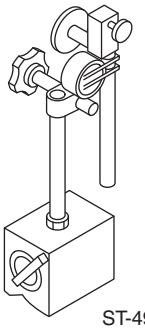
 ST18270AA040	18270AA040	SOCKET	Used for installing the transfer clutch pressure test plug.
 ST-498575400	498575400	OIL PRESSURE GAUGE ASSY	Used for measuring the transfer clutch hydraulic pressure.
 ST-498277200	498277200	STOPPER SET	• Used for removing and installing automatic transmission assembly to engine. • Used for preventing the torque converter from dropping off.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the roller bearing of the primary pulley and secondary pulley. • Used for removing the bearing of reduction driven gear. • Used for removing the differential side retainer bearing outer race.
 ST18760AA000	18760AA000	CLAW	• Used for removing ball bearing of front reduction driven gear. • Used together with PULLER ASSY (398527700).









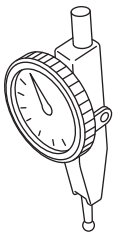


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
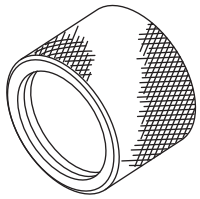
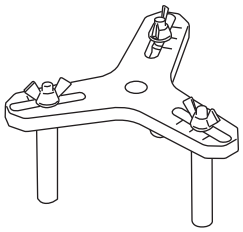
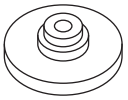
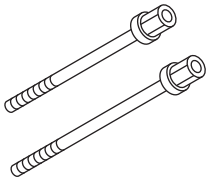
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST18632AA000	18632AA000	TRANSMISSION STAND	Used for disassembling and assembling the transmission.
 ST-498255400	498255400	PLATE	Used for measuring the backlash of hypoid gear.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear. • Used for measuring the backlash of hypoid gear. • Used for measuring the clearance in forward clutch. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear. • Used for measuring the backlash of hypoid gear. • Used for measuring the clearance in forward clutch. • Used together with MAGNET BASE (498247001).









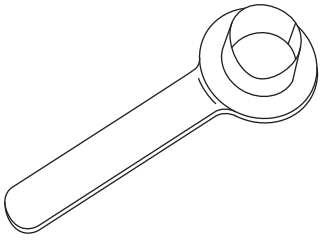


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
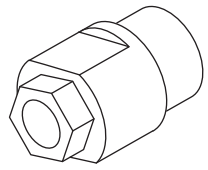
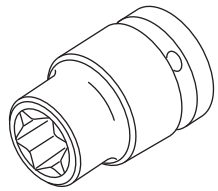
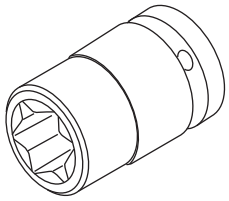
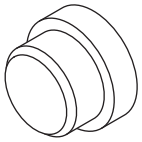
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST18762AA001	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for disassembling and installing the multi-plate clutch piston for shifting. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used.
 ST18765AA000	18765AA000	COMPRESSOR SUPPORT	Used for disassembling and installing the multi-plate clutch for shifting.
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for disassembling and installing the multi-plate clutch for shifting.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting oil seal when installing front drive shaft.









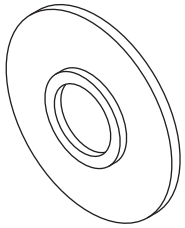


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
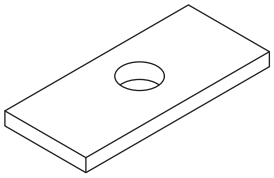
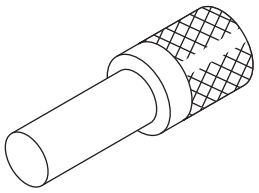
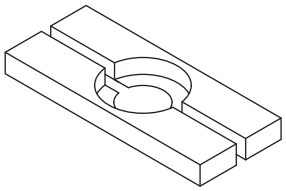
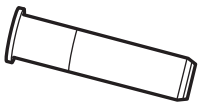
 ST18667AA010	18667AA010	HOLDER	• Used for removing and installing the drive pinion lock nut. • Used as a holder to rotate gear when checking tooth contact.
 ST18270KA010	18270KA010	SOCKET (E16)	Used for removing and installing the center support COMPL.
 ST18270KA020	18270KA020	SOCKET (E20)	• Used for removing and installing the hypoid driven gear. • Used for removing and installing the drive pinion shaft retainer.
 ST-398497701	398497701	SEAT	Used for removing and installing the ball bearing.
 ST-398177700	398177700	INSTALLER	• Used for removing and installing the ball bearing and tapered roller bearing. • Used for installing the parking gear.









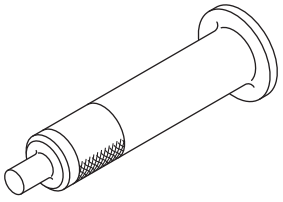


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
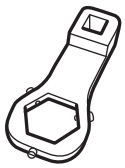
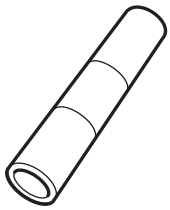
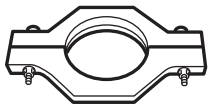
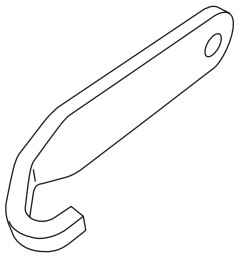
 ST-398643600	398643600	GAUGE	Used for measuring the total end play, extension end play and drive pinion height.
 ST-899864100	899864100	REMOVER	Used for removing and installing the ball bearing.
 ST-498077000	498077000	REMOVER	• Used for removing ball bearing of front reduction drive gear. • Used for removing the inner bearing inner race of the drive pinion shaft. • Used for removing the differential taper roller bearing.
 ST18657AA010	18657AA010	INSTALLER	Used for installing the oil seal of inhibitor switch.
 ST18657AA020	18657AA020	OIL SEAL INSTALLER	Used for installing the oil seal.









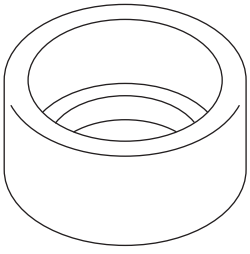


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
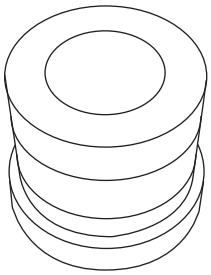
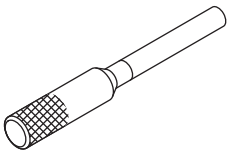
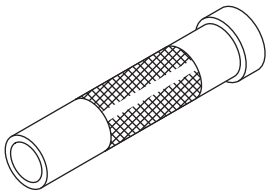
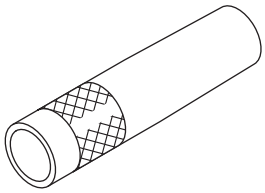
 ST18621AA000	18621AA000	ADAPTER WRENCH	Used for removing and installing the drive pinion shaft lock nut.
 ST18651AA000	18651AA000	INSTALLER	Used for installing the bearing of front reduction drive gear.
 ST18720AA000	18720AA000	REMOVER	Used for removing ball bearing of reduction driven gear.
 ST-498497300	498497300	CRANKSHAFT STOPPER	Used for stopping the drive plate rotation when removing and installing the drive plate.
 ST20299AG010	20299AG010	BASE	Used for installing the bearing on primary pulley side.









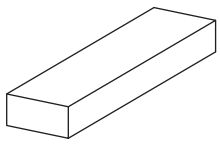


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
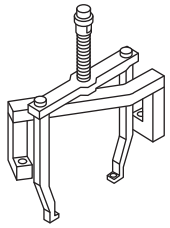
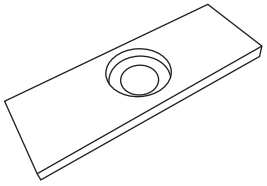
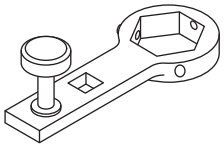
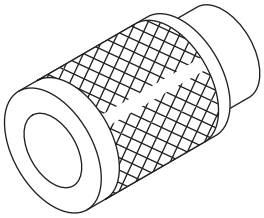
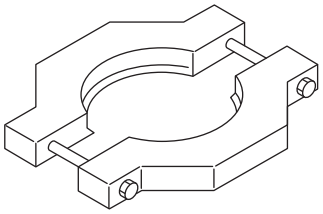
 ST-399513600	399513600	INSTALLER	• Used for removing the ball bearing of the rear drive shaft. • Used for removing the bearing of the oil pump chain sprocket.
 ST-499267300	499267300	STOPPER PIN	Used for adjusting the inhibitor switch.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the front differential taper roller bearing. • Used for removing and installing the transfer reduction drive gear. • Used for installing the ball bearing of the transfer reduction drive gear. • Used for installing the oil seal. • Used for installing the ball bearing of the transfer reduction driven gear.
 ST-499277200	499277200	INSTALLER	• Used for installing the inner bearing inner race of drive pinion shaft. • Used for installing the reduction driven gear.
 ST-499575400	499575400	GAUGE	Used for measuring height of end play.

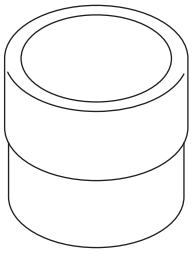


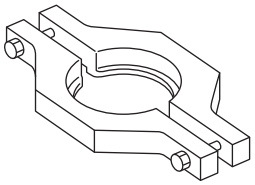












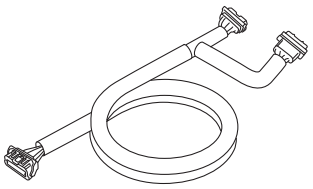


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499737100	499737100	PULLER SET	• Used for measuring height of forward clutch. • Used for measuring the transfer end play. • Use the rack only.
 ST-499575600	499575600	GAUGE	• Used for measuring height of forward clutch. • Used for measuring height of end play.
 ST-499787700	499787700	WRENCH	Used for measuring the differential pinion shaft backlash.
 ST-499757002	499757002	INSTALLER	Used for installing the bearing of front reduction driven gear.
 ST18767AA000	18767AA000	BEARING REMOVER	• Used for removing the transfer reduction drive gear. • Used for removing the reduction driven gear bearing retainer.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499755602	499755602	PRESS SNAP RING	• Used for installing the oil seal. • Used for installing the ball bearing and roller bearing.
 ST-498077600	498077600	REMOVER	• Used for removing the ball bearing of the rear drive shaft. • Used for removing the ball bearing of transfer reduction driven gear. • Used for removing ball bearing of reduction driven gear. • Used for removing the ball bearing of drive sprocket.
 ST18460AA040	18460AA040	CHECK BOARD	Used for measuring TCM terminal voltage and resistance.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

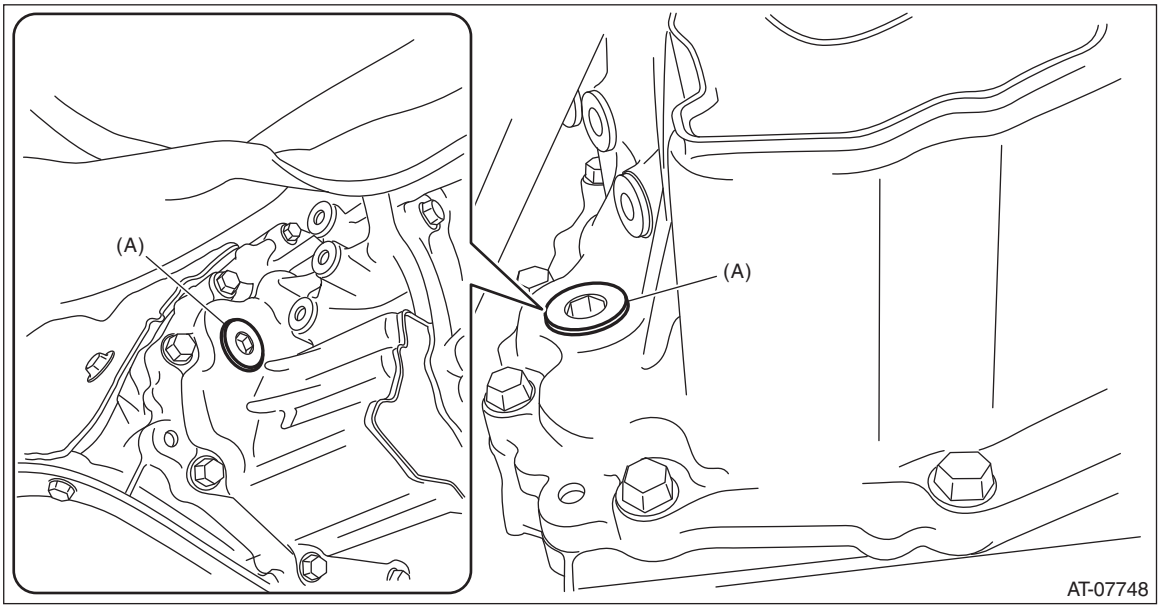
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Thickness gauge	Used for the clearance in reverse brake, transfer clutch and input clutch.
Caliper	Used for measuring the clearance at the parts.
Spring scale	Used for measuring the starting torque of the drive pinion.
TORX® bit T70	Used for removing and installing differential gear oil drain plug.
Straight pin remover	Used for removing and installing the spring pin.

TOOL NAME	REMARKS
Deep socket	Used for removing and installing the secondary pressure sensor. NOTE: Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27).
Push/pull gauge	Used for measuring clutch clearance.
Angle gauge	• Used for installing the hypoid driven gear. • Used for installing the drive plate.
Chain sling	Used for removing and installing transmission. • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Load capacity: 1.2 t (2646 lb) or more • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Chain external width: 23.5 mm (0.93 in) or less • Chain internal width: 8.5 mm (0.33 in) or more
Screw shackle	Used for removing and installing transmission. • Load capacity: 250 kg (551 lb) or more • Use two pieces.
DST-i	Used together with Subaru Select Monitor 4.

2. CVTF

A: INSPECTION

Check for leakage of CVTF from transmission.



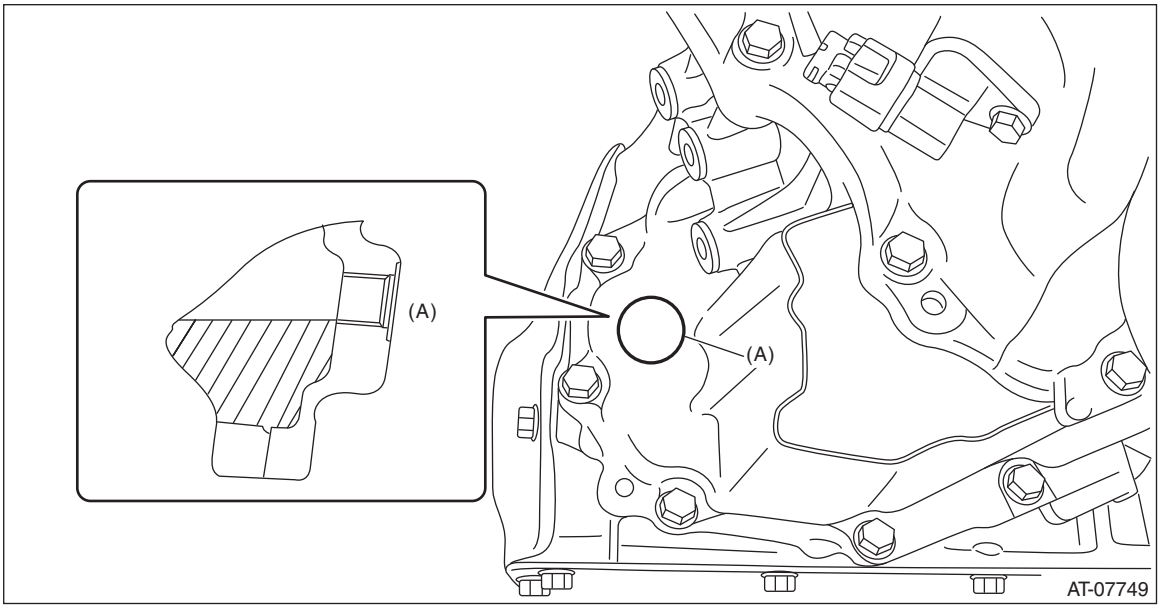
B: ADJUSTMENT

CAUTION:
• CVTF level changes along with CVTF temperature. When inspecting CVTF level, observe the specified CVTF temperature.
• Always use specified CVTF. Using other fluid will cause malfunction.

1) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
2) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.
3) With the engine running, lift up the vehicle and remove the filler plug.

CAUTION:
Pay special attention to the following operations as the engine is at idle.

NOTE:
CVTF is at the specified level when it is up to the filler plug hole lower section.



(A) Filler plug

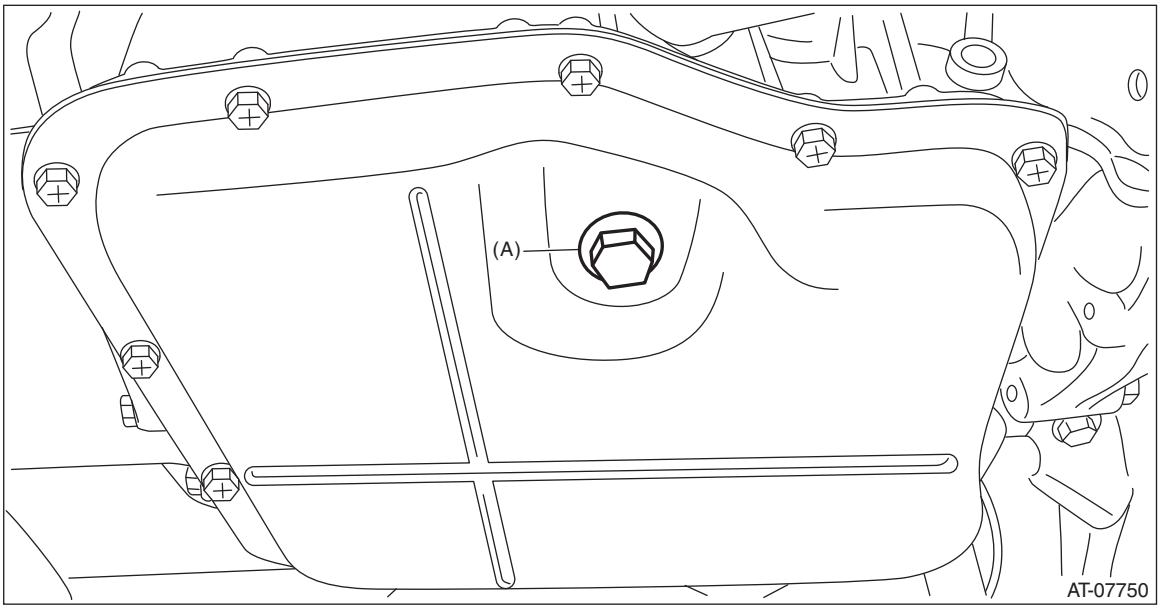
4) When there is no CVTF leakage from the transmission, add the specified fluid up to the filler plug hole lower section.

Specified fluid:
<Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

CAUTION:
Note that when CVTF is added up to the lower section of filler plug while the transmission is in cold condition, overfilling of CVTF occurs, causing the oil to spill out.

(A) Filler plug hole

5) Install the filler plug.



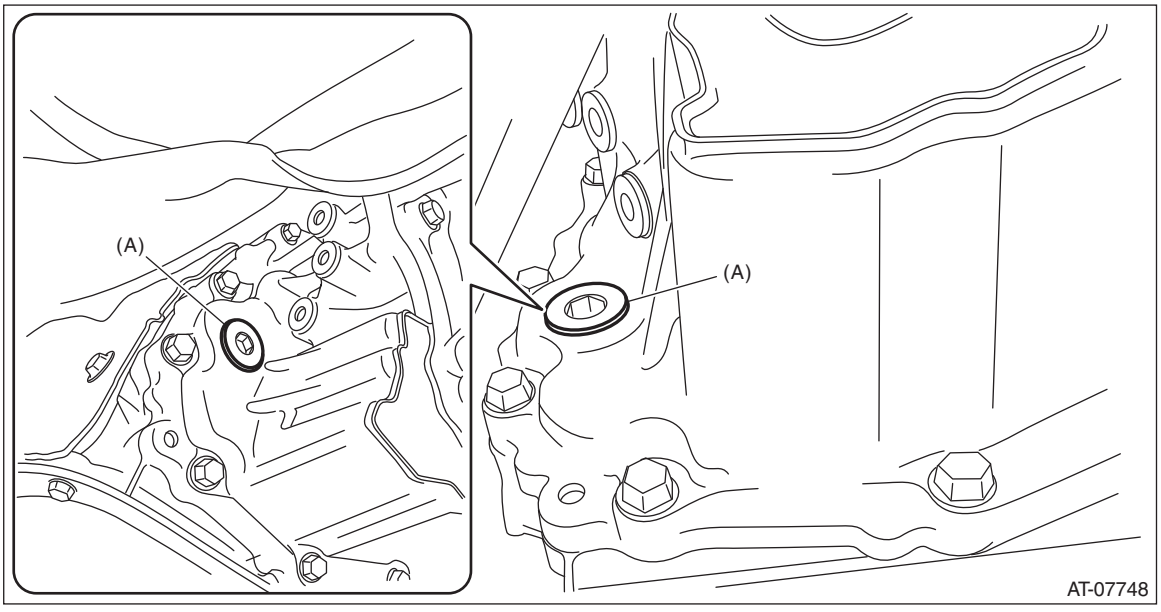
NOTE:
Use a new gasket.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

C: REPLACEMENT

CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill the CVTF on exhaust pipe to prevent it from emitting smoke or causing fires. If CVTF adheres, wipe it off completely.
• Always use specified CVTF. Using other fluid will cause malfunction.

1) Lift up the vehicle, and remove the CVTF drain plug.



(A) CVTF drain plug

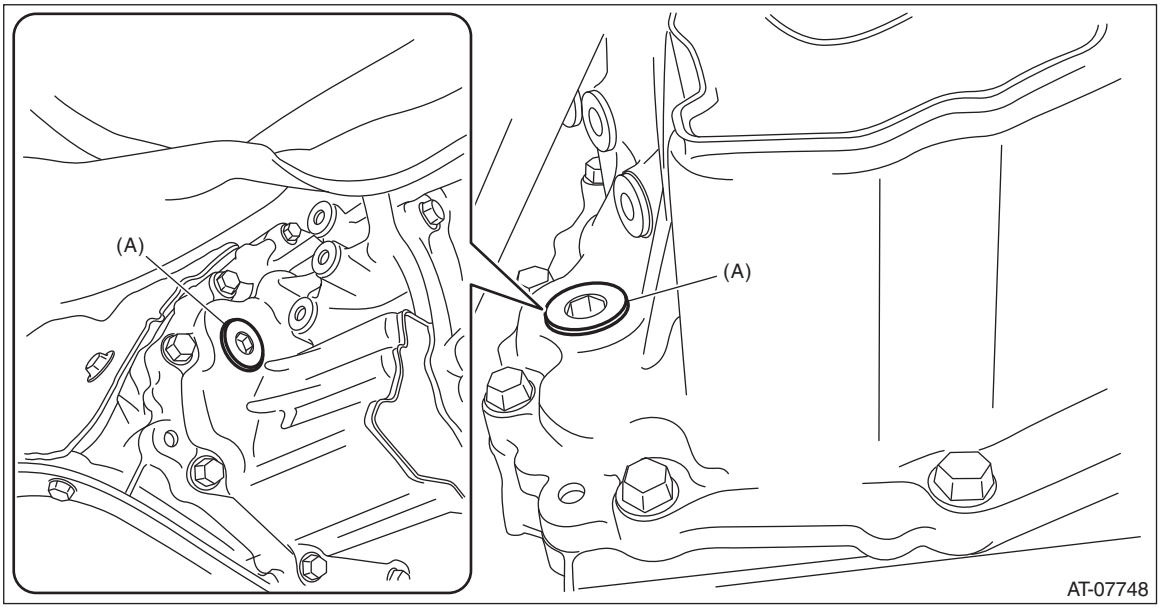
2) Check the CVTF condition. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
3) Install the CVTF drain plug and gasket.

NOTE:
Use a new gasket.

Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)

4) Remove the filler plug.

(A) Filler plug



5) Add the specified fluid up to the filler plug hole lower section.

Specified fluid:
<Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

6) Temporarily tighten the filler plug.
7) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
8) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.

CAUTION:
Pay special attention to the following operations as the engine is at idle.
9) Place the select lever in "P" range. Then lift up the vehicle with the engine at idle to adjust the CVTF level and check for leakage. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
10) Replace with a new gasket, and attach the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

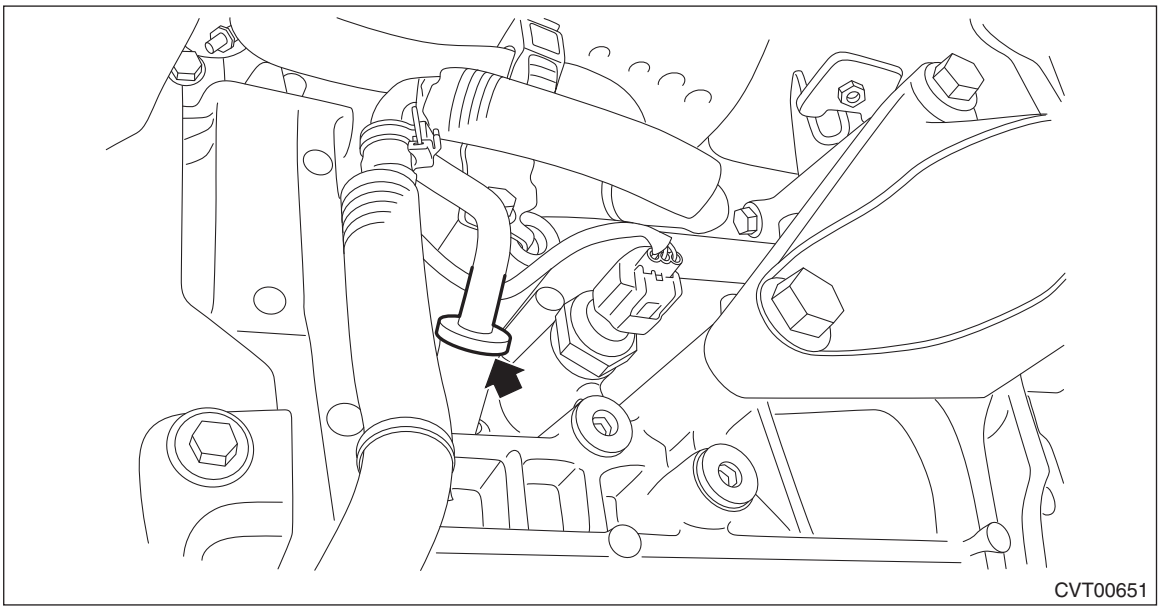
(A) Filler plug

D: CONDITION CHECK

NOTE:
When replacing CVTF, determine the condition inside the transmission body by inspecting the drained CVTF.

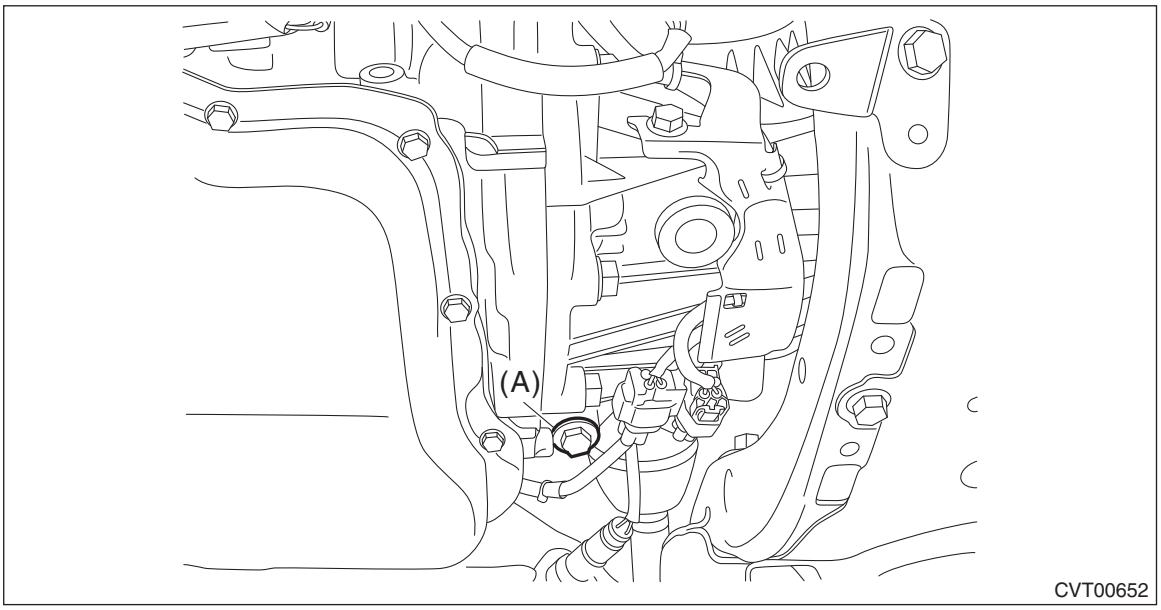
Fluid condition	Trouble and possible cause	Corrective action
Metal particles.	Excessive wear of the internal of the transmission body.	Replace CVTF and check if CVT operates correctly.
Thick and varnish-form fluid.	Burnt clutches	Replace CVTF and check the CVT body or vehicle for faulty.
Clouded CVTF or bubbles.	Water mixed in fluid.	Replace CVTF and check the water entering point.

3. Differential Gear Oil



A: INSPECTION

Check that there is no leakage of differential gear oil from the converter case.



B: ADJUSTMENT

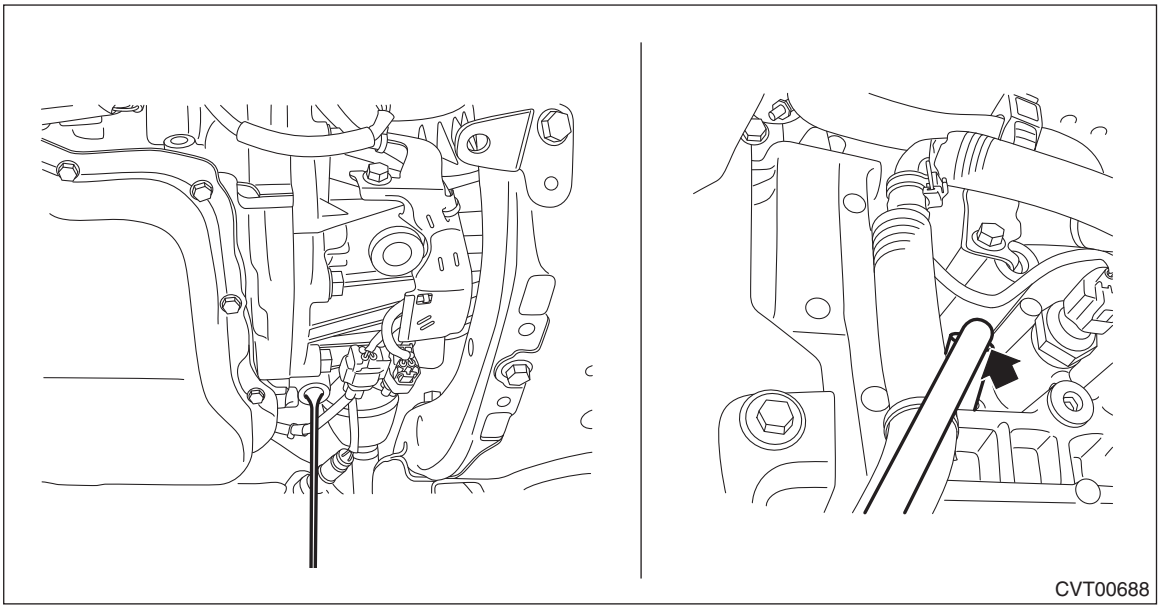
NOTE:
Immediately after removing the overflow drain plug, remaining gear oil (approx. 8 cc) may come out of the overflow pipe. This is not included in the specified amount. When removing the overflow drain plug, make sure the gear oil flows out of the overflow drain plug hole by filling with gear oil.

1) Lift up the vehicle.
2) Remove the front under cover. <Ref. to EI-27, REMOVAL, Front Under Cover.>
3) Remove the oil charge pipe cap.

CVT00651

4) Remove the overflow drain plug.

CVT00652



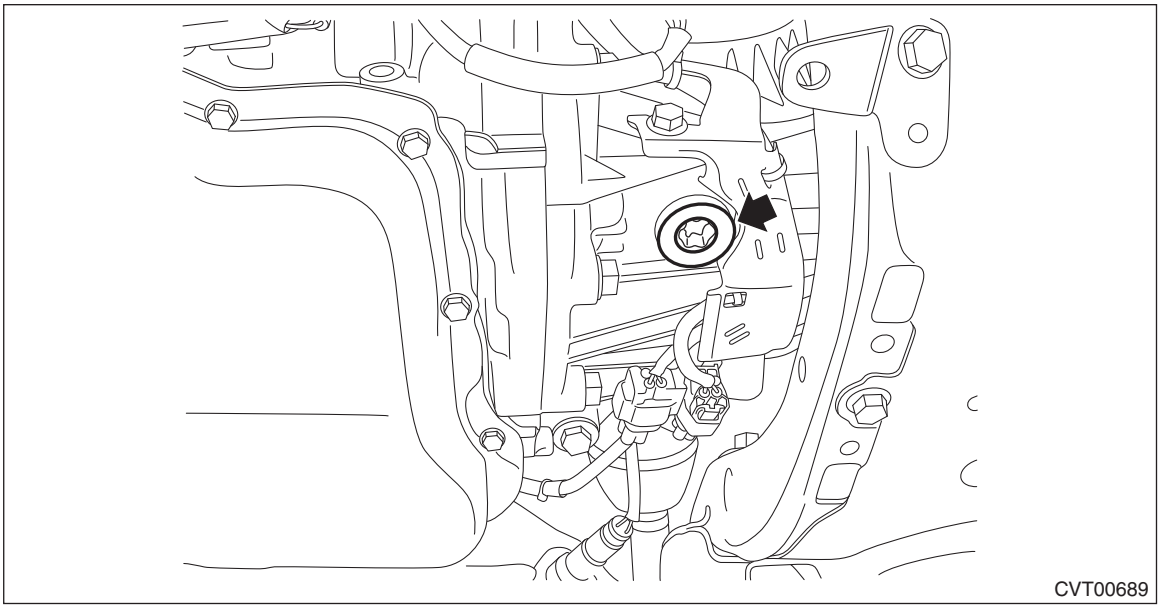
(A) Overflow drain plug

5) Fill in the differential gear oil through the charge pipe up to where the oil flows out of the overflow drain plug.

Recommended gear oil:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>
6) When the flow of the differential gear oil turns into a narrow stream, install the overflow drain plug.

NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

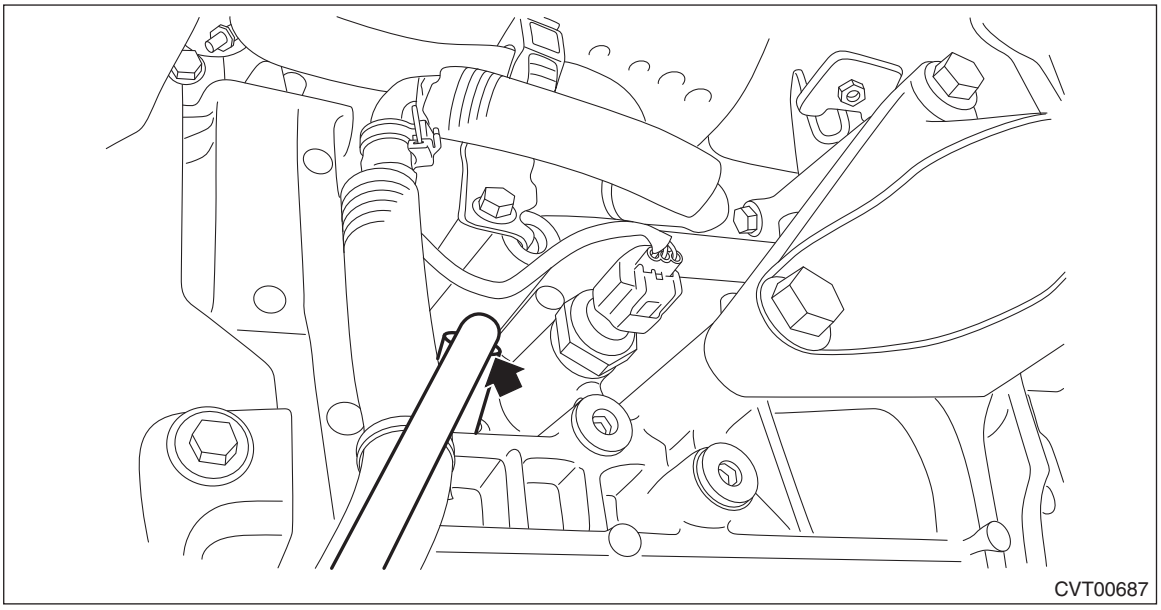


7) Install the oil charge pipe cap.

C: REPLACEMENT

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill differential gear oil on the exhaust pipe to prevent it from emitting smoke or causing a fire. If gear oil adheres, wipe it off completely.
1) Lift up the vehicle.
2) Remove the differential gear oil drain plug using TORX® bit T70. Drain differential gear oil.
3) Install the differential gear oil drain plug using TORX® bit T70.

NOTE:
Use a new gasket.



Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

CVT00689

4) Pour gear oil from the charge pipe.

Recommended gear oil:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>

Gear oil capacity:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>

CVT00687

5) Adjust the level of differential gear oil. <Ref. to CVT(TR690)-43, ADJUSTMENT, Differential Gear Oil.>

4. Variator Chain Break-in

A: GENERAL DESCRIPTION

Perform Variator Chain Break-in when the following work has been performed.
- Variator chain replacement
- Primary pulley and secondary pulley replacement

B: PROCEDURE

NOTE:
- During variator chain break-in, VDC warning light illuminate because of the difference between the vehicle speed value and G sensor value. This is not a malfunction. If the warning light illuminates, clear the VDC memory after the variator chain break-in is finished. <Ref. to VDC(diag)-26, Clear Memory Mode.>
- If the above malfunction code is detected during variator chain break-in, the system enters into fail mode, and the vehicle shows symptom such as engine speed rapid increases even if the accelerator pedal is gradually depressed.

1) Lift up the vehicle.

CAUTION:
Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

2) Shift the select lever to “P” or “N” range.
3) Apply the electronic parking brake.
4) Connect the Subaru Select Monitor to data link connector.
5) Idle the engine to raise the CVTF temperature to 40 — 50°C (104 — 122°F) displayed on the Subaru Select Monitor.

NOTE:
When CVTF temperature does not rise easily or if you want to rise CVTF temperature faster, maintain the engine speed within 2,000 — 2,500 r/min at “P” or “N” range to raise the CVTF temperature.

6) With the select lever in “P” or “N” range, increase the engine speed to 3,000 — 3,500 r/min from the idling condition, and maintain the speed for approximately five seconds, then release the accelerator pedal.
7) Depress the accelerator pedal gradually again from idling condition to increase the engine speed to 3,000 — 3,500 r/min, maintain the speed for approximately five seconds, then release the accelerator pedal.
8) Release the electronic parking brake.
9) Shift the select lever into manual mode and set to 1st.
10) Depress the accelerator pedal gradually, and increase the engine speed to 5,300 r/min from engine idling condition.

NOTE:
Increase the engine speed while taking care that the engine speed does not become too high.

11) Release the accelerator pedal to fully closed position to lower the engine speed to 4,000 r/min.
12) Depress the accelerator pedal gradually again, and increase the engine speed to 5,300 r/min.
13) Repeat the steps 11) and 12) for 40 times.
14) Release the accelerator pedal to return the engine speed to idling.
15) Shift the select lever to “P” range, and then turn the engine to OFF.

5. AWD ON/OFF Switching Mode

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- Perform as necessary in FWD mode.
- When switched to FWD, AWD light illuminates.

B: PROCEDURE

CAUTION:
• Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
• On completing the work in FWD, switch back in AWD.
1) Shift the select lever to “P” range.
2) Connect the Subaru Select Monitor to data link connector.
3) Turn the ignition switch to ON. (For model with push button start, press the push button ignition switch twice without depressing brake pedal.)
4) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger.
5) Select «Diagnosis» in the «Start» screen of Subaru Select Monitor.
6) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
7) On «Main Menu» display, select «Each System».
8) On «Select System» display, select «Transmission Control System».
9) On «Select Function» display, select «Work Support».
10) Select «AWD ON/OFF switching mode» in the «Work Support» screen.
11) Follow the messages displayed on the Subaru Select Monitor screen when working.
Switching completes successfully if any of the following messages is displayed.
- When switching from AWD to FWD: «Switched to FF. To return to AWD, perform basic mode again.»
- When switching from FWD to AWD: «Switched to AWD. To return to FF, perform basic mode again.»

NOTE:
- If communication error occurs during switching mode, start in the “AWD ON/OFF switching mode” again.
- If operation is interrupted before the successful end message is displayed, perform the «AWD ON/OFF switching mode» from the beginning until confirming the operation is successfully ended. If this mode fails to complete successfully, the cause is as follows.
  - Select lever is not in “P” range.
  - Engine is running.
- For detailed operation procedures, refer to “Application help”.

6. Road Test

A: INSPECTION

NOTE:
Turn OFF the X mode switch and perform inspection.

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of CVT.

CAUTION:
Always observe the local traffic laws when performing the test.

2. D RANGE SHIFT FUNCTION

Make sure that the engine speed is 1,100 — 1,300 r/min while driving on the level road at 50 km/h (31 MPH) after accelerating from halting to 1/4 of accelerator opening angle. Then stop the vehicle. Check normal gear change has occurred while the vehicle speed changes from a constant speed to zero.

3. KICK-DOWN FUNCTION

Check if engine speed will rise by operating the accelerator opening angle to the full from a constant speed of 50 km/h (31 MPH) or more.

4. ENGINE BRAKE OPERATION

Check down shifting operation, engine braking, and indicators inside the meters.

- Drive in “6th speed of manual mode” [70 — 80 km/h (43 — 50 MPH)], and shift down from 6th to 5th. Check if the indicator of combination meter switches “6” → “5”. At the same time, check the engine brake in 5th gear.
- Drive in “5th speed of manual mode” [60 — 70 km/h (37 — 43 MPH)], and shift down from 5th to 4th. Check if the indicator of combination meter switches “5” → “4”. At the same time, check the engine brake in 4th gear.
- Drive in “4th speed of manual mode” [50 — 60 km/h (31 — 37 MPH)], and shift down from 4th to 3rd. Check if the indicator of combination meter switches “4” → “3”. At the same time, check the engine brake in 3rd gear.
- Drive in “3rd speed of manual mode” [30 — 40 km/h (19 — 25 MPH)], and shift down from 3rd to 2nd. Check if the indicator of combination meter switches “3” → “2”. At the same time, check the engine brake in 2nd gear.
- Drive in “2nd speed of manual mode” [20 — 30 km/h (12 — 19 MPH)], and shift down from 2nd to 1st. Check if the indicator of combination meter switches “2” → “1”. At the same time, check the engine brake in 1st gear.

5. LOCK-UP FUNCTION

When the accelerator is lightly depressed while driving on a flat road in “D” range, check that rpm does not change abruptly.

6. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to the “P” range and apply the electronic parking brake. Check that the vehicle does not move when the parking brake is released.

7. NOISE AND VIBRATION

Check for noise and vibration during driving at a constant speed, accelerating, decelerating and manual shift operation.

8. OIL LEAKAGE

After the driving test, inspect for leakage of CVTF and differential gear oil from the transmission body.

7. Stall Test

A: INSPECTION

CAUTION:
Make sure no other person is around the vehicle during stall test measurement.

NOTE:
Stall test is extremely important in diagnosing the condition of CVT and engine. The test is necessary to measure the engine stall speeds in “R” and “D” range.
Purposes of the stall test:

- Operational check of forward clutch and reverse brake
- Operational check of the torque converter assembly
- Engine performance check

1) Place wheel chocks at the front and rear of all wheels and engage the electronic parking brake.
2) Turn the A/C OFF.
3) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(H6DO)(diag)-53, OPERATION, Subaru Select Monitor.>
4) Check the engine oil level. <Ref. to LU(H6DO)-10, INSPECTION, Engine Oil.>
5) Check the coolant level. <Ref. to CO(H6DO)-13, INSPECTION, Engine Coolant.>
6) Adjust the CVTF level. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
7) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to “N” or “P” range.
8) Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake. (With EyeSight)
9) Shift the select lever to “D” range.
10) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
11) When the engine speed stabilizes, quickly record the engine speed and release accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.
12) Shift to “R” range and perform the same stall test.

NOTE:

- Do not perform a stall test for over 5 seconds at a time. (From closed throttle, fully open throttle to stall speed reading.) Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute after each stall test with the select lever set in the “P” or “N” range and with the idle speed of 1,200 r/min or less.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the CVT from sustaining damage.

Stall speed standard:
1,870 — 2,900 r/min (D range)
1,750 — 2,750 r/min (R range)

Stall test judgment

Range	Range	Probable cause
Lower than standard value	D, R	• Throttle valve is not fully open. • Insufficient engine output • Torque converter malfunction
Higher than standard value	D	• Forward clutch slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	R	• Reverse brake slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	D, R	• Torque converter malfunction • Control valve body malfunction • TCM malfunction • Damaged harness and harness connector

8. Time Lag Test

A: INSPECTION

NOTE:
When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before shock is felt. This symptom helps to check the condition of forward clutch and reverse brake.
- Perform the test at normal operation CVTF temperature of 60 — 80°C (140 — 176°F).
- Be sure to allow one minute or more interval between tests.
- Make three measurements and take the average value.

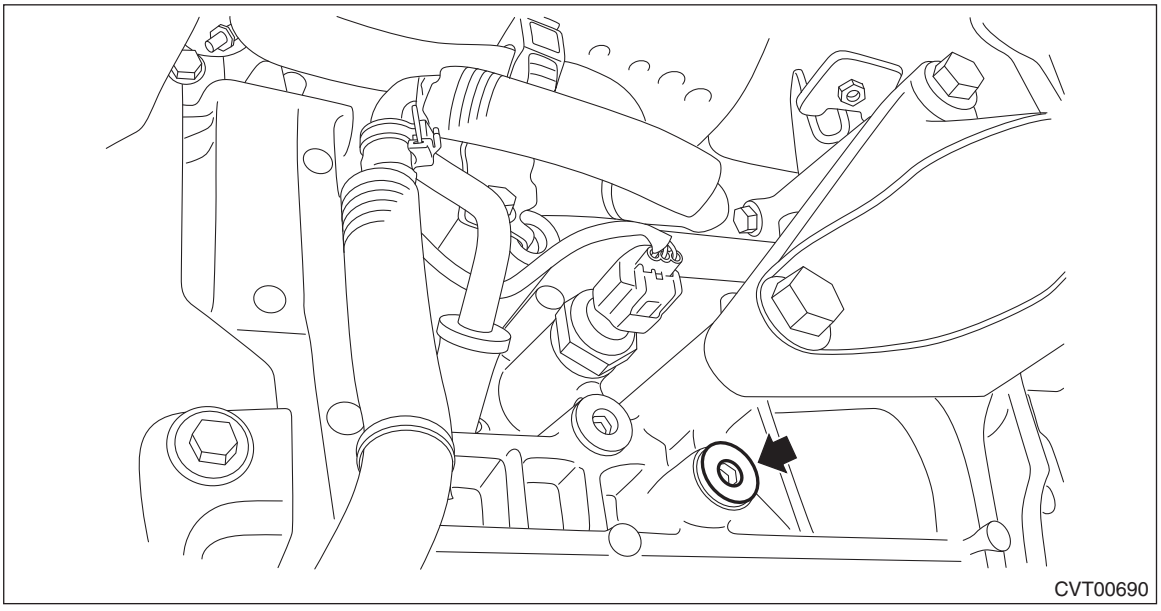
1) Apply the electronic parking brake.
2) Start the engine. Check the idle speed. (A/C OFF)
3) Shift the select lever from “N” to “D” range. Using a stop watch, measure the time elapsed from shifting the lever until the shock is felt.

Time lag standard:
1.2 seconds or less

If “N” → “D” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Forward clutch worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

4) In the same manner, measure the time lag when shifting from “N” range to “R” range.

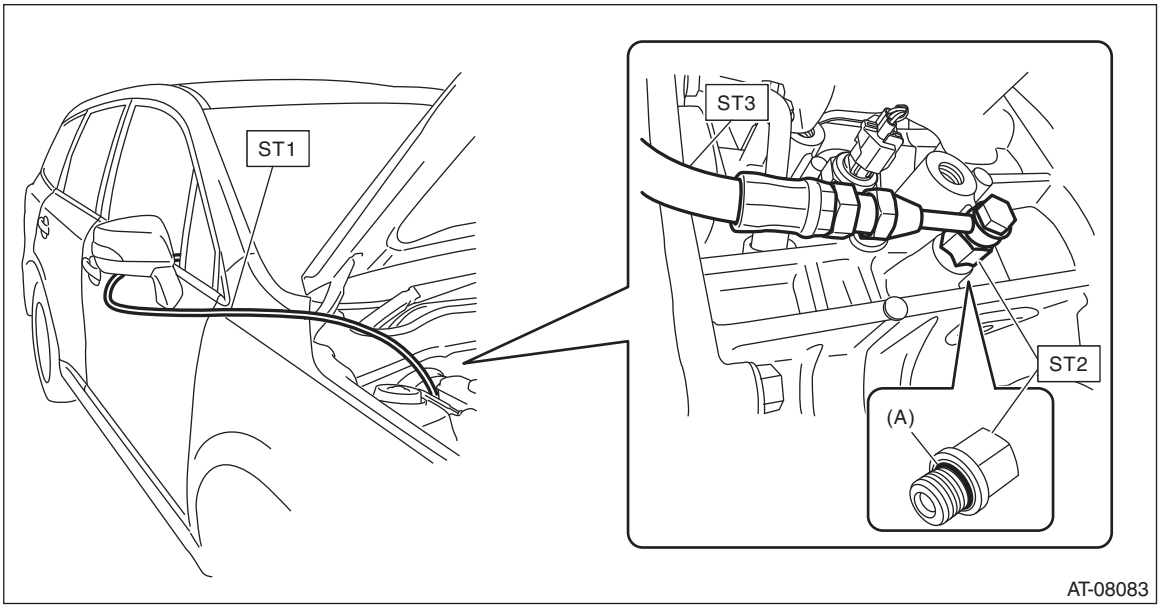
Time lag standard:
1.5 seconds or less



If “N” → “R” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Reverse brake worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

9. Secondary Pressure (Line Pressure) Test

A: INSPECTION



CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Make sure no other person is around the vehicle during secondary pressure (line pressure) test measurement.
• After performing the secondary pressure (line pressure) test measurement, adjust the CVTF level.

NOTE:
• If the pulley and variator chain, clutch or brake show signs of slipping or shift feel is not correct, check the secondary pressure (line pressure).
• Connect Subaru Select Monitor to vehicle so as to measure the engine speed and actual secondary pressure (secondary pressure (line pressure)).
• In many cases, slippage or inability to operate the vehicle may be due to insufficient oil pressure for the operation of clutch, brake or control valve.
1) Remove the front wheel RH. <Ref. to WT-6, REMOVAL, Tire and Wheel.>
2) Lift up the vehicle.
3) Remove the test plug for secondary pressure (line pressure).

4) Attach ST1, ST2 and ST3 to transmission.
ST1 18801AA000 OIL PRESSURE GAUGE ASSY
ST2 18681AA000 PRESSURE GAUGE ADAPTER
ST3 498897700 OIL PRESSURE ADAPTER SET

NOTE:
Use ST2 PRESSURE GAUGE ADAPTER with genuine O-ring (Part No. 806911080) attached.

(A) O-ring (genuine part)

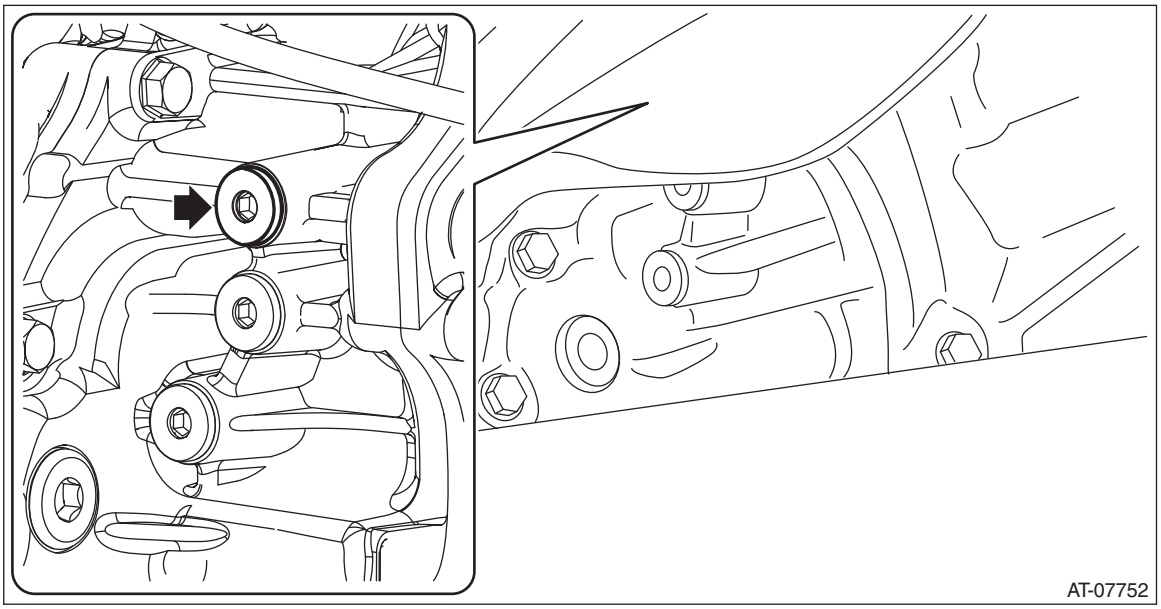
5) Lower the vehicle.
6) Set the gauge so that it can be seen from the driver's seat.
7) Install the front wheel RH. <Ref. to WT-6, INSTALLATION, Tire and Wheel.>
8) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(H6DO)(diag)-53, OPERATION, Subaru Select Monitor.>
9) Check the engine oil level. <Ref. to LU(H6DO)-10, INSPECTION, Engine Oil.>
10) Check the coolant level. <Ref. to CO(H6DO)-13, INSPECTION, Engine Coolant.>
11) Adjust the CVTF level. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
12) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to "N" or "P" range.
13) Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake. (With EyeSight)
14) Shift the select lever to "D" range.
15) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
16) Immediately after the engine speed becomes steady, record the reading of the secondary pressure (line pressure), engine speed and actual secondary pressure on Subaru Select Monitor. And then release the accelerator pedal. Shift the select lever to "N" range. Let the engine idle for one minute or more to cool it down.

NOTE:
• Do not continue the stall test for 5 seconds or more at a time (from fully closed throttle, fully open throttle to secondary pressure (line pressure) reading). Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
• After performing the secondary pressure (line pressure) test, be sure to cool down the engine for at least one minute with the select lever set in "P" or "N" range and with the idle speed at 1,200 r/min or less.
• Under each condition, check that the measured pressure matches almost totally with actual secondary pressure.
• When both measured pressure and actual secondary pressure are out of specification, judge as control valve malfunction.
• The value at stall is for reference because the pressure changes under different conditions or circumstances.

- The value at idling is steady because it is not affected by any condition or circumstance.

Secondary pressure (line pressure) standard				
	Range	Throttle	Brake	Secondary pressure (line pressure) (MPa (kgf/cm^2, psi))
Stall	D, R	Full open	ON	4.5 — 6 (45.9 — 61.2, 652 — 870)
Idling	P, N	Full closed	OFF	0.5 — 1.5 (5.1 — 15.3, 72 — 218)

17) Remove the ST and install the plug after measurement.



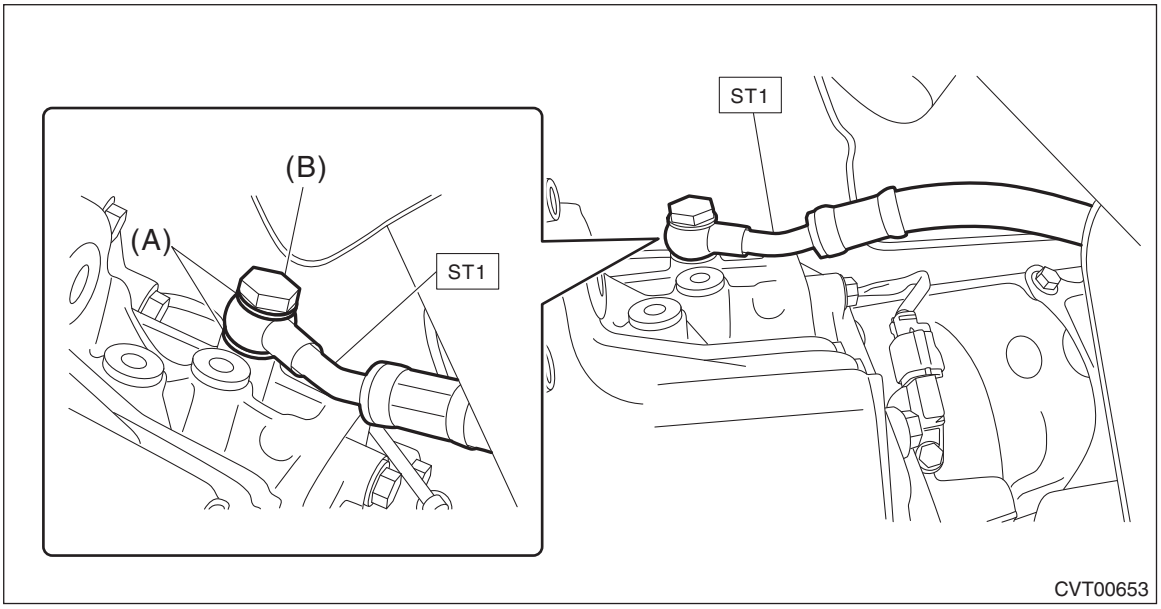
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

10.Transfer Clutch Pressure Test

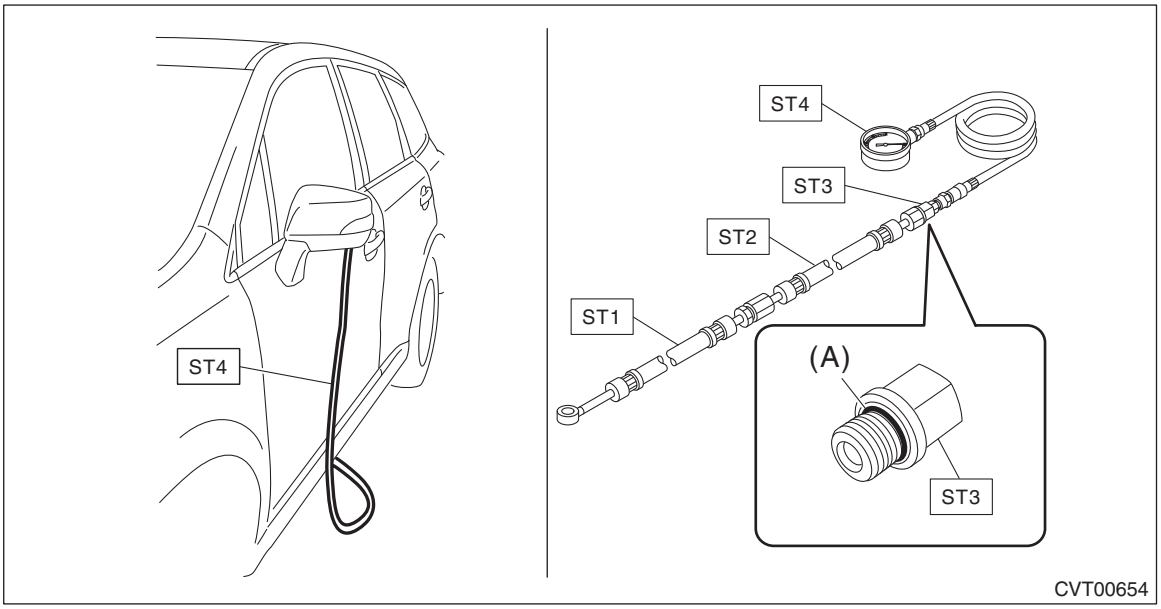
A: INSPECTION

1) Lift up the vehicle.
2) Remove the test plug.



3) Set the ST1, ST2, ST3 and ST4 to the transmission.

CAUTION:
Be careful when setting tools so that the hoses do not touch the exhaust pipes.



NOTE:
• Use ST1 ADAPTER HOSE B with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060) attached.

- Use ST3 PRESSURE GAUGE ADAPTER with genuine O-ring (Part No. 806911080) attached.

ST1 34099AC020 ADAPTER HOSE B
ST2 34099AC010 ADAPTER HOSE A
ST3 18681AA000 PRESSURE GAUGE ADAPTER
ST4 498575400 OIL PRESSURE GAUGE ASSY

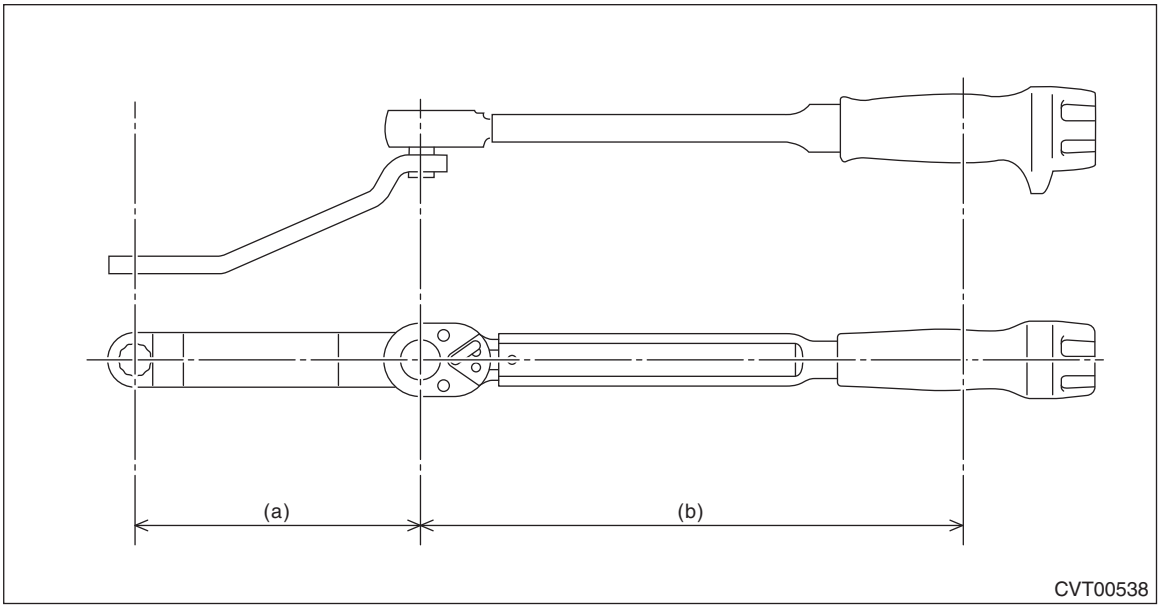
(A) Gasket (genuine part)
(B) Union screw (genuine part)

(A) O-ring (genuine part)

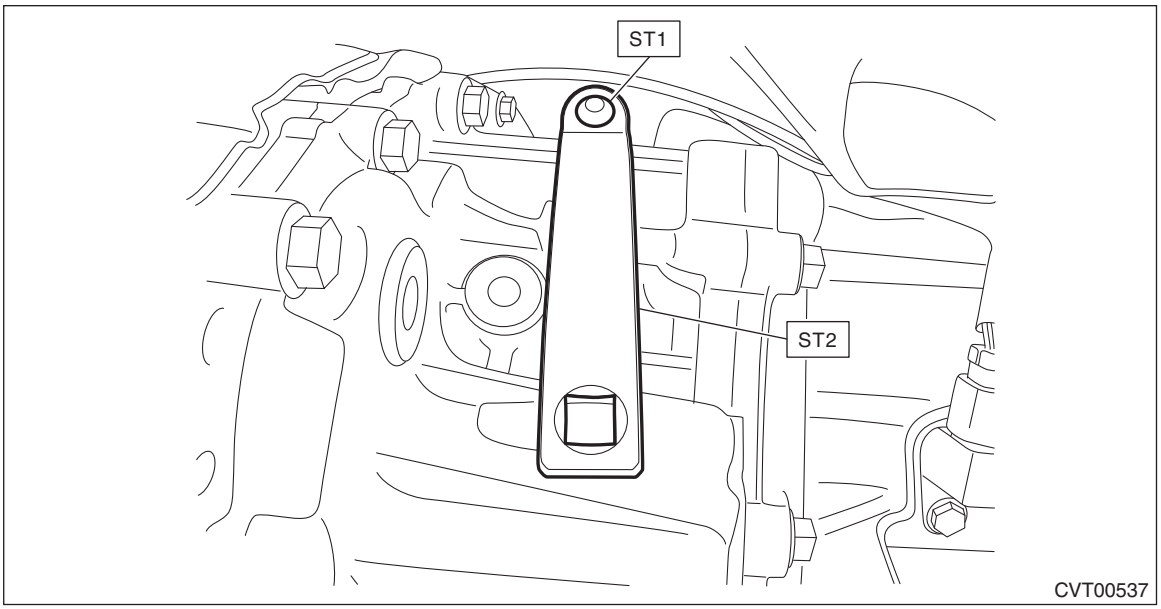
4) Lower the vehicle.
5) Connect the Subaru Select Monitor to the data link connector and read the current data.
6) Check the transfer clutch pressure as in secondary pressure (line pressure) test. <Ref. to CVT(TR690)-52, Secondary Pressure (Line Pressure) Test.>

NOTE:
- Turn OFF the X mode switch and perform inspection.

- If oil pressure is not produced or it does not change, the control valve body may be malfunctioning.



Range position	ON Duty ratio (%)	Accelerator pedal opening angle (%)	Standard transfer clutch pressure kPa (kgf/cm^2, psi)
D	95 — 100	Fully opened (100)	1,000 — 1,200 (10.2 — 12.2, 145 — 174)
	60	Adjust ON Duty ratio to 60%.	400 — 700 (4.1 — 7.1, 58 — 102)
	0	Fully closed (0)	—
N or P	0	Fully closed (0)	0

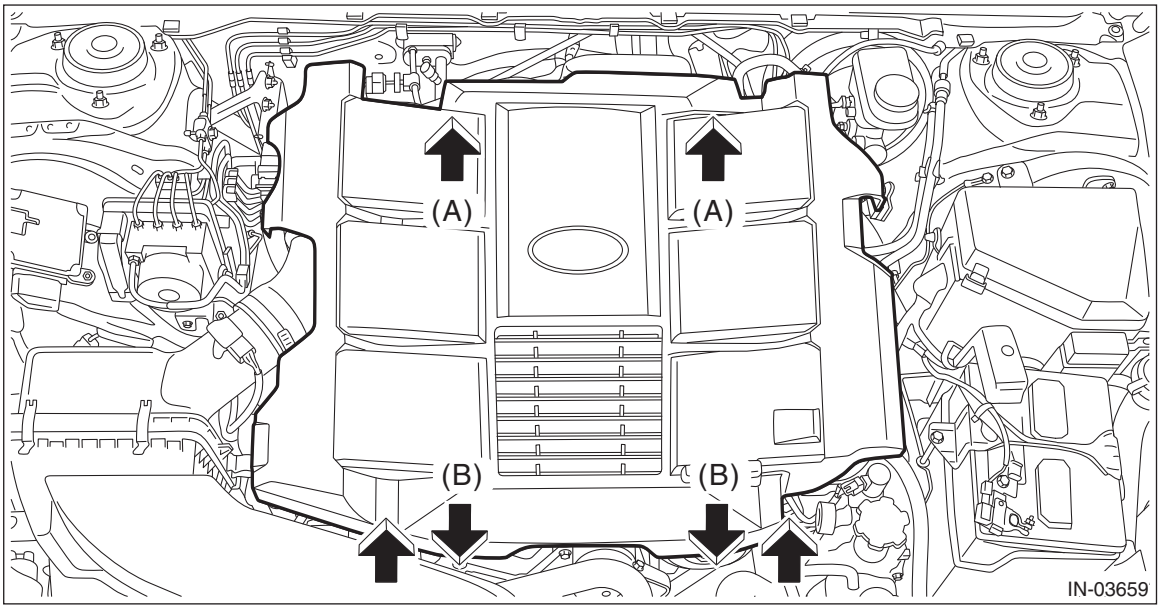


7) Lift up the vehicle.
8) Remove the ST.
9) Install the test plug using ST1 and ST2.

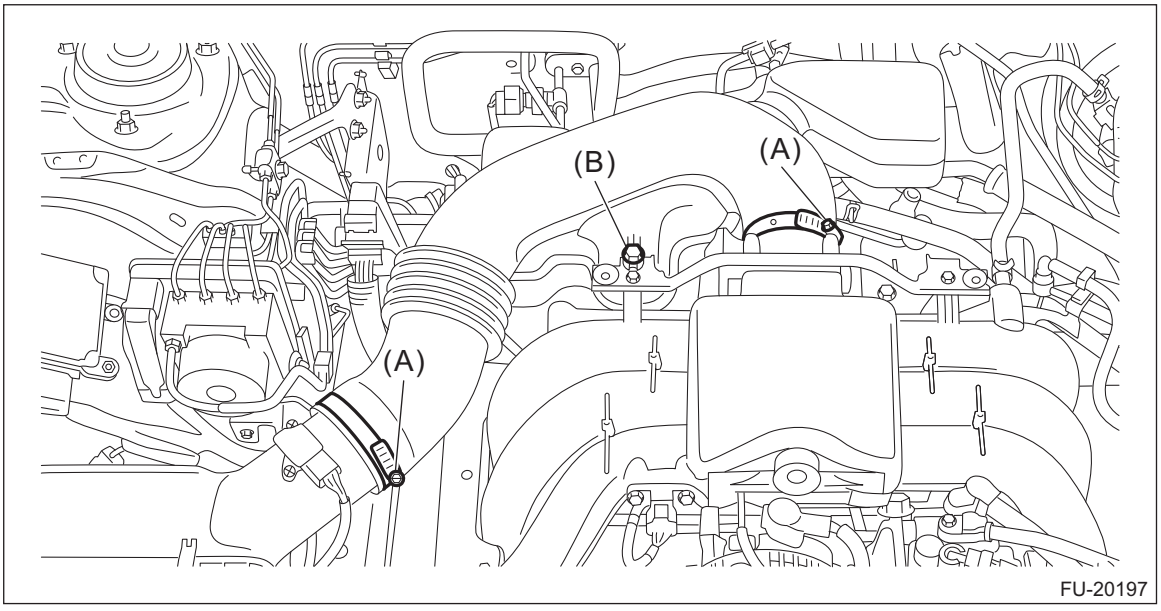
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Tighten the test plug while directly aligning ST2 and torque wrench.

ST1 18270AA040 SOCKET
ST2 73099SG000 SPECIAL TOOL CONDENSER
Using the following formula, calculate the tightening torque for a torque wrench.
$T2 = L2/(L1 + L2) \times T1$
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
L1: ST2 length 0.1 m (3.94 in) (a)
L2: Torque wrench length (b) m (in)

[Required torque setting]
T2: Tightening torque: N·m (kgf-m, ft-lb)



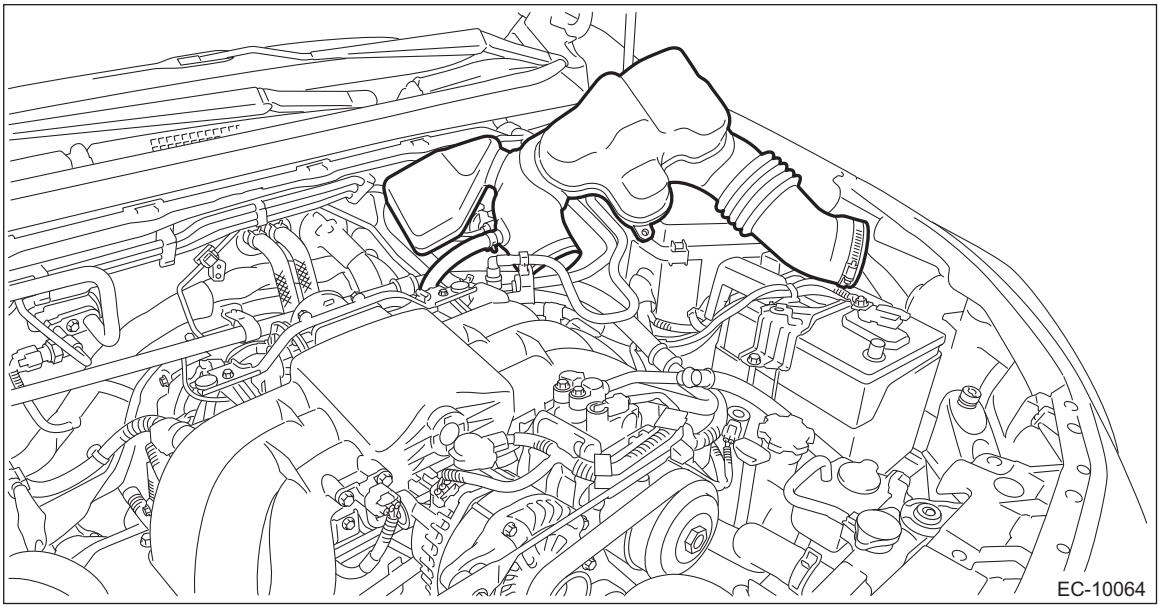
10) Lower the vehicle.



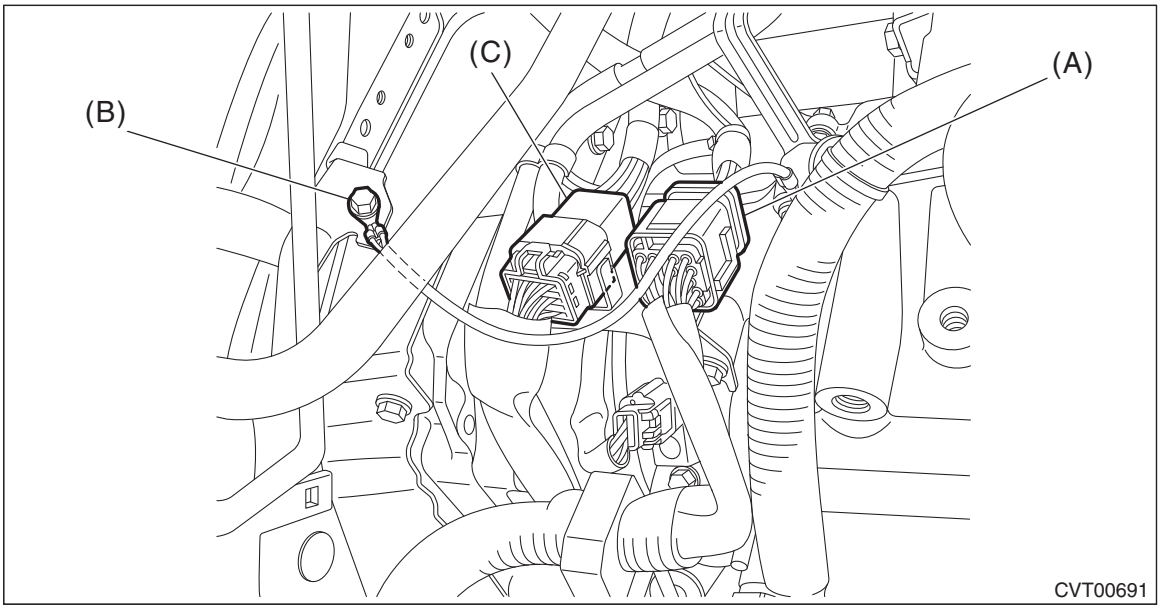
11.Automatic Transmission Assembly

A: REMOVAL

1) Remove the front tires. <Ref. to WT-6, REMOVAL, Tire and Wheel.>
2) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.

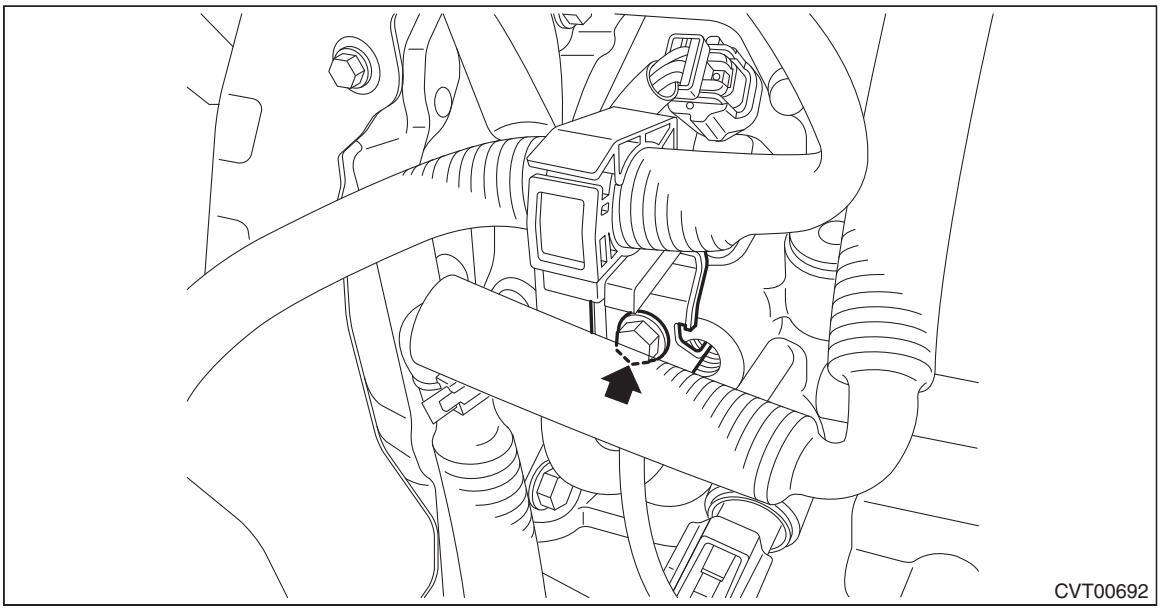


3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the air intake duct. <Ref. to IN(H6DO)-12, REMOVAL, Air Intake Duct.>
5) Loosen the clamp (A) which connects the air intake boot.
6) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.

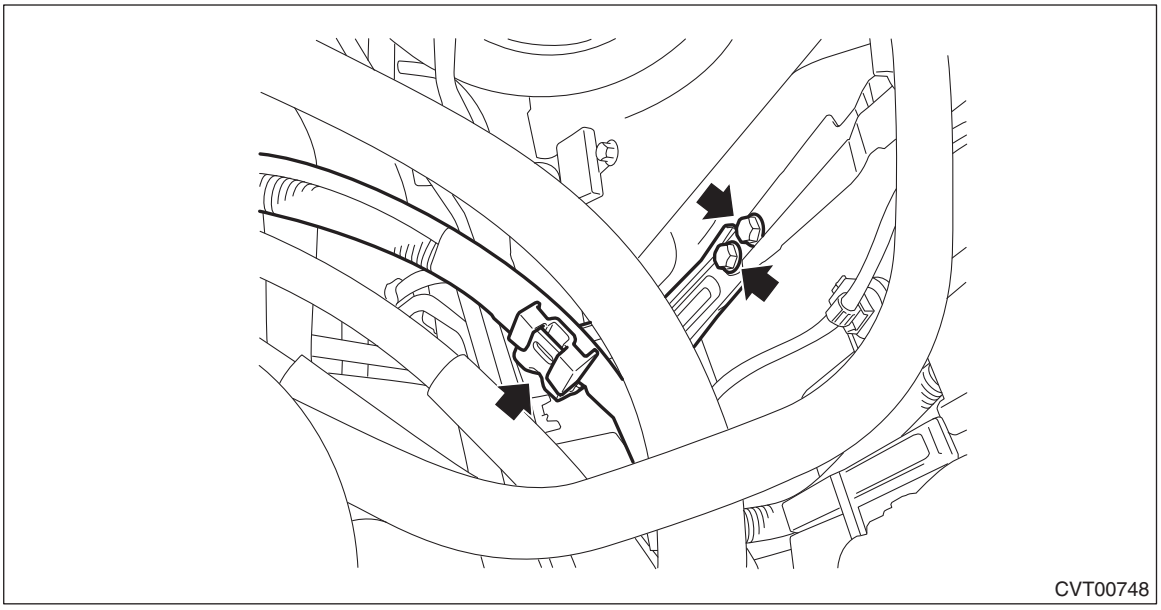


7) Remove the air intake boot from the throttle body and the air cleaner case (rear), and move it to the left side wheel apron.

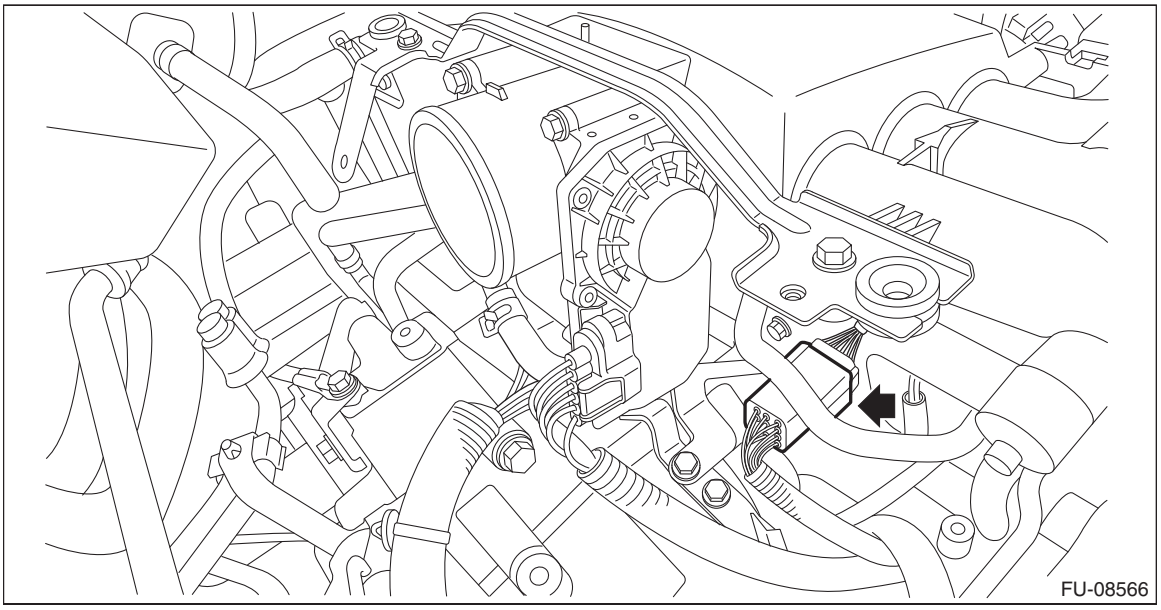
CAUTION:
Be careful not to allow the air intake boot to contact the air conditioner pipe.



8) Disconnect the following connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector

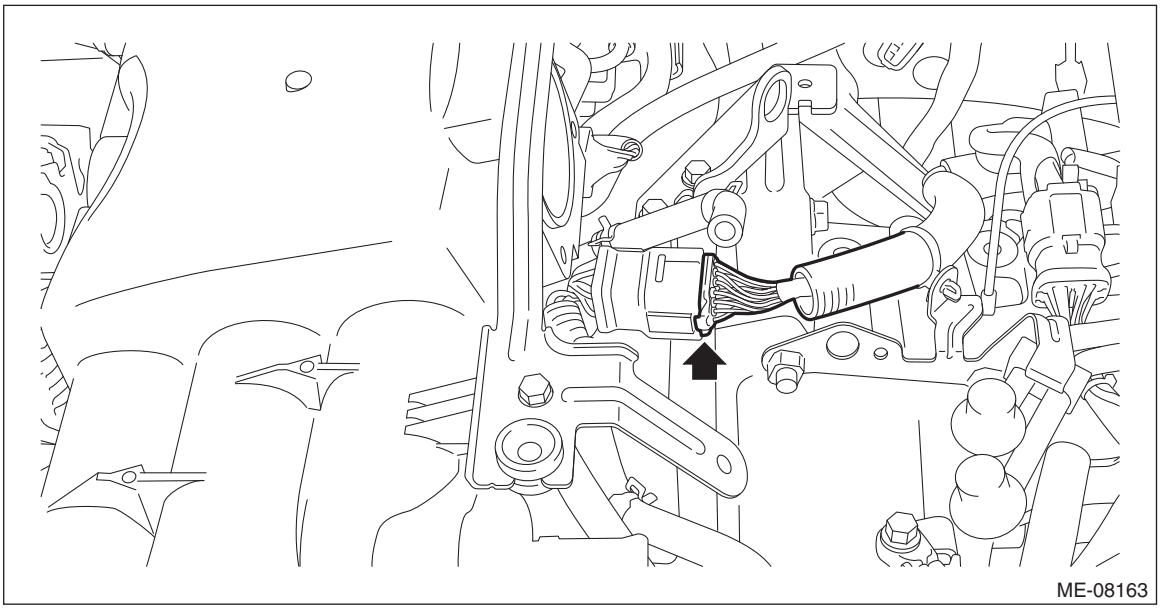


(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector

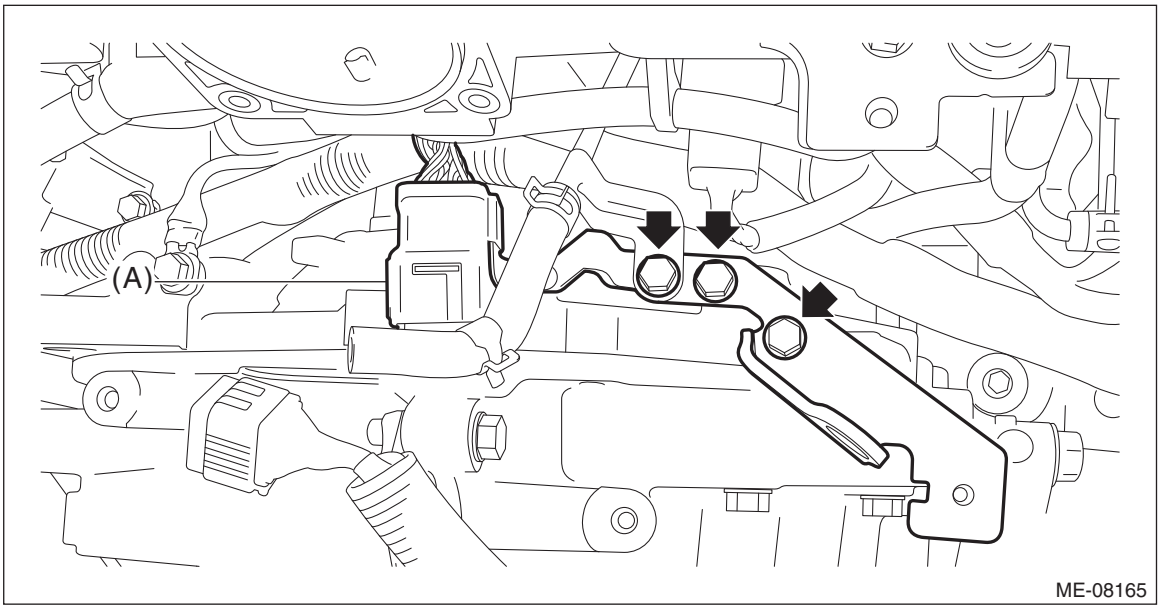


9) Disconnect the harness stay.

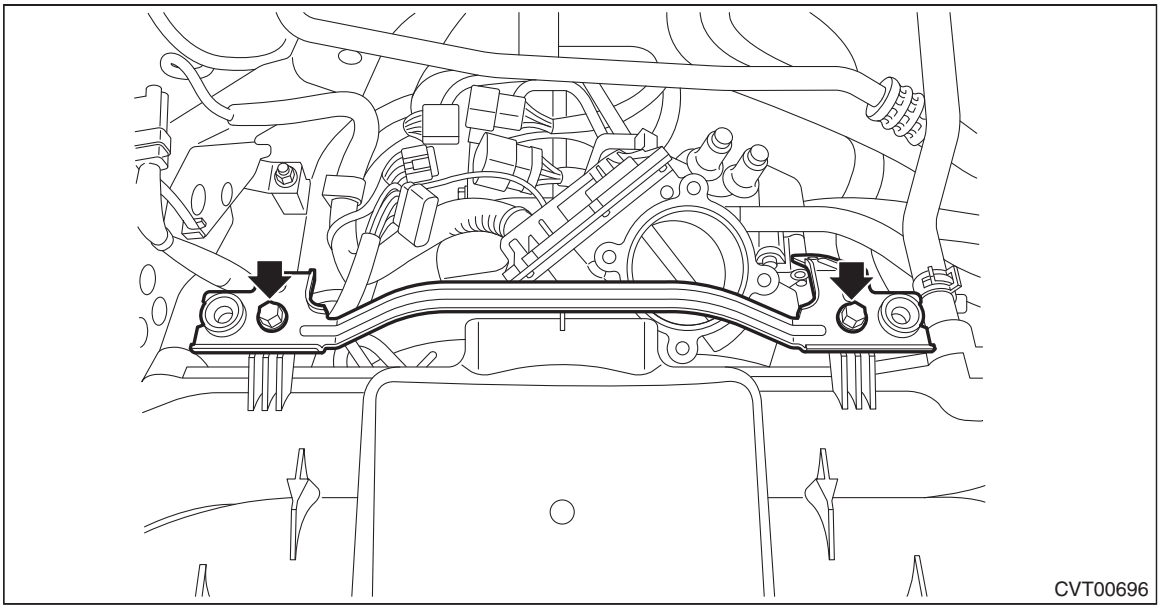
10) Separate the ground cable clip to remove the battery cable bracket.



11) Disconnect the engine harness connector.

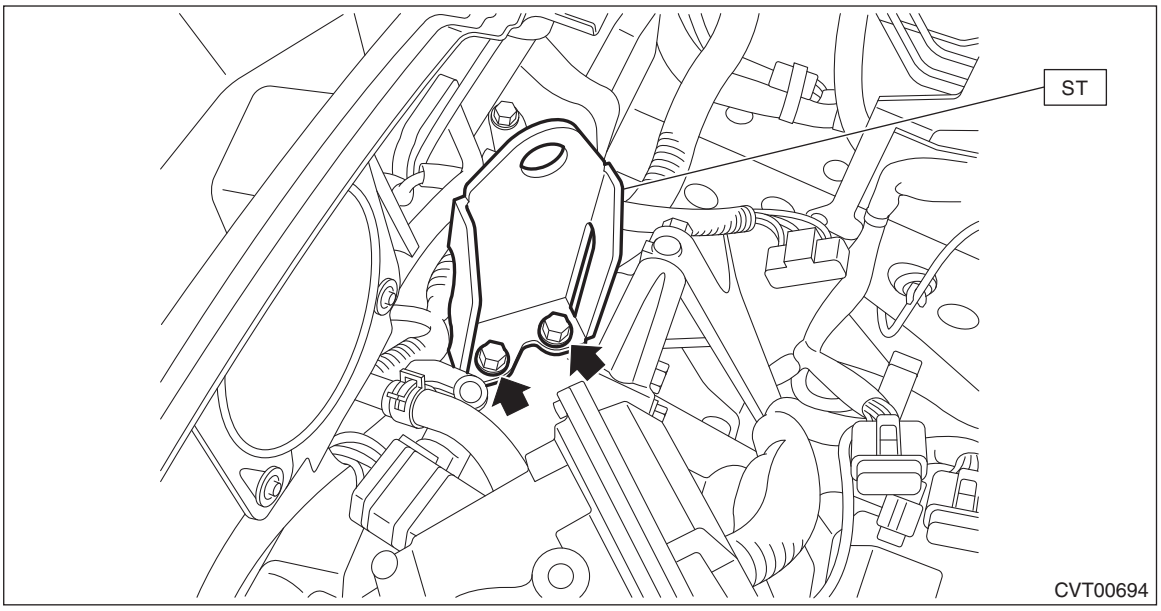


12) Remove the throttle body with the engine coolant hose connected. <Ref. to FU(H6DO)-19, REMOVAL, Throttle Body.>

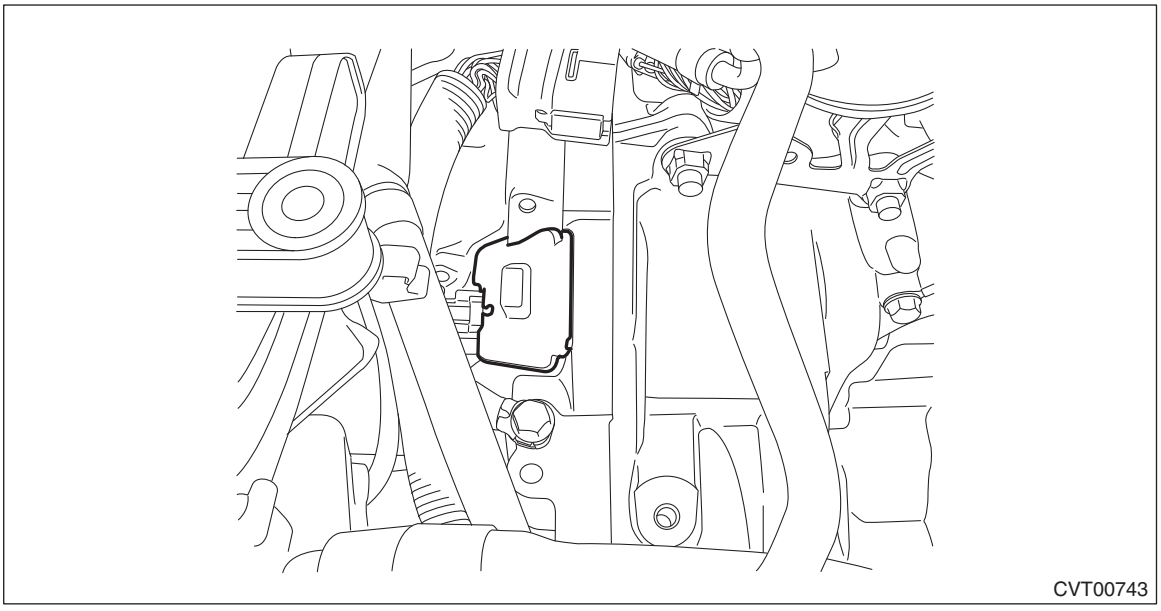


13) Disconnect the oxygen sensor harness connector.

14) Disconnect the oxygen sensor harness connector (A), and then remove the engine hanger rear.

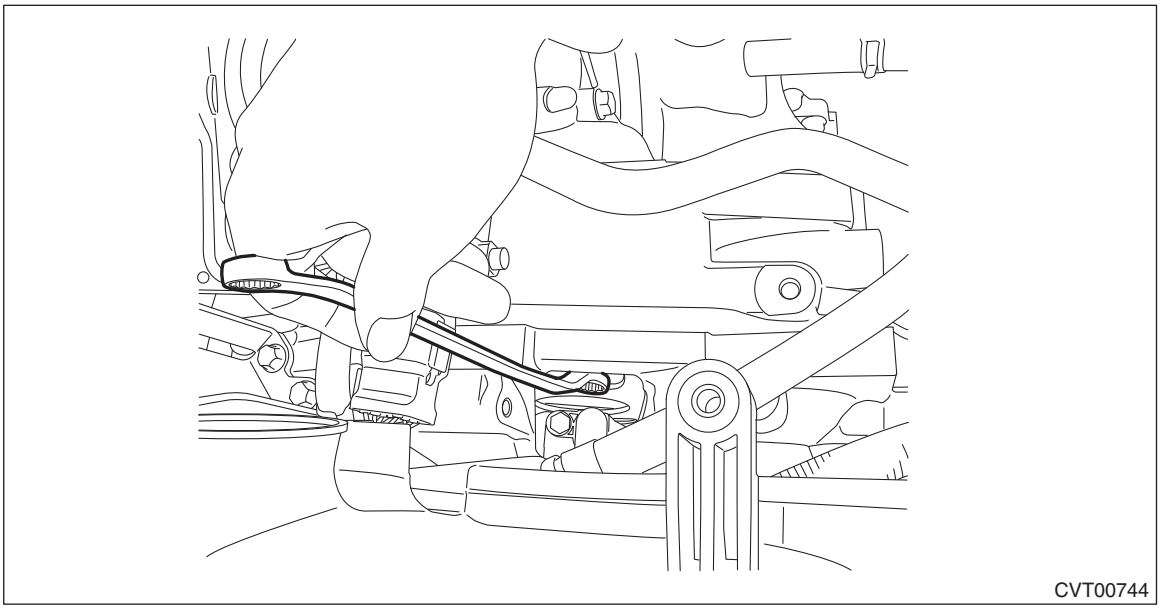


15) Remove the collector cover bracket.

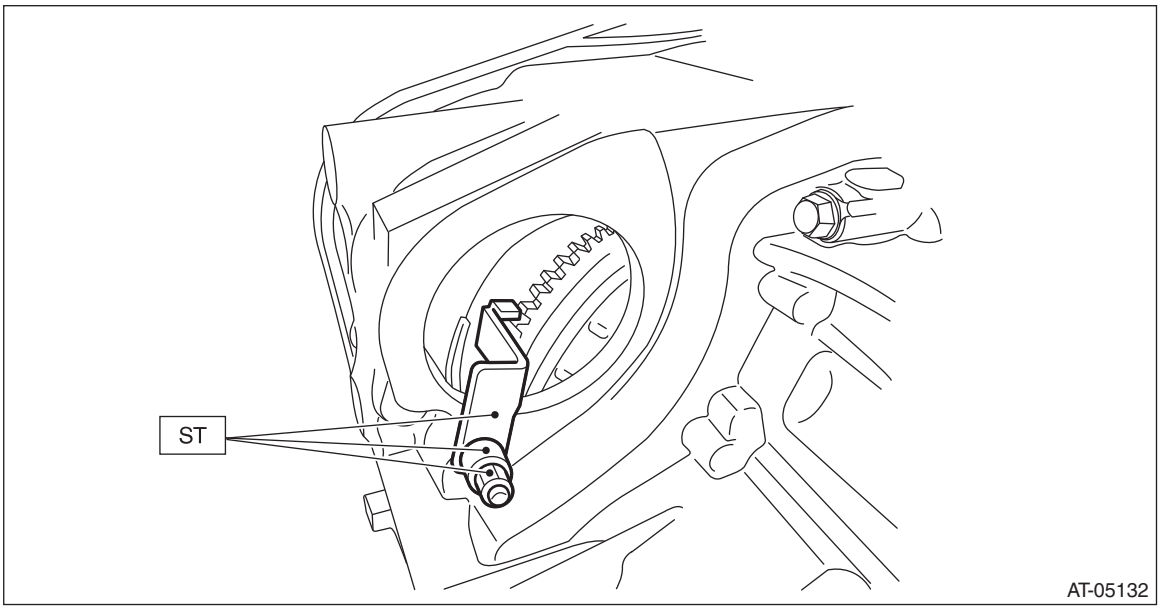


16) Attach the ST to the engine.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)
ST 18360AA020 HANGER



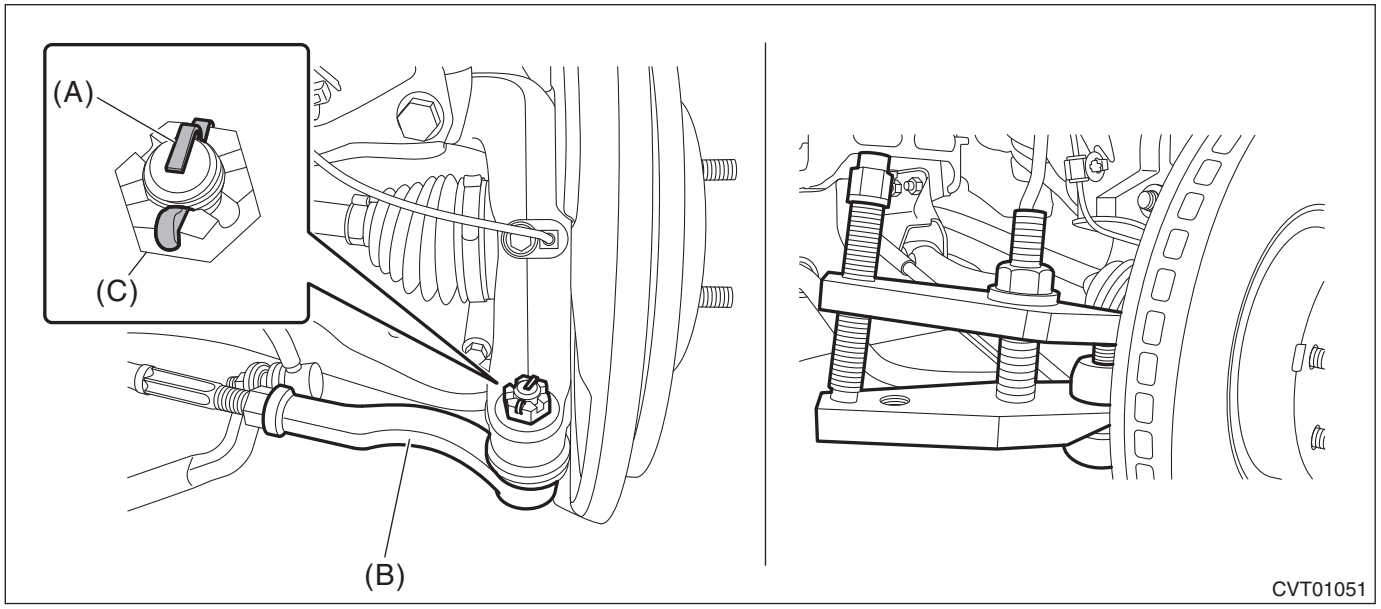
17) Remove the starter. <Ref. to SC(H6DO)-7, REMOVAL, Starter.>
18) Remove the service hole plug.



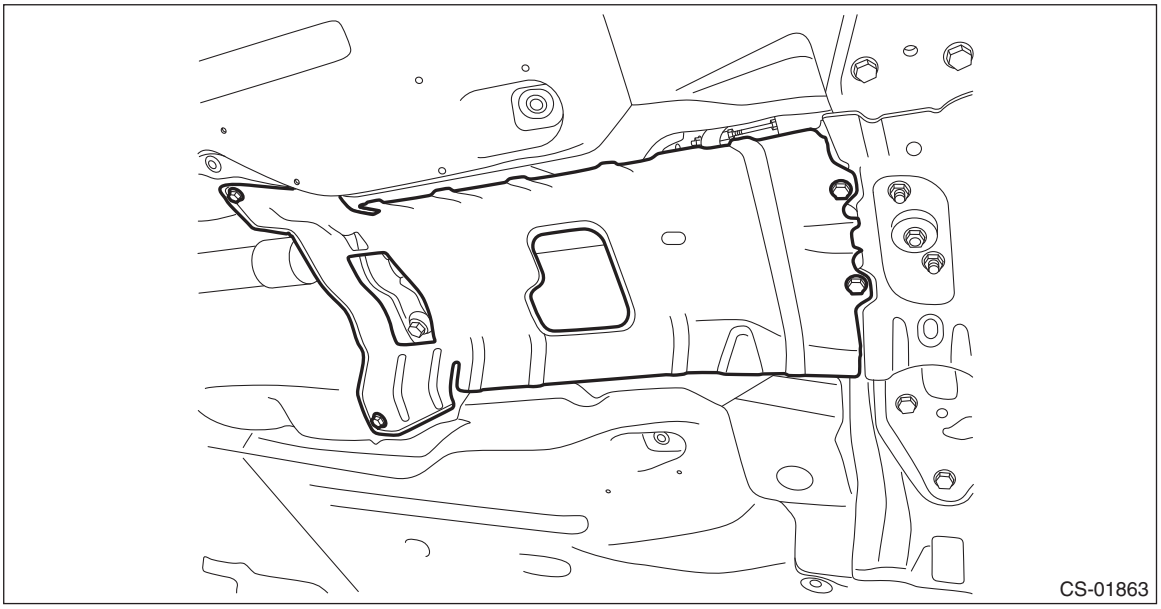
19) Remove the four bolts combining the torque converter and drive plate while rotating the crank pulley a little at a time in the same direction as engine revolution.

CAUTION:
- **Be careful not to drop bolts into converter housing.**

- **Be careful not to damage the mounting bolts.**

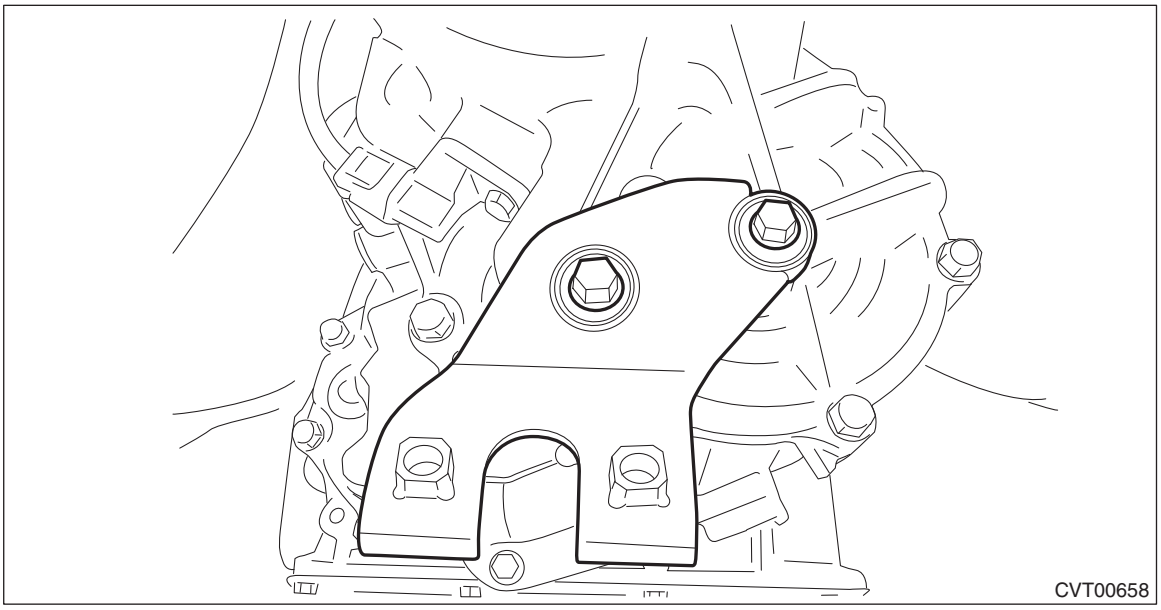


20) Make sure the torque converter moves freely by rotating with finger through the starter installation hole.
21) Attach the ST to the converter case.
ST 498277200 STOPPER SET



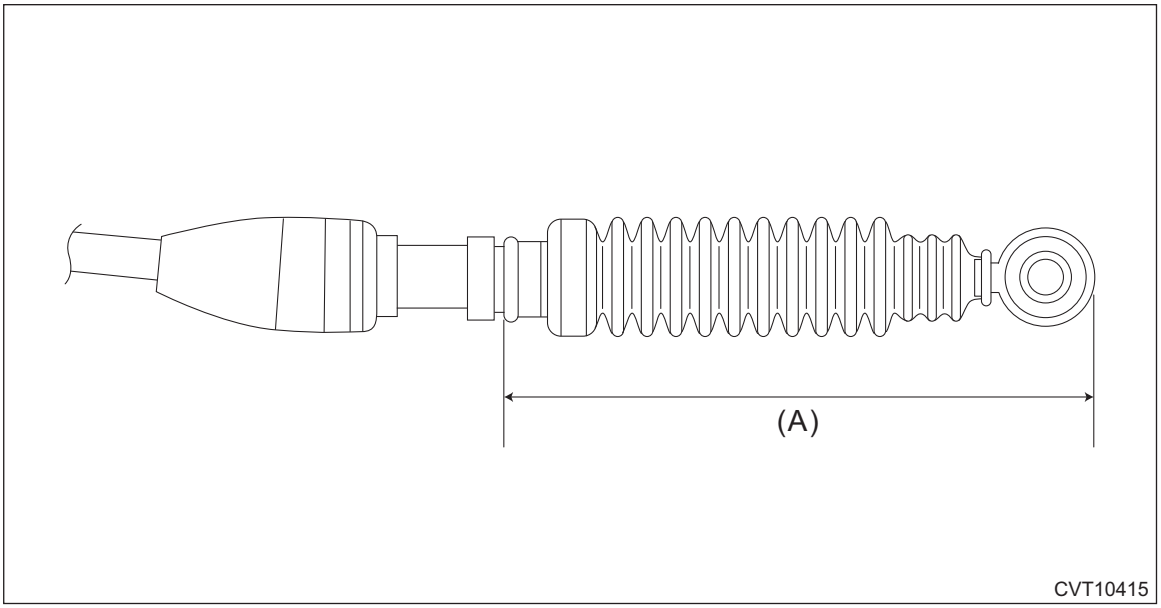
22) After pulling off the cotter pin and removing the castle nut, use a puller to remove the tie-rod end.

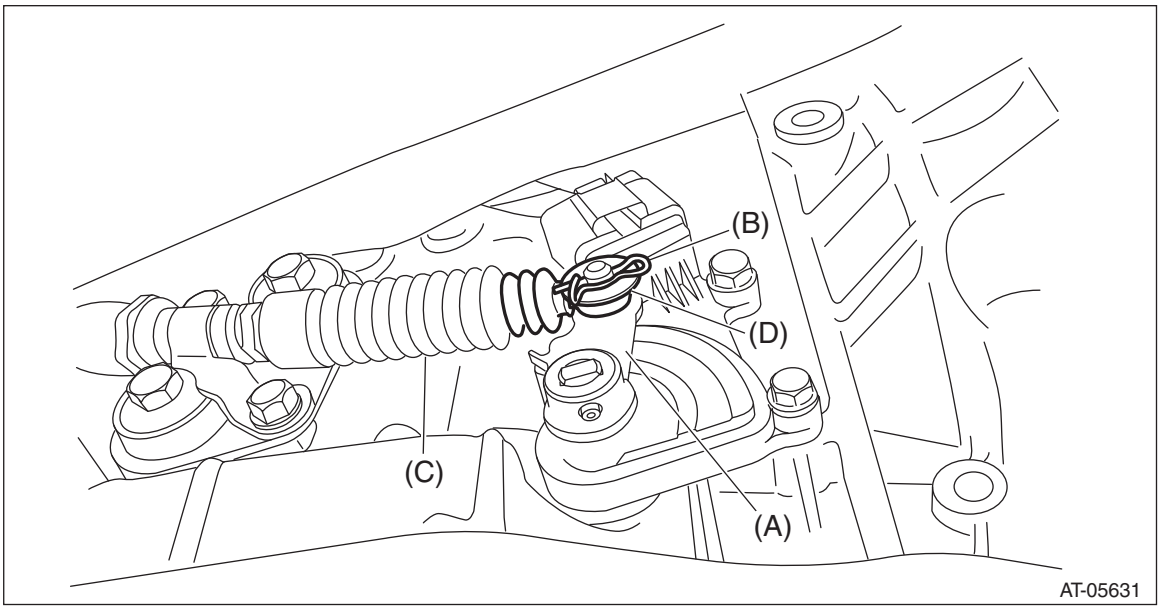
NOTE:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.



(A) Cotter pin
(B) Tie-rod end
(C) Castle nut

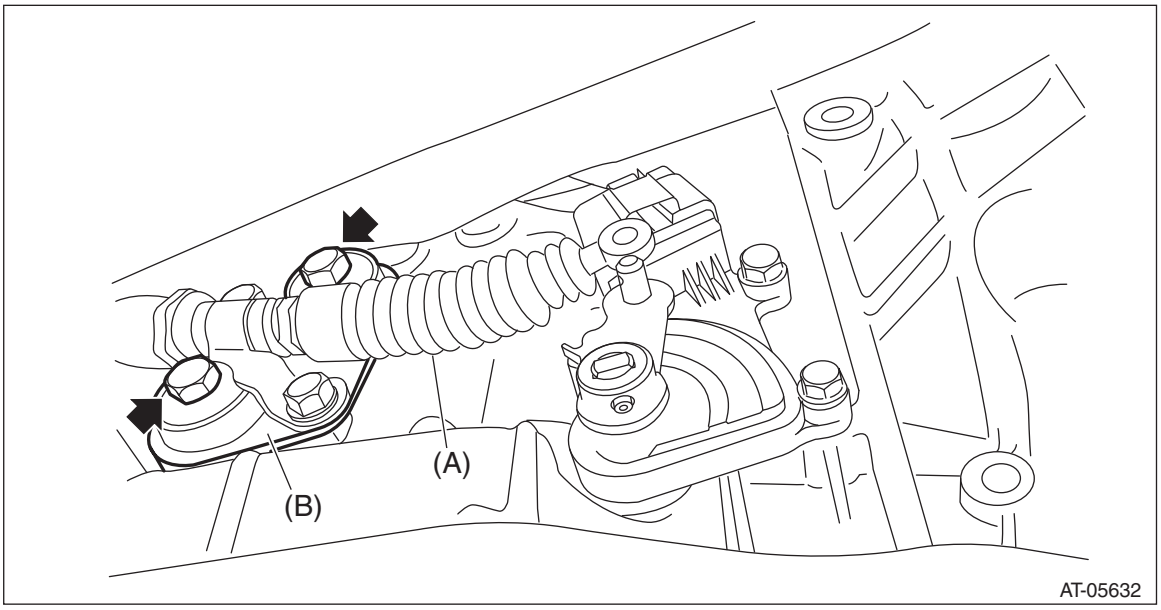
23) Lift up the vehicle.
24) Remove the front under cover. <Ref. to EI-27, REMOVAL, Front Under Cover.>
25) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
26) Remove the center exhaust cover.



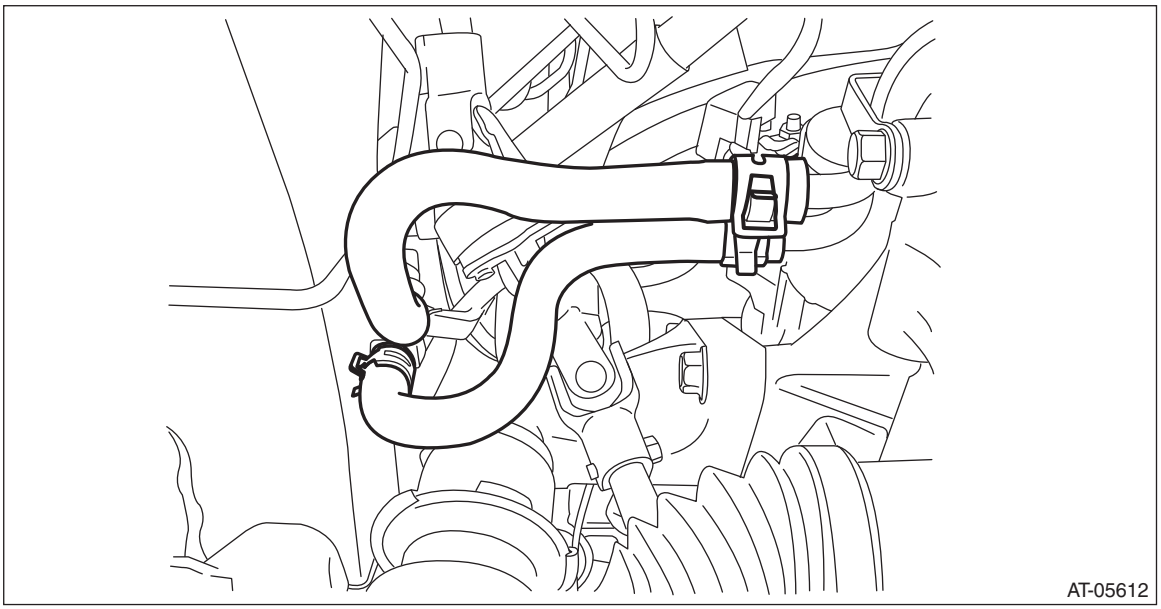


27) Remove the exhaust hanger bracket.

28) Remove the CVTF drain plug to drain CVTF. <Ref. to CVT(TR690)-40, REPLACEMENT, CVTF.>
29) Remove the snap pin and washer, and disconnect the select cable.

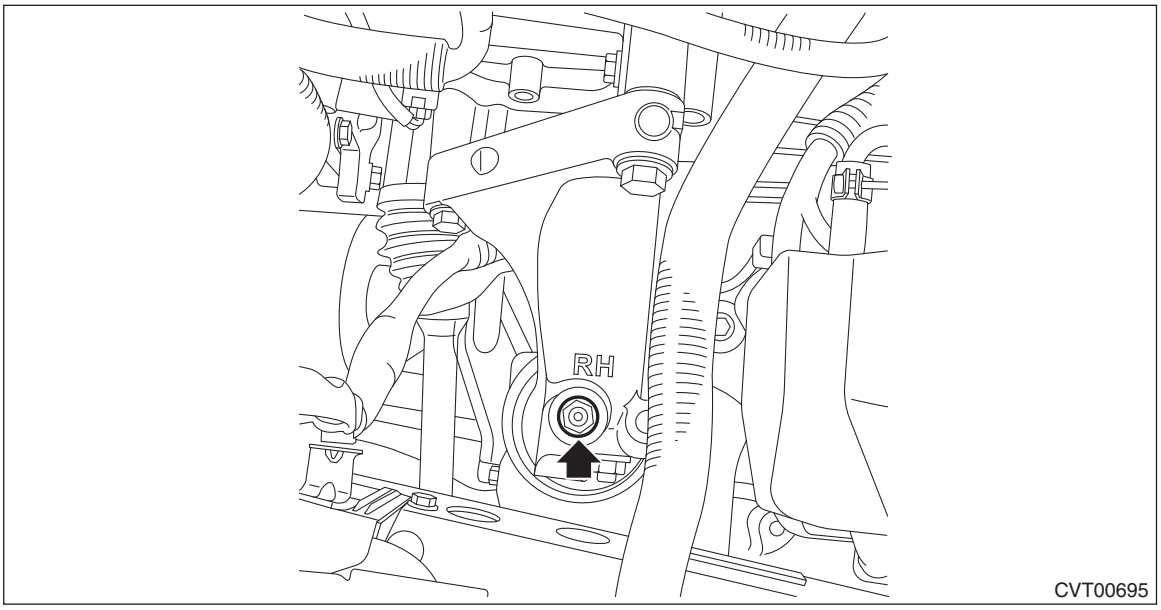


CAUTION:
Do not apply extra overload while holding the part (A).



(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

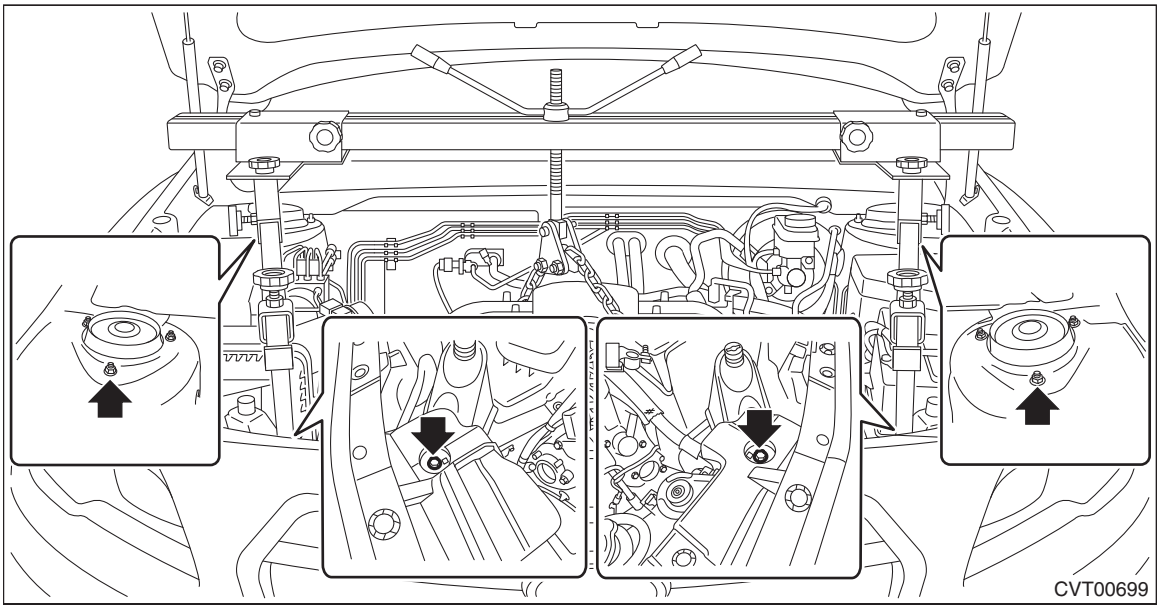
30) Remove the cable plate assembly.



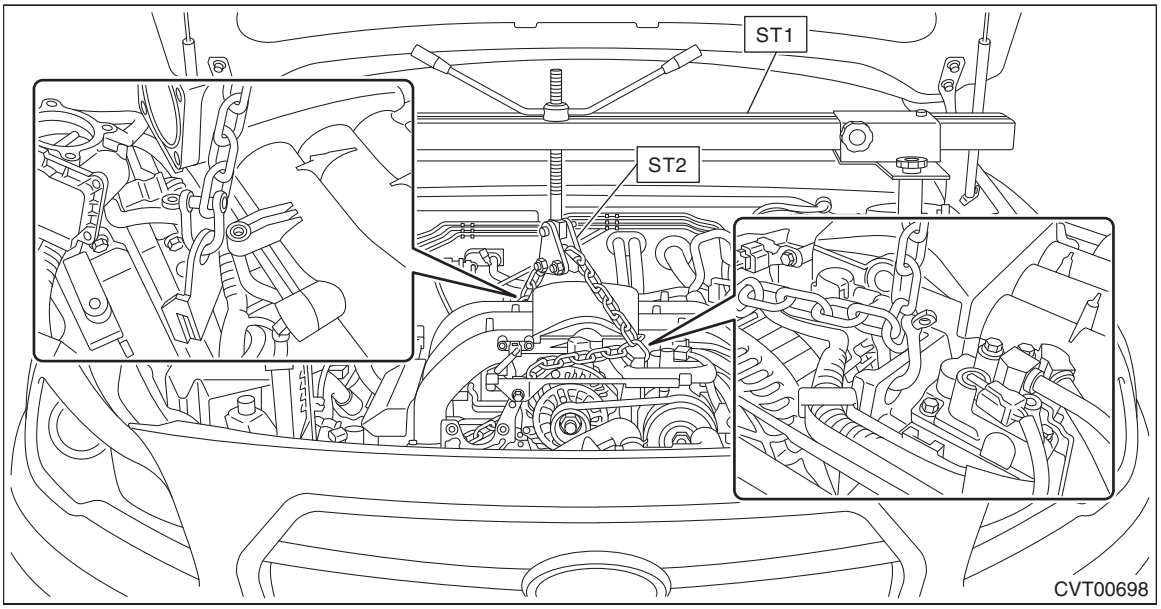
(A) Select cable
(B) Cable plate ASSY

31) Drain differential gear oil. <Ref. to CVT(TR690)-44, REPLACEMENT, Differential Gear Oil.>
32) Remove the CVTF CVT inlet hose and CVTF CVT outlet hose.

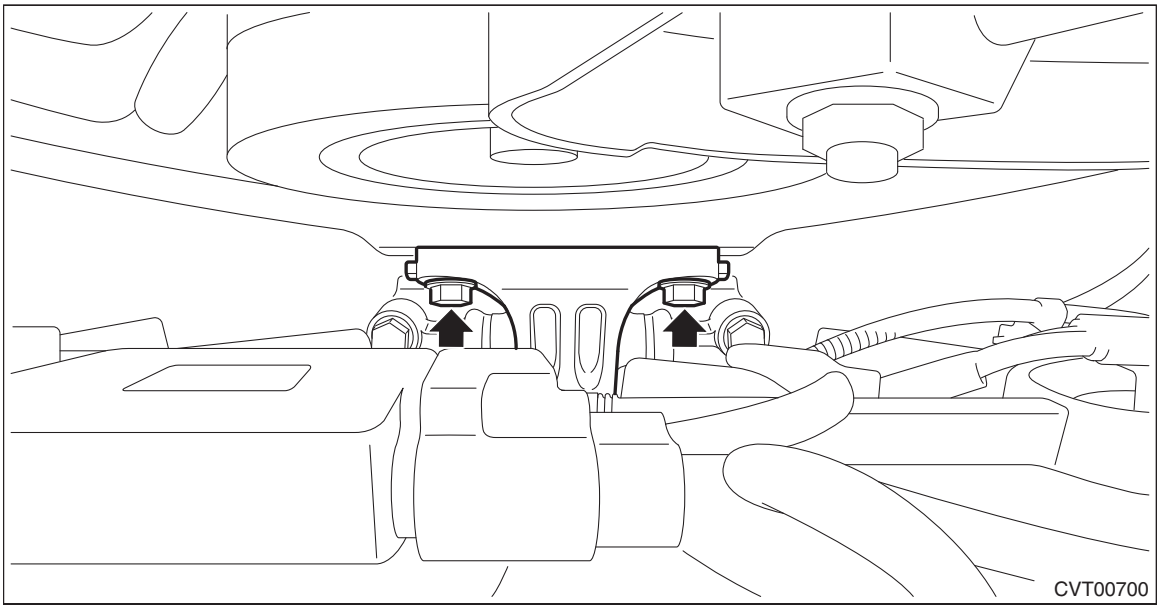
33) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>
34) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
35) Remove the stabilizer link.
36) Disconnect the lower arm ball joint and housing.
37) Pull out the front drive shaft from transmission using a crowbar.
38) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.
39) Lower the vehicle.



40) Remove the nuts from left and right transmission mounting brackets.

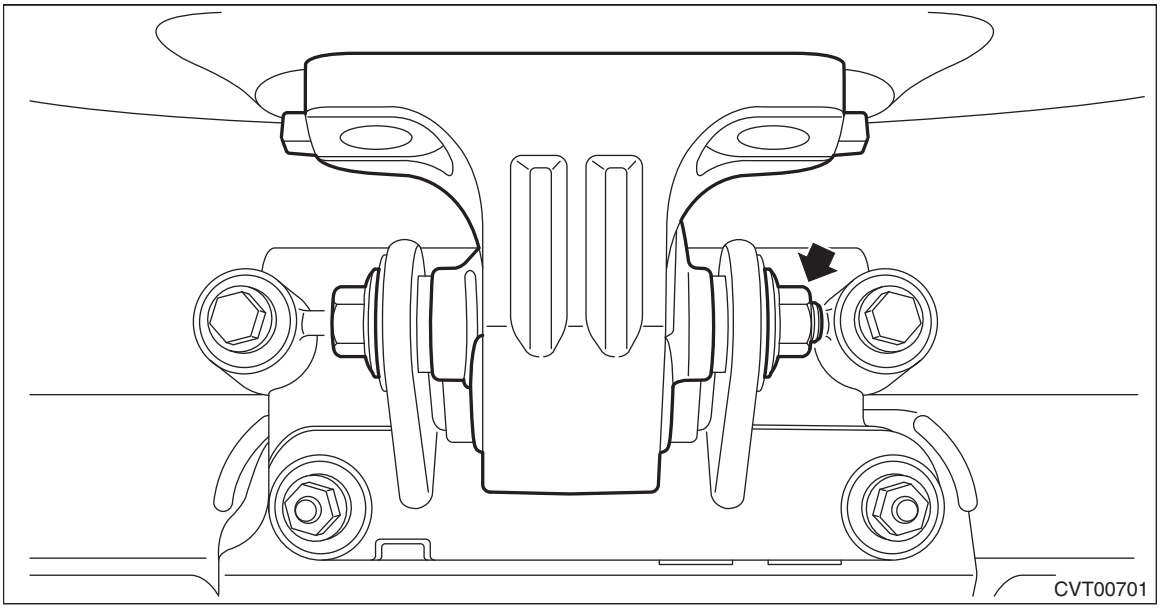


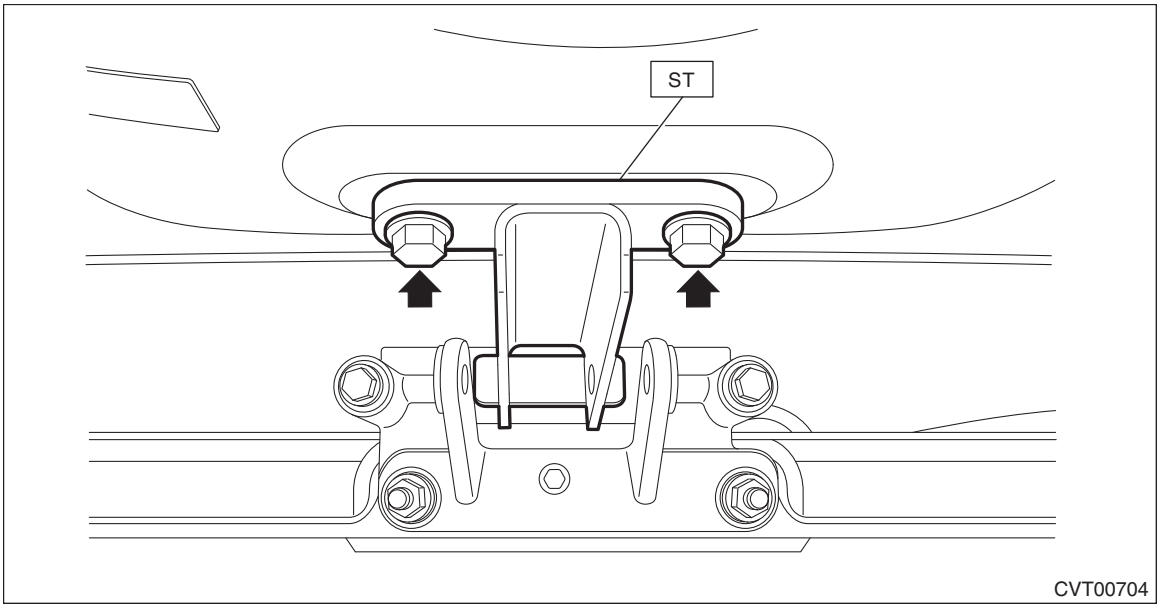
41) Set the ST1 and ST2 to vehicle.
ST1 99099AJ000 ENGINE HANGER
ST2 99099AJ010 CHAIN BALANCER



CAUTION:
- **Set so that the chain sling does not contact the engine parts.**
- **Install a bolt of ϕ8 mm (0.3 in) at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).**

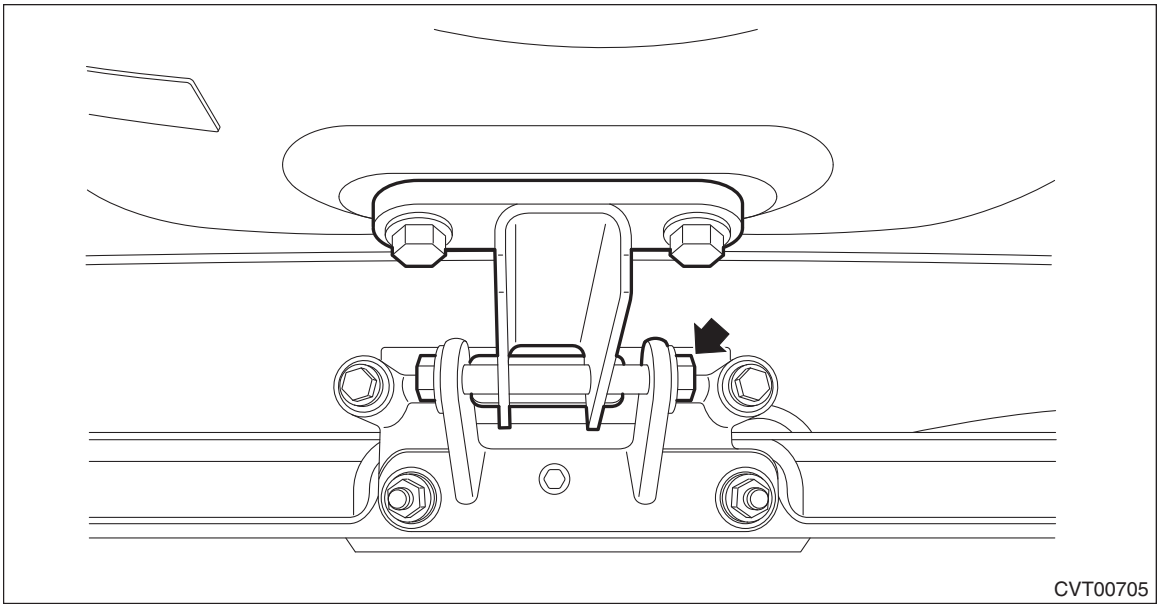
- **Set the rear arms of ST (ENGINE HANGER) at the locations shown in the figure.**





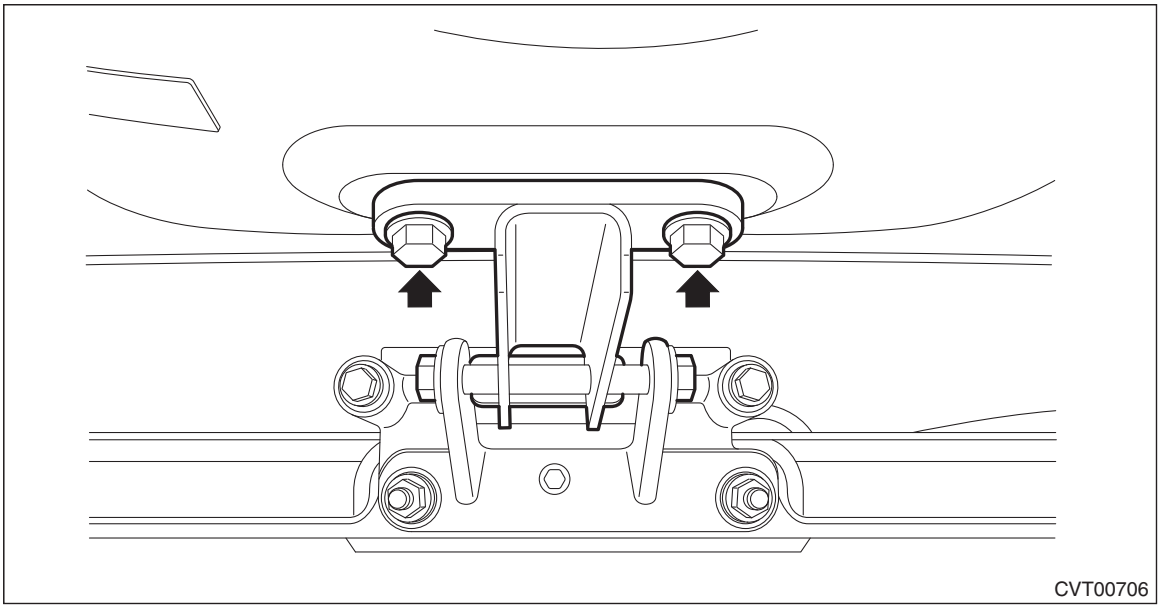
42) Lift the engine slightly and remove the bolts of front cushion rubber.

43) Remove the front cushion rubbers.



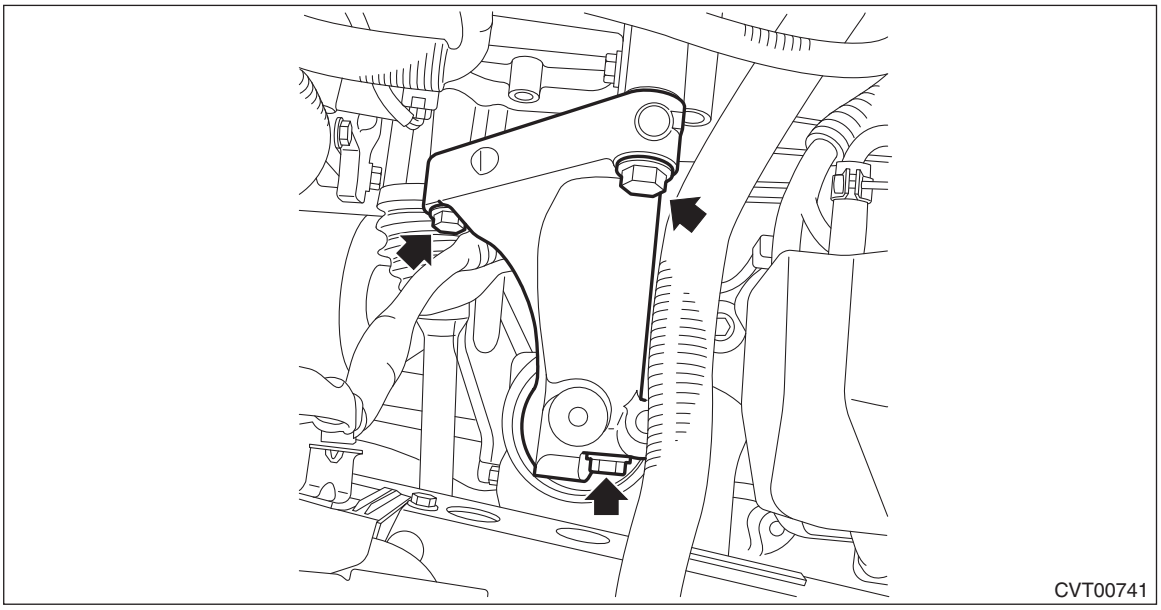
44) Temporarily attach ST by using two bolts.
ST 41099AJ010 SPECIAL TOOL H6

45) Lift up the engine unit high enough to install the bolt and nut to vehicle.



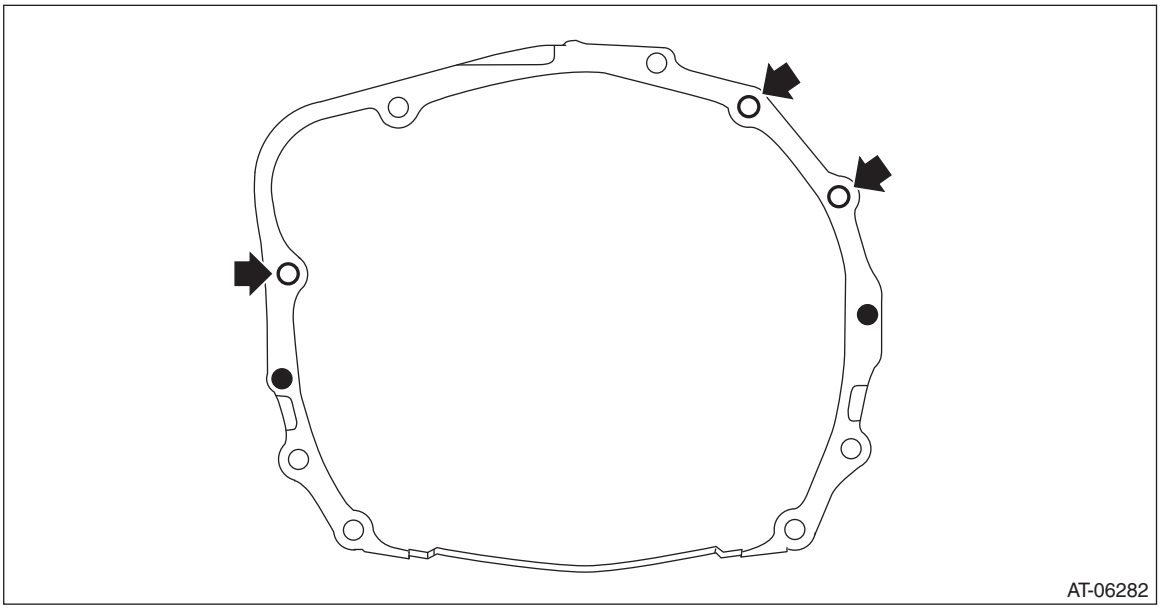
CAUTION:
Do not lift up higher than enough level to install the ST to avoid damage to the hoses and pipes inside the engine room.

NOTE:
If it is difficult to pull out the stud bolt from transmission mounting bracket, slightly shake the engine unit while lifting up.

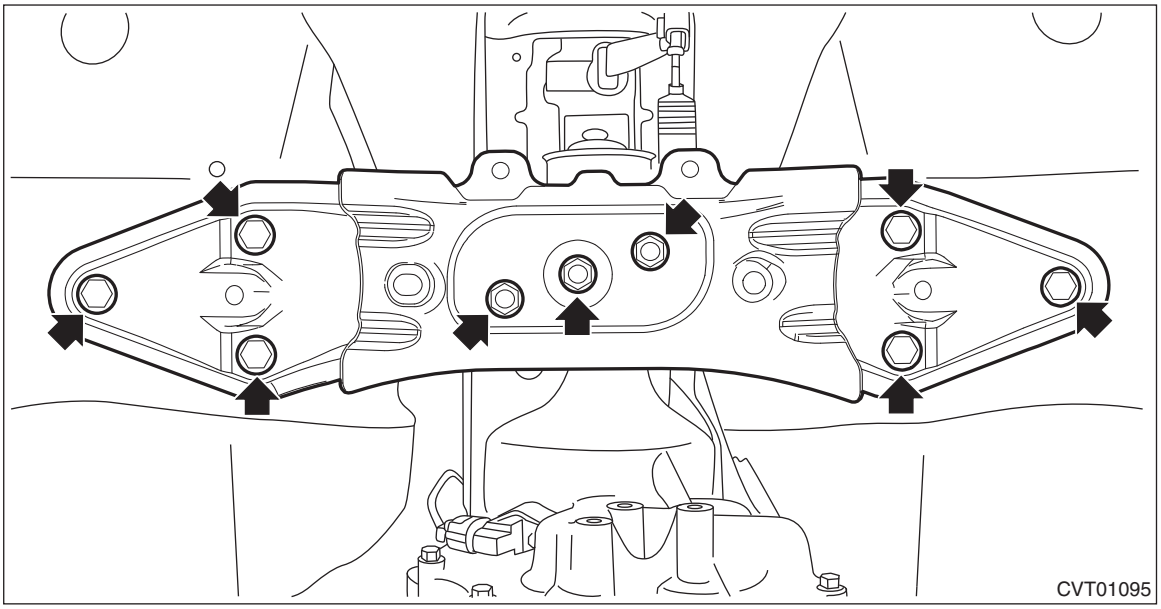


46) Tighten the mounting bolts on the engine side.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

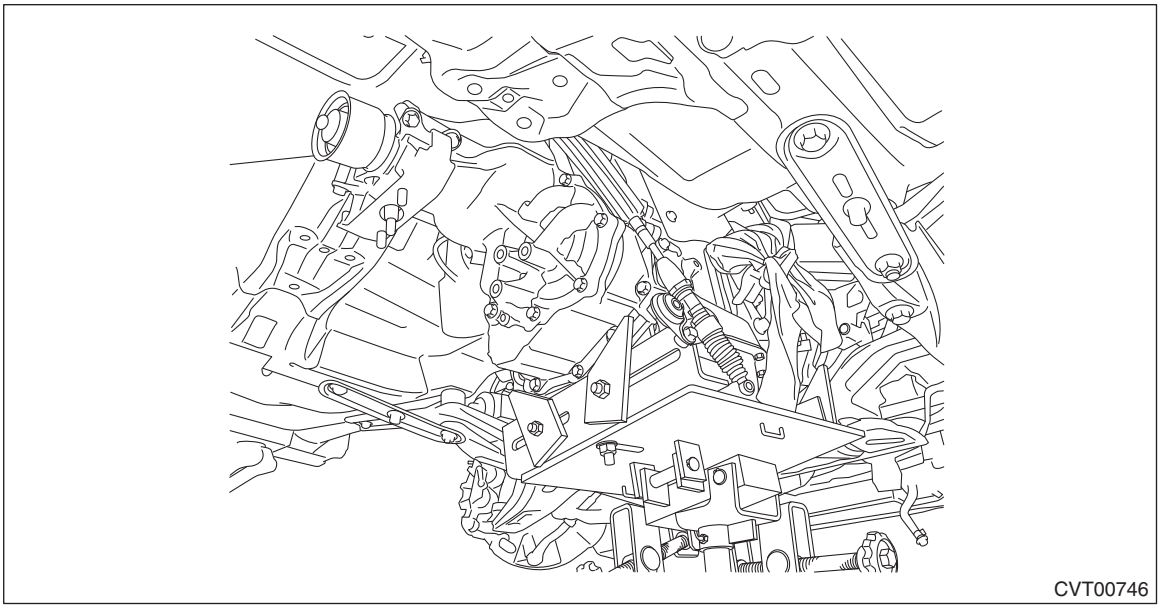


47) Remove the ST (ENGINE HANGER).
48) Remove the left and right transmission mounting brackets.

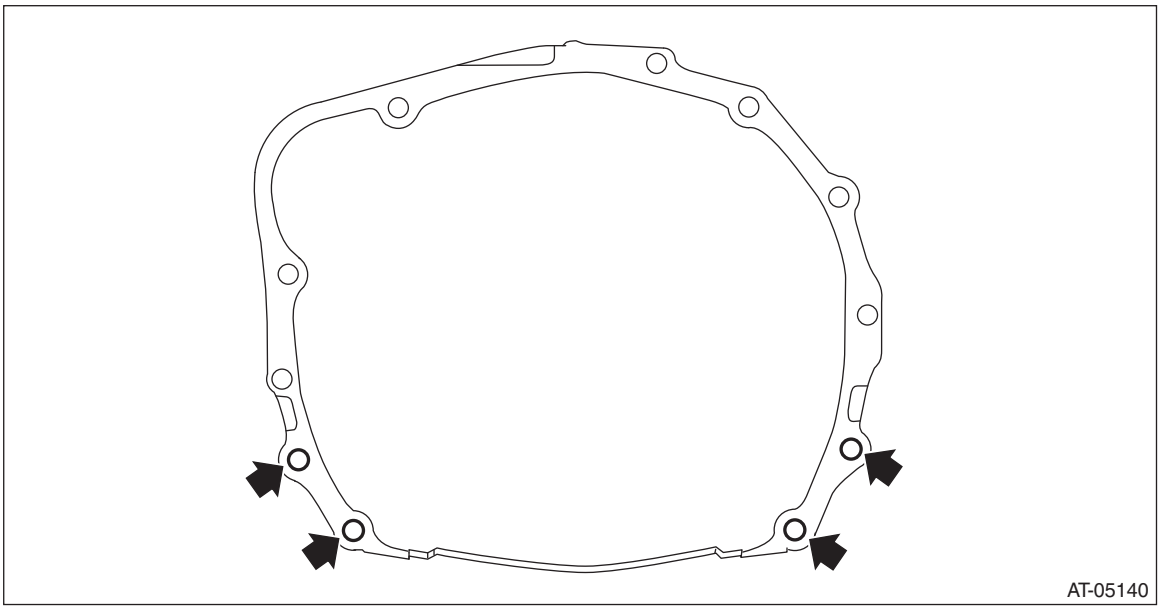


NOTE:
First, remove the transmission mounting bracket on the right side of vehicle, and then tilt the engine unit to remove the left transmission mounting bracket.

49) Remove the three transmission connecting bolts.



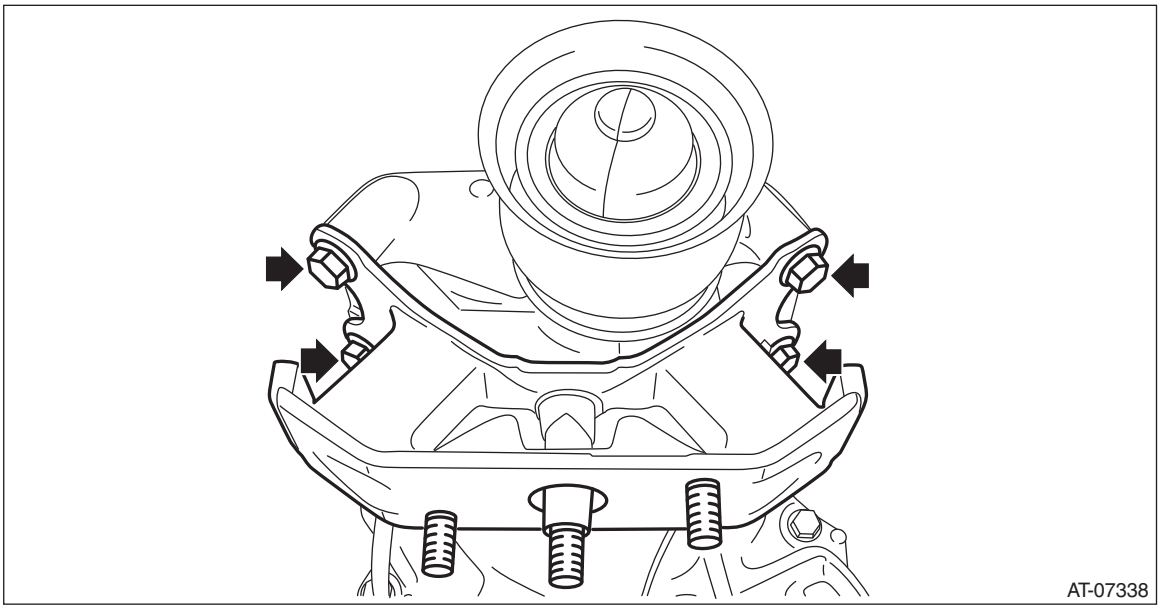
50) Set the ST (ENGINE HANGER) again to loosen the chain sling.
51) Lift up the vehicle.
52) Set the transmission jack under the transmission.
53) Remove the transmission rear crossmember.



54) Lower the transmission rear end (dust cover rear end).

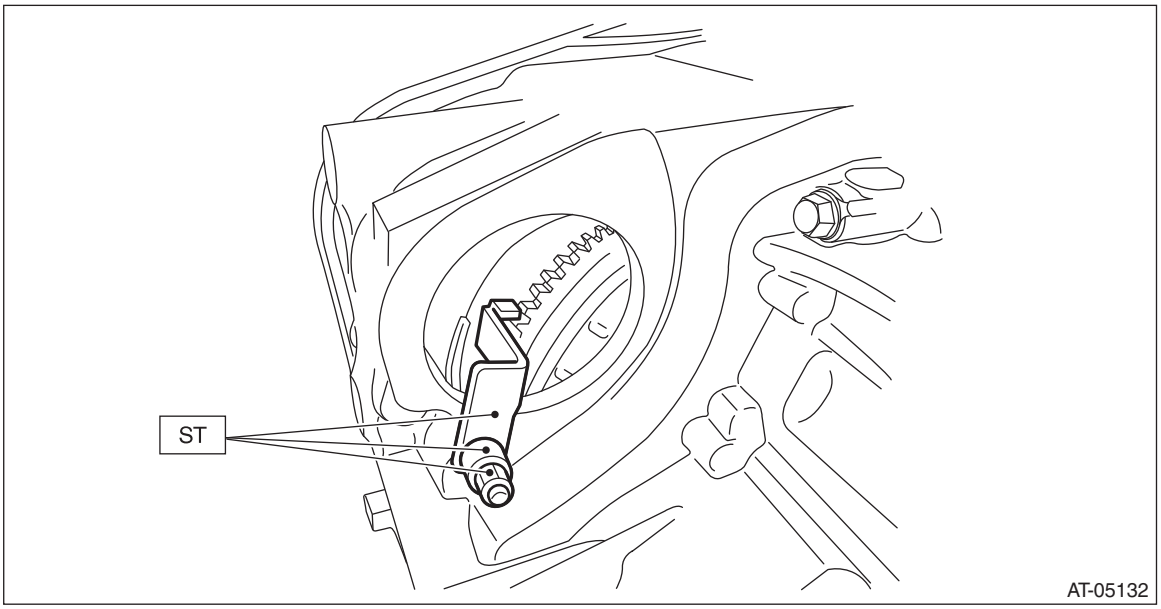
CAUTION:
When lowering the transmission rear end, be careful not to let the converter case and steering mechanical parts contact each other.

NOTE:
Lower the transmission rear end by approx. 80 mm (3.1 in) (reference).



55) Rotate the handle of ST (ENGINE HANGER) to apply tension to the chain sling.
56) Remove the two transmission connecting bolts and two nuts (lower side).

57) Remove the transmission assembly.

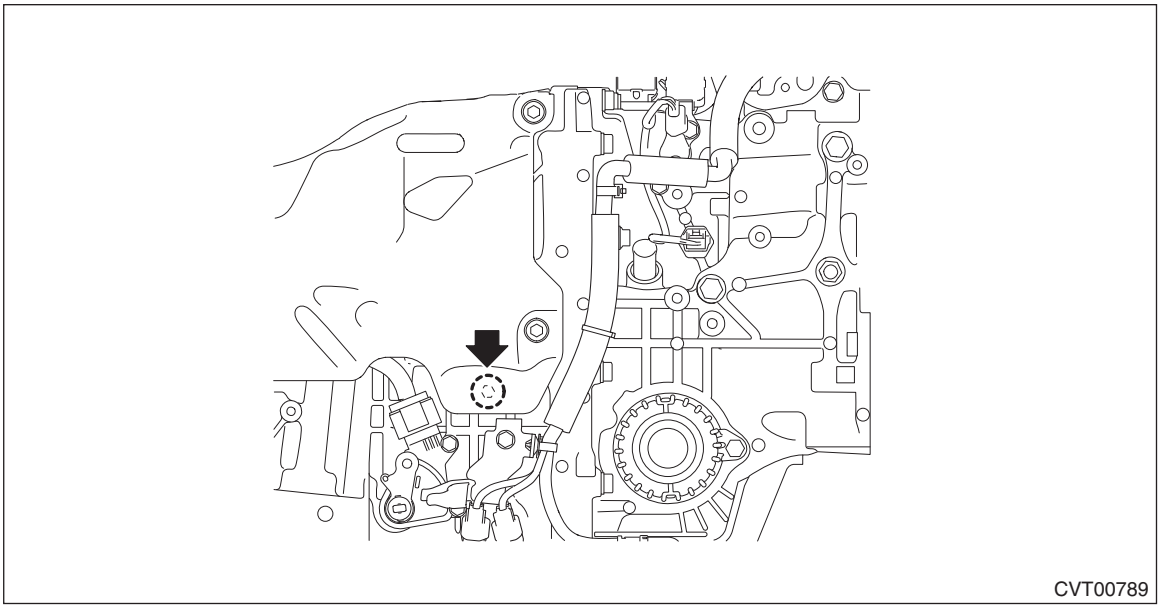


NOTE:
Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

58) Remove the rear cushion rubber.

B: INSTALLATION

1) Attach the ST to converter case.
ST 498277200 STOPPER SET

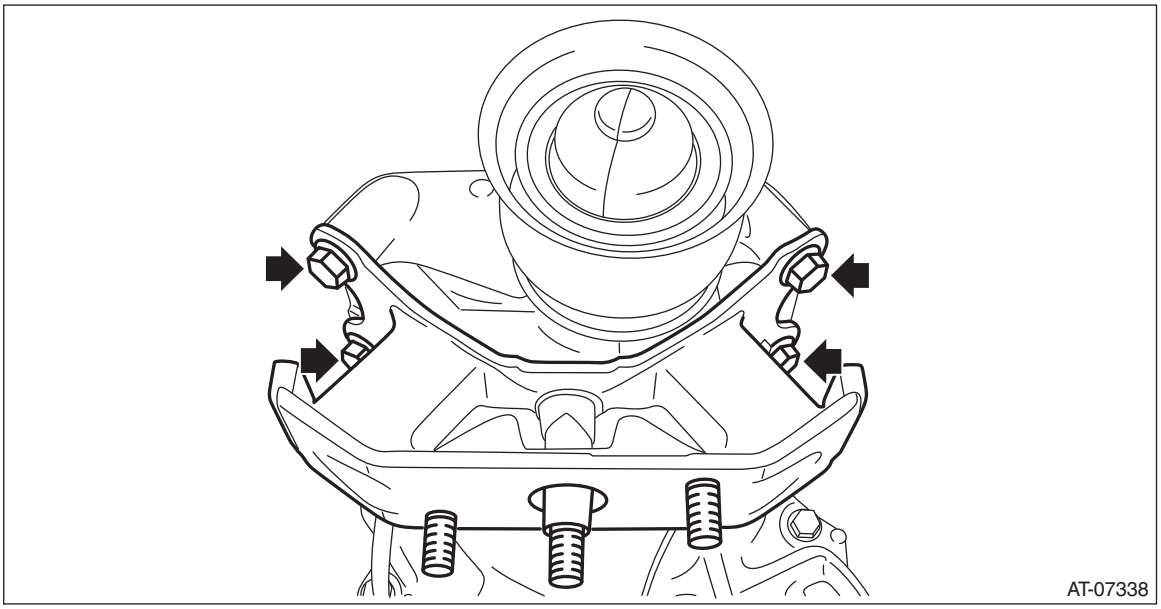


2) When completely overhauling the transmission, refill approx. 10 L (2.6 US qt, 8.8 Imp qt) of CVTF through the transmission right side plug, and install the plug.

CAUTION:
Always use specified CVTF. Using other fluid will cause malfunction. <Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

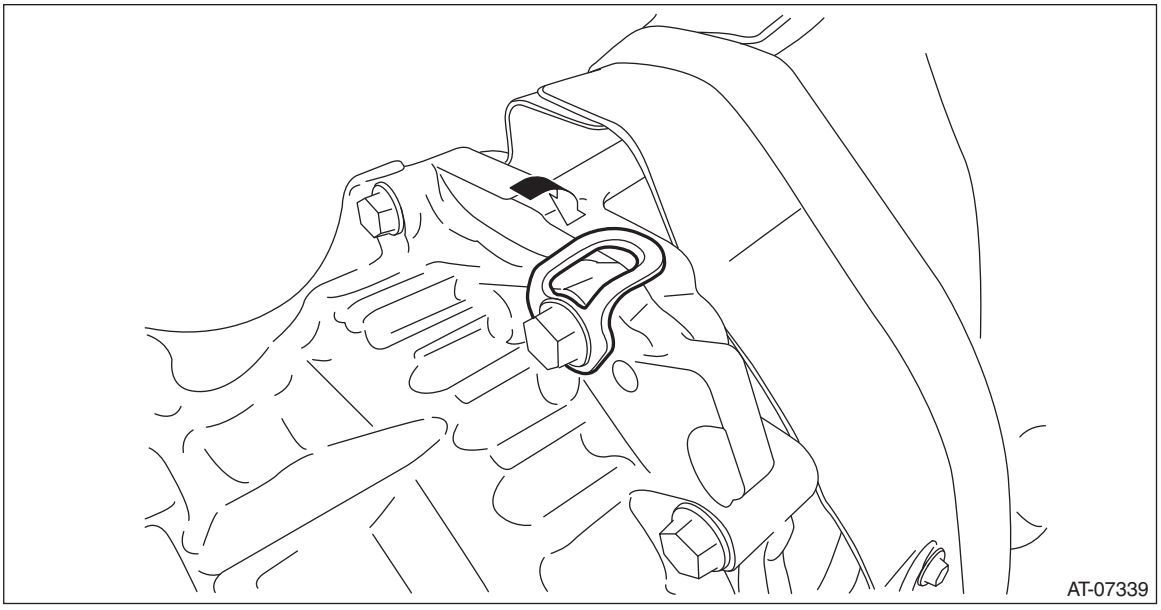
NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)



3) Replace the front differential side retainer oil seal. <Ref. to CVT(TR690)-101, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:
• Be sure to replace the differential side retainer oil seal with a new part whenever the front drive shaft is removed from the transmission.
• When a new differential side retainer oil seal has been installed, replacement is not required.

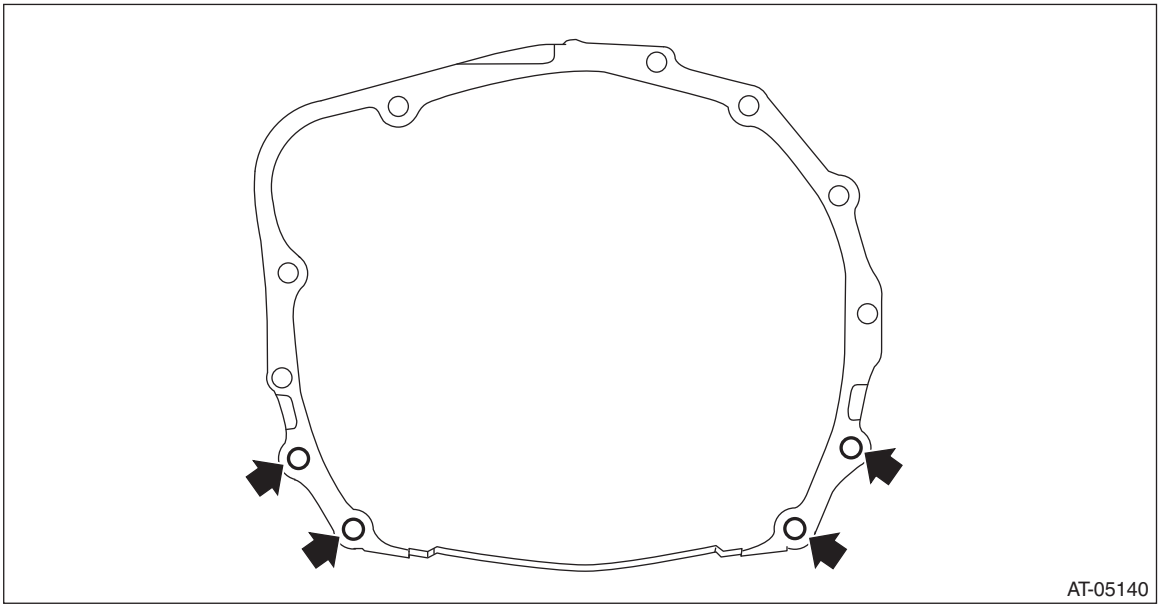


4) Install the rear cushion rubber.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)

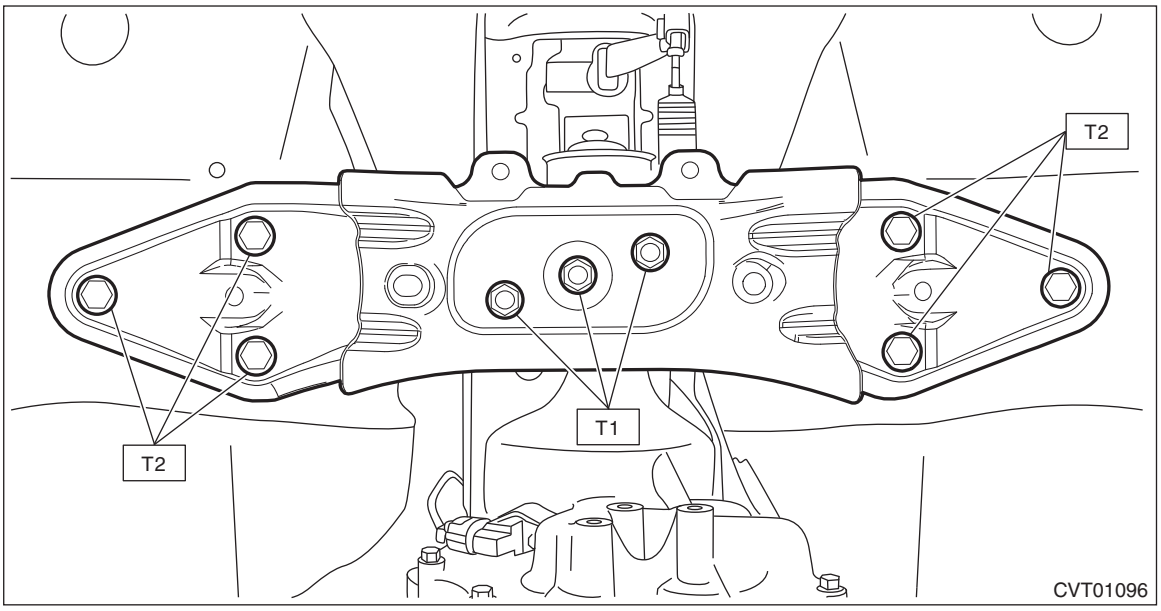
5) Mount the transmission onto the transmission jack.
6) Strike and bend the transmission hanger of transmission rear with a soft rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:
Do not apply excessive load or impact to the transmission case.



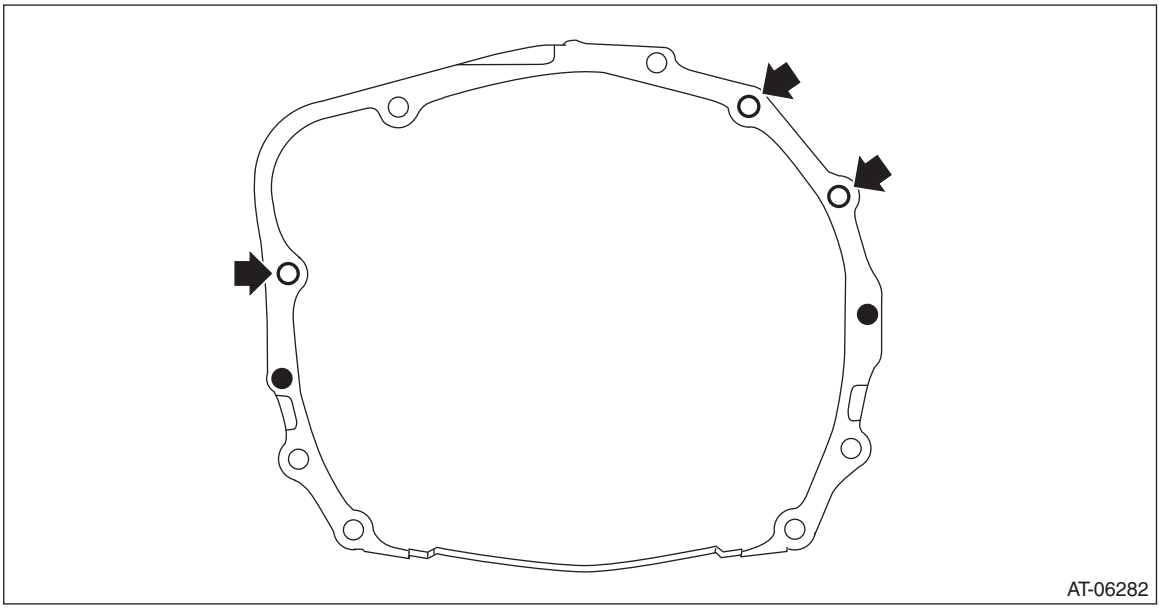
7) While lifting up the transmission gradually, install the transmission to the engine.

CAUTION:
This operation requires at least two persons.



NOTE:
Keep the engine level.
8) Install the two engine connecting bolts and two nuts (lower side).

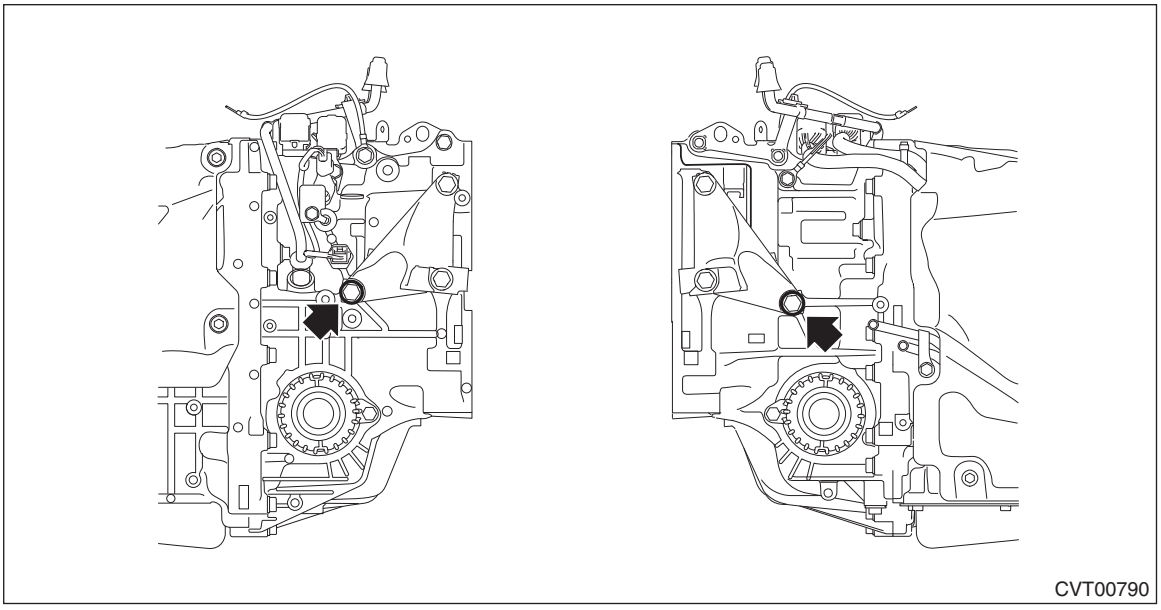
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



9) Secure the transmission rear crossmember to the vehicle body.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 75 N·m (7.6 kgf-m, 55.3 ft-lb)

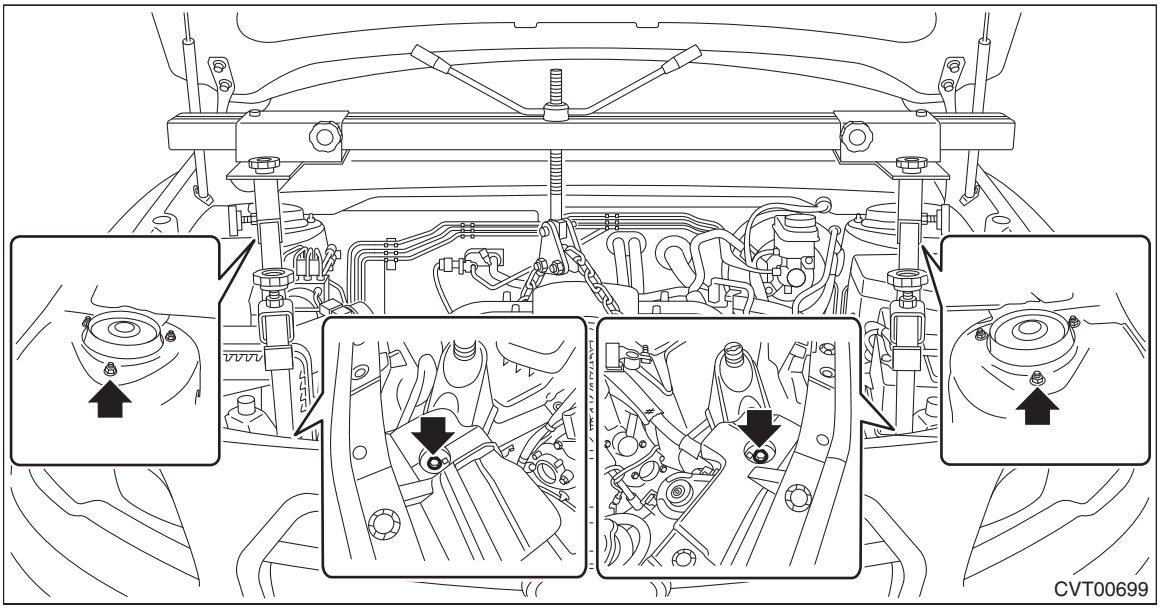
10) Remove the transmission jack.
11) Lower the vehicle.
12) Remove the ST (ENGINE HANGER).
13) Install the three engine mounting bolts (upper side).



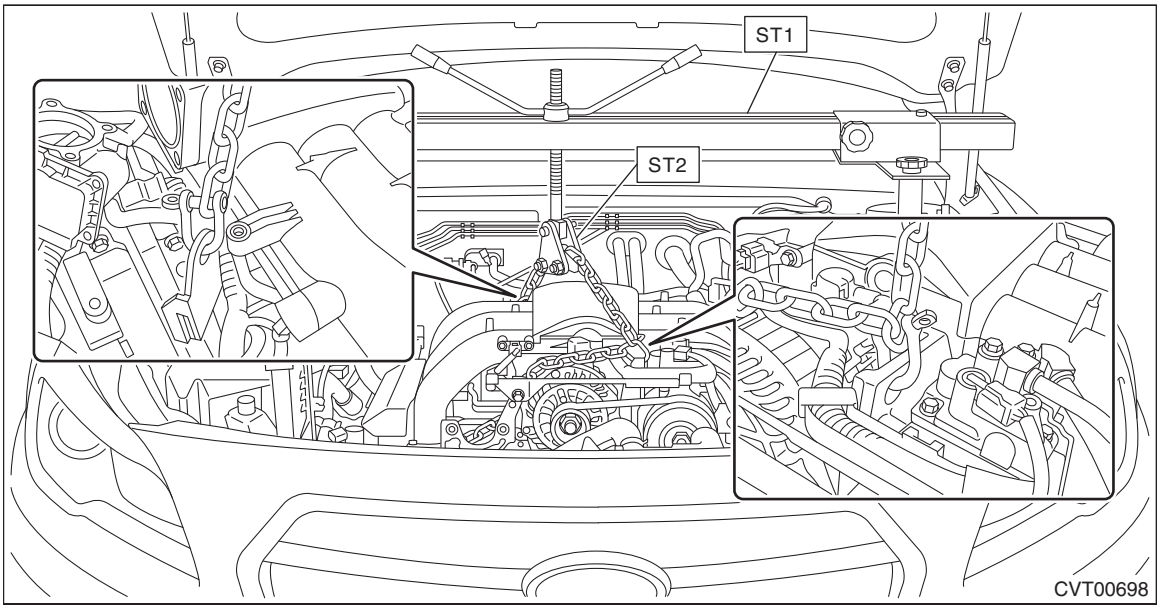
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

14) Install the left and right transmission mounting brackets.

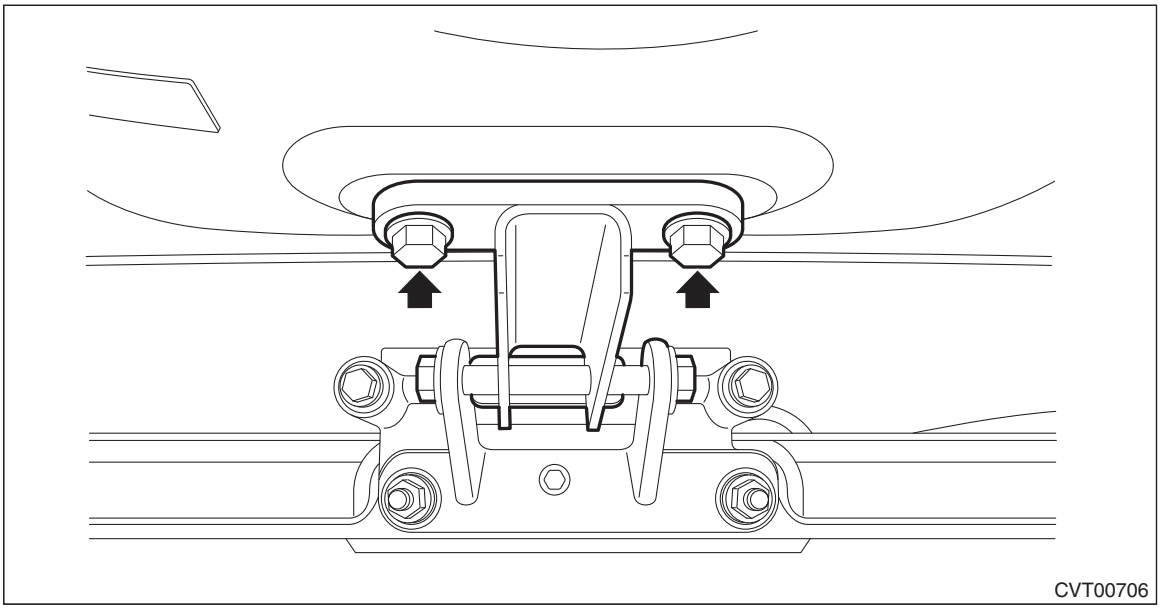
NOTE:
- Install to the left side of vehicle first because the engine inclines to the left.
- Temporarily tighten the bolt arrowed in the figure.



Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)

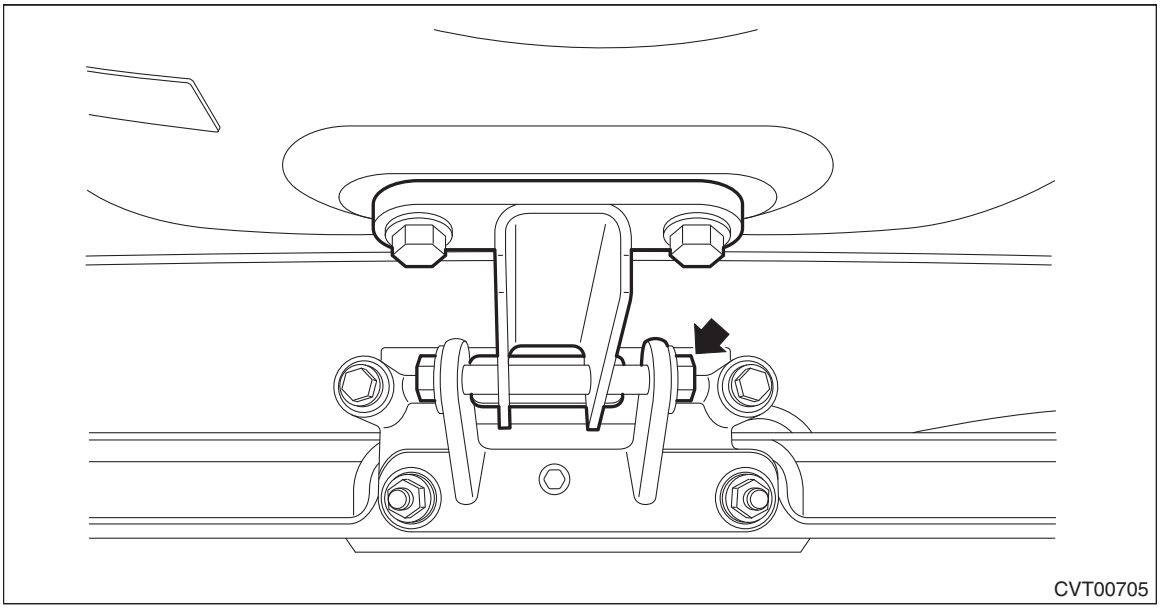


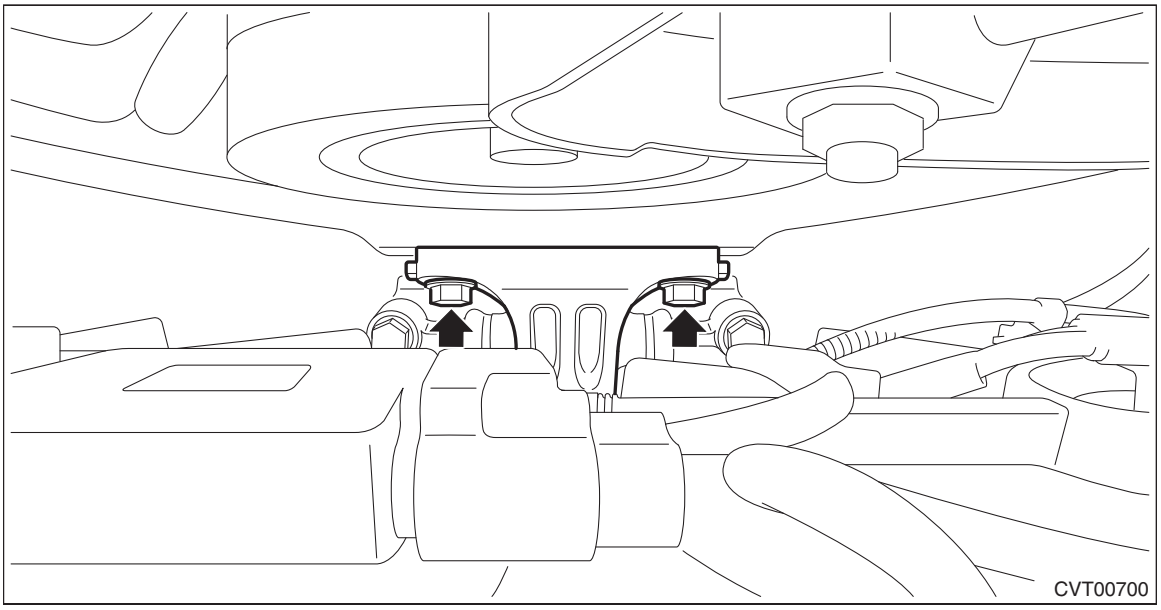
15) Set the ST1 and ST2 to the vehicle body and lift up the engine unit slightly.
ST1 99099AJ000 ENGINE HANGER
ST2 99099AJ010 CHAIN BALANCER



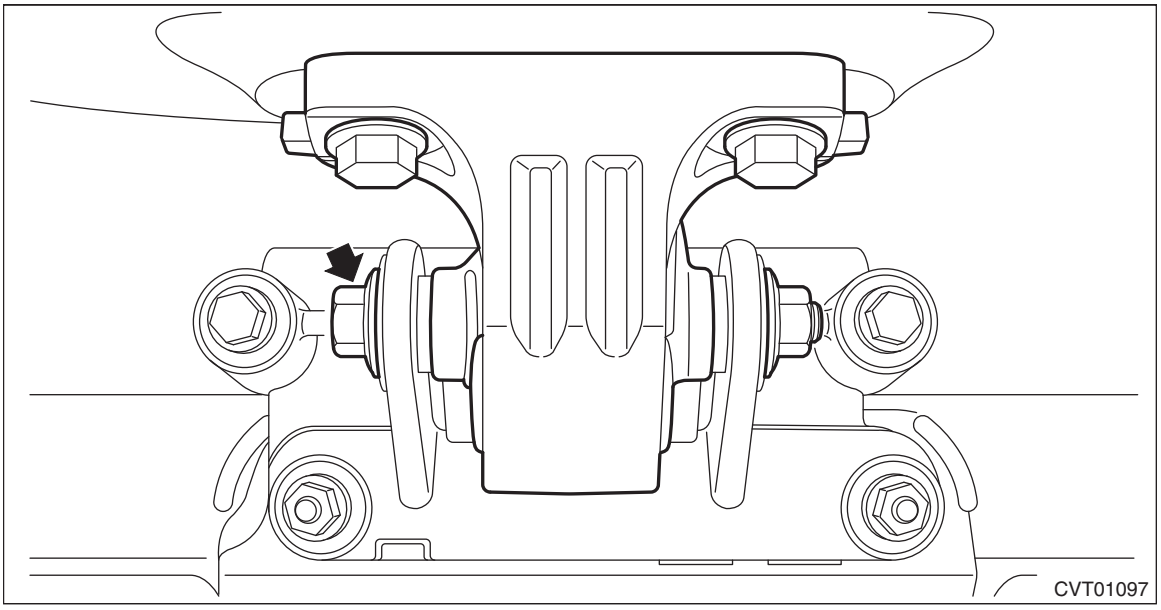
CAUTION:
- **Set so that the chain sling does not contact the engine parts.**
- **Install a bolt of ϕ8 mm (0.3 in) at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).**

- **Set the rear arms of ST (ENGINE HANGER) at the locations shown in the figure.**



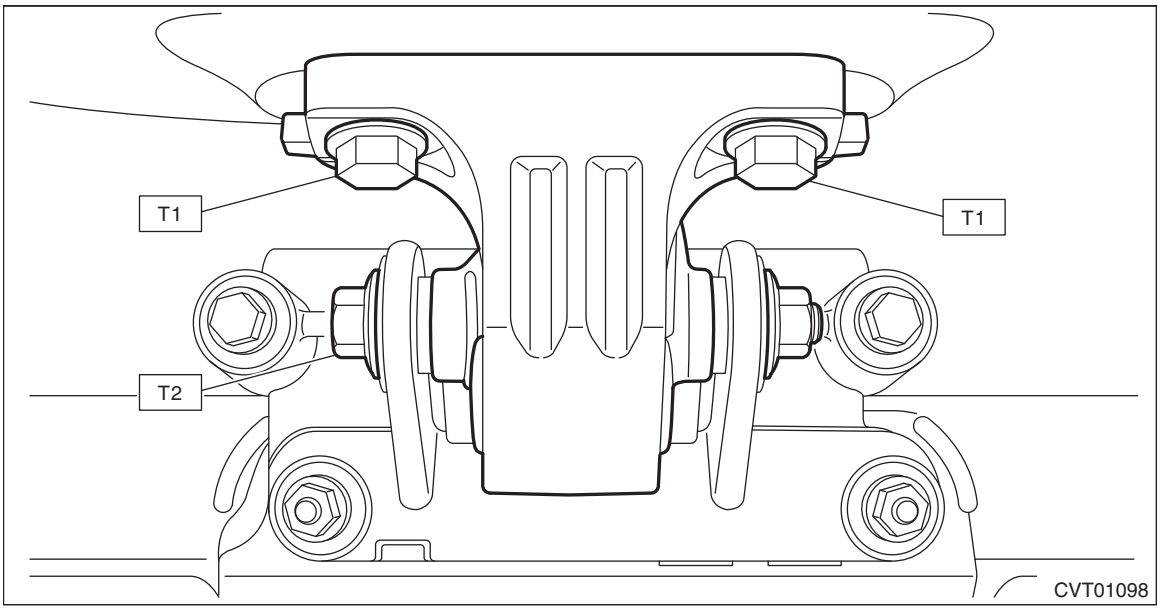


16) Remove the bolts from ST (SPECIAL TOOL H6).



17) Remove the bolt and nut to remove ST (SPECIAL TOOL H6).

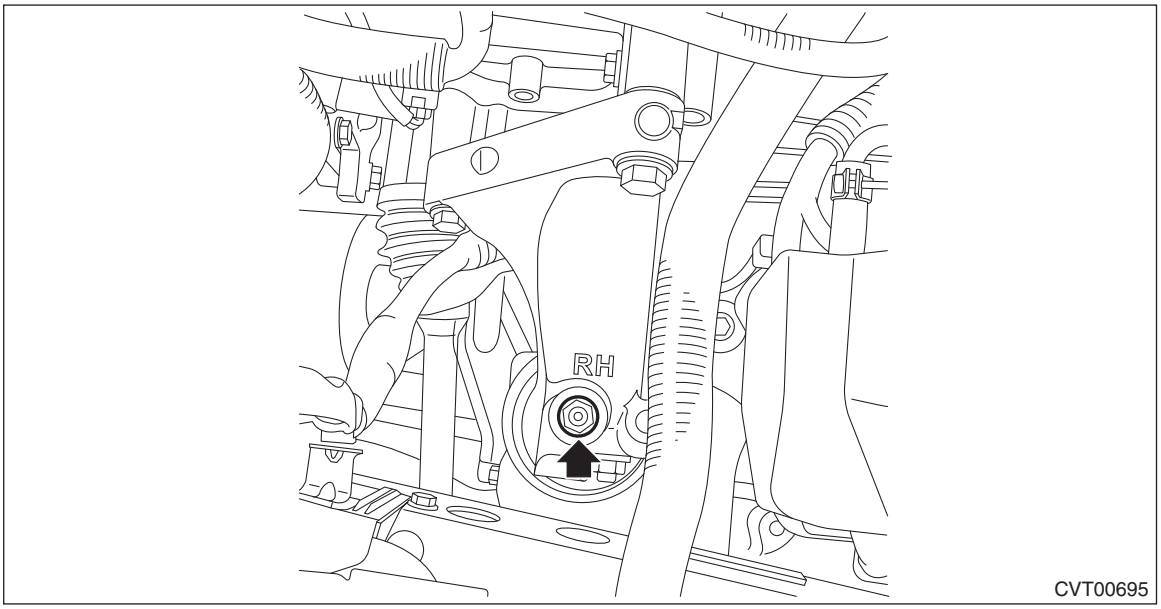
18) Temporarily attach the front cushion rubber with bolts.



19) Lift down the engine slightly and install the bolt and nut to the front cushion rubber.

20) Tighten the bolts and nuts of front cushion rubber.

NOTE:
Always start tightening from the bolts on the engine side.



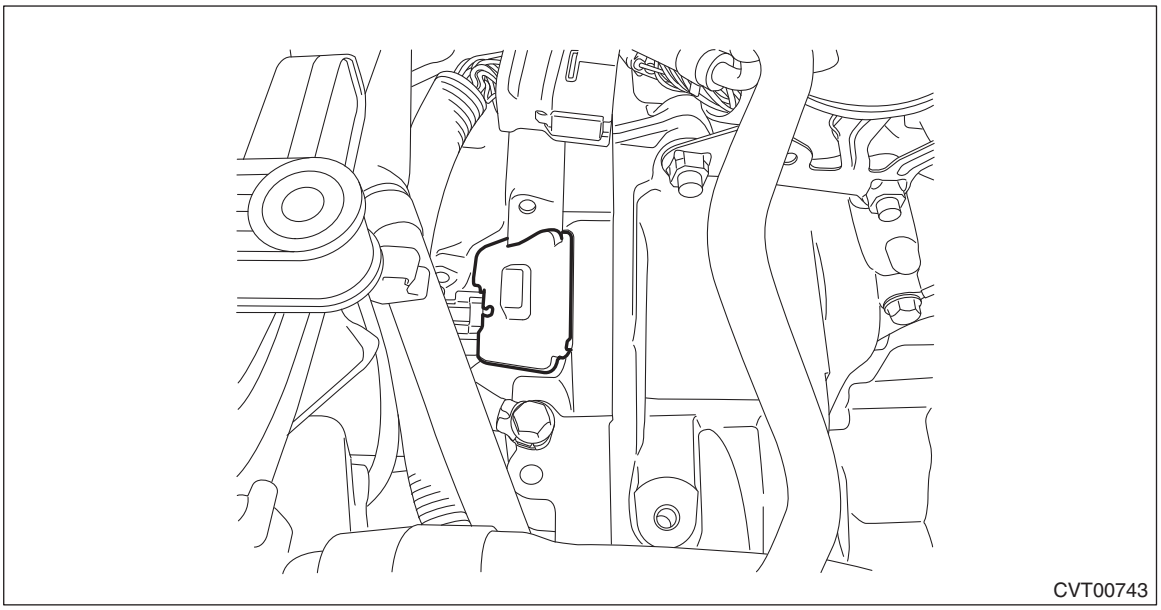
Tightening torque:
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T2: 45 N·m (4.6 kgf-m, 33.2 ft-lb)

21) Remove the ST (ENGINE HANGER and CHAIN SLING).

CAUTION:
Be sure to remove the ϕ8 mm (0.3 in) bolt.
22) Install the nut to the transmission mounting bracket.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

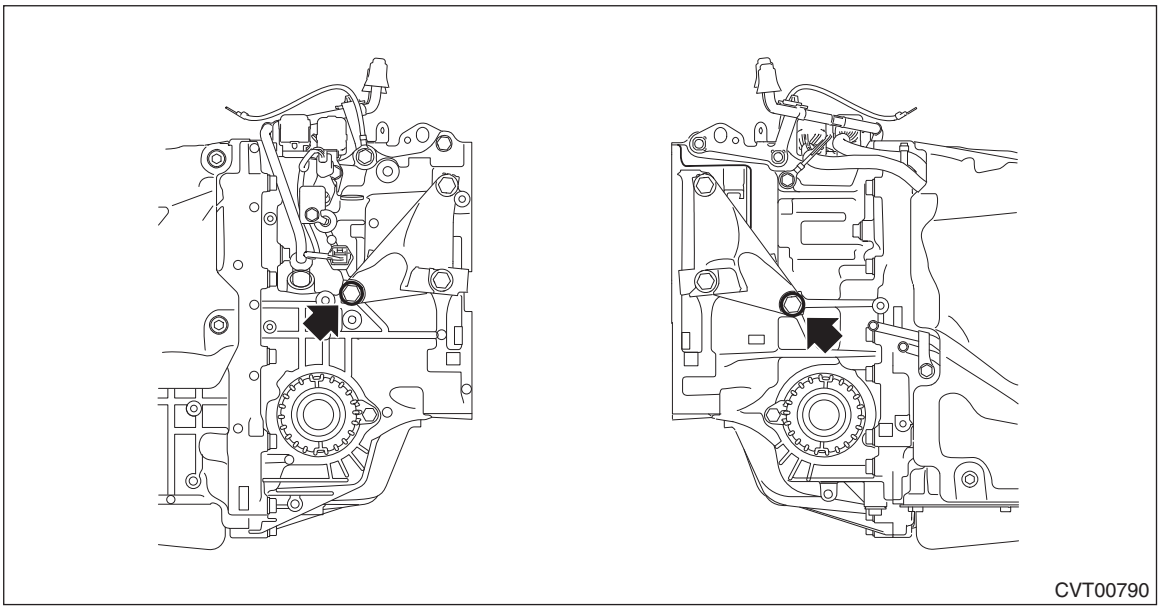
23) Remove the ST (STOPPER SET) from converter case.
24) Match the torque converter screw hole with drive plate hole to install the bolt.



CAUTION:
- **Do not drop the mounting bolt in the converter housing.**
- **Do not damage the mounting bolt.**

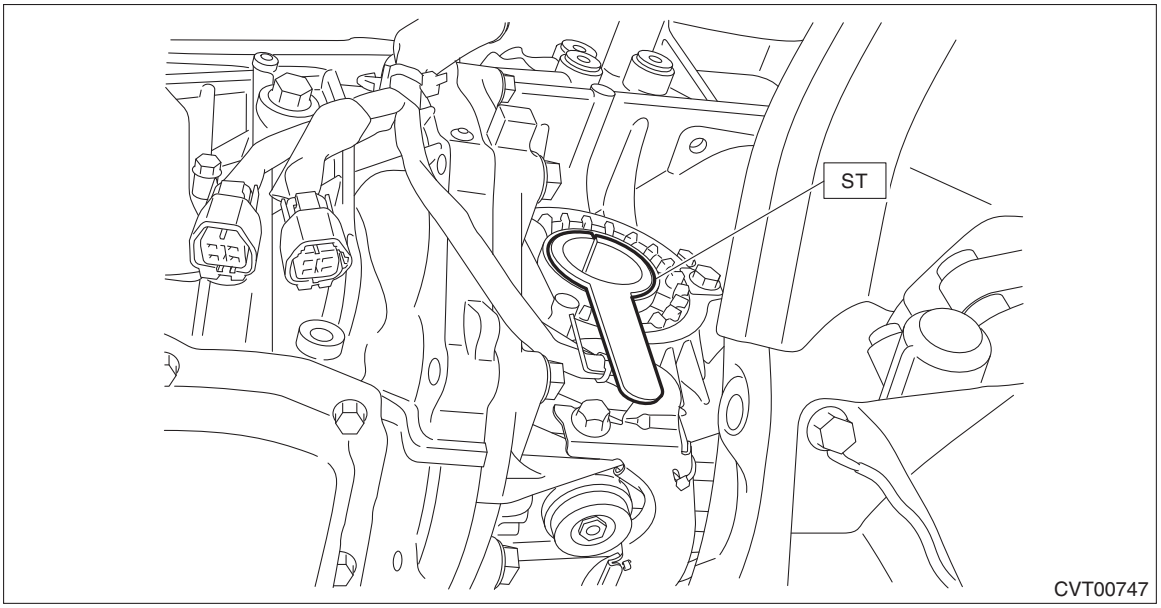
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

25) Install the remaining three bolts by rotating the crank pulley a little at a time in the same direction as engine revolution.



Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

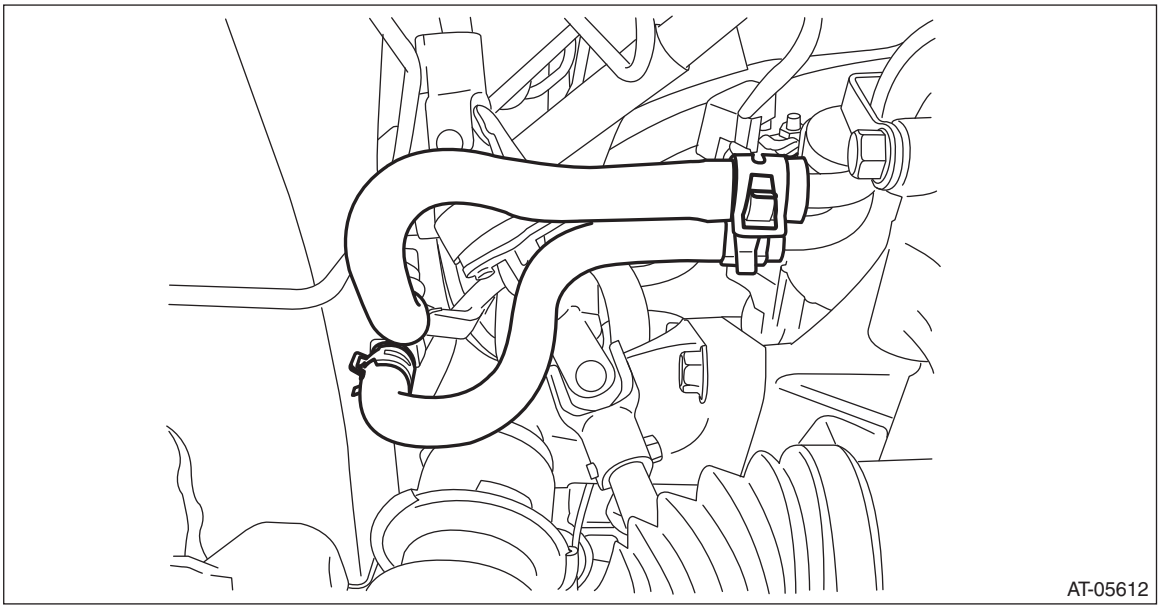
26) Install the service hole plug.



CVT00743

27) Install the starter. <Ref. to SC(H6DO)-9, INSTALLATION, Starter.>
28) Lift up the vehicle.
29) Tighten the single mounting bolt of transmission mounting bracket.

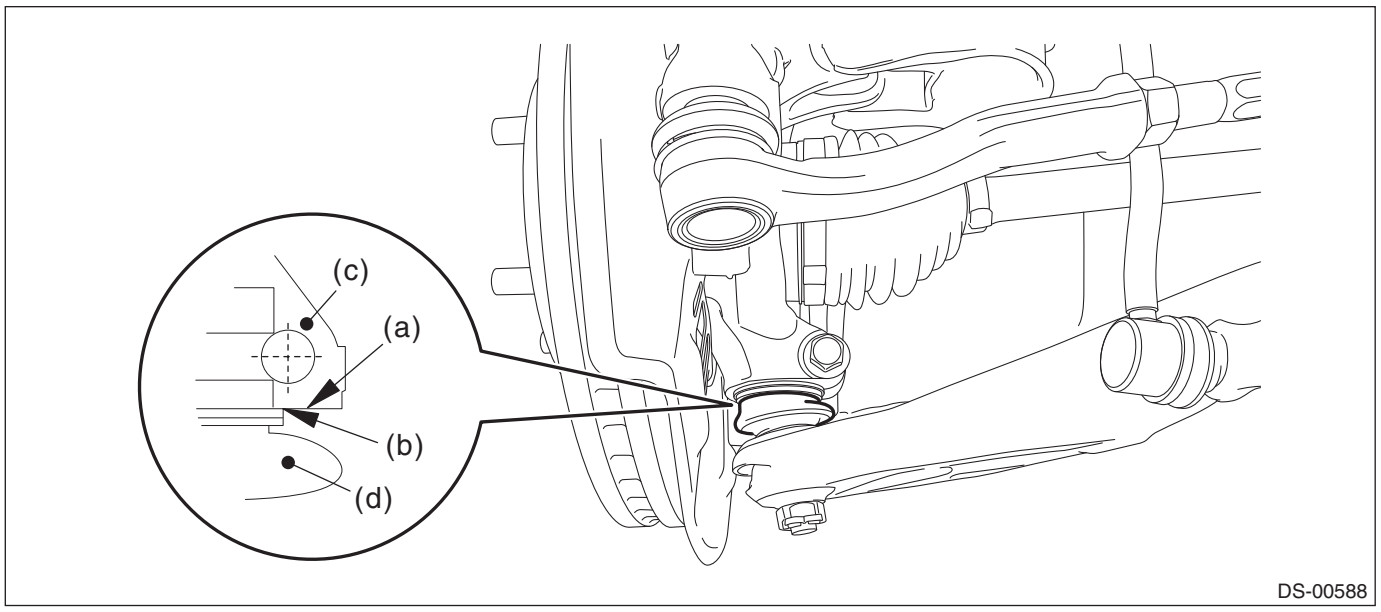
Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)



CVT00790

30) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR

31) Replace the circlip of the drive shaft with a new part.
32) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).
33) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
34) Install the CVTF CVT inlet hose and CVTF CVT outlet hose.



NOTE:
Use new CVTF CVT inlet hose and CVTF CVT outlet hose.

35) Insert the ball joint into housing and secure with bolt.

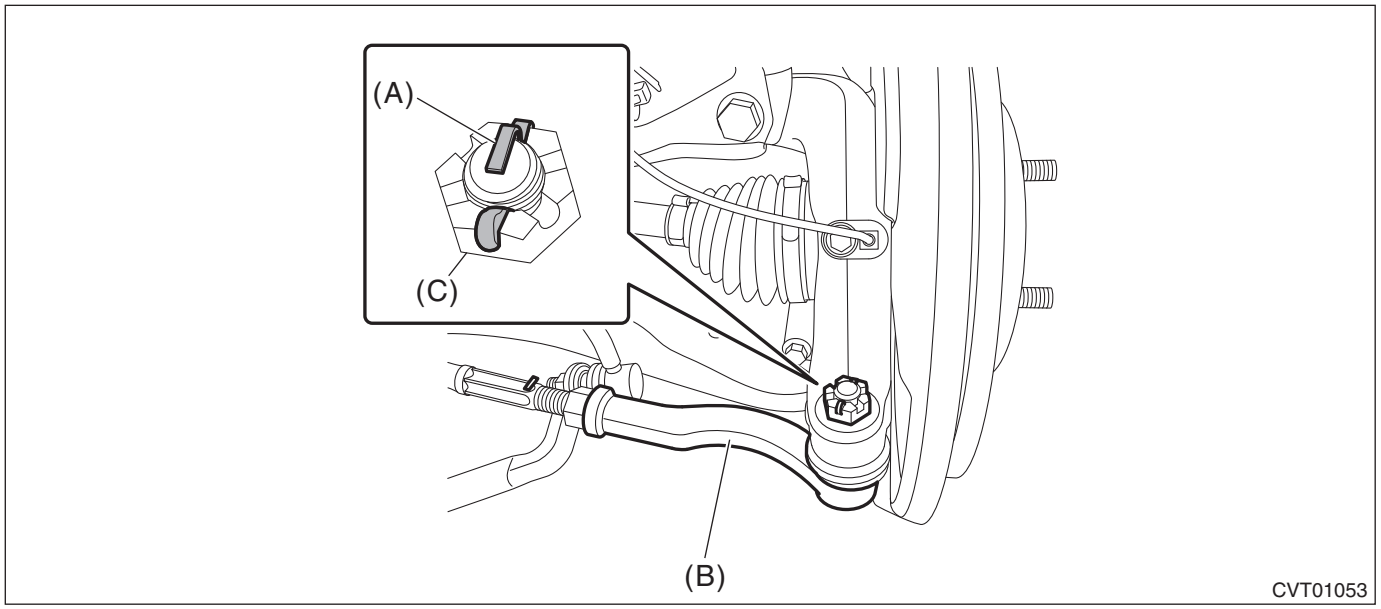
CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.**
- **Be careful not to damage the boot of the joint.**

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint ASSY

36) Install the stabilizer link.

NOTE:
Use a new flange nut.

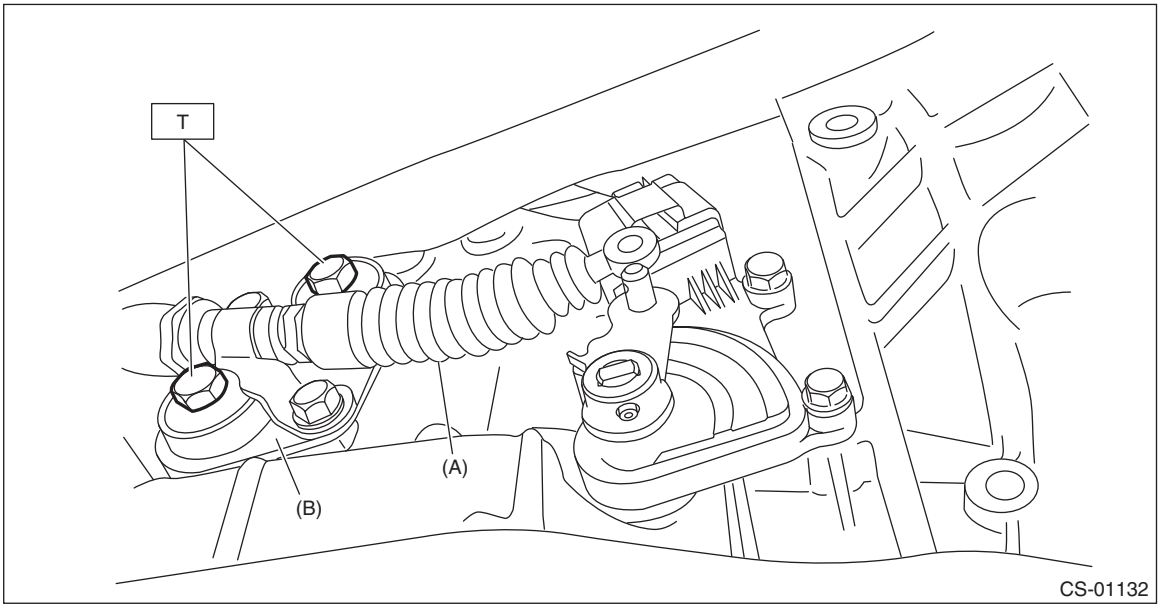


Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

37) Connect the tie-rod end and knuckle arm, and attach the castle nut.

Tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

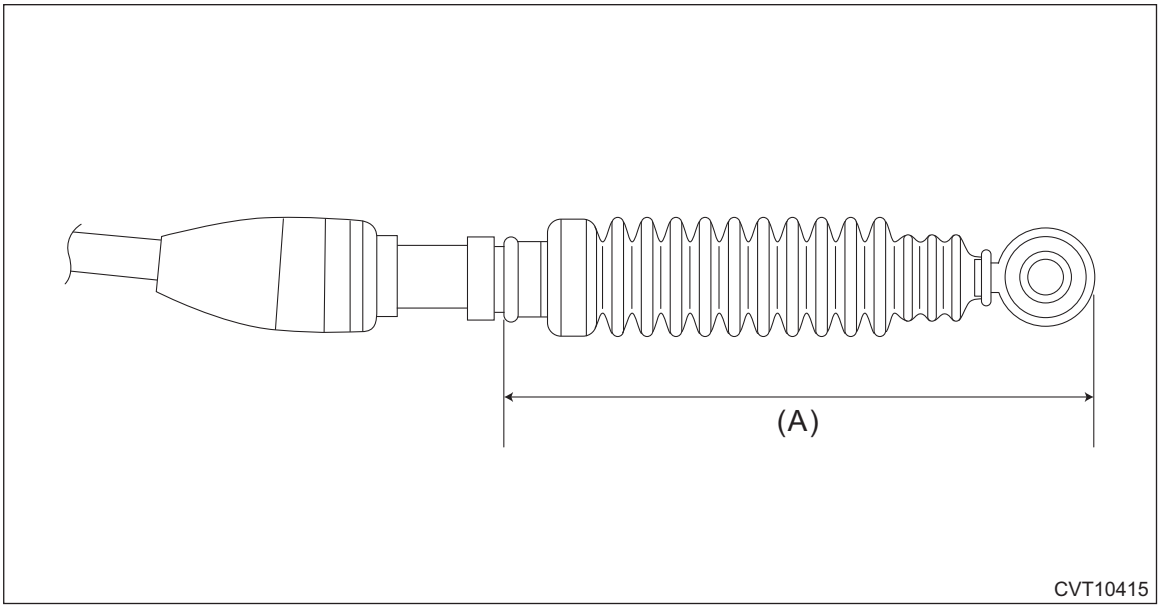
CAUTION:
When connecting, do not hit the cap at the bottom of tie-rod end with hammer.



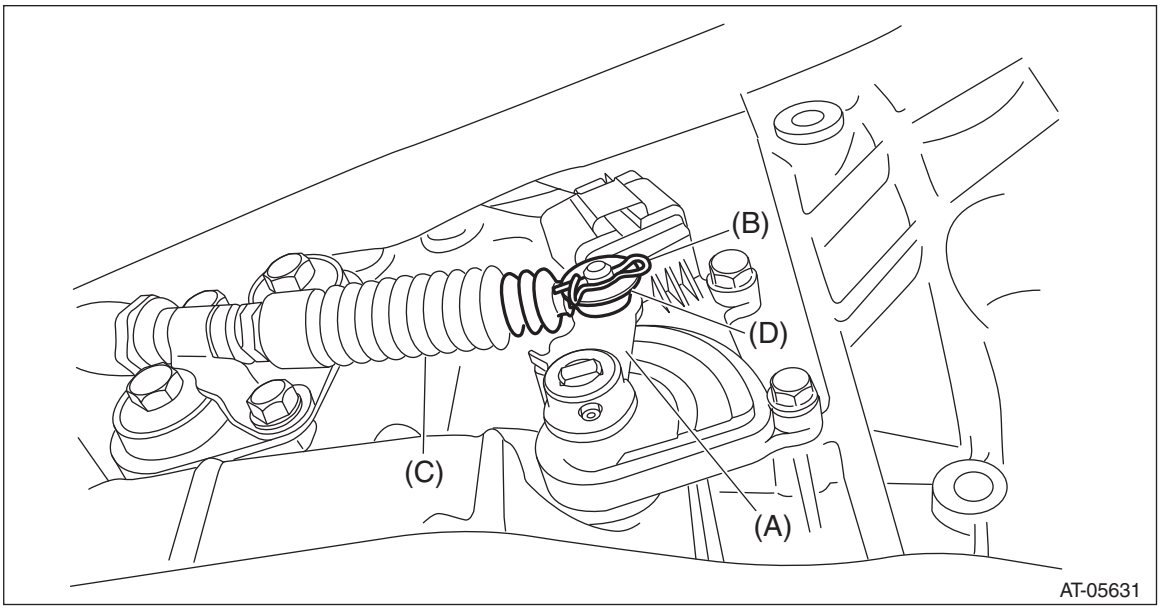
38) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

(A) Cotter pin
(B) Tie-rod end
(C) Castle nut

39) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
40) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
41) Install the cable plate assembly.



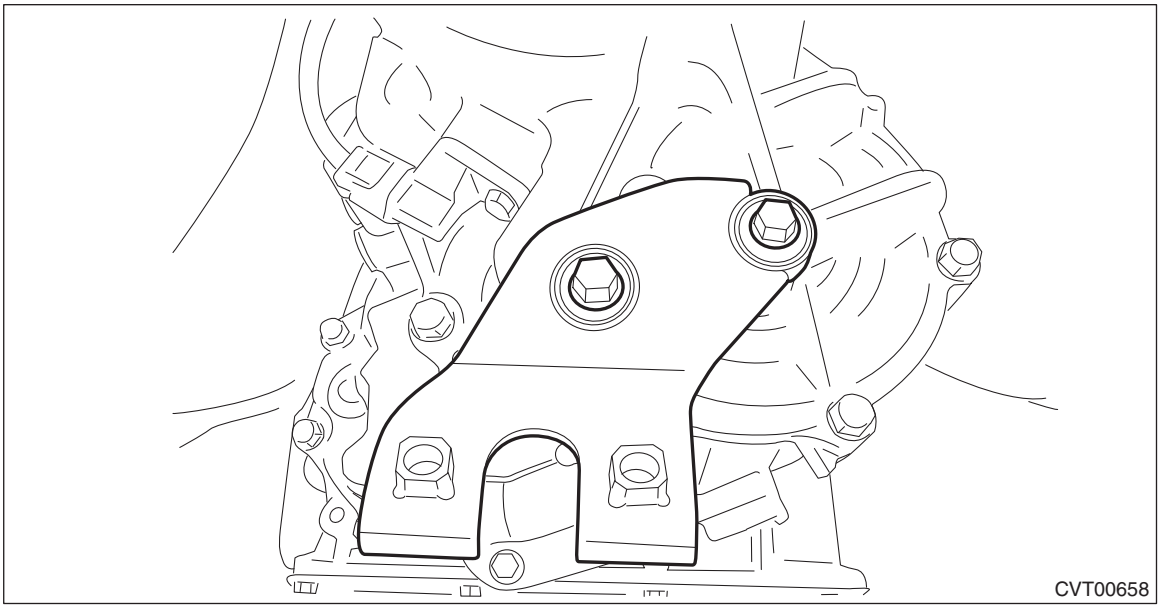
Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



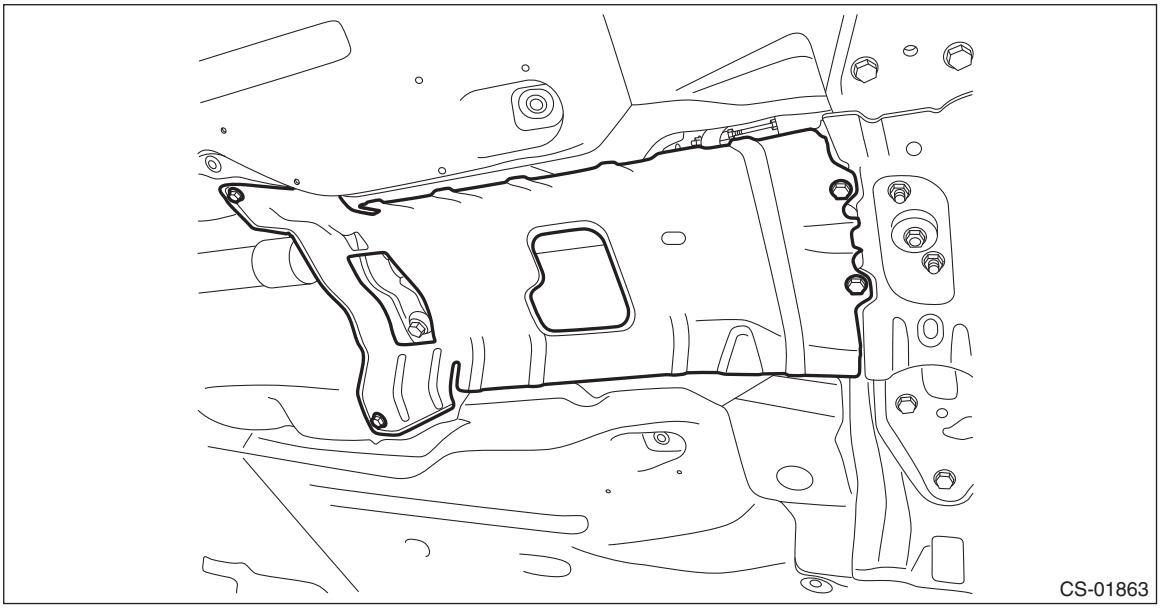
(A) Select cable
(B) Cable plate ASSY

42) Connect the select cable and install the washer and snap pin.

CAUTION:
Do not apply extra overload while holding the part (A).

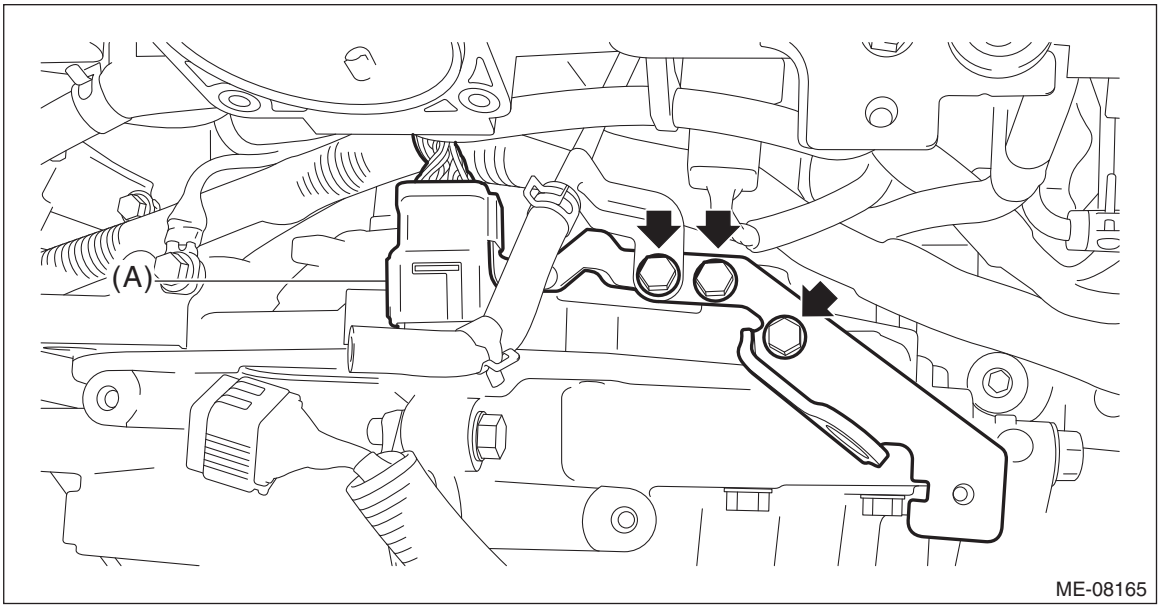


(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer



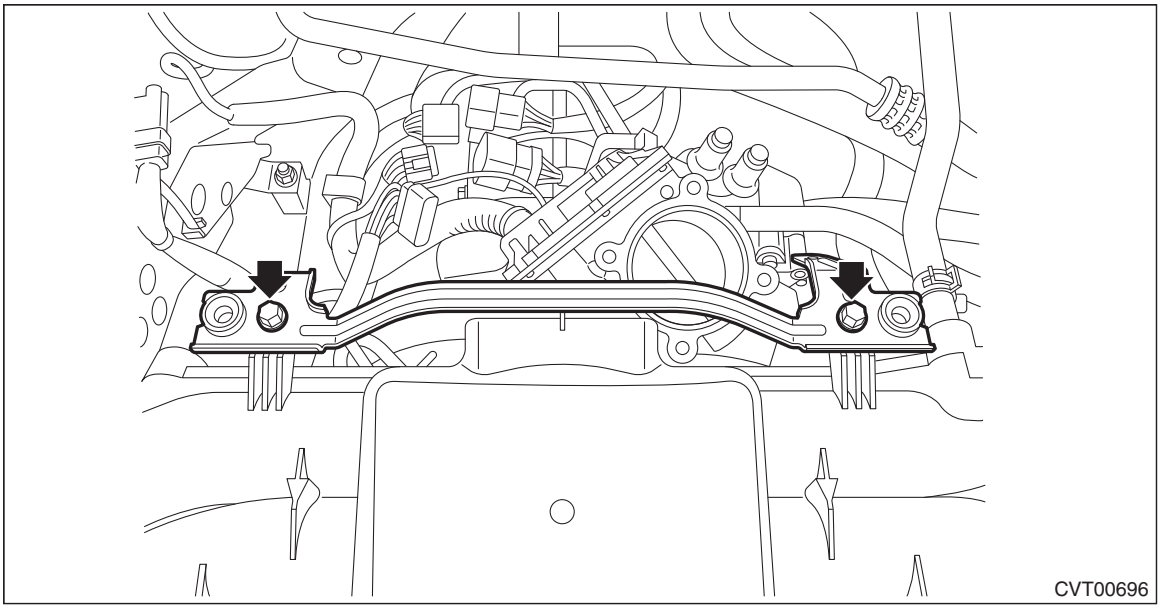
43) Install the exhaust hanger bracket.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



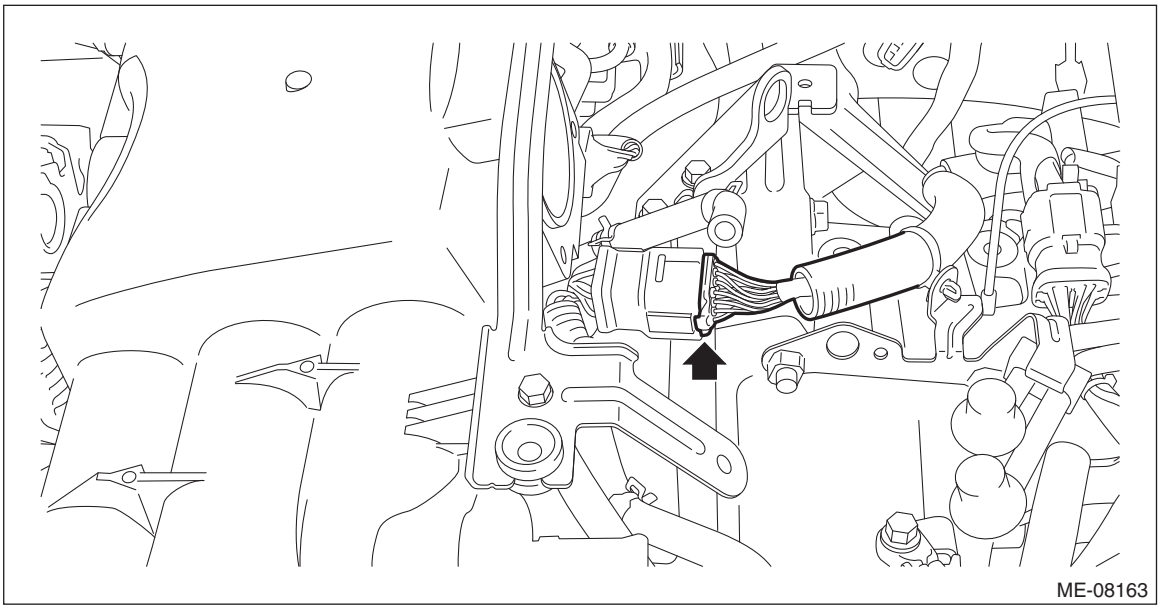
44) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

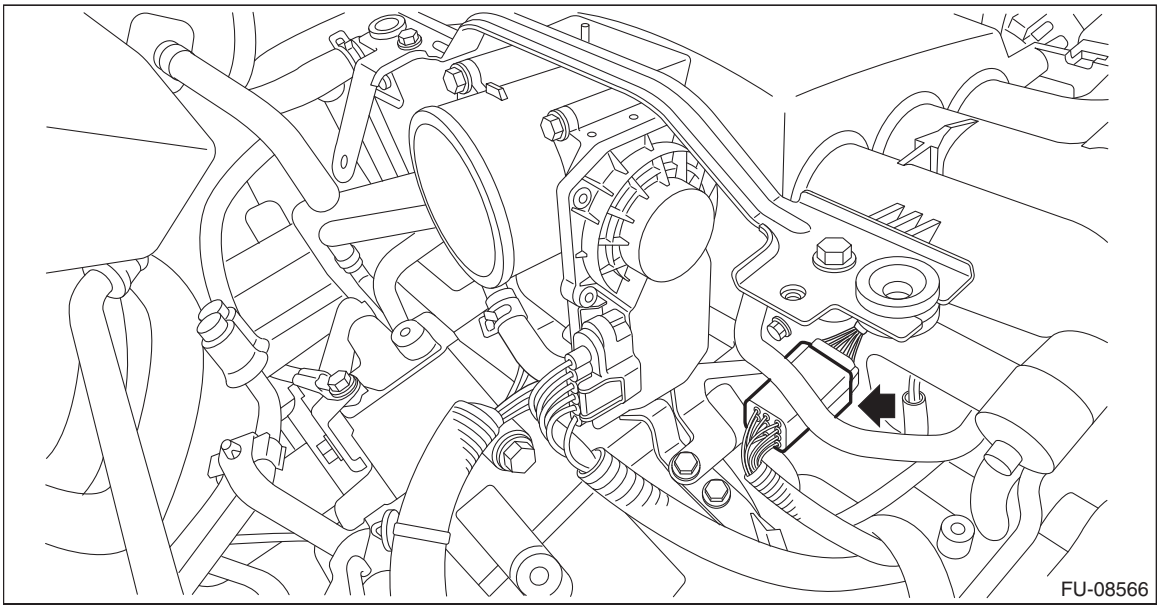


45) Install the front exhaust pipe. <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
46) Install the front under cover. <Ref. to EI-27, INSTALLATION, Front Under Cover.>
47) Lower the vehicle.
48) Remove the ST (HANGER).
49) Install the engine hanger rear and the oxygen sensor harness connector (A).

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

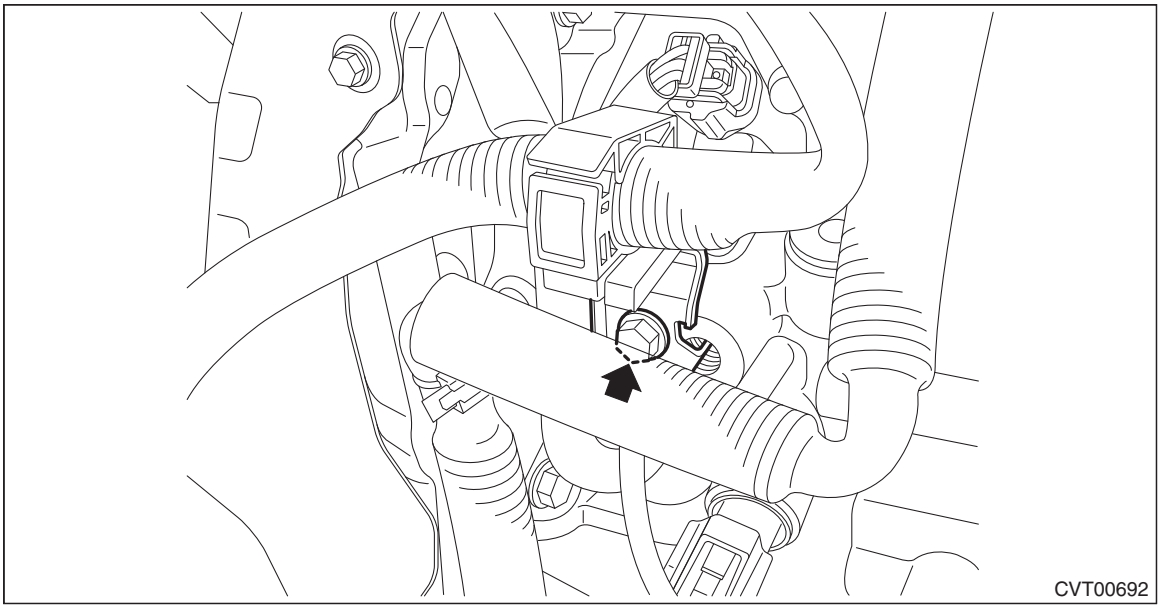


50) Install the collector cover bracket.

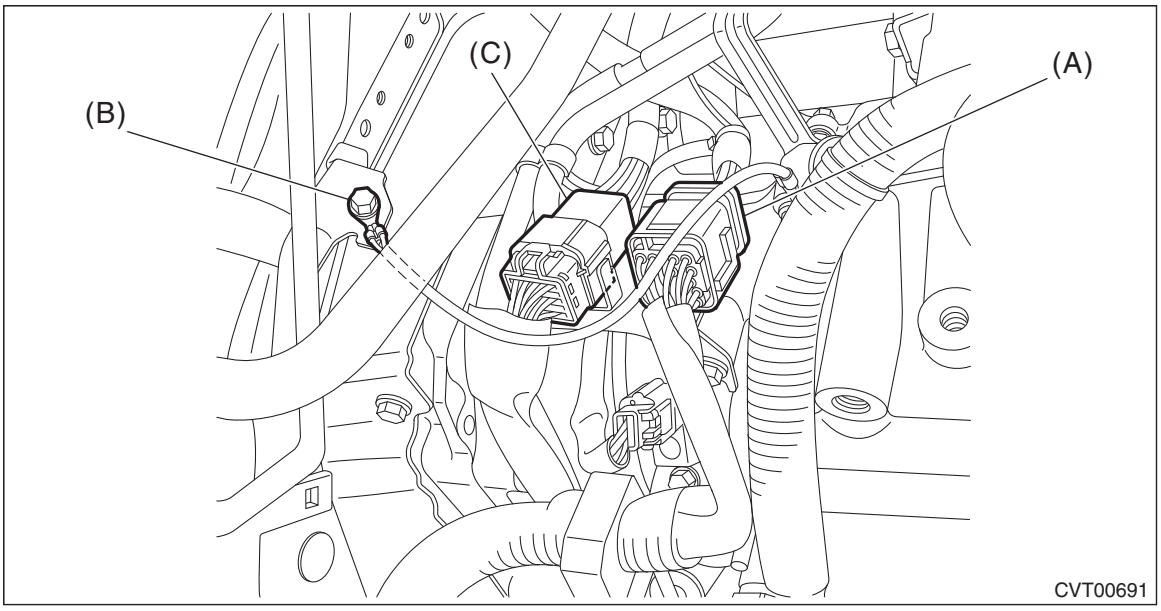


Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

51) Connect the oxygen sensor harness connector.



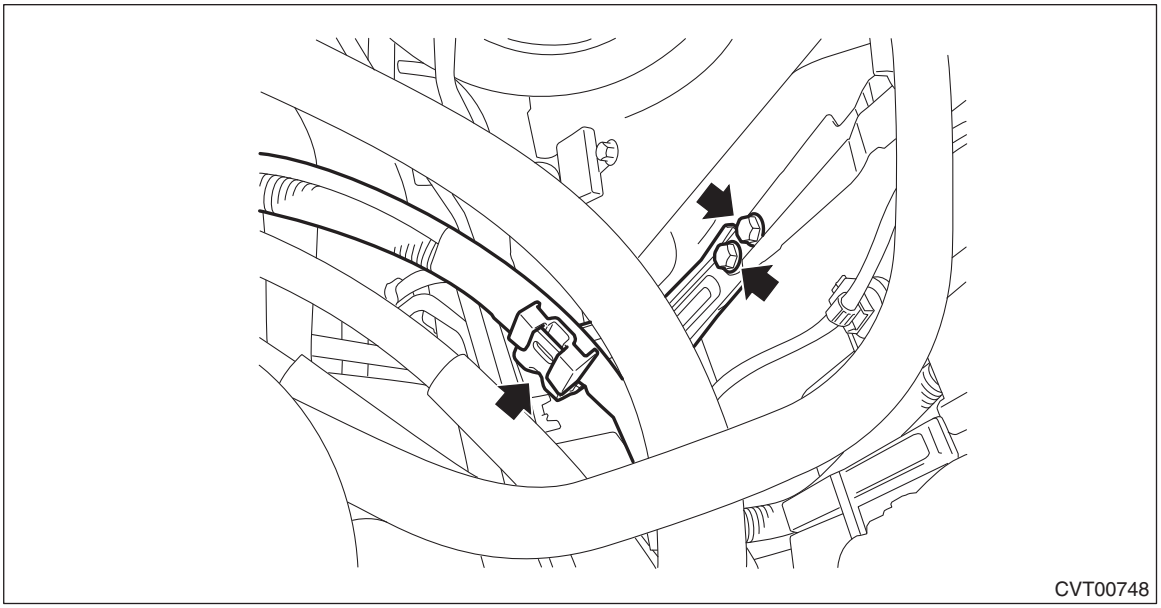
52) Install the throttle body. <Ref. to FU(H6DO)-20, INSTALLATION, Throttle Body.>
53) Connect the engine harness connector.



54) Install the harness stay.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

55) Connect the following harness connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector



Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector

56) Install the battery cable bracket, and install the battery cable clip to the bracket.

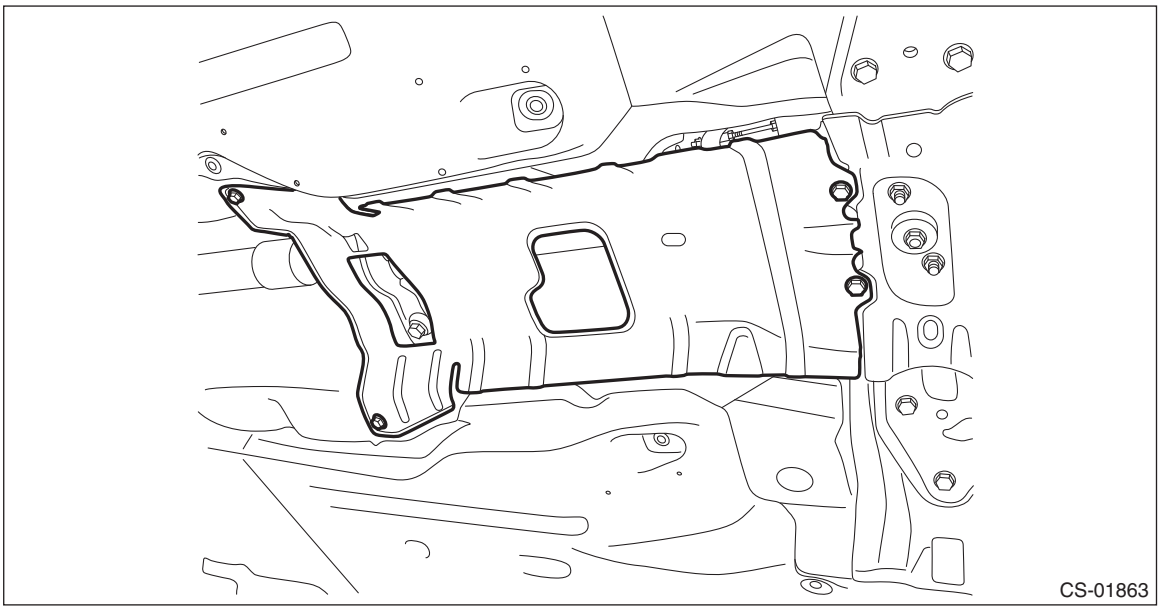
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

57) Install the air intake boot. <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>
58) Install the air intake duct. <Ref. to IN(H6DO)-12, INSTALLATION, Air Intake Duct.>
59) Install the front tires. <Ref. to WT-6, INSTALLATION, Tire and Wheel.>
60) Install the collector cover.
61) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
62) Refill differential gear oil to adjust the differential gear oil amount. <Ref. to CVT(TR690)-43, ADJUSTMENT, Differential Gear Oil.>
63) Refill CVTF to adjust the CVTF amount. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
64) Perform the variator chain break-in. <Ref. to CVT(TR690)-46, Variator Chain Break-in.>

CAUTION:
Always execute the variator chain break-in after the replacement of the following.
- **Variator chain replacement**
- **Primary pulley and secondary pulley replacement**

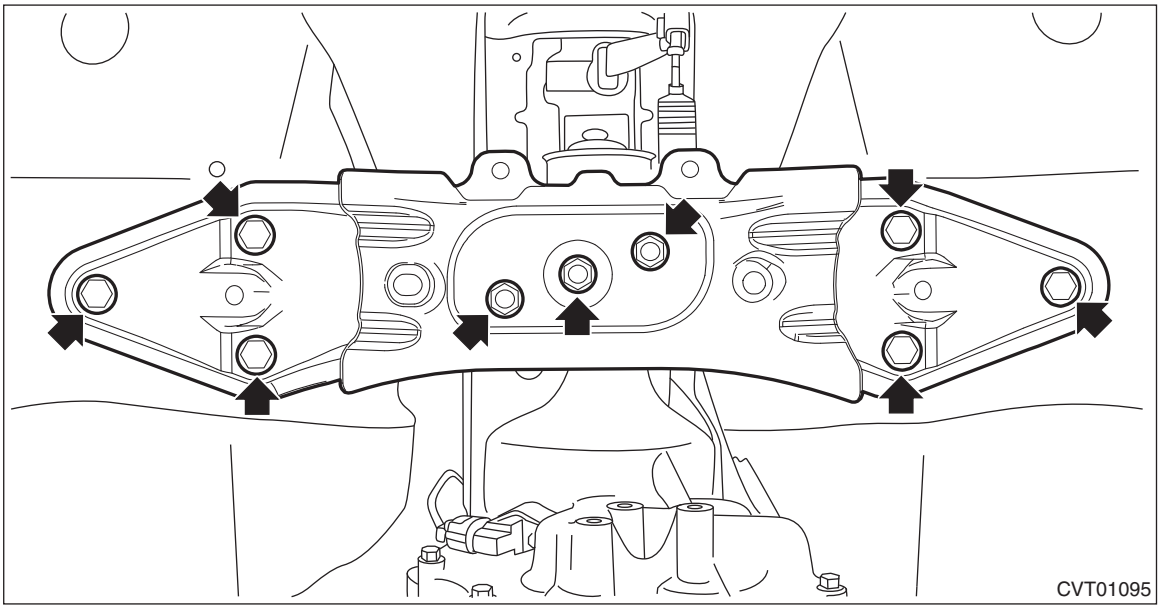
65) Perform the clear operation for AT learning. <Ref. to CVT(diag)-26, Clear Memory Mode.>
66) Perform the operation of AT learning mode. <Ref. to CVT(diag)-33, Learning Control.>
67) Execute the rear differential inspection mode. <Ref. to DI-63, Rear Differential Inspection Mode.>

CAUTION:
Always execute the rear differential inspection mode after the replacement of the following.
- **Replacement of transmission assembly**
- **Replacement of front differential hypoid gear set**



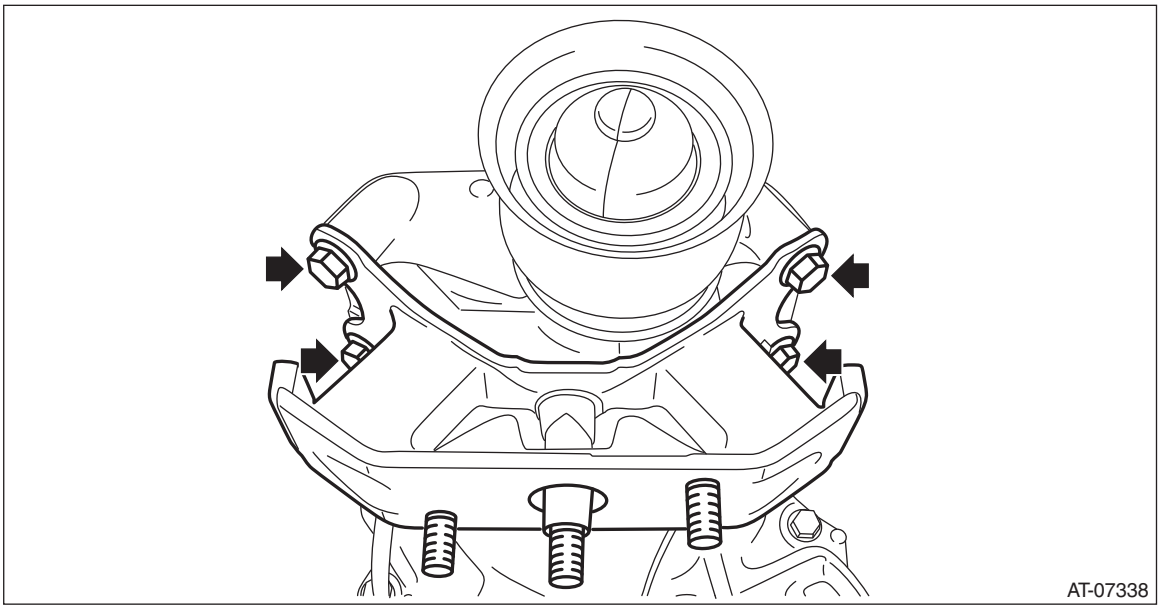
68) Perform the road test to make sure there is no fault. <Ref. to CVT(TR690)-48, INSPECTION, Road Test.>

12.Transmission Mounting System



A: REMOVAL

1. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

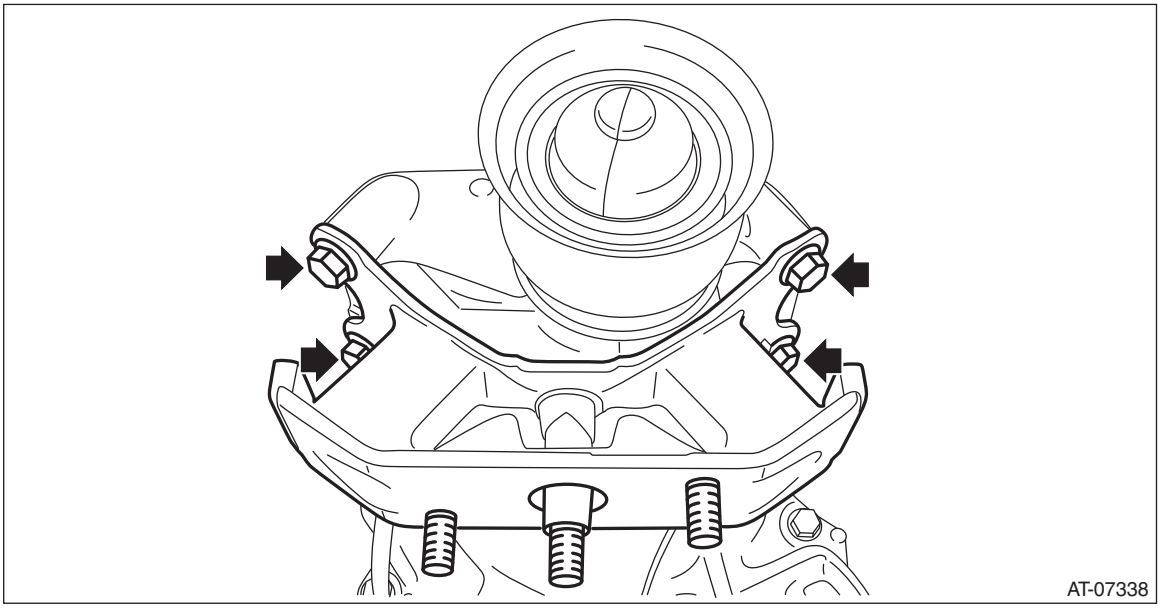


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
4) Remove the center exhaust cover.

5) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.
6) Remove the transmission rear crossmember.

7) Remove the rear cushion rubber.

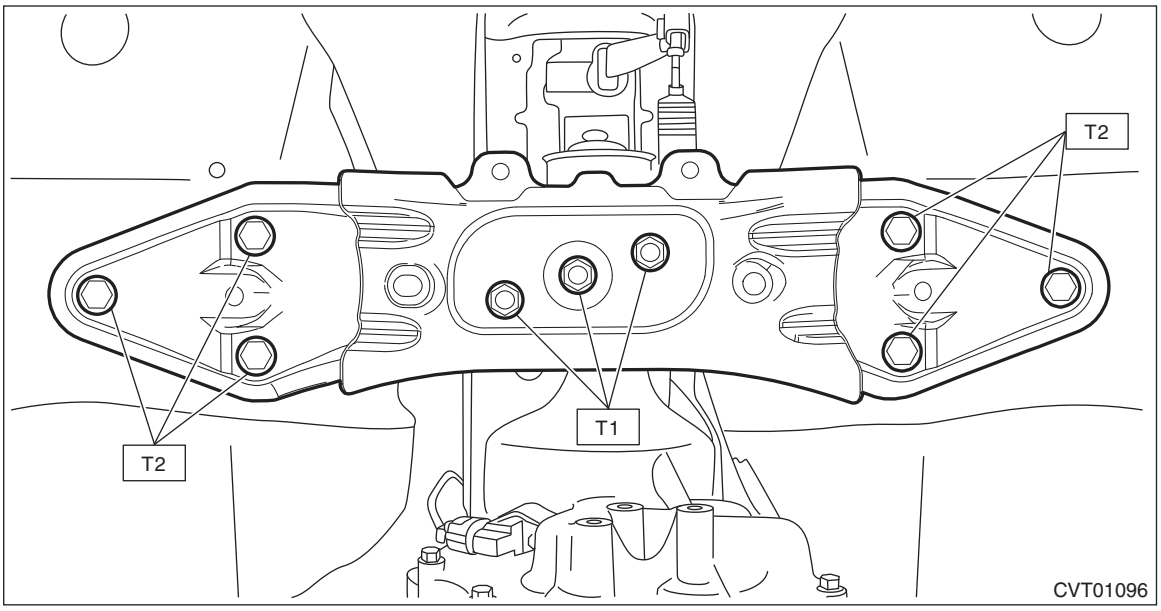
2. MAIN MOUNTING BRACKET & MAIN CUSHION RUBBER



For removal, refer to the “ME (H6DO)” section. <Ref. to ME(H6DO)-76, MAIN MOUNTING BRACKET & MAIN CUSHION RUBBER, REMOVAL, Engine Mounting.>

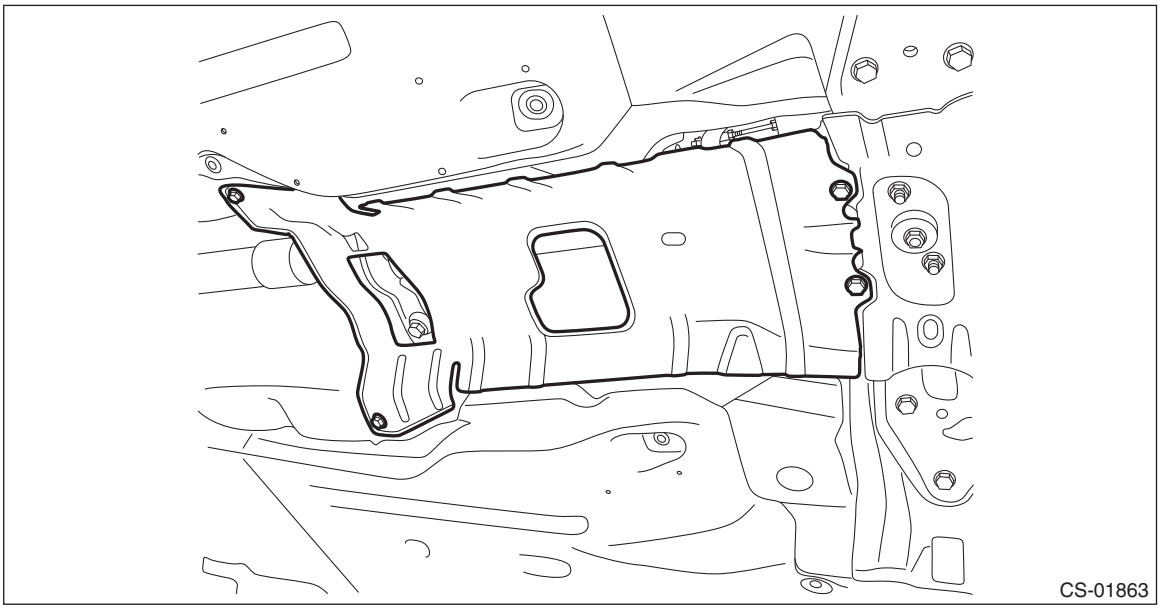
B: INSTALLATION

1. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER



1) Install the rear cushion rubber.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



2) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 75 N·m (7.6 kgf-m, 55.3 ft-lb)

3) Remove the transmission jack.
4) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Install the front exhaust pipe. <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

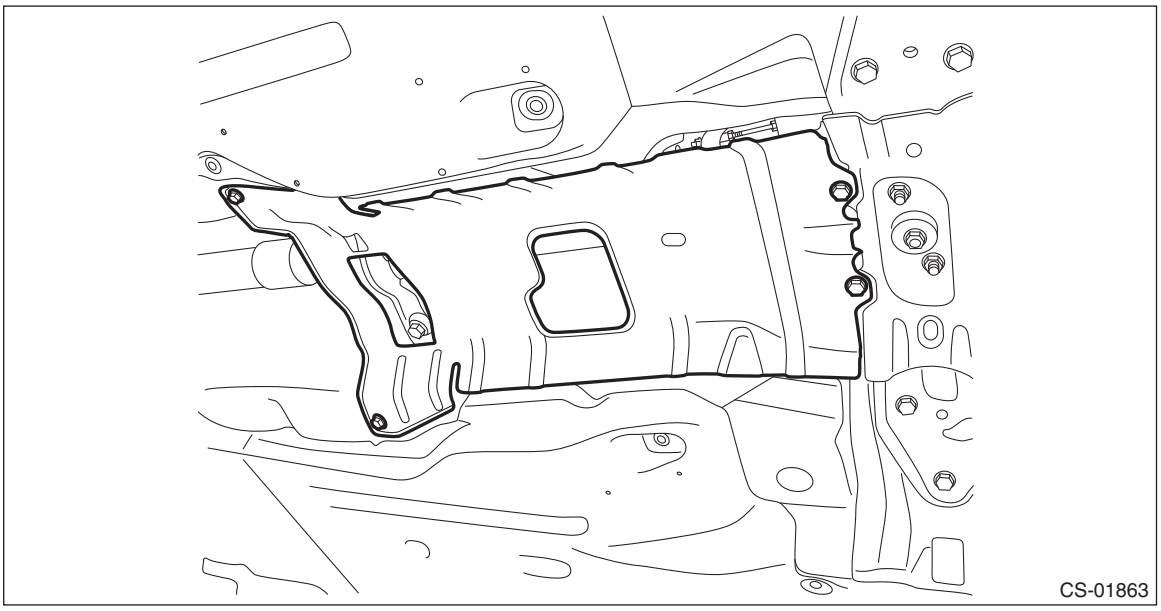
2. MAIN MOUNTING BRACKET & MAIN CUSHION RUBBER

For installation, refer to the “ME (H6DO)” section. <Ref. to ME(H6DO)-81, MAIN MOUNTING BRACKET & MAIN CUSHION RUBBER, INSTALLATION, Engine Mounting.>

C: INSPECTION

- Check the crossmember for bends or damage.
- Check that the cushion rubber is not stiff, cracked or otherwise damaged.

13.Extension Case Oil Seal



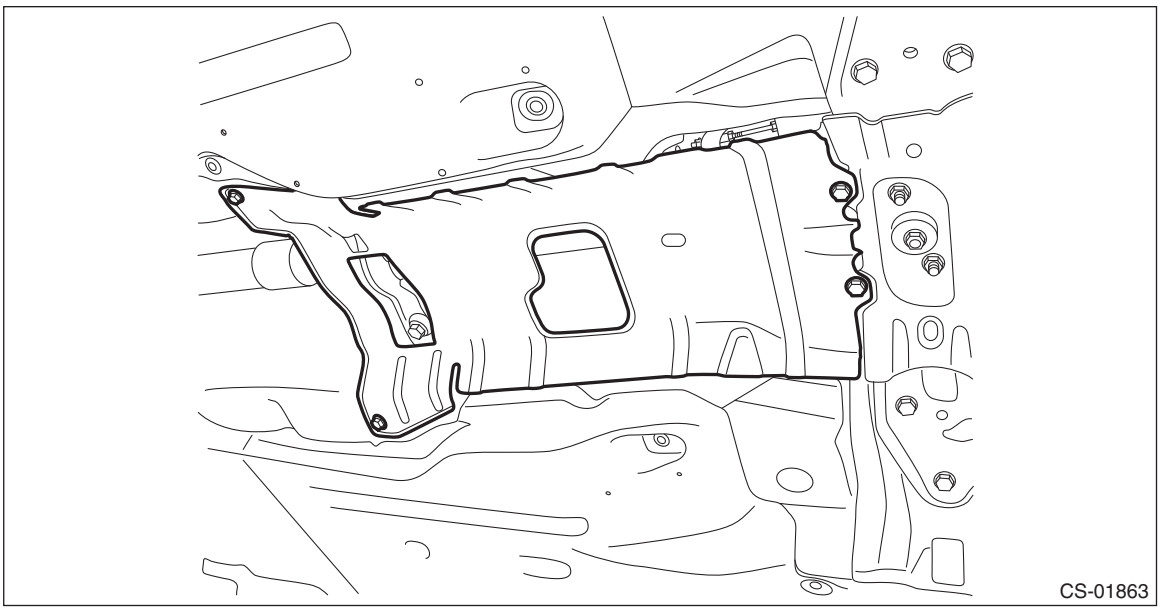
A: INSPECTION

Check for leakage of CVTF from the joint section of transmission and propeller shaft. If a leak is found, inspect the propeller shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:
Immediately after the vehicle has been running or after idling for a long time, the CVTF will be hot. Be careful not to burn yourself.

1) Lift up the vehicle.
2) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
3) Remove the center exhaust cover.



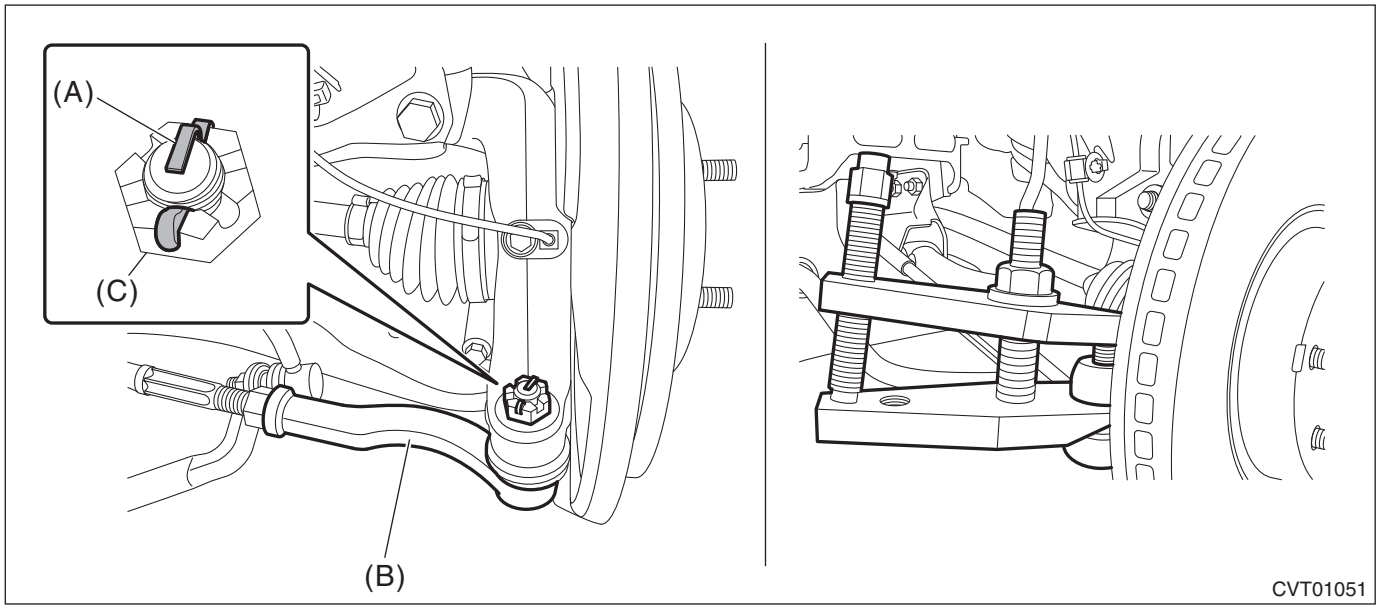
4) Clean the transmission exterior.
5) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
6) Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.
ST 398527700 PULLER ASSY
7) Using the ST, install the oil seal.

NOTE:
- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.

ST 498057300 INSTALLER
8) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
9) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

10) Install the front exhaust pipe. <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
11) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>



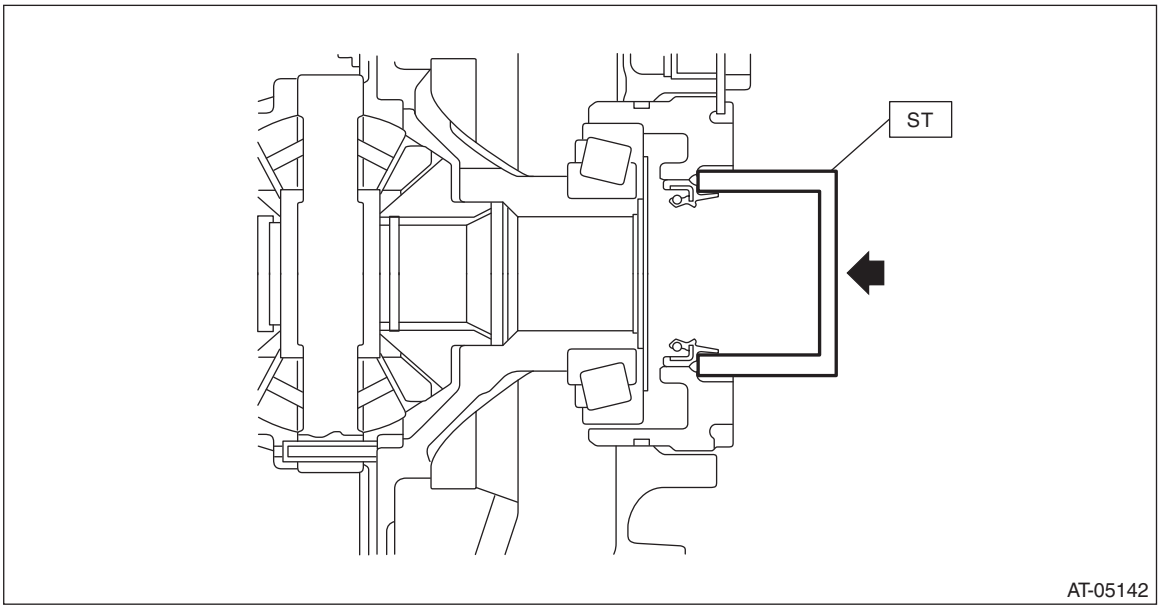
14.Differential Side Retainer Oil Seal

A: INSPECTION

Check for leakage of gear oil from the oil seal. If there is an oil leak, inspect the front drive shaft and replace the oil seal.

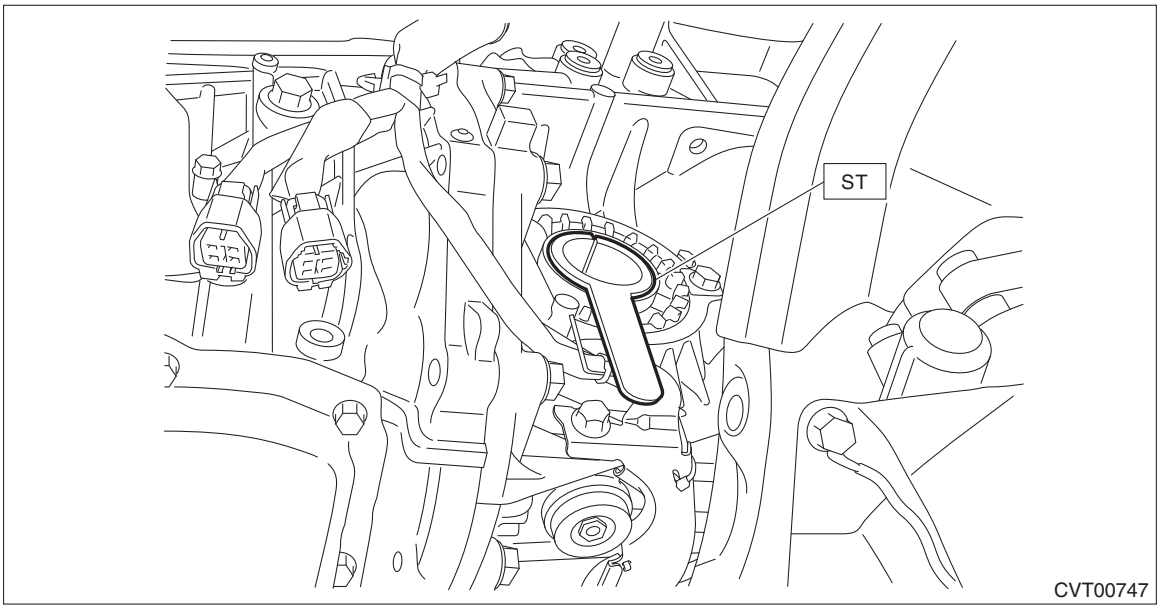
B: REPLACEMENT

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. If differential gear oil is spilled on the exhaust pipe, wipe it off completely.
1) Lift up the vehicle, and remove the front wheels.
2) After pulling off the cotter pin and removing the castle nut, use a puller to remove the tie-rod end.



(A) Cotter pin
(B) Tie-rod end
(C) Castle nut

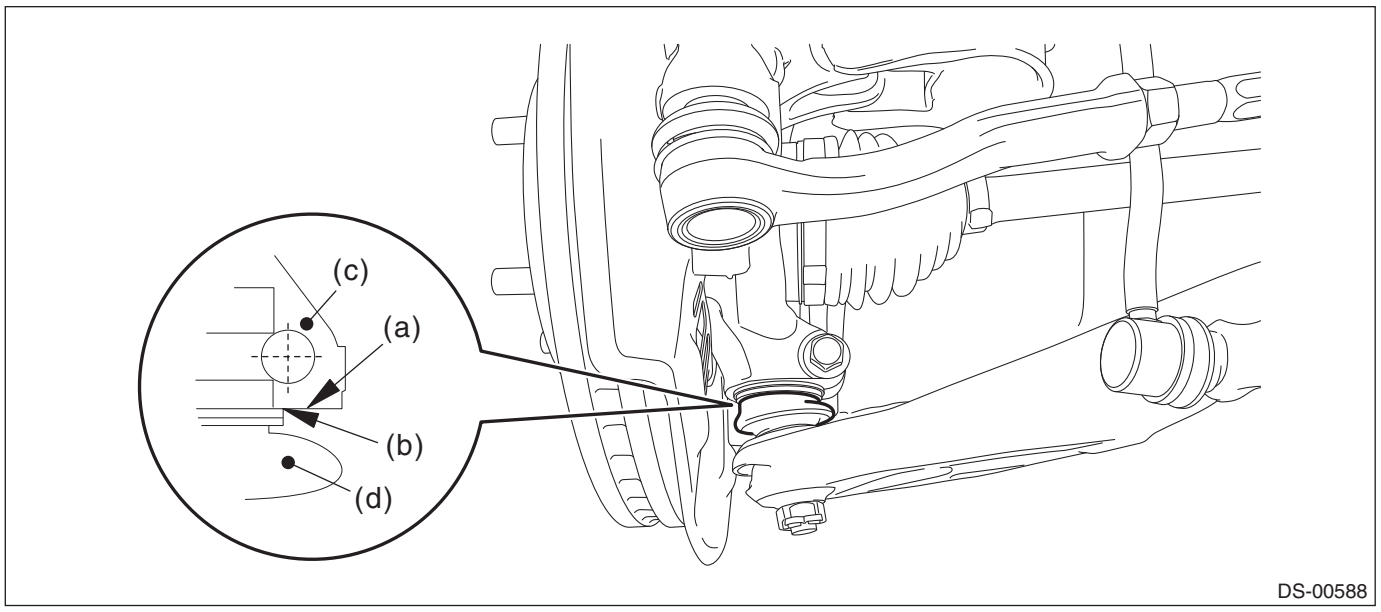
3) Lift up the vehicle.
4) Remove the front under cover. <Ref. to EI-27, REMOVAL, Front Under Cover.>
5) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
6) Drain differential gear oil. <Ref. to CVT(TR690)-44, REPLACEMENT, Differential Gear Oil.>
7) Tighten the differential gear oil drain plug.



NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
8) Remove the stabilizer link. <Ref. to FS-33, REMOVAL, Front Stabilizer.>
9) Disconnect the lower arm ball joint and housing.
10) Pull out the front drive shaft from transmission using a crowbar.
11) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.
12) Remove the differential side retainer oil seal using driver wrapped with vinyl tape etc.
13) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
- Apply differential gear oil to the lip surface, so that the oil seal lip is not deformed.
- Apply differential gear oil to the press-fitting surface of oil seal and the differential side retainer.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.



14) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR

15) Replace the circlip of the drive shaft with a new part.
16) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).
17) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
18) Insert the ball joint into housing and secure with bolt.

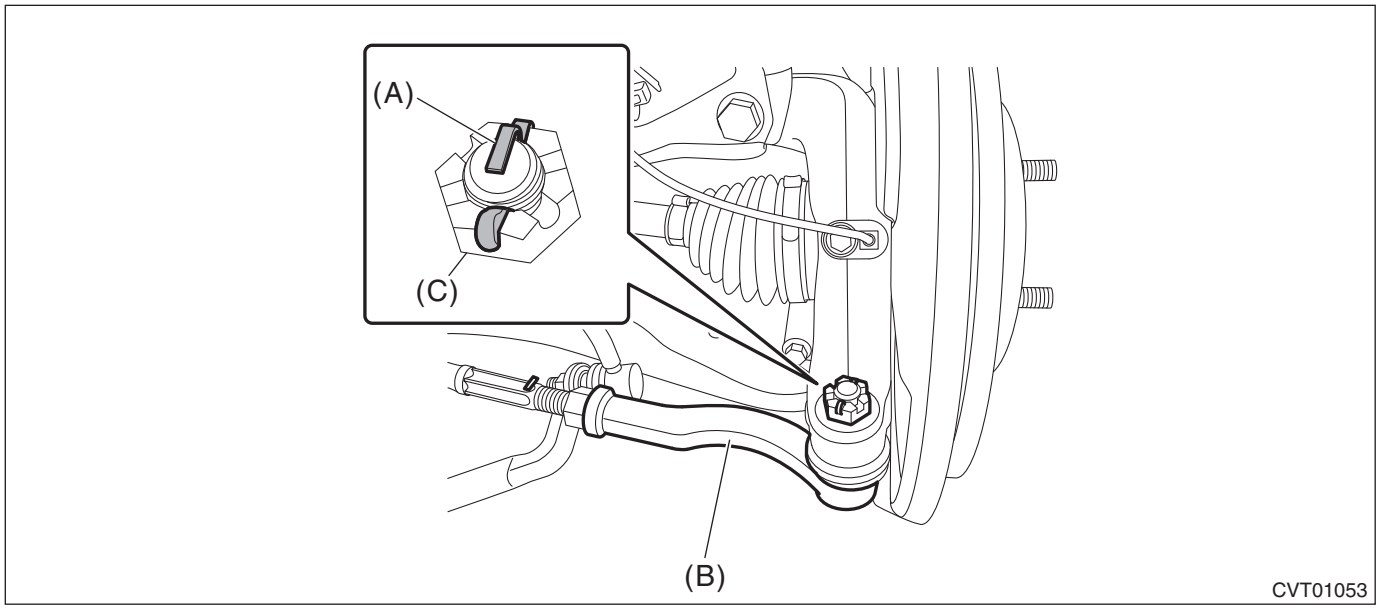
CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.**
- **Be careful not to damage the boot of the joint.**

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint ASSY

19) Install the stabilizer link.

NOTE:
Use a new flange nut.



Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

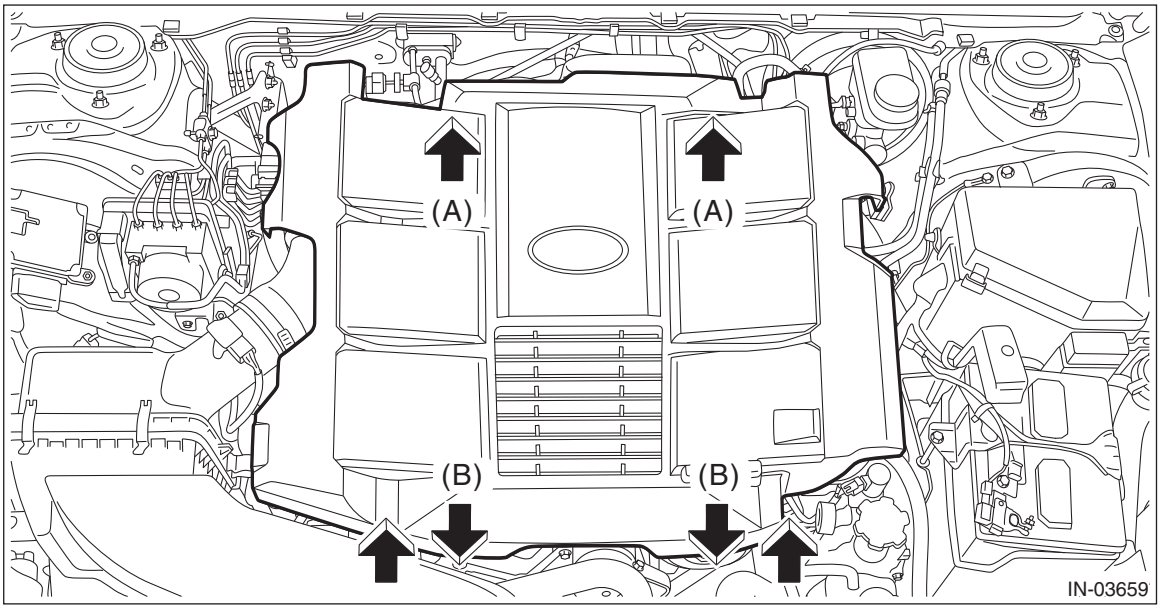
20) Install the front exhaust pipe. <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
21) Install the front under cover. <Ref. to EI-27, INSTALLATION, Front Under Cover.>
22) Lower the vehicle.
23) Connect the tie-rod end and knuckle arm, and attach the castle nut.

Tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

CAUTION:
When connecting, do not hit the cap at the bottom of tie-rod end with hammer.

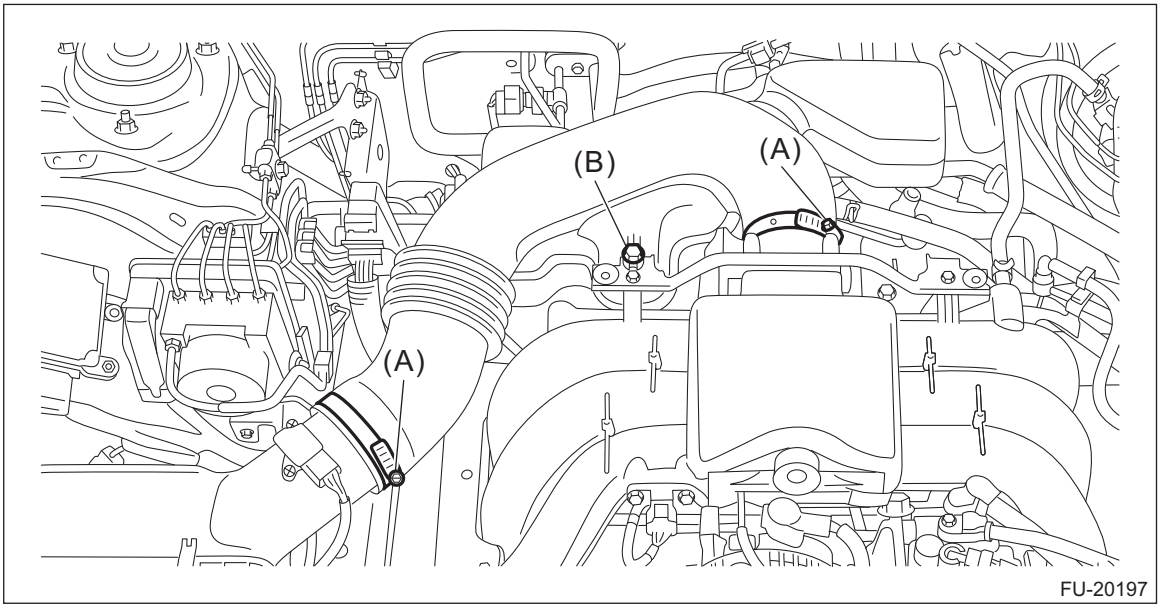
24) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

(A) Cotter pin
(B) Tie-rod end
(C) Castle nut



25) Refill differential gear oil to adjust the differential gear oil amount. <Ref. to CVT(TR690)-43, ADJUSTMENT, Differential Gear Oil.>
26) Install the front tires.

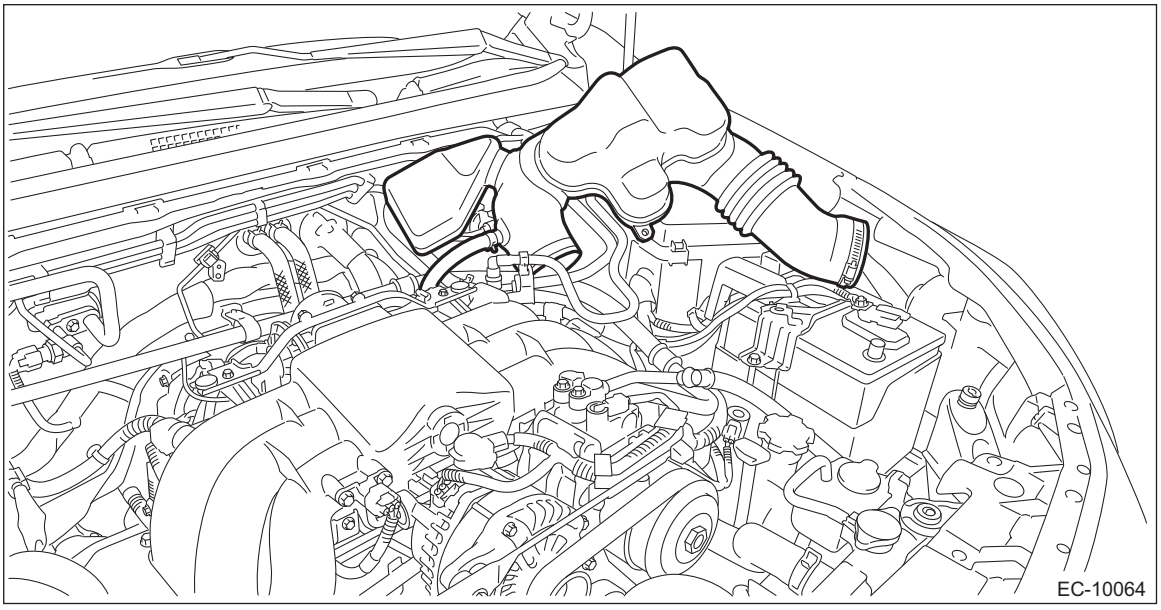
15.Inhibitor Switch



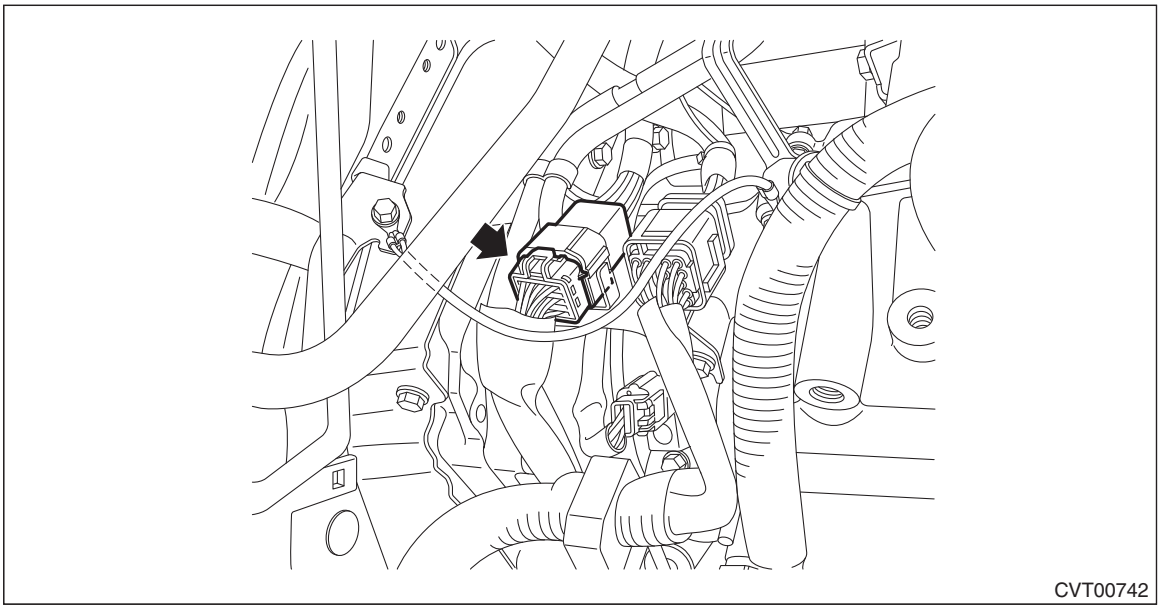
A: INSPECTION

When the driving condition or starter motor operation is improper, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

1) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.



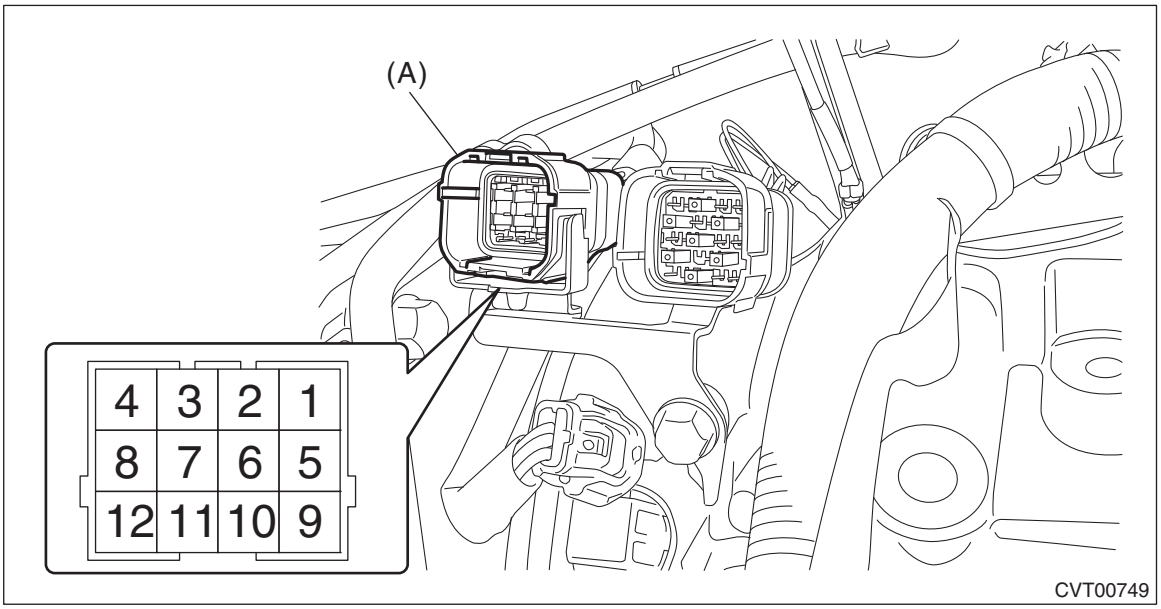
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Loosen the clamp (A) which connects the air intake boot.
4) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.



5) Remove the air intake boot from the throttle body and the air cleaner case (rear), and move it to the left side wheel apron.

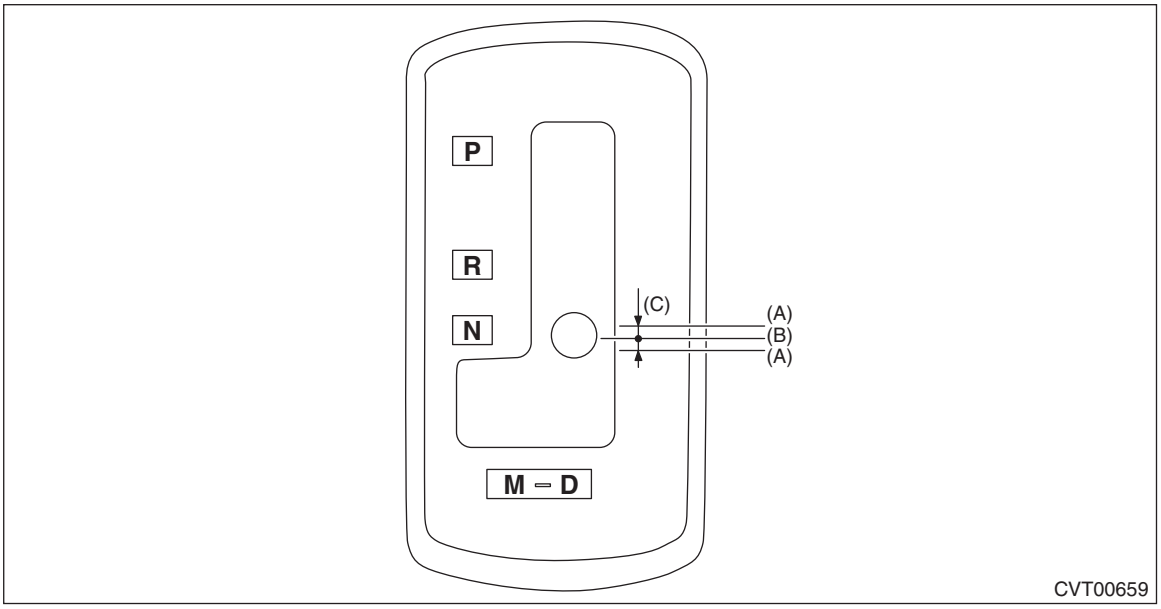
CAUTION:
Be careful not to allow the air intake boot to contact the air conditioner pipe.

6) Disconnect the inhibitor harness connector.



7) Check for continuity in inhibitor switch circuit by shifting the select lever in “P”, “R”, “N” and “D” respectively.

NOTE:
- Check that there is no continuity in the starter circuit when the select lever is in the “R” and “D” ranges.

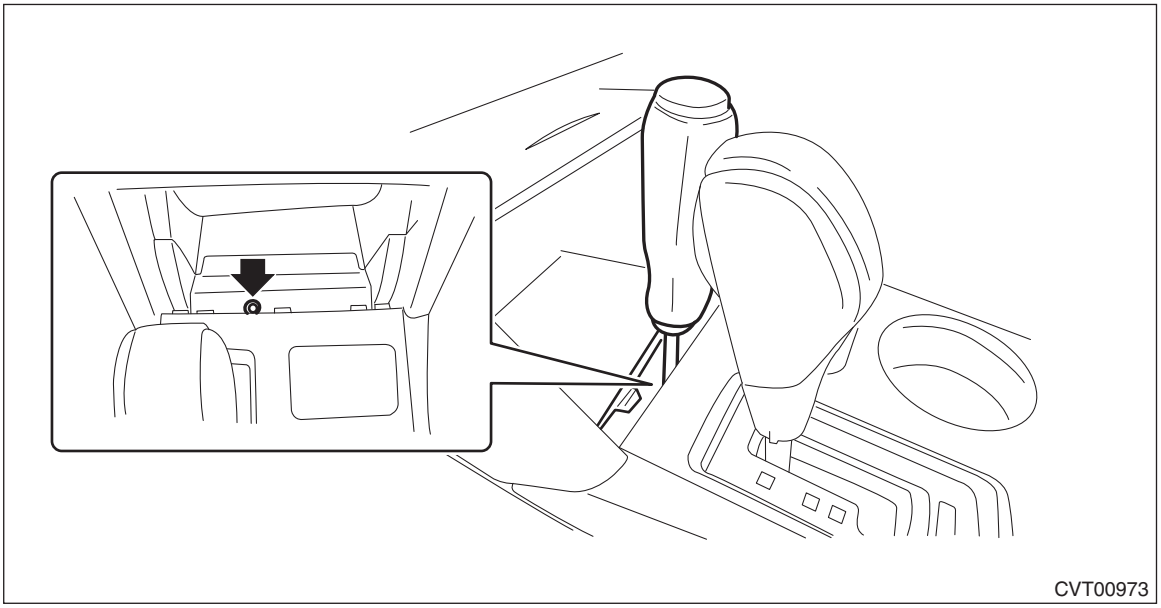


• When inhibitor switch is normal, check there is no poor contact in vehicle side connector and no open circuit in harness.

	Range	Terminal No.
Signal sent to TCM	P	4 — 3
	R	4 — 2
	N	4 — 1
	D	4 — 8
Starter circuit	P/N	12 — 11
Back-up light circuit	R	10 — 9

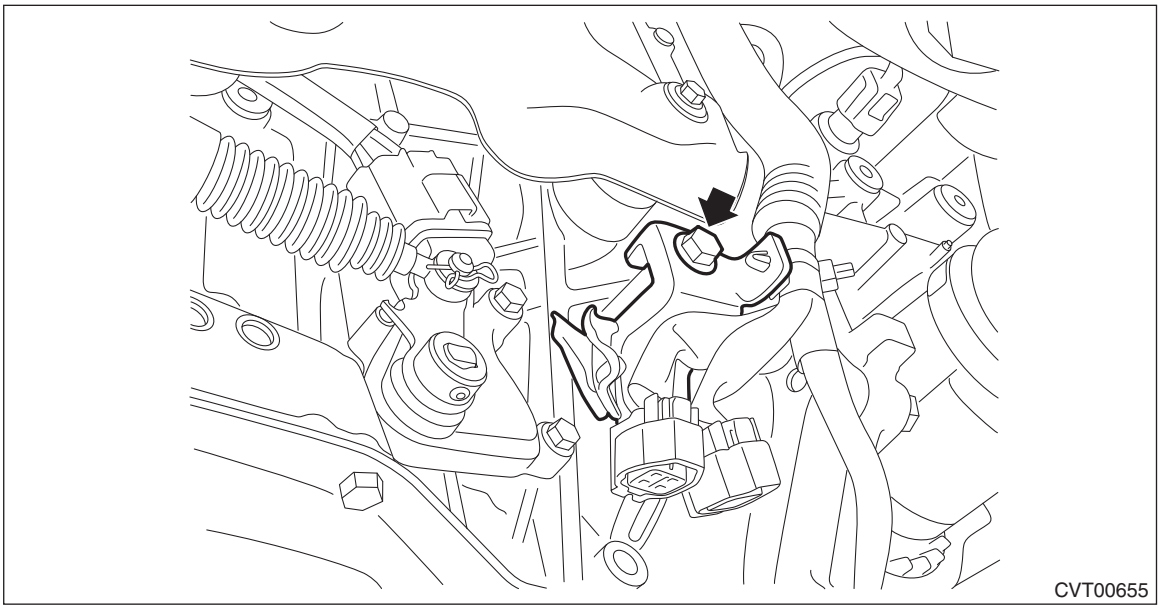
(A) Inhibitor harness connector

8) Check that there is continuity at equal points when the select lever is moved 1.5° in both directions from the “N” range.
If there is continuity in only one direction or in other points, adjust the inhibitor switch. <Ref. to CVT(TR690)-108, ADJUSTMENT, Inhibitor Switch.>



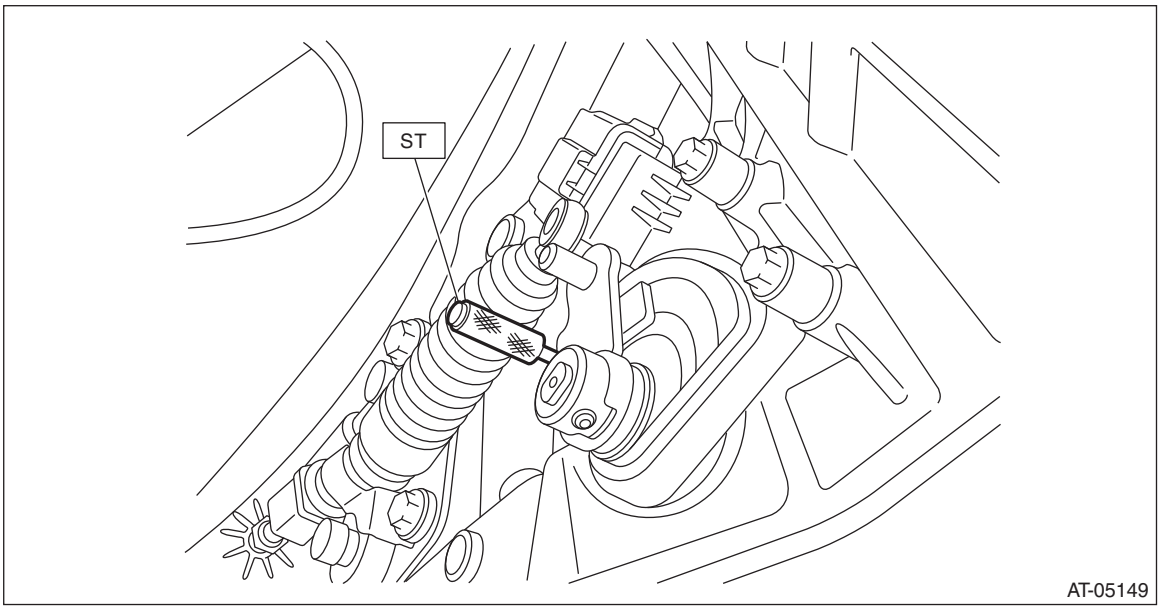
(A) Continuity does not exist.
(B) Continuity exists.
(C) 1.5°

9) Repeat the above inspection in other gear ranges. If there is fault, adjust the inhibitor switch and select cable. <Ref. to CVT(TR690)-108, ADJUSTMENT, Inhibitor Switch.> <Ref. to CS-48, ADJUSTMENT, Select Cable.>



B: ADJUSTMENT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the shift lock using a screwdriver to shift the select lever to the “N” range.

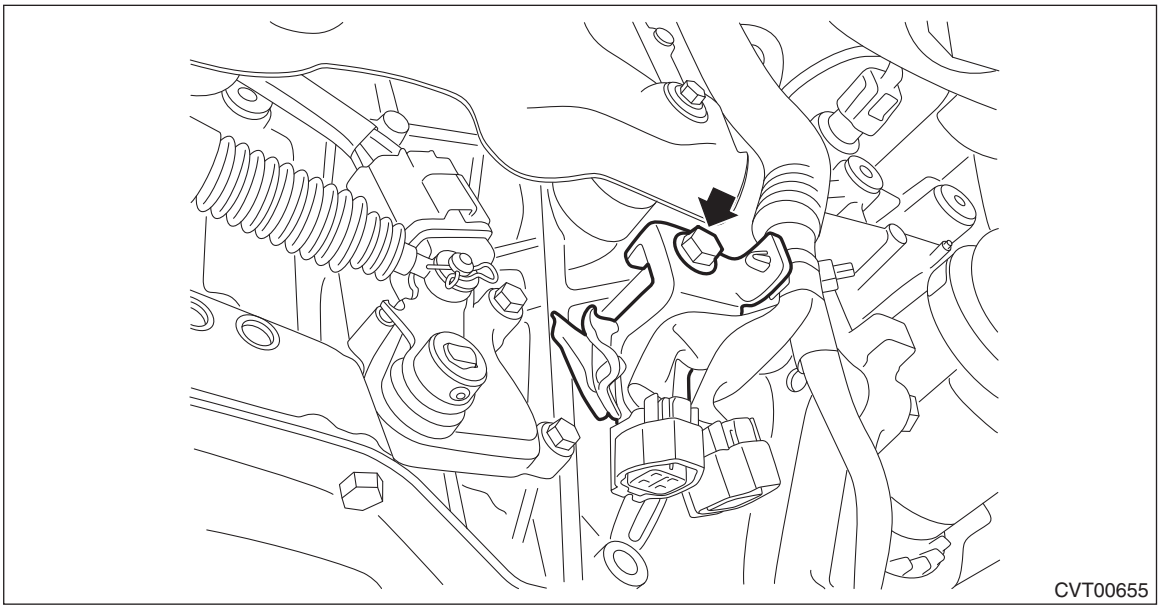


3) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

4) Remove the harness stay.

5) Loosen the two bolts holding the inhibitor switch.
6) Insert the ST vertically into the holes of the shifter arm and switch body.
ST 499267300 STOPPER PIN

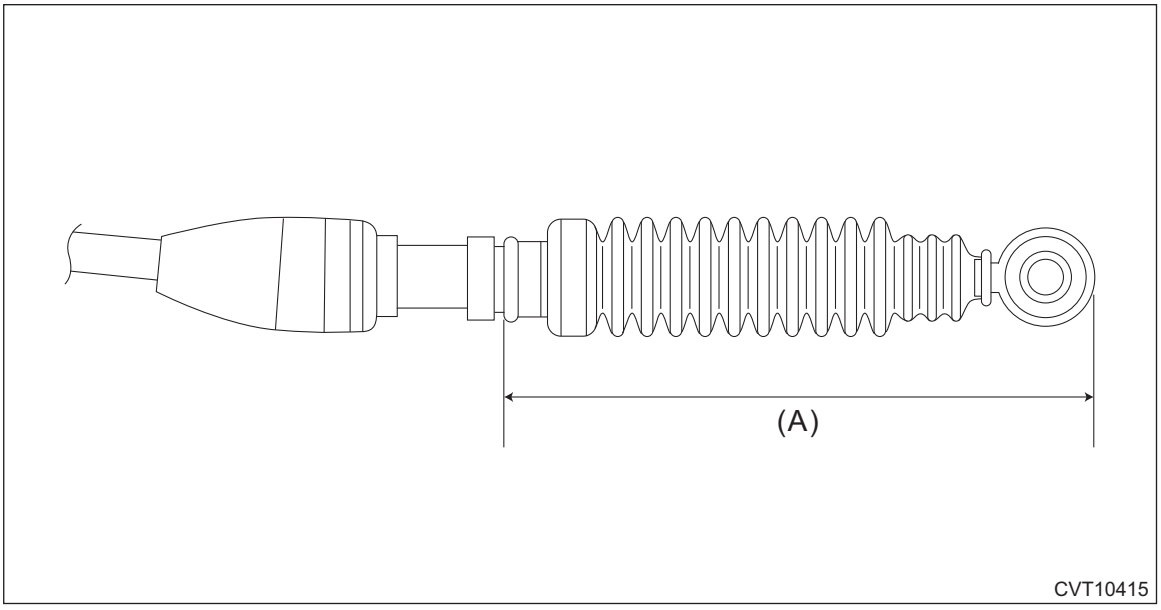
7) Tighten the two bolts holding the inhibitor switch.



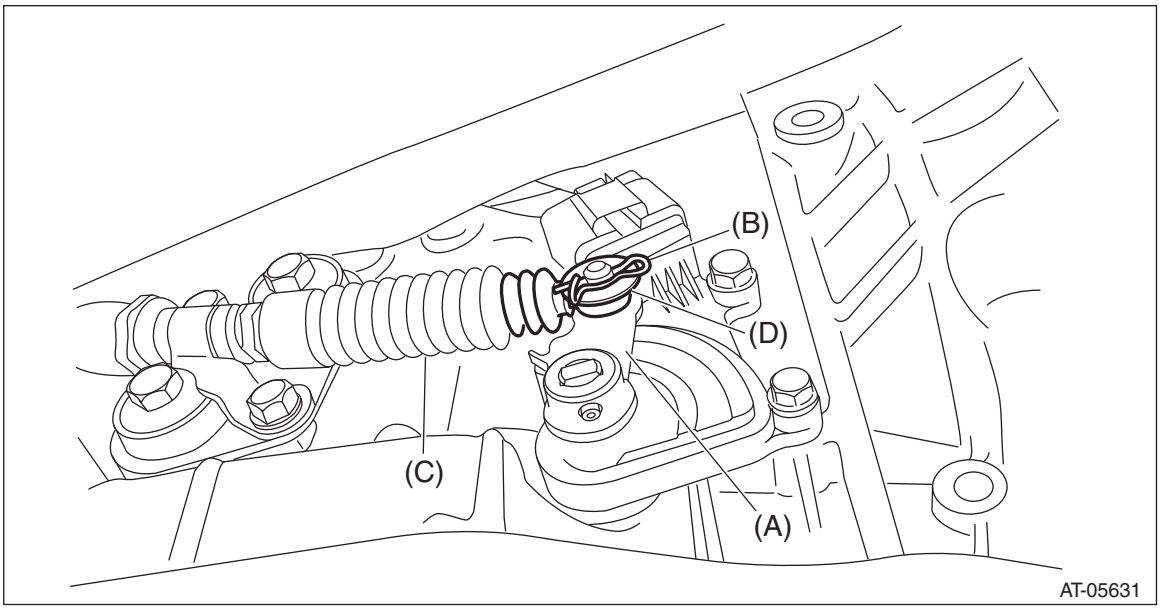
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

8) Repeat the inspection of the inhibitor switch. If the inhibitor switch is determined to be “faulty”, replace it.

C: REMOVAL

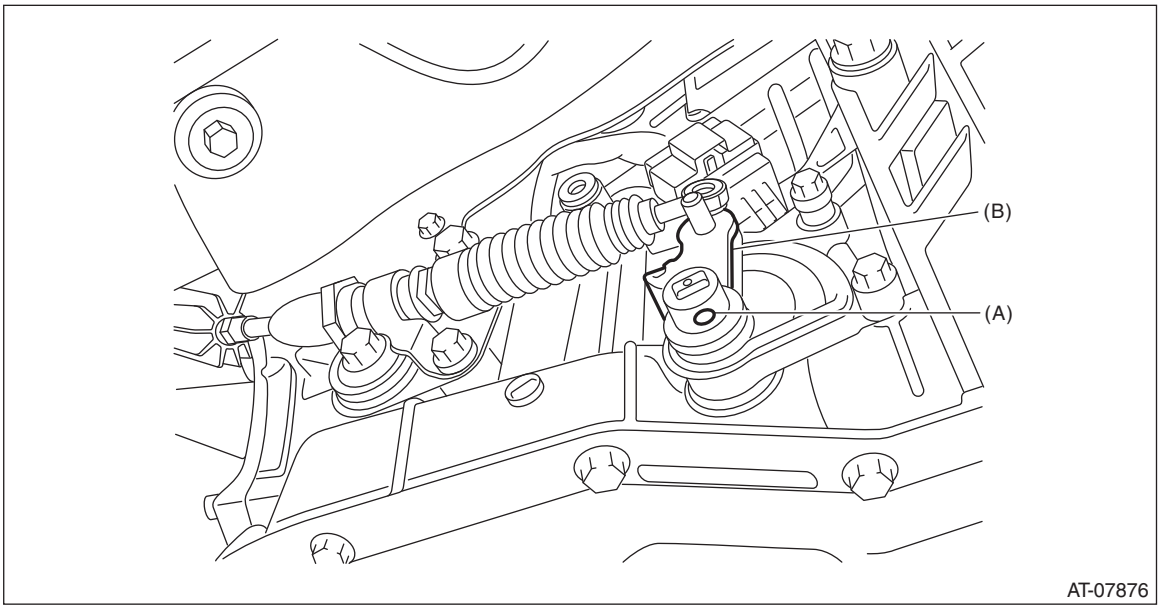


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) While pressing the shift lock release button, shift the select lever to the “N” range.
3) Lift up the vehicle.
4) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

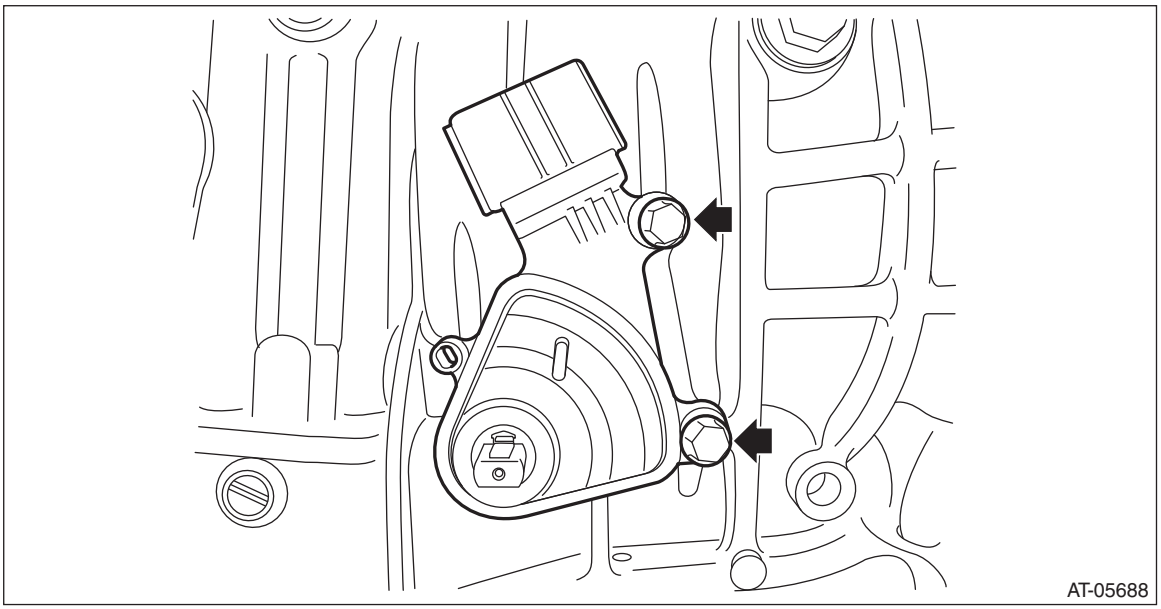


5) Remove the harness stay.

6) Remove the snap pin and washer, and disconnect the select cable.



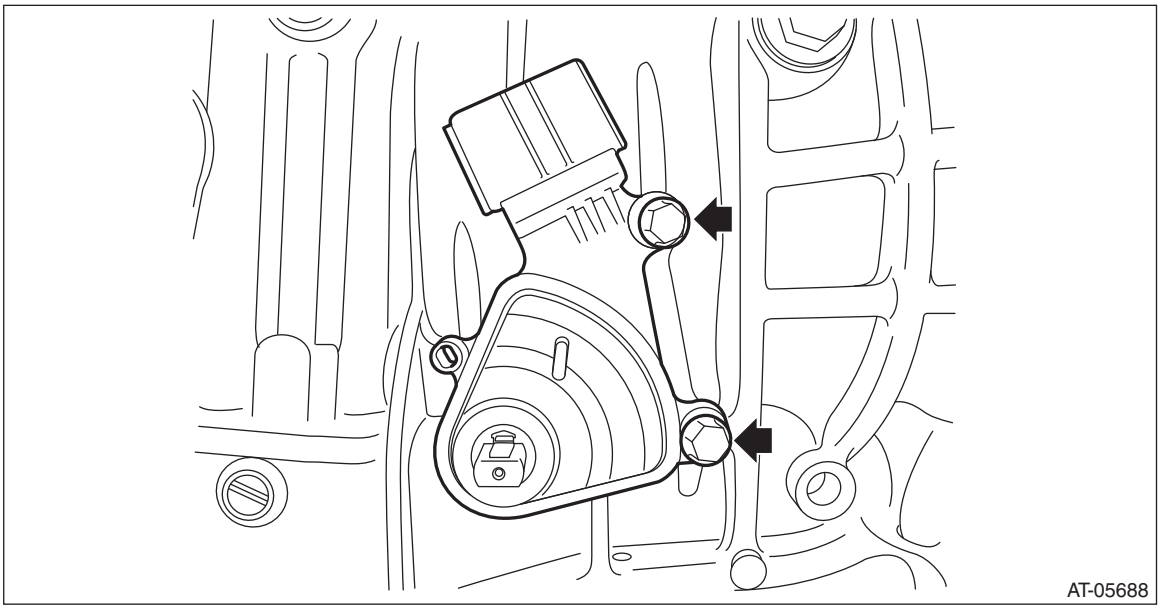
CAUTION:
Do not apply extra overload while holding the part (A).



(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

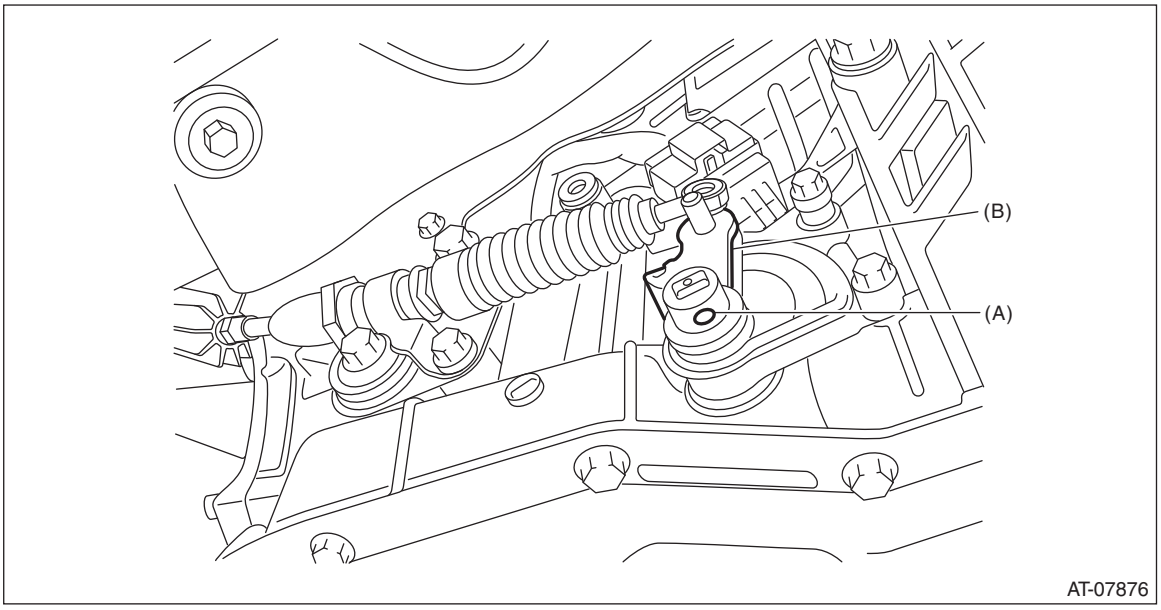
7) Remove the spring pin and shifter arm.

(A) Spring pin
(B) Shifter arm



8) Remove the inhibitor harness connector from inhibitor switch.
9) Remove the two inhibitor switch securing bolts.

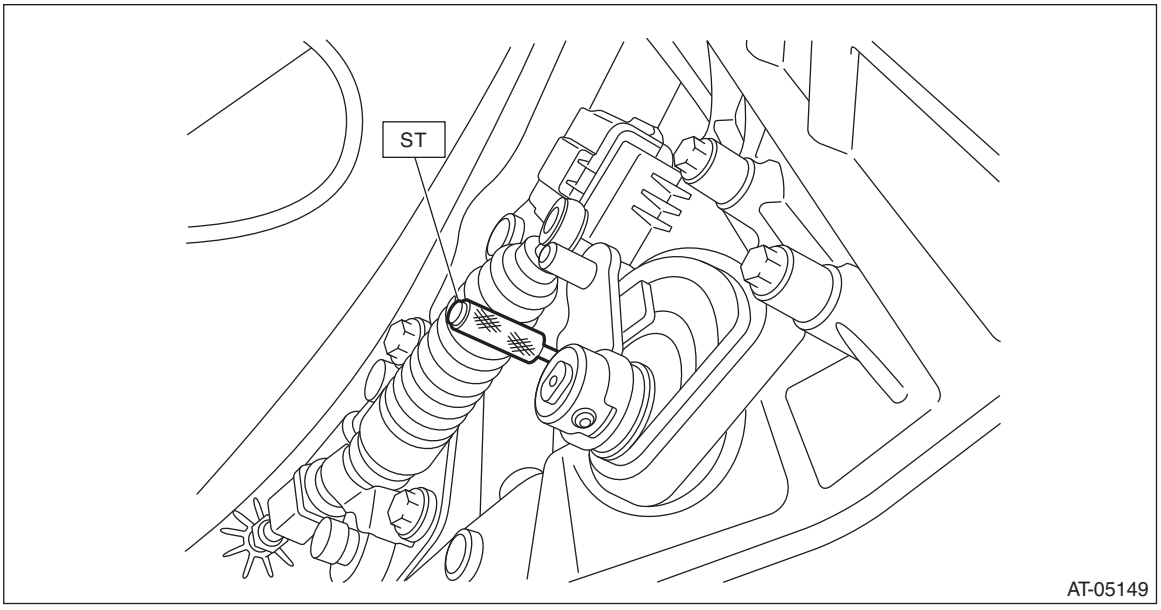
10) Remove the inhibitor switch.



D: INSTALLATION

1) Temporarily install the inhibitor switch.

2) Connect the inhibitor harness connector to the inhibitor switch.
3) Install the shifter arm and fix with the spring pin.

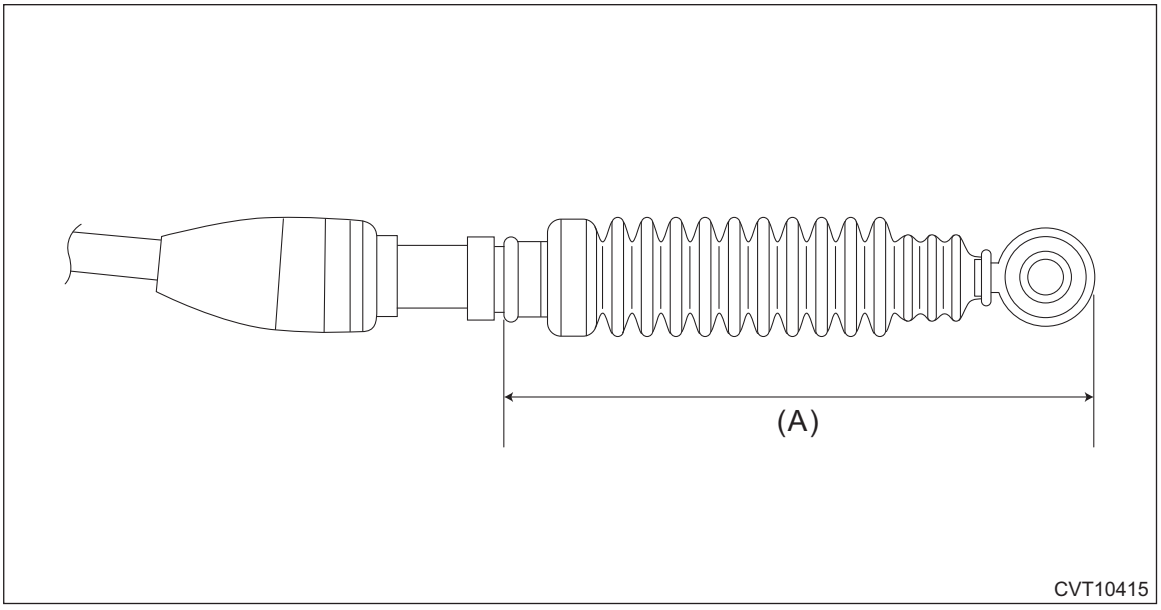


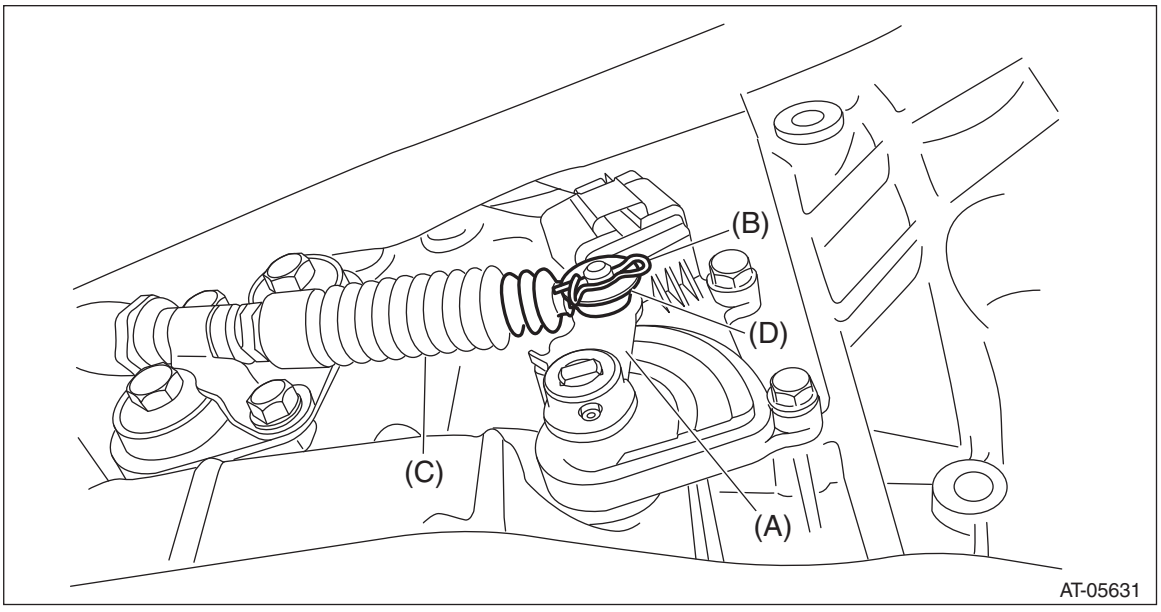
NOTE:
Use new spring pin.

(A) Spring pin
(B) Shifter arm

4) Shift the shifter arm to “N” range.

5) Install the ST vertically in the cutout of shifter arm and the hole of switch body.
ST 499267300 STOPPER PIN



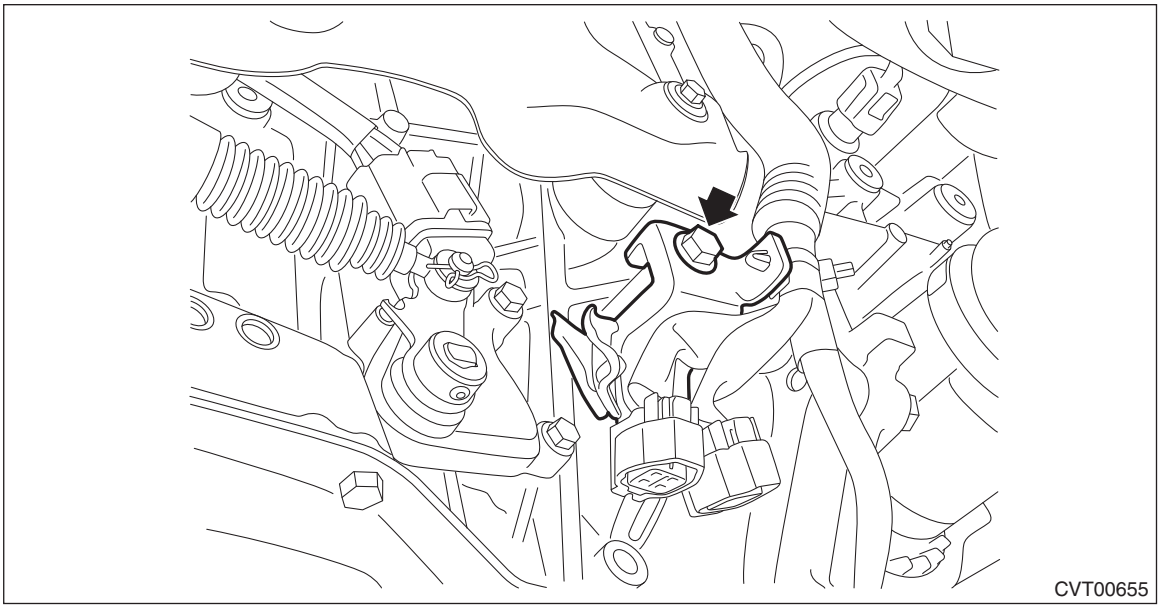


6) Tighten the two bolts holding the inhibitor switch.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

7) Connect the select cable and install the washer and snap pin.

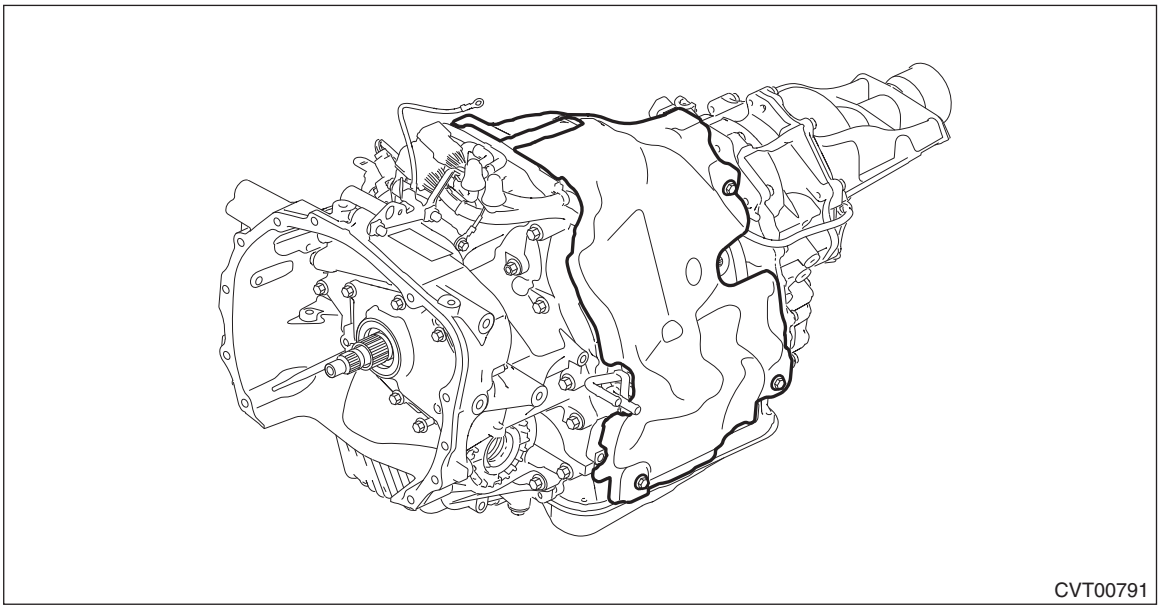
CAUTION:
Do not apply extra overload while holding the part (A).



(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

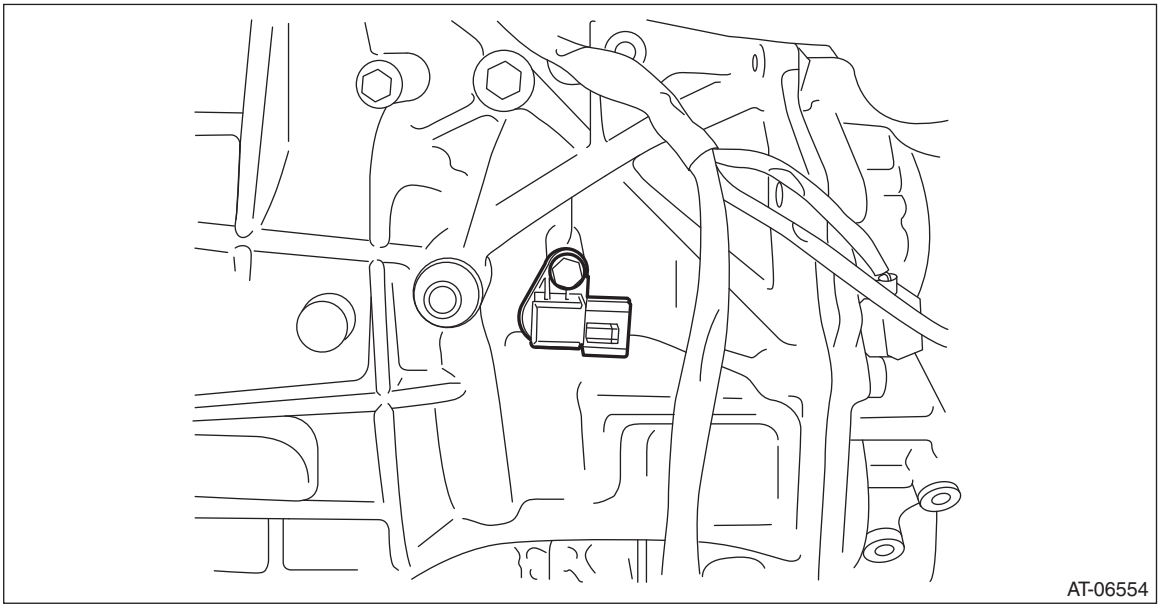
8) Install the harness stay.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



9) Install the front exhaust pipe. <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
10) Lower the vehicle.
11) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
12) Check the inhibitor switch. <Ref. to CVT(TR690)-105, INSPECTION, Inhibitor Switch.>

16.Secondary Speed Sensor



A: REMOVAL

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the transmission cover on the transmission upper side.

3) Remove the secondary speed sensor harness connector.
4) Remove the secondary speed sensor.

B: INSTALLATION

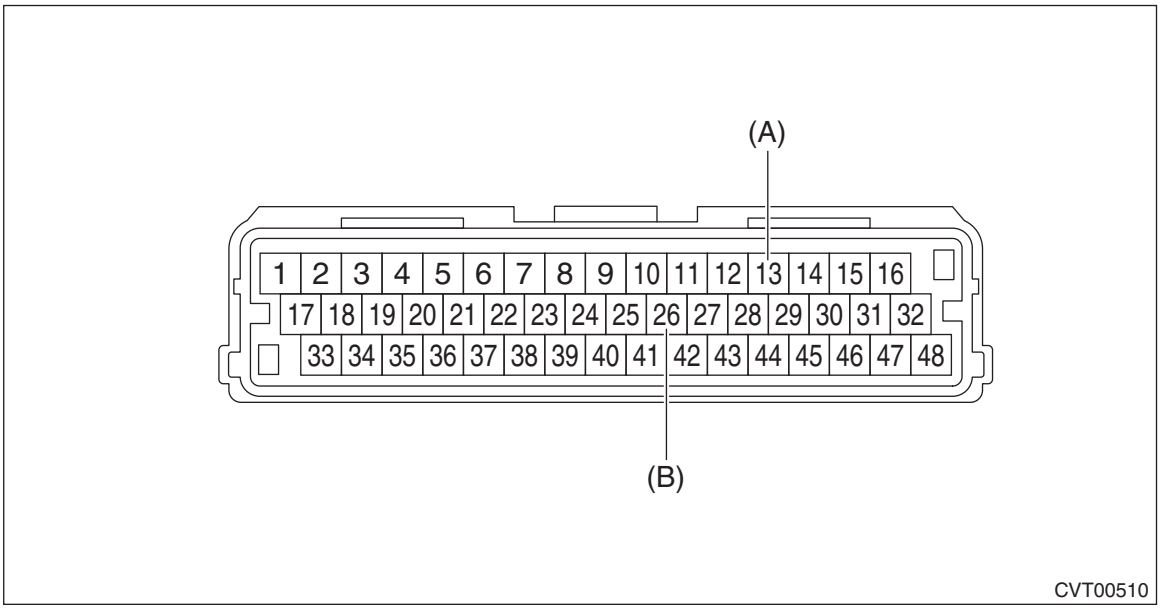
CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.

1) Install the secondary speed sensor.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Connect the harness connector.
3) Install the transmission cover.

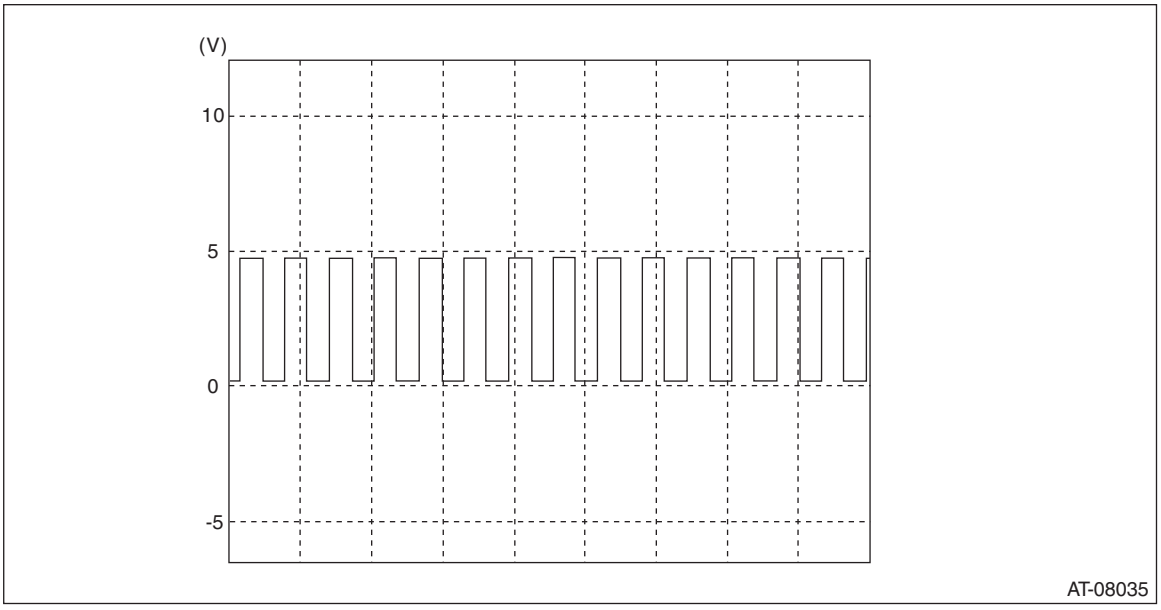


Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

4) Install the transmission assembly. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-146, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

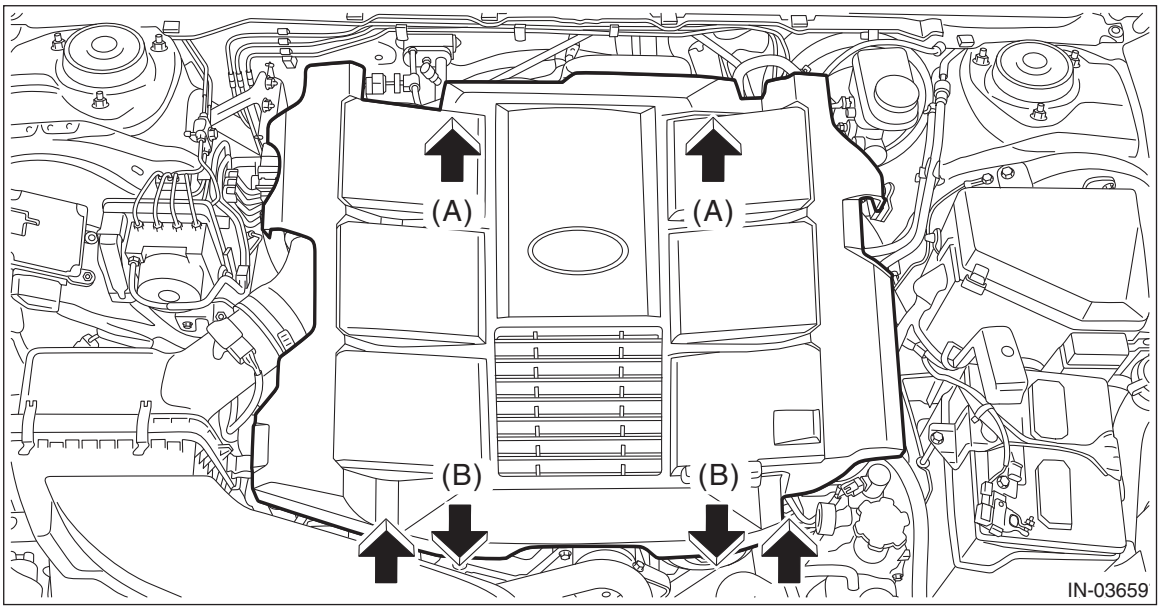


Terminals:
No. 13 (+) — No. 26 (–)

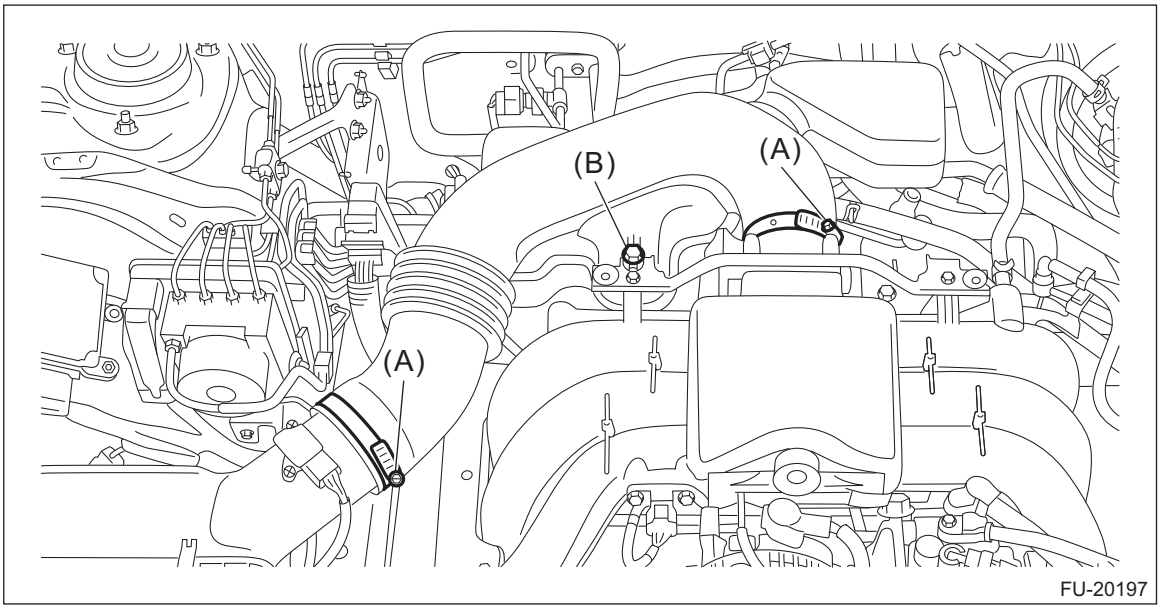
(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of secondary speed sensor with engine idling.

NOTE:
The waveform cycle changes as the speed changes.



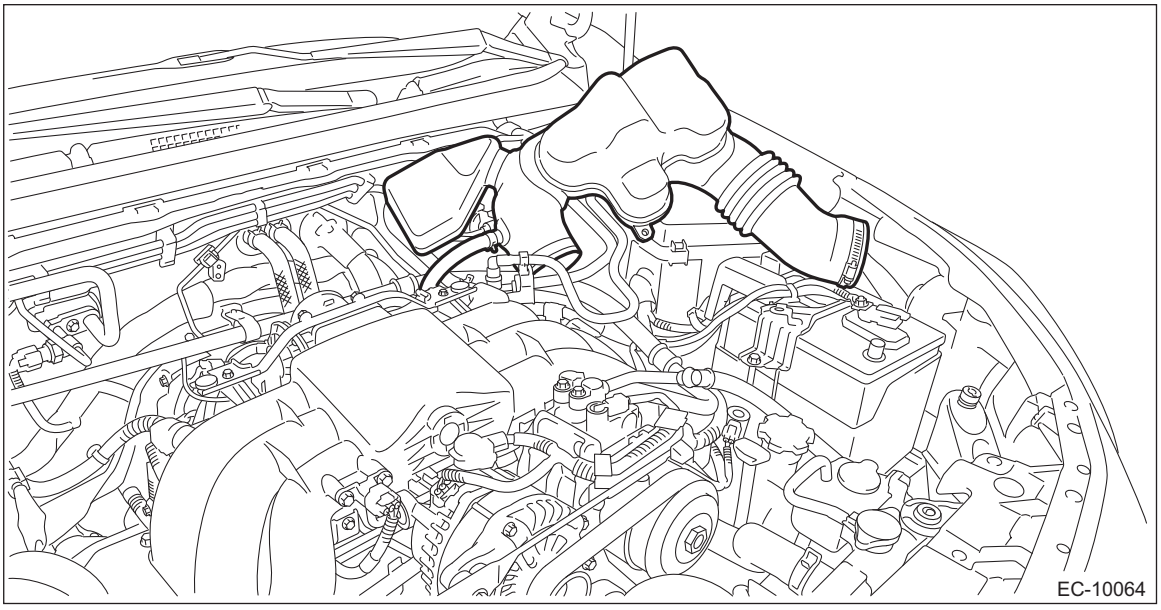
17.Primary Speed Sensor



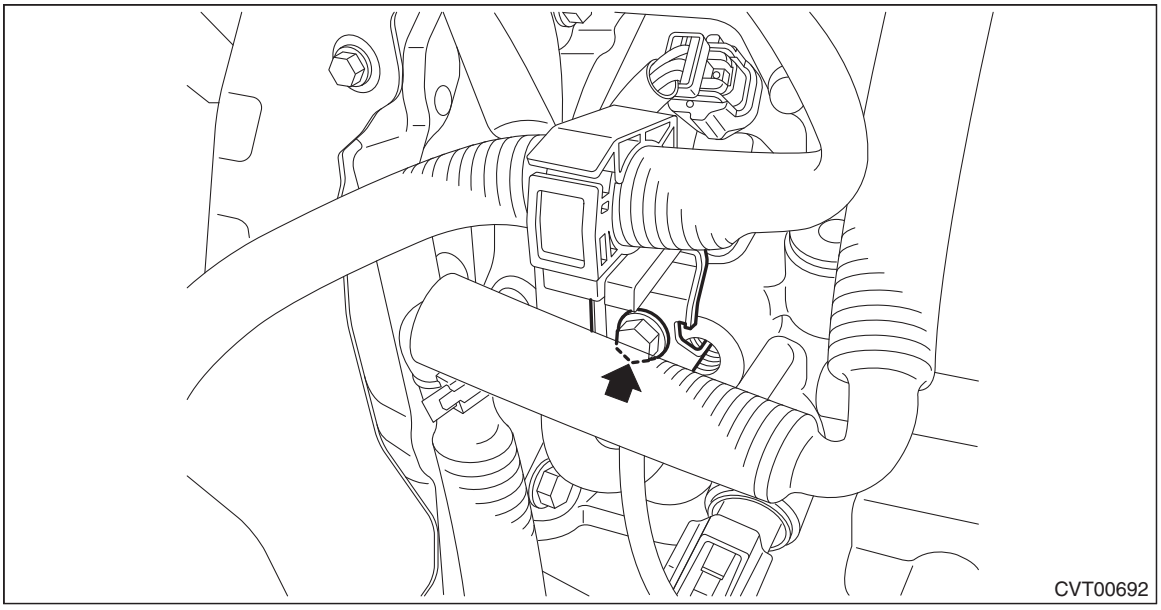
A: REMOVAL

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

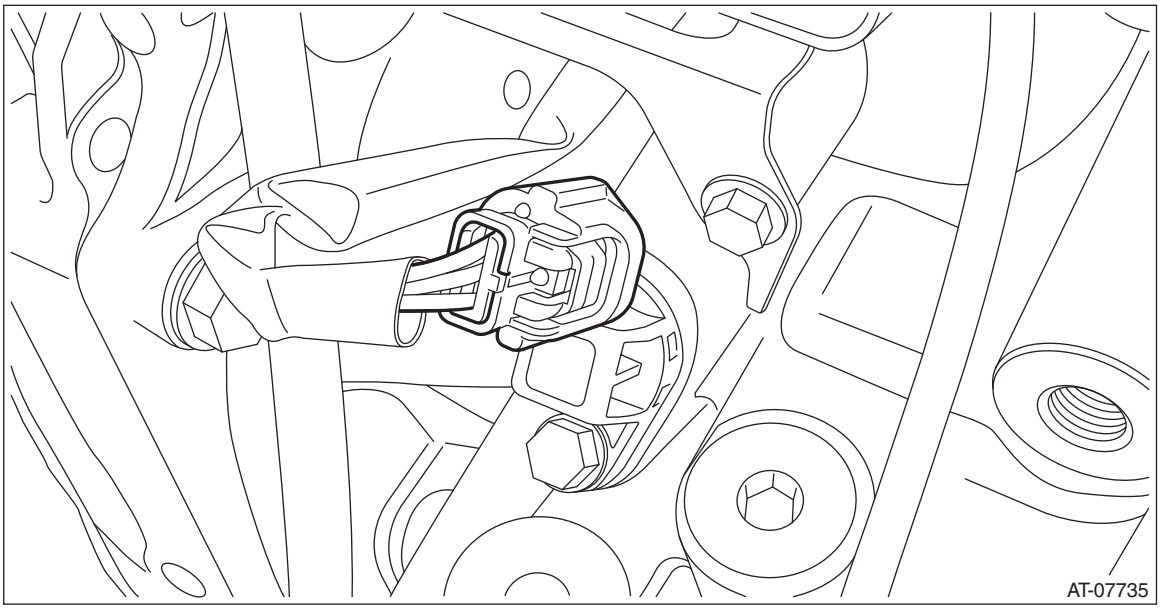
1) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.



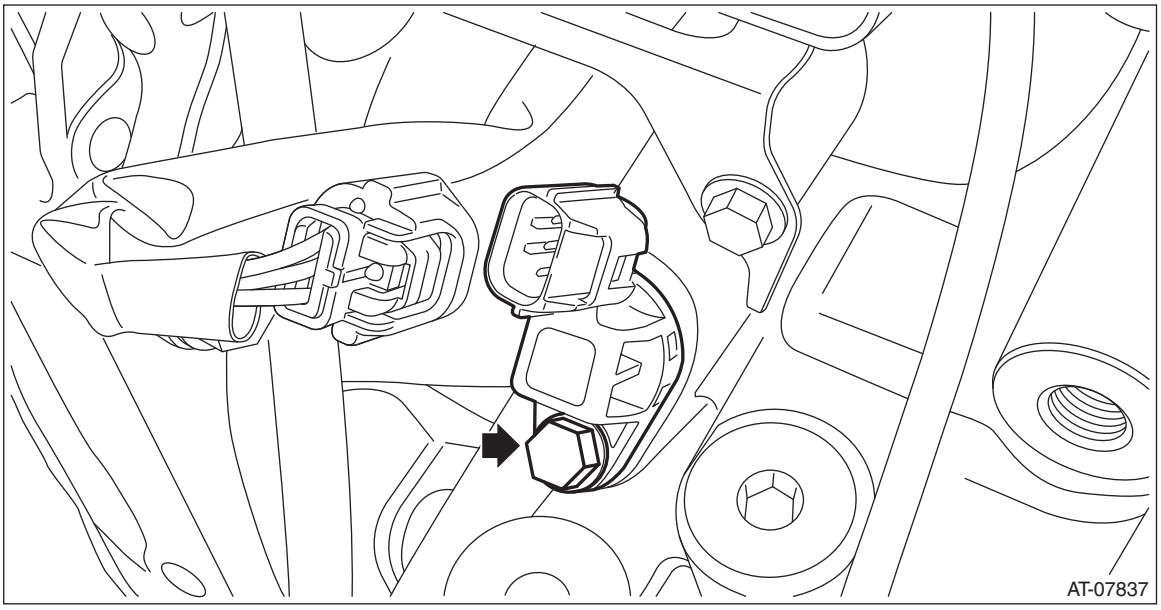
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Loosen the clamp (A) which connects the air intake boot.
4) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.



5) Remove the air intake boot from the throttle body and the air cleaner case (rear), and move it to the left side wheel apron.



CAUTION:
Be careful not to allow the air intake boot to contact the air conditioner pipe.



6) Clean the transmission exterior.
7) Disconnect the harness stay.

8) Remove the primary speed sensor harness connector.

9) Remove the primary speed sensor.

B: INSTALLATION

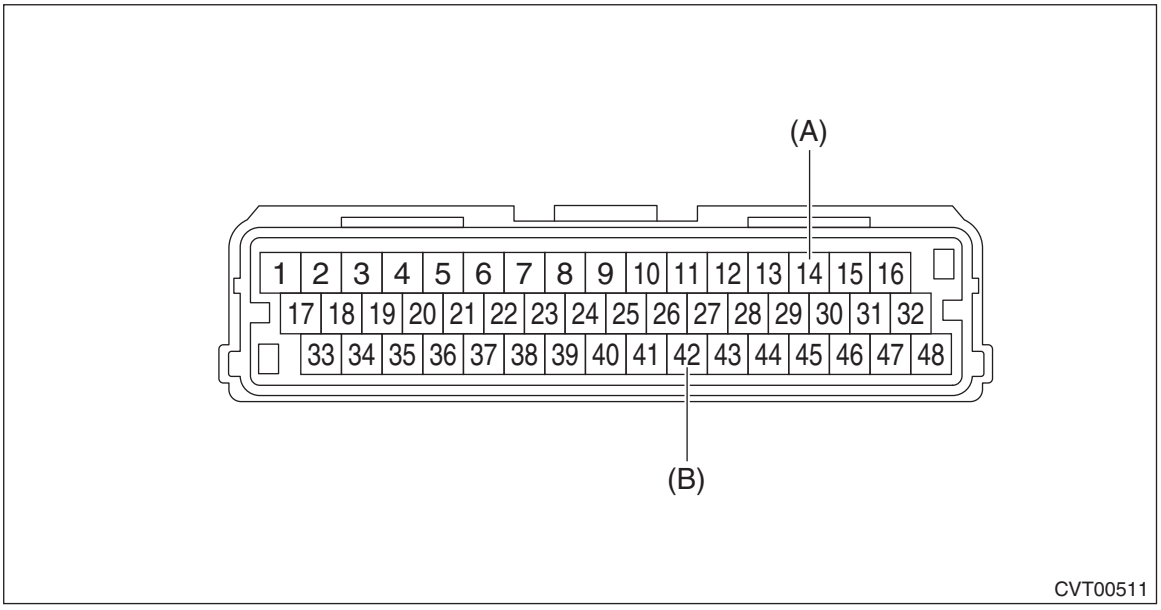
CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

1) Install the primary speed sensor.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Connect the harness connector.
3) Install the harness stay.

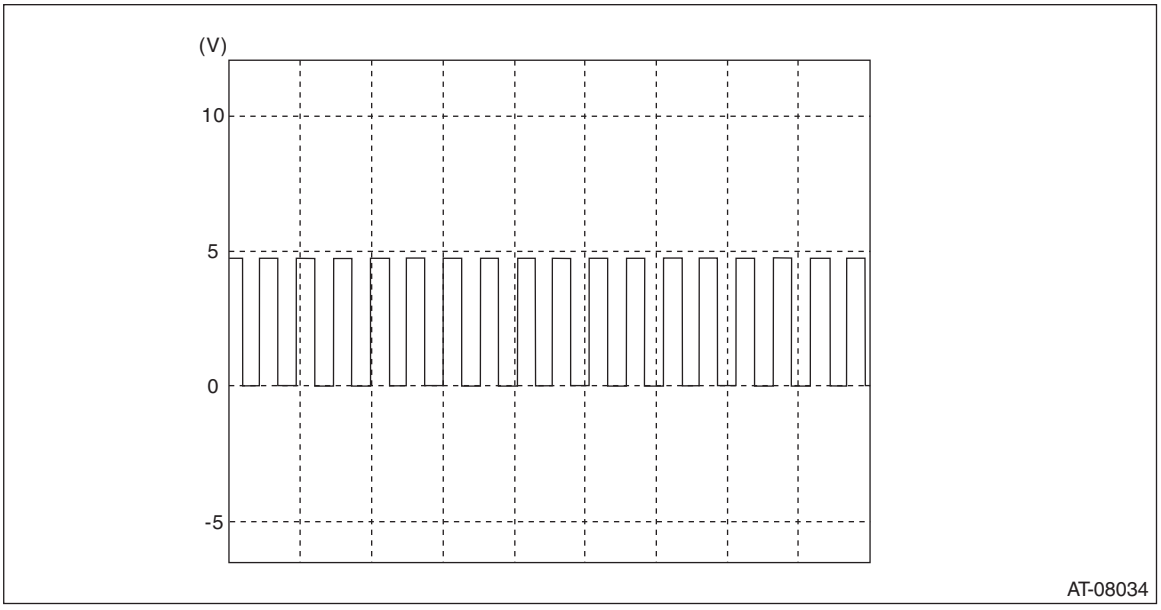


Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

4) Install the air intake boot. <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Install the collector cover.

C: INSPECTION

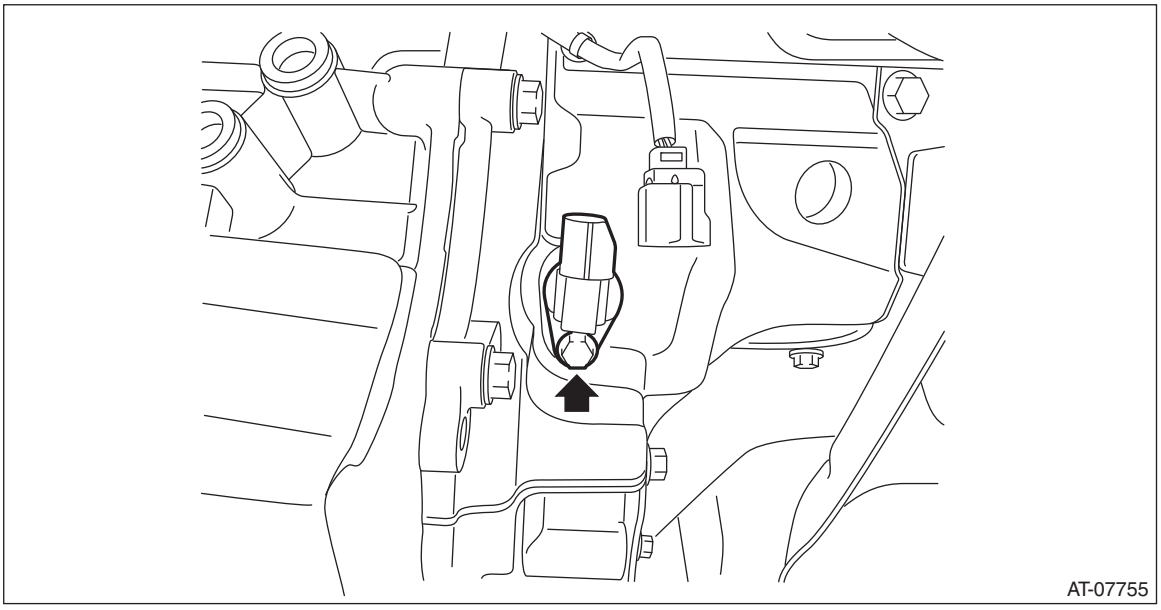
1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-146, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.



Terminals:
No. 14 (+) — No. 42 (–)

(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of primary speed sensor with engine idling.



NOTE:
The waveform cycle changes as the speed changes.

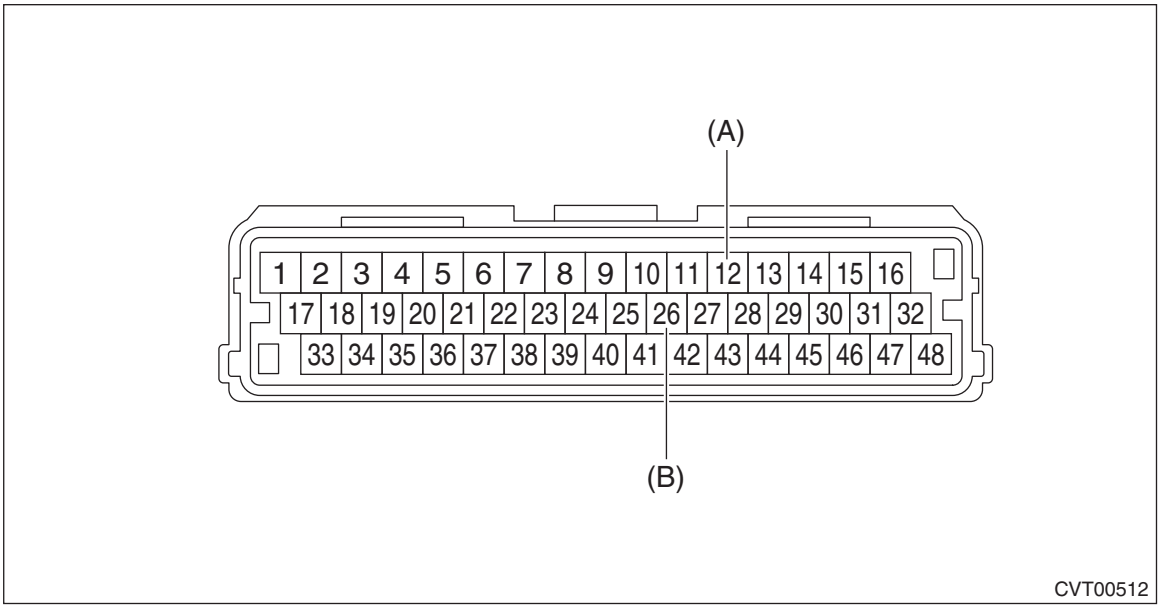
18.Front Wheel Speed Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• When removing front wheel speed sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the front wheel speed sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the front wheel speed sensor harness connector.
5) Remove the front wheel speed sensor.

B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• After installing the front wheel speed sensor, adjust the CVTF level.
1) Install the front wheel speed sensor.

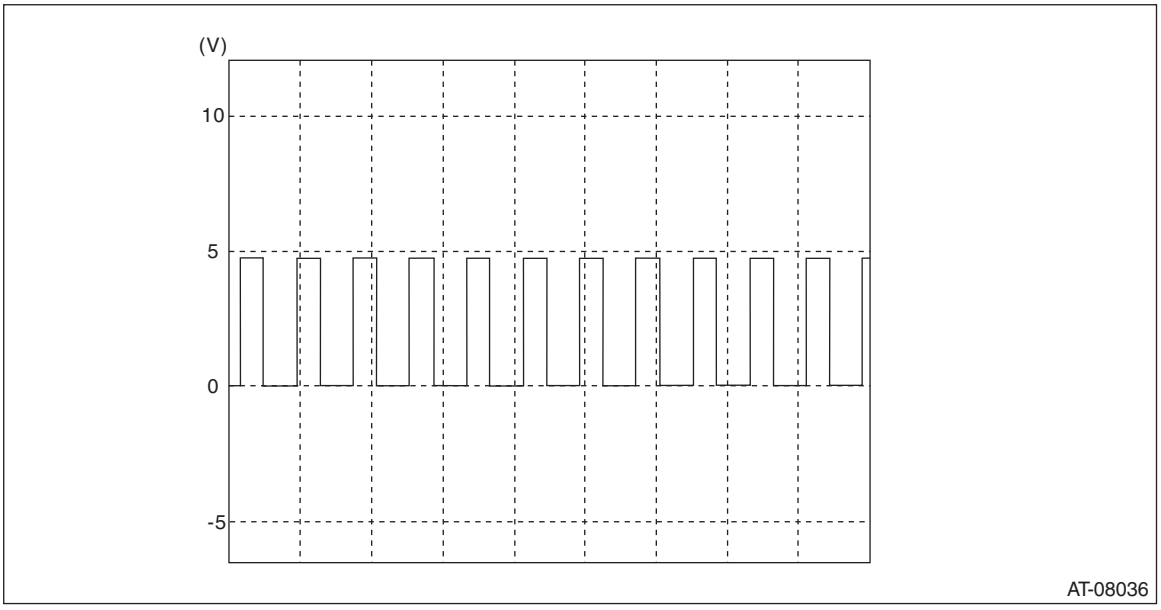


NOTE:
• Use new O-rings.
• Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)
2) Connect the harness connector.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-146, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

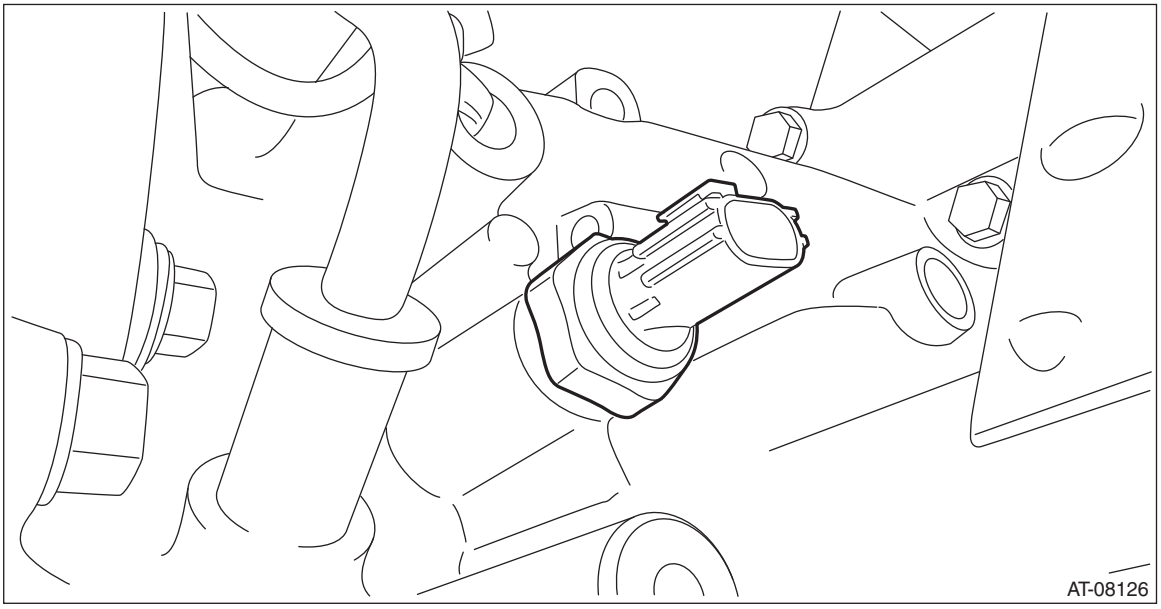


Terminals:
No. 12 (+) — No. 26 (–)

(A) + probe
(B) – probe

4) Lift up the vehicle and raise the vehicle speed up to 20 km/h (12 MPH).
5) Check the waveform of front wheel speed sensor when vehicle speed is at 20 km/h (12 MPH).

NOTE:
The waveform cycle changes as the speed changes.



19.Secondary Pressure Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• When removing secondary pressure sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the secondary pressure sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the secondary pressure sensor harness connector.
5) Remove the secondary pressure sensor.

NOTE:
Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27) deep socket.

B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• After installing the secondary pressure sensor, adjust the CVTF level.
1) Install the secondary pressure sensor.

NOTE:
• Use new O-rings.
• Apply CVTF to the O-rings.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)
2) Connect the harness connector.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

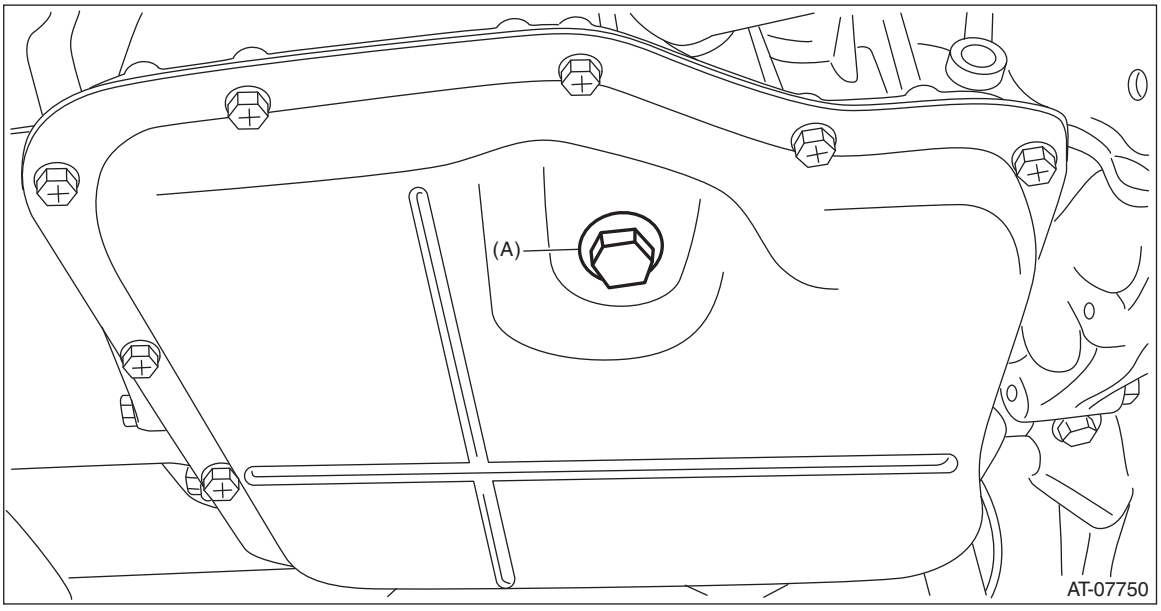
C: INSPECTION

1) Start and warm up the engine.
2) Shift the select lever to “P” or “N” range.
3) Depress the brake pedal and hold it.

4) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is idling. <Ref. to CVT(diag)-18, OPERATION, Subaru Select Monitor.>

Specification:
Approx. 0.8 V

5) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is stopped and the ignition switch is turned on. <Ref. to CVT(diag)-18, OPERATION, Subaru Select Monitor.>



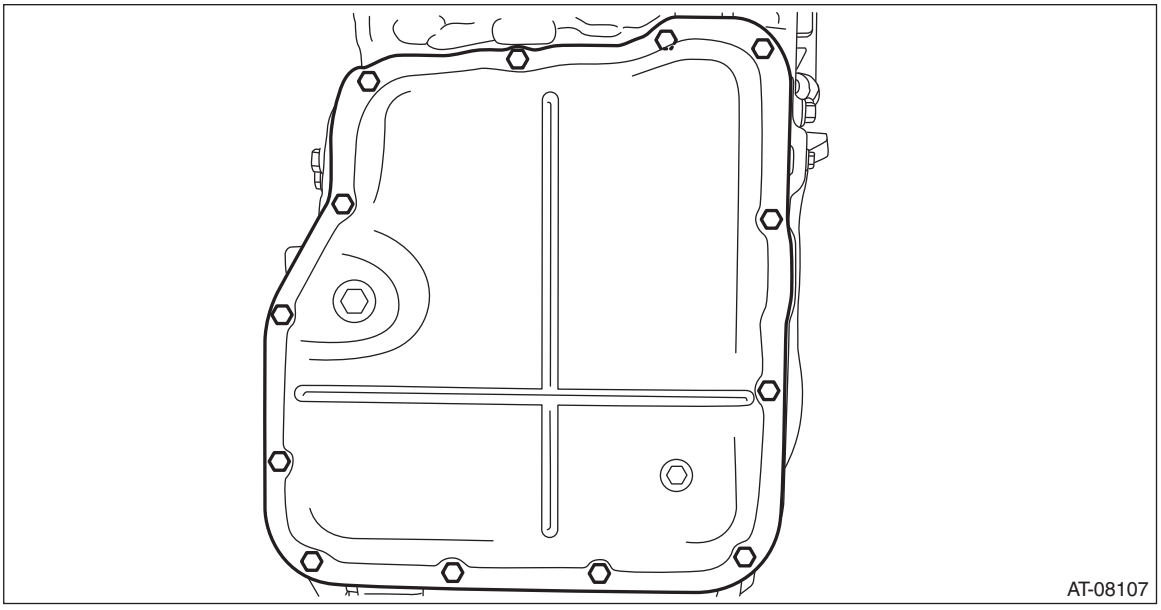
Specification:
Approx. 0.5 V

20.Control Valve Body

A: REMOVAL

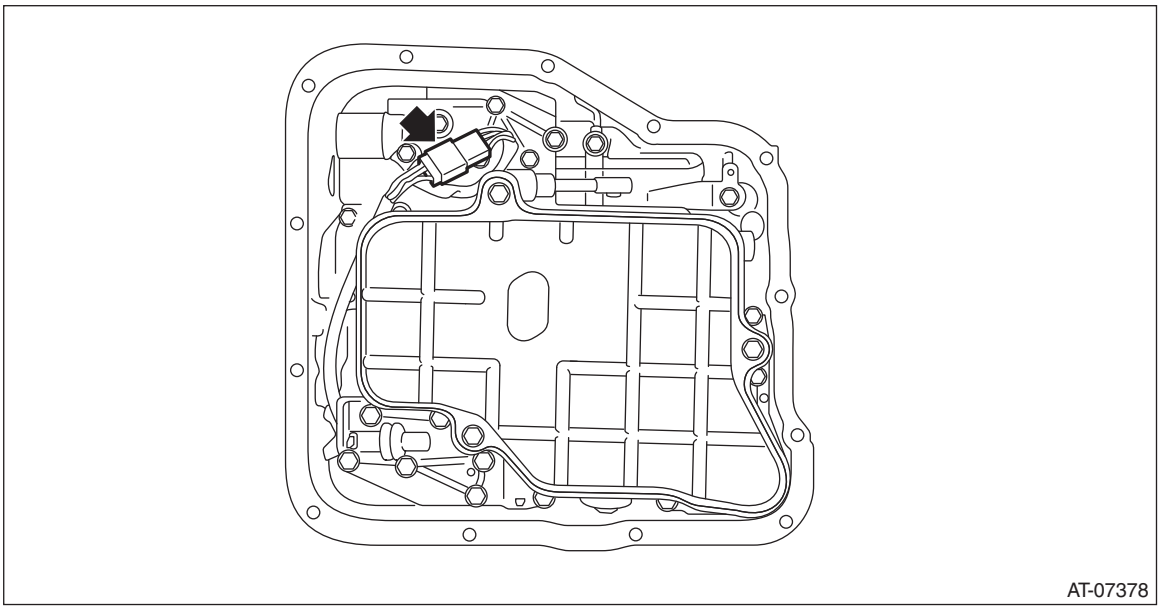
CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.

NOTE:
The control valve body is replaced as an assembly only, because it is a non-disassembly part.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the CVTF drain plug to drain CVTF.



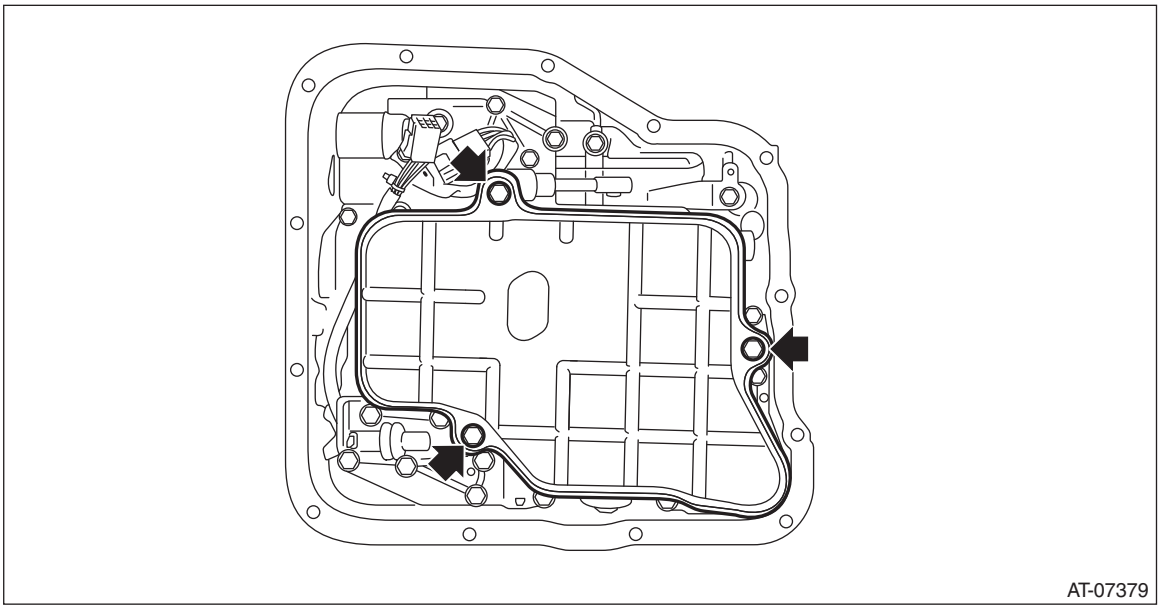
(A) CVTF drain plug

5) Install the CVTF drain plug.



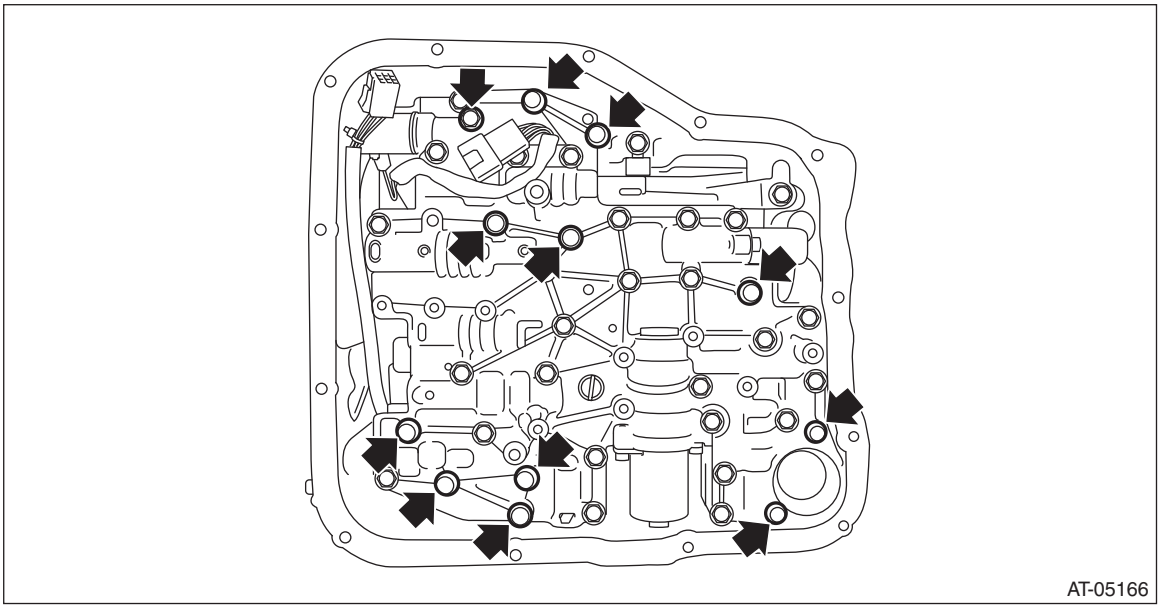
NOTE:
Use a new gasket.

Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)
6) Remove the oil pan.

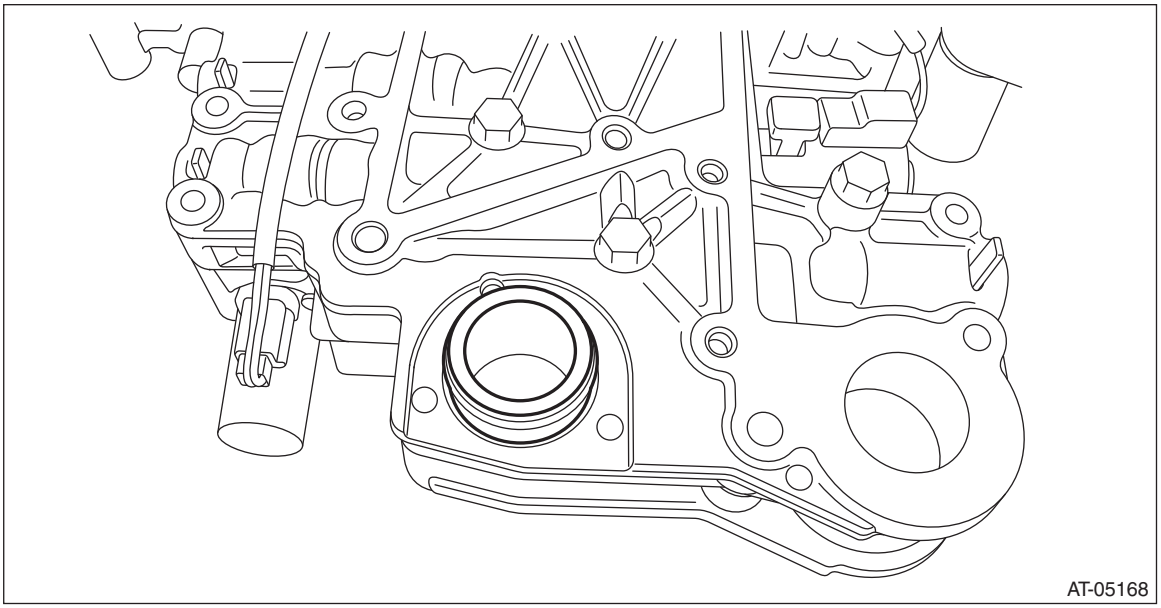


CAUTION:
Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.

7) Remove the magnet.
8) Disconnect the control valve harness connector.

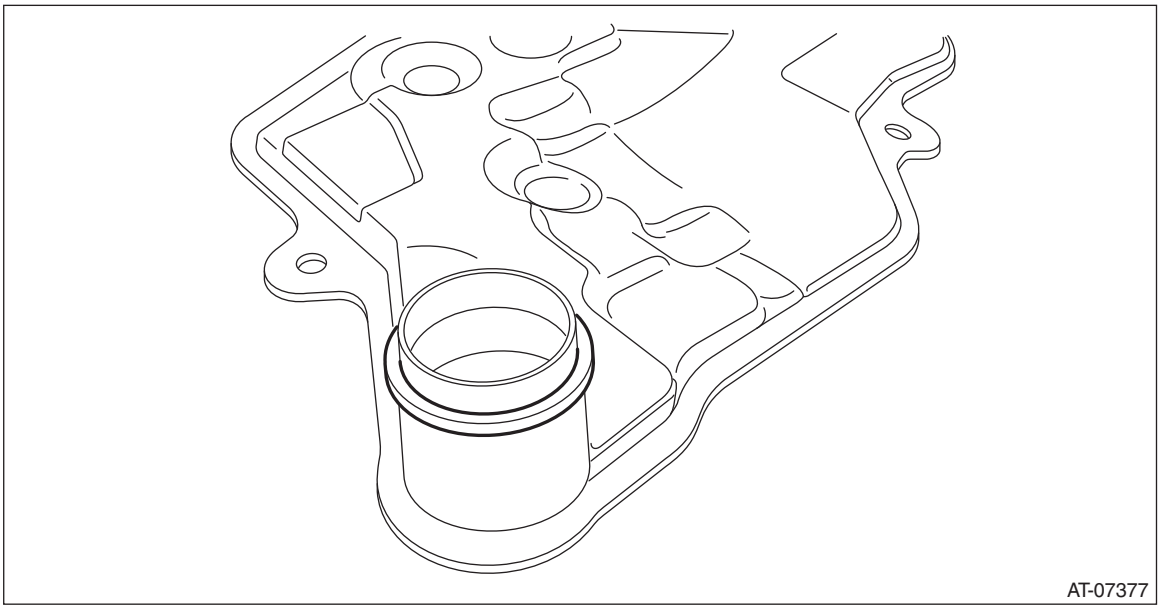


9) Remove the oil strainer.

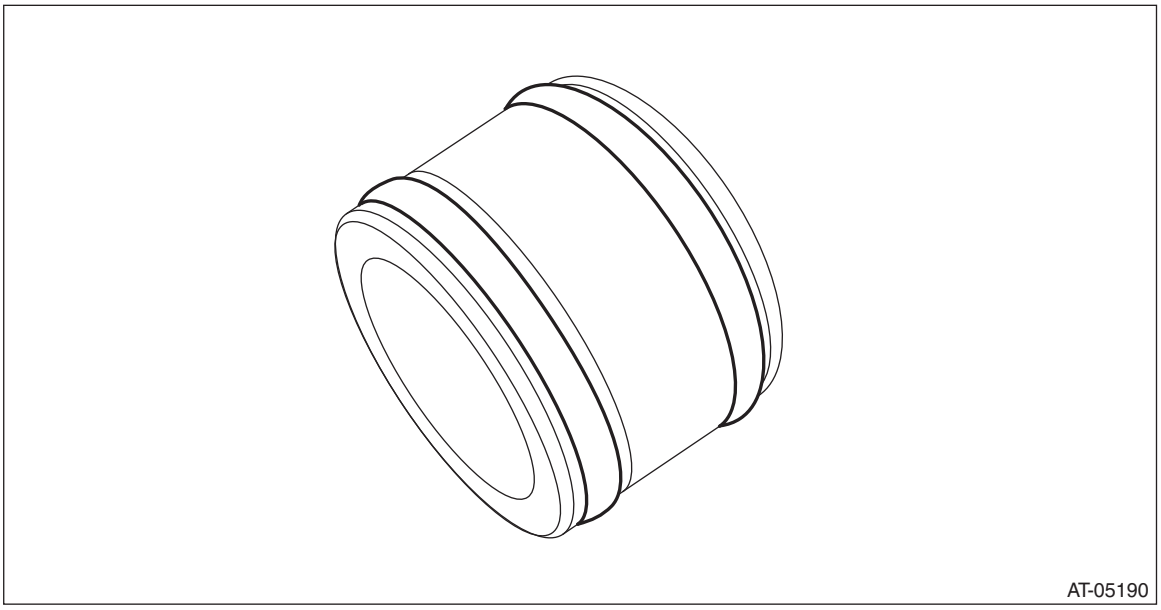


10) Remove the control valve body.

CAUTION:
Do not let the manual valve drop off.

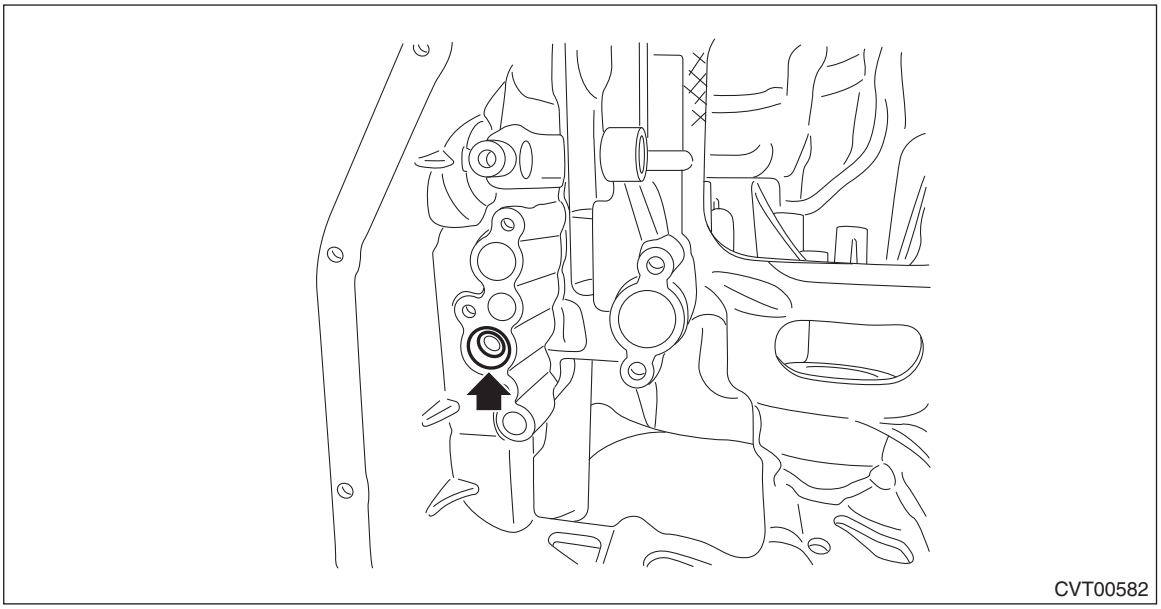


11) Remove the pressure pipe.



NOTE:
It may be located in transmission case side.

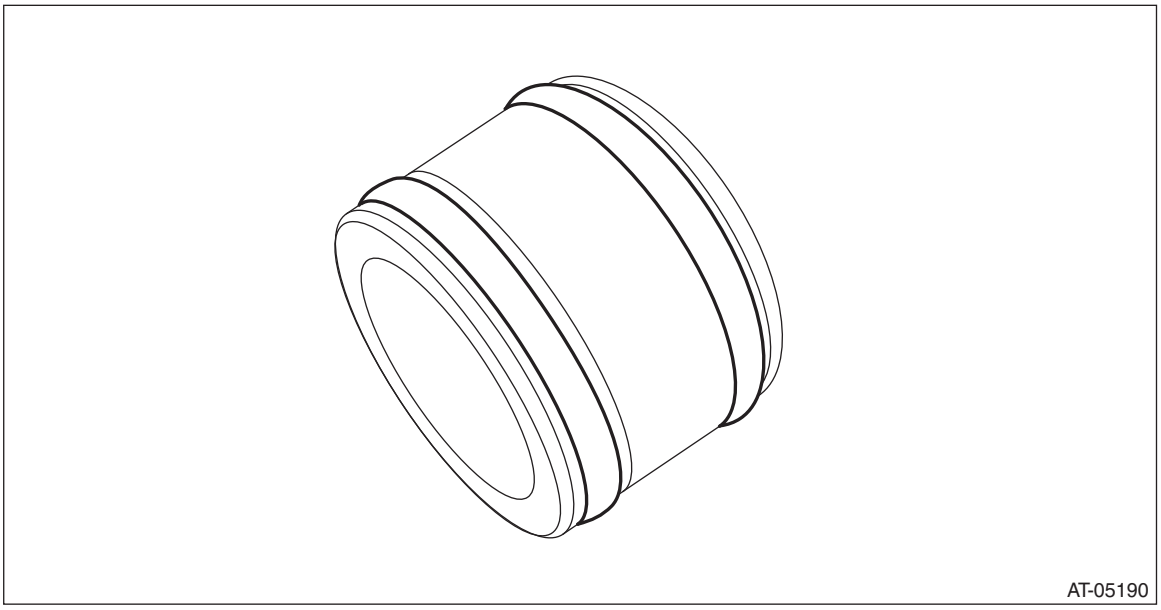
12) Remove the O-ring from oil strainer.



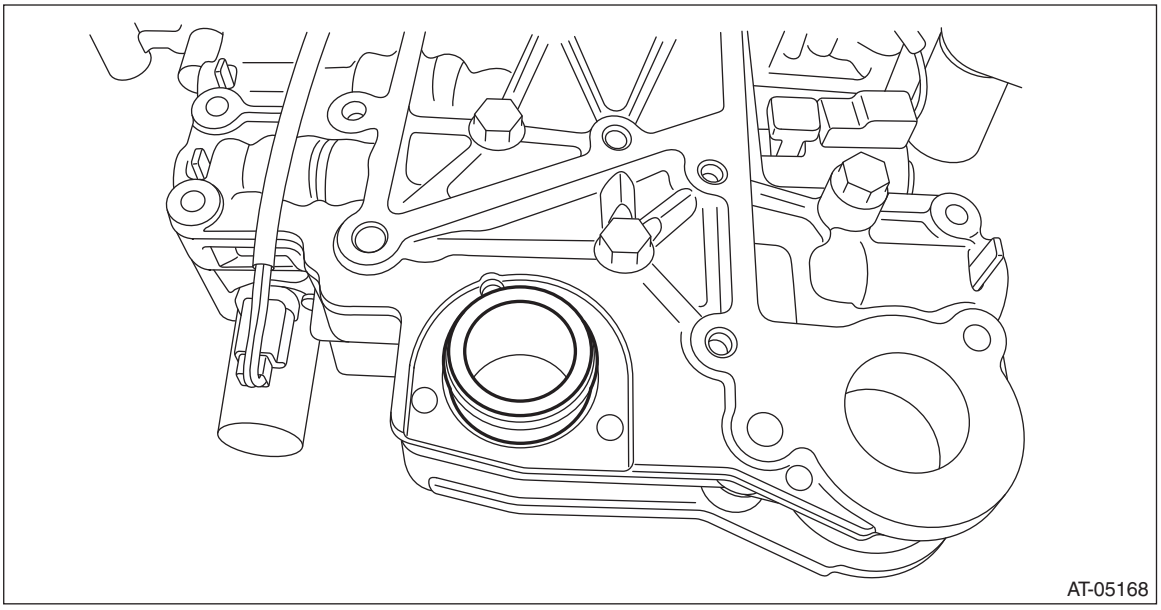
13) Remove the O-ring from pressure pipe.

B: INSTALLATION

1) Clean the mating surface of oil pan and transmission case.
2) Make sure that the CVTF filter is installed to the transmission case.



NOTE:
Make sure that the CVTF filter does not protrude from the transmission case.

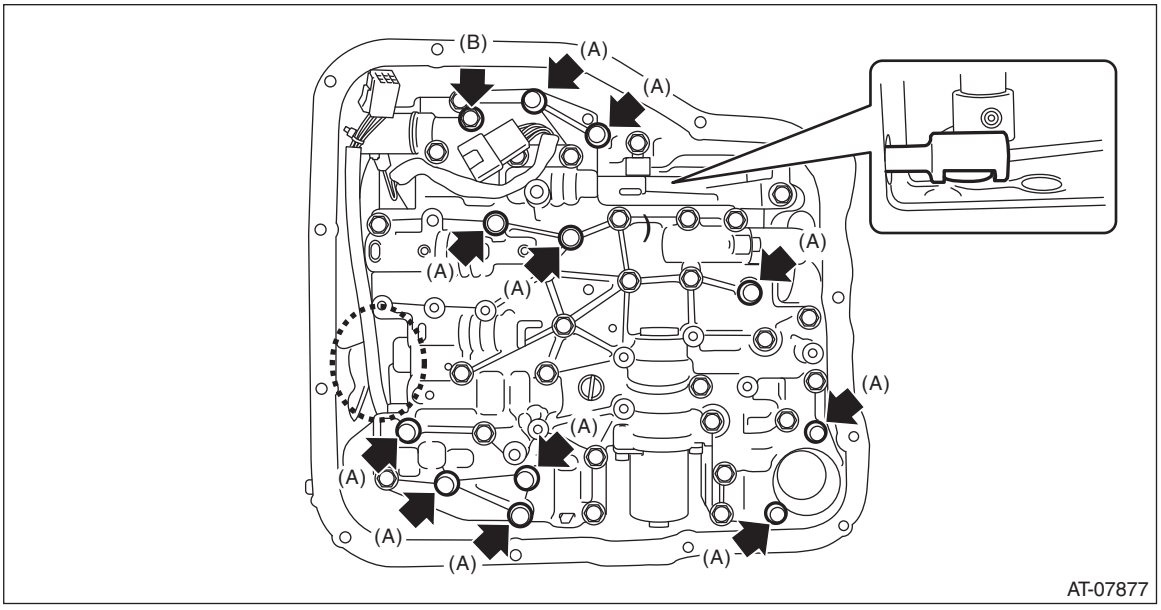


3) Check the control valve body for dust and other foreign matter.
4) Install the O-ring to the pressure pipe.

NOTE:
- Use new O-rings.

- Apply CVTF to the O-rings.

5) Install the pressure pipe.

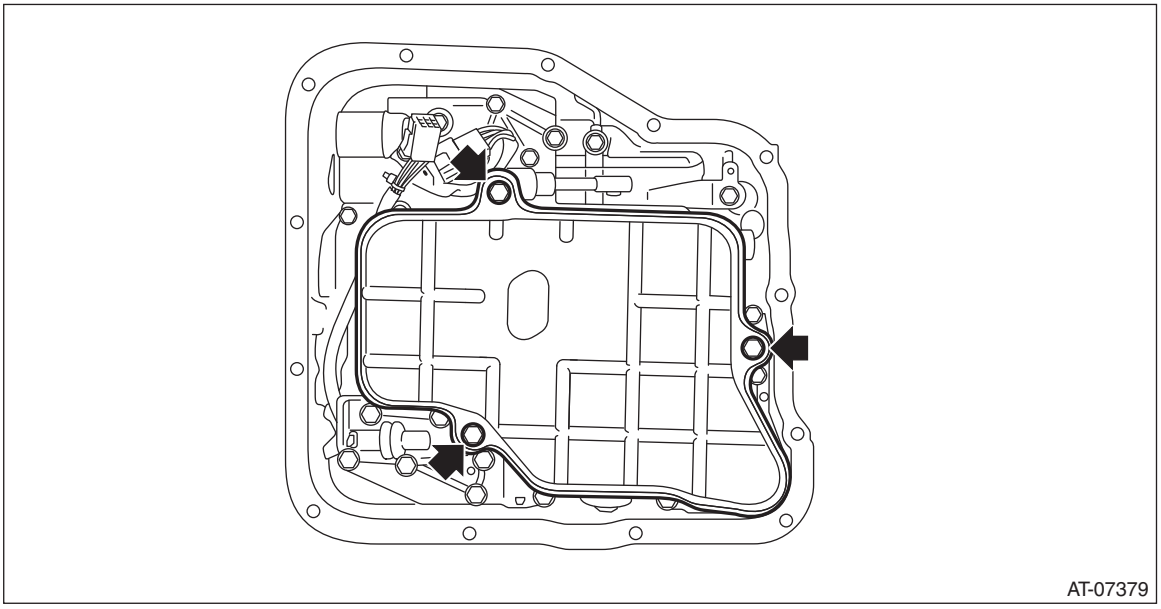


6) Install the control valve body.

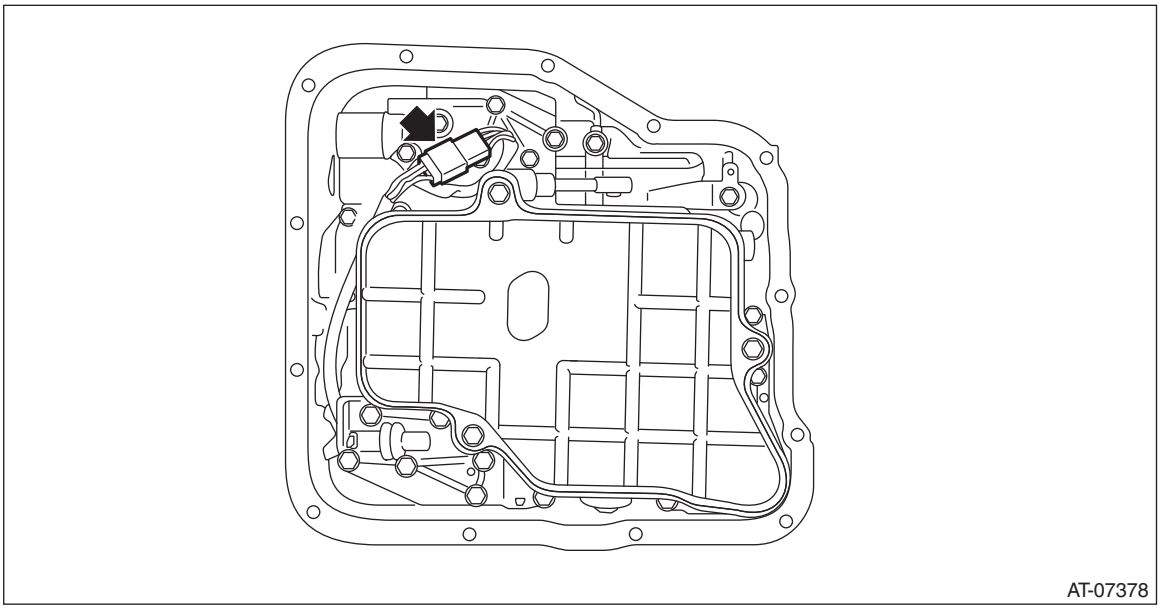
CAUTION:
- **Beware of the transmission harness getting caught in between.**
- **Do not impact or bend the transmission harness because it has the oil temperature sensor inside.**

NOTE:
- Engage the manual valve to the manual plate.
- Lead the transmission harness through from the point indicated by dashed line in the figure.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

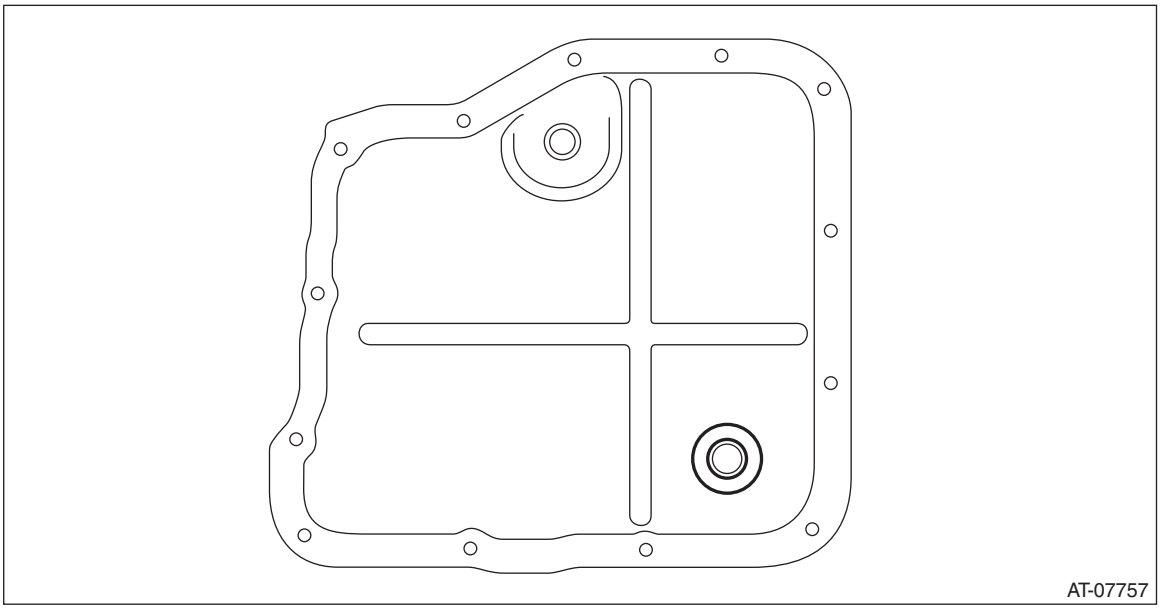


(A) Short bolt (11 pcs)
(B) Long bolt (1 pcs)



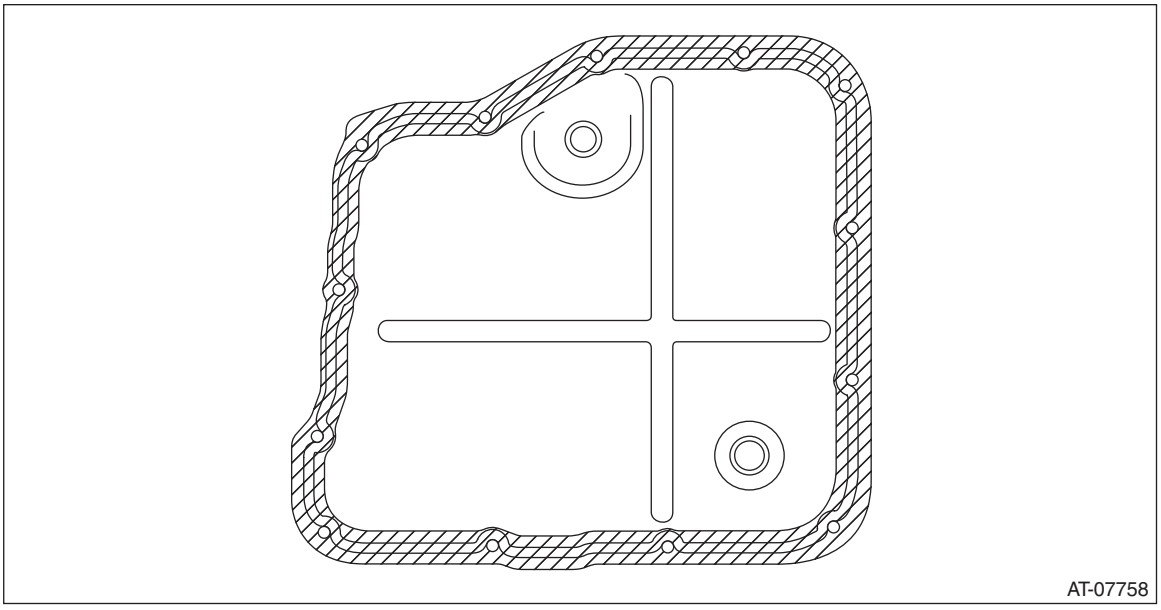
7) Install the O-ring to oil strainer and install the oil strainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Let the transmission harness run between control valve body and oil strainer.



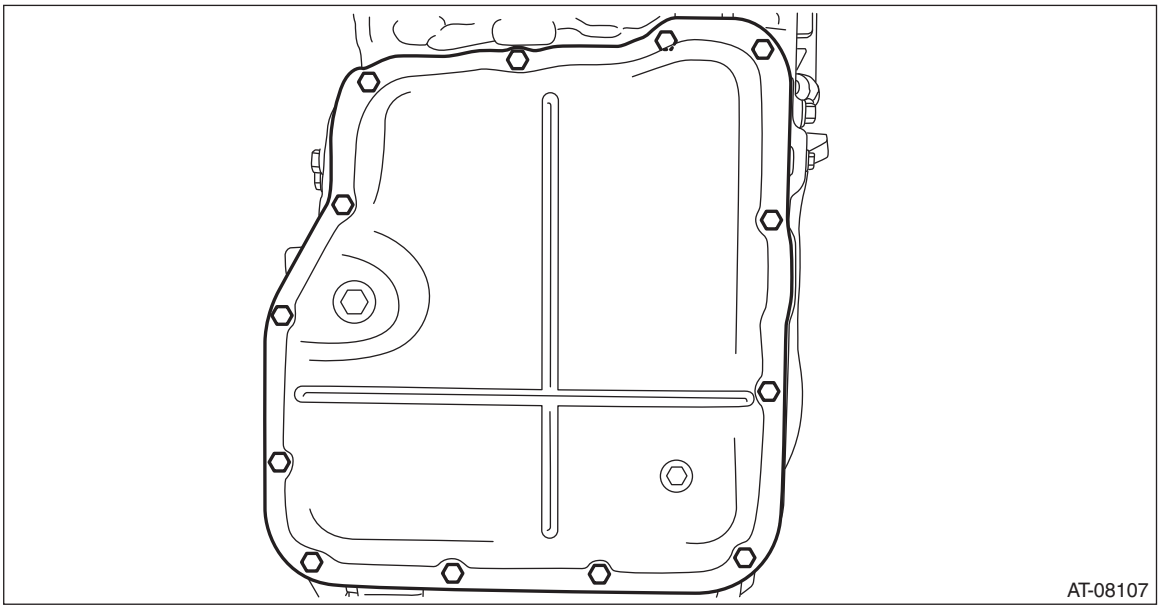
Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

8) Connect the control valve harness connector.



9) Clean the magnet.
10) Attach the magnet at the specified position of the oil pan.

11) Apply liquid gasket all around the oil pan mating surface seamlessly.

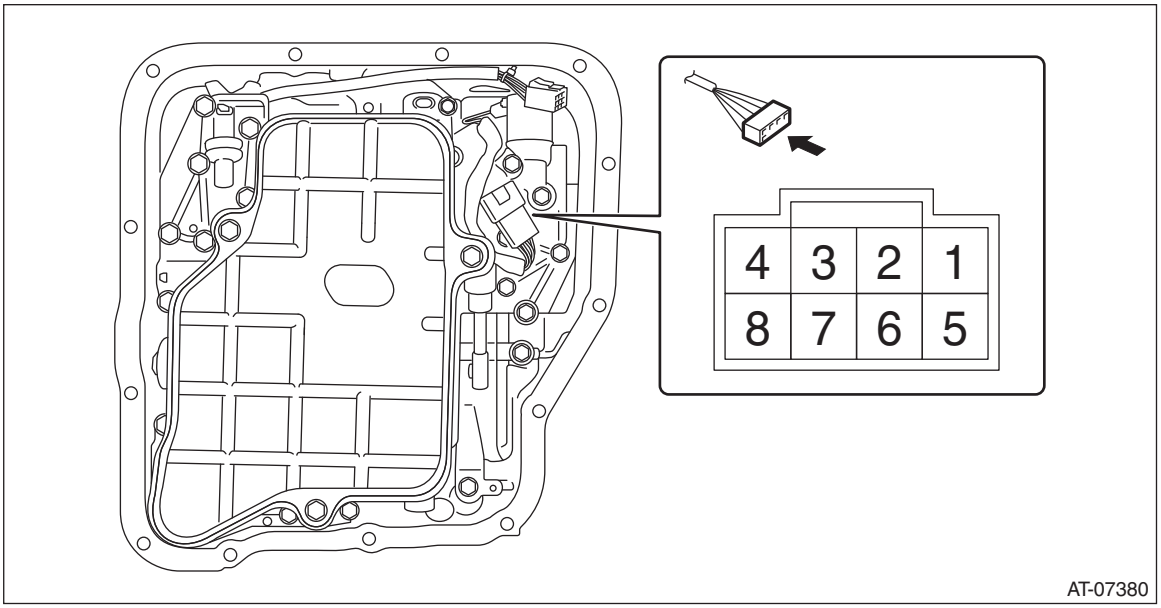


Liquid gasket:
THREE BOND 1217B (Part No. K0877YA020) or equivalent

12) Install the oil pan by equally tightening the bolts.

CAUTION:
Beware of the transmission harness getting caught in between.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

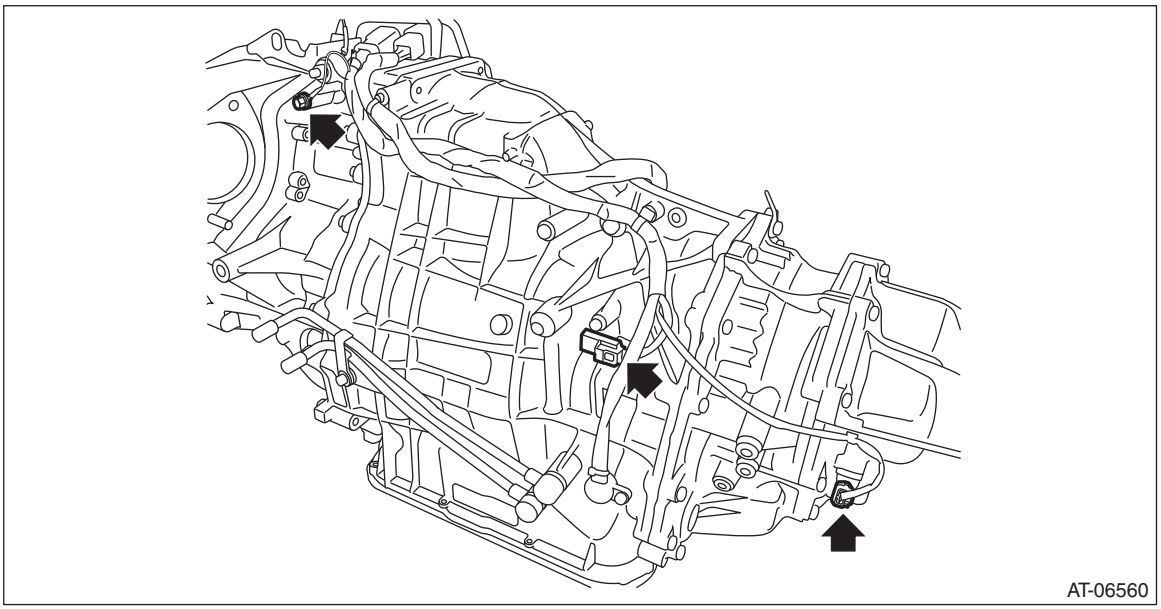


13) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
14) Fill with CVTF. <Ref. to CVT(TR690)-40, REPLACEMENT, CVTF.>
15) Adjust the CVTF level. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
16) Perform the operation of AT learning mode. <Ref. to CVT(diag)-33, Learning Control.>

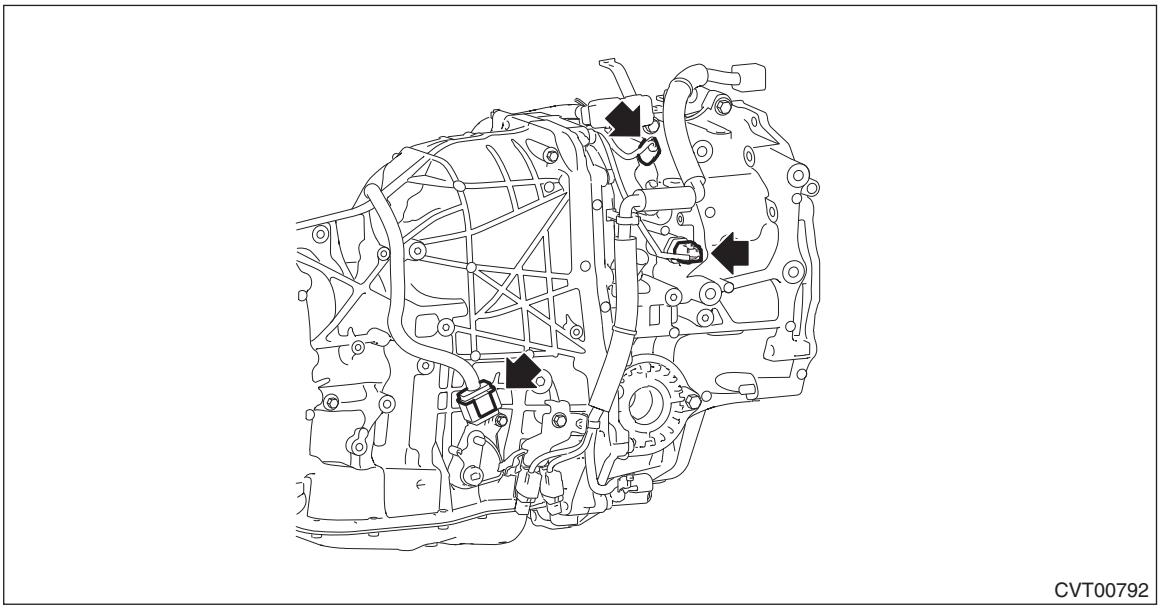
C: INSPECTION

- Check each part for damage or dust.
- Check oil strainer for clogging.
- Measure the resistance of each solenoid.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

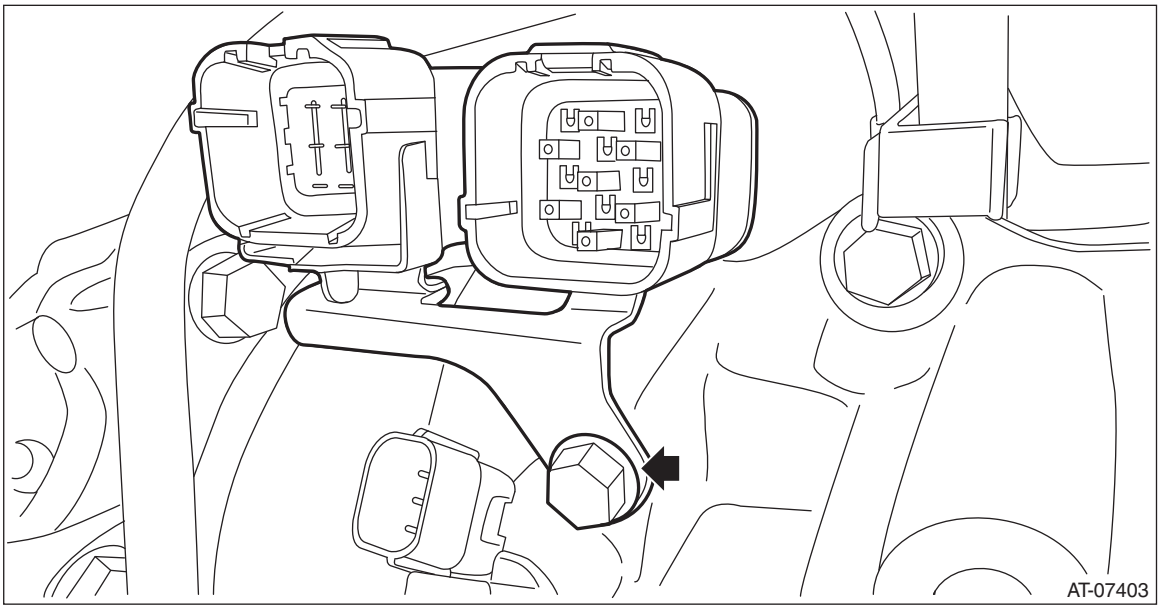


Solenoid	Terminal No.	Standard (Ω)
Secondary solenoid	No. 1 — control valve body	Approx. 6.6 Ω
Lock-up duty solenoid	No. 2 — control valve body	Approx. 12 Ω
F&R solenoid	No. 3 — control valve body	Approx. 5.3 Ω
Lock-up ON/OFF solenoid	No. 5 — control valve body	Approx. 16 Ω
Primary DOWN solenoid	No. 6 — control valve body	Approx. 12 Ω
Primary UP solenoid	No. 7 — control valve body	Approx. 12 Ω
AWD solenoid	No. 8 — control valve body	Approx. 3.2 Ω

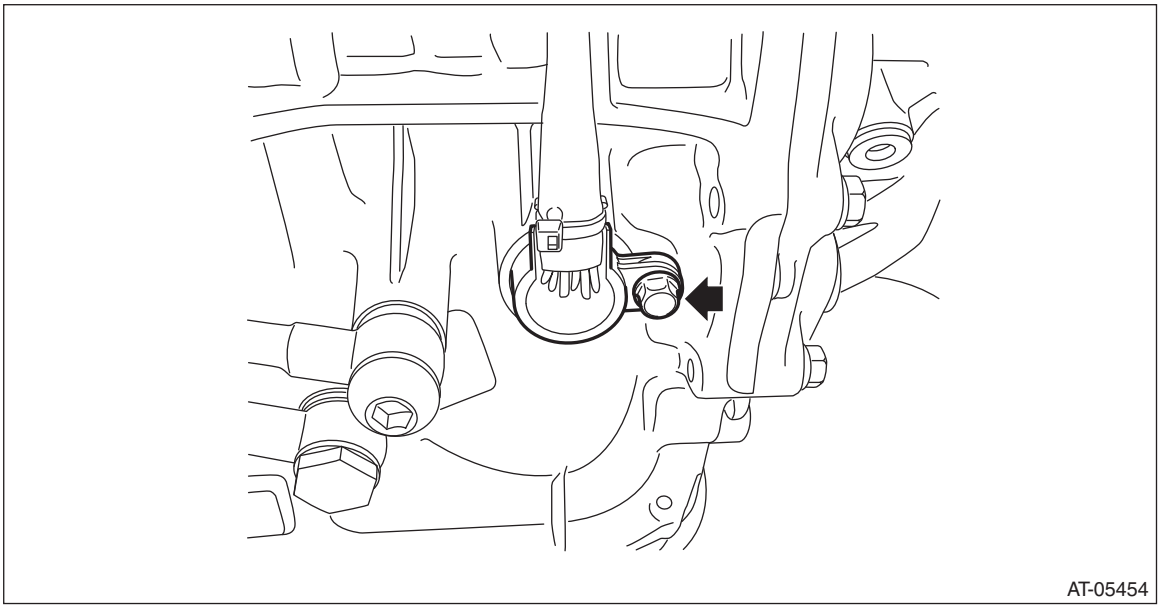


21.Transmission Harness

A: REMOVAL



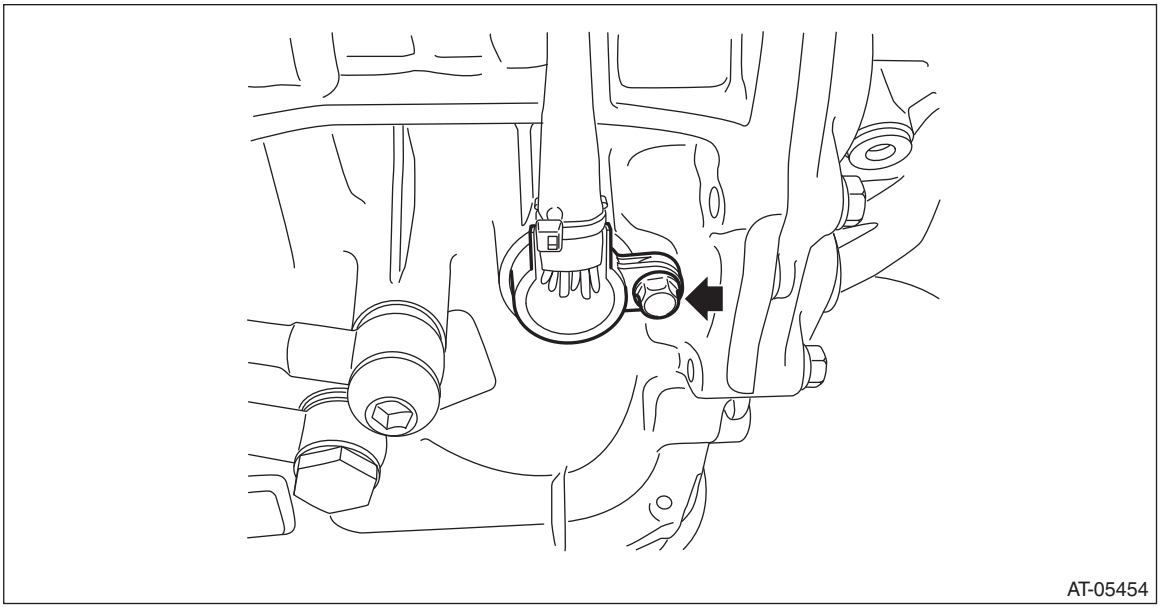
1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Prepare for overhaul. <Ref. to CVT(TR690)-161, Preparation for Overhaul.>
3) Remove the transmission harness ground terminal and remove the harness connectors from front wheel speed sensor and secondary speed sensor.



4) Remove the harness connectors from inhibitor switch, primary speed sensor and secondary pressure sensor.

5) Remove the transmission harness stay.

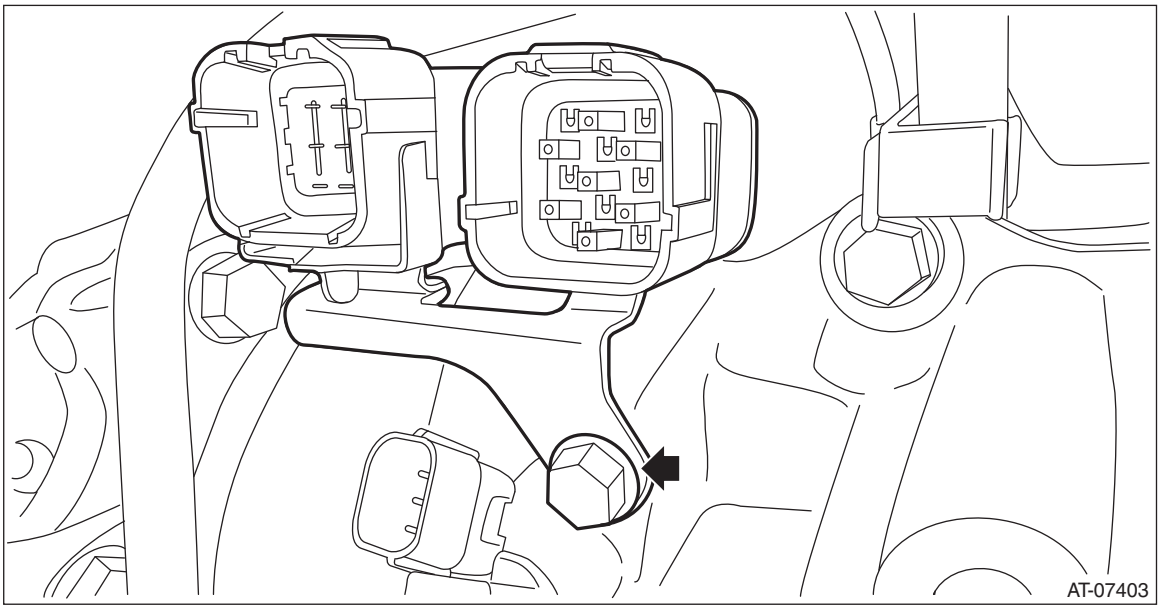
6) Remove transmission harness connector and inhibitor harness connector from harness stay.
7) Remove the control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
8) Remove the mounting bolt to pull out the bushing of transmission harness from transmission case round hole.



9) Remove the harness clip from transmission assembly.

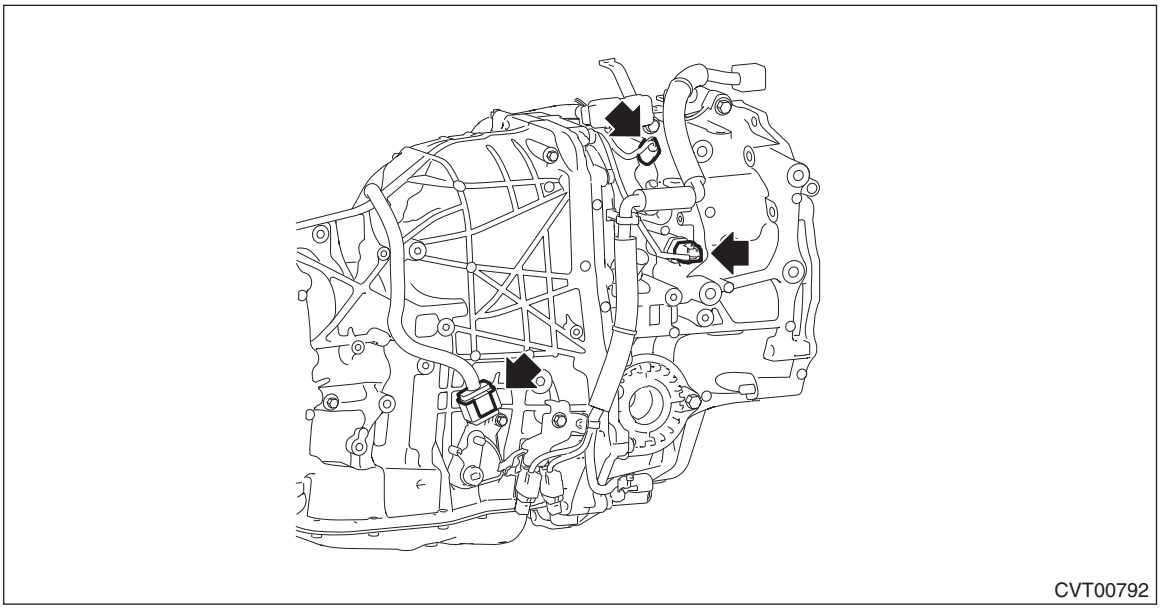
B: INSTALLATION

1) Install the harness clip to the transmission assembly.
2) Insert the transmission harness bushing into the round hole on the transmission case and install the bolt.

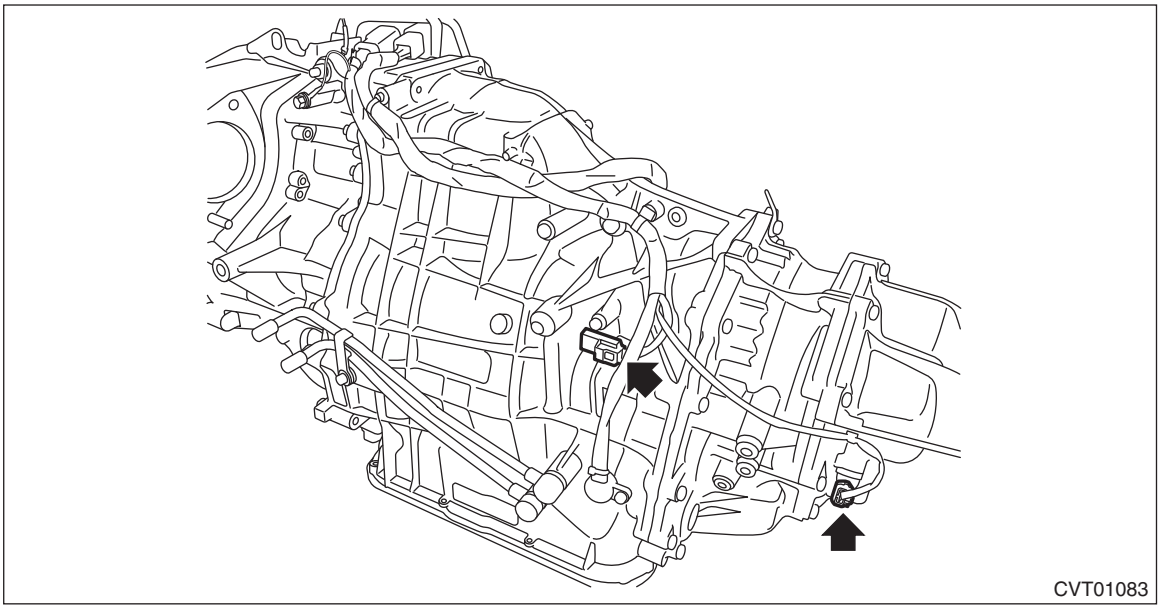


NOTE:
- Use new O-rings.
- Do not impact or bend the transmission harness because it has the oil temperature sensor inside.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

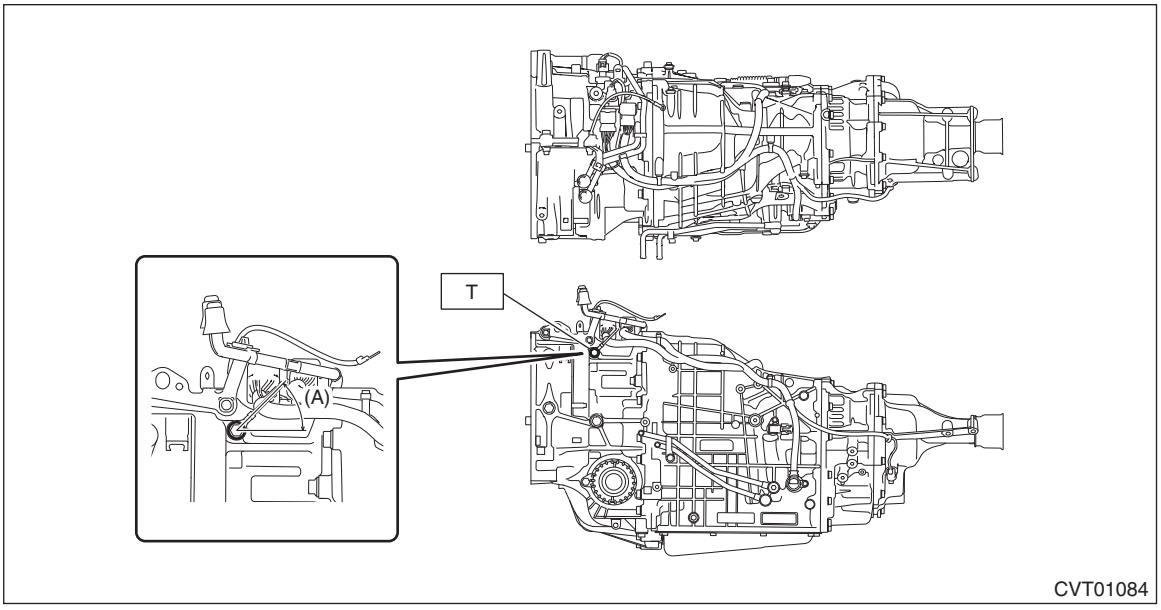


3) Install the control valve body. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
4) Install the transmission harness connector and inhibitor harness connector to the harness stay.
5) Install the transmission harness stay.



Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

6) Connect the harness connectors to the inhibitor switch, primary speed sensor and secondary pressure sensor.



7) Connect the harness connectors to the front wheel speed sensor and secondary speed sensor.

8) Install the transmission ground terminal.

NOTE:
Install the transmission ground terminal at an approximately 45° angle (A).

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

9) Install the transmission cover.

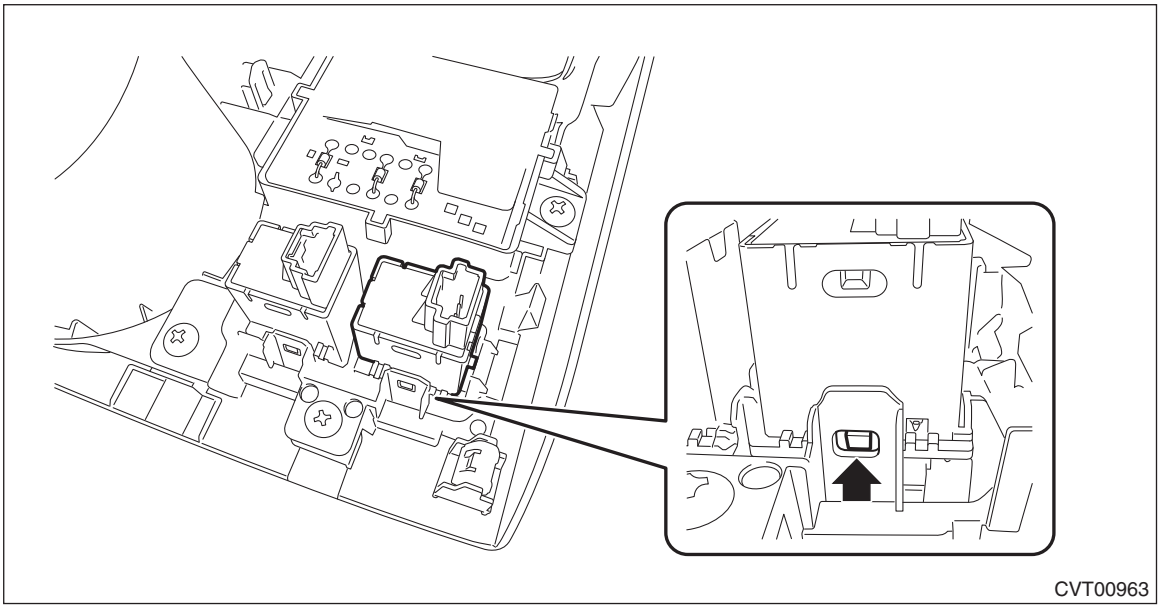
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

10) Install the transmission assembly. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

1) Visually check the harness and connector for damage or crack.
2) Check the harness terminal for rust, disconnection or poor contact.
3) Check the continuity between harness terminals and oil temperature sensor.

NOTE:
Refer to WIRING SECTION for transmission harness terminal and oil temperature sensor terminal. <Ref. to WI-166, WIRING DIAGRAM, CVT Control System.>



Harness continuity standard:
Less than 1 Ω

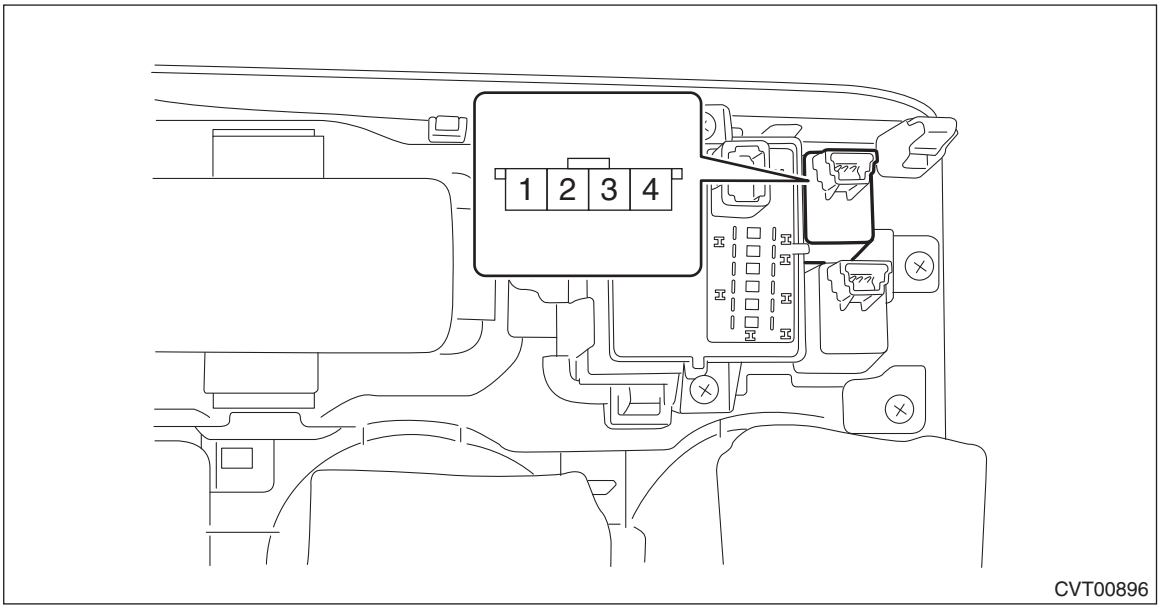
Oil temperature sensor standard:
Approx. 2.6 kΩ (at 20°C)

22.X MODE Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the X mode switch from the cover assembly - front.

B: INSTALLATION



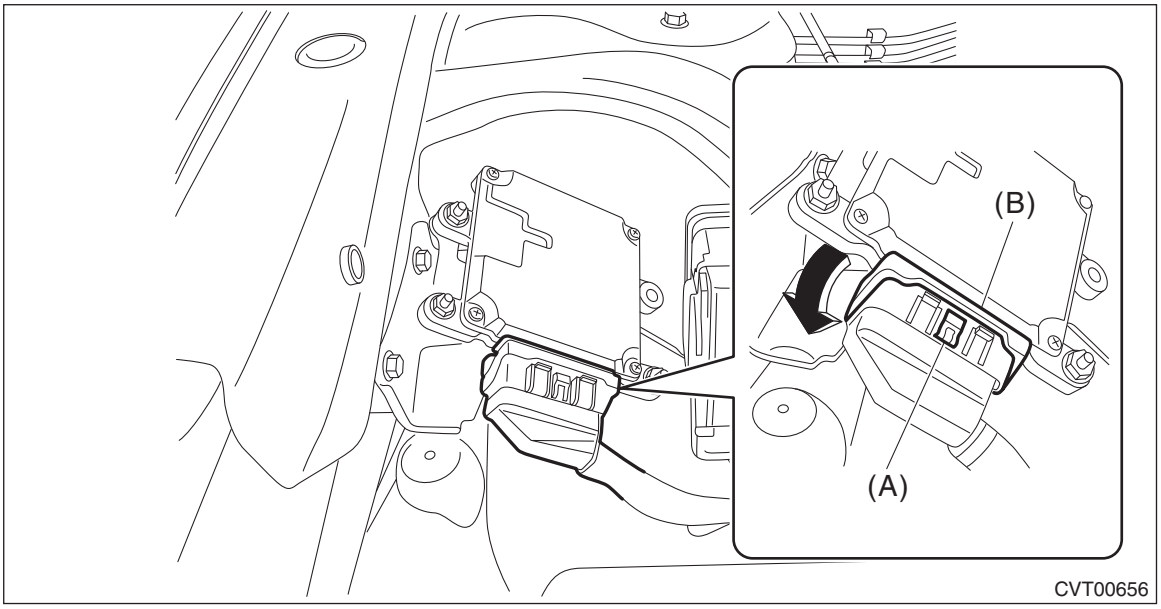
1) Install X mode switch to the cover assembly - front.
2) Install the cover assembly - front. <Ref. to EI-81, INSTALLATION, Console Box.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. CHECK SWITCH UNIT

Measure the resistance between connector terminals of the X mode switch.

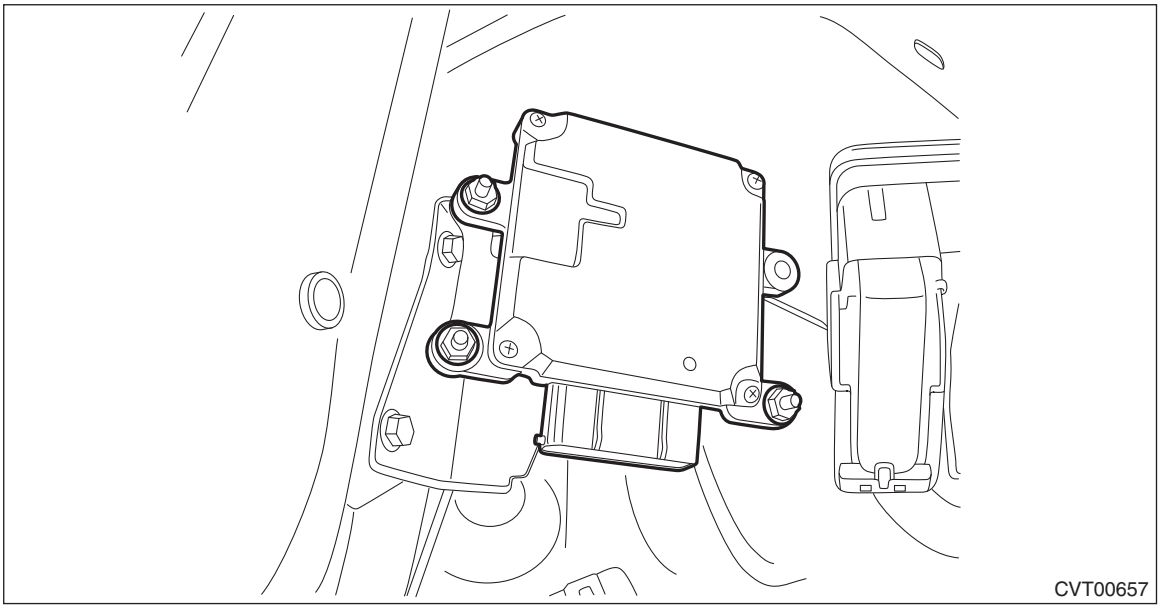
	Terminal No.	Standard
OFF (when measured without operating the switch)	No. 1 — No. 4	1 MΩ or more
ON (when measured with the switch held down)		Less than 1 Ω



2. CHECK X MODE SYSTEM

Refer to “CVT (TR580)” section for X mode system inspection. <Ref. to CVT(TR580)-160, CHECK X MODE SYSTEM, INSPECTION, X MODE Switch.>

23.Transmission Control Module (TCM)

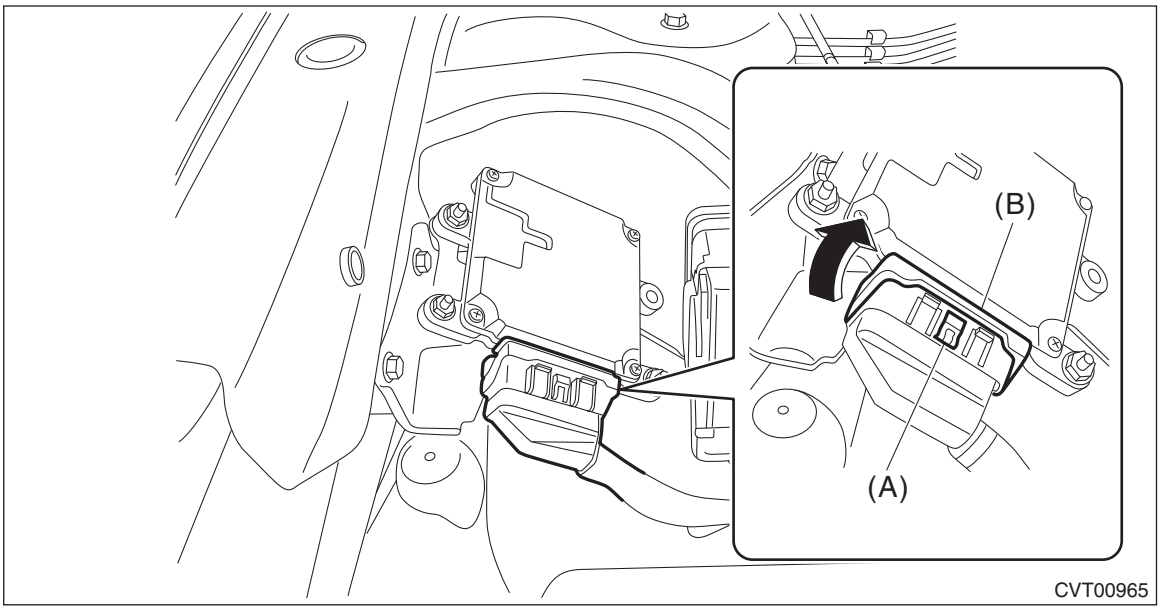


A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air cleaner case. <Ref. to IN(H6DO)-8, REMOVAL, Air Cleaner Case.>
3) Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

(A) Lock button
(B) Lock lever

4) Remove the TCM.



B: INSTALLATION

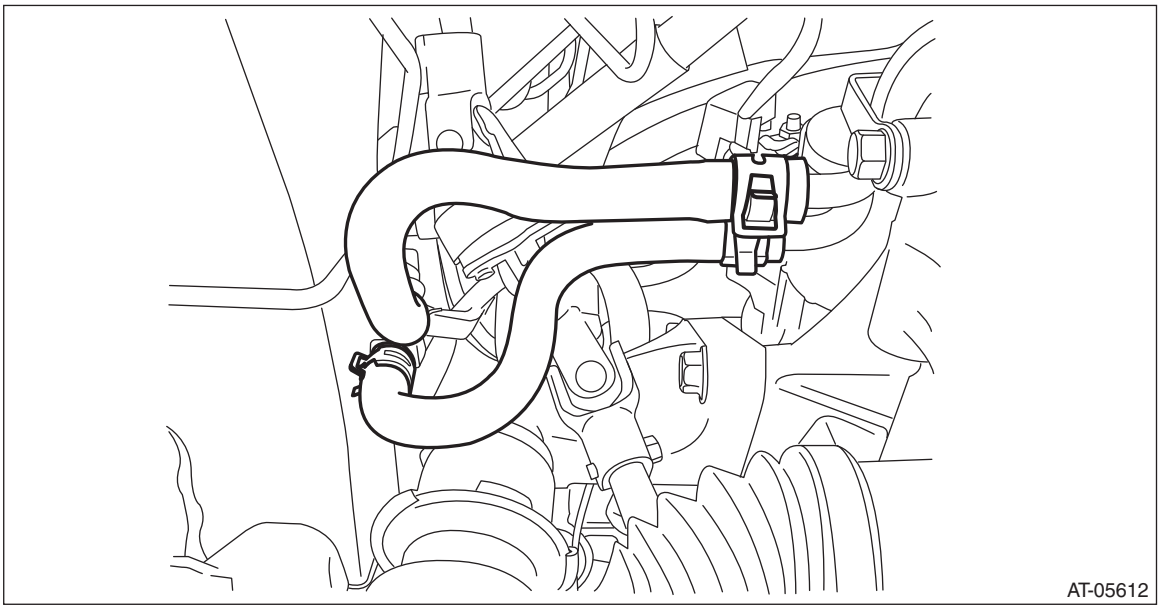
1) Install the TCM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the harness connector to TCM.

NOTE:
- Install the connector in the reverse order of removal.
- Move the lock lever in the arrow direction, and confirm that a clicking sound is heard.

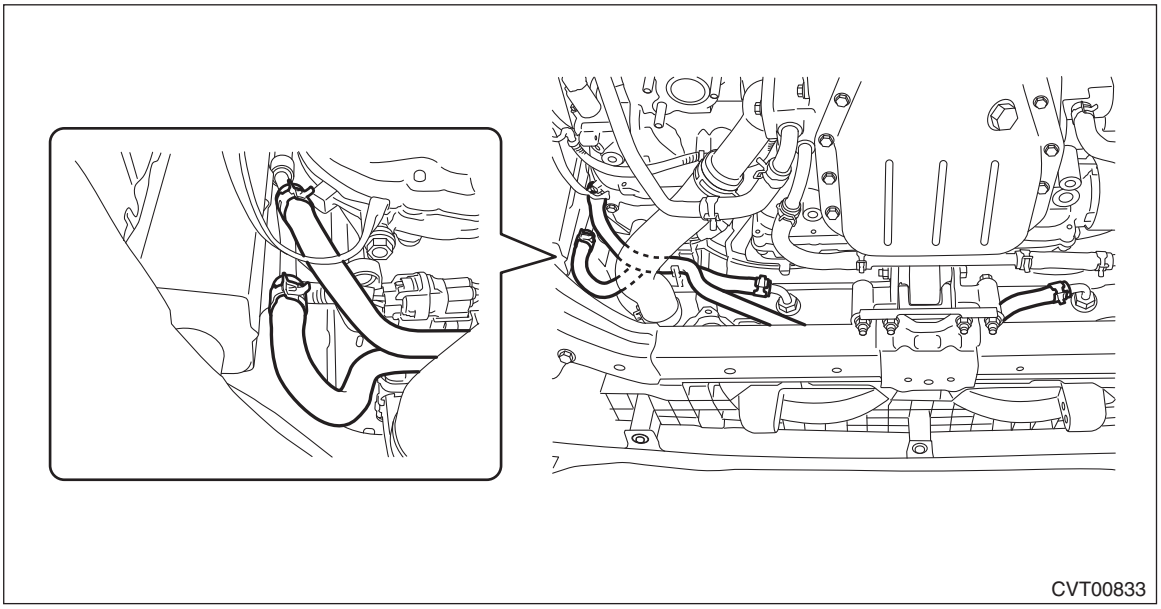
(A) Lock button
(B) Lock lever



3) Install the air cleaner case. <Ref. to IN(H6DO)-8, INSTALLATION, Air Cleaner Case.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Perform the operation of AT learning mode. <Ref. to CVT(diag)-33, Learning Control.>

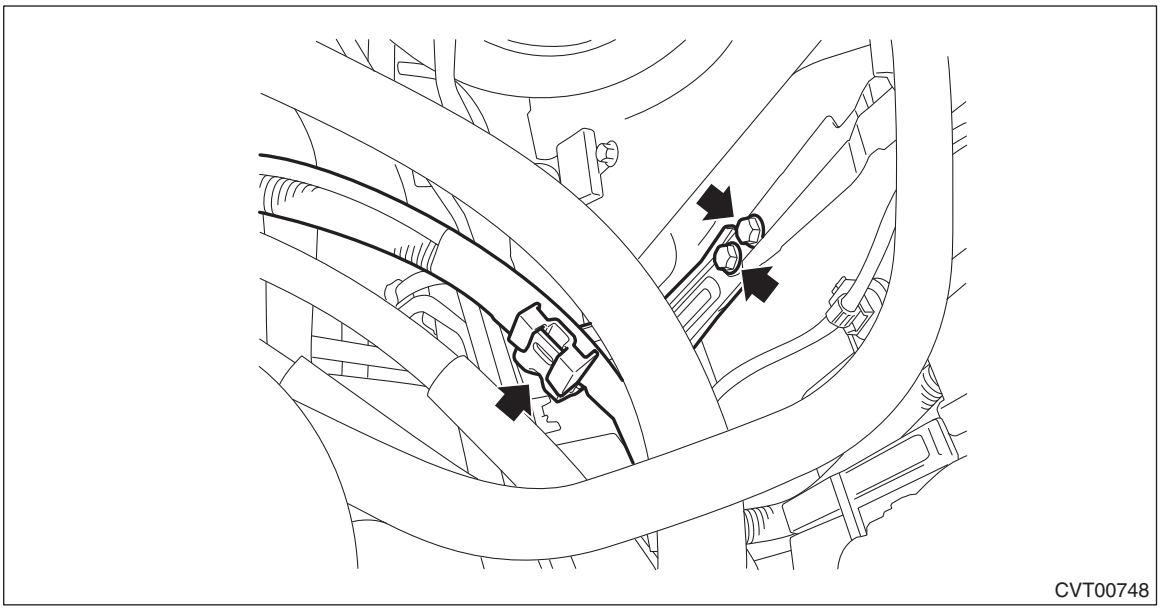
24.CVTF Cooler Pipe and Hose

A: REMOVAL



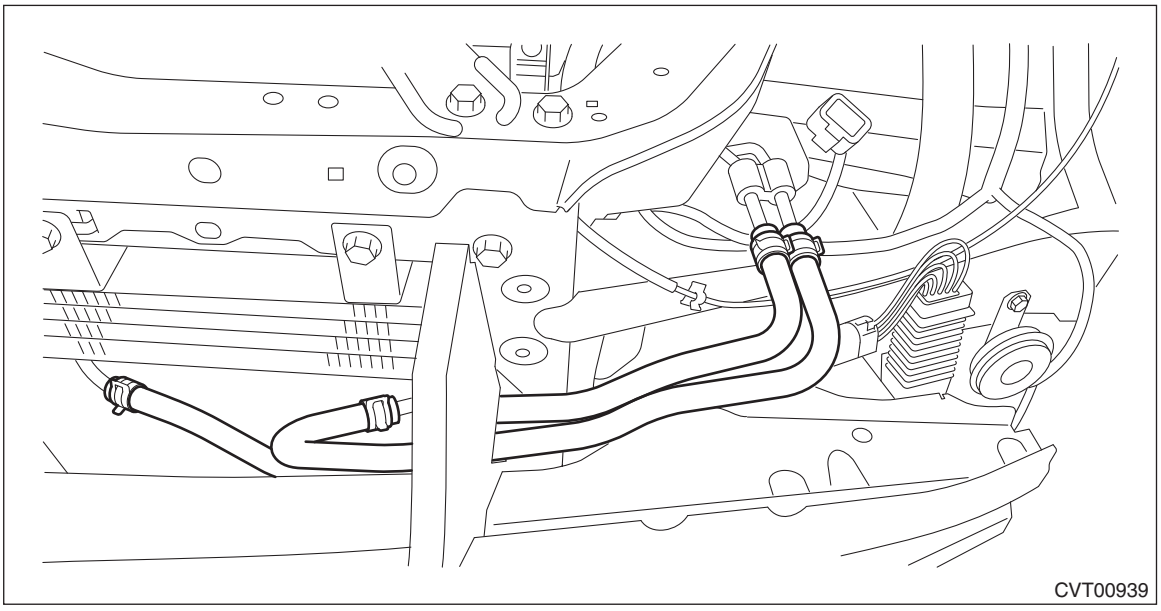
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the CVTF will be hot. Be careful not to burn yourself.
• If the CVTF is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.
• When removing the CVTF cooler pipe assembly on vehicle side, be careful not to bend the A/C pipe.

1) Lift up the vehicle.
2) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
3) Remove the CVTF CVT inlet hose and CVTF CVT outlet hose.

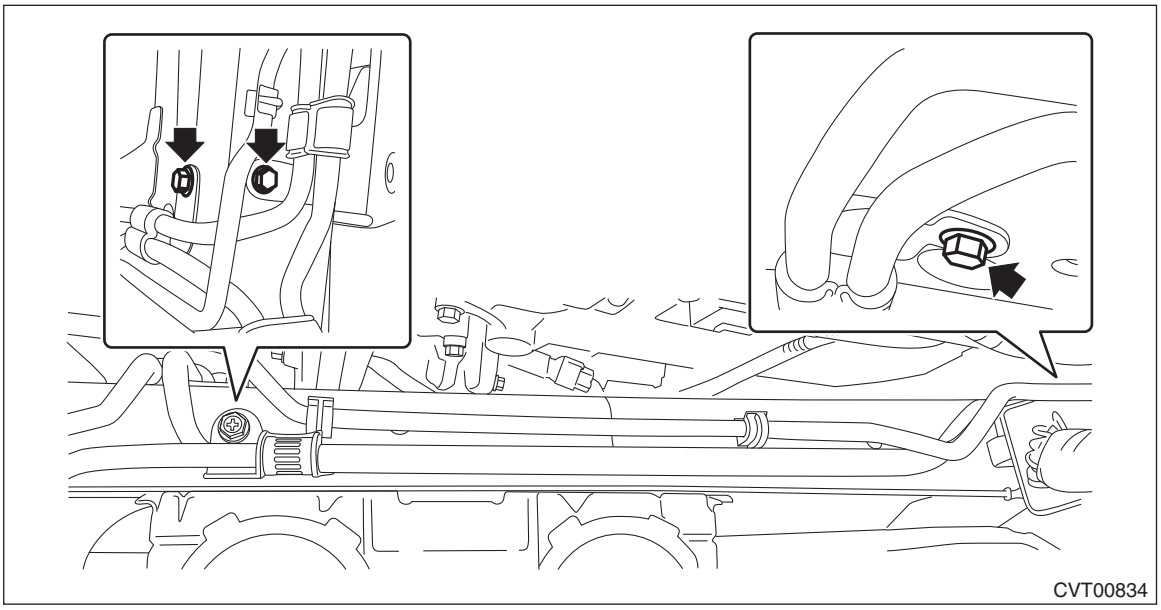


4) Remove the CVTF radiator inlet hose and CVTF radiator outlet hose on radiator side.

CAUTION:
Do not use a screwdriver or other pointed tools.

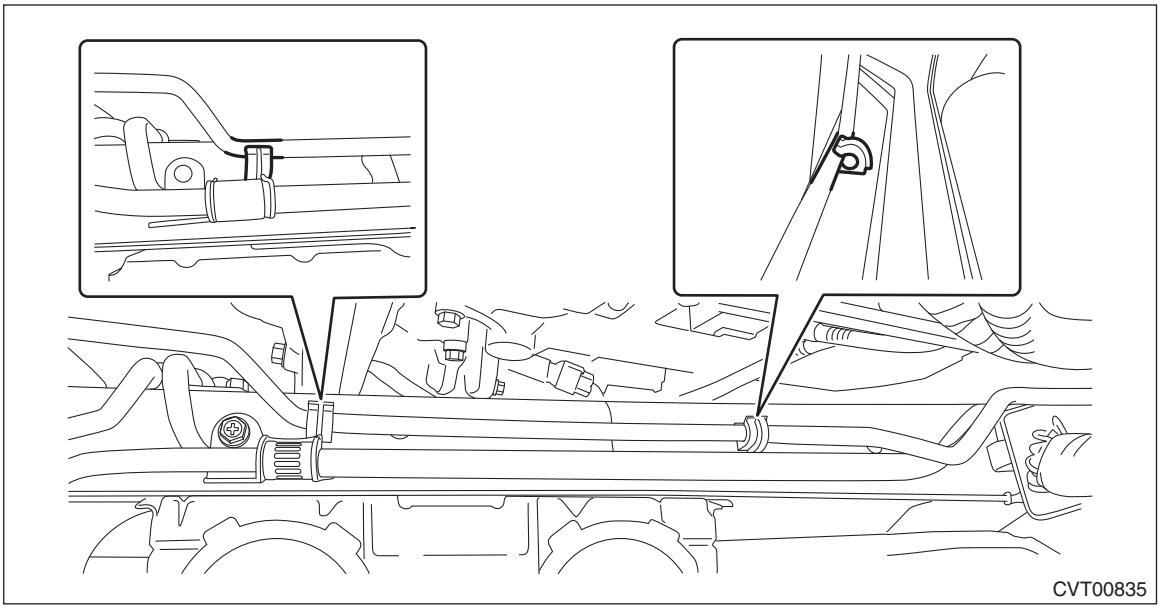


5) Lower the vehicle.



6) Remove the battery and battery box. <Ref. to SC(H6DO)-58, REMOVAL, Battery.>
7) Remove the engine coolant reservoir tank. <Ref. to CO(H6DO)-47, REMOVAL, Reservoir Tank.>
8) Remove the battery cable clip from the bracket, and remove the battery cable bracket.

CVT00748

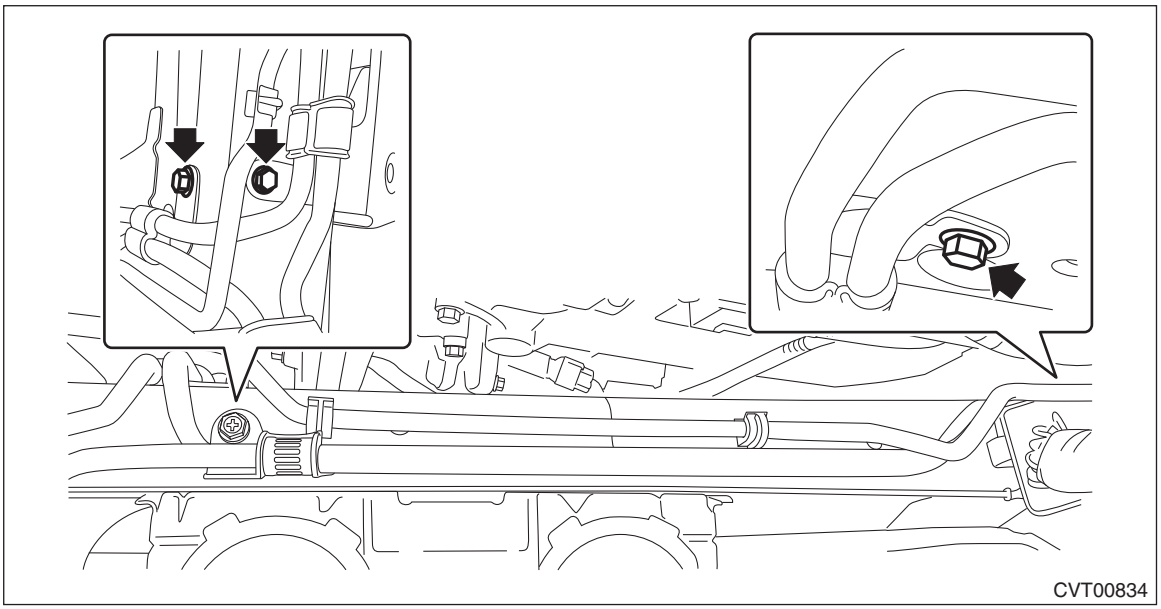


9) Remove the front bumper. (OUTBACK model) <Ref. to EI-32, REMOVAL, Front Bumper.>
10) Remove the headlight assembly LH. (OUTBACK model) <Ref. to LI-37, REMOVAL, Headlight Assembly.>
11) Remove the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose. (OUTBACK model)

CVT00939

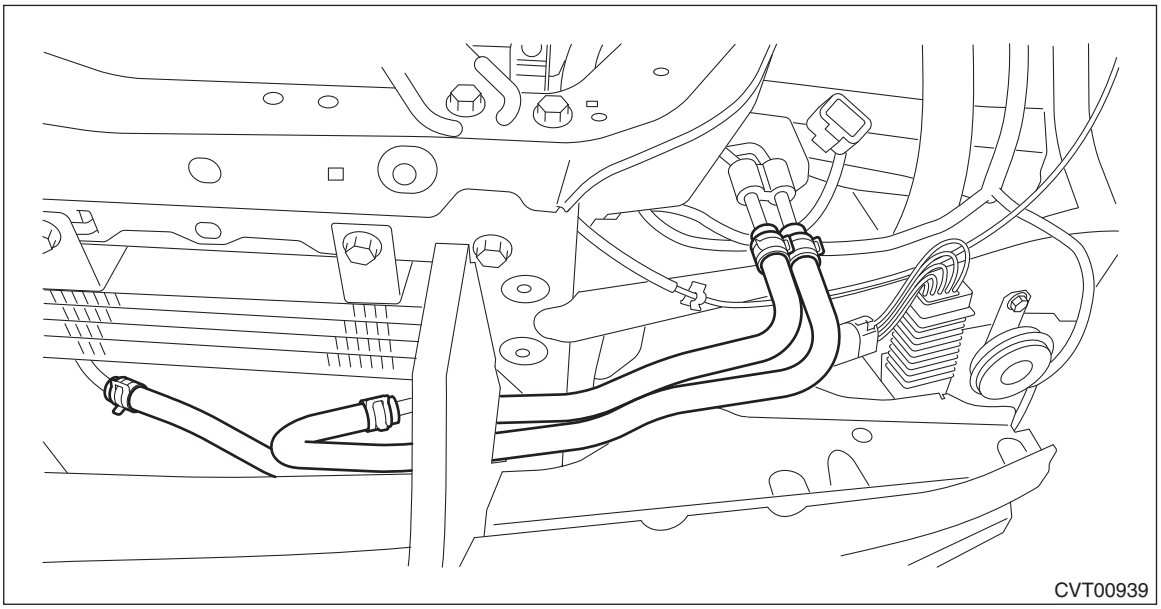
12) Remove the CVTF cooler pipe assembly mounting bolt.

13) Detach the A/C pipe from clip.



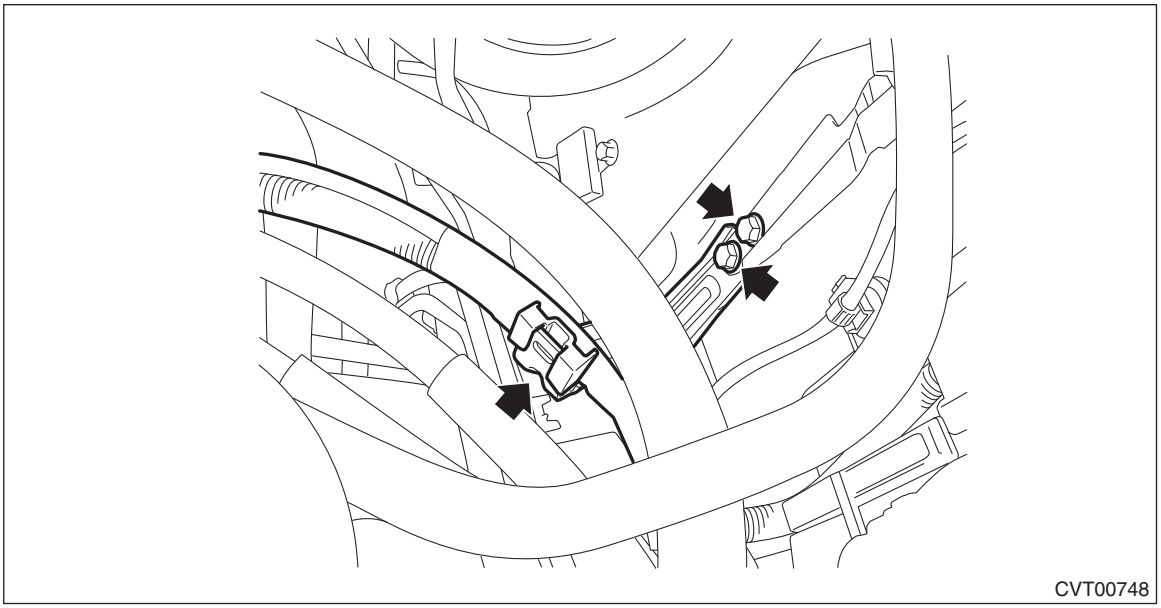
14) Remove the CVTF cooler pipe assembly.

B: INSTALLATION



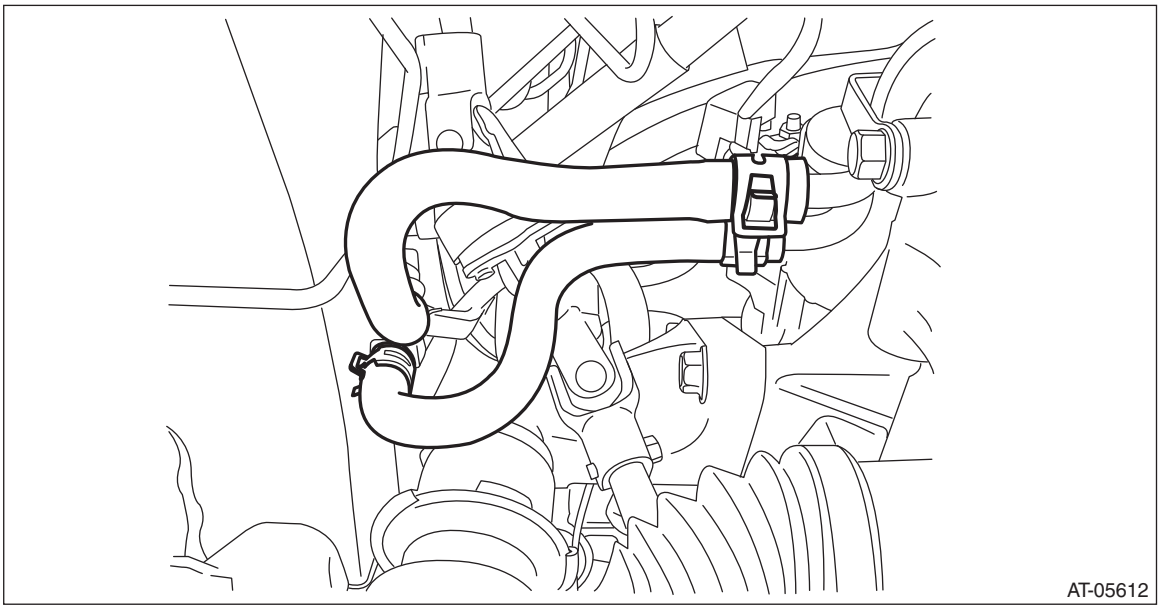
CAUTION:
When installing the CVTF cooler pipe assembly on vehicle side, be careful not to bend the A/C pipe.
1) Install the CVTF cooler pipe assembly to vehicle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



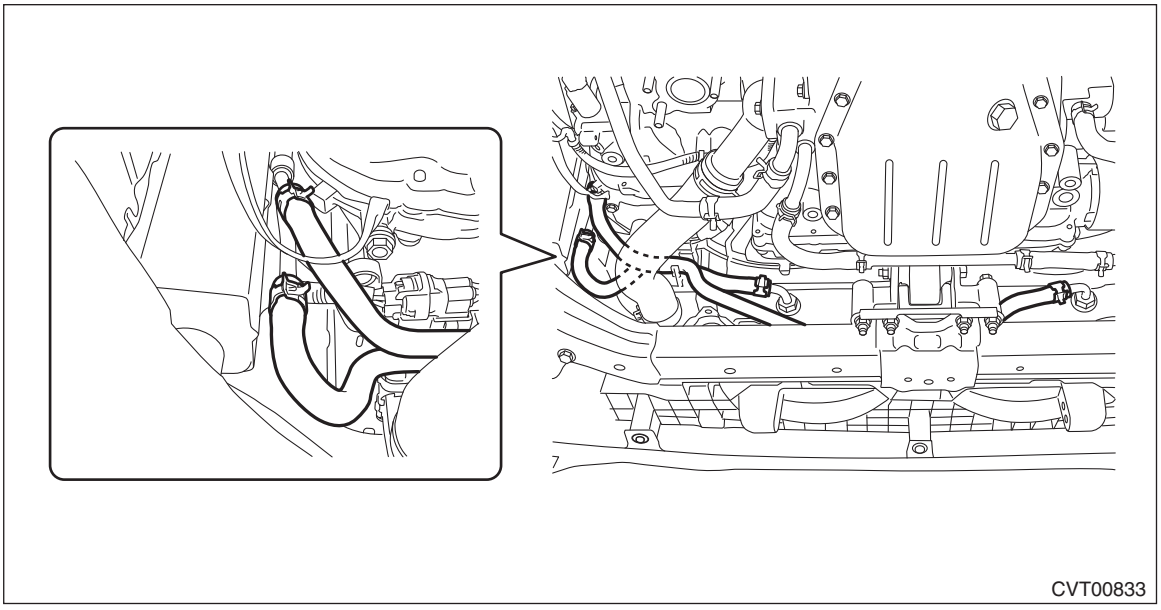
2) Install the A/C pipe to clip.
3) Install the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose. (OUTBACK model)

NOTE:
Use new CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.



4) Install the headlight assembly LH. (OUTBACK model) <Ref. to LI-38, INSTALLATION, Headlight Assembly.>
5) Install the front bumper. (OUTBACK model) <Ref. to EI-35, INSTALLATION, Front Bumper.>
6) Install the battery cable bracket, and install the battery cable clip to the bracket.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



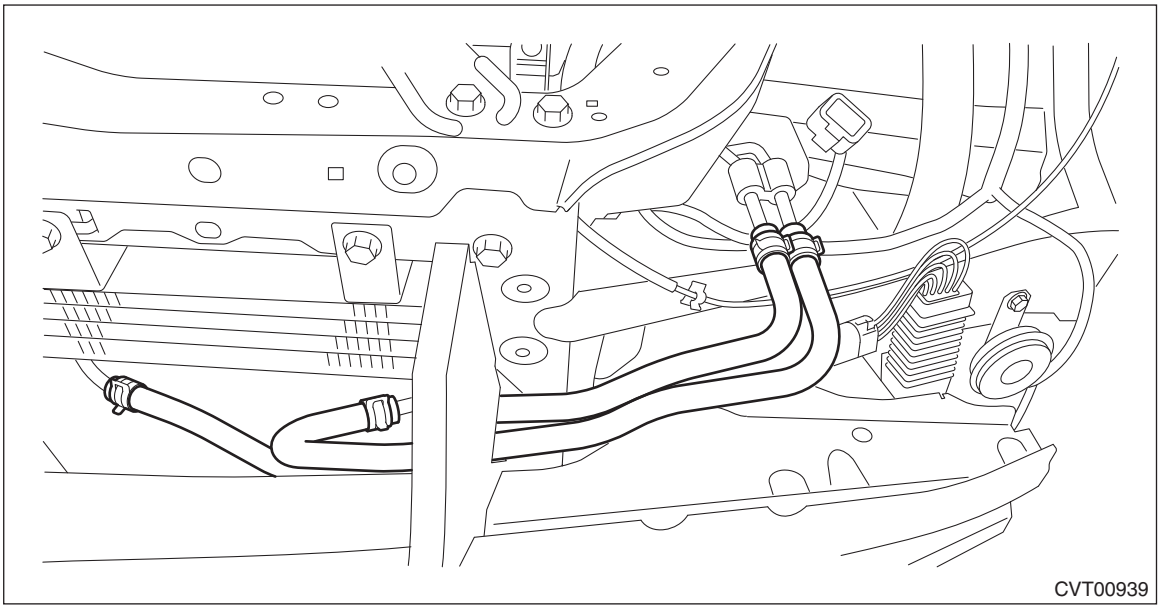
7) Lift up the vehicle.
8) Install the CVTF CVT inlet hose and CVTF CVT outlet hose.

NOTE:
Use new CVTF CVT inlet hose and CVTF CVT outlet hose.

9) Install the CVTF radiator inlet hose and CVTF radiator outlet hose on radiator side.

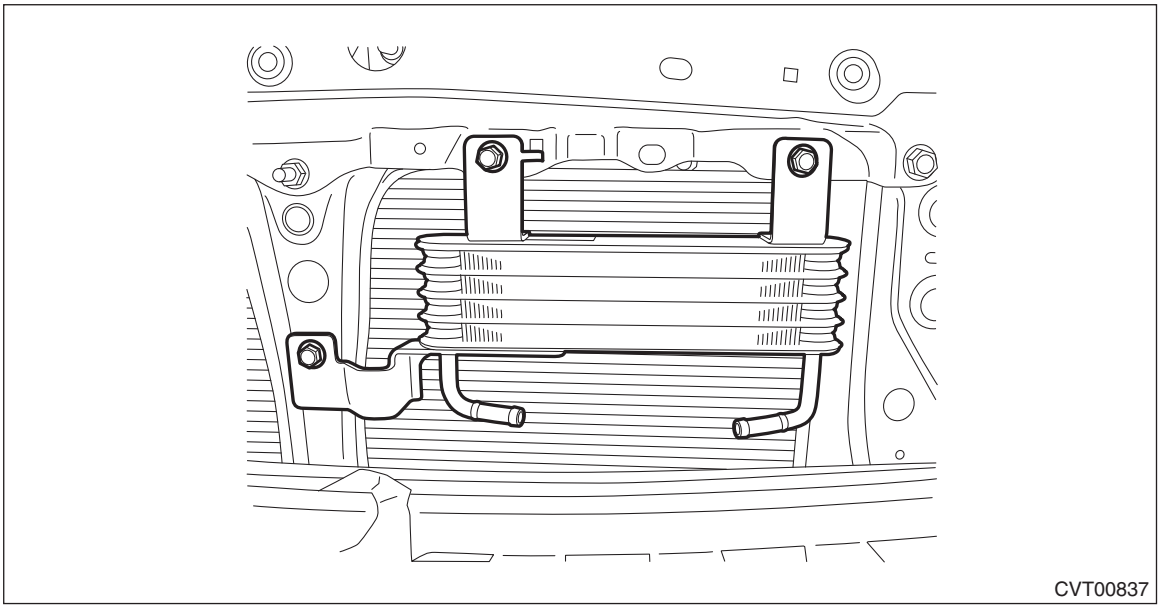
NOTE:
Use new CVTF radiator inlet hose and CVTF radiator outlet hose.

10) Install the front exhaust pipe. <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
11) Lower the vehicle.
12) Install the engine coolant reservoir tank. <Ref. to CO(H6DO)-47, INSTALLATION, Reservoir Tank.>
13) Install the battery and battery box. <Ref. to SC(H6DO)-58, INSTALLATION, Battery.>
14) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>



C: INSPECTION

Repair or replace any faulty hoses, pipes, and clamps found in the inspection below.
- Check for CVTF leaks in joints at the transmission, radiator, CVTF cooler (air cool), pipes, and hoses.
- Check the clamp for deformation.
- Lightly bend the hose and check for cracks in the surface or other damages.
- Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
- Check for peeling, cracks, and deformation at the tip of the hose.



25.CVTF Cooler (Air Cooling)

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the front bumper. <Ref. to EI-32, REMOVAL, Front Bumper.>
3) Remove the headlight assembly LH. <Ref. to LI-37, REMOVAL, Headlight Assembly.>
4) Remove the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.

CVT00939

5) Remove the CVTF cooler (air cool).

CVT00837

B: INSTALLATION

1) Install the CVTF cooler (air cool).

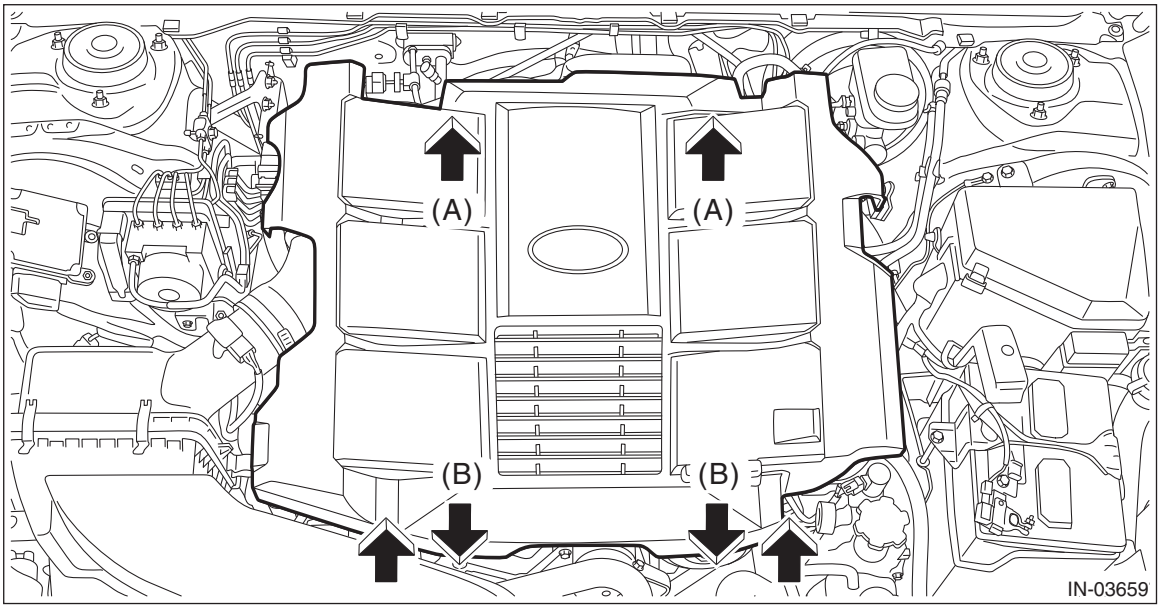
Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)

2) Install the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.

NOTE:
Use new CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.

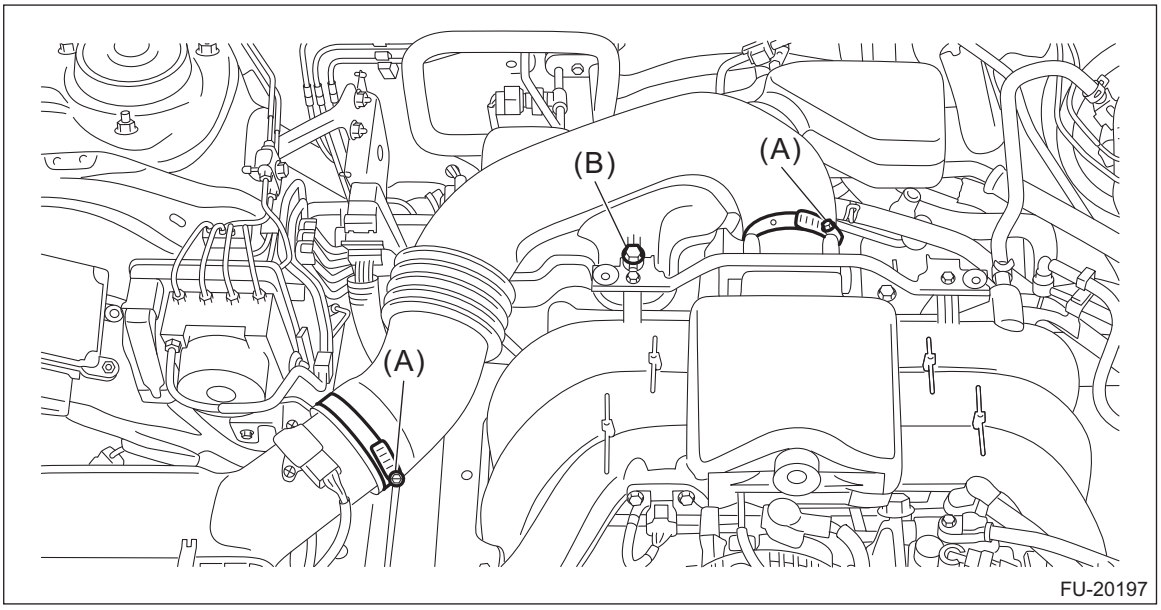
3) Install the headlight assembly LH. <Ref. to LI-38, INSTALLATION, Headlight Assembly.>

4) Install the front bumper. <Ref. to EI-35, INSTALLATION, Front Bumper.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

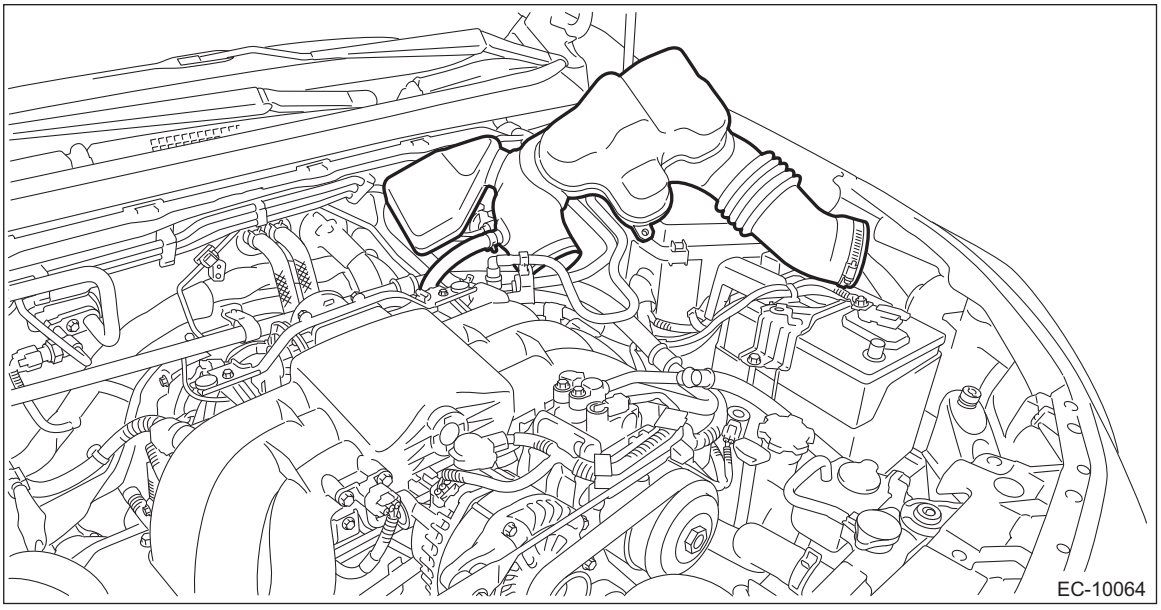
Check that the CVTF cooler (air cool) has no deformation, cracks or other damages.



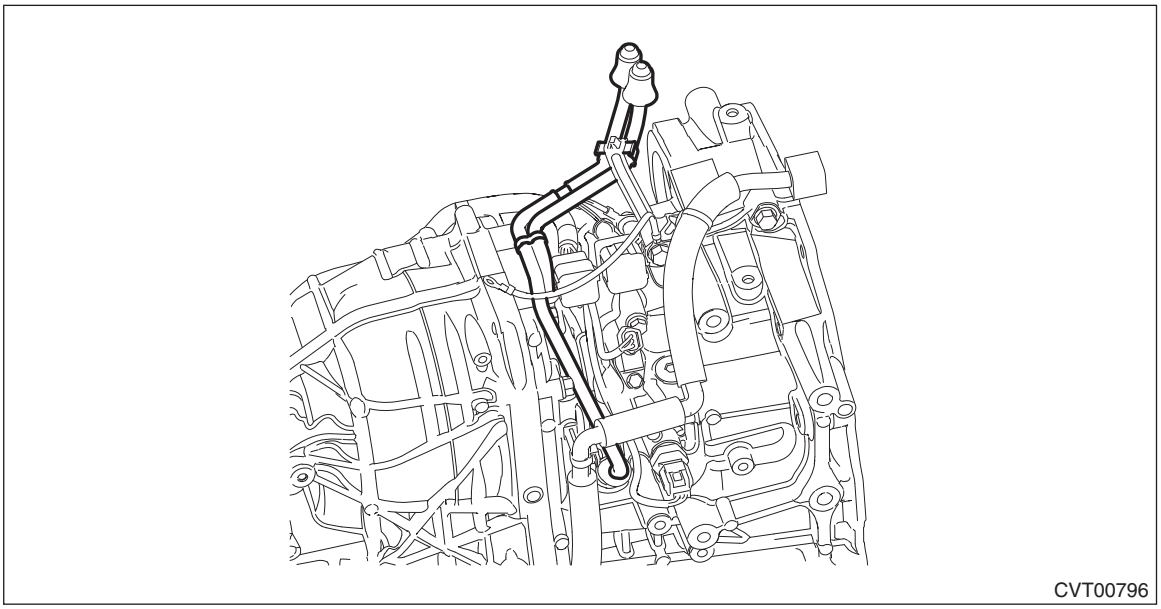
26.Air Breather Hose

A: REMOVAL

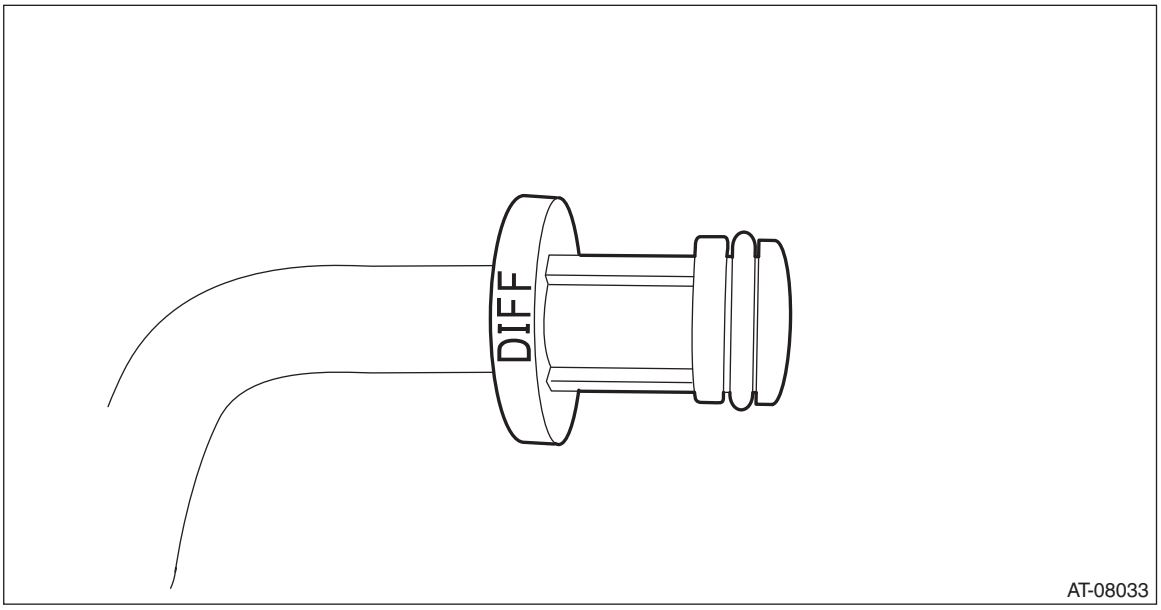
1) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.



2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Loosen the clamp (A) which connects the air intake boot.
4) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.



5) Remove the air intake boot from the throttle body and the air cleaner case (rear), and move it to the left side wheel apron.



CAUTION:
Be careful not to allow the air intake boot to contact the air conditioner pipe.

6) Remove the two air breather hoses.

7) Remove the oil cap.

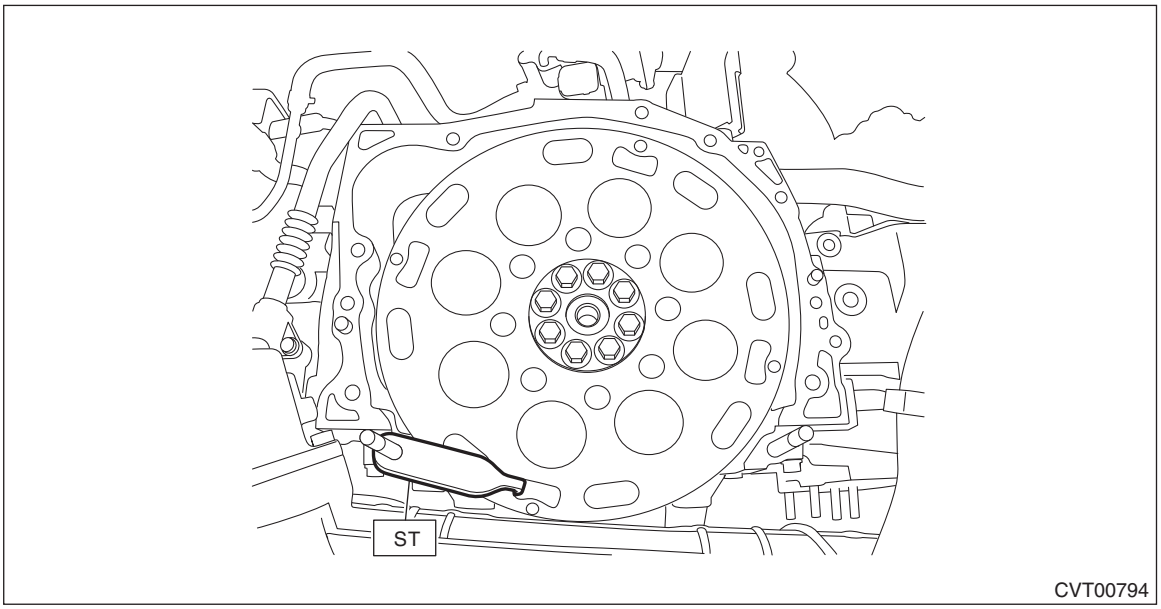
B: INSTALLATION

1) Install the oil cap.

NOTE:
Use new O-rings.

2) Install the two air breather hoses.
3) Install the air intake boot. <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Install the collector cover.

C: INSPECTION



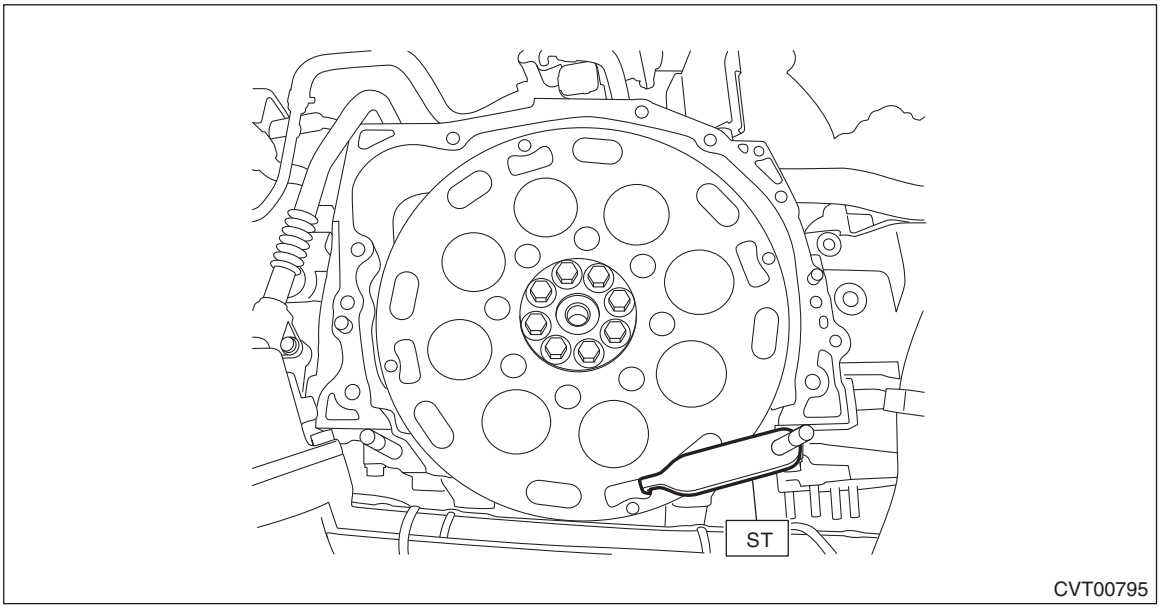
- Check the hose for peeling, crack or clogging.
- Check the oil cap is not cracked or clogged.
- Check O-ring of oil cap is not damaged.

27.Drive Plate

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER



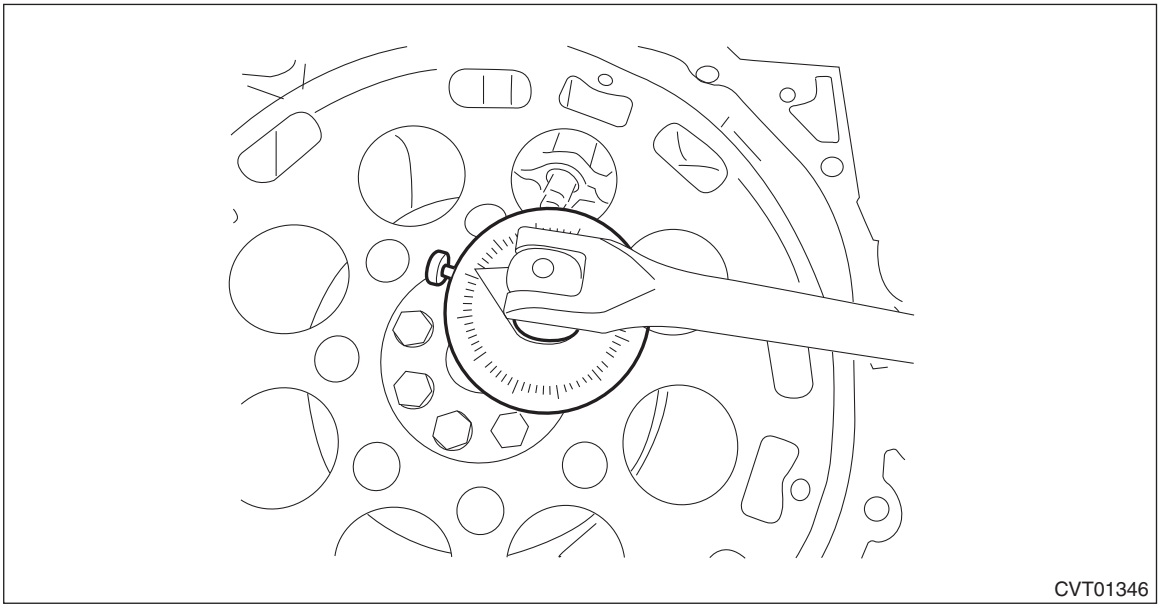
3) Remove the drive plate and reinforcement drive plate.

B: INSTALLATION

1) Temporarily install the drive plate and reinforcement drive plate.
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER

3) Tighten the drive plate mounting bolt in two stages.



NOTE:
Fix the engine unit.

(1) Tighten the drive plate mounting bolt.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

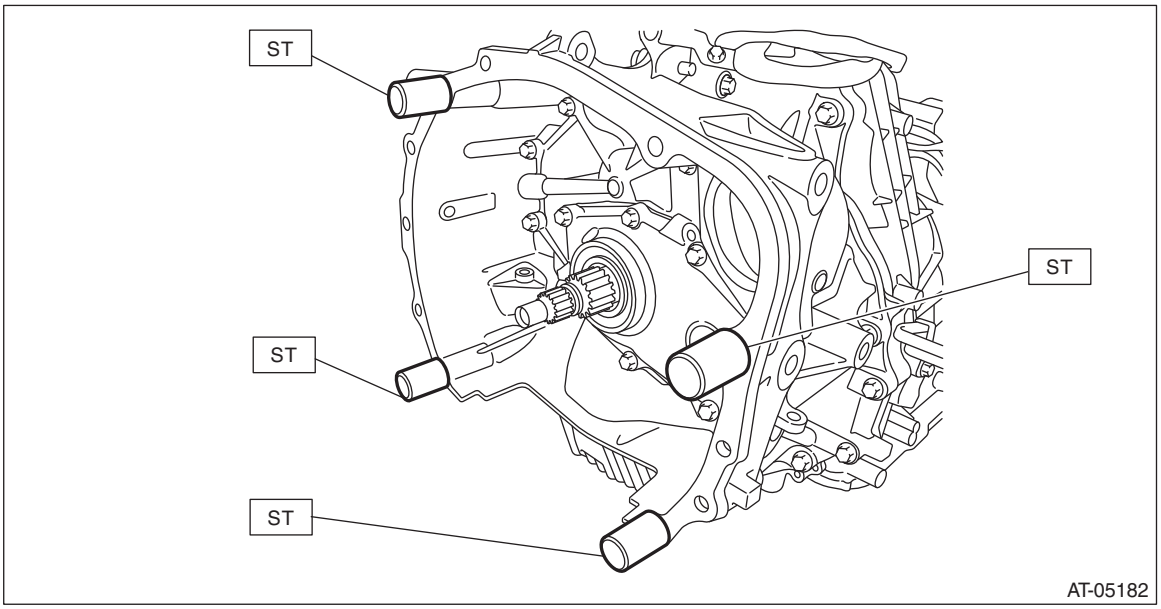
(2) While checking the tightening angle with the angle gauge, tighten the drive plate mounting bolts to the specified angle.

Tightening angle:
41° — 45°

4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check the drive cable for damage.

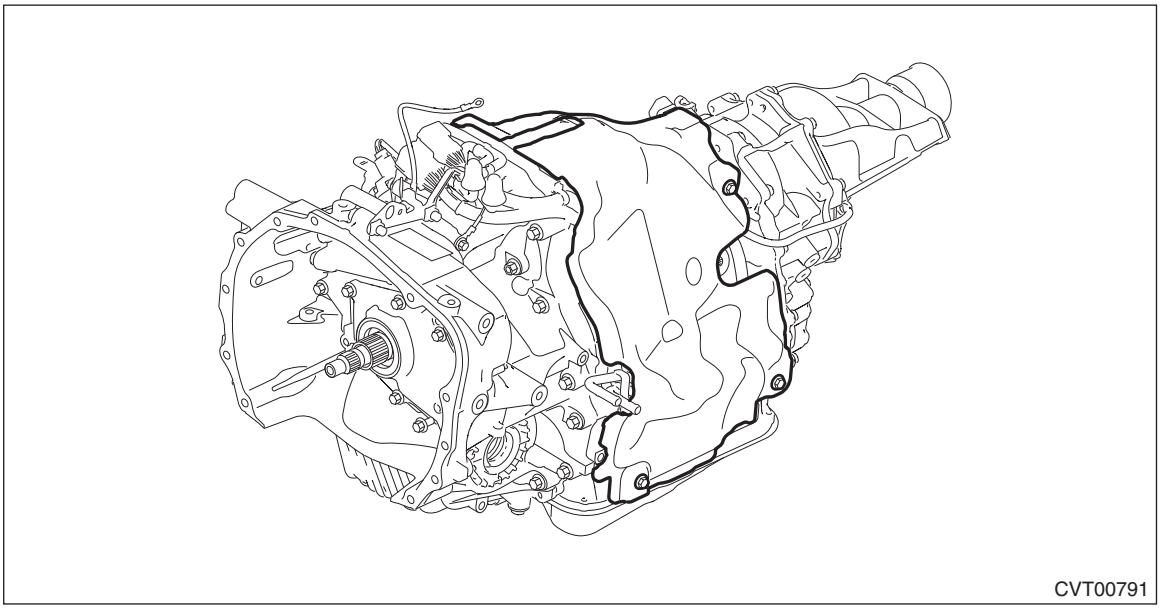


28.Preparation for Overhaul

A: GENERAL DESCRIPTION

Before disassembling and assembling the transmission, follow the following procedures to prepare.

B: PROCEDURE

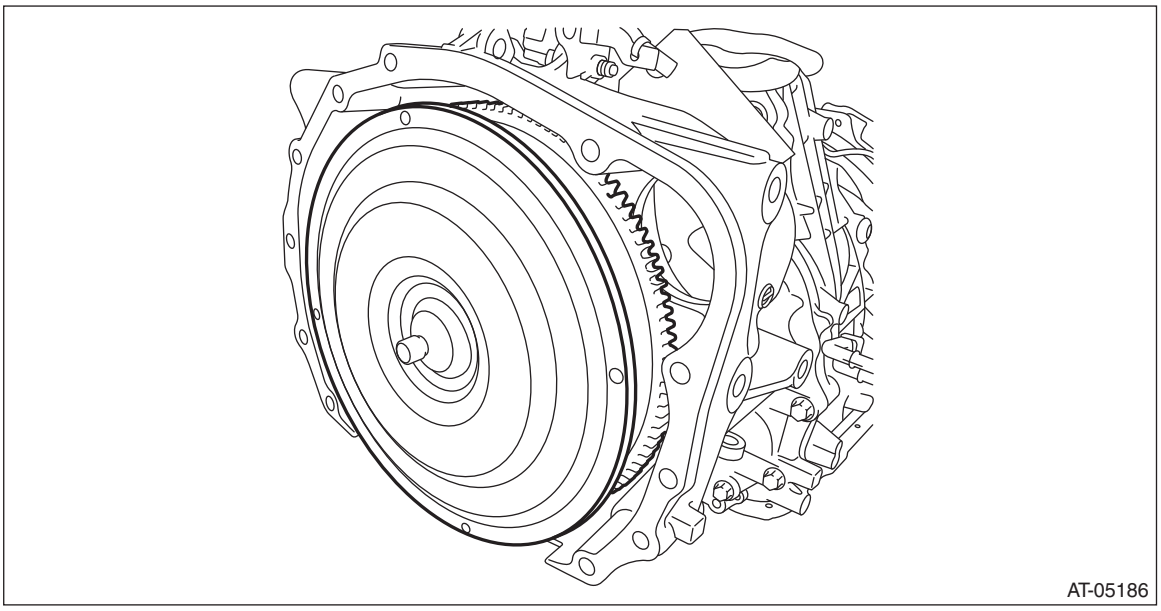


1) Clean the transmission exterior.
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-162, REMOVAL, Torque Converter Assembly.>
3) Attach the ST on the transmission.
ST 18632AA000 STAND ASSY

4) Remove the transmission cover on the transmission upper side.

NOTE:
Install using the following tightening torque.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



5) Place the transmission assembly on end.

29.Torque Converter Assembly

A: REMOVAL

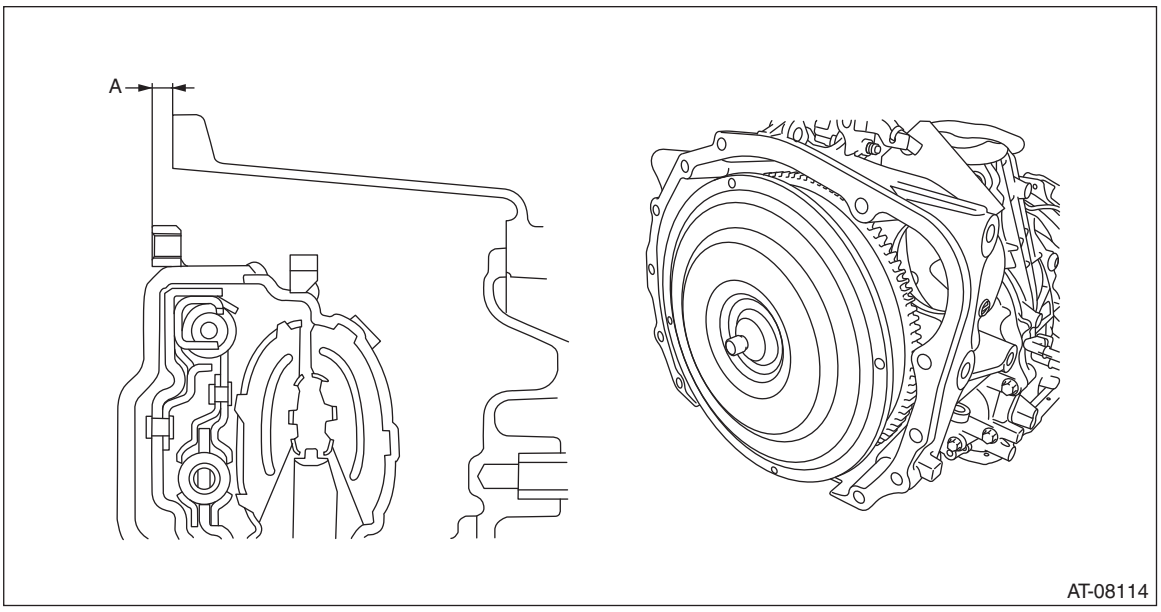
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly horizontally.

CAUTION:
Do not scratch the inside of engaging parts.

3) Remove the O-ring from the front reduction drive gear.

B: INSTALLATION

1) Install the O-ring to front reduction drive gear.



NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

2) While holding the torque converter assembly by hand, carefully install it into the torque converter case.

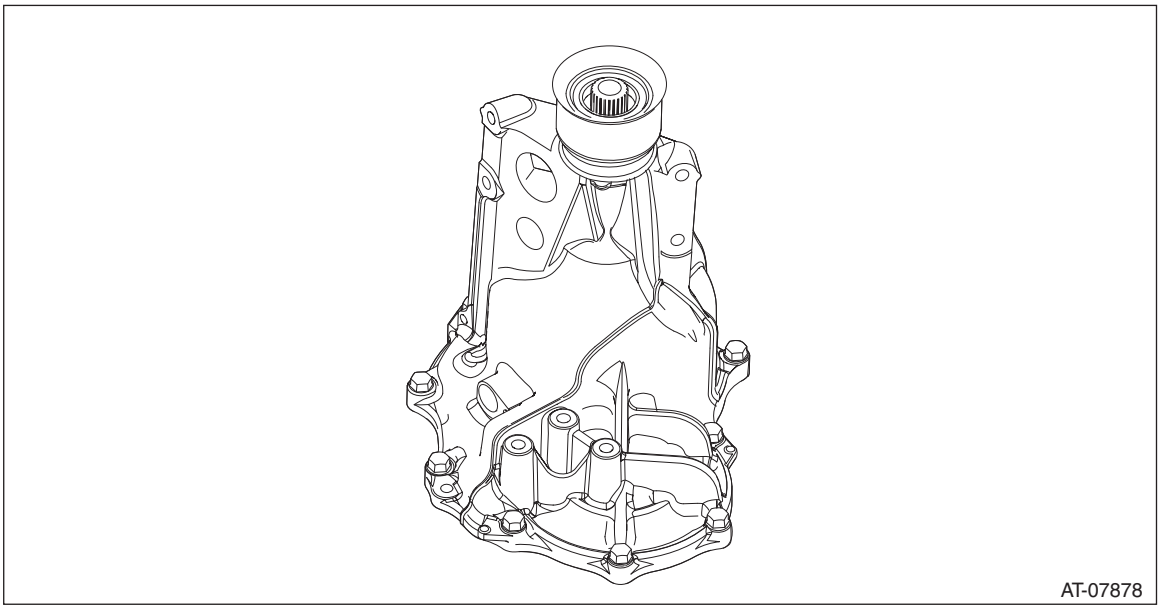
NOTE:
- Apply CVTF to the oil seal lip.
- Do not damage the oil seal and O-ring.

3) Engage the splines while gently rotating the torque converter assembly by hand, and securely insert the assembly.
4) Measure depth “A”, from converter case end surface to drive plate contacting surface.

Standard (reference):
6.8 mm (0.268 in) or less

5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

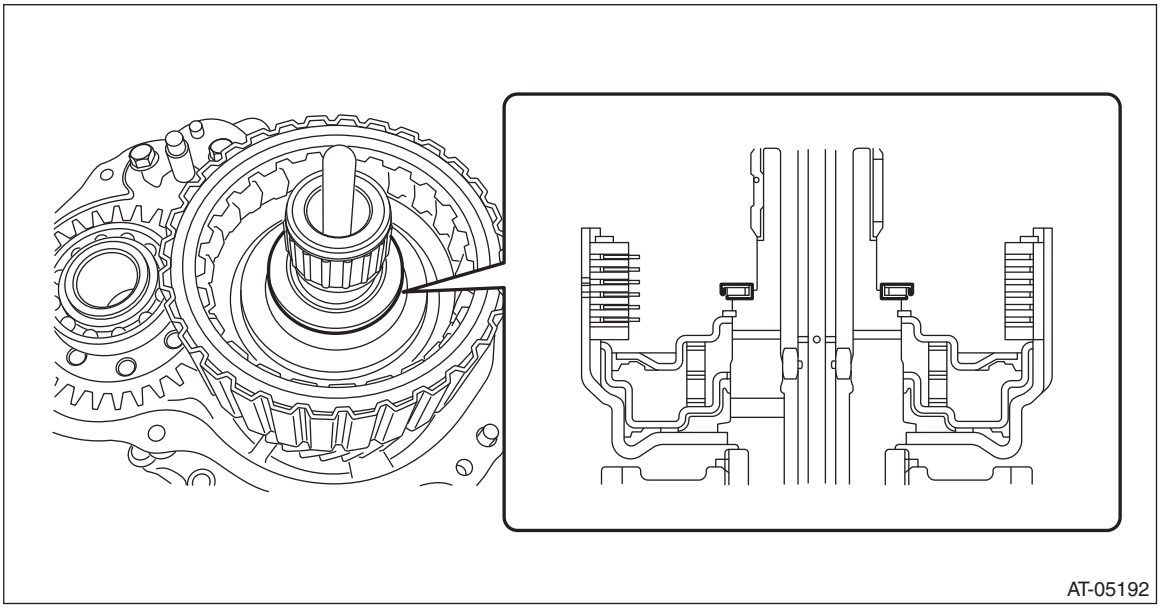


- Check the protrusion of torque converter center (front boss) is not deformed or damaged.
- Check the ring gear and exterior for break or damage.

30.Extension Case

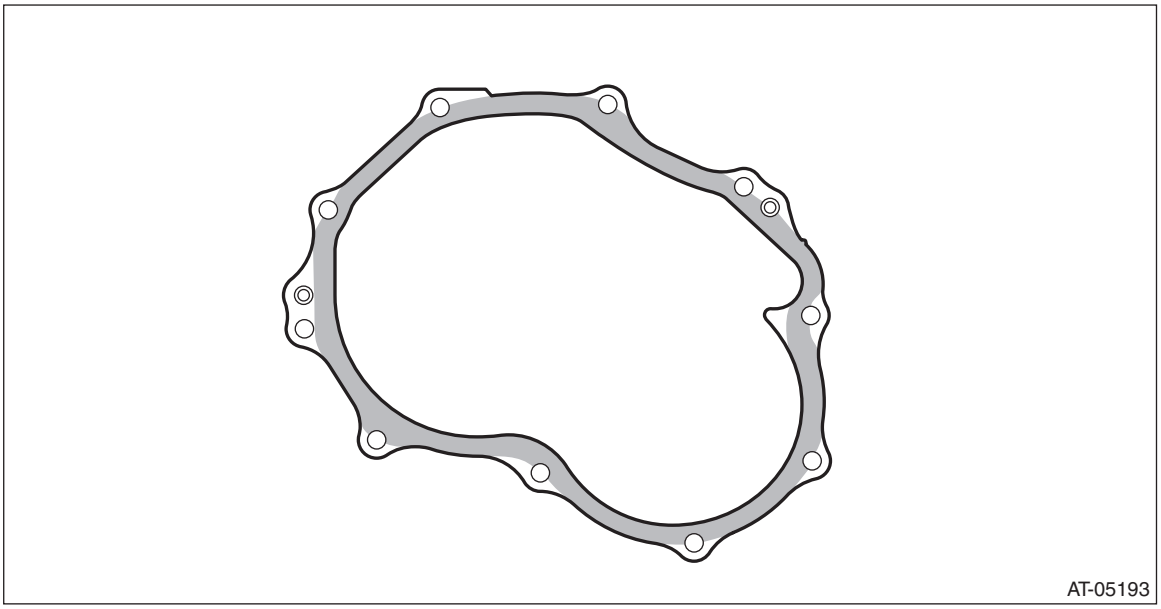
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the front wheel speed sensor. <Ref. to CVT(TR690)-125, REMOVAL, Front Wheel Speed Sensor.>
3) Remove the harness clip, and remove the extension case.



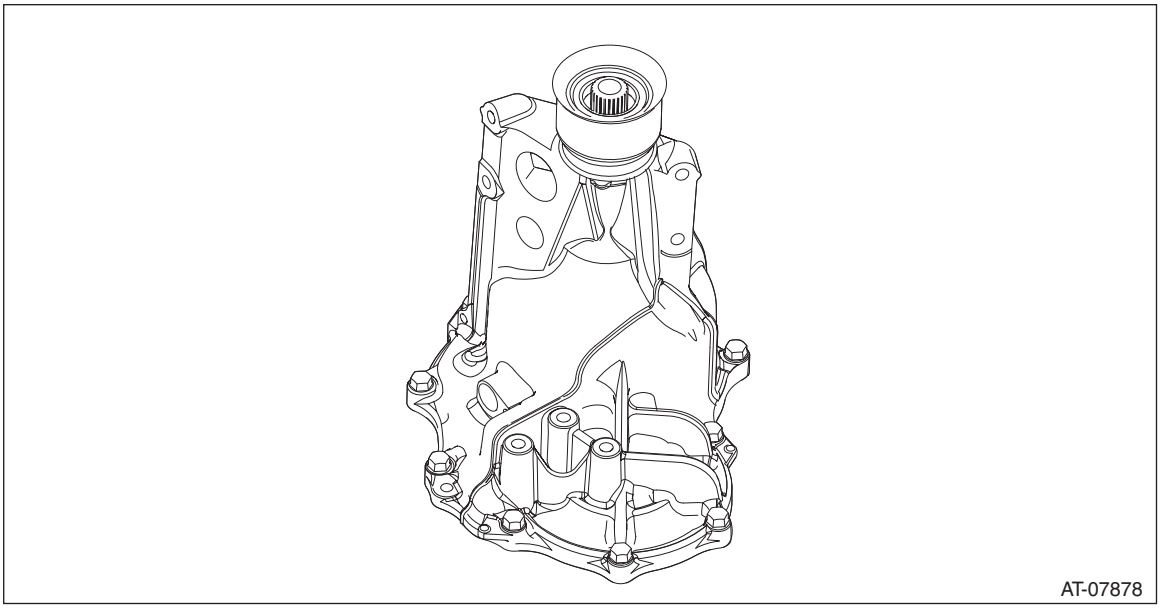
NOTE:
The total number of extension case mounting bolts is 10.

B: INSTALLATION



1) Clean the mating surface of the extension case and intermediate case.
2) Select the thrust needle bearing. <Ref. to CVT(TR690)-169, ADJUSTMENT, Rear Drive Shaft.>
3) Select the shim for transfer reduction driven gear. <Ref. to CVT(TR690)-187, ADJUSTMENT, Transfer Reduction Driven Gear.>
4) Install the selected thrust needle bearing to transfer clutch assembly.

NOTE:
Install the thrust needle bearing in the correct direction.



5) Attach the selected shim to transfer reduction driven gear assembly.
6) Apply liquid gasket to extension case seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent

7) Install the extension case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

8) Install the front wheel speed sensor. <Ref. to CVT(TR690)-125, INSTALLATION, Front Wheel Speed Sensor.>
9) Install the transmission assembly. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

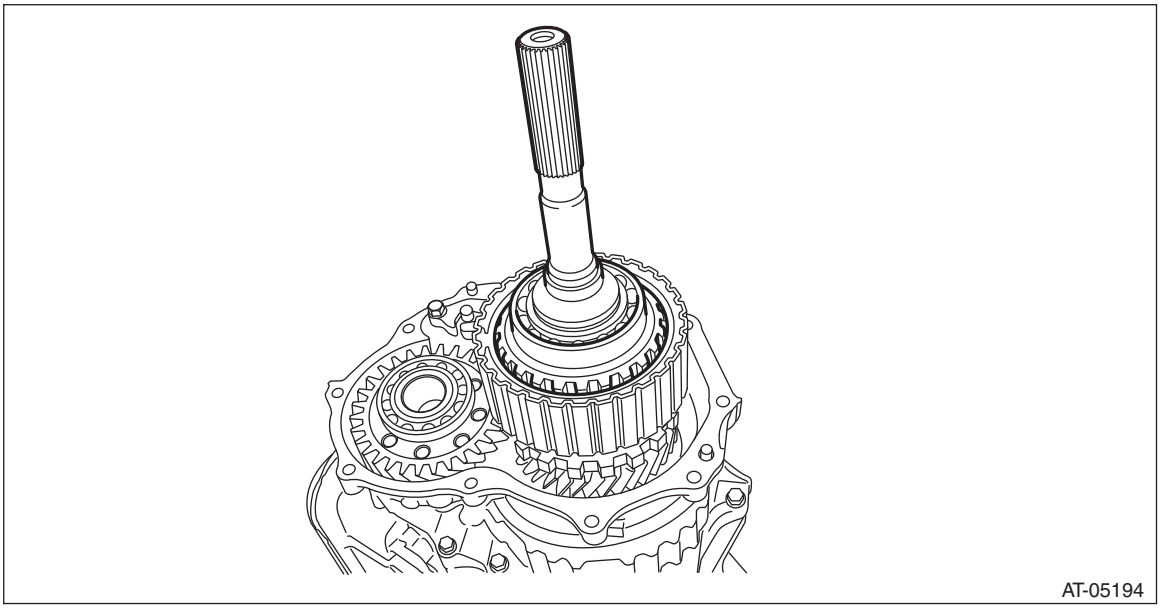
1) Remove the dust cover from extension case.
2) Remove the extension case oil seal from the extension case.

D: ASSEMBLY

1) Press-fit the dust cover into extension case.
2) Install the extension case oil seal to extension case.
ST 498057300 INSTALLER

E: INSPECTION

- Check there is no leak of CVTF from the joint between extension case and intermediate case.
- Check there is no damage or cracks on the extension case.

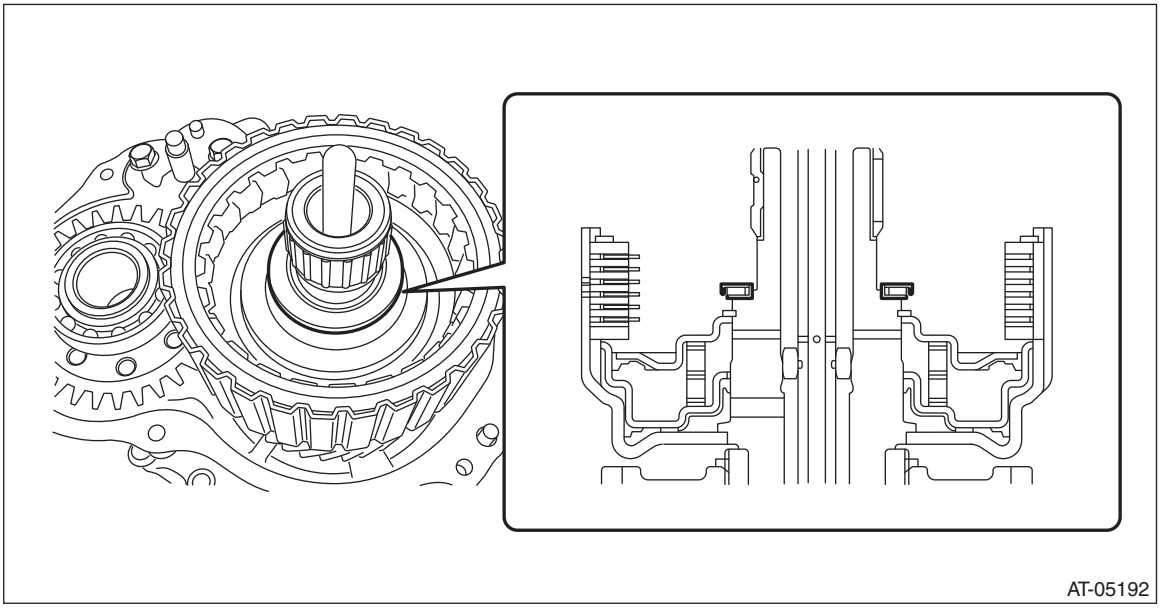


F: ADJUSTMENT

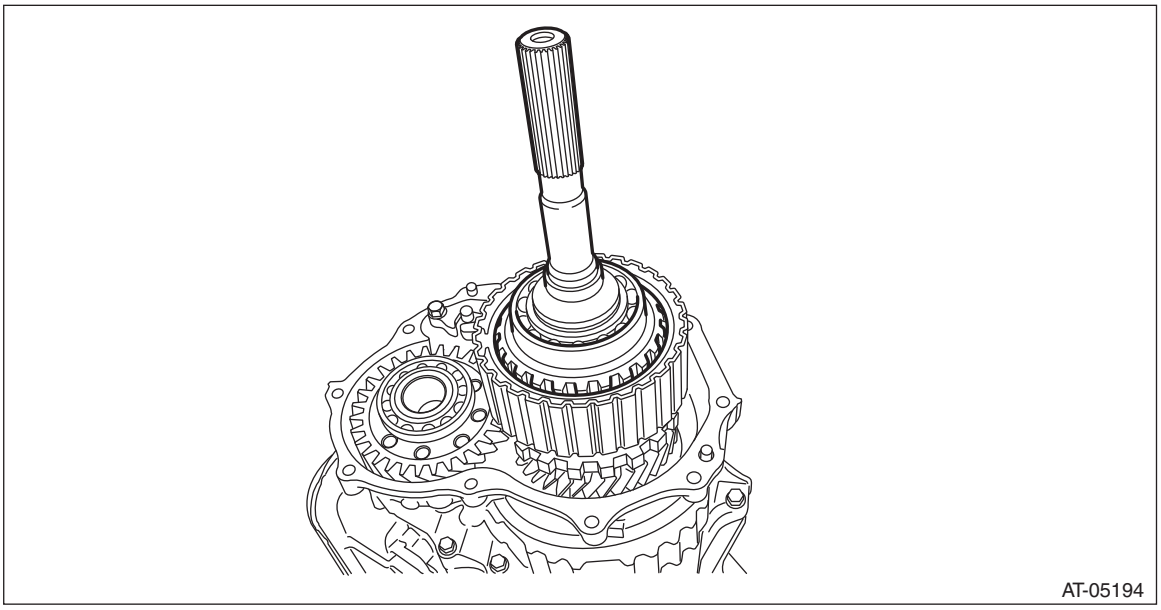
NOTE:
When replacing the extension case, select the shims for rear drive shaft thrust needle bearing and transfer reduction driven gear. <Ref. to CVT(TR690)-169, ADJUSTMENT, Rear Drive Shaft.> <Ref. to CVT(TR690)-187, ADJUSTMENT, Transfer Reduction Driven Gear.>

31.Rear Drive Shaft

A: REMOVAL



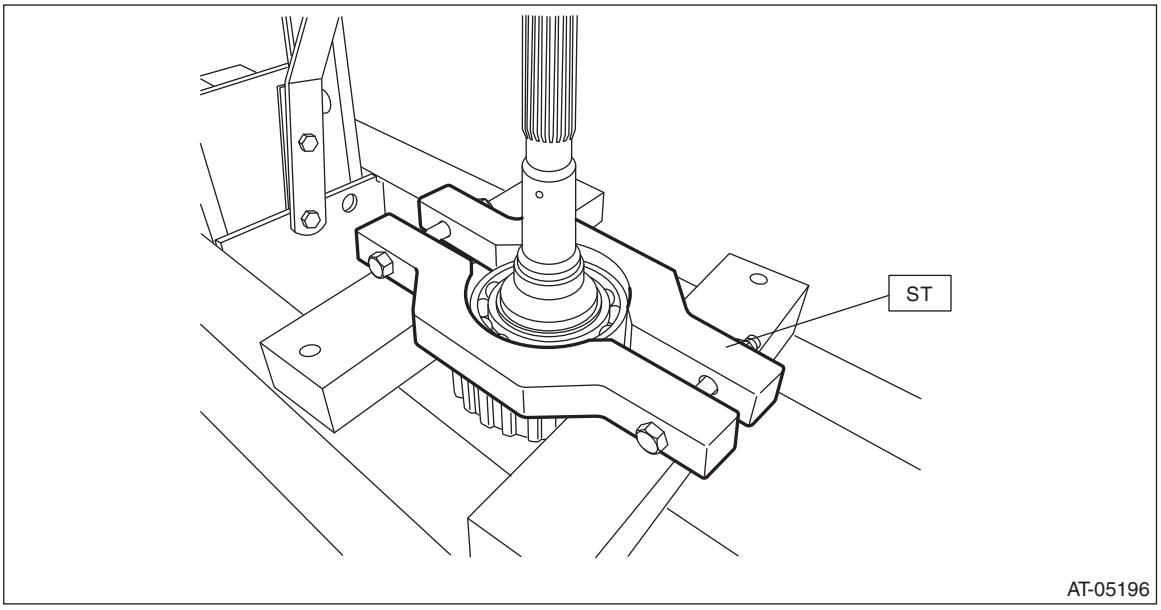
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
3) Remove the rear drive shaft.



B: INSTALLATION

1) Select the thrust needle bearing. <Ref. to CVT(TR690)-169, ADJUSTMENT, Rear Drive Shaft.>
2) Install the selected thrust needle bearing to transfer clutch assembly.

NOTE:
Install the thrust needle bearing in the correct direction.

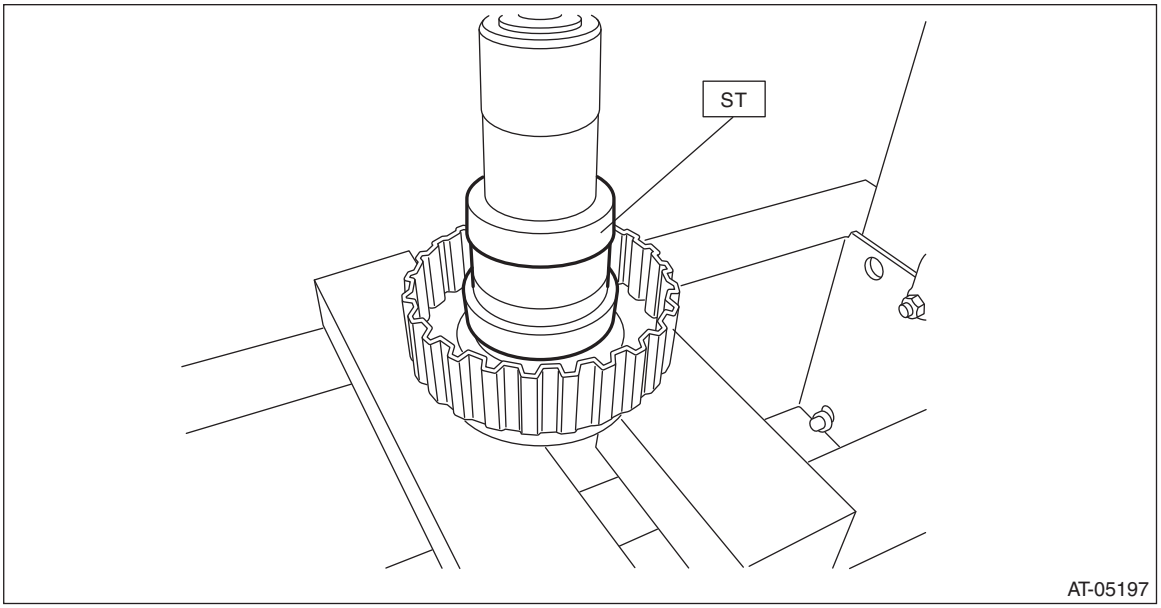


3) Install the rear drive shaft.

4) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the ball bearing using ST.
ST 498077600 REMOVER



D: ASSEMBLY

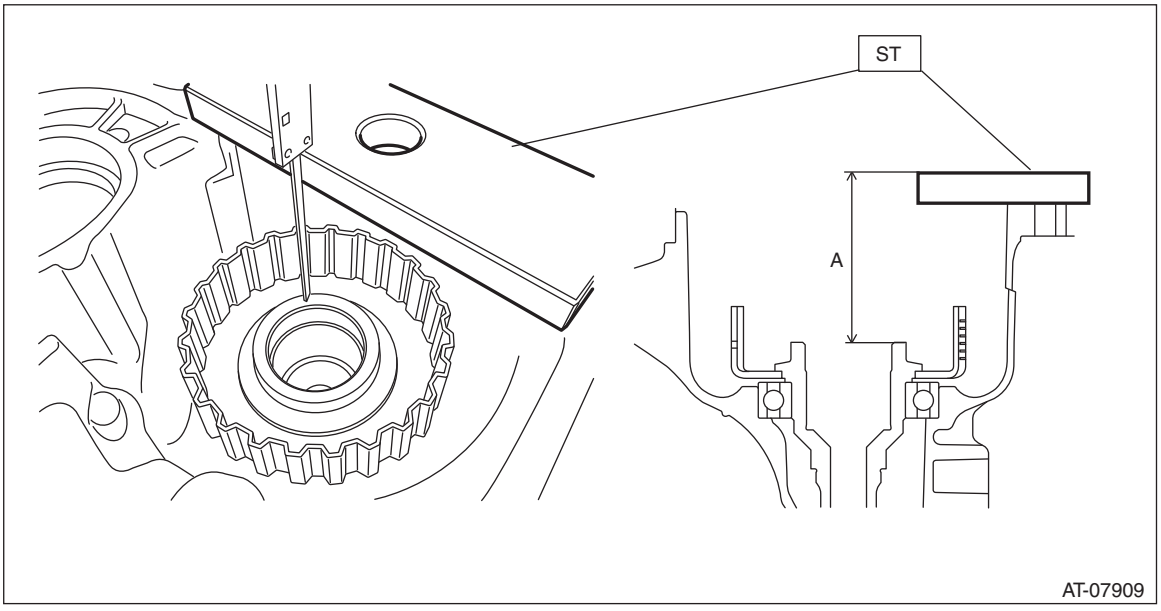
1) Using the ST, install the ball bearing.

NOTE:
- Use a new ball bearing.

• Apply CVTF to press-fitting surface of ball bearing.

ST 399513600 INSTALLER

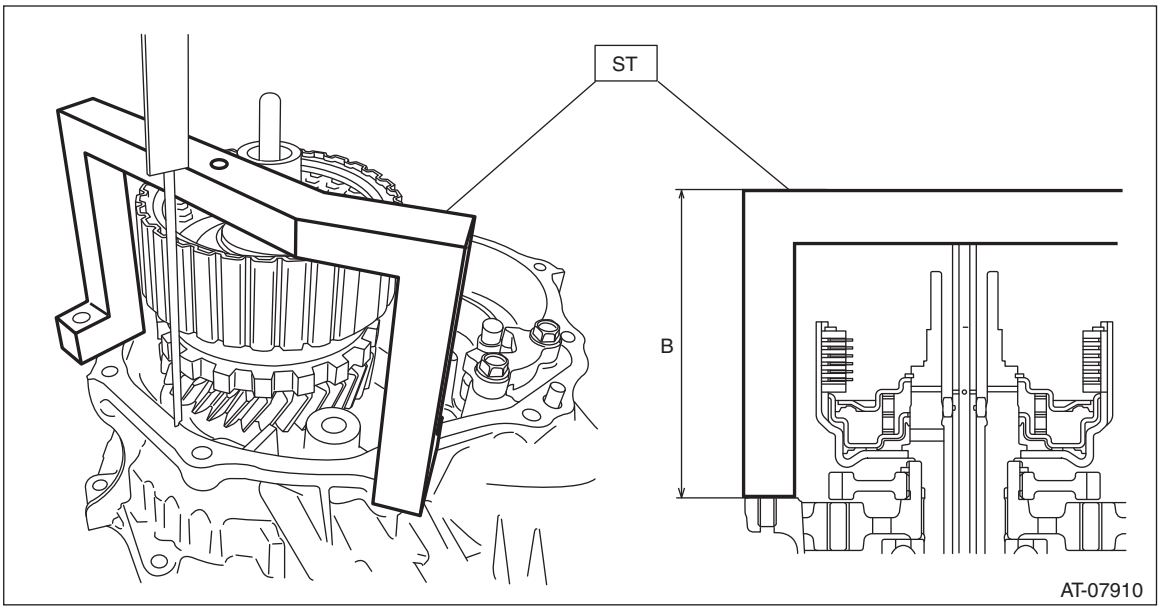
E: INSPECTION



- Check each part for crack, damage or dust.
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.

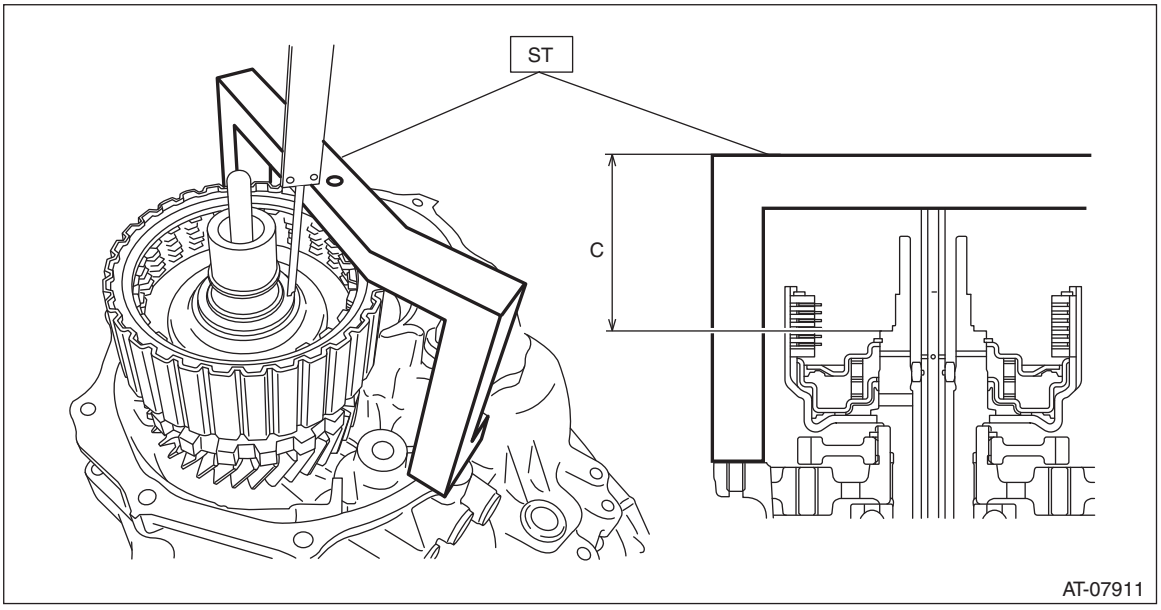
F: ADJUSTMENT

NOTE:
When replacing the rear drive shaft or bearing, select the thrust needle bearing.



1) Using the ST, measure the distance “A” from ST end face to rear drive shaft thrust needle bearing catch surface.

ST 398643600 GAUGE

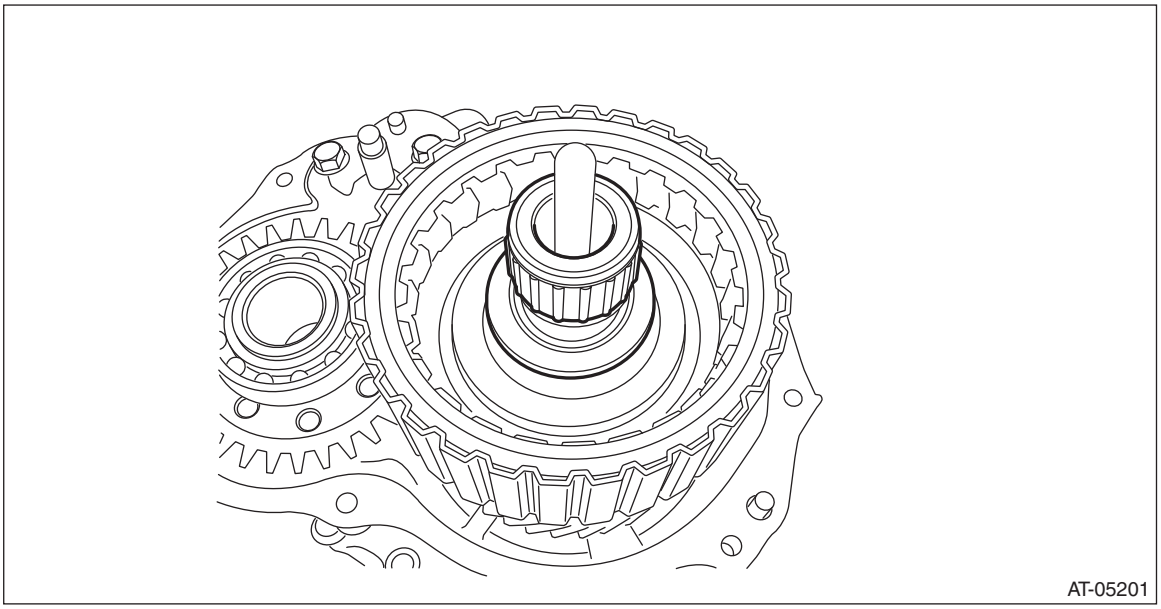


2) Using the ST, measure the height “B” from the intermediate case mating surface to the ST end face.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET

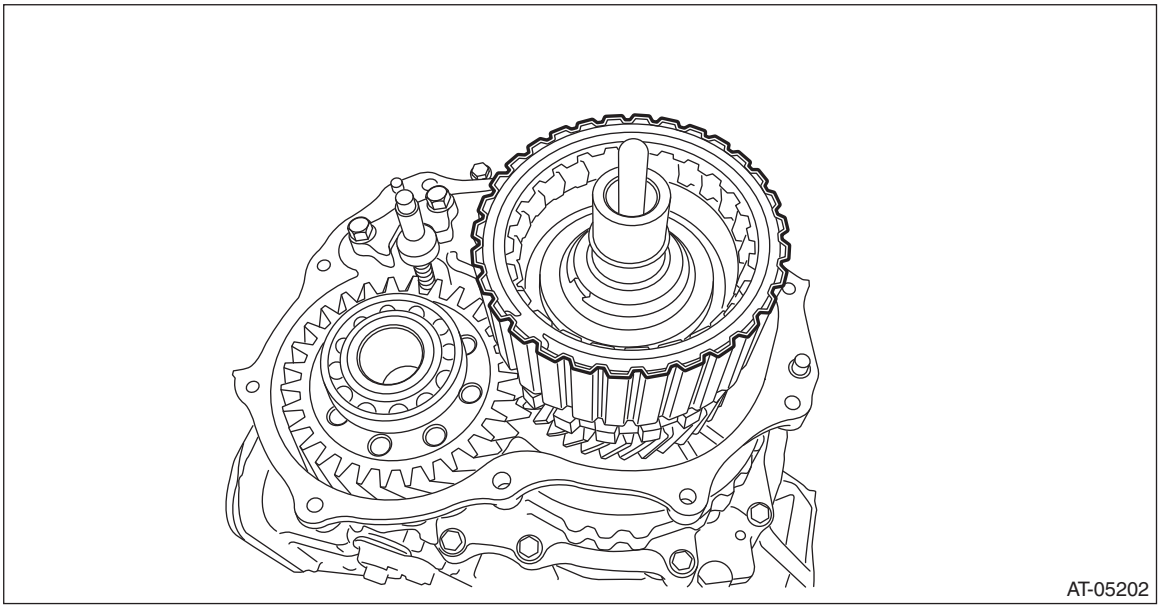
3) Using the ST, measure the height “C” from ST end face to transfer clutch assembly thrust needle bearing catch surface.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET



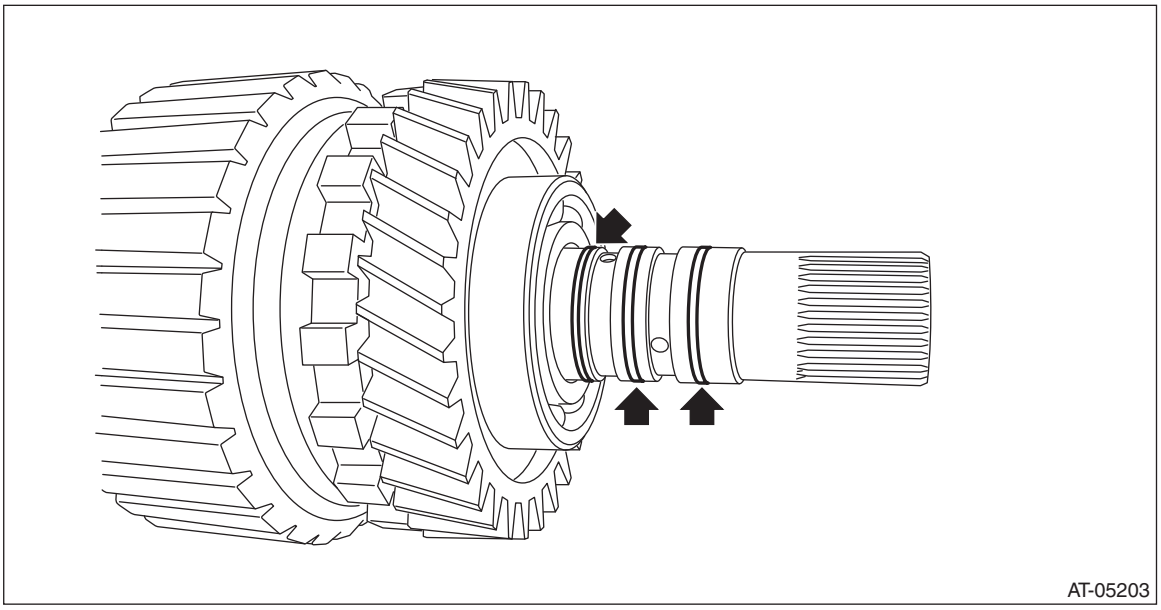
4) Obtain the thickness of thrust bearing using the following formula to select the thrust bearing.
T mm = (A – 15) – (B – C) – (0.05 — 0.25)
[T in = (A – 0.591) – (B – C) – (0.002 — 0.01)]
T: Thrust bearing thickness
A: Height from the ST end face to the rear drive shaft thrust needle bearing catch surface
B: Height from the mating surface of the intermediate case to the ST end face
C: Height from the ST end face to the transfer clutch assembly thrust needle bearing catch surface
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Thrust bearing	
Part No.	Thickness mm (in)
806536020	3.8 (0.15)
806535030	4.0 (0.157)
806535040	4.2 (0.165)
806535050	4.4 (0.173)
806535060	4.6 (0.181)
806535070	4.8 (0.189)
806535090	5.0 (0.197)



32.Transfer Clutch

A: REMOVAL

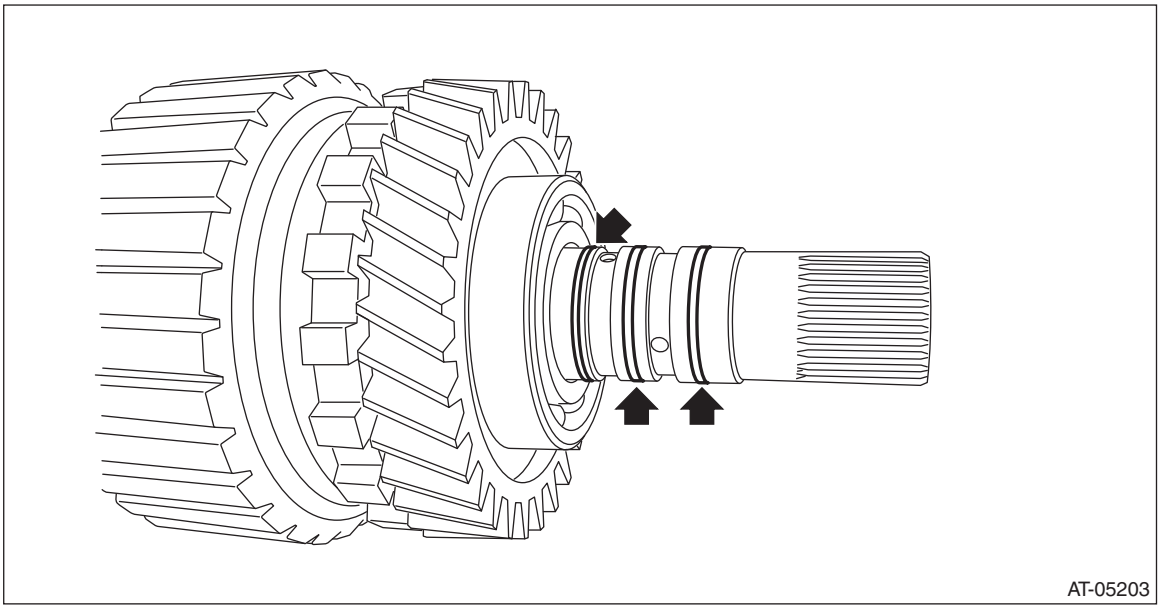


1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
4) Remove the thrust needle bearing and needle bearing.

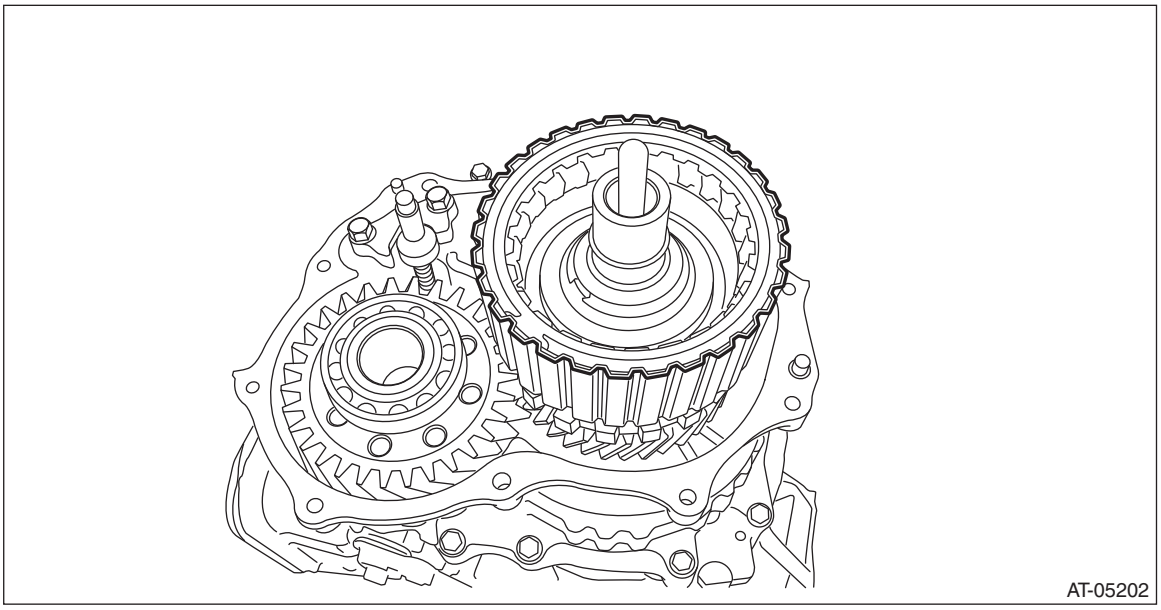
AT-05201

5) Remove the transfer clutch assembly.

AT-05202



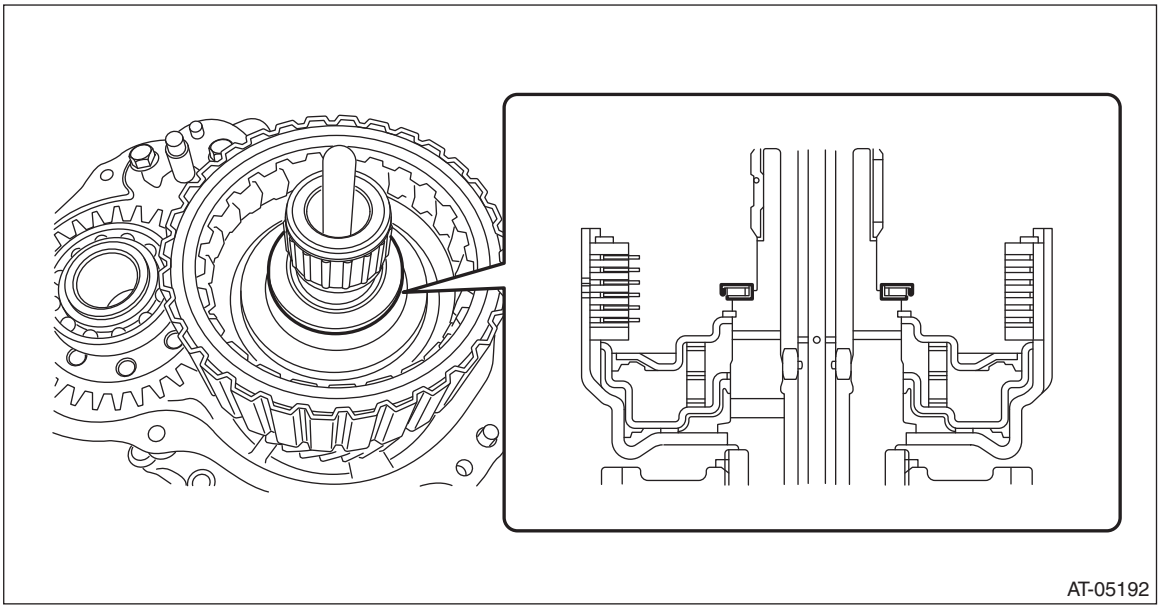
6) Remove the seal ring from transfer clutch assembly.



B: INSTALLATION

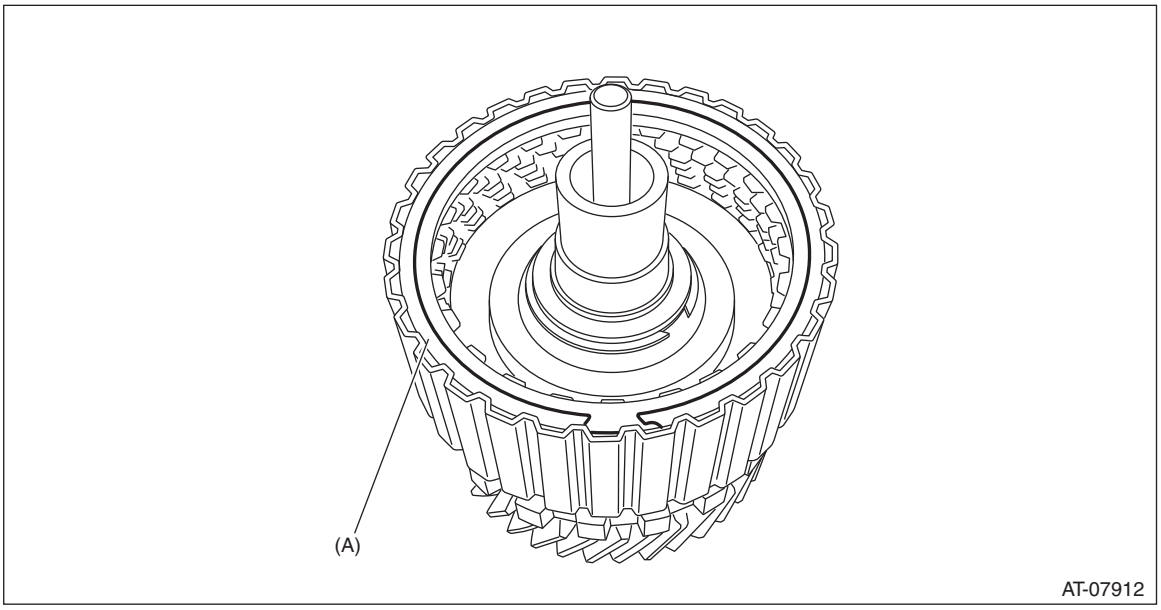
1) Apply CVTF to the seal ring and attach it to the seal ring groove of transfer clutch assembly.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.



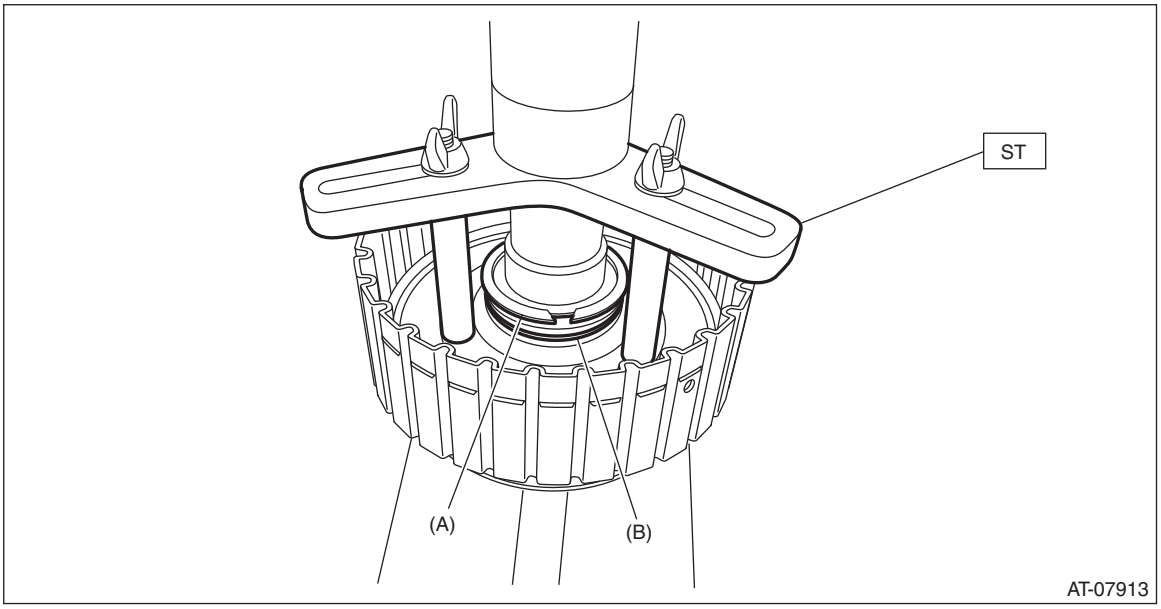
2) Install the transfer clutch assembly.

3) Select the thrust needle bearing. <Ref. to CVT(TR690)-169, ADJUSTMENT, Rear Drive Shaft.>
4) Install the selected thrust needle bearing and needle bearing to transfer clutch assembly.



NOTE:
Install the thrust needle bearing in the correct direction.

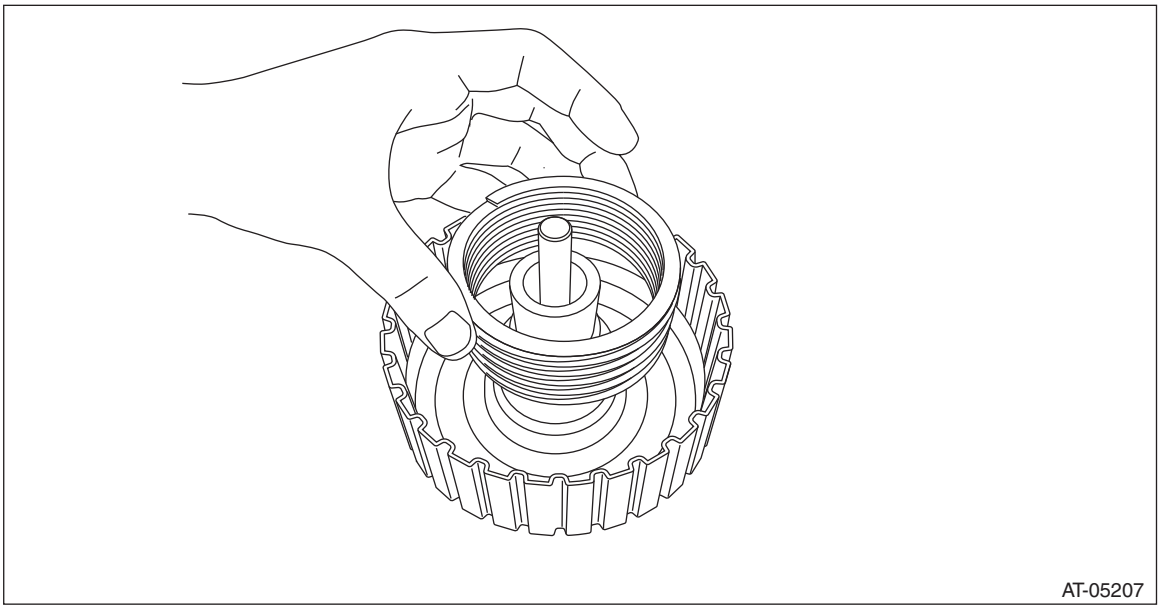
5) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
6) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>



C: DISASSEMBLY

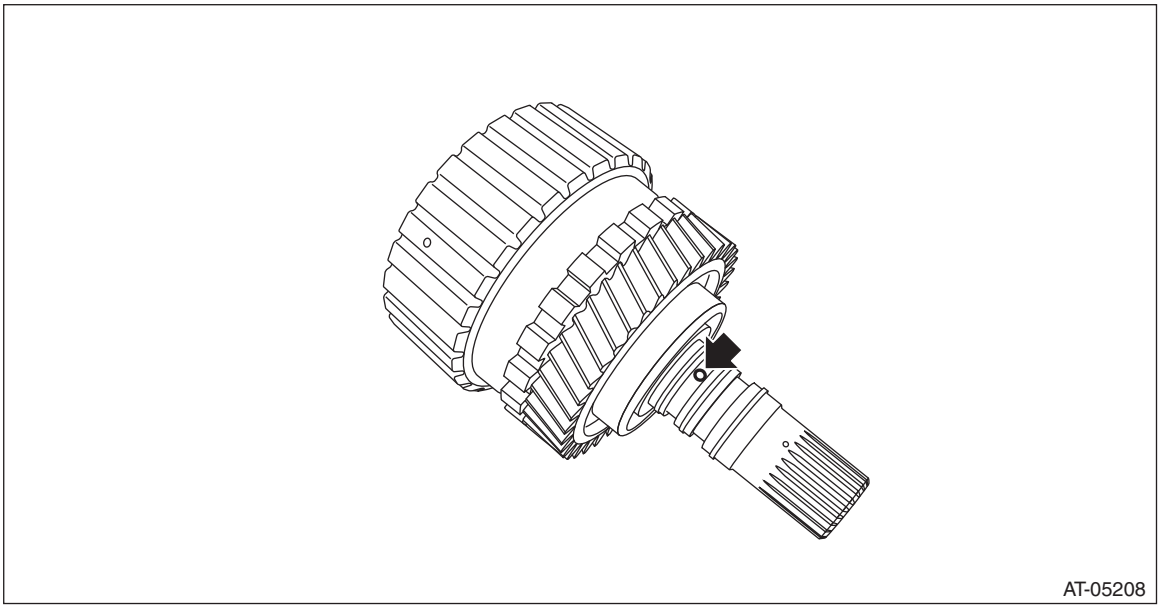
1) Remove the snap ring, and then remove the pressure plate, drive plate and driven plate.

(A) Snap ring



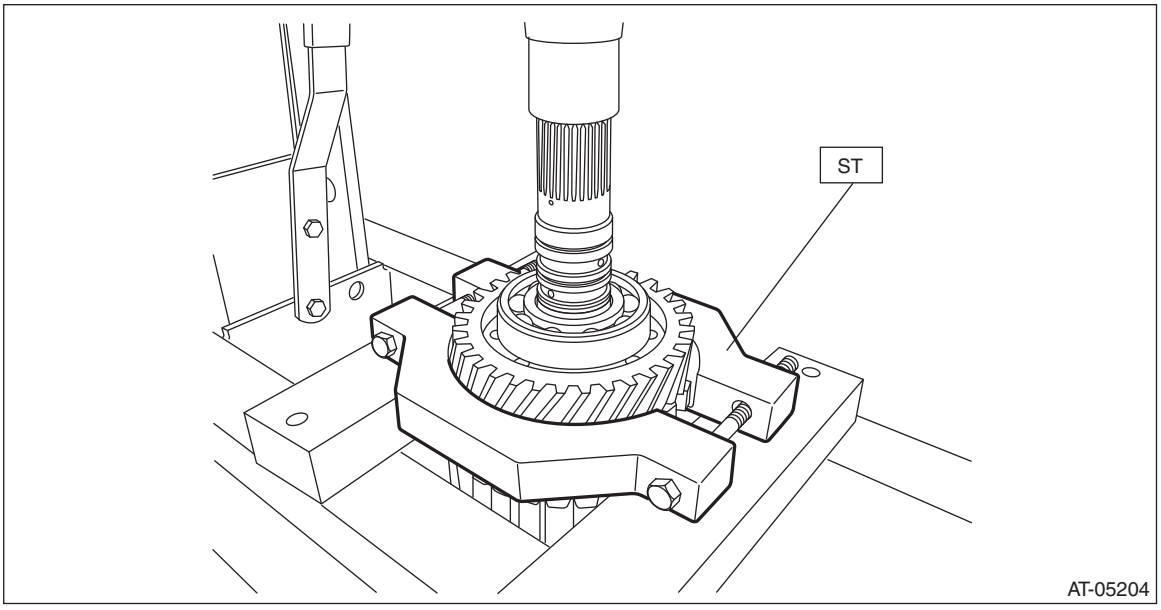
2) Using the ST, remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

(A) Snap ring
(B) Transfer clutch piston seal



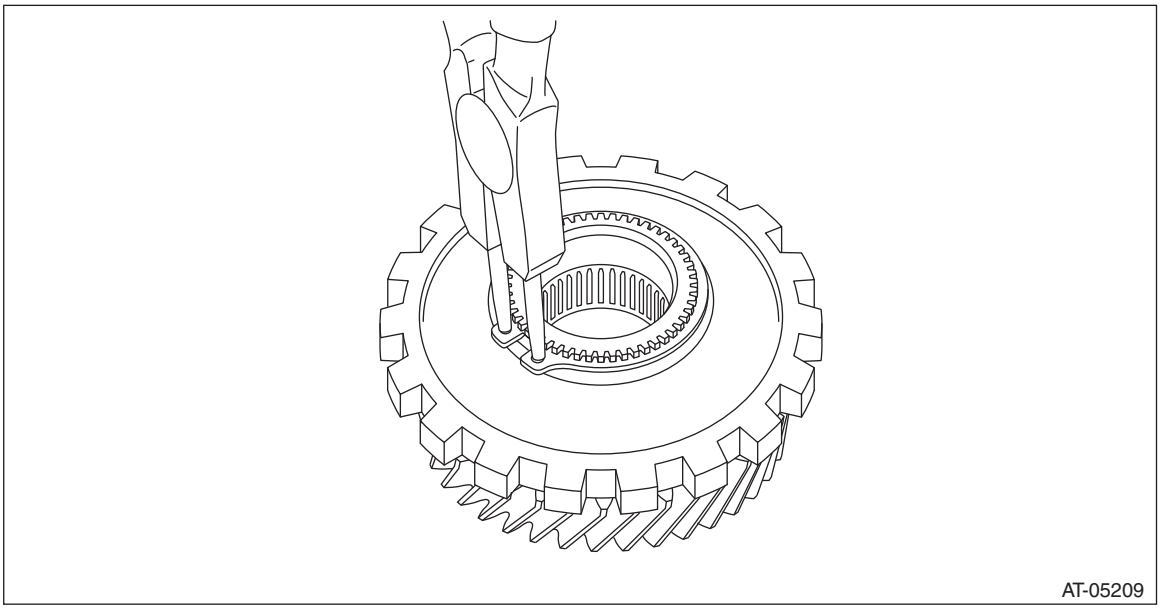
3) Remove the transfer clutch piston seal.

4) Remove the return spring.

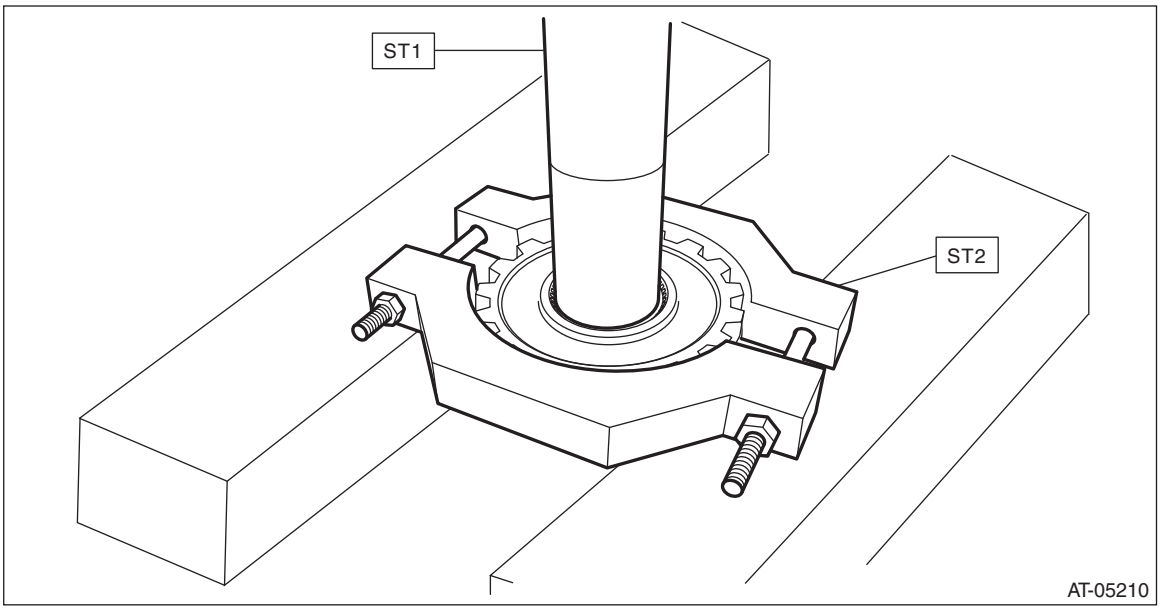


5) Remove the transfer clutch piston by blowing compressed air through transfer clutch assembly hole.

NOTE:
Block the hole opposite to the one to be blown with compressed air by your finger.

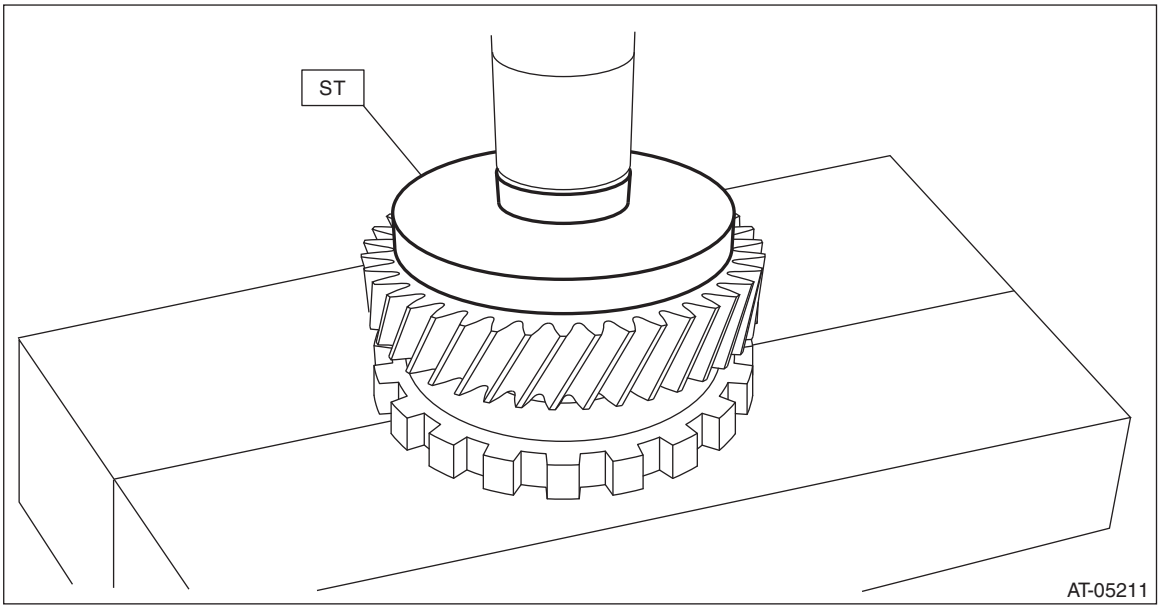


6) Using ST, remove transfer drive gear, parking gear and ball bearing.
ST 18767AA000 BEARING REMOVER

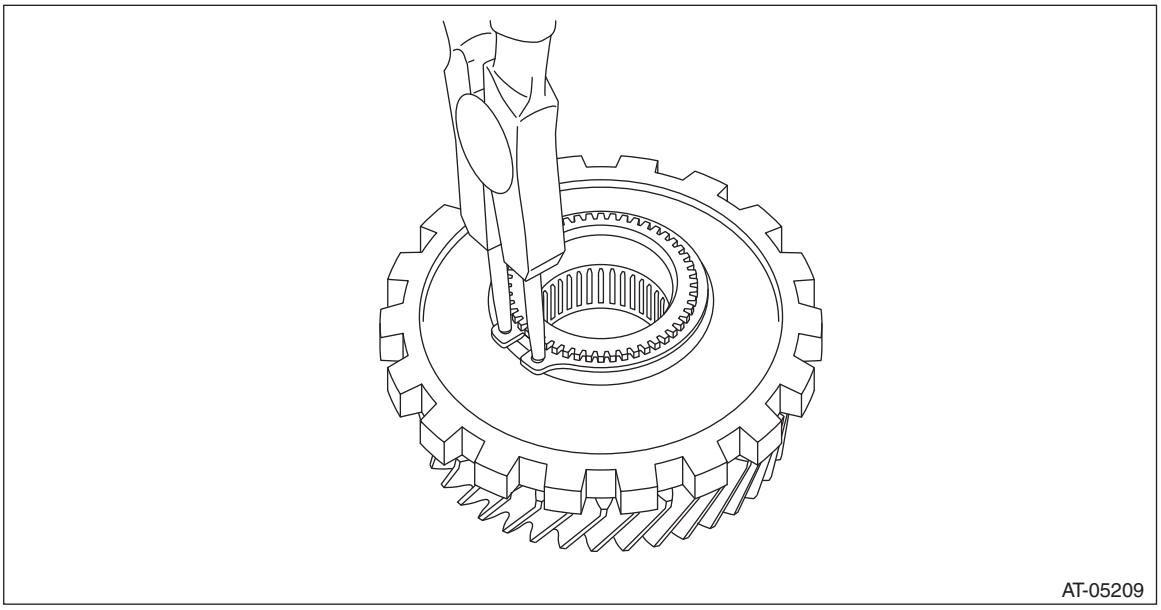


NOTE:
Let the ST sit on the parking gear.

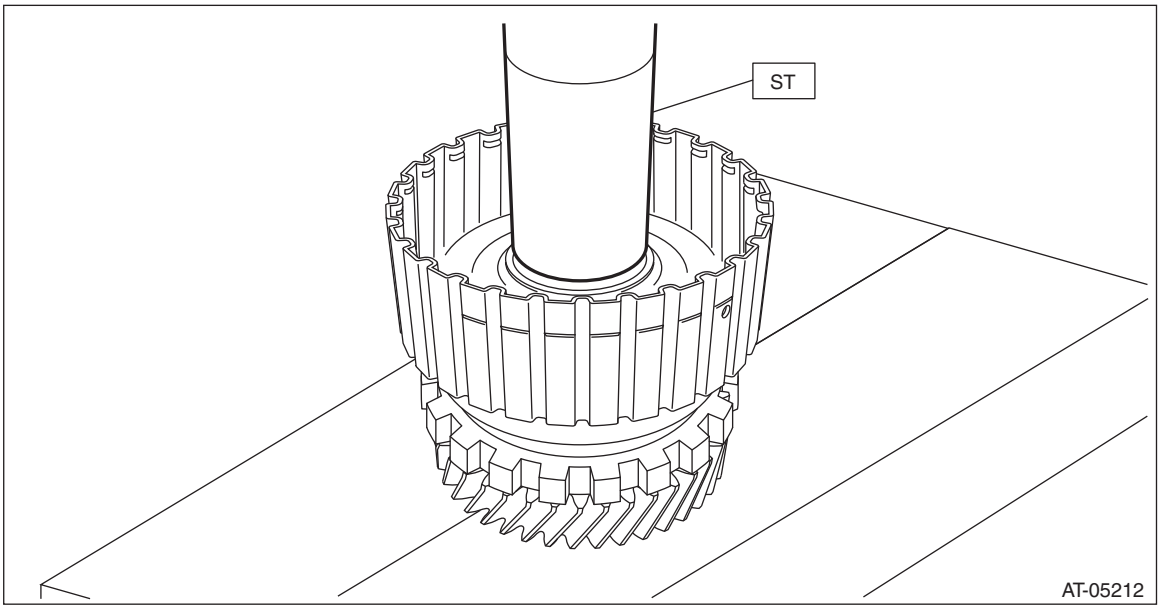
7) Remove the snap ring from transfer reduction drive gear.



8) Using the ST, remove the parking gear from transfer reduction drive gear.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 18767AA000 BEARING REMOVER

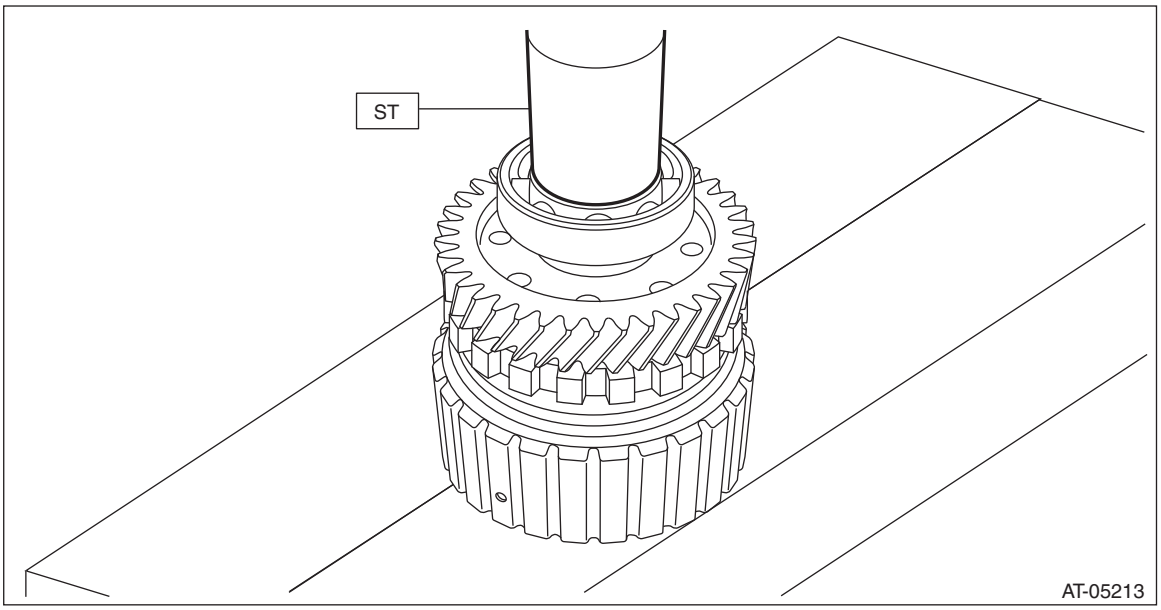


D: ASSEMBLY

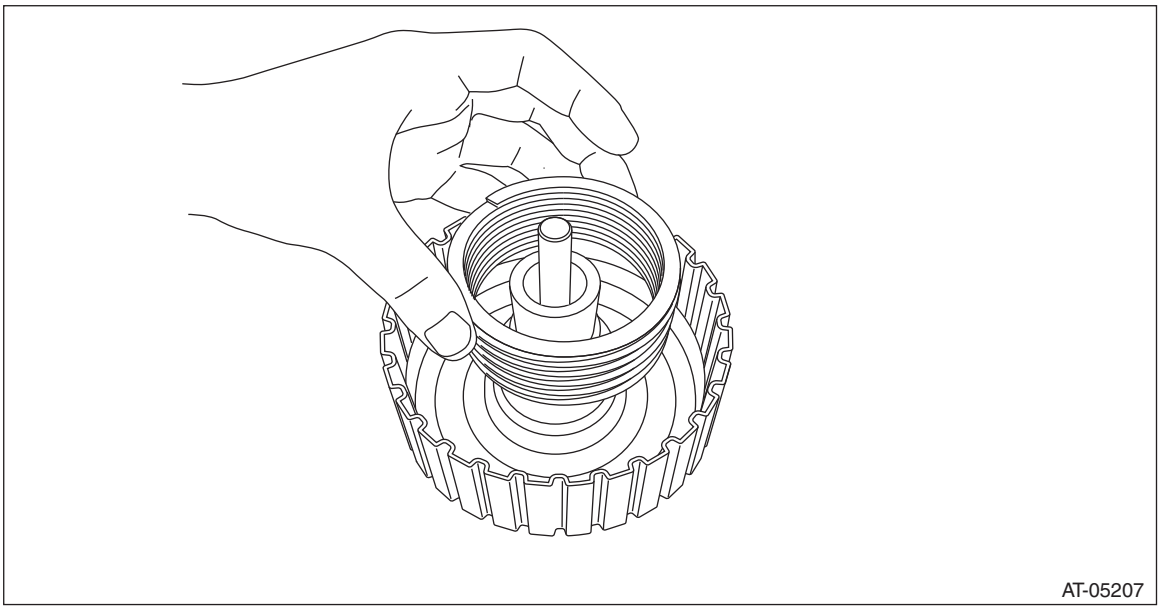


1) Using the ST, install the parking gear to transfer reduction drive gear.
ST 398177700 INSTALLER

2) Install the snap ring to transfer reduction drive gear.

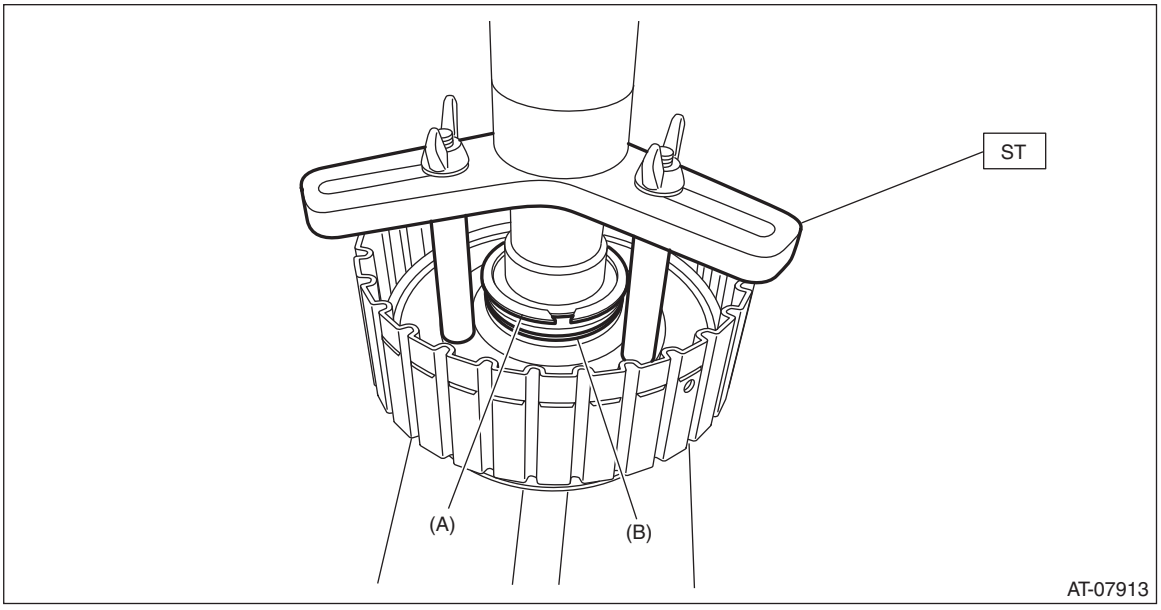


3) Using the ST, install the transfer reduction drive gear to transfer reduction drive gear shaft.
ST 499277100 BUSHING 1-2 INSTALLER



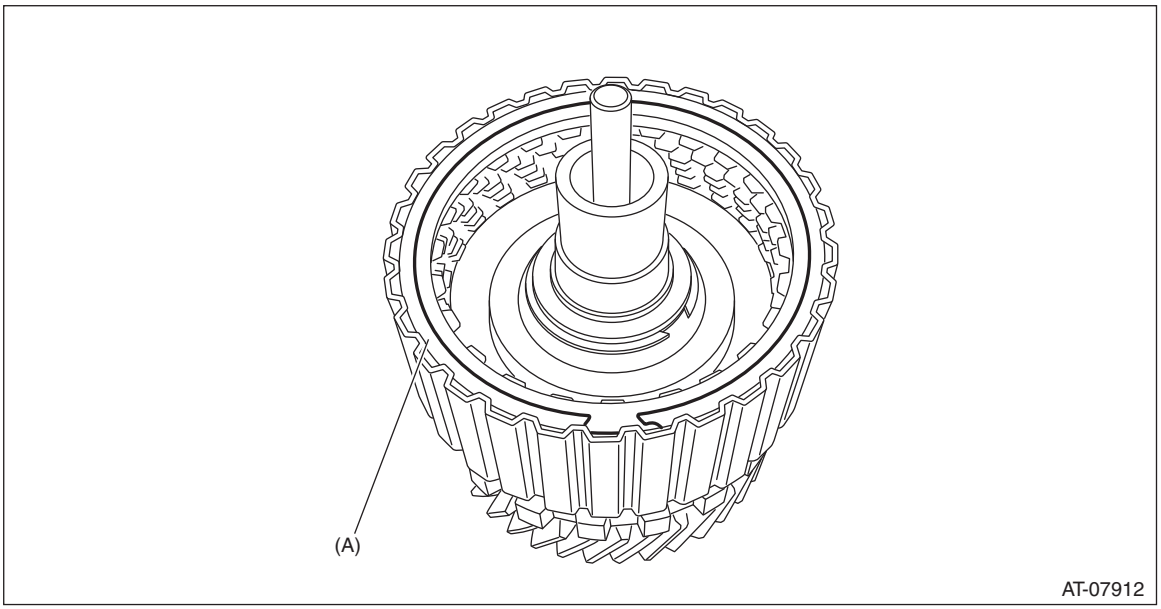
4) Using the ST, install the ball bearing.

NOTE:
Use a new ball bearing.
ST 499277100 BUSHING 1-2 INSTALLER



5) Attach the transfer clutch piston to the reduction drive gear shaft.

NOTE:
Apply CVTF to the transfer clutch piston lip.
6) Install the return spring.

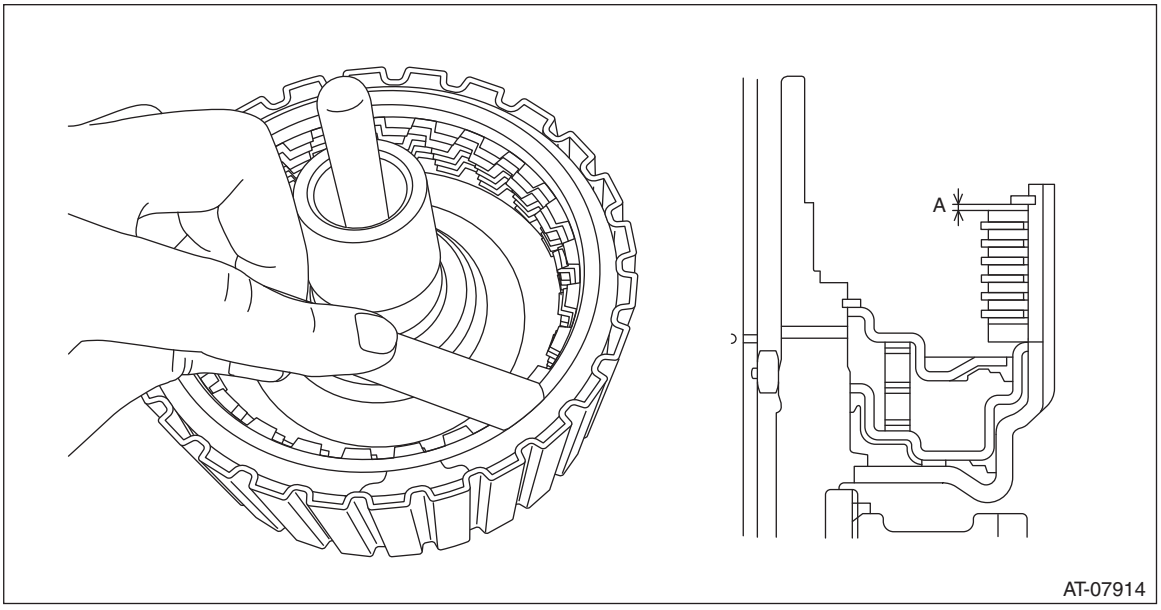


7) Install the transfer clutch piston seal.

8) Using the ST, install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

(A) Snap ring
(B) Transfer clutch piston seal

9) Install the pressure plate, driven plate, drive plate and snap ring.



(A) Snap ring

10) Before measuring clearance “A”, place same thickness shims on both sides to prevent the pressure plate from tilting.
11) When the clearance “A” exceeds the limit for use, select the transfer clutch plate set and pressure plate, and adjust the clearance “A” within the initial specified value.

Initial standard:
0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:
1.6 mm (0.063 in)

(1) Measure the thickness of the pressure plate for the transfer clutch plate set that has been used before replacement.
(2) Select the transfer clutch plate set that uses the pressure plate of which the value is close to the measured value in (1), and check the clearance “A”.

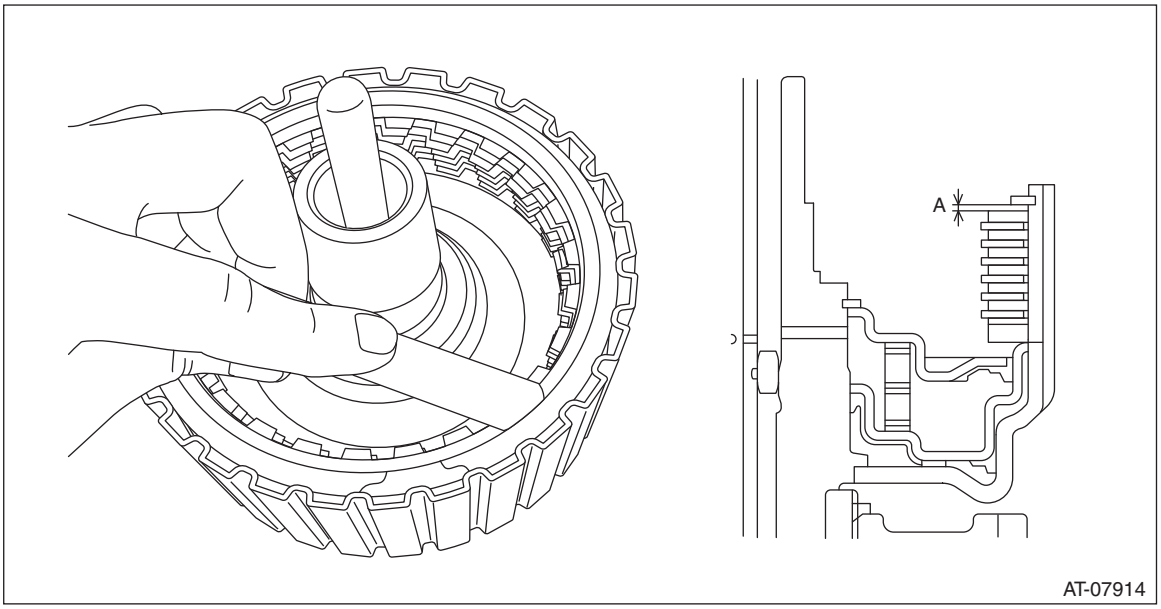
Transfer clutch plate set	
Part No.	Pressure plate thickness mm (in)
31523AA450	3.3 (0.130)
31523AA460	3.7 (0.146)
31523AA470	4.1 (0.161)
31523AA480	4.5 (0.177)

(3) When the clearance “A” exceeds the limit for use in step (2), replace the pressure plate installed on the lower side of the transfer clutch plate set, and check the clearance “A” again.

Pressure plate	
Part No.	Thickness mm (in)
31593AA151	3.3 (0.130)
31593AA161	3.7 (0.146)

(4) When the clearance “A” exceeds the limit for use in step (3), select the transfer clutch plate set that was not used in step (2), and adjust the clearance “A” again.
12) Check the clearance between snap ring and pressure plate. <Ref. to CVT(TR690)-182, INSPECTION, Transfer Clutch.>

E: INSPECTION



- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the lip seal for damage.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR690)-183, ADJUSTMENT, Transfer Clutch.>

1) Before measuring clearance “A” between snap ring and pressure plate, place same thickness shims on both sides to prevent the pressure plate from tilting.

2) When clearance “A” exceeds the limit for use, replace the drive plate and driven plate as a set, and select the pressure plate within the initial specified value.

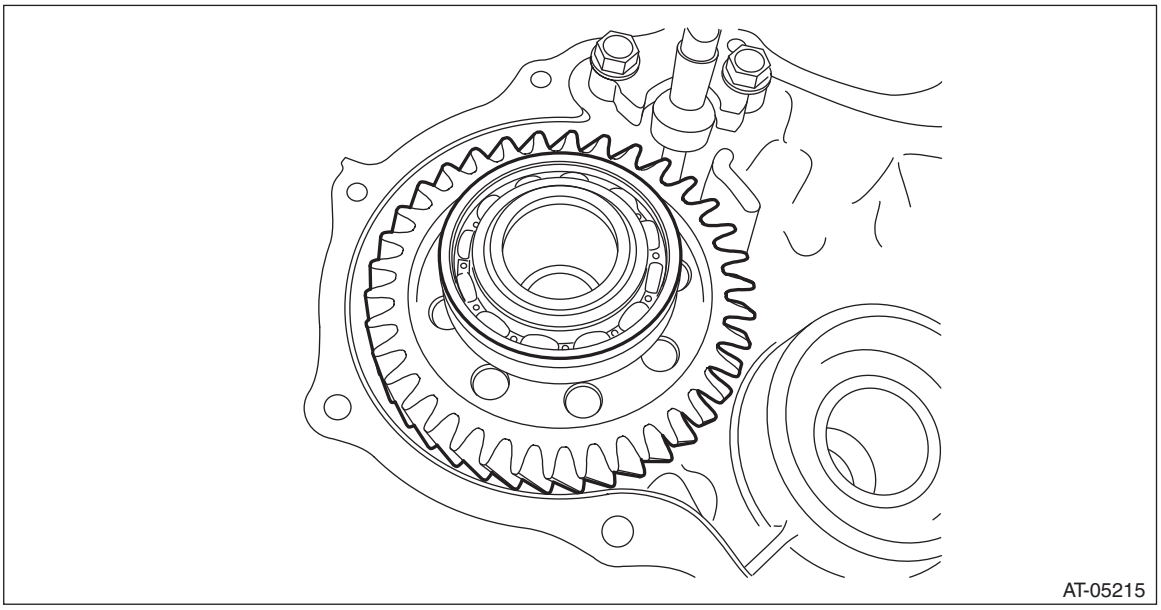
Initial standard:
0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:
1.6 mm (0.063 in)

3) Check for tight corner braking phenomenon when the vehicle is moved forward with the steering fully turned. If tight corner braking occurs, perform the following procedures.

NOTE:
Turn OFF the X mode switch and perform inspection.

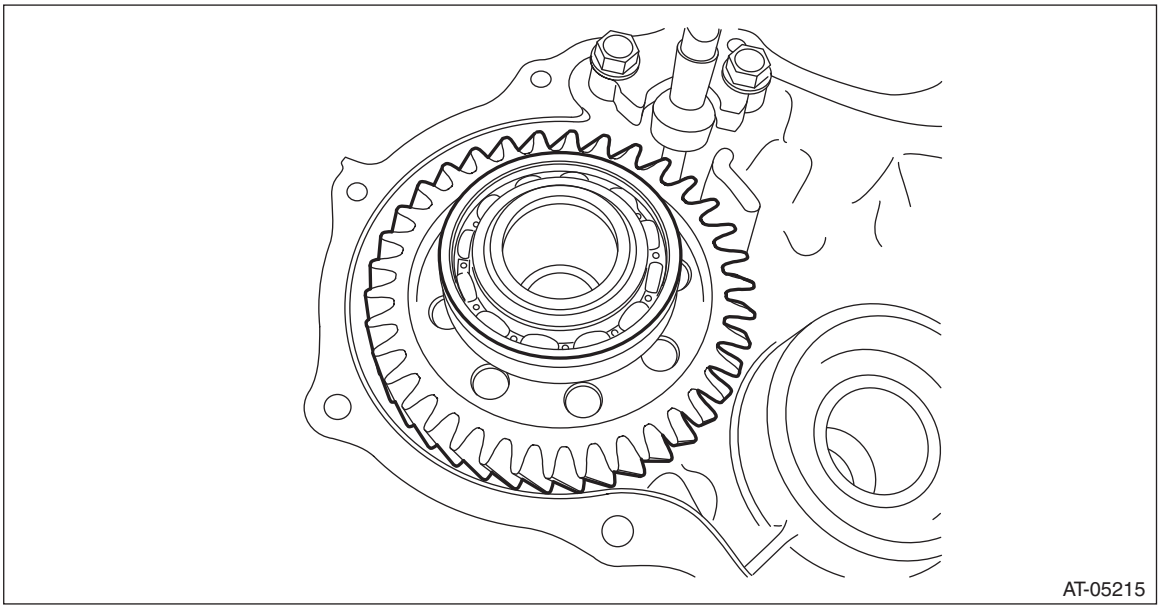
(1) With the steering wheel held at fully turned position, drive the vehicle in “D” range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for approx. ten times each, while repeating acceleration and braking intermittently.
(2) If the tight corner braking phenomenon still persists, drive the vehicle again in a circle for several laps.



F: ADJUSTMENT

NOTE:
Refer to the Rear Drive Shaft. <Ref. to CVT(TR690)-169, ADJUSTMENT, Rear Drive Shaft.>

33.Transfer Reduction Driven Gear

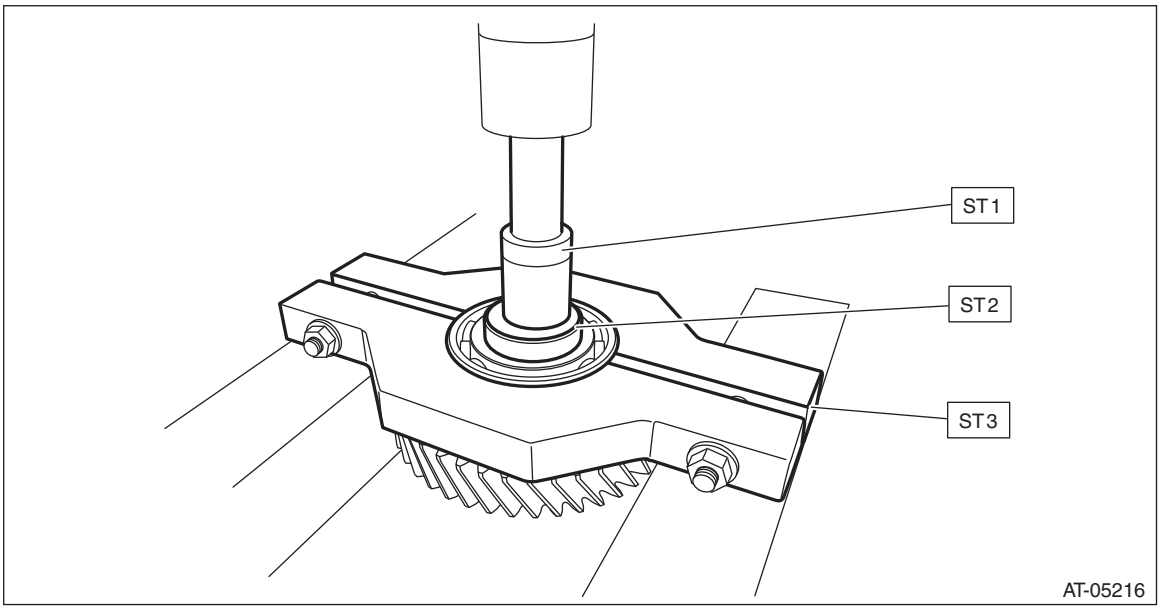


A: REMOVAL

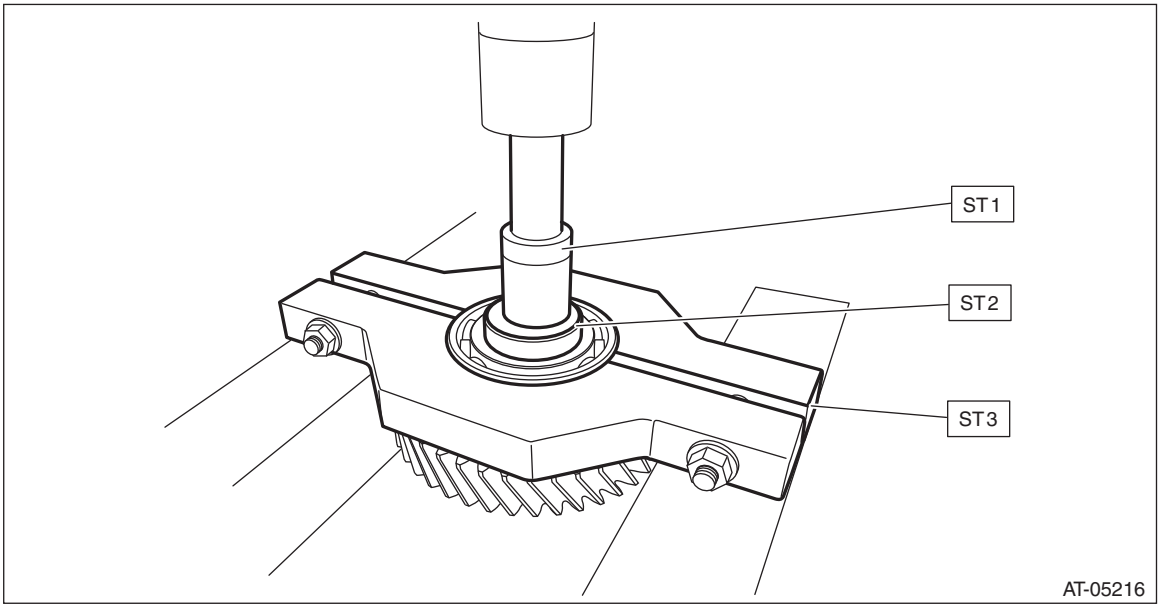
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
5) Remove the transfer reduction driven gear assembly.

B: INSTALLATION

1) Install the reduction driven gear assembly.



2) Select shims. <Ref. to CVT(TR690)-187, ADJUSTMENT, Transfer Reduction Driven Gear.>
3) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
4) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
5) Mount the selected shim onto ball bearing.
6) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>

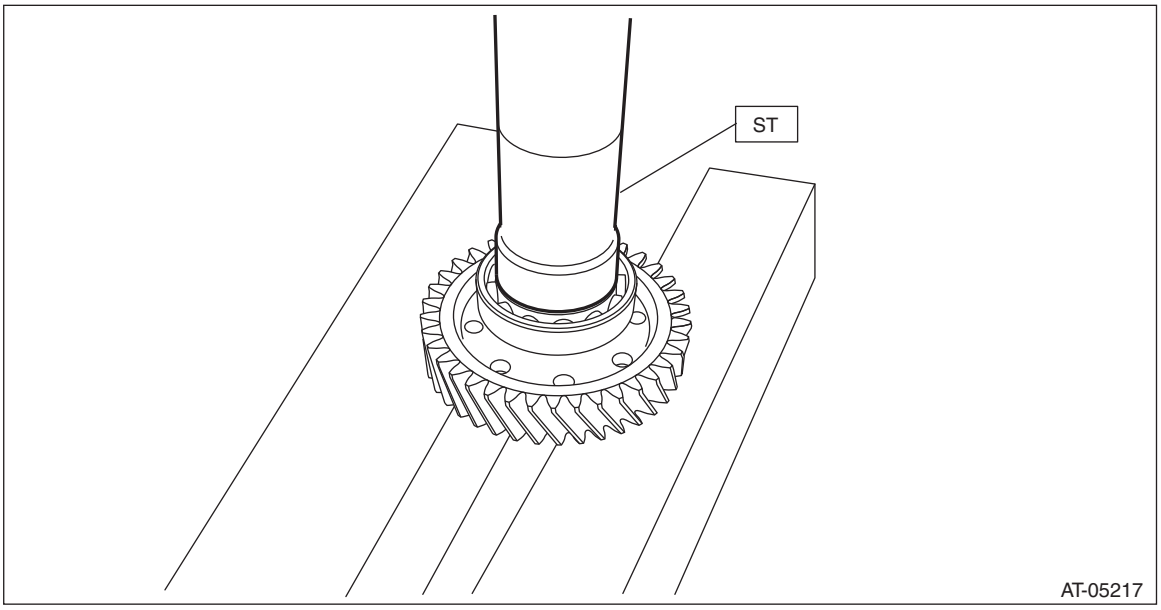


7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

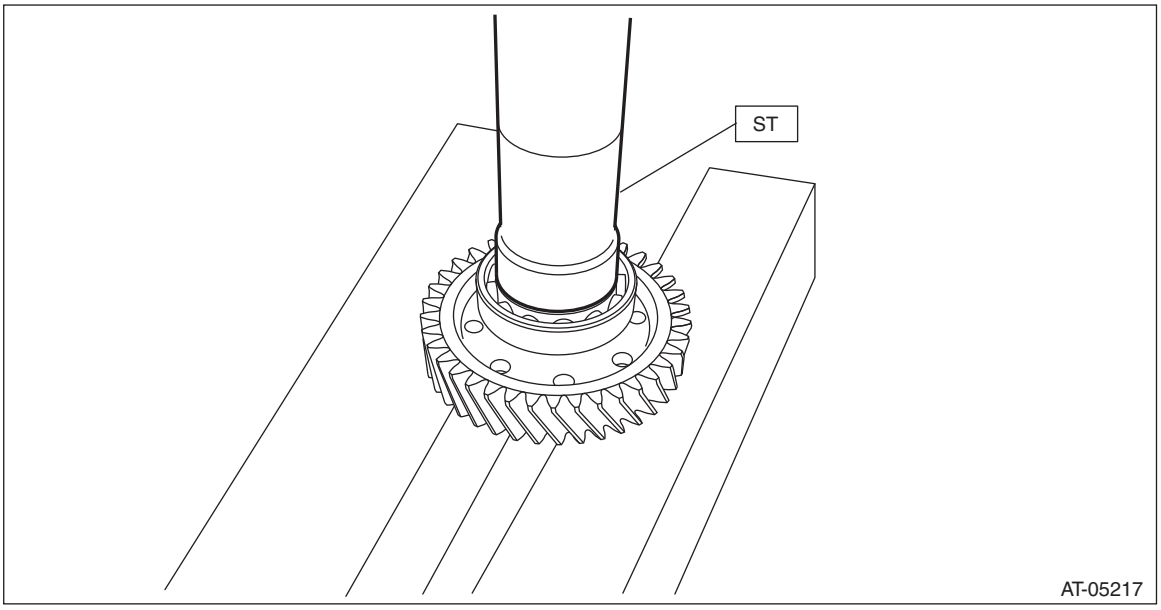
1) Using the ST, remove the ball bearing (large) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER

2) Using the ST, remove the ball bearing (small) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18720AA000 REMOVER



D: ASSEMBLY

1) Install the new ball bearing (large) to reduction driven gear using the ST.
ST 499277100 BUSHING 1-2 INSTALLER

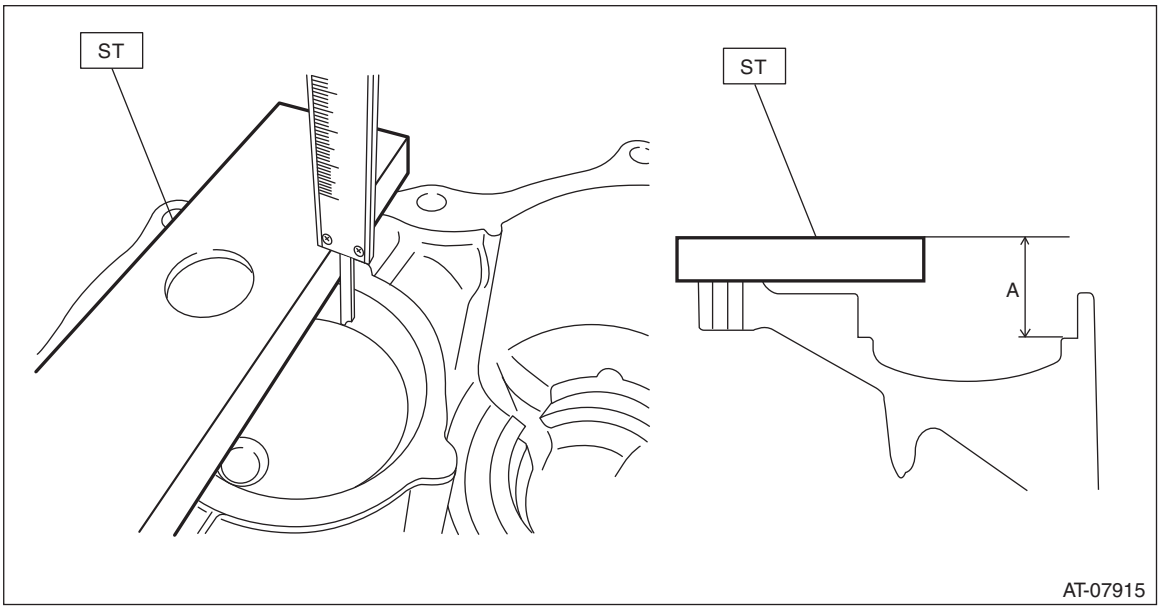


NOTE:
- Use a new ball bearing.

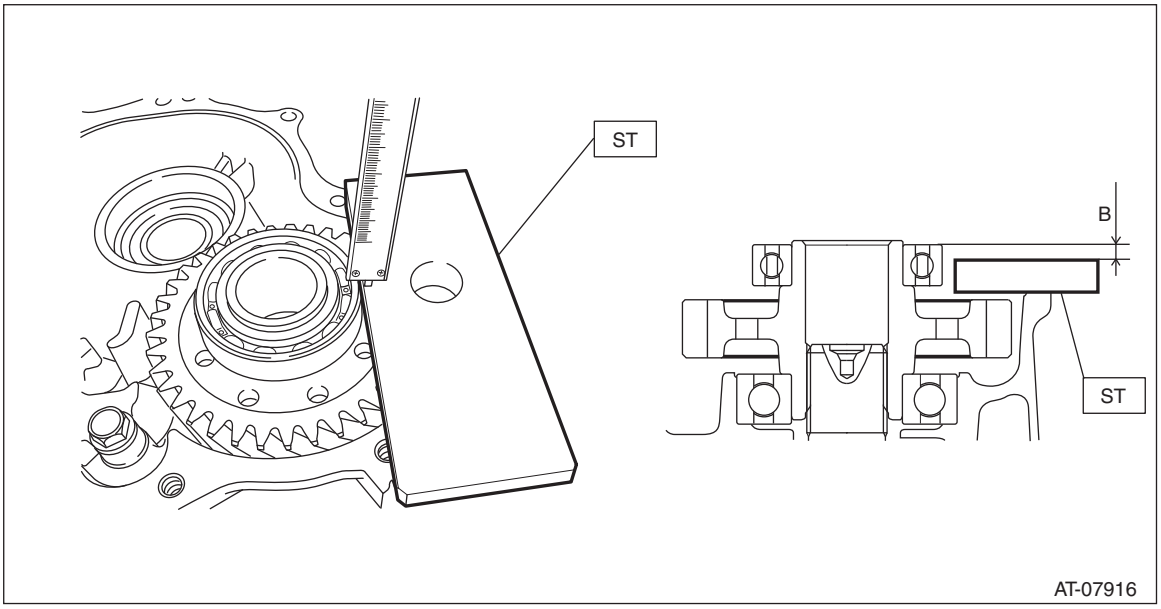
- Install to the splines inside transfer reduction driven gear shaft.

2) Install the new ball bearing (small) to reduction driven gear.

NOTE:
Use a new ball bearing.
ST 499277100 BUSHING 1-2 INSTALLER



E: INSPECTION



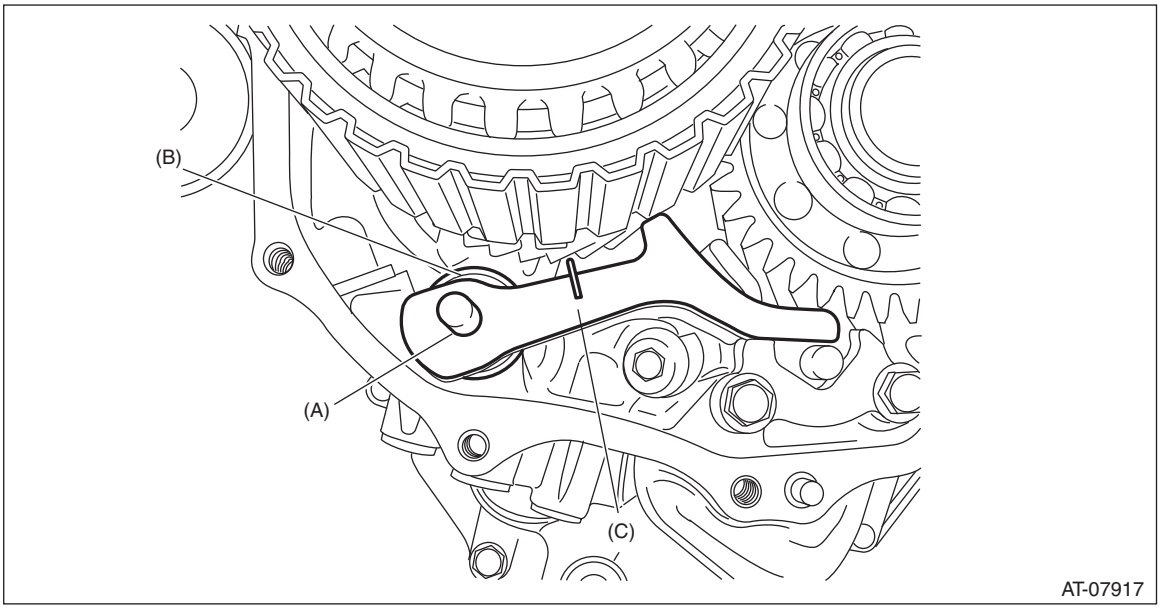
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Make sure the gear is not broken or damaged.

F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the ball bearing catch surface.
ST 398643600 GAUGE

2) Measure height “B” from the ST to the end of the ball bearing outer ring.
ST 398643600 GAUGE

3) Obtain the thickness of shim using the following formula to select none to two shims.
T mm = (A – 15) – (B + 15) – (0.05 — 0.25)
[T in = (A – 0.591) – (B + 0.591) – (0.002 — 0.01)]
T: Shim thickness
A: Depth from the ST upper face to the ball bearing catch surface
B: Height from the ST to the end of the ball bearing outer ring
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance



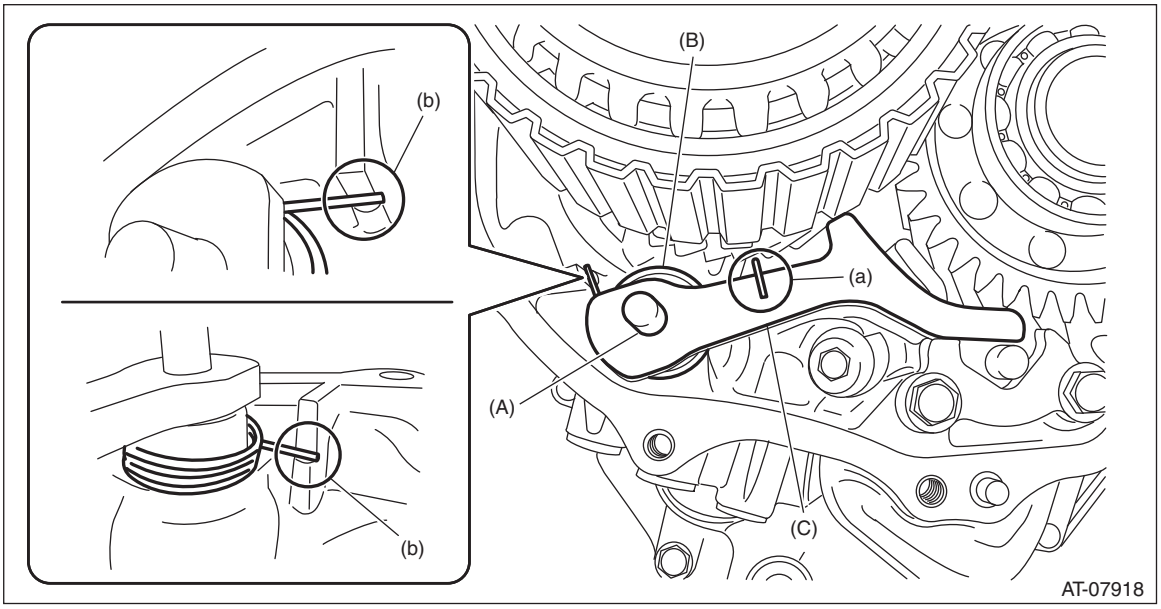
Shim	
Part No.	Thickness mm (in)
31288AA190	0.2 (0.008)
31288AA200	0.3 (0.012)

Shim	
Part No.	Thickness mm (in)
31288AA210	0.5 (0.02)

34.Parking Pawl

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Shift the range select lever to “N” range.
3) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
4) Remove the parking pawl shaft, return spring and parking pawl.



(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

B: INSTALLATION

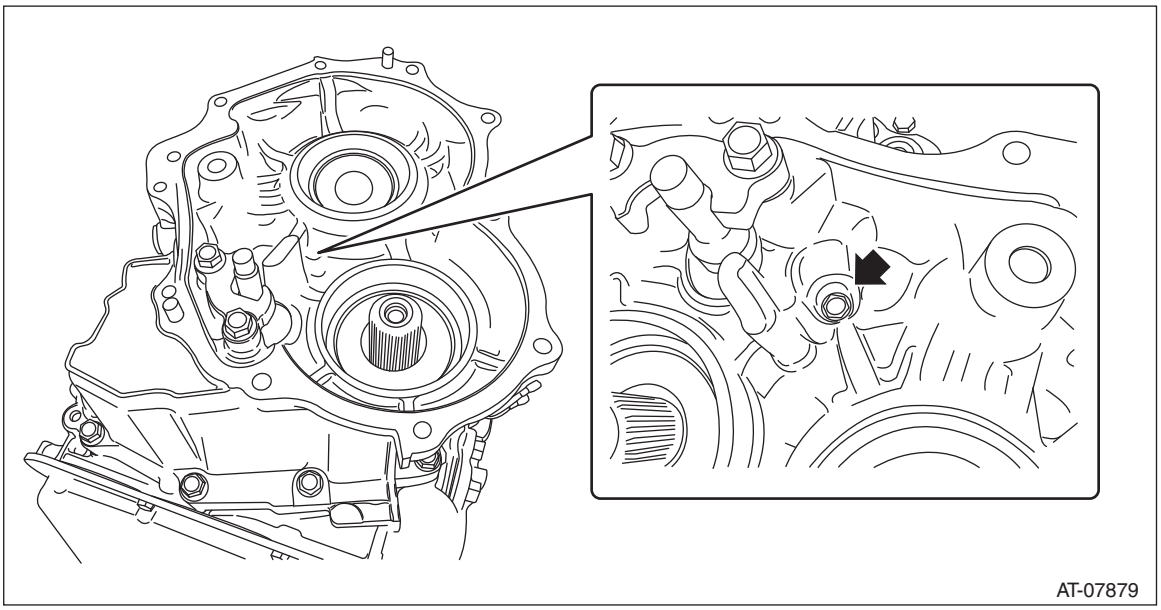
1) Set the range select lever to the “N” range.
2) Install the parking pawl shaft, return spring and parking pawl.

NOTE:
Make sure that the end of return spring sticks out of parking pawl as shown in (a). Make sure that the other end contacts the rib of intermediate case as shown in (b).

(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

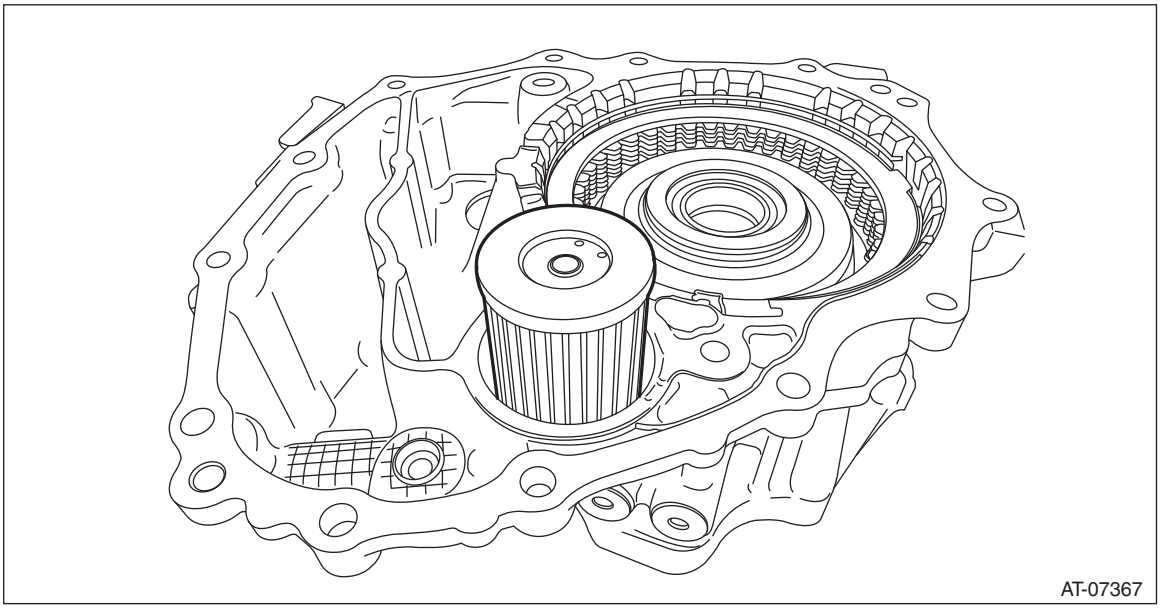
3) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION



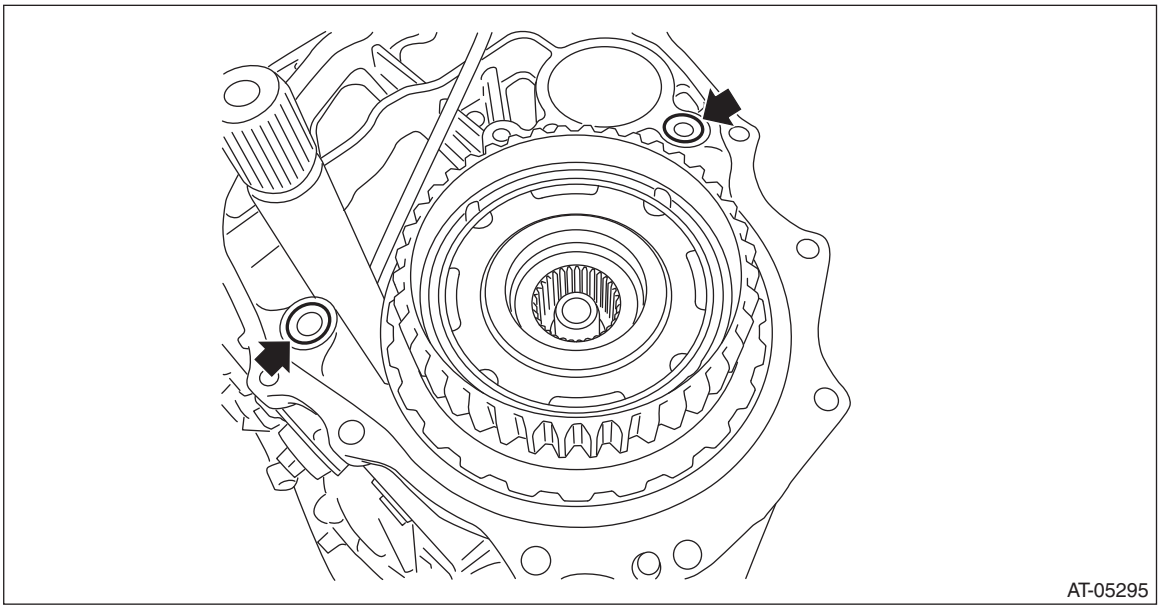
- Check the parking pawl for breakage or damage.
- Check the return spring for fatigue.

35.Intermediate Case



A: REMOVAL

1) Remove the transmission assembly from vehicle body. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
3) Remove the parking pawl. <Ref. to CVT(TR690)-189, REMOVAL, Parking Pawl.>
4) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
5) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
6) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
7) Remove the intermediate case.

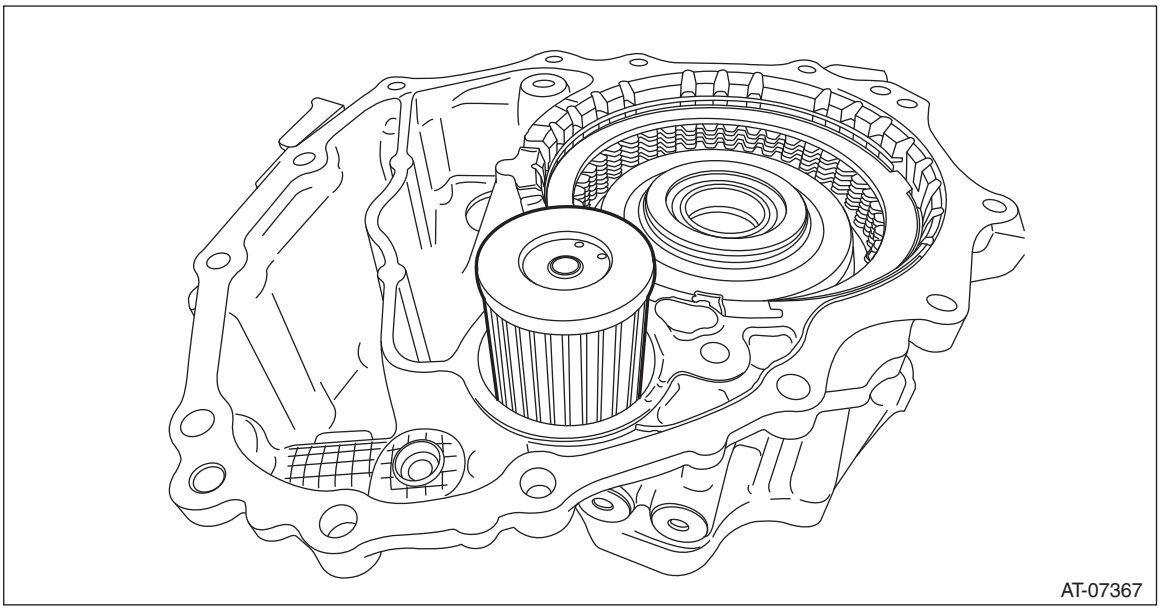


NOTE:
- The total number of intermediate case mounting bolts is 14.
- Inside the transmission is a single bolt (arrowed).

AT-07879

8) Remove the CVTF filter.

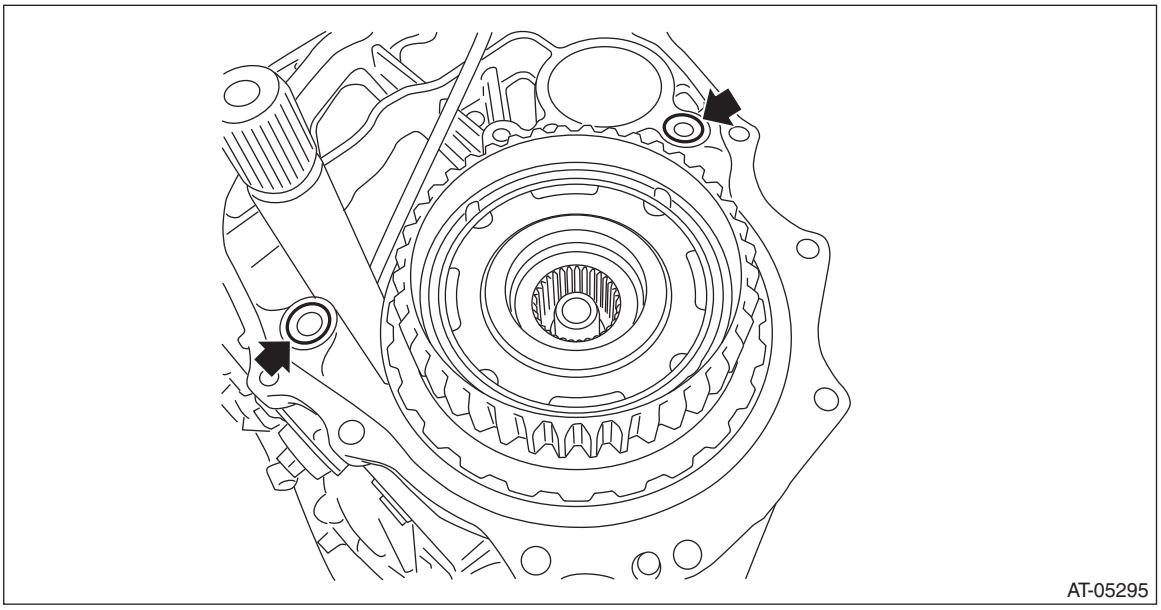
AT-07367



9) Remove the O-ring from the transmission case.

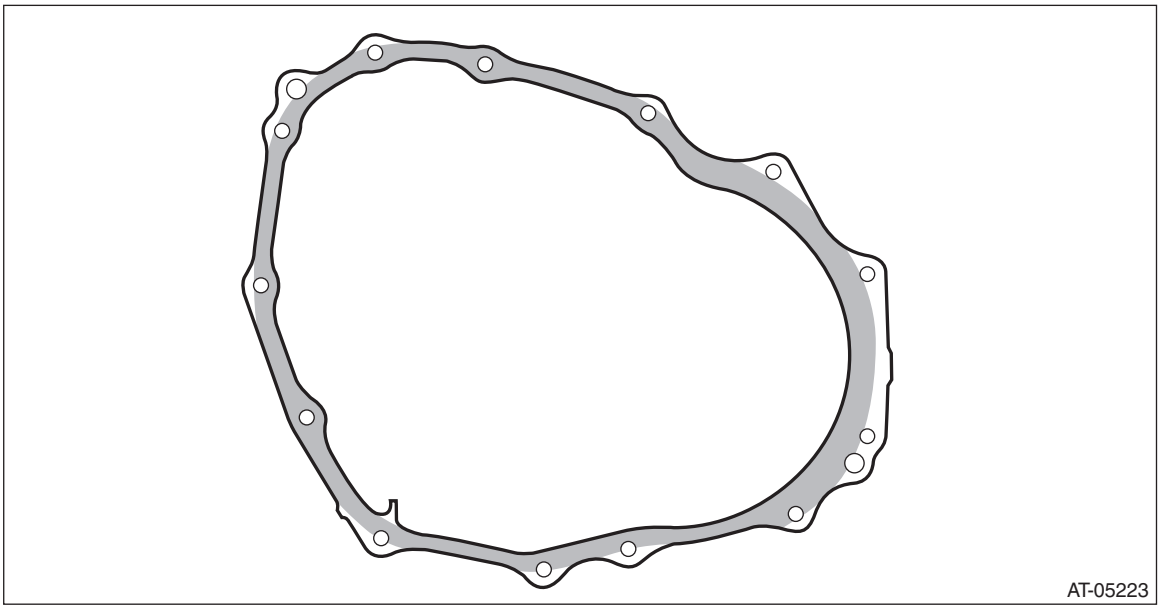
B: INSTALLATION

1) Clean the mating surface of intermediate case and transmission case.
2) Face the O-ring side of the CVTF filter to the intermediate case side, and install the CVTF filter.



NOTE:
Apply CVTF to the O-rings.

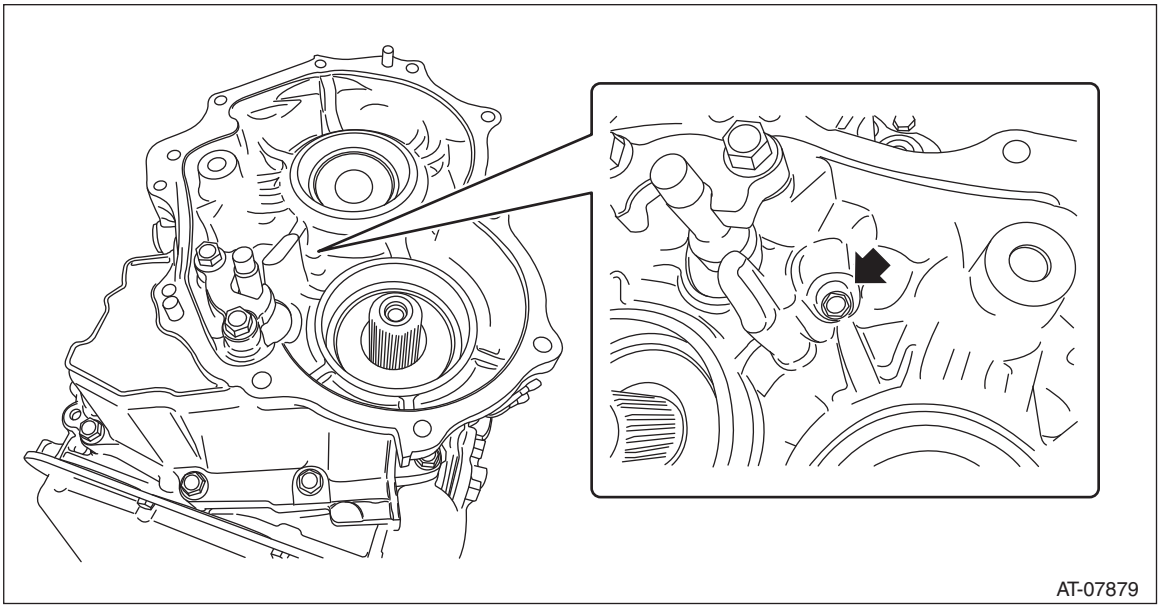
3) Install the O-ring to the transmission case.



NOTE:
- Use new O-rings.

- Apply CVTF to the O-rings.

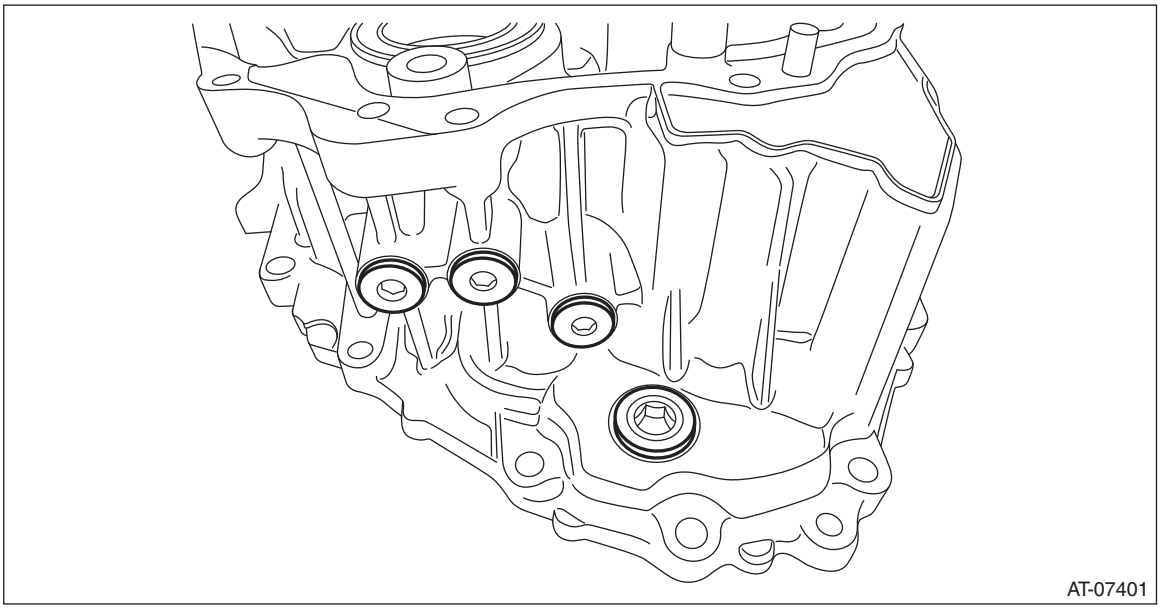
4) Apply liquid gasket to intermediate case seamlessly.



Liquid gasket:
THREE BOND 1215B or equivalent

5) Install the intermediate case and the transmission hanger to the transmission case.

NOTE:
Make sure to install the arrowed bolt.

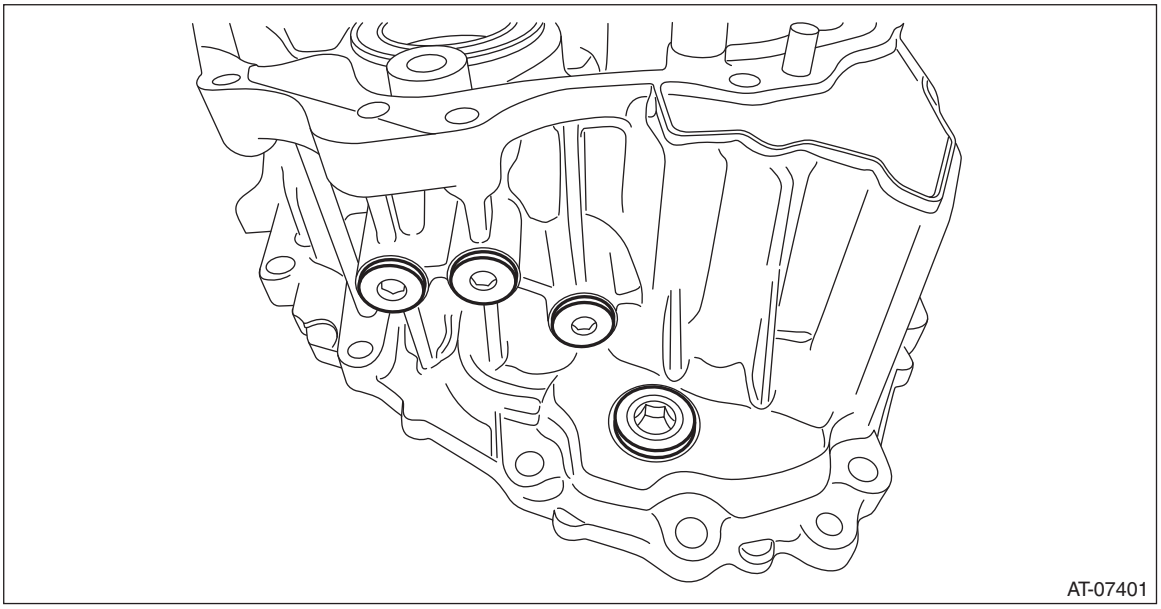


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
8) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
9) Install the parking pawl. <Ref. to CVT(TR690)-189, INSTALLATION, Parking Pawl.>
10) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
11) Install the transmission to vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the parking support.
2) Remove the CVTF filler plug.
3) Remove all plugs from intermediate case.



4) Remove the reverse brake assembly. <Ref. to CVT(TR690)-197, DISASSEMBLY, Reverse Brake Assembly.>

D: ASSEMBLY

1) Install the reverse brake. <Ref. to CVT(TR690)-200, ASSEMBLY, Reverse Brake Assembly.>
2) install all plugs to intermediate case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Use new O-rings.

3) Install the parking support.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
4) Temporarily install the CVTF filler plug.

NOTE:
Replace the gasket of CVTF filler plug with a new part after installing the transmission assembly to vehicle and adjusting CVTF fluid.

E: INSPECTION

- Check the intermediate case for fissures, cracks or damage.
- Check for leakage of CVTF from the connections between intermediate case and transmission case, and between intermediate case and extension case.

36.CVTF Filter

A: REMOVAL

NOTE:
• Although CVTF filter is a maintenance-free part, replace it if a large quantity of wear debris and metal particles are found in CVTF and CVTF filter.
• For removal of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>

B: INSTALLATION

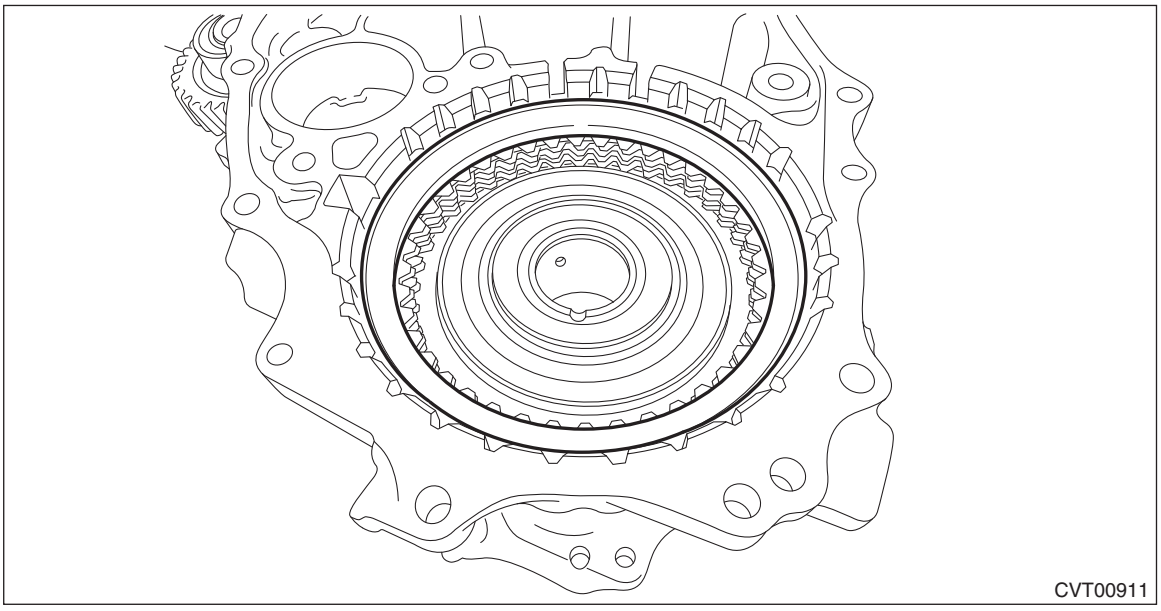
NOTE:
For installation of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>

C: INSPECTION

- Check if a large quantity of wear debris or metal particles are in CVTF and CVTF filter.
- Check for broken part or damaged O-ring.

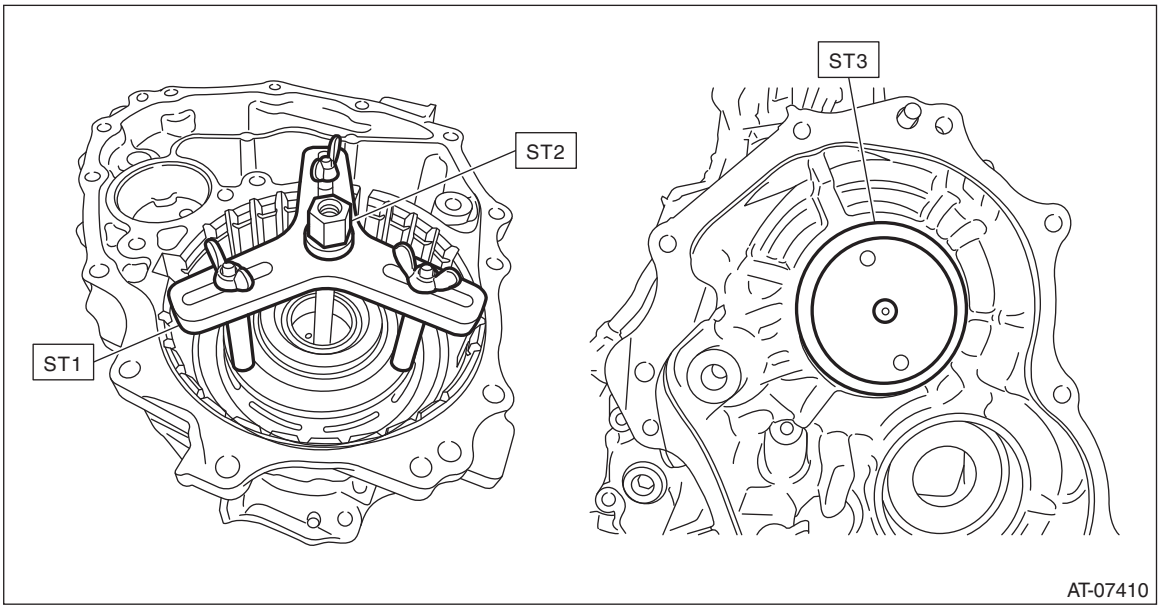
37.Reverse Brake Assembly

A: REMOVAL



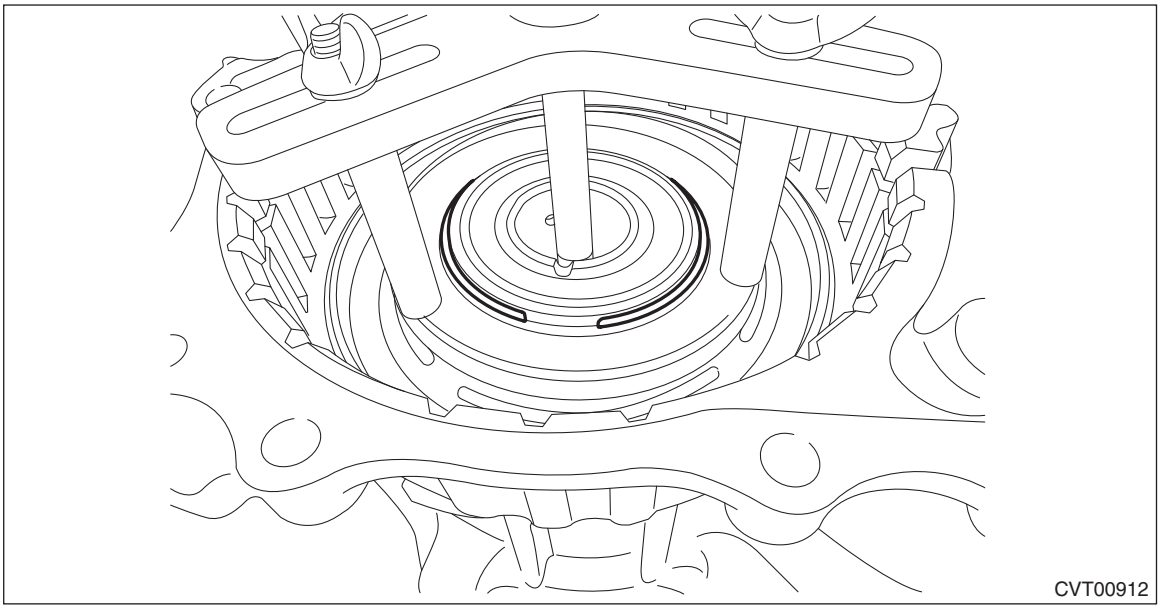
NOTE:
For removal of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>

B: INSTALLATION

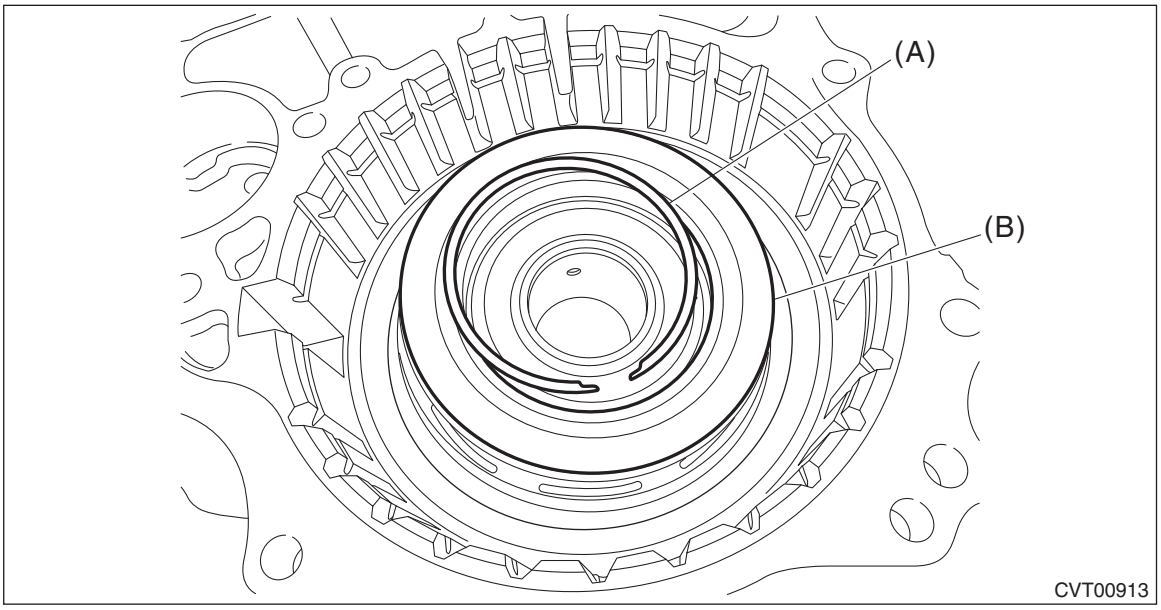


NOTE:
For installation of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>

C: DISASSEMBLY

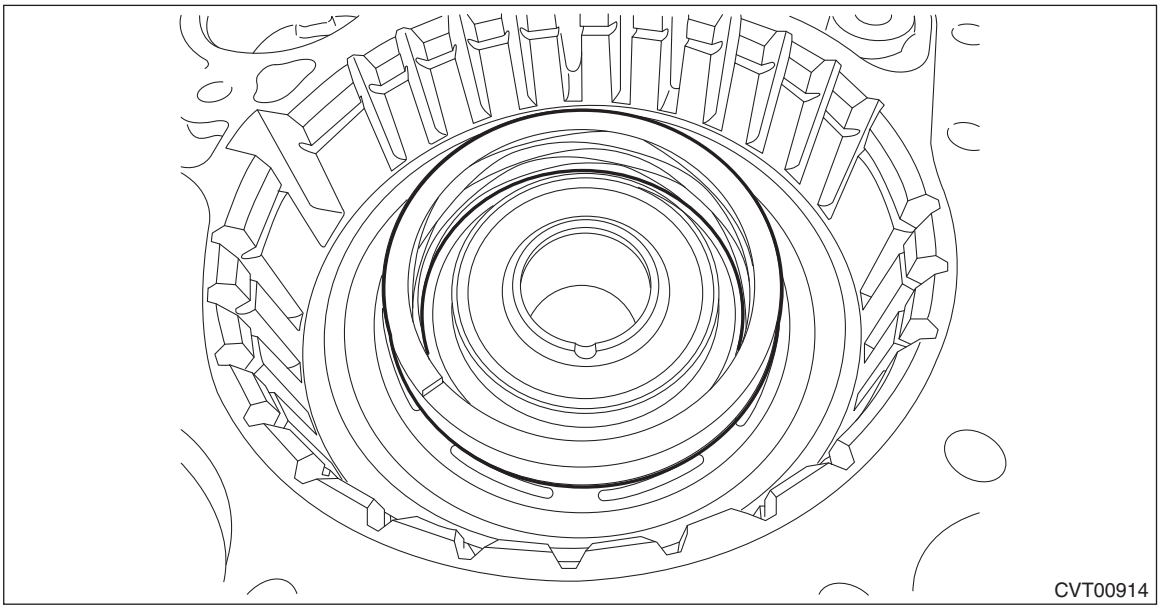


1) Remove the snap ring.
2) Remove the retaining plate, drive plate, driven plate and dish plate.

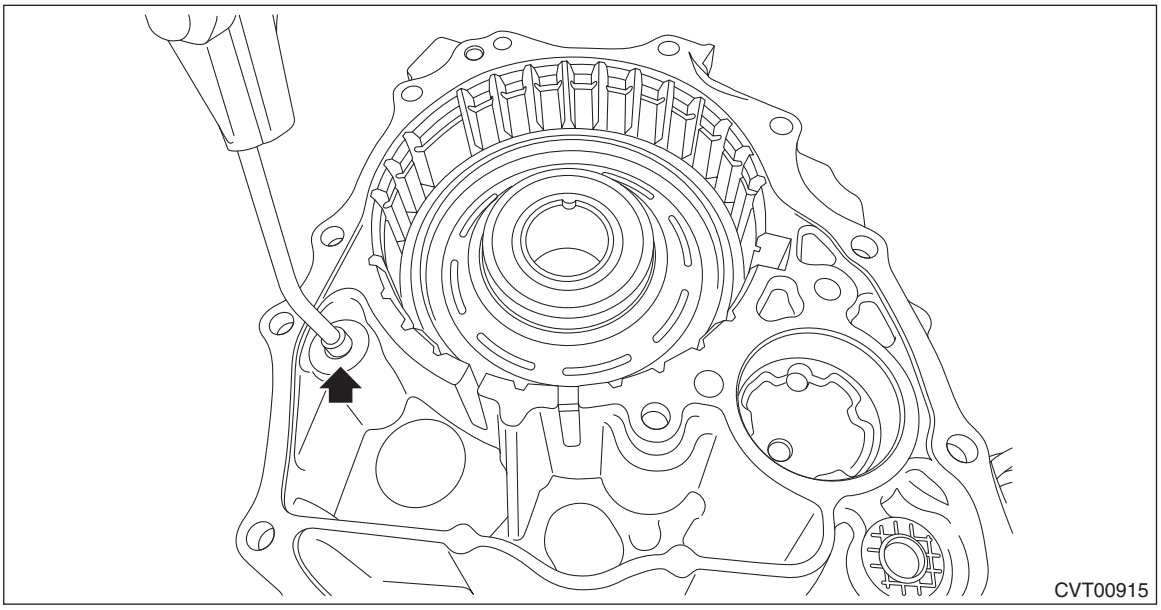


3) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT

4) Compress the return spring using the set ST to remove the snap ring.

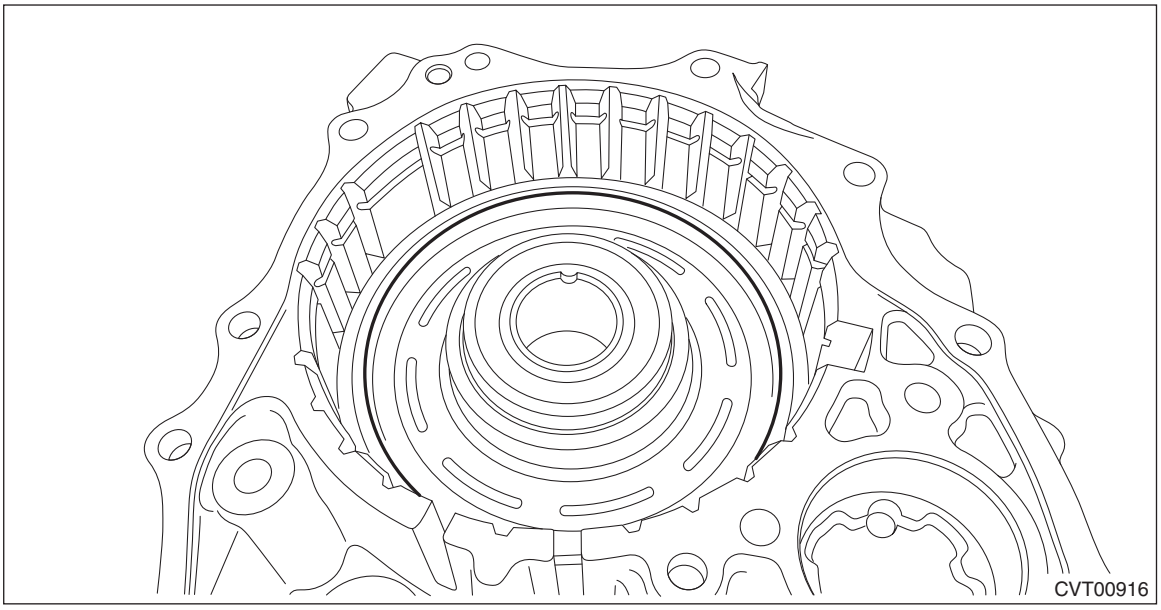


5) Using the ST, remove the snap ring and spring retainer.

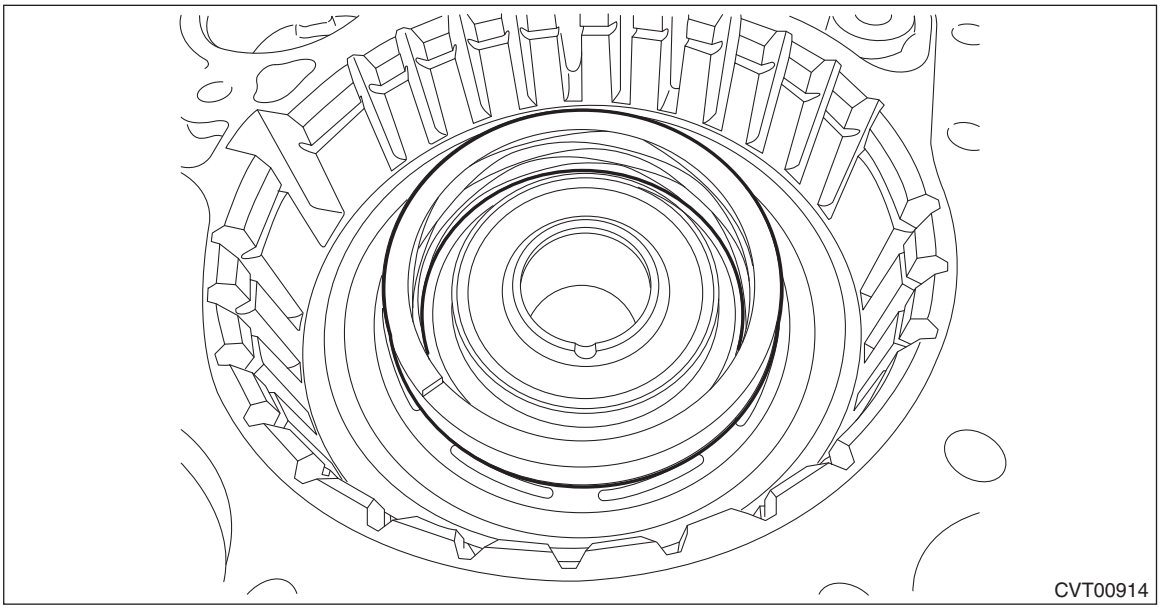


(A) Snap ring
(B) Spring retainer

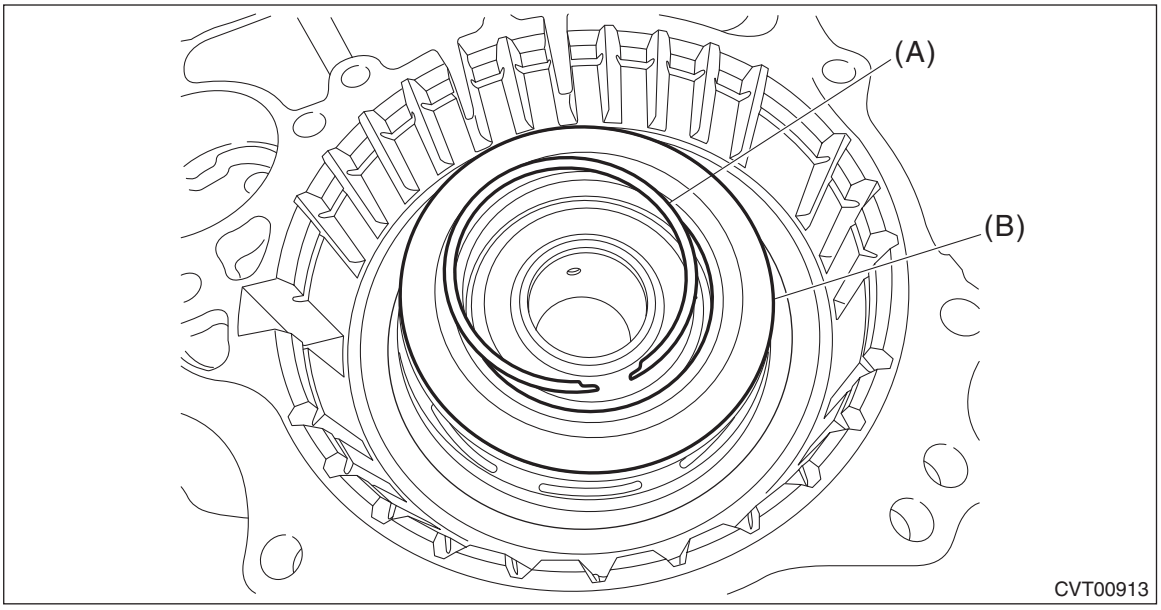
6) Remove the return spring.



7) Remove the reverse brake piston by blowing compressed air intermittently from intermediate case hole.

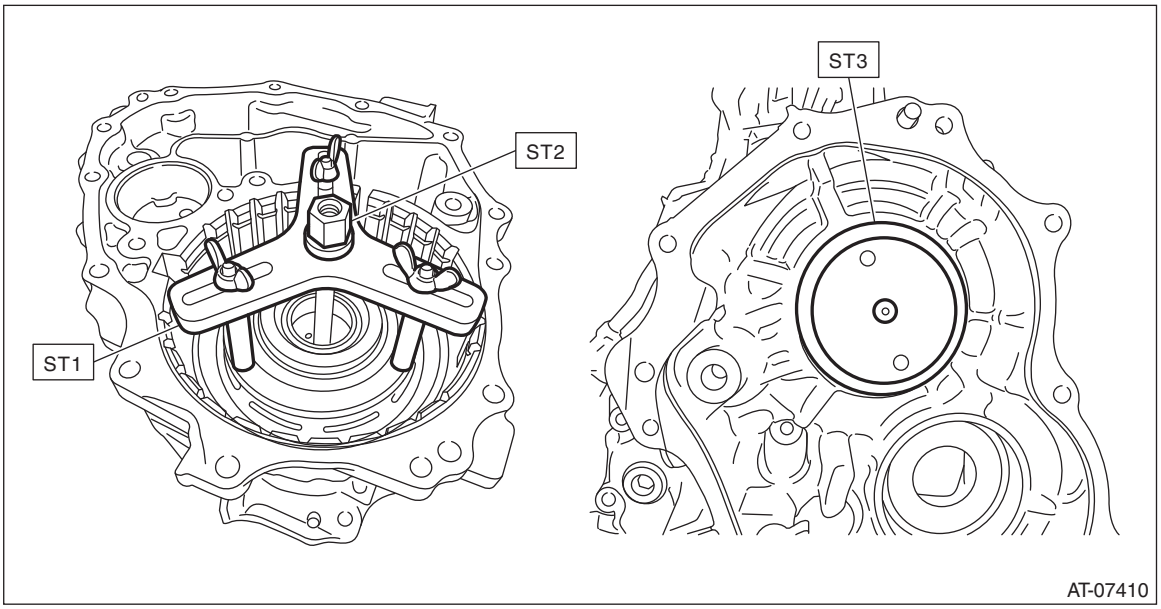


D: ASSEMBLY

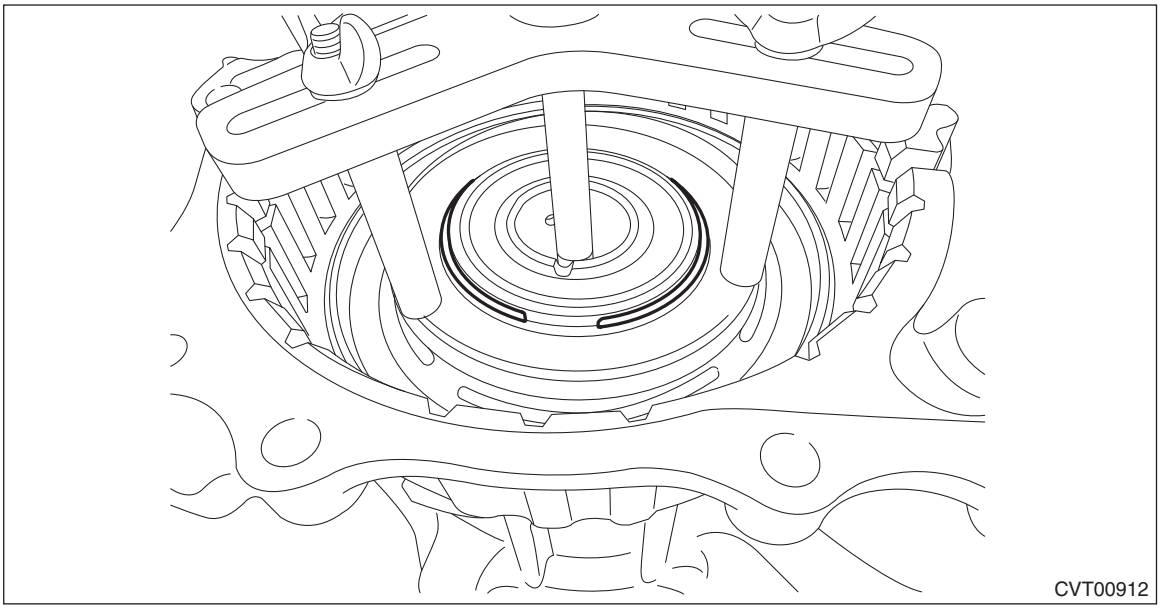


1) Apply CVTF to the seal of reverse brake piston and install it to intermediate case.

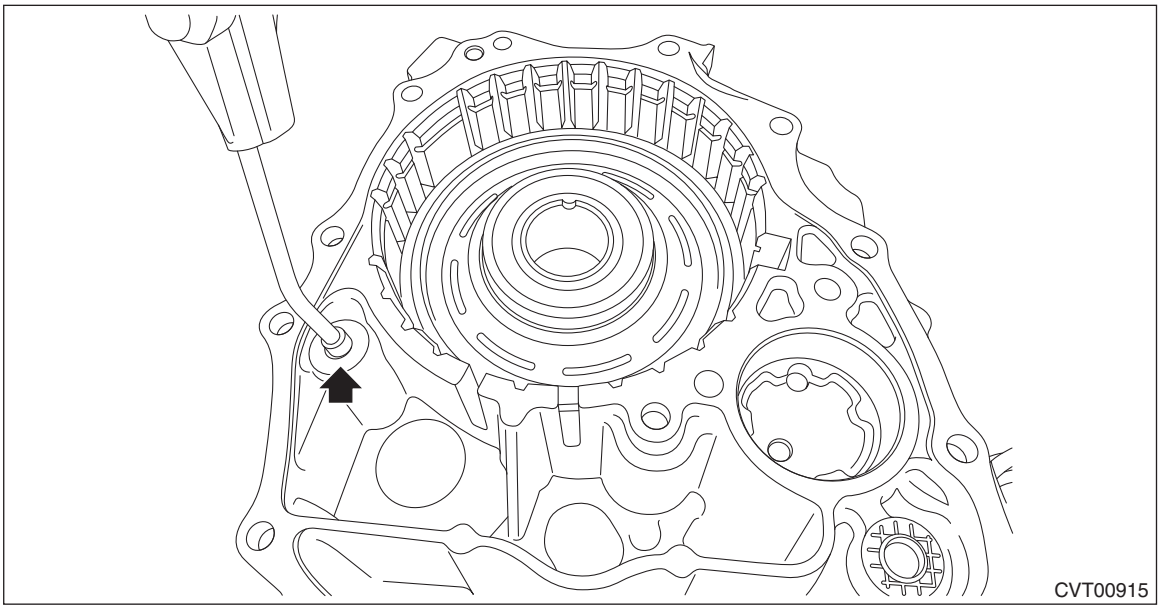
2) Install the return spring.



3) Set the spring retainer and snap ring.



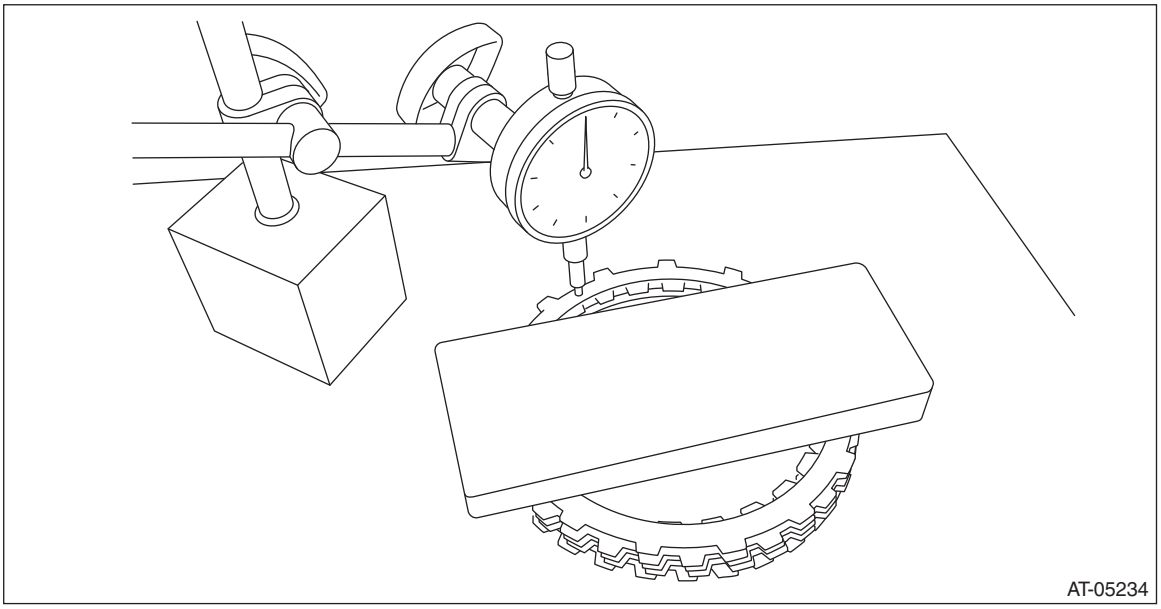
(A) Snap ring
(B) Spring retainer



4) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT

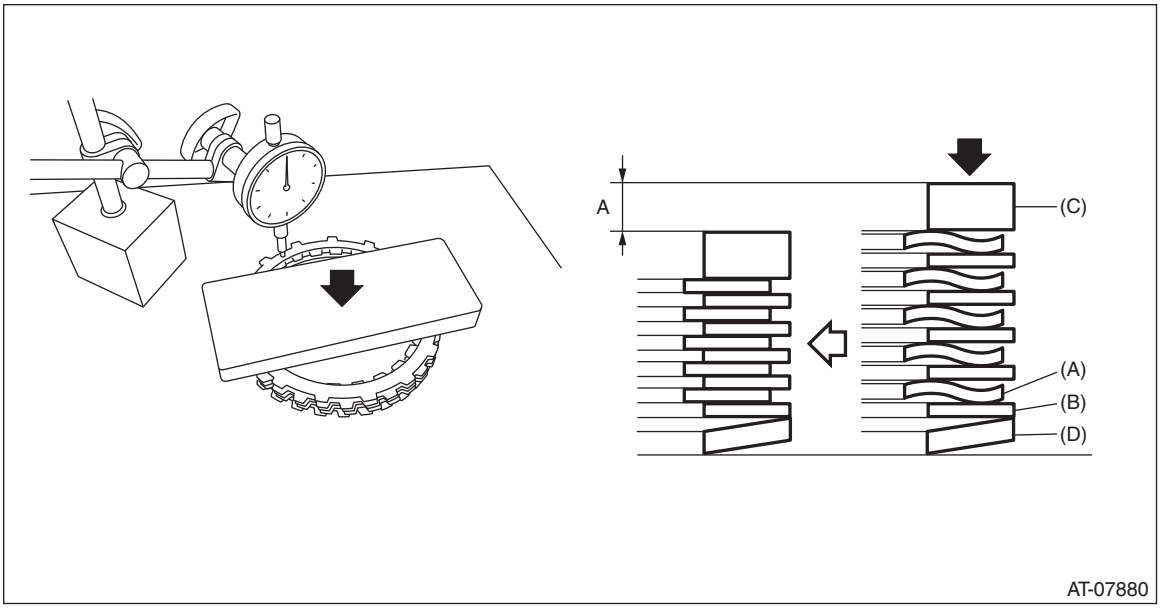
5) Compress the return spring using the ST attached, and install the snap ring.

6) Check the operation of reverse brake piston by blowing compressed air intermittently from intermediate case hole.



7) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.
8) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.
9) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

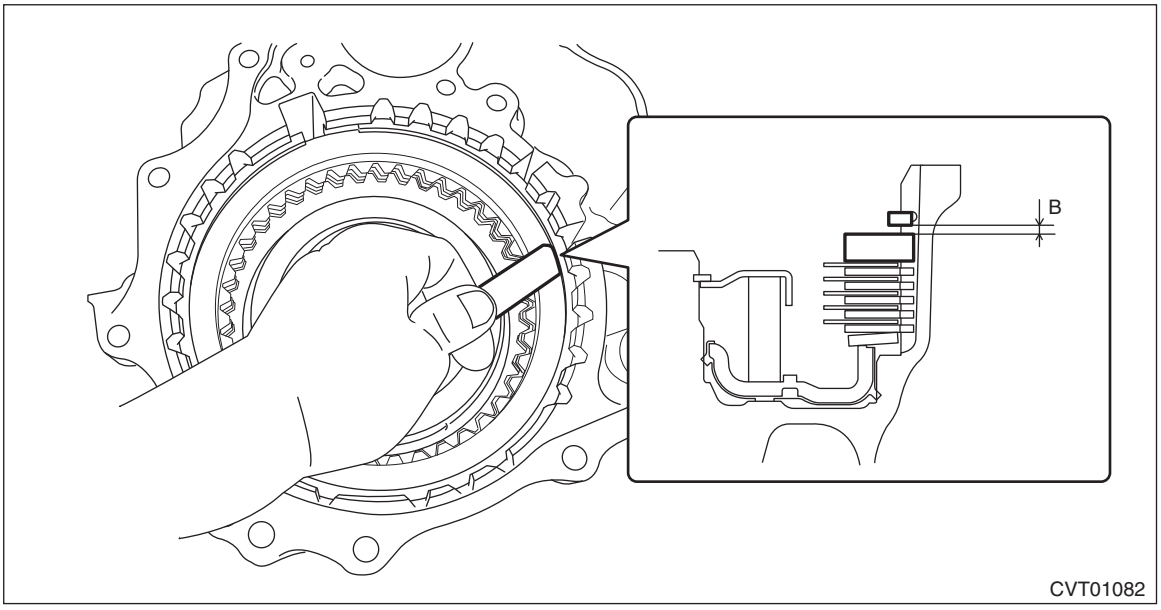


NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 84 N (8.6 kgf, 18.9 lb).

10) Put the flat board on retaining plate.

11) Using the following formula, read the push/pull gauge and calculate "N".
N = 84 N (8.6 kgf, 18.9 lb) – Z
84 N (8.6 kgf, 18.9 lb): Load applied to clutch plate
Z: Flat board weight
12) Press the center of retaining plate by applying a force of "N" or more using push/pull gauge, and then measure and record the compression amount "A".

NOTE:
Measure at four points with a 90° interval and calculate the average.



(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

13) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to intermediate case.

NOTE:
Install the dish plate in the correct direction.

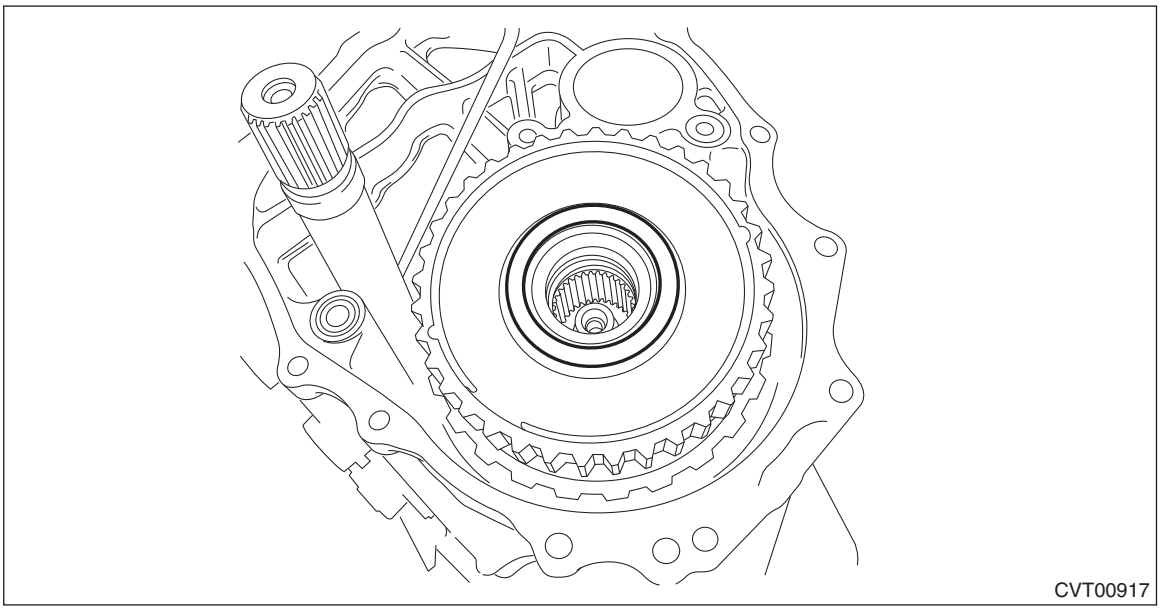
14) Measure and record the clearance “B” between the retaining plate and snap ring.

15) Piston stroke calculation
Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Initial standard:
2.88 — 3.18 mm (0.113 — 0.125 in)

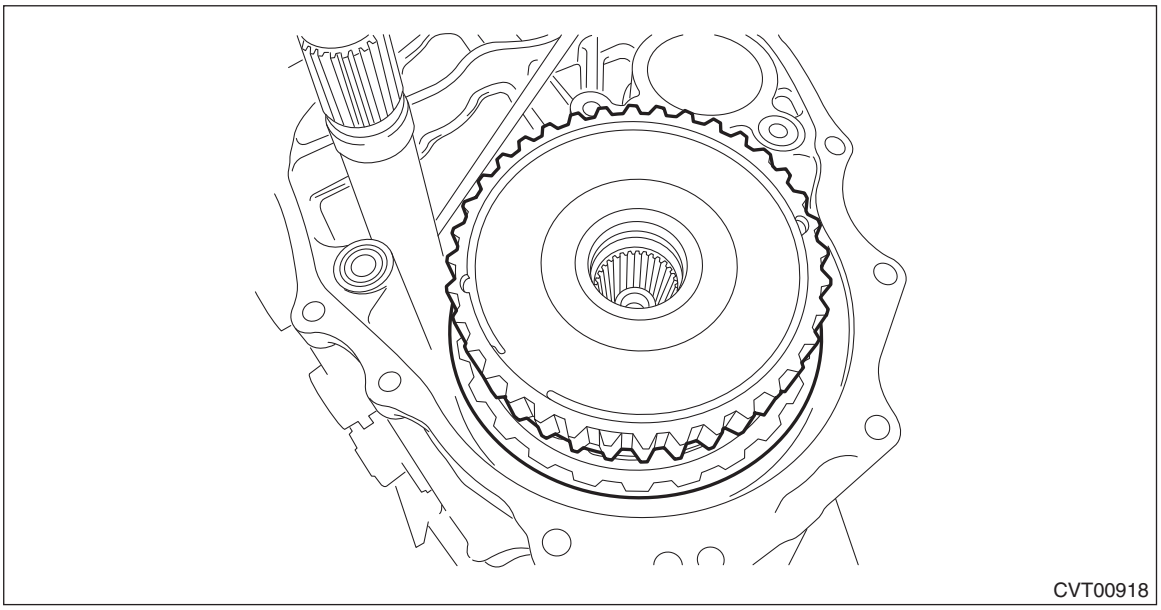
Limit thickness:
3.38 mm (0.133 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB920	5.6 (0.220)
31567AB930	5.8 (0.228)
31567AB940	6.0 (0.236)
31567AB950	6.2 (0.244)



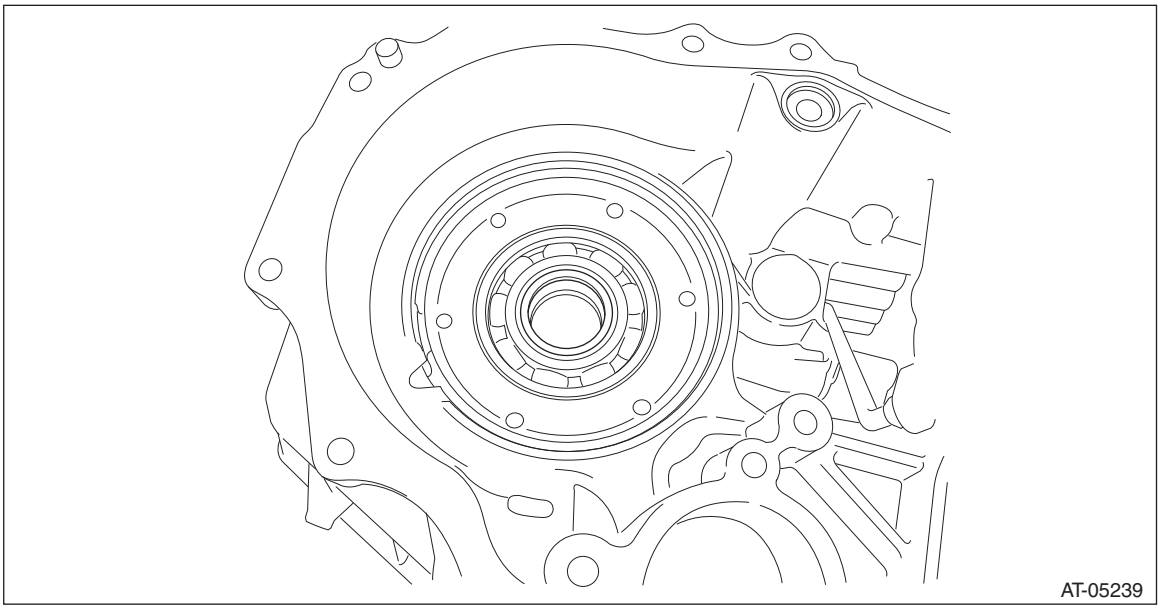
E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. <Ref. to CVT(TR690)-200, ASSEMBLY, Reverse Brake Assembly.>



38.Forward Clutch Assembly

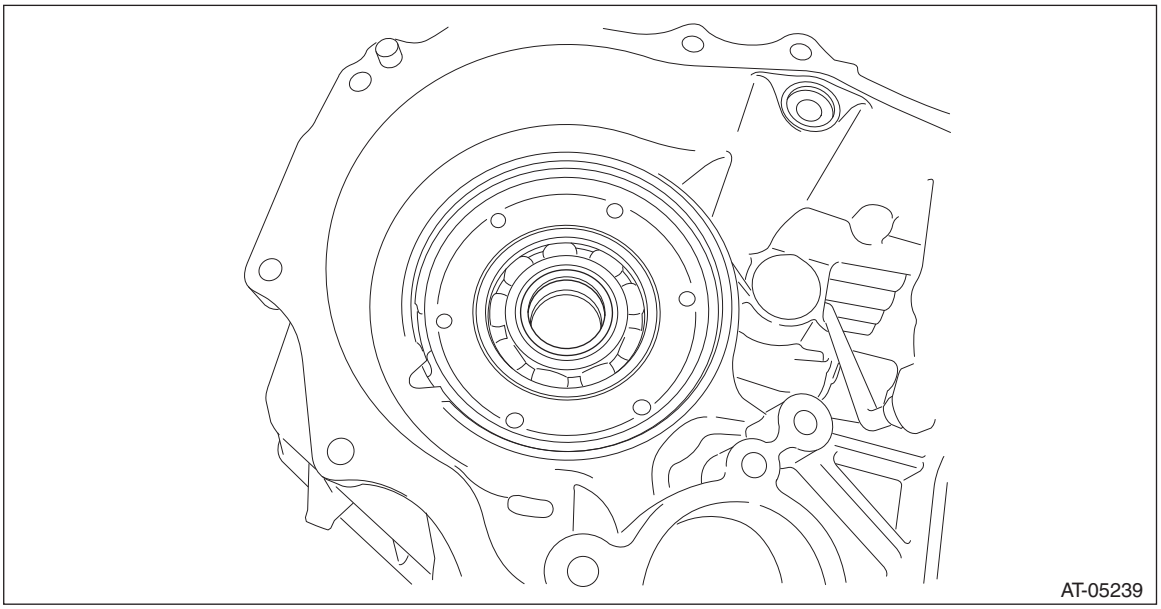
A: REMOVAL



1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
5) Remove the transfer reduction driven gear. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
6) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
7) Remove the thrust needle bearing.

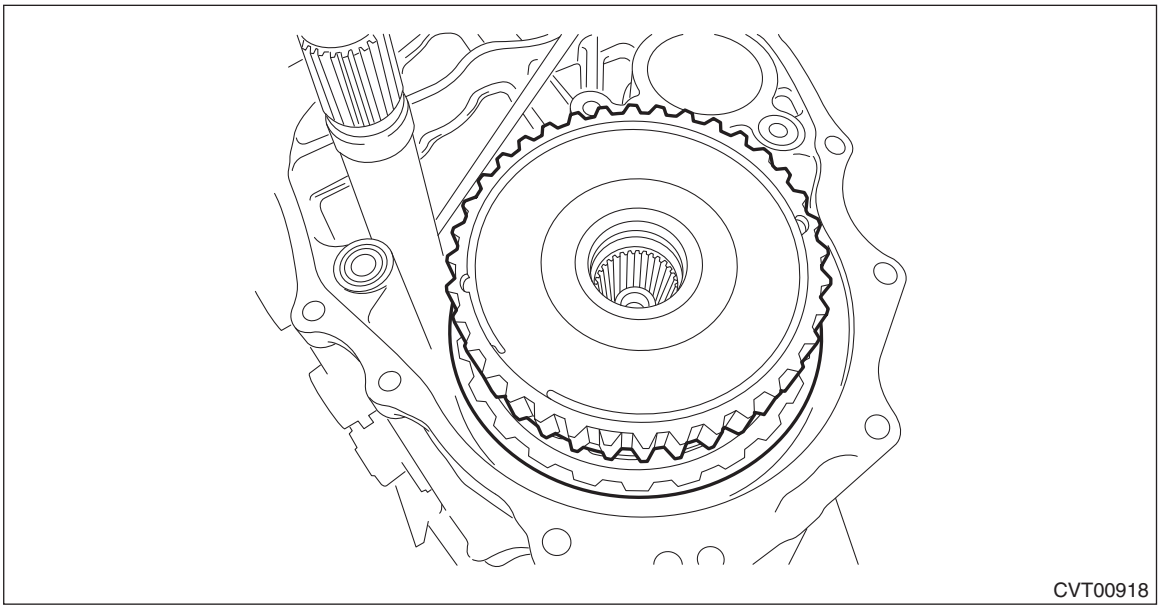
CVT00917

8) Remove the forward clutch assembly.



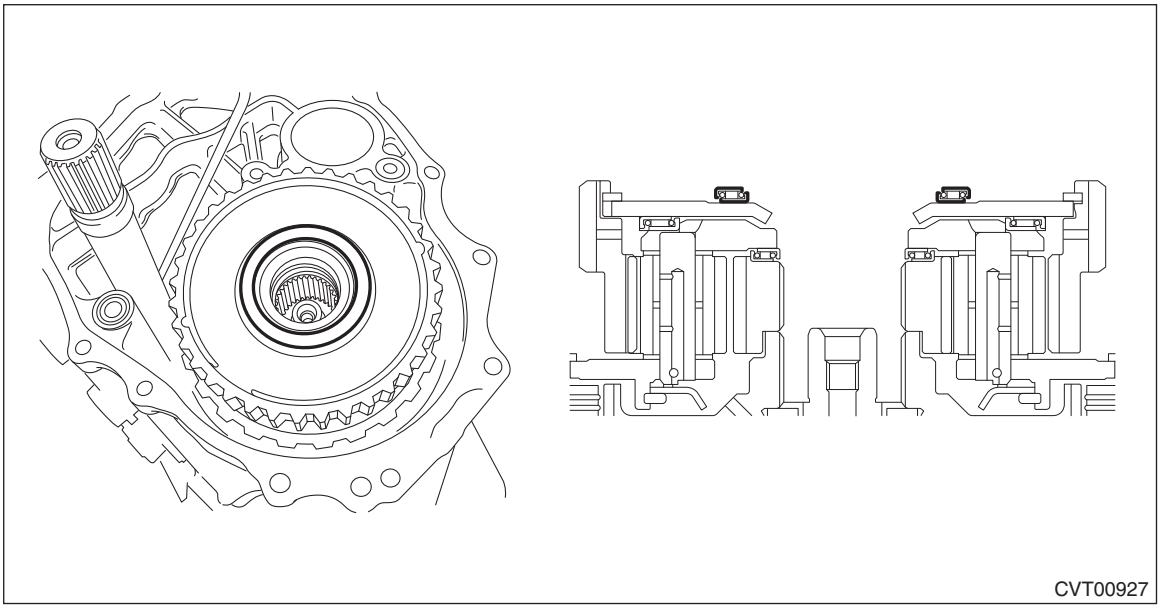
CVT00918

9) Remove the washer.



B: INSTALLATION

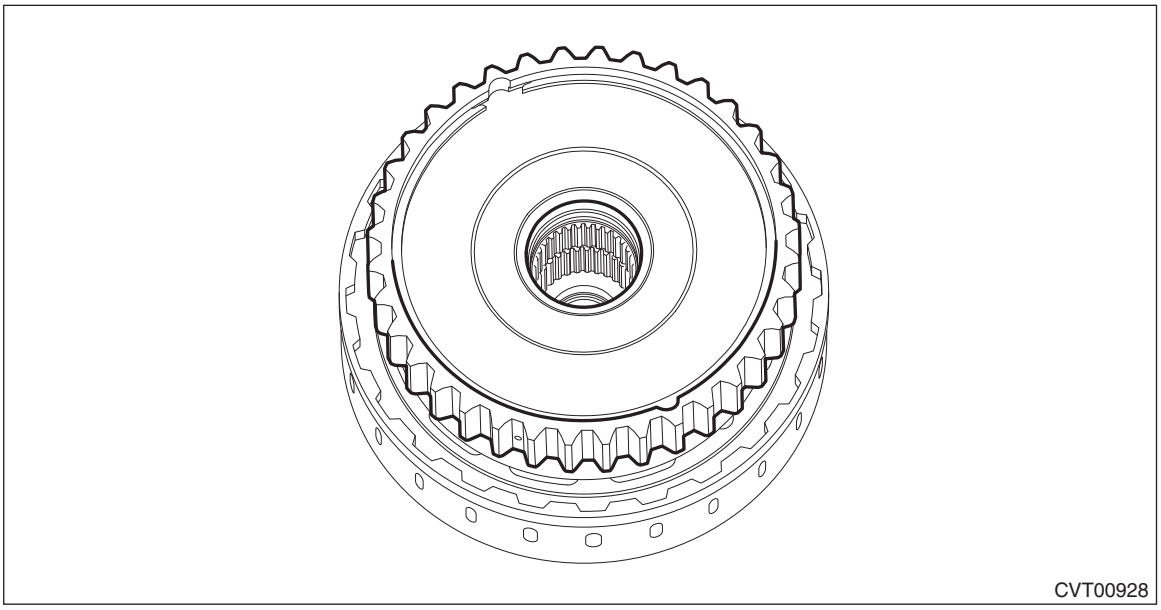
1) Select a washer. <Ref. to CVT(TR690)-233, ADJUSTMENT, Forward Clutch Assembly.>
2) Install the selected washer.



3) Install the forward clutch assembly.

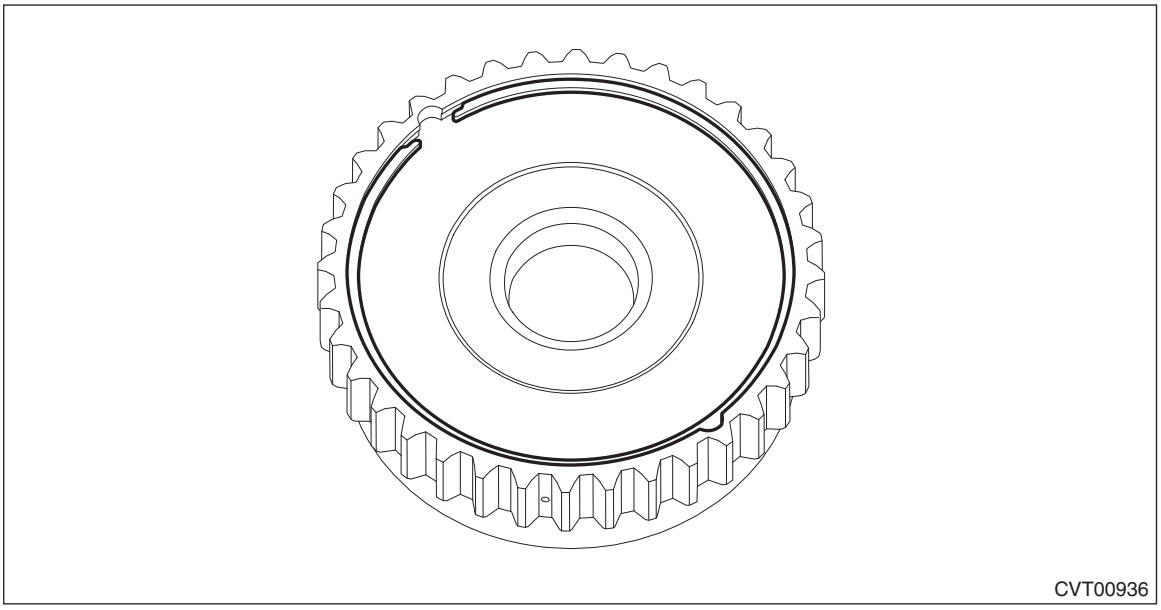
CVT00918

4) Install the thrust needle bearing.



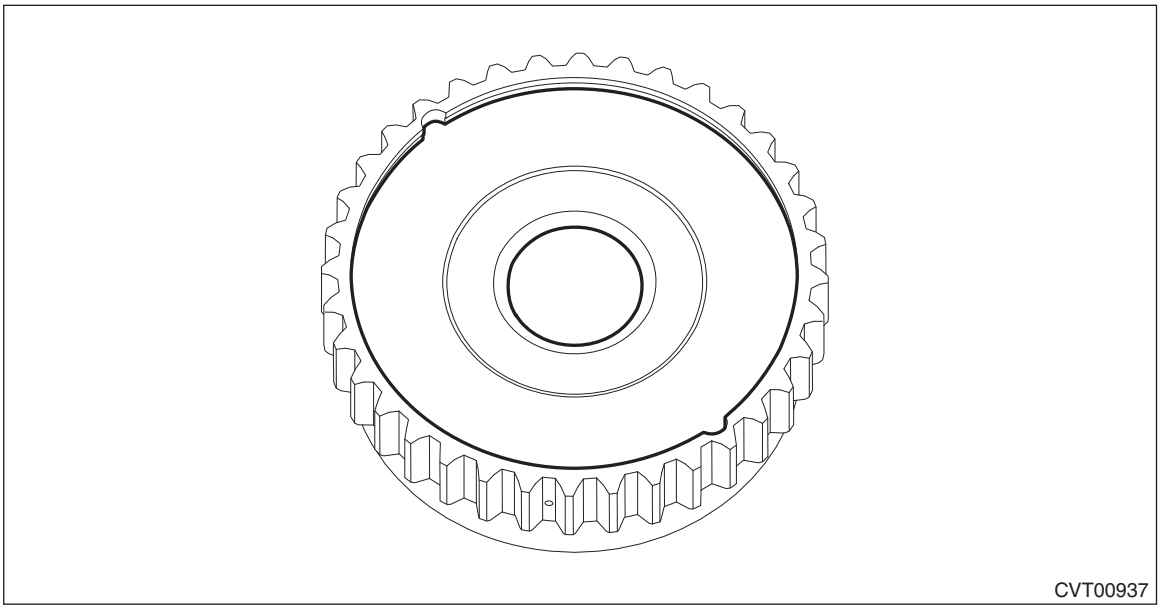
NOTE:
Install the thrust needle bearing in the correct direction.

CVT00927



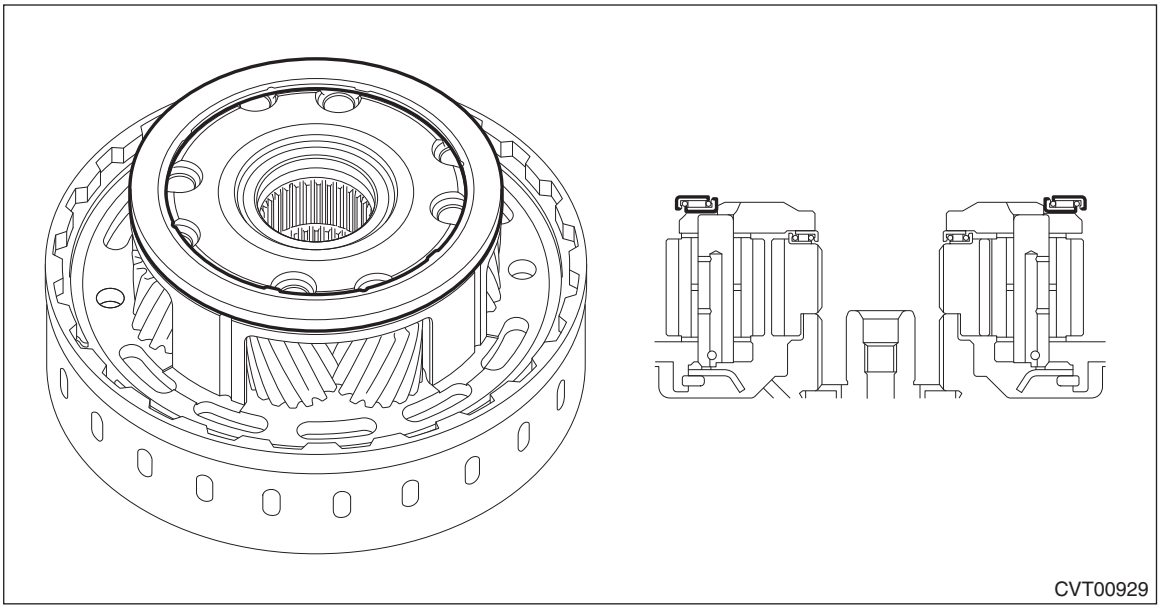
5) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
8) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
9) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
10) Install the transmission to vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY



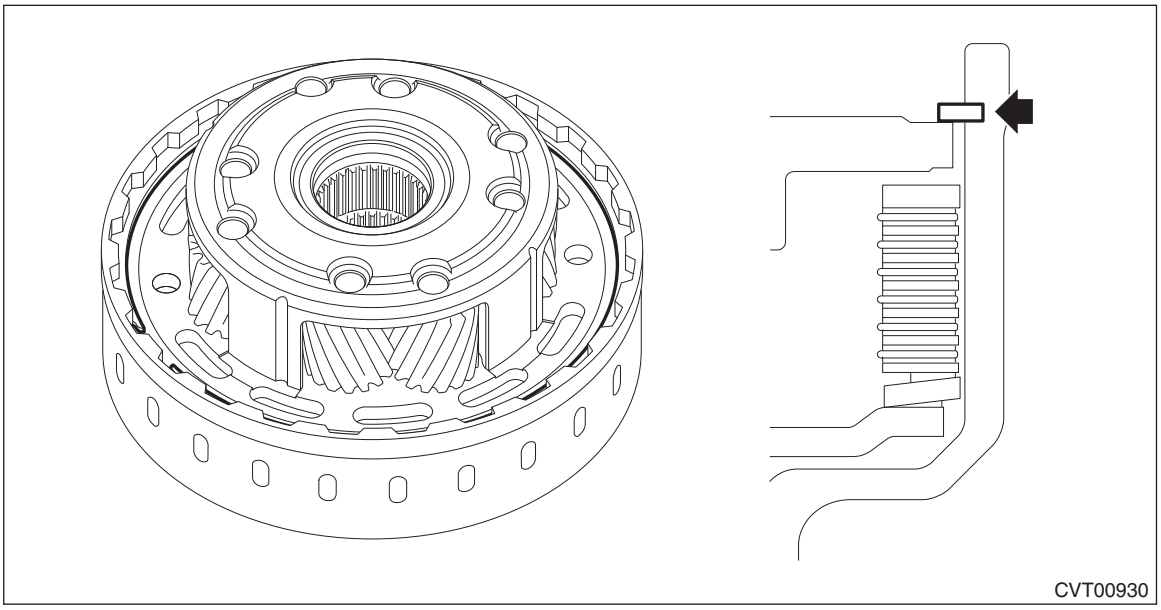
1) Remove the internal gear assembly.

CVT00928

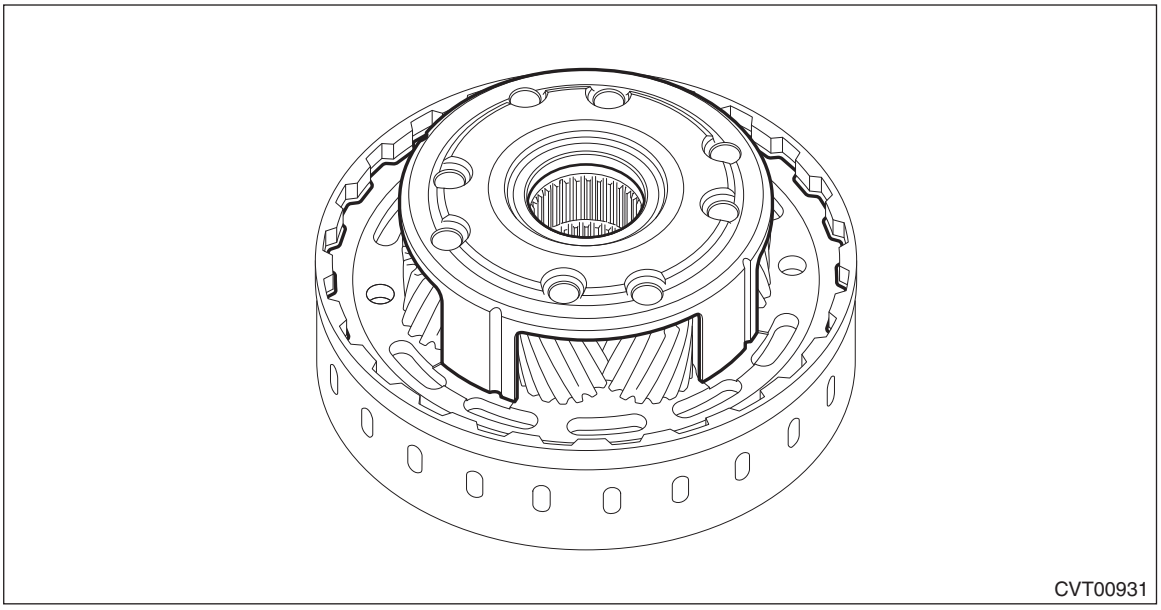


2) Remove the snap ring from the internal gear assembly.

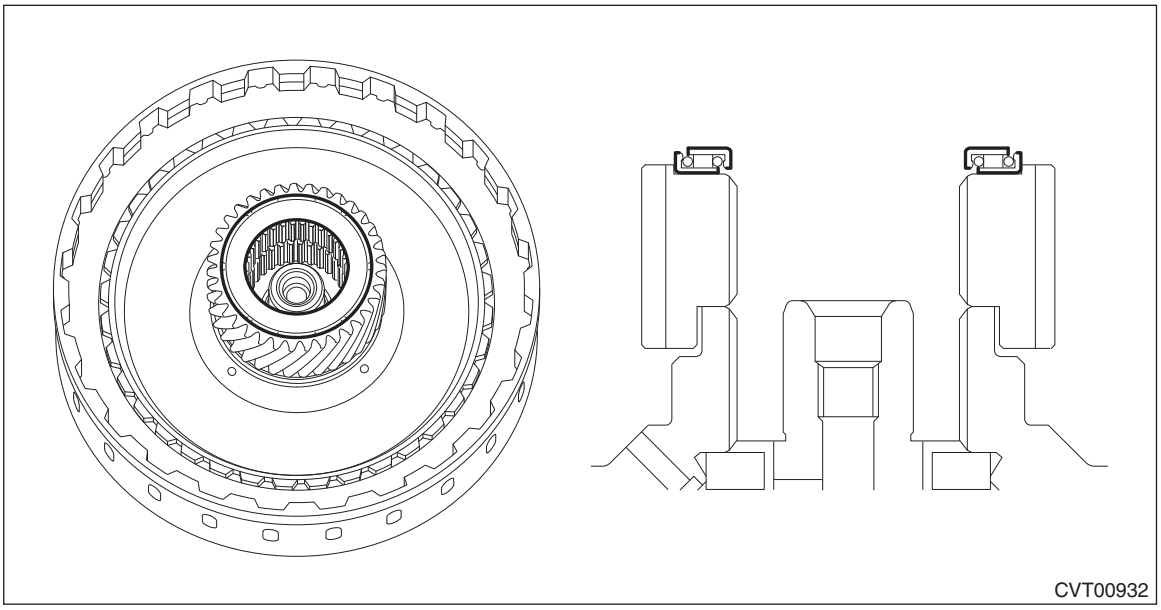
CVT00936



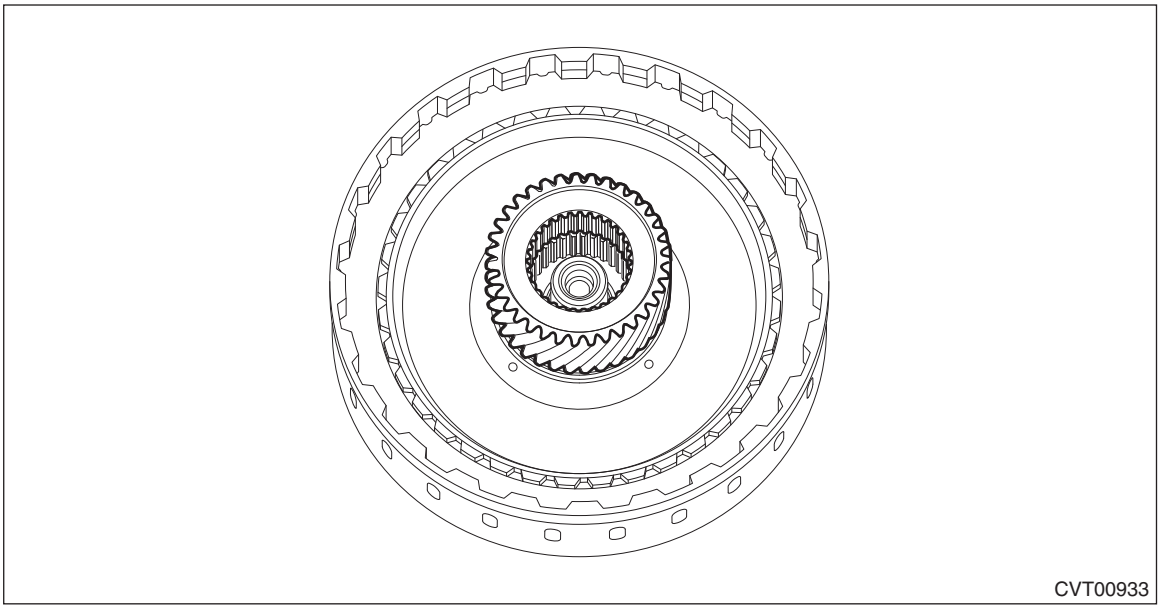
3) Remove the thrust gear plate.



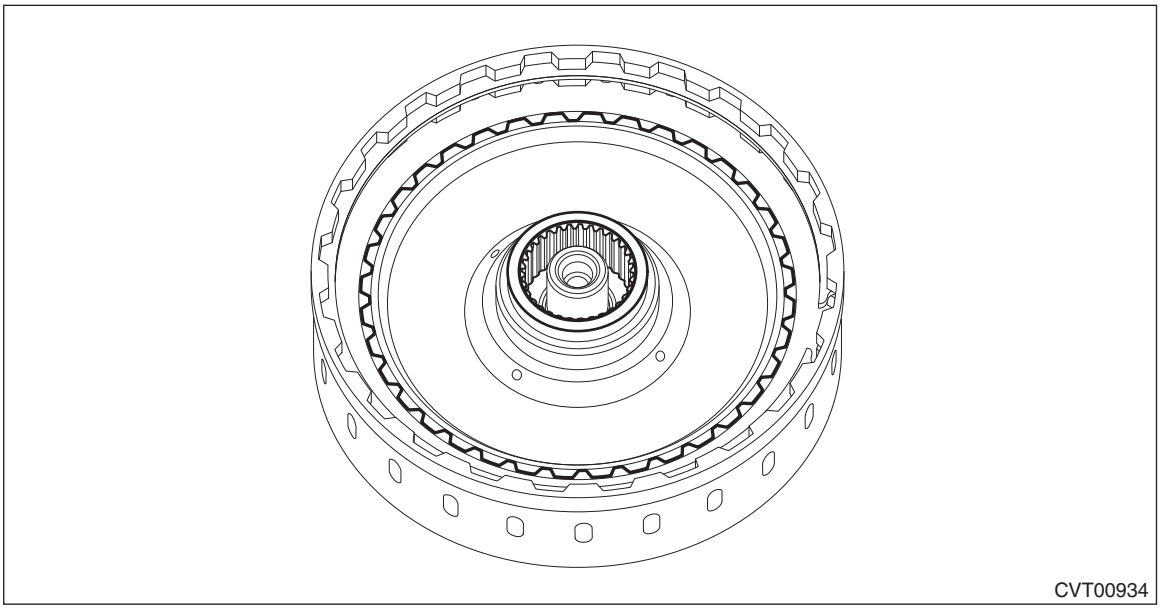
4) Remove the thrust needle bearing.



5) Remove the snap ring.

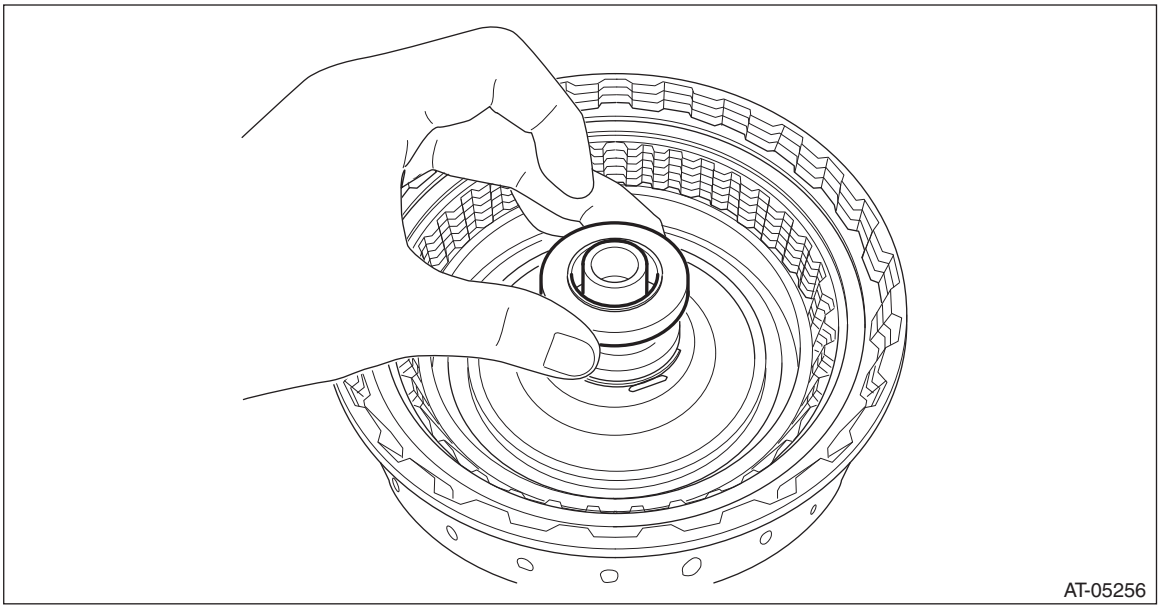


6) Remove the planetary carrier assembly.



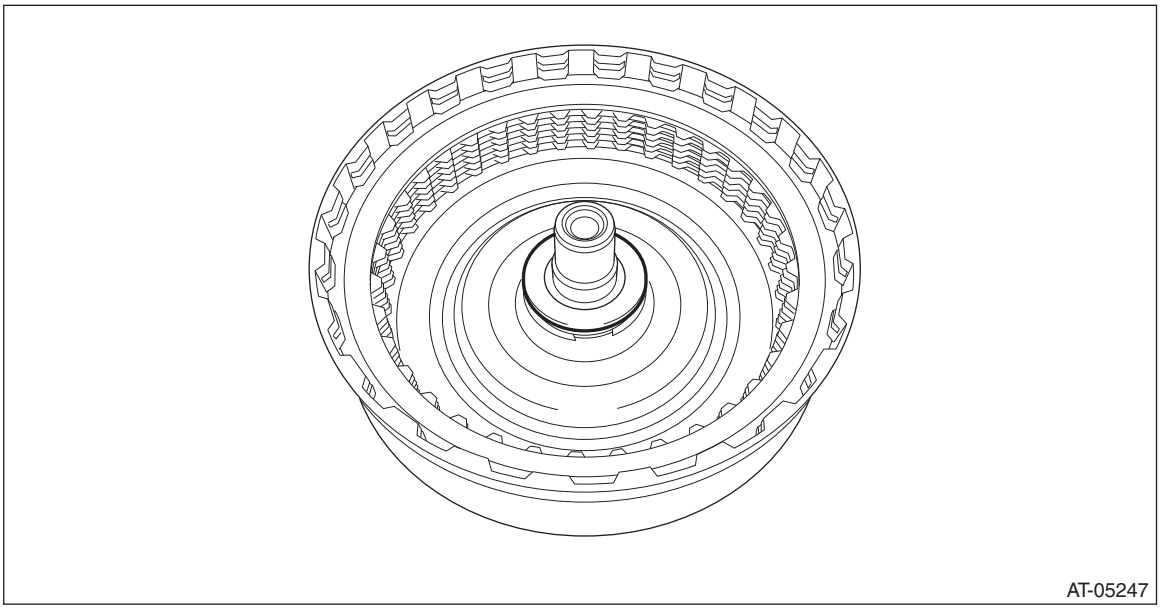
7) Remove the thrust needle bearing.

CVT00932

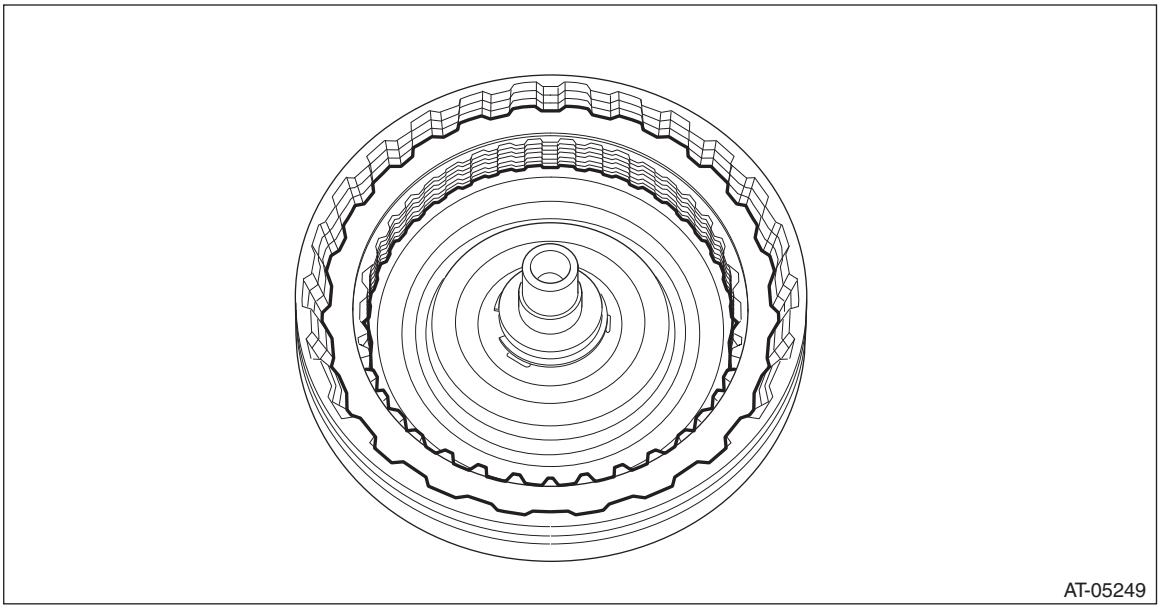


8) Remove the sun gear.

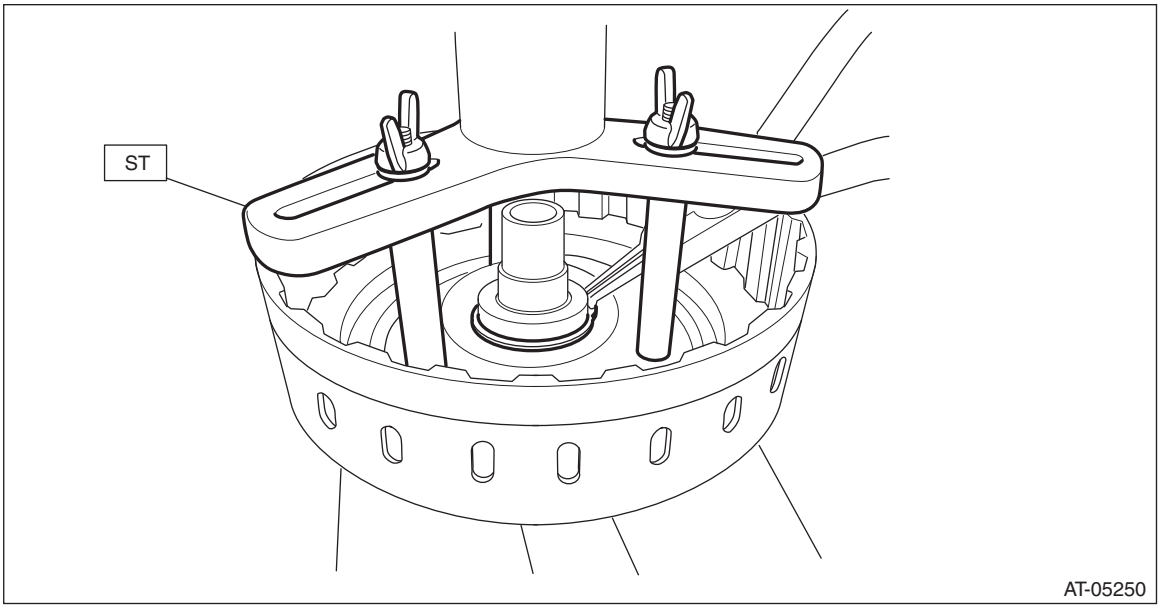
CVT00933



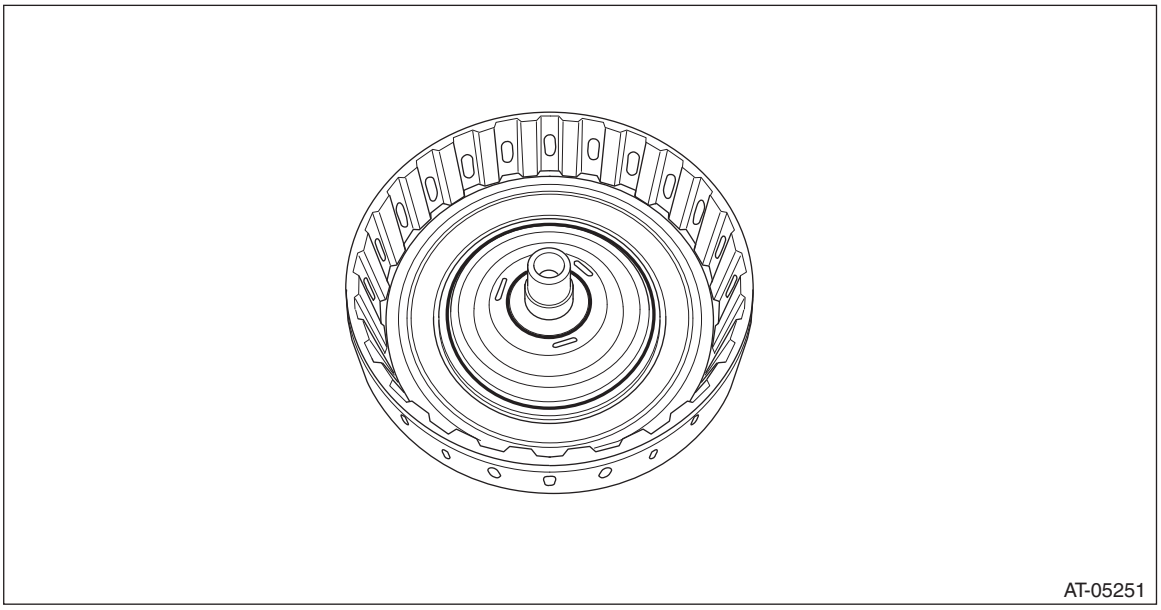
9) Remove the forward clutch hub.



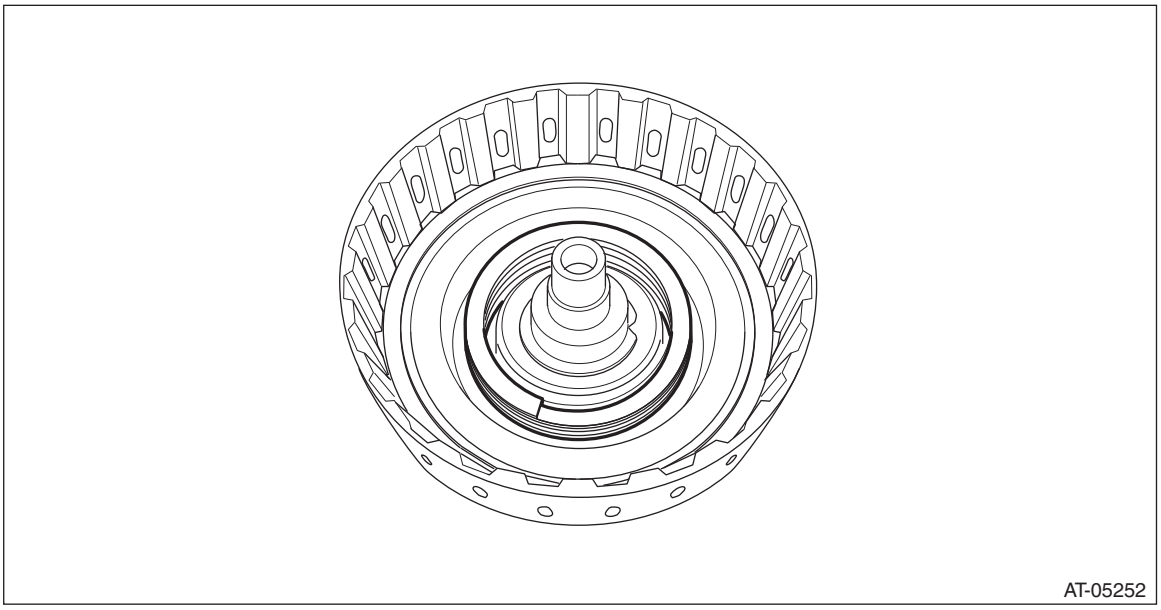
10) Remove the washer.



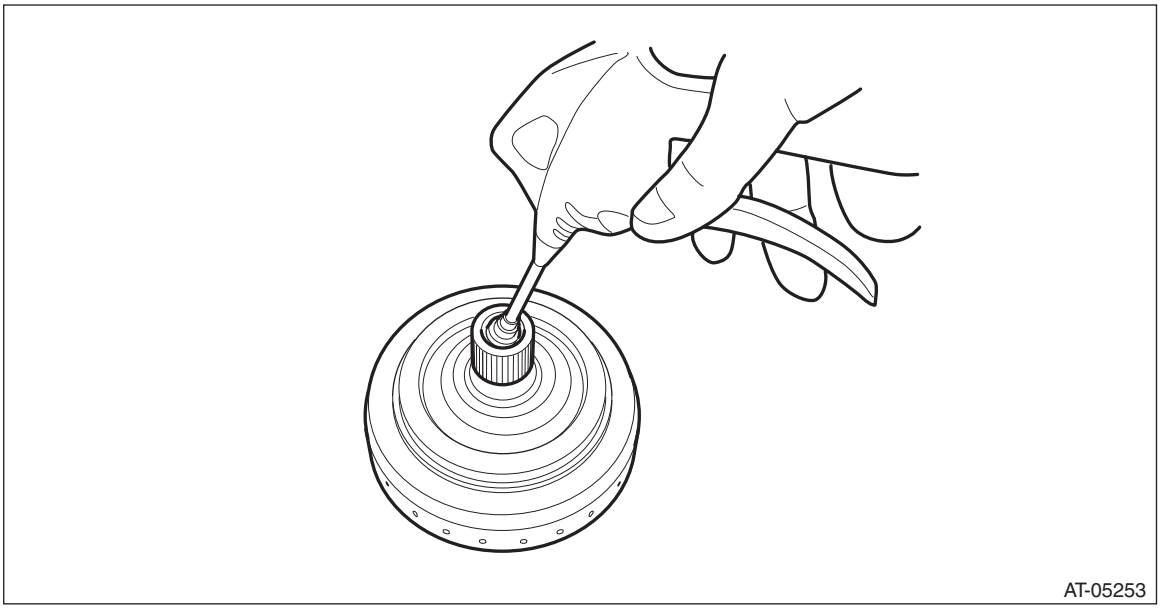
11) Remove the thrust needle bearing.



12) Remove the retaining plate, drive plate, driven plate and dish plate.



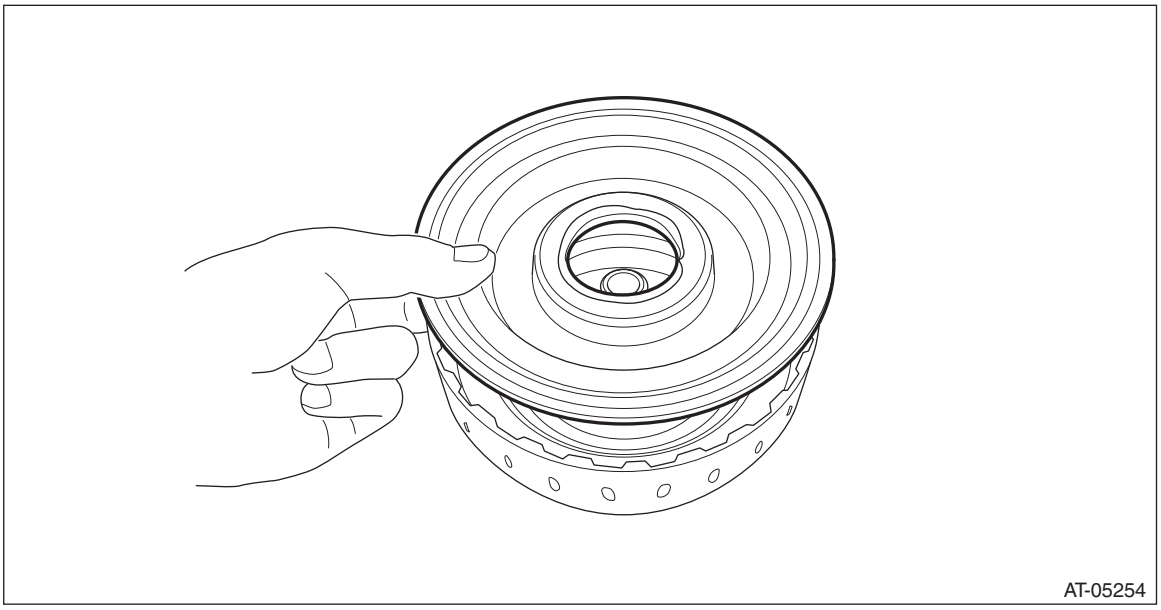
13) Using the ST, remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



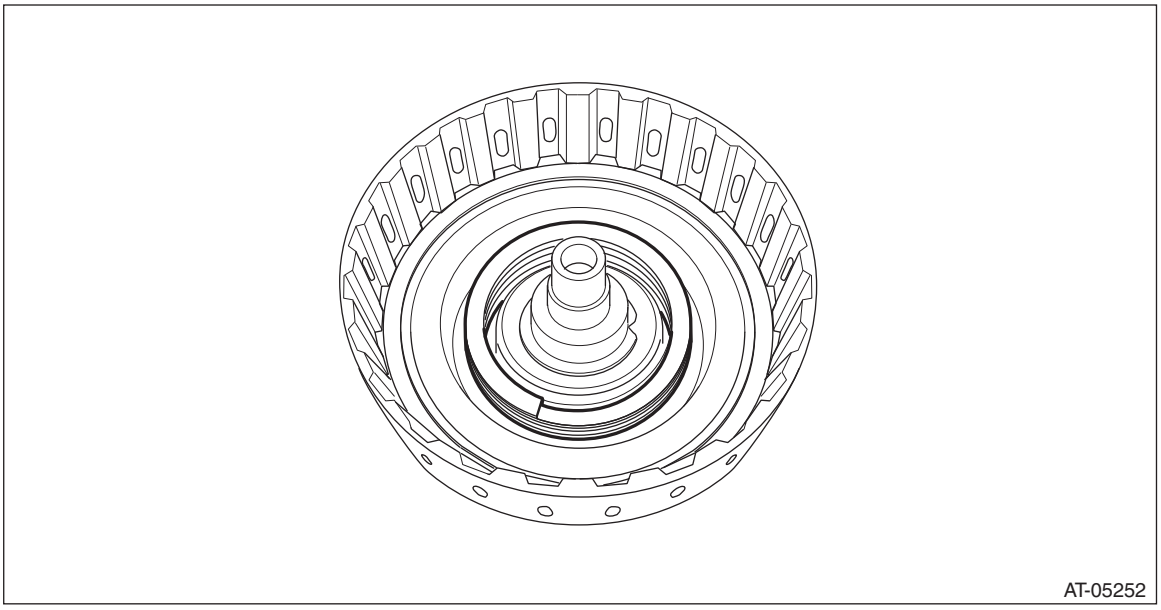
14) Remove the forward clutch piston retainer.

15) Remove the return spring.

16) Remove the forward clutch piston by blowing compressed air intermittently from the end of forward clutch drum.



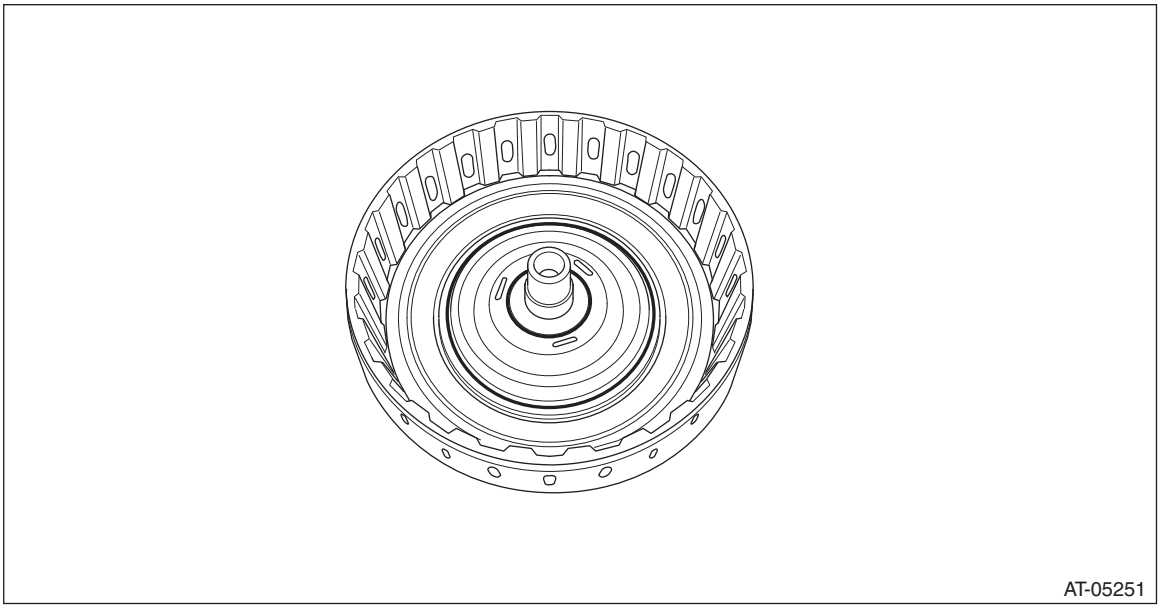
D: ASSEMBLY



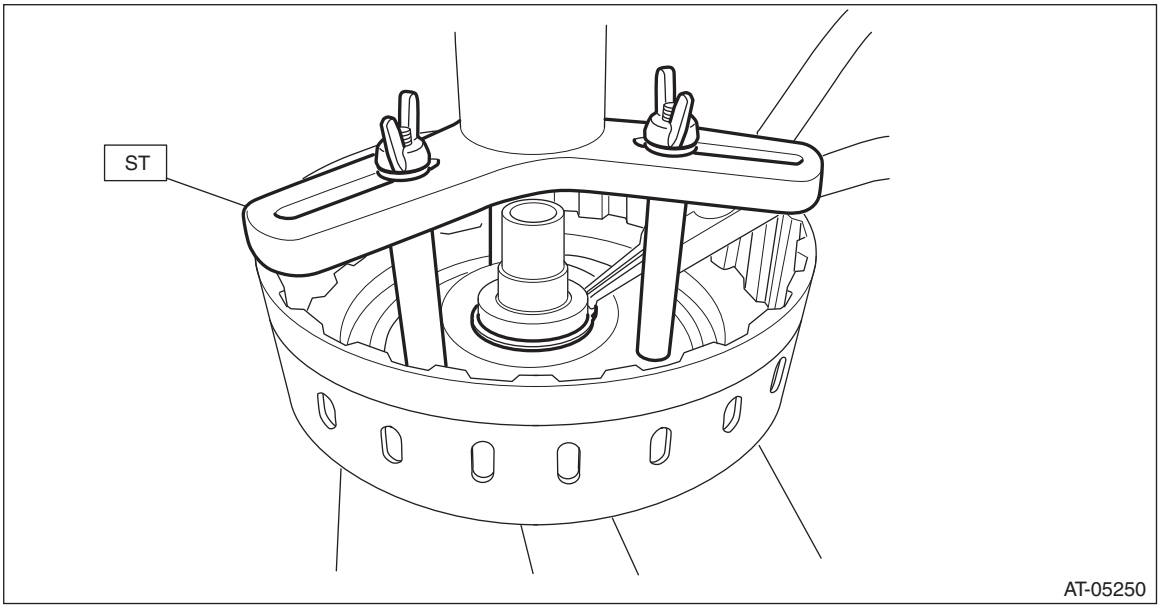
1) Install the forward clutch piston to forward clutch drum.

NOTE:
- Apply CVTF to the seal of forward clutch piston.

- Insert it all the way to the end.

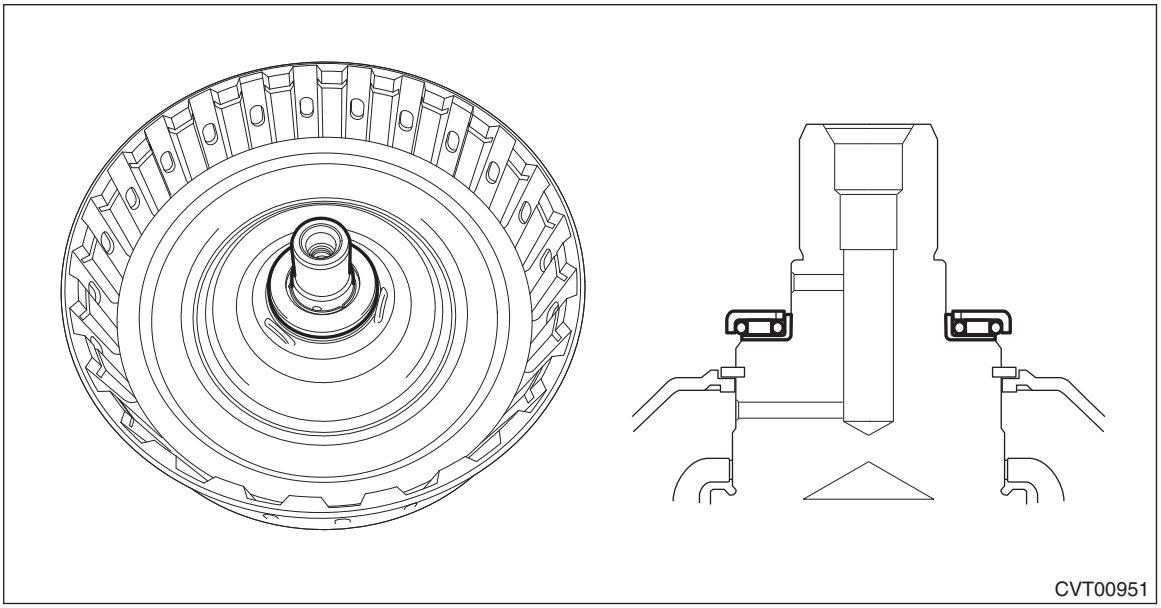


2) Install the return spring.

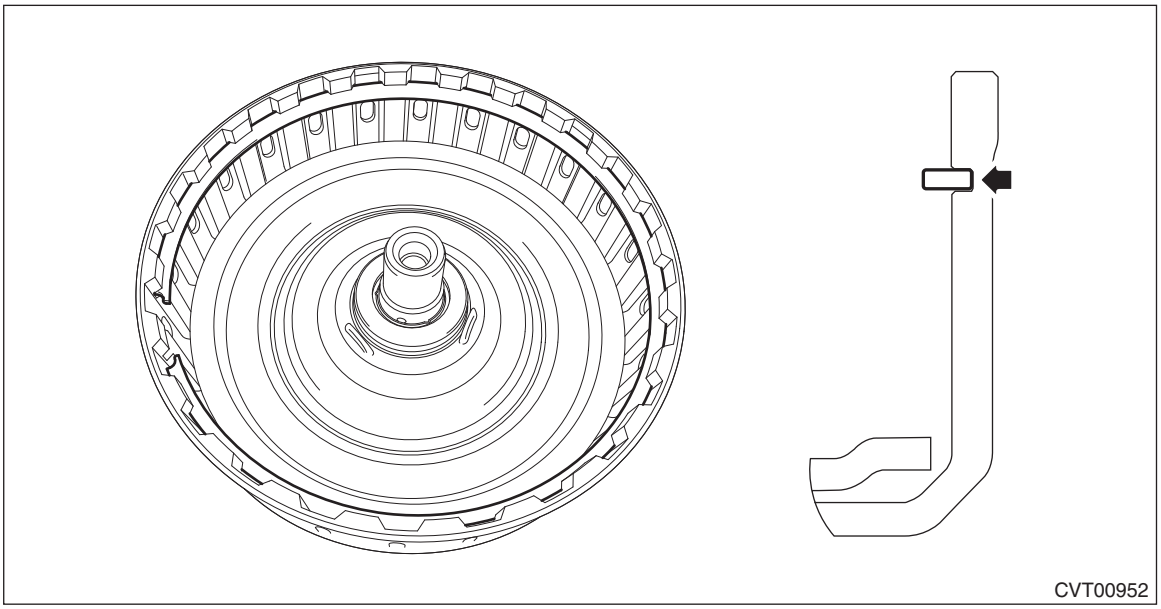


3) Install the forward clutch piston retainer.

NOTE:
Apply CVTF to the sealing portion of the forward clutch piston retainer.



4) Compress the return spring using the ST to install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

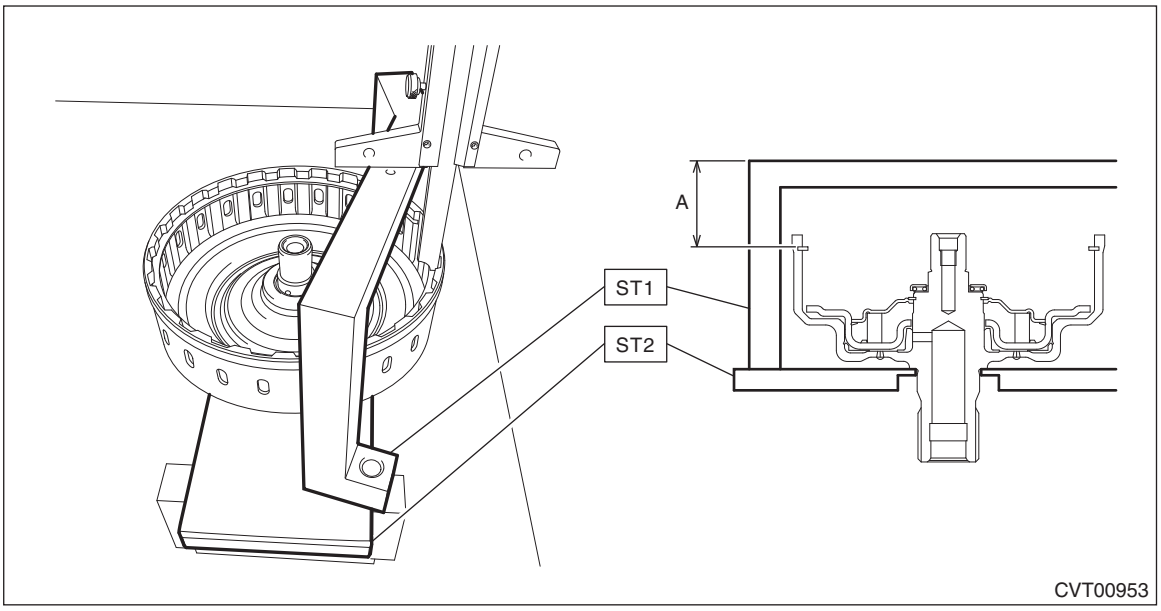


5) Install the thrust needle bearing.

NOTE:
Install the thrust needle bearing in the correct direction.

CVT00951

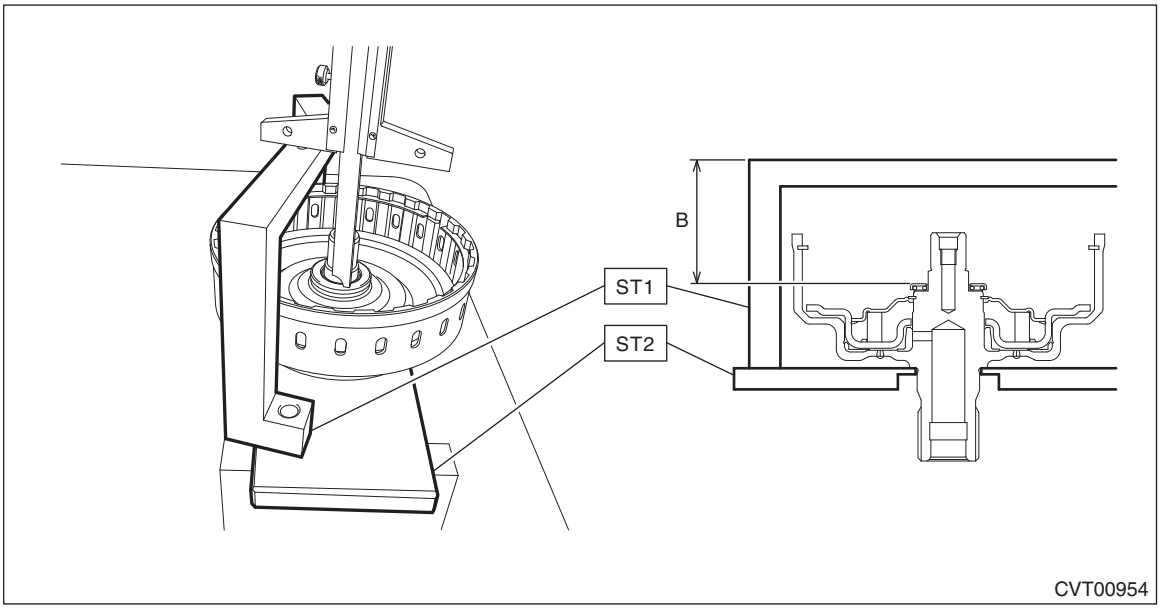
6) Install the snap ring.



CVT00952

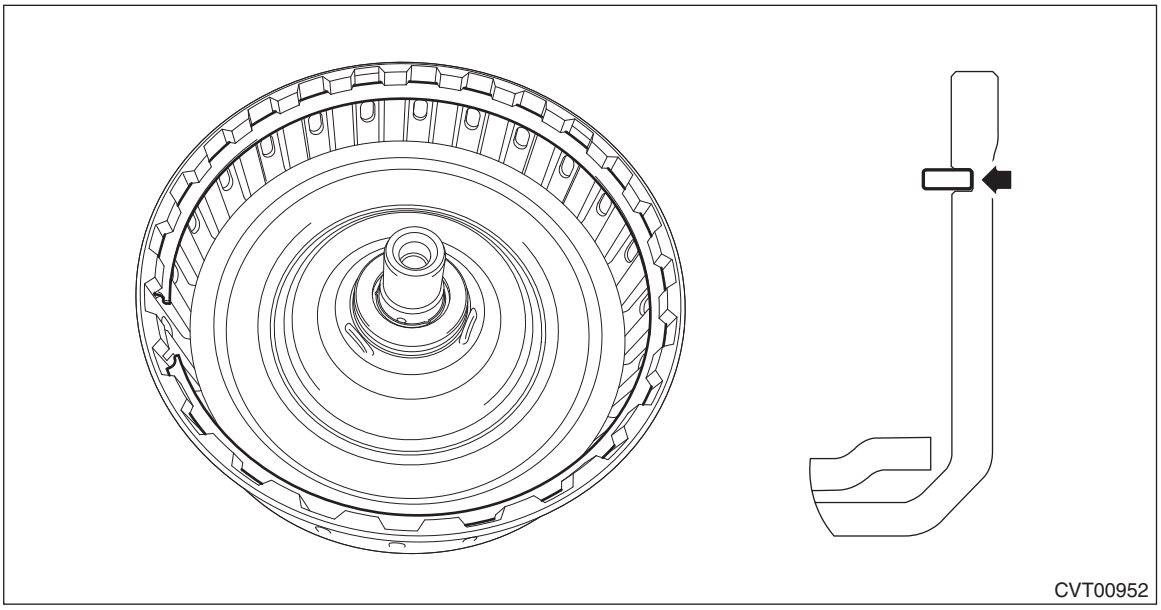
7) Measure the height “A” from the ST end surface to the snap ring of forward clutch drum using the ST on the surface plate.

NOTE:
- Measure while lifting the snap ring.



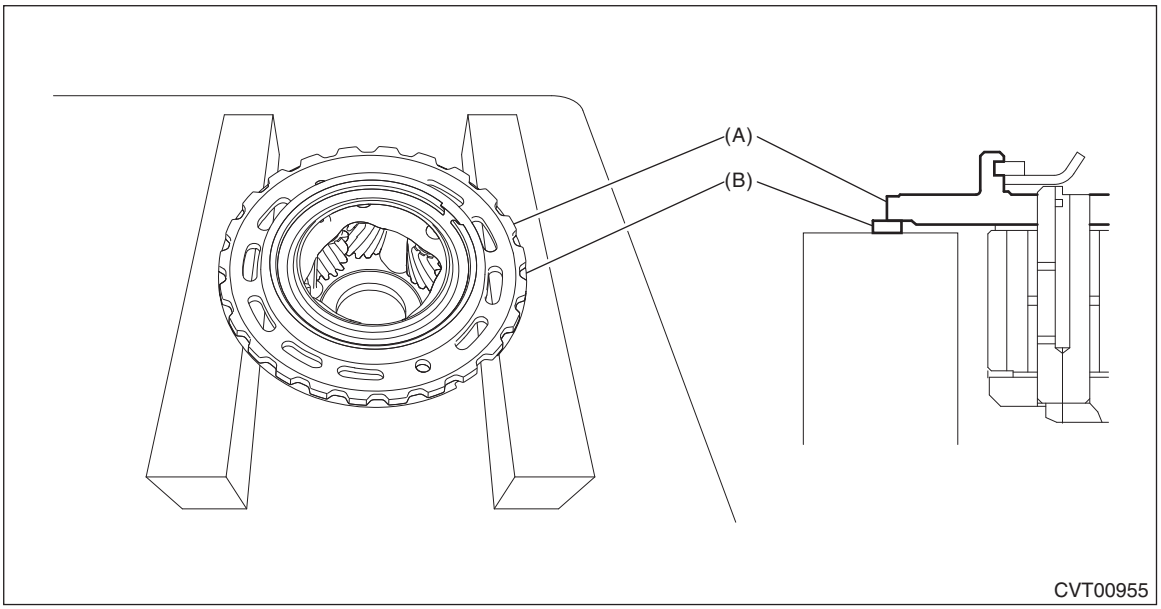
- Place the measurement tool at the dent on ST upper side to measure.

ST1 499737100 PULLER SET
ST2 499575600 GAUGE



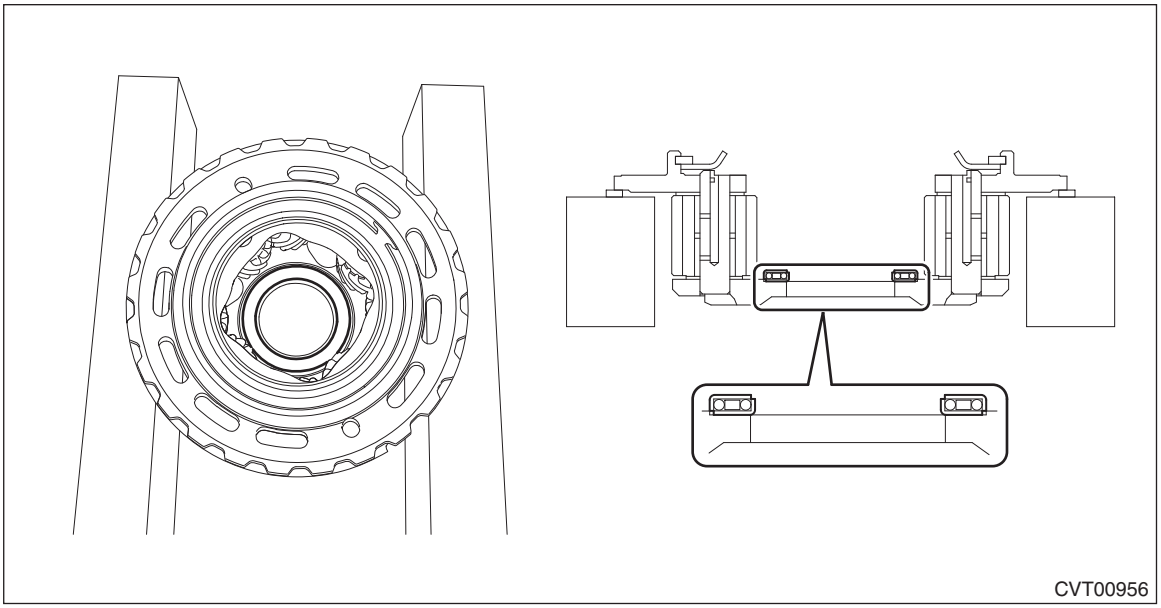
8) Measure height “B” from the ST end surface to the thrust needle bearing using the ST.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST1 499737100 PULLER SET
ST2 499575600 GAUGE



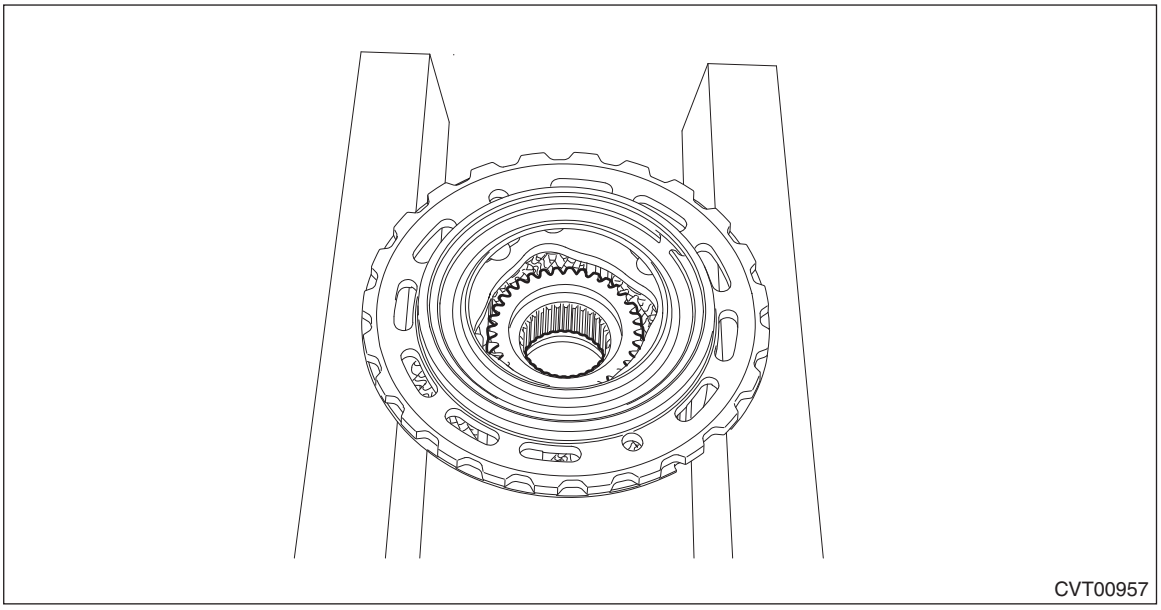
9) Remove the snap ring.

10) Place flat boards on the surface plate, and place the snap ring and then planetary carrier assembly overlapping neatly.



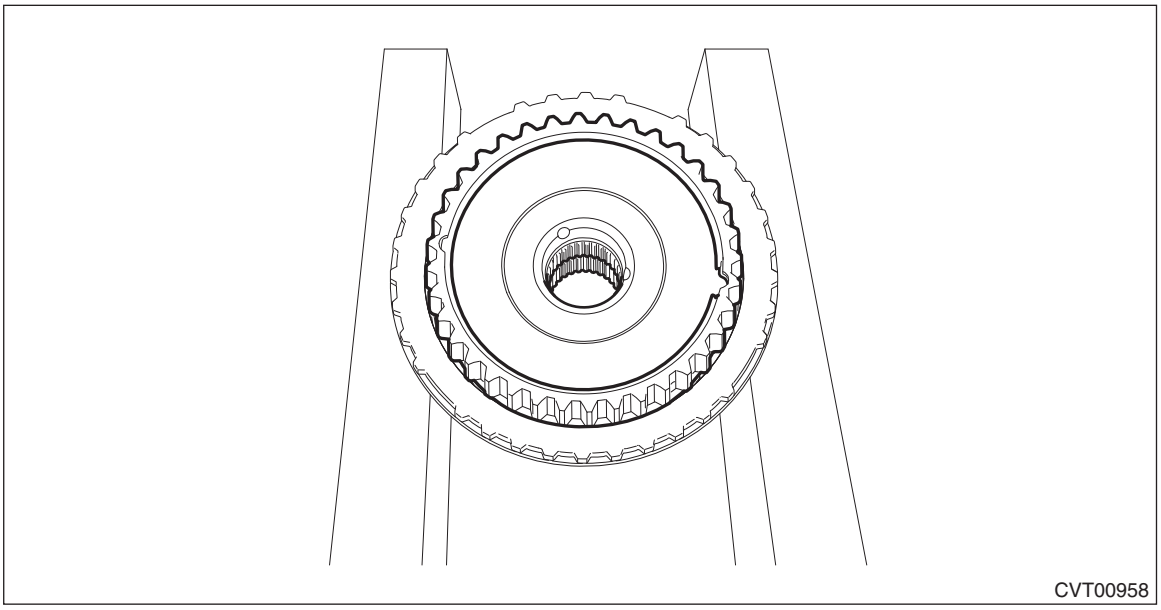
NOTE:
Carefully place them so that the most outer finished surface of planetary carrier assembly overlaps the snap ring.

(A) Planetary carrier ASSY
(B) Snap ring



11) Install the thrust needle bearing.

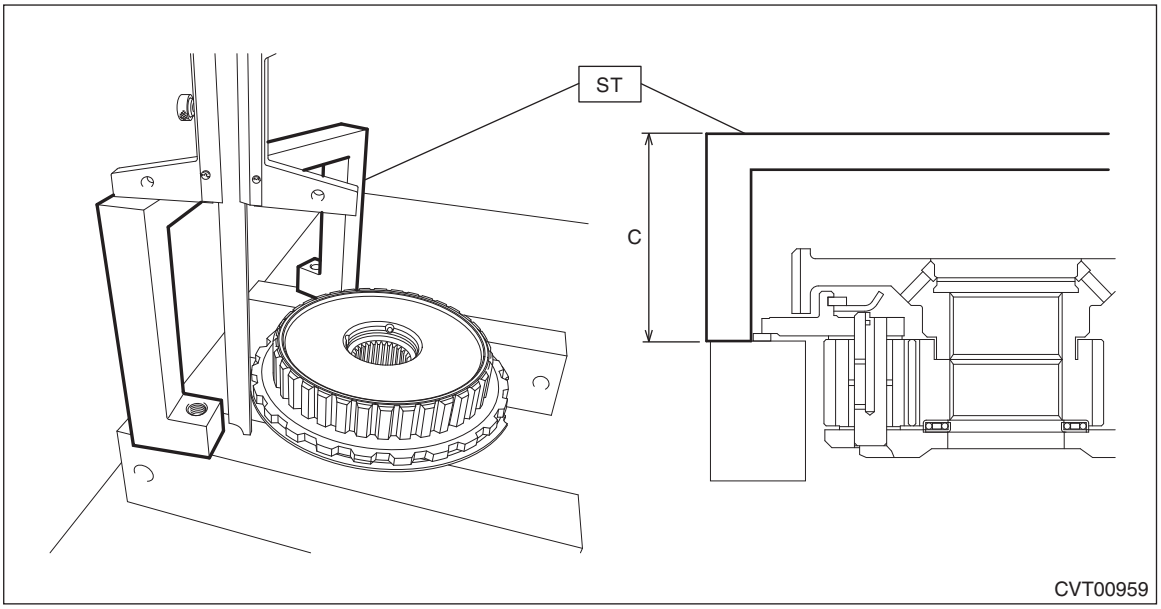
NOTE:
Make sure to install in the right direction.



CVT00956

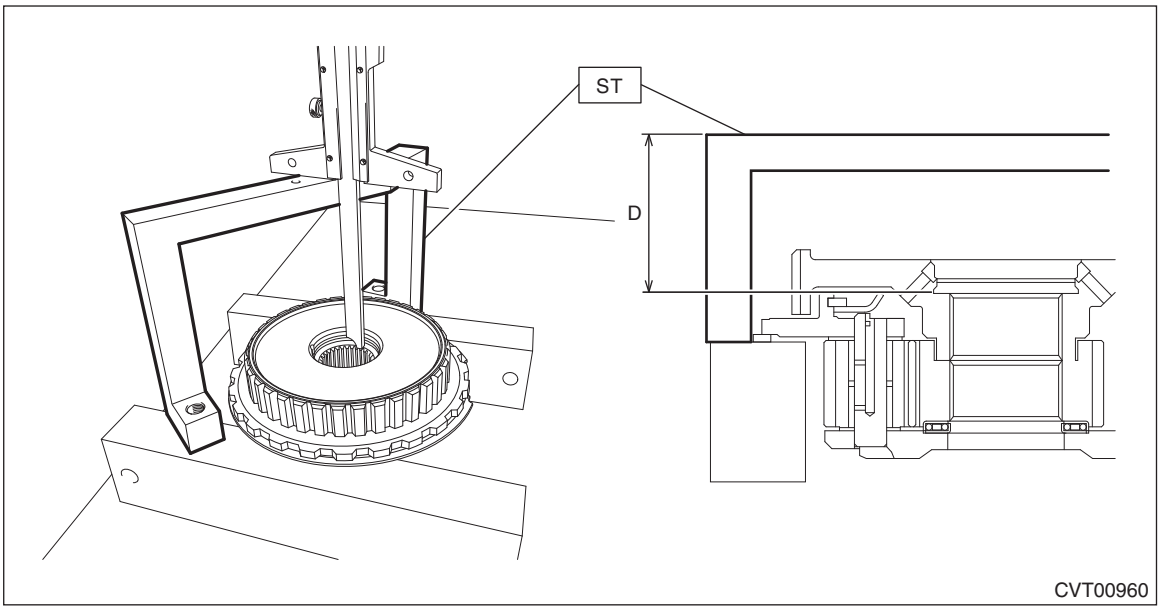
12) Install the sun gear.

NOTE:
Make sure to install in the right direction.



CVT00957

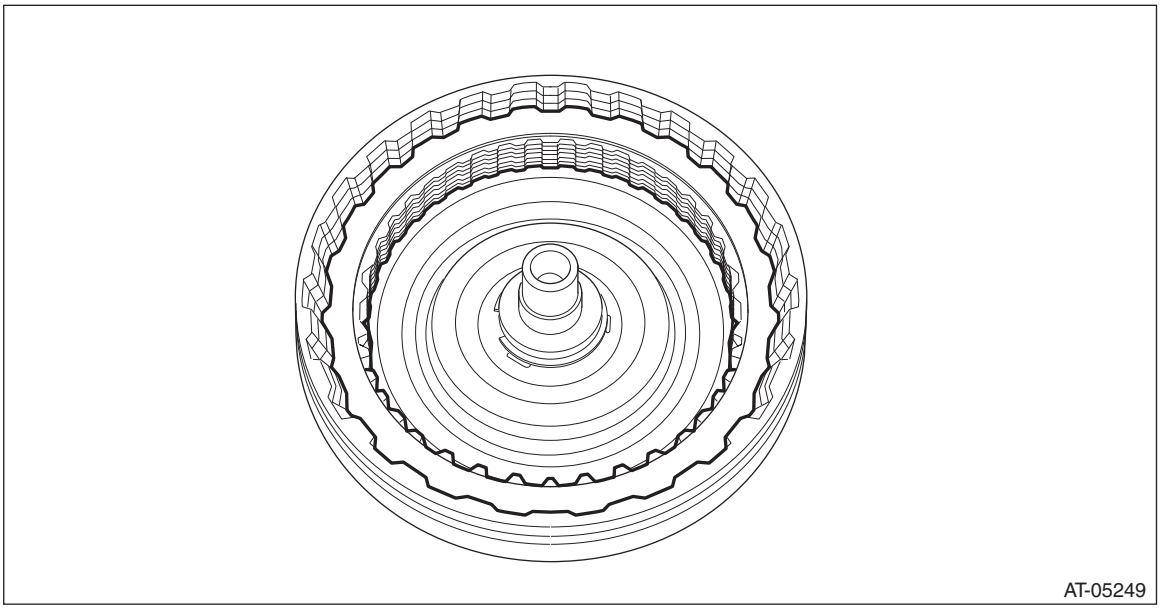
13) Install the forward clutch hub.



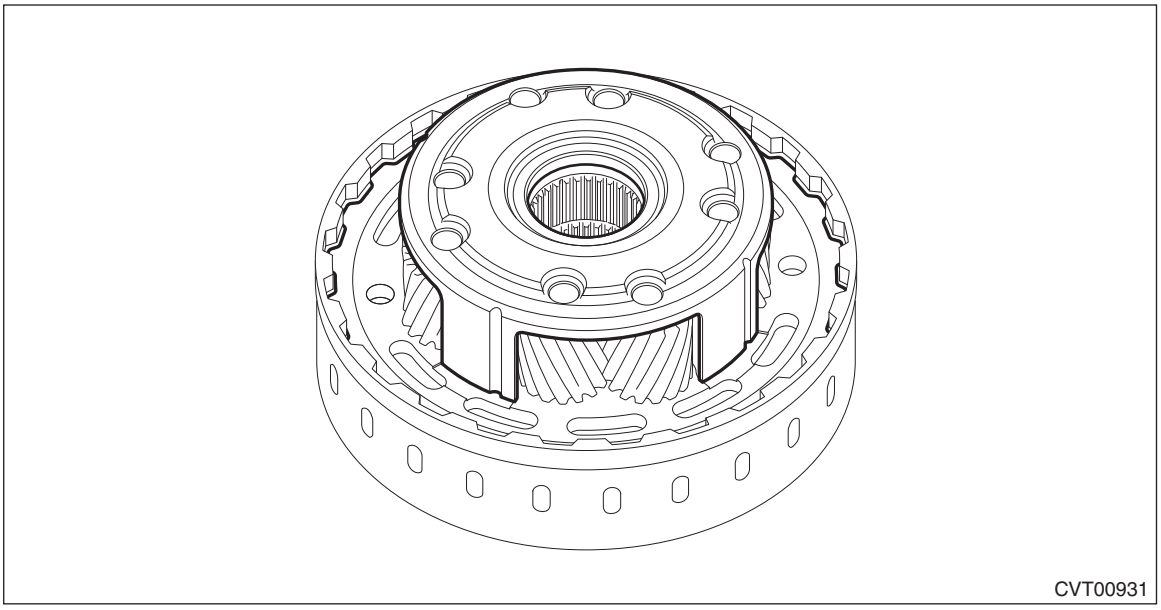
14) Using the ST, measure the height “C” from the ST end surface to the flat board with the snap ring placed on.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET

15) Using the ST, measure the height “D” from the ST end surface to the washer catch surface of the forward clutch hub.

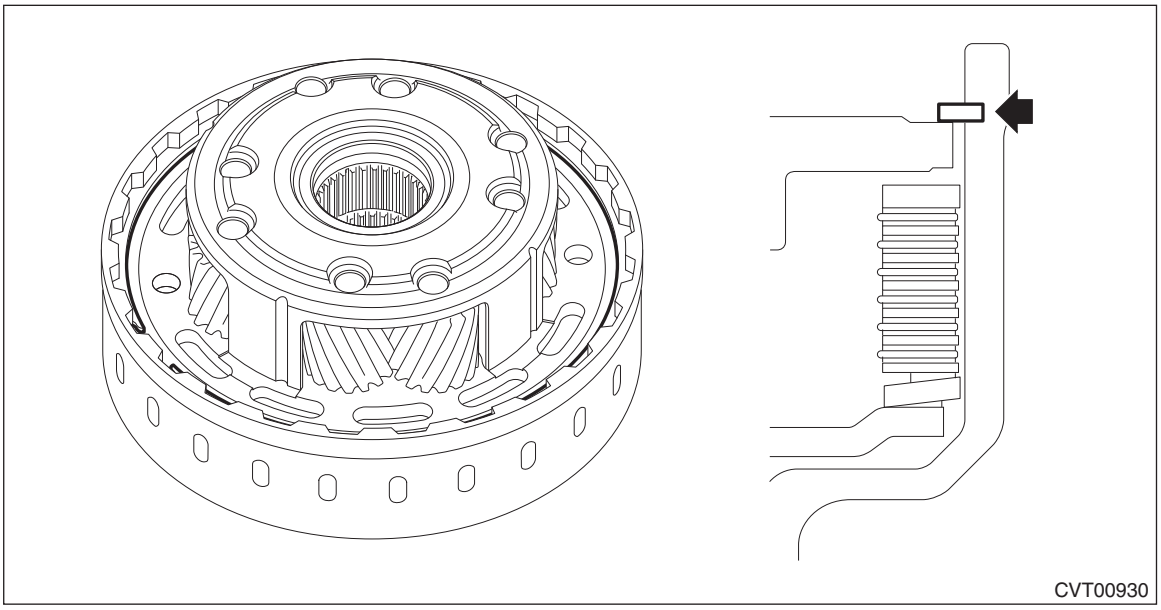


NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET

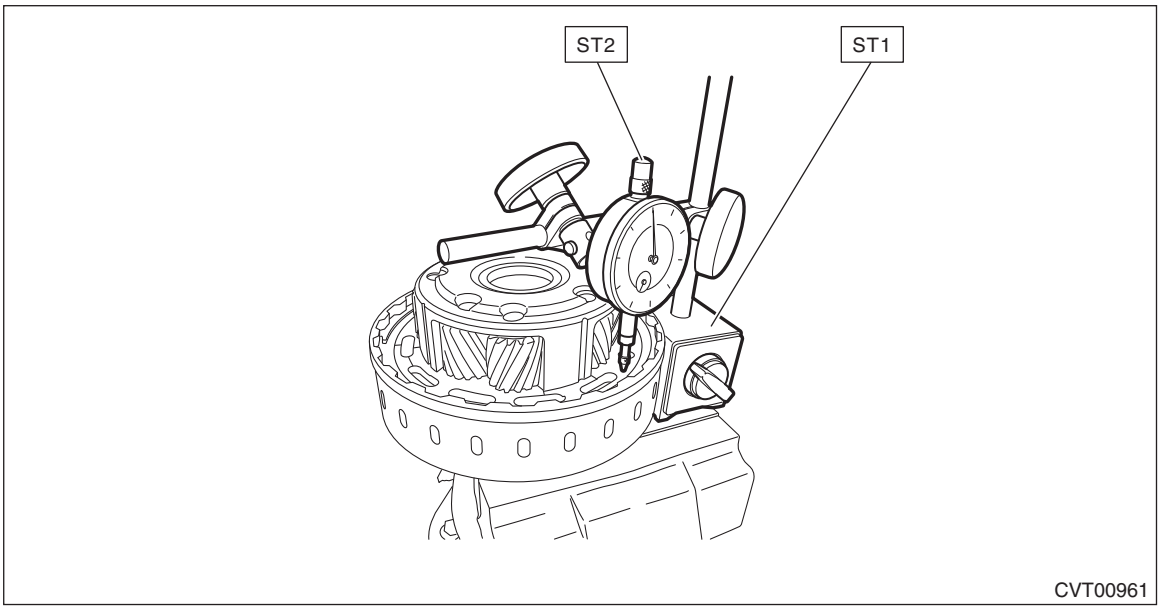


16) Obtain the thickness of washer using the values measured from step 7) to step 15).
Calculation formula:
T mm = (B – A) – (C – D) – (0.0 — 0.20)
[T in = (B – A) – (C – D) – (0.0 — 0.008)]
T: Washer thickness
A: Height from the ST end surface to the snap ring of the forward clutch drum
B: Height from the ST end surface to the thrust needle bearing
C: Height from the ST end surface to the flat board with the snap ring placed on
D: Height from the ST end surface to the washer catch surface of the forward clutch hub
0.0 — 0.20 mm (0.0 — 0.008 in): Clearance
17) Select the washer to meet the value “T” obtained from step 16).

Washer	
Part No.	Thickness mm (in)
31598AA090	4.7 (0.185)
31598AA100	4.8 (0.189)
31598AA110	4.9 (0.193)
31598AA060	5.0 (0.197)
31598AA120	5.1 (0.201)
31598AA130	5.2 (0.205)
31598AA140	5.3 (0.209)

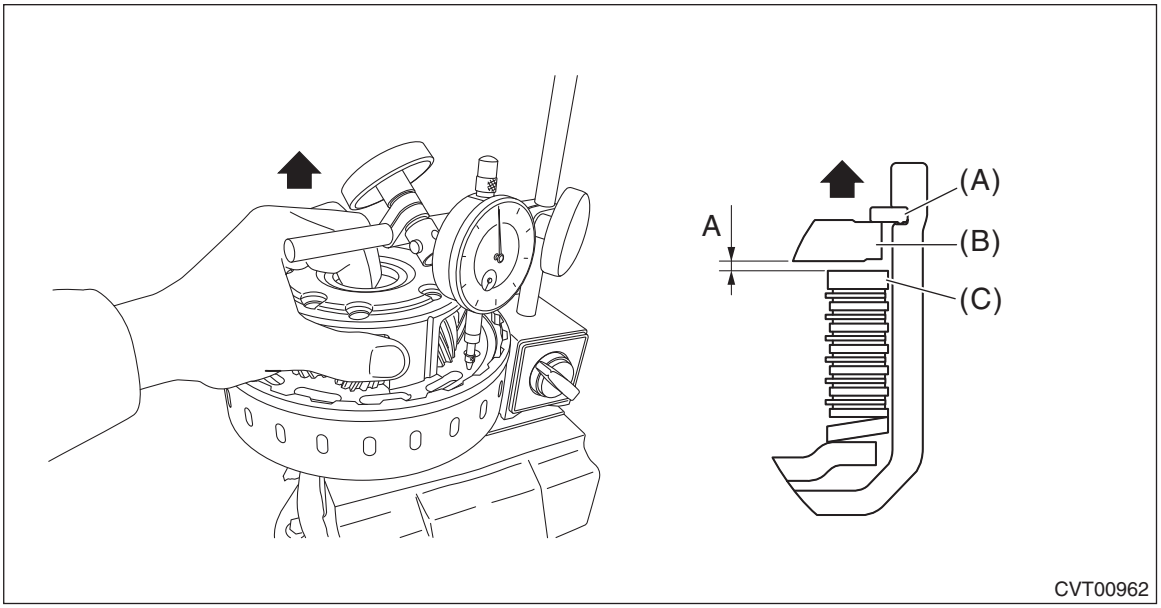


18) Install the dish plate, drive plate, driven plate and retaining plate.



19) Install the planetary carrier assembly.

20) Install the snap ring.



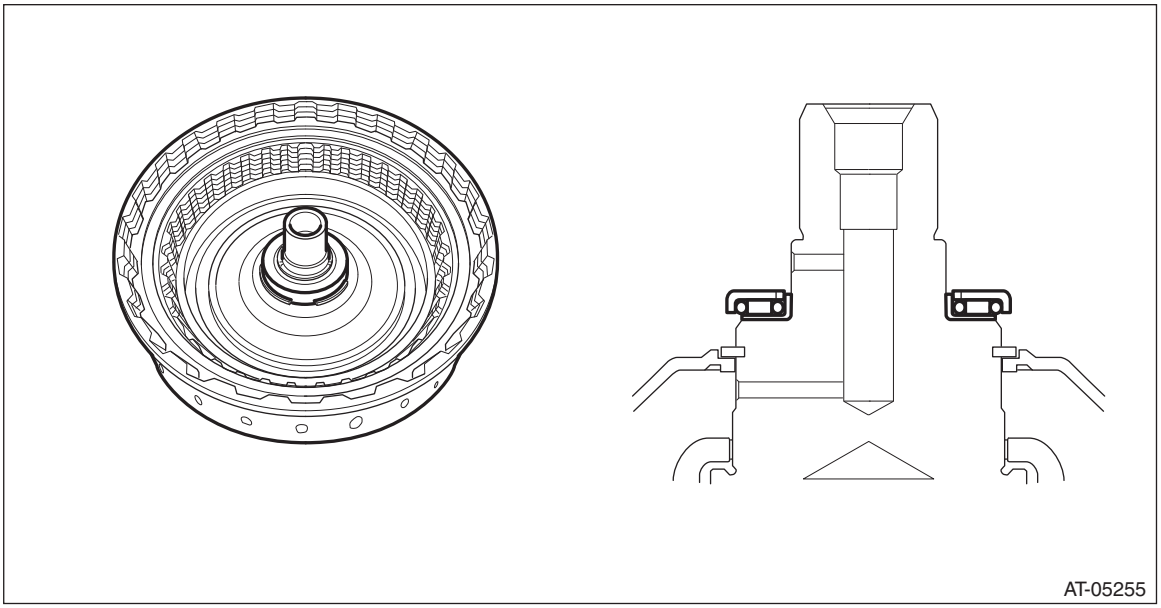
21) Hold the forward clutch drum on a vise, and set the ST.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

22) Lift the planetary carrier assembly, and read the value “A” indicated on the dial gauge.

NOTE:
Measure at four points with a 90° interval and calculate the average.

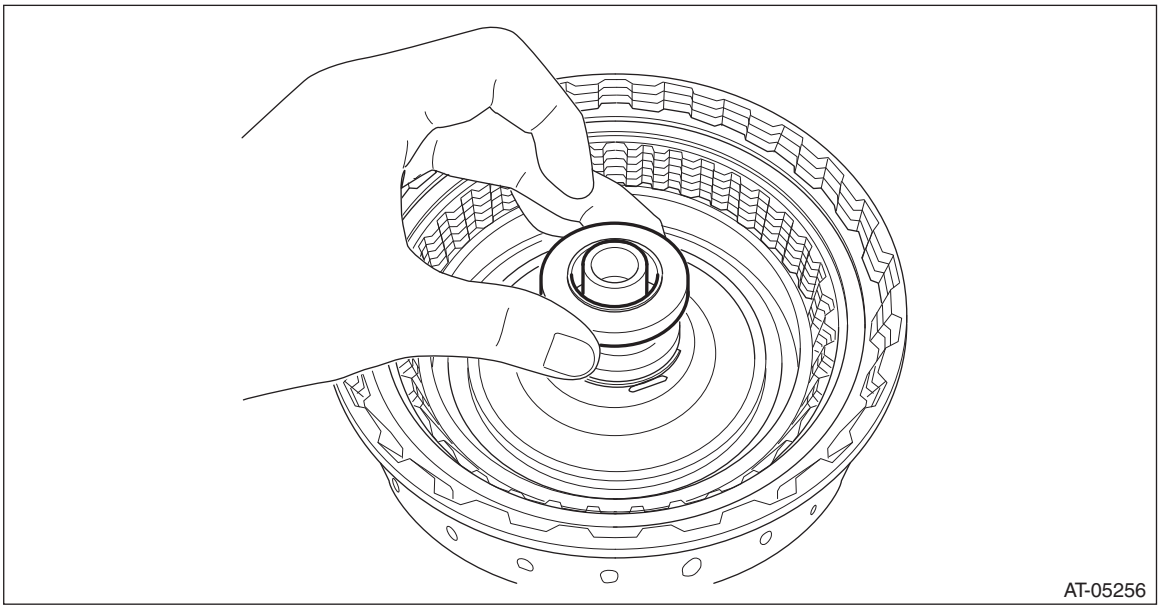
(A) Snap ring
(B) Planetary carrier ASSY
(C) Retaining plate

23) If the value “A” obtained from step 22) exceeds the limit for use, replace the drive plate and driven plate with new parts and select the retaining plate within the initial standard value.



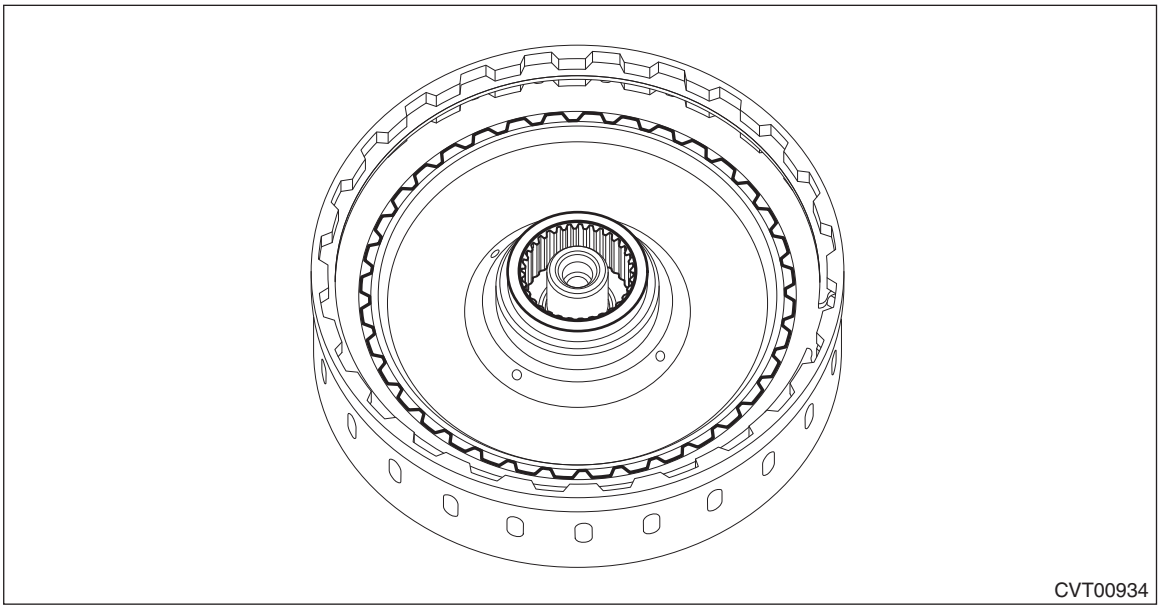
Initial standard:
1.2 — 1.6 mm (0.047 — 0.063 in)

Limit thickness:
2.4 mm (0.09 in)

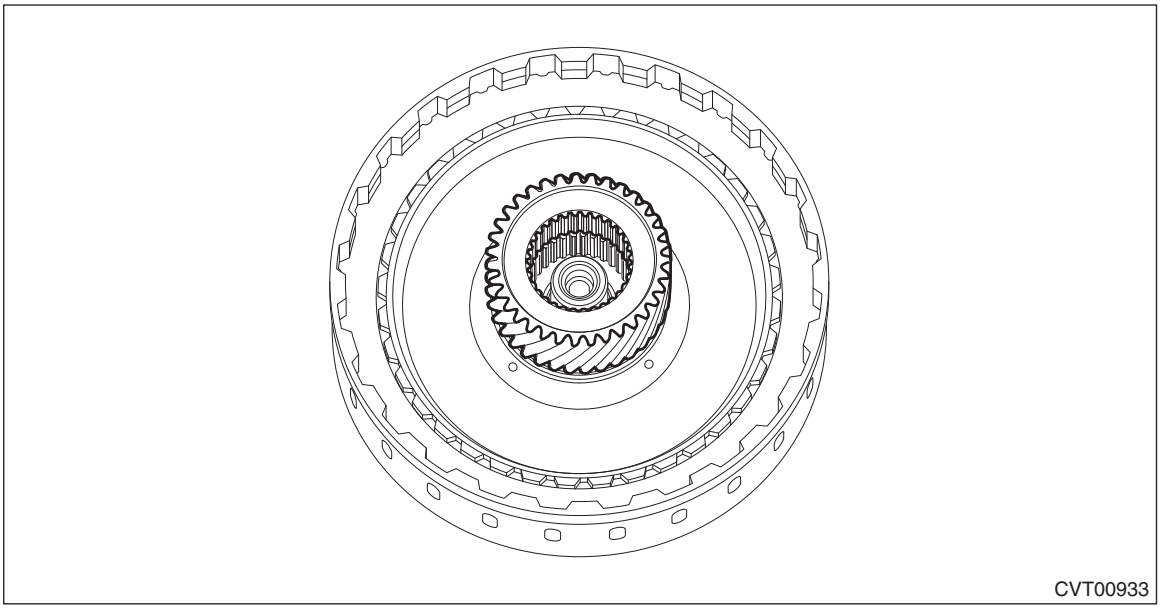


Retaining plate	
Part No.	Thickness mm (in)
31567AB890	2.0 (0.079)
31567AB900	2.2 (0.087)
31567AB910	2.4 (0.094)
31567AB640	2.6 (0.102)

24) Remove the snap ring and the planetary carrier assembly.
25) Replace with the retaining plate selected in step 23) to install.
26) Install the thrust needle bearing.

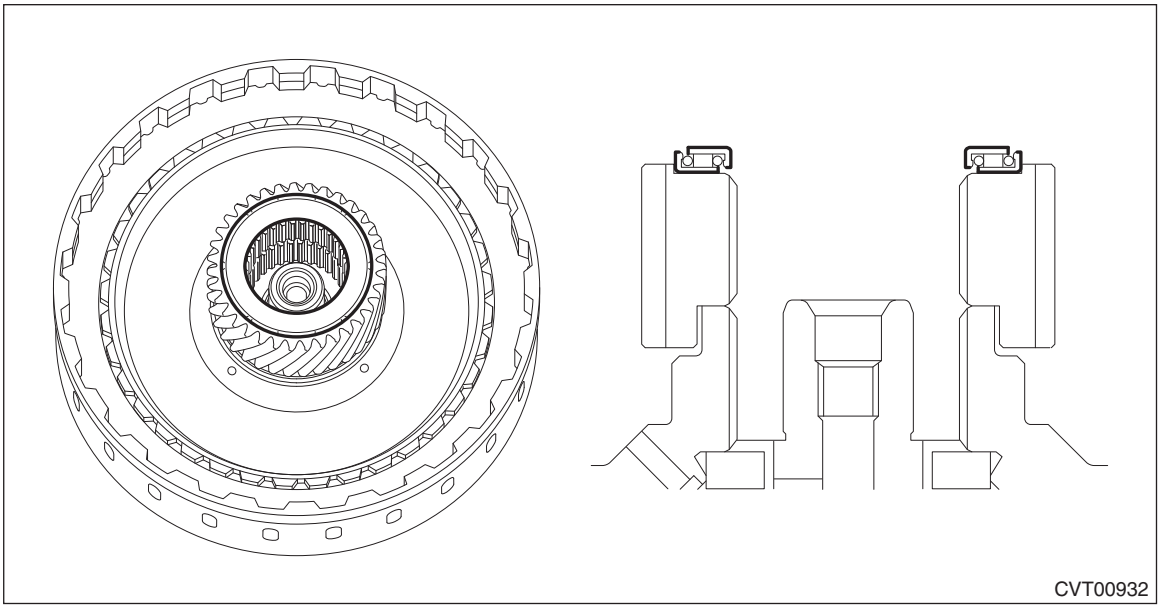


NOTE:
Install the thrust needle bearing in the correct direction.



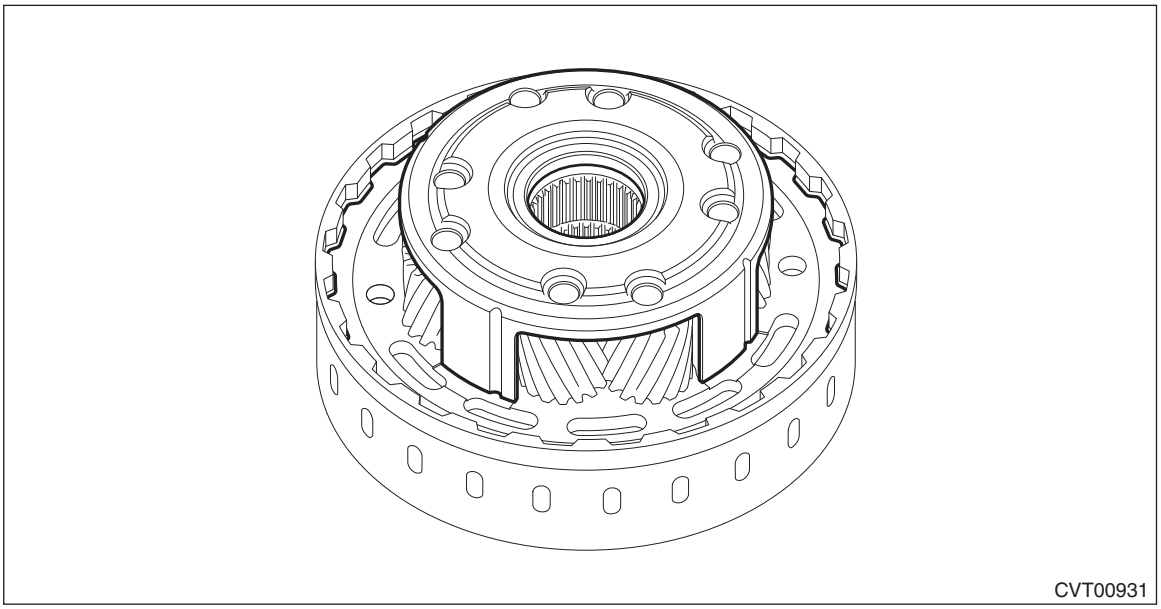
27) Install the washer selected in step 17).

28) Install the forward clutch hub.



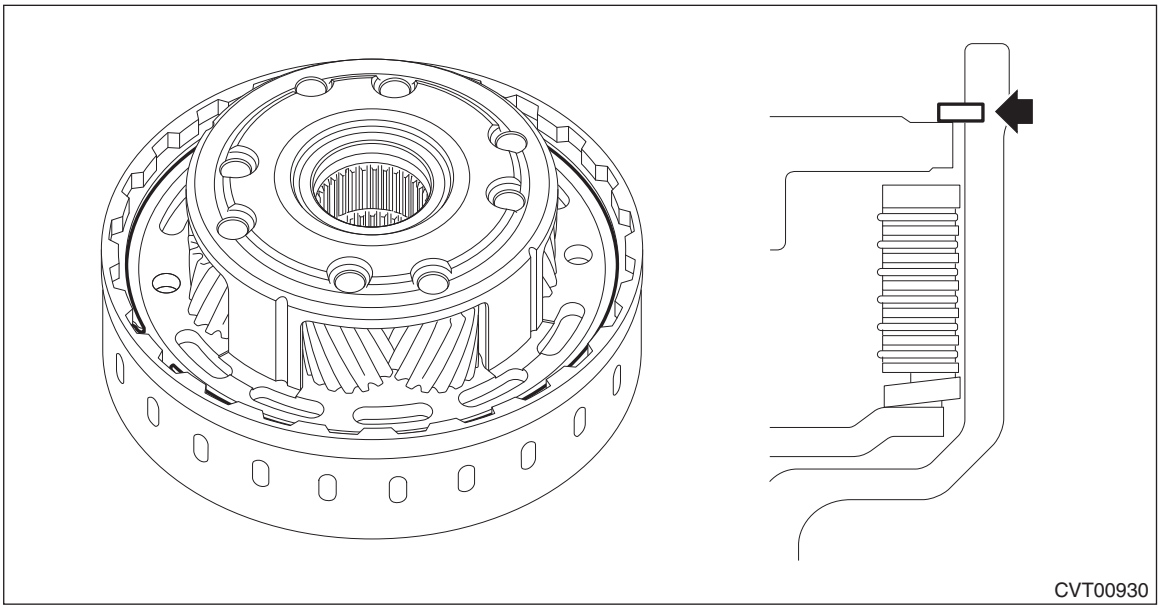
CVT00934

29) Install the sun gear.



CVT00933

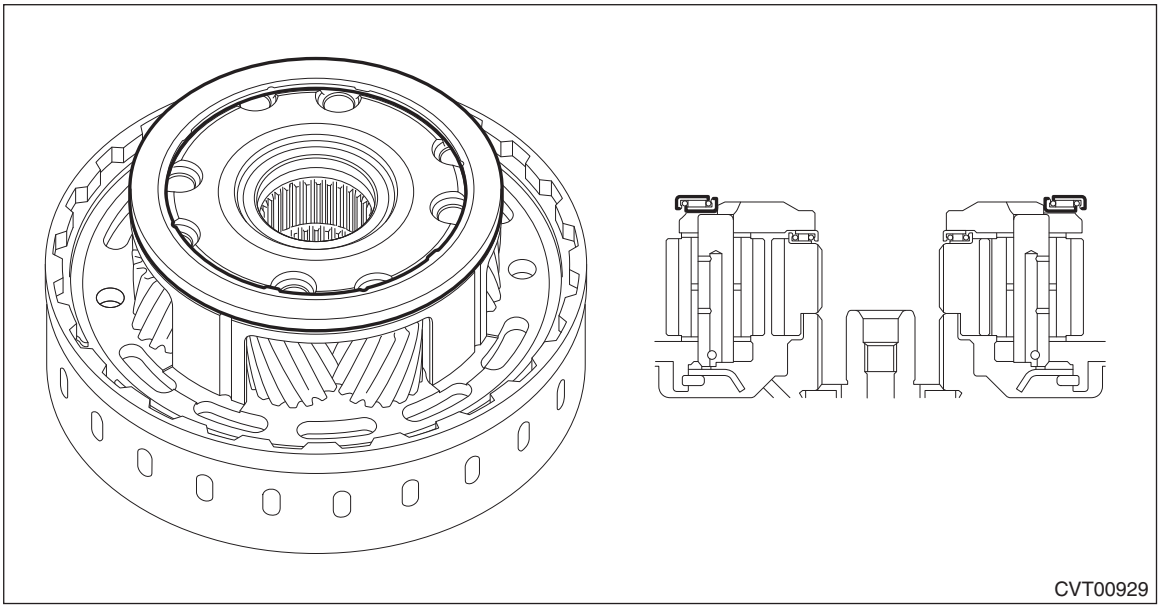
30) Install the thrust needle bearing.



NOTE:
Install the thrust needle bearing in the correct direction.

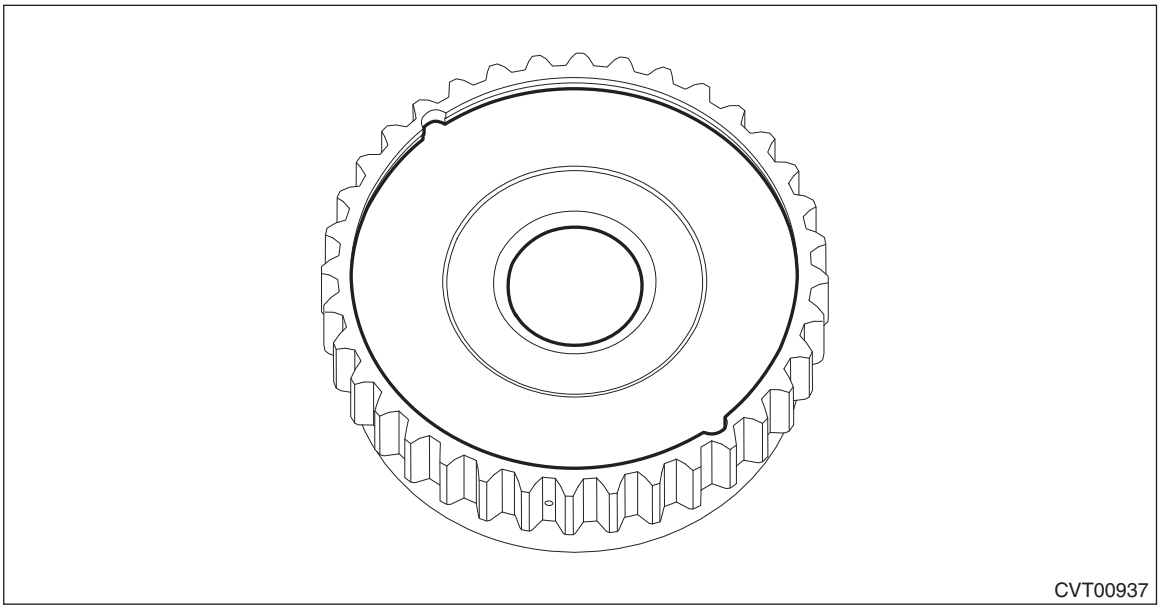
CVT00932

31) Install the planetary carrier assembly.

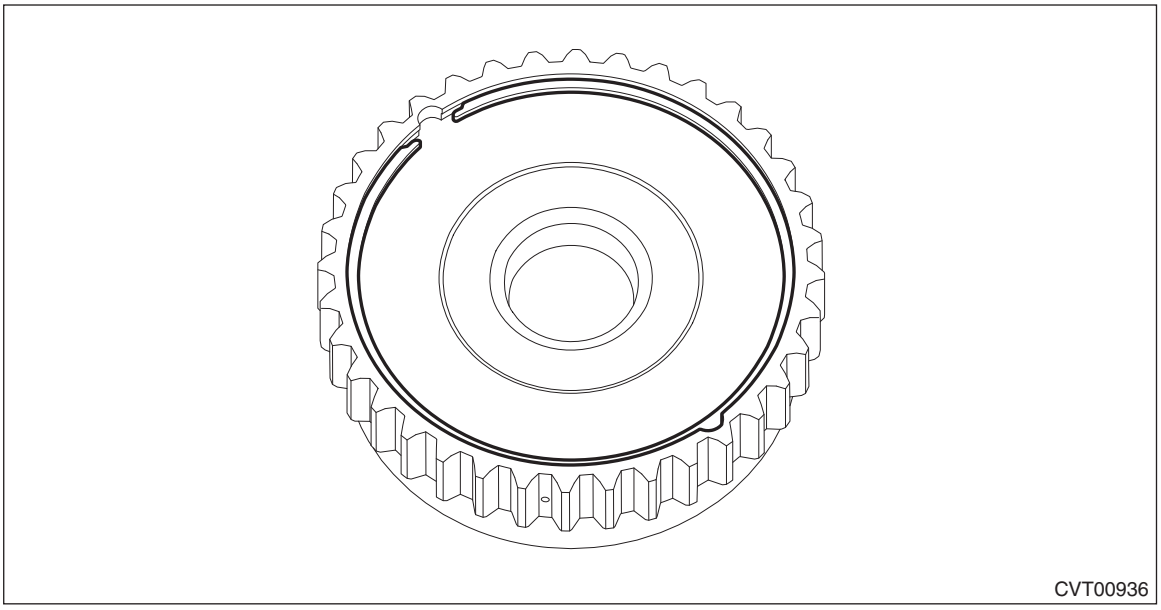


CVT00931

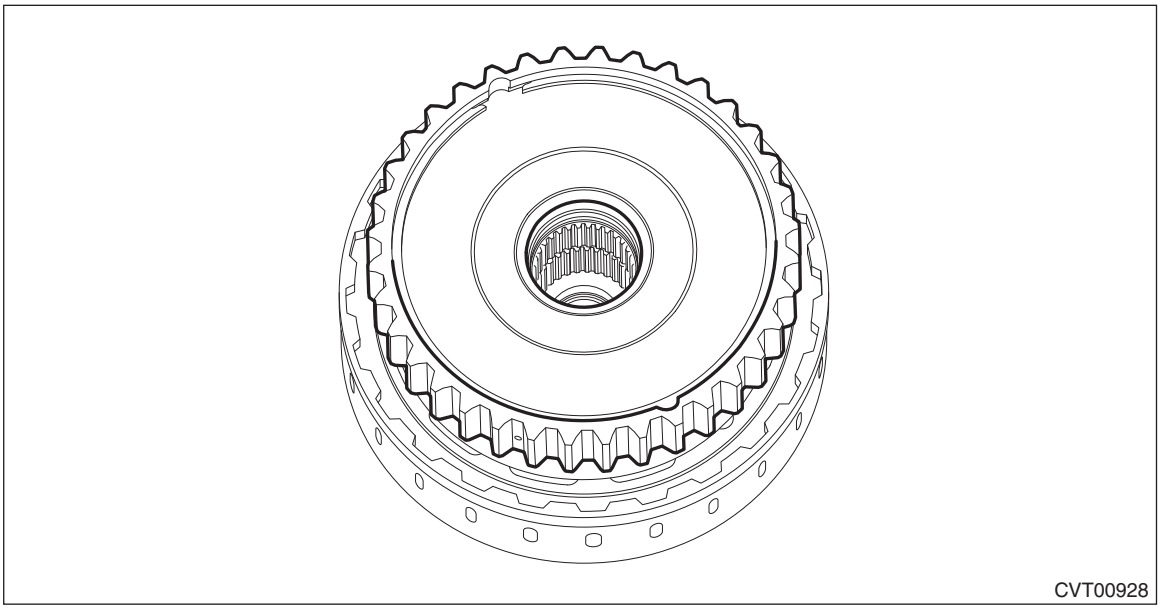
32) Install the snap ring.



33) Install the thrust needle bearing.



NOTE:
Install the thrust needle bearing in the correct direction.



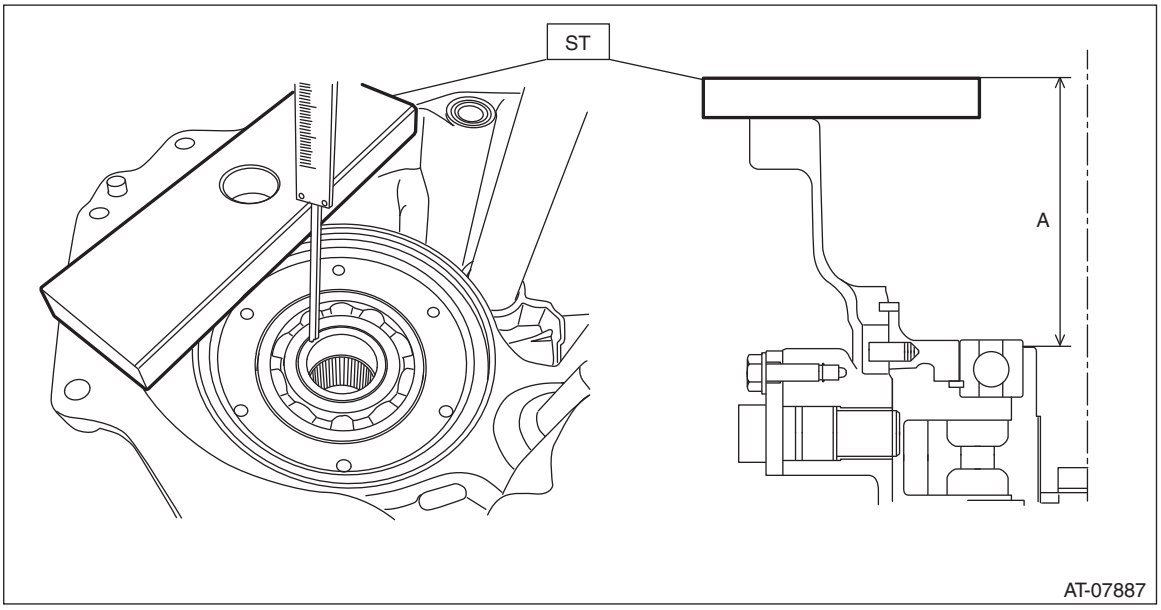
34) Install the thrust gear plate to the internal gear.

CVT00937

35) Install the snap ring.

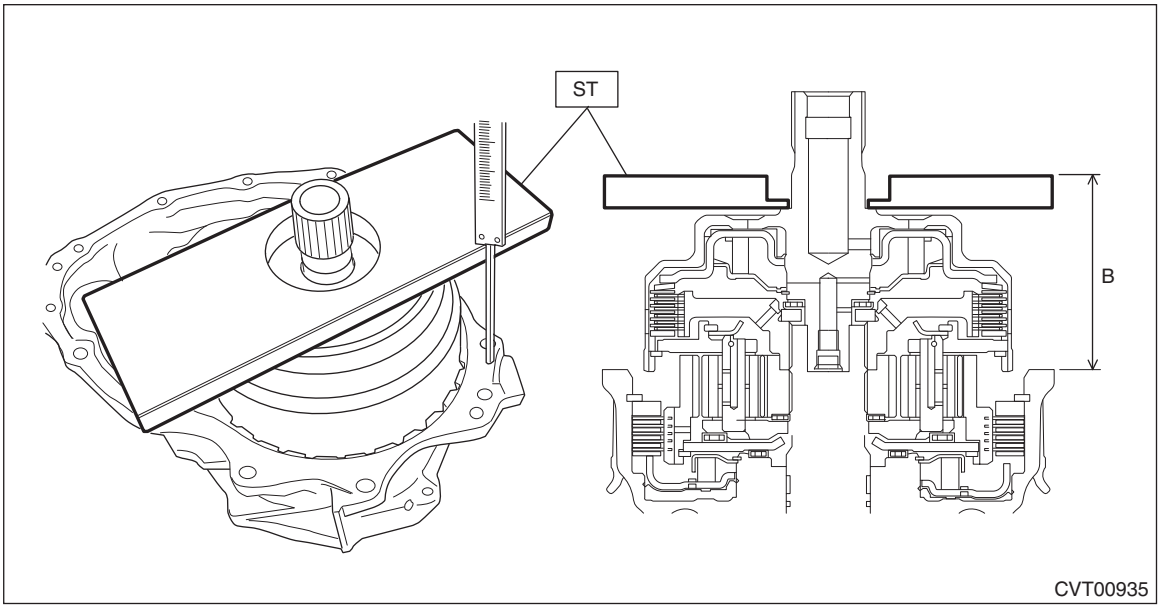
CVT00936

36) Install the internal gear assembly.



E: INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between the retaining plate of forward clutch and the planetary carrier assembly is within the limit. If it exceeds the standard, replace the forward clutch assembly. <Ref. to CVT(TR690)-216, ASSEMBLY, Forward Clutch Assembly.>

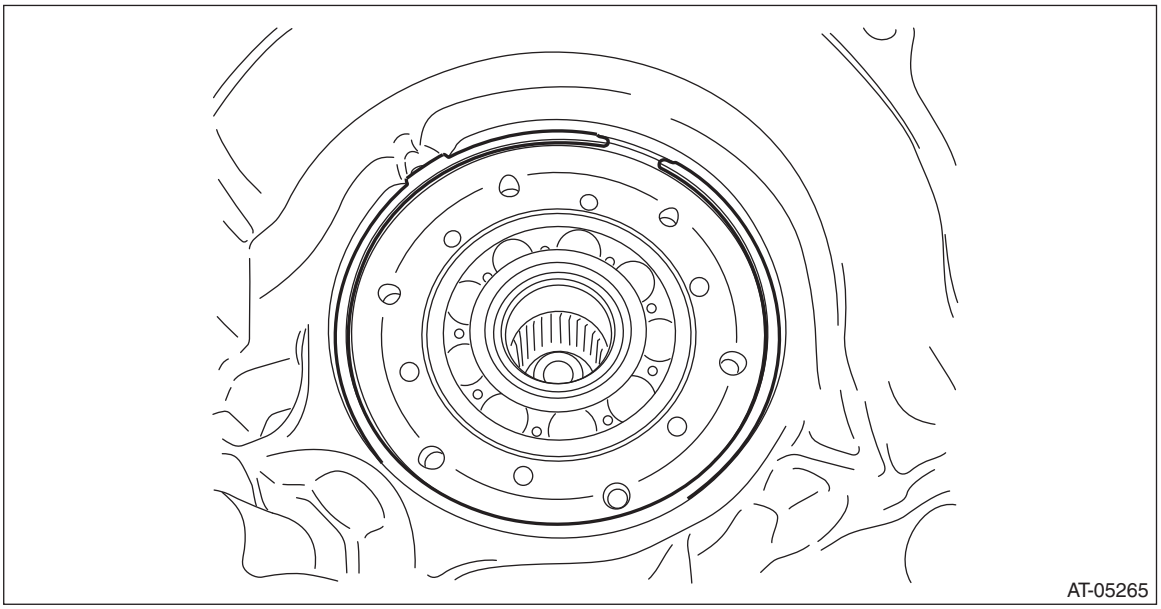


F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the washer catch surface.
ST 398643600 GAUGE

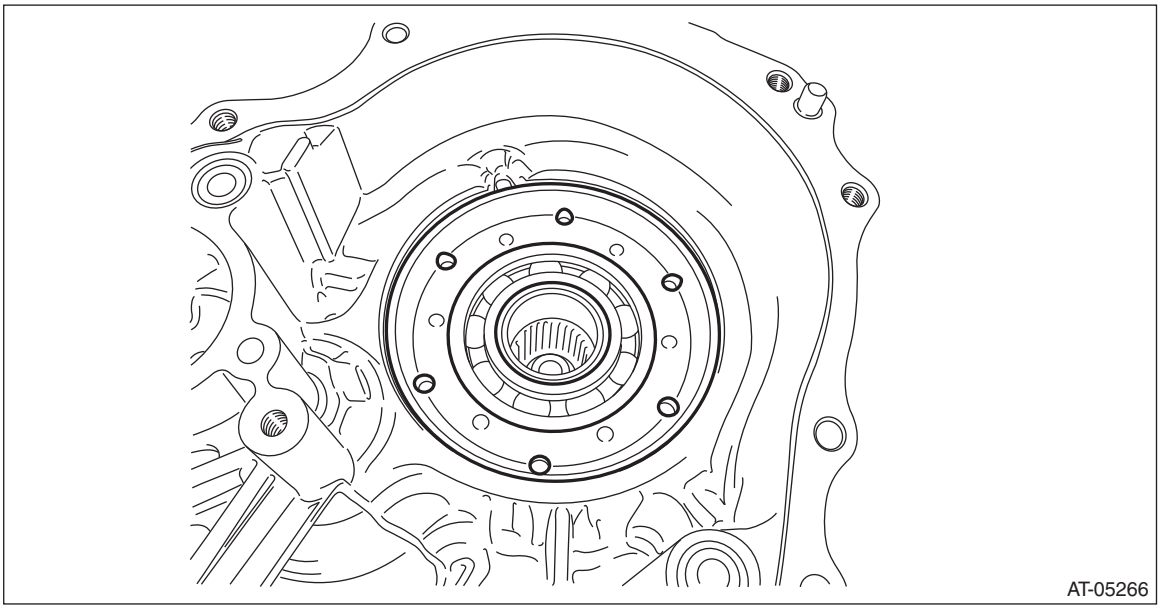
2) Install the forward clutch assembly to intermediate case.

3) Setting the ST, measure height “B” from the ST upper side to the intermediate case mating surface.
ST 499575600 GAUGE



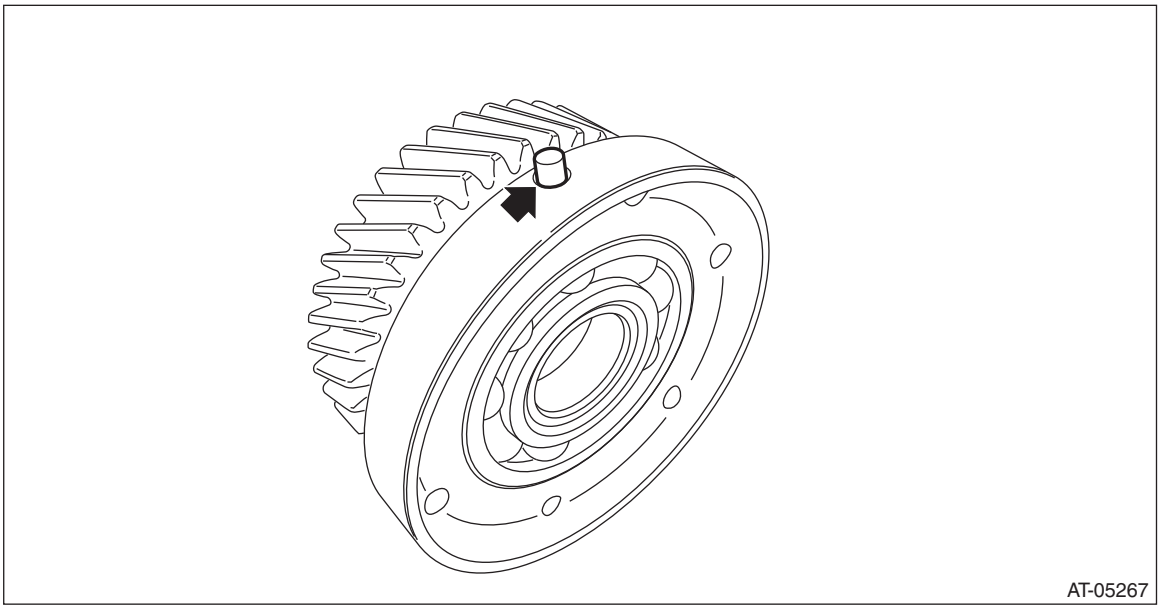
4) Obtain the thickness of washer using the following formula.
Calculation formula:
T (mm) = (A – 15) – (B – 15) – (0.75 — 0.95)
[T (in) = (A – 0.591) – (B – 0.591) – (0.030 — 0.037)]
T: Washer thickness
A: Depth from the ST upper face to the washer catch surface
B: Height from the upper surface of the ST to the mating surface of the intermediate case
15 mm (0.591 in): Thickness of ST
0.75 — 0.95 mm (0.030 — 0.037 in): Clearance
5) Select the washer to meet the value “T” obtained from step 4).

Washer	
Part No.	Washer thickness mm (in)
803034044	0.8 (0.031)
803034045	0.9 (0.035)
803034040	1.0 (0.039)
803034046	1.1 (0.043)
803034041	1.2 (0.047)
803034047	1.3 (0.051)
803034042	1.4 (0.055)
803034048	1.5 (0.059)
803034043	1.6 (0.063)



39.Reduction Driven Gear

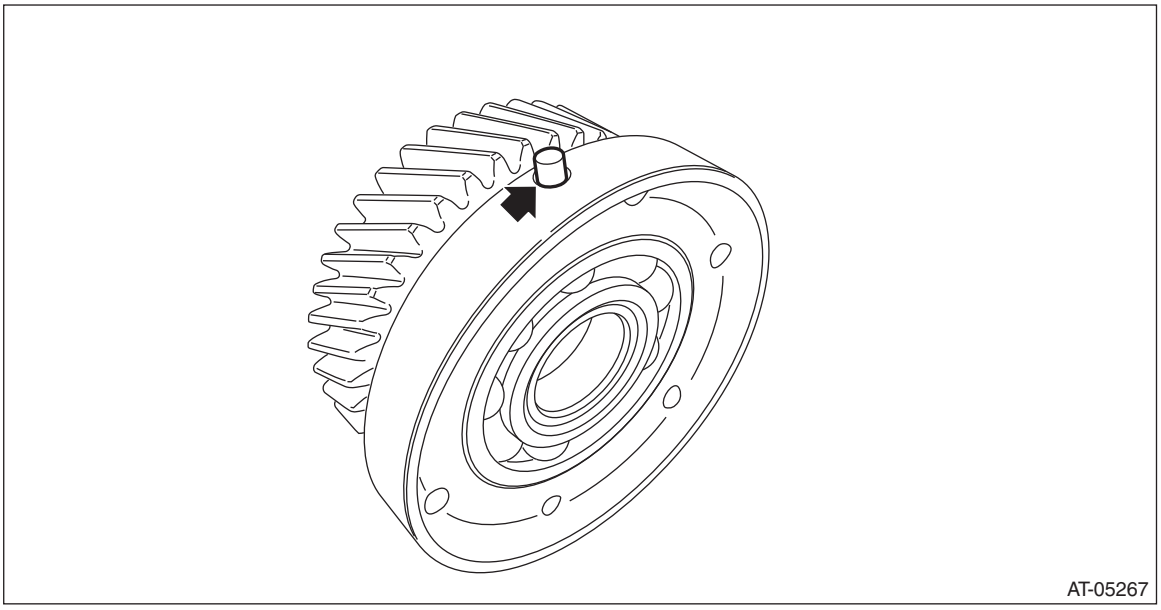
A: REMOVAL



1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
5) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
6) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
7) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
8) Remove the snap ring.

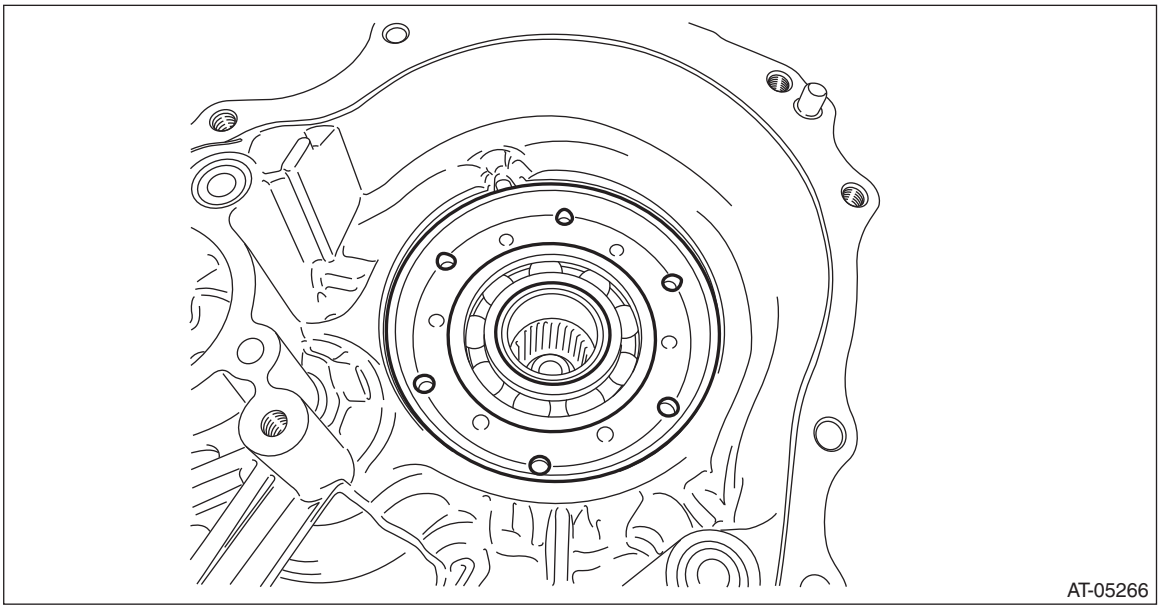
AT-05265

9) Remove the reduction driven gear assembly.



AT-05266

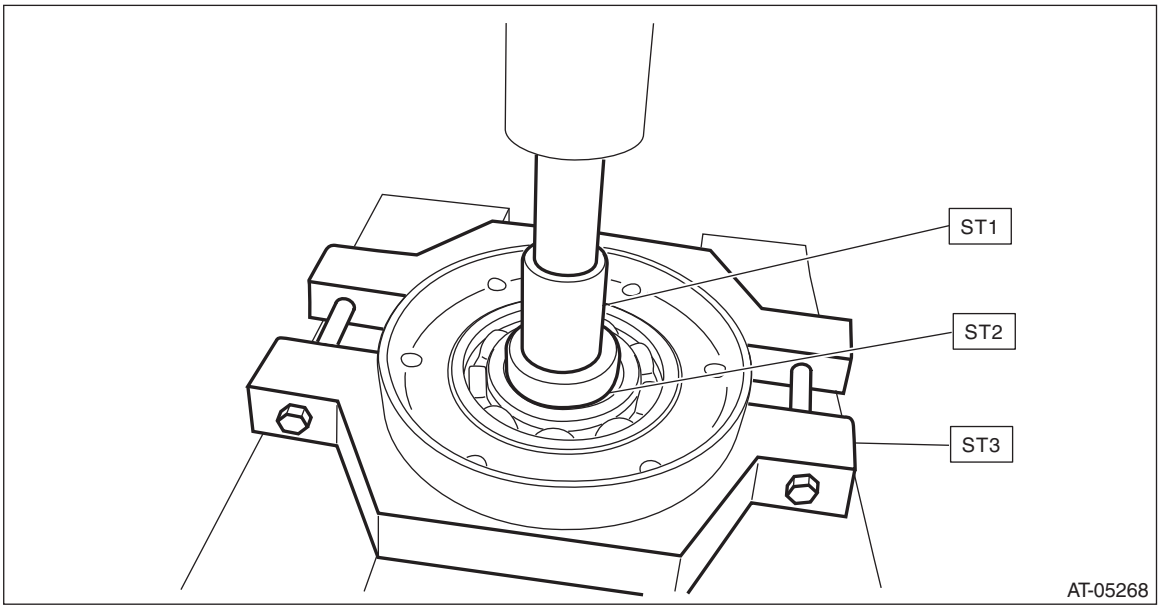
10) Remove the straight pin.



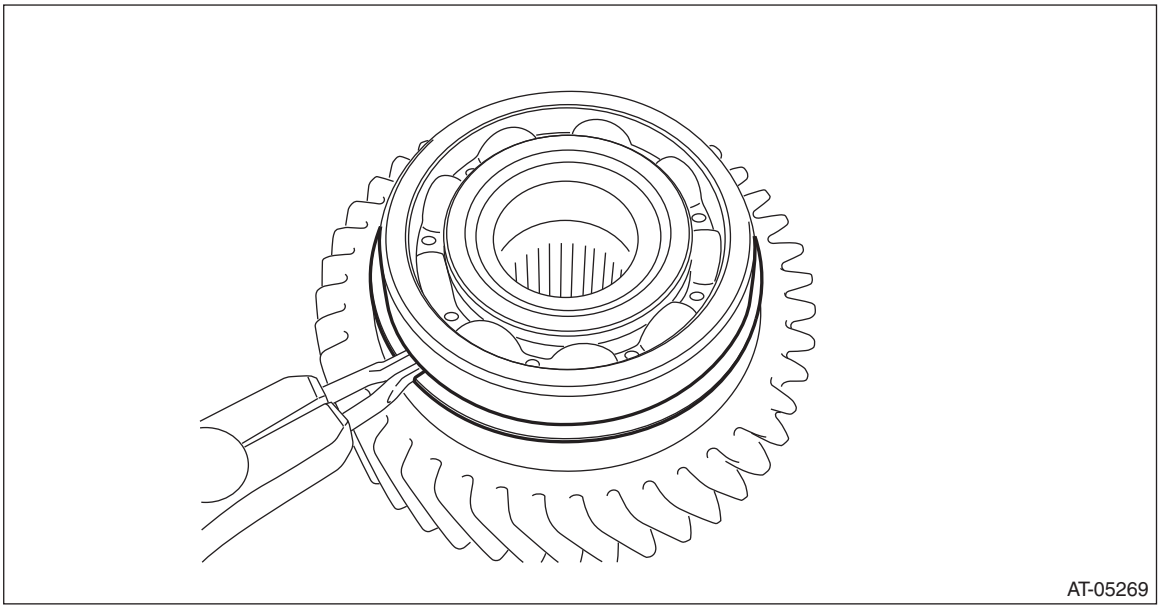
B: INSTALLATION

1) Install the straight pin to reduction driven gear assembly.

2) Fit the straight pin portion to the recess portion of transmission case and install the reduction driven gear and install the snap ring.

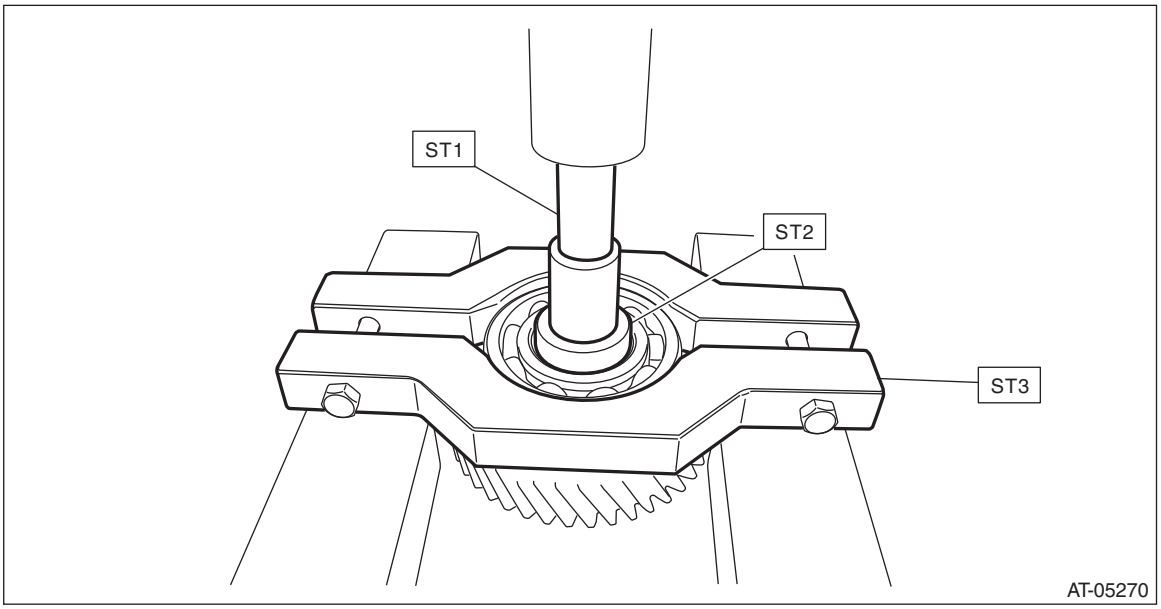


3) Select the snap ring. <Ref. to CVT(TR690)-240, ADJUSTMENT, Reduction Driven Gear.>
4) Replace with the selected snap ring.



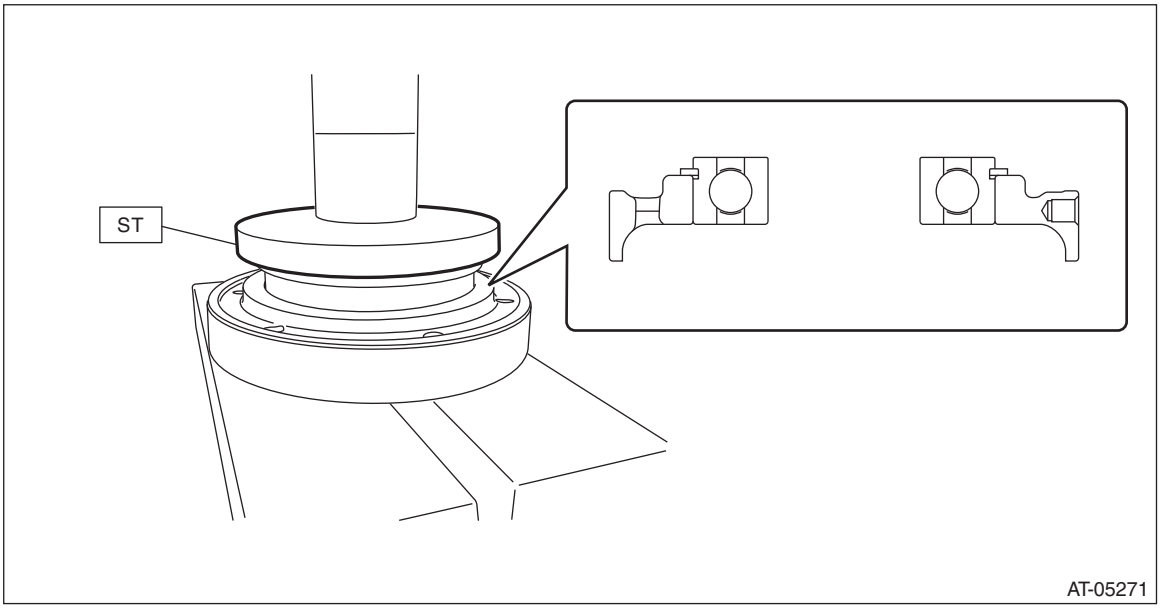
NOTE:
If the clearance measured in step 3) is within standard, the snap ring replacement is not necessary.
5) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
6) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
7) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
8) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
9) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
10) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
11) Install the transmission to vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY



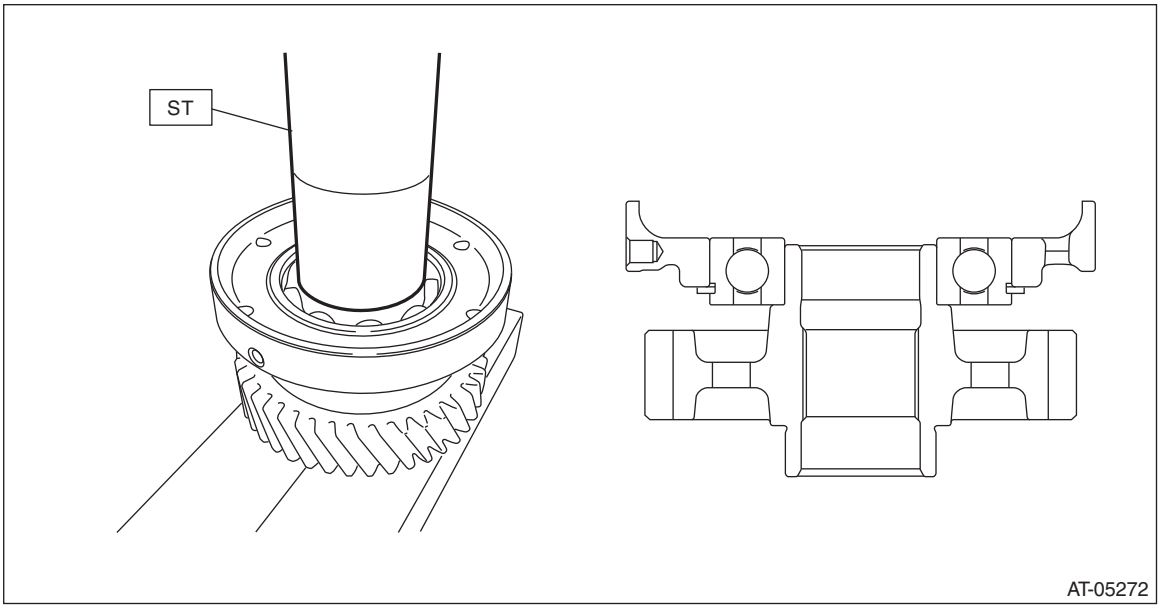
1) Remove the bearing retainer using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18767AA000 BEARING REMOVER

2) Remove the snap ring.



3) Remove the ball bearing using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER

D: ASSEMBLY

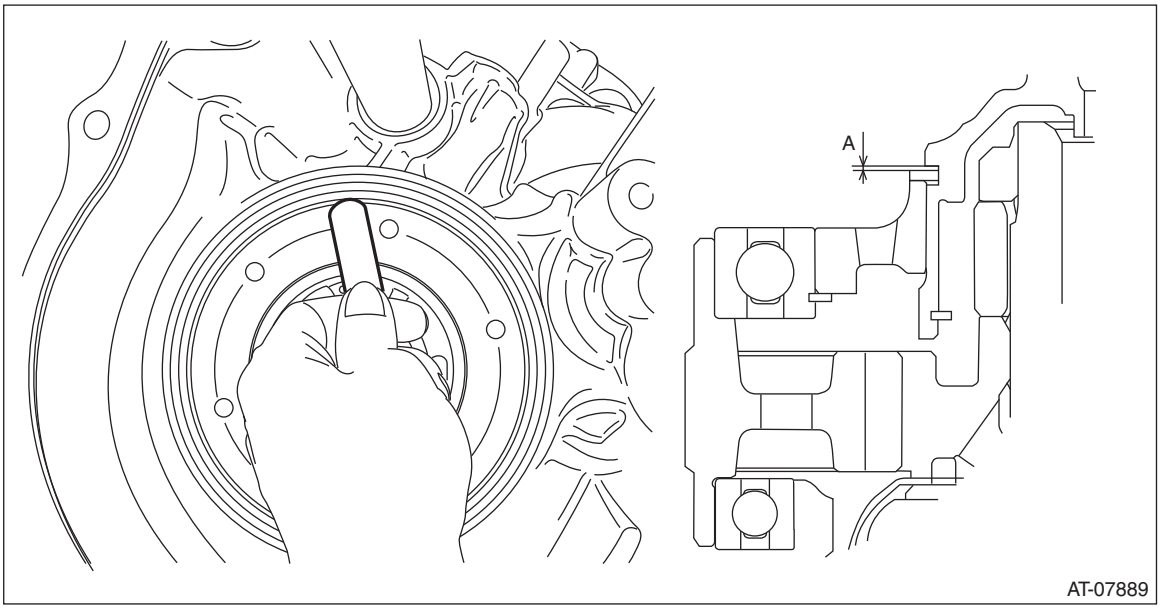


1) Using the ST, install the ball bearing to bearing retainer.
ST 398177700 INSTALLER

NOTE:
- Use a new ball bearing.
- Make sure to install the ball bearing in the right direction.
- Apply CVTF to the press-fitting area.

2) Install the snap ring.

3) Using the ST, install the reduction driven gear.
ST 499277200 INSTALLER



E: INSPECTION

- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check the reduction driven gear for breakage or damage.
- Check the clearance between snap ring and transmission case and replace the snap ring as necessary.

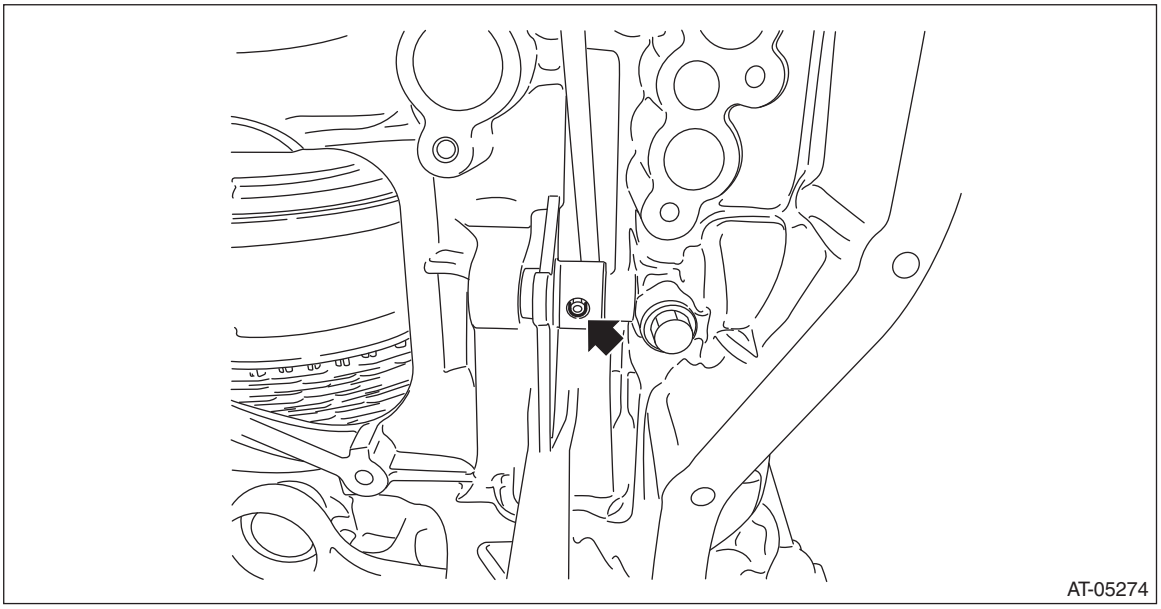
F: ADJUSTMENT

1) Measure clearance “A” between snap ring and transmission case.

Specification:
0.05 — 0.25 mm (0.002 — 0.01 in)

2) If clearance “A” is out of standard, select the snap ring within standard.

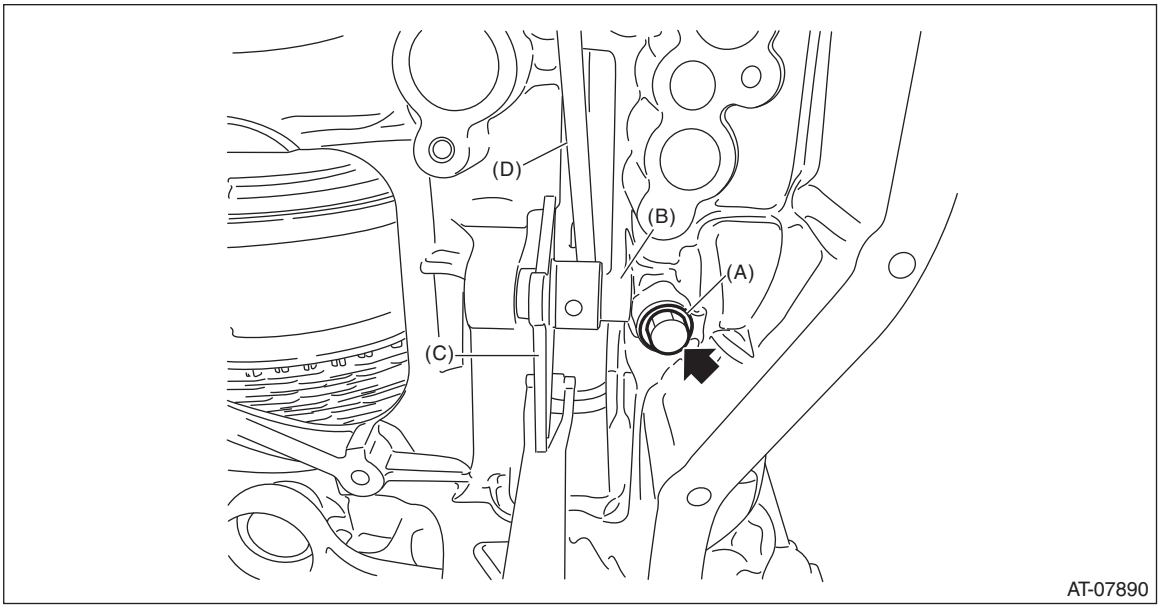
Snap ring	
Part No.	Thickness mm (in)
805100460	2.0 (0.079)
805100461	2.1 (0.083)



Snap ring	
Part No.	Thickness mm (in)
805100462	2.2 (0.087)
805100463	2.3 (0.091)
805100464	2.4 (0.094)

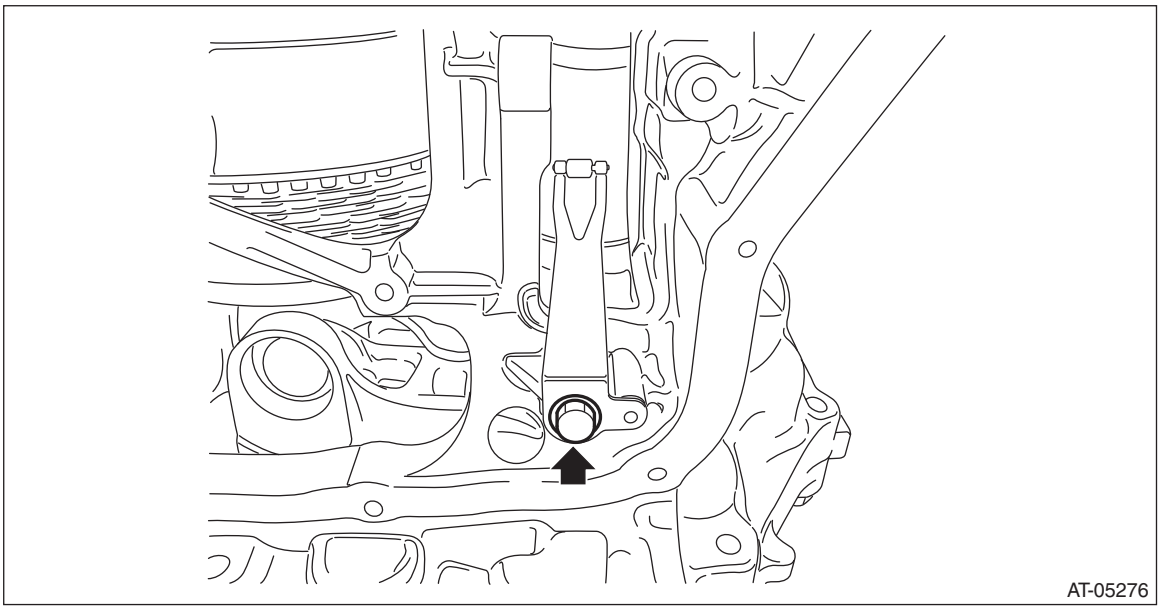
40.Transmission Control Device

A: REMOVAL



1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
3) Remove the inhibitor switch. <Ref. to CVT(TR690)-109, REMOVAL, Inhibitor Switch.>
4) Remove the spring pin.

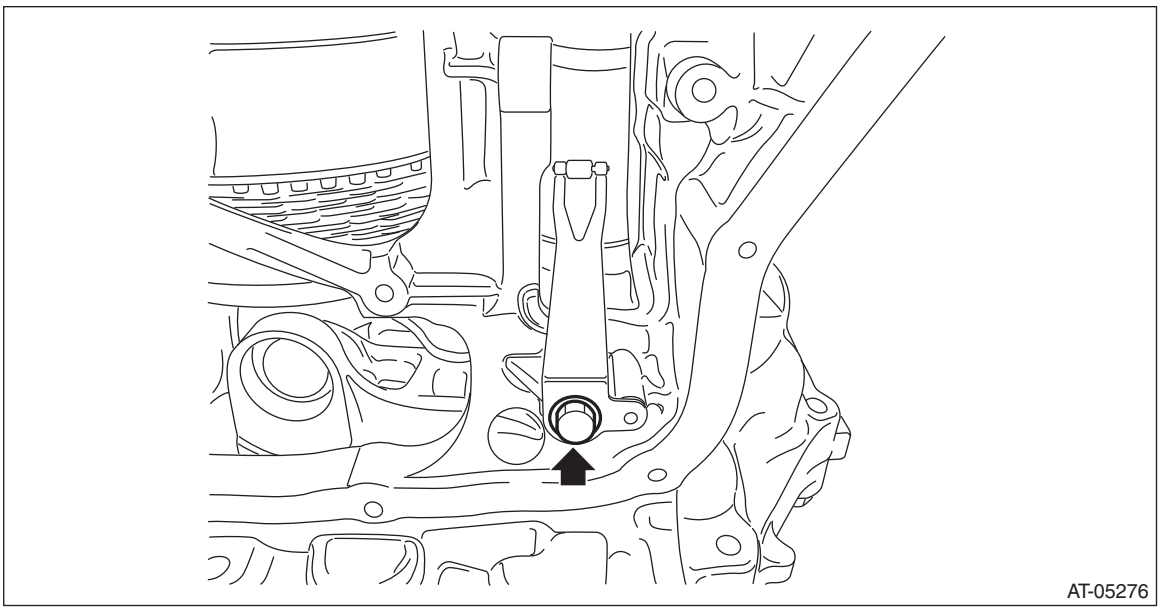
NOTE:
Prevent the spring pin from dropping in the transmission using paper towel etc.



5) Remove the bolt and remove the range select lever, manual plate and parking rod.

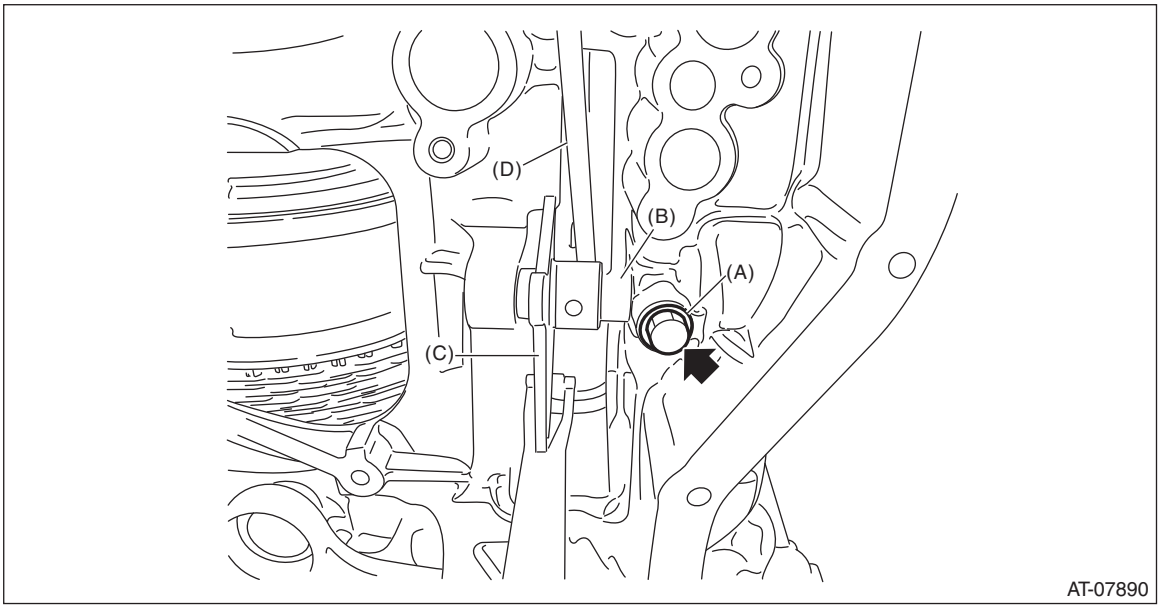
NOTE:
Do not damage the lip of oil seal press-fitted in the case.

(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod



6) Remove the detent spring.

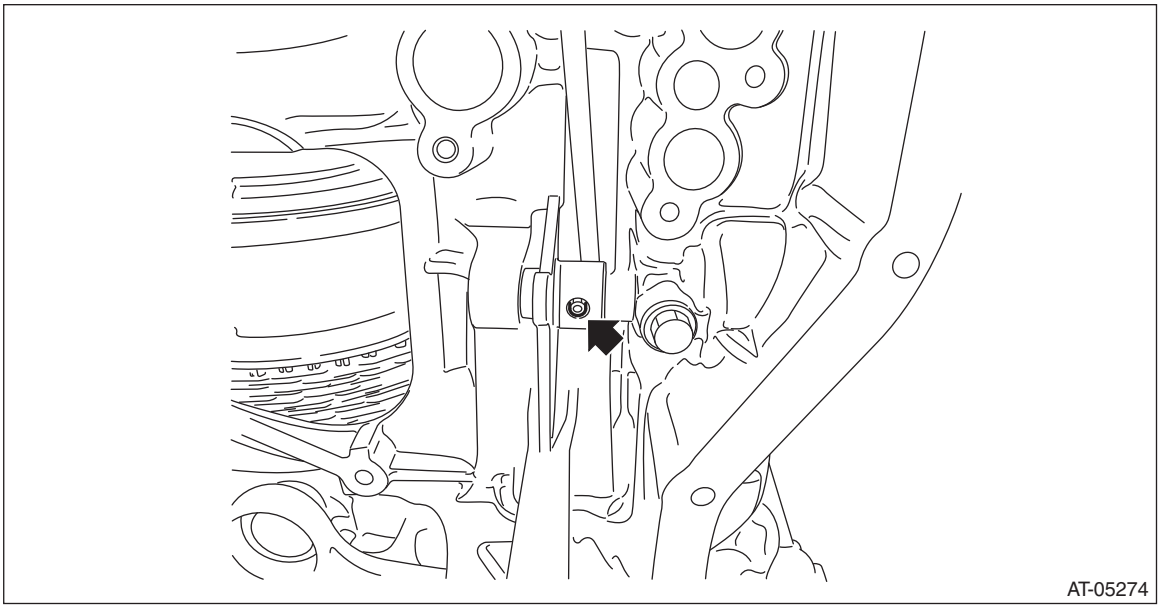
B: INSTALLATION



1) Install the detent spring.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

2) Install the manual plate, parking rod, range select lever and bolt.



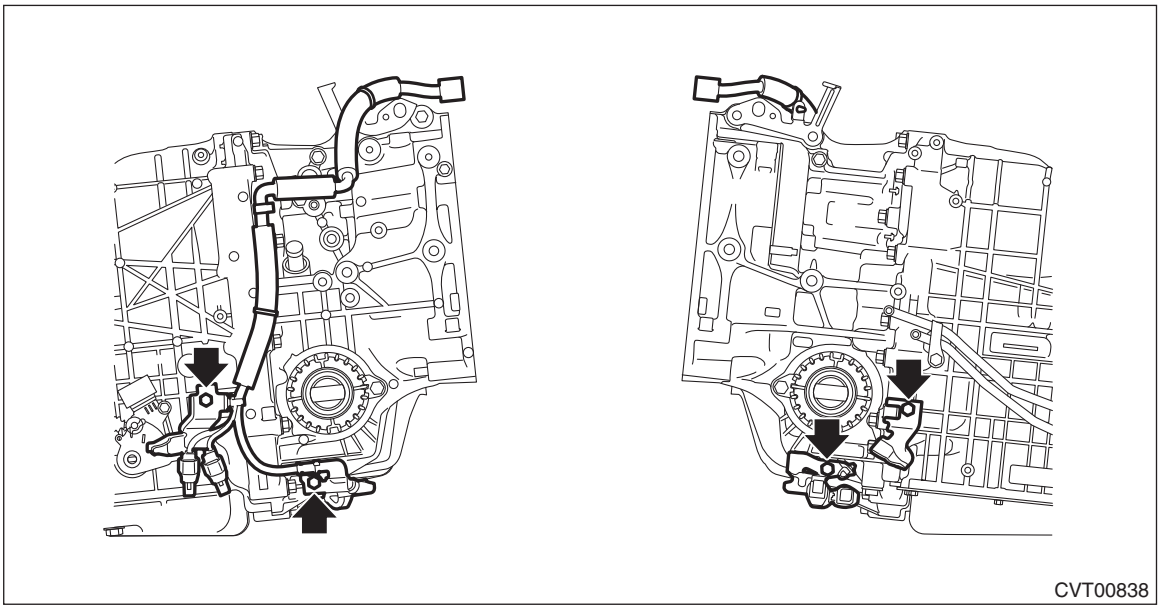
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod

3) Install the spring pin.

NOTE:
Use new spring pin.

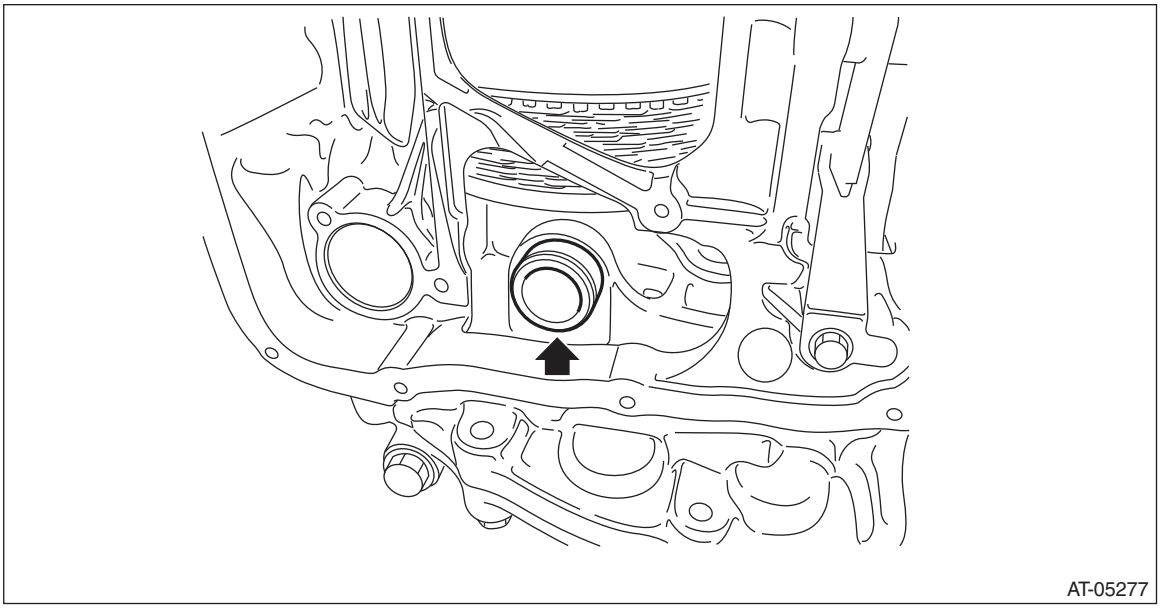
4) Install the inhibitor switch. <Ref. to CVT(TR690)-113, INSTALLATION, Inhibitor Switch.>
5) Adjust the inhibitor switch. <Ref. to CVT(TR690)-108, ADJUSTMENT, Inhibitor Switch.>
6) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>



C: INSPECTION

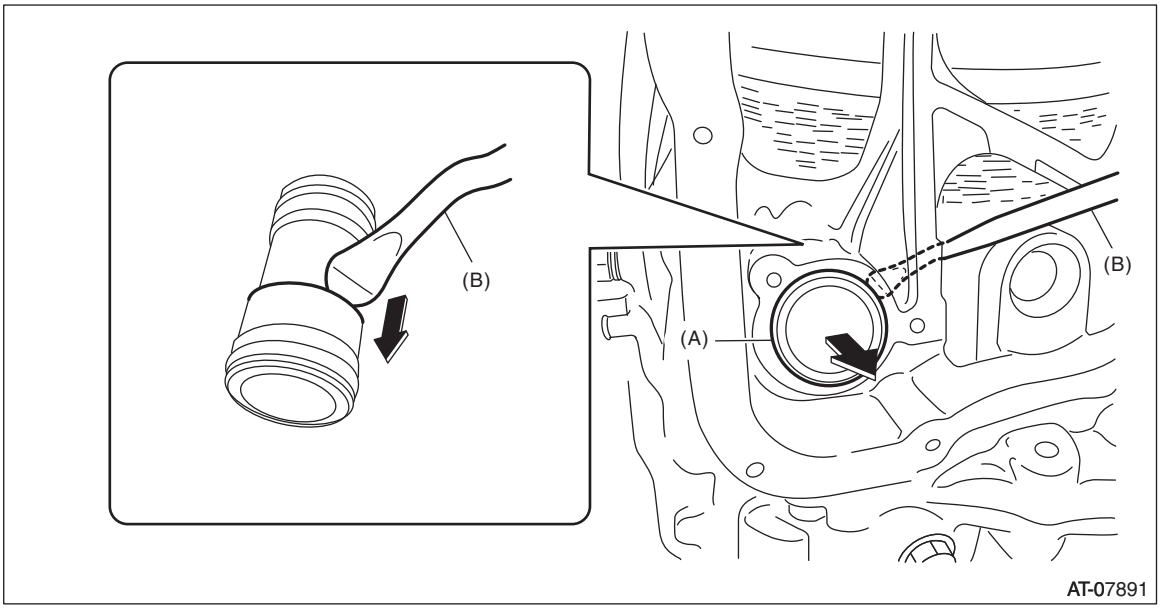
Make sure that the manual lever and detent spring are not worn or otherwise damaged.

41.Transmission Case



A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
4) Remove the secondary speed sensor. <Ref. to CVT(TR690)-117, REMOVAL, Secondary Speed Sensor.>
5) Remove the oxygen sensor harness and harness bracket.

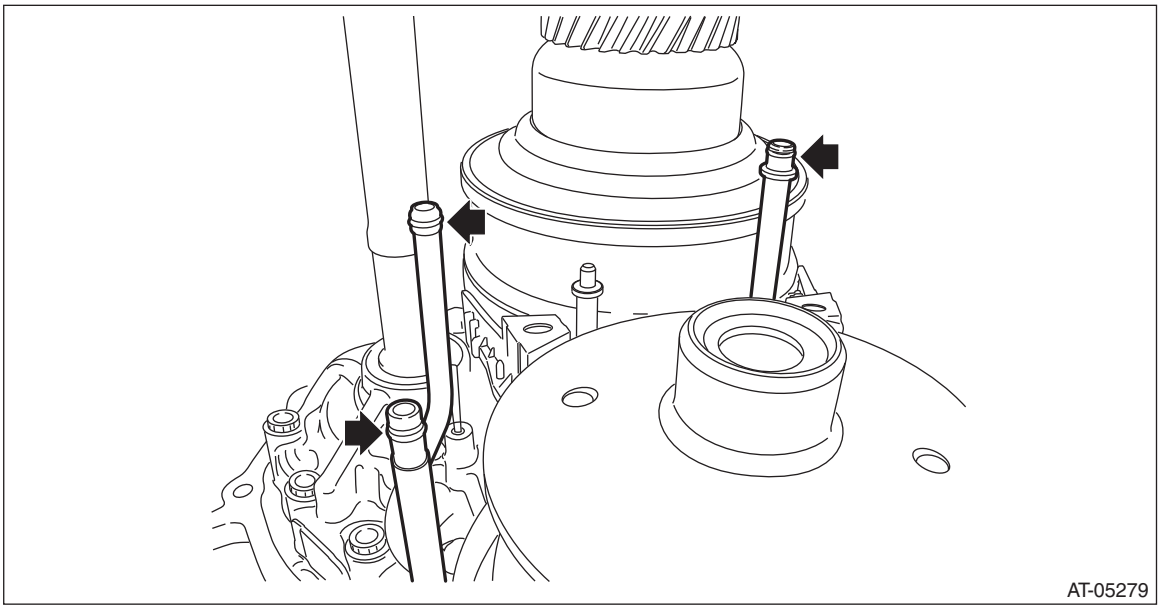


6) Remove the inhibitor switch. <Ref. to CVT(TR690)-109, REMOVAL, Inhibitor Switch.>
7) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
8) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
9) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
13) Remove the reduction driven gear. <Ref. to CVT(TR690)-235, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>

NOTE:
When removing the control valve body, also remove the pressure pipe if it is attached on the case.

15) Remove the CVTF pipe using a tire lever etc.

NOTE:
Remove by hooking the stepped portion of CVTF pipe with a tire lever etc.

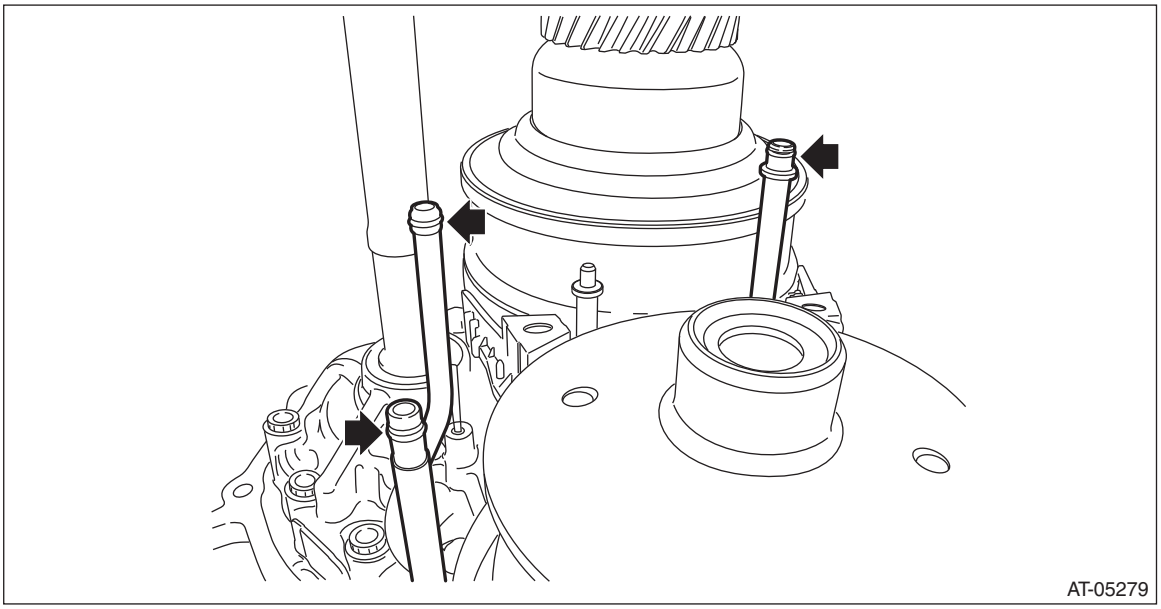


(A) CVTF pipe
(B) Tire lever

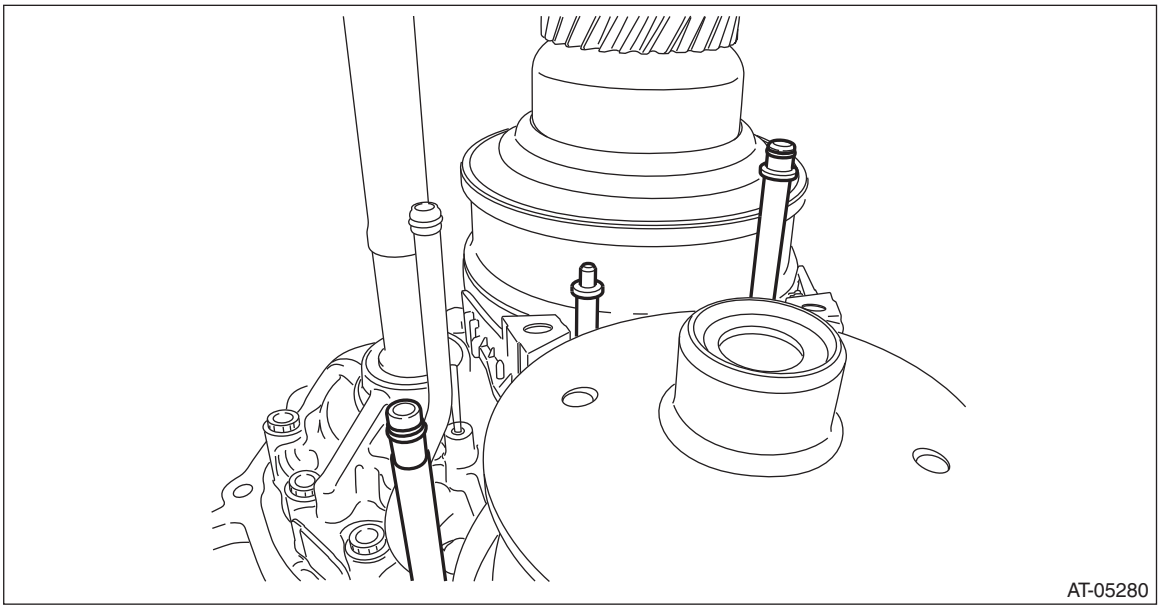
16) Remove the transmission case.

NOTE:
The total number of transmission case mounting bolts is 15.

17) Remove the O-ring of lubrication pipe.



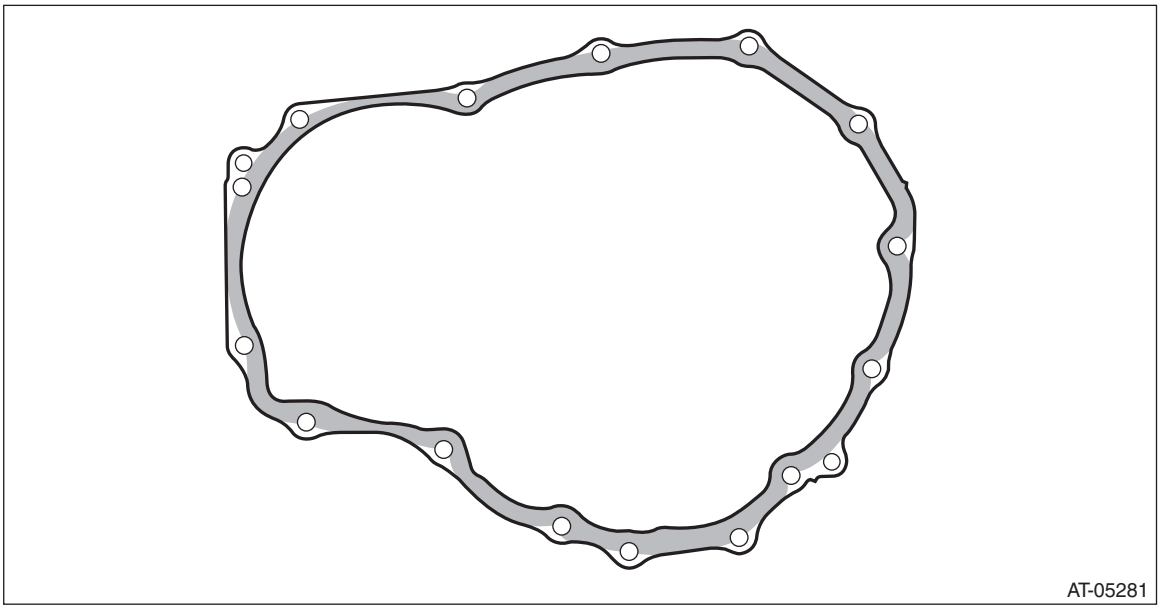
18) Remove the control device system. <Ref. to CVT(TR690)-242, REMOVAL, Transmission Control Device.>



B: INSTALLATION

1) Clean the mating surface of transmission case and converter case.
2) Install the control device system. <Ref. to CVT(TR690)-243, INSTALLATION, Transmission Control Device.>
3) Install the O-ring to the lubrication pipe.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

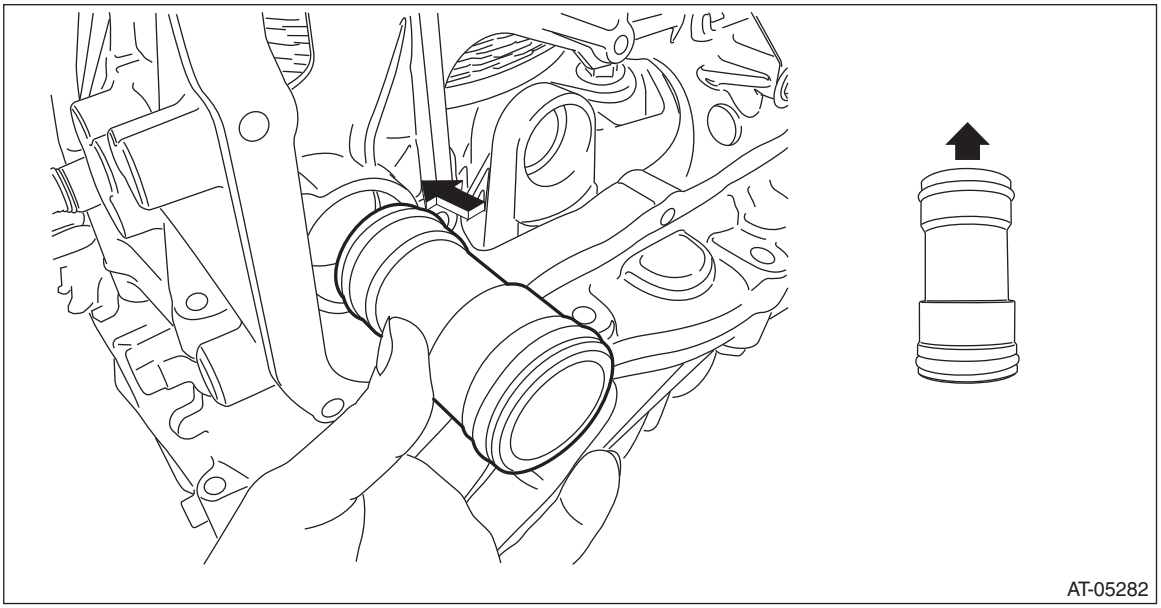


4) Make sure the lubrication pipe and support rod are in vertical position.

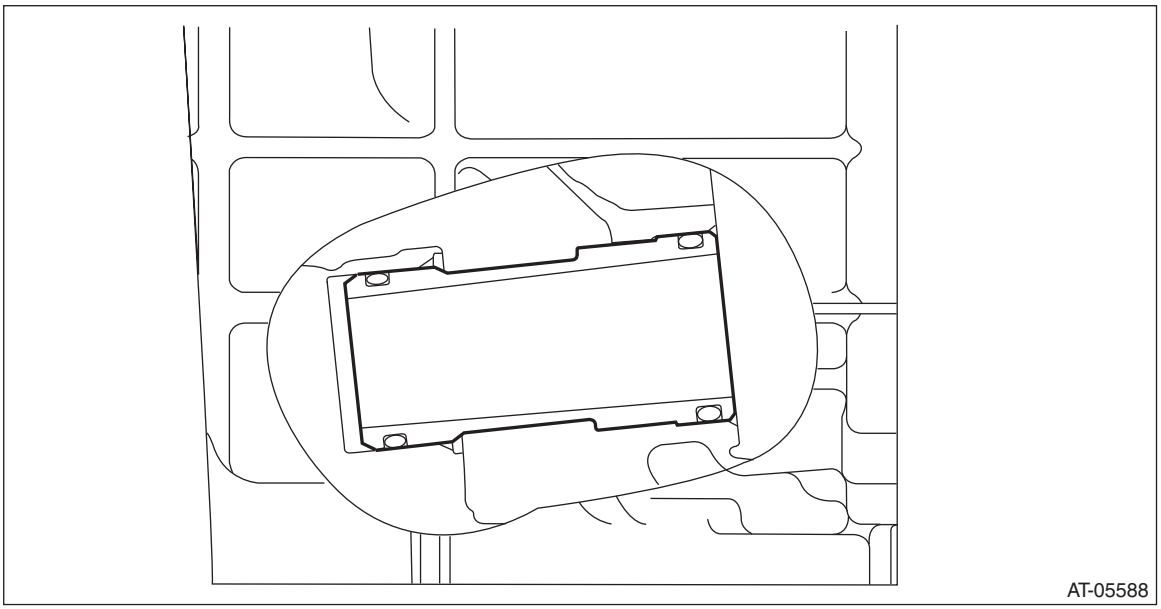
5) Apply liquid gasket seamlessly to the mating surface of transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent

6) Install the transmission case.



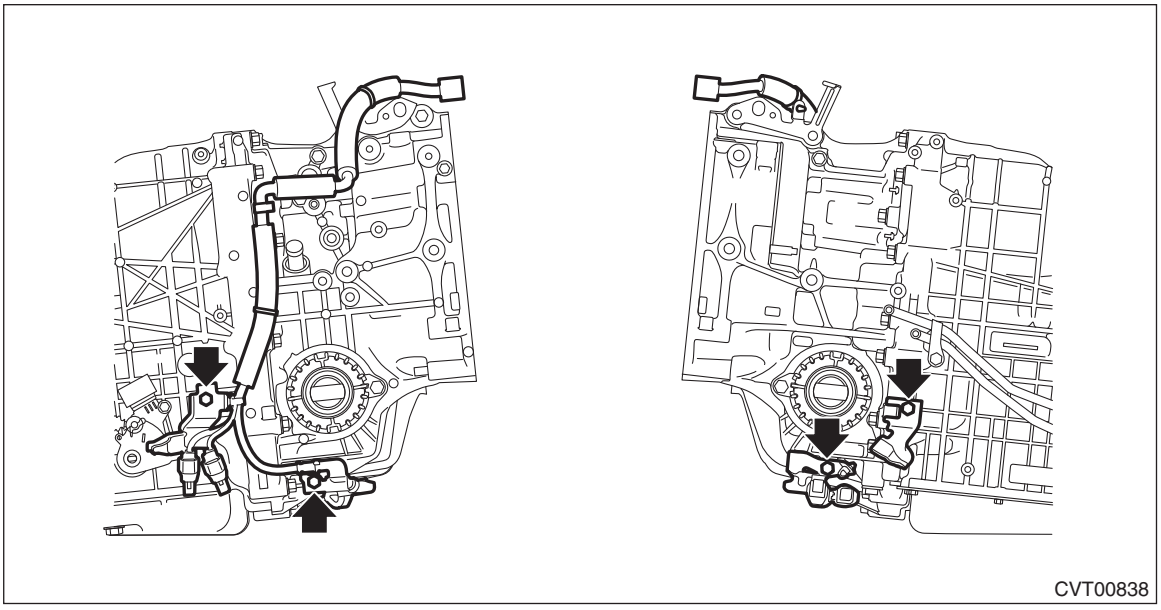
CAUTION:
If the transmission case gets in contact with the lubrication pipe and support rod, do not install the transmission case forcibly.



NOTE:
• Install while checking the lubrication pipe and support rod is being inserted properly into transmission case.
• If installing the transmission case is difficult, check if the lubrication pipe and support rod are bent.
• The total number of transmission case mounting bolts is 15.

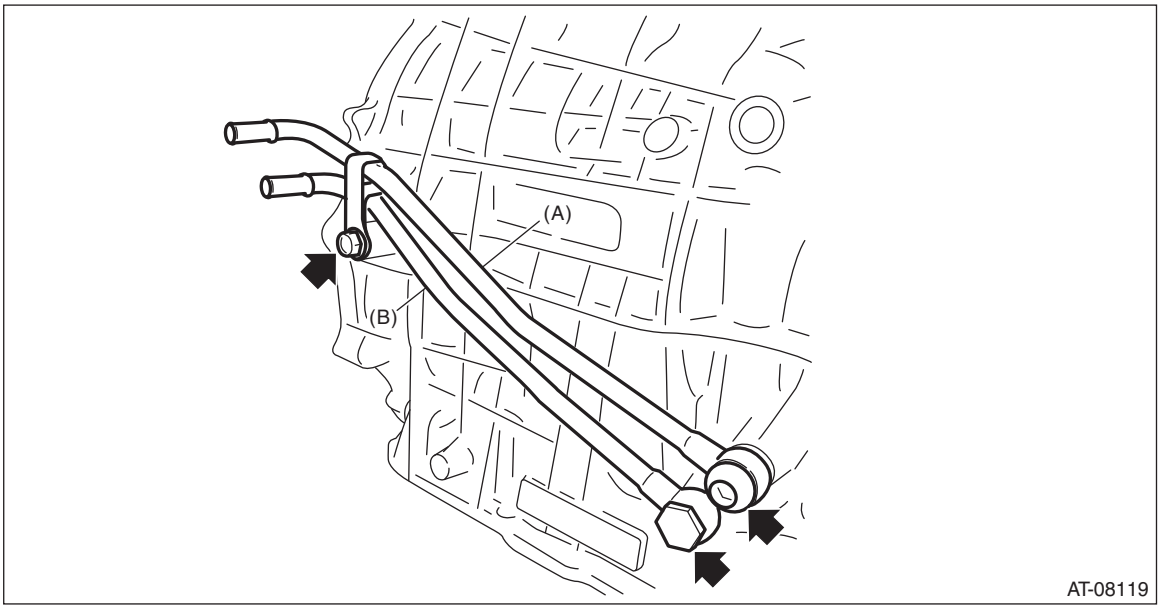
Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)
7) Install the O-ring to CVTF pipe.

NOTE:
Use new O-rings.
8) The smaller opening of CVTF pipe should be inserted to transmission.



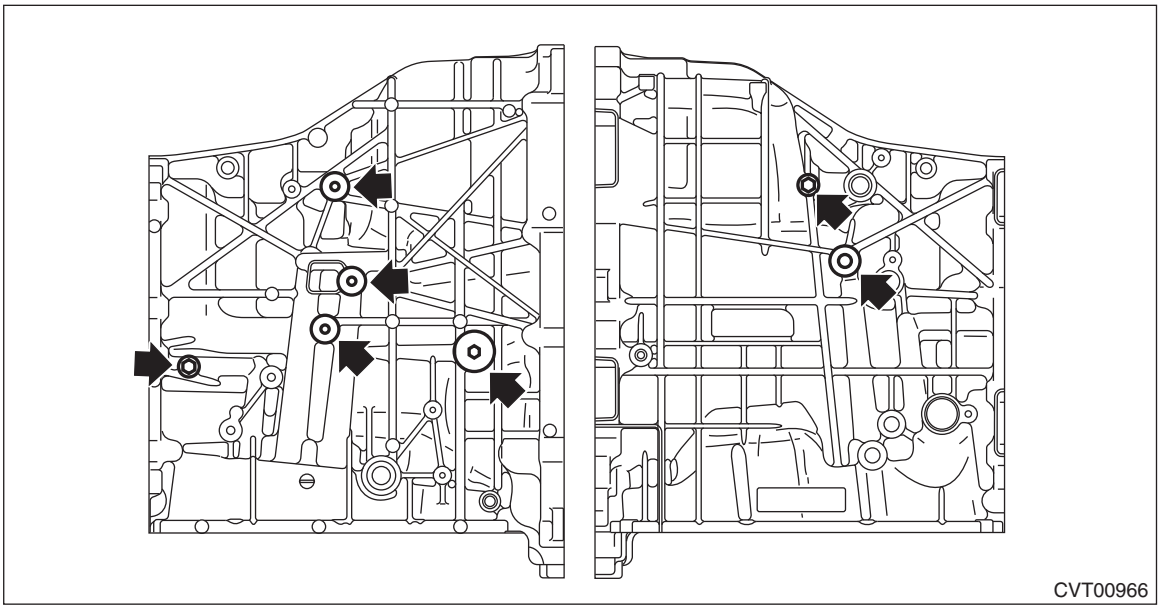
NOTE:
After installing, make sure the CVTF pipe does not stick out of transmission case.

9) Install the reduction driven gear. <Ref. to CVT(TR690)-236, INSTALLATION, Reduction Driven Gear.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
14) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
15) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
16) Install the inhibitor switch. <Ref. to CVT(TR690)-113, INSTALLATION, Inhibitor Switch.>
17) Install the oxygen sensor harness and harness bracket.



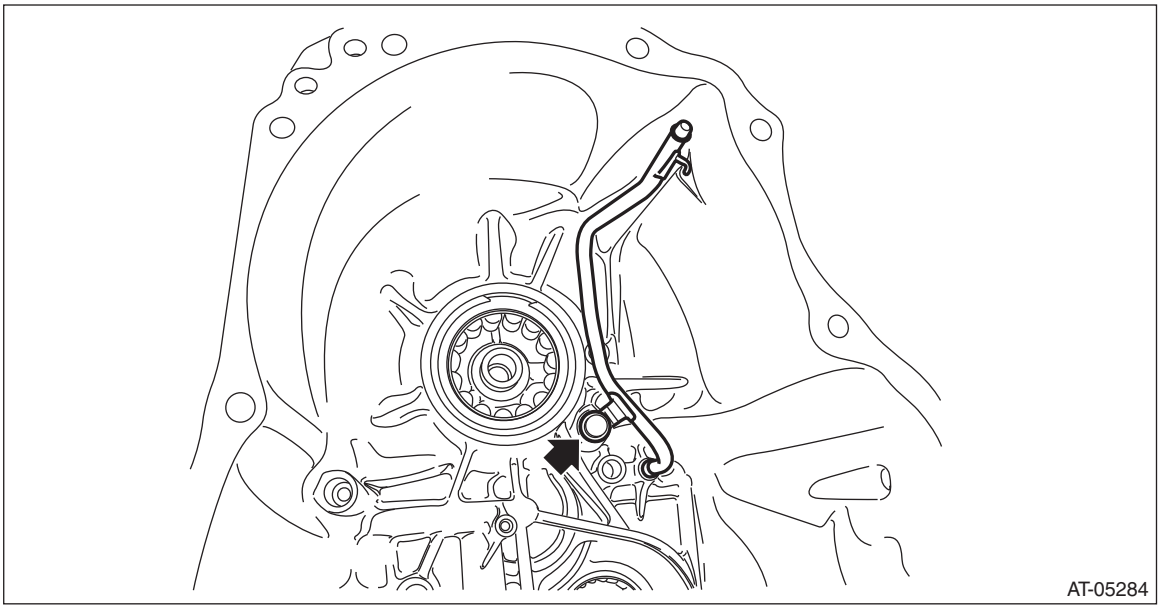
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

18) Install the secondary speed sensor. <Ref. to CVT(TR690)-117, INSTALLATION, Secondary Speed Sensor.>
19) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
20) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
21) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
22) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

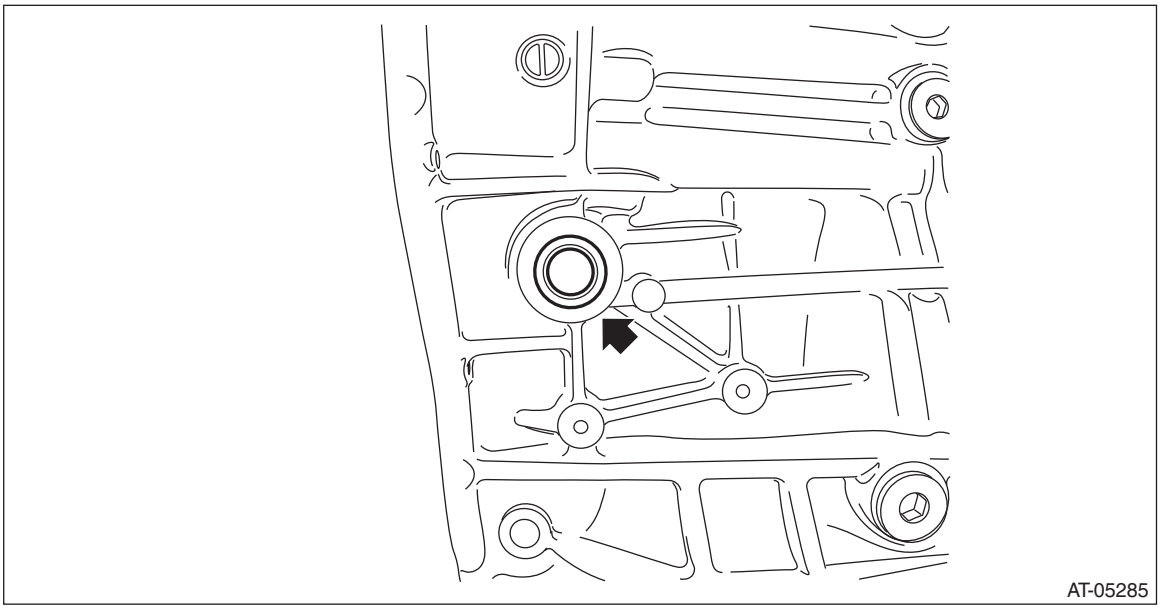


C: DISASSEMBLY

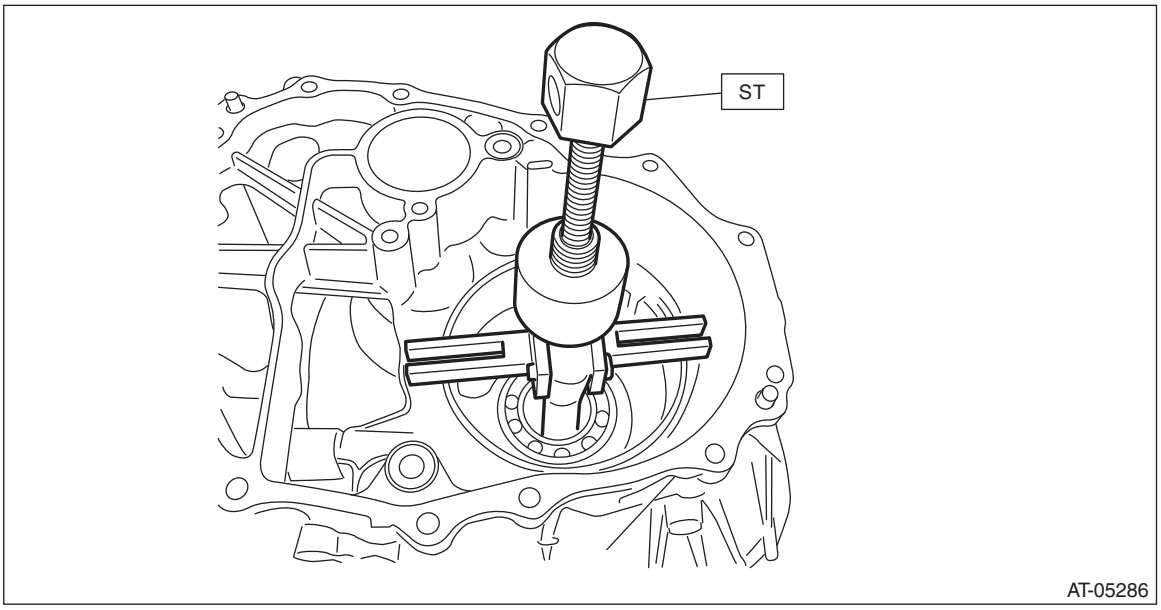
1) Remove the CVTF inlet pipe and CVTF outlet pipe.



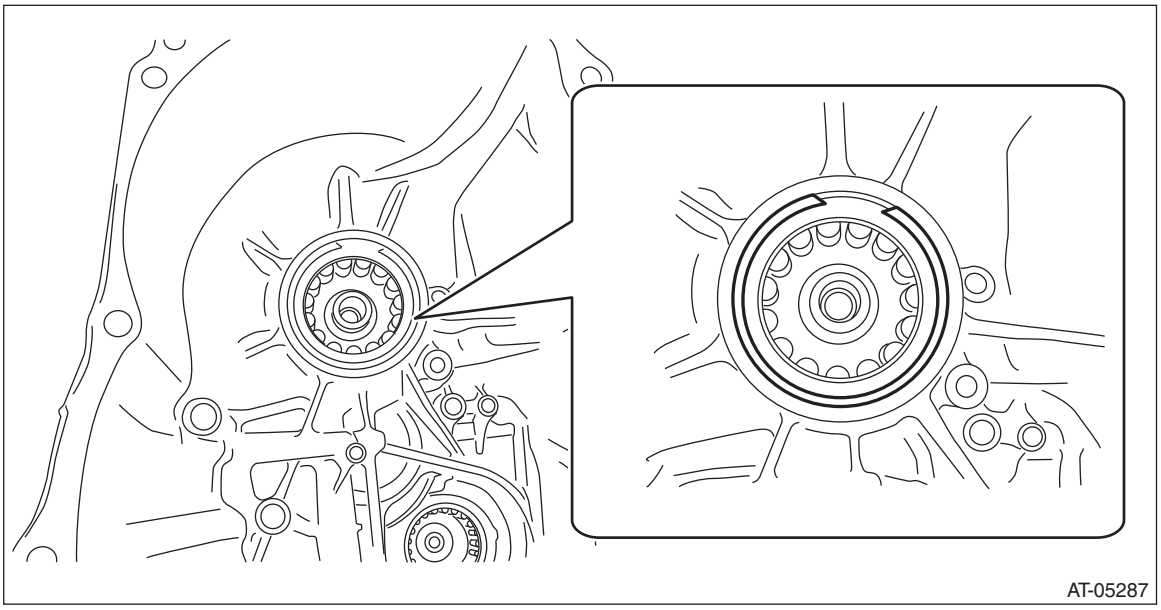
(A) CVTF outlet pipe
(B) CVTF inlet pipe



2) Remove all plugs from the transmission case.

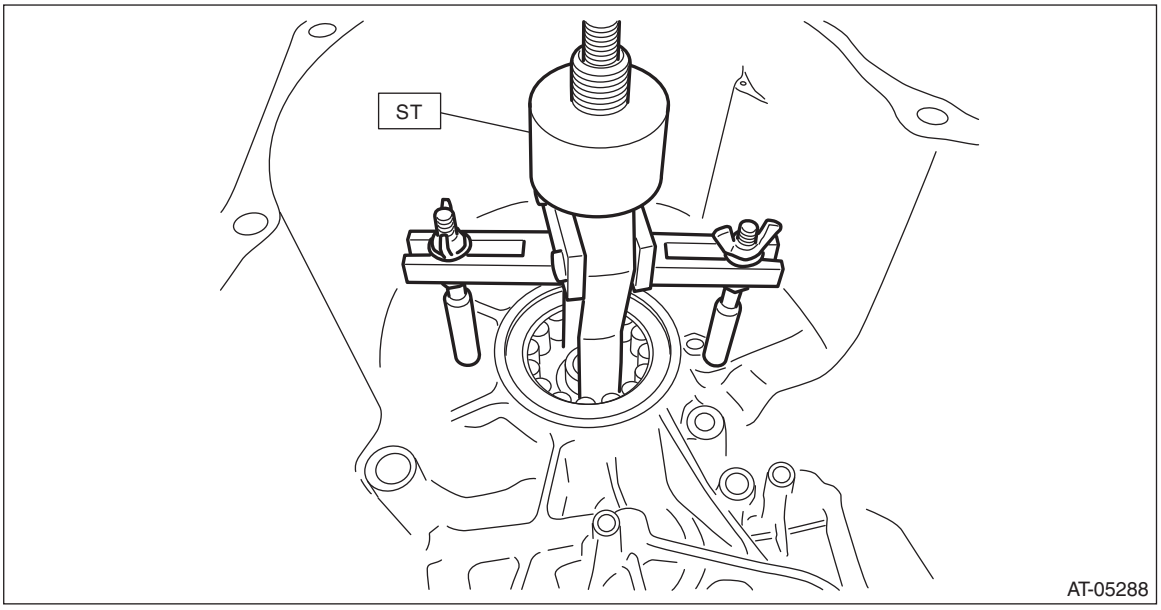


3) Remove the lubrication pipe.

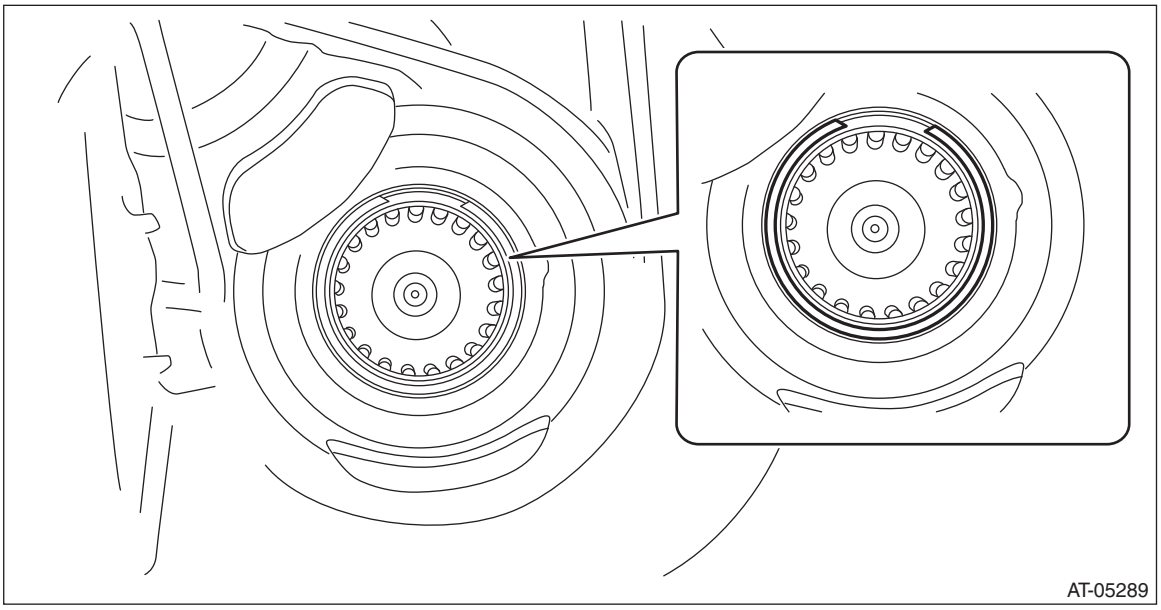


4) Remove the oil seal using a screwdriver wrapped with cloth etc.

5) Remove the ball bearing from reduction driven gear using ST.
ST 398527700 PULLER ASSY

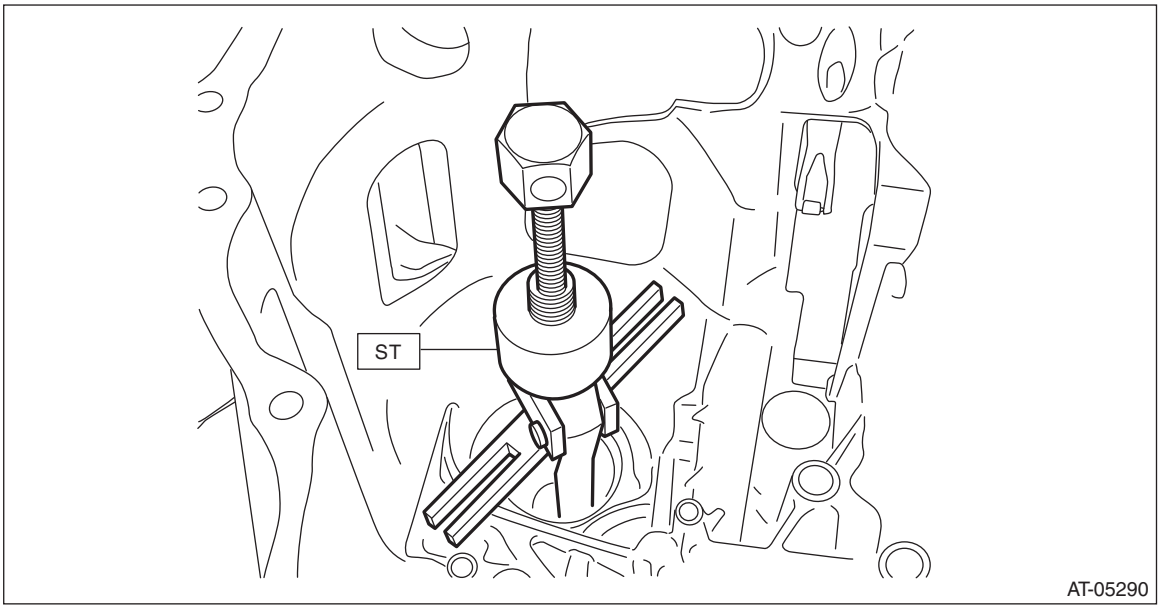


6) Remove the snap ring on primary pulley side.

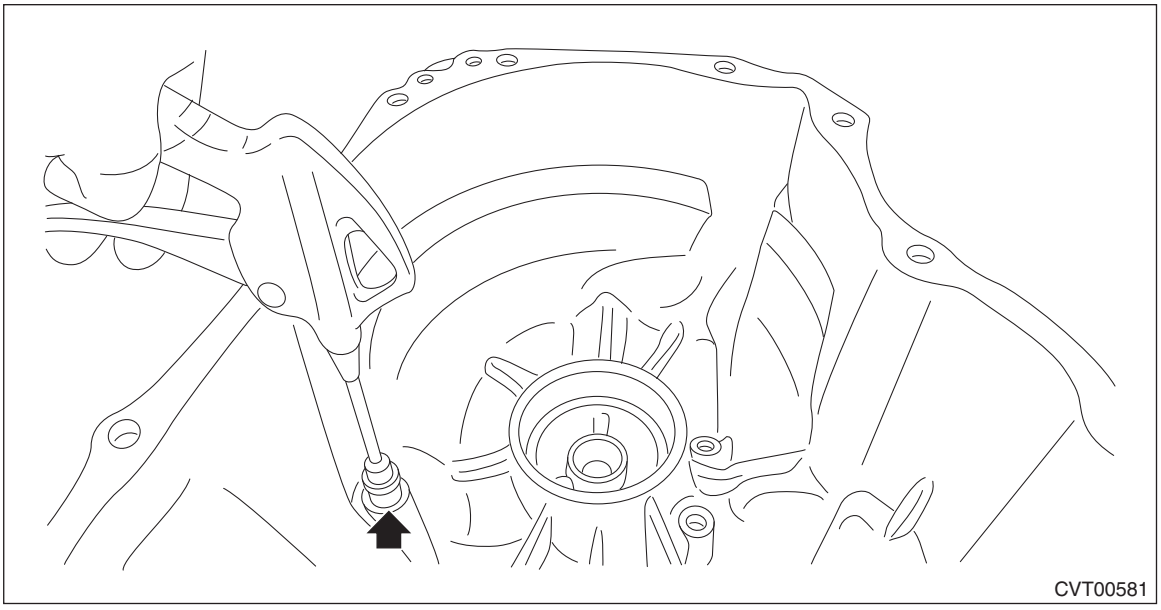


7) Using the ST, remove the roller bearing on primary pulley side.

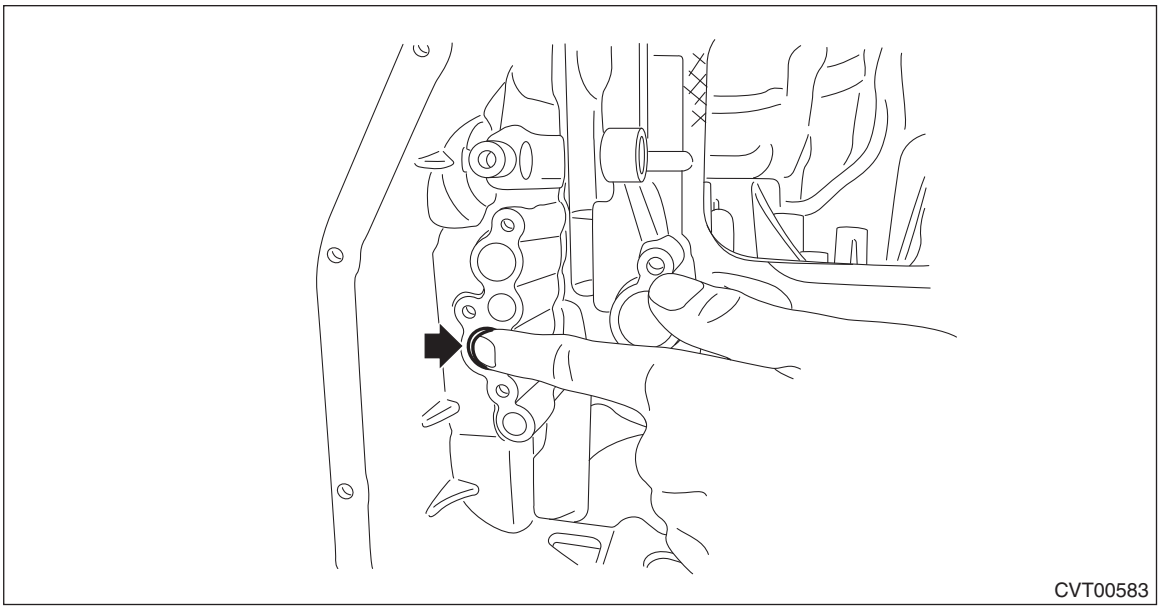
NOTE:
Loosen the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY



8) Remove the snap ring on secondary pulley side.



9) Using the ST, remove the roller bearing on secondary pulley side.

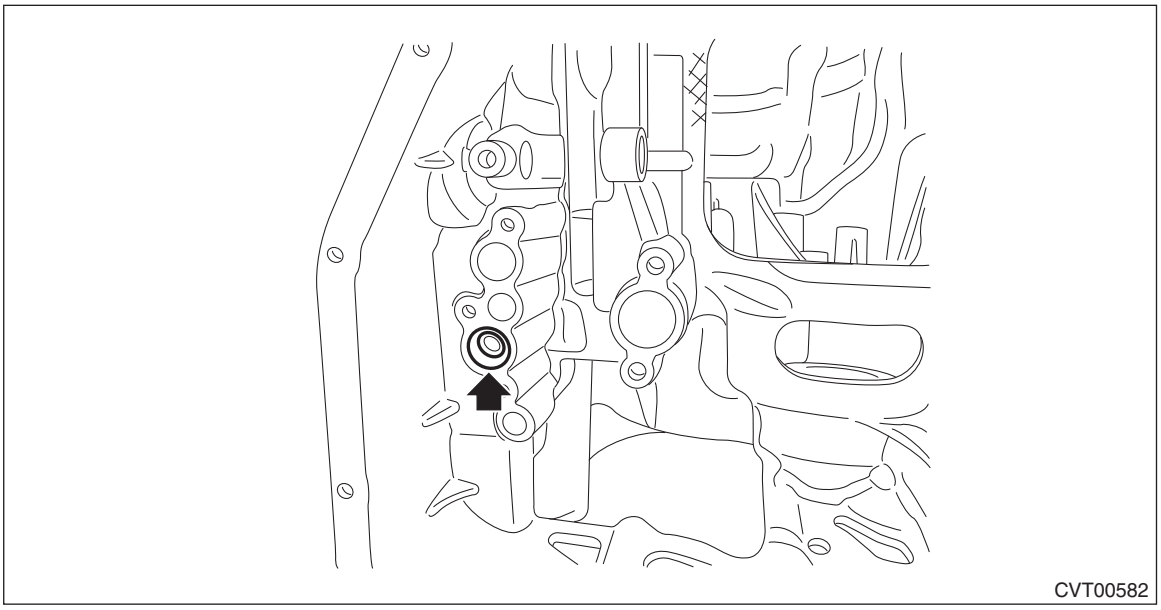


NOTE:
Loosen the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY

10) Remove the CVTF filter by blowing compressed air through the transmission case hole.

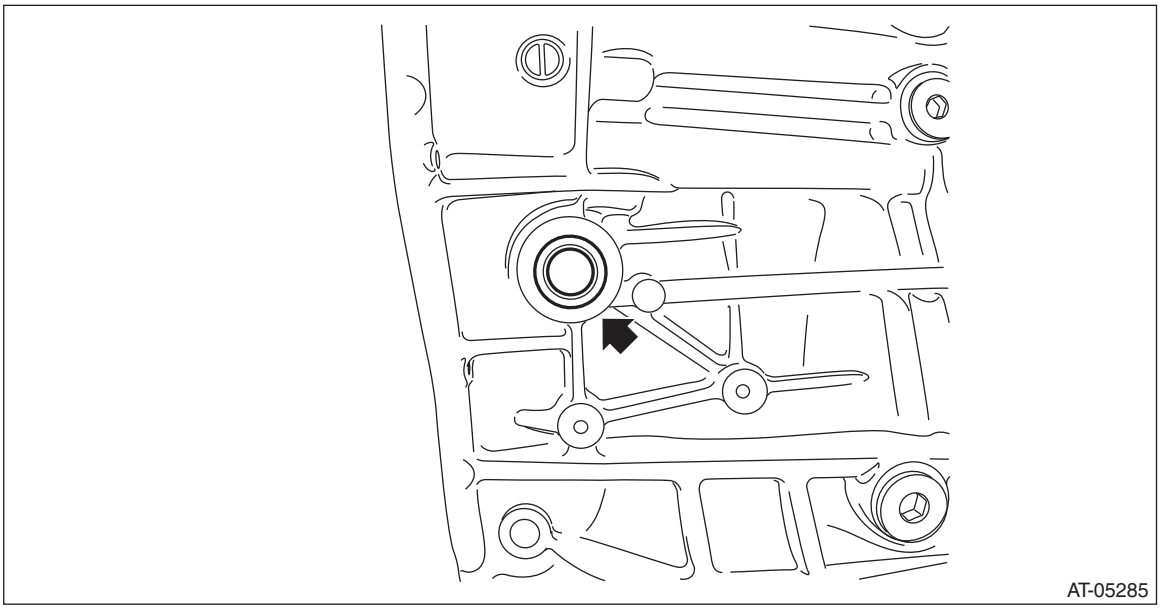
NOTE:
Hold the CVTF filter with a finger to prevent compressed air from leaking.

CVT00581



CVT00583

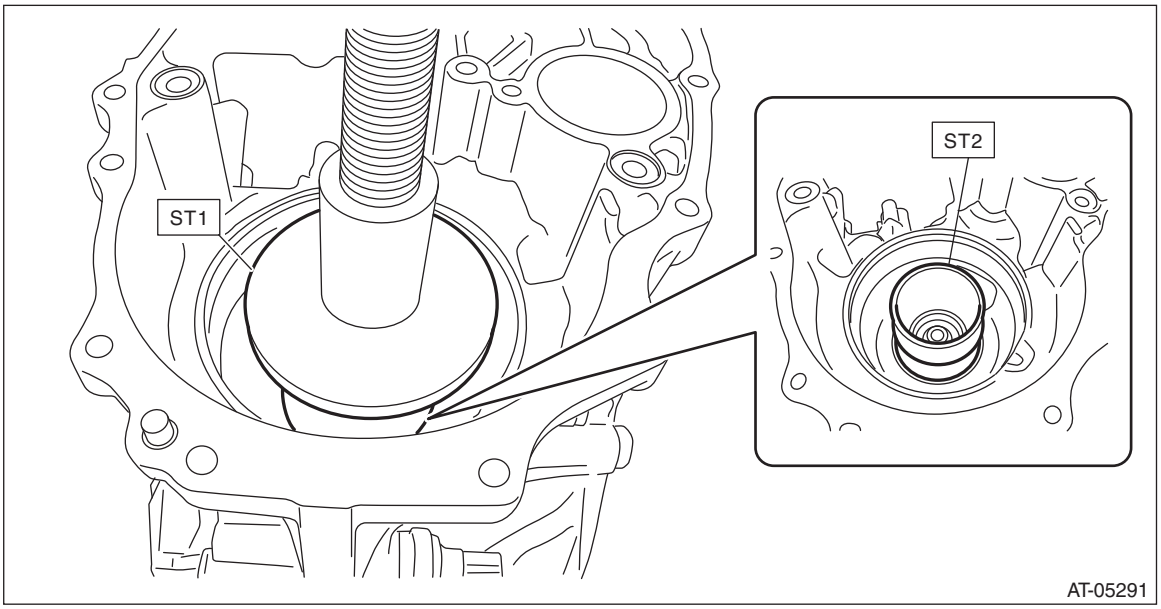
D: ASSEMBLY



1) Install the CVTF filter.

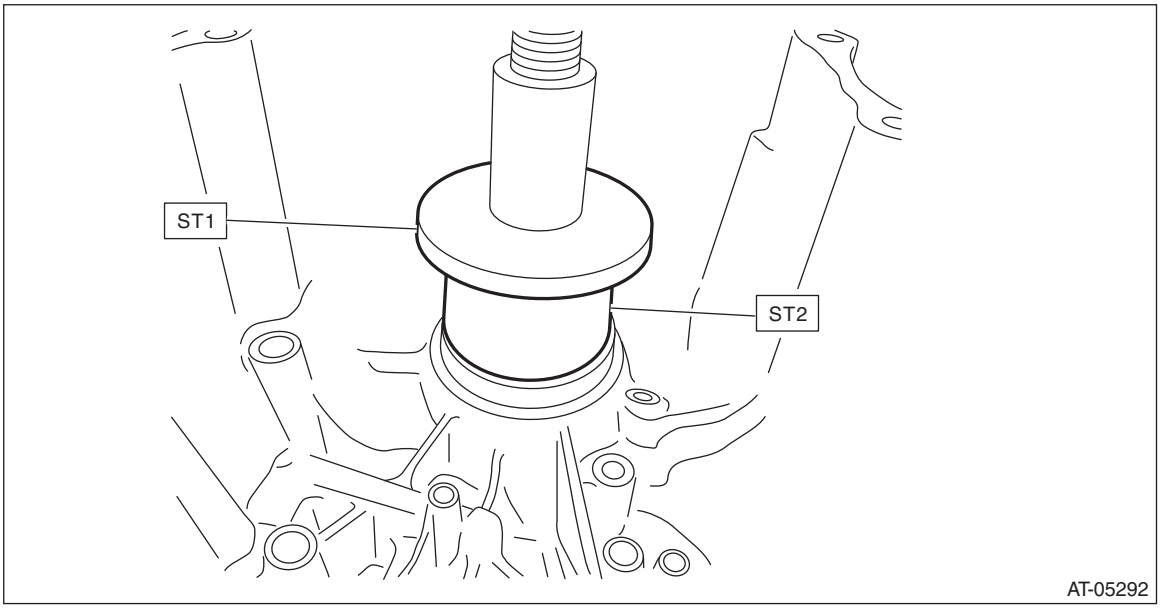
NOTE:
- Use a new CVTF filter.
- Apply CVTF to the CVTF filter.

- Make sure that the CVTF filter does not protrude from the transmission case.



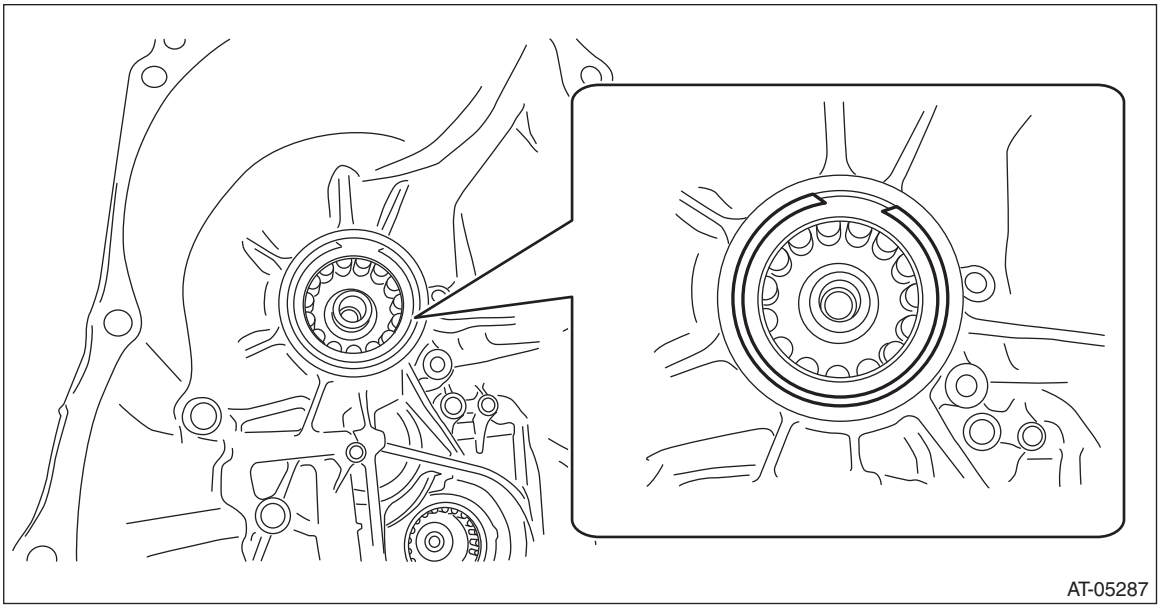
2) Using the ST, install the oil seal.
ST 18657AA000 INSTALLER

3) Using ST1 and ST2, install the ball bearing on the reduction gear side.



NOTE:
Use a new ball bearing.
ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING

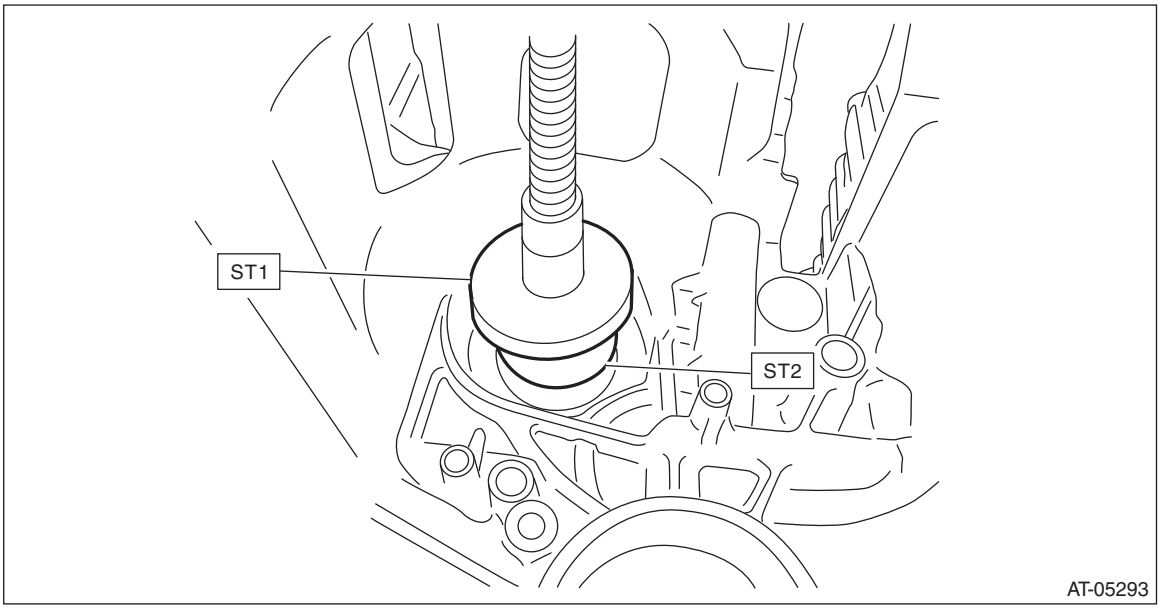
4) Using ST1 and ST2, install the roller bearing on primary pulley side.



NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

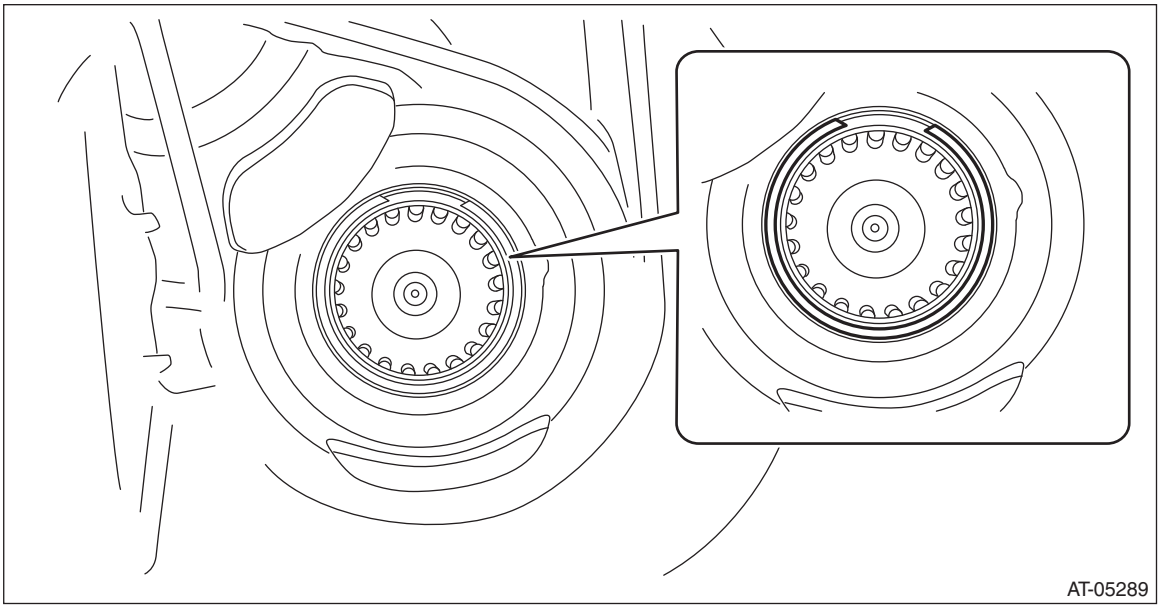
ST1 398177700 INSTALLER
ST2 20299AG010 BASE

5) Install the snap ring on primary pulley side.



NOTE:
Use new snap rings.

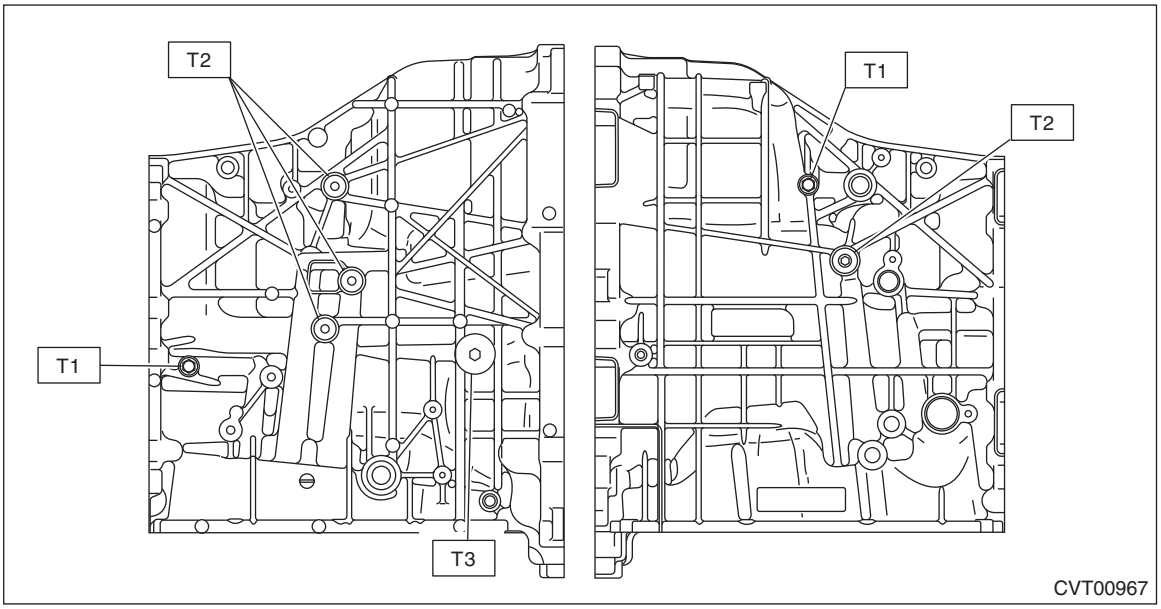
6) Using ST1 and ST2, install the roller bearing on secondary pulley side.



NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING

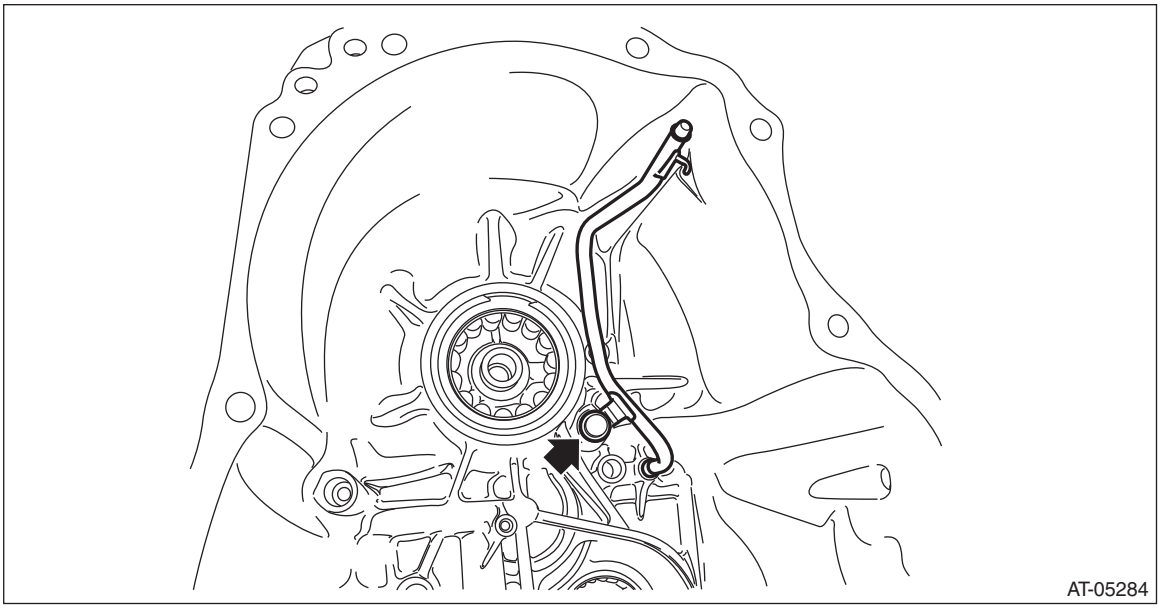
7) Install the snap ring on secondary pulley side.



NOTE:
Use new snap rings.

8) Install all plugs.

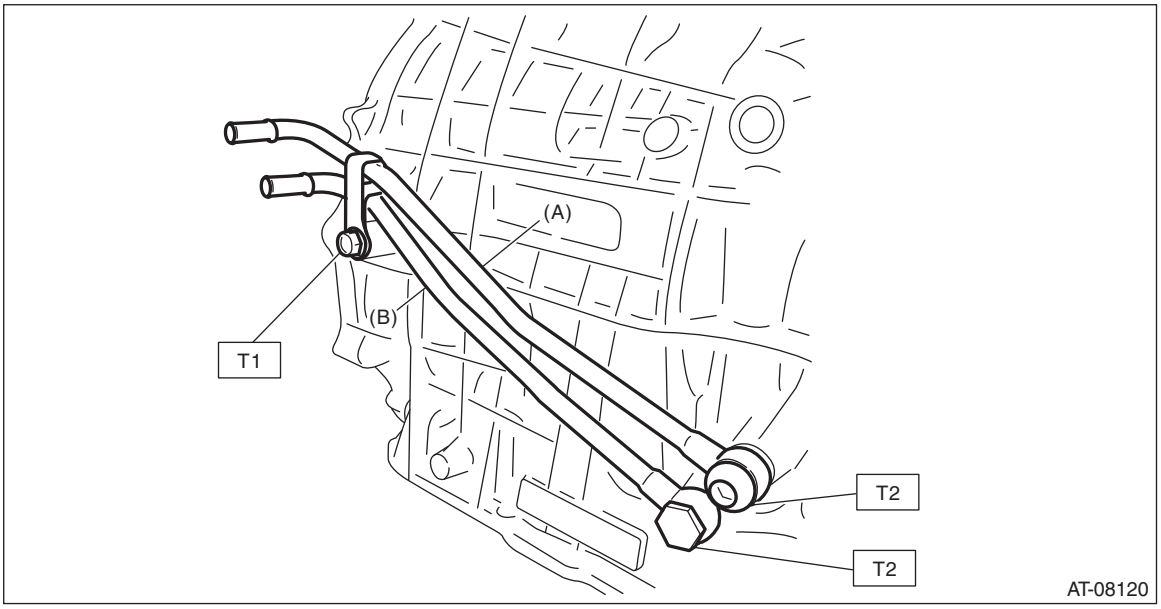
NOTE:
Use new gaskets and O-rings.



Tightening torque:
T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T3: 35 N·m (3.5 kgf-m, 25.8 ft-lb)

9) Install the lubrication pipe and O-ring.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

10) Install the CVTF inlet pipe and CVTF outlet pipe.

NOTE:
Use a new gasket.

Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 40 N·m (4.1 kgf-m, 29.5 ft-lb)

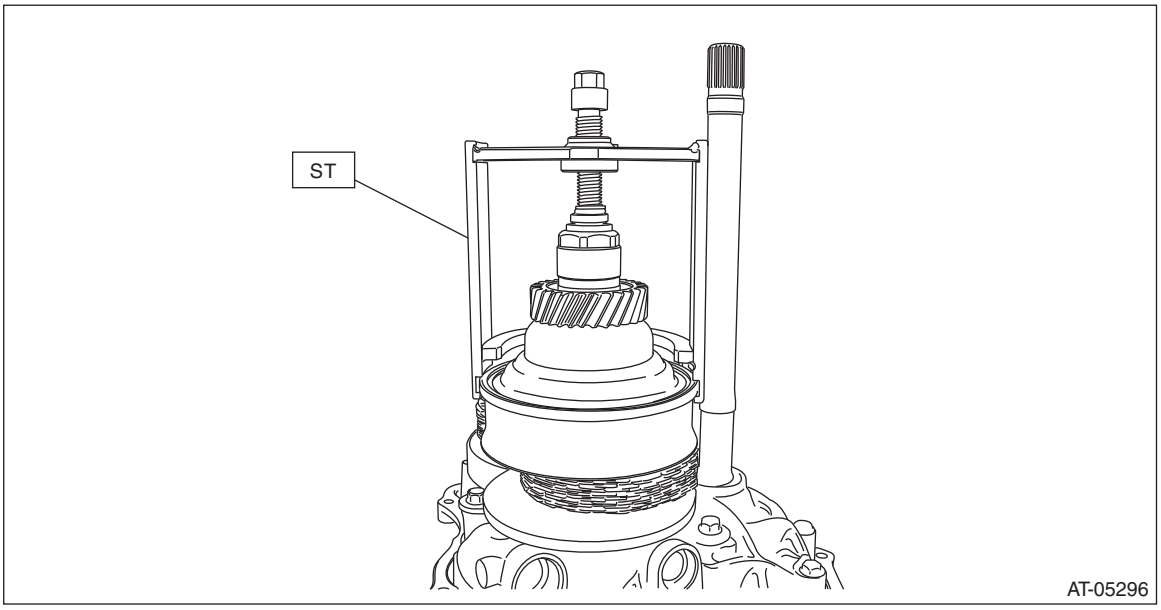
(A) CVTF outlet pipe
(B) CVTF inlet pipe

E: INSPECTION

- Check the transmission case for damage.
- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check for leakage of CVTF from the connection between intermediate case and transmission case.
- Check the lubrication pipe for bend or damage.

- Check the bearing for smooth operation.
- Check the bearing for seizure or wear.

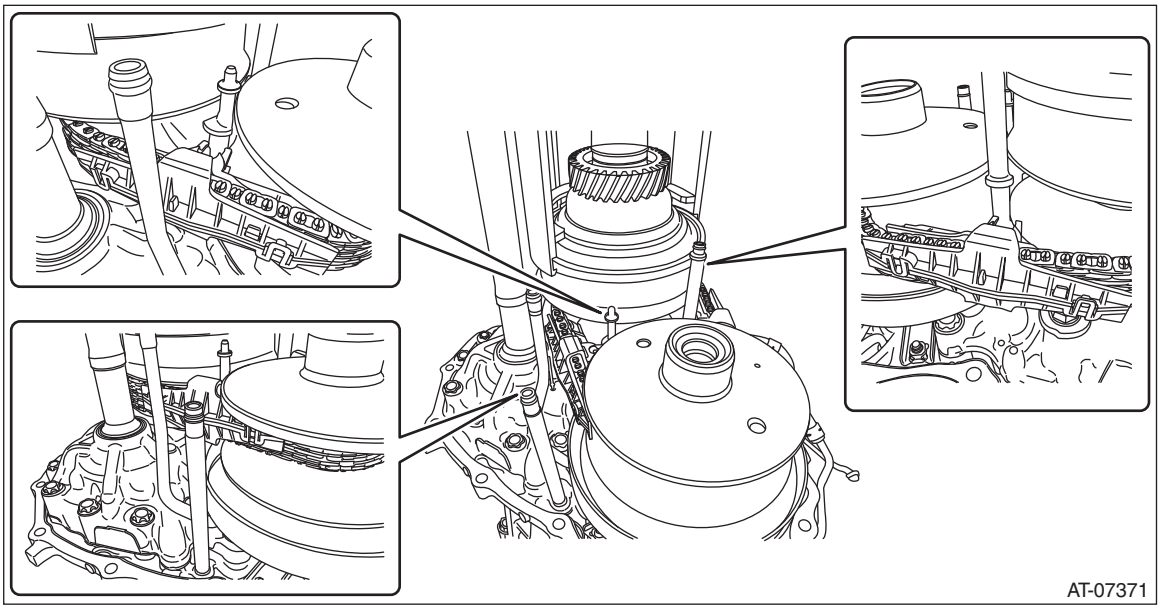
F: ADJUSTMENT



NOTE:
When replacing the transmission case with a new part, perform the following check and adjustment for the selection.

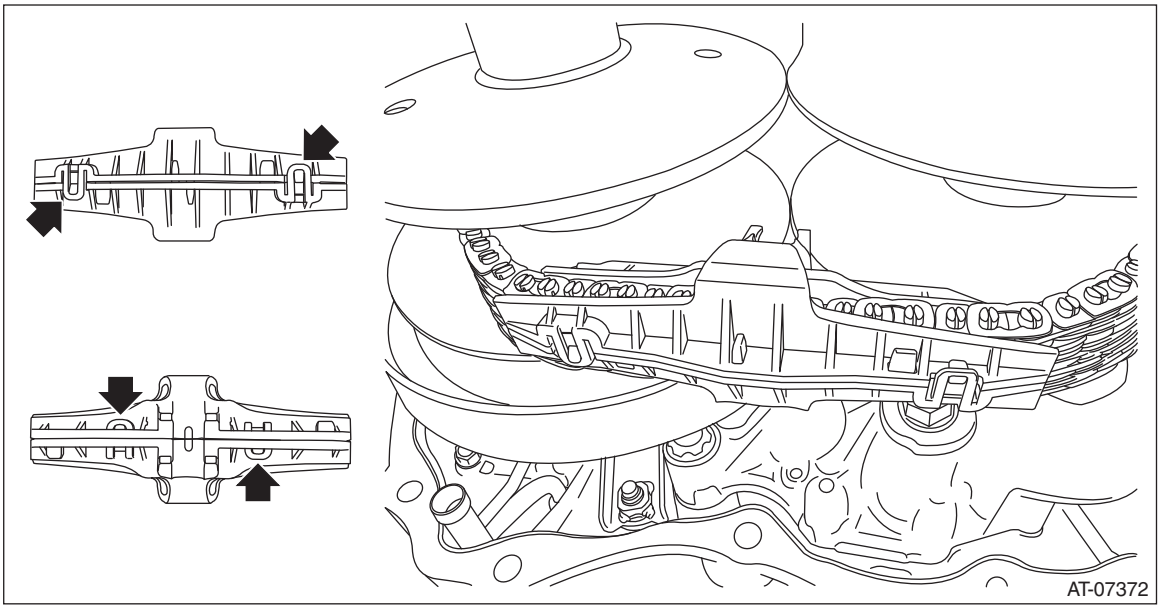
- Select the thrust bearing for the forward clutch assembly. <Ref. to CVT(TR690)-233, ADJUSTMENT, Forward Clutch Assembly.>
- Select the snap ring for the reduction gear. <Ref. to CVT(TR690)-240, ADJUSTMENT, Reduction Driven Gear.>

42.Primary Pulley and Secondary Pulley

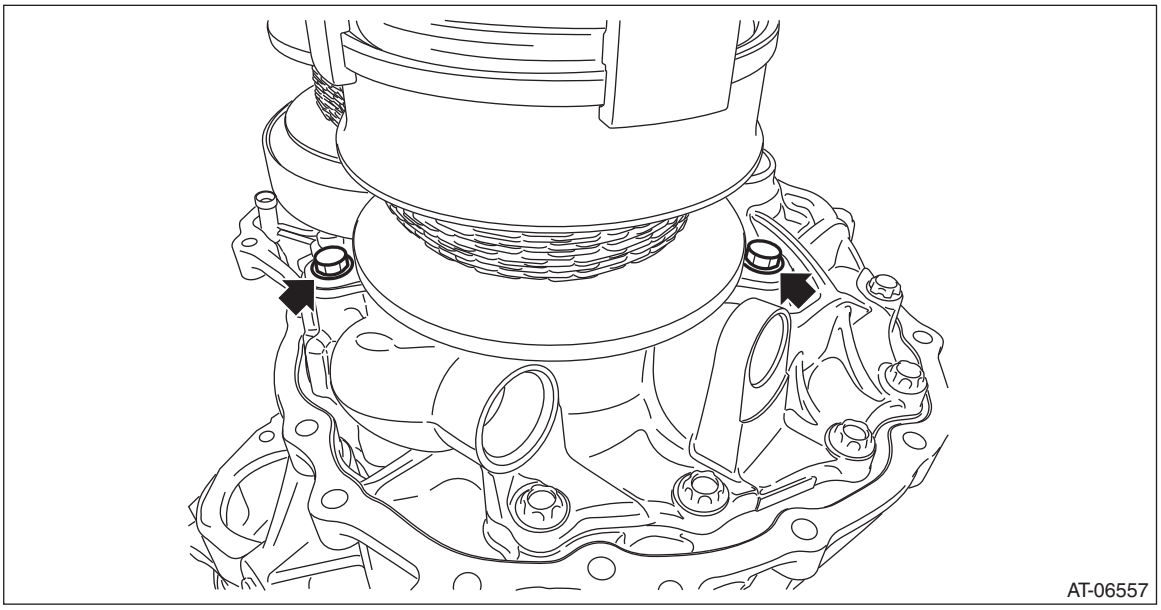


A: REMOVAL

NOTE:
Always replace primary pulley and secondary pulley as an assembly because they are non-disassembled parts.
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-246, REMOVAL, Transmission Case.>
12) Set the ST to the secondary pulley, and expand the V groove of pulley until the variator chain gets completely loose.
ST 18769AA000 EXPANDER PULLEY

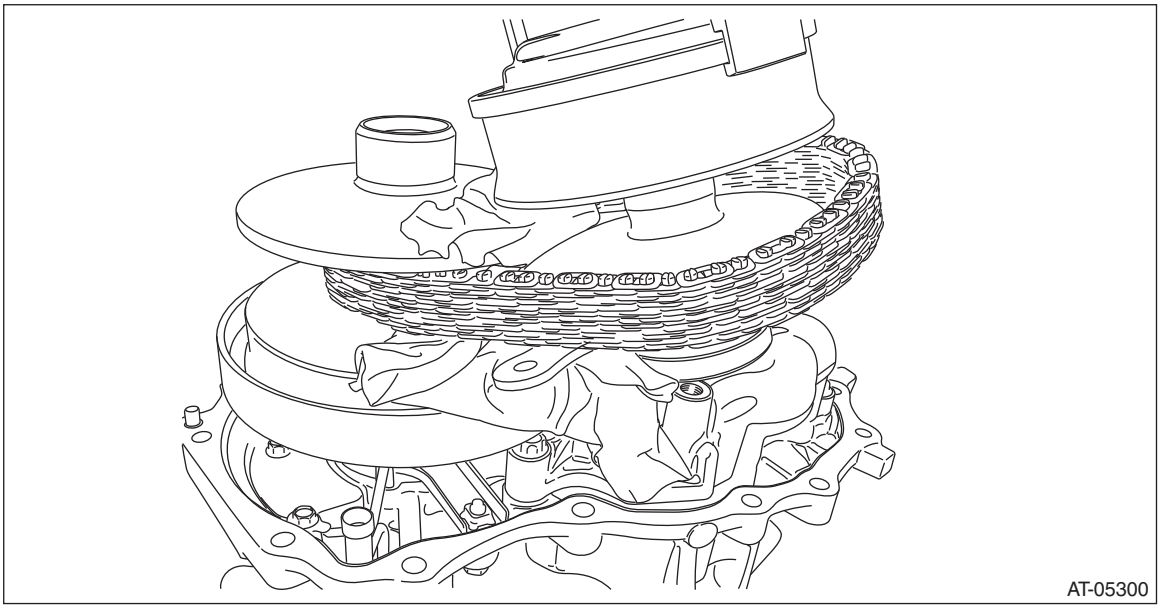


13) Remove the chain guide from lubrication pipe and support rod.

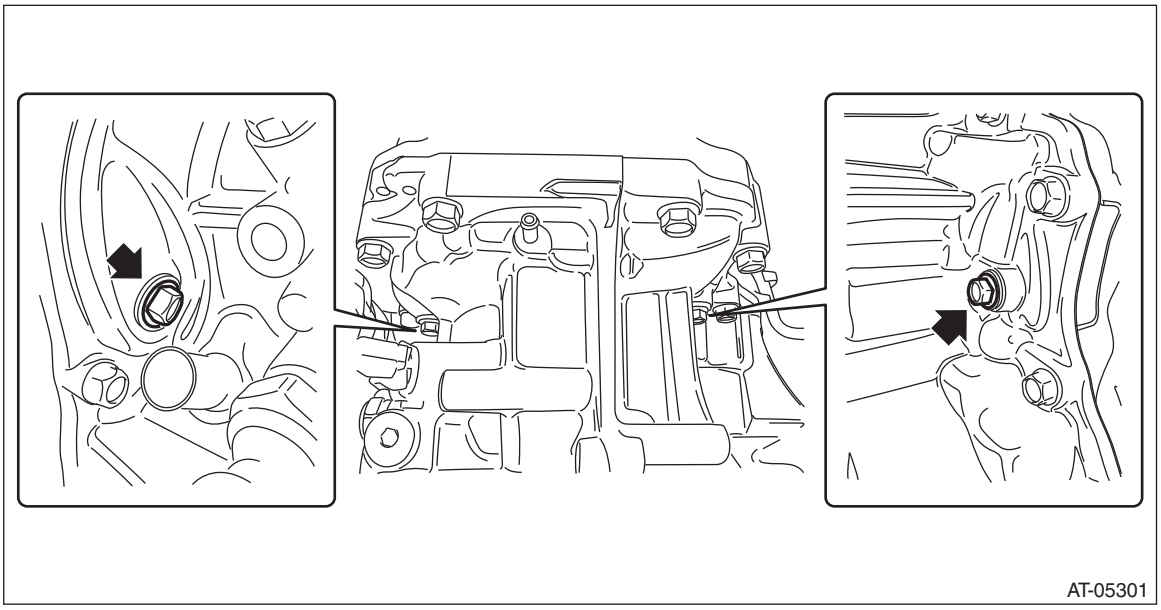


14) Remove the lubrication pipe and support rod.

15) Detach the four claws to remove the two chain guides.

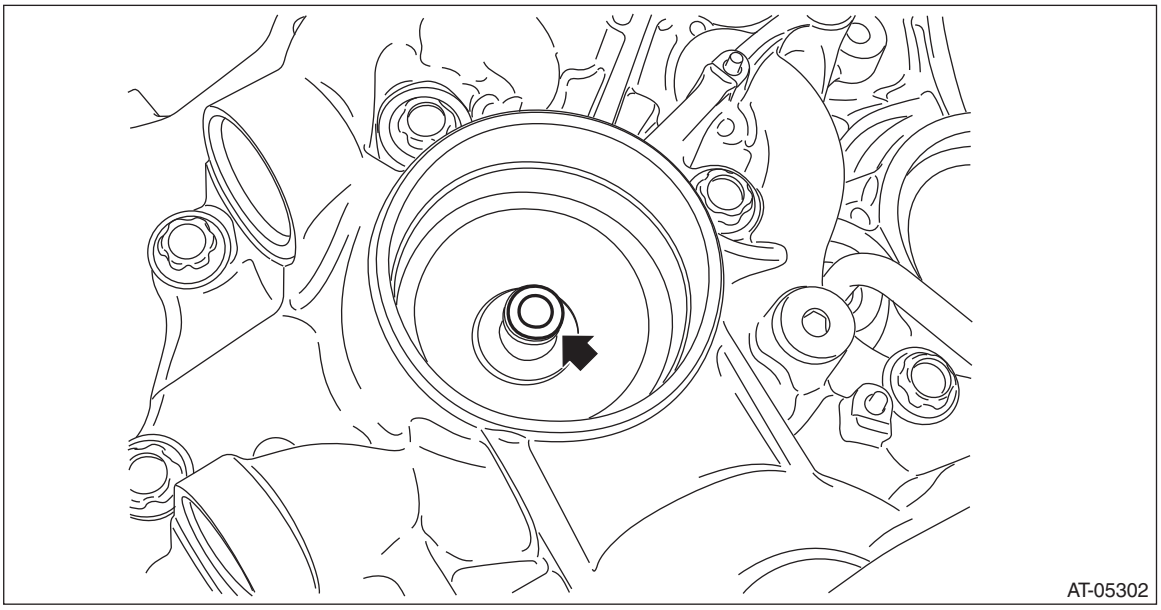


16) Remove the secondary pulley mounting bolt.

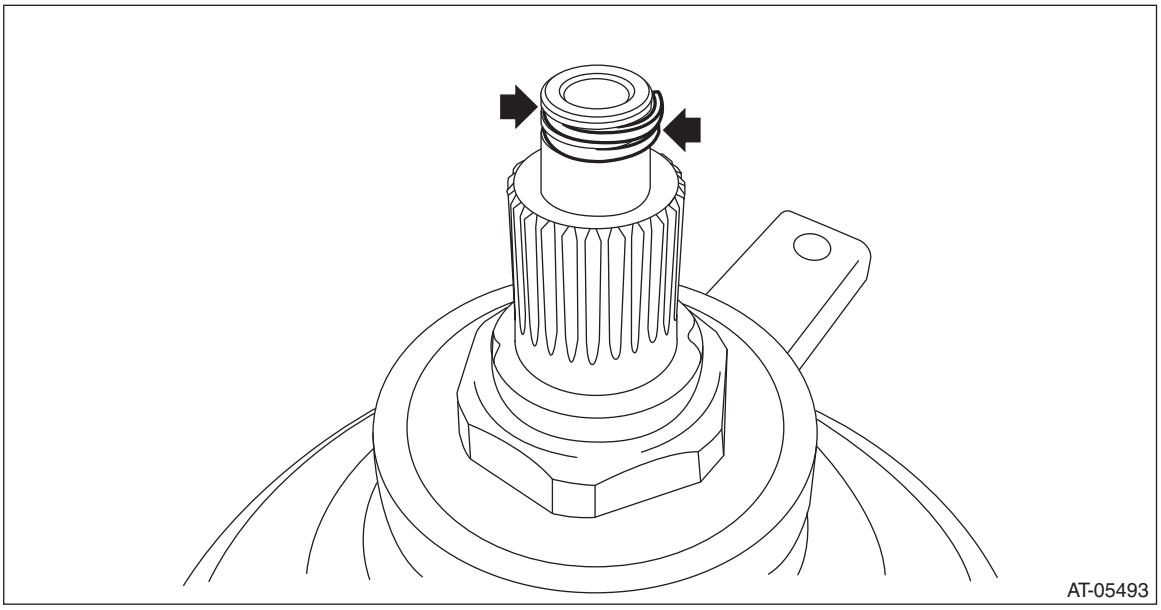


17) Remove the secondary pulley from drive pinion retainer and intersect the V groove of secondary pulley and V groove of primary pulley. Remove the variator chain from secondary pulley and remove the secondary pulley.

CAUTION:
Cover the V grooves of secondary pulley and primary pulley with cloth to protect the both pulleys and variator chain from scratching.

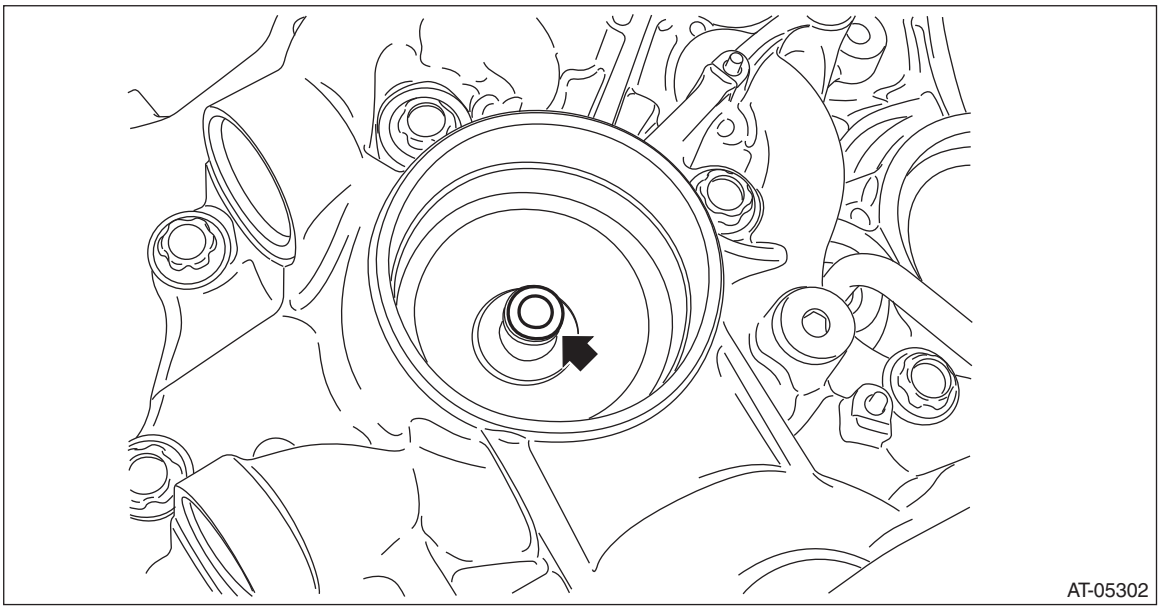


18) Remove the variator chain from primary pulley.



19) Remove the primary pulley mounting bolt.

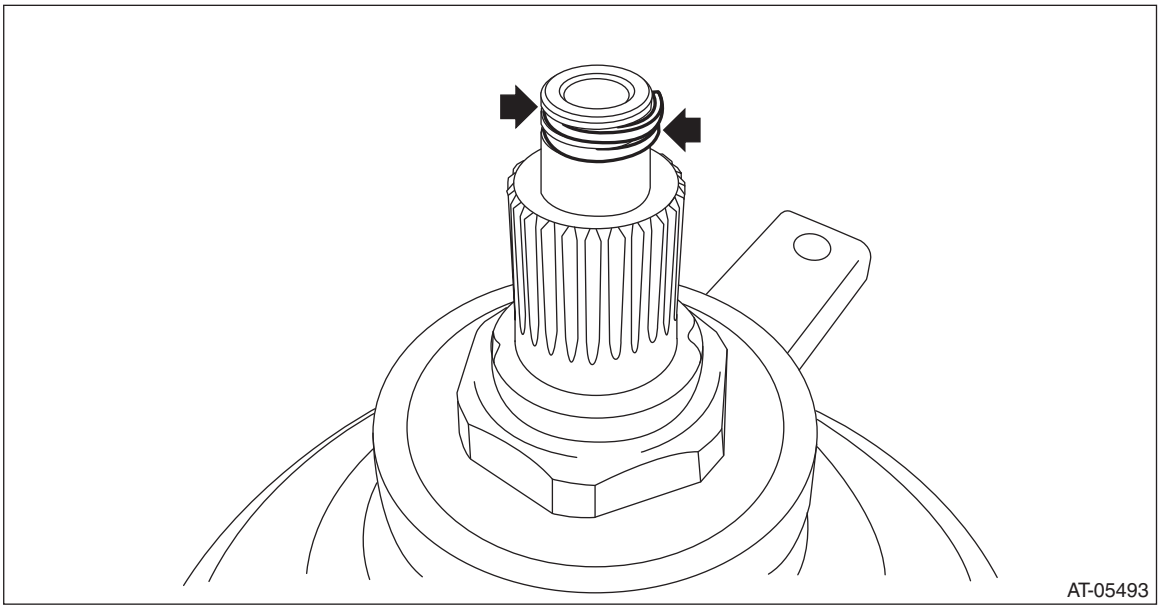
20) Remove the primary pulley.
21) Remove the two seal rings from drive pinion retainer.



22) Remove the two seal rings from primary pulley.

B: INSTALLATION

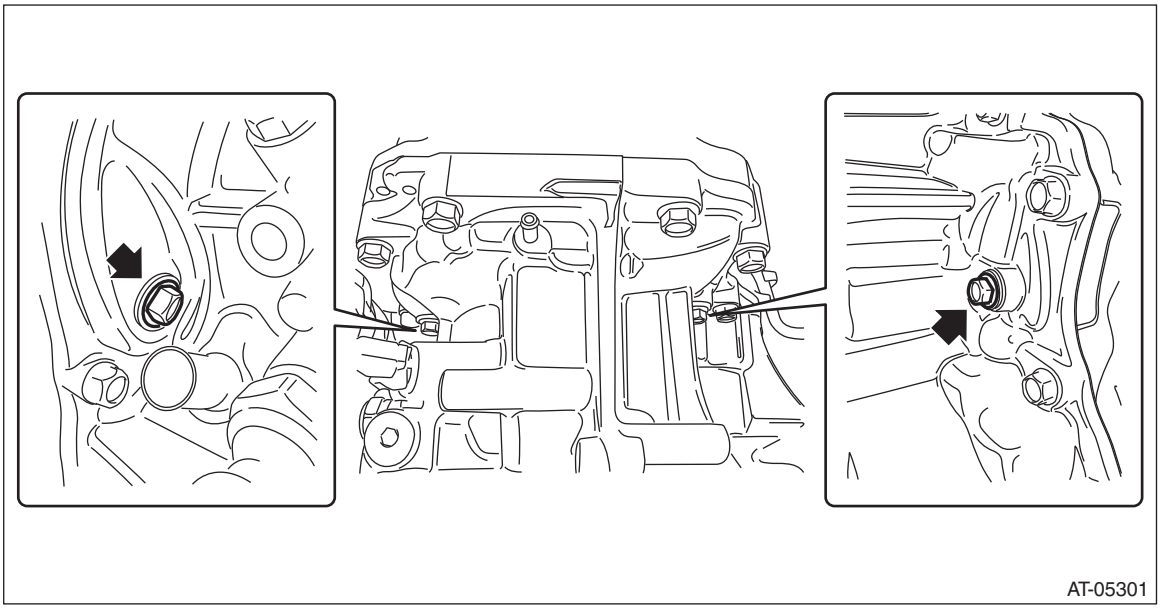
1) Select shims for pulley alignment. <Ref. to CVT(TR690)-273, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
2) Install the two seal rings to drive pinion retainer.



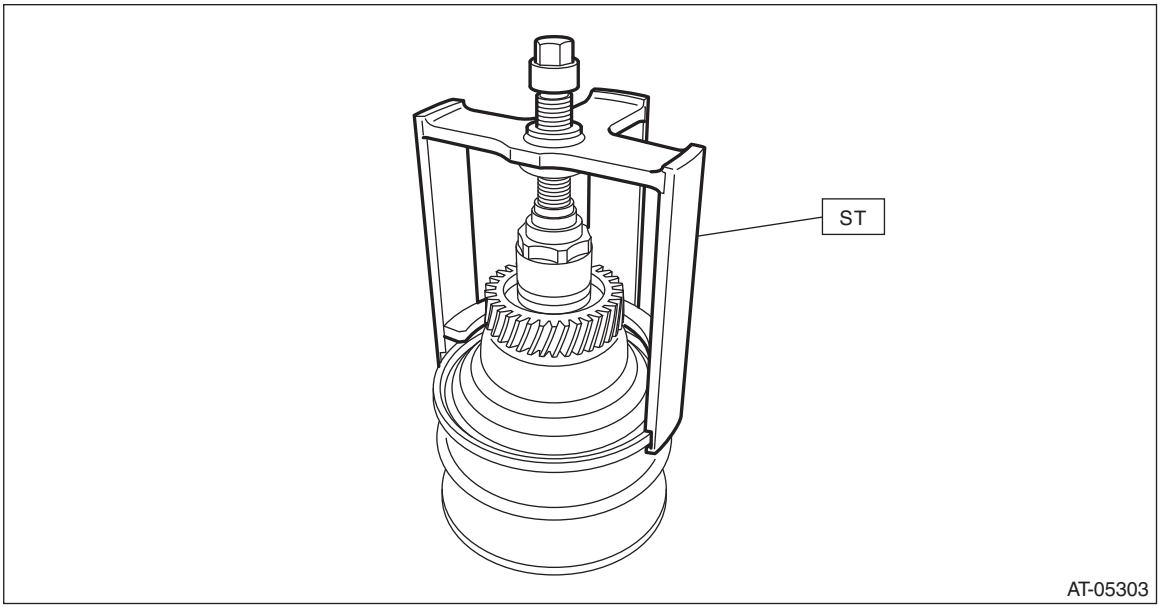
NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.
- When installing the seal rings, do not expand the seal rings too much.

3) Install the selected shims to the primary pulley bearing catch surface.
4) Install the two seal rings to primary pulley.

NOTE:
- Use new seal rings.



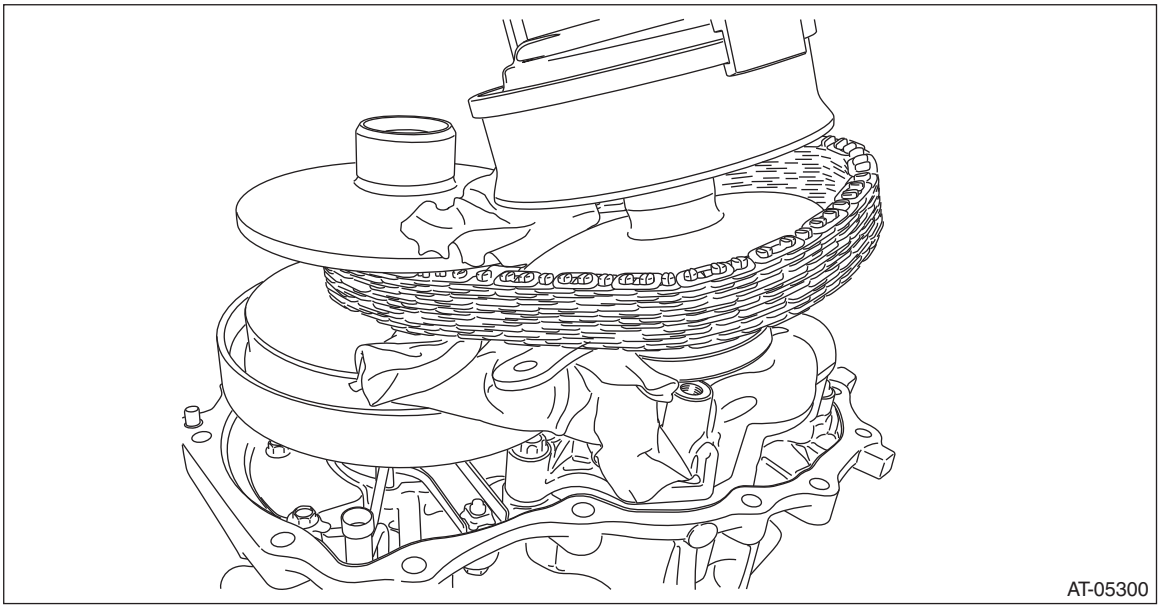
- Apply CVTF to the seal rings.



5) Install the primary pulley and adjust the position of bolt holes of primary bearing retainer and converter case to tighten the primary pulley bolt.

NOTE:
Use a new seal washer.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)

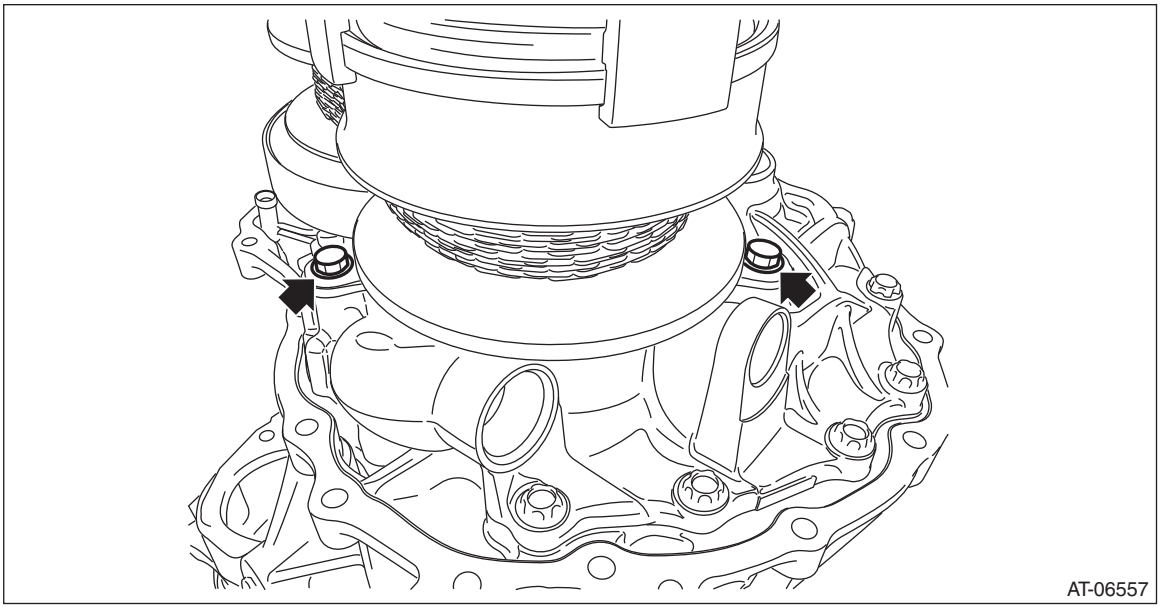


6) Set the ST to secondary pulley and expand the V groove of pulley.
ST 18769AA000 EXPANDER PULLEY

7) Place the variator chain on the primary pulley groove and attach the secondary pulley and variator chain together to the drive pinion retainer.

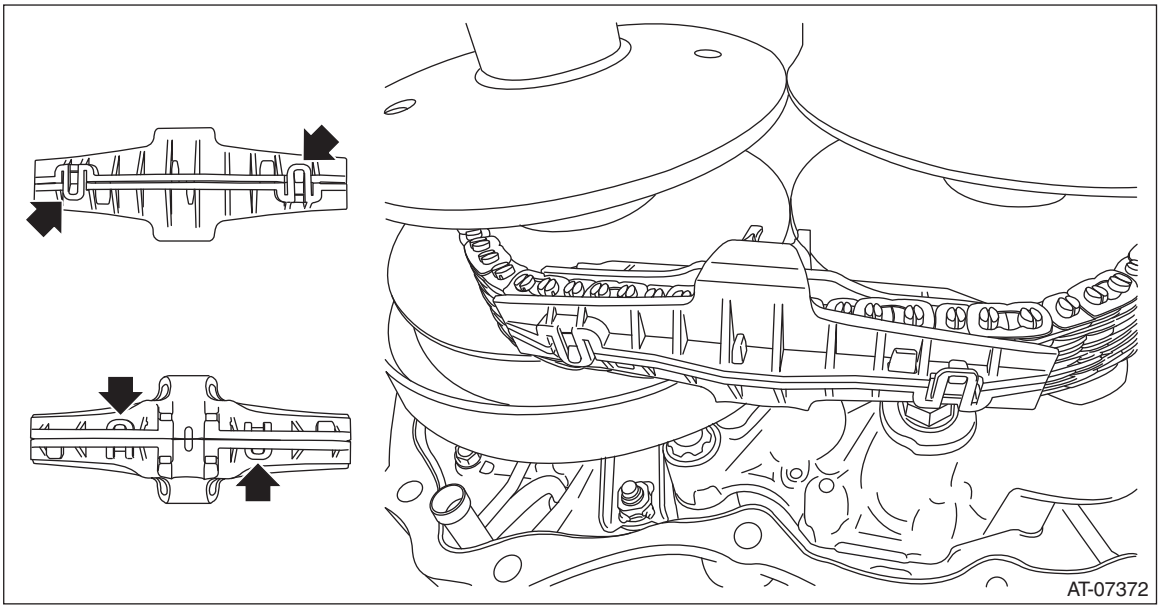
CAUTION:
Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.

(1) Place the variator chain on primary pulley.
(2) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.



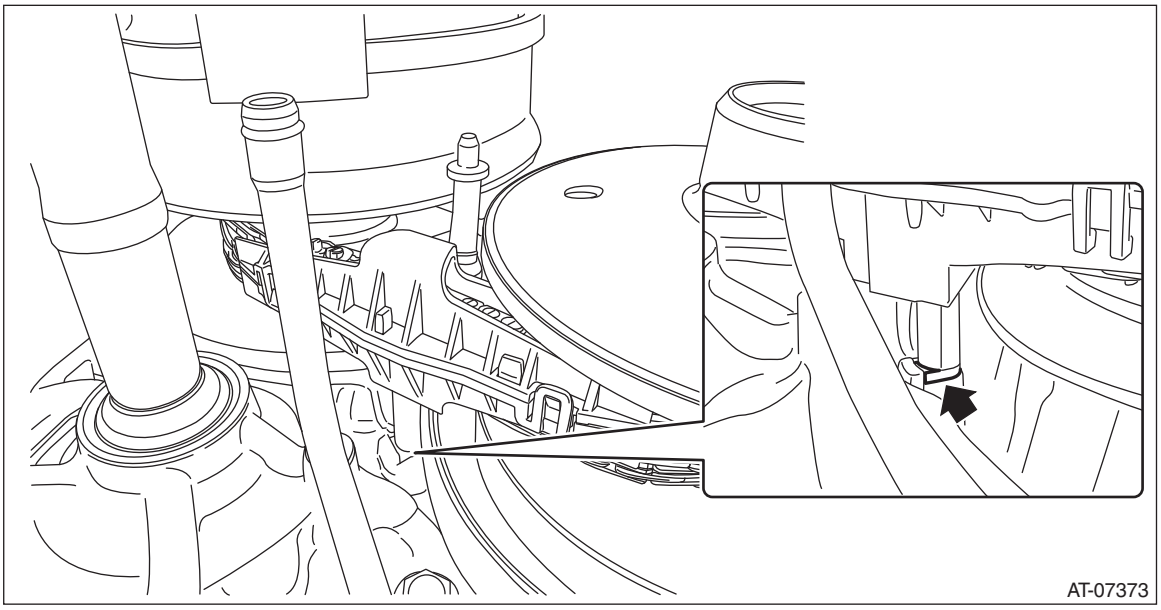
(3) While aligning the bolt hole of secondary bearing retainer and the bolt hole of driving pinion retainer, install the secondary pulley to drive pinion retainer.

8) Install the secondary pulley bolt.

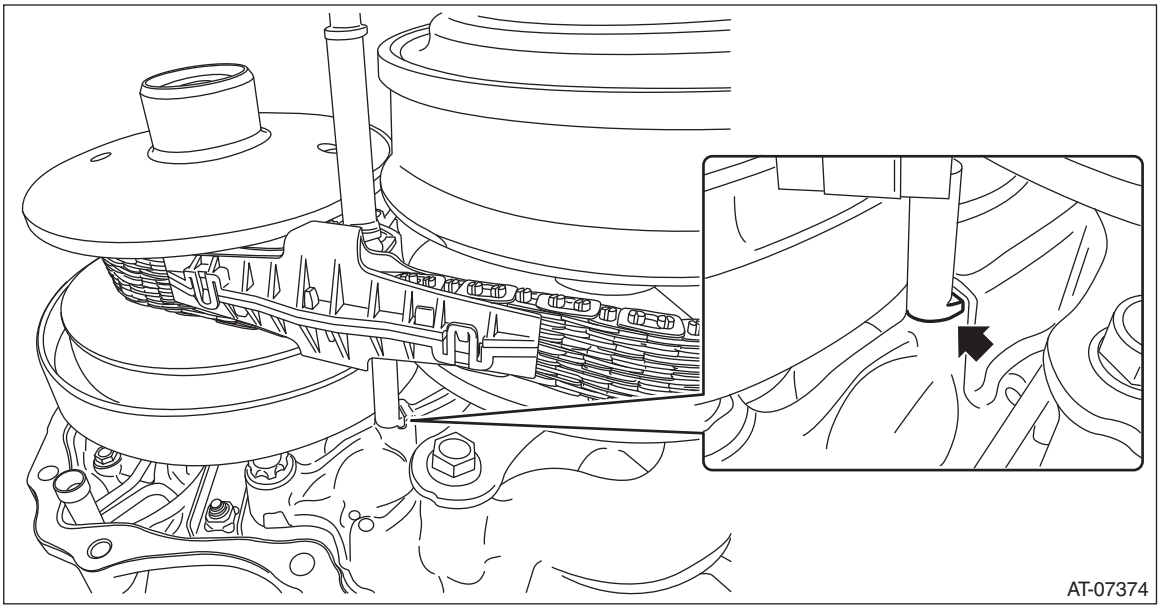


NOTE:
Apply CVTF to the bolt.

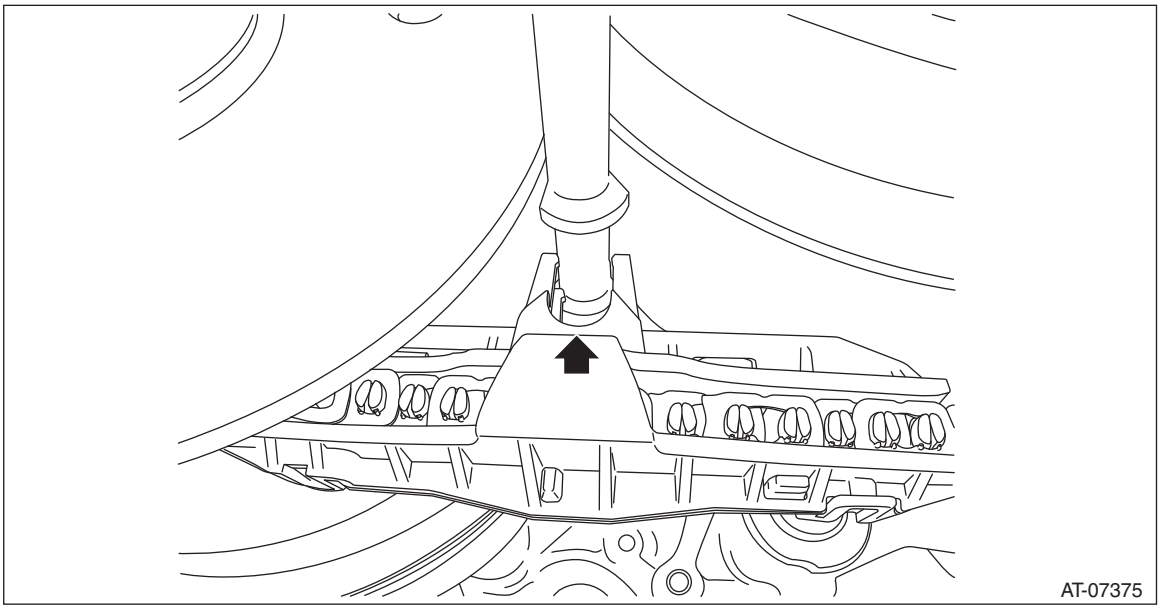
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



9) Install the chain guide.

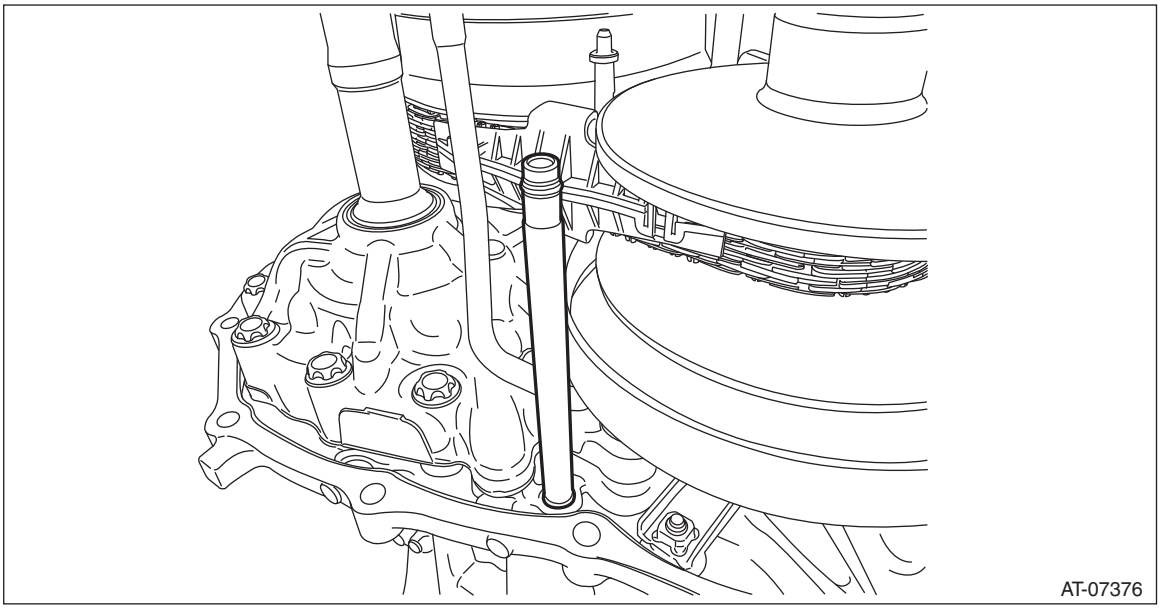


NOTE:
Install it with two claws facing outward and with two claws facing inward.



10) Engage the cutout portions of support rod and drive pinion retainer and install the support rod.

11) Engage the cutout portions of lubrication pipe and drive pinion retainer and install the lubrication pipe.



12) Install the chain guide so that the lubrication pipe and support rod run through between the protrusions of each chain guide. Then remove the ST (EXPANDER PULLEY).

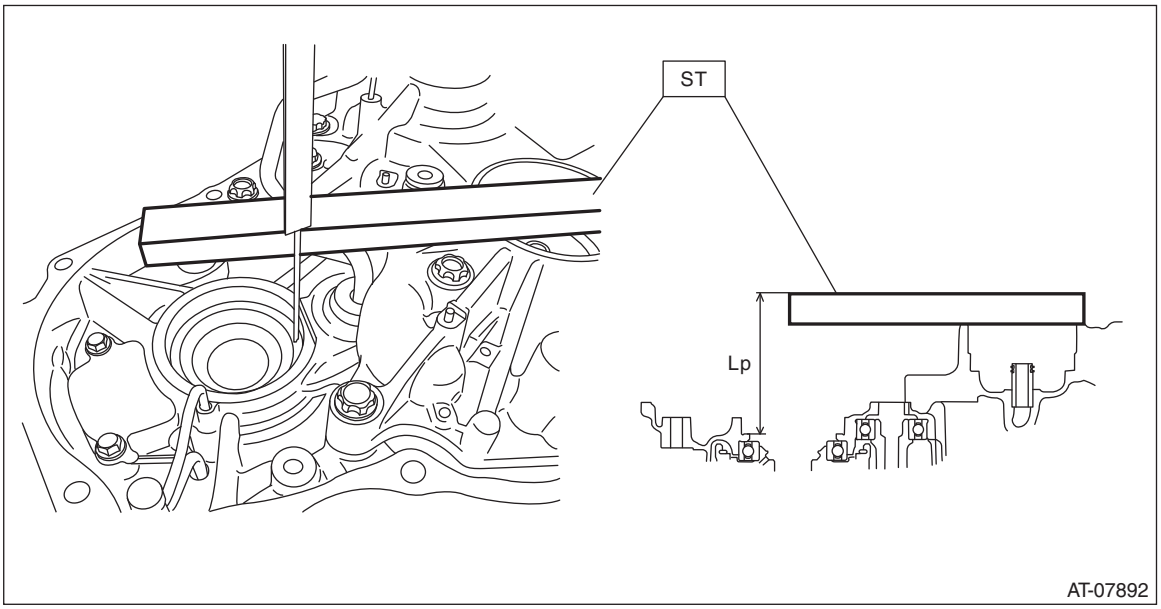
13) Install the O-ring to the lubrication pipe.

NOTE:
Use new O-rings.

14) Install the lubrication pipe.

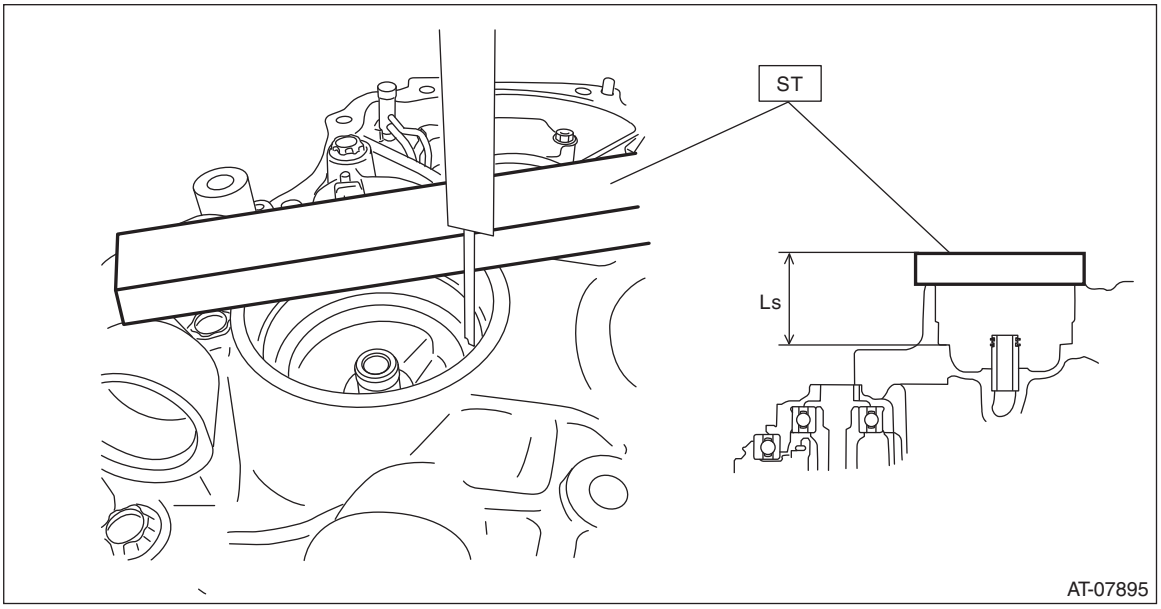
15) Install the transmission case. <Ref. to CVT(TR690)-248, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
19) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
20) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
21) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
22) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
23) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>

24) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
25) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>



C: INSPECTION

- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.



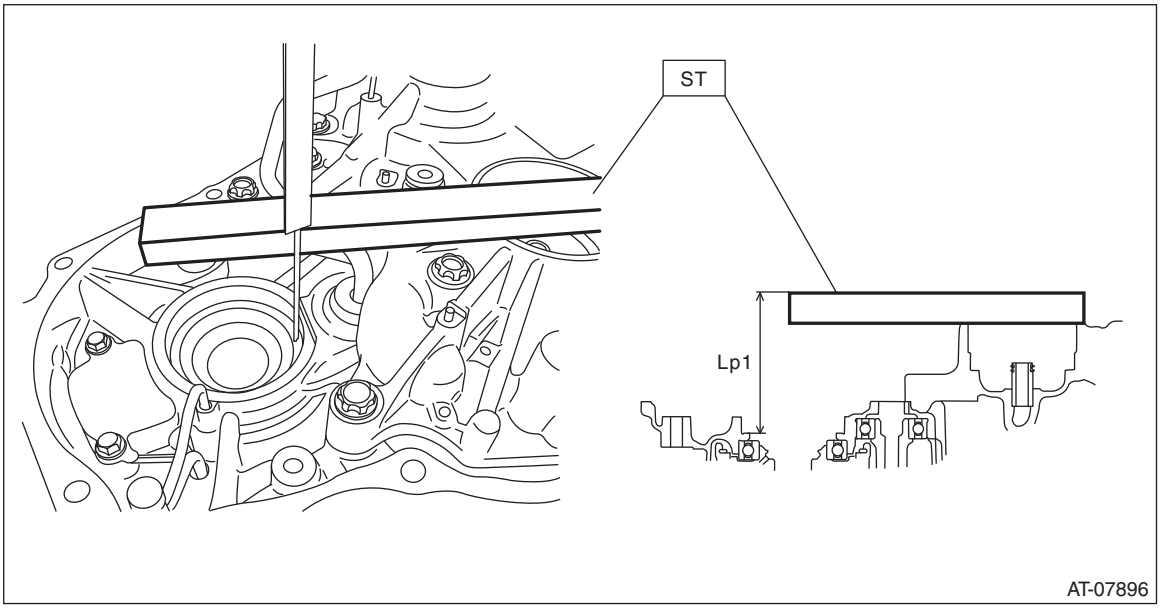
D: ADJUSTMENT

1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

1) Measure depth “Lp” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

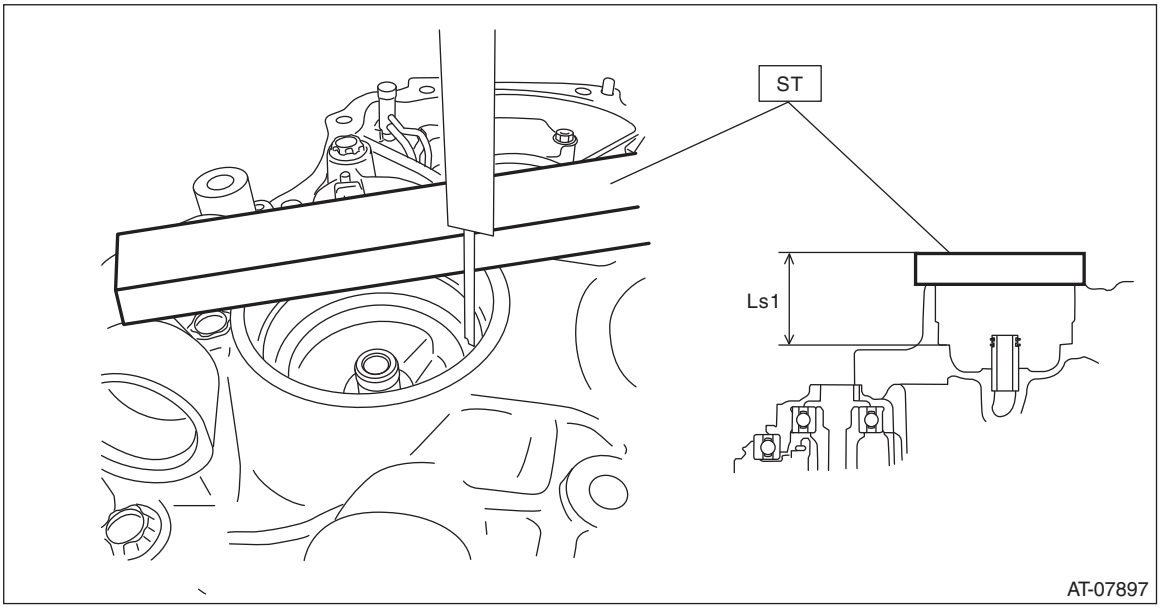
2) Measure height “Ls” from the drive pinion retainer upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

3) Calculate the following formula.
Calculation formula:
T (mm) = B + (Lp – Ls) + 31.601 – A
[T (in) = B + (Lp – Ls) + 1.224 – A]
T: Pulley alignment
A: Specified primary pulley dimension
B: Specified secondary pulley dimension
Lp: Depth from the ST upper face to the primary pulley bearing catch surface
Ls: Depth from the ST upper face to the secondary pulley bearing catch surface
31.601 mm (1.224 in): Constant



Pulley alignment T mm (in)	Shim thickness mm (in)
0.050 — 0.150 (0.002 — 0.006)	0.1 (0.004)
0.151 — 0.250 (0.006 — 0.01)	0.2 (0.008)
0.251 — 0.350 (0.01 — 0.014)	0.3 (0.012)
0.351 — 0.450 (0.014 — 0.018)	0.4 (0.016)
0.451 — 0.550 (0.018 — 0.022)	0.5 (0.020)
0.551 — 0.650 (0.022 — 0.026)	0.6 (0.024)
0.651 — 0.750 (0.026 — 0.030)	0.7 (0.028)
0.751 — 0.850 (0.030 — 0.033)	0.8 (0.031)
0.851 — 0.950 (0.033 — 0.037)	0.9 (0.035)

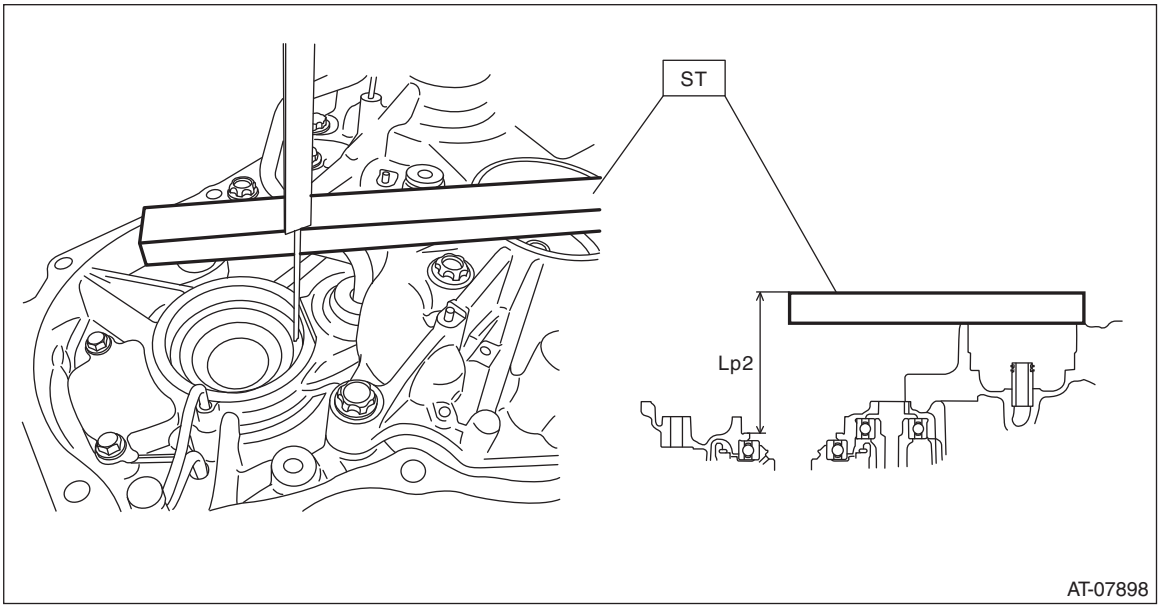
4) Select one to two shims so that the total thickness meets the value obtained from step 3).



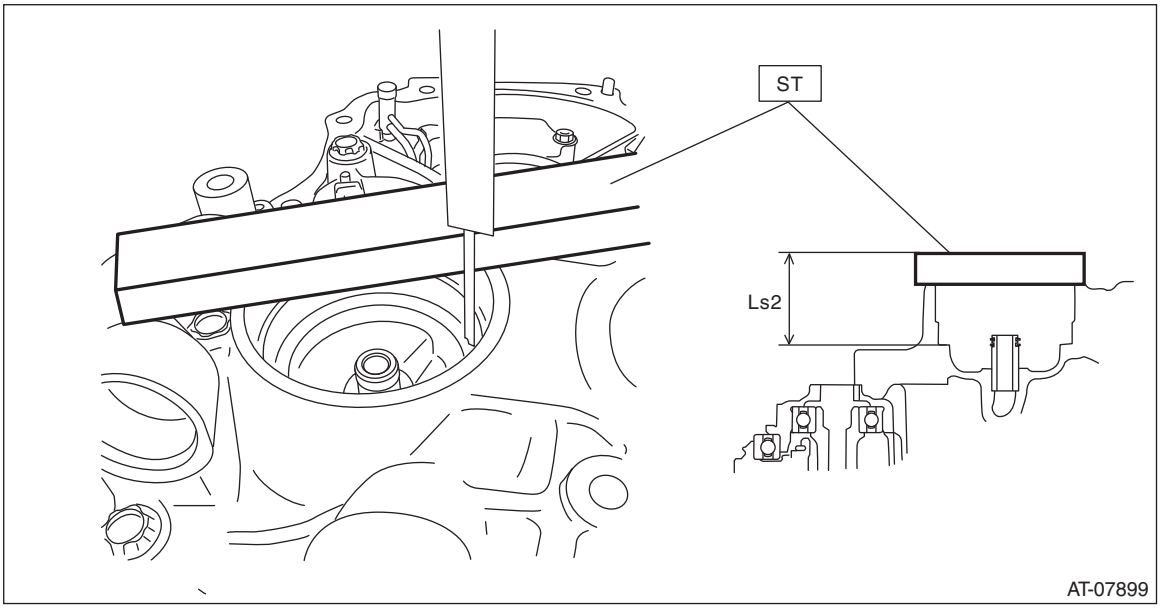
Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR CONVERTER CASE

1) Clean the mating surface of current drive pinion retainer and converter case.
2) Measure and record the shim thickness that is attached on the current converter case.
3) Using the current drive pinion retainer, measure depth “Lp1” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



4) Using the current drive pinion retainer or current converter case, measure depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



5) Calculate the “LD1” using the following formula and record it.
Calculation formula:
LD1 mm (in) = Lp1 – Ls1
LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp1: Depth from the ST upper face to the primary pulley bearing catch surface
Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface

6) Using the new drive pinion retainer or new converter case, measure depth “Lp2” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

7) Using the new drive pinion retainer or new converter case, measure depth “Ls2” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

8) Calculate the “LD2” using the following formula and record it.
Calculation formula:
LD2 mm (in) = Lp2 – Ls2
LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp2: Depth from the ST upper face to the primary pulley bearing catch surface
Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface

9) Calculate the recorded values of “LD1” and “LD2” to obtain the positive number to select the shims.
Calculation formula: T1 mm (in) = LD1 – LD2 or T2 mm (in) = LD2 – LD1
T1, T2: Difference between new drive pinion retainer or new converter case and current drive pinion retainer or current converter case
LD1: Calculated value of current drive pinion retainer or current converter case
LD2: Calculated value of new drive pinion retainer or new converter case

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.070 (0.000827 — 0.00275)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.071 — 0.125 (0.00279 — 0.00492)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.126 — 0.170 (0.00496 — 0.00669)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.171 — 0.230 (0.00673 — 0.00905)	Select the shim 0.2 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.231 — 0.250 (0.00909 — 0.00984)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.251 — 0.300 (0.00988 — 0.01181)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.080 (0.000827 — 0.00315)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.081 — 0.100 (0.00318 — 0.00393)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.101 — 0.120 (0.00397 — 0.00472)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.121 — 0.180 (0.00476 — 0.00708)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.181 — 0.220 (0.00712 — 0.00866)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.221 — 0.280 (0.00870 — 0.01102)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.281 — 0.300 (0.01106 — 0.01181)	Select the shim 0.3 mm thicker than the shim that is used on primary pulley side of the current converter case.

Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

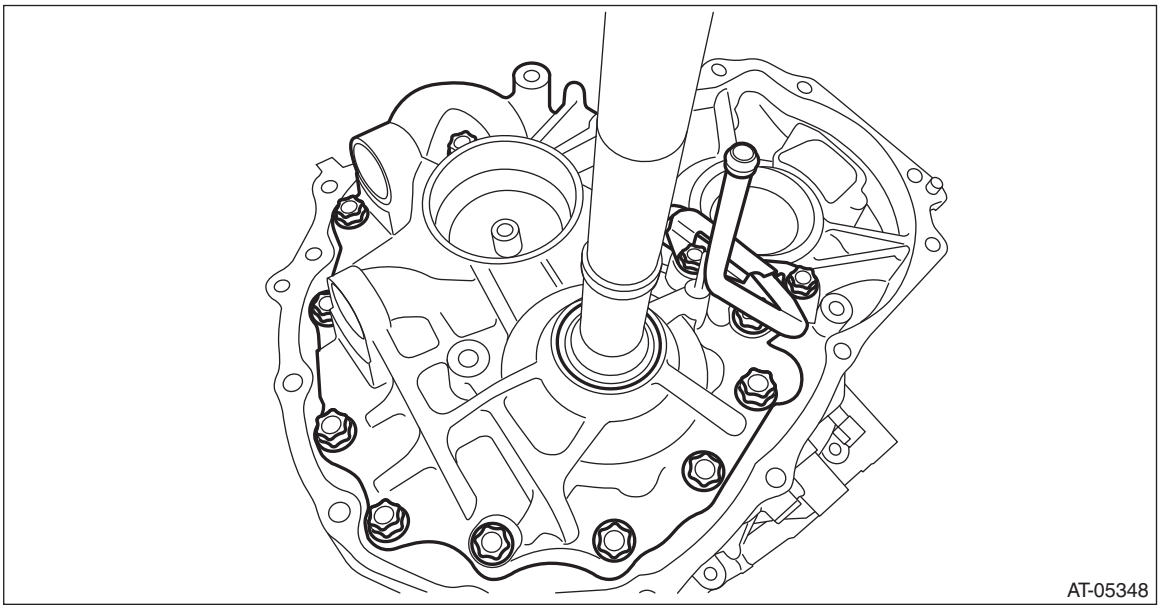
43.Variator Chain

A: REMOVAL

For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-263, REMOVAL, Primary Pulley and Secondary Pulley.>

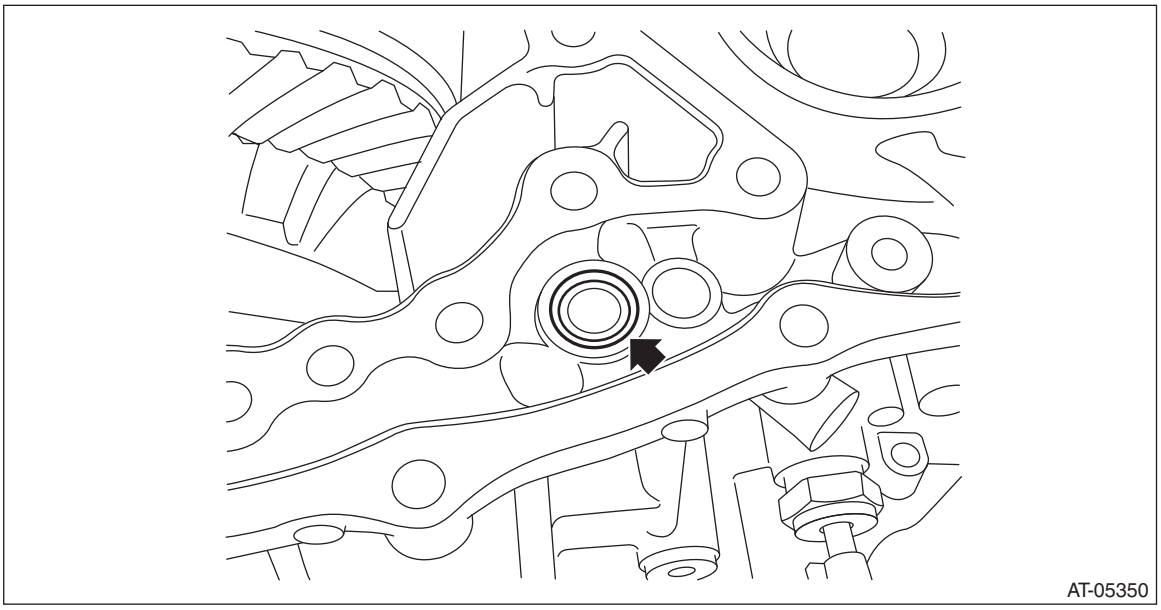
B: INSTALLATION

For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-267, INSTALLATION, Primary Pulley and Secondary Pulley.>



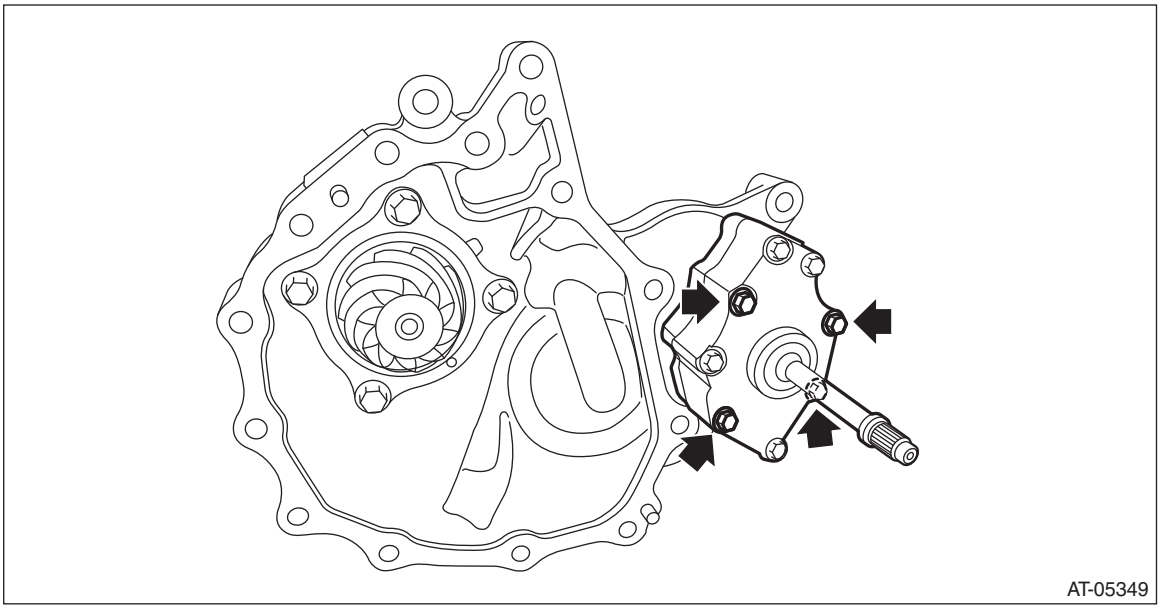
C: INSPECTION

Check the variator chain for damage and wear.

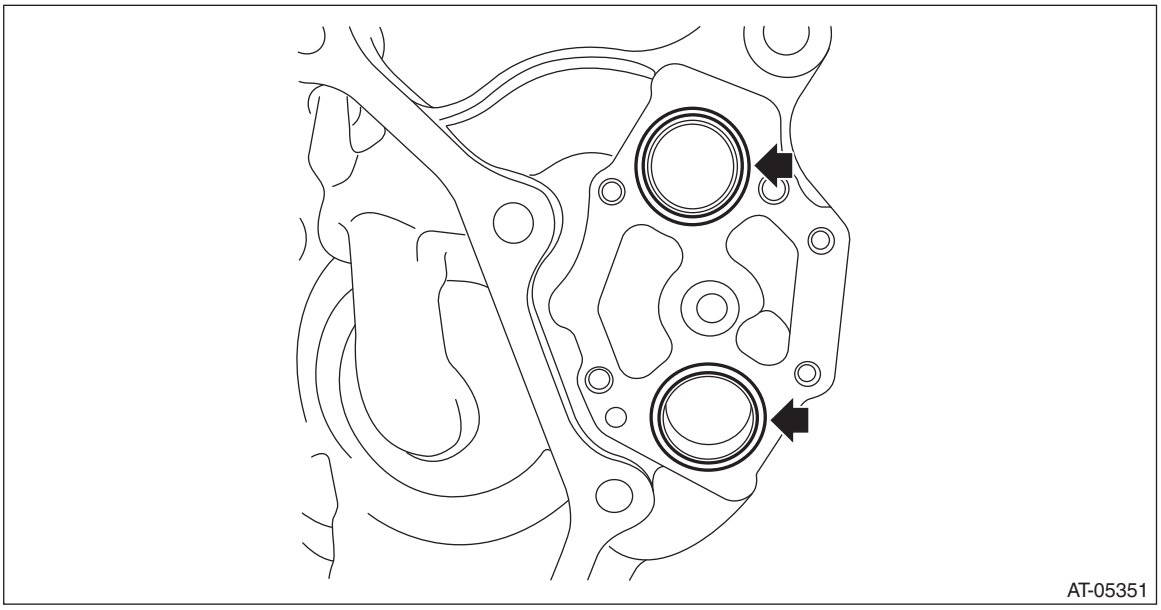


44.Drive Pinion Shaft Assembly

A: REMOVAL

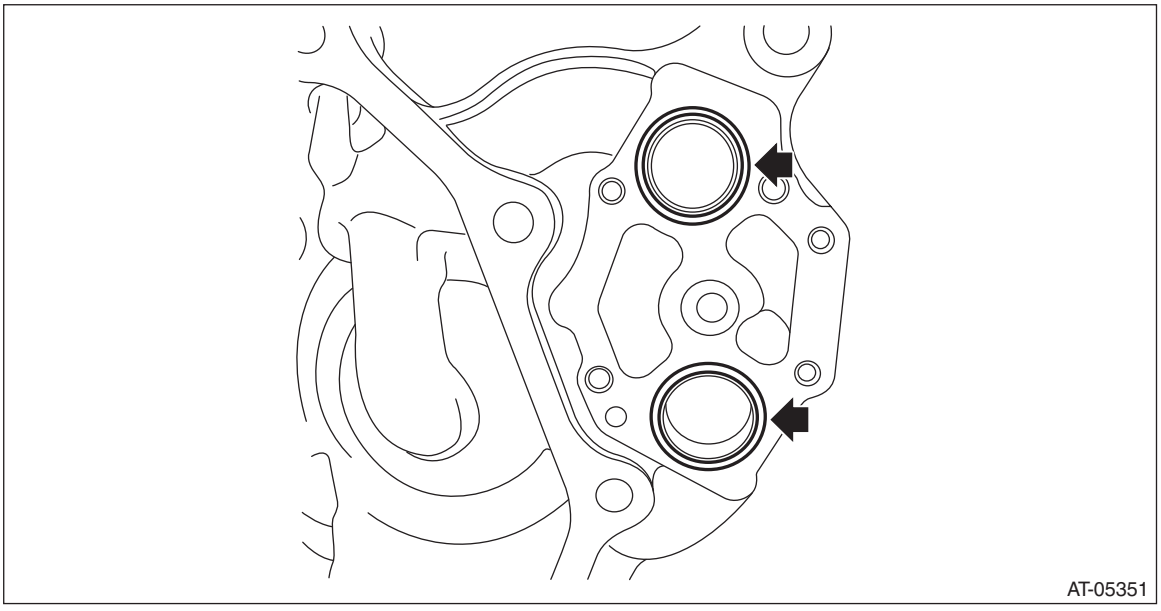


1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-246, REMOVAL, Transmission Case.>
12) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-263, REMOVAL, Primary Pulley and Secondary Pulley.>
13) Using the ST, remove the drive pinion retainer and lubrication pipe.
ST 18270KA020 SOCKET (E20)



14) Remove the O-rings.

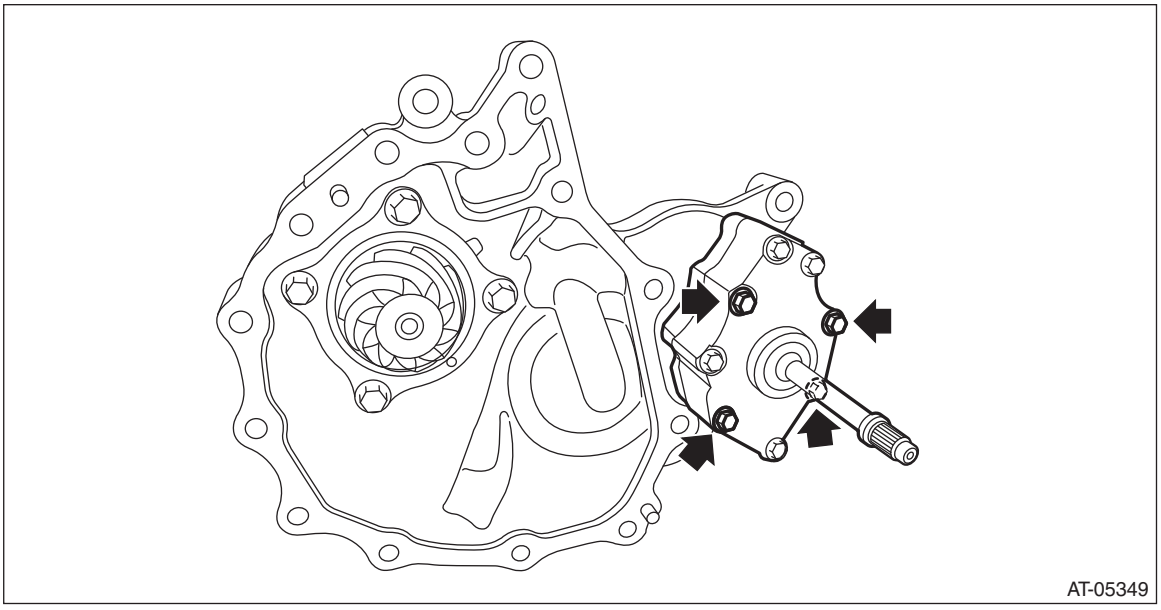
15) Remove the oil pump and the plate.



16) Remove the O-rings.

B: INSTALLATION

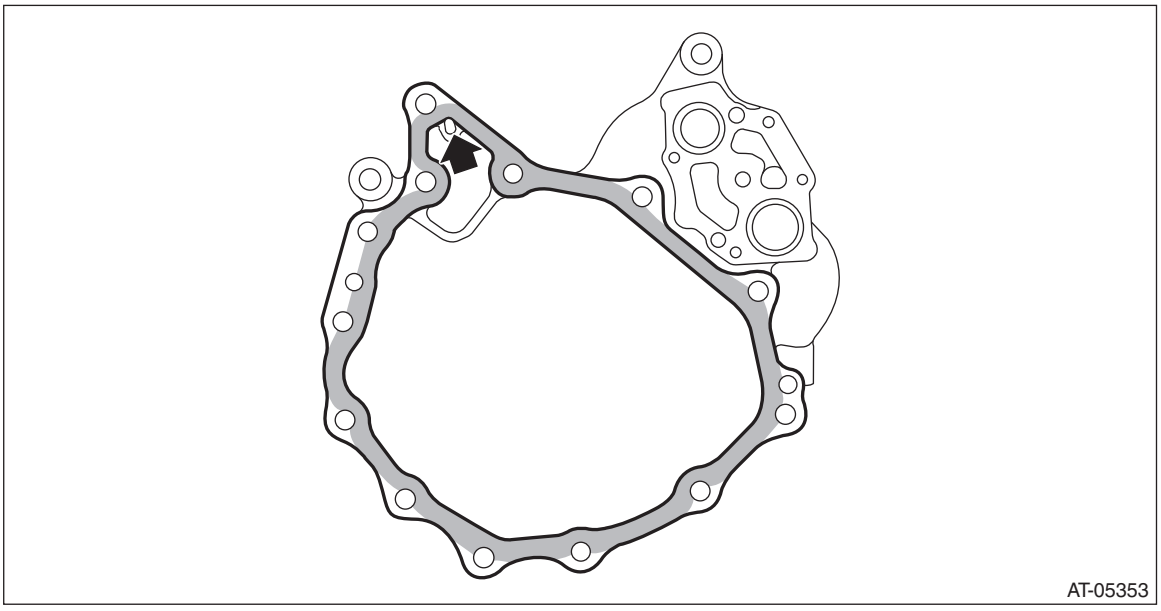
1) Clean the mating surface of drive pinion retainer and converter case.
2) Adjust the backlash and tooth contact between drive pinion shaft assembly and the front differential side gear. <Ref. to CVT(TR690)-292, ADJUSTMENT, Drive Pinion Shaft Assembly.>
3) Install the O-ring for oil pump to drive pinion retainer.



NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

4) Install the plate and the oil pump.

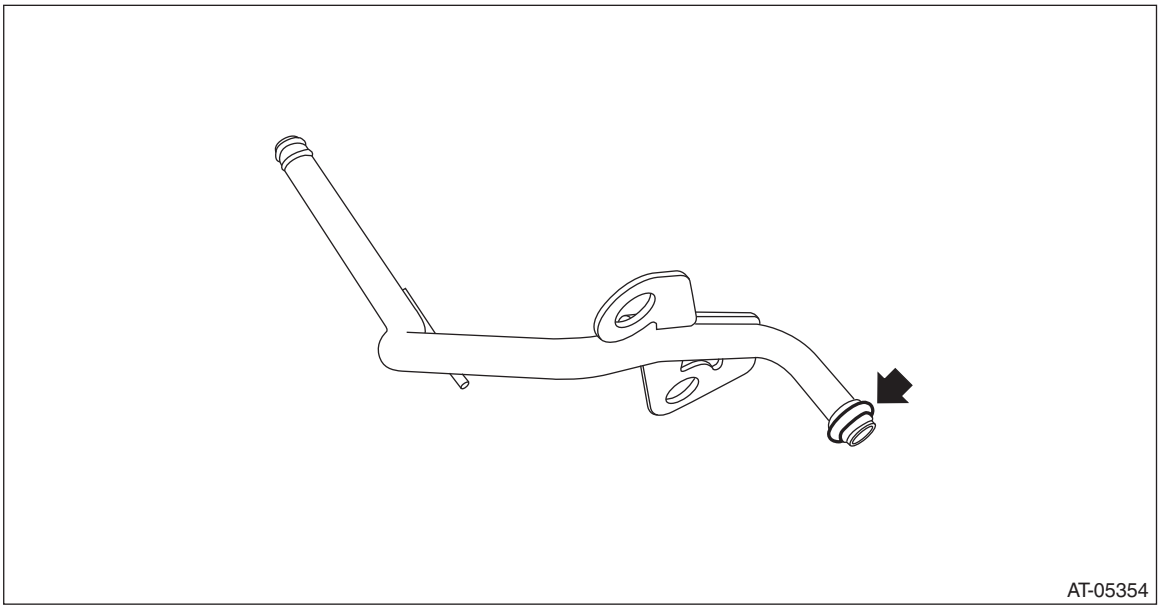
NOTE:
Apply CVTF to the bolt.



Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

5) Apply liquid gasket seamlessly to the mating surface of drive pinion retainer.

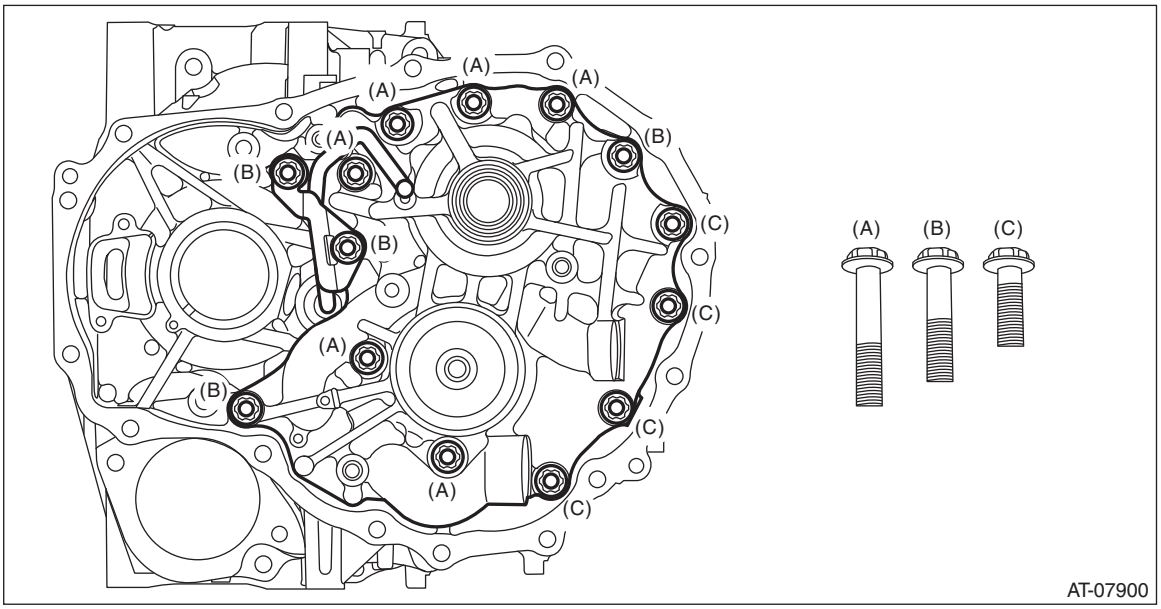
NOTE:
Be careful not to block the arrowed hole when applying liquid gasket.



Liquid gasket:
THREE BOND 1215B or equivalent

6) Install the O-ring to the lubrication pipe.

NOTE:
- Use new O-rings.

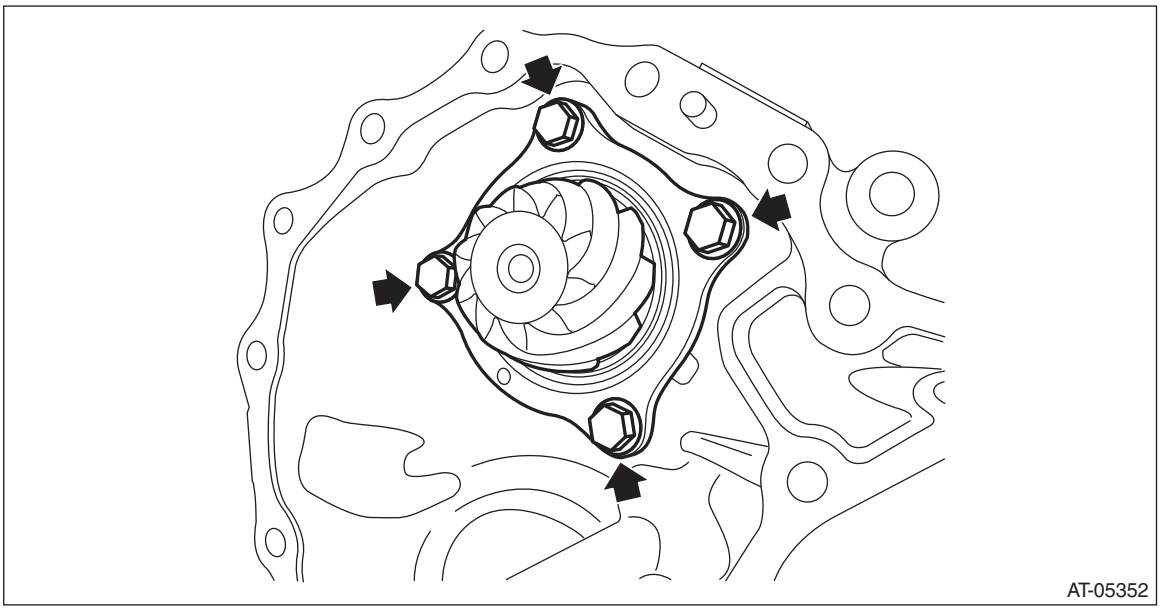


- Apply CVTF to the O-rings.

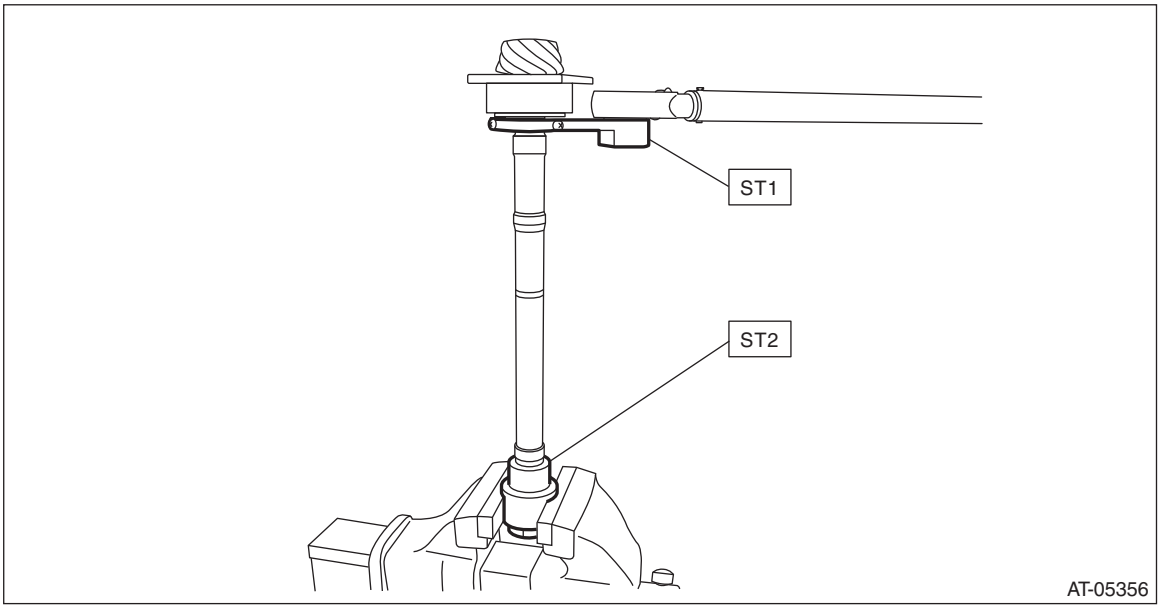
7) Install the drive pinion retainer and lubrication pipe to converter case and tighten the bolt using the ST.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

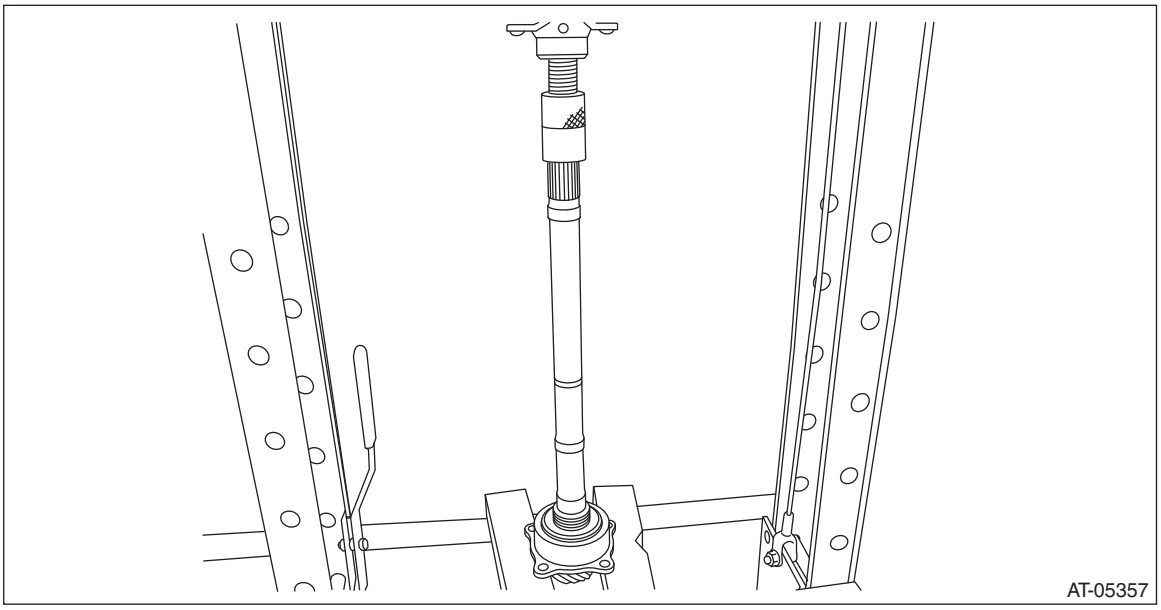


8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-267, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the transmission case. <Ref. to CVT(TR690)-248, INSTALLATION, Transmission Case.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
14) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>

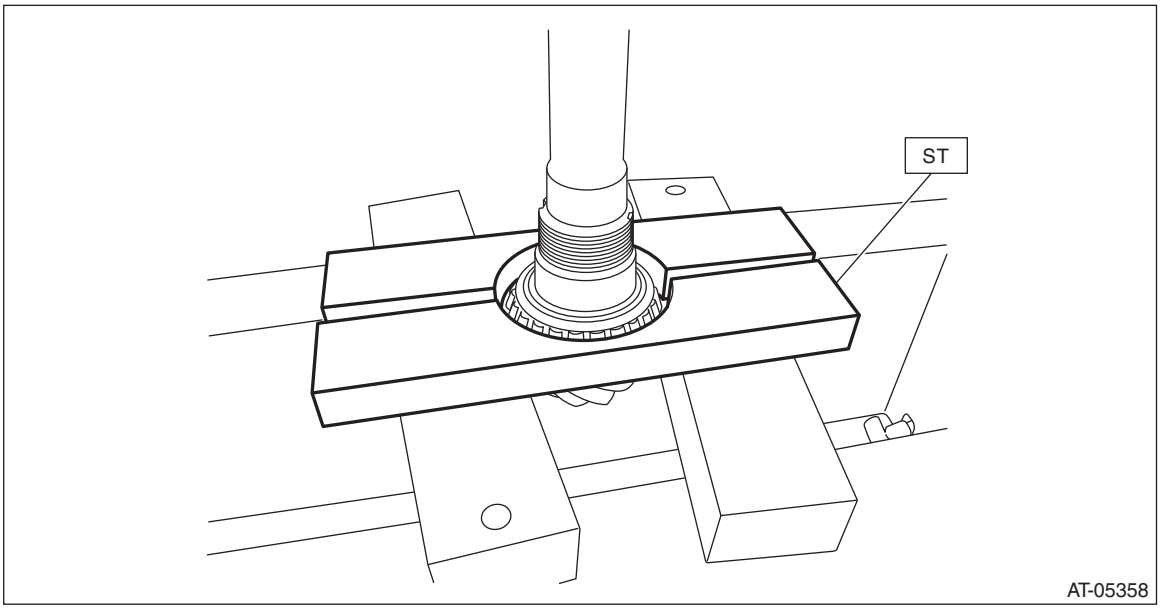


15) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
16) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
17) Install the oil pan and control valve body. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
18) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
19) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

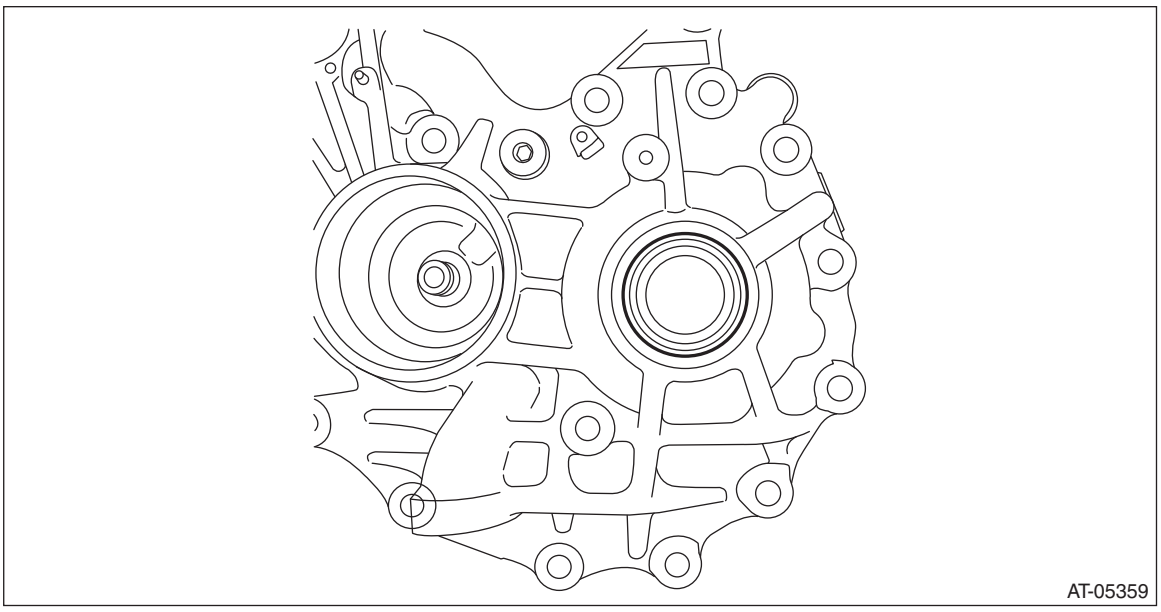


1) Remove the drive pinion assembly.



2) Flatten the tab of the lock nut.
3) Using ST1 and ST2, fix at the spline portion of drive pinion shaft to remove the lock nut.
ST1 18621AA000 ADAPTER WRENCH
ST2 18667AA010 HOLDER

4) Remove the taper roller bearing and outer race from drive pinion shaft.



5) Remove the inner bearing inner race from the drive pinion shaft using ST.
ST 498077000 REMOVER

6) Remove the two oil seals using a screwdriver wrapped with cloth, etc.

CAUTION:
Do not damage the fitting surface of drive pinion bearing.

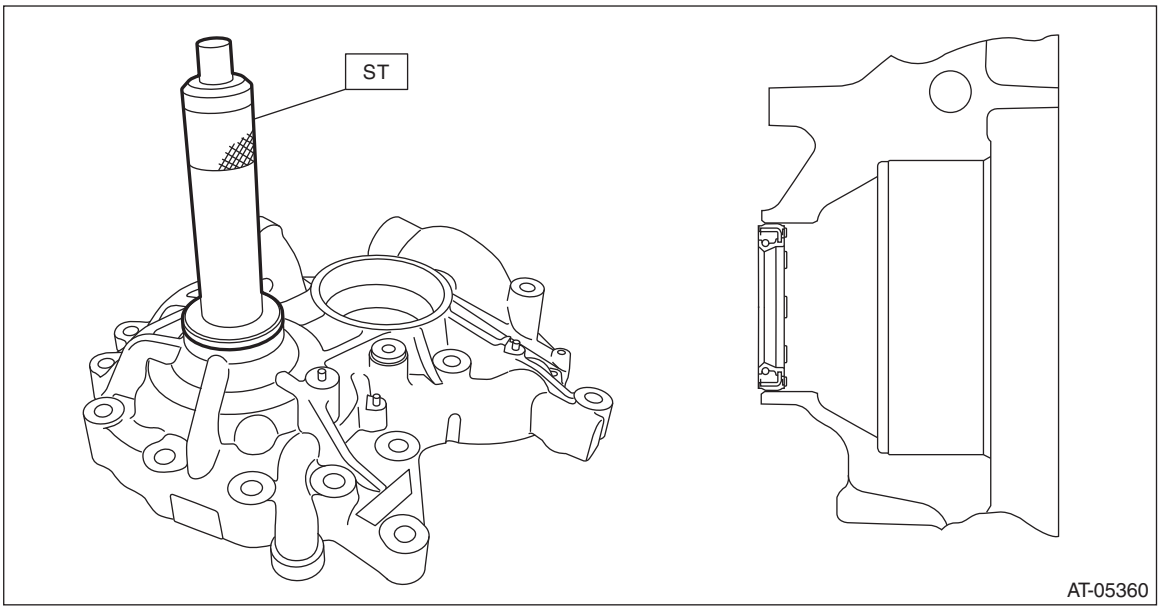
7) Remove the plug from drive pinion retainer.

D: ASSEMBLY

1) Install the O-ring to plug and install the plug to drive pinion retainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

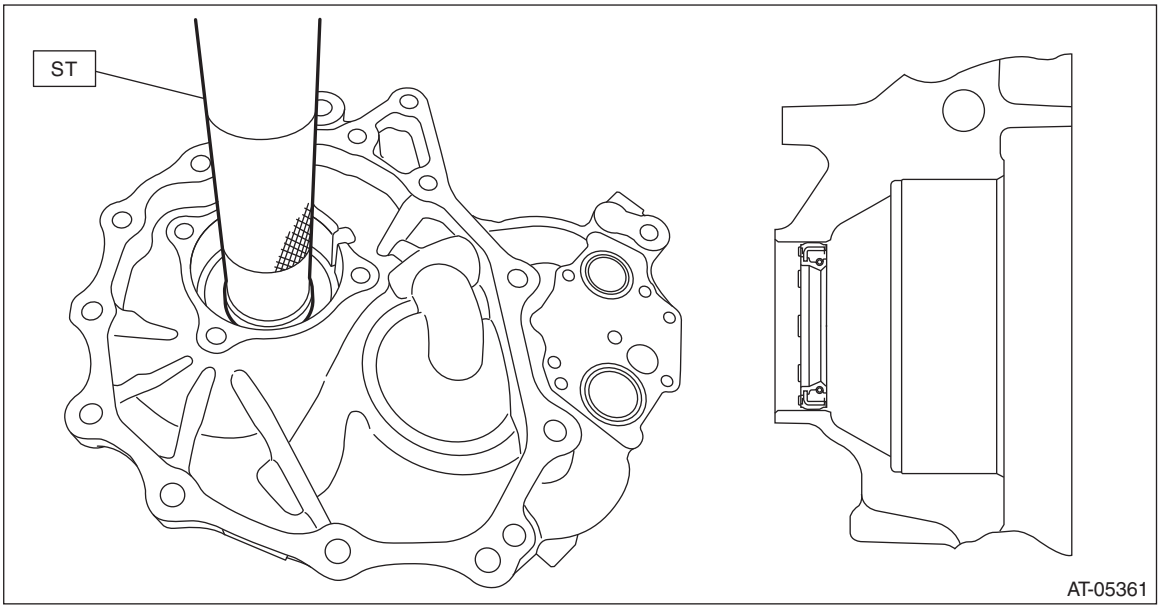
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



2) Using the ST, install the oil seal to drive pinion retainer.

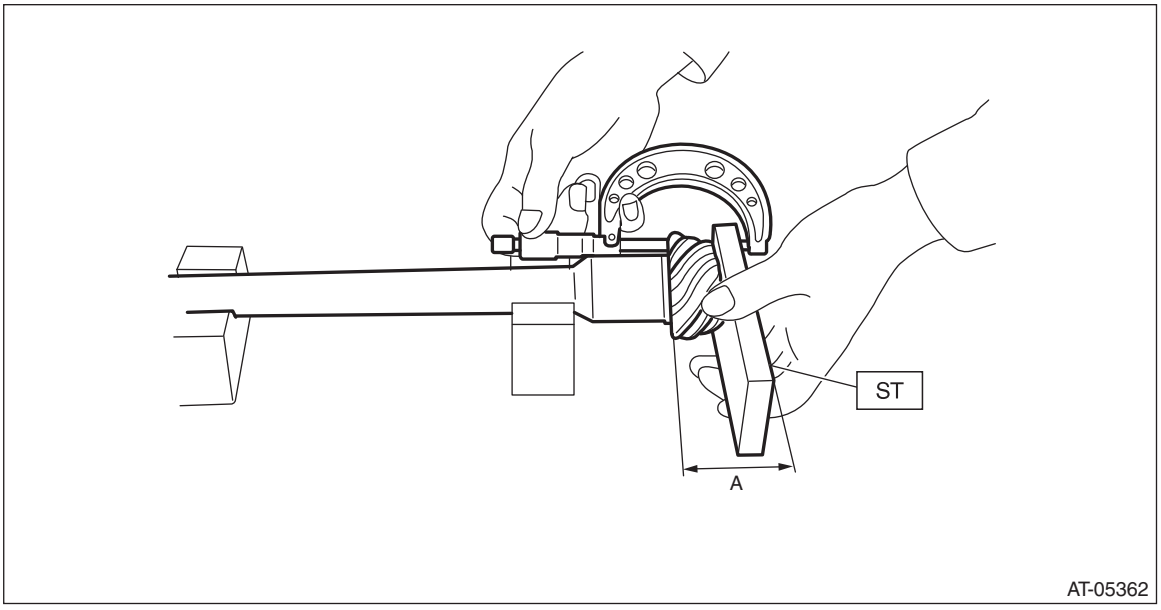
NOTE:
- Apply CVTF to the oil seal press-fitting surface and lip.

- Install the oil seal in the correct direction.

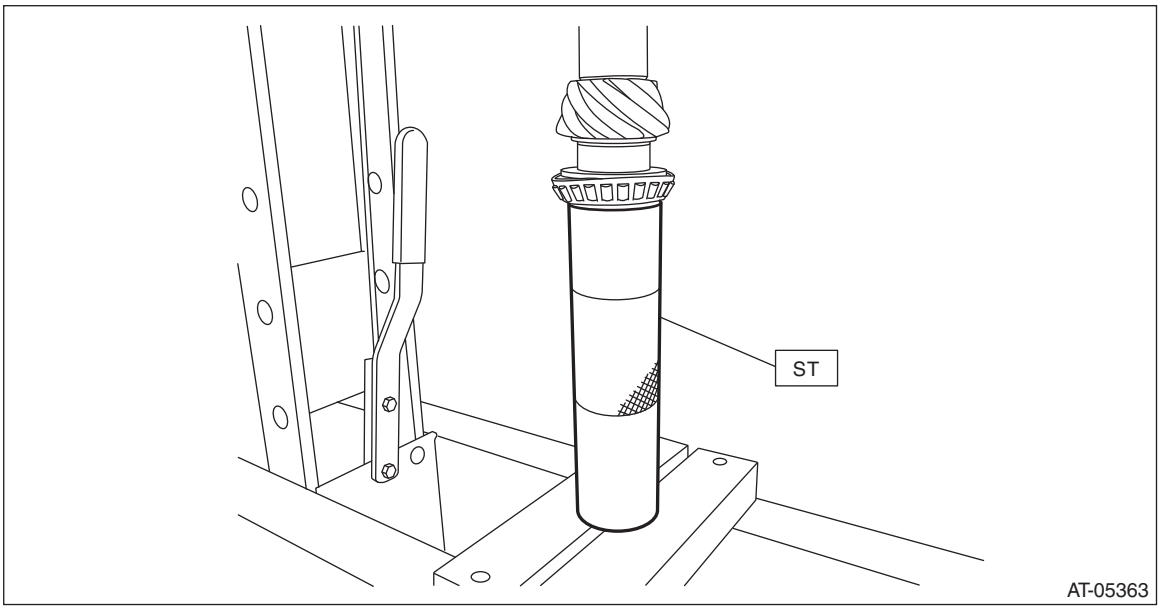


Pulley side

ST 18657AA020 OIL SEAL INSTALLER

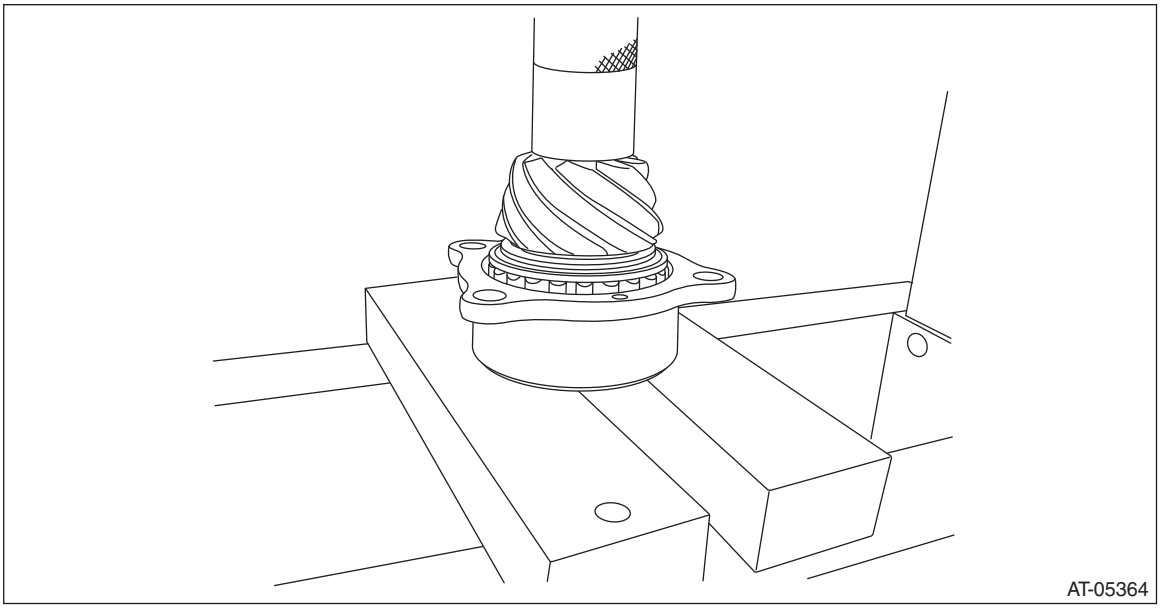


Front differential side



ST 499277100 BUSHING 1-2 INSTALLER

3) Measure the dimension “A” of drive pinion shaft.
ST 398643600 GAUGE

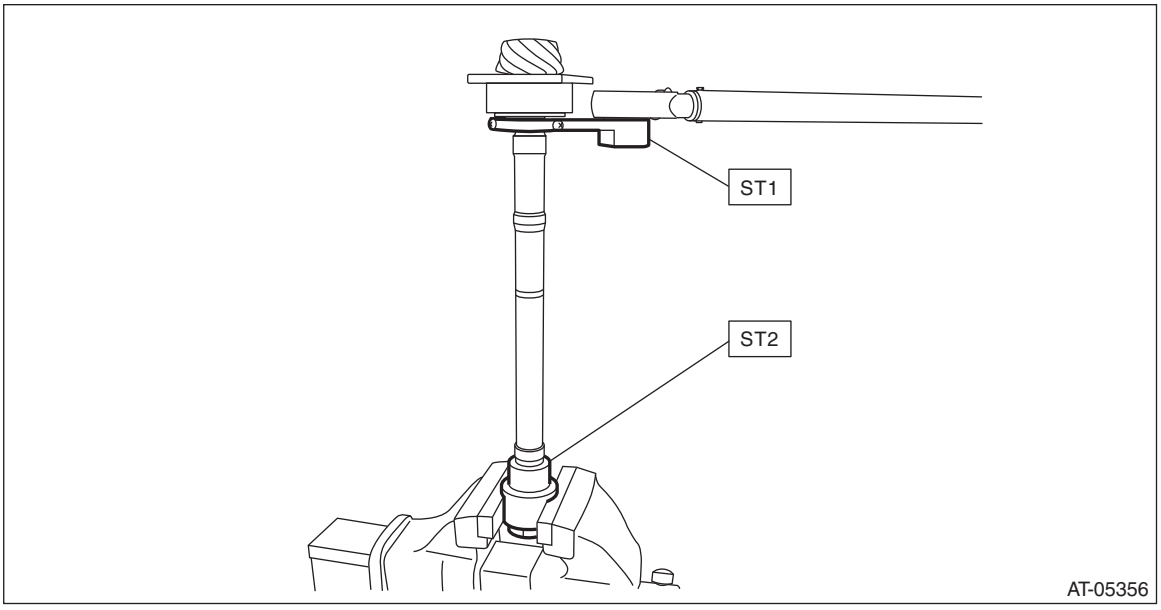


4) Press-fit the new taper roller bearing front side inner race using the ST.
ST 499277200 INSTALLER

5) Press-fit the new taper roller bearing rear side inner race and outer race together.

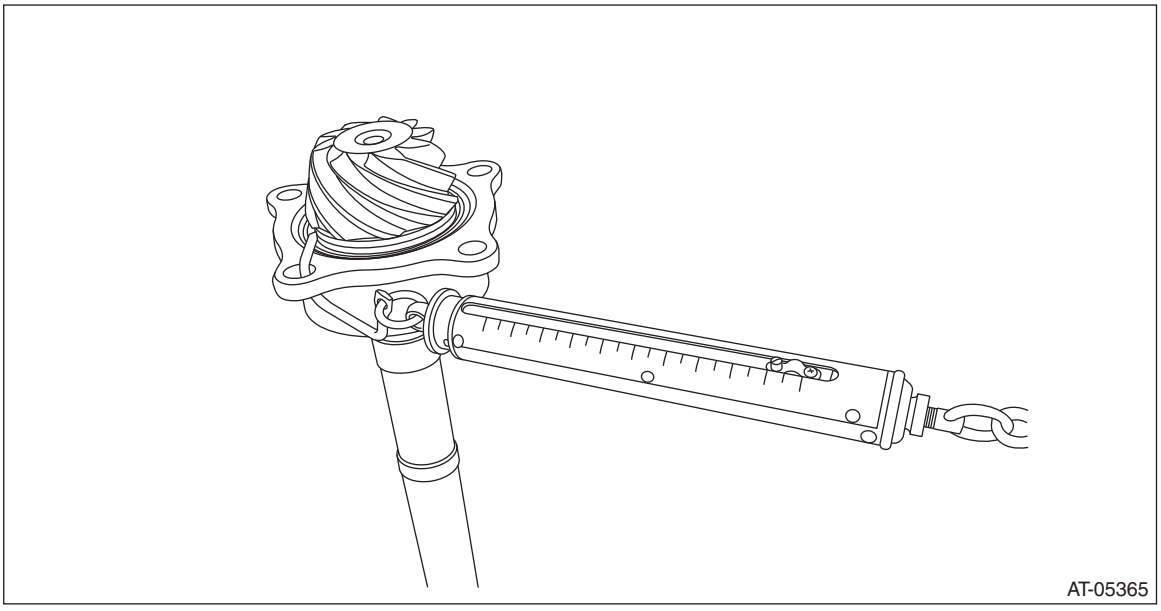
CAUTION:
Damage may result if too much force is applied to the roller bearing.

NOTE:
Press in to a position where the bearing rotates smoothly without play.



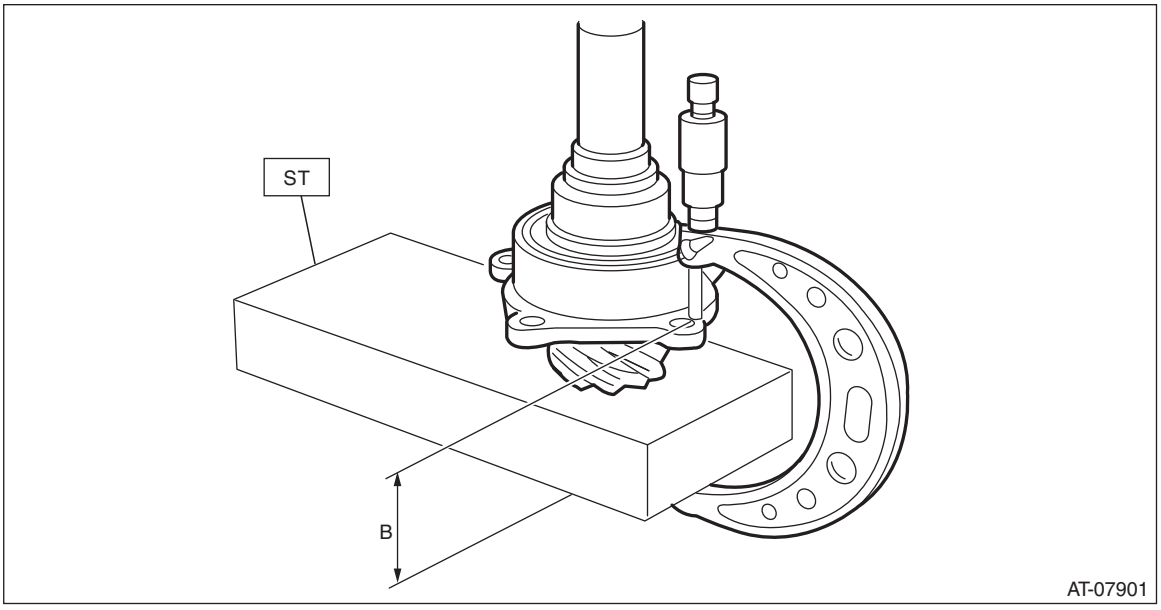
6) Tighten a new lock nut using the ST.
Using the following formula, calculate the torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 130 N·m (13.3 kgf-m, 95.9 ft-lb)
[Required torque setting]
T2: Tightening torque
L1: ST1 length 0.1 m (3.94 in)
L2: Torque wrench length
Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	104 (10.6, 76.7)
0.45 (17.72)	106 (10.8, 78.2)
0.5 (19.69)	108 (11.0, 79.7)
0.55 (21.65)	110 (11.2, 81.1)



ST1 18621AA000 ADAPTER WRENCH
ST2 18667AA010 HOLDER

NOTE:
Tighten the lock nut while directly aligning ST1 and torque wrench.

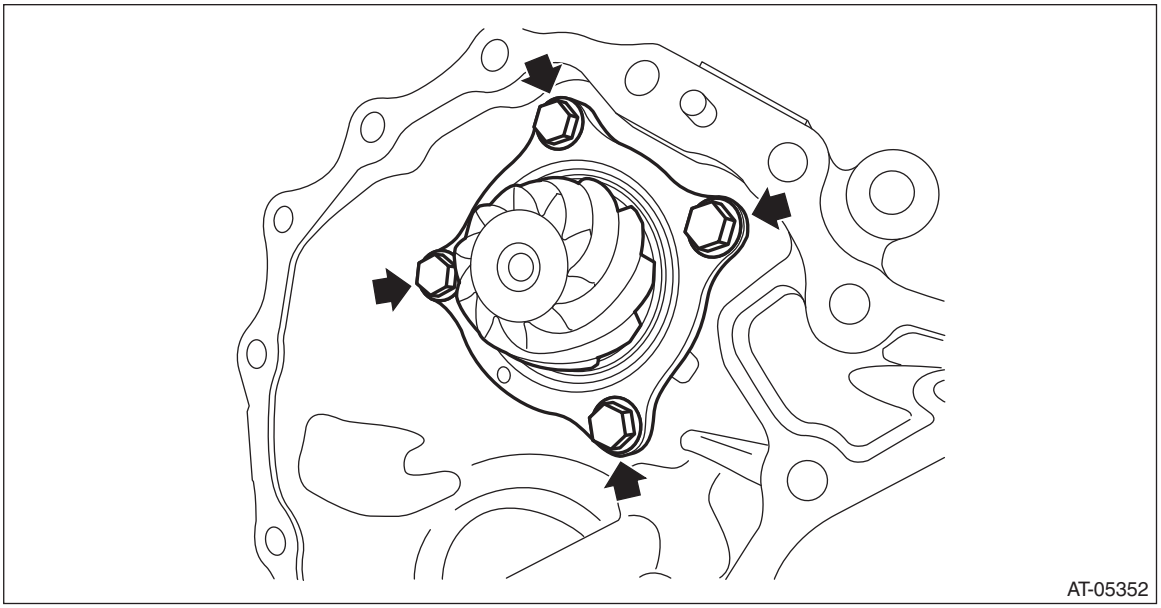


7) Apply differential gear oil to roller of bearing and rotate the bearing several times.
8) Measure the starting torque of the bearing. Make sure the starting torque is within the specified range. If the torque is not within specified range, replace the roller bearing.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)

9) Crimp the lock nut in 2 locations.

10) Measure the dimension “B” of the drive pinion shaft.
ST 398643600 GAUGE



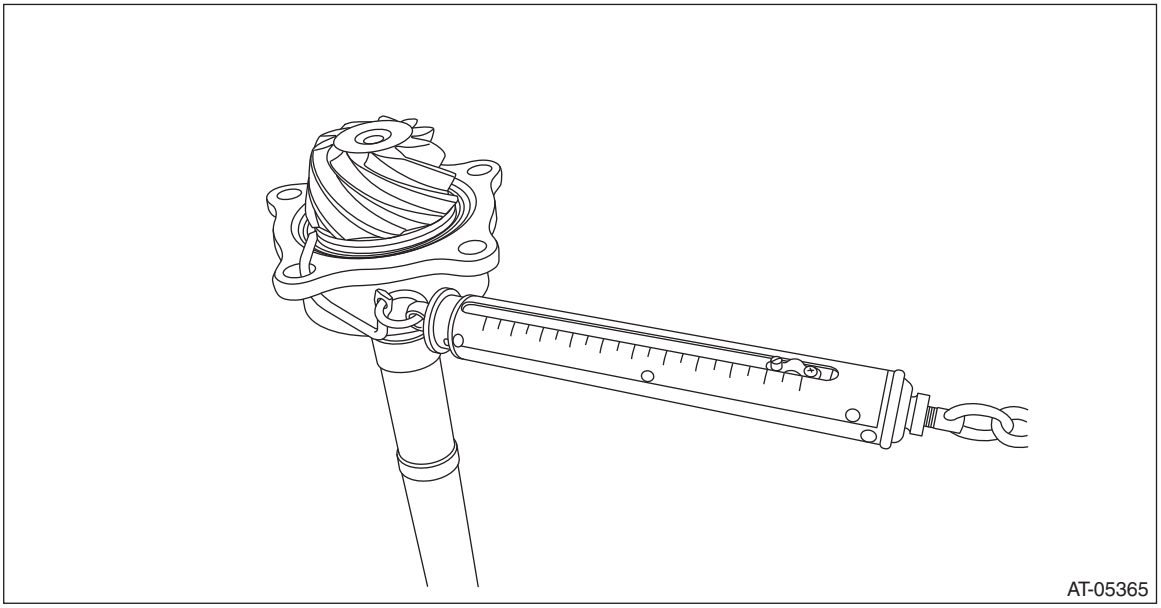
11) Obtain the thickness “T” mm (in) of the drive pinion shim using the following formula.
T = 6.55±0.1225 – (B – A)
[T in = 0.258±0.0048 – (B – A)]
T: Shim thickness
A: Height from ST to drive pinion shaft bearing catch saucer
B: Height from ST to drive pinion retainer case side end face
12) Select three or less shims from following table.

Drive pinion shim	
Part No.	Thickness mm (in)
31451AA050	0.150 (0.0059)
31451AA060	0.175 (0.0069)
31451AA070	0.200 (0.0079)
31451AA080	0.225 (0.0089)
31451AA090	0.250 (0.0098)
31451AA100	0.275 (0.0108)
31451AA240	0.300 (0.0118)

13) Install the shims selected for drive pinion retainer and drive pinion shaft assembly.

NOTE:
Be careful not to bend the shim.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

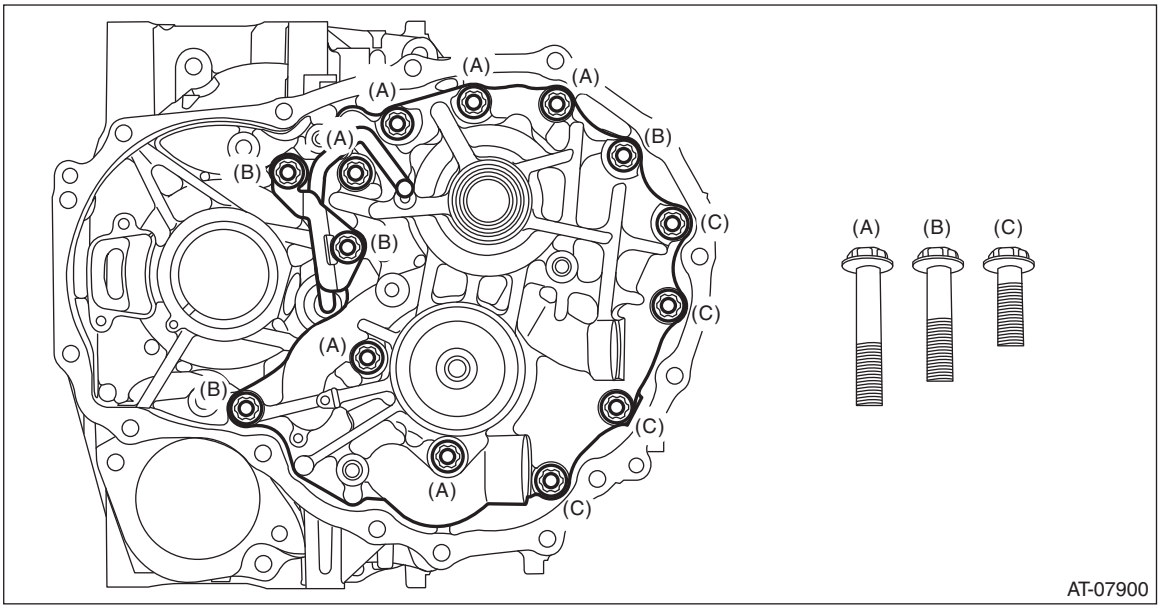


E: INSPECTION

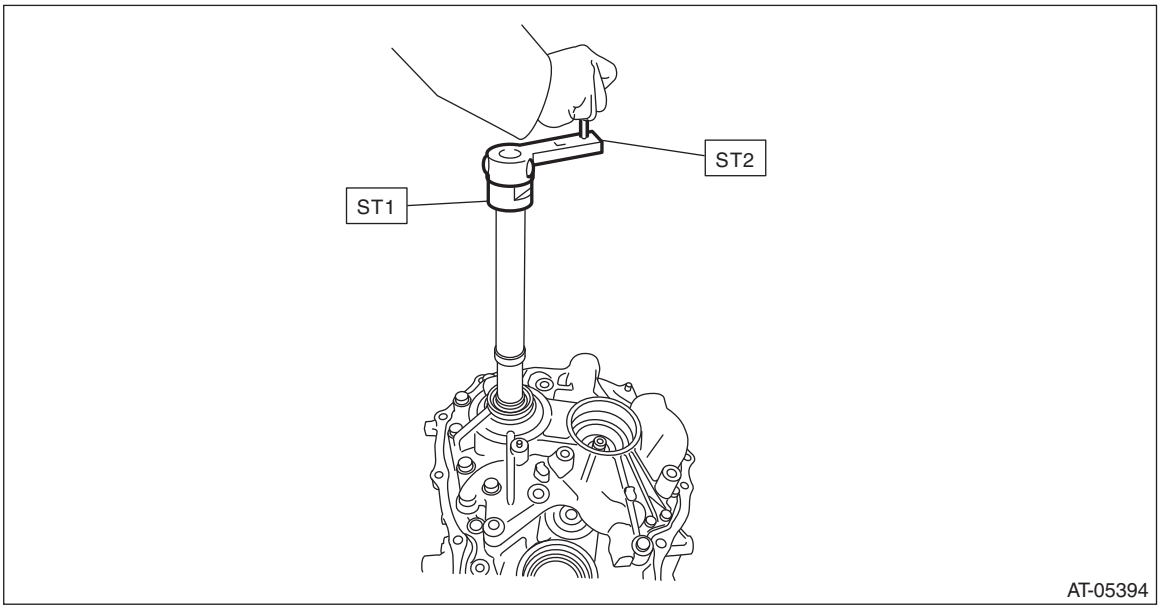
- Make sure that all component parts are free of scratches, holes and other faults.
- Check the tooth contact. <Ref. to CVT(TR690)-292, ADJUSTMENT, Drive Pinion Shaft Assembly.>
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the bearing preload of drive pinion shaft.

CAUTION:
Before measuring, apply differential gear oil to roller of bearing and rotate the bearing several times.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)



F: ADJUSTMENT

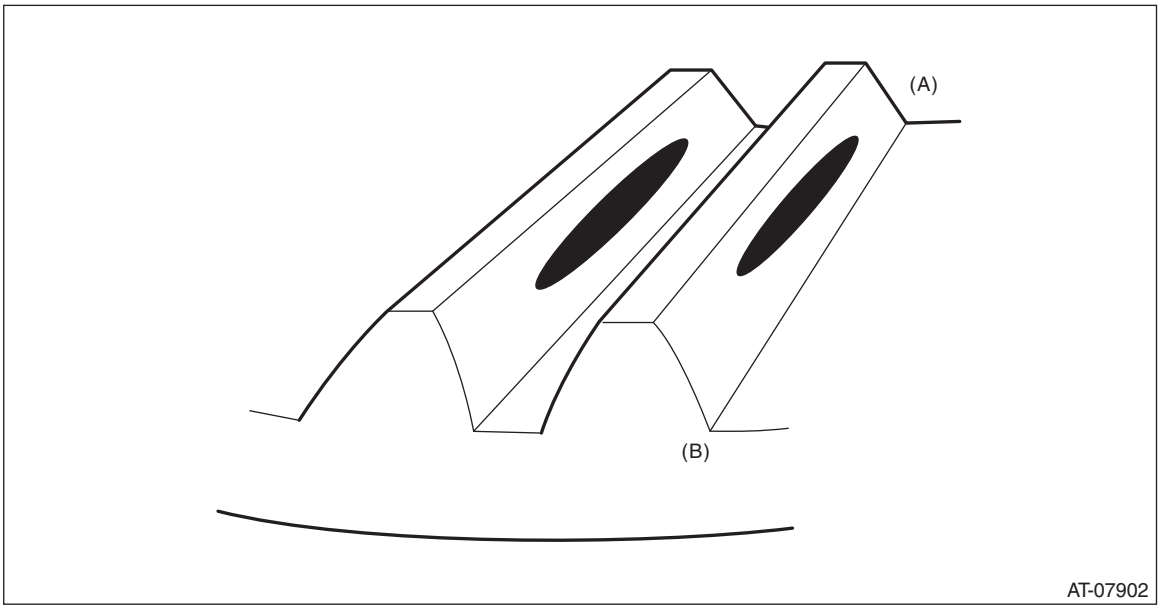


1) Remove the liquid gasket from the mating surface completely.
2) Using the ST, install the drive pinion retainer to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

3) Rotate the drive pinion several times using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH

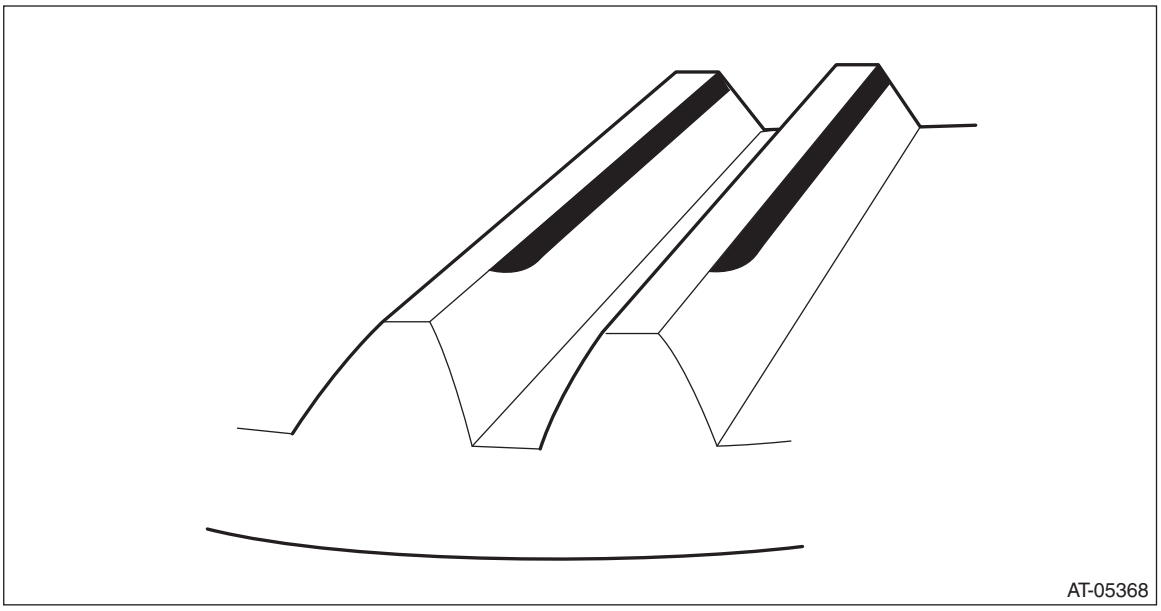


4) Adjust the drive pinion and hypoid driven gear backlash. <Ref. to CVT(TR690)-314, ADJUSTMENT, Front Differential Assembly.>
5) Using the ST, remove the drive pinion retainer from converter case.
ST 18270KA020 SOCKET (E20)
6) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.
If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. <Ref. to CVT(TR690)-314, ADJUSTMENT, Front Differential Assembly.>

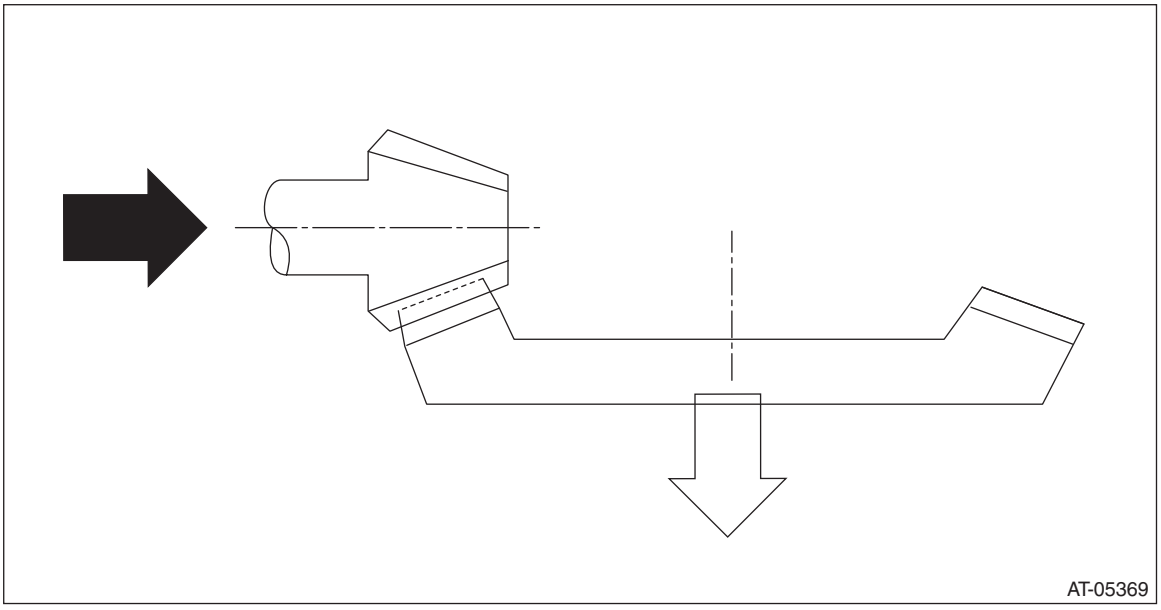
NOTE:
After correction, wipe off the lead-free red dye.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)



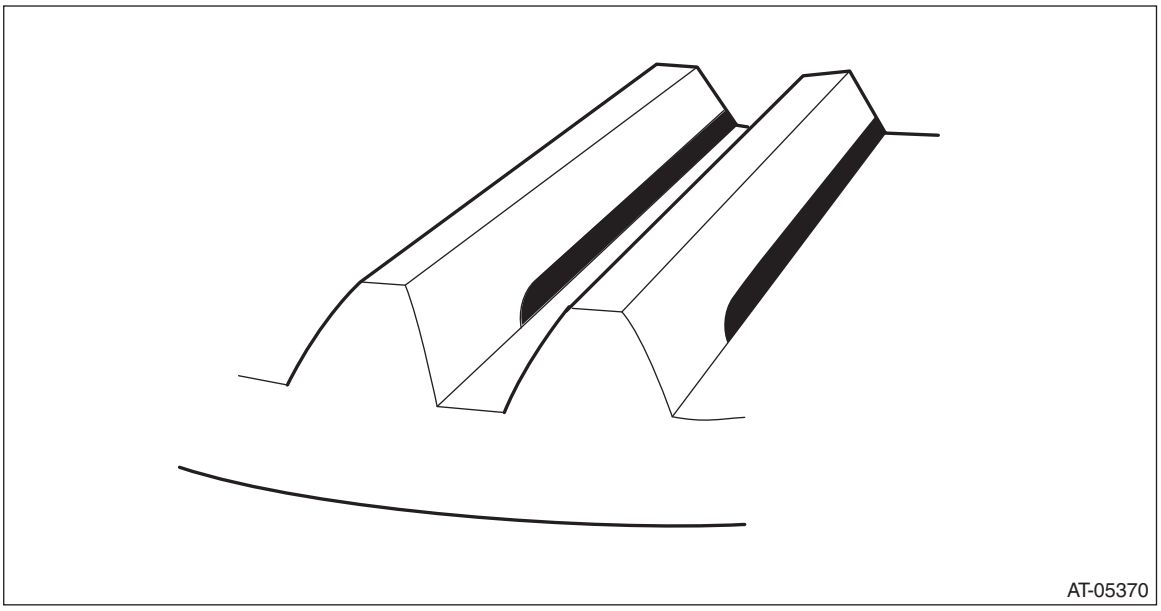
(A) Toe side
(B) Heel side



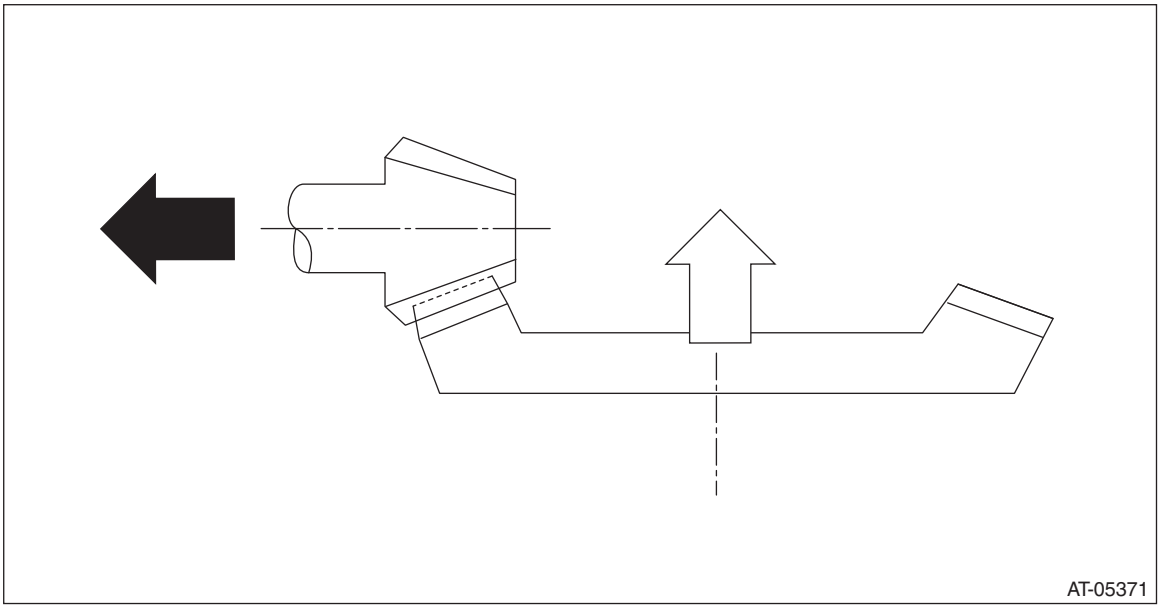
- Face contact

Check item: Backlash is too large.

Contact pattern



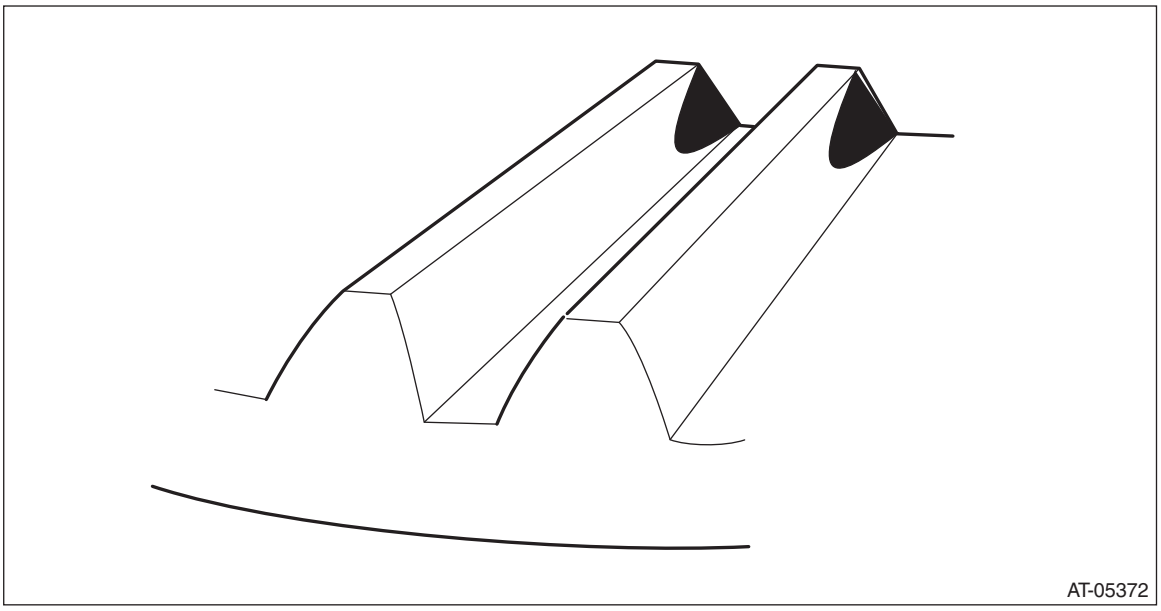
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



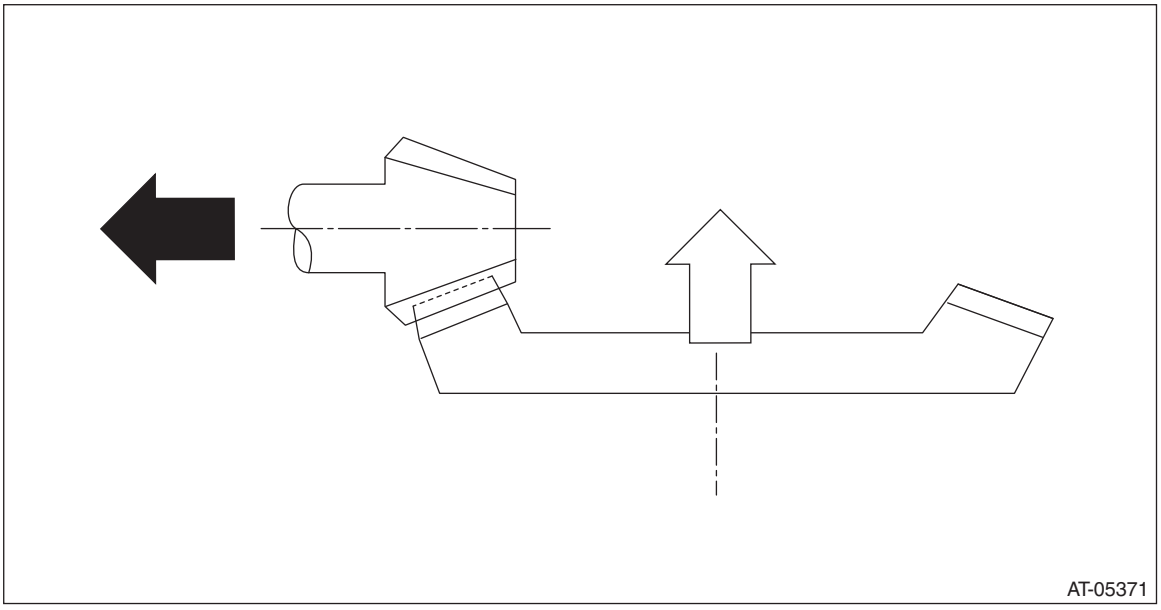
- Flank contact

Check item: Backlash is too small.

Contact pattern



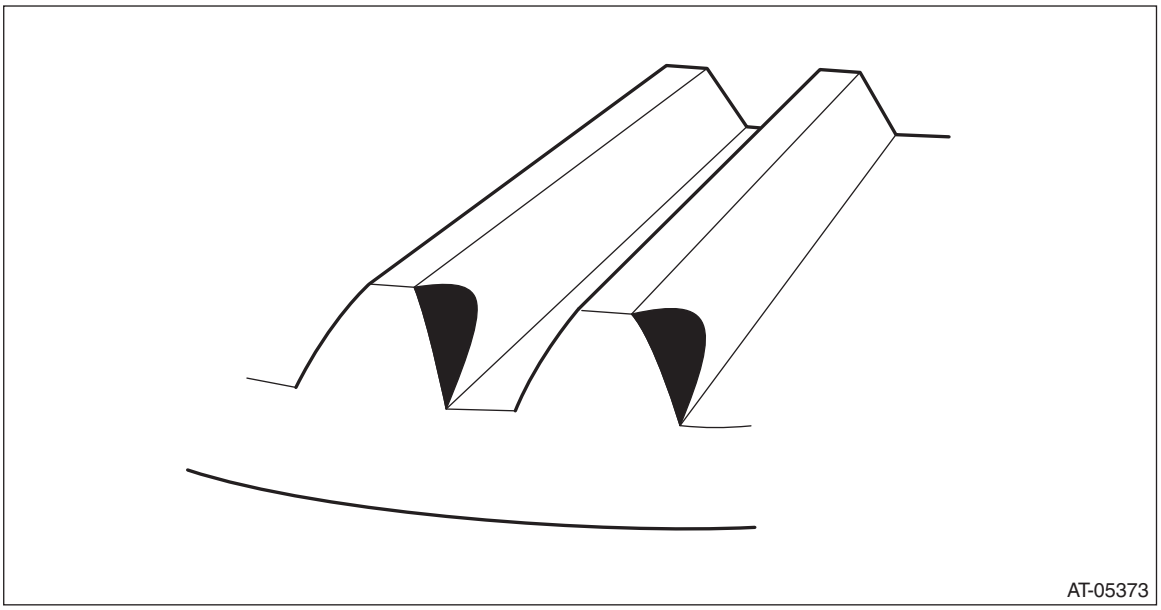
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



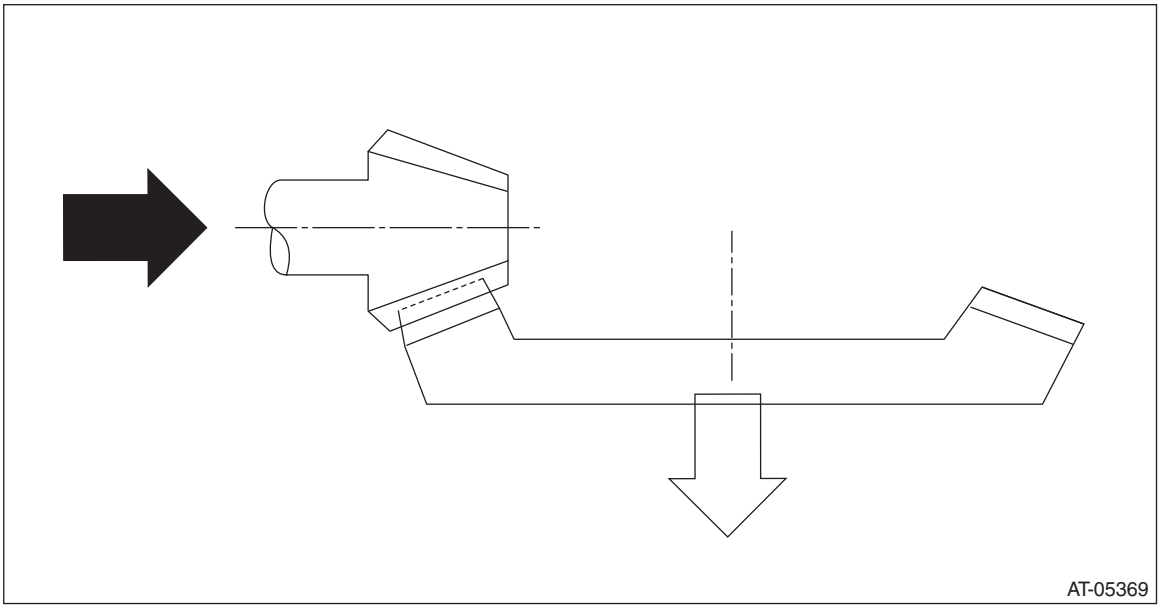
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



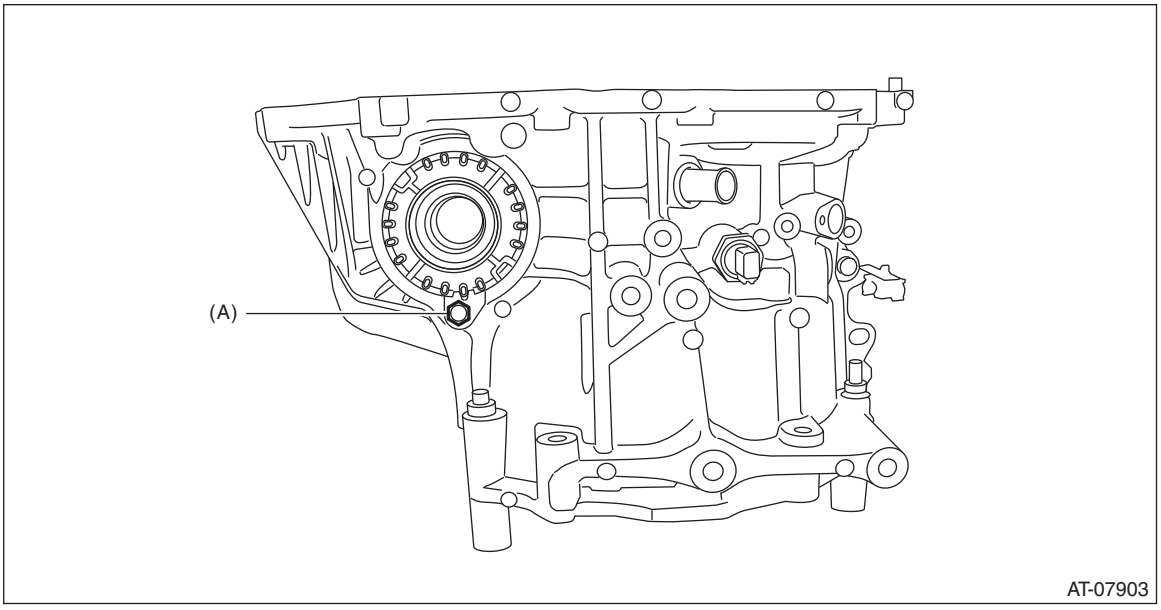
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.



- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

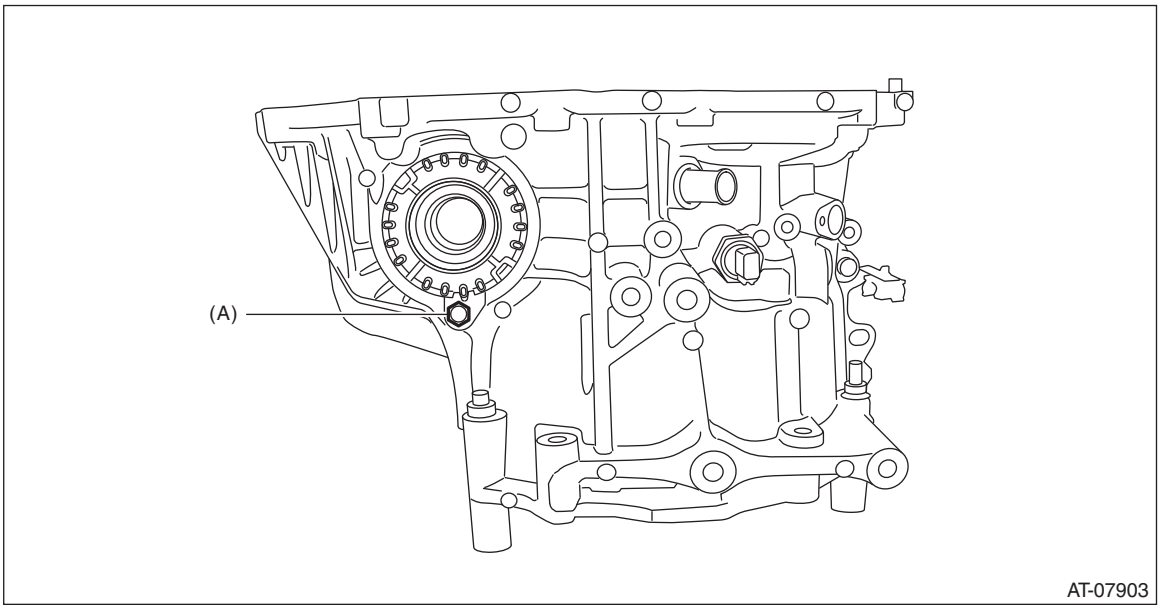
Contact pattern



Corrective action: Increase the thickness of the pinion height adjusting washer according to the procedures for moving the drive pinion closer to the hypoid driven gear.

7) If tooth contact is correct, mark the differential side retainer position and loosen. After fitting a new O-ring and oil seal, screw in the differential side retainer to the marked position.
8) Tighten the lock plate with specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

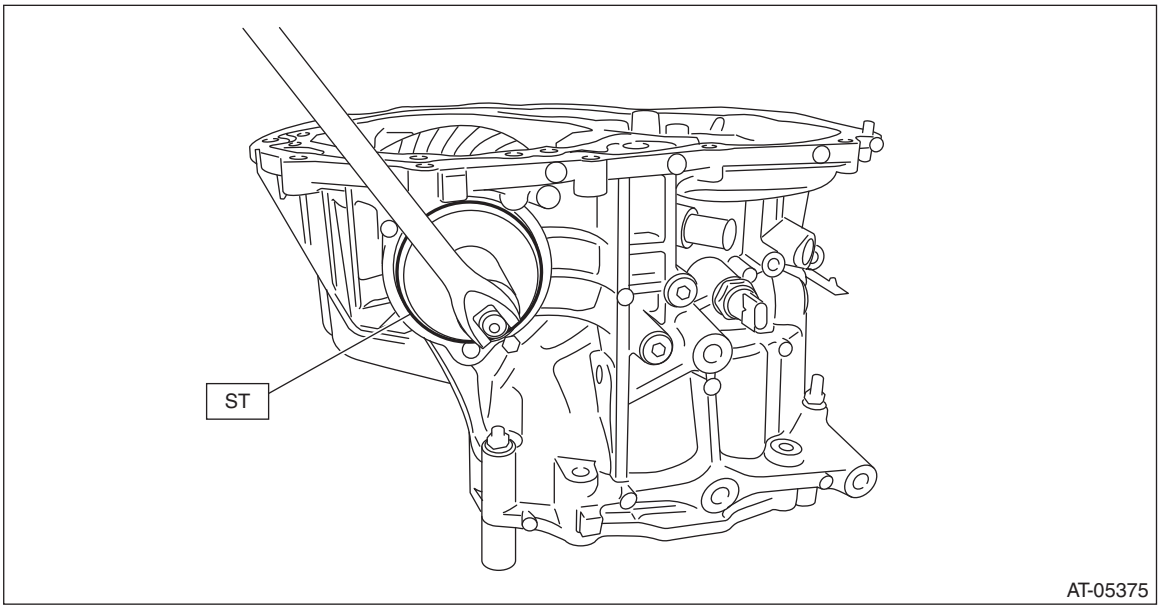


(A) Lock plate

45.Front Differential Assembly

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-246, REMOVAL, Transmission Case.>
12) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-263, REMOVAL, Primary Pulley and Secondary Pulley.>
13) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-279, REMOVAL, Drive Pinion Shaft Assembly.>
14) Remove the lock plates on both sides.

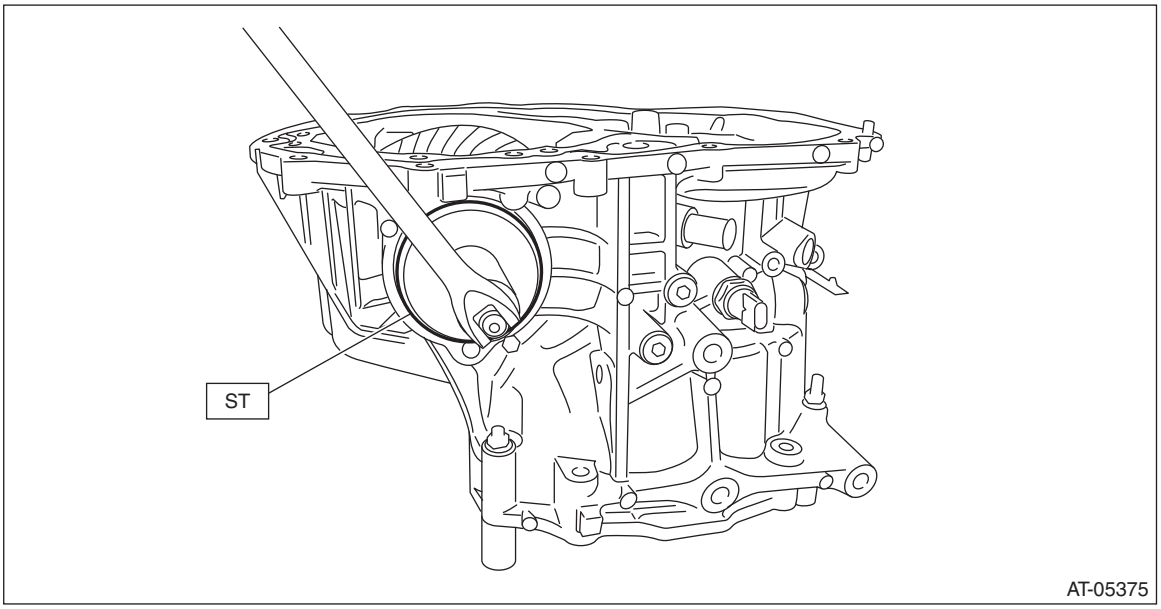


(A) Lock plate

15) Remove the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER

NOTE:
• Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.

- When keeping the retainers aside, use labels etc. to avoid confusing the left and right.



16) Remove the front differential assembly while being careful not to damage the attachment part of the retainer.
17) Remove the oil seals and O-rings from both differential side retainers. <Ref. to CVT(TR690)-305, SIDE RETAINER, DISASSEMBLY, Front Differential Assembly.>

B: INSTALLATION

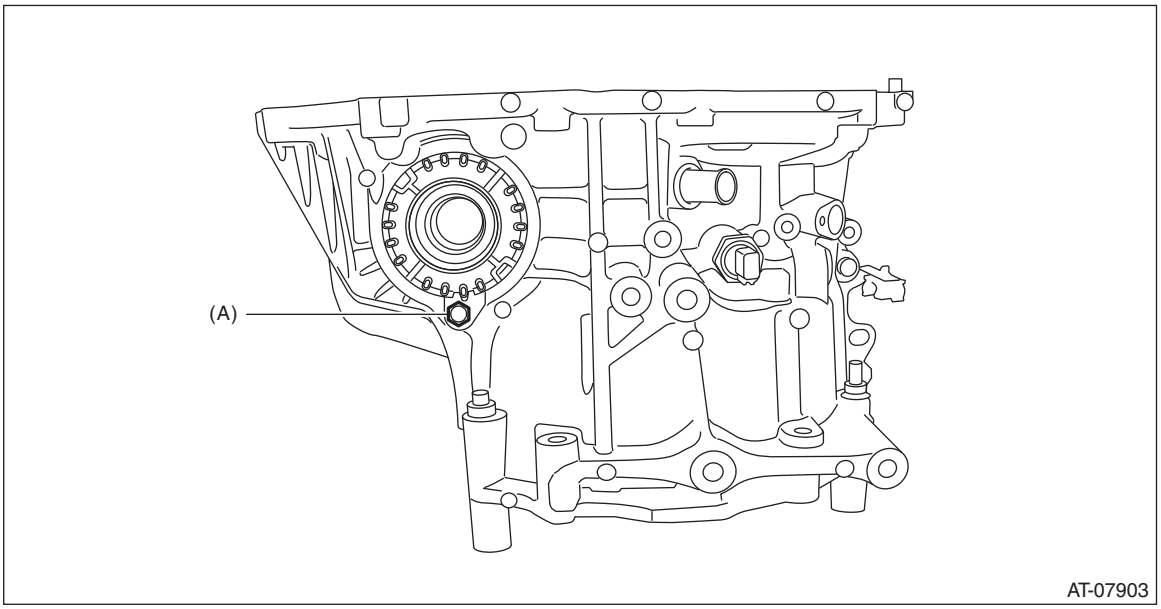
1) Install the front differential assembly to the converter case.

NOTE:
Be careful not to damage the inside of the case (especially the mating surface of the differential side retainers).
2) Temporarily install the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER

3) Adjust the backlash of the front differential. <Ref. to CVT(TR690)-314, ADJUSTMENT, Front Differential Assembly.>
4) Inspect and adjust the tooth contact. <Ref. to CVT(TR690)-292, ADJUSTMENT, Drive Pinion Shaft Assembly.>

5) Remove the differential side retainers and install the O-rings and oil seals. <Ref. to CVT(TR690)-312, SIDE RETAINER, ASSEMBLY, Front Differential Assembly.>

NOTE:
- Record how many turns were needed to remove.
- Use new O-rings and oil seals.



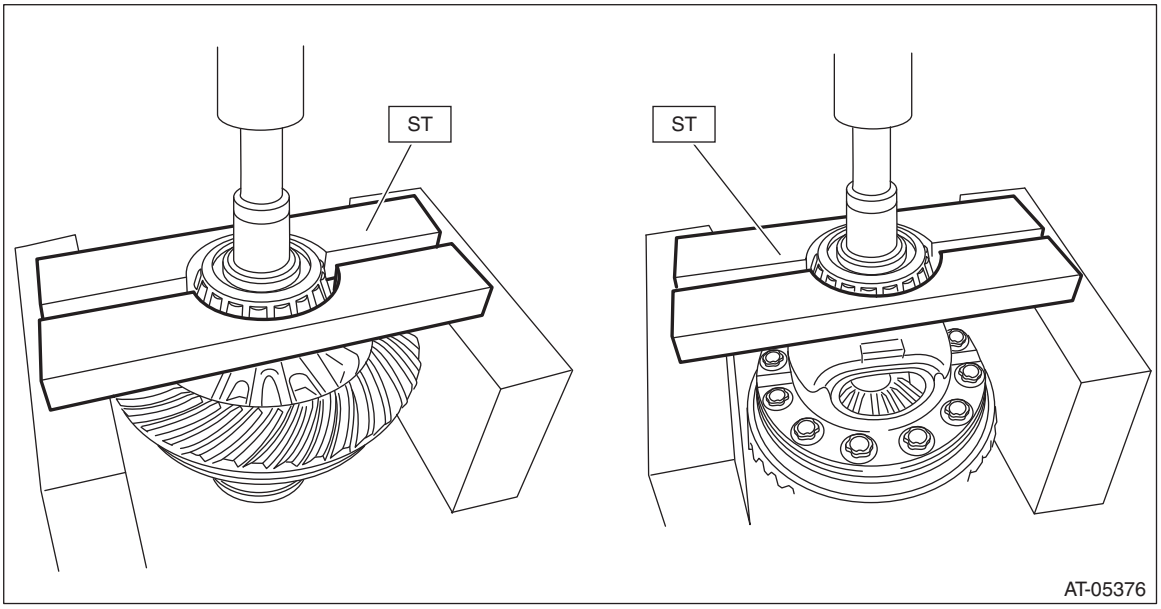
6) Install the differential side retainers using ST.

NOTE:
When attaching, turn the differential side retainer by the same number of turns it took to remove, and align the marks.

ST 18658AA020 WRENCH COMPL RETAINER

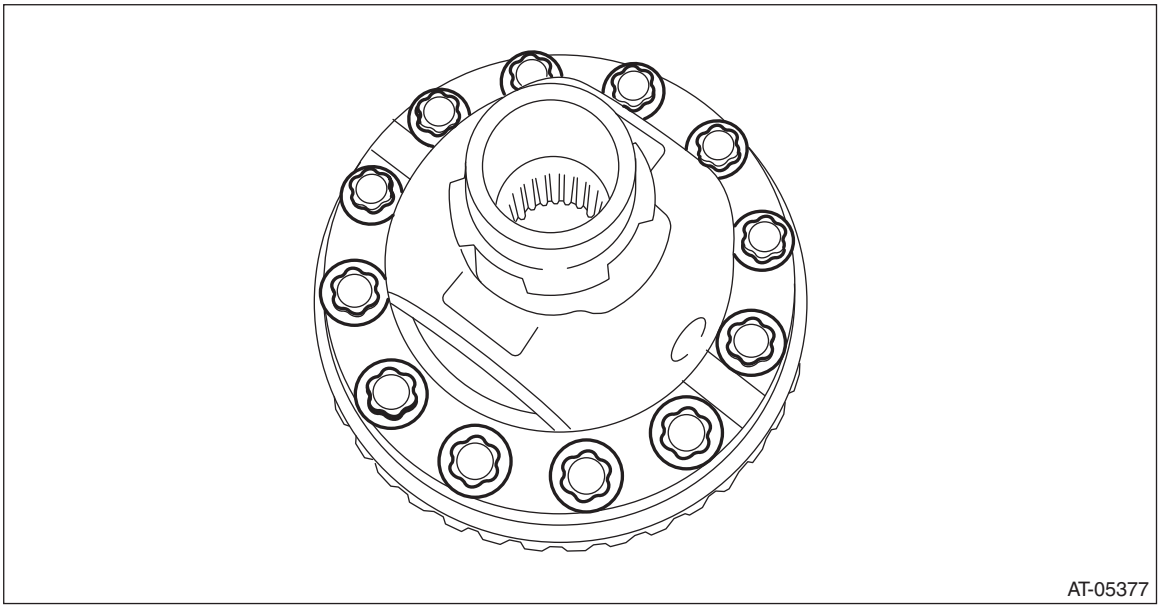
7) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



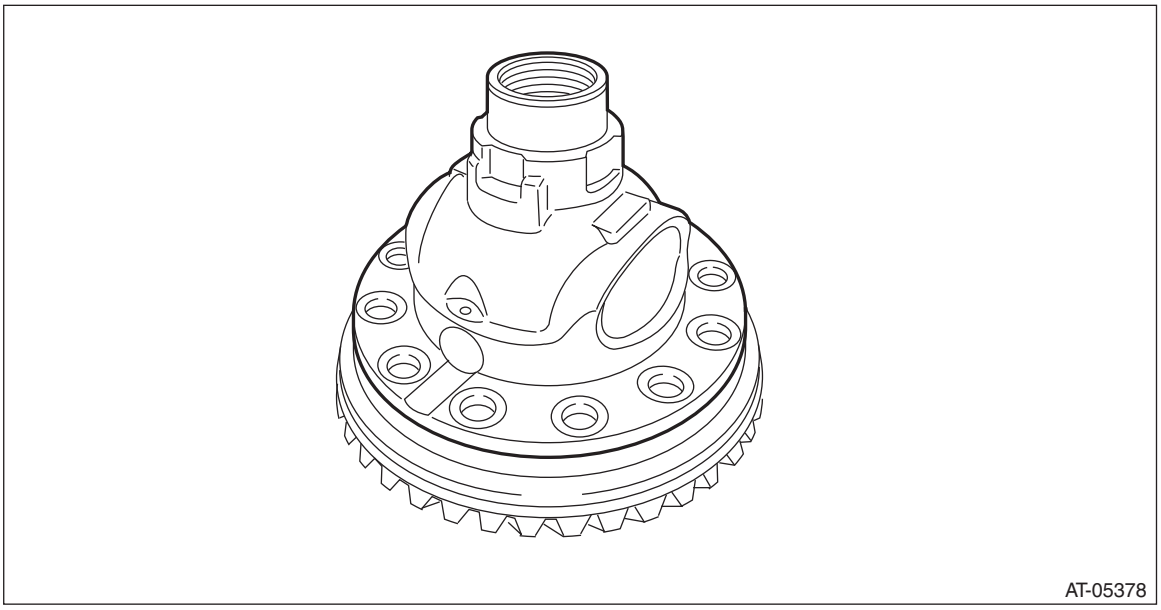
(A) Lock plate

8) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-281, INSTALLATION, Drive Pinion Shaft Assembly.>
9) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-267, INSTALLATION, Primary Pulley and Secondary Pulley.>
10) Install the transmission case. <Ref. to CVT(TR690)-248, INSTALLATION, Transmission Case.>
11) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
12) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
13) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
17) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
18) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
19) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
20) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

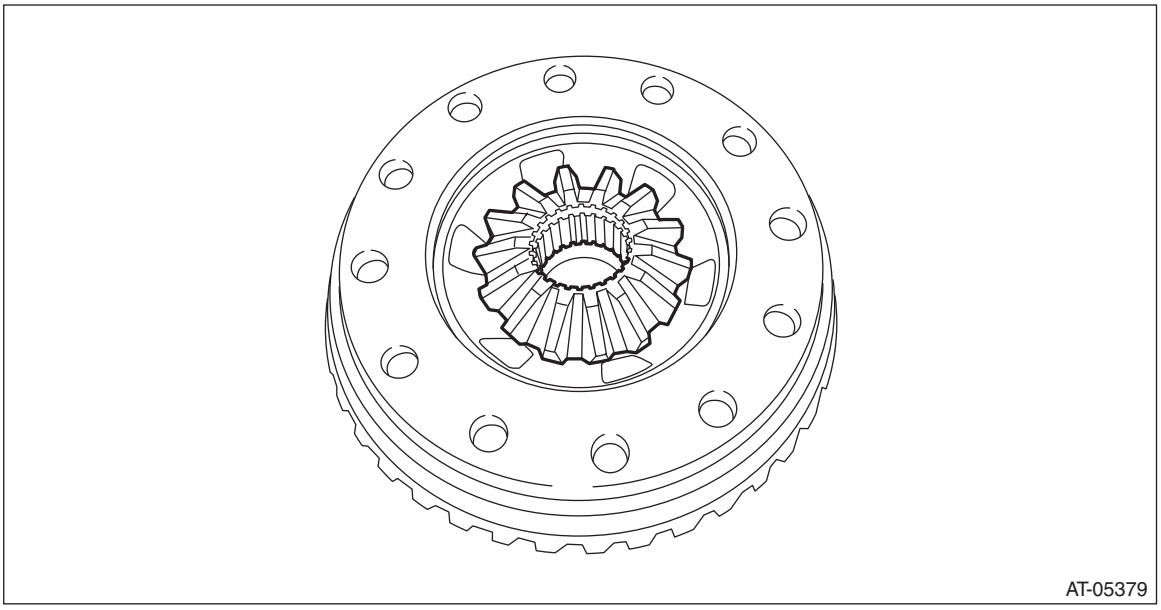


C: DISASSEMBLY

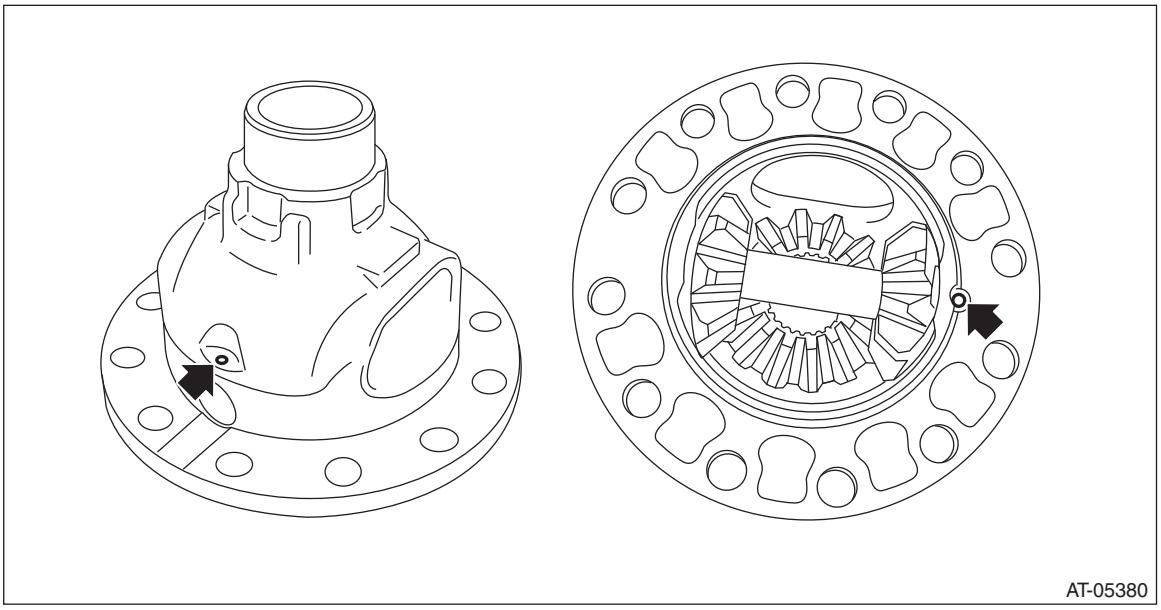
1. DIFFERENTIAL CASE ASSEMBLY



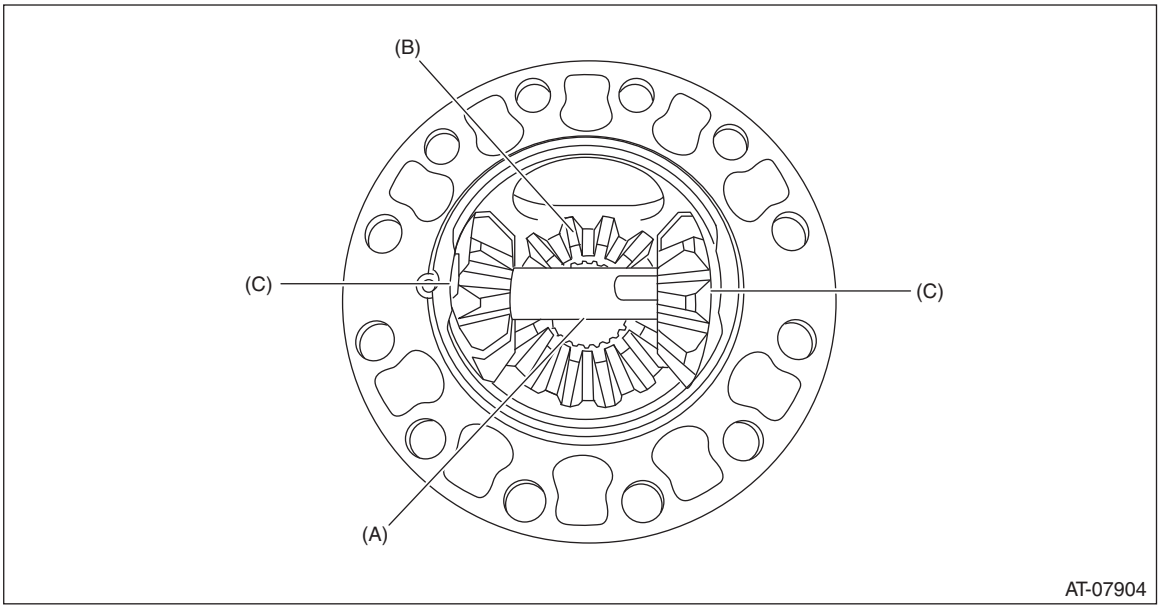
1) Remove the taper roller bearing using the ST.
ST 498077000 REMOVER



2) Remove the hypoid driven gear mounting bolt using the ST.
ST 18270KA020 SOCKET (E20)



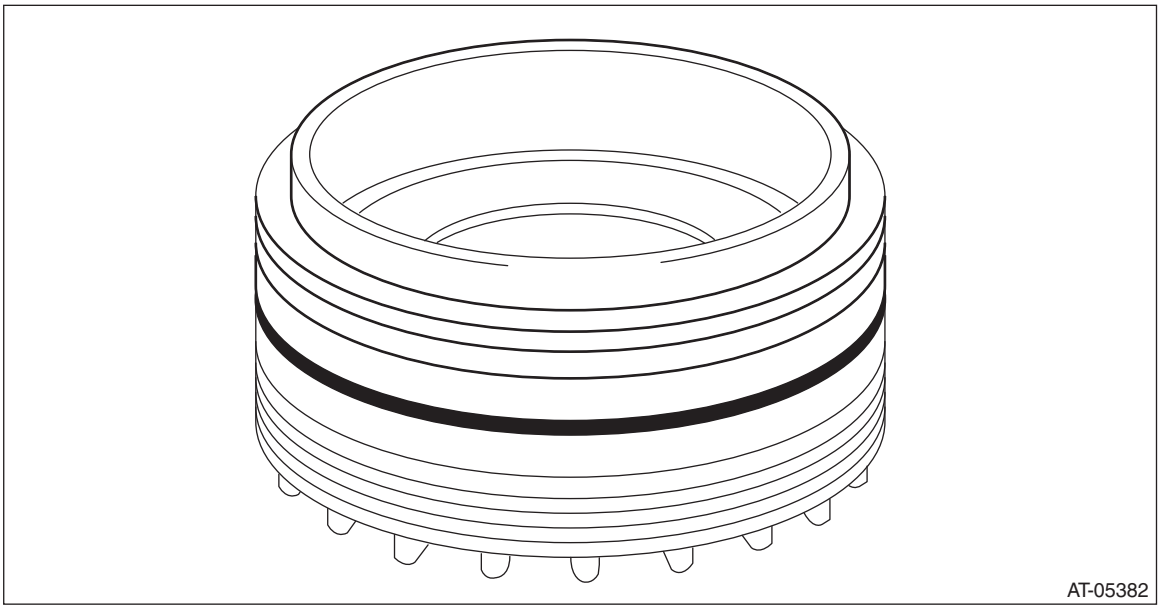
3) Remove the differential case (LH).



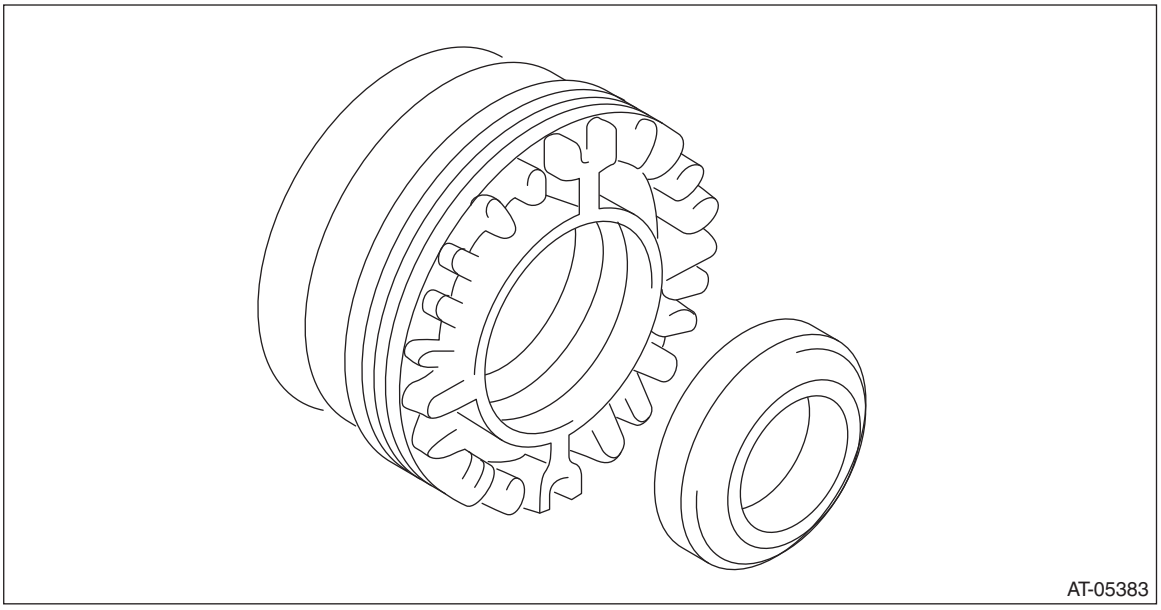
4) Remove the differential bevel gear and washer from differential case.

5) Remove the straight pin.

6) Remove the pinion shaft, then remove the differential bevel gear, washer and differential bevel pinion.

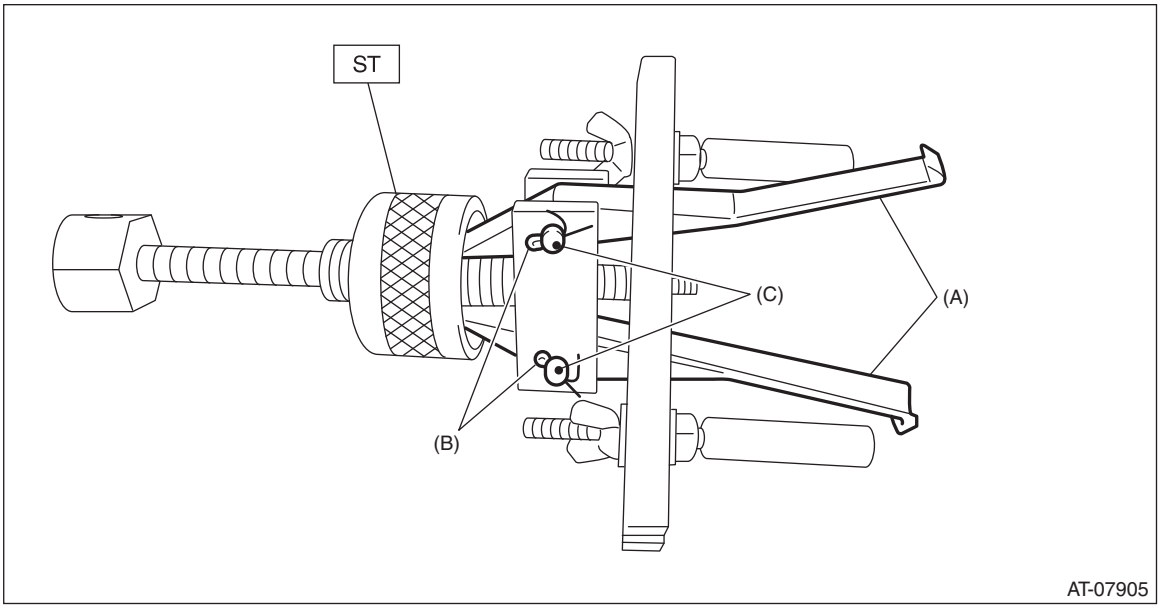


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion



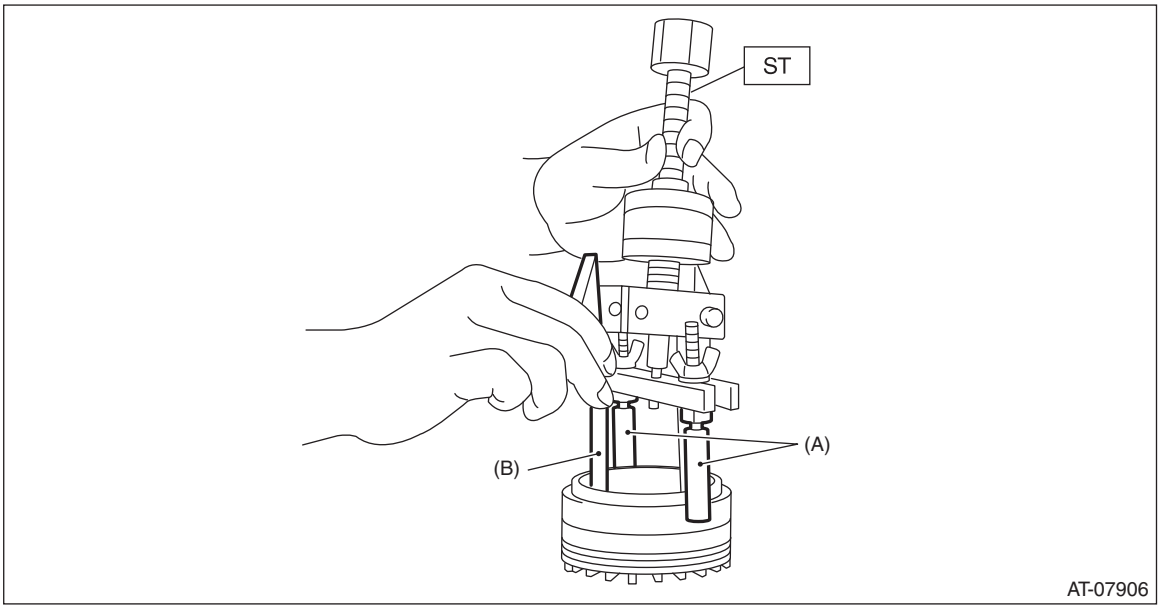
2. SIDE RETAINER

NOTE:
After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.



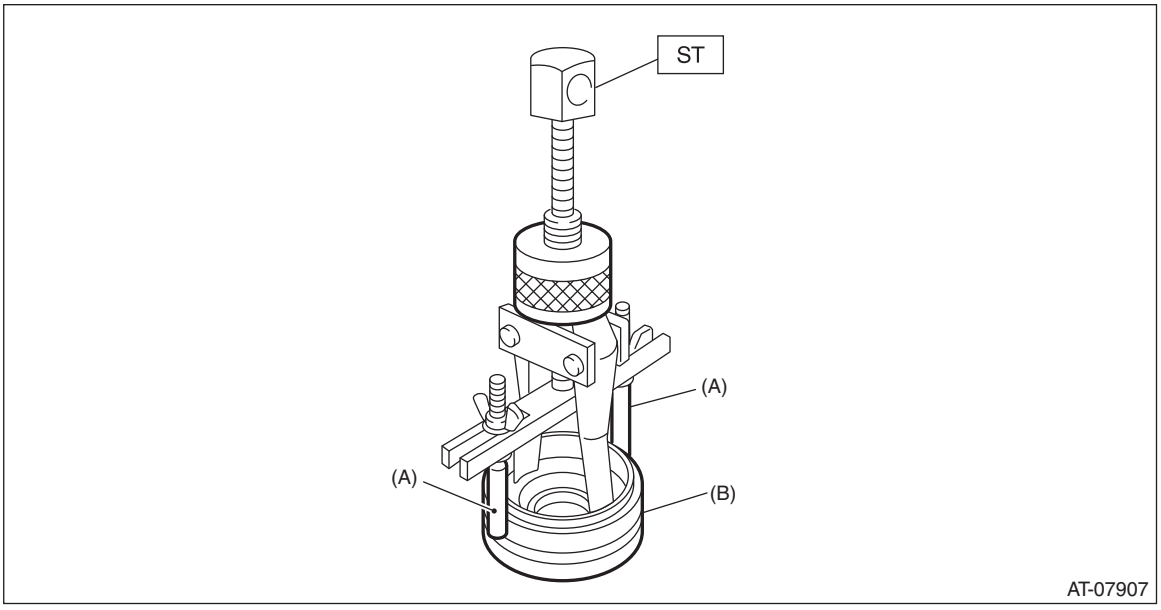
1) Remove the O-rings.

2) Remove the oil seal.



3) Remove the SPLIT PIN (ST), and then remove the claw.
ST 398527700 PULLER ASSY

(A) Claw
(B) Split pin
(C) Pin

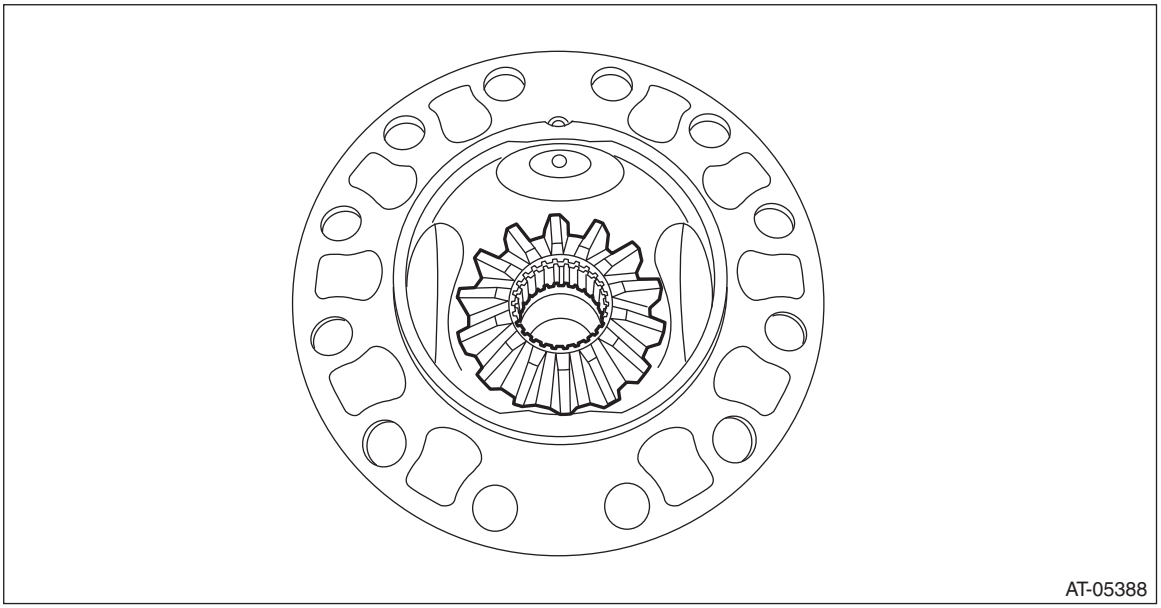


4) Attach two claws to the outer race, and set the ST to side retainer.
ST 398527700 PULLER ASSY

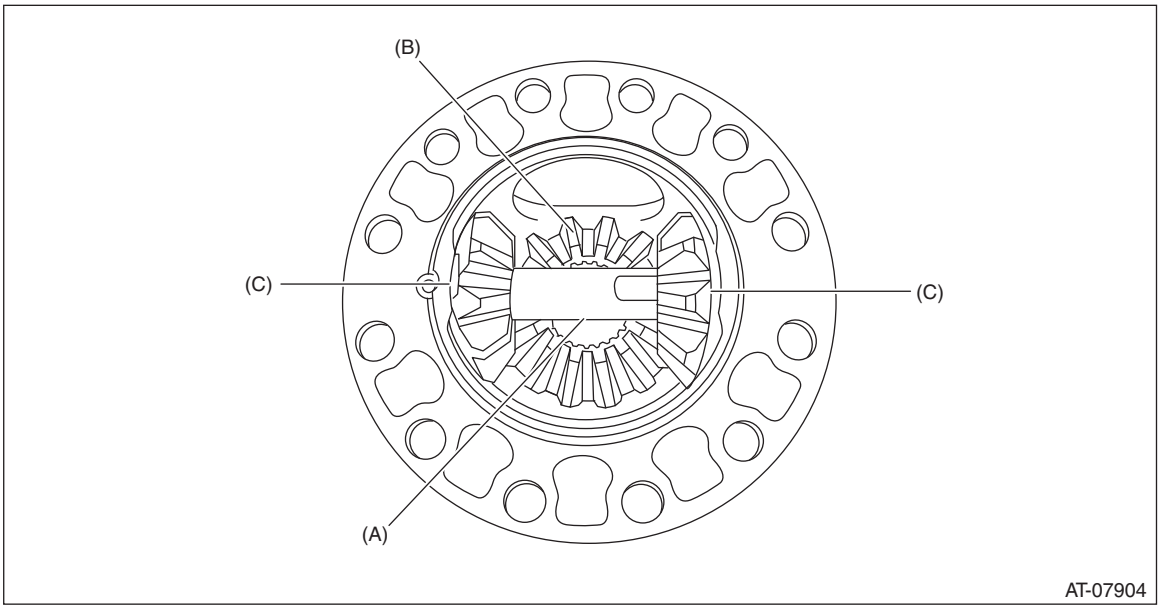
(A) Shaft
(B) Claw

5) Restore the removed claws to original position, and install the pin and split pin.
6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.
ST 398527700 PULLER ASSY

NOTE:
Replace the bearing inner and outer races as a single unit.



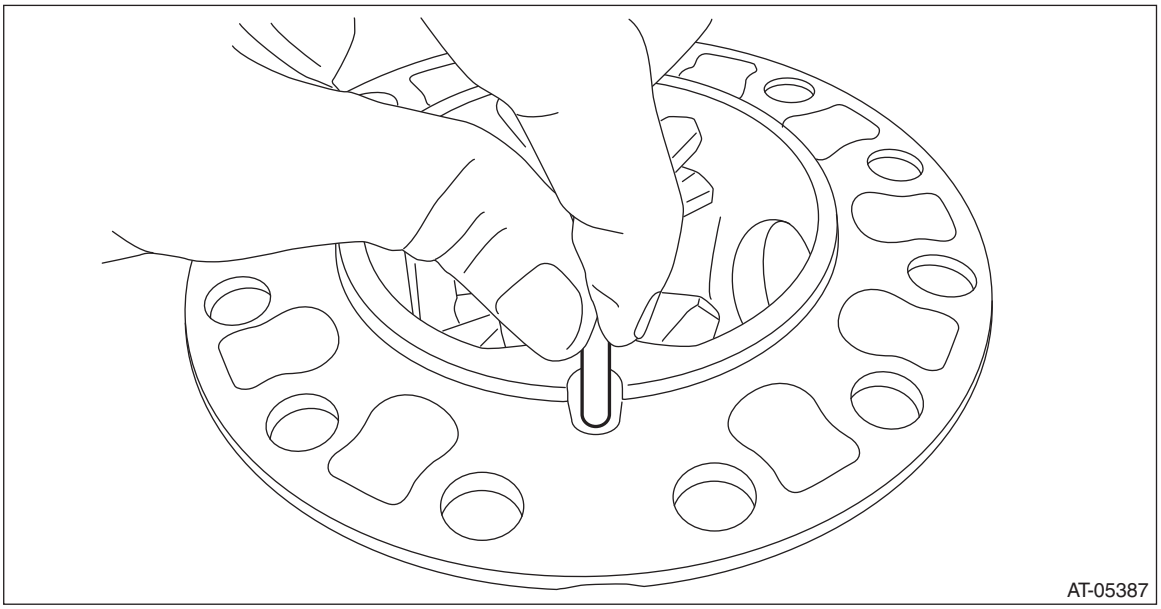
(A) Shaft
(B) Side retainer



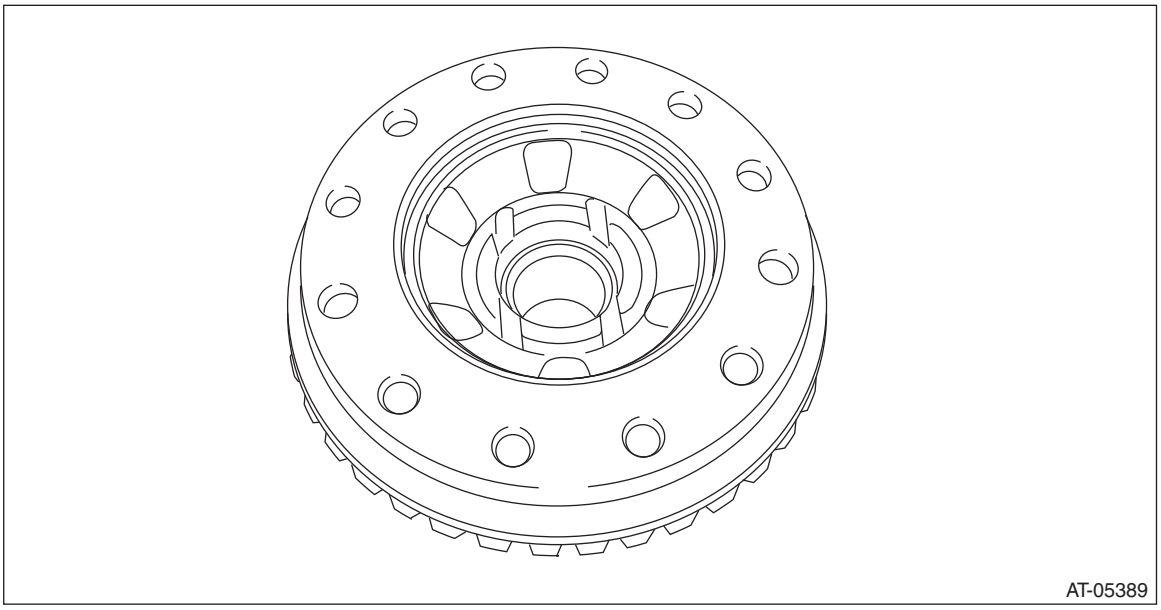
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

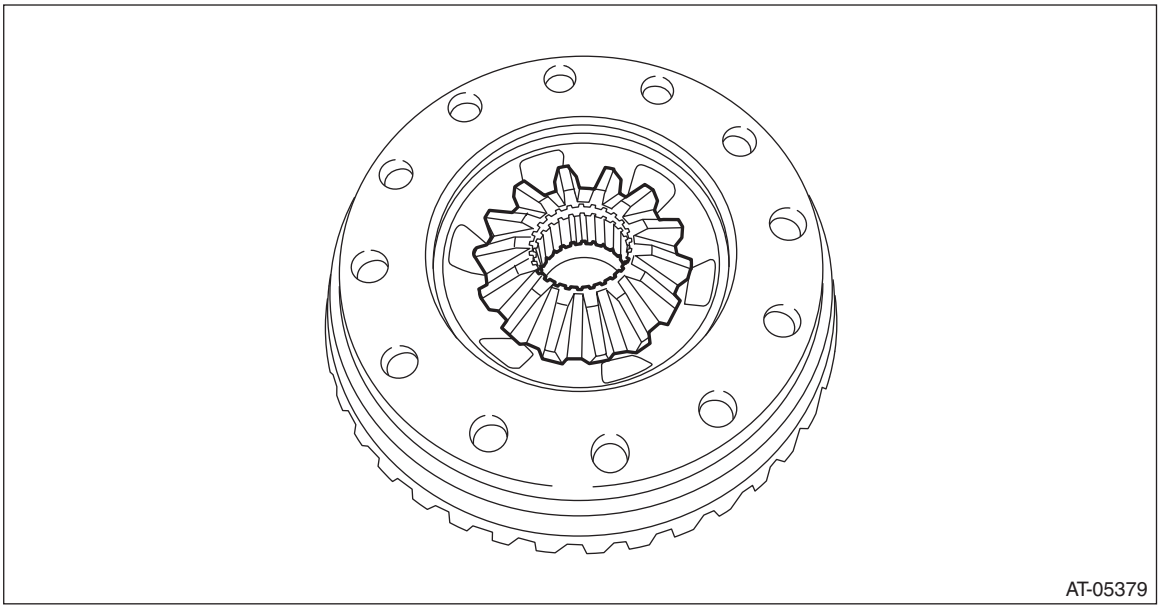
1) Install the washer and differential bevel gear into differential case (LH).



2) Install the differential bevel gear pinions into differential case (LH) and install the pinion shaft.

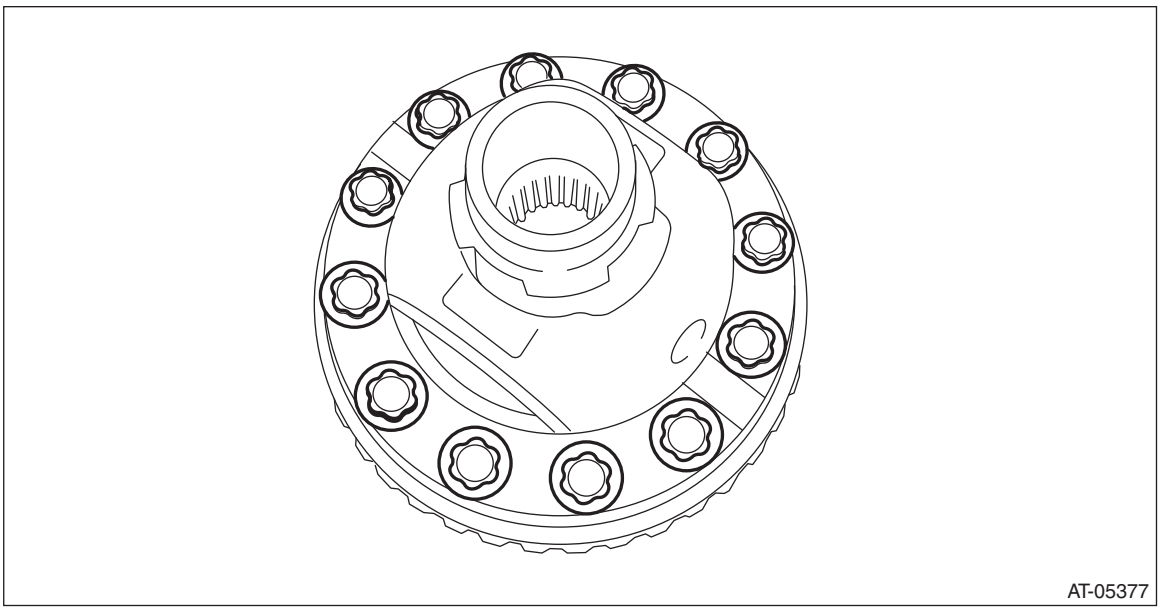


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion



3) Install the straight pin.

4) Install the differential case (RH) to hypoid driven gear and secure with vise.

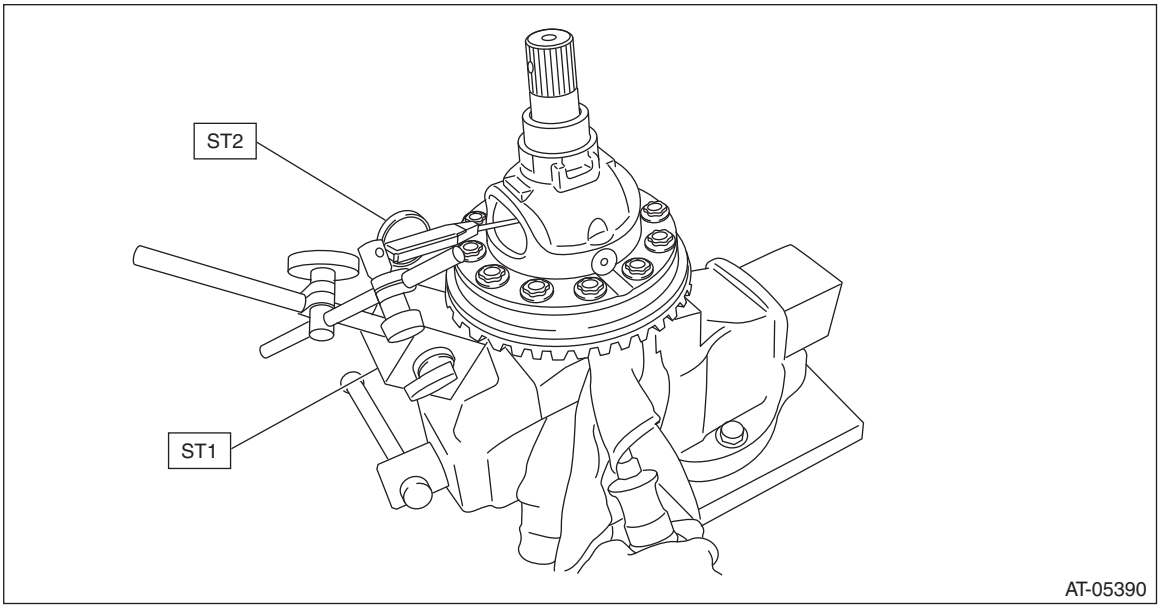


5) Install the washer and differential bevel gear to the differential case (RH).

6) Using the ST, install the hypoid driven gear by tightening the installation bolt.
ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

7) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

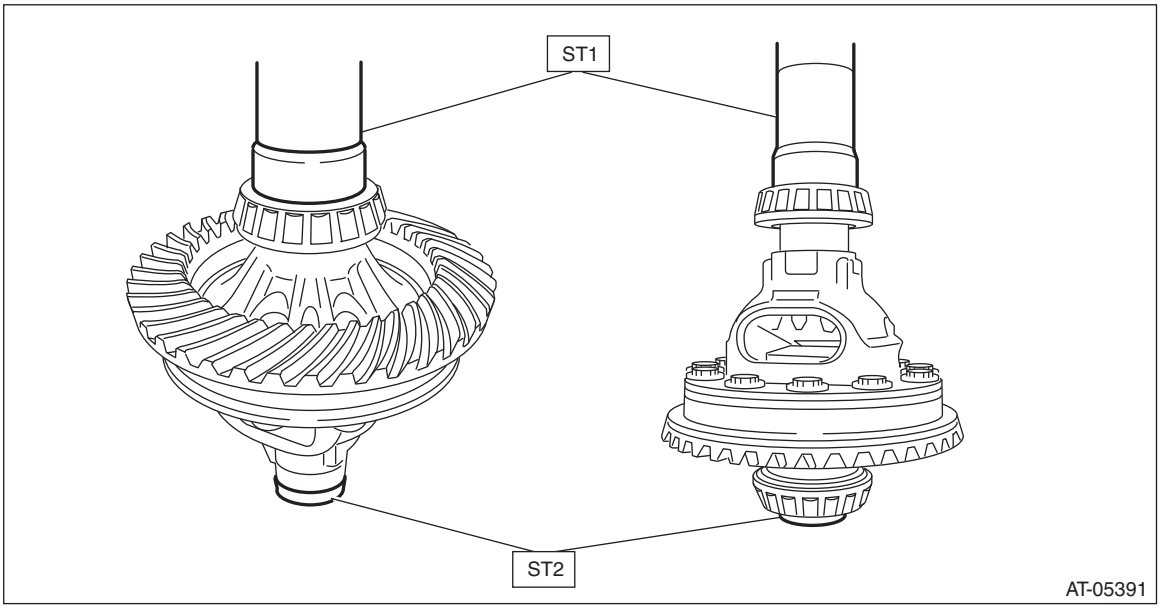


Tightening angle:
45°±2°

8) Measurement of backlash (selection of washer)
(1) Install the SUBARU genuine axle shaft to differential case.
Part No. 38415AA070Axle shaft
(2) Measure the gear backlash using ST1 and ST2, and then insert the ST2 through the window of differential case.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

NOTE:
• Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.
• When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.

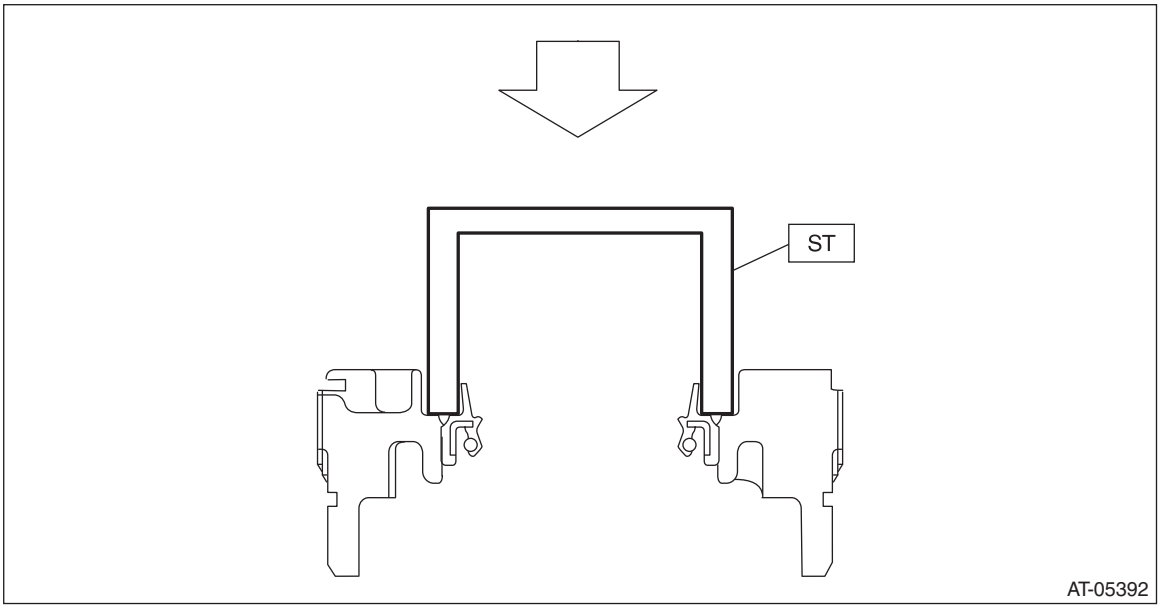


Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)

(3) If the backlash is not within specification, select a washer from the table below and replace.

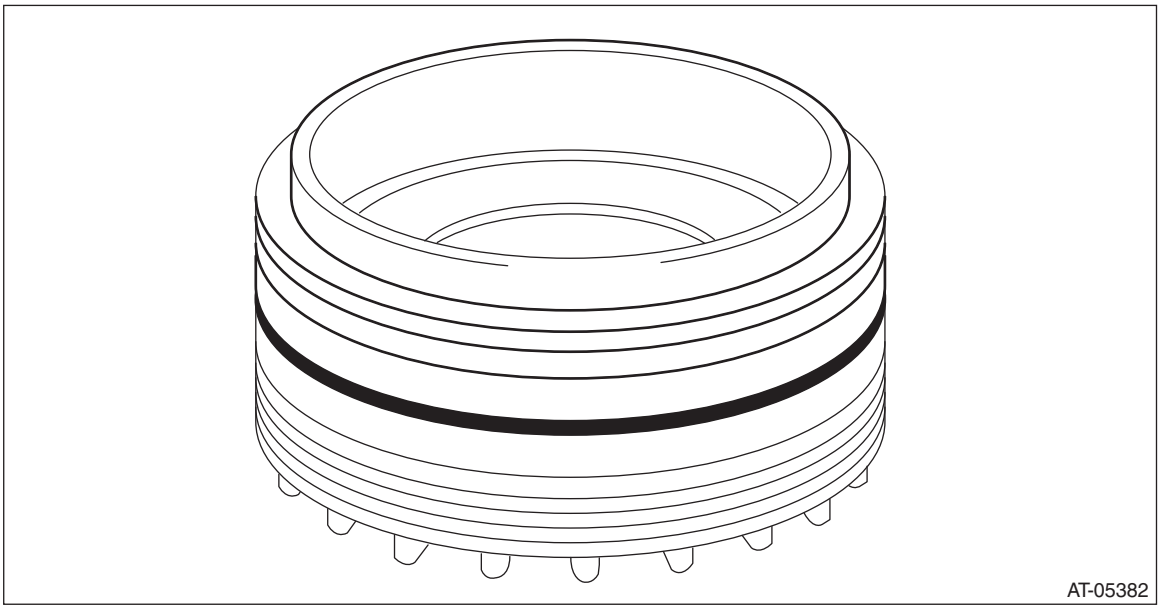
Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

9) Using the ST, install the left and right taper roller bearings.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 SEAT



2. SIDE RETAINER

NOTE:
After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.
1) Press-fit the bearing outer race to side retainer.
2) Using the ST, install the oil seal.

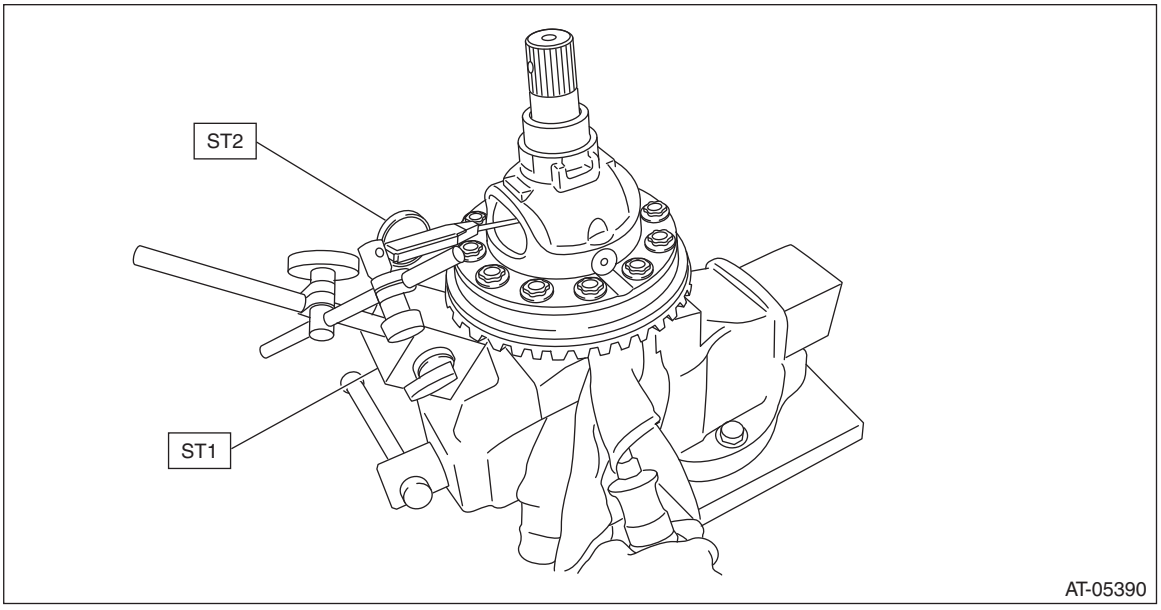


NOTE:
- Use a new oil seal.
- Apply differential oil to the oil seal lip.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

3) Install the O-rings.

NOTE:
- Use new O-rings.
- Apply gear oil to O-ring.

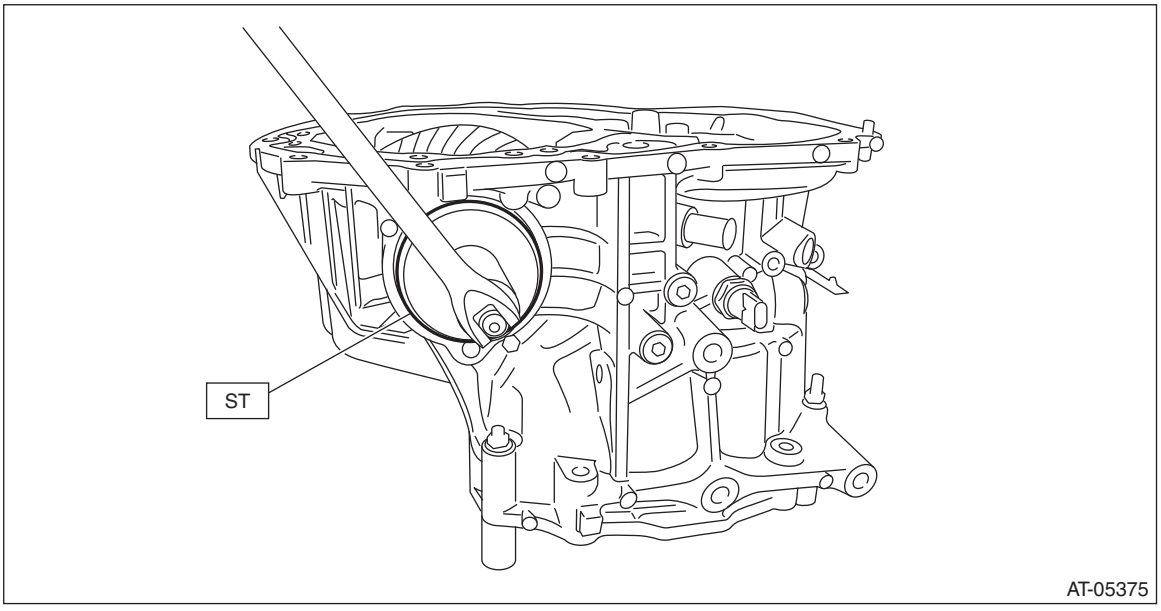


E: INSPECTION

- Check each component for scratches, damage or other faults.
- Inspect the backlash of the pinion gear.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

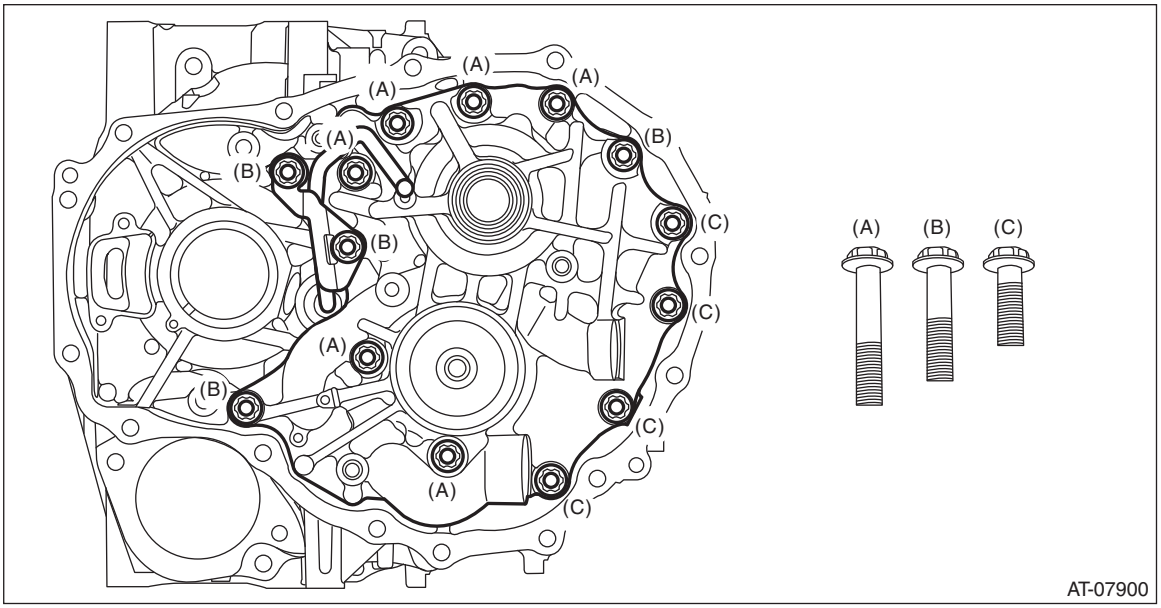
Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



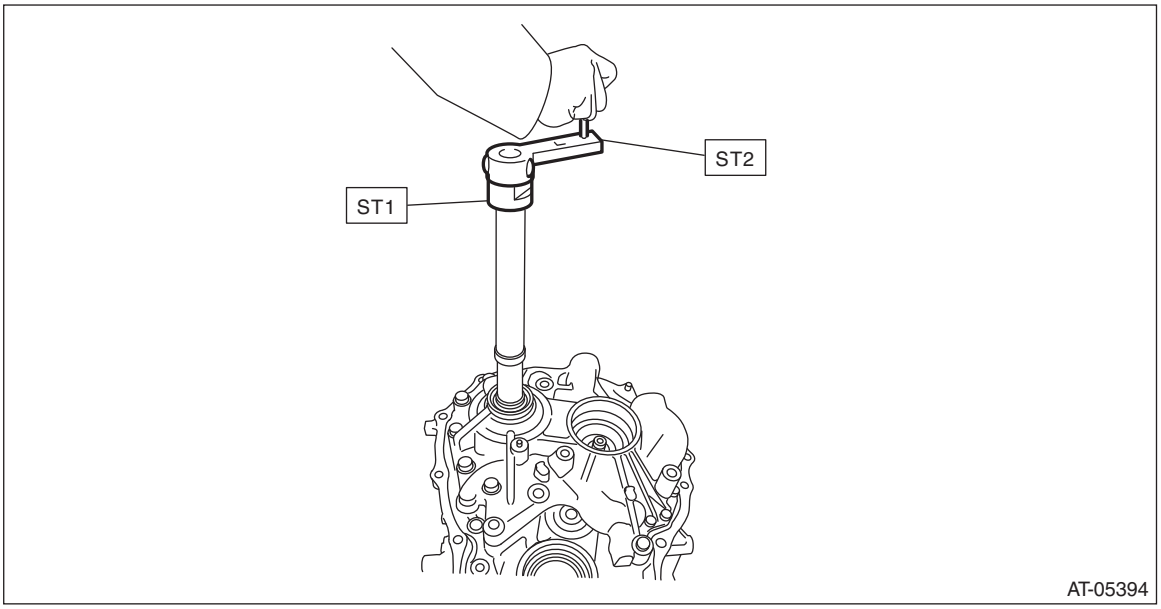
• Measure the hypoid gear backlash, and then adjust it to be within specification. <Ref. to CVT(TR690)-314, ADJUSTMENT, Front Differential Assembly.>

F: ADJUSTMENT

1) Using the ST, screw-in the retainer until resistance is felt.



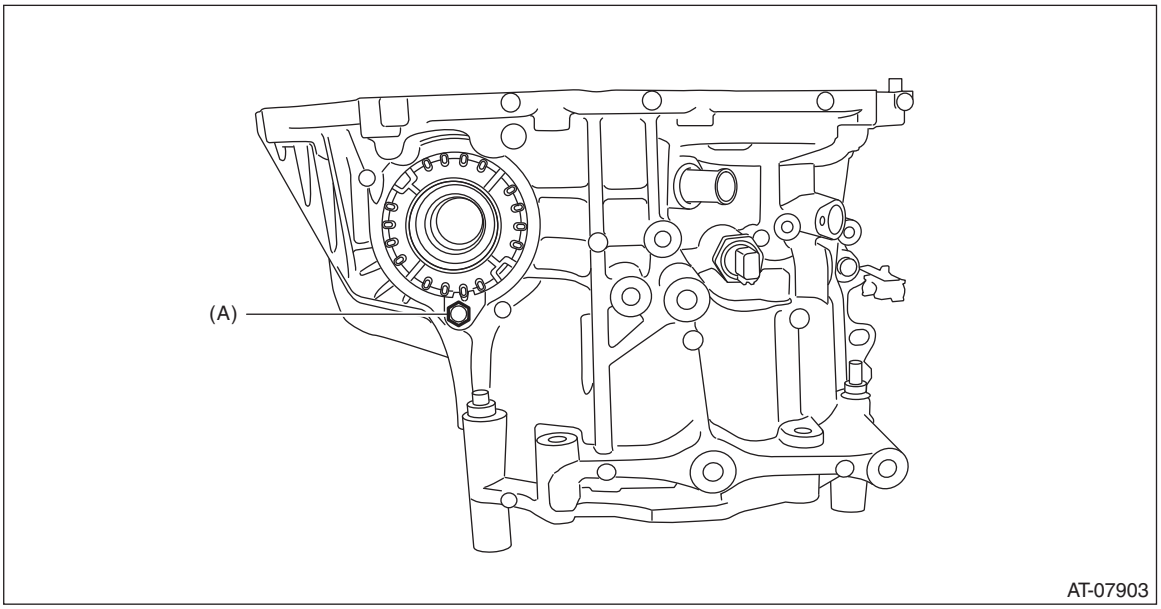
NOTE:
RH side should be screwed-in more than LH side.
ST 18658AA020 WRENCH COMPL RETAINER



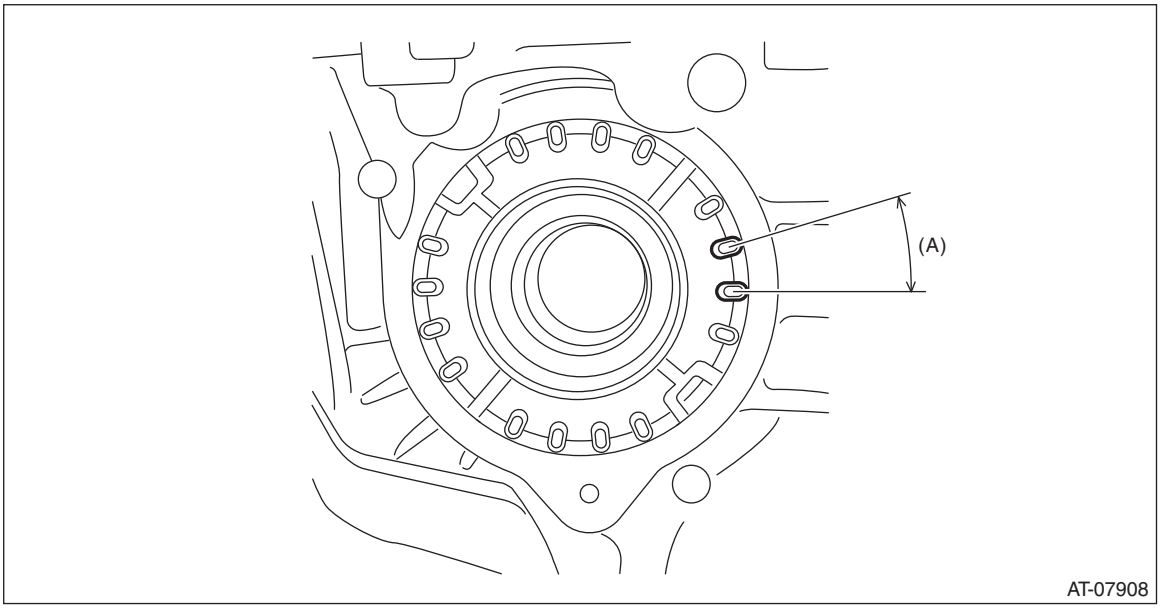
2) Remove the remaining liquid gasket from the mating surface completely.
3) Using the ST, install the drive pinion assembly to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)



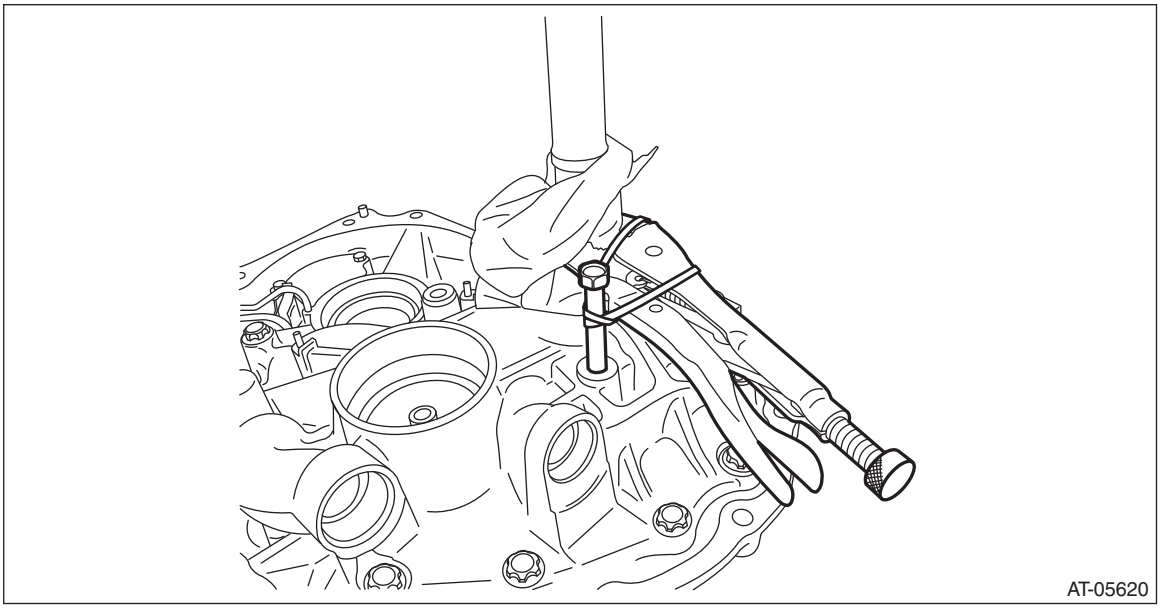
4) Rotate the drive pinion shaft ten times or more using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH



5) While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is “zero” when the pinion shaft comes to the point where it doesn't rotate.

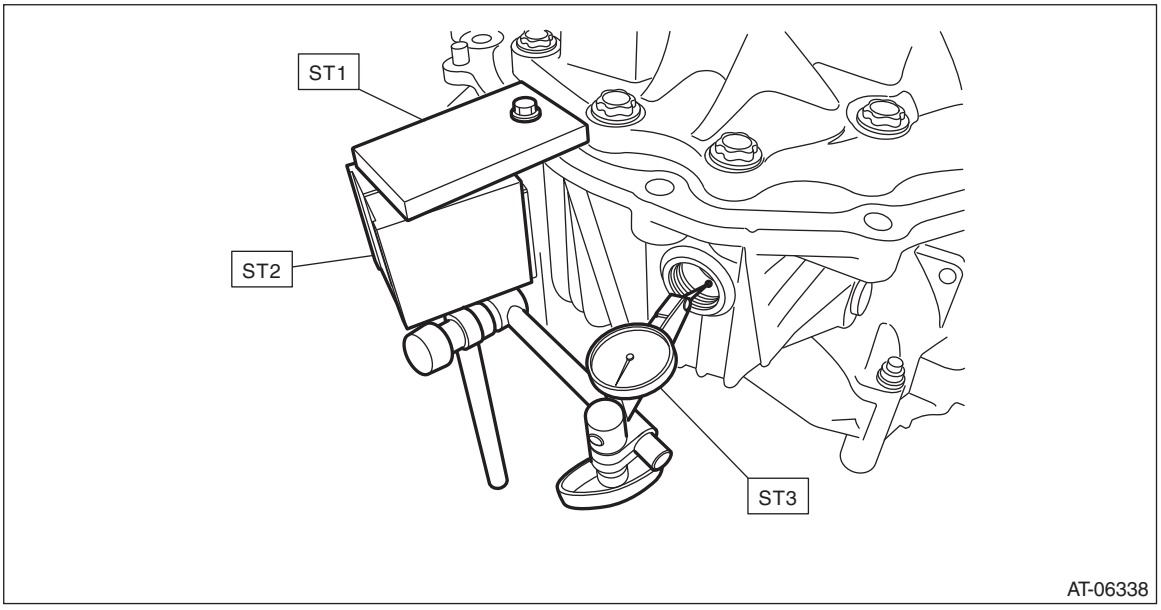
6) After the “zero” state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Loosen the retainer RH and retighten until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.

(A) Lock plate



NOTE:
Turning the retainer by every one tooth changes the backlash approx. 0.05 mm (0.0020 in).

(A) 1 tooth



7) Insert the two SUBARU genuine axle shafts into differential case.
Part No. 38415AA070Axle shaft

8) Wrap the drive shaft pinion shaft with cloth and pinch with vise pliers. Install the bolt into the installation bolt hole of secondary pulley, and secure the bolt and vise pliers using a tie-wrap or wire.
Make sure the drive pinion shaft does not move.

9) Check the backlash is within specification using ST1, ST2 and ST3.
ST1 498255400 PLATE
ST2 498247001 MAGNET BASE
ST3 498247100 DIAL GAUGE

Backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)

10) Adjust the teeth contact of the front differential and drive shaft. <Ref. to CVT(TR690)-292, ADJUSTMENT, Drive Pinion Shaft Assembly.>

46.Oil Pump

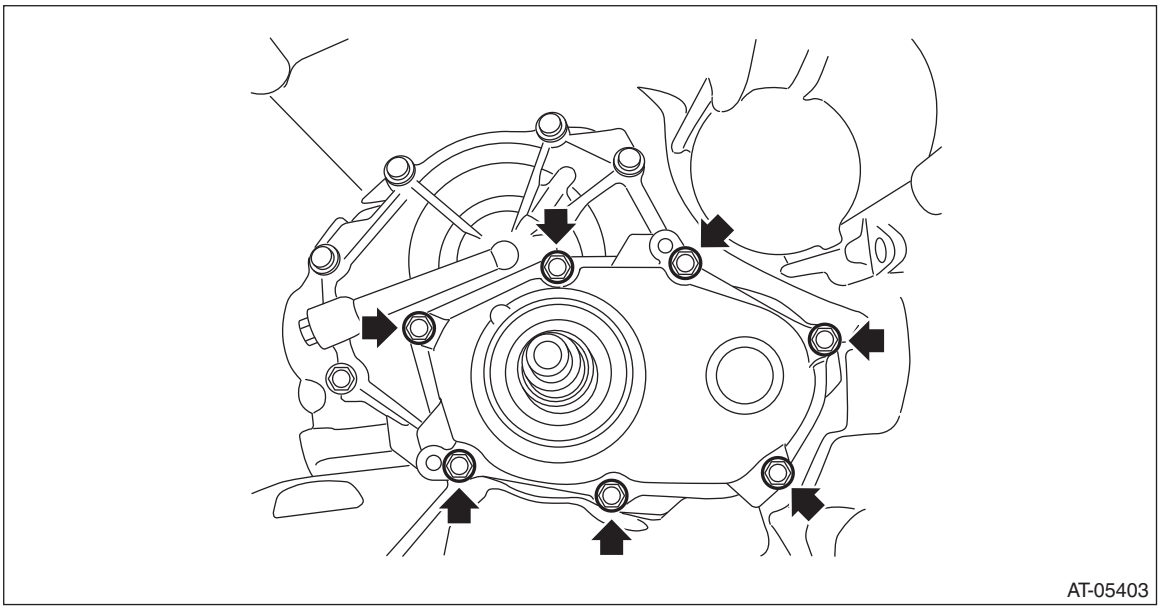
A: REMOVAL

NOTE:
Refer to “Drive Pinion Shaft” for removal procedures. <Ref. to CVT(TR690)-279, REMOVAL, Drive Pinion Shaft Assembly.>

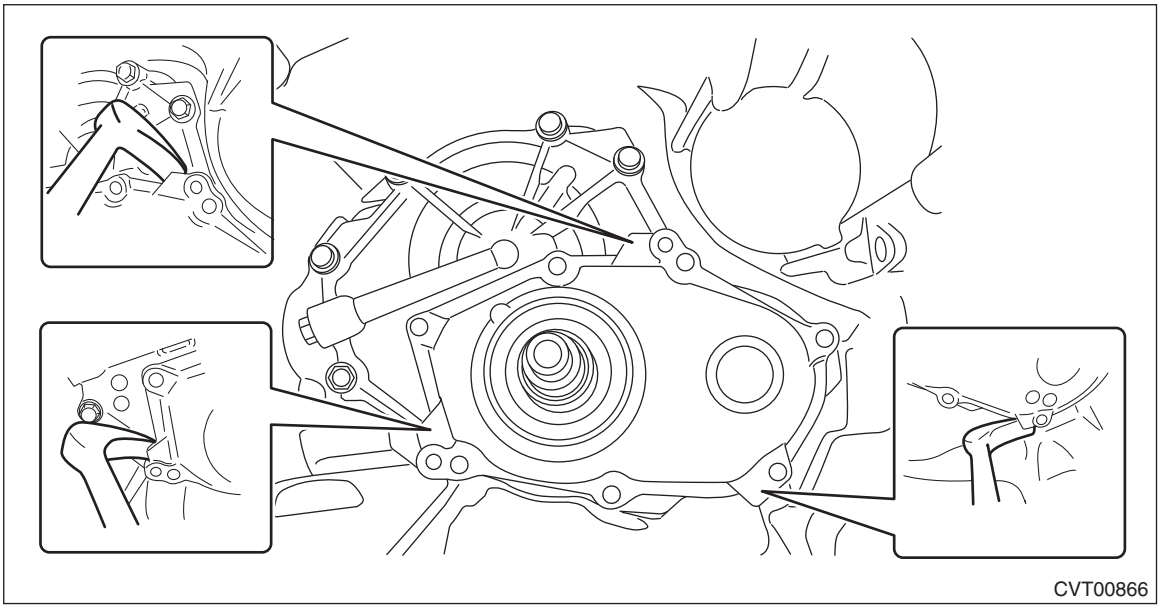
B: INSTALLATION

NOTE:
Refer to “Drive Pinion Shaft” for installation procedures. <Ref. to CVT(TR690)-281, INSTALLATION, Drive Pinion Shaft Assembly.>

C: INSPECTION

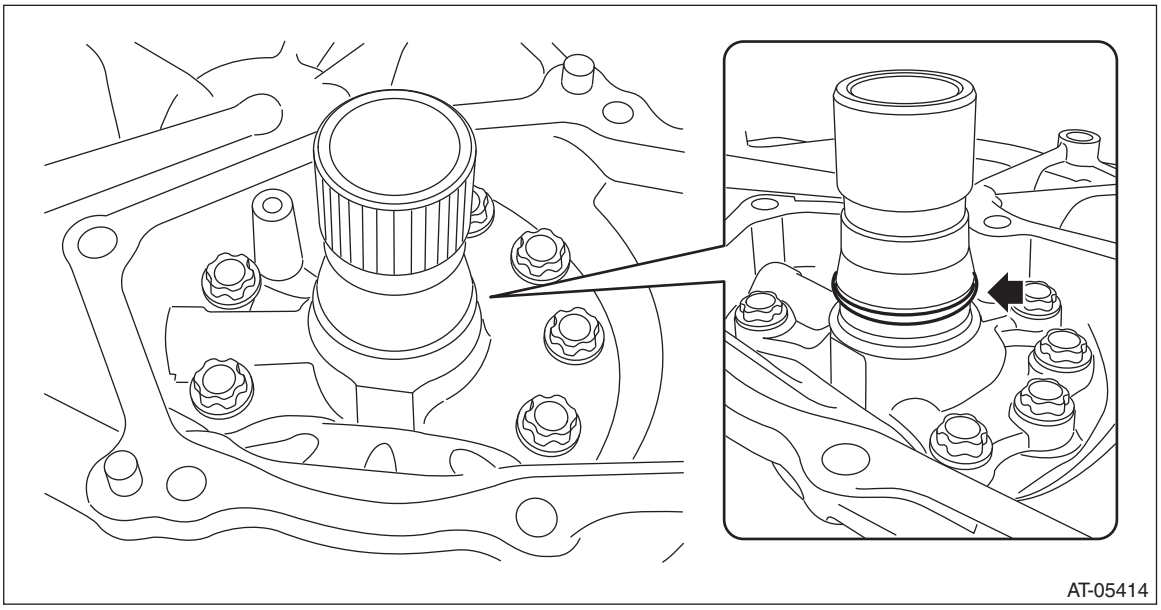


Check the following items.
- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.



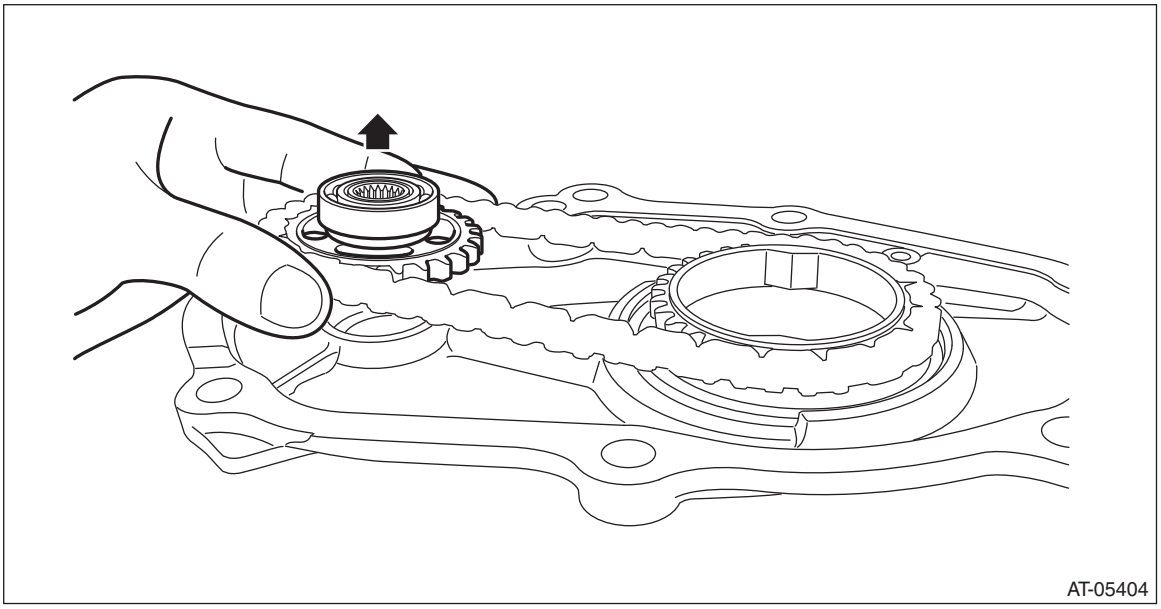
1) Measure the secondary pressure. <Ref. to CVT(TR690)-52, INSPECTION, Secondary Pressure (Line Pressure) Test.>
2) Remove the oil pan and oil strainer. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
3) Check oil strainer for clogging.
When oil strainer has no clogging, replace the oil pump.

47.Oil Pump Chain

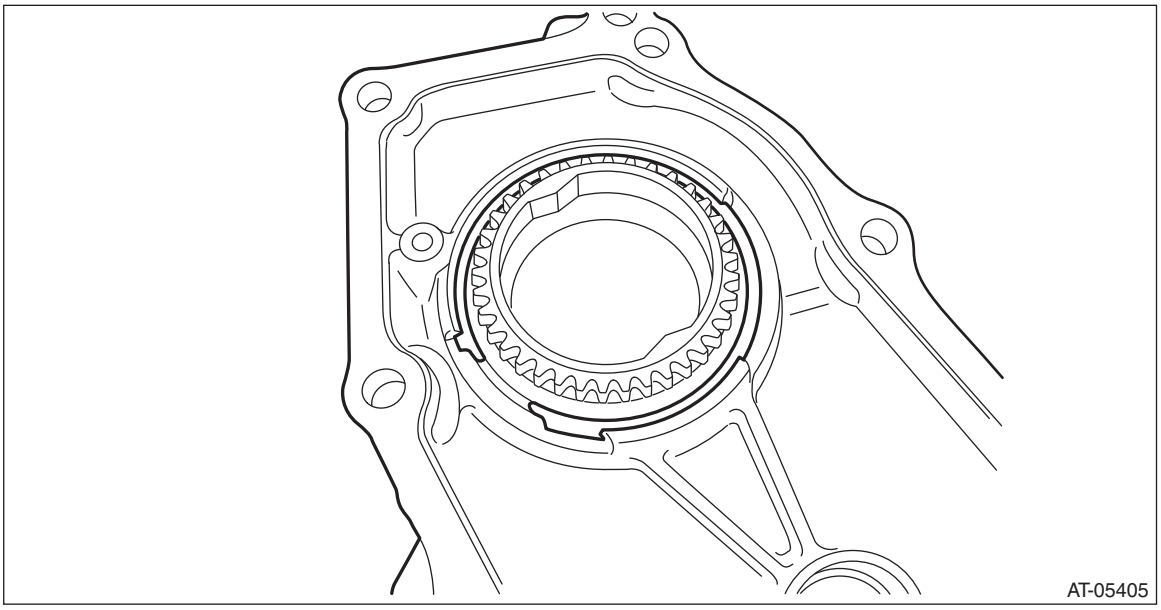


A: REMOVAL

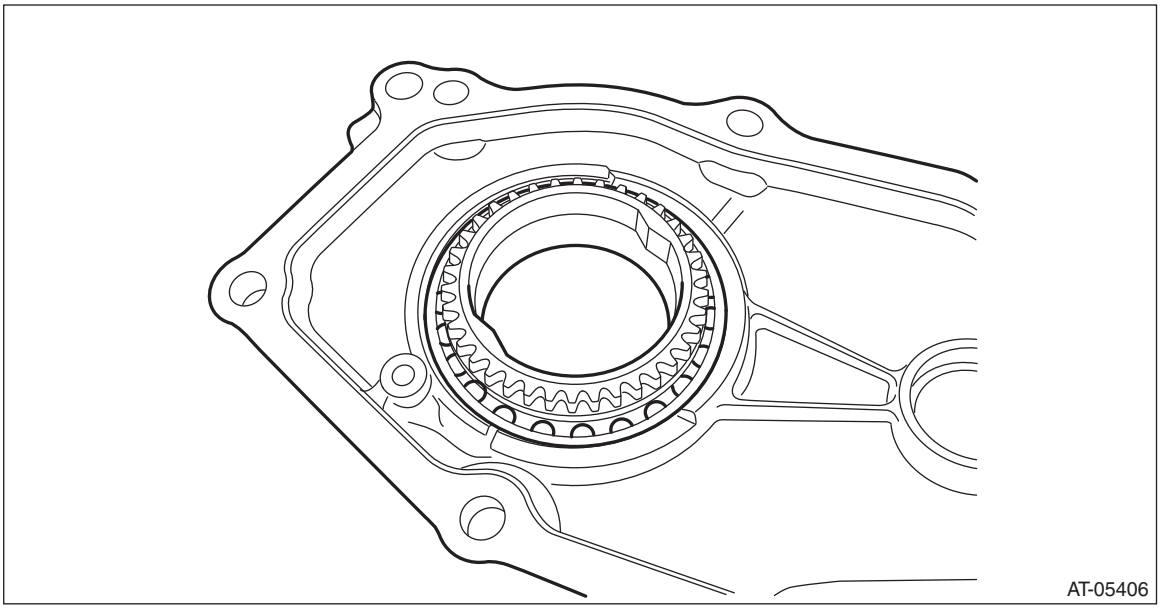
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-162, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover.



4) Remove the seal rings.



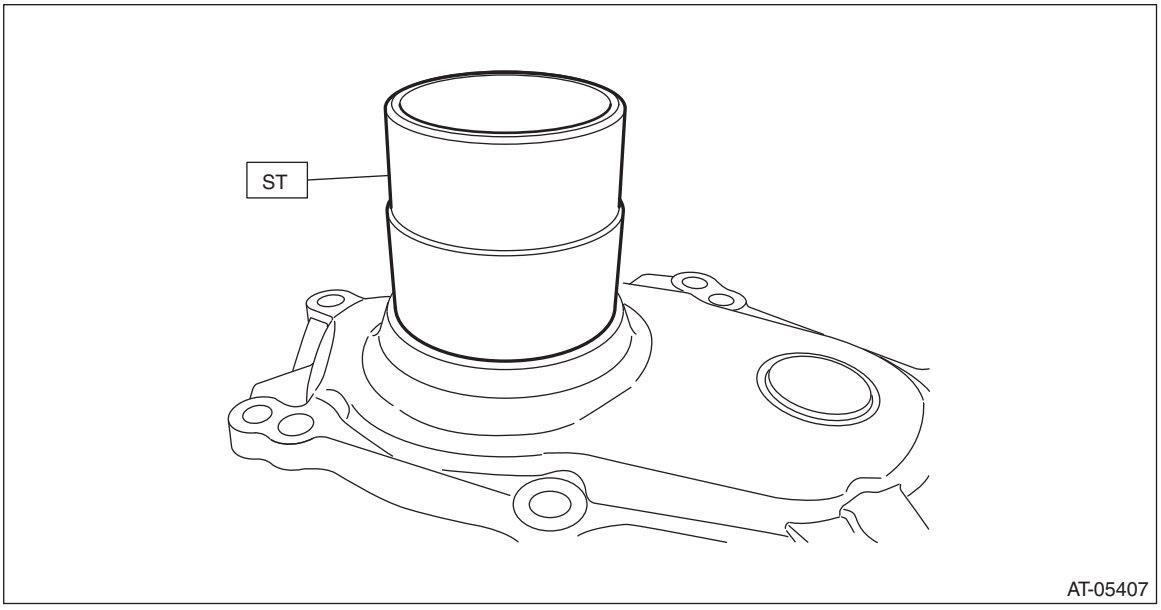
5) Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.



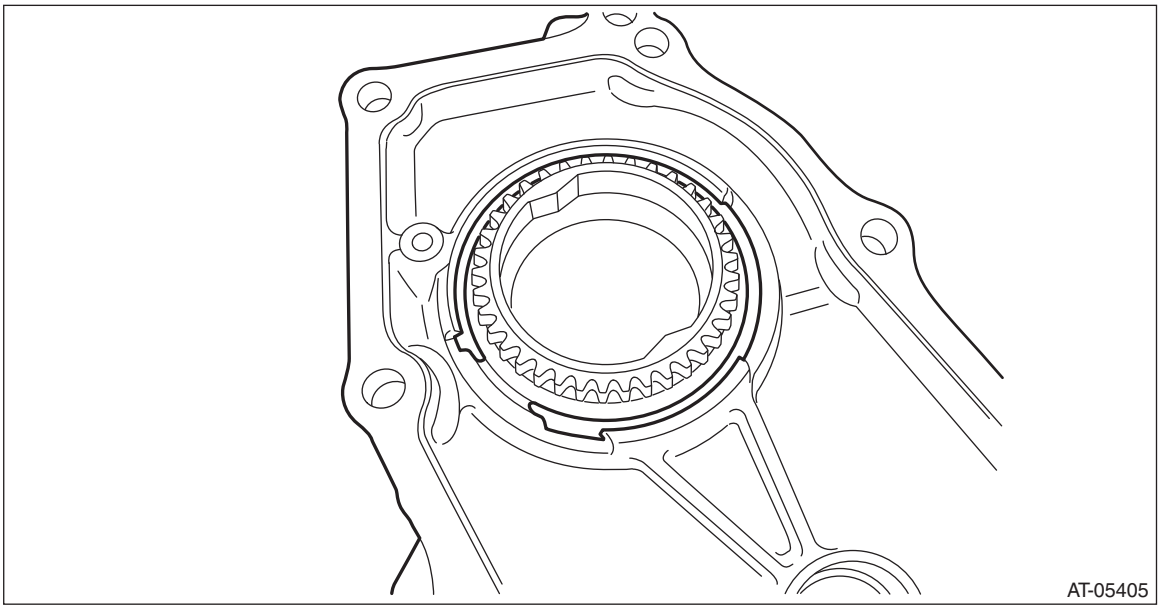
NOTE:
The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.

6) Remove the snap ring.

7) Remove the drive sprocket.



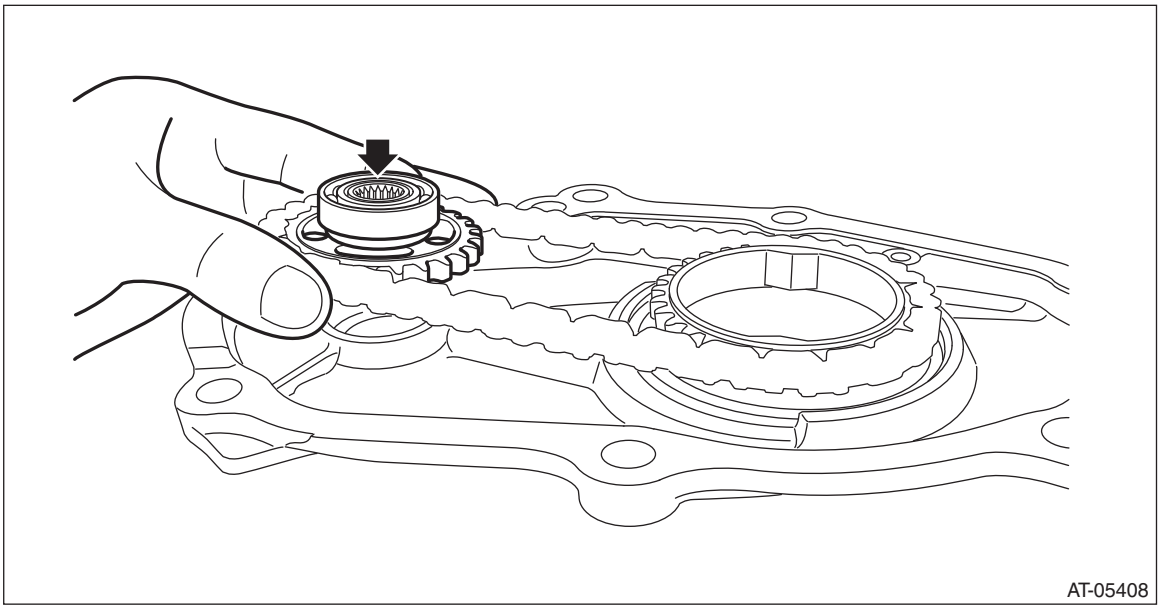
8) Remove the oil seal from the oil pump chain cover.



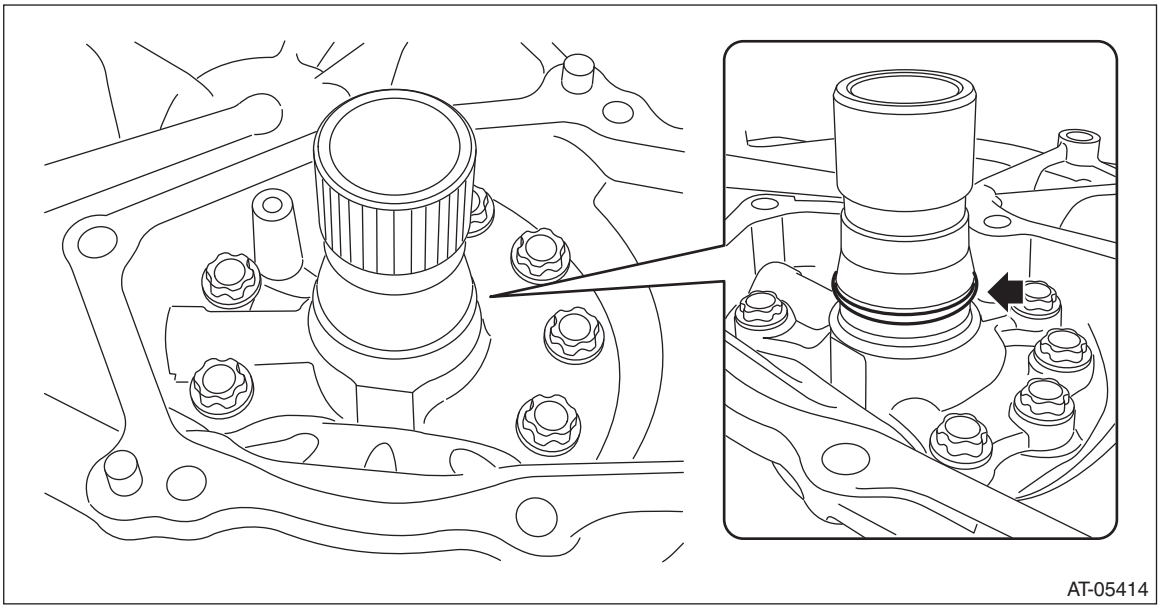
B: INSTALLATION

1) Clean the mating surface of oil pump chain cover and converter case cover.

2) Using the ST, install the oil seal.
ST 499755602 PRESS SNAP RING



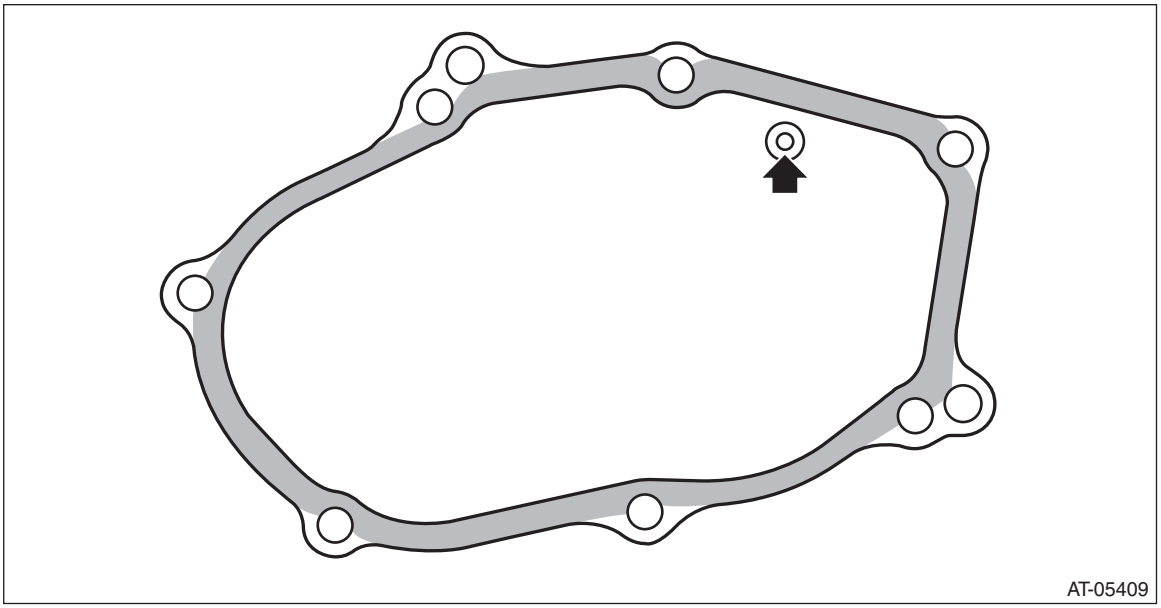
3) Install the drive sprocket and install the snap ring.



4) Place the oil pump chain on drive sprocket.

5) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.

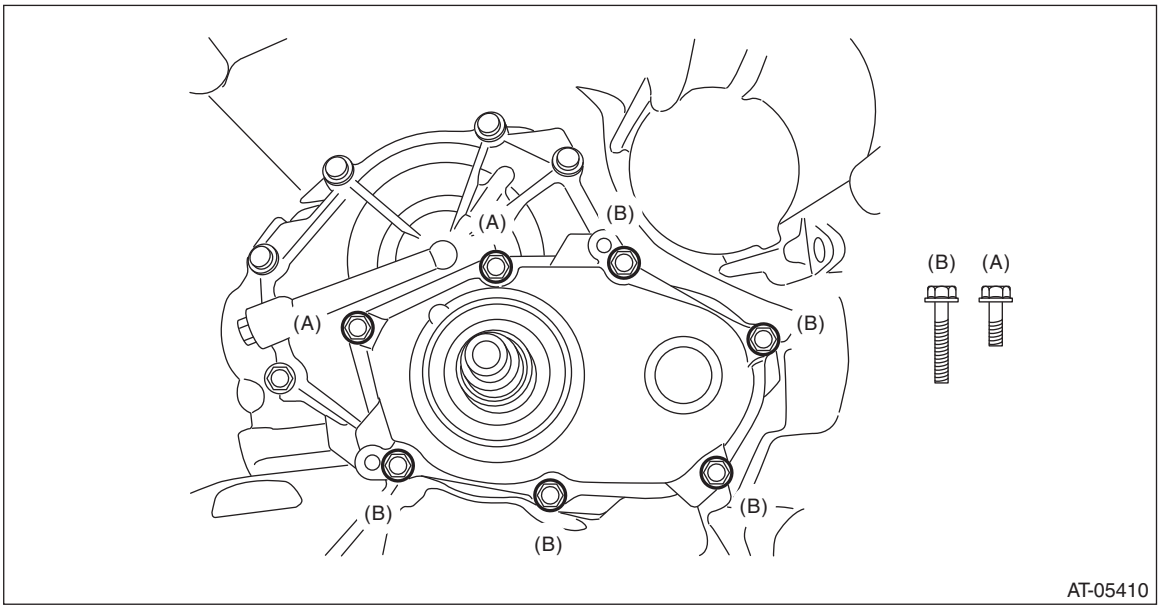
6) Install the seal rings.



NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.

7) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

CAUTION:
Do not apply liquid gasket at the arrowed hole.

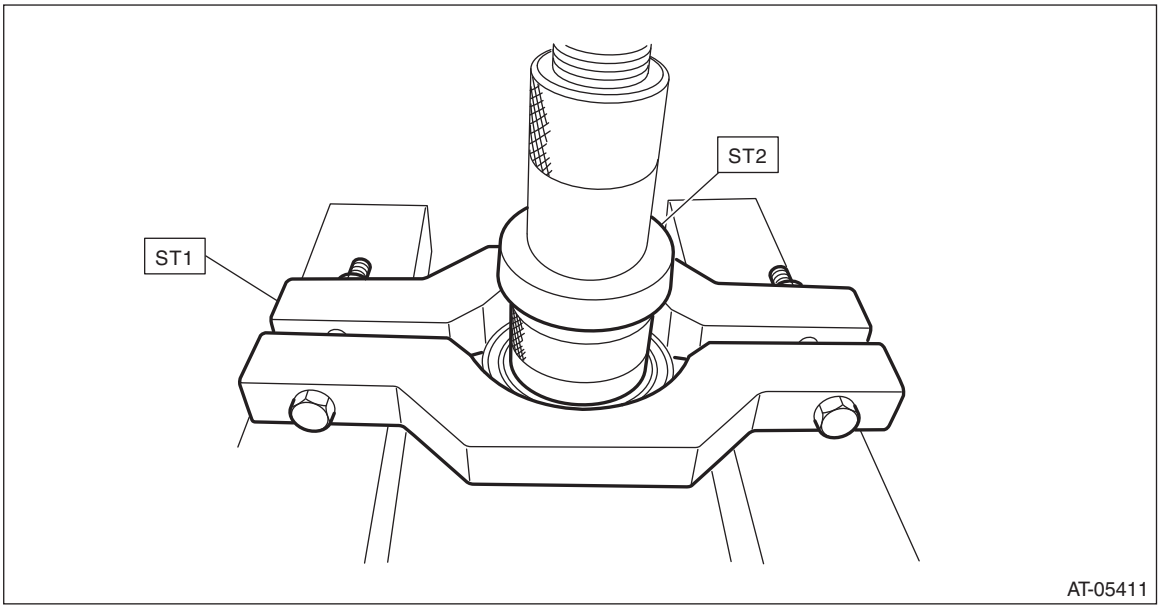


Liquid gasket:
THREE BOND 1216B or equivalent

8) Install the oil pump chain cover.

NOTE:
There are two types of bolt.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

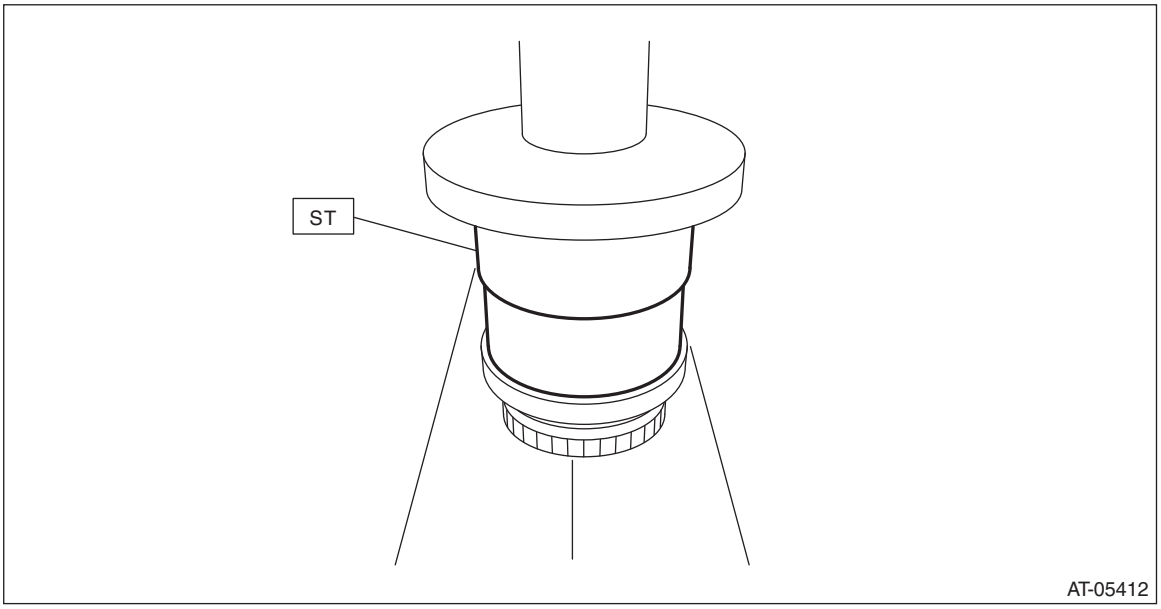


9) Install the torque converter assembly. <Ref. to CVT(TR690)-162, INSTALLATION, Torque Converter Assembly.>
10) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. DRIVE SPROCKET

1) Remove the ball bearing using ST.
ST1 498077600 REMOVER
ST2 399513600 INSTALLER



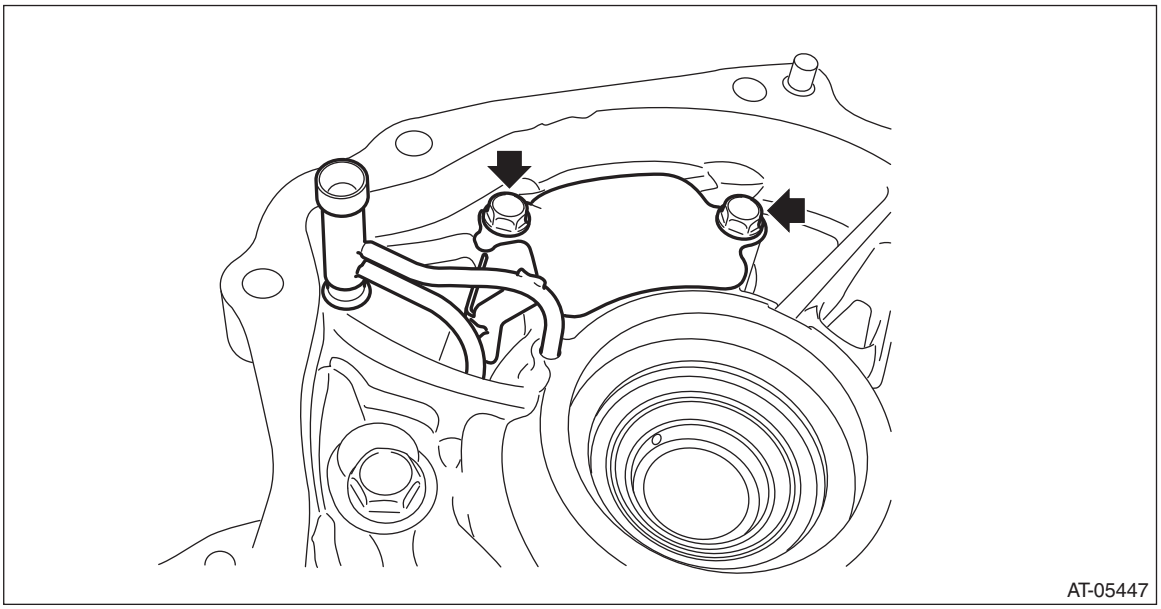
D: ASSEMBLY

1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING

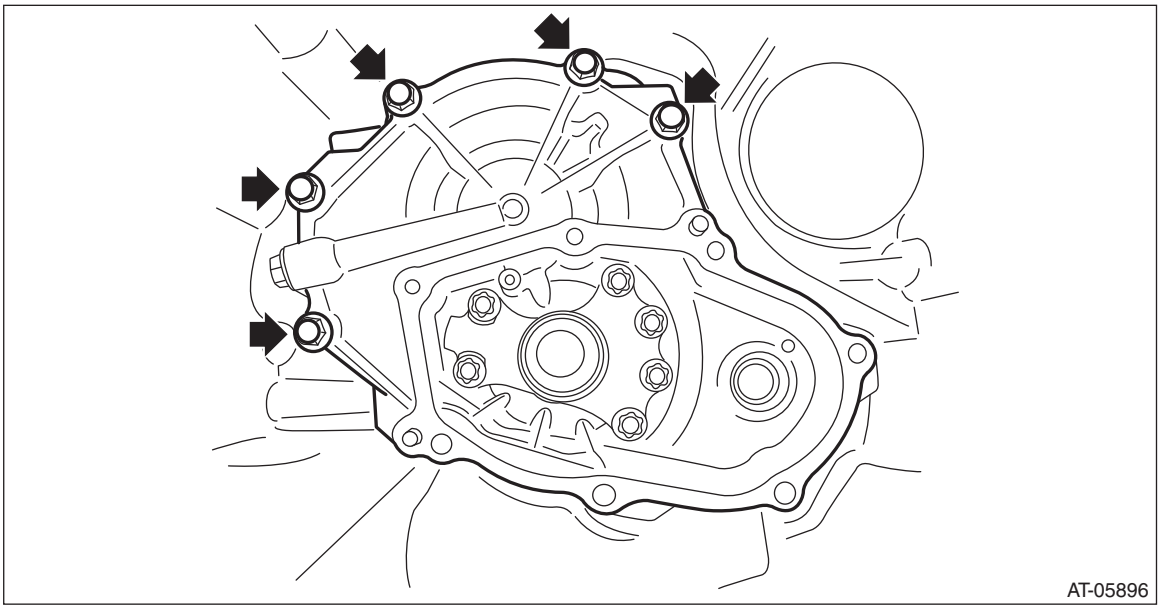
E: INSPECTION



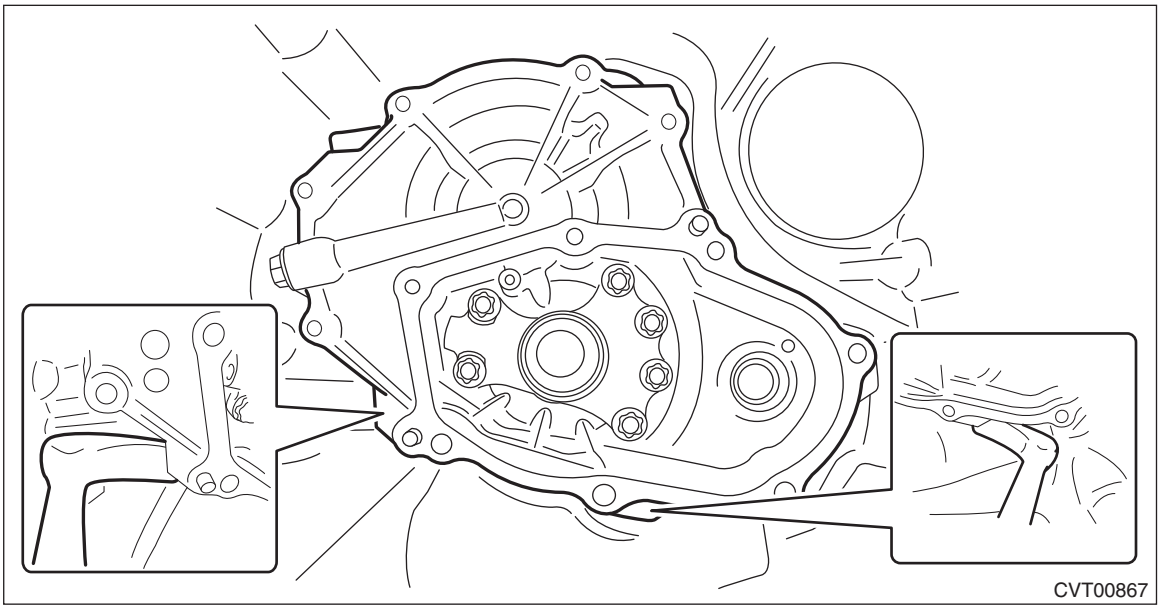
- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.

- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.

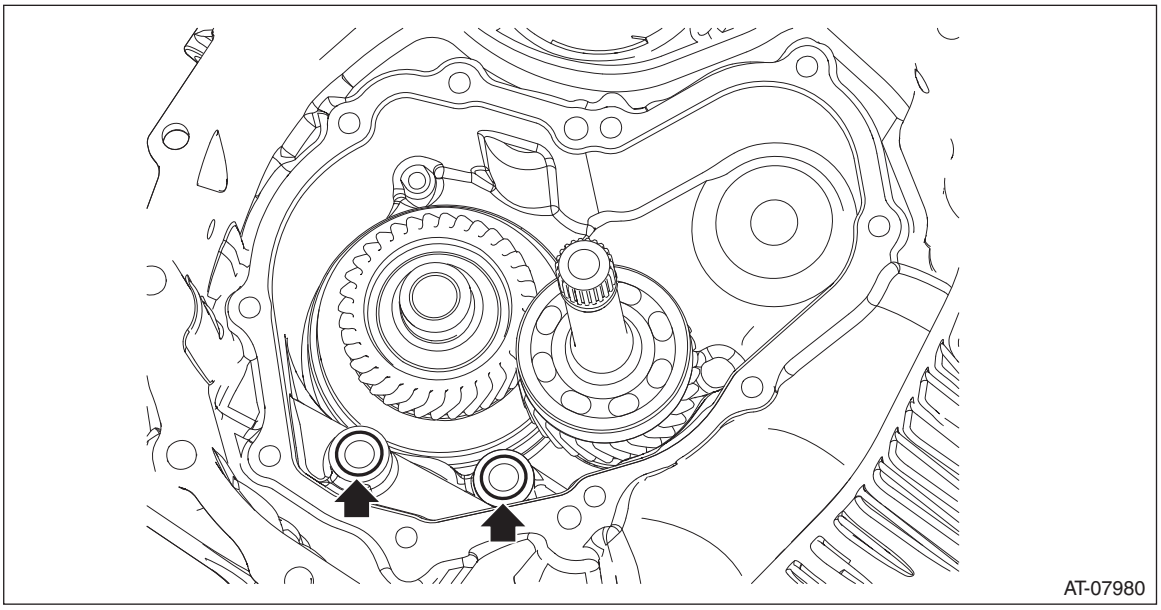
48.Converter Case Cover



A: REMOVAL

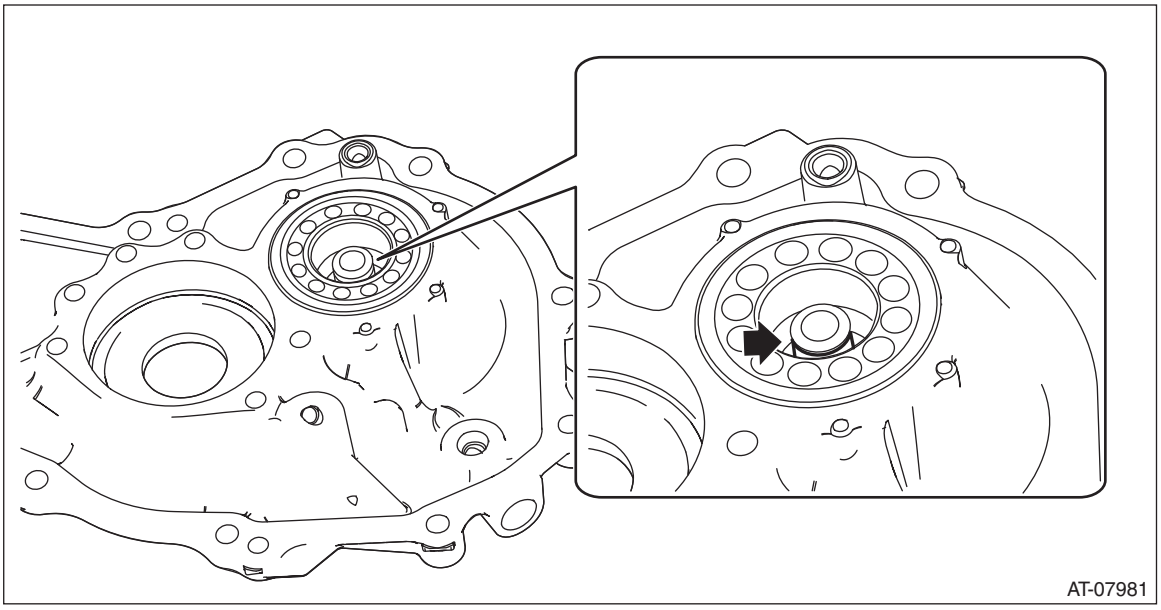


1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-246, REMOVAL, Transmission Case.>
12) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-263, REMOVAL, Primary Pulley and Secondary Pulley.>
13) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-279, REMOVAL, Drive Pinion Shaft Assembly.>
14) Remove the oil stopper plate and lubrication pipe.

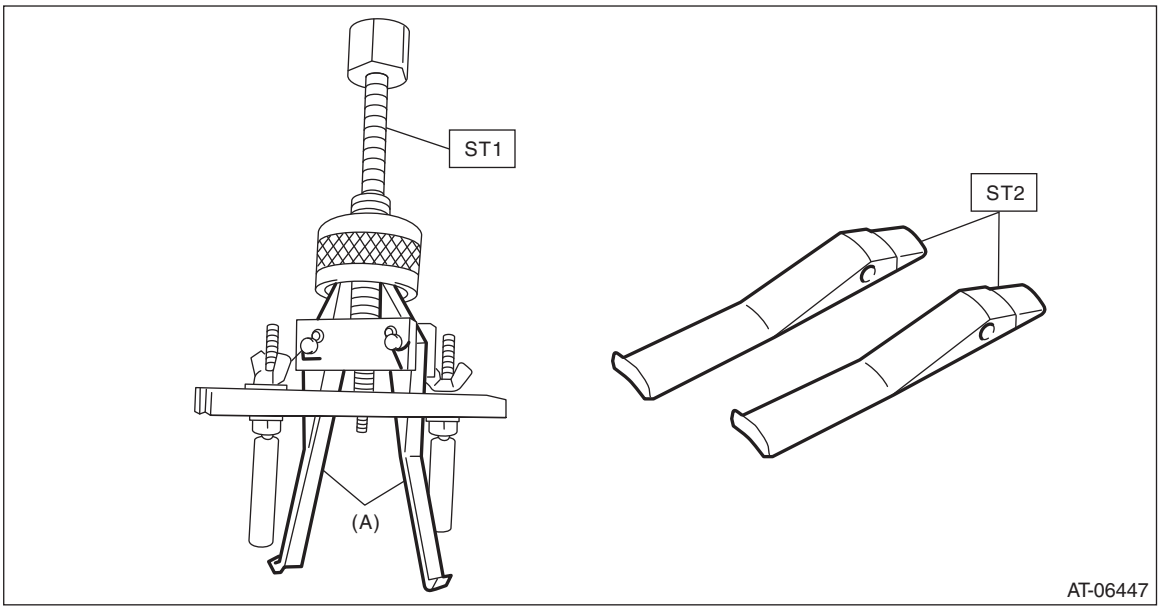


15) Flip over the converter case.
16) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-319, REMOVAL, Oil Pump Chain.>

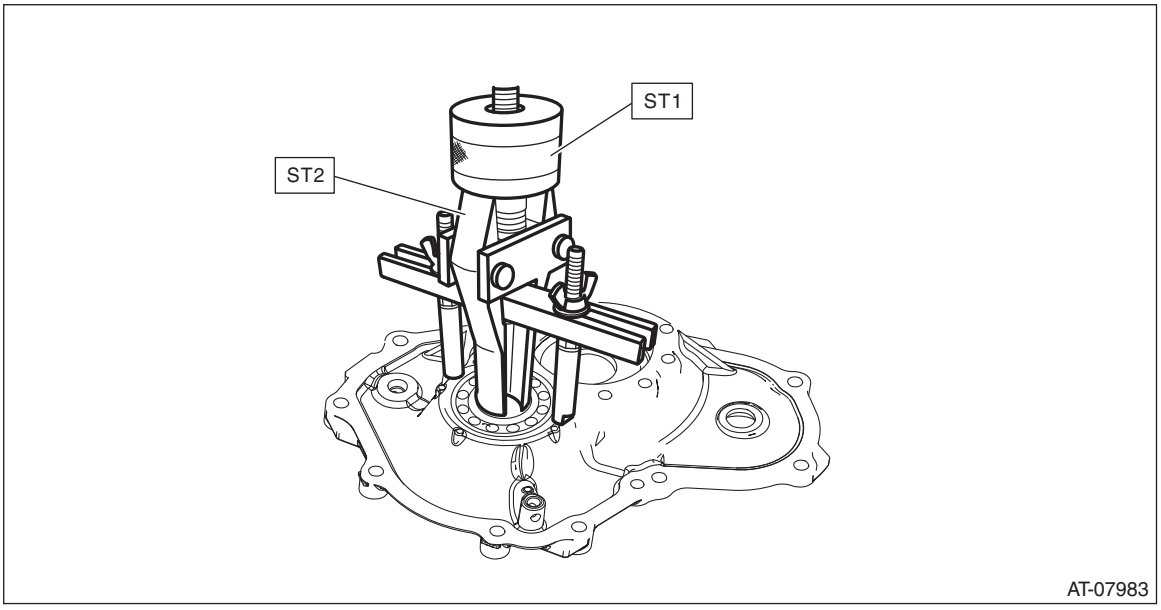
17) Remove the converter case cover.



18) Remove the O-rings.



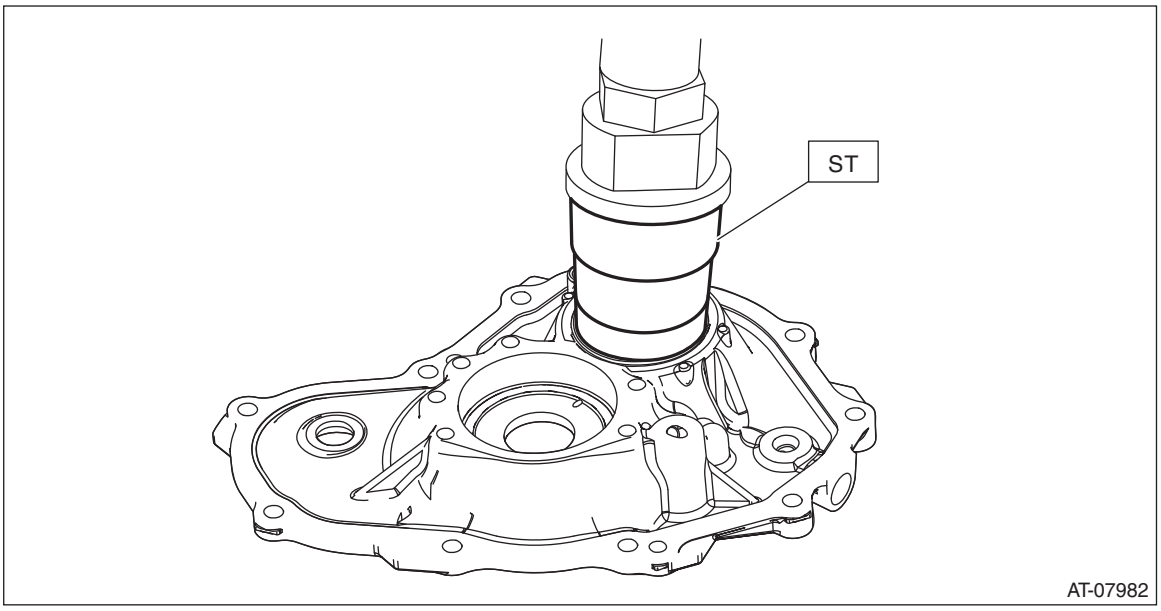
19) Remove the seal ring from converter case cover.



20) Using the ST, remove the ball bearing from the converter case cover.

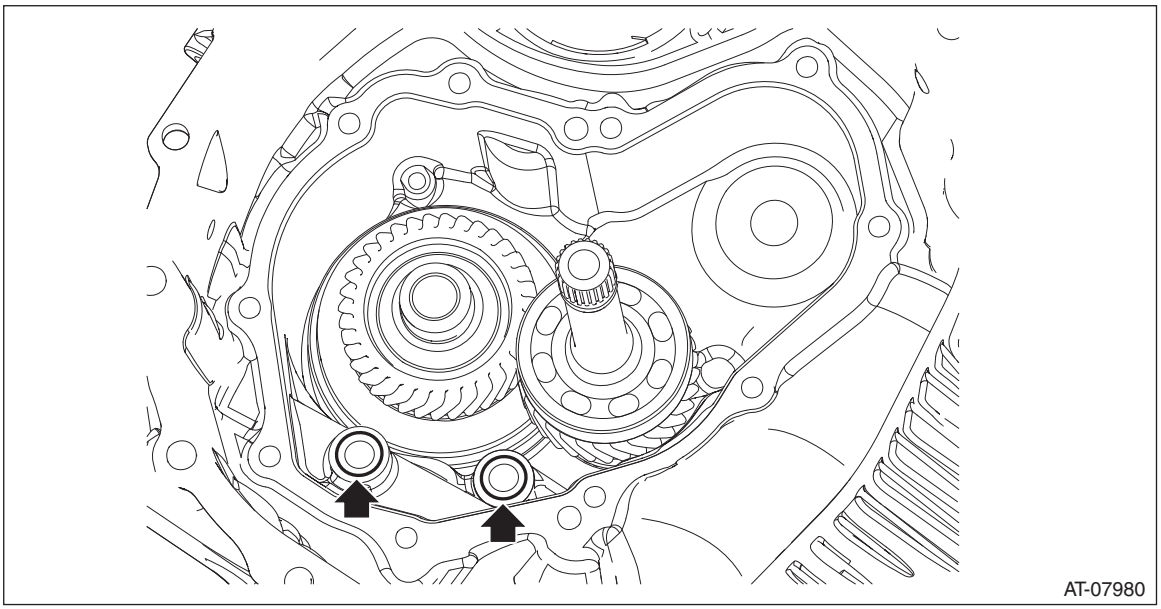
(1) Remove the claw of ST1, and attach the claw of ST2.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW

(A) Claw



(2) Using the ST, remove the ball bearing from the converter case cover.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW

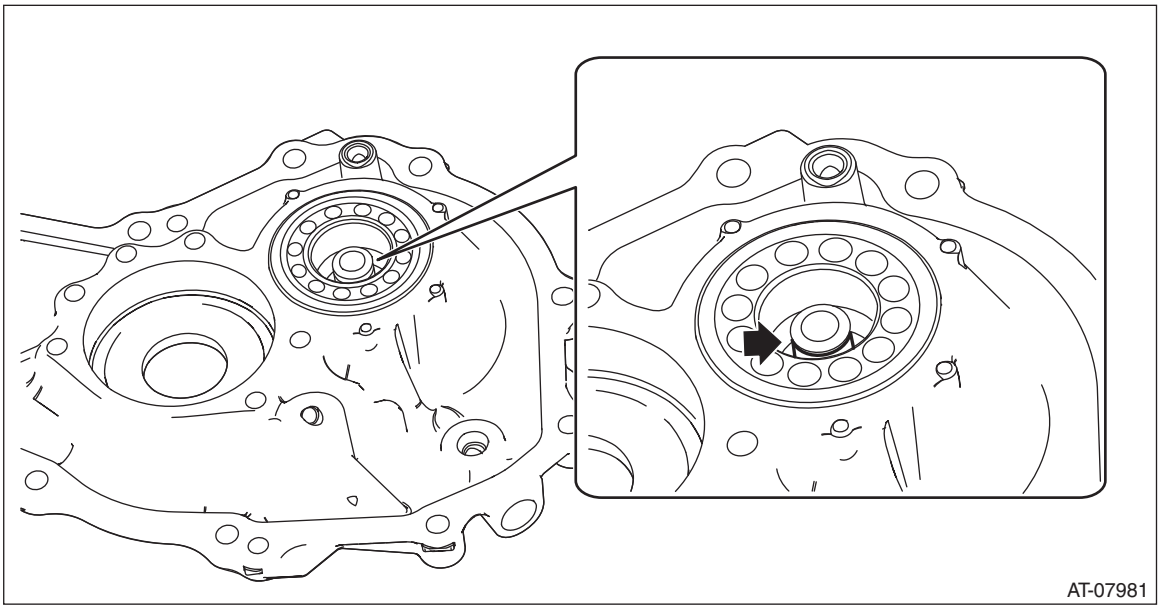
B: INSTALLATION



1) Clean the mating surface of converter case cover and converter case.
2) Adjust the shims of front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-343, ADJUSTMENT, Front Reduction Drive Gear.> <Ref. to CVT(TR690)-350, ADJUSTMENT, Front Reduction Driven Gear.>
3) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction driven gear.
4) Using the ST, install the ball bearing to the converter case cover.

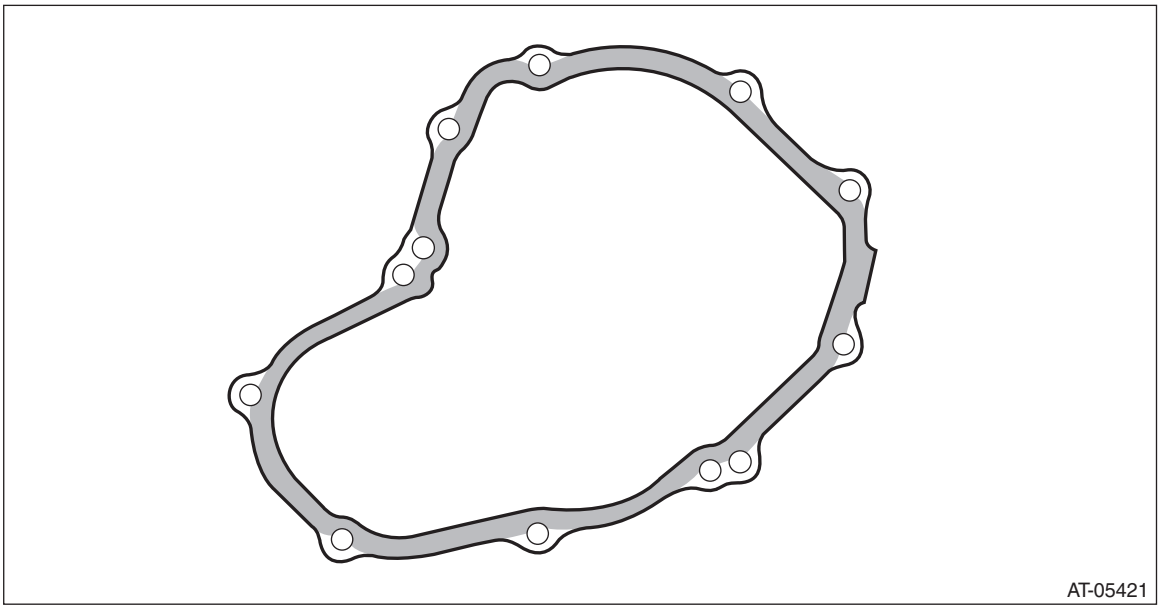
NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING

5) Install the O-rings.



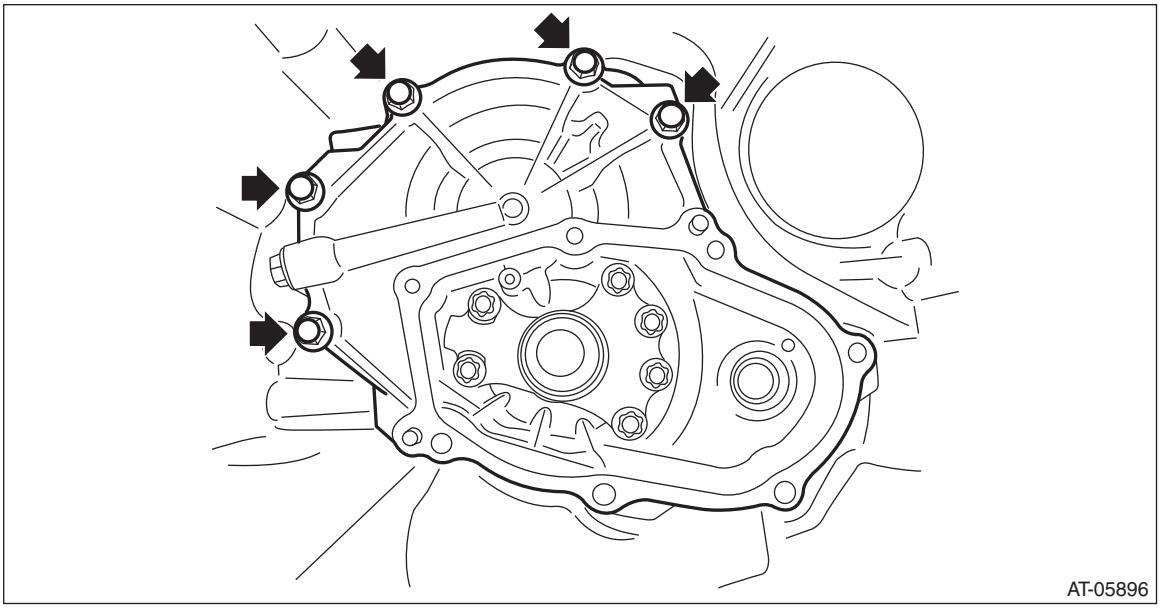
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

6) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction drive gear.
7) Install the seal ring to converter case cover.



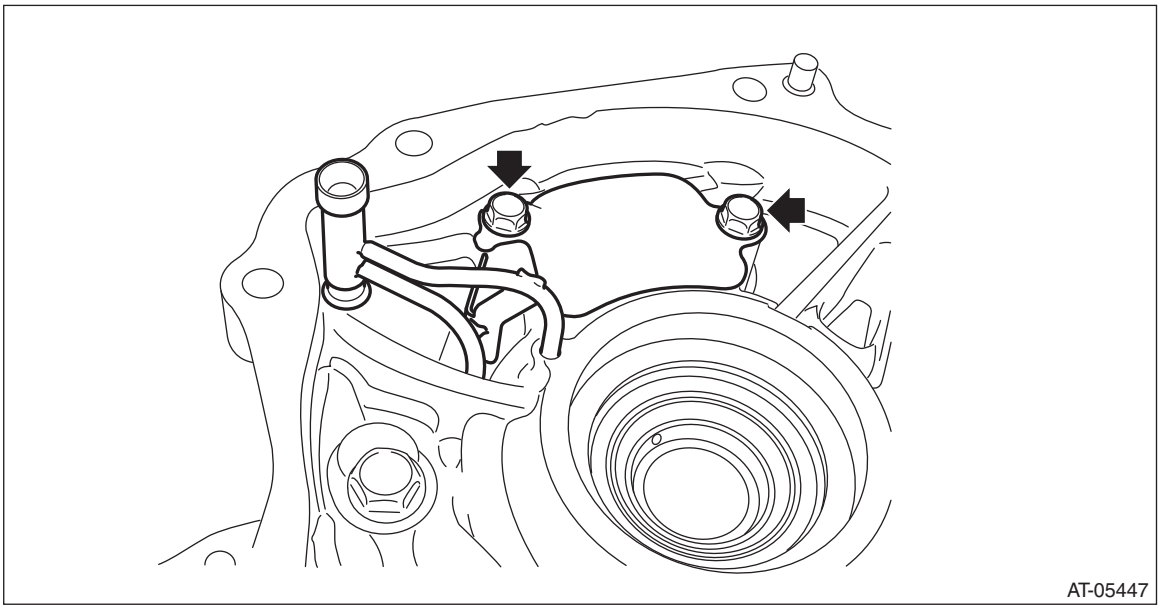
NOTE:
- Use new seal rings.

- When installing the seal rings, do not expand the seal rings too much.



8) Apply liquid gasket seamlessly to the mating surface of converter case cover.

Liquid gasket:
THREE BOND 1216B or equivalent

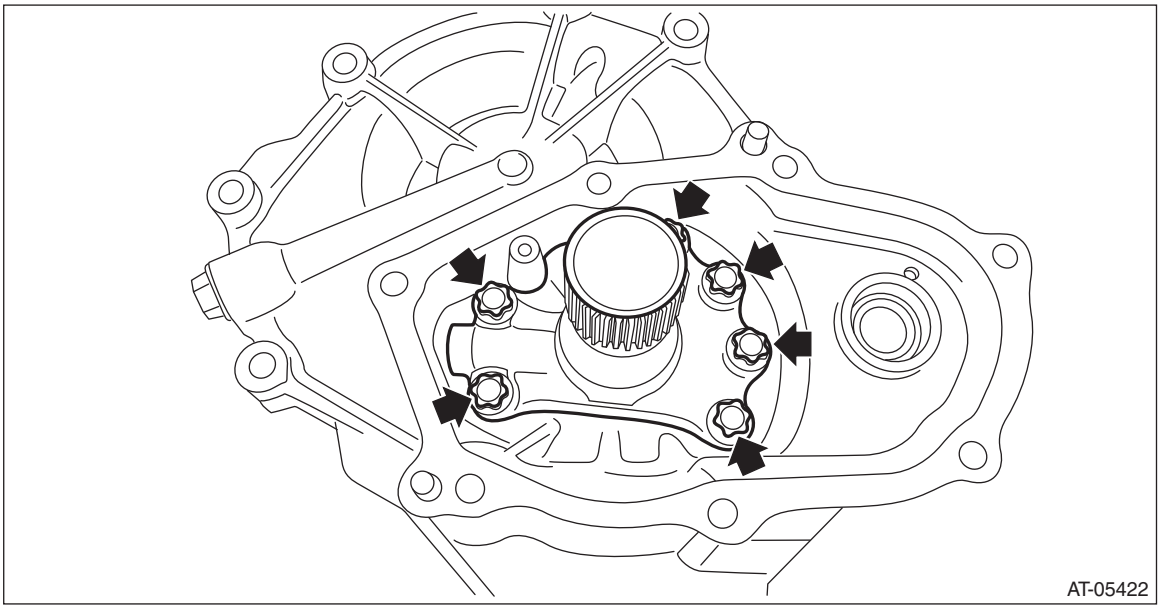


9) Install the converter case cover.

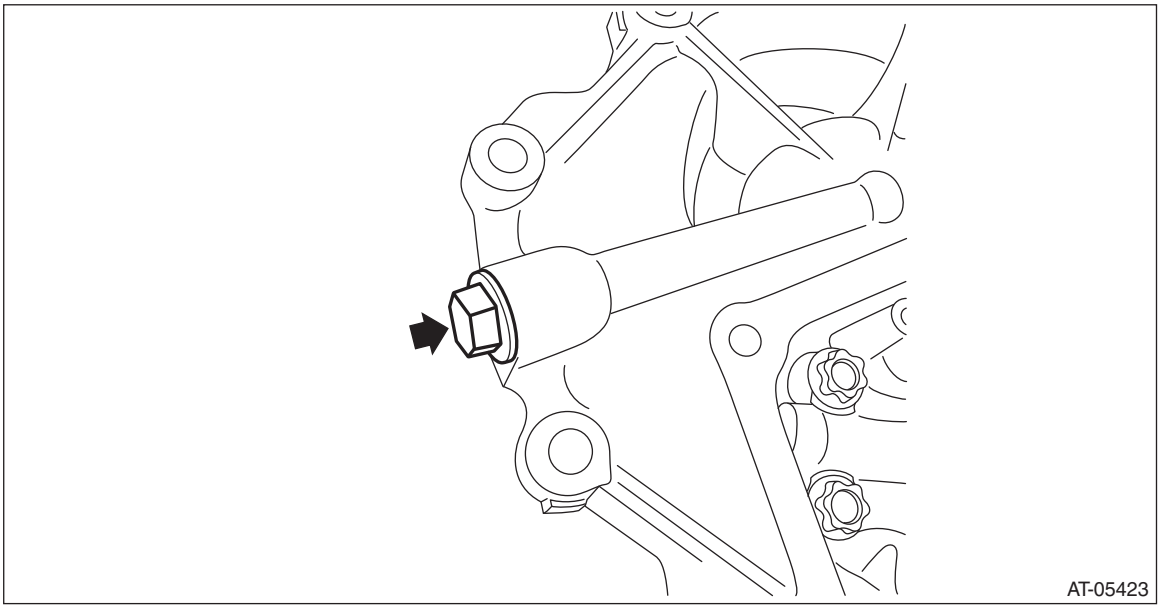
Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

10) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-321, INSTALLATION, Oil Pump Chain.>
11) Flip over the converter case cover.
12) Install the oil stopper plate and lubrication pipe.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



13) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-281, INSTALLATION, Drive Pinion Shaft Assembly.>
14) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-267, INSTALLATION, Primary Pulley and Secondary Pulley.>
15) Install the transmission case. <Ref. to CVT(TR690)-248, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>

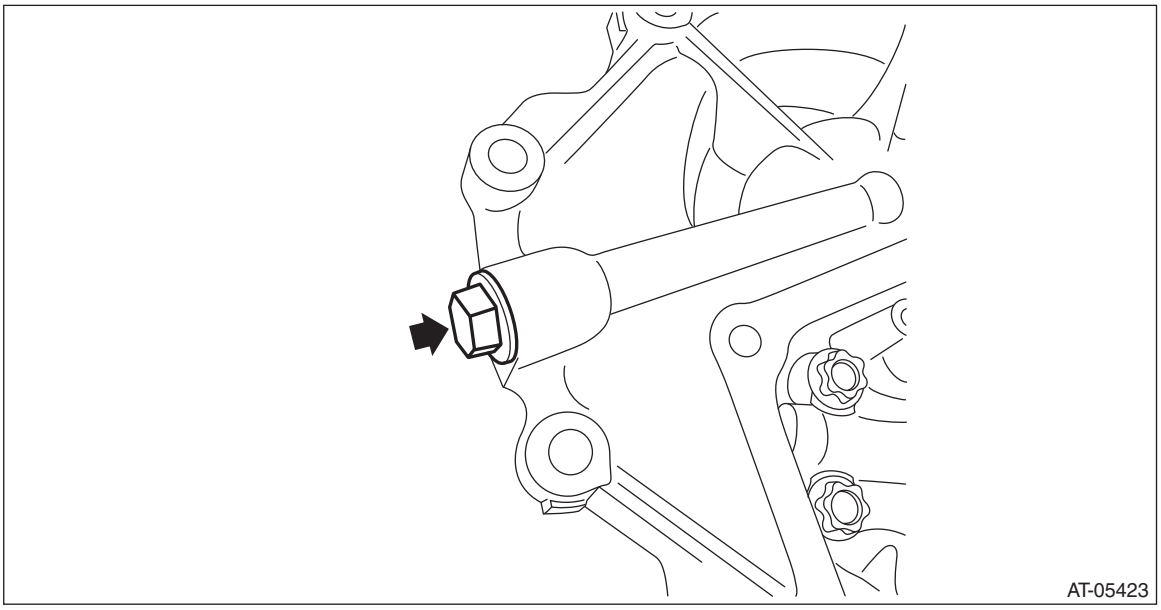


19) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
20) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
21) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
22) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
23) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
24) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
25) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

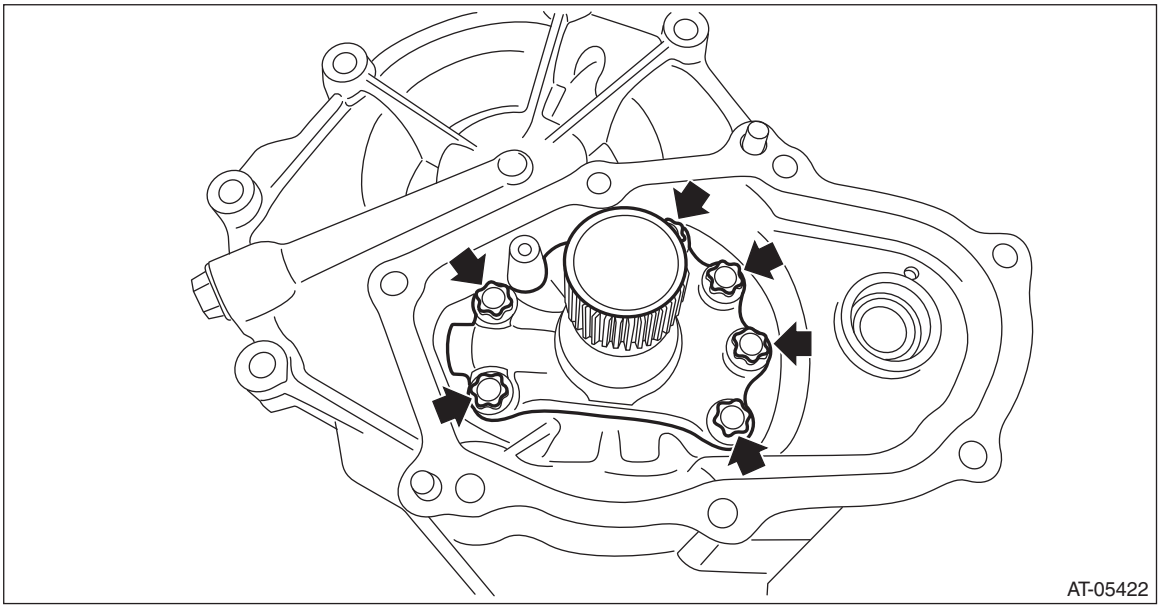
1) Using ST, remove the center support COMPL. (Bolt fixing type)
ST 18270KA010 SOCKET (E16)

2) Remove the plug and O-ring.



D: ASSEMBLY

1) Install the plugs.



NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Using ST, install the center support COMPL. (Bolt fixing type)
ST 18270KA010 SOCKET (E16)

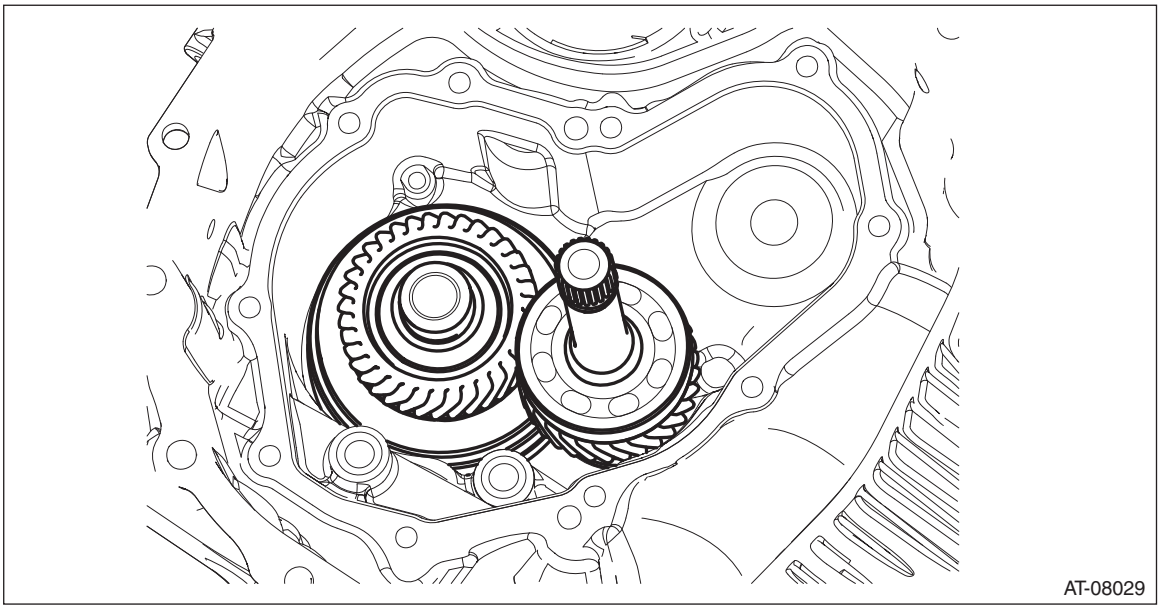
Tightening torque:
21.5 N·m (2.2 kgf-m, 15.9 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and converter case cover.
- Check there is no damage or cracks on the converter case cover.

F: ADJUSTMENT

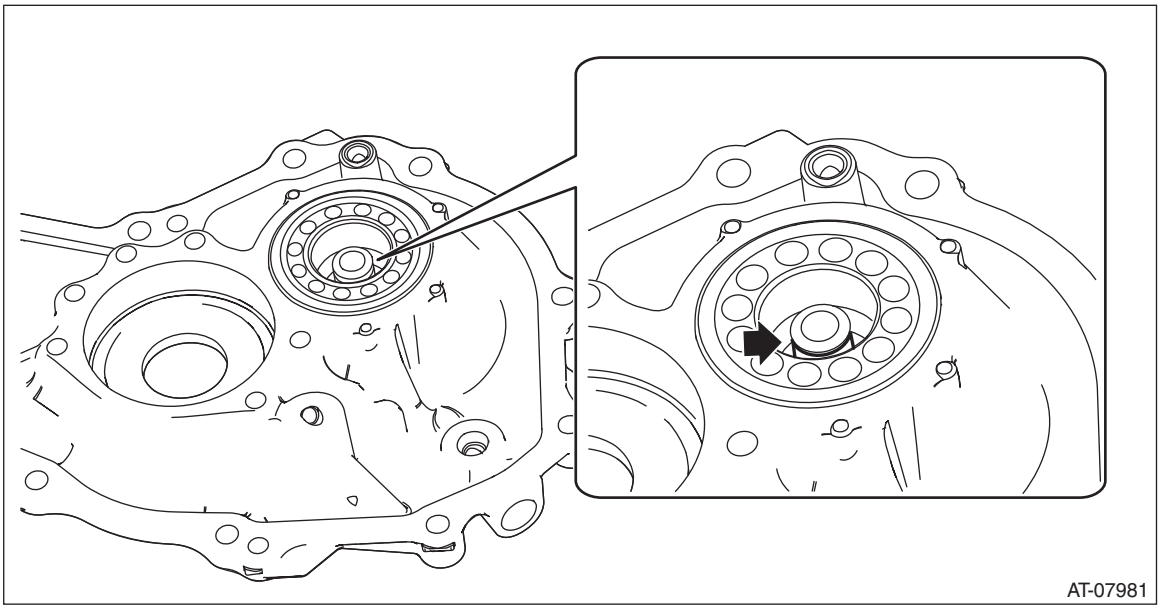
When replacing the converter case cover, select the following shims.
- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-343, ADJUSTMENT, Front Reduction Drive Gear.>



• Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-350, ADJUSTMENT, Front Reduction Driven Gear.>

49.Front Reduction Drive Gear

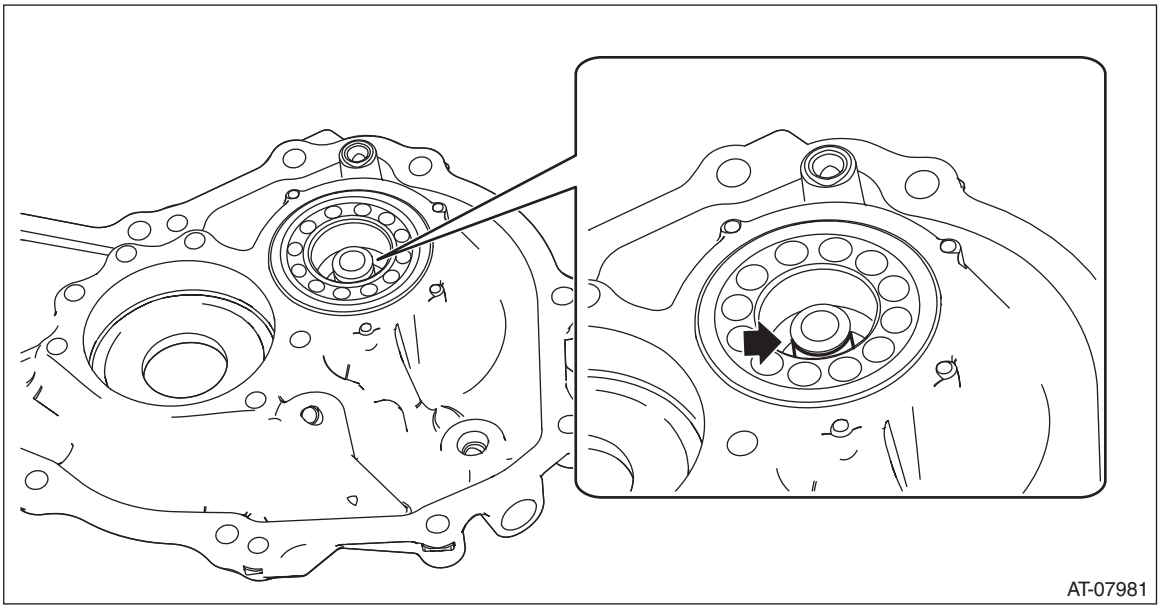
A: REMOVAL



1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
5) Remove the primary speed sensor. <Ref. to CVT(TR690)-120, REMOVAL, Primary Speed Sensor.>
6) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
7) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
8) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-246, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-263, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-279, REMOVAL, Drive Pinion Shaft Assembly.>
15) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-319, REMOVAL, Oil Pump Chain.>
16) Remove the converter case cover. <Ref. to CVT(TR690)-327, REMOVAL, Converter Case Cover.>
17) Remove the front reduction drive gear and front reduction driven gear together.

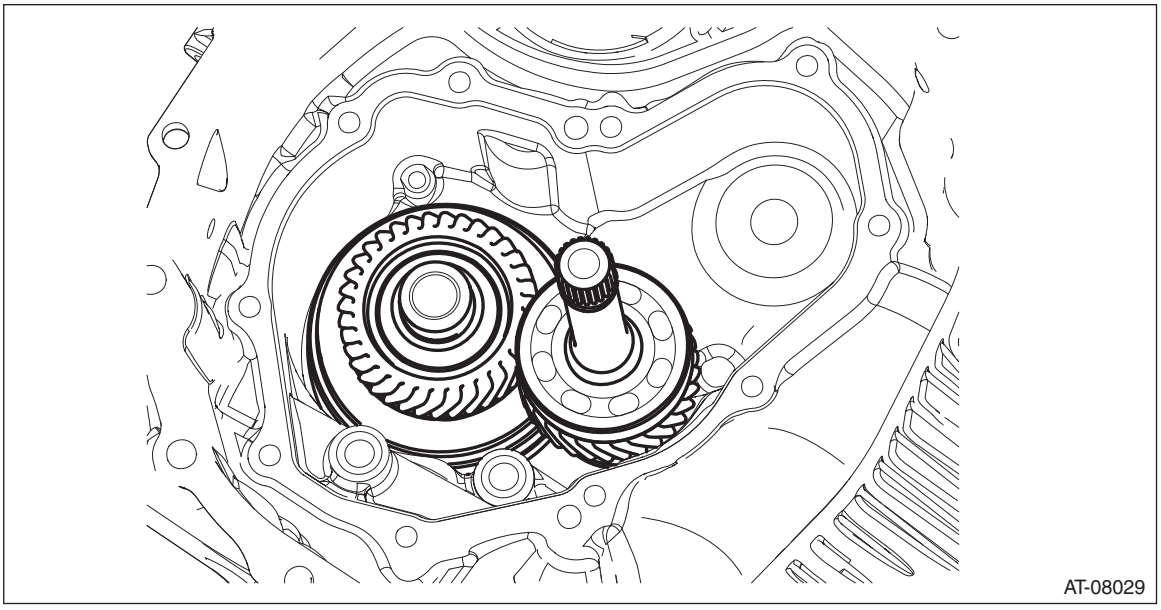
NOTE:
Remove the front reduction driven shaft while holding it.

18) Remove the shims of the front reduction driven gear from the converter case.



19) Remove the seal rings.

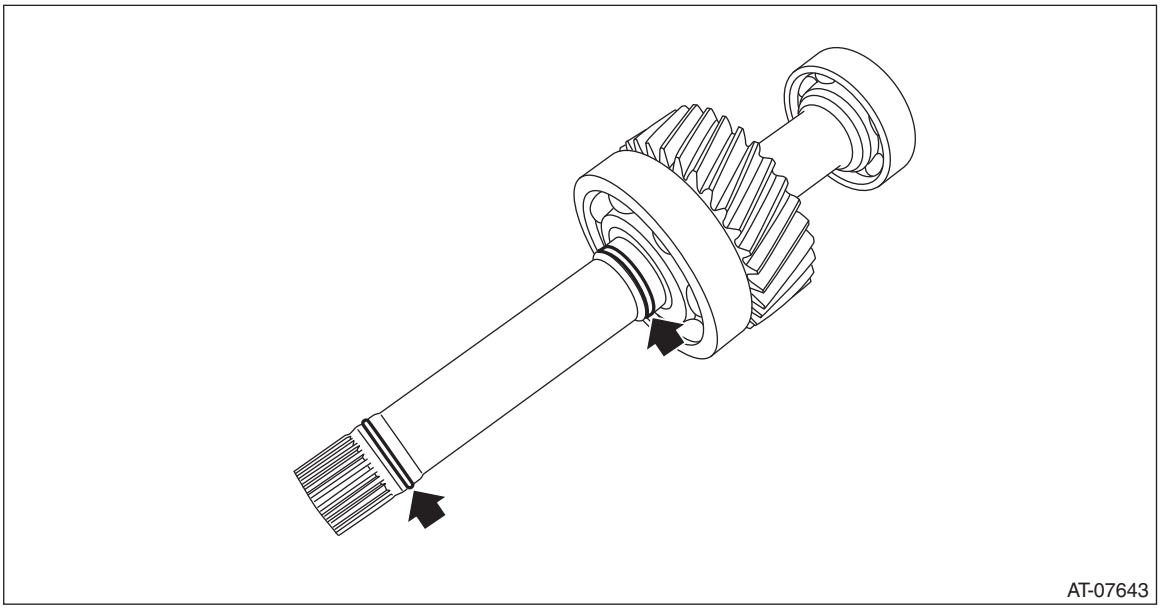
B: INSTALLATION



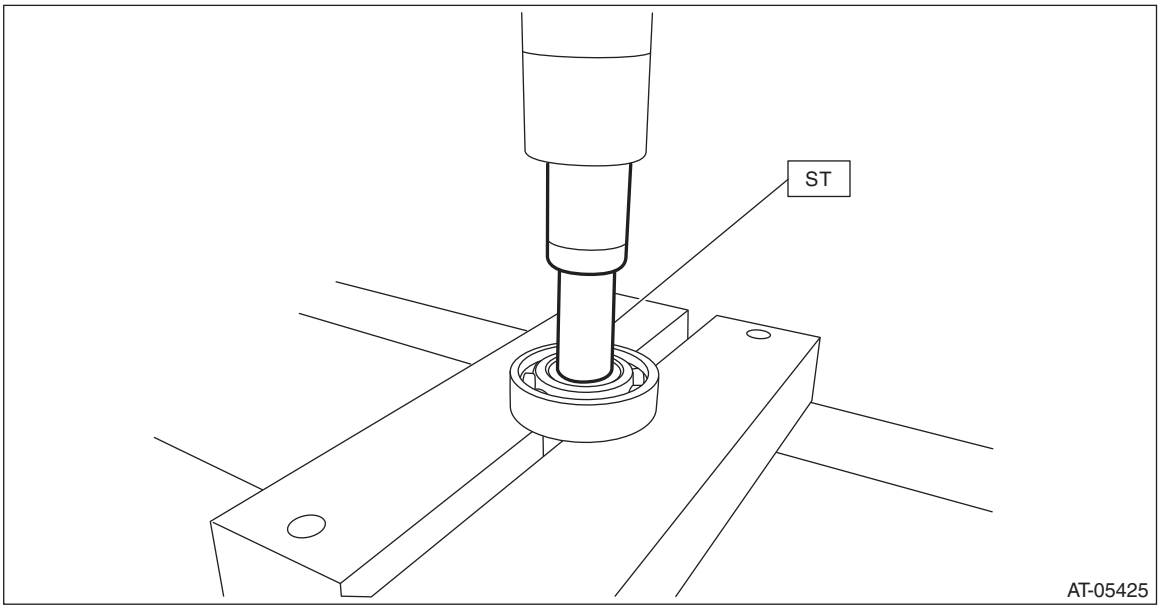
1) Clean the mating surface of converter case cover and converter case.
2) Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-343, ADJUSTMENT, Front Reduction Drive Gear.>
3) Apply CVTF to the shims and install on the bearing catch surface of the front reduction drive gear.
4) Install the seal ring to converter case cover.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.

5) Install the front reduction drive gear and front reduction driven gear together.

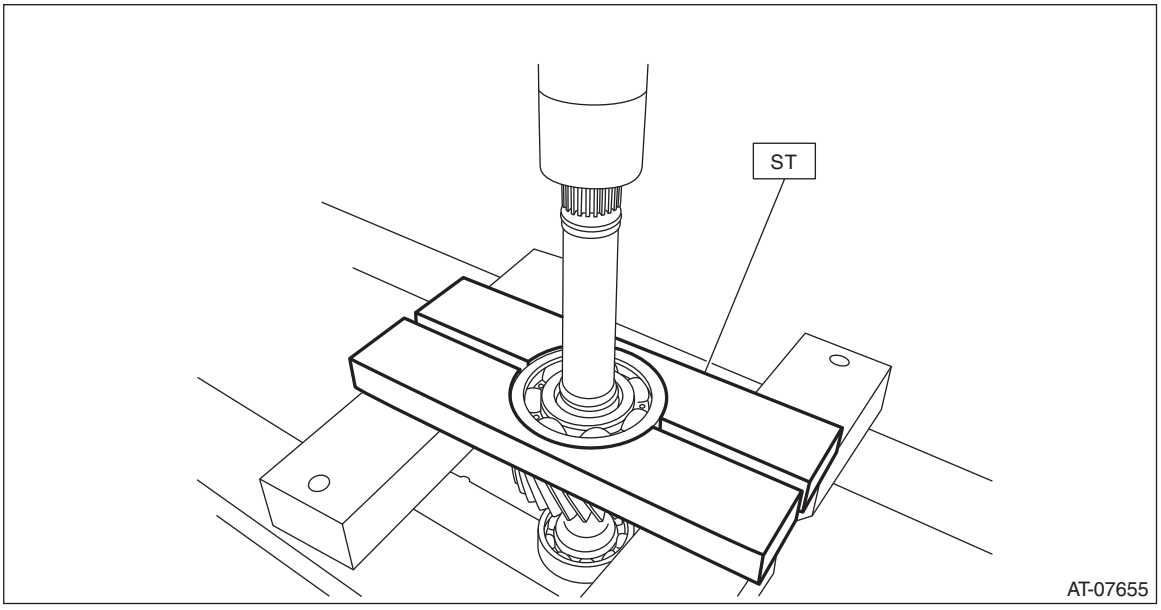


CAUTION:
Be careful not to detach the spline of input clutch and the spline of front reduction driven shaft.



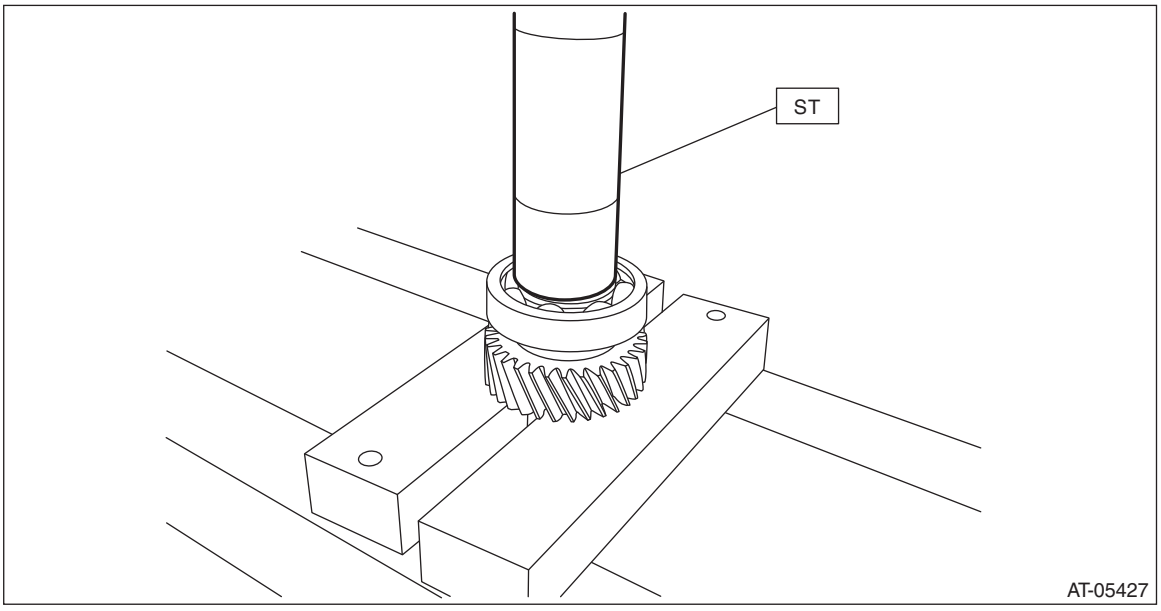
6) Install the converter case cover. <Ref. to CVT(TR690)-330, INSTALLATION, Converter Case Cover.>
7) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-321, INSTALLATION, Oil Pump Chain.>
8) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-281, INSTALLATION, Drive Pinion Shaft Assembly.>
9) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-267, INSTALLATION, Primary Pulley and Secondary Pulley.>
10) Install the transmission case. <Ref. to CVT(TR690)-248, INSTALLATION, Transmission Case.>
11) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
12) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
13) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
17) Install the primary speed sensor. <Ref. to CVT(TR690)-122, INSTALLATION, Primary Speed Sensor.>
18) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
19) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
20) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
21) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY



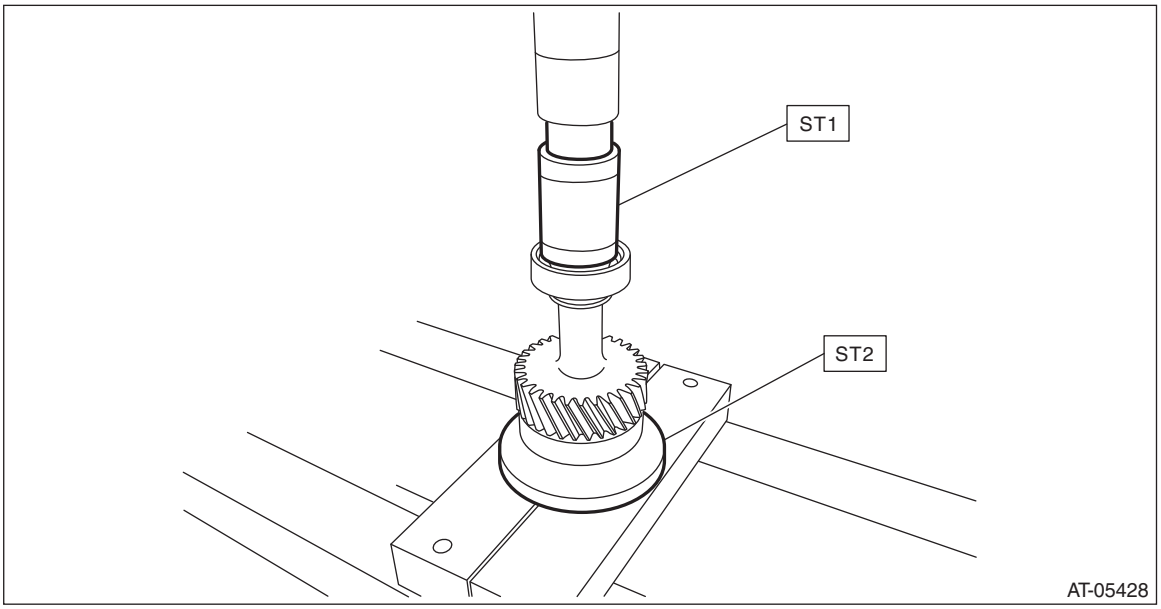
1) Remove the seal ring and O-ring.

2) Using the ST, remove the ball bearing from front reduction drive gear.
ST 899864100 REMOVER



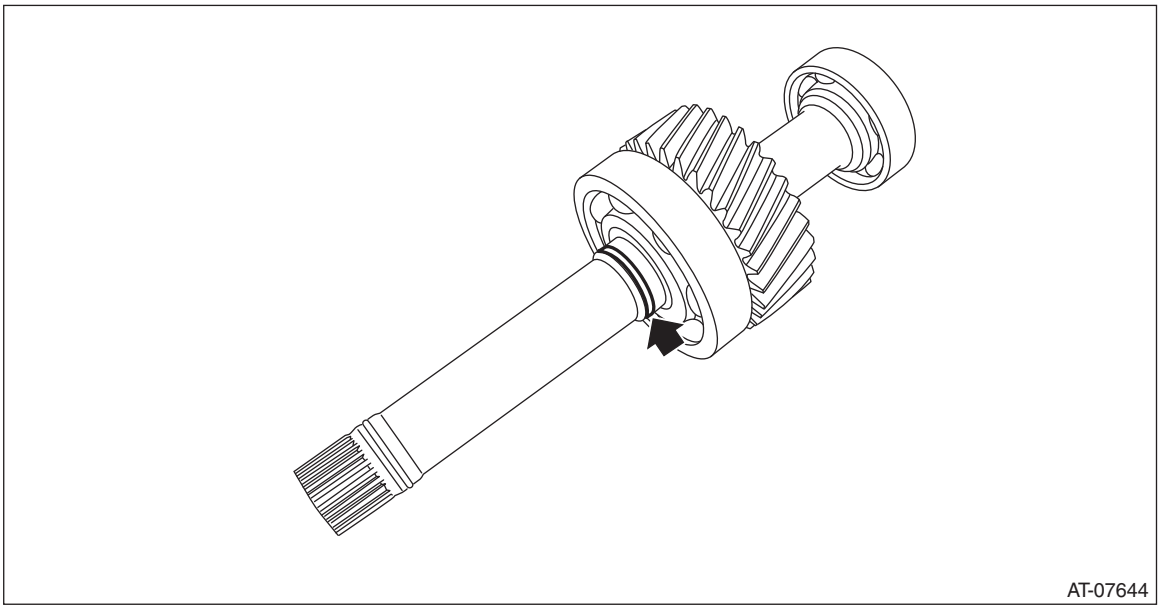
3) Using the ST, remove the ball bearing from front reduction drive gear.
ST 498077000 REMOVER

D: ASSEMBLY



1) Using the ST, install the ball bearing to front reduction drive gear.

NOTE:
Use a new ball bearing.
ST 18651AA000 INSTALLER

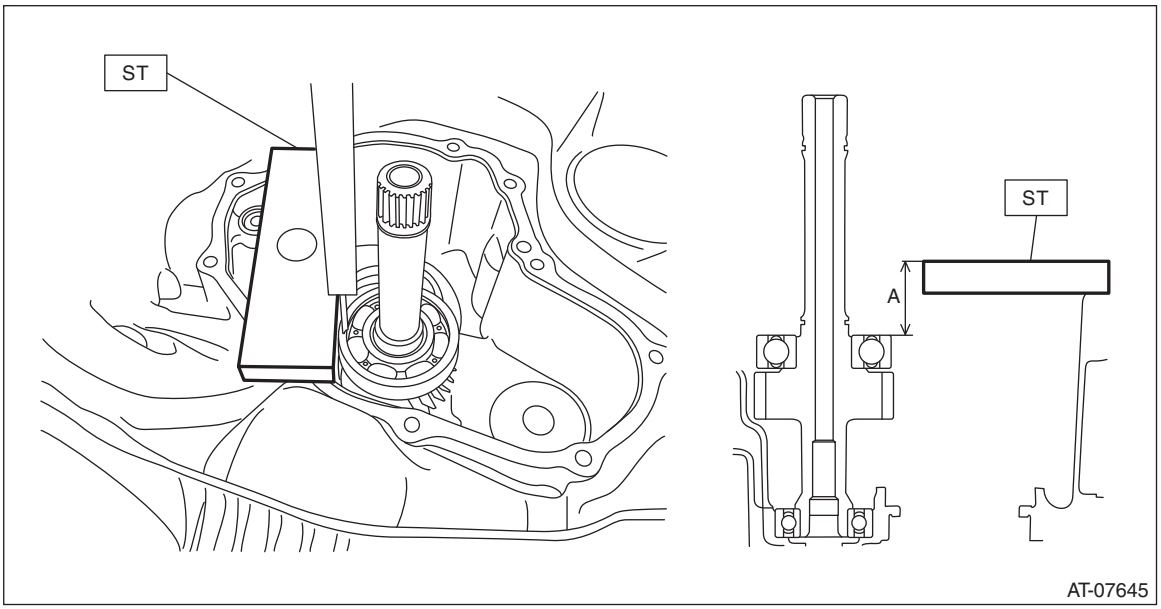


2) Using ST1 and ST2, install the ball bearing to front reduction drive gear.

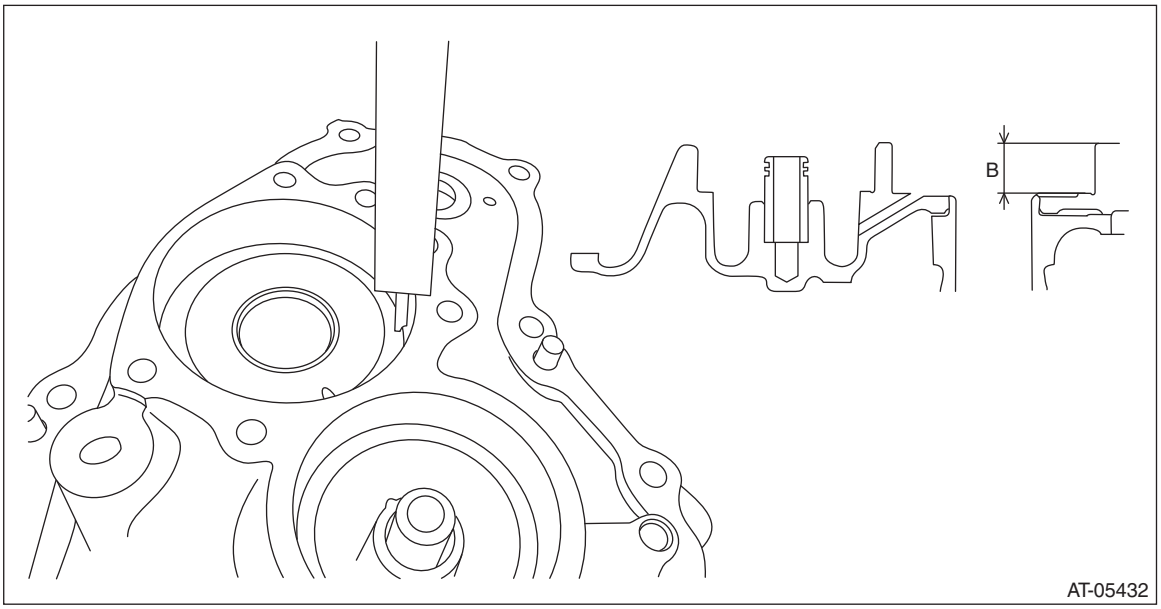
NOTE:
Use a new ball bearing.
ST1 499757002 INSTALLER
ST2 398177700 INSTALLER

3) Install the seal rings.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Install the O-ring when installing the torque converter assembly.

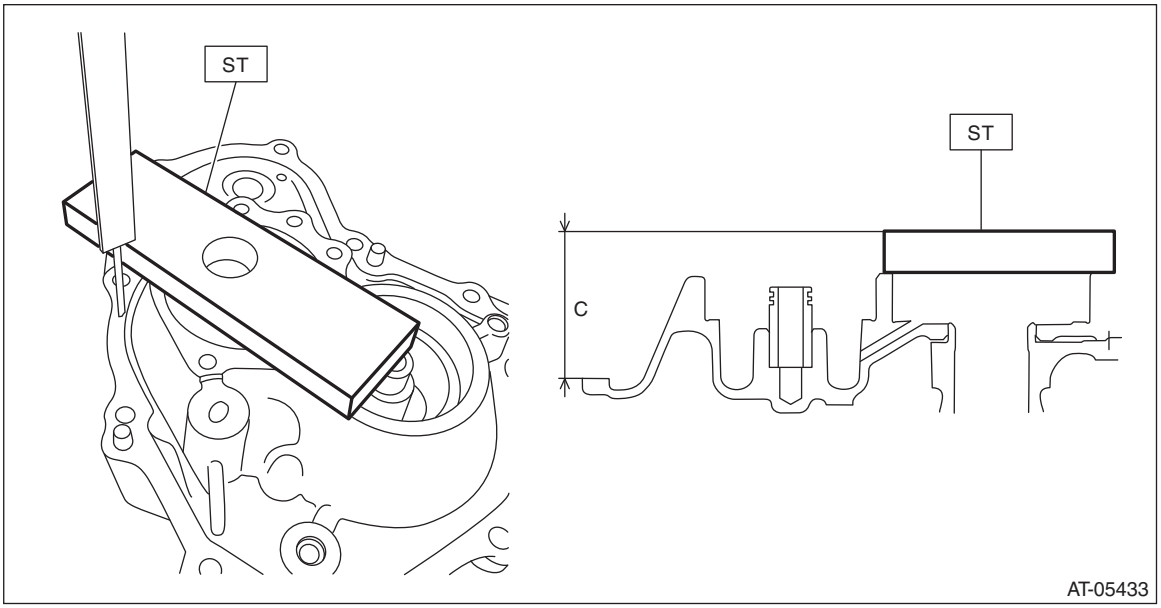


E: INSPECTION



- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

F: ADJUSTMENT



1) Measure height “A” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE

2) Measure depth “B” from the converter case cover upper face to the bearing catch surface.

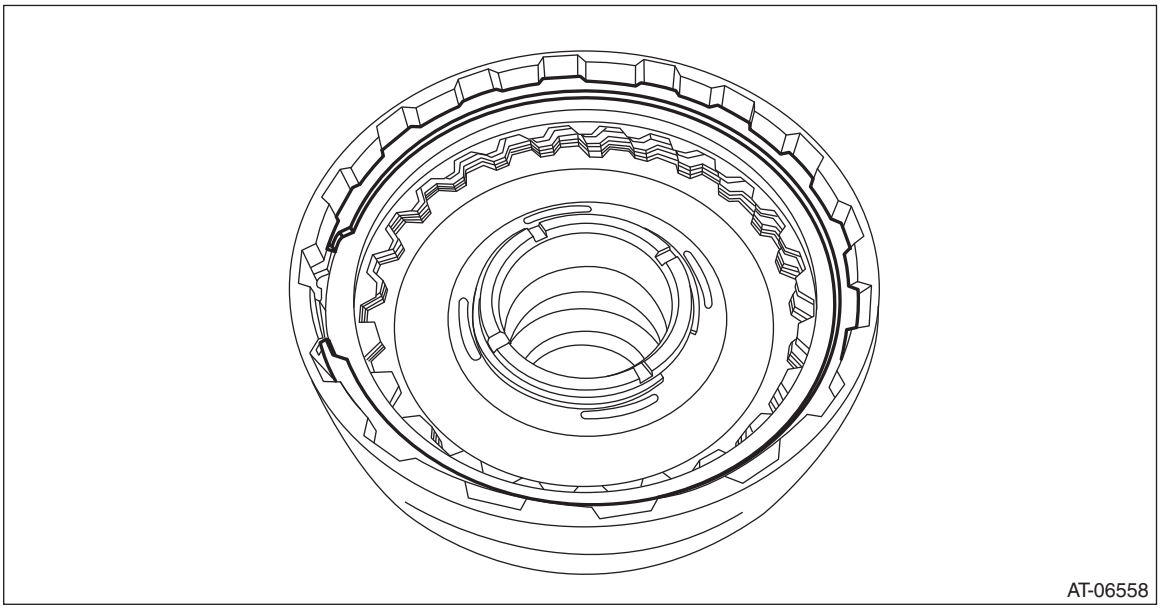
3) Using the ST, measure height “C” from the ST upper face to the converter case cover mating surface.
ST 398643600 GAUGE

4) Using the following formula, calculate clearance “T” to select shims.
Calculation formula:
T mm = (A – 15) – ((C – 15) – B)
[T in = (A – 0.591) – ((C – 0.591) – B)]
T: Clearance
A: Depth from the ST upper face to the bearing end surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Height from the ST upper face to the converter case cover mating surface
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)	Part No.
1.070 — 1.174 (0.042 — 0.045)	1.0 (0.039)	31288AA160
1.175 — 1.274 (0.046 — 0.049)	1.1 (0.043)	31288AA170
1.275 — 1.374 (0.050 — 0.053)	1.2 (0.047)	31288AA180
1.375 — 1.474 (0.054 — 0.057)	1.3 (0.051)	31288AA220
1.475 — 1.580 (0.058 — 0.062)	1.4 (0.055)	31288AA230

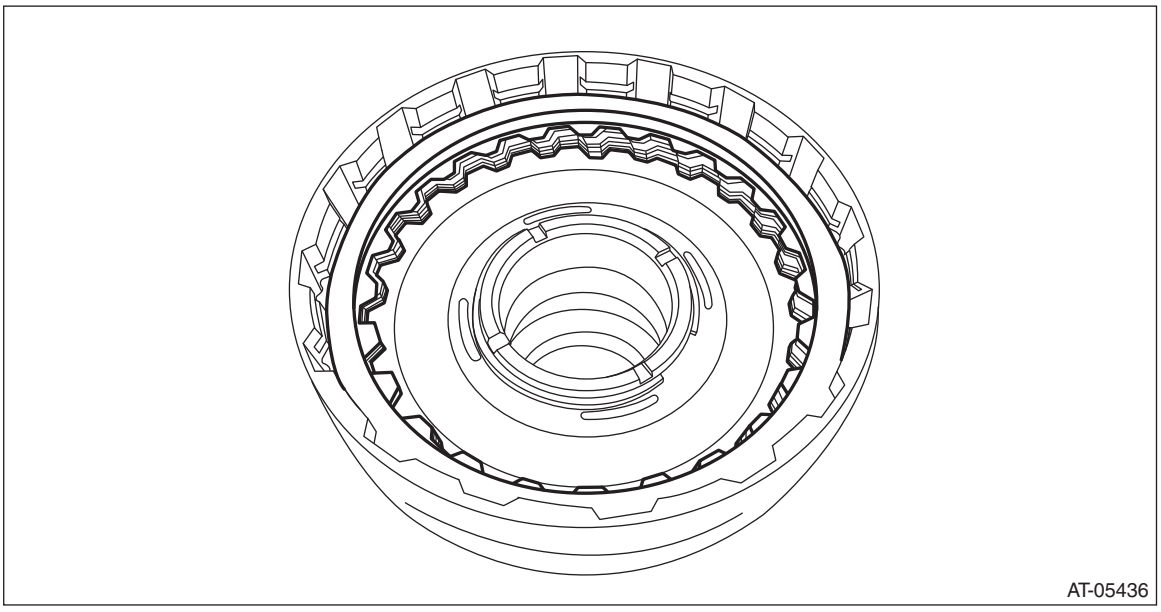
50.Front Reduction Driven Gear

A: REMOVAL



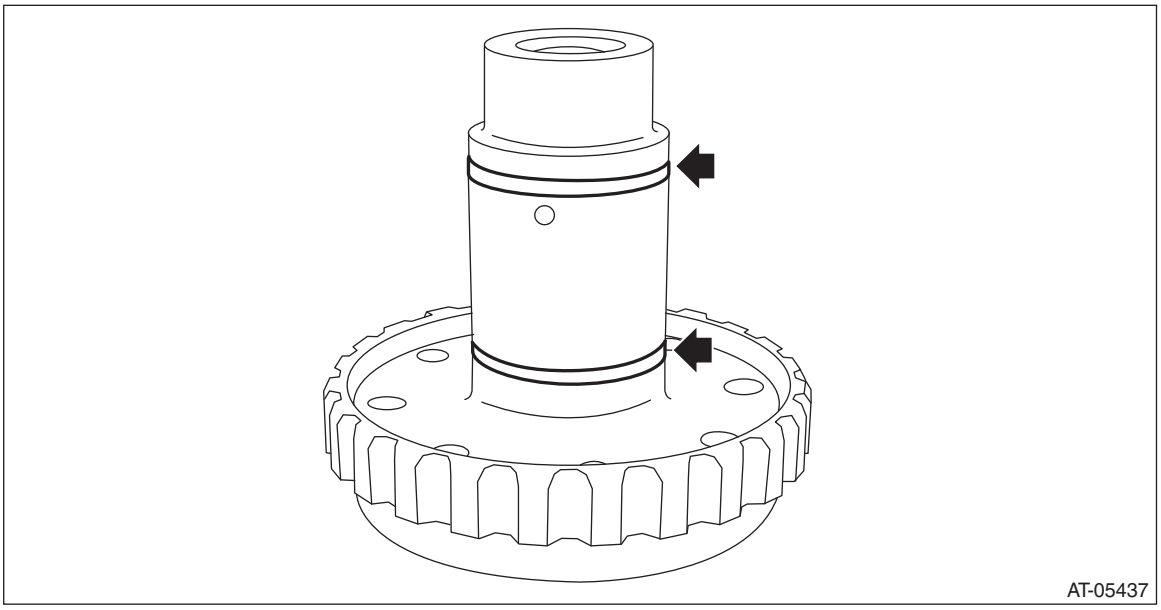
NOTE:
For removal of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-337, REMOVAL, Front Reduction Drive Gear.>

B: INSTALLATION

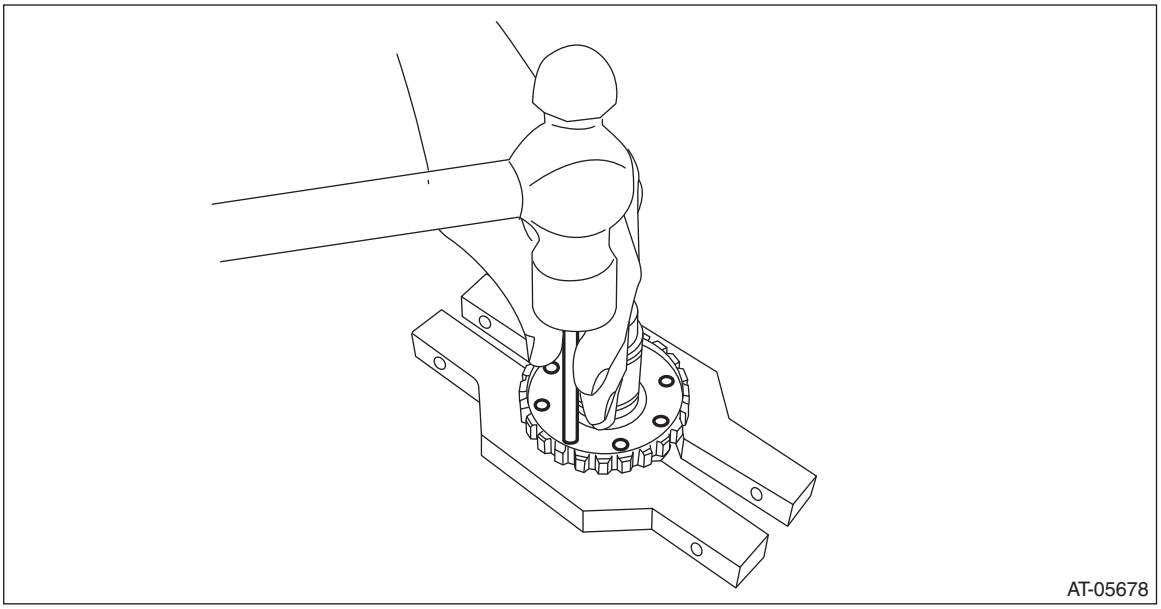


NOTE:
For installation of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-338, INSTALLATION, Front Reduction Drive Gear.>

C: DISASSEMBLY



1) Remove the front reduction driven shaft from the front reduction driven gear.
2) Remove the snap ring.



3) Remove the retaining plate, drive plate, driven plate and dish plate.

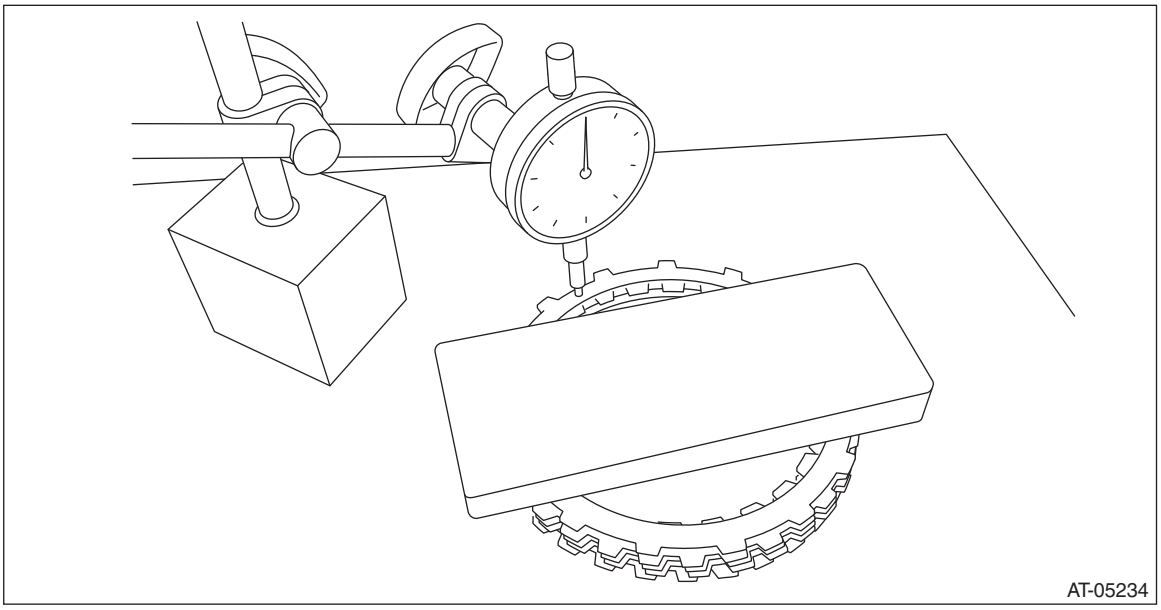
4) Remove the seal ring from front reduction driven shaft.

5) Remove the ball bearing, while tapping the entire circumference around the ball bearing outer race a little at a time through the front reduction driven shaft hole using the round bar with diameter of 7 mm (0.28 in).

D: ASSEMBLY

1) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

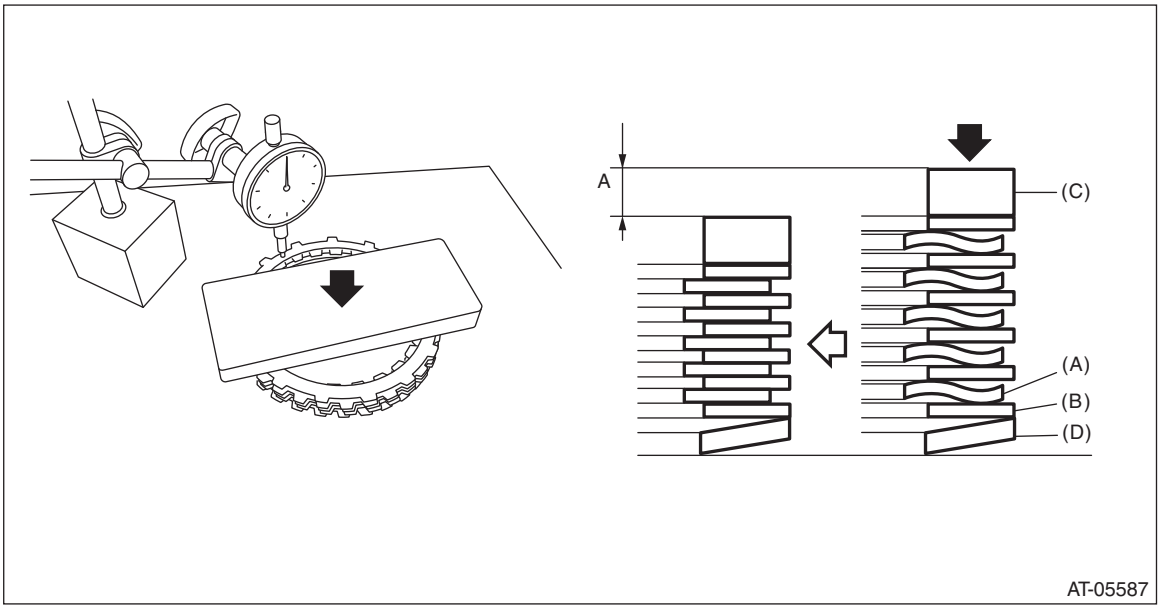
NOTE:
Make sure of the direction of dish plate.



2) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

3) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

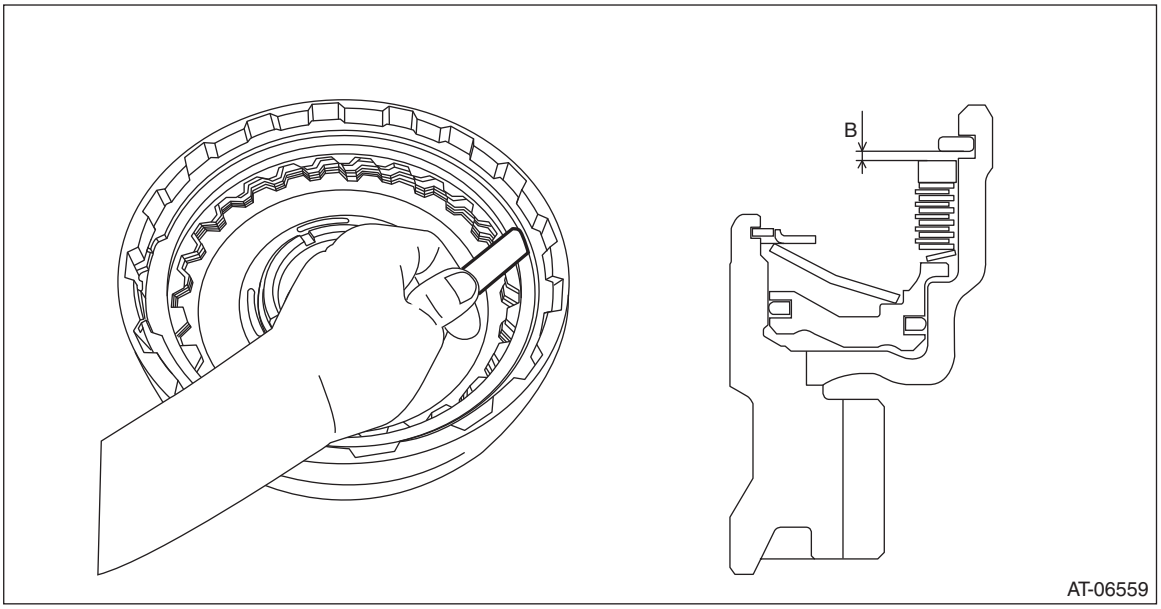


NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 130 N (13.3 kgf, 29.2 lb).

4) Put the flat board on retaining plate.

5) Using the following formula, calculate load “N”, a force of pressing with push/pull gauge.
N = 130N (13.3 kgf, 29.2 lb) – Z
130 N (13.3 kgf, 29.2 lb): Load applied to clutch plate
Z: Flat board weight
6) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

NOTE:
Measure at four points with a 90° interval and calculate the average.



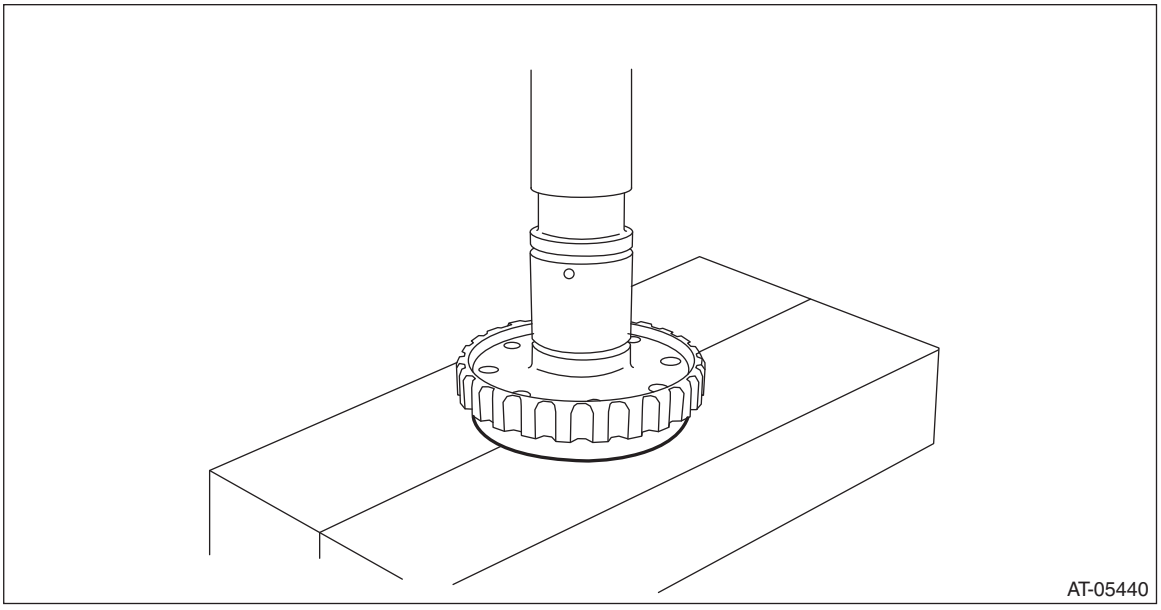
(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

7) Install the dish plate, driven plate, drive plate, retaining plate and snap ring.

NOTE:
Make sure of the direction of dish plate.

8) Measure and record the clearance “B” between the retaining plate and snap ring.

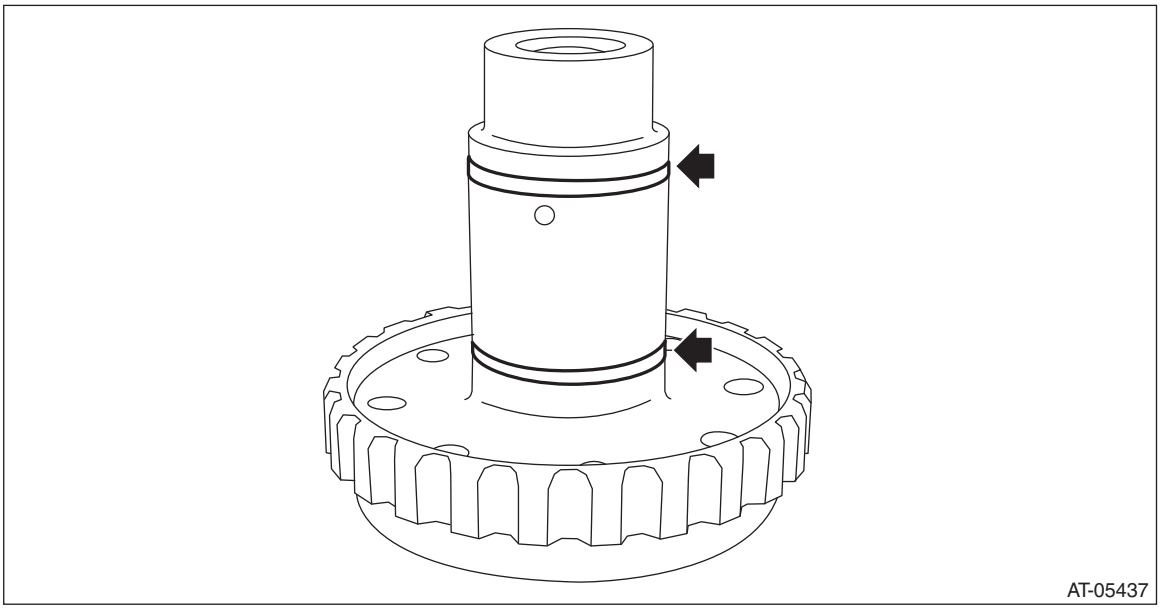
NOTE:
Before measuring, press down the whole circumference of retaining plate using your finger.



9) Piston stroke calculation
Calculate with A and B dimensions recorded before.
If out of standard, replace with a new drive plate and adjust it within standard.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

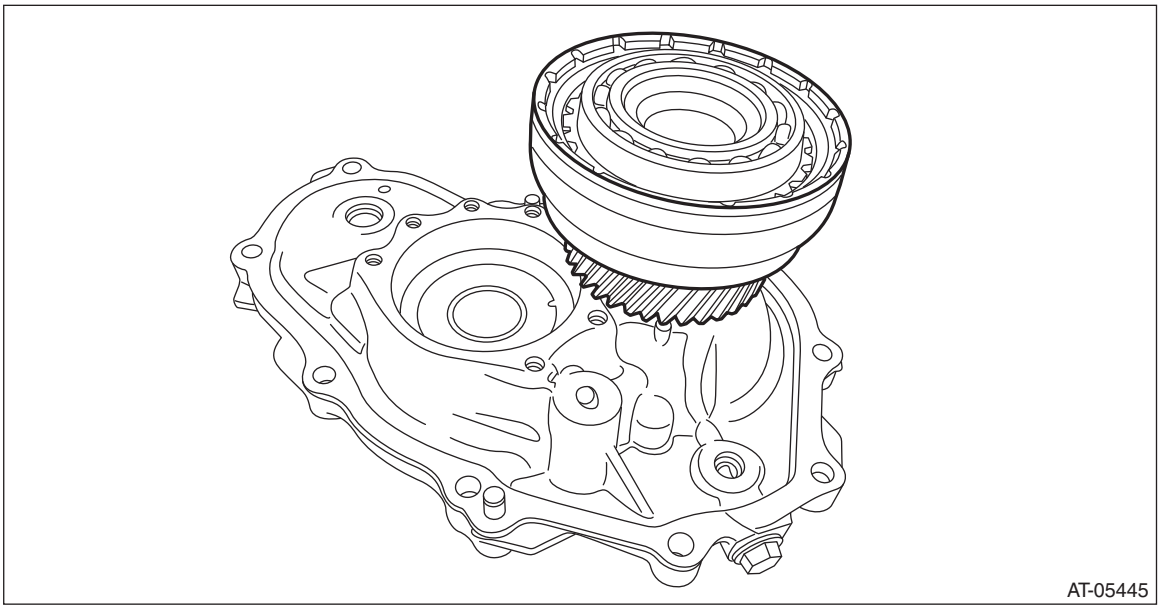
Specification:
2.4 — 2.8 mm (0.094 — 0.11 in)

Retaining plate	
Part No.	Thickness mm (in)
31667AA430	3.1 (0.122)
31667AA440	3.3 (0.130)
31667AA450	3.5 (0.138)



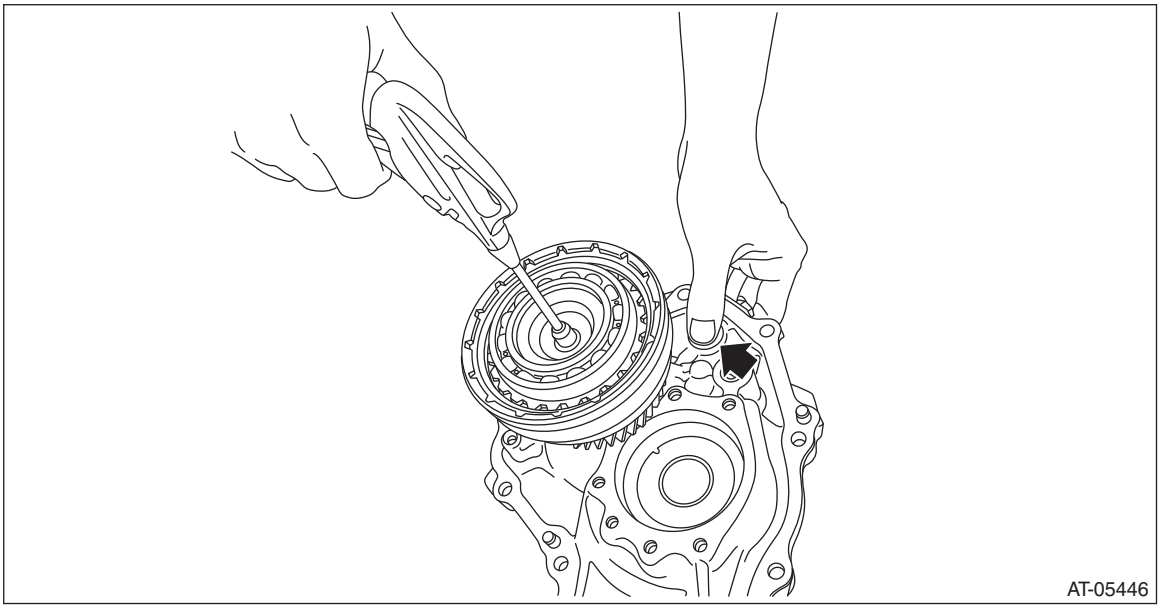
10) Press-fit the ball bearing into front driven shaft.

NOTE:
Use a new ball bearing.



11) Install the seal ring to the front driven shaft.

NOTE:
- Install a new seal ring.
- Apply CVTF to the seal rings.

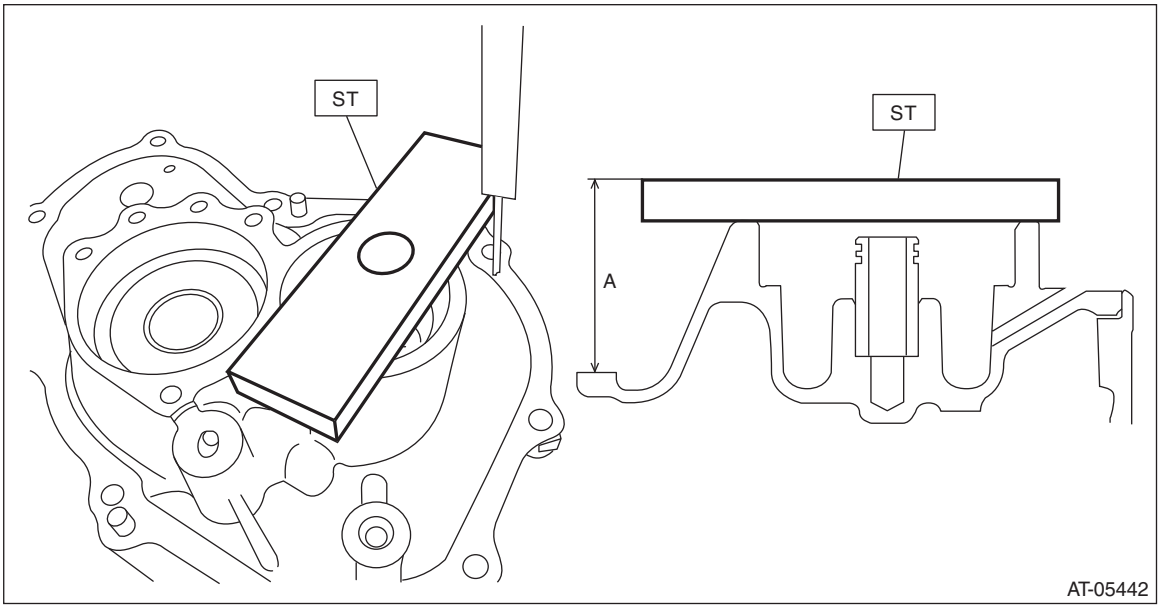


12) Install the front reduction driven shaft to the front reduction driven gear.

13) Install the front reduction driven gear assembly to converter case cover.

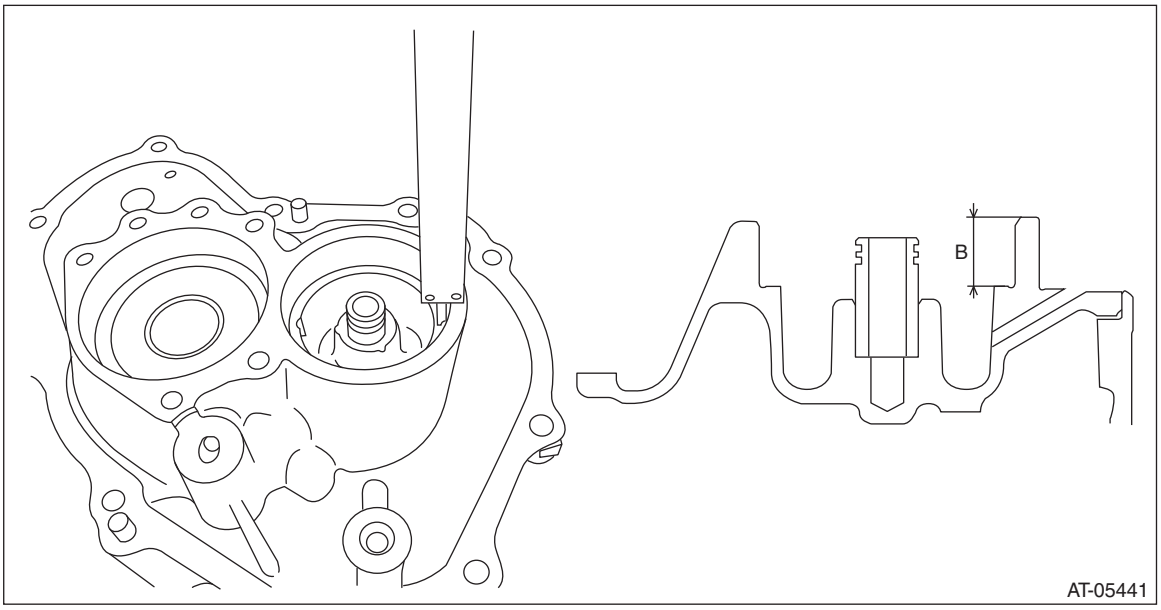
14) Apply compressed air intermittently to check the piston operation.

NOTE:
Hold the arrowed area with a finger.



E: INSPECTION

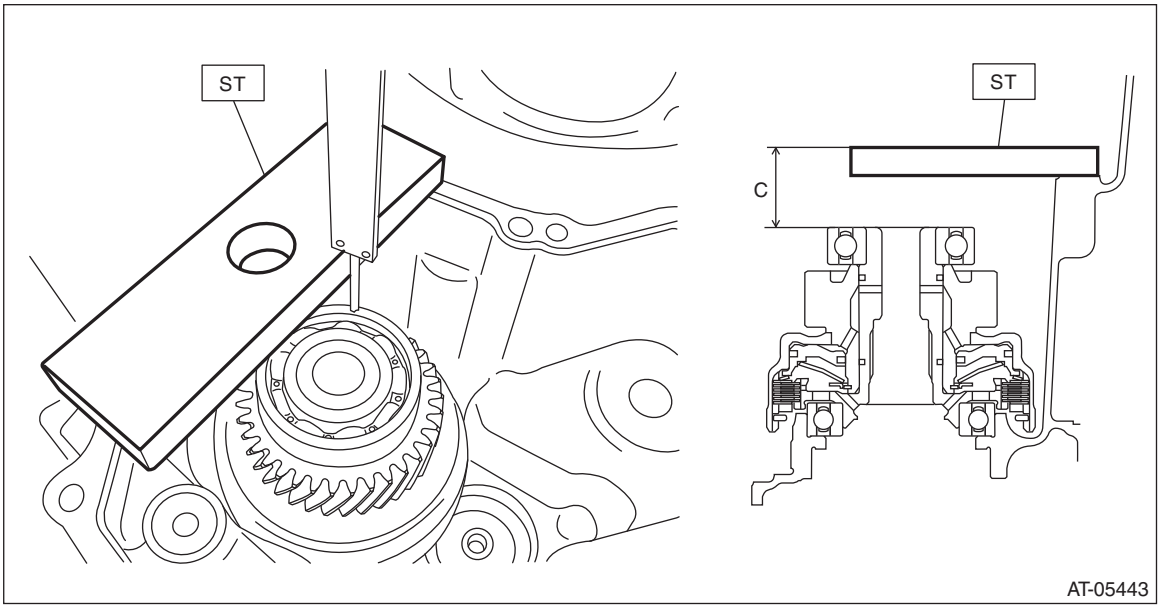
- Check the drive plate for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed piston retainer.
- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.



F: ADJUSTMENT

1) If the ball bearing is attached, remove the bearing and shims. <Ref. to CVT(TR690)-327, REMOVAL, Converter Case Cover.>

2) Using the ST, measure height “A” from the ST upper face to the mating surface of the case.
ST 398643600 GAUGE



3) Measure depth “B” from the converter case cover upper face to the bearing catch surface.

4) Install the ball bearing to the reduction driven gear.

NOTE:
Use a new ball bearing.

5) Measure depth “C” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE

6) Calculate clearance “T” using the following formula.
Formula: T mm = (C – 15) – ((A – 15) – B)
[T in = (C – 0.591) – ((A – 0.591) – B)]
T: Clearance
A: Height from the ST upper face to the converter case mating surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Depth from the ST upper face to the bearing end face
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)
0.470 — 0.569 (0.019 — 0.021)	0.4 (0.016)
0.570 — 0.669 (0.022 — 0.025)	0.5 (0.020)
0.670 — 0.769 (0.026 — 0.029)	0.6 (0.024)
0.770 — 0.869 (0.030 — 0.033)	0.7 (0.028)
0.870 — 0.980 (0.034 — 0.039)	0.8 (0.031)

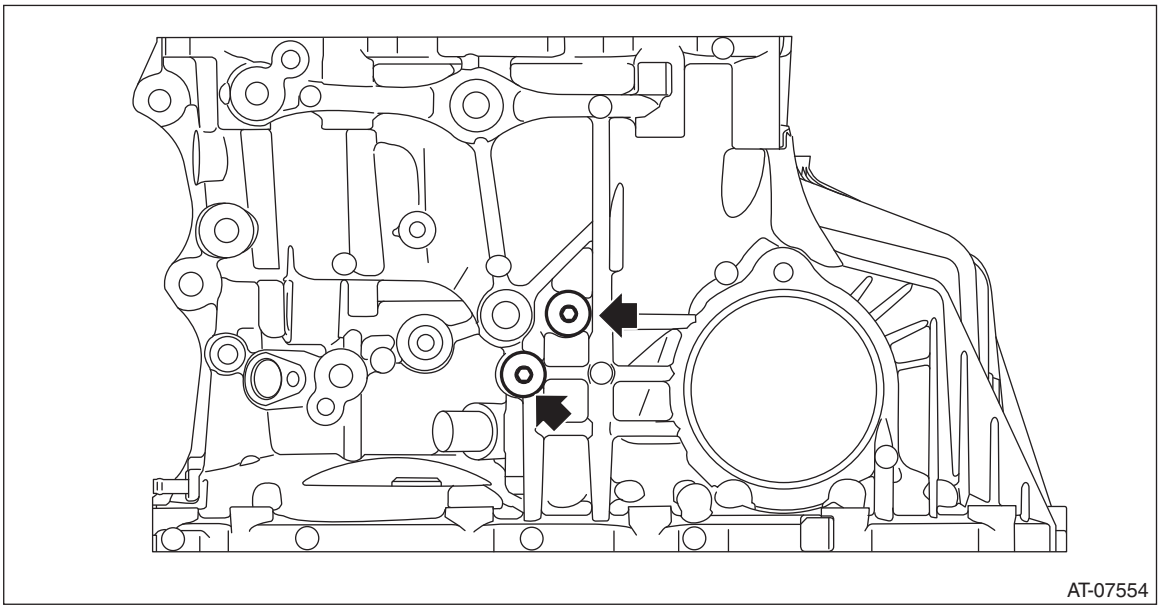
7) Select one to two shims so that the total thickness meets the value obtained from above.

Part No.	Thickness of shim mm (in)
31288AA130	0.2 (0.008)
31288AA140	0.3 (0.012)
31288AA150	0.5 (0.020)

51.Converter Case

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-59, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-156, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-129, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-139, REMOVAL, Transmission Harness.>
5) Remove the secondary pressure sensor. <Ref. to CVT(TR690)-127, REMOVAL, Secondary Pressure Sensor.>
6) Remove the primary speed sensor. <Ref. to CVT(TR690)-120, REMOVAL, Primary Speed Sensor.>
7) Remove the extension case. <Ref. to CVT(TR690)-164, REMOVAL, Extension Case.>
8) Remove the rear drive shaft. <Ref. to CVT(TR690)-167, REMOVAL, Rear Drive Shaft.>
9) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-172, REMOVAL, Transfer Clutch.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-184, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-191, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-206, REMOVAL, Forward Clutch Assembly.>
13) Remove the transmission case. <Ref. to CVT(TR690)-246, REMOVAL, Transmission Case.>
14) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-263, REMOVAL, Primary Pulley and Secondary Pulley.>
15) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-279, REMOVAL, Drive Pinion Shaft Assembly.>
16) Remove the front differential assembly. <Ref. to CVT(TR690)-300, REMOVAL, Front Differential Assembly.>
17) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-319, REMOVAL, Oil Pump Chain.>
18) Remove the converter case cover. <Ref. to CVT(TR690)-327, REMOVAL, Converter Case Cover.>
19) Remove the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-337, REMOVAL, Front Reduction Drive Gear.>



B: INSTALLATION

1) Install the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-338, INSTALLATION, Front Reduction Drive Gear.>
2) Install the converter case cover. <Ref. to CVT(TR690)-330, INSTALLATION, Converter Case Cover.>
3) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-321, INSTALLATION, Oil Pump Chain.>
4) Install the front differential assembly. <Ref. to CVT(TR690)-301, INSTALLATION, Front Differential Assembly.>
5) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-281, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-267, INSTALLATION, Primary Pulley and Secondary Pulley.>
7) Install the transmission case. <Ref. to CVT(TR690)-248, INSTALLATION, Transmission Case.>
8) Install the forward clutch assembly. <Ref. to CVT(TR690)-207, INSTALLATION, Forward Clutch Assembly.>
9) Install the intermediate case. <Ref. to CVT(TR690)-192, INSTALLATION, Intermediate Case.>
10) Install the transfer reduction driven gear. <Ref. to CVT(TR690)-184, INSTALLATION, Transfer Reduction Driven Gear.>
11) Install the transfer clutch assembly. <Ref. to CVT(TR690)-173, INSTALLATION, Transfer Clutch.>
12) Install the rear drive shaft. <Ref. to CVT(TR690)-167, INSTALLATION, Rear Drive Shaft.>
13) Install the extension case. <Ref. to CVT(TR690)-164, INSTALLATION, Extension Case.>
14) Install the primary speed sensor. <Ref. to CVT(TR690)-122, INSTALLATION, Primary Speed Sensor.>
15) Install the secondary pressure sensor. <Ref. to CVT(TR690)-127, INSTALLATION, Secondary Pressure Sensor.>

16) Install the transmission harness. <Ref. to CVT(TR690)-140, INSTALLATION, Transmission Harness.>
17) Install the control valve body and oil pan. <Ref. to CVT(TR690)-133, INSTALLATION, Control Valve Body.>
18) Install the air breather hose. <Ref. to CVT(TR690)-158, INSTALLATION, Air Breather Hose.>
19) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-77, INSTALLATION, Automatic Transmission Assembly.>

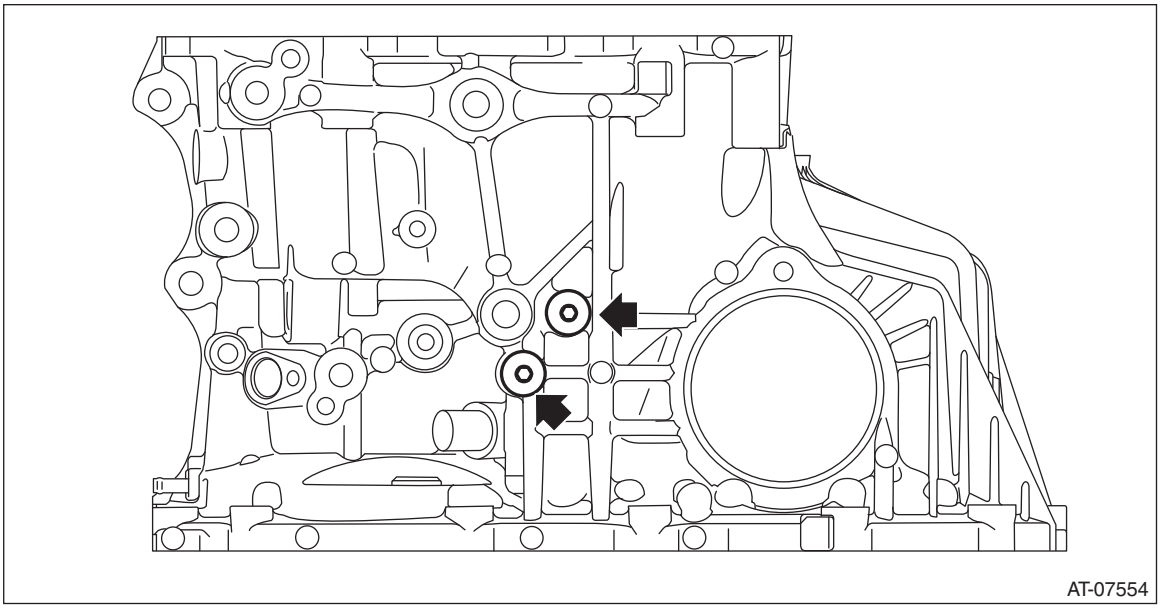
C: DISASSEMBLY

1) Remove the transmission hanger and transmission radio ground cord, if mounted.
2) Remove the oil drain plug and overflow drain plug. <Ref. to CVT(TR690)-44, REPLACEMENT, Differential Gear Oil.>
3) Remove all plugs.

D: ASSEMBLY

1) Install the oil drain plug.

NOTE:
Use a new gasket.



Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

2) Temporarily install the overflow drain plug.

NOTE:
Replace the gasket of overflow drain plug with a new part after installing the transmission assembly to vehicle and adjusting differential gear oil.
3) Install all plugs.

NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

4) Install the transmission hanger and transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

F: ADJUSTMENT

When replacing the converter case, select the following shims.

- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-343, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-350, ADJUSTMENT, Front Reduction Driven Gear.>
- Select shims for primary pulley. <Ref. to CVT(TR690)-273, ADJUSTMENT, Primary Pulley and Secondary Pulley.>

52.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in “D” or “R” range.	• Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to CVT(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the following items which might affect CVT problems. • General inspection <Ref. to CVT(diag)-5, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness damage • Oil leakage • Stall speed test <Ref. to CVT(TR580)-49, Stall Test.> <Ref. to CVT(TR690)-49, Stall Test.> • Secondary pressure test <Ref. to CVT(TR580)-52, Secondary Pressure (Line Pressure) Test.> <Ref. to CVT(TR690)-52, Secondary Pressure (Line Pressure) Test.> • Transfer clutch pressure test <Ref. to CVT(TR580)-55, Transfer Clutch Pressure Test.> <Ref. to CVT(TR690)-55, Transfer Clutch Pressure Test.> • Time lag test <Ref. to CVT(TR580)-51, Time Lag Test.> <Ref. to CVT(TR690)-51, Time Lag Test.> • Road test <Ref. to CVT(TR580)-48, Road Test.> <Ref. to CVT(TR690)-48, Road Test.> • Inhibitor switch <Ref. to CVT(TR580)-107, Inhibitor Switch.> <Ref. to CVT(TR690)-105, Inhibitor Switch.>	Is the check result OK?	Go to step **2**.	Repair the items which may be affecting the CVT trouble.
2	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON and wait for at least 2 seconds.	Does the AT OIL TEMP light illuminate?	Go to step **3**.	Check the AT OIL TEMP light.
3	**CHECK AT OIL TEMP LIGHT.** Start the engine and wait for 2 seconds or more.	Does the AT OIL TEMP light blink?	Go to step **4**.	Go to step **5**.
4	**CHECK DTC DISPLAY.** Read the DTC. NOTE: If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to CVT(diag)-41, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **6**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **5**.

	Step	Check	Yes	No
5	**PERFORM GENERAL DIAGNOSTICS.** 1) Inspect using “Diagnostic Procedure without Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-238, Diagnostic Procedure without Diagnostic Trouble Code (DTC).> 2) Inspect using “Diagnostics with Phenomenon”. <Ref. to CVT(diag)-239, Diagnostics with Phenomenon.> 3) Perform the Inspection Mode. <Ref. to CVT(diag)-27, Inspection Mode.> 4) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Go to step **6**.	Finish the diagnosis.
6	**PERFORM DIAGNOSIS.** 1) Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-49, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: For the DTC table, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-44, List of Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Perform the Inspection Mode. <Ref. to CVT(diag)-27, Inspection Mode.> 5) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-49, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer reading	km (miles)		
Frequency	❑ Continuous ❑ Intermittent (times/day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Other ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Other ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
AT OIL TEMP light	❑ Blinks continuously	❑ Does not blink	
Select lever position	❑ P ❑ R ❑ N ❑ D ❑ Manual mode		
Driving condition	❑ Not affected ❑ At racing ❑ While decelerating	❑ At starting ❑ While accelerating ❑ While turning (❑ RH/❑ LH)	❑ While idling ❑ When cruising (Vehicle speed km/h) ❑ Immediately after starting the engine
Manual mode	❑ ON ❑ OFF		
Symptoms	❑ Vehicle does not move (❑ Any position ❑ Particular position)		
	❑ Vehicle does not move (no load racing condition as in N range)		
	❑ Vehicle does not move (engine speed does not increase, felt as stall condition)		
	❑ Noise or vibration (Describe concretely:)		
	❑ Shock felt at N → D selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shock felt at N → R selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shifting is wrong (Describe concretely:)		
	❑ Shock or judder during driving		
	❑ Fails to accelerate.		
	❑ Engine speed increases abruptly during driving		
	❑ Shock or judder during standing start		
	❑ Select lever does not move		
	❑ Other ( )		

3. General Description

A: CAUTION

1) The airbag system wiring harness is routed near the TCM.

CAUTION:
• All the airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment to check these circuits.
• Be careful not to damage the airbag system wiring harness when performing diagnostics or servicing the TCM.

2) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal because it deforms inside which may lead to malfunction.

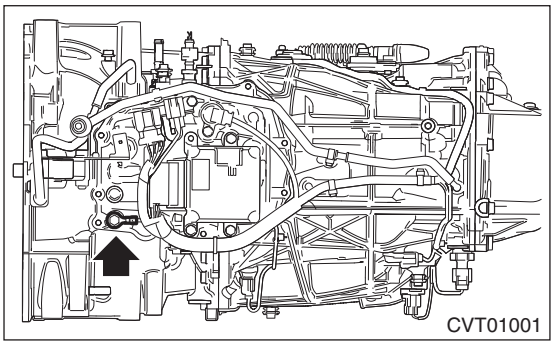
CAUTION:
If a taper pin or the like has been inserted into the connector terminal, replace the connector.

3) The TCM connector is waterproof. When measuring the TCM connector terminal voltage, or the resistance between the terminals, use the ST.
ST 18460AA040 CHECK BOARD

B: INSPECTION

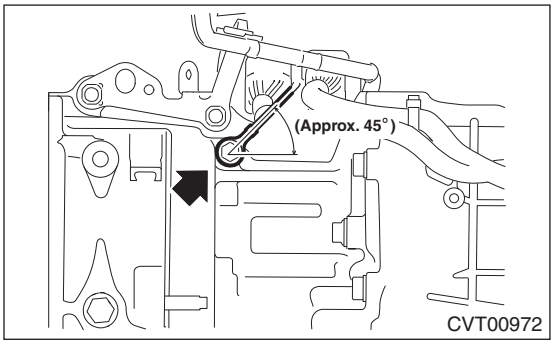
1. BATTERY

Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>



Standard voltage: 12 V or more

Specific gravity: 1.260 or more

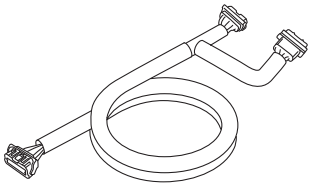


2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

Tightening torque:
ENGINE TYPE FB
14 N·m (1.4 kgf-m, 10.3 ft-lb)

ENGINE TYPE EZ
16 N·m (1.6 kgf-m, 11.8 ft-lb)



3. OPERATION OF SELECT LEVER

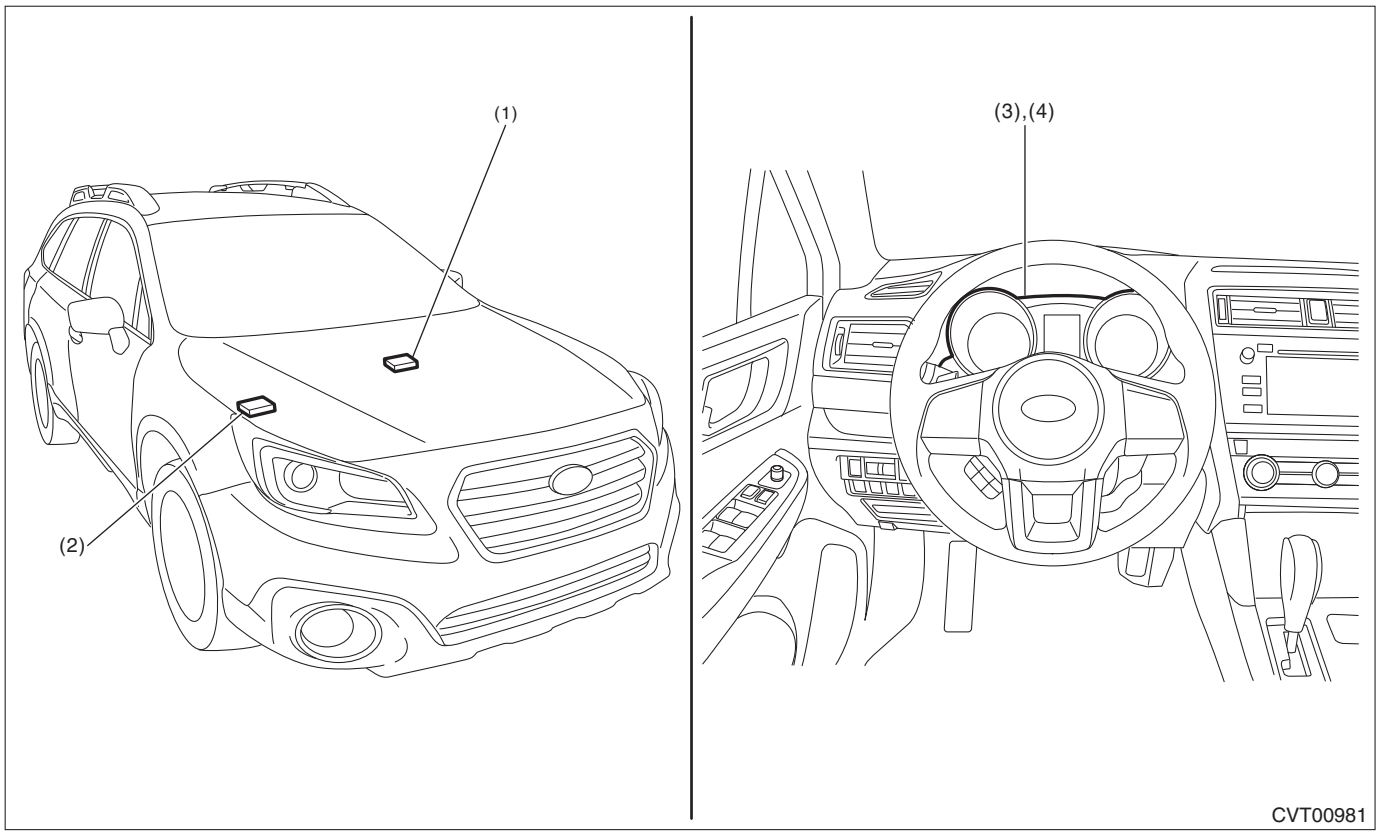
Make sure there is no noise, dragging or contact pattern in each select lever range.

WARNING:
Stop the engine while checking operation of the select lever.

C: PREPARATION TOOL

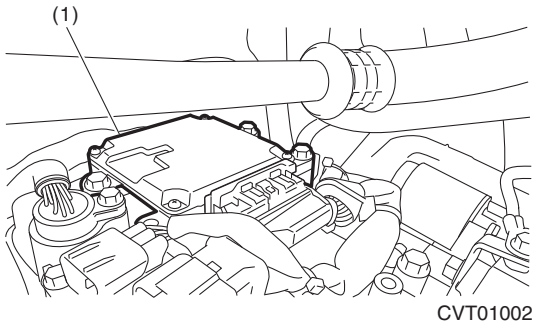
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18460AA040	18460AA040	CHECK BOARD	Used for measuring voltage and resistance of TCM terminals.

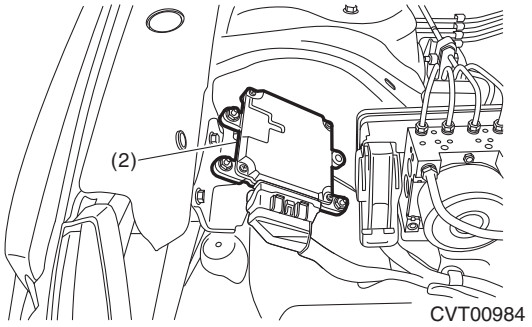


2. GENERAL TOOL

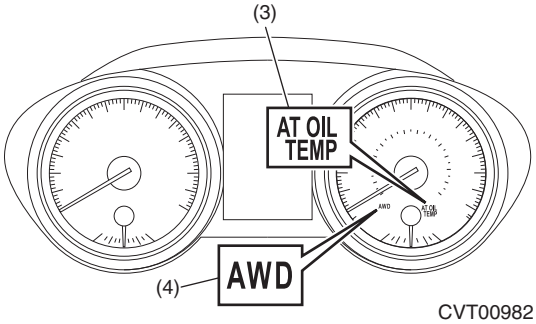
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.



4. Electrical Component Location

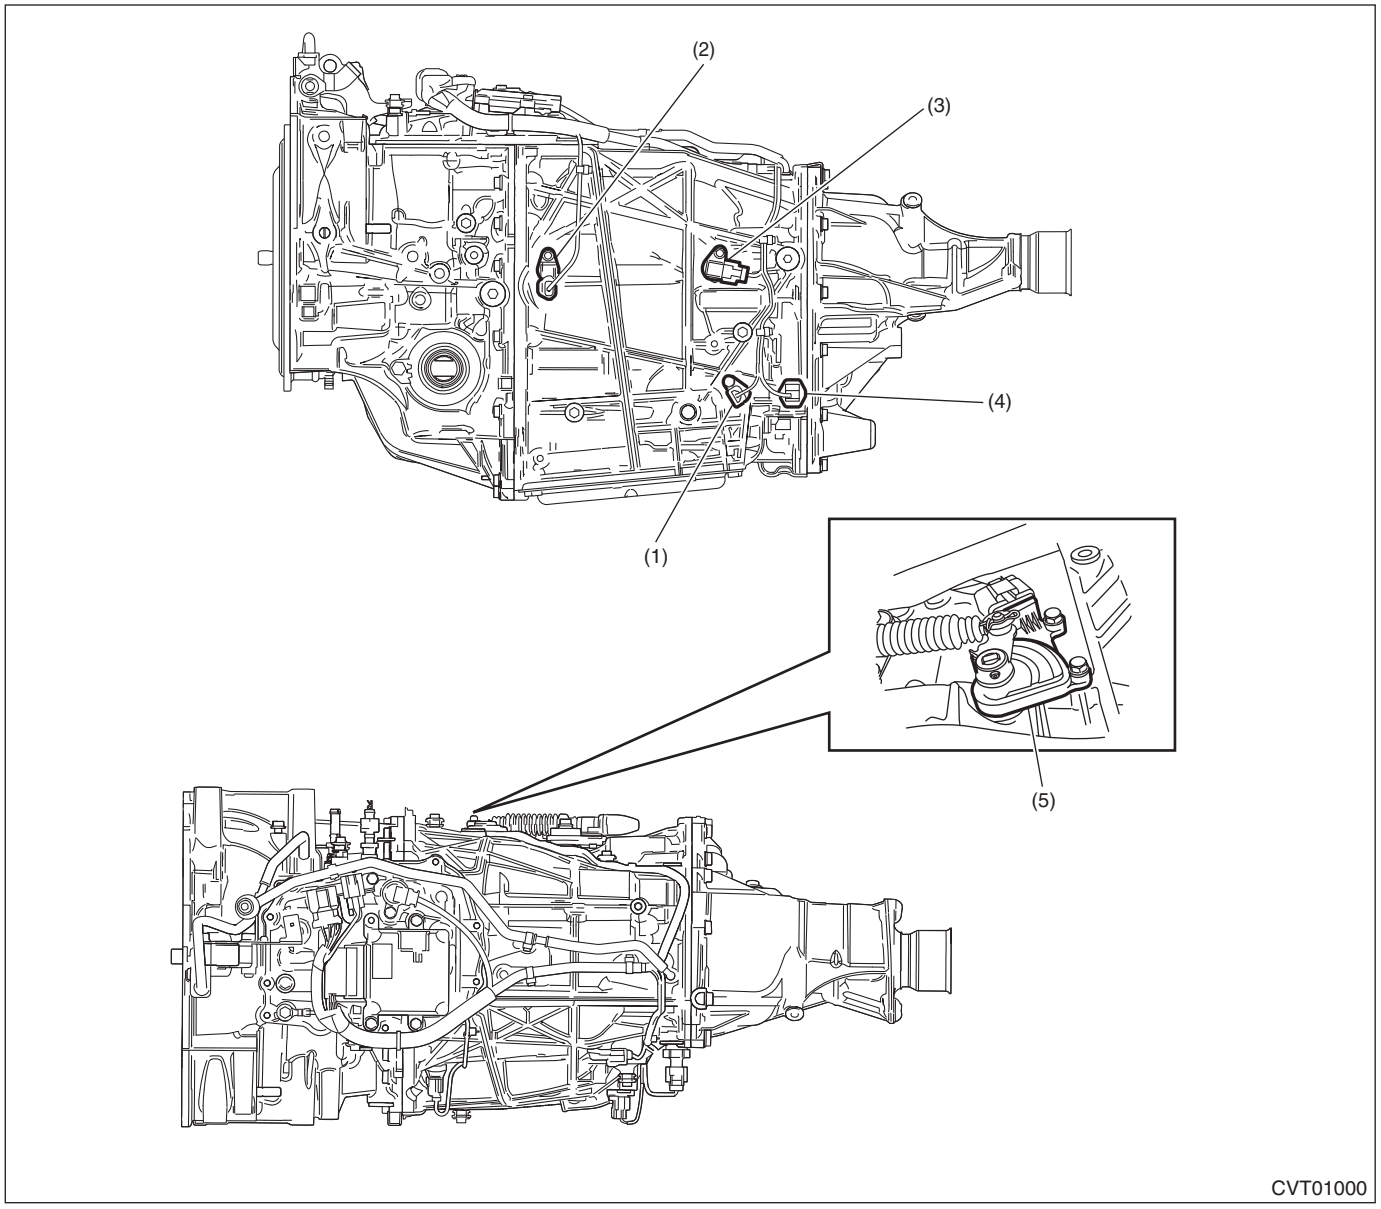


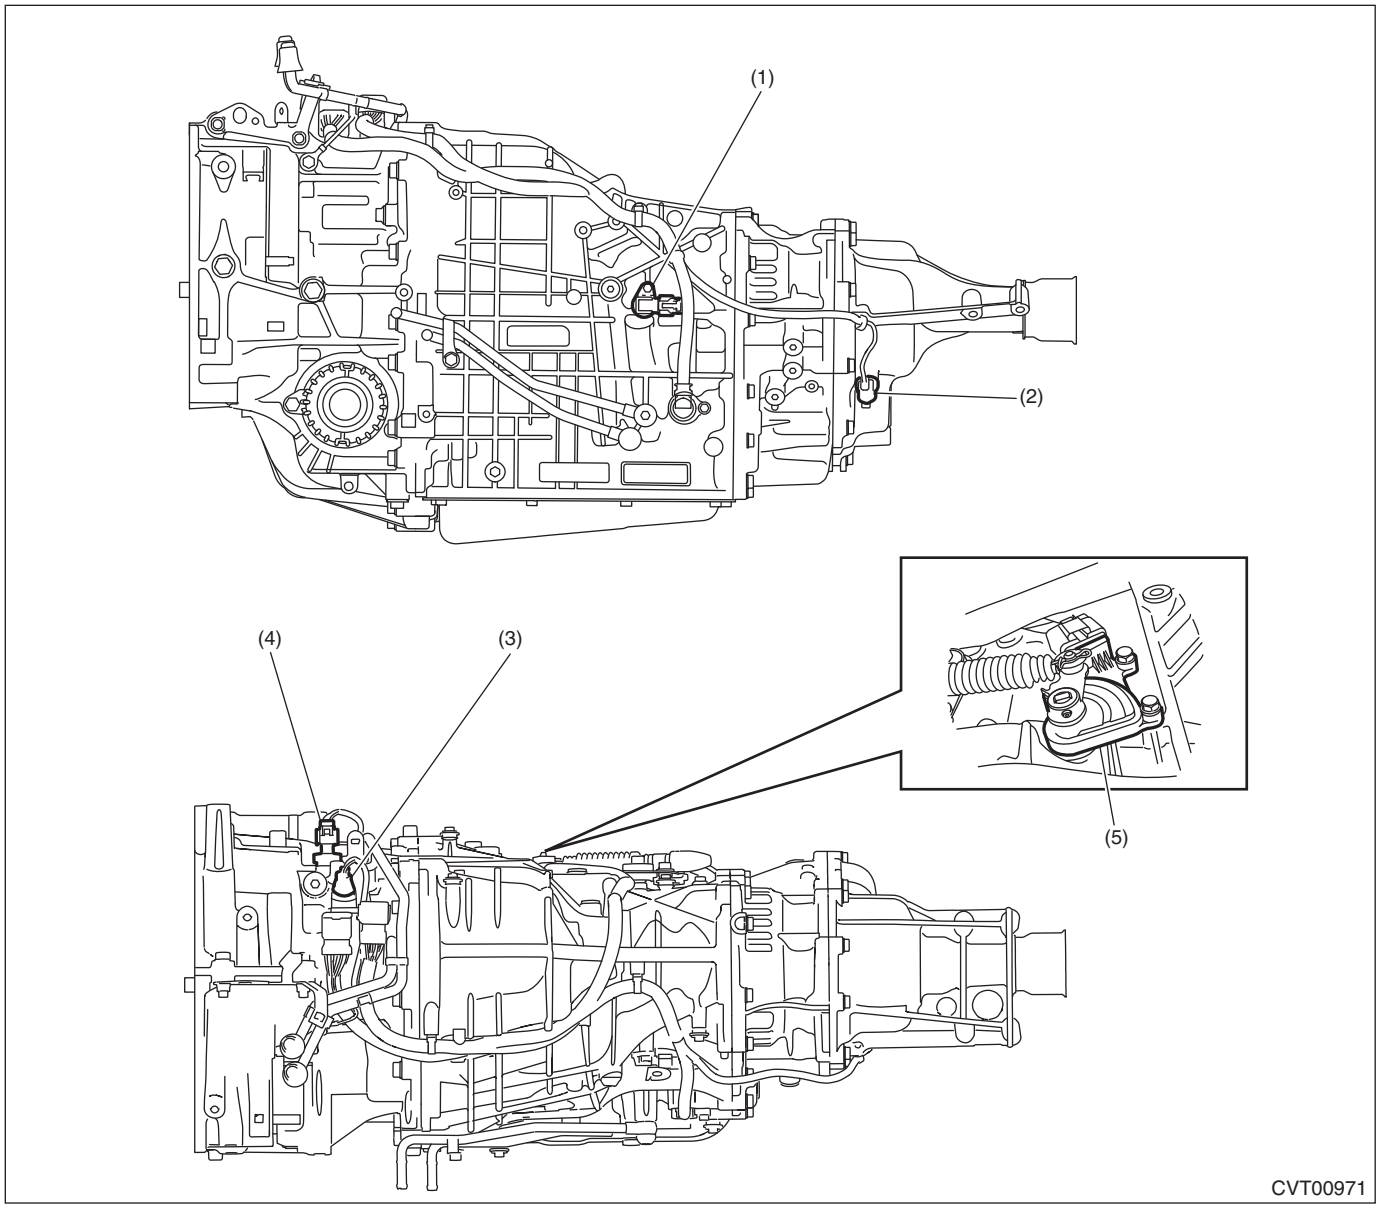
A: LOCATION



1. CONTROL MODULE

(1) TCM (engine type FB)
(2) TCM (engine type EZ)
(3) AT OIL TEMP light
(4) AWD light





2. SENSOR

- ENGINE TYPE FB

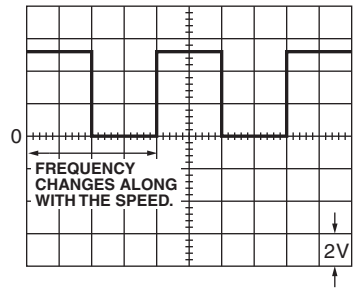
		Except for P range	8 V or more	—	
R range switch	37	R range	Less than 1 V	—	
		Except for R range	8 V or more	—	
N range switch	36	N range	Less than 1 V	—	
		Except for N range	8 V or more	—	
D range switch	35	D range	Less than 1 V	—	
		Except for D range	8 V or more	—	

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
ATF temperature sensor	6	ATF temperature at 20°C (68°F)	Approx. 2.5 V	Approx. 2.5 kΩ	
		ATF temperature at 80°C (176°F)	Approx. 0.7 V	Approx. 330 Ω	
ATF temperature sensor GND	1	Always	Approx. 0 V	—	
Secondary pressure sensor power supply output	33	Ignition switch ON	5 V	—	
Secondary pressure sensor	5	Ignition switch ON, engine OFF	Approx. 0.5 V (0 MPa)	—	Value increases with increase of engine load. (0.5 — 4.5 V)
		Ignition switch ON, engine ON	Approx. 1.0 V (1.0 MPa)	—	
Secondary pressure sensor GND	2	Always	Approx. 0 V	—	
Primary speed sensor	14	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Secondary speed sensor	13	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Turbine speed sensor	12	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
F&R solenoid	16	Engine ON	Refer to the waveform (solenoid (1))	Approx. 4 — 6 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Secondary solenoid	32	Engine ON	Refer to the waveform (solenoid (2))	Approx. 5 — 7 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary UP solenoid	47	Engine ON, while UP shifting	Refer to the waveform (solenoid (3))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary DOWN solenoid	30	Engine ON, while DOWN shifting	Refer to the waveform (solenoid (4))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Lock-up duty solenoid	15	Lock-up ON	Refer to the waveform (solenoid (5))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
AWD solenoid	48	Engine ON, “P” or “N” range	Refer to the waveform (solenoid (6))	Approx. 2 — 4.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		Engine ON, “D” range, brake ON	Refer to the waveform (solenoid (7))		
CAN communication line (+)	43	—	—	—	
CAN communication line (–)	44	—	—	—	
GND	26	Always	Approx. 0 V	—	
GND	42	Always	Approx. 0 V	—	

- ENGINE TYPE EZ



NOTE:
Measure after warming up.

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks

Display	Contents	Unit of measure
Engine RPM	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signal. TCM input value.	rpm
Turbine Revolution Speed	Turbine rotation speed calculated by the TCM using signals from the turbine speed sensor.	rpm
Accelerator Opening Angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the secondary axis rotation speed.	km/h or MPH
ATF Temperature	Value calculated from the ATF temperature sensor output value. ATF temperature of the control valve section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Stop Light Switch	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF

Display	Contents	Unit of measure
X Mode	ON/OFF status of the X mode received from the engine. TCM input value.	ON or OFF
Shift Step in Manual Mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (–) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
AT learning	AT initial learning completion status. AT oil temperature warning light blinks at 4 Hz when the learning is not completed. TCM output value.	Complete or Not Completed
Ignition SW ON Count	Number of times the ignition is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
Back-up Power Supply Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

NOTE:
For detailed operation procedures, refer to “Application help”.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «DTC».

NOTE:
• For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-44, List of Diagnostic Trouble Code (DTC).>
• For detailed operation procedures, refer to “Application help”.

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

<Ref. to CVT(TR580)-48, Road Test.> <Ref. to CVT(TR690)-48, Road Test.>

10.Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to CVT(diag)-26, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P0601	INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR	Perform the drive cycle A twice.
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	Perform the drive cycle A twice.
P062F	INTERNAL CONTROL MODULE EEPROM ERROR	Perform the drive cycle A twice.
P0712	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW	—
P0776	PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF	Perform the drive cycle D, then the drive cycle A, and perform the drive cycle D again.
P0842	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW	—
P0843	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH	—
P0890	TCM POWER RELAY SENSE CIRCUIT LOW	—
P0962	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW	—
P0963	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH	—
P0966	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW	—
P0967	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH	—
P160A	RANDOM ACCESS MEMORY (RAM) ERROR	Perform the drive cycle A twice.
P2530	IGNITION SWITCH RUN POSITION CIRCUIT	—
P2763	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH	Perform the drive cycle A, then perform the drive cycle C.

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”.

3. DRIVE CYCLE B

DTC	Item	Condition
P0711	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	Perform the drive cycle B twice.

Diagnostic procedure:
1) Start the engine under condition that ATF temperature is at 20°C (68°F) or below.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

NOTE:
Repeat two or more driving cycles in this driving pattern.

4. DRIVE CYCLE C

DTC	Item	Condition
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	—
P0716	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—
P0717	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL	—
P0720	OUTPUT SHAFT SPEED SENSOR CIRCUIT	—
P0721	OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE	—
P0970	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW	—
P0971	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH	—
P0973	SHIFT SOLENOID "A" CONTROL CIRCUIT LOW	—
P0974	SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH	—
P0976	SHIFT SOLENOID "B" CONTROL CIRCUIT LOW	—
P0977	SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH	—
P2746	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/PERFORMANCE	—
P2747	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL	—
P2750	INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/PERFORMANCE	—
P2751	INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL	—
P2763	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH	Perform the drive cycle A, then perform the drive cycle C.
P2764	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW	—
P2769	TORQUE CONVERTER CLUTCH CIRCUIT LOW	—
P2770	TORQUE CONVERTER CLUTCH CIRCUIT HIGH	—

Diagnostic procedure:
1) Start the engine.
2) Accelerate slowly to a legal speed, and then decelerate slowly to a stop.

5. DRIVE CYCLE D

DTC	Item	Condition
P0713	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH	—
P0730	INCORRECT GEAR RATIO	—
P0746	PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P0747	PRESSURE CONTROL SOLENOID "A" STUCK ON	Perform the drive cycle D twice.
P0751	SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P0752	SHIFT SOLENOID "A" STUCK ON	Perform the drive cycle D twice.
P0756	SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.
P0757	SHIFT SOLENOID "B" STUCK ON	Perform the drive cycle D twice.
P0776	PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF	Perform the drive cycle D, then the drive cycle A, and perform the drive cycle D again.
P0841	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE	—
P0961	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE	—
P0965	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE	—
P2757	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF	Perform the drive cycle D twice.

DTC	Item	Condition
P2758	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON	Perform the drive cycle D twice.

Diagnostic procedure:
1) Start the engine.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

6. DRIVE CYCLE E

DTC	Item	Condition
P0801	REVERSE INHIBIT CONTROL CIRCUIT/OPEN	—
U0073	CAN FAILURE, BUS 'OFF' DETECTION	—
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	—
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	—
U1235	LOST COMMUNICATION WITH EyeSight	—
U1433	INVALID DATA RECEIVED FROM EyeSight	—

Diagnostic procedure:
1) Start the engine.

7. DRIVE CYCLE F

DTC	Item	Condition
P0705	TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)	—

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: "P" → "R" → "N" → "D".
3) Maintain the engine speed to 2,000 rpm for five seconds or more.

8. DRIVE CYCLE G

DTC	Item	Condition
P0708	TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH	—

Diagnostic procedure:
1) Start the engine.
2) Drive for three seconds at 16 km/h (10 MPH).

NOTE:
Drive in "D" range and "R" range.

9. DRIVE CYCLE H

DTC	Item	Condition
P0719	BRAKE SWITCH "B" CIRCUIT LOW	—
P0724	BRAKE SWITCH "B" CIRCUIT HIGH	—
P0951	AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE	—

Diagnostic procedure:
1) Start the engine.
2) Operate the stop light switch or the manual mode switch.

NOTE:
Drive in “D” range and “R” range.
3) Read the data of the stop light switch or the manual mode switch using the Subaru Select Monitor. Or measure the terminal voltage.

11.Active Test

A: OPERATION

CAUTION:
- **Be sure to perform the active test while the engine is not running.**
- **After executing the active test, execute the Clear Memory Mode.**

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «Active Test».

Item	SSM display	Execution condition
Activating the actuator ON/OFF	F&R Clutch Solenoid	When all of the following conditions are met: • P range • Ignition switch is ON (engine stops) • Battery voltage is 10.9 V or more
	Secondary Solenoid	
	Primary Down Solenoid	
	Primary Up Solenoid	
	AWD Solenoid	
	Lock-Up Duty Solenoid	
	Lock-Up ON/OFF Solenoid	

NOTE:
For detailed operation procedures, refer to “Application help”.

12.Learning Control

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- When the following work is performed, perform learning work for the transmission.

Replacement of TCM/Replacement or disassembly of transmission assembly/Replacement of control valve body/Clearing AT leaning value is executed.

B: PROCEDURE

1. PREPARATION FOR LEARNING

1) Warm up or cool down until the ATF temperature displayed on the Subaru Select Monitor is 40 — 65°C (104 — 149°F).
2) After stopping the vehicle, shift the select lever to “P” range.
3) Apply the electronic parking brake.
4) Lift up the vehicle.

CAUTION:
While working, be sure to keep the lower edge of the tires 30 cm or more above the ground as vehicle will vibrate.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON.
7) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger, etc.

2. SIMPLE LEARNING

NOTE:
Simple learning is performed with the vehicle lifted, without actually running the vehicle.

CAUTION:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «AT learning mode».
7) Follow the messages displayed on the screen when working.

NOTE:
During AT learning in progress, AT OIL TEMP light in the combination meter starts flashing at 2 Hz and the learning operation starts. When the AT OIL TEMP light which was flashing at 2 Hz goes off, the following message is displayed on the screen.
8) When «AT learning normally ended.» is displayed, simple AT learning is completed.

NOTE:
- If communication error occurs during learning, retry the “AT learning mode” from the beginning.
- If the message «Execute AT learning again after fixing troubles of the vehicle» appears during learning, select [OK] and display the DTC list. After repairing the locations indicated by the DTC, start the “AT learning mode” over from the beginning.
- When communication error occurs during learning, select lever does not shift occasionally. If select lever does not shift, turn the ignition switch to OFF before operating the select lever.

• If the message «AT learning ended abnormally. Try again from the beginning.» is displayed, start the “AT learning mode” over from the beginning.

Display	Main causes for abnormal termination
AT learning ended abnormally. Try again from the beginning.	• Fault is detected during AT learning. • The accelerator pedal is depressed during AT learning. • An unspecified operation was performed during AT learning • ATF temperature becomes out of specification during AT learning. • Battery voltage is low. • Malfunction indicator light illuminates. • Electric parking brake not applied strongly enough • Brake pedal is not fully depressed. • Abnormal idle speed increase, etc.

• For detailed operation procedures, refer to “Application help”.

13.AT OIL TEMP Warning Light Display

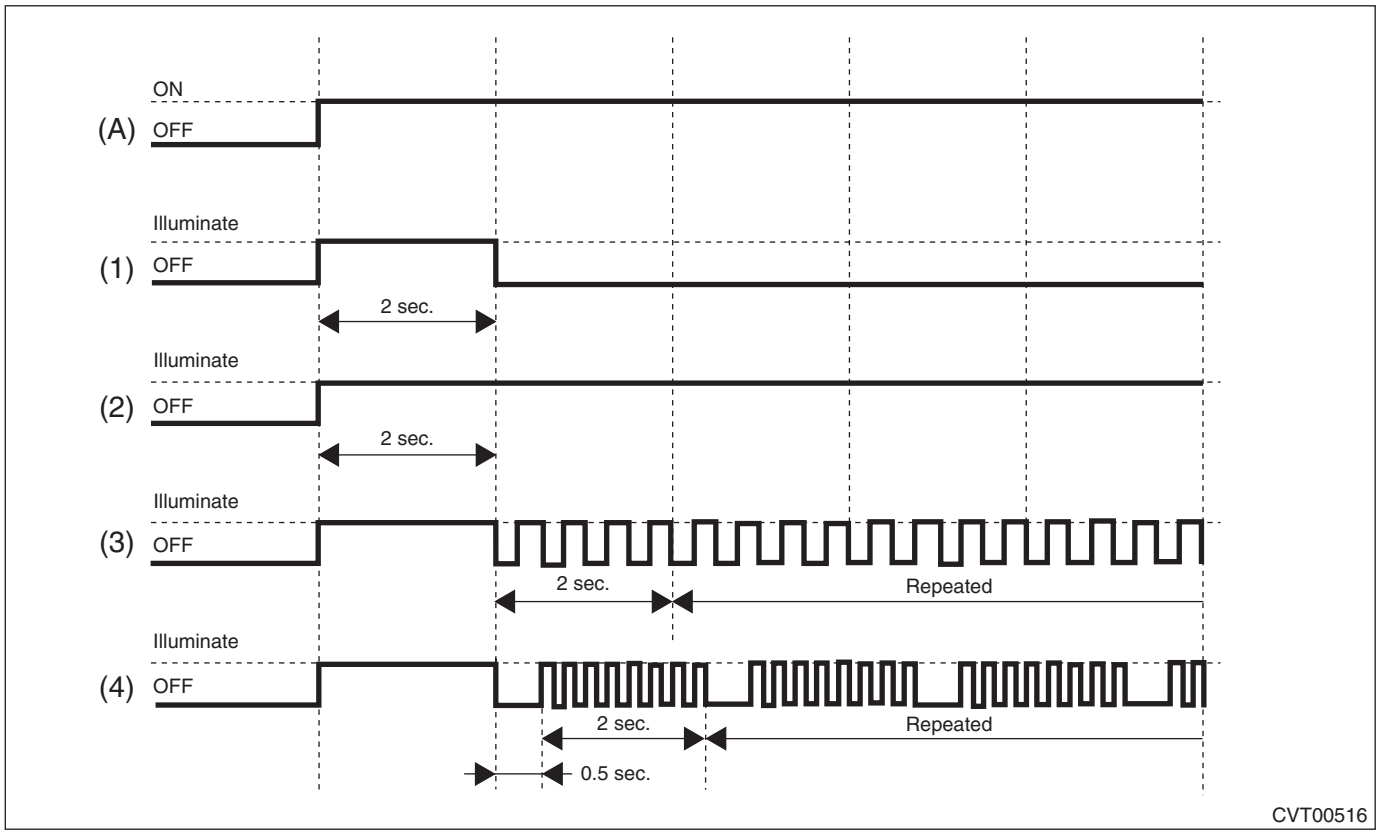
A: OPERATION

The AT OIL TEMP light illuminates or blinks, when the ATF temperature is high and malfunction occurs in CVT.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When ATF temperature is high



AT OIL TEMP light illuminates when the ATF temperature is abnormally high with the ignition switch ON.

- When malfunction is detected

AT OIL TEMP light blinks at 2 Hz when the TCM detects the malfunction of CVT with the ignition switch ON. In this case, inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-49, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

- When AT learning is not finished

AT OIL TEMP light repeats “Blinking at 4 Hz → Turning OFF” when the AT learning is not completed with the ignition switch ON. In this case, perform the “Learning”. (During AT learning, the light blinks at 2 Hz or illuminates.) <Ref. to CVT(diag)-33, Learning Control.>

(A) Ignition switch condition

(1) At normal condition
(2) When ATF temperature is high
(3) When malfunction is detected
(4) When AT learning is not finished

If the AT OIL TEMP light does not illuminate, or illumination patterns are not as above, check the AT OIL TEMP light circuit. <Ref. to CVT(diag)-36, INSPECTION, AT OIL TEMP Warning Light Display.>

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in special control mode.
- AT learning is not finished.

TROUBLE SYMPTOM:

- When the ignition switch is turned to ON, the AT OIL TEMP light does not illuminate.
- AT OIL TEMP light remains lit after engine start.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON.	Does AT OIL TEMP light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AT OIL TEMP LIGHT.** Start the engine.	Does the AT OIL TEMP light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK TCM.** Read the data of «ATF Temperature Lamp» using the Subaru Select Monitor.	Is “ON” displayed?	Go to step **8**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
8	**CHECK TCM.** Read the data of «ATF Temp.» using the Subaru Select Monitor.	Is the display 125°C or more?	Go to step **9**.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

	Step	Check	Yes	No
9	**CHECK ATF TEMPERATURE.** Check the real fluid temperature from the transmission case surface temperature.	Does it clearly differ from the «ATF Temp.» displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC P0712. If there is no problem, perform the diagnosis according to DTC P0713.	When ATF temperature can be judged as actually high, perform the diagnosis again after the ATF temperature lowers.

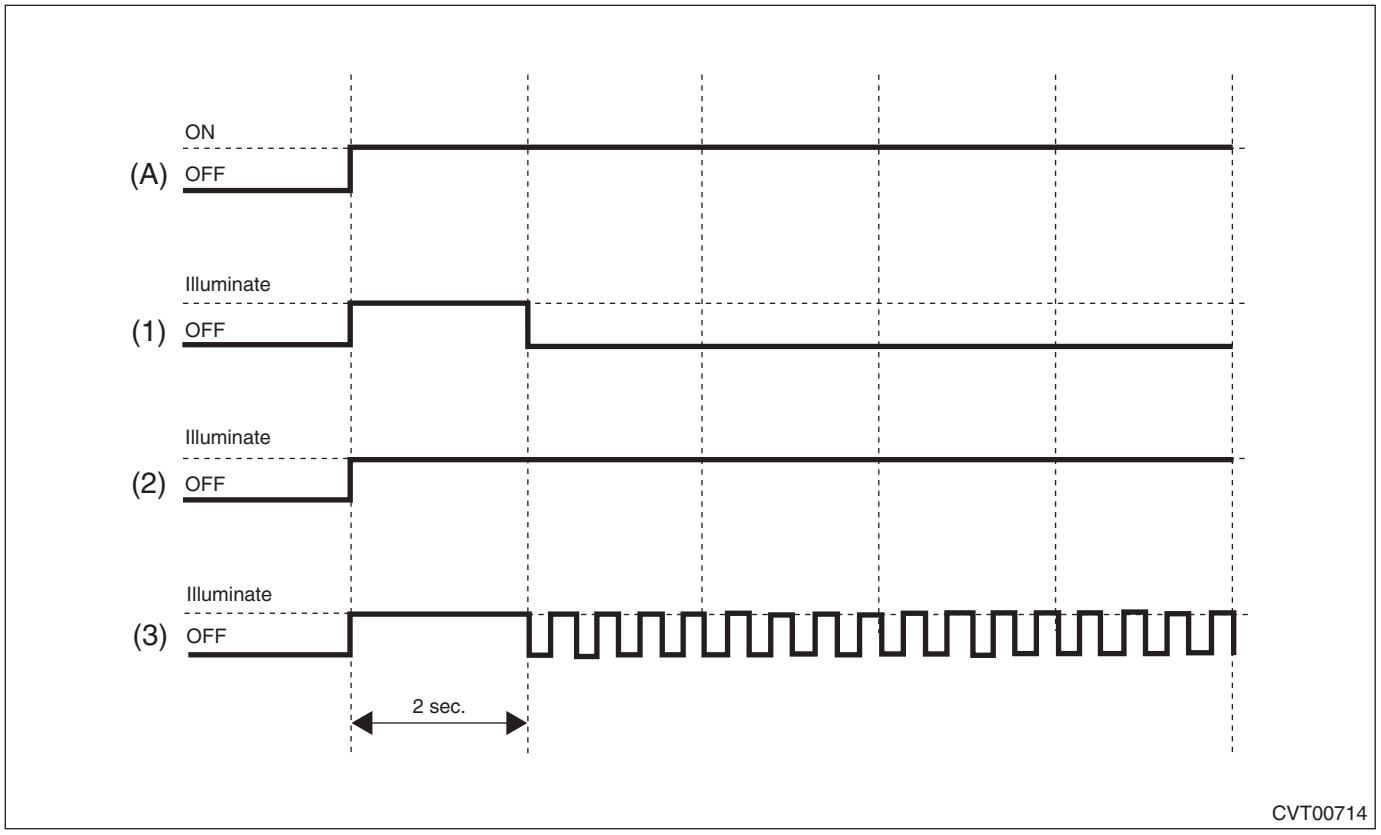
14.AWD Warning Light Display

A: OPERATION

AWD light illuminates or blinks, when the AWD is in special control condition and AWD has malfunction.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.



- When FF mode is selected

AWD light illuminates when the AWD ON/OFF switching function is set to “FF mode” with the ignition switch ON.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed, or air pressure of any of four wheels is excessively low.
2. When “Rear differential inspection mode” is judged as NG <Ref. to DI-63, Rear Differential Inspection Mode.>

(A) Ignition switch condition

(1) At normal condition (2) When FF mode is selected (3) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to CVT(diag)-38, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in AWD special control mode.

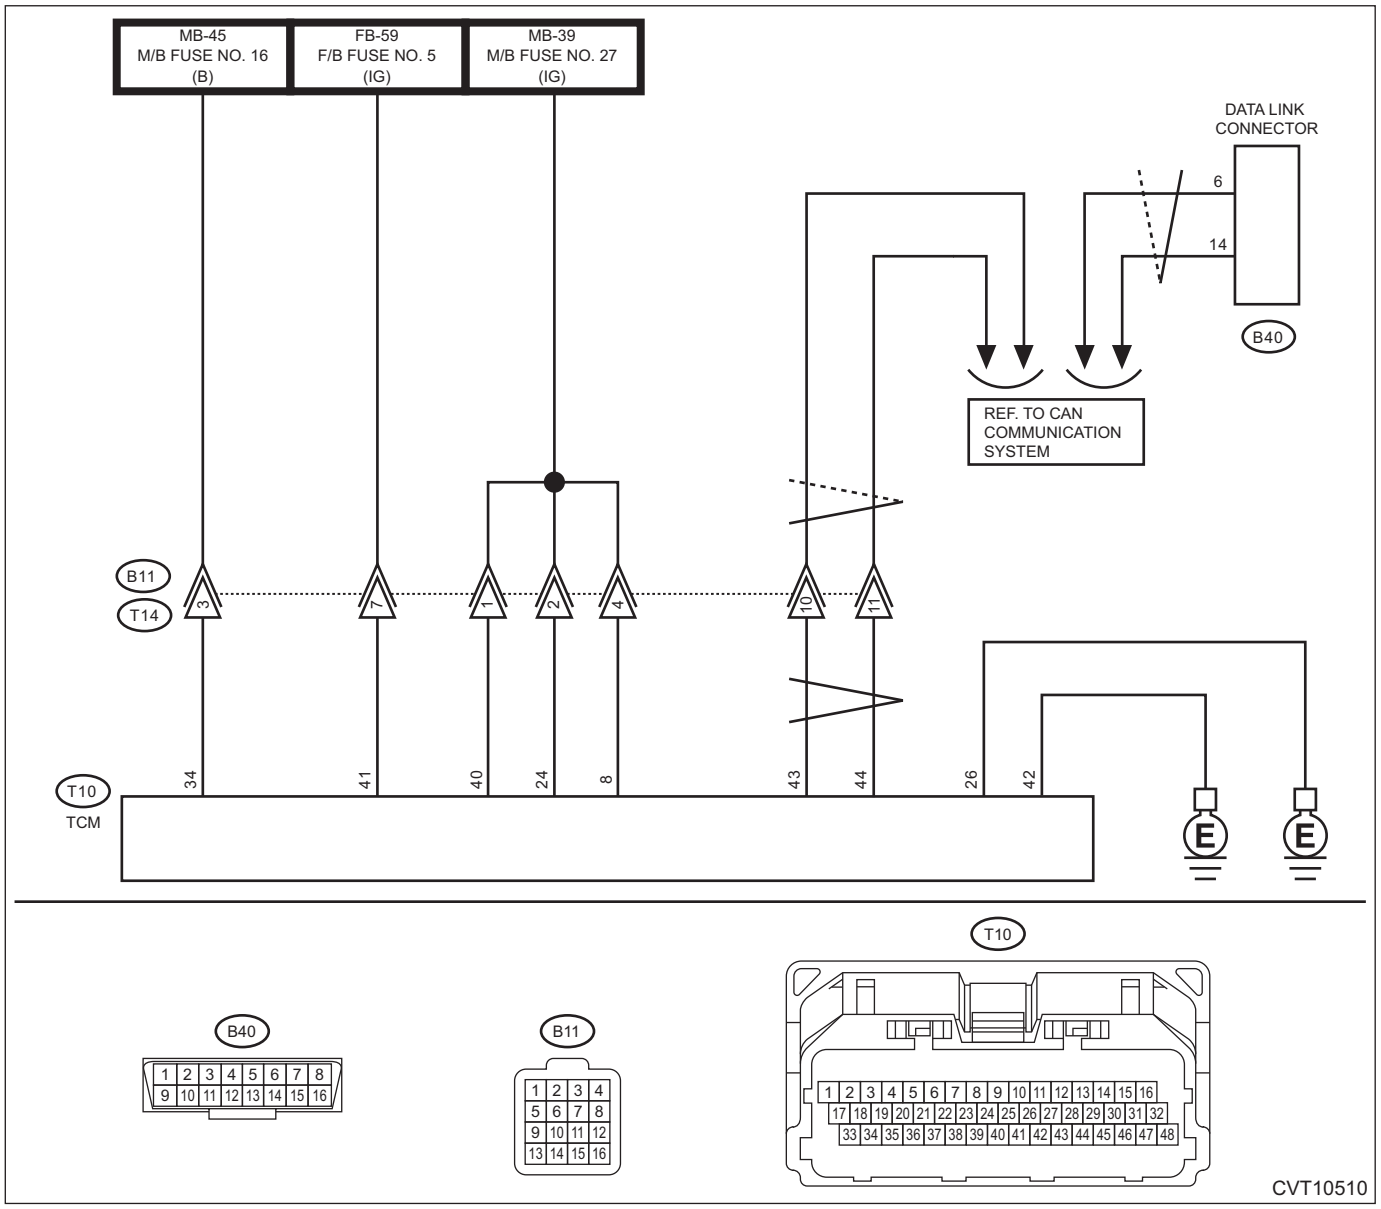
TROUBLE SYMPTOM:

- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light remains lit after engine start.

- AWD light is blinking immediately after engine start.

	Step	Check	Yes	No
1	**CHECK TCM.** Check the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK TCM.** Check the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AWD LIGHT.** Turn the ignition switch to ON.	Does AWD light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AWD LIGHT.** Start the engine.	Does the AWD light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK AWD LIGHT.** Check the display of AWD light after engine start.	Is AWD light illuminating?	Go to step **9**.	Go to step **8**.
8	**CHECK AWD LIGHT.** Check the display of AWD light after engine start.	Is AWD light blinking at 2 Hz?	Go to step **10**.	Go to step **11**.
9	**CHECK AWD ON/OFF SWITCHING FUNCTION.** Using the Subaru Select Monitor, select the «AWD ON/OFF switching mode» in «Work Support» display, and check the current mode. <Ref. to CVT(TR580)-47, AWD ON/OFF Switching Mode.>	Is the message «At present, the vehicle is in AWD. Switch to FF?» displayed?	Go to step **11**.	If the message «At present, the vehicle is in FF. Switch to AWD?» is displayed, select “OK”, and switch to AWD mode.
10	**CHECK REAR DIFFERENTIAL.** Using the Subaru Select Monitor, select and check «Rear differential inspection mode» in «Work Support» display. <Ref. to DI-63, Rear Differential Inspection Mode.>	Does AWD light go off after inspection is finished normally?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **11**.

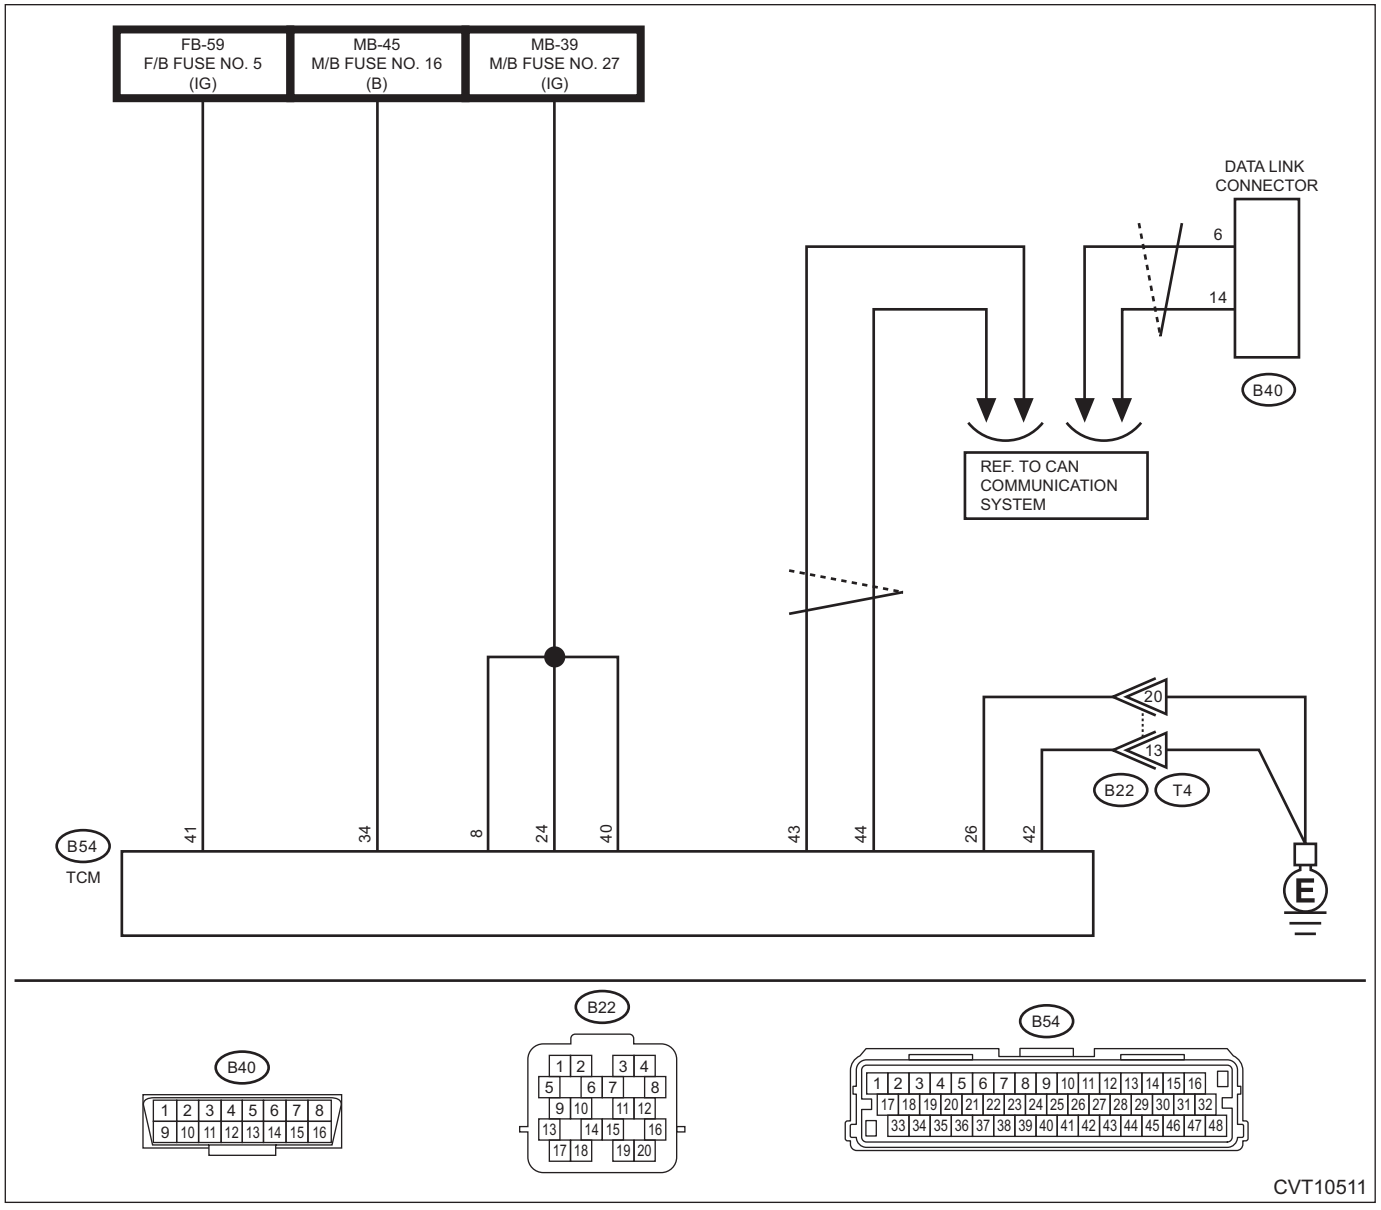
	Step	Check	Yes	No
11	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>



15.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Defective harness connector
Trouble symptom:
Subaru Select Monitor communication failure



CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
- ENGINE TYPE FB

CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

- ENGINE TYPE EZ

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the transmission using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF TCM CONNECTOR.** Turn the ignition switch to OFF.	Is the TCM connector inserted into the TCM until the clamp locks?	Go to step **5**.	Insert the TCM connector to TCM.

	Step	Check	Yes	No
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to transmission system can be executed normally.	Is «Select Function» displayed?	Check DTC of TCM. <Ref. to CVT(diag)-25, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. (Engine OFF) 4) Measure the ignition power supply voltage between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 8 (+) — Chassis ground (–):*** ***(T10) No. 24 (+) — Chassis ground (–):*** ***(T10) No. 34 (+) — Chassis ground (–):*** ***(T10) No. 40 (+) — Chassis ground (–):*** ***(T10) No. 41 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 8 (+) — Chassis ground (–):*** ***(B54) No. 24 (+) — Chassis ground (–):*** ***(B54) No. 34 (+) — Chassis ground (–):*** ***(B54) No. 40 (+) — Chassis ground (–):*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness between TCM and battery.
8	**CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 26 — Chassis ground:*** ***(T10) No. 42 — Chassis ground:*** ***ENGINE TYPE EZ*** ***(B54) No. 26 — Chassis ground:*** ***(B54) No. 42 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the TCM ground circuit and poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

16.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	Wheel speed data from VDC CM&H/U is abnormal.	<Ref. to CVT(diag)-49, DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0601	INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR	TCM ROM is faulty.	<Ref. to CVT(diag)-50, DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	TCM RAM is faulty.	<Ref. to CVT(diag)-51, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	INTERNAL CONTROL MODULE EEPROM ERROR	TCM EEPROM is faulty.	<Ref. to CVT(diag)-52, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0705	TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)	Inhibitor switch malfunction or short circuit	<Ref. to CVT(diag)-53, DTC P0705 TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0708	TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH	Inhibitor switch malfunction or open circuit	<Ref. to CVT(diag)-56, DTC P0708 TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0711	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	ATF temperature sensor is faulty or input signal circuit is faulty.	<Ref. to CVT(diag)-60, DTC P0711 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0712	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW	ATF temperature sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-62, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0713	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH	ATF temperature sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-65, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0716	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/PERFORMANCE	Turbine speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-69, DTC P0716 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0717	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL	Turbine speed sensor signal no input	<Ref. to CVT(diag)-70, DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0719	BRAKE SWITCH "B" CIRCUIT LOW	Brake switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-73, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0720	OUTPUT SHAFT SPEED SENSOR CIRCUIT	Front wheel speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-76, DTC P0720 OUTPUT SHAFT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0721	OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE	Front wheel speed sensor characteristics is abnormal.	<Ref. to CVT(diag)-79, DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0724	BRAKE SWITCH "B" CIRCUIT HIGH	Brake switch is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-80, DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0730	INCORRECT GEAR RATIO	Primary speed sensor, secondary speed sensor, control valve, or chain is faulty.	<Ref. to CVT(diag)-82, DTC P0730 INCORRECT GEAR RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0746	PRESSURE CONTROL SOLENOID A PERFORMANCE/STUCK OFF	Secondary solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-85, DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0747	PRESSURE CONTROL SOLENOID "A" STUCK ON	Secondary solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-92, DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0751	SHIFT SOLENOID "A" PERFORMANCE/ STUCK OFF	Primary UP solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-99, DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0752	SHIFT SOLENOID "A" STUCK ON	Primary UP solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-104, DTC P0752 SHIFT SOLENOID "A" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0756	SHIFT SOLENOID "B" PERFORMANCE/ STUCK OFF	Primary DOWN solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-109, DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0757	SHIFT SOLENOID "B" STUCK ON	Primary DOWN solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-114, DTC P0757 SHIFT SOLENOID "B" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0776	PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF	F&R solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-119, DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0801	REVERSE INHIBIT CONTROL CIRCUIT/ OPEN	Shift lock solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-125, DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT/ OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0841	TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT RANGE/PERFORMANCE	Secondary pressure sensor or control valve is faulty	<Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0842	TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT LOW	Secondary pressure sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-135, DTC P0842 TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0843	TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT HIGH	Secondary pressure sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-139, DTC P0843 TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0890	TCM POWER RELAY SENSE CIRCUIT LOW	Self-shut relay is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-143, DTC P0890 TCM POWER RELAY SENSE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0951	AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE	Manual mode switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-145, DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0961	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE	Characteristics of secondary solenoid is abnormal.	<Ref. to CVT(diag)-148, DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0962	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW	Secondary solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-151, DTC P0962 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0963	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH	Secondary solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-155, DTC P0963 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0965	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE	F&R solenoid, forward clutch or control valve is faulty.	<Ref. to CVT(diag)-158, DTC P0965 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0966	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW	F&R solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-161, DTC P0966 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0967	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH	F&R solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-164, DTC P0967 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0970	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW	AWD solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-167, DTC P0970 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0971	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH	AWD solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-170, DTC P0971 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0973	SHIFT SOLENOID "A" CONTROL CIRCUIT LOW	Primary UP solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-173, DTC P0973 SHIFT SOLENOID "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0974	SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH	Primary UP solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-176, DTC P0974 SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0976	SHIFT SOLENOID "B" CONTROL CIRCUIT LOW	Primary DOWN solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-179, DTC P0976 SHIFT SOLENOID "B" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0977	SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH	Primary DOWN solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-182, DTC P0977 SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P160A	RANDOM ACCESS MEMORY (RAM) ERROR	TCM RAM is faulty.	<Ref. to CVT(diag)-185, DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P2530	IGNITION SWITCH RUN POSITION CIRCUIT	Ignition SW circuit is faulty.	<Ref. to CVT(diag)-186, DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2746	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/PERFORMANCE	Primary speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-188, DTC P2746 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U1235	LOST COMMUNICATION WITH EyeSight	Detected that the EyeSight data has not yet arrived.	<Ref. to CVT(diag)-236, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	Detected abnormality of the EyeSight data.	<Ref. to CVT(diag)-236, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

17.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC DETECTING CONDITION:
Immediately at fault recognition
TROUBLE SYMPTOM:
VDC does not operate.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from Vehicle Dynamics Control Module NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	ON

Time Needed for Diagnosis: 2.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

DTC DETECTING CONDITION:
Detected when two consecutive driving cycles with fault occur.
TROUBLE SYMPTOM:
TCM ROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0601 displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in ROM area of the TCM.
- Judge as NG when the consistency in the ROM area is lost.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:
Detected when two consecutive driving cycles with fault occur.
TROUBLE SYMPTOM:
TCM RAM malfunction

Step		Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0604 displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.
Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM only used for CAN communication.	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DTC DETECTING CONDITION:
Detected when two consecutive driving cycles with fault occur.
TROUBLE SYMPTOM:
TCM EEPROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Read the DTC.	Is DTC P062F displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction in EEPROM area of the TCM.
- Judge as NG if an attempt to write to EEPROM area failed.

Diagnosis 2
- Detect the malfunction in EEPROM area of the TCM.
- Judge as malfunction when the consistency in the EEPROM area is lost.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

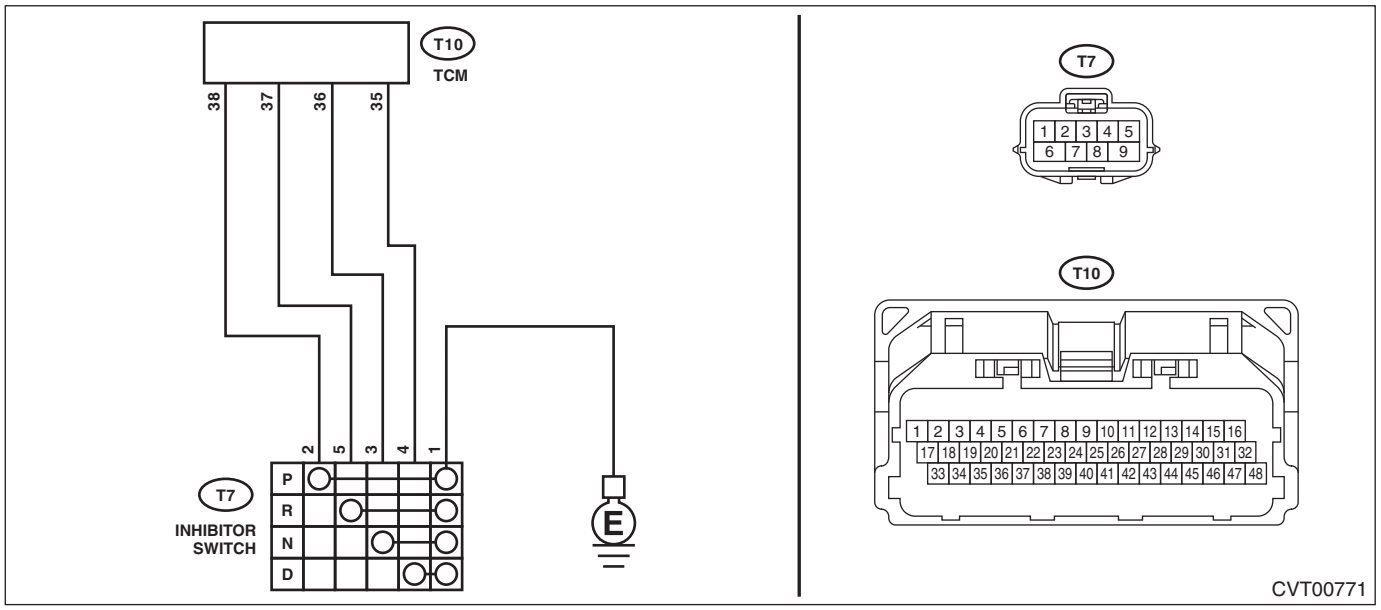
3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Writing-check (EEPROM)	Error
Diagnosis 2	
Checksum (EEPROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



E: DTC P0705 TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is display “OFF” for the range other than corresponding range?	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the inhibitor switch connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 38 — Chassis ground:*** ***(T10) No. 37 — Chassis ground:*** ***(T10) No. 36 — Chassis ground:*** ***(T10) No. 35 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of transmission harness.

	Step	Check	Yes	No
3	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch terminals. ***Connector & terminal*** ***No. 2 — No. 1:*** ***No. 5 — No. 1:*** ***No. 3 — No. 1:*** ***No. 4 — No. 1:***	Is the resistance other than corresponding range 1 MΩ or more?	Go to step **4**.	Replace the inhibitor switch. <Ref. to CVT(TR580)-107, Inhibitor Switch.>
4	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is display "OFF" for the range other than corresponding range?	Go to step **5**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 38 — Chassis ground:*** ***(B54) No. 37 — Chassis ground:*** ***(B54) No. 36 — Chassis ground:*** ***(B54) No. 35 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of body harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T3) No. 3 — Chassis ground:*** ***(T3) No. 2 — Chassis ground:*** ***(T3) No. 1 — Chassis ground:*** ***(T3) No. 8 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of transmission harness.
4	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch terminals. ***Connector & terminal*** ***No. 2 — No. 1:*** ***No. 5 — No. 1:*** ***No. 3 — No. 1:*** ***No. 4 — No. 1:***	Is the resistance other than corresponding range 1 MΩ or more?	Go to step **5**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-105, Inhibitor Switch.>
5	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

3. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if more than one input of Range Switch are detected.

4. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

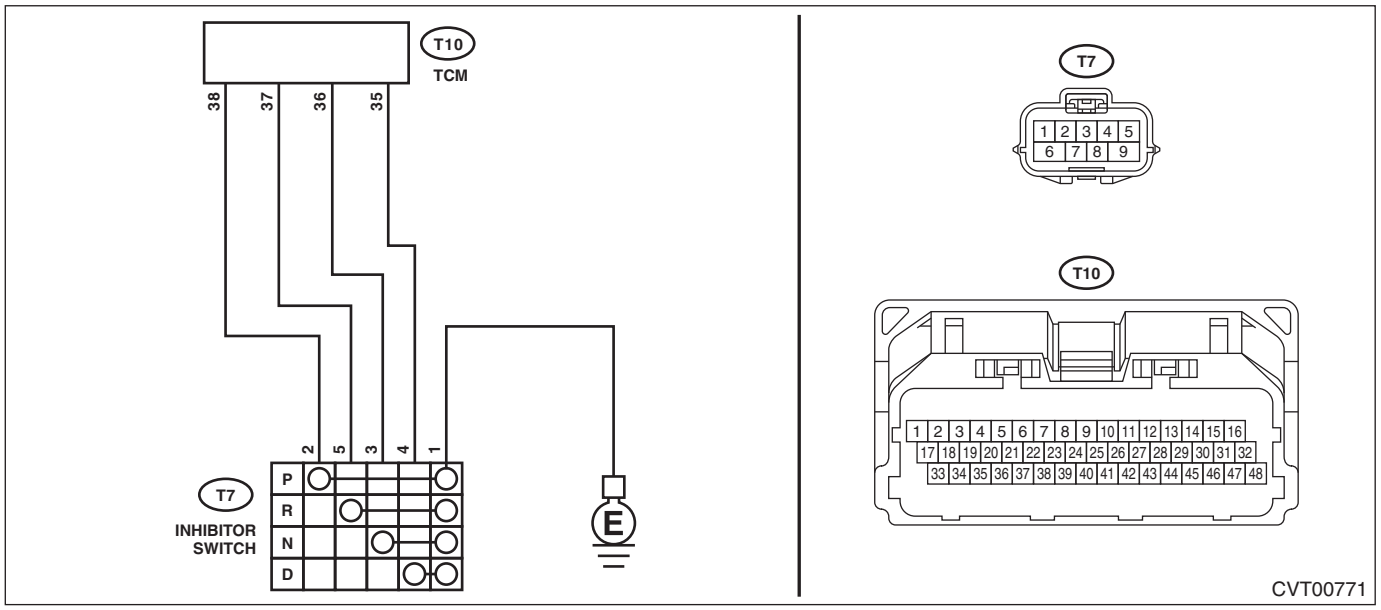
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Two or more transmission range switches ON NOTE: "Transmission range switch ON" is defined as Transmission range switch input voltage ≤ 1.7 V	True

Time needed for diagnosis: 3 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



F: DTC P0708 TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range “ON”?	Go to step **6**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the inhibitor switch connector. 4) Measure the resistance of the harness between TCM connector and inhibitor switch connector. ***Connector & terminal*** ***(T10) No. 38 — (T7) No. 2:*** ***(T10) No. 37 — (T7) No. 5:*** ***(T10) No. 36 — (T7) No. 3:*** ***(T10) No. 35 — (T7) No. 4:***	Is each resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of transmission harness.
3	**CHECK HARNESS.** Measure the resistance of harness between inhibitor switch connector and transmission ground. ***Connector & terminal*** ***(T7) No. 1 — Transmission ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch terminals. ***Connector & terminal*** ***No. 2 — No. 1:*** ***No. 5 — No. 1:*** ***No. 3 — No. 1:*** ***No. 4 — No. 1:***	Is the resistance of the corresponding range less than 1 MΩ?	Go to step **5**.	Replace the inhibitor switch. <Ref. to CVT(TR580)-107, Inhibitor Switch.>
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between inhibitor switch connector and chassis ground. ***Connector & terminal*** ***(T7) No. 2 (+) — Chassis ground (–):*** ***(T7) No. 5 (+) — Chassis ground (–):*** ***(T7) No. 3 (+) — Chassis ground (–):*** ***(T7) No. 4 (+) — Chassis ground (–):***	Is each voltage less than 1 V?	Go to step **6**.	Repair the harness which outputs 1 V or more.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range "ON"?	Go to step **7**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance of harness between TCM connector and transmission connector. ***Connector & terminal*** ***(B54) No. 38 — (B12) No. 3:*** ***(B54) No. 37 — (B12) No. 2:*** ***(B54) No. 36 — (B12) No. 1:*** ***(B54) No. 35 — (B12) No. 8:***	Is each resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK HARNESS.** Measure the resistance of harness between inhibitor switch connector and transmission ground. ***Connector & terminal*** ***(T7) No. 1 — Transmission ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and inhibitor switch connector. ***Connector & terminal*** ***(T3) No. 3 — (T7) No. 2:*** ***(T3) No. 2 — (T7) No. 5:*** ***(T3) No. 1 — (T7) No. 3:*** ***(T3) No. 8 — (T7) No. 4:***	Is each resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of transmission harness.
5	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch terminals. ***Connector & terminal*** ***No. 2 — No. 1:*** ***No. 5 — No. 1:*** ***No. 3 — No. 1:*** ***No. 4 — No. 1:***	Is the resistance of the corresponding range less than 1 MΩ?	Go to step **6**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-105, Inhibitor Switch.>
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between each connector and chassis ground. ***Connector & terminal*** ***Transmission connector (B12 side)*** ***(B12) No. 3 (+) — Chassis ground (–):*** ***(B12) No. 2 (+) — Chassis ground (–):*** ***(B12) No. 1 (+) — Chassis ground (–):*** ***(B12) No. 8 (+) — Chassis ground (–):*** ***Transmission connector (T7 side)*** ***(T7) No. 2 (+) — Chassis ground (–):*** ***(T7) No. 5 (+) — Chassis ground (–):*** ***(T7) No. 3 (+) — Chassis ground (–):*** ***(T7) No. 4 (+) — Chassis ground (–):***	Is each voltage less than 1 V?	Go to step **7**.	Repair the harness which outputs 1 V or more.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect the malfunction of Range Switch.

- Judge as NG if there is no input from all Range Switches.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from secondary pulley shaft speed)	≥ 6 MPH

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: "Transmission range switch OFF" is defined as transmission range switch input voltage ≥ 3.4 V.	True

Time Needed for Diagnosis: 3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect the malfunction of Range Switch.
- Judge as NG if there is no input from all Range Switches.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from output shaft speed)	≥ 6 MPH

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: "Transmission range switch OFF" is defined as transmission range switch input voltage ≥ 3.4 V.	True

Time Needed for Diagnosis: 3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

G: DTC P0711 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:
Detected when two consecutive driving cycles with fault occur.
TROUBLE SYMPTOM:
- Excessive shift shock
- Shift characteristics malfunction

NOTE:
For the diagnostic procedure, perform the diagnosis according to DTC P0712 and P0713. <Ref. to CVT(diag)-62, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CVT(diag)-65, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

Diagnosis 1
- Judge the malfunction of oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of oil temperature sensor characteristics (stuck to high temperature side).
- Judge as malfunction when the difference between engine coolant temperature and CVT oil temperature is equal to or more than specified value at starting.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Vehicle speed (calculated from secondary pulley shaft speed)	≥ 21.9 MPH
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Soak time (received from ECM)	≥ 21600 s
(Engine speed	≥ 400 rpm
for time)	≥ 300 s

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Absolute change of measured Transmission fluid temperature sensor input voltage	< 0.049 V
Transmission fluid temperature	< 20 degC
Diagnosis 2	
Transmission fluid temperature – Engine coolant temperature at engine start	> 18 degC

Time needed for diagnosis:
- **Diagnosis 1:** 600 s
- **Diagnosis 2:** Immediately

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

Diagnosis 1
- Judge the malfunction of oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of oil temperature sensor characteristics (stuck to high temperature side).
- Judge as malfunction when the difference between engine coolant temperature and CVT oil temperature is equal to or more than specified value at starting.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Vehicle speed (calculated from output shaft speed)	≥ 21.9 MPH
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Soak time (received from ECM)	≥ 21600 s
(Engine speed	≥ 400 rpm
for time)	≥ 300 s

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

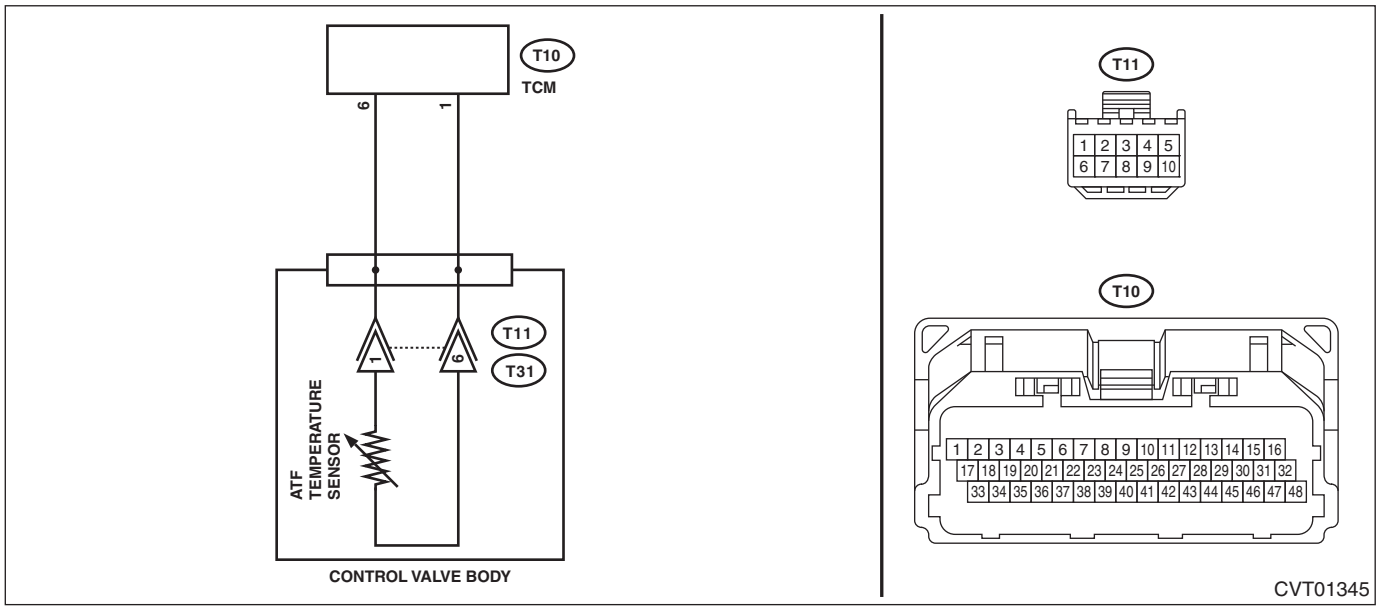
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Absolute change of measured Transmission fluid temperature sensor input voltage	< 0.049 V
Transmission fluid temperature	< 20 degC
Diagnosis 2	
Transmission fluid temperature – Engine coolant temperature at engine start	> 18 degC

Time needed for diagnosis:
- **Diagnosis 1:** 600 s
- **Diagnosis 2:** Immediately

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Excessive shift shock
- Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 1 — Chassis ground:*** ***(T10) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Go to step **2**.
2	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **3**.
3	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(T10) No. 1 — No. 6:*** NOTE: Perform the measurements using multiple oil temperatures.	Is resistance as follows? Fluid temperature 0°C → Approx. 6.0 kΩ Fluid temperature 20°C → Approx. 2.5 kΩ Fluid temperature 80°C → Approx. 330 Ω	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 1 — Chassis ground:*** ***(B54) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the transmission connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 16 — Transmission body:*** ***(T4) No. 19 — Transmission body:***	Is the resistance 1 MΩ or more?	Repair the short circuit of body harness.	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.
4	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:*** NOTE: Perform the measurements using multiple oil temperatures.	Is resistance as follows? Fluid temperature 0°C → Approx. 6.2 kΩ Fluid temperature 20°C → Approx. 2.6 kΩ Fluid temperature 80°C → Approx. 370 Ω	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect the ground short circuit of oil temperature sensor.
- Judge as NG if the voltage detected by the oil temperature sensor is lower than the predetermined value.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	< 0.117 V (> 146 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect the ground short circuit of oil temperature sensor.
- Judge as NG if the voltage detected by the oil temperature sensor is lower than the predetermined value.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

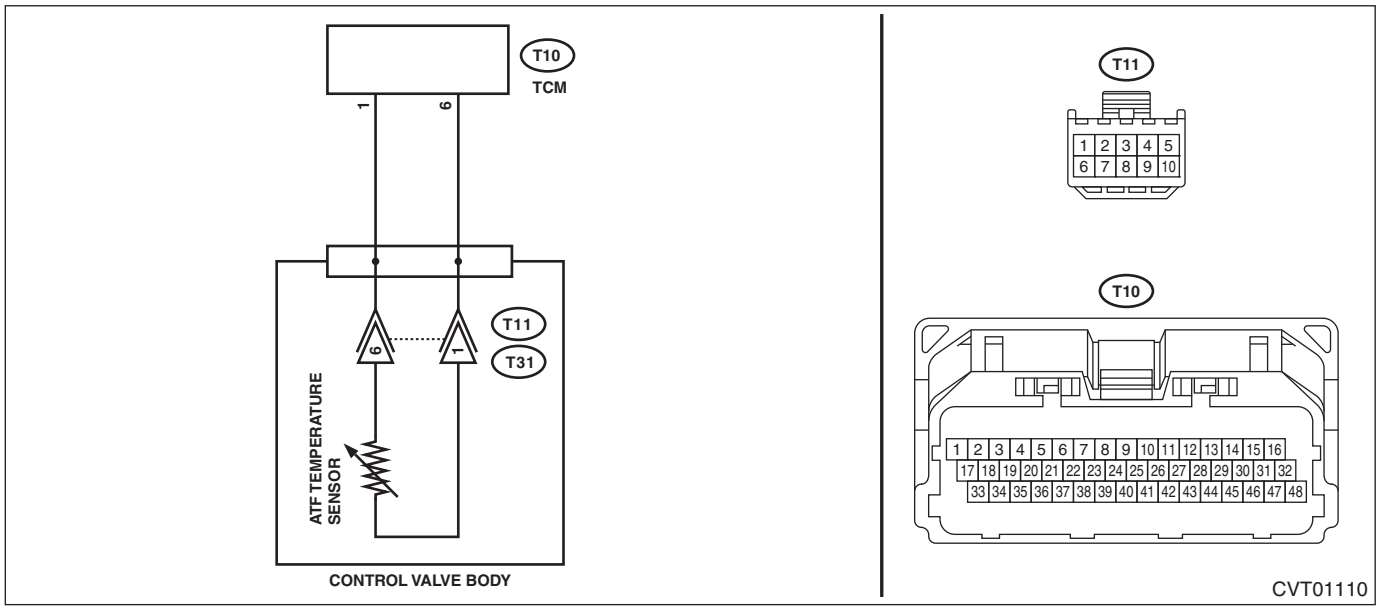
8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	< 0.132 V (> 150 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



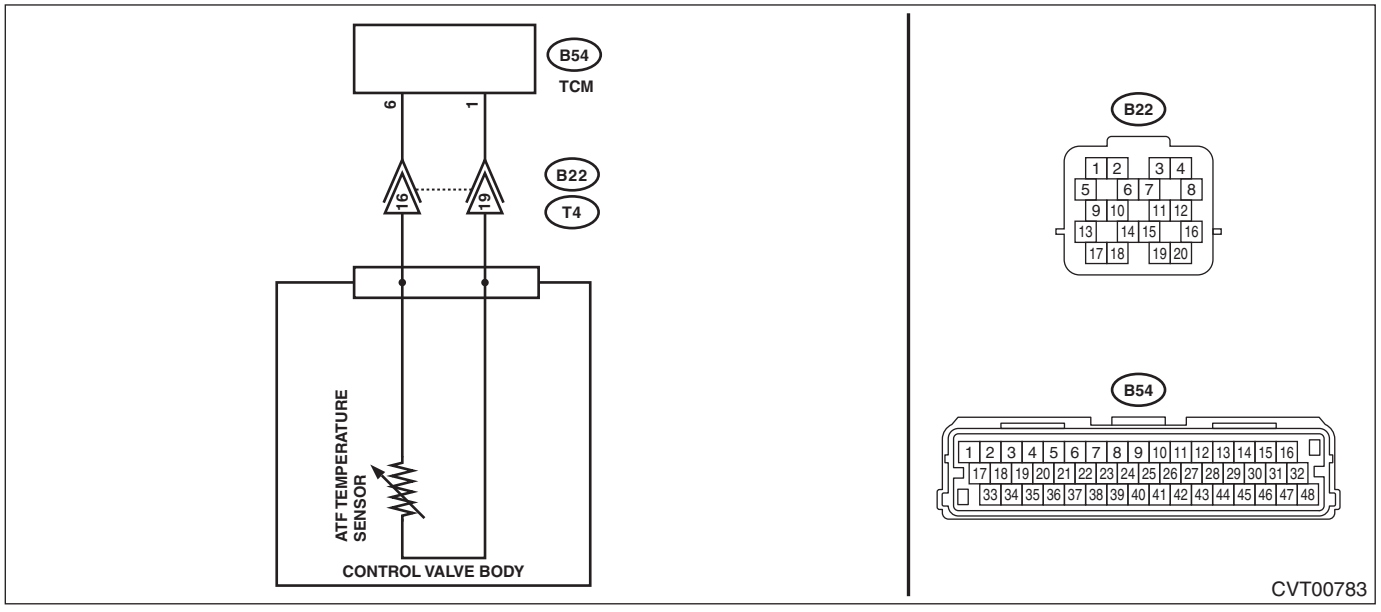
I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Excessive shift shock
- Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 6 (+) — (T10) No. 1 (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step **2**.
2	**CHECK ATF TEMPERATURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(T10) No. 1 — No. 6:***	Is the resistance 1 MΩ or more?	Repair the open circuit of transmission harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ATF TEMPERATURE SENSOR.** 1) Connect the connector to TCM. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the TCM connector. 6) Measure the resistance between TCM connector terminals. ***Connector & terminal (T10) No. 1 — No. 6:***	Is the resistance 650 — 990 Ω?	Go to step **4**.	Go to step **6**.
4	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between TCM connector terminals. ***Connector & terminal (T10) No. 1 — No. 6:***	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step **5**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connector to TCM. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and TCM connector harness, and repair the defective part.	Go to step **6**.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 6 (+) — (B54) No. 1 (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 6 — (B22) No. 16:*** ***(B54) No. 1 — (B22) No. 19:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 1 MΩ or more?	Repair the open circuit of transmission harness.	Go to step **4**.
4	**CHECK ATF TEMPERATURE SENSOR.** 1) Connect all connectors. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the transmission connector. 6) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 730 — 1120 Ω?	Go to step **5**.	Go to step **7**.
5	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step **6**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connector to transmission. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and transmission connector harness, and repair the defective part.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect short circuit to power supply or open circuit of the oil temperature sensor 5 V system.
- Judge as NG if the voltage detected by the oil temperature sensor is higher than the predetermined value.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Vehicle speed (calculated from secondary pulley speed)	≥ 6.3 MPH
Above condition satisfied for	≥ 50 s

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage	> 4.507 V
(Transmission fluid temperature)	(< – 52 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect short circuit to power supply or open circuit of the oil temperature sensor 5 V system.
- Judge as NG if the voltage detected by the oil temperature sensor is higher than the predetermined value.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Vehicle speed (calculated from output shaft speed)	≥ 6.3 MPH
Above condition satisfied for	≥ 50 s

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage	> 4.502 V
(Transmission fluid temperature)	(< – 53 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

J: DTC P0716 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- No lock-up occurs.
- Shock occurs when selecting shift position.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0716, is DTC U0122 or U0416 displayed?	Perform the diagnosis according to DTCs other than P0716.	Perform the diagnosis according to DTC P0717. <Ref. to CVT(diag)-70, DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of turbine speed sensor signal characteristics.
- Judge as NG if the turbine speed against the engine speed is outside the possible range considering the hardware capabilities.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

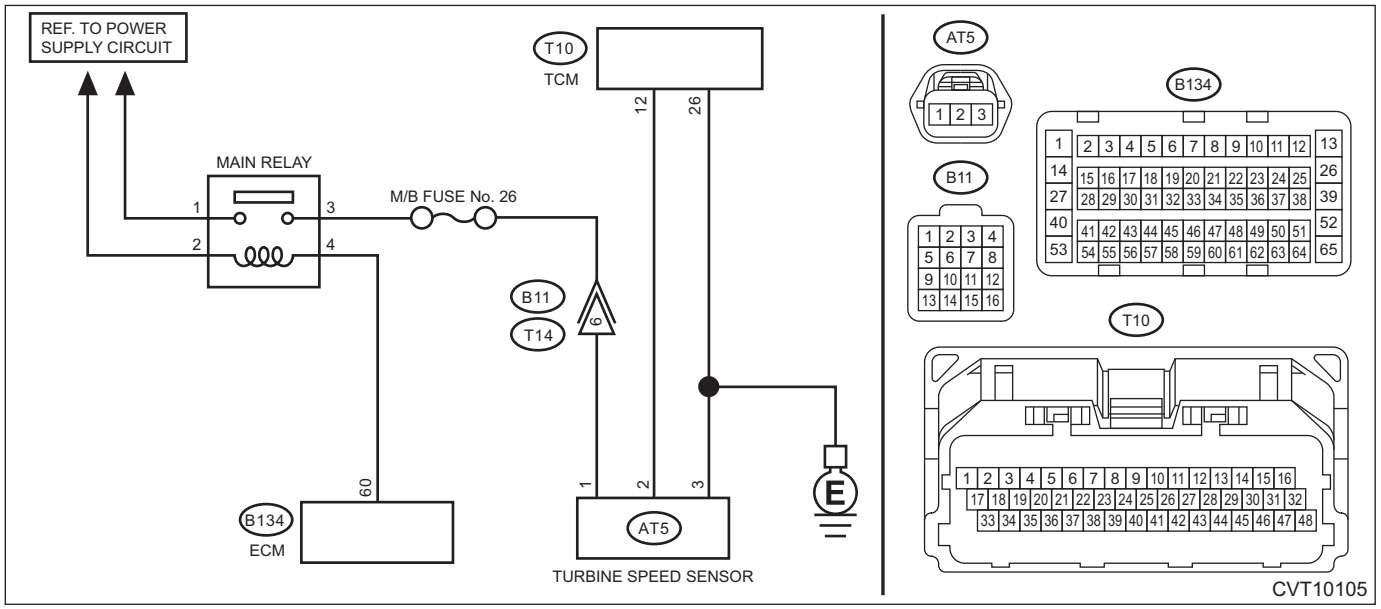
3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.
Judgment Value

Malfunction Criteria	Threshold Value
Measured turbine shaft speed	< Table 1 rpm

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500



Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

K: DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

CAUTION:
Use the check board when measuring the TCM/ECM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between transmission connector and engine ground. ***Connector & terminal*** ***(B11) No. 6 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between transmission connector and main relay connector • Defective main relay	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the turbine speed sensor connector. 4) Measure the resistance between TCM connector and turbine speed sensor connector. ***Connector & terminal*** ***(T10) No. 12 — (AT5) No. 2:*** ***(T10) No. 26 — (AT5) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness.
7	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness or poor contact of connector.
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Read the data of «Turbine Revolution Speed» using the Subaru Select Monitor.	Does the value of «Turbine Revolution Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of turbine speed sensor and transmission connector.	Go to step **9**.
9	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the turbine speed sensor connector. 4) Measure the resistance between transmission connector and turbine speed sensor connector. ***Connector & terminal*** ***(T14) No. 6 — (AT5) No. 1:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the transmission harness.
10	**CHECK TURBINE SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the turbine speed sensor. <Ref. to CVT(TR580)-118, Turbine Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0717 displayed?	Go to step **11**.	The original turbine speed sensor is defective.

Step		Check	Yes	No
11	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the main relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0717 displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	The original main relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the turbine speed sensor.
- Judge as NG if there is no input signal from the turbine speed sensor, while the primary speed sensor on the same shaft has the input signal with the forward/reverse clutch engaged.

2. EXECUTION CONDITION

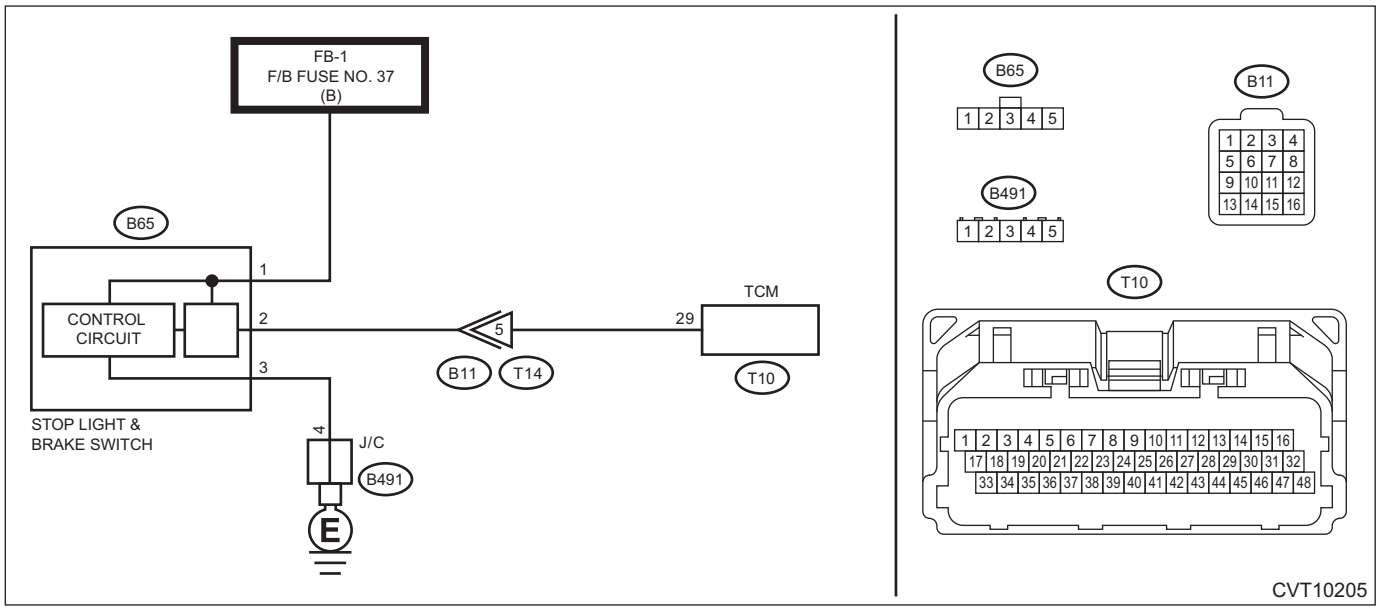
Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

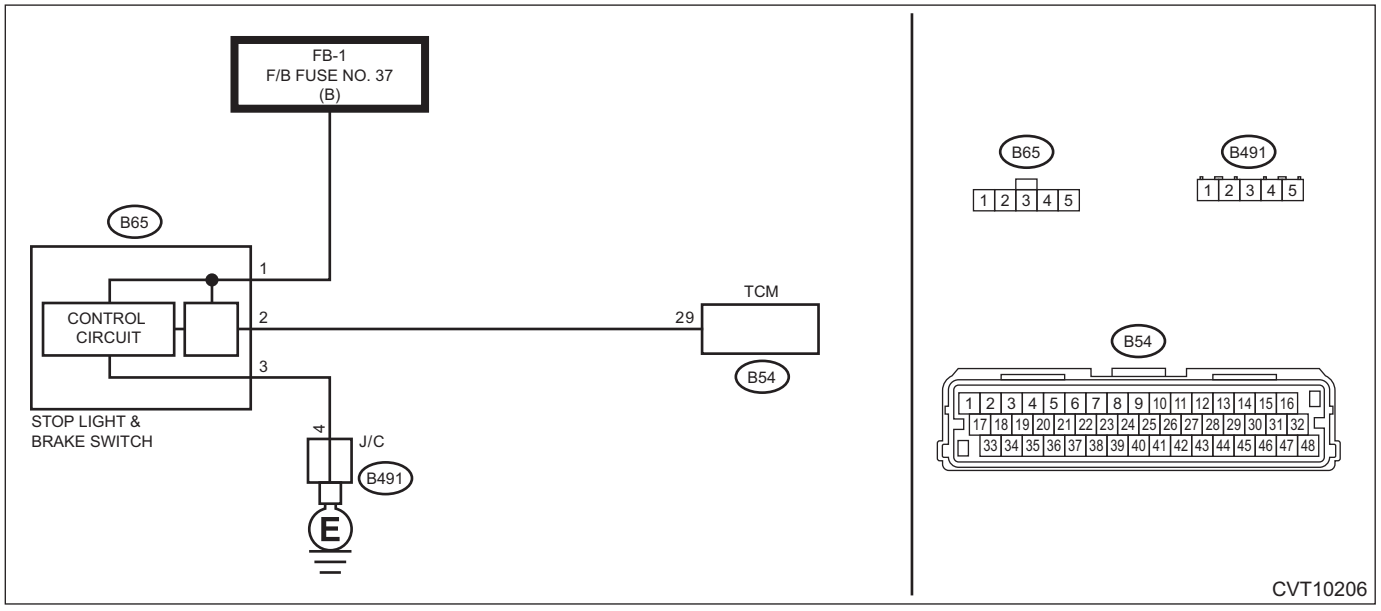
Malfunction Criteria	Threshold Value
Measured turbine shaft speed	0 rpm



Time needed for diagnosis: 0.6 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

L: DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not shifted down when climbing a hill or driving down a hill.



CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
- ENGINE TYPE FB

Stop light system <Ref. to WI-363, Stop Light System.>

- ENGINE TYPE EZ

Stop light system <Ref. to WI-363, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK FUSE (NO. 37).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 37). 3) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse (No. 37). If the new fuse (No. 37) has blown out easily, repair the short circuit of harness between fuse (No. 37) and stop light switch.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the stop light switch connector. 4) Measure the resistance between TCM connector and stop light switch connector. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 29 — (B65) No. 2:*** ***ENGINE TYPE EZ*** ***(B54) No. 29 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between the stop light switch connector and fuse (No. 37). ***Connector & terminal*** ***(B65) No. 1 — fuse (No. 37):***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Install the fuse (No. 37). 2) Connect the stop light switch connector. 3) Depress the brake pedal. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 29 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Replace the stop light switch. <Ref. to BR-70, Stop Light Switch.>
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) With brake pedal depressed, read the data of «Stop Light Switch» using Subaru Select Monitor.	Is “ON” displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **6**.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact in the stop light switch input signal circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

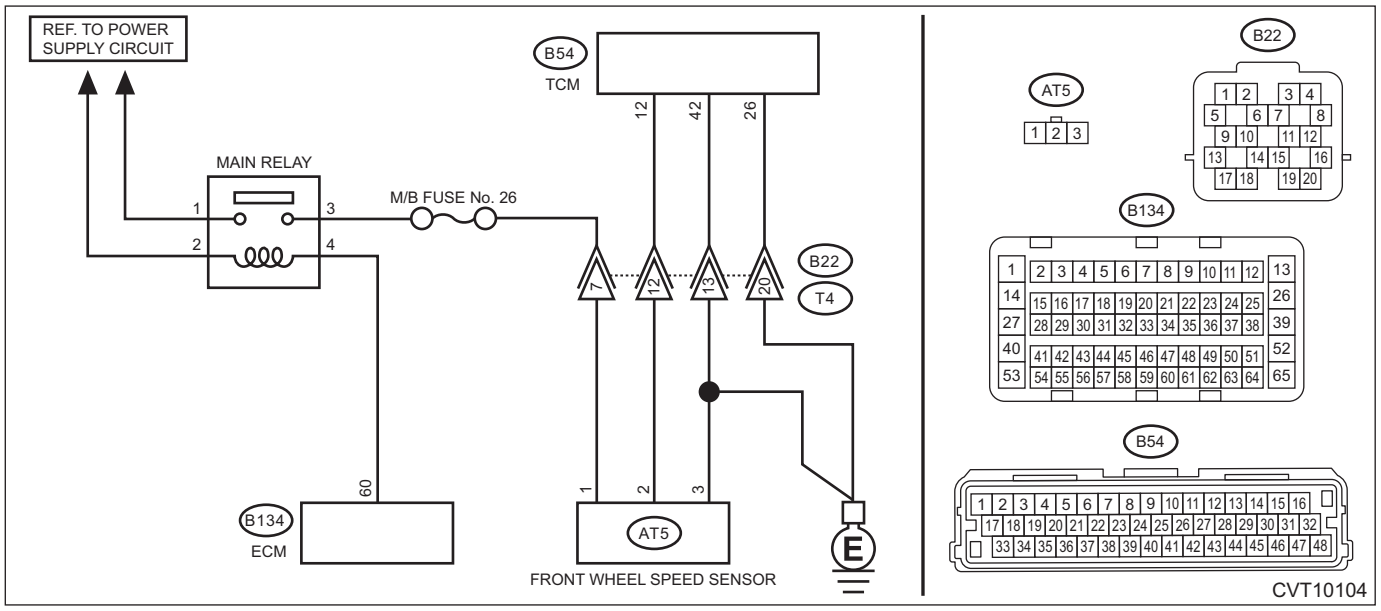
- Detect no input from the brake signal.
- Judge as NG if a predetermined number of deceleration occurs while the cruise control is set to OFF and the brake is OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.



Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 30 km/h to 1 km/h while the brake SW is OFF	> 10 count

M: DTC P0720 OUTPUT SHAFT SPEED SENSOR CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shock occurs when selecting shift position.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM/ECM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between transmission connector and engine ground. ***Connector & terminal*** ***(B22) No. 7 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between transmission connector and main relay connector • Defective main relay	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 12 — (B22) No. 12:*** ***(B54) No. 26 — (B22) No. 20:*** ***(B54) No. 42 — (B22) No. 13:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness.
7	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B22) No. 7 (+) — Chassis ground (–):***	Is the voltage approx. 10 — 13 V?	Go to step **8**.	Repair the poor contact of harness or connector.
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Slowly increase the speed to 30 km/h (19 MPH). 6) Read the data of «Front Wheel Speed» using Subaru Select Monitor.	Does the value of «Front Wheel Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of front wheel speed sensor and transmission connector.	Go to step **9**.
9	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the front wheel speed sensor connector. 4) Measure the resistance between transmission connector and front wheel speed sensor connector. ***Connector & terminal*** ***(T4) No. 7 — (AT5) No. 1:*** ***(T4) No. 12 — (AT5) No. 2:*** ***(T4) No. 13 — (AT5) No. 3:*** ***(T4) No. 20 — (AT5) No. 3:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the transmission harness.

Step		Check	Yes	No
10	**CHECK FRONT WHEEL SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the front wheel speed sensor. <Ref. to CVT(TR690)-125, Front Wheel Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0720 displayed?	Go to step **11**.	The original front wheel speed sensor is defective.
11	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the main relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0720 displayed?	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	The original main relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect no input signal from the front wheel speed sensor.
- Judge as NG if there is no output from the front wheel speed sensor while the forward/reverse clutch is engaged and the wheel speed from VDC is equal to or higher than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 3 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured front output shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

N: DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- No lock-up occurs.
- The engine stalls when the vehicle is stopped.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0721, is DTC P0500 displayed?	Perform the diagnosis according to DTCs other than P0721.	Perform the diagnosis according to DTC P0720. <Ref. to CVT(diag)-76, DTC P0720 OUTPUT SHAFT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of front wheel speed sensor characteristics.
- Judge as NG when the deviation between vehicle speed from VDC and front wheel speed sensor becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 12 MPH

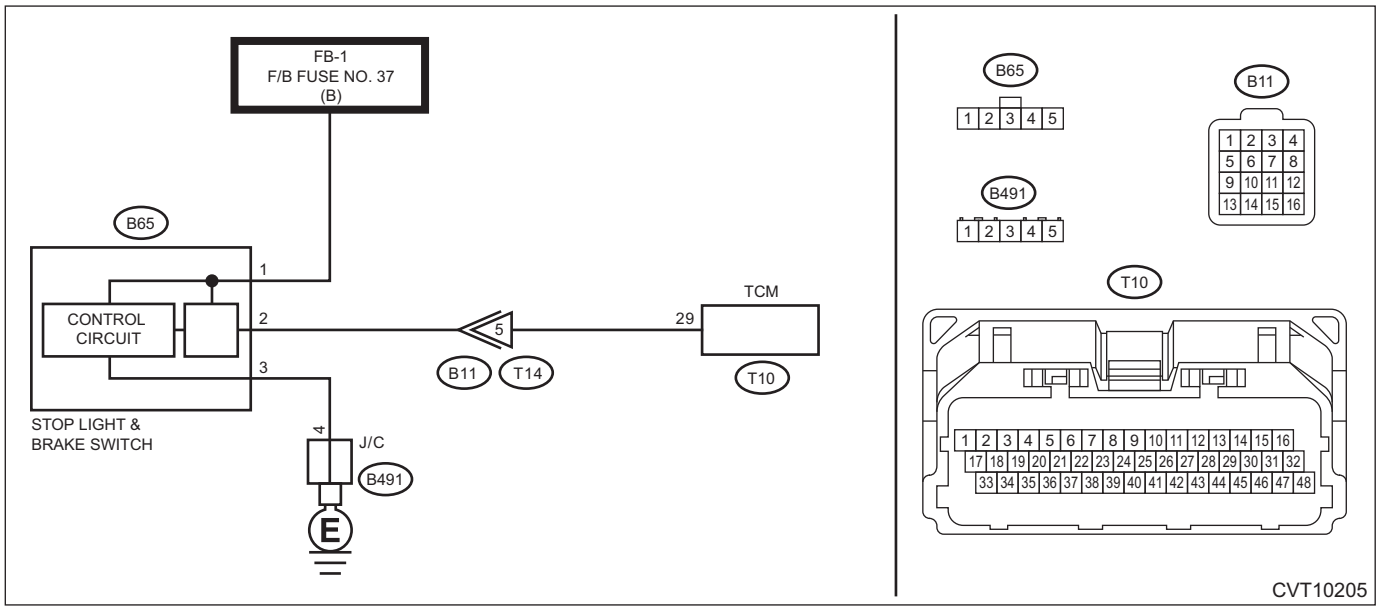
3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Vehicle speed (calculated from front output shaft speed) – Vehicle speed (from vehicle dynamics control module)|	> 10 MPH

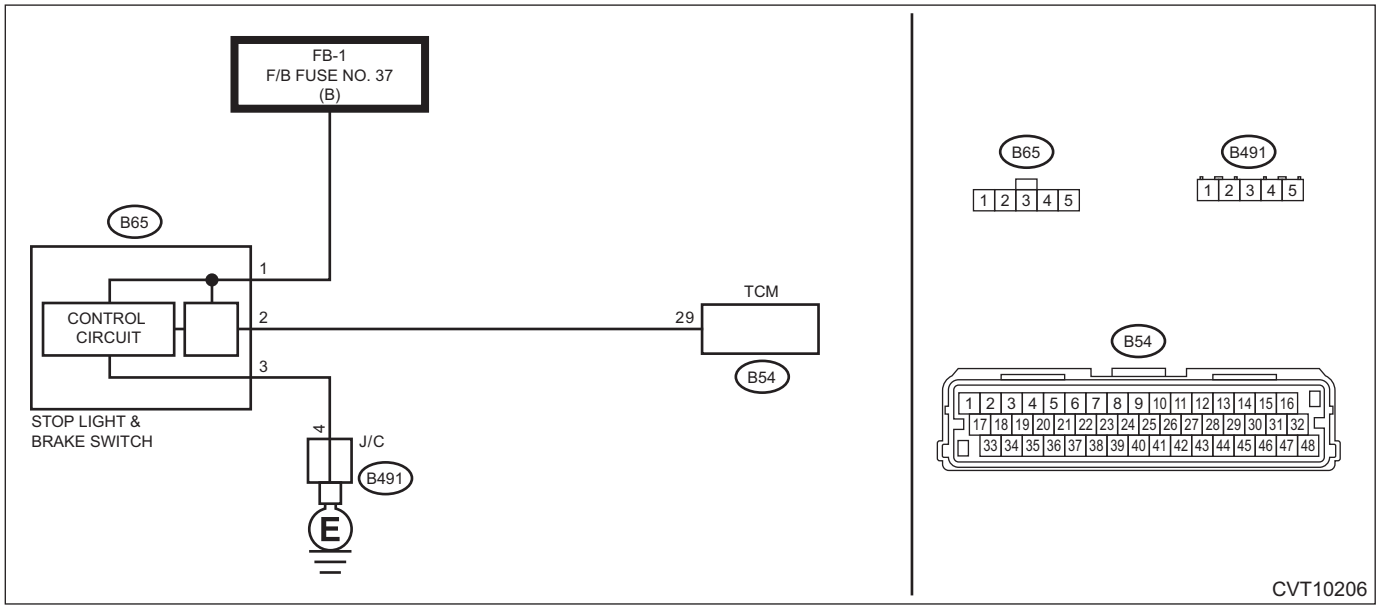
Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



O: DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not shifted down when climbing a hill or driving down a hill.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:



- ENGINE TYPE FB

Stop light system <Ref. to WI-363, Stop Light System.>

- ENGINE TYPE EZ

Stop light system <Ref. to WI-363, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance between stop light switch connectors. ***Connector & terminal*** ***(B65) No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Replace the stop light switch. <Ref. to BR-70, Stop Light Switch.>
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 29 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit of harness.	Go to step **3**.
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Is "OFF" displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **4**.
4	**CHECK FOR POOR CONTACT.**	Is there poor contact in the stop light switch input signal circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the brake signal stuck to ON.
- Judge as NG if a predetermined number of acceleration occurs while the cruise control is set to OFF and the brake is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 1 km/h to 30 km/h while the brake SW is ON	> 10 count

P: DTC P0730 INCORRECT GEAR RATIO

DTC DETECTING CONDITION:
Immediately at fault recognition
TROUBLE SYMPTOM:
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

1. ENGINE TYPE FB

	Step	Check	Yes	No
1	**CHECK TRANSMISSION FLUID.** Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **2**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
2	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **3**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **4**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **5**.	Go to step **6**.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **6**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
6	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

	Step	Check	Yes	No
1	**CHECK TRANSMISSION FLUID.** Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **2**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
2	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **3**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **4**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **5**.	Go to step **6**.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **6**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
6	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS

- Detect the abnormality in transmission gear ratio control function.
- Judge as NG if a discrepancy between the transmission target gear ratio (as internal data) and the actual gear ratio becomes the specified value or more. (Compare the value of "Gear Ratio Target × Secondary pulley speed ≈ Target primary speed equivalent value" with the value of primary pulley speed sensor.)

4. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Transmission range	Drive

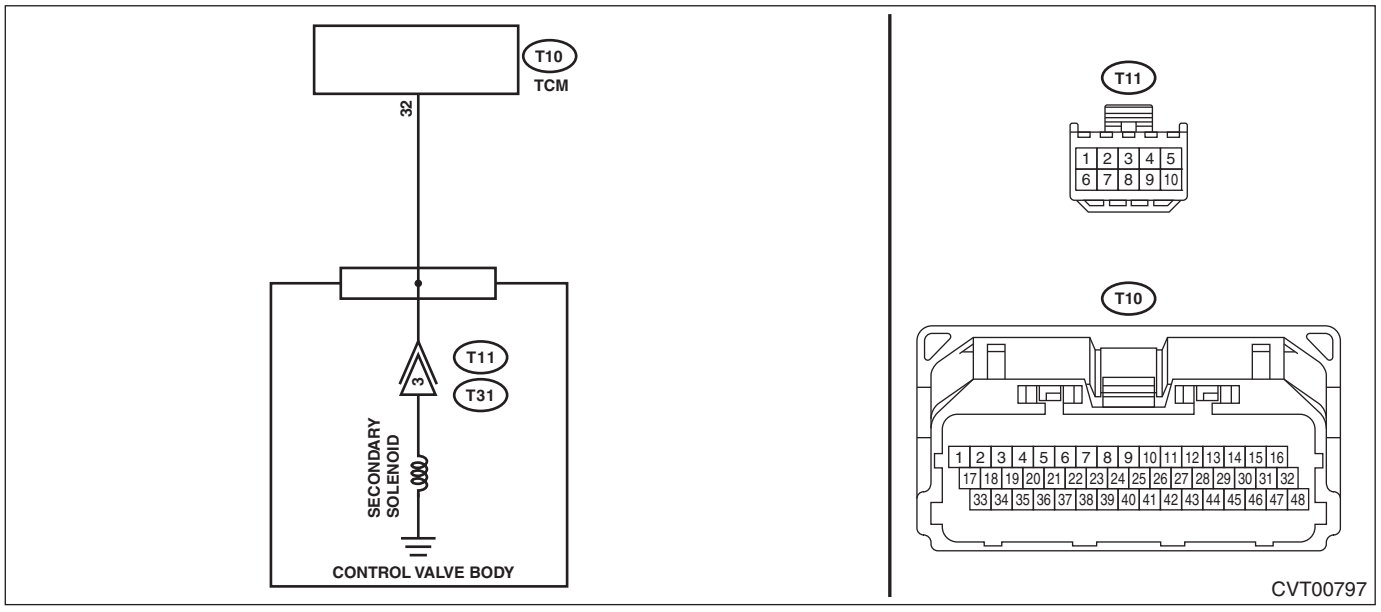
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Target primary pulley shaft speed – Measured primary pulley shaft speed|	≥ 600 rpm
(Commanded duty of shift up pressure control solenoid valve	≥ 90%
or	
Commanded duty of shift down pressure control solenoid valve)	≥ 90%

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



Q: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Shift control malfunction
- CVT chain slippage

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-52, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

	Step	Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to “D” range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-52, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to low pressure side).
• Judge as NG if “Target line pressure – Actual line pressure” becomes the predetermined value or more, while the actual line pressure is equal to or more than the predetermined value.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.78 A

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure	< Map1 kPa

R: DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-52, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

	Step	Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to “D” range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-52, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to high pressure side).
• Judge as NG if “Target line pressure – Actual line pressure” becomes the predetermined value or less, while the actual line pressure is equal to or more than the predetermined value.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≥ 0.5 A

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure	> Map1 kPa

S: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Shift control malfunction
- Engine speed increases abruptly.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

Step		Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of shift-up fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	> 1.5 and < 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08

Judgment Value

Malfunction Criteria	Threshold Value
Commanded duty of shift up pressure control solenoid	≥ 90%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

• Detect the malfunction of shift-up fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	> 1.5 and < 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

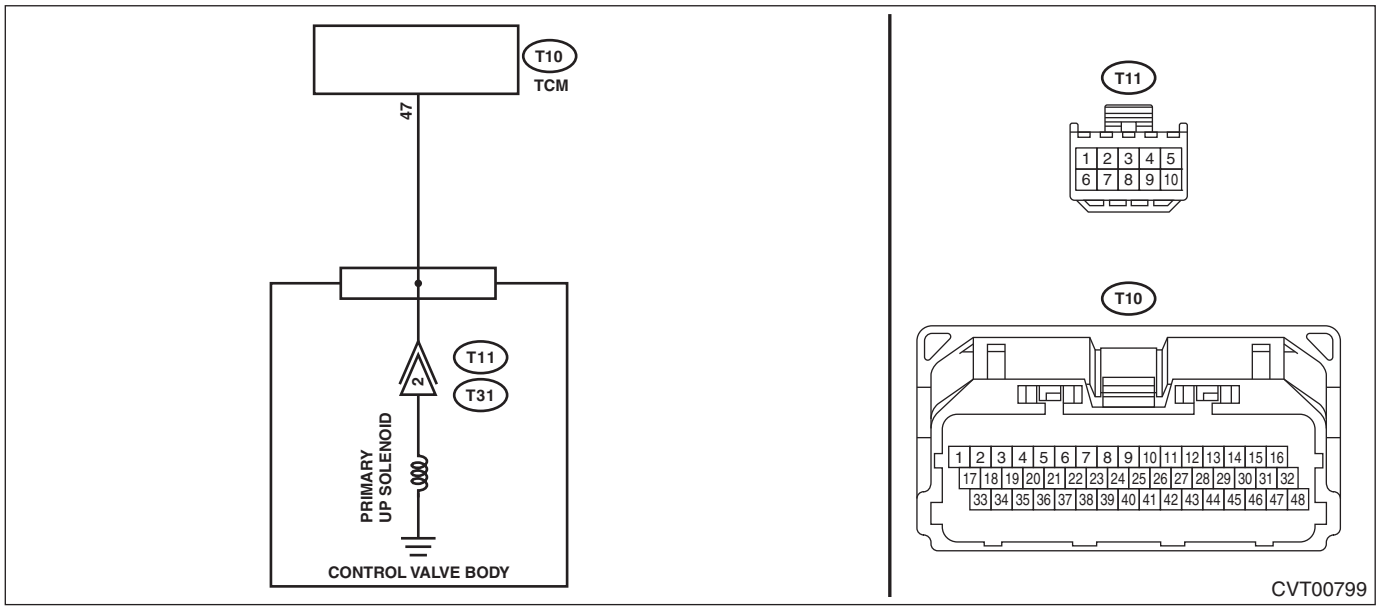
8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08
Commanded duty of shift up pressure control solenoid	≥ 90%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



T: DTC P0752 SHIFT SOLENOID "A" STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0752 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

	Step	Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0752 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio*	< 0.5

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

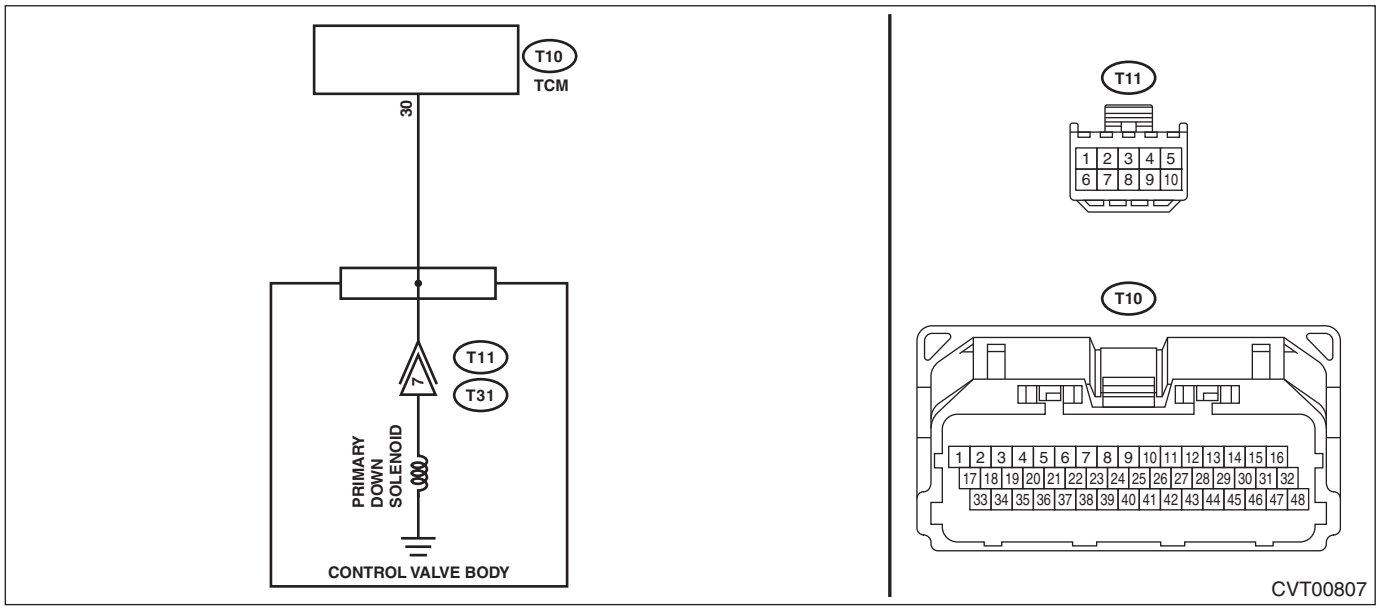
Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08 and < 0.08

Judgment Value

Malfunction Criteria	Threshold Value
Commanded duty of shift down pressure control solenoid	> 80%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



U: DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0756.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0756 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0756.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

	Step	Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0756 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio*	≥ 0.406 and ≤ 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08

Judgment Value

Malfunction Criteria	Threshold Value
	and
	< 0.08
Commanded duty of shift down pressure control solenoid	> 80%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio*	≥ 0.363
	and
	≤ 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

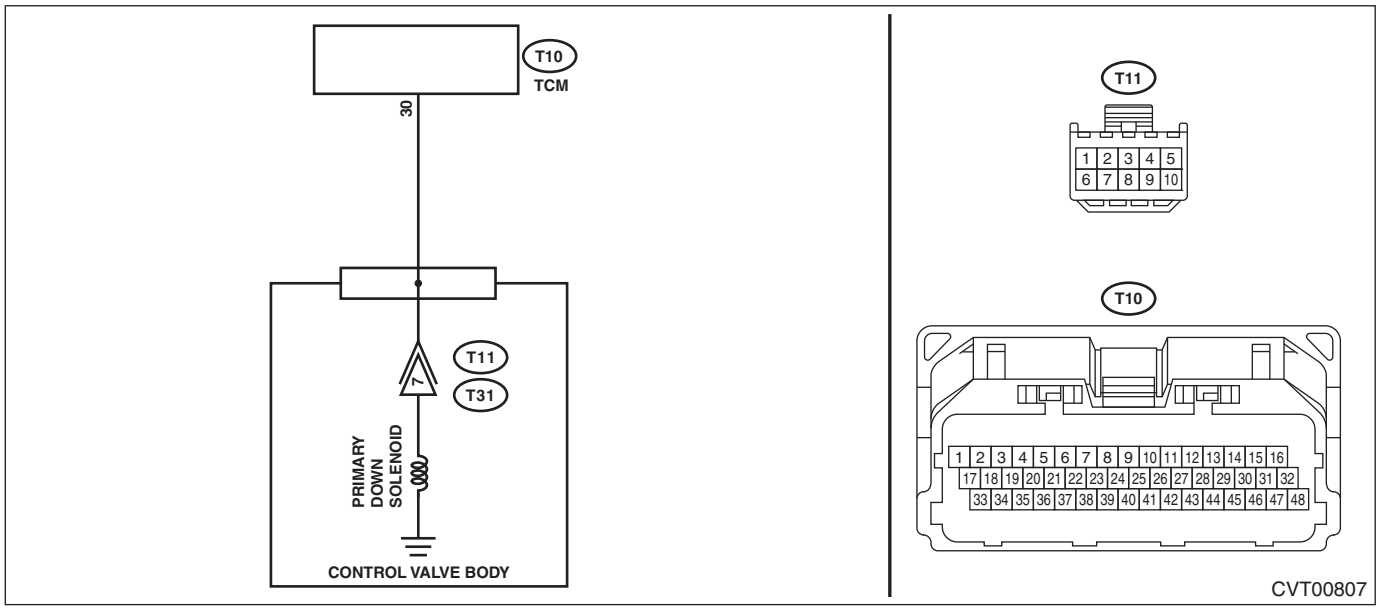
8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08
	and
	< 0.08
Commanded duty of shift down pressure control solenoid	> 80%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



V: DTC P0757 SHIFT SOLENOID "B" STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Vibration occurs at shift change.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

Step		Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	≥ 0.406 and ≤ 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> 0.04

Judgment Value

Malfunction Criteria	Threshold Value
Commanded duty of shift up pressure control solenoid	> 50%

Time Needed for Diagnosis: 1 s × 10 times
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	≥ 0.363 and ≤ 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

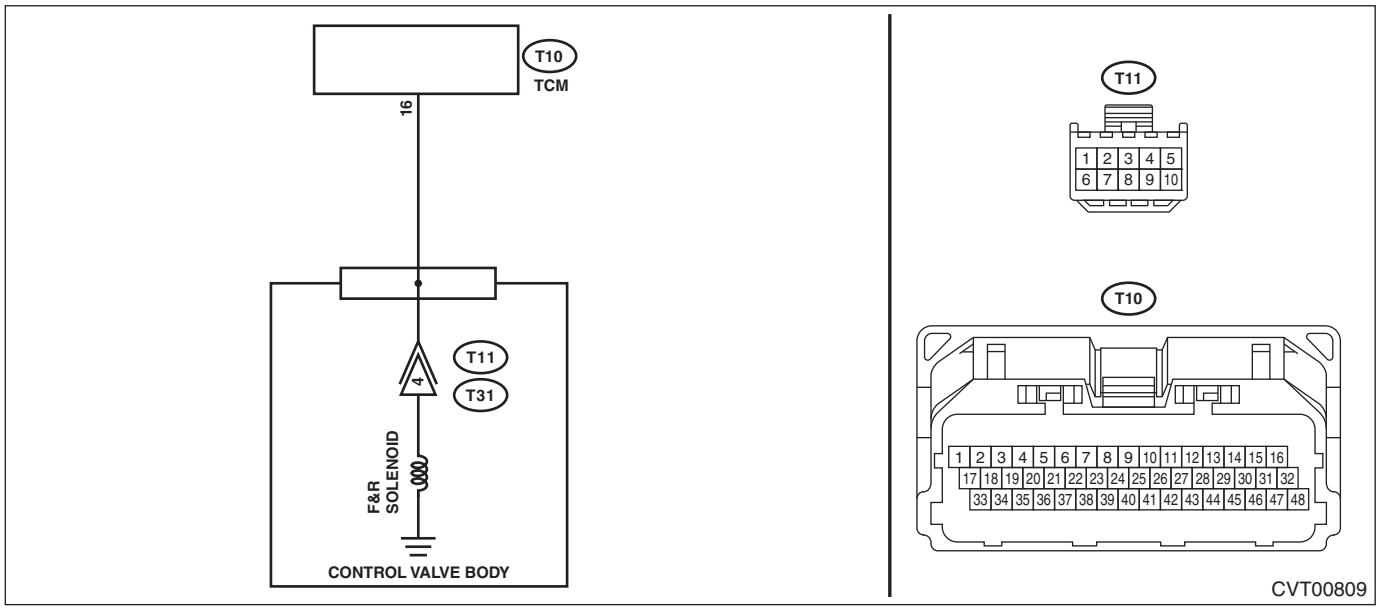
8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> 0.04
Commanded duty of shift up pressure control solenoid	> 50%

Time Needed for Diagnosis: 1 s × 10 times
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



W: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTC P0717, P0966, P0967 or P2747 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step **2**.
2	**CHECK F&R SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**STALL TEST.** Perform the stall test. <Ref. to CVT(TR580)-49, Stall Test.>	Is the result of the stall test OK?	Go to step **9**.	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>
9	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step **2**.
2	**CHECK F&R SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

	Step	Check	Yes	No
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT RANGE/ PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**STALL TEST.** Perform the stall test. <Ref. to CVT(TR690)-49, Stall Test.>	Is the result of the stall test OK?	Go to step **9**.	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>
9	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-27, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the value calculated by “Turbine speed – Primary speed” becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured turbine shaft speed	≥ 100 rpm
Measured primary pulley shaft speed	≥ 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Engine speed	≥ 400 rpm
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured primary pulley shaft speed	< 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Accelerator pedal position (from ECM)	> 6%

Secondary parameters	Execution condition
Engine speed	≥ 400 rpm

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
|Measured turbine shaft speed – Measured primary pulley shaft speed|	> Table 1 rpm
Diagnosis 2	
Measured turbine shaft speed	> 2000 rpm

Table 1

Vehicle speed (MPH)	0	13	25	38	50	63	75
|Measured turbine shaft speed – Measured primary pulley shaft speed|(rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
|Measured turbine shaft speed – Measured primary pulley shaft speed|(rpm)	100	100	100	100	100	100	100

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

• Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the value calculated by “output speed – secondary pulley speed” becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured secondary pulley shaft speed	≥ 100 rpm
Measured front output shaft speed	≥ 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Engine speed	≥ 400 rpm
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured front output shaft speed	< 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Accelerator pedal position (from ECM)	> 6%
Engine speed	≥ 400 rpm

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1 |Measured front output shaft speed – Measured secondary pulley shaft speed/ 1.322|	> Table 2 rpm
Diagnosis 2 Measured secondary pulley shaft speed	> 600 rpm

Table 2

Vehicle speed (MPH)	0	13	25	38	50	63	75
|Measured front output shaft speed – Measured secondary pulley shaft speed|(rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
|Measured front output shaft speed – Measured secondary pulley shaft speed|(rpm)	100	100	100	100	100	100	100

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

X: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT/OPEN

DTC DETECTING CONDITION:
Immediately at fault recognition

NOTE:
For diagnostic procedures, refer to “BODY CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to BC(diag)-55, DTC B1016 SHIFT LOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift lock solenoid or circuit.
- Judge as NG if abnormal signal from the integrated unit is received, when bus off is not detected and there is no trouble in CAN between the integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

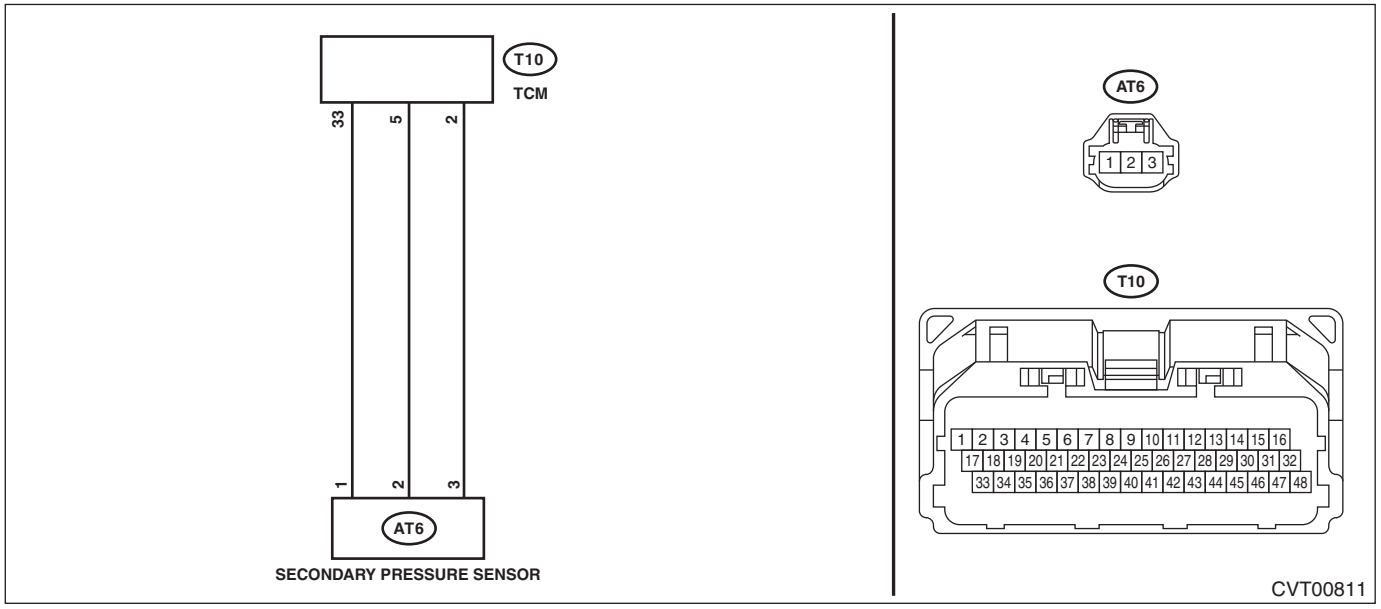
3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Shift lock solenoid system circuit abnormal (received from BIU)	ON

Time Needed for Diagnosis: 1 second



Y: DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

CAUTION:
- **Before performing diagnosis, record the freeze frame data.**
- **Use the check board when measuring the TCM terminal voltage and resistance.**

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step **2**.	Go to step **2**.
2	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage» 0.39 — 0.61 V?	Go to step **10**.	Go to step **3**.

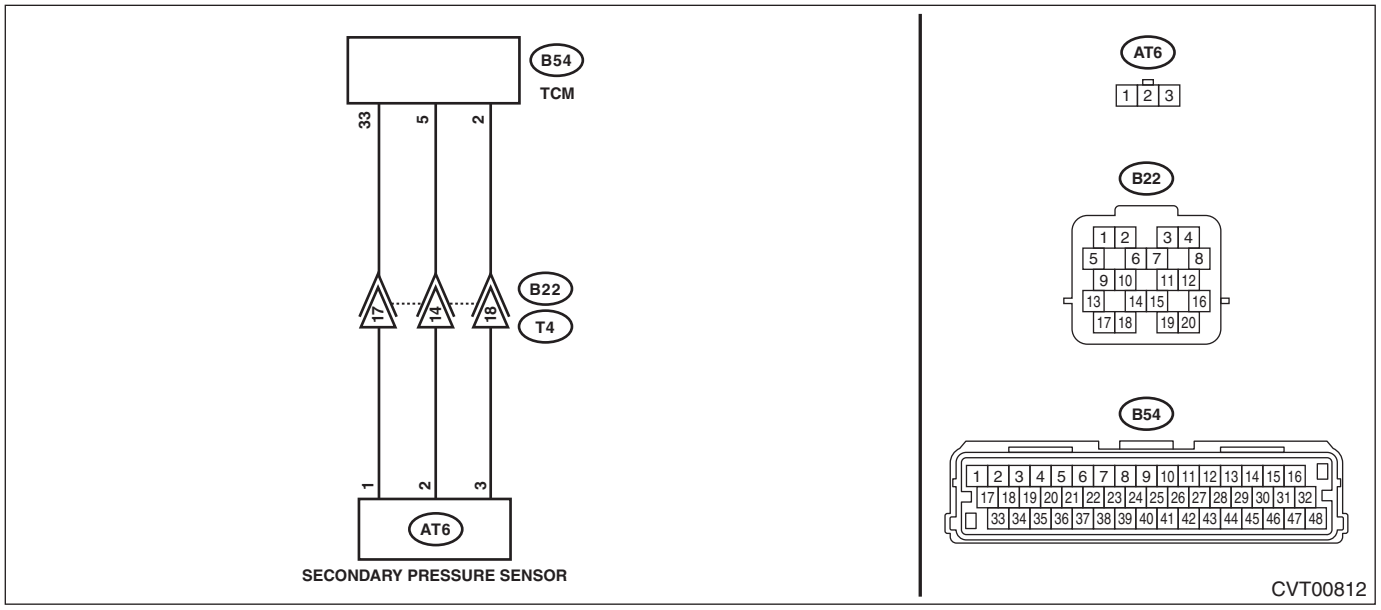
	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T10) No. 2 — (AT6) No. 3:*** ***(T10) No. 5 — (AT6) No. 2:*** ***(T10) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(T10) No. 2 — (T10) No. 33:*** ***(T10) No. 5 — (T10) No. 2:*** ***(T10) No. 33 — (T10) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 2 — Transmission body:*** ***(T10) No. 5 — Transmission body:*** ***(T10) No. 33 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 33 (+) — (T10) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **7**.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>
7	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 33 (+) — (T10) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **8**.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>
8	**CHECK SECONDARY PRESSURE SENSOR OUTPUT.** Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 5 (+) — (T10) No. 2 (–):***	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Check the TCM connector (T10) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure connector?	Repair the connector, or replace harness.	Go to step **10**.
10	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **11**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.> Go to step **11**.
11	**CHECK INPUT SIGNAL FOR TCM.** 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **12**.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step **13**.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>
13	**CHECK FREEZE FRAME DATA.** 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-129, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Go to step **14**.
14	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Go to step **15**.

	Step	Check	Yes	No
15	**CHECK INPUT SIGNAL FOR TCM.** Check the «Actual Secondary Pressure» in step 14.	Is the «Actual Secondary Pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR580)-64, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.



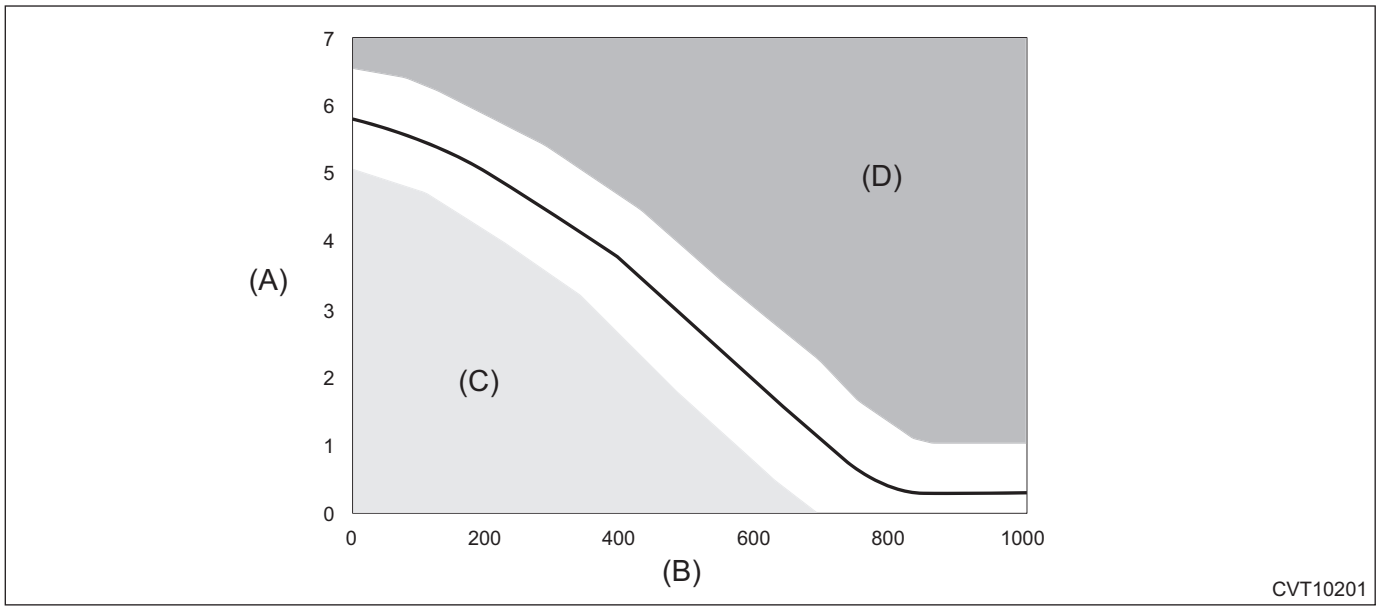
(A) Actual secondary pressure (MPa) (C) Low-voltage malfunction (D) High-voltage malfunction
(B) Secondary actual current (mA)

NOTE:
Symptom that the DTC P0841 illuminates can be classified into 2 patterns.
- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

3. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step **2**.	Go to step **2**.
2	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage» 0.39 — 0.61 V?	Go to step **10**.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(B54) No. 2 — (AT6) No. 3:*** ***(B54) No. 5 — (AT6) No. 2:*** ***(B54) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(B54) No. 2 — (B54) No. 33:*** ***(B54) No. 5 — (B54) No. 2:*** ***(B54) No. 33 — (B54) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 2 — Transmission body:*** ***(B54) No. 5 — Transmission body:*** ***(B54) No. 33 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **7**.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>
7	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **8**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-127, Secondary Pressure Sensor.>
8	**CHECK SECONDARY PRESSURE SENSOR OUTPUT.** Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 5 (+) — (B54) No. 2 (–):***	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Check the TCM connector (B54) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure connector?	Repair the connector, or replace harness.	Go to step **10**.
10	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **11**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.> Go to step **11**.

	Step	Check	Yes	No
11	**CHECK INPUT SIGNAL FOR TCM.** 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **12**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-127, Secondary Pressure Sensor.>
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step **13**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-127, Secondary Pressure Sensor.>
13	**CHECK FREEZE FRAME DATA.** 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-133, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Go to step **14**.
14	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Go to step **15**.
15	**CHECK TCM INPUT SIGNAL (STALL TEST).** Check the «Actual Secondary Pressure» in step 14.	Is the «Actual Secondary Pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR690)-59, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>

4. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.

(A) Actual secondary pressure (MPa) (C) Low-voltage malfunction (D) High-voltage malfunction
(B) Secondary actual current (mA)

NOTE:
Symptom that the DTC P0841 illuminates can be classified into 2 patterns.
- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

5. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure control function.
- Judge as NG if a discrepancy between the target secondary oil pressure (as internal data) and the detected value of the secondary oil pressure sensor becomes the specified value or more.

6. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ Table 1 rpm

Table 1 (ENGINE TYPE FB)

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	300	660	900	1080	1170	1400	1680	1900	2100

Table 1 (ENGINE TYPE EZ)

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	400	600	965	1180	1370	1670	1930	2150	2340

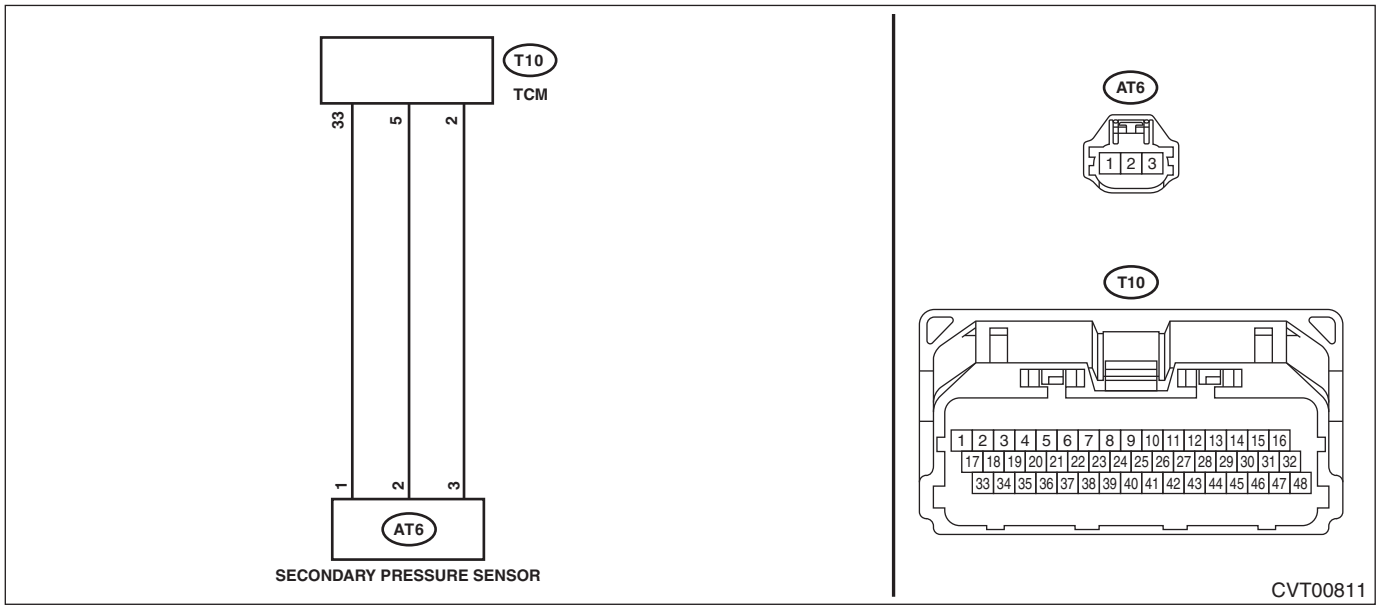
7. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Target line pressure – Measured line pressure|	≥ 500 kPa

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



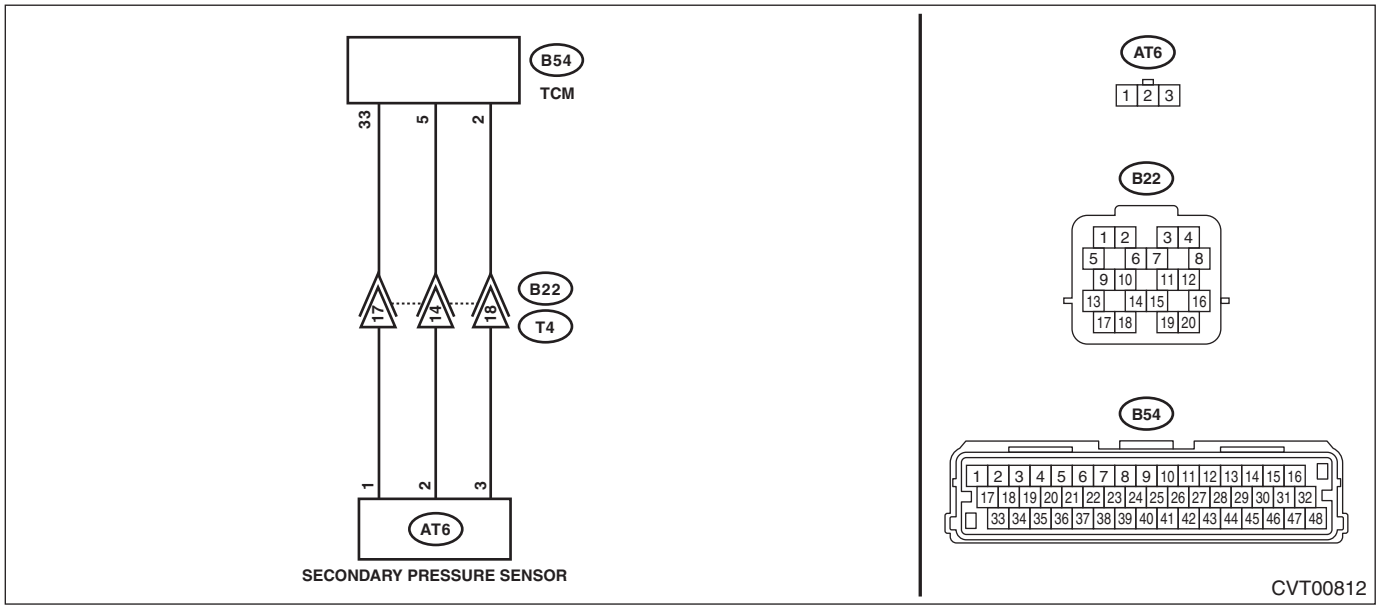
Z: DTC P0842 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T10) No. 2 — (AT6) No. 3:*** ***(T10) No. 5 — (AT6) No. 2:*** ***(T10) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 5 — Chassis ground:*** ***(T10) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Connect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 2 — (B22) No. 18:*** ***(B54) No. 5 — (B22) No. 14:*** ***(B54) No. 33 — (B22) No. 17:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 — Chassis ground:*** ***(B54) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Measure the resistance between transmission connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T4) No. 14 — (AT6) No. 2:*** ***(T4) No. 17 — (AT6) No. 1:*** ***(T4) No. 18 — (AT6) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 — Chassis ground:*** ***(T4) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Connect the TCM connector. 2) Connect the transmission connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-127, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

3. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of the transmission line pressure sensor.
- Judge as NG if the voltage detected by the transmission line pressure sensor is lower than the predetermined value.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

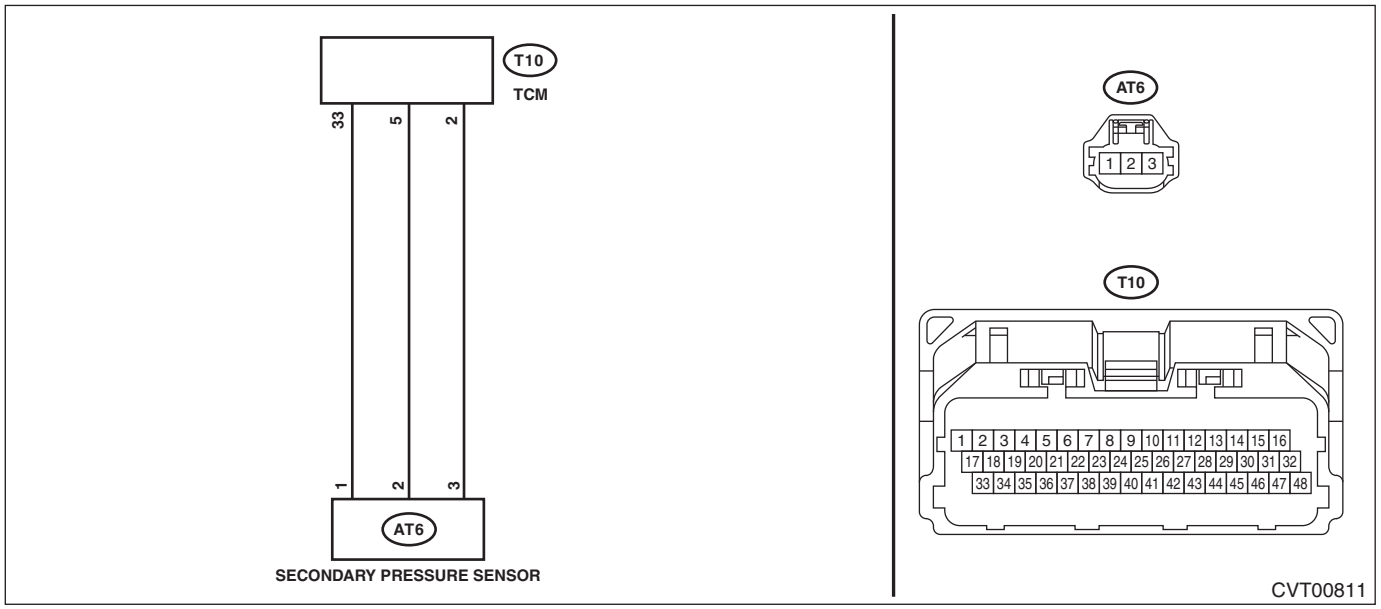
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	< 0.195 V (< – 574 kPa)

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



AA:DTC P0843 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 5 (+) — Chassis ground (–):*** ***(T10) No. 33 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(T10) No. 5 — (T10) No. 33:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **4**.
4	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Connect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 (+) — Chassis ground (–):*** ***(B54) No. 33 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(B54) No. 5 — (B54) No. 33:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **4**.
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 (+) — Chassis ground (–):*** ***(T4) No. 17 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 14 — (T4) No. 17:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **6**.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Connect the TCM connector. 2) Connect the transmission connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-127, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

3. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure sensor 5 V system.
- Judge as NG if the voltage detected by the transmission line pressure sensor is higher than the predetermined value.

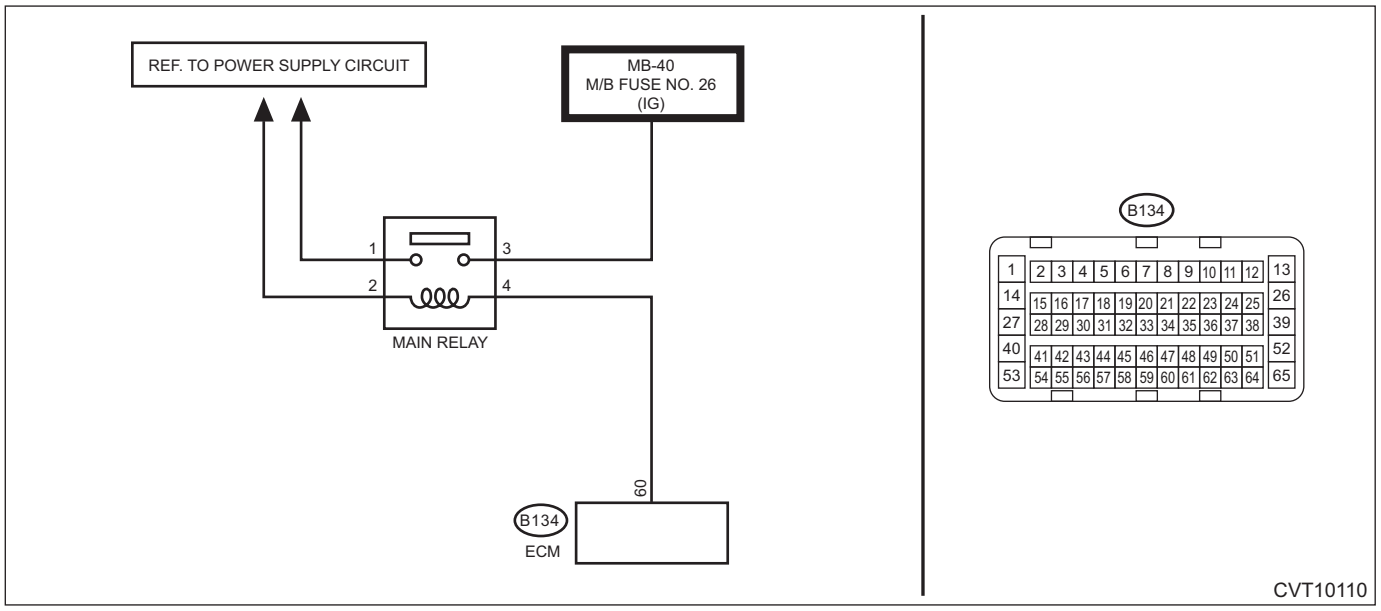
4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value



Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	> 4.883 V (> 8200 kPa)

Time Needed for Diagnosis: 1.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AB:DTC P0890 TCM POWER RELAY SENSE CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper gear shifting

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Power supply circuit <Ref. to WI-25, WIRING DIAGRAM, Power Supply Circuit.>
Engine electrical system <Ref. to WI-179, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **2**.	Connect the ECM connector correctly.
2	**CHECK HARNESS BETWEEN M/B FUSE AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between M/B fuse and engine ground. ***Connector & terminal*** ***(M/B fuse) No. 26 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between M/B fuse and main relay connector • Defective main relay	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and main relay connector.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure solenoid drive power supply relay circuit.
- Judge as NG if the transmission fluid pressure solenoid drive power supply voltage is lower than the predetermined value.

2. EXECUTION CONDITION

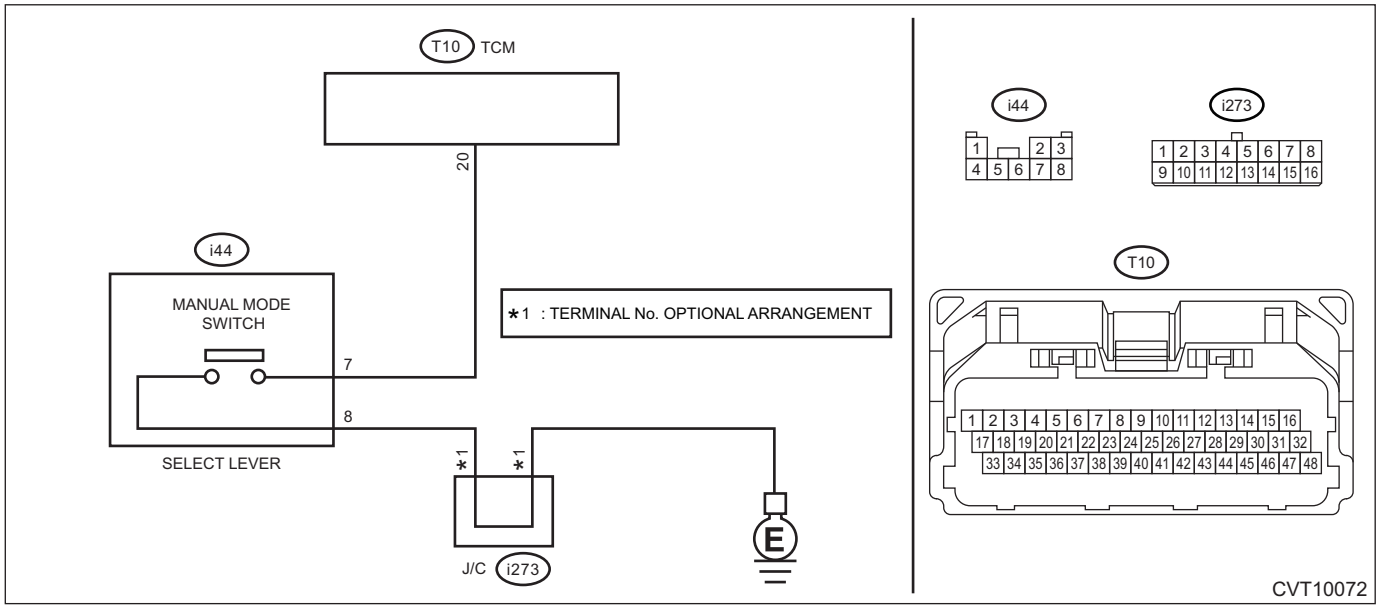
Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Ignition state	Run or Crank

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

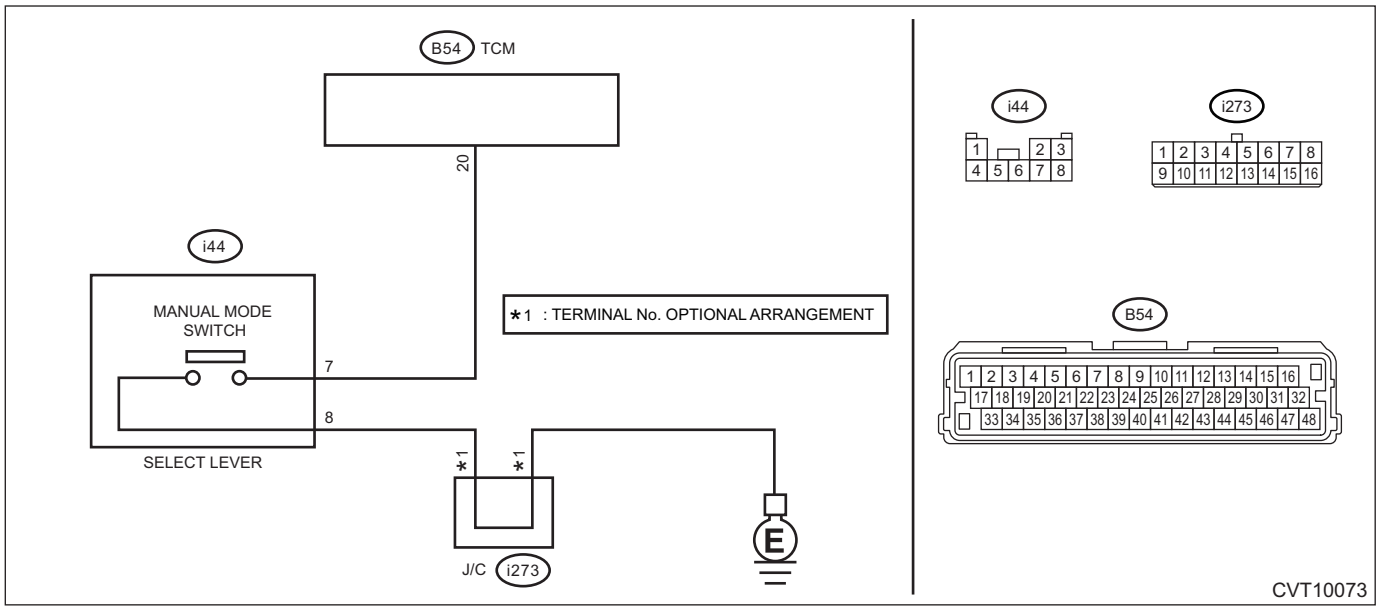
Malfunction Criteria	Threshold Value
Measured TCM input voltage which is supplied from 12 V battery system through the TCM Power Relay	< 2 V



Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AC:DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Manual mode can not be set.



CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
- ENGINE TYPE FB

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

- ENGINE TYPE EZ

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the manual mode switch connector. 3) Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(i44) No. 8 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK MANUAL MODE SWITCH.** Measure the resistance between manual mode switch terminals. ***Connector & terminal*** ***No. 7 — No. 8:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the select lever assembly. <Ref. to CS-23, Select Lever.>
3	**CHECK MANUAL MODE SWITCH.** 1) Shift the select lever to manual mode. 2) Measure the resistance between manual mode switch terminals. ***Connector & terminal*** ***No. 7 — No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the select lever assembly. <Ref. to CS-23, Select Lever.>
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and manual mode switch connector. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 20 — (i44) No. 7:*** ***ENGINE TYPE EZ*** ***(B54) No. 20 — (i44) No. 7:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK HARNESS.** Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(i44) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.

	Step	Check	Yes	No
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Set the select lever to “D” range. 4) Read the data of «Tiptronic Mode Switch» using Subaru Select Monitor.	Does the value of «Tiptronic Mode Switch» change to “ON” with select lever in manual mode, and “OFF” with select lever in other than manual mode?	Current condition is normal.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of the manual mode switch circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
D range SW	OFF

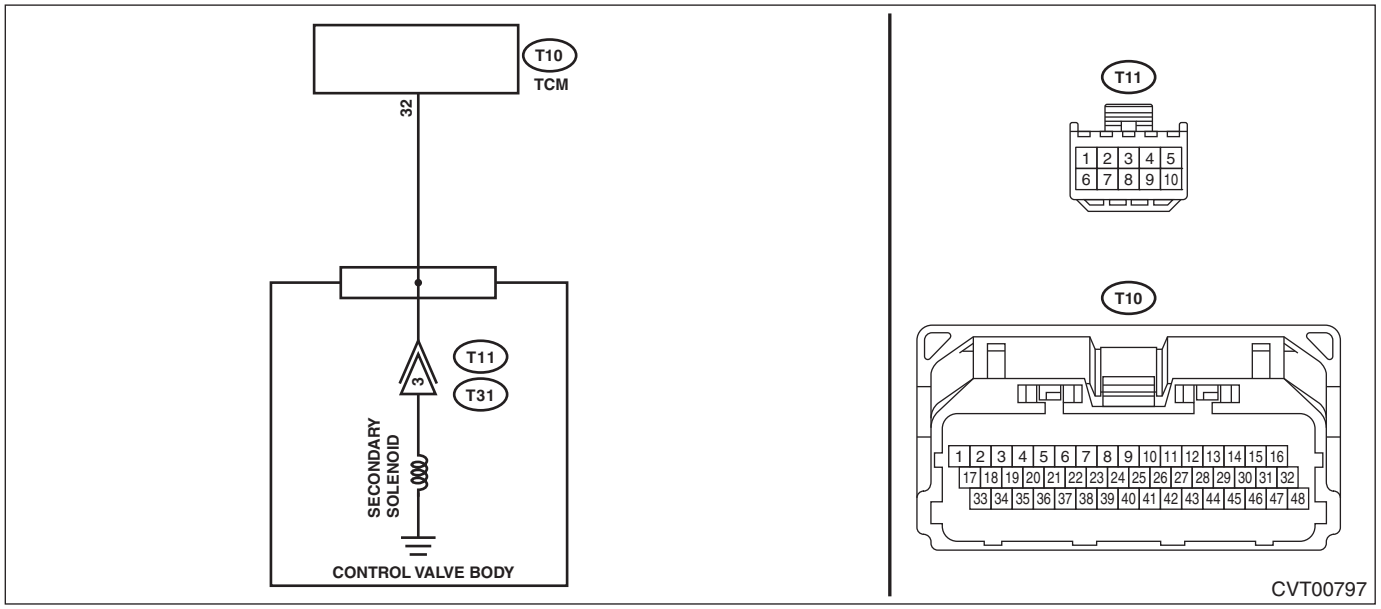
3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Manual SW	ON

Time needed for diagnosis: 5 s



AD:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Repair or replace the harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Repair or replace the harness.

3. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid drive circuit.
- Judge as NG when the deviation between target current and actual current of the transmission line pressure solenoid becomes equal to or larger than the predetermined value.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

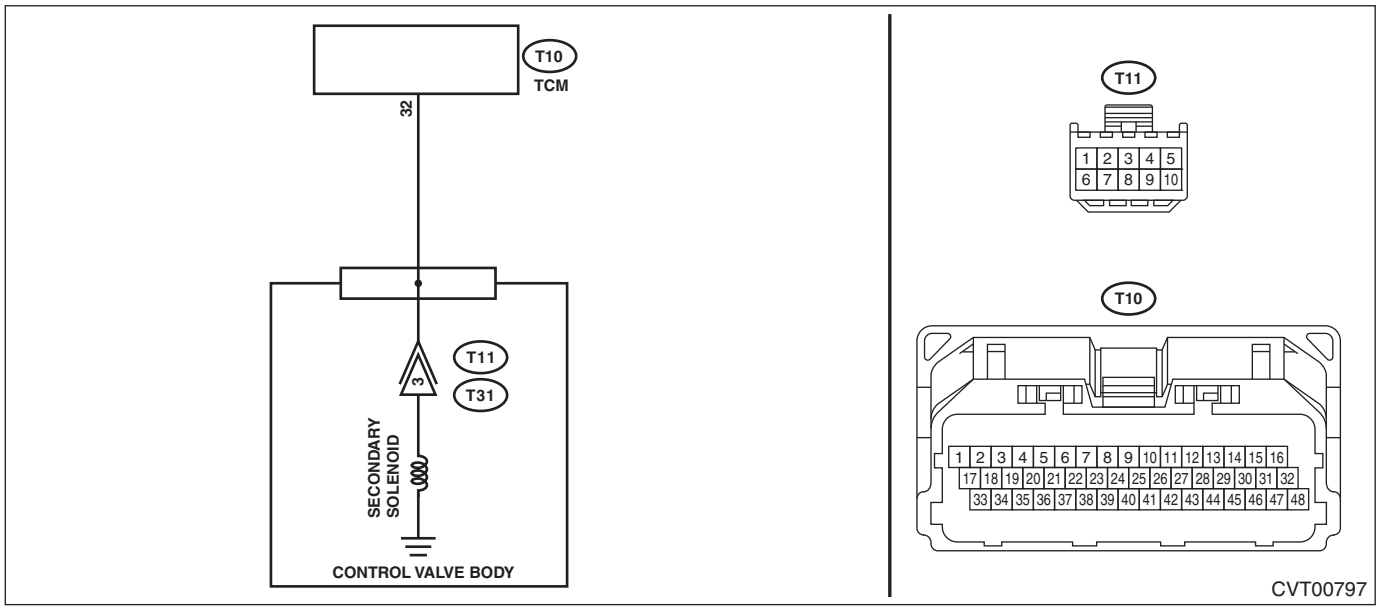
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Target line pressure control solenoid valve current – Measured line pressure control solenoid valve current|	> 0.2 A

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



AE:DTC P0962 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK SECONDARY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “N” range. 2) Read the data of «Secondary Set Current» and «Secondary Actual Current» using Subaru Select Monitor.	Does the value of «Secondary Set Current» and «Secondary Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is higher than the predetermined value.

Diagnosis 2
- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission line pressure solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.1 A
Diagnosis 2	
12 V battery system voltage	≥ 9 V

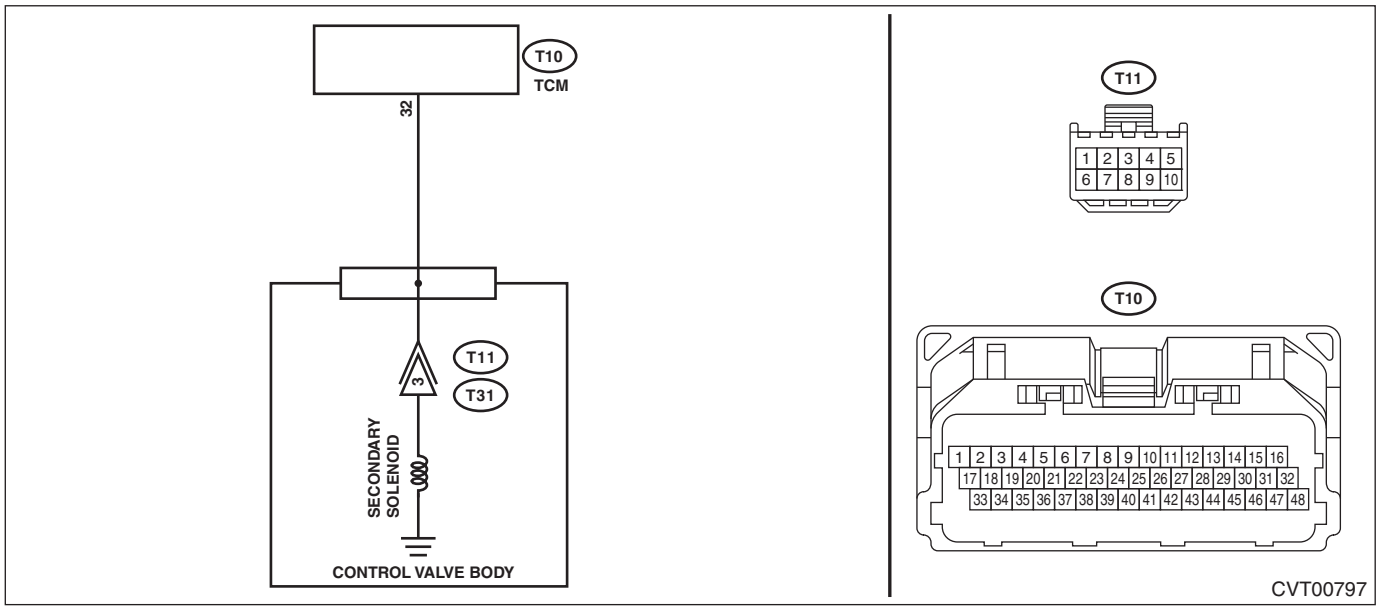
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure control solenoid valve current	≥ 1.1 A
Diagnosis 2	
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured line pressure control solenoid valve current ≥ 1.2 A	

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



AF:DTC P0963 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 32 — (T11) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 32 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK SECONDARY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “N” range. 2) Read the data of «Secondary Set Current» and «Secondary Actual Current» using Subaru Select Monitor.	Does the value of «Secondary Set Current» and «Secondary Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 32 — (B22) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is lower than the predetermined value.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.2 A

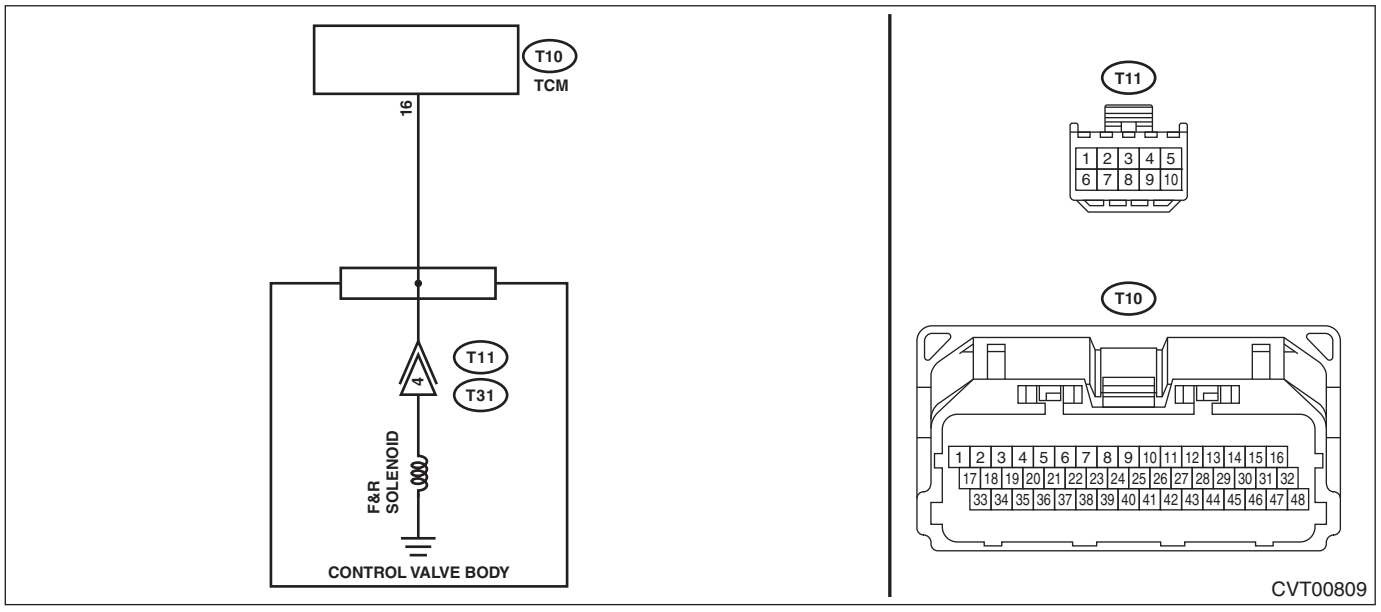
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure control solenoid valve current	< 0.1 A

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



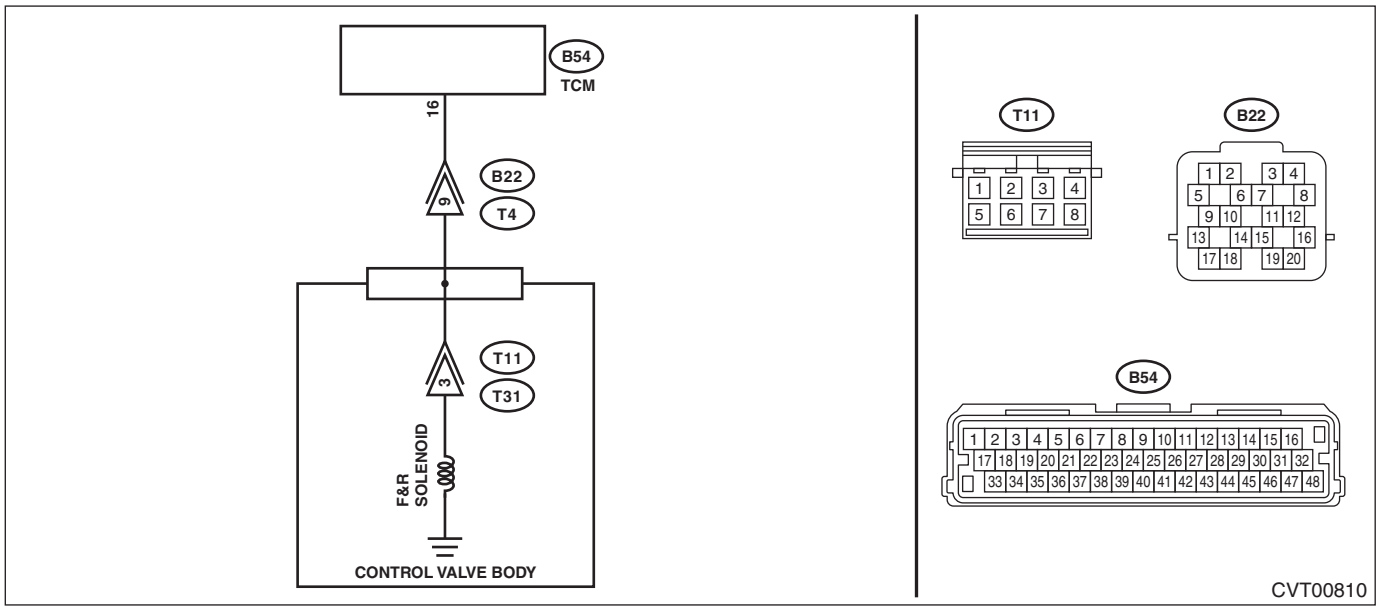
AG:DTC P0965 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTC P0717, P0966, P0967 or P2747 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step **2**.
2	**CHECK F&R SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Repair or replace the harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step **2**.
2	**CHECK F&R SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

Step		Check	Yes	No
4	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Repair or replace the harness.

3. OUTLINE OF DIAGNOSIS

Diagnosis 1
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the deviation between set current and actual current of the transmission forward/reverse clutch pressure solenoid drive circuit becomes equal to or larger than the predetermined value.
Diagnosis 2
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the transmission forward/reverse clutch pressure solenoid drive current is within the predetermined value.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

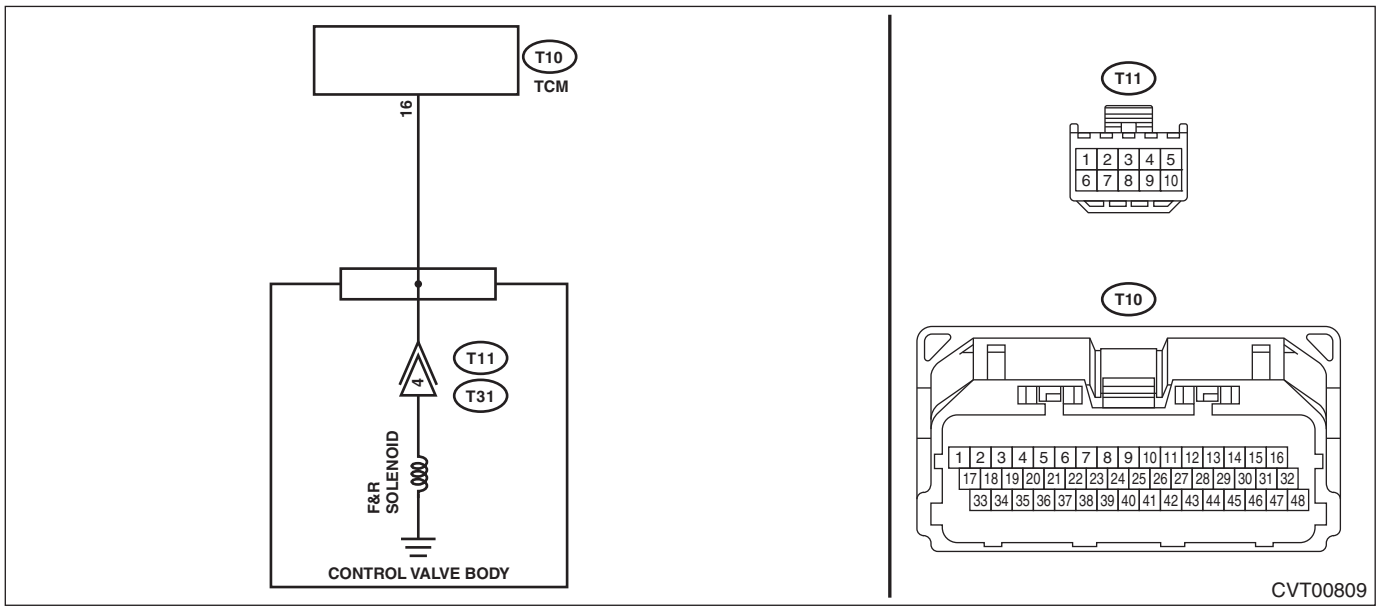
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
|Target forward & reverse clutch pressure control solenoid current – Measured forward & reverse clutch pressure control solenoid circuit|	> 0.2 A
Diagnosis 2	
Measured forward & reverse clutch pressure control solenoid current	> 1.08 A and ≤ 1.6 A

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



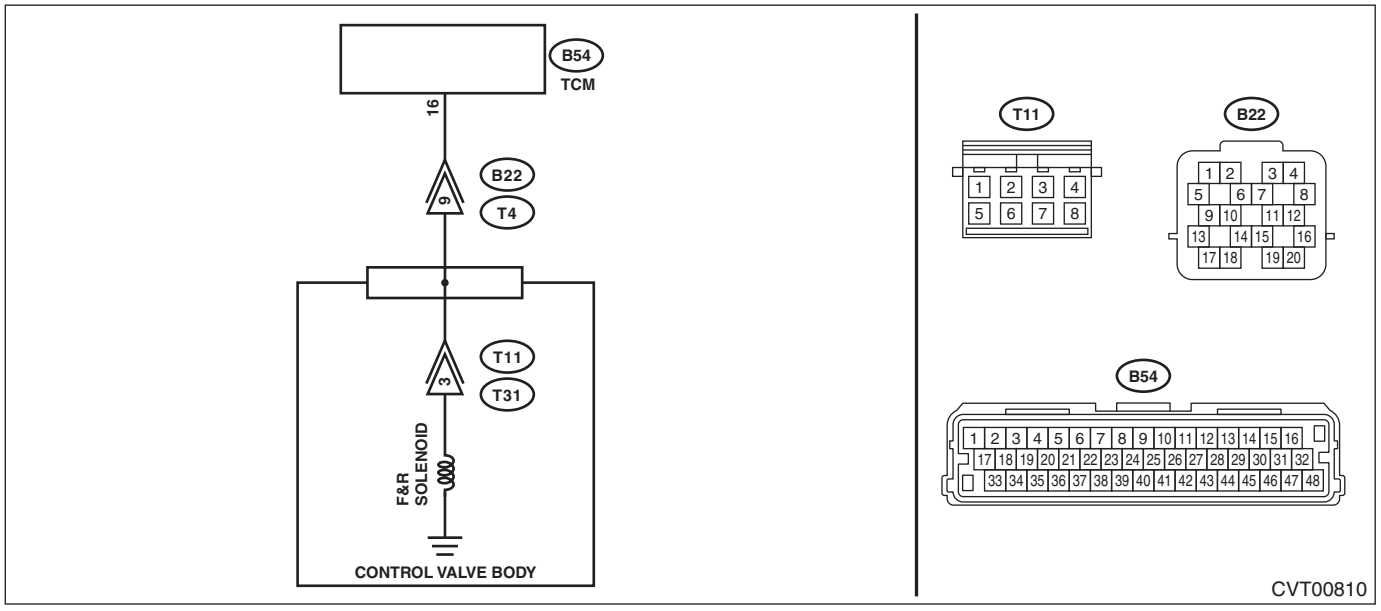
AH:DTC P0966 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Excessive shift shock

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK F&R SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range. 2) Read the data of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» using Subaru Select Monitor.	Does the value of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect the short circuit to ground in transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission forward/reverse clutch pressure solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

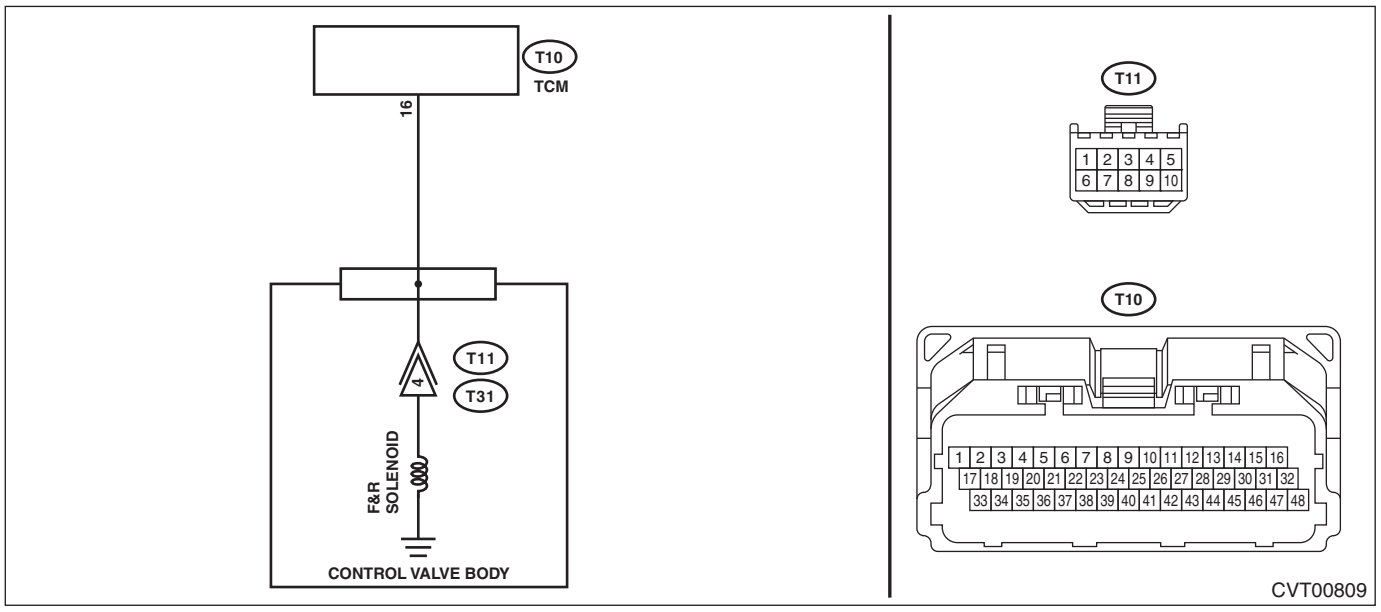
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current ≥ 1.6 A	ON

Time Needed for Diagnosis: 0.02 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



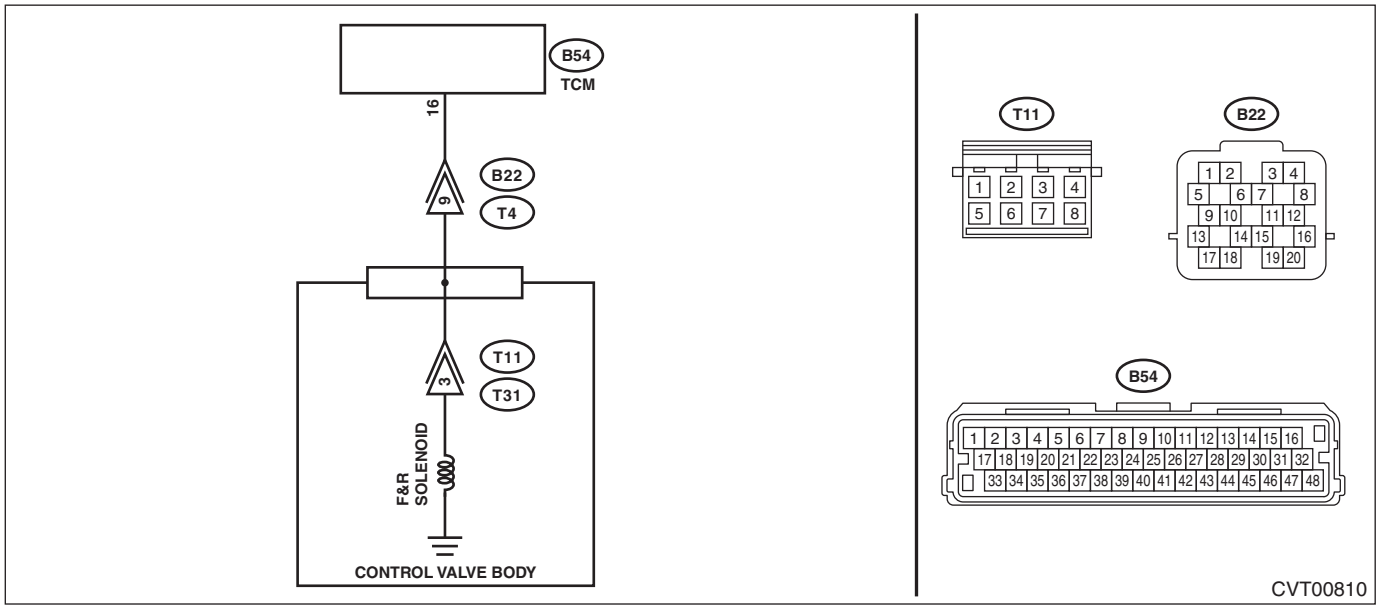
AI: DTC P0967 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Engine speed increases abruptly, and can not start.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 16 — (T11) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 16 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range. 2) Read the data of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» using Subaru Select Monitor.	Does the value of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 16 — (B22) No. 9:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

• Detect open circuit or power supply-output short circuit in the transmission forward/reverse clutch pressure solenoid circuit.
• Judge as NG if the transmission forward/reverse clutch pressure solenoid drive current is lower than the predetermined value.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Target forward & reverse clutch pressure control solenoid current	≥ 0.1 A

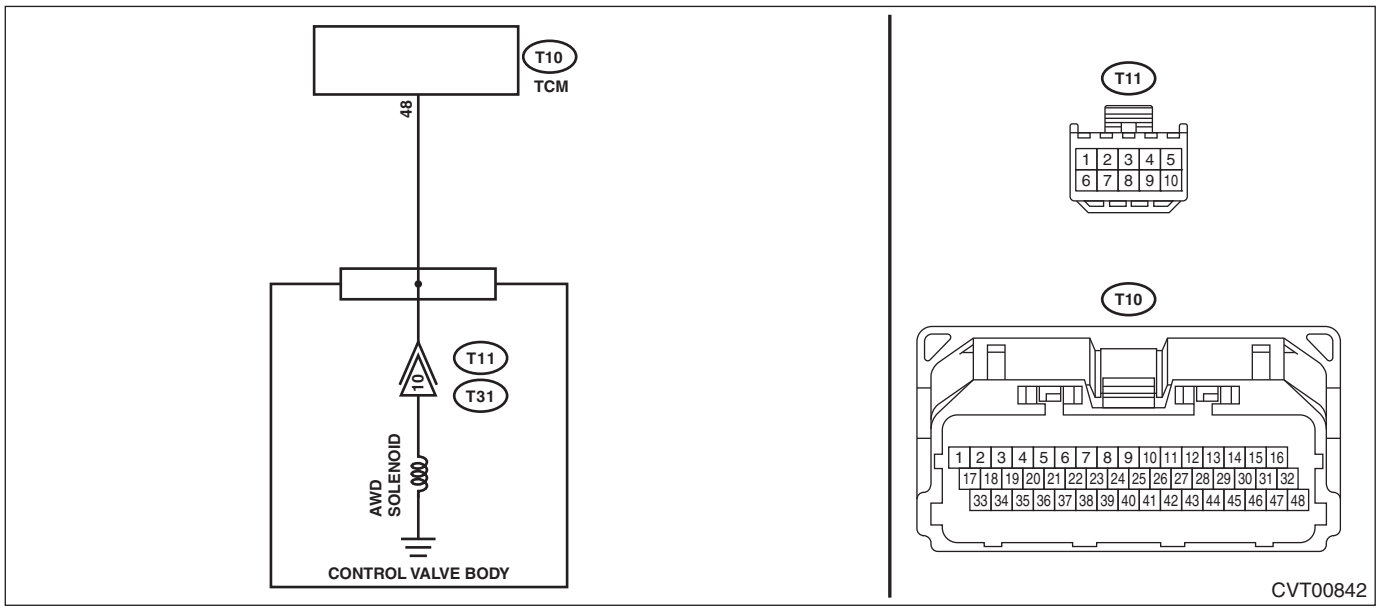
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current < 5.9 mA	ON

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.



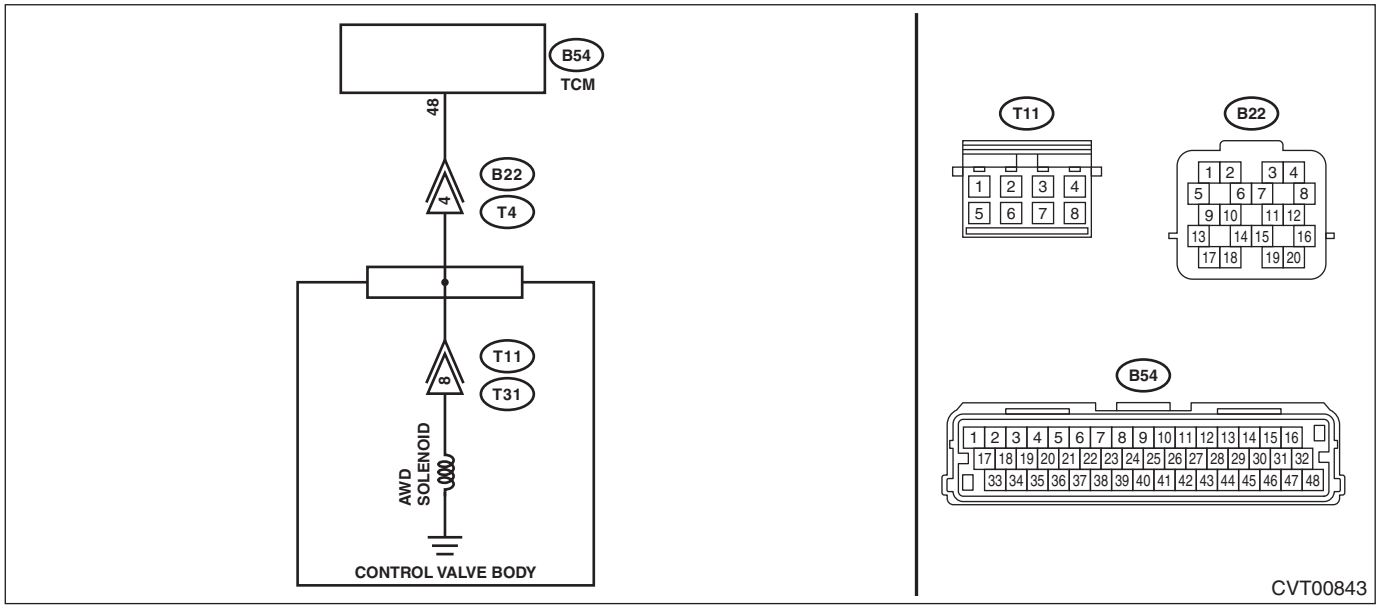
AJ:DTC P0970 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Drivability getting worse.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 48 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK AWD SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 48 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transfer solenoid circuit.
- Judge as NG if a ground short circuit is detected more than 10 times via the detection circuit for the transfer solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
Target duty cycle	0%

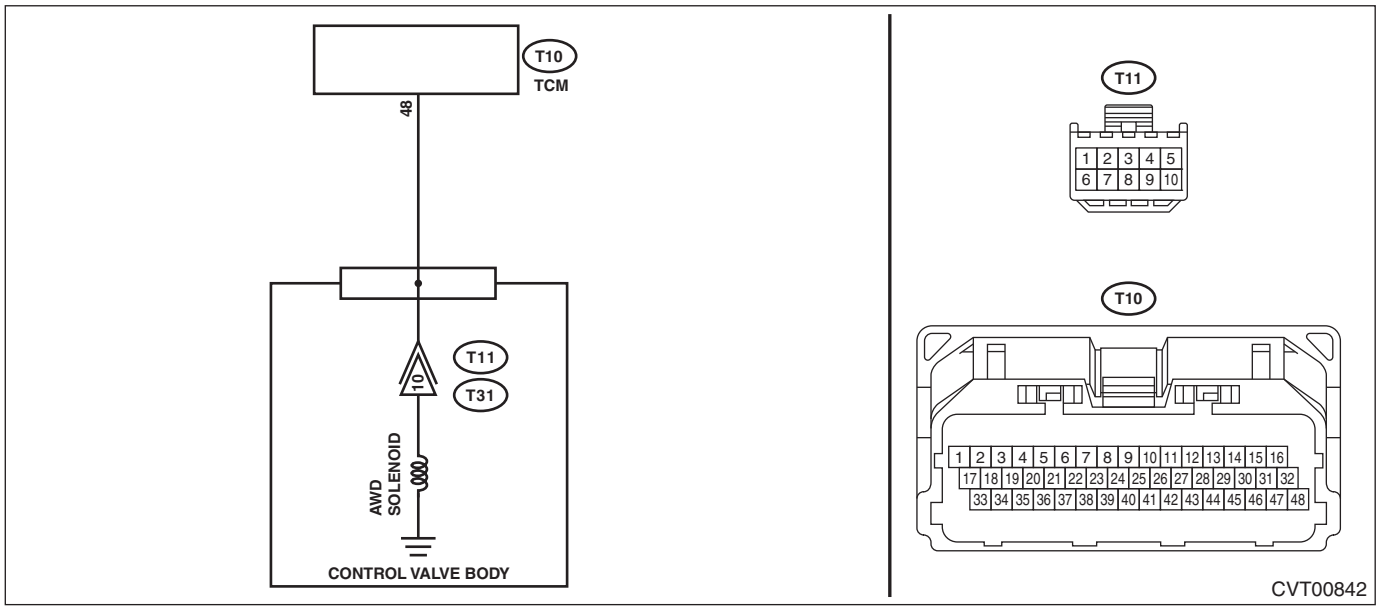
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately



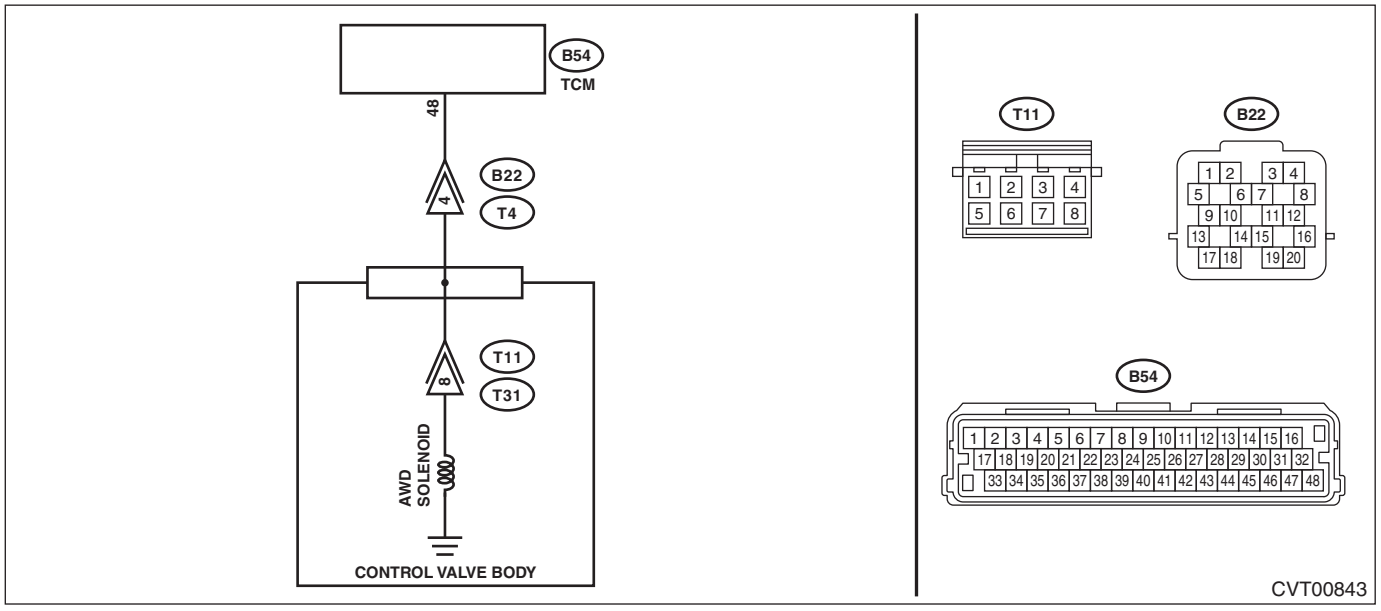
AK:DTC P0971 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Tight corner braking phenomenon occurs.
- Drivability getting worse.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 48 — (T11) No. 10:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 48 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK AWD SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 48 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 48 — (B22) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transfer solenoid circuit.
- Judge as NG if an open circuit or a short circuit to ground is detected more than 10 times via the detection circuit in the transfer solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
Target duty cycle	100%

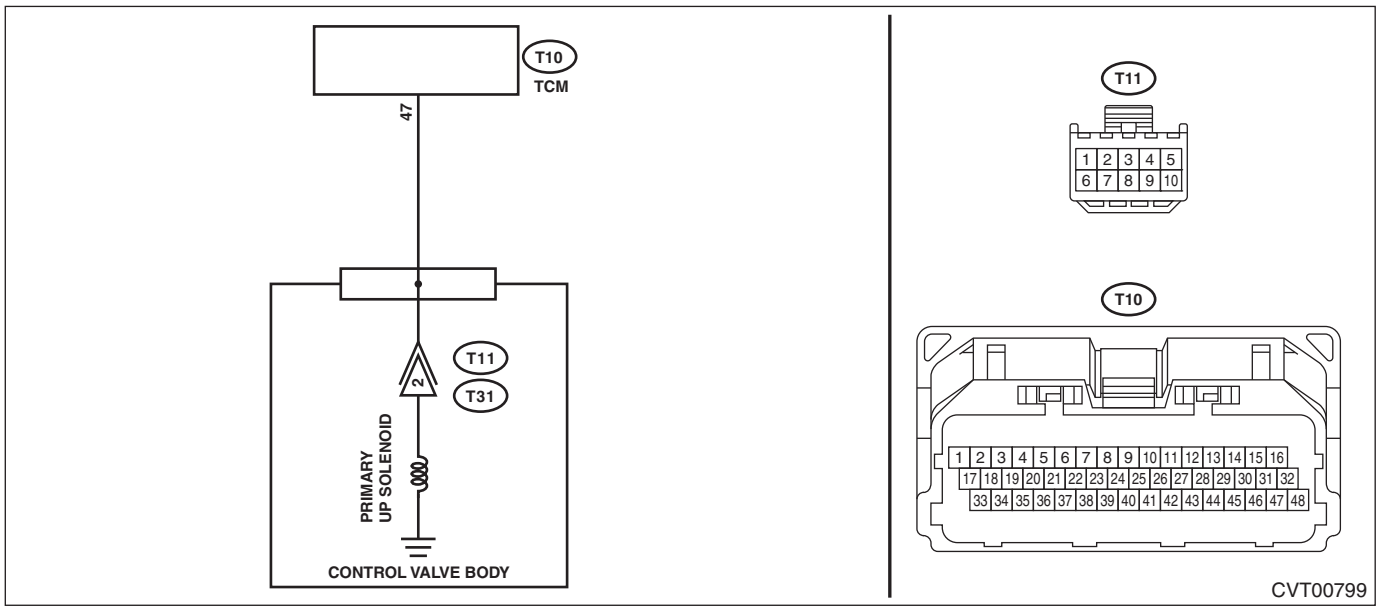
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately



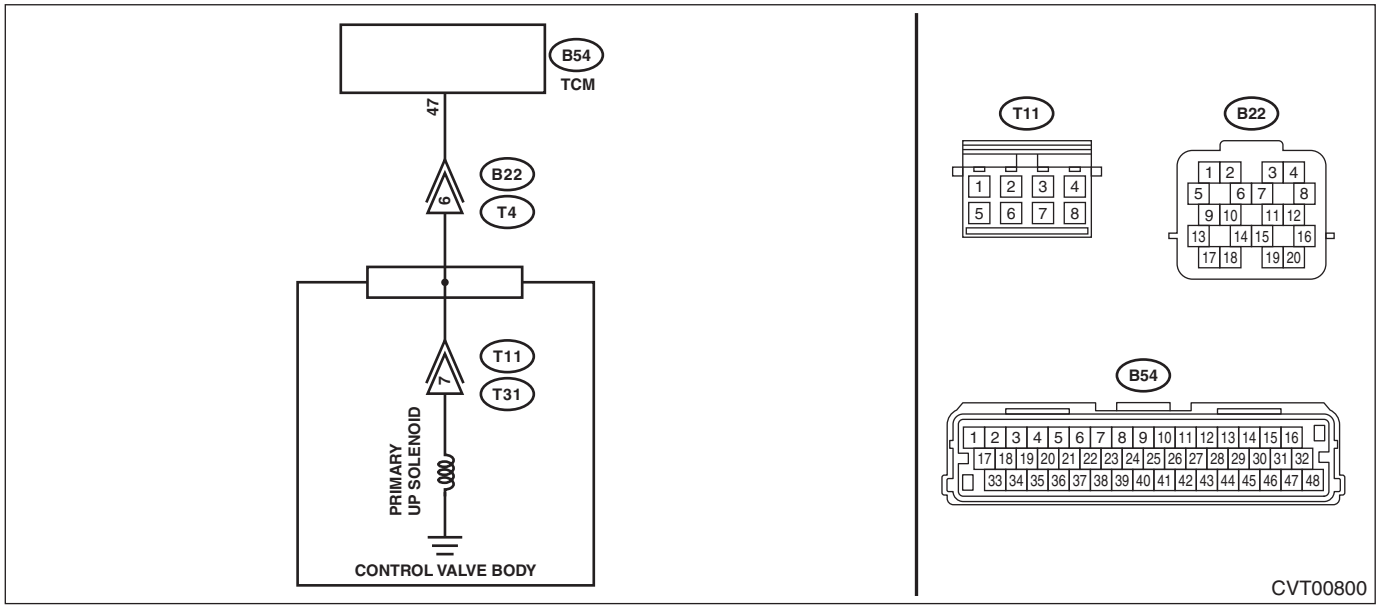
AL:DTC P0973 SHIFT SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No up-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY UP SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	100%

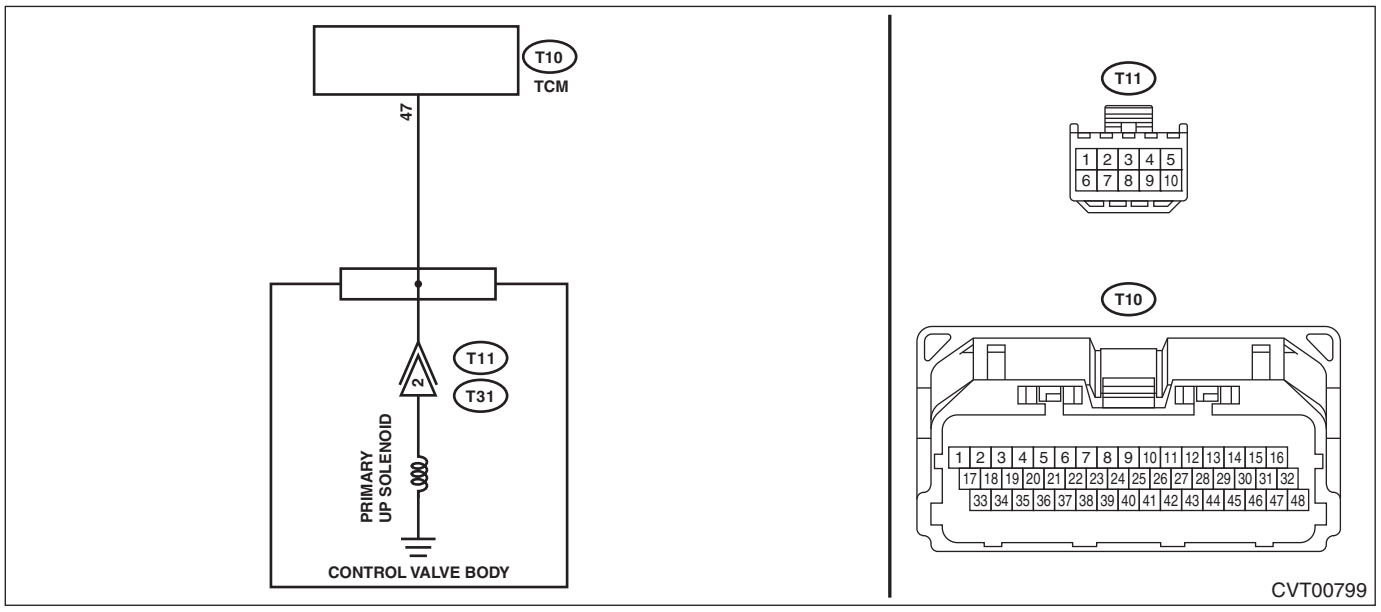
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



AM:DTC P0974 SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No up-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 47 — (T11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 47 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY UP SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 47 — (B22) No. 6:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the shift-up fluid pressure control solenoid drive circuit.
• Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	0%

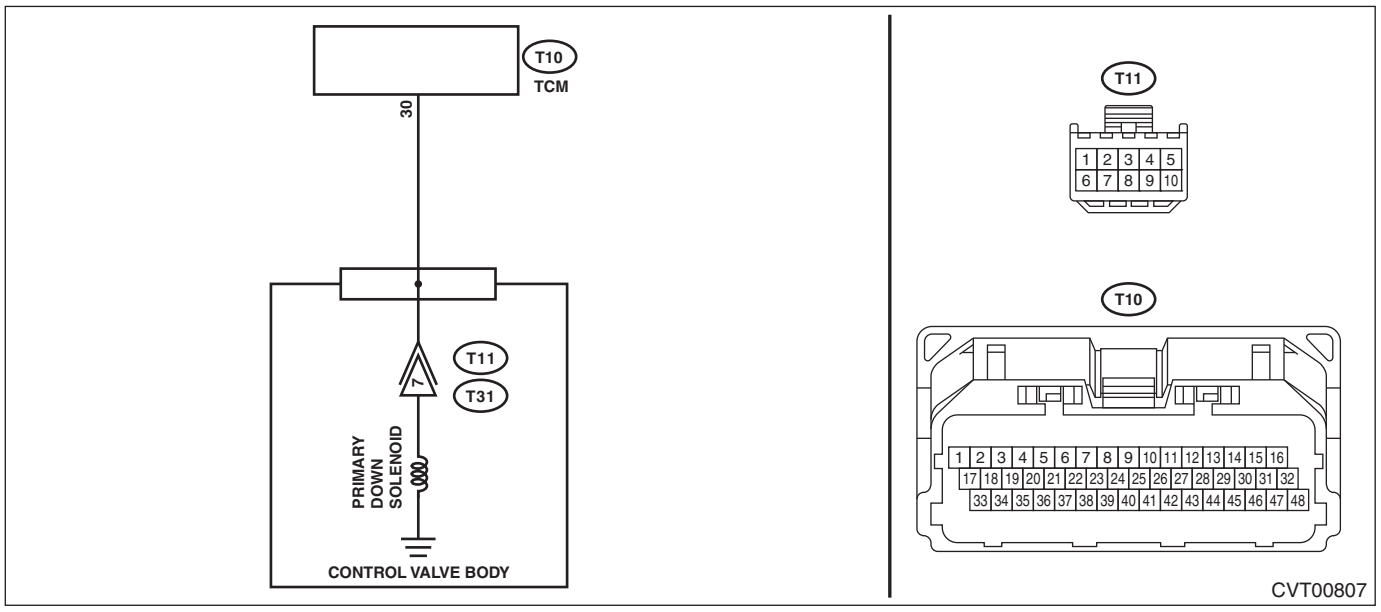
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



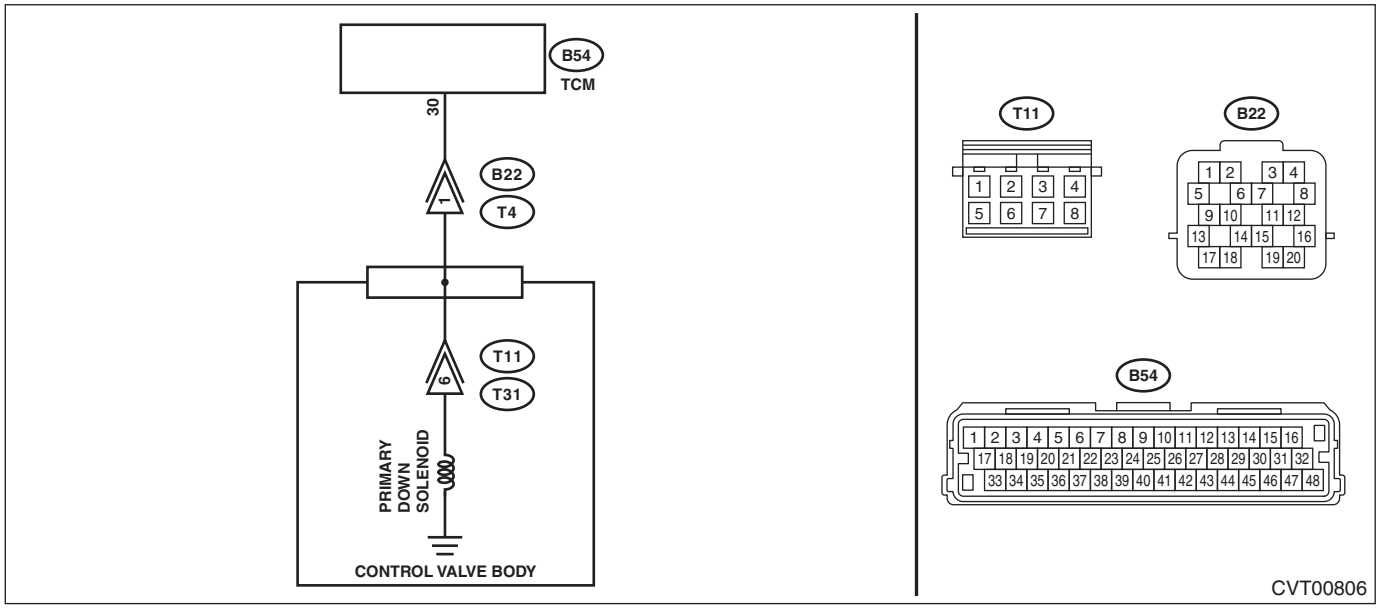
AN:DTC P0976 SHIFT SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No down-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 30 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY DOWN SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	100%

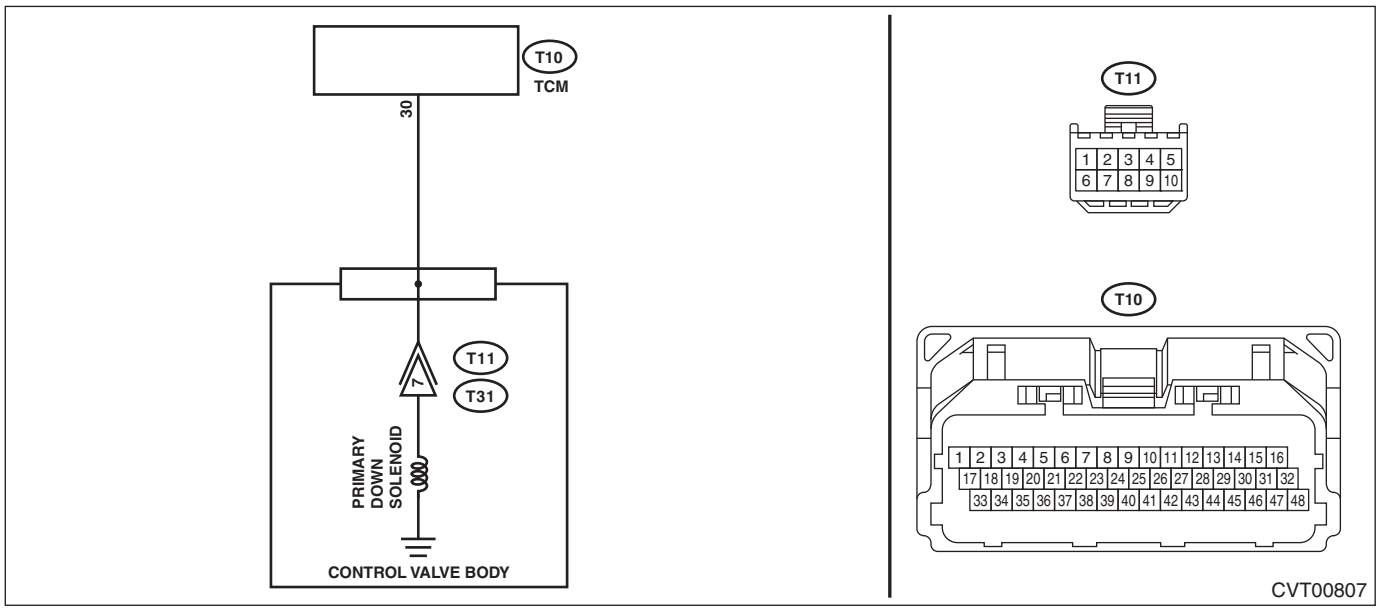
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



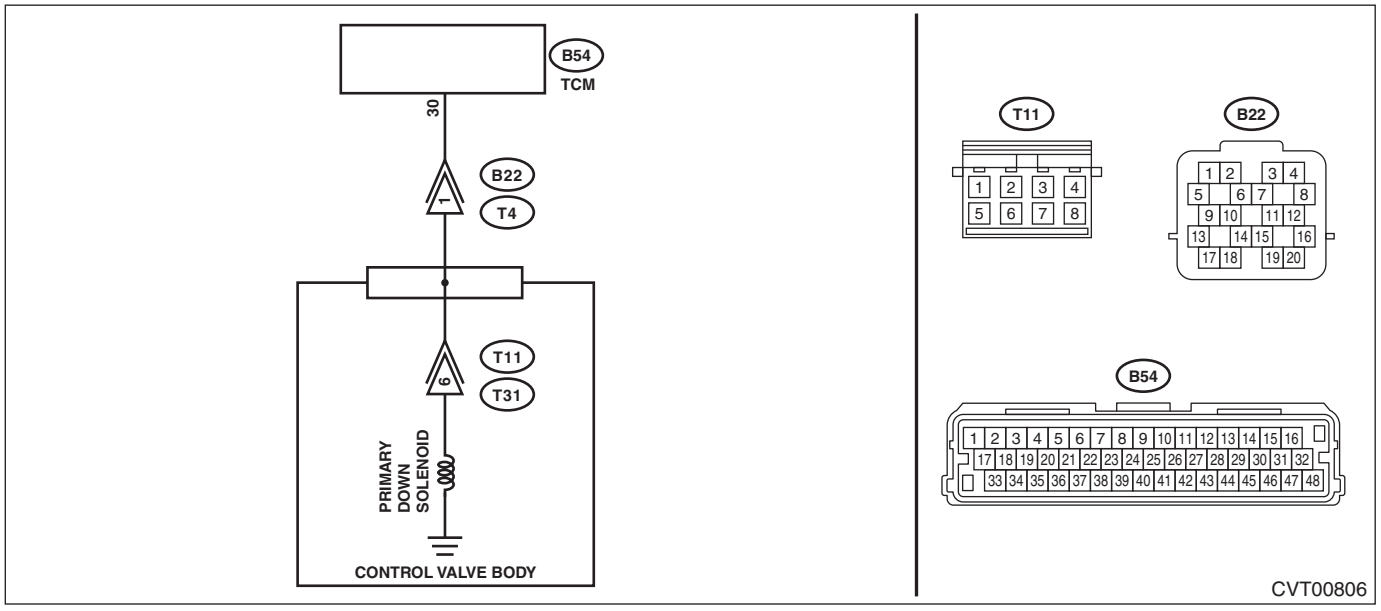
AO:DTC P0977 SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No down-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 30 — (T11) No. 7:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 30 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 30 — (B22) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the shift-down fluid pressure control solenoid drive circuit.
• Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	0%

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AP:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:
Detected when two consecutive driving cycles with fault occur.
TROUBLE SYMPTOM:
TCM RAM malfunction

Step		Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Read the DTC.	Is DTC P160A displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

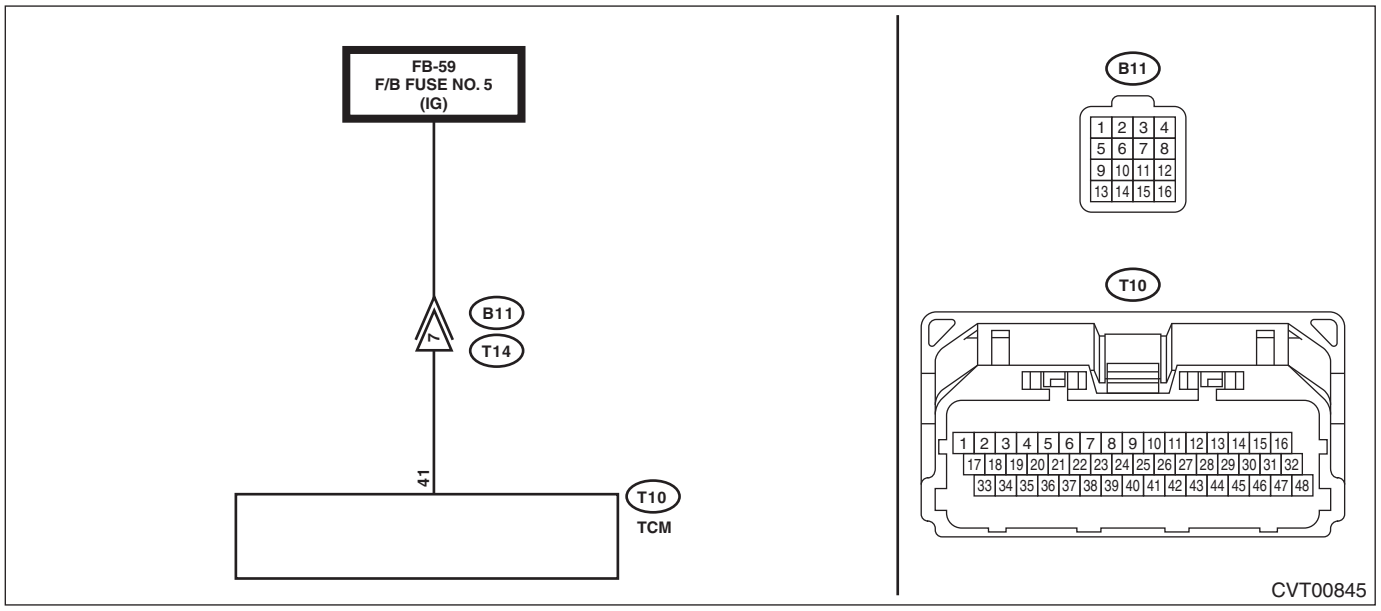
2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

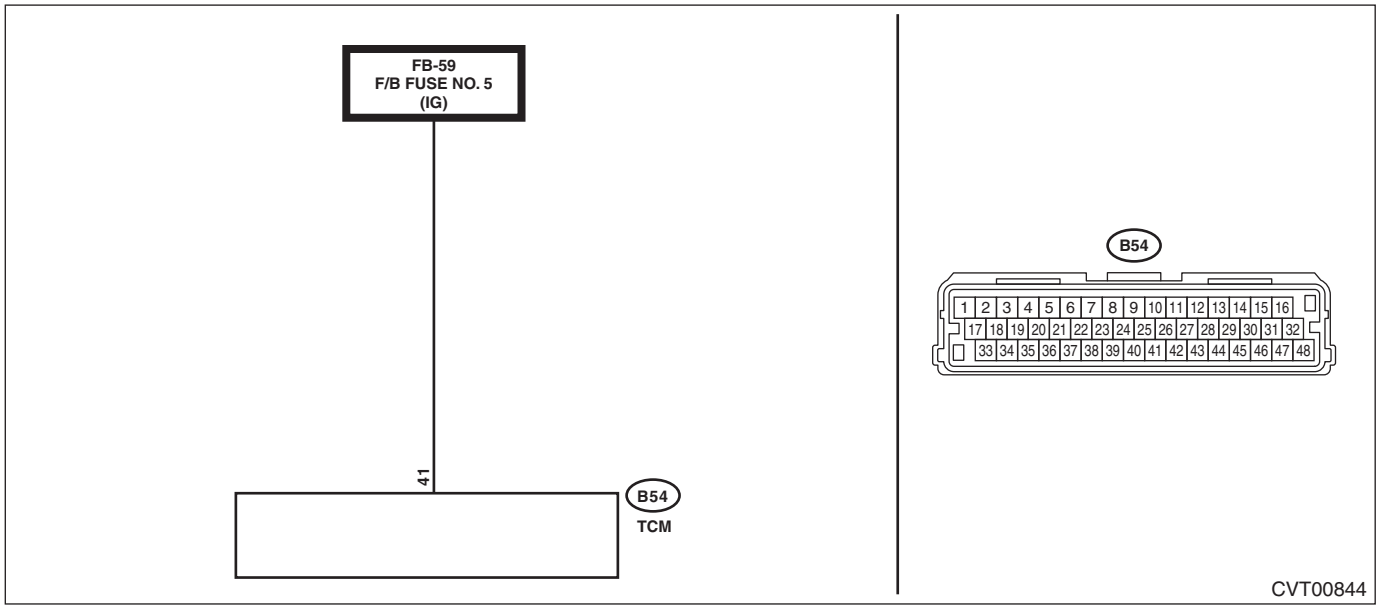
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value



Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM used except for CAN communication.	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



AQ:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Faulty TCM operation

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
• ENGINE TYPE FB
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

• ENGINE TYPE EZ
CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** Check the installing condition of TCM connector.	Is the TCM connector installed properly?	Go to step **2**.	Install the TCM connector.

Step		Check	Yes	No
2	**CHECK INPUT VOLTAGE OF TCM.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connector and chassis ground. (While wiggling the harness) ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 41 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of ignition SW circuit.
- Judge as NG if the ignition SW signals are lost 5 times or more even though the engine is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Count of temporarily discontinuous input of ignition switch	≥ 5 count

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AR:DTC P2746 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/ PERFORMANCE

DTC DETECTING CONDITION:
Immediately at fault recognition
TROUBLE SYMPTOM:
- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

1. ENGINE TYPE FB

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-191, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. ENGINE TYPE EZ

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is any of the DTCs P2747, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-191, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

Diagnosis 1
- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed, compared with the speeds of other parts, is outside the possible range considering the hardware capabilities.

Diagnosis 2
- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed exceeds the predetermined value.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse

Secondary Parameters	Execution condition
(Measured turbine shaft speed / Measured secondary pulley shaft speed)	≥ 0.4 and ≤ 2.55
Diagnosis 2	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured turbine shaft speed / Measured secondary pulley shaft speed)	≥ 0.4 and ≤ 2.55

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
(Measured primary pulley shaft speed / Measured secondary pulley shaft speed)	< 0.36 or > 2.80
Diagnosis 2	
Measured primary pulley shaft speed	> 7140 rpm

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the turbine speed, compared with the engine speed, is outside the possible range considering the hardware capabilities.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	< Table 1 rpm

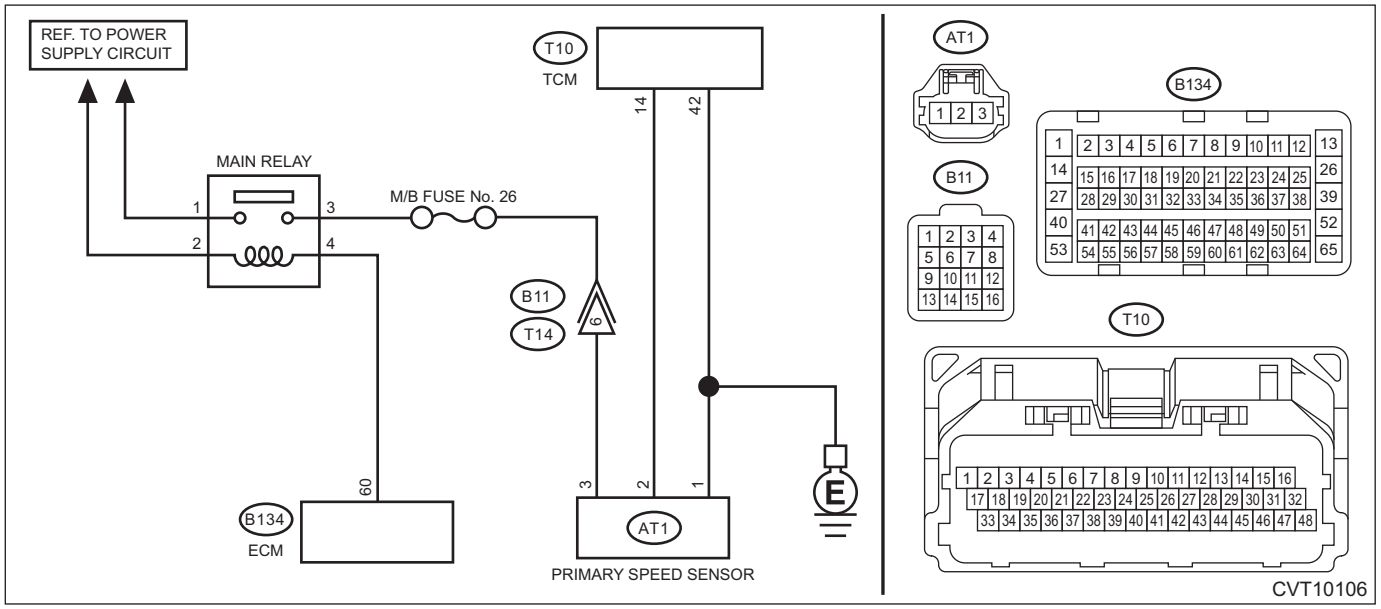
Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

Time Needed for Diagnosis: 10 seconds

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



AS:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between transmission connector and engine ground. ***Connector & terminal*** ***(B11) No. 6 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between transmission connector and main relay connector • Defective main relay	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between TCM connector and the primary speed sensor connector. ***Connector & terminal*** ***(T10) No. 14 — (AT1) No. 2:*** ***(T10) No. 42 — (AT1) No. 1:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness.
7	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness or poor contact of connector.
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Primary Rev Speed» using Subaru Select Monitor.	Does the value of «Primary Rev Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step **9**.
9	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. ***Connector & terminal*** ***(T14) No. 6 — (AT1) No. 3:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the transmission harness.
10	**CHECK PRIMARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the primary speed sensor. <Ref. to CVT(TR580)-128, Primary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Go to step **11**.	The original primary speed sensor is defective.

	Step	Check	Yes	No
11	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the main relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	The original main relay is defective.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between transmission connector and engine ground. ***Connector & terminal*** ***(B12) No. 5 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between transmission connector and main relay connector • Defective main relay	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 26 — (B22) No. 20:*** ***(B54) No. 42 — (B22) No. 13:*** ***(B54) No. 14 — (B12) No. 6:*** ***(B54) No. 42 — (B12) No. 7:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness.
7	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B12) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness or poor contact of connector.
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Primary Rev Speed» using Subaru Select Monitor.	Does the value of «Primary Rev Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step **9**.
9	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. ***Connector & terminal*** ***(T3) No. 5 — (AT1) No. 1:*** ***(T3) No. 6 — (AT1) No. 2:*** ***(T3) No. 7 — (AT1) No. 3:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the transmission harness.
10	**CHECK PRIMARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the primary speed sensor. <Ref. to CVT(TR690)-120, Primary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Go to step **11**.	The original primary speed sensor is defective.

Step		Check	Yes	No
11	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the main relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	The original main relay is defective.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect no input signal from the primary speed sensor.
- Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Measured secondary pulley shaft speed	≥ 500 rpm

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect no input signal from the primary speed sensor.
- Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured secondary pulley shaft speed	≥ 500 rpm

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AT:DTC P2750 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/ PERFORMANCE

DTC DETECTING CONDITION:
Immediately at fault recognition
TROUBLE SYMPTOM:
- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

1. ENGINE TYPE FB

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is any of the DTC P2751, U0122 or U0416 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-198, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. ENGINE TYPE EZ

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-198, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect the malfunction of the secondary speed sensor characteristics.
- Judge as NG if the deviation of vehicle speed between VDC and the secondary speed sensor becomes the predetermined value or more.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 5 MPH

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Vehicle speed (calculated from secondary pulley shaft speed) – Vehicle speed (from vehicle dynamics control module)|	> 10 MPH

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

Diagnosis 1

- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG if the secondary speed, compared with the primary speed, is outside the possible range considering the hardware capabilities.

Diagnosis 2

- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG if the secondary speed exceeds the predetermined value.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured primary pulley shaft speed / Measured front output shaft speed)	≥ 0.36 and ≤ 2.34
Diagnosis 2	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured primary pulley shaft speed / Measured front output shaft speed)	≥ 0.36 and ≤ 2.34

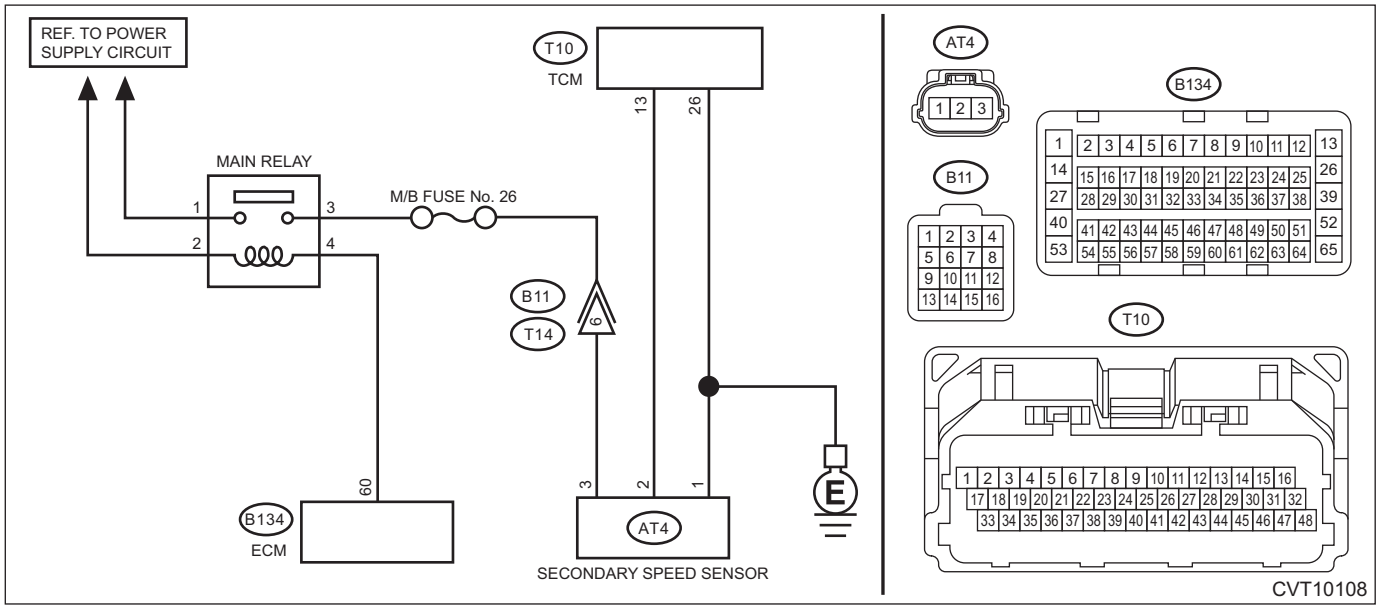
8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
(Measured primary pulley shaft speed / Measured secondary pulley shaft speed)	< 0.33 or > 2.58
Diagnosis 2	
Measured secondary pulley shaft speed	> 10820 rpm

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



AU:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM/ECM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between transmission connector and engine ground. ***Connector & terminal*** ***(B11) No. 6 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between transmission connector and main relay connector • Defective main relay	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between TCM connector and the secondary speed sensor connector. ***Connector & terminal*** ***(T10) No. 13 — (AT4) No. 2:*** ***(T10) No. 26 — (AT4) No. 1:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness.
7	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness or poor contact of connector.
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Secondary Rev Speed» using Subaru Select Monitor.	Does the value of «Secondary Rev Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step **9**.
9	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. ***Connector & terminal*** ***(T14) No. 6 — (AT4) No. 3:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the transmission harness.
10	**CHECK SECONDARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the secondary speed sensor. <Ref. to CVT(TR580)-123, Secondary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Go to step **11**.	The original secondary speed sensor is defective.

	Step	Check	Yes	No
11	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the main relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	The original main relay is defective.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between transmission connector and engine ground. ***Connector & terminal*** ***(B22) No. 11 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply of harness between transmission connector and main relay connector • Defective main relay	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the ECM connector. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 60 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 13 — (B22) No. 10:*** ***(B54) No. 26 — (B22) No. 20:*** ***(B54) No. 42 — (B22) No. 13:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness.
7	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B22) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness or poor contact of connector.
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Secondary Rev Speed» using Subaru Select Monitor.	Does the value of «Secondary Rev Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step **9**.
9	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. ***Connector & terminal*** ***(T4) No. 10 — (AT4) No. 2:*** ***(T4) No. 11 — (AT4) No. 3:*** ***(T4) No. 13 — (AT4) No. 1:*** ***(T4) No. 20 — (AT4) No. 1:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the transmission harness.

	Step	Check	Yes	No
10	**CHECK SECONDARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the secondary speed sensor. <Ref. to CVT(TR690)-117, Secondary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Go to step **11**.	The original secondary speed sensor is defective.
11	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the main relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	The original main relay is defective.

3. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the secondary speed sensor.
- Judge as NG if there is no input signal from the secondary pulley speed sensor, while the primary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 1000 rpm

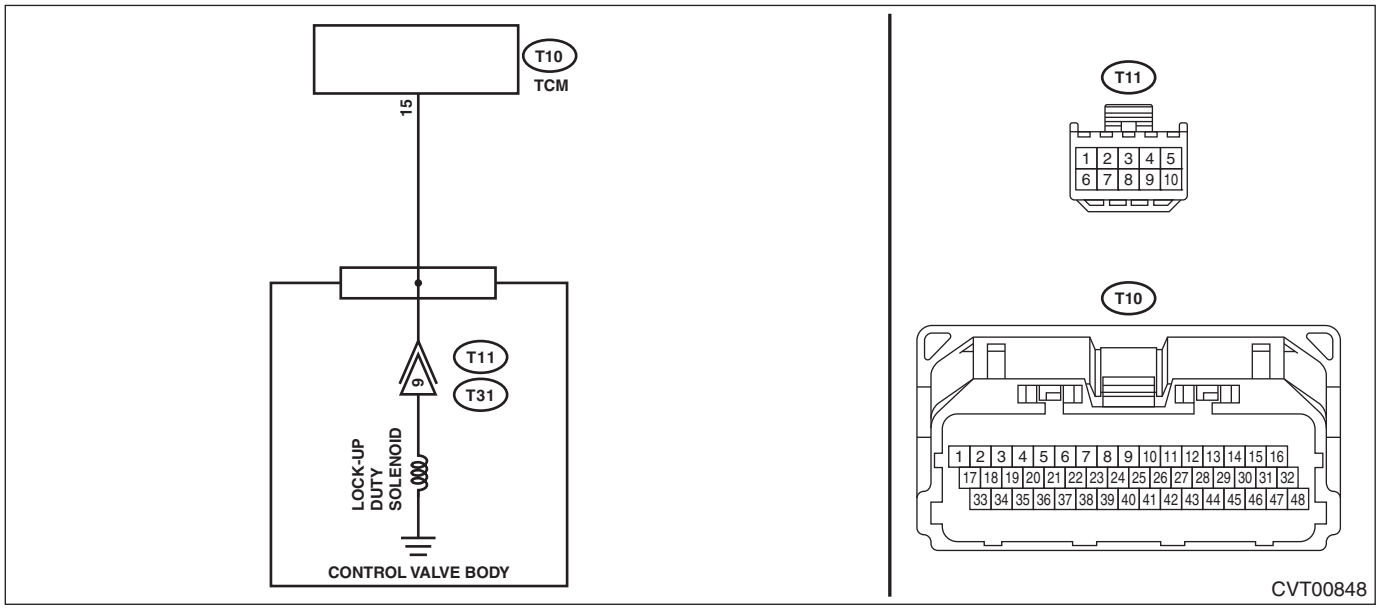
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured secondary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



AV:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2757 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **6**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission valve cover. 2) Disconnect the control valve body connector. 3) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 15 — (T11) No. 9:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Repair the short circuit of harness.
6	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **7**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
7	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **8**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.> Go to step **9**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
9	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Replace the torque converter assembly. <Ref. to CVT(TR580)-202, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2757 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **8**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B22) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 15 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Disconnect the control valve body connector. 3) Measure the resistance between transmission connector and control valve body connector. ***Connector & terminal*** ***(T4) No. 2 — (T11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness.
7	**CHECK HARNESS.** Measure the resistance between transmission connector and control valve body. ***Connector & terminal*** ***(T11) No. 2 — Control valve body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Repair the short circuit of harness.
8	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **9**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
9	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **10**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

	Step	Check	Yes	No
10	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.> Go to step **11**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
11	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Replace the torque converter assembly. <Ref. to CVT(TR690)-162, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
• Judge as NG if the deviation between engine speed and turbine speed becomes equal to or larger than the predetermined value, even though the lock-up command is issued.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%
Measured turbine shaft speed	> Table1 rpm

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Engine speed – Measured turbine shaft speed|	> Table 2 rpm

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured turbine shaft speed|(rpm)	200	200	200	200	200	200	200	200

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured turbine shaft speed|(rpm)	200	200	200	200	200	200	200

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
• Judge as NG if the deviation between engine speed and primary pulley speed becomes equal to or larger than the predetermined value, even though the lock-up command is issued.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%
Measured primary pulley shaft speed	> Table 3 rpm

Table 3

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

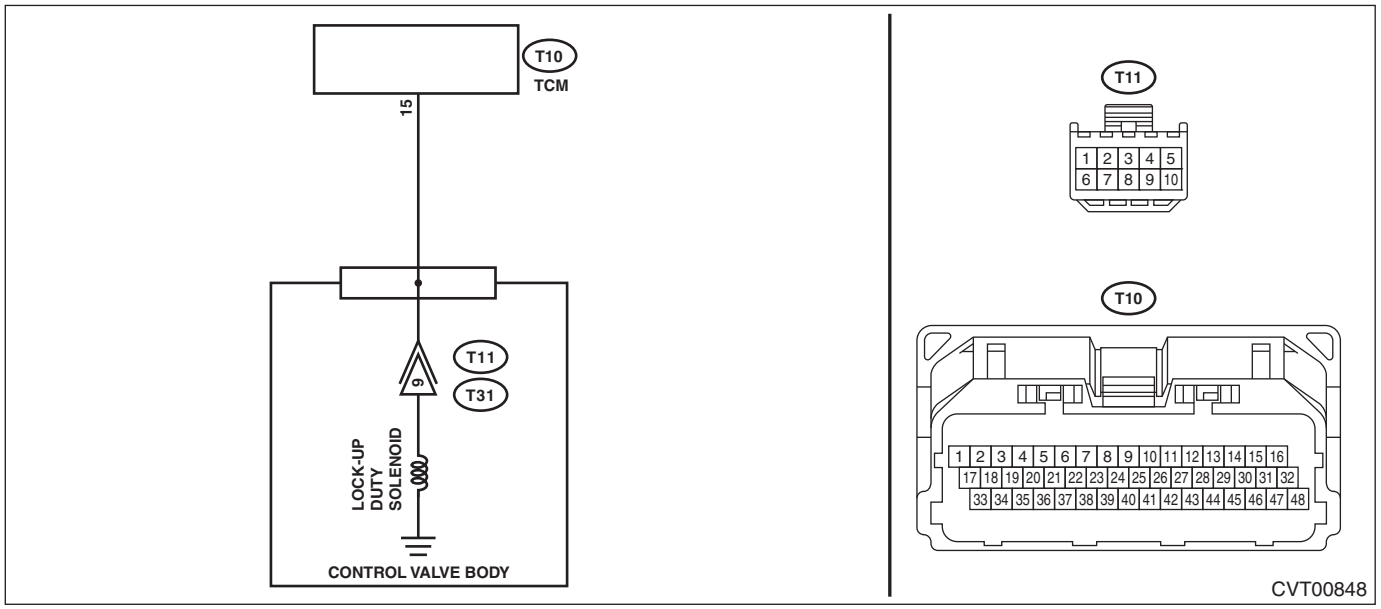
Malfunction Criteria	Threshold Value
|Engine speed – Measured primary pulley shaft speed|	> Table 4 rpm

Table 4

Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured primary pulley shaft speed|(rpm)	200	200	200	200	200	200	200	200

Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured primary pulley shaft speed|(rpm)	200	200	200	200	200	200	200

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



AW:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
The engine stalls when the vehicle is stopped.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2758 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **6**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission valve cover. 2) Disconnect the control valve body connector. 3) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 15 — (T11) No. 9:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Repair the short circuit of harness.
6	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **7**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
7	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **8**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-42, CONDITION CHECK, CVTF.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.> Go to step **9**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
9	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Replace the torque converter assembly. <Ref. to CVT(TR580)-202, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2758 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-32, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **8**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B22) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 15 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Disconnect the control valve body connector. 3) Measure the resistance between transmission connector and control valve body connector. ***Connector & terminal*** ***(T4) No. 2 — (T11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness.
7	**CHECK HARNESS.** Measure the resistance between transmission connector and control valve body. ***Connector & terminal*** ***(T11) No. 2 — Control valve body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Repair the short circuit of harness.
8	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **9**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-39, ADJUSTMENT, CVTF.>
9	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **10**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>

Step		Check	Yes	No
10	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.> Go to step **11**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-126, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/ SWITCH "A" CIRCUIT RANGE/ PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
11	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-26, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Replace the torque converter assembly. <Ref. to CVT(TR690)-162, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

3. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
• Judge as NG if the deviation between engine speed and turbine speed becomes equal to or smaller than the predetermined value, even though the lock-up release command is issued.

4. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 1 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 1

		Engine coolant temperature (degC)							
		– 40	– 20	0	20	40	60	80	100
Vehicle speed (calculated from measured secondary pulley shaft speed sensor) (MPH)	0	170	156	142	128	114	100	99	99
	13	170	170	164	150	136	122	121	121
	25	170	170	170	166	152	138	138	138
	38	170	170	170	170	170	166	165	165
	50	170	170	170	170	170	170	170	170

5. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Engine speed – Measured turbine shaft speed|	< Table 2 rpm

Table2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured turbine shaft speed|(rpm)	0	0	50	50	50	50	50	50

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured turbine shaft speed|(rpm)	50	50	50	50	50	50	50

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
• Judge as NG if the deviation between engine speed and primary speed becomes equal to or smaller than the predetermined value, even though the lock-up release command is issued.

7. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 3 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 3

		Engine coolant temperature (degC)							
		– 40	– 20	0	20	40	60	80	100
Vehicle speed (calculated from measured front output shaft speed sensor) (MPH)	0	230	230	210	185	155	135	135	135
	13	230	230	216	191	161	141	141	141
	25	230	230	230	207	177	157	157	157
	38	230	230	230	230	208	188	188	188
	50	230	230	230	230	230	219	219	219
	63	230	230	230	230	230	230	230	230

8. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

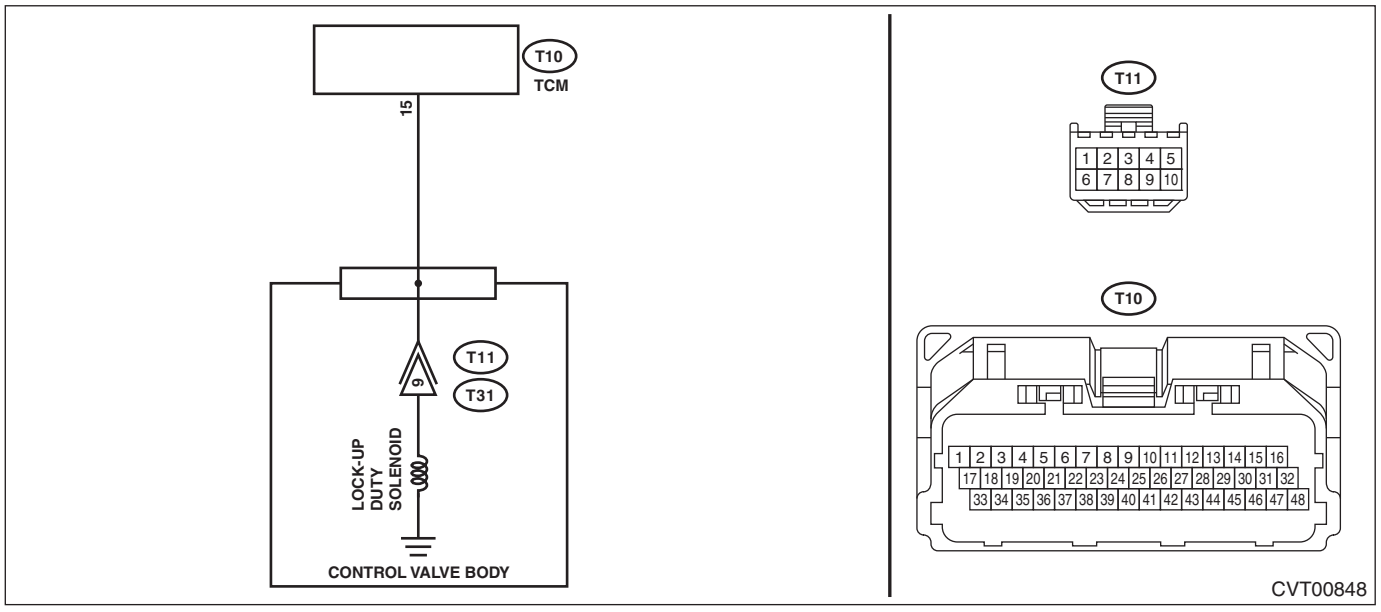
Malfunction Criteria	Threshold Value
|Engine speed – Measured primary pulley shaft speed|	< Table 4 rpm

Table 4

Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured primary pulley shaft speed|(rpm)	0	0	50	50	50	50	50	50

Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured primary pulley shaft speed|(rpm)	50	50	50	50	50	50	50

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.



AX:DTC P2763 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- No lock-up occurs.
- Engine stalls.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

WIRING DIAGRAM:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 15 — (T11) No. 9:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 15 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B22) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the lock-up clutch pressure control solenoid drive circuit.
• Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	0%

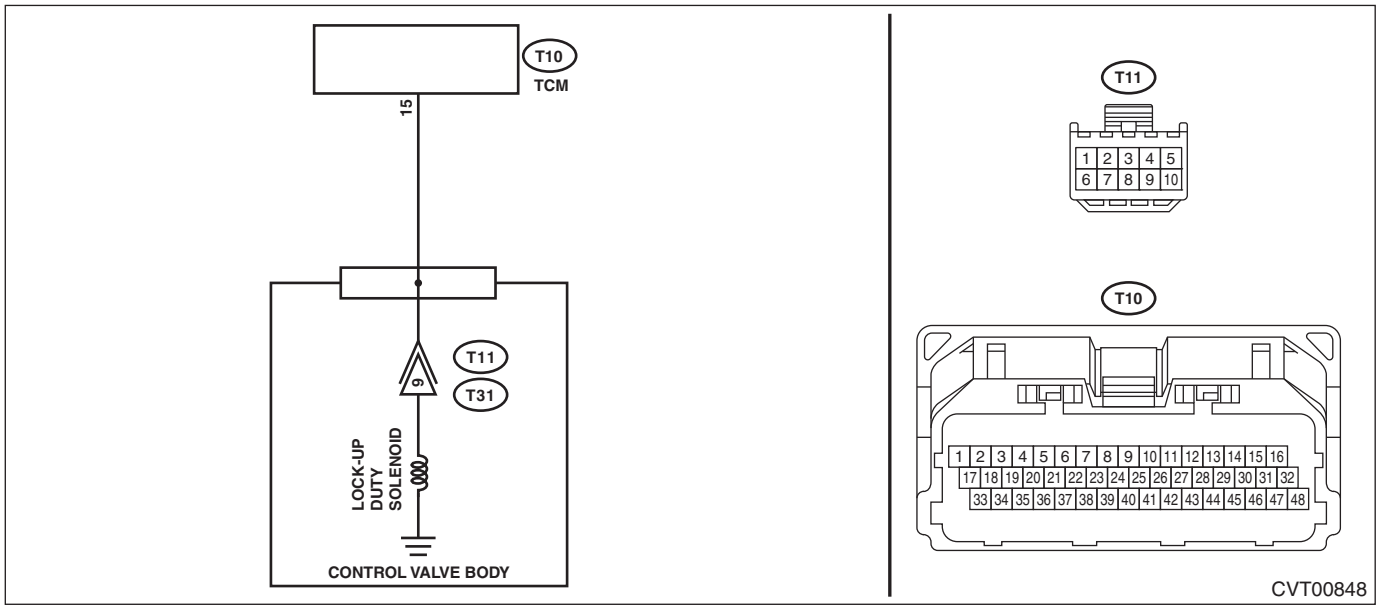
5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.



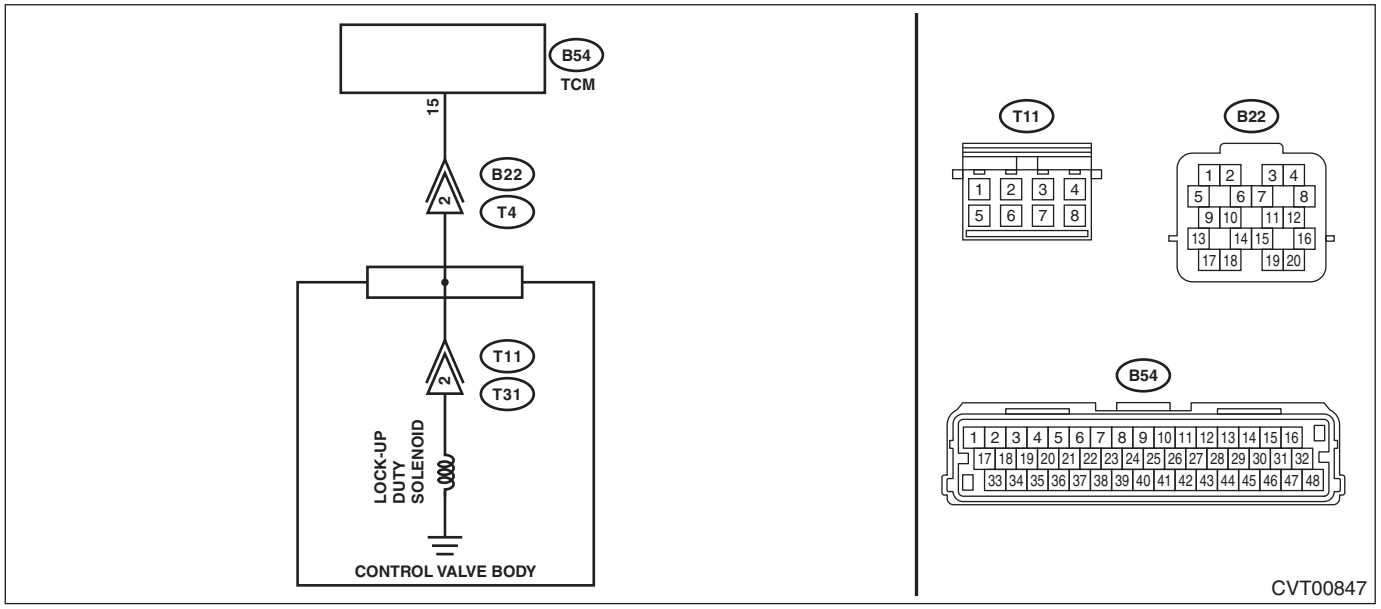
AY:DTC P2764 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.

1. ENGINE TYPE FB

Wiring diagram:
CVT control system <Ref. to WI-166, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK-UP DUTY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

Wiring diagram:

CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

3. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

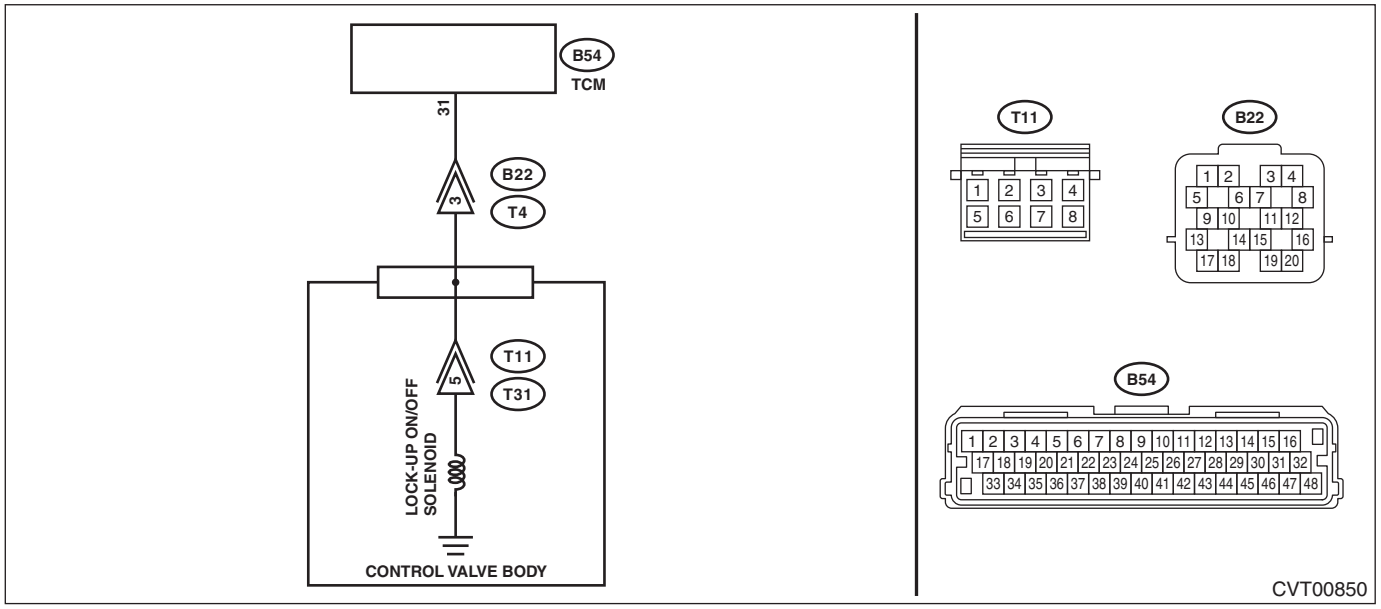
4. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	100%

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value



Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AZ:DTC P2769 TORQUE CONVERTER CLUTCH CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch ON/OFF solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch ON/OFF solenoid drive circuit.

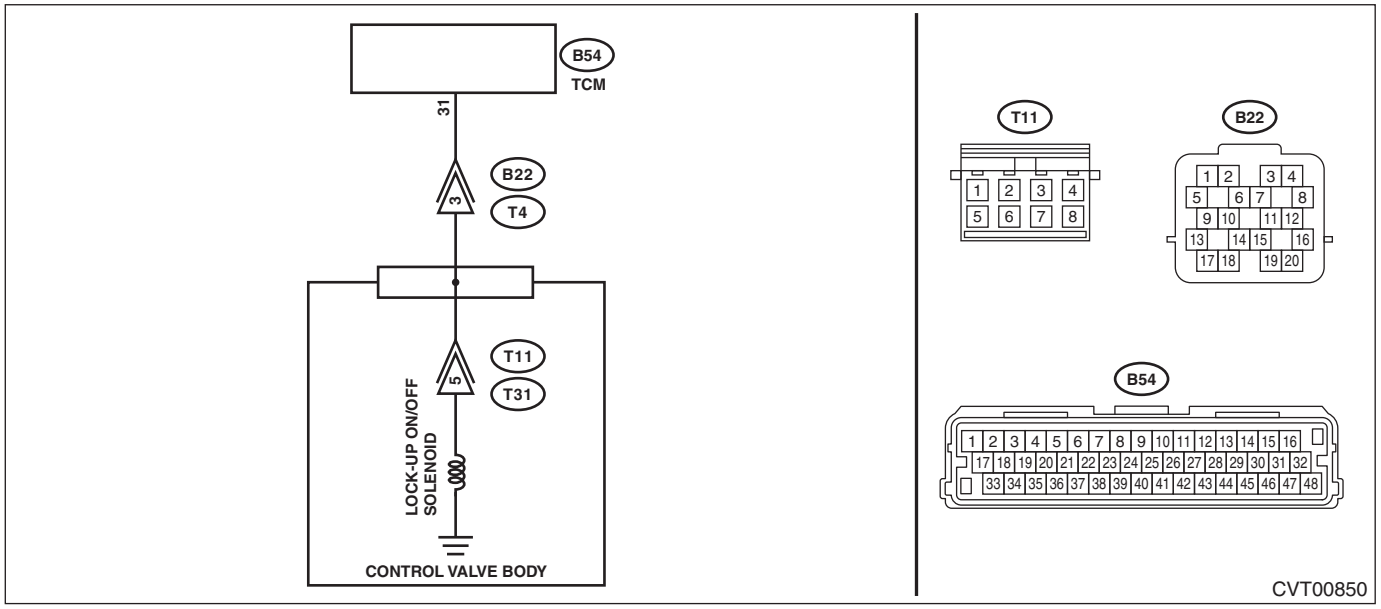
2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value



Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch circuit control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BA:DTC P2770 TORQUE CONVERTER CLUTCH CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-172, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 31 — (B22) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-129, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or short circuit to ground in the lock-up clutch ON/OFF solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch ON/OFF solenoid drive circuit.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch circuit control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BB:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BC:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the ECM.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the ECM.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BD:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the VDC CM.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the VDC CM.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BE:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time Needed for Diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Primary pulley shaft speed or D range switch	> 0 rpm ON

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time needed for diagnosis: 2 seconds

BF:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Lost

Time needed for diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Primary pulley shaft speed or D range switch	> 0 rpm ON

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Lost

Time needed for diagnosis: 2 seconds

BG:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time Needed for Diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Primary pulley shaft speed	> 0 rpm
or	
D range switch	ON

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time needed for diagnosis: 2 seconds

BH:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BI: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V

Secondary Parameters	Execution condition
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BJ:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when data received from the body integrated unit is not normal.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time Needed for Diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when data received from the body integrated unit is not normal.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Primary pulley shaft speed	> 0 rpm
or	
D range switch	ON

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time needed for diagnosis: 2 seconds

BK:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Freeze

Time needed for diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Primary pulley shaft speed or D range switch	> 0 rpm ON

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Freeze

Time needed for diagnosis: 2 seconds

BL:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (ENGINE TYPE FB)

- Judge as NG when data received from the stereo camera is not normal.

2. EXECUTION CONDITION (ENGINE TYPE FB)

Secondary Parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD (ENGINE TYPE FB)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Freeze

Time Needed for Diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (ENGINE TYPE EZ)

- Detect malfunction of CAN communication.
- Judge as NG when data received from the stereo camera is not normal.

5. EXECUTION CONDITION (ENGINE TYPE EZ)

Secondary parameters	Execution condition
Primary pulley shaft speed	> 0 rpm
or	
D range switch	ON

6. DIAGNOSTIC METHOD (ENGINE TYPE EZ)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Freeze

Time needed for diagnosis: 2 seconds

18.Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK SHIFT INDICATOR

Diagnosis:

- CAN communication is abnormal with the combination meter.
- Combination meter malfunction

Trouble symptom:

- Shift indicator does not display or remains displayed.
- Shift indicator display does not change.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK TCM.** 1) Operate the + side of the paddle shift switch. 2) Read the data of «Up Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **5**.	Check for poor contact between TCM and paddle shift UP switch, and repair the defective part.
5	**CHECK TCM.** 1) Operate the – side of the paddle shift switch. 2) Read the data of «Down Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **6**.	Check for poor contact between TCM and paddle shift down switch, and repair the defective part.
6	**CHECK TCM.** 1) Turn the ignition switch OFF, then turn it ON again. 2) Shift the select lever to manual mode. 3) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “1” displayed?	Go to step **7**.	Perform the diagnosis according to DTC P0951. <Ref. to CVT(diag)-145, DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/ PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	**CHECK TCM.** 1) Shift up the select lever. 2) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “2” displayed?	Current condition is normal.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

19.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Engine stalls when driving in “D” or “R” range, or selecting “N” → “D”, “N” → “R”.	• Control valve • Engine control system
While driving in “D” range, vibration occurs immediately before the stop or engine stalls.	• Control valve • Torque converter
Vehicle cannot shift while driving in “D” range.	• Control valve • TCM • Shift mechanism • Power supply system
Excessive shock when selecting “N” → “D”, and “N” → “R”.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Excessive shock at standing start in “D” range.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Engine speed increases abruptly during driving in “D” or “R” range.	• Control valve • Secondary pressure sensor • F&R clutch pack • ATF deterioration or lack
Vehicle can not start when depressing the accelerator pedal in “D” or “R” range, or acceleration is very poor. (without abrupt engine increase)	• Control valve • F&R clutch pack • Shift mechanism • Parking mechanism • Engine control system • Power supply system
Shift indicator in combination meter displays the position which differs from select lever position.	• Inhibitor switch • Select cable related • Combination meter
Manual mode enters even though the select lever and paddle shift switch is not operated.	• Manual mode switch • Paddle shift switch • Select lever • TCM
Engine speed increases abruptly in “D” or “R” range, vehicle can not start.	• F&R clutch pack • Select cable related
Manual mode can not be set.	• Select lever • TCM

CHASSIS SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

1. FRONT ALIGNMENT (INSPECTION VALUE)

• Sedan model

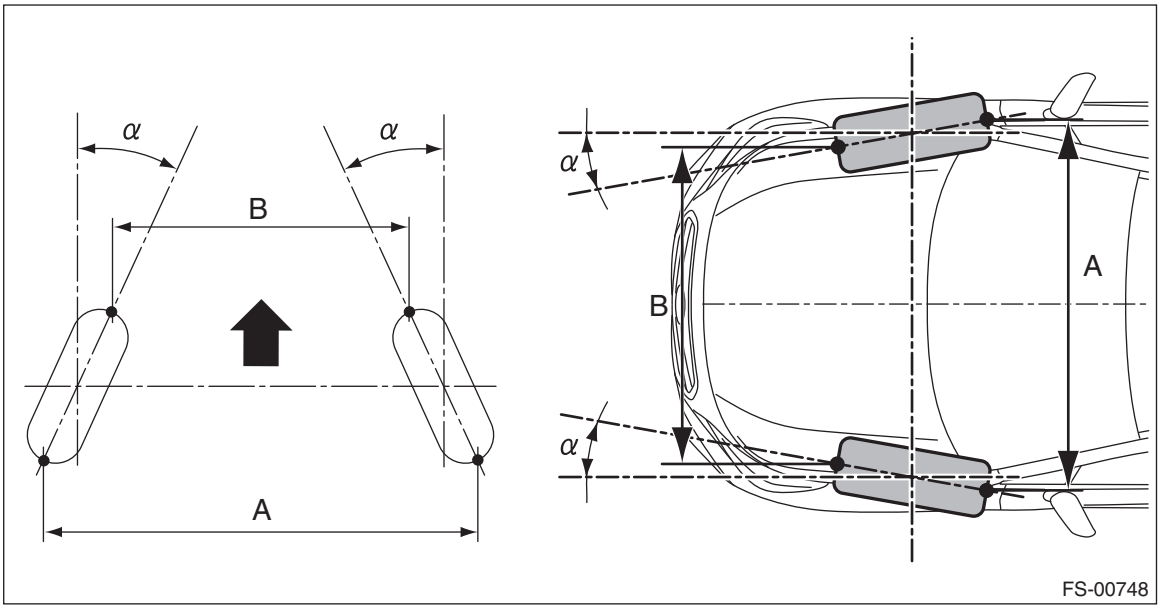
Tire size		225/55R17 225/50R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	397 (15.63)
Camber (tolerance: ±0°30′ Differences between RH and LH: 45′ or less)		–0°15′
Caster (referential value)		5°51′
Steering angle (tolerance: ±1.5°)	Inner wheel	37.6°
	Outer wheel	32.8°
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°00′±0°15′
Kingpin angle (referential value)		13°56′

• OUTBACK model

Tire size		225/65R17 225/60R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	468 (18.43)
Camber (tolerance: ±0°30′ Differences between RH and LH: 45′ or less)		–0°00′
Caster (referential value)		5°02′
Steering angle (tolerance: ±1.5°)	Inner wheel	38.6°
	Outer wheel	33.8°
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°00′±0°15′
Kingpin angle (referential value)		12°16′

2. REAR ALIGNMENT (INSPECTION VALUE)

• Sedan model

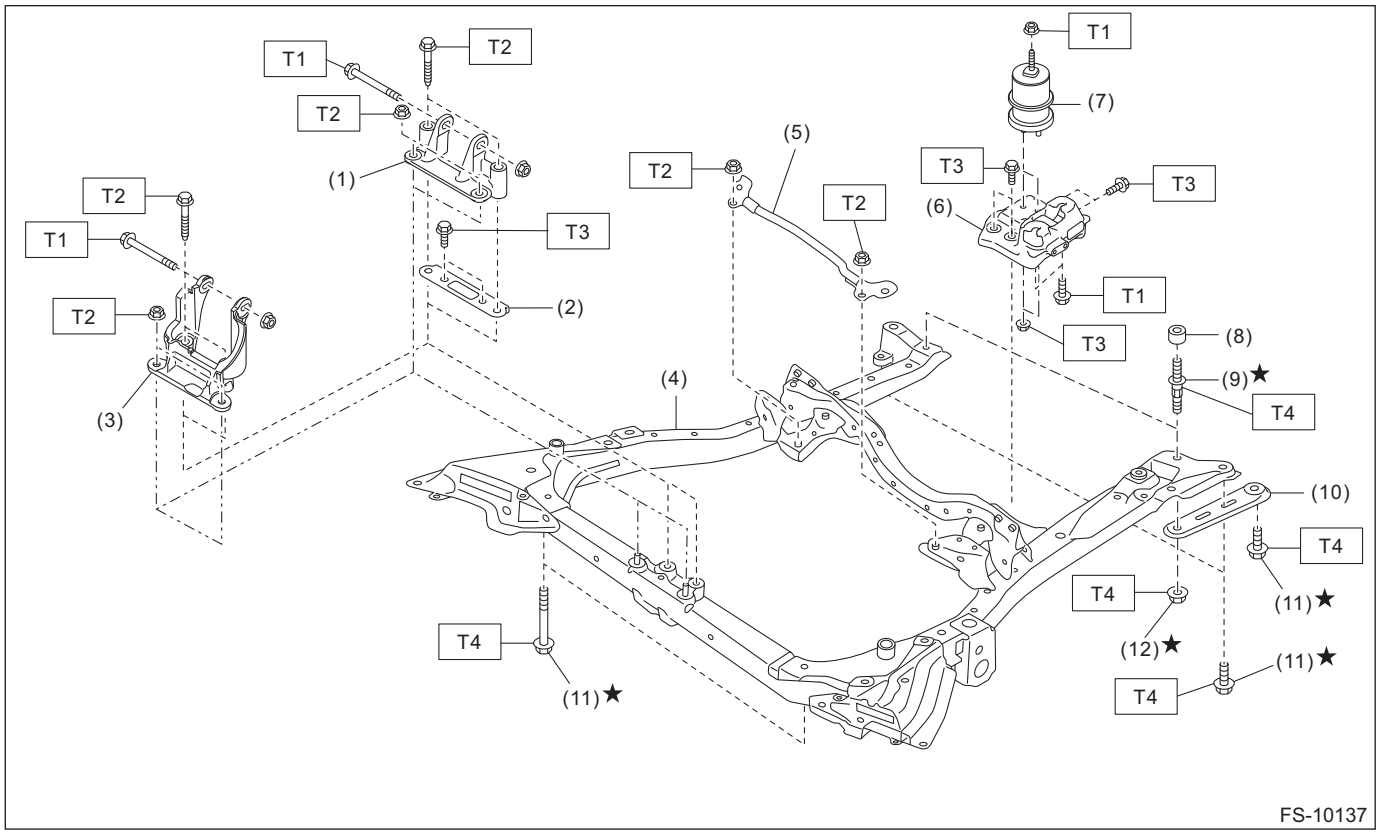


Tire size		225/55R17 225/50R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	383 (15.08)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°30′
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°00′±0°15′
Thrust angle (tolerance: ±0°30′)		0°00′

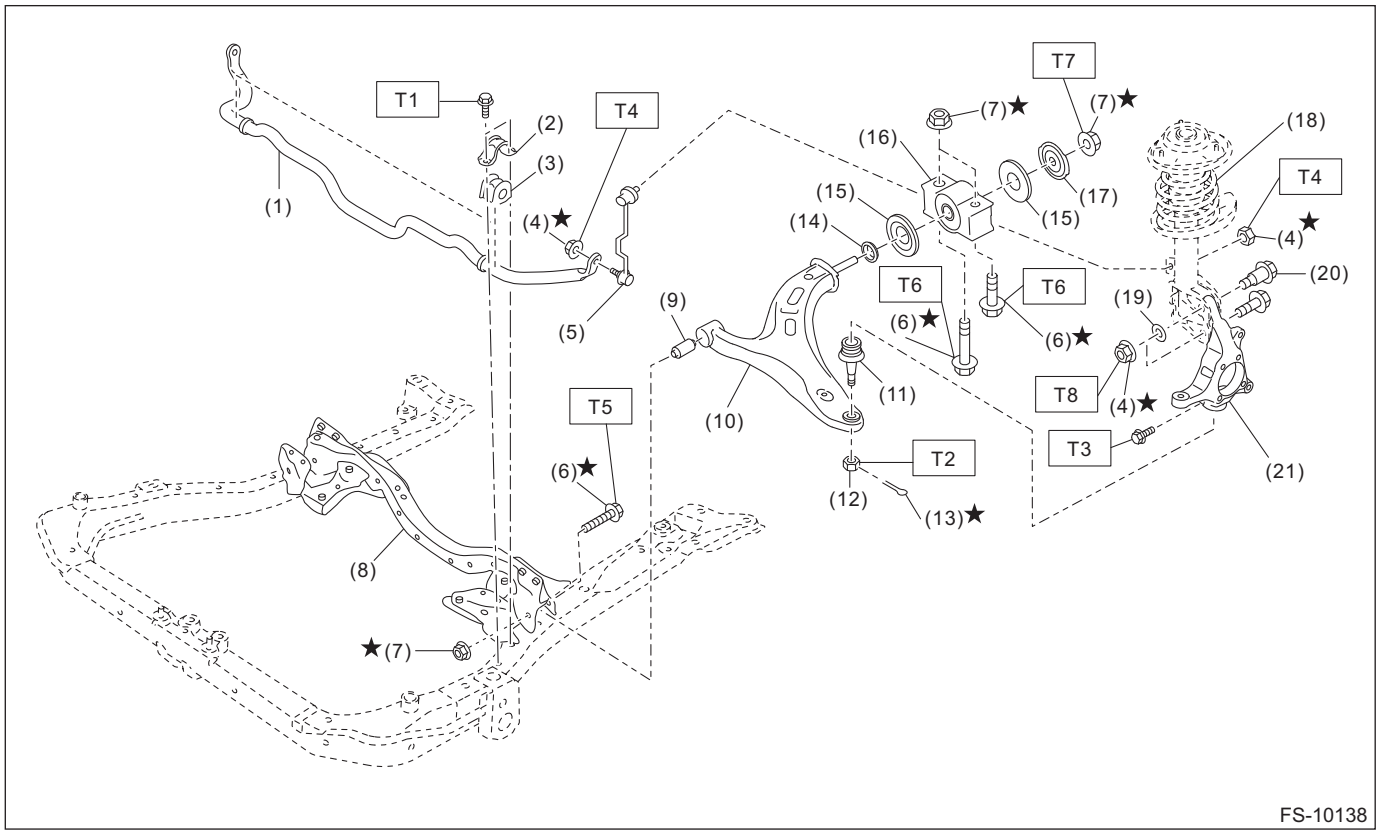
• OUTBACK model

Tire size		225/65R17 225/60R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	468 (18.43)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°00′
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°00′±0°14′
Thrust angle (tolerance: ±0°30′)		0°00′

NOTE:
• Adjust with the value less than the inspection value, taking aging variation into consideration.



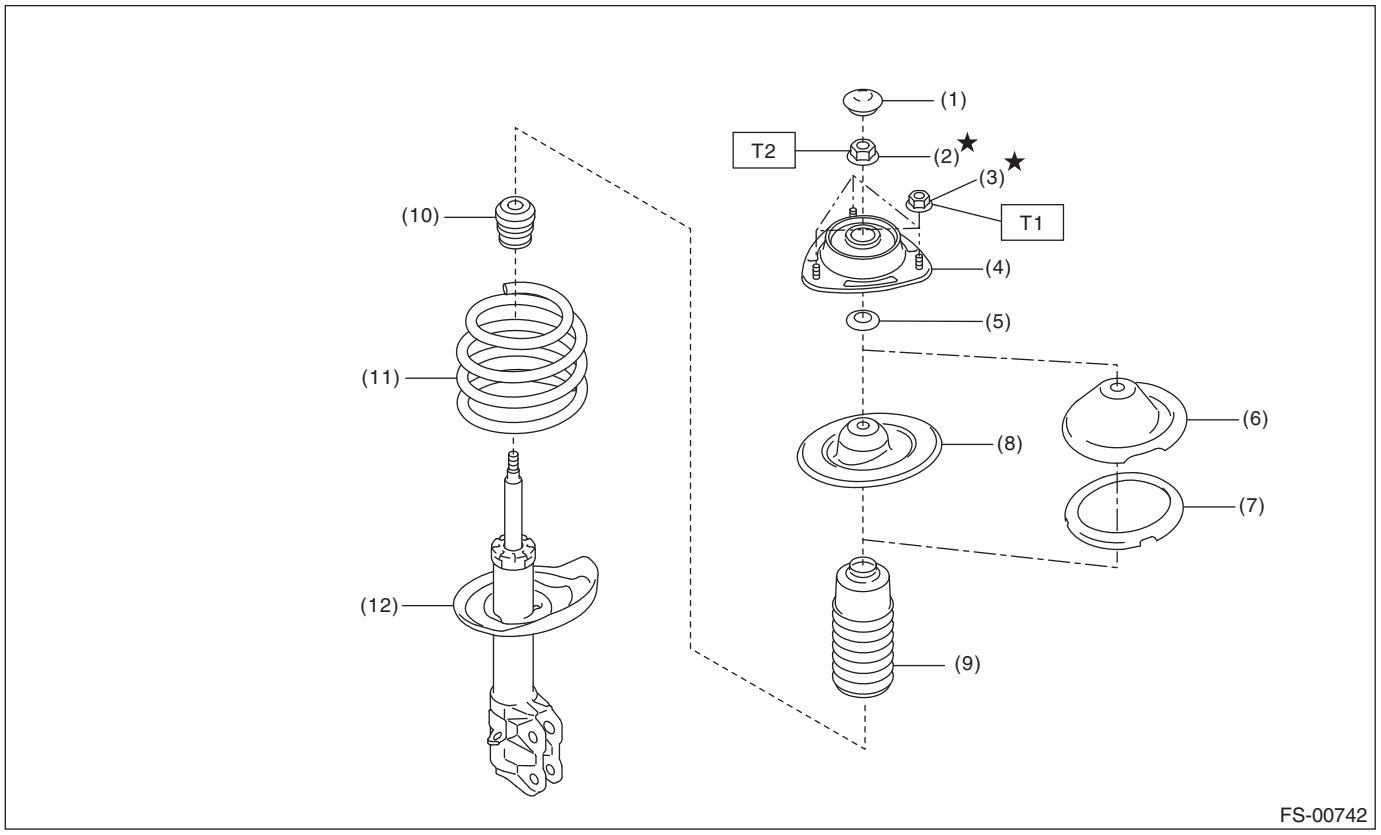
• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.



A – B = Positive: Toe-in, Negative: Toe-out

α = Individual toe angles

B: COMPONENT



(1)	Front mounting bracket (H6 model)	(7)	Main cushion rubber	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Bracket	(8)	Stopper (OUTBACK model only)	***T1: 45 (4.6, 33.2)***
(3)	Front mounting bracket (H4 model)	(9)	Stud bolt	***T2: 60 (6.1, 44.3)***
(4)	Cradle	(10)	Stiffener	***T3: 65 (6.6, 47.9)***
(5)	Crossmember support - front	(11)	Bolt	***T4: 90 (9.2, 66.4)***
(6)	Main mounting bracket	(12)	Self-locking nut	

(1)	Front stabilizer	(12)	Castle nut
(2)	Clamp - stabilizer bushing	(13)	Cotter pin
(3)	Bushing - stabilizer	(14)	Spacer - arm front
(4)	Flange nut	(15)	Stopper - rubber front
(5)	Stabilizer link	(16)	Rear bushing
(6)	Flange bolt	(17)	Plate - arm front
(7)	Self-locking nut	(18)	Front strut ASSY
(8)	Cradle	(19)	Adjusting washer
(9)	Front bushing	(20)	Adjusting bolt
(10)	Front arm ASSY	(21)	Housing - front axle
(11)	Ball joint		

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 39 (4, 28.8)
T3: 50 (5.1, 36.9)
T4: 60 (6.1, 44.3)
T5: 95 (9.7, 70.1)
T6: 130 (13.3, 95.9)
T7: 140 (14.3, 103.3)
T8: 155 (15.8, 114.3)

(1)	Dust seal - front strut	(7)	Rubber seat (OUTBACK model)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Self-locking nut	(8)	Spring seat - front strut UPR (sedan model)	***T1: 20 (2, 14.8)***
(3)	Flange nut	(9)	Dust cover - front strut	***T2: 55 (5.6, 40.6)***
(4)	Strut mount - front	(10)	Helper - front strut	
(5)	Spacer - front strut	(11)	Coil spring - front	
(6)	Spring seat - front strut UPR (OUTBACK model)	(12)	Strut COMPL - front	

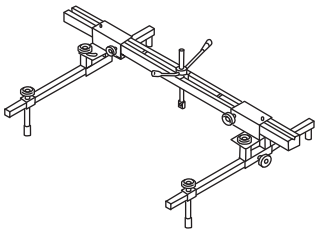
C: CAUTION

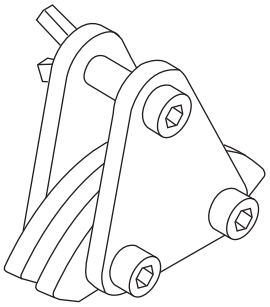
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of strut COMPL - front, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  – Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
  – VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

• For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
• When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
• Be sure that the surface of brake disc or brake pad is free from grease or oil.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL





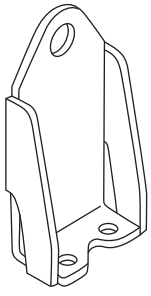


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
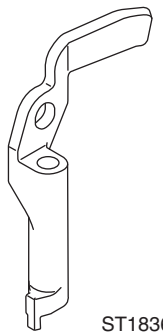
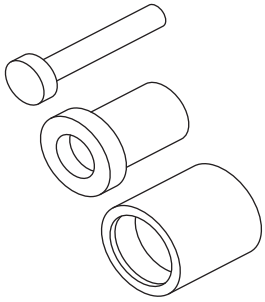
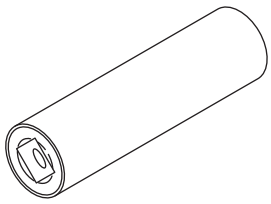
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for hanging power unit. • Used together with CHAIN BALANCER (99099AJ010).
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for hanging power unit. • Used together with ENGINE HANGER (99099AJ000).
 ST18360AA020	18360AA020	HANGER	• Used for hanging power unit. • For H6 model.







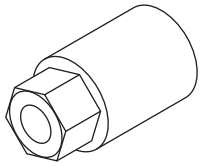


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18360AA040	18360AA040	HANGER	• Used for removing and installing the cradle. • Used together with BOLT (18363AA050).
 ST18363AA050	18363AA050	BOLT	• Used for removing and installing the cradle. • Used together with HANGER (18360AA040).
 ST-927680000	927680000	INSTALLER & REMOVER SET	Used for replacing the bushing front - front arm of front arm assembly.
 ST20299AG020	20299AG020	STUD BOLT SOCKET	Used for removing and installing the stud bolt for front arm installing portion.
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

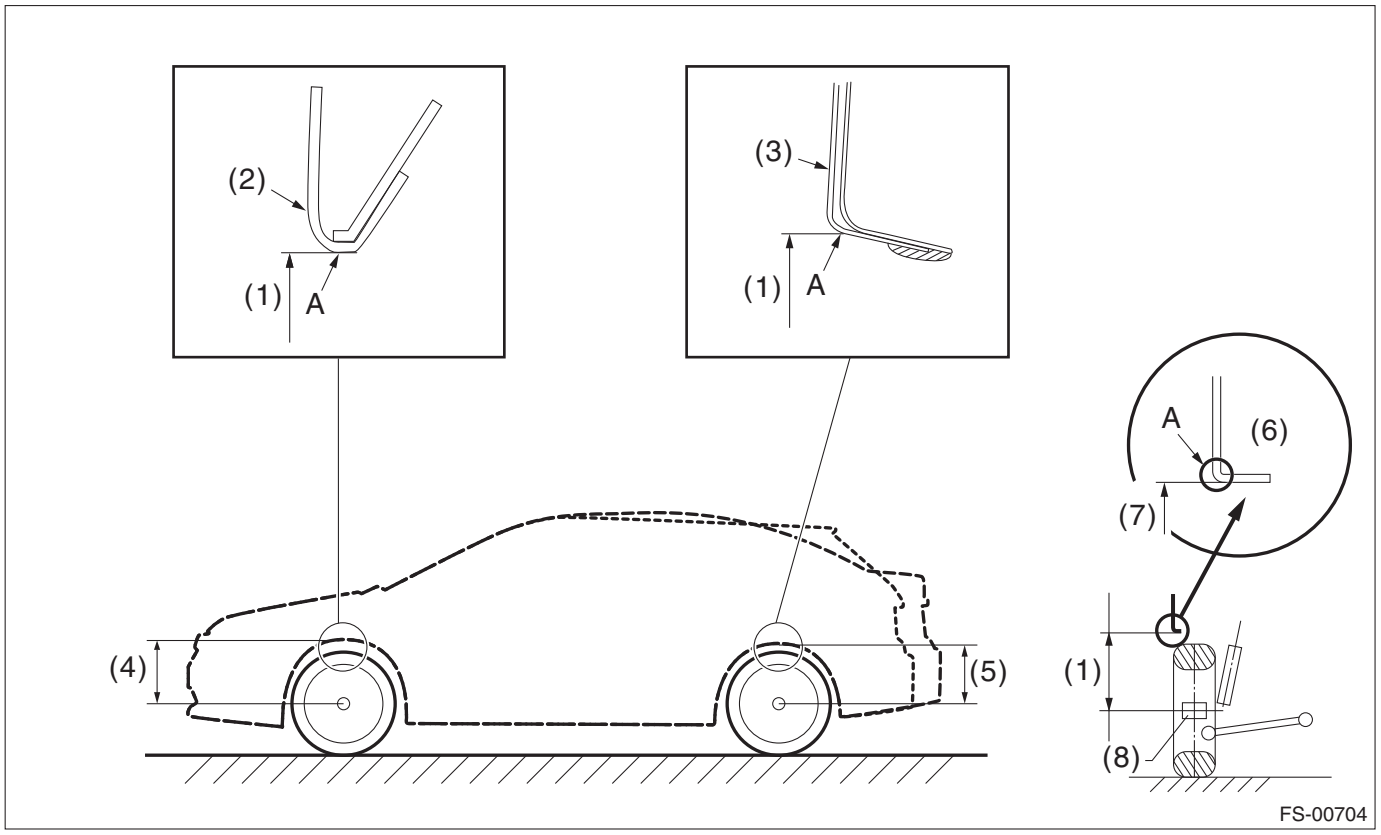
2. GENERAL TOOL

TOOL NAME	REMARKS
DST-i	Used together with Subaru Select Monitor 4.
Alignment gauge	Used for measuring wheel alignment.
Alignment gauge adapter	Used for measuring wheel alignment.
Turning radius gauge	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Chain sling	• Used for hanging power unit. • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Chain inner width: 8.5 mm (0.33 in) or more • Chain external width: 23.5 mm (0.93 in) or less • Load capacity: 1.2 t (2646 lb) or more
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used to remove and install the cradle. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more
Shackle	• Used to remove and install the cradle. • Load capacity: 500 kg (1103 lb) or more
Tie-rod ball joint puller	Used for disconnecting tie-rod end.
Dial gauge	Used for damper strut measurement.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

2. Wheel Alignment

A: INSPECTION

Check the following items before performing the wheel alignment measurement.
- Tire inflation pressure
- Uneven wear of RH and LH tires, or difference of sizes
- Tire runout
- Excessive play and wear of ball joint
- Excessive play and wear of tie-rod end
- Excessive play of wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play of steering link
- Deformation and excessive play of suspension parts



Check, adjust and measure the wheel alignment in accordance with the following procedures.

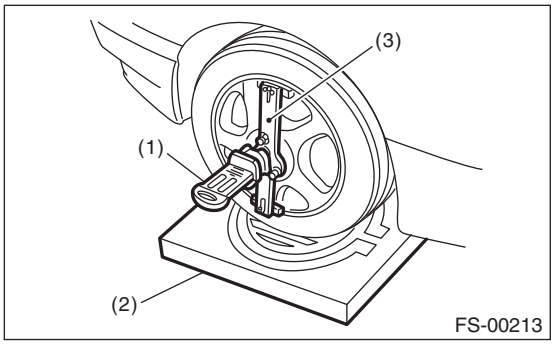
1	Wheel arch height (front and rear wheels)	Inspection: <Ref. to FS-10, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>
↓		
2	Camber (front wheel)	Inspection: <Ref. to FS-11, CAMBER, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-14, FRONT CAMBER, ADJUSTMENT, Wheel Alignment.>
	Camber (rear wheel)	Inspection: <Ref. to FS-11, CAMBER, INSPECTION, Wheel Alignment.> NOTE: Rear camber cannot be adjusted. If the value exceeds the lateral tolerance range, check the suspension parts and connections for deformation. If defective, replace with new parts.
↓		
3	Caster (front wheel)	Inspection: <Ref. to FS-12, CASTER, INSPECTION, Wheel Alignment.>
↓		
4	Adjustment of difference between right and left steering angles	Inspection: <Ref. to FS-12, STEERING ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES, ADJUSTMENT, Wheel Alignment.>
↓		
5	Front wheel toe-in	Inspection: <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
↓		
6	Rear wheel toe-in	Inspection: <Ref. to FS-13, REAR WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, REAR WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
↓		
7	Thrust angle	Inspection: <Ref. to FS-13, THRUST ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-17, THRUST ANGLE, ADJUSTMENT, Wheel Alignment.>

1. WHEEL ARCH HEIGHT

1) Park the vehicle on a level surface.
2) Empty the vehicle so that it is at “curb weight”.

NOTE:
Empty the trunk or luggage room, load the spare tire, jack and service tools, and fill up the fuel tank.
3) Set the steering wheel in a straight-ahead position, and stabilize the suspension by moving the vehicle in a straight line for 5 m (16 ft) or more.
4) Suspend a thread from the wheel arch (point “A” in the figure below) and affix at a position directly above the center of wheel.
5) Measure the distance between the point “A” and the center of wheel.

(1) Wheel arch height
(2) Front fender
(3) Rear quarter
(4) Front wheel arch height
(5) Rear wheel arch height
(6) Flange bend line
(7) Point of measurement
(8) End of spindle



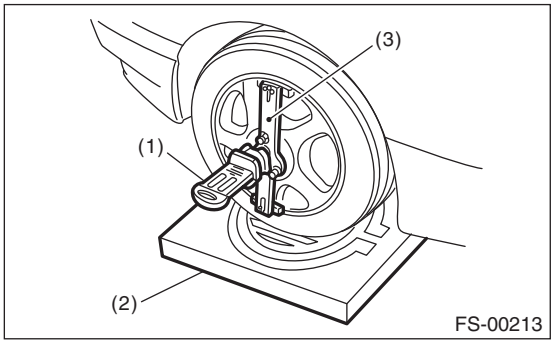
Model	Tire size	Wheel arch height specification mm (in) (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	
		Front	Rear
Sedan model	225/55R17 225/50R18	397 (15.63)	383 (15.08)
OUTBACK model	225/65R17 225/60R18	468 (18.43)	

2. CAMBER

1) Place the wheel on turning radius gauge.

NOTE:
Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.



(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Tire size		Camber (difference between RH and LH 45′ or less)	
		Front	Rear
Sedan model	225/55R17 225/50R18	–0°15′±0°45′	–1°30′±0°45′
OUTBACK model	225/65R17 225/60R18	–0°00′±0°45′	–1°00′±0°45′

3. CASTER

1) Place the front wheel on the turning radius gauge. Make sure the ground contact surfaces of the front and rear wheels are at the same height.
2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.

(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

Tire size		Caster
Sedan model	225/55R17 225/50R18	5°51′
OUTBACK model	225/65R17 225/60R18	5°02′

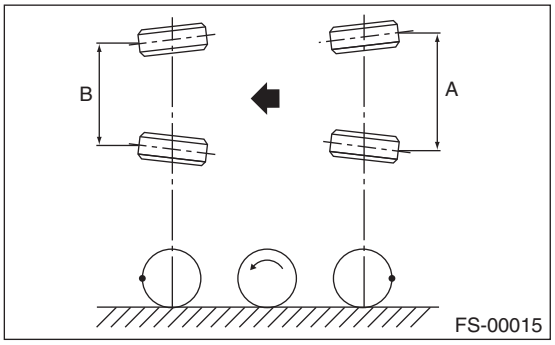
4. STEERING ANGLE

1) Place the vehicle on turning radius gauge.
2) While depressing the brake pedal, turn the steering wheel fully to the left and right.

3) With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angles.

Model	Tire size	Inner wheel	Outer wheel
Sedan model	225/55R17 225/50R18	37.6°±1.5°	32.8°±1.5°
OUTBACK model	225/65R17 225/60R18	38.6°±1.5°	33.8°±1.5°

5. FRONT WHEEL TOE-IN



Toe-in: Inspection value
0±3 mm (0±0.12 in)

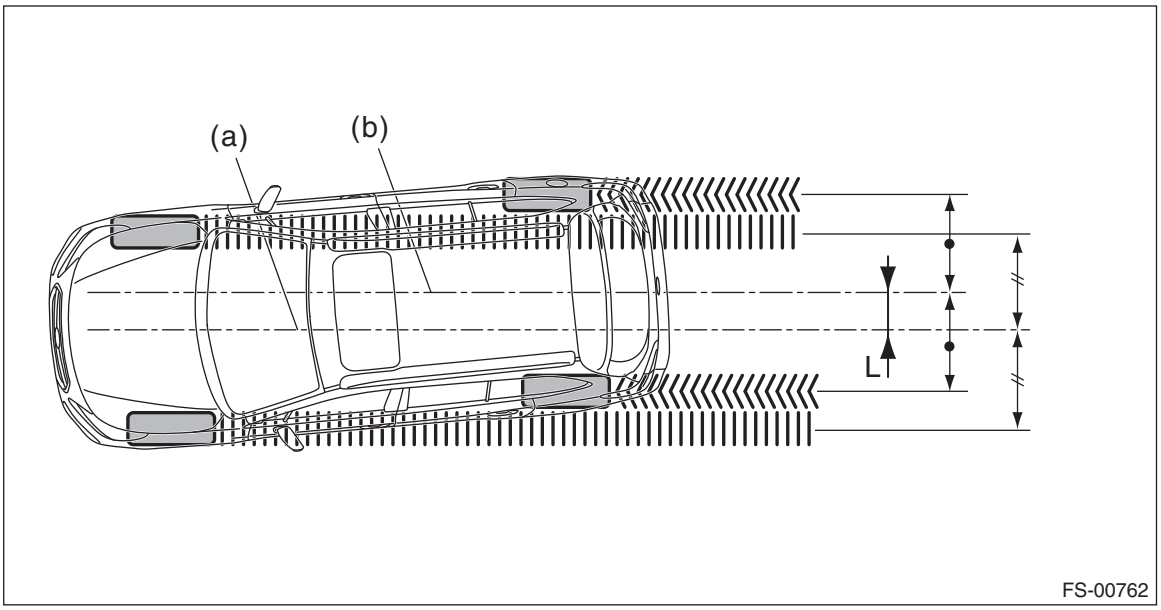
1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2) Place a mark at the center of both left and right tires, and measure distance “A” between the marks.
3) Move the vehicle forward to rotate the tires 180°.

NOTE:
Be sure to rotate the tires in the forward direction.

4) Measure the distance “B” between the left and right marks. Find toe-in using the following calculation:

A – B = Toe-in

6. REAR WHEEL TOE-IN



Refer to the FRONT WHEEL TOE-IN for rear toe-in inspection procedures. <Ref. to FS-12, STEERING ANGLE, INSPECTION, Wheel Alignment.>

Toe-in: Inspection value
0±3 mm (0±0.12 in)

7. THRUST ANGLE

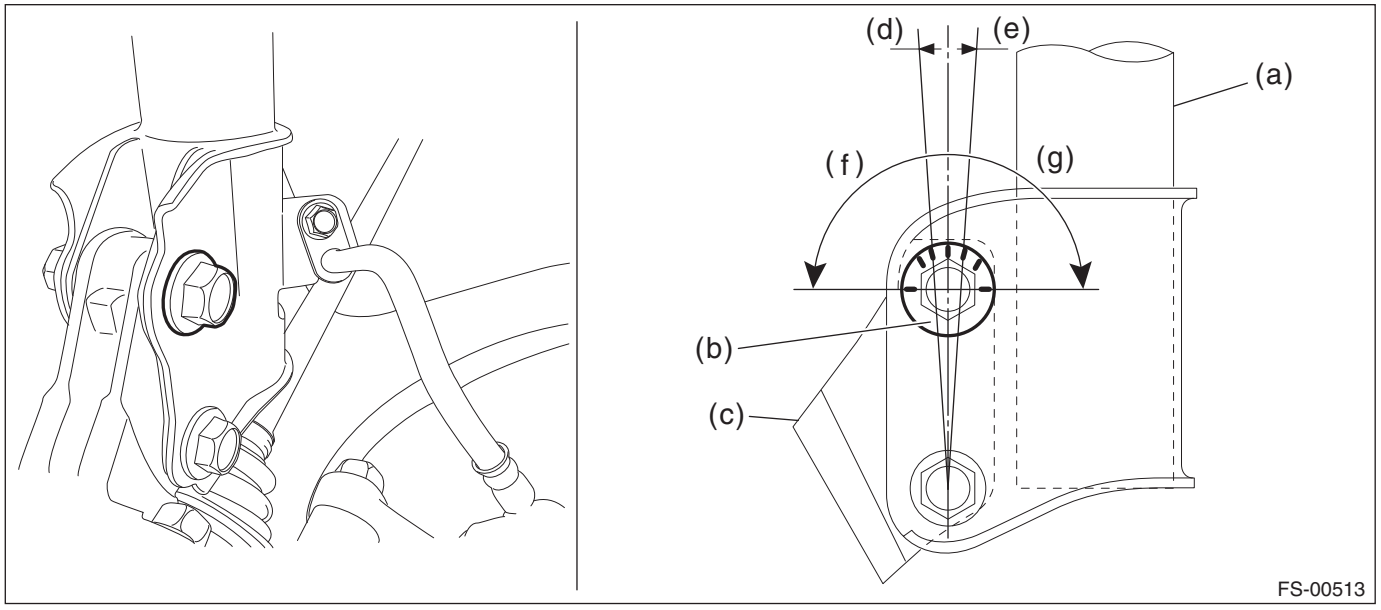
1) Park the vehicle on a level surface.
2) Move the vehicle 3 — 4 meters (10 — 13 feet) straight forward.
3) Draw the center of loci for both the front and rear axles.
4) Measure distance “L” between the center lines of the axle loci.

Thrust angle: Inspection value
0°±30′
Less than 30′ when "L" is 23 mm (0.9 in) or less

(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

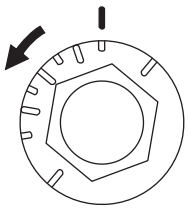
B: ADJUSTMENT

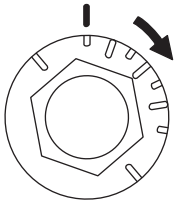
CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



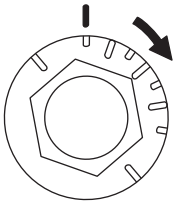
1. FRONT CAMBER

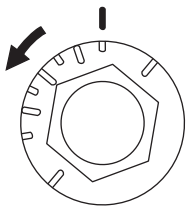
1) Adjust the camber angle to the following value.





Tire size		Camber (difference between RH and LH 35′ or less)
Sedan model	225/55R17 225/50R18	–0°15′±0°30′
OUTBACK model	225/65R17 225/60R18	–0°00′±0°30′





2) Loosen the two flange nuts while holding the strut bolts.
3) Turn the camber adjusting bolt so that the camber is set at specification.

NOTE:
Moving the adjusting bolt by one scale changes the camber by approximately 0°10′.

(a) Strut ASSY
(b) Adjusting bolt
(c) Housing - front axle
(d) Outer direction
(e) Inner direction
(f) Camber is increased.
(g) Camber is decreased.

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00739	 FS-00740

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00740	 FS-00739

4) Tighten two new flange nuts.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

NOTE:
While holding the adjusting bolt side, tighten the nut side.

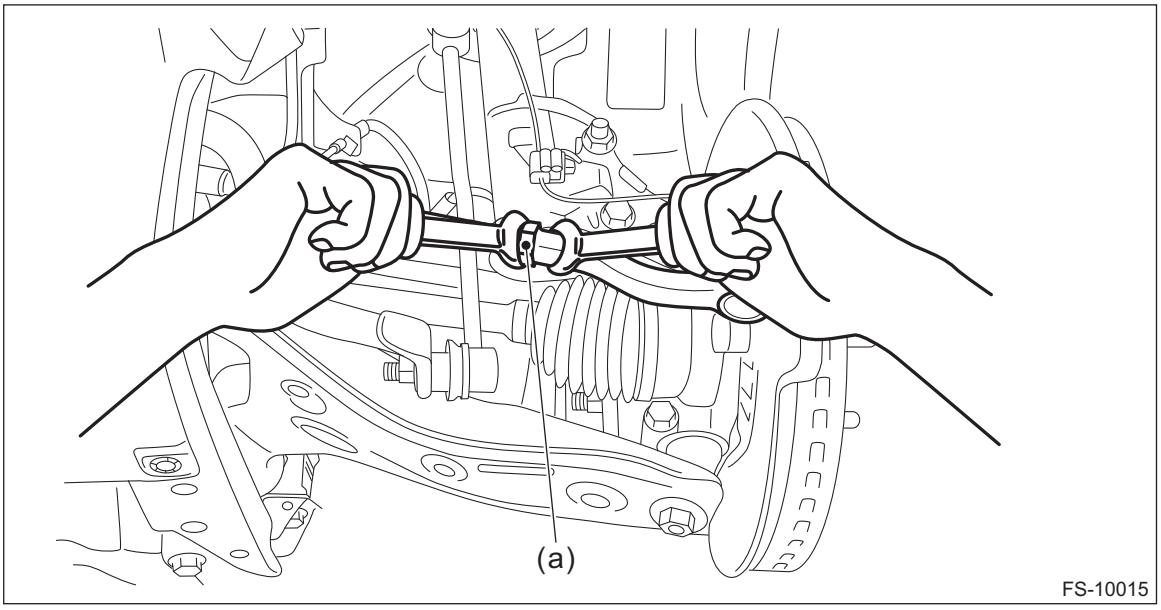
2. ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES

1) Operate the steering system from lock to lock and stop operating it at the center position from lock to lock, and then install the steering wheel in the straight-ahead position.

NOTE:
Using of the steering wheel angle sensor output values shown on Subaru Select Monitor will facilitate your work.

2) Before adjusting toe-in, be sure to adjust the steering wheel in the straight-ahead position (steering angle sensor output: 0 deg).

3. FRONT WHEEL TOE-IN



When adjusting the toe-in, adjust it to the following value. <Ref. to FS-16, ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES, ADJUSTMENT, Wheel Alignment.>

Toe-in: Adjustment value
0±2 mm (0±0.08 in)

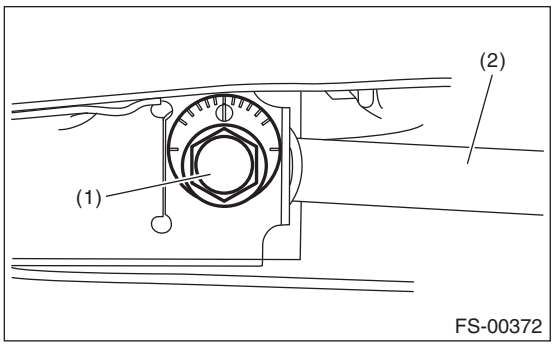
1) Check that the left and right wheel steering angles are within specification.
2) Loosen the left and right side steering tie-rod lock nuts (a).
3) Turn the left and right tie-rods by equal amounts until the toe-in is at the specification.

NOTE:
Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).

4) Tighten the steering tie-rod lock nut (a).

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

5) Check and correct the tie-rod boot if twisted.

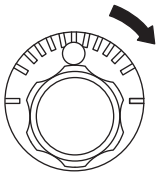


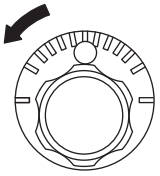
4. REAR WHEEL TOE-IN

When adjusting, adjust it to the following value.

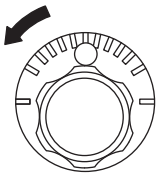
Toe-in: Adjustment value
0±2 mm (0±0.08 in)

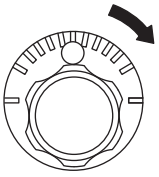
1) Loosen the self-locking nut after holding the bolt head section of lateral link assembly - front.





NOTE:
When loosening or tightening the adjusting bolt, hold the bolt head and turn the self-locking nut.





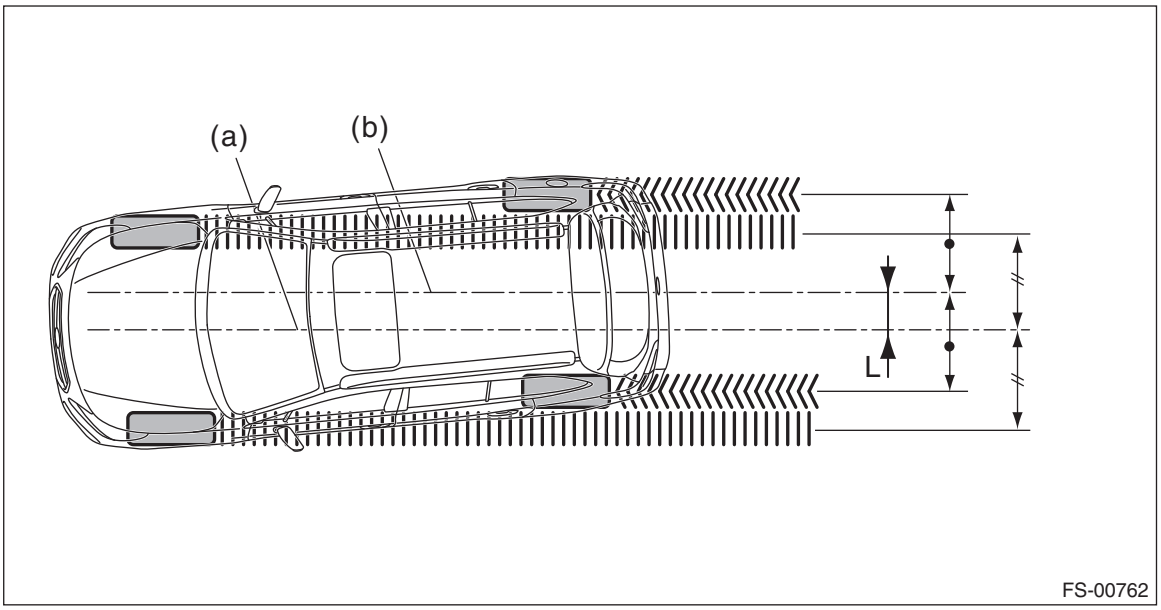
(1) Adjusting bolt
(2) Lateral link ASSY - front

2) Turn the adjusting bolt until toe-in is within the specification.

NOTE:
When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 6 mm (0.24 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00018	 FS-00019

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00019	 FS-00018

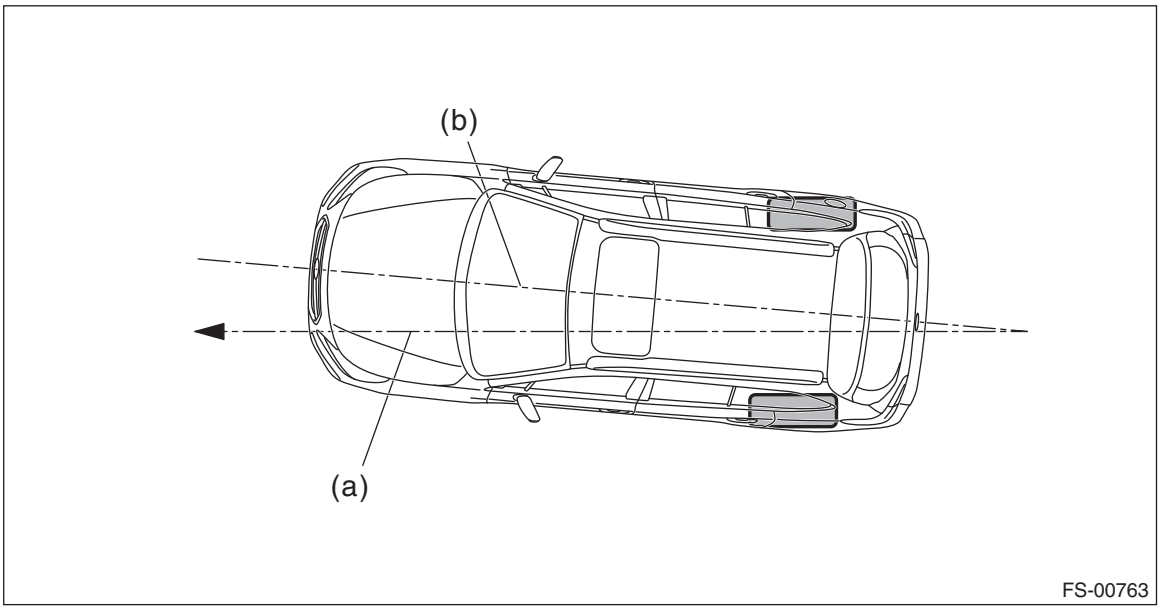


3) Attach and tighten a new self-locking nut.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. THRUST ANGLE

When adjusting, adjust it to the following value.



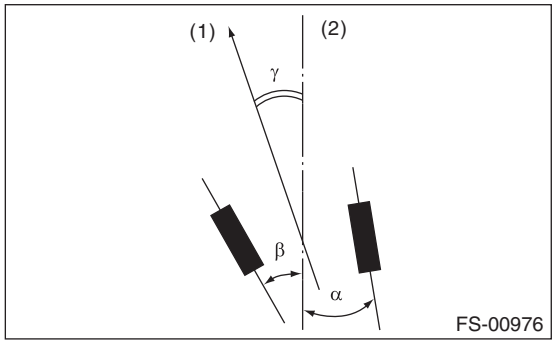
Thrust angle: Adjustment value
0°±20′
Less than 20′ when "L" is 15 mm (0.6 in) or less

(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

1) Make thrust angle adjustments by turning the toe-in adjusting bolts of the rear suspension equally in the same direction.
2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.
3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 15′. ("L" is approx. 11 mm (0.43 in).)

NOTE:
Thrust angle is a mean value of left and right wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.

(a) Thrust angle (b) Body center line



Thrust angle:

$\gamma = (\alpha - \beta)/2$

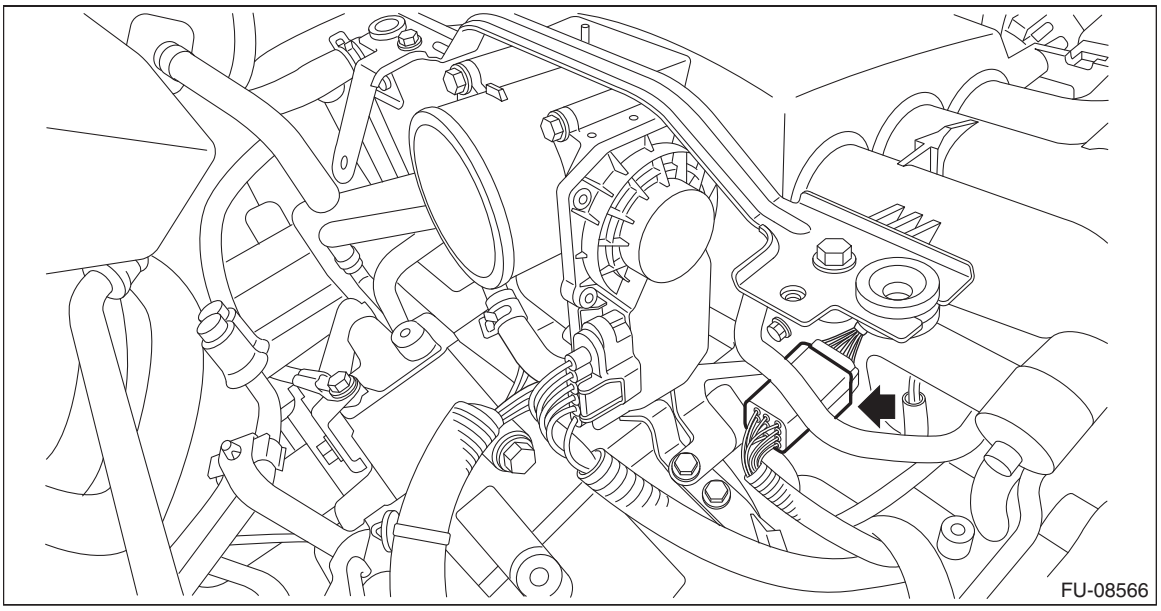
α: Rear RH wheel toe-in angle

β: Rear LH wheel toe-in angle

Substitute only the positive toe-in values from each wheel into α and β in the calculation.

(1) Front

(2) Body center line

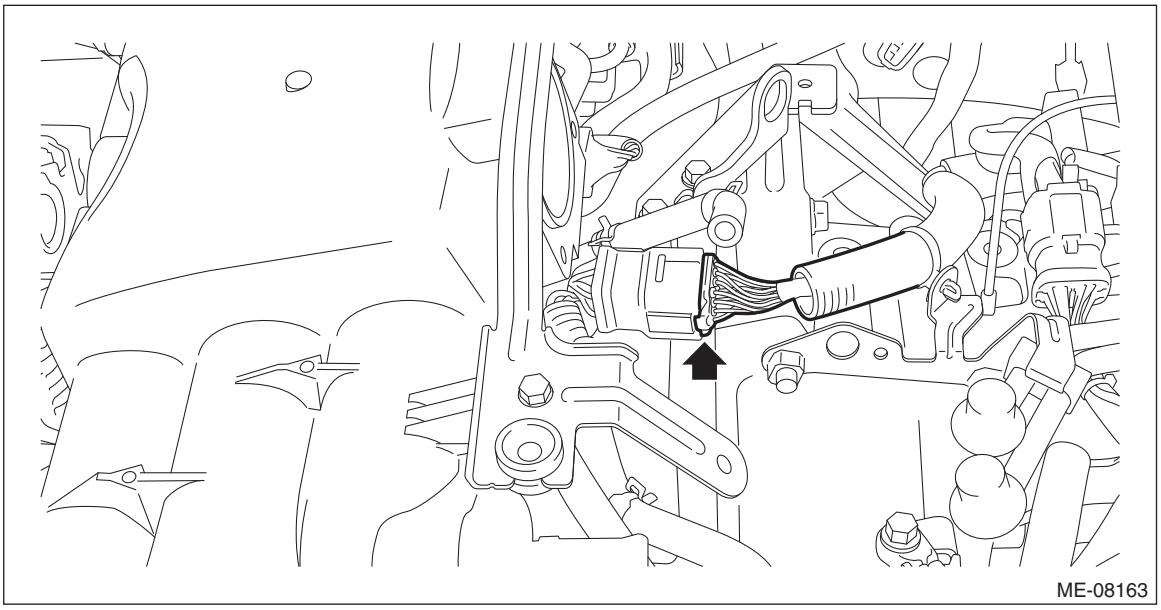


3. Cradle

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Adjust the tilt position of the steering column to the neutral position and the telescopic position to the longest position.

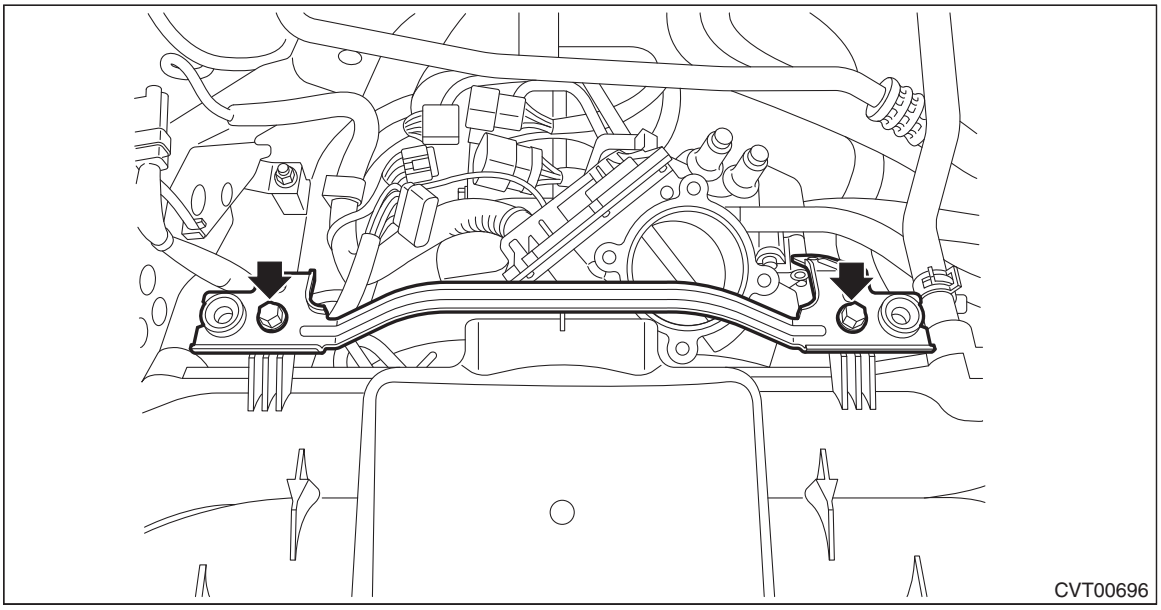
CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.
3) Remove the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the air intake duct. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
6) Remove the air intake boot assembly.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>



7) Fully open the front hood. <Ref. to RC-19, FRONT HOOD DAMPER STAY, NOTE, Repair Contents.>
8) Replace the engine hanger attached to the engine with ST. (H6 model)
   (1) Remove the engine harness connector.

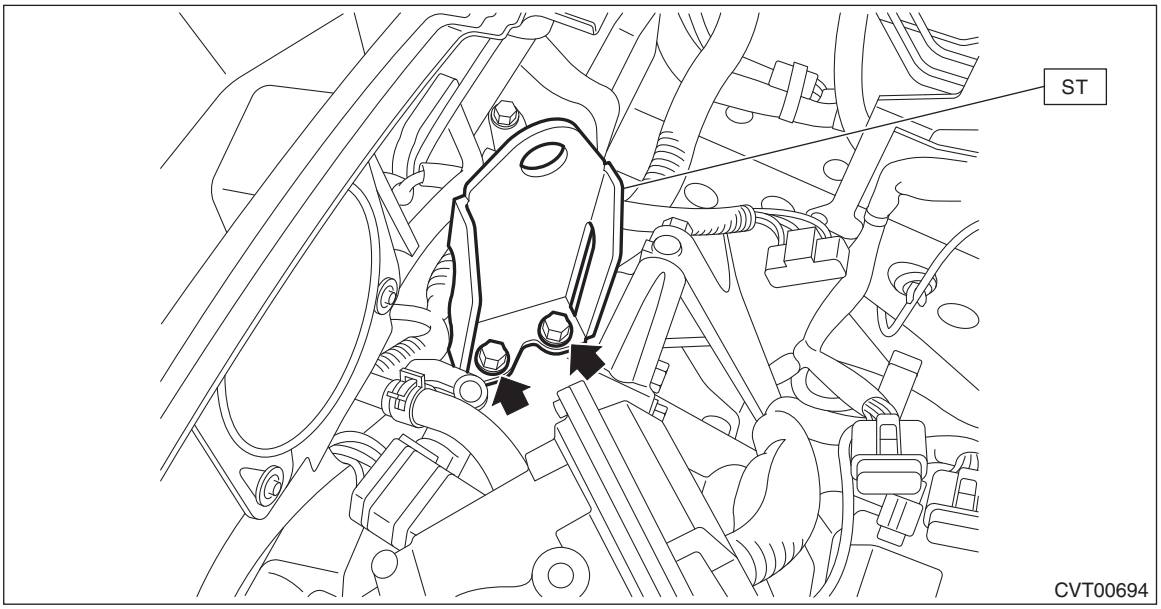
   (2) Remove the throttle body from the intake manifold. <Ref. to FU(H6DO)-19, REMOVAL, Throttle Body.>

NOTE:
Do not disconnect the inlet and outlet hoses of engine coolant.



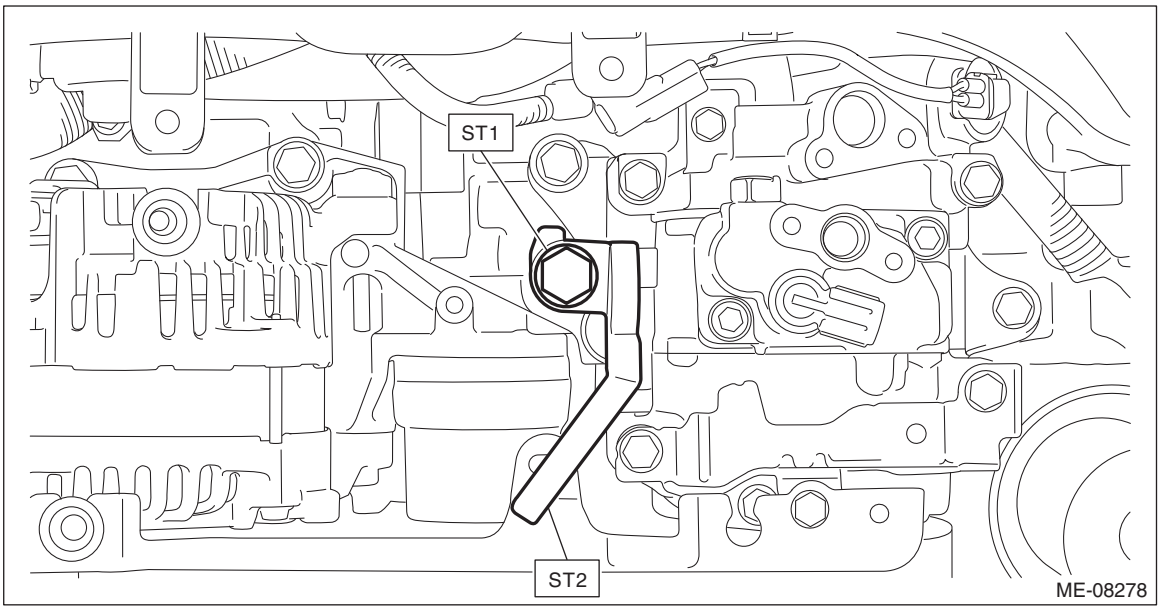
(3) Remove the engine harness connector.

(4) Remove the engine harness connector from the engine hanger - rear, and remove the engine hanger - rear.



(5) Remove the collector cover bracket.

(6) Replace the engine hanger attached to the engine with ST.

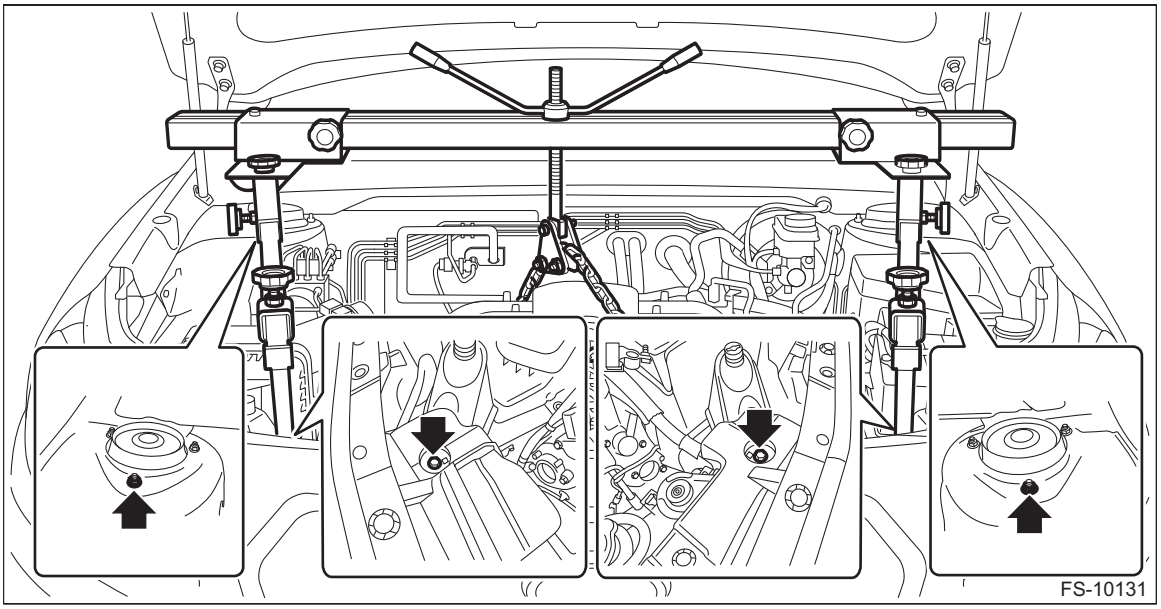


Preparation tool:
ST (for H6 model): HANGER (18360AA020)

Tightening torque:
19 N·m (1.9 kgf-m, 14 ft-lb)

9) Install the ST for the engine hanger to the engine front side. (H4 model)
(1) Remove the belt cover.
(2) Attach the ST.

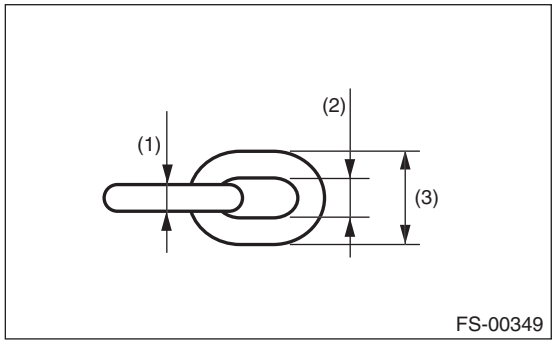
Preparation tool:
ST1 (for H4 model): BOLT (18363AA050)
ST2 (for H4 model): HANGER (18360AA040)



Tightening torque:
19 N·m (1.9 kgf-m, 14 ft-lb)

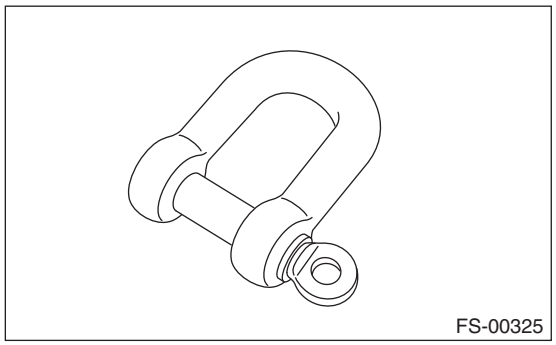
10) Suspend the engine using ST, chain sling, and shackle.
(1) Set the ST on the vehicle.

CAUTION:
• Install the M8 bolt at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).
• Set the arms of ST (ENGINE HANGER) at the locations shown in the figure.



Preparation tool:
ST1: ENGINE HANGER (99099AJ000)
ST2: CHAIN BALANCER (99099AJ010)

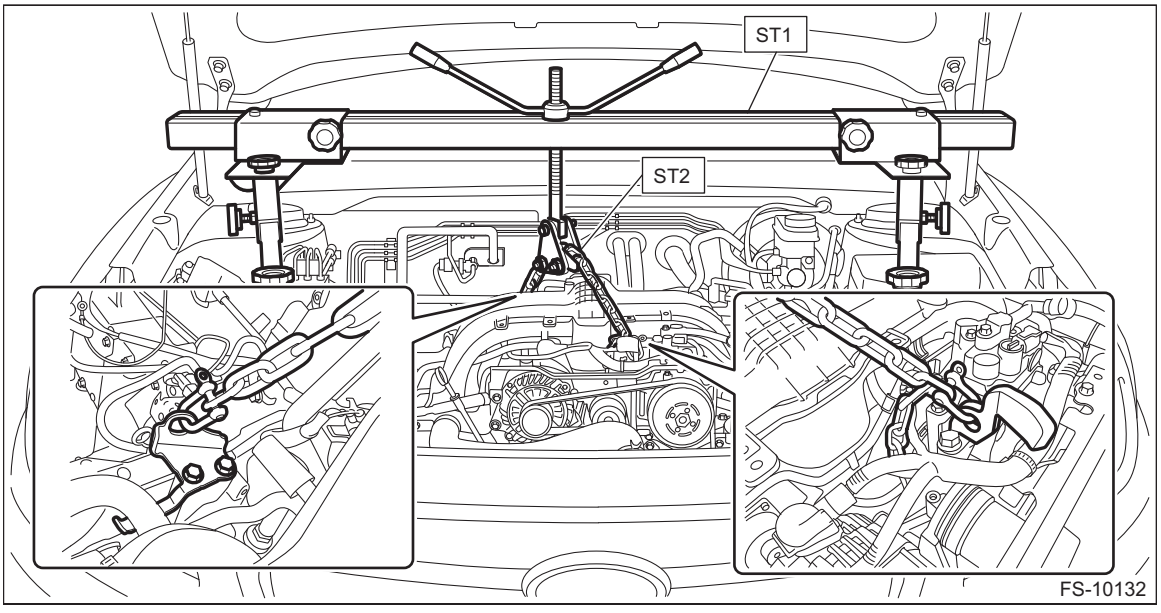
(2) Attach the shackle to the both ends of chain sling.



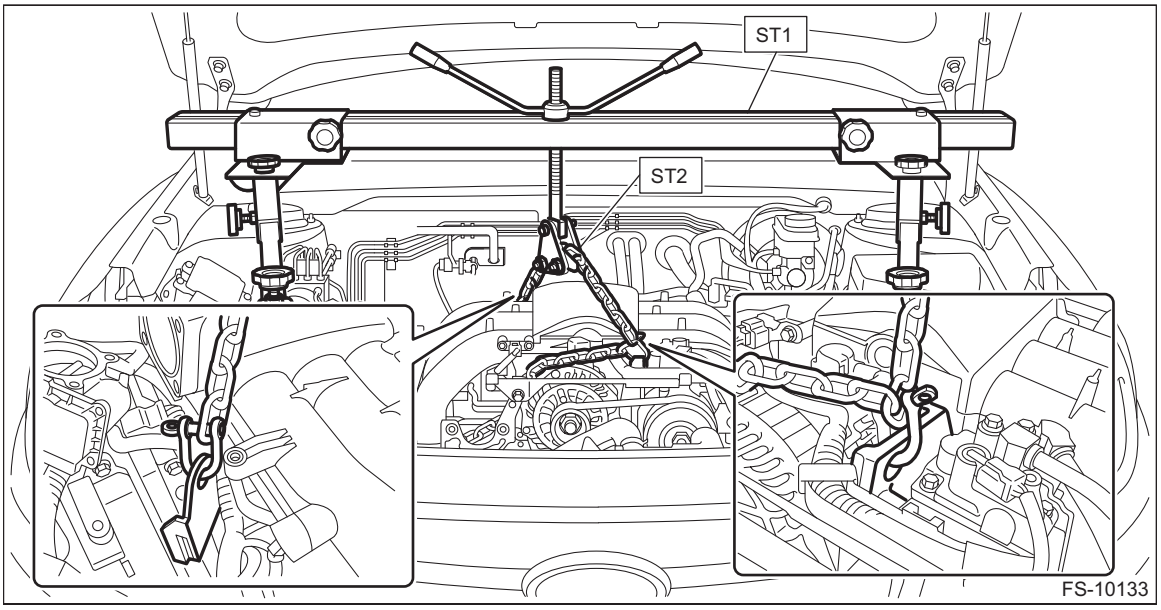
CAUTION:
• Be sure to use chain slings that satisfy the following requirements:

- **Length: 0.8 — 1 m (2.6 — 3.3 ft)**
- **Load capacity: 1.2 t (2646 lb) or more**
- **Wire diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in)**
- **Internal width: 8.5 mm (0.33 in) or more**
- **External width: 23.5 mm (0.93 in) or less**

(1) Wire diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in)
(2) Internal width: 8.5 mm (0.33 in) or more
(3) External width: 23.5 mm (0.93 in) or less

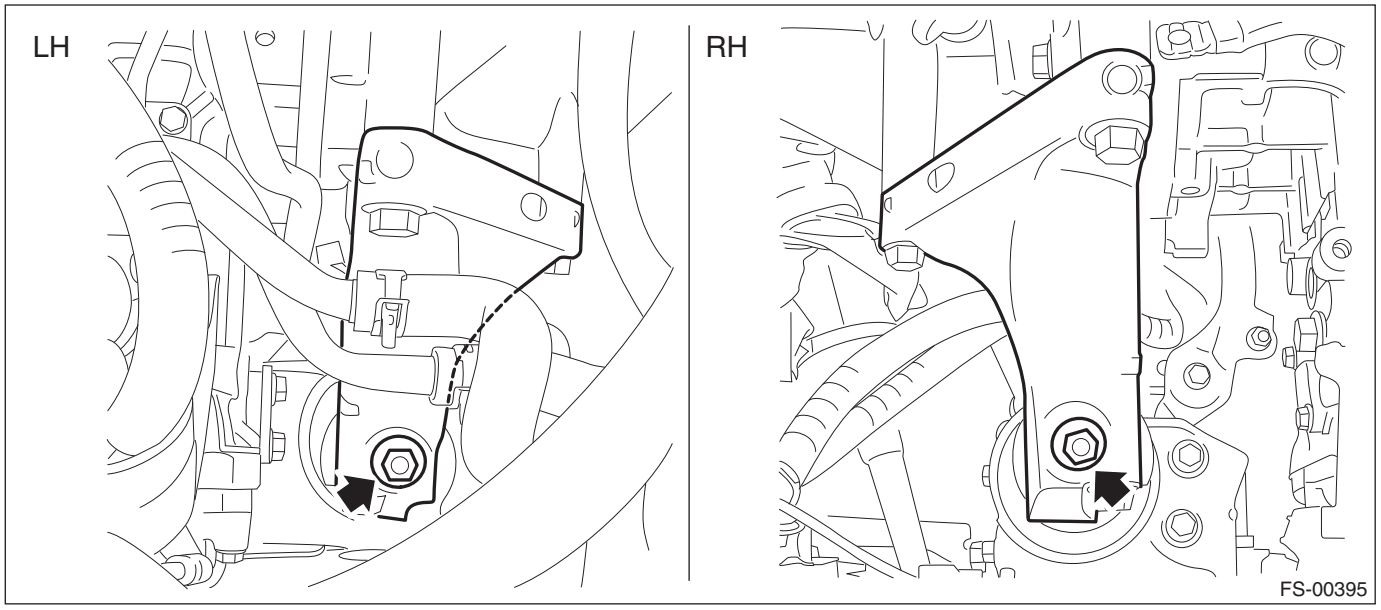


- **Use a shackle with the load capacity of 250 kg (551 lb) or more.**

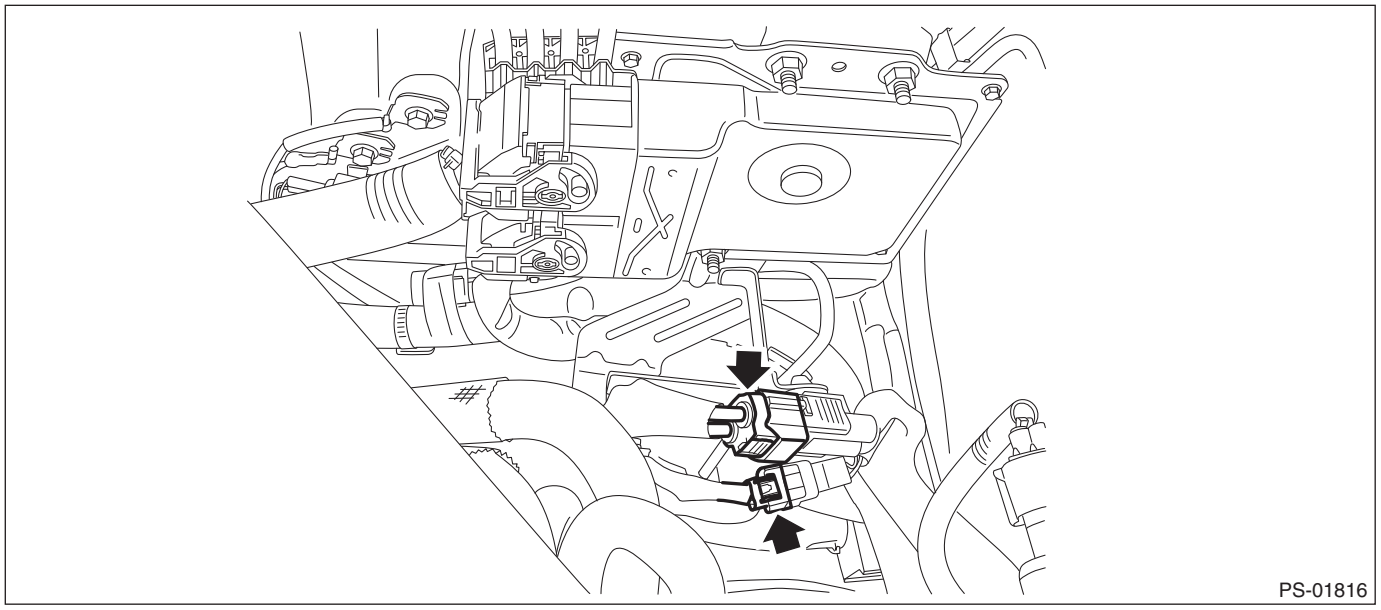


(3) Pass the chain sling through the CHAIN BALANCER and secure the both ends to the hooks on the engine.

CAUTION:
Set the chain sling so that it does not contact the engine parts.



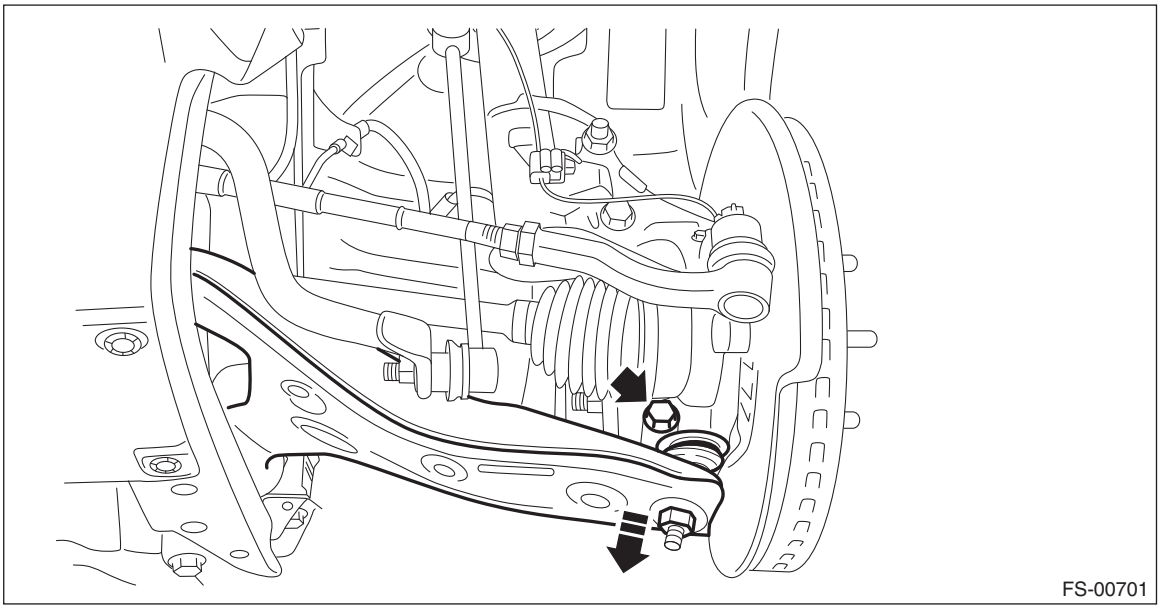
- H4 model



- H6 model

11) Remove the nuts connecting the main mount and the transmission mounting bracket.

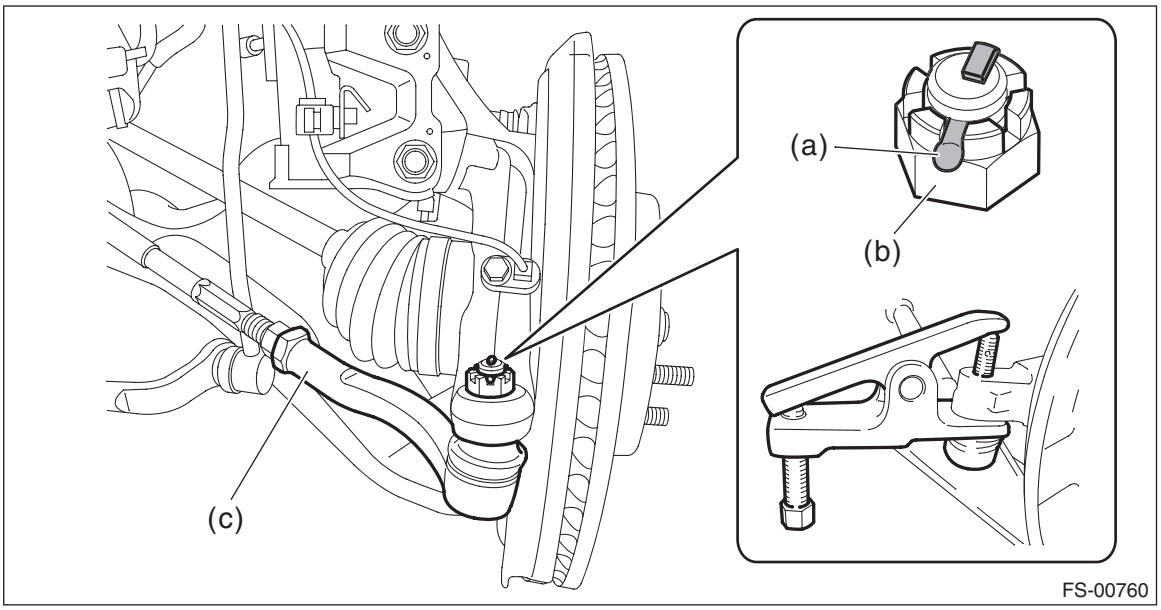
12) Remove the power steering connector.



13) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

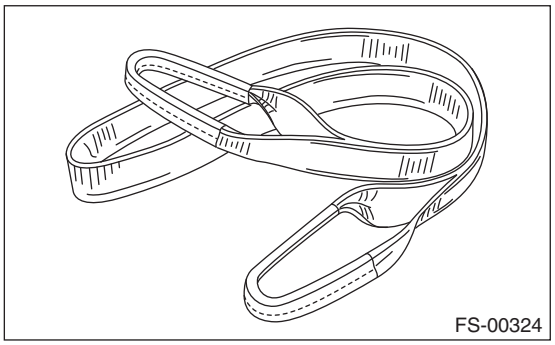
CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

14) Remove the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-6, REMOVAL, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>



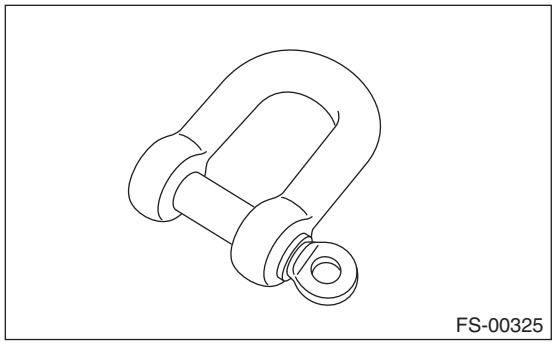
15) Remove the stabilizer link. <Ref. to FS-33, REMOVAL, Front Stabilizer.>
16) Disconnect the left and right front arms.
   (1) Remove the nut, and pull out the bolt from the front lower arm.
   (2) Remove the ball joint from the front lower arm.

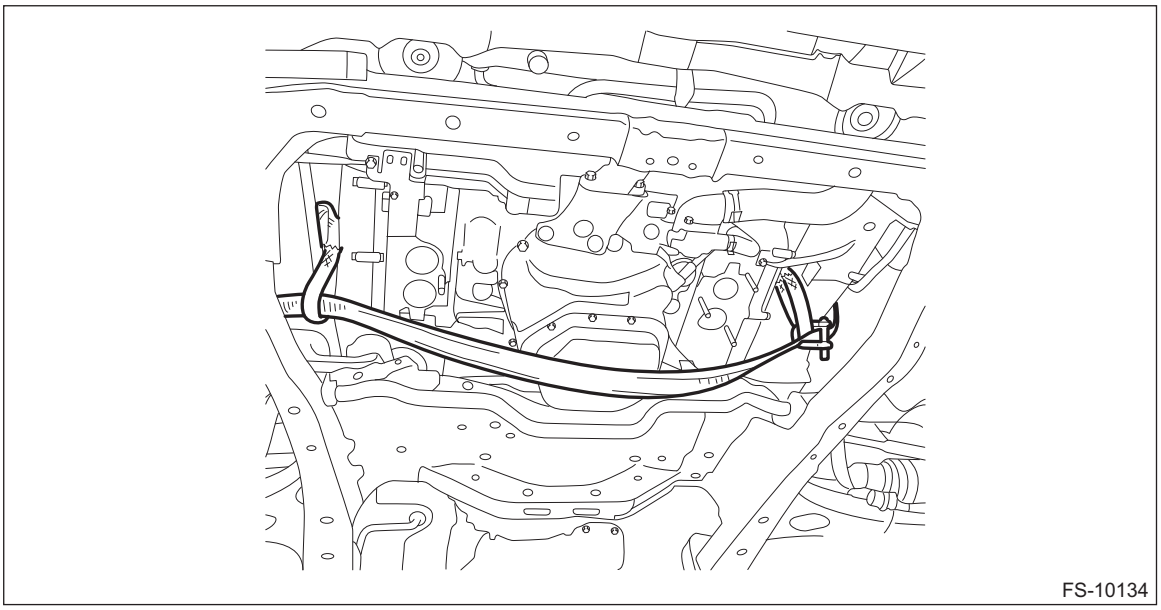
17) Disconnect the left and right tie-rod ends.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Extract the tie-rod end (c) from the housing - front axle.



CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

Preparation tool:
Tie-rod ball joint puller

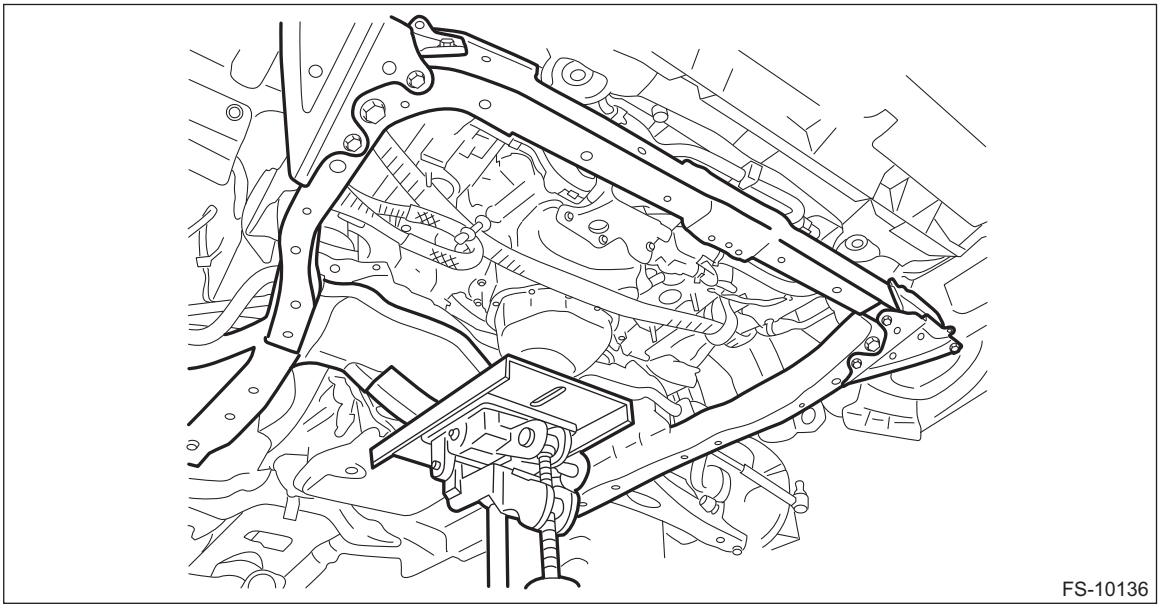




18) Attach the sling belt so that it wraps around the both frames using the shackle.

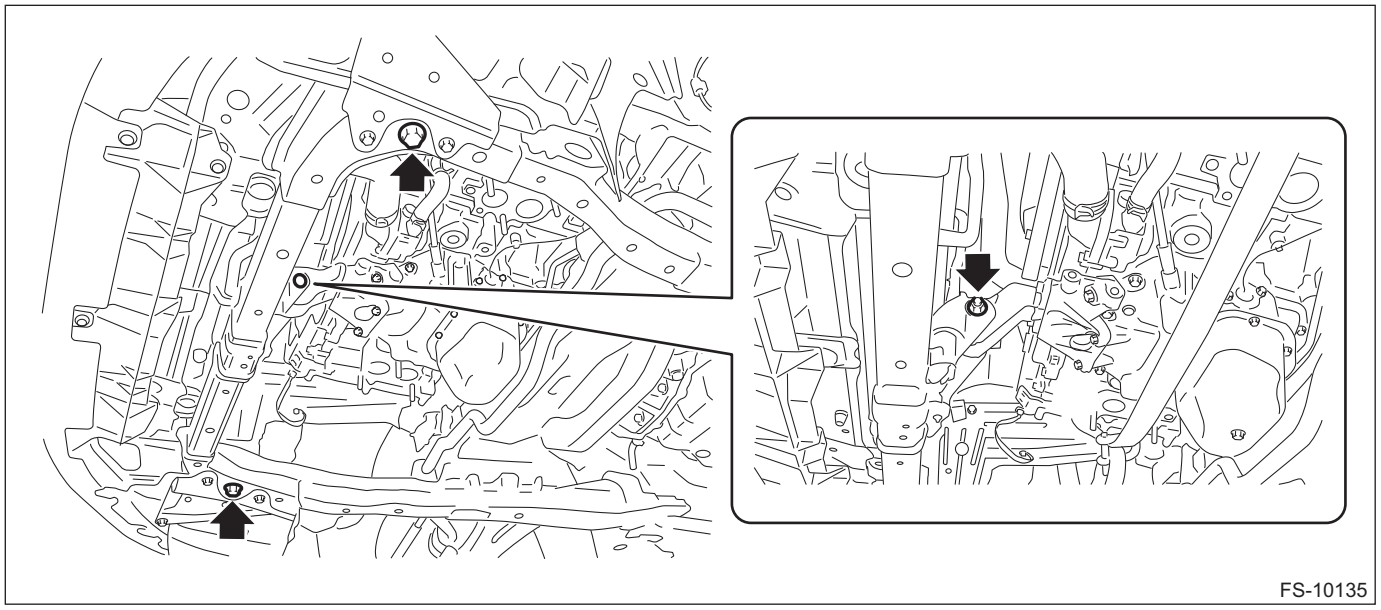
CAUTION:
- **Be sure to attach the sling belt to ensure safety in operation.**
- **Use a sling belt with the length of 2 m (6.6 ft), the width of 35 — 40 mm (1.38 — 1.57 in) and the load capacity of 1 t (2205 lb) or more.**

- **Use a shackle with the load capacity of 0.5 t (1103 lb) or more.**



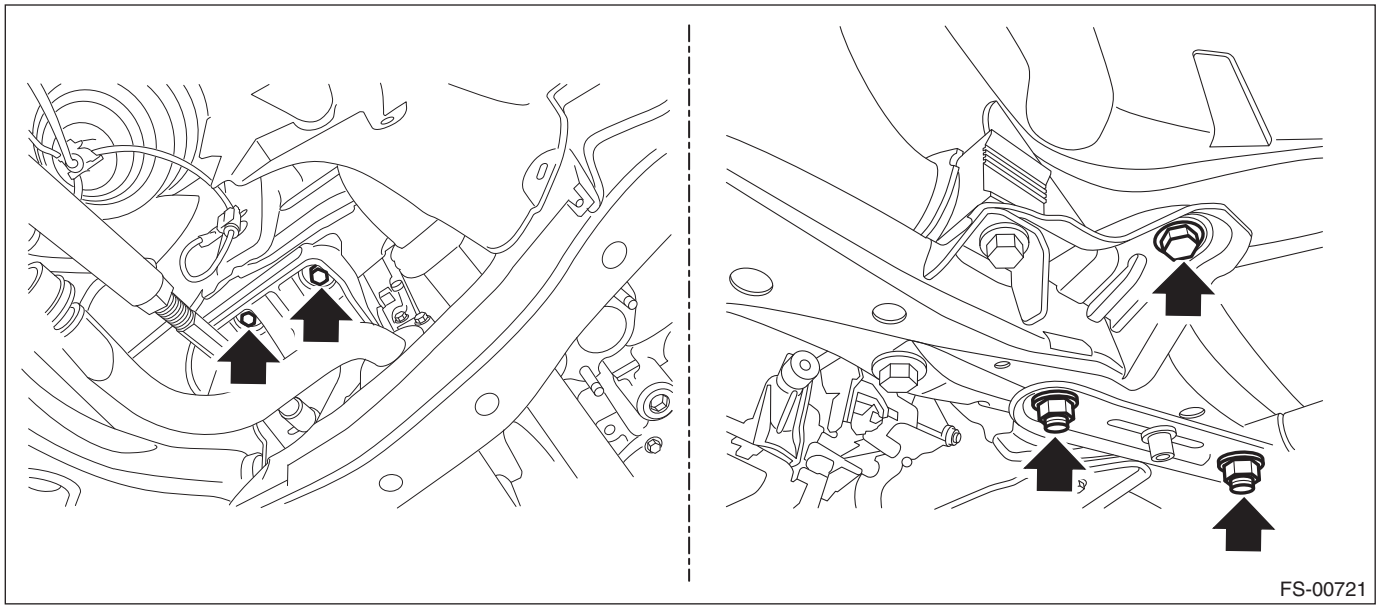
FS-00325

FS-10134



19) Remove the cradle from the vehicle.

CAUTION:
The cradle is heavy. Remove it carefully by paying attention to the balance.

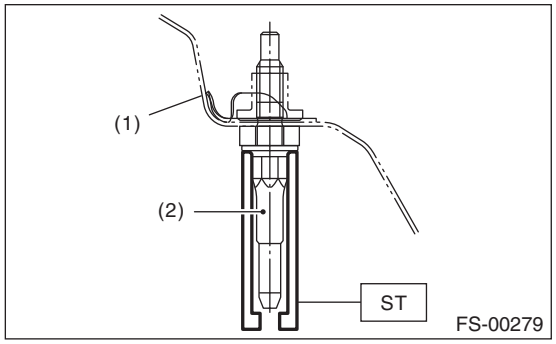


(1) Support the cradle with the transmission jack.

FS-10136

(2) Remove the bolt from the front cushion rubber, and remove the bolt securing the front of the cradle.

(3) Remove the left and right bolts and nuts.



(4) Remove the cradle from the vehicle.

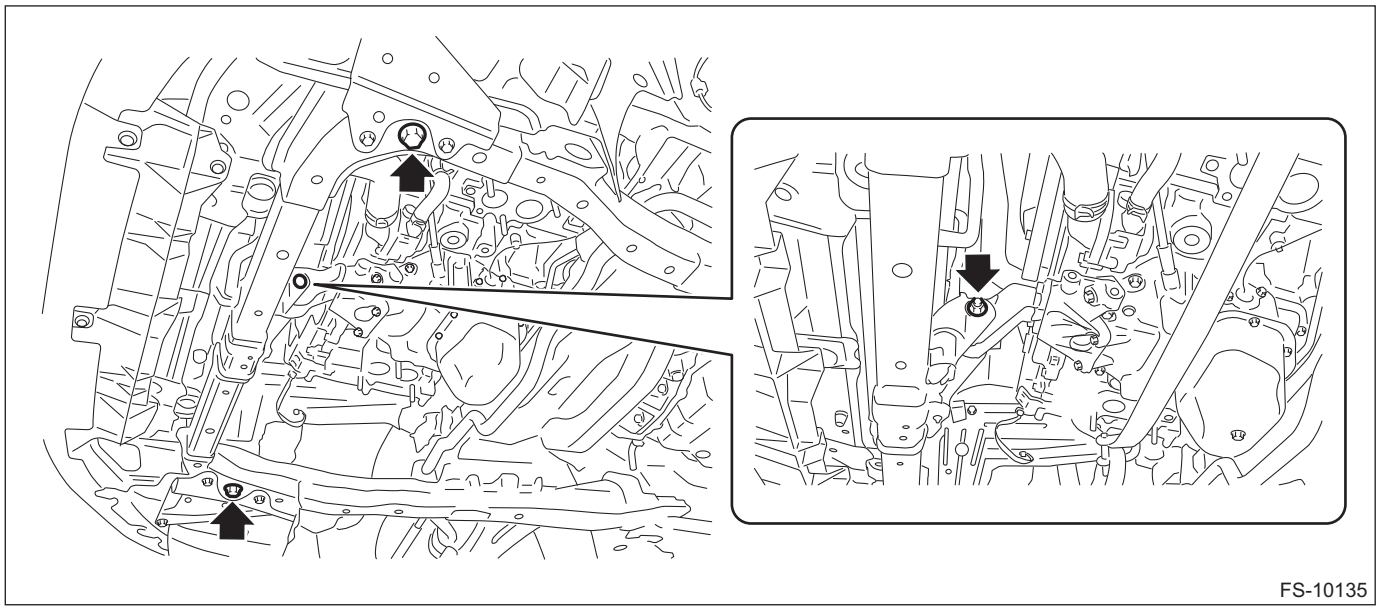
20) To remove the stud bolt, use the ST.

CAUTION:
Do not remove the stud bolt unless necessary. Always replace the parts with new parts when removed.

Preparation tool:
ST: STUD BOLT SOCKET (20299AG020)

(1) Vehicle body
(2) Stud bolt

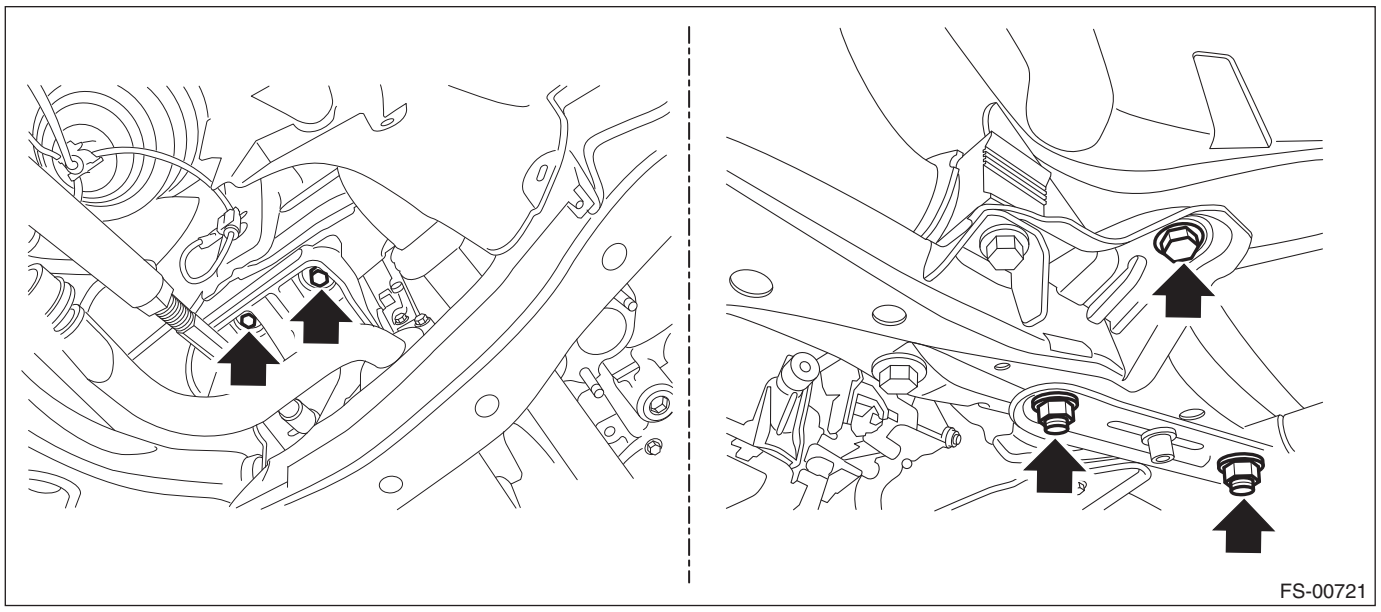
B: INSTALLATION



CAUTION:
Use a new bolt and self-locking nut. For parts which are not reusable, refer to "COMPONENT". <Ref. to FS-4, COMPONENT, General Description.>

1) Install the cradle to the vehicle body.
(1) Raise the cradle with the transmission jack.

CAUTION:
The cradle is heavy. Raise it carefully by paying attention to the balance.



(2) Install the bolt to the front cushion rubber and the bolt to the front of the cradle.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>

(3) Install the left and right bolts and nuts.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>

2) Remove the shackle and sling belt.
3) Install the tie-rod end.

Tightening torque:
Steering gearbox-related parts: <Ref. to PS-4, STEERING GEARBOX, COMPONENT, General Description.>
4) Install the front arm.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>
5) Install the stabilizer link rod. <Ref. to FS-34, INSTALLATION, Front Stabilizer.>
6) Install the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>

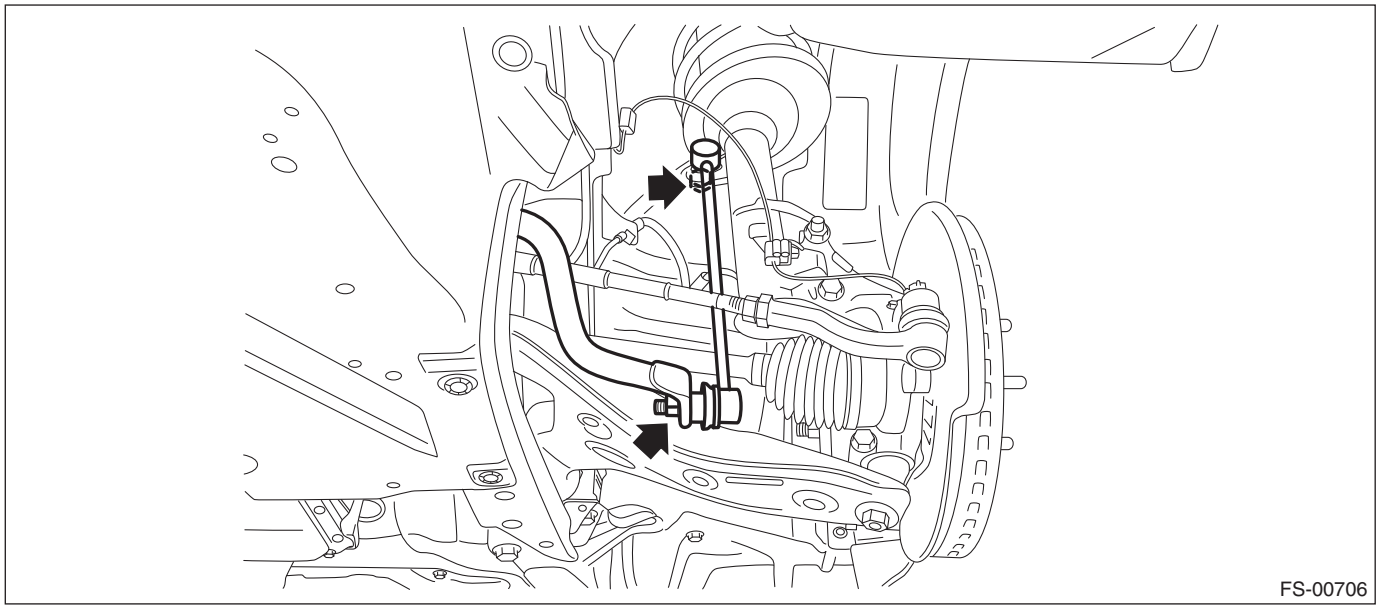
7) Install the power steering connector.
8) Install the nuts connecting the main mount and the transmission mounting bracket.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>
9) Remove the ST, chain sling and shackle.
10) Remove the ST for the engine hanger from the engine front side. (H4 model)
11) Replace the ST with the engine hanger attached to the engine. (H6 model)
12) Change the hood stay location to support the front hood at ordinary position.
13) Install the air intake boot assembly.
- H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>

14) Install the air intake duct. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Duct.>
15) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
16) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>

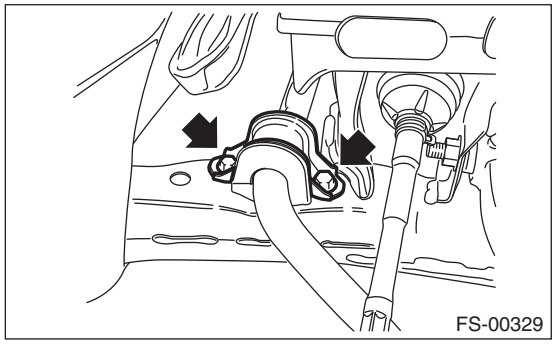
CAUTION:
• Tighten the cradle and main mounting to the specified torque first before tightening the universal joint assembly - steering to avoid the steering effort from becoming heavy.
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.

• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.
17) Install the under cover - front. <Ref. to EI-27, INSTALLATION, Front Under Cover.>
18) Install the front wheels.



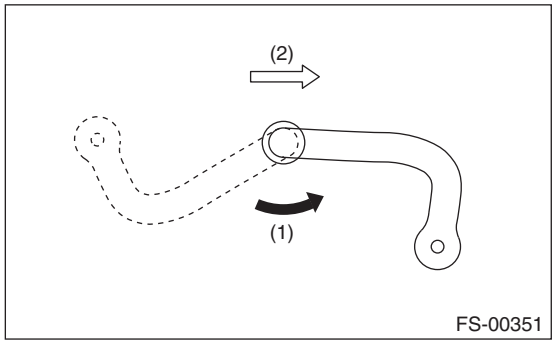
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
19) Inspect the wheel alignment and adjust if necessary. <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
20) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>



4. Front Stabilizer

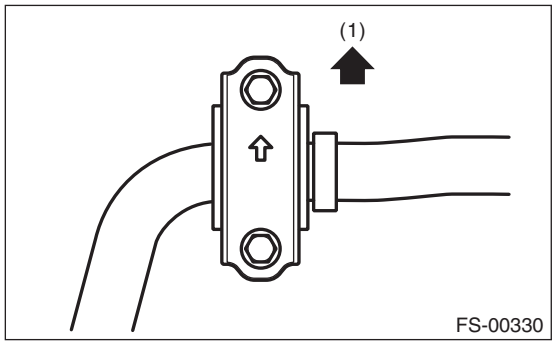
A: REMOVAL



1) Lift up the vehicle, and then remove the left and right front wheels.
2) Remove the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>
3) Remove the front stabilizer.
   (1) Remove the left and right stabilizer links.

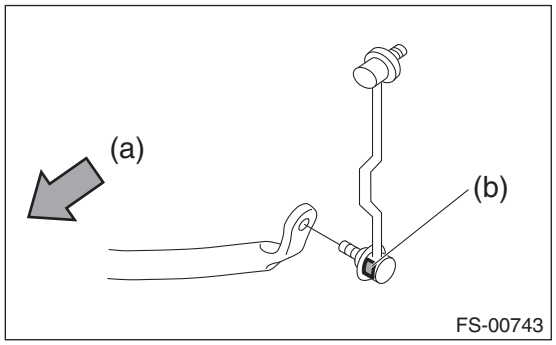
   (2) Remove the left and right stabilizer brackets.

   (3) Turn the front stabilizer by approximately 180° toward the front of the vehicle and pull out the front stabilizer from the right side of the vehicle.



(1) Turn toward the front of the vehicle.
(2) Front side of vehicle

B: INSTALLATION



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing for abnormal cracks, fatigue or damage.
- Check the stabilizer link for damage.

2) Install the front stabilizer.

CAUTION:
• Be careful not to let the dust boot of the stabilizer link turn over or fall off when installing. If a deformed dust boot is installed, the dust boot may be damaged.
• The stabilizer bracket has a set orientation. Install it with the arrow mark facing the front side (1) of the vehicle.

• The stabilizer link RH is different from LH. Therefore, make sure that the stabilizer link is installed correctly by checking the paint mark.

(a) Front side of vehicle
(b) Identification paint

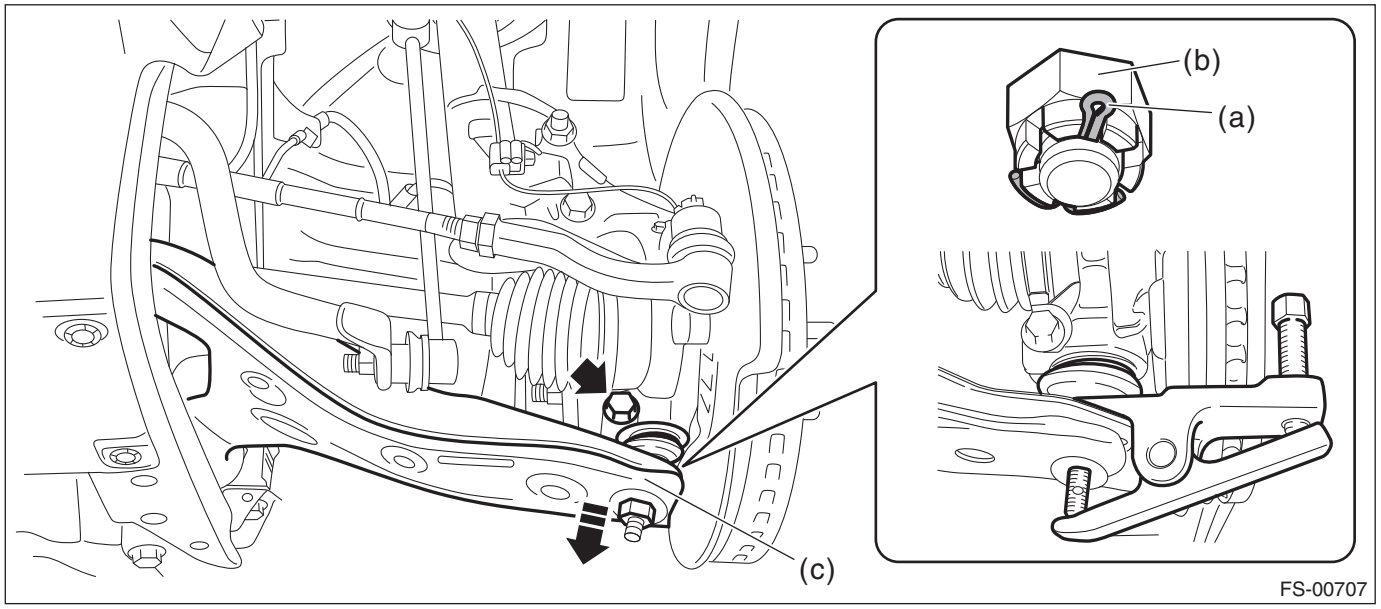
(1) Put the front stabilizer in from the right side of vehicle.
(2) Install the right and left stabilizer brackets.

Tightening torque:
Stabilizer bracket: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
(3) Install the right and left stabilizer links.

Tightening torque:
Stabilizer link: 60 N·m (6.1 kgf-m, 44.3 ft-lb)

3) Install the under cover - front. <Ref. to EI-27, INSTALLATION, Front Under Cover.>
4) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



5. Front Ball Joint

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the ball joint.
   (1) Extract the cotter pin (a) from the ball stud.
   (2) Remove the castle nut (b).
   (3) Extract the ball stud from the front arm (c).
   (4) Remove the bolt securing the ball joint to the housing - front axle.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

Preparation tool:
Tie-rod ball joint puller

   (5) Extract the ball joint from the housing - front axle.

B: INSTALLATION

1) Install the ball joint into the housing - front axle.

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Be careful not to damage the boot of the joint.**

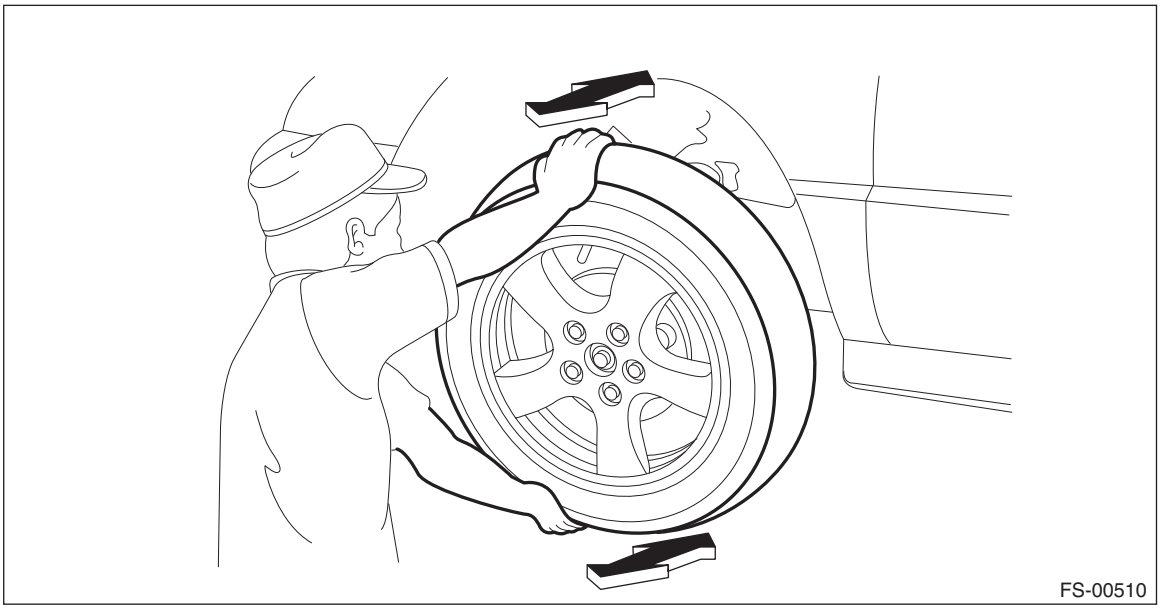
• Before tightening, make sure the bottom surface of the housing - front axle and the stepped section of ball joint are in contact.

(1) Bottom surface of housing - front axle
(3) Housing - front axle
(4) Ball joint boot
(2) Raised section of ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

2) Install the ball joint into front arm.
(1) Connect the ball joint to the front arm.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)



(2) Further tighten the castle nut up to 60° until the hole in the ball stud is aligned with a slot in castle nut.
(3) Insert a new cotter pin and bend it around the castle nut.

3) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

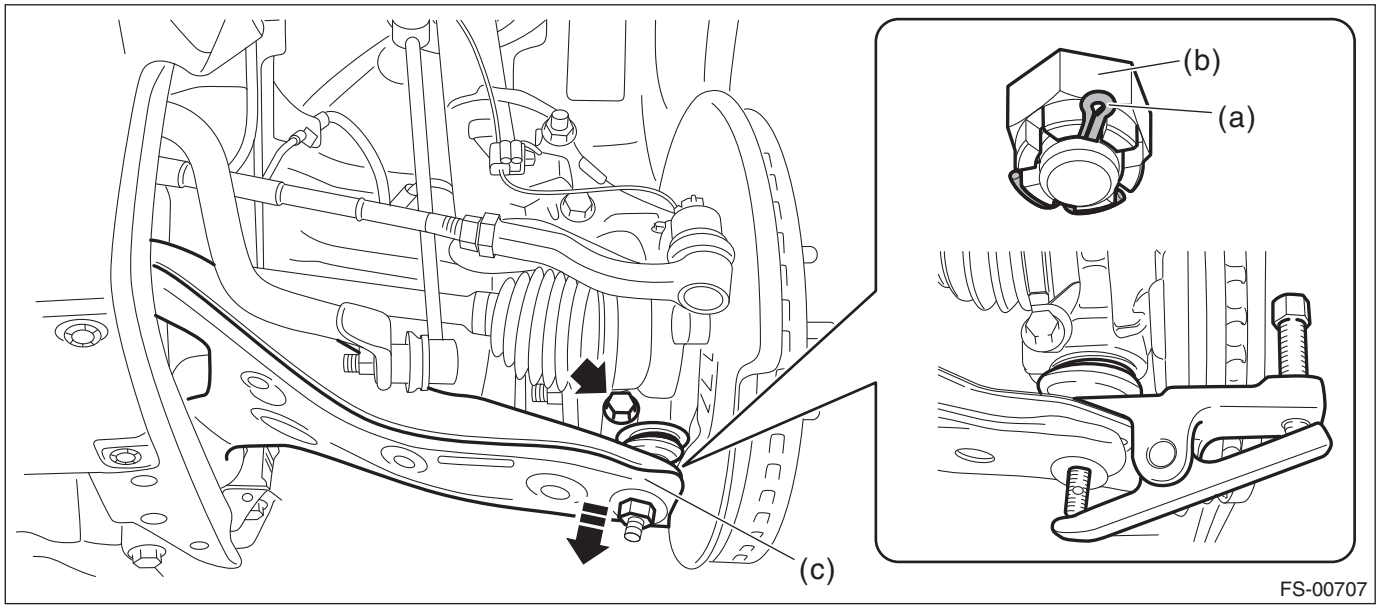
1) Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.

- **Looseness exists**→ Replace the ball joint. <Ref. to FS-35, REMOVAL, Front Ball Joint.>

2) Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

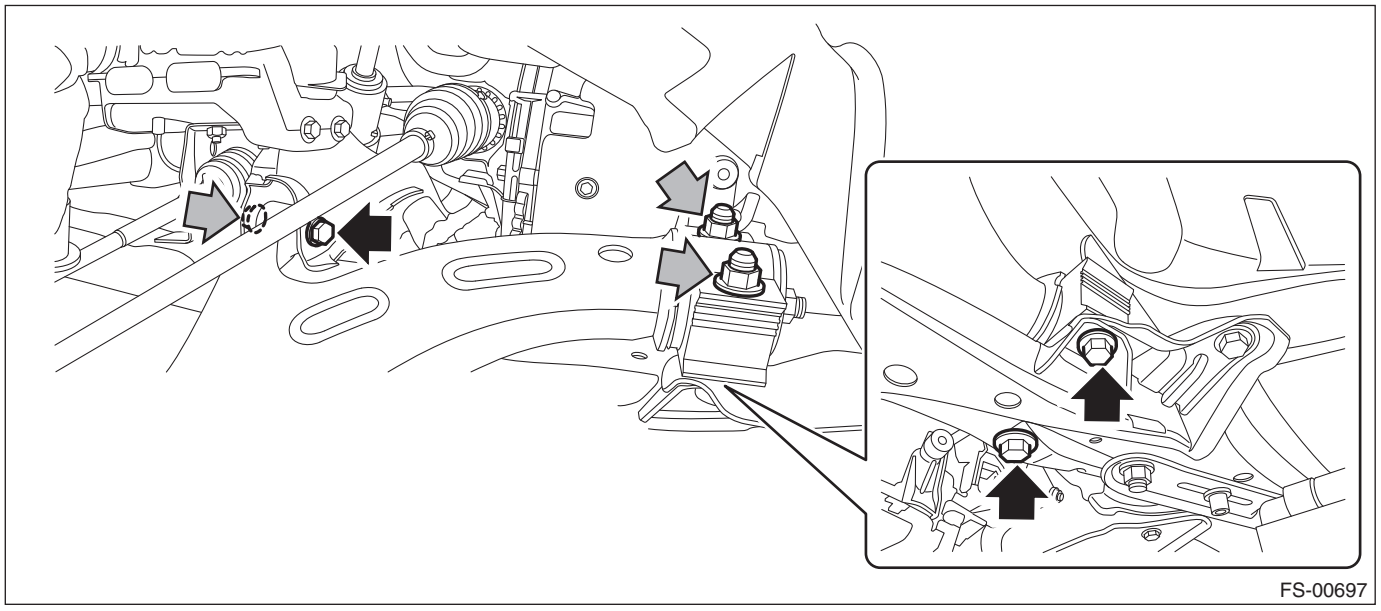
- **Looseness exists**→ Check the hub unit bearing. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>

3) Replace the ball joint if the ball joint boot is damaged when visually inspecting the ball joint boot.



6. Front Arm

A: REMOVAL

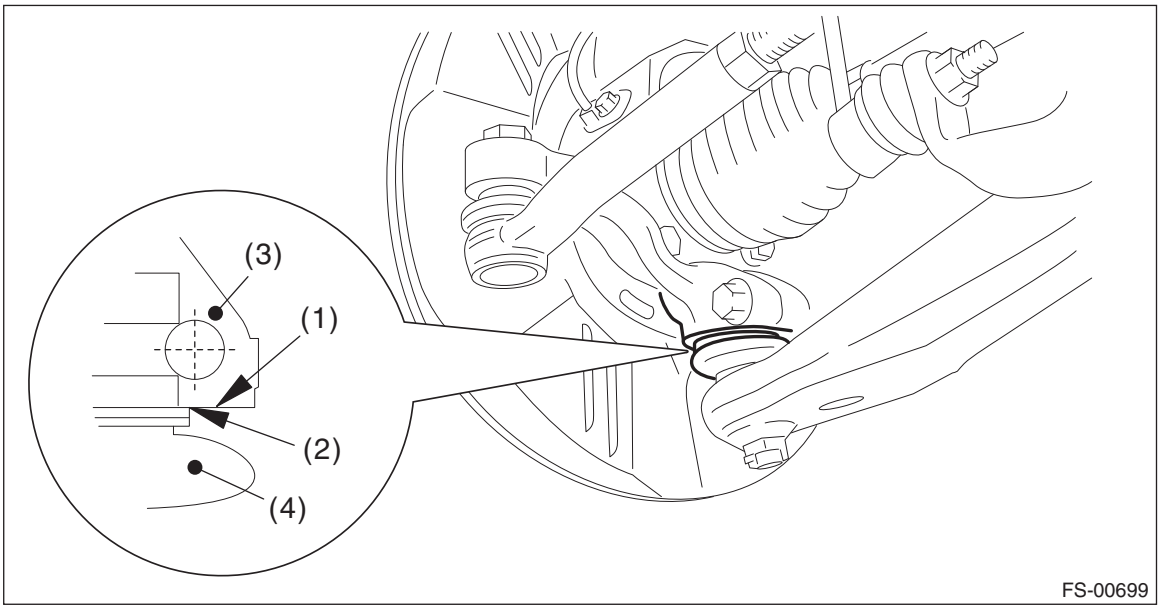


1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>
3) Remove the front arm.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b) and bolt.
   (3) Extract the front arm (c) from the housing - front axle.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

Preparation tool:
Tie-rod ball joint puller

(4) Remove the bolts, then remove the front arm.



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

2) Using new self-locking nuts, temporary tighten the front arm.
3) Install the ball joint into the housing - front axle.

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Be careful not to damage the boot of the joint.**
- **Before tightening, make sure the bottom surface of the housing - front axle and the stepped section of ball joint are in contact.**

(1) Bottom surface of housing - front axle
(2) Raised section of ball joint
(3) Housing - front axle
(4) Ball joint boot

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Install the under cover - front. <Ref. to EI-27, INSTALLATION, Front Under Cover.>
5) Install the front wheels.

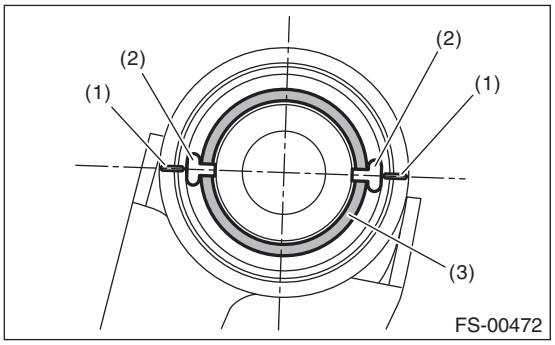
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6) Unload the vehicle from lift, and tighten the bolt which secures the front arm to cradle with wheels in full contact with the ground and the vehicle at curb weight.

Tightening torque:
Front bushing side: 95 N·m (9.7 kgf-m, 70.1 ft-lb)
Rear bushing side: 130 N·m (13.3 kgf-m, 95.9 ft-lb)

7) Inspect the wheel alignment and adjust if necessary. <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

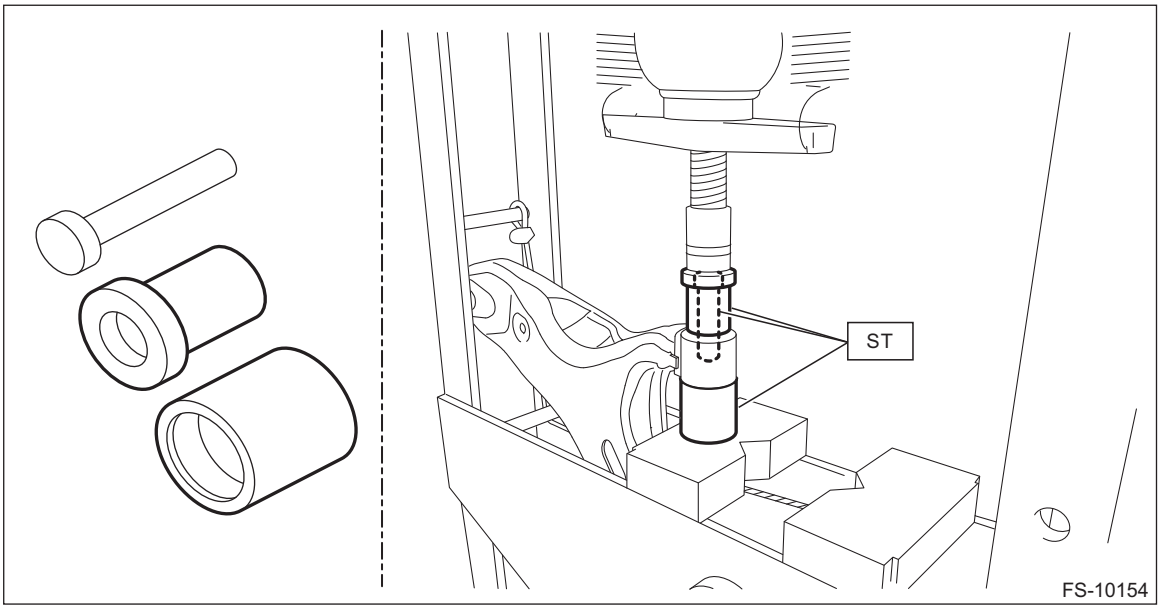


8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1. BUSHING FRONT - FRONT ARM

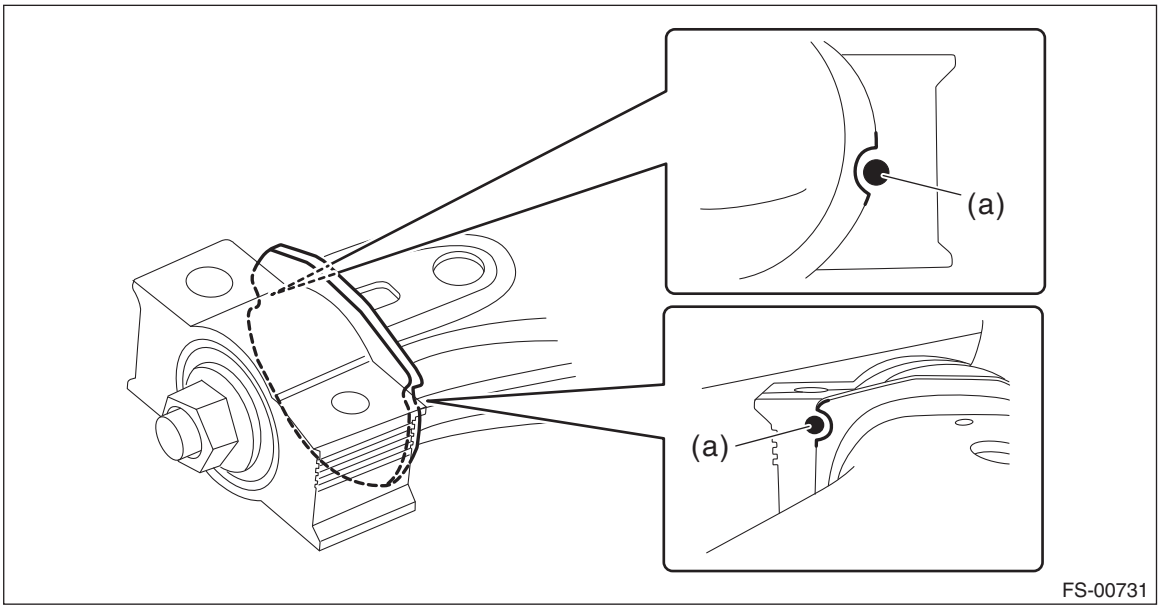
1) Put an alignment mark on the front arm assembly based on the split portion of the bushing intermediate plate of the busing front - front arm.



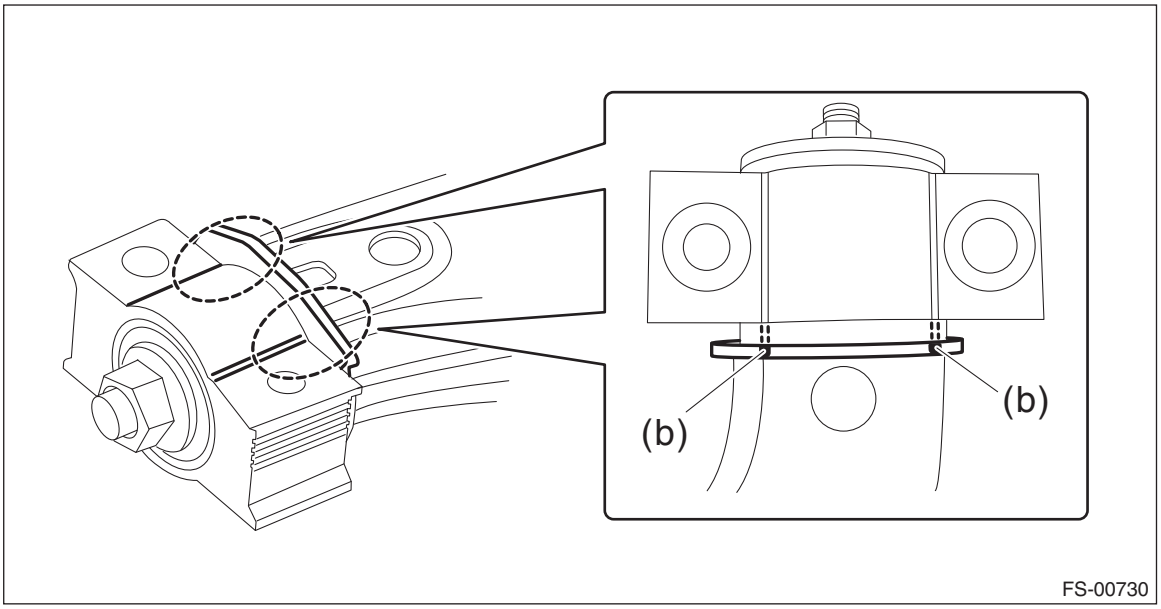
CAUTION:
Always put an alignment mark for aligning the position on bushing installation.

(1) Put an alignment mark.
(2) Gap of bushing intermediate plate
(3) Bushing intermediate plate

2) Using the ST and a press, remove the front bushing.

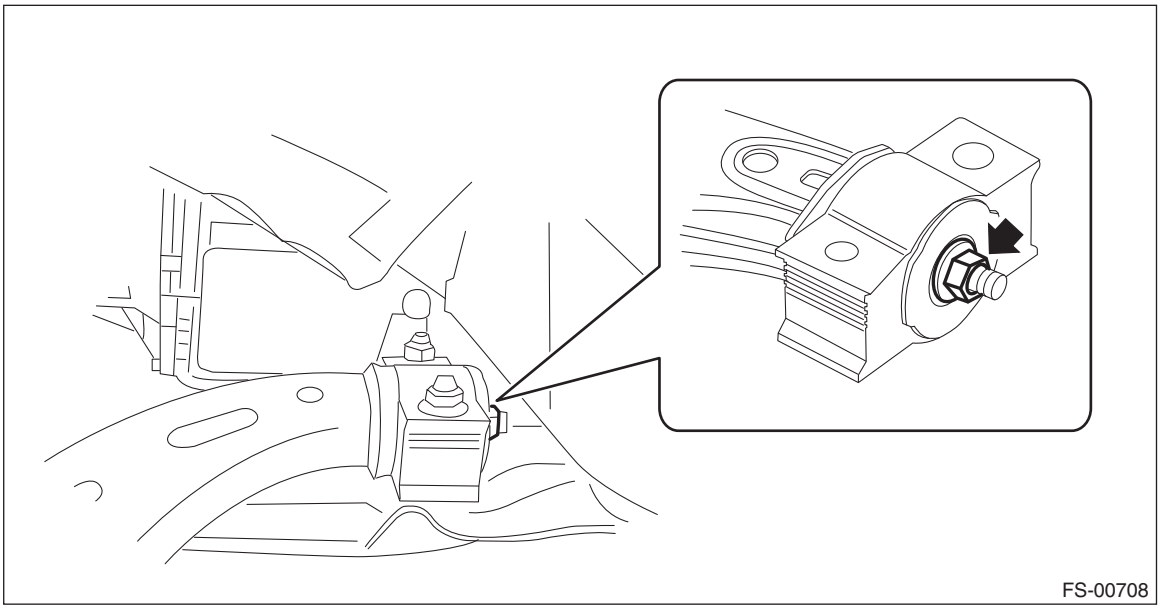


Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



2. BUSHING REAR - FRONT ARM

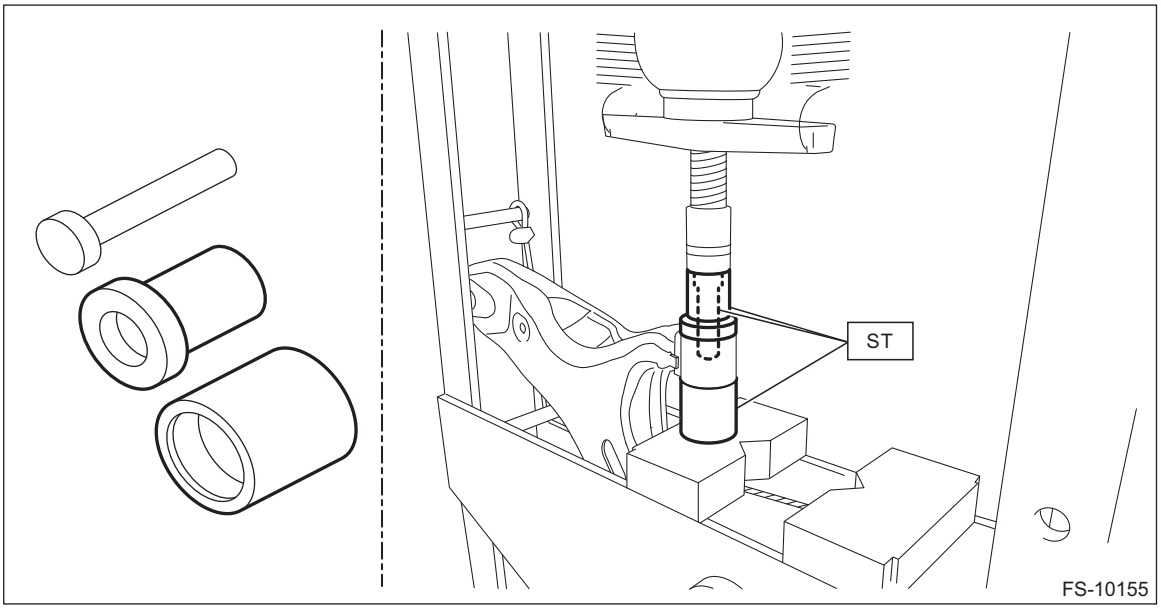
1) Remove the rear bushing.
(1) Put alignment marks on the front arm assembly and the bushing rear - front arm.



• Front arm assembly replacement: put an alignment mark (a) from the cutout portion of the front arm assembly to the bushing rear - front arm.

• Bushing rear - front arm replacement: put an alignment mark (b) on the front arm assembly located on an imaginary line extending from the rib portion of the bushing rear - front arm.

(2) Remove the self-locking nut, and then remove the rear bushing.



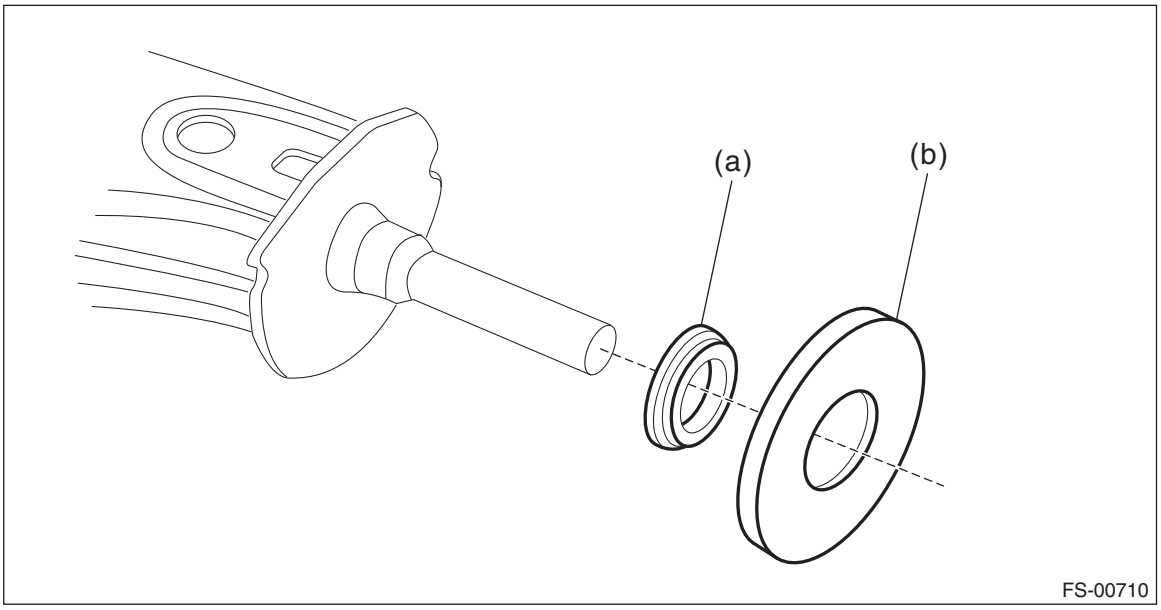
D: ASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Check the front arm for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

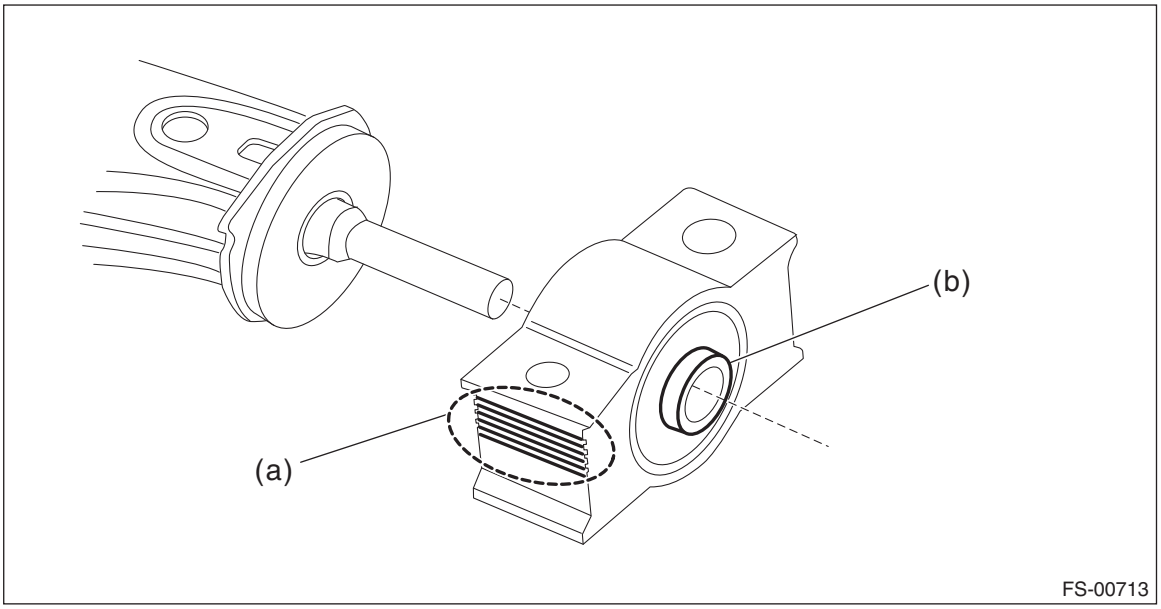
2) Align the gap of bushing intermediate plate for front bushing with the alignment mark of the front arm.
3) Using the ST and a press, install the front bushing.

Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



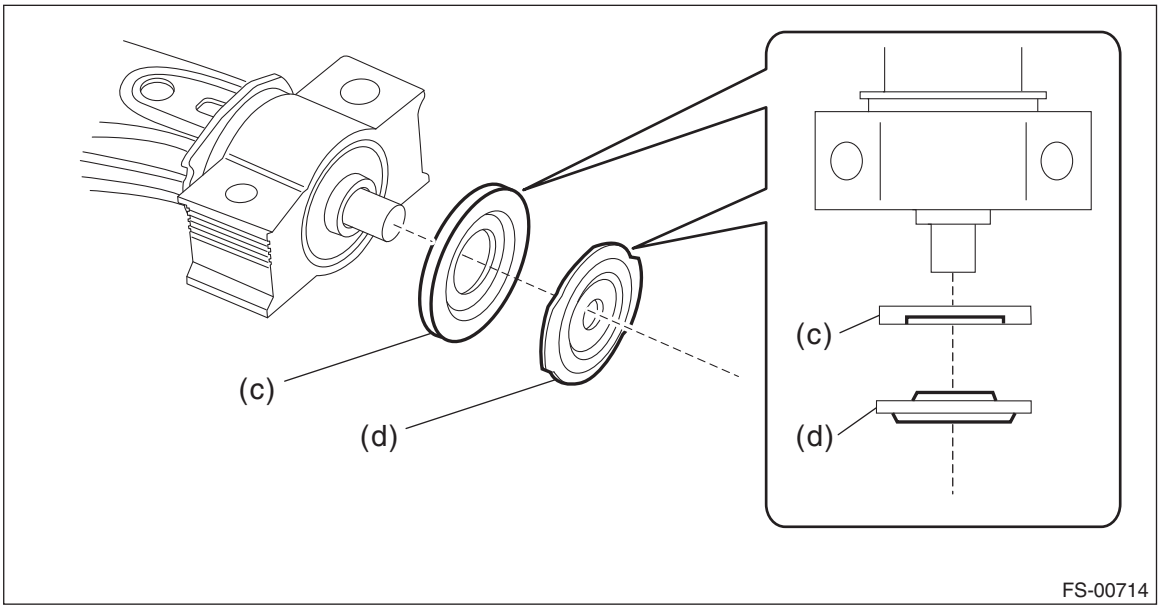
2. BUSHING REAR - FRONT ARM

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.



2) Install the rear bushing to the bushing rear - front arm.

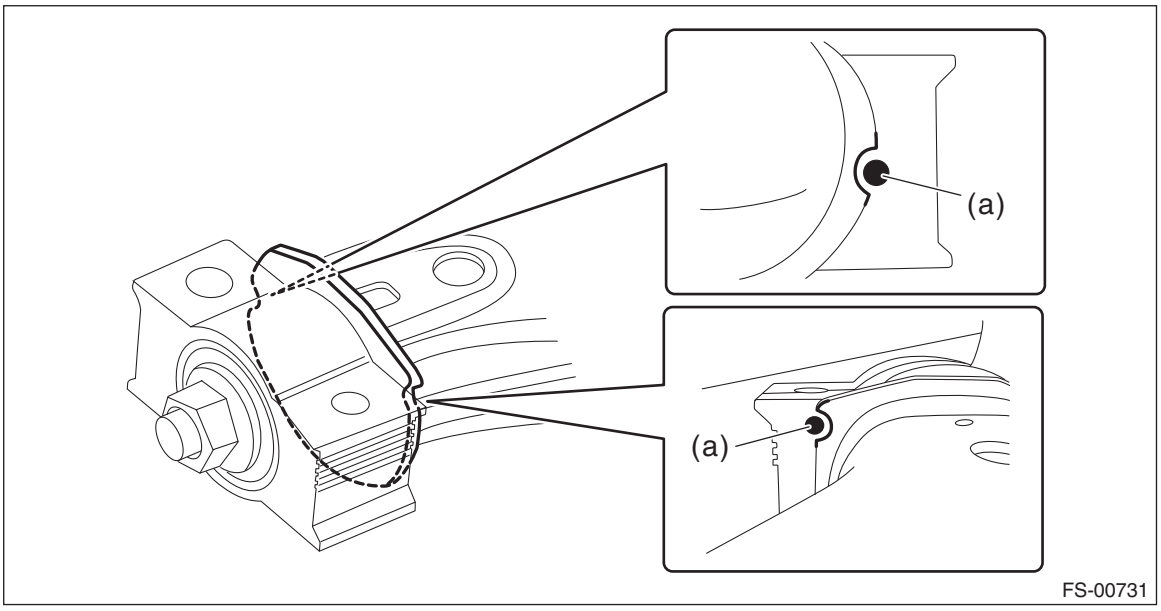
CAUTION:
Confirm the installing direction and install securely.



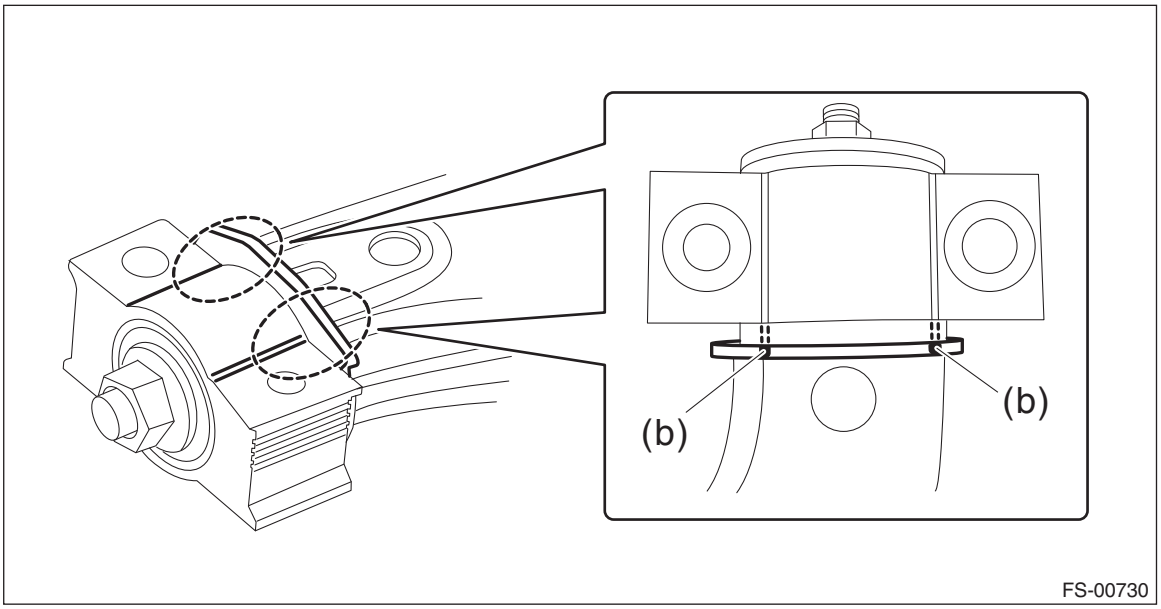
(1) Install the spacer - arm front (a) and the stopper - rubber front (b).

(2) Install the rear bushing so that the rib (a) faces the upper side of the vehicle and the protrusion (b) faces the rear side of the vehicle.

(3) Install the plate - arm front (d) and the stopper - rubber front (c).



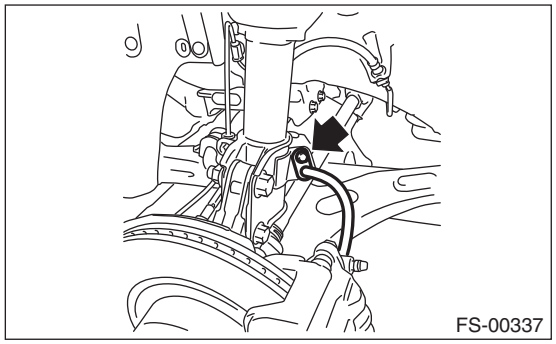
(4) Using new self-locking nuts, install the rear bushing to the bushing rear - front arm by matching the alignment marks that have been marked when removing.



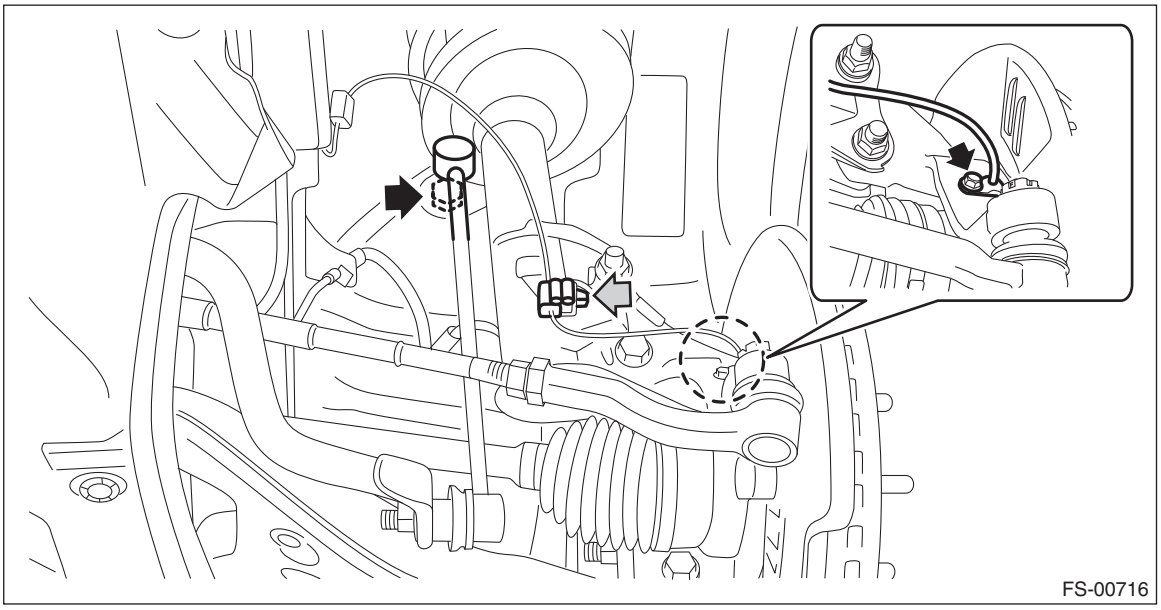
Tightening torque:

140 N·m (14.3 kgf-m, 103.3 ft-lb)

- Front arm assembly replacement: align the alignment mark (a) of the bushing rear - front arm with the cutout portion of the front arm assembly.



• Bushing rear - front arm replacement: align the alignment mark (b) on the front arm assembly with an imaginary line extending from the rib portion of the bushing rear - front arm.



7. Front Strut

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the front strut assembly.
   (1) Place an alignment mark on the camber adjusting bolt and strut.
   (2) Remove the brake hose bracket.

   (3) Remove the nut on the upper side of stabilizer link and the ABS wheel speed sensor harness.

   (4) Remove the two bolts securing the housing - front axle to the strut.

NOTE:
While holding the head of the adjusting bolt, loosen the flange nut.

(5) Remove the three nuts securing the strut mount - front to the body.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Check the bushing for abnormal cracks, fatigue or damage.**

1) Install the strut mount - front at the upper side of the strut to the body, and tighten it with new flange nuts.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

2) Align alignment marks on the camber adjusting bolt and strut.
Using new self-locking nuts, install the strut to the housing - front axle.

NOTE:
While holding the head of adjusting bolt, tighten the self-locking nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

3) Install the ABS wheel speed sensor harness.

CAUTION:
During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the nut to the upper side of stabilizer link.

CAUTION:
Be careful not to let the dust boot of the stabilizer link turn over or fall off when installing. If a deformed dust boot is installed, the dust boot may be damaged.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

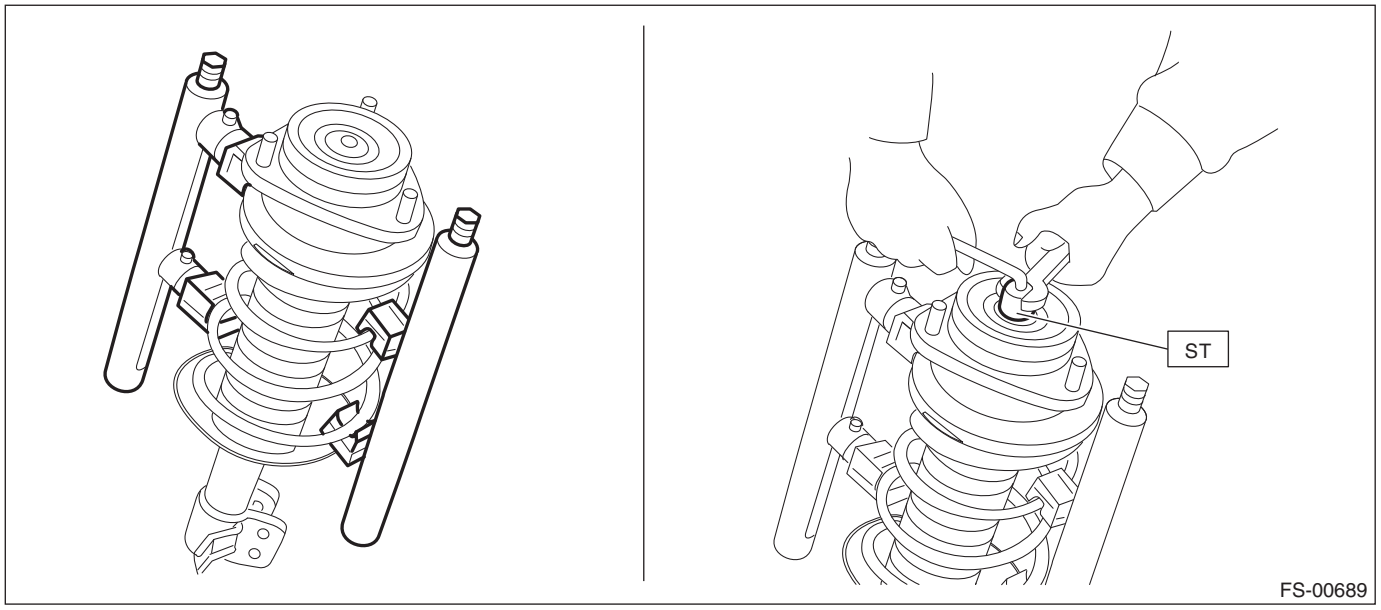
6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

7) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>



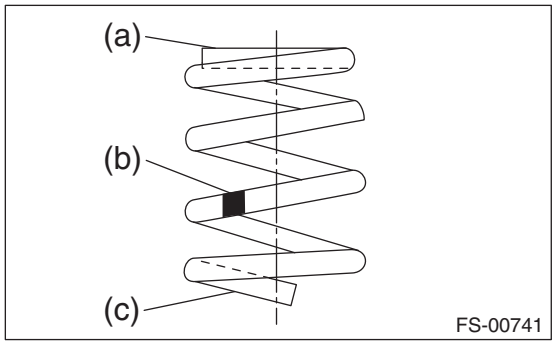
C: DISASSEMBLY

1) Using a coil spring compressor, compress the coil spring.
2) Using a hexagon wrench to prevent strut rod from turning, remove the self-locking nut with ST.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)

NOTE:
< Example of coil spring compressor installation >
The installing position of coil spring compressor varies depending on the coil spring shape and winding number.

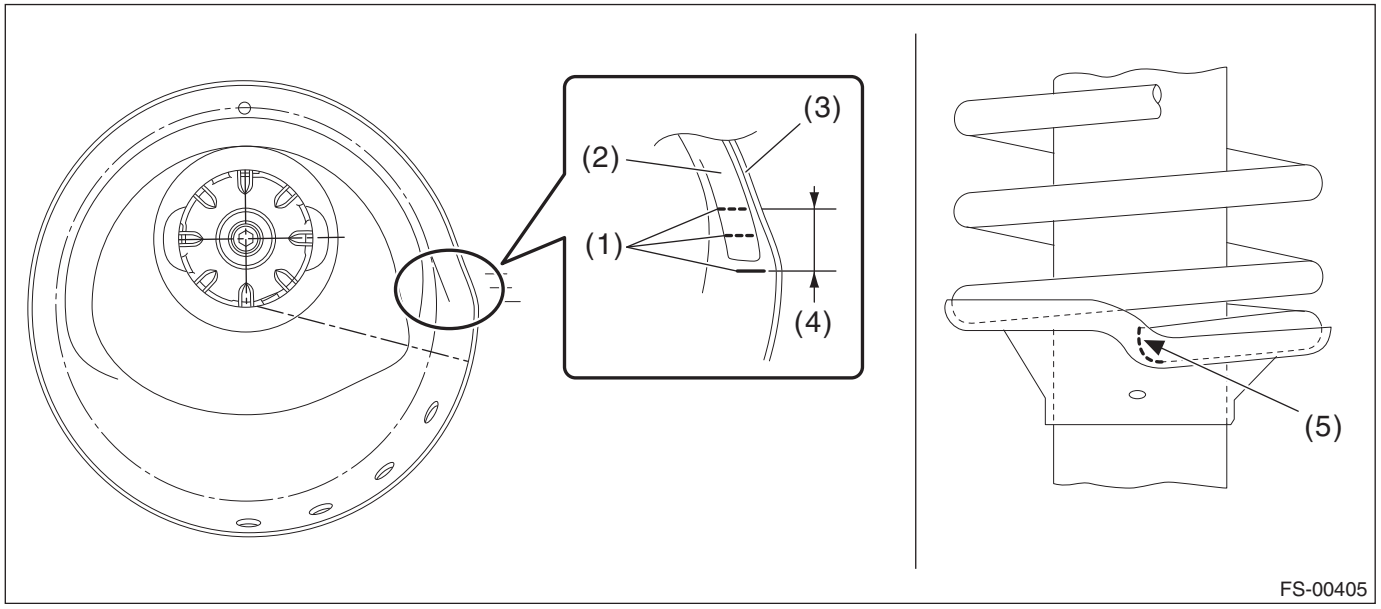


3) Remove the strut mount - front, spacer - front strut, dust cover - front strut and spring seat - front strut UPR from the strut COMPL.
4) Gradually decrease the compression force of compressor, and remove the coil spring.
5) Remove the dust cover and helper.

D: ASSEMBLY

1) Before assembly, check each part. <Ref. to FS-51, INSPECTION, Front Strut.>
2) Using a coil spring compressor, compress the coil spring.

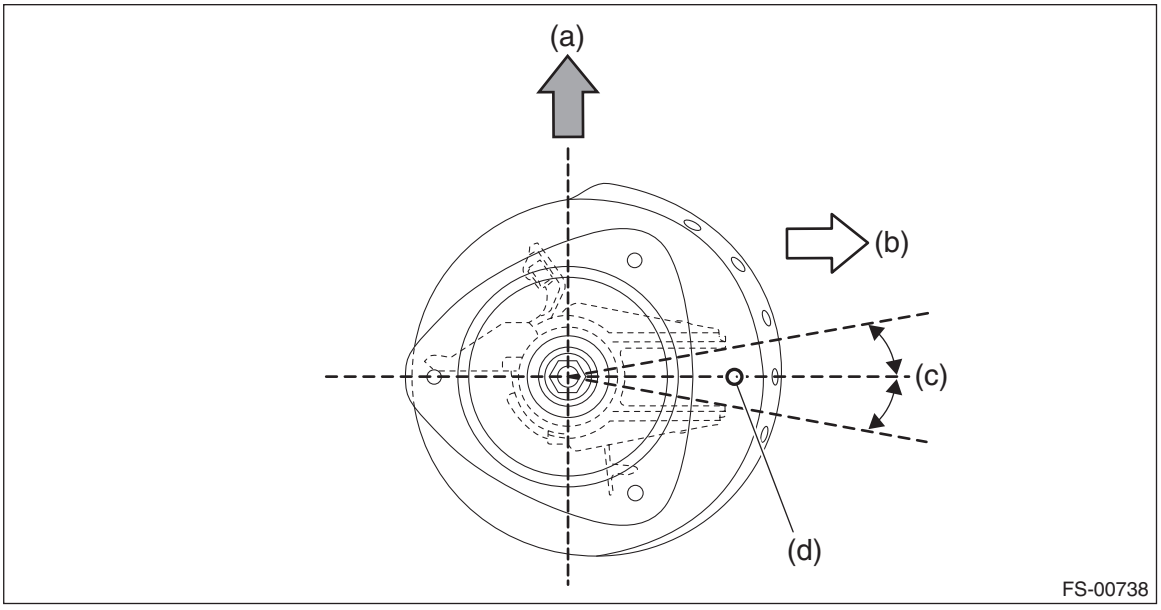
CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.



NOTE:
Make sure that the vertical install direction of the coil spring is as shown in the figure.

(a) Diameter is small (upper part)
(b) Identification paint
(c) Diameter is large (bottom part)

3) Set the coil spring correctly so that its end face seats well in the spring seat as shown in the figure.

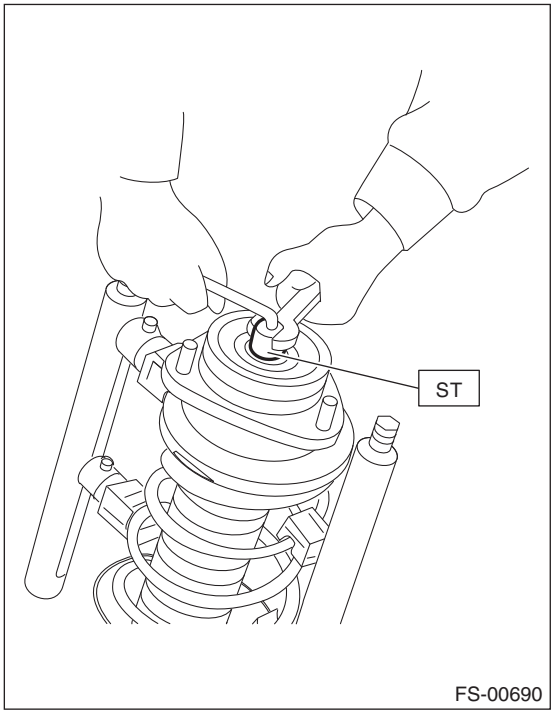


CAUTION:
Install the coil spring so that the end of spring is between the marks on the spring seat.

(1) Mark
(2) Spring
(3) Spring seat
(4) Install the spring within this area
(5) Coil spring end face

4) Install the dust cover and the helper - front strut to the piston rod.
5) Pull the piston rod fully upward, and install the spring seat and the dust cover - front strut.

NOTE:
Position the spring seat - front strut UPR as shown in the figure.



(a) Rear side of vehicle
(b) Outside of body
(c) 0°±10°
(d) Hole of spring seat - front strut UPR

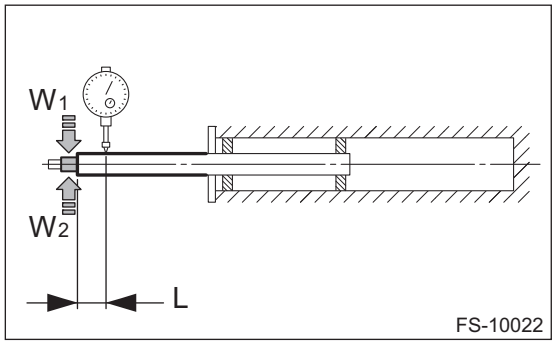
6) Install the spacer - front strut and the strut mount - front to the piston rod, and temporarily tighten a new self-locking nut.
7) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

CAUTION:
Make sure that the strut mount - front turns smoothly after tightening.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:
55 N·m (5.6 kgf-m, 40.6 ft-lb)
8) Loosen the coil spring compressor carefully.

E: INSPECTION



Check the removed part for wear, damage and cracks, and then repair or replace it if defective.

1. STRUT COMPL - FRONT

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.
3) Check the piston rod runout.

Preparation tool:
Dial gauge
(1) Fix the outer shell.
(2) Extend the piston rod until it stops retracting, and set the dial gauge at the L position from the end of the piston rod.

Measuring point:
L = 10 mm (0.39 in)
(3) While applying a force of W [20 N (2 kgf, 4 lbf)] to the arrowed section, read the dial gauge indication P_1.
(4) While applying a force of W_2 20 N (2 kgf, 4 lbf) from the opposite side of W_1, read the dial gauge indication P_2.

Play limit ($P_1 + P_2$): 0.8 mm (0.031 in)
4) Replace the strut if faulty is found in the inspection or limit value is exceeded.

2. STRUT MOUNT - FRONT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new part if defective.

3. DUST COVER - INNER

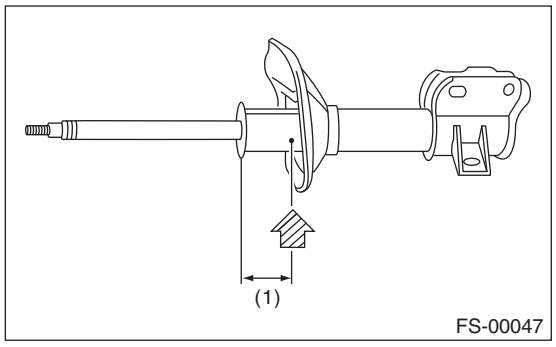
If cracks or damage are found, replace it with a new part.

4. COIL SPRING - FRONT

If a permanent strain is found, replace it with a new part.

5. HELPER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.



6. DUST COVER - FRONT

If major cracks or damage are found, replace it with a new part.

F: DISPOSAL

CAUTION:
• Before handling the strut damper and shock absorber, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the strut damper and shock absorber or place them into a fire.

• **When discarding gas filled strut dampers and shock absorbers, drill holes in them to purge the gas.**
1) Place the strut damper and shock absorber on a level surface with the piston rod fully expanded.
2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

8. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Deformation or damage of suspension parts	Replace.
(2) Rough operation of strut COMPL or shock absorber COMPL	Replace.
(3) Improper installation of strut COMPL or shock absorber COMPL	Replace with appropriate parts.
(4) Installation of the wrong coil spring	Replace with appropriate parts.

2. POOR RIDE COMFORT

1) Large rebound shock.
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping.

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of strut assembly or strut COMPL - front	Replace.
(5) Damage or deformation of strut mount - front or shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of strut assembly or shock absorber	Replace with appropriate parts.
(7) Abnormal deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or strut COMPL - front	Replace.
(9) Oil leakage from the strut assembly or strut COMPL - front	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of strut assembly or strut COMPL - front component parts	Replace.
(2) Loosening of the suspension link installing bolt	Tighten to the specified torque.
(3) Abnormal deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of strut assembly or strut COMPL - front	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

REAR SUSPENSION

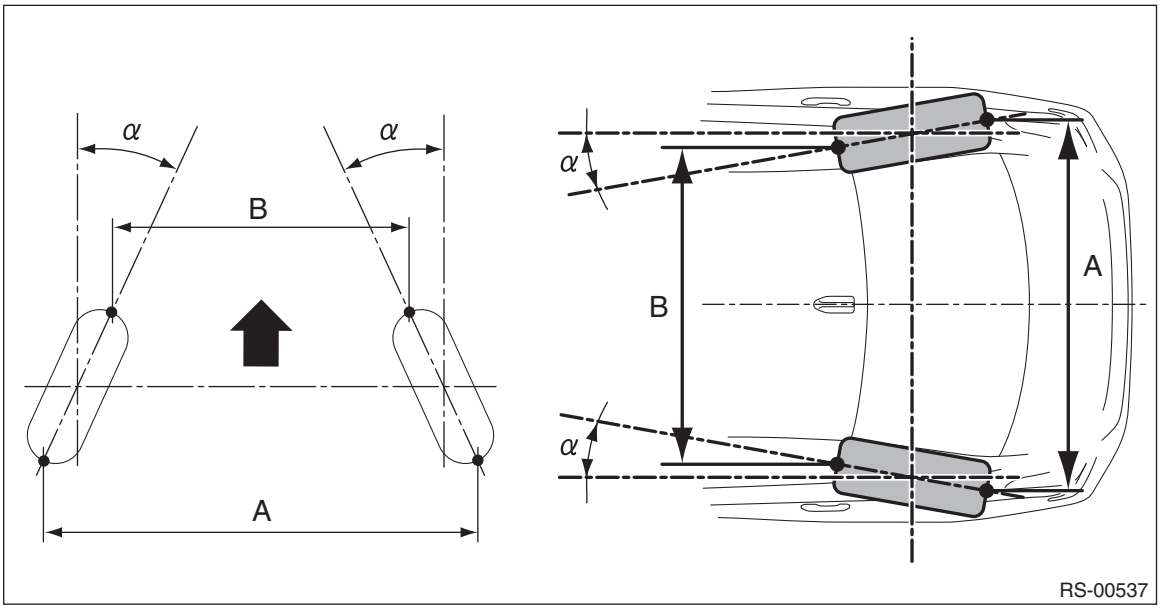
7. Front Lateral Link 23
8. Rear Lateral Link 26
9. Rear Shock Absorber 29
10. General Diagnostic Table 35

1. General Description

A: SPECIFICATION

1. SEDAN MODEL



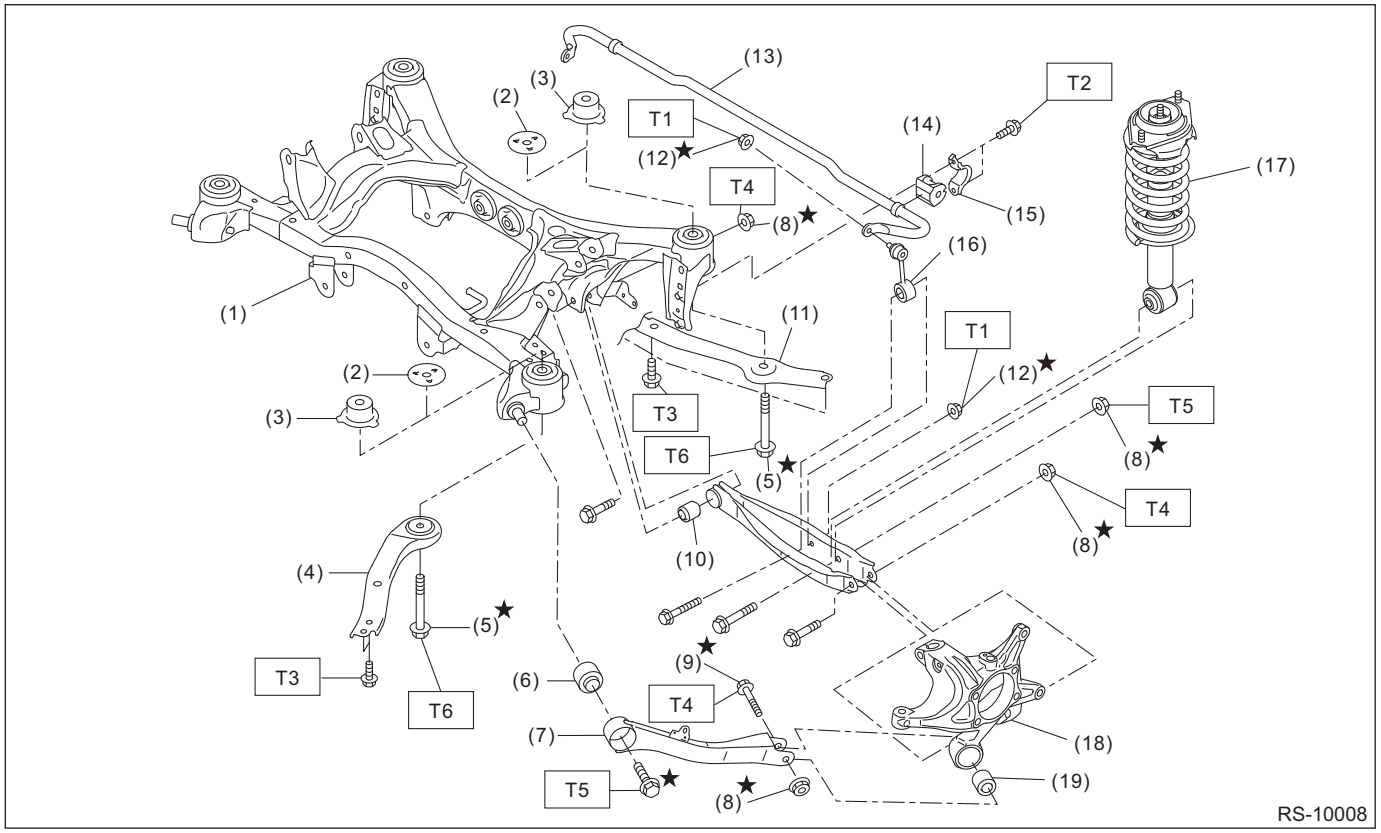
Tire size		225/55R17 225/50R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	383 (15.08)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°30′
Toe-in	mm (in)	IN0±3 (IN0.00±0.12)
		Toe angle (sum of both wheels): IN0°00′±15′
Thrust angle (tolerance: 0°00′±30′)		0°00′

2. OUTBACK MODEL

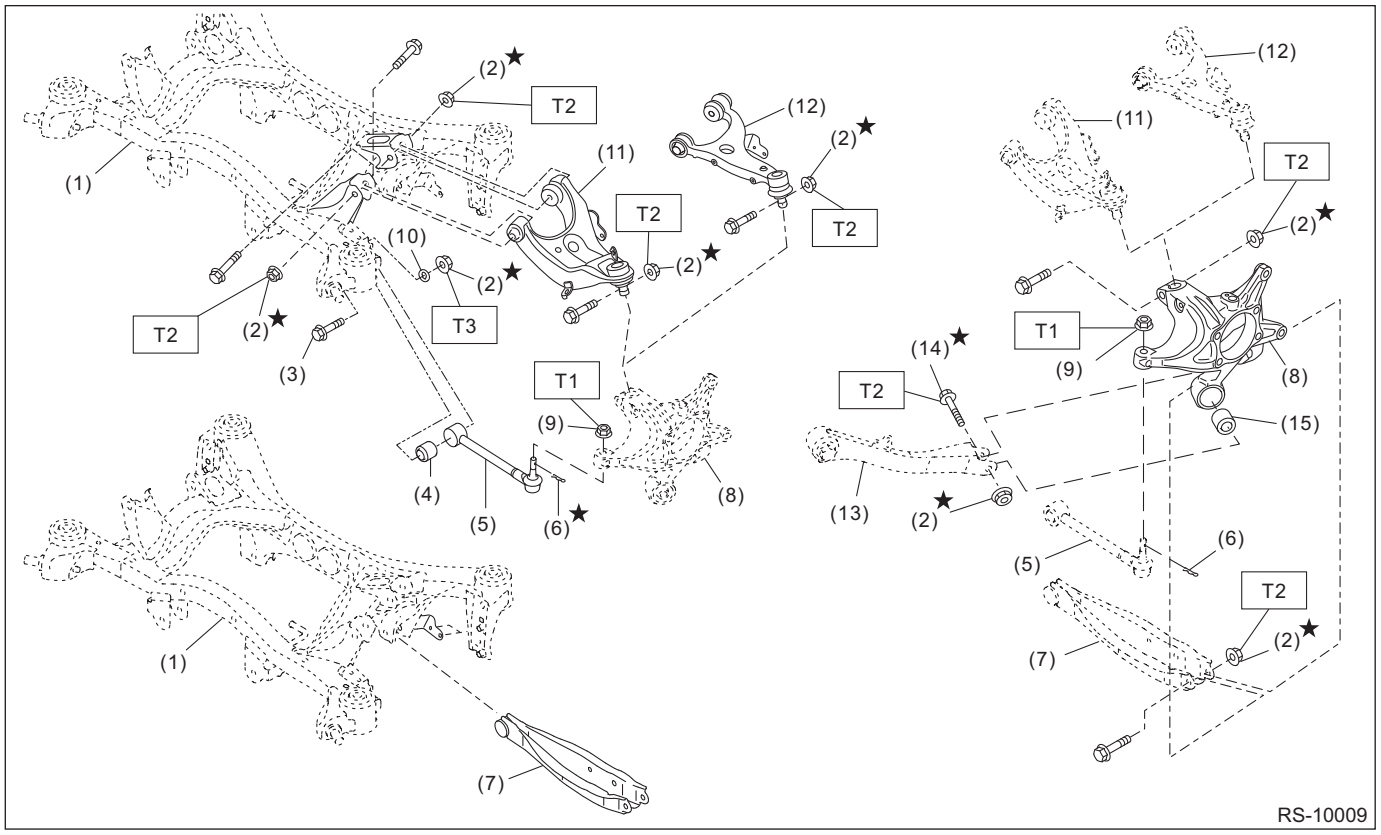
Tire size		225/65R17 225/60R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	468 (18.43)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°00′
Toe-in	mm (in)	IN0±3 (IN0.00±0.12)
		Toe angle (sum of both wheels): IN0°00′±14′
Thrust angle (tolerance: 0°00′±30′)		0°00′

NOTE:
- Adjust with the value less than the inspection value, taking aging variation into consideration.
- Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
- Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.

• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.



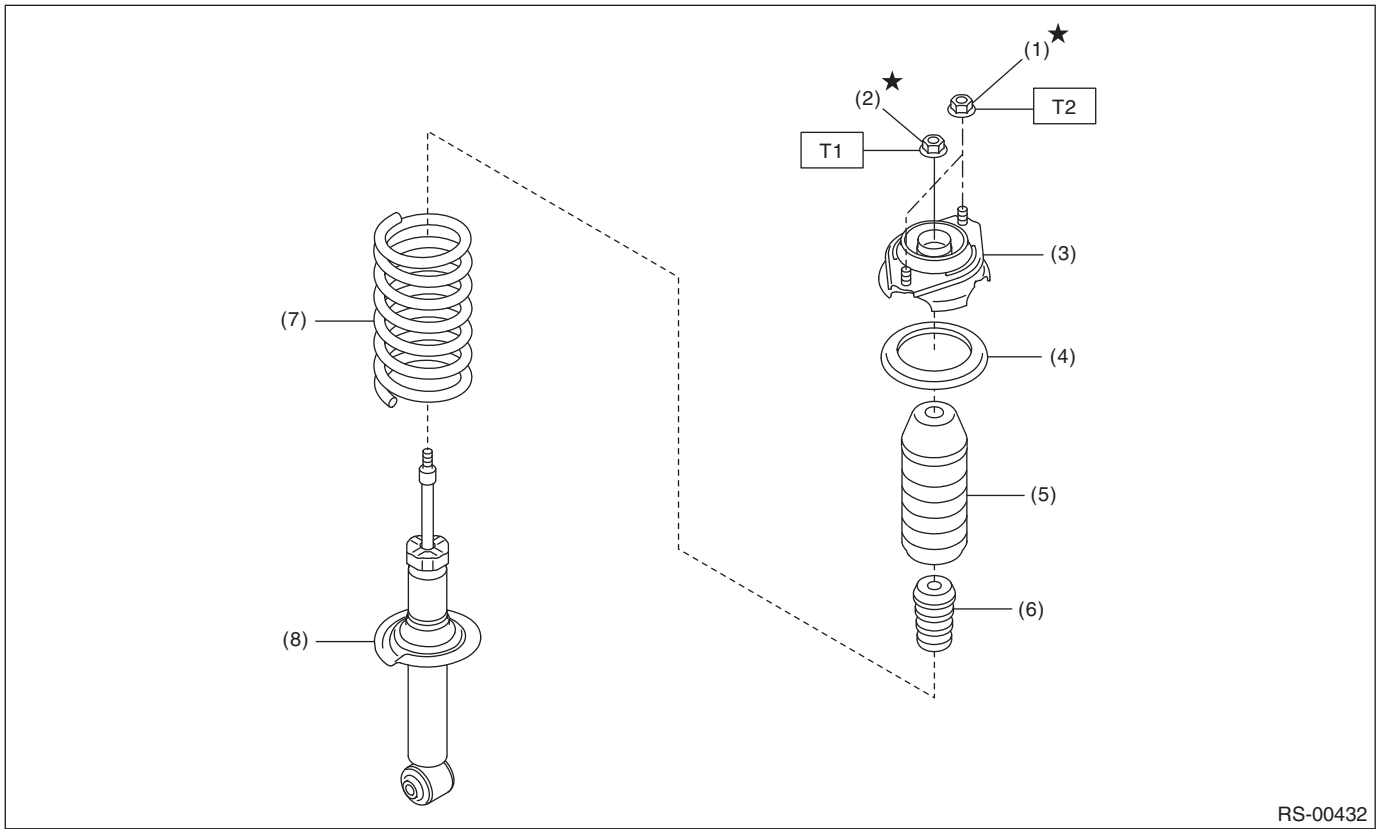
A – B = Positive: Toe-in, Negative: Toe-out



α = Individual toe angles

B: COMPONENT

1. REAR SUSPENSION



(1)	Rear sub frame ASSY	(11)	Support - sub frame	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear sub frame stopper upper (sedan model)	(12)	Flange nut	***T1: 33 (3.4, 24.3)***
(3)	Rear sub frame stopper upper (OUTBACK model)	(13)	Rear stabilizer	***T2: 38 (3.9 28)***
(4)	Front sub frame support plate	(14)	Bushing - stabilizer	***T3: 70 (7.1, 51.6)***
(5)	Flange bolt A	(15)	Clamp - stabilizer bushing	***T4: 80 (8.2, 59)***
(6)	Bushing A - trailing link	(16)	Stabilizer link	***T5: 120 (12.2, 88.5)***
(7)	Trailing link	(17)	Rear shock absorber ASSY	***T6: 145 (14.8, 106.9)***
(8)	Self-locking nut	(18)	Housing ASSY - rear axle	
(9)	Flange bolt B	(19)	Bushing - trailing link	
(10)	Bushing C - lateral link rear			

(1)	Rear sub frame ASSY	(8)	Housing ASSY - rear axle	(15)	Bushing - rear trailing link
(2)	Self-locking nut	(9)	Flange nut		
(3)	Adjusting bolt	(10)	Adjusting washer	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Bushing B - lateral link	(11)	Rear upper arm ASSY (sedan model)	***T1:***	***60 (6.1, 44.3)***
(5)	Lateral link ASSY - front	(12)	Rear upper arm ASSY (OUTBACK model)	***T2:***	***80 (8.2, 59)***
(6)	Snap pin	(13)	Trailing link	***T3:***	***120 (12.2, 88.5)***
(7)	Lateral link ASSY - rear	(14)	Flange bolt		

2. REAR SHOCK ABSORBER

(1)	Flange nut	(5)	Dust cover - rear shock
(2)	Self-locking nut	(6)	Helper - rear
(3)	Shock mount - rear	(7)	Coil spring - rear
(4)	Rubber seat - shock UPR	(8)	Shock absorber COMPL - rear

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 30 (3.1, 22.1)

C: CAUTION

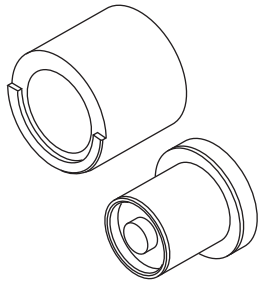
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of shock absorbers, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  – Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
  – VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.

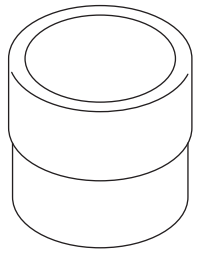
– Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
– Follow all government and local regulations concerning disposal of refuse when disposing.

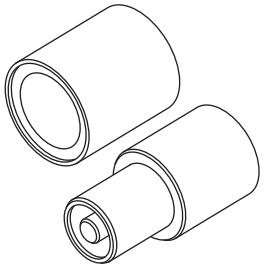
- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

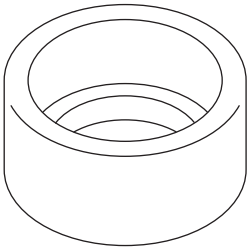
D: PREPARATION TOOL

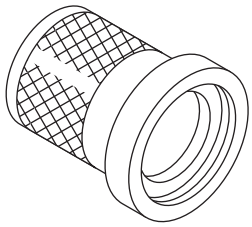
1. SPECIAL TOOL

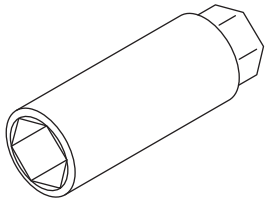


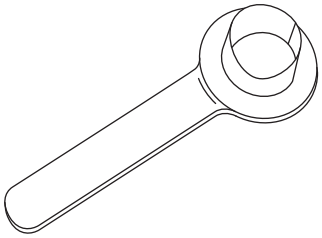


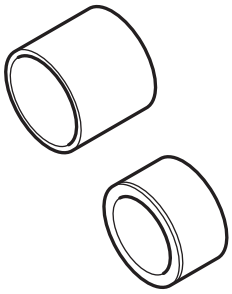












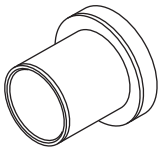


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099AE000	20099AE000	INSTALLER & REMOVER	Used for replacing the bushing B - lateral link.
 ST-499755602	499755602	PRESS	Used for replacing the bushing - rear trailing link.
 ST20099AE010	20099AE010	INSTALLER & REMOVER	Used for replacing the bushing C - lateral link rear.
 ST20299AG010	20299AG010	BASE	Used for replacing the rear trailing link bushing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899874100	899874100	INSTALLER	Used for replacing the rear trailing link bushing.
 ST20399FG000	20399FG000	STRUT MOUNT SOCKET	• Used for removing and installing shock mount - rear. • Used for checking torque of shock mount center nut.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • Used for oil seal protection.
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing of the rear housing. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing of the rear housing. • Used together with base part of INSTALLER & REMOVER (20099PA010).

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment tester	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Tie-rod ball joint puller	Used for disconnecting the lateral link assembly - front.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

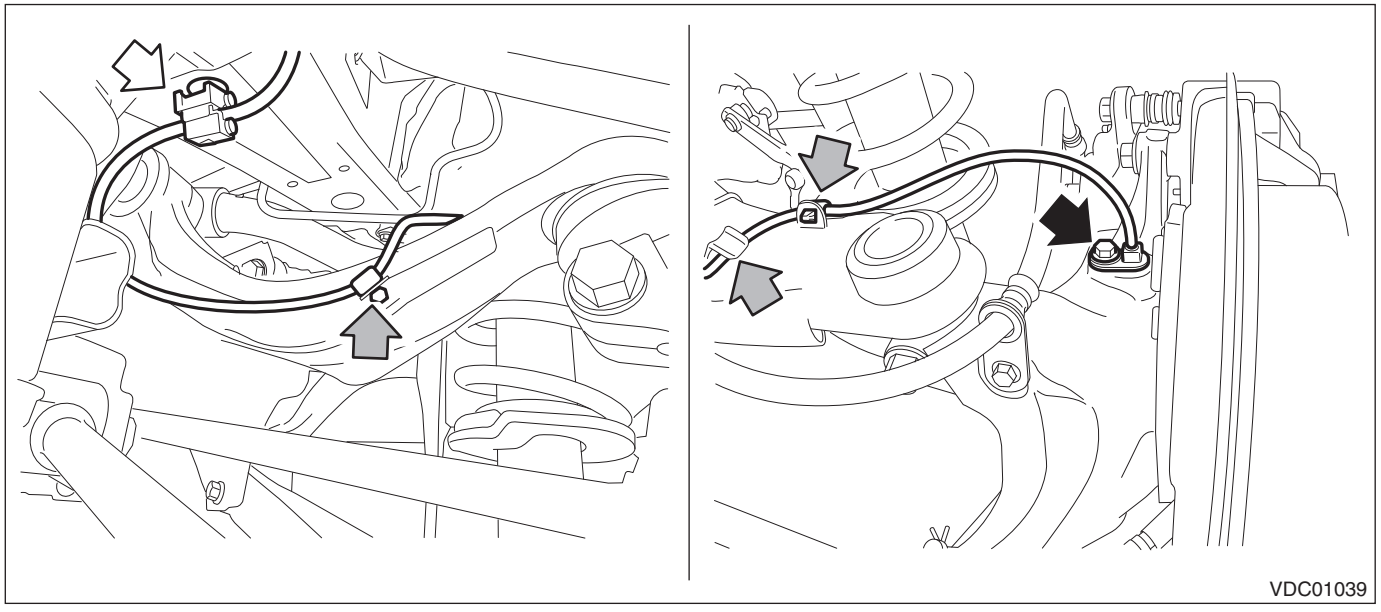
2. Wheel Alignment

A: INSPECTION

NOTE:
Measure and adjust the front and rear wheel alignment at a time. Refer to “Wheel Alignment” in FS section for measurement and adjustment of wheel alignment.

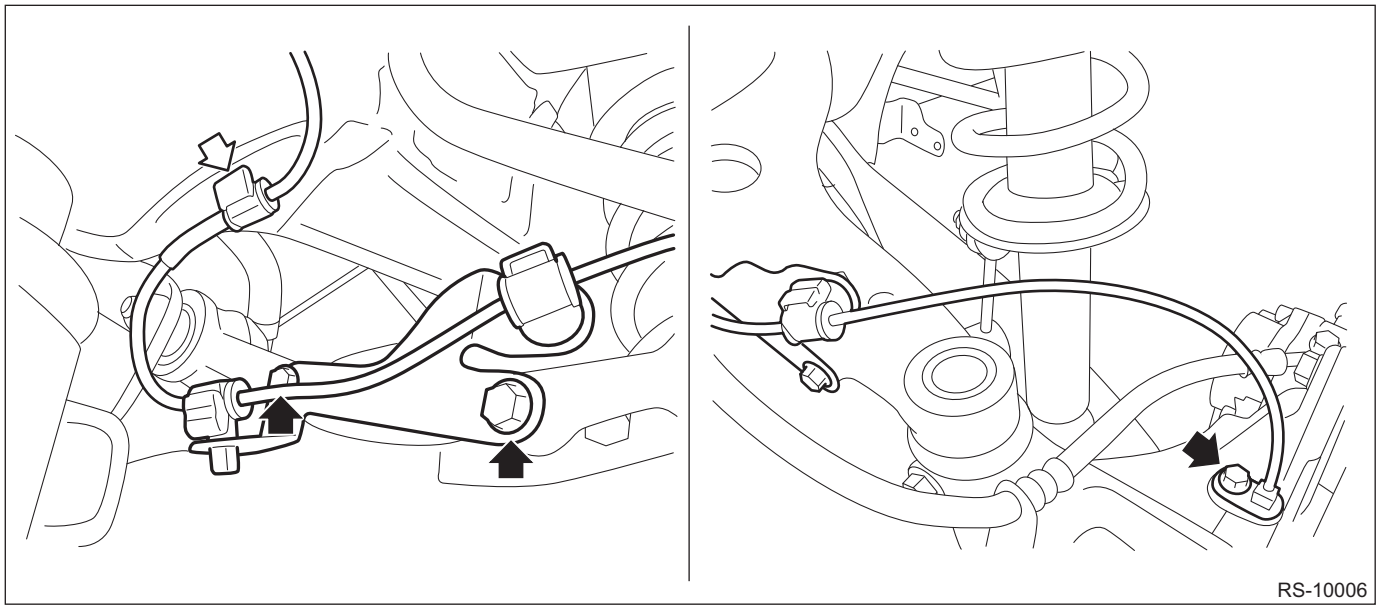
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

3. Rear Sub Frame



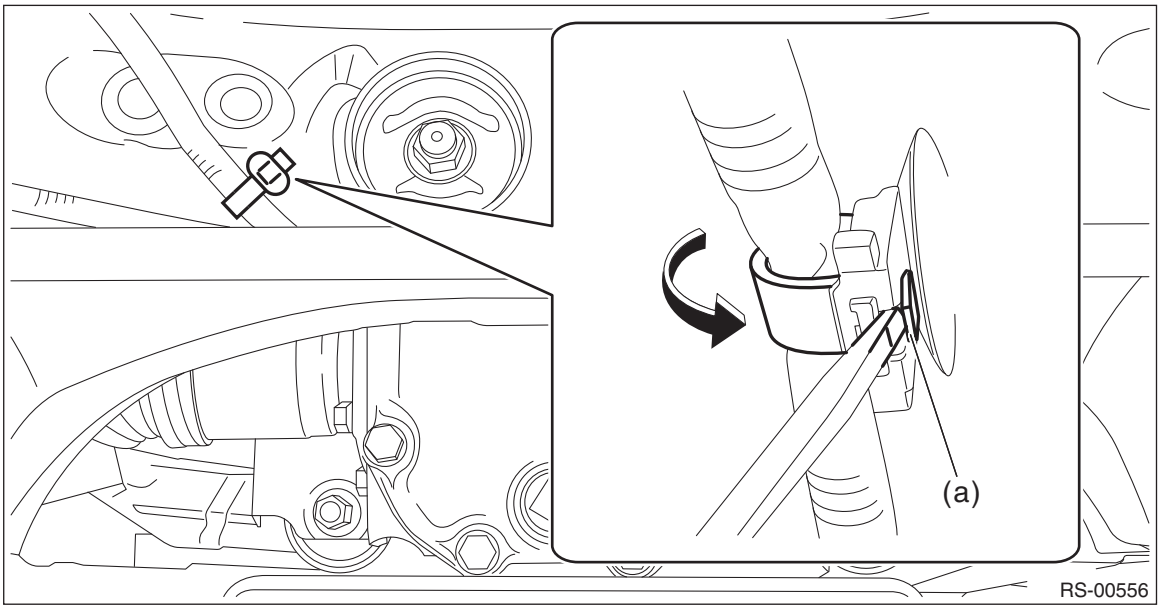
A: REMOVAL

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>



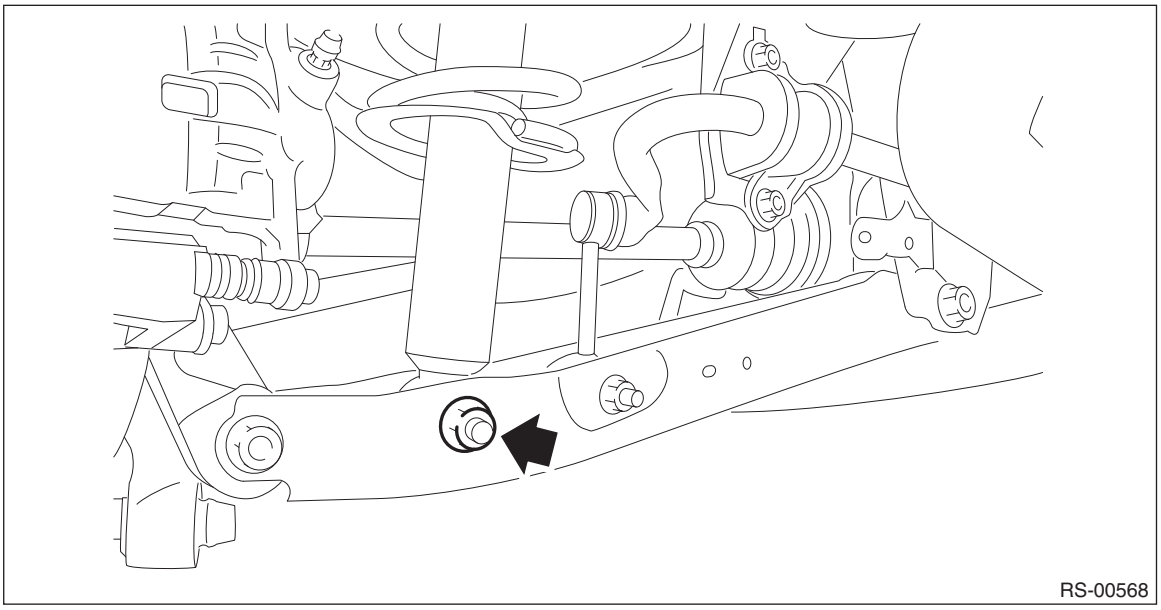
NOTE:
For detailed operation procedures, refer to “Application help”.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the rear exhaust pipe.
- H4 engine model: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- H6 engine model: <Ref. to EX(H6DO)-11, REMOVAL, Rear Exhaust Pipe.>

6) Remove the propeller shaft assembly. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
7) Remove the electronic parking brake harness. <Ref. to PB-9, REMOVAL, Parking Brake Actuator.>
8) Remove the harness clamp and bolts, and remove the rear ABS wheel speed sensor from the housing assembly - rear axle.



CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp (white arrow) on the vehicle side.**
  - **– Sedan model**

– OUTBACK model

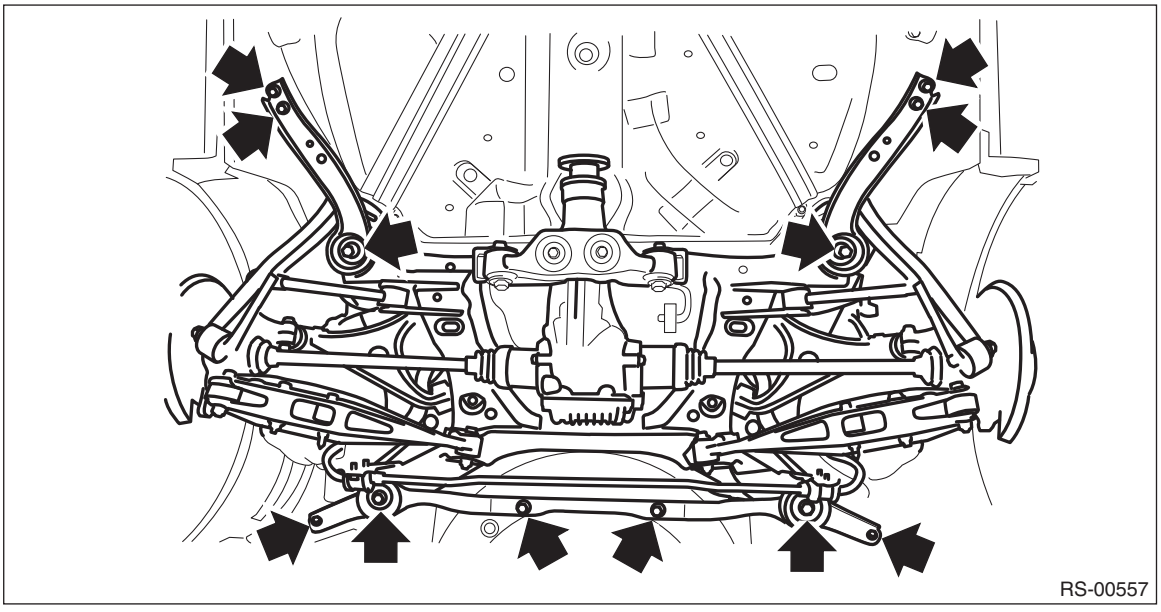


9) Remove the disc brake assembly - rear. <Ref. to BR-40, REMOVAL, Rear Disc Brake Assembly.>
10) Remove the brake hose bracket and disc brake assembly - rear.
11) Remove the sub rear harness from the clamp.
(1) Press in the clamp claw (a).
(2) Remove the clamp band, and then remove the sub rear harness.

12) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking) <Ref. to LI-93, REMOVAL, Rear Height Sensor.>
13) Remove the fuel tank protector.
- H4 engine model: <Ref. to FU(H4DO)-96, REMOVAL, Fuel Tank Protector.>
- H6 engine model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

14) Remove the rear sub frame assembly.

(1) Remove the bolts and nuts from the lower side of rear shock absorber COMPL - rear.



(2) Support the sub frame assembly using a transmission jack.

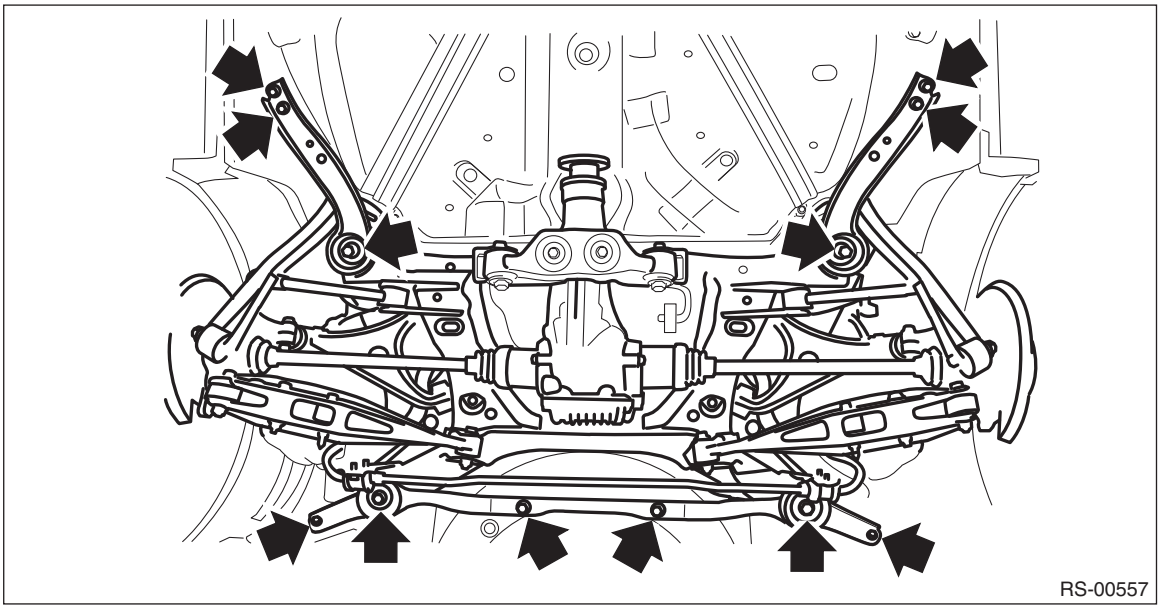
CAUTION:
The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.

(3) Remove the bolt, and remove the left and right sub frame supports and the rear sub frame support.
(4) Remove the rear sub frame assembly.

CAUTION:
While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.

15) As necessary, remove each part from the rear sub frame assembly.

B: INSTALLATION



CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.**

1) Check the removed parts for wear, damage and crack, and repair or replace them if faulty.
2) Install each part to the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

3) Install the rear sub frame assembly.
(1) Lift the rear sub frame assembly using a transmission jack.
(2) Install the right and left supports - sub frame and the rear support - sub frame, and install the rear sub frame assembly.

CAUTION:
- **The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.**
- **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

4) Install the bolts and nuts to the lower side of rear shock absorber COMPL - rear.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Install the fuel tank protector.
- H4 engine model: <Ref. to FU(H4DO)-96, INSTALLATION, Fuel Tank Protector.>
- H6 engine model: <Ref. to FU(H6DO)-99, INSTALLATION, Fuel Tank Protector.>

6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking)

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the sub rear harness.
8) Install the brake hose bracket and the disc brake assembly - rear.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Disc brake assembly - rear: 66 N·m (6.7 kgf-m, 48.7 ft-lb)

9) Install the electronic parking brake harness. <Ref. to PB-11, INSTALLATION, Parking Brake Actuator.>

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
10) Install the rear ABS wheel speed sensor and the rear ABS wheel speed sensor bracket.

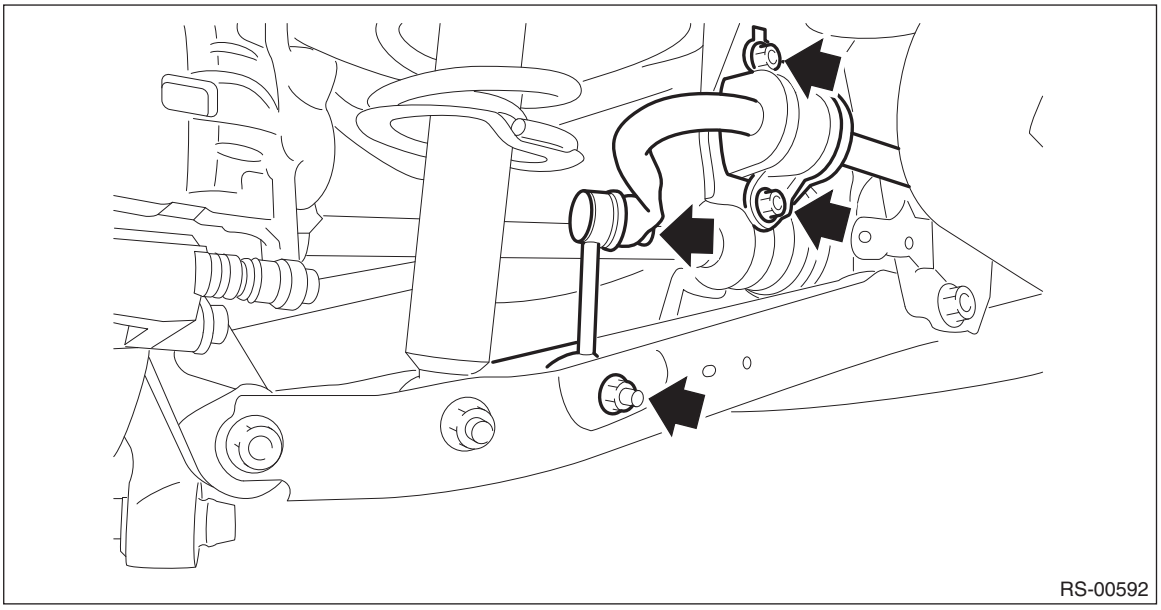
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the propeller shaft assembly. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
12) Install the rear exhaust pipe.
- H4 engine model: <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>
- H6 engine model: <Ref. to EX(H6DO)-12, INSTALLATION, Rear Exhaust Pipe.>

13) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
14) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– "VSC(VDC) Centering Mode": <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
15) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
16) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

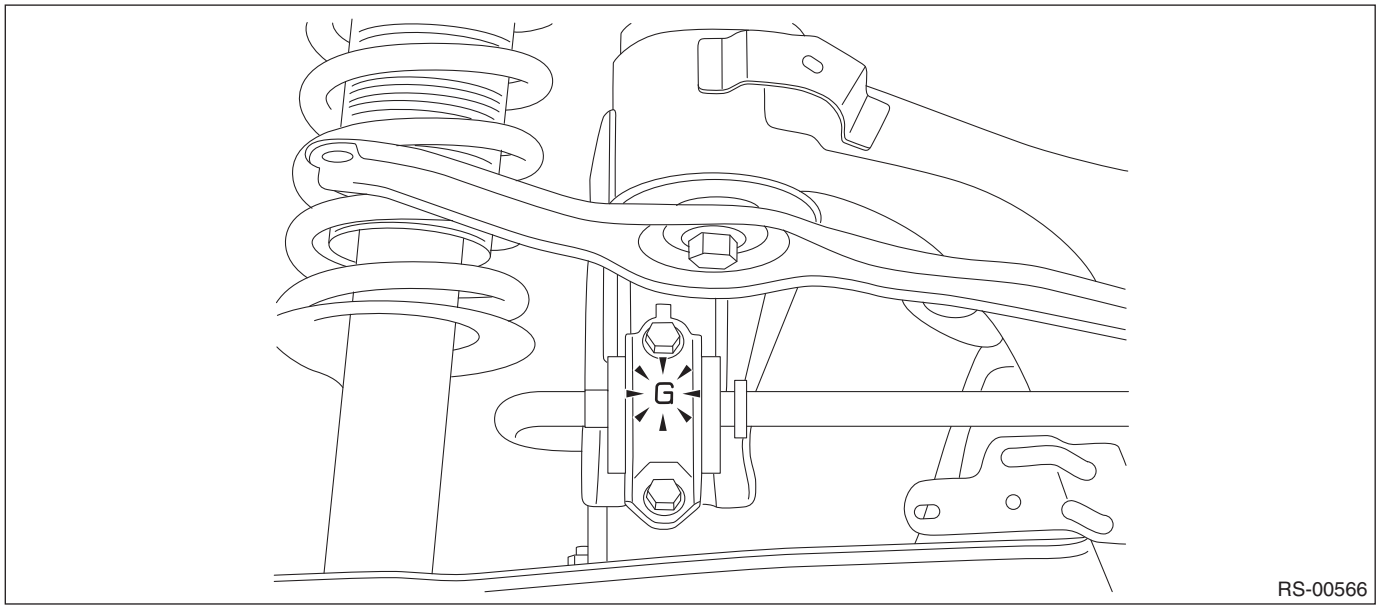
NOTE:
For detailed operation procedures, refer to "Application help".
17) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
18) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>



C: INSPECTION

Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

4. Rear Stabilizer



A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the rear stabilizer.
   (1) Remove the nut and disconnect the right and left stabilizer links.
   (2) Detach the right and left clamps - stabilizer bushing and remove the rear stabilizer.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Install the clamp - stabilizer bushing with the "G" character facing upward.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing for abnormal cracks, fatigue or damage.
- Check the stabilizer link for damage.

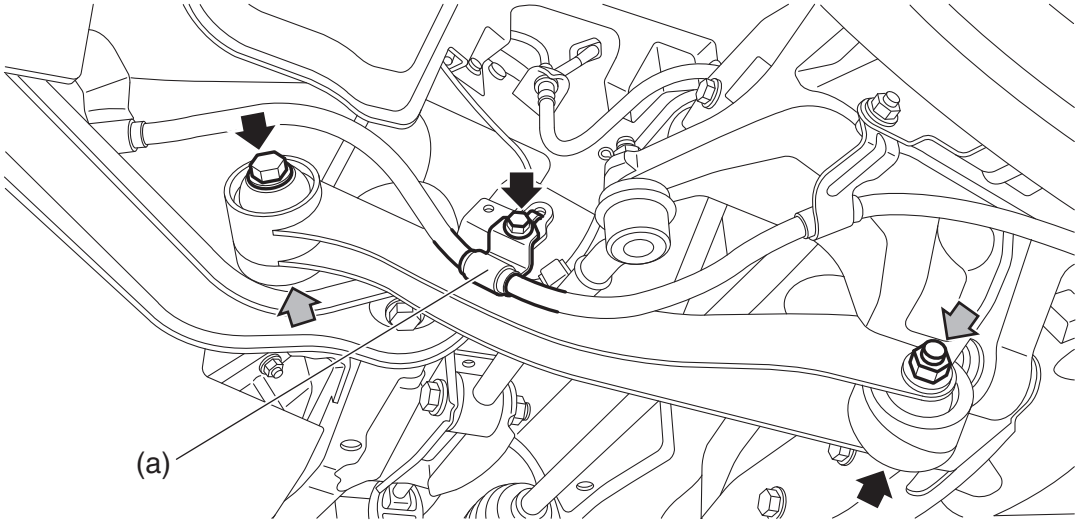
2) Install the rear stabilizer.

(1) Install the stabilizer link.

Tightening torque:
Stabilizer link: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

(2) Install the clamp - stabilizer bushing.

Tightening torque:
Clamp - stabilizer bushing: 38 N·m (3.9 kgf-m, 28 ft-lb)



3) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. Rear Trailing Link

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the trailing link.
   (1) Remove the bolts, and remove the bracket - parking brake cable (a) from the trailing link.
   (2) Remove the bolts and nuts, and then remove the trailing link.

RS-00552

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

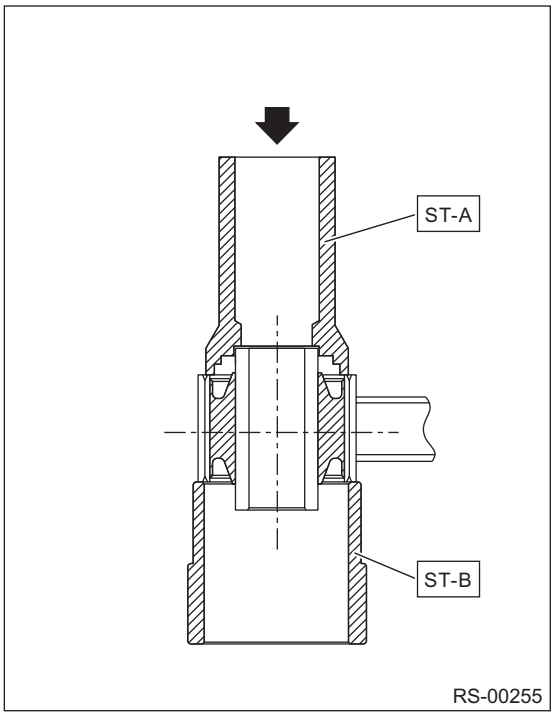
1) Install the trailing link.

Tightening torque:
Trailing link — rear sub frame assembly: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Trailing link — rear axle housing: 80 N·m (8.2 kgf-m, 59 ft-lb)

2) Install the bracket - parking brake cable.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

3) Install the rear wheels and lower the vehicle.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

1. BUSHING A - TRAILING LINK

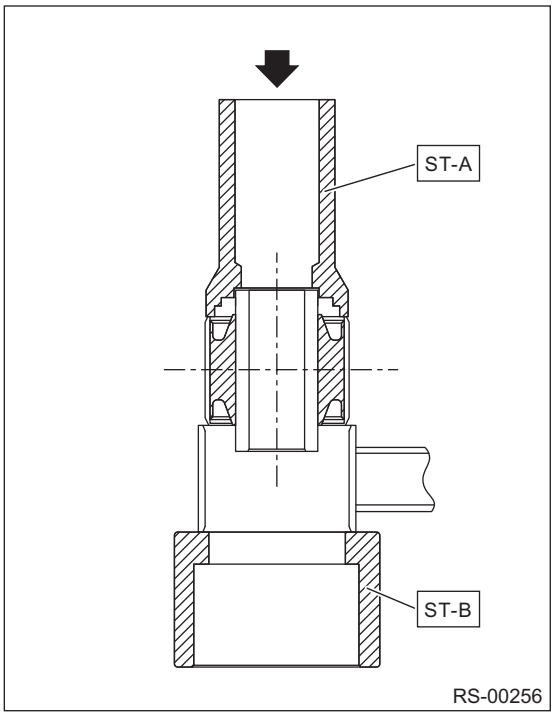
Using the ST, push out the bushing A - trailing link.

Preparation tool:
ST-A: INSTALLER (899874100)
ST-B: PRESS (499755602)

2. BUSHING - TRAILING LINK

For the removal procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-31, REAR BUSHING, DISASSEMBLY, Rear Axle.>

D: ASSEMBLY



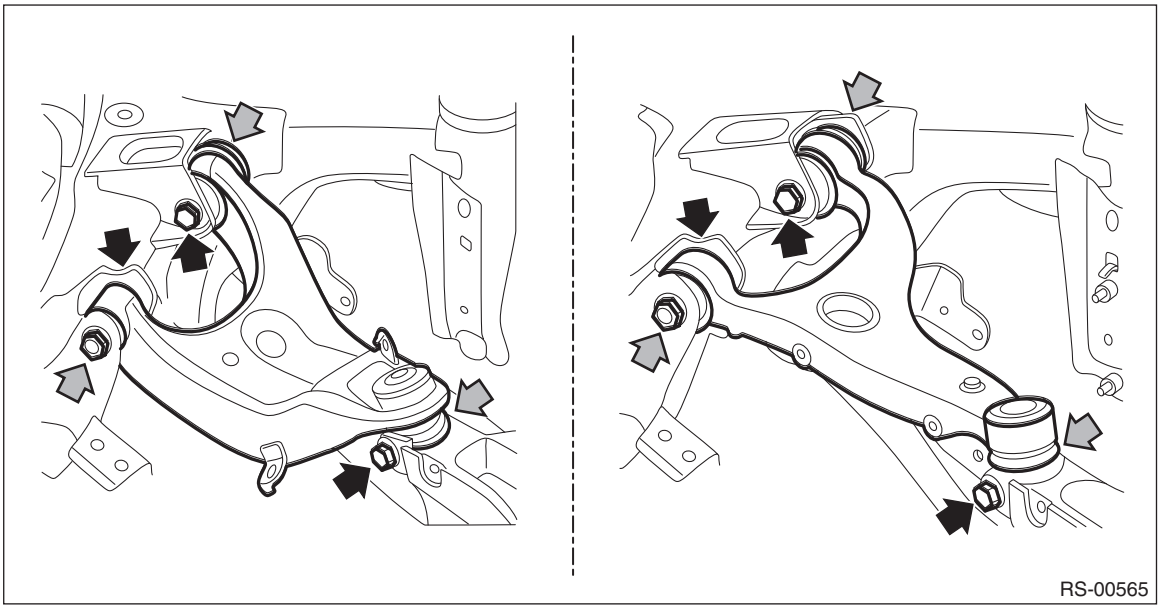
1. BUSHING A - TRAILING LINK

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST-A and ST-B, press-fit the bushing.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST-A: INSTALLER (899874100)
ST-B: BASE (20299AG010)



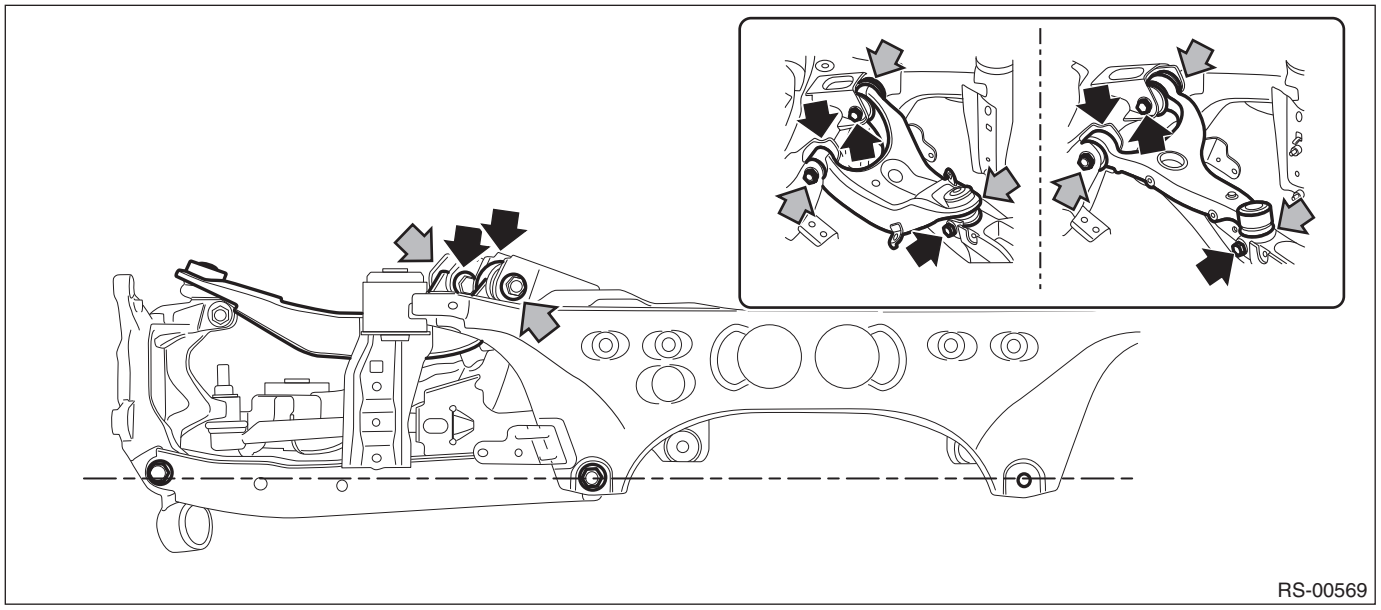
2. BUSHING - TRAILING LINK

For the installation procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-32, ASSEMBLY, Rear Axle.>

6. Upper Arm

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear sub frame assembly. <Ref. to RS-11, REMOVAL, Rear Sub Frame.>
4) Remove the bolts, then remove the rear upper arm assembly from the rear sub frame assembly.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing when the arm is positioned in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the upper arm assembly for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install the upper arm assembly.
   (1) Make the installation sections of the rear lateral link assembly (the bolt on the housing assembly - rear axle side and the bolt on the rear sub frame assembly side) horizontal.

(2) Install the upper arm assembly to the rear sub frame assembly.

Tightening torque:
Upper arm assembly — rear sub frame assembly: 80 N·m (8.2 kgf-m, 59 ft-lb)

3) Connect the upper arm assembly and the housing assembly - rear axle.

Tightening torque:
Upper arm assembly — housing assembly - rear axle: 80 N·m (8.2 kgf-m, 59 ft-lb)

4) Install the rear sub frame assembly. <Ref. to RS-13, INSTALLATION, Rear Sub Frame.>
5) Install the rear wheels and lower the vehicle.

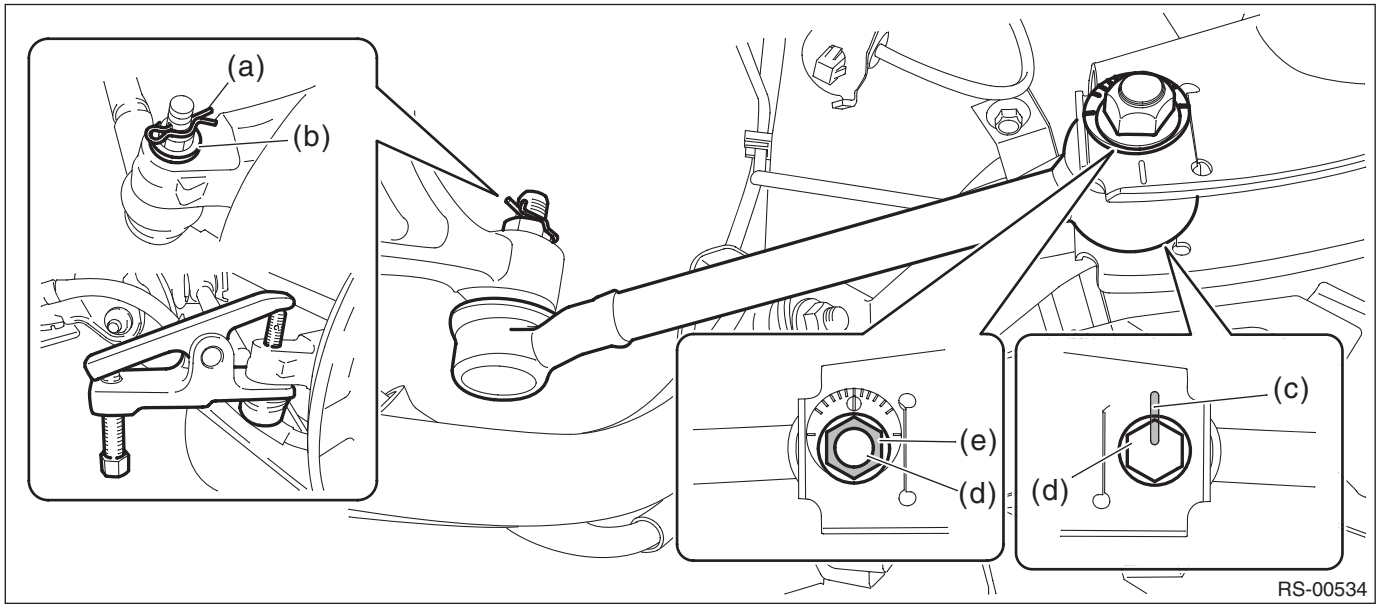
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– "VSC(VDC) Centering Mode": <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>

7. Front Lateral Link



A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the trailing link. <Ref. to RS-18, REMOVAL, Rear Trailing Link.>
3) Remove the lateral link assembly - front.
   (1) Remove the snap pin (a) and nut (b).
   (2) Remove the ball joint from the housing assembly - rear axle.

Preparation tool:
Tie-rod ball joint puller

   (3) Scribe alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.
   (4) Remove the adjusting bolt (d), and remove the lateral link assembly - front.

CAUTION:
• When removing the adjusting bolt (d), make sure to fix the bolt head in place when loosening the nut (e).
• Use a suitable tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

B: INSTALLATION

CAUTION:
• For parts which are not reusable, always use new parts.
• Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - front.

CAUTION:
• When installing the adjusting bolt (d), make sure to fix the bolt head in place and tighten the nut side (e).
• Align alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

3) Install the trailing link.

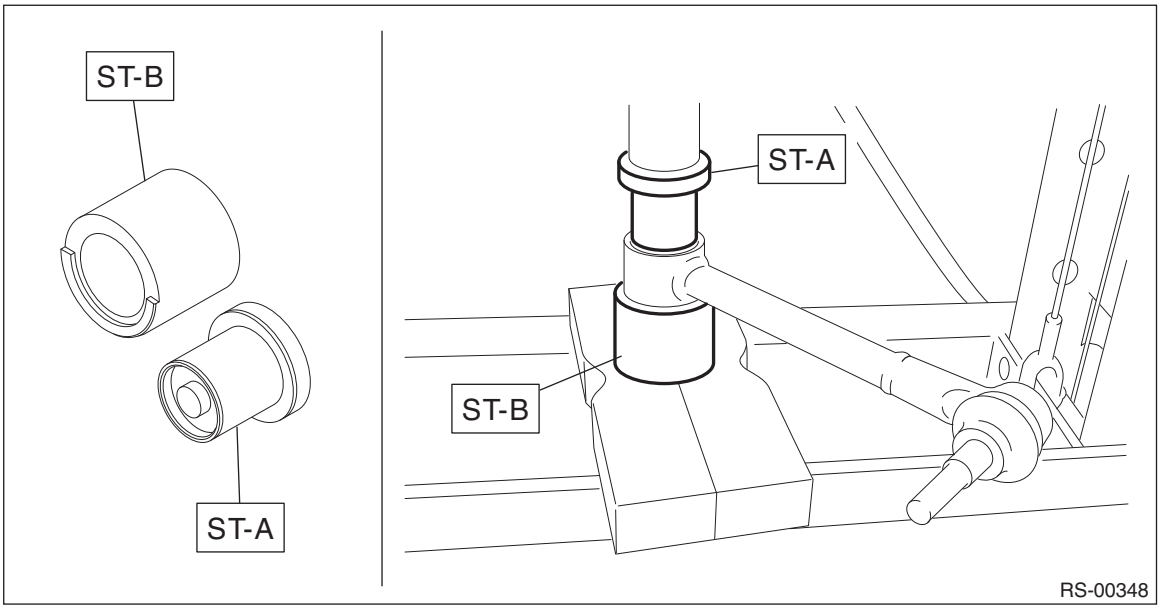
Tightening torque:
Trailing link — rear sub frame assembly: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Trailing link — rear axle housing: 80 N·m (8.2 kgf-m, 59 ft-lb)

4) Install the bolt and install the bracket - parking brake cable.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



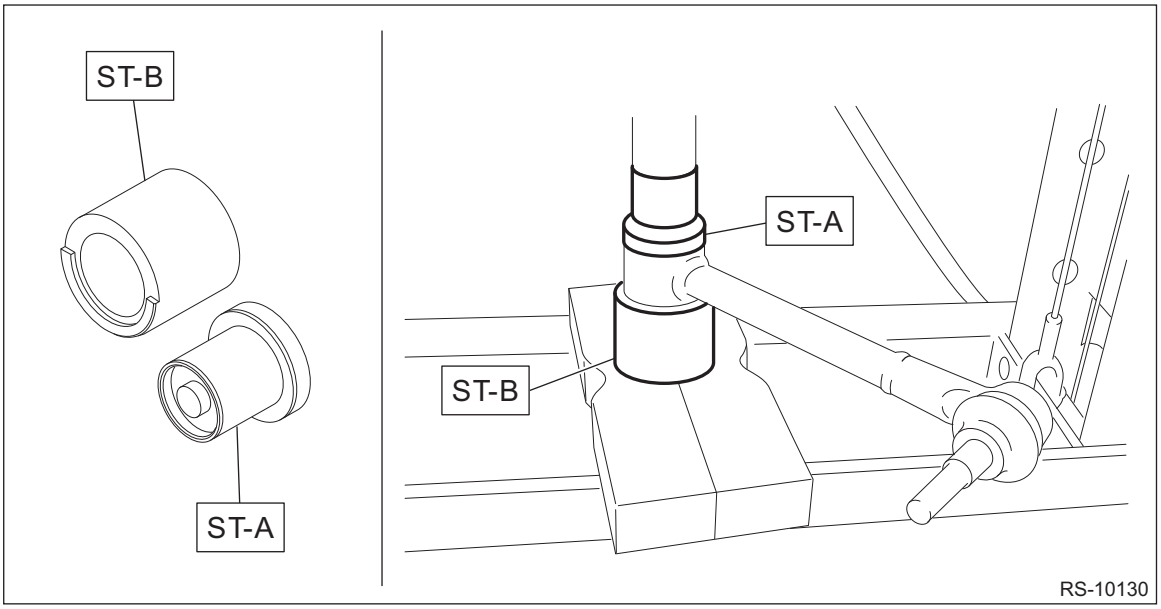
6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– "VSC(VDC) Centering Mode": <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: DISASSEMBLY

Using the ST, push out the bushing B - lateral link.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

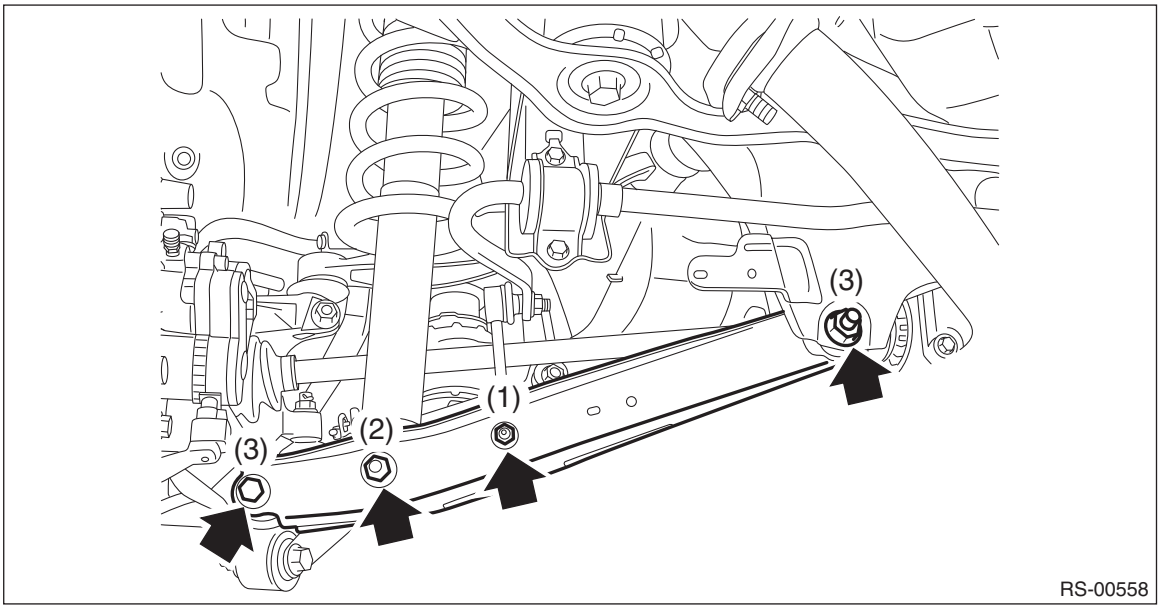


D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.

2) Using the ST, press the bushing into place.

CAUTION:
Make sure to press the bushing straight in.



Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

8. Rear Lateral Link

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking) <Ref. to LI-93, REMOVAL, Rear Height Sensor.>
4) Remove the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link.
   (2) Remove the bolts and nuts, and remove the lower side of rear shock absorber assembly.
   (3) Remove the bolts and nuts, and remove the lateral link assembly - rear.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - rear.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

3) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking)

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

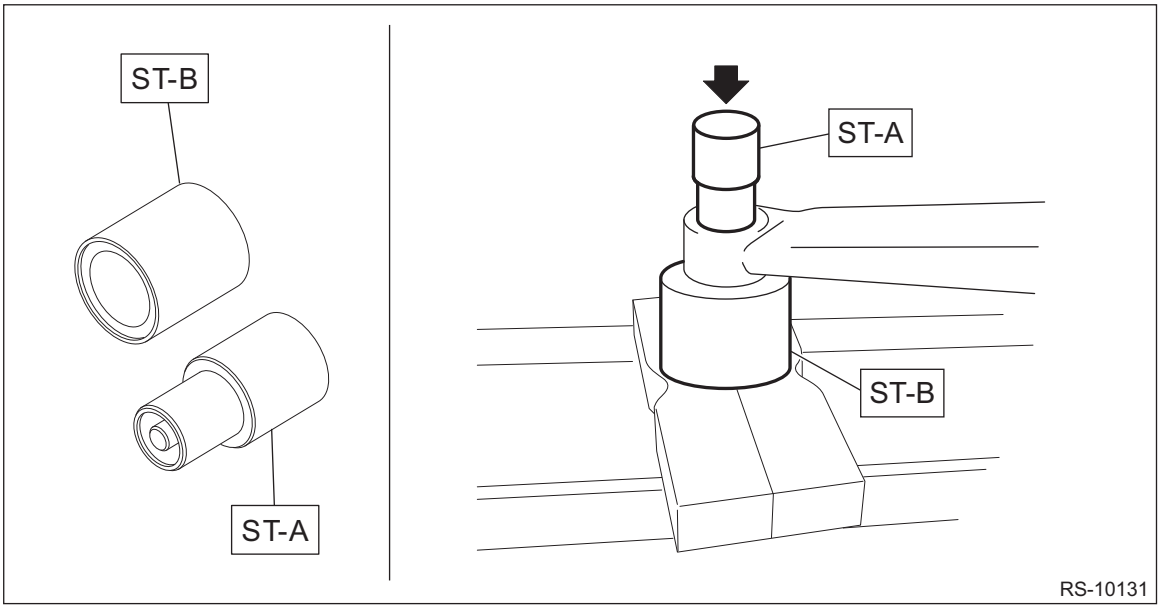
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6) Inspect the wheel alignment and adjust if necessary. <Ref. to FS-10, INSPECTION, Wheel Alignment.>



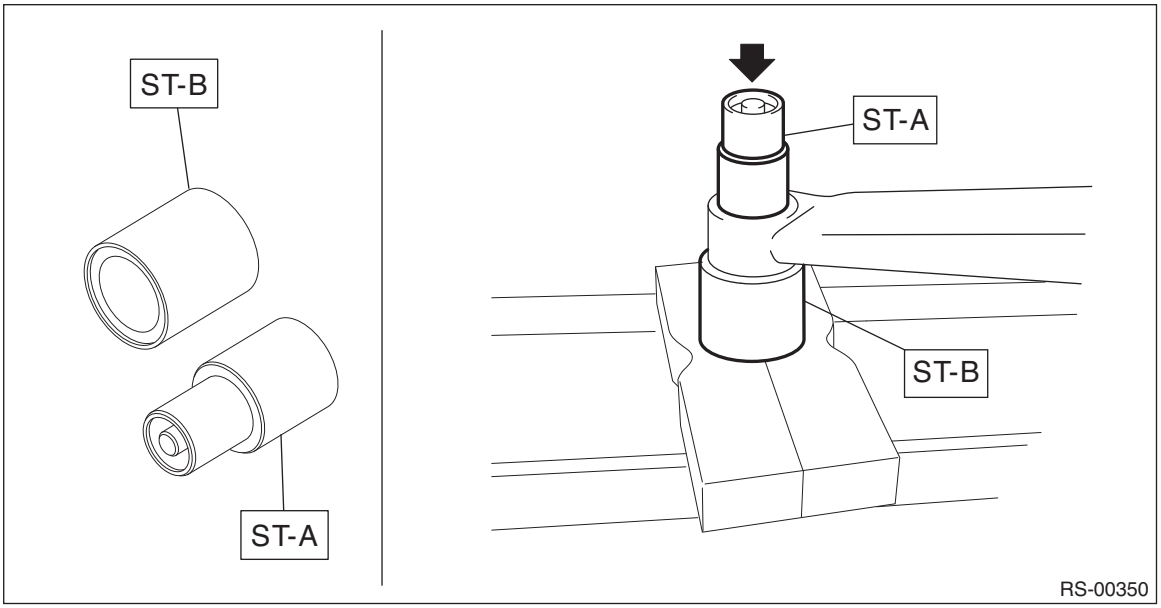
CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– "VSC(VDC) Centering Mode": <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

Using the ST, push out the bushing.

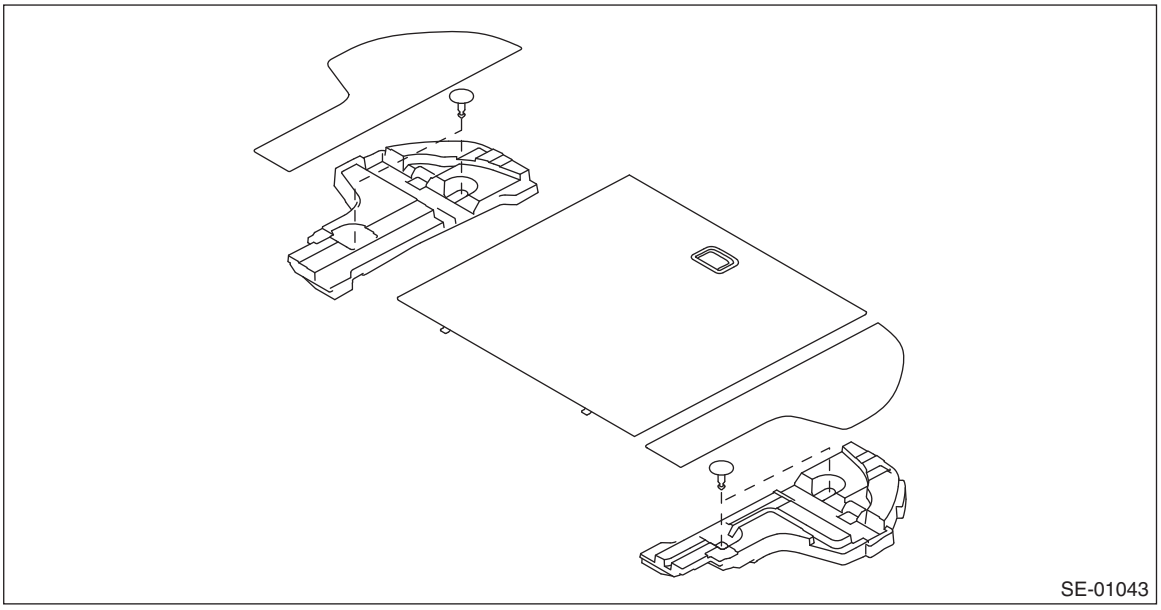
Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE010)



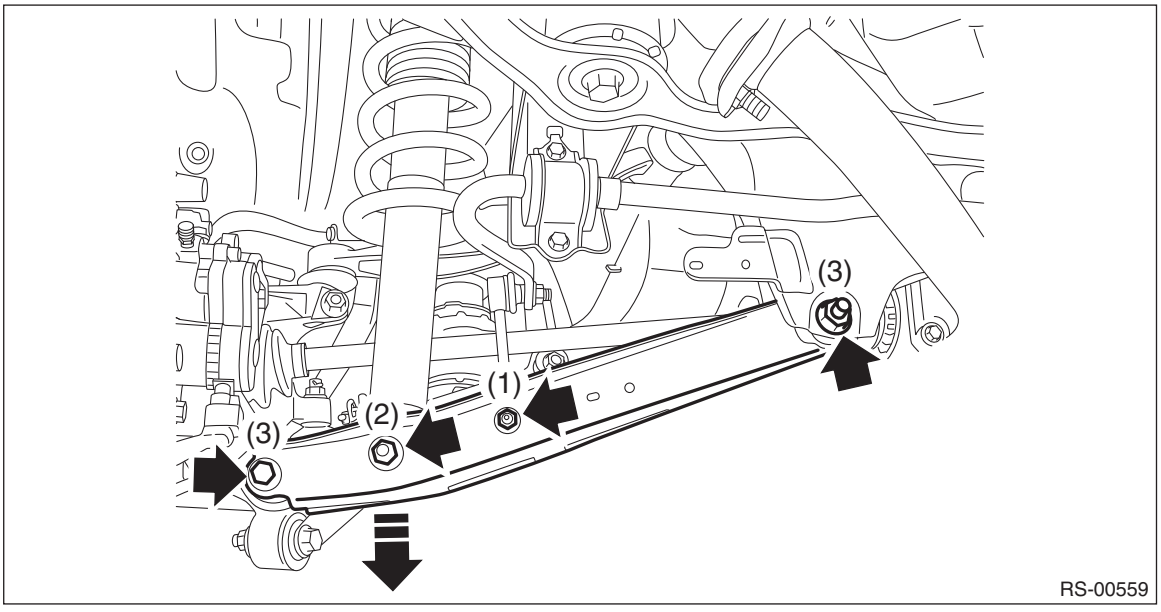
D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST, press the bushing into place.



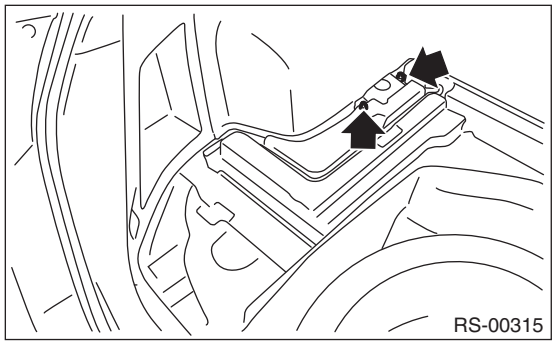
Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE010)



9. Rear Shock Absorber

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk trim panel assembly - side (sedan model) or rear floor mat (OUTBACK model).
- Sedan model: <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
- OUTBACK model: Remove the rear floor mat and the spacer - rear floor mat.



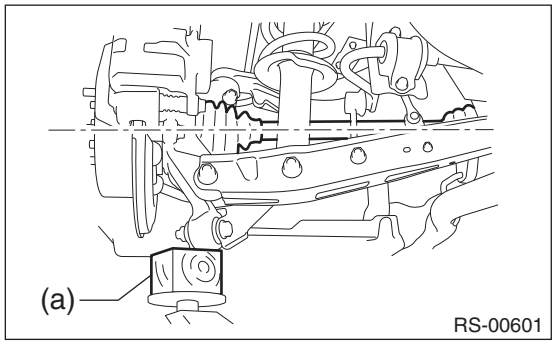
SE-01043

3) Lift up the vehicle, and then remove the rear wheels.
4) Remove the bolts and nuts, and lower the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link.
   (2) Remove the bolts from the lower side of rear shock absorber assembly.
   (3) Disconnect the lateral link assembly - rear.

RS-00559

5) Remove the nut of shock mount - rear.

6) Remove the rear shock absorber assembly.



B: INSTALLATION

CAUTION:
- **Be sure to use a new flange nut and self-locking nut.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Install the nut of shock mount - rear.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

2) Lift the lateral link assembly - rear, and temporarily tighten the bolts and nuts.
   (1) Temporarily tighten the lateral link assembly - rear.
   (2) Temporarily tighten the bolts on the lower side of the rear shock absorber assembly.
   (3) Temporarily tighten the rear stabilizer link.
3) Using a jack and a wooden block, apply a load so that the rear drive shaft assembly is level.

(a) Wooden block

4) Tighten the lateral link assembly - rear.

Tightening torque:
80 N·m (8.2 kgf-m, 59 ft-lb)

5) Tighten the bolts on the lower side of the rear shock absorber assembly.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6) Tighten the rear stabilizer link.

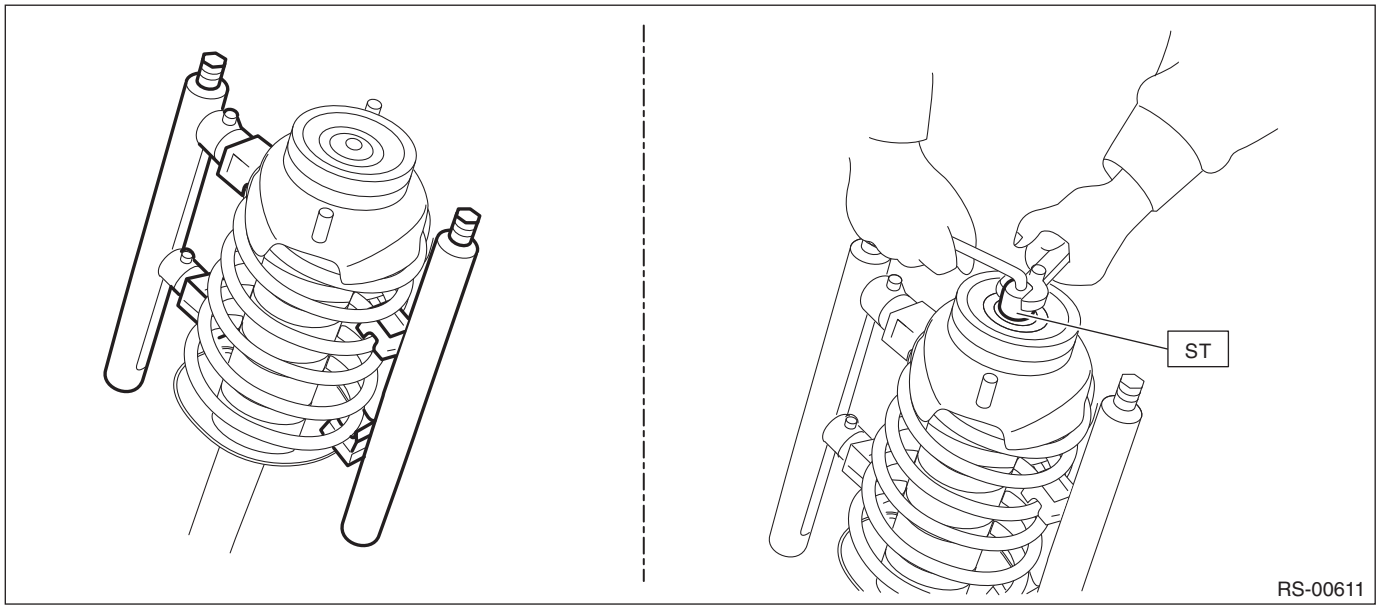
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

7) Install the trunk trim panel assembly - side (sedan model) or rear floor mat (OUTBACK model).
- Sedan model: <Ref. to EI-108, INSTALLATION, Trunk Room Trim.>
- OUTBACK model: Install the rear floor mat and the spacer - rear floor mat.

8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
9) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
10) Check the wheel alignment and adjust it if necessary. <Ref. to FS-10, INSPECTION, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– "VSC(VDC) Centering Mode": <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



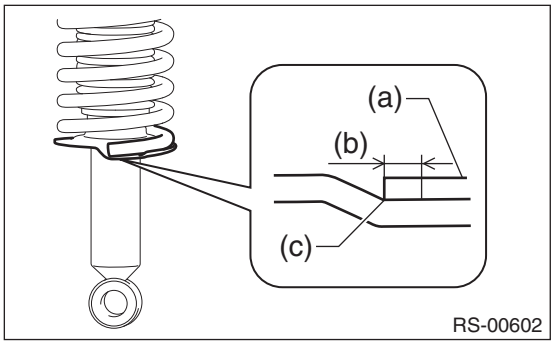
C: DISASSEMBLY

1) Using a coil spring compressor, compress the coil spring.
2) Using a hexagon wrench to prevent the shock absorber piston rod from turning, remove the self-locking nut with ST.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399FG000)

NOTE:
<Example of coil spring compressor installation>
The installing position of coil spring compressor varies depending on the coil spring shape and winding number.

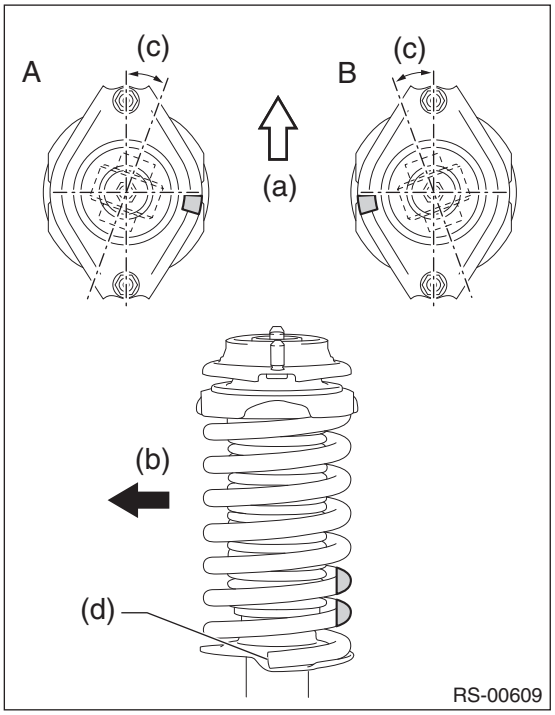


3) Remove the rubber seat - shock UPR and shock mount - rear from the shock absorber COMPL - rear.
4) Gradually decrease the compression pressure of compressor, and remove the coil spring - rear.
5) Remove the helper - rear and the dust cover - rear shock.

D: ASSEMBLY

1) Before assembly, check each part. <Ref. to RS-33, INSPECTION, Rear Shock Absorber.>
2) Using a coil spring compressor, compress the coil spring - rear.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.



3) Install by aligning with the edge surface of the coil spring - rear and the stopper portion of the lower side spring seat.

(a) Coil spring - rear
(b) 0+10 mm (0+0.4 in)
(c) Spring seat stopper portion

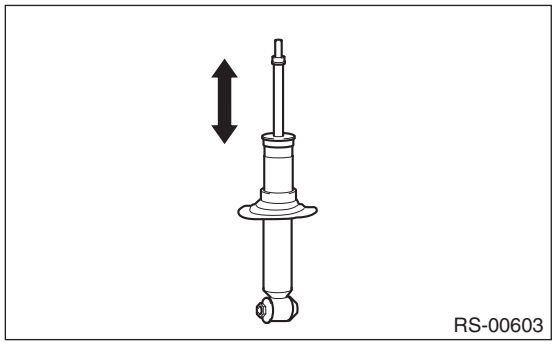
4) Install the helper - rear and the dust cover - rear shock to the piston rod.
5) Fully pull up the piston rod in the upward direction.
6) Temporarily tighten the rubber seat - shock UPR and the shock mount - rear with new self-locking nuts.

NOTE:
Position the shock mount - rear as shown in the figure.

A LH side
B RH side

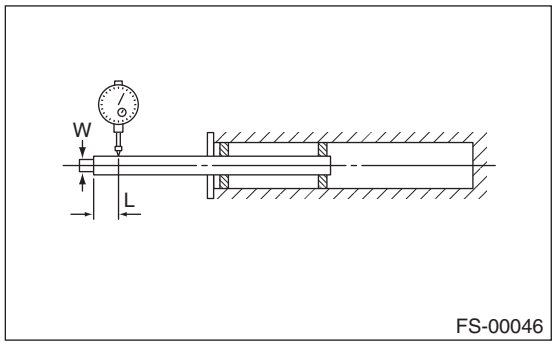
(a) Front side of vehicle
(b) Vehicle outside
(c) 0°±10°
(d) End portion of coil spring - rear

7) Using a hexagon wrench to prevent the shock absorber piston rod from turning, tighten the new self-locking nut with ST.



CAUTION:
Make sure that the shock mount - rear turns smoothly after tightening.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399FG000)

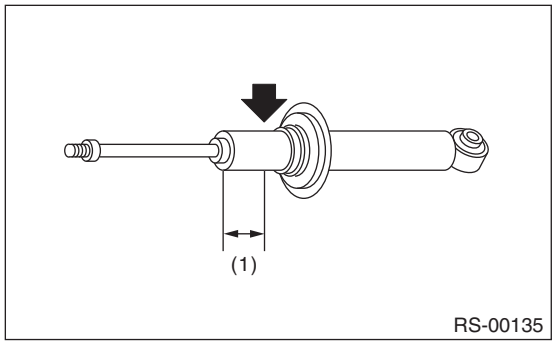


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
8) Loosen the coil spring compressor carefully.

E: INSPECTION

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.

3) Check the piston rod for play as follows:
1. Fix the outer shell in place and fully extend the rod.
2. Set the dial gauge on the end of the rod L [10 mm (0.39 in)].
3. While applying a force of W [20 N (2 kgf, 4 lbf)] to the threaded part, read the dial gauge indication P_1.
4. Apply a force of 20 N (2 kgf, 4 lbf) from the opposite direction of “W”, and then read the dial gauge indication P_2.



Play limit (P_1 + P_2): 0.8 mm (0.031 in)

F: DISPOSAL

CAUTION:
• Before handling the shock absorber, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the shock absorber or place it into a fire.
• Drill a hole into shock absorbers in case of discarding shock absorbers filled with gas.
1) Place the shock absorber on a level surface with the piston rod fully expanded.

2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

10.General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damaged coil spring	Replace.
(2) Rough operation of shock absorber COMPL	Replace.
(3) Installation of the wrong shock absorber assembly	Replace with proper parts.
(4) Installation of the wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping

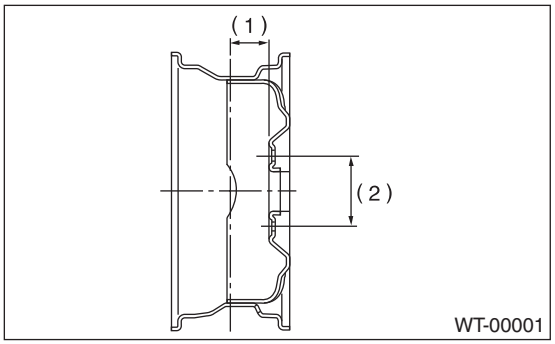
Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of shock absorber assembly	Replace.
(5) Damage or deformation of shock mount - rear	Replace.
(6) Unsuitable length (maximum or minimum) of shock absorber assembly	Replace with appropriate parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper - rear in shock absorber	Replace.
(9) Oil leakage from the shock absorber COMPL	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of shock absorber assembly component parts	Replace.
(2) Loosening of the suspension link or arm installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the stabilizer clamp	Replace.

WHEEL AND TIRE SYSTEM

WT



Page

1. General Description 2
2. Tire and Wheel 6
3. Temporary Tire 8
4. Tire Pressure Monitoring System 9
5. Full Wheel Cap 12
6. General Diagnostic Table 13

1. General Description

A: SPECIFICATION

1. NOTE

(1) Inset
(2) P.C.D.

NOTE:
Size and inflation pressure of the standard equipment tire, temporary tire and appropriate tire for equipment are described on the “Tire inflation pressure” label attached to the body side of the driver’s door.

2. STANDARD EQUIPMENT TIRE & WHEEL

• Sedan model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
225/50R18 95H	18 × 7 $^1/_2$J	55 (2.17)	114.3 (4.5)	230 (2.3, 33)	220 (2.2, 32)
225/55R17 97V	17 × 7 $^1/_2$J 17 × 7J				

• OUTBACK model

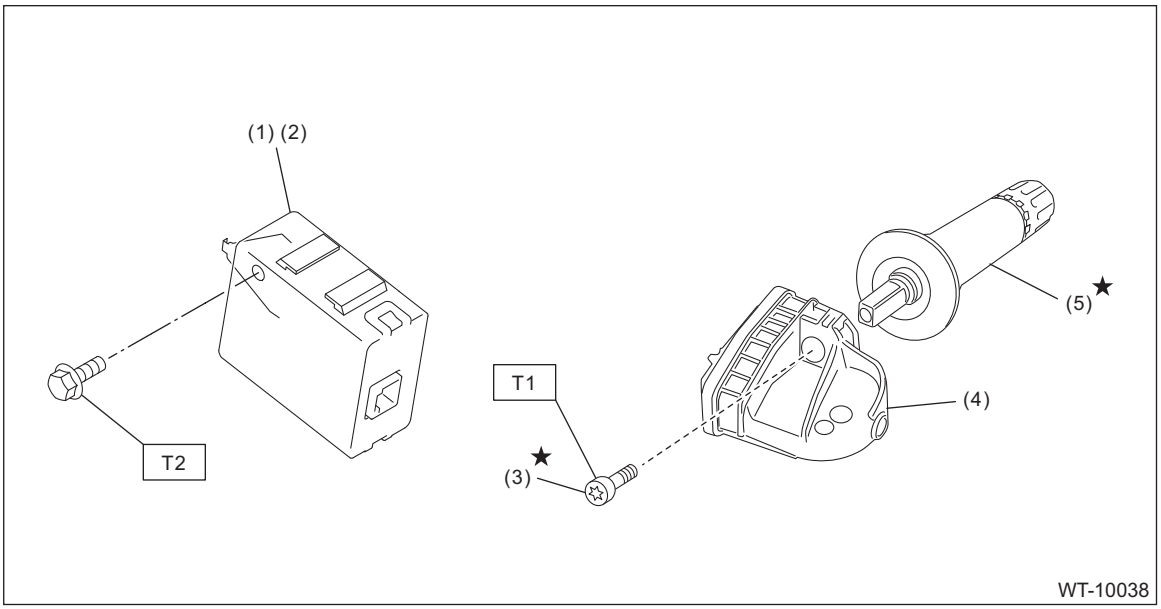
Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
225/60R18 100H	18 × 7J	55 (2.17)	114.3 (4.5)	240 (2.4, 35)	230 (2.3, 33)
225/65R17 102H	17 × 7J				

3. TEMPORARY TIRE & WHEEL

• Sedan model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
T155/70D17 110M	17 × 4T	40 (1.57)	114.3 (4.5)	420 (4.2, 60)	

• OUTBACK model



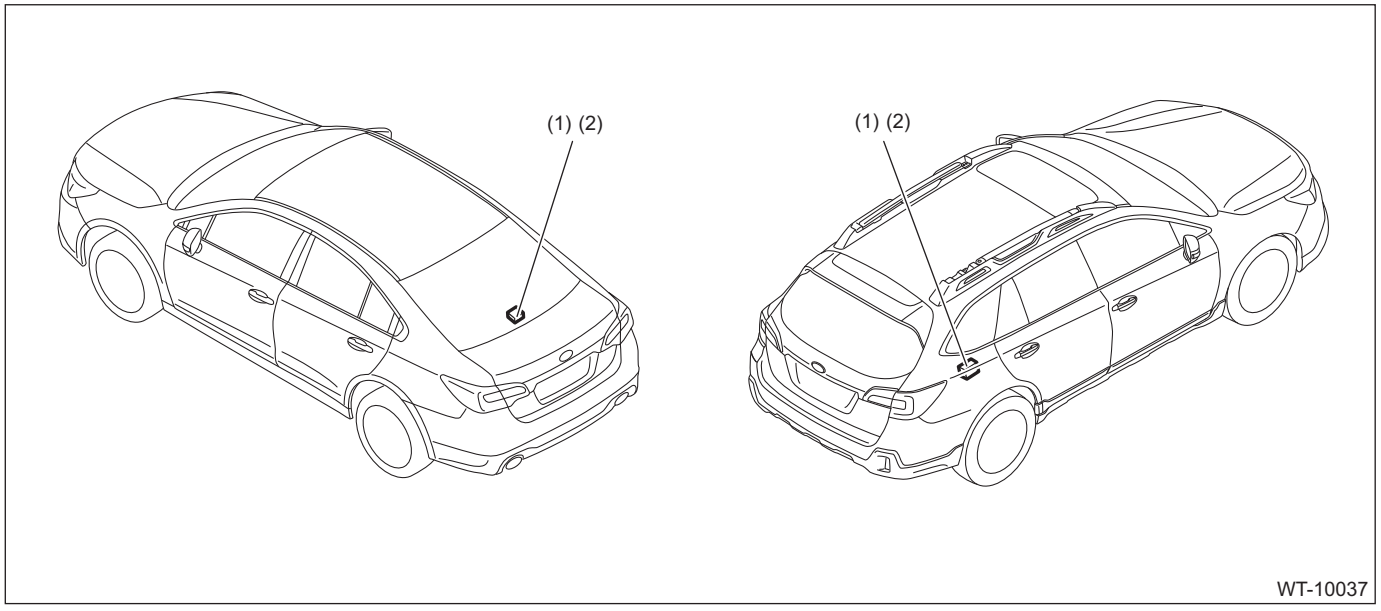
Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
T155/80R17 101M	17 × 4T	40 (1.57)	114.3 (4.5)	420 (4.2, 60)	

4. SERVICE DATA

Part	Axial runout	Radial runout
Steel wheel	1.5 mm (0.06 in)	
Aluminum wheel	1 mm (0.04 in)	

Wheel balancing	Standard	Service limit
Dynamic unbalance	5 g (0.18 oz) or less	

B: COMPONENT



(1) TPMS & keyless entry control module (model without keyless access with push button start system)
(2) TPMS CM (model with keyless access with push button start system)
(3) Screw
(4) Transmitter (snap in type)
(5) Valve

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.4 (0.1, 1)

T2: 7.5 (0.8, 5.5)

(1) TPMS & keyless entry control module (model without keyless access with push button start system)
(2) TPMS CM ASSY (model with keyless access with push button start system)

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire air pressure.
Dial gauge	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.
Circuit tester	Used for measuring resistance, voltage and current.

2. Tire and Wheel

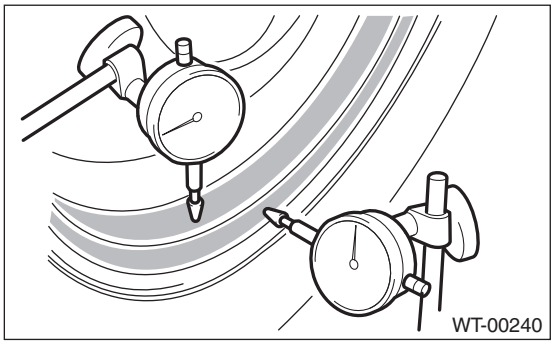
A: REMOVAL

1) Lift up the vehicle.
2) Remove the wheel nut.
3) Remove the wheels.

CAUTION:
When removing the wheels, be careful not to damage the bolt - hub.

B: INSTALLATION

1) Install the wheels to vehicle.
2) Tighten the wheel nuts to the specified torque.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1. TIRE

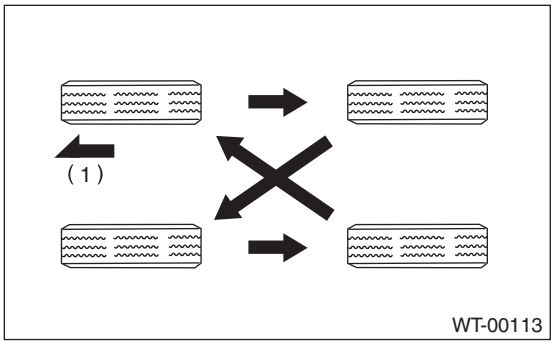
CAUTION:
When replacing a tire, make sure to use tires of the same size, construction and load range as originally installed.

1) Tire size and tire inflation pressure check <Ref. to WT-2, SPECIFICATION, General Description.>
2) Cracks, damage and wear check
3) Tire runout check
   (1) Lift up the vehicle.
   (2) Slowly rotate the wheel to check rim “runout” using a dial gauge.

- Aluminum wheel

Service limit:
Axial and longitudinal runout: 1 mm (0.04 in)

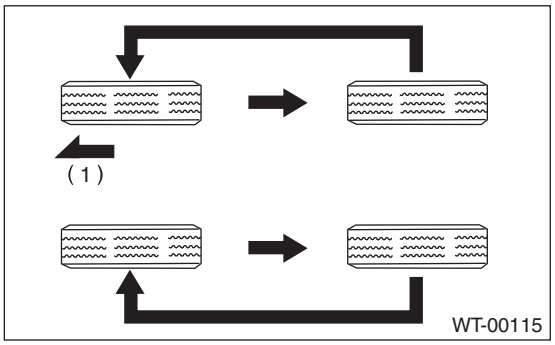
- Steel wheel



Service limit:
Axial and longitudinal runout: 1.5 mm (0.06 in)

   (3) If the rim runout exceeds service limit, replace the wheel.

2. TIRE ROTATION

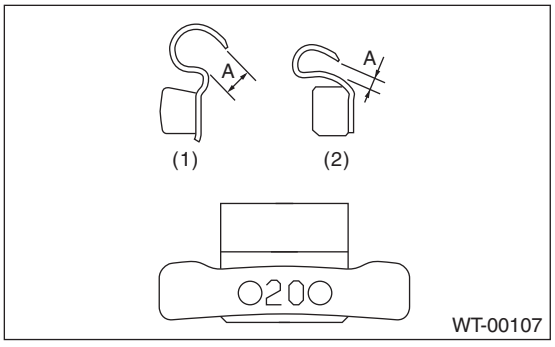


NOTE:
Rotate tires periodically (9,600 km/6,000 miles) in order to prolong life and to prevent uneven wear.
Rotate tires as shown in the figure depending on whether or not the direction of the tire rotation is specified.

- When the direction of tire rotation is not specified

(1) Front side of vehicle

- When the direction of tire rotation is specified



(1) Front side of vehicle

3. WHEEL BALANCING

1) Using the wheel balancer, measure wheel balance.
2) Adjust the wheel balancing.

NOTE:
- Unbalance after adjusting the wheel balancing should be 5 g (0.18 oz) or less.
- When using the adhesive type weight, degrease the surface where the adhesive type weight will be applied securely.
- After applying the adhesive type weight, apply a force to the weight and attain full adhesion.
- Using the knock-on type weight, check the size of the knock-on part.

(1) Knock-on type weight for aluminum wheel
(2) Knock-on type weight for steel wheel

Service limit A:
Knock-on type weight for steel wheel: 2 mm (0.08 in)
Knock-on type weight for aluminum wheel: 5 mm (0.2 in)

3. Temporary Tire

A: NOTE

"T-type" or "Temporary" tire for temporary use is equipped as a temporary tire.

CAUTION:
• The "T-type" or "Temporary" tire is only for temporary use. Replace with a standard equipment sized tire as soon as possible.
• Do not use standard sized tire chains for "T-type" or "Temporary" tires. Because tire size is small, tire chains can not be installed and will damage the vehicle and tires.
• Do not drive at a speed greater than 80 km/h (50 MPH).
• Drive the vehicle as slowly as possible and avoid bumps on the road.

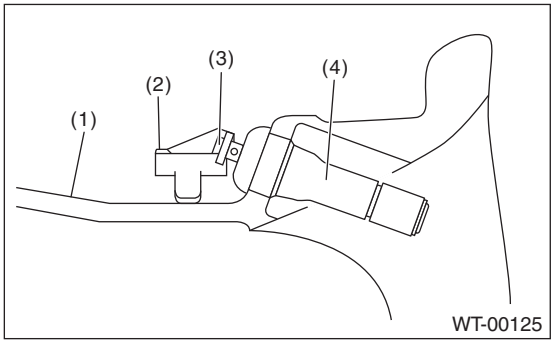
B: REPLACEMENT

Refer to "Tire and Wheel" for removal and installation of the "T-type" or "Temporary" tire. <Ref. to WT-6, Tire and Wheel.>

C: INSPECTION

Refer to "Tire and Wheel" for inspection of the "T-type" or "Temporary" tire. <Ref. to WT-6, TIRE, INSPECTION, Tire and Wheel.>

4. Tire Pressure Monitoring System



A: REMOVAL

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

1) Remove the wheels from the vehicle. <Ref. to WT-6, REMOVAL, Tire and Wheel.>
2) Remove the tires from wheels.

CAUTION:
Use a tire changer when removing the tire from the wheel.
3) Loosen the screw to remove the transmitter from the valve stem.

CAUTION:
Do not reuse the valve and screw.
Replace the valve and screw with a new part even when reusing transmitter.

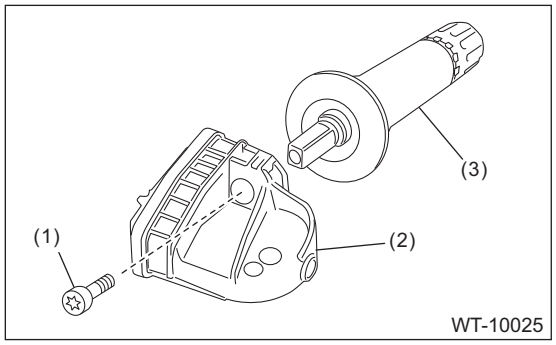
(1) Wheel
(2) Transmitter
(3) Screw
(4) Valve

4) Remove the valve from the wheel.

2. TPMS & KEYLESS CONTROL MODULE

NOTE:
• TPMS CM for model without keyless access with push button start system is integrated with the keyless entry control module.
• For installation procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-80, INSTALLATION, Keyless Entry Control Module.>
• Re-register the key and the transmitter ID when TPMS & keyless entry control module has been replaced.
  • Keyless transmitter re-registration: <Ref. to SL-86, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>
  • Transmitter ID re-registration: <Ref. to TPM(diag)-15, Register Transmitter (ID).>

3. TPMS CM



NOTE:
• TPMS CM for model with keyless access with push button start system is installed in the same position as the keyless entry control module for model without keyless access with push button start system.
• For installation procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-80, INSTALLATION, Keyless Entry Control Module.>
• Re-register the transmitter ID when the TPMS CM has been replaced. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

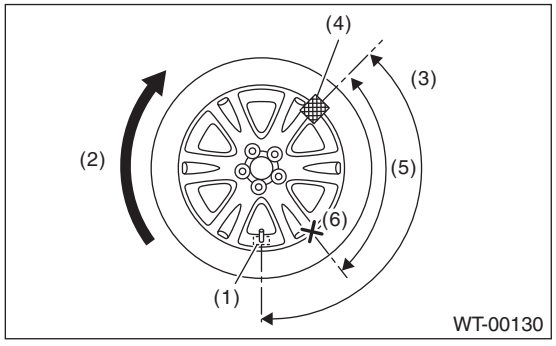
B: INSTALLATION

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

CAUTION:
Use the new transmitter assembly or replace the new valve and screw, when installing.

1) Replace the valve and screw with a new part when reusing transmitter.

(1) Screw
(2) Transmitter
(3) Valve



Tightening torque:
1.4 N·m (0.1 kgf-m, 1 ft-lb)

2) Install the transmitter to the wheel by aligning it with valve hole.

NOTE:
When using the jig that pulls the valve cap by hooking its neck part, use another short-type cap.

3) Install the tires to wheels.

CAUTION:
• Use a tire changer when installing tire to wheel.
• To prevent damaging the transmitter, set the tire changer boom in the position as shown in the figure.

(1) Transmitter
(2) Direction of turn table rotation
(3) 135°
(4) Tire changer boom
(5) 90°
(6) Starting point for fitting the bead to the rim

4) Install the wheels to vehicle. <Ref. to WT-6, INSTALLATION, Tire and Wheel.>
5) Register the transmitter ID to the TPMS & keyless control module. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

2. TPMS & KEYLESS CONTROL MODULE

NOTE:
• TPMS CM for model without keyless access with push button start system is integrated with the keyless entry control module.
• For installation procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-80, INSTALLATION, Keyless Entry Control Module.>
• Re-register the key and the transmitter ID when TPMS & keyless entry control module has been replaced.
  • Keyless transmitter re-registration: <Ref. to SL-86, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>
  • Transmitter ID re-registration: <Ref. to TPM(diag)-15, Register Transmitter (ID).>

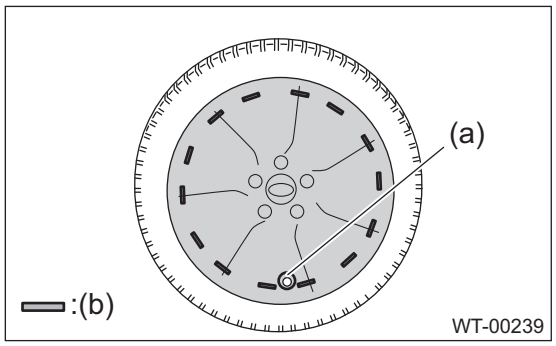
3. TPMS CM

NOTE:
• TPMS CM for model with keyless access with push button start system is installed in the same position as the keyless entry control module for model without keyless access with push button start system.
For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-79, REMOVAL, Keyless Entry Control Module.>
• Re-register the transmitter ID when the TPMS control module has been replaced. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

C: ADJUSTMENT

Re-register the transmitter ID when transmitter has been replaced. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

5. Full Wheel Cap



A: REMOVAL

Remove the full hubcap using your hands protected with gloves or the like.

NOTE:
The wheels may be damaged while removing the hubcaps, but the performance will not be impaired.

B: INSTALLATION

1) Align the valve with the valve hole (a) in the hubcap.
2) Install the hubcap by lightly tapping the claw (b).

C: INSPECTION

Check for damage on the hubcap.

6. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Wheel is out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-51, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-33, INSPECTION, Rear Shock Absorber.>
	Housing assembly - front axle	Check the housing assembly - front axle. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-38, INSPECTION, Rear Hub Unit Bearing.>
Vehicle is abnormally out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front stabilizer	Inspect the front stabilizer.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
Abnormal wheel vibration	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Housing assembly - front axle	Check the housing assembly - front axle. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-38, INSPECTION, Rear Hub Unit Bearing.>

Symptoms	Possible cause	Corrective action
Abnormal tire wear	Improperly inflated tire	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

7. Diagnostic Procedure for Subaru Select Monitor Communication 10
8. Data Monitor 13
9. Register Transmitter (ID) 15
10. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern .. 17
11. Clear Memory 21
12. Diagnostic Trouble Code (DTC) 22
13. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 24

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil, etc.) from the TPMS & keyless entry CM connector or TPMS CM connector during removal and installation.

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to TPM(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Perform the interview, and Go to step **2**.
2	**BASIC INSPECTION.** Perform the basic inspection. <Ref. to TPM(diag)-4, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair the failures from the basic inspection, and Go to step **3**.
3	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select «Tire Pressure Monitor». NOTE: For detailed operation procedures, refer to “Application help”.	Is communication possible?	Go to step **4**.	Check the communication circuit. <Ref. to TPM(diag)-10, Diagnostic Procedure for Subaru Select Monitor Communication.>
4	**CHECK DTC.** Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor.	Are any DTCs displayed? (Current malfunction)	Record the DTC, and Go to step **5**.	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
5	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis according to the displayed DTC. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).> 2) Repair or replace the cause of trouble. 3) Using the Subaru Select Monitor, perform the clear memory for «Tire Pressure Monitor». <Ref. to TPM(diag)-21, Clear Memory.> 4) Execute the inspection mode. <Ref. to TPM(diag)-9, Inspection Mode.> 5) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="2">Tire pressure monitoring check list for interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td rowspan="2">Date and time when the trouble occurred</td><td rowspan="2"></td><td rowspan="2">Frequency of trouble occurrence</td><td>Always occurs</td></tr>
<tr><td>Sometimes occurs (times per day, times per month)</td></tr>
<tr><td rowspan="2">Condition of trouble occurrence (how the trouble occurs)</td><td rowspan="2"></td><td>Weather</td><td>❑ Fine❑ Cloudy❑ Rainy❑ Snowy❑ Others</td></tr>

</table>

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Refer to “CAUTION” in AIRBAG SYSTEM for removal of airbag. <Ref. to AB(diag)-4, CAUTION, General Description.>

2. TPMS & KEYLESS ENTRY CM OR TPMS CM

• If the transmitter is replaced, ID registration for the transmitter is required. <Ref. to TPM(diag)-15, OPERATION, Register Transmitter (ID).>
• When adjusting tire pressure indoors in winter, there is a big temperature difference between the indoor facilities and outside. Once the car is outside where the temperature is lower, the air pressure in the tires will drop, causing the tire pressure warning light to illuminate, even if the pressure in the tires was adjusted to standard values indoors. To avoid this, it is necessary to adjust the tire pressure to the high side in consideration of the difference in temperature between inside and outside according to the following table.
• 225/60R18, 225/65R17

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	–1 (30)	–12 (10)	–23 (–9)
Air pressure kPa (psi)	Front	265 (38)	280 (40)	295 (42)
	Rear	250 (36)	265 (38)	280 (40)

• 225/50R18, 225/55R17

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	–1 (30)	–12 (10)	–23 (–9)
Air pressure kPa (psi)	Front	250 (36)	265 (38)	280 (40)
	Rear	240 (35)	255 (37)	270 (39)

B: INSPECTION

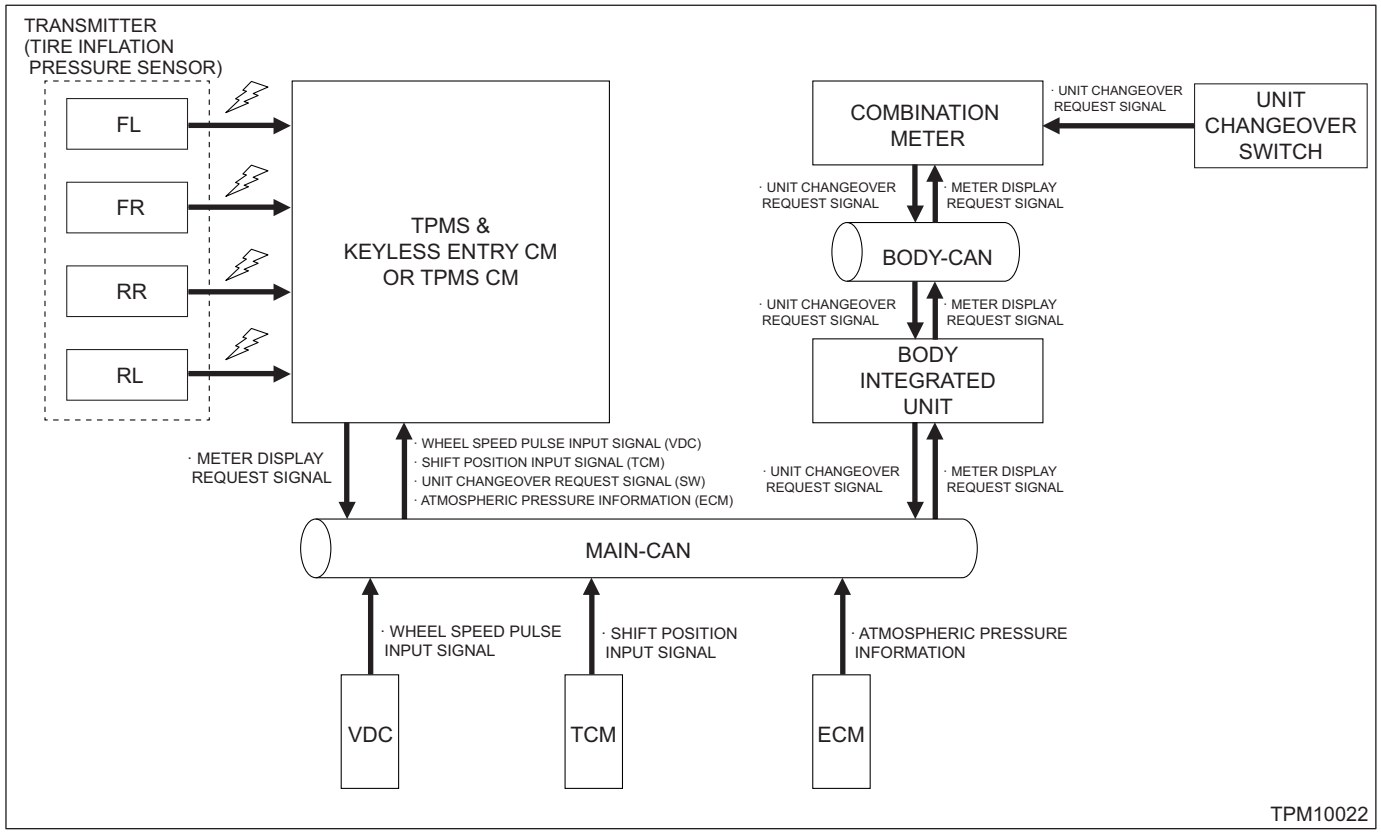
Before performing diagnosis, check the following item which might affect the quality of the tire pressure monitoring system.

1. BASIC INSPECTION

1) Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>
2) Check the fuse condition. <Ref. to SL-9, Relay and Fuse.>
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Inspect that the tire pressure is within the specification while the tire is cool. (Refer to Tire Caution Label.)
4) Check the tires for damage or the insertion of foreign matters.
5) Check the connecting condition of harness and harness connector.

NOTE:
To check harness for open or short circuits, shake the suspected trouble spot or connector.

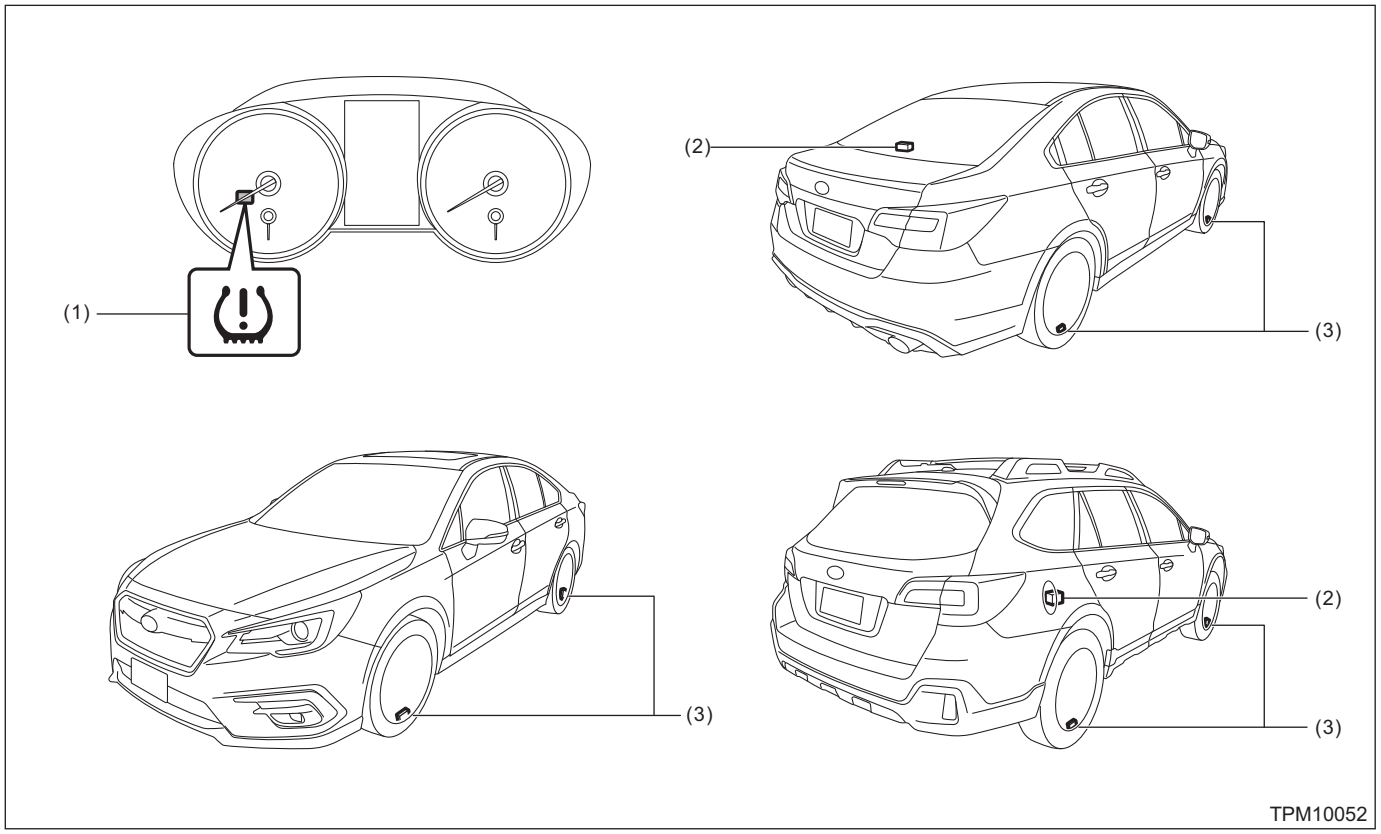
C: PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

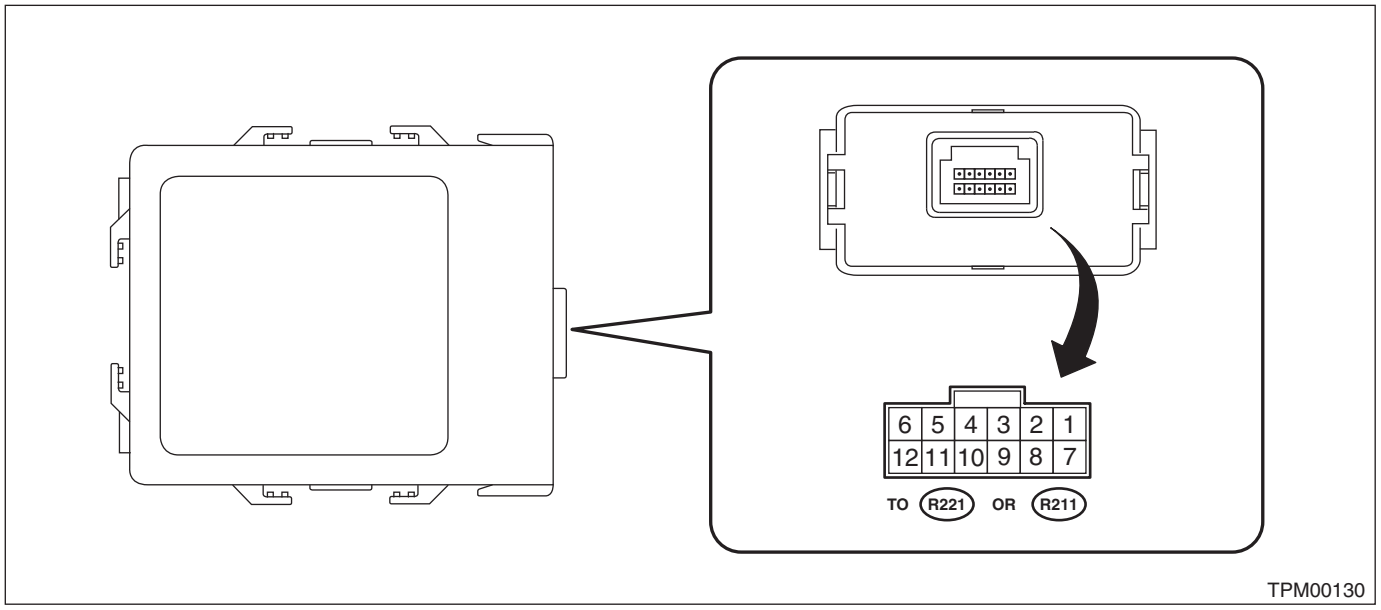


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Transmitter registration tool	Used to register the transmitter ID. Manufacturer: ATEQ latest model. Or, ATEQ model that is updated for Generation 6 transmitter compatible software is used. NOTE: For update software, detailed registration procedures and retailers, contact ATEQ in your country.
DST-i	Used together with Subaru Select Monitor 4.

D: SYSTEM BLOCK DIAGRAM

4. Electrical Component Location

A: LOCATION



(1) Tire pressure warning light
(2) TPMS & keyless entry CM*1 or TPMS CM*2
(3) Snap-in type transmitter

*1: Without push button start
*2: With push button start

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Terminal No.	Contents	Measuring condition	Standard
(R221) or (R211) No. 1	CAN-L	Digital signal; can not be measured	—
(R221) or (R211) No. 2	CAN-H	Digital signal; can not be measured	—
(R221) or (R211) No. 3	—	—	—
(R221) or (R211) No. 4	—	—	—
(R221) or (R211) No. 5	—	—	—
(R221) or (R211) No. 6 ←→ Chassis ground	Ignition power supply	When ignition switch is ON	9 — 16 V
(R221) or (R211) No. 7 ←→ Chassis ground	GND	Always	1 Ω or less
(R221) or (R211) No. 8	—	—	—
(R221) or (R211) No. 9	—	—	—

Terminal No.	Contents	Measuring condition	Standard
(R221) or (R211) No. 10	—	—	—
(R221) or (R211) No. 11	—	—	—
(R221) or (R211) No. 12 ←→ Chassis ground	Battery power supply	Always	9 — 16 V

B: WIRING DIAGRAM

Refer to “Tire Pressure Monitoring System” in the wiring diagram. <Ref. to WI-374, WIRING DIAGRAM, Tire Pressure Monitoring System.>

6. Inspection Mode

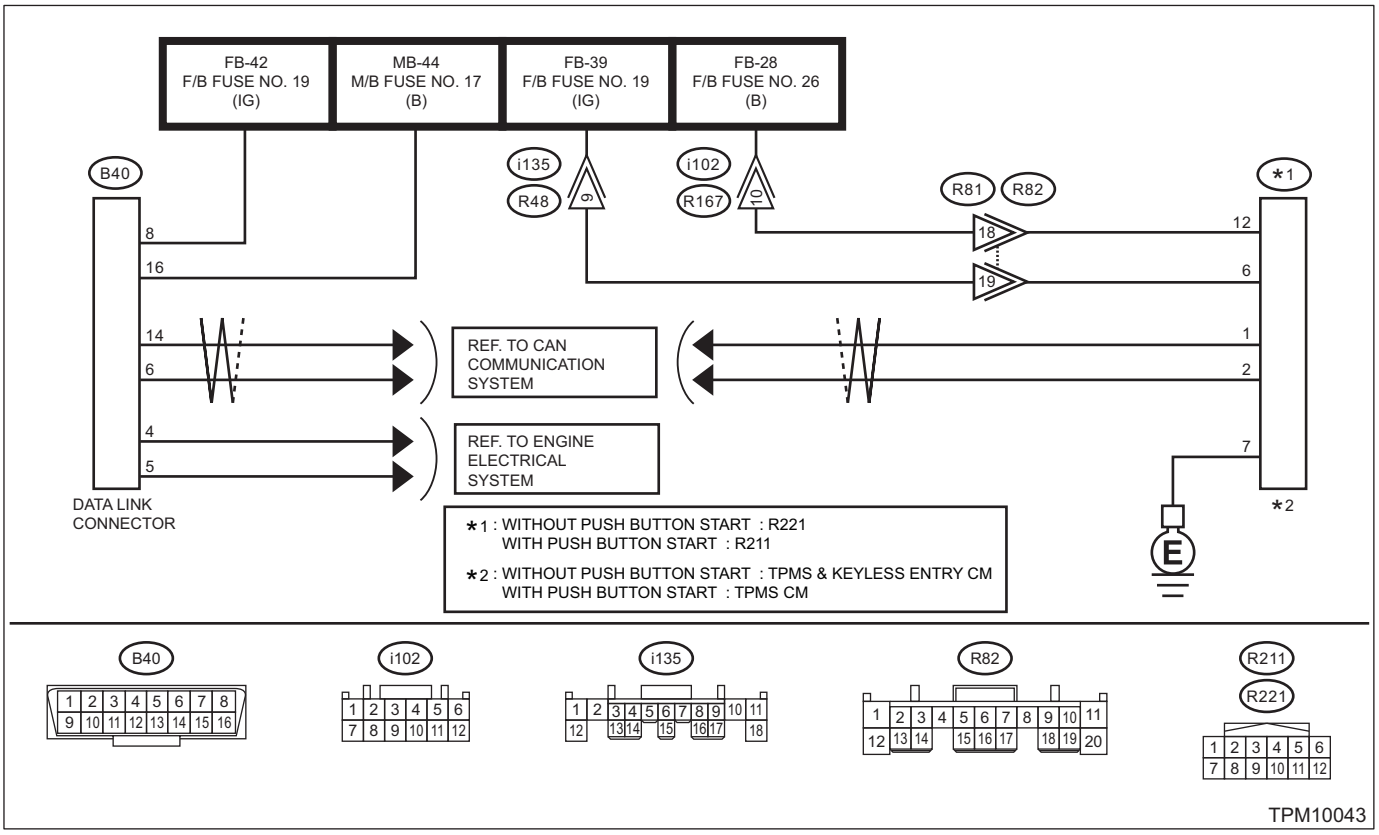
A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible. Drive the vehicle at 40 km/h (25 MPH) or faster for at least ten minutes.

7. Diagnostic Procedure for Subaru Select Monitor Communication

A: INSPECTION

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective TPMS & keyless entry CM or TPMS CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

- Tire Pressure Monitoring System <Ref. to WI-374, WIRING DIAGRAM, Tire Pressure Monitoring System.>
- CAN communication system <Ref. to WI-141, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Connect DST-i to data link connector.	Does DST-i turn ON?	Go to step **4**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse
3	**CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, Go to step **4**.	Repair the harness and connector.
4	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to a normal vehicle. 2) Start the engine and perform communication between the Subaru Select Monitor and vehicle.	Is communication possible?	Go to step **5**.	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system OK?	Go to step **6**.	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
6	**CHECK CONNECTOR.** Check poor contact of TPMS & keyless entry CM or TPMS CM connector, data link connector and coupling connector.	Is the connector OK?	Go to step **7**.	Repair the connector.
7	**CHECK FUSE.** 1) Remove a fuse from the fuse box. 2) Check the fuse. <Ref. to SL-9, Relay and Fuse.>	Is the fuse OK?	Go to step **8**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the TPMS & keyless entry CM or TPMS CM connector and fuse.

	Step	Check	Yes	No
8	**CHECK TPMS & KEYLESS ENTRY CM OR TPMS CM CONNECTOR POWER SUPPLY CIRCUIT (OPEN).** 1) Disconnect the connector of the TPMS & keyless entry CM or TPMS CM. 2) Turn the ignition switch to ON. 3) Measure the voltage between TPMS & keyless entry CM or TPMS CM connector and chassis ground. ***Connector & terminal*** ***Without push button start system*** ***(R221) No. 6 (+) — Chassis ground (–):*** ***(R221) No. 12 (+) — Chassis ground (–):*** ***With push button start system*** ***(R211) No. 6 (+) — Chassis ground (–):*** ***(R211) No. 12 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Check for an open or short circuit in the harness between TPMS & keyless entry CM or TPMS CM connector and fuse.
9	**CHECK TPMS & KEYLESS ENTRY CM OR TPMS CM GROUND CIRCUIT (OPEN).** Measure the resistance of harness between TPMS & keyless entry CM or TPMS CM connector and chassis ground. ***Connector & terminal*** ***Without push button start system*** ***(R221) No. 7 — Chassis ground:*** ***With push button start system*** ***(R211) No. 7 — Chassis ground:***	Is the resistance less than 1 Ω?	Check the connection between the data link connector and Subaru Select Monitor.	Repair the harness for ground line.

8. Data Monitor

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

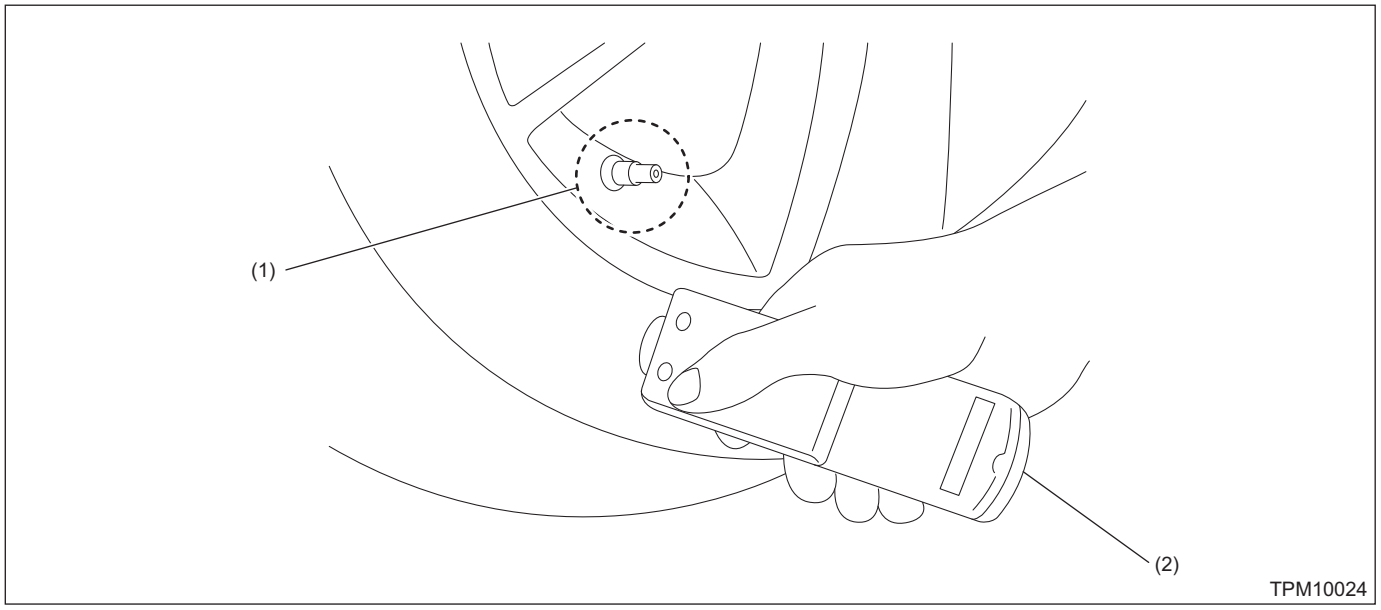
B: LIST

Item	Content / display range	Standard	Note
FL Tire status	Status of the front left transmitter	00000000 — 11111111	For details, refer to the Notes in the margin.
FR Tire status	Status of the front right transmitter		
RR Tire status	Status of the front left transmitter		
RL Tire status	Status of the front left transmitter		
FL Tire air pressure	Value converted to tire pressure from data delivered from transmitter is displayed. (The figure may differ from the actual measured values.)	0 — 351.645 kPa	—
FR Tire air pressure		0 — 351.645 kPa	—
RR Tire air pressure		0 — 351.645 kPa	—
RL Tire air pressure		0 — 351.645 kPa	—
Vehicle speed	Vehicle speed signal which is input in control module	0 — 255 km/h	—
Pressure warning	Threshold where tire pressure warning light illuminates	0 — 351.645 kPa	—
Return pressure	Threshold where tire pressure warning light goes out	0 — 351.645 kPa	—
Transmitter power supply	Status of transmitter power supply	ON MODE/OFF	—
INDICATOR LAMP	Status of tire pressure warning light	ON/OFF	—
FL Registered ID	ID of the front left transmitter	0 — 16777215	NOTE: During ID registration such as when replacing valves, valve IDs displayed on the unit body in hexadecimal format are converted into decimal number and displayed in the data monitor.
FR Registered ID	ID of the front right transmitter	0 — 16777215	
RR Registered ID	ID of the rear right transmitter	0 — 16777215	
RL Registered ID	ID of the rear left transmitter	0 — 16777215	
Latest reception ID	The former reception ID	0 — 16777215	
Reception ID one ahead	The second former reception ID	0 — 16777215	
Before reception ID2	The third former reception ID	0 — 16777215	
Before reception ID3	The fourth former reception ID	0 — 16777215	

NOTE:
Details of tire status

Bit	Data	Condition	
7	Low Battery	Indicates remaining battery	0: Normal 1: Low battery
6	Sensor Fail	Indicates malfunction of TPMS	0: Normal 1: Failure
5	LF Response LF	Indicates response transmission to LF signal	0: Transmission of non-LF response 1: Transmission by LF response

Bit	Data	Condition	
4	PAL Condition	Indicates positioning information status	0: Position detection confirmed 1: Position detection in progress
3	Rolling Detection	Indicates status of tire rotation detection	0: Tire stop detected 1: Tire rotation detected
2-0	Status code	Indicates status at valve transmission	0: Responded to LF signal “Learn LF” 1: Tire pressure change detected 1: Tire pressure change detected 2: — 3: LF signal “Entering off LF” responded 4: Position detection in progress (transmission timing synchronized with tire rotation) 5: Position detection in progress (transmission timing asynchronized with tire rotation) 6: Normal driving (when position detection mode completed) 7: End of tire pressure change detected



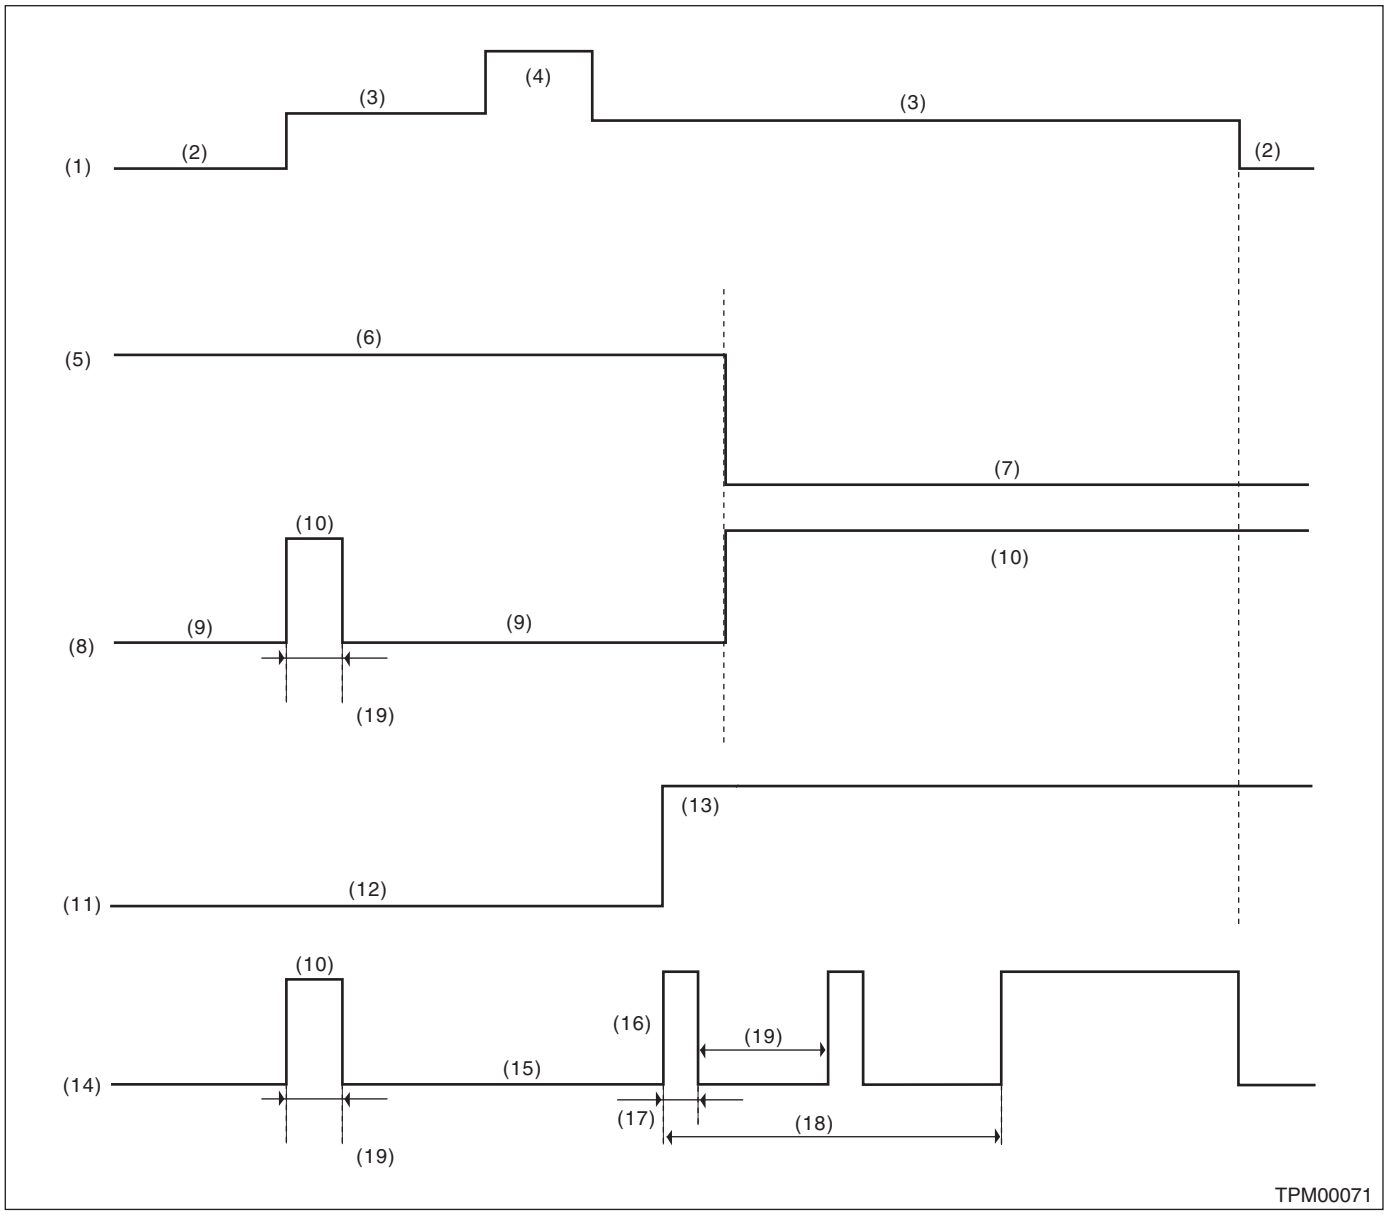
9. Register Transmitter (ID)

A: OPERATION

Perform the registration procedure of the transmitter in the following cases:
- Transmitter is replaced.
- TPMS & keyless entry CM or TPMS CM is replaced.

NOTE:
- If registration of the transmitter ID is not possible after two attempts, replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>
- During the registration, turn the ignition switch to OFF and end the Subaru Select Monitor. Or if the registration is not performed for 5 minutes or more, the registration mode is cancelled.
- When rotating tires, there is no affect on the performance or functions of the tire pressure monitoring control module even if the transmitter (ID) is not registered, however, the tire position displayed on the Subaru Select Monitor will be incorrect.

1) Adjust all tire pressures to the specifications.
2) Connect the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
4) On «Main Menu» display, select «Each System».
5) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
6) On «Select Function» display, select «Work Support».
7) On «Work Support» display, select «ID registration».
8) «ID registration mode When execute Registered ID is deleted Continue?» is displayed, select [OK].
9) Contact the transmitter registration tool to the side wall area near the air valve on the front left tire, and press the switch. The transmitter ID is sent to the TPMS & keyless entry CM or TPMS CM. (At this time, the tire pressure warning light blinks to confirm that the registration has started.)



(1) Air valve (transmitter) (2) Transmitter registration tool

NOTE:
- The registration order of transmitter ID is not specified.
- The transmitter registration tool is used by touching the side wall area near the transmitter.
- When registration of each tire is completed, «ID registration completed» is displayed on the Select Monitor screen.
- If registration procedure stop in the halfway (turning ignition switch to OFF, wrong registration order, etc), proceed from step 5).

10) When ID registration is completed, the tire pressure warning light remains lit for approximately 2 seconds, to end the registration. Switch the screen to «Data monitor» of Subaru Select Monitor. <Ref. to TPM(diag)-13, Data Monitor.>
11) Check the registered transmitter ID, then perform a driving test. <Ref. to TPM(diag)-9, Inspection Mode.>

10. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

A: INSPECTION

(1)	Ignition switch	(8)	Tire inflation pressure warning light (pressure condition)	(15)	Light OFF
(2)	OFF	(9)	Light OFF	(16)	Blink
(3)	ON	(10)	Light ON	(17)	1 second
(4)	Start	(11)	System status	(18)	Blinks 25 times
(5)	Tire inflation pressure condition	(12)	Normal	(19)	2 seconds
(6)	Meet the specification	(13)	Malfunction		
(7)	Less than standard value (For the pressure warning level, refer to “Data Monitor”.) <Ref. to TPM(diag)-13, Data Monitor.>	(14)	Tire inflation pressure warning light (system condition)		

1) When the tire pressure warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) If the tire pressure warning light does not go off, check the TPMS & keyless entry CM or TPMS CM/warning light circuit and the combination meter circuit. <Ref. to TPM(diag)-19, TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

NOTE:
If the problem is fixed while driving at approximately 40 km/h (25 MPH) after the tire pressure warning light blinks/lights, the warning light goes out and the tire pressure monitor system operates normally. (If there is a decrease in tire pressure, or a malfunction of the system, the malfunction history is displayed.)

B: TIRE PRESSURE WARNING LIGHT DOES NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON, the tire pressure warning light does not turn on (for approx. 2 seconds).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs. <Ref. to TPM(diag)-22, LIST, Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK COMBINATION METER.** Using Subaru Select Monitor, check the following items in «Active Test» of «Combination Meter». <Ref. to MET(diag)-16, System Operation Check Mode.> • «TPMS warning»	Does the tire pressure warning light illuminate?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

C: TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF

Detecting condition:
- Defective combination meter
- Tires pressure drop
- Transmitter ID not registered

Trouble symptom:
Tire pressure warning light remains illuminating after engine starts.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TPM(diag)-22, LIST, Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TRANSMITTER (ID).** Using Subaru Select Monitor, check the following items in «Data monitor» of «Tire Pressure Monitor». <Ref. to TPM(diag)-13, Data Monitor.> • «FL Registered ID» • «FR Registered ID» • «RR Registered ID» • «RL Registered ID»	Is the transmitter ID registered?	Go to step **3**.	Register the transmitter ID. <Ref. to TPM(diag)-15, OPERATION, Register Transmitter (ID).>
3	**CHECK TRANSMITTER DATA OUTPUT.** 1) Start the engine. 2) Using Subaru Select Monitor, check the following items in «Data monitor» of «Tire Pressure Monitor». <Ref. to TPM(diag)-13, Data Monitor.> • «INDICATOR LAMP»	Is "ON" displayed?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

D: TIRE PRESSURE WARNING LIGHT IS 25 TIMES BLINKING AND TURN ON

Detecting condition:
- Defective TPMS & keyless entry CM or TPMS CM
- Defective harness
- Transmitter is faulty.

Trouble symptom:
Every time the engine starts, tire pressure warning light blinks 25 times and then illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TPM(diag)-22, LIST, Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>	Perform the inspection according to the diagnosis for LAN system.

11.Clear Memory

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

12.Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTCs, refer to List of Diagnostic Trouble Code (DTC). <Ref. to TPM(diag)-22, LIST, Diagnostic Trouble Code (DTC).>

B: LIST

Code	Description & trouble position	Reference

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2021 FL TIRE AIR PRESSURE DECREASE NORMAL MODE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 RL TIRE AIR PRESSURE DECREASE NORMAL MODE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C2022 FR TIRE AIR PRESSURE DECREASE NORMAL MODE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 RL TIRE AIR PRESSURE DECREASE NORMAL MODE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2023 RR TIRE AIR PRESSURE DECREASE NORMAL MODE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 RL TIRE AIR PRESSURE DECREASE NORMAL MODE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C2024 RL TIRE AIR PRESSURE DECREASE NORMAL MODE

DTC detecting condition:
Inflation pressure of tires dropped below the specified value.

NOTE:
For the specifications, refer to “Data Monitor”. <Ref. to TPM(diag)-13, Data Monitor.>

Trouble symptom:
Tire pressure warning light illuminates.

CAUTION:
• When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.
• Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK TIRES.** Lift up the vehicle and check for damage in the tires.	Are there cracks or damage?	Replace the tire.	Go to step **2**.
2	**CHECK TIRES.** Check the tire air pressure.	Is the tire pressure in the specifications?	Go to step **3**.	Adjust the air pressure.
3	**CHECK TRANSMITTER DATA.** 1) Drive at 40 km/h (25 MPH) or more. 2) Using Subaru Select Monitor, check the following items in «Data monitor» of «Tire Pressure Monitor». <Ref. to TPM(diag)-13, Data Monitor.> • «FL Tire air pressure» • «FR Tire air pressure» • «RR Tire air pressure» • «RL Tire air pressure»	Is there a transmitter with different display?	Replace the transmitter (tire pressure sensor) with different display. <Ref. to WT-9, Tire Pressure Monitoring System.>	Go to step **4**.
4	**PERFORM DRIVING TEST.** 1) Using the Subaru Select Monitor, perform the clear memory for «Tire Pressure Monitor». <Ref. to TPM(diag)-21, Clear Memory.> 2) Perform a driving test. <Ref. to TPM(diag)-9, PROCEDURE, Inspection Mode.> 3) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is DTC C2021, C2022, C2023 or C2024 displayed? (Current malfunction)	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>	Even if the DTC is displayed, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

E: DTC C2121 FL TRANSMITTER NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 RL TRANSMITTER NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C2122 FR TRANSMITTER NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 RL TRANSMITTER NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C2123 RR TRANSMITTER NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 RL TRANSMITTER NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C2124 RL TRANSMITTER NO DATA

DTC detecting condition:
Detected when no data is received from each transmitter for 8 minutes or more at a vehicle speed of 40 km/h (25 MPH) or more. (Timer is not cleared when the vehicle speed becomes lower than 40 km/h halfway.)
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

CAUTION:
• When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Using Subaru Select Monitor, display the following items in «Data monitor» of «Tire Pressure Monitor». <Ref. to TPM(diag)-13, Data Monitor.> • «Latest reception ID» 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>

	Step	Check	Yes	No
3	**CHECK FRONT LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «FL Registered ID».	Are the two IDs same?	Go to step **4**.	Record «Latest reception ID» as the front left. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «FR Registered ID».	Are the two IDs same?	Go to step **6**.	Record «Latest reception ID» as the front right. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «RR Registered ID».	Are the two IDs same?	Go to step **8**.	Record «Latest reception ID» as the rear right. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «RL Registered ID».	Are the two IDs same?	Go to step **10**.	Record «Latest reception ID» as the rear left. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-9, Tire Pressure Monitoring System.>

I: DTC C2221 FL TRANSMITTER PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C2222 FR TRANSMITTER PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C2223 RR TRANSMITTER PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL

DTC detecting condition:
Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.
- When comparing the data from each transmitter to the previous data, the change is large.
- The pressure exceeds what the transmitter can measure. (Excessive pressure)

Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

CAUTION:
• When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Using Subaru Select Monitor, display the following items in «Data monitor» of «Tire Pressure Monitor». <Ref. to TPM(diag)-13, Data Monitor.> • «Latest reception ID» 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «FL Registered ID».	Are the two IDs same?	Go to step **4**.	Record «Latest reception ID» as the front left. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «FR Registered ID».	Are the two IDs same?	Go to step **6**.	Record «Latest reception ID» as the front right. Go to step **6**.

	Step	Check	Yes	No
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «RR Registered ID».	Are the two IDs same?	Go to step **8**.	Record «Latest reception ID» as the rear right. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «RL Registered ID».	Are the two IDs same?	Go to step **10**.	Record «Latest reception ID» as the rear left. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-9, Tire Pressure Monitoring System.>

M: DTC C2321 FL TRANSMITTER STATUS ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-28, DTC C2324 RL TRANSMITTER STATUS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C2322 FR TRANSMITTER STATUS ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-28, DTC C2324 RL TRANSMITTER STATUS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C2323 RR TRANSMITTER STATUS ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-28, DTC C2324 RL TRANSMITTER STATUS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C2324 RL TRANSMITTER STATUS ABNORMAL

Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.
DTC detecting condition:
Unexpected function codes received from each transmitter.
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

CAUTION:
• When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Using Subaru Select Monitor, display the following items in «Data monitor» of «Tire Pressure Monitor». <Ref. to TPM(diag)-13, Data Monitor.> • «Latest reception ID» 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «FL Registered ID».	Are the two IDs same?	Go to step **4**.	Record «Latest reception ID» as the front left. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «FR Registered ID».	Are the two IDs same?	Go to step **6**.	Record «Latest reception ID» as the front right. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «RR Registered ID».	Are the two IDs same?	Go to step **8**.	Record «Latest reception ID» as the rear right. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>

	Step	Check	Yes	No
9	**CHECK REAR LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «RL Registered ID».	Are the two IDs same?	Go to step **10**.	Record «Latest reception ID» as the rear left. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Replace the transmitter indicated by DTC. <Ref. to WT-9, Tire Pressure Monitoring System.>
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the transmitter indicated by DTC. <Ref. to WT-9, Tire Pressure Monitoring System.>

Q: DTC C2421 FL TRANSMITTER BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-30, DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

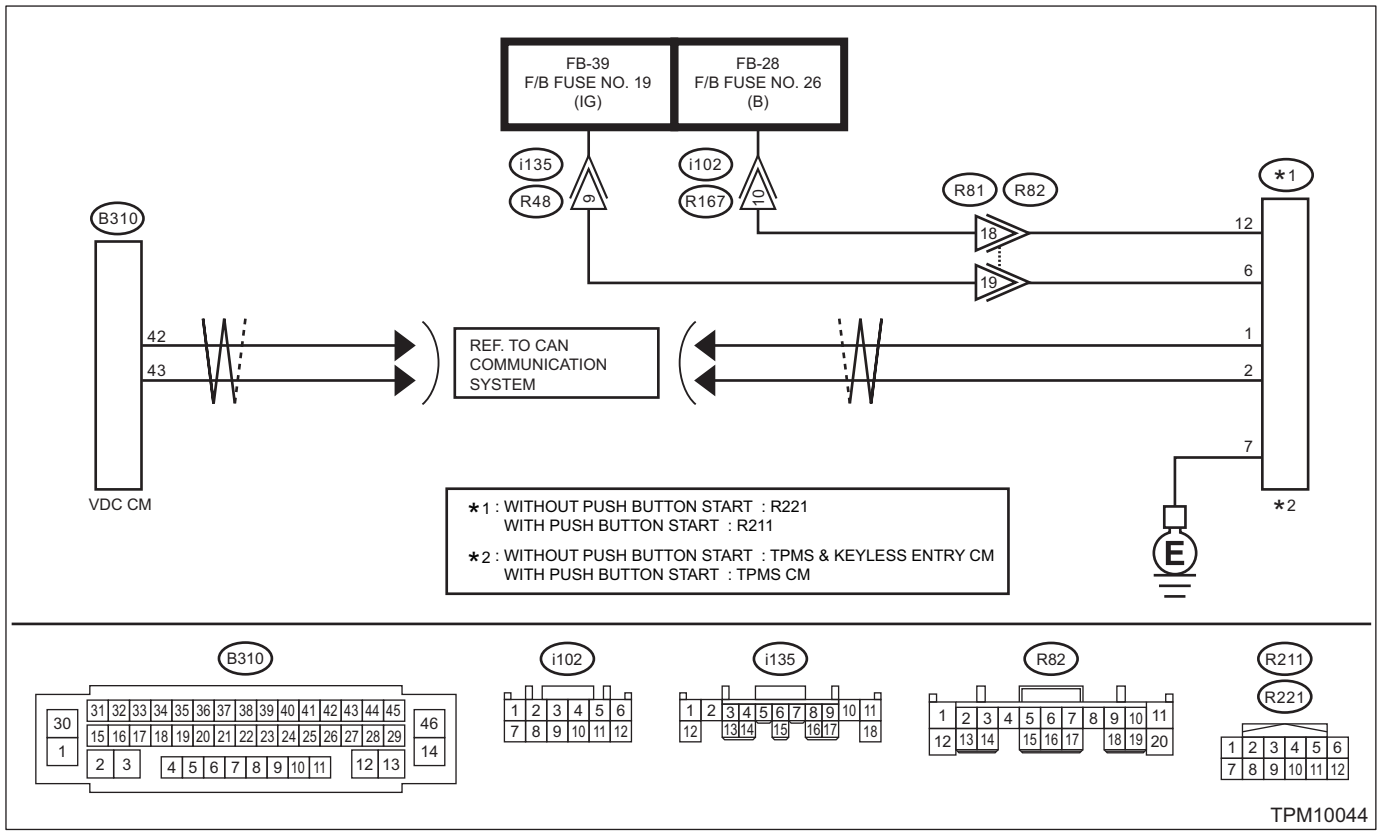
R: DTC C2422 FR TRANSMITTER BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-30, DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C2423 RR TRANSMITTER BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-30, DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE



DTC detecting condition:
Detected when power supply voltage failure signal is received from each transmitter.
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

CAUTION:
• When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**CHECK TRANSMITTER.** 1) Replace all transmitters with new parts and register their IDs. <Ref. to TPM(diag)-15, OPERATION, Register Transmitter (ID).> 2) Using the Subaru Select Monitor, perform the clear memory for «Tire Pressure Monitor». <Ref. to TPM(diag)-21, Clear Memory.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-9, Inspection Mode.>	Is the fault eliminated?	Internal battery of the transmitter had worn out.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

U: DTC C2521 SPEED ABNORMAL

DTC detecting condition:
Detected when transmitter normal signal is received at a vehicle speed of less than 6 km/h (4 MPH).
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.
Wiring diagram:
Tire Pressure Monitoring System <Ref. to WI-374, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Step		Check	Yes	No
1	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK VDC.** Check the VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the VDC diagnosis.
3	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

V: DTC C2821 WHEEL POSITION SENSING ABNORMAL

DTC detecting condition:
When position detection was not confirmed, and failed 10 consecutive times.
Trouble symptom:
Display of combination meter air pressure indicates " — ".

CAUTION:
• When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to TPM(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DRIVING HISTORY.** Ask the customer for the following items. • Did the customer drive in traffic congestion? • Did the customer drive rough road (such as unpaved road)?	Did the customer drive in traffic congestion or rough road?	This DTC may be stored if the vehicle was driven in traffic congestion or rough road.	Go to step **2**.
2	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **3**.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
3	**CHECK DTC.** Read the DTC of «Tire Pressure Monitor» using the Subaru Select Monitor. <Ref. to TPM(diag)-22, Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC C2821 displayed as current malfunction?	Perform the diagnosis for DTCs other than the displayed C2821. <Ref. to TPM(diag)-22, LIST, Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK VDC.** Read the DTC of «Brake Control System» using the Subaru Select Monitor. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as "current malfunction"?	Perform the diagnosis for the displayed DTCs. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK TCM.** Using the Subaru Select Monitor, read DTC of «Transmission». <Ref. to CVT(diag)-25, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs. <Ref. to CVT(diag)-44, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

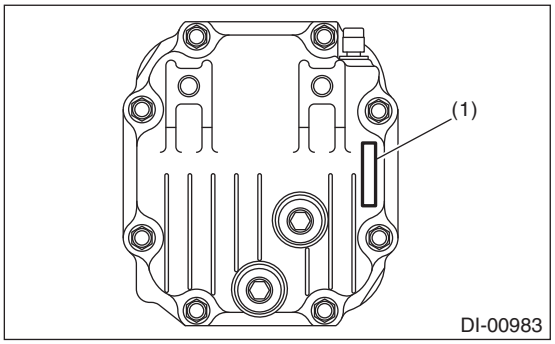
1. General Description

A: SPECIFICATION

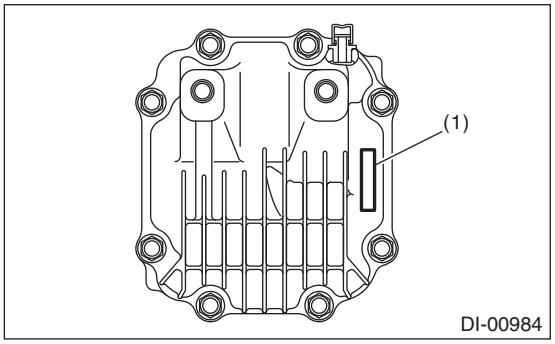
1. REAR DIFFERENTIAL



When replacing a rear differential assembly, select the correct one according to the following table.

NOTE:
• Using a different rear differential assembly will cause the drive train and tires to drag or emit abnormal noise.
• For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

Model	Sedan		OUTBACK	
	2.5 L	3.6 L	2.5 L	3.6 L
	CVT			
Rear differential type	VA1-type	VA2-type	VA1-type	VA2-type
Identification	43	Y4	44	Y4
LSD type	—			
Type of gear	Hypoid gear			
Gear ratio (number of gear teeth)	3.900 (39/10)	4.111 (37/9)		
Oil capacity	0.8 L (0.8 US qt, 0.7 Imp qt)			
Rear differential gear oil	SUBARU GEAR OIL EXTRA MT or equivalent	GL–5 (75W–90) or equivalent	SUBARU GEAR OIL EXTRA MT or equivalent	GL–5 (75W–90) or equivalent

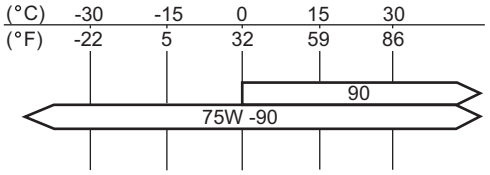


2. IDENTIFICATION

Identification positions are shown in the following figures. For details concerning identification, refer to the “ID” section.
• VA1-type

(1) Identification

• VA2-type

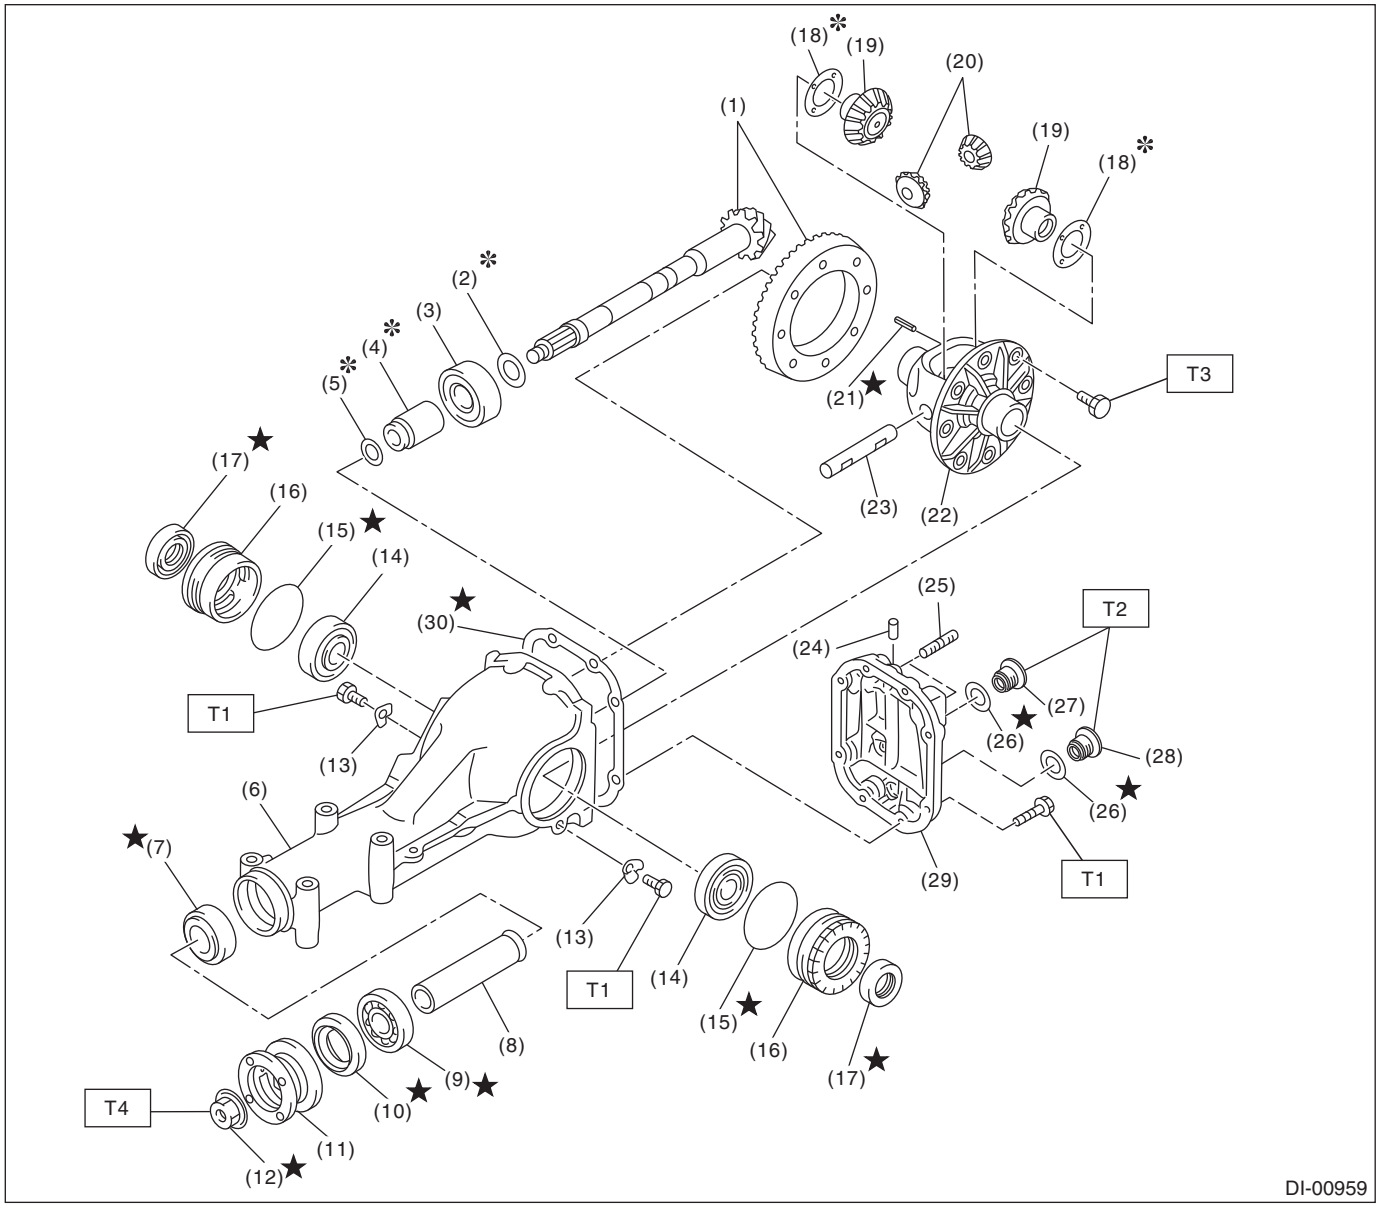


(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

CAUTION:
- **Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.**
- **If an alternate product is used for VA1 type, note that you may not have expected functionality and performance.**

Recommended gear oil:
VA1-type
SUBARU GEAR OIL EXTRA MT or equivalent
VA2-type
GL–5 (75W–90) or equivalent



API classification	GL–5
SAE viscosity No. and applicable temperature	 DI-10007

4. SERVICE DATA

Drive pinion bearing preload (for new bearing)	Measured with spring measurement (measured from the companion flange bolt)	N (kgf, lbf)	12.7 — 32.2 (1.3 — 3.3, 2.9 — 7.2)	
	Measured with torque wrench	N·m (kgf-m, ft-lb)	0.48 — 1.22 (0.05 — 0.12, 0.35 — 0.90)	
Side gear backlash		mm (in)	VA1-type	0.05 — 0.15 (0.002 — 0.006)
			VA2-type	0.13 — 0.18 (0.005 — 0.007)
Hypoid driven gear backlash		mm (in)	0.10 — 0.15 (0.004 — 0.006)	
Companion flange mating surface runout		mm (in)	0.08 (0.003)	
Companion flange runout on its inner side		mm (in)	0.08 (0.003)

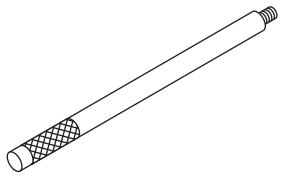
C: CAUTION

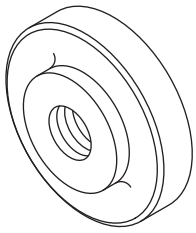
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.

• Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Before installing the O-ring or snap ring, apply a sufficient amount of gear oil to avoid damage and deformation.
• Avoid damaging the mating surface of the case.
• For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
• When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground terminal from the battery sensor.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL





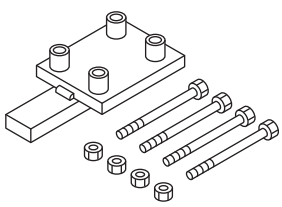


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
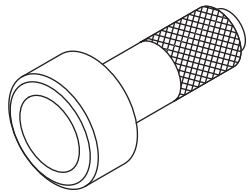
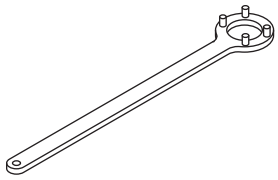
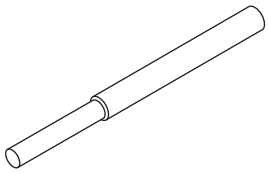
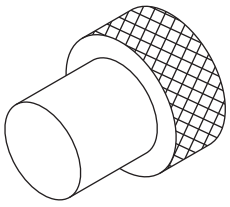
 ST-398477701	398477701	HANDLE	• Used for installing the rear bearing race. • Used for installing the front bearing race. (VA1-type)
 ST-398477702	398477702	DRIFT	• Used for installing the rear bearing race. (VA1-type) • Used for installing side bearing race. (VA1-type)
 ST-398217700	398217700	ATTACHMENT SET	Stand for rear differential carrier disassembly and assembly.









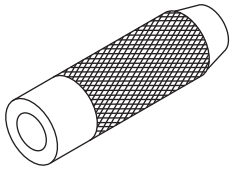


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498447120	498447120	INSTALLER	Used for installing the front oil seal.
 ST-498427200	498427200	FLANGE WRENCH	Used for stopping rotation of companion flange when removing and tightening self-lock nut.
 ST-398467700	398467700	DRIFT	Used for removing drive pinion shaft, pilot bearing and front bearing cone. (VA1-type)
 ST-399780104	399780104	WEIGHT	• Used for installing the front bearing cone and the companion flange. • Used for installing the pilot bearing. (VA1-type)

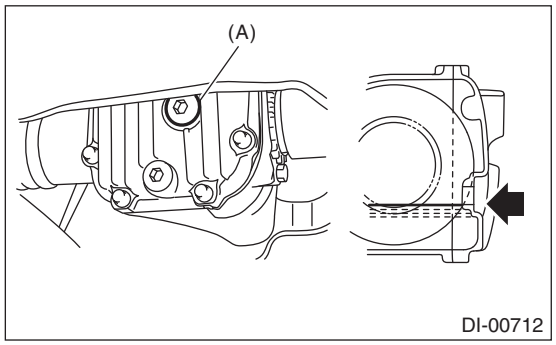
 ST41399YC000	41399YC000	SOCKET WRENCH (17)	Used for tightening the self-locking nut. (Except for OUTBACK)

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

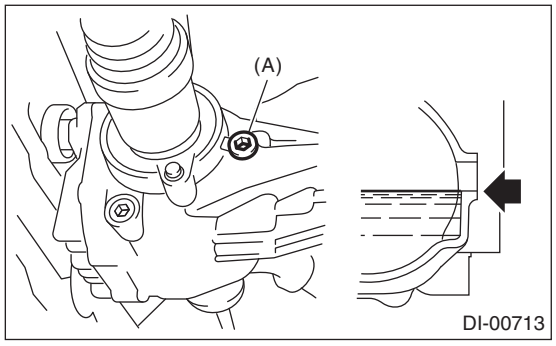
TOOL NAME	REMARKS
Transmission jack	Used for removing and installing the rear differential.
Puller	Used for removing the side bearing retainer.
Thickness gauge	Used for measuring clearance.
Hexagon wrench	Used for installing and removing the oil filler plug and oil drain plug.
Tire lever	Used for removing the rear drive shaft.
Angle gauge	Used for installing the hypoid driven gear.
DST-i	Used together with Subaru Select Monitor 4.



2. Differential Gear Oil

A: INSPECTION

1) Lift up the vehicle.
2) Remove the filler plug, and then check the gear oil. Replace the gear oil if it is contaminated, deteriorated or cloudy. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
3) Check that the gear oil level is within –5 mm (–0.2 in) from the bottom of the filler plug hole. If the level is low, make sure that there is no oil leakage and add oil up to the bottom of filler plug hole.



NOTE:
On VA1-types at factory settings, the oil level may be within –14 mm (–0.6 in) from the bottom of the filler plug. This is at normal level, therefore, oil filling is not required.

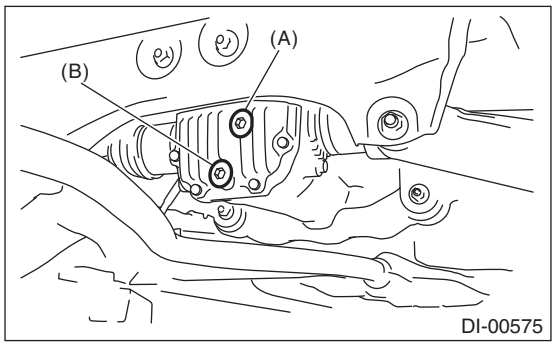
- VA1-type

(A) Filler plug

- VA2-type

(A) Filler plug

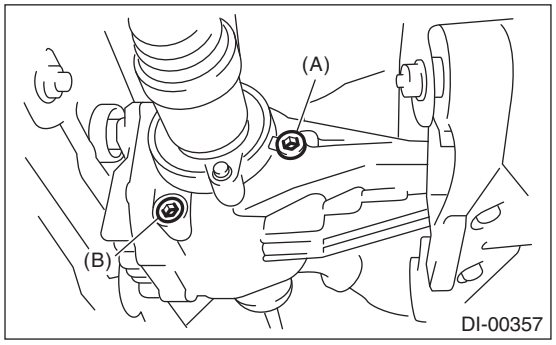
4) Replace the gasket with a new part, and attach the filler plug.



Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

B: REPLACEMENT

CAUTION:
• Gear oil is extremely hot just after driving. Be wary of receiving burns.
• Be careful not to spill the differential gear oil on exhaust pipe. If gear oil is spilled, wipe it off completely.



1) Lift up the vehicle.
2) Remove the drain plug and filler plug, and drain the gear oil.

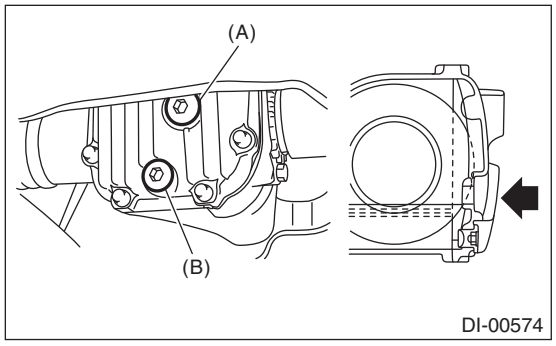
- VA1-type

(A) Filler plug
(B) Drain plug

- VA2-type

(A) Filler plug
(B) Drain plug

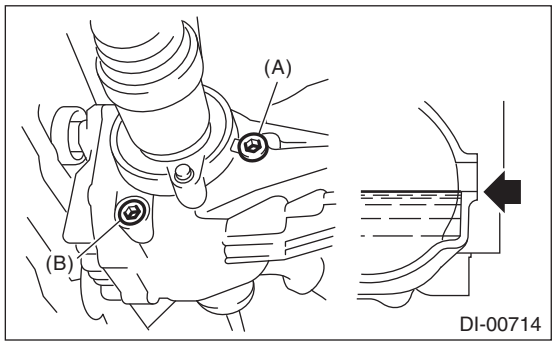
3) Replace the gasket with a new part, and attach the drain plug.



Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
4) Fill the differential carrier with gear oil to the bottom of filler plug.

NOTE:
In order to prevent insufficiency of oil, supply gear oil until it flows out of the plug hole.

Recommended gear oil:
<Ref. to DI-2, SPECIFICATION, General Description.>



Oil capacity:
0.8 L (0.8 US qt, 0.7 Imp qt)

- VA1-type

(A) Filler plug
(B) Drain plug

- VA2-type

(A) Filler plug
(B) Drain plug

5) Replace the gasket with a new part, and attach the filler plug.

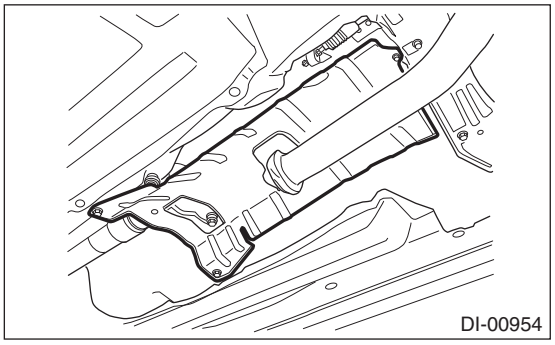
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

3. Front Differential Assembly

A: NOTE

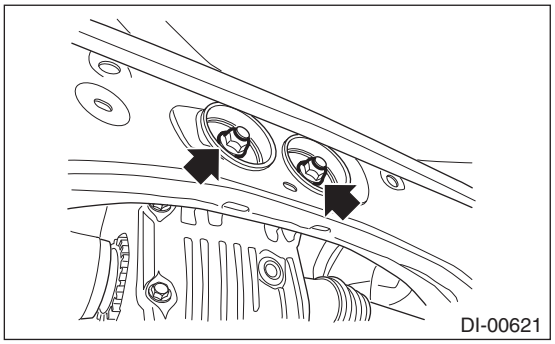
1. CVT (TR580) MODEL

Regarding the front differential, refer to the “CVT (TR580)” section. <Ref. to CVT(TR580)-353, Front Differential Assembly.>



2. CVT (TR690) MODEL

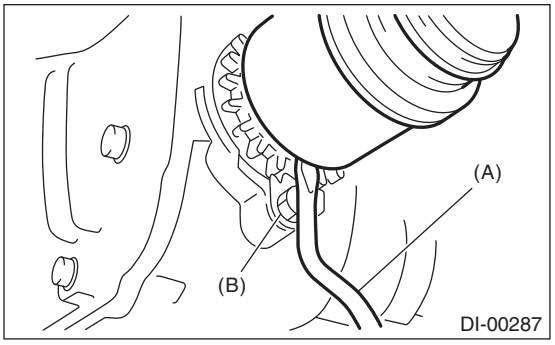
Regarding the front differential, refer to the “CVT (TR690)” section. <Ref. to CVT(TR690)-300, Front Differential Assembly.>



4. Rear Differential (VA-type)

A: REMOVAL

1) Shift the select lever to neutral.
2) Release the electronic parking brake.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle.
5) Remove the rear tires. <Ref. to WT-6, REMOVAL, Tire and Wheel.>
6) Drain differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
7) Remove the rear exhaust pipe.
• 2.5 L model
<Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
• 3.6 L model
<Ref. to EX(H6DO)-11, REMOVAL, Rear Exhaust Pipe.>
8) Remove the center exhaust cover.

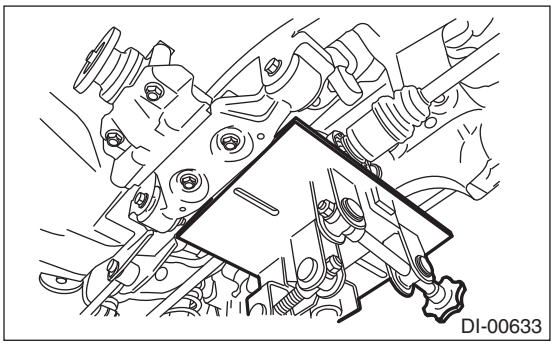


DI-00954

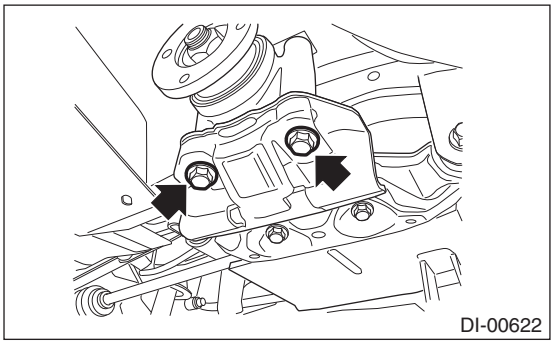
9) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
10) Loosen the self-lock nuts which hold the rear differential to the rear sub frame assembly.

DI-00621

11) Remove the DOJ of the rear drive shaft using a tire lever.

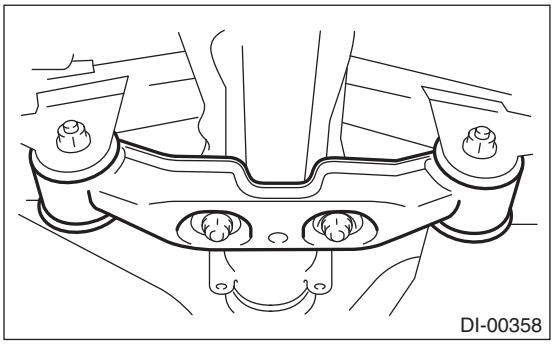


NOTE:
When removing the DOJ, fit a tire lever to the bolts as shown in the figure so as not to damage the side retainer.



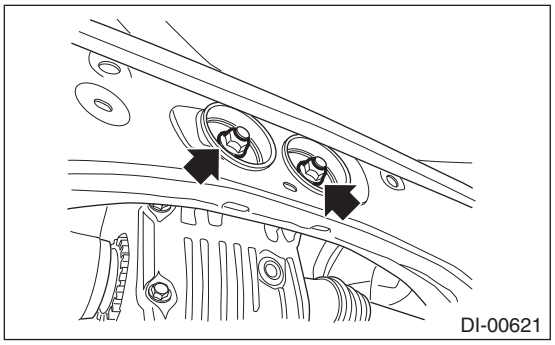
DI-00287

(A) Tire lever
(B) Bolt



12) Set the transmission jack.

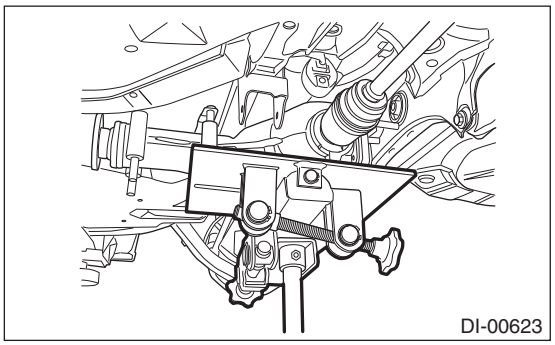
DI-00633



13) Remove the mass damper. (2.5 L OUTBACK model)

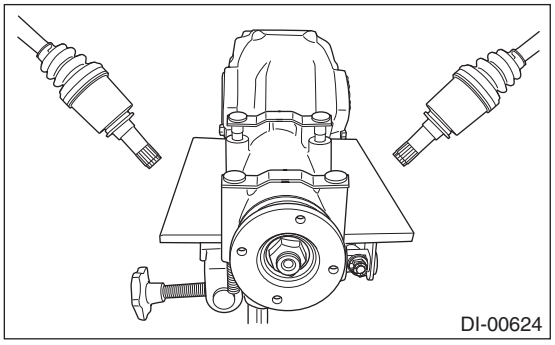
DI-00622

14) Remove the rear differential front member.



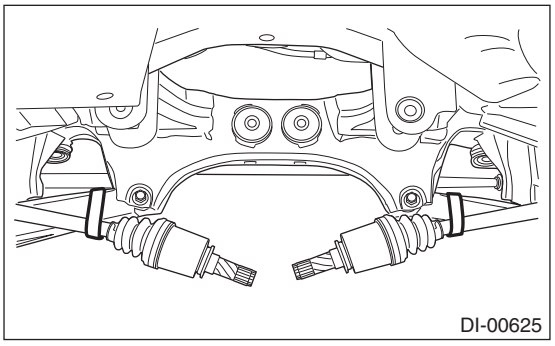
DI-00358

15) Remove the self-lock nuts which hold the rear differential to the rear sub frame assembly.



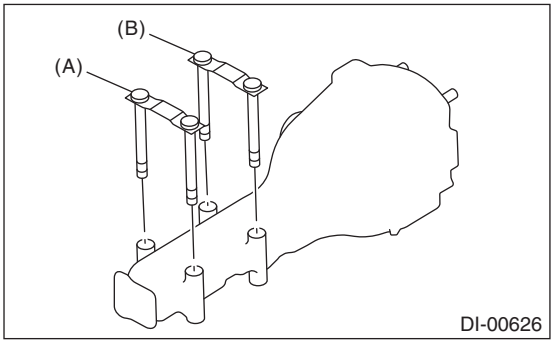
16) Pull out the rear differential stud bolt from rear differential mount bushing.

NOTE:
When pulling out the stud bolt from the rear differential mount bushing, carefully adjust the angle and location of transmission jack and jack stand, if necessary.



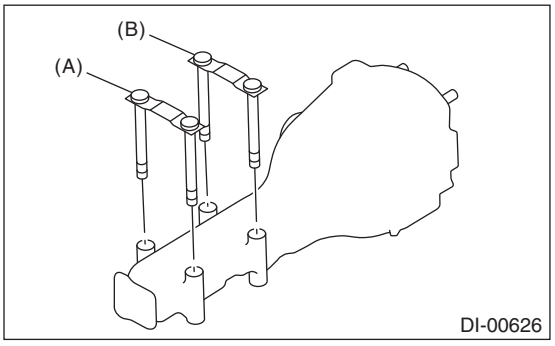
17) Lower the transmission jack.
18) Pull out the rear drive shaft.

NOTE:
• If it is difficult to pull out the rear drive shaft, remove it using a tire lever.
• For VA2-type, if the circlip is adhered to the removed rear drive shaft side when the rear drive shaft is pulled out, overhaul the differential case assembly and install a new circlip to the side gear.



19) Lower the transmission jack.

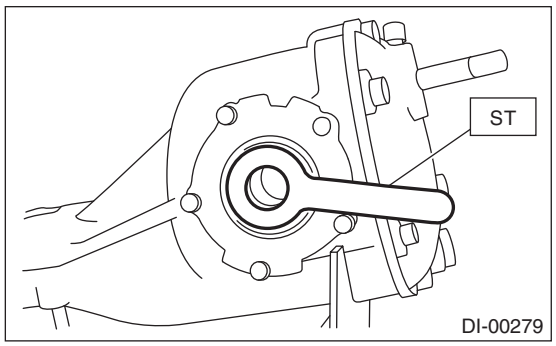
20) Secure the rear drive shaft using a wire.



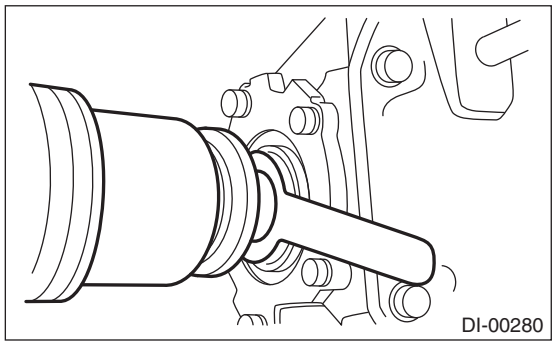
21) Remove the rear differential member plate.

(A) Rear differential member plate (2.5 L OUTBACK model)
(B) Rear differential member plate

B: INSTALLATION

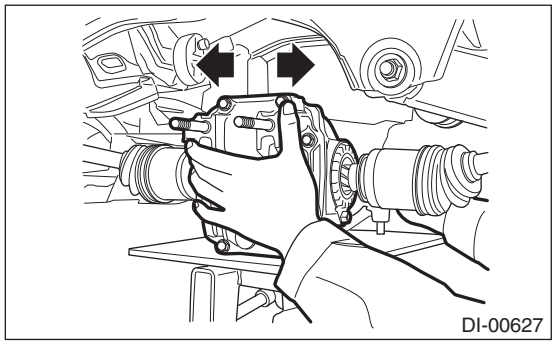


1) Install the rear differential member plate.

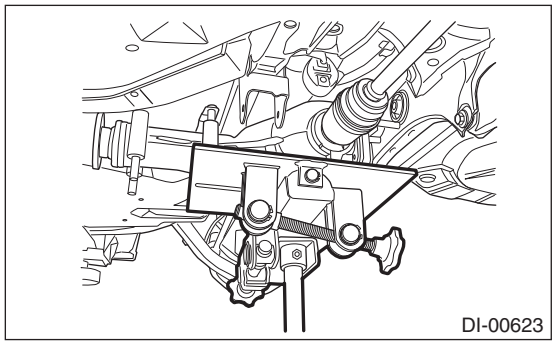


(A) Rear differential member plate (2.5 L OUTBACK model)
(B) Rear differential member plate

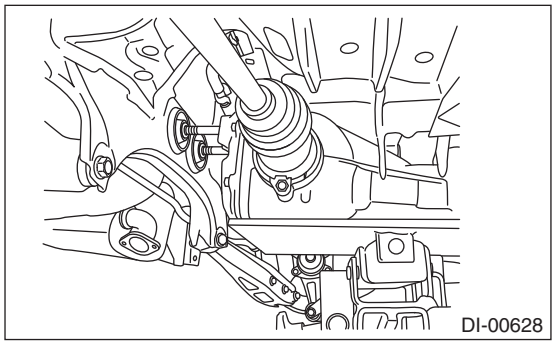
2) Set the rear differential to transmission jack.



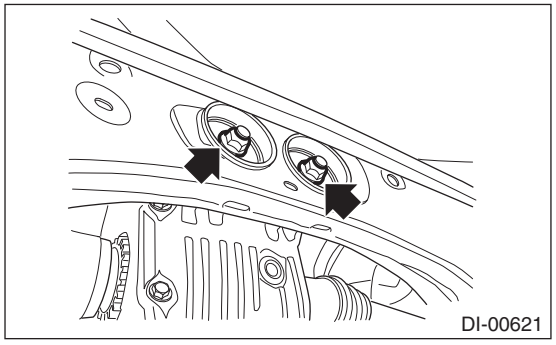
3) Set the ST to the rear differential.
ST 28099PA090 OIL SEAL PROTECTOR



4) Insert the rear drive shaft until the spline portion of the rear drive shaft exceeds the side oil seal.

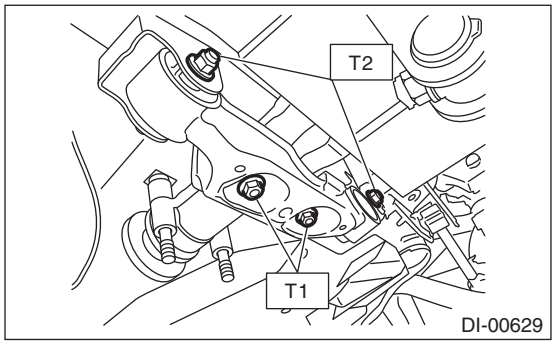


5) Remove ST from rear differential.
6) Push the rear differential from side to side to insert the DOJ completely.

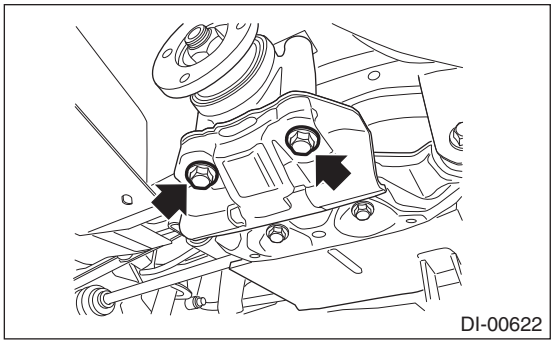


7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into the rear differential mount bushing.

8) Raise the transmission jack to align the rear differential to its attachment position.



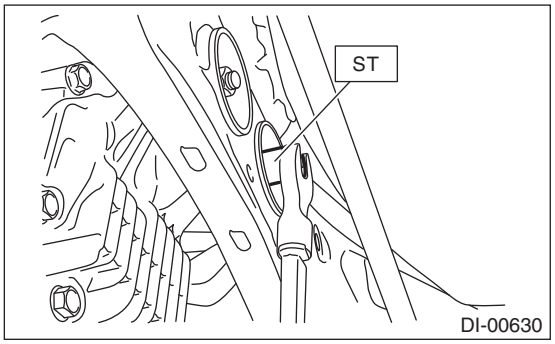
9) Tighten a new self-locking nut temporarily to the rear differential stud bolt.



10) Install the rear differential front member with a new self-locking nut.

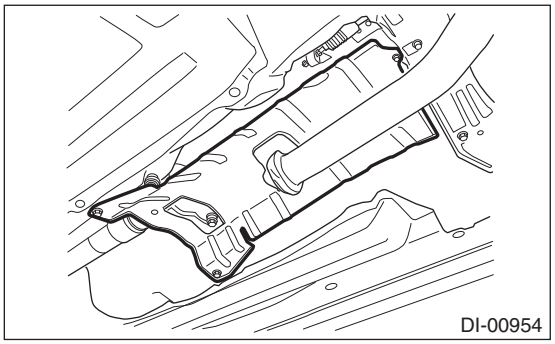
Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

11) Install the mass damper with a new self-locking nut. (2.5 L OUTBACK model)



Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

12) Tighten the self-locking nut.

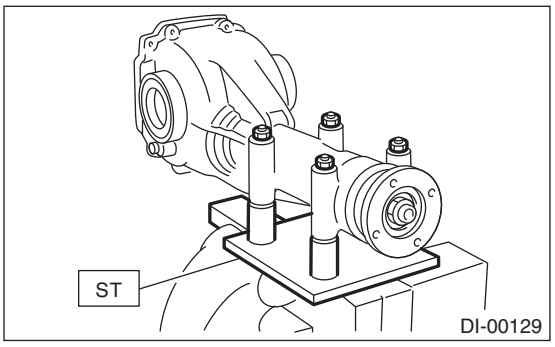


NOTE:
For models other than OUTBACK model, tighten the self-locking nut using the ST.
ST 41399YC000 SOCKET WRENCH (17)

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

13) Remove the transmission jack.
14) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
15) Install the center exhaust cover.

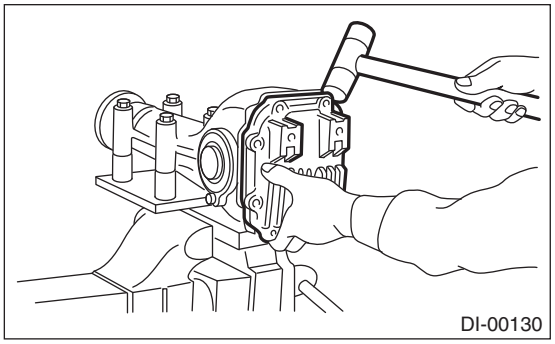
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



16) Install the rear exhaust pipe.
• 2.5 L model
<Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>
• 3.6 L model
<Ref. to EX(H6DO)-12, INSTALLATION, Rear Exhaust Pipe.>
17) Fill differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
18) Lower the vehicle.
19) Install the rear tires. <Ref. to WT-6, INSTALLATION, Tire and Wheel.>
20) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
21) Perform “Rear differential inspection mode” using the Subaru Select Monitor. <Ref. to DI-63, Rear Differential Inspection Mode.>

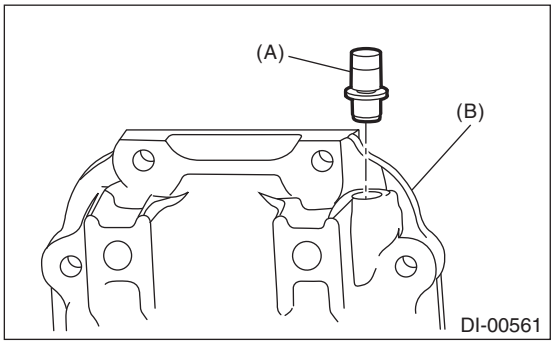
CAUTION:
Be sure to perform rear differential inspection mode when the following work has been performed.
- **Replacement of rear differential**
- **Replacement of rear differential hypoid gear set**
- **Replacement of transmission assembly**
- **Replacement of front differential hypoid gear set**

C: DISASSEMBLY



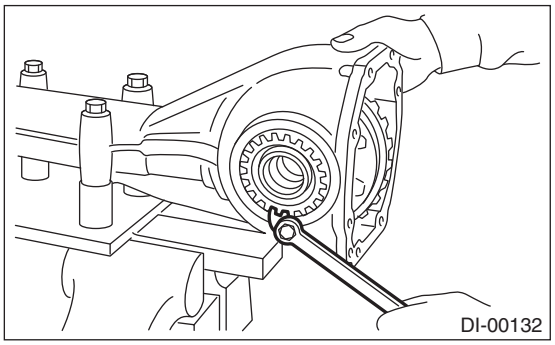
1. VA1-TYPE

To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact and backlash between hypoid driven gear and drive pinion
1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT SET



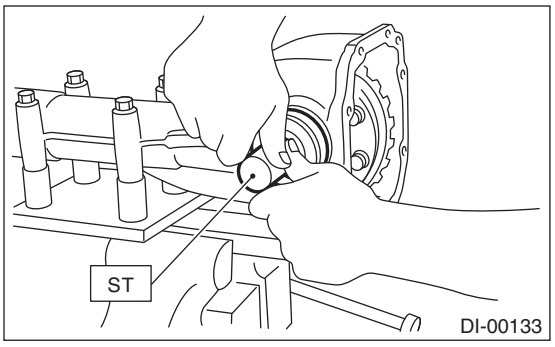
2) Remove the drain plug and filler plug.
3) Remove the rear cover by removing retaining bolts.

NOTE:
Remove it by tapping with a plastic hammer.



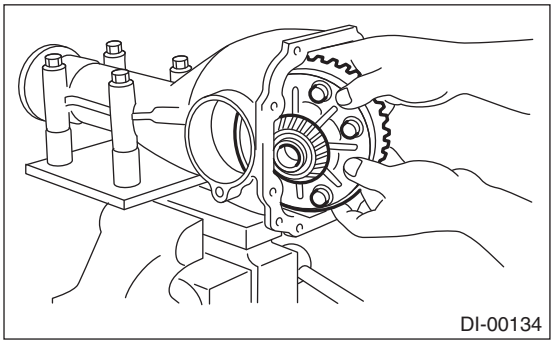
4) Remove the stud bolts from rear cover if necessary.
5) Remove the air breather cap.

NOTE:
• Do not attempt to remove the air breather cap unless necessary.
• Whenever the air breather cap is removed, replace it with a new part.



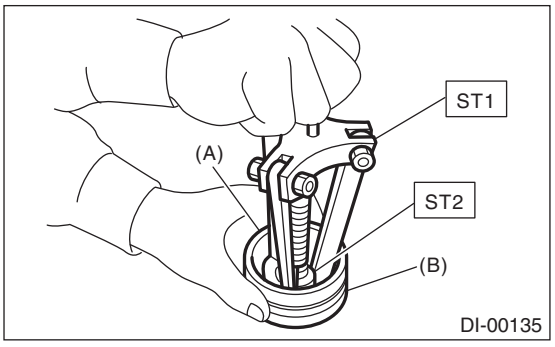
(A) Air breather cap
(B) Rear cover

6) Remove the lock plate.



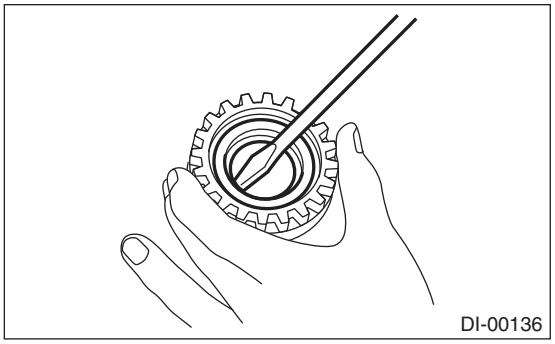
7) Remove the side retainer using ST.

NOTE:
When keeping the retainers aside, use labels etc. to avoid confusing the left and right.
ST 18630AA010 WRENCH COMPL RETAINER



8) Remove the differential case assembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



9) Remove the side bearing race with ST1 and ST2.

(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race

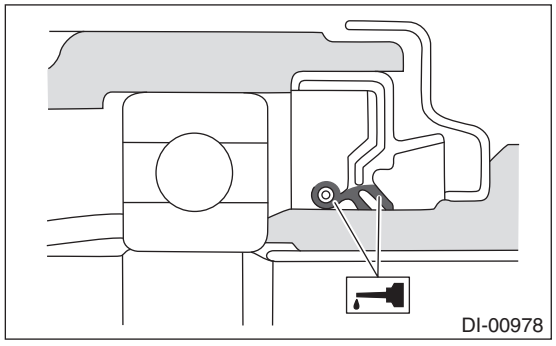
23) When replacing the bearings, tap out the front bearing race and rear bearing race in this order using a brass bar to remove them.

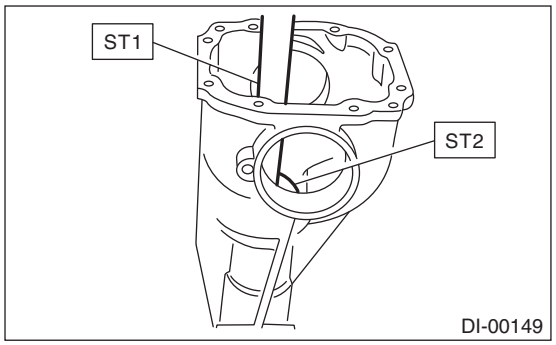


(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.

D: ASSEMBLY

1. VA1-TYPE

NOTE:
• Check and adjust each part during assembly.
• Keep the shims and washers in order, so that they are not improperly installed.
• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply differential gear oil when installing the bearings and thrust washers.
• Do not confuse the LH and RH side bearing races.
• Replace the gasket, oil seal and O-ring with a new part.
• Do not confuse the LH and RH side oil seals.
• Apply differential gear oil to the lips when installing the oil seal.



1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must be carried out with oil seal removed.

(1) Install the rear bearing race using ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477702 DRIFT

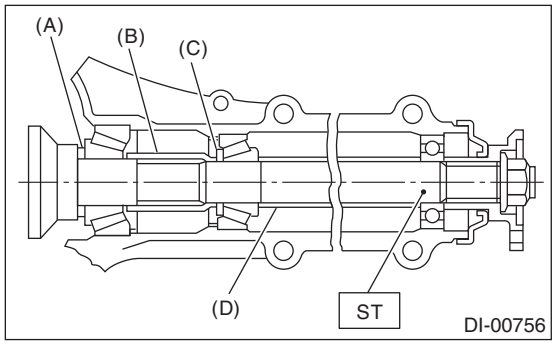
(2) Install the front bearing race to the differential carrier using ST1 and ST2.

NOTE:
Use a new front bearing race.

ST1 398477701 HANDLE
ST2 498447110 DRIFT

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.



(4) Measure and record the thickness of the pinion height adjusting washer.

NOTE:
• At this time, install a provisionally selected or previously used pinion height adjusting washer.
• If tooth contact (drive pinion and hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

(5) Insert the ST (DUMMY SHAFT) into differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

(6) Install the preload adjusting spacer, washer, spacer, pilot bearing, companion flange, and self-locking nut.

NOTE:
Use a new pilot bearing.

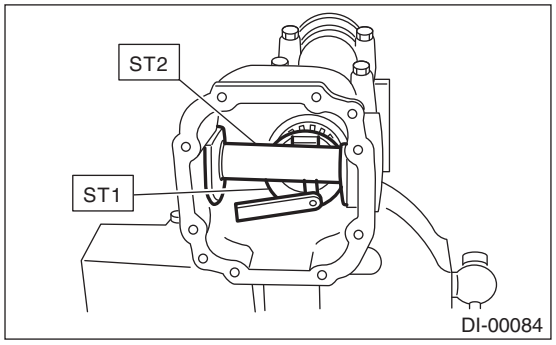
38336AA100	1.750 (0.0689)
38336AA220	1.763 (0.0694)
38336AA110	1.775 (0.0699)

Preload adjusting spacer	
Part No.	Length mm (in)
32288AA040	52.3 (2.059)
32288AA050	52.5 (2.067)
31454AA100	52.6 (2.071)
32288AA060	52.7 (2.075)
31454AA110	52.8 (2.079)
32288AA070	52.9 (2.083)
31454AA120	53.0 (2.087)
32288AA080	53.1 (2.091)
32288AA090	53.3 (2.098)



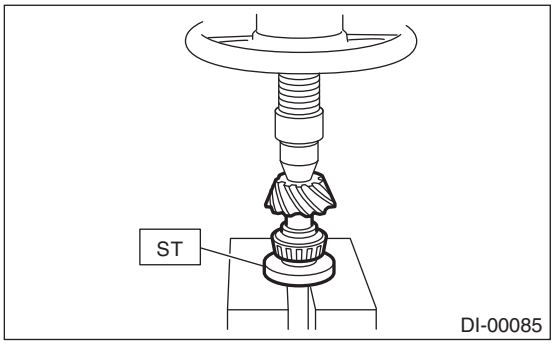
2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.
(1) Attach the ST2.
ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE
Part No. 32285AA000Spacer

(A) Pinion height adjusting washer
(B) Spacer (SUBARU genuine parts)

(2) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.

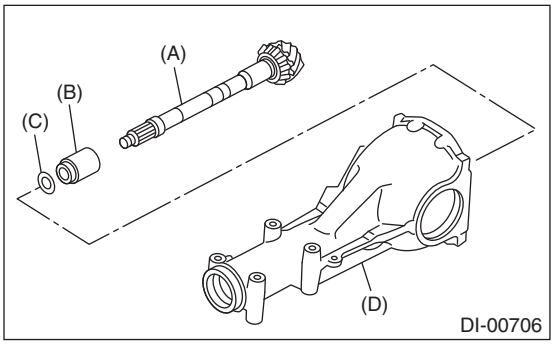
NOTE:
Make sure there is no clearance between the differential carrier and ST2.
ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE

(3) Calculate the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with a new washer of the calculated thickness.



NOTE:
Adjust it using the 1 — 3 washers.
T = To + N – 0.05 mm (0.0020 in)

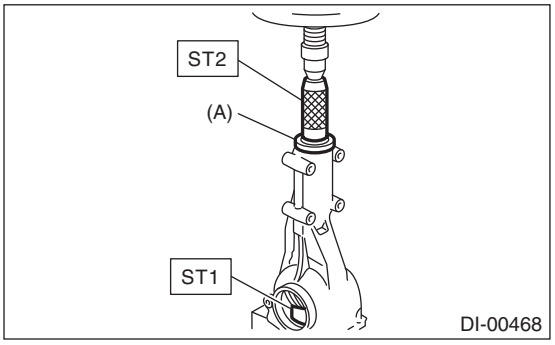
T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		



(Example of calculation)
To = 0.15 mm (0.0059 in)
N = 0.1 mm (0.0039 in)
T = 0.15 + 0.1 – 0.05 = 0.2 mm (0.0079 in)
Result: Thickness = 0.2 mm (0.0079 in)
Therefore use part number 32295AA220.

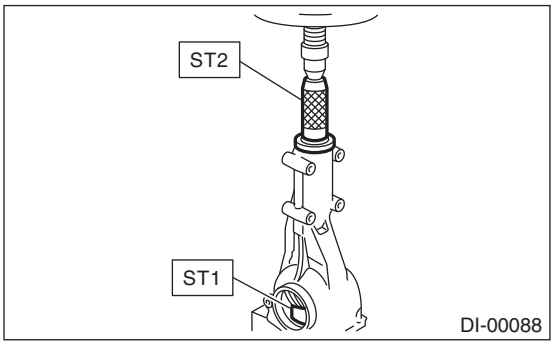
Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA200	0.150 (0.0059)
32295AA210	0.175 (0.0069)
32295AA220	0.200 (0.0079)
32295AA230	0.225 (0.0089)
32295AA240	0.250 (0.0098)
32295AA250	0.275 (0.0108)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone with ST.
ST 498175500 INSTALLER



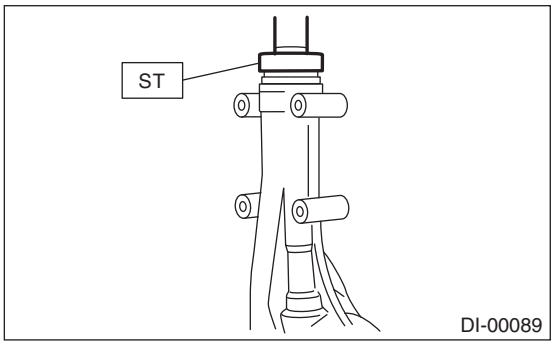
4) Insert the drive pinion, and install the preselected preload adjusting spacer and washer.

(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier



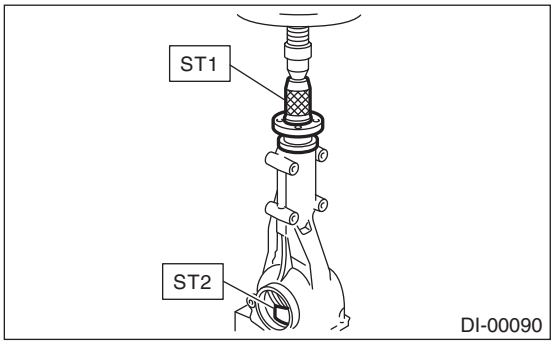
5) Press-fit the front bearing cone with ST1, ST2 and the spacer.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER
Part No. 32285AA000Spacer

(A) Spacer (SUBARU genuine parts)



6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.

NOTE:
Use a new pilot bearing.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER

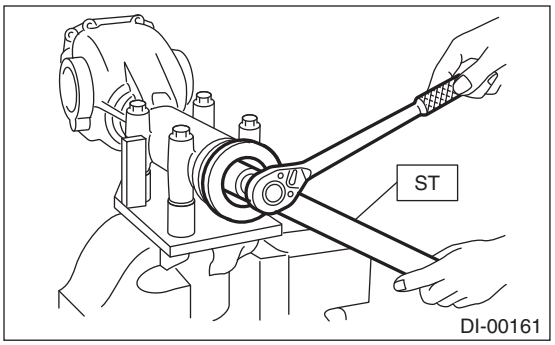


7) Using the ST, install the front oil seal.

NOTE:
• Use a new front oil seal.
• Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
• Apply differential gear oil to the oil seal lips.
ST 498447120 INSTALLER

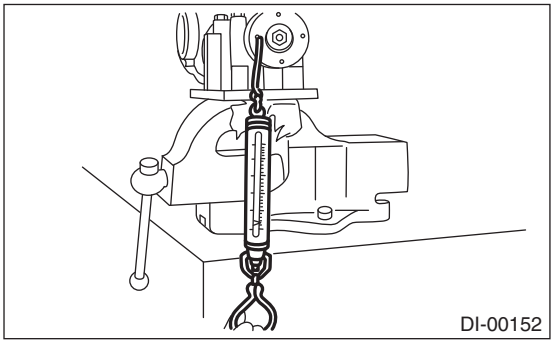
8) Press-fit the companion flange with ST1 and ST2.

NOTE:
Be careful not to damage the pilot bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT



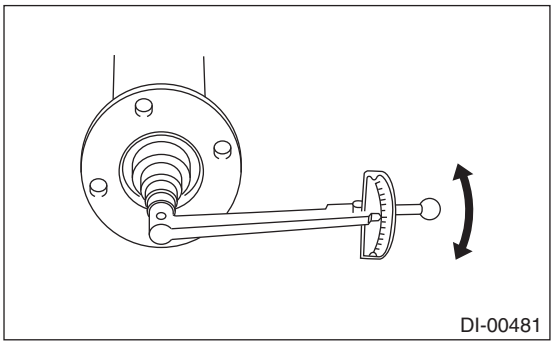
9) Attach the self-locking nut and use the ST to fix the companion flange in place, then tighten the self-locking nut.

NOTE:
• Use a new self-locking nut.
• Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.



Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

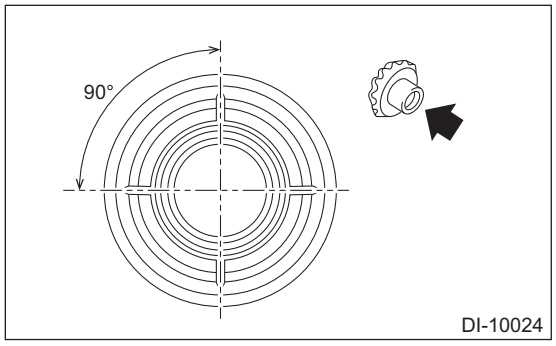
Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)
ST 498427200 FLANGE WRENCH



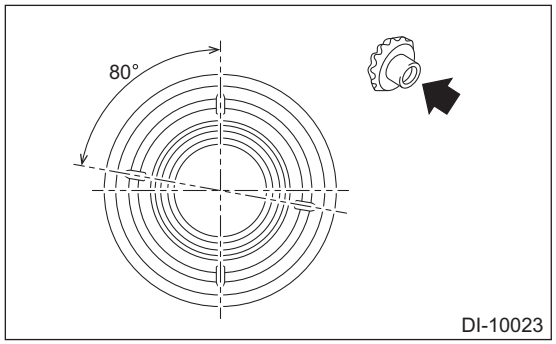
10) Check the initial torque or initial load.

Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)



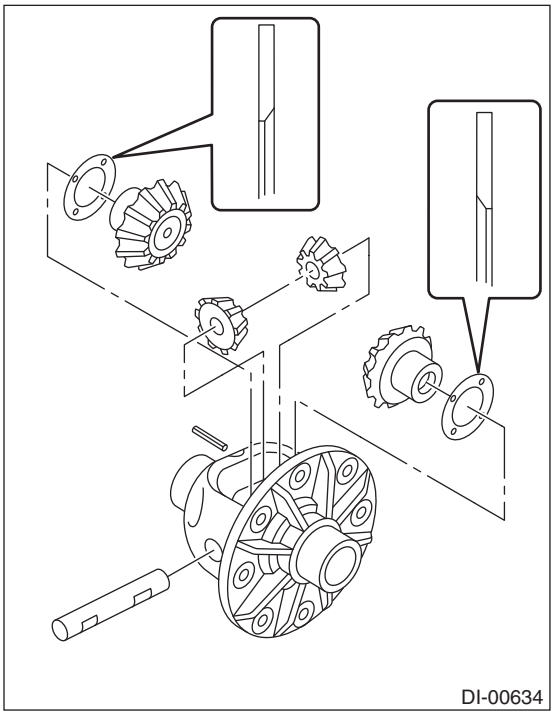
11) Assembling differential case
(1) Check that the oil grooves of LH and RH side gears are oriented in the same direction.



CAUTION:
If replacing the side gears, replace them on LH and RH side together.

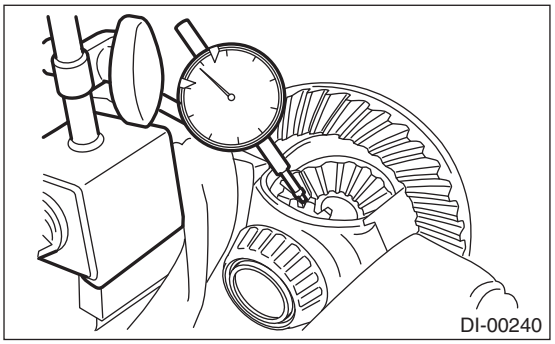
NOTE:
There are two types of directions for oil grooves of the side gears.

• Type A



• Type B

(2) Install the side gears and pinion mate gears together with their side gear thrust washers and pinion mate shaft.



NOTE:
• Apply gear oil on both sides of the washer and on the side gear shaft before installing.
• Insert the pinion mate shaft into the differential case by aligning the pin holes.

• The side gear thrust washer inner surface has a chamfered side. Install the washer with the chamfered side facing toward the side gear.

(3) Measure the side gear backlash.

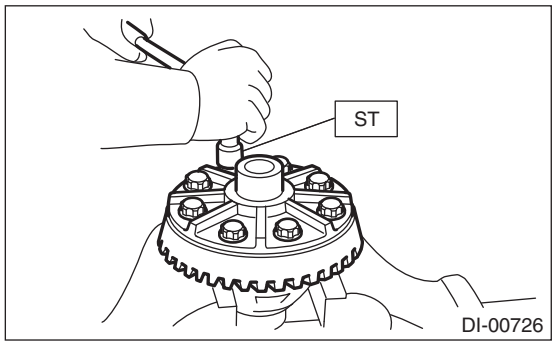
Side gear backlash:
0.05 — 0.15 mm (0.002 — 0.006 in)

(4) Adjust the side gear backlash by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
803135011	0.925 — 0.950 (0.0364 — 0.0374)
803135012	0.950 — 0.975 (0.0374 — 0.0384)
803135013	0.975 — 1.000 (0.0384 — 0.0394)
803135014	1.000 — 1.025 (0.0394 — 0.0404)
803135015	1.025 — 1.050 (0.0404 — 0.0413)

(5) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.
(6) Using the ST, drive the spring pin to the differential case.

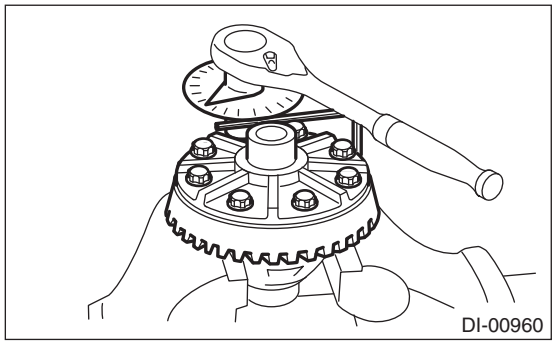
NOTE:
Use new spring pin.
ST 899904100 STRAIGHT PIN REMOVER



12) Install the hypoid driven gear to differential case.

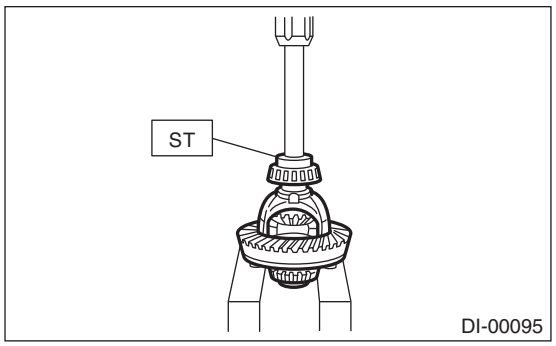
NOTE:
• Before installing bolts, apply seal material to bolt threads.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent



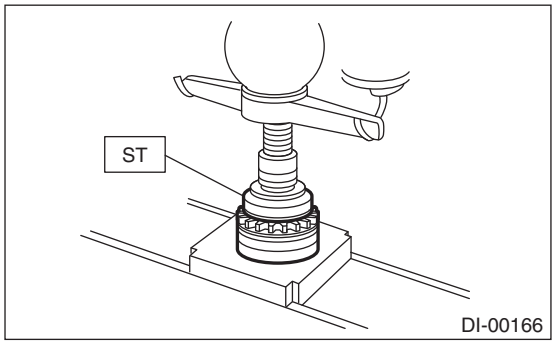
• Tighten opposing bolts in order.
(1) Tighten the hypoid driven gear mounting bolts to the specified torque using the ST.
ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



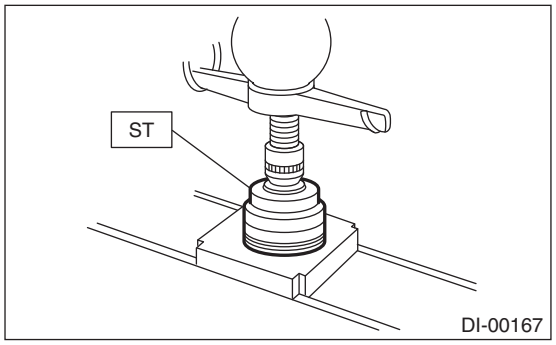
(2) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
35°±2°



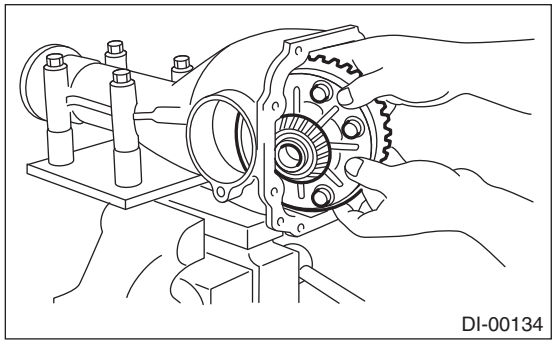
13) Press-fit the side bearing cone using the ST.
ST 498485400 DRIFT

14) Assemble the side retainer.
(1) Install the side oil seal to the side retainer.



CAUTION:
Pay attention to the left and right of the oil seal.

NOTE:
• Use a new oil seal.
• Apply differential gear oil to the oil seal lip.
ST 498447100 INSTALLER

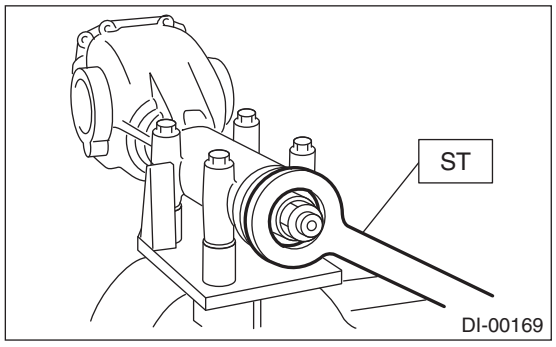


(2) Attach the side bearing race to the side retainer.

CAUTION:
Make sure that bearing races and cones are properly assembled.
ST 398477702 DRIFT

(3) Install the differential case assembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

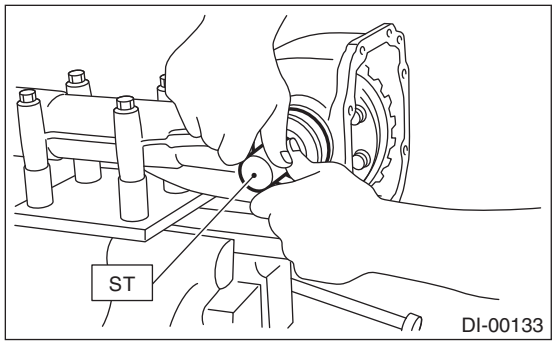


DI-00134

(4) Lightly tighten the side retainers RH and LH to the differential carrier.

15) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and side bearing preload adjustment.

(1) Turn the drive pinion with ST for better fitting of side bearing.

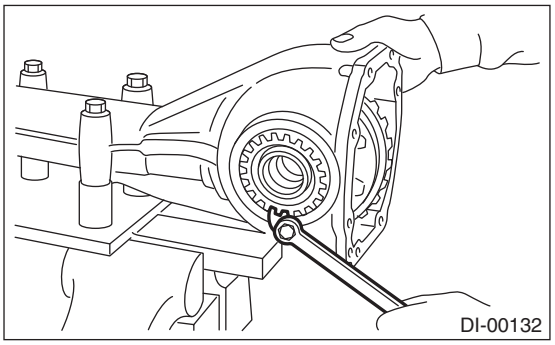


ST 498427200 FLANGE WRENCH

DI-00169

(2) Using the ST, tighten side retainer RH, and then tighten side retainer LH until there is no backlash.

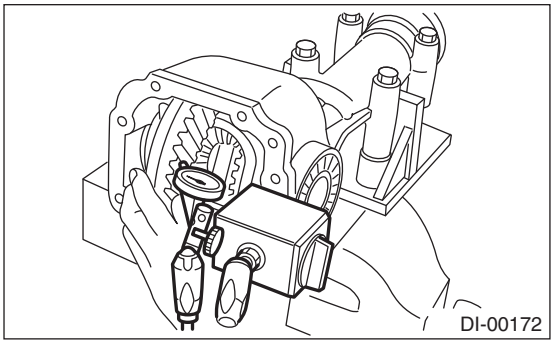
ST 18630AA010 WRENCH COMPL RETAINER



DI-00133

(3) Loosen the side retainer LH by approx. 1 and 1/2 teeth, and tighten the side retainer RH by approx. 2 teeth [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth) + approx. 1/2 teeth]. Difference between [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth)] and [amount that the side retainer RH is tightened (approx. 2 teeth)] gives preload.

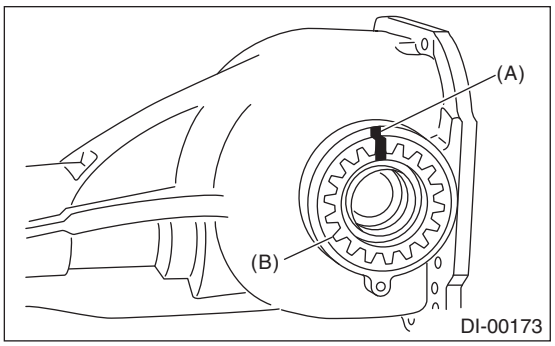
(4) Temporarily tighten the lock plate.



NOTE:
Turn over the lock plate to shift the holder by 1/2 teeth.

DI-00132

(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

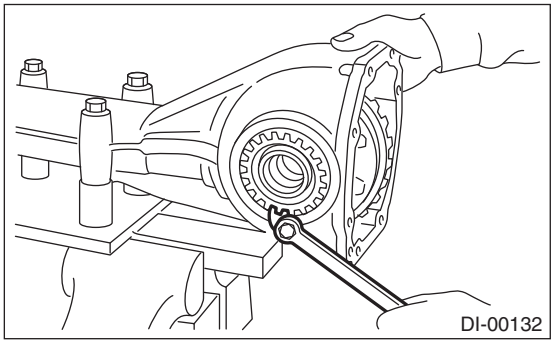


NOTE:
If measured value of backlash is not within the specified range, repeat the procedures for pinion driven gear set backlash adjustment and the side bearing preload adjustment.

Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

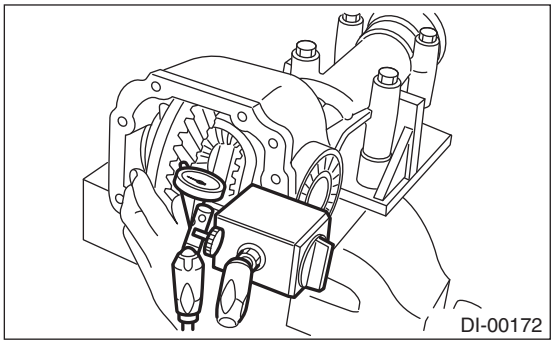
DI-00172

16) Put alignment marks on both the differential carrier and side retainer. Remove the side retainers one side at a time. After installing an O-ring and applying oil to the threaded portion, restore them to the original position.



NOTE:
Use new O-rings.

(A) Alignment mark
(B) Side retainer

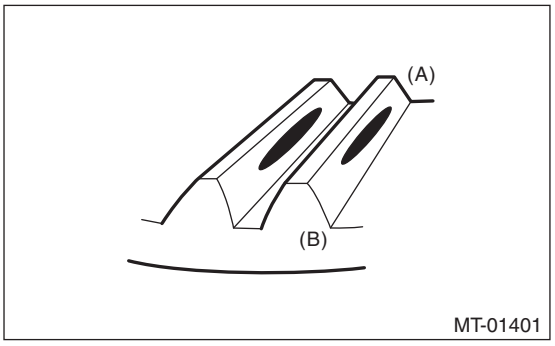


17) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

18) Recheck the backlash between hypoid driven gear and drive pinion.

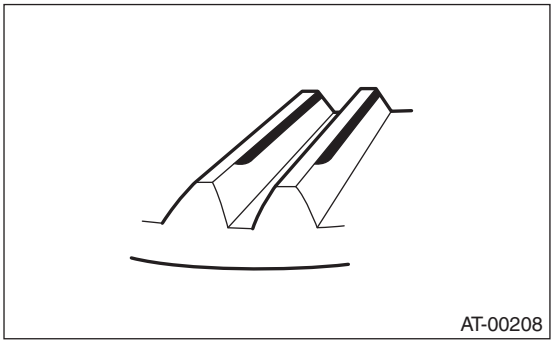
Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)



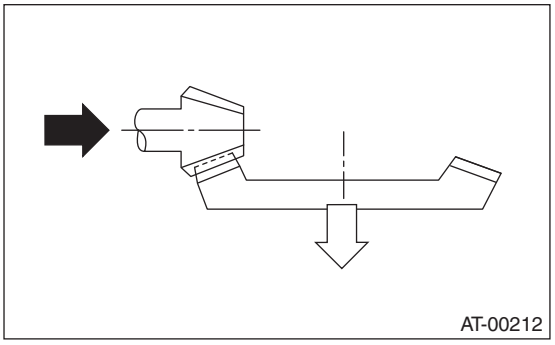
19) Checking and adjusting the tooth contact of hypoid driven gear
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is not correct, readjust.

NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact



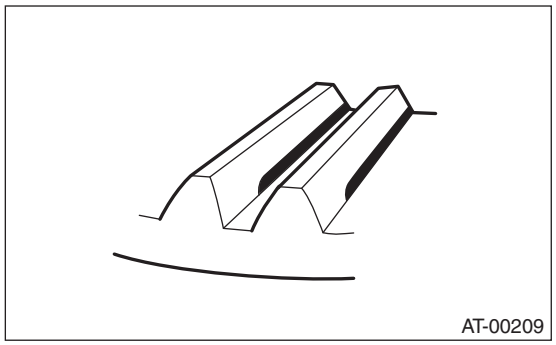
Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



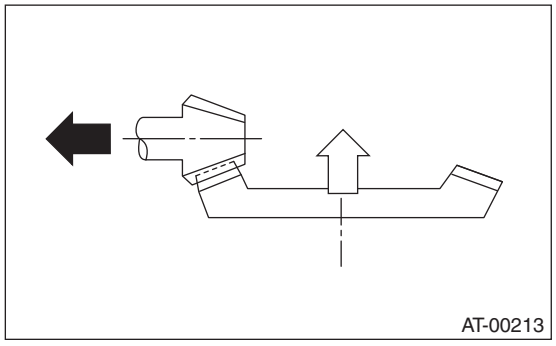
(A) Toe side
(B) Heel side

- Face contact

Check item: Backlash is too large.
Contact pattern



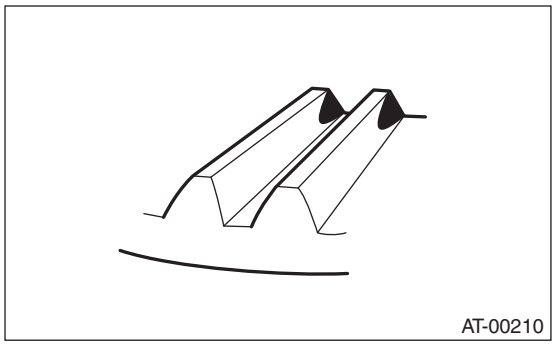
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



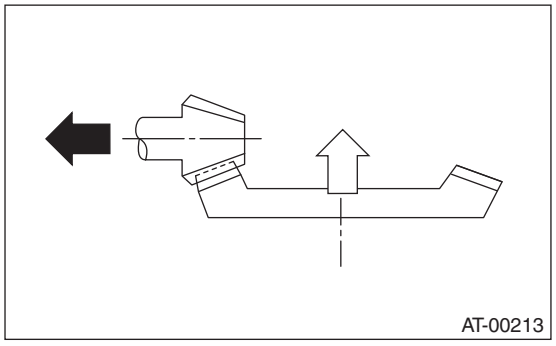
• Flank contact

Check item: Backlash is too small.

Contact pattern

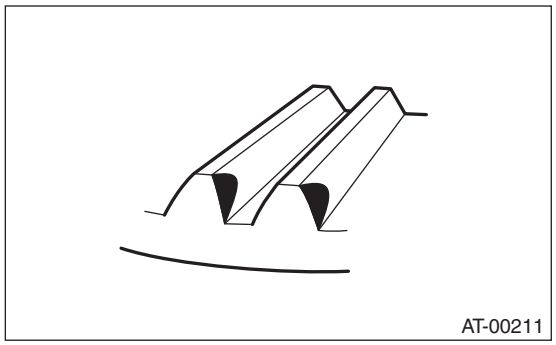


Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

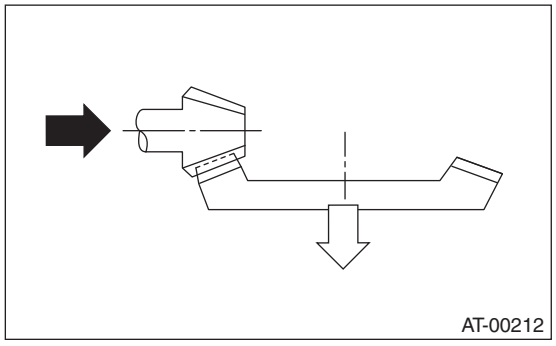


• Toe contact (inside contact)

Check item: Teeth contact area is too small.

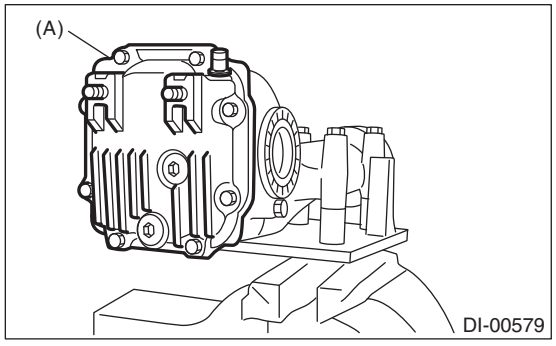


Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.

• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern

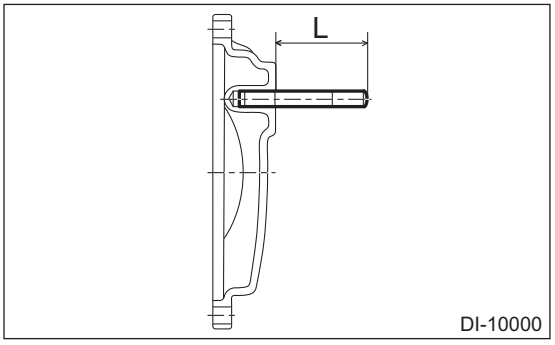


Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

20) If proper tooth contact is not obtained, readjust the drive pinion height, side bearing preload (previously described) and the hypoid driven gear backlash.
21) Install the gasket and rear cover, and tighten the bolts to specified torque.

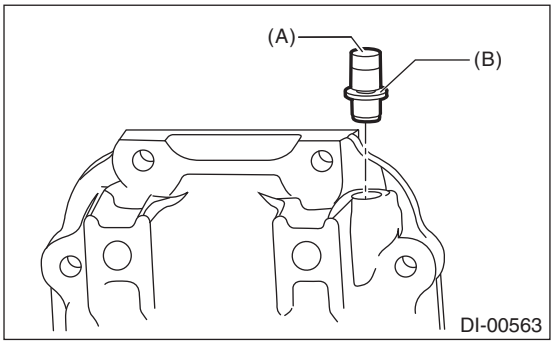
NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Rear cover

22) When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of "L".



CAUTION:
• Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.
• Do not tighten with a tightening torque of 55 N·m (5.6 kgf-m, 40.6 ft-lb) (reference value) or more.

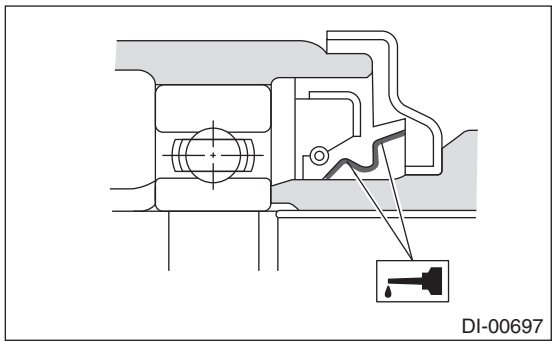
Exposed length L of stud bolt:
59.0 — 61.0 mm (2.32 — 2.40 in)

23) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

24) Install the drain plug.

NOTE:
Use a new gasket.



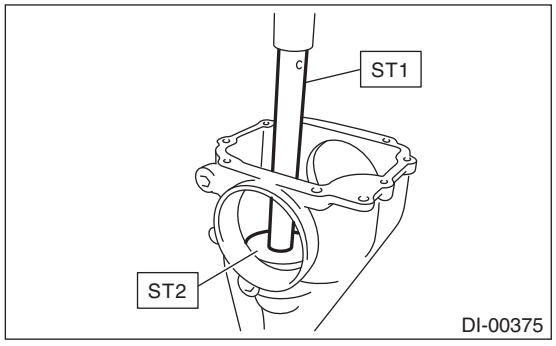
Tightening torque:
50 N·m (5.1 kg-m, 36.9 ft-lb)
25) Install the filler plug.

NOTE:
After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

2. VA2-TYPE

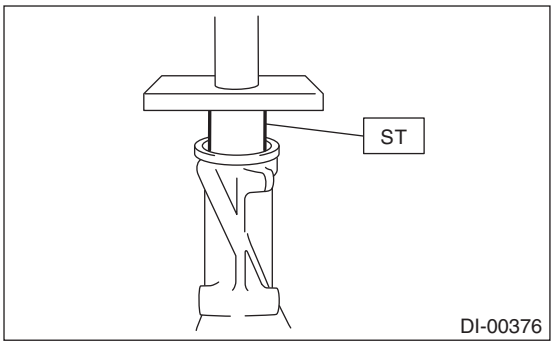
NOTE:
• Check and adjust each part during assembly.
• Keep the shims and washers in order, so that they are not improperly installed.

• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply differential gear oil when installing the bearings and thrust washers.
• Do not confuse the LH and RH side bearing races.
• Replace the gasket, oil seal and O-ring with a new part.
• Do not confuse the LH and RH side oil seals.
• Apply differential gear oil to the lips when installing the oil seal.



1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.



(1) Install the rear bearing race using ST1 and ST2.

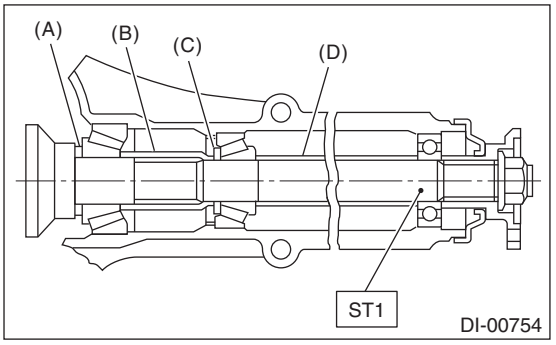
ST1 398477701 HANDLE
ST2 398477703 DRIFT 2

(2) Using the ST, press-fit the front bearing race to the differential carrier.

NOTE:
Use a new front bearing race.
ST 499277200 INSTALLER

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.



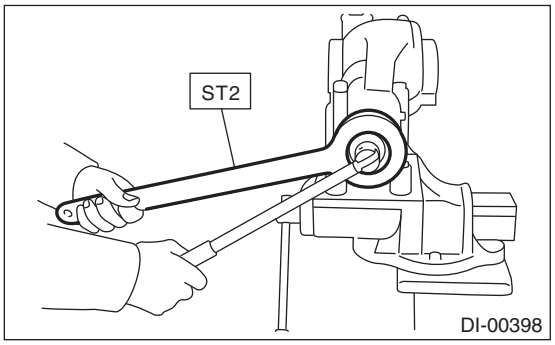
(4) Measure and record the thickness of the pinion height adjusting washer.

NOTE:
• At this time, install a provisionally selected or previously used pinion height adjusting washer.
• If tooth contact (drive pinion and hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

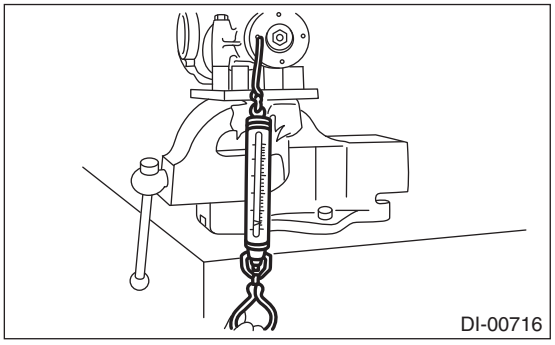
(5) Insert ST1 into the differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

(6) Install the preload adjusting spacer, washer, spacer, pilot bearing, companion flange, and self-locking nut.

NOTE:
Use a new pilot bearing.
ST1 18678AA000 DUMMY SHAFT



(A) Pinion height adjusting washer
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Spacer



(7) Turn the ST1 by hand to smooth the bearing, and tighten the self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:
• Measure the preload in direction of tangent to the flange.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock companion flange with ST2 as shown in the figure.

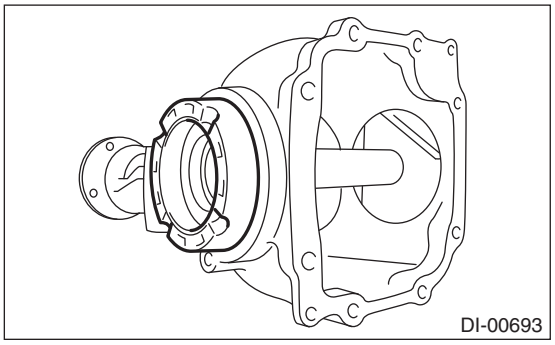
38336AA550	1.650 (0.0650)
38336AA560	1.663 (0.0655)
38336AA570	1.675 (0.0659)
38336AA580	1.688 (0.0665)
38336AA590	1.700 (0.0669)
38336AA600	1.713 (0.0674)
38336AA610	1.725 (0.0679)
38336AA620	1.738 (0.0684)
38336AA630	1.750 (0.0689)
38336AA640	1.763 (0.0694)
38336AA650	1.775 (0.0699)

Preload adjusting spacer	
Part No.	Length mm (in)
31454AA250	51.05 (2.010)
31454AA260	51.25 (2.018)
31454AA270	51.35 (2.022)
31454AA280	51.45 (2.026)
31454AA290	51.55 (2.030)
31454AA300	51.65 (2.033)
31454AA310	51.75 (2.037)
31454AA320	51.85 (2.041)
31454AA330	52.05 (2.049)

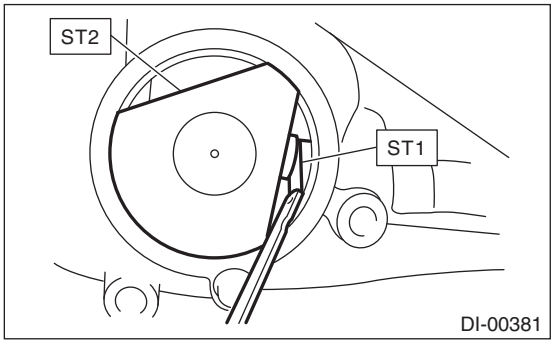
2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.



(1) Attach the ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE

(A) Pinion height adjusting washer



(2) Install the side retainer LH to the left side of the differential carrier in reverse direction.

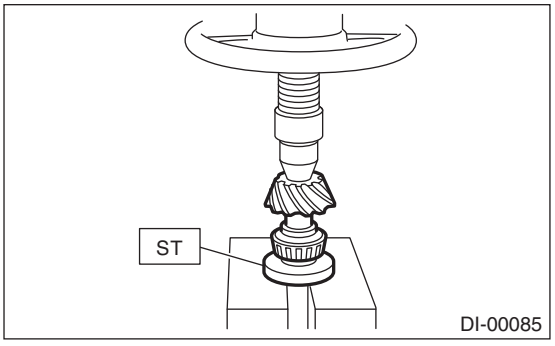
(3) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the differential carrier and ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE

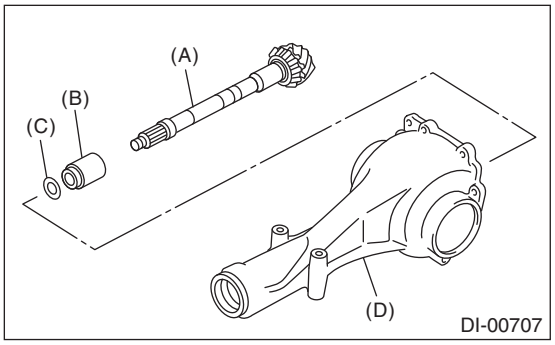
(4) Calculate the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with a new washer of the calculated thickness.

NOTE:
Adjust it using the 1 — 3 washers.
T = To + N – 0.05 mm (0.0020 in)



T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		

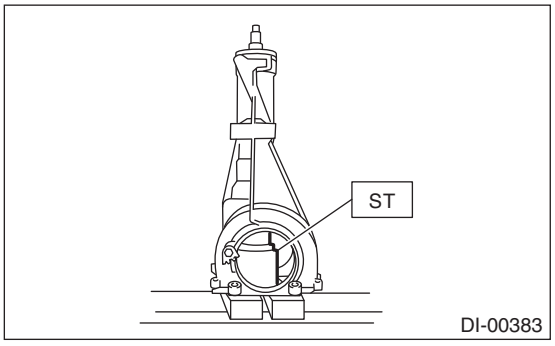
(Example of calculation)
To = 0.15 mm (0.0059 in)
N = 0.1 mm (0.0039 in)
T = 0.15 mm (0.0059 in) + 0.1 mm (0.0039 in) – 0.05 mm (0.0020 in) = 0.2 mm (0.0079 in)
Result: Thickness = 0.2 mm (0.0079 in)
Therefore use part number 32295AA370.



Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA350	0.150 (0.0059)
32295AA360	0.175 (0.0069)
32295AA370	0.200 (0.0079)
32295AA380	0.225 (0.0089)
32295AA390	0.250 (0.0098)
32295AA400	0.275 (0.0108)

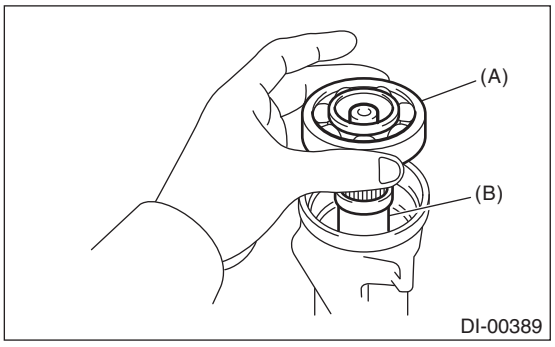
3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone with ST.

ST 398177700 INSTALLER



4) Insert the drive pinion, and install the preselected preload adjusting spacer and washer.

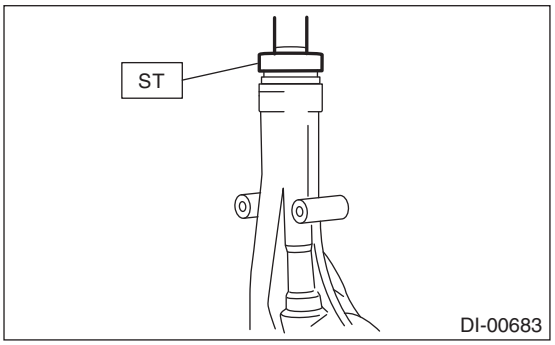
(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier



5) Set ST and differential carrier to the press and install the front bearing cone.

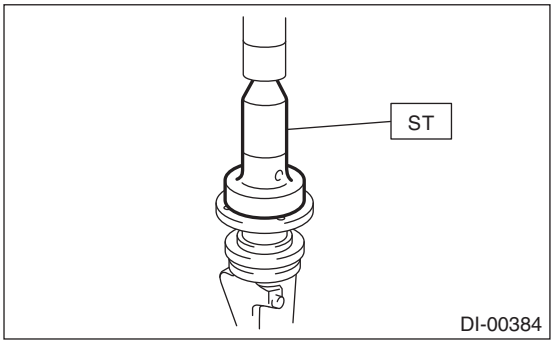
NOTE:
• Use new front bearing cone.
• Set the carrier to the press until the companion flange is installed.
ST 399780104 WEIGHT

6) Insert the spacer, then install the pilot bearing.



NOTE:
Use a new pilot bearing.

(A) Pilot bearing
(B) Spacer

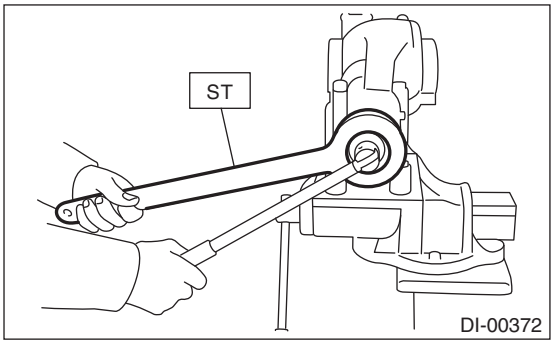


7) Using the ST, install the front oil seal.

NOTE:
• Use a new front oil seal.
• Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
• Apply differential gear oil to the oil seal lips.
ST 499277200 INSTALLER

8) Press-fit the companion flange with ST.

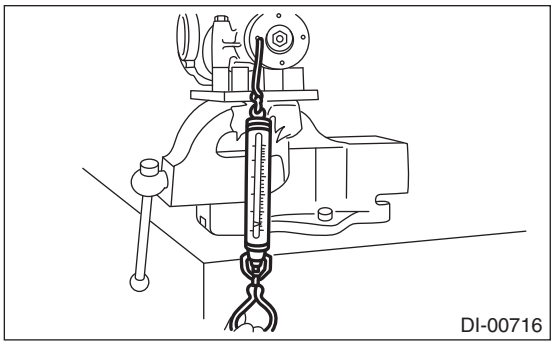
NOTE:
Be careful not to damage the pilot bearing.
ST 899874100 INSTALLER



9) Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

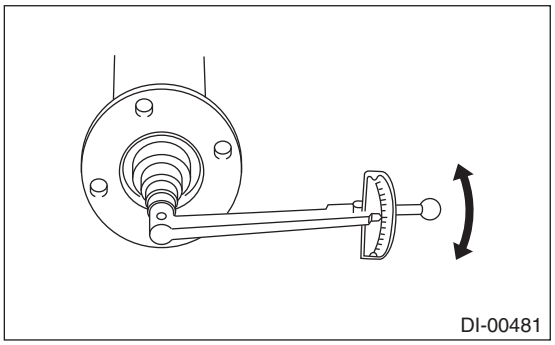
Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

10) Install the self-locking nut while holding the companion flange with ST.

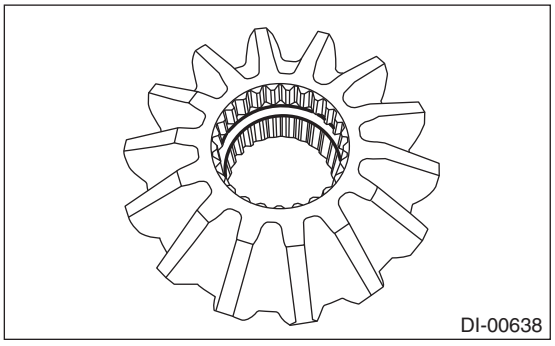


NOTE:
Use a new self-locking nut.

Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)
ST 498427200 FLANGE WRENCH

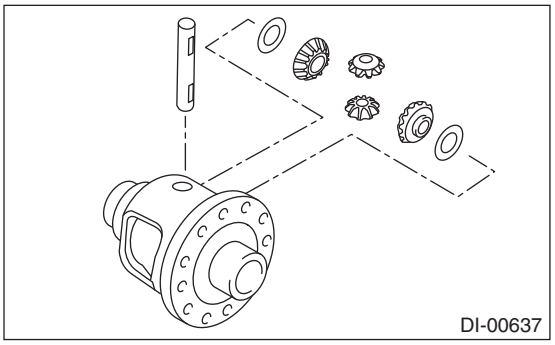


11) Check the initial torque or initial load.



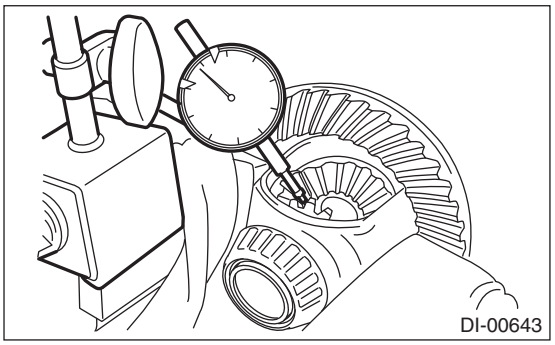
Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)



12) Assembling differential case
(1) Attach the circlip to the side gear.

(2) Install the side gears and pinion mate gears together with their side gear thrust washers and pinion mate shaft.



NOTE:
• Apply gear oil on both sides of the washer and on the side gear shaft before installing.

• Insert the pinion mate shaft into the differential case by aligning the pin holes.

(3) Measure the side gear backlash.

Side gear backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)

(4) Adjust the side gear backlash by selecting side gear thrust washer.

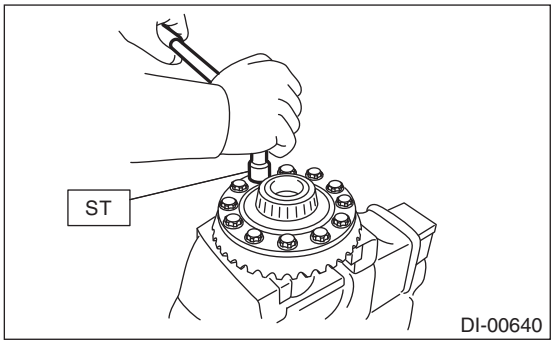
Side gear thrust washer	
Part No.	Thickness mm (in)
803038021	0.950 (0.0374)
803038022	1.000 (0.0394)
803038023	1.050 (0.0413)

(5) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.
(6) Using the ST, install the spring pin to the differential case.

NOTE:
Use new spring pin.
ST 899904100 STRAIGHT PIN REMOVER

13) Install the hypoid driven gear to differential case.

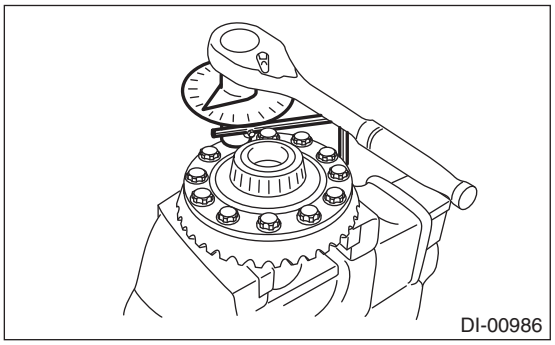
NOTE:
• Set a cushioning such as wooden block, aluminum plate or shop cloth between vise and differential case if the side gear comes into contact with vise.
• Before installing bolts, apply seal material to bolt threads.



Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

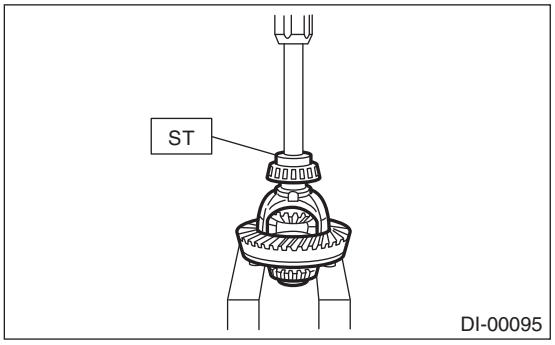
- Tighten opposing bolts in order.

(1) Tighten the hypoid driven gear mounting bolts to the specified torque using the ST.



ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



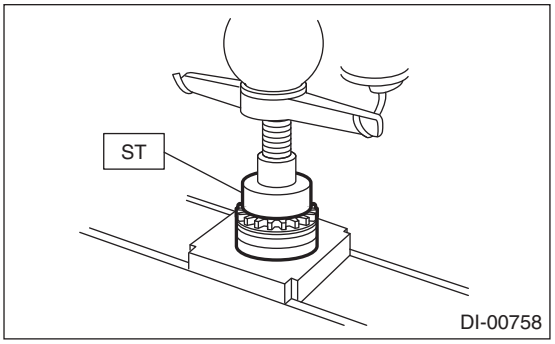
(2) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
33°±2°

14) Press-fit the side bearing cone using the ST.

ST 398487700 DRIFT

15) Assemble the side retainer.

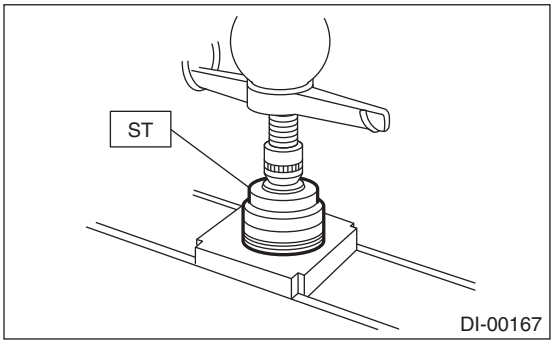


(1) Install the side oil seal to the side retainer.

CAUTION:
Pay attention to the left and right of the oil seal.

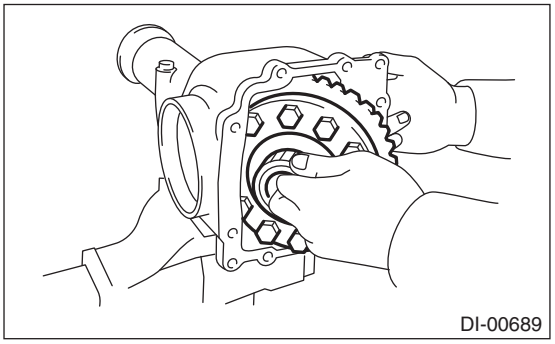
NOTE:

- Use a new oil seal.
- Apply differential gear oil to the oil seal lip.



ST 398437700 OIL SEAL INSTALLER

(2) Attach the side bearing race to the side retainer.

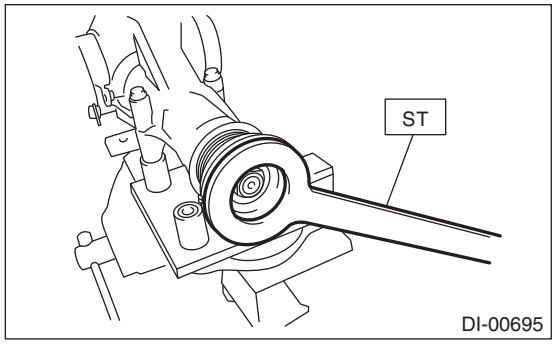


CAUTION:
Make sure that bearing races and cones are properly assembled.

ST 398417700 DRIFT

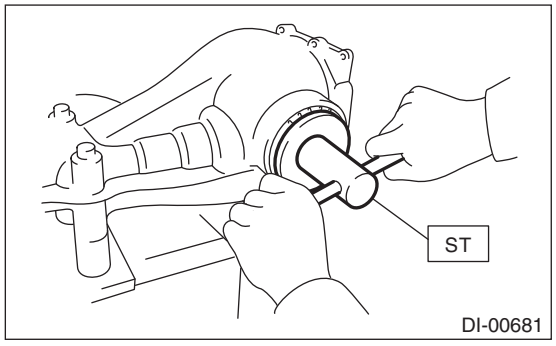
(3) Install the differential case assembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



(4) Lightly tighten the side retainers RH and LH to the differential carrier.

16) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and side bearing preload adjustment.

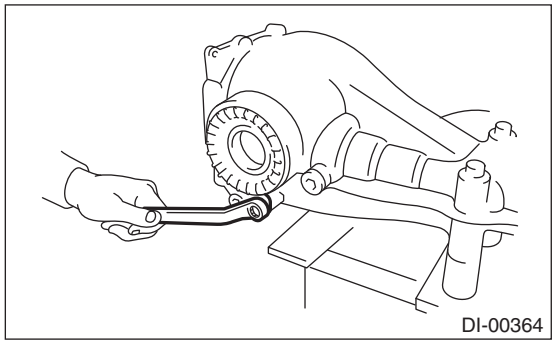


(1) Turn the drive pinion with ST for better fitting of side bearing.

ST 498427200 FLANGE WRENCH

(2) Using the ST, tighten side retainer RH, and then tighten side retainer LH until there is no backlash.

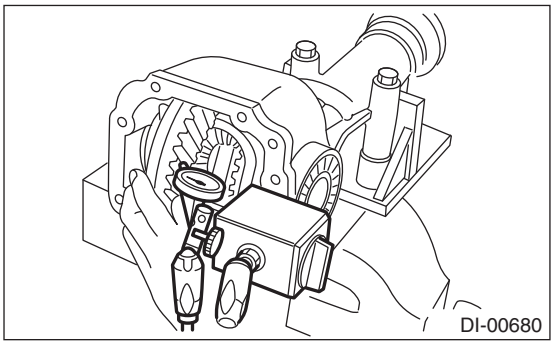
ST 18630AA010 WRENCH COMPL RETAINER



(3) Back off the side retainer LH by approx. 1 and 1/2 teeth, and tighten the side retainer RH by approx. 2 teeth [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth) + approx. 1/2 teeth].

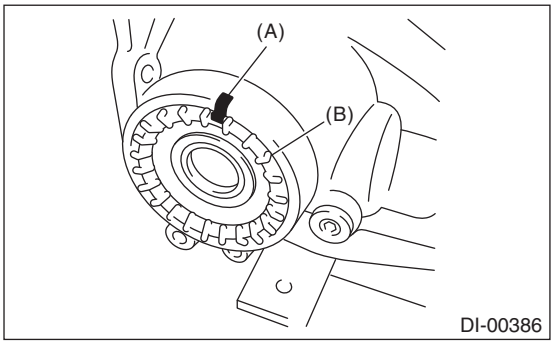
NOTE:
Difference between [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth)] and [amount that the side retainer RH is tightened (approx. 2 teeth)] gives preload.

(4) Temporarily attach the lock plate.



NOTE:
Turn over the lock plate to shift the holder by 1/2 teeth.

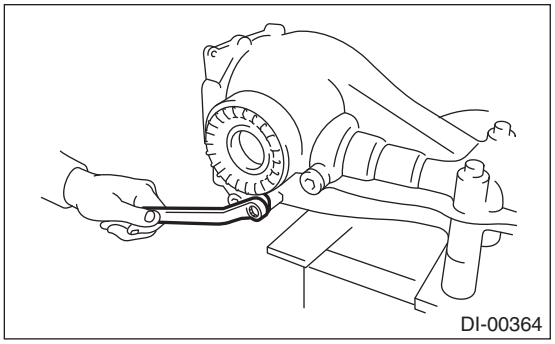
(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.



NOTE:
If measured value of backlash is not within the specified range, repeat the procedures for the backlash adjustment between hypoid driven gear and drive pinion, and the side bearing preload adjustment.

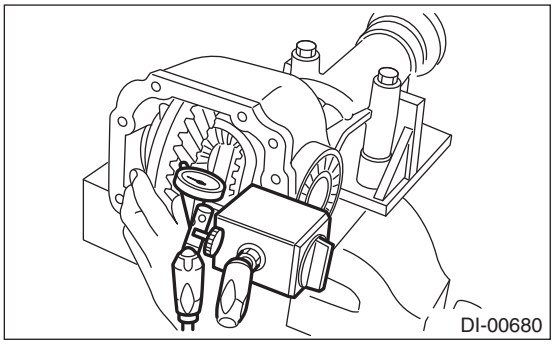
Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

17) Put alignment marks on both the differential carrier and side retainer. Remove the side retainers one side at a time. After installing an O-ring and applying differential gear oil to the threaded portion, restore them to the original position.



NOTE:
Use new O-rings.

(A) Alignment mark
(B) Side retainer



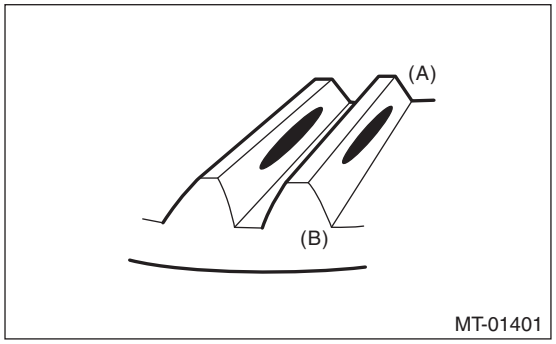
18) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

19) Recheck the backlash between hypoid driven gear and drive pinion.

Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

20) Checking and adjusting the tooth contact of hypoid driven gear

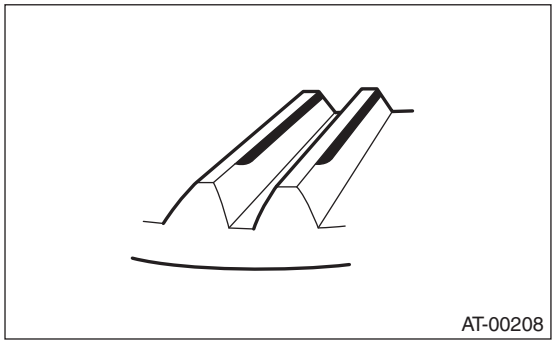


(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

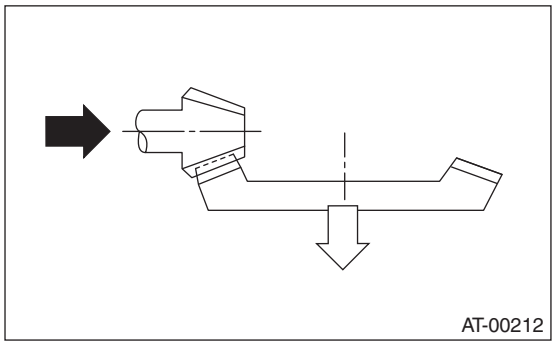
(2) When the contact pattern is not correct, readjust.

NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact



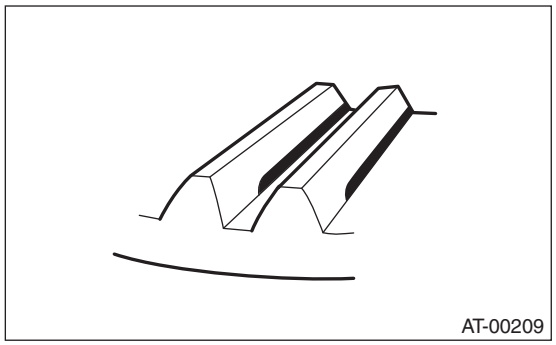
Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



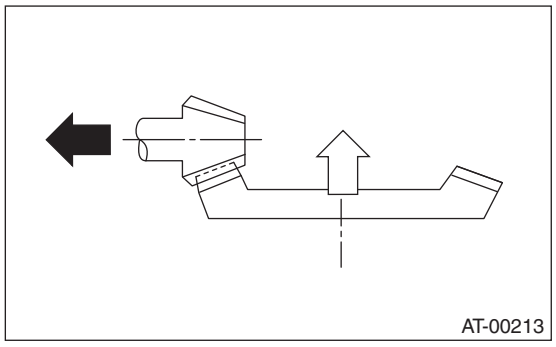
(A) Toe side
(B) Heel side

- Face contact

Check item: Backlash is too large.
Contact pattern



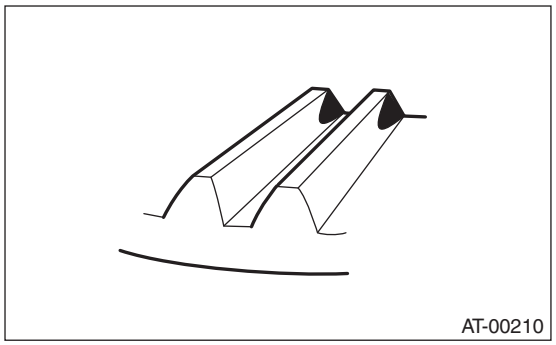
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



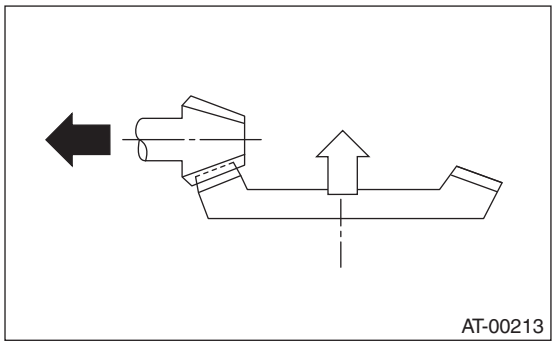
- Flank contact

Check item: Backlash is too small.

Contact pattern

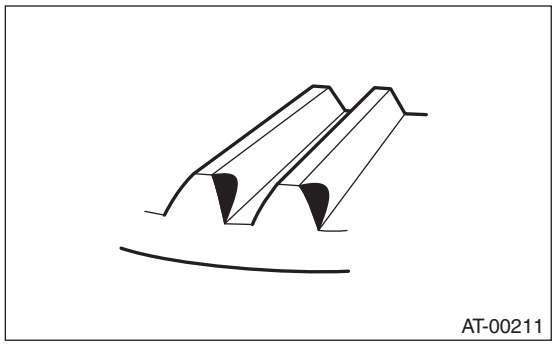


Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

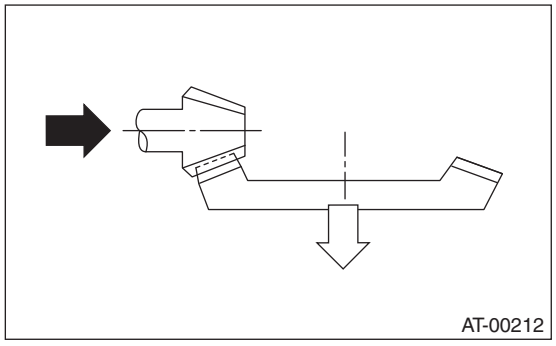


- Toe contact (inside contact)

Check item: Teeth contact area is too small.

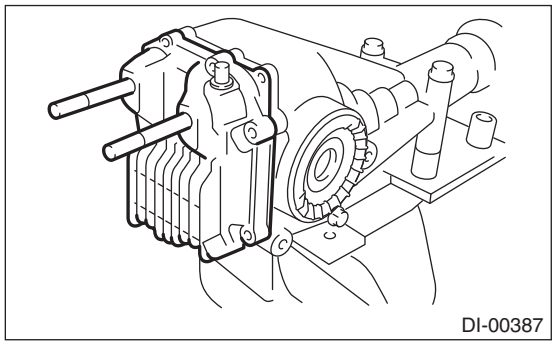


Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

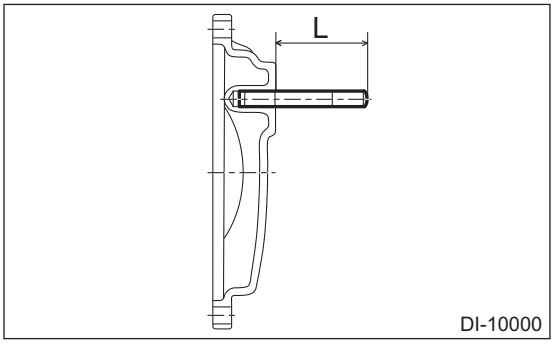
• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern



Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

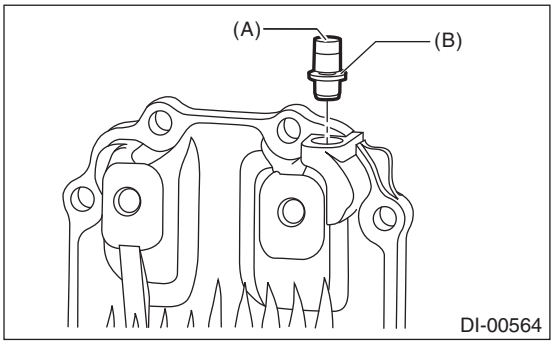
21) If proper tooth contact is not obtained, readjust the drive pinion height, side bearing preload (previously described) and the hypoid gear backlash.
22) Install the gasket and rear cover, and tighten the bolts to specified torque.

NOTE:
Use a new gasket.



Tightening torque:
34 N·m (3.5 kgf-m, 25.1 ft-lb)

23) When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of "L".



CAUTION:
• Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.
• Do not tighten with a tightening torque of 55 N·m (5.6 kgf-m, 40.6 ft-lb) (reference value) or more.

Exposed length L of stud bolt:
59.0 — 61.0 mm (2.32 — 2.40 in)

24) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

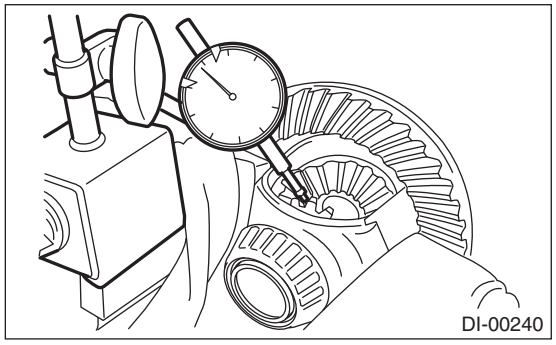
25) Install the drain plug.

NOTE:
Use a new gasket.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
26) Install the filler plug.

NOTE:
After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

E: INSPECTION

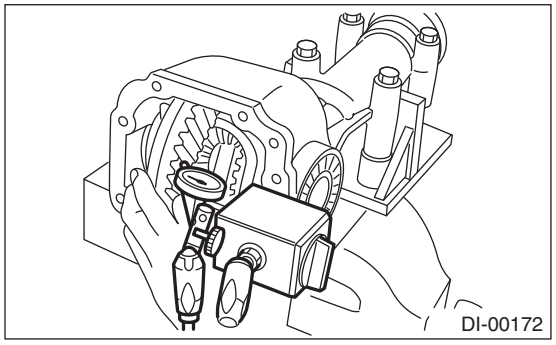


Wash all the disassembled parts clean, and examine them for wear, damage or other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion

• If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
• If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
• Replace if cracks, scoring or other defects are evident on the tooth surface.
• Replace if thrust washer contact surface is worn or seized. Slight damages of the surface can be corrected by oil stones or equivalent.
3) Bearing
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Side gear thrust washer
Replace if seized, flawed, abnormally worn or having other defects.
5) Oil seal
Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
Replace if the bearing bores are worn or damaged.
7) Differential case
Replace if its sliding surfaces are abnormally worn, burned, or cracked.
8) Companion flange
Replace if the oil seal lip contact surface shows cracking.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of side gear.

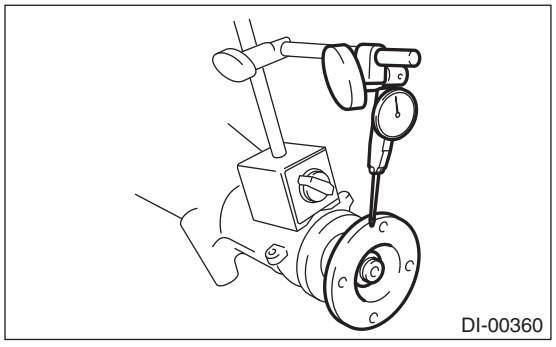


Side gear backlash:
VA1-type:
0.05 — 0.15 mm (0.002 — 0.006 in)
VA2-type:
0.13 — 0.18 mm (0.005 — 0.007 in)
If the side gear backlash is outside the specification range, select the side gear thrust washer and adjust the side gear backlash as specified.

DI-00240

2. HYPOID DRIVEN GEAR BACKLASH

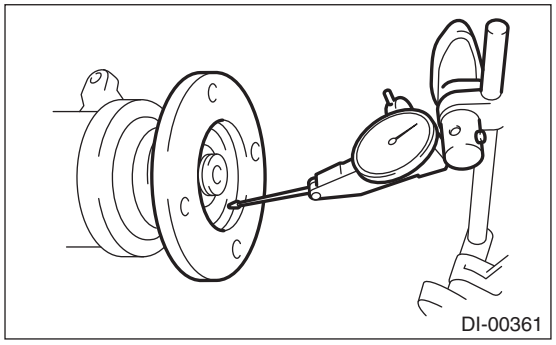
Using a dial gauge, check the backlash of hypoid driven gear.



Hypoid driven gear backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)
If the hypoid driven gear backlash is outside the specification range, adjust the side bearing preload and repair if necessary.

DI-00172

3. COMPANION FLANGE



1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:
0.08 mm (0.003 in)

DI-00360

3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)

DI-00361

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-32, ASSEMBLY, Rear Differential (VA-type).>

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

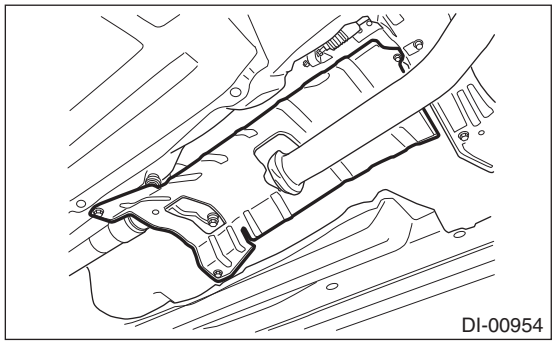
Adjust the side gear backlash. <Ref. to DI-32, ASSEMBLY, Rear Differential (VA-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. <Ref. to DI-32, ASSEMBLY, Rear Differential (VA-type).>

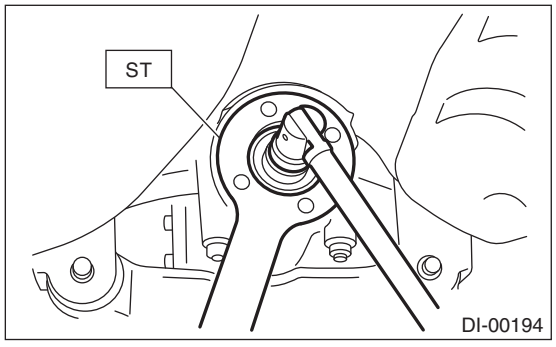
3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-32, ASSEMBLY, Rear Differential (VA-type).>



5. Rear Differential Front Oil Seal

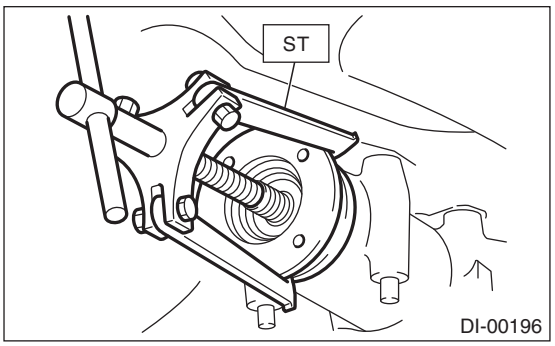
A: INSPECTION



Check that there is no leakage from the oil seal. If there is any leakage, replace the oil seal and inspect the propeller shaft.

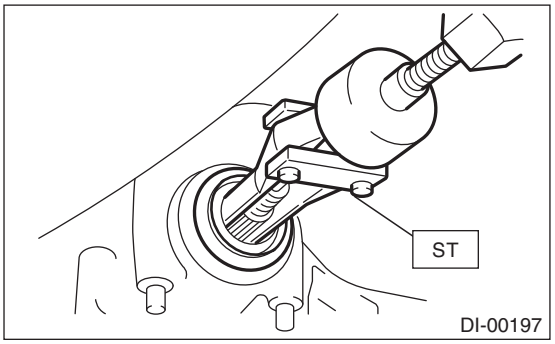
B: REPLACEMENT

1) Shift the select lever to neutral.
2) Release the electronic parking brake.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle.
5) Drain differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
6) Remove the rear exhaust pipe.
• 2.5 L model
<Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
• 3.6 L model
<Ref. to EX(H6DO)-11, REMOVAL, Rear Exhaust Pipe.>
7) Remove the center exhaust cover.



DI-00954

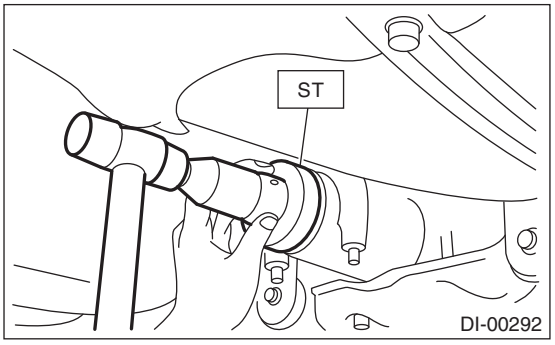
8) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
9) Check the initial torque and write it down.
10) Remove the self-locking nut while holding the companion flange with ST.
ST 498427200 FLANGE WRENCH



DI-00194

11) Extract the companion flange using the ST.
ST 399703600 PULLER ASSY

DI-00196



12) Remove the front oil seal using ST or a screwdriver.
ST 398527700 PULLER ASSY

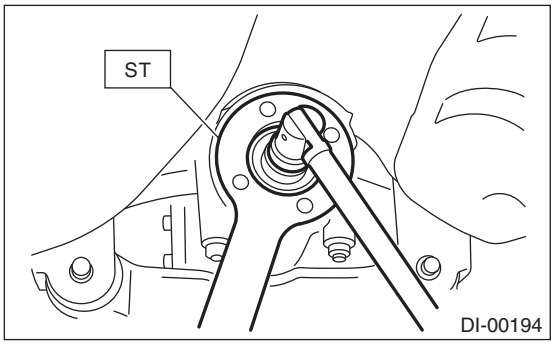
DI-00197

13) Using the ST, install the front oil seal.

NOTE:
• Use a new front oil seal.
• Apply differential gear oil to the oil seal lips.
ST 498447120 INSTALLER

DI-00292

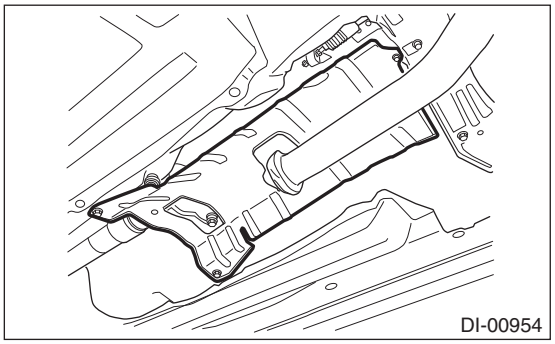
14) Install the companion flange.



NOTE:
Use a plastic hammer to install companion flange.
15) Tighten the self-locking nut to the specified torque so that the initial torque of companion flange becomes the same as that of before oil seal replacement.

NOTE:
• Use a new self-locking nut.
• Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent



Tightening torque:
162 — 220 N·m (16.5 — 22.5 kgf-m, 119.5 — 162.3 ft-lb)

ST 498427200 FLANGE WRENCH

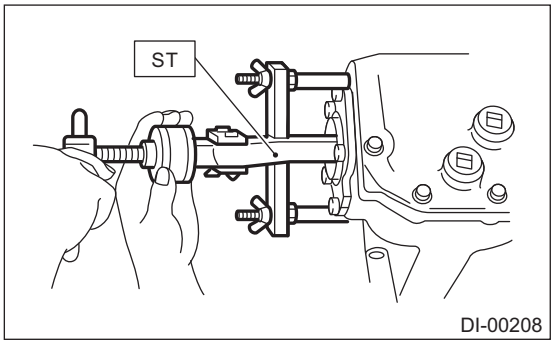
16) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
17) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

18) Install the rear exhaust pipe.
- 2.5 L model

<Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>
- 3.6 L model

<Ref. to EX(H6DO)-12, INSTALLATION, Rear Exhaust Pipe.>
19) Fill differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
20) Lower the vehicle.
21) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



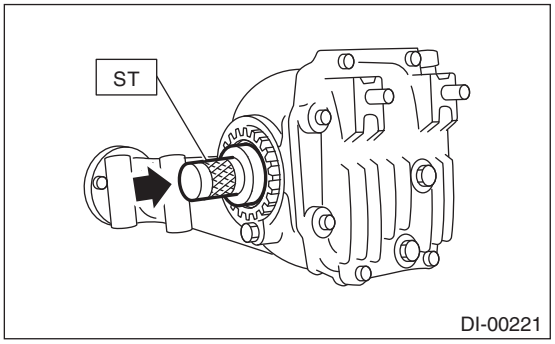
6. Rear Differential Side Oil Seal

A: INSPECTION

Check that there is no oil leakage from the oil seal. If there is any leakage, replace the oil seal.

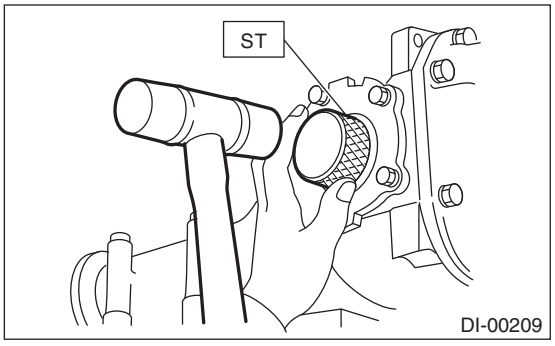
B: REPLACEMENT

1) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (VA-type).>
2) Wrap vinyl tape around the ST or the screwdriver, and remove the side oil seal while taking care not to damage the side retainer.
ST 398527700 PULLER ASSY



3) Using the ST, install the side oil seal.

CAUTION:
Pay attention to the left and right of the oil seal.

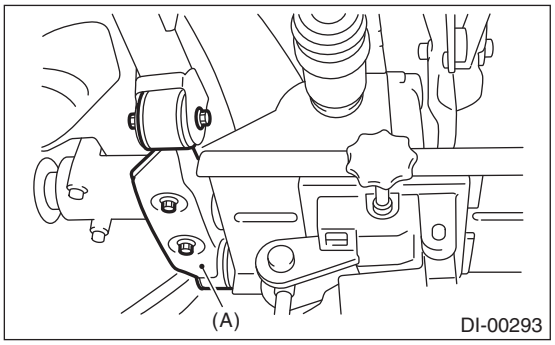


NOTE:
- Use a new oil seal.
- Apply differential gear oil to the oil seal lips.
- VA1-type

ST 498447100 INSTALLER

- VA2-type

ST 398437700 OIL SEAL INSTALLER

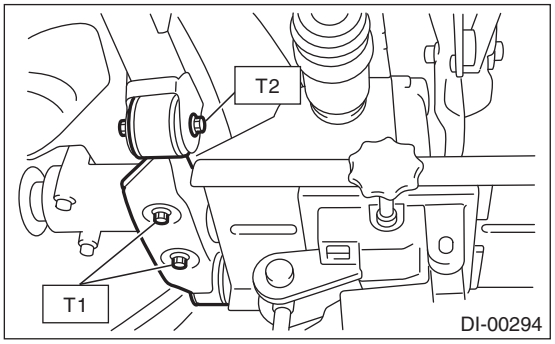


4) Install the rear differential. <Ref. to DI-23, INSTALLATION, Rear Differential (VA-type).>

7. Rear Differential Front Member

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Set the transmission jack.
4) Remove the rear differential front member.



(A) Rear differential front member

B: INSTALLATION

1) Install the rear differential front member with a new self-locking nut.

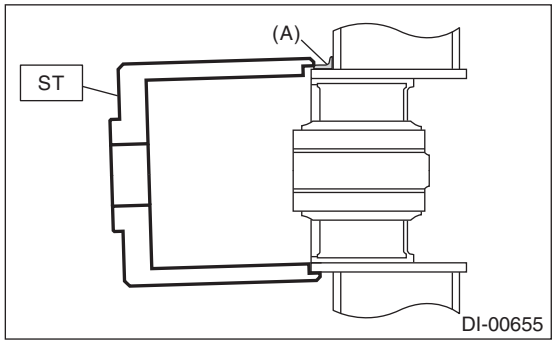
Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

2) Remove the transmission jack.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the rear differential front member for damage, bend and corrosion.
If damage, bend or corrosion is excessive, replace the rear differential front member.
2) Check the bushings of rear differential front member for cracking, hardening and damage.
If cracking, hardening or damage is excessive, replace rear differential front member.

8. Rear Differential Mount Bushing



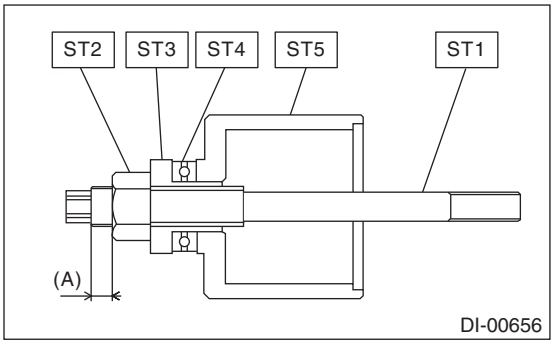
A: INSPECTION

Check the rear differential mount bushing for cracks, hardening or damage. If cracking, hardening or damage is excessive, replace it.

B: REPLACEMENT

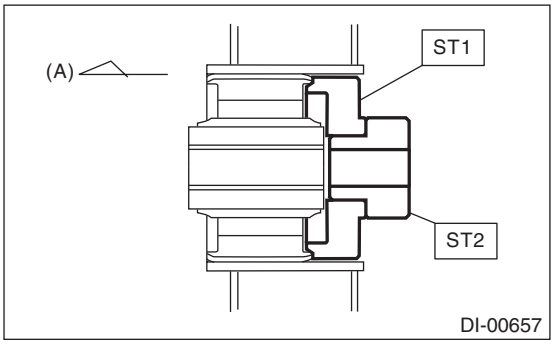
CAUTION:
• If there was so much rust in the rear differential mount bushing, remove the rust before starting work.
• Apply the molybdenum grease on the square thread of the ST (shaft and nut) before use.

1) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (VA-type).>
2) Fit the ST to the periphery of the sub frame cylinder, and make sure that the ST does not contact with welded spots or spatters.
ST 41399FG010 SPECIAL TOOL A



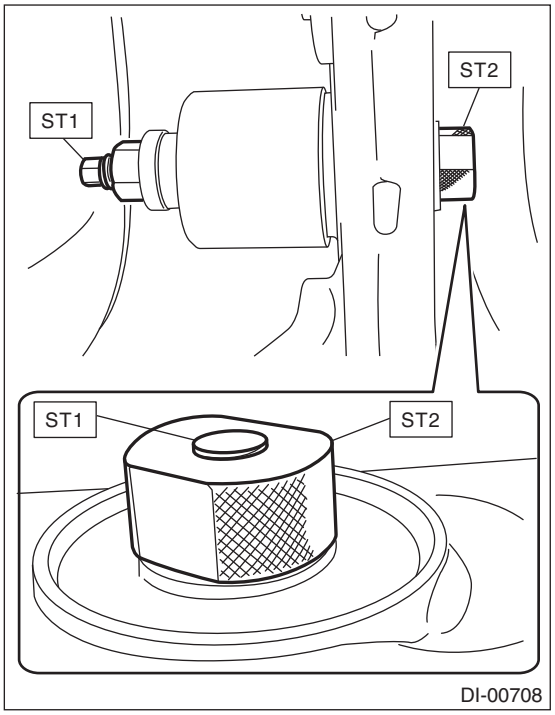
(A) Welded spot

3) If the ST contacts with welded spots or spatters, remove the excessive welds or spatters with sander or the equivalent so that the ST contacts the cylinder peripheral part.



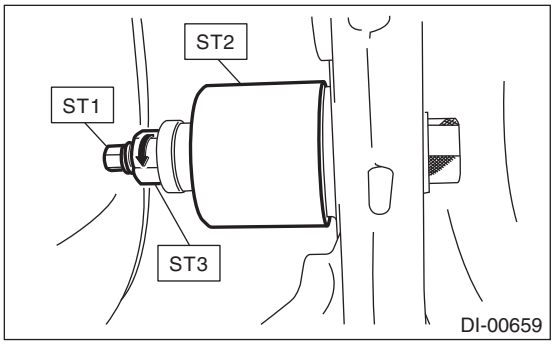
CAUTION:
Performing the operation with the ST contacting with welded spots or spatters may break the ST. Be sure to remove excessive welds or spatters before the operation.

4) Set ST1, ST2, ST3, ST4 and ST5 as shown in the figure.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT
ST3 41399FG050 SPECIAL TOOL SLEEVE
ST4 41399FG080 SPECIAL TOOL BEARING
ST5 41399FG010 SPECIAL TOOL A



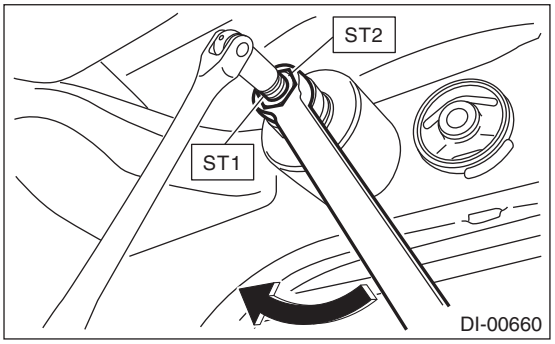
(A) 5 mm (0.2 in) or less

5) Fit and hold the ST1 and ST2 to the rear differential mount bushing from the rear side of vehicle.
ST1 41399FG031 SPECIAL TOOL C
ST2 41399FG061 SPECIAL TOOL RING



(A) Front side of vehicle

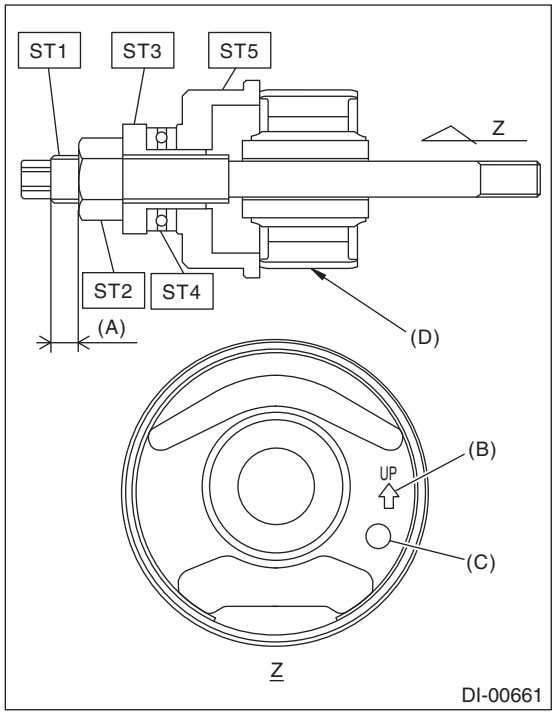
6) Insert the ST set in the step 4) through the rear differential mount bushing hole from the front side of vehicle, and screw in the ST1 by hand till the front end of ST1 comes out slightly from the rear end of ST2.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG061 SPECIAL TOOL RING



7) Hold the ST1 to prevent it from rotating, and screw in the ST3 by hand till there is no loose fit on the ST2.

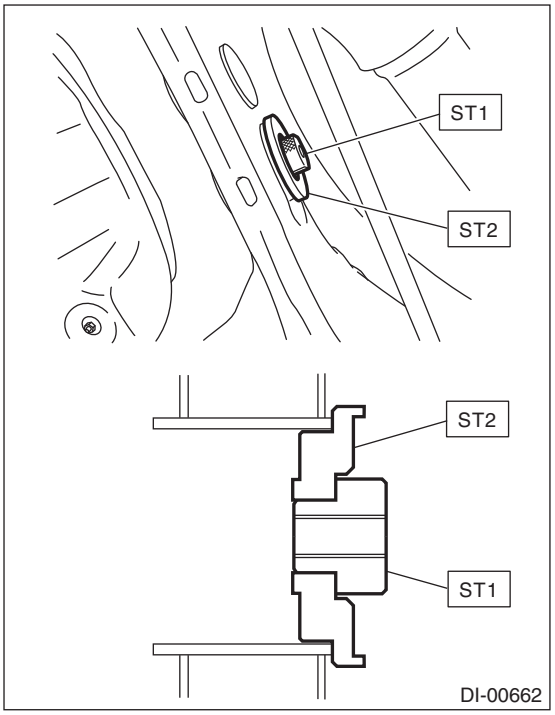
CAUTION:
When setting the ST to the vehicle, always make sure that the ST2 fits the periphery of the sub frame cylinder and is not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG010 SPECIAL TOOL A
ST3 41399FG070 SPECIAL TOOL NUT

8) Hold the ST1 with a tool to prevent it from rotating, and screw in the ST2 to remove the rear differential mount bushing.



CAUTION:
• Rotation of ST1 will damage the screw at the rear end of rear differential mount bushing. Never rotate the ST1.
• If the ST starts to tilt while removing the rear differential mount bushing, stop the work and set the ST again.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT

9) Set ST1, ST2, ST3, ST4, ST5 and rear differential mount bushing as shown in the figure.



NOTE:
• Set the ST2 nut near to the end of ST1 screw.
• Hold the rear differential mount bushing with the marked side facing toward the rear of the vehicle, and set the rear differential mount bushing to the ST so that the arrow mark faces upward.

• Mark the bottom end of rear differential mount bushing to identify the installing direction.

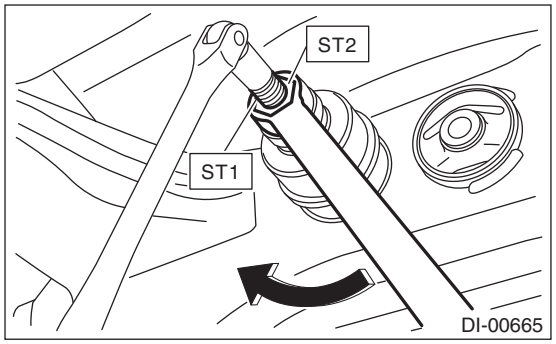
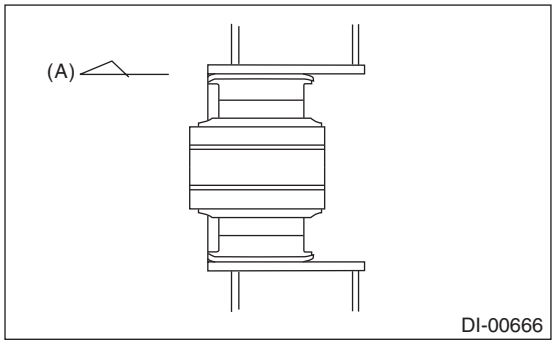
ST2 41399FG061 SPECIAL TOOL RING



(A) Mark

12) Hold the ST1 to prevent it from rotating, and screw in the ST2 by hand till there is no loose fit on the ST and the rear differential mount bushing.



CAUTION:
Make sure that the ST and rear differential mount bushing are not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT

13) Screw in the ST2 while holding the ST1 with a tool to prevent it from rotating, and press-fit the rear differential mount bushing to the front end of sub frame cylinder.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT

14) Make sure that the rear differential mount bushing is inserted to the front end of sub frame cylinder.

(A) Front side of vehicle

15) Install the rear differential. <Ref. to DI-23, INSTALLATION, Rear Differential (VA-type).>

9. Rear Differential Inspection Mode

A: GENERAL DESCRIPTION

CAUTION:
Be sure to perform rear differential inspection mode.
- Follow the messages displayed on the Subaru Select Monitor when working.
- Perform rear differential inspection mode when the following work has been performed.

Transmission assembly replacement/Replacement of rear differential/Replacement of front differential hypoid gear set/Replacement of rear differential hypoid gear set

B: PROCEDURE

CAUTION:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
1) Shift the select lever to “P” range.
2) Apply the electronic parking brake.
3) Lift up the vehicle.

WARNING:
Lift up the vehicle until the tire bottom is 30 cm or more above the ground.
4) Connect the Subaru Select Monitor to data link connector.
5) Turn the ignition switch to ON. (For model with push button start, press the push button ignition switch twice without depressing brake pedal.)
6) Select «Diagnosis» in the «Start» screen of Subaru Select Monitor.
7) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
8) On «Main Menu» display, select «Each System».
9) On «Select System» display, select «Transmission Control System».
10) On «Select Function» display, select «Work Support».
11) On «Work Support» display, select «Rear differential inspection mode».
12) Follow the messages displayed on the Subaru Select Monitor screen when working.
13) The results of the rear differential inspection mode are displayed on the Subaru Select Monitor screen.
- When ended properly:

«The rear differential is replaced properly.»
- When ended abnormally:

«A rear differential abnormality has been detected. Reinspect the items at the time of rear differential installation.»
- When interrupted:

«Inspection is stopped. Restart this inspection mode from the beginning.»

14) After the message “Please be IGOFF in a safe state” appears, the rear differential inspection mode completes.

NOTE:
- When the rear differential inspection mode is completed properly, the following warning lights may illuminate. But this is not a malfunction. If warning light illuminates, clear the memory.

VDC/ABS, engine, power steering, EyeSight
- For detailed operation procedures, refer to “Application help”.
- If the rear differential inspection mode does not end normally, repeat the mode until it ends normally.
- When the inspection mode does not end normally, the AWD warning light will start blinking at 2 Hz.
- When the rear differential inspection mode ends abnormally, the front differential and rear differential may be different from the specifications for the vehicle.

- When the rear differential inspection mode is interrupted, the following reasons are possible.

Message	Main reasons for abnormal termination	Action to take
• «Inspection is stopped.» • «Inspection is stopped. Restart this inspection mode from the beginning.»	TCM has detected a failure.	Perform the diagnosis for TCM. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>
	VDC has a failure.	Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>
	Brake is applied after start during automatic running.	—
	Too delayed operation to the instructions displayed on the Subaru Select Monitor.	—
«The TCM has detected a fault. Inspect following the manual.»	TCM has detected a failure.	Perform the diagnosis for TCM. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>

10.General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Repair or replace.
	(2) Clogged or damaged air breather cap.	Clean, repair or replace.
	(3) Loose bolts on the side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attachment bolts or damaged gasket.	Replace the gasket, and tighten the bolts to specified torque.
	(5) Loose filler plug or drain plug.	Replace the gasket, and tighten to the specified torque.
	(6) Wear, damage or incorrect fitting of drive shaft, side retainer or oil seal.	Repair or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Insufficient backlash for hypoid gear.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Add recommended oil to the specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Improper backlash for hypoid gear.	Readjust or replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash for differential gear.	Replace gear or thrust washer.
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retighten.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust. (Drive pinion adjustment and backlash adjustment)
	(2) Excessive backlash for hypoid driven gear.	Replace the gear or the pinion height adjusting washer.
	(3) Excessive backlash for side gear.	Replace gear or thrust washer.
	(4) Insufficient preload for front or rear bearing.	Readjust.
	(5) Loose drive pinion nut.	Tighten to the specified torque.
	(6) Loose bolts and nuts such as side retainer attachment bolt.	Tighten to the specified torque.
5. Noises when cornering	(1) Damaged differential gear.	Replace.
	(2) Excessive wear or damage of thrust washer.	Replace.
	(3) Broken pinion mate shaft.	Replace.
	(4) Seized or damaged side bearing.	Replace.

Symptom or trouble	Possible cause	Remedy
6. Gear Noise NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to the condition of trouble. When listening to noises, shift the gear into four-wheel drive and fourth speed position, trying to pick up only differential noise.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust or replace the hypoid gear set.
	(2) Improper backlash of the hypoid driven gear.	Readjust.
	(3) Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	(4) Scuffed hypoid gear.	Replace hypoid gear set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Stuck, scored or chipped teeth of front or rear bearing.	Replace.
	(7) Stuck, scored or chipped teeth of side bearing.	Replace.
	(8) Vibrating differential gear.	Replace the differential gear.

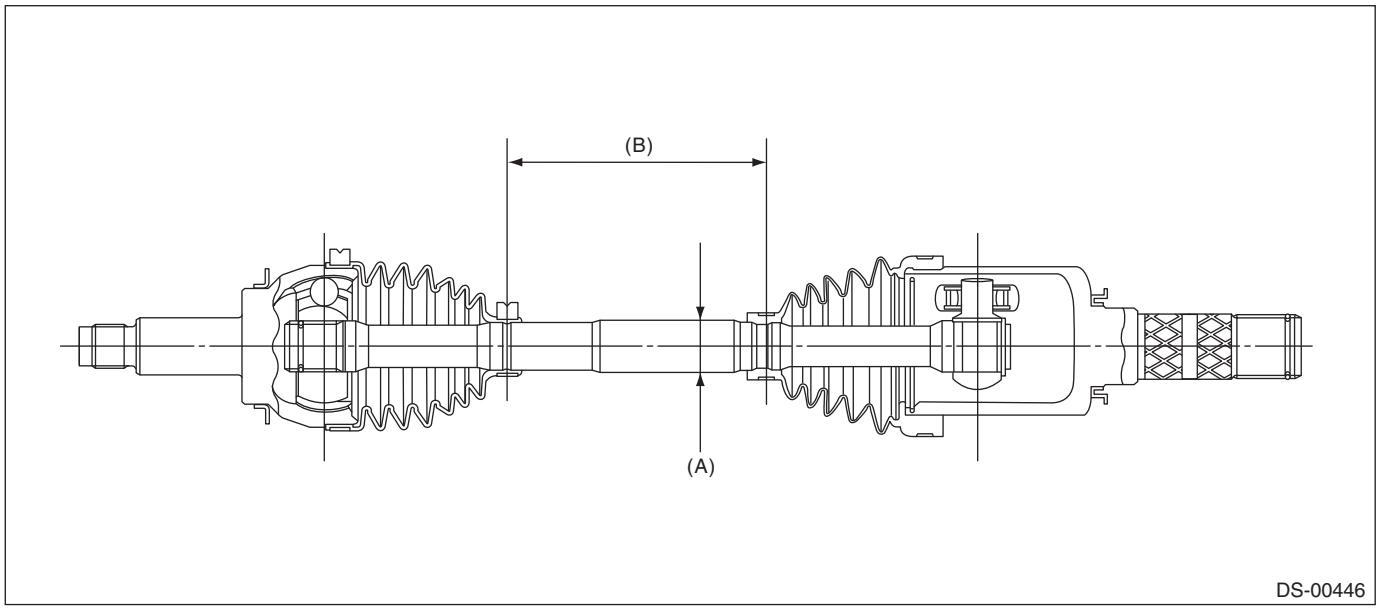
5. Rear Axle 28
6. Rear Hub Unit Bearing 34
7. Front Drive Shaft 39
8. Rear Drive Shaft 48
9. General Diagnostic Table 58

1. General Description

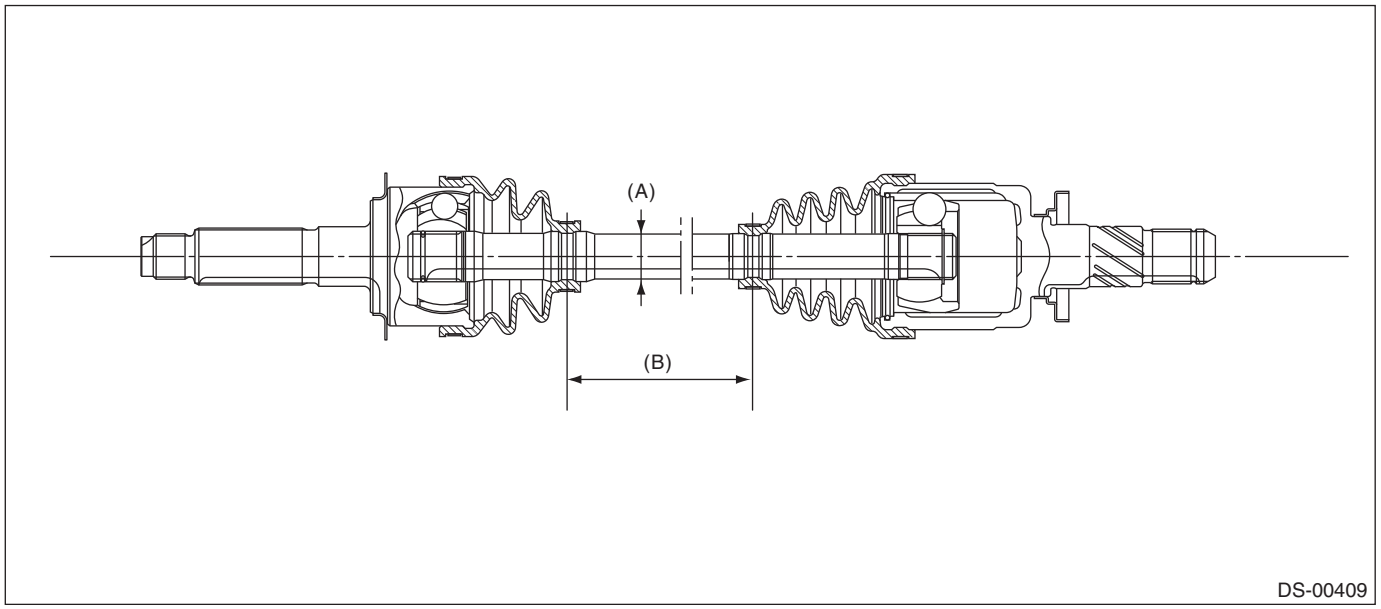
A: SPECIFICATION



1. PROPELLER SHAFT

Model			All models
Propeller shaft type			EDJ
Front propeller shaft joint-to-joint length: L_1	mm (in)	CVT (TR580)	675.5 (26.59)
		CVT (TR690)	578 (22.76)
Rear propeller shaft joint-to-joint length: L_2		mm (in)	828 (32.6)
Outer diameter of tube:	mm (in)	D_1	63.5 (2.500)
		D_2	57.5 (2.264)

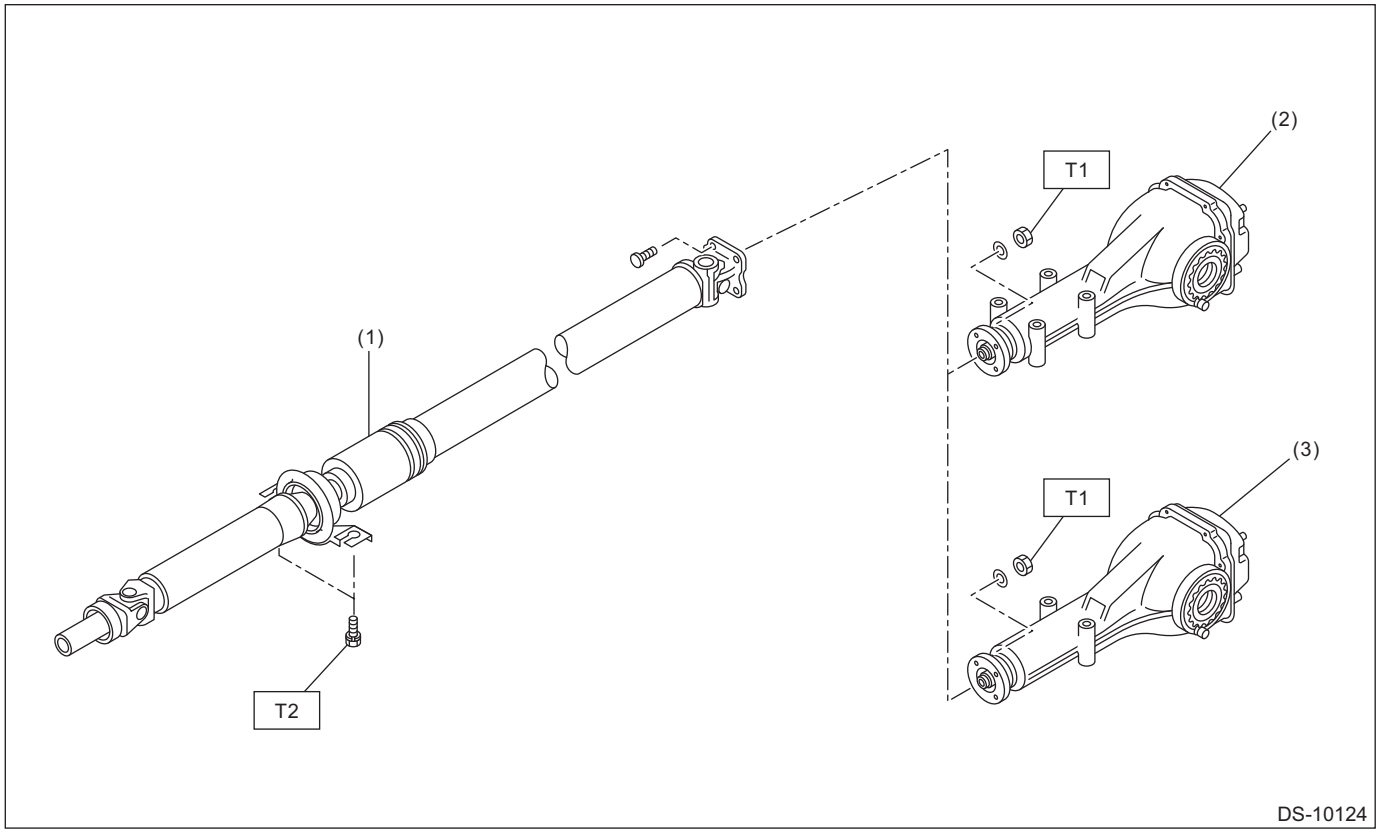
2. FRONT DRIVE SHAFT ASSEMBLY



Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
2.5 L sedan model	EBJ + PTJ	22 (0.87)	381.2 (15.01)
Other than above	EBJ + PTJ	22 (0.87)	366.8 (14.44)

(A) Axle diameter (B) Axle length

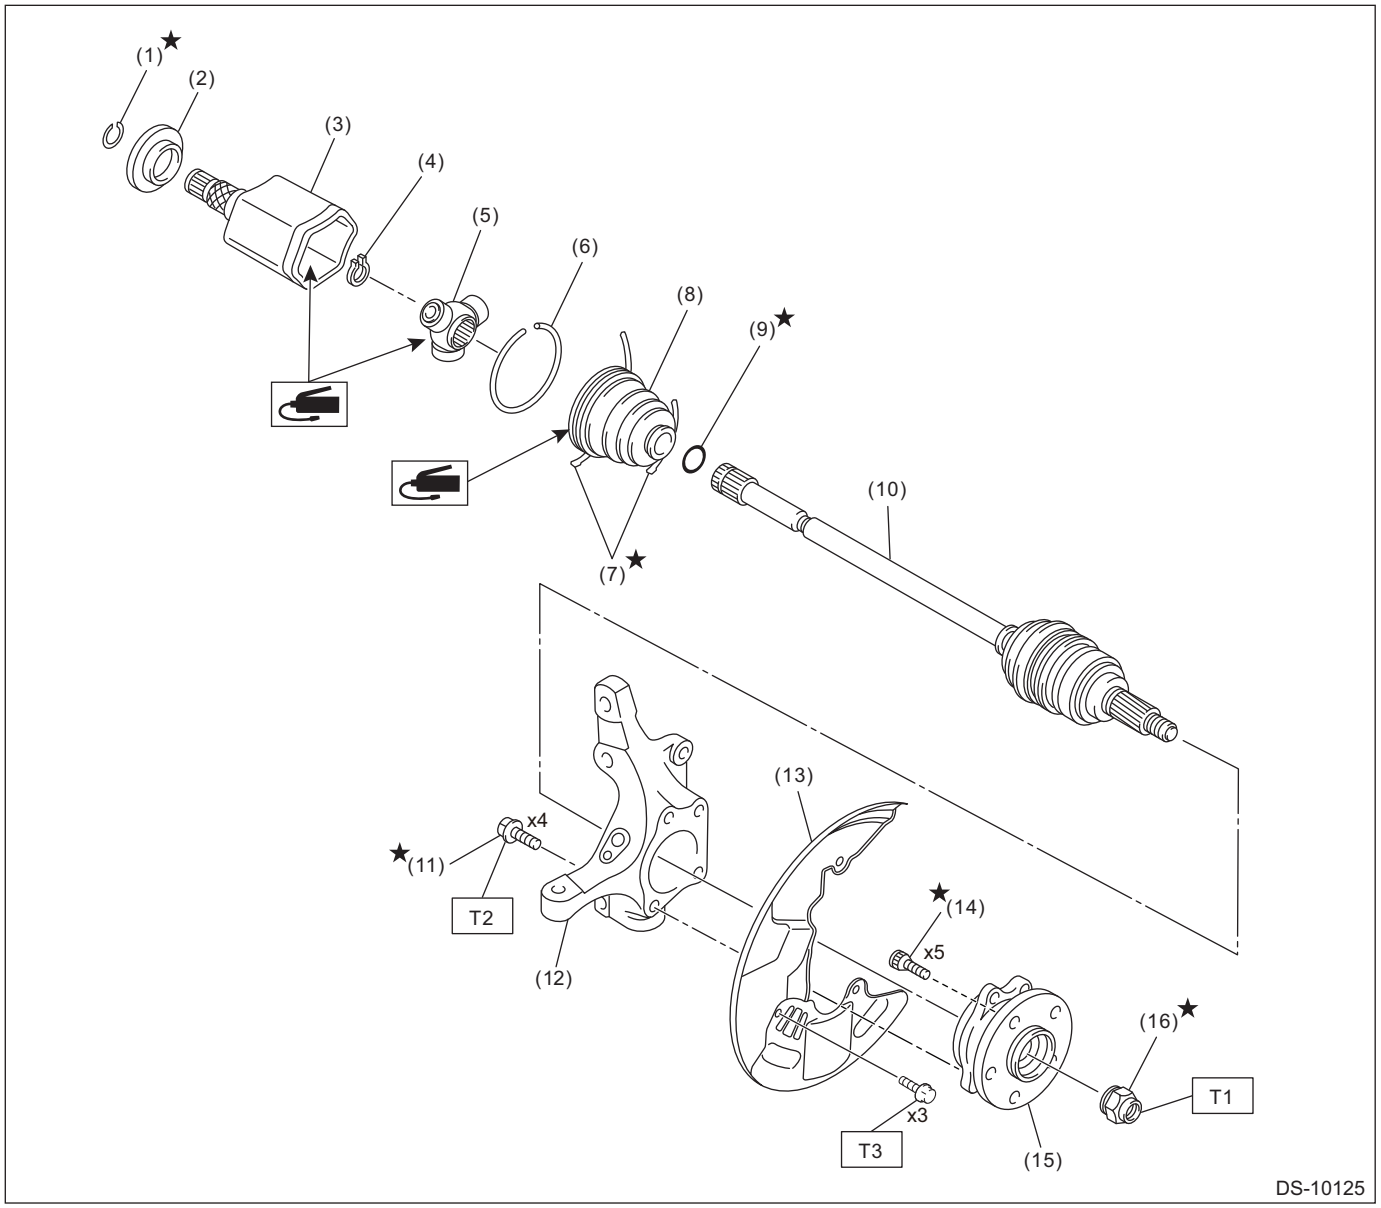
3. REAR DRIVE SHAFT ASSEMBLY



Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
2.5 L model	BJ + DOJ	22 (0.87)	420.8 (16.57)
3.6 L model	EBJ + DOJ	22 (0.87)	409.7 (16.13)

(A) Axle diameter (B) Axle length

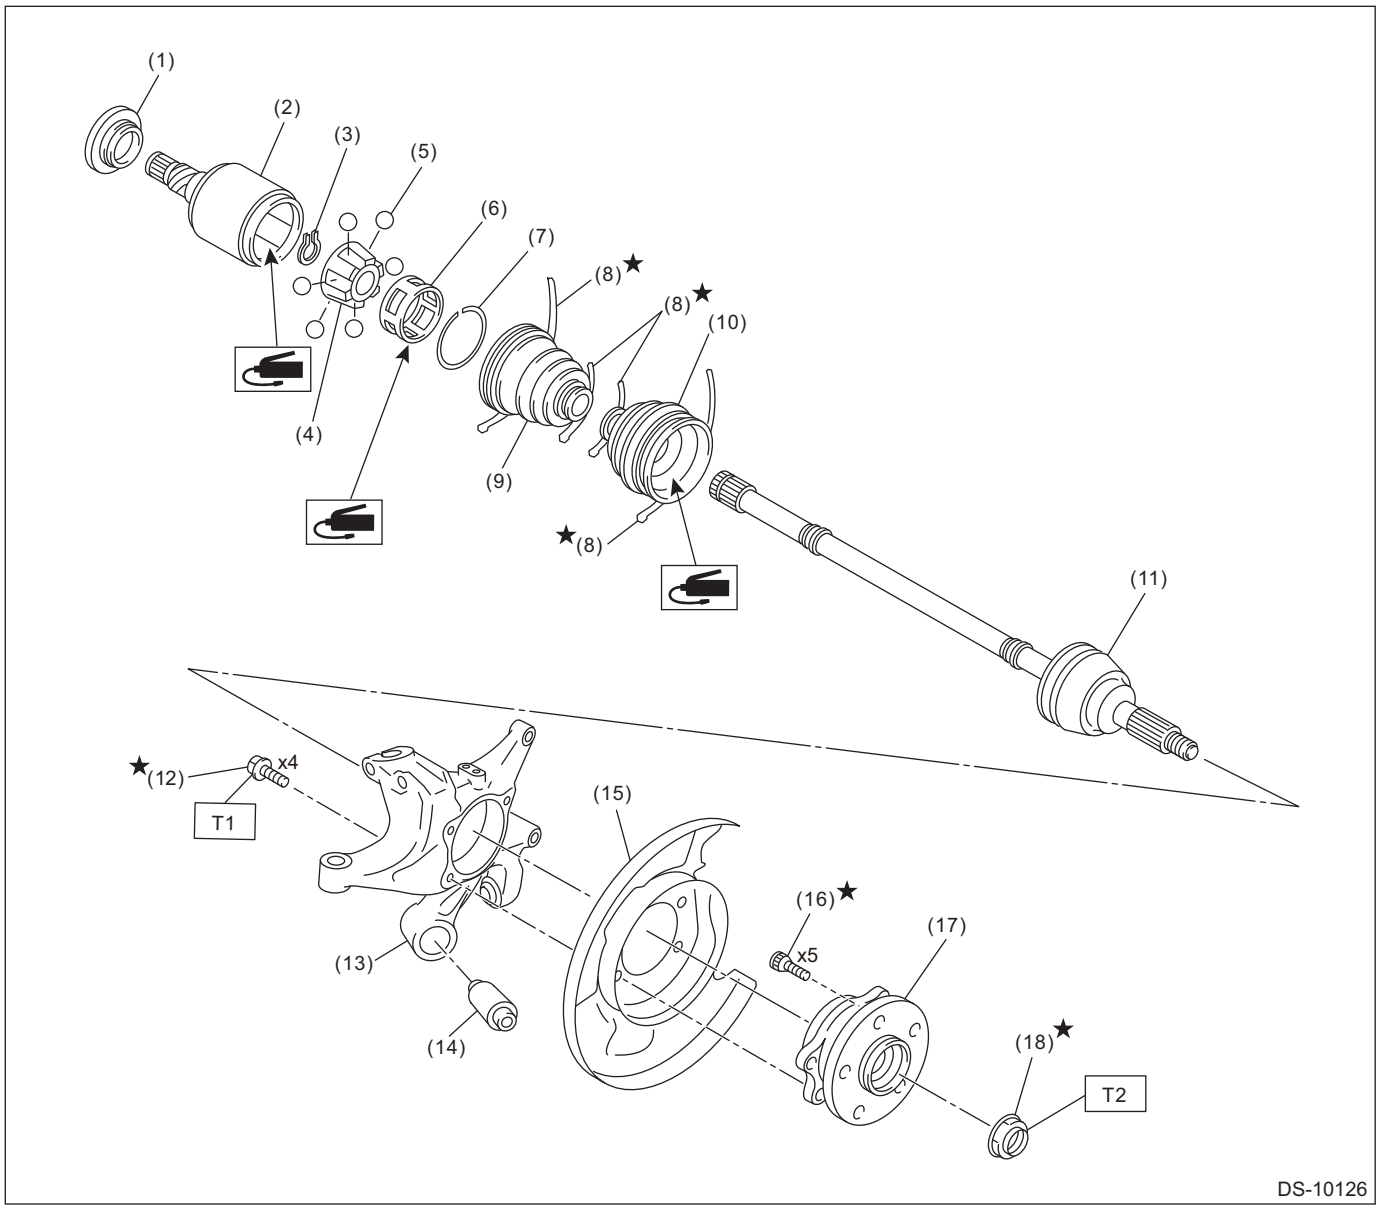
B: COMPONENT



1. PROPELLER SHAFT

(1) Propeller shaft
(2) Rear differential (VA1-type)
(3) Rear differential (VA2-type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 31 (3.2, 22.9)
T2: 52 (5.3, 38.4)



2. FRONT AXLE

(1) Circlip
(2) Baffle plate
(3) Outer race (PTJ)
(4) Snap ring
(5) Trunnion
(6) Snap ring
(7) Boot band
(8) Boot (PTJ)
(9) O-ring
(10) Shaft ASSY (EBJ)
(11) Bolt
(12) Front axle housing
(13) Front brake back plate
(14) Hub bolt
(15) Front hub unit bearing
(16) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 220 (22.4, 162.3)
T2: 85 (8.7, 62.7)
T3: 18 (1.8, 13.3)

3. REAR AXLE

(1)	Baffle plate	(9)	Boot (DOJ)	(17)	Rear hub unit bearing
(2)	Outer race (DOJ)	(10)	Boot (BJ) Boot (EBJ)	(18)	Axle nut
(3)	Snap ring	(11)	Shaft ASSY (BJ) Shaft ASSY (EBJ)		
(4)	Inner race	(12)	Bolt		
(5)	Ball	(13)	Rear axle housing		
(6)	Cage	(14)	Rear bushing		
(7)	Snap ring	(15)	Rear brake back plate		
(8)	Boot band	(16)	Hub bolt		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 65 (6.6, 47.9)
T2: 240 (24.5, 177.0)

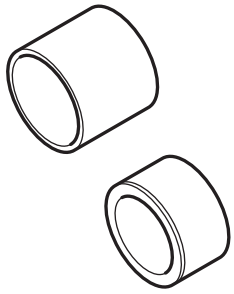
C: CAUTION

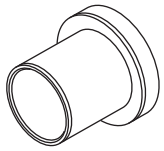
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.

• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  – Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
  – VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL





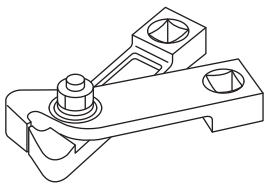


ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
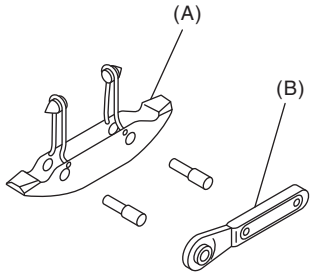
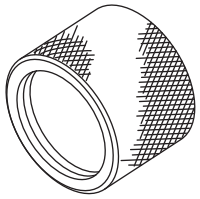
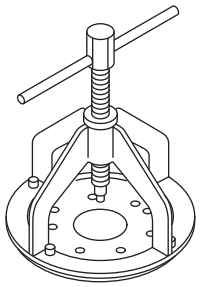
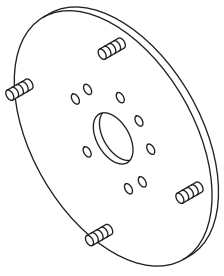
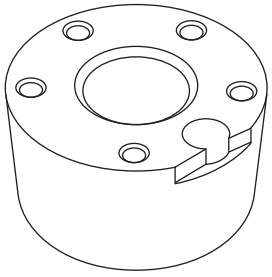
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the rear bushing of rear axle housing. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the rear bushing of rear axle housing. • Used together with base part of INSTALLER & REMOVER (20099PA010).
 ST28099AC000	28099AC000	BOOT BAND PLIERS	Used for tightening the boot band. (For front drive shaft)

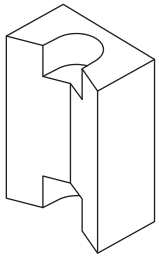


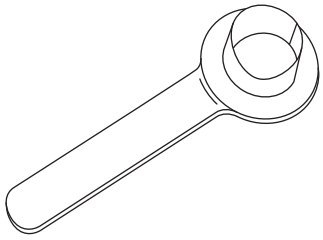












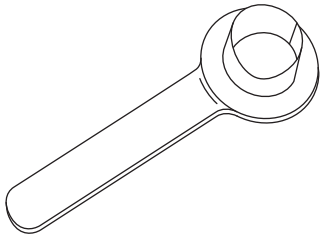


ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
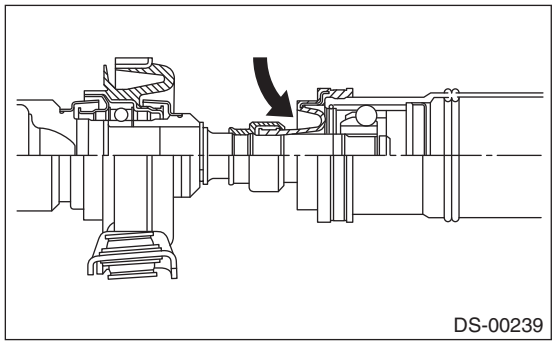
 ST-925091000	925091000	BAND TIGHTENING TOOL	Used for tightening the boot band. (A) Jig for the band (B) Ratchet wrench
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-926470000	926470000	AXLE SHAFT PULLER	• Used for removing the drive shaft. • Used together with AXLE SHAFT PULLER PLATE (28099PA110).
 ST28099PA110	28099PA110	AXLE SHAFT PULLER PLATE	• Used for removing the drive shaft. • Exchange with the plate of the AXLE SHAFT PULLER (926470000) to use.
 ST28099PA080	28099PA080	HUB STAND	Used for assembling the hub bolt.

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST28399AG000	28399AG000	HUB STAND	Used for extracting hub bolt.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	• Used for installing front drive shaft into front differential. • For protecting the oil seal.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • For protecting the oil seal.

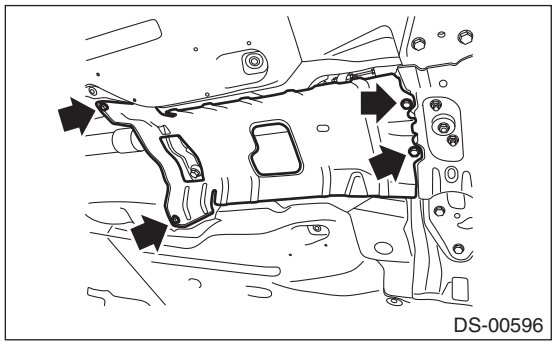


2. GENERAL TOOL

TOOL NAME	REMARKS
Tie-rod ball joint puller	Used for disconnecting joints.
Dial gauge	Used for inspecting the propeller shaft run-out.
Extension cap	Used for preventing leakage of gear oil or CVTF.
Crowbar	Used for extracting drive shaft.
Needle nose pliers	Used for tightening the boot band of the rear drive shaft. • Snap-on 96BCP Or equivalent.

2. Propeller Shaft

A: REMOVAL

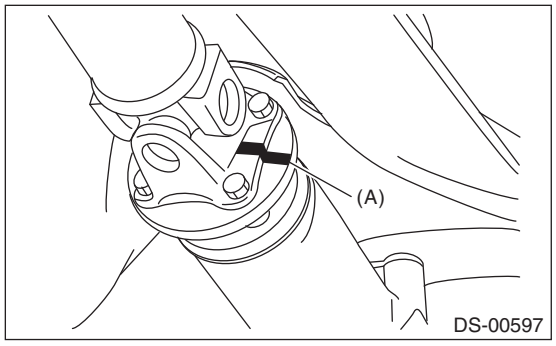


CAUTION:
- **Before removing propeller shaft, wrap metal parts with a cloth or rubber material.**
- **Do not disassemble the center EDJ of the propeller shaft.**
- **Before removing the propeller shaft, wrap the center joint part with a cloth, etc. If the joint is bent during removal, the rubber boot may be damaged due to interference with metal parts.**

DS-00239

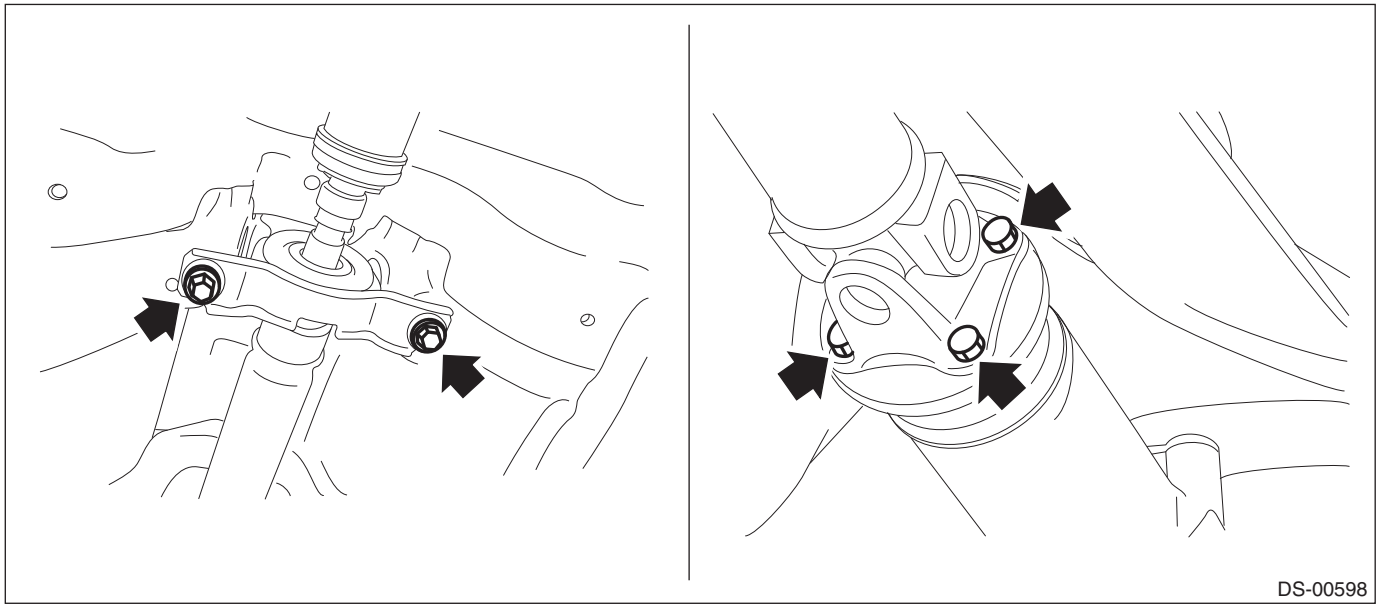
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the front exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-6, REMOVAL, Front Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

5) Remove the rear exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-11, REMOVAL, Rear Exhaust Pipe.>



6) Remove the bolts, and then remove the center exhaust cover.

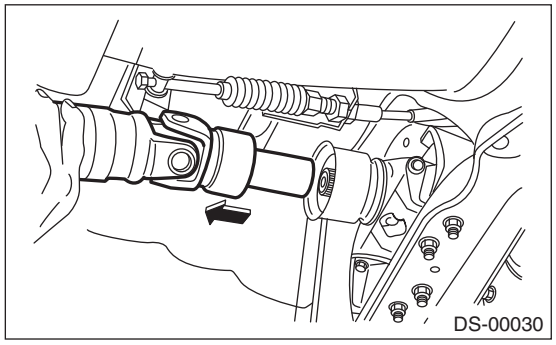
DS-00596



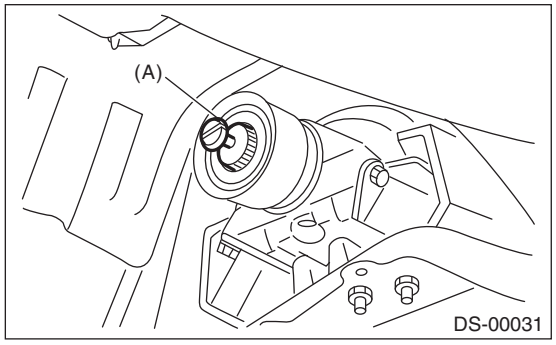
7) Remove the propeller shaft assembly.

CAUTION:
- **Do not disassemble the propeller shaft.**
- **Use a container to catch CVTF or oil flowing from propeller shaft.**
- **To prevent CVTF from leaking, install extension cap etc. to the transmission.**
- **Be careful not to damage oil seals and contact surface of the sleeve yoke.**

(1) Place alignment marks (A) on the flange yoke and rear differential.



(2) Remove the bolts and remove the propeller shaft from the rear differential.



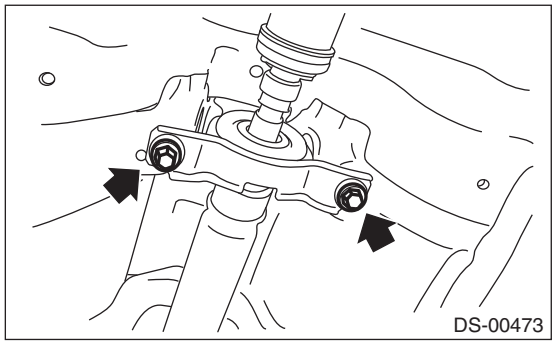
(3) Remove the end of propeller shaft from the transmission.

NOTE:
Use a container to catch oil flowing from propeller shaft.

(4) Install extension cap (A) to the transmission.

NOTE:
If extension cap (A) is not available, place vinyl bag over opening and fasten with string to prevent gear oil from leaking.

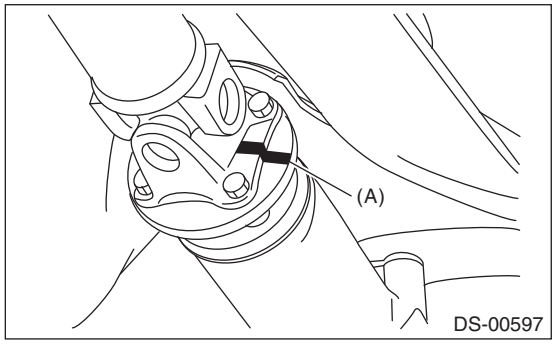
B: INSTALLATION



1) Before installation, check the following items, and replace the propeller shaft assembly as necessary.
- Dents or cracks on the tube surface
- Splines for deformation or abnormal wear
- Unsmooth joint operation or abnormal noise
- Center bearing for looseness, unsmooth operation or noise.
- Oil seals for abnormal wear or damage
- Damaged center bearing

2) Apply fluid or gear oil to the oil seal lip and the propeller shaft.

Recommended fluid/gear oil:
<Ref. to RM-4, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>



3) Insert the sleeve yoke into the transmission and attach center bearing to body.

Tightening torque:
52 N·m (5.3 kgf-m, 38.4 ft-lb)

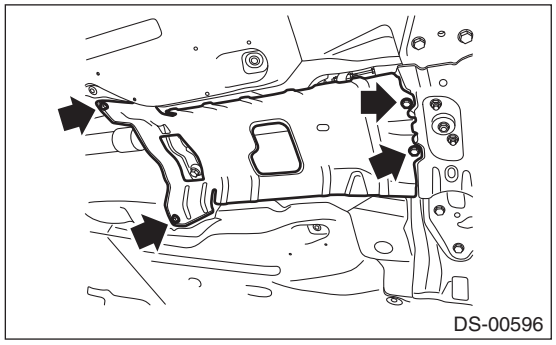
4) Align the alignment marks (A), and connect the yoke flange and rear differential.

Tightening torque:
31 N·m (3.2 kgf-m, 22.9 ft-lb)

5) Check the propeller shaft with the propeller shaft installed to the vehicle. <Ref. to DS-13, INSPECTION, Propeller Shaft.>
6) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

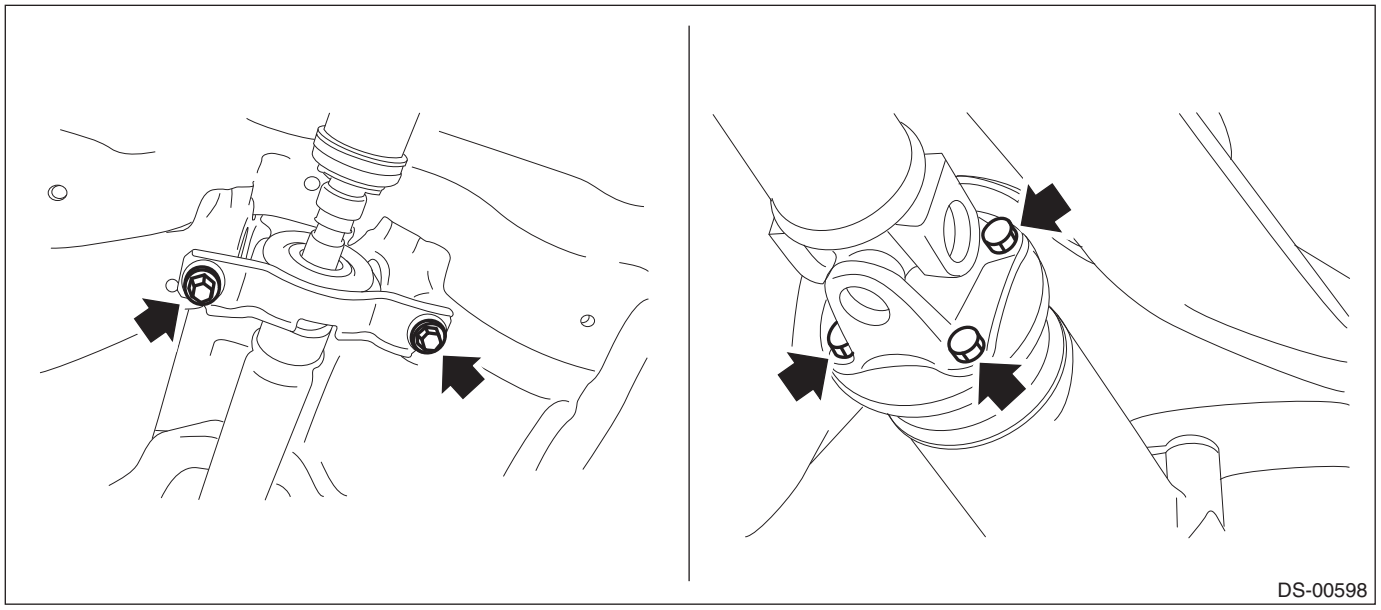
7) Install the rear exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-18, INSTALLATION, Rear Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-12, INSTALLATION, Rear Exhaust Pipe.>



8) Install the front exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>

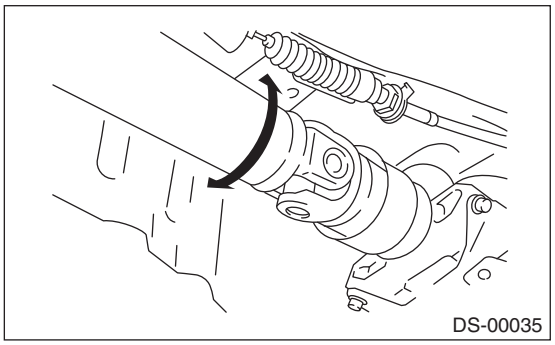
C: INSPECTION

Check the propeller shaft with the propeller shaft installed to the vehicle.
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the front exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-6, REMOVAL, Front Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>



5) Remove the rear exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-17, REMOVAL, Rear Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-11, REMOVAL, Rear Exhaust Pipe.>

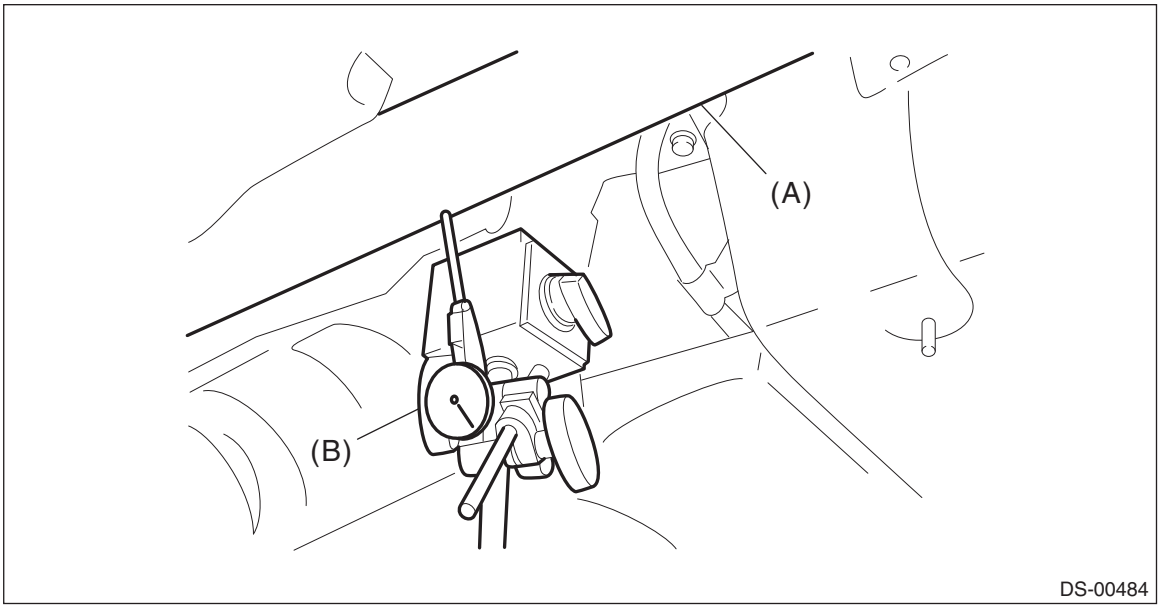
6) Remove the bolts, and then remove the center exhaust cover.



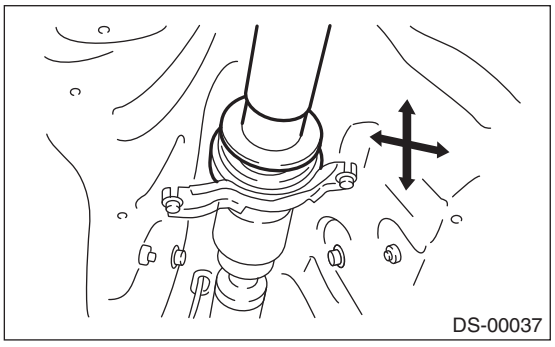
DS-00596

7) Check the propeller shaft mounting bolt for looseness.
(1) Yoke flange mounting bolts which connect to the rear differential

(2) Center bearing bracket mounting bolts



8) Check the spline and bearing for the propeller shaft.
(1) Turn the propeller shaft by hand to check if abnormal looseness exists at splines.
(2) Also move yokes to check if abnormal looseness exists at spiders and bearings.

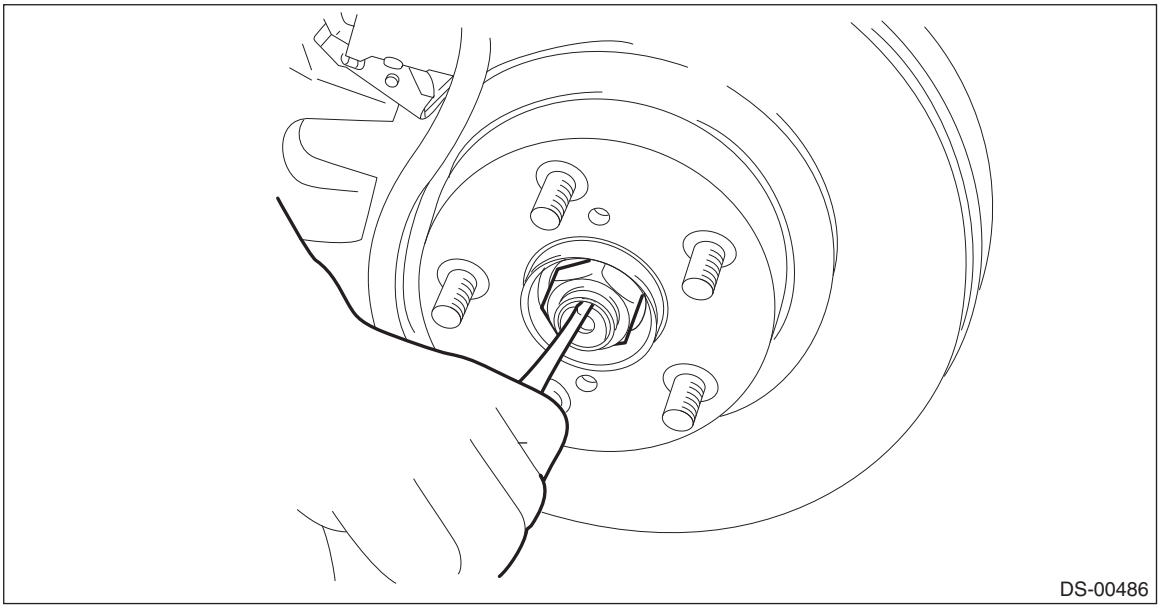


9) Measure the deflection of the propeller shaft.
(1) Set the dial gauge (B) with its indicator stem at the center of the propeller shaft (A).
(2) Turn the propeller shaft (A) slowly by hands to check for runout of the propeller shaft.

Runout:
Limit: 0.6 mm (0.024 in)

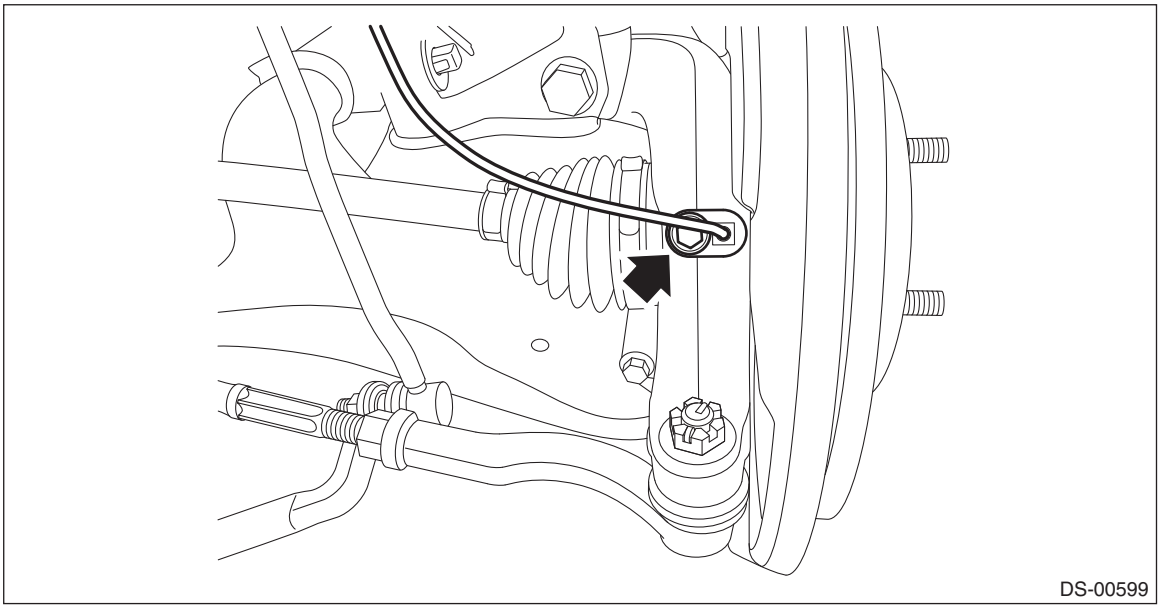
10) Check the center bearing for play.
Hold the propeller shaft near the center bearing section and move it by hand to upward, downward and sideways, in order to check for any abnormal free play of the bearings.

11) Replace the propeller shaft assembly if faulty is found in the inspection.



3. Front Axle

A: REMOVAL

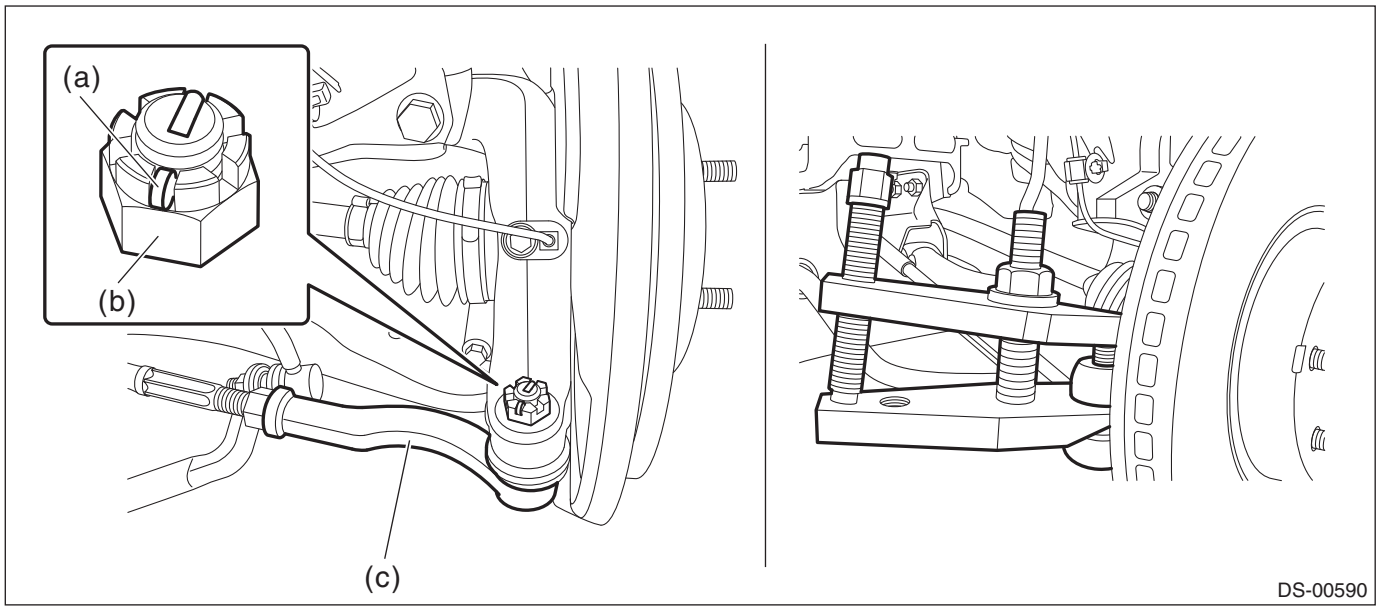


1) Lift up the vehicle, and then remove the front wheels.
2) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

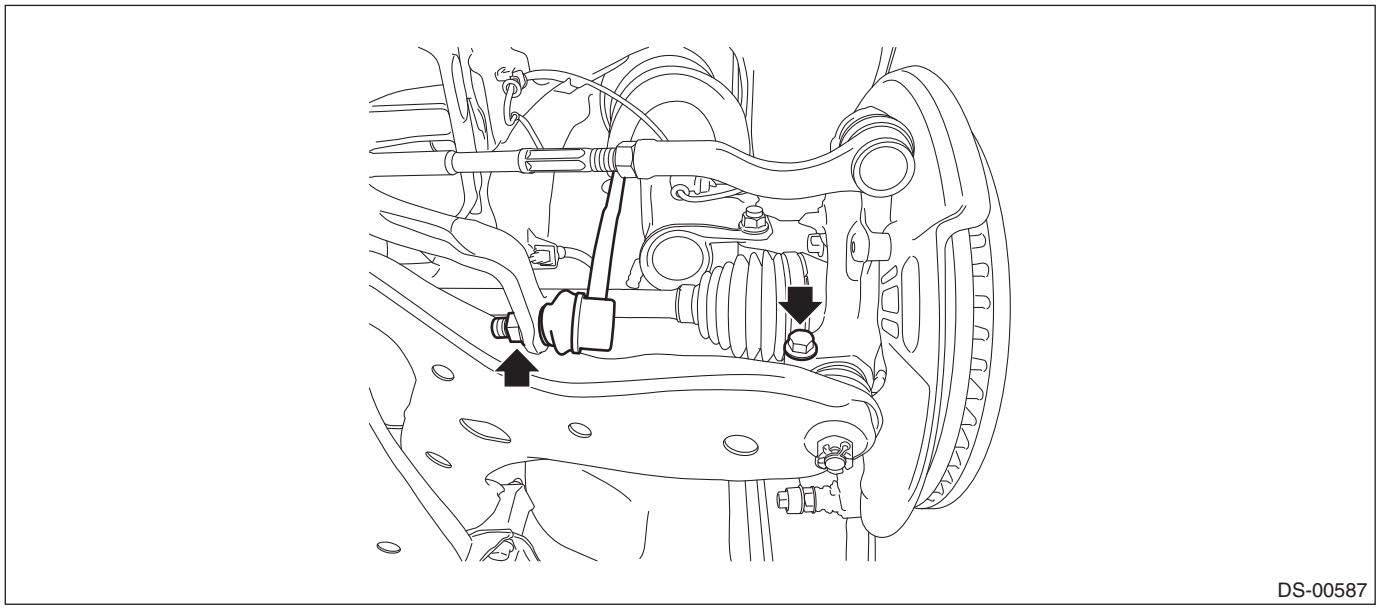
(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.

3) Remove the disc brake assembly and disc rotor. <Ref. to BR-19, REMOVAL, Front Disc Rotor.>
4) Remove the bolts, and remove the front ABS wheel speed sensor.



5) Disconnect the tie-rod end.

(1) Pull out the cotter pin (a).
(2) Remove the castle nut (b).
(3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

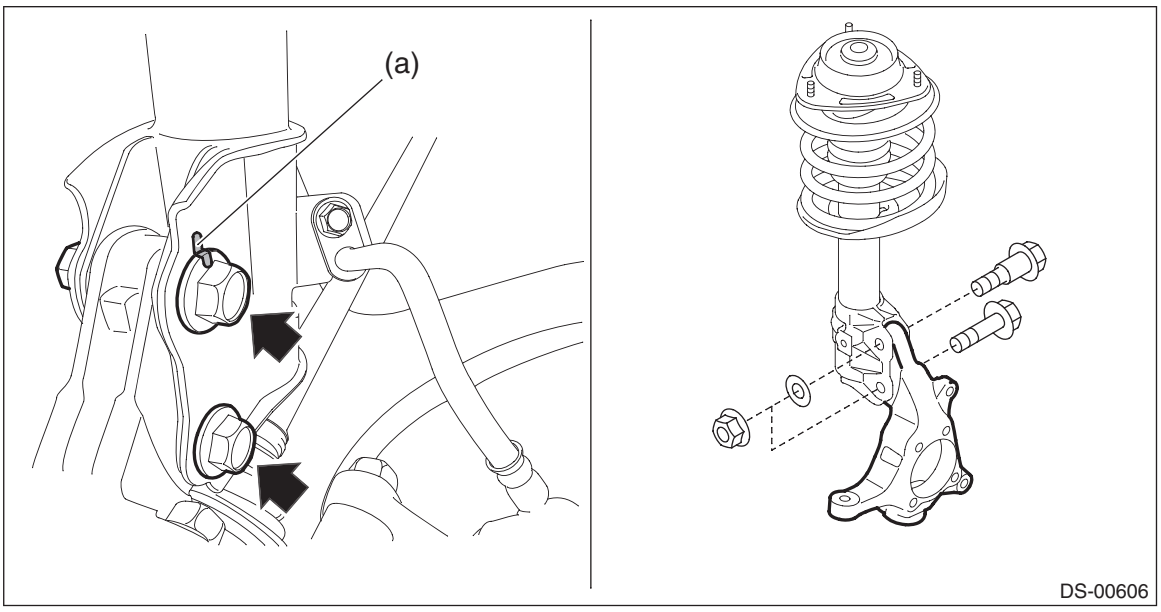


CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

Preparation tool:
Tie-rod ball joint puller

6) Remove the stabilizer link and ball joint.

CAUTION:
Be careful not to damage the boot of the joint.



7) Remove the front drive shaft. <Ref. to DS-39, REMOVAL, Front Drive Shaft.>
8) Remove the front axle housing.

CAUTION:
- **Be careful of the weight of front axle housing.**
- **Be careful not to damage the spline portion of the drive shaft.**

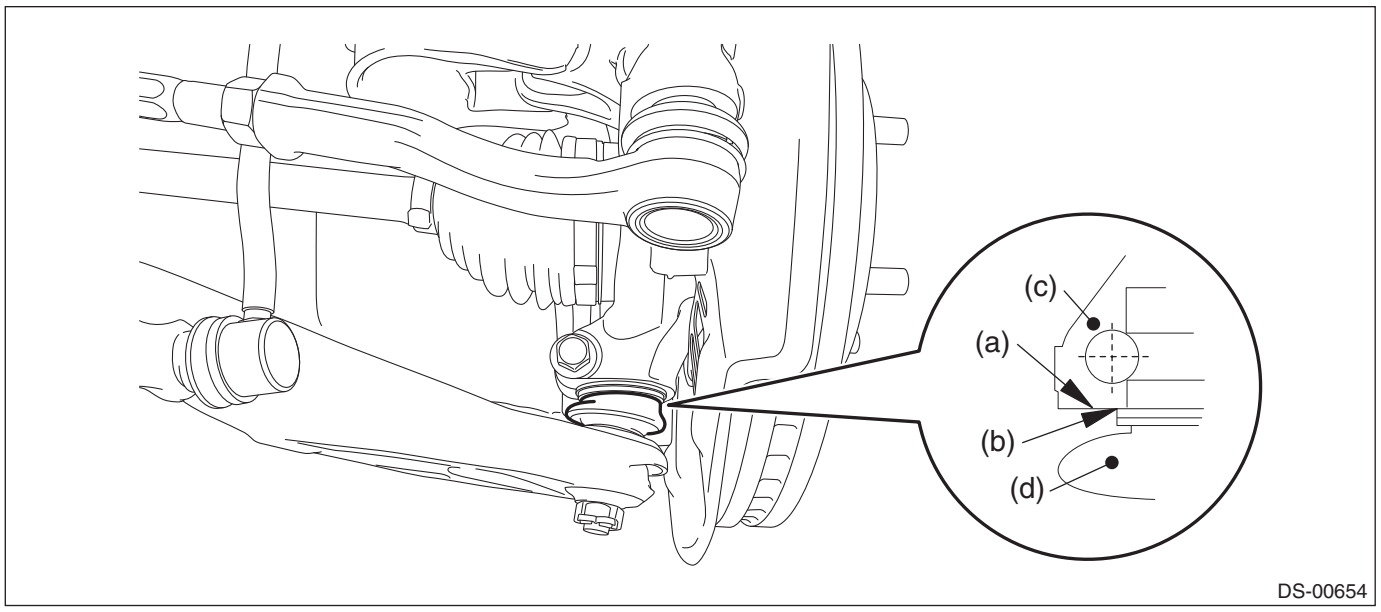
(1) Place an alignment mark (a) on the adjusting bolt and the strut assembly.
(2) Remove the adjusting bolts and flange bolts for the strut assembly, and then remove the front axle housing.

NOTE:
While holding the adjusting bolt side, tighten the nut side.

9) Refer to “Front Hub Unit Bearing” for removal of the front hub unit bearing. <Ref. to DS-22, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

1) Install the front axle housing to the strut assembly.
   (1) Align alignment marks on the camber adjusting bolt and strut.
   (2) While holding the bolt head of adjusting bolt, tighten the flange nut.



CAUTION:
Use a new flange nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

2) Install the front drive shaft assembly. <Ref. to DS-40, INSTALLATION, Front Drive Shaft.>
3) Install the ball joint.

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.**
- **Be careful not to damage the boot of the joint.**

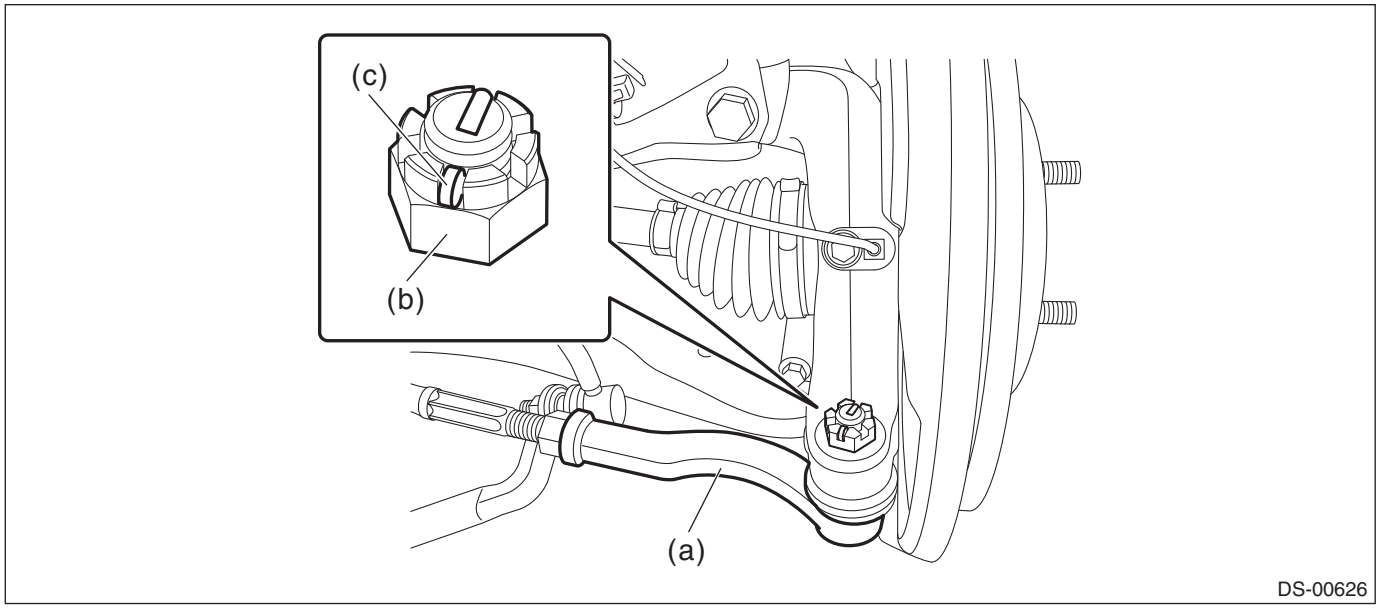
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

(a) Lower side of front axle housing
(b) Raised section of ball joint
(c) Front axle housing
(d) Ball joint

4) Install the front ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the disc rotor.
6) Install the disc brake assembly.

Tightening torque:
Mounting bolt: <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>
7) Install the brake hose bracket.



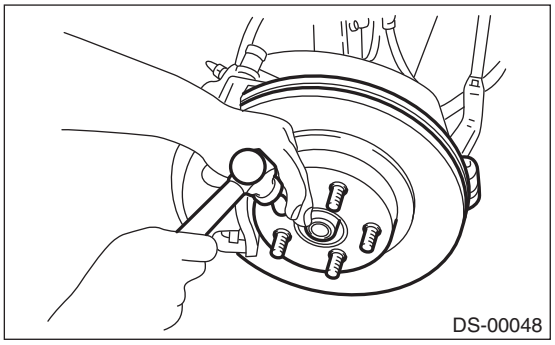
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
8) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
9) Connect the tie-rod ends.
(1) Connect the tie-rod ends (a) to the front axle housing.
(2) Tighten the castle nuts (b) to the specified torque.

CAUTION:
When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
(3) Tighten the castle nut within the range of 60° so that the cotter pin hole and cutout portion of the castle nut are aligned.
(4) Insert the cotter pin (c), and bend the tip of the pin to fix it.

CAUTION:
Use a new cotter pin.



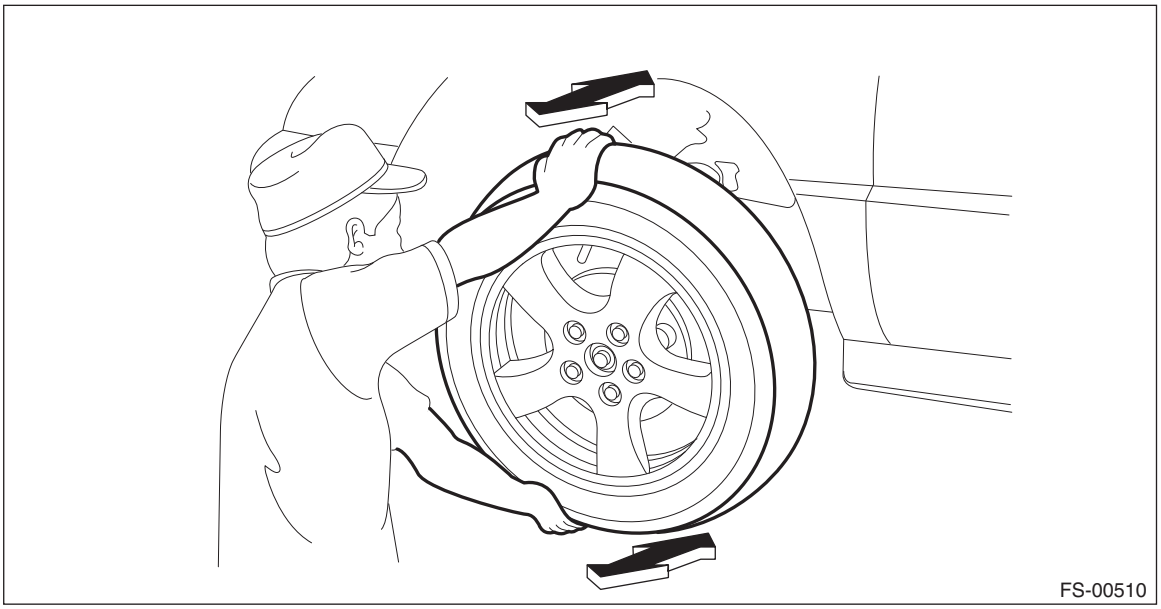
(a) Tie-rod end (b) Castle nut (c) Cotter pin

10) While depressing the brake pedal, tighten the axle nut to the specified torque.

CAUTION:
Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

11) After tightening the axle nut, lock it securely.



12) Install the front wheels, and perform the following inspections.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

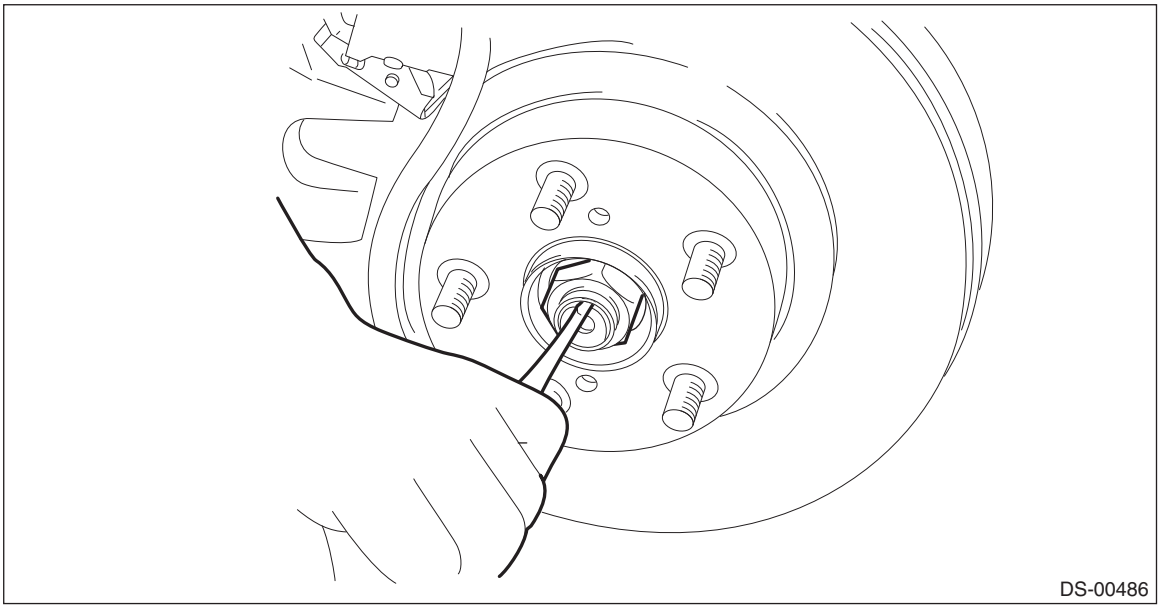
• **Looseness exists** → Check the front hub unit bearing. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   • **Looseness exists** → Replace the ball joint. <Ref. to FS-35, REMOVAL, Front Ball Joint.>

13) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

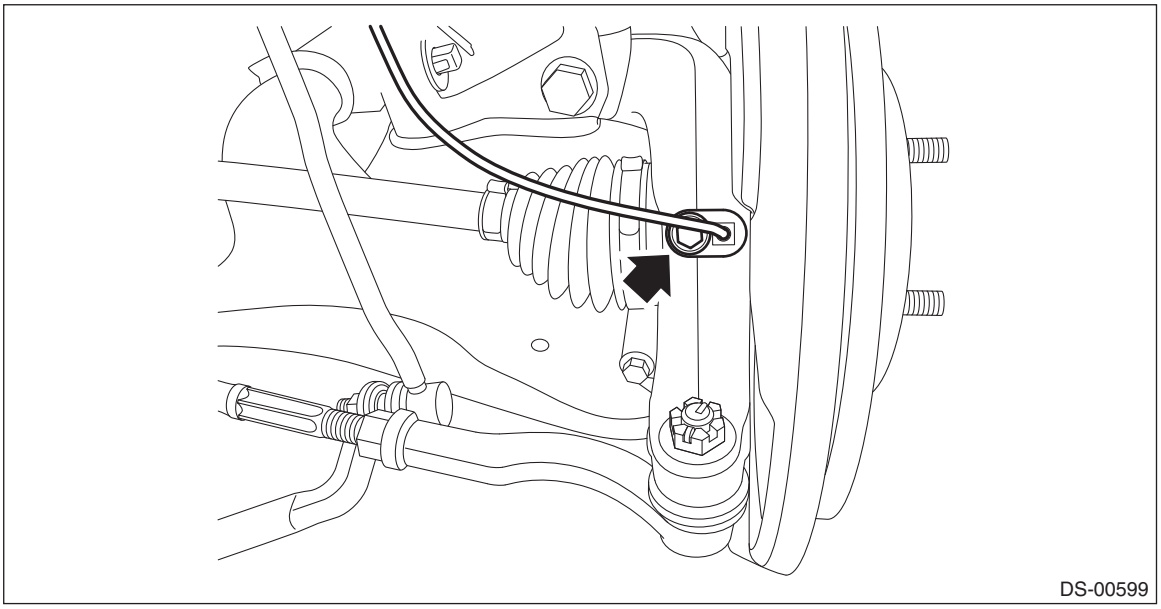
CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– Steering angle sensor adjustment: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>



4. Front Hub Unit Bearing

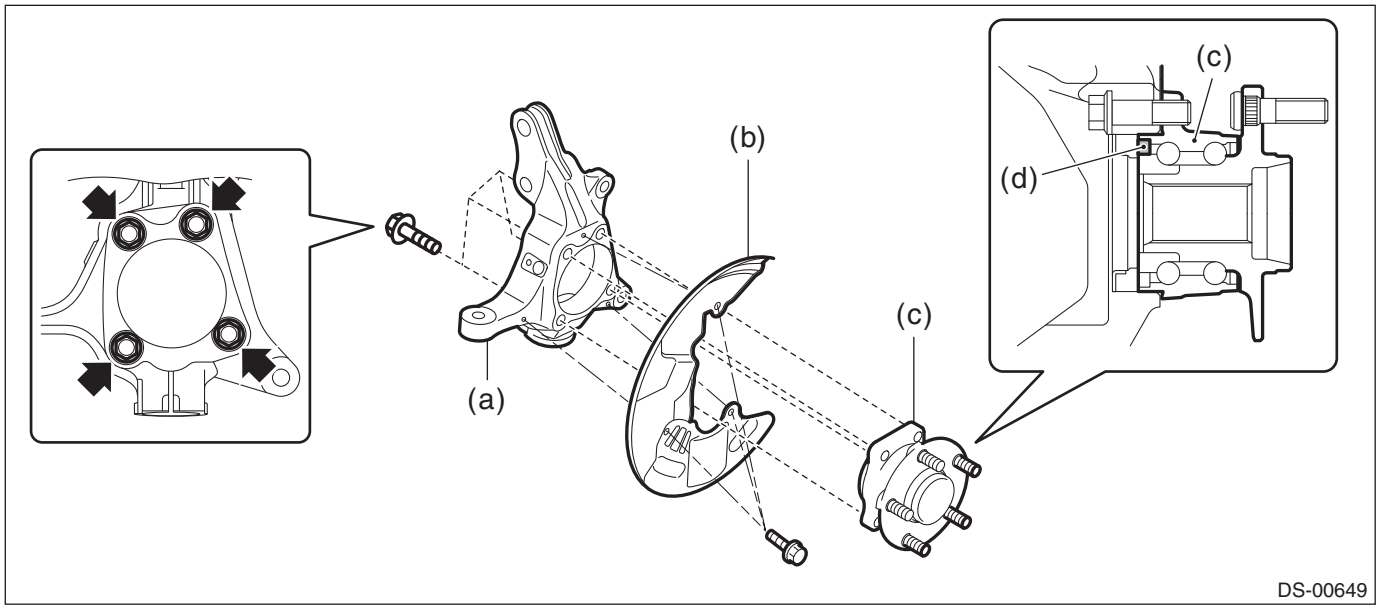
A: REMOVAL



1) Lift up the vehicle, and then remove the front wheels.
2) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

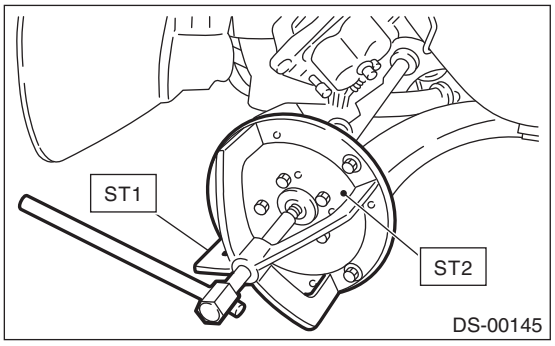
(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



3) Remove the disc brake assembly and disc rotor. <Ref. to BR-19, REMOVAL, Front Disc Rotor.>
4) Remove the bolts, and remove the front ABS wheel speed sensor.

5) Remove the front hub unit bearing.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**

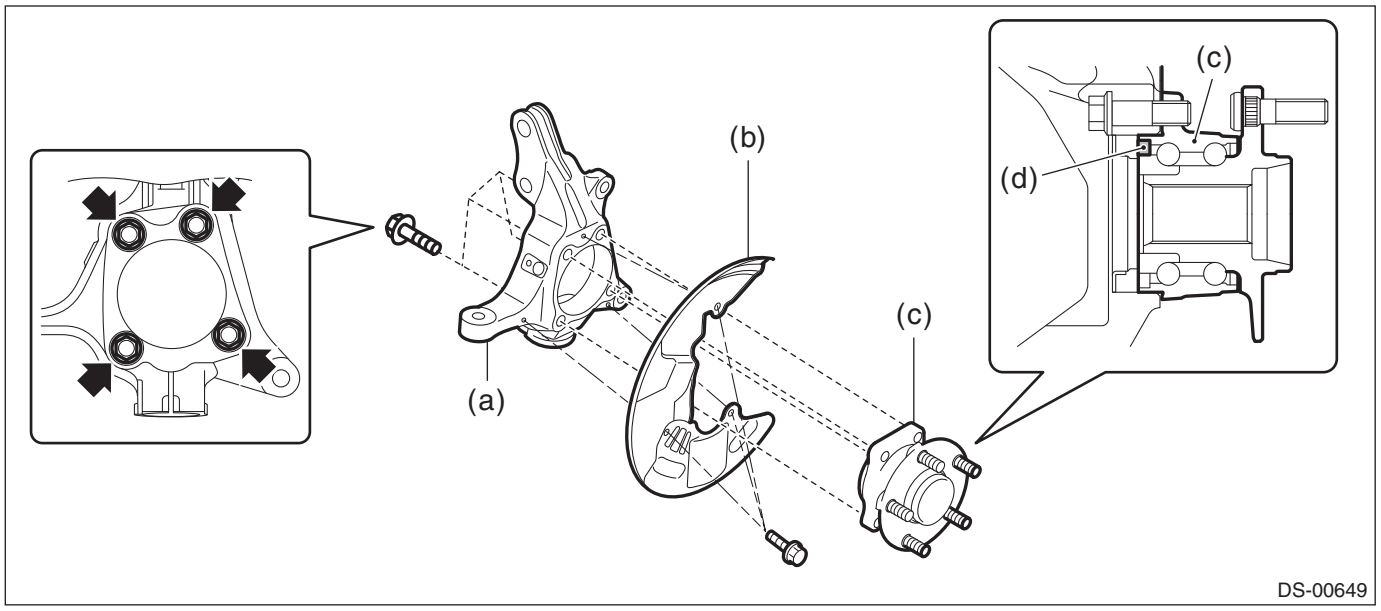


- **Be careful not to damage the magnetic encoder.**

(a) Front axle housing
(b) Front brake back plate
(c) Front hub unit bearing
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Tighten the front brake back plate and front hub unit bearing to the front axle housing with the bolt.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**
- **Use a new mounting bolt for the hub unit bearing.**

Tightening torque:
Front brake back plate: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
Front hub unit bearing: 85 N·m (8.7 kgf-m, 62.7 ft-lb)

(a) Front axle housing
(b) Front brake back plate
(c) Front hub unit bearing
(d) Magnetic encoder

2) Install the front drive shaft assembly.

CAUTION:
- **Do not hammer the drive shaft assembly when installing.**
- **Use new axle nuts.**

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new axle nut temporarily.

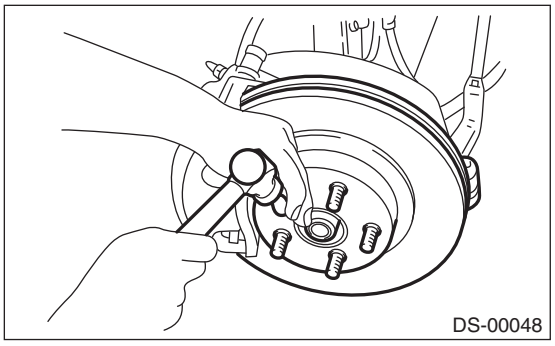
3) Install the disc rotor to the front hub unit bearing.
4) Install the disc brake assembly to the front axle housing.

Tightening torque:
Mounting bolt: <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>

5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

6) Install the front ABS wheel speed sensor.

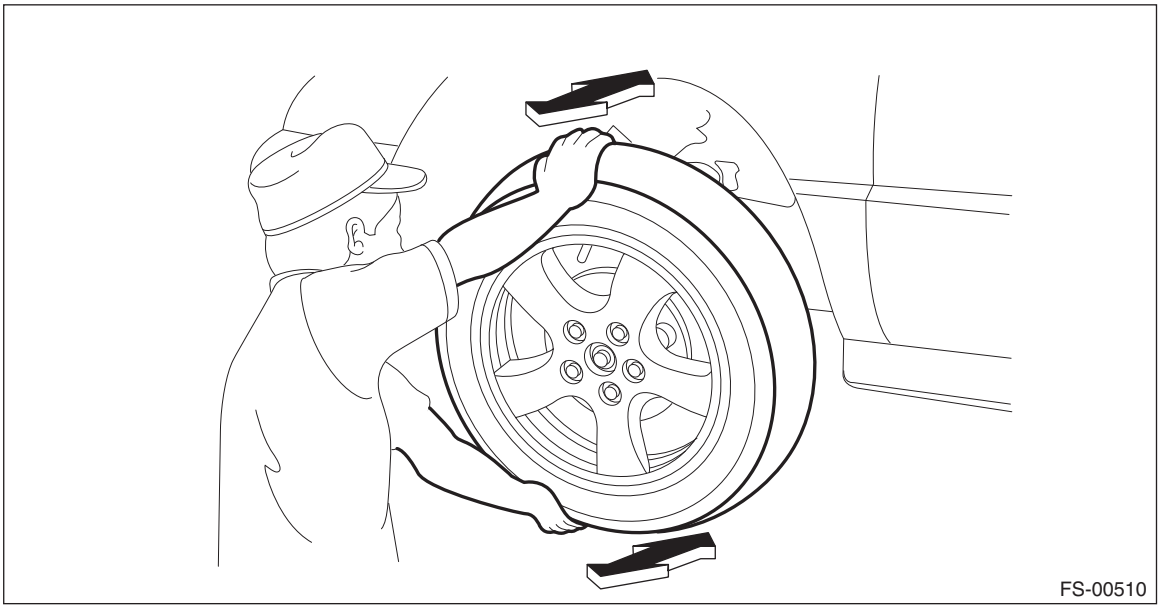


Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)



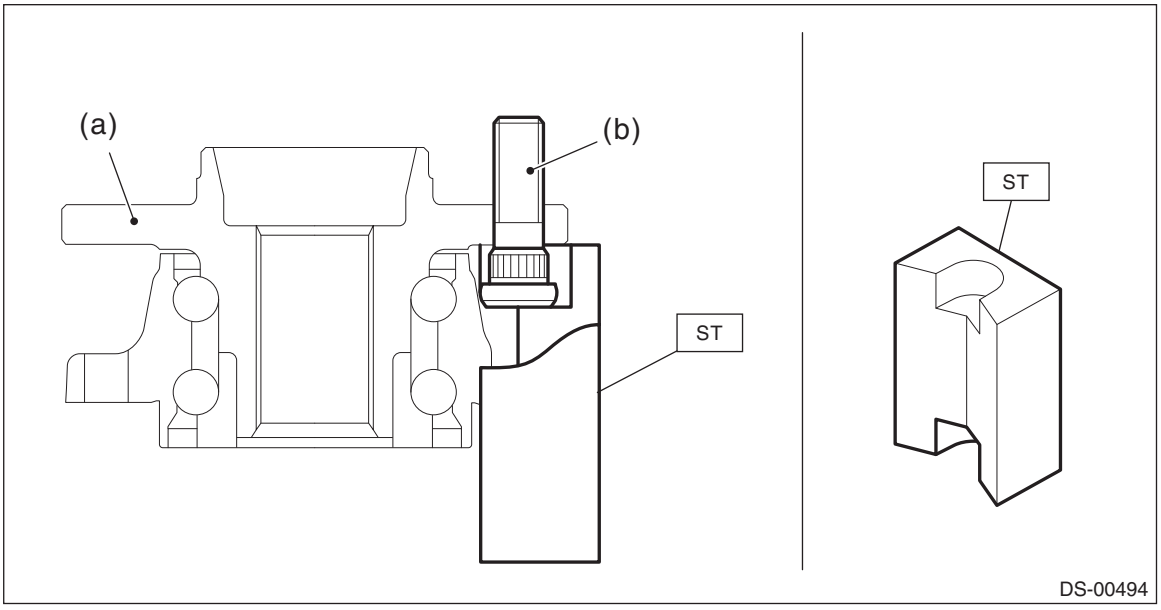
8) After tightening the axle nut, lock it securely.

9) Install the front wheels, and perform the following inspections.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the front hub unit bearing. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Looseness exists** → Replace the ball joint. <Ref. to FS-35, REMOVAL, Front Ball Joint.>



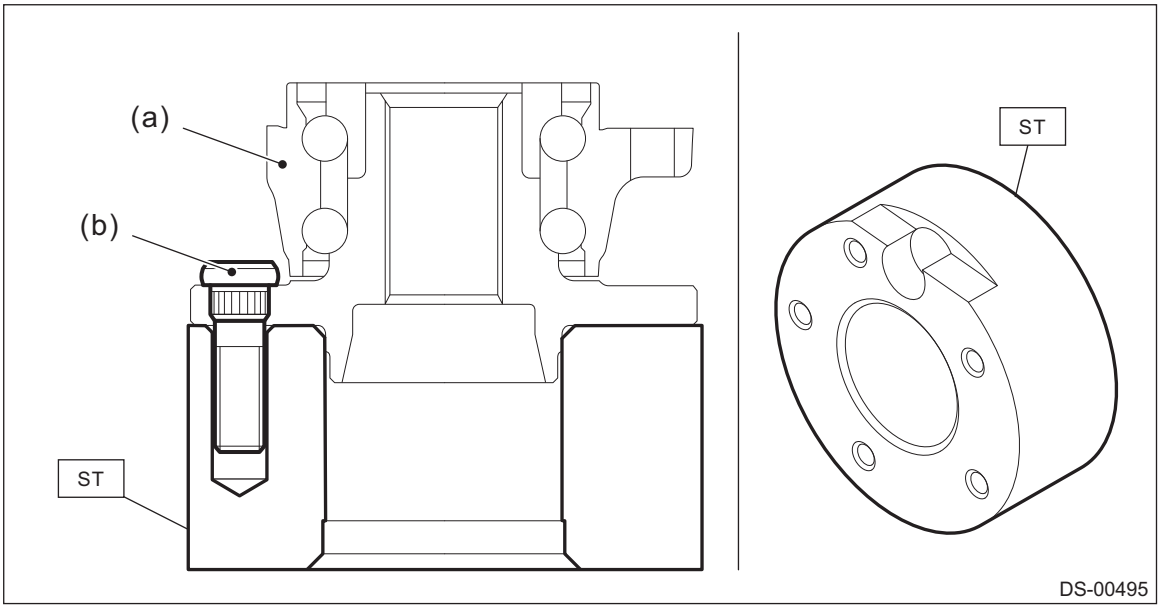
C: DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the front hub unit bearing (a).

CAUTION:
- **Be careful not to hammer the hub bolts. This may deform the hub unit bearing.**
- **Do not reuse the hub bolt.**

NOTE:
Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

Preparation tool:
ST: HUB STAND (28399AG000)

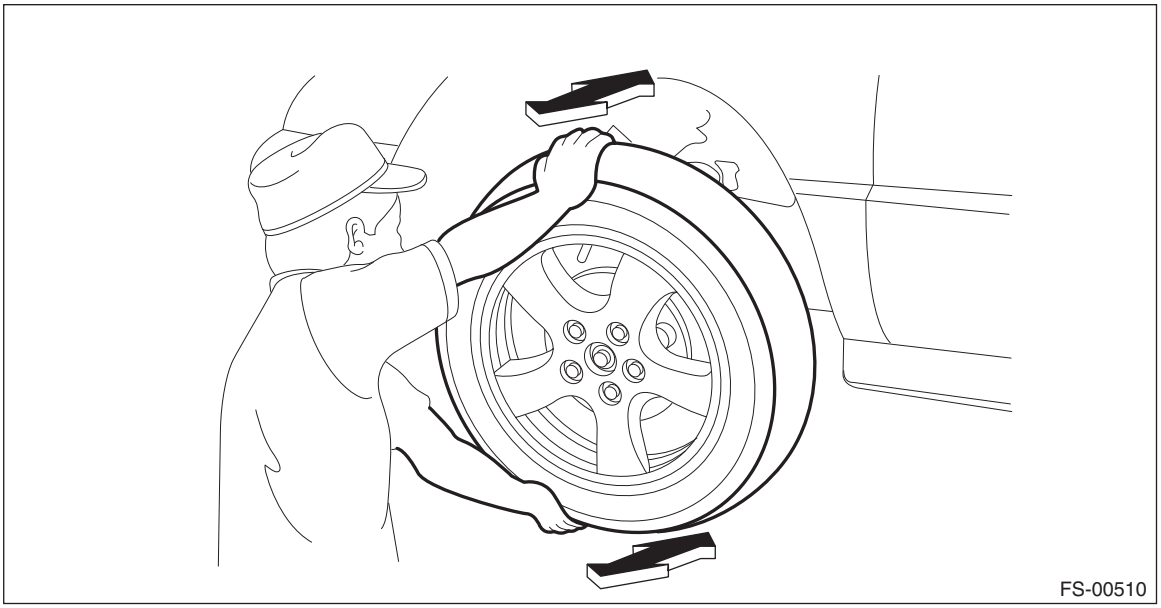


D: ASSEMBLY

1) Install the hub unit bearing to the ST securely.

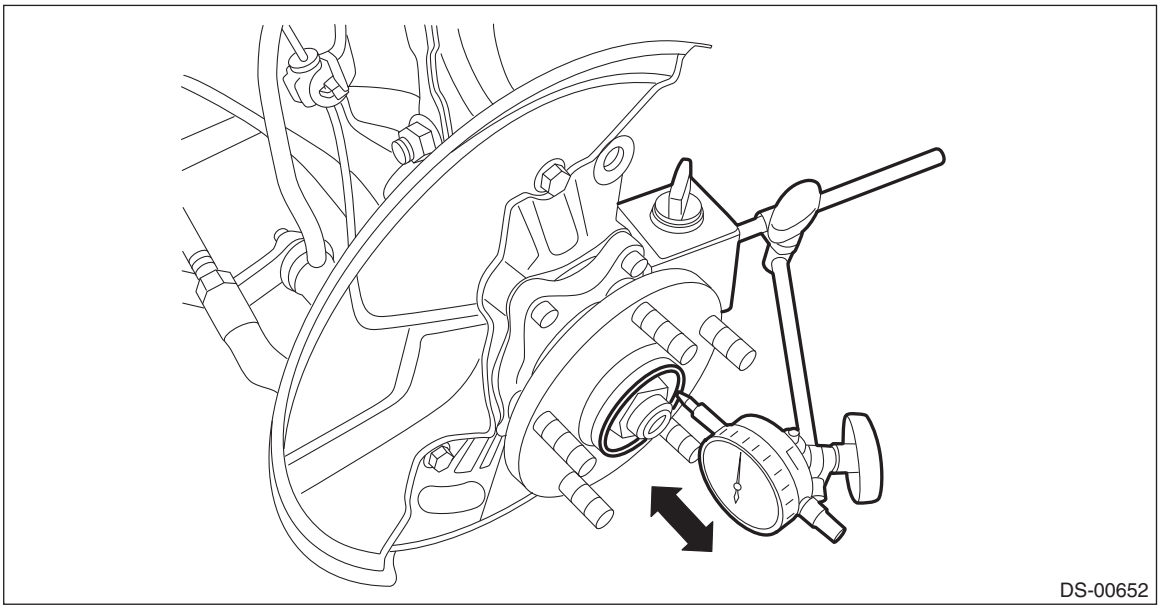
Preparation tool:
ST: HUB STAND (28099PA080)

2) Using a press, press the new hub bolts (b) until their seating surfaces contact the hub unit bearing (a).



NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION



1) Moving the front tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

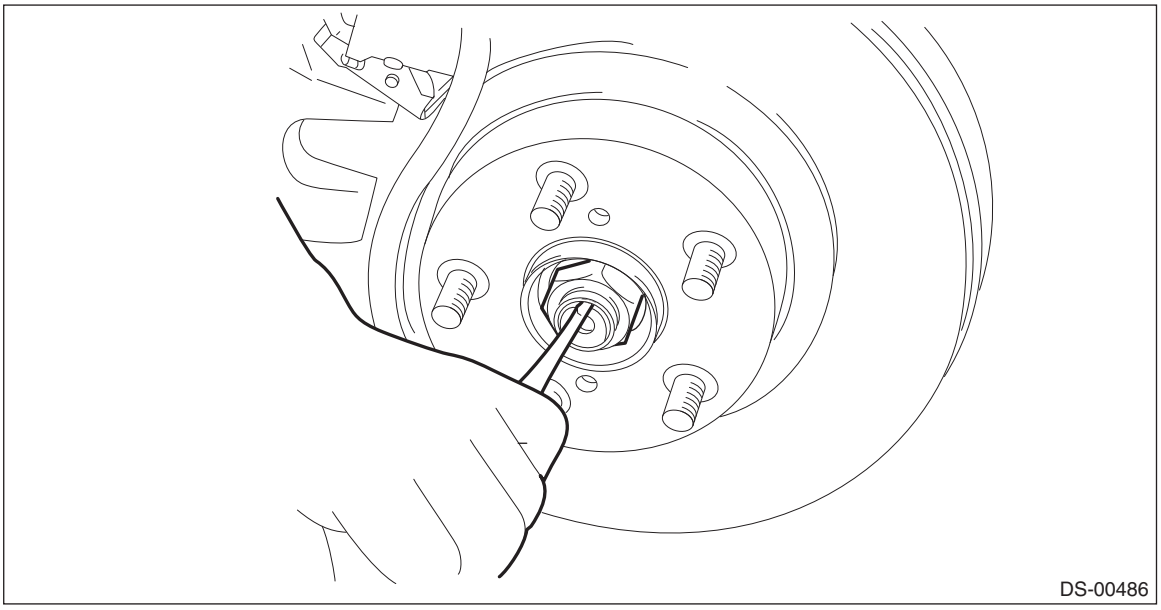
CAUTION:
If there is unsmooth sliding operation or abnormal noise in the bearing, replace the hub unit bearing.

FS-00510

2) Inspect the hub unit bearing for axial looseness.
1. Remove the tire and disc rotor.
2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)

DS-00652

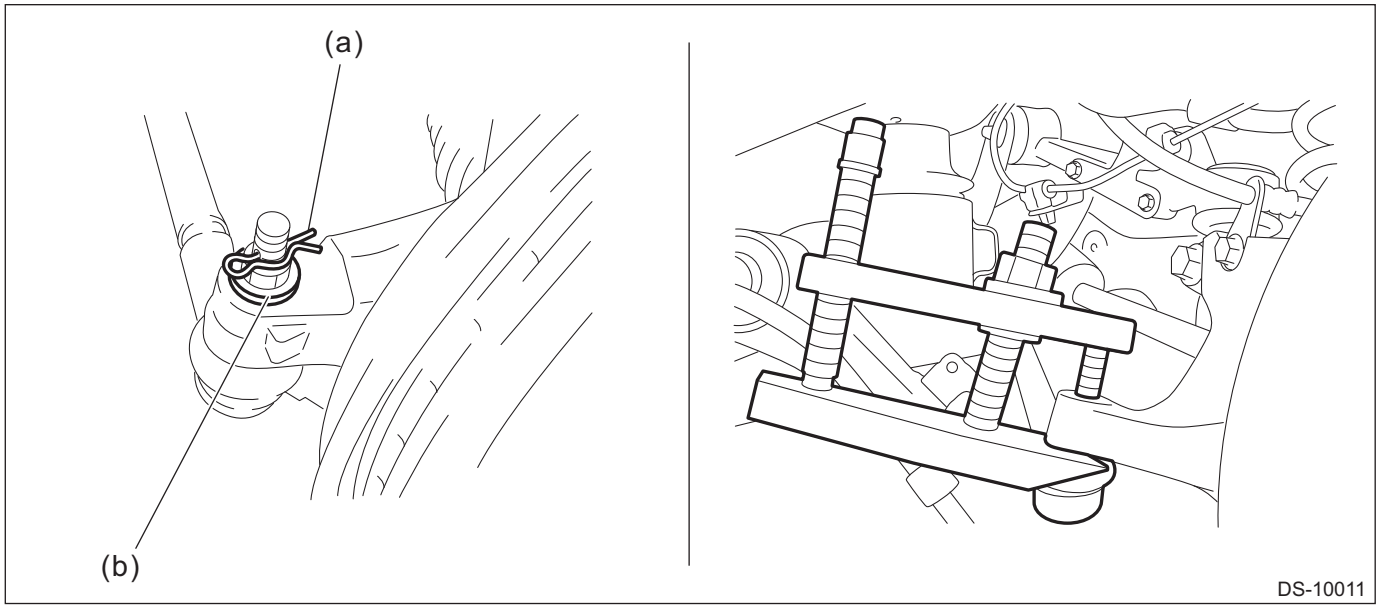


5. Rear Axle

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the axle nut.

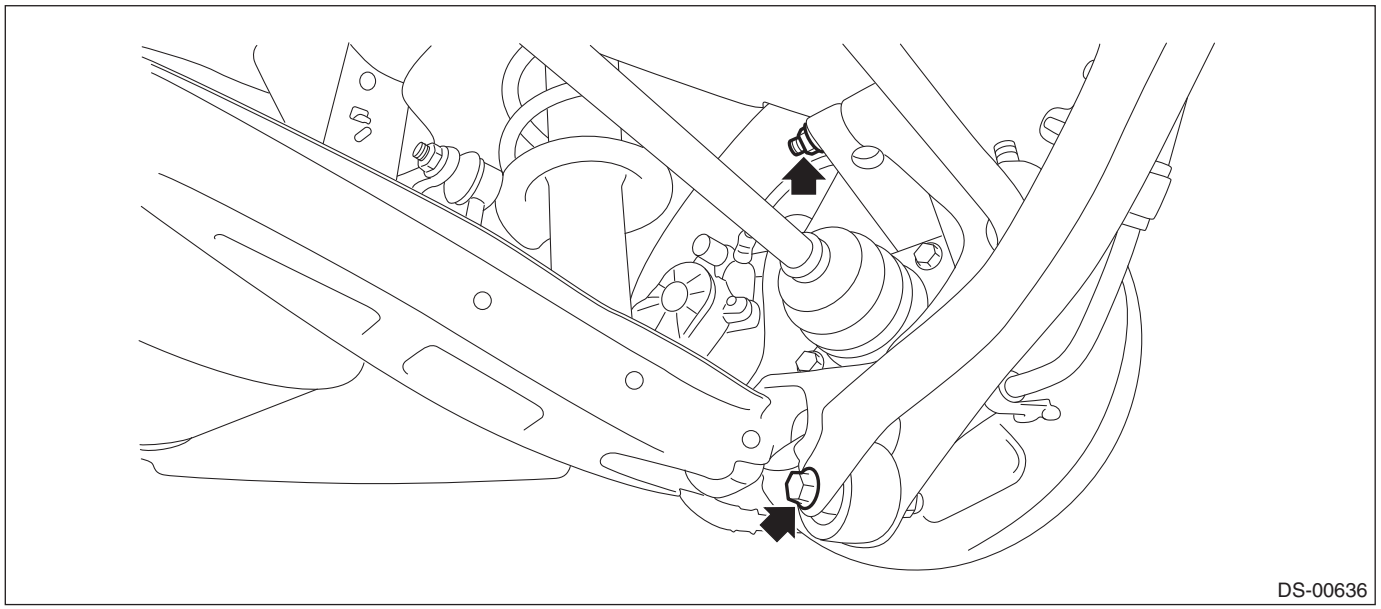
CAUTION:
Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.



(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.

4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking) <Ref. to LI-93, REMOVAL, Rear Height Sensor.>
5) Remove the lateral link assembly - rear. <Ref. to RS-26, REMOVAL, Rear Lateral Link.>
6) Remove the rear disc rotor. <Ref. to BR-36, REMOVAL, Rear Disc Rotor.>
7) Remove the rear drive shaft assembly. <Ref. to DS-48, REMOVAL, Rear Drive Shaft.>
8) Remove the lateral link assembly - front.
(1) Remove the snap pin (a) and nut (b).
(2) Disconnect the ball joint from the rear axle housing.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.



Preparation tool:
Tie-rod ball joint puller

9) Remove the rear axle housing.

CAUTION:
- **Be careful of the weight of rear axle housing.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Remove the bolts, and disconnect the upper arm and trailing link.

(2) Remove the rear axle housing.

10) Refer to “Rear Hub Unit Bearing” for removal of the rear hub unit bearing. <Ref. to DS-34, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

1) Temporarily tighten the rear axle housing to the upper arm assembly.
2) Install the rear drive shaft assembly. <Ref. to DS-51, INSTALLATION, Rear Drive Shaft.>

CAUTION:
Do not hammer the drive shaft assembly when installing.

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

(2) Tighten the new axle nut temporarily.

3) Tighten the rear shock absorber assembly, rear stabilizer link and other links to the specified torque.

Tightening torque:
Rear suspension: <Ref. to RS-4, REAR SUSPENSION, COMPONENT, General Description.>

4) Install the rear disc rotor.

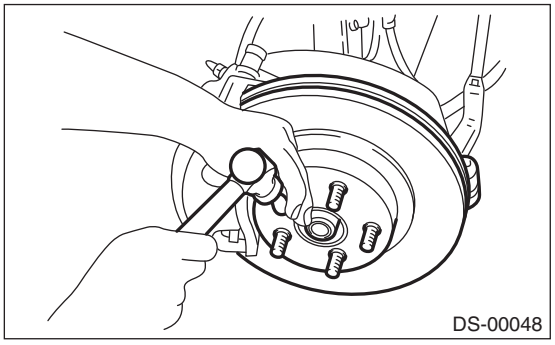
5) Install the disc brake assembly.

Tightening torque:
Mounting bolt: <Ref. to BR-6, REAR DISC BRAKE, COMPONENT, General Description.>

6) Install the brake hose bracket and rear ABS wheel speed sensor.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking)



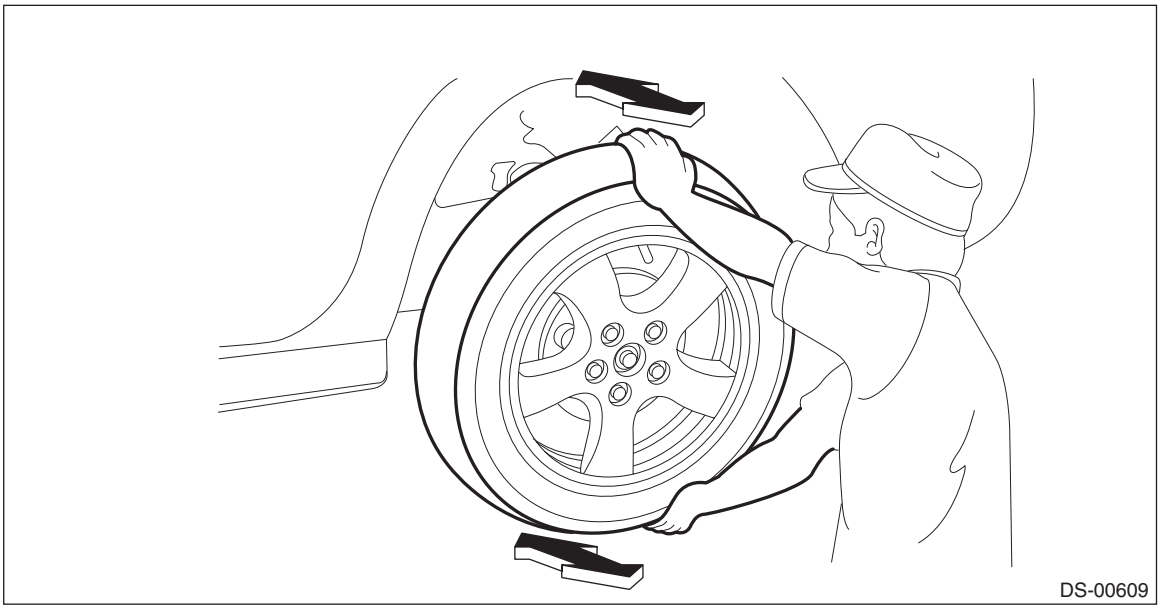
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
240 N·m (24.5 kgf-m, 177 ft-lb)

9) After tightening the axle nut, lock it securely.



10) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

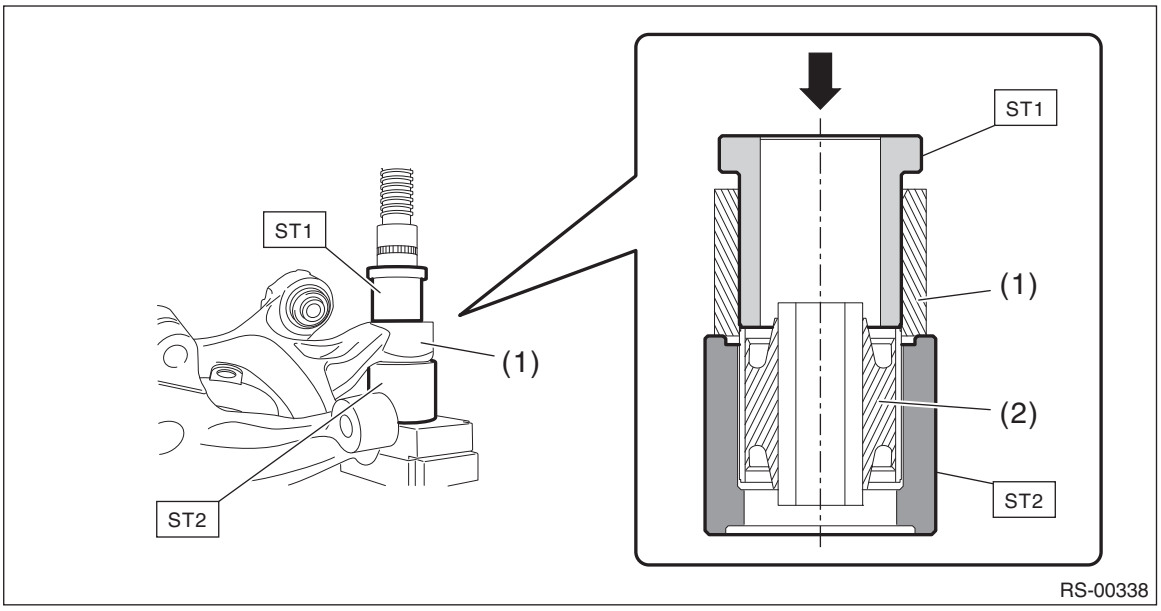
1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.

• **Looseness exists** → Check the rear hub unit bearing. <Ref. to DS-38, INSPECTION, Rear Hub Unit Bearing.>

11) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– Steering angle sensor adjustment: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
12) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY



1. BUSHING - REAR AXLE HOUSING

Do not remove the bushing - rear axle housing from the rear axle housing, because it cannot be replaced. If removed, replace the rear axle housing.

2. REAR BUSHING

1) Remove the rear axle housing. <Ref. to DS-28, REMOVAL, Rear Axle.>
2) Push out the bushing using the ST and a hydraulic press.

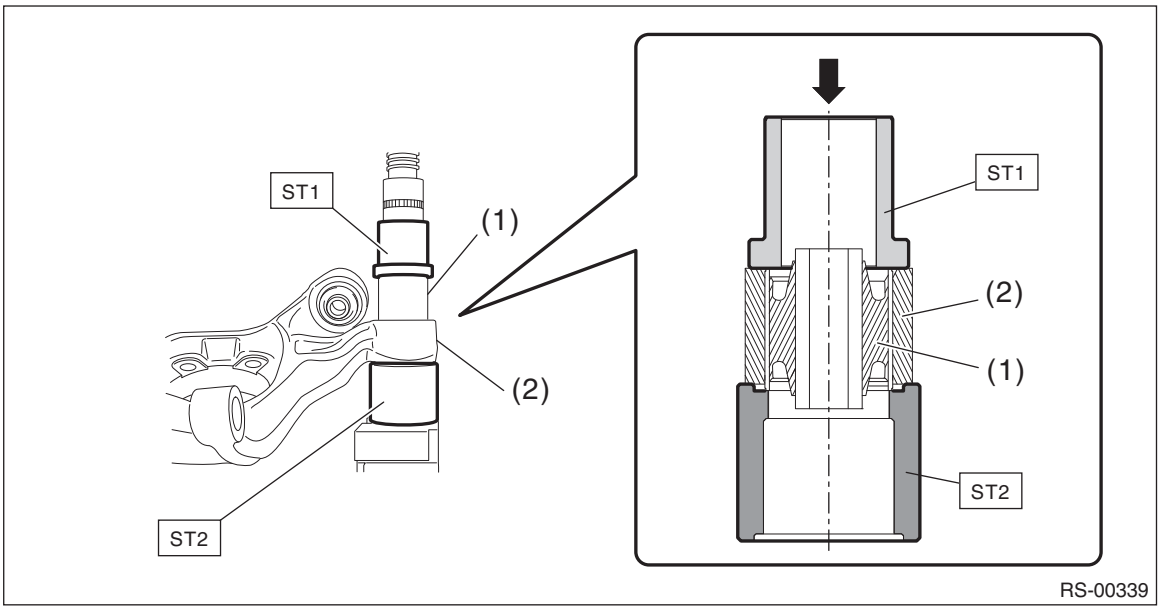
Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)

(1) Rear axle housing (2) Rear bushing

D: ASSEMBLY

1. BUSHING - REAR AXLE HOUSING

Do not remove the bushing - rear axle housing from the rear axle housing, because it cannot be replaced. If removed, replace the rear axle housing.



2. REAR BUSHING

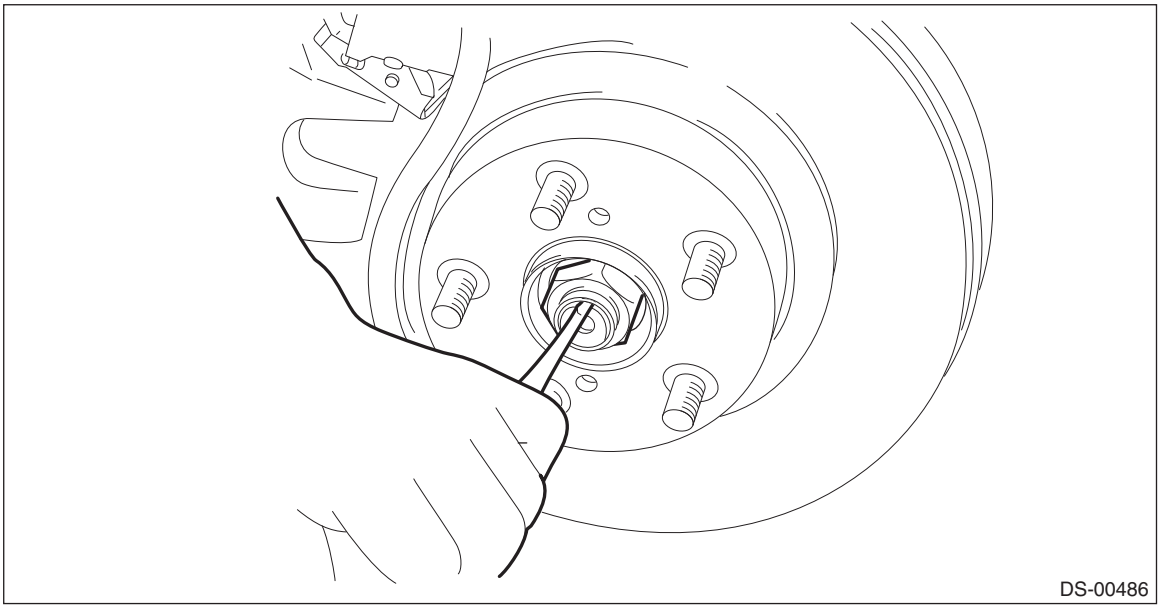
1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Press-fit the bushing using ST and the hydraulic press.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)

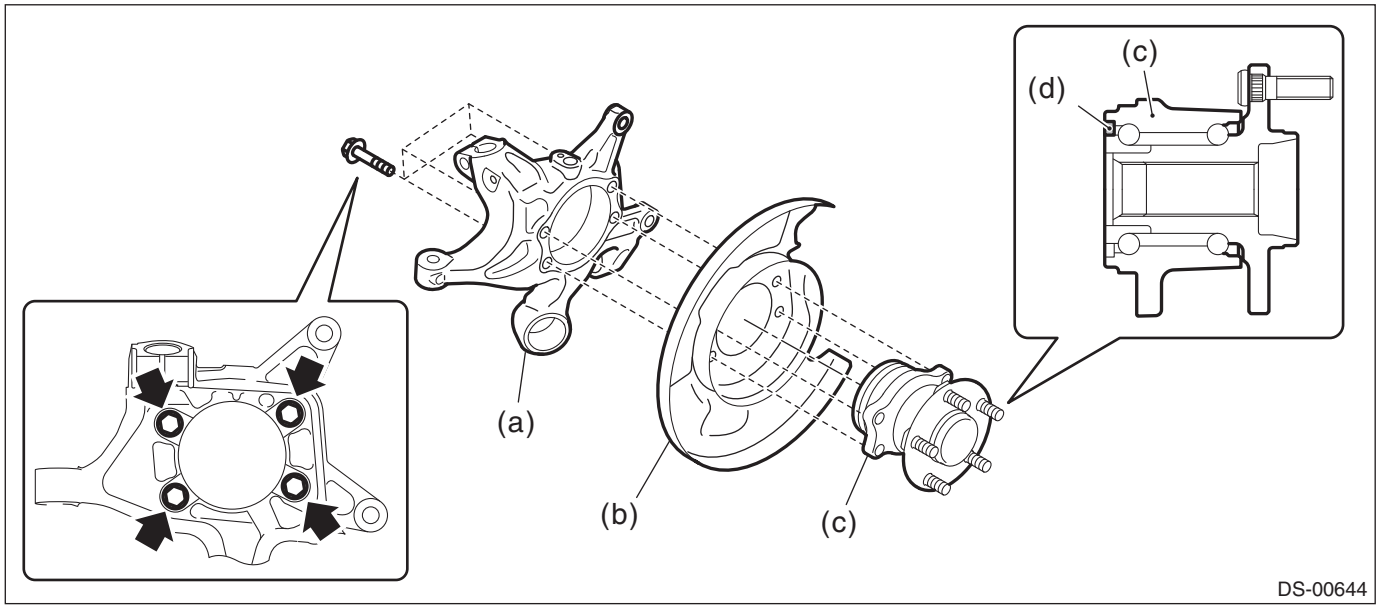
(1) Bushing
(2) Rear axle housing



6. Rear Hub Unit Bearing

A: REMOVAL

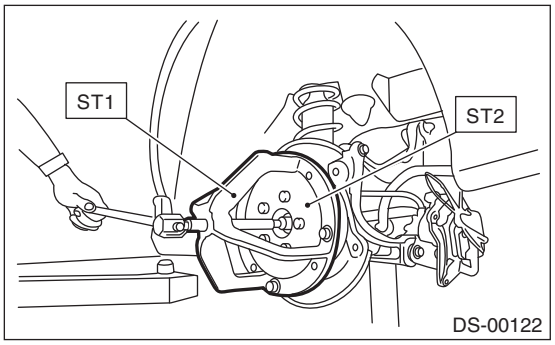
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the axle nut.



CAUTION:
Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.

3) Remove the rear disc brake assembly and rear disc rotor. <Ref. to BR-36, REMOVAL, Rear Disc Rotor.>
4) Remove the rear hub unit bearing.

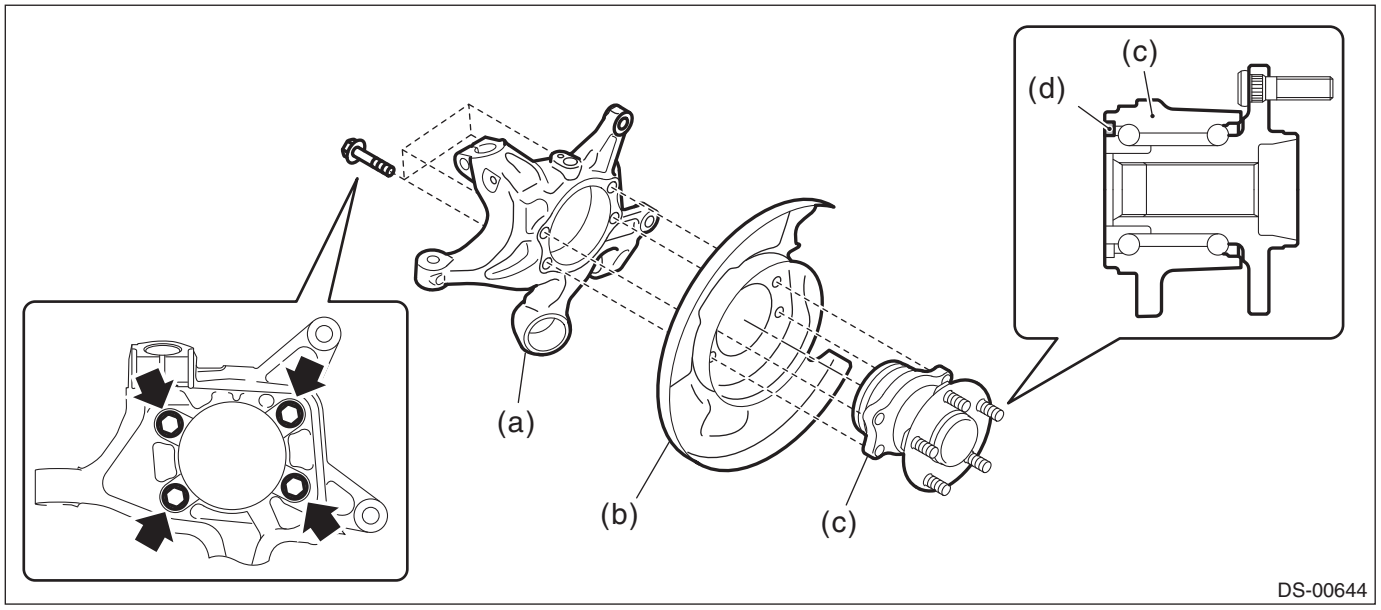


CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**

(a) Rear axle housing
(b) Rear brake back plate
(c) Rear hub unit bearing
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Place the rear brake back plate between the rear axle housing and the rear hub unit bearing, and tighten the bolt.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**
- **Use a new mounting bolt for the hub unit bearing.**

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)

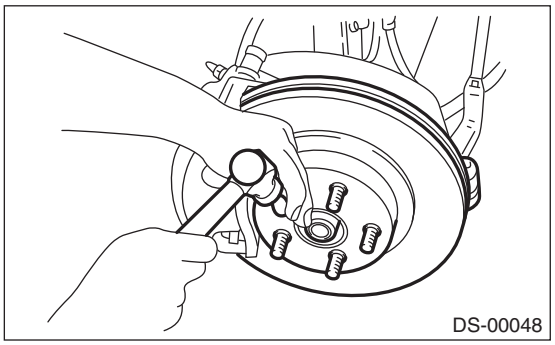
(a) Rear axle housing
(b) Rear brake back plate
(c) Rear hub unit bearing
(d) Magnetic encoder

2) Install the rear drive shaft assembly.

CAUTION:
Do not hammer the drive shaft assembly when installing.
(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new axle nut temporarily.

3) Install the disc rotor to the rear hub unit bearing.

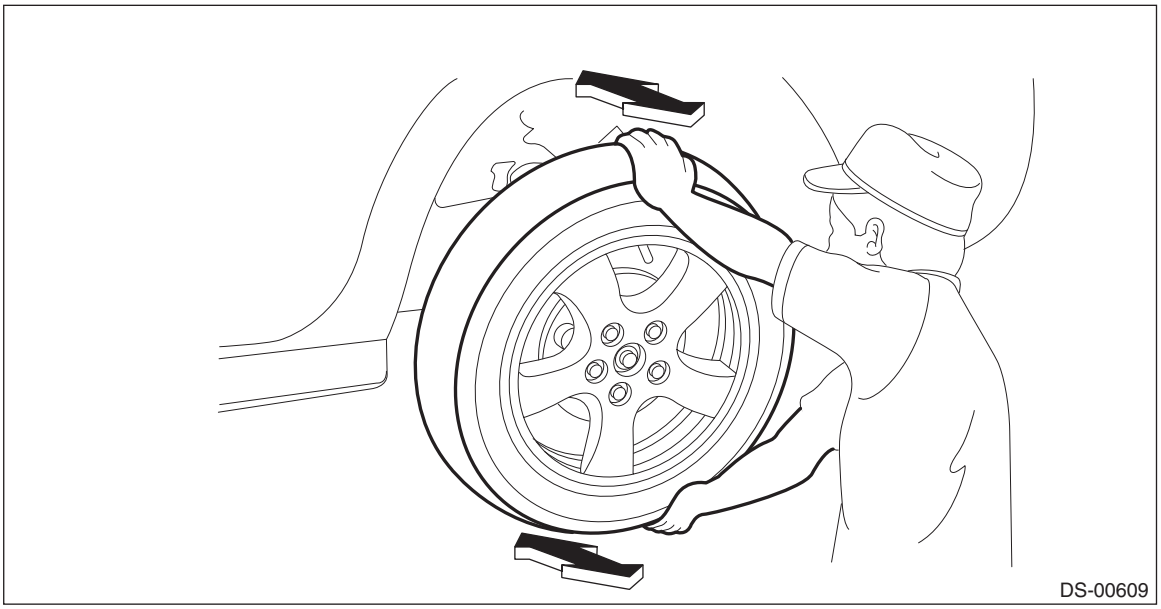
4) Install the disc brake assembly to the rear axle housing.



Tightening torque:
Mounting bolt: <Ref. to BR-6, REAR DISC BRAKE, COMPONENT, General Description.>
5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
6) Install the rear ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.



CAUTION:
Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

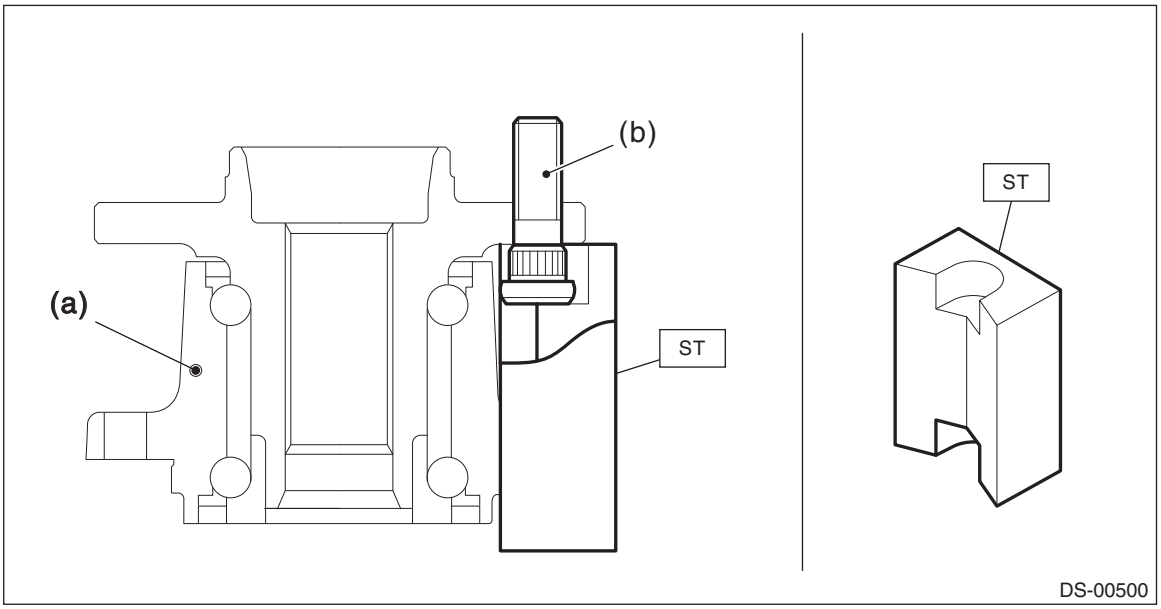
Tightening torque:
240 N·m (24.5 kgf-m, 177 ft-lb)
8) After tightening the axle nut, lock it securely.

DS-00048

9) Install the rear wheels, and perform the following inspections.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)
1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the rear hub unit bearing. <Ref. to DS-38, INSPECTION, Rear Hub Unit Bearing.>

DS-00609

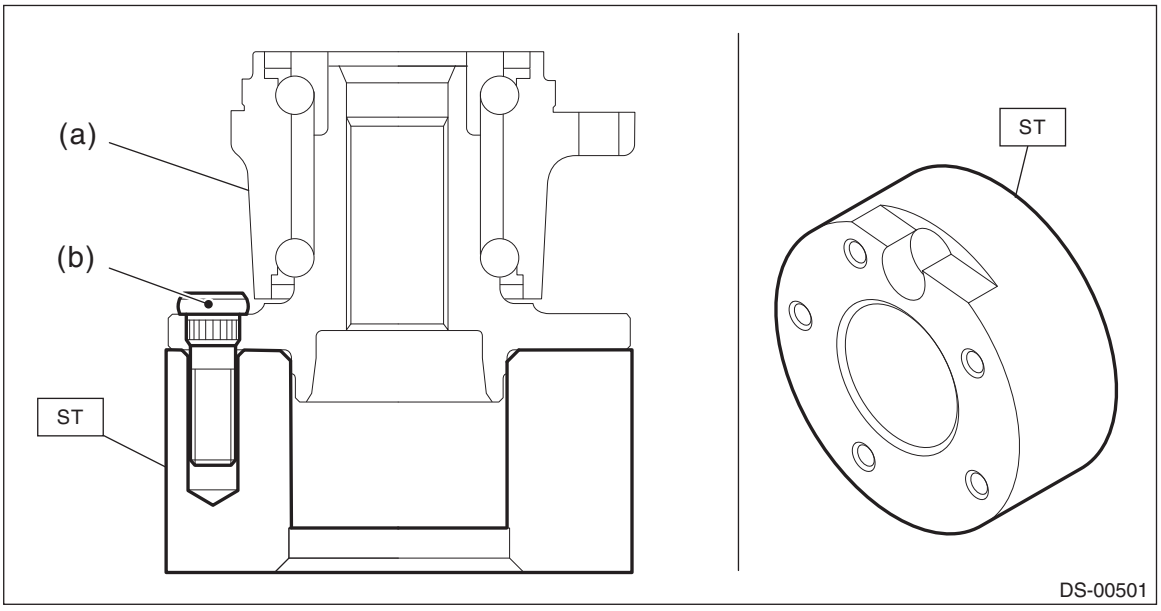


C: DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the rear hub unit bearing (a).

CAUTION:
- **Be careful not to hammer the hub bolts. This may deform the hub unit bearing.**
- **Do not reuse the hub bolt.**

NOTE:
Since the rear hub unit bearing can not be disassembled, only hub bolts can be removed.

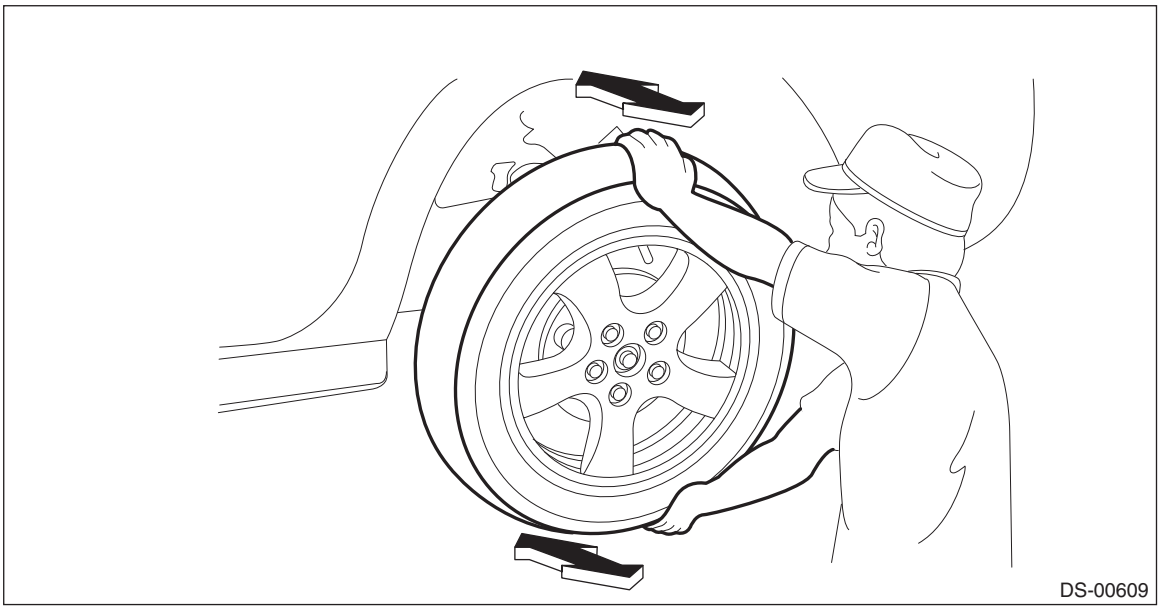


Preparation tool:
ST: HUB STAND (28399AG000)

D: ASSEMBLY

1) Install the rear hub unit bearing (a) to the ST securely.

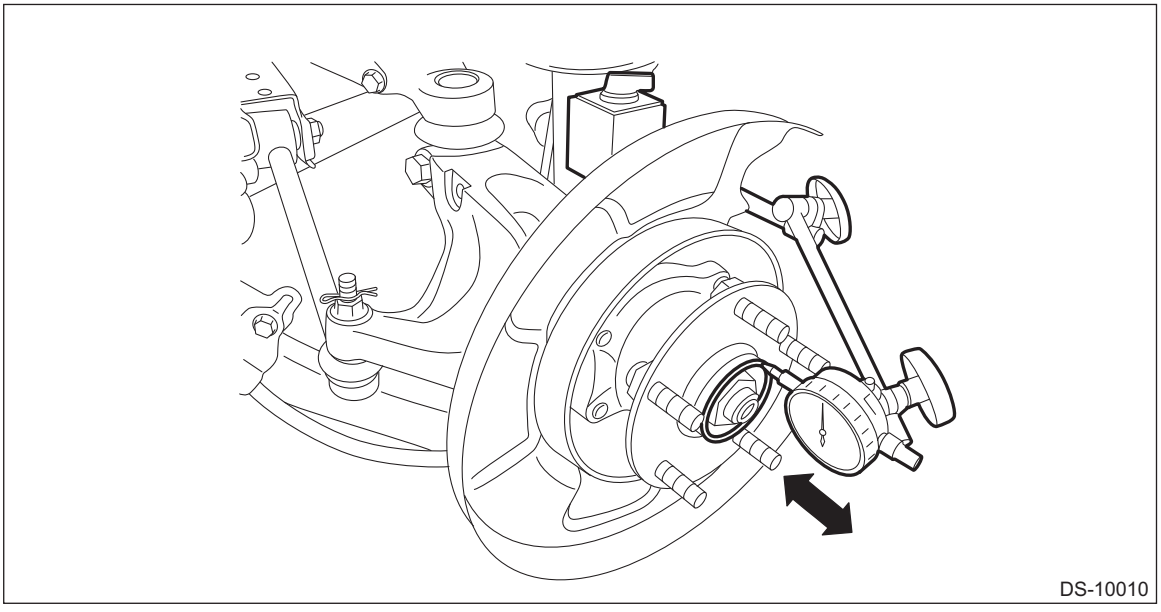
Preparation tool:
ST: HUB STAND (28099PA080)



2) Using a press, press new hub bolts (b) until their seating surfaces contact the rear hub unit bearing (a).

NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

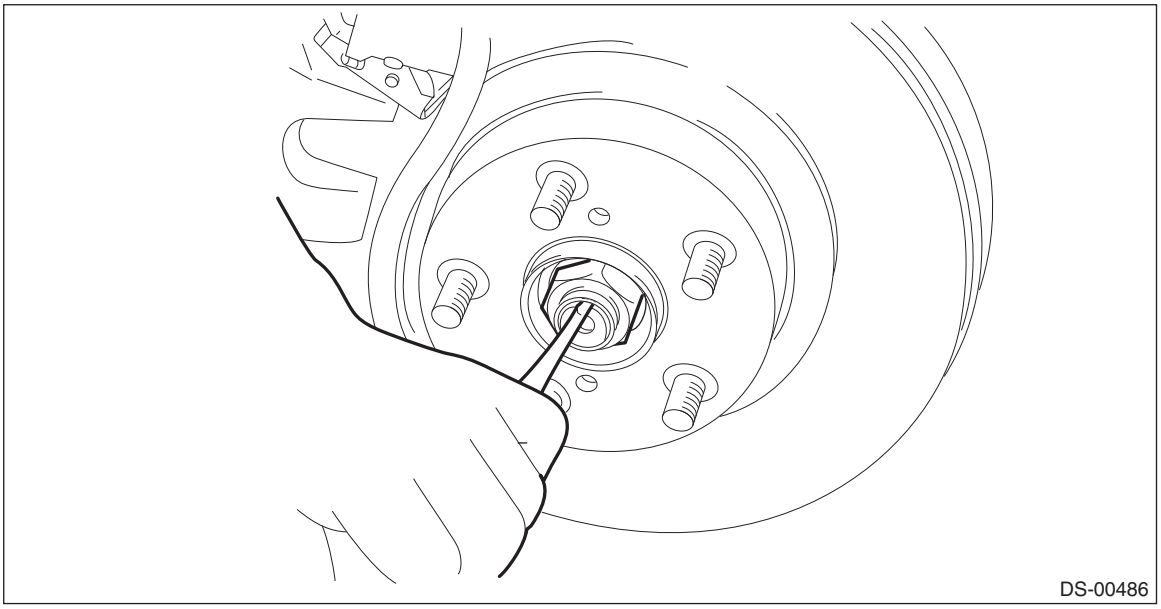


1) Moving the rear tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

CAUTION:
If there is unsmooth sliding operation or abnormal noise in the bearing, replace the rear hub unit bearing.

2) Inspect the hub unit bearing for axial looseness.
1. Remove the tire and disc rotor.
2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

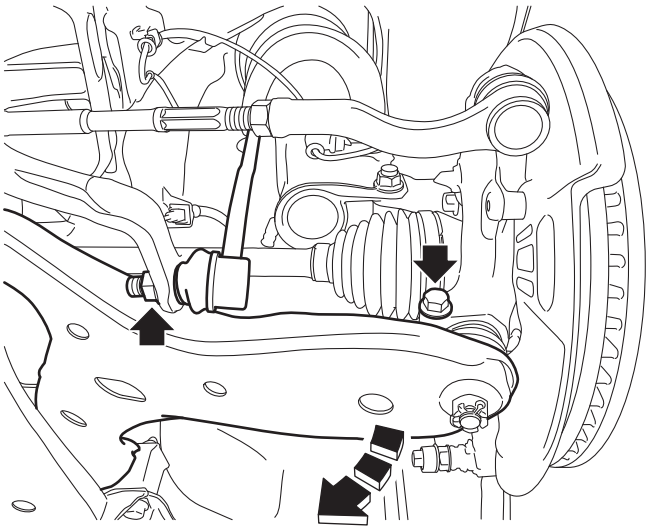
Service limit:
Maximum: 0.05 mm (0.0020 in)



7. Front Drive Shaft

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the axle nut.

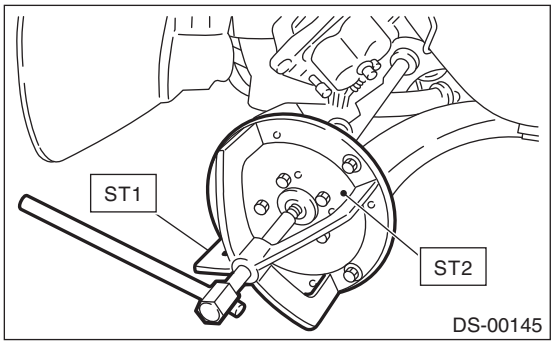


CAUTION:
Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.

DS-00486

3) Drain differential gear oil.
4) Disconnect the ball joint.
   (1) Remove the nut and disconnect the front stabilizer link.
   (2) Remove the bolts, disconnect the front arm ball joint, and lower the front arm assembly.



CAUTION:
Be careful not to damage the boot of the joint.

DS-00630

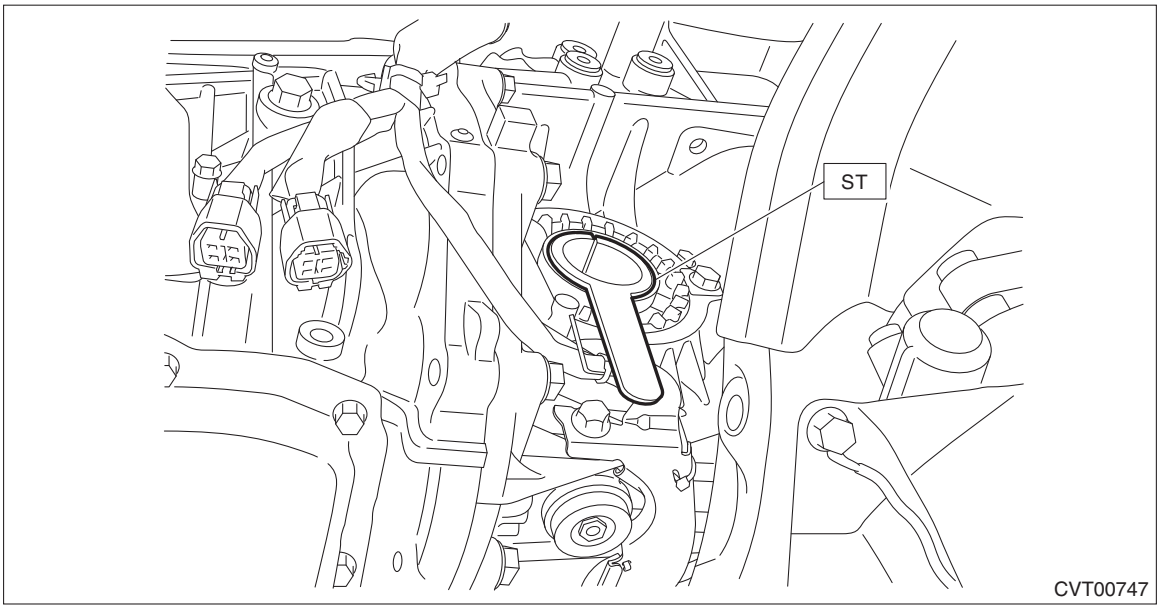
5) Remove the front drive shaft.
   (1) Disconnect the front axle housing from the front drive shaft.

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)

(2) Using a bar, remove the front drive shaft from transmission.

CAUTION:
Be careful not to allow the bar to damage holder area.

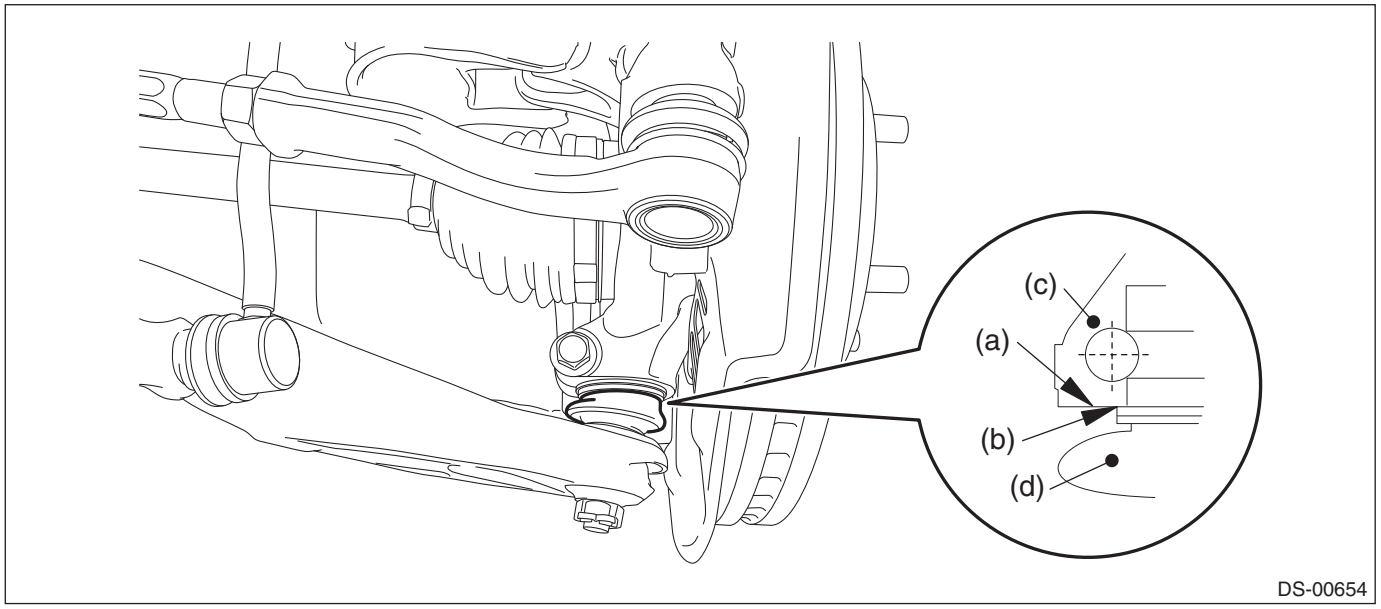


B: INSTALLATION

1) Before installation, check the drive shaft assembly. <Ref. to DS-47, INSPECTION, Front Drive Shaft.>
2) Replace the differential side retainer oil seal with a new part.
- CVT (TR690) model: <Ref. to CVT(TR690)-101, REPLACEMENT, Differential Side Retainer Oil Seal.>
- CVT (TR580) model: <Ref. to CVT(TR580)-103, REPLACEMENT, Differential Side Retainer Oil Seal.>

CAUTION:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
3) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

CAUTION:
Do not hammer the drive shaft assembly when installing.
4) Tighten the new axle nut temporarily.
5) Using the ST, install the front drive shaft assembly to the transmission.



Preparation tool:
ST: OIL SEAL PROTECTOR (28399SA010)

6) Install the ball joint to the front axle housing.

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.**
- **Be careful not to damage the boot of the joint.**

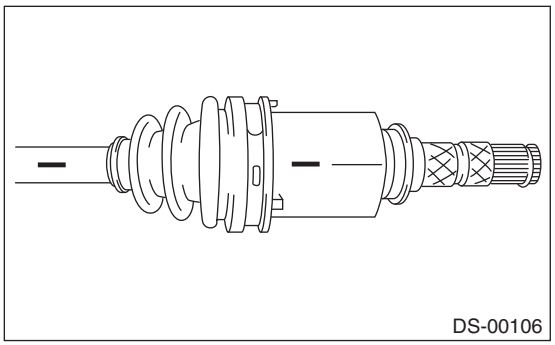
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

(a) Lower side of front axle housing
(b) Raised section of ball joint
(c) Front axle housing
(d) Ball joint

7) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
8) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

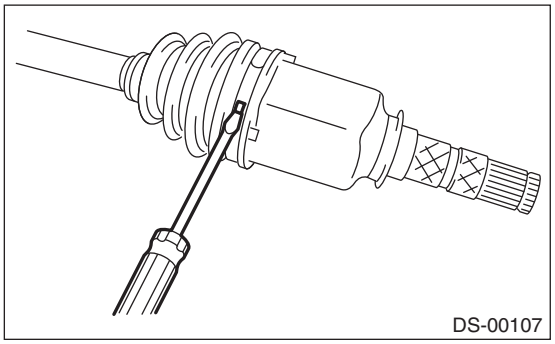
CAUTION:
Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.



Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)
9) After tightening axle nut, lock it securely.
10) Fill differential gear oil. (CVT model)
11) Install the front wheels.

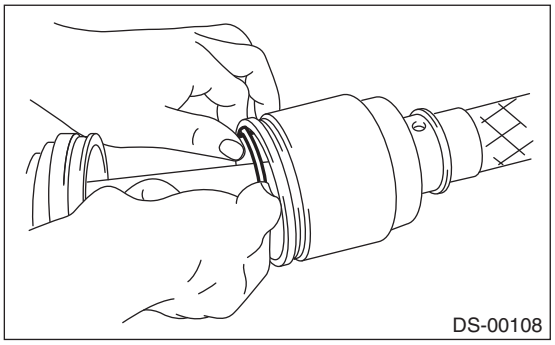
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
12) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– Steering angle sensor adjustment: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
13) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>



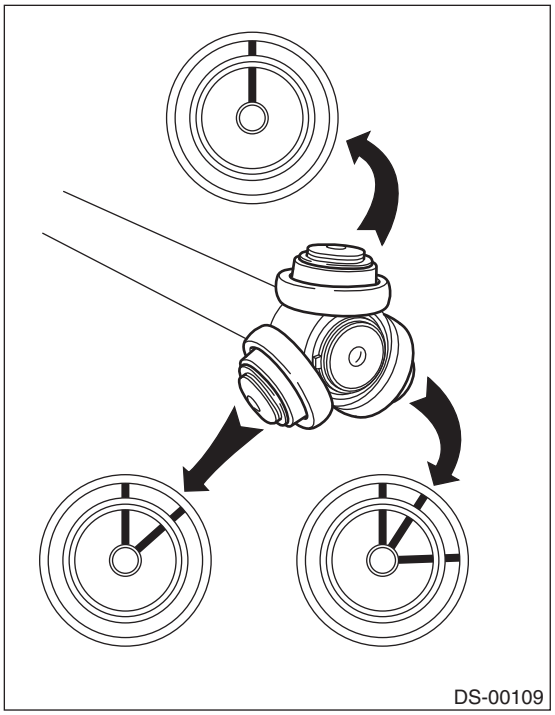
C: DISASSEMBLY

1) Place alignment marks on the shaft and outer race.



2) Remove the boot band and boot (PTJ).

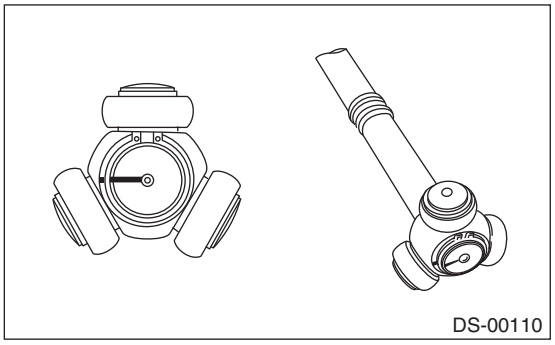
CAUTION:
Be careful not to damage the boot.



3) Remove the snap ring from the outer race (PTJ).

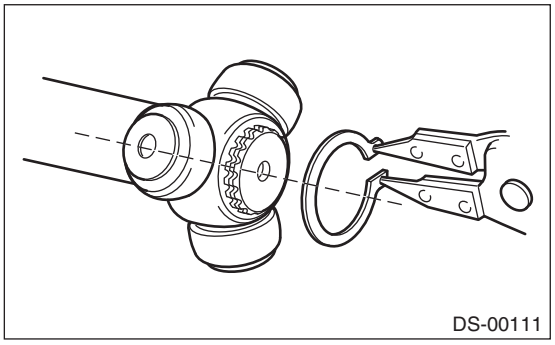
4) Remove the outer race (PTJ) from the shaft assembly.
5) Wipe off grease.

CAUTION:
The grease is a special type of grease. Do not mix with other grease.



6) Place alignment marks on the roller kit and trunnion.

7) Remove the roller kit from trunnion.

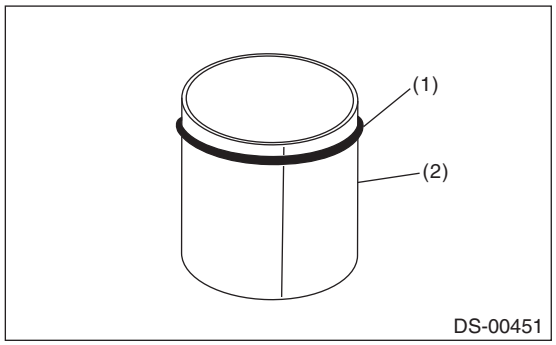


CAUTION:
Be careful with the roller kit position.

8) Place alignment marks on the trunnion and shaft.

9) Remove the snap ring and trunnion.

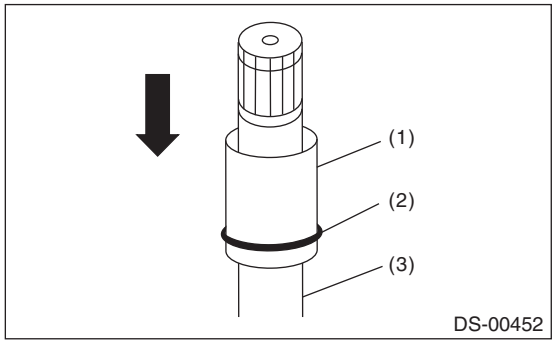
CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.



10) Remove the boot (PTJ).
11) Remove the O-ring from the groove of the shaft.

NOTE:
The EBJ is a non-disassembly part, so the axle disassembly stops here.

D: ASSEMBLY

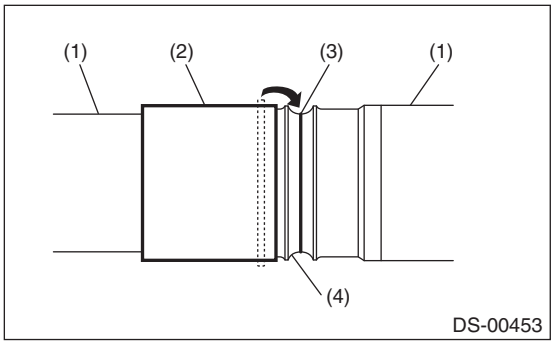


1) Roll up a thick piece of paper to a size where the shaft can pass through, and affix with tape to form a cylinder.
2) Attach a new O-ring on this cylinder.

CAUTION:
- **Always use a new O-ring.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **Do not stretch the O-ring to 30 mm (1.18 in) inner diameter or more.**

(1) O-ring
(2) Cylinder made with thick paper, etc.

3) Pass the cylinder material onto the shaft, and slide in the direction of the shaft axis.

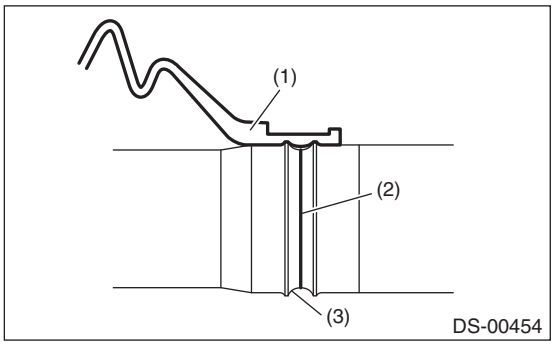


(1) Cylinder material
(2) O-ring
(3) Shaft

4) Clean the shaft boot groove, and wipe off the grease.
5) Slide the cylinder material near the shaft boot groove, and move the O-ring from the cylinder material onto the shaft boot groove.

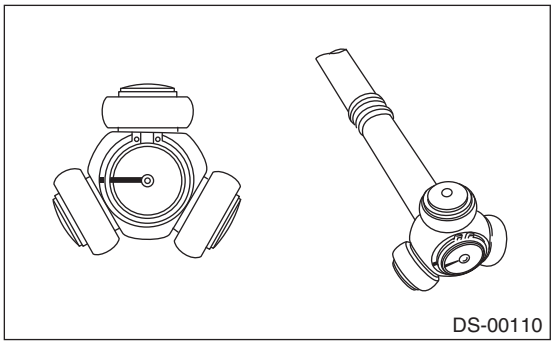
CAUTION:
- **Attach the O-ring to the shaft boot groove center.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**

- **With the O-ring attached, do not wash with kerosene, gasoline, etc.**



(1) Shaft
(2) Cylinder material
(3) O-ring
(4) Boot groove

6) Pass the small diameter boot band through the shaft.
7) Wrap vinyl tape around the splines of the shaft.



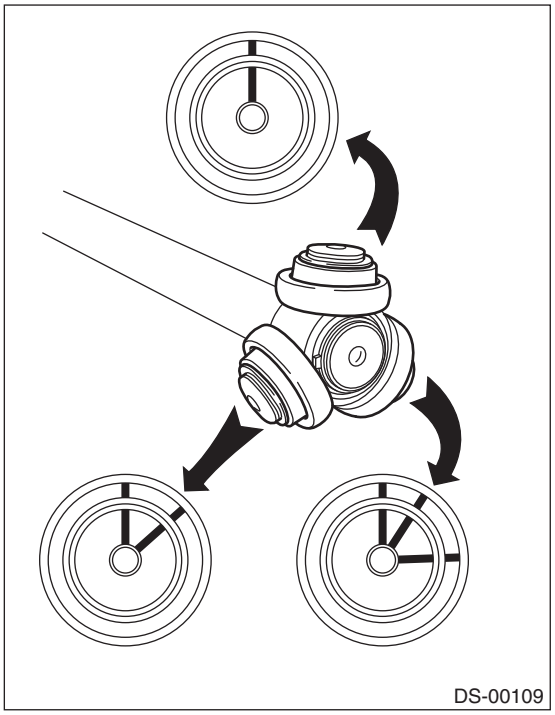
CAUTION:
To prevent damage to the boots, make sure to always wrap with vinyl tape for protection.
8) Install a new boot (PTJ).

CAUTION:
Make sure to fit securely on the boot groove of the shaft.

(1) Boot (PTJ)
(2) O-ring
(3) Boot groove

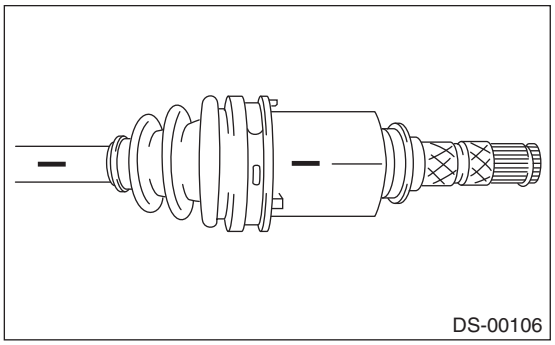
9) Match the alignment marks, and attach the trunnion onto the shaft.

10) Attach the snap ring to the shaft.



CAUTION:
Confirm that the snap ring is completely fitted in the shaft groove.

11) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of the outer race (PTJ).



Grease:
NKG302

12) Apply a thin coat of specified grease to the roller kit and trunnion.
13) Match the alignment marks of the roller kit and trunnion, and attach the roller kit.

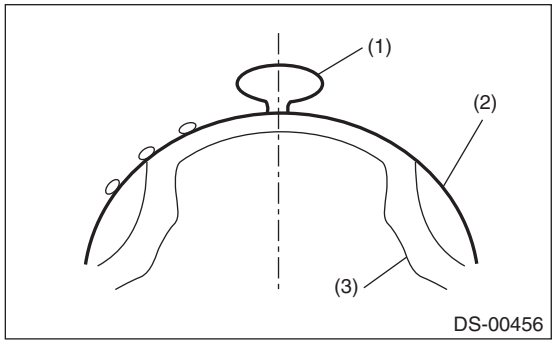
CAUTION:
Be careful with the roller kit position.

DS-00109

14) Match the alignment marks of the shaft and outer race, and attach the outer race.

DS-00106

15) Install the snap ring in the groove of the outer race (PTJ).

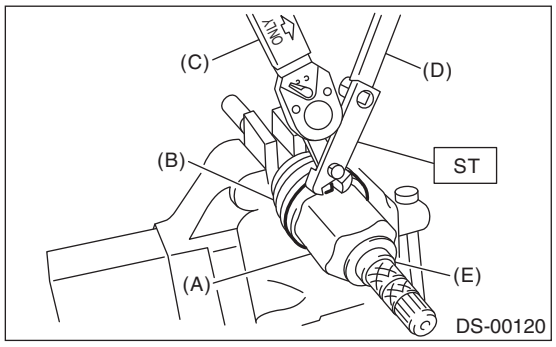


CAUTION:
Pull the shaft lightly and make sure that the snap ring is completely fitted in the groove.

16) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.
17) Attach the boot (PTJ) taking care not to twist it.

CAUTION:
• Clean the large end of boot (PTJ) and the boot groove well, and remove the grease and other substances.
• When installing the boot (PTJ), position the outer race (PTJ) at center of the stroke.

18) Set the new boot band at the specified position.
19) Tighten the boot bands using ST, torque wrench and socket flex handle.



CAUTION:
The large boot band is to be tightened so that the omega shaped part is at the position indicated in the figure below.

(1) Omega shaped part
(2) Boot band
(3) Outer race

Tightening torque:
Large boot band: 178 N·m (18.1 kgf-m, 131.3 ft-lb)
Small boot band: 145 N·m (14.8 kgf-m, 106.9 ft-lb)

Preparation tool:
ST: BOOT BAND PLIERS (28099AC000)

(A) Large boot band
(B) Boot
(C) Torque wrench
(D) Socket flex handle
(E) Outer race

20) Extend and retract the boot (PTJ) repeatedly so that grease is spread evenly.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.
- **PTJ (pillow tripod joint):**

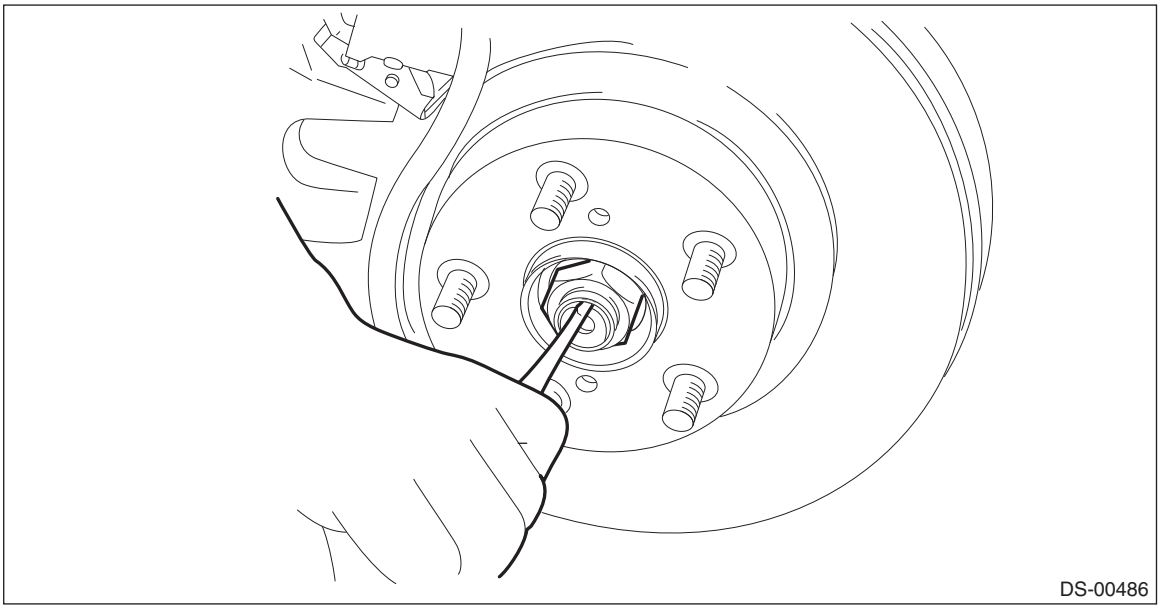
Check for seizure, corrosion, damage, wear and excessive looseness.
- **EBJ (High-Efficiency Compact Ball Fixed Joint):**

Check for seizure, corrosion, damage and excessive looseness.
- **Shaft:**

Check for excessive bending, twisting, damage and wear.
- **Boot:**

Check for wear, warping, breakage and scratches.
- **Grease:**

Check for discoloration and fluidity.

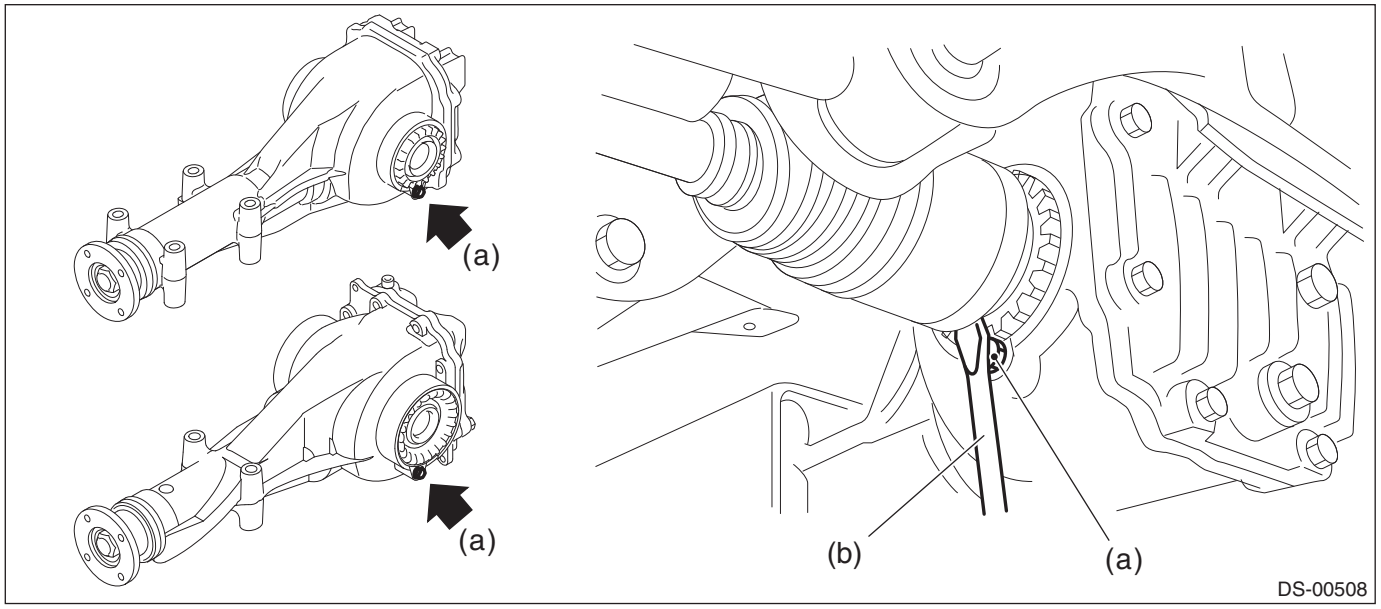


8. Rear Drive Shaft

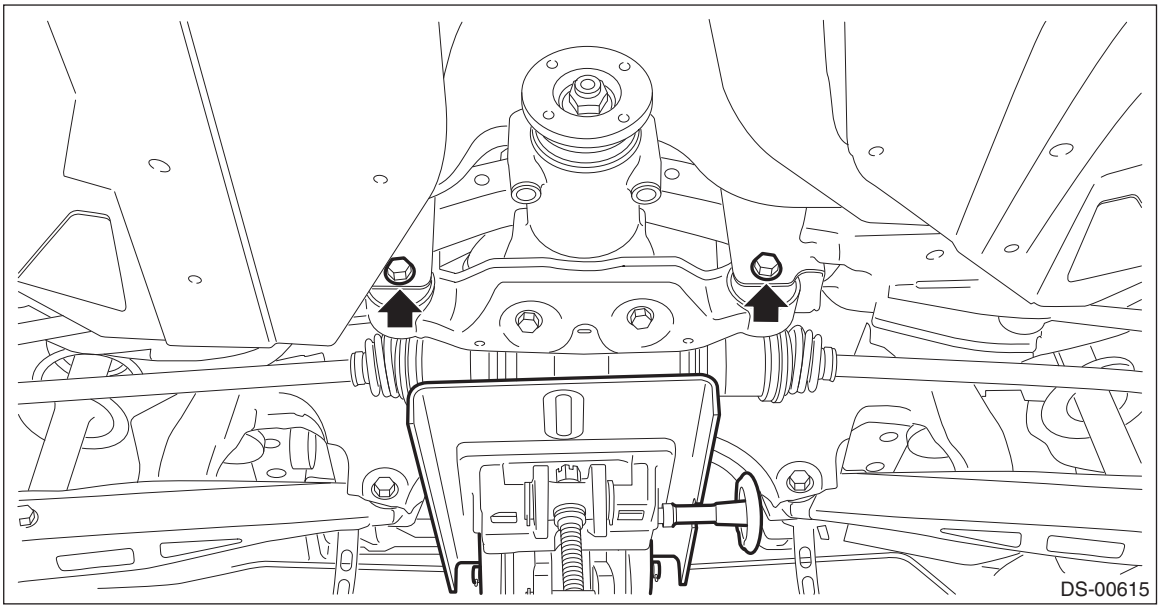
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

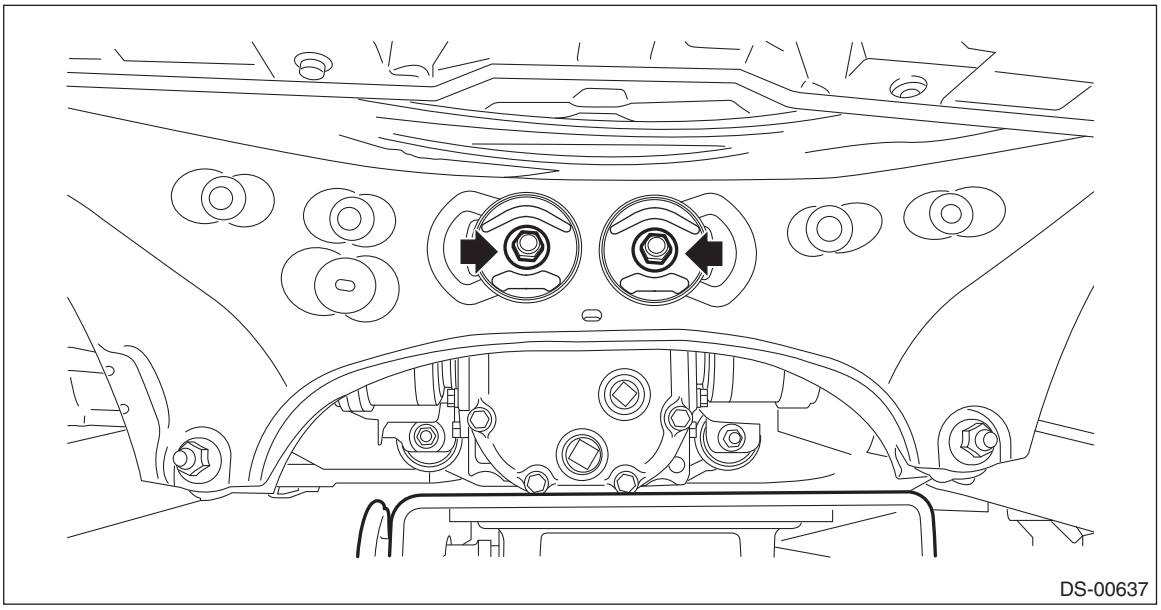


(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



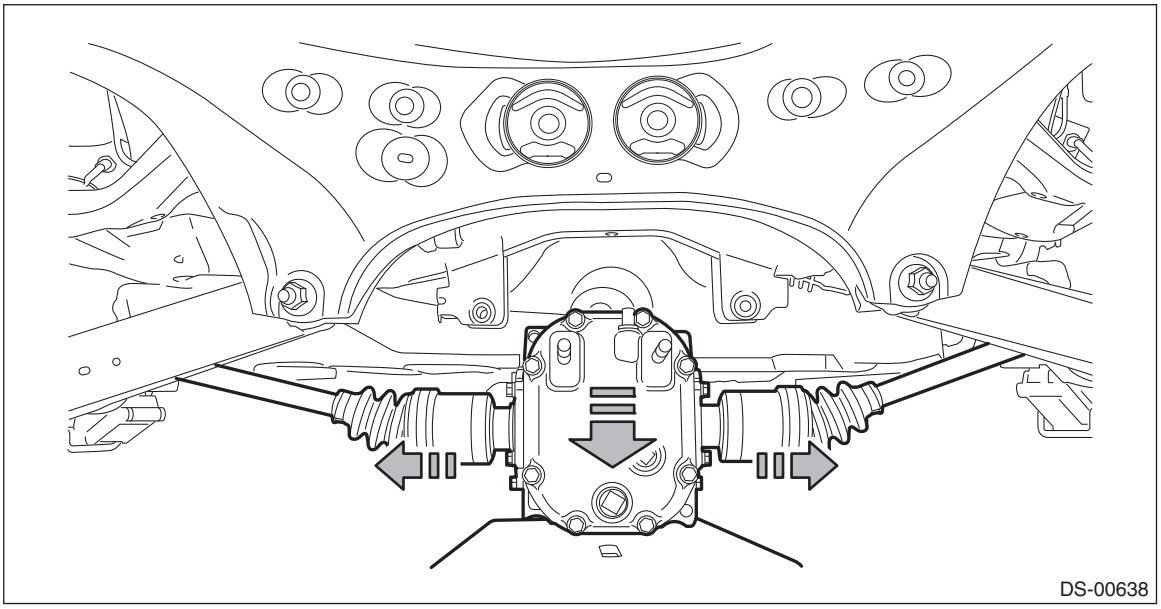
4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking) <Ref. to LI-93, REMOVAL, Rear Height Sensor.>
5) Drain differential gear oil.
6) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
7) Remove the rear differential assembly and the rear drive shaft assembly.

• VA1/VA2 type: Pull out the rear drive shaft assembly by fitting the crowbar (b) to the bolt (a) as shown in the figure.



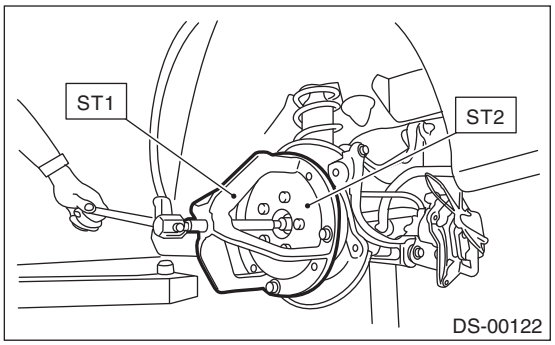
CAUTION:
To prevent damage to the side bearing retainer, use by placing the crowbar against the bolt as shown in the figure.

8) Remove the installation section of rear differential assembly.
(1) Support the rear differential assembly with a transmission jack.
(2) Remove the bolts which hold the rear differential front crossmember from the rear sub frame assembly.



(3) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

9) Completely pull out the rear drive shaft assembly while lowering the rear differential.

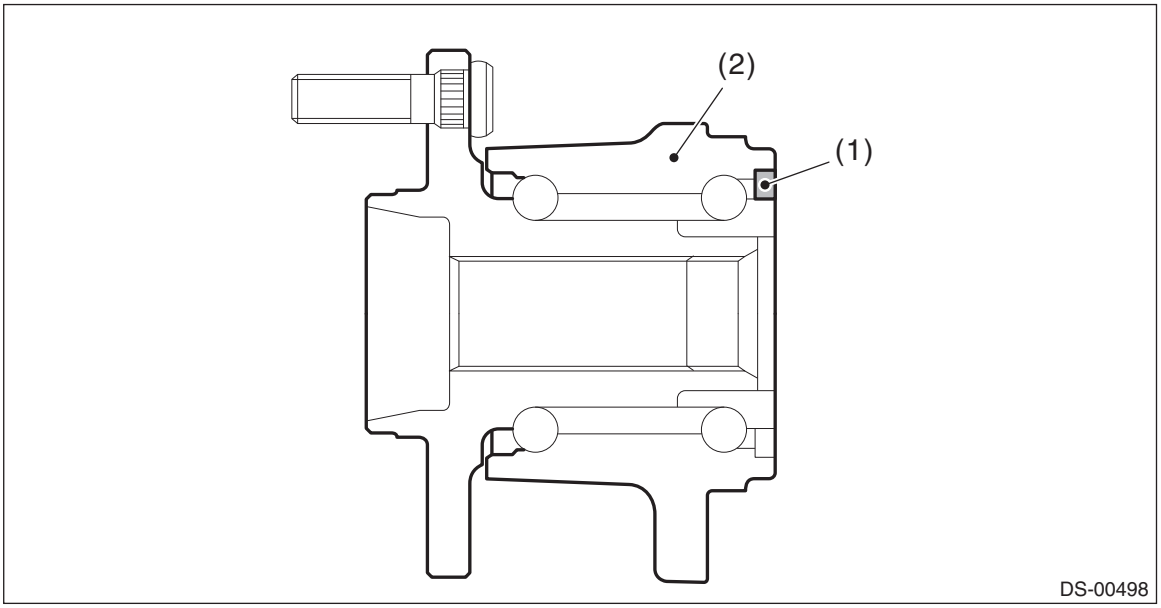


CAUTION:
Pay attention to avoid damaging the boot of drive shaft.

10) Remove the rear drive shaft assembly from the rear axle housing.

NOTE:
If it is hard to remove, use the ST.

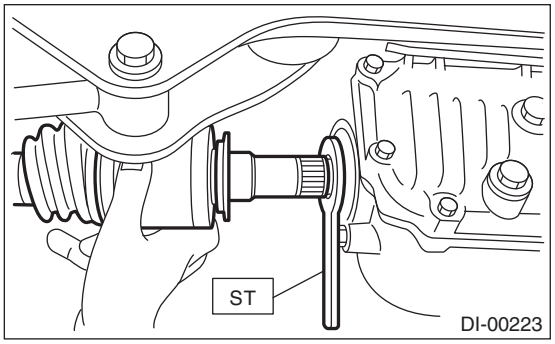
Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Replace the rear differential side oil seal. <Ref. to DI-57, REPLACEMENT, Rear Differential Side Oil Seal.>

CAUTION:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
2) Insert the drive shaft assembly into the rear hub spline, and pull it into the specified position.

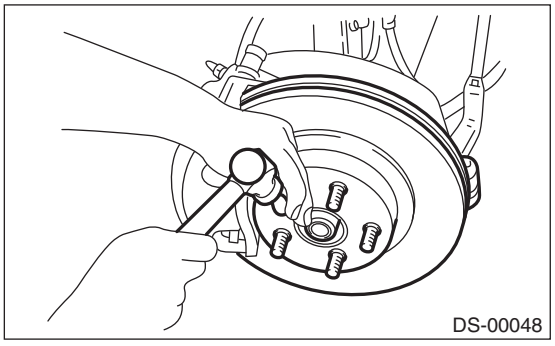


CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Do not hammer the drive shaft assembly when installing.**

(1) Magnetic encoder (2) Rear hub unit bearing

3) Tighten the axle nut temporarily.
4) Using the ST, install the rear drive shaft assembly to the rear differential.

Preparation tool:
ST: OIL SEAL PROTECTOR (28099PA090)



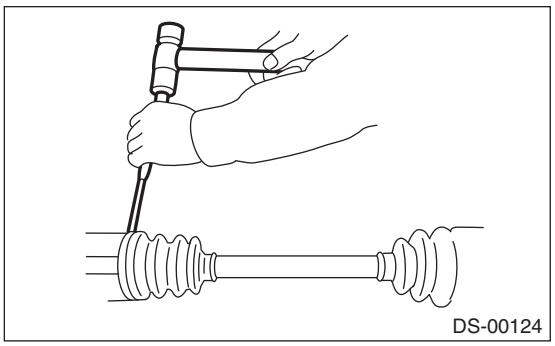
5) Install the rear differential assembly to the rear sub frame assembly. <Ref. to DI-23, INSTALLATION, Rear Differential (VA-type).>

CAUTION:
Be sure to use a new self-locking nut.
6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler and model with Reverse Automatic Braking)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

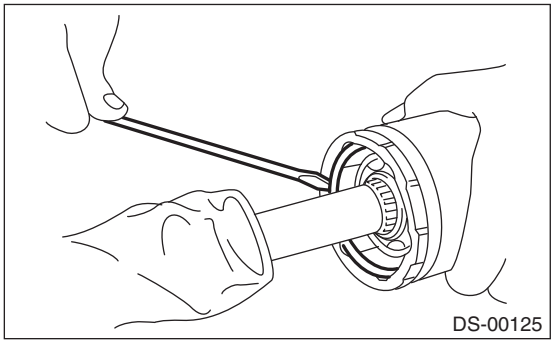
CAUTION:
Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
240 N·m (24.5 kgf-m, 177 ft-lb)
8) Lock the axle nut securely.



9) Fill differential gear oil.
10) Install the rear wheels.

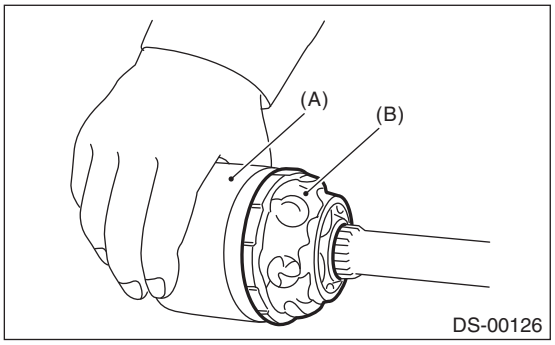
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
11) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-30, PROCEDURE, Auto Headlight Beam Leveler System.>



C: DISASSEMBLY

1) Using a flat tip screwdriver or pliers, loosen the boot band on the large end of boot (DOJ).

CAUTION:
Be careful not to damage the boot.



2) Remove the boot band on the small end of boot (DOJ) in the same manner.
3) Remove the large end of boot (DOJ) from outer race (DOJ).
4) Remove the round snap ring at the neck of outer race (DOJ) with a flat tip screwdriver.

5) Remove the outer race (DOJ) from the shaft assembly.
6) Wipe off the grease and take out the ball bearings.

CAUTION:
The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:
Disassemble the parts taking care not to lose balls.

(A) Outer race
(B) Grease

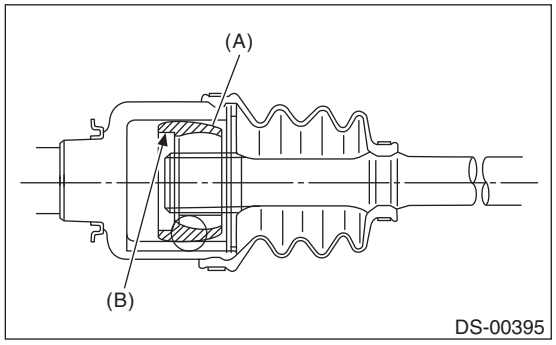
7) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
8) Using pliers, remove the snap ring fixing the inner race to the shaft.
9) Take out the inner race.
10) Remove the cage from the shaft and remove the boot (DOJ).

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.
11) Remove the boot (BJ or EBJ) in the same procedure as for the boot (DOJ).

NOTE:
Further disassembly of the drive shaft is impossible because the BJ and EBJ cannot be disassembled.

D: ASSEMBLY

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

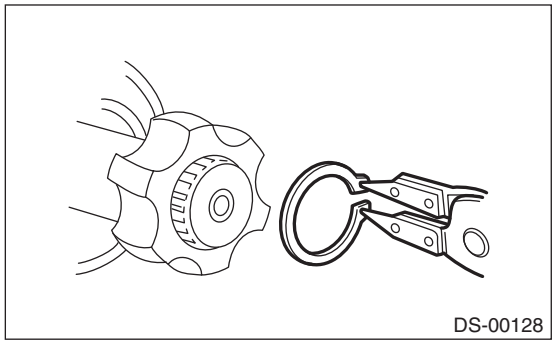


NOTE:
Use specified grease.

BJ, EBJ side:
NKG814

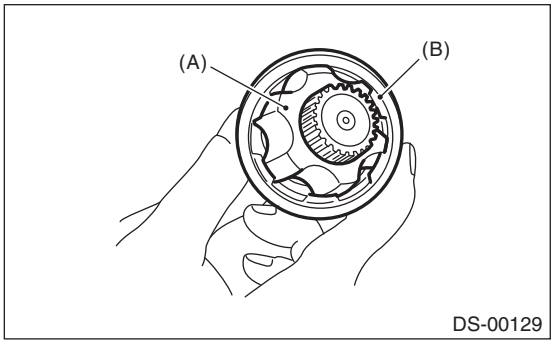
DOJ side:
NKG814

1) Install the boot (BJ or EBJ) to the specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.
2) Place the boot (DOJ) at the center of shaft.
3) Insert the cage onto shaft.



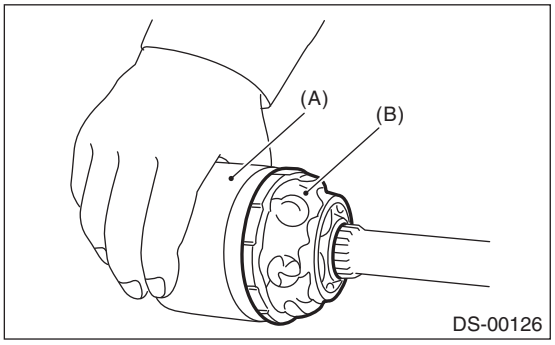
NOTE:
Insert the cage with the cutout portion facing the outer race side, since the cage has an orientation.

(A) Cage
(B) Cutout portion



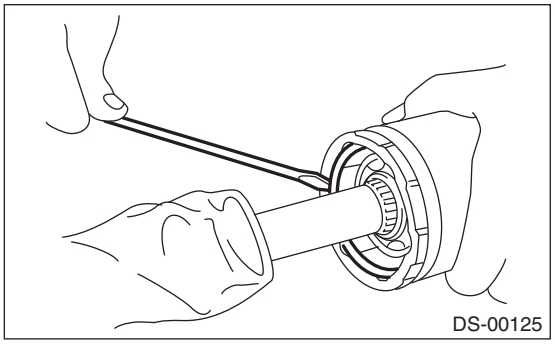
4) Install the inner race on shaft and fix the snap ring in place with pliers.

NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



5) Install the cage to inner race fixed upon shaft.

NOTE:
Install the cage (B) with the protruding section aligned with the track on the inner race (A), and turn by a half pitch.



6) Fill 80 to 90 g (2.82 to 3.17 oz) of the specified grease into the inner side of the outer race (DOJ).
7) Apply a thin coat of specified grease to the cage pocket and ball.
8) Insert the ball bearings into the cage pocket.
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race (DOJ) in place.

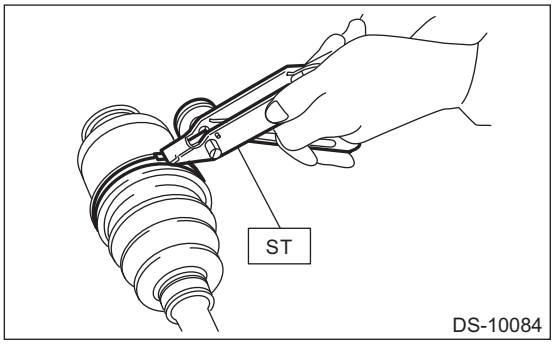
(A) Outer race
(B) Grease

10) Install the snap ring in the groove of the outer race (DOJ).

NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race (DOJ).
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to the shaft.
12) Attach the boot (DOJ) taking care not to twist it.

NOTE:
- The inside of the large end of boot (DOJ) and the boot groove shall be cleaned so as to be free from grease and other substances.

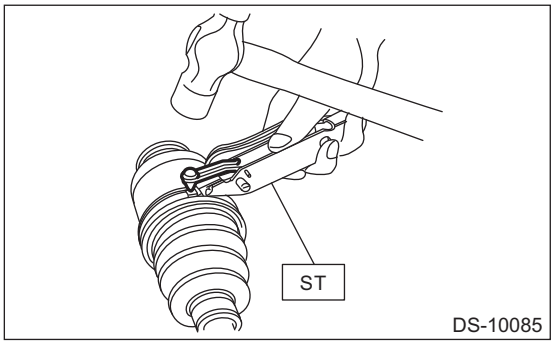


- When installing the boot (DOJ), position the outer race (DOJ) at center of the stroke.

13) Put a new band through the clip and wind twice in the band groove of the boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.
15) Tighten the band using the ST.

NOTE:
Tighten the band until it cannot be moved by hand.



Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

16) Tap the clip with the punch provided at the end of the ST.

NOTE:
Tap to an extent that the boot underneath is not damaged.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

17) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.
18) Install the boot band using the same procedures as for the boot (DOJ).
19) Extend and retract the boot (DOJ) repeatedly to provide an equal coating of grease.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.

- **DOJ (Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive looseness.

- **EBJ (High-Efficiency Compact Ball Fixed Joint):**

Check for seizure, corrosion, damage, wear and excessive looseness.

- **BJ (Ball Fixed Joint):**

Check for seizure, corrosion, damage and excessive looseness.

- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**

Check for discoloration and fluidity.

9. General Diagnostic Table

A: INSPECTION

NOTE:
Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptoms	Possible cause	Corrective action
Noise or vibration from propeller shaft	• Center bearing • Runout of propeller shaft • Loose or play at connections	Inspect the propeller shaft. <Ref. to DS-13, INSPECTION, Propeller Shaft.>
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-10, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-51, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-33, INSPECTION, Rear Shock Absorber.>
	Front drive shaft	Check the front drive shaft. <Ref. to DS-47, INSPECTION, Front Drive Shaft.>
	Rear drive shaft	Check the rear drive shaft. <Ref. to DS-56, INSPECTION, Rear Drive Shaft.>
	Front hub unit bearing	Check the front hub unit bearing. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>
	Rear hub unit bearing	Check the rear hub unit bearing. <Ref. to DS-38, INSPECTION, Rear Hub Unit Bearing.>
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-10, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-51, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-33, INSPECTION, Rear Shock Absorber.>

VEHICLE DYNAMICS CONTROL (VDC)

VDC

		Page
1.	General Description	2
2.	Relay and Fuse	6
3.	Vehicle Dynamics Control System	7
4.	VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)	8
5.	ABS Sequence Control	18
6.	VDC Sequence Control	21
7.	Brake Lamp Relay	24
8.	Yaw Rate and G Sensor	25

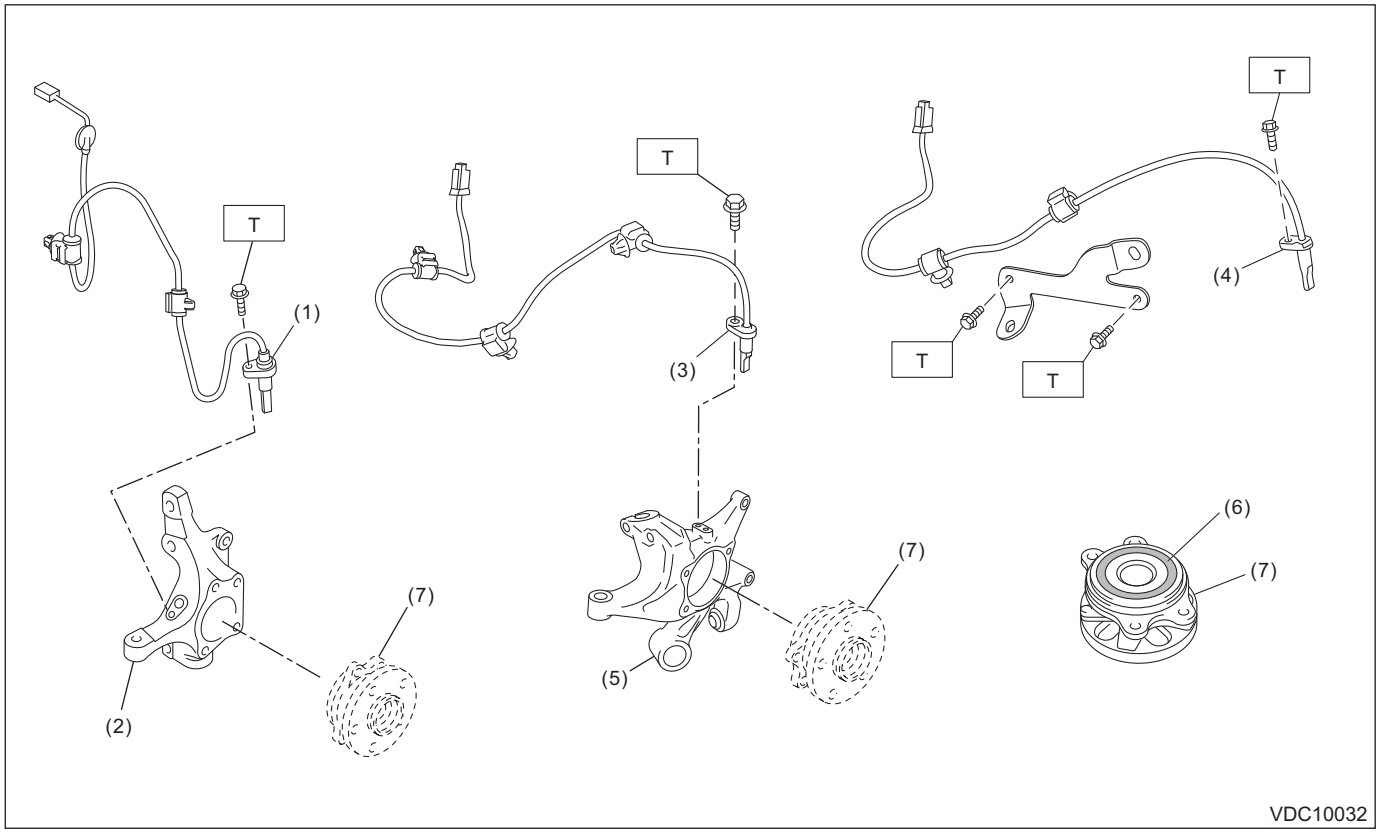
10.	Front ABS Wheel Speed Sensor	29
11.	Rear ABS Wheel Speed Sensor	32
12.	Front Magnetic Encoder	35
13.	Rear Magnetic Encoder	36
14.	VDC OFF Switch	37
15.	Hill Hold Switch	39

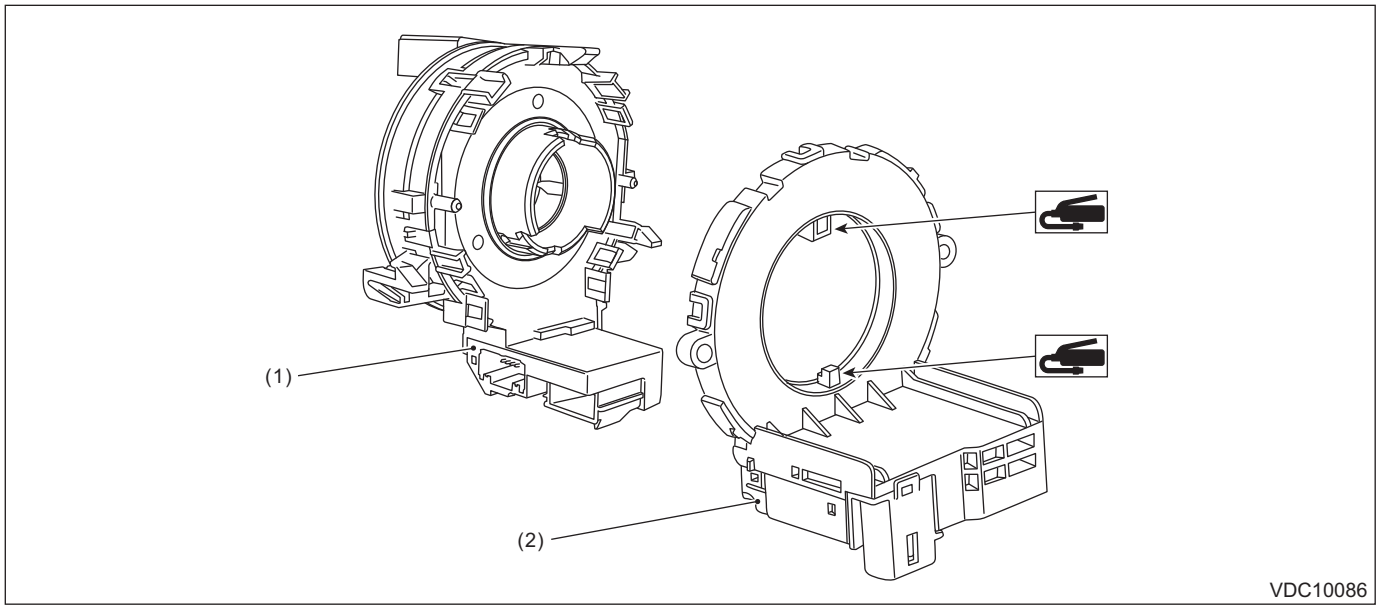


1. General Description

A: SPECIFICATION

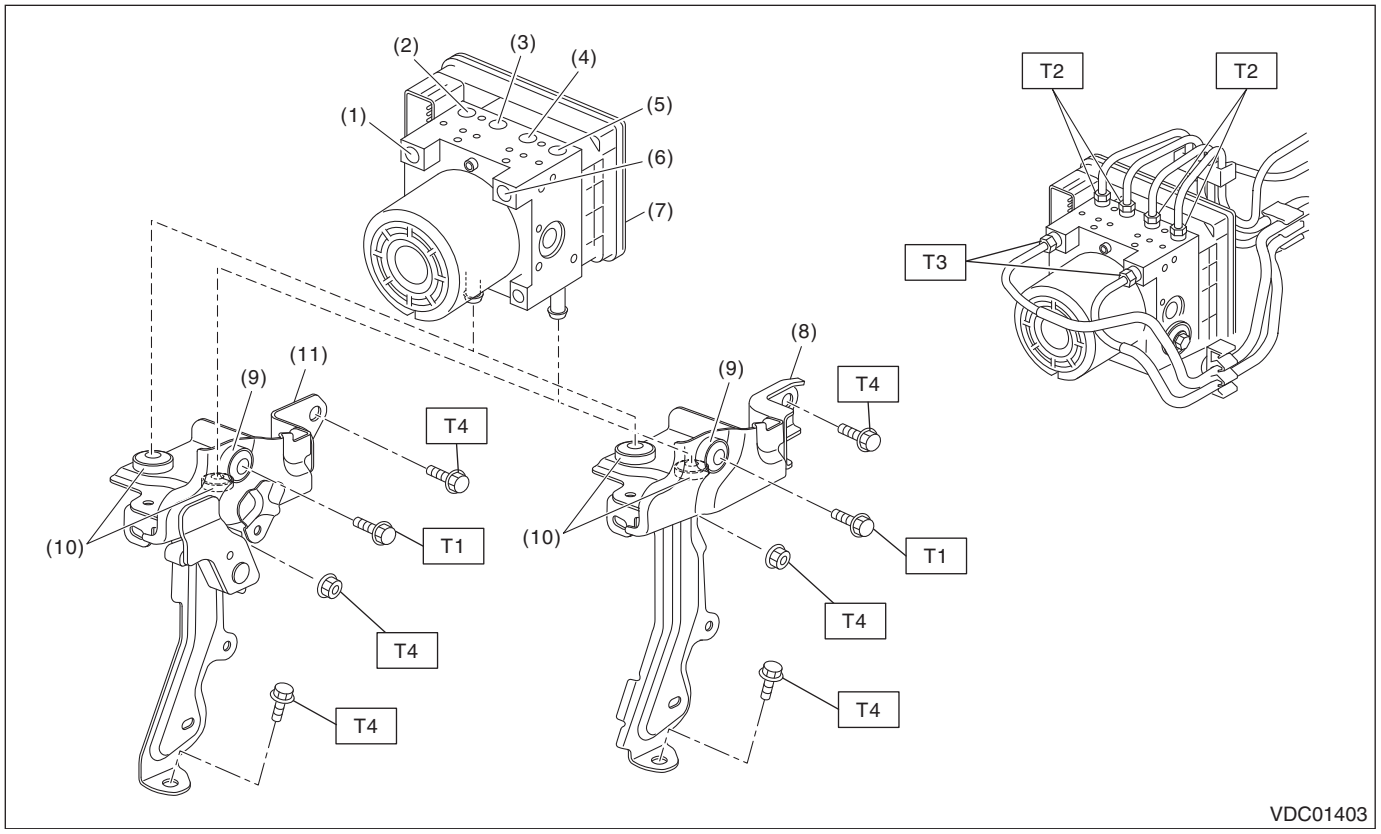
Item					Specification or identification
ABS wheel speed sensor	Gap between ABS wheel speed sensor and magnetic encoder (for reference)	Front			0.77 — 1.43 mm (0.03 — 0.056 in)
		Rear			0.44 — 1.76 mm (0.017 — 0.069 in)
	Identifications of harness (symbol)	Front			H1
		Rear	Sedan model	RH	H3
				LH	H4
			OUTBACK model	RH	H7
				LH	H8
VDCCM&H/U identification		Models without EyeSight			G7
		Models with EyeSight			G8

B: COMPONENT



1. ABS WHEEL SPEED SENSOR

(1) Front ABS wheel speed sensor
(2) Housing ASSY - front axle
(3) Rear ABS wheel speed sensor (sedan model)
(4) Rear ABS wheel speed sensor (OUTBACK model)
(5) Housing ASSY - rear axle
(6) Magnetic encoder
(7) Hub unit COMPL



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

2. STEERING ANGLE SENSOR

(1) Steering roll connector
(2) Steering angle sensor

3. VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U)

(1)	Secondary inlet	(7)	VDC control module and hydraulic control unit (VDCCM&H/U)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear RH outlet	(8)	Bracket - hydraulic unit (model without EyeSight)	***T1: 7.5 (0.8, 5.5)***
(3)	Front LH outlet	(9)	Spacer	***T2: 15 (1.5, 11.1)***
(4)	Front RH outlet	(10)	Damper - hydraulic unit	***T3: 19 (1.9, 14)***
(5)	Rear LH outlet	(11)	Bracket - hydraulic unit (model with EyeSight)	***T4: 33 (3.4, 24.3)***
(6)	Primary inlet			

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

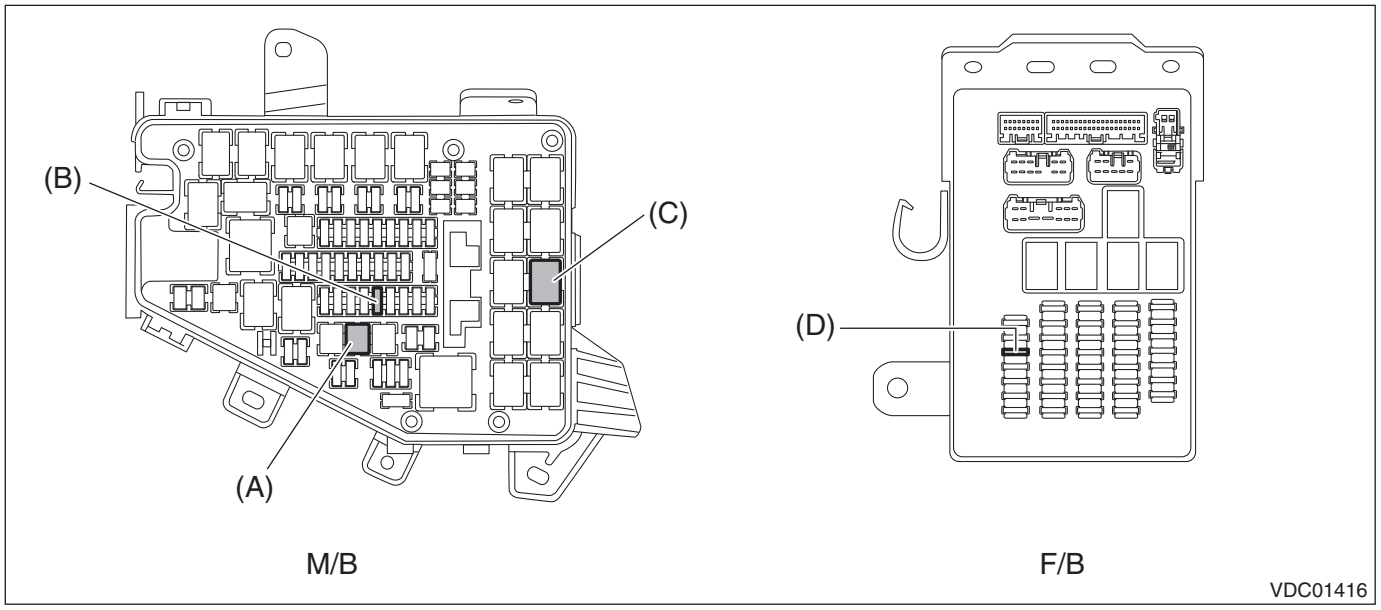


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

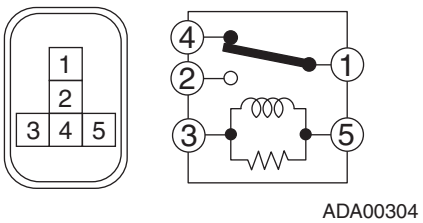
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring the sensor.
Steering wheel puller	Used for removing the steering wheel.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 40 A	(A)
	Fuse 30 A	(B)
	Brake light relay	(C)
Fuse & relay box (F/B)	Fuse 7.5 A	(D)

NOTE:
For details concerning other fuses and relays, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>



B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Vehicle Dynamics Control System

A: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-379, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-15, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-111, INSPECTION, General Diagnostic Table.>

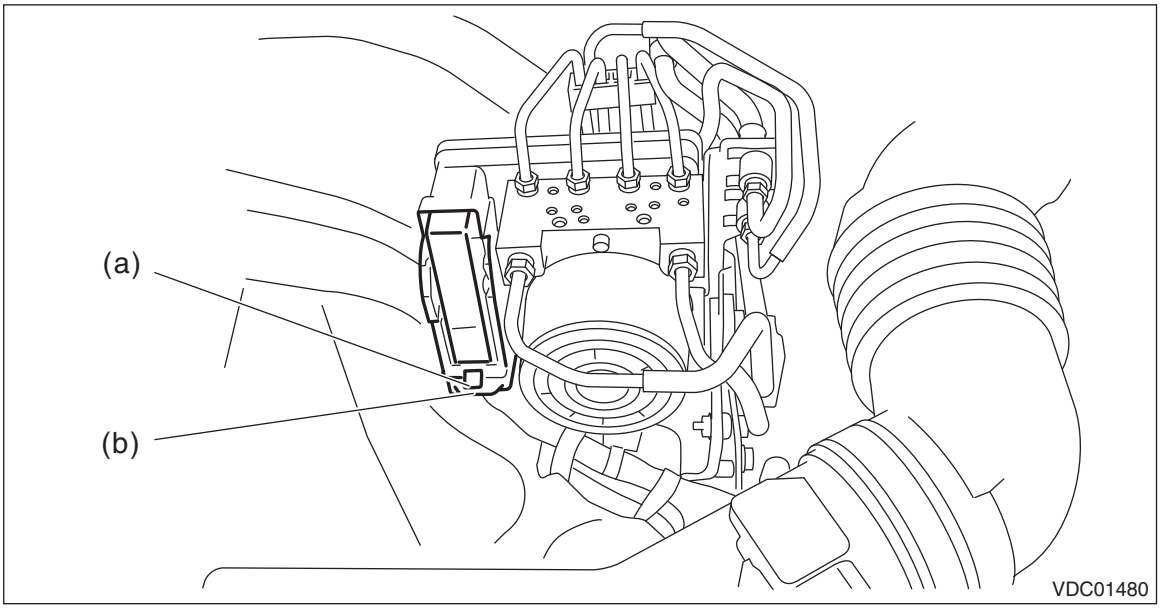
D: NOTE

For operation procedures of each component of the vehicle dynamics control system, refer to the respective section.

- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Yaw rate & G sensor: <Ref. to VDC-25, Yaw Rate and G Sensor.>
- Steering angle sensor: <Ref. to VDC-26, Steering Angle Sensor.>
- Front ABS wheel speed sensor: <Ref. to VDC-29, Front ABS Wheel Speed Sensor.>
- Rear ABS wheel speed sensor: <Ref. to VDC-32, Rear ABS Wheel Speed Sensor.>
- Front magnetic encoder: <Ref. to VDC-35, Front Magnetic Encoder.>
- Rear magnetic encoder: <Ref. to VDC-36, Rear Magnetic Encoder.>
- VDC OFF switch: <Ref. to VDC-37, VDC OFF Switch.>
- Hill hold switch: <Ref. to VDC-39, Hill Hold Switch.>

4. VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

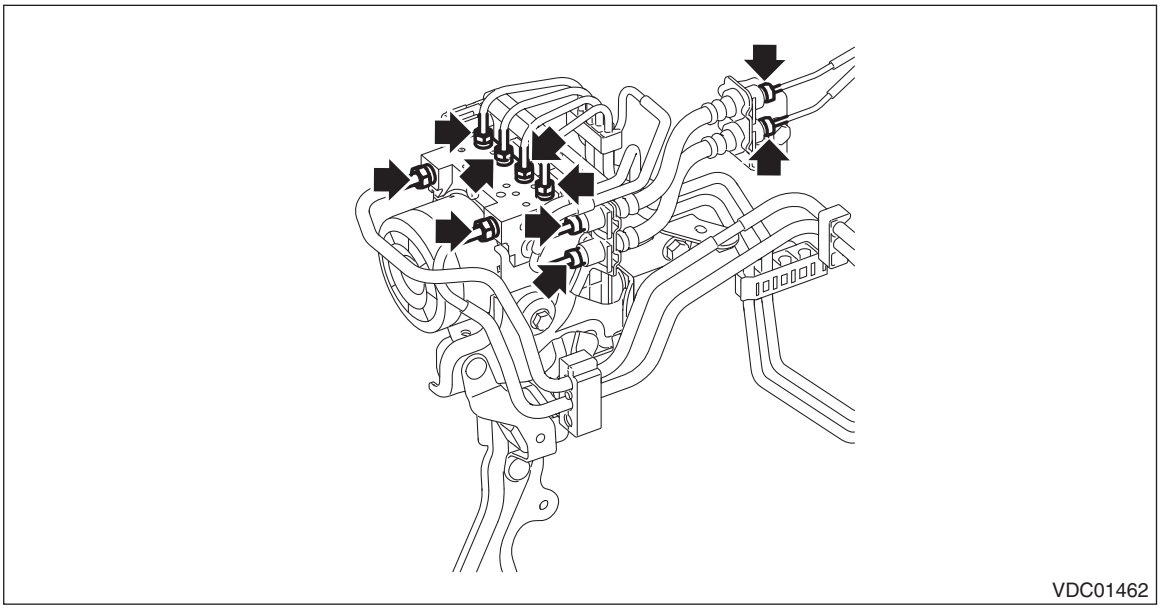
A: REMOVAL



CAUTION:
- **Avoid unnecessary removal of parts in order to prevent fluid leakage.**
- **When the VDCCM&H/U components are removed, be sure to perform the installation according to the installation procedures. <Ref. to VDC-10, INSTALLATION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>**

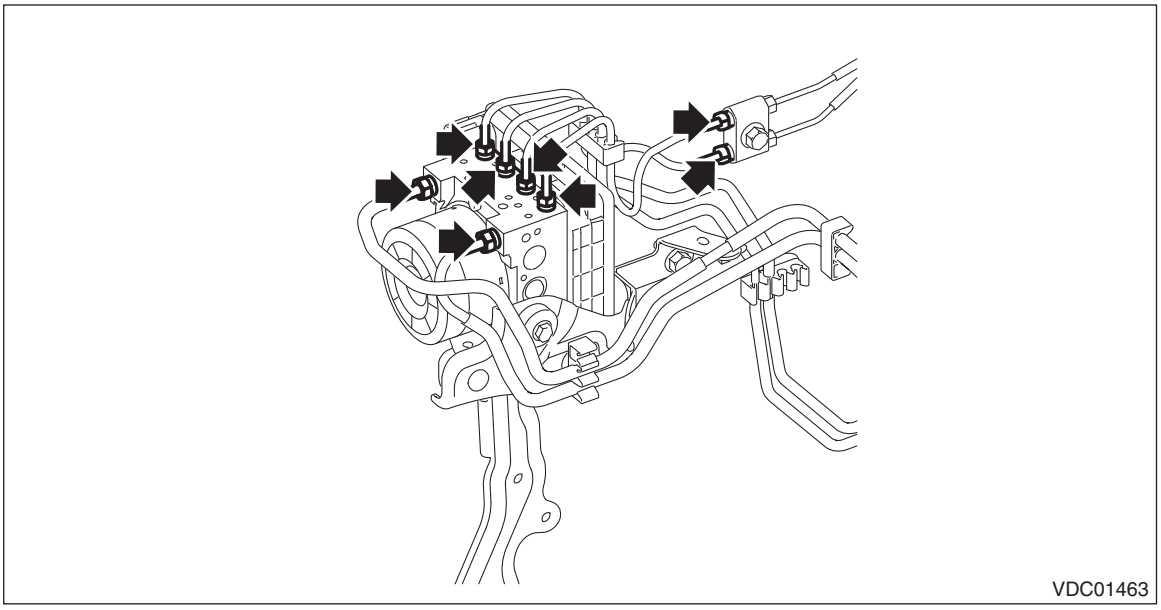
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>

3) Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

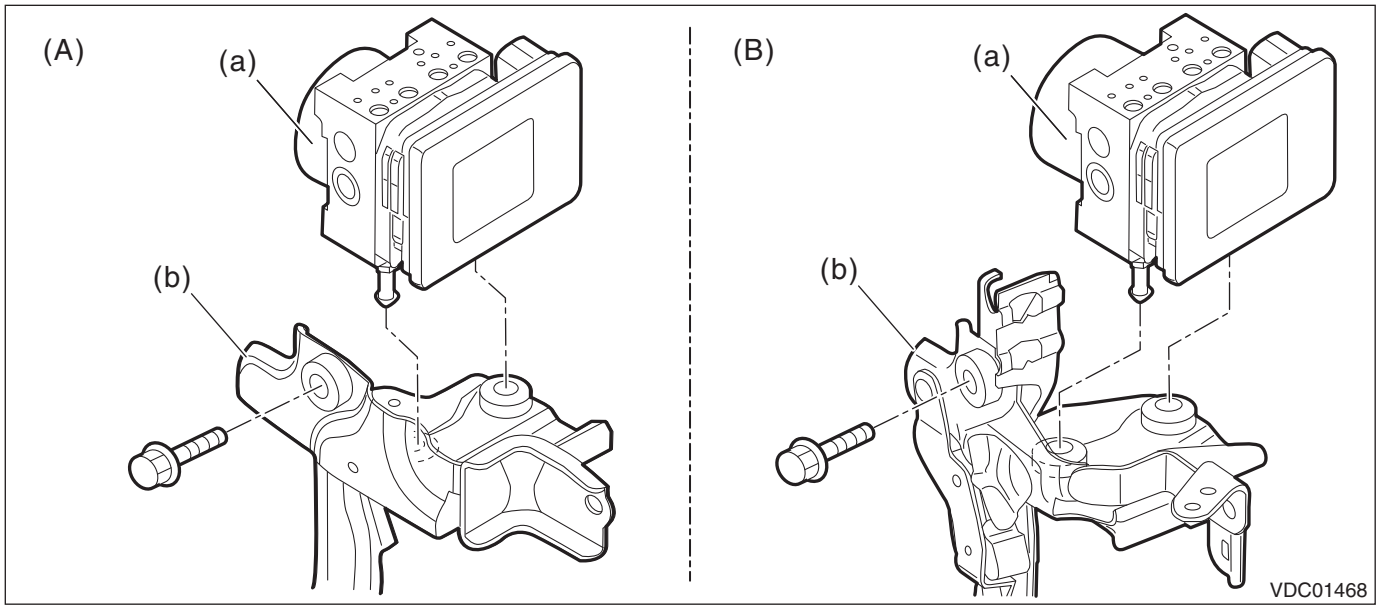


CAUTION:
- **Do not pull on the harness when disconnecting the connector.**
- **Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.**
- **If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.**

(1) Remove any dirt from around the VDCCM&H/U.
(2) Pull up the lock lever (b) while pressing the lock button (a) and disconnect the VDCCM&H/U connector.



(3) Separate each brake pipe using a flare nut wrench.



- Models with EyeSight

- Models without EyeSight

(4) Remove the bolts and nuts and remove the bracket - hydraulic unit (b) and the VDCCM&H/U (a).

(A) Models without EyeSight (B) Models with EyeSight

B: INSTALLATION

CAUTION:
• When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.
• Connect the VDCCM&H/U connector securely.

1) Install the bracket - hydraulic unit and the VDCCM&H/U.
(1) Install the VDCCM&H/U to the bracket - hydraulic unit.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
(2) Attach the bracket - hydraulic unit.

Tightening torque:
33 N·m (3.4 kgf-m, 23.8 ft-lb)
(3) Connect the VDCCM&H/U connector.
(4) Install each brake pipe using a flare nut wrench.

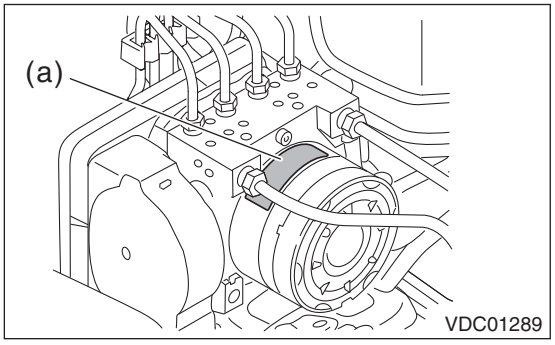
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>

2) Install the air intake boot.
• H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
• H6 model: <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Bleed air from the brake system. <Ref. to BR-57, Air Bleeding.>
5) Perform parameter confirmation, selection, and registration.

NOTE:
• When the VDCCM&H/U is replaced with a new part, be sure to perform the selection • registration operation.
• When the registration has not been performed, the DTC code "Parameter selection error" is detected together with the ABS/EBD/VDC warning light illumination.

• When the VDCCM&H/U is replaced with a new part, the EPB warning light illuminates and the EPB operation light blinks. After performing parameter selection and registration, be sure to operate the electronic parking brake five times and check that the EPB operation light illuminates or blinks and the EPB warning light goes off.

(1) Check that the applied model and grade of the relevant vehicle are included. <Ref. to VDC-17, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



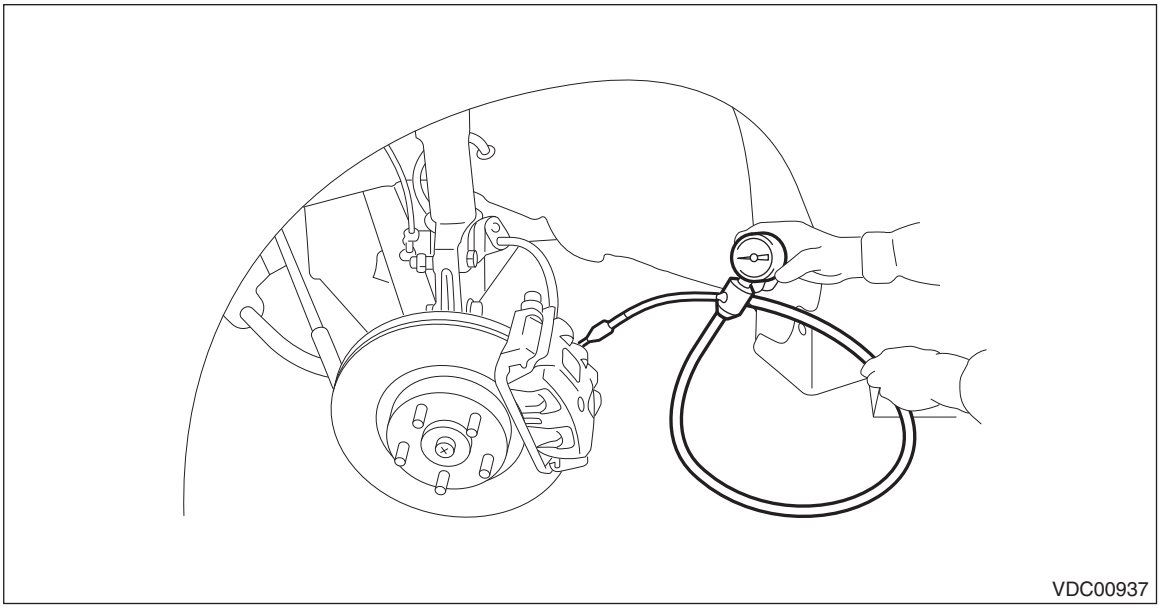
(2) If the applied model and grade of the target vehicle are not included, perform parameter selection and registration. <Ref. to VDC-16, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

6) Perform “VDC sensor midpoint setting mode”. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check the identification (a) of the VDC control module & hydraulic control unit (VDCCM&H/U).

NOTE:
For the identification, refer to “SPECIFICATION” in “General Description”. <Ref. to VDC-2, SPECIFICATION, General Description.>



2) Check the condition of connection and settlement of connector, and correct or replace if defective.

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
• Use a pressure gauge used exclusively for brake fluid measurement.
• Do not use the pressure gauge used for the measurement of transmission oil. Doing so will cause the piston seal to expand and deform.

NOTE:
Wrap sealing tape around the pressure gauge.

4) Bleed air from the pressure gauges and the front LH and front RH caliper bodies.
5) Perform ABS sequence control. <Ref. to VDC-18, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs decompression, hold and compression, and then the front RH side performs decompression, hold and compression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm^2, 511 psi)	3,500 kPa (36 kgf/cm^2, 511 psi)
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less
When pressurized	3,500 kPa (36 kgf/cm^2, 511 psi) or more	3,500 kPa (36 kgf/cm^2, 511 psi) or more

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform ABS sequence control. <Ref. to VDC-18, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear LH side performs decompression, hold and compression, and then the rear RH side performs decompression, hold and compression.
13) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-57, Air Bleeding.>

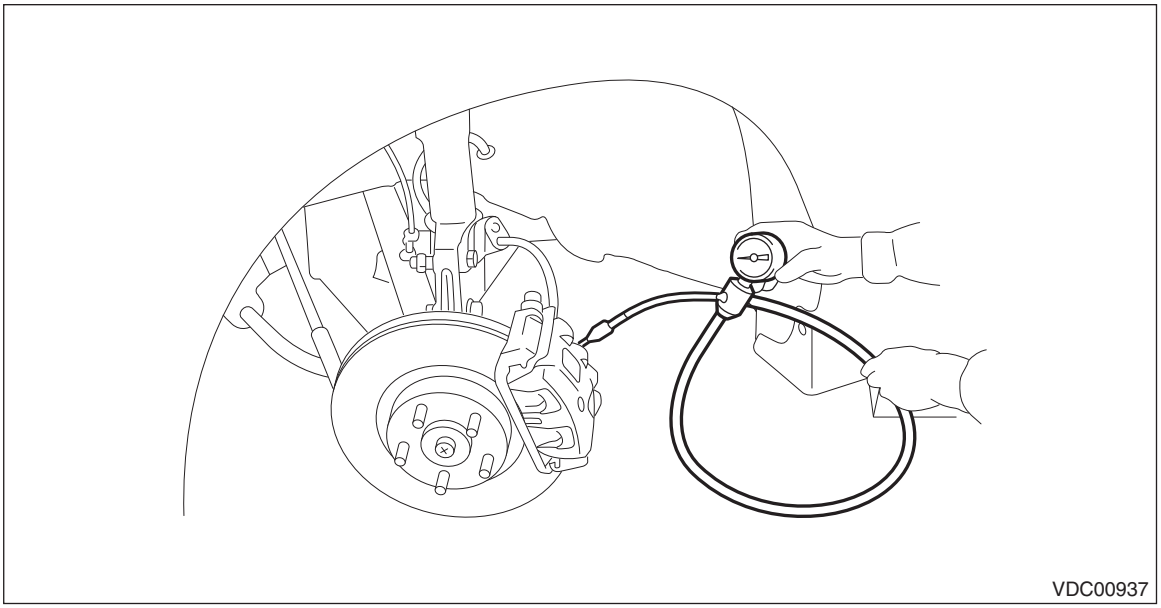
2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare for the ABS sequence control operation. <Ref. to VDC-18, ABS Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester and set the gear to neutral.
4) Operate the brake tester.

NOTE:
When any wheel speed reaches 10 km/h (6.2 MPH), the ABS sequence control stops and ABS operation is returned to the normal control mode.

5) Perform ABS sequence control. <Ref. to VDC-18, ABS Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs decompression, hold and compression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs decompression, hold and compression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When depressurized	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When pressurized	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more



8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION USING A PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use a pressure gauge used for the measuring transmission oil pressure, as the piston seal may expand and deform.**

NOTE:
Wrap sealing tape around the pressure gauge.

4) Bleed air from the pressure gauge.
5) Perform VDC sequence control. <Ref. to VDC-21, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs compression, hold and decompression, and then the front RH side performs compression, hold and decompression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
When pressurized	3,000 kPa (31 kgf/cm^2, 441 psi) or more	3,000 kPa (31 kgf/cm^2, 441 psi) or more
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform VDC sequence control. <Ref. to VDC-21, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear RH side performs compression, hold and decompression, and then the rear LH side performs compression, hold and decompression.
13) Read the values indicated on the pressure gauges and check if it is within specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-57, Air Bleeding.>

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare to operate the VDC sequence control. <Ref. to VDC-21, VDC Sequence Control.>

3) Set the front wheels or rear wheels on the brake tester and set the gear to neutral.
4) Operate the brake tester.

NOTE:
When any wheel speed reaches 10 km/h (6.2 MPH), the VDC sequence control stops and VDC operation is returned to the normal control mode.
5) Perform VDC sequence control. <Ref. to VDC-21, VDC Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
(1) The front LH wheel performs compression, hold and decompression in sequence, and subsequently the front RH wheel repeats the same cycle.
(2) The rear RH wheel performs compression, hold and decompression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
When pressurized	2,000 N (204 kgf, 450 lbf) or more	2,000 N (204 kgf, 450 lbf) or more
When depressurized	500 N (51 kgf, 112 lbf) or less	500 N (51 kgf, 112 lbf) or less

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: ADJUSTMENT

1. VDC SENSOR MIDPOINT SETTING MODE

After installing, replacing or adjusting the following parts, perform the VDC sensor midpoint setting mode.
- Steering angle sensor
- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1) Park the vehicle on a level surface, and set the steering wheel to the neutral position.
2) Perform the VDC sensor 0 point setting mode.
(1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Brake Control System» and select «Enter».
(7) On «Select Function» display, select «Data Monitor».
(8) From the data monitor item list, select «Steering Angle Sensor», «Longitudinal G Sensor» and «Lateral G sensor Output».
(9) Check that the steering angle sensor output value is within the range of following values.
- Model without EyeSight: –10 — 10 deg
- Model with EyeSight: –2 — 2 deg

NOTE:
If the output value is different from the standard value, check the steering wheel.
(10) Check that output values for the longitudinal G sensor and lateral G sensor are –2 — 2 m/s^2.

NOTE:
If the output value is not at the standard value, check the installing condition of the VDCCM&H/U and VDC-CM&H/U bracket.

(11) On «Select Function» display, select «Work Support».

(12) From the work support item list, select «VSC(VDC) Centering Mode», and perform the setting according to the procedure displayed on the Subaru Select Monitor screen.

3) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.

4) Make sure that the DTC is not stored.

E: MAINTENANCE MODE

1. BRAKE MAINTENANCE MODE

NOTE:
For brake maintenance mode, refer to “PARKING BRAKE” section. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

2. VDCCM PARAMETER READING

1) Perform reading of parameter.

(1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

(2) Turn the ignition switch to ON.

(3) On «Start» display, select «Diagnosis».

(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

(5) On «Main Menu» display, select «Each System».

(6) On «Select System» display, select «Brake Control System» and select «Enter».

(7) On «Select Function» display, select «Work Support».

(8) On «Work Support» display, select «Reading of parameter: ECM to SSM».

2) Save and close the file.

3. VDCCM PARAMETER WRITING

1) Perform writing of parameter.

(1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

(2) Turn the ignition switch to ON.

(3) On «Start» display, select «Diagnosis».

(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

(5) On «Main Menu» display, select «Each System».

(6) On «Select System» display, select «Brake Control System» and select «Enter».

(7) On «Select Function» display, select «Work Support».

(8) On «Work Support» display, select «Writing of parameter: SSM to ECM».

2) Open the file saved in the «Reading of parameter: ECM to SSM» procedure.

3) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the «OK» button.

4. VDCCM PARAMETER SELECTION

NOTE:

- When the VDCCM&H/U is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM&H/U using this function.
- To check the applied model, refer to the “Model number plate” attached to the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
- If you entered a wrong applied model, you can re-write it.
- When the registration has not been performed, the DTC code “Parameter” is detected together with the ABS/EBD/VDC warning light illumination.

- This function can be used for the replacement part of VDCCM&H/U.

1) Perform selection of parameter.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Brake Control System» and select «Enter».
   (7) On «Select Function» display, select «Work Support».
   (8) On «Work Support» display, select «Selection of Parameter».

2) Check the applied model and option code indicated on the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
3) Enter the applied model (alphanumeric characters) and press the «Enter» key.
4) When the option code input screen appears after entering the applied model, enter the option code (alphanumeric characters), and press the «Enter» key.
5) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the «OK» button.

NOTE:
When the displayed applied model and grade are different from those of the vehicle, perform registration operations again after clicking the «OK» button.

6) Execute the Clear Memory Mode after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized. <Ref. to VDC(diag)-26, Clear Memory Mode.>

5. VDCCM PARAMETER CHECK

NOTE:
The parameter data registered in the VDCCM is shown on the display.

1) Perform confirming on parameter.
   (1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.

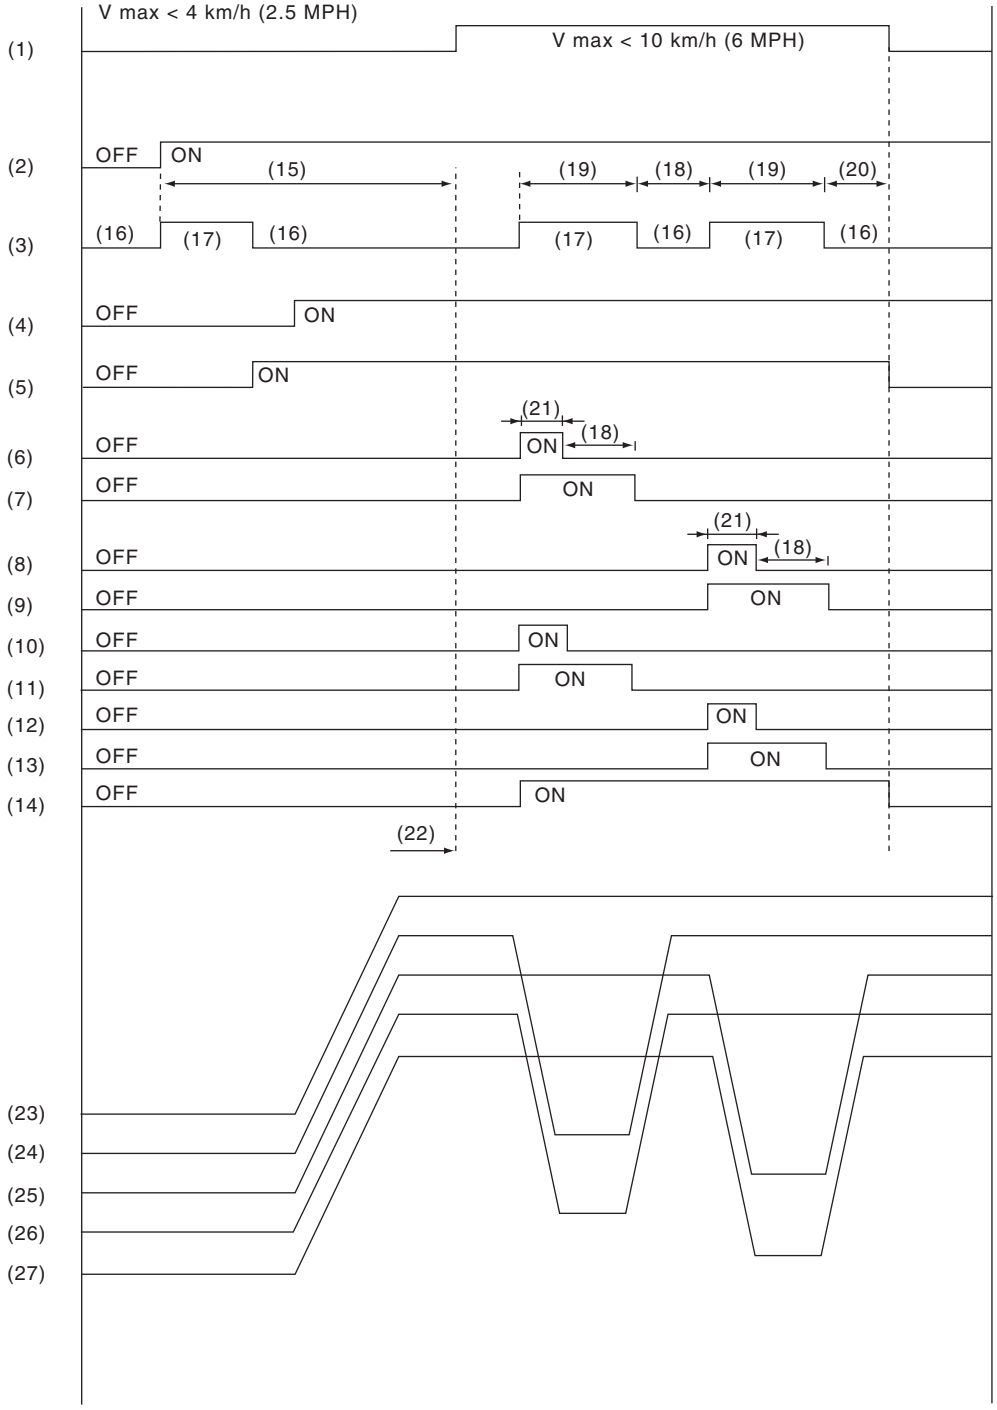
   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Brake Control System» and select «Enter».
   (7) On «Select Function» display, select «Work Support».
   (8) On «Work Support» display, select «Confirm on parameter».

2) Check that the applied model and grade of the relevant vehicle are included, and click the «OK» button.
3) If the applied model and grade of the target vehicle are not included, perform “parameter selection and registration”. <Ref. to VDC-16, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. ABS Sequence Control

A: OPERATION

1) While the ABS sequence control is being performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2) ABS sequence control can be started by the Subaru Select Monitor.



1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the ABS sequence control will not operate.
1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) Turn the ignition switch to ON.
(2) On «Start» display, select «Diagnosis».
(3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(4) On «Main Menu» display, select «Each System».
(5) On «Select System» display, select «Brake Control System» and select «Enter».
(6) On «Select Function» display, select «Work Support».
(7) From the work support item list, select «ABS Sequence Control Mode».
2) Follow the procedures displayed in the Subaru Select Monitor to execute the following.
(1) When using a brake tester, depress the brake pedal with a force of 100 N (10.2 kgf, 22.5 lbf).
(2) When using a pressure gauge, press the brake pedal so that the pressure gauge indicates 3,500 kPa (36 kgf/cm^2, 511 psi).
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR ABS SEQUENCE CONTROL

NOTE:
The control operation starts at point A.

VDC01433

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) Switch - stop light
(5) Valve relay
(6) Front LH decompression valve
(7) Front LH compression valve
(8) Front RH decompression valve
(9) Front RH compression valve
(10) Rear RH decompression valve
(11) Rear RH compression valve
(12) Rear LH decompression valve
(13) Rear LH compression valve
(14) Pump motor
(15) A few seconds
(16) Light OFF
(17) Light ON
(18) 1 second
(19) 1.4 seconds
(20) 0.6 seconds
(21) 0.4 seconds
(22) Point A
(23) Master cylinder pressure
(24) Front LH wheel cylinder pressure
(25) Front RH wheel cylinder pressure
(26) Rear RH wheel cylinder pressure
(27) Rear LH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

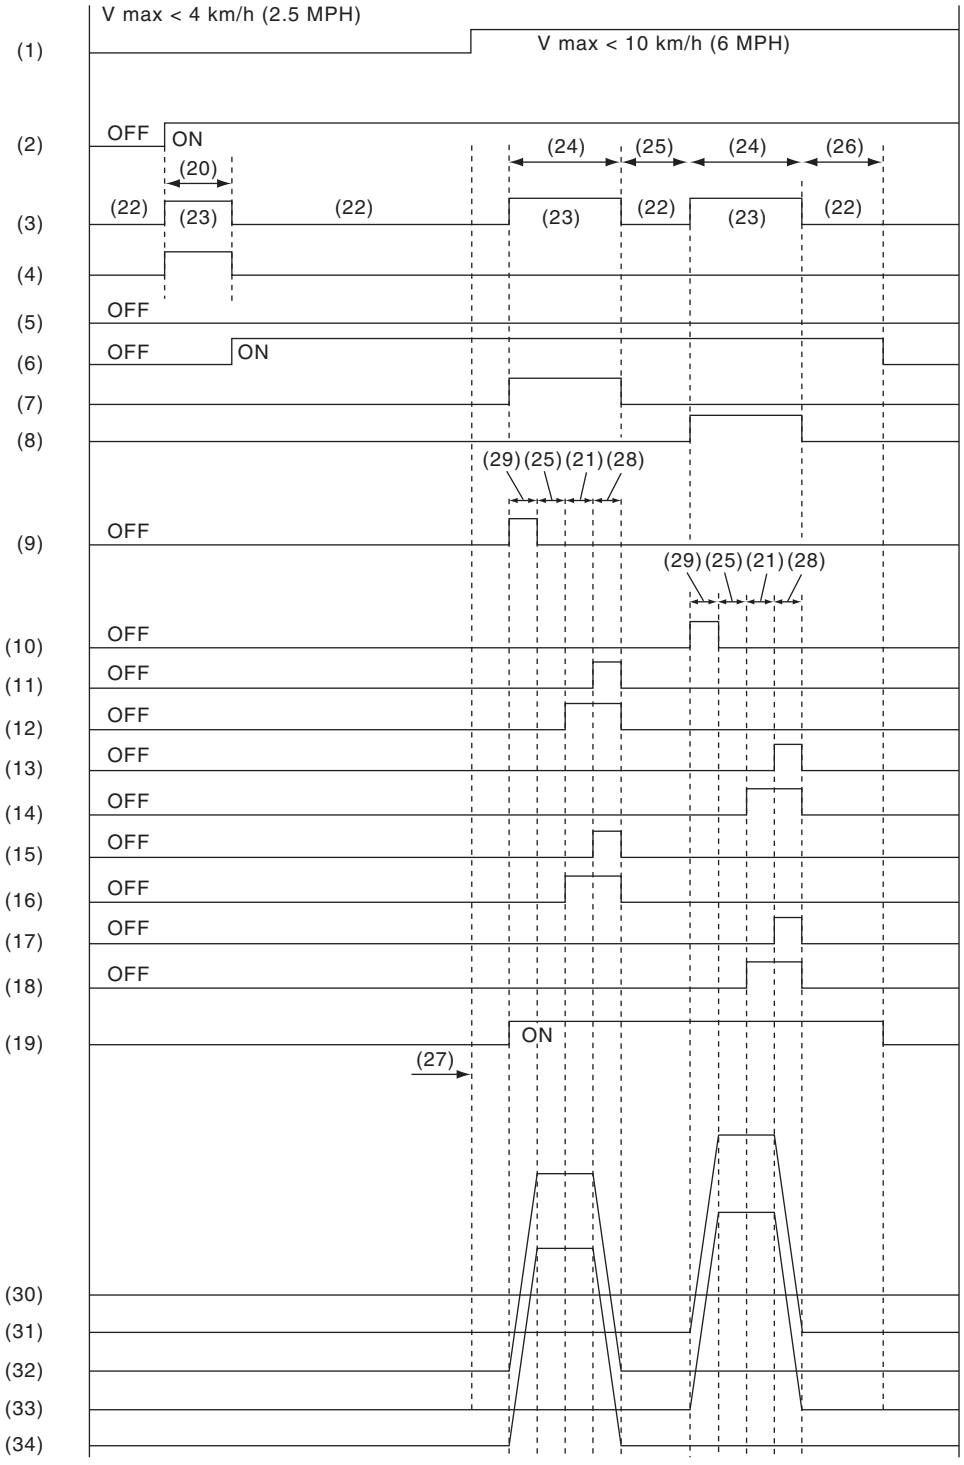
When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6.2 MPH).
- When the brake pedal is released during ABS sequence control and the switch - stop light becomes OFF.
- After completion of ABS sequence control.
- When a malfunction is detected.

6. VDC Sequence Control

A: OPERATION

1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2) VDC sequence control can be started by Subaru Select Monitor.



1. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, sequence control will not operate.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) Turn the ignition switch to ON.
(2) On «Start» display, select «Diagnosis».
(3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(4) On «Main Menu» display, select «Each System».
(5) On «Select System» display, select «Brake Control System» and select «Enter».
(6) From the function selection item list, select «Work Support».
(7) On «Work Support» display, select «VDC Function Check Mode».
2) Operate according to the procedures displayed in the Subaru Select Monitor.
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR VDC SEQUENCE CONTROL

NOTE:
The control operation starts at point A.

VDC01434

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) VDC warning light
(5) Switch - stop light
(6) Valve relay
(7) VDC switching valve 1 front LH
(8) VDC switching valve 1 front RH
(9) VDC switching valve 2 front LH
(10) VDC switching valve 2 front RH
(11) Front LH decompression valve
(12) Front LH compression valve
(13) Front RH decompression valve
(14) Front RH compression valve
(15) Rear RH decompression valve
(16) Rear RH compression valve
(17) Rear LH decompression valve
(18) Rear LH compression valve
(19) Pump motor
(20) A few seconds
(21) 1.2 seconds
(22) Light OFF
(23) Light ON
(24) 3.4 seconds
(25) 1 second
(26) 1.6 seconds
(27) Point A
(28) 0.4 seconds
(29) 0.8 seconds
(30) Master cylinder pressure
(31) Front RH wheel cylinder pressure
(32) Front LH wheel cylinder pressure
(33) Rear LH wheel cylinder pressure
(34) Rear RH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6.2 MPH).
- After completion of VDC sequence control.
- When a malfunction is detected.

7. Brake Lamp Relay

A: NOTE

For brake light relay, refer to “Relay and Fuse”. <Ref. to VDC-6, Relay and Fuse.>

B: OPERATION

1. BRAKE LIGHT LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR

CAUTION:
By executing the compulsory operation for the brake light relay, the electronic parking brake warning light may illuminate. After the brake light relay compulsory operation is executed, refer to “Basic Diagnostic Procedure” of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)” and check DTCs and then clear memory. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

NOTE:
- In the event of any trouble, brake light lighting operation mode will not function.
- For detailed operation procedures, refer to “Application help”.

1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Brake Control System» and select «Enter».
(5) On «Select Function» display, select «Work Support».
(6) From the work support item list, select «Brake Lamp Lighting Operation».

2) Operate according to the procedures displayed in the Subaru Select Monitor.

C: SPECIFICATION

1. CONDITIONS TO COMPLETE BRAKE LIGHT LIGHTING OPERATION MODE

When the following conditions develop, the brake light lighting operation mode stops and the normal control mode is restored.
- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When brake light lighting operation mode ends.
- When a malfunction is detected.

8. Yaw Rate and G Sensor

A: NOTE

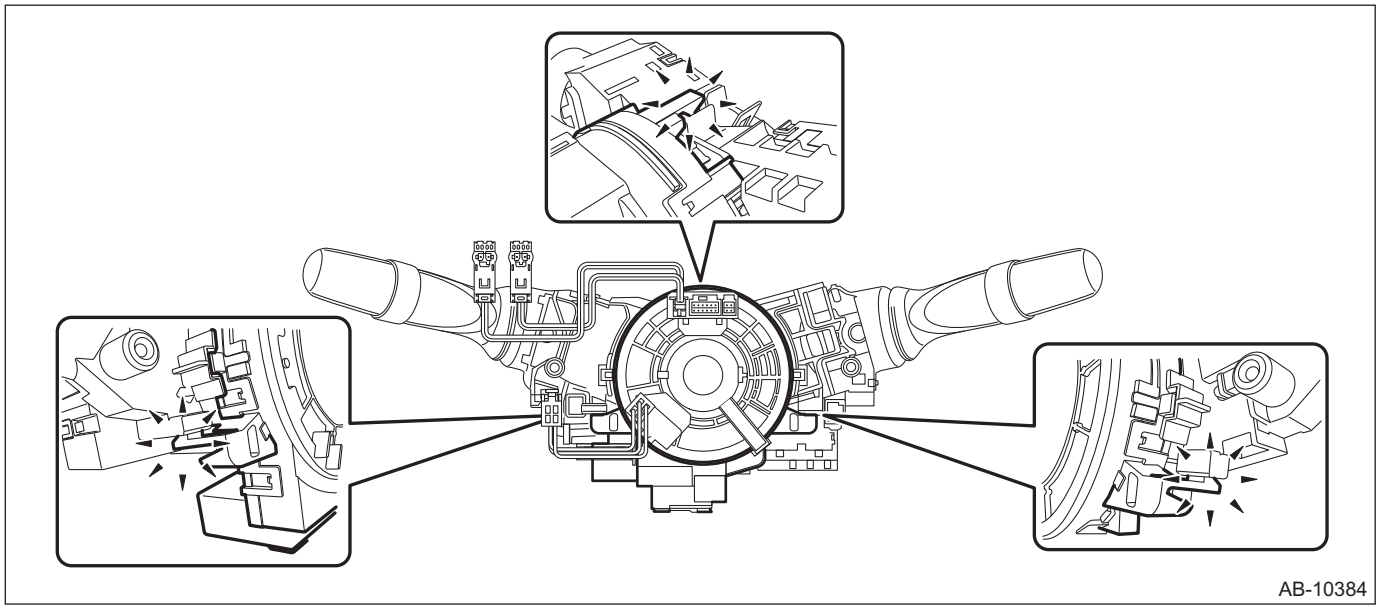
Yaw rate & longitudinal G and lateral G sensor are integrated with the VDC control module & hydraulic control unit (VDCCM&H/U).

B: INSPECTION

1. YAW RATE & LONGITUDINAL G AND LATERAL G SENSOR SIGNAL

	Step	Check	Yes	No
1	**CHECK YAW RATE & G SENSOR.** 1) Check the installation condition of the VDC control module & hydraulic control module (VDCCM&H/U). 2) Using the Subaru Select Monitor, display «Data monitor». 3) Read the output of «Yaw Rate Sensor», «Longitudinal G Sensor» and «Lateral G Sensor».	When the vehicle is placed horizontally, are the displayed values –1.5 — 1.5 m/s^2 for longitudinal G and lateral G sensor, and –4 — 4 deg/s for yaw rate sensor?	Go to step **2**.	Replace the VDC control module & hydraulic control unit (VDCCM&H/U).
2	**PERFORM DRIVING TEST.** Drive for approximately 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.	Is there any abnormal movement or the warning light illumination while driving?	Perform the diagnosis according to DTCs for the VDC system. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	G sensor is normal.

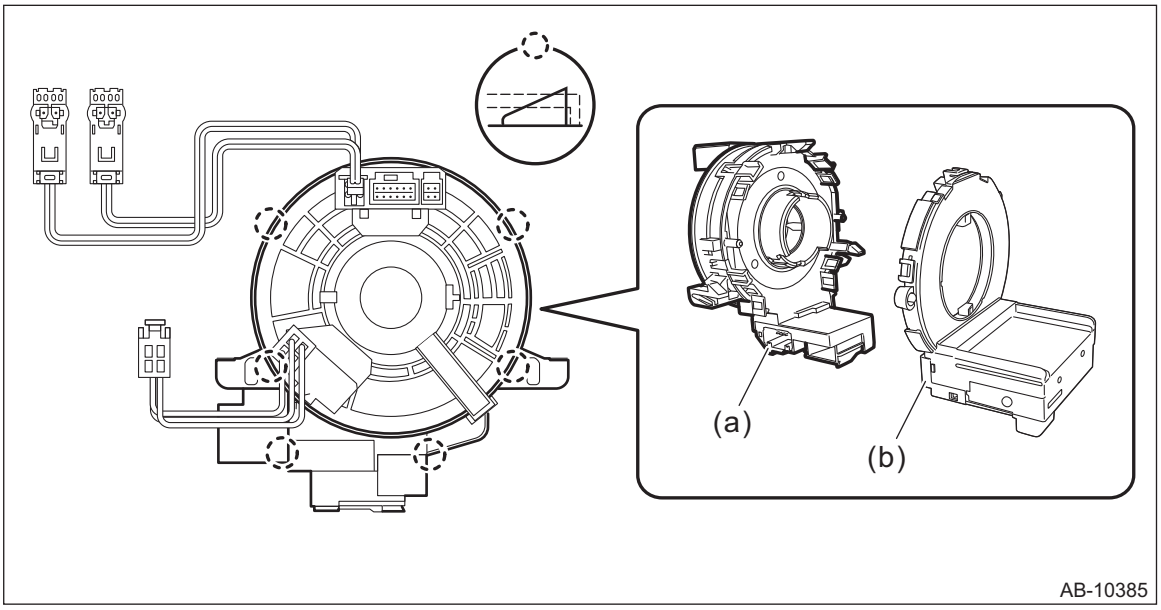
9. Steering Angle Sensor



A: REMOVAL

CAUTION:
• If the steering wheel and steering angle sensor are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Always use the steering wheel puller for removal to avoid deforming the steering wheel.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.

1) Position the front wheels straight ahead.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-11, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column. <Ref. to PS-26, REMOVAL, Steering Column.>
6) Remove the steering roll connector.

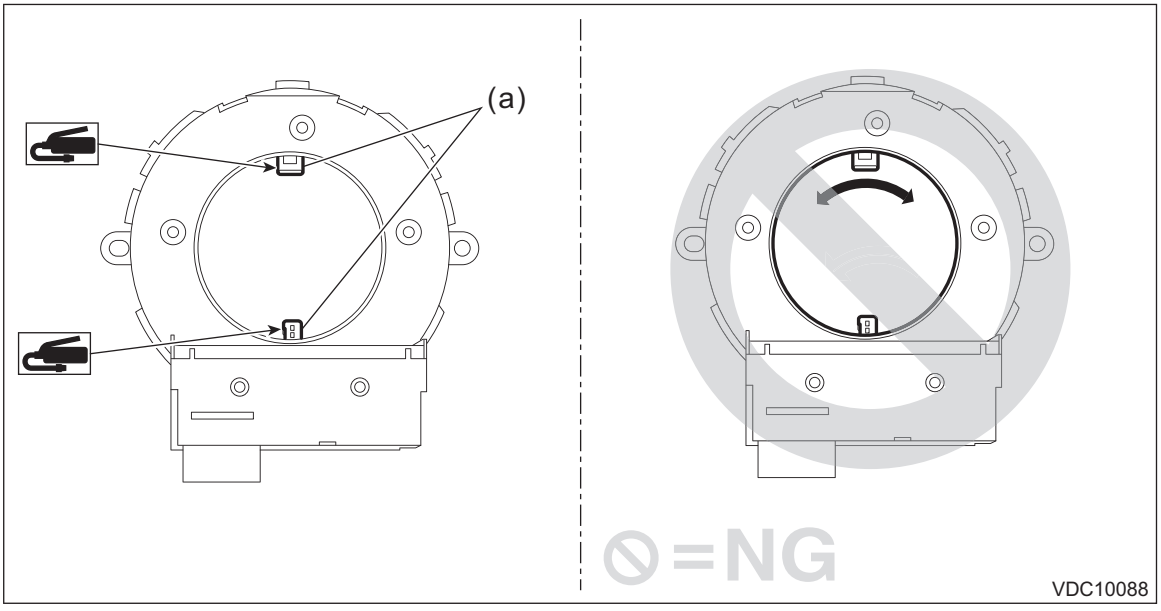


CAUTION:
Make sure that the steering roll connector is not turned from the original position.

(1) Disconnect the connector under the steering roll connector.
(2) Release the claws and remove the steering roll connector.

7) Remove the steering angle sensor.

(1) Release the claws and remove the steering angle sensor (b) from the steering roll connector (a).



B: INSTALLATION

CAUTION:
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Install the steering angle sensor.
(1) Apply grease to the protrusion (a) of the new steering angle sensor.

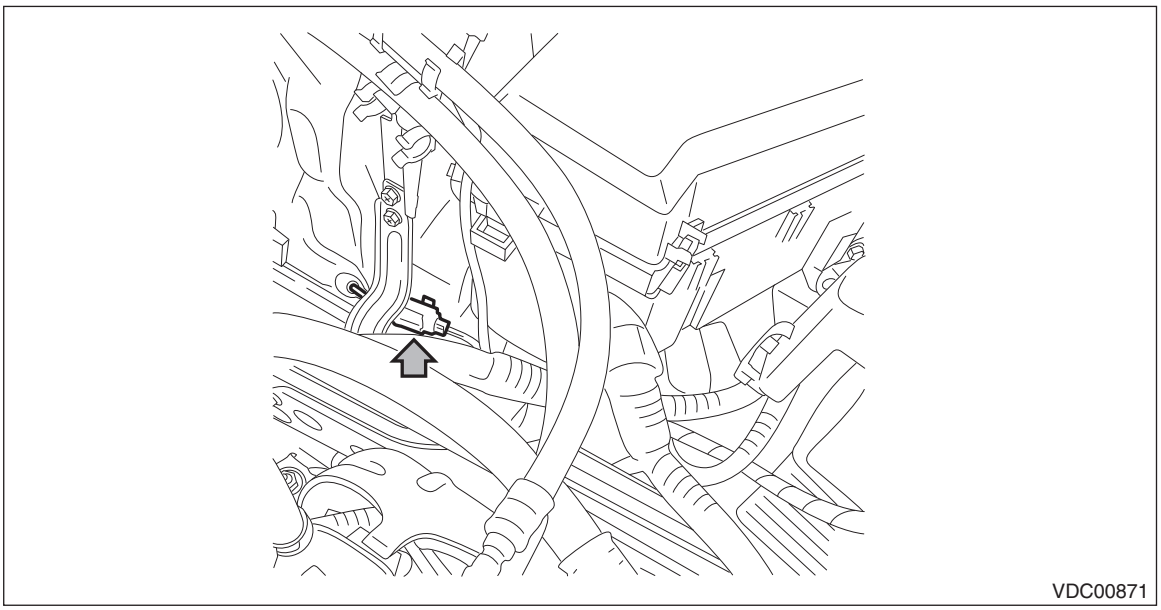
CAUTION:
Do not rotate the steering angle sensor protrusion.

(2) Align the center of steering roll connector. <Ref. to AB-60, INSTALLATION, Roll Connector.>
(3) Align the position of the protrusion and install the steering angle sensor to the steering roll connector.
2) Install the cover assembly - column.
3) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

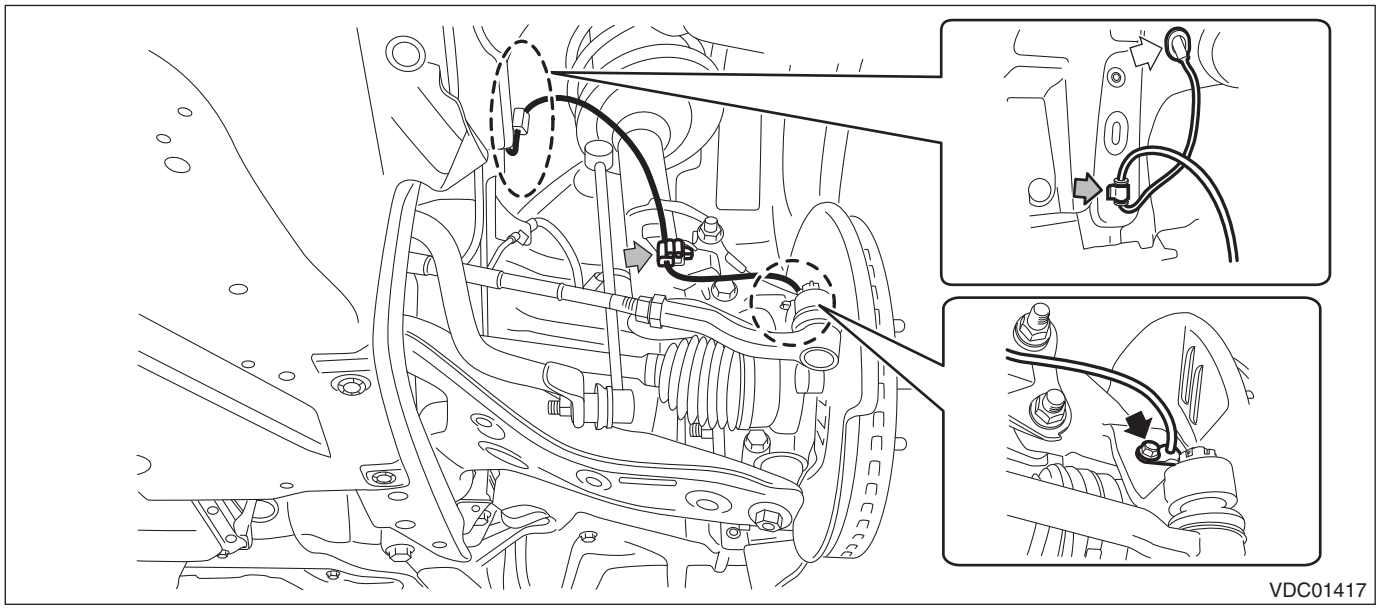
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Perform the centering setting for the steering angle sensor. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



10.Front ABS Wheel Speed Sensor

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the front wheels.
3) Remove the front ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp on the vehicle side.**

(1) Disconnect the connector of the front ABS wheel speed sensor in the engine compartment.

VDC00871

(2) Remove each harness clip and grommet.
(3) Remove the front ABS wheel speed sensor from the housing assembly - front axle.

VDC01417

B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1) Install the front ABS wheel speed sensor.

Tightening torque:
Front ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the front wheels.

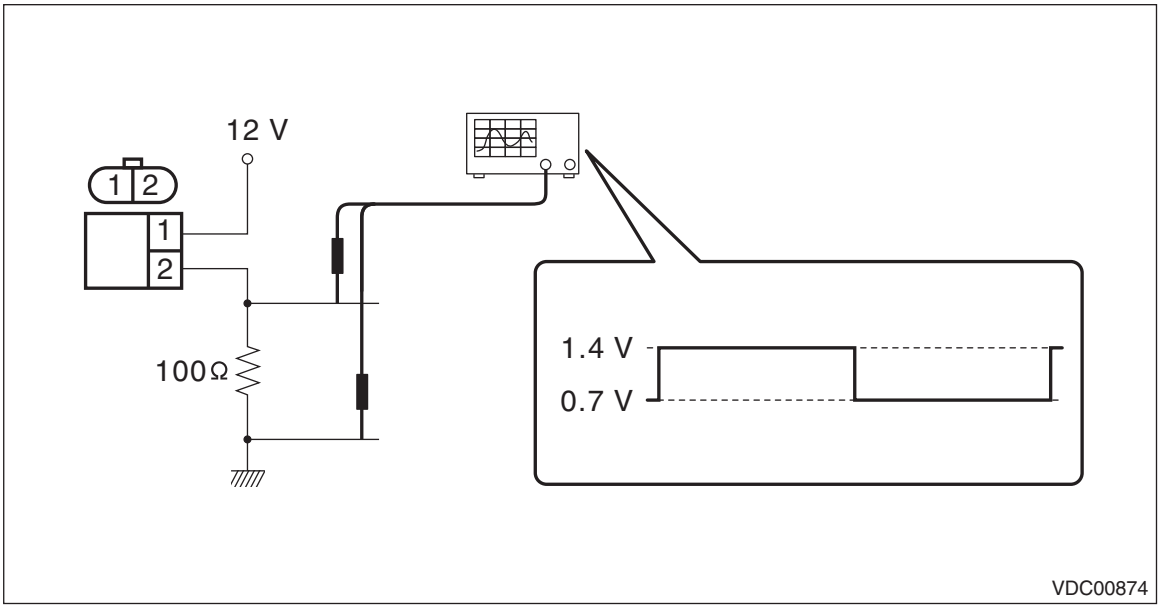
Tightening torque:
Front wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
3) Lower the vehicle.

NOTE:
Check if the harness is not pulled and does not come in contact with the suspension or body while operating the steering.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor.



NOTE:
For detailed operation procedures, refer to “Application help”.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Brake Control System» and select «Enter».
(5) On «Select Function» display, select «Data Monitor».
(6) From the data monitor item list, select «FR Wheel Speed» and «FL Wheel Speed».
2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3) If the inspection result shows that the value for either side alone does not change on the display screen, swap the ABS wheel speed sensors between LH and RH and then check again to see if the value changes or not.

NOTE:
Using a tape or the like, mark the one on which the value did not change.
• If the inspection result shows that the value does not change on the sensor marked: Replace the relevant ABS wheel speed sensor.
• If the inspection result shows that the value does not change on the sensor not marked: Place the ABS wheel speed sensor that is not marked to the original position, and perform unit inspection on the ABS wheel speed sensor that is marked. <Ref. to VDC-30, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

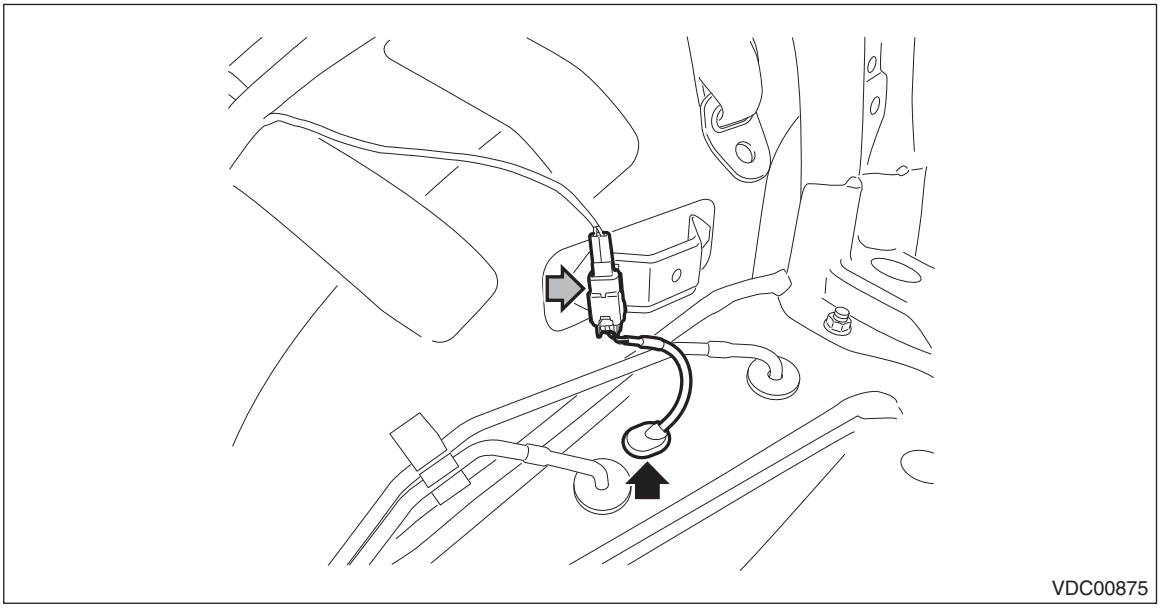
2. CHECK ABS WHEEL SPEED SENSOR UNIT

1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2) Disconnect the ABS wheel speed sensor connector.
3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 3 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:
0.7 — 1.4 V

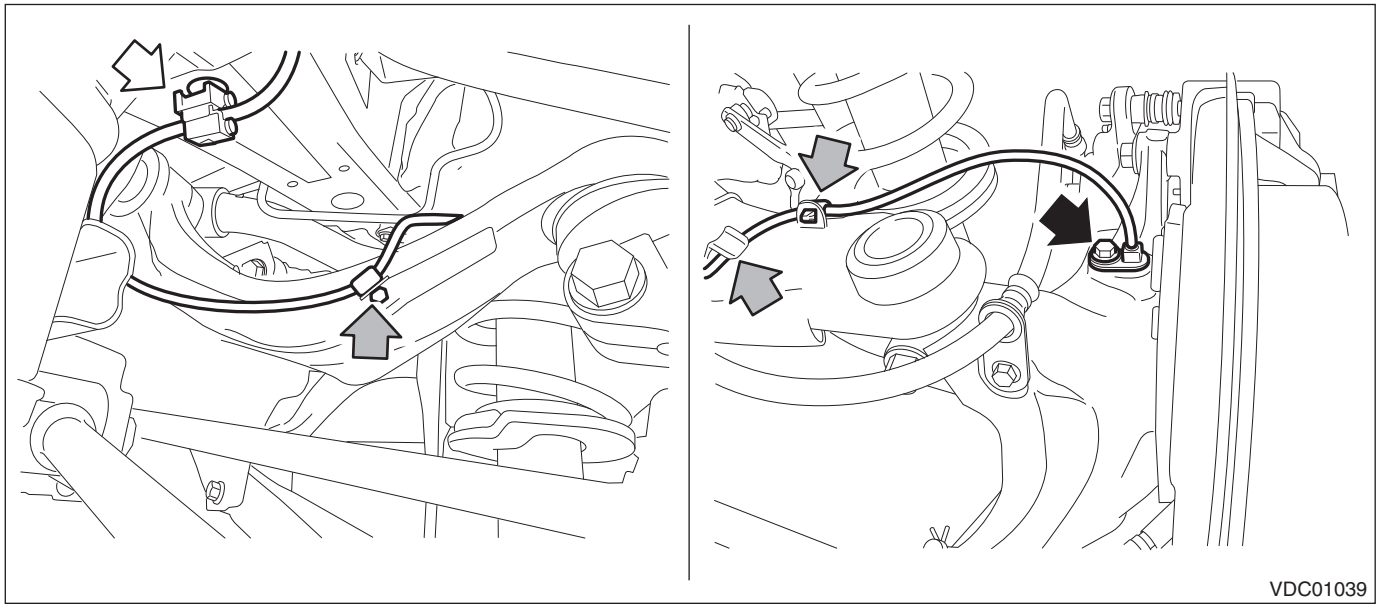
- If the inspection result shows that the output voltage is out of the standard value: Replace the magnetic encoder (hub unit bearing).
- If the inspection result shows that the output voltage is within standard value: Replace the VDCCM&H/U.

11.Rear ABS Wheel Speed Sensor



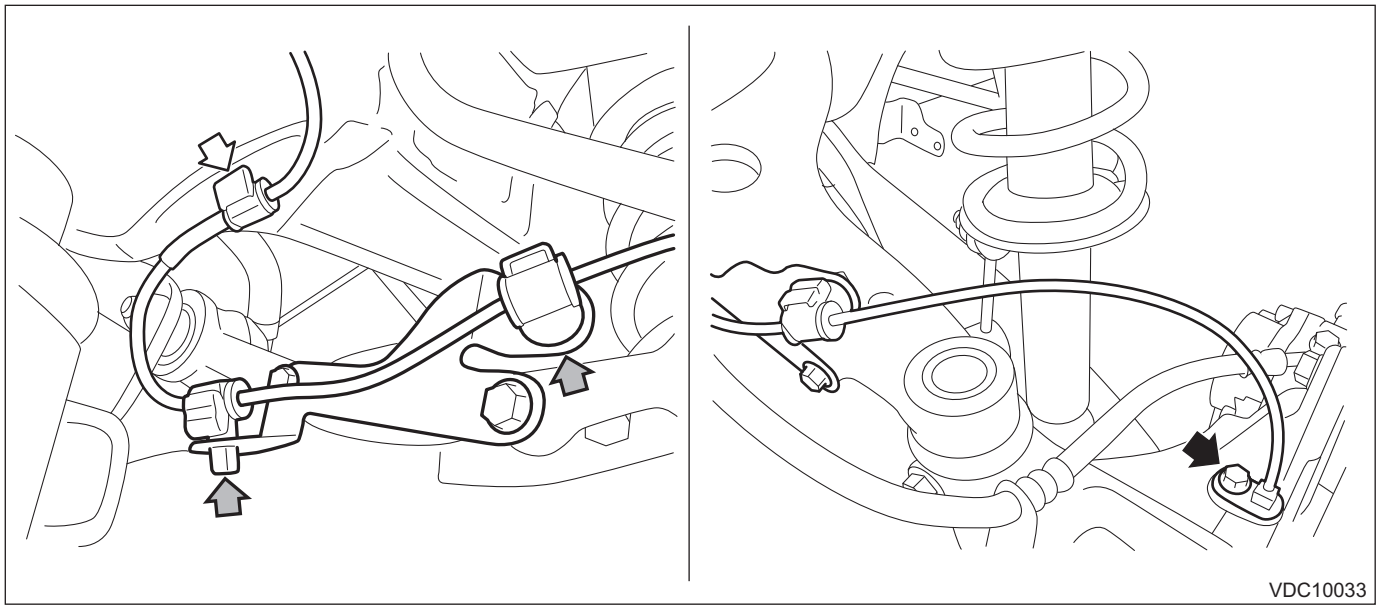
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the trunk trim panel assembly - side (sedan model) or rear floor mat (OUTBACK model).
- Sedan model: <Ref. to EI-107, REMOVAL, Trunk Room Trim.>
- OUTBACK model: Remove the rear floor mat and the spacer - rear floor mat.



4) Remove the rear ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp (white arrow) on the vehicle side.**



(1) Disconnect the connector from the rear ABS wheel speed sensor, and remove the grommet.

VDC00875

(2) Remove the harness clamp and bolts, and remove the rear ABS wheel speed sensor from the rear axle housing.
- Sedan model

VDC01039

- OUTBACK model

B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1) Install the rear ABS wheel speed sensor.

NOTE:
Check the identification (mark) on the harness to make sure there is no warpage. <Ref. to VDC-2, SPECIFICATION, General Description.>

Tightening torque:
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the grommet, and connect the rear ABS wheel speed sensor connector.
3) Install the trunk trim panel assembly - side (sedan model) or rear floor mat (OUTBACK model).
- Sedan model: <Ref. to EI-108, INSTALLATION, Trunk Room Trim.>
- OUTBACK model: Install the rear floor mat and the spacer - rear floor mat.

4) Install the rear wheels.

Tightening torque:
Rear wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Lower the vehicle.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

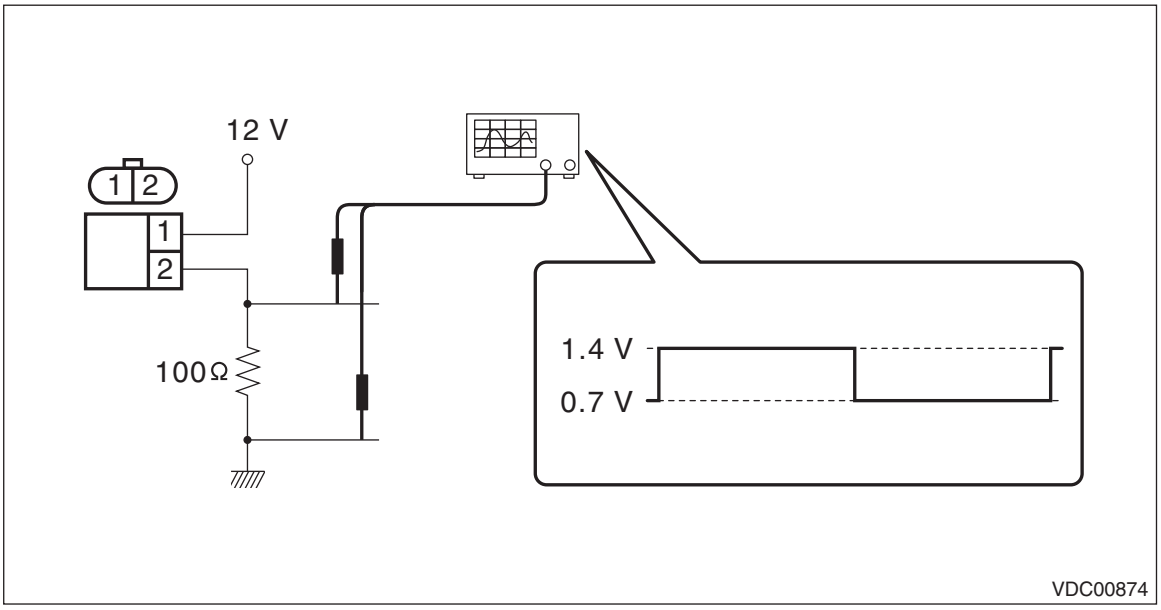
1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Brake Control System» and select «Enter».
(5) On «Select Function» display, select «Data Monitor».
(6) From the data monitor item list, select «RR Wheel Speed» and «RL Wheel Speed».

2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.

3) If the inspection result shows that the value for either side alone does not change on the display screen, swap the ABS wheel speed sensors between LH and RH and then check again to see if the value changes or not.



NOTE:
Using a tape or the like, mark the one on which the value did not change.

- If the inspection result shows that the value does not change on the sensor marked: Replace the relevant ABS wheel speed sensor.
- If the inspection result shows that the value does not change on the sensor not marked: Place the ABS wheel speed sensor that is not marked to the original position, and perform unit inspection on the ABS wheel speed sensor that is marked. <Ref. to VDC-34, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>

2. CHECK ABS WHEEL SPEED SENSOR UNIT

1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2) Disconnect the ABS wheel speed sensor connector.
3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 3 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:
0.7 — 1.4 V

- If the inspection result shows that the output voltage is out of the standard value: Replace the magnetic encoder (hub unit bearing).
- If the inspection result shows that the output voltage is within standard value: Replace the VDCCM&H/U.

12.Front Magnetic Encoder

A: REMOVAL

Refer to “Front Hub Unit Bearing” for removal, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-22, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

Refer to “Front Hub Unit Bearing” for installation, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-23, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit COMPL - front axle.

NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

13.Rear Magnetic Encoder

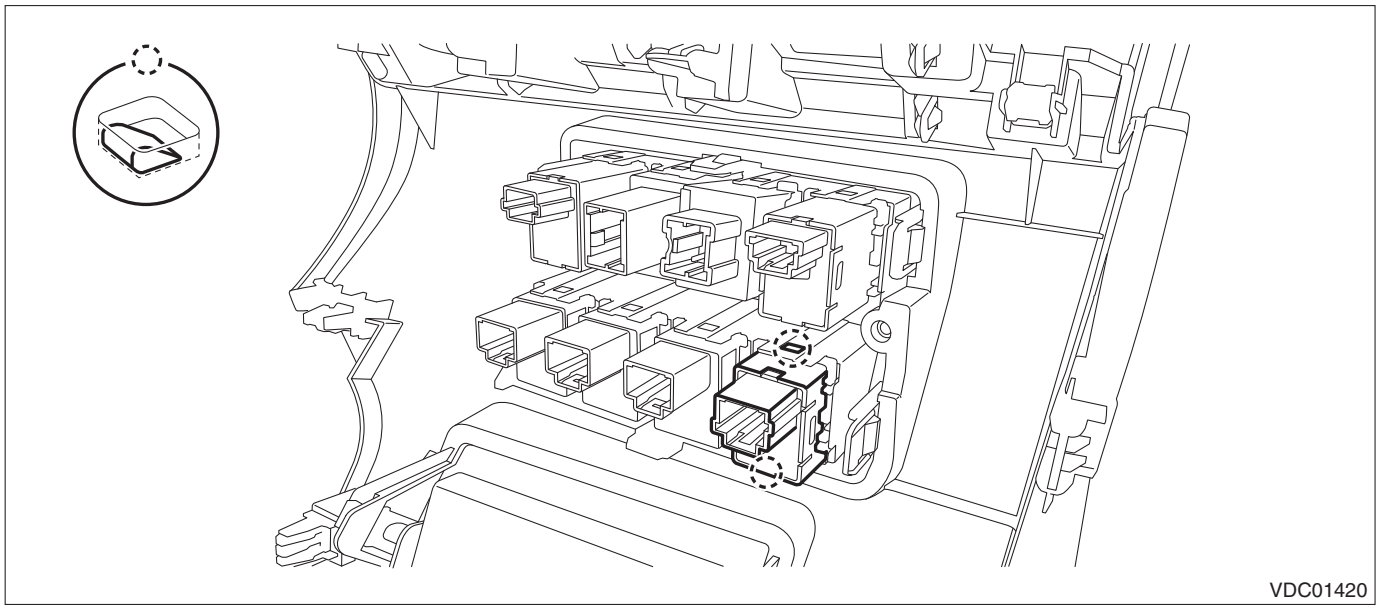
A: REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-34, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-35, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION



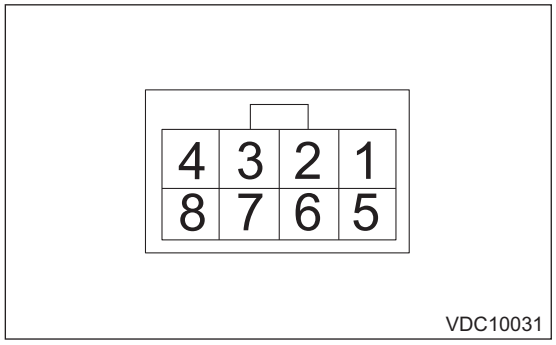
Visually check the magnetic encoder parts for any damage. If necessary, replace with a new hub unit COMPL - rear axle.

NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

14.VDC OFF Switch

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the VDC OFF switch.



B: INSTALLATION

1) Install the VDC OFF switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

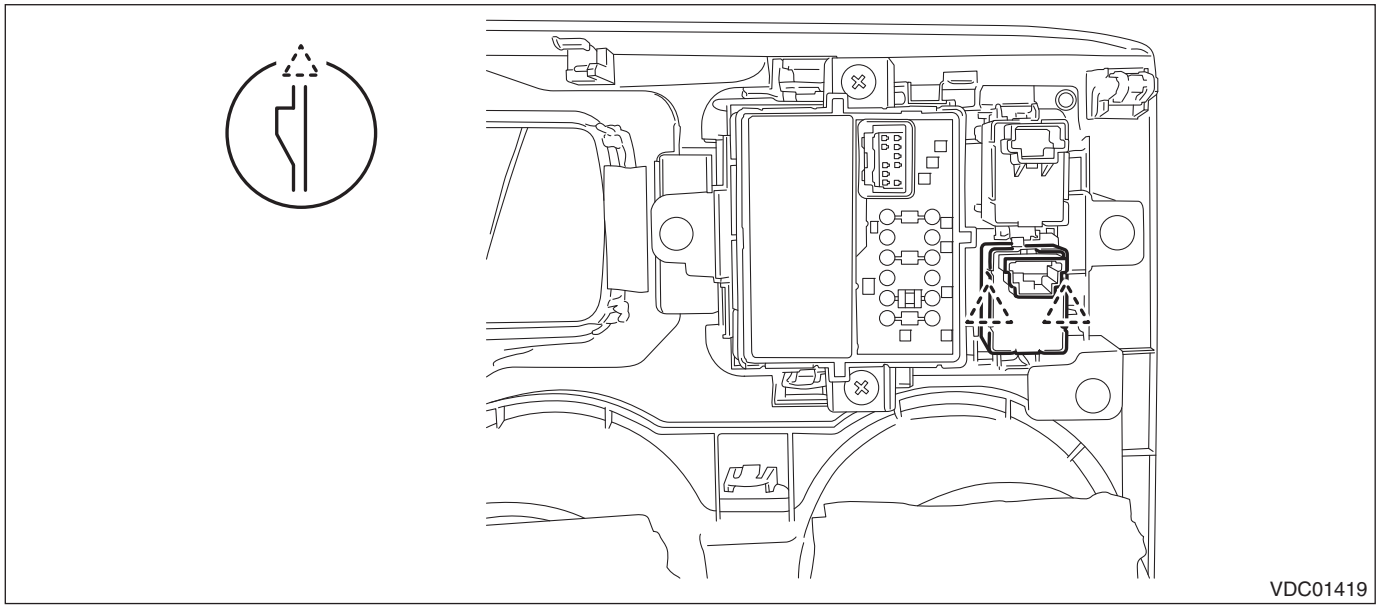
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
6 — 8	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



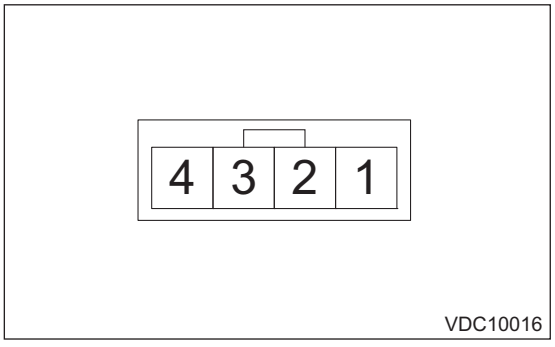
Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the VDC OFF switch if the inspection result is not within the standard value.

15.Hill Hold Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front. <Ref. to EI-80, REMOVAL, Console Box.>
3) Release the claws and remove the hill hold switch.



B: INSTALLATION

1) Install the hill hold switch.
2) Install the cover assembly - front. <Ref. to EI-81, INSTALLATION, Console Box.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the hill hold switch if the inspection result is not within the standard value.

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC(diag)

1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	4
3.	General Description	11
4.	Electrical Component Location	12
5.	Control Module I/O Signal	15
6.	Subaru Select Monitor	17
7.	Read Diagnostic Trouble Code (DTC)	24
8.	Inspection Mode	25
9.	Clear Memory Mode	26
10.	Warning Light Illumination Pattern	27
11.	List of Diagnostic Trouble Code (DTC)	40
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	44
13.	General Diagnostic Table	111

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil etc.) from the VDCCM&H/U connector during removal and installation.

NOTE:
- To check the harness for open or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to VDC(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to VDC(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect VDC or parking brake system problems. <Ref. to VDC(diag)-11, INSPECTION, General Description.>	Is the check result OK?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to VDC(diag)-22, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.

	Step	Check	Yes	No
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to VDC(diag)-111, INSPECTION, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Check that the DTC is not displayed.	Do the VDC warning light & VDC indicator light, VDC OFF indicator light and ABS warning light go off after starting the engine? Do the electronic parking brake operation indicator light and hill hold indicator light go off with the electronic parking brake disengaged?	Finish the diagnosis.	Check the combination meter circuit. <Ref. to VDC(diag)-32, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-33, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-35, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-34, ELECTRONIC PARKING BRAKE INDICATOR LIGHT, HILL HOLD INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.>
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. NOTE: For the DTC list, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-40, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, PROCEDURE, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following item about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

2. STATE OF VDC WARNING LIGHT & VDC INDICATOR LIGHT

VDC warning light & VDC indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)

Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

3. STATE OF VDC OFF INDICATOR LIGHT

VDC OFF indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

4. STATE OF BRAKE WARNING LIGHT

Brake warning light illuminates/goes off/ blinks.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate ❑ Does not go off ❑ Blinks • When/How long does illuminate/go off/blink?

Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

5. CONDITION OF ELECTRONIC PARKING BRAKE OPERATION INDICATOR LIGHT

Electronic parking brake operation indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)

Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

6. ELECTRONIC PARKING BRAKE WARNING LIGHT CONDITION

Electronic parking brake warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

7. HILL HOLD INDICATOR LIGHT CONDITION

Hill hold indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the hill hold switch is pressed (seconds) ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

8. CONDITIONS UNDER WHICH TROUBLE OCCURS

Environment	a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
	b) Ambient temperature	°C (°F)
	c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Uphill ❑ Downhill ❑ Paved road ❑ Gravel road ❑ Muddy road ❑ Sandy place ❑ Straight road ❑ Sharp curve ❑ Gentle curve ❑ S-curve ❑ Road with a slope on both sides ❑ Others:
	d) Road surface	❑ Dry ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Frozen slope ❑ Others:

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>

2. GROUND

Check the installation of the ground bolt for VDC.

3. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

4. HYDRAULIC UNIT

Check the hydraulic unit.

- When using the brake tester <Ref. to VDC-13, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- When not using the brake tester <Ref. to VDC-11, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. BRAKE DRAG

Check for brake drag.

6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
- Front <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-20, INSPECTION, Front Disc Rotor.>
- Rear <Ref. to BR-34, INSPECTION, Rear Brake Pad.> <Ref. to BR-38, INSPECTION, Rear Disc Rotor.>

7. PARKING BRAKE ASSEMBLY

Check the parking brake assembly. <Ref. to PB-3, COMPONENT, General Description.>

8. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

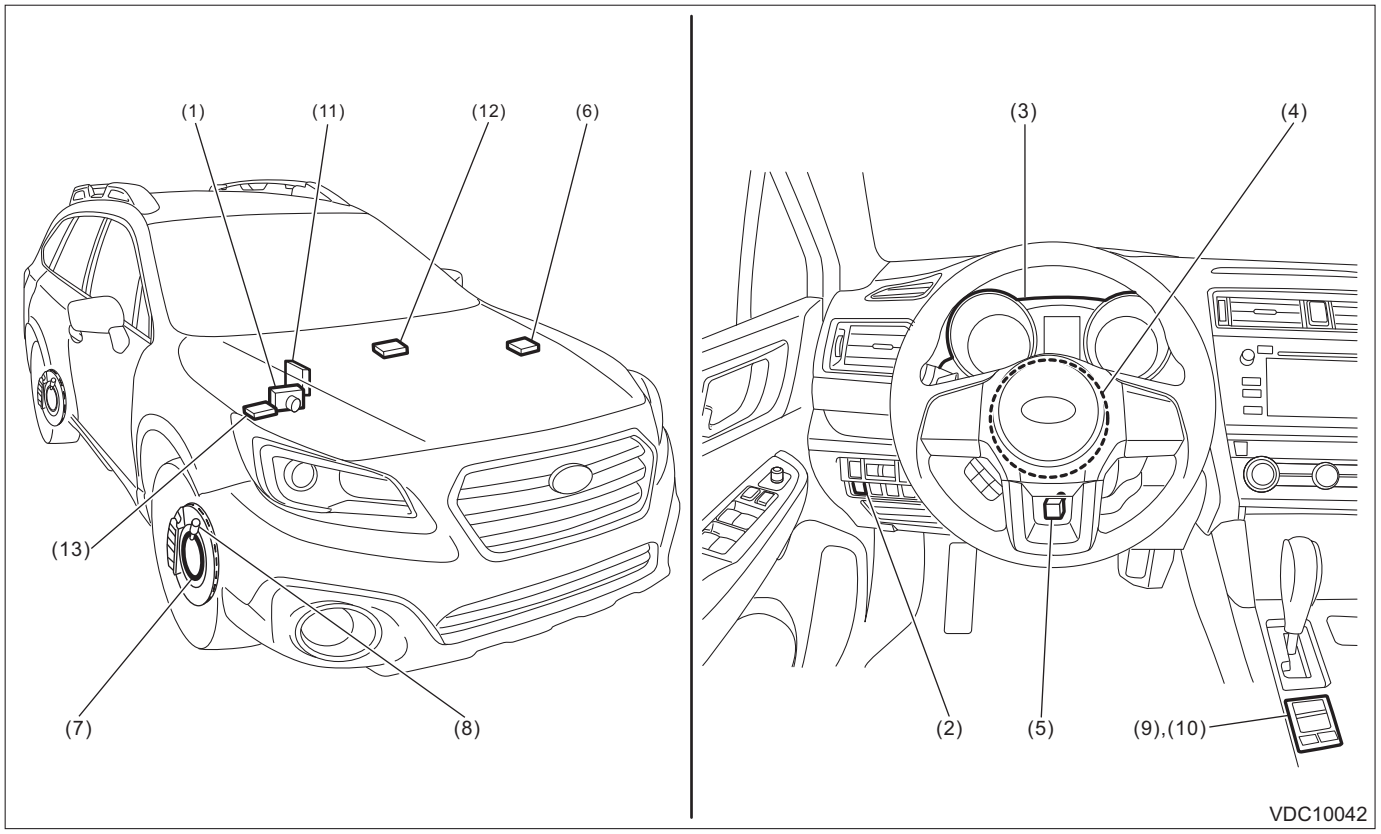

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
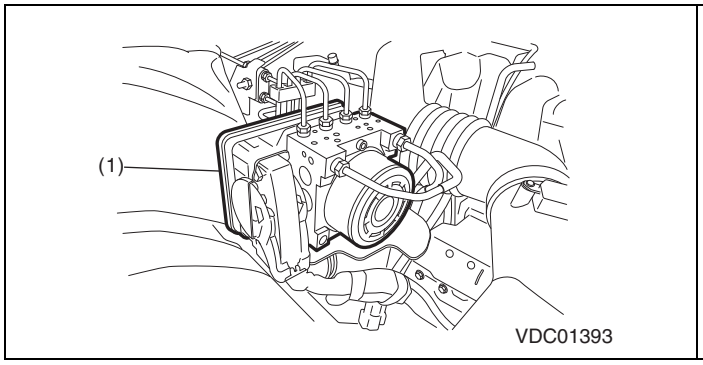
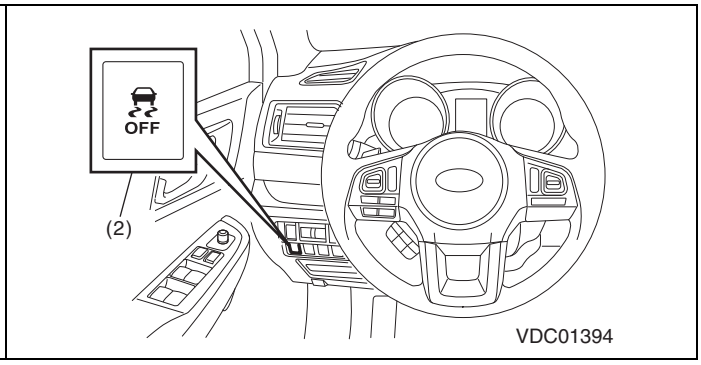
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

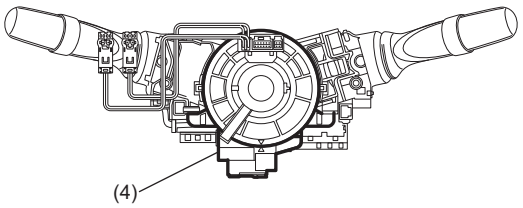
2. GENERAL TOOL



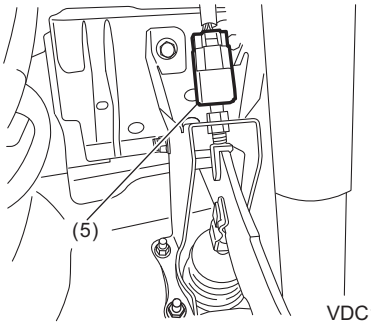
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.



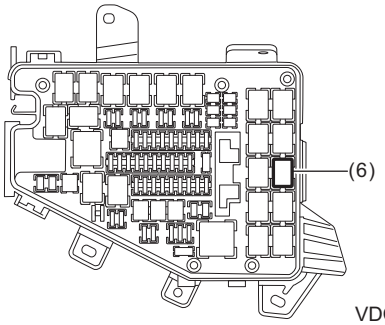
4. Electrical Component Location

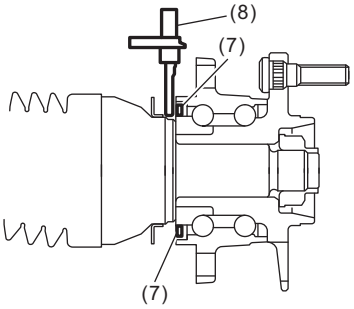


A: LOCATION

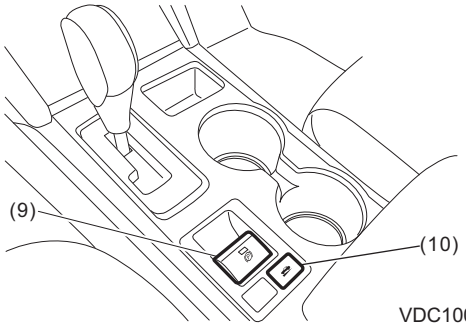


(1) VDC control module and hydraulic control unit (VDCCM&H/U)
(2) VDC OFF switch
(3) Combination meter
(4) Steering angle sensor
(5) Stop light and brake switch
(6) Brake light relay
(7) Magnetic encoder
(8) ABS wheel speed sensor
(9) Parking brake switch
(10) Hill hold switch
(11) Engine control module (ECM)
(12) Transmission control module (TCM) (engine type FB)
(13) Transmission control module (TCM) (engine type EZ)



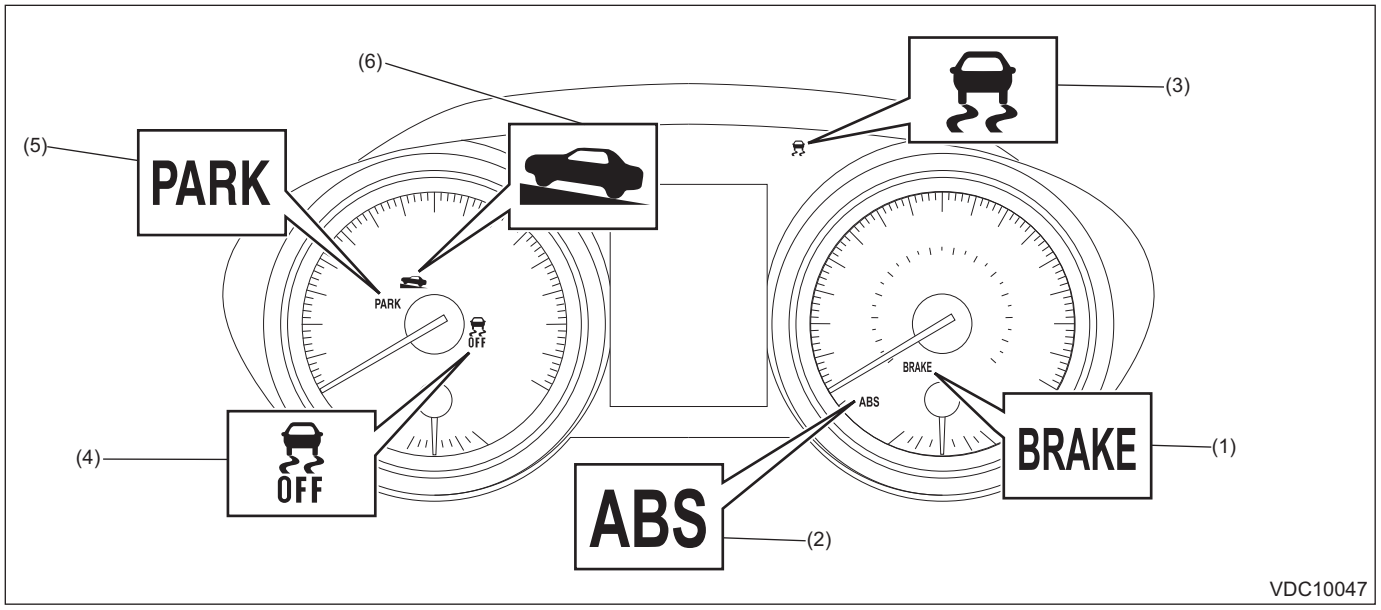


VDC10043



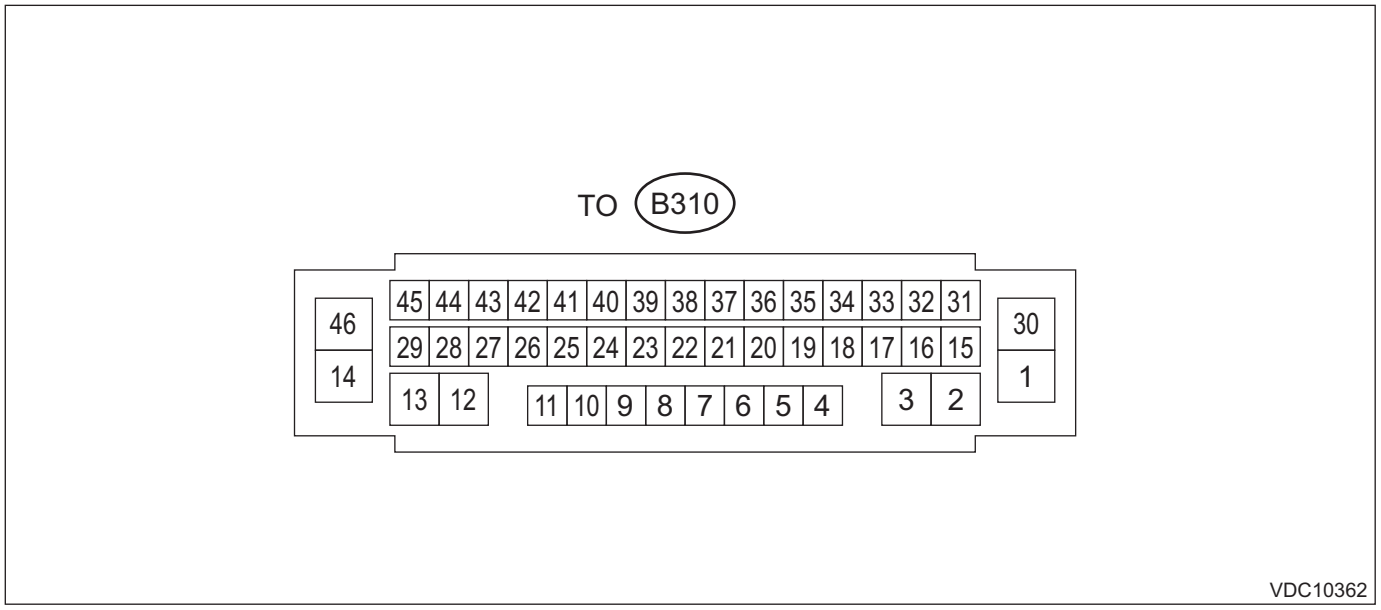
VDC10044

VDC10045



VDC10024

VDC10046



(3) Combination meter

(1) Brake warning light (EBD warning light) and electronic parking brake warning light
(2) ABS warning light
(3) VDC warning light & VDC indicator light
(4) VDC OFF indicator light
(5) Electronic parking brake operation indicator light
(6) Hill hold indicator light

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

NOTE:
- Terminal numbers in VDCCM&H/U connector (on the control module side) are shown in the figure.
- When the connector is removed from the VDCCM&H/U, the brake warning light (EBD warning light), ABS warning light, VDC warning light & VDC indicator light, VDC OFF indicator light, and the hill hold indicator light illuminate.

Contents			Terminal No. (+) — (–)	Input/Output signal
				Measured value and measuring conditions
Power supply			35 — 14	10 — 15 V when the ignition switch is ON.
ABS wheel speed sensor	Front LH wheel	Power supply	9 — 14	0 — 18 V when the ignition switch is ON.
		Signal	8	7 — 14 mA: Rectangle waveform
	Front RH wheel	Power supply	5 — 14	0 — 18 V when the ignition switch is ON.
		Signal	4	7 — 14 mA: Rectangle waveform
	Rear LH wheel	Power supply	7 — 14	0 — 18 V when the ignition switch is ON.
		Signal	6	7 — 14 mA: Rectangle waveform
	Rear RH wheel	Power supply	11 — 14	0 — 18 V when the ignition switch is ON.
		Signal	10	7 — 14 mA: Rectangle waveform
Valve relay power supply			30 — 14	10 — 15 V
Motor relay power supply			1 — 14	10 — 15 V
Stop light switch			15 — 14	1.5 V or less when the stop light is OFF; 10 — 15 V when the stop light is ON.
Brake light relay power supply			25 — 14	10 — 15 V when the ignition switch is ON.
Vehicle speed output signal			22	0 ←→ 12 V pulse
VDC OFF switch			31 — 14	1 Ω or less when the OFF switch is “ON”; 1 MΩ or more when the switch is “OFF”.
Parking brake switch			17	Pulse signal
Parking brake switch			18	Pulse signal
Parking brake switch			19	Pulse signal
Parking brake switch			24	Pulse signal
Rear brake caliper RH			2 — 3	Pulse signal
Rear brake caliper LH			12 — 13	Pulse signal
Hill hold switch			36 — 14	10 — 15 V when the hill hold switch is ON.
Parking brake indicator light			33 — 14	0 V when the light is on; 10 — 15 V when the light is off.
Brake fluid level switch			38 — 14	10 — 15 V when the ignition switch is ON.
CAN communication line (H)			42	Pulse signal
CAN communication line (L)			43	Pulse signal
Ground			14	—

B: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-379, Vehicle Dynamics Control System.>

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «Data Monitor».

Display	Contents to be displayed	Unit of measure
Trip Count [count]	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Angle of the vehicle detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Voltage of IGN	Voltage supplied to VDCCM&H/U is displayed.	V
M. Relay monitor Voltage	Voltage applied to the motor relay is displayed.	V
FL wheel cylinder pressure sensor output	FL wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
FR wheel cylinder pressure sensor output	FR wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
Motor Relay Signal	Motor relay driving signal is displayed.	ON or OFF
Valve Relay Signal	Valve relay driving signal is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
ABS Warning Lamp	ON operation of the ABS warning light is displayed.	ON or OFF
VDC Warning Lamp	ON operation of the VDC warning light is displayed.	ON or OFF
EBD Control Flag	EBD operation condition is displayed.	ON or OFF
ABS Control Flag	ABS operation condition is displayed.	ON or OFF
TCS Control Flag	TCS operation condition is displayed.	ON or OFF
VDC Control Flag	VDC operation condition is displayed.	ON or OFF
E/G Torque Down Control Stop Flag	Engine control command signal is displayed.	1 or 0
Stop-lamp relay drive signal	Brake light relay driving signal is displayed.	ON or OFF
X Mode	The status of X mode is displayed. (Model with X mode)	ON or OFF
VDC-OFF Light	ON/OFF condition of VDC OFF indicator light is displayed.	ON or OFF
OFF SW Signal	Operation condition of VDC OFF switch is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed.	ON or OFF
Incline	Incline of the vehicle is displayed.	%
Total Operation Number	Total number of the electronic parking brake operation is displayed.	times

Display	Contents to be displayed	Unit of measure
Hill Hold Operation Number	Number of times that hill hold function activated at uphill parking is displayed.	times
Auto Operation Number	Number of times that an electronic parking brake operated automatically while using the adaptive cruise control is displayed.	times
Auto Cancel Number	Number of times that an automatic accelerator interlock cancel function operated at starting is displayed.	times
Parking Operation Number when driving	Number of the parking brake operation while driving is displayed.	times
Engine Torque	Engine torque is displayed.	N·m
Ambient Temp Sensor	Ambient temperature is displayed.	°C
Manual Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Auto Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Parking Operation when driving	Parking brake operation condition is displayed.	ON or OFF
Parking Cancel	Parking brake operation condition is displayed.	ON or OFF
Hill Hold Lamp	Hill hold indicator control condition is displayed.	ON or OFF
Ignition Signal	Input condition of ignition signal is displayed.	ON or OFF
Brake Warning Light	Brake warning light control condition is displayed.	ON or OFF
Parking System Warning Light	Control condition of electric parking brake warning light is displayed.	ON or OFF
Neutral Signal	Input condition of neutral signal is displayed.	ON or OFF
Engine idle flag	Engine speed condition is displayed.	ON or OFF
Door Signal	Input condition of door (4 locations) open/close signal is displayed.	ON or OFF
Driver Seat Belt Signal	Input condition of driver's seat belt buckle signal is displayed.	ON or OFF

NOTE:
For detailed operation procedures, refer to "Application help".

3. FUNCTION CHECK

Display	Contents of display	Index No.
ABS Sequence Control Mode	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to VDC-18, ABS Sequence Control.>
VDC Check Mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	<Ref. to VDC-21, VDC Sequence Control.>
Brake Lamp Lighting Operation	Forcibly activate the brake light relay to illuminate the brake light.	<Ref. to VDC-24, BRAKE LIGHT LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR, OPERATION, Brake Lamp Relay.>
VSC(VDC) Centering Mode	Set the steering angle sensor neutral position, and the lateral G sensor and longitudinal G sensor "0" point.	<Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

4. MAINTENANCE MODE

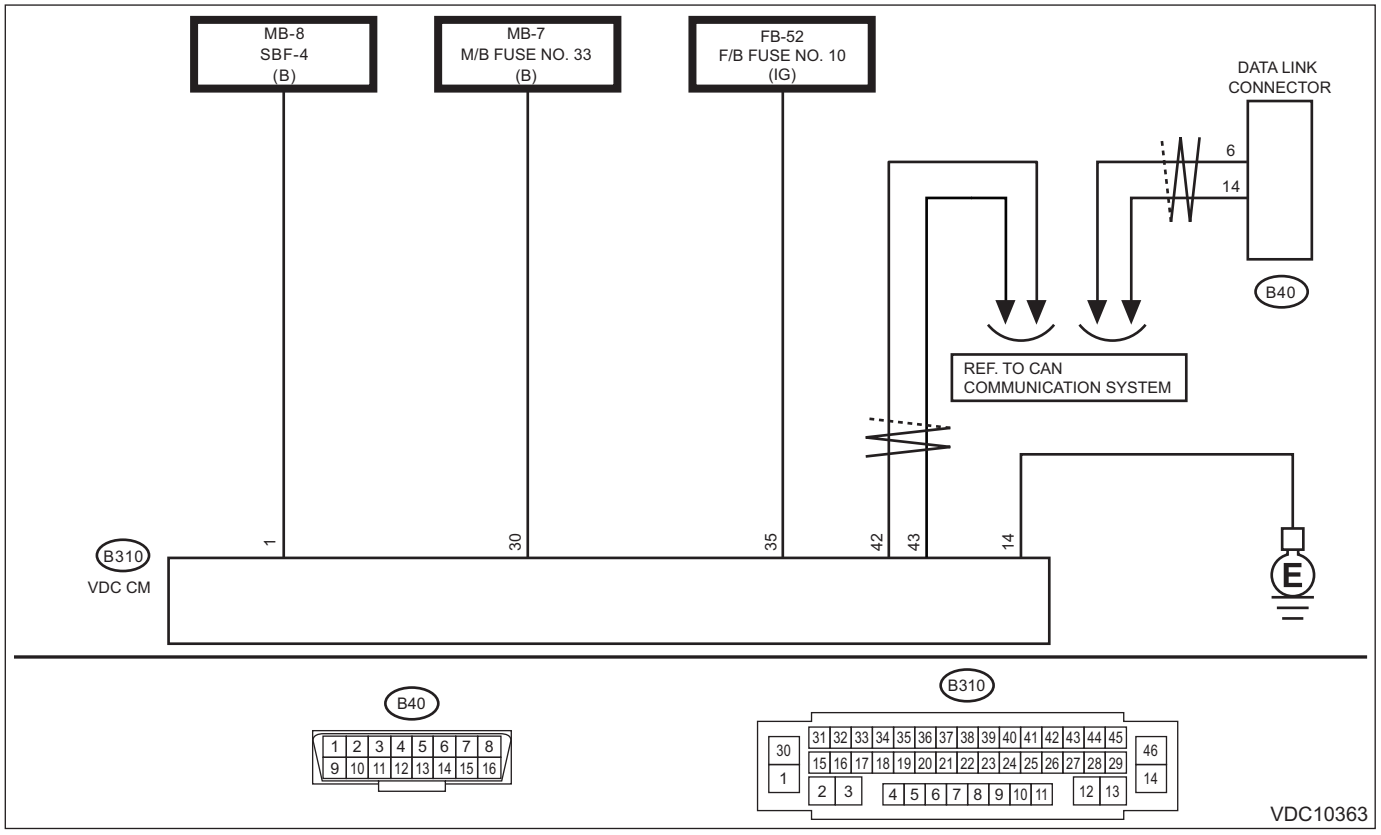
Display	Contents of display	Index No.
Brake Maintenance Mode	Used when inspecting and repairing parts related to rear brake.	<Ref. to VDC-16, BRAKE MAINTENANCE MODE, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Reading of parameter: ECM to SSM	Read VDCCM parameter data.	<Ref. to VDC-16, VDCCM PARAMETER READING, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Display	Contents of display	Index No.
Writing of parameter: SSM to ECM	Write the parameter data to the VDCCM.	<Ref. to VDC-16, VDCCM PARAMETER WRITING, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Select Parameter	Select and register parameters in the VDCCM.	<Ref. to VDC-16, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Confirm on parameter	Parameters registered in the VDCCM are displayed.	<Ref. to VDC-17, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. READ FREEZE FRAME DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents to be displayed	Unit of measure
Classification	Recorded trouble code is displayed.	—
Trip Count [count]	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Vehicle speed	Vehicle speed calculated by VDC control module is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Angle of the vehicle detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Voltage of IGN	Voltage supplied to VDC control module is displayed.	V
Acceleration Pedal Position	Accelerator pedal opening angle is displayed.	%
Engine RPM	Engine speed on malfunction occurrence is displayed.	rpm
FL wheel cylinder pressure sensor output	FL wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
FR wheel cylinder pressure sensor output	FR wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
Steering Angle Flag	Whether the absolute angle of the steering angle sensor was determined is displayed.	Recognized or No recognition
EBD Control Flag	EBD control condition is displayed.	ON or OFF
ABS Control Flag	ABS control condition is displayed.	ON or OFF
TCS Control Flag	TCS control condition is displayed.	ON or OFF
VDC Control Flag	VDC control condition is displayed.	ON or OFF



Display	Contents to be displayed	Unit of measure
E/G Torque Down Control Stop Flag	Engine control command signal is displayed.	1 or 0
Stop-lamp relay drive signal	Brake light relay driving signal is displayed.	ON or OFF
X Mode	The status of X mode is displayed. (Model with X mode)	ON or OFF
E/G torques up Control Stop Flag	Engine control command signal is displayed.	1 or 0
OFF Switch Detection	ON/OFF condition of the VDC operated by the driver is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed.	ON or OFF
Engine Torque	Engine torque is displayed.	N·m
Ambient Temp Sensor	Ambient temperature is displayed.	°C
Manual Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Auto Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Parking Operation when driving	Parking brake operation condition is displayed.	ON or OFF
Parking Cancel	Parking brake operation condition is displayed.	ON or OFF
Hill Hold Lamp	Hill hold indicator control condition is displayed.	ON or OFF
Ignition Signal	Input condition of ignition signal is displayed.	ON or OFF
Neutral Signal	Input condition of neutral signal is displayed.	ON or OFF
Engine idle flag	Engine speed condition is displayed.	ON or OFF
Door Signal	Input condition of door (4 locations) open/close signal is displayed.	ON or OFF
Driver Seat Belt Signal	Input condition of driver's seat belt buckle signal is displayed.	ON or OFF

NOTE:
- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.
- For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
Defective harness connector
Trouble symptom:
Communication is impossible between VDC and Subaru Select Monitor.
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select VDC using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step **5**.	Insert VDCCM&H/U connector into VDCCM&H/U.

	Step	Check	Yes	No
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to VDC system can be executed normally.	Is «Select Function» displayed?	Check the DTC in VDC system. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.	Does the Subaru Select Monitor communicate normally?	Go to step **8**.	Repair or replace the Subaru Select Monitor.
8	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **9**.	Repair open circuit in harness between VDCCM&H/U and battery.
9	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the open circuit of VDCCM&H/U ground circuit and poor contact of connector.
10	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «DTC».

NOTE:
- For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

1. VDC SYSTEM

1) Delete the DTC.
2) Drive the vehicle at least ten minutes. (Reproduce nearly the same condition as occurred when the DTC was recorded.)

NOTE:
Make sure the vehicle is not dragged to one side under usual driving condition.

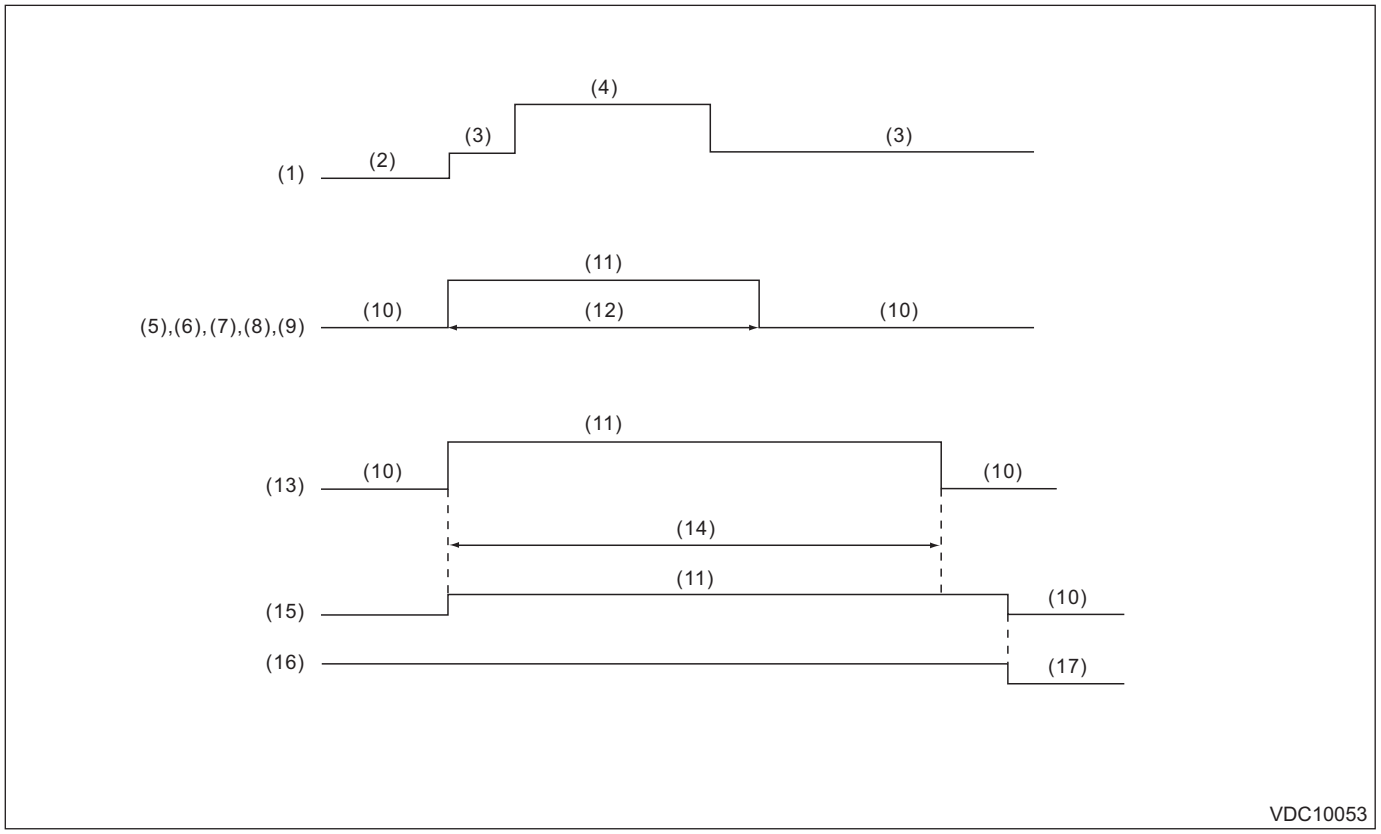
2. ELECTRONIC PARKING BRAKE SYSTEM

1) Start the engine, and operate and release the electronic parking brake a few times with the vehicle at a standstill.
2) Check if the warning light illuminates or blinks, or DTC is displayed.

NOTE:
If the DTC is displayed, perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-44, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3) Drive the vehicle at least 10 minutes, and operate and release the electronic parking brake a few times.

CAUTION:
Do not drive the vehicle with the warning light illuminated or blinked.

9. Clear Memory Mode



A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.Warning Light Illumination Pattern

A: INSPECTION

(1)	Ignition switch	(7)	VDC OFF indicator light	(13)	VDC warning light & VDC indicator light
(2)	OFF	(8)	Electronic parking brake warning light	(14)	2 seconds or more
(3)	ON	(9)	Hill hold indicator light	(15)	Electronic parking brake operation indicator light
(4)	Engine start	(10)	Light OFF	(16)	Parking brake
(5)	ABS warning light	(11)	Light ON	(17)	Released
(6)	Brake warning light (EBD warning light)	(12)	2 seconds		

NOTE:
The hill hold indicator light always illuminates when the hill hold is in the ON mode.

Warning Light Illumination Pattern

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) When the warning lights or indicator lights remain constantly OFF, check the combination meter circuit. <Ref. to VDC(diag)-29, EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-30, ELECTRONIC PARKING BRAKE INDICATOR LIGHT, HILL HOLD INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.>
3) When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill hold indicator light do not go off, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-32, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-35, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-33, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-34, ELECTRONIC PARKING BRAKE INDICATOR LIGHT, HILL HOLD INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.>

NOTE:
- Even when the ABS warning light and the VDC warning light & VDC indicator light do not go off in 2 seconds after illuminating, the ABS and VDC functions are normal if the warning lights go off while the vehicle is driven. However, while these lights are on, the functions with their warning lights illuminated do not operate.
- It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature. Perform the Clear Memory Mode because DTC may be recorded at this time. <Ref. to VDC(diag)-26, Clear Memory Mode.>
- With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensor or longitudinal G sensor. In this case, this is not a malfunction. Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.>
- When operation and release of the electronic parking brake is repeated excessively, the electronic parking brake warning light may illuminate or the electronic parking brake operation indicator light may blink and then the parking brake switch operation may not be accepted; this is not malfunction.

B: EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON (engine OFF), brake warning light (EBD warning light), ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.

NOTE:
When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON.	Immediately after the ignition switch is turned to ON, do all the indicator lights for VDC system and others illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «EBD Warning Light» ON?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «ABS Warning Lamp» ON?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «VDC-OFF Light» ON?	Go to step **5**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
5	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «VDC Warning Lamp» ON?	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: ELECTRONIC PARKING BRAKE INDICATOR LIGHT, HILL HOLD INDICATOR LIGHT DO NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
• When the ignition switch is ON (engine OFF), the electronic parking brake operation indicator light does not illuminate even when the electronic parking brake switch is operated.
• When the ignition switch is ON (engine OFF), the hill hold indicator light does not illuminate even when the hill hold switch is operated.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON. (Engine OFF)	Do other indicator lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

D: ELECTRONIC PARKING BRAKE INDICATOR LIGHT IS BLINKING

DETECTING CONDITION:

- When VDCCM&H/U was replaced
- When fault was detected or electronic parking brake switch was operated under faulty condition
- When electronic parking brake switch was operated during maintenance mode
- When electronic parking brake was operated while the vehicle was running on the free roller or while the tires were rotating with a help of the free roller
- When electronic parking brake was operated with the brake high in temperature or operated on a steep slope

TROUBLE SYMPTOM:

Electronic parking brake may not operate properly.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U.** NOTE: If VDCCM&H/U was not replaced, start the diagnosis from step 2.	Was electronic parking brake operated after replacement of VDCCM&H/U?	Go to step **2**.	It is normal if the electronic parking brake operation indicator light comes on by operating the electronic parking brake and goes off by disengaging.
2	**CHECK ELECTRONIC PARKING BRAKE WARNING LIGHT.** Turn the ignition switch to ON. (Engine OFF)	Does electronic parking brake warning light illuminate?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK VEHICLE CONDITION.**	Is the brake condition other than overheating? Is the electronic parking brake is operated except on a steep road?	Normal	Go to step **4**.
4	**CHECK DRIVING CONDITION.**	Was the vehicle running except on the free roller?	Normal	Go to step **5**.
5	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.>	Does electronic parking brake operation indicator light blink?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Electronic parking brake was temporarily prohibited.

E: ABS WARNING LIGHT DOES NOT GO OFF

Detecting condition:
- Defective combination meter
- Defective engine
- Defective CAN communication

Trouble symptom:
ABS warning light does not go off when starting the engine.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «ABS Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.>	Does the ABS warning light go off?	Normal. Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

F: VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

Detecting condition:
- Defective combination meter
- Defective engine
- Defective CAN communication

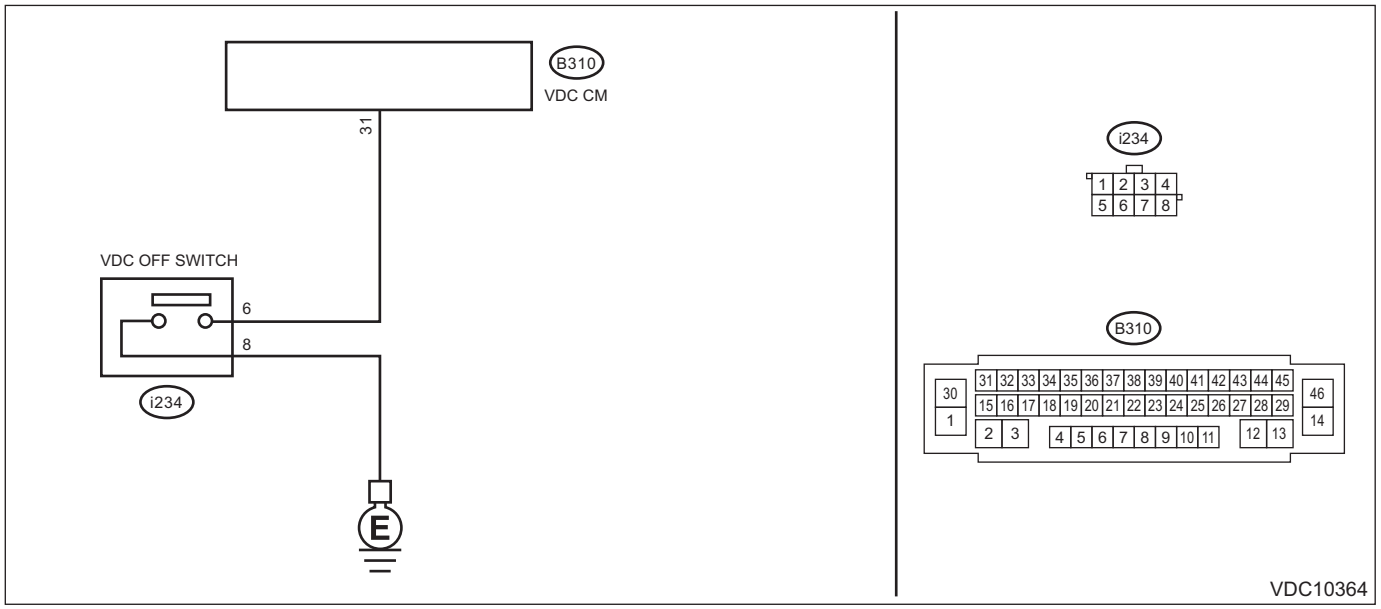
Trouble symptom:
VDC warning light and VDC indicator light do not go off when starting the engine.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «VDC Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.>	Does the VDC warning light & VDC operation indicator light go off?	Normal. Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

G: ELECTRONIC PARKING BRAKE INDICATOR LIGHT, HILL HOLD INDICATOR LIGHT DO NOT GO OFF

Detecting condition:
Defective combination meter
Trouble symptom:
• When starting the engine, the electronic parking brake operation indicator light does not go off even when the electronic parking brake is released.
• When starting the engine, the hill hold indicator light does not go off even when the hill hold switch is deactivated.

	Step	Check	Yes	No
1	**CHECK INDICATOR LIGHT.** 1) Start the engine. 2) Operate the electronic parking brake switch or hill hold switch.	Does the electronic parking brake operation indicator light or hill hold indicator light go off?	Normal.	Go to step **2**.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK VDCCM&H/U.** Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	Is «Parking System Warning Light» ON?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK VDCCM&H/U.** Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	When the hill hold switch is not operated after starting the engine, is the «Hill hold lamp» ON?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>



H: VDC OFF INDICATOR LIGHT DOES NOT GO OFF

Detecting condition:
- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

Trouble symptom:
VDC OFF indicator light does not go off when starting the engine.

Wiring diagram:

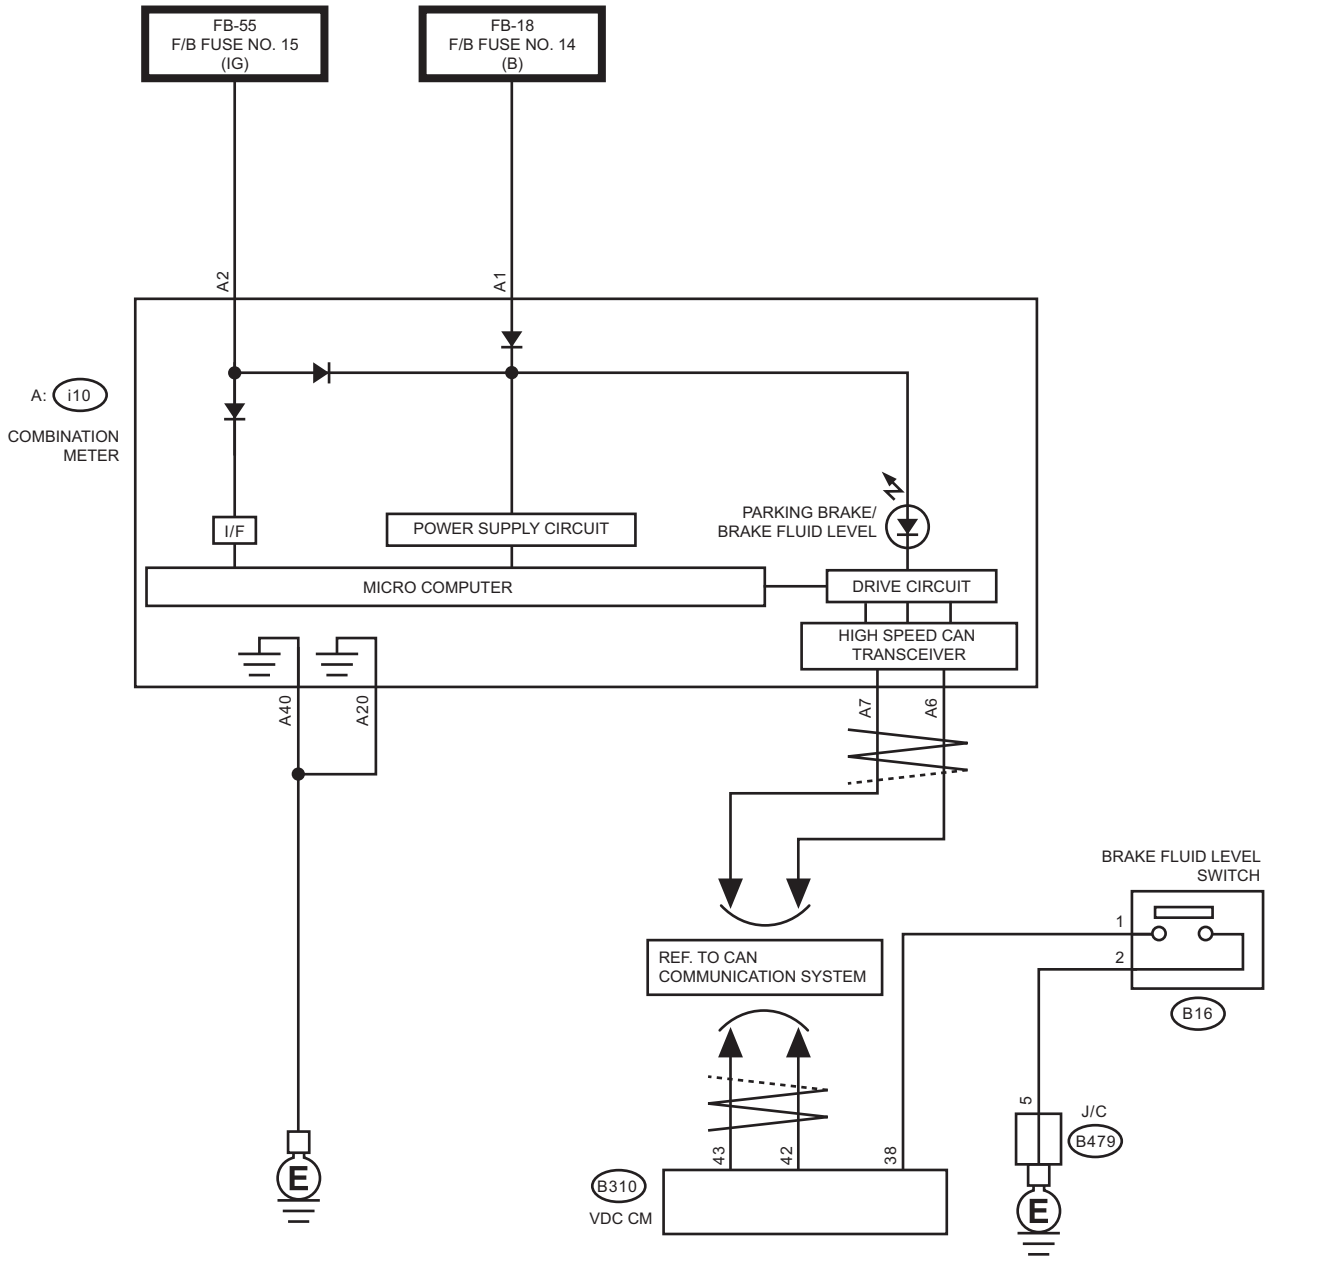
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDC OFF SWITCH.** Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	Does «OFF SW Signal» change according to operation of VDC OFF switch?	Go to step **5**.	Go to step **3**.
3	**CHECK VDC OFF SWITCH.** Remove and check VDC OFF switch. <Ref. to VDC-37, VDC OFF Switch.>	Is the check result OK?	Go to step **4**.	Replace the VDC OFF switch.
4	**CHECK VDC OFF SWITCH CIRCUIT.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 31 — Chassis ground:***	Is the resistance less than 10 Ω?	Check the VDC OFF switch circuit.	Go to step **5**.

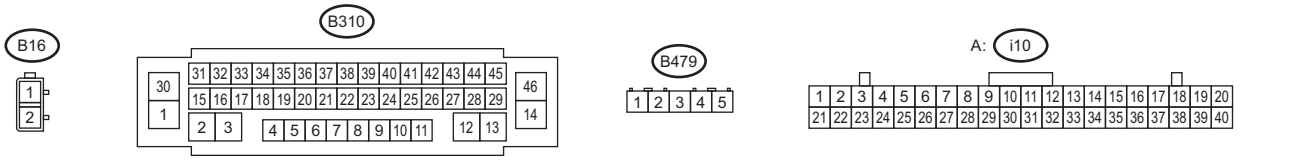
	Step	Check	Yes	No
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

I: BRAKE WARNING LIGHT DOES NOT GO OFF

Detecting condition:
- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication



Trouble symptom:
Brake warning light does not go off after starting the engine.



Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.

Warning Light Illumination Pattern

Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

VDC10365

Step		Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step **2**.	Insert the VDCCM&H/U connector until it is locked by clamp.

	Step	Check	Yes	No
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Does the level of the brake fluid amount fall between the lines of "MAX" and "MIN"?	Go to step **5**.	Replenish brake fluid to the specified value.
5	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the master cylinder. <Ref. to BR-45, Master Cylinder.>
6	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector from the combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the harness connector between combination meter and brake fluid level switch.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
C1211	FRONT RIGHT ABS SENSOR CIRCUIT	Open/high input of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-44, DTC C1211 FRONT RIGHT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1212	FRONT RIGHT ABS SENSOR SIGNAL	Front ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-48, DTC C1212 FRONT RIGHT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1221	FRONT LEFT ABS SENSOR CIRCUIT	Open/high input of front ABS wheel speed sensor LH	<Ref. to VDC(diag)-44, DTC C1221 FRONT LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1222	FRONT LEFT ABS SENSOR SIGNAL	Front ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-48, DTC C1222 FRONT LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1231	REAR RIGHT ABS SENSOR CIRCUIT	Open/high input of rear ABS wheel speed sensor RH	<Ref. to VDC(diag)-44, DTC C1231 REAR RIGHT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1232	REAR RIGHT ABS SENSOR SIGNAL	Rear ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-48, DTC C1232 REAR RIGHT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1241	REAR LEFT ABS SENSOR CIRCUIT	Open/high input of rear ABS wheel speed sensor LH	<Ref. to VDC(diag)-45, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1242	REAR LEFT ABS SENSOR SIGNAL	Rear ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-49, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1311	FR HOLD VALVE	Front inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1311 FR HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1312	FR PRESSURE REDUCING VALVE	Front outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1312 FR PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1321	FL HOLD VALVE	Front inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1321 FL HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1322	FL PRESSURE REDUCING VALVE	Front outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1322 FL PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1331	RR HOLD VALVE	Rear inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1331 RR HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1332	RR PRESSURE REDUCING VALVE	Rear outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1332 RR PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1341	RL HOLD VALVE	Rear inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1341 RL HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1342	RL PRESSURE REDUCING VALVE	Rear outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1342 RL PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
C1351	NORMAL OPENING VALVE 1	Secondary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1351 NORMAL OPENING VALVE 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1352	NORMAL OPENING VALVE 2	Primary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1352 NORMAL OPENING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1361	NORMAL CLOSING VALVE 1	Secondary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1361 NORMAL CLOSING VALVE 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1362	NORMAL CLOSING VALVE 2	Primary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1411	ELECTRICAL CONTROL MODULE	VDC control module malfunction	<Ref. to VDC(diag)-55, DTC C1411 ELECTRICAL CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1412	SELECTED PARAMETER	VDC control module parameter failure	<Ref. to VDC(diag)-57, DTC C1412 SELECTED PARAMETER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1413	POWER SUPPLY VOLTAGE	Power voltage malfunction	<Ref. to VDC(diag)-58, DTC C1413 POWER SUPPLY VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1422	VDC INTERRUPTION FOR ENGINE CONVENIENCE	VDC interrupted due to some reasons of the engine	<Ref. to VDC(diag)-60, DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1423	DIFFERENT ECU SPECIFICATIONS	Different VDC control module specification	<Ref. to VDC(diag)-62, DTC C1423 DIFFERENT ECU SPECIFICATIONS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1424	ECM	Engine control module is faulty	<Ref. to VDC(diag)-64, DTC C1424 ECM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1431	AT	Transmission control module is faulty	<Ref. to VDC(diag)-65, DTC C1431 AT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1511	VALVE RELAY	Defective valve relay	<Ref. to VDC(diag)-66, DTC C1511 VALVE RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1521	MOTOR RELAY	Motor relay malfunction	<Ref. to VDC(diag)-68, DTC C1521 MOTOR RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1531	BLS OFF STUCK	Stop light switch malfunction	<Ref. to VDC(diag)-70, DTC C1531 BLS OFF STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1532	BLS ON STUCK	Stop light switch malfunction	<Ref. to VDC(diag)-72, DTC C1532 BLS ON STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1571	BRAKE LAMP RELAY OFF STUCK	Brake light relay malfunction	<Ref. to VDC(diag)-74, DTC C1571 BRAKE LAMP RELAY OFF STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1711	STEERING ANGLE SENSOR	Steering angle sensor malfunction	<Ref. to VDC(diag)-76, DTC C1711 STEERING ANGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1721	YAW RATE SENSOR	Defective yaw rate sensor	<Ref. to VDC(diag)-79, DTC C1721 YAW RATE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
C1732	LATERAL G SENSOR	Defective lateral G sensor	<Ref. to VDC(diag)-81, DTC C1732 LATERAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1733	LONGITUDINAL G SENSOR	Defective longitudinal G sensor	<Ref. to VDC(diag)-83, DTC C1733 LONGITUDINAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1741	PRESSURE SENSOR	Defective pressure sensor	<Ref. to VDC(diag)-84, DTC C1741 PRESSURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1742	WHEEL CYLINDER PRESSURE SENSOR	Defective pressure sensor	<Ref. to VDC(diag)-85, DTC C1742 WHEEL CYLINDER PRESSURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1811	SYSTEM	System malfunction	<Ref. to VDC(diag)-86, DTC C1811 SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1921	PARKING POSITION SWITCH CIRCUIT	Parking switch malfunction	<Ref. to VDC(diag)-88, DTC C1921 PARKING POSITION SWITCH CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1922	HILL HOLD SWITCH CIRCUIT	Hill hold switch malfunction	<Ref. to VDC(diag)-91, DTC C1922 HILL HOLD SWITCH CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1935	IGNITION SWITCH CIRCUIT	No match of IGN input	<Ref. to VDC(diag)-93, DTC C1935 IGNITION SWITCH CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1942	POWER SUPPLY VOLTAGE	Electronic parking brake power supply voltage is faulty	<Ref. to VDC(diag)-95, DTC C1942 POWER SUPPLY VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1951	ACTUATOR	Electronic parking brake actuator line is faulty	<Ref. to VDC(diag)-97, DTC C1951 ACTUATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1954	RH ACTUATOR	Electronic parking brake RH actuator is faulty	<Ref. to VDC(diag)-99, DTC C1954 RH ACTUATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1955	LH ACTUATOR	Electronic parking brake LH actuator is faulty	<Ref. to VDC(diag)-101, DTC C1955 LH ACTUATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1956	RH ACTUATOR CIRCUIT	Defective RH drive circuit	<Ref. to VDC(diag)-103, DTC C1956 RH ACTUATOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1957	LH ACTUATOR CIRCUIT	Defective LH drive circuit	<Ref. to VDC(diag)-105, DTC C1957 LH ACTUATOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1983	HIGH FREQUENCY OPERATION	Electronic parking brake operation is too frequent	<Ref. to VDC(diag)-107, DTC C1983 HIGH FREQUENCY OPERATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1984	BRAKE MAINTENANCE MODE	Executing brake maintenance mode	<Ref. to VDC(diag)-108, DTC C1984 BRAKE MAINTENANCE MODE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1985	FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION	Electronic parking brake actuator is faulty	<Ref. to VDC(diag)-109, DTC C1985 FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Defective CAN communication	<Ref. to VDC(diag)-109, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Defective CAN communication	<Ref. to VDC(diag)-109, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Defective CAN communication	<Ref. to VDC(diag)-109, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	Defective CAN communication	<Ref. to VDC(diag)-109, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-109, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	Defective CAN communication	<Ref. to VDC(diag)-110, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C1211 FRONT RIGHT ABS SENSOR CIRCUIT

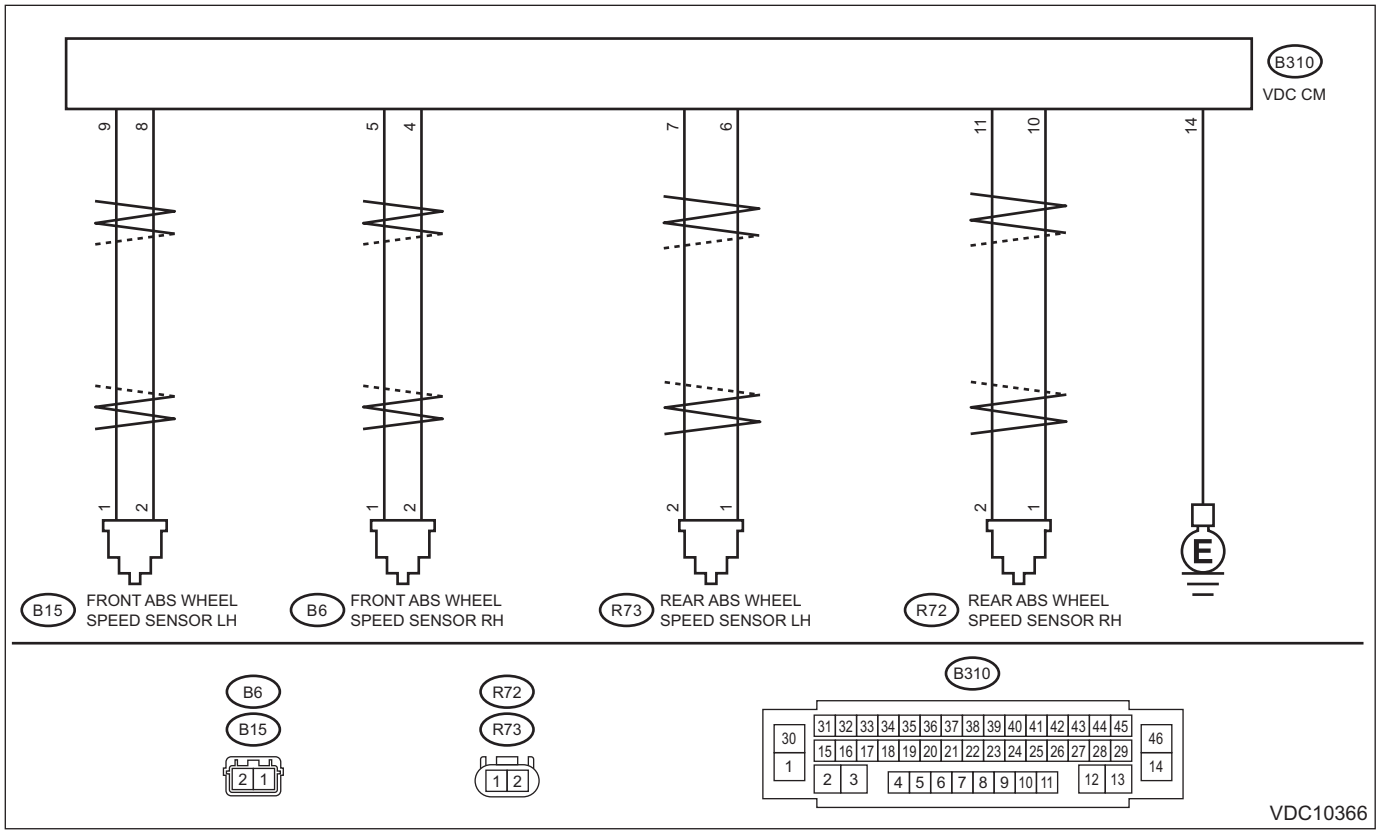
NOTE:
For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-45, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C1221 FRONT LEFT ABS SENSOR CIRCUIT

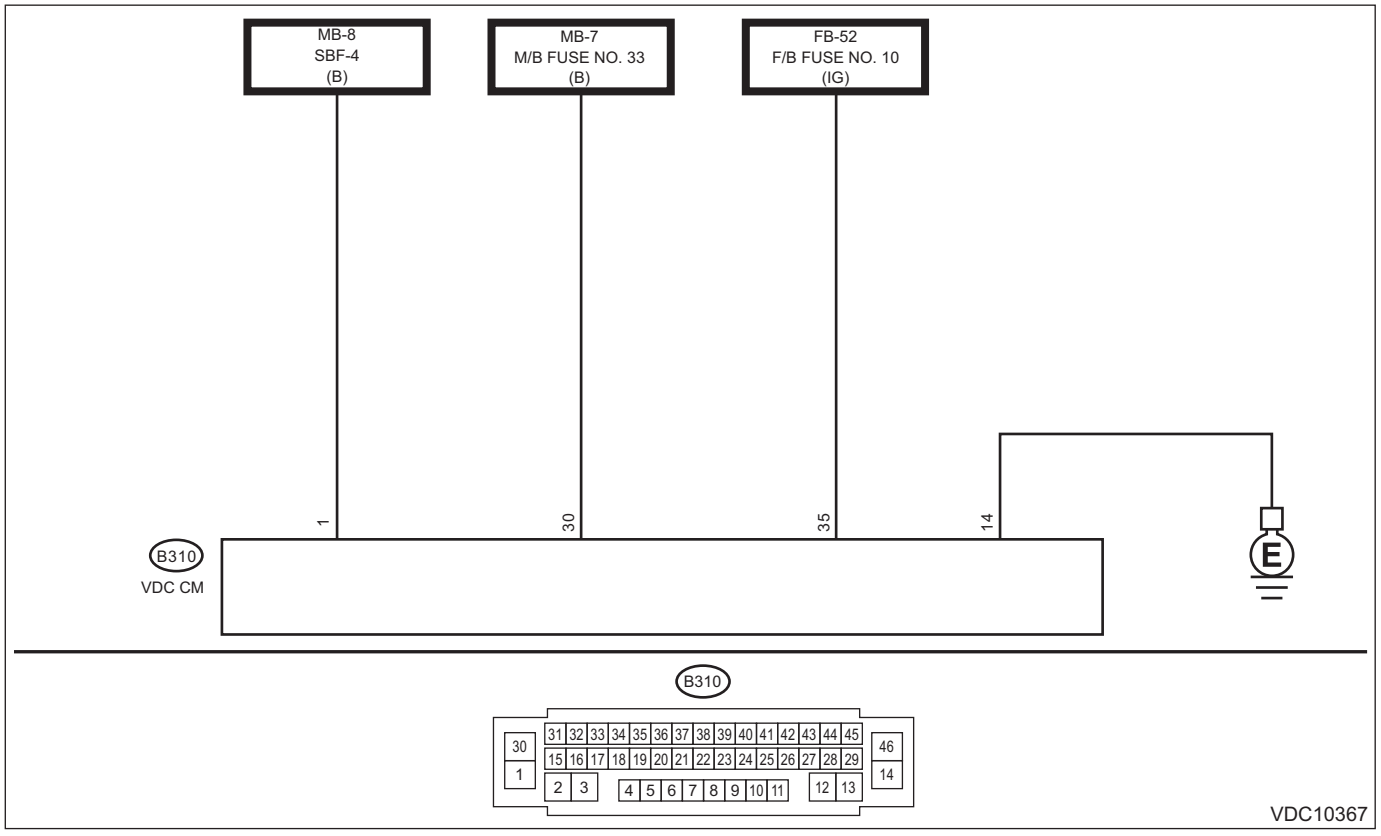
NOTE:
For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-45, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C1231 REAR RIGHT ABS SENSOR CIRCUIT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-45, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



D: DTC C1241 REAR LEFT ABS SENSOR CIRCUIT



DTC detecting condition:
Judge as malfunction when the current value of the wheel speed sensor is out of normal range for a predetermined time or more.
Trouble symptom:
- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
This DTC may be stored when the wheel speed sensor connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-26, Clear Memory Mode.>
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.

Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.** Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step **2**.
2	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B310) from the VDCCM&H/U. 3) Disconnect the connector from ABS wheel speed sensor. 4) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. ***Connector & terminal*** ***DTC C1211*** ***(B310) No. 5 — (B6) No. 1:*** ***(B310) No. 4 — (B6) No. 2:*** ***DTC C1221*** ***(B310) No. 9 — (B15) No. 1:*** ***(B310) No. 8 — (B15) No. 2:*** ***DTC C1231*** ***(B310) No. 10 — (R72) No. 1:*** ***(B310) No. 11 — (R72) No. 2:*** ***DTC C1241*** ***(B310) No. 6 — (R73) No. 1:*** ***(B310) No. 7 — (R73) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B310) No. 4 — Chassis ground:*** ***DTC C1221*** ***(B310) No. 8 — Chassis ground:*** ***DTC C1231*** ***(B310) No. 10 — Chassis ground:*** ***DTC C1241*** ***(B310) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4	**CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.** 1) Connect the VDCCM&H/U connector. 2) Connect the ABS wheel speed sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between ABS wheel speed sensor connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B6) No. 1 (+) — Chassis ground (–):*** ***DTC C1221*** ***(B15) No. 1 (+) — Chassis ground (–):*** ***DTC C1231*** ***(R72) No. 2 (+) — Chassis ground (–):*** ***DTC C1241*** ***(R73) No. 2 (+) — Chassis ground (–):***	Is the voltage 5 — 16 V?	Go to step **6**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 1 (+) — (B310) No. 14 (–):*** ***(B310) No. 30 (+) — (B310) No. 14 (–):*** ***(B310) No. 35 (+) — (B310) No. 14 (–):***	Is the voltage 10 — 15 V?	Go to step **6**.	Check the generator, battery and VDCCM&H/U power supply circuit.
6	**CHECK ABS WHEEL SPEED SENSOR.** Check the ABS wheel speed sensor. <Ref. to VDC-30, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-33, INSPECTION, Rear ABS Wheel Speed Sensor.>	Is the check result OK?	Go to step **7**.	Replace the ABS wheel speed sensor. <Ref. to VDC-29, Front ABS Wheel Speed Sensor.> <Ref. to VDC-32, Rear ABS Wheel Speed Sensor.>
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

E: DTC C1212 FRONT RIGHT ABS SENSOR SIGNAL

NOTE:
For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-49, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C1222 FRONT LEFT ABS SENSOR SIGNAL

NOTE:
For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-49, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C1232 REAR RIGHT ABS SENSOR SIGNAL

NOTE:
For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-49, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C1242 REAR LEFT ABS SENSOR SIGNAL

DTC detecting condition:

- A fault is detected if the time of decompression or hold exceeds the predetermined time.
- A fault is detected if noise of the wheel speed sensor signal is detected.
- A fault is detected if the wheel speed sensor signal is lost, or the wheel speed sensor signal continuously indicates significantly low speed by calculating the difference between maximum speed and minimum speed among the four wheels.
- A fault is detected if the wheel speed sensor signal continuously indicates excessively high or low speed.
- A fault is detected if the wheel speed sensor signal changes irregularly.
- A fault is detected if the wheel speed sensor signal drops cyclically.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
This DTC may be stored when the wheel speed sensor connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-26, Clear Memory Mode.>

	Step	Check	Yes	No
1	**CHECK ABS WHEEL SPEED SENSOR AND FREEZE FRAME DATA USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, check the freeze frame data when DTC is detected. <Ref. to VDC(diag)-20, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Compare «FR Wheel Speed», «FL Wheel Speed», «RR Wheel Speed» and «RL Wheel Speed» to determine a sensor that is not indicating the same value. 3) Check the current data of the wheel speed sensor that is not indicating the same value. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	During acceleration/deceleration when the steering wheel is in the straight-ahead position, does the speed indicated on the data monitor change in response to the speedometer reading? In addition, are the wheel speed values of the freeze frame data for 4 wheels almost the same?	Go to step **2**.	Go to step **7**.
2	**CHECK POOR CONTACT OF CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check for poor contact of the connector between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
7	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **8**.	Tighten the ABS wheel speed sensor installation bolts.
8	**CHECK ABS WHEEL SPEED SENSOR.** Check the ABS wheel speed sensor. <Ref. to VDC-30, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-33, INSPECTION, Rear ABS Wheel Speed Sensor.>	Is the check result OK?	Go to step **10**.	Go to step **9**.
9	**CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.**	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step **10**.
10	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **11**.	Install the radio wave devices and electronic components properly.
11	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **12**.
12	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Go to step **13**.	Go to step **14**.
13	**CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Freeze frame data”. <Ref. to VDC(diag)-20, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Read the ABS wheel speed sensor output.	Is the ABS wheel speed sensor output different compared with other wheels?	Replace the ABS wheel speed sensor which has a difference. <Ref. to VDC-29, Front ABS Wheel Speed Sensor.> <Ref. to VDC-32, Rear ABS Wheel Speed Sensor.>	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

	Step	Check	Yes	No
14	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference. NOTE: Though the ABS warning light may remain on at this time, this is normal. Drive the vehicle at approximately 40 km/h (25 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

I: DTC C1311 FR HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C1312 FR PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C1321 FL HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C1322 FL PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC C1331 RR HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C1332 RR PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C1341 RL HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C1342 RL PRESSURE REDUCING VALVE

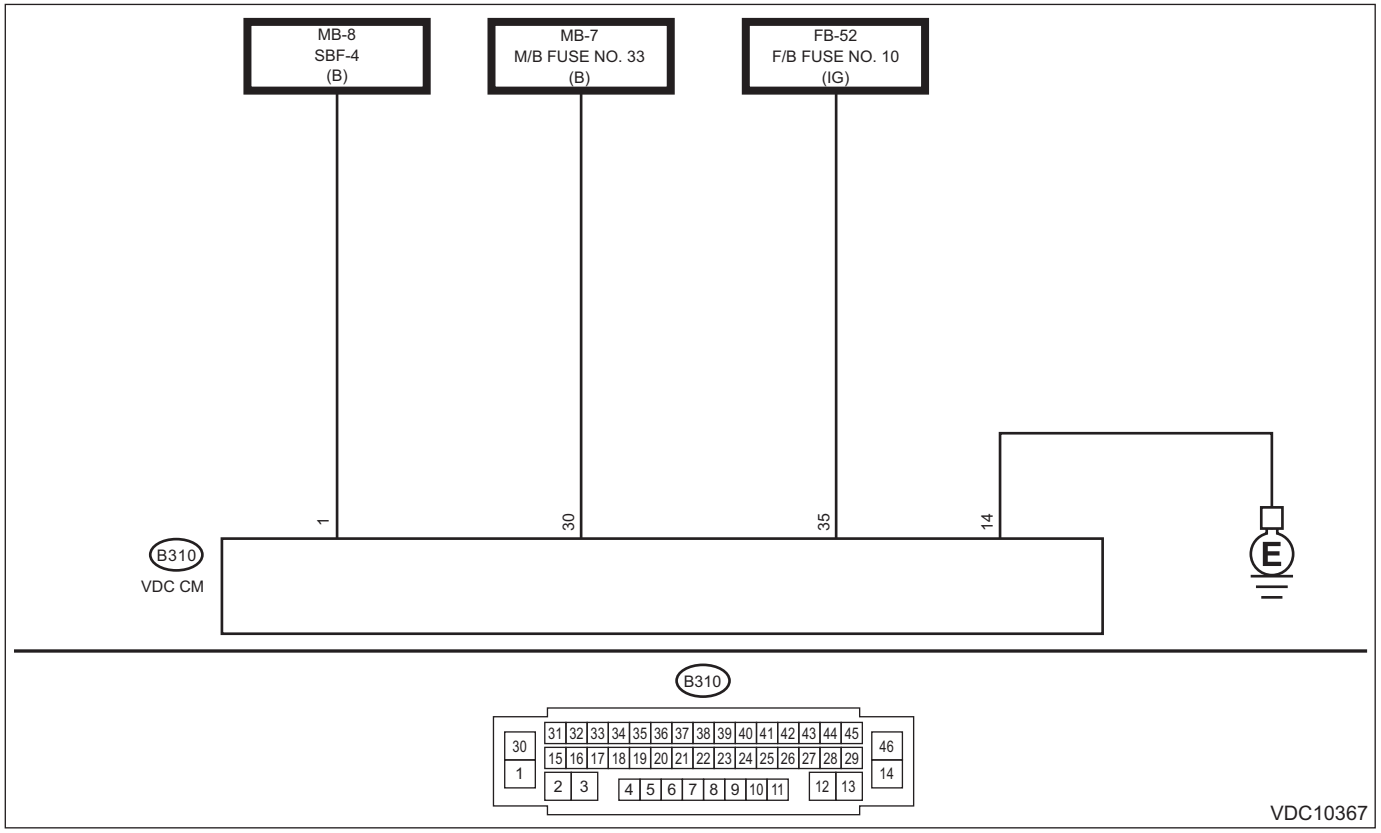
NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C1351 NORMAL OPENING VALVE 1

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C1352 NORMAL OPENING VALVE 2

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



S: DTC C1361 NORMAL CLOSING VALVE 1

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C1362 NORMAL CLOSING VALVE 2

DTC detecting condition:
A fault is detected if electrical malfunction judgment is generated for VDCH/U solenoid valve.
Trouble symptom:
- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

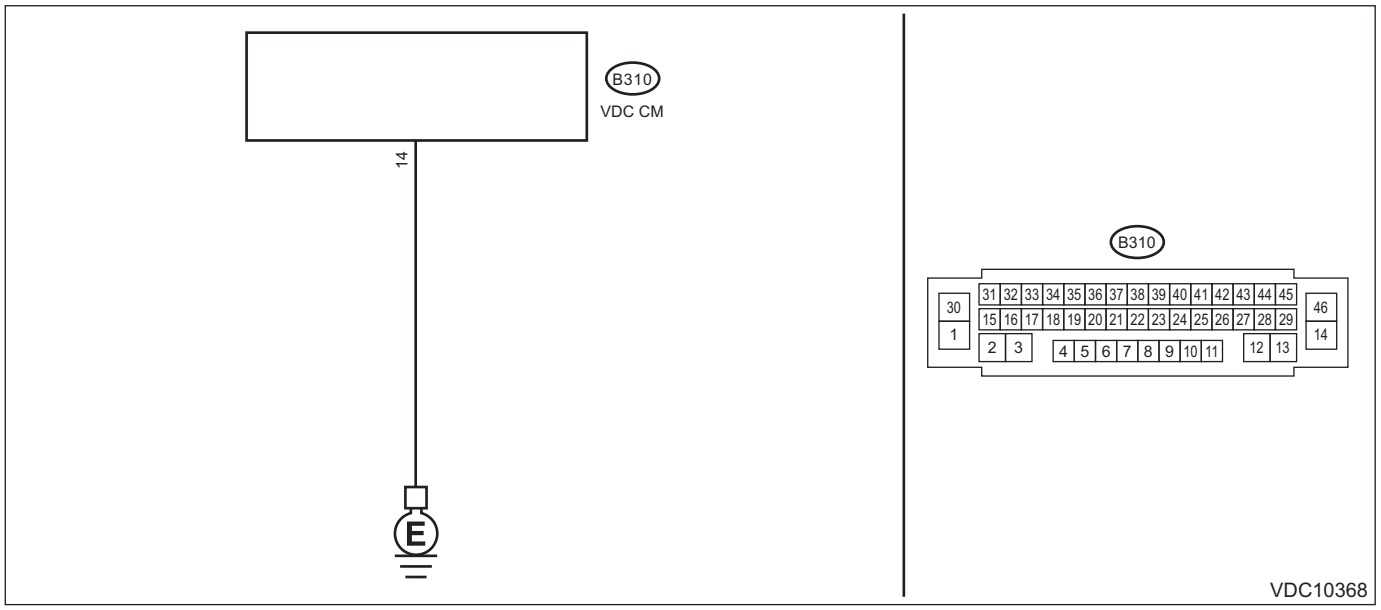
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit including the battery.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground harness.

Step		Check	Yes	No
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **4**.
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

U: DTC C1411 ELECTRICAL CONTROL MODULE

DTC detecting condition:



- Judge as malfunction when ECM internal malfunction is detected.
- This malfunction is stored if the fluid pressure request from the electronic parking brake does not operate.

Trouble symptom:

- ABS does not operate sometimes.
- EBD does not operate sometimes.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal (B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Repair the VDCCM&H/U ground harness.
2	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.**	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.**	Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?	Install the noise sources apart from sensor harness and VDCCM.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

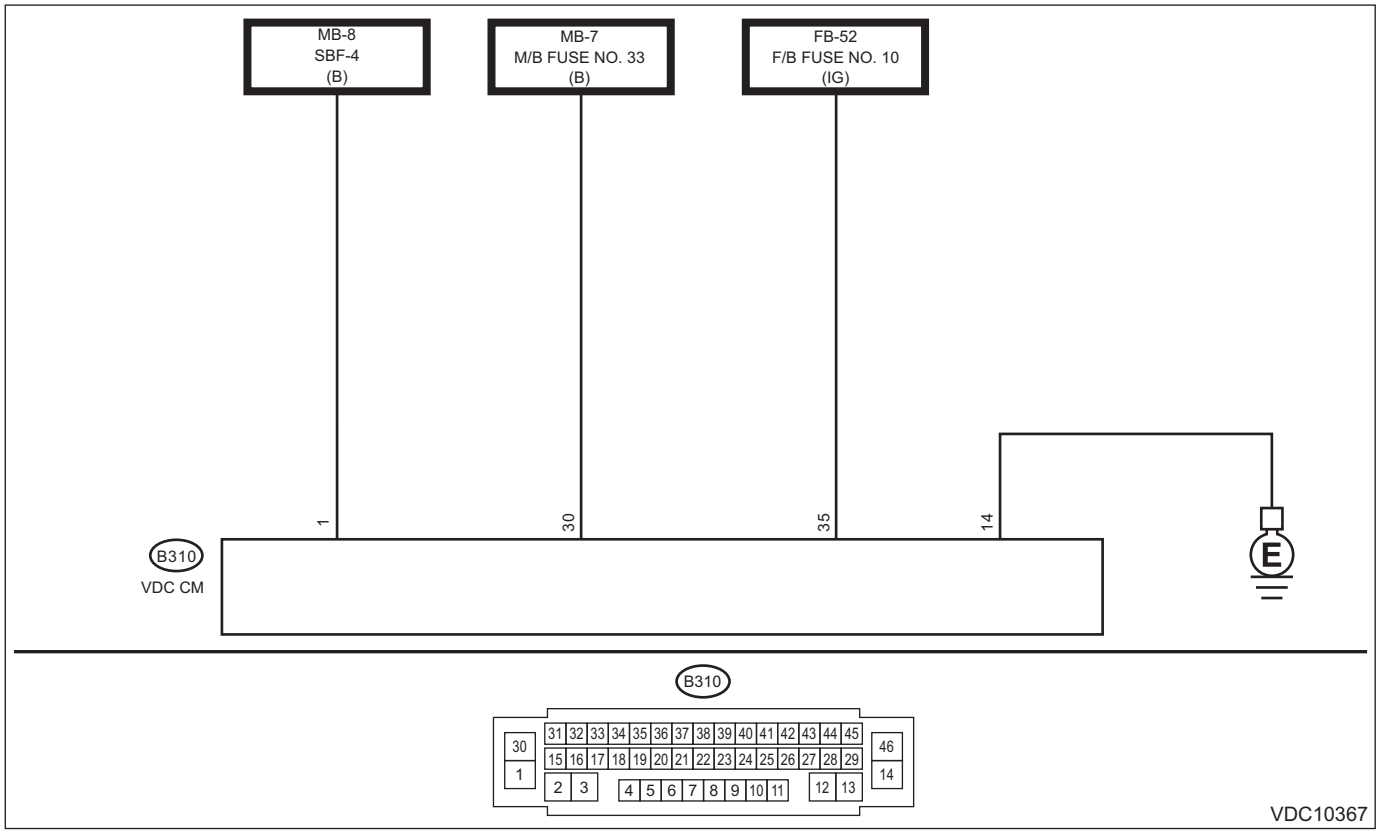
V: DTC C1412 SELECTED PARAMETER

DTC DETECTING CONDITION:

- A fault is detected if abnormal set value is found on the vehicle model that were given some parameters.
- A fault is detected if 0 point setting compensation of the sensor is not yet performed.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)



NOTE:
When the VDCCM&H/U is replaced, this DTC may be stored.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC-17, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Does the parameter registered in the VDCCM match the relevant vehicle?	Go to step **3**.	Select and register the correct parameter. <Ref. to VDC-16, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK SPECIFICATIONS OF OTHER CONTROL MODULES.** Check the specifications of ECM and TCM.	Are the specifications of ECM and TCM the same as vehicle specification?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the ECM and TCM. <Ref. to FU(H4DO)-83, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>

W: DTC C1413 POWER SUPPLY VOLTAGE

DTC detecting condition:
A fault is detected if the power supply voltage is out of normal range for a predetermined time or more.
Trouble symptom:
- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
Warning lights go off if voltage returns.
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. ***Terminals*** ***Generator terminal B (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the generator.
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Are the positive and negative battery terminals installed tightly?	Go to step **3**.	Install the battery terminal correctly.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, rear defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness circuit.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

X: DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE

DTC detecting condition:
A fault is detected if engine control prohibition flag from ECM is received.
Trouble symptom:
- VDC does not operate.
- Hill hold does not function.

NOTE:
The warning light goes off if the engine control prohibition flag from ECM returns normally.

	Step	Check	Yes	No
1	**CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR.** 1) Start the engine, and run the engine at idle approximately 5 minutes. 2) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Check the «E/G Torque Down Control Stop Flag» displayed on screen.	Does the «E/G Torque Down Control Stop Flag» indicate “1”?	Go to step **4**.	Go to step **2**.
2	**CHECK WARNING LIGHT.** Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h (6 MPH) or more.	Does the VDC warning light illuminate?	Go to step **3**.	VDC is normal. Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> NOTE: DTC may be recorded if cranking is performed during driving.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of ECM connector?	Repair the connector.	Go to step **4**.
4	**CHECK DTC OF ECM.** Read the DTC relating the ECM using the Subaru Select Monitor. <Ref. to EN(H4DO)(diag)-67, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-73, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-114, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Y: DTC C1423 DIFFERENT ECU SPECIFICATIONS

DTC detecting condition:
A fault is detected if the vehicle type information obtained from ECM via communication is different from the parameter setting information.
Trouble symptom:
- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
When parameter selection for VDCCM is improper, this DTC may be memorized.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC-17, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Does the parameter registered in the VDCCM match the relevant vehicle?	CVT model: Go to step **3**. MT model: Go to step **5**.	Select and register the correct parameter. <Ref. to VDC-16, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK TCM SPECIFICATION.** Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step **4**.	Replace the TCM. <Ref. to CVT(TR580)-164, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-146, Transmission Control Module (TCM).>
4	**CHECK CVT SYSTEM.** 1) Start the engine. 2) Read the DTC of the CVT system. <Ref. to CVT(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-44, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK ECM SPECIFICATION.** Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step **6**.	Replace the ECM. <Ref. to FU(H4DO)-83, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).>

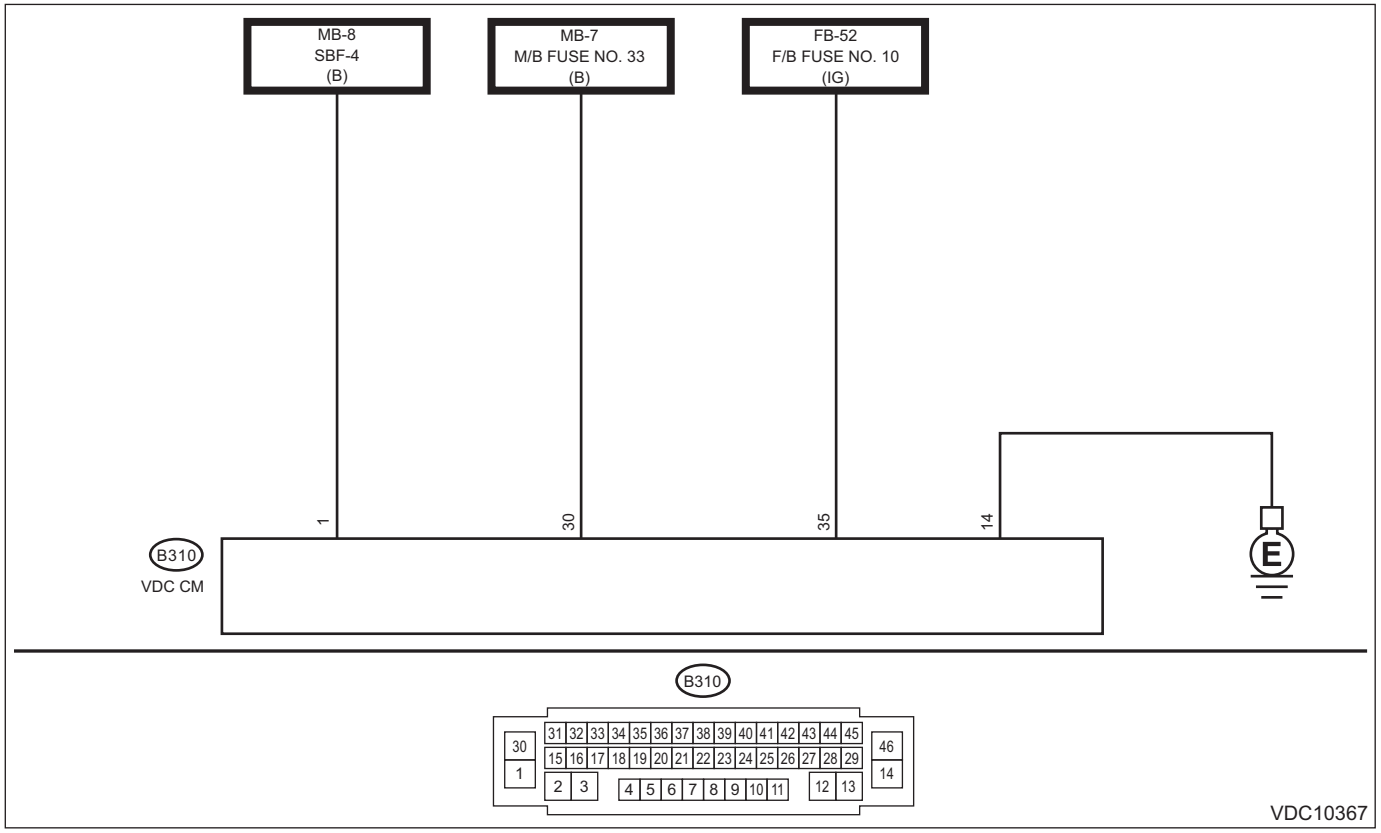
	Step	Check	Yes	No
6	**CHECK ENGINE SYSTEM.** 1) Start the engine. 2) Read DTC of the engine system. <Ref. to EN(H4DO)(diag)-67, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-73, Read Diagnostic Trouble Code (DTC).>	Is engine system DTC displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-114, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Z: DTC C1424 ECM

DTC detecting condition:
A fault is detected if malfunction judgment flag for the engine system is received from ECM for a predetermined time or more.
Trouble symptom:
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

Step		Check	Yes	No
1	**CHECK ECM.** 1) Start the engine. 2) Read the DTC of the ECM. <Ref. to EN(H4DO)(diag)-67, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-73, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-114, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AA:DTC C1431 AT



DTC detecting condition:
A fault is detected if malfunction flag is received from TCM.
Trouble symptom:
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK TCM.** 1) Start the engine. 2) Read the DTC of the TCM. <Ref. to CVT(diag)-25, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-44, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) After turning the ignition switch to ON for approx. 10 seconds, turn it to OFF. 3) Turn the ignition switch to ON again. 4) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 6) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AB:DTC C1511 VALVE RELAY

DTC detecting condition:
A fault is detected if valve relay drive voltage failure is detected.
Trouble symptom:
- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. A: (B310) No. 30 (+) — Chassis ground (–): B: (B310) No. 35 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the VDCCM&H/U ground harness.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AC:DTC C1521 MOTOR RELAY

DTC detecting condition:
A fault is detected if the pump motor supply voltage becomes significantly low when the pump motor is not driven.

Trouble symptom:
- ABS does not operate sometimes.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the VDCCM&H/U power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. A: (B310) No. 1 (+) — Chassis ground (–): B: (B310) No. 35 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK INSTALLATION OF VDCCM&H/U GROUND.**	Is the VDCCM&H/U ground terminal installation bolt installed correctly?	Go to step **4**.	Install the VDCCM&H/U ground terminal installation bolt correctly.
4	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness.
5	**CHECK VDCCM&H/U MOTOR RELAY.** Measure the resistance between VDCCM&H/U terminals. ***Terminals*** ***No. 1 — No. 14:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK POOR CONTACT OF CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AD:DTC C1531 BLS OFF STUCK

DTC detecting condition:
A fault is detected if stop light switch signal is OFF for a predetermined time or more with the pressure signal of the pressure sensor high.

Trouble symptom:
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

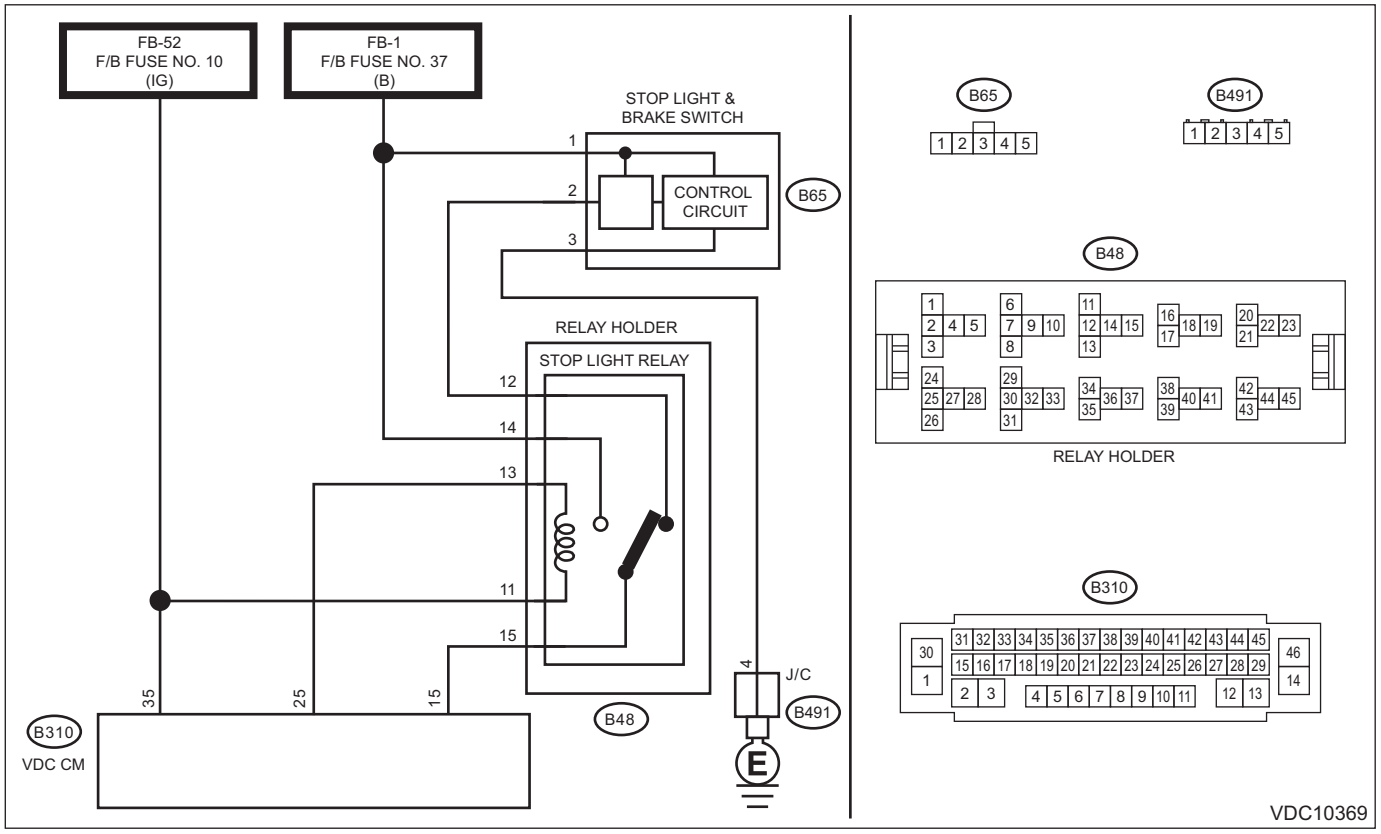
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** Check the stop light switch. <Ref. to BR-70, INSTALLATION, Stop Light Switch.>	Is the installation position of the stop light switch correct?	Go to step **2**.	Adjust the installation position of the stop light switch. <Ref. to BR-70, INSTALLATION, Stop Light Switch.>
2	**CHECK STOP LIGHT SWITCH.** 1) Disconnect the stop light switch connector. 2) Measure the resistance of stop light switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω when the stop light switch is ON (when pedal is depressed)?	Go to step **3**.	Replace the stop light switch. <Ref. to BR-70, Stop Light Switch.>
3	**CHECK STOP LIGHT RELAY.** Measure the resistance of stop light relay terminals. ***Terminals*** ***No. 12 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the stop light relay. <Ref. to VDC-6, Relay and Fuse.>

	Step	Check	Yes	No
4	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **5**.
5	**CHECK STOP LIGHT SWITCH CIRCUIT (CHECK FOR OPEN CIRCUIT).** Measure the resistance of stop light switch circuit. ***Connector & terminal*** ***(B310) No. 15 — (B48) No. 15:*** ***(B65) No. 2 — (B48) No. 12:*** ***(B65) No. 1 — (F/B fuse) No. 37:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the stop light switch circuit.
6	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the stop light switch is ON (when pedal is depressed)?	Go to step **7**.	Repair the stop light switch circuit.
7	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AE:DTC C1532 BLS ON STUCK

DTC detecting condition:



- A fault is detected if a change of the vehicle speed from high to low occurs for a predetermined number of times or more, while a change of the stop light switch from OFF to ON is not detected.
- A fault is detected if stop light switch ON status continues for long time while the vehicle speed is at the predetermined speed or higher.

Trouble symptom:

- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate sometimes. (Models with EyeSight)

NOTE:
If the pressure sensor is defective, this DTC may probably be stored in addition to pressure sensor malfunction.

Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

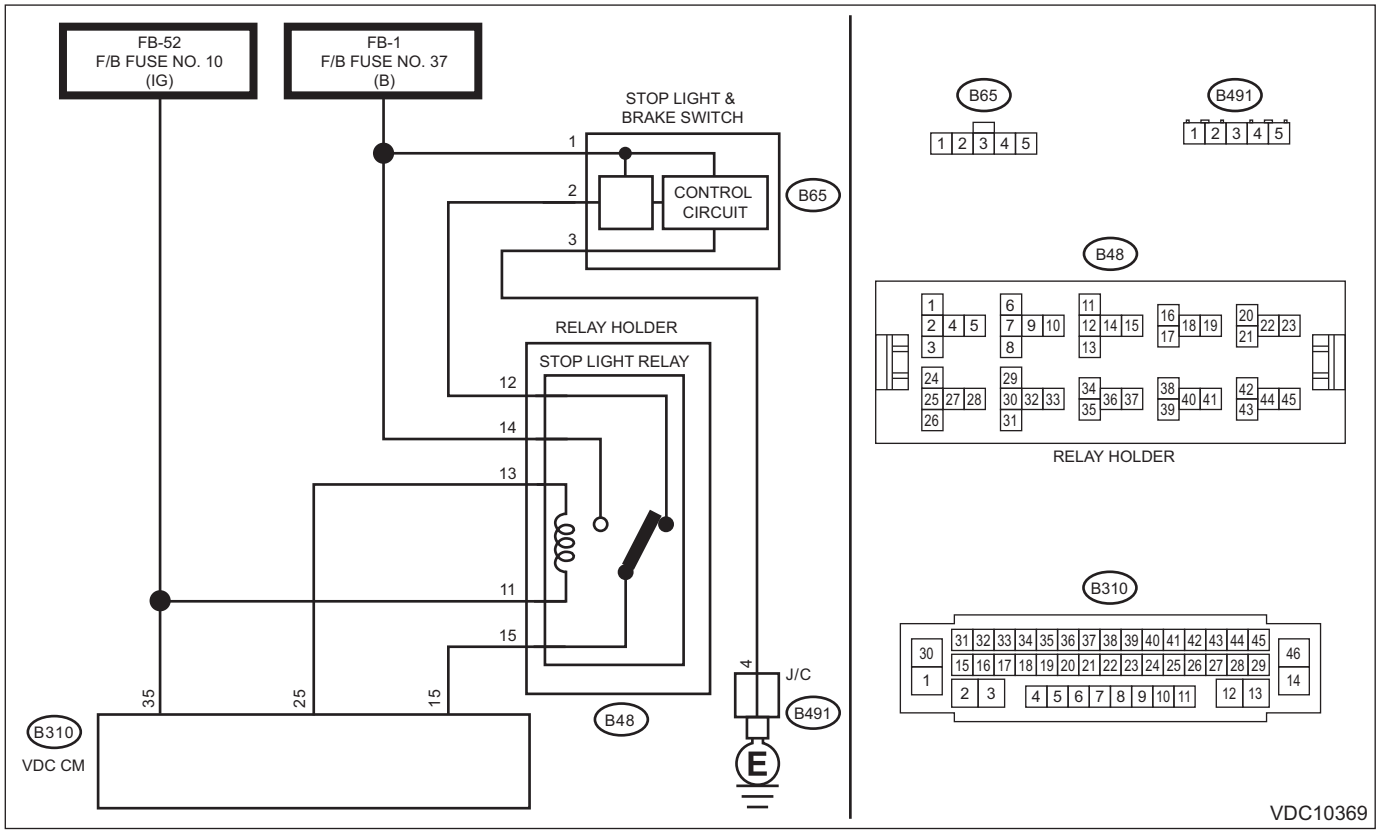
Step		Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step **2**.
2	**CHECK STOP LIGHT RELAY.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of stop light relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Replace the stop light relay. <Ref. to VDC-6, Relay and Fuse.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **4**.
4	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the stop light switch is OFF (when pedal is not depressed)?	Repair the stop light switch circuit.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AF:DTC C1571 BRAKE LAMP RELAY OFF STUCK

DTC detecting condition:

A fault is detected if the stop light relay operation request were compared with the feedback signal and detected as follows:



- The feedback signal is OFF.
- The stop light relay operation request is ON.

Trouble symptom:

- EyeSight does not operate. (Models with EyeSight)
- Stop lights do not illuminate sometimes.

Wiring diagram:

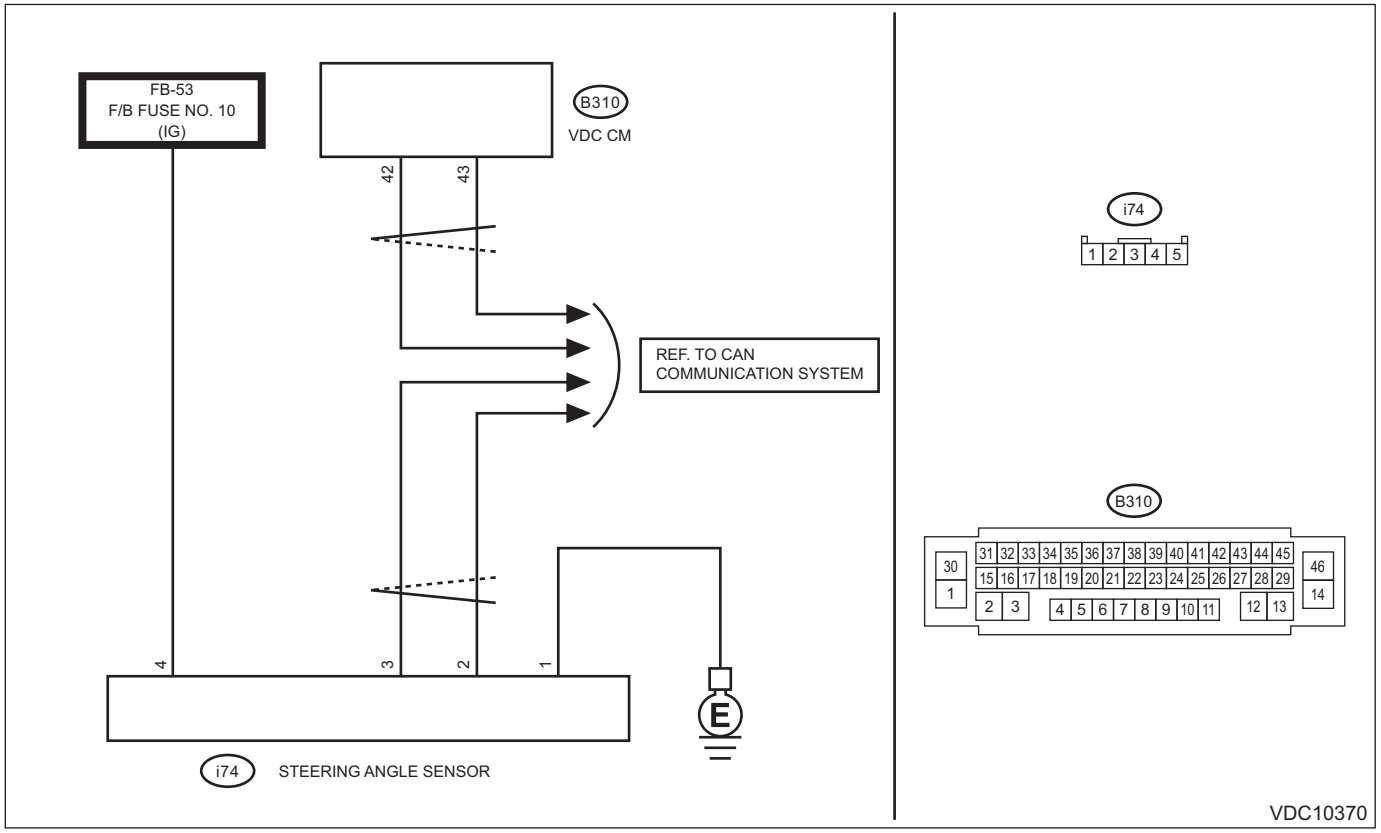
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Are any DTCs related to the stop light switch displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK STOP LIGHT RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the stop light relay. 3) Measure the resistance between stop light relay terminals No. 13 — No. 11 when the battery voltage is applied. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the stop light relay. <Ref. to VDC-6, Relay and Fuse.>
3	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK STOP LIGHT SWITCH CIRCUIT.** Measure the resistance between the stop light relay and the fuse. ***Connector & terminal*** ***(B48) No. 14 — (F/B fuse) No. 37:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit in the power supply circuit including the fuse.
5	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair or replace the open circuit in the power supply circuit including the fuse.
6	**CHECK STOP LIGHT RELAY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the stop light relay. 3) Turn the ignition switch to ON. 4) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the stop light relay circuit.	Go to step **7**.
7	**CHECK STOP LIGHT RELAY CIRCUIT.** Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the ignition power supply circuit.
8	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all connectors and relays. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **9**.
9	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AG:DTC C1711 STEERING ANGLE SENSOR

DTC detecting condition:



- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the yaw rate sensor signal / lateral G sensor signal change while the sensor signal of steering angle sensor indicates a constant value.
- A fault is detected if the communication status of steering angle sensor is abnormal.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. ***Connector & terminal*** ***(i74) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the steering angle sensor power supply circuit including the fuse.

	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR (CHECK FOR OPEN CIRCUIT).** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(i74) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair ground circuit in the steering angle sensor.
3	**CHECK STEERING ANGLE SENSOR HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angel sensor. ***Connector & terminal*** ***(i74) No. 2 — (B310) No. 43:*** ***(i74) No. 3 — (B310) No. 42:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
4	**CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(i74) No. 2 — Chassis ground:*** ***(i74) No. 3 — Chassis ground:***	Is the resistance 10 Ω or more?	Go to step **5**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
5	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **6**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10° — 10°?	Perform the VDC sensor midpoint setting mode. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step **7**.	Check the installation of the steering wheel and steering angle sensor.

	Step	Check	Yes	No
7	**CHECK STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the steering angle sensor. <Ref. to VDC-26, Steering Angle Sensor.>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AH:DTC C1721 YAW RATE SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / lateral G sensor signal change while the yaw rate sensor signal indicates a constant value.
- A fault is detected if the communication status of yaw rate sensor is abnormal.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step **2**.
2	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **3**.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step **3**.
3	**CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Yaw Rate Sensor» displayed on display.	Is the reading of «Yaw Rate Sensor» –4 deg/s — 4 deg/s?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

	Step	Check	Yes	No
4	**CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10 — 10°?	Go to step **5**.	Perform the centering adjustment of steering wheel.
5	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AI: DTC C1732 LATERAL G SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / yaw rate sensor signal change while the lateral G sensor signal indicates a constant value.
- A fault is detected if the communication status of lateral G sensor is abnormal.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step **2**.
2	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10 — 10°?	Go to step **3**.	Check the installation of steering angle sensor.
3	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	Are the values of «Lateral G Sensor» «Longitudinal G Sensor» –2 — 2 m/s^2?	Go to step **4**.	Recheck from step 1, and if the problem is not solved, Go to step **7**.

	Step	Check	Yes	No
4	**SET 0 POINT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-15, VDC SENSOR MID-POINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **5**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
5	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-25, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	Are the values of «Lateral G Sensor» «Longitudinal G Sensor» –1.5 — 1.5 m/s^2?	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	When the VDCCM&H/U is in a horizontal position, are the values of «Lateral G Sensor» «Longitudinal G Sensor» –1.5 — 1.5 m/s^2?	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AJ:DTC C1733 LONGITUDINAL G SENSOR

DTC DETECTING CONDITION:

- A fault is detected if the communication status of longitudinal G sensor is abnormal.
- A fault is detected if malfunction judgment is generated by self-diagnosis test of the longitudinal G sensor.
- A fault is detected if the longitudinal G sensor signal is out of normal range.
- A fault is detected if the longitudinal G sensor compensation value is out of normal range.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
For the diagnostic procedure, refer to “DTC C1732 LATERAL G SENSOR”. <Ref. to VDC(diag)-81, DTC C1732 LATERAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AK:DTC C1741 PRESSURE SENSOR

DTC detecting condition:

- A fault is detected if two fluid pressure signals in master cylinder are out of normal range.
- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.

Trouble symptom:

- VDC does not operate sometimes.
- The hill hold function may not be operable.

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION.** Check the stop light switch circuit and the installation condition.	Is the check result OK?	Go to step **2**.	Repair the stop light switch circuit or correct the installation condition. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, does the value for «Master Cylinder Pressure Sensor» fall within 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	When the brake pedal is operated, does the value of «Master Cylinder Pressure Sensor» change in accordance with the brake pedal?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AL:DTC C1742 WHEEL CYLINDER PRESSURE SENSOR

DTC detecting condition:

- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.
- A fault is detected if a difference between fluid pressures for the wheels exceeds a predetermined judgment value.
- A fault is detected if master cylinder pressure and fluid pressures for the wheels exceed predetermined judgment values.

Trouble symptom:

EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION.** Check the stop light switch circuit and the installation condition.	Is the check result OK?	Go to step **2**.	Repair the stop light switch circuit or correct the installation condition.
2	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» displayed on the screen.	With the brake pedal released, do the values for «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» fall within 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» displayed on the screen.	When the brake pedal is operated, do the values of «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» change in accordance with the brake pedal operation? At this time, is the difference between «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» less than 10 bar?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AM:DTC C1811 SYSTEM

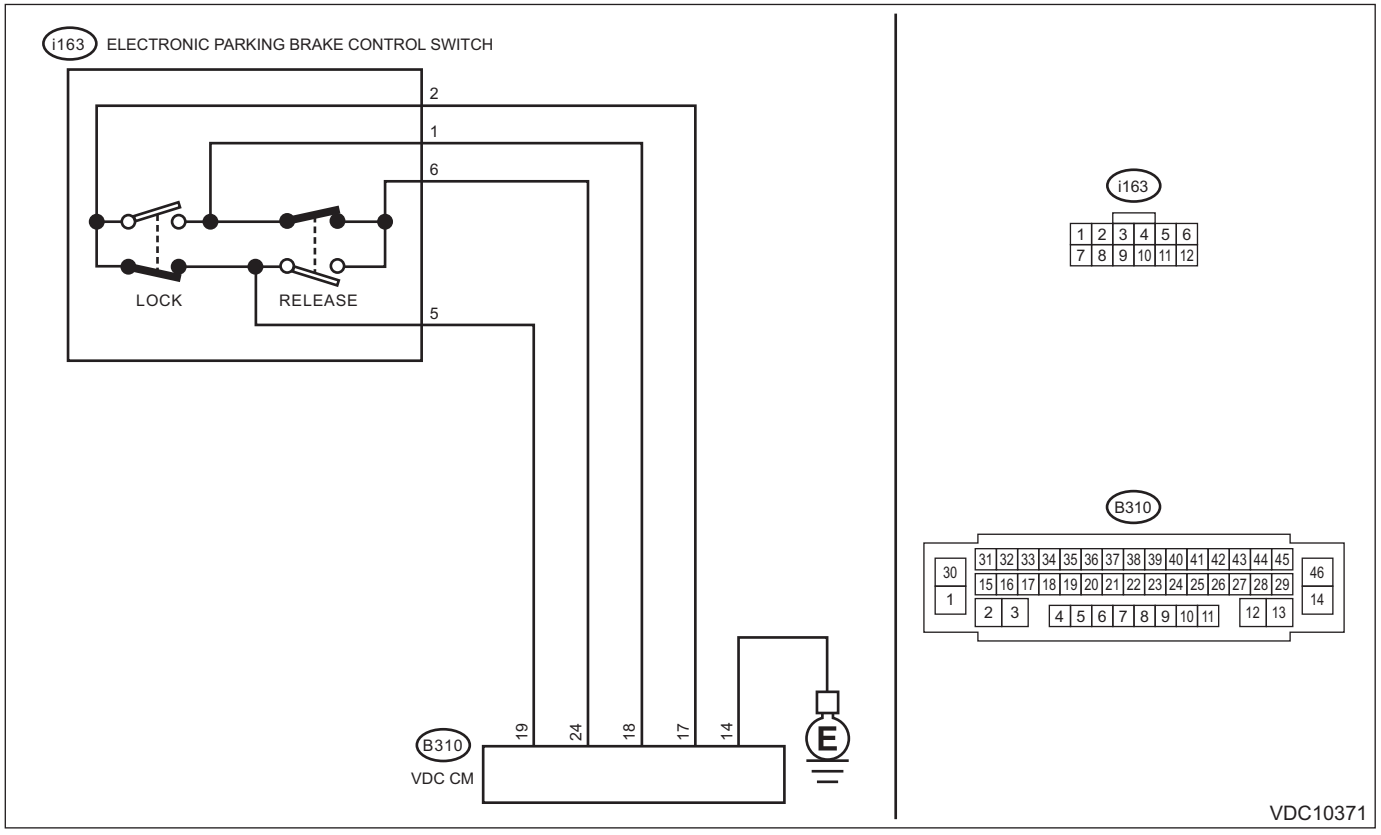
DTC detecting condition:
A fault is detected if VDC control status continues for 15 seconds or more.
Trouble symptom:
- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step **2**.
2	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **3**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step **3**.
3	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10° — 10°?	Go to step **4**.	Check the installation of the steering wheel and steering angle sensor, and correct the installation if it is improper. If the installation condition is correct, replace the sensor.

	Step	Check	Yes	No
4	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read «Lateral G Sensor», «Longitudinal G Sensor», and «Yaw Rate Sensor» displayed on display.	Is the reading of each sensor following value? «Lateral G Sensor»: –2 — 2 m/s^2 «Longitudinal G Sensor»: –2 — 2 m/s^2 «Yaw Rate Sensor»: –4 deg/s — 4 deg/s	Go to step **5**.	Recheck from step 1, and if the problem is not solved, Go to step **8**.
5	**SET 0 POINT SETTING OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **6**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U and steering angle sensor. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-26, Steering Angle Sensor.>
6	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-25, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read «Lateral G Sensor», «Longitudinal G Sensor», and «Yaw Rate Sensor» displayed on display.	Is the reading of each sensor following value? «Lateral G Sensor»: –2 — 2 m/s^2 «Longitudinal G Sensor»: –2 — 2 m/s^2 «Yaw Rate Sensor»: –4 deg/s — 4 deg/s	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read «Lateral G Sensor», «Longitudinal G Sensor», and «Yaw Rate Sensor» displayed on display.	When VDCCM&H/U is in a horizontal position, is the reading of each sensor following value? «Lateral G Sensor»: –1.5 — 1.5 m/s^2 «Longitudinal G Sensor»: –1.5 — 1.5 m/s^2 «Yaw Rate Sensor»: –4 deg/s — 4 deg/s	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AN:DTC C1921 PARKING POSITION SWITCH CIRCUIT

DTC detecting condition:



- A fault is detected if the switch was positioned at lock or release continuously for 90 seconds while the vehicle is stopped.
- A fault is detected if an irregular switch condition continues for a predetermined period of time immediately after the switch position is changed. A fault is also detected if the switch condition is not confirmed afterwards.
- A fault is detected if the switch harness is open or shorted.

Trouble symptom:

Parking brake system does not operate.

Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

	Step	Check	Yes	No
1	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** Operate the parking brake switch.	Does the electronic parking brake operate properly?	Ask the customer whether the following switch operation was performed. • Operated slowly over one second or more. • Repeated ON/OFF operation several times within one second. When the case above is true, the system is normal. When it is normal, a temporary poor contact or noise interference is a possible cause.	Go to step **2**.
2	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and parking brake switch. 3) Measure the resistance between VDCCM&H/U and parking brake switch connector. ***Connector & terminal*** ***(B310) No. 17 — (i163) No. 2:*** ***(B310) No. 18 — (i163) No. 1:*** ***(B310) No. 19 — (i163) No. 5:*** ***(B310) No. 24 — (i163) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and parking brake switch connector.
3	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the parking brake switch connector and chassis ground. ***Connector & terminal*** ***(i163) No. 2 — Chassis ground:*** ***(i163) No. 1 — Chassis ground:*** ***(i163) No. 5 — Chassis ground:*** ***(i163) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and parking brake switch connector.
4	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between parking brake switch connector and chassis ground. ***Connector & terminal*** ***(i163) No. 2 (+) — Chassis ground (–):*** ***(i163) No. 1 (+) — Chassis ground (–):*** ***(i163) No. 5 (+) — Chassis ground (–):*** ***(i163) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and parking brake switch connector.
5	**CHECK PARKING BRAKE SWITCH.** Check the parking brake switch. <Ref. to PB-13, INSPECTION, Parking Brake Switch.>	Is the check result OK?	Go to step **6**.	Replace the parking brake switch. <Ref. to PB-13, Parking Brake Switch.>

	Step	Check	Yes	No
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AO:DTC C1922 HILL HOLD SWITCH CIRCUIT

DTC detecting condition:
A fault is detected if the hill hold switch is pressed and held for a long period of time.
Trouble symptom:
Hill hold function cannot be set.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HILL HOLD SWITCH POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from hill hold switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between hill hold switch connector and chassis ground. ***Connector & terminal*** ***(i156) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit of hill hold switch.
2	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and hill hold switch connector. ***Connector & terminal*** ***(i156) No. 4 — (B310) No. 36:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and hill hold switch connector.
3	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between hill hold switch connector and chassis ground. ***Connector & terminal*** ***(i156) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and hill hold switch connector.

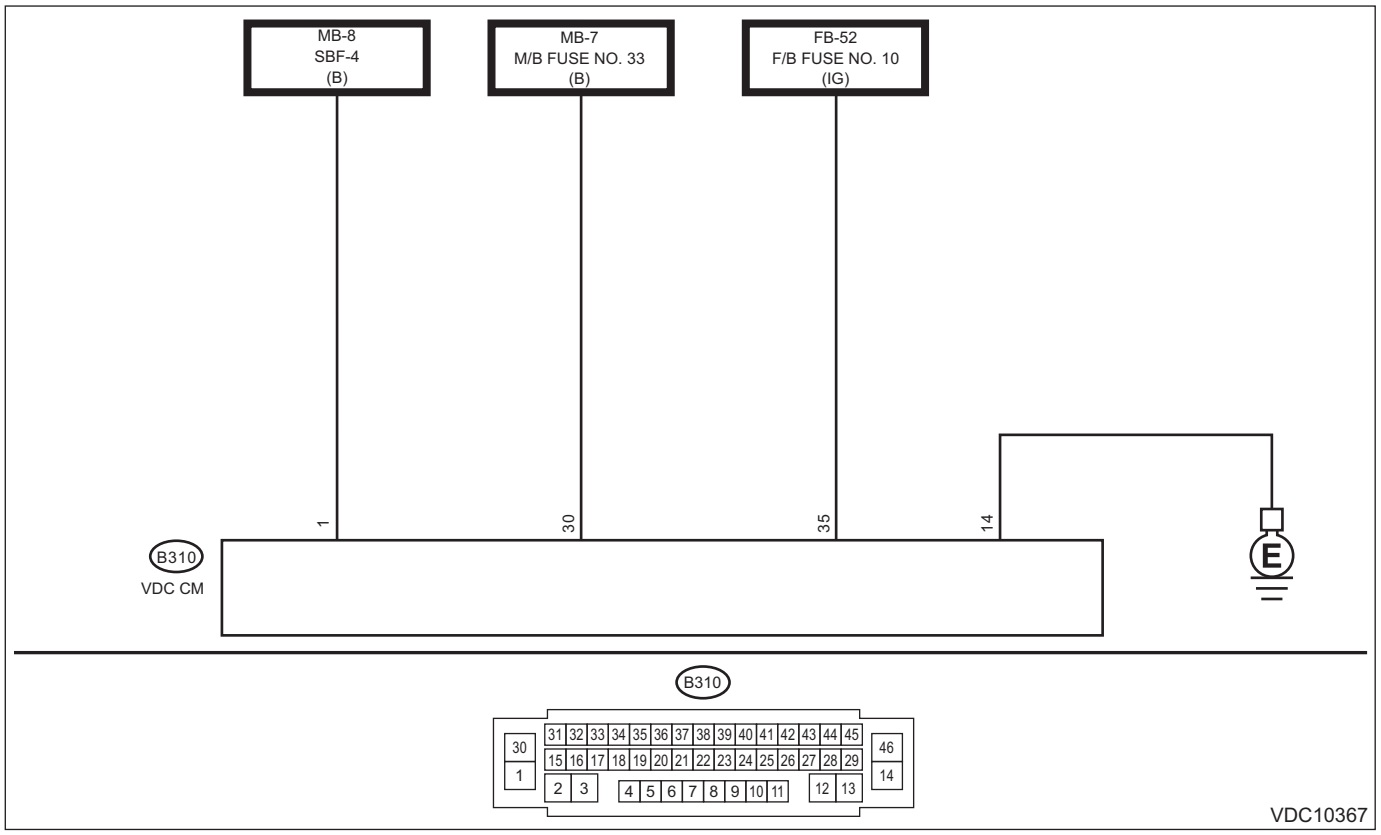
	Step	Check	Yes	No
4	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between hill hold switch connector and chassis ground. ***Connector & terminal*** ***(i156) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and hill hold switch connector.
5	**CHECK HILL HOLD SWITCH.** Check the hill hold switch. <Ref. to VDC-39, INSPECTION, Hill Hold Switch.>	Is the check result OK?	Go to step **6**.	Replace the hill hold switch. <Ref. to VDC-39, Hill Hold Switch.>
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AP:DTC C1935 IGNITION SWITCH CIRCUIT

DTC detecting condition:
A fault is detected after a predetermined period of time, if the hardware IGN signal and CAN IGN signal were compared and did not match.

Trouble symptom:
Brake warning light illuminates.

Wiring diagram:
Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

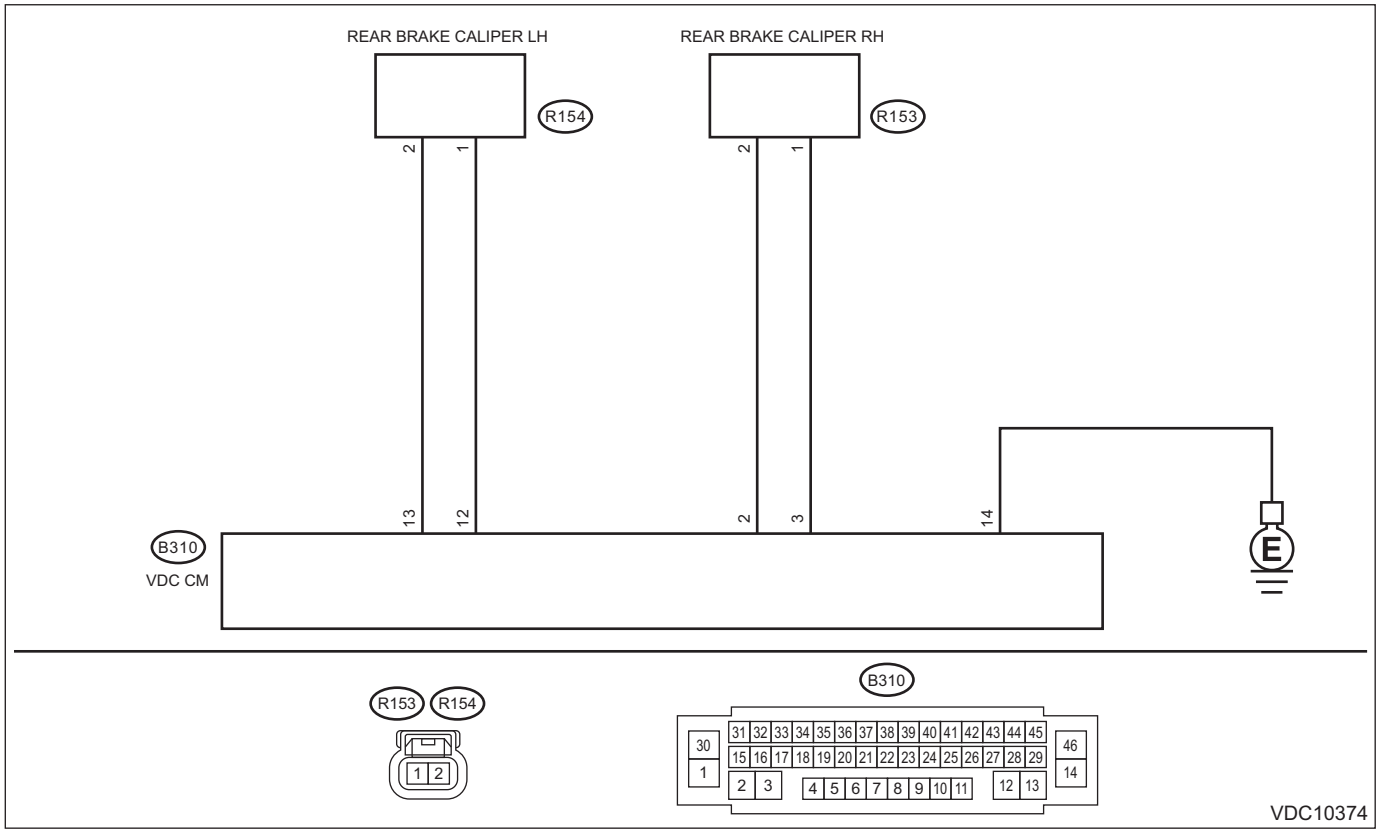


Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair or replace the open circuit in the power supply circuit including the fuse.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.
3	**CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT.** 1) Using the Subaru Select Monitor, select “Data monitor” in body control system. <Ref. to BC(diag)-24, Read Current Data.> 2) Read the «Voltage of IGN» displayed on the screen.	Is the voltage 10 — 15 V?	Go to step **4**.	Perform the diagnosis for the body control system. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
4	**CHECK LAN SYSTEM.** Check the DTC in LAN system. <Ref. to LAN(diag)-39, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC for LAN system displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AQ:DTC C1942 POWER SUPPLY VOLTAGE

DTC detecting condition:
A fault is detected if low voltage is detected during the electronic parking brake operation.
Trouble symptom:
Parking brake system does not operate sometimes.
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-379, Vehicle Dynamics Control System.>



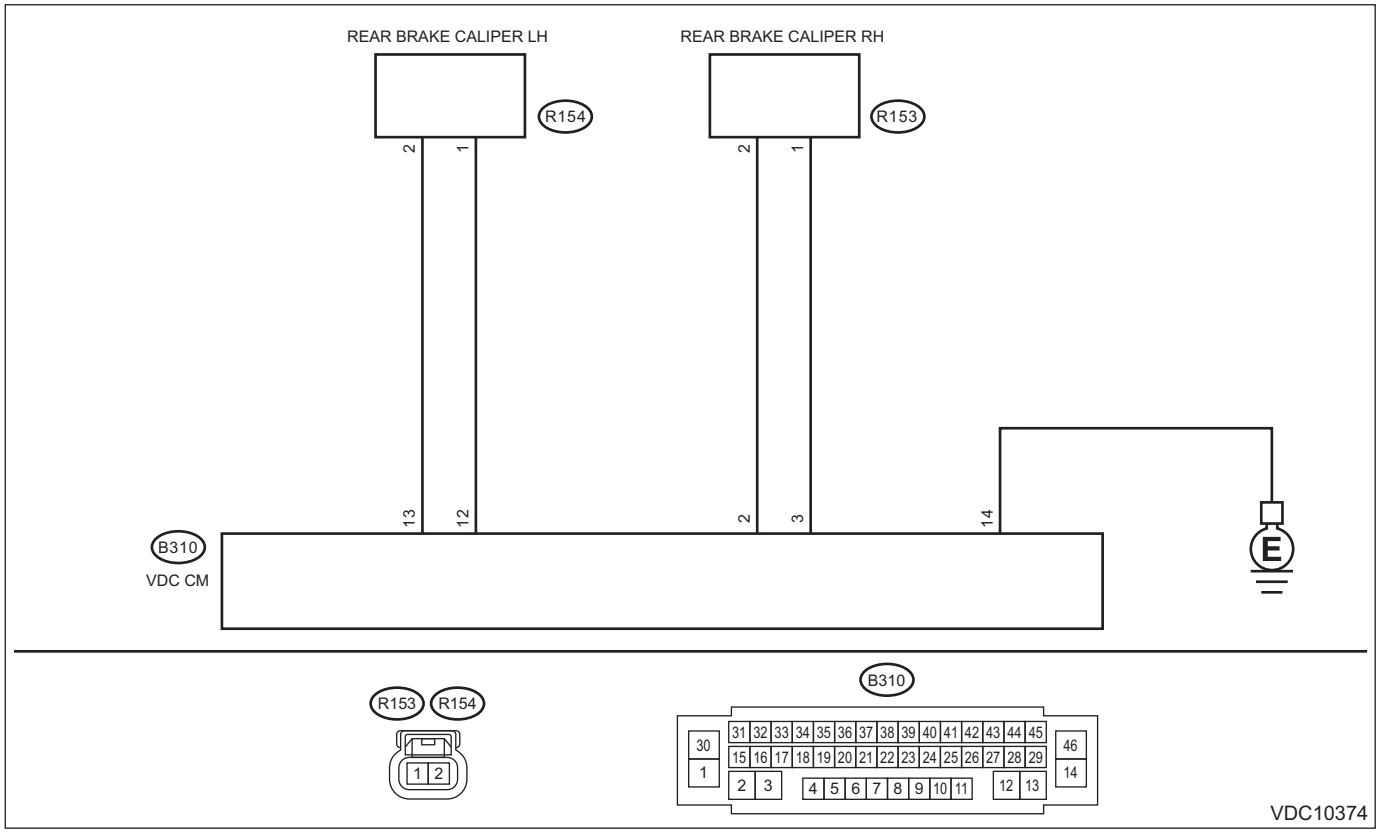
Step		Check	Yes	No
1	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Check the battery voltage. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>	Is the voltage 10 — 15 V?	Go to step **2**.	Charge or replace the battery.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AR:DTC C1951 ACTUATOR

DTC detecting condition:
A fault is detected if the electronic parking brake operation status does not match the operation request.
Trouble symptom:
Parking brake system does not operate.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>



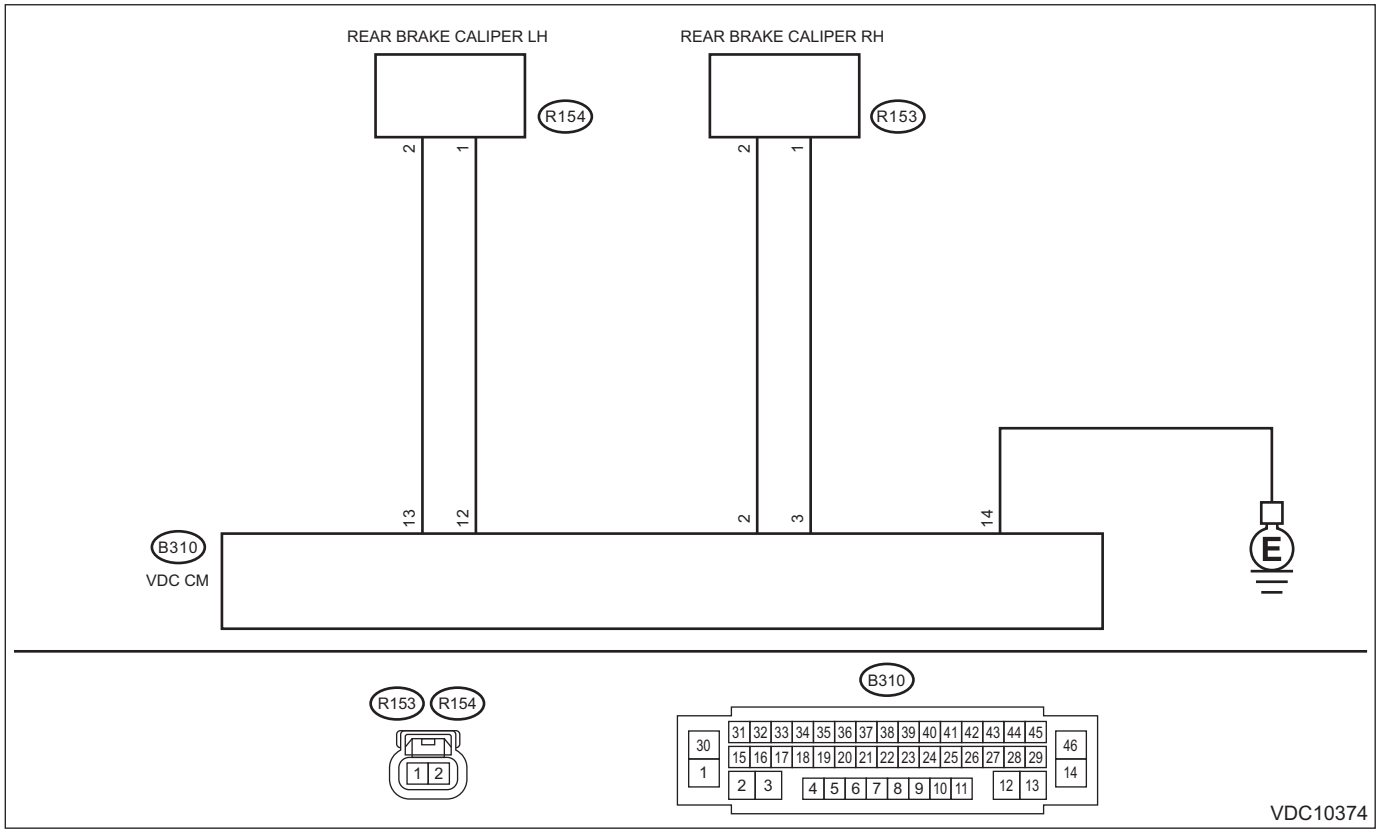
Step		Check	Yes	No
1	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Check the battery voltage. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>	Is the voltage 10 — 15 V?	Go to step **2**.	Charge or replace the battery. Check the generator circuit.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.

	Step	Check	Yes	No
3	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper. 3) Measure the resistance between VDCCM&H/U and rear brake caliper connector. ***Connector & terminal*** ***(B310) No. 2 — (R153) No. 2:*** ***(B310) No. 3 — (R153) No. 1:*** ***(B310) No. 12 — (R154) No. 1:*** ***(B310) No. 13 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair harness and connector between VDCCM&H/U and rear brake caliper connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK DRIVER'S DOOR SWITCH.** Check the driver's door switch. <Ref. to SL-20, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>	Is the check result OK?	Go to step **6**.	Repair the driver's door switch or circuit.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 3) Set the hill hold function to ON. 4) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AS:DTC C1954 RH ACTUATOR

DTC detecting condition:
A fault is detected if mechanical sticking or abnormal operation of the rear brake caliper RH is detected.
Trouble symptom:
Parking brake system does not operate.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper RH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper RH connector. ***Connector & terminal*** ***(B310) No. 2 — (R153) No. 2:*** ***(B310) No. 3 — (R153) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper RH connector.
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 — Chassis ground:*** ***(R153) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper RH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 (+) — Chassis ground (–):*** ***(R153) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper RH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper RH. 3) Measure the resistance between rear brake caliper RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly RH. <Ref. to PB-9, Parking Brake Actuator.>

AT:DTC C1955 LH ACTUATOR

DTC detecting condition:
A fault is detected if mechanical sticking or abnormal operation of the rear brake caliper LH is detected.
Trouble symptom:
Parking brake system does not operate.
Wiring diagram:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper LH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper LH connector. ***Connector & terminal*** ***(B310) No. 12 — (R154) No. 1:*** ***(B310) No. 13 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper LH connector.
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 — Chassis ground:*** ***(R154) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper LH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 (+) — Chassis ground (–):*** ***(R154) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper LH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper LH. 3) Measure the resistance between rear brake caliper LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly LH. <Ref. to PB-9, Parking Brake Actuator.>

AU:DTC C1956 RH ACTUATOR CIRCUIT

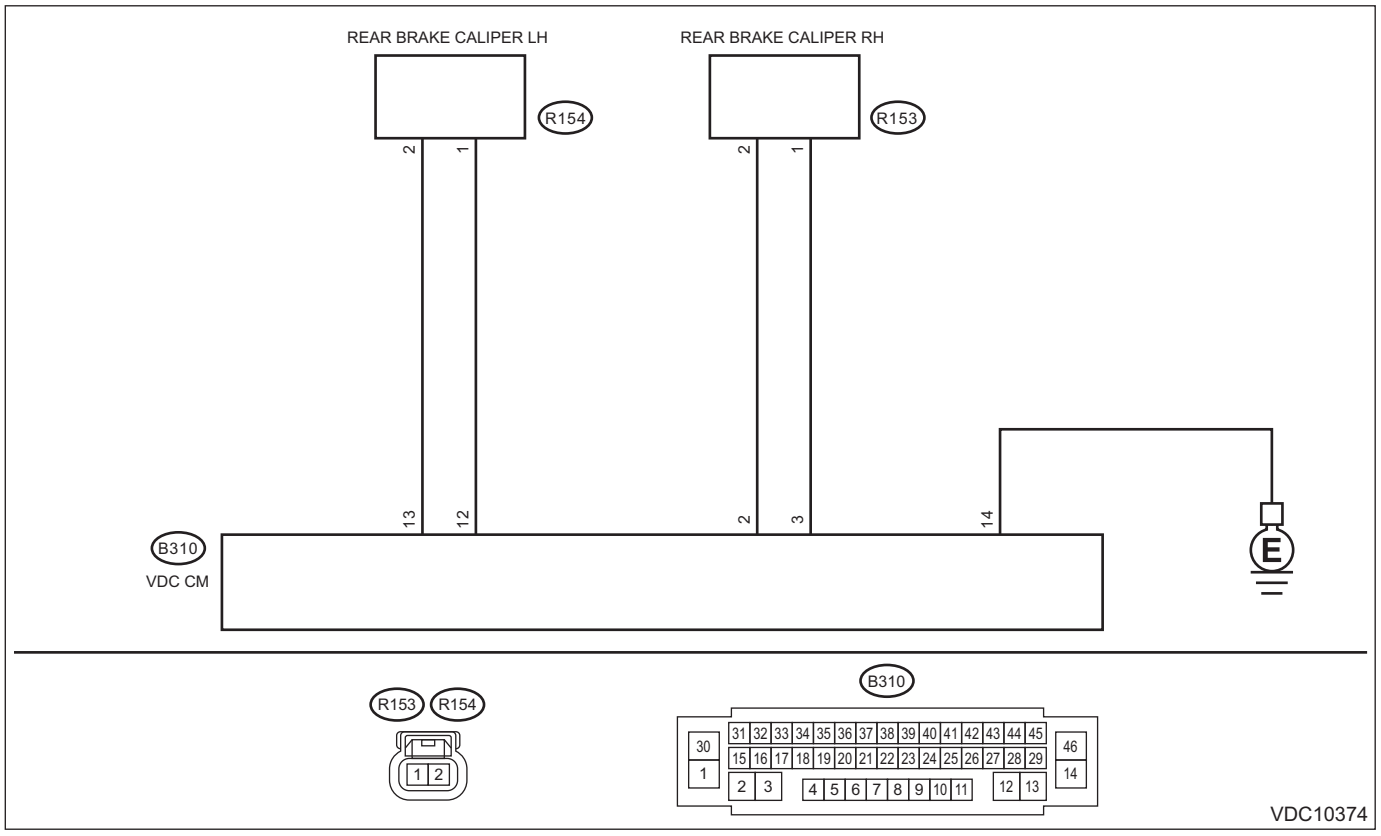
DTC detecting condition:

- A fault is detected, if the motor control mismatch occurs during the motor operation.
- A fault is detected if the motor circuit or harness is open or shorted.

Trouble symptom:

Parking brake system does not operate.

NOTE:



This DTC may be stored when the rear brake caliper connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-26, Clear Memory Mode.>

Wiring diagram:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper RH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper RH connector. ***Connector & terminal*** ***(B310) No. 2 — (R153) No. 2:*** ***(B310) No. 3 — (R153) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper RH connector.

	Step	Check	Yes	No
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 — Chassis ground:*** ***(R153) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper RH connector.
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 (+) — Chassis ground (–):*** ***(R153) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper RH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper RH. 3) Measure the resistance between rear brake caliper RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly RH. <Ref. to PB-9, Parking Brake Actuator.>

AV:DTC C1957 LH ACTUATOR CIRCUIT

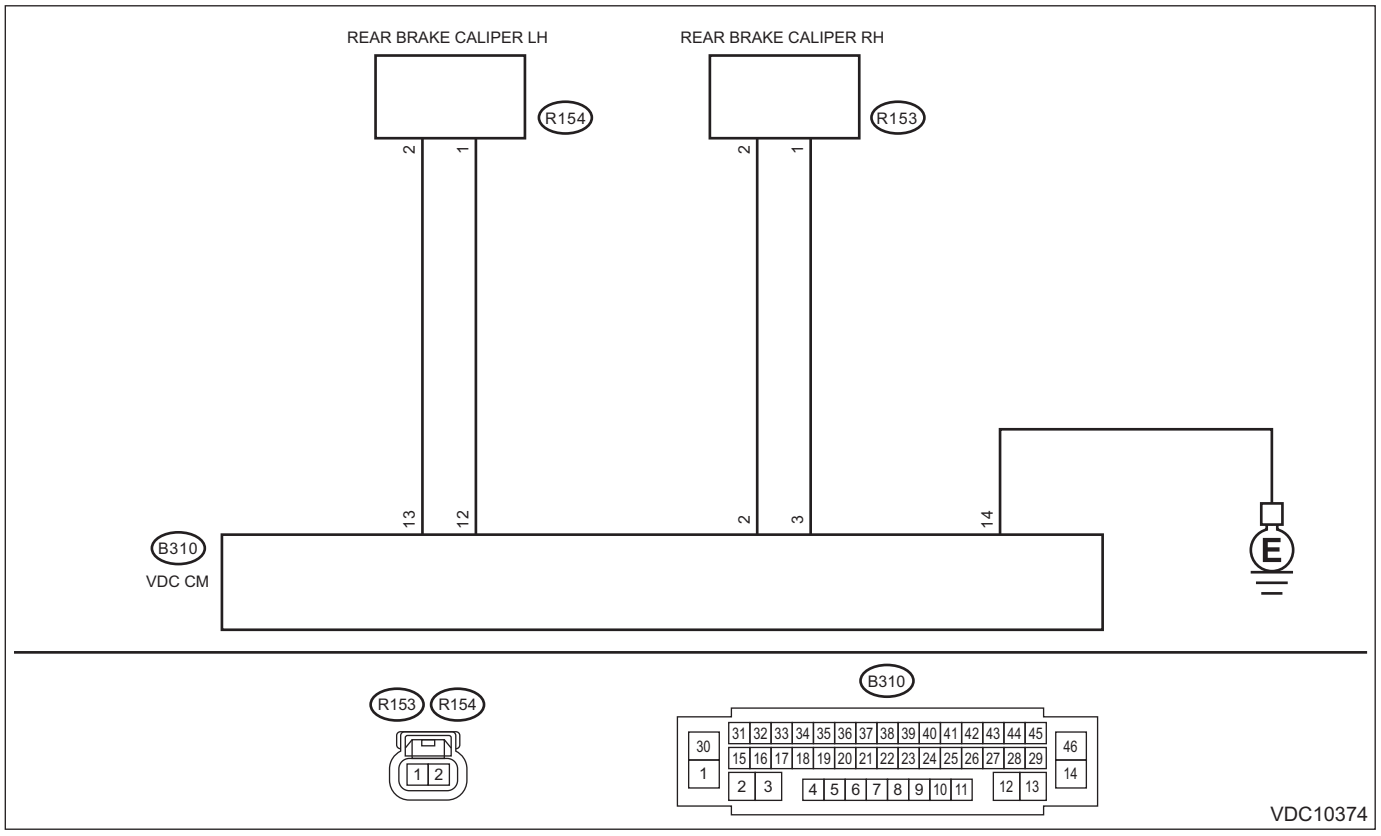
DTC detecting condition:

- A fault is detected, if the motor control mismatch occurs during the motor operation.
- A fault is detected if the motor circuit or harness is open or shorted.

Trouble symptom:

Parking brake system does not operate.

NOTE:



This DTC may be stored when the rear brake caliper connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-26, Clear Memory Mode.>

Wiring diagram:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Parking brake / brake fluid level warning light system <Ref. to WI-307, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper LH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper LH connector. ***Connector & terminal*** ***(B310) No. 12 — (R154) No. 1:*** ***(B310) No. 13 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper LH connector.

	Step	Check	Yes	No
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 — Chassis ground:*** ***(R154) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper LH connector.
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 (+) — Chassis ground (–):*** ***(R154) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper LH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper LH. 3) Measure the resistance between rear brake caliper LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly LH. <Ref. to PB-9, Parking Brake Actuator.>

AW:DTC C1983 HIGH FREQUENCY OPERATION

DTC detecting condition:
This malfunction is stored if the electronic parking brake is operated with high frequency in a short period of time.

Trouble symptom:
Parking brake system does not operate sometimes.

	Step	Check	Yes	No
1	**CHECK OUTPUT OF AMBIENT SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-18, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Ambient Temp Sensor» displayed on the screen.	Is the reading of «Ambient Temp Sensor» within the range of ±10°C to the ambient temperature?	Go to step **2**.	Repair the ambient sensor circuit.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Stop the vehicle for approximately one hour. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AX:DTC C1984 BRAKE MAINTENANCE MODE

DTC detecting condition:
This malfunction is stored when the brake maintenance mode is in progress.
Trouble symptom:
Parking brake system does not operate.

	Step	Check	Yes	No
1	**CHECK ELECTRONIC PARKING MODE.**	Is the brake maintenance mode in progress?	Currently, it is normal. Although DTC C1984 is stored during the brake maintenance mode, it is normal. <Ref. to VDC-16, BRAKE MAINTENANCE MODE, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **2**.
2	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Apply the electronic parking brake several times. 3) Read the DTC. <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is DTC stored even though the electronic parking brake operates?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).> Perform the diagnosis from step 1 again, and if the same DTC is stored, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AY:DTC C1985 FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION

DTC detecting condition:
This malfunction is stored if dynamic parking through the electronic parking brake actuator does not operate.
Trouble symptom:
Parking brake system does not operate.

	Step	Check	Yes	No
1	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-24, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).> NOTE: This DTC is stored for other malfunctions.	Go to step **2**.
2	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-26, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-25, Inspection Mode.>	Does it operate properly?	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AZ:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

13.General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/ stopping distance	• VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pipe
	Brake drag	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Axle and wheels • Brake pedal play	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• VDCCM&H/U • Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Vehicle vertical pitching	• VDCCM&H/U • Road surface (uneven) • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
Poor brake performance	Unstable or uneven braking	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Road surface (uneven) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Disc rotor • Brake pipe • Axle and wheels • Road with crowns or banks • Suspension play or fatigue (reduced damping)

General Diagnostic Table

Symptoms		Main probable cause	Other probable cause
Vibration or noise • When braking suddenly • When accelerating suddenly • While driving on a slippery road	Excessive brake pedal vibration	• Road surface (uneven) • Incorrect wiring or piping connections	• VDCCM&H/U • Brake booster • Suspension play or fatigue (reduced damping)
	Noise from VDCCM&H/U	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Brake pipe	• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
	Noise from the front side of vehicle	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Brake pad • Disc rotor • Brake pipe • Brake booster • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
	Noise from the rear side of vehicle	• Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Disc rotor • Parking brake • Brake pipe • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
Engine does not accelerate or goes into a stall when accelerating suddenly or driving on a slippery surface.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Incorrect wiring or piping	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe

Symptoms		Main probable cause	Other probable cause
Poor change-direction-operation stability of TCS	Deviation to right or left direction	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pad • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Disc rotor • Brake pipe • Axle and wheels • Suspension play or fatigue (reduced damping)
	Vehicle spin	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Brake caliper • Brake pipe
Steering wheel drag while driving		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Incorrect wiring or piping connections • Power steering system	• Brake caliper • Brake pad • Disc rotor • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures
VDC operates while driving normally.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Power steering system	

Symptoms		Main probable cause	Other probable cause
VDC OFF indicator light does not illuminate when the VDC OFF switch is depressed. NOTE: When pressing VDC OFF switch for 30 seconds or more, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the previous status is restored.		• Harness • Combination meter • VDC OFF switch	
Electronic parking brake warning light illuminates.	Parking brake system does not operate.	• Defective parking brake switch • Defective VDCCM&H/U • Defective CAN communication	
	Hill hold function and accelerator interlocking release function do not operate.	• Defective hill hold switch • Faulty signal received from ECM • Faulty signal received from TCM • Faulty signal received from VDC control module • Defective parameter selection for VDCCM&H/U • No CAN signal received from ECM • No CAN signal received from TCM • No CAN signal received from body integrated unit • Defective clutch stroke sensor (MT model) • Defective longitudinal G sensor	
When the hill hold function is set to ON, drugging of brake may occur when the vehicle starts to move.		—	Driver's seat belt is not fastened.

1. General Description

A: SPECIFICATION

NOTE:
Refer to “PARKING BRAKE” for parking brake specifications. <Ref. to PB-2, SPECIFICATION, General Description.>

1. FRONT DISC BRAKE

Item		Specification		
Size		16-inch		17-inch
Type		Floating 2-POT piston type Ventilated disc		
Effective cylinder diameter	mm (in)	42.8 × 2 (1.685 × 2)		
Pad dimension (Length × Width × Thickness)	mm (in)	137.4 × 49.2 × 12 (5.118 × 2.106 × 0.433)		130 × 53.5 × 11 (5.118 × 2.106 × 0.433)
Pad thickness	mm (in)	Standard	12 (0.47)	11 (0.43)
		Limit	1.5 (0.059)	
Effective disc diameter	mm (in)	244 (4.61)		261 (10.28)
Rotor dimension (Thickness × O.D.)	mm (in)	28 × 294 (1.1 × 11.57)		30 × 316 (1.18 × 12.44)
Disc thickness	mm (in)	Standard	28 (1.1)	30 (1.18)
		Limit	26 (1.02)	28 (1.1)
Disc runout	mm (in)	Standard	—	
		Limit	0.05 (0.002)	
Clearance adjustment		Automatic adjustment		

2. REAR DISC BRAKE

Item		Specification	
Size		17-inch	
Type		Floating 1-POT piston type (Caliper with electric parking) Ventilated disc	
Effective cylinder diameter	mm (in)	40 (1.57)	
Pad dimension (Length × Width × Thickness)	mm (in)	86.8 × 43.5 × 9 (3.42 × 1.71 × 0.354)	
Pad thickness	mm (in)	Standard	9 (0.354)
		Limit	1.5 (0.059)
Effective disc diameter	mm (in)	255 (10.44)	
Rotor dimension (Thickness × O.D.)	mm (in)	17 × 300 (0.67 × 11.81)	
Disc thickness	mm (in)	Standard	17 (0.67)
		Limit	15 (0.59)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.002)
Clearance adjustment		Automatic adjustment	

3. MASTER CYLINDER

Item		Specification
Type		Tandem
Effective diameter	mm (in)	23.8 (15/16)
Reservoir type		Sealed type
Brake fluid reservoir capacity	cm^3 (cu in)	250 (15.26)

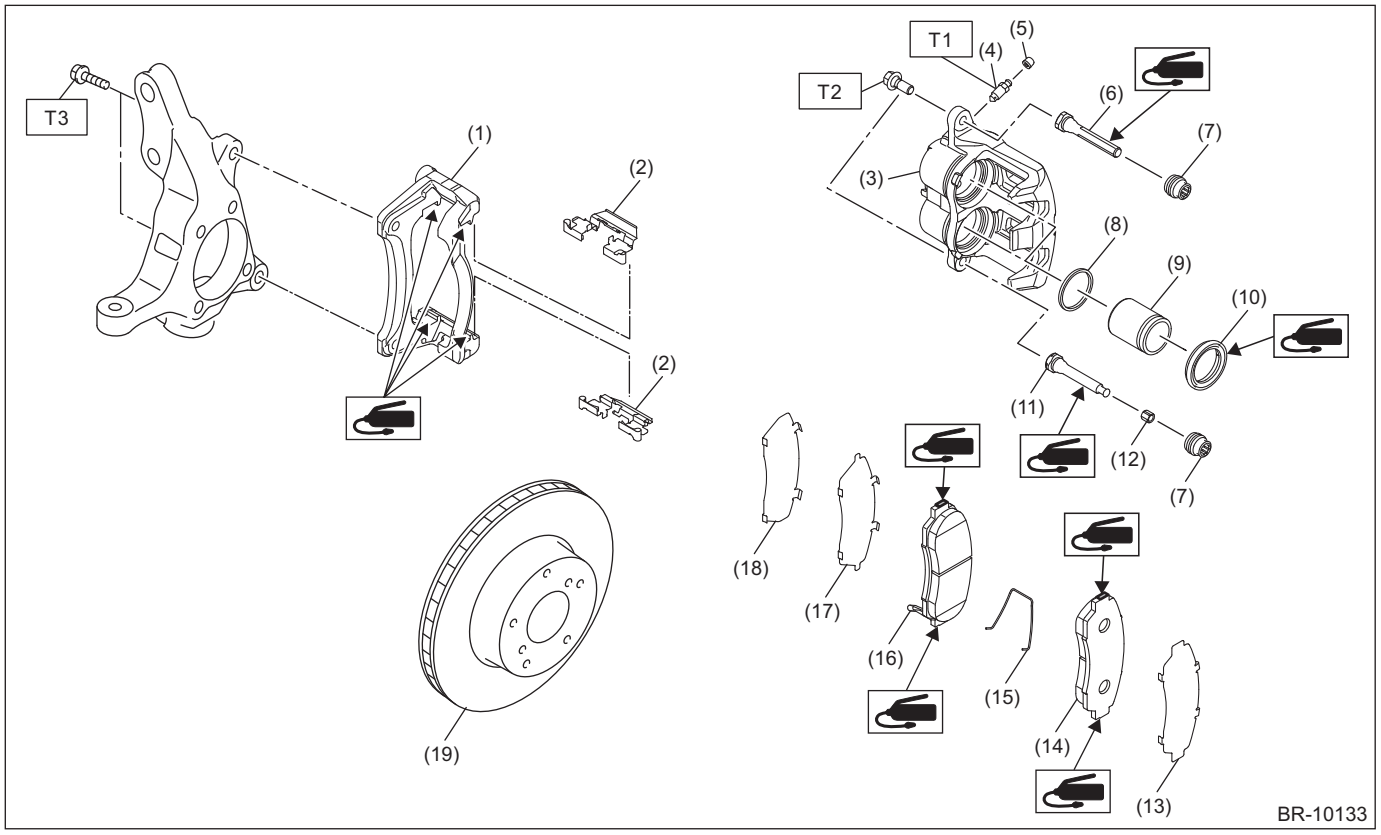
4. BRAKE BOOSTER

Item		Specification	
Type		Vacuum suspended	
Effective diameter	mm (in)	208 + 229 (8.19 + 9.02)	
Brake fluid pressure		Brake pedal force N (kgf, lbf)	Fluid pressure kPa (kgf/cm^2, psi)
When engine is stopped		147 (15, 33)	514 (5.24, 74.53)
		294 (30, 66)	1,551 (16, 225)
When engine is running and vacuum pressure is at 66.7 kPa (500 mmHg, 19.69 inHg)		147 (15, 33)	6,177 (63, 896)
		294 (30, 66)	11,273 (115, 1,635)

5. BRAKE LINE, BRAKE PEDAL AND BRAKE FLUID

CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• When refilling brake fluid, do not allow dirt or dust to get into the reservoir tank.
• Always use new SUBARU genuine brake fluid when replacing or refilling the fluid. Do not reuse drained brake fluid.

Item		Specification
Brake line		Dual circuit system
Brake pedal	Type	Suspended type
	Free play mm (in)	0.5 — 2.7 (0.02 — 0.11) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]
Brake fluid		FMVSS No. 116, DOT3, or DOT4

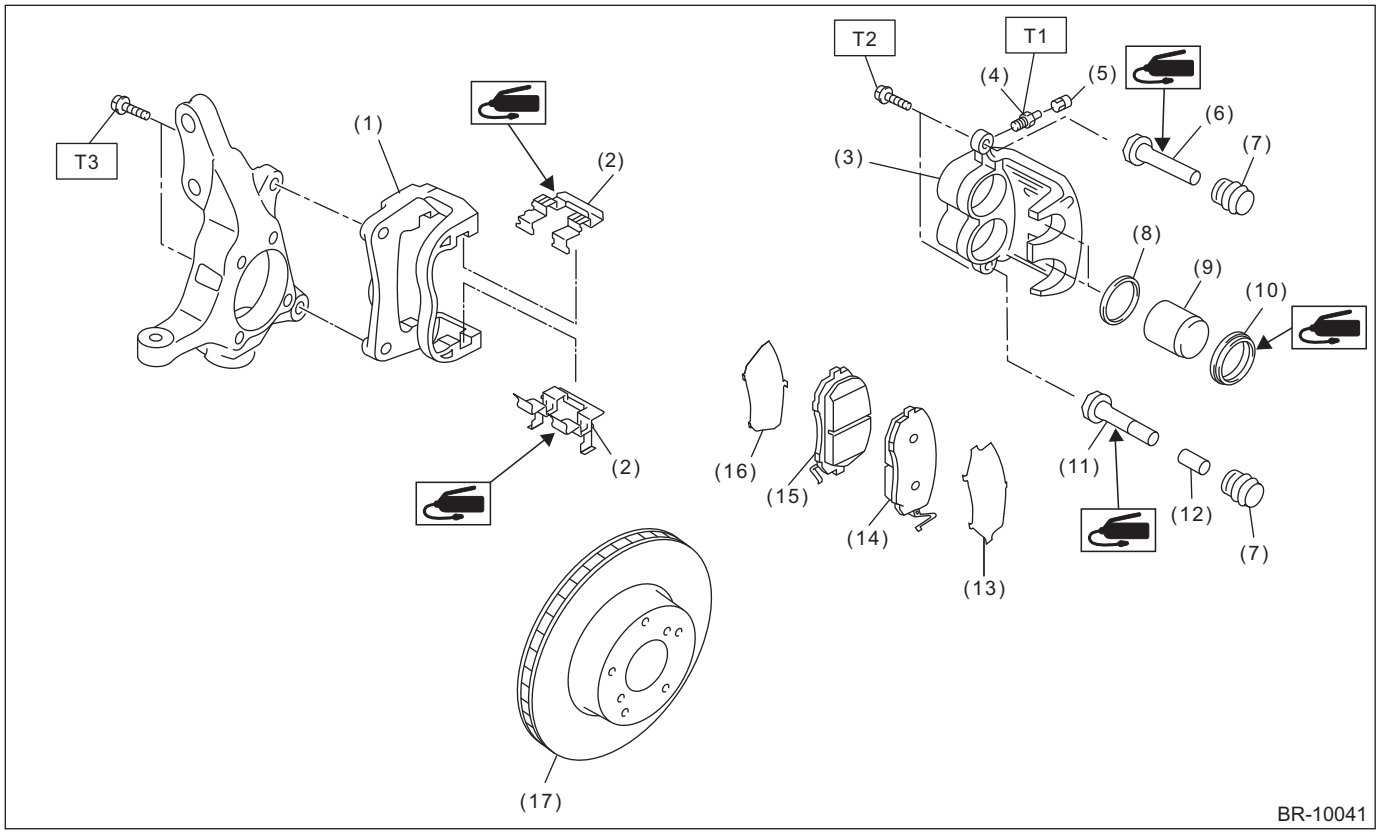


6. DAMAGE TO BRAKE PARTS

CAUTION:
• Check that there are no deformation, excessive rusting and rubber part deterioration.
• Dirt, sand and wear debris are easy to accumulate around the installation area of the brake bad. After removing the deposits carefully, apply grease. If serious damage is detected on any part, replace with a new part.
• In the area where salt is sprayed on a road to melt snow in winter, check the brake parts for damage caused by rust or sticking of sliding parts in every periodic inspection. Take rust prevention measures as required.

B: COMPONENT

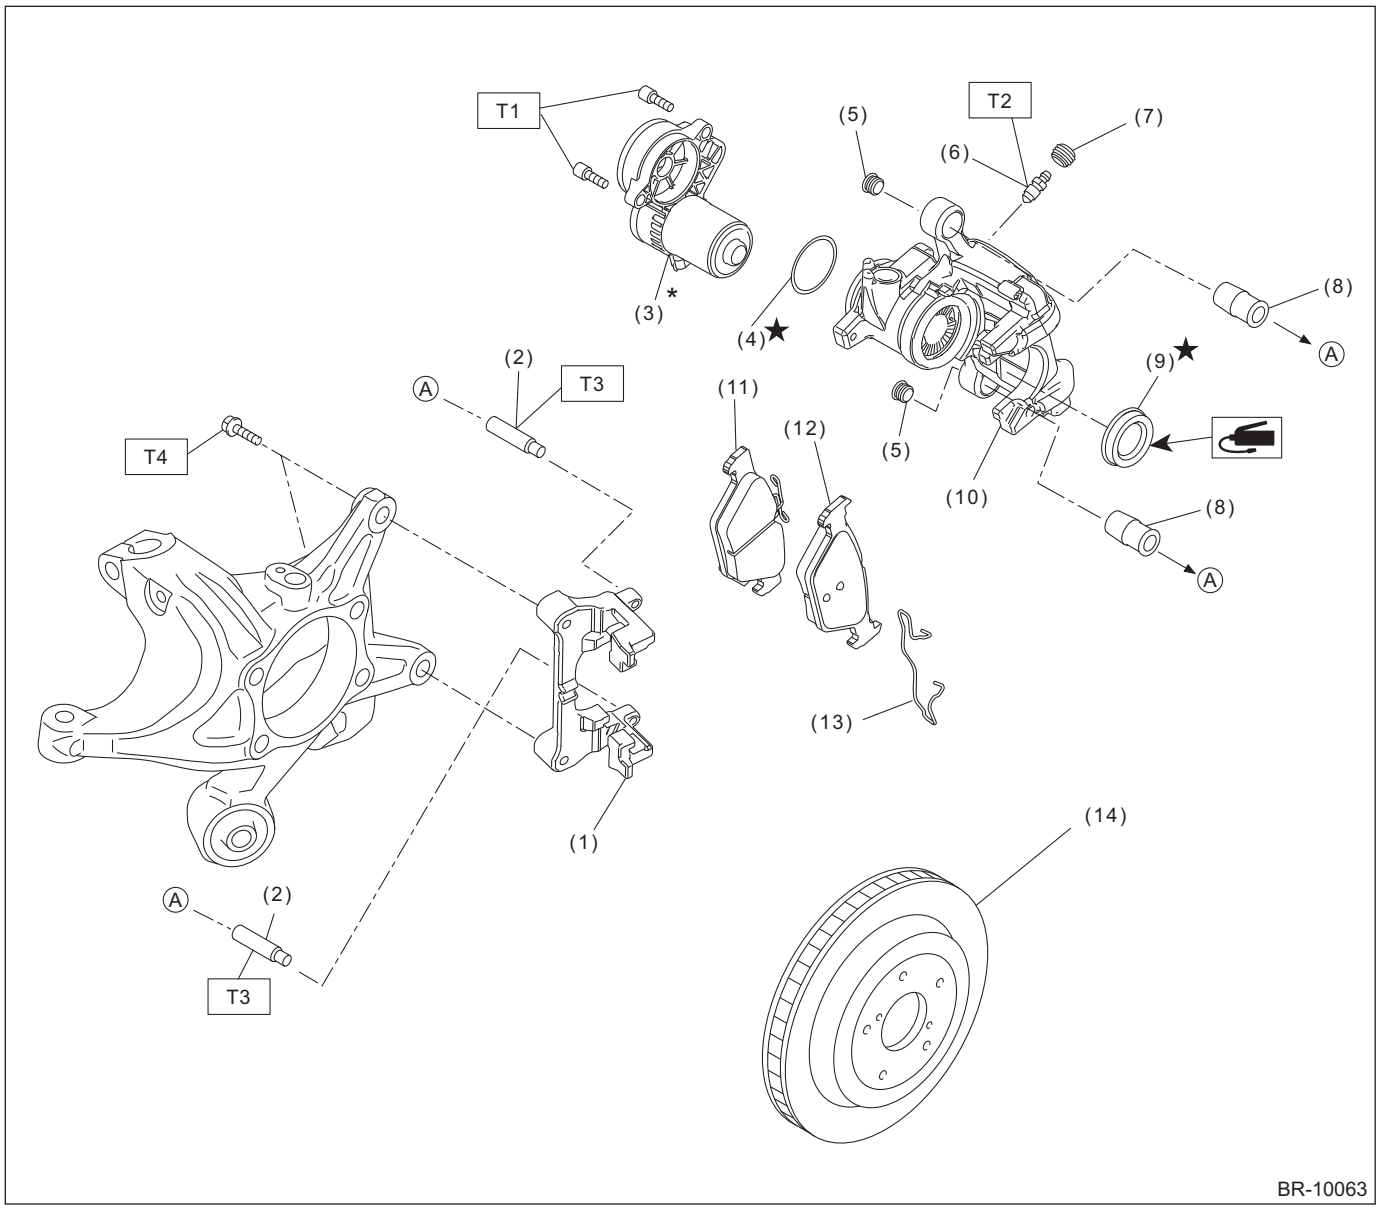
1. FRONT DISC BRAKE



- 16-inch

(1)	Support - front disc brake	(9)	Piston - disc brake	(17)	Shim - disc brake front inner A
(2)	Pad clip - front brake	(10)	Piston boot	(18)	Shim - disc brake front inner B
(3)	Caliper body	(11)	Lock pin - front brake	(19)	Disc rotor (ventilated type)
(4)	Bleeder - screw	(12)	Lock pin - sleeve		
(5)	Cap - bleeder	(13)	Shim - disc brake front outer		
(6)	Guide pin - front brake	(14)	Pad - disc brake front outer		
(7)	Pin boot	(15)	Spring - brake pad		
(8)	Piston seal	(16)	Pad - disc brake front inner		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8.5 (0.9, 6.2)
T2: 50 (5.1, 36.9)
T3: 120 (12.2, 88.5)

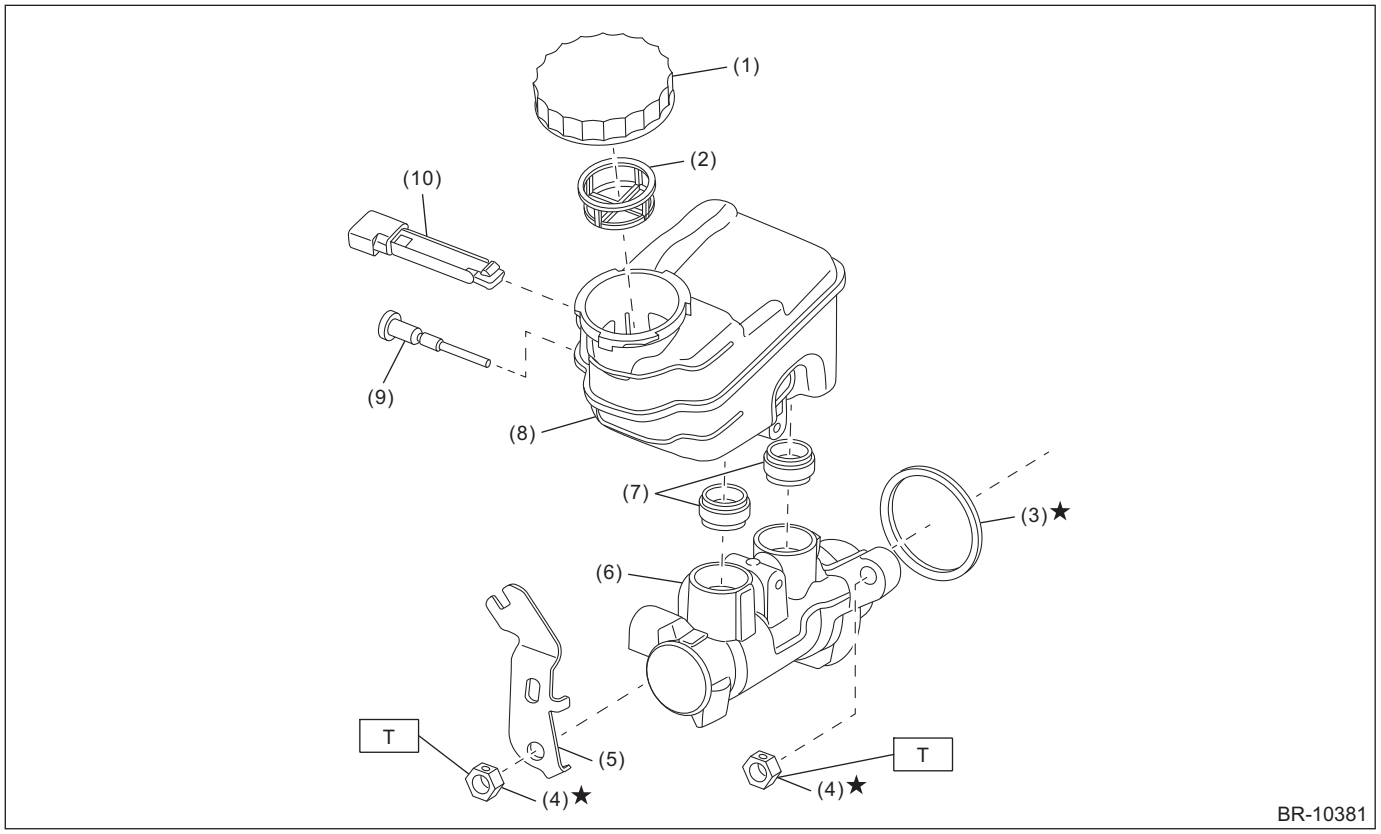


- 17-inch

(1) Support - front disc brake
(2) Pad clip - front brake
(3) Caliper body
(4) Bleeder - screw
(5) Cap - bleeder
(6) Guide pin - front brake
(7) Pin boot
(8) Piston seal
(9) Piston - disc brake
(10) Piston boot
(11) Lock pin - front brake
(12) Lock pin - sleeve
(13) Shim - disc brake front outer
(14) Pad - disc brake front outer
(15) Pad - disc brake front inner
(16) Shim - disc brake front inner
(17) Disc rotor (ventilated type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 27 (2.8, 20.3)
T3: 120 (12.2, 88.5)

2. REAR DISC BRAKE

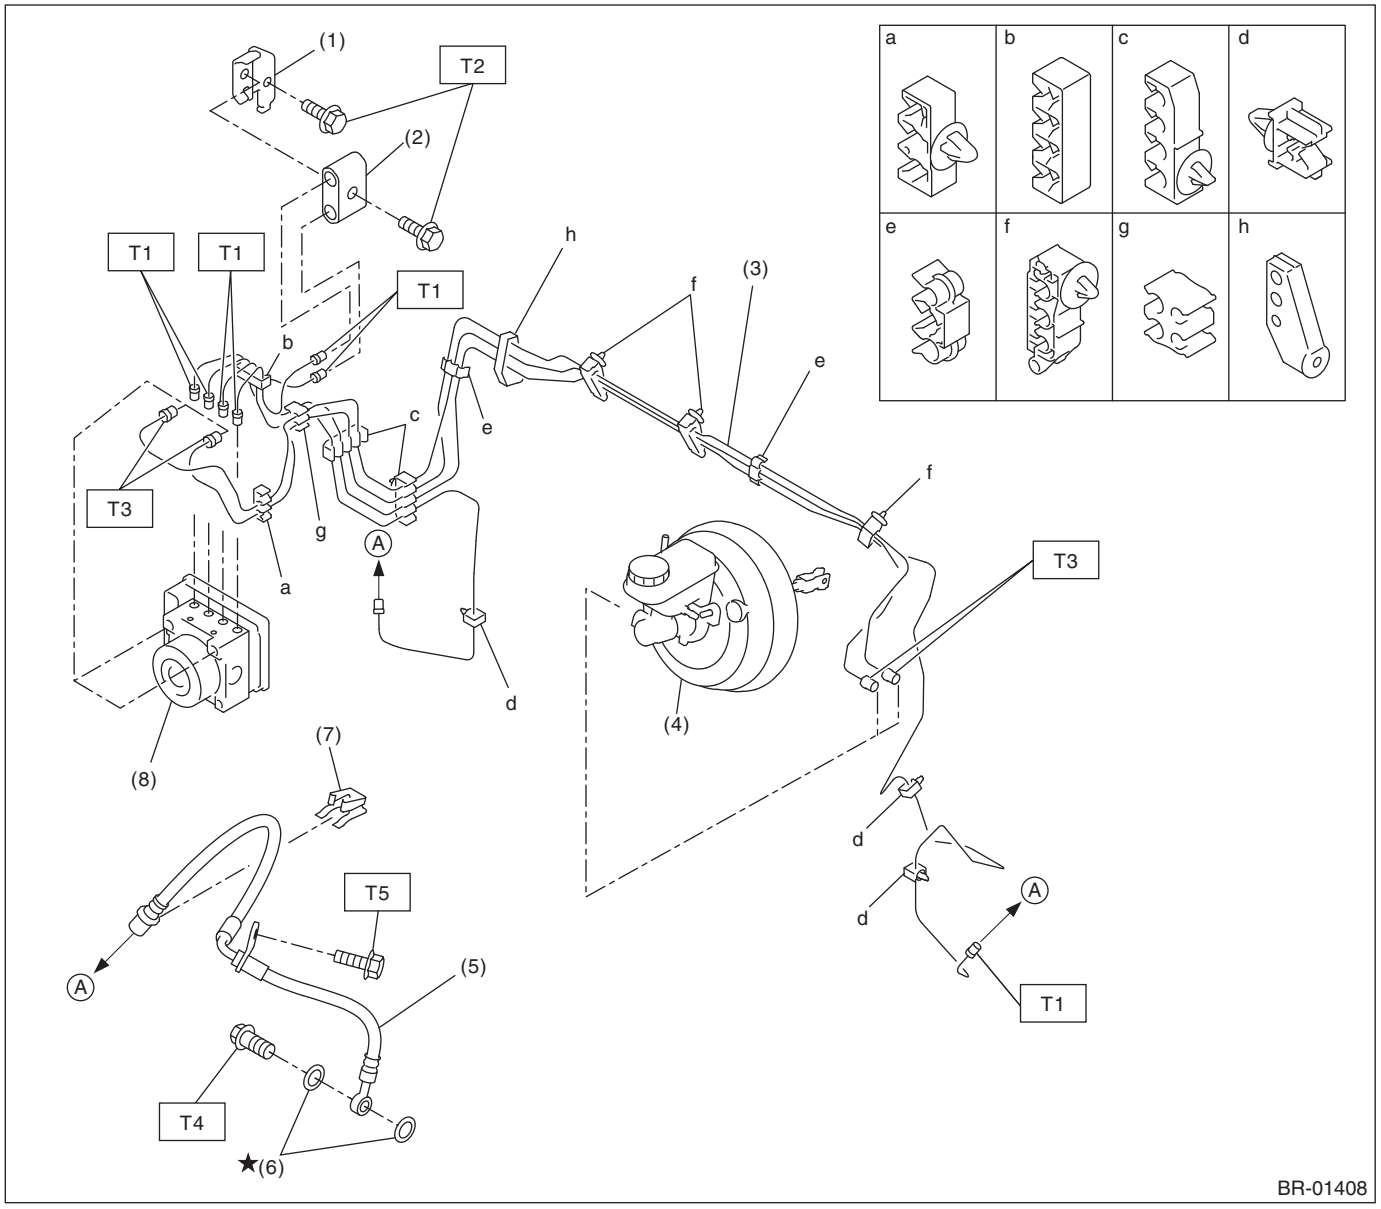


(1)	Support - rear disc brake	(8)	Pin boot
(2)	Guide pin - rear brake	(9)	Piston boot
(3)	Parking brake actuator ASSY	(10)	Caliper body
(4)	O-ring	(11)	Pad - disc brake rear inner
(5)	Cap	(12)	Pad - disc brake rear outer
(6)	Bleeder - screw	(13)	Pad clip
(7)	Cap - bleeder	(14)	Disc rotor (ventilated type)

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	***8 (0.8, 5.9)***
T2:	***17 (1.7, 12.5)***
T3:	***25 (2.5, 18.4)***
T4:	***66 (6.7, 48.7)***

*: The component cannot be reused when the emergency release of parking brake was performed or when the actuator has a malfunction.

3. MASTER CYLINDER

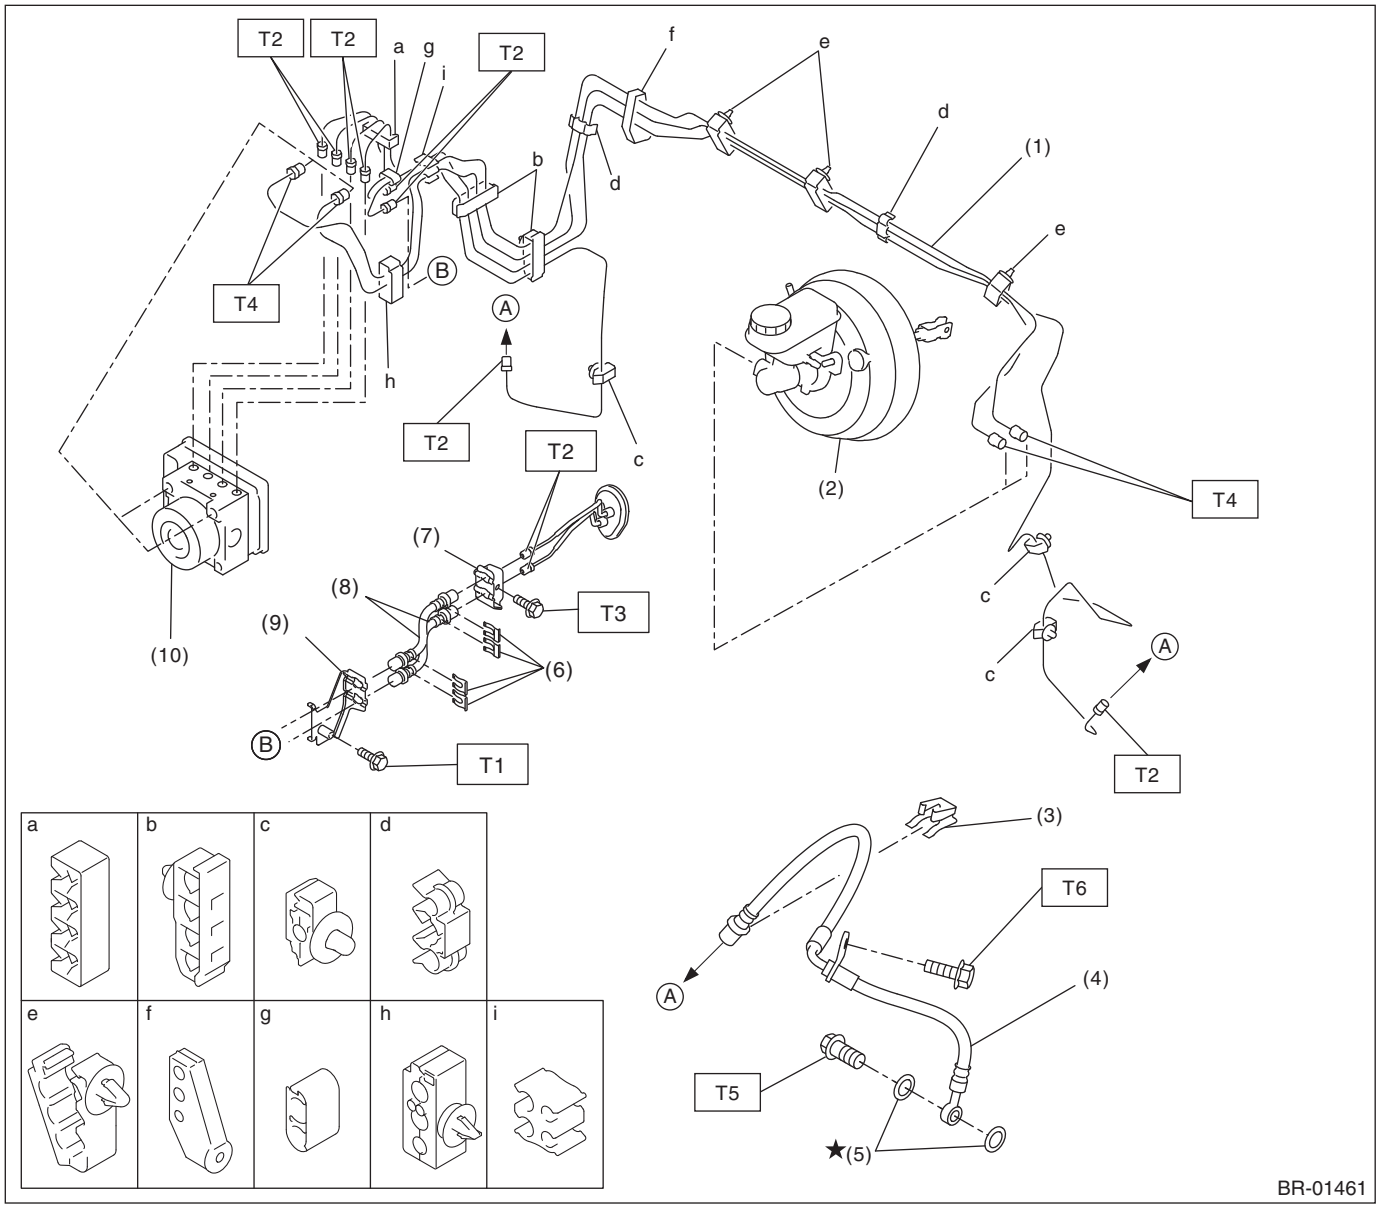


(1) Cap - reservoir tank
(2) Filter - master cylinder
(3) Ring seal
(4) Nut
(5) Bracket - master cylinder
(6) Cylinder body ASSY
(7) Seal
(8) Reservoir tank
(9) Pin
(10) Level - indicator

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

4. FRONT BRAKE PIPES AND HOSES

- Models without EyeSight

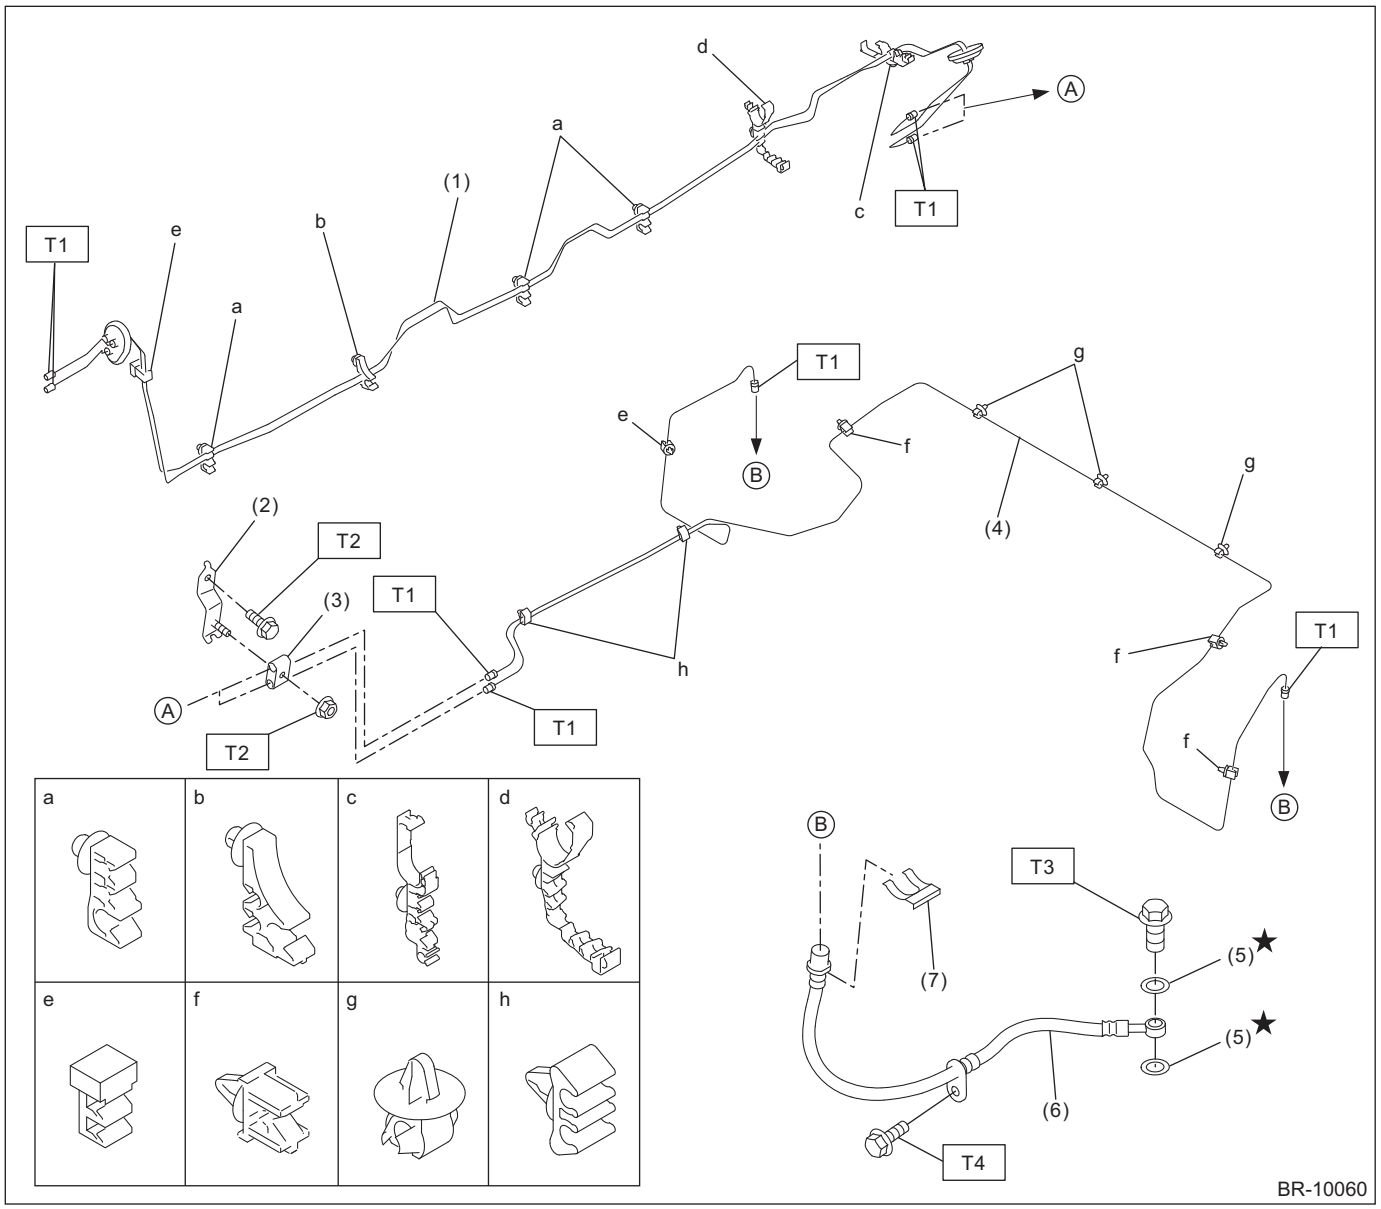


(1)	Bracket	(5)	Front brake hose RH/LH
(2)	Connector - two-way	(6)	Gasket
(3)	Front brake pipe ASSY	(7)	Clamp
(4)	Master cylinder ASSY	(8)	VDC control module and hydraulic control unit (VDCCM&H/U)

Tightening torque: N·m (kgf-m, ft-lb)

T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 19 (1.9, 14)
T4: 26 (2.7, 19.2)
T5: 33 (3.4, 24.3)

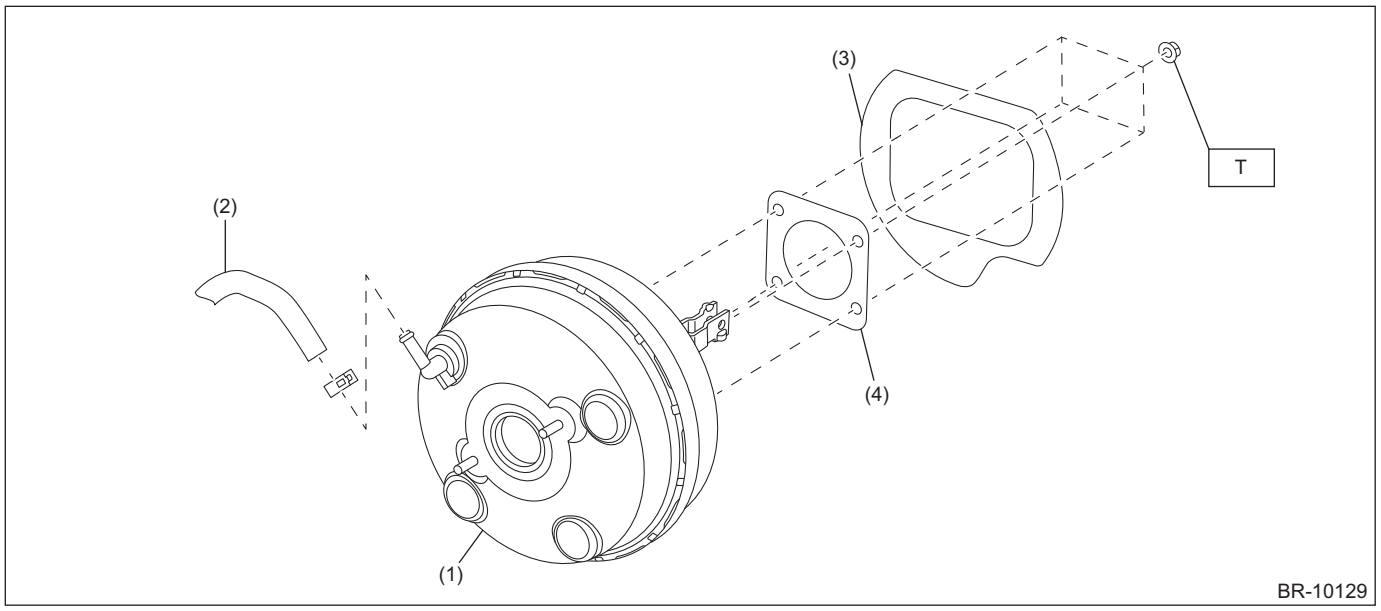
- Models with EyeSight



(1)	Front brake pipe ASSY	(6)	Clamp
(2)	Master cylinder ASSY	(7)	Bracket
(3)	Clamp	(8)	Brake hose ASSY
(4)	Front brake hose RH/LH	(9)	Bracket
(5)	Gasket	(10)	VDC control module and hydraulic control unit (VDCCM&H/U)

Tightening torque: N·m (kgf-m, ft-lb)

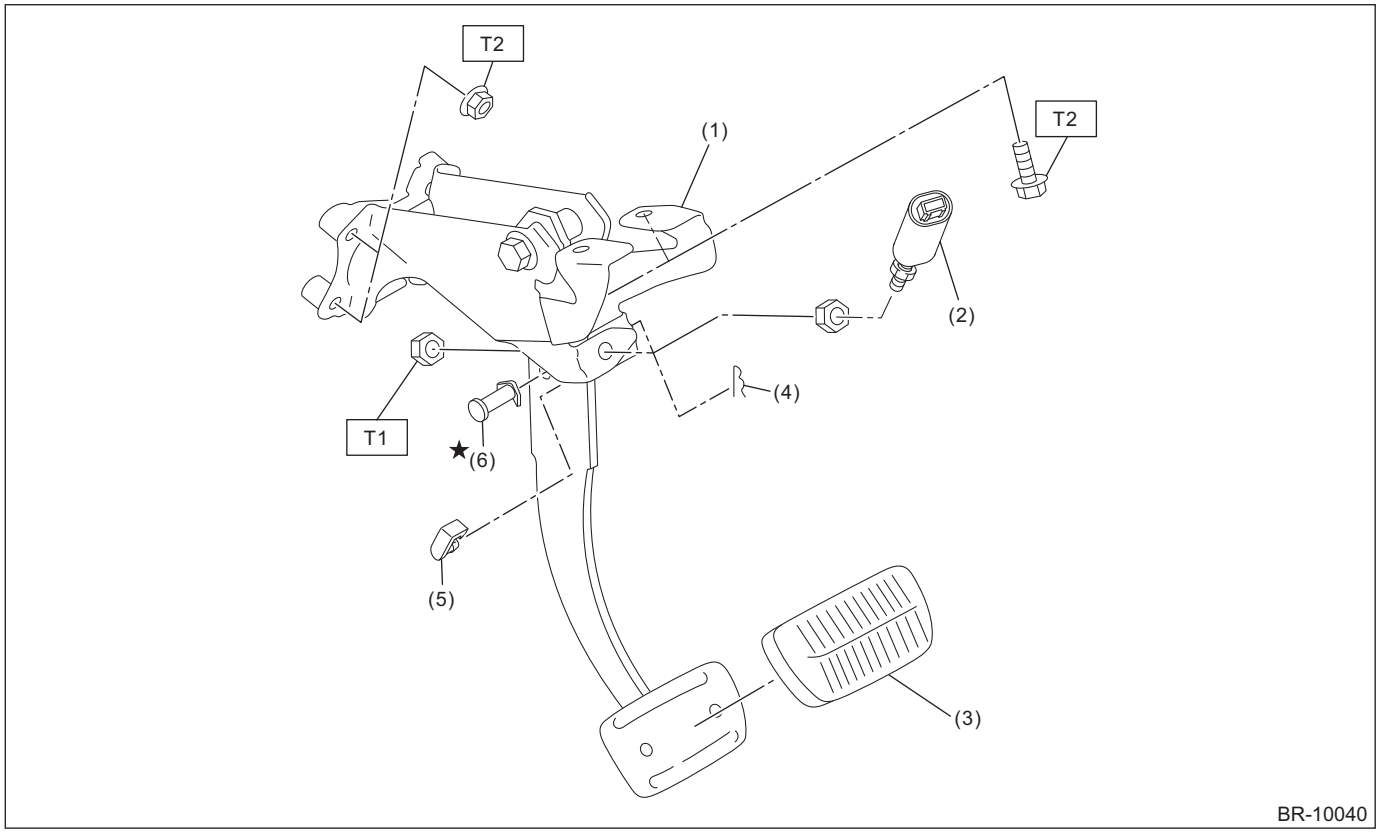
T1: 7.5 (0.8, 5.5)
T2: 15 (1.5, 11.1)
T3: 18 (1.8, 13.3)
T4: 19 (1.9, 14)
T5: 26 (2.7, 19.2)
T6: 33 (3.4, 24.3)



5. CENTER AND REAR BRAKE PIPES AND HOSES

(1) Center brake pipe ASSY
(2) Bracket
(3) Connector
(4) Rear brake pipe ASSY
(5) Gasket
(6) Rear brake hose RH/LH
(7) Clamp

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 26 (2.7, 19.2)
T4: 33 (3.4, 24.3)



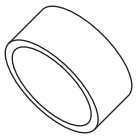
6. BRAKE BOOSTER

(1) Vacuum booster ASSY
(2) Vacuum hose
(3) Gasket (model with EyeSight)
(4) Gasket

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

7. BRAKE PEDAL

(1) Brake pedal ASSY
(2) Stop light switch
(3) Brake pedal pad
(4) Snap pin
(5) Brake pedal stopper
(6) Clevis pin



Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.

D: PREPARATION TOOL

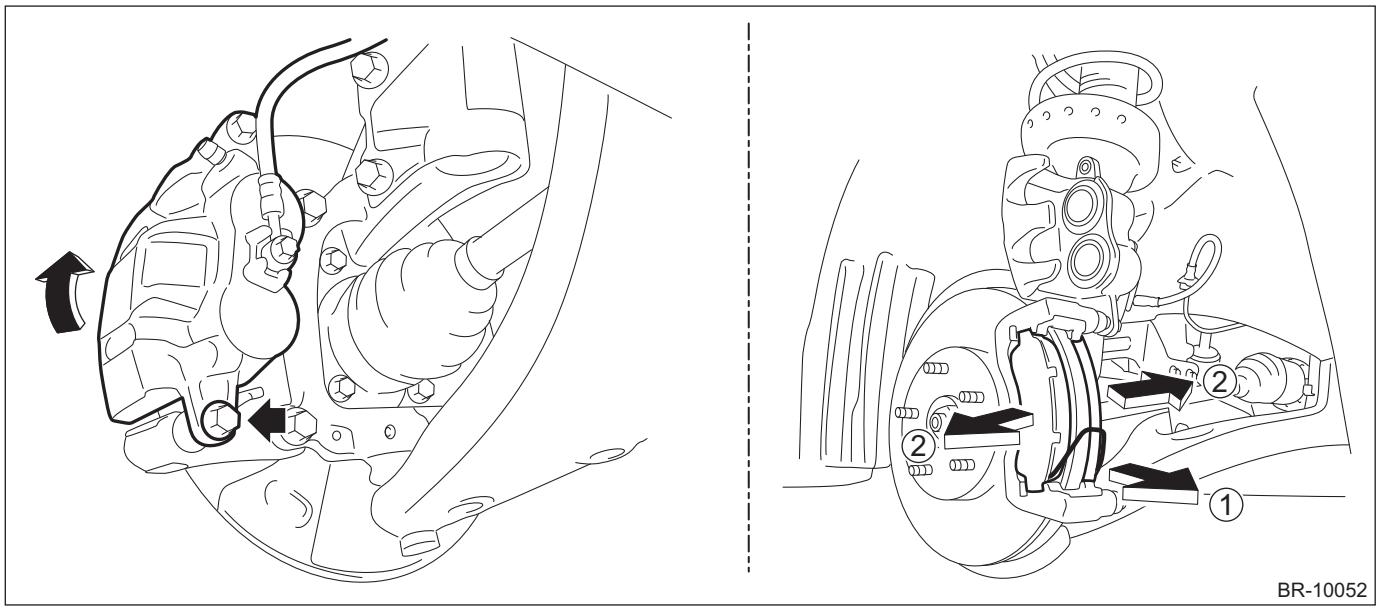
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST99099AL000	99099AL000	PISTON BOOT INSTALLER	Used for installing the piston boot.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring the operation and airtightness of the brake booster.
Vacuum gauge	Used for measuring the operation and airtightness of the brake booster.
Dial gauge	Used for measuring brake disc rotor run-out.
Cap	Used for brake hose installing portion of brake disc caliper.
Disc brake piston tool	Used for pushing back the electronic parking brake piston. • KTC disc parking tool rotor • OTC brake caliper tool adapter

2. Front Brake Pad



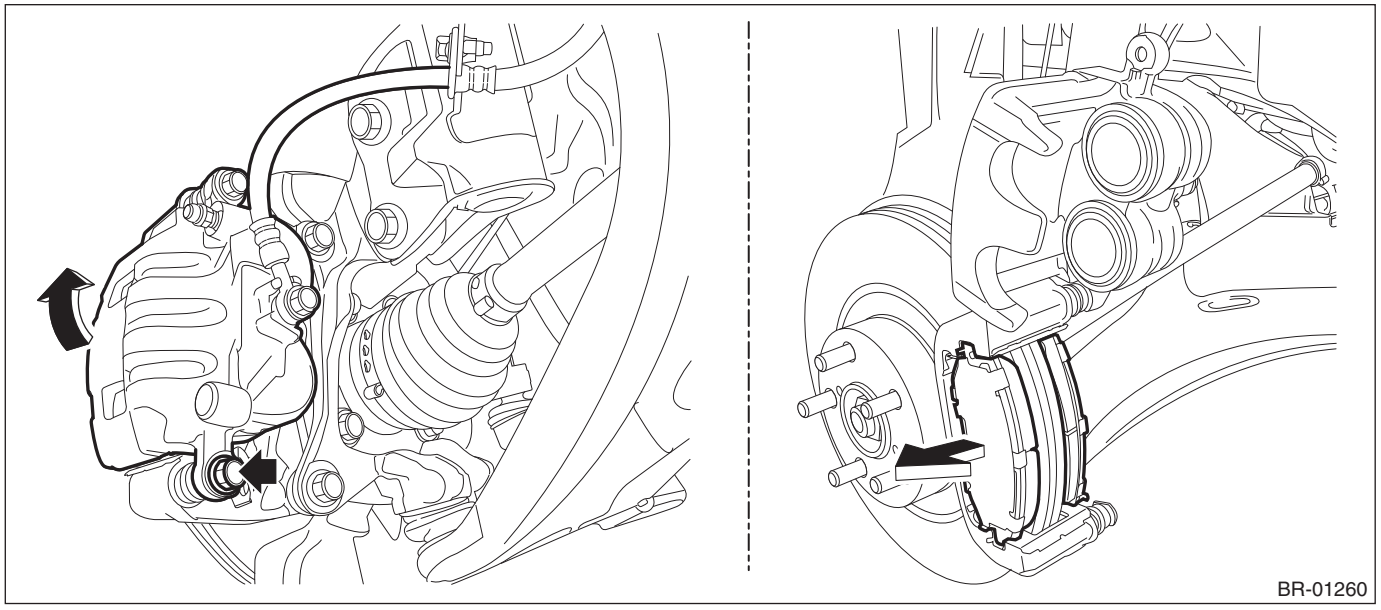
A: REMOVAL

1. 16-INCH TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.

NOTE:
Do not disconnect the brake hose from the caliper body assembly.

(1) Remove the caliper bolt on the lower side.
(2) Lift the caliper body assembly.
(3) Remove the spring - brake pad and the pad - disc brake front.

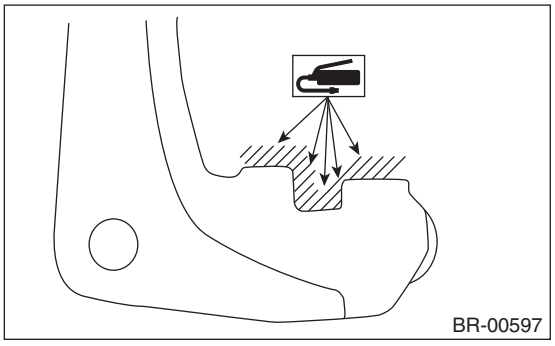


2. 17-INCH TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.

(1) Remove the caliper bolt on the lower side.
(2) Raise the caliper body assembly and remove the pad - disc brake front.

NOTE:
Do not disconnect the brake hose from the caliper body assembly.



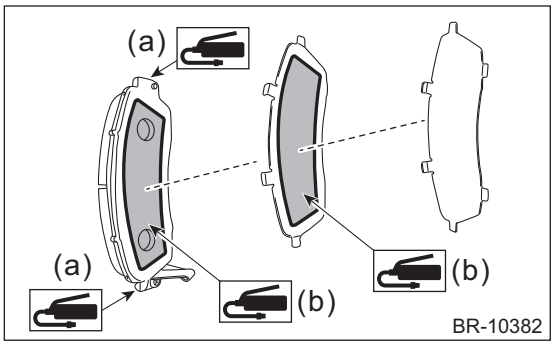
B: INSTALLATION

1. 16-INCH TYPE

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.

1) Check the brake pad. <Ref. to BR-18, INSPECTION, Front Brake Pad.>
2) Apply a thin coat of grease to the support - front disc brake.

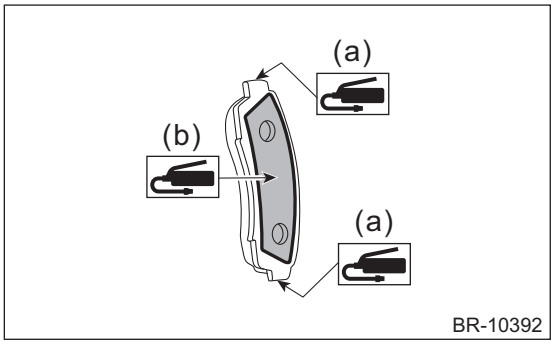
Preparation items:
Grease: Dow Corning Molykote G-5029 or equivalent



3) Apply a thin coat of grease to the shim - disc brake front and the pad - disc brake front.

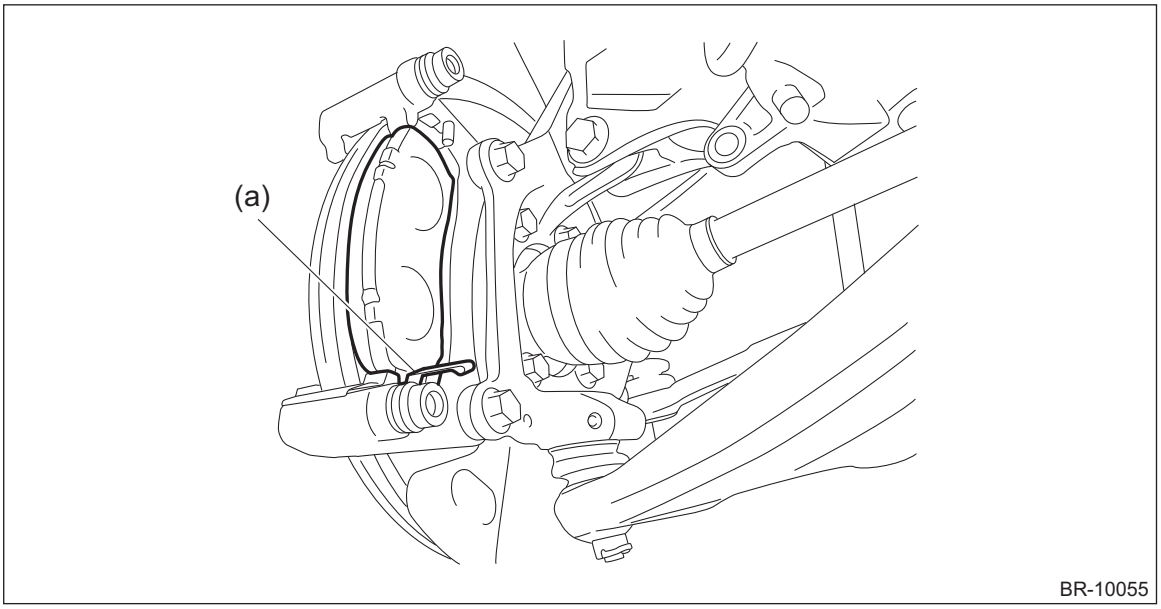
- Inner side:

Apply a thin coat of grease to the shim - disc brake front inner and the pad - disc brake front.



Preparation items:
Grease (a): Dow Corning Molykote G-5029 or equivalent
Grease (b): Dow Corning Molykote M-77 or equivalent

- Outer side:

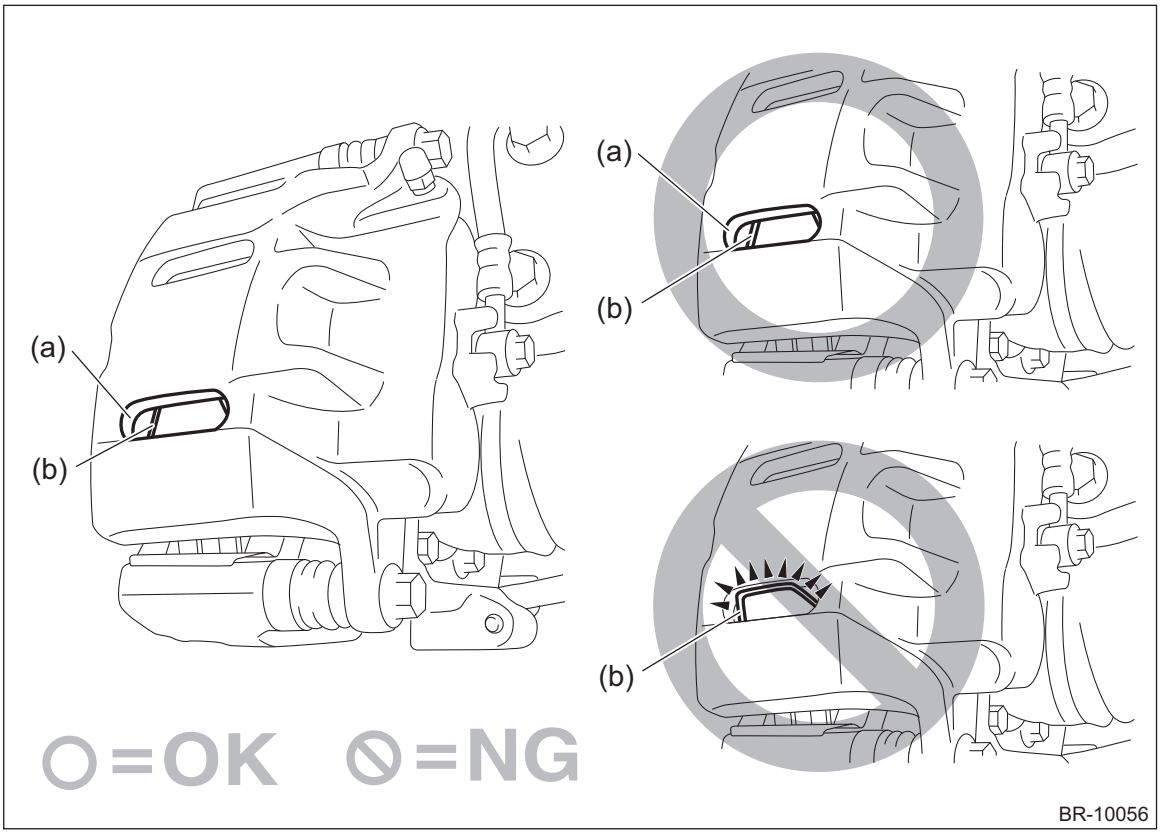


Apply a thin coat of grease to the pad - disc brake front.

Preparation items:
Grease (a): Dow Corning Molykote G-5029 or equivalent
Grease (b): Dow Corning Molykote M-77 or equivalent

4) Install the spring - brake pad and the pad - disc brake front.

NOTE:
Install so that the pad wear indicator faces the inner side.



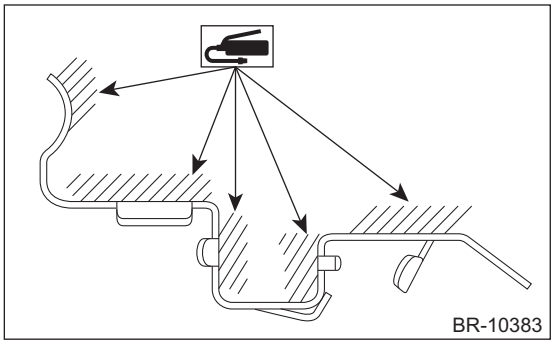
(a) Pad wear indicator

5) Install the caliper body assembly.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

NOTE:
Install so that the spring - brake pad (b) does not protrude out of the hole (a).

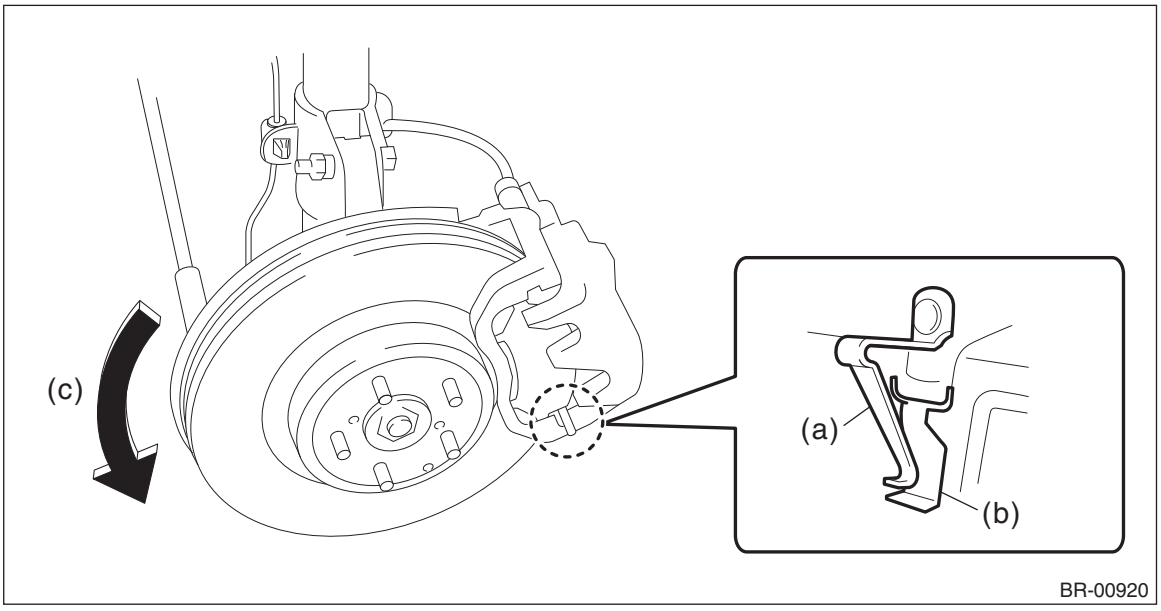
6) Install the front wheels.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

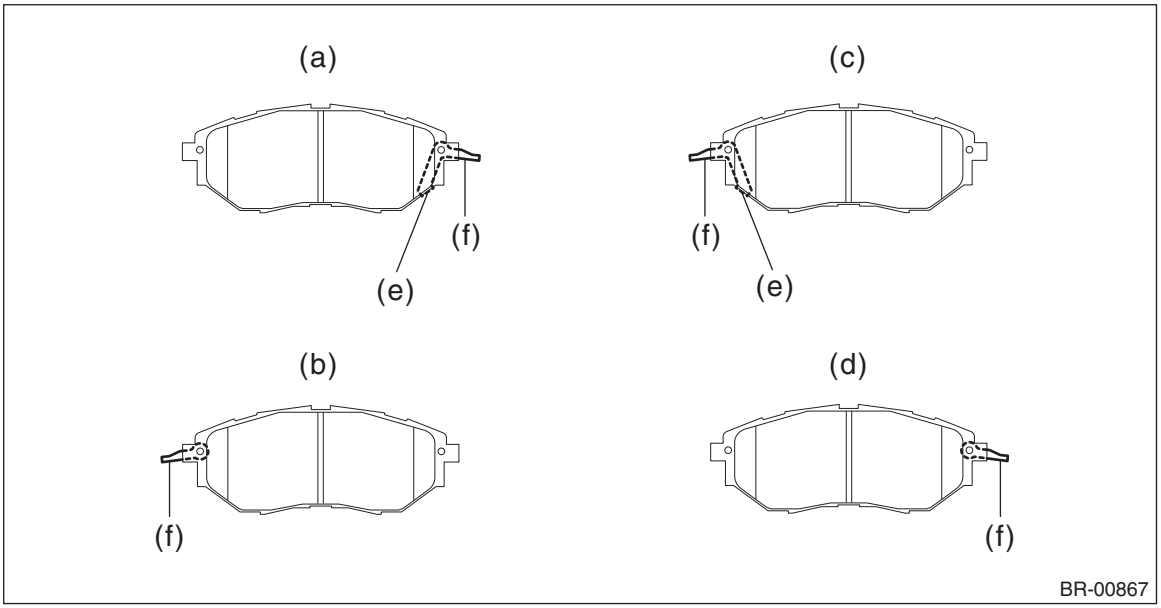
2. 17-INCH TYPE

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.



1) Check the brake pad. <Ref. to BR-18, INSPECTION, Front Brake Pad.>
2) Apply a thin coat of grease to the pad clip.

Preparation items:
Grease: An item contained in the pad kit or equivalent



3) Install the pad - disc brake front.

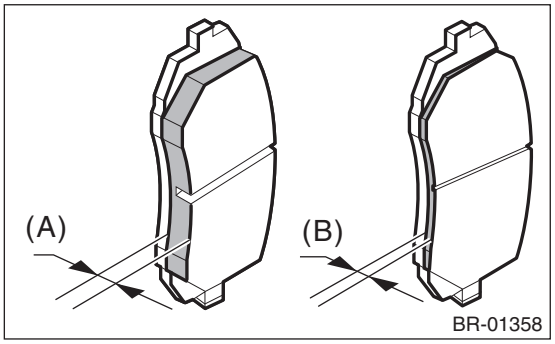
CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of disc rotor rotation, as shown in the figure.
• When installing, correctly place the pad return spring onto the catch surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the pad - disc brake front with a new part.

(a) Pad return spring (b) Supporting surface of pad clip (c) Disc rotor rotation direction

NOTE:
Install the pad wear indicator in proper direction.

(a) LH — IN (c) RH — IN (e) Pad wear indicator
(b) LH — OUT (d) RH — OUT (f) Pad return spring

4) Install the caliper body assembly.



Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
5) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

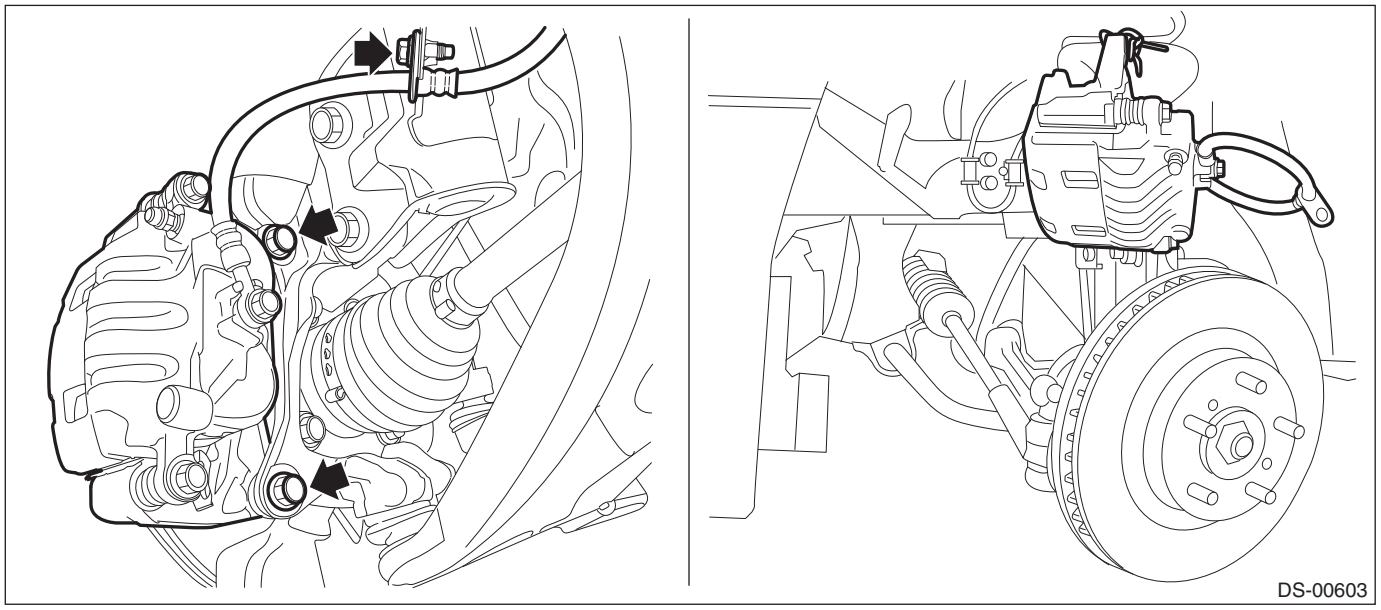
1) Check the thickness (A) of the pad - disc brake front.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- Wear indicators are installed on the pad - disc brake front inner and the pad - disc brake front outer, and a squeaking sound is heard if the pad is worn to the limit.

	Brake pad type	Standard (A)	Wear limit (B)
Pad thickness	16-inch type	12 mm (0.47 in)	1.5 mm (0.059 in)
	17-inch type	11 mm (0.43 in)	

2) If the wear limit is exceeded in the inspection, replace the pad - disc brake front. <Ref. to BR-18, REPLACEMENT, Front Brake Pad.>

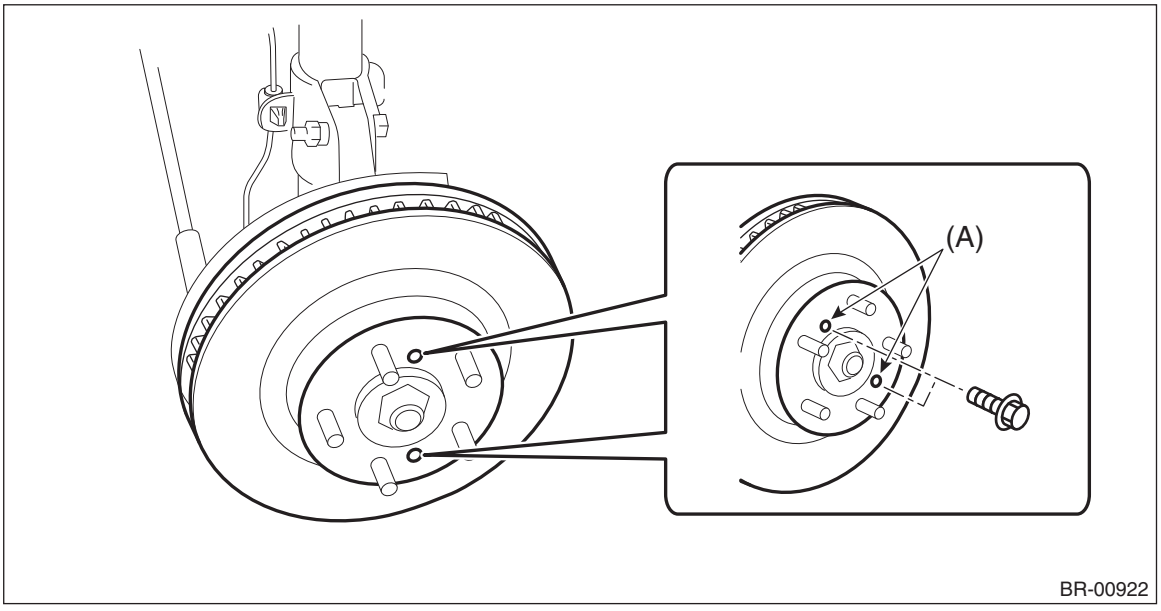
D: REPLACEMENT



1) Remove the pad - disc brake front.
- 16-inch type: <Ref. to BR-13, 16-INCH TYPE, REMOVAL, Front Brake Pad.>
- 17-inch type: <Ref. to BR-13, 17-INCH TYPE, REMOVAL, Front Brake Pad.>

2) Press back the piston - disc brake.
3) Install the pad - disc brake front. <Ref. to BR-14, INSTALLATION, Front Brake Pad.>
- 16-inch type: <Ref. to BR-14, 16-INCH TYPE, INSTALLATION, Front Brake Pad.>
- 17-inch type: <Ref. to BR-16, 17-INCH TYPE, INSTALLATION, Front Brake Pad.>

3. Front Disc Rotor



A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the strut assembly.

3) Remove the disc rotor.

NOTE:
When the disc rotor is difficult to be removed, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

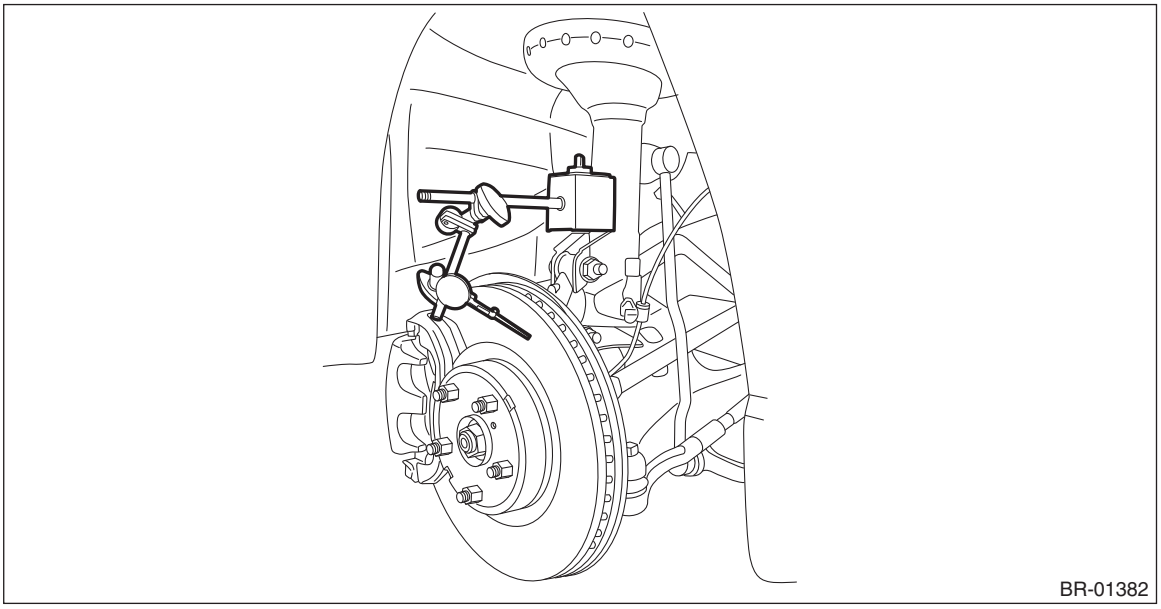
B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the front disc rotor. <Ref. to BR-20, INSPECTION, Front Disc Rotor.>

2) Install the disc rotor.
3) Install the disc brake assembly.

Tightening torque:
Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
4) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



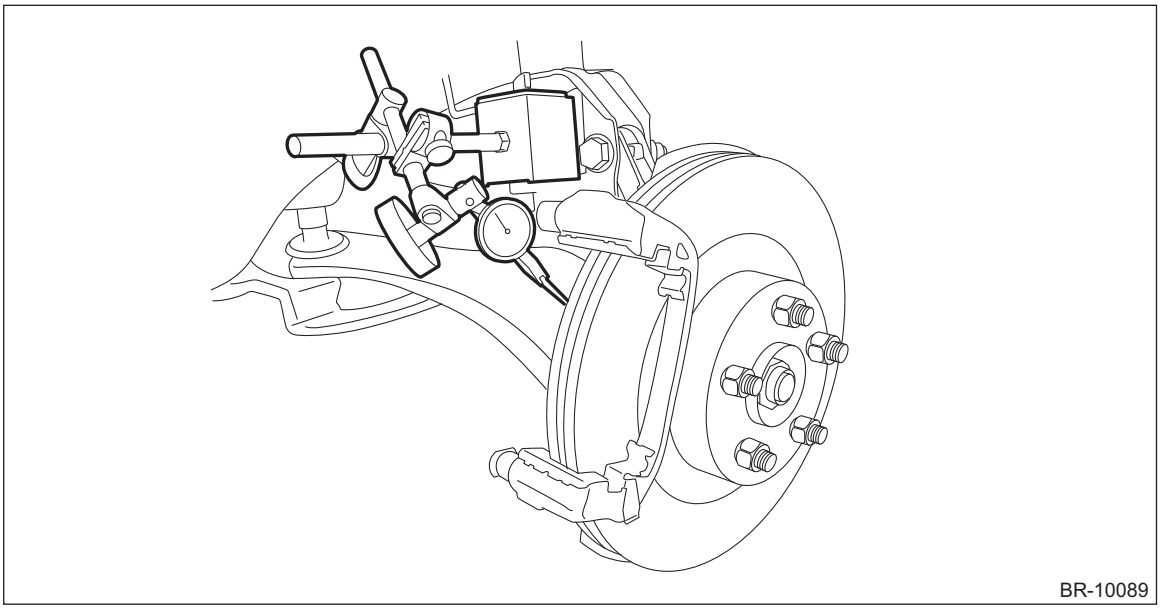
C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - front axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-26, INSPECTION, Front Hub Unit Bearing.>
2) Tighten the wheel nuts to secure disc rotor.
3) Check the disc rotor runout.
(1) Remove the caliper body assembly. <Ref. to BR-19, REMOVAL, Front Disc Rotor.>
(2) Secure the disc rotor by tightening the five wheel nuts.
(3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.002 in)

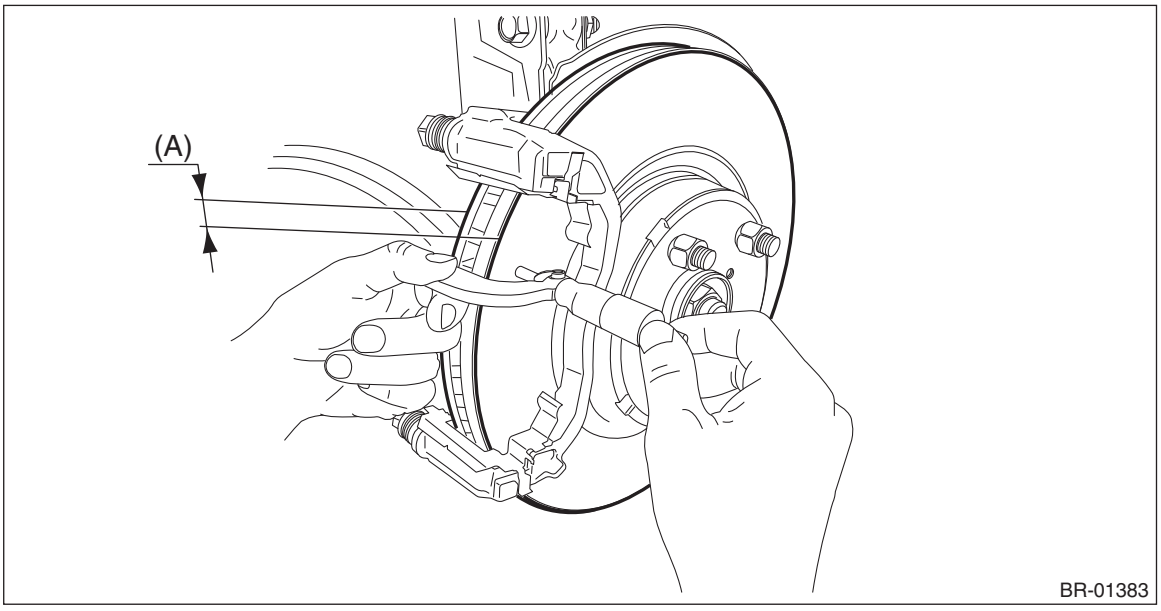
NOTE:
<Example of magnet stand and dial gauge installation>
The location where the magnet stand is installed varies to stabilize the magnet stand.



(4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.002 in)

NOTE:
<Example of magnet stand and dial gauge installation>



The location where the magnet stand is installed varies to stabilize the magnet stand.

BR-10089

4) If the disc rotor runout exceeds service limit, grind the disc rotor.
5) Check the disc rotor thickness after grinding. <Ref. to BR-21, DISC ROTOR THICKNESS CHECK, INSPECTION, Front Disc Rotor.>

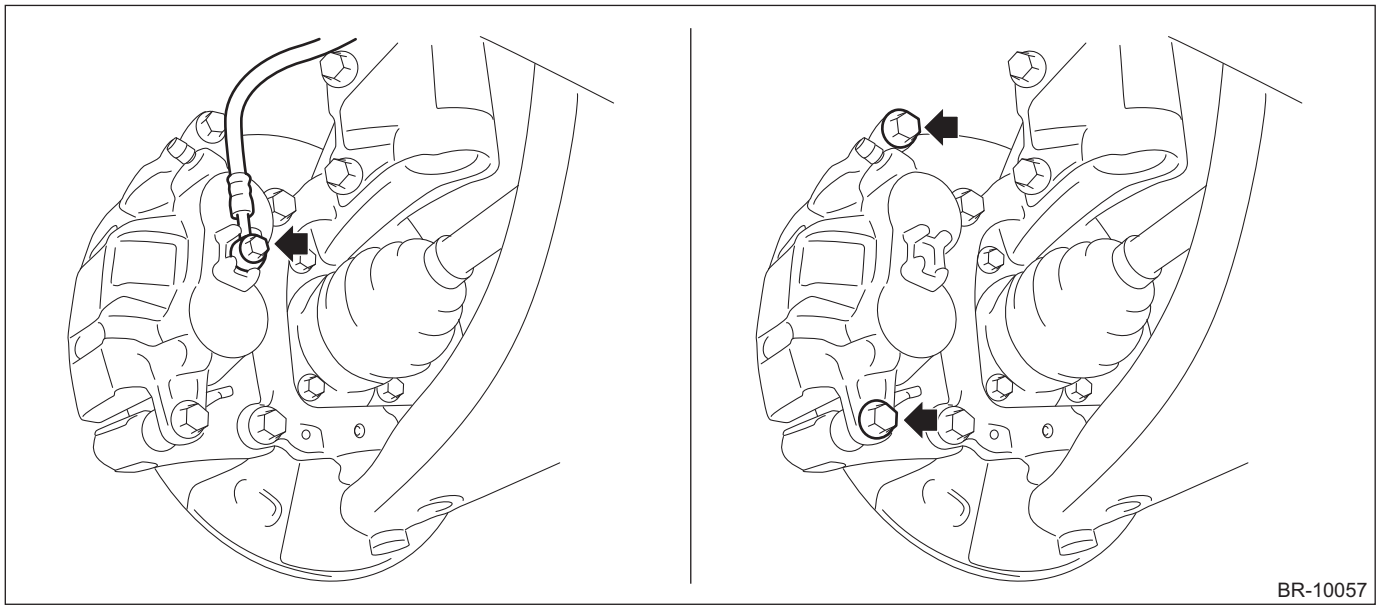
2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

BR-01383

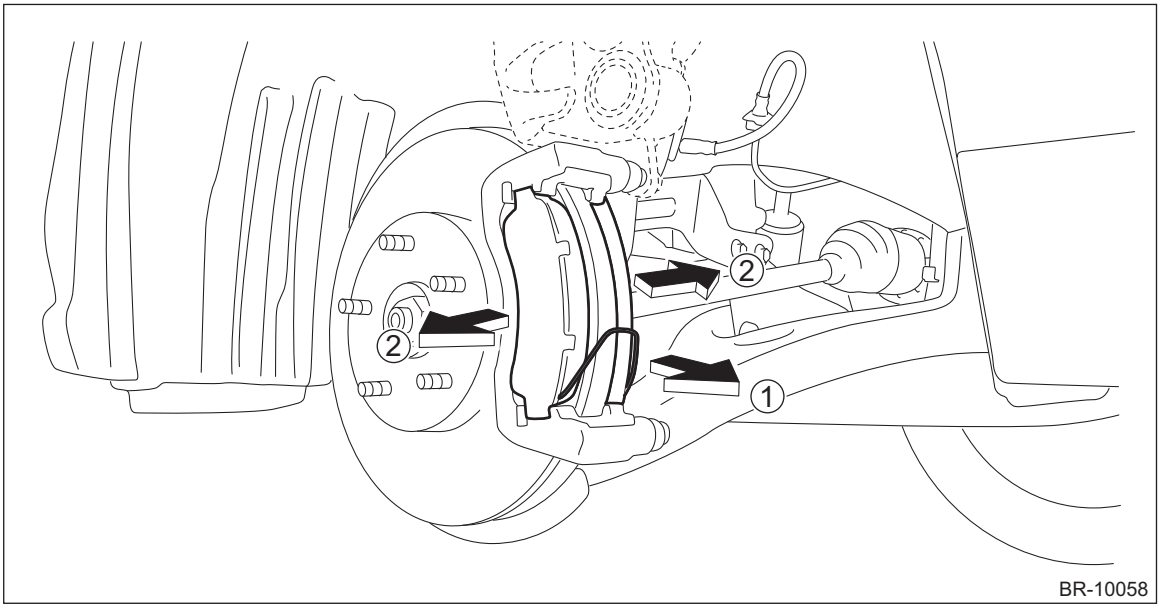
	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	16-inch	28 mm (1.1 in)	26 mm (1.02 in)	294 mm (11.57 in)
	17-inch	30 mm (1.18 in)	28 mm (1.1 in)	316 mm (12.44 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.



4. Front Disc Brake Assembly

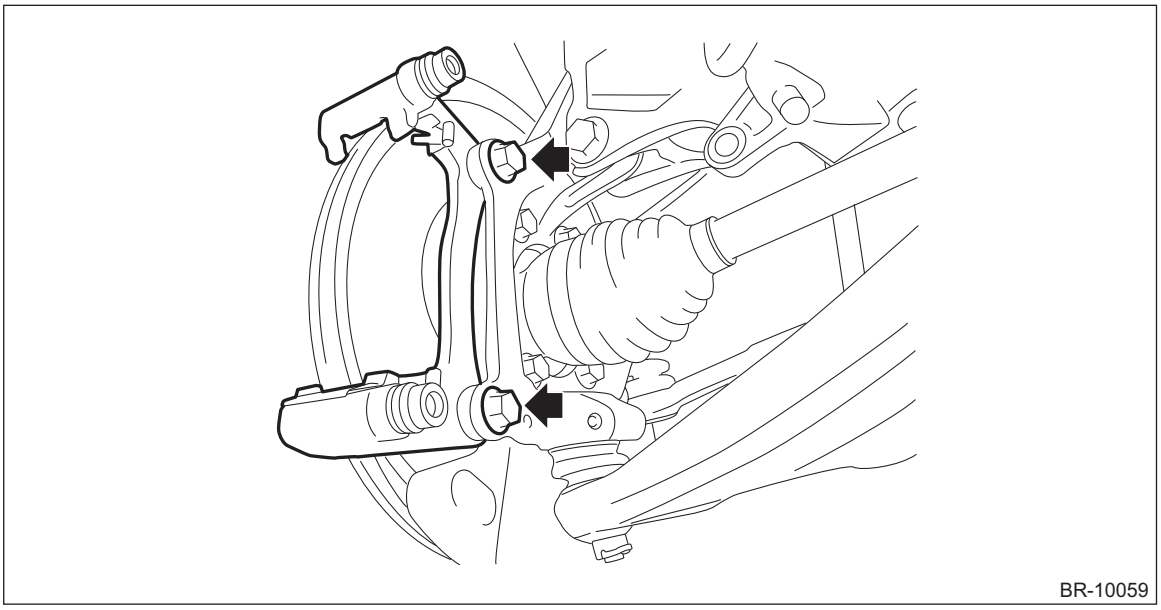
A: REMOVAL



1. 16-INCH TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

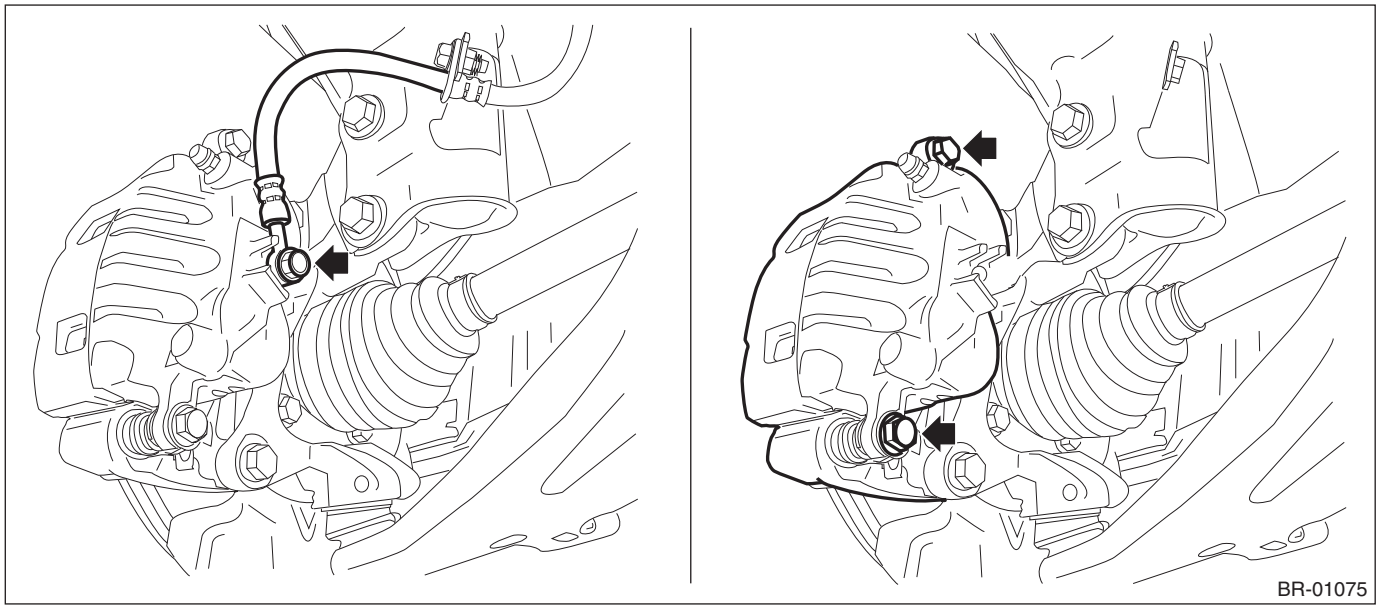
CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



BR-10057

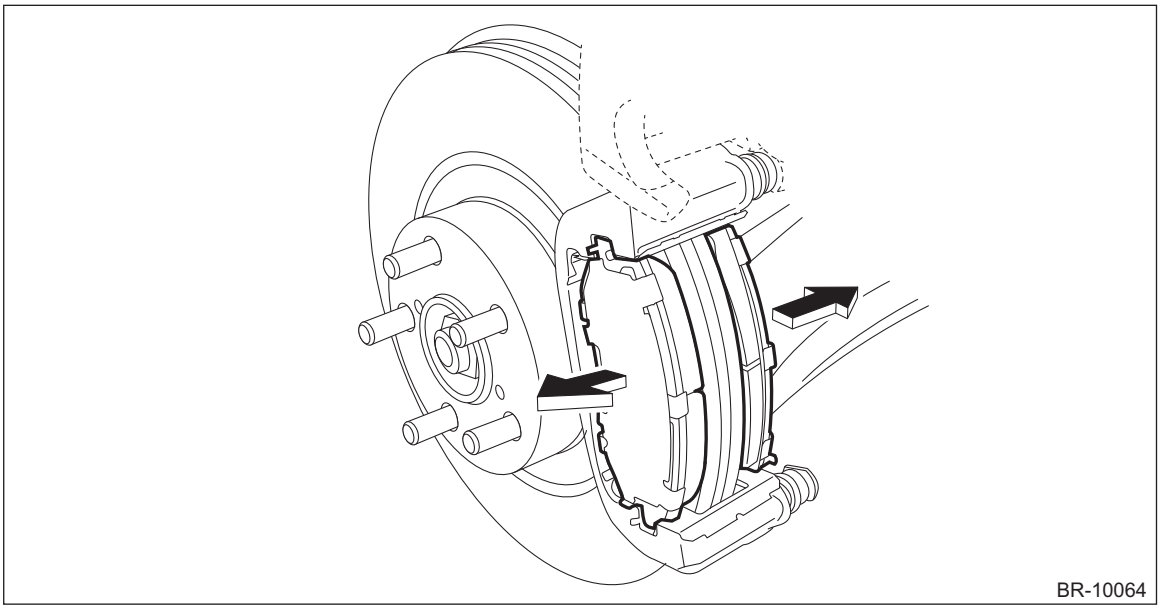
3) Remove the support - front disc brake.
(1) Remove the spring - brake pad and the pad - disc brake front.

BR-10058



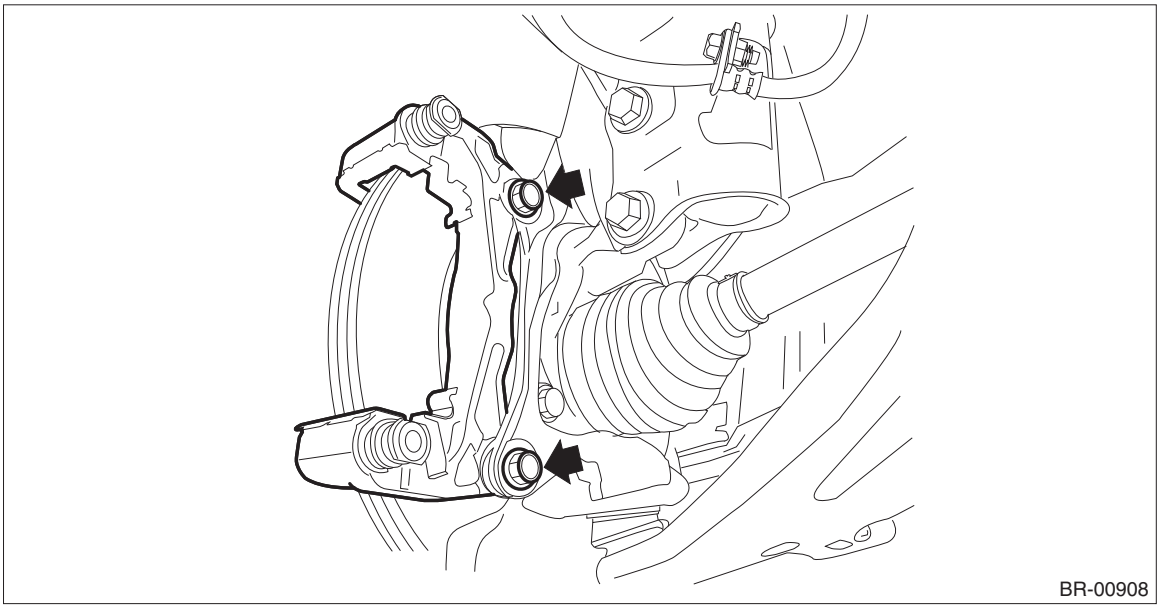
(2) Remove the mounting bolts, and then remove the support - front disc brake.

2. 17-INCH TYPE



1) Lift up the vehicle, and then remove the front wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

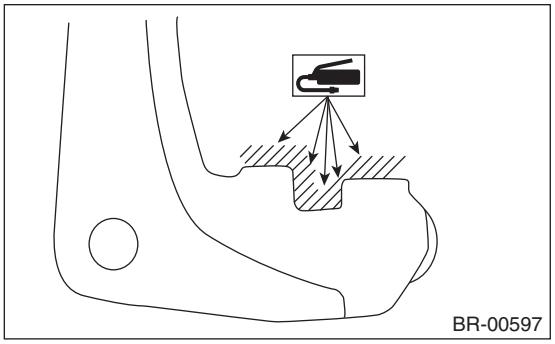
CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



3) Remove the support - front disc brake.

(1) Remove the pad - disc brake front.

(2) Remove the mounting bolts, and then remove the support - front disc brake.



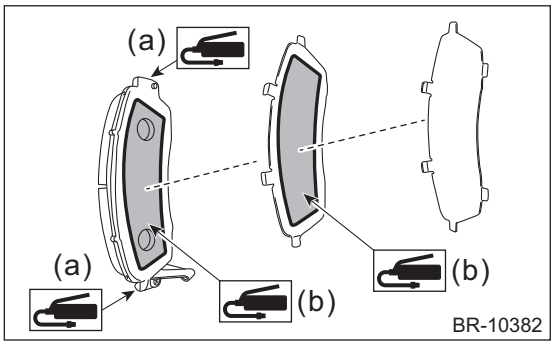
B: INSTALLATION

1. 16-INCH TYPE

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check each part. <Ref. to BR-32, INSPECTION, Front Disc Brake Assembly.>
2) Apply a thin coat of grease to the support - front disc brake.

Preparation items:
Grease: Dow Corning Molykote G-5029 or equivalent

3) Install the support - front disc brake.

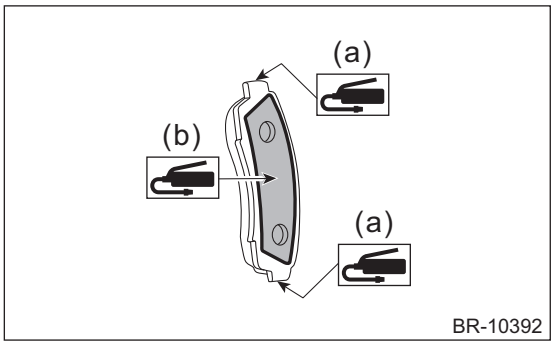


Tightening torque:
Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

4) Apply a thin coat of grease to the shim - disc brake front and the pad - disc brake front.

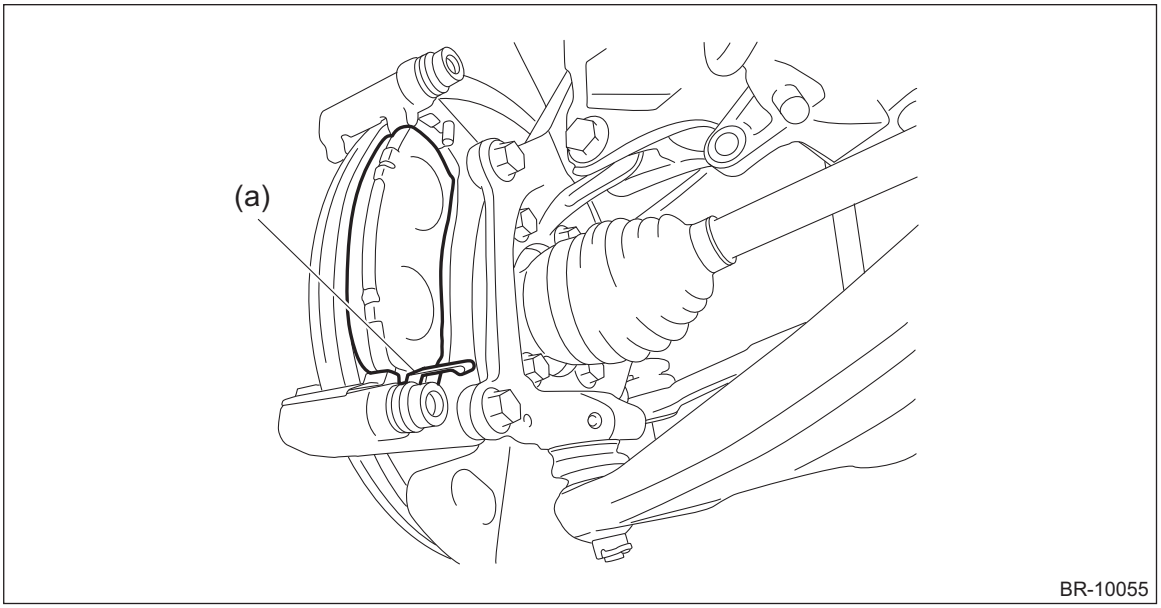
- Inner side:

Apply a thin coat of grease to the shim - disc brake front inner and the pad - disc brake front.



Preparation items:
Grease (a): Dow Corning Molykote G-5029 or equivalent
Grease (b): Dow Corning Molykote M-77 or equivalent

- Outer side:

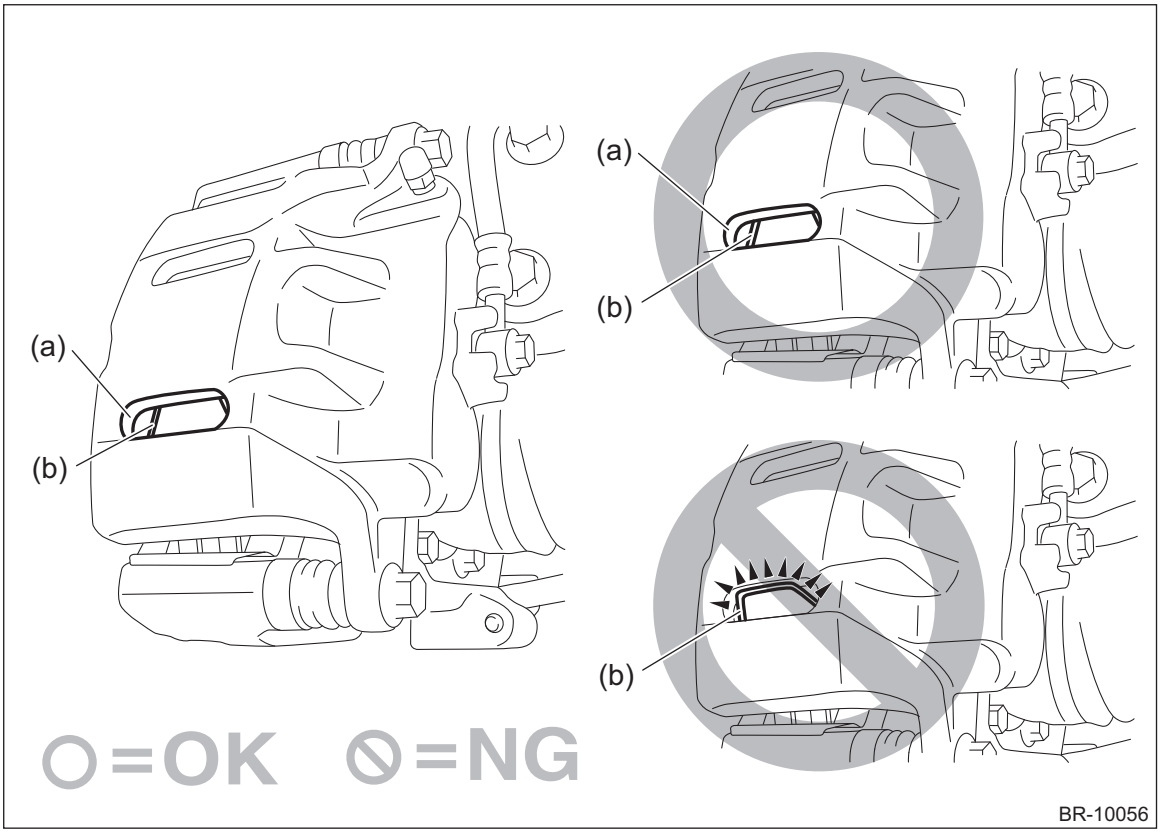


Apply a thin coat of grease to the pad - disc brake front.

Preparation items:
Grease (a): Dow Corning Molykote G-5029 or equivalent
Grease (b): Dow Corning Molykote M-77 or equivalent

5) Install the spring - brake pad and the pad - disc brake front.

NOTE:
Install so that the pad wear indicator faces the inner side.



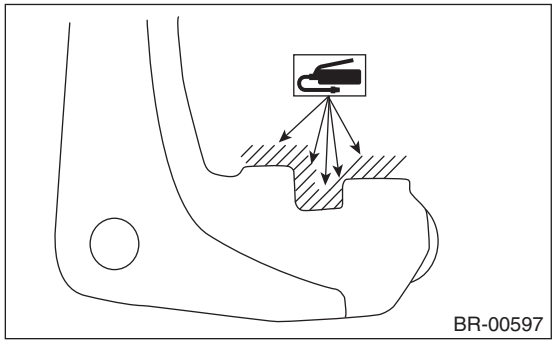
(a) Pad wear indicator

6) Install the caliper body assembly.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

NOTE:
Install so that the spring - brake pad (b) does not protrude out of the hole (a).

7) Connect the brake hose using a new brake hose gasket.

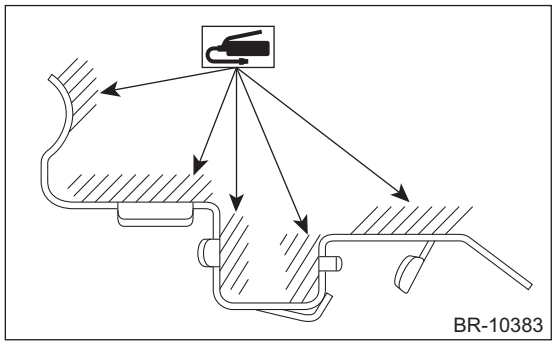


Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)
8) Bleed air from the brake system. <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>
9) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. 17-INCH TYPE

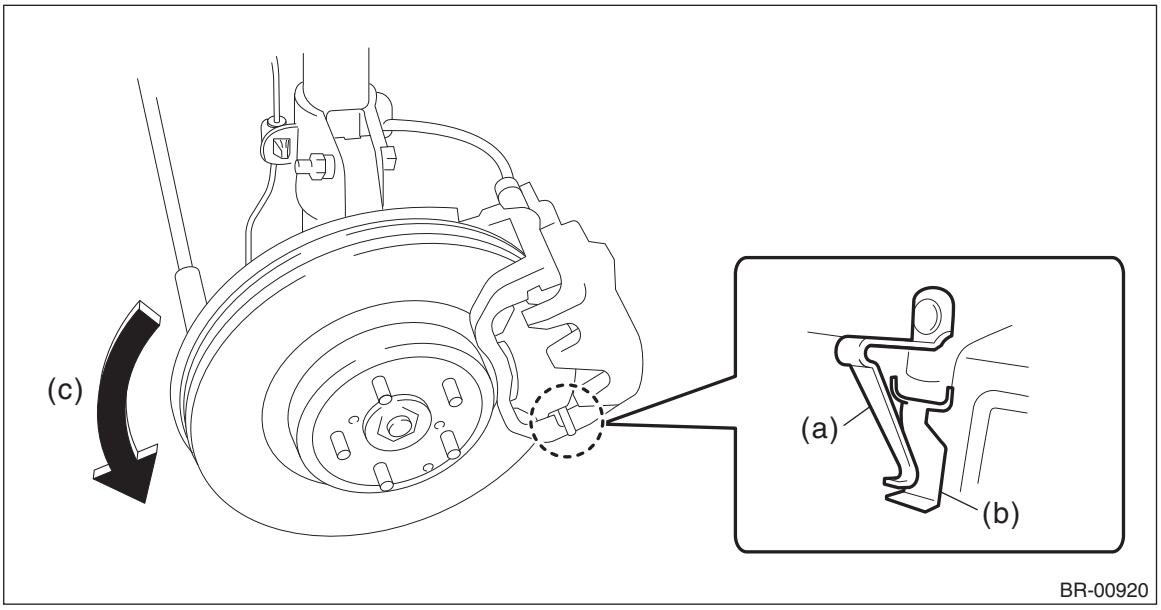
NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check each part. <Ref. to BR-32, INSPECTION, Front Disc Brake Assembly.>
2) Apply a thin coat of grease to the support - front disc brake.



Preparation items:
Grease: An item contained in the pad kit or equivalent

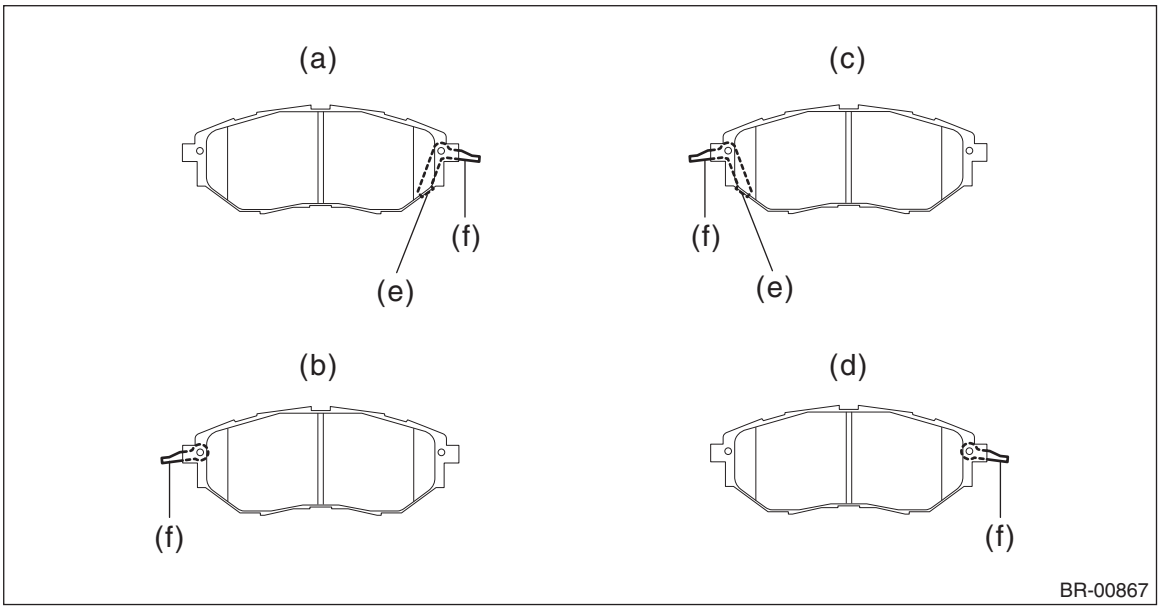
3) Install the support - front disc brake.

Tightening torque:
Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
4) Apply a thin coat of grease to the pad clip.



Preparation items:
Grease: An item contained in the pad kit or equivalent

5) Install the brake pad.



CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
• When installing, correctly place the pad return spring onto the catch surface of the pad clip as shown in the figure.

- **If the pad return spring is deformed or damaged, replace the brake pad with a new part.**

(a) Pad return spring (b) Supporting surface of pad clip (c) Direction of brake rotor rotation

NOTE:
Install the brake pad wear indicator in proper direction.

(a) LH — IN (c) RH — IN (e) Pad wear indicator
(b) LH — OUT (d) RH — OUT (f) Pad return spring

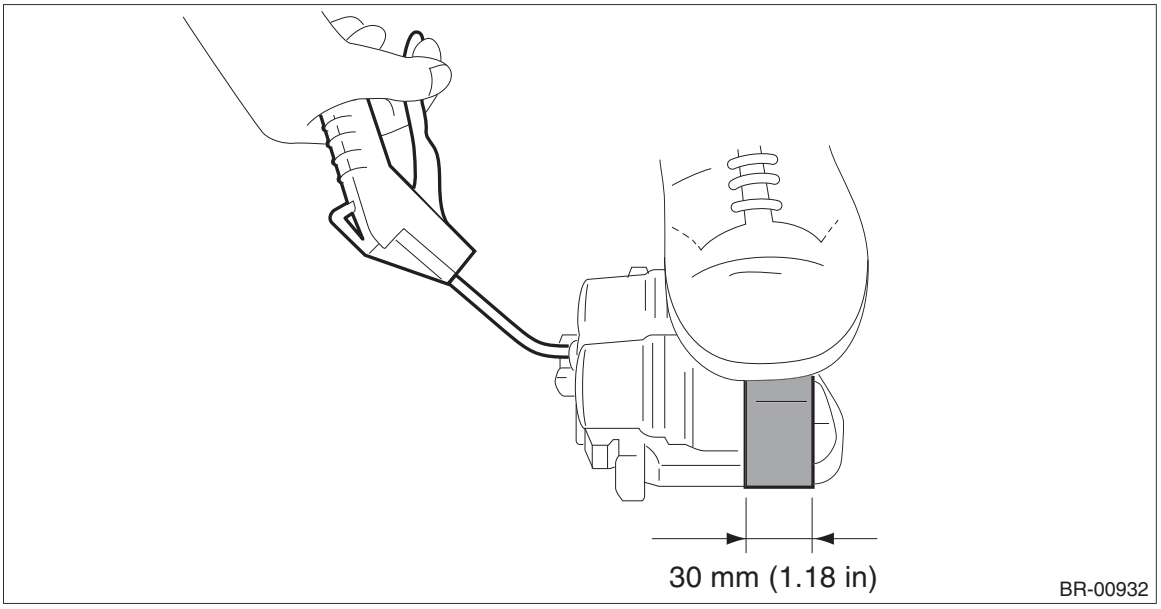
6) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

7) Connect the brake hose using a new brake hose gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

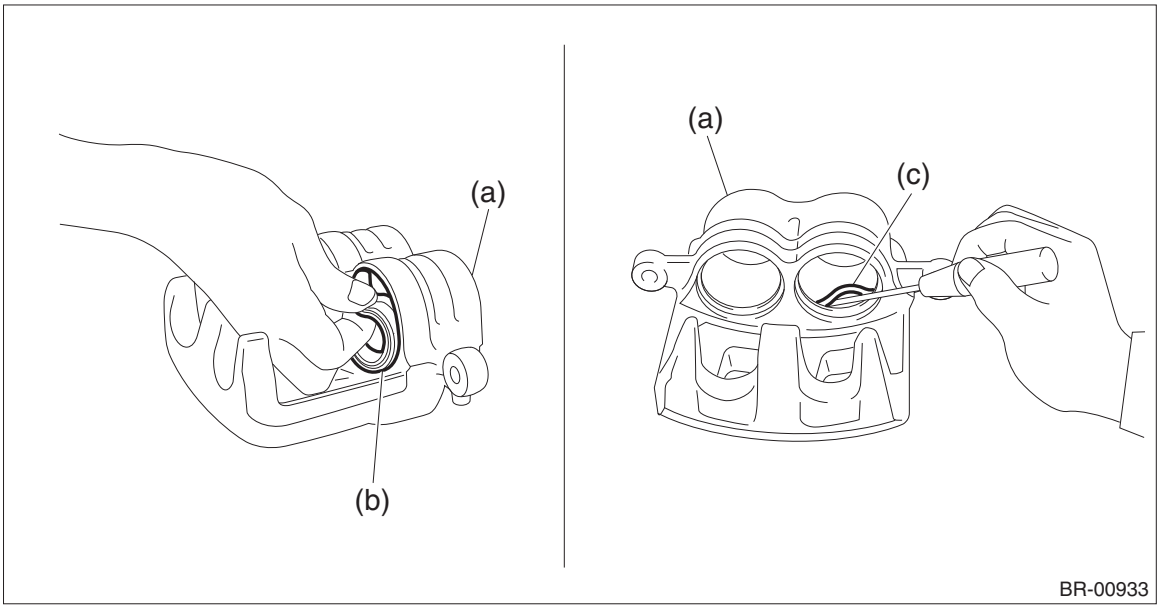
8) Bleed air from the brake system. <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>
9) Install the front wheels.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

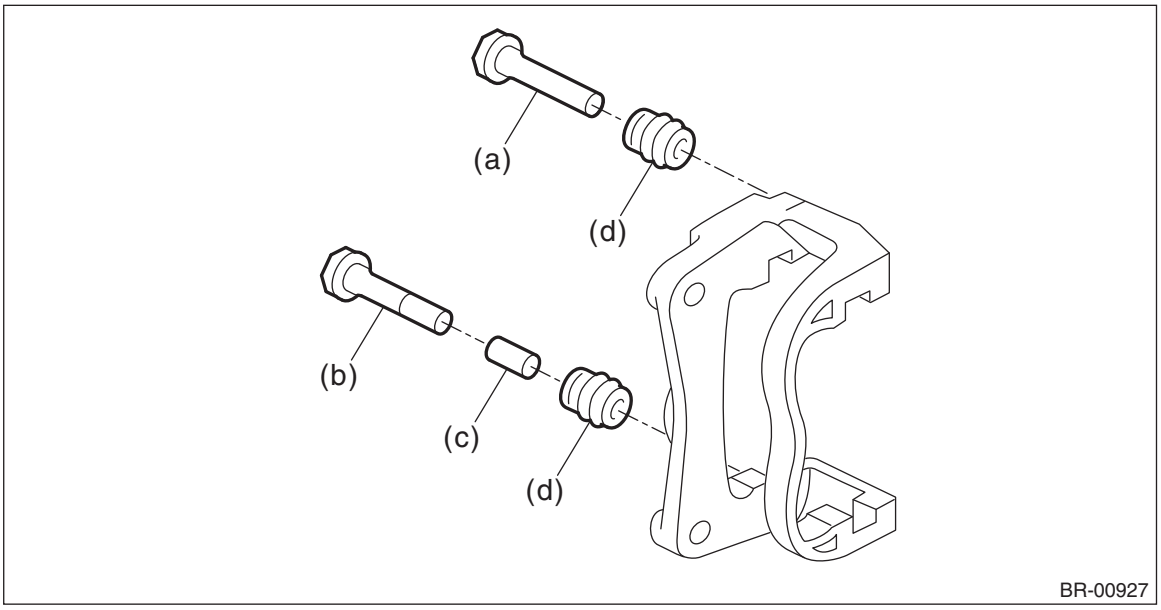
C: DISASSEMBLY

CAUTION:
Be careful not to allow foreign matter to enter the brake hose connector.



1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston - disc brake.
   (1) Place a wooden block in the caliper body as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
   (2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.



3) Remove the piston boot (b) and piston seal (c) from the caliper body cylinder (a).

CAUTION:
Do not damage the cylinder and piston seal groove.

4) Remove each part from support - front disc brake.

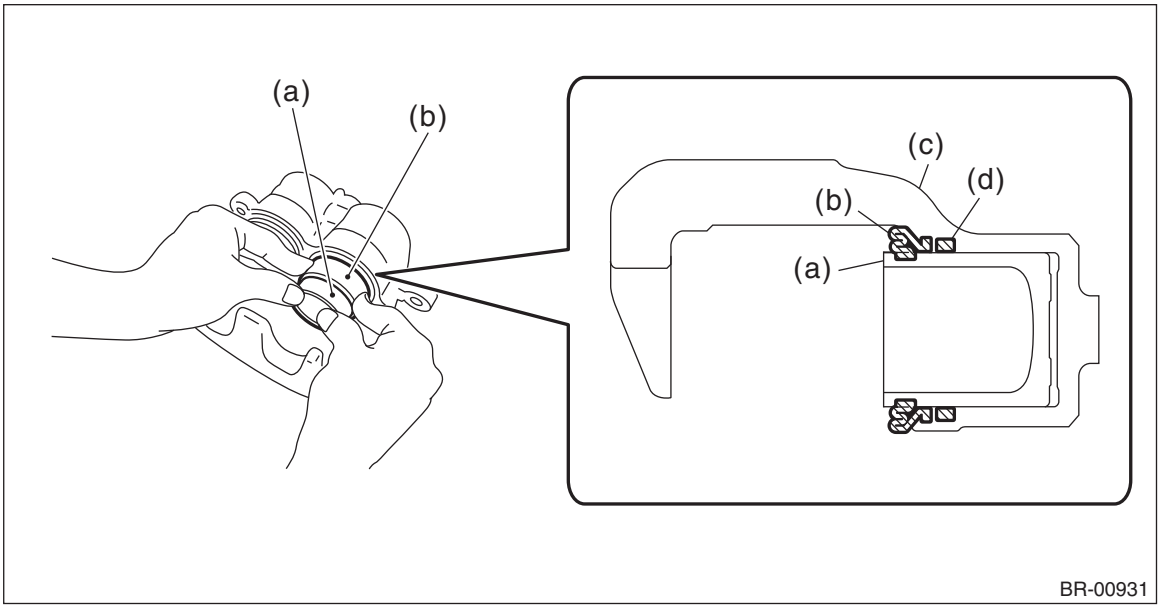
(a) Guide pin - front brake
(b) Lock pin - front brake
(c) Lock pin - sleeve
(d) Pin boot

D: ASSEMBLY

1) Check each part. <Ref. to BR-32, INSPECTION, Front Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
(1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
(2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.



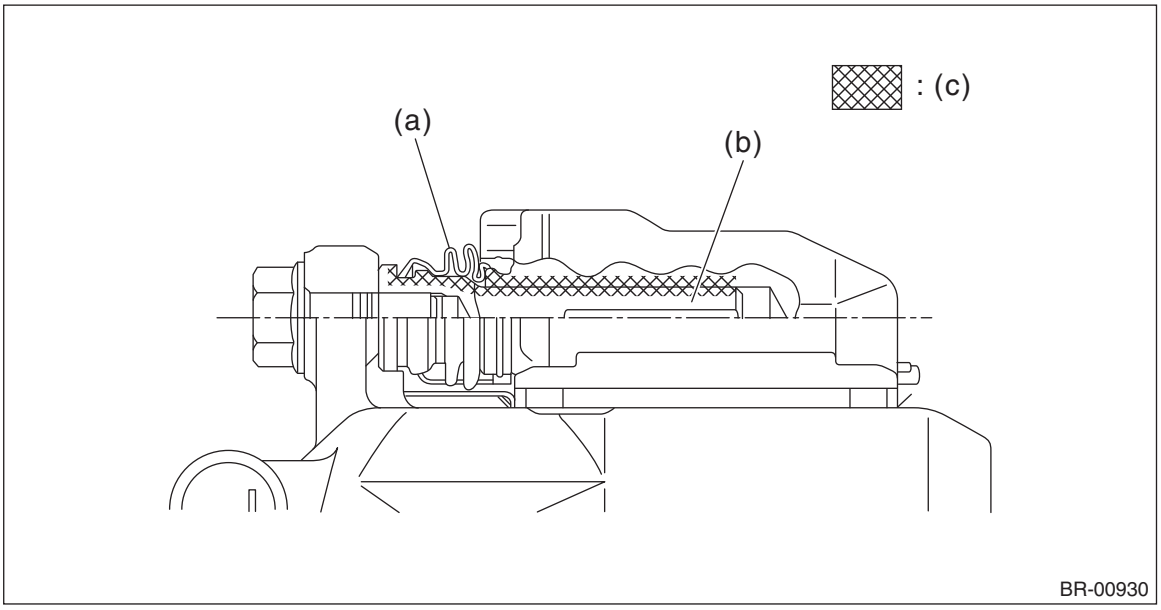
Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

(3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Preparation items:
Grease: An item contained in the piston seal kit or equivalent

(4) Install the piston - disc brake to the caliper body.

CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.



(a) Piston - disc brake
(b) Piston boot
(c) Caliper body assembly
(d) Piston seal

4) Apply grease contained in the piston seal kit (or Nippon Grease NIGLUBE RX-2) to the lock pin - front brake, the outer surface of guide pin - front brake, the pin sliding part of the support - front disc brake, and the grooves of pin boot.

Preparation items:
Brake grease: An item contained in the piston seal kit or Nippon Grease NIGLUBE RX-2

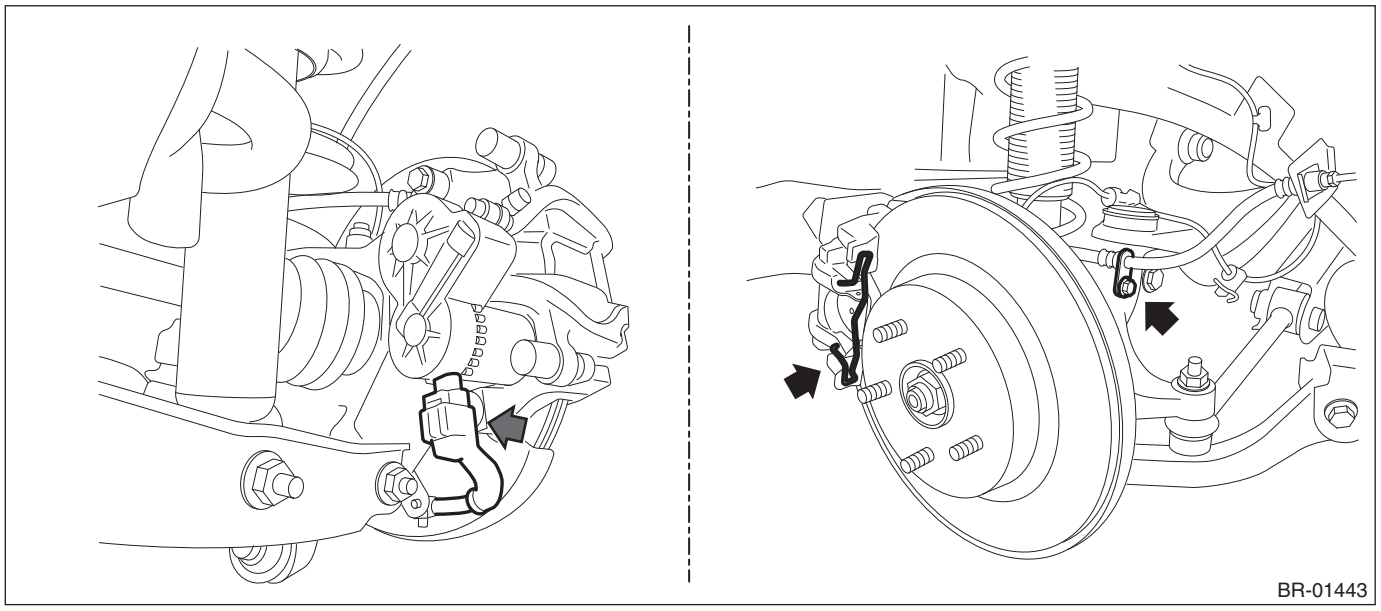
5) Install the pin boot to the lock pin - front brake and the guide pin - front brake, and insert them into the support - front disc brake.

CAUTION:
Insert the lock pin - front brake and guide pin - front brake into specified position, and make sure that they slide and seat properly.

(a) Pin boot
(b) Lock pin - front brake or guide pin - front brake
(c) Grease applied area

E: INSPECTION

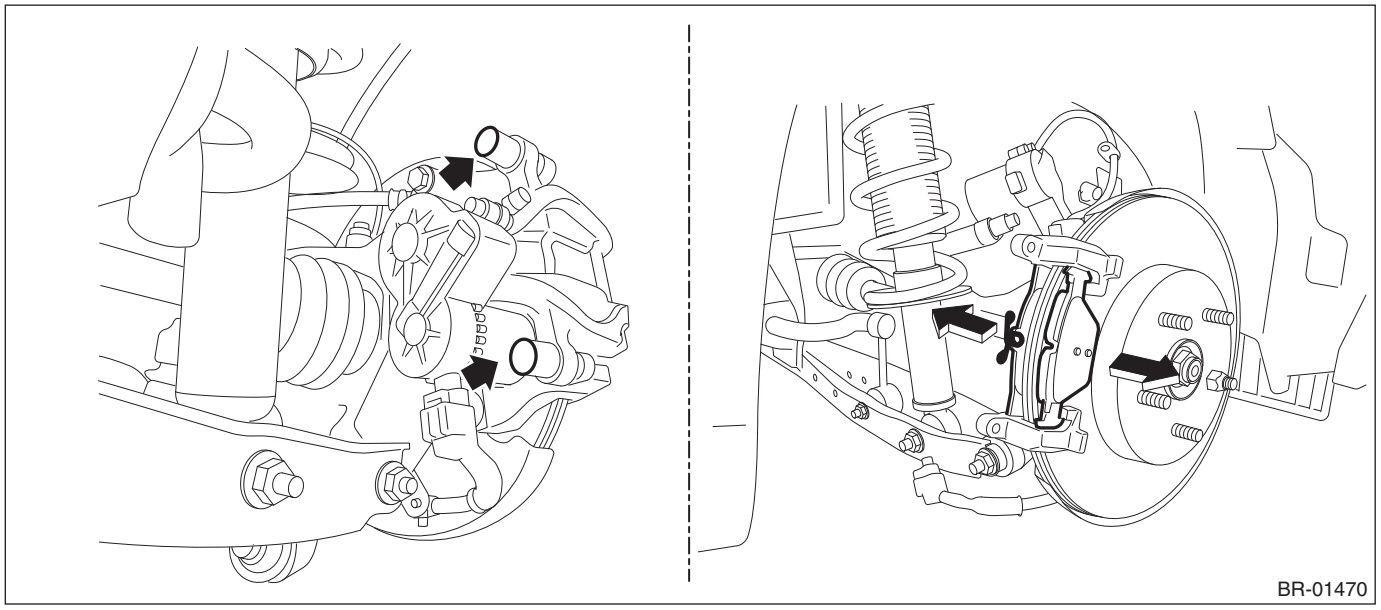
1) Check the piston sliding part of caliper body and the piston for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.



5. Rear Brake Pad

A: REMOVAL

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>



NOTE:
For detailed operation procedures, refer to “Application help”.

3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the pad - disc brake rear.
   (1) Disconnect the connector.
   (2) Remove the pad clip and the brake hose bracket.

BR-01443

   (3) Remove the cap and the caliper bolt, and remove the caliper body assembly.
   (4) Remove the pad - disc brake rear.

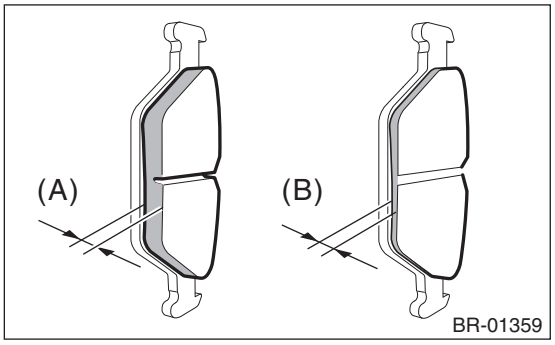
Preparation tool:
Hexagon wrench: 7 mm (0.28 in)

BR-01470

B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Install the pad - disc brake rear.
2) Install the caliper body assembly.

Tightening torque:
Caliper bolt: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>



NOTE:
For detailed operation procedures, refer to “Application help”.
5) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
6) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

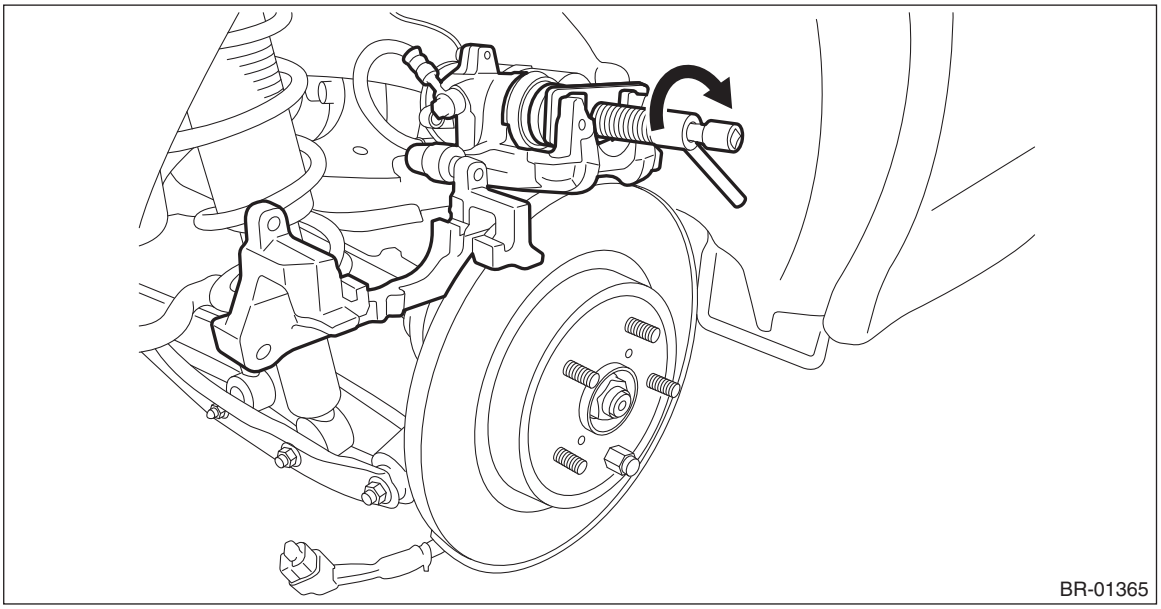
1) Check the thickness of the pad - disc brake rear.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- Wear indicators are installed on the pad - disc brake rear inner, and a squeaking sound is heard if the pad is worn to the limit.

	Standard (A)	Wear limit (B)
Pad thickness	9 mm (0.354 in)	1.5 mm (0.059 in)

2) If the wear limit is exceeded in the inspection, replace the brake pad. <Ref. to BR-34, REPLACEMENT, Rear Brake Pad.>

D: REPLACEMENT



1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the pad - disc brake rear. <Ref. to BR-33, REMOVAL, Rear Brake Pad.>
5) Press back the piston - disc brake.

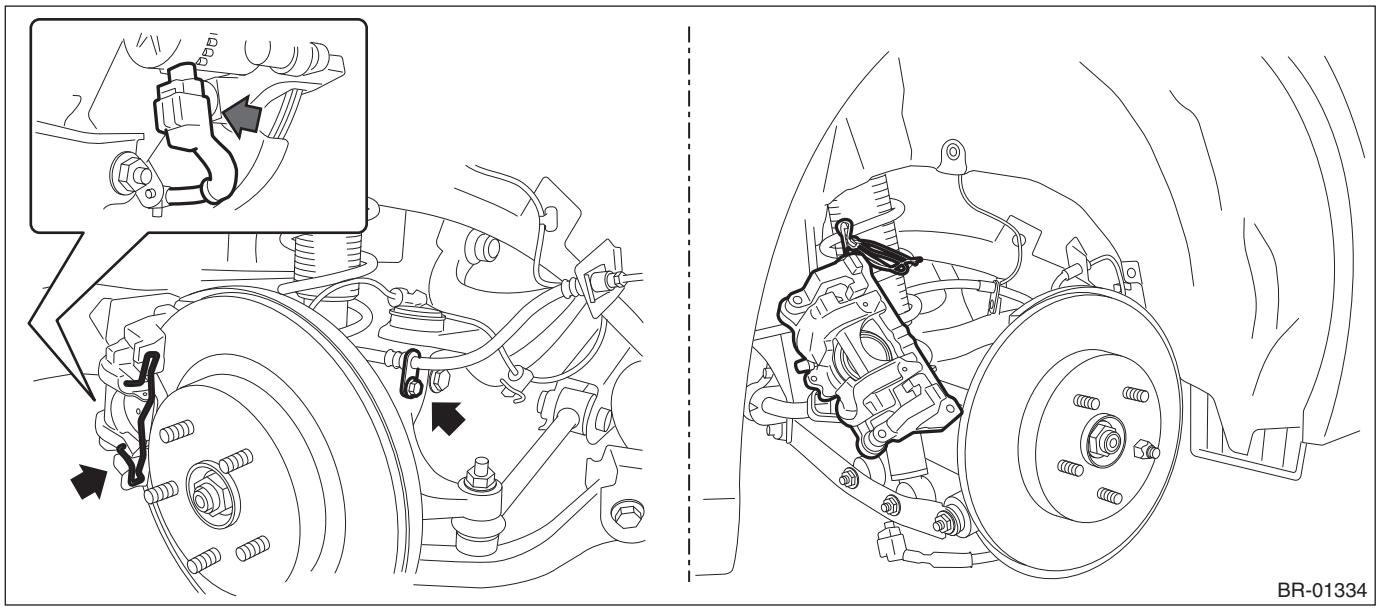
6) Install the pad - disc brake rear. <Ref. to BR-34, INSTALLATION, Rear Brake Pad.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
9) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.

NOTE:
Perform the following replacement procedure if the Subaru Select Monitor cannot be used.
1. Remove the disc brake assembly and the pad - disc brake rear.
2. Remove the bolt securing the lower side of the support - rear disc brake, loosen the upper side bolt, and then slide the support - rear disc brake upward and hold it.
3. Secure the disc brake assembly as shown in the figure, and push back the piston using the tool.

Preparation tool:
Disc brake piston tool: KTC disc parking tool rotor (E•F) ABX104
Disc brake piston tool: OTC brake caliper tool adapter No. 7317A
or equivalent

4. Install the support - rear disc brake and the disc brake assembly to the specified tightening torque.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to BR-6, REAR DISC BRAKE, COMPONENT, General Description.>

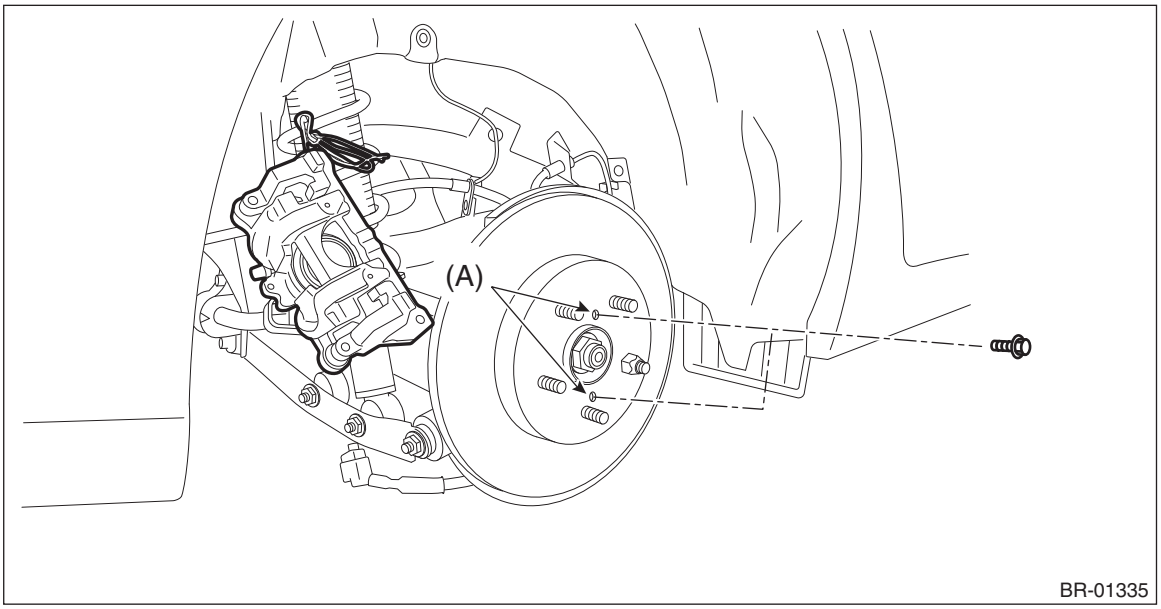


6. Rear Disc Rotor

A: REMOVAL

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

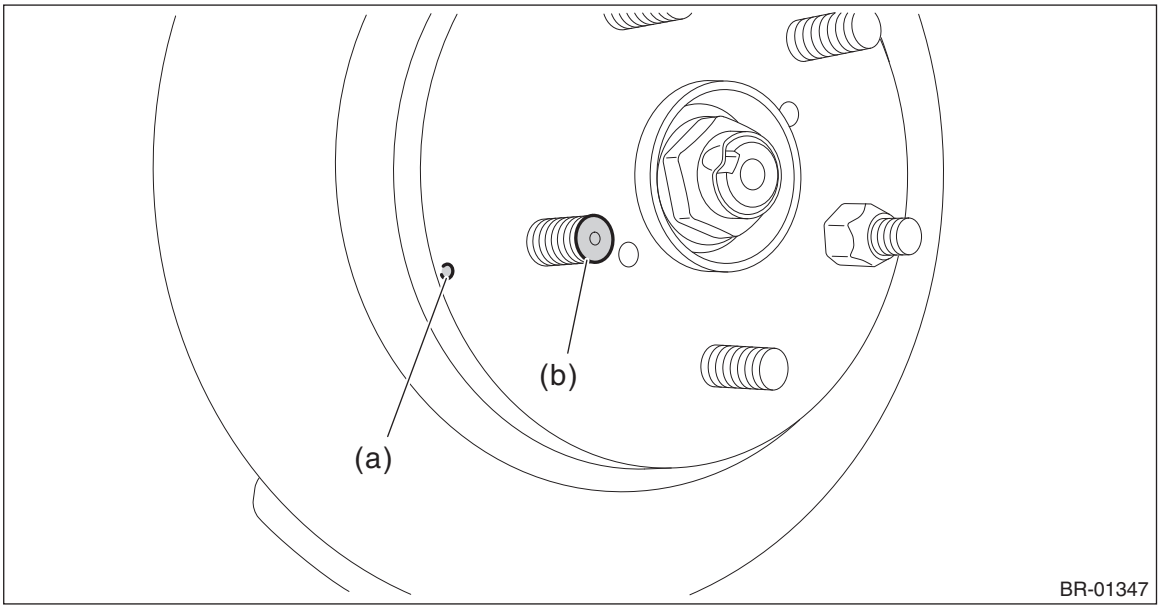
NOTE:
For detailed operation procedures, refer to “Application help”.



3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the disc brake assembly.
   (1) Remove the pad clip, the connector and the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.

6) Remove the disc rotor.

NOTE:
If the disc rotor is difficult to remove, proceed as follows.



When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-38, INSPECTION, Rear Disc Rotor.>
2) Install the rear disc rotor.

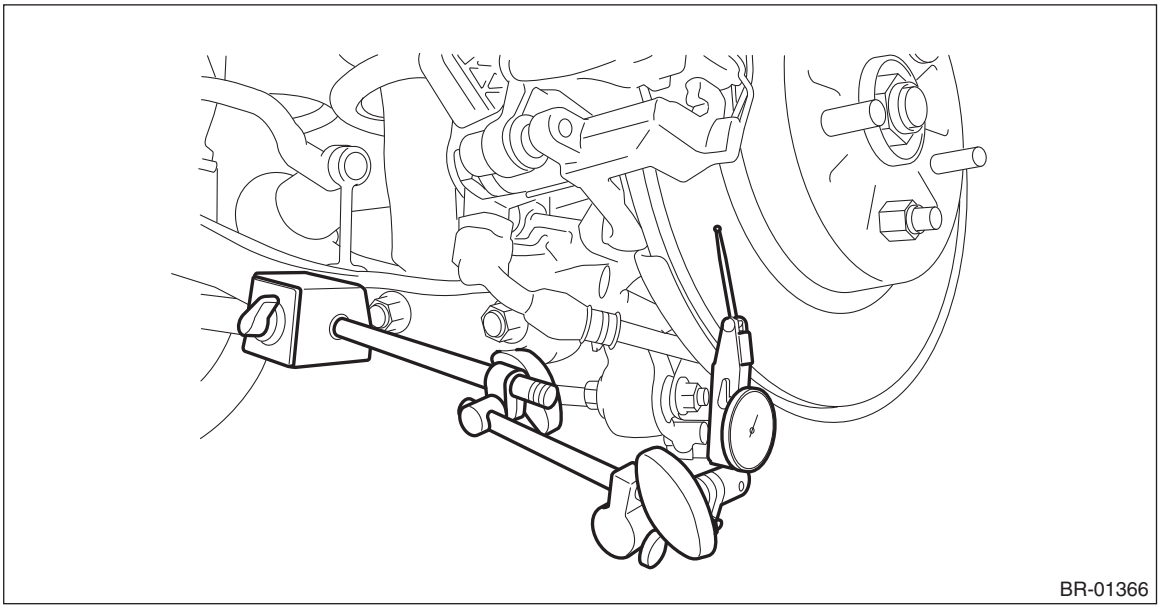
NOTE:
When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.

3) Install the disc brake assembly.

Tightening torque:
Mounting bolt: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.
6) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
7) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



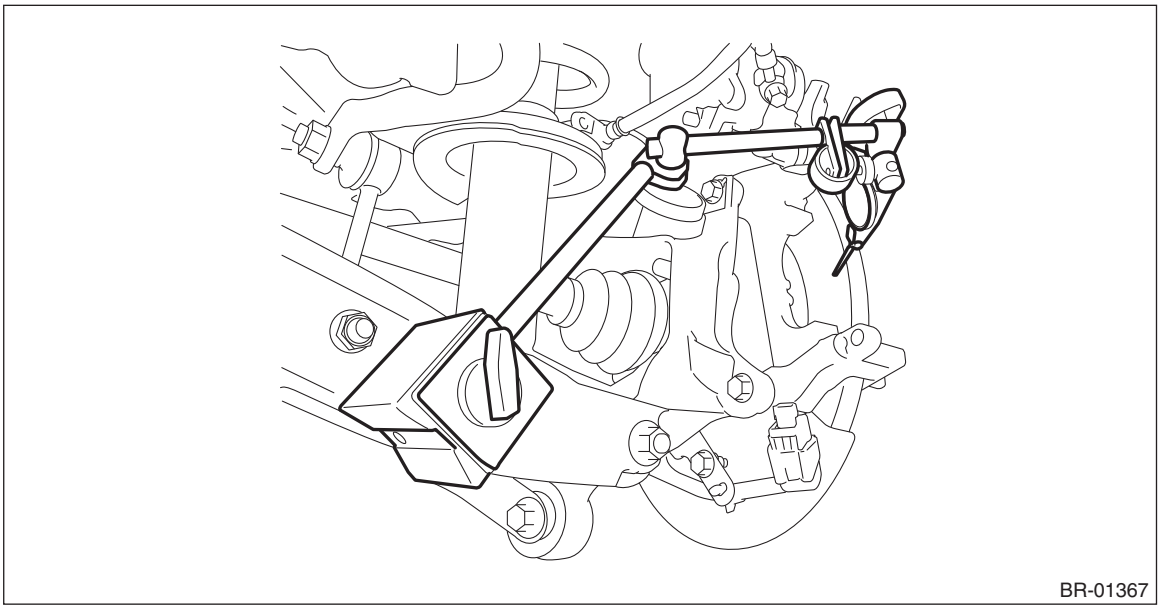
C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - rear axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-38, INSPECTION, Rear Hub Unit Bearing.>
2) Check the disc rotor runout.
(1) Remove the caliper body assembly. <Ref. to BR-40, REMOVAL, Rear Disc Brake Assembly.>
(2) Secure the disc rotor by tightening the five wheel nuts.
(3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.002 in)

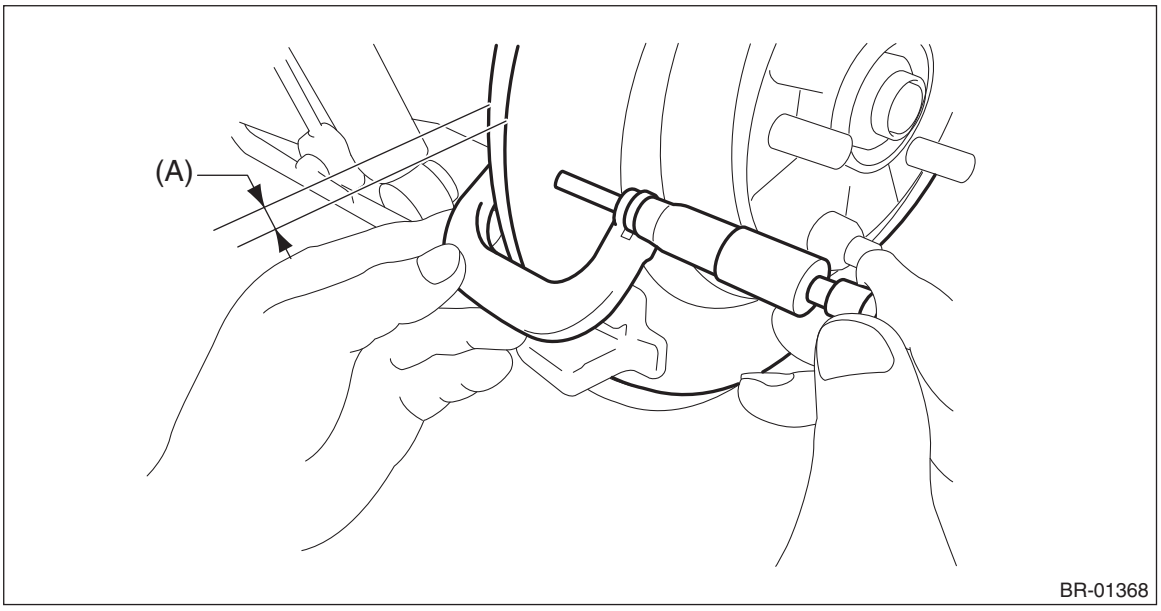
NOTE:
<Example of magnet stand and dial gauge installation>
The location where the magnet stand is installed varies to stabilize the magnet stand.



(4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.002 in)

NOTE:
<Example of magnet stand and dial gauge installation>



The location where the magnet stand is installed varies to stabilize the magnet stand.

BR-01367

3) If the disc rotor runout exceeds service limit, grind the disc rotor.
4) Check the disc rotor thickness after grinding. <Ref. to BR-39, DISC ROTOR THICKNESS CHECK, INSPECTION, Rear Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Remove the caliper body assembly. <Ref. to BR-40, REMOVAL, Rear Disc Brake Assembly.>
2) Set a micrometer 17 mm (0.67 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

BR-01368

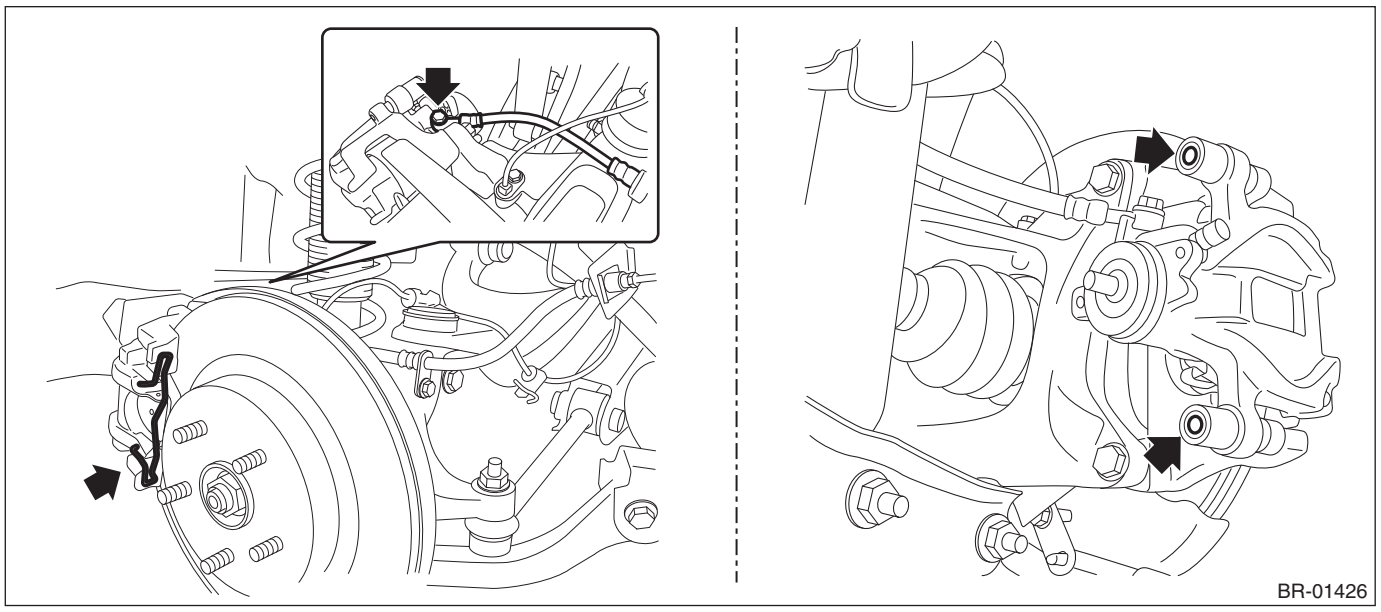
	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	17 mm (0.67 in)	15 mm (0.59 in)	300 mm (11.81 in)

3) If the wear limit is exceeded in the inspection, replace the disc rotor.

7. Rear Disc Brake Assembly

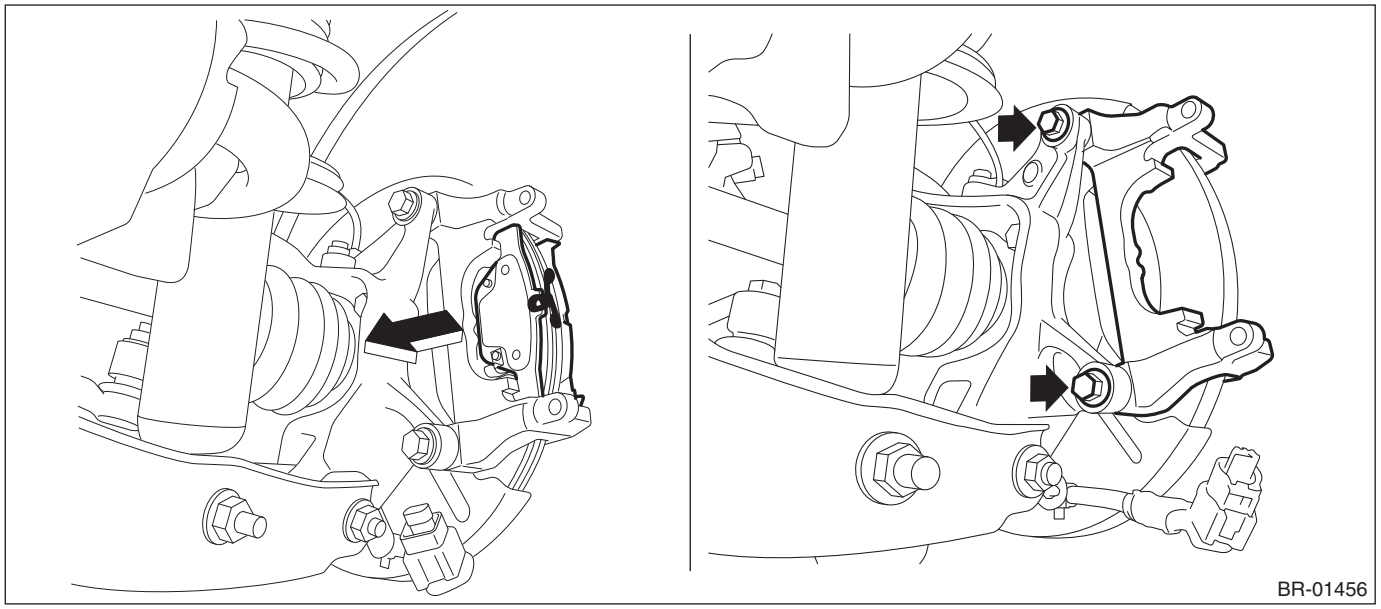
A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.
1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>



NOTE:
For detailed operation procedures, refer to “Application help”.
3) Lift up the vehicle, and then remove the rear wheels.
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the parking brake actuator. <Ref. to PB-10, PARKING BRAKE ACTUATOR, REMOVAL, Parking Brake Actuator.>
6) Remove the caliper body assembly.

CAUTION:
• Do not detach the brake hose except when replacing the caliper body assembly.
• Install the plug bolt to the caliper body assembly when the brake hose is disconnected.
If air enters or fluid leaks by tilting, replace the caliper body assembly.
(1) Remove the union bolt, and then disconnect the brake hose.
(2) Install the fluid leakage protection plug to the caliper body.



Preparation items:
Genuine part: PLUG BOLT (26642AL000)
Genuine part: PLUG GASKET (26642AL010)

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)
(3) Remove the pad clip, and disconnect the connector.
(4) Remove the caliper bolts, and then remove the disc brake assembly.

Preparation tool:
Hexagon wrench: 7 mm (0.28 in)

7) Remove the support - rear disc brake.
(1) Remove the pad - disc brake rear.
(2) Remove the mounting bolts, and then remove the support - rear disc brake.

B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-43, INSPECTION, Rear Disc Brake Assembly.>
2) Install the support - rear disc brake to the housing assembly - rear axle.

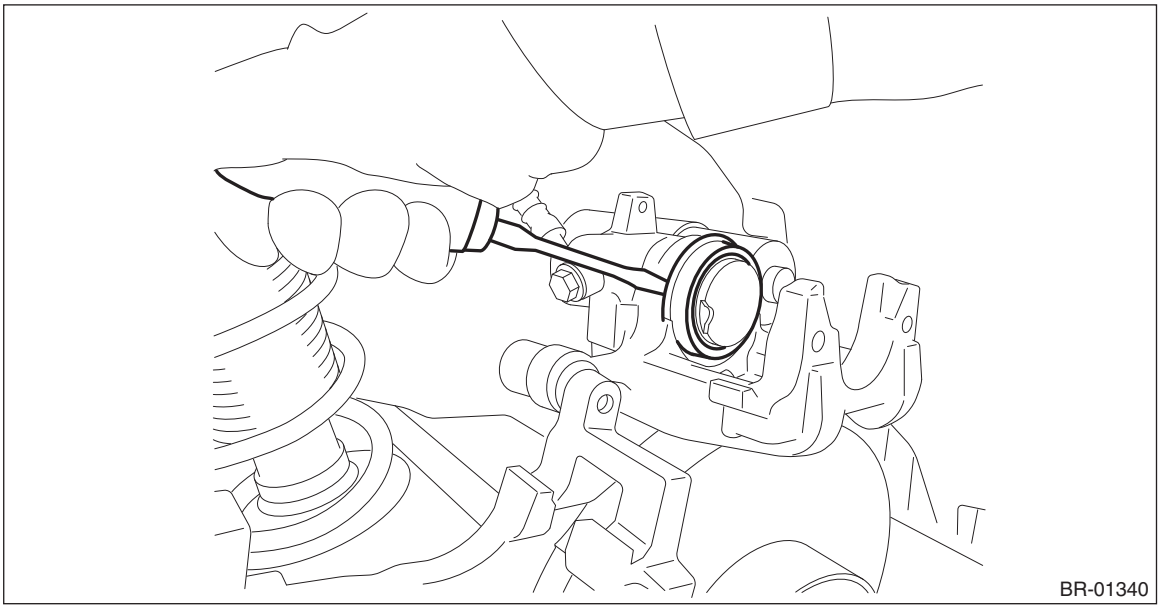
Tightening torque:
66 N·m (6.7 kgf-m, 48.7 ft-lb)
3) Install the caliper body assembly.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
4) Connect the brake hose using a new brake hose gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

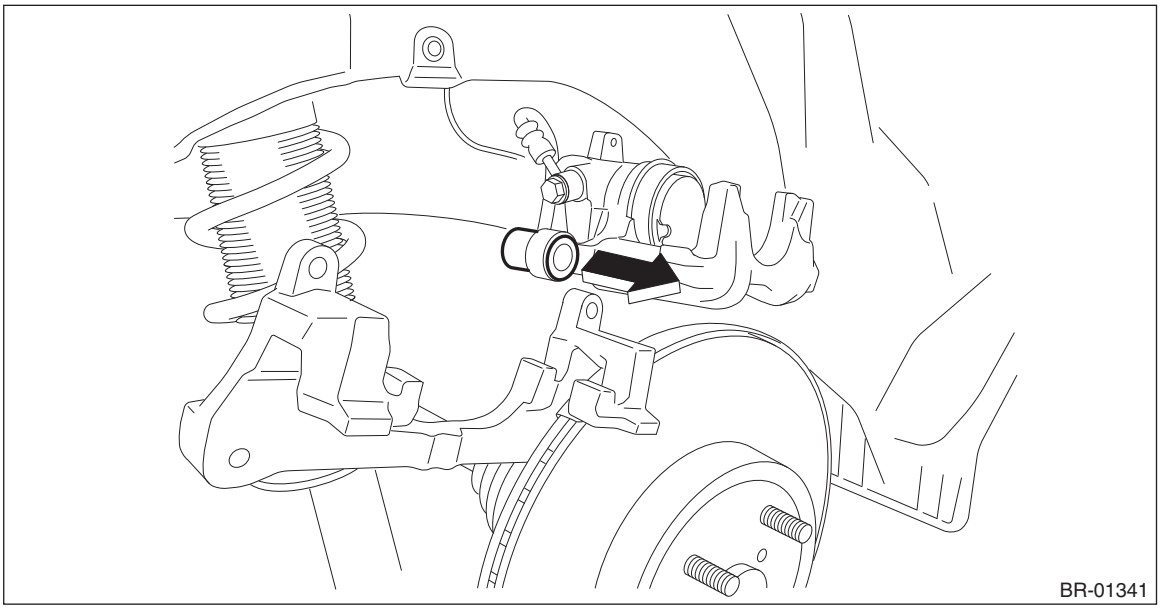
5) Install the parking brake actuator. <Ref. to PB-12, PARKING BRAKE ACTUATOR, INSTALLATION, Parking Brake Actuator.>
6) Bleed air from the brake system. <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.



9) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
10) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



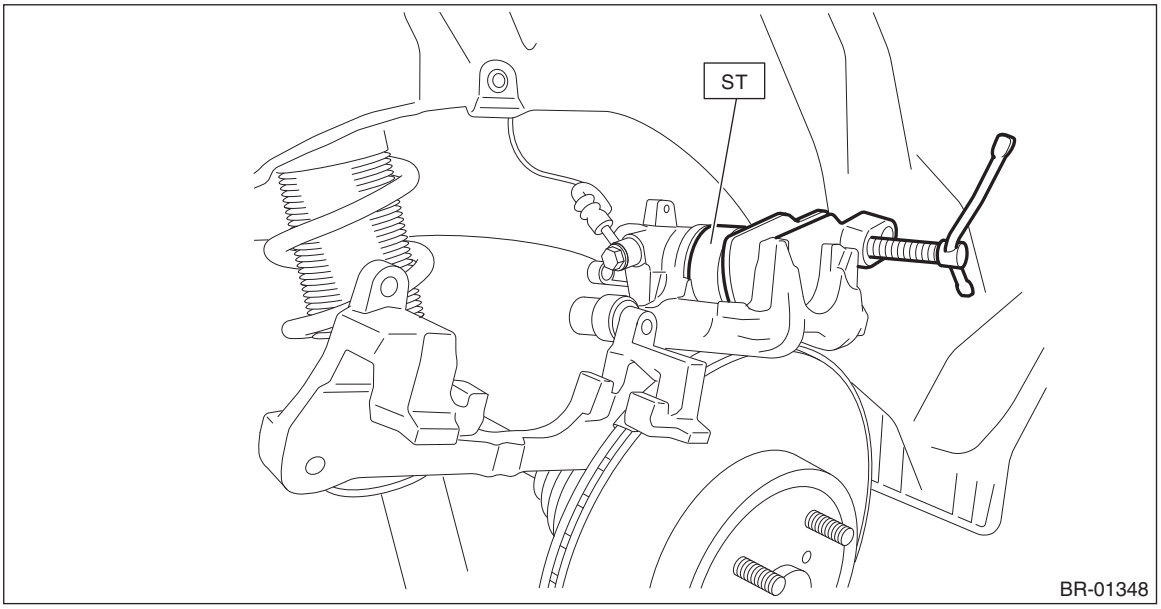
C: DISASSEMBLY

CAUTION:
- **The piston cannot be removed from the caliper body assembly.**
- **Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.**

1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

BR-01340

3) Remove the bushing from the support - rear disc brake.



D: ASSEMBLY

NOTE:
If the brake hose is disconnected, air enters inside. Therefore, this operation should be performed on the vehicle without the brake hose disconnected.
1) Check each part. <Ref. to BR-43, INSPECTION, Rear Disc Brake Assembly.>
2) Install the bushing.
3) Apply a coat of grease to the inside of the new piston boot.

Preparation items:
Grease: Nippon Grease NIGLUBE RX-2 or equivalent
4) Using the ST, install the piston boot.

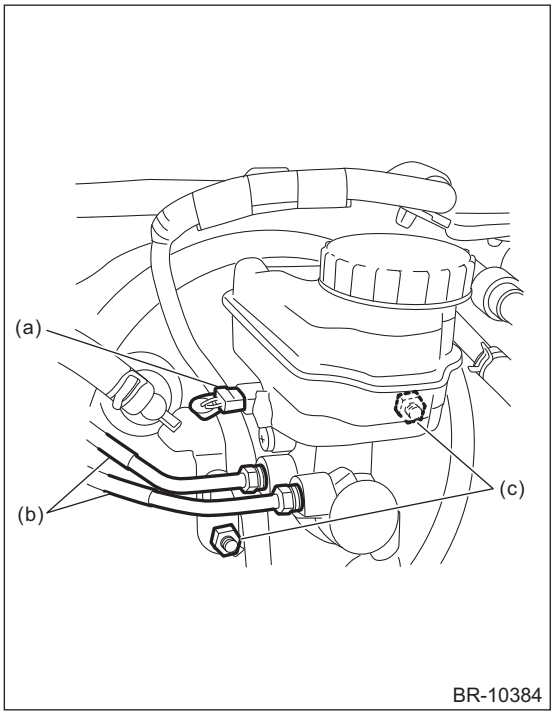
Preparation tool:
ST: PISTON BOOT INSTALLER (99099AL000)

E: INSPECTION

1) Check the piston sliding part of caliper body and the piston - disc brake for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.

3) If faulty is found in the inspection, replace the relevant part.

8. Master Cylinder



A: REMOVAL

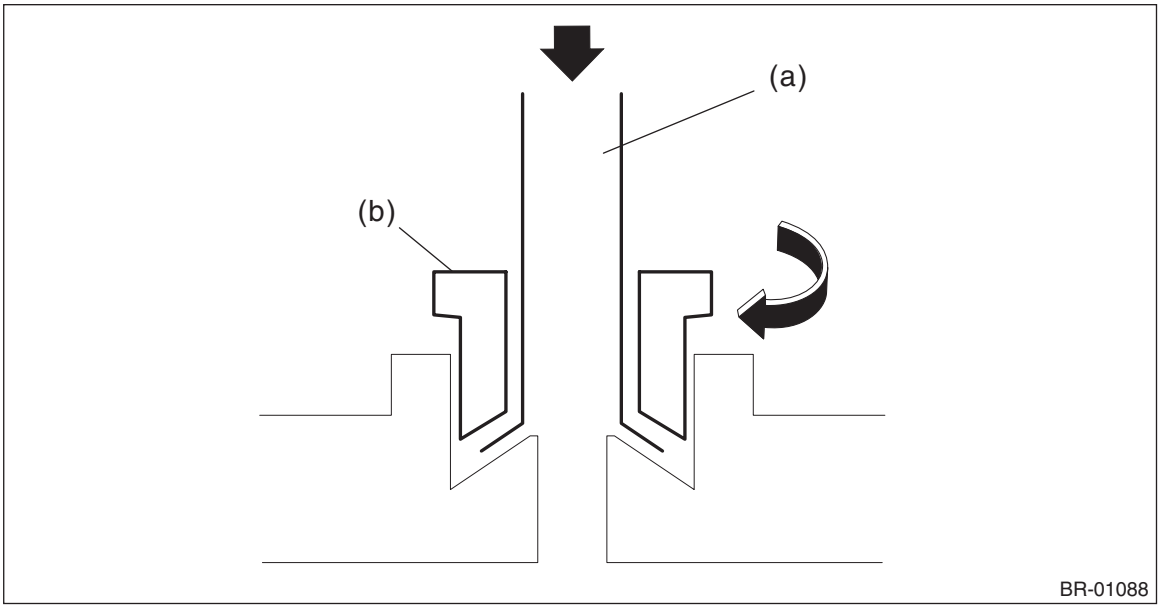
CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Since the master cylinder assembly cannot be disassembled, disassembly and cleaning are prohibited. When replacing, replace the master cylinder assembly.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Drain brake fluid from the reservoir tank completely.
3) Remove the master cylinder assembly.

CAUTION:
Replace the nuts with new parts.

(1) Disconnect the fluid level gauge connector (a).
(2) Disconnect the brake pipe (b).
(3) Remove the nut (c), and slowly remove the master cylinder from the brake booster.

B: INSTALLATION



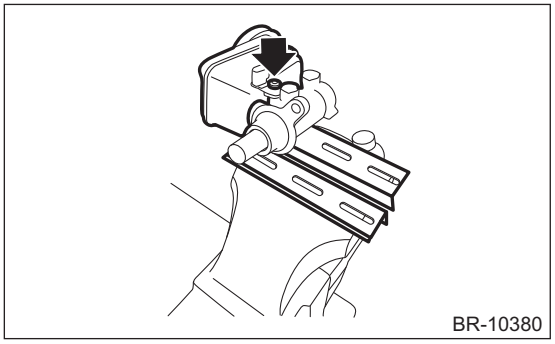
1) Replace the ring seal of the master cylinder assembly with a new part.
2) Install the master cylinder assembly.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
19 N·m (1.9 kgf-m, 14 ft-lb)



4) Bleed air from the brake system. <Ref. to BR-57, PROCEDURE, Air Bleeding.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

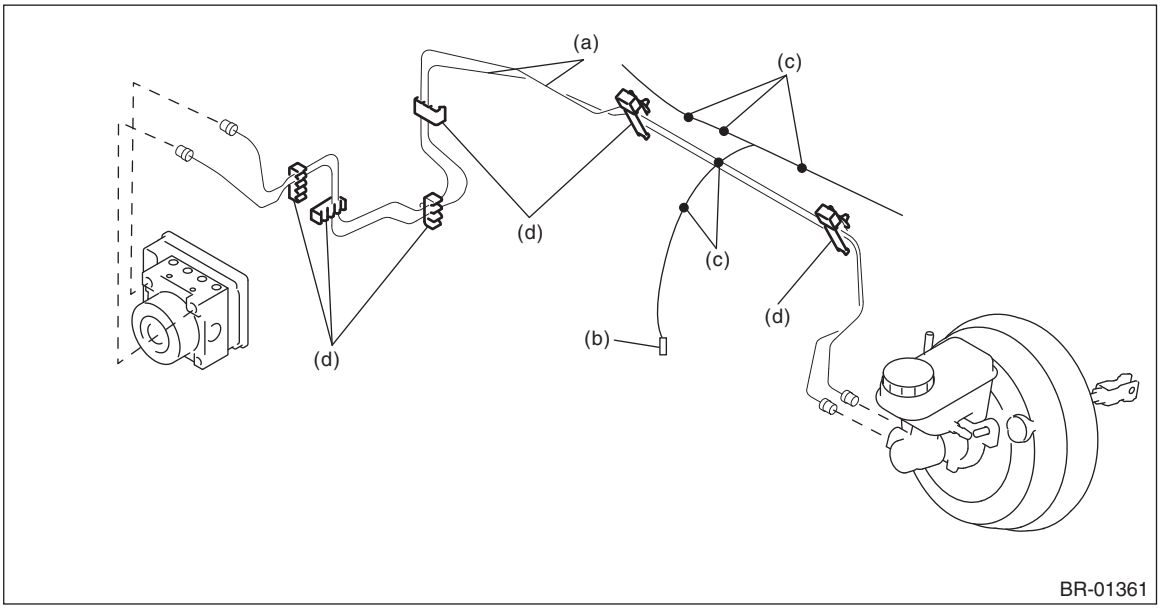
1) Remove the reservoir tank.

CAUTION:
Be careful not to tighten a vise excessively.
(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Pull out the pin by turning it using a screwdriver to remove the reservoir tank.

2) Remove the seal from the cylinder body assembly.

D: ASSEMBLY

1) Install the seal to the cylinder body assembly.
2) Install the reservoir tank.



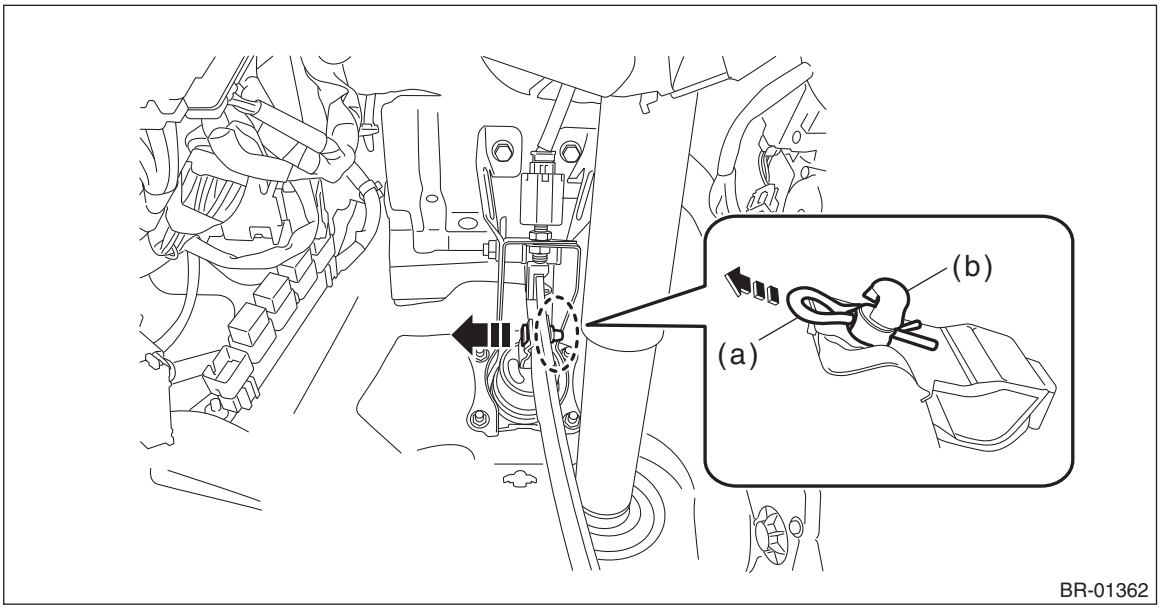
CAUTION:
Be careful not to tighten a vise excessively.
(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Tighten the pin using a screwdriver to install the reservoir tank.

Tightening torque:
5.5 N·m (0.6 kgf-m, 4.1 ft-lb)

9. Brake Booster

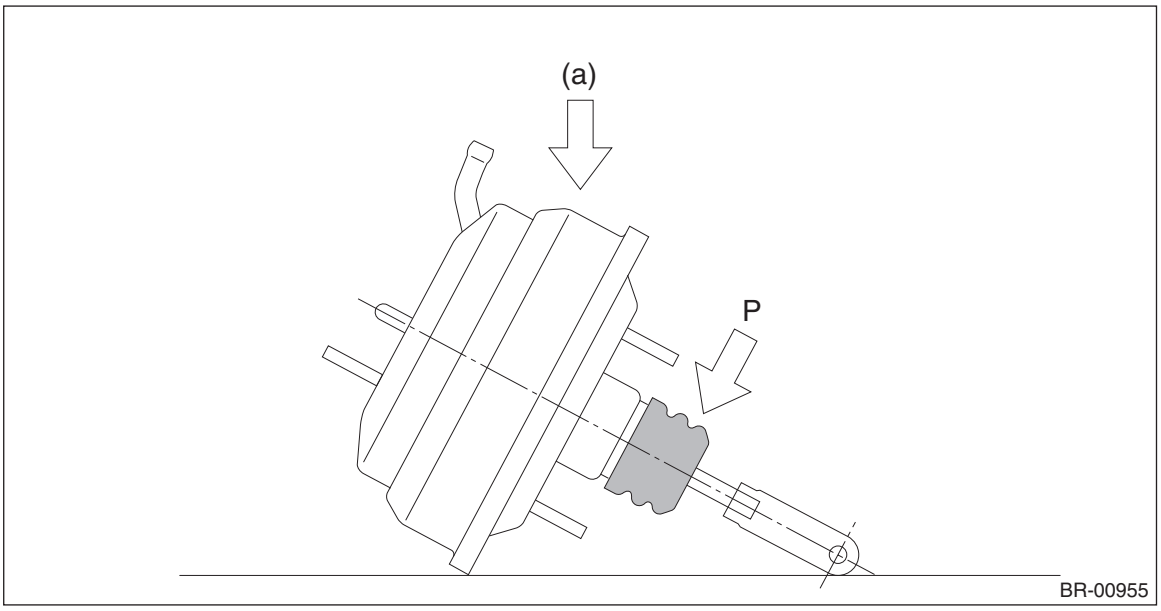
A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the vacuum hose.
3) Remove the master cylinder assembly. <Ref. to BR-45, REMOVAL, Master Cylinder.>
4) Remove the ECM and ECM bracket.
• H4 model: <Ref. to FU(H4DO)-83, REMOVAL, Engine Control Module (ECM).>
• H6 model: <Ref. to FU(H6DO)-83, REMOVAL, Engine Control Module (ECM).>
5) Remove the brake pipe assembly (a).
(1) Disconnect the starter connector (b) and harness clip (c).
(2) Remove the brake pipe assembly (a) from the pipe clip (d).



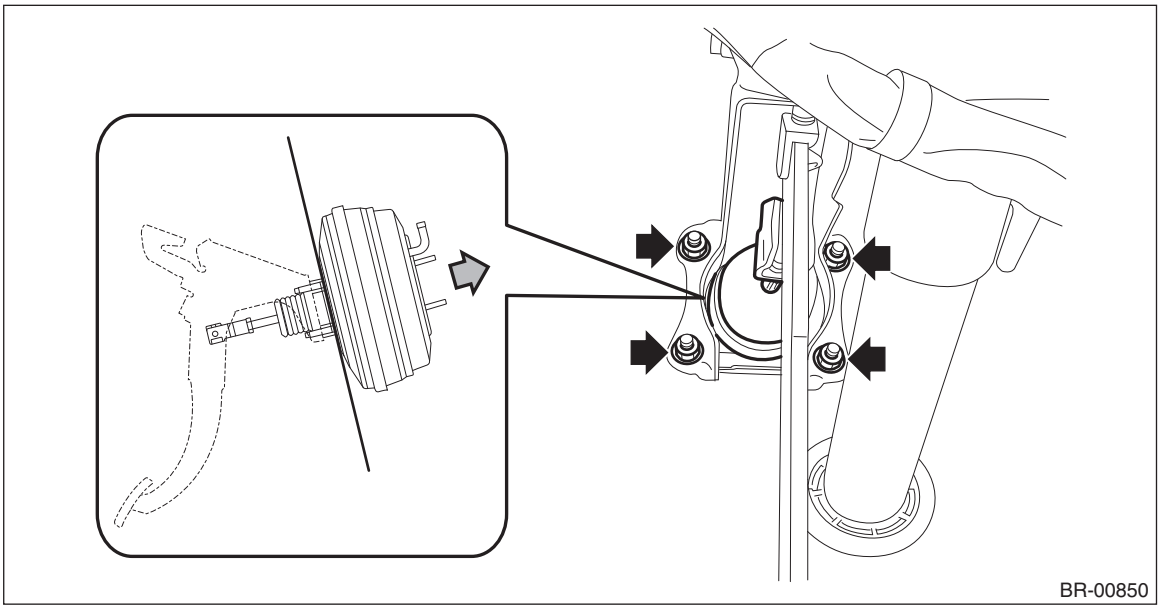
6) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
7) Remove the panel - knee guard. <Ref. to PS-26, REMOVAL, Steering Column.>
8) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
9) Remove the column assembly - steering. <Ref. to PS-26, REMOVAL, Steering Column.>
10) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.



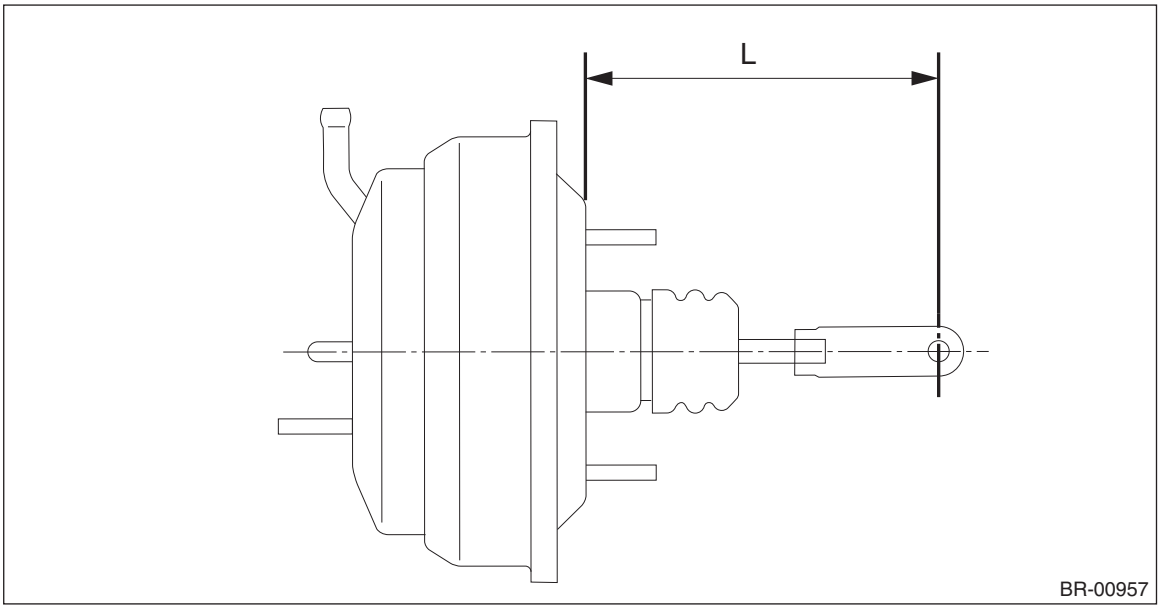
CAUTION:
• Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.
• Do not change the push rod length.

- **Do not reuse clevis pins. Always replace with a new part.**



11) Remove the vacuum booster assembly.

CAUTION:
- **Do not disassemble the vacuum booster assembly.**
- **Make sure that the booster shell and vacuum pipe are not subject to strong impacts.**
- **Be careful not to drop the vacuum booster assembly. If the vacuum booster assembly is dropped accidentally, replace it.**
- **Be careful when placing the vacuum booster assembly on floor.**
- **If external force (a) is applied from above when the vacuum booster assembly is placed in this position, the resin portion as indicated by "P" may become damaged.**



(1) Remove the nuts, and then remove the vacuum booster assembly.

B: INSTALLATION

1) Check and adjust the operating rod of the vacuum booster assembly.
(1) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
(2) If it is not within the specification, loosen the lock nut, rotate the vacuum booster assembly operating rod to adjust the rod length.

Specification L:
136.3 mm (5.37 in)

2) Install the vacuum booster assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

CAUTION:
• Apply grease to the snap pin to prevent the operating rod from wear.
• Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.

• When installing the master cylinder assembly, replace the ring seal with a new part, and install it to the vacuum booster assembly.

3) Install the column assembly - steering. <Ref. to PS-28, INSTALLATION, Steering Column.>
4) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.

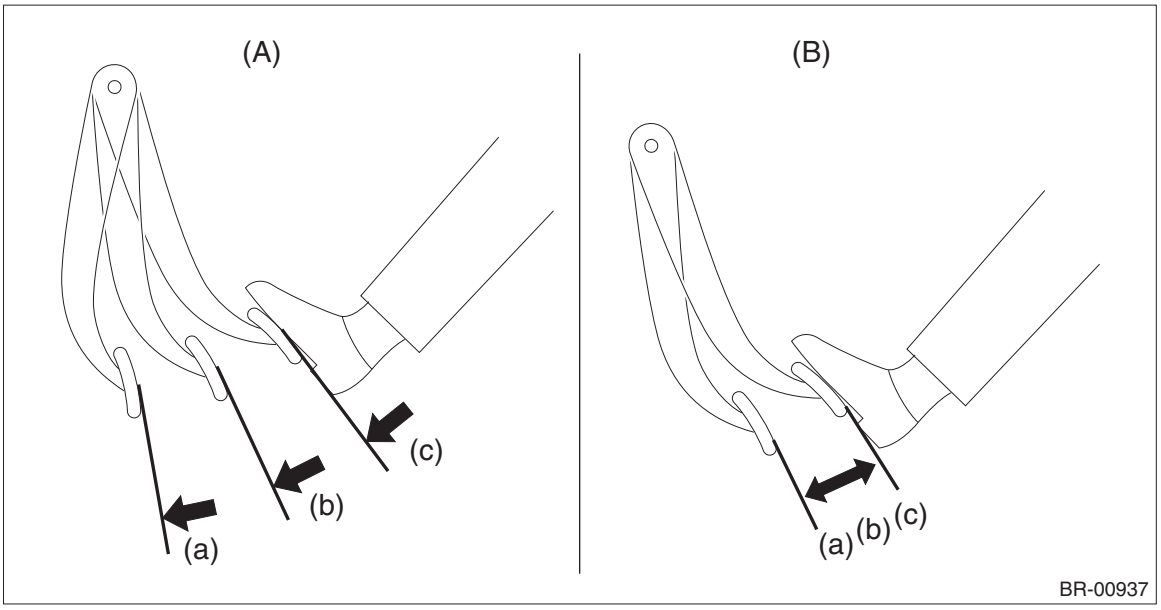
5) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

6) Install the cover assembly - instrument panel LWR driver.
7) Install the master cylinder assembly. <Ref. to BR-45, INSTALLATION, Master Cylinder.>
8) Bleed air from the brake system. <Ref. to BR-57, PROCEDURE, Air Bleeding.>
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
10) Perform a road test to make sure the brakes do not drag.

C: INSPECTION

1. OPERATION CHECK WHEN NOT USING MEASURING DEVICES



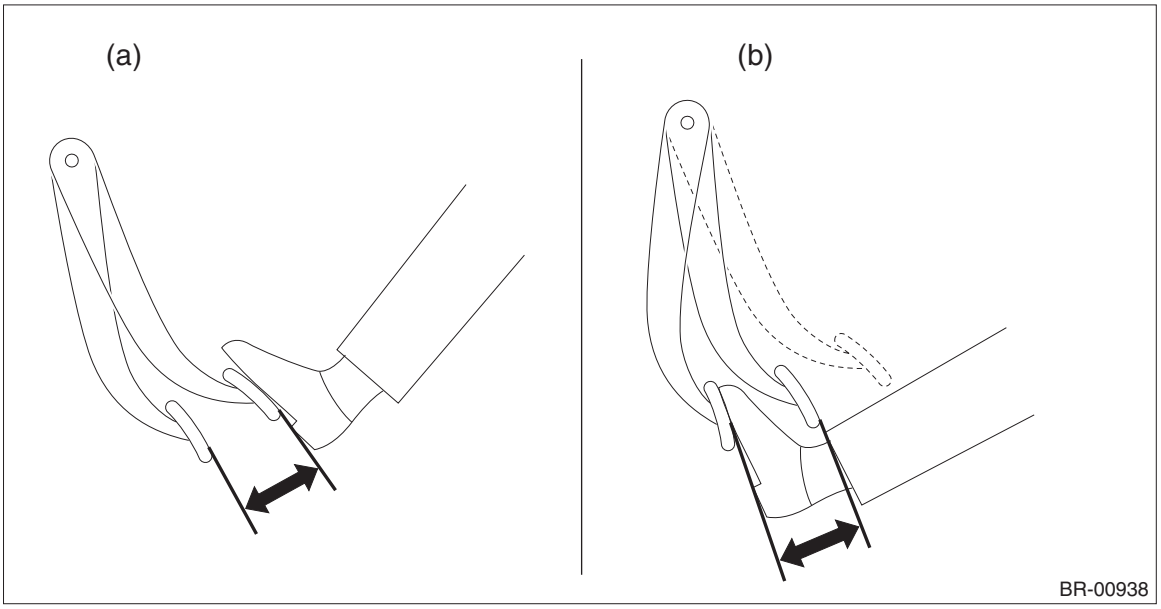
CAUTION:
When checking operation, be sure to apply the parking brake securely.
When an operation check is performed with no measuring devices, a faulty part cannot be identified correctly. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

• Air tightness check

1) Start the engine, and idle it for 1 to 2 minutes, then turn it OFF.
2) Depress the brake pedal several times applying the normal pedal force.

NOTE:
The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression.

3) If no change occurs in the pedal height when pressed, the vacuum booster assembly is faulty.



(A) Normal (B) Not OK

(a) 1st (b) 2nd (c) 3rd

NOTE:
- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

- **Check operation**

1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.

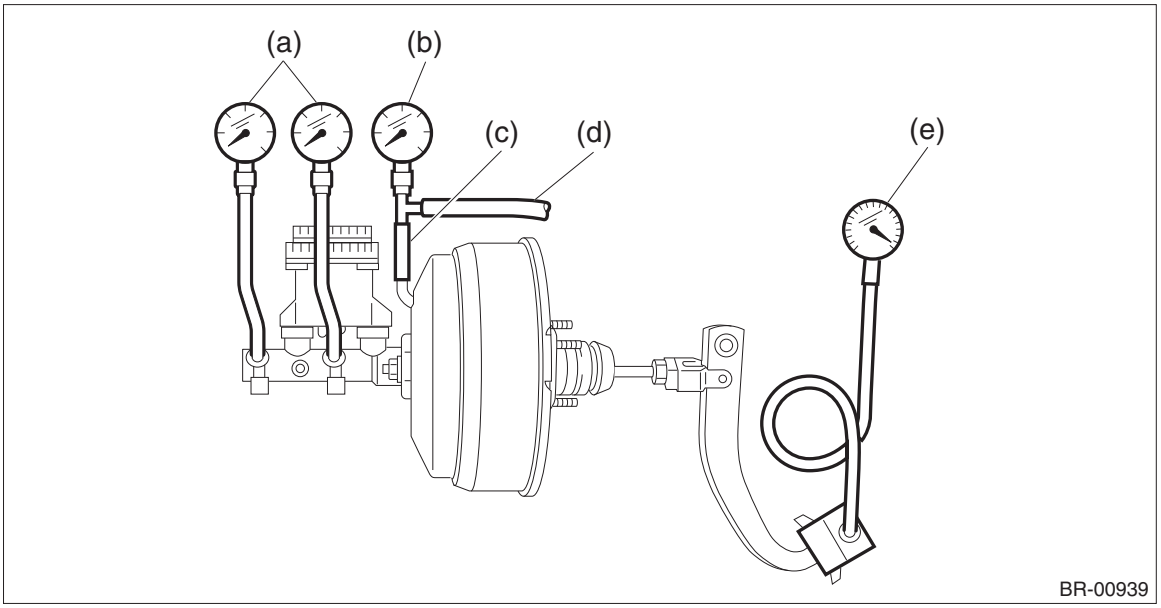
(a) When engine is stopped (b) When engine is started

2) With the brake pedal depressed, start the engine.
3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the vacuum booster assembly is faulty.

NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

- **Loaded air tightness check**

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed.
Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of vacuum booster assembly is normal. If the pedal height increases, it is faulty.

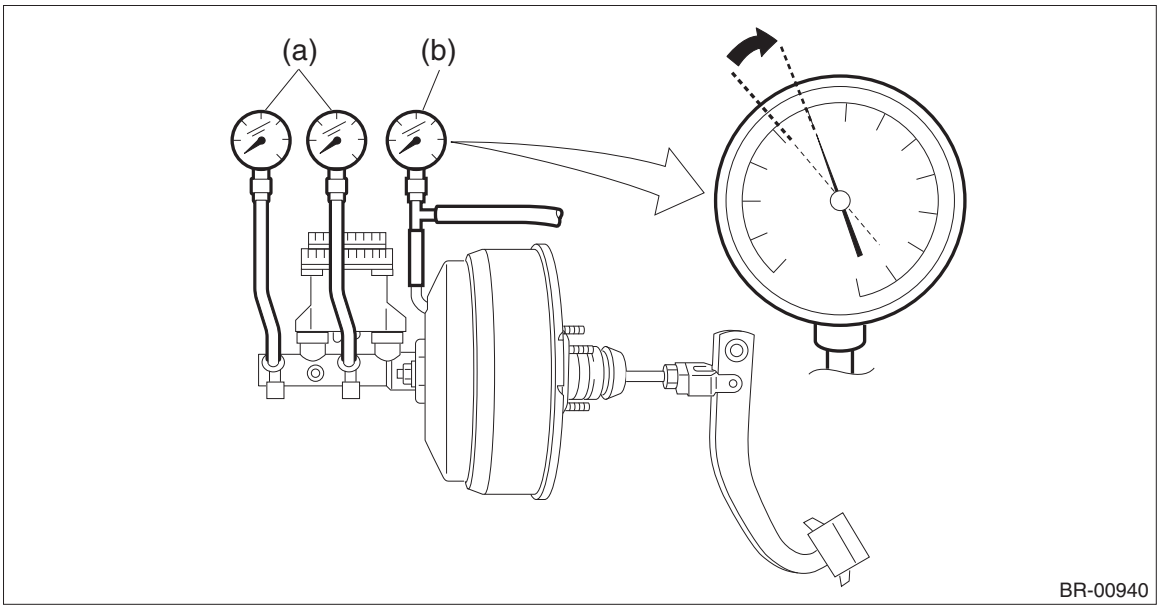


NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

2. OPERATION CHECK WHEN USING MEASURING DEVICES

CAUTION:
When checking operation, be sure to apply the parking brake securely.

- **Check with measuring devices**



Connect a measuring device as shown in the figure. After bleeding air from the pressure gauge, perform each check.

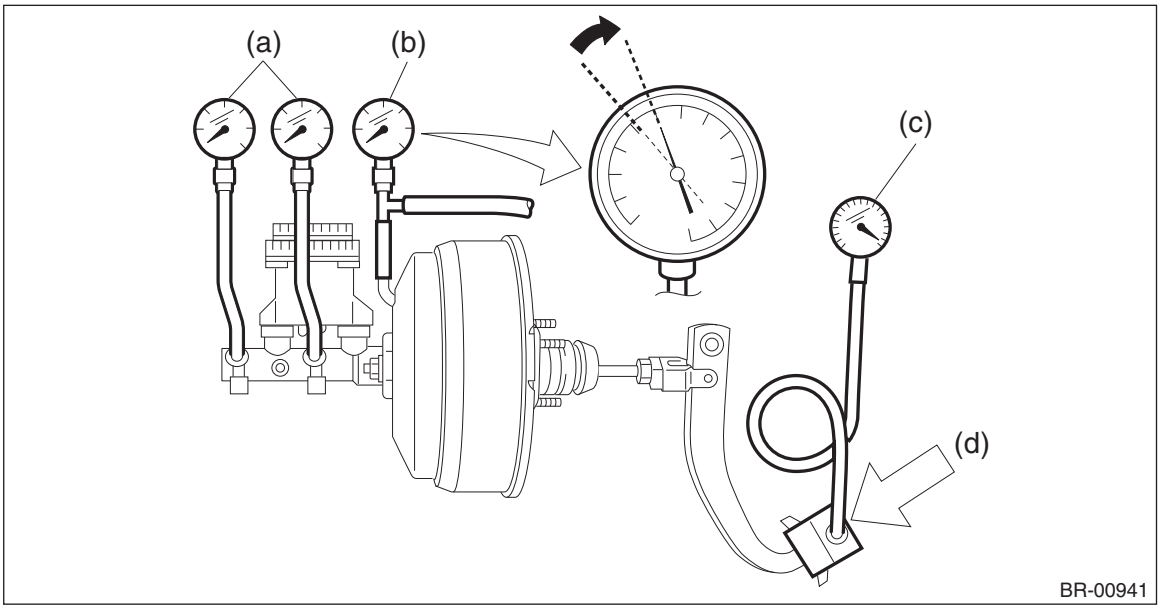
(a) Pressure gauge
(b) Vacuum gauge
(c) Adapter hose
(d) Vacuum hose
(e) Pedal force gauge

- **Air tightness check**

1) Start the engine and keep it running at idle until vacuum pressure indicates 66.7 kPa (500 mmHg, 19.69 inHg) while the brake pedal is not depressed.

(a) Pressure gauge (b) Vacuum gauge

2) Stop the engine and check the vacuum pressure.
If the value matches the following standard, the vacuum booster assembly function is normal.



Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, it may results from one of the following causes.
- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

- **Loaded air tightness check**

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf).

2) Keep the engine running at idle and the pedal depressed until vacuum pressure of the vacuum gauge indicates 66.7 kPa (500 mmHg, 19.69 inHg).

(a) Pressure gauge
(b) Vacuum gauge
(c) Pedal force gauge
(d) Depressed

3) Stop the engine and check the vacuum gauge.
If the value matches the following standard, the vacuum booster function is normal.

Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, refer to “AIR TIGHTNESS CHECK”.
<Ref. to BR-50, INSPECTION, Brake Booster.>
4) If the vacuum booster assembly is faulty, replace it with a new part.

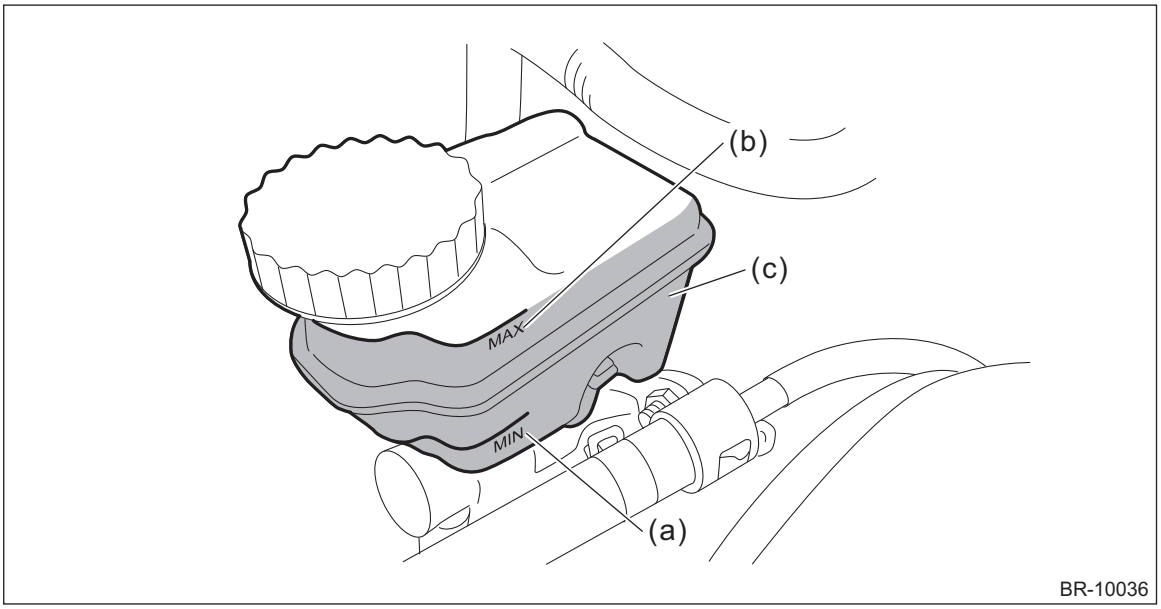
• Lack of boost action check

1) Turn the engine OFF, and set the value of the vacuum gauge to “0”.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	533 (5, 77)	1,551 (16, 225)

• Boosting action check

1) Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.



Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	6,177 (63, 896)	11,273 (115, 1,635)

10.Brake Fluid

A: INSPECTION

CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• Do not allow dirt or dust to get into the reservoir tank.
1) Check the fluid for discoloration.
2) Check that the amount of brake fluid is between the lines of “MIN” and “MAX” from the front view or from the forward right and left within 90°.

CAUTION:
Always check the level using the specified direction because there is a partition in the reservoir tank.

(A) View from upper face

(a) MIN. level
(b) MAX. level
(c) Brake fluid
(d) Brake fluid level check range

3) If the brake fluid level is close to “MIN”, check the brake pipe or brake hose for any leak first. Then, check that the brake fluid level is reduced due to brake pad wear.
4) If the fluid is extremely discolored or the fluid level is less than the specified value after inspection, replenish or replace with the new fluid.

B: REPLACEMENT

CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• Do not allow dirt or dust to get into the reservoir tank.

NOTE:
• During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.

- Operate the brake pedal slowly and depress it fully.
- For convenience and safety, perform the work with 2 people.
- The required amount of brake fluid is approximately 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.

1) Lift up the vehicle.
2) Remove the front/rear and right/left wheels.
3) Drain brake fluid from the reservoir tank.
4) Replenish the reservoir tank with the recommended brake fluid, and perform the same procedure as for bleeding the brake line on each brake caliper. <Ref. to BR-57, PROCEDURE, Air Bleeding.>

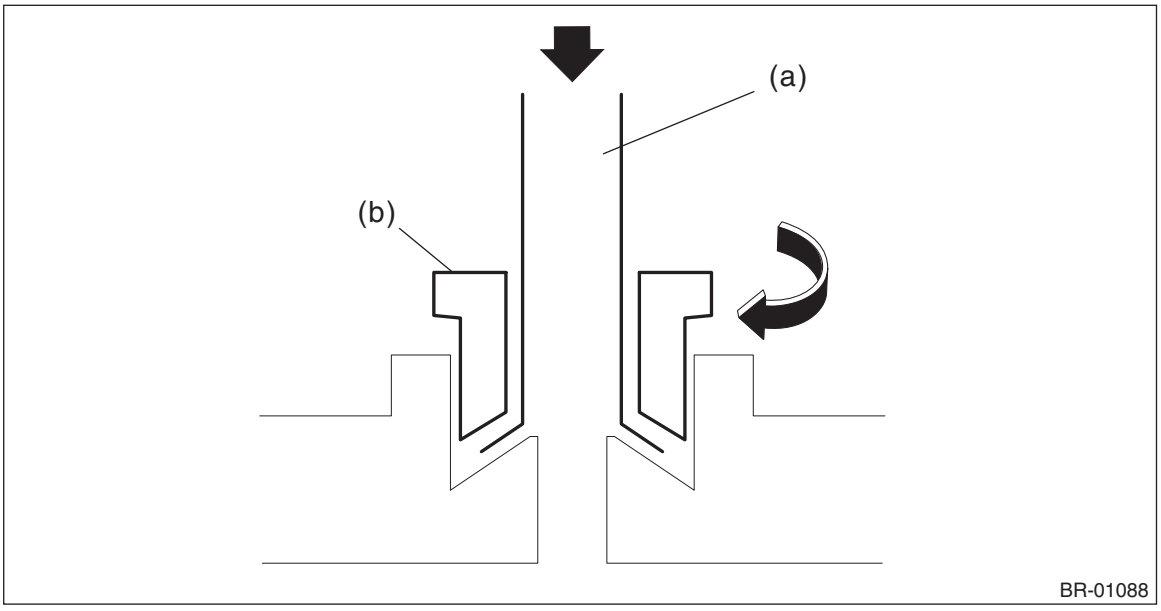
Preparation items:
Recommended brake fluid: FMVSS No. 116, DOT3 or DOT4

NOTE:
Repeat the full stroke depressing operation of the brake pedal slowly, until new brake fluid comes out from a transparent vinyl tube. (On each brake caliper, 20 times or more of pedal operations is necessary in order for new brake fluid from the master cylinder to come out from the bleeder - screw.)

11.Air Bleeding

A: PROCEDURE

CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
• Do not allow dirt or dust to get into the reservoir tank.
• For convenience and safety, perform the work with 2 people.
• During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.
• After air bleeding operation, wipe off fluid around each bleeder - screw and the reservoir tank.
For air bleed procedure of each part, refer to the following.
- Master cylinder: <Ref. to BR-57, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
- Brake line: <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>
- Hydraulic control unit: <Ref. to BR-60, HYDRAULIC CONTROL UNIT, PROCEDURE, Air Bleeding.>
- Caliper: <Ref. to BR-61, CALIPER, PROCEDURE, Air Bleeding.>



1. MASTER CYLINDER

NOTE:
- When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the brake master cylinder.
- If bleeding of the master cylinder assembly is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>

1) Install the brake pipe to the master cylinder assembly.
   (1) Screw and tighten the flare nut (b) so that the end of the nut contacts the back side of the brake pipe flare, while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 19 N·m (1.9 kgf-m, 14 ft-lb)

2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:
• Replenish brake fluid to the MAX level.
• During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.

3) Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly that is the closest from the VDC control module & hydraulic control unit, and the other end of the vinyl tube to a collection container.
4) Loosen the bleeder - screw, depress the brake pedal slowly and hold it.
5) Tighten the bleeder - screw, and release the brake pedal quickly.
6) Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.

NOTE:
Air bubbles are removed after repeating the procedures six to seven times.

7) Attach a transparent vinyl tube to the bleeder - screw of the left front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
8) Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.

NOTE:
• Air bubbles are removed after repeating the procedures seven to eight times.
• With the procedures so far, bleed is completed for the air that entered in the master cylinder, front brake piping hose passages and front caliper.

Next, perform the following procedures to bleed air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.
9) Attach a transparent vinyl tube to the bleeder - screw of the left rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
10) Loosen the bleeder - screw, and repeat the full stroke depressing operation of the brake pedal slowly, until the brake fluid in the transparent vinyl tube has no more air bubbles, then tighten the bleeder - screw.

NOTE:
By repeating the procedures 15 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the left rear caliper body assembly and is discharged.

11) Attach a transparent vinyl tube to the bleeder - screw of the right rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
12) Perform step 10).

NOTE:
• By repeating the procedures 10 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the right rear caliper body assembly and is discharged.
• With the procedures so far, bleed is completed for the air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.

Lastly, perform the following procedures to bleed air that may remain in areas where the brake fluid flow stands.
13) Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
14) After repeating firmly depressing of the brake pedal quickly five or six times, depress and hold the pedal.
15) Loosen the bleeder - screw to drain brake fluid. When the brake pedal reaches the full stroke position, tighten the bleeder - screw quickly, and release the brake pedal.
16) Repeat steps 14) and 15) until there are no more air bubbles in the transparent vinyl tube.

NOTE:
Repeat the procedures approximately four to five times.

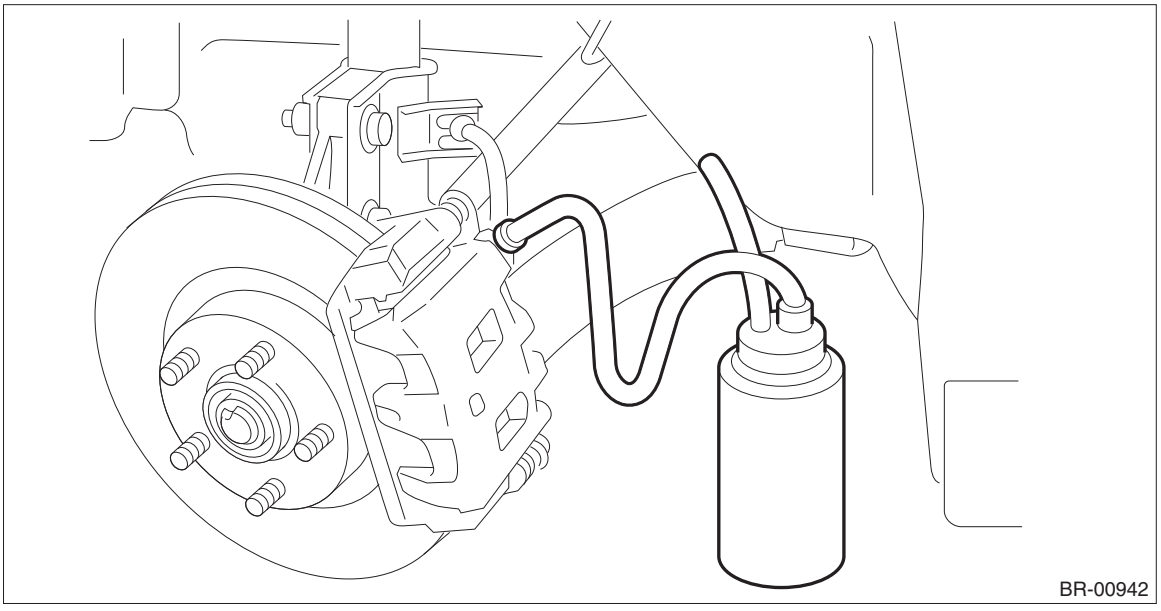
17) Repeat steps 14) to 16) above for each brake caliper.

NOTE:
Bleed air in the order starting from the front RH → front LH → rear LH → rear RH.

18) Tighten the bleeder - screw to the specified torque.

Tightening torque:
Front bleeder - screw: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>
Rear bleeder - screw: 17 N·m (1.7 kgf-m, 12.5 ft-lb)

19) Install the cap - bleeder to each bleeder - screw.
20) Check that there are no brake fluid leaks at the flare nut portion or in the entire brake system.



CAUTION:
After inspection, wipe off fluid completely around each bleeder - screw, the passage of the bleeder - screw and the reservoir tank.
If brake fluid remains in the bleeder - screw, fluid oozing can occur due to thermal expansion of fluid, and this may result in false recognition of fluid leakage.

21) After inspection, wipe off fluid around each bleeder - screw and the reservoir tank.
22) Perform a road test and ensure that the brakes operate normally.

2. BRAKE LINE

1) When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the master cylinder assembly before bleeding the brake line. <Ref. to BR-57, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:
While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.
3) Attach one end of a transparent vinyl tube to the bleeder - screw, and the other end to a brake fluid collection container.

4) Loosen the bleeder - screw, and then repeat the full stroke depressing operation of the brake pedal, until brake fluid in the transparent vinyl tube has no more air bubbles.

NOTE:
Air bubbles are removed after repeating the depressing operation 15 times or more for the front caliper, and 20 times or more for the rear caliper.
5) Perform the steps 2) to 4) above on each brake caliper.

NOTE:
Perform in the order starting from the front RH → front LH → rear LH → rear RH.
6) Tighten the loosened bleeder - screw, repeat firmly depressing of the brake pedal 5 to 6 times, and then depress and hold the brake pedal.
7) Loosen the bleeder - screw to drain the brake fluid. When the brake pedal reaches the full stroke position, immediately tighten the bleeder - screw and return the brake pedal.
8) Repeat steps 6) and 7) until there are no more air bubbles in the transparent vinyl tube.

9) Perform the steps 6) to 8) above on each brake caliper.

NOTE:
Perform in the order starting from the front RH → front LH → rear LH → rear RH.
10) Operate the hydraulic control unit in the sequence control mode for both ABS and VDC systems.

CAUTION:
• If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform steps 11) to 16).
• For normal air bleeding operation, do not operate the sequence control for the hydraulic control unit. (Operating the sequence control may let air in the normal air bleeding passages move to the pressure control section.)

NOTE:
• Normal air bleeding operation does not help bleed air that enters the pressure control section in the hydraulic control unit.
• If there is a possibility that air enters the pressure control section in the hydraulic control unit (if VDC or ABS operates with air contained in the normal air bleeding passage), perform the sequence control mode for both of the ABS and VDC systems.
11) Perform the ABS sequence control mode. <Ref. to VDC-18, ABS Sequence Control.>

CAUTION:
Be sure to perform the ABS sequence control mode first.
12) Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.

NOTE:
• Perform in the order starting from the front RH → front LH → rear LH → rear RH.
• As a reference, the number of the full stroke depressing operation is six times.
13) Perform the VDC sequence control mode. <Ref. to VDC-21, VDC Sequence Control.>
14) Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.
15) Repeat from steps 11) to 14) for three cycles.
16) In case air still remains at step 15), repeat steps 11) to 14) again until all air is removed.
17) Fill the reservoir tank with brake fluid up to the “MAX” level.
18) Tighten the bleeder - screw to the specified torque.

Tightening torque:
Front bleeder - screw: Refer to “COMPONENT” of “General Description” for the tightening torque. <Ref. to BR-4, FRONT DISC BRAKE, COMPONENT, General Description.>
Rear bleeder - screw: 17 N·m (1.7 kgf-m, 12.5 ft-lb)
19) Install the cap - bleeder to each bleeder - screw.
20) Check that there are no brake fluid leaks at the flare nut portion or in the entire brake system.

CAUTION:
After inspection, wipe off fluid completely around each bleeder - screw, the passage of the bleeder - screw and the reservoir tank.
If brake fluid remains in the bleeder - screw, fluid oozing can occur due to thermal expansion of fluid, and this may result in false recognition of fluid leakage.
21) After inspection, wipe off fluid around each bleeder - screw and the reservoir tank.
22) Perform a road test and ensure that the brakes operate normally.

3. HYDRAULIC CONTROL UNIT

1) Perform steps 1) to 22) in procedure 2 for air bleeding of the brake line. <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>

CAUTION:
• If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform steps 11) to 16) in procedure 2.
• For normal air bleeding operation, do not operate the sequence control for the hydraulic control unit. (Operating the sequence control may let air in the normal air bleeding passages move to the pressure control section.)
• Always start the operations in ABS sequence control mode prior to VDC sequence control mode.

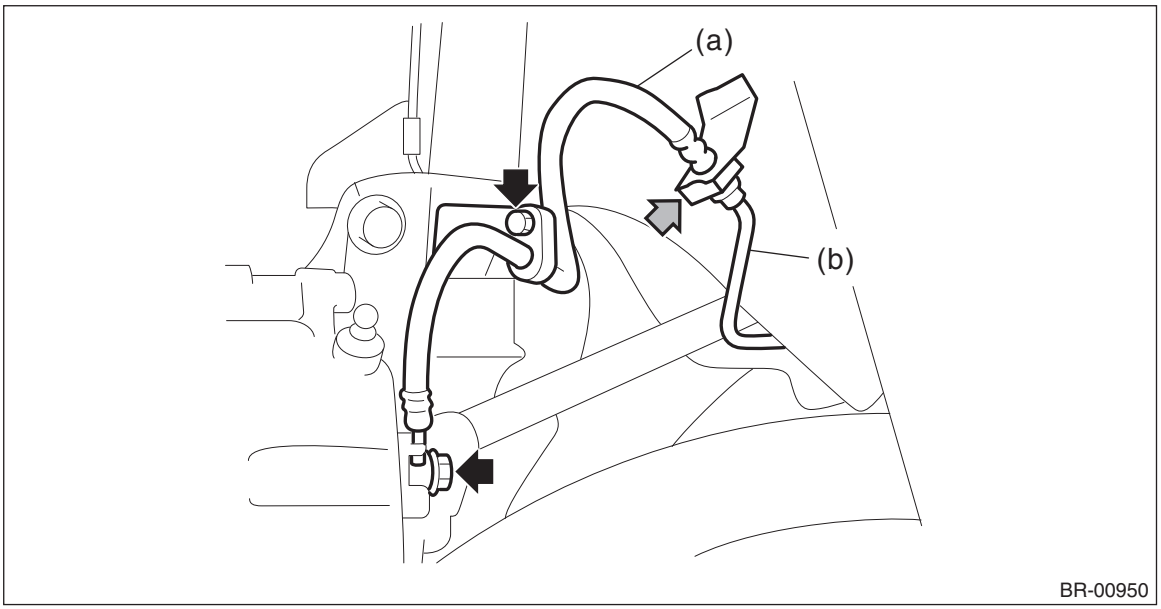
NOTE:
If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform the sequence control mode for both of the ABS and VDC systems. (Refer to steps 10) to 16) for brake lining.)

4. CALIPER

1) Perform steps 1) to 22) in procedure 2 for air bleeding of the brake line. <Ref. to BR-59, BRAKE LINE, PROCEDURE, Air Bleeding.>

CAUTION:
- **For the caliper with electronic parking actuator, never drain the brake fluid in the caliper.**
- **When removing the caliper with electronic parking actuator from the vehicle, make sure to apply the brake fluid seal before disconnection.**
- **Do not remove the brake fluid seal of the caliper with replacement electronic parking actuator, except when the caliper is installed on the vehicle.**

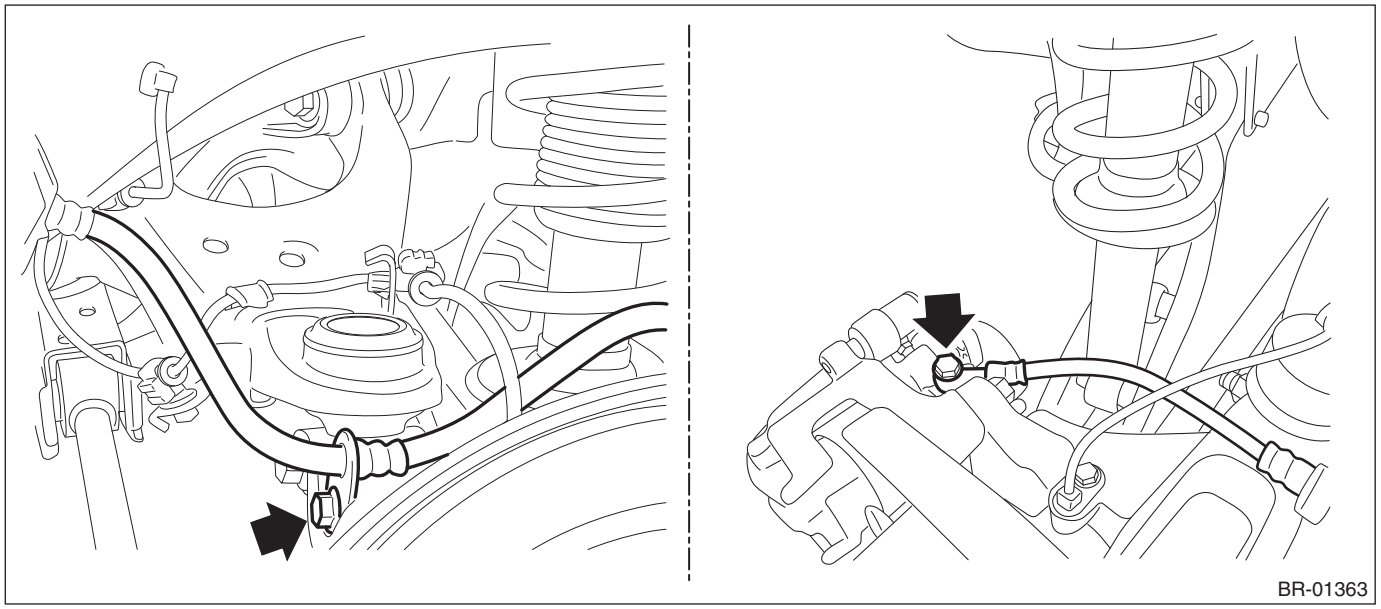
12.Brake Hose



A: REMOVAL

1. FRONT BRAKE HOSE

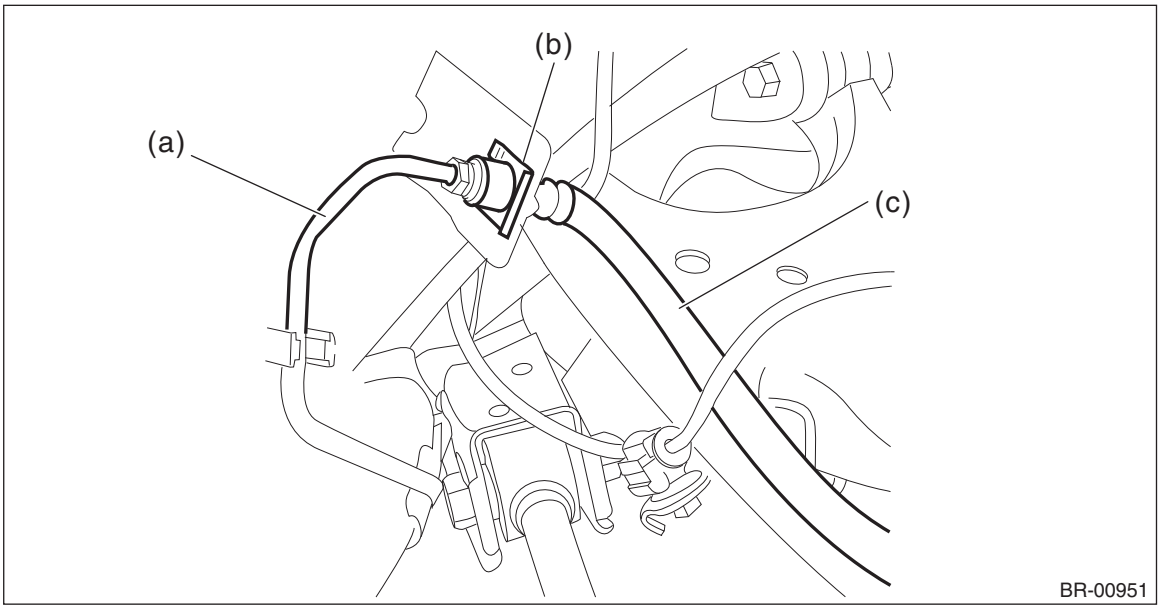
1) Disconnect the brake hose (a) and the brake pipe (b).



Preparation tool:
Flare nut wrench

2) Remove the clamp, strut mounting bolt and union bolt, and remove the front brake hose.

2. REAR BRAKE HOSE



1) Remove the brake hose bracket bolt and union bolt.

2) Disconnect the brake pipe (a).

Preparation tool:
Flare nut wrench

3) Remove the brake hose clamp (b), and remove the rear brake hose (c).

B: INSTALLATION

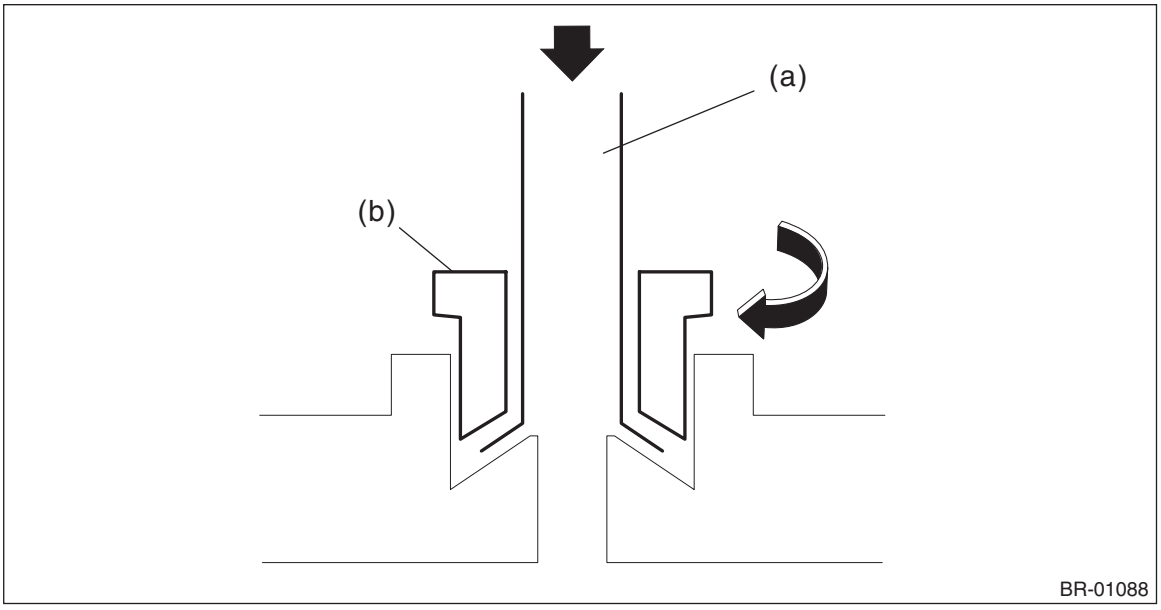
1. FRONT BRAKE HOSE

1) Secure the brake hose to the brake hose mount part of strut COMPL.

Tightening torque:
Brake hose: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

2) Connect the brake hose to the caliper body assembly using a new gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)



3) Position the disc rotor in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

CAUTION:
Do not twist the brake hose.

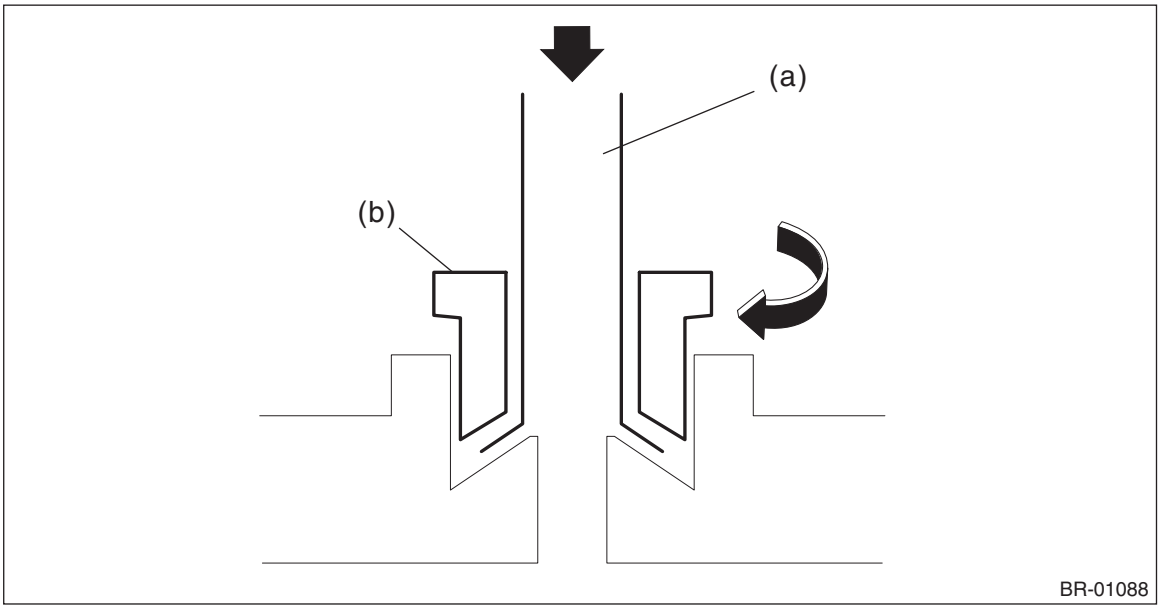
4) Connect the brake pipe and the hose, then temporarily tighten the flare nut.
5) Secure the brake hose to wheel apron bracket with clamp.
6) Turn and tighten the flare nut (b) by hand while pushing the brake pipe (a) away from yourself.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.53 kgf-m, 11.1 ft-lb)

7) Bleed air from the brake system. <Ref. to BR-57, PROCEDURE, Air Bleeding.>

2. REAR BRAKE HOSE



1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2) Insert the clamp to secure brake hose.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
3) Install the brake hose to rear caliper body using a new gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)
4) Turn and tighten the flare nut (b) by hand while pushing the brake pipe (a) away from yourself.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.53 kgf-m, 11.1 ft-lb)

5) Bleed air from the brake system. <Ref. to BR-57, PROCEDURE, Air Bleeding.>

C: INSPECTION

Check the hose for crack, interference with other parts, damage, and fluid leakage on connecting sections. If any faulty is found, repair or replace the relevant part.

13.Brake Pipe

A: REMOVAL

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When removing the brake pipe, do not bend.**

NOTE:
The airbag system wiring harness is routed near the center brake pipe.

B: INSTALLATION

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When installing the brake pipe, do not bend.**
- **After installing the brake pipe and hose, perform air bleed.**
- **After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.**

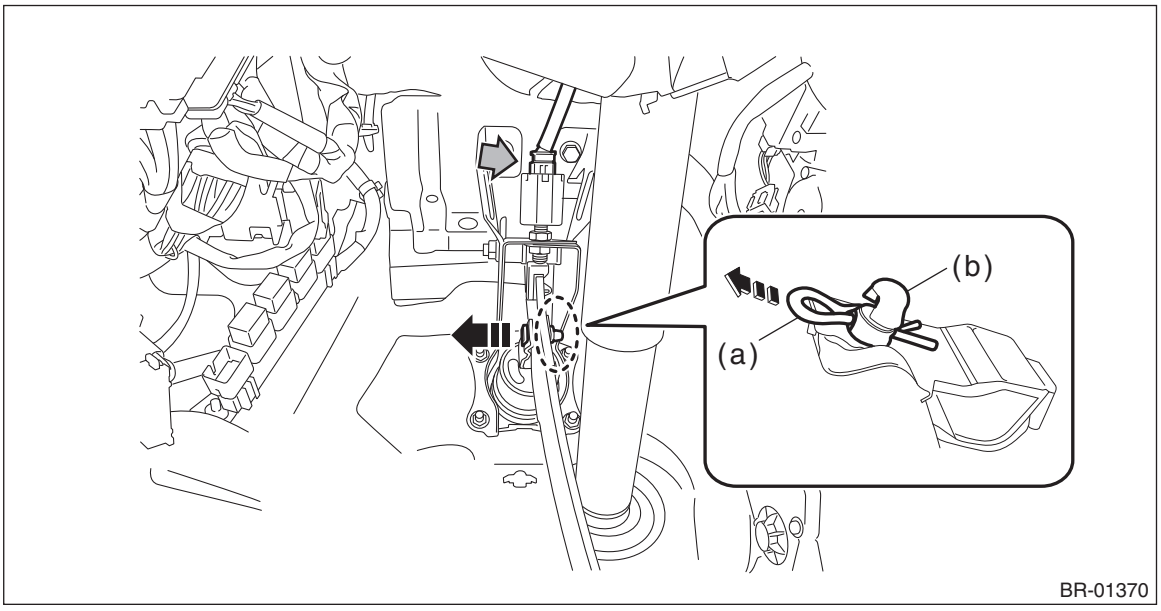
NOTE:
The airbag system wiring harness is routed near the center brake pipe.

Tightening torque:
Front brake pipes & hoses: <Ref. to BR-8, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>
Center & rear brake pipes and hoses: <Ref. to BR-10, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>

C: INSPECTION

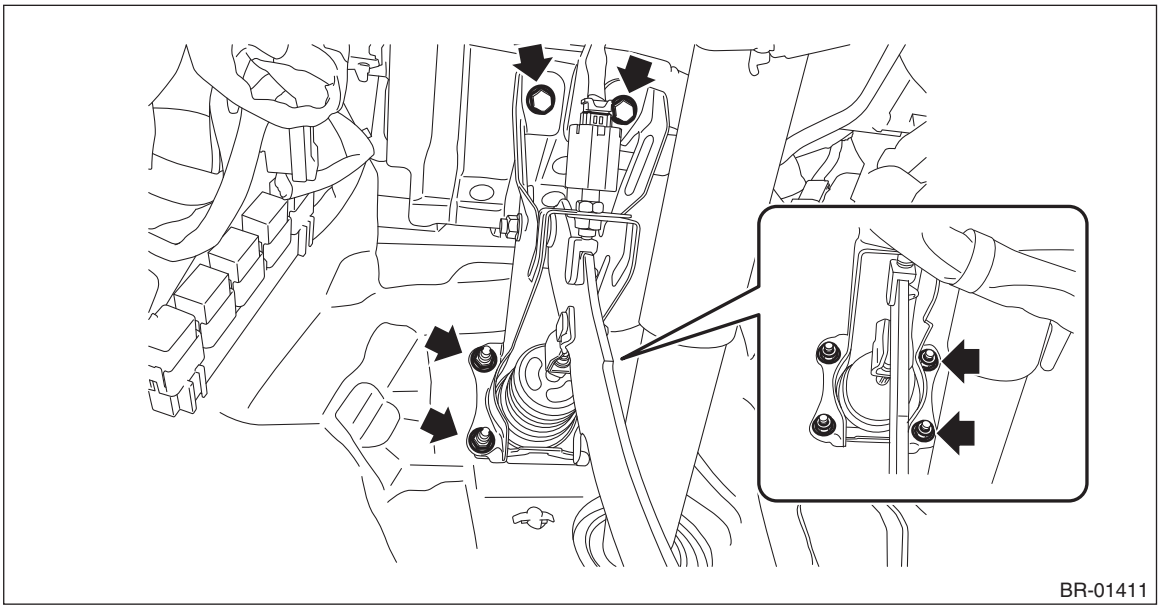
Check the pipe for crack and damage, and also check the connection for fluid leakage. If any faulty is found, repair or replace the relevant part.

NOTE:
Use a mirror when inspecting back sides and other locations which are hard to see.



14.Brake Pedal

A: REMOVAL



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard. <Ref. to PS-26, REMOVAL, Steering Column.>
4) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
5) Remove the column assembly - steering. <Ref. to PS-26, REMOVAL, Steering Column.>
6) Remove the brake pedal assembly.
(1) Disconnect the stop light switch connector.
(2) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:
- **Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.**
- **Do not change the push rod length.**

(3) Remove the bolt and nut, and then detach the brake pedal assembly.

B: INSTALLATION

1) Install the brake pedal assembly.

CAUTION:
• Apply grease to the snap pin to prevent the operating rod from wear.
• Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.

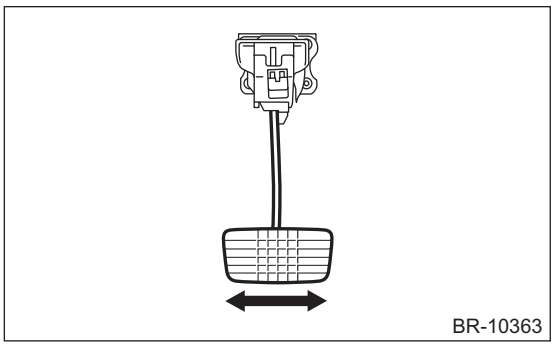
Tightening torque:
Brake pedal: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the column assembly - steering. <Ref. to PS-28, INSTALLATION, Steering Column.>
3) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.

4) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

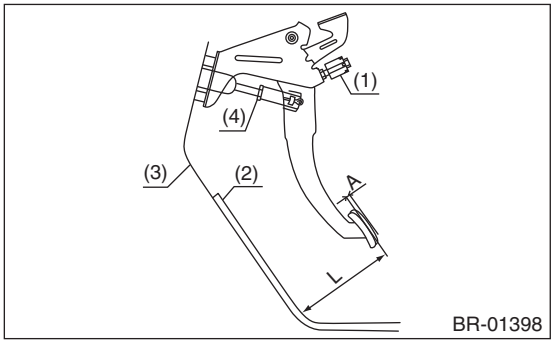


5) Install the cover assembly - instrument panel LWR driver.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Check that the brake light operate properly.
8) Check the brake pedal after installation. <Ref. to BR-68, INSPECTION, Brake Pedal.>

C: INSPECTION

1) Move the pad - brake pedal in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

CAUTION:
If excessive deflection is noted, replace with a new bushing.



Deflection of brake pedal:
Limit: 5 mm (0.197 in) or less

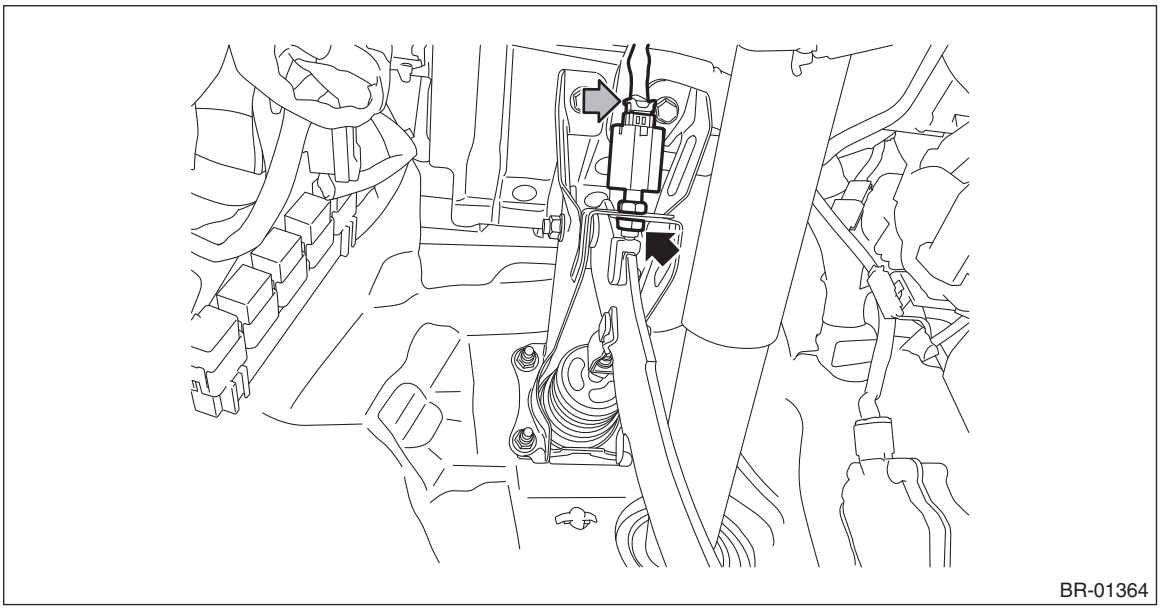
2) Check the position of the pedal pad.

Pedal height L:
125 — 135 mm (4.92 — 5.31 in)

Brake pedal free play A:
0.5 — 2.7 mm (0.02 — 0.11 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]

(1) Stop light switch
(2) Mat
(3) Toe board
(4) Brake booster operating rod

3) If it is not within the specification, loosen the lock nuts of vacuum booster operating rod, and rotate the rod to adjust the pedal height L within the specification.
4) Tighten the lock nut.



Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

NOTE:
Check the brake pedal height. When adjusting, also adjust the stop light switch.

15.Stop Light Switch

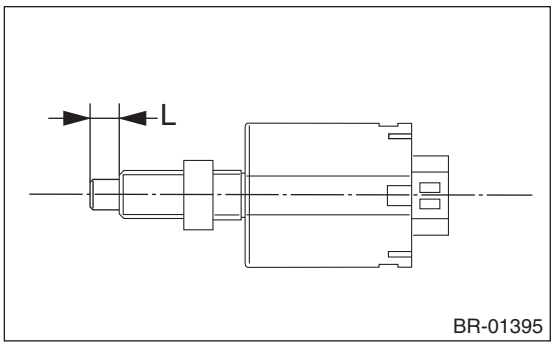
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard. <Ref. to PS-26, REMOVAL, Steering Column.>
4) Remove the stop light switch.
   (1) Disconnect the stop light switch connector.
   (2) Remove the nut, and remove the stop light switch.

B: INSTALLATION

1) Install the stop light switch onto the bracket with screws and position it with the nut.
2) Adjust the stop light switch position, and then tighten the nut. <Ref. to BR-72, ADJUSTMENT, Stop Light Switch.>

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)
3) Install the panel - knee guard.

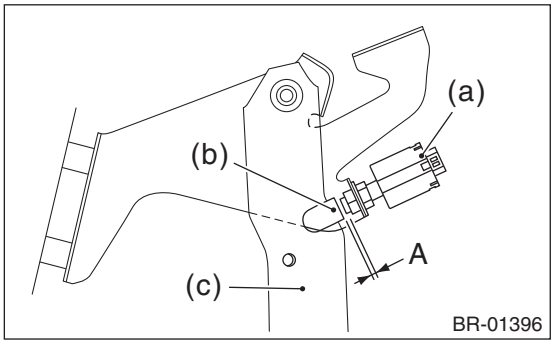


Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. INSPECT THE SPECIFIED POSITION

1) Measure the specified position of the stop light switch ends.



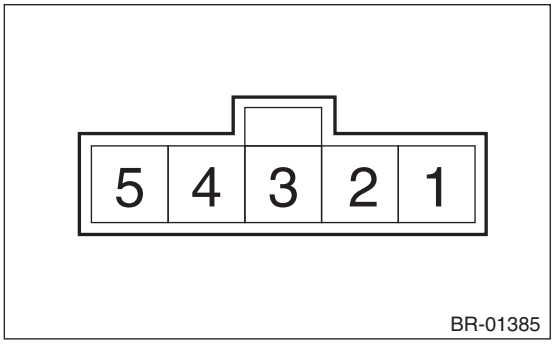
Specified position L:
3.6 mm ±0.4 mm (0.14 in ±0.016 in)

2) Measure the clearance between the end of the stop light switch and the stopper.

CAUTION:
Be careful not to rotate the stop light switch.

Stop light switch clearance A:
1.1 mm (0.03 — 0.04 in)

(a) Stop light switch
(b) Stopper
(c) Brake pedal



3) Adjust the position of the stop light switch if the inspection result is not within the standard value. <Ref. to BR-72, ADJUSTMENT, Stop Light Switch.>
4) If the stop light switch does not operate properly or it is not secured at the specified position after adjustment, replace with a new part.

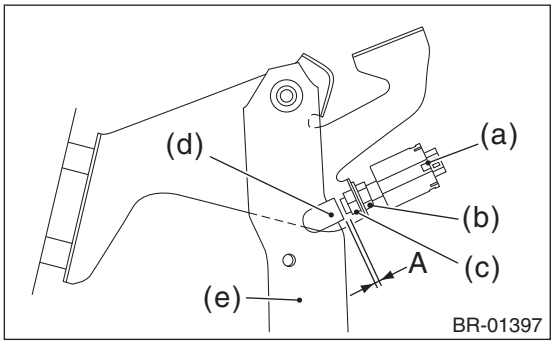
2. INSPECT THE RESISTANCE

1) Check the resistance between connector terminals.

CAUTION:
When checking, always apply battery voltage to connector terminals 1 (+) — 3 (–) and 5 (+) — 3 (–).

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	When brake pedal is depressed	Less than 1 Ω
	When brake pedal is released	1 MΩ or more
5 — 4	When brake pedal is depressed	1 MΩ or more
	When brake pedal is released	Less than 1 Ω



2) Replace the stop light switch if the inspection result is not within the standard value.

D: ADJUSTMENT

1) Loosen the lock nut, and adjust the stop light switch position until the clearance (A) between the threaded end of the stop light switch and stopper becomes 1.1 mm (0.04 in). Then, tighten the lock nut.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

2) Tighten the lock nut.

(a) Stop light switch
(b) Lock nut A
(c) Lock nut B
(d) Stopper
(e) Brake pedal

16.General Diagnostic Table

A: INSPECTION

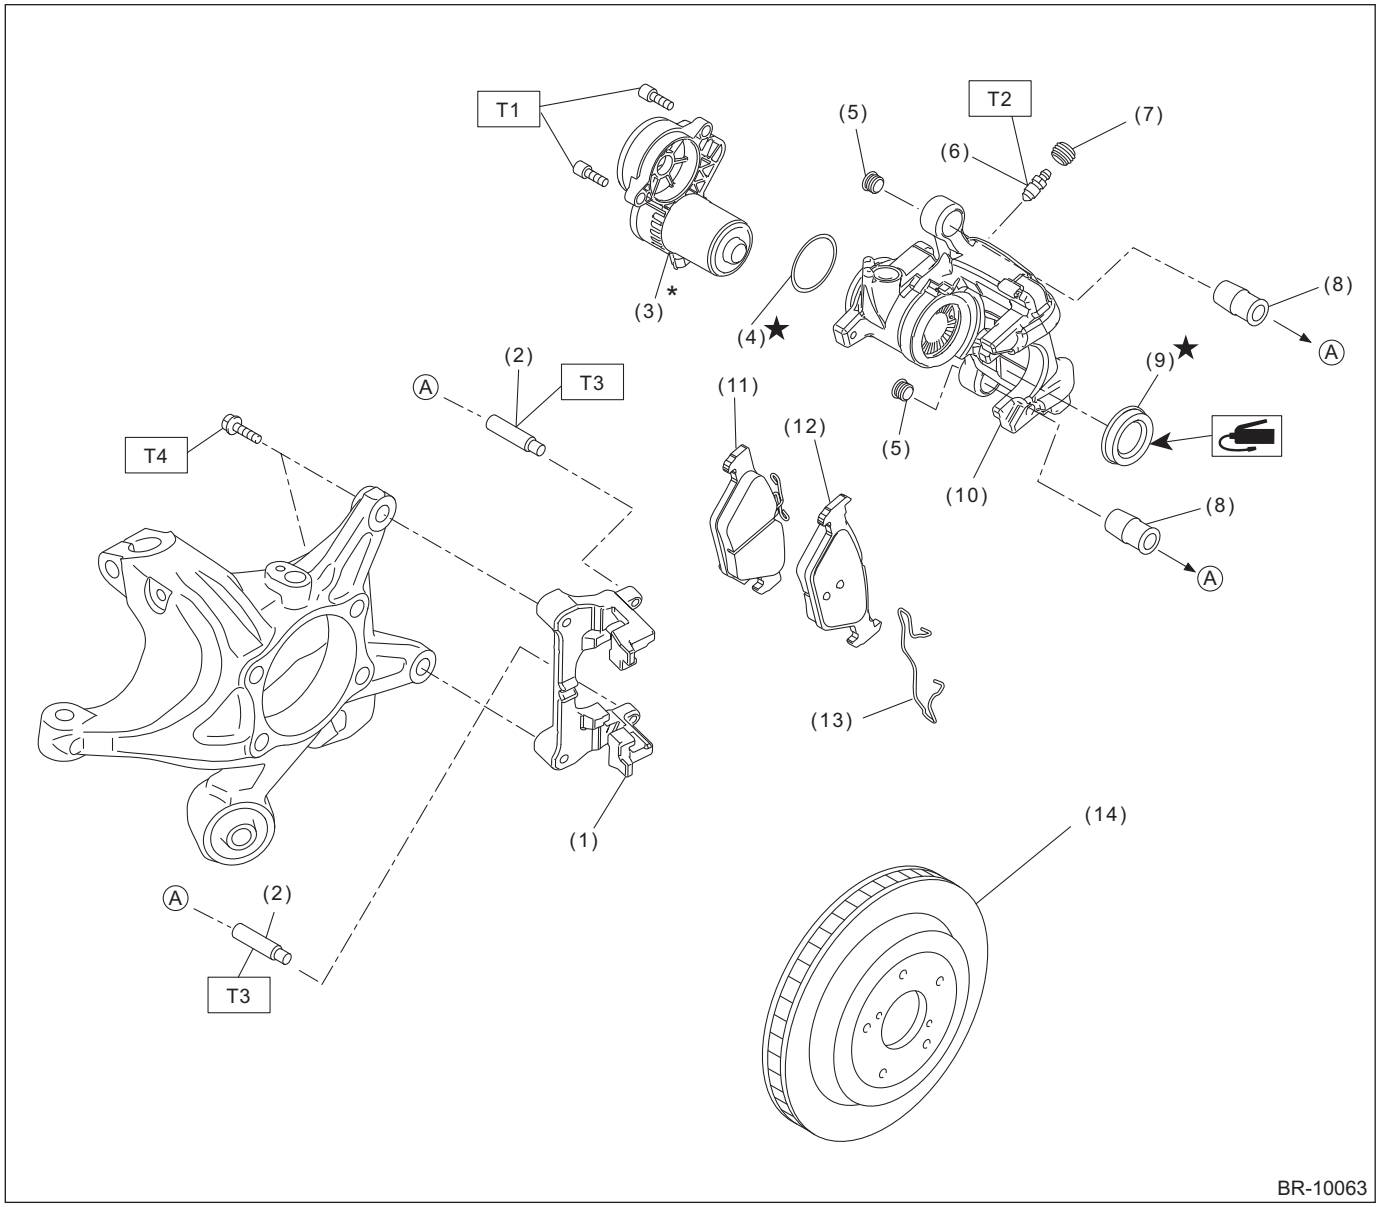
	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on pad	Replace and clean.
	(4) Improper operation of master cylinder assembly, disc caliper, vacuum booster assembly or check valve	Repair or replace.
2. Unstable or uneven braking	(1) Fluid on pad or rotor	Correct the cause of fluid leakage, and replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper pad contact, deteriorated surface, deteriorated or worn pad material	Replace.
	(4) Deformed back plate	Repair or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Defective hub unit COMPL	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper pad contact or worn pad	Repair or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return of parking brake	Repair or replace.
	(5) Improper disc caliper operation	Repair or replace.
	(6) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose hub unit COMPL	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

PARKING BRAKE

PB

Page

1. General Description 2
2. Parking Brake System 6
3. Relay and Fuse 7
4. Parking Brake Assembly (Rear Disc Brake) 8
5. Parking Brake Actuator 9
6. Parking Brake Switch 13
7. Emergency Release of Electronic Parking Brake 15
8. General Diagnostic Table 18



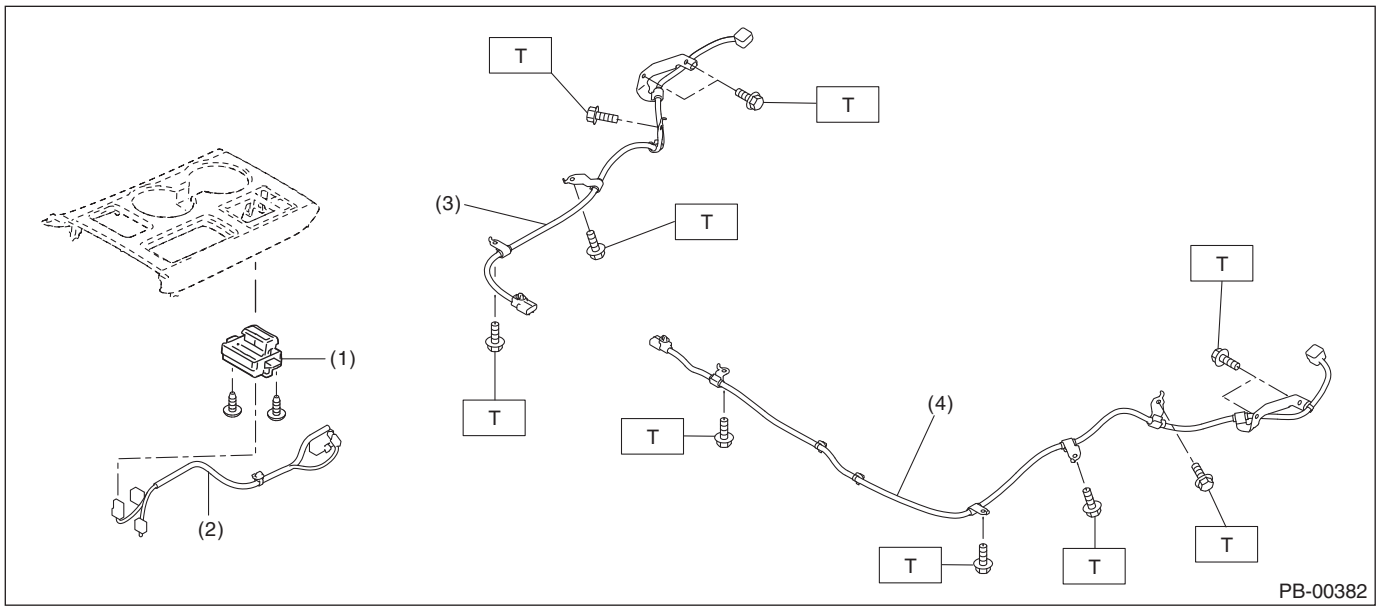
1. General Description

A: SPECIFICATION

Item	Specification
Type	Electric type
Clearance adjustment	Automatic adjusting
Operation method	Switch type

B: COMPONENT

1. PARKING BRAKE ACTUATOR



(1)	Support - rear disc brake	(8)	Pin boot	
(2)	Guide pin - rear brake	(9)	Piston boot	
(3)	Parking brake actuator ASSY	(10)	Caliper body	
(4)	O-ring	(11)	Pad - disc brake rear inner	
(5)	Cap	(12)	Pad - disc brake rear outer	
(6)	Bleeder - screw	(13)	Pad clip	
(7)	Cap - bleeder	(14)	Disc rotor (ventilated type)	

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 17 (1.7, 12.5)
T3: 25 (2.5, 18.4)
T4: 66 (6.7, 48.7)

*: The component cannot be reused when the emergency release of parking brake was performed or when the actuator has a malfunction.

2. ELECTRONIC PARKING BRAKE HARNESS

(1)	Switch ASSY - electronic parking brake	(3)	Electronic parking brake harness RH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Console box harness	(4)	Electronic parking brake harness LH	***T: 18 (1.8, 13.3)***

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Parking Brake System

A: WIRING DIAGRAM

Refer to “Parking Brake / Brake Fluid Level Warning Light System” in the wiring diagram. <Ref. to WI-307, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-15, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

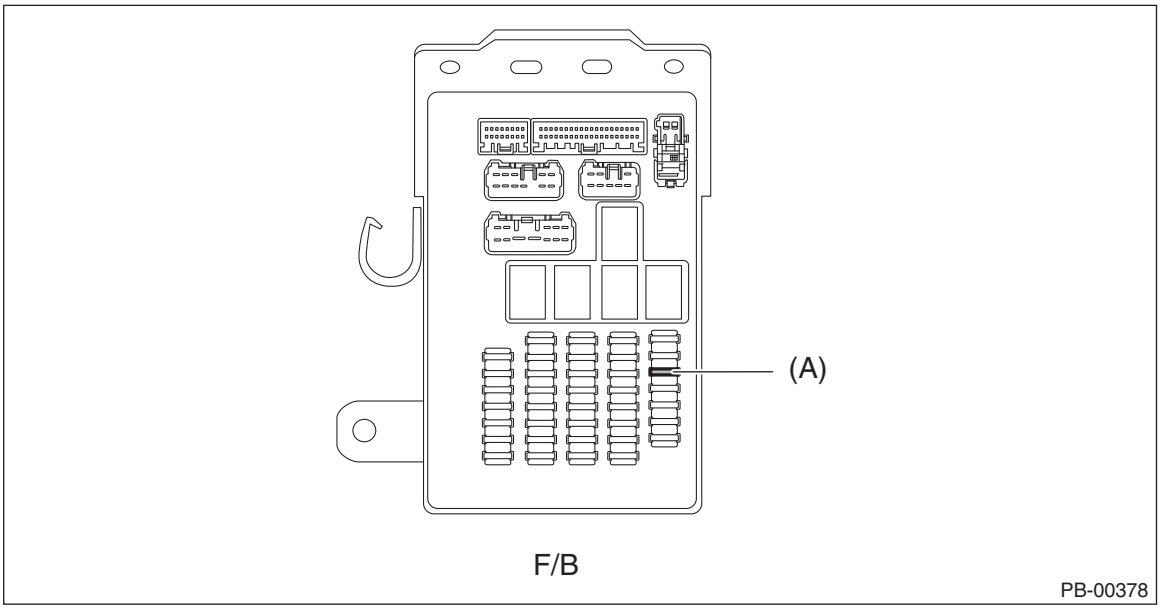
1. BRAKE MAINTENANCE MODE

CAUTION:
• DTCs may be stored after starting the brake maintenance mode. When the brake maintenance mode is complete, clear the DTCs.
• When the brake maintenance mode is completed, the electronic parking brake automatically operates. Check if any other works are not performed in advance. Sufficient safety consideration is required.

NOTE:
• This function is used when inspecting and repairing the rear brake related parts.
• When the brake maintenance mode is performed, the electronic parking brake warning light illuminates, the electronic parking brake operation light illuminates, and DTC: C1984 is stored. If the system returns from the brake maintenance mode to the normal mode, the electronic parking brake warning light goes off, and DTC is cleared.
• During the brake maintenance mode, the electronic parking brake cannot be applied/released.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
2) Turn the ignition switch to ON.
3) On «Start» display, select «Diagnosis».
4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
5) On «Main Menu» display, select «Each System».
6) On «Select System» display, select «Brake Control System» and select «Enter».
7) On «Select Function» display, select «Work Support».
8) From the work support item list, select «Brake Maintenance Mode». And then, start the operation.
9) After the operation is complete, exit the brake maintenance mode according to the display screen.

D: INSPECTION



Refer to Basic Diagnostic Procedure of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

E: NOTE

For procedure of each component in the parking brake system, refer to the respective section.
• Parking brake actuator: <Ref. to PB-9, Parking Brake Actuator.>
• Parking brake switch: <Ref. to PB-13, Parking Brake Switch.>
• Emergency release of electronic parking brake: <Ref. to PB-15, Emergency Release of Electronic Parking Brake.>

3. Relay and Fuse

A: LOCATION

Relay & fuse box (F/B)	Fuse 7.5 A (EPB control switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

4. Parking Brake Assembly (Rear Disc Brake)

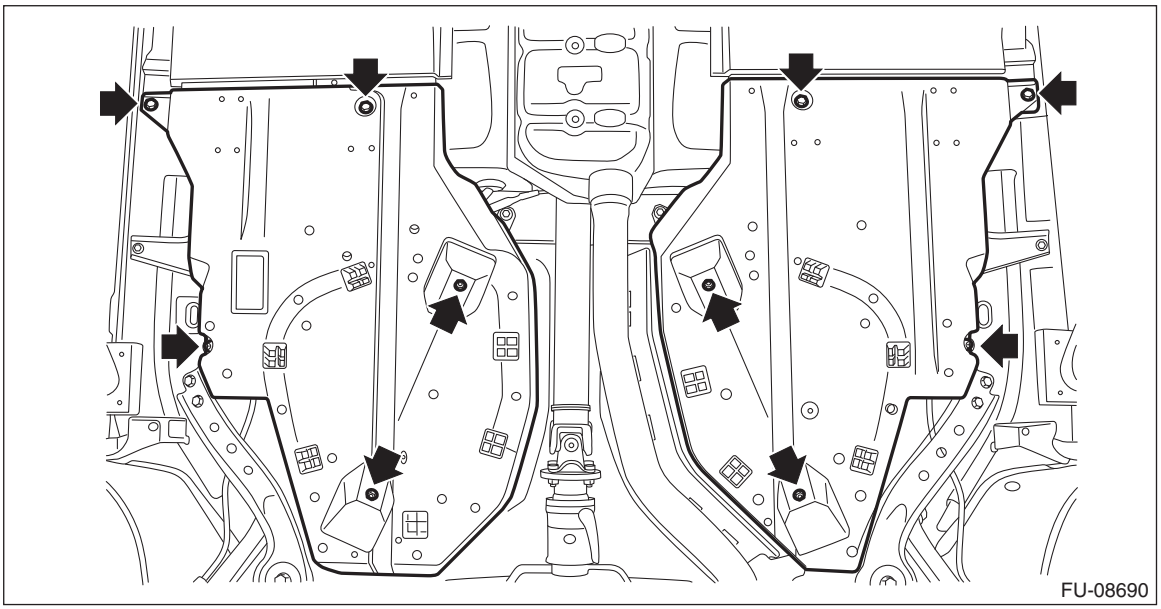
A: REMOVAL

NOTE:
For parking brake assembly removal and disassembly of electronic parking brake model, refer to “BRAKE” section.

- Removal: <Ref. to BR-40, REMOVAL, Rear Disc Brake Assembly.>
- Disassembly: <Ref. to BR-42, DISASSEMBLY, Rear Disc Brake Assembly.>

B: INSTALLATION

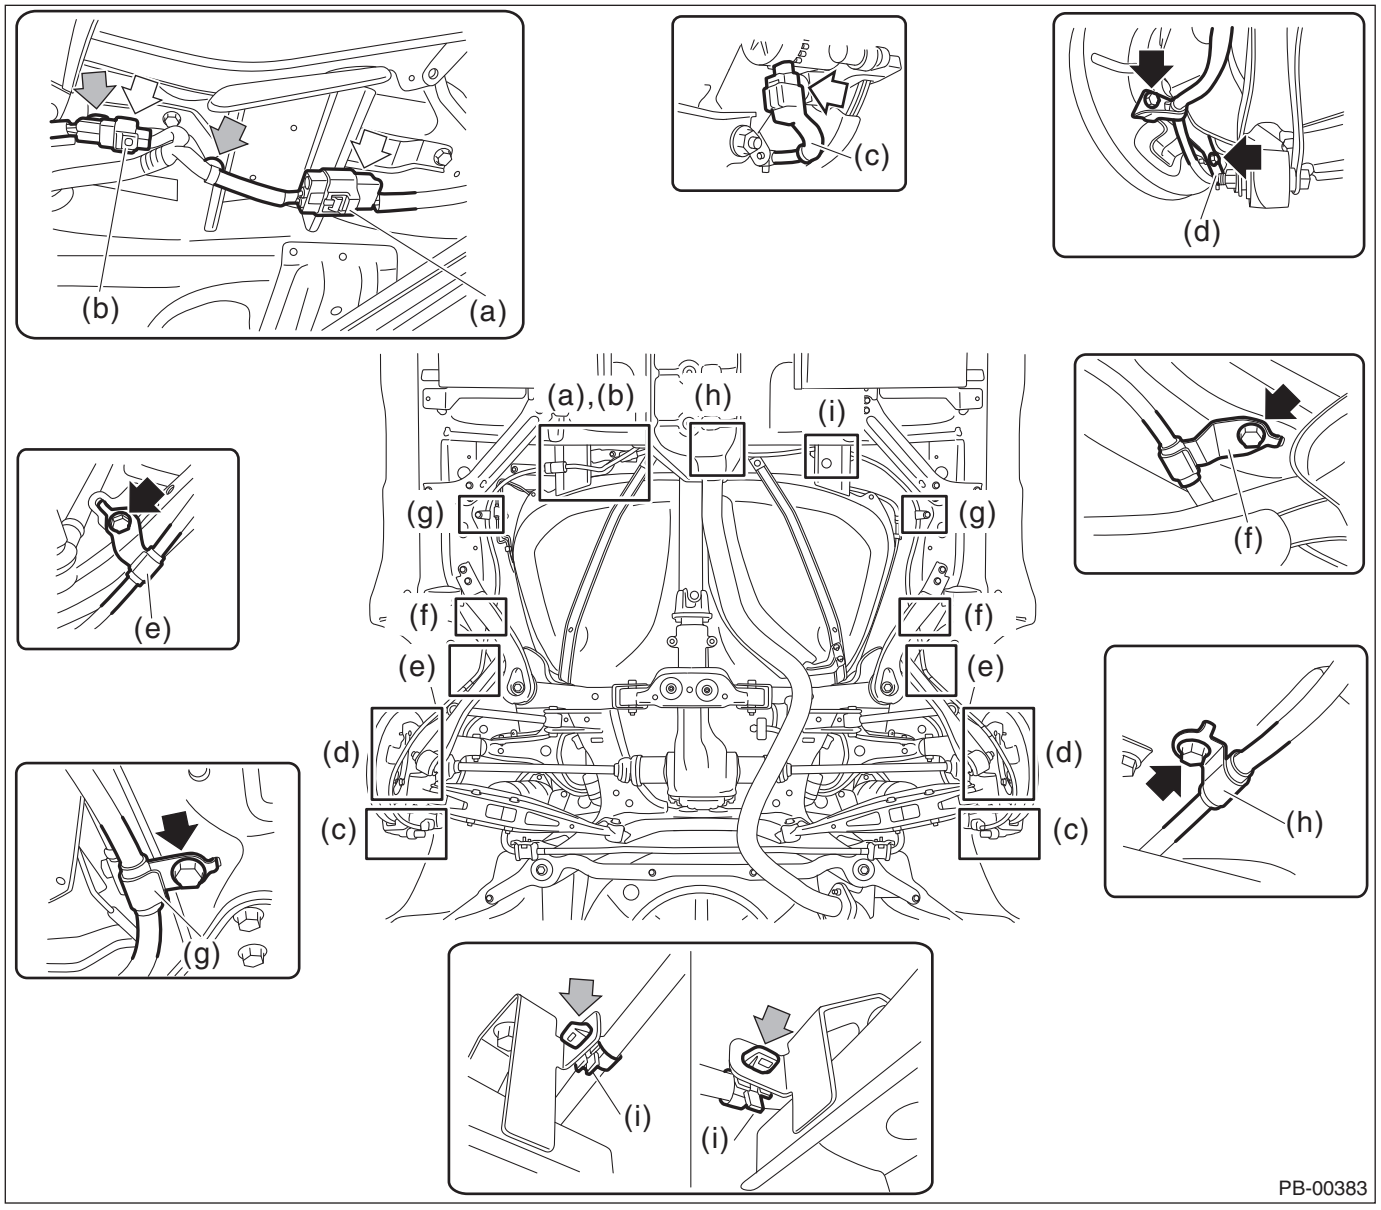
NOTE:
For parking brake assembly installation and assembly of electronic parking brake model, refer to “BRAKE” section.



- Installation: <Ref. to BR-41, INSTALLATION, Rear Disc Brake Assembly.>
- Assembly: <Ref. to BR-42, DISASSEMBLY, Rear Disc Brake Assembly.>

5. Parking Brake Actuator

A: REMOVAL



1. PARKING BRAKE HARNESS

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the bolt and nuts and remove the fuel tank protector.

4) Remove the electronic parking brake harness.
   (1) Remove the connectors (a), (b) and (c), and the clip (i).
   (2) Remove the harness clamp (d) from the back plate - rear brake.
   (3) Remove the harness clamp (e) from the trailing link.
   (4) Remove the harness clamp (f) from the rear floor.
   (5) Remove the harness clamp (g) from the rear floor.

(6) Remove the harness clamp (h) from the rear floor.

2. PARKING BRAKE ACTUATOR

CAUTION:

• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.

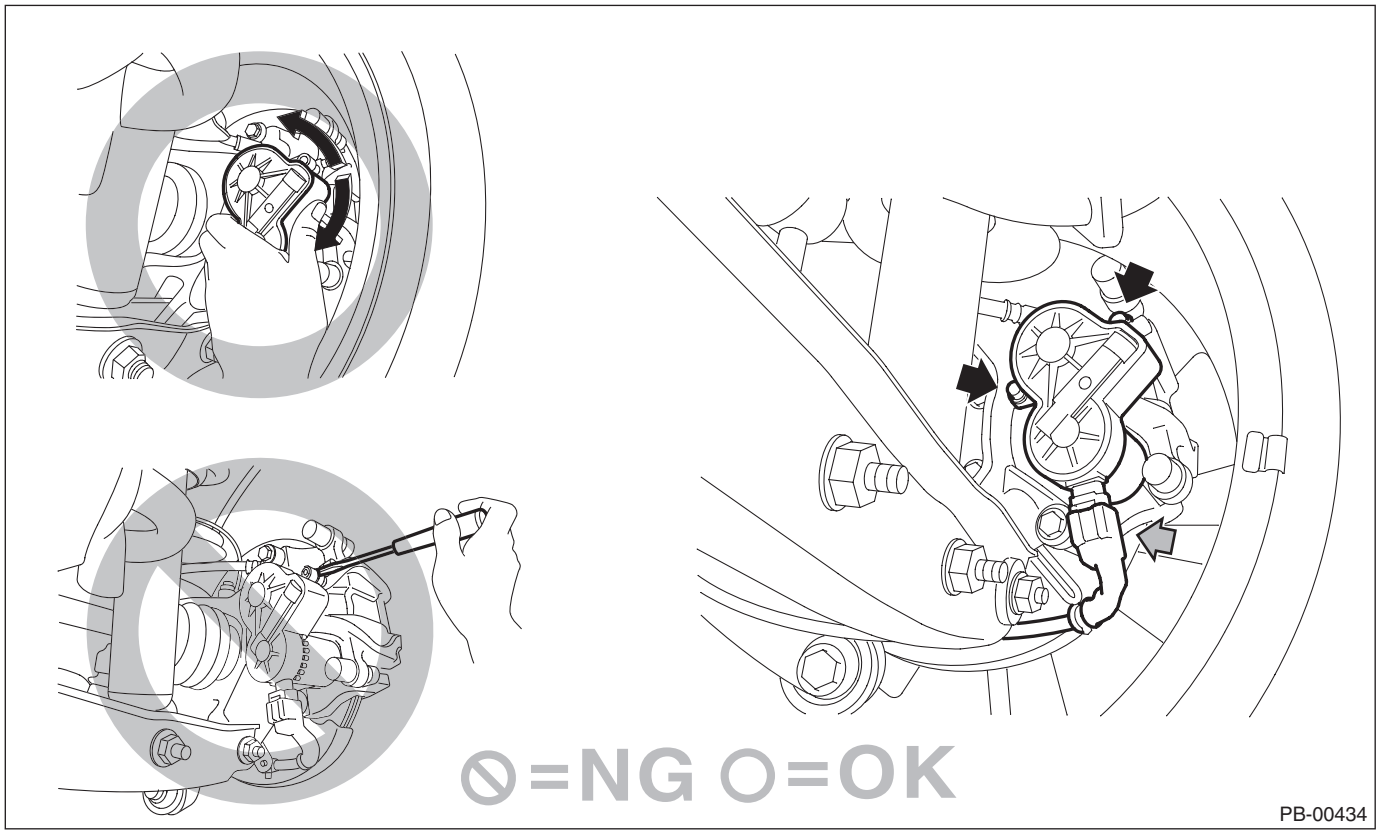
• Do not reuse the parking brake actuator assembly when the emergency release of parking brake was performed or when the actuator has a malfunction. Always replace with a new parking brake actuator assembly.

1) Release the parking brake.

2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.

3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



4) Lift up the vehicle, and then remove the rear wheels.

5) Remove the parking brake actuator assembly.
(1) Disconnect the connector.

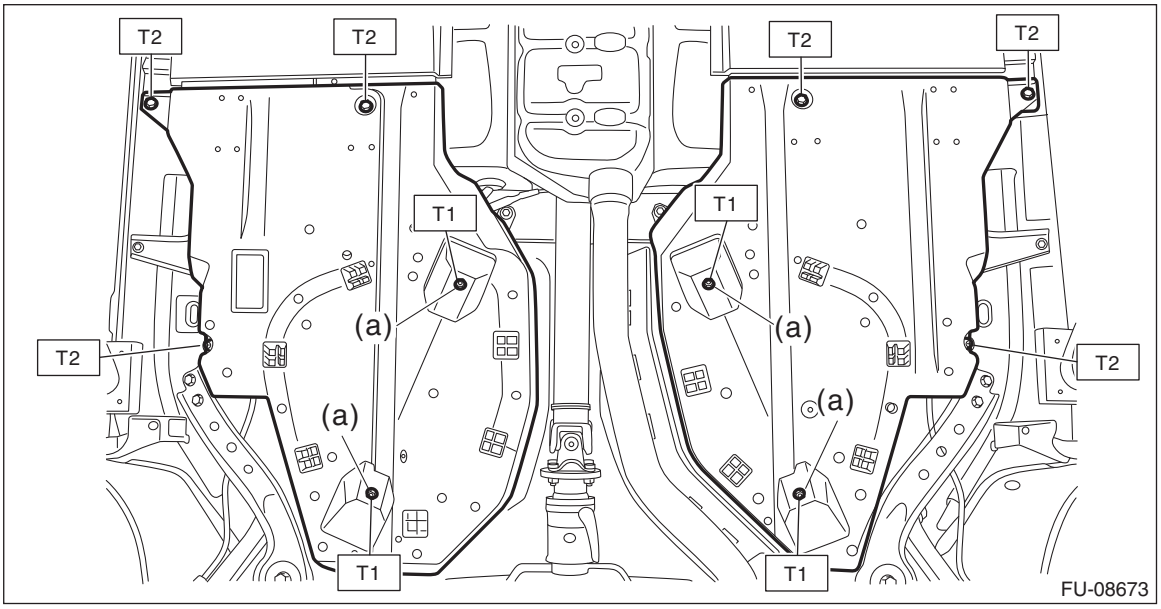
CAUTION:
- **Be careful that no water and dust enter inside the connectors.**
- **When removing the parking brake actuator assembly, do not use any tools. Slide it upward and downward by hand to remove.**

(2) Remove the bolts, and remove the parking brake actuator assembly.

Preparation tool:
Hexagon wrench: 5 mm (0.2 in)

B: INSTALLATION

1. PARKING BRAKE HARNESS



1) Install the electronic parking brake harness.

Tightening torque:
Harness clamp: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the fuel tank protector.

NOTE:
Use a new self-locking nut (a).

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Install the rear wheels.

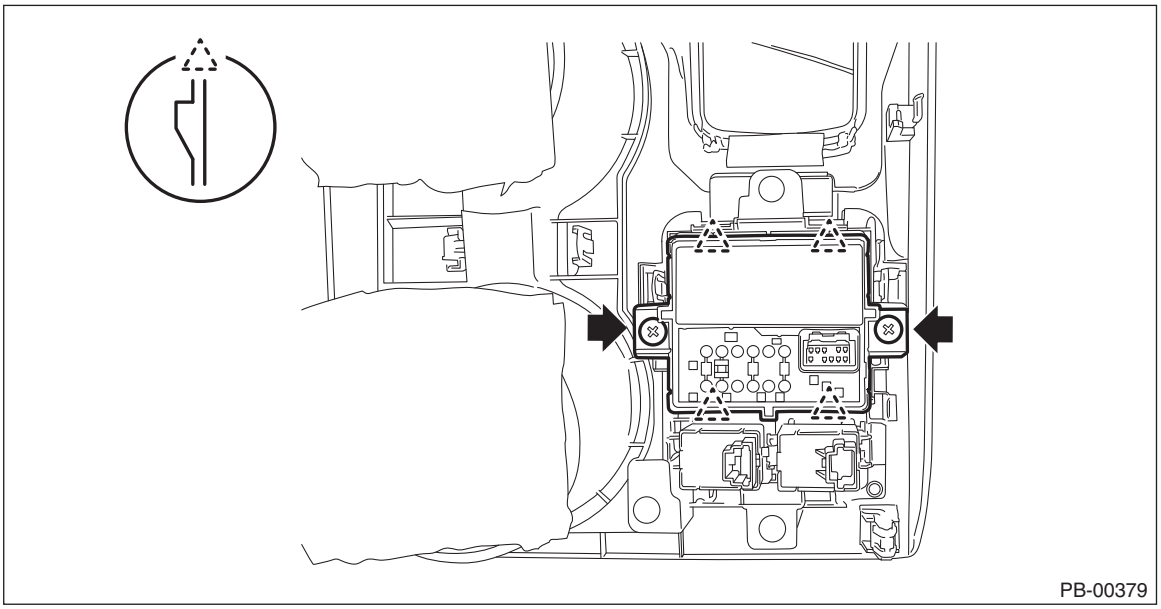
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. PARKING BRAKE ACTUATOR

CAUTION:
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.
• Do not reuse the parking brake actuator assembly when the emergency release of parking brake was performed or when the actuator has a malfunction. Always replace with a new parking brake actuator assembly.
1) Install the parking brake actuator assembly.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-6, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.
4) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
5) Install the rear wheels.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

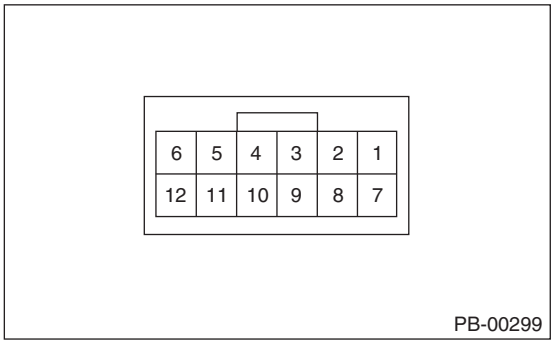
6. Parking Brake Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
For CVT models, set the select lever to the “N” position before disconnecting the battery.
2) Remove the cover assembly - front. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the screws to remove the switch assembly - electronic parking brake.

B: INSTALLATION



1) Install the switch assembly - electronic parking brake.
2) Install the cover assembly - front. <Ref. to EI-81, INSTALLATION, Console Box.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

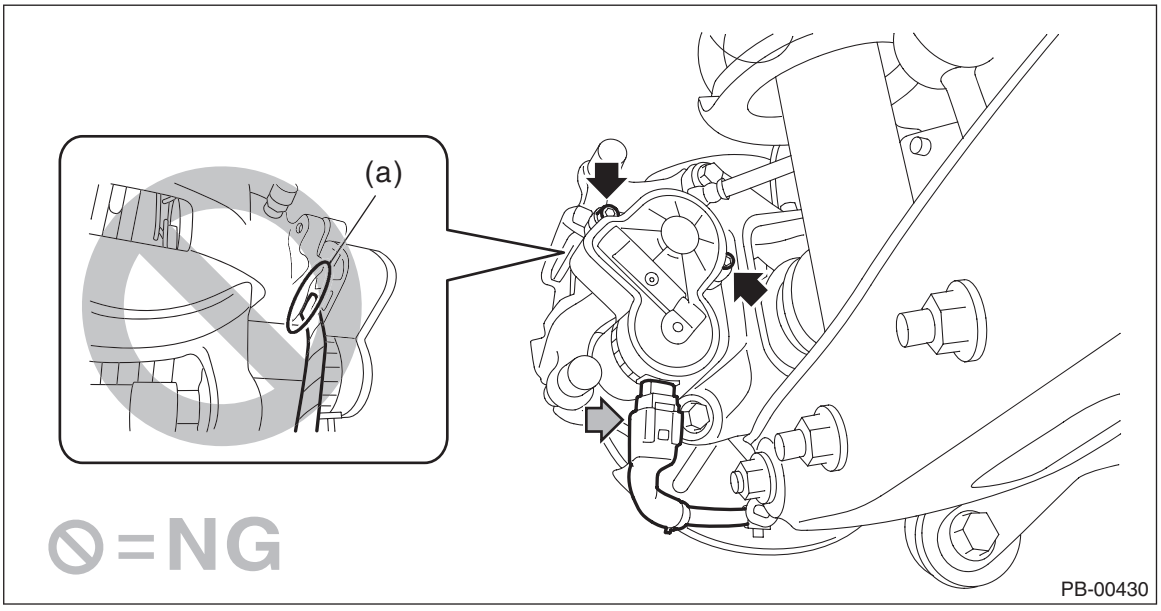
C: INSPECTION

1. SWITCH ASSY - ELECTRONIC PARKING BRAKE

Check the resistance between connector terminals.

NOTE:
Replace the switch if the inspection result is not within the standard value.

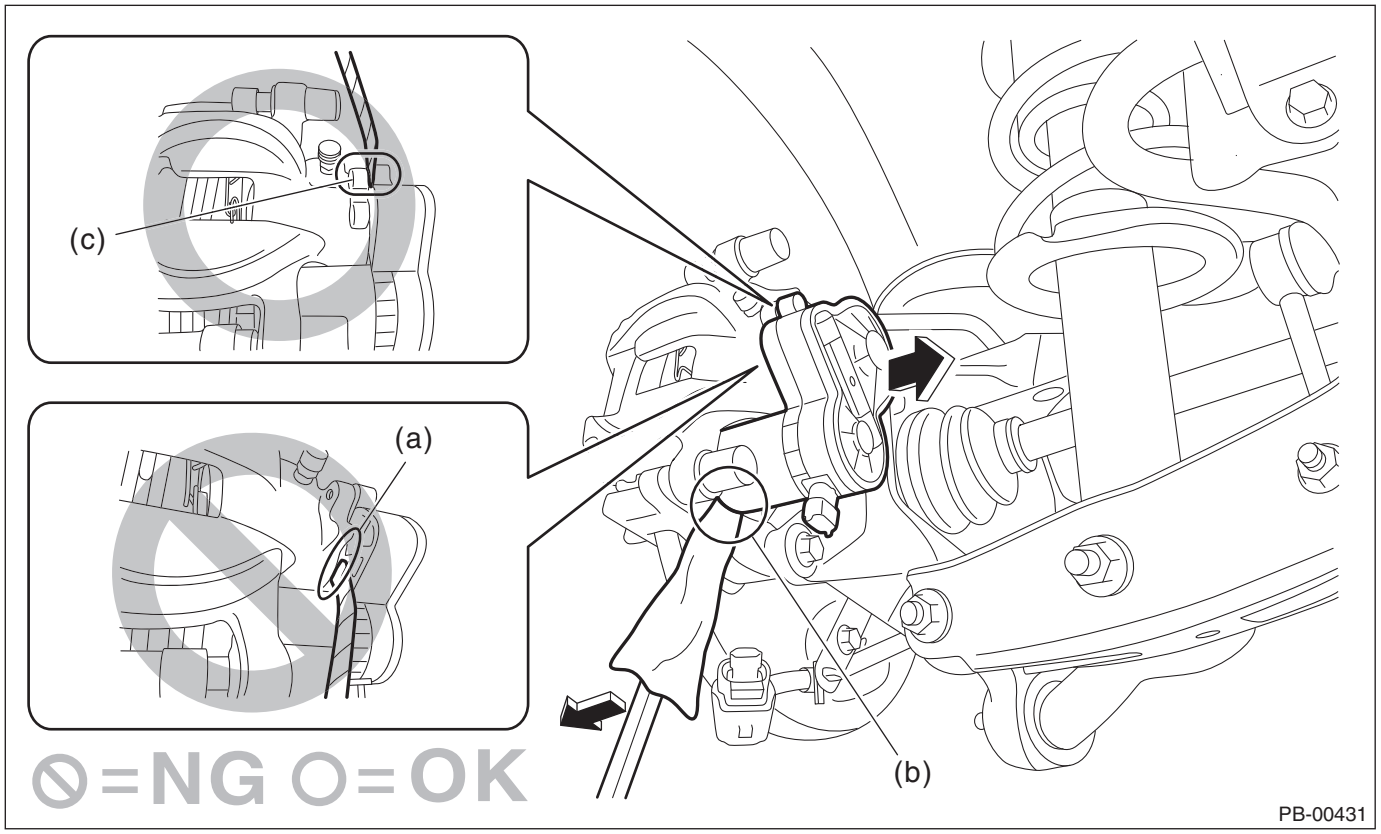
Switch position	Terminal No.	Standard
Press (Release)	6 and 2 6 and 5	Less than 1 Ω
Neutral	6 and 1 2 and 5	Less than 1 Ω



Switch position	Terminal No.	Standard
Pull (Lock)	6 and 1 6 and 2	Less than 1 Ω

7. Emergency Release of Electronic Parking Brake

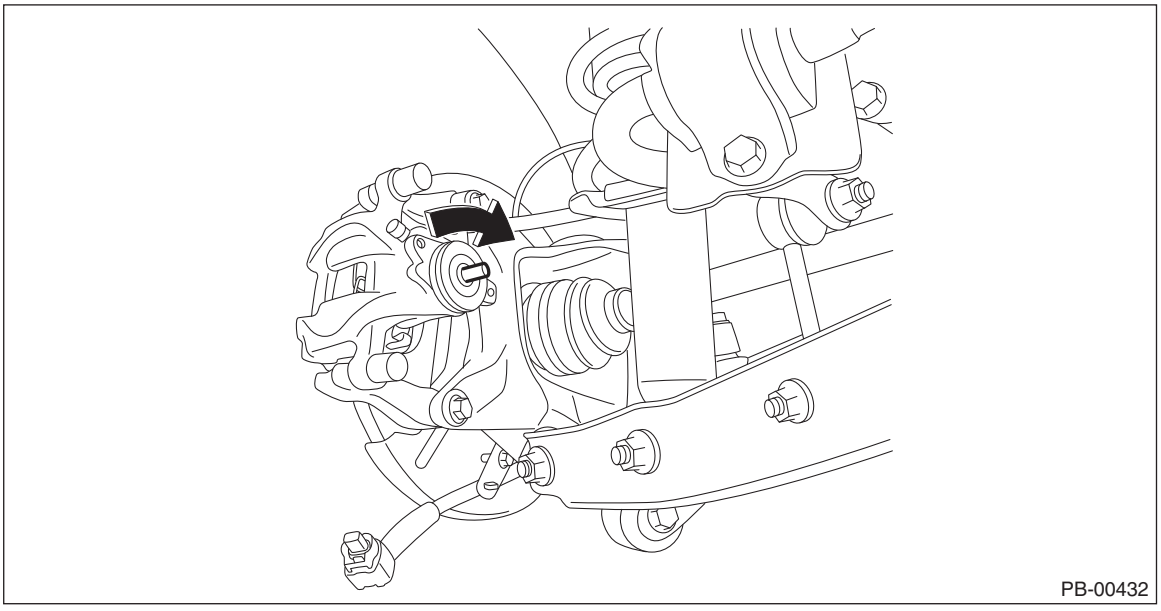
A: OPERATION



CAUTION:
• Perform this operation only when the parking brake must be released in emergency situation such as a system malfunction.
• When performing this procedure, be sure to fully confirm safety in the nearby area and park the vehicle on a horizontal ground.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Set the wheel stoppers to front tires.
3) Jack-up the rear side of vehicle and support it with rigid racks.
4) Remove the rear wheels.
5) Remove the parking brake actuator assembly.

CAUTION:
• When removing the bolt, the parking brake actuator assembly turns due to reaction force generated by the motor. Be careful not to pinch your hand.
• Wrap the tip of a screwdriver with cloth in order not to damage the caliper body that will be reused.
• Do not insert a tool into the seal surface (a) on the parking brake actuator assembly.
• Always remove the parking brake actuator assembly while holding it by hand because the parking brake actuator assembly falls off during removal.
(1) Disconnect the connector and remove the bolt.

(2) Put a crowbar between the parking brake actuator assembly and the support - rear disc brake (b).
(3) Push out the parking brake actuator assembly toward yourself.



(4) Insert a screwdriver into the gap (c) made by pushing the parking brake actuator assembly, and then remove it.

6) Turn the caliper body spindle bolt clockwise by approx. 1 rotation.

NOTE:
Turn both sides of LH and RH clockwise.

Preparation tool:
TORX® E12

7) Confirm that the parking brake lock is released and the disc rotor rotates.
8) Temporarily install the parking brake actuator assembly.

CAUTION:
• When the emergency release of parking brake was performed, replace the parking brake actuator assembly after the system trouble is resolved.
• Do not connect the actuator connector. It may be locked again due to continuity.
• If the vehicle needs to be moved, cover the actuator connector with vinyl tape to prevent foreign matter from entering, and secure it in an area where no interference occurs.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

9) When the emergency release of parking brake was performed, be sure to perform the inspection related to the parking brake system.

NOTE:
For inspection, refer to Basic Diagnostic Procedure of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

8. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Brake drag	Defective parking brake switch	Replace.
	Defective parking brake harness	Replace.
	Defective parking brake actuator	Replace.
	Loose parking brake actuator and support installation bolt	Tighten to the specified torque.
Noise from brake	Worn or hardened pad	Replace.
	Defective parking brake actuator	Replace.

POWER ASSISTED SYSTEM (POWER STEERING)

1. General Description

A: SPECIFICATION

Model				Sedan model	OUTBACK model
Whole system	Minimum turning radius		m (ft)	5.6 (18.37)	5.4 (17.72)
	Steering angle	Inner wheel		37.6°±1.5°	38.6°±1.5°
		Outer wheel		32.8°±1.5°	33.8°±1.5°
	Steering wheel diameter		mm (in)	370 (14.57)	
	Lock-to-lock revolution number			2.82	
Gearbox	Type			Rack & pinion type	
	Backlash			0 (automatic adjusting)	
Motor (Temperature 20°C (68°F))	Rated voltage		V	13.5	
	Rated torque		N·m (kgf-m, ft-lb)	4.43 (0.45,3.27)	
	Rated revolution speed		r/min	1380	
	Rated current		A	63	
	Rated output		W	640	

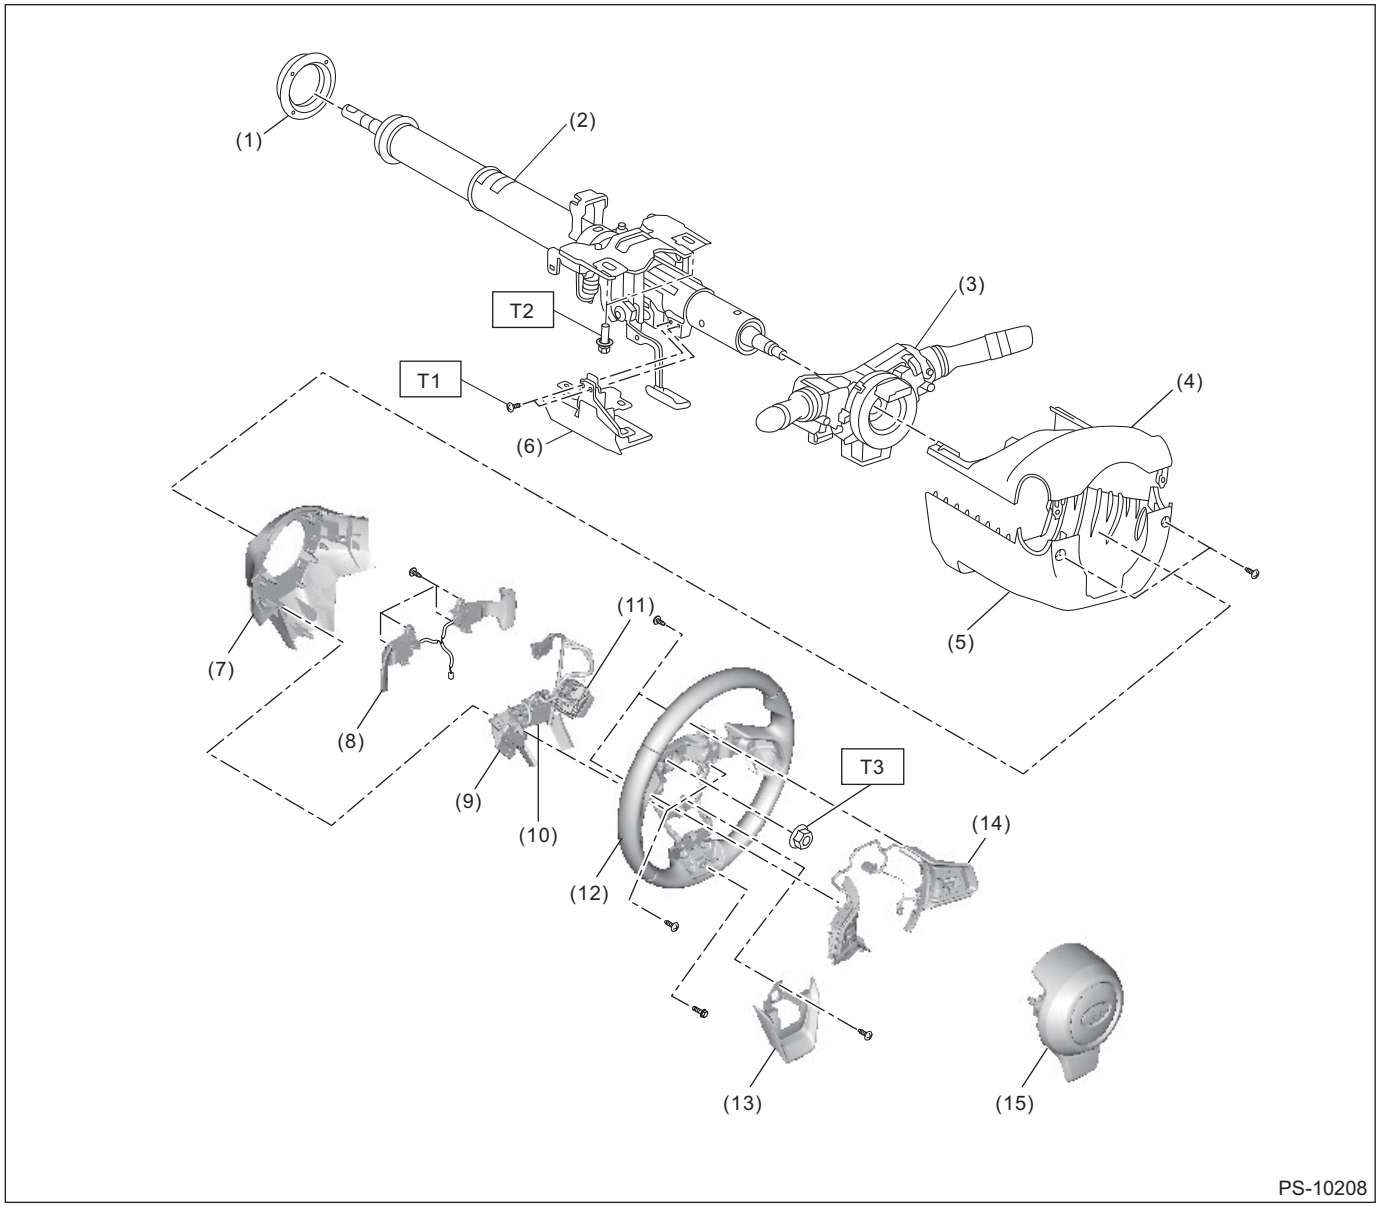
Steering wheel

Free play	mm (in)	17 (0.67) or less

Column assembly - steering

Clearance Between steering wheel and cover assembly - column	mm (in)	4 — 6 (0.16 — 0.24)

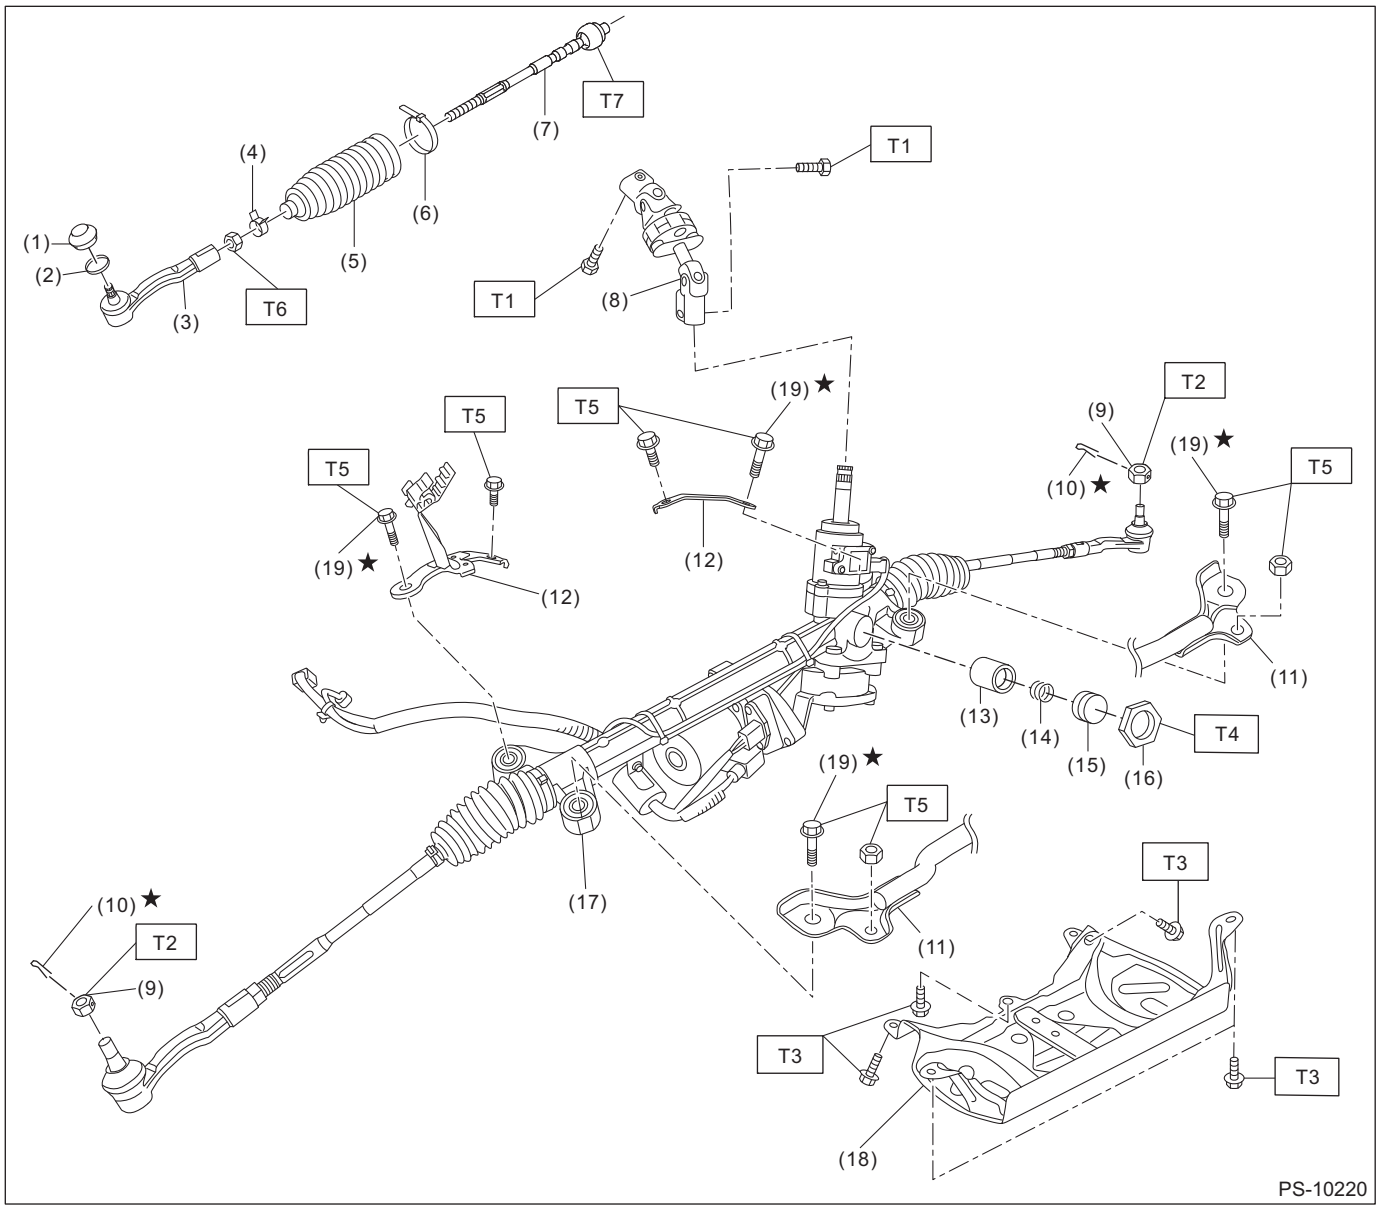
Steering gearbox



Sliding resistance		N (kgf, lbf)	360 (37, 81) or less Difference between right and left sliding resistance: 20% or less
Rack shaft play in the radial direction	mm (in)	Right-turn steering	Both amplitudes: 0.6 (0.024) or less
		Left-turn steering	Both amplitudes: 0.6 (0.024) or less
Input shaft play	mm (in)	In radial direction	Both amplitudes: 0.6 (0.024) or less
		In axial direction	0.27 (0.0106) or less
Rotational resistance		N (kgf, lbf)	Maximum allowable value: 18 (1.8, 4) or less Difference between right and left sliding resistance: 20% or less

Steering effort (with power steering assist)

At standstill with engine idling on paved road	N (kgf, lbf)	29.4 (3, 6.6) or less
At standstill with engine stalled on paved road	N (kgf, lbf)	294.2 (30, 66.2) or less



B: COMPONENT

1. STEERING WHEEL AND COLUMN

(1)	Bushing	(9)	MID switch	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Column ASSY - steering	(10)	Steering heater unit (model with steering heater)	***T1: 4 (0.4, 3)***
(3)	Switch ASSY - combination	(11)	Steering heater switch (model with steering heater)	***T2: 20 (2, 14.8)***
(4)	Cover ASSY - column UPR	(12)	Steering wheel	***T3: 39 (4, 28.8)***
(5)	Cover ASSY - column LWR	(13)	Cover - spoke	
(6)	Knee protector	(14)	Satellite switch	
(7)	Cover - steering wheel LWR	(15)	Airbag module	
(8)	Paddle shift			

2. STEERING GEARBOX

(1)	Dust seal	(11)	Crossmember support - front	
(2)	Clip - boot tie-rod end	(12)	Stiffener	
(3)	Tie-rod end	(13)	Sleeve	
(4)	Clip - boot tie-rod	(14)	Spring - gearbox	
(5)	Boot - steering gearbox	(15)	Adjusting screw	
(6)	Band - boot	(16)	Lock nut	
(7)	Tie-rod	(17)	Steering gearbox ASSY	
(8)	Universal joint ASSY - steering	(18)	Guard	
(9)	Castle nut	(19)	Bolt	
(10)	Cotter pin			

Tightening torque: N·m (kgf-m, ft-lb)
T1: 24 (2.4, 17.7)
T2: 27 (2.8, 19.9)
T3: 30 (3.1, 22.1)
T4: 45 (4.6, 33.2)
T5: 60 (6.1, 44.3)
T6: 85 (8.7, 62.7)
T7: 90 (9.2, 66.4)

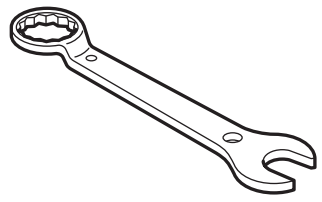
C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.

• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• When the wheel alignment has been adjusted, perform the following adjustment.
  – Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
  – VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Always remove the universal joint before removing, installing or loosening the following parts to avoid damage to the universal joint. Also, to avoid steering effort from being heavy while driving, make sure that the following parts are firmly engaged before assembling the universal joint and the steering column tilt position is set in neutral.
  – Gearbox assembly
  – Column assembly
  – Cradle
  – Engine mounting bracket
  – Beam COMPL - steering

D: PREPARATION TOOL

1. SPECIAL TOOL



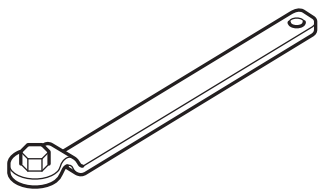


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
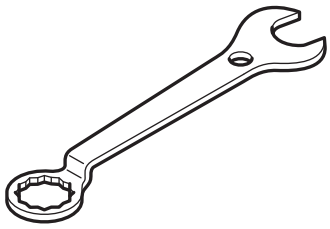
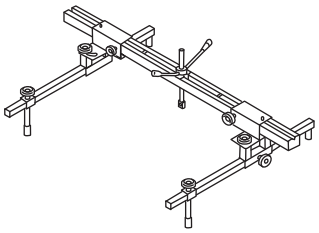
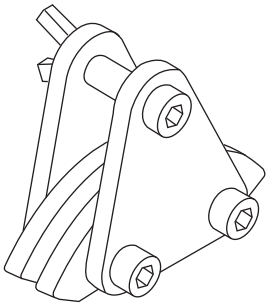
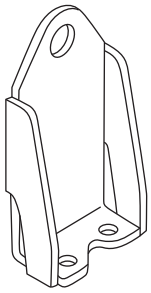
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotational resistance of gearbox assembly.
 ST34199AJ040	34199AJ040	SPECIAL TOOL EPS	• Used for adjusting the backlash of gearbox. (Adjusting screw side) • Used together with SPECIAL TOOL EPS (34199AJ030).









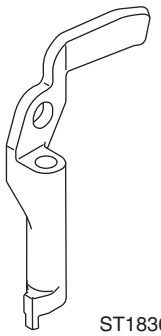


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AJ030	34199AJ030	SPECIAL TOOL EPS	• Used for adjusting the backlash of gearbox. (Lock nut side) • Used together with SPECIAL TOOL EPS (34199AJ040).
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for hanging power unit. • Used together with CHAIN BALANCER (99099AJ010).
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for hanging power unit. • Used together with ENGINE HANGER (99099AJ000).
 ST18360AA020	18360AA020	HANGER	• Used for hanging power unit. • For H6 model.
 ST18360AA040	18360AA040	HANGER	• Used for removing and installing the cradle. • Used together with BOLT (18363AA050).

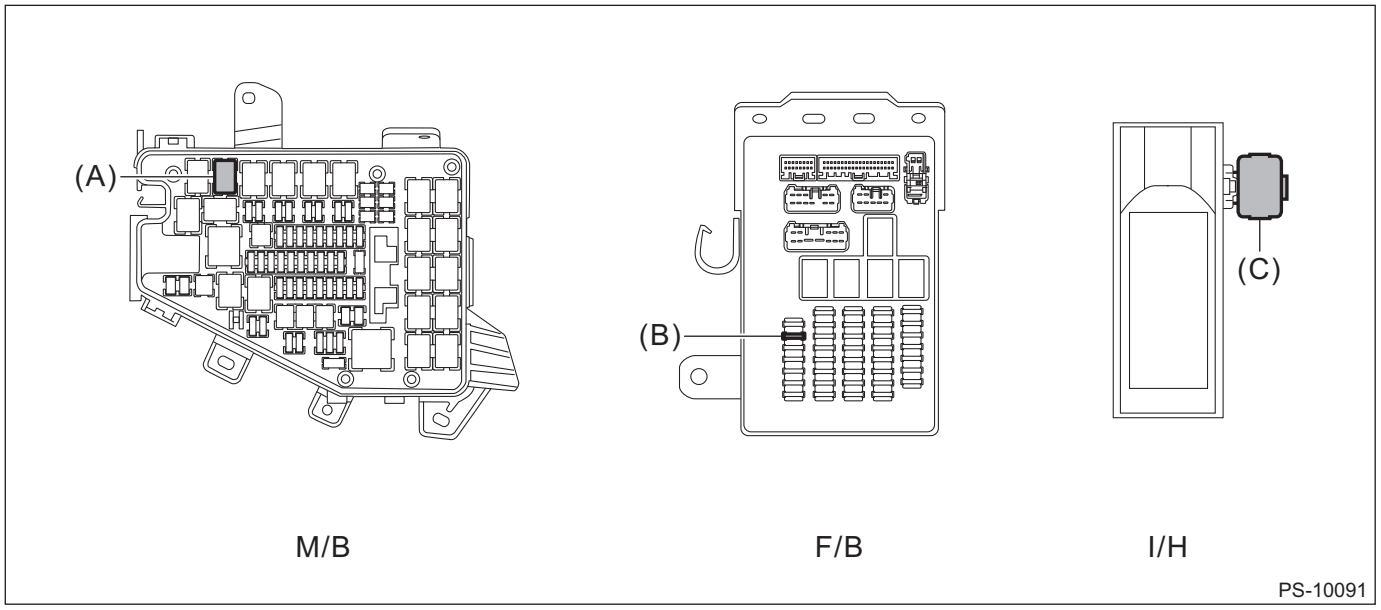

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
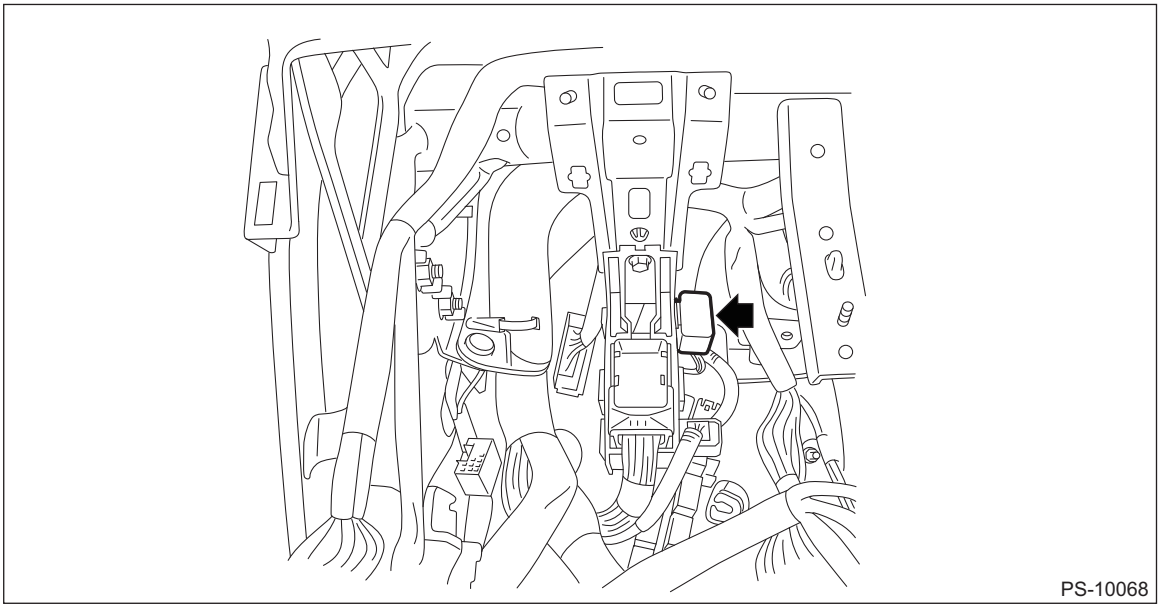
 ST18363AA050	18363AA050	BOLT	• Used for removing and installing the cradle. • Used together with HANGER (18360AA040).
SSM 4 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Chain sling	• Used for hanging power unit. • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Chain inner width: 8.5 mm (0.33 in) or more • Chain external width: 23.5 mm (0.93 in) or less • Load capacity: 1.2 t (2646 lb) or more
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used to remove and install the cradle. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more
Shackle	• Used to remove and install the cradle. • Load capacity: 500 kg (1103 lb) or more
C-clamp	Used when inspecting steering gearbox assembly.

2. Relay and Fuse



A: LOCATION

Main fuse box (M/B)	SBF fuse 80 A (power steering CM)	(A)
Fuse & relay box (F/B)	Fuse 7.5 A (power steering CM)	(B)
Instrument panel harness holder (I/H)	Steering heater relay	(C)

B: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the body integrated unit. <Ref. to SL-83, REMOVAL, Body Integrated Unit.>
4) Remove the steering heater relay.

C: INSTALLATION

1) Install the steering heater relay.

2) Install the body integrated unit (fuse & relay box).

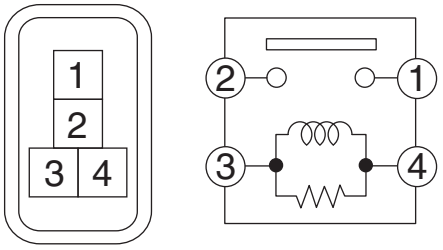
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

D: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Power Steering System

A: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-178, WIRING DIAGRAM, Electric Power Steering System.>

B: ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-9, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

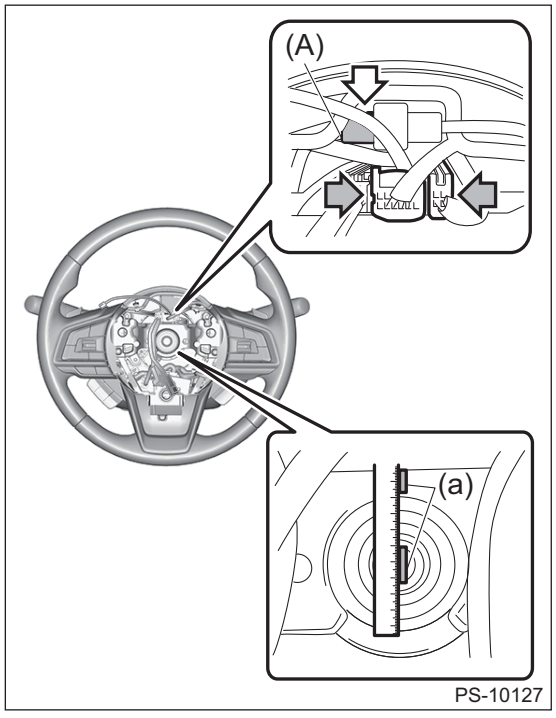
C: INSPECTION

Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the power steering system, refer to the respective section.

- Steering wheel: <Ref. to PS-11, Steering Wheel.>
- Universal joint assembly - steering: <Ref. to PS-21, Universal Joint.>
- Steering column: <Ref. to PS-26, Steering Column.>
- Electric power steering gearbox: <Ref. to PS-31, Electric Power Steering Gearbox.>
- Power steering control module (with built-in gearbox): <Ref. to PS-44, Power Steering Control Module.>



4. Steering Wheel

A: REMOVAL

CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel.

CAUTION:
- **Always use the steering wheel puller for removal to avoid deforming the steering wheel.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**

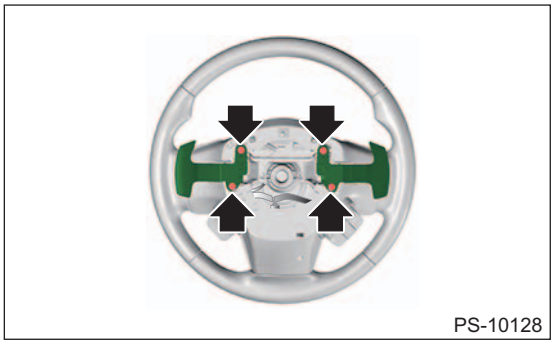
Preparation tool:
Steering wheel puller
(1) Disconnect the connector and remove the nut.
(2) Put an alignment mark (a) using a ruler as shown in the figure, and remove the steering wheel.

(A) Model with steering heater

B: INSTALLATION

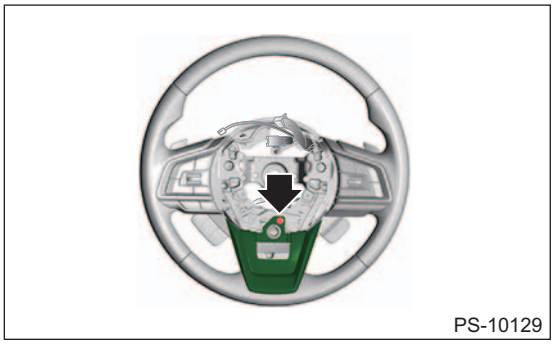
CAUTION:
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**
- **If the steering wheel and steering angle sensor are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>**

1) Align the center position of the roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
2) Install the steering wheel.



Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)



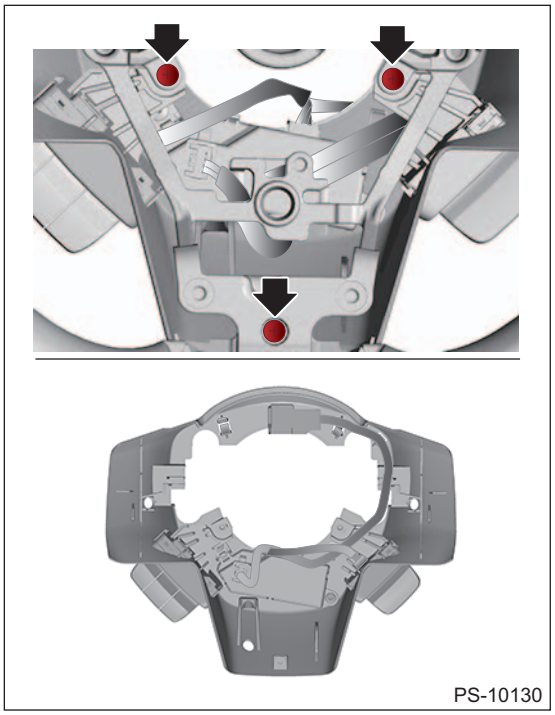
3) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

1) Remove the screw, disconnect the connector and remove the paddle shift switch.

PS-10128

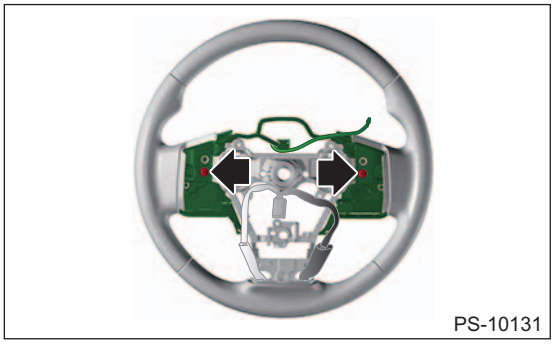
2) Release the claws and remove the screws, then detach the cover - spoke.



PS-10129

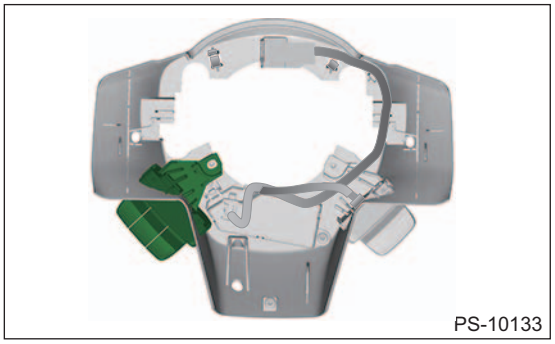
3) Remove the cover - steering wheel LWR.

CAUTION:
Carefully remove the cover - steering wheel LWR and the steering wheel. Do not pull with excessive force. Otherwise, heat wire between cover - steering wheel LWR and steering wheel may be damaged. (Model with steering heater)



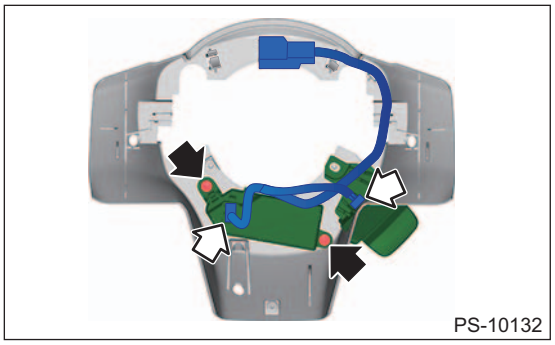
(1) Remove the connectors and screws.

(2) Release the claws and harness clips, detach the cover - steering wheel LWR.



PS-10130

NOTE:
For model with steering heater, disconnect the connector with the cover - steering wheel LWR removed from steering wheel, and remove the steering heater unit. Also, remove the heater elements RH and LH secured with double-sided tape from the cover - steering wheel LWR.



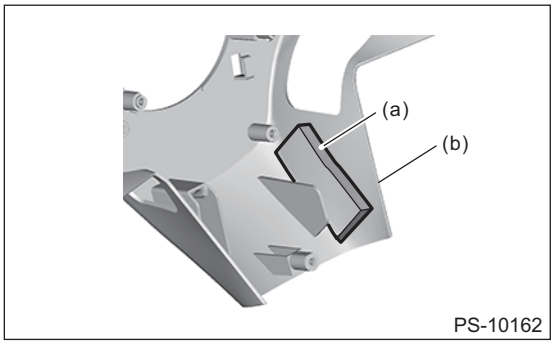
4) Release the claws and remove the screws, then detach the satellite switch.

PS-10131

5) Release the claws, and then remove the MID switch.

PS-10133

6) Release the connector and claws, and remove the steering heater switch and steering heater unit. (Model with steering heater)



D: ASSEMBLY

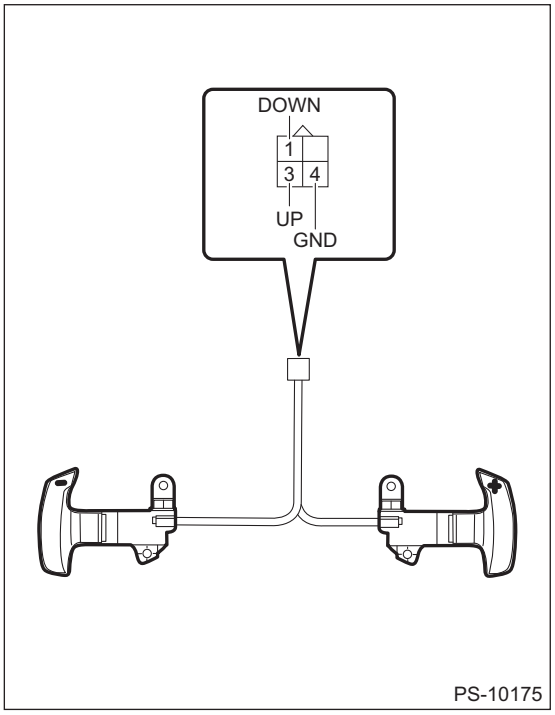
CAUTION:

- **Securely install the switch and the cover - steering wheel LWR. Improper insertion of the pins or claws of the switch and the cover - steering wheel LWR may cause improper installation.**
- **When installing the heater steering wheel and the cover - steering wheel LWR for models with steering heater, be careful of the following:**
  - **– Attach the heater element to the cover - steering wheel LWR so that it is not twisted or does not interfere with switches.**
  - **– Be careful not to allow the heater element to be caught in steering frame, unit and cover - steering wheel LWR.**

1) Install the MID switch.
2) Install the steering heater switch and steering heater unit to the cover - steering wheel LWR. (Model with steering heater)
3) Install the satellite switch.
4) Install the cover - steering wheel LWR.

NOTE:
Secure the heater element on the cover - steering wheel LWR using double-sided tape. Refer to the figure below to attach the heater element and double-sided tape symmetrically.

(a) Heater element and double-sided tape
(b) Cover - steering wheel LWR



5) Install the cover - spoke.
6) Install the paddle shift switch.

E: INSPECTION

1. PADDLE SHIFT SWITCH

1) Measure the resistance between connector terminals.

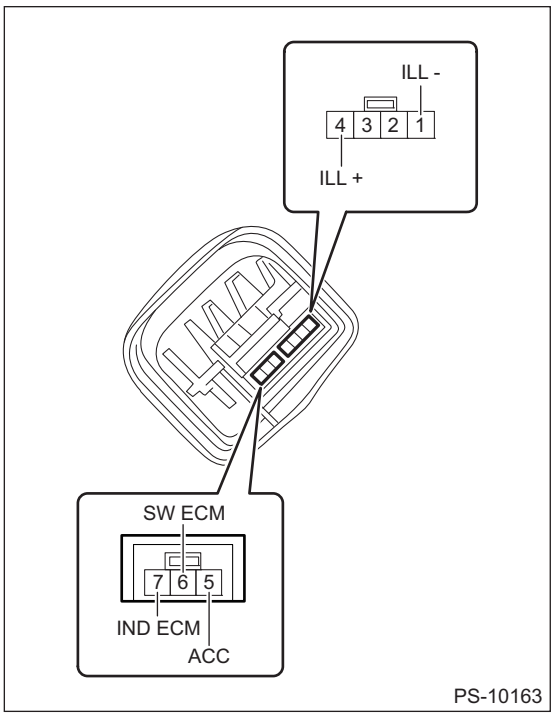
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
3 — 4	Operate the + side of paddle shift assembly and hold it.	Less than 10 Ω
1 — 4	Operate the – side of paddle shift assembly and hold it.	Less than 10 Ω
1 — 4 3 — 4	Do not operate the paddle shift assembly.	1 MΩ or more

2) Replace the paddle shift switch if the inspection result is not within the standard value.

2. SATELLITE SWITCH ASSEMBLY

Refer to switch inspection in each section.
- Audio (navigation) switch: <Ref. to ETM-33, INSPECTION, Switches and Harness.>
- Cruise control command switch: <Ref. to CC-6, INSPECTION, Cruise Control Command Switch.>
- EyeSight steering switch: <Ref. to ES-33, EyeSight STEERING SWITCH, INSPECTION, Switches and Harness.>



3. SWITCH ASSEMBLY - STEERING

Refer to “Steering Switch” of “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-20, INSPECTION, Switches and Harness.>

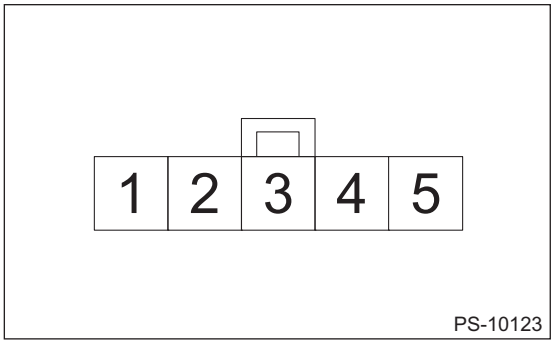
4. STEERING HEATER SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
5 — 6	Operate the switch and hold it.	Less than 1 Ω
	Do not operate the switch.	1 MΩ or more

2) Apply battery voltage between the connector terminals to check lighting condition of illumination and indicator inside the switch.



Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Illumination (mark) turns on.
5 (+) — 7 (–)		Indicator turns on.
4 (+) — 1 (–) 5 (+) — 7 (–)	Apply battery voltage simultaneously.	Illumination (mark) and indicator turn on in dimmed condition at one level.

3) Replace the steering heater switch if it is found defective.

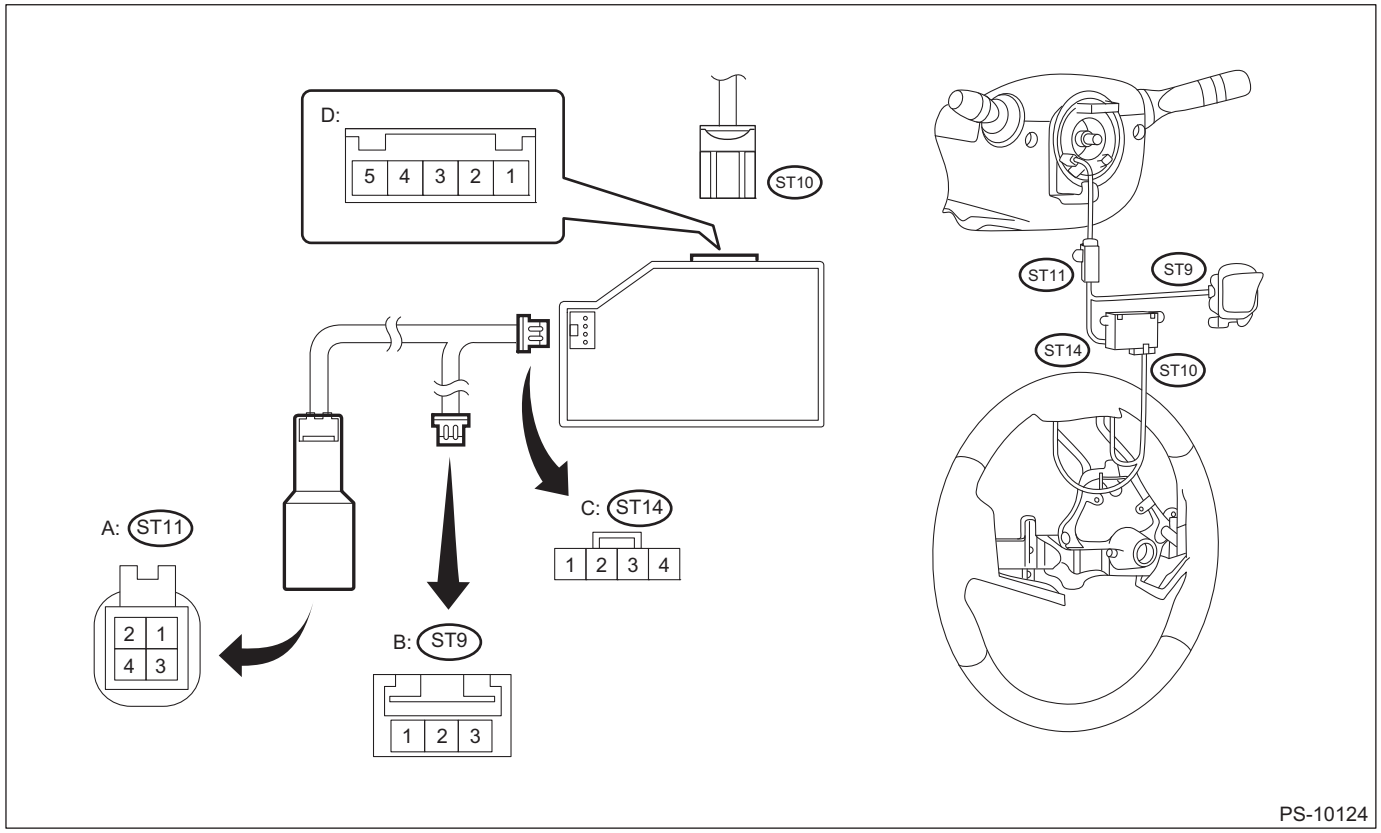
5. STEERING WHEEL HEATER

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
Thermistor: 2 — 3	(Outside temperature: 10 — 30°C)	8.13 — 18.43 kΩ
Thermostat: 5 — 1		1.8 — 2.4 Ω

2) Replace the steering wheel if the inspection result is not within the standard value.



5. Steering Heater System

A: WIRING DIAGRAM

Refer to “STEERING HEATER SYSTEM” in the wiring diagram. <Ref. to WI-362, WIRING DIAGRAM, Steering Heater System.>

B: ELECTRICAL SPECIFICATION

1. STEERING HEATER UNIT

Terminal No.	Content	Measuring condition	Standard
A No. 1	Not used	—	—
A No. 2	Not used	—	—
A No. 3 ←→ Chassis ground	Heater unit GND	Always	Less than 1 Ω
A No. 4 ←→ Chassis ground	Heater unit power supply input	Ignition switch ON	10 — 14 V
B No. 1 ←→ Chassis ground	Heater unit power supply input	Ignition switch ON	10 — 14 V
B No. 2 ←→ Chassis ground	Heater switch input	Turn the ignition switch to ON, and press and hold the heater switch.	9 — 14 V
B No. 3	Indicator light output	—	*
D No. 1 ←→ Chassis ground	Heater GND	Ignition switch ON, heater switch ON	Less than 1 V
D No. 2 ←→ Chassis ground	Thermistor input	Ignition switch ON, heater switch ON	1.5 — 4.5 V
D No. 3 ←→ Chassis ground	Thermistor GND	Ignition switch ON, heater switch ON	Less than 1 V
D No. 5 ←→ Chassis ground	Heater output	Ignition switch ON, heater switch ON	9 — 14 V

*: Illuminates when the ignition switch and heater switch are turned to ON.

NOTE:
Connect the each connector of the unit before checking.

C: INSPECTION

1. CHECK STEERING HEATER SYSTEM

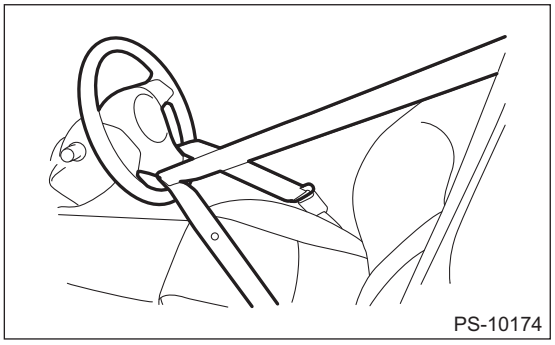
Symptoms	Reference
The steering heater does not operate.	<Ref. to PS-19, THE STEERING HEATER DOES NOT OPERATE, INSPECTION, Steering Heater System.>
The temperature of steering heater increases excessively.	<Ref. to PS-16, STEERING WHEEL HEATER, INSPECTION, Steering Wheel.>
The steering heater does not stop.	<Ref. to PS-15, STEERING HEATER SWITCH, INSPECTION, Steering Wheel.>

2. THE STEERING HEATER DOES NOT OPERATE

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY INPUT.** 1) Disconnect the negative terminal from the battery, and wait for 60 seconds or more. 2) Disconnect the connector between steering roll connector and steering heater unit. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Measure the steering roll connector voltage. ***Connector & terminal*** ***(ST12) No. 4 (+) — No. 3 (–):***	Is the voltage 10 — 14 V?	Go to step **2**.	Go to step **5**.
2	**CHECK STEERING HEATER SWITCH.** Check the steering heater switch. <Ref. to PS-15, STEERING HEATER SWITCH, INSPECTION, Steering Wheel.>	Is the steering heater switch OK?	Go to step **3**.	Replace the steering heater switch. <Ref. to PS-12, DISASSEMBLY, Steering Wheel.>
3	**CHECK STEERING HEATER UNIT.** Check the steering heater unit. <Ref. to PS-18, STEERING HEATER UNIT, ELECTRICAL SPECIFICATION, Steering Heater System.>	Is the steering heater unit OK?	Go to step **4**.	Replace the steering heater unit. <Ref. to PS-12, DISASSEMBLY, Steering Wheel.>
4	**CHECK STEERING WHEEL.** Check the steering wheel. <Ref. to PS-16, STEERING WHEEL HEATER, INSPECTION, Steering Wheel.>	Is the steering wheel OK?	It is possible that temporary poor contact occurs. Restore the parts and check it again.	Replace the steering wheel. <Ref. to PS-11, Steering Wheel.>
5	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse No. 33 in the fuse & relay box.	Is the fuse OK?	Go to step **6**.	Replace the fuse.
6	**CHECK RELAY.** Check the steering heater relay. <Ref. to PS-8, Relay and Fuse.>	Is the steering heater relay OK?	Go to step **7**.	Replace the steering heater relay.
7	**CHECK BATTERY VOLTAGE.** Measure the battery voltage.	Is the battery OK?	Go to step **8**.	Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.>
8	**CHECK ROLL CONNECTOR (HEATER).** Measure the resistance between steering roll connectors (heater part). <Ref. to COM-8, CHECK ROLL CONNECTOR, INSPECTION, Horn Switch.>	Is the steering roll connector OK?	It is possible that temporary poor contact occurs. Restore the parts and check it again.	Replace the steering roll connector. <Ref. to AB-59, Roll Connector.>

D: NOTE

For procedure of each component in the steering heater system, refer to the respective section.

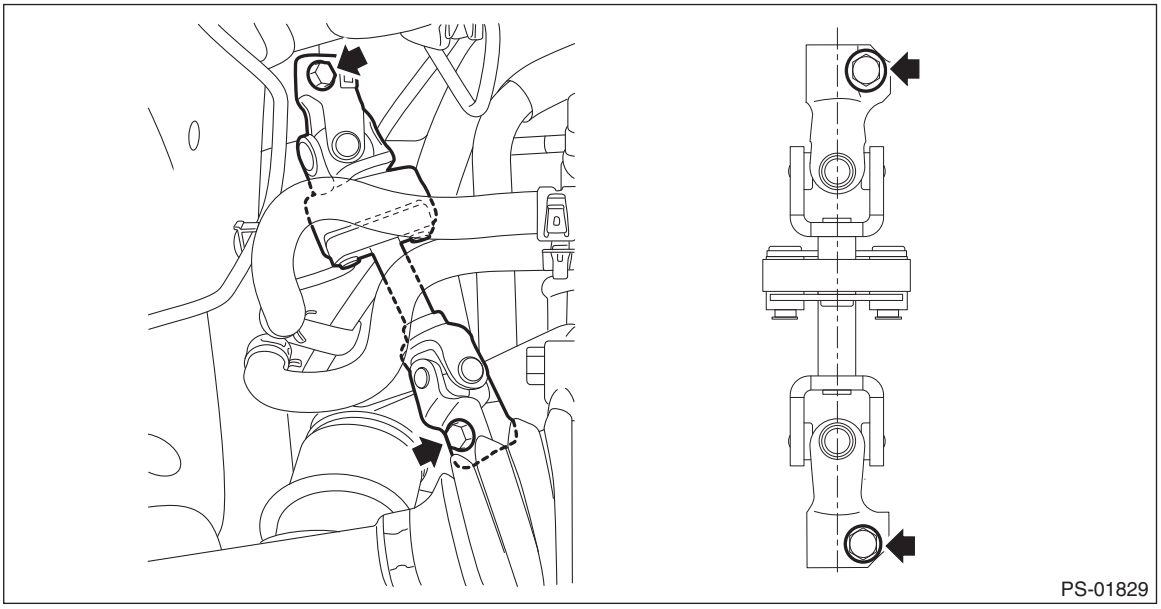


- Steering wheel
  - Removal: <Ref. to PS-11, REMOVAL, Steering Wheel.>
  - Installation: <Ref. to PS-11, INSTALLATION, Steering Wheel.>
- Steering heater switch
  - Disassembly: <Ref. to PS-12, DISASSEMBLY, Steering Wheel.>
  - Assembly: <Ref. to PS-14, ASSEMBLY, Steering Wheel.>

6. Universal Joint

A: REMOVAL

1) Set the steering wheel to the straight-ahead position.
2) Adjust the tilt position of the steering column to the neutral position.

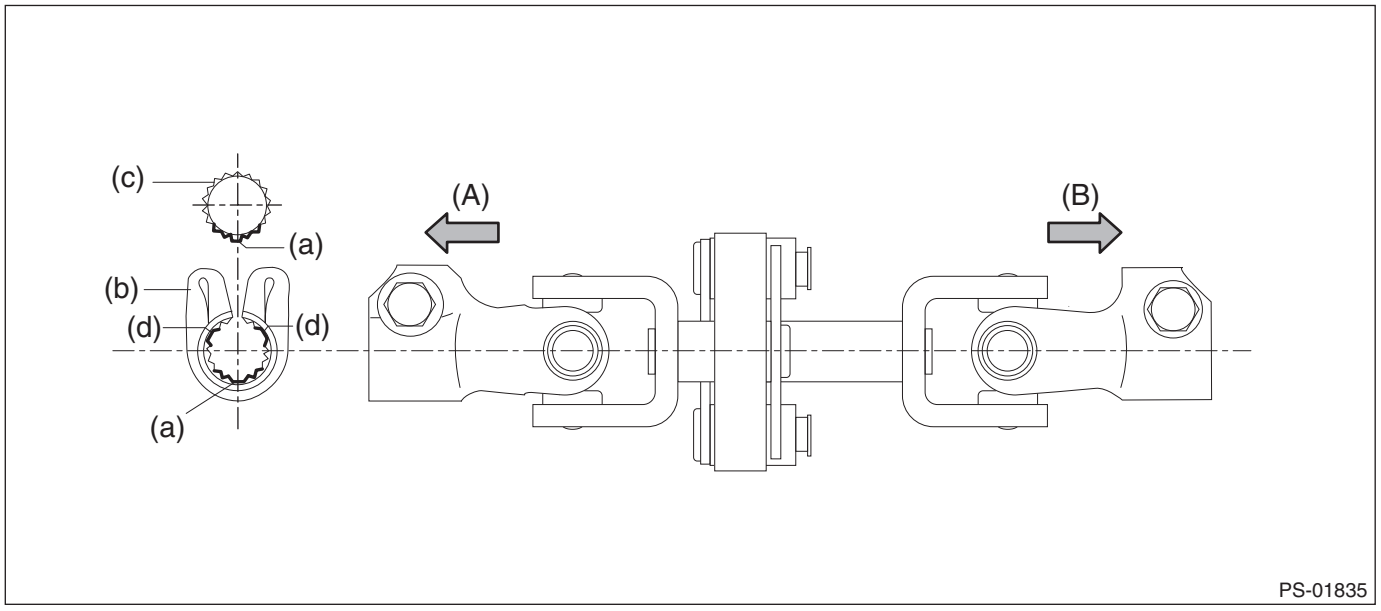


CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.
3) Set the driver's seat to the neutral position.
4) Prevent the steering wheel from turning using the seat belt.

5) Remove the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>
6) Remove the front exhaust pipe. (H6 model only) <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
7) Remove the universal joint assembly - steering.
(1) Place alignment marks on the universal joint assembly - steering.

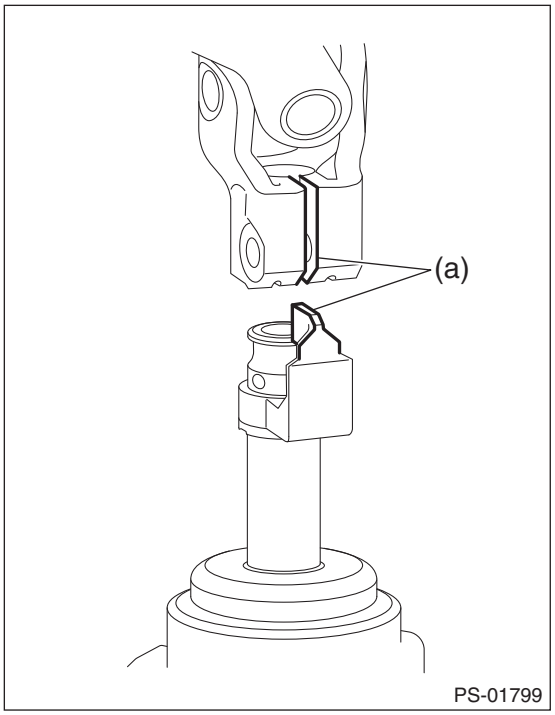
NOTE:
Place alignment marks on the following positions.
- Between the column assembly - steering and the universal joint assembly - steering
- Between the steering gearbox assembly and the universal joint assembly - steering (the guide is not installed)

(2) Remove the bolt, and remove the universal joint assembly - steering.



B: INSTALLATION

1) Before installation, check the universal joint assembly - steering. <Ref. to PS-24, INSPECTION, Universal Joint.>
2) Adjust the tilt position of the steering column to the neutral position.

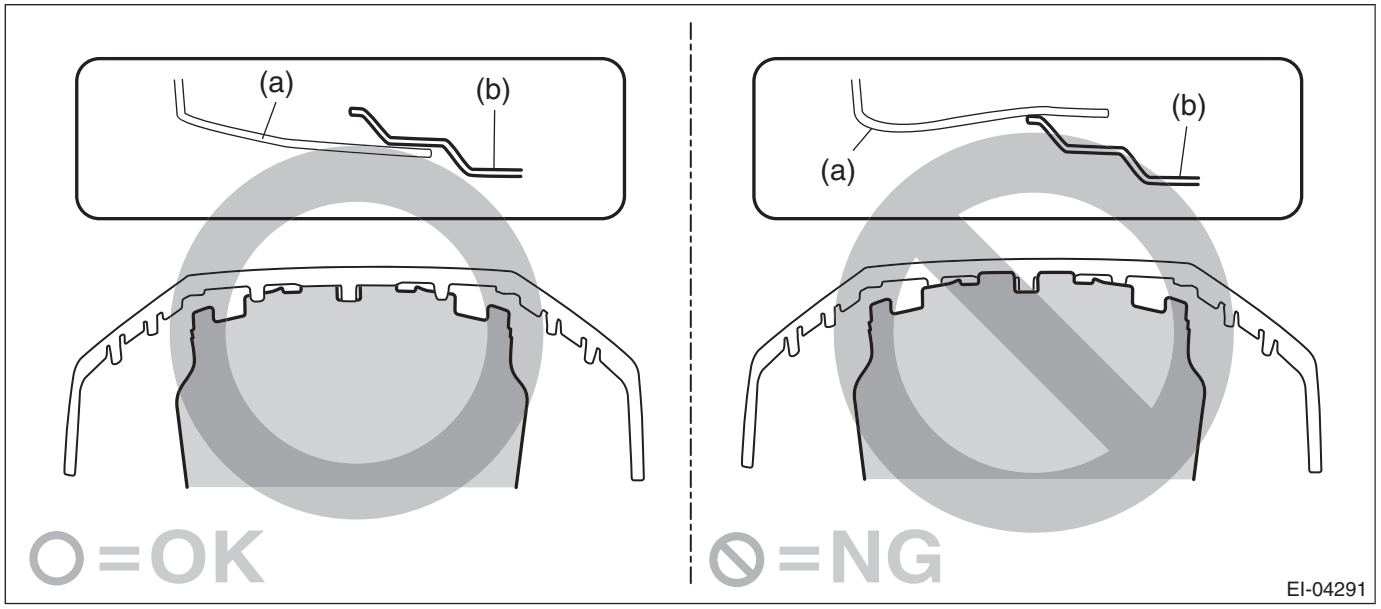


CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.
3) Install the universal joint assembly - steering.

CAUTION:
• Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• When tightening the mounting bolts of the universal joint assembly - steering, always tighten the gearbox side bolts first.
• Always place the tilt lever to the lock position after the steering column is adjusted.
(1) Match the alignment marks that have been marked when removing with the column shaft (c) and the cutout portion (a) at the serrations of the yoke (b).
(2) Connect the universal joint assembly - steering with the column shaft.

(A) Column shaft side (B) Gearbox side

(3) Install the universal joint assembly - steering to the serrations of the gearbox assembly by matching the alignment marks that have been marked when removing and the cutout portion of the guide (a). (Use the alignment mark only when the guide is not installed.)

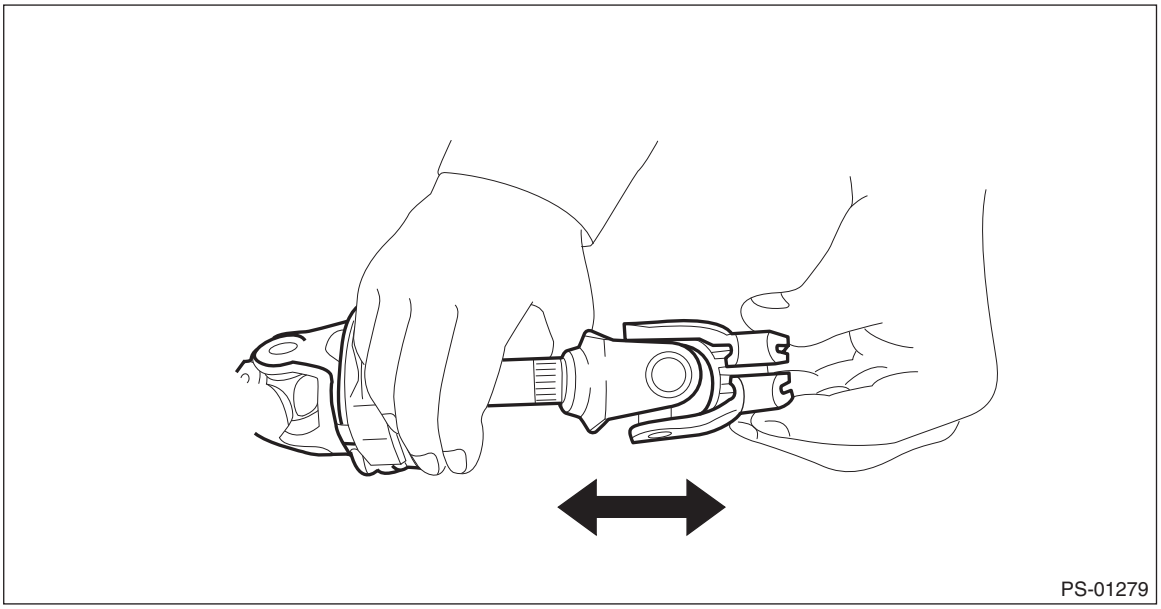


(4) Tighten the bolts on the gearbox side first, and then the column shaft side.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

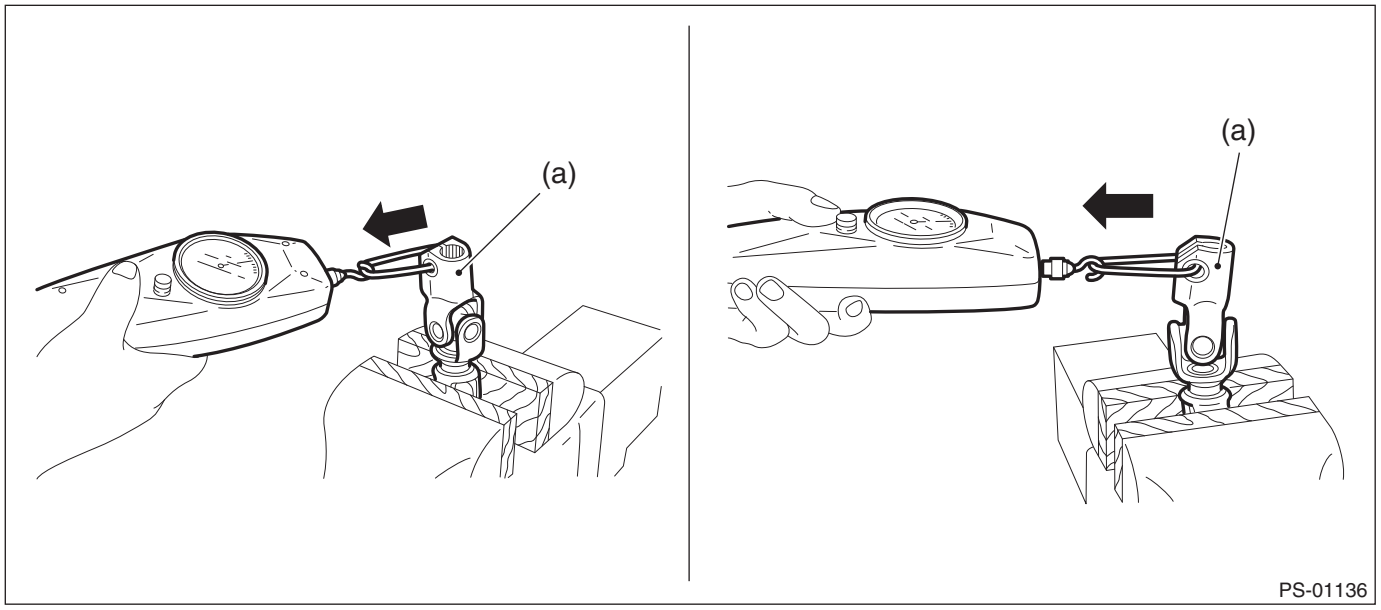
Clearance:
Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

4) Unfasten the seat belt and make the steering wheel turn freely.
5) Install the front exhaust pipe. (H6 model only) <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>
6) Install the under cover - front. <Ref. to EI-27, INSTALLATION, Front Under Cover.>



CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

C: INSPECTION

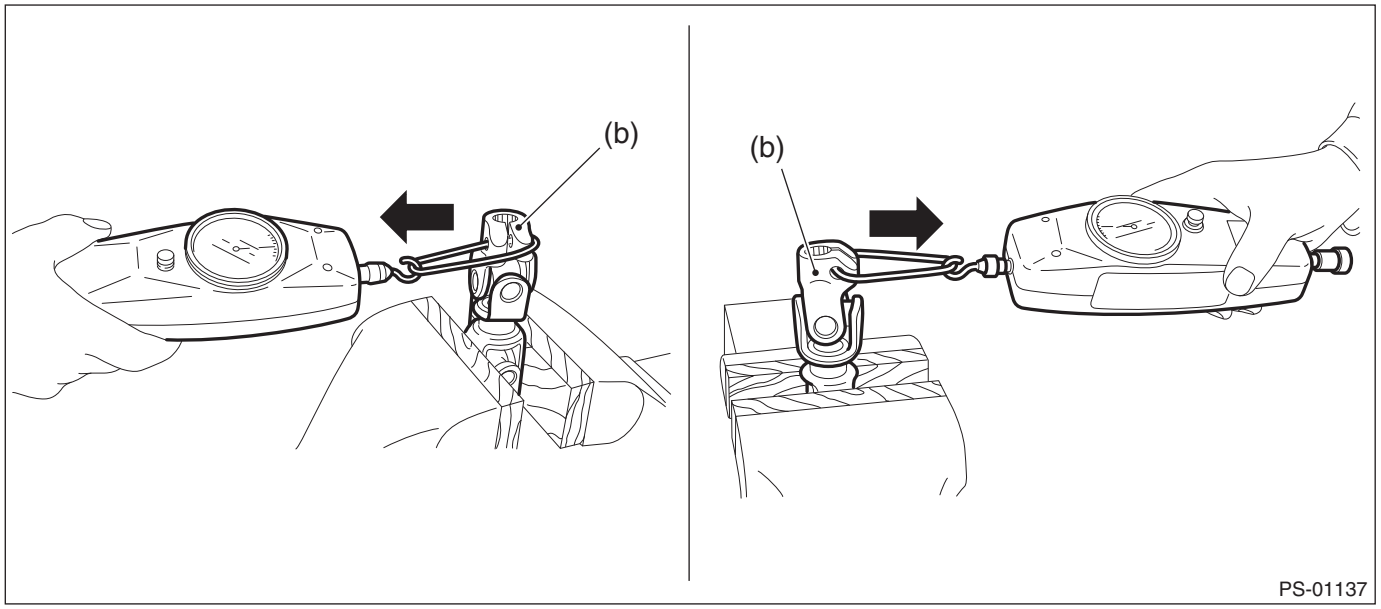


Check for wear, damage or any other faults.
1) Check the universal joint assembly - steering for excessive looseness.

Service limit:
Play of the universal joint assembly - steering: 0 mm (0 in)

2) Measure the swing load of the universal joint assembly - steering.
(1) Place the universal joint assembly - steering between wooden blocks and fix it on a vise.

(2) With the yoke (a) of gearbox side facing up, measure the swing load in two directions.



Service limit:

Maximum load:

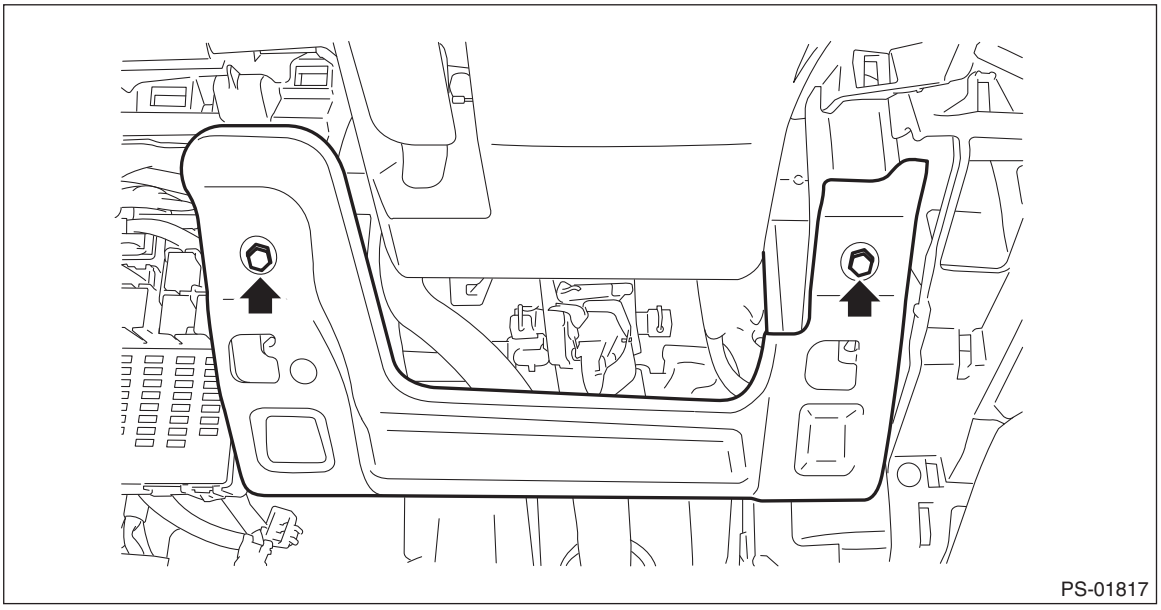
Except for OUTBACK model: 4.5 N (0.46 kgf, 1.01 lbf) or less

OUTBACK model: 2.8 N (0.29 kgf, 0.63 lbf) or less

(3) With the yoke (b) of the column assembly - steering side facing up, measure the swing load in two directions.

Service limit:

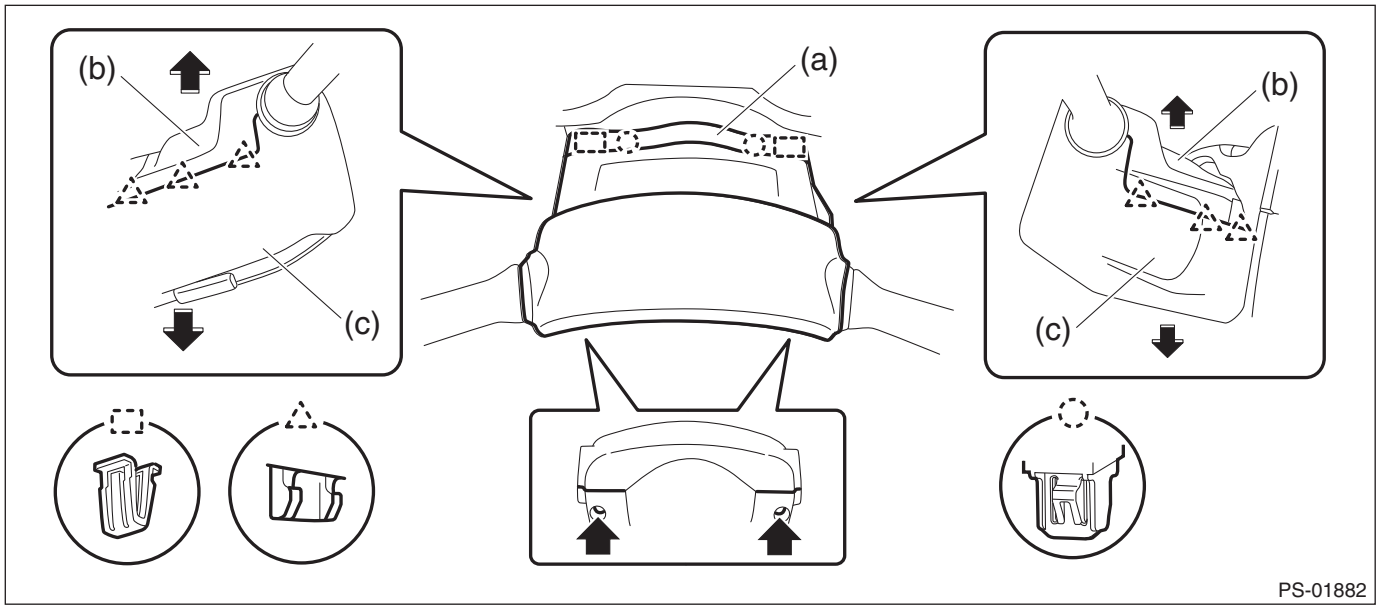
Maximum load: 5.4 N (0.55 kgf, 1.21 lbf) or less



(4) Replace as necessary, if it is found defective.

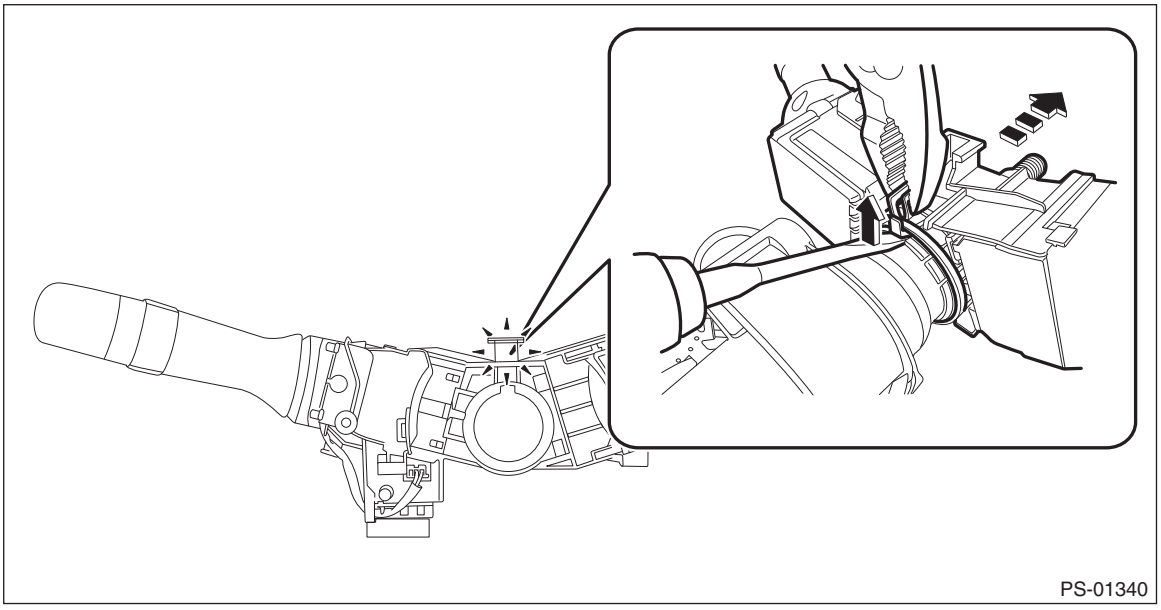
7. Steering Column

A: REMOVAL



CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Adjust the tilt position of the steering column to the neutral position and the telescopic position to the longest position.

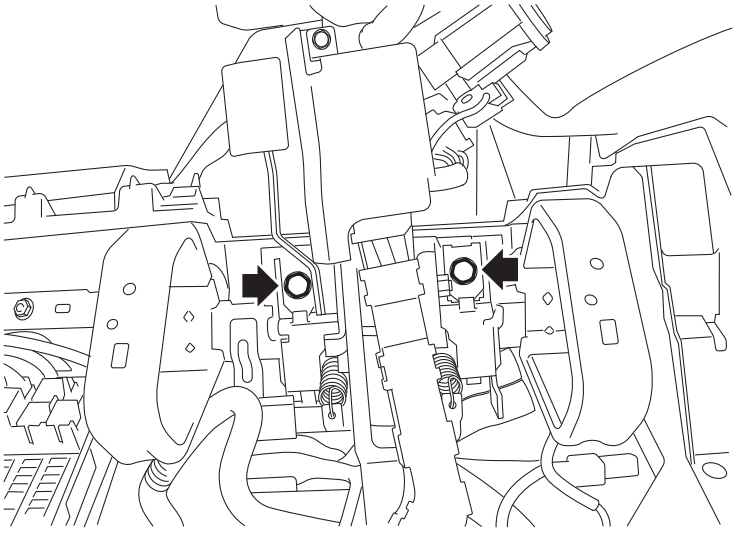
CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the panel - knee guard.



PS-01817

5) Remove the driver's airbag module. <Ref. to AB-31, REMOVAL, Driver's Airbag Module.>
6) Remove the steering wheel. <Ref. to PS-11, REMOVAL, Steering Wheel.>
7) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column (a).
   (2) Remove the screws.

(3) Release the claws, and remove the cover assembly - column UPR (b) and the cover assembly - column LWR (c).

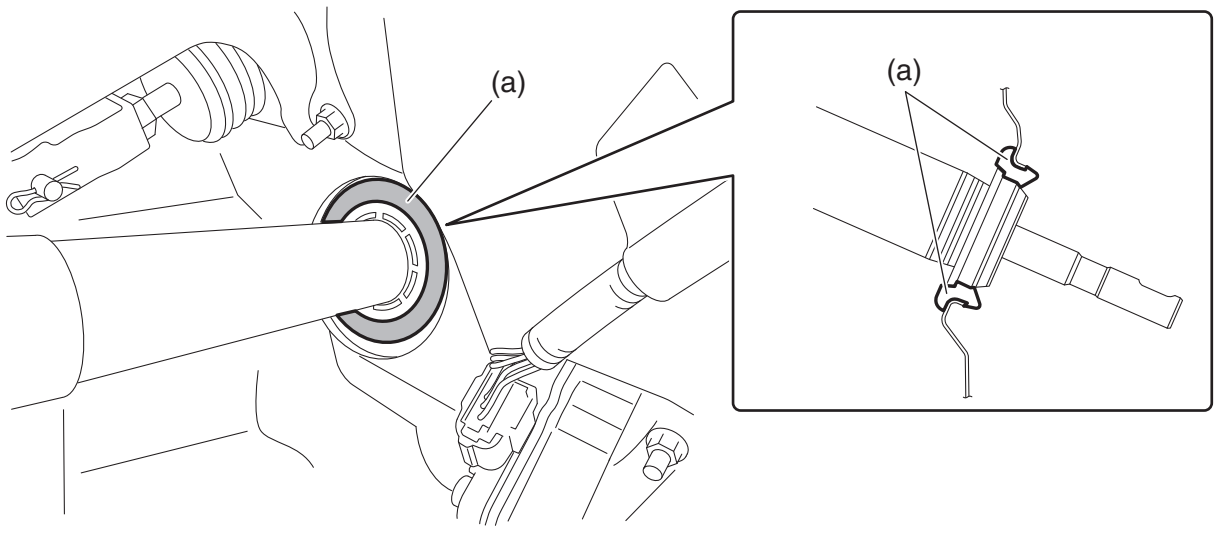


8) Remove the switch assembly - combination.
(1) Disconnect the connector, and loosen the clamp to release the claws.
(2) Pull out the switch assembly - combination from the column assembly - steering.

9) Remove all connectors from the column assembly - steering.
10) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

11) Remove the bolt under the beam COMPL - steering securing the column assembly - steering.



PS-01798

12) Pull out the column assembly - steering from the hole on toe board.

CAUTION:
Do not loosen the tilt lever when the column assembly - steering is not secured to the vehicle.
13) Remove the ignition key lock. <Ref. to SL-67, REPLACEMENT, Ignition Key Lock.>

B: INSTALLATION

CAUTION:
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Install the bushing (a) to the toe board from the passenger compartment side.

PS-01795

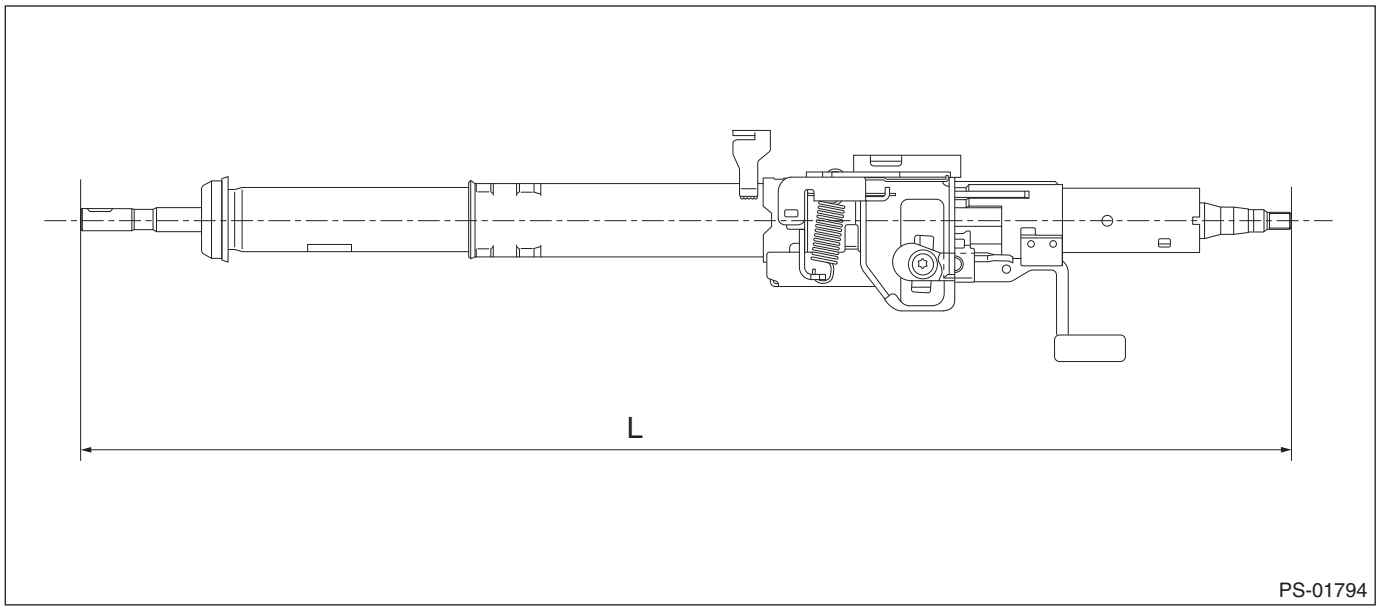
2) Insert the end of the column assembly - steering into the toe board bushing.
3) Tighten the column assembly - steering installation bolt located under the beam COMPL - steering with the tilt lever fixed.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)
4) Install the ignition key lock. <Ref. to SL-67, REPLACEMENT, Ignition Key Lock.>
5) Install the switch assembly - combination.
6) Connect all the connectors under the instrument panel.
7) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.
8) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
9) Install the cover assembly - instrument panel LWR driver.
10) Install the cover assembly - column.
11) Align the center position of the steering roll connector. <Ref. to AB-62, ADJUSTMENT, Roll Connector.>
12) Install the steering wheel.

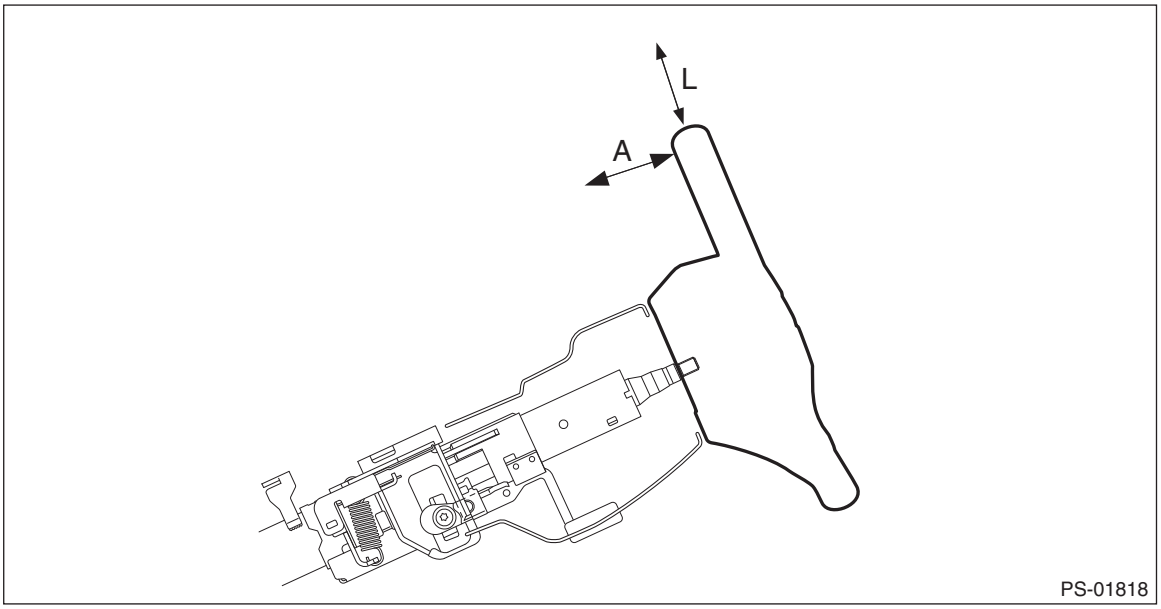
Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)



Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
13) Install the driver's airbag module. <Ref. to AB-32, INSTALLATION, Driver's Airbag Module.>
14) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. UNIT INSPECTION



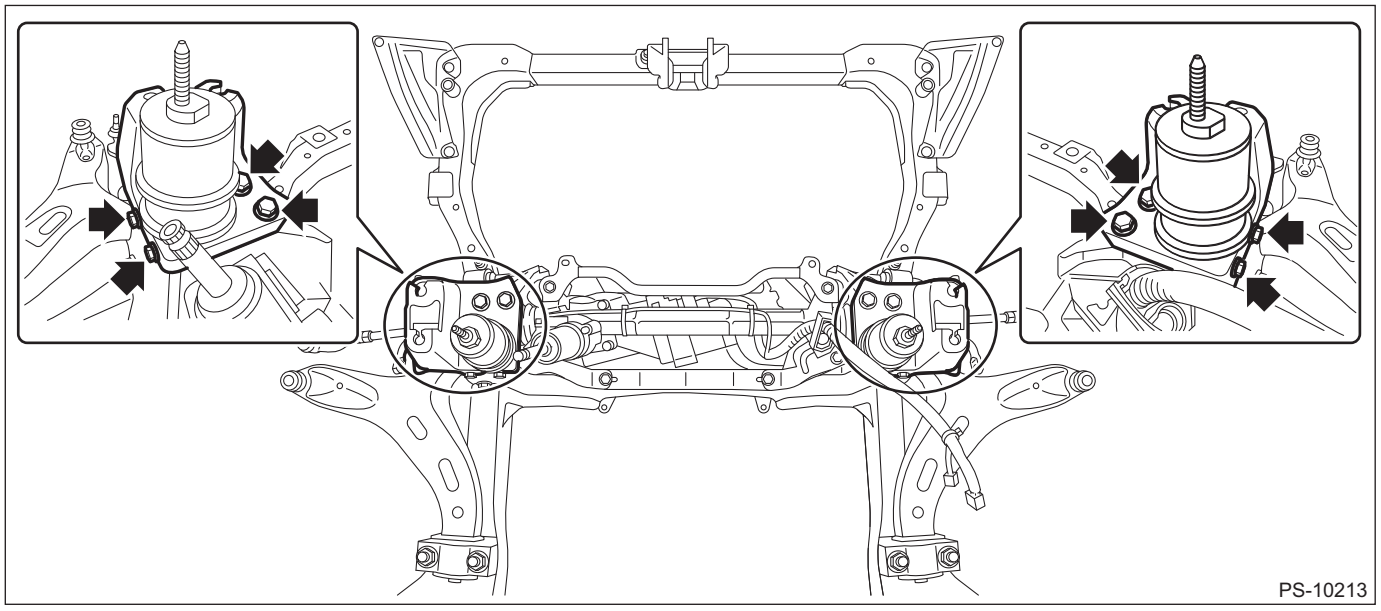
Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.
• Measure the whole length of the column assembly - steering.

Standard: Overall length L
Tilt (measure at the neutral position) and telescopic column (measure at the longest position)
$857.1^{+1.5}_{-1.5}$ mm ($33.74^{+0.059}_{-0.059}$ in)

- Check the steering wheel deflection in axial and vertical directions.

Specification:
Axial deflection A (deflection of steering wheel)
Less than 6 mm (0.24 in)
Vertical deflection L (runout of steering wheel)
Less than 17 mm (0.68 in)

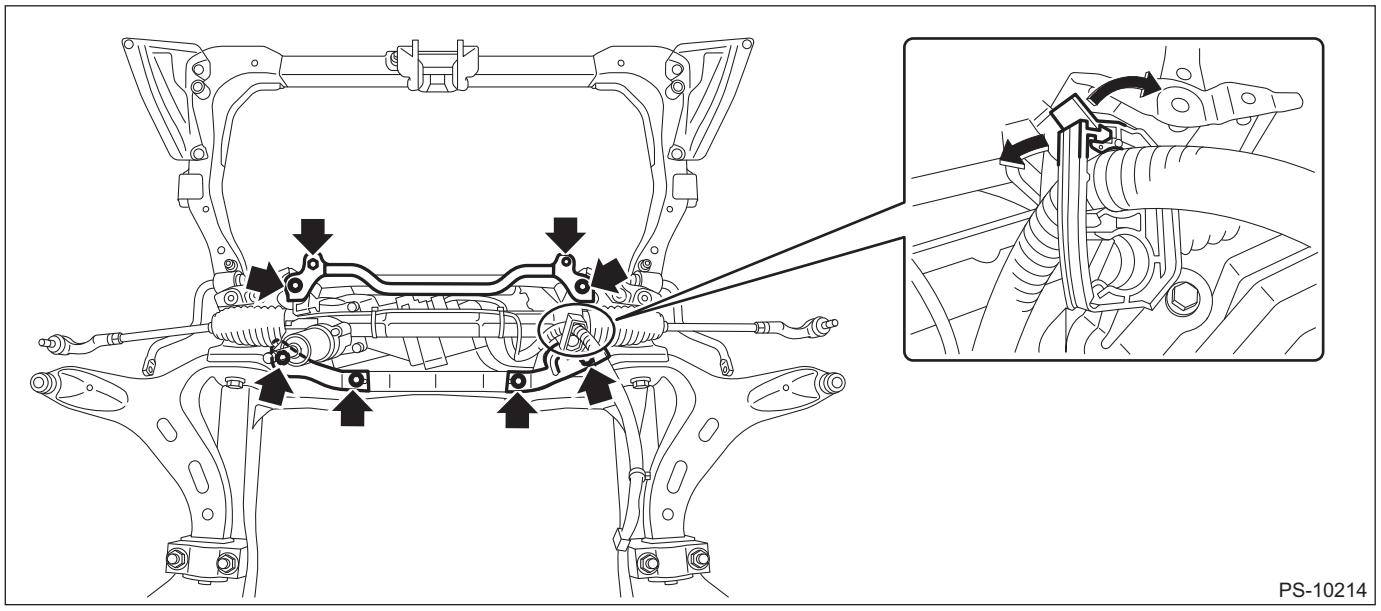
2. INSPECTION OF AIRBAG SYSTEM



Refer to “AIRBAG SYSTEM” section for airbag inspection procedure. <Ref. to AB-32, INSTALLATION, Driver’s Airbag Module.>

8. Electric Power Steering Gearbox

A: REMOVAL



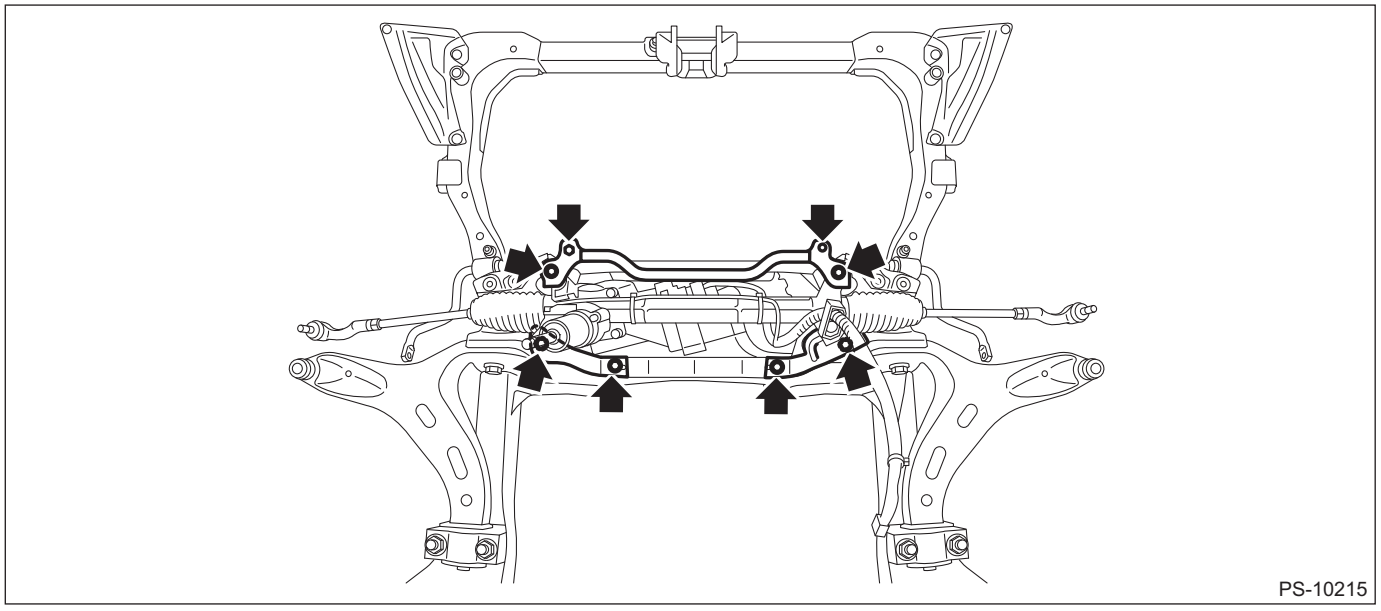
CAUTION:
• The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>
3) Remove the cradle. <Ref. to FS-20, REMOVAL, Cradle.>
4) Remove the bolts, and remove left and right main mounting brackets.

PS-10213

5) Remove the clips and bolts, then remove the steering gearbox.

CAUTION:
Be careful not to damage the steering boot.

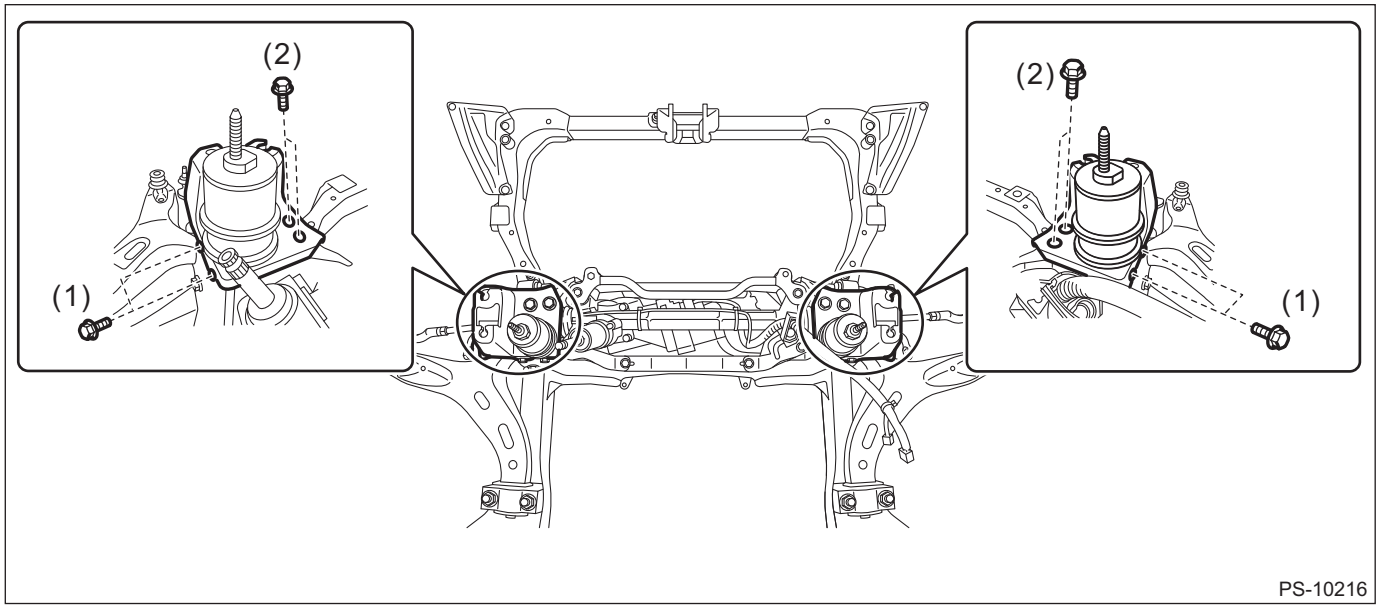


PS-10214

B: INSTALLATION

1) Before installation, check the steering gearbox. <Ref. to PS-37, INSPECTION, Electric Power Steering Gearbox.>
2) Install the steering gearbox assembly by tightening the bolts through the stiffener to the specified torque.

CAUTION:
- **Be careful not to damage the steering gearbox assembly boot.**
- **Since the steering gearbox assembly mounting bolt is applied with lubricant, always use a new bolt.**



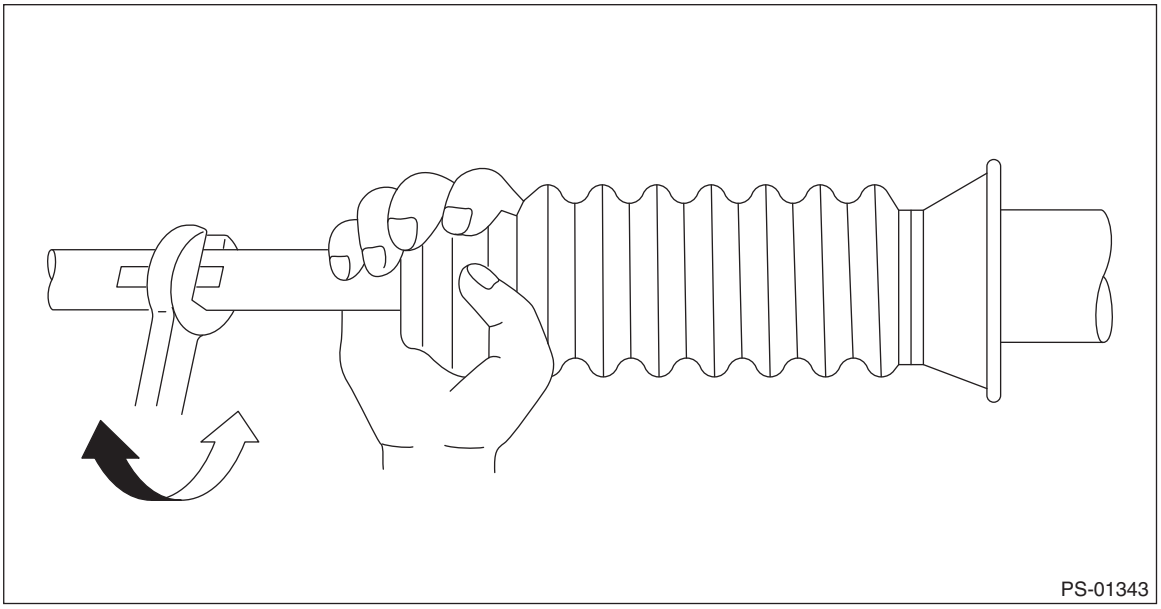
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

3) Install the main mounting bracket in the numerical order.
(1) Temporarily tighten the main mounting bracket in the numerical order.

Tightening torque:
10 N·m (1 kgf-m, 7.4 ft-lb)
(2) Tighten the main mounting bracket in the numerical order.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

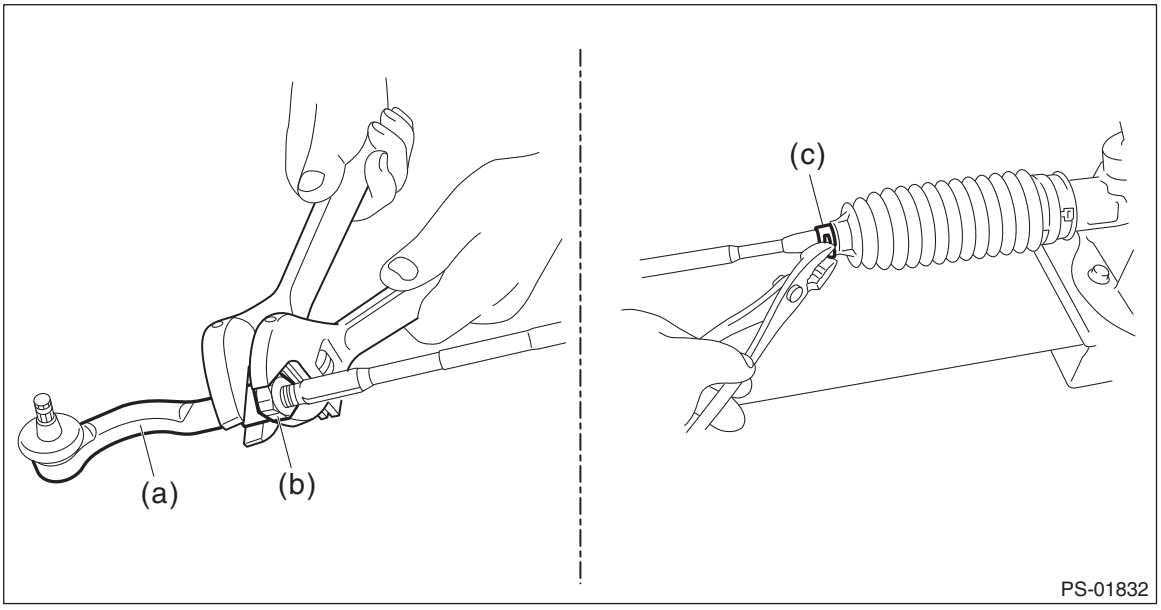
4) Install the cradle. <Ref. to FS-30, INSTALLATION, Cradle.>
5) Install the universal joint assembly - steering. <Ref. to PS-21, INSTALLATION, Universal Joint.>



CAUTION:
• Install the cradle first before tightening the universal joint assembly - steering to avoid the steering effort from becoming heavy.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.

6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

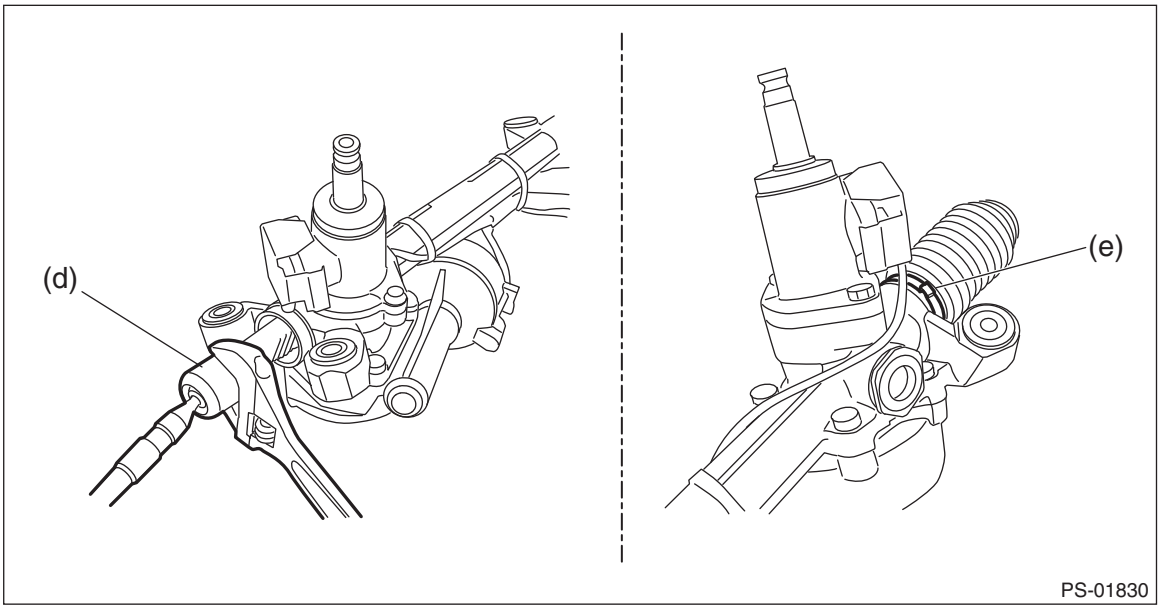
CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-50, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-15, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
When adjusting toe-in, hold the boot - steering gearbox as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.

C: DISASSEMBLY



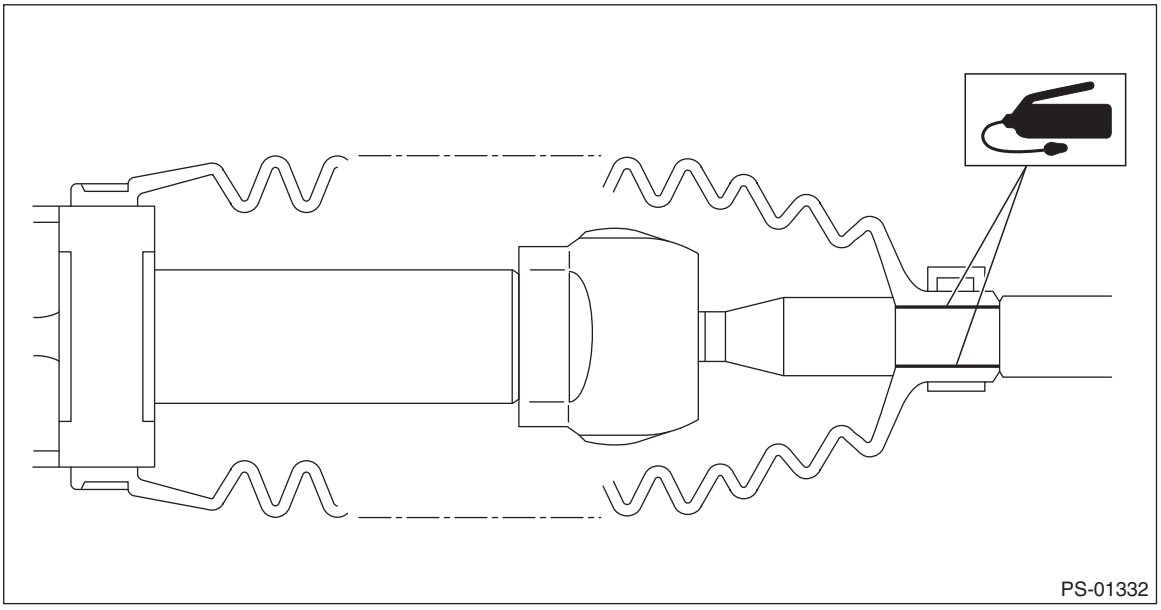
CAUTION:
When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
1) Remove the tie-rod end (a) and lock nut (b) from the steering gearbox assembly.
2) Remove the clip - boot tie-rod (c) located outside the boot - steering gearbox using the pliers, and then slide the boot - steering gearbox to the tie-rod end side.

3) Remove the tie-rod (d) from the gearbox assembly.
(1) Using a flat tip screwdriver, remove the band - boot (e) from the boot - steering gearbox.

NOTE:
Replace the boot - steering gearbox or the band - boot (e) if there is damage, cracks or deterioration.

(2) Remove the tie-rod (d).

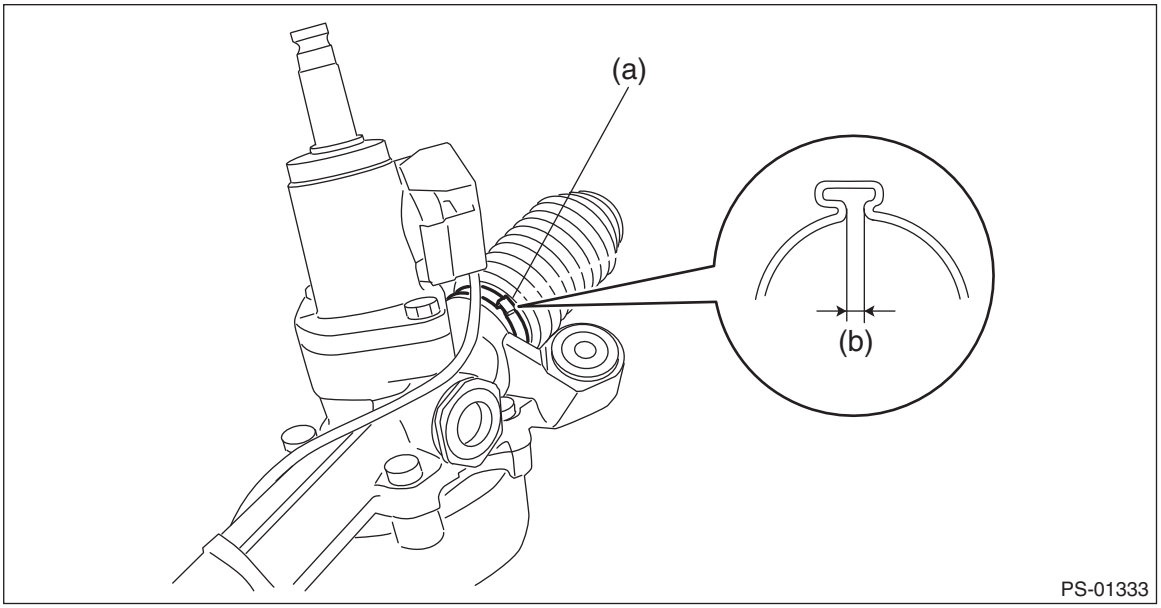
D: ASSEMBLY



1) Install the tie-rod into rack.

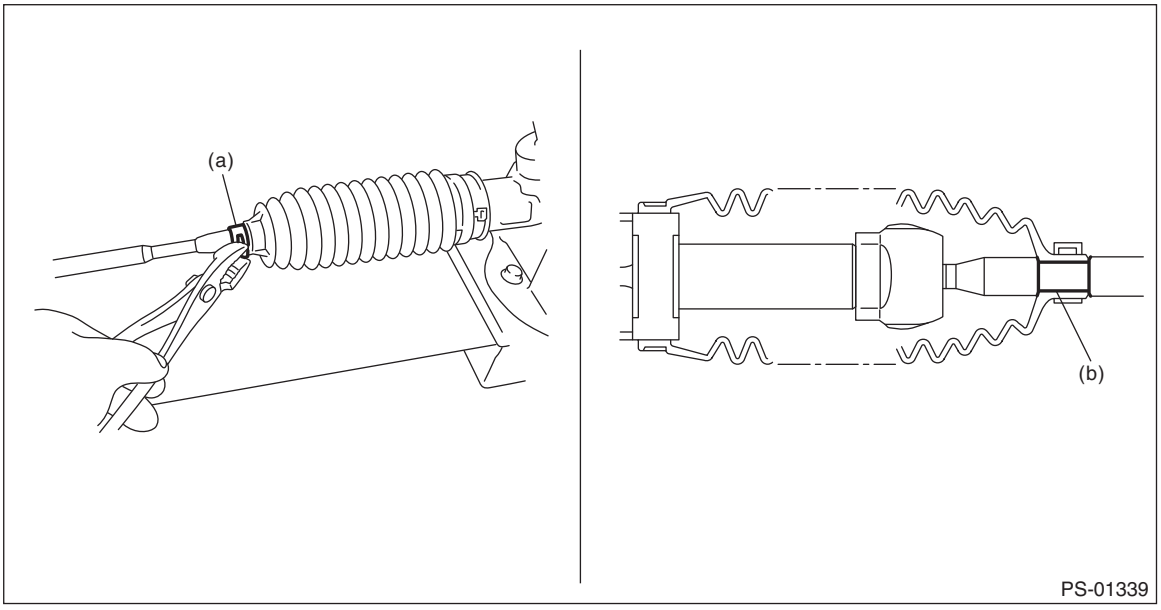
Tightening torque:
90 N·m (9.2 kgf-m, 66.4 ft-lb)

NOTE:
Check the mating face of rack and tie-rod for foreign matter such as dust etc.
2) Apply a coat of grease to the tie-rod groove, and then install the boot - steering gearbox to the housing.



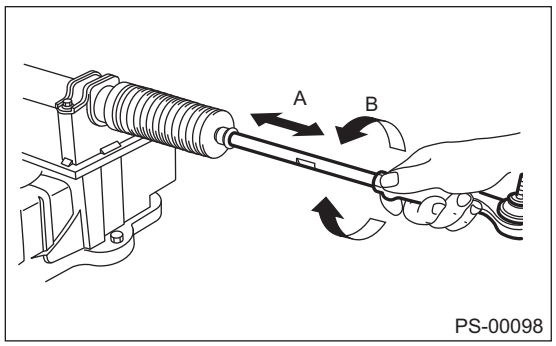
CAUTION:
Assemble the small end of the boot - steering gearbox in the tie-rod groove first, and then assemble the large end of the boot - steering gearbox in the housing.

NOTE:
Make sure that the boot - steering gearbox is installed without unusual inflation or deflation.

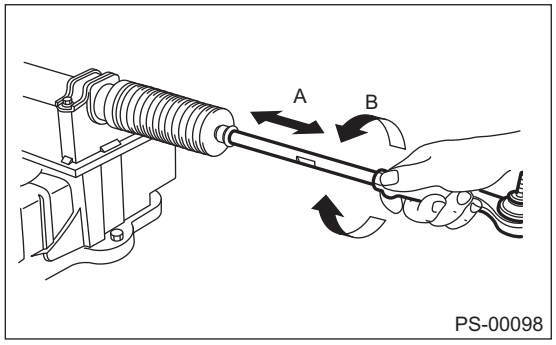


3) Using the boot clamp pliers, crimp the boot so that the clearance (b) of the band - boot (a) crimp portion becomes 2 mm (0.08 in) or less.

NOTE:
Use a new band - boot.



4) Fix the end of the boot - steering gearbox with clip - boot tie-rod (a).
5) After installation, check that the end of the boot - steering gearbox is installed to the groove (b) of the tie-rod.



6) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the threaded portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

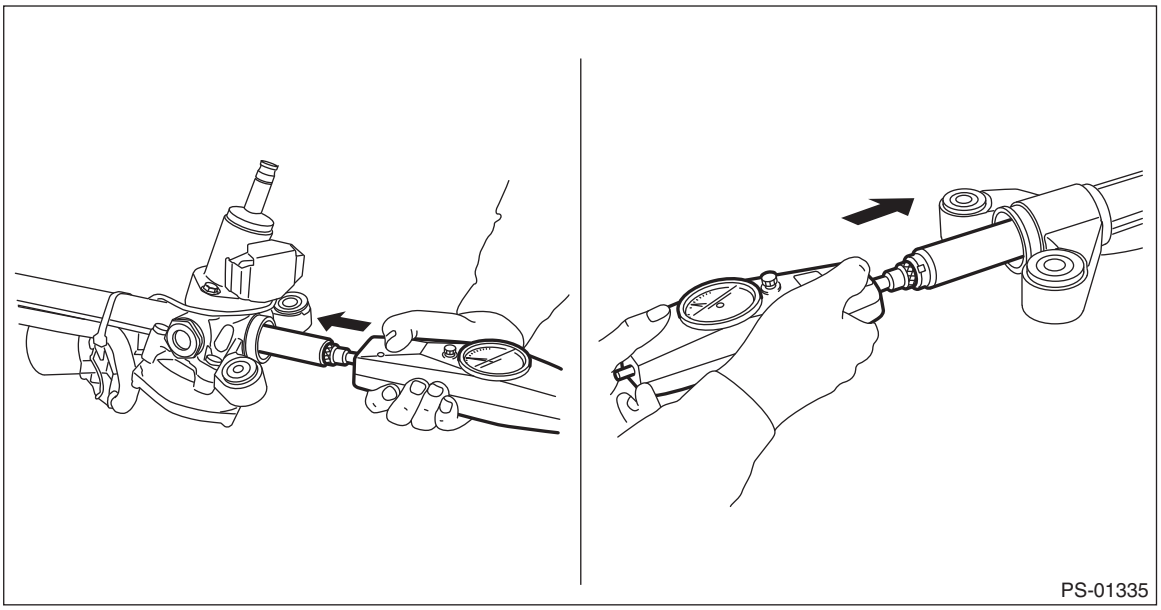
Installed tie-rod length L:
27 mm (1.06 in)

7) Inspect the steering gearbox assembly as follows:
1. “A” Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
2. “B” Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
3. Finally, make sure that the boot - steering gearbox is installed in the specified position without inflating.

8) Remove the steering gearbox assembly from ST.

E: INSPECTION

1. UNIT INSPECTION



Check components for wear, damage or other faults. Adjust or replace if necessary.

2. LIMIT

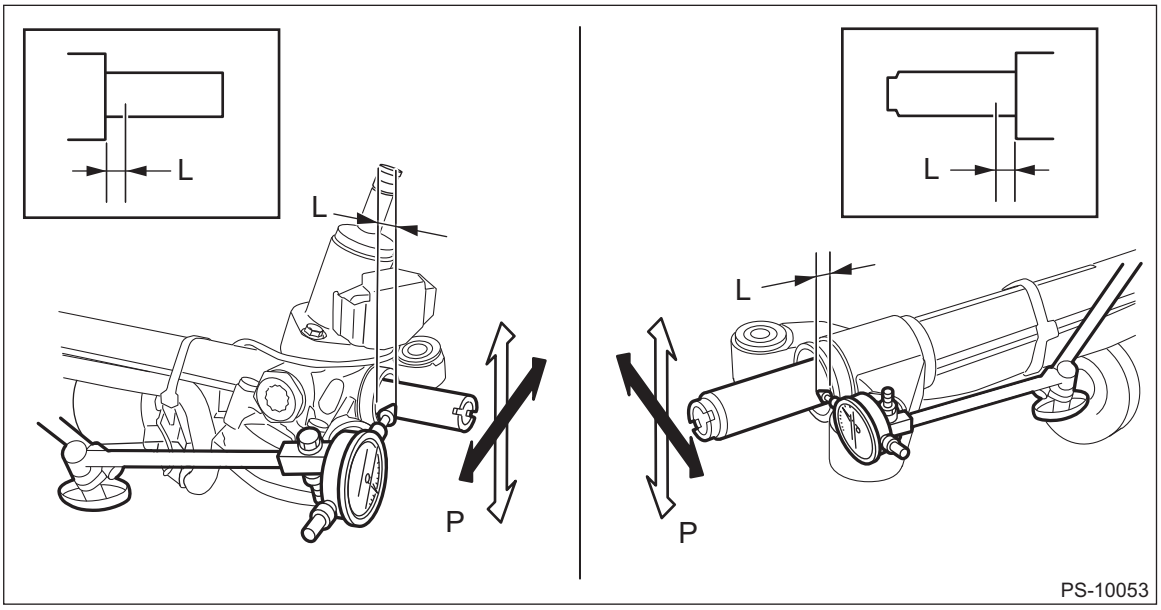
Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:
When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

Rack shaft sliding resistance:
Limit: 360 N (37 kgf, 81 lbf) or less
Left/right differential of sliding resistance: 20% or less

3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

NOTE:
- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
- When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.
  – Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.
  – Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))



Right-turn steering:
Service limit:
Both amplitudes: 0.6 mm (0.024 in) or less

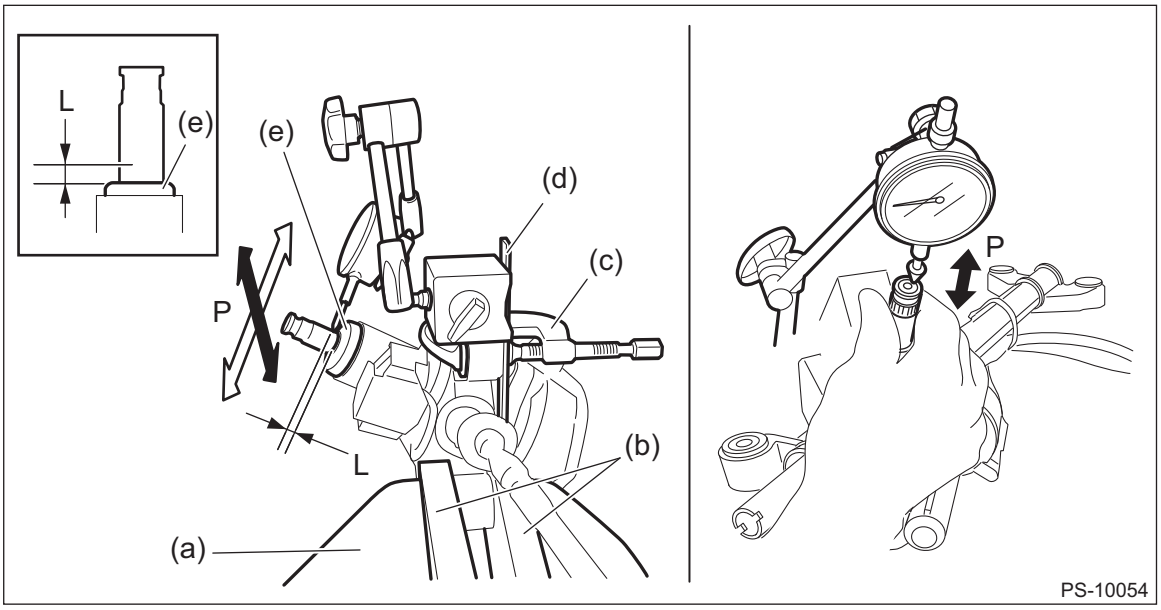
Left-turn steering:
Service limit:
Both amplitudes: 0.6 mm (0.024 in) or less

Condition:
L: 5 mm (0.2 in)
Rack shaft end P: 98 N (10 kgf, 22 lbf)

NOTE:
<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.

4. INPUT SHAFT PLAY



NOTE:
- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
- When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.
  – Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.
  – Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))

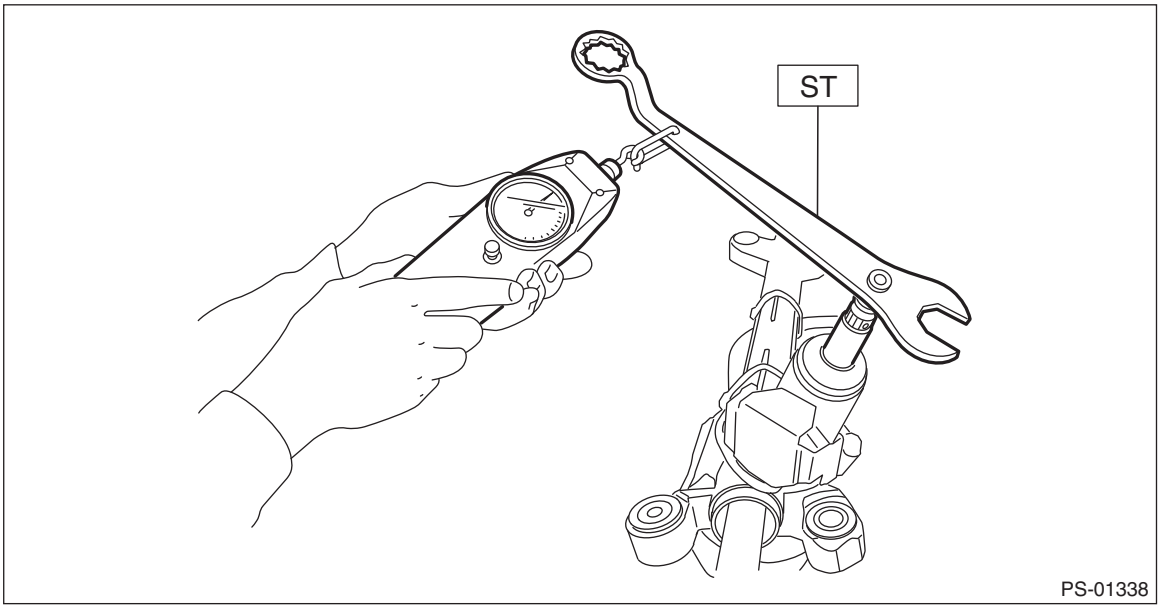
In radial direction:
Limit: Both amplitudes: 0.6 mm (0.024 in) or less
Condition: Input shaft tip P = 98 N (10 kgf, 22 lbf)
L: 5 mm (0.2 in) from dust cover

In axial direction:
Limit: 0.27 mm (0.0106 in) or less
Condition: Input shaft tip P = 20 — 49 N (2 — 5 kgf, 4 — 11 lbf)

NOTE:
<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.

(a) Vise
(b) Wooden block
(c) C-clamp
(d) Iron plate
(e) Dust cover



5. ROTATIONAL RESISTANCE OF GEARBOX

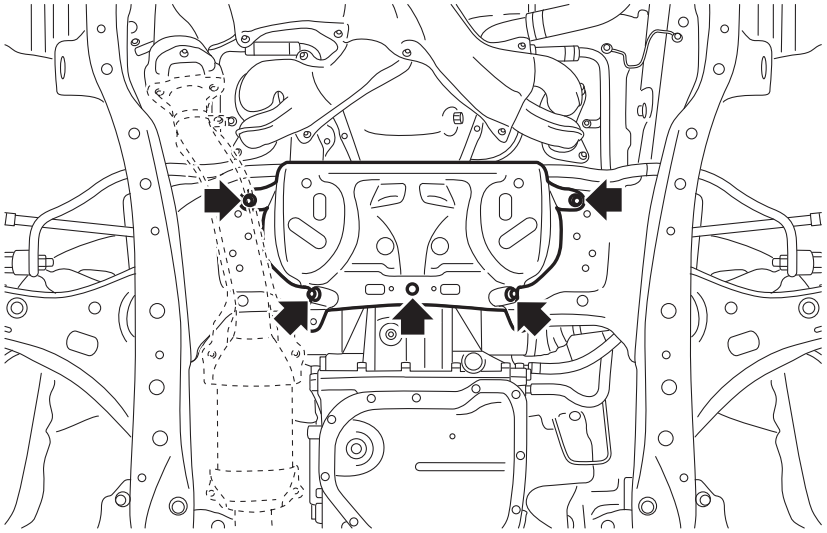
CAUTION:
- **Always remove the guide when measuring turn resistance.**
- **Be sure to put an alignment mark on the guide and the input shaft before removing the guide. After measurement is completed, install them by matching the alignment marks.**

1) Using the ST, measure the rotational resistance of the steering gearbox assembly.

Preparation tool:
ST: SPANNER (34099PA100)

Service limit:
Maximum allowable resistance: 18 N (1.8 kgf, 4 lbf) or less
Difference between right and left rotational resistance: 20% or less

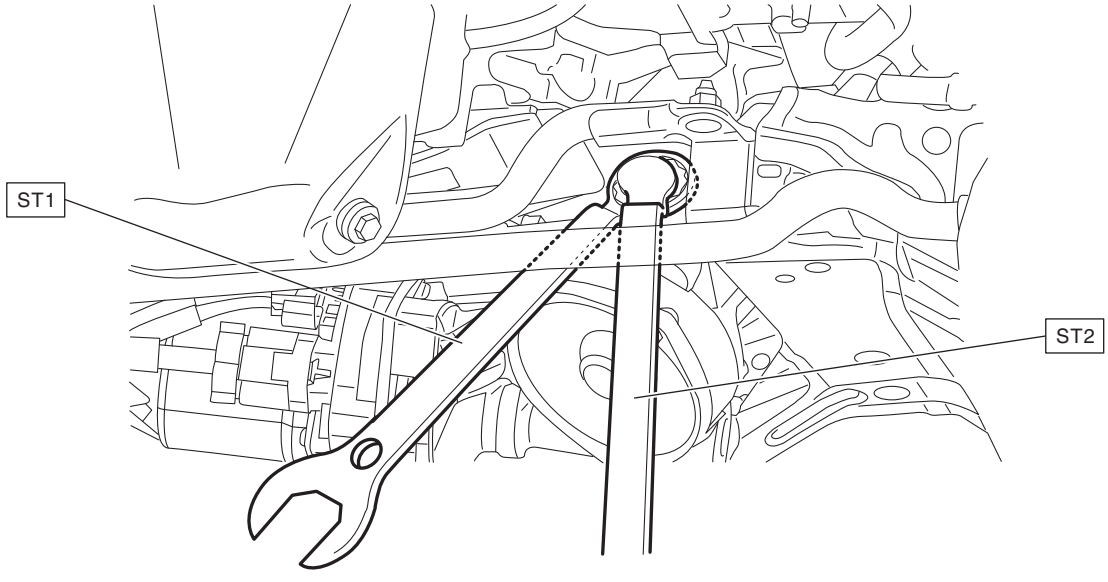
6. CHECK BUSHING



1) Check the bushing for cracks. If there is a crack, replace the steering gearbox assembly.

F: ADJUSTMENT

1. GEARBOX BACKLASH ADJUSTMENT (SERVICING ON VEHICLE)



1) Remove the under cover - front. <Ref. to EI-27, REMOVAL, Front Under Cover.>
2) Remove the front stabilizer and slide the front stabilizer. <Ref. to FS-33, REMOVAL, Front Stabilizer.>
3) Remove the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-6, REMOVAL, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

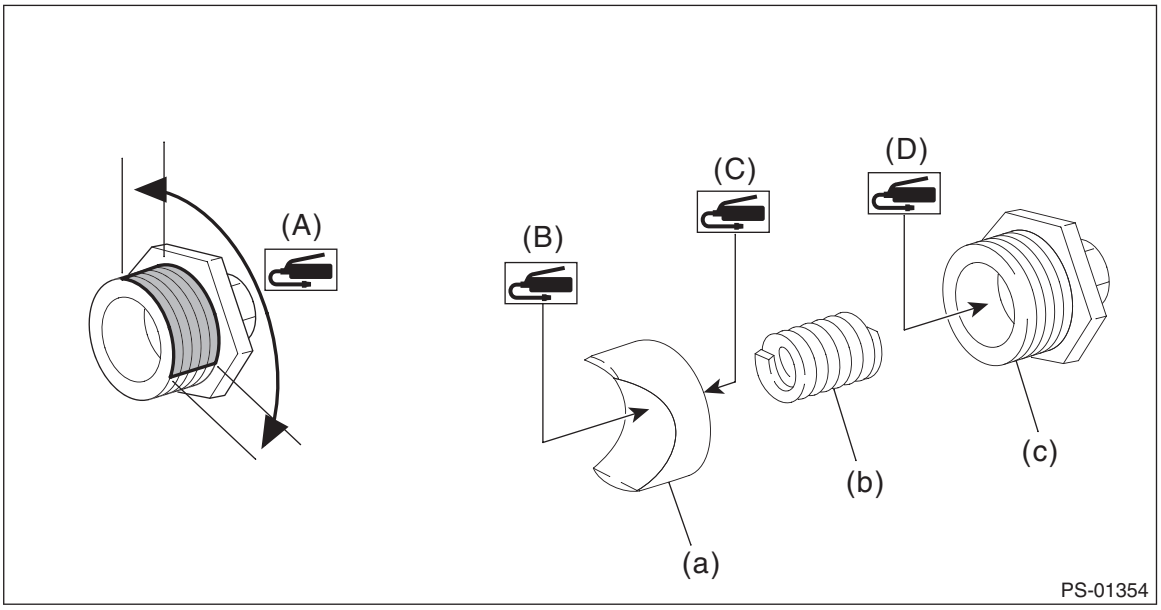
4) Remove the bolts, then remove the guard.

PS-01811

5) Using the ST, loosen the lock nut and adjusting screw.

Preparation tool:
ST1: SPECIAL TOOL EPS (34199AJ030)
ST2: SPECIAL TOOL EPS (34199AJ040)

PS-01836



6) Apply a coat of grease to the sliding surface (B) of the pad - pressure (a) and seating surface (C) of spring - gearbox (b), and then insert the pad - pressure (a) into steering body.

7) Charge the adjusting screw (c) with grease (D), and then insert the spring - gearbox (b) into adjusting screw. Then install on the steering body.

Grease:
Molywhite LS-G

8) Apply liquid gasket to 1/3 or more (A) of entire perimeter of adjusting screw thread (c).

Liquid gasket:
SEAL END No. 22

9) Tighten the adjusting screw to 20 N·m (2 kgf-m, 14.8 ft-lb), then loosen it.
10) Tighten the adjusting screw to 20 N·m (2 kgf-m, 14.8 ft-lb) again, then loosen it.
11) Tighten the adjusting screw to 20 N·m (2 kgf-m, 14.8 ft-lb), loosen by 30°, and then fix the screw.
12) Install the lock nut. While holding the adjusting screw with a wrench, tighten the lock nut using ST.
13) Lift up the front wheels, turn the steering wheel to right and left, and perform the adjustment again if the steering is not smooth. Adjust by gradually increasing the angle of loosening up to 40°.

Tightening torque:
Lock nut: 45 N·m (4.6 kgf-m, 33.2 ft-lb)

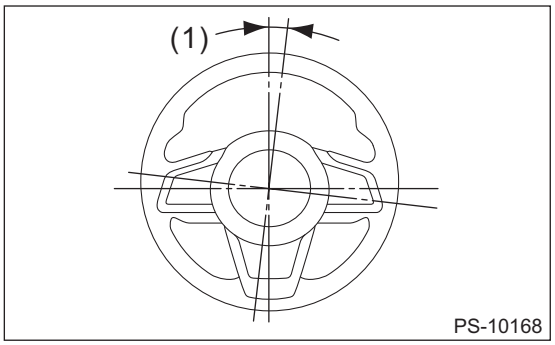
CAUTION:
Hold the adjusting screw with a wrench to prevent it from turning while tightening the lock nut.

14) Install the guard.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

15) Install the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-7, INSTALLATION, Front Exhaust Pipe.>

16) Install the front stabilizer. <Ref. to FS-34, INSTALLATION, Front Stabilizer.>
17) Install the under cover - front. <Ref. to EI-27, INSTALLATION, Front Under Cover.>



2. FRONT WHEEL ALIGNMENT ADJUSTMENT

1) Adjust the front toe-in. <Ref. to FS-16, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
2) Check the steering angle of the wheels.

Standard of steering angle:

Model	Inner wheel	Outer wheel
Sedan model	37.6°±1.5°	32.8°±1.5°
OUTBACK model	38.6°±1.5°	33.8°±1.5°

3) When the steering wheel is in the following condition, perform the steering wheel installation over again.
- When wheels are set in the straight ahead position, the steering wheel spokes are not horizontal.
- Error is more than 5° on the periphery of the steering wheel.

(1) 5° or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle. Also check that there are no abnormal steering effort, failure of the steering wheel to return or other faults.
5) Adjust the steering angle sensor. <Ref. to VDC-15, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

9. Power Steering Control Module

A: REMOVAL

NOTE:
Power steering control module is integrated with the electric power steering gearbox. Since the power steering control module is a non-disassemble part, it cannot be removed.

B: INSTALLATION

NOTE:
Power steering control module is integrated with the electric power steering gearbox. The power steering control module is a non-disassemble part.

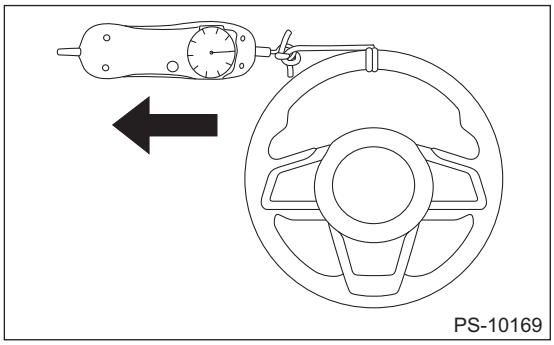
C: INSPECTION

NOTE:
Power steering control module is integrated with the electric power steering gearbox. Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)” for inspection. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

10.General Diagnostic Table

A: INSPECTION

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Tire and wheel • Improper tire out of specifications • Improper wheel out of specification • Tires not properly inflated	Replace or reinflate the tire and wheel.
	2. Measure the steering wheel effort. <Ref. to PS-46, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front wheel alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Measure the steering wheel effort. <Ref. to PS-46, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.



NOTE:
When performing repeated steering operation with the vehicle at standstill, the steering effort may be temporarily heavy because the heat generated in the system activates the power steering protection control. This is not a malfunction caused by the steering system. After a while, it will return to normal steering effort. (In this case, the steering warning light will not come on and there will be no DTC.)

1. NOISE AND VIBRATION

NOTE:
• When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
• There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Trouble	Possible cause	Corrective action
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Noise emitted from inside of the gearbox	Replace the gearbox assembly.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust the backlash. When the noise remains after adjustment, replace the gearbox assembly.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (intermittent) While engine is running. (While operating the steering.)	Fault inside of gearbox	Replace the gearbox assembly.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/without steering turned)	Excessive play in steering, looseness of suspension parts	Retighten.

2. MEASUREMENT OF STEERING EFFORT

	Step	Check	Yes	No
1	**CHECK STEERING WARNING LIGHT.**	Does the steering warning light illuminate?	Using Subaru Select Monitor, read the DTC and inspect according to it. For detailed operation procedures, refer to “Application help”.	Go to step **2**.
2	**CHECK STEERING WARNING LIGHT.** 1) Display the data of «EPS operating condition» using Subaru Select Monitor. 2) Connect the Subaru Select Monitor, and turn the steering wheel. (One lock to lock)	Is the «EPS operating condition» normal without displaying any DTC code?	Go to step **3**.	If the «EPS operating condition» is “Assist limitation”, stop the engine for approx. 30 minutes and perform the procedures from step 1 again.
3	**CHECK STEERING EFFORT.** 1) Stop the vehicle on paved road. 2) Set the tire air pressure to the specification. 3) Start the engine. 4) Run the engine at idle. 5) Install a spring scale on the steering wheel. 6) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  PS-10169	Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lbf)?	Go to step **4**.	Go to step **8**.
4	**CHECK STEERING EFFORT.** 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?	Go to step **5**.	Perform the inspection or adjustment around the suspension part.
5	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Using Subaru Select Monitor connected, display the data of «Torque sensor main output» and «Torque sensor sub output». 2) Read the voltage value of torque sensor. NOTE: When measuring, place the steering wheel at the center position.	Is the voltage 2.425 — 2.575 V?	Go to step **6**.	Replace the gearbox assembly. <Ref. to PS-31, Electric Power Steering Gearbox.>
6	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. 2) Using Subaru Select Monitor connected, display the data of «Torque sensor main output» and «Torque sensor sub output». 3) Read the voltage value of torque sensor.	Is the voltage 2.425 — 2.575 V?	Go to step **7**.	Replace the gearbox assembly. <Ref. to PS-31, Electric Power Steering Gearbox.>

	Step	Check	Yes	No
7	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. NOTE: Check that the universal joint assembly - steering moves up and down smoothly without installing the bolt. Then tighten the bolts first on the gearbox side and then on the column shaft side. 2) Using Subaru Select Monitor connected, display the data of «Torque sensor main output» and «Torque sensor sub output». 3) Read the voltage value of torque sensor.	Is the voltage 2.425 — 2.575 V?	Go to step **8**.	Check the universal joint assembly - steering. <Ref. to PS-31, Electric Power Steering Gearbox.>
8	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step **9**.	Replace the column assembly - steering. <Ref. to PS-31, Electric Power Steering Gearbox.>
9	**CHECK STEERING WHEEL EFFORT.** Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step **10**.	Replace the column assembly - steering. <Ref. to PS-26, Steering Column.>
10	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the bending load of joint. (Yoke of column assembly - steering side) <Ref. to PS-24, INSPECTION, Universal Joint.>	Is the bending load of the universal joint assembly - steering less than 5.4 N (0.55 kgf, 1.21 lbf)?	Go to step **11**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-21, Universal Joint.>
11	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the bending load of joint. (Yoke of gearbox side) <Ref. to PS-24, INSPECTION, Universal Joint.>	Except for OUTBACK model: Is the bending load of the universal joint assembly - steering less than 4.5 N (0.46 kgf, 1.01 lbf)? OUTBACK model: Is the bending load of the universal joint assembly - steering less than 2.8 N (0.29 kgf, 0.63 lbf)?	Go to step **12**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-21, Universal Joint.>
12	**CHECK FRONT WHEEL.** Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step **13**.
13	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends.	Does the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **14**.
14	**CHECK BALL JOINT.** Remove the ball joint.	Does the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **15**.
15	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-37, LIMIT, INSPECTION, Electric Power Steering Gearbox.>	Is the rotational resistance of steering gearbox less than 18 N (1.8 kgf, 4.0 lbf)? Is the difference between clockwise and counterclockwise less than 20%?	Go to step **16**.	Replace the gearbox assembly. <Ref. to PS-31, Electric Power Steering Gearbox.>

Step		Check	Yes	No
16	**CHECK GEARBOX.** Measure the sliding of gearbox.	Is the sliding resistance of the steering gearbox less than 360 N (36.7 kgf, 80.9 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal.	Replace the gearbox assembly. <Ref. to PS-31, Electric Power Steering Gearbox.>

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

10.	STEERING Warning Light	18
11.	List of Diagnostic Trouble Code (DTC)	21
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	24

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.

NOTE:
• Shake the connector at the suspected trouble location to check for open or short circuits of the harness.
• Refer to “Check List for Interview”. <Ref. to PS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to PS(diag)-4, Check List for Interview.> 2) Check the illumination status of the STEERING warning light while the engine is running. 3) Before performing diagnostics, check components which might affect power steering problems. <Ref. to PS(diag)-7, INSPECTION, General Description.> 4) Save the data of «Overheating protection intervention history», «IG Count after ECU Overheat Protection(latest)», «IG Count after ECU Overheat Protection(Previous)», «IG Count after ECU Overheat Protection(Before Previous)», and «Assist limited(Low voltage)» using Subaru Select Monitor. <Ref. to PS(diag)-10, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the check result OK?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using Subaru Select Monitor. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PS(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Are DTC, time stamp and freeze frame data displayed?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.

	Step	Check	Yes	No
3	**PERFORM GENERAL DIAGNOSTICS.** 1) If the STEERING warning light is illuminated while the engine is running, perform the Clear Memory Mode. <Ref. to PS(diag)-17, OPERATION, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 3) Read the DTC. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).> 4) Check that the DTC is not displayed.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	<Ref. to PS(diag)-13, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-21, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Check the illumination status of the STEERING warning light while the engine is running, and if the warning light is lit, perform Clear Memory Mode. <Ref. to PS(diag)-17, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 5) Read the DTC. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items regarding condition of the vehicle.

1. TROUBLE STATUS

Phenomenon of the vehicle	❑ Steering is heavy ❑ Steering is not smooth ❑ Steering is unstable (wondering) ❑ Steering does not return to center ❑ Steering is not straight
	❑ Steering force required is not the same for right and left turn ❑ Steering force required is not even ❑ Steering is too light
	❑ Noise ❑ Vibration ❑ STEERING warning light illuminates ❑ Other
Frequency	❑ Always ❑ Sometimes ❑ Immediately after starting the engine ❑ Only once ❑ Other
	❑ Recovers after leaving it for minutes
Steering wheel operation	❑ Dry steering ❑ When turning ❑ Quick steering ❑ Slow steering ❑ Returning the steering wheel
	❑ Releasing the steering wheel ❑ Only supporting the steering wheel by hand ❑ Repetitive dry steering
Steering wheel status / direction	❑ Around center position ❑ Near end of lock to lock
	❑ When turning the steering to right ❑ When turning the steering to left ❑ Both to right and to left ❑ (1) Steering angle: degrees ❑ (2) Maneuvering time: minutes
	❑ Slow steering ❑ Quick steering ❑ While holding the steering ❑ When repeating the dry wheel operation
Vehicle speed	❑ Stall 0 km/h (0 MPH) ❑ Very low speed — 20 km/h (— 12 MPH) ❑ Low speed — 40 km/h (— 25 MPH) ❑ Medium speed — 80 km/h (— 50 MPH) ❑ High speed — 80 km/h or more (— 50 MPH or more)
	❑ At starting ❑ While accelerating ❑ While decelerating ❑ When accelerating rapidly ❑ When decelerating rapidly
	❑ Other
Engine speed	❑ Idling ❑ (1) Around rpm ❑ (2) rpm — rpm ❑ (3) rpm or more / or less

2. STATE OF STEERING WARNING LIGHT

STEERING warning light illuminates	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate ❑ Other
Ignition key position	❑ LOCK ❑ ACC ❑ ON (when starting engine) ❑ START ❑ ON (when starting engine, while engine is running) ❑ ON (when starting engine, when engine is at a standstill)
Timing	❑ Immediately after turning the ignition ON ❑ Immediately after turning the ignition to START
	❑ Idling ❑ While accelerating ❑ While decelerating ❑ When cruising at — km/h (MPH)
	❑ When other electrical parts are operating (parts name: operating condition:)

3. ENVIRONMENT

a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
b) Outside temperature	❑ °C (°F)
c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Alley way ❑ Private road ❑ Parking lot ❑ Mountain road ❑ Paved road ❑ Unpaved road ❑ Gravel road ❑ Sandy place ❑ Muddy road ❑ Concrete road ❑ Stone pavement ❑ Racetrack ❑ Others:
d) Road surface	❑ Dry ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Others:
e) Tire	❑ Tire chain ❑ Studless tire ❑ T-type tire (front RH, front LH, rear RH, rear LH)
f) Tire inflation pressure	Front RH: kPa Front LH: kPa Rear RH: kPa Rear LH: kPa
g) Degree of wear	Front RH: mm (in) Front LH: mm (in) Rear RH: mm (in) Rear LH: mm (in)

h) Genuine part	❑ Yes ❑ No Record after-market parts if any. (Steering wheel, audio, tires, and similar parts)
i) Condition of suspension alignment	
j) Electrical load conditions	❑ Audio ❑ Air conditioner ❑ Other
k) Loaded state	Condition:
l) Repair parts	❑ None ❑ Provided Contents:
m) Others	

3. General Description

A: CAUTION

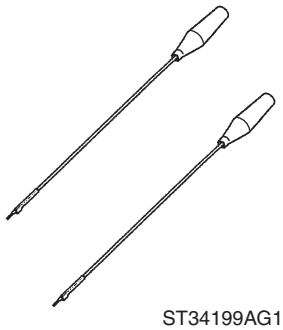
1. SRS AIRBAG SYSTEM

CAUTION:
Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.

B: INSPECTION

Before performing diagnosis, check the following items which might be affecting the power steering problem.

1. BATTERY



Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>

2. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

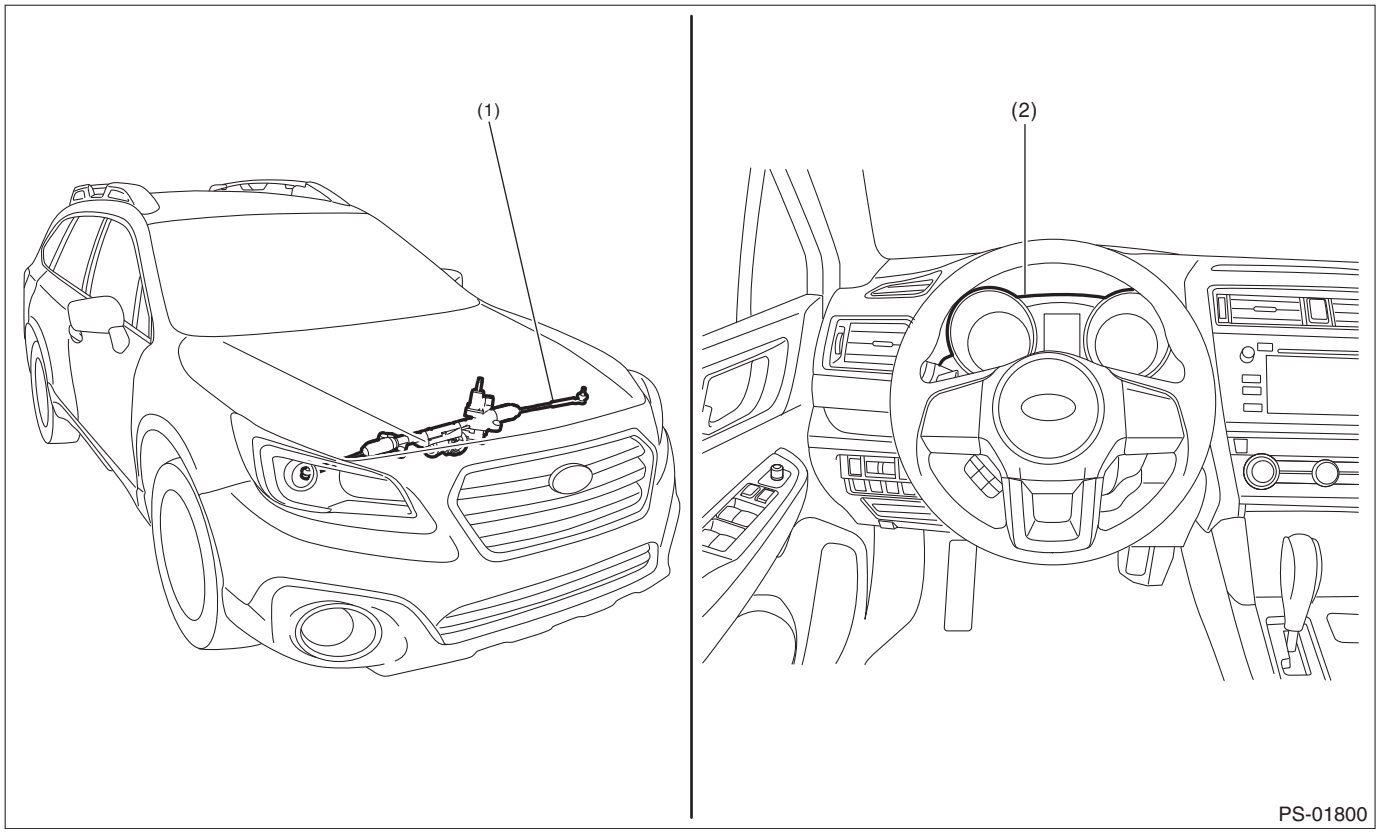


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
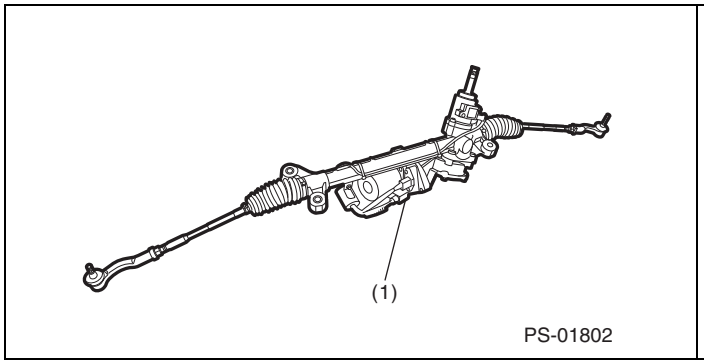
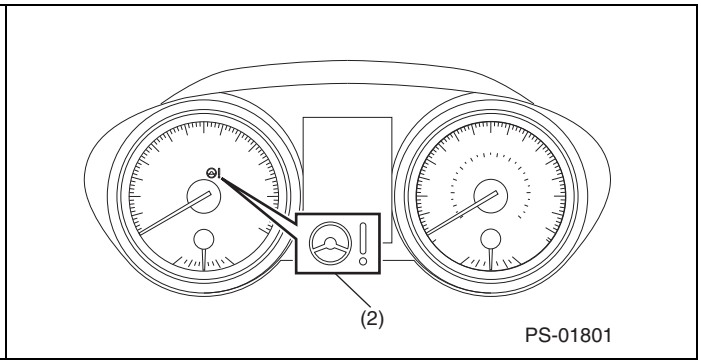
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST34199AG100	34199AG100	SPECIAL TOOL HARNESS	Used for troubleshooting the electrical system.

2. GENERAL TOOL

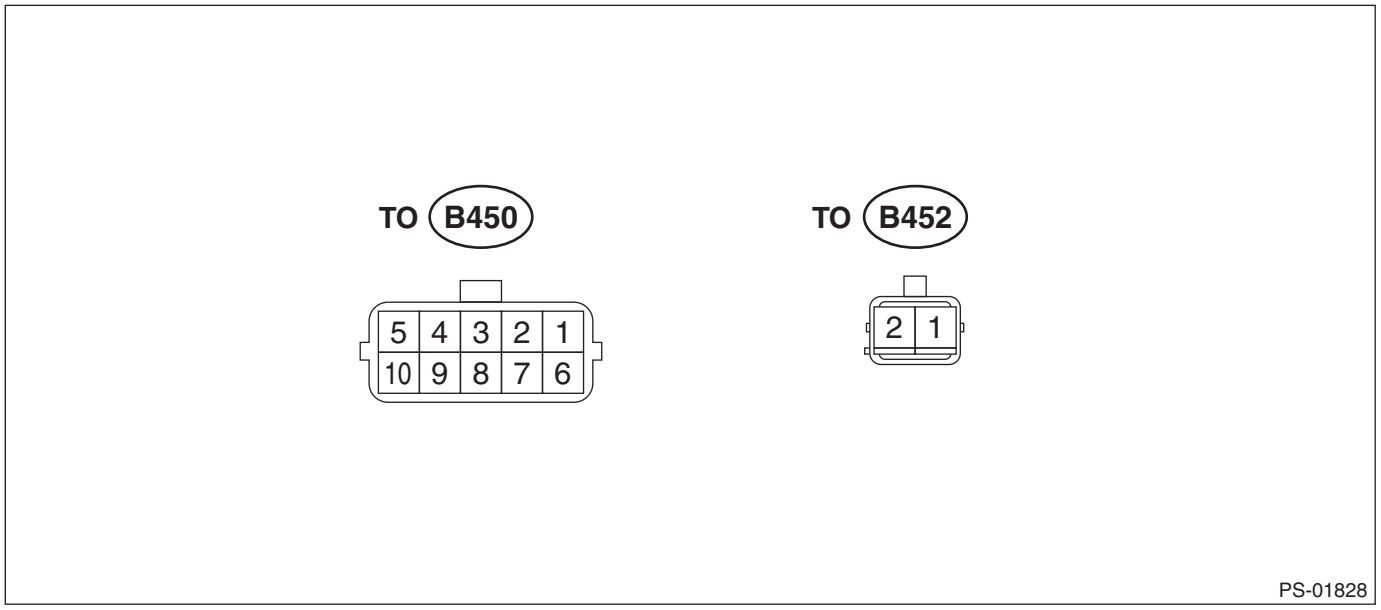


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.



4. Electrical Component Location

A: LOCATION



(1) Steering gearbox (including power steering control module)
(2) STEERING warning light

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

NOTE:
The terminal numbers of the power steering control module connectors are as indicated in the figure.

Content	Connector No.	Terminal No.	Input/output signal
			Measured value and measuring conditions
Power supply (IG SW)	B450	5	Battery voltage is detected with the ignition switch ON when measuring between (B450) No. 5 — (B452) No. 2.
Main torque sensor	B450	2	The voltage changes when the steering is operated to the right or left with the ignition switch ON.
Sub torque sensor	B450	1	The voltage changes when the steering is operated to the right or left with the ignition switch ON.
Torque sensor power supply	B450	6	Approximately 5 V is detected with ignition switch ON.
Torque sensor ground	B450	7	0 V is constantly detected.
CAN communication	B450	9	Digital signal; can not be measured
CAN communication	B450	10	Digital signal; can not be measured
Power supply	B452	1	Battery voltage is constantly detected when measuring between 1 — 2.
Ground	B452	2	

B: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-178, Electric Power Steering System.>

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «Data Monitor».

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Vehicle Speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
CU Sensing Current(q)	The current flowing to the motor relay is displayed.	–128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the microcomputer from the torque sensor input is displayed.	–128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the microcomputer from the torque sensor input is displayed.	–128 — 127	A
Motor angular speed	Data from the resolver sensor is displayed.	–4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	–50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS operating condition	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
CU Target current(q)	The motor target current value required for assist is displayed.	–128 — 127	A
Steering Angle	Steering angle of steering wheel is displayed.	–640 — 635	deg
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Before Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limited(Low voltage)	Number of intervention to assist limit when the power supply voltage is low*1	0 — 250	times
Torque Sensor Amplifier	Torque sensor control voltage is displayed.	0 — 5	V
Motor Current	The current flowing to the motor relay is displayed.	–128 — 127	Arms

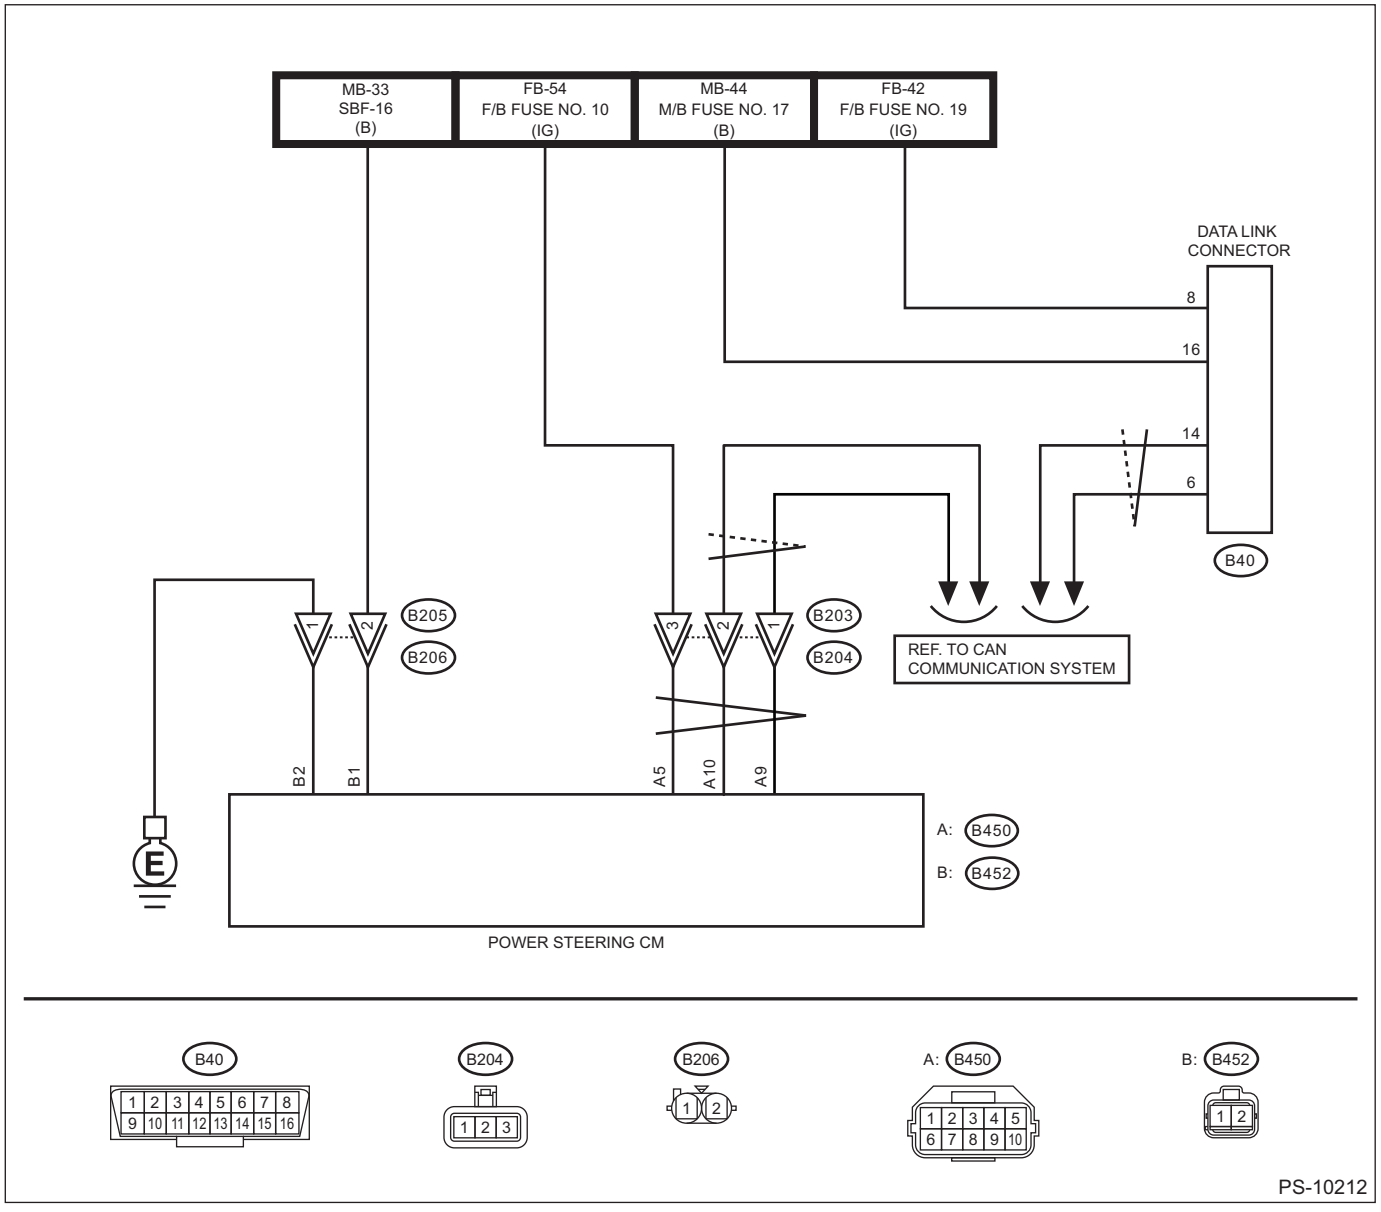
NOTE:
- *1 When the value exceeds the maximum of 250 times, 250 is displayed.
- *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.
- For detailed operation procedures, refer to “Application help”.

3. FREEZE FRAME DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Vehicle Speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
CU Sensing Current(q)	The current flowing to the motor relay is displayed.	–128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
Motor angular speed	Data from the resolver sensor is displayed.	–4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	–50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS operating condition	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
CU Target current(q)	The motor target current value required for assist is displayed.	–128 — 127	A
Steering Angle	Steering angle of steering wheel is displayed.	–640 — 635	deg
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Before Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limited(Low voltage)	Number of intervention to assist limit when the power supply voltage is low*1	0 — 250	times
Torque Sensor Amplifier	Torque sensor control voltage is displayed.	0 — 5	V
Motor Current	The current flowing to the motor relay is displayed.	–128 — 127	Arms

NOTE:
- *1 When the value exceeds the maximum of 250 times, 250 is displayed.
- *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.
- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Data of the first trouble occurrence is stored as the freeze frame data in memory.
- Three freeze frame data are stored.
- For detailed operation procedures, refer to “Application help”.



B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
- Defective harness connector
- Defective power steering control module

Trouble symptom:
- Communication is impossible between the power steering control module and Subaru Select Monitor.
- After starting the engine, the STEERING warning light does not illuminate but steering effort is heavy.

Wiring diagram:
Electric power steering system <Ref. to WI-178, Electric Power Steering System.>

Step	Check	Yes	No
1 **CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the power steering using the Subaru Select Monitor.

	Step	Check	Yes	No
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE CONNECTOR INSTALLATION.** Turn the ignition switch to OFF.	Is the power steering control module connector inserted into the power steering control module until the clamp locks?	Go to step **5**.	Insert the power steering control module connector into the power steering control module.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to electric power steering system can be executed normally.	Is «Select Function» displayed?	Check DTC of electric power steering system. <Ref. to PS(diag)-15, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.	Does the Subaru Select Monitor communicate normally?	Go to step **8**.	Repair or replace the Subaru Select Monitor.
8	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between the power steering control module connector and chassis ground. ***Connector & terminal*** ***(B204) No. 3 (+) — Chassis ground (–):*** ***(B206) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **9**.	Repair the open circuit in the harness between the power steering control module and the battery.
9	**CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector. 3) Measure the resistance of harness between power steering control module connector and chassis ground. ***Connector & terminal*** ***(B206) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the open circuit of the power steering control module ground circuit and the poor contact of connector.
10	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of power steering control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>

2. WITHOUT DTC

Detecting condition:

- Defective combination meter
- Open circuit of harness

Trouble symptom:

- The STEERING warning light will not turn off.
- «No DTC» will be displayed on Subaru Select Monitor.

NOTE:
Read all DTCs with the STEERING warning light OFF. When «No DTC» is displayed on Subaru Select Monitor, the system is operating properly.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC U0131 detected?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK COMBINATION METER.** Check the STEERING warning light when the ignition is turned from OFF to ON.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «DTC».

NOTE:
- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-21, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

1) Start the engine.
2) Idle the engine for five seconds or more.
3) Operate the steering wheel from side to side.
4) Reproduce the malfunction occurrence condition as much as possible.

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:

- Before performing memory clear, check the current data, and if there are any data of DTC, trouble status information, overheating protection intervention history, IGN count from overheating protection and assist limit history, save them.
- For detailed operation procedures, refer to “Application help”.

10.STEERING Warning Light

A: STEERING WARNING LIGHT DOES NOT COME ON

1. POWER STEERING ASSIST ENABLED

Detecting condition:
- Defective combination meter
- Defective harness

Trouble symptom:
When the ignition switch is turned to ON (engine OFF), the STEERING warning light does not illuminate.

NOTE:
It is operating normally if the warning light illuminates when the ignition switch is turned to ON (engine OFF), and turns off approximately two seconds after engine start.

	Step	Check	Yes	No
1	**CHECK ILLUMINATION OF OTHER LIGHTS.** Turn the ignition switch to ON. (Engine OFF)	Do other warning lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-9, INSPECTION, Combination Meter System.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Current condition is normal.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

2. POWER STEERING ASSIST DISABLED

Detecting condition:
CAN communication error (engine rpm signal not received)

Trouble symptom:
- Not assisted due to power supply voltage failure.
- The STEERING warning light is normal but there is no power steering assist (steering feels heavy).

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery.
2	**CHECK BATTERY TERMINAL AND FUSE.** Check the battery terminals and the fuse.	Is the check result OK?	Go to step **3**.	Repair or replace faulty parts.
3	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC related to VDC system or ignition power supply system displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** 1) Start the engine. 2) Display the current data «Engine Speed» of the power steering control module using the Subaru Select Monitor.	Is «Engine Speed» the same as that in the combination meter?	Go to step **5**.	Check the CAN communication. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
5	**CHECK CURRENT DATA.** Display the current data «EPS Status» of the power steering control module using the Subaru Select Monitor.	Is «Assist limitation» displayed?	It is possible that temporary assist limitation has occurred due to overheat protection. Stop the engine for approx. 30 minutes, and check again.	Go to step **6**.
6	**CHECK CURRENT DATA.** 1) Display the current data «Torque sensor main output» and «Torque sensor sub output» of the power steering control module using the Subaru Select Monitor. 2) Move the steering wheel to the left and right.	Do the values of «Torque sensor main output» and «Torque sensor sub output» change according to the operations?	Go to step **7**.	Check for poor contact of the torque sensor connector.
7	**CHECK CURRENT DATA.** Display the current data «IG Voltage» of the power steering control module using the Subaru Select Monitor.	Is the value of «IG Voltage» steady? (While shaking the harness)	Go to step **8**.	Check the ignition switch and IG voltage harness, and repair the defective part.
8	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B204).	Are there any damages to terminal or other parts either on the power steering control module side or on the connector side?	Repair the terminal.	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>

NOTE:
• During driving, the assist system will not be activated when the ignition voltage drops.
• Power steering assist is not started unless both of the ignition switch ON signal and the engine speed signal are input.
• In any of the following cases, the power steering assist is limited and steering wheel operation may become heavy.
If the steering wheel is held to an end for a long time, or the steering wheel turning to right and left at slow speed is repeated during parking, the assist limitation (overheat protection control) may operate to prevent failures by overheat.
In this case, by stopping the engine for approx. 30 minutes for cooling, the assist will start operating. While assist limitation (overheat protection control) is in active, «Assist limitation» is displayed in the «EPS operating condition» in the Subaru Select Monitor “Data monitor”.
• History can be confirmed on «Overheating protection intervention history» or «IGN count from overheating protection» of “Data monitor”.
• The overheat protection control system is normal operation, therefore, the STEERING warning light will not come on and there will be no DTC displayed.
• If the power steering system connector is disconnected while cooling under the overheat protection control, different DTC may be recorded. If there is no DTC and assist limitation is in active, stop the engine for approx. 30 minutes for cooling.

B: STEERING WARNING LIGHT DOES NOT GO OFF

Detecting condition:
• Defective combination meter
• Open circuit of harness
Trouble symptom:

STEERING Warning Light

When starting the engine, the STEERING warning light continues to illuminate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-15, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC. <Ref. to PS(diag)-21, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the steering box. <Ref. to PS-31, Electric Power Steering Gearbox.>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
None	Without DTC	Normal	<Ref. to PS(diag)-13, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
	«Assist limitation» is displayed in the current data «EPS operating condition».	Assist limitation is performed due to overheat protection control.	<Ref. to PS(diag)-18, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
	«Overheating protection intervention history» in current data display shows 1 or more.	There are previous records of intervention to overheat protection control.	<Ref. to PS(diag)-18, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
C2511	TORQUE SENSOR MAIN	• Poor connector contact • Forgot to connect connector • Faulty torque sensor section circuit • Faulty torque sensor coil	<Ref. to PS(diag)-24, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2512	TORQUE SENSOR SUB		<Ref. to PS(diag)-24, DTC C2512 TORQUE SENSOR SUB, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

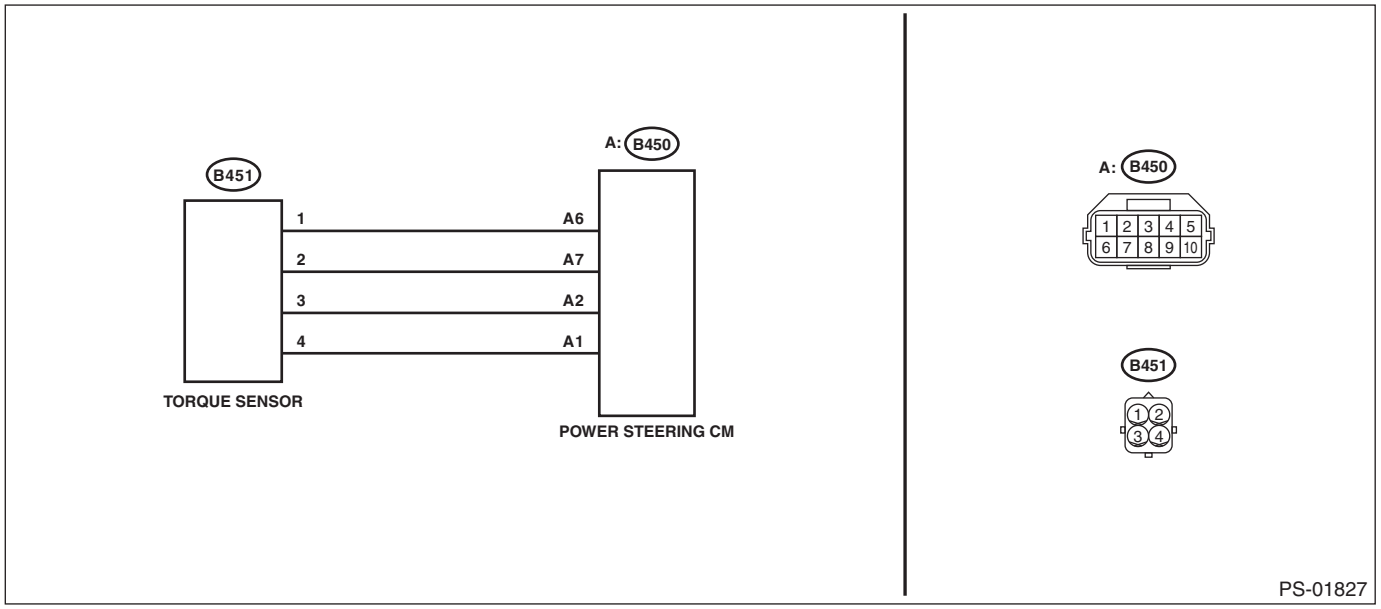
U1235	LOST COMMUNICATION WITH EyeSight	Defective CAN communication	<Ref. to PS(diag)-38, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
U1433	INVALID DATA RECEIVED FROM EyeSight	Defective CAN communication	<Ref. to PS(diag)-38, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1469	INVALID DATA RECEIVED FROM AUTOSTART STOP CONTROL MODULE	Defective CAN communication	<Ref. to PS(diag)-39, DTC U1469 INVALID DATA RECEIVED FROM AUTOSTART STOP CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2511 TORQUE SENSOR MAIN

DTC DETECTING CONDITION:



When torque sensor main output voltage failure is detected after the ignition switch is ON.

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

WIRING DIAGRAM:

Electric power steering system <Ref. to WI-178, Electric Power Steering System.>

Step		Check	Yes	No
1	**CHECK TORQUE SENSOR SIGNAL.** 1) Display the current data of the power steering control module using the Subaru Select Monitor. 2) Check the voltage of «Torque sensor main output», «Torque sensor sub output» and «Torque sensor power supply voltage».	Are the voltage of «Torque sensor main output» and «Torque sensor sub output» 2.5±0.3 V? Is the voltage of «Torque sensor power supply voltage» 5±0.3 V?	Check for poor contact of the connector, and check the conditions again. If the condition recur, go to the next step. Go to step **2**. If it does not recur, complete the inspection.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Remove the cradle. <Ref. to FS-20, Cradle.> 3) Disconnect the connectors (B450, B451). 4) Using a tester and special tool harness, check the resistance between harness terminals. ***Connector & terminal*** ***(B451) No. 1 — (B450) No. 6:*** ***(B451) No. 2 — (B450) No. 7:*** ***(B451) No. 3 — (B450) No. 2:*** ***(B451) No. 4 — (B450) No. 1:***	Is the resistance less than 10 Ω?	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>	Repair or replace the harness.

B: DTC C2512 TORQUE SENSOR SUB

DTC DETECTING CONDITION:

When torque sensor sub output voltage failure is detected after the ignition switch is ON.

NOTE:
Refer to “DTC C2511 TORQUE SENSOR MAIN” for diagnostic procedure. <Ref. to PS(diag)-24, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2513 TORQUE SENSOR MUCH TOLERANCE

DTC DETECTING CONDITION:
When torque sensor main/sub output voltage failure is detected after the ignition switch is ON.

NOTE:
Refer to “DTC C2511 TORQUE SENSOR MAIN” for diagnostic procedure. <Ref. to PS(diag)-24, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C2514 TORQUE SENSOR POWER SUPPLY

DTC DETECTING CONDITION:
When torque sensor power supply voltage failure is detected after the ignition switch is ON.

NOTE:
Refer to “DTC C2511 TORQUE SENSOR MAIN” for diagnostic procedure. <Ref. to PS(diag)-24, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

E: DTC C2521 MOTOR MALFUNCTION

DTC DETECTING CONDITION:
- When motor driving element malfunction is detected after assist starts with 500 rpm engine speed reception.
- When motor current failure is detected after assist starts with 500 rpm engine speed reception.
- When motor voltage failure is detected after assist starts with 500 rpm engine speed reception.

TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-31, Electric Power Steering Gearbox.>

F: DTC C2522 RESOLVER SENSOR

DTC DETECTING CONDITION:
When resolver signal output voltage failure is detected after assist starts with 500 rpm engine speed reception.

TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-31, Electric Power Steering Gearbox.>

G: DTC C2531 CONTROL MODULE CPU

DTC DETECTING CONDITION:
When microcomputer malfunction is detected after the ignition switch is ON.

TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-31, Electric Power Steering Gearbox.>

H: DTC C2532 CONTROL MODULE PERIPHERAL CIRCUIT

DTC DETECTING CONDITION:

- When torque sensor peripheral circuit malfunction inside the power steering control module is detected after assist starts with 500 rpm engine speed reception.
- When storage medium IC malfunction inside the power steering control module is detected at initial check.
- When motor drive circuit malfunction is detected after assist starts with 500 rpm engine speed reception.
- When motor driving element driver malfunction is detected after the ignition switch is ON.
- When intercommunication error of the power steering control module is detected after the ignition switch is ON.

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-31, Electric Power Steering Gearbox.>

I: DTC C2533 CONTROL MODULE BOARD TEMPERATURE SENSOR

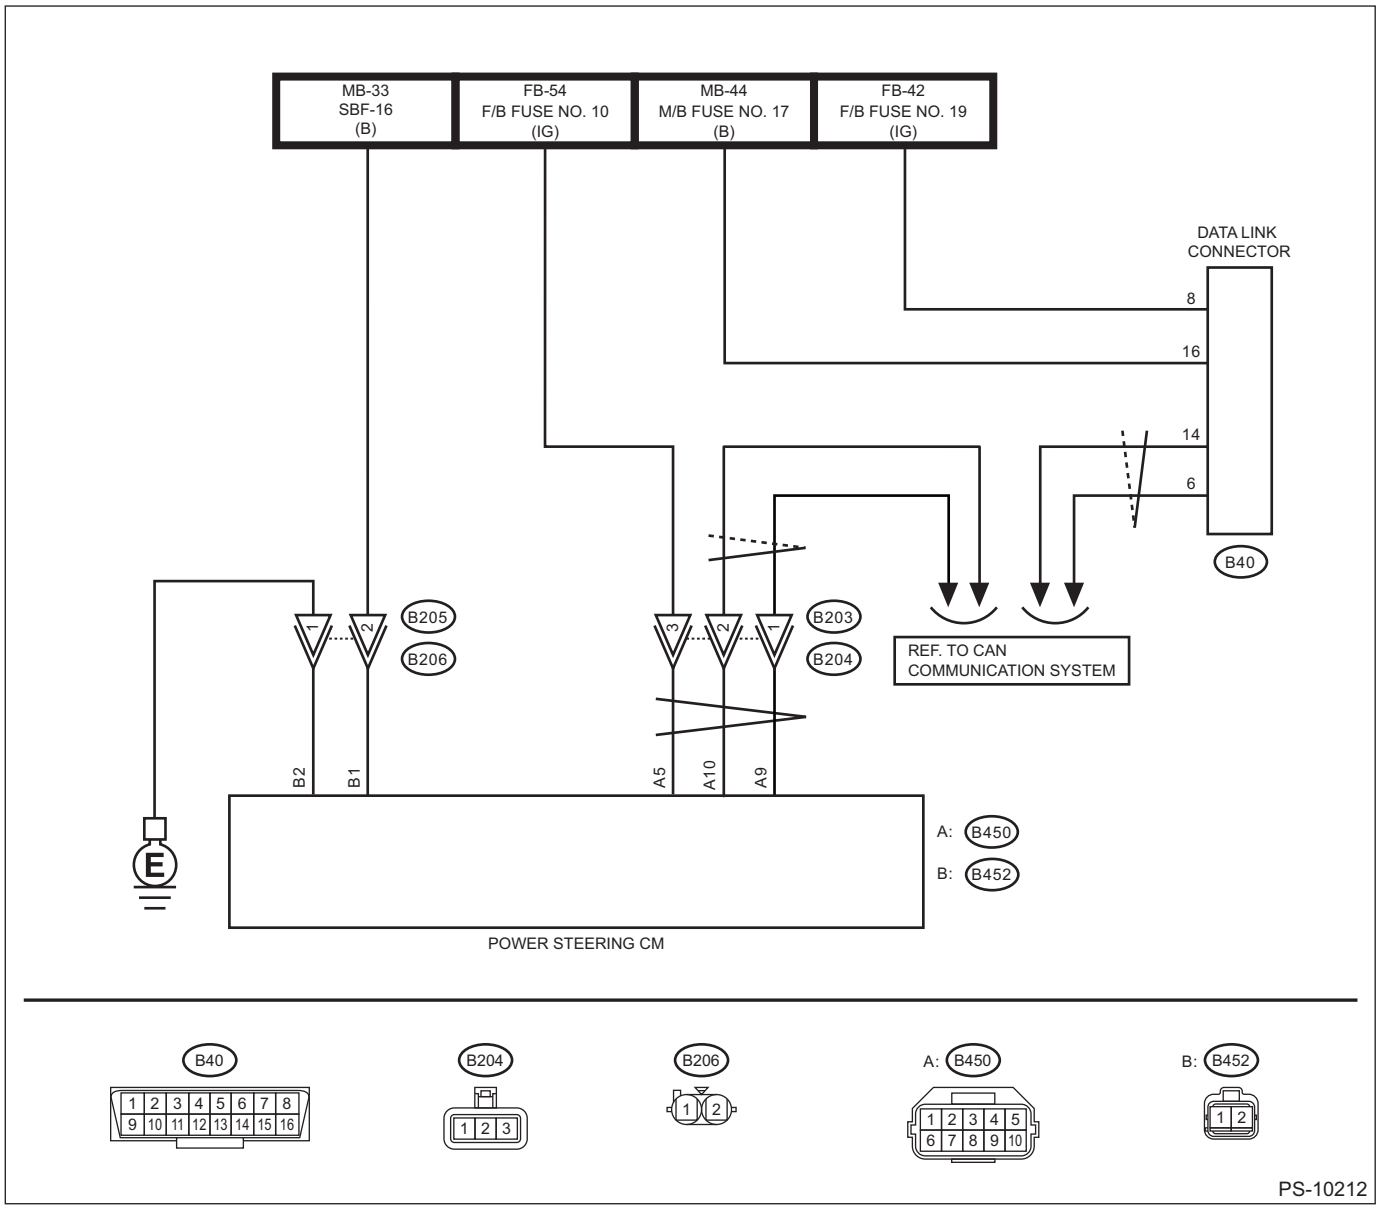
DTC DETECTING CONDITION:

When thermistor malfunction is detected after the ignition switch is ON.

TROUBLE SYMPTOM:

The steering wheel operation feels heavy.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-31, Electric Power Steering Gearbox.>



J: DTC C2541 VEHICLE DYNAMICS CONTROL MODULE VEHICLE SPEED SENSOR

DTC DETECTING CONDITION:
When VDCCM reception failure (related to vehicle speed sensor) is detected after the ignition switch is ON.
TROUBLE SYMPTOM:
The steering wheel operation feels heavy.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is a DTC related to VDC system or vehicle speed signal system detected?	Perform the diagnosis according to the DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK VEHICLE SPEED SIGNAL.** 1) Display the current data «Vehicle Speed» of the power steering control module using the Subaru Select Monitor. 2) Lift up the vehicle (so that the wheels turn freely), start the engine, and raise engine speed in gear. **CAUTION:** **Be careful that no one is near the spinning tires and nothing gets caught in them.** 3) Check for whether the data changes according to vehicle speed.	Is the data in sync with the vehicle speed?	It is possible that temporary poor communication occurs. Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.>	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>

K: DTC C2543 ERROR PASSIVE

DTC detecting condition:
When send/receive failure of CAN communication is detected after the ignition switch is ON.
Trouble symptom:
The steering wheel operation feels heavy.
Wiring diagram:
Electric power steering system <Ref. to WI-178, Electric Power Steering System.>

Step		Check	Yes	No
1	**CHECK PERIPHERALS.** Check the data link connector.	Is any other electrical part connected to the data link connector or harness?	Disconnect the connection of electrical parts and perform inspection again.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK DTC.** Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-15, Read Diagnostic Trouble Code (DTC).>	Is DTC C2543 a current malfunction?	Go to step **4**.	System is normal. Temporary interference from noise is a possible cause.
4	**CHECK CONNECTOR.** Check the connecting condition of connector.	Is the connector firmly installed?	Go to step **5**.	Install the connector, and check again.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B204).	Is there crimped or spread portion in connector terminal on vehicle harness side and power steering control module side?	Repair or replace faulty parts.	Go to step **6**.
6	**CHECK HARNESS.** Check the harness related to CAN communication system.	Is there any fault in the harness?	Repair or replace the harness.	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>

L: DTC C2544 Auto Start Stop SYSTEM

DTC DETECTING CONDITION:

- When a failure of CAN communication is detected after the ignition switch is ON.
- When the power steering control module has a detection error after the ignition switch is ON.

TROUBLE SYMPTOM:

DTC C2544 is stored in the power steering control module.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK POWER STEERING CONTROL MODULE.** 1) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 3) Read the DTC.	Is DTC C2544 detected?	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

M: DTC C2545 EyeSight SYSTEM

DTC detecting condition:
When the EyeSight system fail flag from stereo camera is received after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the EyeSight system.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC. <Ref. to ES(diag)-42, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2545 detected?	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

N: DTC C2546 EyeSight VALUE

DTC detecting condition:
When the steering support indication value from stereo camera is out of range after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the EyeSight system.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC. <Ref. to ES(diag)-42, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2546 detected?	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

O: DTC C2547 EyeSight CHECK SUM

DTC detecting condition:
When check sum error of EyeSight transmission data is detected after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the EyeSight system.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC. <Ref. to ES(diag)-42, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2547 detected?	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

P: DTC C2548 VEHICLE DYNAMICS CONTROL MODULE SYSTEM

DTC DETECTING CONDITION:

When error flag from VDCCM is detected for 2 seconds after the ignition switch is ON.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is a DTC related to VDC system (sensors) detected?	Perform the diagnosis according to the DTC. <Ref. to VDC(diag)-40, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>

Q: DTC C2549 ASSIST MAP SELECTION

DTC detecting condition:

- When CAN communication error is received after the ignition switch is ON.
- When the vehicle CAN information cannot be received after the ignition switch is ON.

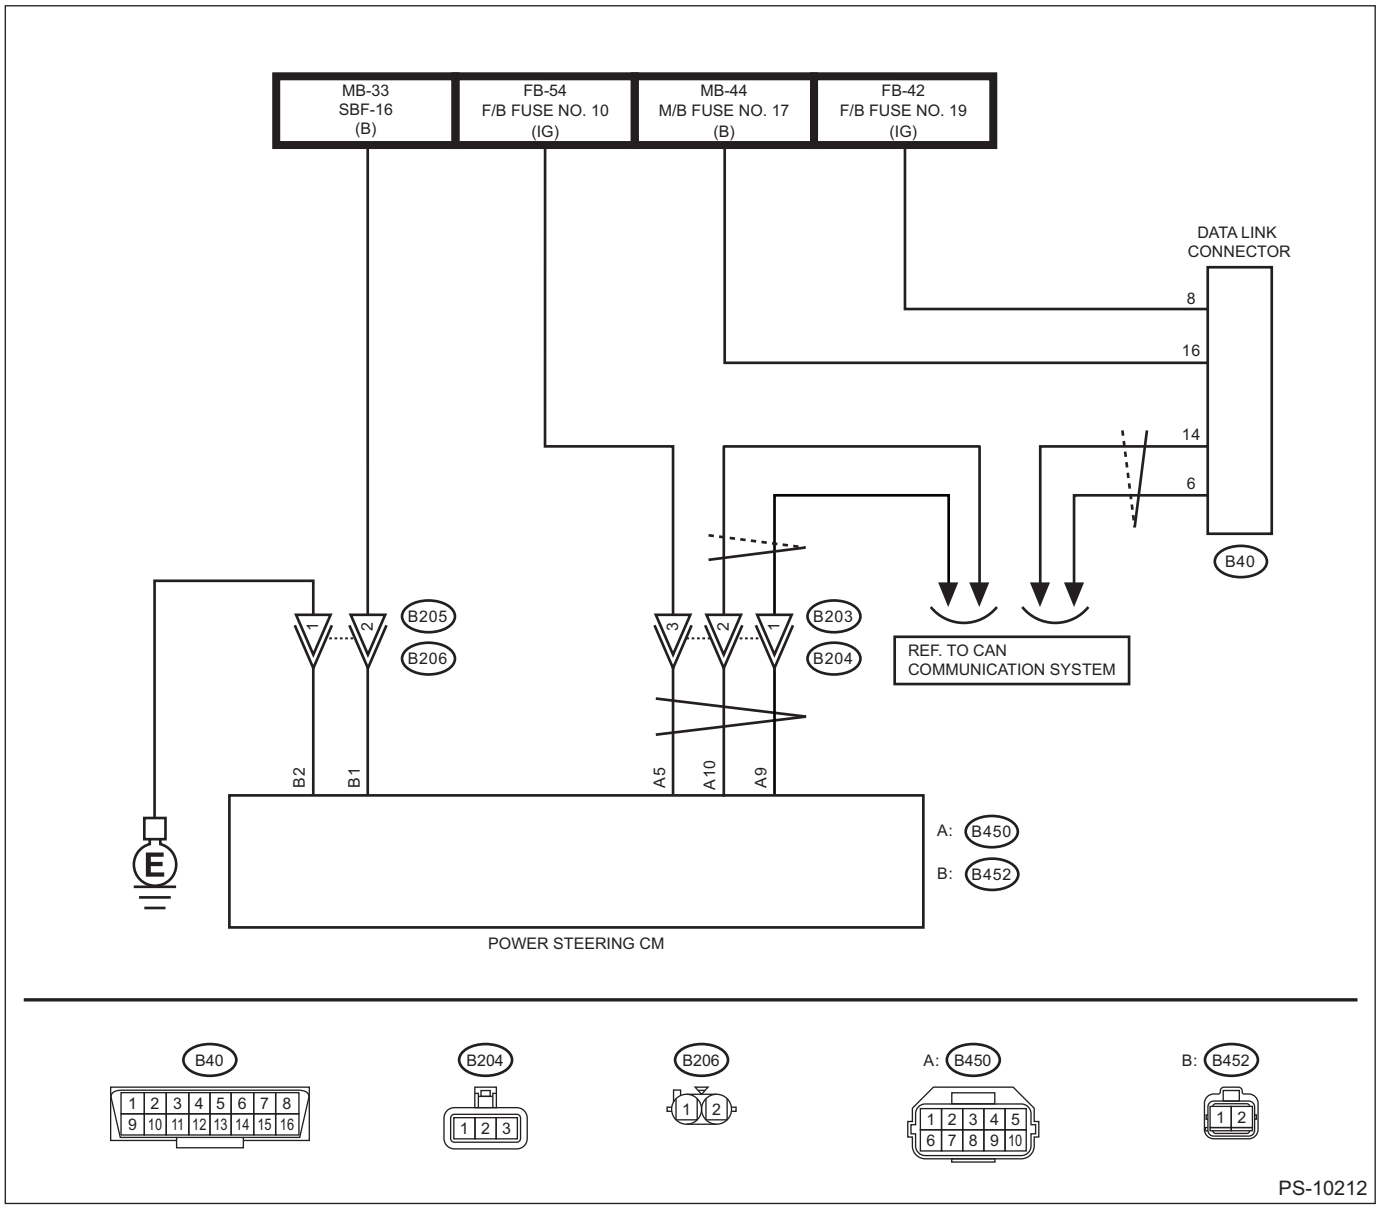
Trouble symptom:

The steering wheel operation feels heavy.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.**	Is there any poor contact in the connector of combination meter, body integrated unit or engine control module?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Are there any DTCs detected for combination meter, body integrated unit or engine control module as well as DTC C2532?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-124, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2549 detected?	Replace the power steering control module. <Ref. to PS-44, Power Steering Control Module.>	It results from a temporary noise interference.

R: DTC C2551 POWER SUPPLY RELAY

DTC detecting condition:



- When contact deposit malfunction of power supply relay is detected at initial check.
- When power supply voltage failure is detected after the ignition switch is ON.
- When power supply voltage drop is detected with 500 rpm engine speed reception.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
If power supply voltage failure exists at the vehicle side, the warning light goes off if the normal voltage returns.

Wiring diagram:
Electric power steering system <Ref. to WI-178, Electric Power Steering System.>

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery.
2	**CHECK BATTERY TERMINAL AND FUSE.** Check the battery terminals and the fuse.	Is the check result OK?	Go to step **3**.	Repair or replace faulty parts.
3	**CHECK WIRING HARNESS.** 1) Disconnect the connector. (B205, B206) 2) Turn the ignition switch to ON. 3) Using a tester and special tool harness, check the voltage between terminals. ***Connector & terminal*** ***(B205) No. 2 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **4**.	Repair the open circuit of harness or the poor contact of connector between the power steering control module and the battery.
4	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester and special tool harness, check the resistance between terminals. ***Connector & terminal*** ***(B205) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit or poor contact of the harness between the power steering control module and chassis ground.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector (B452). 3) Using a tester and special tool harness, check the resistance between harness terminals. ***Connector & terminal*** ***(B206) No. 1 — (B452) No. 2:*** ***(B206) No. 2 — (B452) No. 1:***	Is the resistance less than 10 Ω?	Replace the steering gearbox. <Ref. to PS-31, Electric Power Steering Gearbox.>	Repair or replace the harness.

S: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

T: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

U: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

V: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

W: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

X: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Y: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Z: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

AA:DTC U1235 LOST COMMUNICATION WITH EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

AB:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

AC:DTC U1469 INVALID DATA RECEIVED FROM AUTOSTART STOP CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

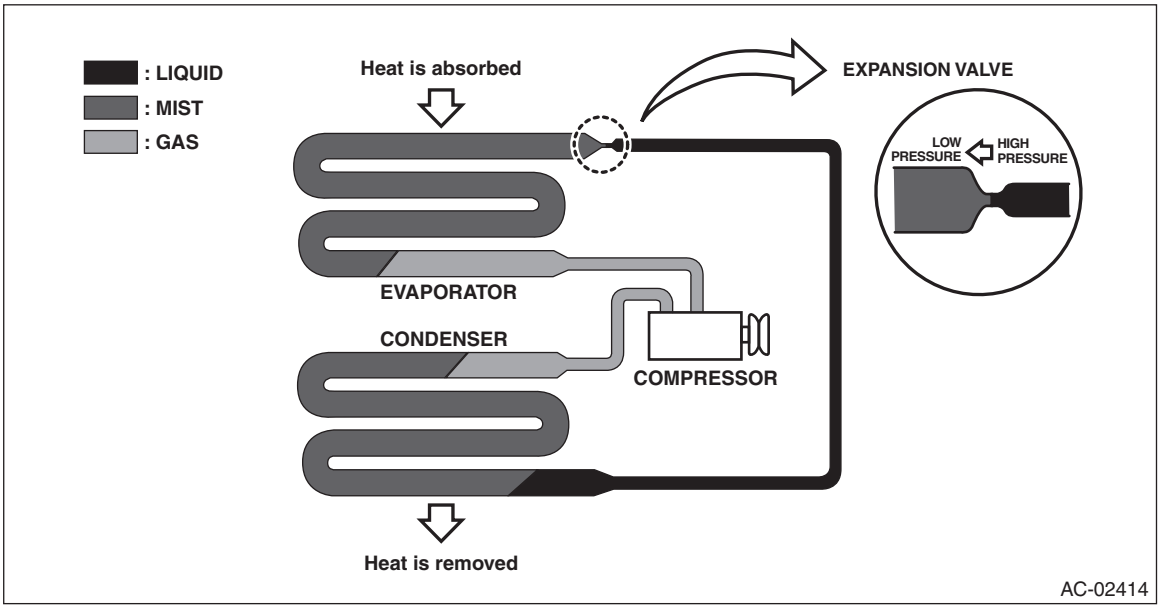
1. General Description

A: SPECIFICATION

1. HEATER SYSTEM

Item		Specifications	Condition
Heating capacity		4.8 kW (4,127 kcal/h, 16,377 BTU/h) or more	• Air flow control switch: FOOT • Temperature control dial: HI (MAX HOT) • Temperature difference between hot water and inlet air: 65°C (149°F) • Hot water flow rate: 360 L (95.1 US gal, 79.2 Imp gal)/h
Air flow rate		300 m^3 (10,596 cu ft)/h	FOOT mode (FRESH), MAX HOT at 12.5 V
Max air flow rate		495 m^3 (17,483 cu ft)/h	• Temperature control dial: LO (MAX COOL) • Fan switch or dial: HI (MAX) – Auto A/C model: 7th position – Manual A/C model: 4th position • FRESH/RECIRC switch: RECIRC
Heater core size (height × length × width)		264 × 100 × 27 mm (10.4 × 3.94 × 1.06 in)	—
Blower motor	Type	Magnet motor 260 W or less	12 V
	Fan type and size (diameter × width)	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—



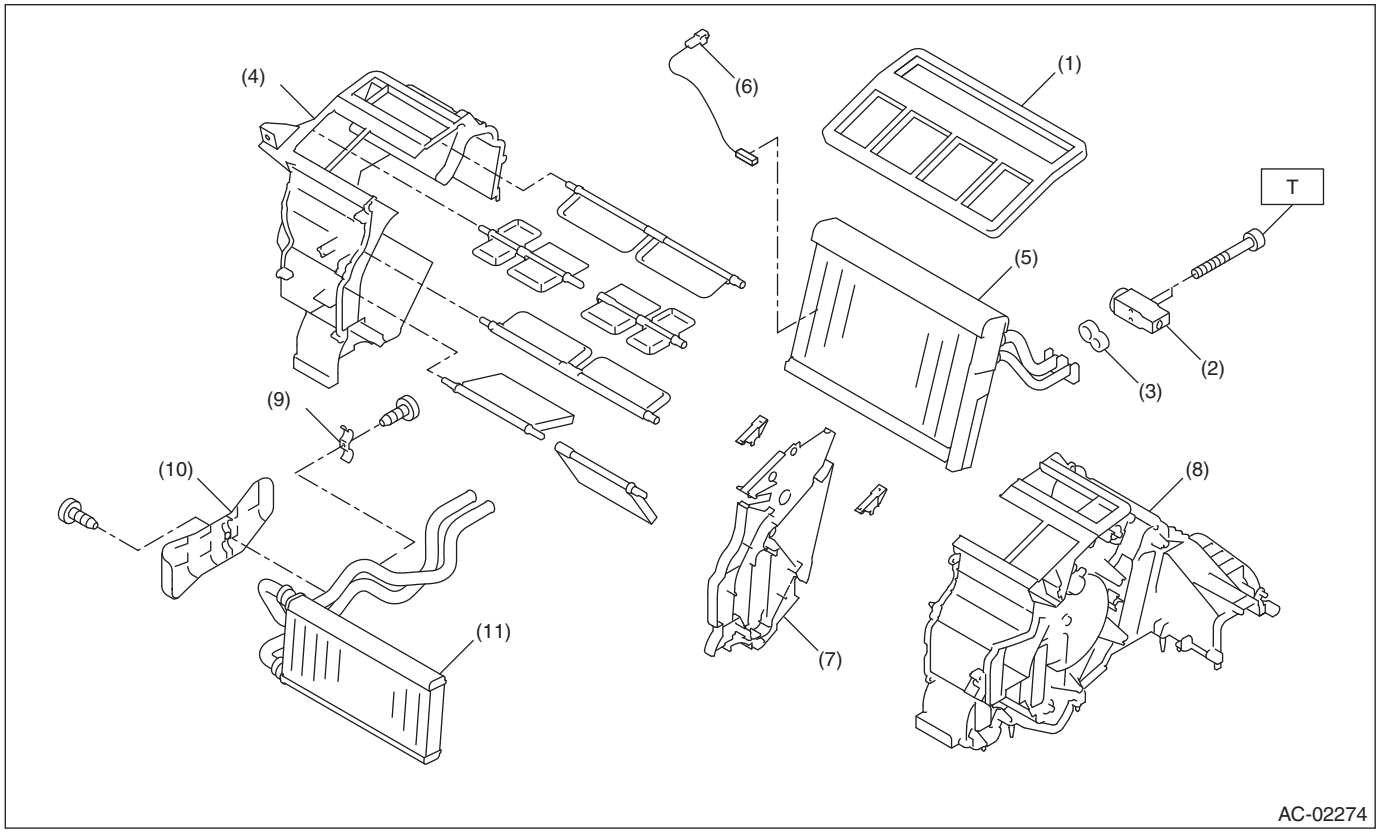
2. A/C SYSTEM

Item		Specifications
Type of air conditioner		Reheat air-mix type
Cooling capacity		4.18 kW [at 500 m^3 (17,660 cu ft)/h] (3,594 kcal/h, 14,262 BTU/h)
Refrigerant		HFO-1234yf (CH_2) [0.425±0.025 kg (0.94±0.06 lb)]
Compressor	Type	H4 model: Swash plate, variable volume (TSE14F) H6 model: Swash plate, variable volume (TSE14C)
	Discharge	140.6 cc (8.58 cu in)/rev
	Max. permissible speed	6,000 r/min
Pulley	Type of belt	V-belt 6 PK
	Pulley dia. (effective dia.)	110 mm (4.33 in)
	Pulley ratio	1.3
Condenser	Type	Corrugated fin (sub cool type)
	Core face area	0.186 m^2 (2.002 sq ft)
	Core thickness	11.5 mm (0.45 in)
	Radiation area	3.516 m^2 (37.85 sq ft)
Receiver drier	Effective inner capacity	190 cm^3 (11.6 cu in)
Expansion valve	Type	Internally equalizing
Evaporator	Type	Double tank
	Dimensions (W × H × T)	293.1 × 171 × 38 mm (11.54 × 6.73 × 1.5 in)
Blower fan	Fan type	Sirocco fan
	Outer diameter × Width	150 × 75 mm (5.91 × 2.95 in)
	Power consumption	260 W

Item			Specifications
Condenser fan (sub fan)		Motor type	Magnet
		Power consumption	H4 model: 120 W H6 model: 240 W
		Fan outer diameter	320 mm (12.6 in)
Radiator fan (main fan)		Motor type	Magnet
		Power consumption	H4 model: 120 W H6 model: 240 W
		Fan outer diameter	320 mm (12.6 in)
Idle speed	MPFI model	No load	H4 model: 675±100 r/min H6 model: 700±100 r/min
		A/C ON	H4 model: 800 — 900±100 r/min H6 model: 700 — 910±100 r/min

3. BASIC OPERATION

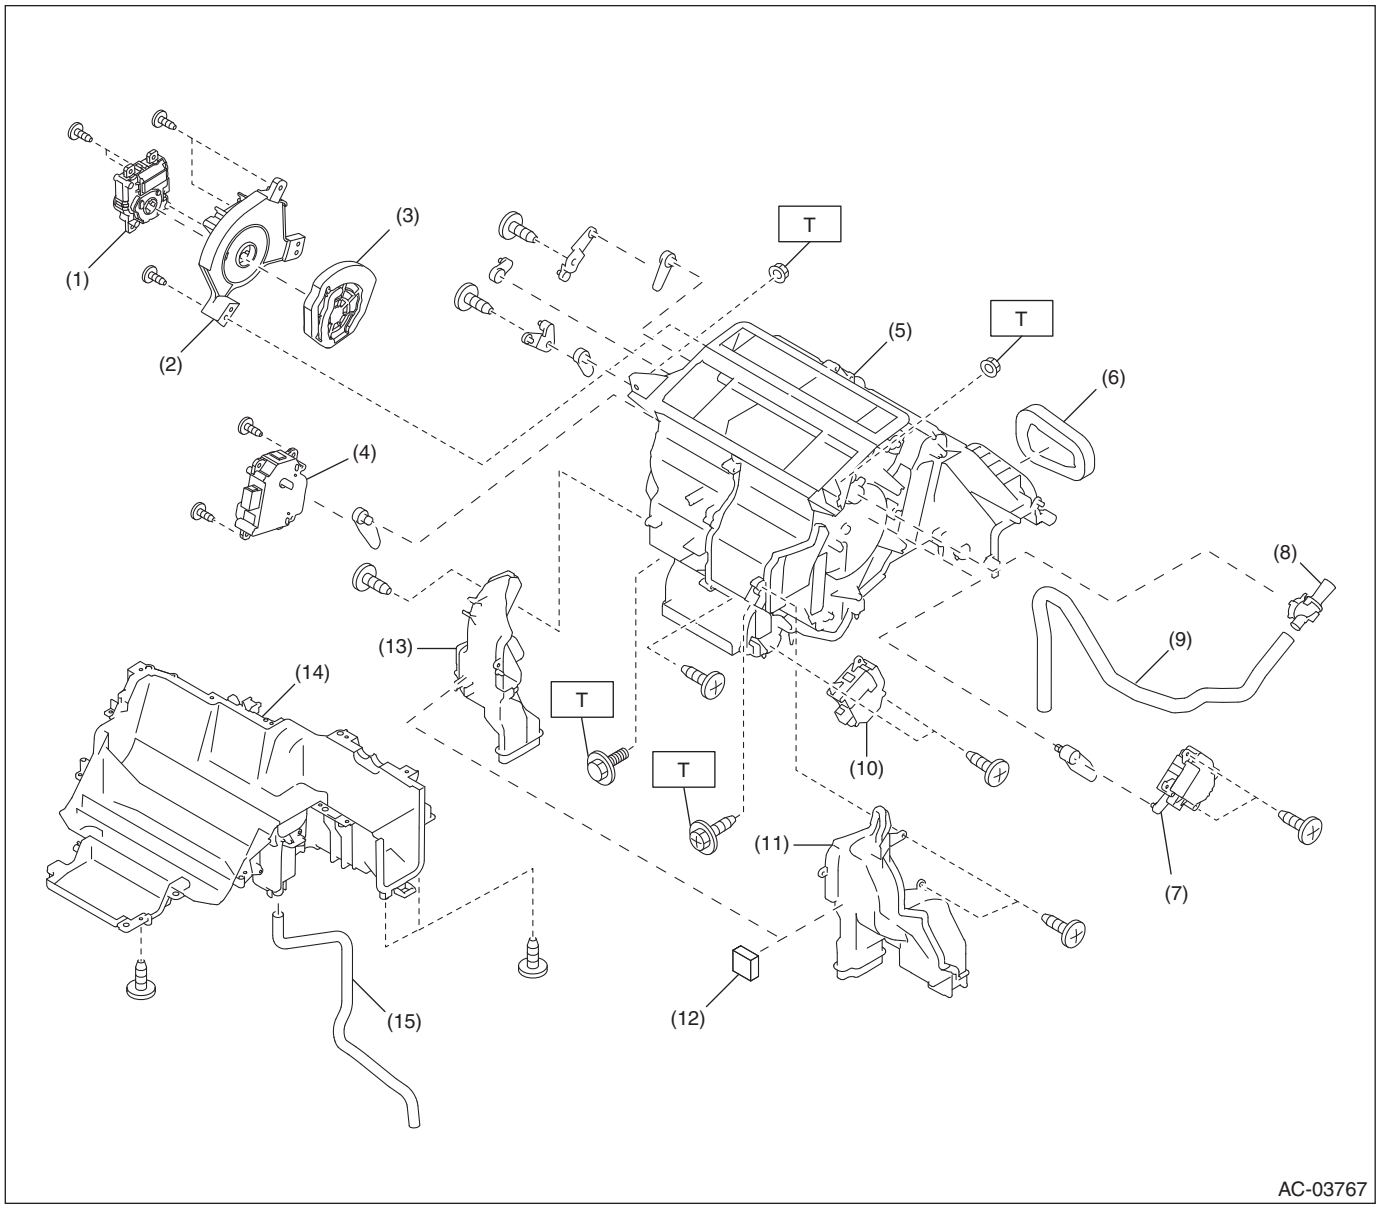
The cooling system cools down the compartment by using the pipes connecting parts and cycling the evaporable liquid (refrigerant) within the sealed system in a repeated process of “vaporization — liquefaction — re-vaporization”.



Item	Operation
Compressor	Sucks and pressurizes the low temperature, low pressure refrigerant gas that was vaporized at the evaporator by absorbing heat from the compartment, and sends the high temperature, high pressure refrigerant gas to the condenser.
Condenser	Cools the high temperature, high pressure refrigerant gas sent from the compressor for condense and liquefaction.
Expansion valve	• Sprays the high temperature, high pressure liquid refrigerant from the small hole in order to let the refrigerant expand rapidly to turn it into low temperature, low pressure mist. • The refrigerant amount is adjusted according to the refrigerant vaporization condition in the evaporator.
Evaporator	The evaporator turns into a low temperature condition when the mist refrigerant that was turned into a low temperature, low pressure condition at the expansion valve is vaporized in large quantity in the evaporator. Passing air flow through the low temperature evaporator emits cold air.

B: LOCATION

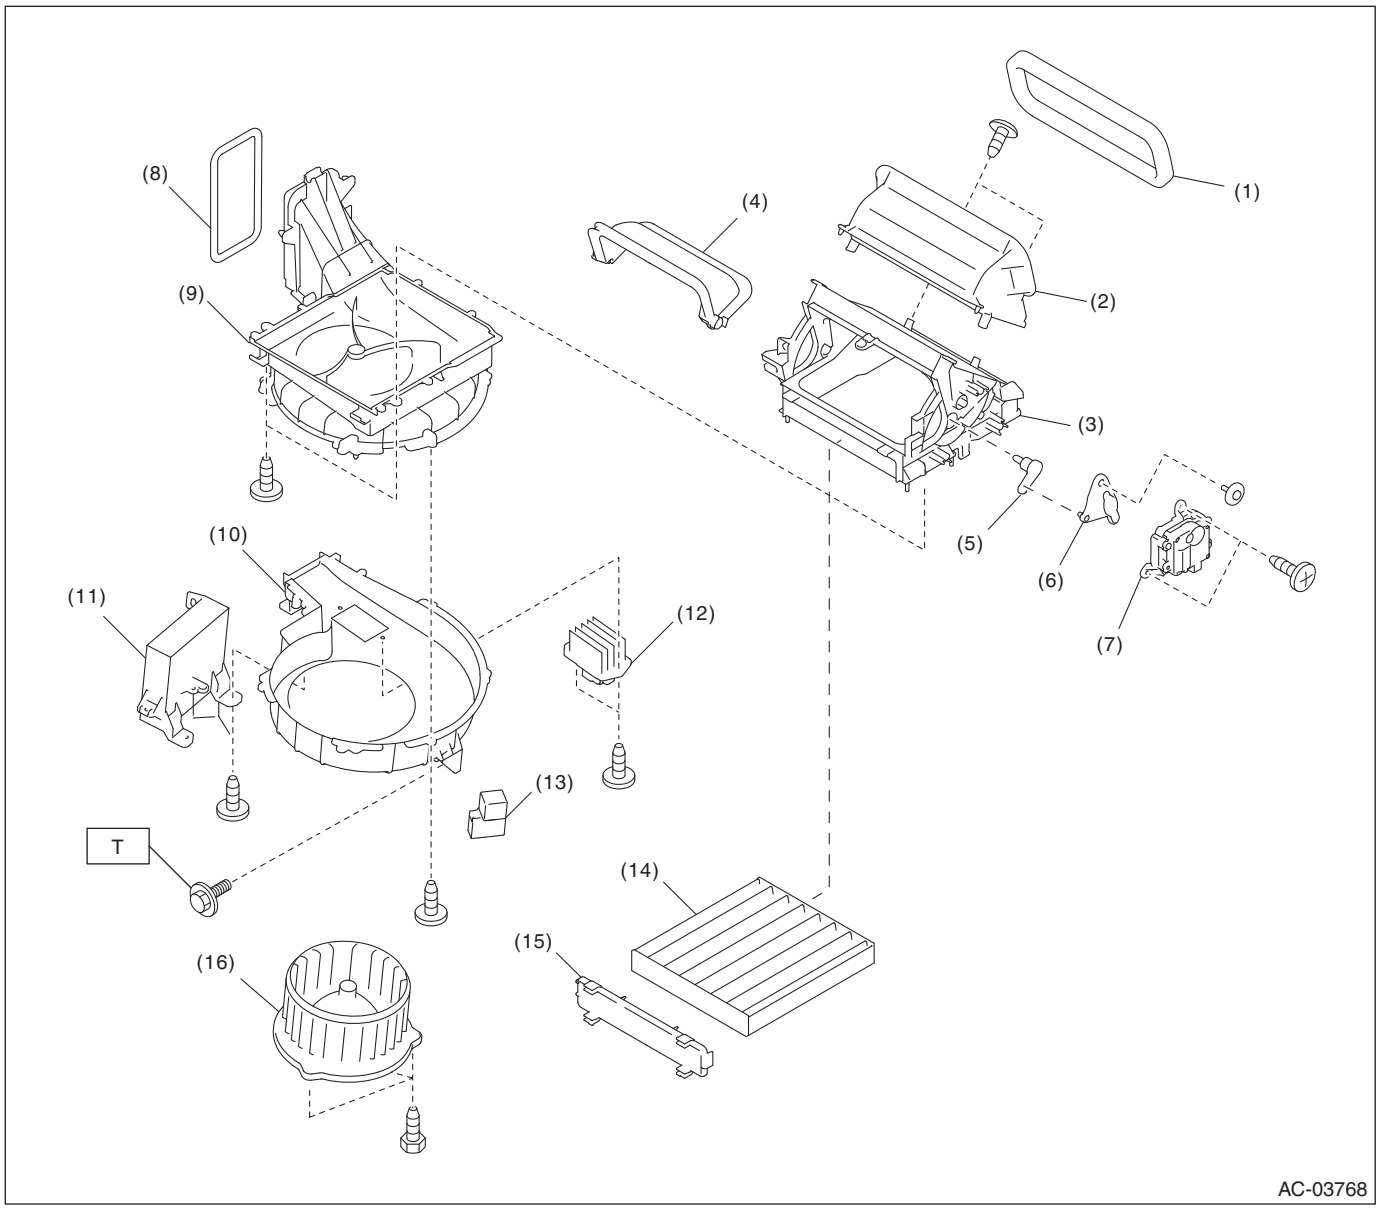
Refer to “Electrical Component Location” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-4, Electrical Component Location.>



C: COMPONENT

1. HEATER COOLING UNIT

(1) Packing - heater unit
(2) Expansion valve - cooling
(3) Packing
(4) Case - heater unit LH
(5) Evaporator ASSY - cooling
(6) Thermostat - cooling
(7) Plate
(8) Case - heater unit RH
(9) Clamp
(10) Cover
(11) Heater core

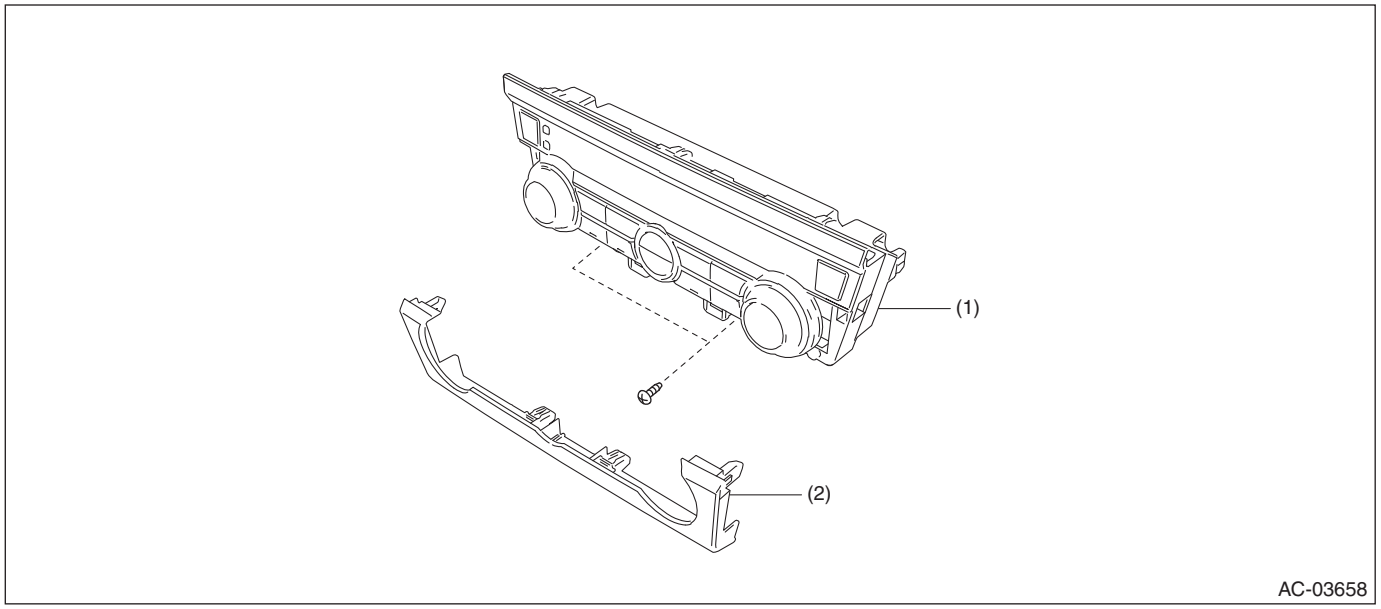


Tightening torque: N·m (kgf-m, ft-lb)
T: 3.5 (0.4, 2.6)

(1) Motor - actuator mode
(2) Cover - actuator
(3) Link plate
(4) Motor - actuator mix LH
(5) Heater cooling unit
(6) Packing
(7) Motor - actuator mix RH
(8) Aspirator
(9) Aspirator hose
(10) Motor ASSY - rear heater
(11) Duct - foot assist
(12) Packing
(13) Duct - foot driver
(14) Case - heater lower
(15) Hose - heater drain

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

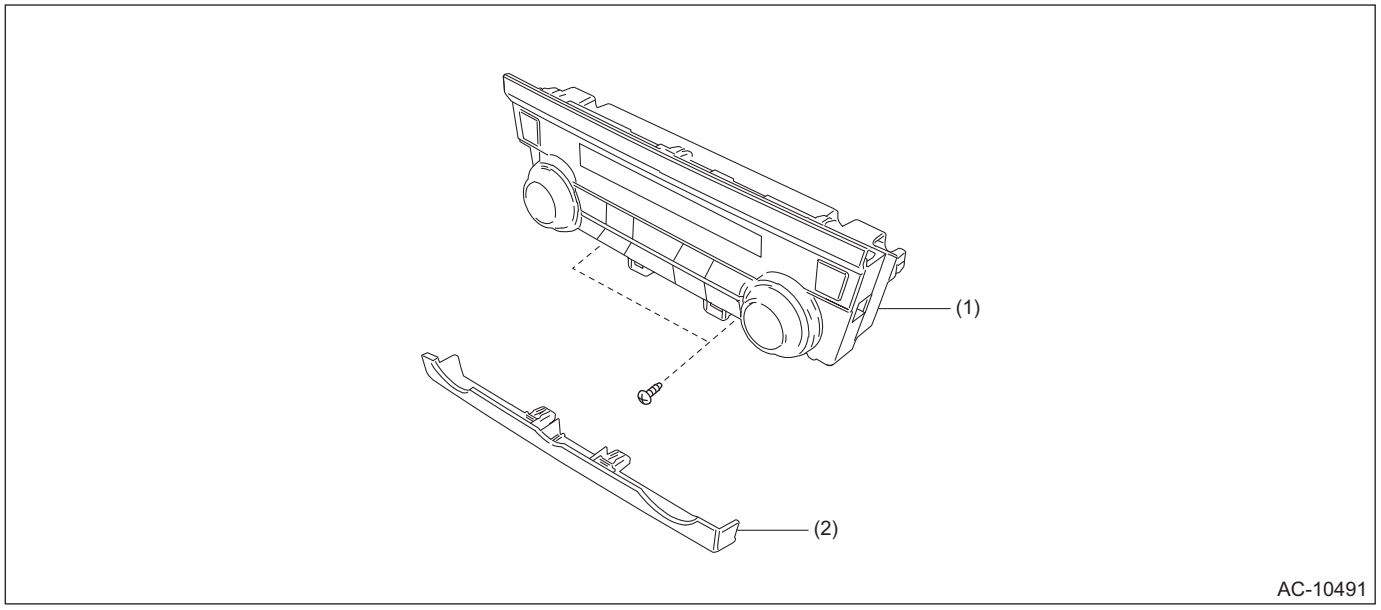
2. BLOWER MOTOR UNIT



(1) Packing
(2) Air duct cover UPR
(3) Air duct cover LWR
(4) Shutter - heater
(5) Lever
(6) Link plate
(7) Intake door actuator
(8) Packing - blower
(9) Case upper - blower
(10) Case lower - blower
(11) Control module
(12) Power transistor (auto A/C model) or resistor (manual A/C model)
(13) Blower motor relay
(14) Filter
(15) Filter cover
(16) Blower motor ASSY

Tightening torque: N·m (kgf-m, ft-lb)

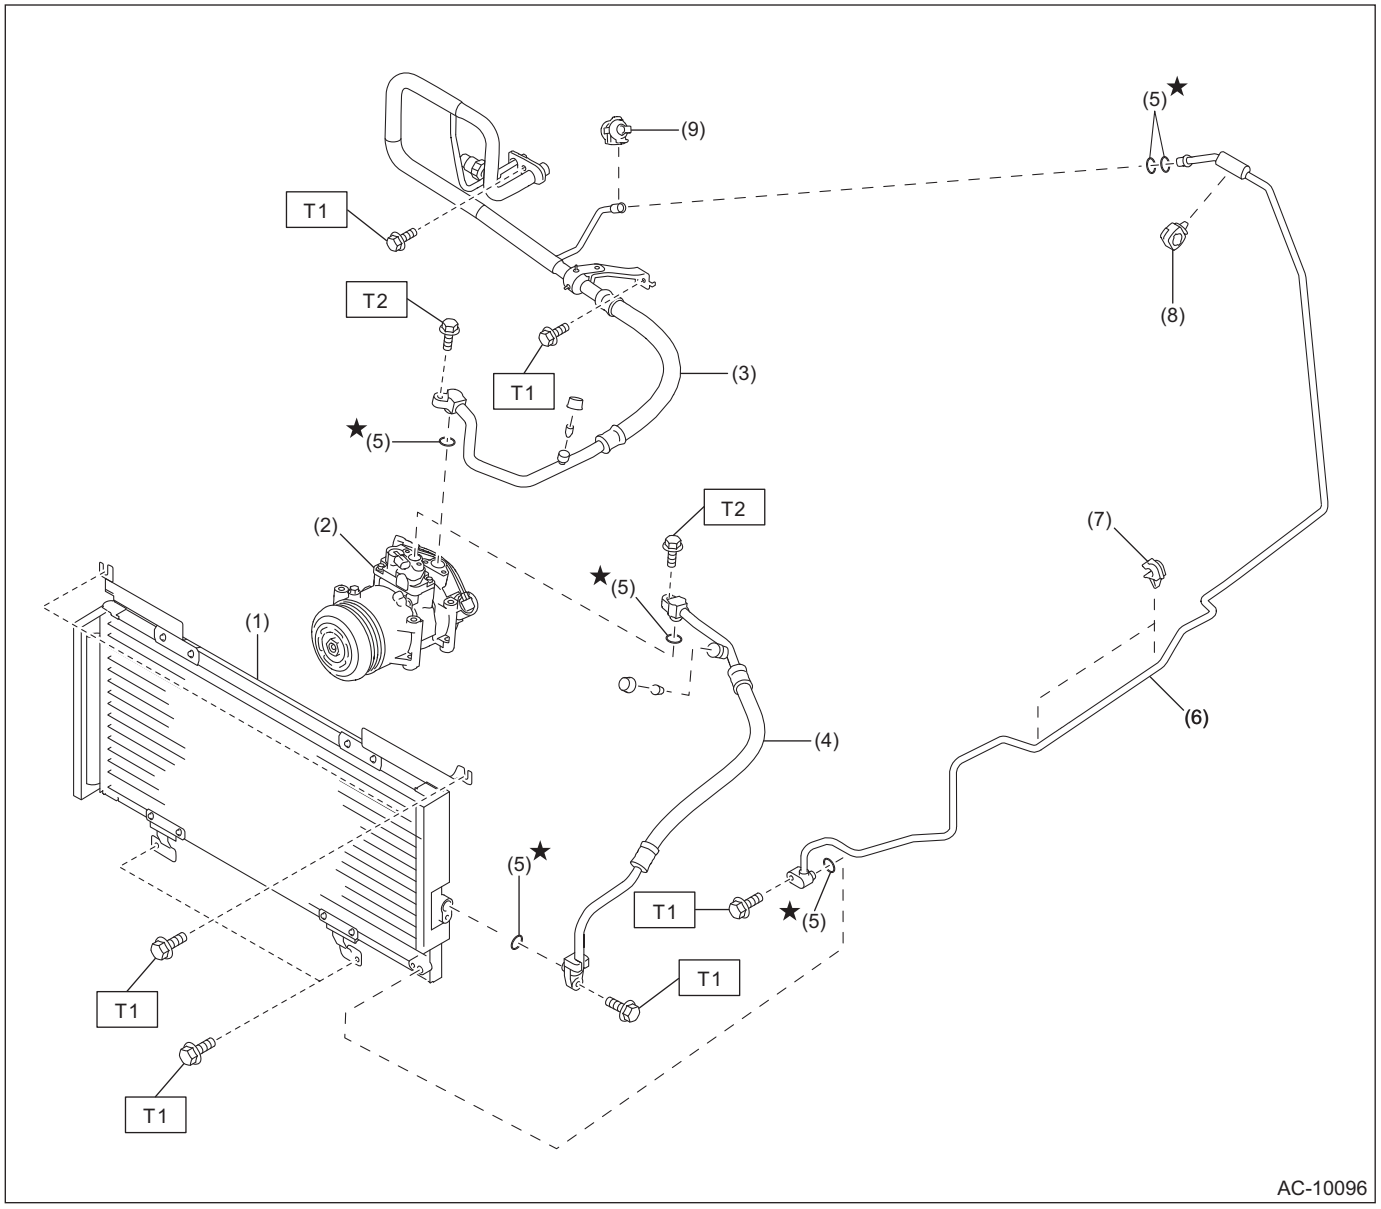
T: 7.5 (0.8, 5.5)



3. CONTROL PANEL

- Manual A/C model

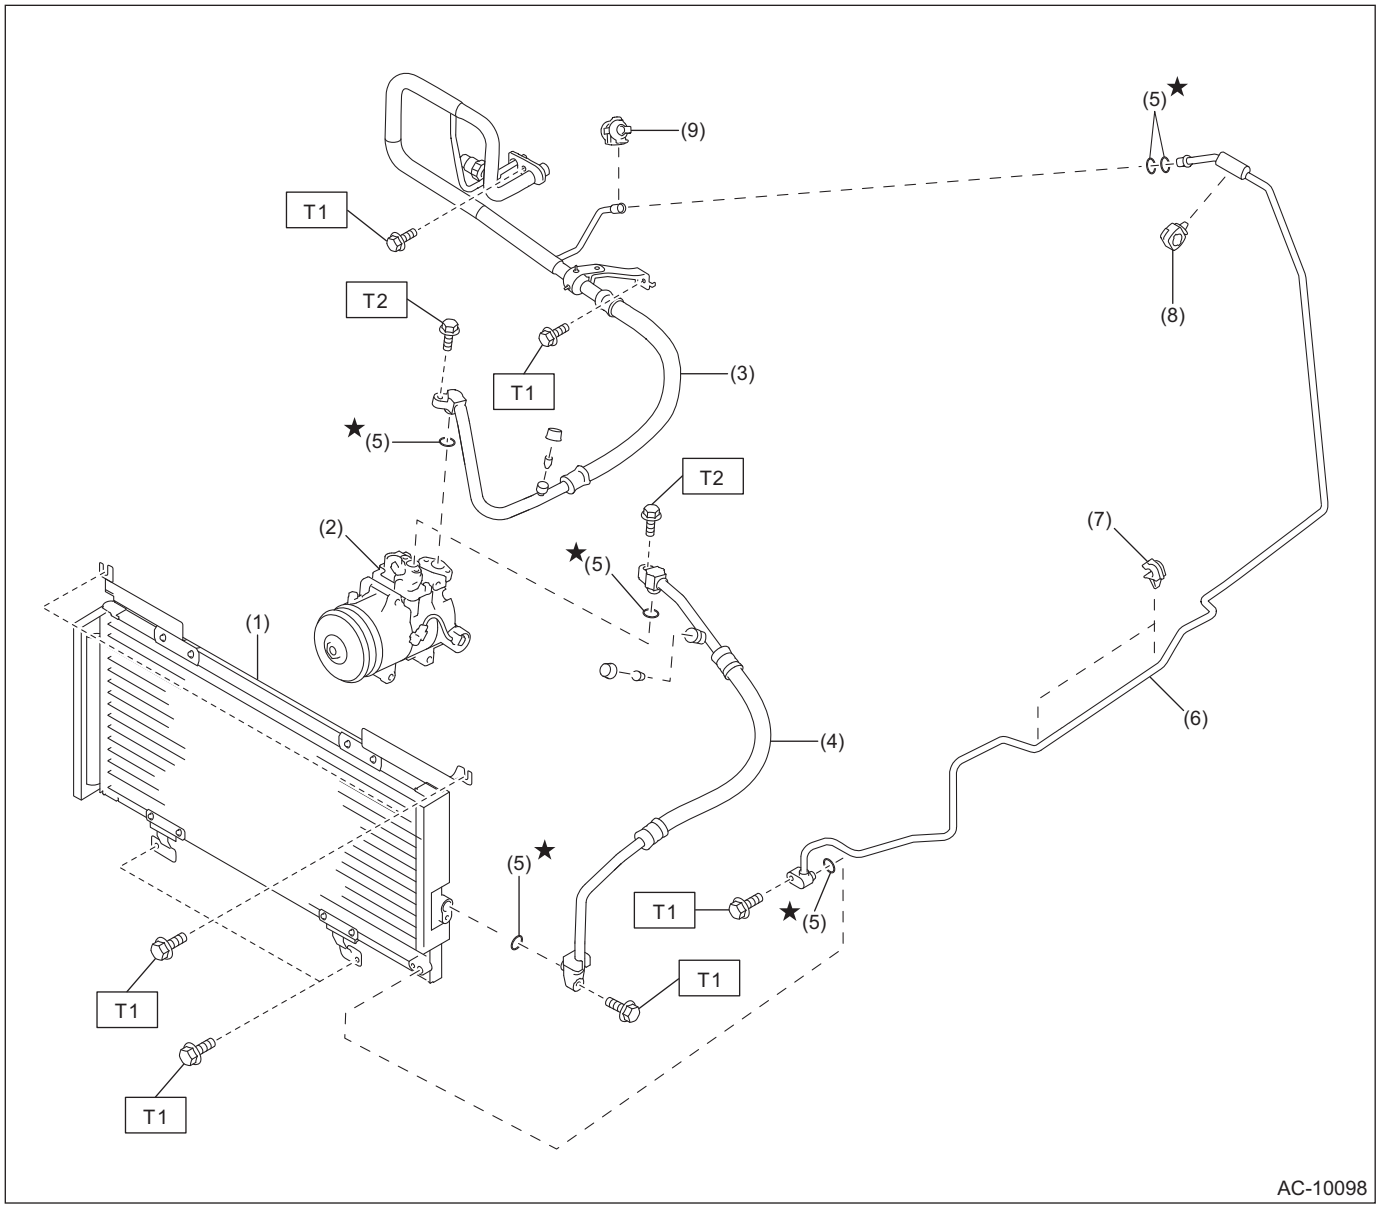
(1) Heater control ASSY (2) Panel - heater control



- Auto A/C model

(1) Heater control ASSY (2) Panel - heater control

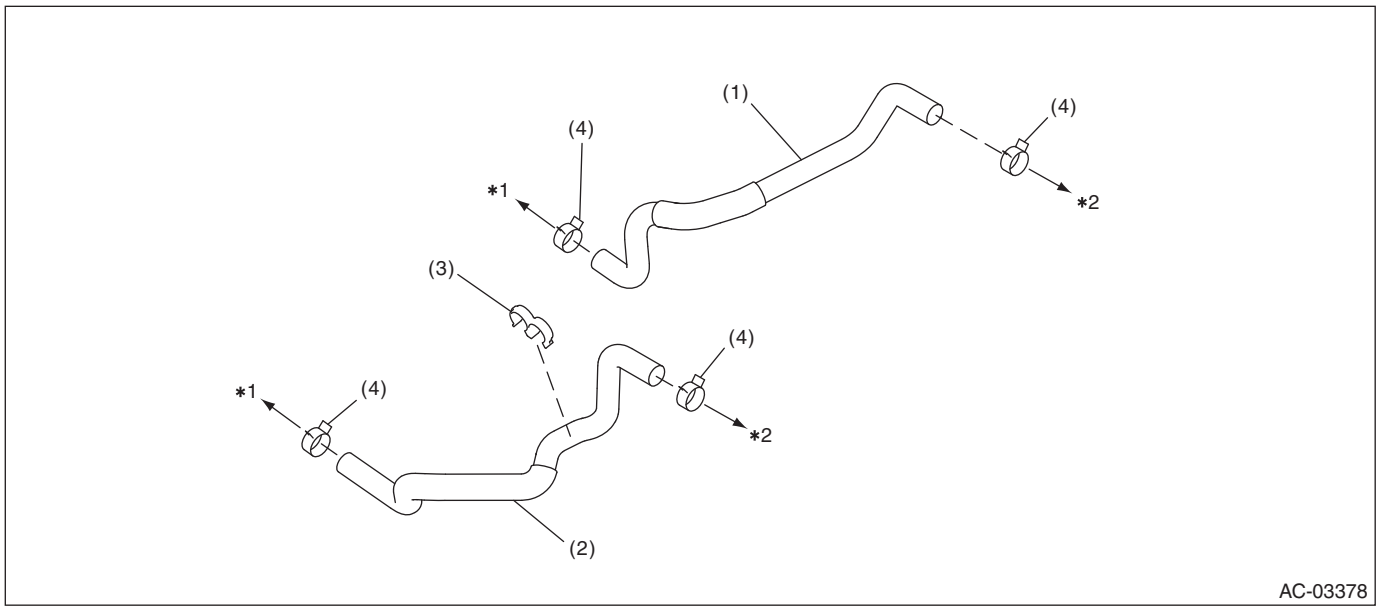
4. AIR CONDITIONING UNIT



- H4 model

(1) Condenser ASSY - air conditioner
(2) Compressor ASSY
(3) Hose - pressure suction
(4) Hose - pressure discharge
(5) Seal O-ring
(6) Pipe - evaporator cooling
(7) Clip - pipe
(8) Clip
(9) Quick connector

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1, 7.4)

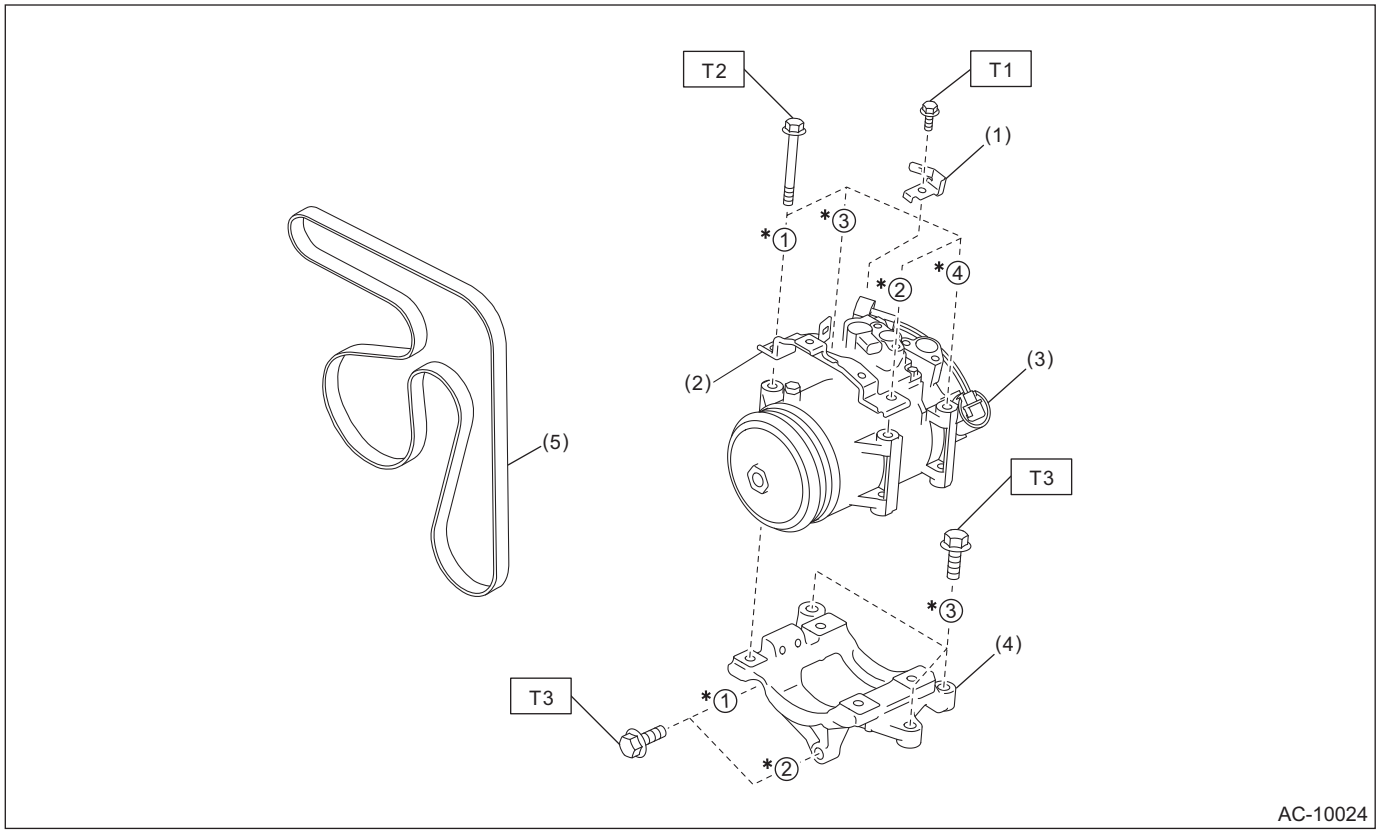


- H6 model

(1) Condenser ASSY - air conditioner
(2) Compressor ASSY
(3) Hose - pressure suction
(4) Hose - pressure discharge
(5) Seal O-ring
(6) Pipe - evaporator cooling
(7) Clip - pipe
(8) Clip
(9) Quick connector

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1, 7.4)

5. HEATER HOSE

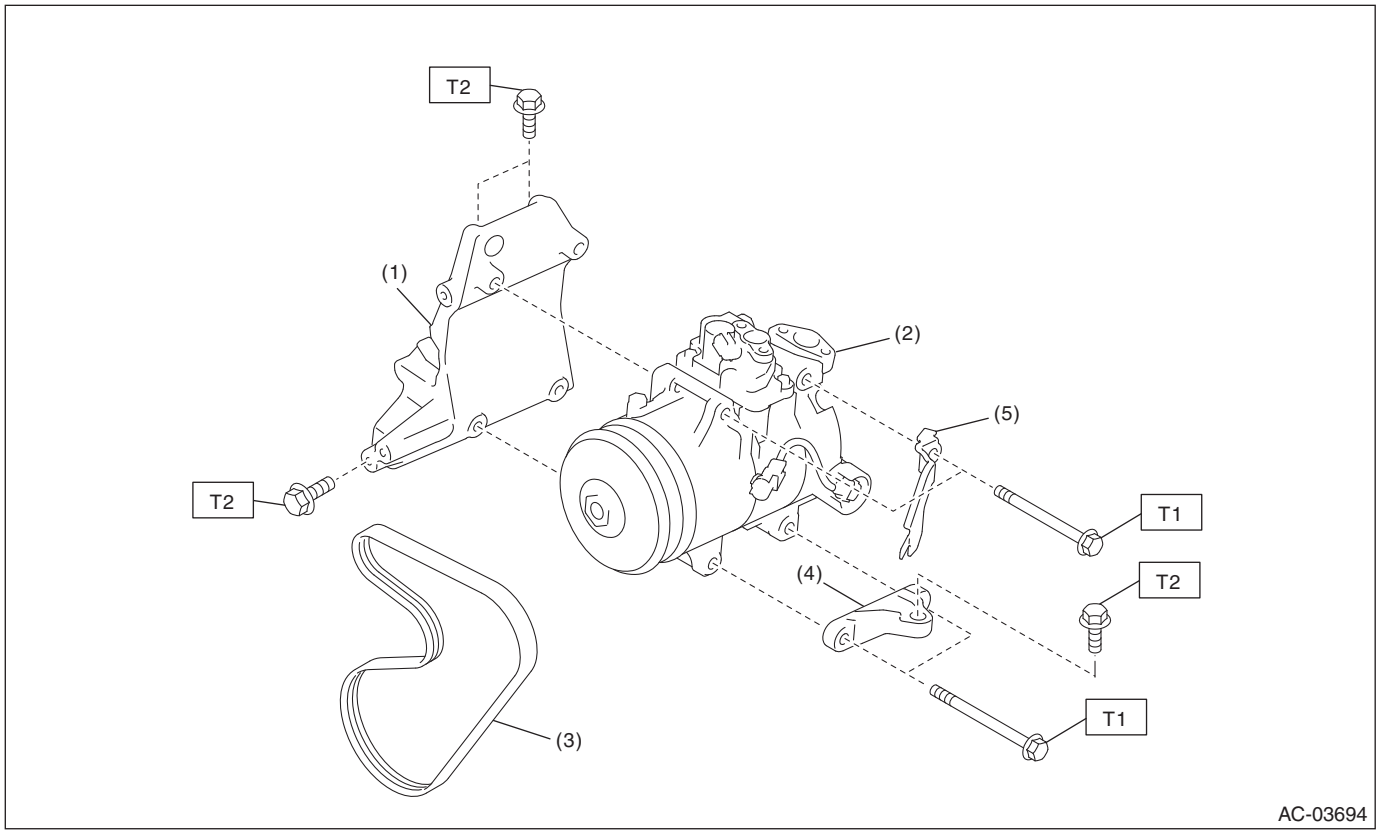


(1) Hose - heater outlet
(2) Hose - heater inlet
(3) Clip
(4) Clamp

*1: Engine side
*2: Heater core side

6. COMPRESSOR

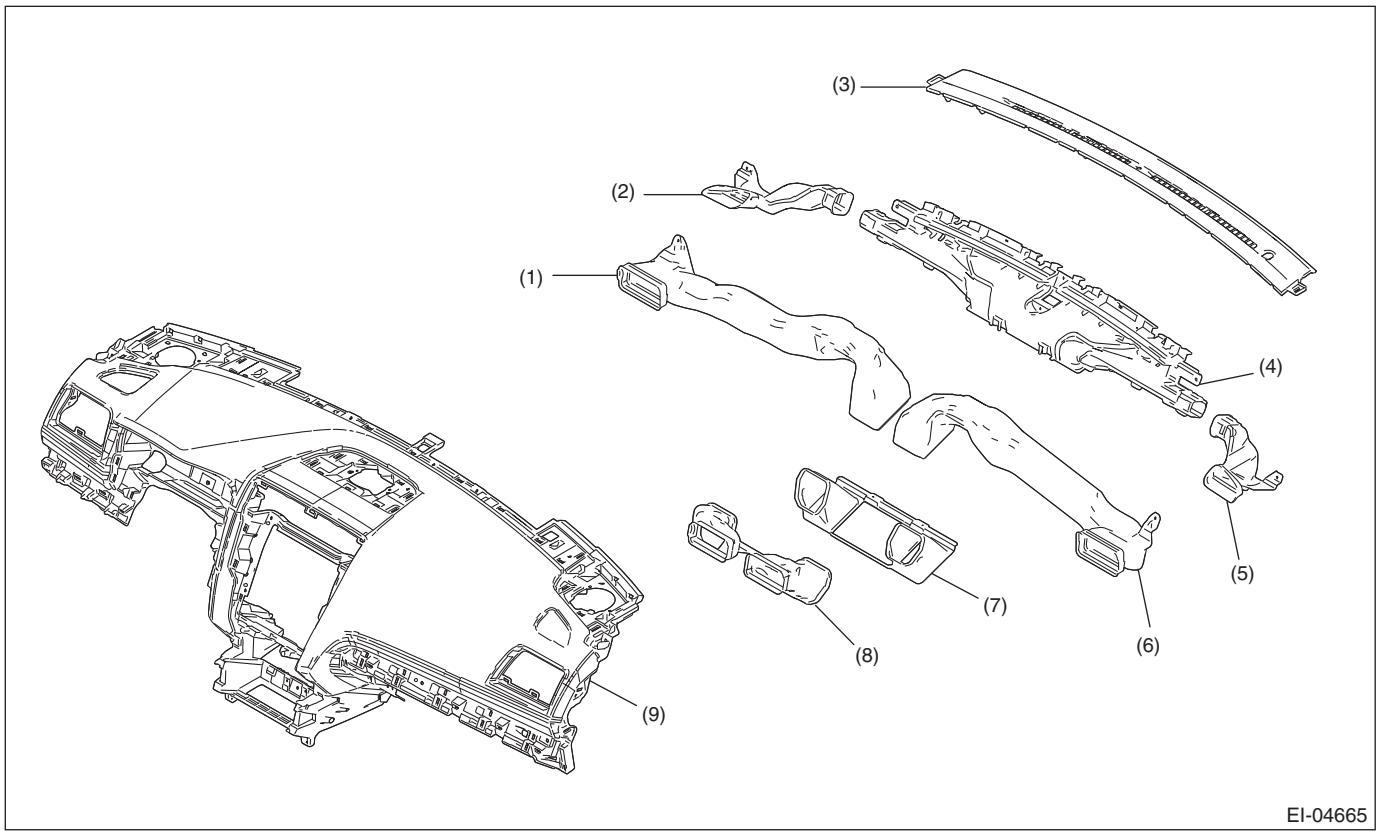
- H4 model



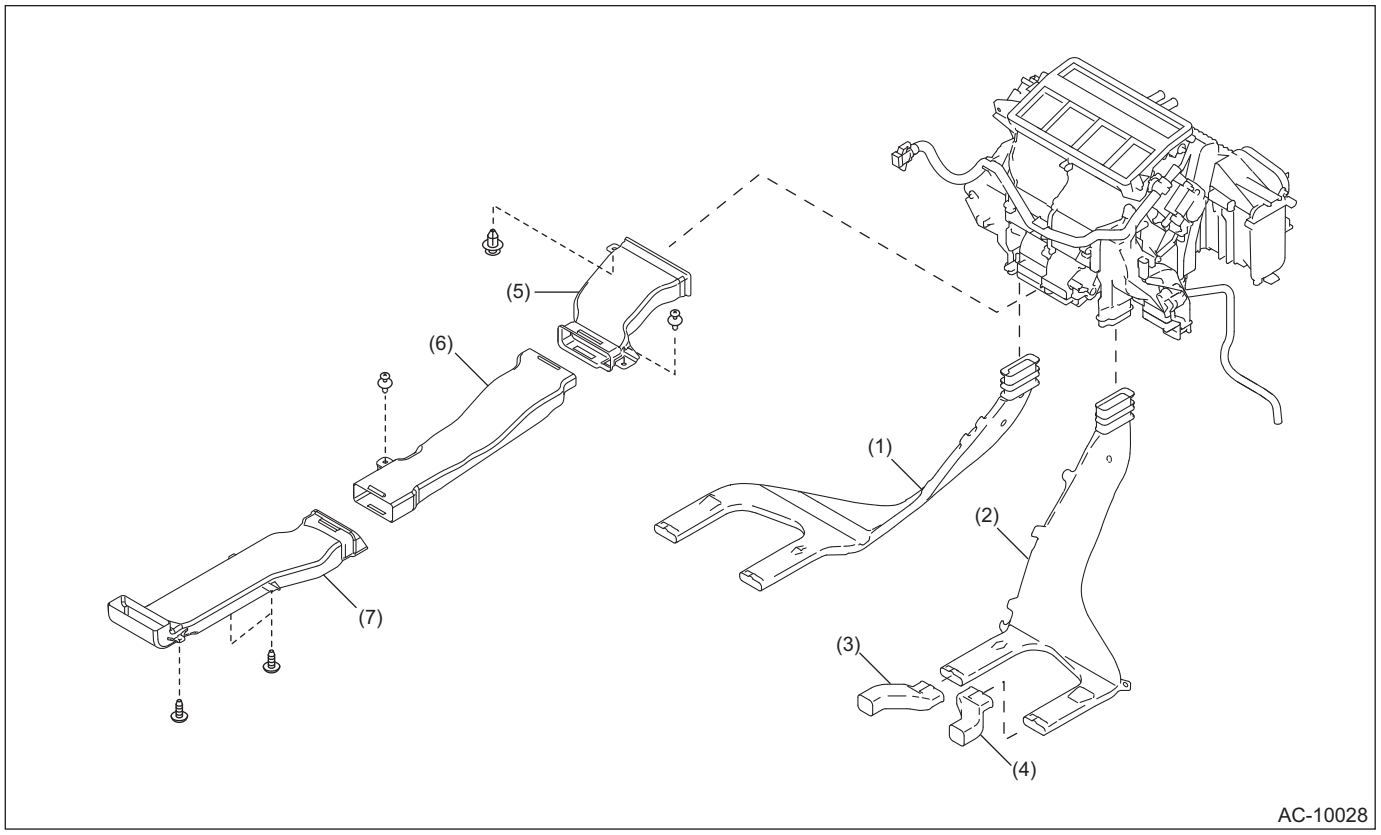
(1)	Bracket - connector	(4)	Bracket - air conditioner
(2)	Bracket - V-belt cover	(5)	V-belt (6 PK)
(3)	Compressor ASSY		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 25 (2.5, 18.4)
T3: 36 (3.7, 26.6)

* Tighten the compressor assembly and the bracket - air conditioner in the numerical order as shown in the figure.



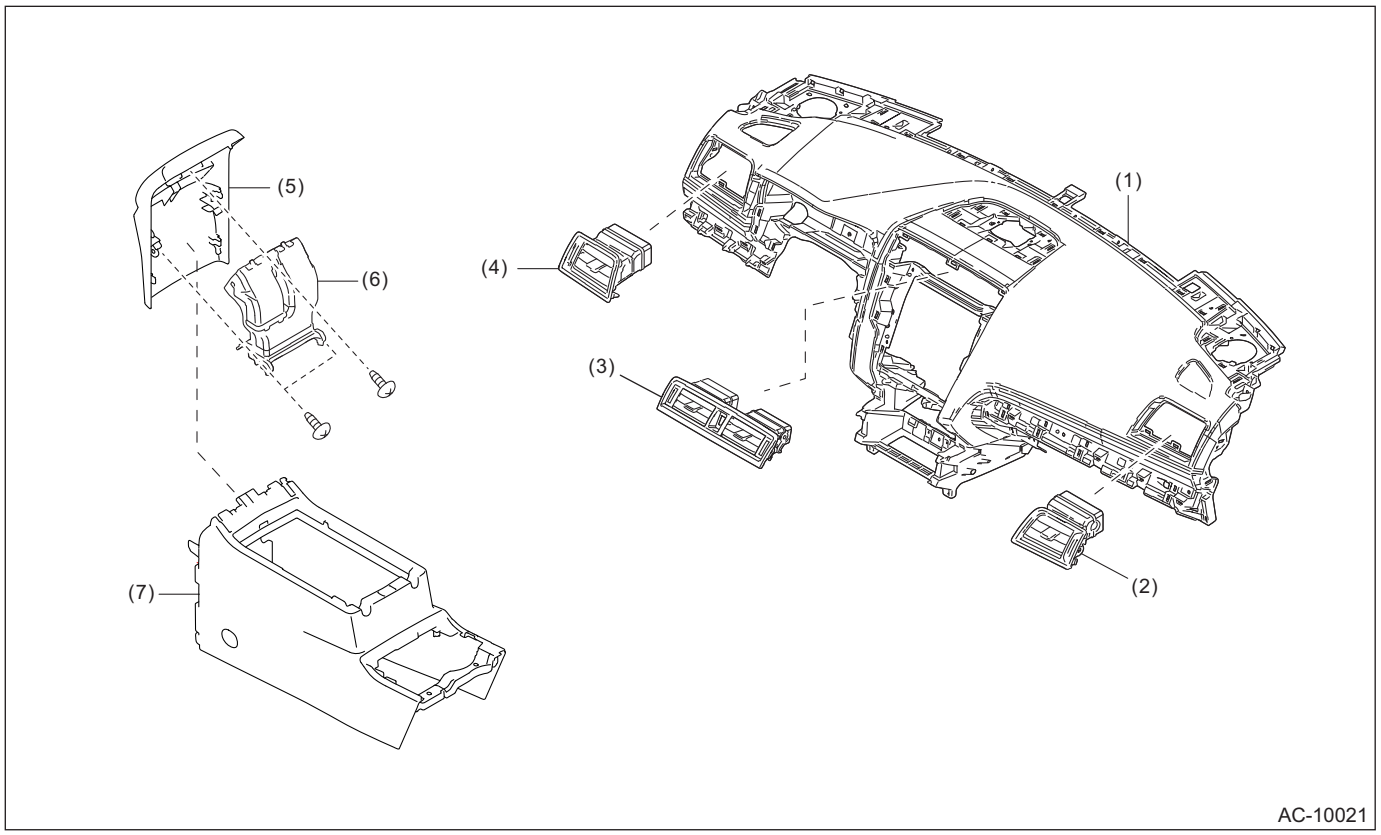
- H6 model



(1) Bracket ASSY - compressor
(2) Compressor ASSY
(3) V-belt (6 PK)
(4) Bracket - air conditioner
(5) Bracket - connector

Tightening torque: N·m (kgf-m, ft-lb)
T1: 26.5 (2.7, 19.5)
T2: 36 (3.7, 26.6)

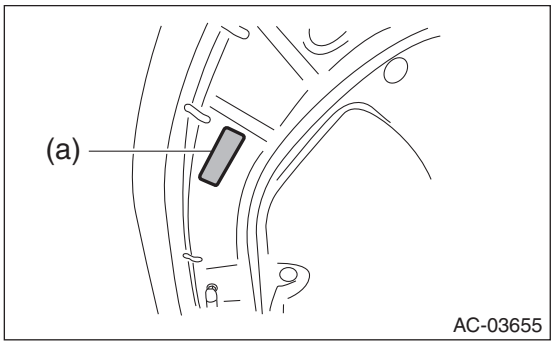
7. HEATER DUCT



(1) Duct - side ventilation LH
(2) Duct - side defroster LH
(3) Grille - front defroster
(4) Nozzle - front defroster
(5) Duct - side defroster RH
(6) Duct - side ventilation RH
(7) Duct - center vent
(8) Duct - center vent front
(9) Panel COMPL - instrument

(1) Duct - rear heater LH
(2) Duct - rear heater RH
(3) Duct - extension LH
(4) Duct - extension RH
(5) Duct - console front
(6) Duct - console center
(7) Duct - console rear

8. AIR VENT GRILLE



(1) Panel COMPL - instrument
(2) Grille ASSY - ventilation RH
(3) Grille ASSY - CTR ventilation
(4) Grille ASSY - ventilation LH
(5) End cover - console box
(6) Grille ASSY - rear heater
(7) Console box outer

D: CAUTION

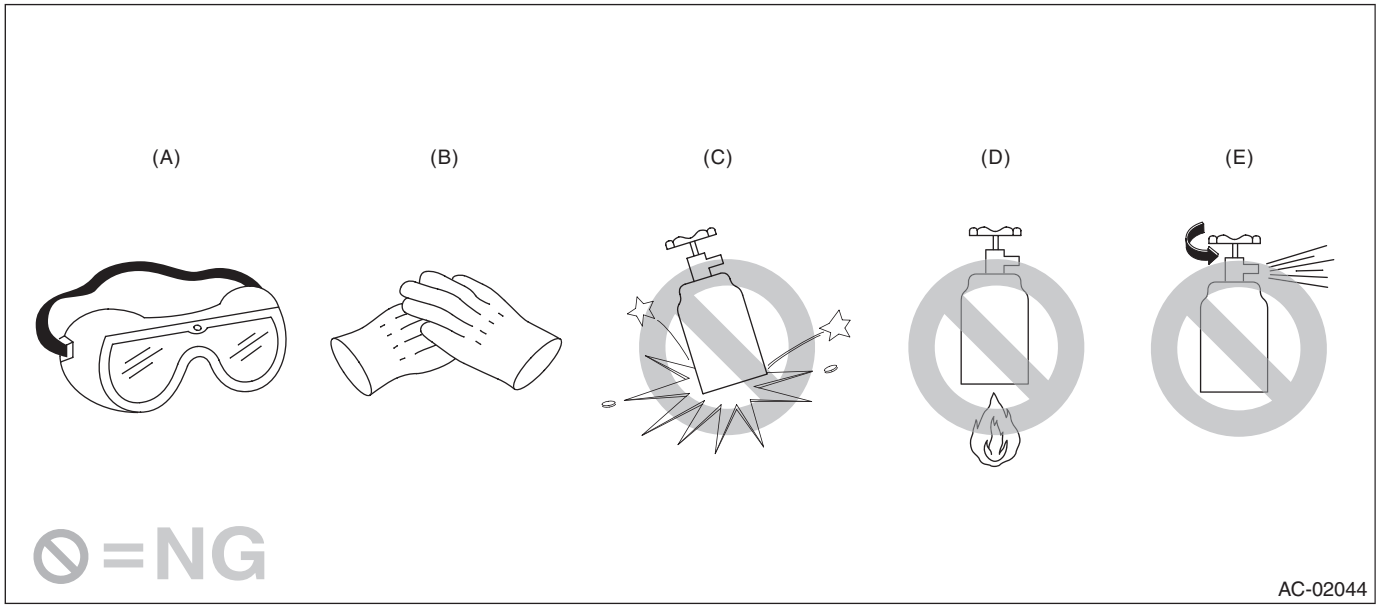
Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.

1. HFO-1234YF A/C SYSTEM

- Since the system is different from the conventional CFC-12 system and the HFC-134a system, use refrigerant, compressor oil, etc. dedicated to the HFO-1234yf system.
- Before maintenance, check A/C system identification using the label (a) which is installed to the vehicle.

2. COMPRESSOR OIL

- Compressor oil for the HFO-1234yf system has no compatibility with that for the CFC-12 system and HFC-134a system.
- Use only the manufacturer-authorized compressor oil, ND-OIL12, for the HFO-1234yf system.



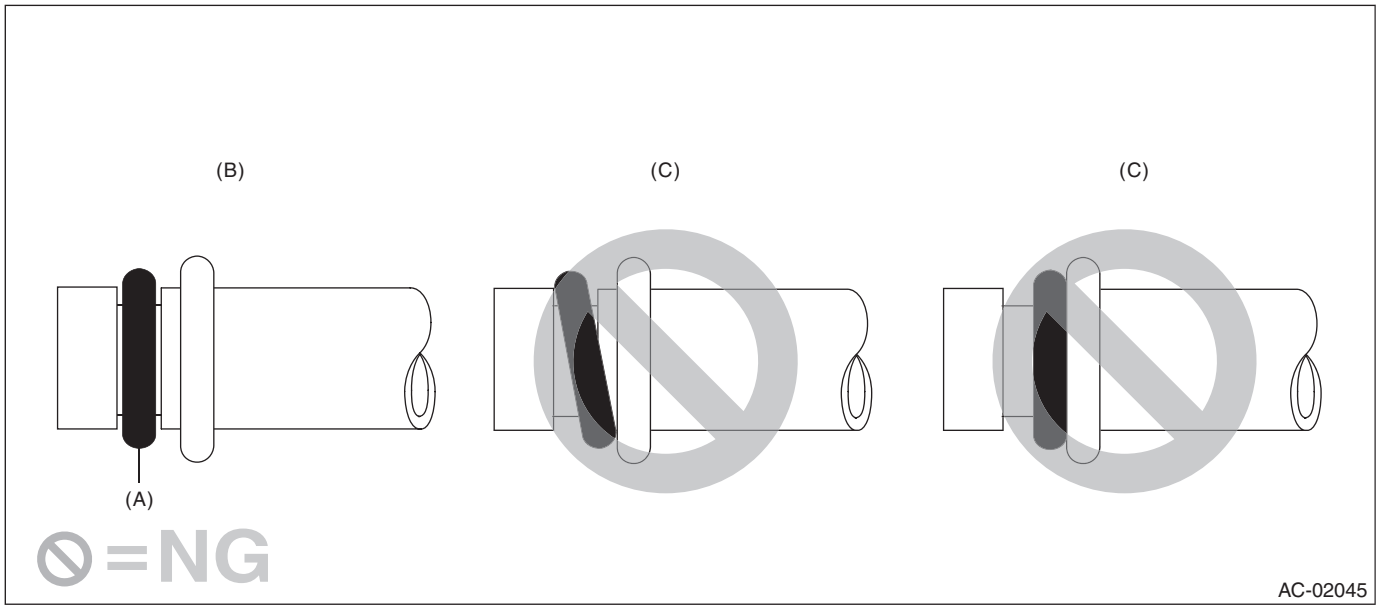
• Do not mix multiple compressor oils.
If compressor oil for the CFC-12 system and HFC-134a system is used in the HFO-1234yf system, the compressor may become stuck due to durability reduction and poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
• Compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

• Refrigerant for the CFC-12 system and HFC-134a cannot be used for the HFO-1234yf system.
• If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor may be damaged.

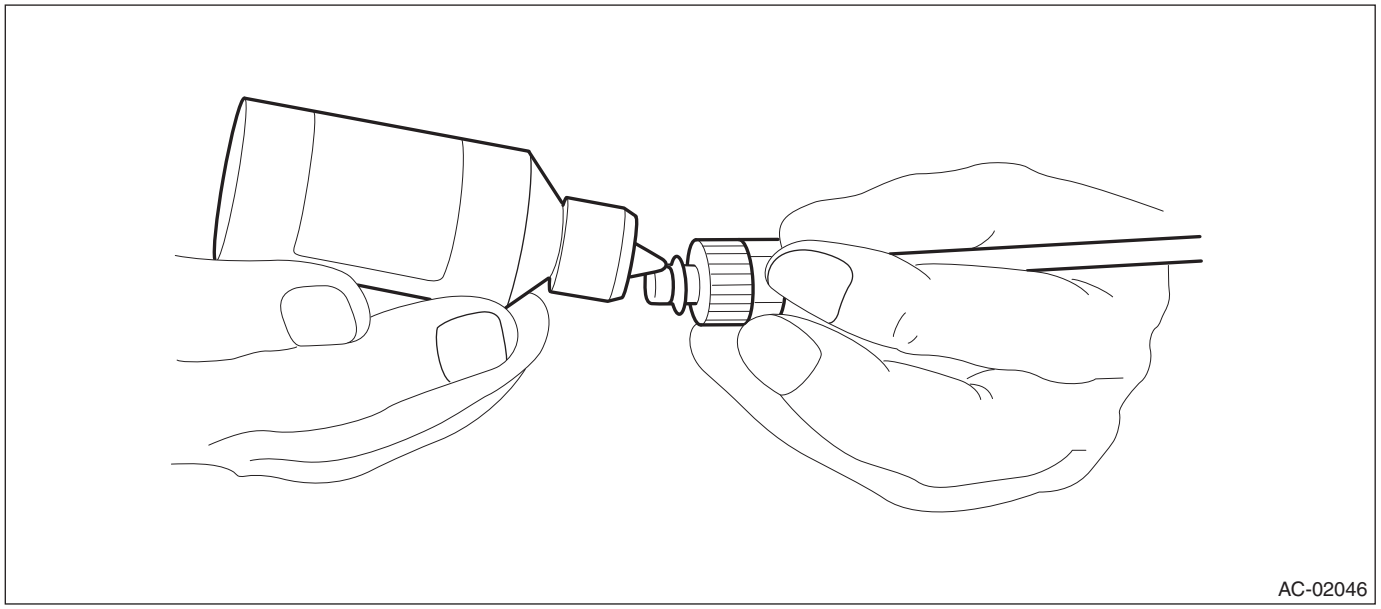
4. HANDLING OF REFRIGERANT

• The refrigerant boils at approx. –30°C (–22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.
If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eyes with plenty of water, and receive medical treatment from an eye doctor.
• Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of 40°C (104°F) or less.
• Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant container.)
• When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
• Provide good ventilation and do not work in a closed area.
• In order to prevent global warming, avoid releasing refrigerant into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.



(A) Goggles
(B) Gloves
(C) Do not apply impact.
(D) No direct heat on container
(E) Do not discharge

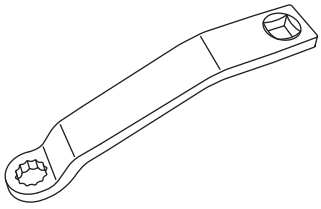
5. O-RING CONNECTIONS

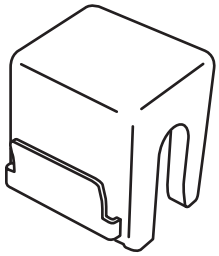


• Always use a new O-ring.
• In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
• Apply compressor oil to O-rings to avoid sticking, before installation.

• Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
• If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.
• Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
• Install the O-rings straight against the pipe groove.

(A) O-ring (B) OK (C) NG



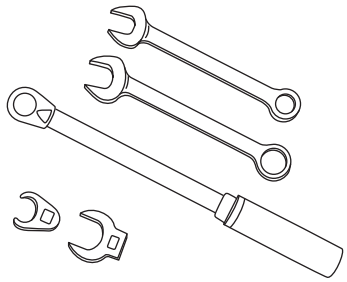


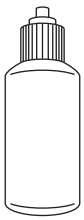
• Use compressor oil specified in the service manual to lubricate the O-rings.
Apply oil to the top and sides of O-rings before installation.
Apply compressor oil to the pipe grooves.

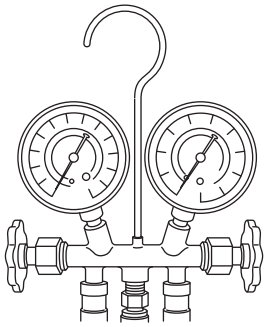
• After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
• If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

E: PREPARATION TOOL

1. SPECIAL TOOL







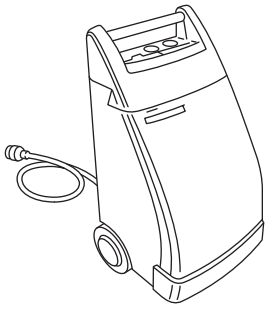


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
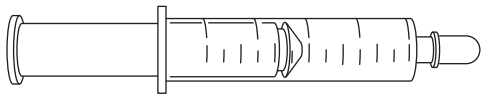
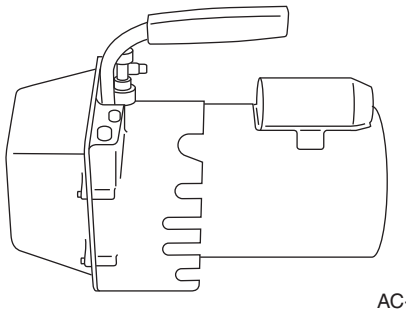
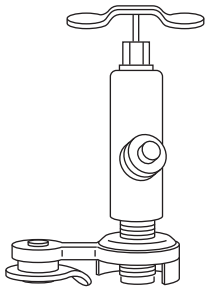
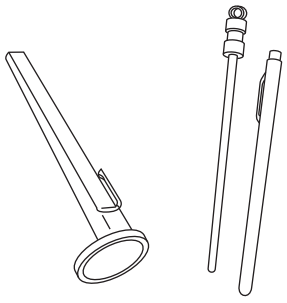
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST73099SG000	73099SG000	SPECIAL TOOL CONDENSER	Used for removing and installing the condenser.
 ST73499XA00A	73499XA00A	SP TL REMOVER PD	Used to disconnect the connector for a quick joint type air conditioner piping.

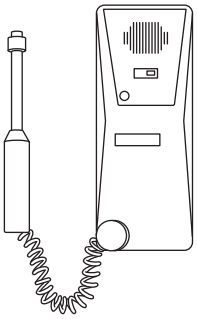


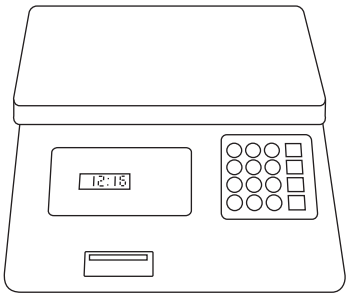






2. GENERAL TOOL





CAUTION:
• Use only tools and parts dedicated to the HFO-1234yf system. If other types of refrigerant or compressor oil are mixed, it will result in poor lubrication and the compressor may be damaged.
• In order to prevent the mixture of other parts, grease or oil, the types of tools and screws and the replacement valves used are different. Use tools and parts appropriate for the system.

	HFO-1234yf	HFC-134a	CFC-12
Tool and screw type	Millimeter size	Millimeter size	Inch size
Valve type	Quick joint type	Quick joint type	Screw-in type

TOOL NAME/ILLUSTRATION	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

TOOL NAME/ILLUSTRATION	REMARKS
Wrench  AC-00213	Various **WRENCHES** will be required to service any A/C system.7 — 40 N·m (0.7 to 4.1 kgf-m, 5 to 30 ft-lb) torque wrench and various crow-foot wrenches will be needed. Open end or flare nut wrenches will be needed to affix the pipe and hose fittings.
Applicator bottle  AC-00012	A small **APPLICATOR BOTTLE** is recommended to apply compressor oil to the various parts. It can be available at a hardware store.
Manifold gauge set  AC-00013	A **MANIFOLD GAUGE SET** (with hoses) is available at either a refrigerant supplier or an automotive equipment supplier.
Refrigerant recovery system  AC-00014	A **REFRIGERANT RECOVERY SYSTEM** is used for the recovery and recycling of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.

TOOL NAME/ILLUSTRATION	REMARKS
Syringe  AC-00015	A graduated plastic **SYRINGE** will be needed to add oil into the system again. A syringe can be available at a pharmacy or drug store.
Vacuum pump  AC-00016	A **VACUUM PUMP** is necessary (for a good working condition), and may be available at either a refrigerant supplier or an automotive equipment supplier.
Can tap  AC-00017	A **CAN TAP** for the 397 g (14 oz) can is available at an automotive equipment supplier.
Thermometer/hygrometer  AC-00018	A Pocket **THERMOMETER/HYGROMETER** is available at either a industrial hardware store or a refrigerant supplier.

TOOL NAME/ILLUSTRATION	REMARKS
Electronic leak detector  AC-00019	An **ELECTRONIC LEAK DETECTOR** can be available at either a specialty tool supplier or an A/C equipment supplier.
Weight scale  AC-00020	A **WEIGHT SCALE** such as an electronic charging scale or a bathroom scale with digital display will be needed, if a 13.6 kg (30 lb) refrigerant container is used.

2. Air Conditioning System

A: WIRING DIAGRAM

Refer to “Air Conditioning System” in the wiring diagram.
- Manual A/C model: <Ref. to WI-98, MANUAL A/C, WIRING DIAGRAM, Air Conditioning System.>

- Sunload sensor (auto A/C model): <Ref. to AC-81, Sunload Sensor (Auto A/C Model).>
- In-vehicle sensor (auto A/C model): <Ref. to AC-83, In-Vehicle Sensor (Auto A/C Model).>
- Evaporator sensor: <Ref. to AC-86, Evaporator Sensor.>
- Intake door actuator: <Ref. to AC-89, FRESH/RECIRC Door Actuator.>
- Mode door actuator: <Ref. to AC-91, Mode Door Actuator.>
- Air mix door actuator: <Ref. to AC-94, Air Mix Door Actuator.>
- Rear vent actuator: <Ref. to AC-98, Rear Vent Door Actuator.>

3. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE

1. CHECK REFRIGERANT GAS PRESSURE

1) Prepare the vehicle.

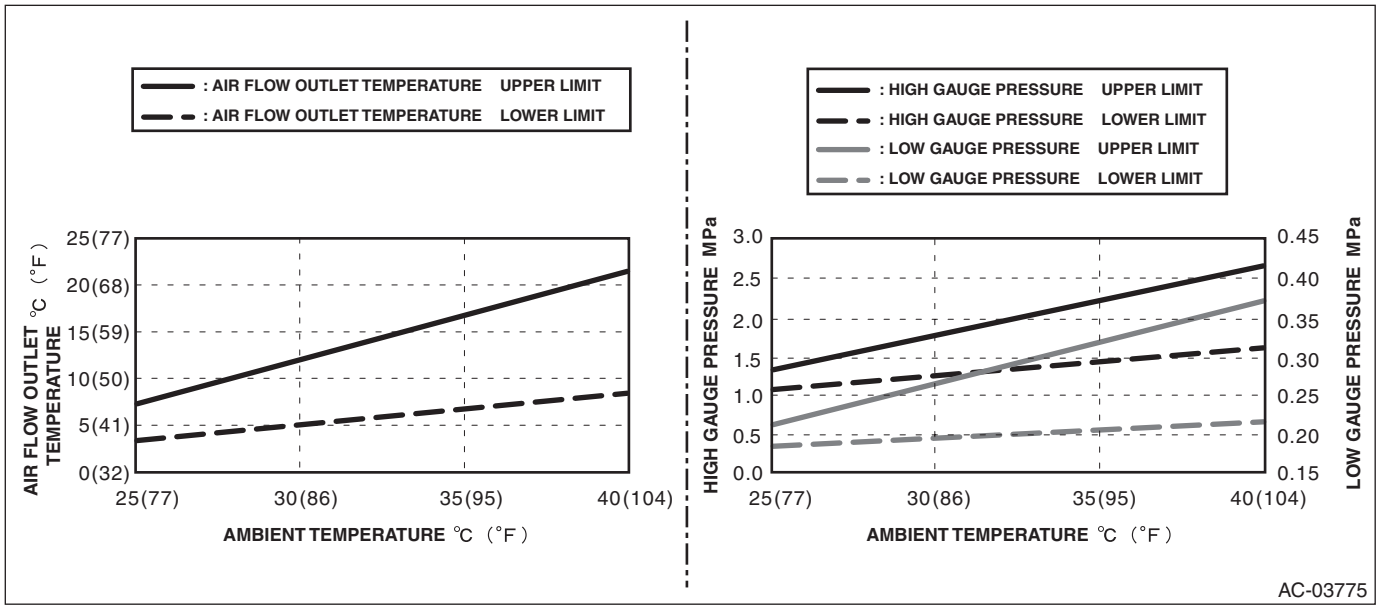
NOTE:
Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
- Place the vehicle in the shade and windless condition, and open the front hood.
- Open the front windows and close all doors.

2) Check the refrigerant pressure.

Preparation tool:
Manifold gauge set

(1) Connect the manifold gauge set, and start the engine.
(2) Set the vehicle to the following conditions.

Item	Condition
Engine	Warmed up (Engine coolant temperature indicator light: OFF)
Air vent grille	Shutter is fully open.
AC switch	ON
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control switch	VENT
Fan switch (auto A/C model)	5/7 level
Fan dial (manual A/C model)	3/4 level



(3) In the condition of step (2), idle the engine for 30 minutes.
(4) Read the gauge values on both high pressure side and low pressure side for manifold gauge.

3) Measure the air vent grille outlet opening temperature, ambient temperature and humidity.

Preparation tool:
Thermometer and hygrometer

NOTE:
For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

4) Check that the high and low pressures and outlet opening temperature for ambient temperature and humidity is within the standard value described in the chart below.

5) Refer to “DIAGNOSIS WITH SYMPTOM” if the inspection result is not within the standard value. <Ref. to AC-24, INSPECTION WITH PRESSURE SYMPTOM, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

B: INSPECTION

1. INSPECTION WITH PRESSURE SYMPTOM

Symptoms	Reference
Both high and low pressure sides are low	<Ref. to AC-24, BOTH HIGH AND LOW PRESSURE SIDES ARE LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Both high and low pressure sides are high	<Ref. to AC-25, BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High and low pressure sides are equal, high-pressure side is low	<Ref. to AC-25, HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High-pressure side is high	<Ref. to AC-25, HIGH-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is low	<Ref. to AC-26, LOW-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is high	<Ref. to AC-27, LOW-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

2. BOTH HIGH AND LOW PRESSURE SIDES ARE LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-33, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.

	Step	Check	Yes	No
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Perform corresponding "INSPECTION WITH PRESSURE SYMPTOM".

3. BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH

	Step	Check	Yes	No
1	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Perform corresponding "INSPECTION WITH PRESSURE SYMPTOM".

4. HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-33, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69 Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-34, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

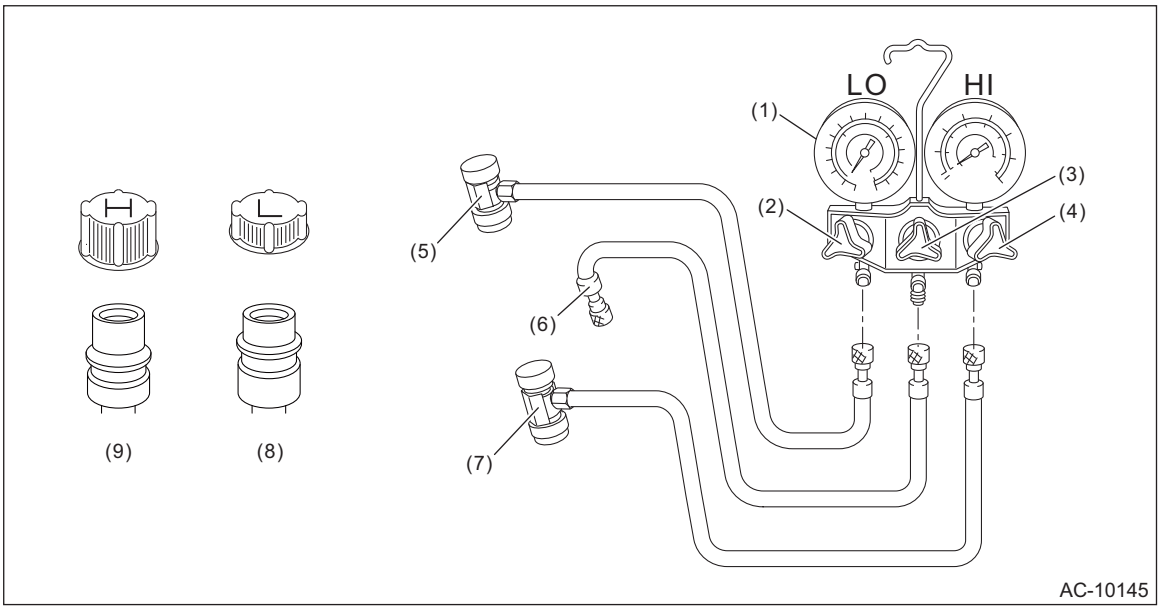
5. HIGH-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	**CHECK CONDENSER.** Check the condenser. <Ref. to AC-57, INSPECTION, Condenser.>	Is condenser OK?	Go to step **2**.	Clean or replace the condenser.

	Step	Check	Yes	No
2	**CHECK RADIATOR FAN.** Check the radiator fan system. • H4 model: <Ref. to CO(H4DO)-9, Radiator Fan System.> • H6 model: <Ref. to CO(H6DO)-8, Radiator Fan System.>	Is radiator fan system normal?	Go to step **3**.	Repair the radiator fan system or replace the faulty parts.
3	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Check the high-pressure hose and condenser for kinks or clogging, and replace if defective.

6. LOW-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-33, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69 Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Go to step **3**.
3	**REPLACE EXPANSION VALVE.** Replace the expansion valve. <Ref. to AC-65, REMOVAL, Expansion Valve.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-34, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

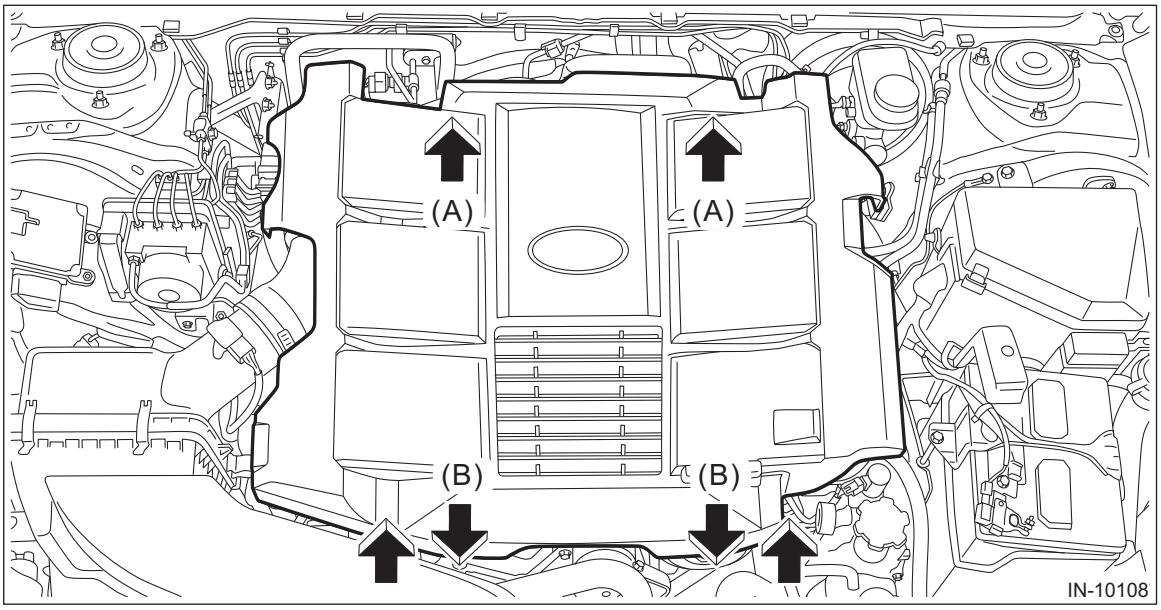


7. LOW-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Go to step **2**.
2	**REPLACE EXPANSION VALVE.** Replace the expansion valve. <Ref. to AC-65, REMOVAL, Expansion Valve.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Replace the evaporator. <Ref. to AC-63, REMOVAL, Evaporator.>

4. Refrigerant Recovery Procedure

A: PROCEDURE



CAUTION:
• During operation, be sure to wear protective goggles and protective gloves.
• Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
• When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
• Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

(1)	Manifold gauge	(4)	High pressure valve	(7)	High-pressure hose
(2)	Low pressure valve	(5)	Low-pressure hose	(8)	Low-pressure side service port
(3)	Center valve	(6)	Center manifold hose (vacuum pump and charge)	(9)	High-pressure side service port

1) Perform compressor oil return operation. <Ref. to AC-36, PROCEDURE, Compressor Oil.>
2) Turn the ignition switch to OFF.
3) Remove the collector cover. (H6 model)
   (1) Carefully pull up the rear of collector cover at two positions (A).

(2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.

4) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

(1) Check that all valves are fully closed.

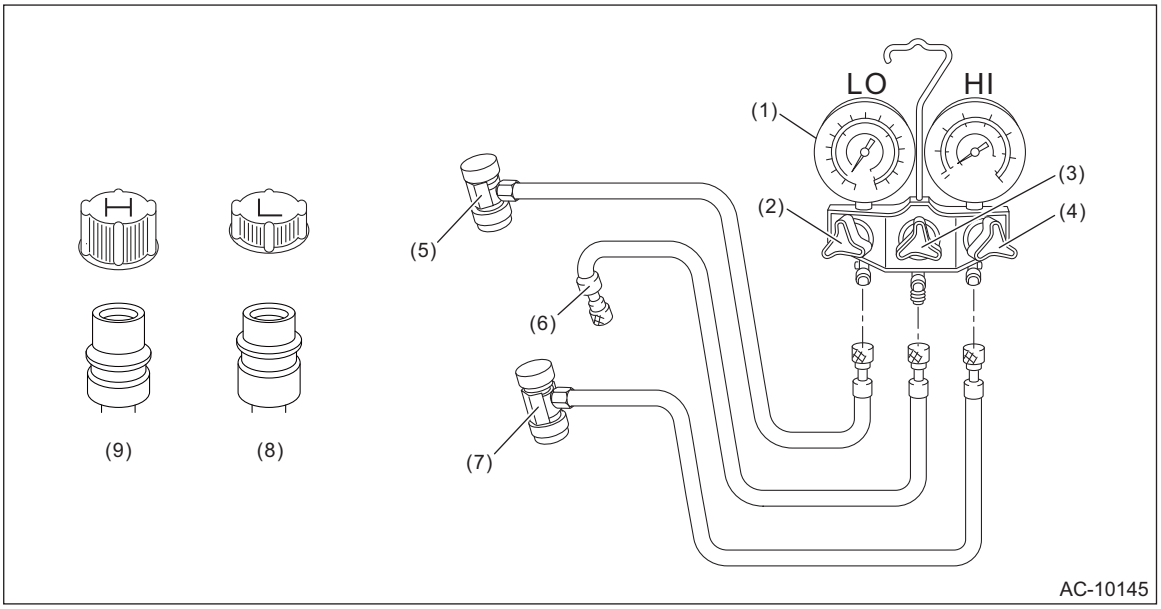
(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:

Confirm that the connections are secure.

(3) Connect the center hose to the refrigerant recovery system.

Preparation tool:



Refrigerant recovery system

5) Follow the operation manual attached to the refrigerant recovery system to collect the refrigerant.

5. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:
- **While working, be sure to wear protective goggles and protective gloves.**
- **Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at normal temperatures, and can be removed.**

(1)	Manifold gauge	(4)	High pressure valve	(7)	High-pressure hose
(2)	Low pressure valve	(5)	Low-pressure hose	(8)	Low-pressure side service port
(3)	Center valve	(6)	Center manifold hose (vacuum pump and charge)	(9)	High-pressure side service port

1) Attach the manifold gauge set.

Preparation tool:
Manifold gauge set

(1) Check that all valves are fully closed.
(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:
Confirm that the connections are secure.

(3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

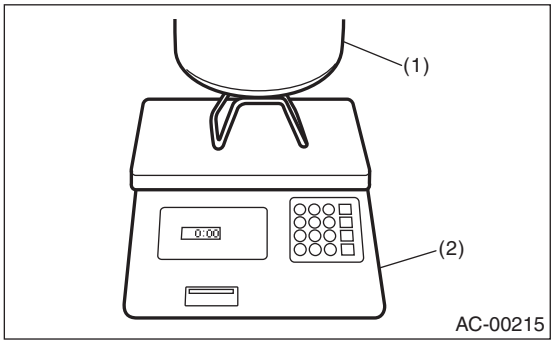
Preparation tool:
Vacuum pump

2) Perform evacuation.

CAUTION:
Make sure to perform evacuation using a vacuum pump.

(1) Open the low-pressure valve, high-pressure valve and center valve.
(2) Operate the vacuum pump.
(3) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches –0.1 MPa (–1 kgf/cm^2, –14 psi), close the center manifold hose valve, and stop the vacuum pump.

(4) Leave alone for 5 to 10 minutes after closing the low pressure and high pressure valves, and check whether there is any change in the low pressure gauge needle indication.
If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem.
After repair, retry charging the refrigerant from the step 1).
(5) If there is no leakage, continue evacuation for additional 20 — 30 minutes, close all valves and then stop the vacuum pump.



3) Charge refrigerant.
(1) Follow the can tap operation manual to attach it to the refrigerant can.

Preparation tool:
Can tap

(2) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

Preparation tool:
Weight scale

NOTE:
When 13.6 kg (30 lb) refrigerant container (1) is used, measure the amount of refrigerant with a refrigerant charging scale (2), and connect with the center manifold hose.

(3) Open the tap valve of the supply container (refrigerant can or refrigerant container).
(4) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to be bled by the refrigerant pressure.
(5) Open the high pressure and low pressure valves of the manifold gauge to fill with refrigerant.

NOTE:
If the supply container is empty, close all manifold gauge valves and the tap valve of the supply container, and replace the empty supply container with a new one. After replacing with a new supply container, perform air purge, and resume the filling operation.
(6) If the low pressure gauge indicates approximately 0.2 MPa (2 kgf/cm^2, 29 psi) or refrigerant filling efficiency drops, close the low pressure and high pressure valves.
(7) Check that the low pressure and high pressure valves are closed, turn off the A/C switch and start the engine.

CAUTION:
When filling operation is performed with the engine running, do not open the high pressure valve. Always fill from the low pressure valve.

(8) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.
(9) Set the vehicle to the following conditions.

Item	Condition
Engine speed	1,500 r/min
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
Fan switch or dial	HI (MAX)
FRESH/RECIRC switch	RECIRC
Air flow control switch	VENT

Item	Condition
Window	OPEN

(10) Open the low pressure valve, check the refrigerant pressure with a manifold gauge and fill with refrigerant up to the specified amount. <Ref. to AC-24, INSPECTION WITH PRESSURE SYMPTOM, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

4) Using an electronic leak detector (leak tester), check for refrigerant leaks in the system. <Ref. to AC-33, INSPECTION, Refrigerant Leak Check.>

5) After filling with refrigerant, close all valves and remove the manifold gauge set.

6) Attach cap to the service port of the low pressure side and high pressure side.

6. Refrigerant Leak Check

A: INSPECTION

1) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

(1) Check that all valves are fully closed.

(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

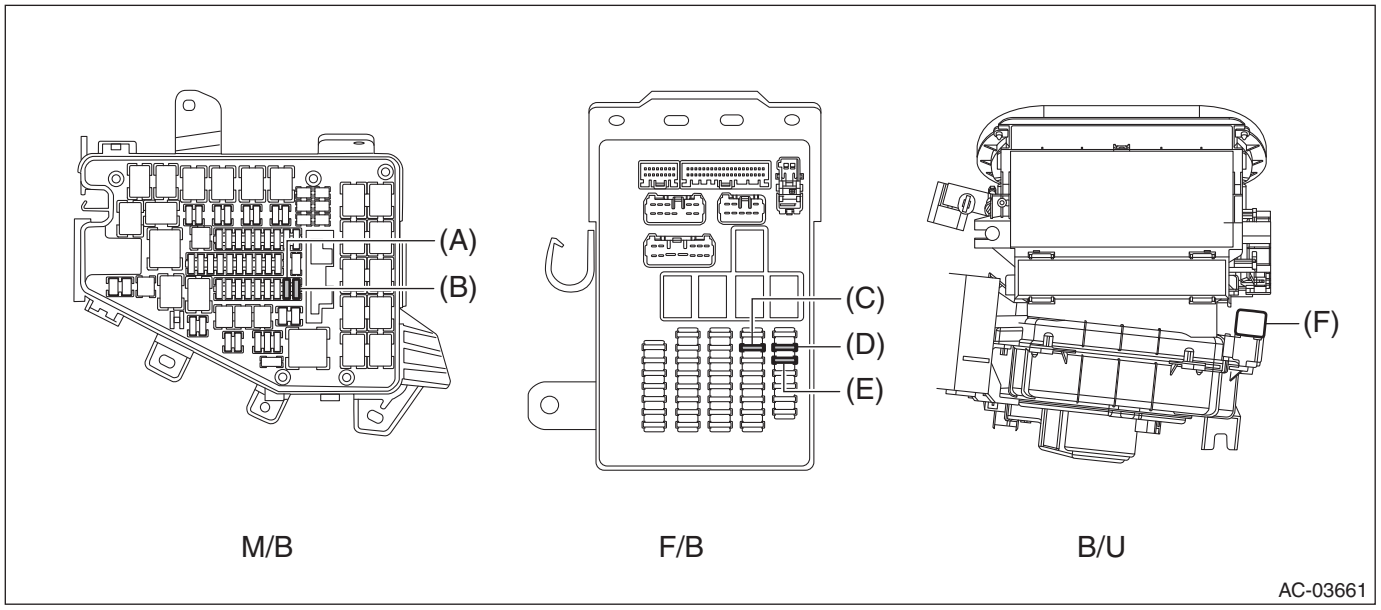
CAUTION:

Confirm that the connections are secure.

(3) Start the engine, operate the A/C system for approx. 10 minutes, and check that the high-pressure side indicates 0.69 MPa (7 kgf/cm^2, 100 psi) or more.

2) Stop the engine to start the leak test.

Preparation tool:



Electronic leak detector (leak tester)

Items	Condition	Corrective action
Pipe	Check the connections of pipe and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between pressure switch or pressure sensor and high-pressure pipe.	Replace the pressure switch or pressure sensor.
	Check the connection between pipe and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
Condenser	Check the welded part of condenser and core.	Replace the condenser.
Hose (high-pressure)	Check the connection between hose (high-pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (high-pressure) and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **CAUTION:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (high pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Compressor	Check the compressor pulley and vicinity of shaft seal. **CAUTION:** **Some shaft seals will show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.**	Replace the compressor.

Items	Condition	Corrective action
Hose (low-pressure)	Check the connection between hose (low pressure) and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (low pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **CAUTION:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (low pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Evaporator	Remove the drain hose from the heater case, and check the end part for 10 seconds or more.	Replace the evaporator.
	Check the air vent grille. NOTE: Turn the ignition switch to ON, and run the blower at high speed for approx. 1 minute. Stop the blower to check the air vent grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.	Replace the evaporator.

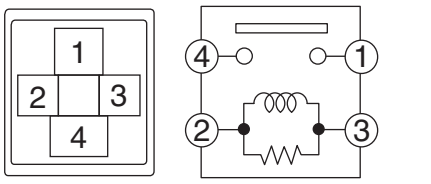
7. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 15 A (blower motor relay)	(A)
	Fuse 15 A (blower motor relay)	(B)
Fuse & relay box (F/B)	Fuse 15 A (blower motor relay, intake door actuator, A/C control module)	(C)
	Fuse 7.5 A (A/C control module, A/C control panel)	(D)
	Fuse 7.5 A (A/C control panel)	(E)
Blower motor unit (B/U)	Blower motor relay	(F)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-25, Power Supply Circuit.>

B: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between blower motor relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	
	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

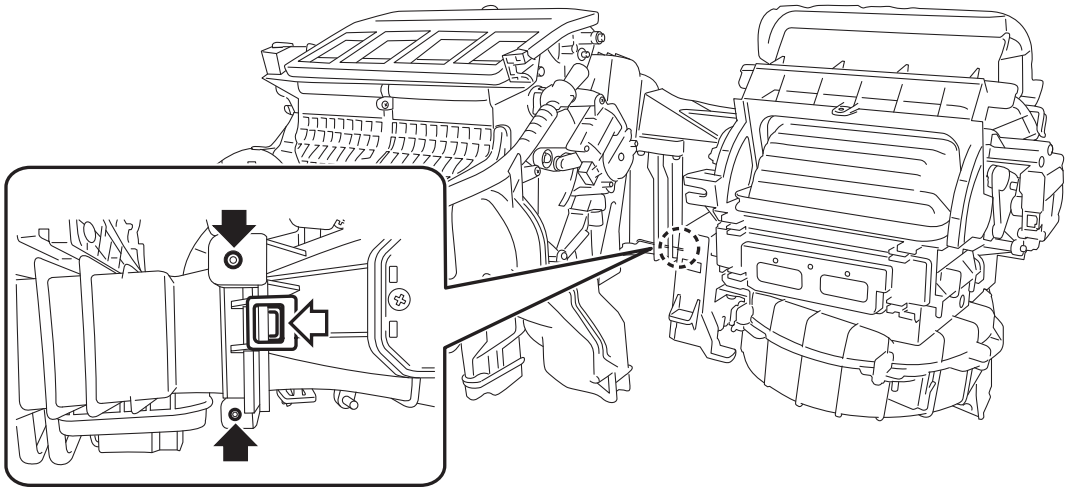
2) Replace the blower motor relay if the inspection result is not within the standard value.

8. Compressor Oil

A: PROCEDURE

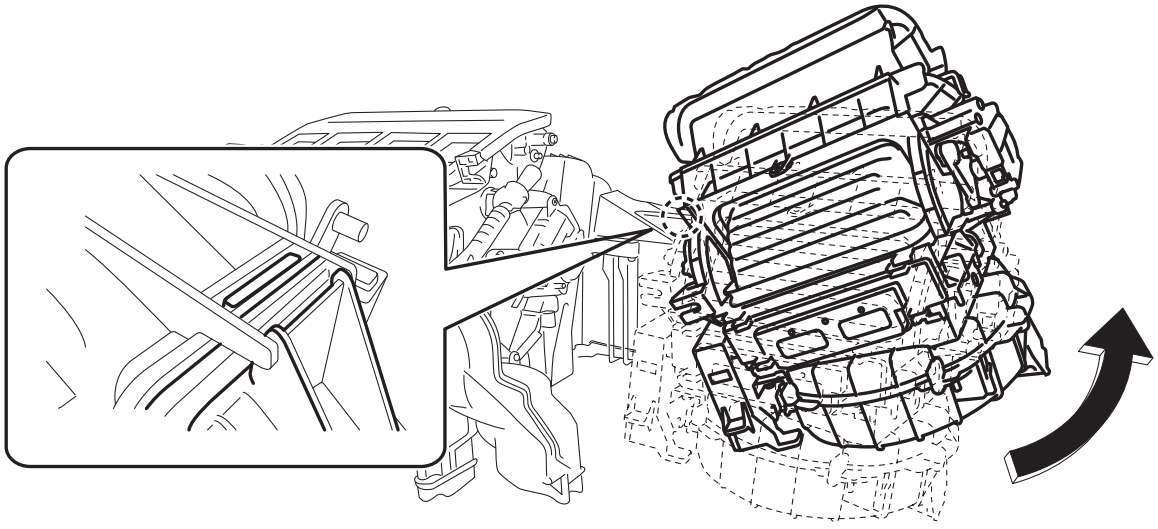
NOTE:
Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.
1) Increase the engine speed to 1,500 r/min.
2) Turn the A/C switch to ON.
3) Turn the temperature control dial to LO (MAX COOL).
4) Turn the FRESH/RECIRC switch to RECIRC position.
5) Turn the fan switch or dial to HI (MAX).
6) Leave in this condition for 10 minutes.

B: ADJUSTMENT



- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor) and install the new compressor.

NOTE:
Since the hygroscopicity of compressor oil is high, perform this series of works quickly.



9. Blower Motor Unit Assembly

A: REMOVAL

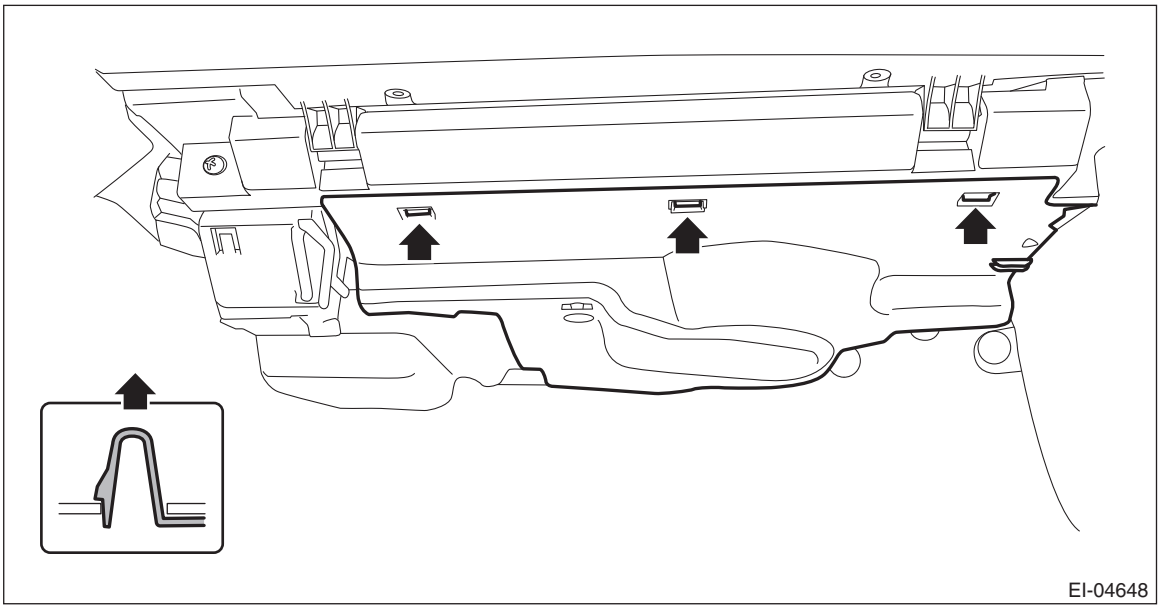
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not detach the immobilizer control module except when replacing the blower motor unit assembly.
• Replace the air duct cover LWR with a new part when the immobilizer control module is removed. If the air duct cover LWR is reused, screw tightening force is reduced and the immobilizer control module may be detached due to vibration while driving.
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater and cooling unit assembly. <Ref. to AC-58, REMOVAL, Heater and Cooling Unit.>
3) Remove the blower motor unit assembly.
(1) Release the claws and remove the screws.

AC-03662

(2) Remove the blower motor unit assembly as shown in the figure.

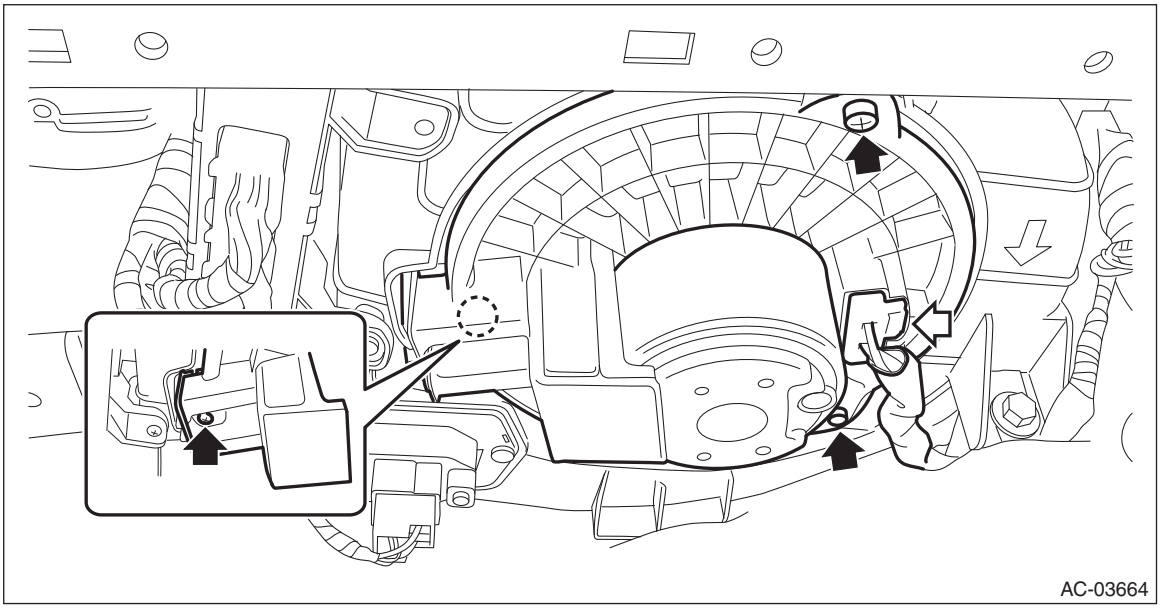
AC-03663

B: INSTALLATION



CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace O-rings and pipe clamps with new parts and install securely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Install the blower motor unit assembly.
2) Install the heater and cooling unit assembly. <Ref. to AC-61, INSTALLATION, Heater and Cooling Unit.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

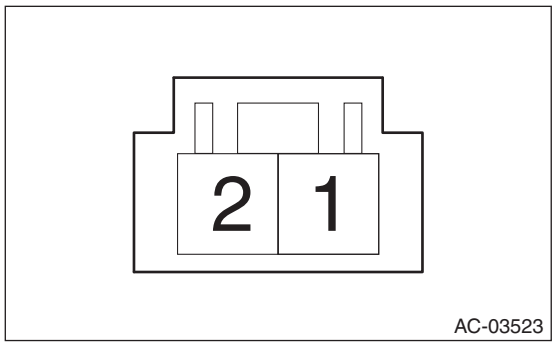


10.Blower Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the hook, and remove the under cover assembly - passenger.

3) Remove the blower motor.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the blower motor.

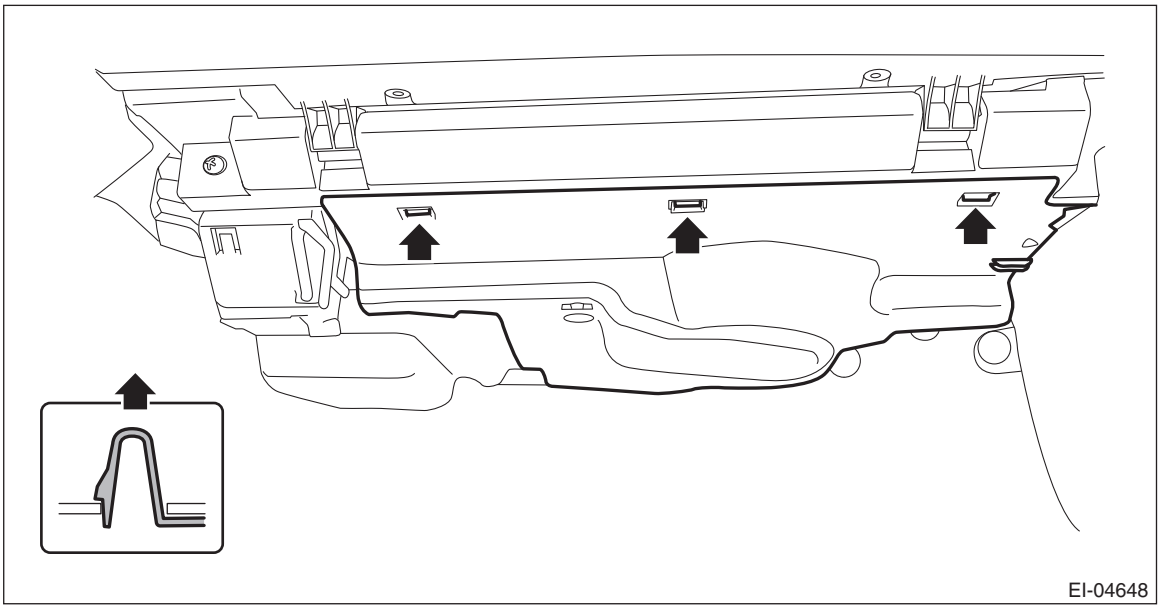


B: INSTALLATION

1) Install the blower motor.
2) Install the under cover assembly - passenger.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

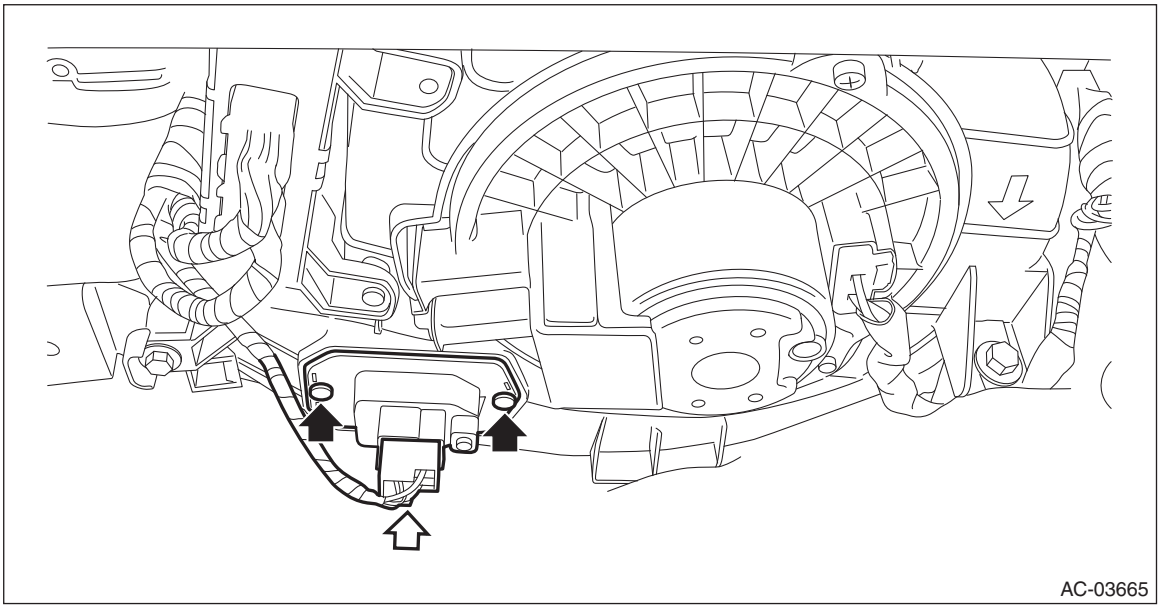
C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
2 (+) — 1 (–)	Apply battery voltage.	Rotation

2) If the blower motor does not operate normally, replace the blower motor.

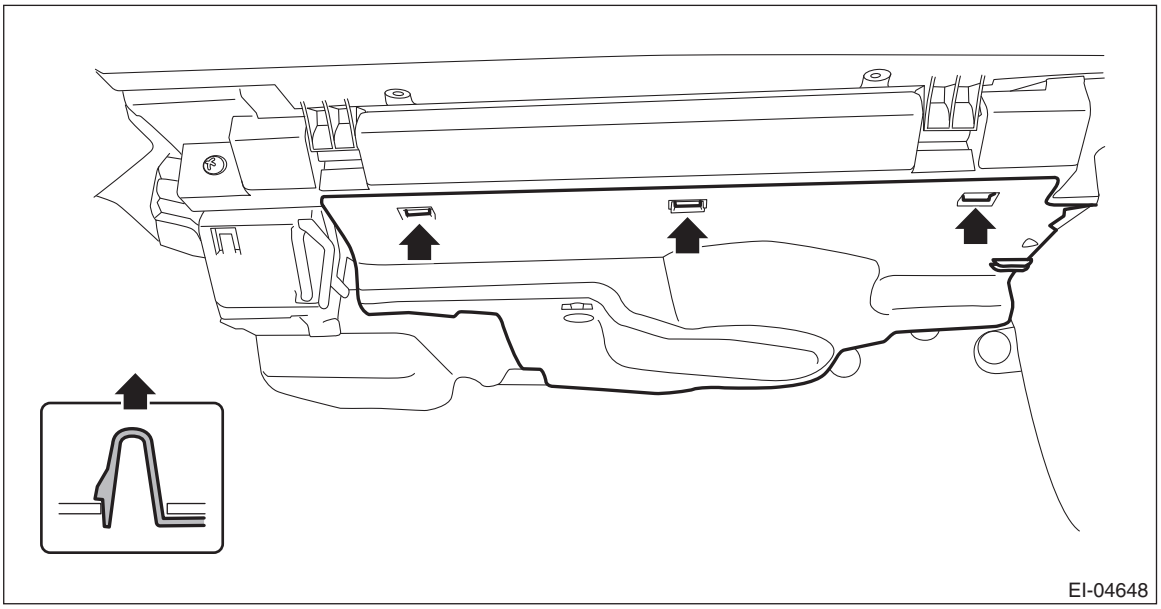


11.Power Transistor (Auto A/C Model)

A: REMOVAL

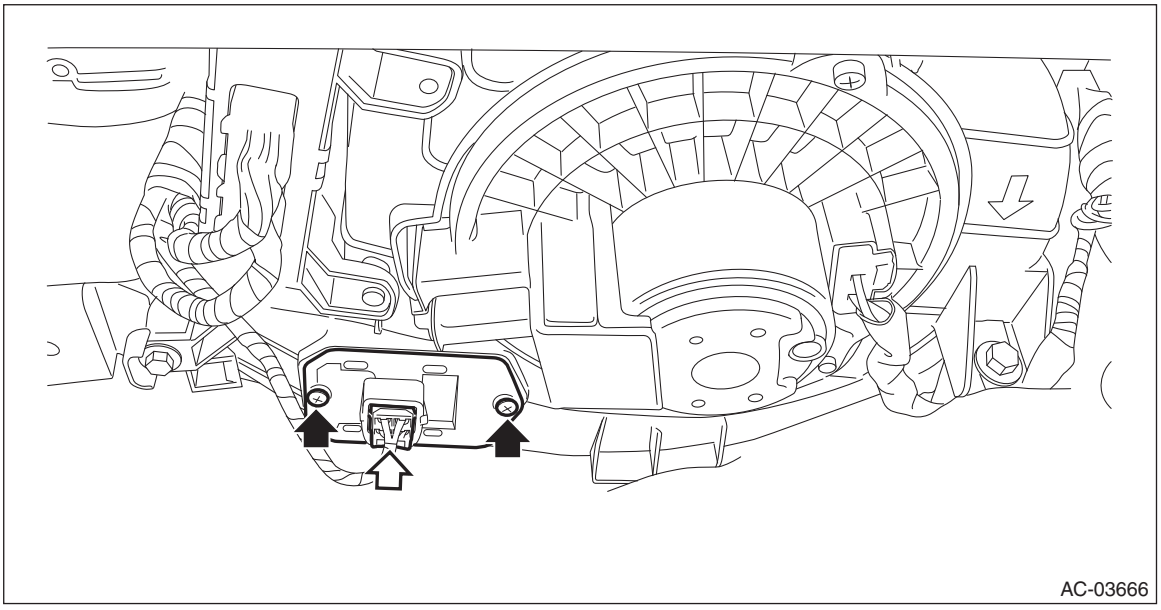
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the hook, and remove the under cover assembly - passenger.

3) Remove the power transistor.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the power transistor.



B: INSTALLATION

1) Install the power transistor.
2) Install the under cover assembly - passenger.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

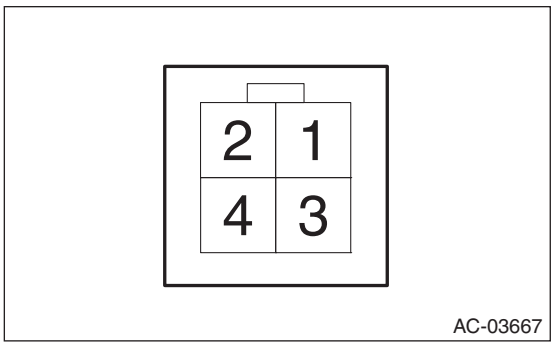


12.Blower Resistor (Manual A/C Model)

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the hook, and remove the under cover assembly - passenger.

3) Remove the blower resistor.
   (1) Disconnect the connector.
   (2) Remove the screw and remove the blower resistor.



B: INSTALLATION

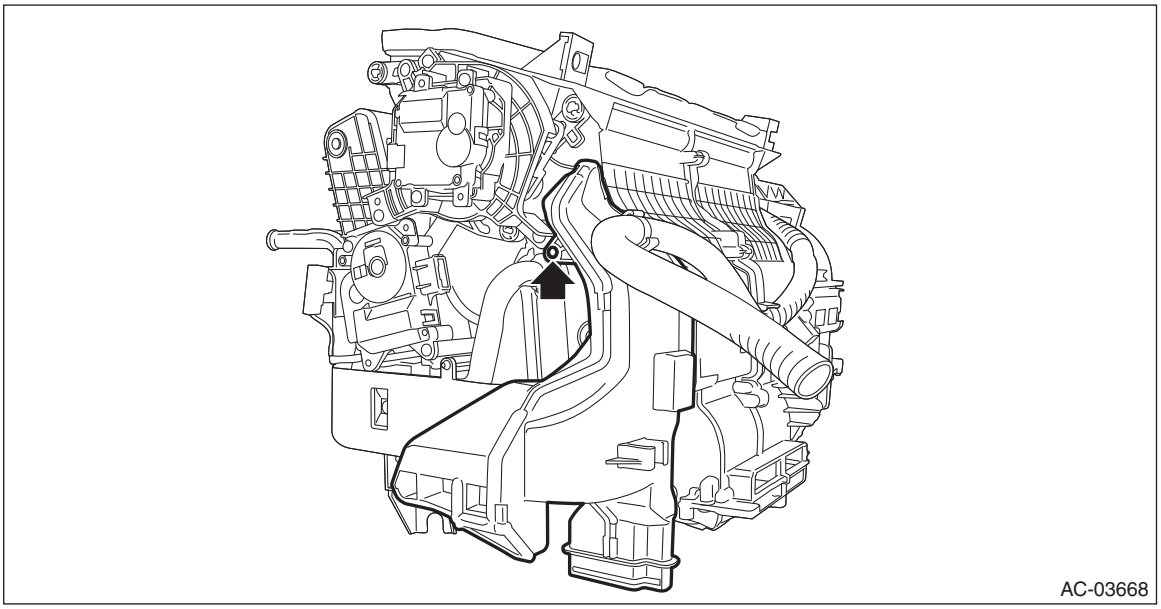
1) Install the blower resistor.
2) Install the under cover assembly - passenger.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

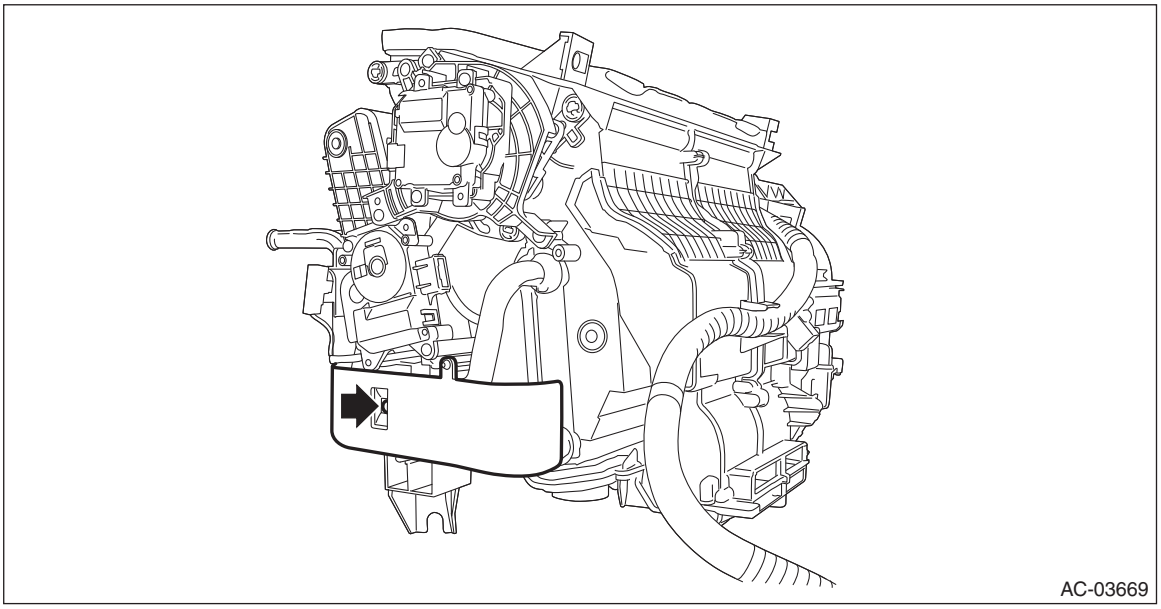
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
4 — 2	Always	Approx. 0.44 Ω
4 — 3		Approx. 1.12 Ω
4 — 1		Approx. 2.92 Ω



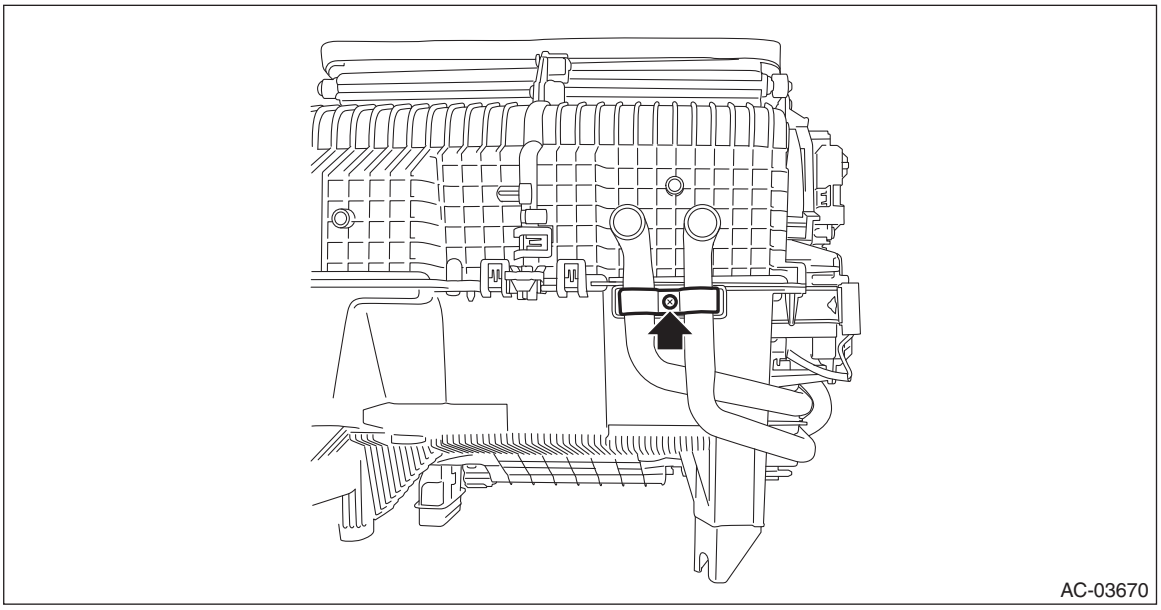
2) Replace the blower resistor if the inspection result is not within the standard value.

13.Heater Core



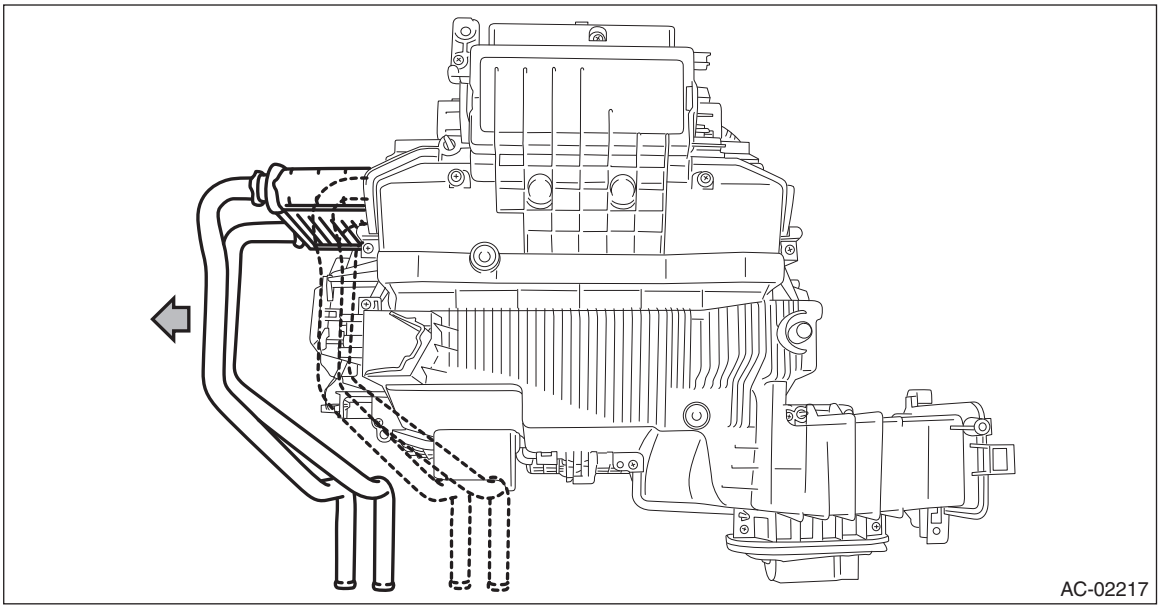
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater and cooling unit assembly. <Ref. to AC-58, REMOVAL, Heater and Cooling Unit.>
3) Remove the heater core.
(1) Remove the screws, and remove the duct - foot driver.

AC-03668



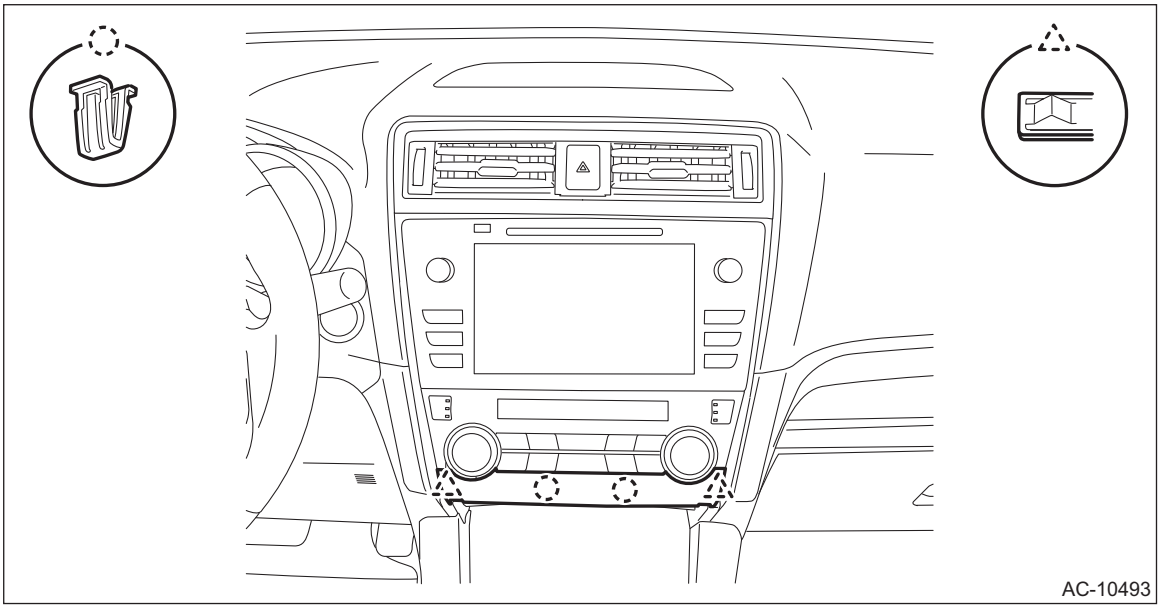
(2) Remove the screw and detach the heater pipe cover.

AC-03669

(3) Remove the screw and remove the heater pipe clamp.

(4) Remove the heater core.

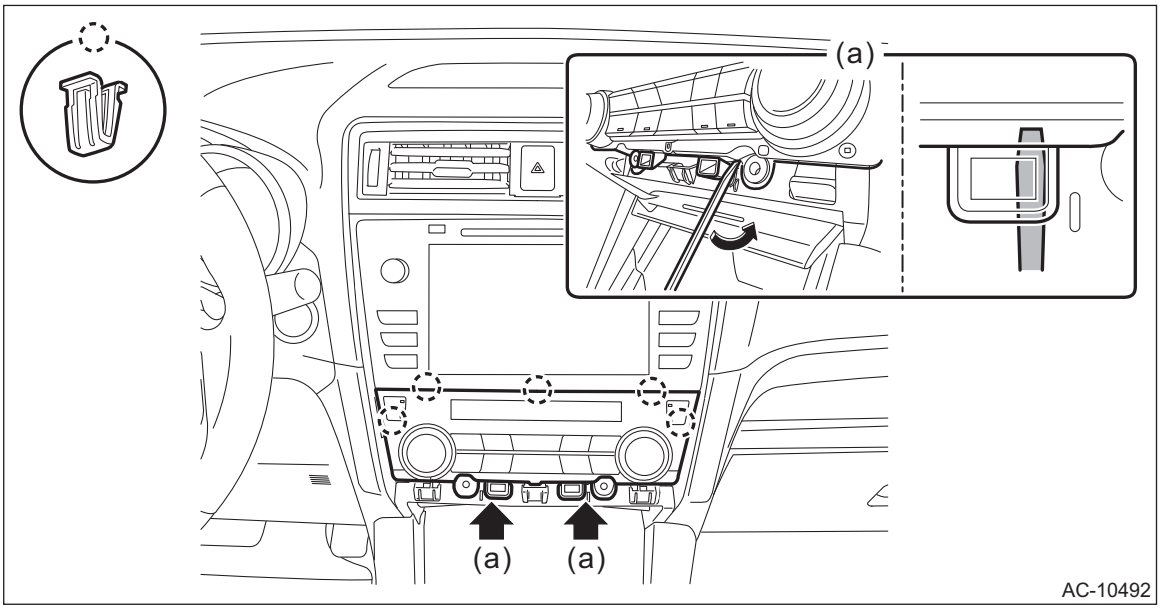
B: INSTALLATION



CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace O-rings and pipe clamps with new parts and install securely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Attach the heater core.
   (1) Install the heater pipe clamp.
   (2) Install the heater pipe cover.
   (3) Install the duct - foot driver.
2) Install the heater and cooling unit assembly. <Ref. to AC-61, INSTALLATION, Heater and Cooling Unit.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

14.Control Panel

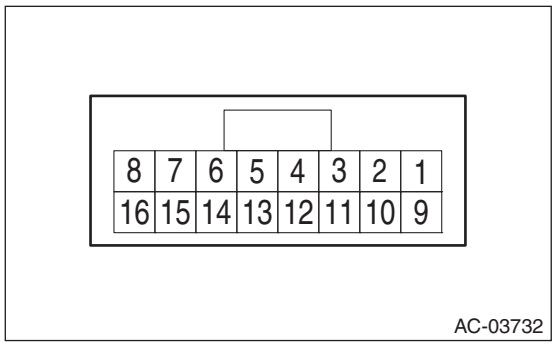


A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly.
   (1) Release the clips and claws, and then remove the panel - heater control.

   (2) Release the screws and clips, then detach the heater control assembly.

CAUTION:
• Insert a flat tip screwdriver wrapped with a protection tape into the position (a) shown in the figure, and move it in the arrow direction to remove the clip. When both clips are removed, pull out the heater control assembly by hand inserted through the space.
• Be careful not to damage the clips and the control panel.

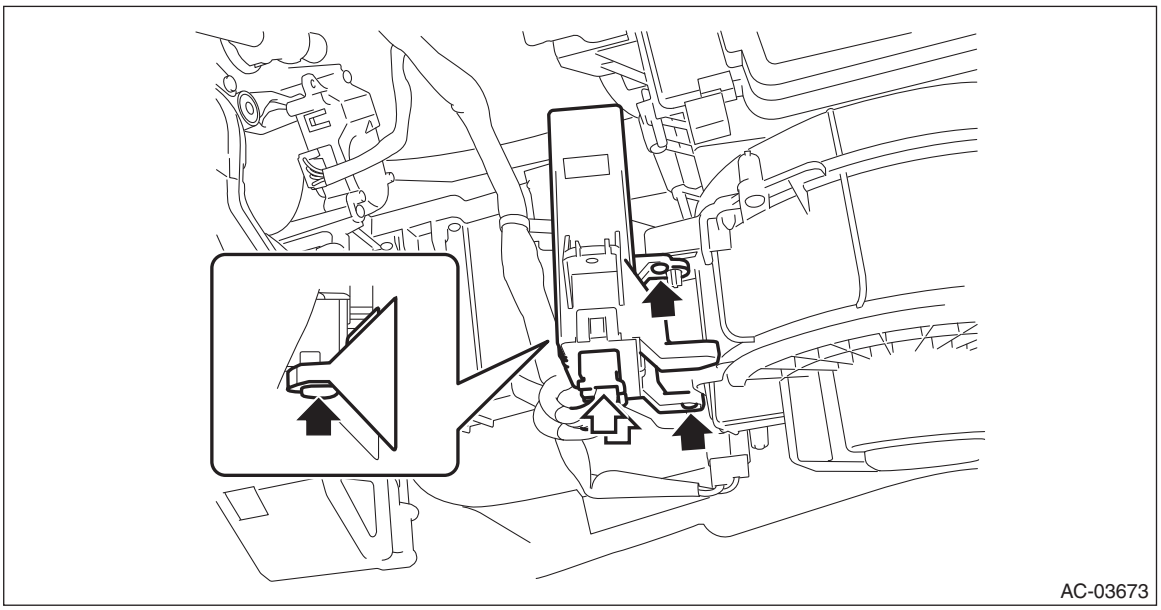


B: INSTALLATION

1) Install the heater control assembly.
2) Install the panel - heater control.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the illumination operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
2 (+) — 6 (–)	Apply battery voltage.	Light ON

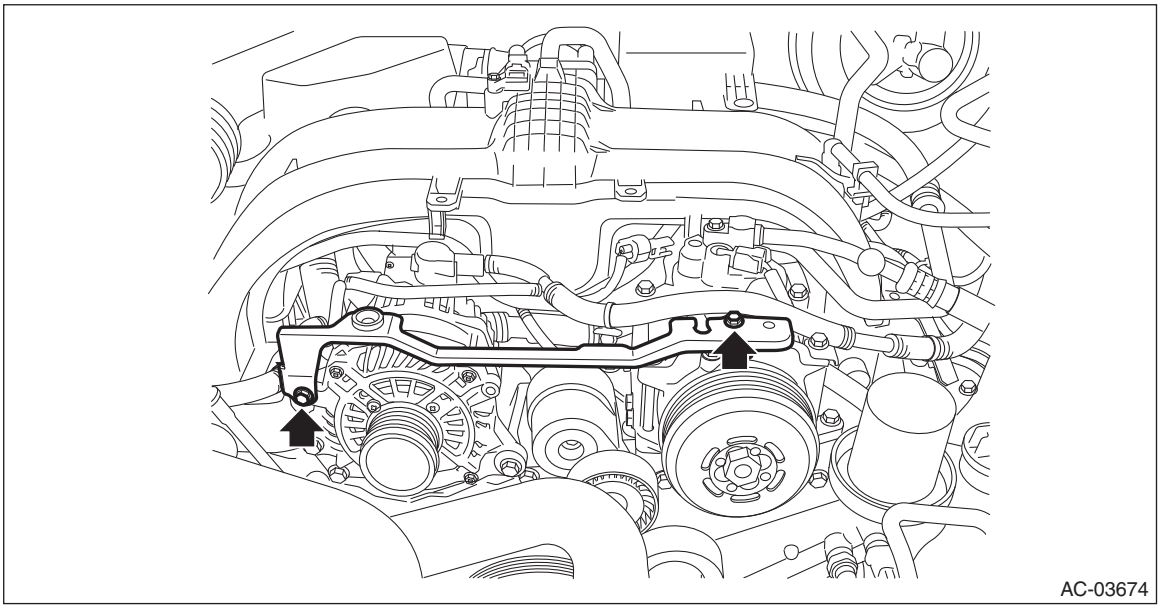
2) If it does not operate normally, replace the heater control assembly.

15.Control Unit

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the pocket assembly and the back panel - pocket. <Ref. to EI-77, REMOVAL, Glove Box.>
3) Remove the control module.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the control module.

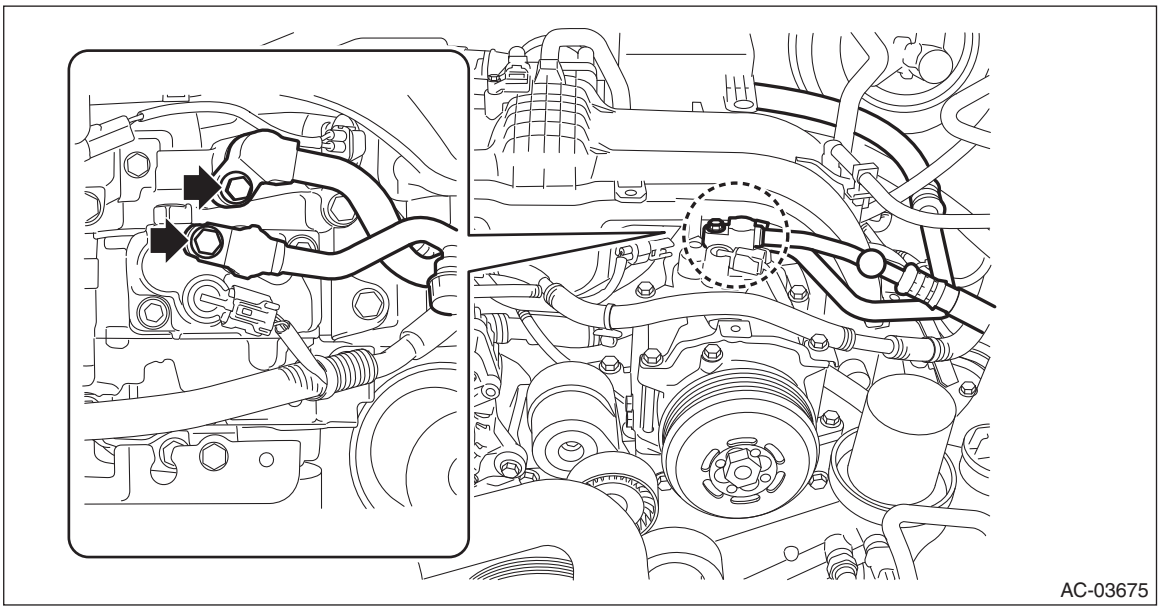
B: INSTALLATION



1) Install the control module.
2) Install the pocket assembly and the back panel - pocket.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

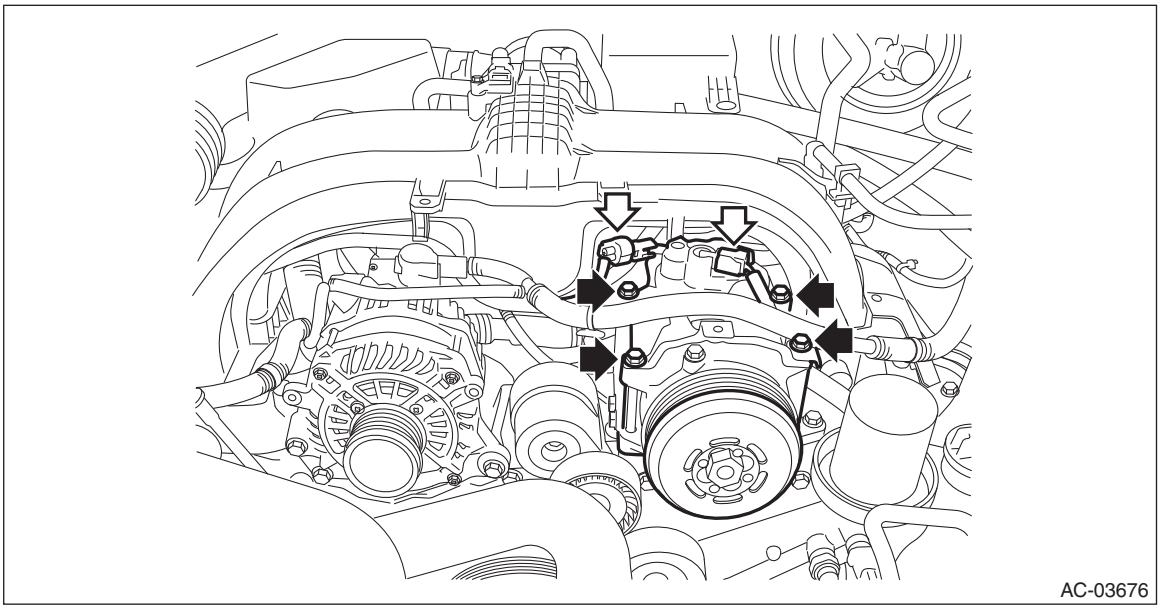
16.Compressor

A: REMOVAL



1. H4 MODEL

1) Perform compressor oil return operation. <Ref. to AC-36, PROCEDURE, Compressor Oil.>
2) Turn the A/C switch to OFF and stop the engine.
3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the V-belts. <Ref. to ME(H4DO)-70, REMOVAL, V-belt.>
6) Remove the bolts and remove the V-belt cover bracket.

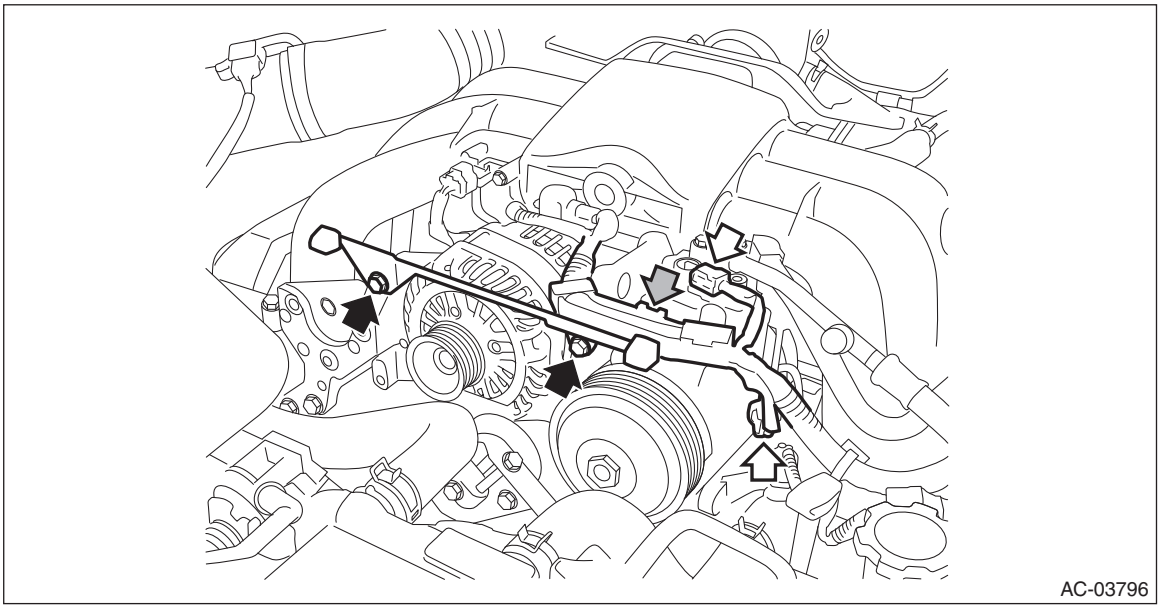


AC-03674

7) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

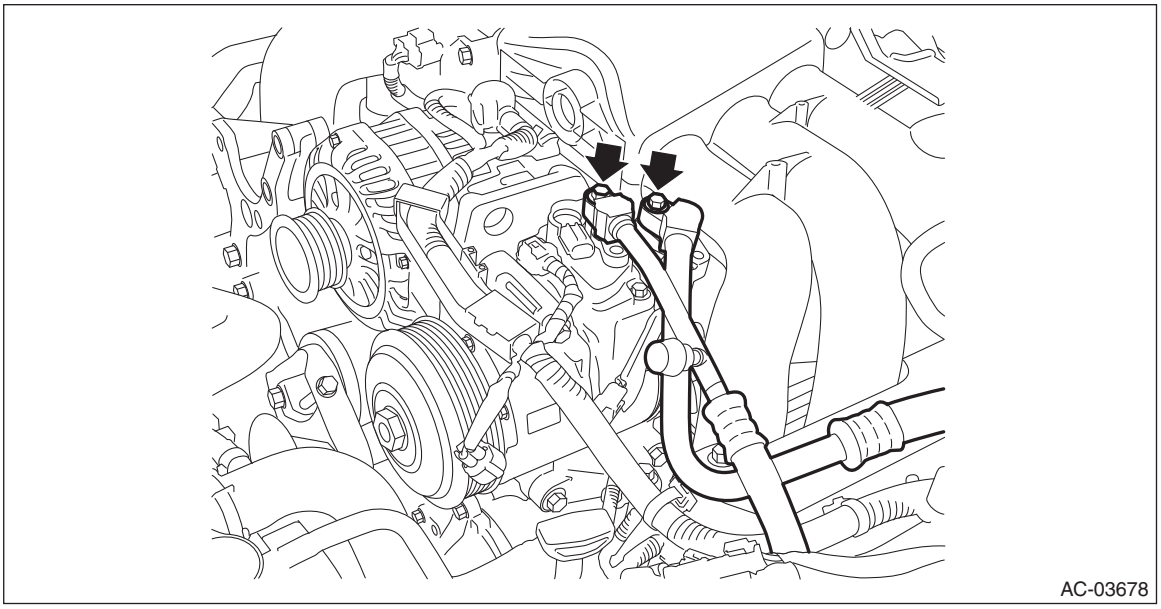
CAUTION:
Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.

AC-03675



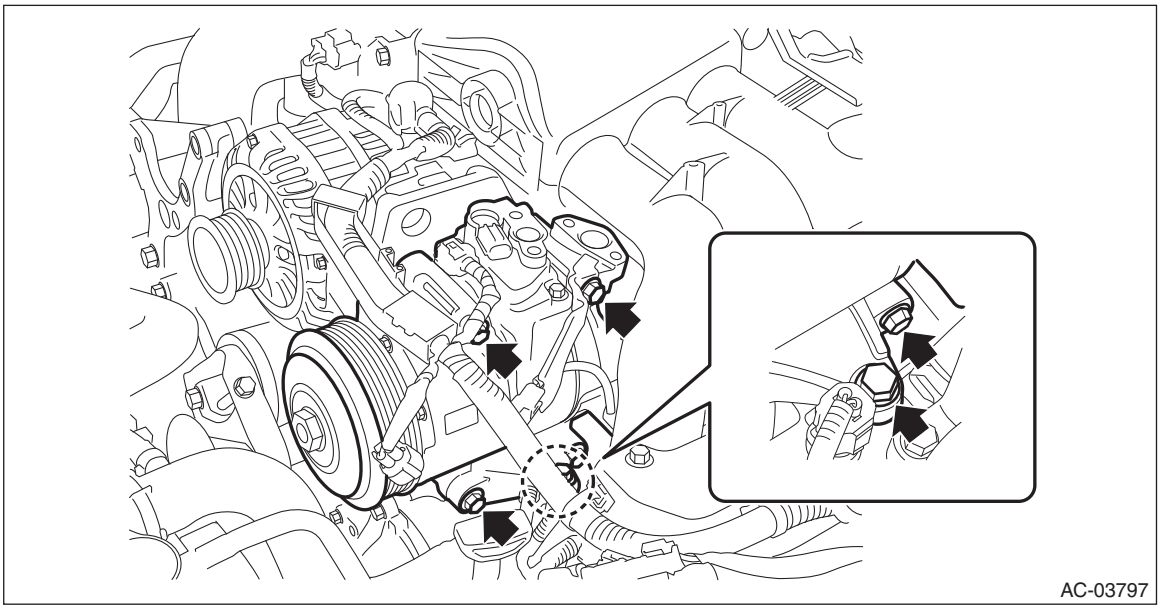
8) Remove the bolts and connector, and remove the compressor assembly.

NOTE:
Leave the bracket on the harness side.



2. H6 MODEL

1) Perform compressor oil return operation. <Ref. to AC-36, PROCEDURE, Compressor Oil.>
2) Turn the A/C switch to OFF and stop the engine.
3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the V-belts. <Ref. to ME(H6DO)-84, REMOVAL, V-belt.>
6) Remove the collector cover bracket.
   (1) Disconnect the connector, and detach the harness clamp.
   (2) Remove the bolts and then remove the collector cover bracket.



7) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

CAUTION:
Seal the disconnected hose and engaging part of compressor assembly with a plug or vinyl tape to prevent foreign matter from entering.

AC-03678

8) Remove the bolts and remove the compressor assembly.

AC-03797

B: INSTALLATION

CAUTION:
• Replace the O-rings on the hose - pressure suction and the hose - pressure discharge with new parts, and apply compressor oil.
• If the compressor assembly is replaced, adjust the amount of the compressor oil. <Ref. to AC-36, ADJUSTMENT, Compressor Oil.>
• After installing the compressor, do not start the engine until the A/C system is charged with refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.

1) Install the compressor assembly.

NOTE:
Tighten the compressor assembly for H4 model in the numerical order as shown in the figure. <Ref. to AC-11, COMPRESSOR, COMPONENT, General Description.>

Tightening torque:
H4 model: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
H6 model: 26.5 N·m (2.7 kgf-m, 19.5 ft-lb)

2) Install the hose - pressure suction and the hose - pressure discharge.

Tightening torque:
10 N·m (1 kgf-m, 7.4 ft-lb)

3) Install the V-belt cover bracket. (H4 model)

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

4) Install the collector cover bracket. (H6 model) <Ref. to SC(H6DO)-35, INSTALLATION, Generator.>
5) Install the V-belts.
- H4 model: <Ref. to ME(H4DO)-71, INSTALLATION, V-belt.>
- H6 model: <Ref. to ME(H6DO)-85, INSTALLATION, V-belt.>

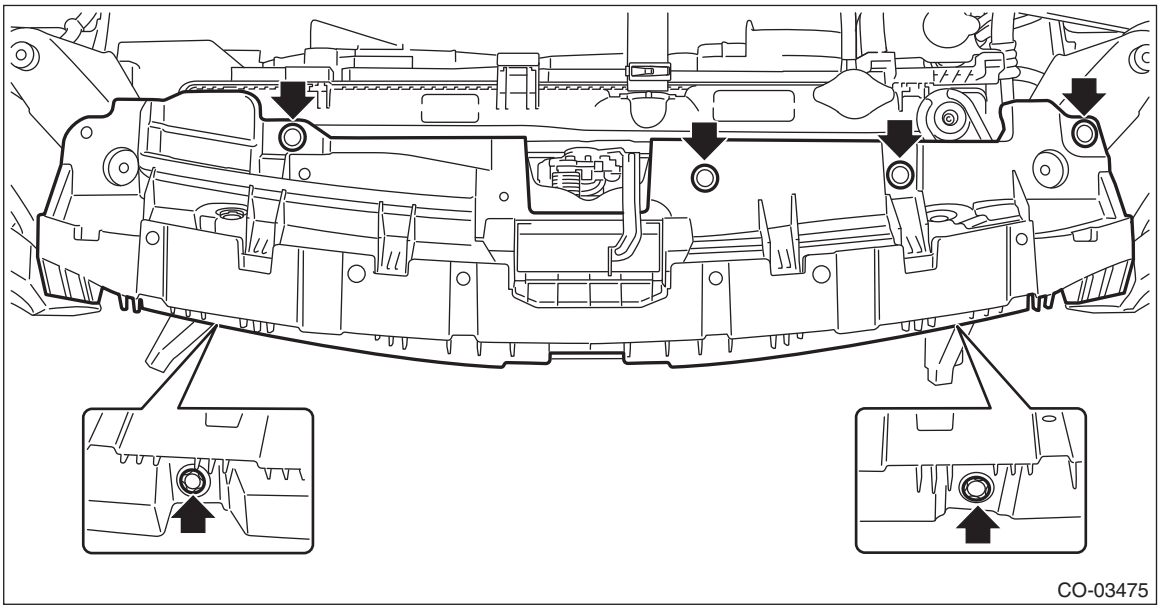
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>
8) After installing the compressor assembly, perform a break-in operation according to the following steps.

NOTE:
Do not increase the engine speed to and above 4,000 r/min unless the break-in operation finishes.

(1) Check that all connectors are locked securely.
(2) Reset the control module. (Disconnect and then connect the connector)
(3) Attach a delivery (test) mode fuse to the main fuse box.
(4) Set the fan dial to MAX (4th position). (manual A/C model)
(5) Connect the Subaru Select Monitor.
(6) On «Start» display, select «Diagnosis».
(7) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
(8) On «Main Menu» display, select «Each System».
(9) On «Select System» display, select «Air Conditioner» and select «Enter».
(10) On «Select Function» display, select «Work Support».
(11) Select «Break-in variable compressor drive, finish status» mode from the work support list, and display «Variable compressor break-in drive finish status» by following the procedure.
(12) Start and idle the engine at or below 1,800 r/min. (The compressor operation is automatically changed to the break-in drive mode.)
(13) When «Break-in variable compressor drive, finish status» changes from «incomplete» → «Finished», stop the engine.

CAUTION:
If the engine may have been started with no refrigerant charge, check for any diagnosis code (DTC) using Subaru Select Monitor. If the code B14A8 (REFRIGERANT NOT SEALED DRIVE ERROR) is output, replace the compressor assembly.

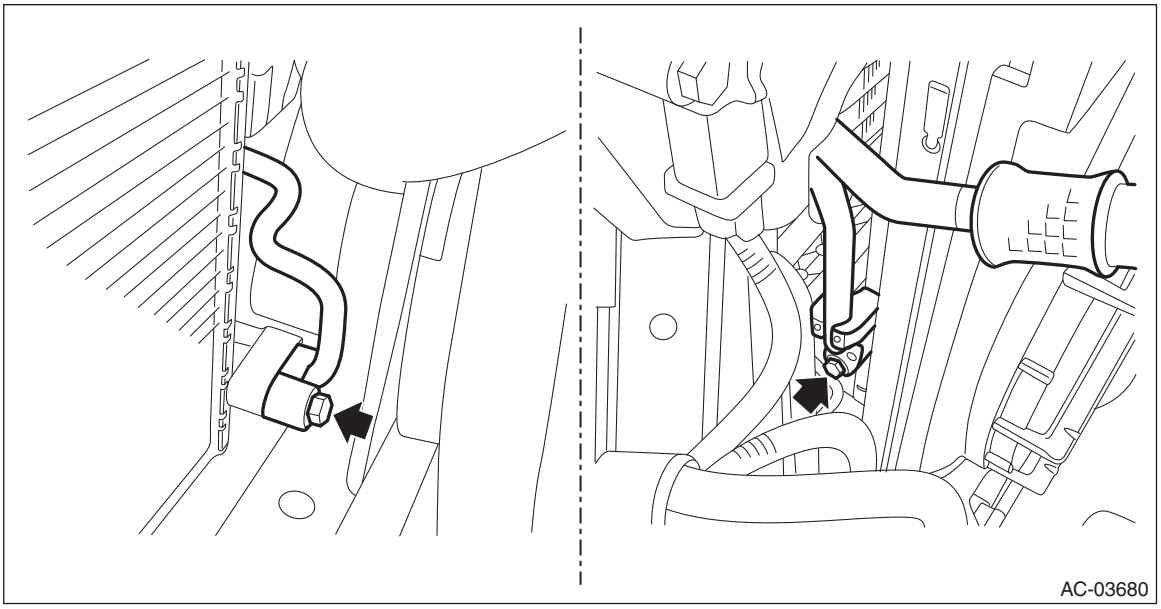
(14) Remove the delivery (test) mode fuse from the main fuse box.
(15) The break-in operation finishes.



17.Condenser

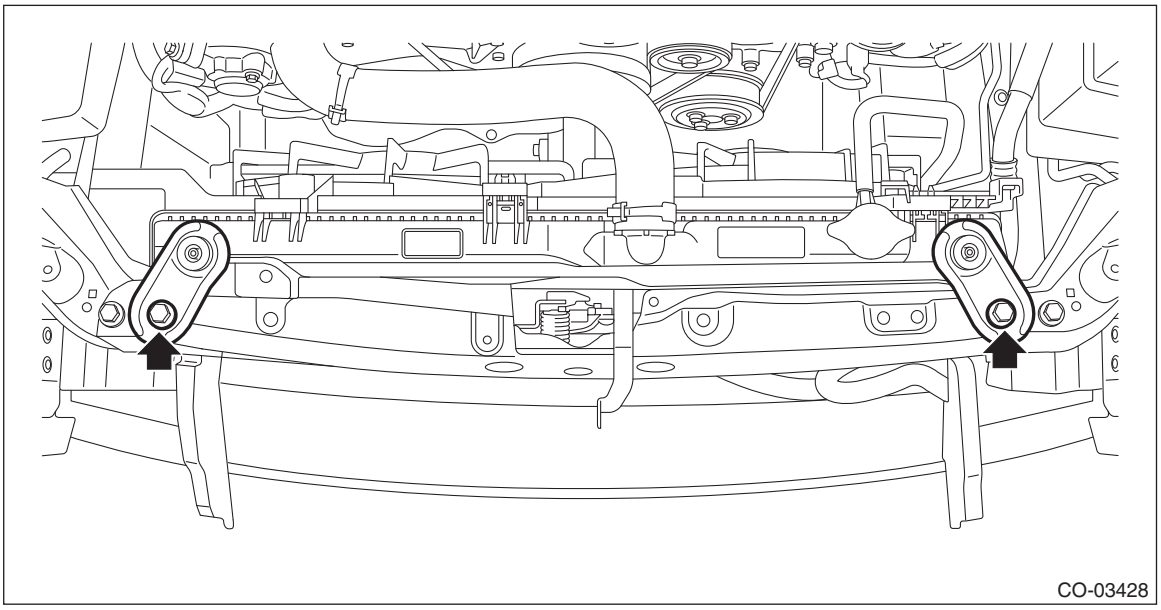
A: REMOVAL

1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the air intake duct.
- H4 model: <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
- H6 model: <Ref. to IN(H6DO)-12, REMOVAL, Air Intake Duct.>



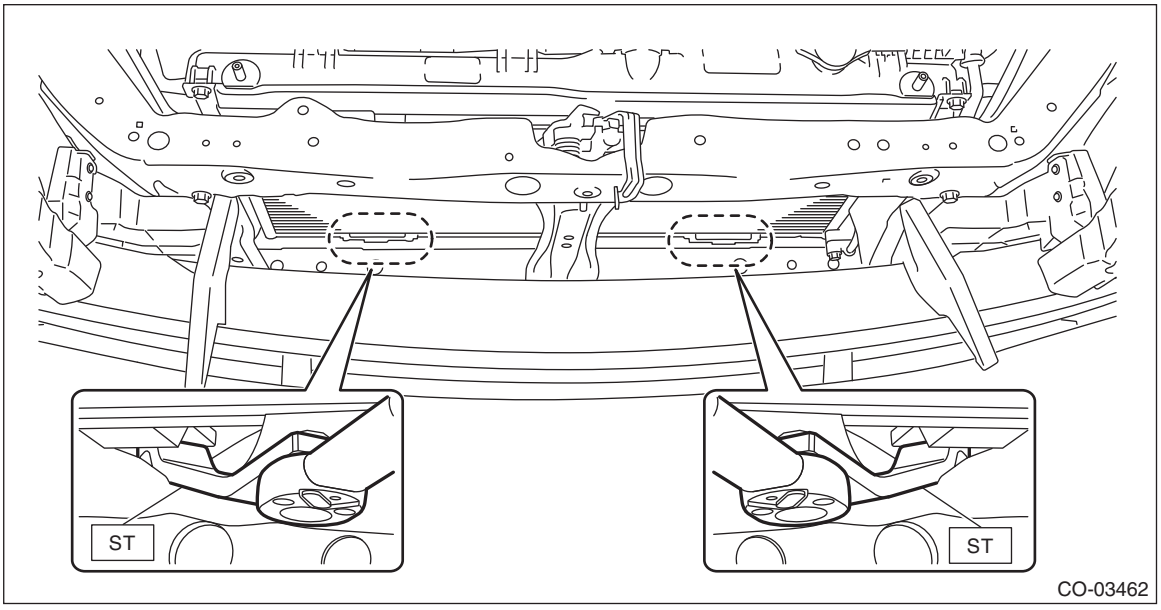
4) Remove the reservoir tank.
- H4 model: <Ref. to CO(H4DO)-62, REMOVAL, Reservoir Tank.>
- H6 model: <Ref. to CO(H6DO)-47, REMOVAL, Reservoir Tank.>

5) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>
6) Remove the active grille shutter. (H4 model) <Ref. to CO(H4DO)-64, REMOVAL, Active Grille Shutter.>
7) Remove the clip, and remove the bracket - grille.

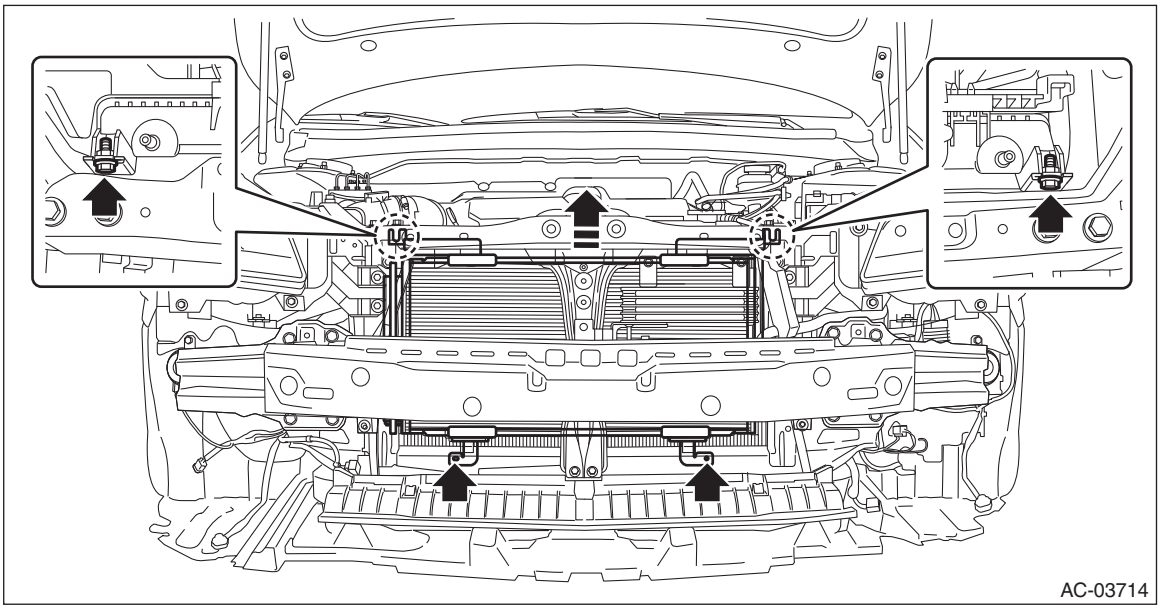


8) Remove the bolt, and detach the hose - pressure discharge and the pipe - evaporator cooling.

CAUTION:
Seal the disconnected hose, pipe and engaging part of condenser assembly with a plug or vinyl tape to prevent foreign matter from entering.



9) Remove the bolts and remove the radiator upper bracket.



10) Remove the condenser assembly - air conditioner.
(1) Remove the bolts at the bottom of the condenser using the ST.

Preparation tool:
ST: SPECIAL TOOL CONDENSER (73099SG000)

(2) Remove the bolts at the top of the condenser, and remove the condenser assembly - air conditioner.

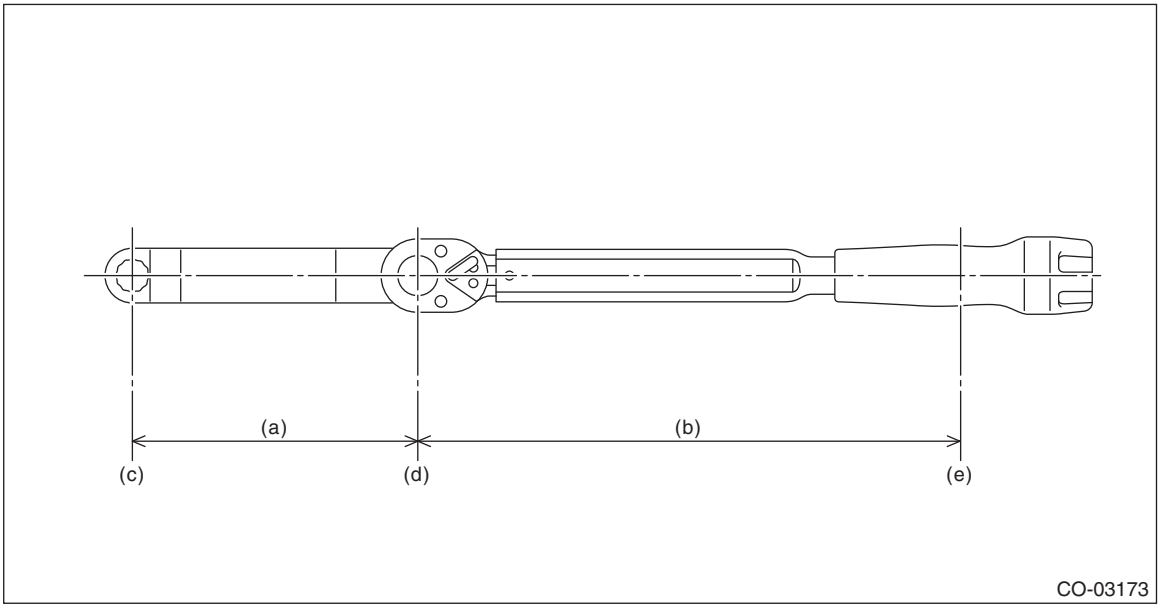
CAUTION:
• Push the radiator to the engine side, and pull it out through the space between the radiator and the radiator panel.
• Be careful not to damage the condenser and radiator fin. If a damaged fin is found, repair it using a thin screwdriver.

B: INSTALLATION

CAUTION:
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• If the condenser has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-36, ADJUSTMENT, Compressor Oil.>
• Replace the O-rings with new parts, and then apply compressor oil.

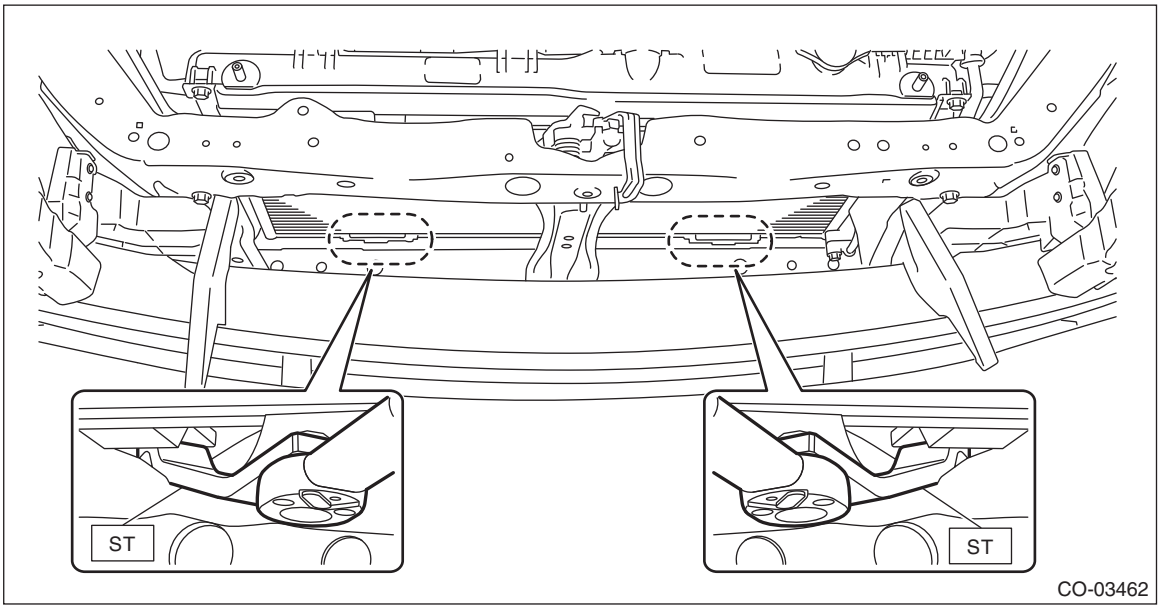
1) Install the condenser assembly - air conditioner.

NOTE:
To tighten the bolts at the bottom of the condenser, use the ST.



Preparation tool:
ST: SPECIAL TOOL CONDENSER (73099SG000)

Tightening torque:



Calculation formula
T = L/(100 mm (3.94 in) + L) × 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

T: Tightening torque
L: Effective length of torque wrench

NOTE:
If the effective length of the torque wrench used is unknown, consult the manufacturer of the torque wrench.

(a) Effective length of the ST
(b) Effective length of the torque wrench
(c) Center of drive angle of the ST
(d) Center of drive angle of the torque wrench
(e) Center of the position where a force is applied by hand

2) Install the radiator upper brackets.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)
3) Install the hose - pressure discharge and the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Attach the grille bracket.
5) Install the active grille shutter. (H4 model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
7) Install the reservoir tank.

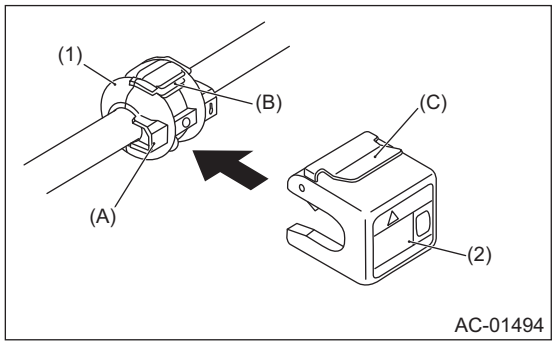
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8) Install the air intake duct.
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
10) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.
2) If any oil leak is found from the condenser, replace the condenser.

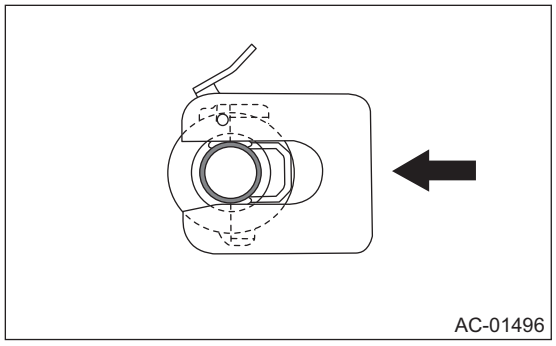
18.Heater and Cooling Unit

A: REMOVAL



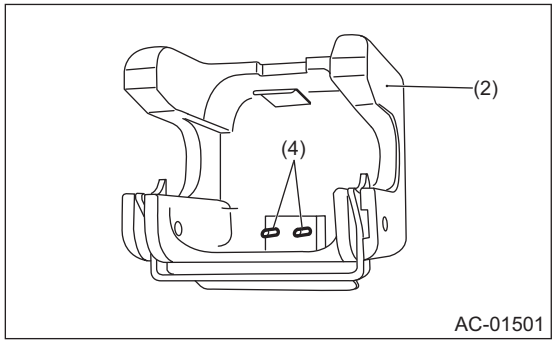
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
3) Drain the coolant from the radiator.
- H4 model: <Ref. to CO(H4DO)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- H6 model: <Ref. to CO(H6DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

4) With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>

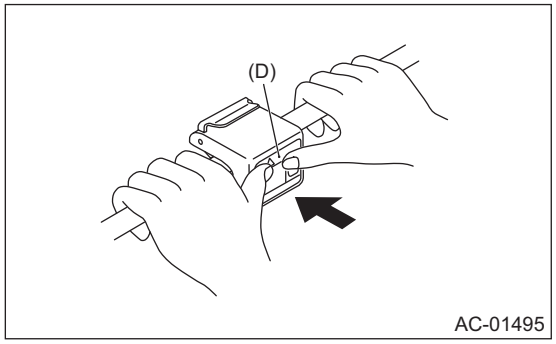


5) Disconnect the hose - pressure suction.

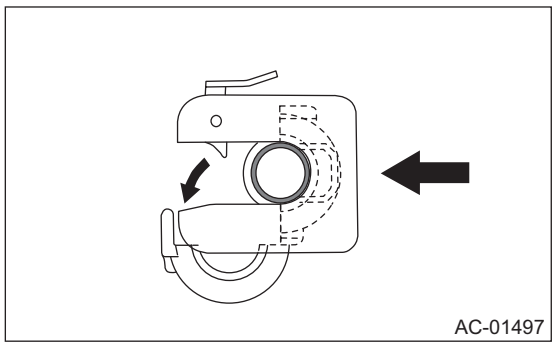
CAUTION:
Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.
(1) Disconnect the quick connector.



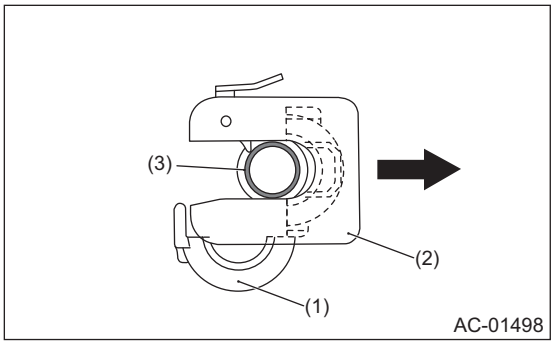
Preparation tool:
ST: SP TL REMOVER PD (73499XA00A)
1. Face collar side (A) of the quick connector (1) to the remover (2), and set lock part (B) on the stopper side (C) of the remover.



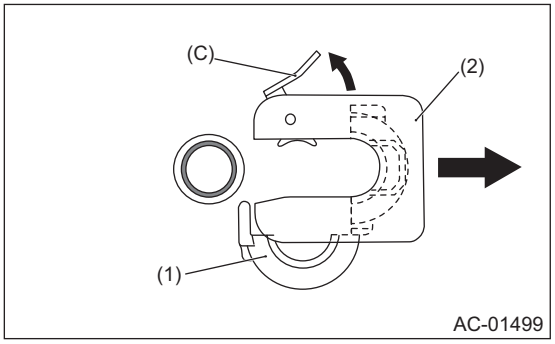
2. Insert the remover.

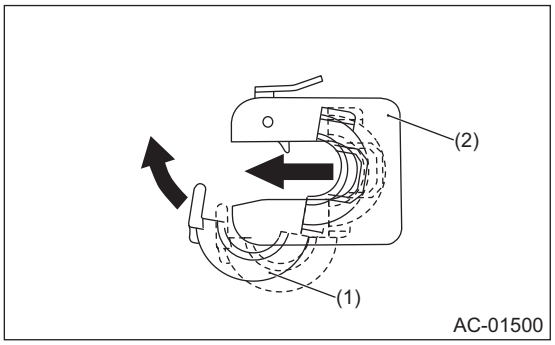


Do not bend the needle (4) in the remover.

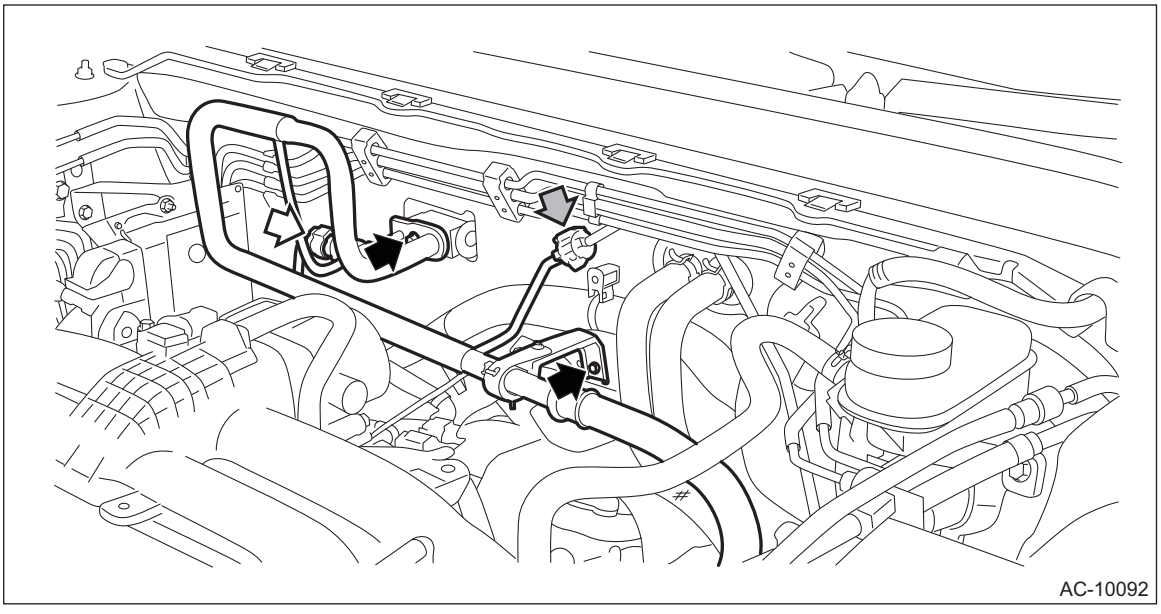


3. With the pipe secured, press the label part (D) of the remover with a thumb. Connector is unlocked and the quick connector opens.

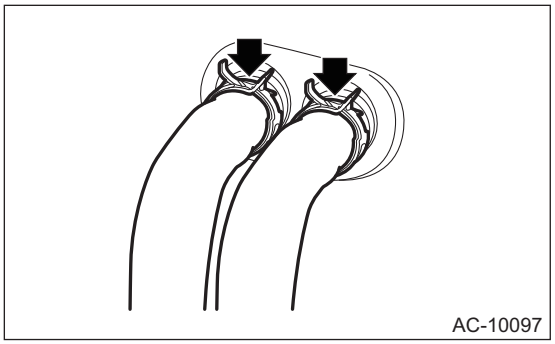




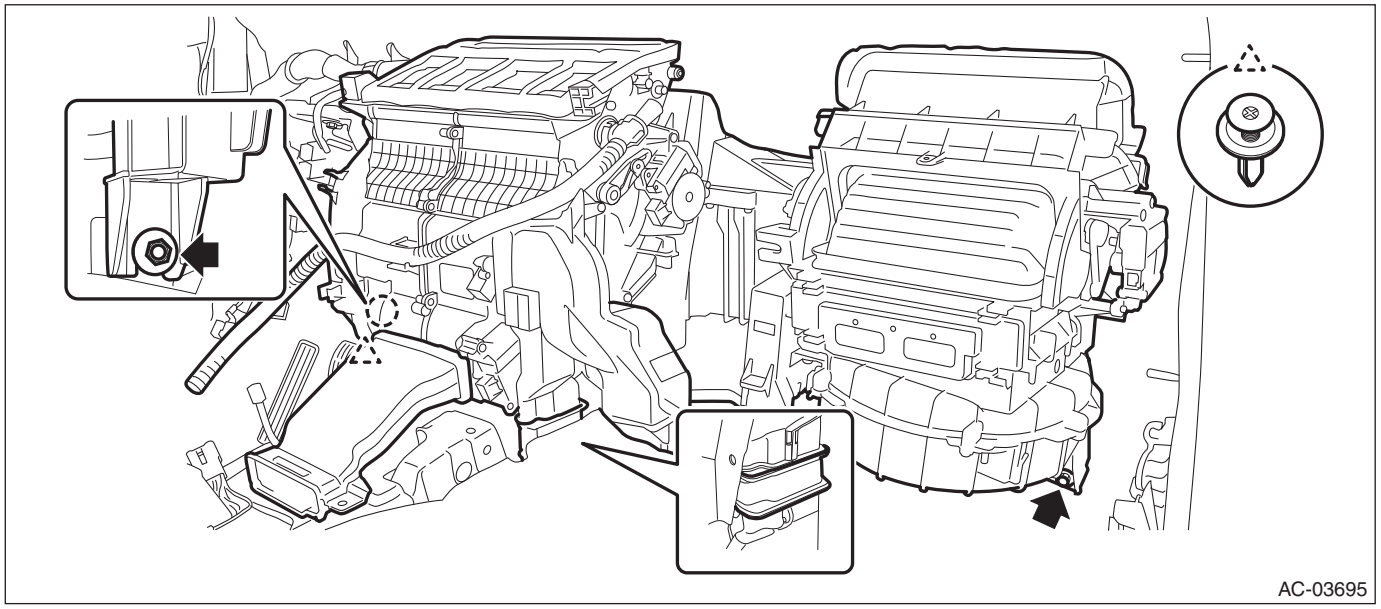
4. Pull the remover (2) and separate the pipe (3) from the quick connector (1).



5. Pull up the stopper (C) and remove the remover (2) and quick connector (1) from the pipe.



6. Disconnect the quick connector (1) from the remover (2).



(2) Disconnect the connector.
(3) Remove the bolts and detach the hose - pressure suction.

6) Loosen the heater hose clamps and detach the hoses.

NOTE:
Put alignment marks to hoses, clamps, etc.
7) Remove the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-82, REMOVAL, Instrument Panel Assembly.>
8) Remove the heater and cooling unit assembly.
(1) Remove the clips, and remove the duct - console front.
(2) Remove the hose - heater drain.
(3) Turn over the floor carpet and remove the slide lock of the duct - rear heater.
(4) Remove the bolt and remove the heater and cooling unit assembly.

9) Remove the blower motor unit assembly. <Ref. to AC-37, REMOVAL, Blower Motor Unit Assembly.>

CAUTION:
• Do not detach the immobilizer control module except when replacing the blower motor unit assembly.
• Replace the air duct cover LWR with a new part when the immobilizer control module is removed. If the air duct cover LWR is reused, screw tightening force is reduced and the immobilizer control module may be detached due to vibration while driving.

B: INSTALLATION

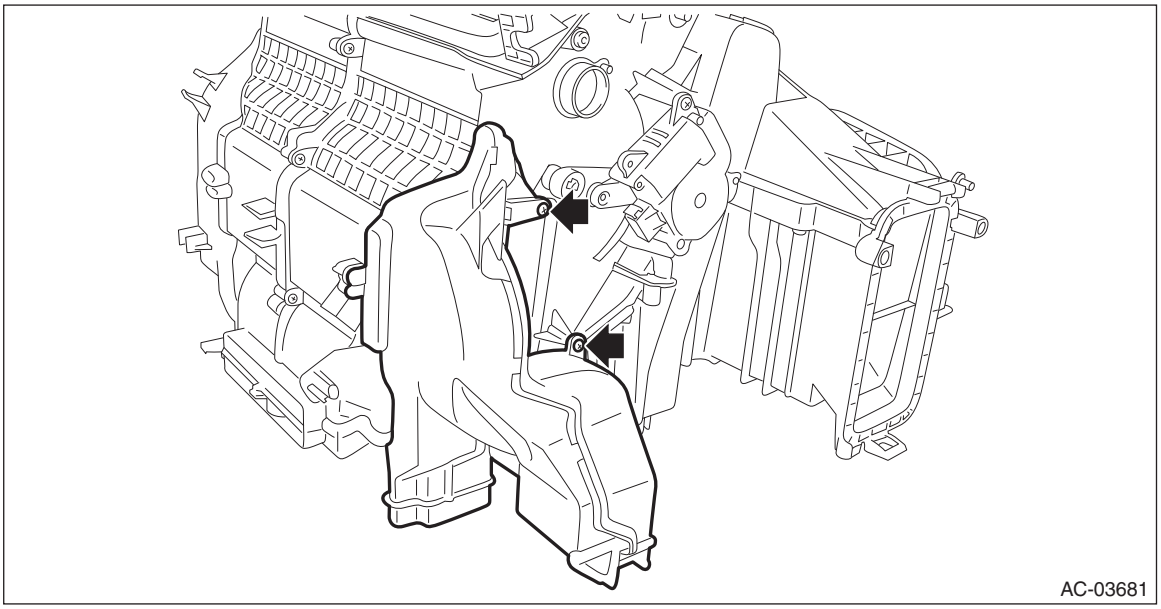
CAUTION:
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• Replace O-rings and pipe clamps with new parts and install securely.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Install the blower motor unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the heater and cooling unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the duct - console front.
4) Install the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-86, INSTALLATION, Instrument Panel Assembly.>
5) Attach the heater hose.
6) Install the hose - pressure suction.

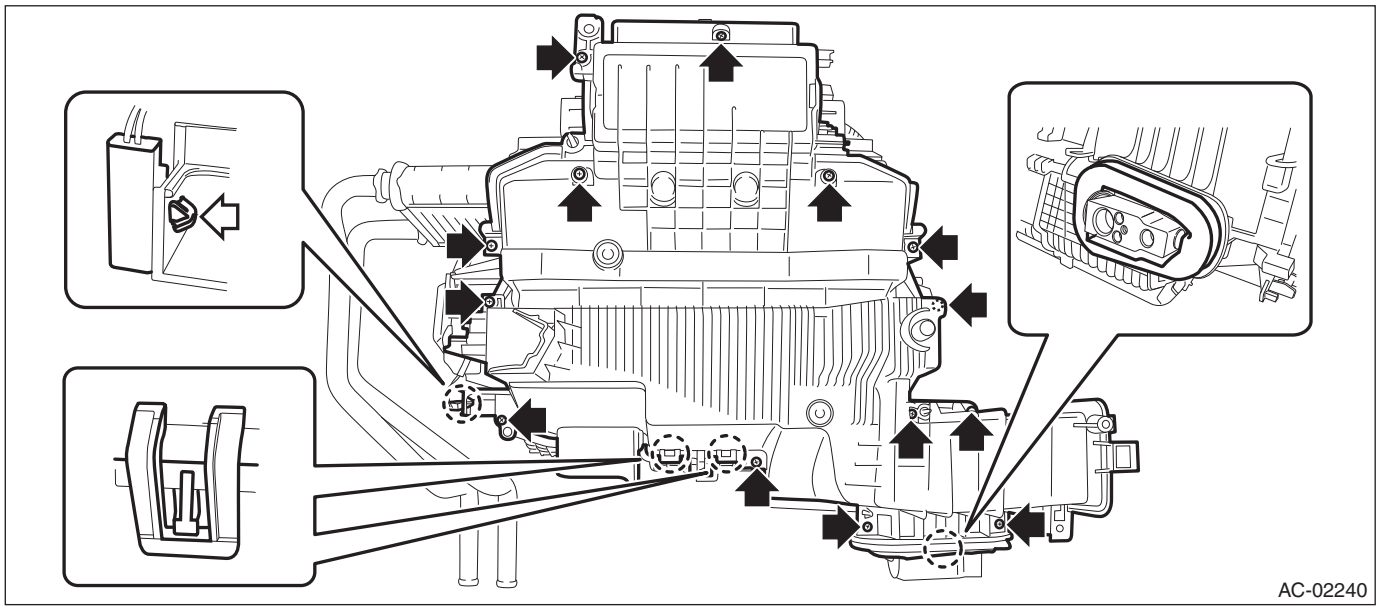
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) Install the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>

8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
9) Fill engine coolant.
- H4 model: <Ref. to CO(H4DO)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- H6 model: <Ref. to CO(H6DO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>



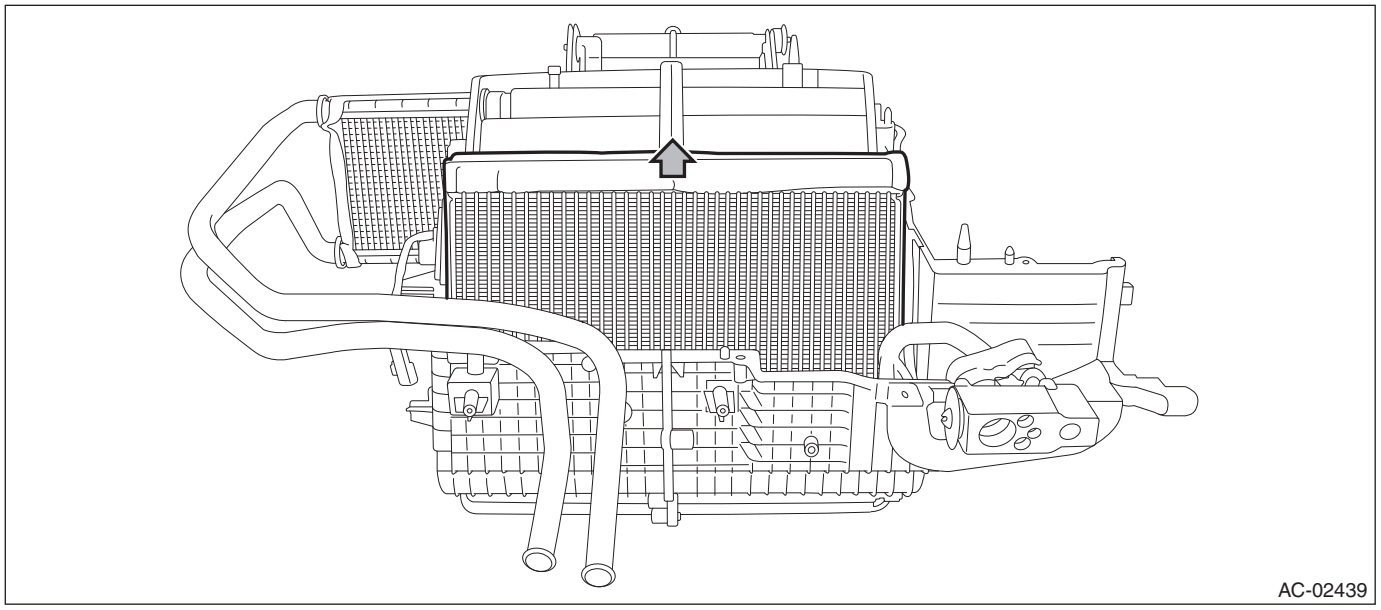
10) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

19.Evaporator



A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater and cooling unit assembly. <Ref. to AC-58, REMOVAL, Heater and Cooling Unit.>
3) Pull out the heater core. <Ref. to AC-44, REMOVAL, Heater Core.>
4) Remove the screws, and remove the duct - foot assist.

AC-03681

5) Remove the heater case lower.
   (1) Remove the clip, and remove the connector.
   (2) Remove the packing.
   (3) Remove the screw and lock, then remove the heater case lower.

AC-02240

6) Remove the evaporator.

7) Remove the expansion valve - cooling. <Ref. to AC-65, REMOVAL, Expansion Valve.>
8) Remove the evaporator sensor. <Ref. to AC-86, REMOVAL, Evaporator Sensor.>

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **If the evaporator has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-36, ADJUSTMENT, Compressor Oil.>**
- **When the evaporator has been replaced, always replace the packing for expansion valve with a new one and apply the compressor oil on it.**
- **Make sure that the water seal packing on the cover attachment area is securely attached.**
- **Replace the O-rings with new parts, and then apply compressor oil.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Install the evaporator sensor to the specified location. <Ref. to AC-86, INSTALLATION, Evaporator Sensor.>
2) Install the expansion valve - cooling.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

3) Install the evaporator.
4) Attach the heater case lower.
5) Install the duct - foot assist.
6) Attach the heater core.
7) Install the heater and cooling unit assembly. <Ref. to AC-61, INSTALLATION, Heater and Cooling Unit.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

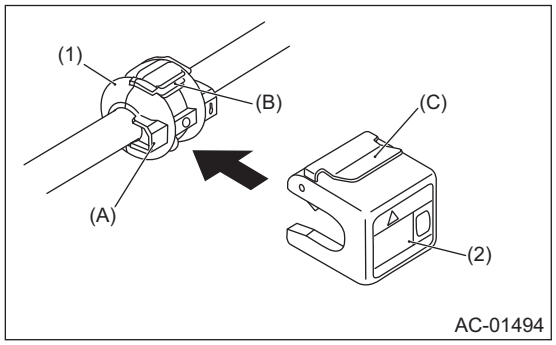
C: INSPECTION

1) Check the evaporator fin for dust. Blow with compressed air or flush fins with water as needed.
2) If any oil leak is found from the evaporator, replace the evaporator.

20.Expansion Valve

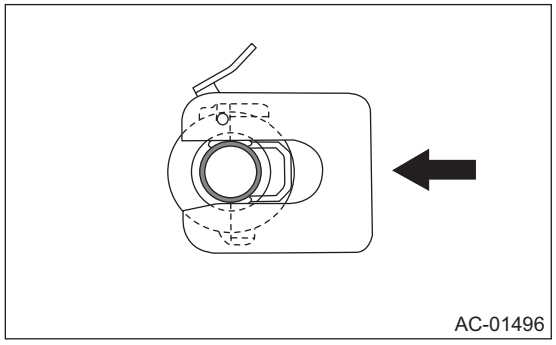
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
3) With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>



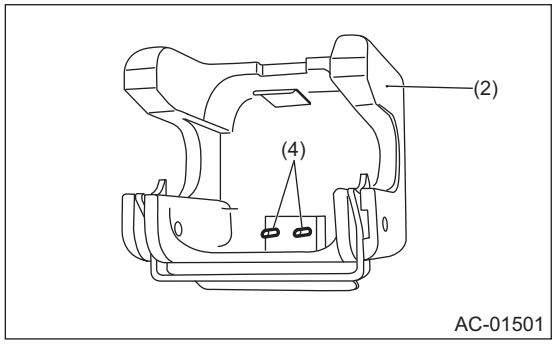
4) Disconnect the hose - pressure suction.

CAUTION:
Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

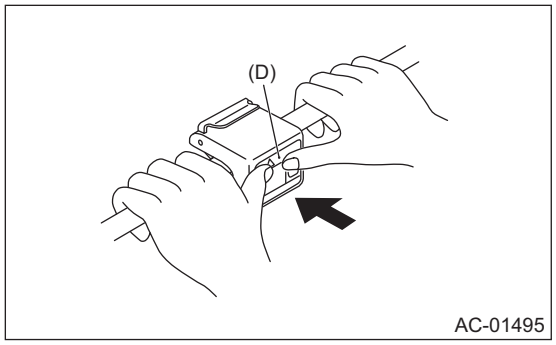


(1) Disconnect the quick connector.

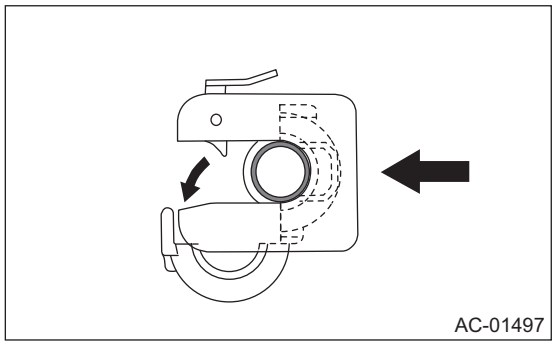
Preparation tool:
ST: SP TL REMOVER PD (73499XA00A)



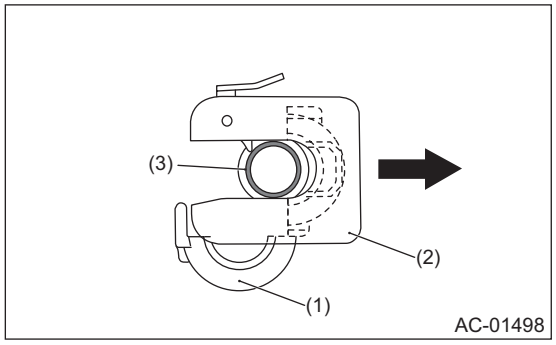
1. Face collar side (A) of the quick connector (1) to the remover (2), and set lock part (B) on the stopper side (C) of the remover.



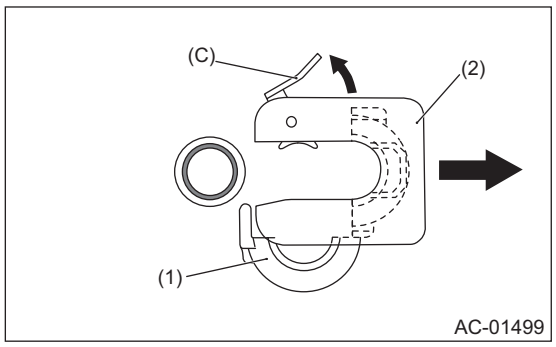
2. Insert the remover.

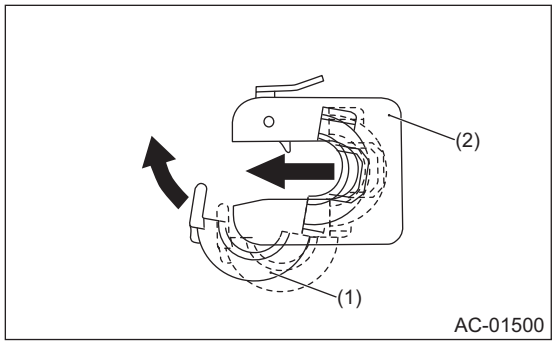


Do not bend the needle (4) in the remover.

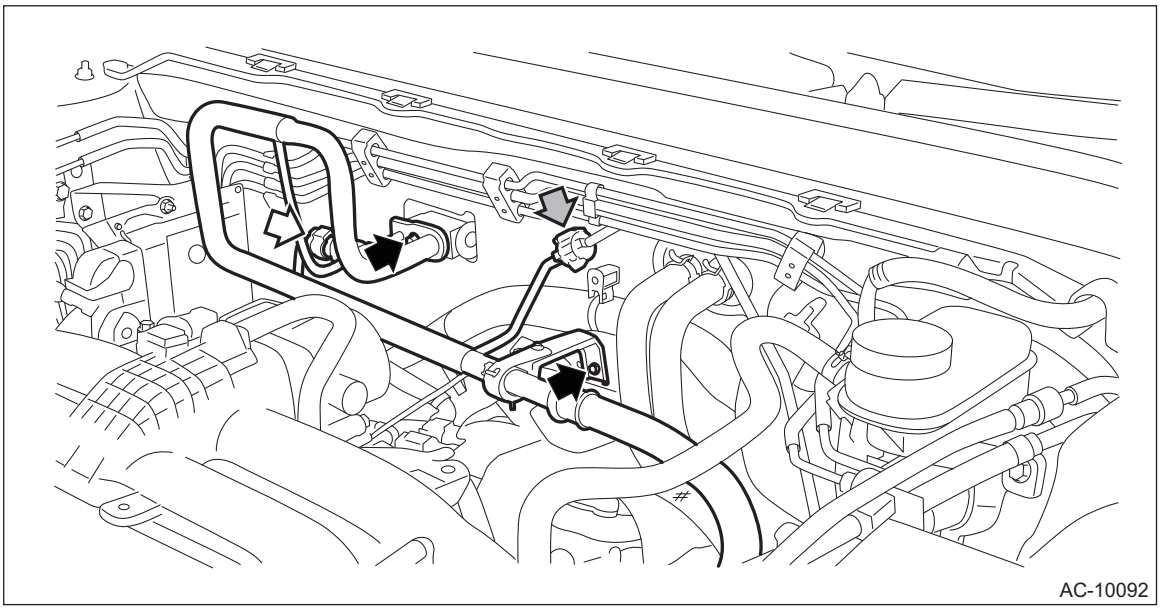


3. With the pipe secured, press the label part (D) of the remover with a thumb. Connector is unlocked and the quick connector opens.



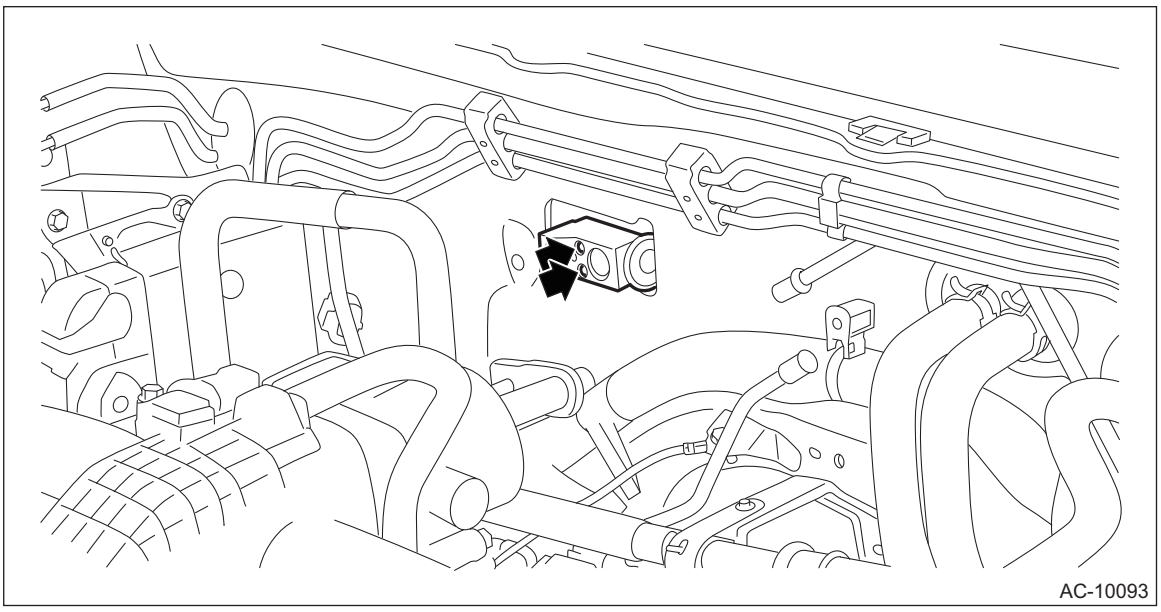


4. Pull the remover (2) and separate the pipe (3) from the quick connector (1).



5. Pull up the stopper (C) and remove the remover (2) and quick connector (1) from the pipe.

6. Disconnect the quick connector (1) from the remover (2).



(2) Disconnect the connector.
(3) Remove the bolts and detach the hose - pressure suction.

5) Remove the bolt, and remove the expansion valve - cooling.

CAUTION:
Seal the pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

Preparation tool:
Hexagon wrench: 4 mm (0.16 in)

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace the gasket and O-rings with new parts, and then apply compressor oil.**

1) Install the expansion valve - cooling.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Install the hose - pressure suction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>

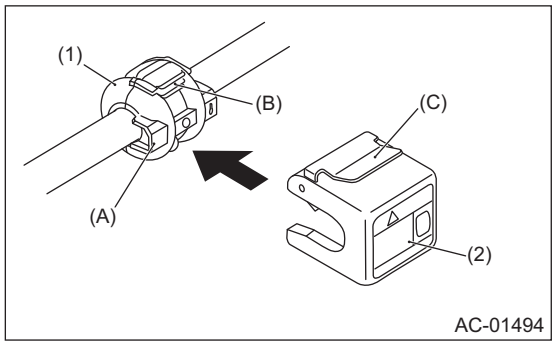
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

21.Hose and Pipe

A: REMOVAL

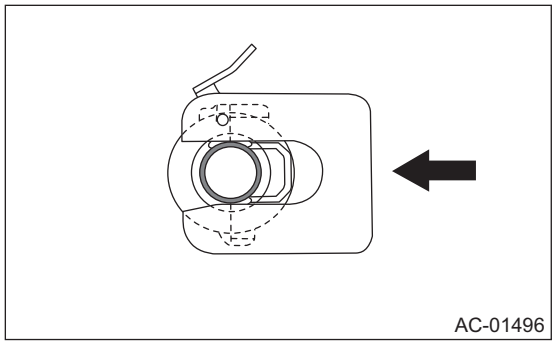
1. LOW-PRESSURE HOSE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
3) With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>



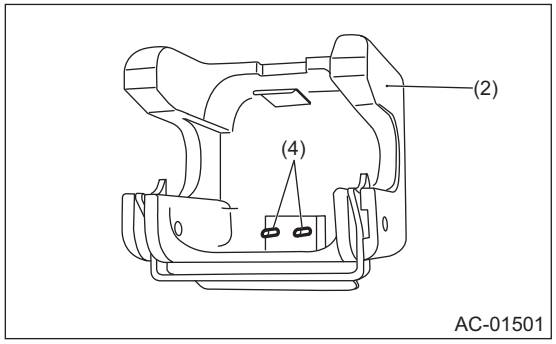
4) Remove the hose - pressure suction.

CAUTION:
- **Do not apply excessive force to the hose.**
- **Seal the disconnected hose, pipe, compressor assembly and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.**



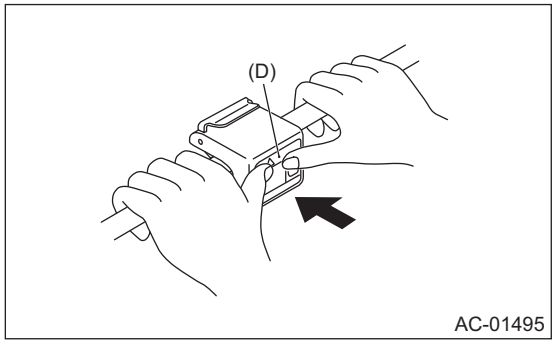
(1) Disconnect the quick connector.

Preparation tool:
ST: SP TL REMOVER PD (73499XA00A)



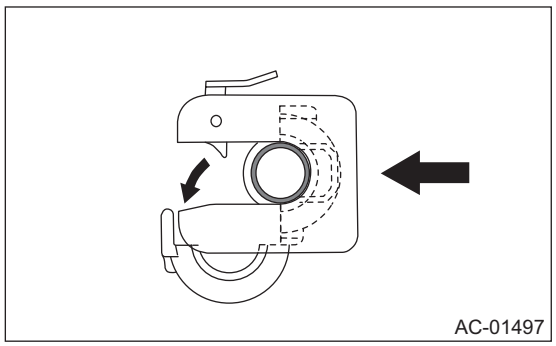
1. Face collar side (A) of the quick connector (1) to the remover (2), and set lock part (B) on the stopper side (C) of the remover.

2. Insert the remover.

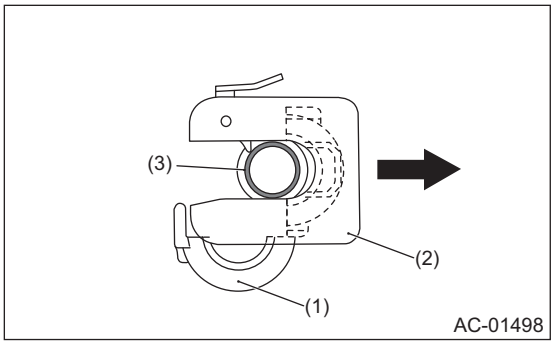


AC-01496

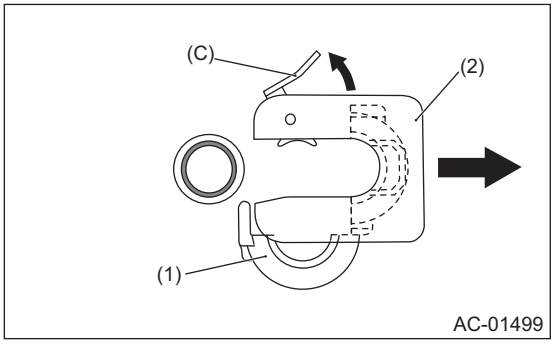
Do not bend the needle (4) in the remover.



AC-01501

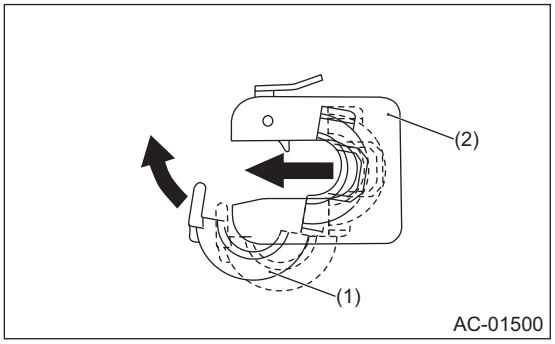


3. With the pipe secured, press the label part (D) of the remover with a thumb. Connector is unlocked and the quick connector opens.

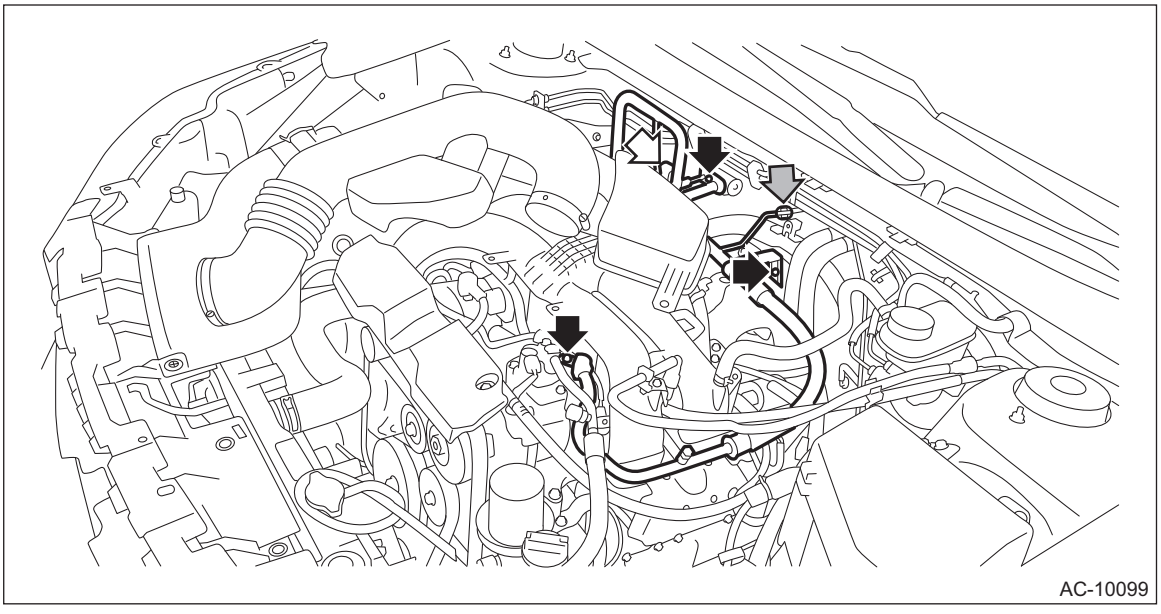


AC-01495

AC-01497



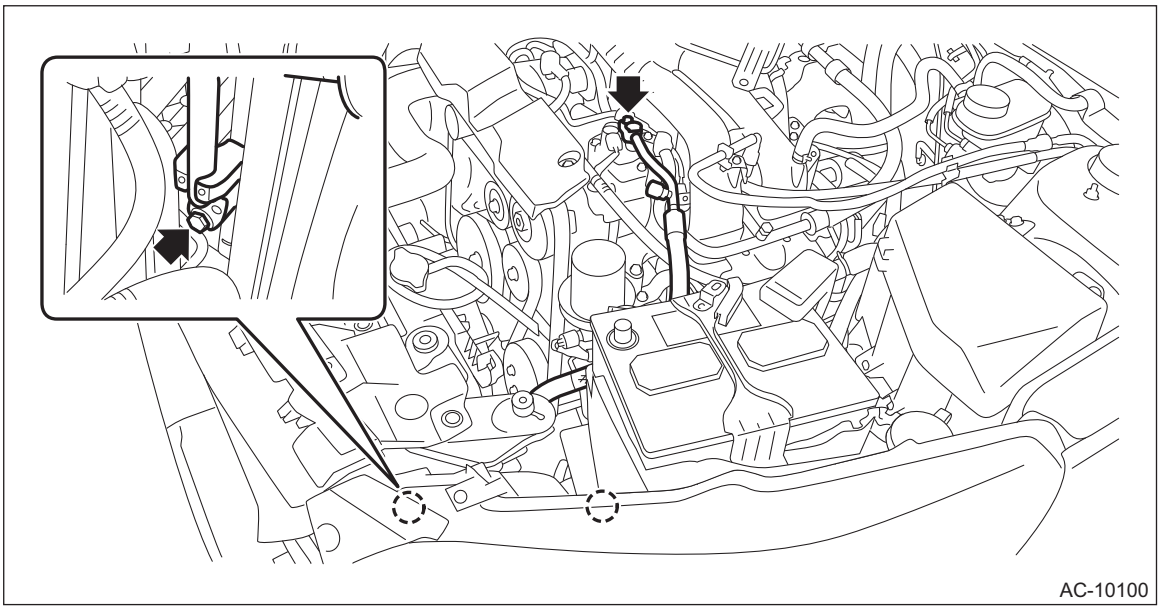
4. Pull the remover (2) and separate the pipe (3) from the quick connector (1).



5. Pull up the stopper (C) and remove the remover (2) and quick connector (1) from the pipe.

6. Disconnect the quick connector (1) from the remover (2).

(2) Disconnect the connector.
(3) Remove the bolts and remove the hose - pressure suction.



2. HIGH-PRESSURE HOSE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the reservoir tank.
- H4 model: <Ref. to CO(H4DO)-62, REMOVAL, Reservoir Tank.>
- H6 model: <Ref. to CO(H6DO)-47, REMOVAL, Reservoir Tank.>

4) Remove the bolts, and remove the hose - pressure discharge.

CAUTION:
- **Do not apply excessive force to the hose.**
- **Seal the disconnected hose, compressor assembly and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.**

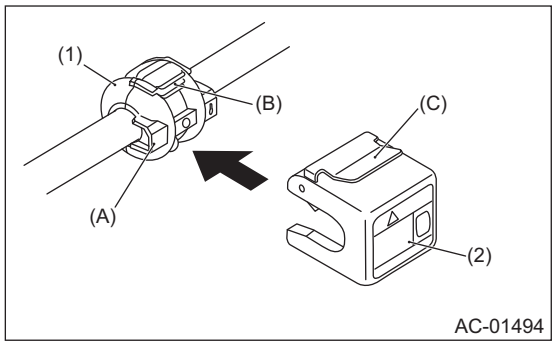
3. A/C PIPE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the battery and battery box.
- H4 model: <Ref. to SC(H4DO)-49, REMOVAL, Battery.>
- H6 model: <Ref. to SC(H6DO)-58, REMOVAL, Battery.>

4) With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>

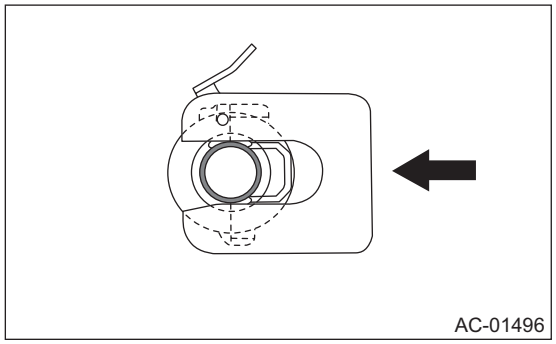
5) Remove the reservoir tank.
- H4 model: <Ref. to CO(H4DO)-62, REMOVAL, Reservoir Tank.>
- H6 model: <Ref. to CO(H6DO)-47, REMOVAL, Reservoir Tank.>

6) Remove the bumper face - front. <Ref. to EI-32, REMOVAL, Front Bumper.>
7) Remove the active grille shutter. (H4 model) <Ref. to CO(H4DO)-64, REMOVAL, Active Grille Shutter.>
8) Remove the pipe - evaporator cooling.



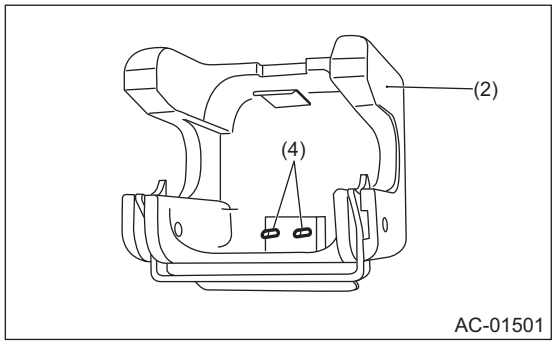
CAUTION:
- **Do not apply excessive force to the pipe.**
- **Seal the engaging parts of disconnected pipe, hose - pressure suction and condenser with a plug or vinyl tape to prevent foreign matter from entering.**
- **Do not pull the harness and cable forcibly.**

(1) Disconnect the quick connector.

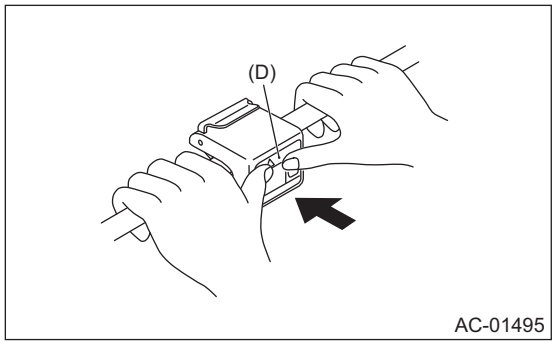


Preparation tool:

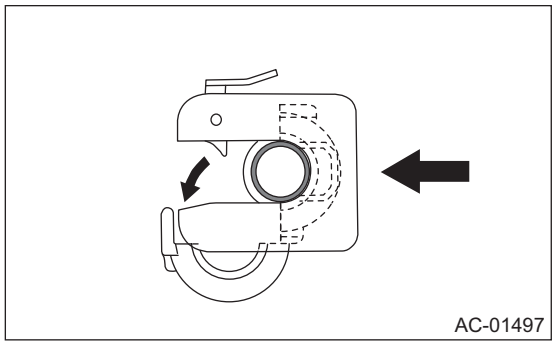
ST: SP TL REMOVER PD (73499XA00A)



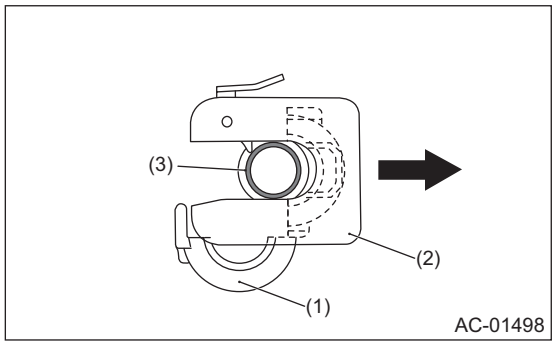
1. Face collar side (A) of the quick connector (1) to the remover (2), and set lock part (B) on the stopper side (C) of the remover.



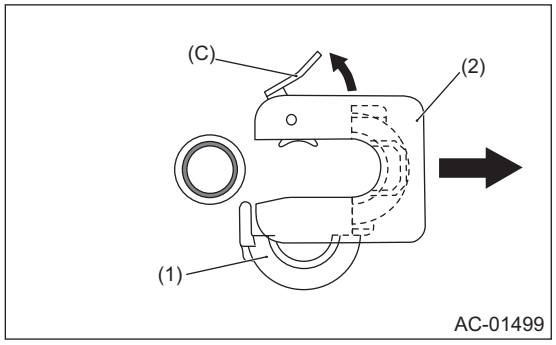
2. Insert the remover.

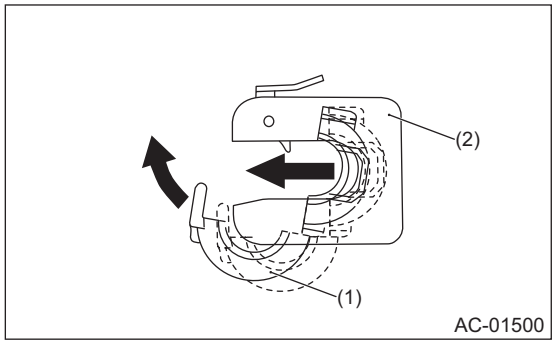


Do not bend the needle (4) in the remover.



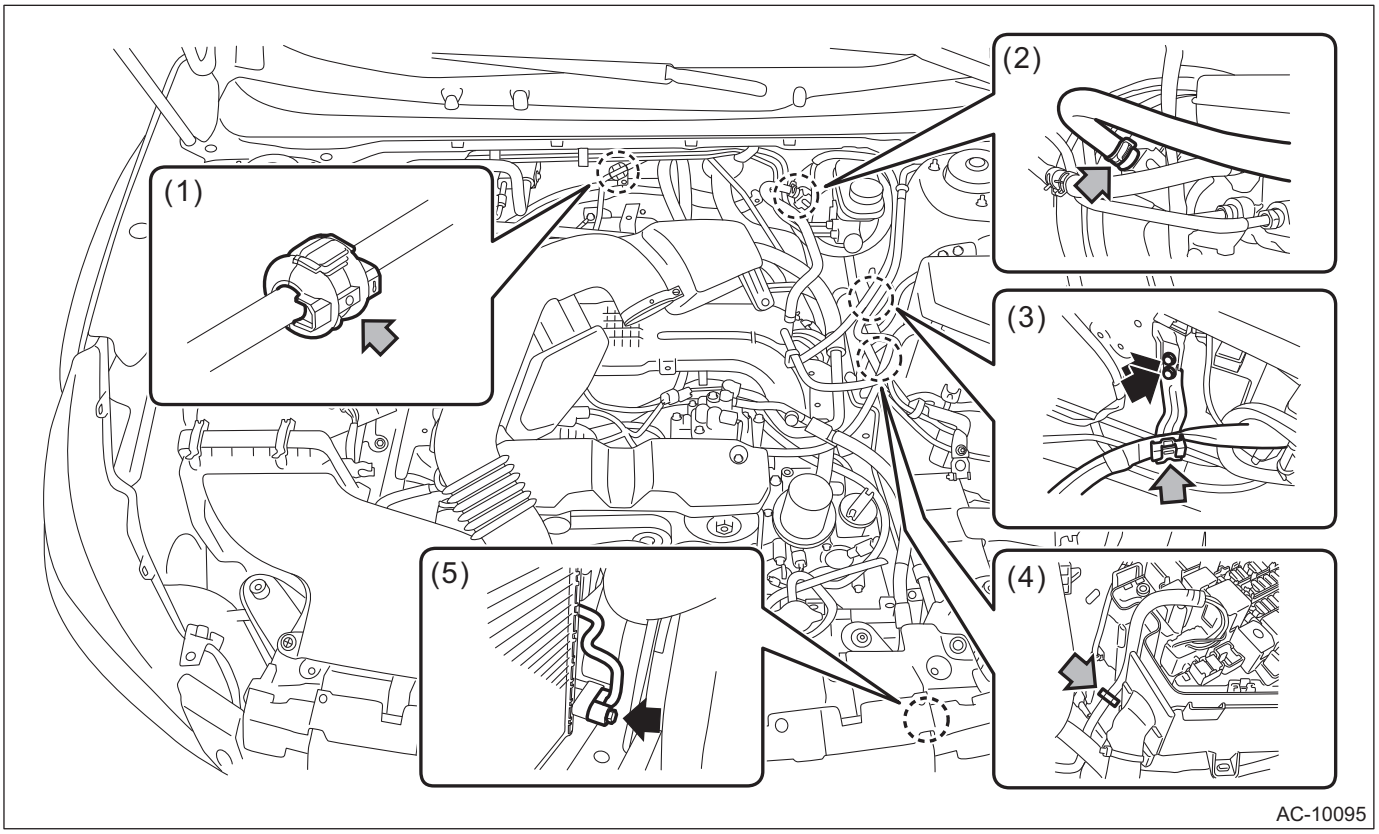
3. With the pipe secured, press the label part (D) of the remover with a thumb. Connector is unlocked and the quick connector opens.



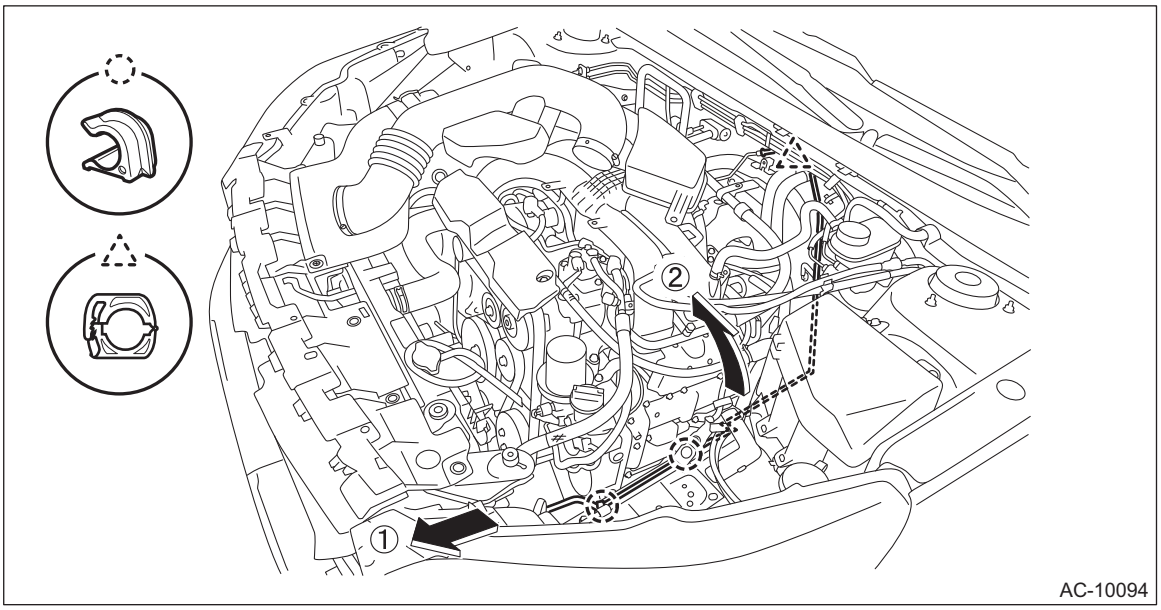


4. Pull the remover (2) and separate the pipe (3) from the quick connector (1).

5. Pull up the stopper (C) and remove the remover (2) and quick connector (1) from the pipe.



6. Disconnect the quick connector (1) from the remover (2).



(2) Remove the clamp and remove the vacuum hose.
(3) Remove the cable clamps and bolts, and remove the battery cable bracket.
(4) Remove the engine harness clips.

(5) Remove the bolt, and detach the pipe - evaporator cooling.

(6) Remove the clip - pipe and the clip, and remove the pipe - evaporator cooling in numerical order as shown in the figure.

B: INSTALLATION

1. LOW-PRESSURE HOSE

CAUTION:

- **If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-36, ADJUSTMENT, Compressor Oil.>**
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**

• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
1) Install the hose - pressure suction.

Tightening torque:
Air conditioning unit: <Ref. to AC-8, AIR CONDITIONING UNIT, COMPONENT, General Description.>
2) Install the air intake boot.
• H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
• H6 model: <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

2. HIGH-PRESSURE HOSE

CAUTION:
• If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-36, ADJUSTMENT, Compressor Oil.>
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
1) Install the hose - pressure suction discharge.

Tightening torque:
Air conditioning unit: <Ref. to AC-8, AIR CONDITIONING UNIT, COMPONENT, General Description.>
2) Install the reservoir tank.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

3. A/C PIPE

CAUTION:
• If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-36, ADJUSTMENT, Compressor Oil.>
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting pipes, do not apply an excessive force to them. After installation, check that the pipes are not damaged.
1) Install the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the active grille shutter. (H4 model) <Ref. to CO(H4DO)-65, INSTALLATION, Active Grille Shutter.>
3) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
4) Install the reservoir tank.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the air intake boot.
• H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
• H6 model: <Ref. to IN(H6DO)-10, INSTALLATION, Air Intake Boot.>
6) Install the battery and battery box.

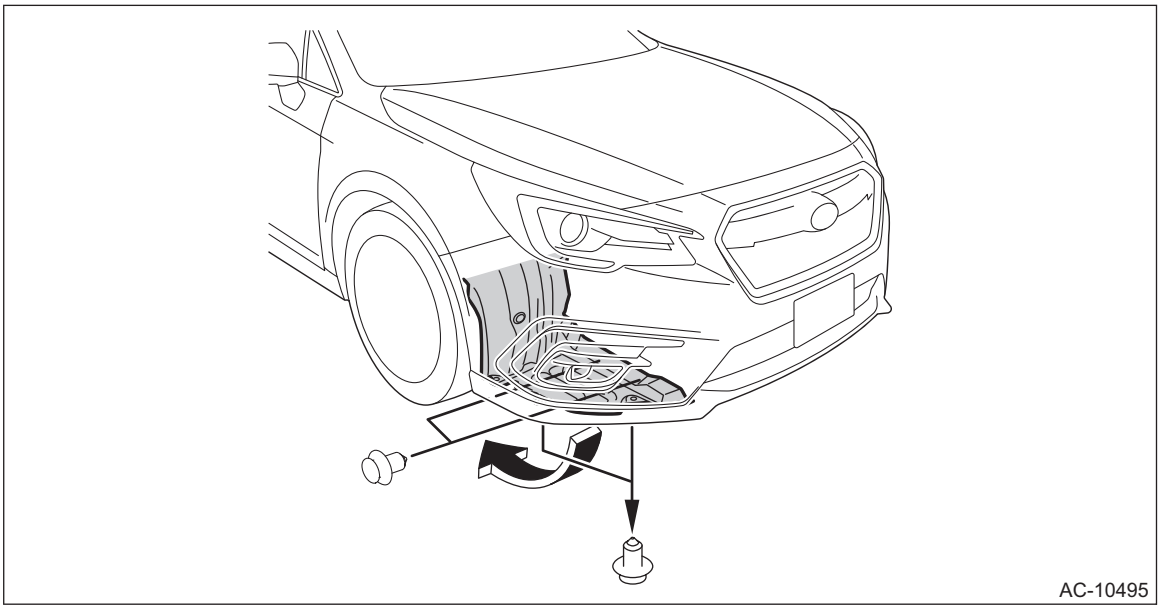
- H4 model: <Ref. to SC(H4DO)-49, INSTALLATION, Battery.>
- H6 model: <Ref. to SC(H6DO)-58, INSTALLATION, Battery.>

7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

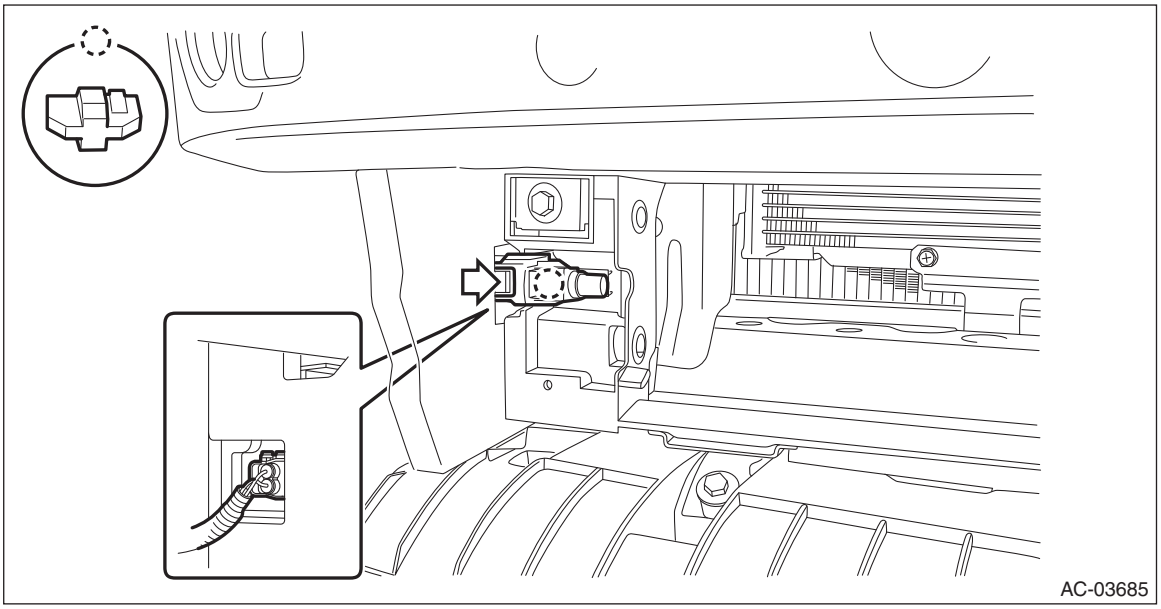
1) Check the hoses for cracks, damage and expansion. Replace the hose if faulty.
2) Check the pipes for crack or damage. Replace the pipe if faulty.

22.Pressure Sensor



A: INSPECTION

1) Perform a diagnosis code (DTC) check by connecting the Subaru Select Monitor. <Ref. to AC(diag)-41, OPERATION, Read Diagnostic Trouble Code (DTC).>
2) If any diagnosis code (DTC) is displayed, refer to “List of Diagnostic Trouble Code (DTC)” in “HVAC SYSTEM (DIAGNOSTICS)” section. <Ref. to AC(diag)-50, LIST, List of Diagnostic Trouble Code (DTC).>



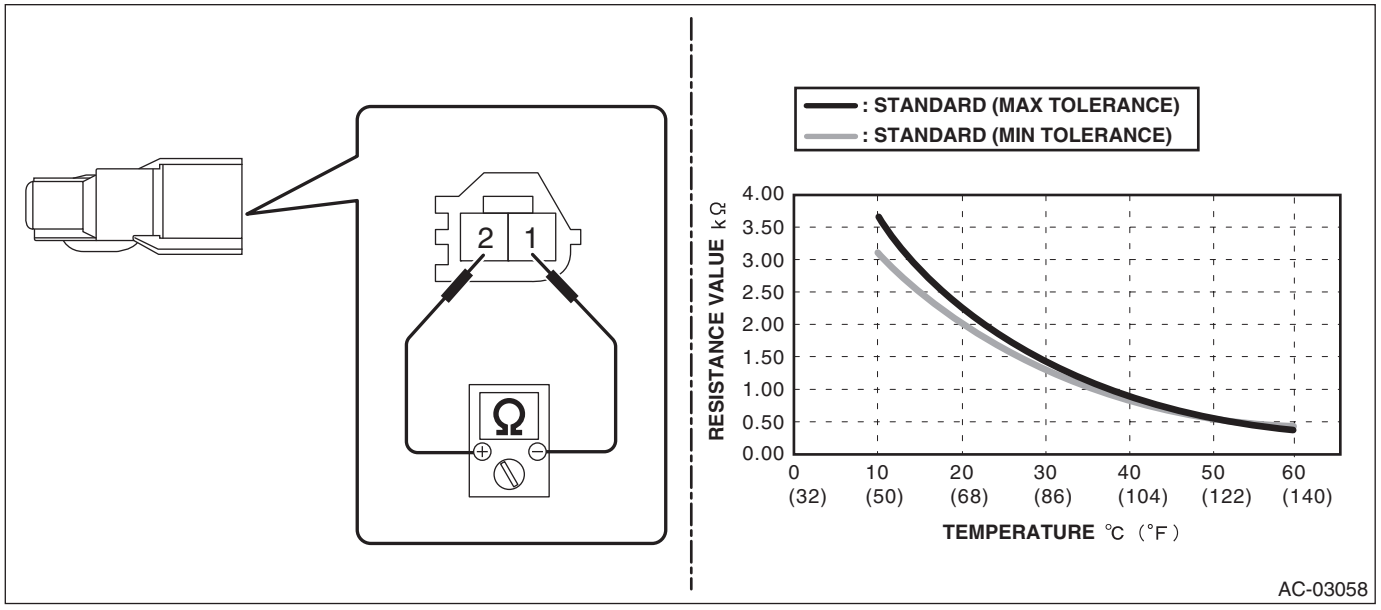
23.Ambient Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and turn over the mud guard - front.

3) Disconnect the connector and remove the ambient sensor.

B: INSTALLATION



1) Install the ambient sensor.
2) Install the mud guard - front.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

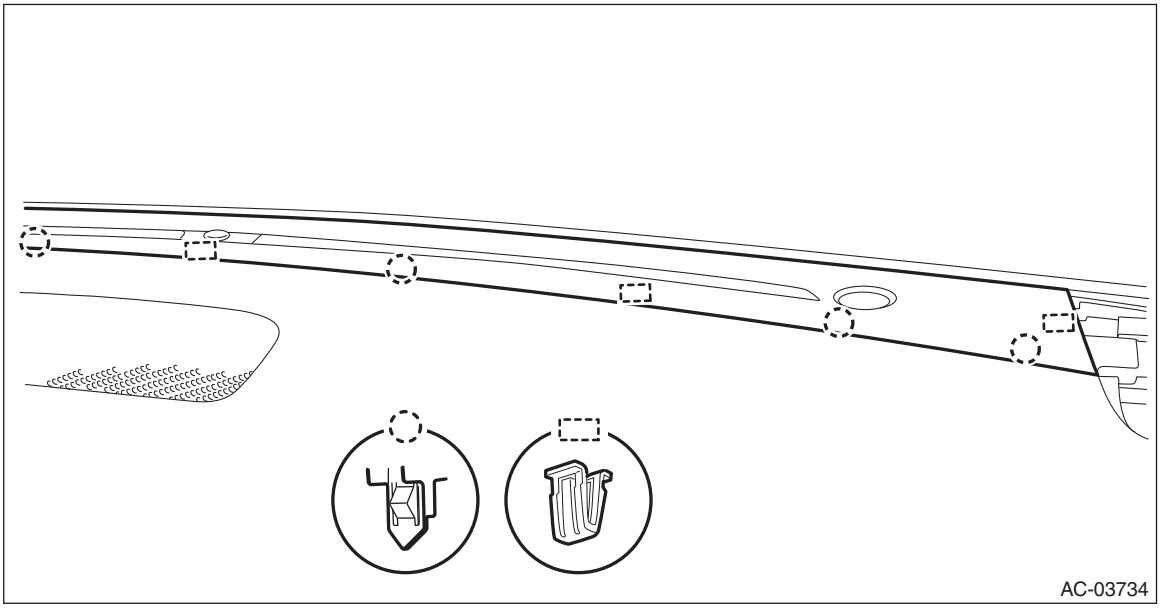
C: INSPECTION

1) Visually check the ambient sensor for dirt or damage, and clean or replace as necessary.
2) Measure the resistance between connector terminals.

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

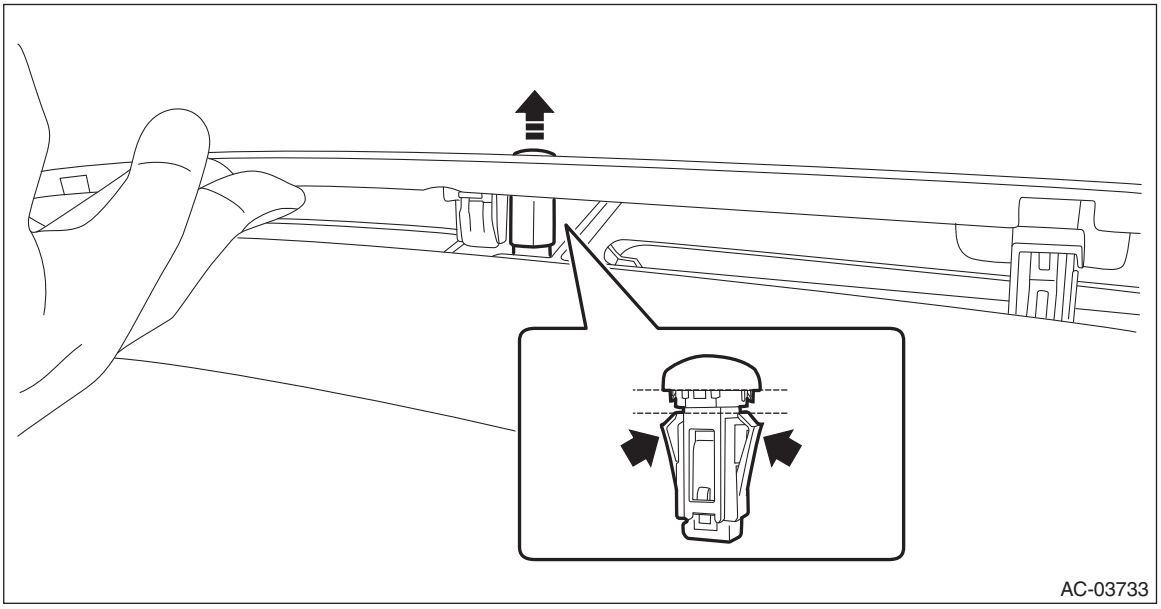
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.12 — 3.70 kΩ
	15°C	2.49 — 2.88 kΩ
	20°C	2 — 2.26 kΩ
	25°C	1.62 — 1.79 kΩ
	30°C	1.32 — 1.42 kΩ
	35°C	1.08 — 1.14 kΩ
	40°C	0.89 — 0.92 kΩ
	45°C	0.74 — 0.75 kΩ
	50°C	0.62 — 0.62 kΩ
	55°C	0.52 — 0.51 kΩ
	60°C	0.44 — 0.42 kΩ



3) Replace the ambient sensor if the inspection result is not within the standard value.

24.Sunload Sensor (Auto A/C Model)



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-94, REMOVAL, Upper Inner Trim.>
3) Release the clips and claws, then detach the grille speaker side. <Ref. to ETM-13, TWEETER, REMOVAL, Front Speaker.>
4) Remove the sunload sensor.
   (1) Release the claws of the grille - front defroster.

CAUTION:
• Secure minimum space for performing the operation. Do not remove the grille - front defroster. If the grille - front defroster is removed, it cannot be reinstalled unless the instrument panel is removed.
• Be careful not to damage the sensor and interior trim.

AC-03734

   (2) Release the claws, and then pull out the sunload sensor from the grille - front defroster.
   (3) Disconnect the connector and remove the sunload sensor.

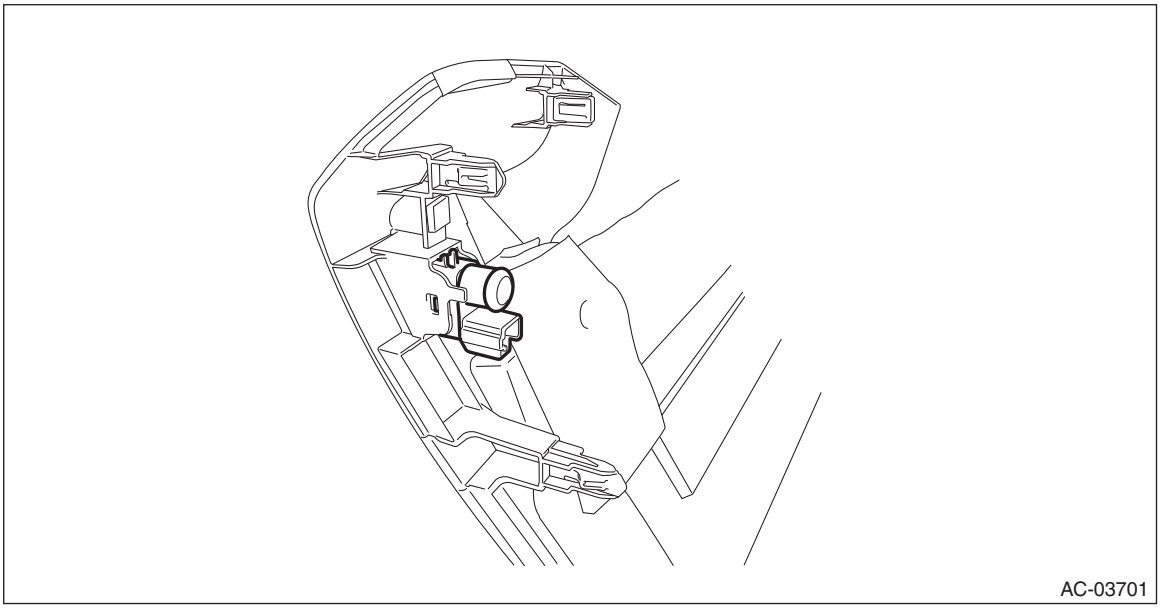
AC-03733

B: INSTALLATION

1) Install the sunload sensor.
2) Install the grille - front defroster.
3) Install the grille speaker side.
4) Install the trim panel - front pillar UPR. <Ref. to EI-95, INSTALLATION, Upper Inner Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check if there is anything that affects sensing, around the sunload sensor.
   (1) Is the sunload sensor free from any object that disturbs sensing?
   (2) Is the windshield glass free from any object such as sticker or film that disturbs sensing?
   - **Yes** → Go to step 2).
   - **No** → Remove everything that affects sensing.
2) Check the sunload sensor using the Subaru Select Monitor.



NOTE:
For detailed operation procedures, refer to “Application help”.
   (1) Connect the Subaru Select Monitor.
   (2) On «Start» display, select «Diagnosis».
   (3) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
   (4) On «Select System» display, select «Air Conditioner» and select «Enter».
   (5) On «Select Function» display, select «Data Monitor».
   (6) From the data monitor item list, select «Quantity of Sunload».
   (7) Cover the sunload sensor with cloth and the like to avoid direct light. Does «Quantity of Sunload» indicate «0 W/m^2»?
   - **Yes** → Go to step 3).
   - **No** → Replace the sunload sensor.
3) From step 2), expose the sunload sensor to light.
   (1) Place intense light such as incandescent light at 300 mm (11.81 in) or less from the sunload sensor.
   (2) Does «Quantity of Sunload» indicate «2,000 W/m^2» or less?

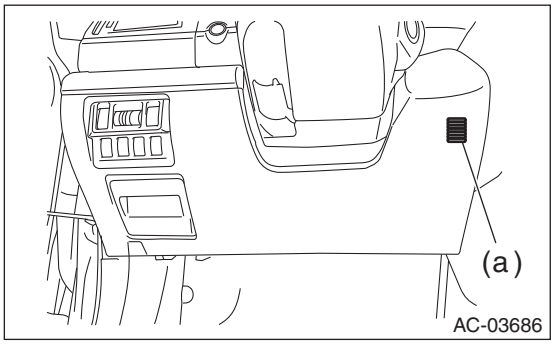
CAUTION:
The value changes depending on the angle of light.
   - **Yes** → The sunload sensor is normal.
   - **No** → Replace the sunload sensor.

25.In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the in-vehicle sensor.

B: INSTALLATION



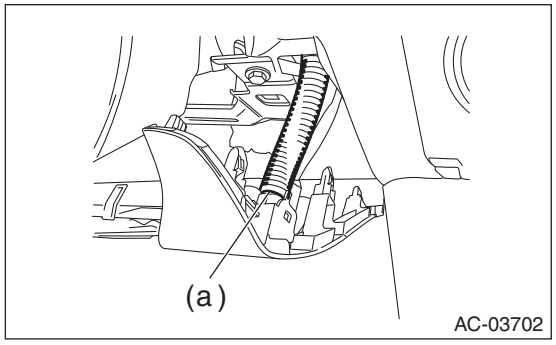
1) Install the in-vehicle sensor.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Set the vehicle to the following conditions.

Item	Condition
Ignition switch	ON
AC switch	ON
Temperature adjustment dial	HI (MAX HOT)
Air flow control switch	DEF
Fan switch	HI (MAX)

2) Check the suction port (a) for in-vehicle sensor of the cover assembly - instrument panel LWR driver.



(1) Put a strip of paper close to the front side of the suction port (a).
(2) Can you see the paper moving towards the port and the air being sucked into the port?

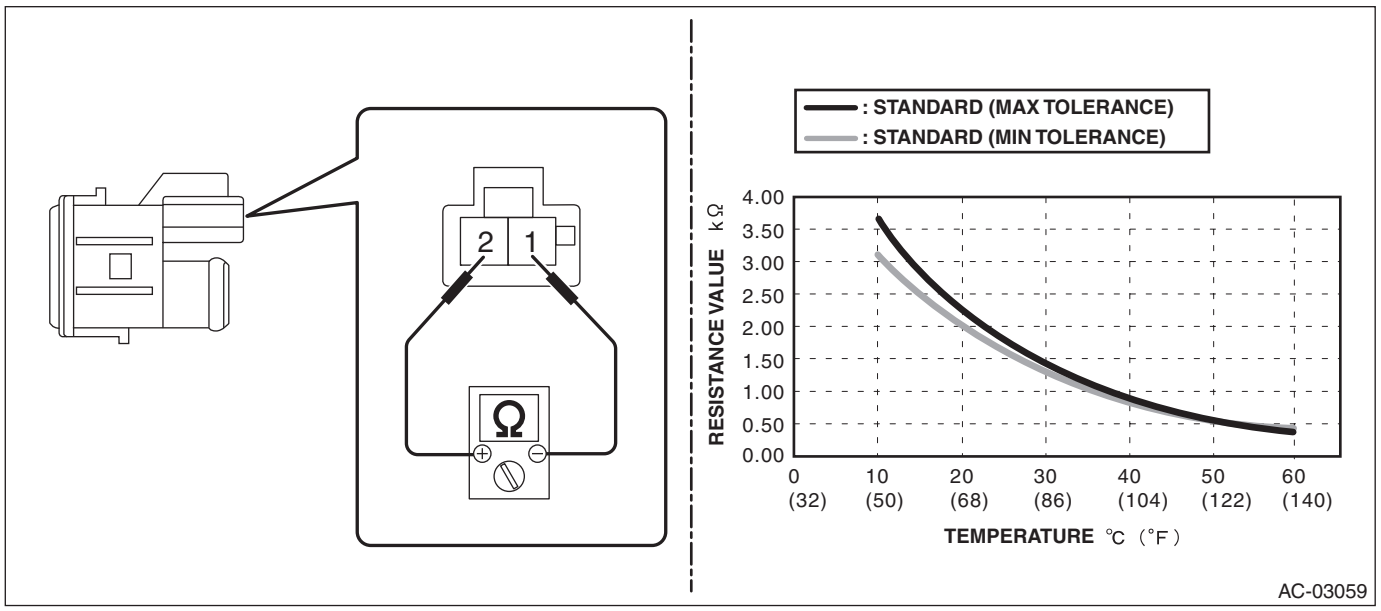
CAUTION:
Be careful not to let the paper get sucked into the port.

- **Yes** → Go to step 5).
- **No** → Go to step 3).

3) Remove the cover assembly - instrument panel LWR driver, and check the aspirator hose (a).

(1) Are the aspirator hoses on both sides of the case and sensor connected securely?
(2) Is the aspirator hose free from any kinks or cracks?

- **Yes** → Go to step 4).
- **No** → Repair or replace the aspirator hose if necessary.



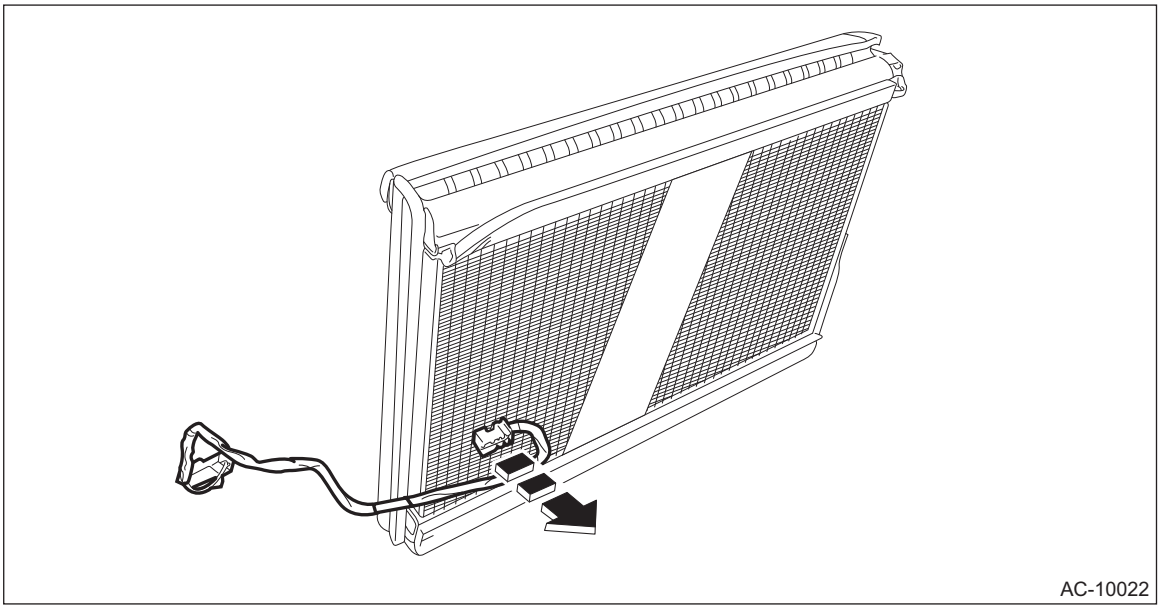
4) Check if there is anything that affects sensing, around the in-vehicle sensor.
(1) Is the in-vehicle sensor hole free from clogging?
(2) Is the peripheral area of in-vehicle sensor free from any heat-producing parts (such as audio, navigation system etc.)?

- **Yes** → Go to step 5).
- **No** → Remove everything that affects sensing.

5) Check in-vehicle sensor.
(1) Disconnect the connector.
(2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

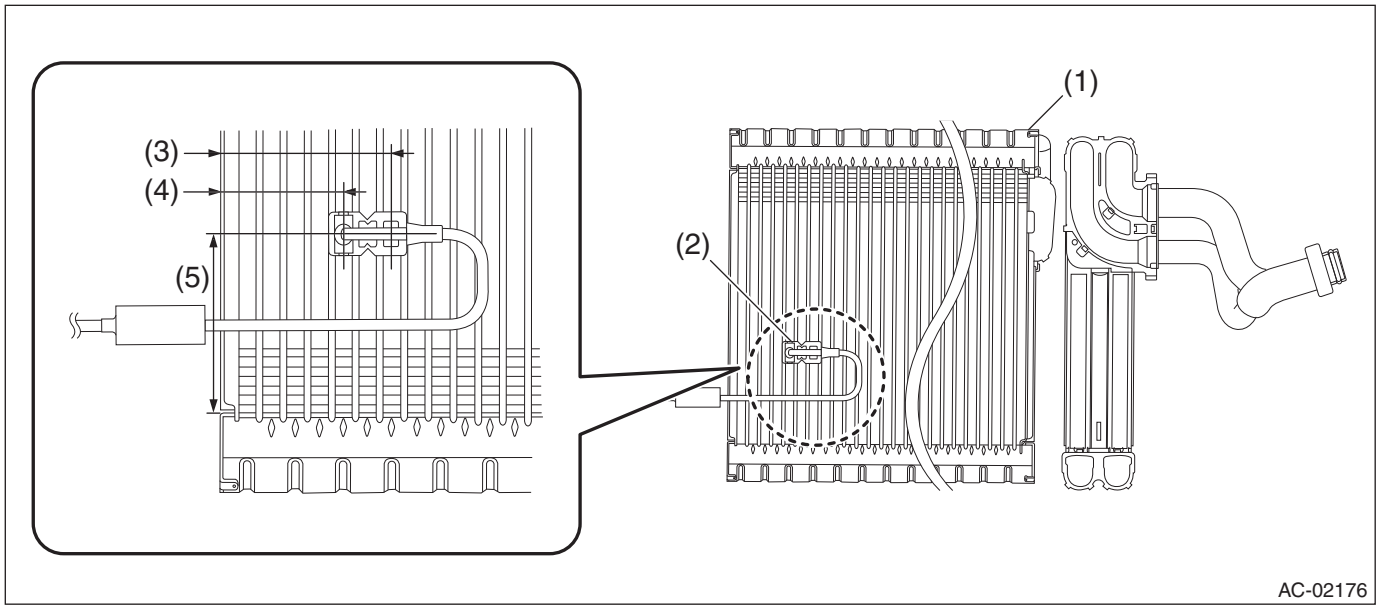


Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.12 — 3.7 kΩ
	15°C	2.49 — 2.88 kΩ
	20°C	2 — 2.26 kΩ
	25°C	1.62 — 1.79 kΩ
	30°C	1.32 — 1.42 kΩ
	35°C	1.08 — 1.14 kΩ
	40°C	0.89 — 0.92 kΩ
	45°C	0.74 — 0.75 kΩ
	50°C	0.62 — 0.62 kΩ
	55°C	0.52 — 0.51 kΩ
	60°C	0.44 — 0.42 kΩ

(3) Is the resistance within the standard?
- **Yes** → The in-vehicle sensor is normal.
- **No** → Replace the in-vehicle sensor.

26.Evaporator Sensor

A: REMOVAL



CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the evaporator assembly - cooling. <Ref. to AC-63, REMOVAL, Evaporator.>
4) Remove the evaporator sensor.

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Make sure that the water seal packing on the cover attachment area is securely attached.**
- **Replace the O-rings with new parts, and then apply compressor oil.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Install the evaporator sensor at the position shown in the figure below.

(1)	Evaporator	(3)	47.7 mm (1.88 in)	(5)	50 mm (1.97 in)
(2)	Evaporator sensor	(4)	34.3 mm (1.35 in)		

2) Install the evaporator assembly - cooling. <Ref. to AC-64, INSTALLATION, Evaporator.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Charge refrigerant. <Ref. to AC-30, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Prepare the vehicle.

NOTE:
Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

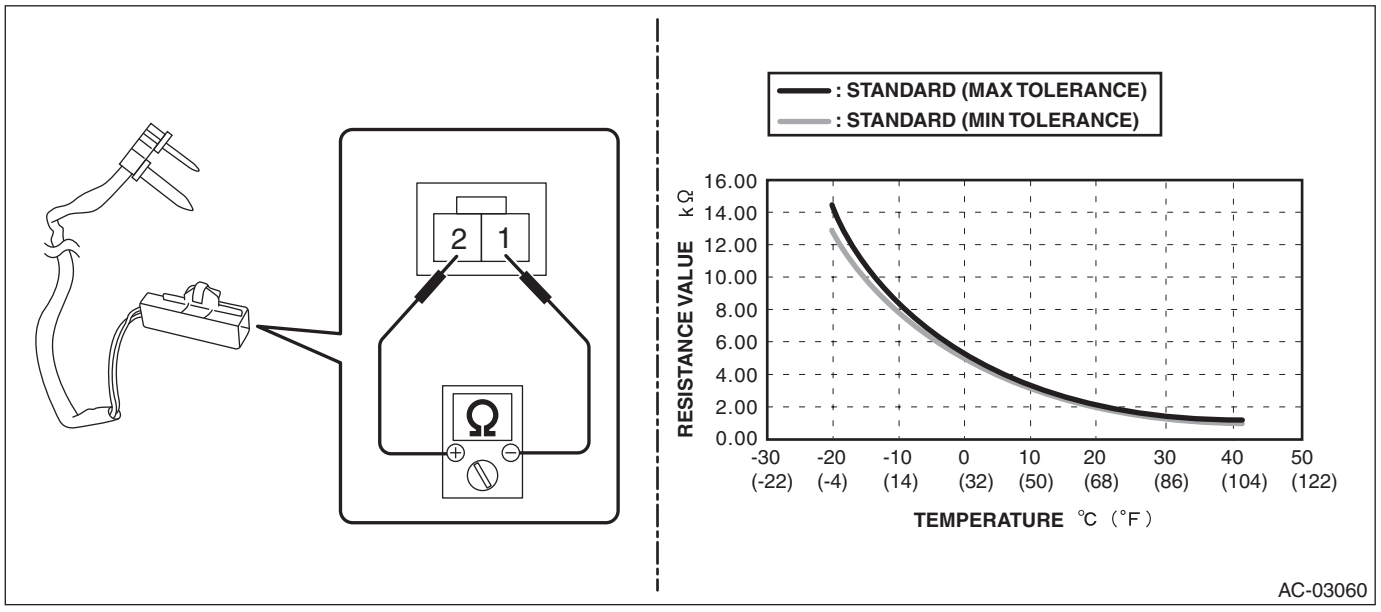
2) Set the vehicle to the following conditions.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
AC switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control switch	VENT
Fan switch (auto A/C model)	5/7 level
Fan dial (manual A/C model)	3/4 level

3) Using the Subaru Select Monitor, check the evaporator sensor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) Connect the Subaru Select Monitor.
(2) On «Start» display, select «Diagnosis».
(3) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
(4) On «Select System» display, select «Air Conditioner» and select «Enter».
(5) On «Select Function» display, select «Data Monitor».
(6) From the data monitor item list, select «Evaporator Temperature Target».

(7) Idle the engine for 15 minutes, and then compare the air flow outlet temperature with «Evaporator Temperature Target».



Preparation tool:
Thermometer and hygrometer

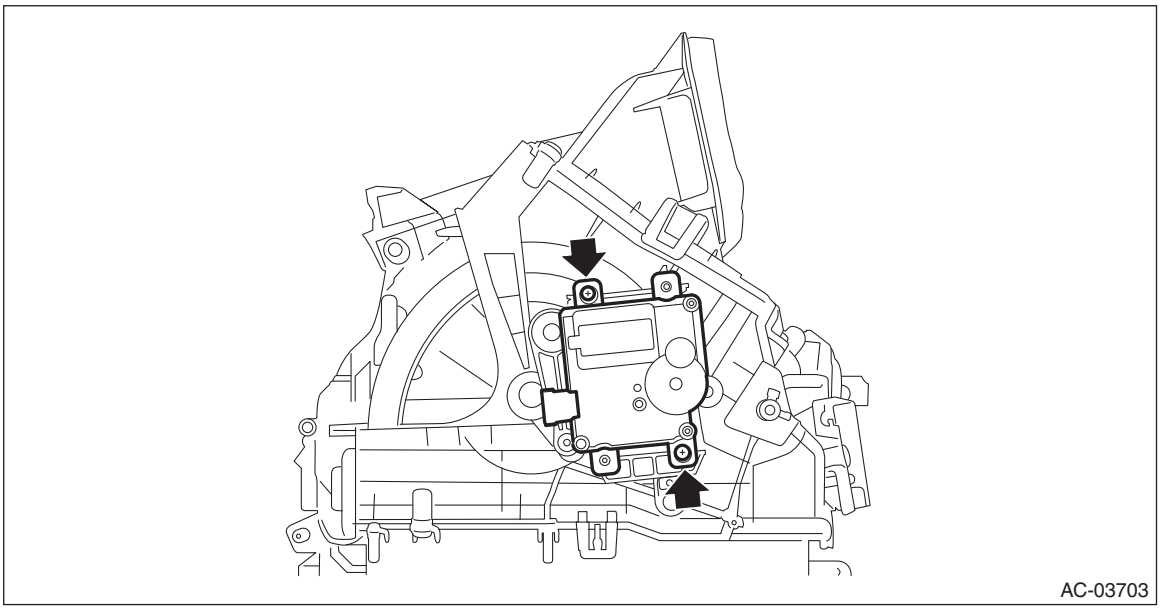
NOTE:
For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

(8) Do the air flow outlet temperature and «Evaporator Temperature Target» differ by 3°C (5.4°F) or more?
- **Yes** → Go to step 4).
- **No** → Evaporator sensor is normal.

4) Check the evaporator sensor.
(1) Disconnect the connector.
(2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	–20°C	13.584 — 14.541 kΩ
	–15°C	10.34 — 10.946 kΩ
	–10°C	7.938 — 8.313 kΩ
	–5°C	6.143 — 6.366 kΩ
	0°C	4.79 — 4.914 kΩ
	5°C	3.718 — 3.829 kΩ
	10°C	2.889 — 3.031 kΩ
	15°C	2.247 — 2.435 kΩ
	20°C	1.785 — 1.952 kΩ
	25°C	1.427 — 1.574 kΩ
	30°C	1.149 — 1.278 kΩ
	35°C	0.931 — 1.044 kΩ
	40°C	0.759 — 0.858 kΩ

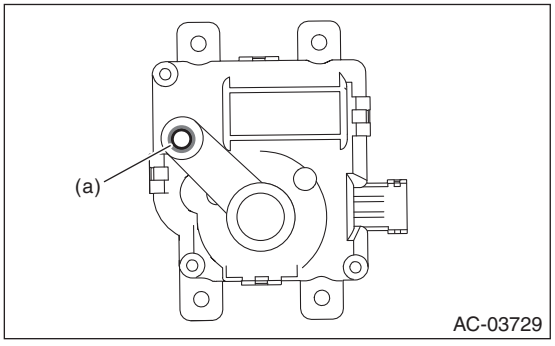


(3) Is the resistance within the standard?
- **Yes** → Evaporator sensor is normal.
- **No** → Replace the evaporator sensor.

27.FRESH/RECIRC Door Actuator

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly. <Ref. to EI-82, REMOVAL, Instrument Panel Assembly.>
3) Remove the screws and detach the motor - actuator blower.

B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

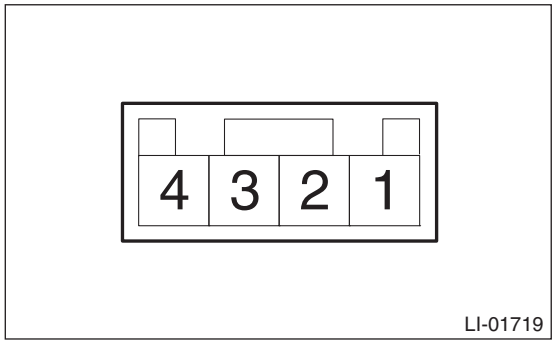
1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the side face (a) of lever pin by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

Preparation items:
Genuine part: SUBARU genuine grease (72129AJ000)

2) Install the motor - actuator blower.
3) Install the instrument panel assembly. <Ref. to EI-86, INSTALLATION, Instrument Panel Assembly.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



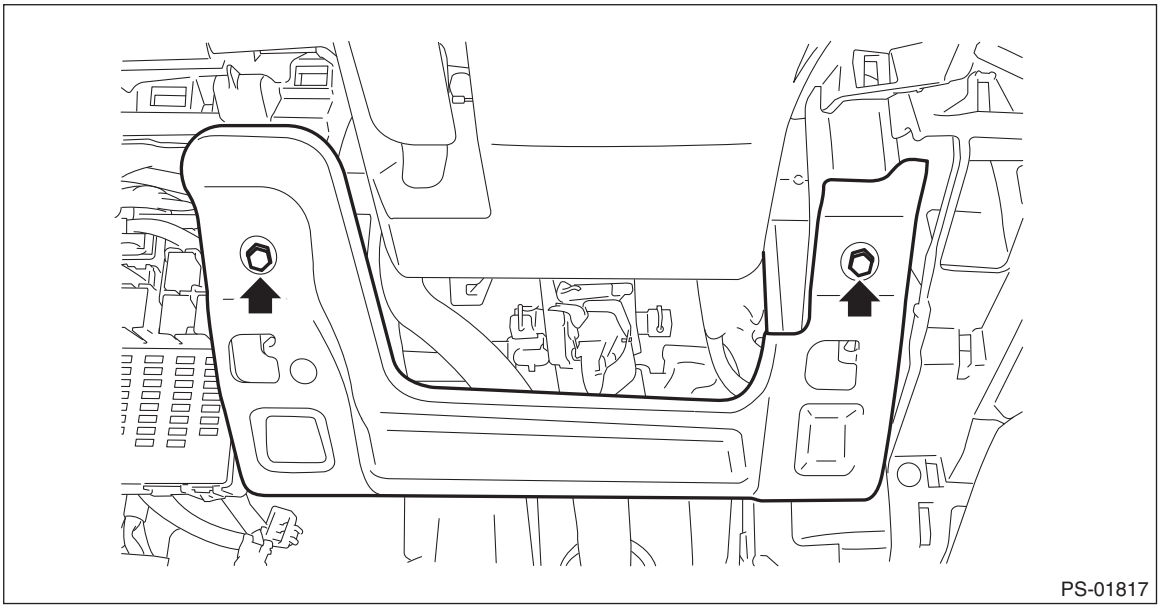
1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the FRESH/RECIRC switch, and check that the link operates normally.
3) If it does not operate normally as the result of inspection, perform a unit inspection of motor - actuator blower.

2. CHECK ACTUATOR

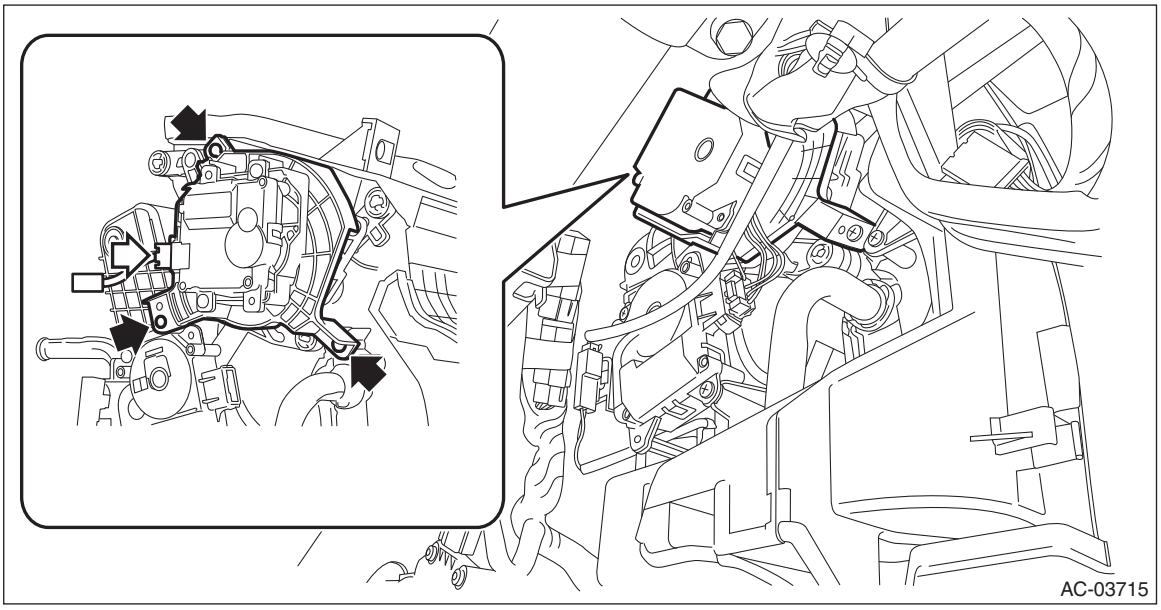
1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.



Terminal No.	Inspection conditions	Operating position
4 (+) — 2 (–)	Apply battery voltage.	FRESH
4 (+) — 1 (–)		RECIRC

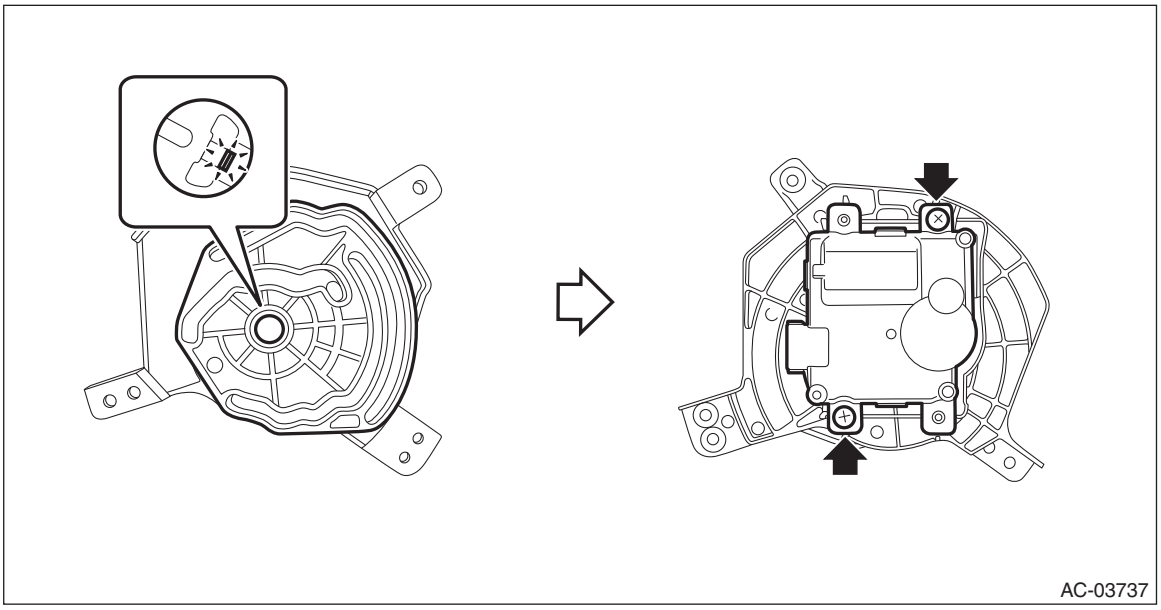
2) If it does not operate normally as the result of inspection, replace the motor - actuator blower.



28.Mode Door Actuator

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts, and then remove the panel - knee guard.



PS-01817

4) Remove the motor - actuator mode.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the motor - actuator assembly.

AC-03715

   (3) Release the lock and remove the link plate.

(4) Remove the screws and detach the motor - actuator mode.

B: INSTALLATION

1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the contact area (a) inside the rail of link plate by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube. Also apply a thin coat of grease evenly to the contact areas (b) through (f), by using the same amount of grease to each area.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

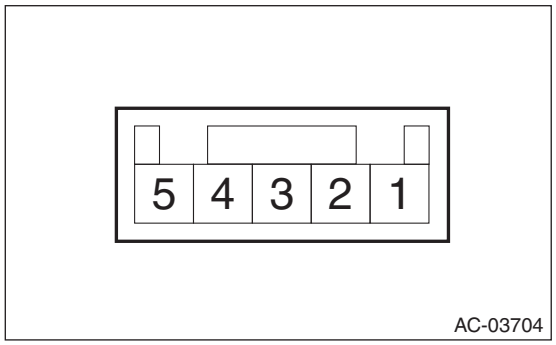
Preparation items:
Genuine part: SUBARU genuine grease (72129AJ000)

2) Install the motor - actuator mode and the link plate to the cover - actuator.
3) Install the motor - actuator assembly.
4) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

5) Install the cover assembly - instrument panel LWR driver.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the mode change switch, and check that the link operates normally.
3) If it does not operate normally as the result of inspection, perform a unit inspection of motor - actuator mode.

2. CHECK ACTUATOR OPERATION

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
4 (+) — 5 (–)	Apply battery voltage.	DEF
5 (+) — 4 (–)		FACE

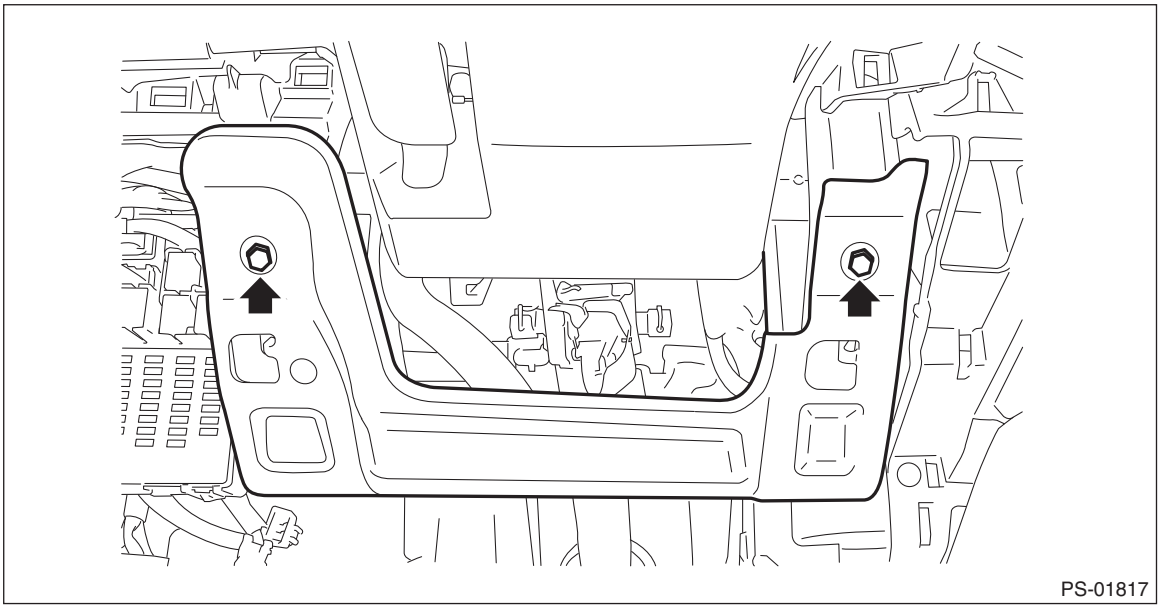
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Always	4.2 — 7.8 Ω

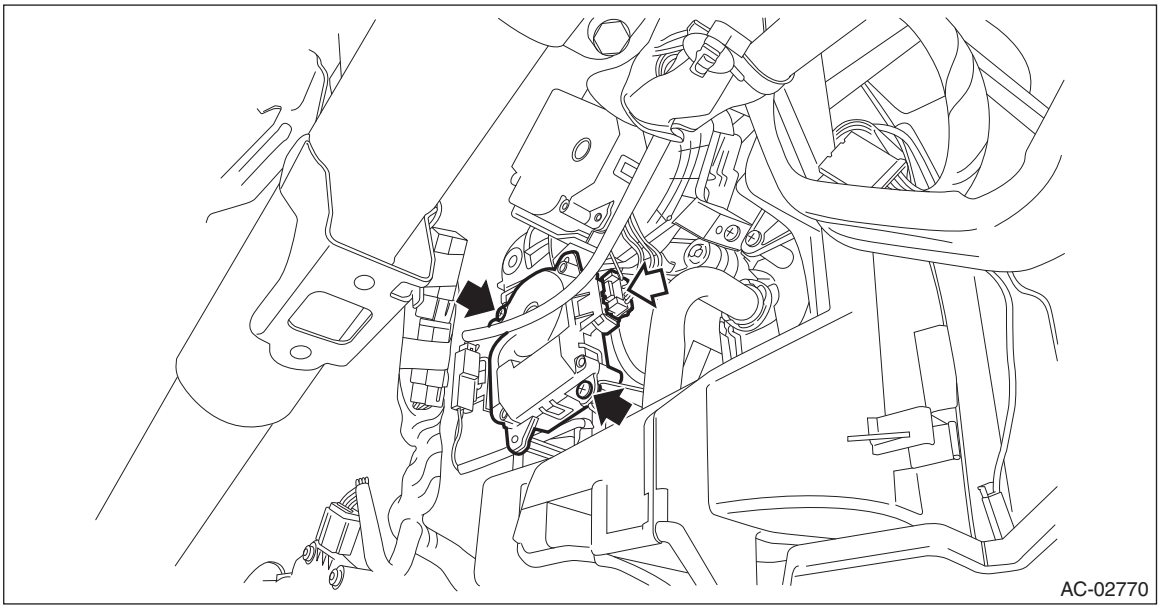
3) Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	FACE	Approx. 4 V
	DEF	Approx. 1 V



4) Replace the motor - actuator mode if it is found defective as a result of inspection.

29.Air Mix Door Actuator

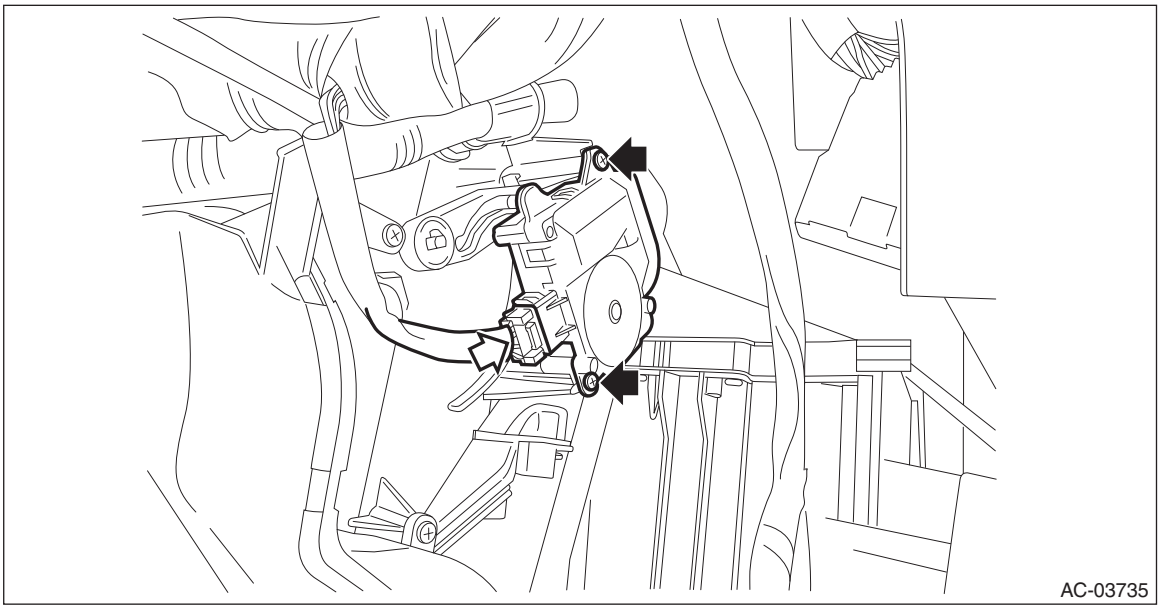


A: REMOVAL

1. DRIVER'S SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-75, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts, and then remove the panel - knee guard.

PS-01817

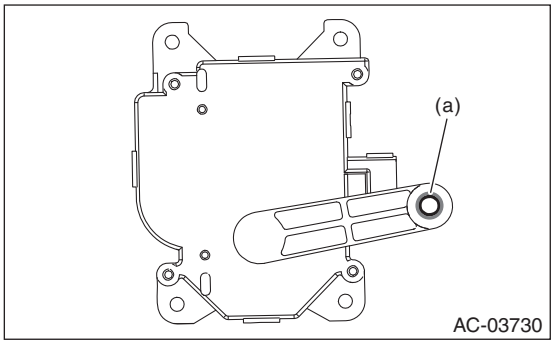


4) Remove the motor - actuator mix.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the motor - actuator mix.

AC-02770

2. PASSENGER'S SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the pocket assembly and the back panel - pocket. <Ref. to EI-77, REMOVAL, Glove Box.>
3) Remove the motor - actuator mix.
   (1) Disconnect the connector.



(2) Remove the screws and detach the motor - actuator mix.

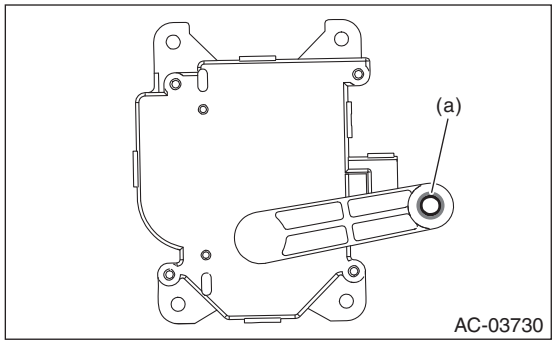
B: INSTALLATION

1. DRIVER'S SIDE

1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the side face (a) of lever pin by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

Preparation items:
Genuine part: SUBARU genuine grease (72129AJ000)



2) Install the motor - actuator mix.
3) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. PASSENGER'S SIDE

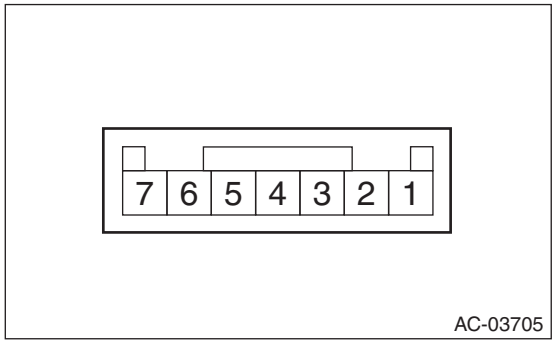
1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the side face (a) of lever pin by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

Preparation items:
Genuine part: SUBARU genuine grease (72129AJ000)

2) Install the motor - actuator mix.
3) Install the pocket assembly and the back panel - pocket.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the temperature control switch, and check that the link operates normally.
3) If it does not operate normally as the result of inspection, perform a unit inspection of motor - actuator mix.

2. CHECK ACTUATOR OPERATION

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
6 (+) — 7 (–)	Connect battery to the terminals	•Driver's seat: COOL •Passenger's seat: HOT
7 (+) — 6 (–)		•Driver's seat: HOT •Passenger's seat: COOL

2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

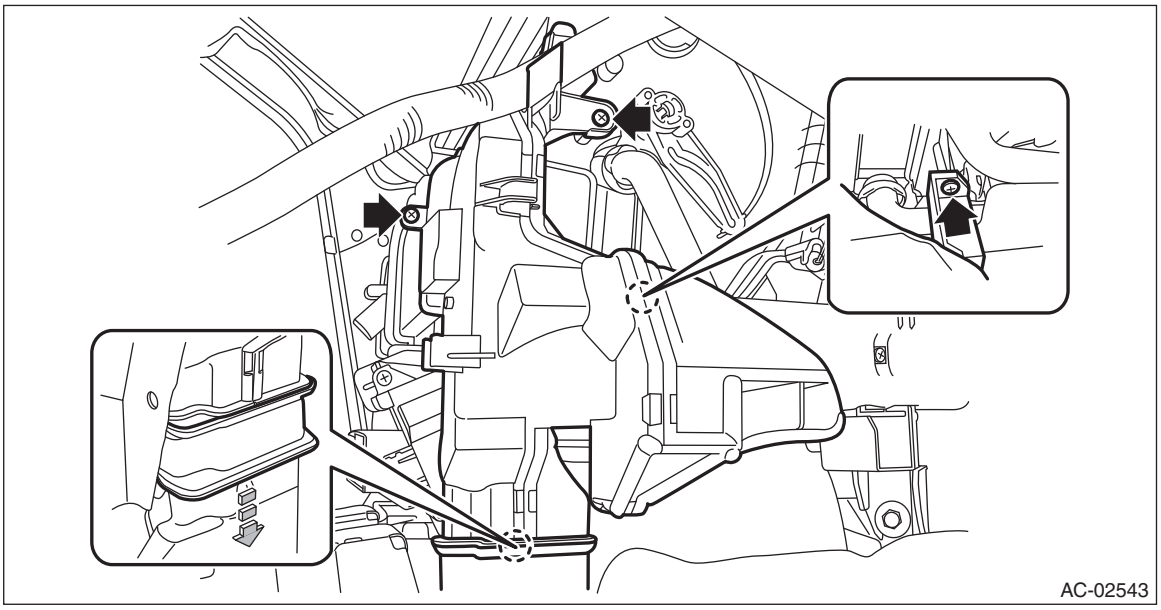
Terminal No.	Inspection conditions	Standard
1 — 3	Always	4.2 — 7.8 Ω

3) Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.
- Driver's seat

Terminal No.	Inspection conditions	Standard
5 (+) — 3 (–)	HOT	Approx. 1 V
	COOL	Approx. 4 V

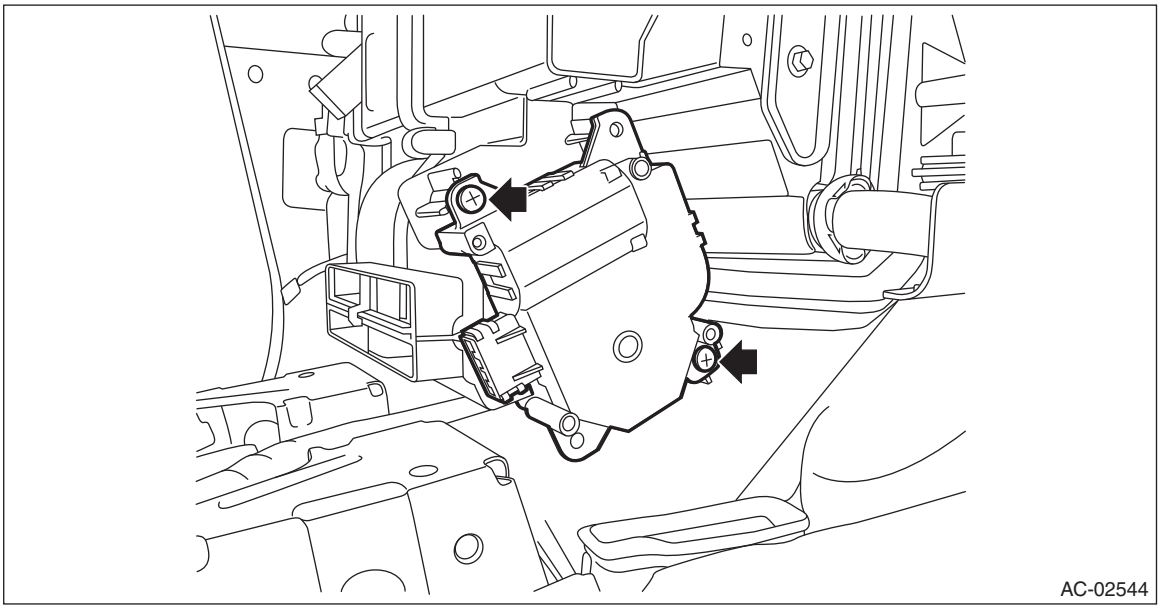
- Passenger's seat

Terminal No.	Inspection conditions	Standard
5 (+) — 1 (–)	HOT	Approx. 1 V
	COOL	Approx. 4 V



4) Replace the motor - actuator mix if it is found defective as a result of inspection.

30.Rear Vent Door Actuator



A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-82, REMOVAL, Instrument Panel Assembly.>
3) Remove the duct - foot assist.
   (1) Turn over the floor carpet and remove the slide lock of the duct - rear heater.
   (2) Remove the screws, and remove the duct - foot assist.

AC-02543

4) Remove the screws and remove the motor assembly - rear heater.

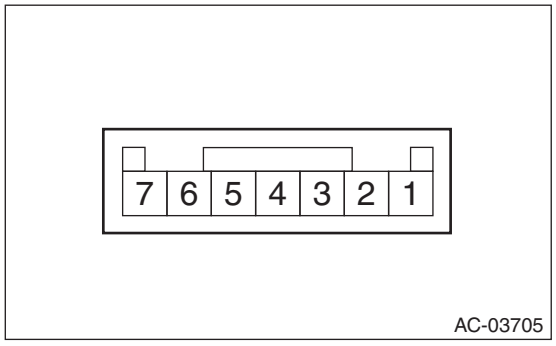
AC-02544

B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Install the motor assembly - rear heater.
2) Install the duct - foot assist.
3) Install the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-86, INSTALLATION, Instrument Panel Assembly.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the temperature control switch, and check that the link operates normally.
3) If it does not operate normally as the result of inspection, perform a unit inspection of motor assembly - rear heater.

2. CHECK ACTUATOR OPERATION

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
6 (+) — 7 (–)	Connect battery to the terminals	COOL
7 (+) — 6 (–)		HOT

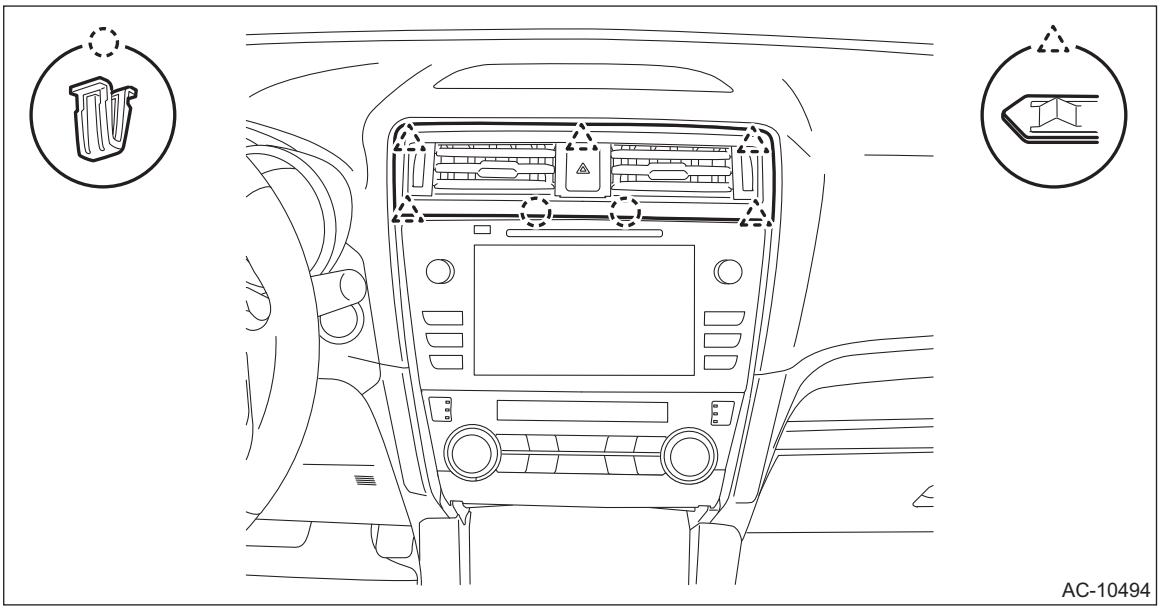
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Always	4.2 — 7.8 Ω

3) Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.

Terminal No.	Inspection conditions	Standard
5 (+) — 3 (–)	HOT	Approx. 1 V
	COOL	Approx. 4 V

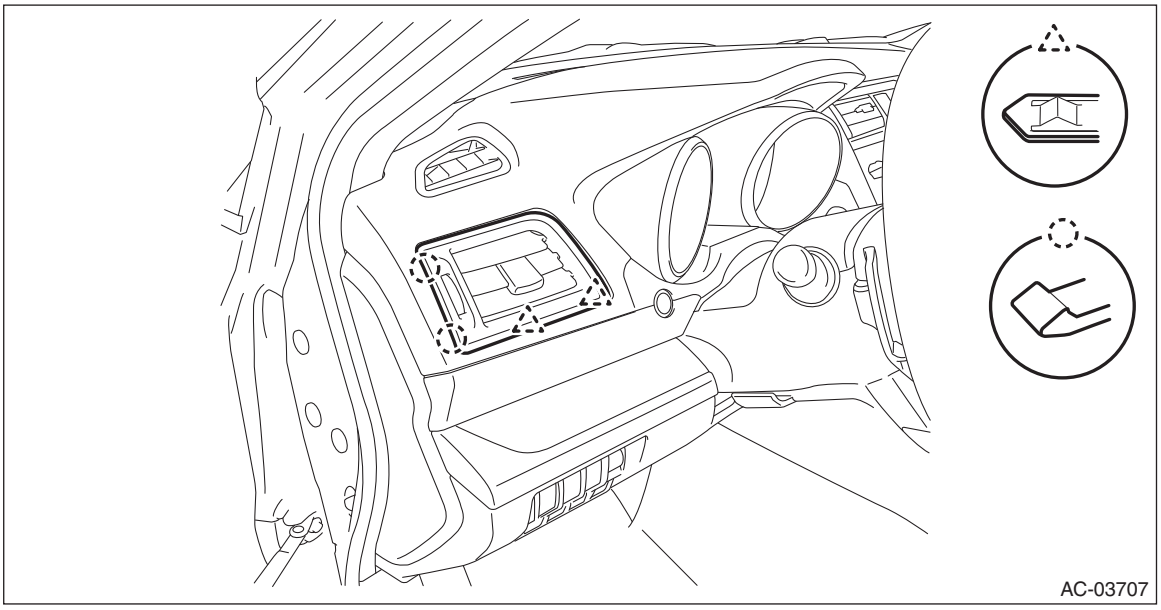


4) Replace the motor assembly - rear heater if faulty is found in the inspection.

31.Air Vent Grille

A: REMOVAL

1. CENTER GRILLE ASSEMBLY

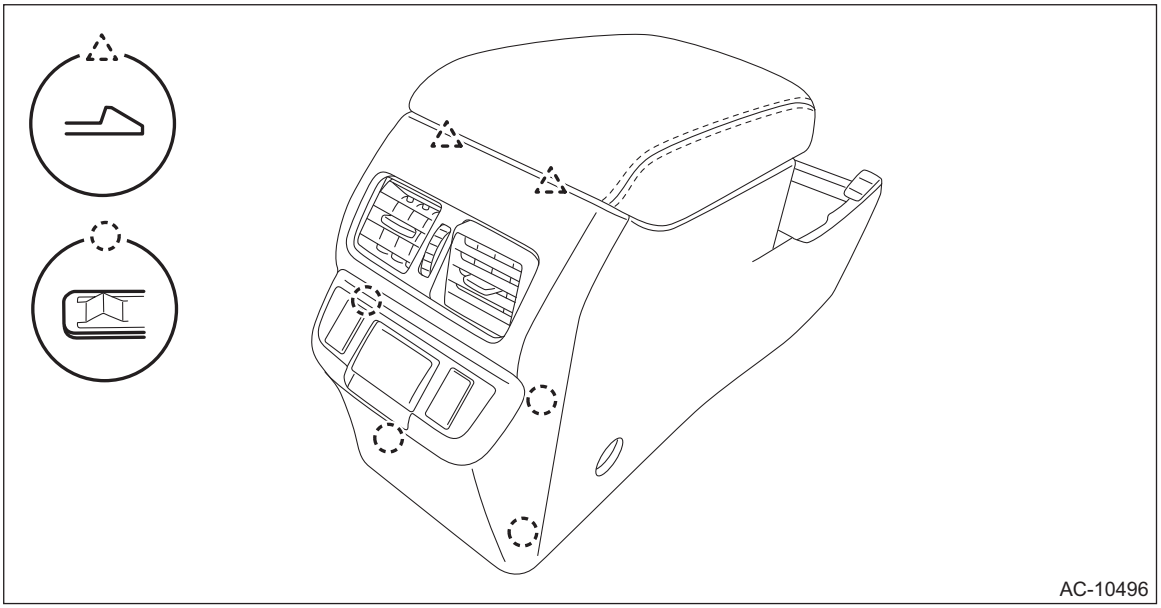


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the grille assembly - CTR ventilation.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the grille assembly - CTR ventilation.

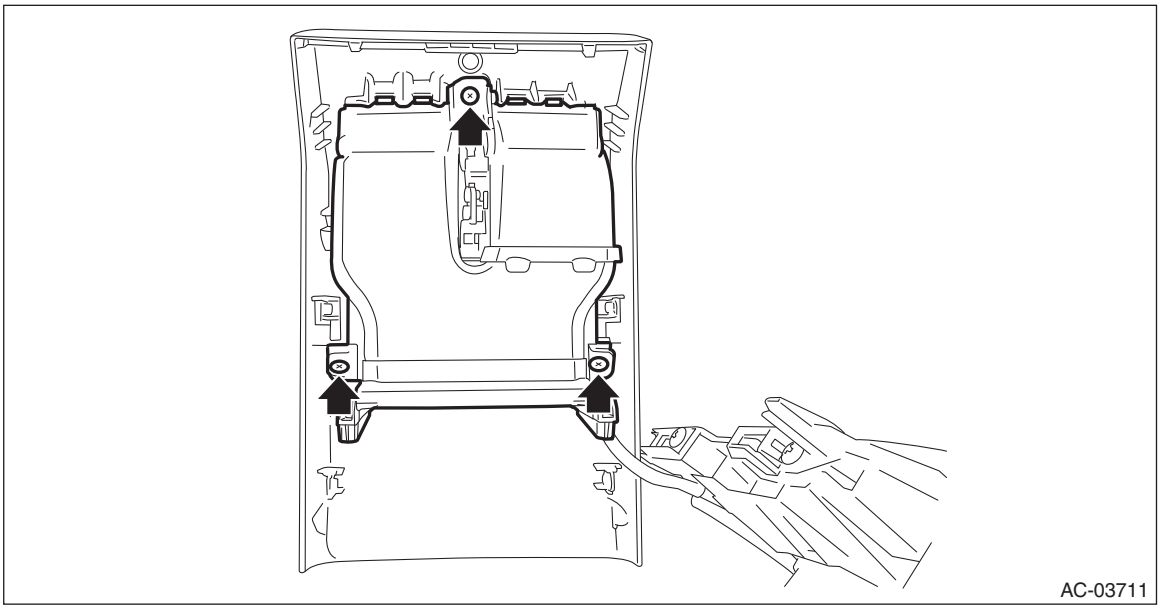
   (3) Remove the switch - hazard. <Ref. to LI-46, REMOVAL, Hazard Switch.>

2. SIDE GRILLE ASSEMBLY

Release the claws, and then remove the grille assembly - ventilation.
- LH side



- RH side



3. REAR GRILLE ASSEMBLY

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the screws, and remove the duct - console rear. <Ref. to AC-103, CONSOLE DUCT, REMOVAL, Heater Duct.>
4) Release the claws and remove the end cover - console box.

NOTE:
The connector and harness clip of the external connection terminal and seat heater switch are currently connected.

5) Remove the screws and remove the grille assembly - rear heater.

B: INSTALLATION

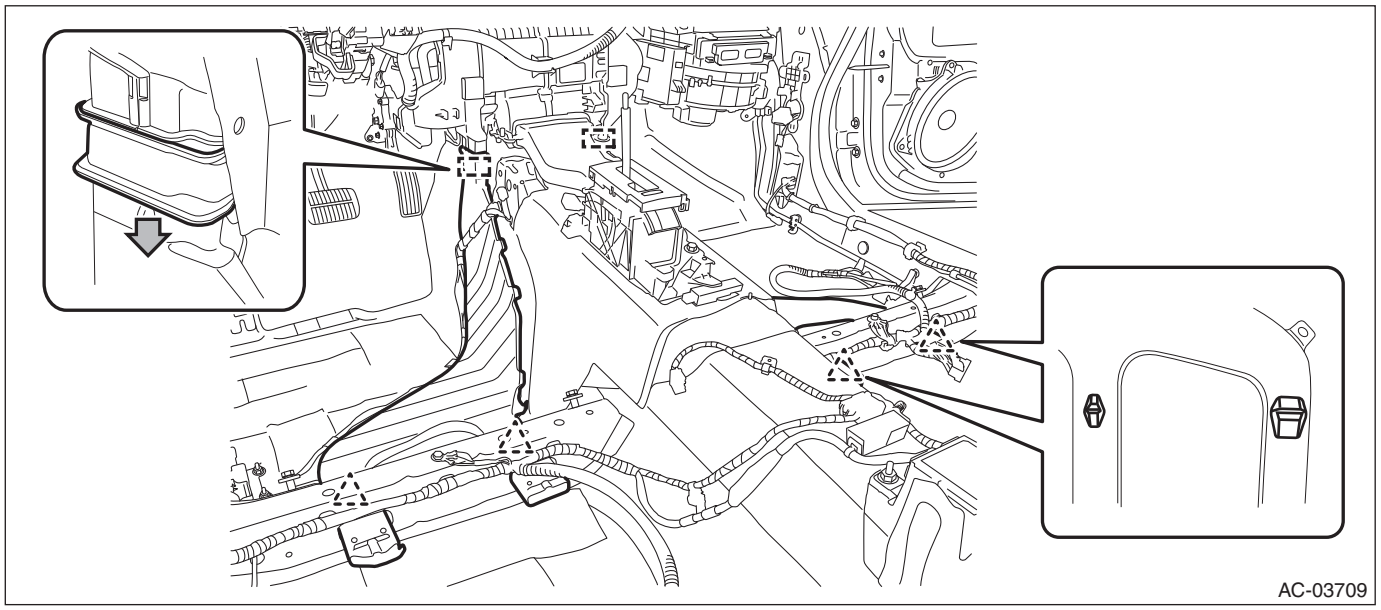
CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.

1) Install the switch - hazard. (Center grille assembly)
2) Install the grille assembly.
3) Install the end cover - console box. (Rear grille assembly)
4) Install the duct - console rear. (Rear grille assembly)
5) Install the cover assembly - front and the console box assembly. (Rear grille assembly)

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Check that the direction and amount of air can be adjusted smoothly. Replace the air vent grille if faulty.
2) Check that the adjustment can be maintained in each position. Replace the air vent grille if faulty.

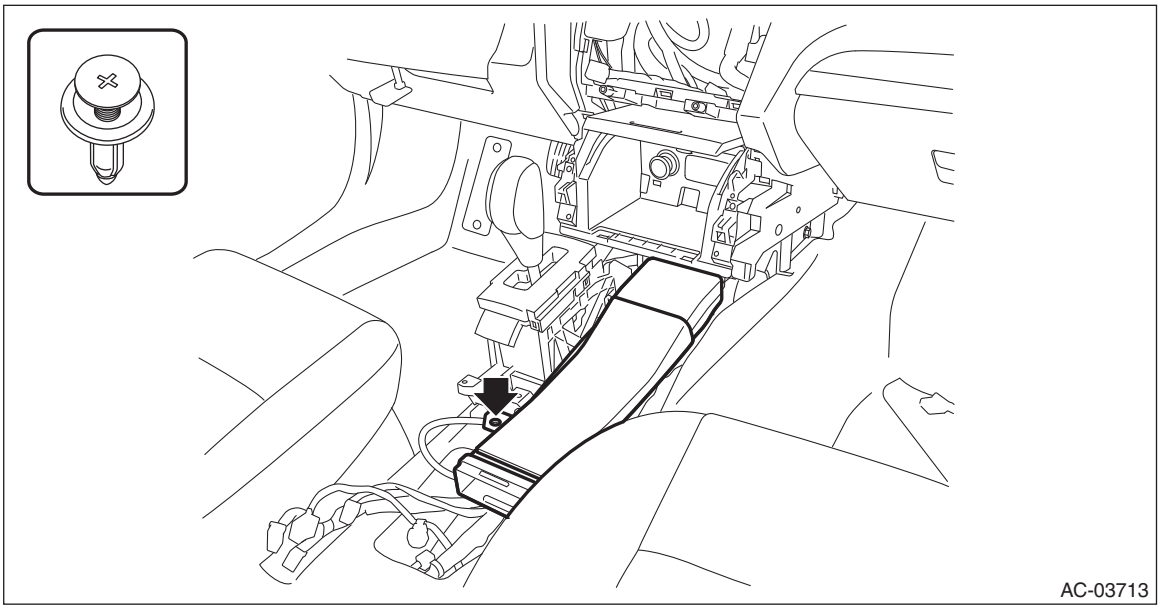
32.Heater Duct

A: REMOVAL

1. REAR HEATER DUCT

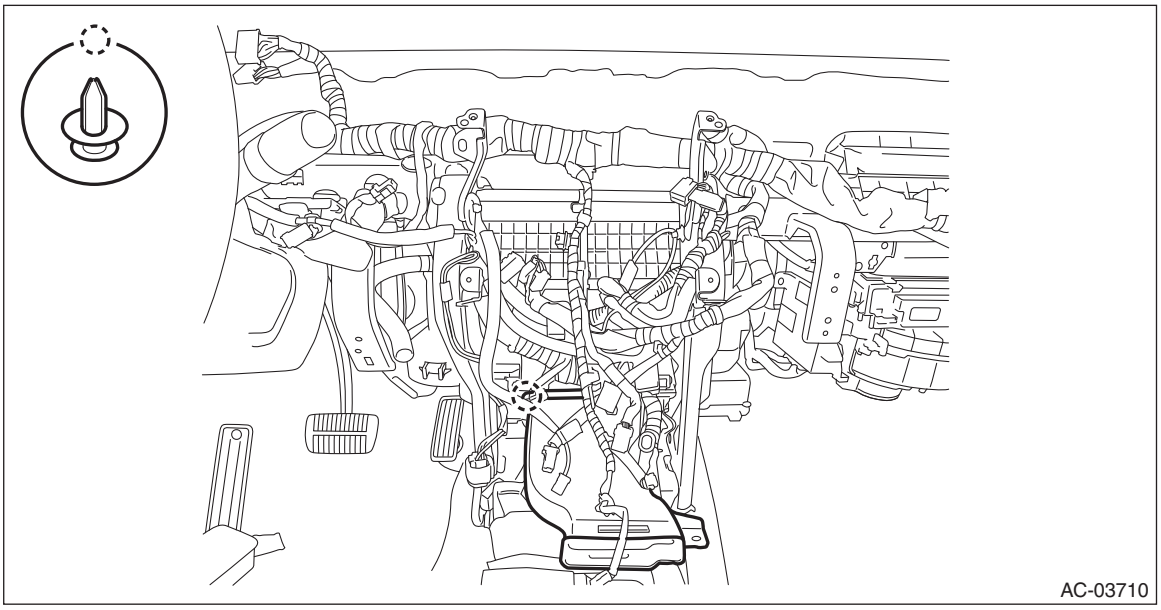
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Turn over the floor mat. <Ref. to EI-121, REMOVAL, Floor Mat.>
3) Remove the rear heater duct.
   (1) Release the clips, and remove the adapter cord.
   (2) Remove the slide lock of the duct - rear heater.
   (3) Release the claws, and then remove the duct - rear heater LH and RH.

AC-03709



NOTE:
For models with amplifier, remove the extension duct.

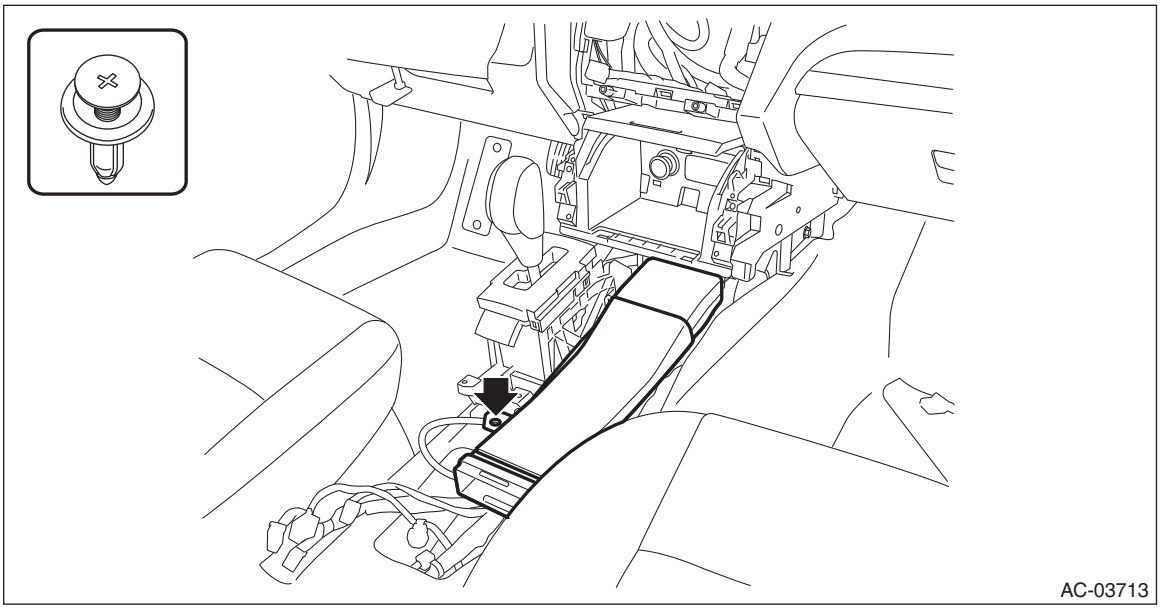
2. CONSOLE DUCT



Front

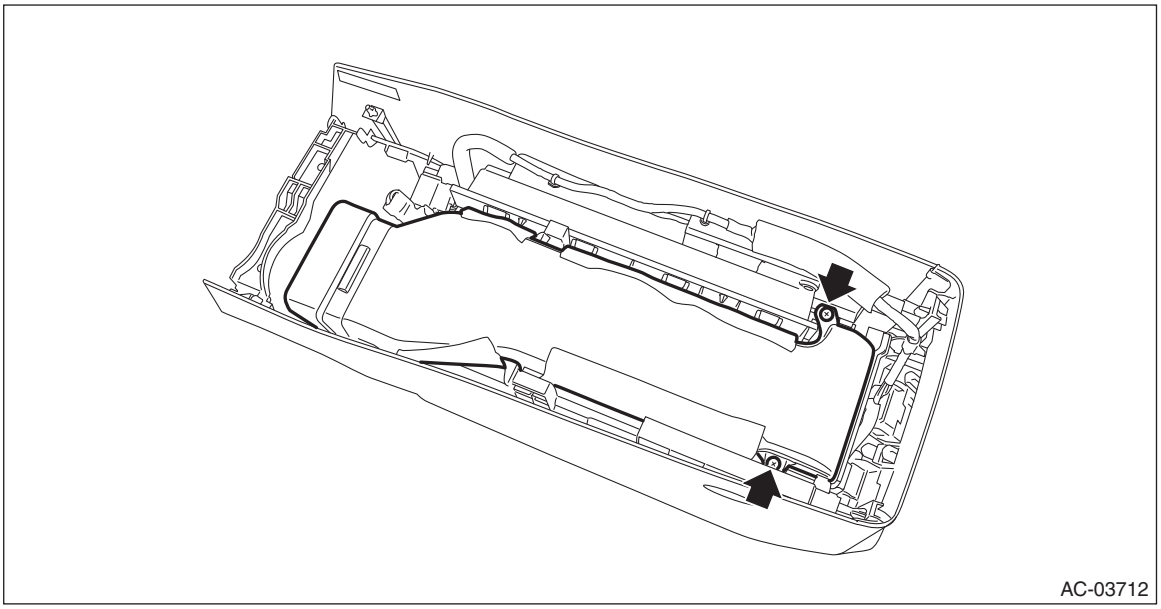
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>

3) Remove the clips, and remove the duct - console center.



4) Remove the instrument panel assembly. <Ref. to EI-82, REMOVAL, Instrument Panel Assembly.>
5) Remove the clips, and remove the duct - console front.

Center



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>

3) Remove the clips, and remove the duct - console center.

Rear

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the screws, and remove the duct - console rear.

B: INSTALLATION

1. REAR HEATER DUCT

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Install the duct - rear heater.
2) Install the floor mat. <Ref. to EI-121, INSTALLATION, Floor Mat.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

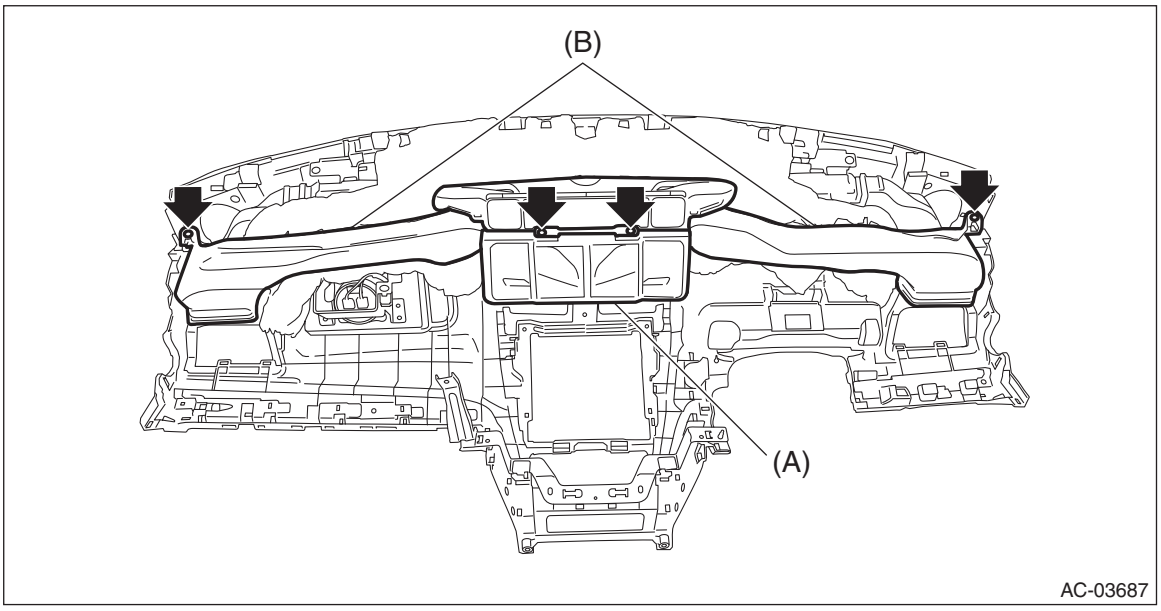
2. CONSOLE DUCT

1) Install the console duct.
2) Install the instrument panel assembly. (Front) <Ref. to EI-86, INSTALLATION, Instrument Panel Assembly.>
3) Install the cover assembly - front and the console box assembly. <Ref. to EI-81, INSTALLATION, Console Box.>

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Check installation condition of duct. Connect the duct properly if defective.
2) Check that no foreign matter is mixed in the duct. Remove the foreign matter if any.

33.Heater Vent Duct

A: REMOVAL

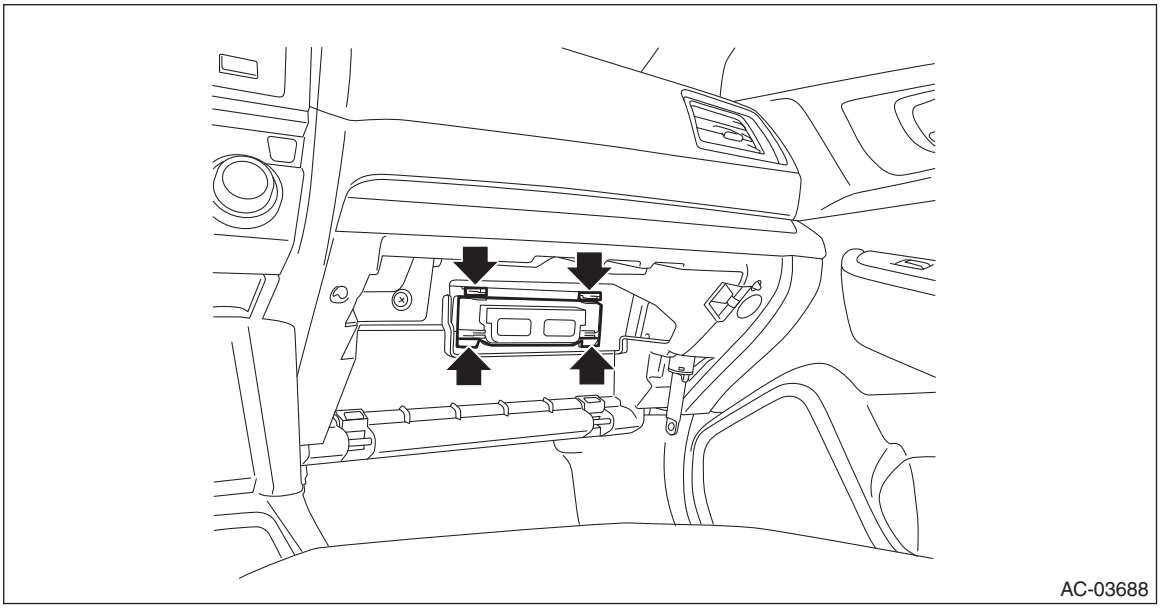
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly. <Ref. to EI-82, REMOVAL, Instrument Panel Assembly.>
3) Remove the screws and remove the duct - center vent (A) and the duct - side ventilation (B) on LH and RH sides.

B: INSTALLATION

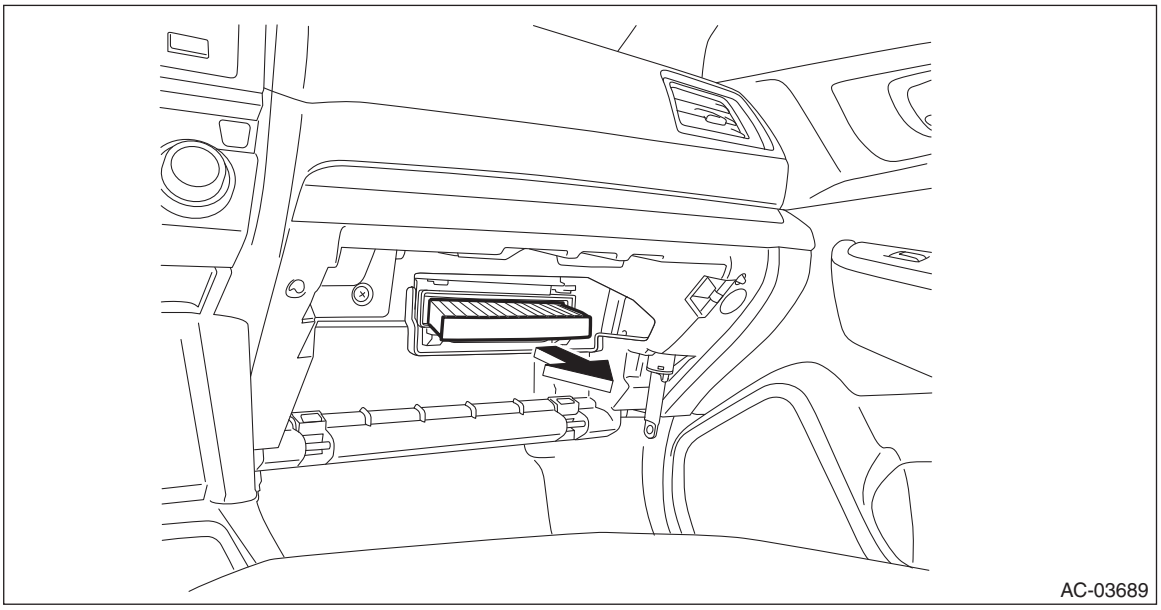
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Install the duct - center vent and the duct - side ventilation.
2) Install the instrument panel assembly. <Ref. to EI-86, INSTALLATION, Instrument Panel Assembly.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1) Check installation condition of duct. Connect the duct properly if defective.
2) Check that no foreign matter is mixed in the duct. Remove the foreign matter if any.



34.A/C Filter

A: REPLACEMENT

1) Remove the pocket assembly. <Ref. to EI-77, REMOVAL, Glove Box.>
2) Remove the A/C filter.
   (1) Release the lock and remove the A/C filter cover.

   (2) Remove the A/C filter.

NOTE:
Pull out slowly so that foreign materials attached to the filter do not fall into the filter insertion part.
3) Install a new A/C filter.
4) Install the pocket assembly.

B: INSPECTION

Check the A/C filter for dust or dirt, and clean or replace as necessary.

35.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “HVAC SYSTEM (DIAGNOSTICS)” section. <Ref. to AC(diag)-9, Diagnostics with Phenomenon.>

HVAC SYSTEM (DIAGNOSTICS)

AC(diag)

Page

1. Basic Diagnostic Procedure 2
2. General Description 3
3. Electrical Component Location 4
4. Control Module I/O Signal 6
5. Diagnostics with Phenomenon 9
6. Subaru Select Monitor 40
7. Read Diagnostic Trouble Code (DTC) 41
8. Clear Memory Mode 42
9. Inspection Mode 43
10. Read Current Data 45
11. System Operation Check Mode 47
12. Diagnostic Procedure for Subaru Select Monitor Communication 48
13. List of Diagnostic Trouble Code (DTC) 50
14. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 53

1. Basic Diagnostic Procedure

A: PROCEDURE

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as sensor having an open circuit. Always perform the inspection in direct sunlight.

	Step	Check	Yes	No
1	**START INSPECTIONS.** 1) Prepare the tools. <Ref. to AC-18, PREPARATION TOOL, General Description.> 2) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.>	Is any malfunction found in pre-inspection?	Fix the malfunction found in pre-inspection, and go to the next inspection step. Go to step **2**.	Go to step **2**.
2	**CHECK DTC.** 1) Under the failure condition, leave the vehicle for one minute or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).> NOTE: • If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AC(diag)-48, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.> • Record the freeze frame data recorded together with the DTC.	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to AC(diag)-50, LIST, List of Diagnostic Trouble Code (DTC).> After diagnosis, Go to step **3**.	Refer to Diagnostics with Phenomenon. <Ref. to AC(diag)-9, INSPECTION, Diagnostics with Phenomenon.>
3	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to AC(diag)-42, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to AC(diag)-43, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

2. General Description

A: CAUTION

1) Never connect the battery in reverse polarity.
• Doing so may immediately damage the A/C CM.
2) Do not disconnect the battery terminals while the engine is running.
• A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as A/C CM etc.
3) Before disconnecting the connectors of sensors and the A/C CM, be sure to turn off the ignition switch.
• A/C CM may be damaged.
4) Every A/C-related part is a precision part. Do not drop them.
5) Airbag system wiring harness is routed near the A/C control panel and junction box.

CAUTION:
• Do not use electrical test equipment on the airbag system wiring harness and connector.
• Be careful not to damage the airbag system wiring harness when servicing the A/C control panel and junction box.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems in the A/C system.

1. BATTERY

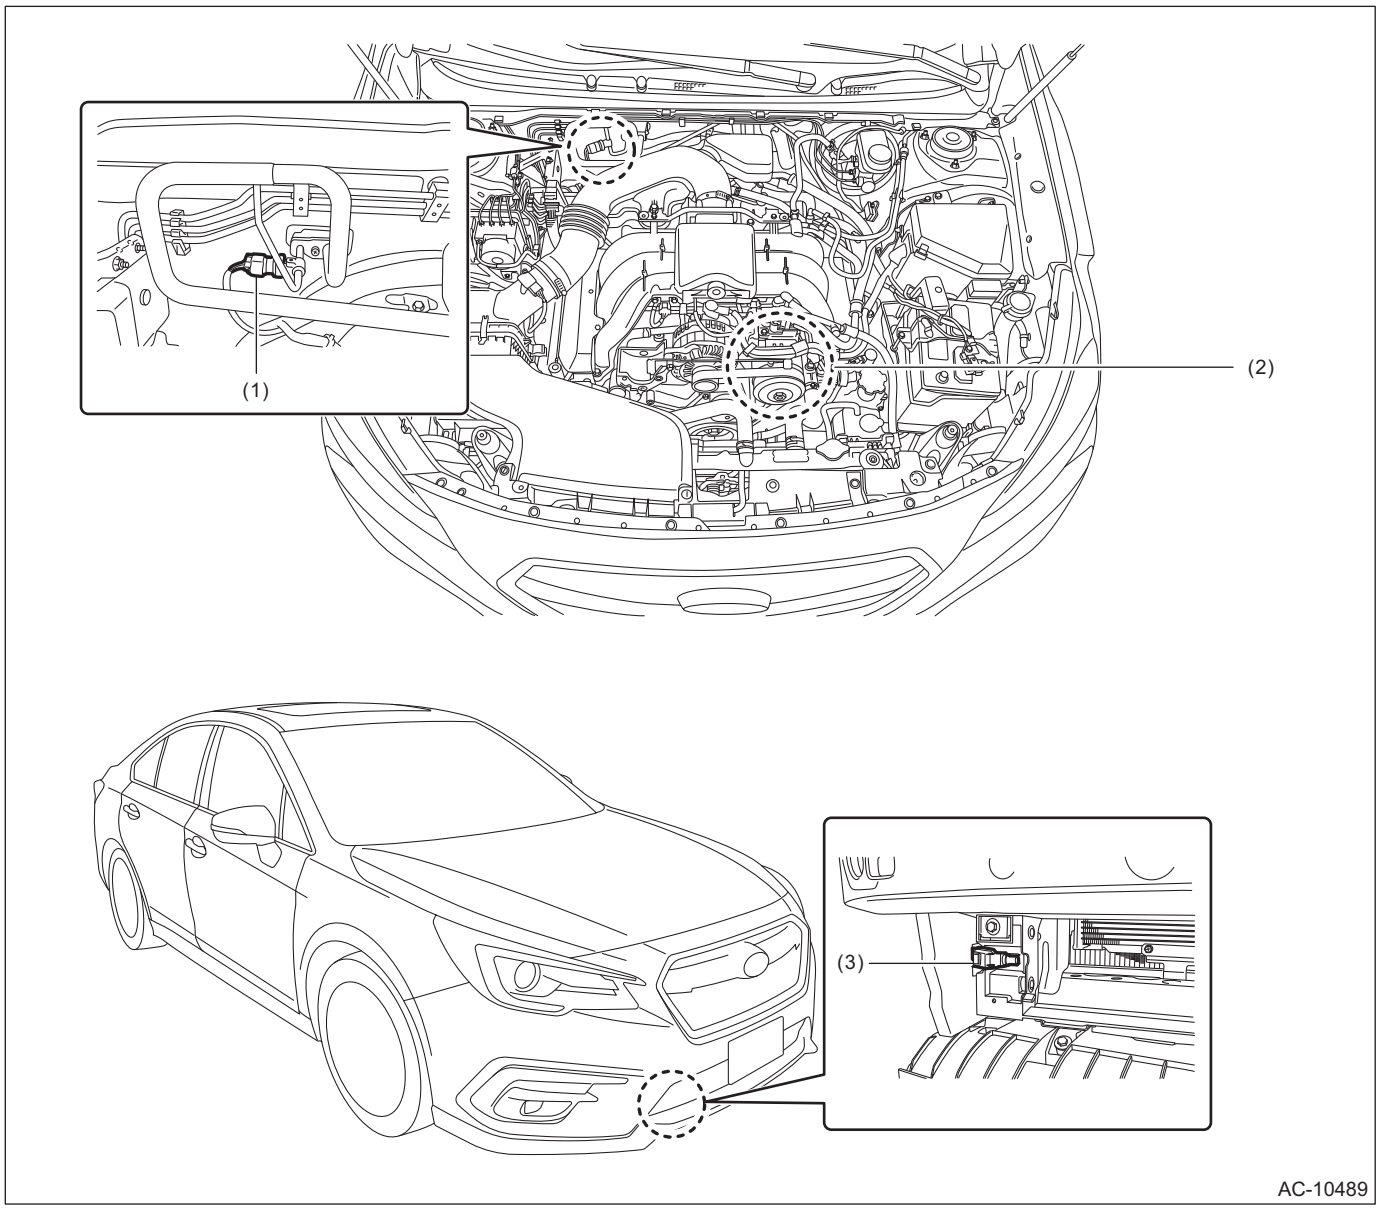
Check the battery. <Ref. to SC(H4DO)-50, INSPECTION, Battery.> <Ref. to SC(H6DO)-59, INSPECTION, Battery.>

NOTE:
If the battery voltage does not reach the specified value, recharge or replace the battery.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.



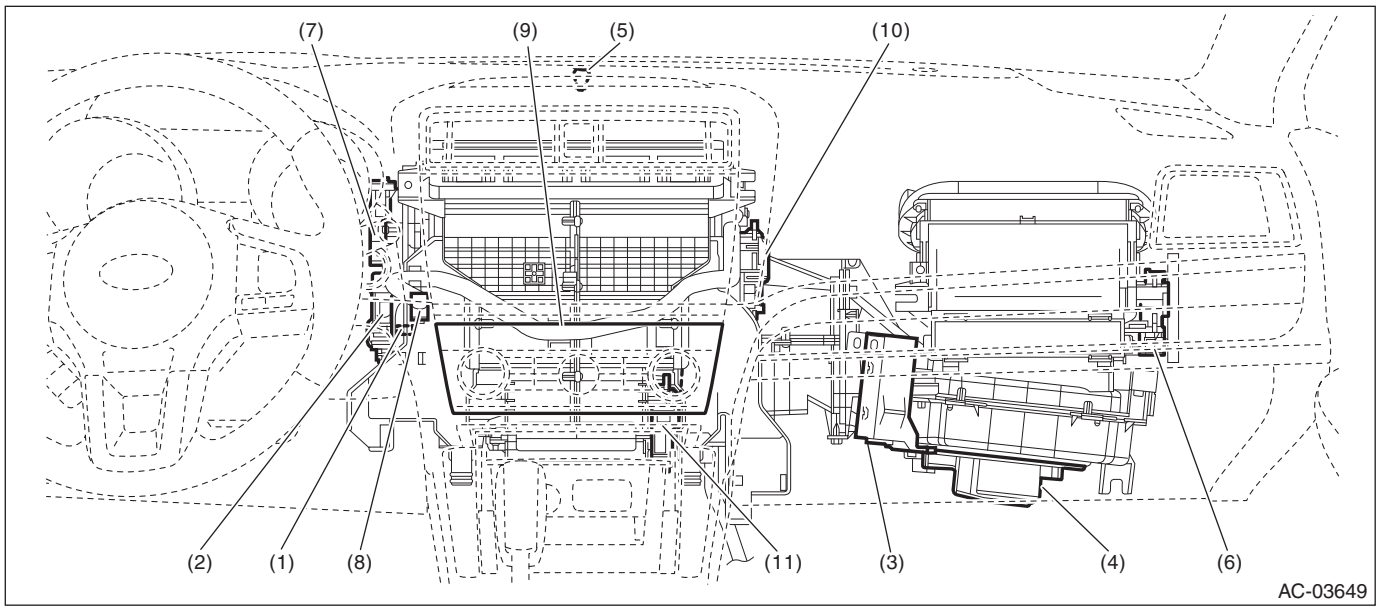
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. Electrical Component Location

A: LOCATION

1. ENGINE COMPARTMENT

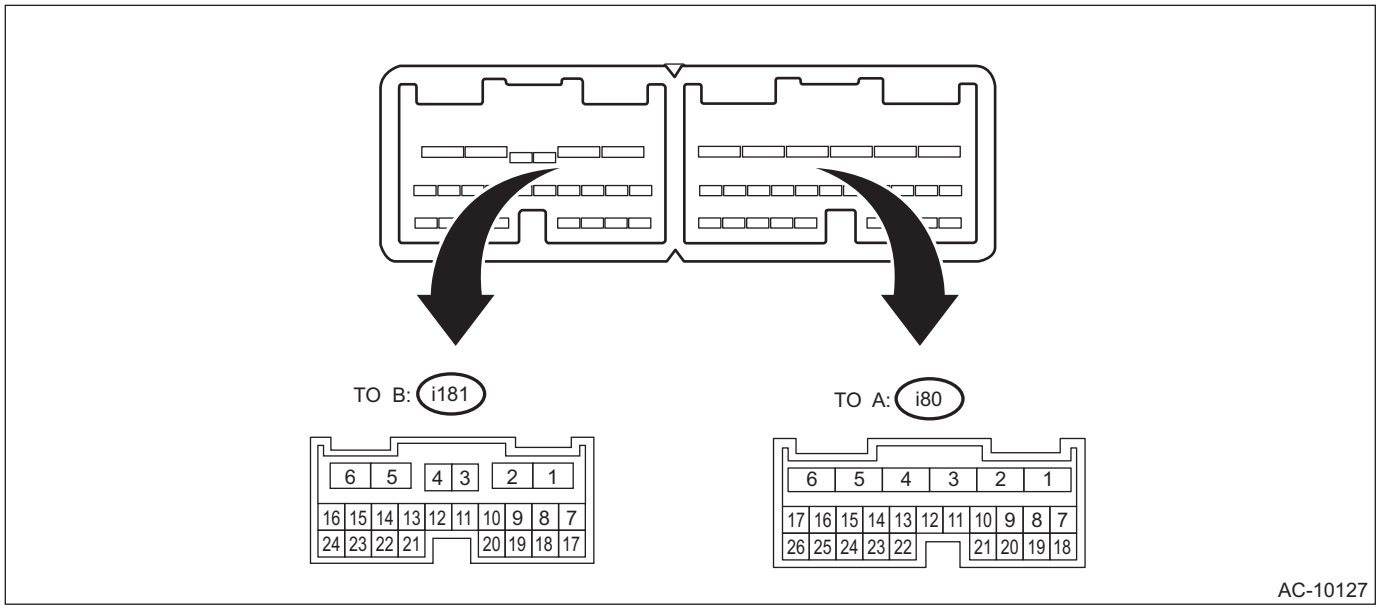


(1) Pressure sensor

(2) A/C compressor (Refrigerant flow sensor, variable flow change solenoid)

(3) Ambient sensor

2. PASSENGER COMPARTMENT



(1) Evaporator sensor
(2) Air mix door actuator*1 or air mix door actuator LH*2
(3) A/C CM
(4) Blower motor
(5) Sunload sensor
(6) Intake door actuator
(7) Mode door actuator
(8) In-vehicle sensor
(9) A/C control panel
(10) Air mix door actuator RH*2
(11) Rear vent actuator*3

*1: Manual A/C
*2: Auto A/C
*3: With rear seat A/C

4. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Terminal No.	Content	Measuring condition	Standard
A1 ←→ Chassis ground	Ignition power supply	Ignition switch: ON	Battery voltage
A2	CAN-H (CAN communication line)	Measurement load (digital signal)	—
A3	CAN-L (CAN communication line)	Measurement load (digital signal)	—
A4 ←→ Chassis ground	Ground	Always	0 V
A5 ←→ Chassis ground	Driver's side seat heater temperature sensor*4	Ignition switch: ON Varies depending on temperature at seat heater	0 — 5 V
A6 ←→ Chassis ground	Mode door actuator position signal	Ignition switch: ON Mode door FACE position	4 V
		Ignition switch: ON Mode door DEF position	1 V
A7 ←→ Chassis ground	Mode servo drive signal (FACE)	When turning towards FACE side: A7 is 12 V, B18 is GND	While operating: 12 V While not operating: 0 V
A8 ←→ Chassis ground	Battery power supply	Always	Battery voltage
A9	—	—	—
A10	—	—	—
A11 ←→ Chassis ground	Air mix door actuator drive signal (HOT)*1 or air mix door actuator (driver's seat) drive signal (HOT)*2	Turning towards HOT side: A11 is 12 V, A21 is GND	While operating: 12 V While not operating: 0 V
A12 ←→ Chassis ground	Each potentiometer and sensor power supply	Ignition switch: ON	5 V
A13	—	—	—
A14 ←→ Chassis ground	Passenger's side seat heater temperature sensor*4	Ignition switch: ON Varies depending on temperature at seat heater	0 — 5 V

Terminal No.	Content	Measuring condition	Standard
A15 ←→ Chassis ground	Rear vent actuator position signal*3	Ignition switch: ON Air mix door: Maximum cool position	1.8 V
		Ignition switch: ON Air mix door: Maximum hot position	4.1 V
A16 ←→ Chassis ground	Air mix door actuator (passenger's side) position signal*2	Ignition switch: ON Air mix door: Maximum cool position	4 V
		Ignition switch: ON Air mix door: Maximum hot position	1 V
A17 ←→ Chassis ground	Air mix door position signal*1 or air mix door (driver's side) position signal*2	Ignition switch: ON Air mix door: Maximum cool position	4 V
		Ignition switch: ON Air mix door: Maximum hot position	1 V
A18 ←→ Chassis ground	Mode servo drive signal (DEF)	When turning towards DEF side: A18 is 12 V, A7 is GND	While operating: 12 V While not operating: 0 V
A19	—	—	—
A20 ←→ Chassis ground	ACC power supply	Ignition switch: ACC	Battery voltage
A21 ←→ Chassis ground	Air mix door actuator drive signal (COOL)*1 or air mix door actuator (driver's side) drive signal (COOL)*2	Turning towards COOL side: A21 is 12 V, A11 is GND	While operating: 12 V While not operating: 0 V
A22 ←→ Chassis ground	After-evaporator sensor signal	Ignition switch: ON Varies depending on temperature after the evaporator	1 — 4.5 V
A23 ←→ Chassis ground	In-vehicle sensor signal	Ignition switch: ON	25°C (77°F): Approx. 1.5 V 40°C (104°F): Approx. 1.0 V
A24 ←→ Chassis ground	Pressure sensor signal	Ignition switch: ON	0.5 — 4.9 V
A25 ←→ Chassis ground	Sunload sensor signal	Ignition switch: ON (0 V: No sunload)	0 — 4.9 V
A26 ←→ Chassis ground	Flow sensor signal	Ignition switch: ON	0.3 — 4.7 V
B1 ←→ Chassis ground	Driver's side seat heater control*4	Ignition switch: ON Seat heater switch: ON	0 V or battery voltage
B2 ←→ Chassis ground	Seat heater (driver's side) GND*4	Always	Less than 0.5 V
B3 ←→ Chassis ground	Blower motor voltage feedback*2	Ignition switch: ON Blower switch: ON	0.45 — 10 V
B4 ←→ Chassis ground	Blower motor control signal*2	Ignition switch: ON Blower switch: ON	9.05 V
B5 ←→ Chassis ground	Passenger's side seat heater control*4	Ignition switch: ON Seat heater switch: ON	0 V or battery voltage
B6 ←→ Chassis ground	Seat heater (passenger's side) GND*4	Always	Less than 0.5 V
B7 ←→ Chassis ground	Intake door actuator drive signal (RECIRC)	Intake door actuator operating on the RECIRC side	0.7 V or less
B8 ←→ Chassis ground	Variable compressor solenoid valve	Ignition switch: ON Blower switch: ON A/C switch: ON	2 — 12 V
B9	—	—	—
B10	—	—	—
B11	A/C control panel communication	Measurement load (digital signal)	—
B12	A/C control panel communication	Measurement load (digital signal)	—

Terminal No.	Content	Measuring condition	Standard
B13 ←→ Chassis ground	Heater main relay drive signal*2	Ignition switch: ON Blower switch: ON	0.7 V or less
B14	—	—	—
B15 ←→ Chassis ground	Air mix door actuator (passenger's side) drive signal (HOT)*2	Turning towards HOT side: B14 is 12 V, B15 is GND	While operating: 12 V While not operating: 0 V
B16 ←→ Chassis ground	Air mix door actuator (passenger's side) drive signal (COOL)*2	Turning towards COOL side: B15 is 12 V, B14 is GND	While operating: 12 V While not operating: 0 V
B17 ←→ Chassis ground	Intake door actuator drive signal (FRESH)	Intake door actuator operating on the FRESH side	0.7 V or less
B18 ←→ Chassis ground	Sensor GND	Always	Less than 0.5 V
B19	—	—	—
B20	—	—	—
B21	—	—	—
B22	—	—	—
B23 ←→ Chassis ground	Rear vent actuator drive signal (HOT)*3	Turning towards HOT side: B22 is 12 V, B23 is GND	While operating: 12 V While not operating: 0 V
B24 ←→ Chassis ground	Rear vent actuator drive signal (COOL)*3	Turning towards COOL side: B23 is 12 V, B22 is GND	While operating: 12 V While not operating: 0 V

*1: Manual A/C
*2: Auto A/C
*3: With rear seat A/C
*4: With seat heater

B: WIRING DIAGRAM

Refer to "Air Conditioning System" in the wiring diagram. <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

5. Diagnostics with Phenomenon

A: INSPECTION

1. Perform diagnosis according to the diagnosis procedure for the corresponding symptom listed in the symptom table.
2. If there are multiple symptoms, perform the diagnosis in the order of symptom number (1 → 2 → ... → 13).

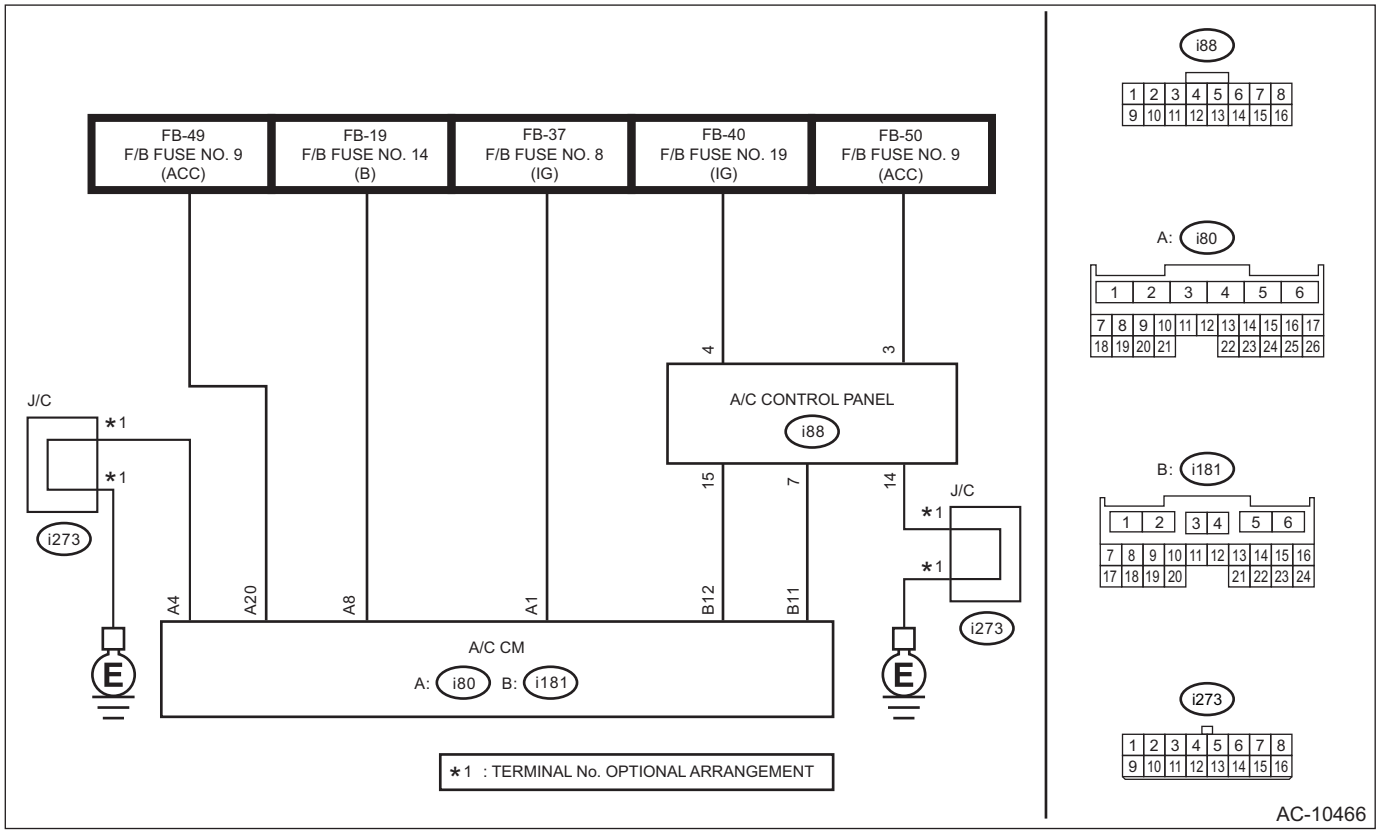
1. SYMPTOM TABLE

Symptoms		Diagnosis procedure
1	Nothing is displayed on the screen or indicators do not illuminate.	<Ref. to AC(diag)-10, NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
2	Air conditioner does not stop even when the OFF switch is pressed. (vehicles with fully automatic air conditioner)	<Ref. to AC(diag)-12, AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	The windshield glass is not cleared even when the DEF switch is pressed. (vehicles with fully automatic air conditioner)	<Ref. to AC(diag)-13, THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	Cold air not emitted.	<Ref. to AC(diag)-14, COLD AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
5	Warm air not emitted.	<Ref. to AC(diag)-17, WARM AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	Compartment temperature is excessively lower than setting temperature.	<Ref. to AC(diag)-20, COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7	Compartment temperature is excessively higher than setting temperature.	<Ref. to AC(diag)-22, COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	Air does not come out, or airflow capacity is insufficient. (Blower motor does not rotate.)	<Ref. to AC(diag)-25, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	Air goes out of control. (Blower motor rotates at high speed.)	<Ref. to AC(diag)-31, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	Cold air does not come out even when the A/C switch is pressed. The glass cannot be defogged. (Compressor does not operate. (variable))	<Ref. to AC(diag)-34, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	Unable to switch suction vents.	<Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	Unable to switch vents.	<Ref. to AC(diag)-37, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	Illumination does not come on, or cannot dim.	<Ref. to AC(diag)-38, ILLUMINATION DOES NOT COME ON OR CANNOT DIM, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

B: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE

Trouble symptom:



- When the AUTO button is pressed with IGN ON, nothing is displayed on the screen or indicators do not illuminate.
- Self diagnosis using A/C control panel does not operate.

Trouble causes:

- Control module power supply circuit failure
- A/C control panel power supply failure
- UART communication failure

Wiring diagram:

Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuses No. 8, 9, 14 and 19 from fuse & relay box. 3) Check the condition of fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the A/C control panel or A/C CM and fuse.
2	**CHECK CONNECTOR.** Check poor contact of A/C control panel connector, A/C CM connector and coupling connector.	Is the check result OK?	Go to step **3**.	Repair the connector.

Step		Check	Yes	No
3	**CHECK A/C CONTROL PANEL POWER CIRCUIT.** 1) Remove the A/C control panel. 2) Disconnect the A/C control panel connector. 3) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i88) No. 3 (+) — Chassis ground (–):*** ***(i88) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check for open or short circuit in the harness between A/C control panel and fuse.
4	**CHECK A/C CONTROL PANEL GROUND CIRCUIT.** Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. ***Connector & terminal*** ***(i88) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness for ground line.
5	**CHECK A/C CM POWER SUPPLY CIRCUIT.** 1) Install the A/C control panel. 2) Disconnect the A/C CM connector. 3) Measure the voltage between A/C CM connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i80) No. 1 (+) — Chassis ground (–):*** ***(i80) No. 8 (+) — Chassis ground (–):*** ***(i80) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for open or short circuit in the harness between A/C CM and fuse.
6	**CHECK A/C CM GROUND CIRCUIT.** Measure the resistance of harness between A/C CM and chassis ground. ***Connector & terminal*** ***(i80) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair the harness for ground line.
7	**CHECK COMMUNICATION CIRCUIT.** Measure the resistance of harness between A/C control panel and A/C CM. ***Connector & terminal*** ***(i88) No. 7 — (i80) No. 11:*** ***(i88) No. 15 — (i80) No. 12:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair the harness.
8	**CHECK COMMUNICATION CIRCUIT HARNESS.** Measure the resistance between communication circuit harness and chassis ground. ***Connector & terminal*** ***(i80) No. 11 — Chassis ground:*** ***(i80) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the harness.	Go to step **9**.
9	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i80) No. 11 — (i80) No. 12:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the harness.	Go to step **10**.
10	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to OFF. 2) Replace the A/C control panel with a properly functioning part.	Is the check result OK?	Since the A/C control panel has an internal error, replace A/C control panel with a new one. <Ref. to AC-46, REMOVAL, Control Panel.>	Since the A/C CM has an internal error, replace A/C CM with a new one. <Ref. to AC-48, REMOVAL, Control Unit.>

2. AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER)

TROUBLE SYMPTOM:

Even when the OFF switch is pressed, the blower fan does not turn off, the inlet opening remains in FRESH mode, and the compressor does not turn off.

Trouble causes:

- UART communication failure
- A/C control panel failure
- Blower motor failure
- Intake door actuator failure
- Compressor failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Press the OFF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Blower Fan Level» • «Variable Flow Change Solenoid Duty» (vehicles with variable air conditioner) • «Fresh/Recircle Air Door Actuator Position Target»	Does «Blower Fan Level» indicate 0, «Variable Flow Change Solenoid Duty» indicate 0%, and «Fresh/Recircle Air Door Actuator Position Target» indicate 100% respectively?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
2	**CHECK BLOWER MOTOR.** With the OFF switch pressed, check the blower motor operation.	Is the blower motor stopped?	Go to step **3**.	<Ref. to AC(diag)-31, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	**CHECK INTAKE DOOR ACTUATOR.** With the OFF switch pressed, check the FRESH/RECIRC door operation.	Does the FRESH/RECIRC door set to FRESH?	Go to step **4**.	<Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK COMPRESSOR.** With the OFF switch pressed, check the compressor operation.	Is the compressor stopped?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-34, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

3. THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER)

Trouble symptom:

Even when the DEF switch is pressed, the defroster indicator does not illuminate, the outlet opening is not set to DEF, the compressor does not turn on and the outlet opening is not set to FRESH.

Trouble causes:

- UART communication failure
- A/C control panel failure
- Mode door actuator failure
- Compressor failure
- Intake door actuator failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Press the DEF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Mode Door Actuator Position Target» • «Variable Flow Change Solenoid Duty» (vehicles with variable air conditioner) • «Fresh/Recircle Air Door Actuator Position Target»	Does «Mode Door Actuator Position Target» indicate 100%, «Variable Flow Change Solenoid Duty» indicate 0% or more, and «Fresh/Recircle Air Door Actuator Position Target» indicate 100% respectively?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
2	**CHECK MODE DOOR ACTUATOR.** With the DEF switch ON, check the mode door operation.	Does the air come out from the DEF outlet opening?	Go to step **3**.	<Ref. to AC(diag)-37, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
3	**CHECK INTAKE DOOR ACTUATOR.** With the DEF switch ON, check the FRESH/RECIRC door operation.	Does the FRESH/RECIRC door operate normally?	Go to step **4**.	<Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	**CHECK COMPRESSOR.** With the DEF switch ON, check the compressor operation.	Does the compressor operate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-34, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

4. COLD AIR NOT EMITTED

Trouble symptom:
Cold air not emitted.
Trouble causes:
- Airflow capacity failure
- Refrigerant pressure failure
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Intake door actuator failure
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK MAX COOL.** Set the A/C control panel switch as described below. Temperature control switch: MAX COOL FRESH/RECIRC switch: RECIRC Mode switch: VENT A/C switch: ON	Does it fail to blow the cold air?	Go to step **2**.	Go to step **4**.

	Step	Check	Yes	No
2	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-25, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **3**.	Perform repair according to inspection procedure.
3	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-23, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the check result OK?	For vehicles with automatic air conditioner Go to step **4**. For vehicles with manual air conditioner Go to step **6**.	Perform repair according to refrigerant pressure inspection.
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 60? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate 74.5?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn the temperature control dial (driver’s side) to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 90? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate –5.5?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
7	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>

	Step	Check	Yes	No
8	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **9**.
9	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **10**.
10	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the check result OK?	Go to step **11**.	Check the intake door actuator. <Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-87, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **12**.	Replace the evaporator sensor. <Ref. to AC-86, REMOVAL, Evaporator Sensor.>
12	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor. <Ref. to AC-83, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **13**.	Replace the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
13	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the ambient sensor. <Ref. to AC-79, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **14**.	Replace the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.>

	Step	Check	Yes	No
14	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-82, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>

5. WARM AIR NOT EMITTED

Trouble symptom:
Warm air not emitted.
Trouble causes:
- Airflow capacity failure
- Coolant failure
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Intake door actuator failure
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK MAX HOT.** Set the A/C control panel switch as described below. Temperature control dial: MAX HOT FRESH/RECIRC switch: FRESH Mode switch: HEAT A/C switch: OFF	Does it fail to blow the hot air?	Go to step **2**.	Go to step **4**.
2	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-25, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **3**.	Perform repair according to inspection procedure.

	Step	Check	Yes	No
3	**CHECK ENGINE COOLANT.** Check engine coolant amount.	Is the check result OK?	For vehicles with automatic air conditioner Go to step **4**. For vehicles with manual air conditioner Go to step **6**.	Fill engine coolant. If there is coolant leakage, repair the leaks according to Engine Cooling System Trouble in General. <Ref. to CO(H4DO)-66, Engine Cooling System Trouble in General.> <Ref. to CO(H6DO)-52, Engine Cooling System Trouble in General.>
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 60? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate 74.5?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn the temperature control dial (driver’s side) to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 90? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate –5.5?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
7	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>

	Step	Check	Yes	No
8	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **9**.
9	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **10**.
10	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the check result OK?	Go to step **11**.	Check the intake door actuator. <Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-87, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **12**.	Replace the evaporator sensor. <Ref. to AC-86, REMOVAL, Evaporator Sensor.>
12	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor circuit. <Ref. to AC-83, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **13**.	Replace the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
13	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the ambient sensor. <Ref. to AC-79, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **14**.	Replace the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.>

	Step	Check	Yes	No
14	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-82, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>

6. COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE

Trouble symptom:
Compartment temperature is excessively lower than setting temperature.
Trouble causes:
- Large airflow capacity
- Refrigerant pressure failure
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-31, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **2**.	Perform repair according to inspection procedure.
2	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-23, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the check result OK?	For vehicles with automatic air conditioner Go to step **3**. For vehicles with manual air conditioner Go to step **5**.	Perform repair according to refrigerant pressure inspection.

	Step	Check	Yes	No
3	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 60? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate 74.5?	Go to step **4**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 90? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate –5.5?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn both temperature control dials to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
7	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **9**.
9	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-87, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **10**.	Replace the evaporator sensor. <Ref. to AC-86, REMOVAL, Evaporator Sensor.>
10	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor circuit. <Ref. to AC-83, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **11**.	Replace the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check ambient sensor circuit. <Ref. to AC-79, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **12**.	Replace the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.>
12	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-82, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>

7. COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE

Trouble symptom:
Compartment temperature is excessively higher than setting temperature.
Trouble causes:
- Large airflow capacity
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Intake door actuator failure
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)

- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-31, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	For vehicles with automatic air conditioner Go to step **2**. For vehicles with manual air conditioner Go to step **4**.	Perform repair according to inspection procedure.
2	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 60? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate 74.5?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
3	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn the temperature control dial (driver’s side) to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 90? And does «Rear Vent Actuator Position Target» (only for models with rear seat A/C) indicate –5.5?	Go to step **4**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>

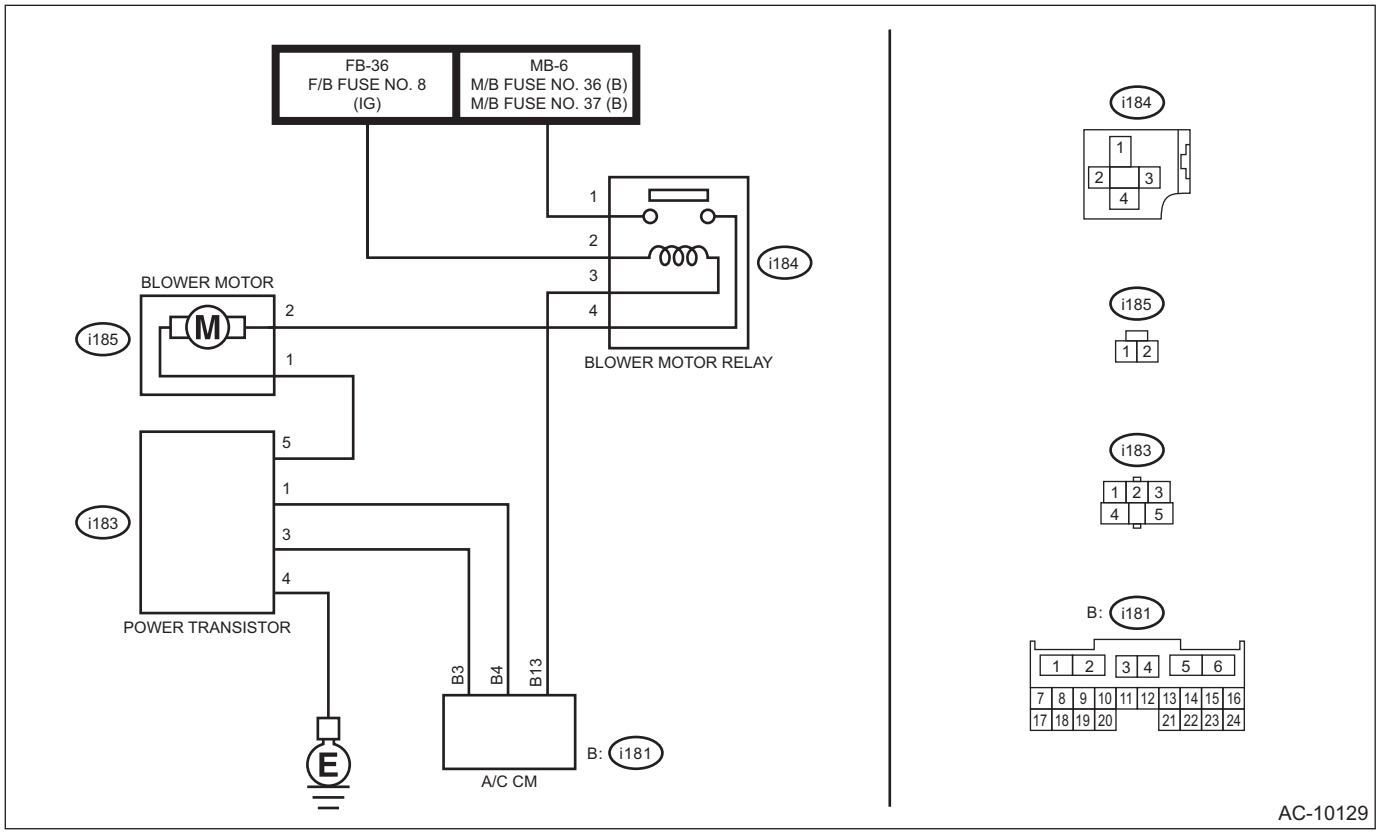
	Step	Check	Yes	No
6	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **7**.
7	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed?	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.	Go to step **8**.
8	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the check result OK?	Go to step **9**.	Check the intake door actuator. <Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-87, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **10**.	Replace the evaporator sensor. <Ref. to AC-86, REMOVAL, Evaporator Sensor.>
10	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor circuit. <Ref. to AC-83, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **11**.	Replace the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check ambient sensor circuit. <Ref. to AC-79, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **12**.	Replace the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.>

	Step	Check	Yes	No
12	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-82, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>

8. AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT

Trouble symptom:

- Airflow capacity is insufficient.
- No air comes out even when the fan switch or fan dial is operated.
- There is a fan speed at which no air comes out.



Trouble causes:

- Airflow capacity failure
- UART communication failure
- A/C control panel failure
- Blower motor failure

Auto A/C

Wiring diagram:

Air conditioning system <Ref. to WI-102, AUTO A/C, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK BLOWER OPERATION.** 1) Using Subaru Select Monitor, display the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • «Air mix door actuator position (driver’s side)» • «Air mix door actuator position (passenger’s side)» (with left/right independent air conditioner) • «Blower fan level» 2) Turn the temperature control dial to the lowest setting, and increase or decrease the A/C control panel fan switch. (For vehicles with left/right independent air conditioner, perform setting on both sides.)	Do «Air mix door actuator position (driver’s side)» and «Air mix door actuator position (passenger’s side)» (with left/right independent air conditioner) indicate 0%? Also, does the value of «Blower Fan Level» increase or decrease in conjunction with the fan switch operation?	Go to step **2**.	Go to step **5**.

	Step	Check	Yes	No
2	**CHECK AIRFLOW CAPACITY.** Turn the temperature control dial to the lowest setting (both dials for the models equipped with left/right independent air conditioning function), and set A/C control panel fan switch to MAX and FRESH/RECIRC switch to RECIRC.	Is the airflow capacity insufficient for the same model?	Go to step **3**.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK A/C FILTER.** Check the A/C filter. <Ref. to AC-108, INSPECTION, A/C Filter.>	Is the check result OK?	Go to step **4**.	Clean or replace the A/C filter.
4	**CHECK EACH DUCT.** Check each duct joint for disconnection or clogging. <Ref. to AC-102, INSPECTION, Air Vent Grille.> <Ref. to AC-106, INSPECTION, Heater Duct.> <Ref. to AC-107, INSPECTION, Heater Vent Duct.>	Is the check result OK?	Go to step **5**.	Repair the faulty duct.
5	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Set the fan switch to maximum position. 3) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate 31?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL.** 1) Set the fan switch to minimum position. 2) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate 3?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
7	**CHECK CONNECTOR.** Check poor contact of the blower motor connector, blower motor relay connector, power transistor connector, A/C CM connector and coupling connector.	Is the check result OK?	Go to step **8**.	Repair the connector.
8	**CHECK FUSE.** 1) Remove the fuse No. 8 of the fuse & relay box and the fuses No. 36 and No. 37 of the main fuse box. 2) Check the condition of fuse.	Is the check result OK?	Go to step **9**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the blower motor relay and fuse.

	Step	Check	Yes	No
9	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Stop the engine. 2) Turn the fan switch to OFF. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the A/C CM connector and chassis ground. ***Connector & terminal*** ***(i181) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	• Check for an open or short circuit in the harness between the F/B fuse No. 8 and ECM. • Check the blower relay connector and relay unit. <Ref. to AC-35, CHECK RELAY, INSPECTION, Relay and Fuse.>
10	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Start the engine. 2) Turn the fan switch to ON. 3) Using a tester, measure the voltage between the A/C CM connector and chassis ground. ***Connector & terminal*** ***(i181) No. 13 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **11**.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>
11	**CHECK BLOWER MOTOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Turn the fan switch to ON. 3) Use a tester to measure the voltage between the blower motor connector and chassis ground. ***Connector & terminal*** ***(i185) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	• Check the harness of blower motor power supply line for open circuit and the coupling connector. • Check the blower relay connector and relay unit. <Ref. to AC-35, CHECK RELAY, INSPECTION, Relay and Fuse.>
12	**CHECK BLOWER MOTOR UNIT.** Check the blower motor. <Ref. to AC-40, INSPECTION, Blower Motor.>	Is the check result OK?	Go to step **13**.	Replace the blower motor. <Ref. to AC-39, REMOVAL, Blower Motor.>
13	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the power transistor and A/C CM connector. 2) Using a tester, measure the resistance between harness terminals. ***Connector & terminal*** ***(i185) No. 1 — (i183) No. 5:*** ***(i183) No. 3 — (i181) No. 3:*** ***(i183) No. 1 — (i181) No. 4:*** ***(i183) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Use a tester to measure the harness resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 — Chassis ground:*** ***(i183) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Go to step **15**.

	Step	Check	Yes	No
15	**CHECK POWER TRANSISTOR.** Replace the power transistor with a properly functioning part.	Does the blower motor rotate?	Replace the power transistor. <Ref. to AC-41, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C CM <Ref. to AC-48, REMOVAL, Control Unit.>

Manual A/C

Wiring diagram:

Air conditioning system <Ref. to WI-98, MANUAL A/C, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK BLOWER OPERATION.** Turn the temperature control dial to the lowest setting, and increase or decrease the fan dial.	Does the airflow capacity increase or decrease in accordance with the dial operation?	Go to step **2**.	Go to step **5**.
2	**CHECK AIRFLOW CAPACITY.** Turn the temperature control dial to the highest setting, and set the fan switch to MAX and FRESH/RECIRC switch to RECIRC.	Is the airflow capacity insufficient for the same model?	Go to step **3**.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

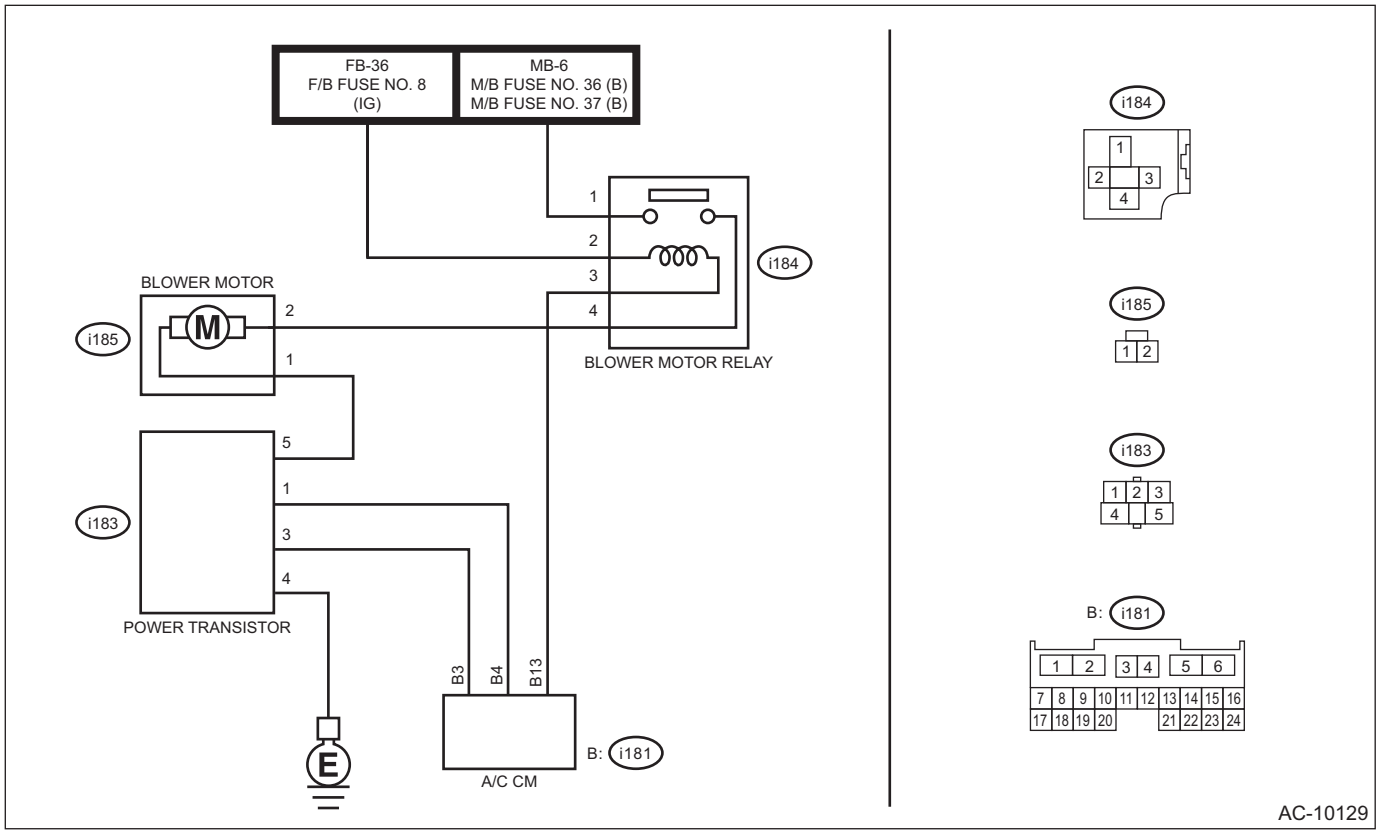
	Step	Check	Yes	No
3	**CHECK A/C FILTER.** Check the A/C filter. <Ref. to AC-108, INSPECTION, A/C Filter.>	Is the check result OK?	Go to step **4**.	Clean or replace the A/C filter.
4	**CHECK EACH DUCT.** Check each duct joint for disconnection or clogging. <Ref. to AC-102, INSPECTION, Air Vent Grille.> <Ref. to AC-106, INSPECTION, Heater Duct.> <Ref. to AC-107, INSPECTION, Heater Vent Duct.>	Is the check result OK?	Go to step **5**.	Repair the faulty duct.
5	**CHECK CONNECTOR.** Check poor contact of the blower motor relay connector, blower motor connector, blower resistor connector, blower fan switch connector and coupling connector.	Is the check result OK?	Go to step **6**.	Repair the connector.
6	**CHECK FUSE.** 1) Remove the fuse No. 8 of the fuse & relay box and the fuses No. 36 and No. 37 of the main fuse box. 2) Check the condition of fuse.	Is the check result OK?	Go to step **7**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the blower motor relay and fuse.
7	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Stop the engine. 2) Turn the fan switch to OFF. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the blower fan switch and chassis ground. ***Connector & terminal*** ***(i15) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	• Check for an open or short circuit between the F/B fuse No. 8 and blower fan switch. • Check the blower relay connector and relay unit.
8	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Start the engine. 2) Turn the fan switch to OFF. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the blower fan switch and chassis ground. ***Connector & terminal*** ***(i15) No. 1 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **9**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
9	**CHECK BLOWER MOTOR POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Turn the blower switch to ON. 3) Use a tester to measure the voltage between the blower motor connector and chassis ground. ***Connector & terminal*** ***(i185) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	• Check the harness of blower motor power supply line for open circuit and the coupling connector. • Check the blower relay connector and relay unit.
10	**CHECK BLOWER MOTOR.** Check the blower motor. <Ref. to AC-40, INSPECTION, Blower Motor.>	Is the check result OK?	Go to step **11**.	Replace the blower motor. <Ref. to AC-39, REMOVAL, Blower Motor.>

	Step	Check	Yes	No
11	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from blower motor, blower resistor and blower fan switch. 2) Use a tester to measure the resistance of the harness between terminals. ***Connector & terminal*** ***(i185) No. 1 — (i182) No. 4:*** ***(i185) No. 1 — (i15) No. 3:*** ***(i182) No. 1 — (i15) No. 6:*** ***(i182) No. 2 — (i15) No. 4:*** ***(i182) No. 3 — (i15) No. 5:***	Is the resistance less than 1 Ω?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK BLOWER RESISTOR.** Check the blower resistor. <Ref. to AC-42, INSPECTION, Blower Resistor (Manual A/C Model).>	Is the check result OK?	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>	Replace the blower resistor. <Ref. to AC-42, REMOVAL, Blower Resistor (Manual A/C Model).>

9. AIR GOES OUT OF CONTROL

Trouble symptom:

- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)



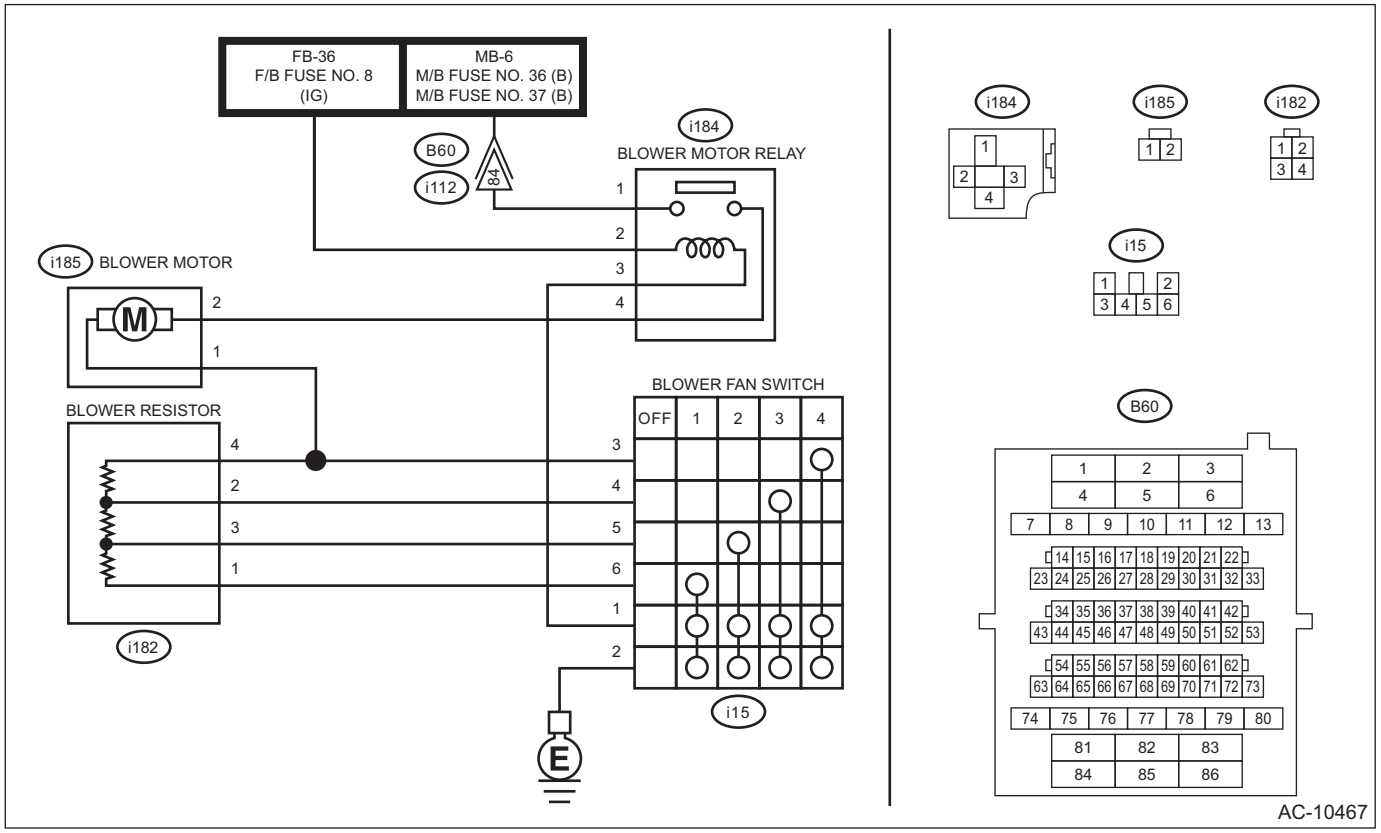
Trouble causes:

- Airflow capacity failure
- UART communication failure
- A/C control panel failure
- Blower motor failure

Auto A/C

Wiring diagram:

Air conditioning system <Ref. to WI-102, AUTO A/C, WIRING DIAGRAM, Air Conditioning System.>

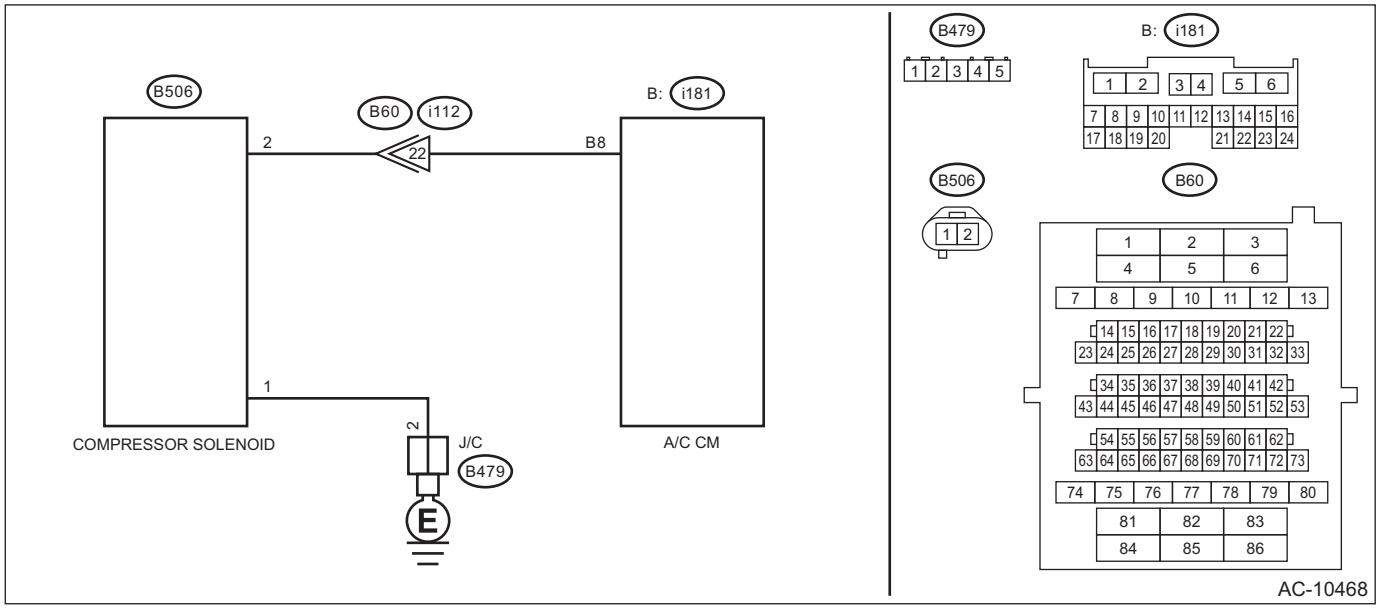


Step		Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Set the fan switch to maximum position. 3) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate 31?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
2	**CHECK A/C CONTROL PANEL.** 1) Set the fan switch to minimum position. 2) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate 1?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness between blower motor and power transistor.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Remove the A/C CM. 2) Turn the ignition switch to ON. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness between A/C CM and power transistor.	Go to step **5**.
5	**CHECK HARNESS.** 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 (+) — Chassis ground (–):***	Is the voltage approx. 10 V when the fan switch is set to 1st, and approx. 1 V when set to 6th?	Replace the power transistor. <Ref. to AC-41, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step **6**.
6	**CHECK A/C CM.** 1) Turn the fan switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 — Chassis ground:***	When the fan switch is OFF and other than OFF, does the resistance change?	Replace the power transistor. <Ref. to AC-41, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

Manual A/C

Wiring diagram:



Air conditioning system <Ref. to WI-98, MANUAL A/C, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK BLOWER MOTOR CIRCUIT (SHORT CIRCUIT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the blower fan switch connector and blower resistor connector. 3) Use a tester to measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(i182) No. 4 — Chassis ground:*** ***(i15) No. 3 — Chassis ground:*** ***(i15) No. 4 — Chassis ground:*** ***(i15) No. 5 — Chassis ground:*** ***(i15) No. 6 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Go to step **2**.
2	**CHECK BLOWER RESISTOR.** Check the blower resistor. <Ref. to AC-42, INSPECTION, Blower Resistor (Manual A/C Model).>	Is the check result OK?	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>	Replace the blower resistor. <Ref. to AC-42, REMOVAL, Blower Resistor (Manual A/C Model).>

10.COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE))

Trouble symptom:
Compressor does not operate even when the A/C switch is turned on and the fan switch is set to LO — HI.
Trouble causes:
Compressor failure
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Leave the vehicle under the condition at ambient temperature of 15°C (59°F) or more. 2) Turn the ignition switch to ON. 3) Set the fan switch to maximum position. 4) Press the A/C switch.	Is A/C indicator displayed on the A/C control panel?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>

	Step	Check	Yes	No
2	**CHECK VARIABLE FLOW CHANGE SOLENOID DUTY VALUE.** Using the Subaru Select Monitor, check «Variable Flow Change Solenoid Duty» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate the value greater than zero?	Go to step **7**.	Go to step **3**.
3	**CHECK EVAPORATOR SENSOR.** Using the Subaru Select Monitor, check «Evaporator Temperature» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate –0.5 degree or more?	Go to step **5**.	Go to step **4**.
4	**CHECK EVAPORATOR SENSOR.** Check the evaporator sensor. <Ref. to AC-87, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **5**.	Replace the evaporator sensor.
5	**CHECK REFRIGERANT PRESSURE SENSOR.** Using the Subaru Select Monitor, check «Refrigerant Pressure» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the display indicate 0.21 Mpa — 3.03 Mpa?	Go to step **7**.	Go to step **6**.
6	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-23, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the check result OK?	Go to step **7**.	Perform repair according to refrigerant pressure inspection.
7	**CHECK FLOW SENSOR CIRCUIT.** 1) Turn the ignition switch to ON. 2) Wait at least 1 second. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A5, B14A6 displayed?	Perform the diagnosis for the displayed DTC B14A5, B14A6.	Go to step **8**.
8	**CHECK VARIABLE SOLENOID CIRCUIT.** 1) Start the engine. 2) Turn the A/C switch to ON. 3) Set the fan switch to maximum position. 4) Set the temperature control switch to LO, and wait for 30 seconds or more. 5) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A7 displayed?	Perform the diagnosis for the displayed DTC B14A7.	Replace the compressor. <Ref. to AC-49, REMOVAL, Compressor.>

11.UNABLE TO SWITCH SUCTION VENTS

Trouble symptom:
Even when the FRESH/RECIRC switch is pressed, the inlet opening does not switch to RECIRC → FRESH or FRESH → RECIRC.
Trouble causes:
Intake door actuator failure
Wiring diagram:

Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**VISUALLY CHECK FRESH/RECIRC DOOR OPERATION.** 1) Remove the glove box. <Ref. to EI-77, REMOVAL, Glove Box.> 2) Operate the FRESH/RECIRC switch, and visually check the intake door operation.	Does the intake door operate normally? Is the portion between intake door and intake door case sealed completely?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check «Fresh/Recircle Air Door Actuator Position Target» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.> 3) Operate the FRESH/RECIRC switch.	Does the display indicate 0 ←→ 100?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>
3	**CHECK CONNECTOR.** Check connecting condition of the intake door actuator connector, A/C CM connector and coupling connector.	Is the check result OK?	Go to step **4**.	Repair the connector.
4	**CHECK FUSE.** 1) Remove the fuse No. 8 from fuse & relay box. 2) Check the fuse.	Is the check result OK?	Go to step **5**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the intake door actuator and fuse.

	Step	Check	Yes	No
5	**CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the intake door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake door actuator connector and chassis ground. ***Connector & terminal*** ***(i186) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for open or short circuit in the harness between intake door actuator and fuse.
6	**CHECK HARNESS BETWEEN A/C CM AND INTAKE DOOR ACTUATOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C CM connector. 3) Measure the resistance between intake door actuator connector and A/C CM connector. ***Connector & terminal*** ***(i186) No. 1 — (i181) No. 7:*** ***(i186) No. 2 — (i181) No. 17:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair the open circuit of harness between A/C CM and intake door actuator.
7	**CHECK OPERATION OF INTAKE DOOR ACTUATOR.** 1) Connect the intake door actuator connector. 2) Ground the A/C CM connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. ***Connector & terminal*** ***(i181) No. 7 — Chassis ground:***	Does the intake door actuator move to the FRESH side?	Go to step **8**.	Replace the intake door actuator. <Ref. to AC-89, REMOVAL, FRESH/RECIRC Door Actuator.>
8	**CHECK OPERATION OF INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Ground the A/C CM connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. ***Connector & terminal:*** ***(i181) No. 17 — Chassis ground:***	Does the intake door actuator move to the RECIRC side?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Replace the intake door actuator. <Ref. to AC-89, REMOVAL, FRESH/RECIRC Door Actuator.>

12.UNABLE TO SWITCH VENTS

Trouble symptom:

- Unable to switch blow vents.
- Selected mode does not work even when mode switch is operated.

Trouble causes:

Mode door actuator failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check «Mode Door Actuator Position Target» of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.> 3) Operate the mode change switch.	Does the value for «Mode Door Actuator Position Target» change?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Set the mode change switch to DEF, and wait for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1438, B1439 or B1443 displayed?	Perform the diagnosis for the displayed DTC B1438, B1439 or B1443.	Go to step **3**.
3	**CHECK DTC.** 1) Set the mode change switch to VENT, and wait for 16 seconds or more. 2) Using the Subaru Select Monitor, read DTC of A/C CM. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1438, B1439 or B1443 displayed?	Perform the diagnosis for the displayed DTC B1438, B1439 or B1443.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

13.ILLUMINATION DOES NOT COME ON OR CANNOT DIM

Trouble symptom:
Even when the lighting switch is operated, the illumination does not come on. Even when the illumination control is operated, the illumination does not dim.

Trouble symptom:
Open circuit in illumination circuit

Wiring diagram:
Clearance light and illumination light system <Ref. to WI-146, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check poor contact of F/B connector, A/C control panel connector, combination meter connector and coupling connector.	Is the check result OK?	Go to step **2**.	Repair the connector.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the A/C control panel connector and chassis ground. ***Connector & terminal*** ***(i88) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between A/C control panel connector and combination meter connector. ***Connector & terminal*** ***(i88) No. 6 — (i10) No. 34:***	Is the resistance less than 10 Ω?	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

NOTE:
When initialization communication using Select Monitor is impossible, perform diagnosis according to “Diagnostic Procedure Used When Abnormal Communication with Subaru Select Monitor Occurs”. <Ref. to AC(diag)-48, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Air Conditioner» and select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AC(diag)-50, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Air Conditioner» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1430	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN	—
B1431	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B1432	AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)	—
B1433	AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)	—
B1434	EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN	—
B1435	EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B1436	AIR MIX DOOR ACTUATOR CIRCUIT OPEN (PASSENGER)	—
B1437	AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (PASSENGER)	—
B1438	MODE DOOR ACTUATOR CIRCUIT OPEN	—
B1439	MODE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT	—
B1440	AIR MIX DOOR ACTUATOR CIRCUIT OPEN (DRIVER)	—
B1441	AIR MIX DOOR ACTUATOR CIRCUIT STUCK (PASSENGER)	—
B1442	AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (DRIVER)	—
B1443	MODE DOOR ACTUATOR CIRCUIT STUCK	—
B1446	MODE DOOR ACTUATOR CIRCUIT STUCK	—
B1448	REAR VENT DOOR ACTUATOR CIRCUIT OPEN	—
B1449	REAR VENT DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT	—
B144A	REAR VENT DOOR ACTUATOR CIRCUIT STUCK	—
B14A3	REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN	—
B14A4	REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B14A5	REFRIGERANT FLOW SENSOR CIRCUIT OPEN	—
B14A6	REFRIGERANT FLOW SENSOR CIRCUIT SHORT-CIRCUIT	—
B14A7	VARIABLE SOLENOID VALVE CIRCUIT	—
B14A8	COMPRESSOR BREAK-IN MALFUNCTION LOW REFRIGERANT	—
B14B1	SEAT HEATER THERMISTOR CIRCUIT OPEN (DRIVER)	—
B14B2	SEAT HEATER THERMISTOR CIRCUIT SHORT-CIRCUIT (DRIVER)	—
B14B3	SEAT HEATER THERMISTOR CIRCUIT OPEN (PASSENGER)	—
B14B4	SEAT HEATER THERMISTOR CIRCUIT SHORT-CIRCUIT (PASSENGER)	—
U0002	CAN COMMUNICATION ERROR	—
U0028	HEATER CONTROL PANEL COMMUNICATION ERROR	—
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to AC(diag)-42, Clear Memory Mode.>

2) Read the DTC and check that the DTC is not displayed. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to ON and then leave it for 1 second or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B14A1	SUNLOAD SENSOR CIRCUIT LOW/OPEN	—
B14A2	SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to AC(diag)-42, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Park the vehicle in the place subjected to direct sunlight.
4) Turn the ignition switch to ON and then leave it for 1 second or more.
5) Read the DTC and check that the DTC is not displayed. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Air Conditioner» and select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Description	Unit	Note
In-vehicle Sensor Temperature	A/C CM input value	°C	Auto A/C

12.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Defective CAN communication circuit
Trouble symptom:
- LAN system is abnormal.
- Communication failure between Subaru Select Monitor and A/C CM

Wiring diagram:
- Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>
- CAN communication system <Ref. to WI-141, WIRING DIAGRAM, CAN Communication System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Connect DST-i to data link connector.	Does DST-i turn ON?	Go to step **4**.	Go to step **2**.
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse (M/B No. 17, F/B No. 19)

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Check for poor contact of the data link connector, and repair a fault, if any. If no fault is found, Go to step **4**.	Repair the harness and connector.
4	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to a normal vehicle. 2) Start the engine and perform communication between the Subaru Select Monitor and vehicle.	Is communication possible?	Go to step **5**.	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.
5	**CHECK CAN COMMUNICATION CIRCUIT.** Check the CAN communication circuit. <Ref. to LAN(diag)-42, CAN Communication Circuit Check.>	Is the check result OK?	Go to step **6**.	Repair the CAN communication circuit.
6	**CHECK CONNECTOR.** Check poor contact of A/C CM connector, data link connector and coupling connector.	Is the check result OK?	Go to step **7**.	Repair the connector.
7	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuses No. 8, 9, 14 from main fuse box. 3) Check the fuse.	Is the check result OK?	Go to step **8**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the A/C CM and fuse.
8	**CHECK A/C CM POWER SUPPLY CIRCUIT.** 1) Install the A/C control panel. 2) Disconnect the A/C CM connector. 3) Measure the voltage between A/C CM connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i80) No. 1 (+) — Chassis ground (–):*** ***(i80) No. 8 (+) — Chassis ground (–):*** ***(i80) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Check for open or short circuit in the harness between A/C CM and fuse.
9	**CHECK A/C CM GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance of harness between A/C CM and chassis ground. ***Connector & terminal*** ***(i80) No. 4 — Chassis ground:***	Is the resistance less than 5 Ω?	Recheck the poor contact between the data link connector and select monitor.	Repair the harness for ground line.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

DTC	Item	Note
B1430	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN	<Ref. to AC(diag)-53, DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:
In-vehicle sensor circuit is open.
Trouble symptom:
In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and in-vehicle sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1430 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IN-VEHICLE SENSOR.** 1) Disconnect the in-vehicle sensor. 2) Short the connector i173. 3) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1431 displayed?	Replace the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step **3**.

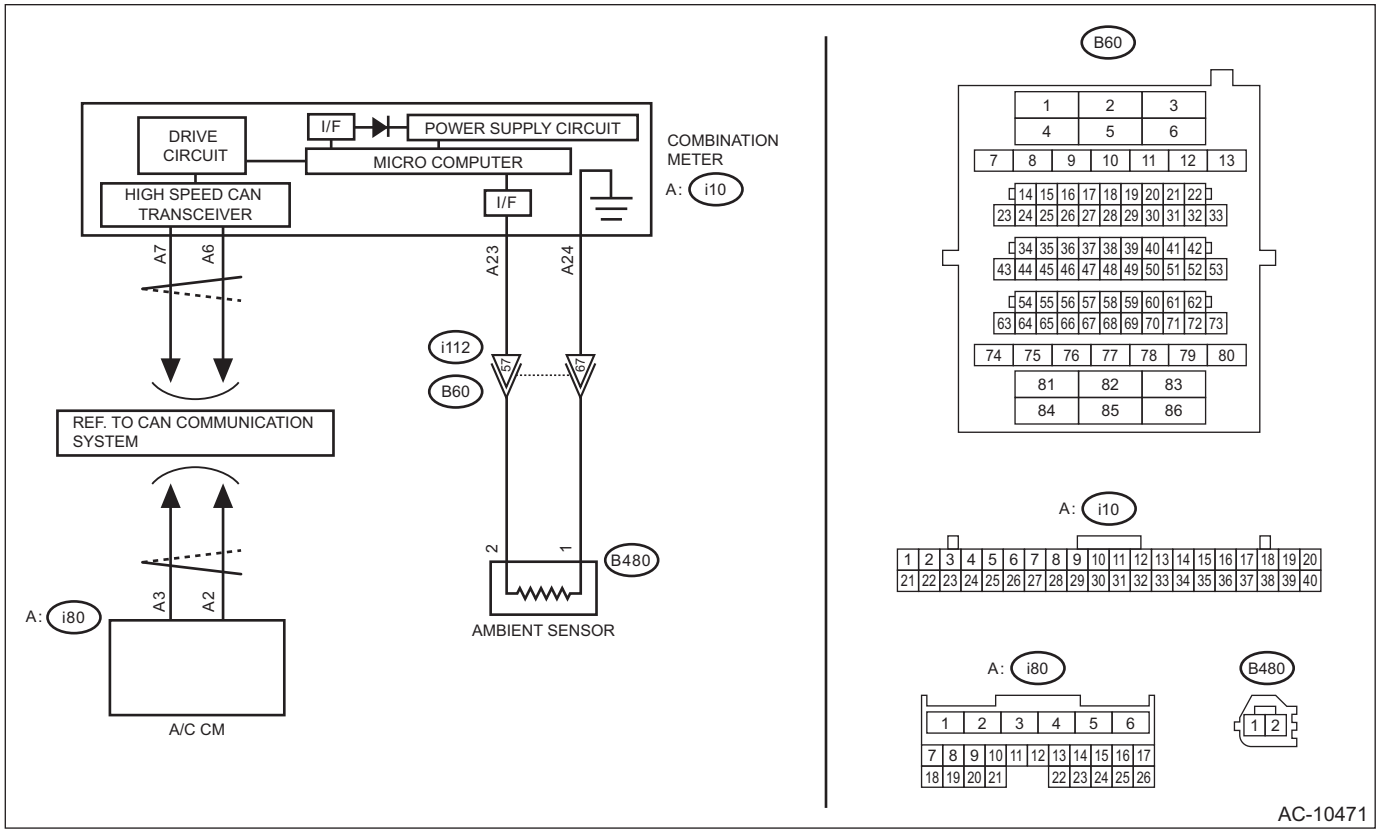
	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i173) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i173) No. 1 — (i80) No. 23:*** ***(i173) No. 2 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

B: DTC B1431 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
In-vehicle sensor circuit is shorted.
Trouble symptom:
In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and in-vehicle sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1431 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IN-VEHICLE SENSOR.** 1) Disconnect the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).> 2) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1430 displayed?	Replace the in-vehicle sensor. <Ref. to AC-83, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i173) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i173) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

C: DTC B1432 AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)



DTC detecting condition:

- Ambient sensor to combination meter circuit is open.
- Data to be received from the combination meter via CAN communication do not arrive.

Trouble symptom:

- Defective ambient temperature display
- Ambient temperature is recognized as 15.2°C (59°F), and the compartment temperature is falsely adjusted.

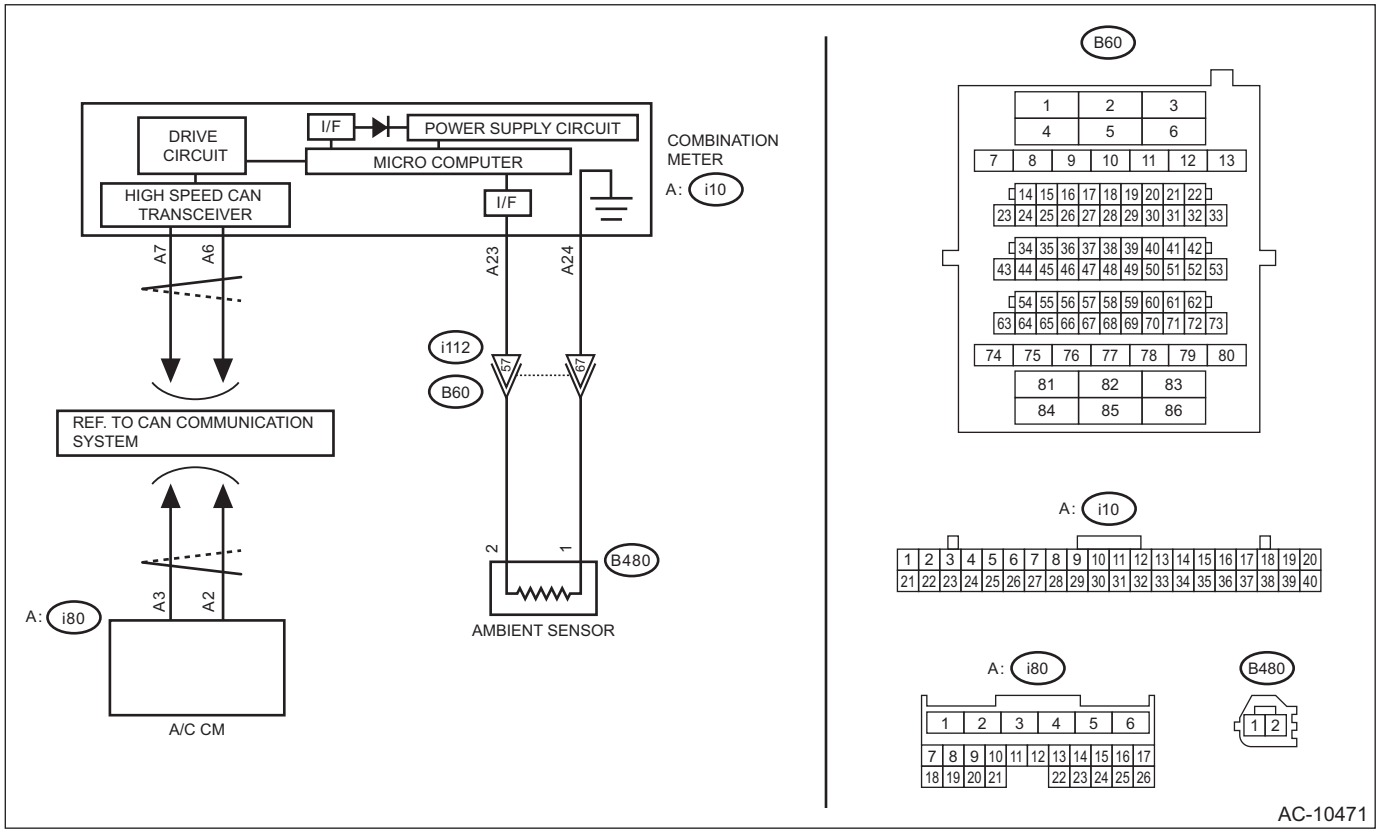
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the connecting conditions of combination meter connector and ambient sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1432 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK AMBIENT SENSOR.** 1) Disconnect the ambient sensor. 2) Short the connector B480. 3) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1433 displayed?	Replace the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B480) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from the combination meter. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B480) No. 1 — (i10) No. 24:*** ***(B480) No. 2 — (i10) No. 23:***	Is there continuity?	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>	Repair or replace the open circuit of harness.

D: DTC B1433 AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)

DTC detecting condition:



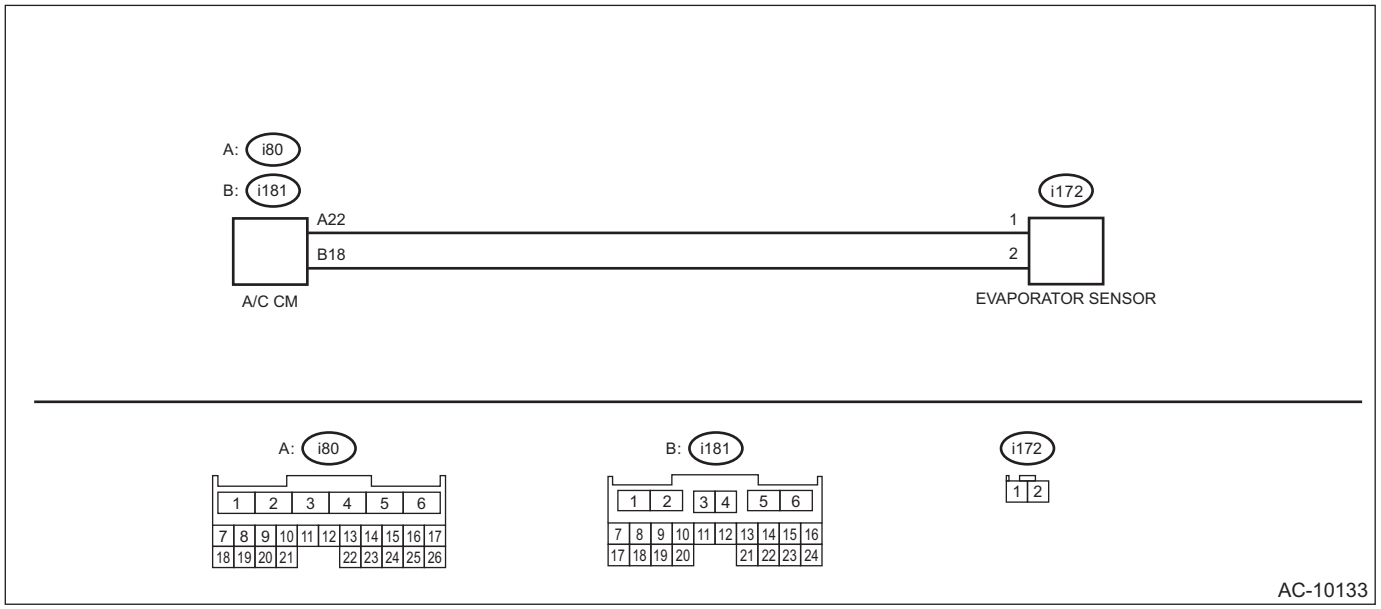
- Ambient sensor to combination meter circuit is shorted.
- Data to be received from the combination meter via CAN communication do not arrive.

Trouble symptom:

- Defective ambient temperature display
- Ambient temperature is recognized as 15.2°C (59°F), and the compartment temperature is falsely adjusted.

Wiring diagram:

Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the connecting conditions of combination meter connector and ambient sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1433 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK AMBIENT SENSOR.** 1) Disconnect the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.> 2) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1432 displayed?	Replace the ambient sensor. <Ref. to AC-79, REMOVAL, Ambient Sensor.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B480) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from the combination meter. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B480) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

E: DTC B1434 EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:
Evaporator sensor circuit is open.
Trouble symptom:
- Compressor does not operate.
- Evaporator temperature is falsely recognized as low, and the compartment temperature is adjusted.

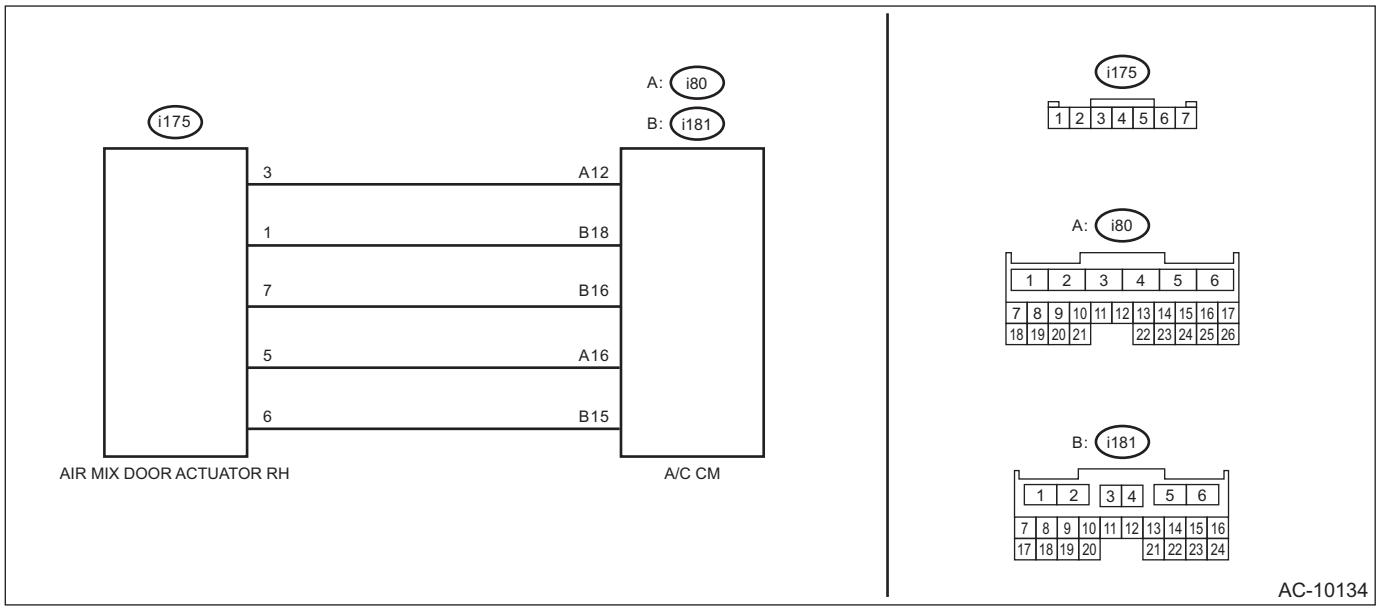
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and evaporator sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1434 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK EVAPORATOR SENSOR.** 1) Disconnect the evaporator sensor. 2) Short the i172 connector. 3) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1435 displayed?	Replace the evaporator sensor. <Ref. to AC-63, REMOVAL, Evaporator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i172) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i172) No. 1 — (i80) No. 22:*** ***(i172) No. 2 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

F: DTC B1435 EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Evaporator sensor circuit is shorted.
Trouble symptom:
- Compressor does not operate. (Variable compressor)
- Evaporator temperature is falsely recognized as high, and the compartment temperature is adjusted.

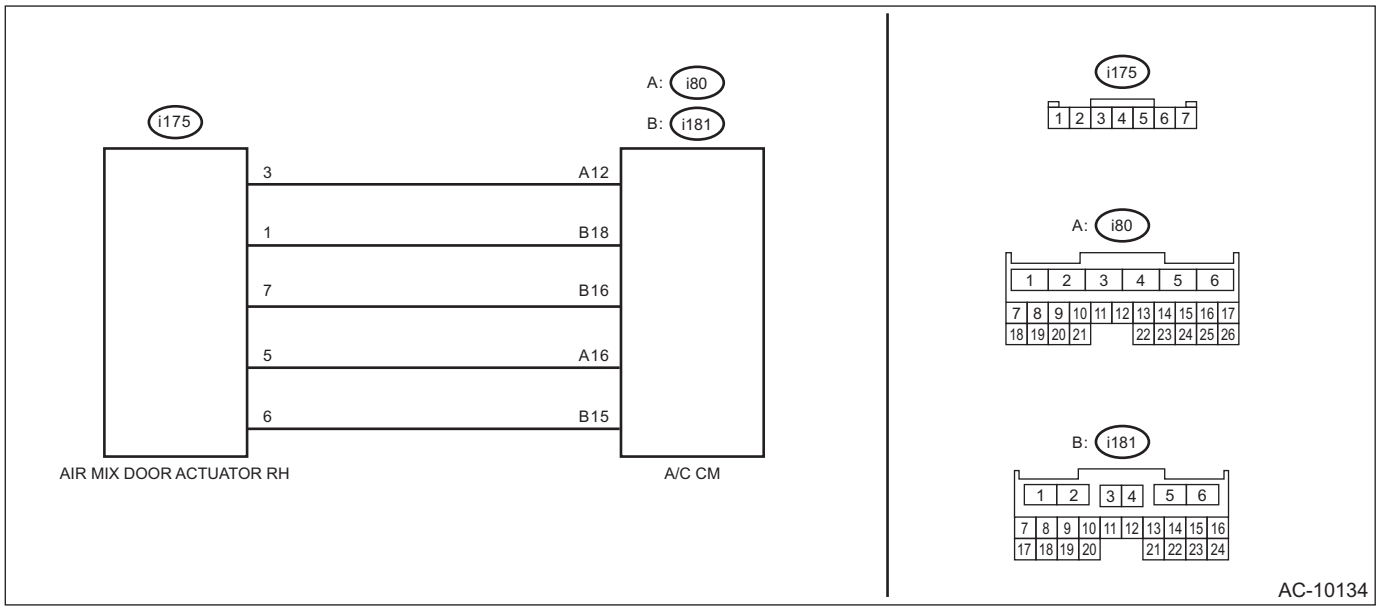


Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and evaporator sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1435 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK EVAPORATOR SENSOR.** 1) Disconnect the evaporator sensor. 2) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1434 displayed?	Replace the evaporator sensor. <Ref. to AC-63, REMOVAL, Evaporator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i172) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i172) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

G: DTC B1436 AIR MIX DOOR ACTUATOR CIRCUIT OPEN (PASSENGER)

DTC detecting condition:
Air mix door actuator potentiometer circuit is open.
Trouble symptom:
Temperature of the passenger's side cannot be adjusted for model with left/right independent air conditioner.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

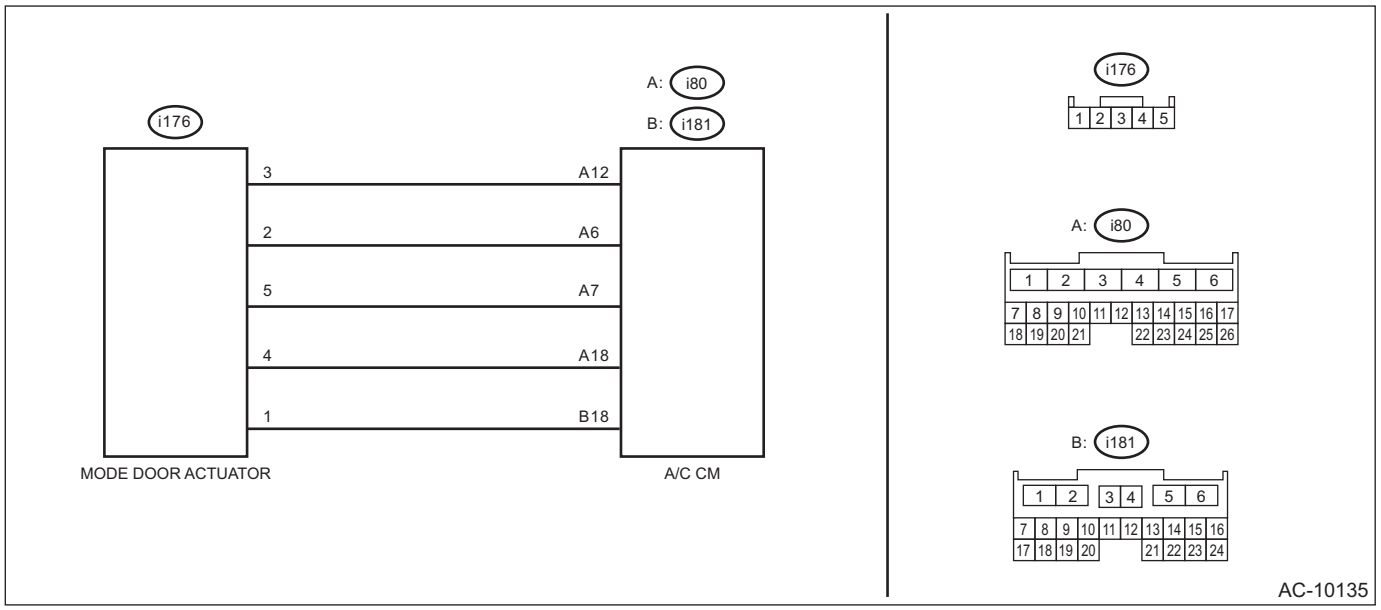


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator RH connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1436 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the air mix door actuator RH. 2) Short No. 1 and No. 5 of connector i175. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1437 displayed?	Replace the air mix door actuator RH. <Ref. to AC-94, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i175) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i175) No. 1 — (i181) No. 18:*** ***(i175) No. 3 — (i80) No. 12:*** ***(i175) No. 5 — (i80) No. 16:***	Is the resistance less than 10 Ω?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

H: DTC B1437 AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (PASSENGER)

DTC detecting condition:
Air mix door actuator potentiometer circuit is shorted.
Trouble symptom:
Temperature of the passenger's side cannot be adjusted for model with left/right independent air conditioner.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

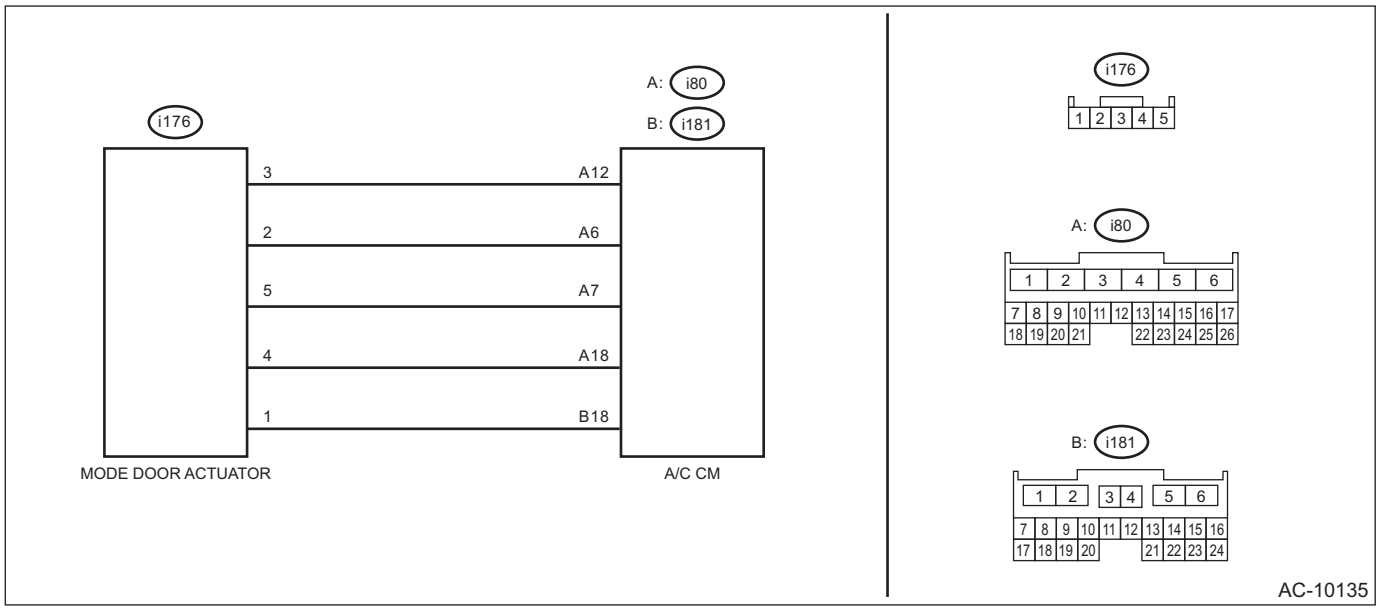


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator RH connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1437 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the air mix door actuator RH. 2) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1436 displayed?	Replace the air mix door actuator RH. <Ref. to AC-94, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i175) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i175) No. 1 — No. 5:*** ***(i175) No. 5 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

I: DTC B1438 MODE DOOR ACTUATOR CIRCUIT OPEN

DTC detecting condition:
Mode door actuator potentiometer circuit is open.
Trouble symptom:
Vent does not change.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

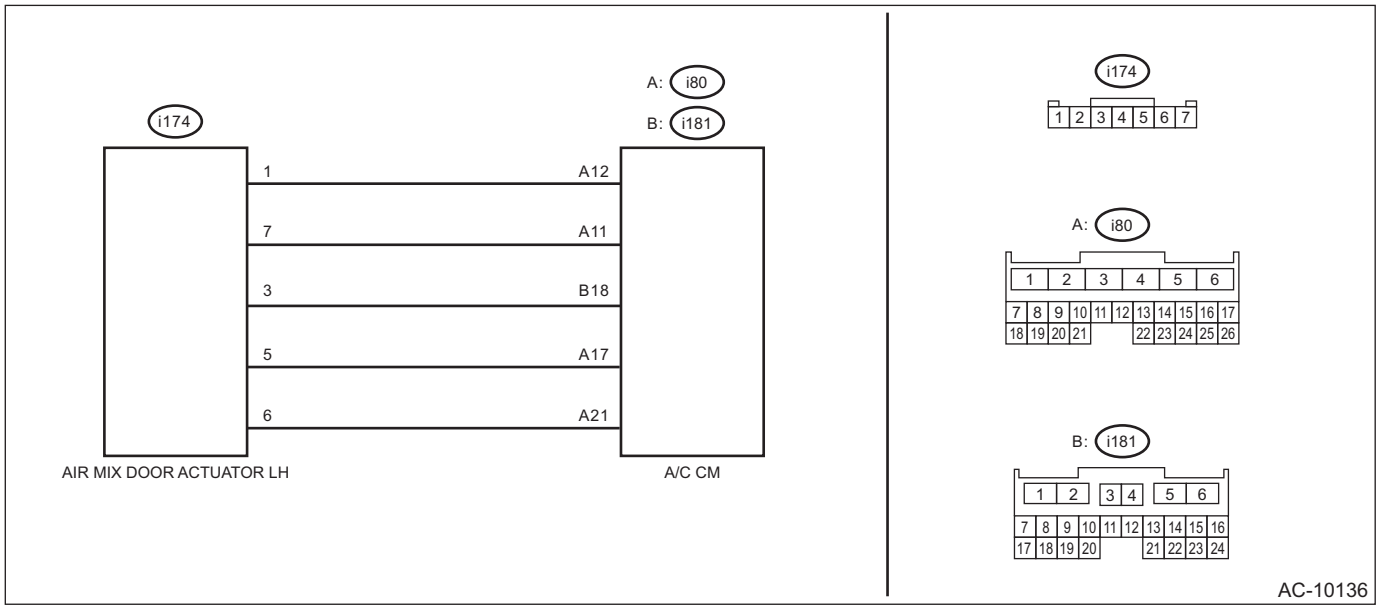


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and mode door actuator connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1438 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the mode door actuator. 2) Short No. 2 and No. 3 of (i176) connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1439 displayed?	Replace the mode door actuator. <Ref. to AC-91, REMOVAL, Mode Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal (i176) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i176) No. 1 — (i181) No. 18:*** ***(i176) No. 2 — (i80) No. 6:*** ***(i176) No. 3 — (i80) No. 12:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

J: DTC B1439 MODE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Mode door actuator potentiometer circuit is shorted.
Trouble symptom:
Vent does not change.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

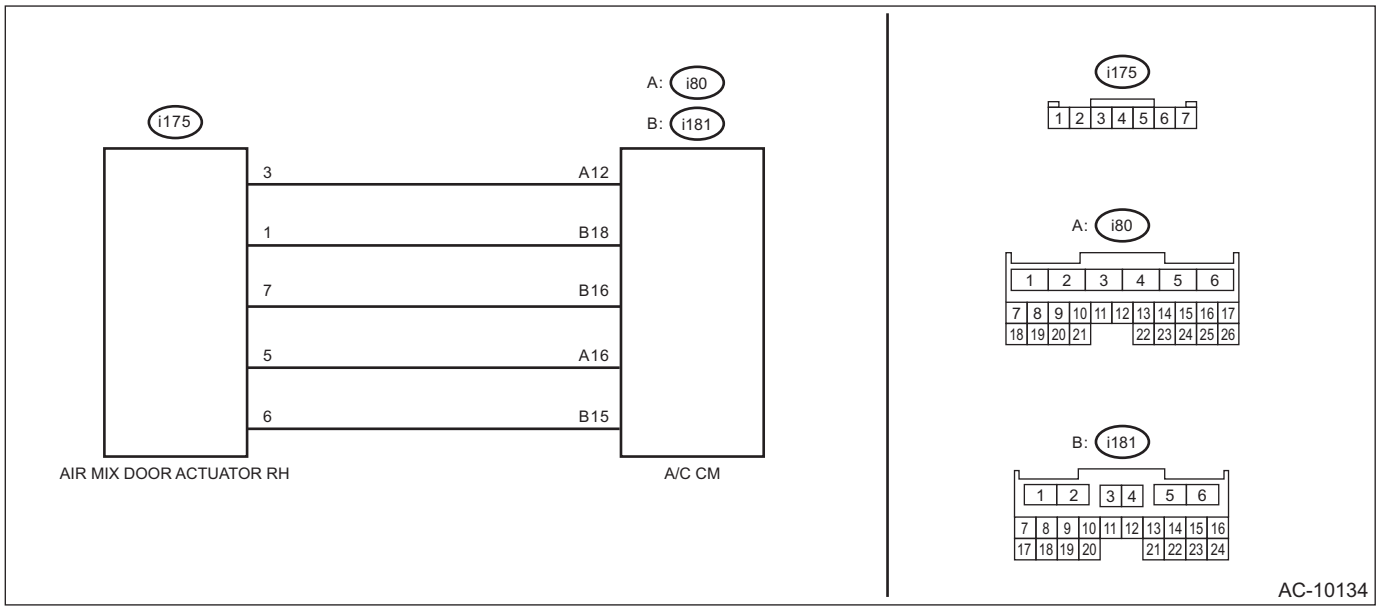


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and mode door actuator connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1439 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the mode door actuator. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1438 displayed?	Replace the mode door actuator. <Ref. to AC-91, REMOVAL, Mode Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i176) No. 2 — No. 3:*** ***(i176) No. 3 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

K: DTC B1440 AIR MIX DOOR ACTUATOR CIRCUIT OPEN (DRIVER)

DTC detecting condition:
Air mix door actuator potentiometer circuit is open.
Trouble symptom:
- Temperature cannot be adjusted.
- Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

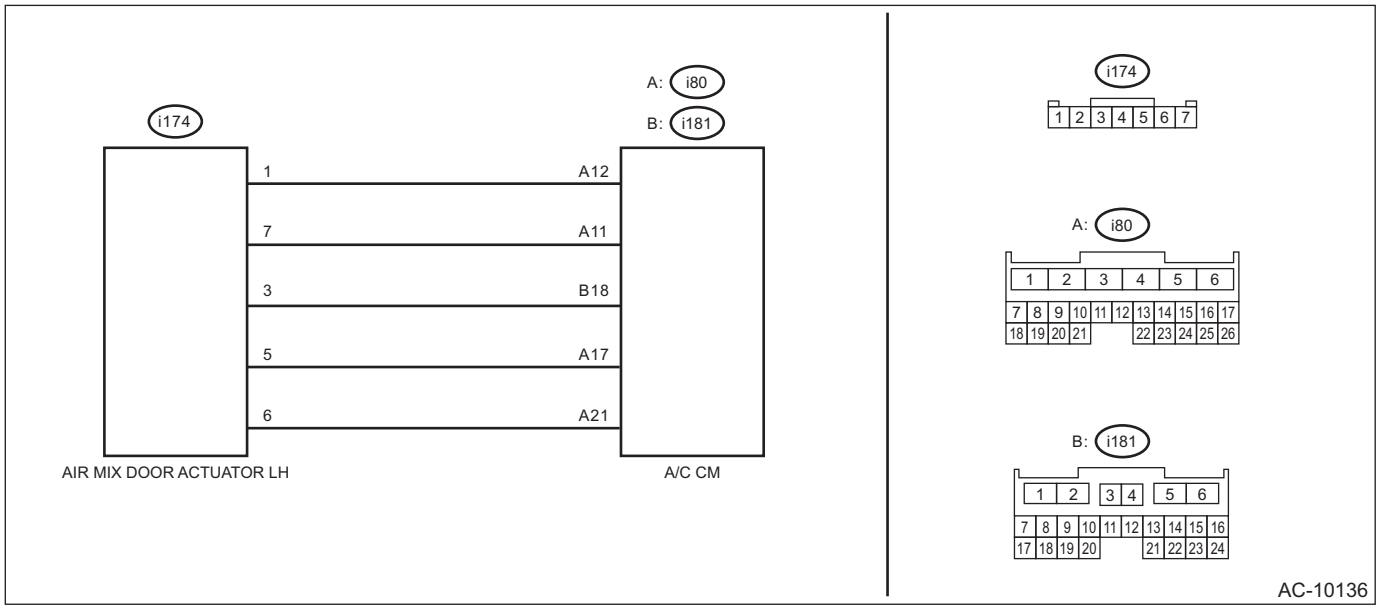


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator LH connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the air mix door actuator LH. 2) Short No. 3 and No. 5 of i174 connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1442 displayed?	Replace the air mix door actuator LH. <Ref. to AC-94, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i174) No. 1 (+) — No. 3 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i174) No. 1 — (i80) No. 12:*** ***(i174) No. 3 — (i181) No. 18:*** ***(i174) No. 5 — (i80) No. 17:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

L: DTC B1441 AIR MIX DOOR ACTUATOR CIRCUIT STUCK (PASSENGER)

DTC detecting condition:
Air mix door actuator RH is locked.
Trouble symptom:
Temperature of the passenger's side cannot be adjusted for model with left/right independent air conditioner.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator RH connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1441 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** Using the Subaru Select Monitor, change the setting of «Air mix door actuator target open (passenger's side)» from the A/C diagnosis and perform the system operation check. <Ref. to AC(diag)-47, System Operation Check Mode.>	Did the actuator move to the specified target opening angle?	Air mix door actuator circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Disconnect the air mix door actuator RH connector (i175). 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i175) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i175) No. 5 — (i80) No. 16:*** ***(i175) No. 3 — (i80) No. 12:*** ***(i175) No. 1 — (i181) No. 18:*** ***(i175) No. 7 — (i181) No. 16:*** ***(i175) No. 6 — (i181) No. 15:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK AIR MIX DOOR ACTUATOR RH.** Check the air mix door actuator RH parts. <Ref. to AC-96, INSPECTION, Air Mix Door Actuator.>	Is the check result OK?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Replace the air mix door actuator RH. <Ref. to AC-94, REMOVAL, Air Mix Door Actuator.>

M: DTC B1442 AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (DRIVER)

DTC detecting condition:
Air mix door actuator potentiometer circuit is shorted.
Trouble symptom:
- Temperature cannot be adjusted.
- Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator LH connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1442 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK AIR MIX DOOR ACTUATOR LH.** 1) Disconnect the air mix door actuator LH. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1440 displayed?	Replace the air mix door actuator LH. <Ref. to AC-94, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i174) No. 3 — (i174) No. 5:*** ***(i174) No. 5 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

N: DTC B1443 MODE DOOR ACTUATOR CIRCUIT STUCK

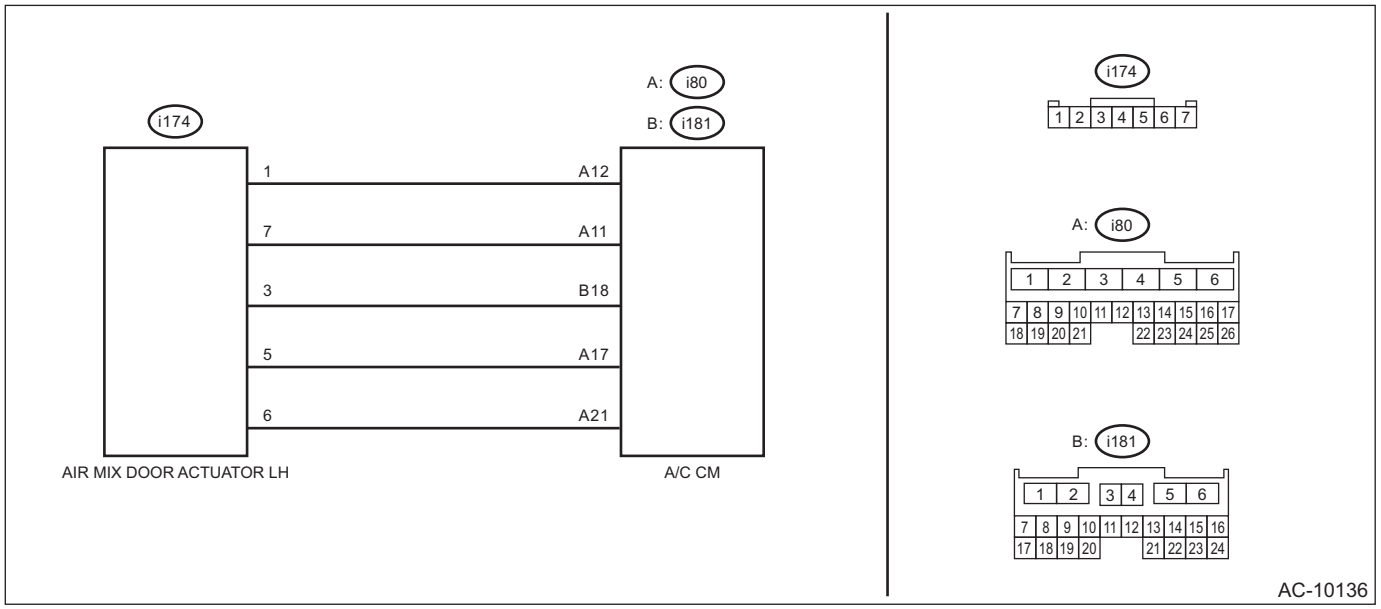
DTC detecting condition:
Mode door actuator is locked.
Trouble symptom:
Vent does not change.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and mode door actuator connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1443 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** Using the Subaru Select Monitor, change the setting of «Mode Door Actuator Opening Angle Target» from the A/C diagnosis and perform the system operation check. <Ref. to AC(diag)-47, System Operation Check Mode.>	Did the mode door actuator move to the specified target opening angle?	Mode door actuator circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i176) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i176) No. 3 — (i80) No. 12:*** ***(i176) No. 1 — (i181) No. 18:*** ***(i176) No. 2 — (i80) No. 6:*** ***(i176) No. 4 — (i80) No. 18:*** ***(i176) No. 5 — (i80) No. 7:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK MODE DOOR ACTUATOR.** Check the mode door actuator parts. <Ref. to AC-92, INSPECTION, Mode Door Actuator.>	Is the check result OK?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Replace the mode door actuator. <Ref. to AC-91, REMOVAL, Mode Door Actuator.>

O: DTC B1446 AIR MIX DOOR ACTUATOR CIRCUIT STUCK (DRIVER)

DTC detecting condition:



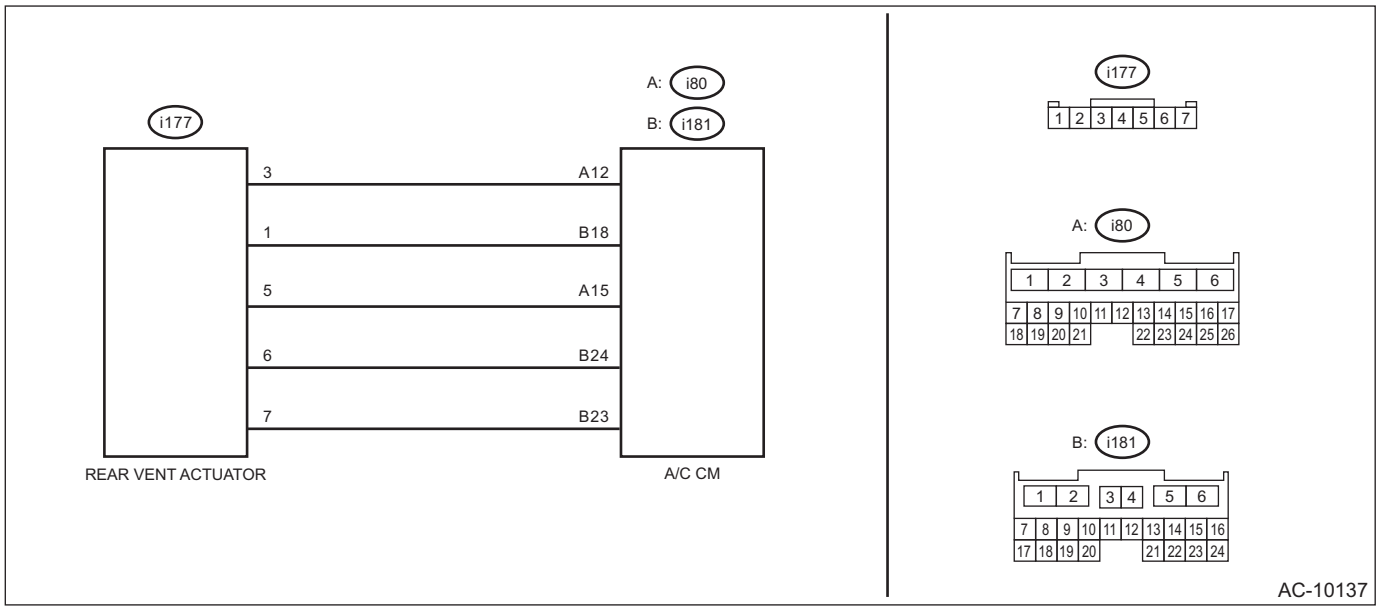
- Air mix door actuator LH is locked.
- The potentiometer value of the actuator does not change.

Trouble symptom:

Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

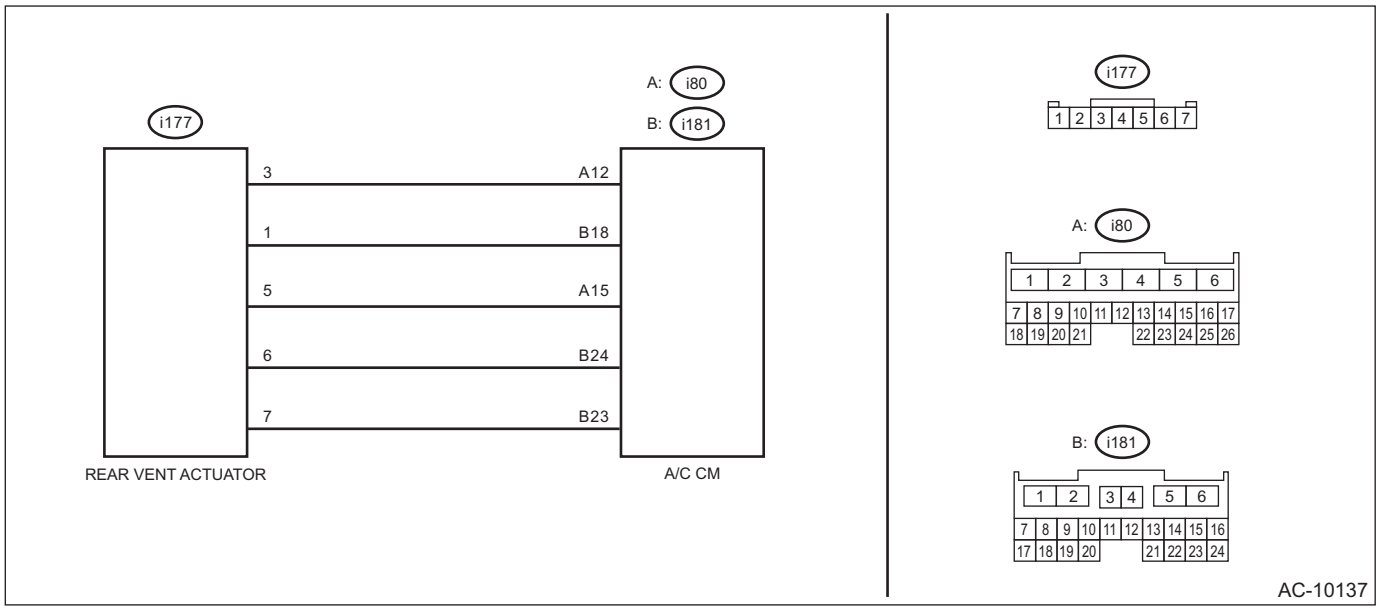


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator LH connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1446 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** Using the Subaru Select Monitor, change the setting of «Air mix door actuator target open (driver's side)» from the A/C diagnosis and perform the system operation check. <Ref. to AC(diag)-47, System Operation Check Mode.>	Did the air mix door actuator LH move to the specified target opening angle?	Air mix door actuator LH circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i174) No. 1 (+) — No. 3 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i174) No. 5 — (i80) No. 17:*** ***(i174) No. 1 — (i80) No. 12:*** ***(i174) No. 3 — (i181) No. 18:*** ***(i174) No. 6 — (i181) No. 21:*** ***(i174) No. 7 — (i181) No. 11:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK AIR MIX DOOR ACTUATOR LH.** Check the air mix door actuator LH parts. <Ref. to AC-96, INSPECTION, Air Mix Door Actuator.>	Is the check result OK?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Replace the air mix door actuator LH. <Ref. to AC-94, REMOVAL, Air Mix Door Actuator.>

P: DTC B1448 REAR VENT DOOR ACTUATOR CIRCUIT OPEN

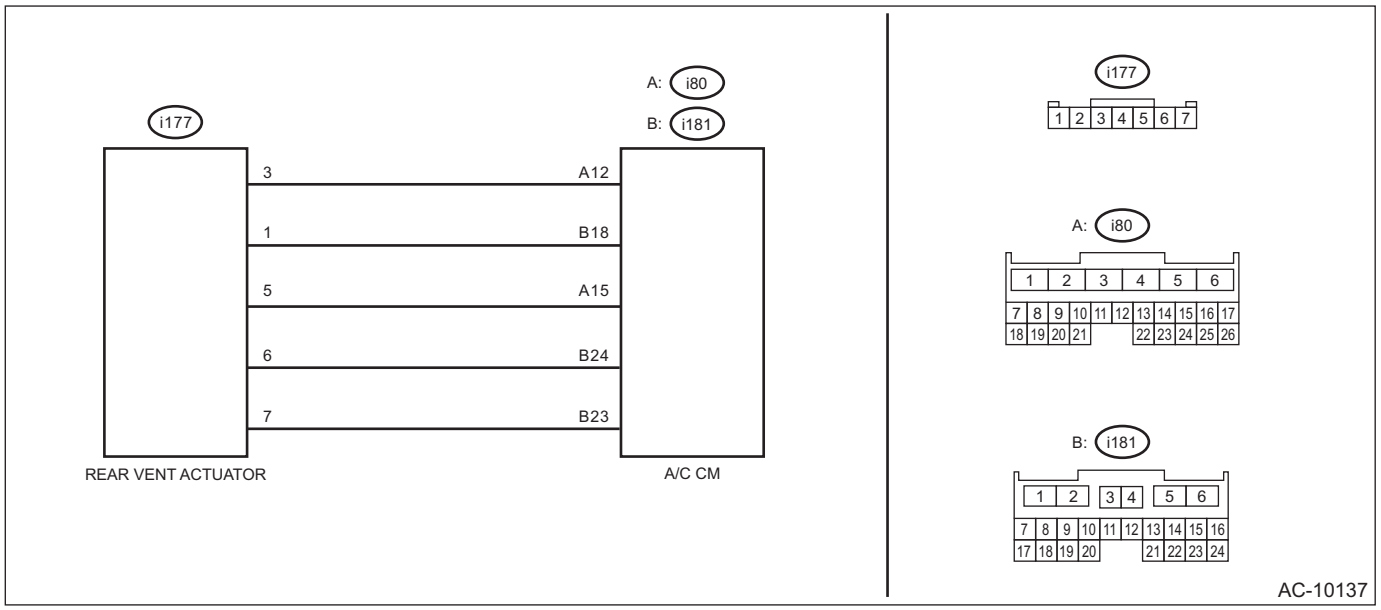
DTC detecting condition:
Rear vent actuator potentiometer circuit is open.
Trouble symptom:
Unable to control the rear vent temperature.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and rear vent actuator connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1448 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REAR VENT ACTUATOR.** 1) Disconnect the rear vent actuator. 2) Short No. 1 and No. 5 of (i177) connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1449 displayed?	Replace the rear vent actuator. <Ref. to AC-98, REMOVAL, Rear Vent Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i177) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.

Step		Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i177) No. 3 — (i80) No. 12:*** ***(i177) No. 1 — (i181) No. 18:*** ***(i177) No. 5 — (i80) No. 15:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

Q: DTC B1449 REAR VENT DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT



DTC detecting condition:
Rear vent actuator potentiometer circuit is shorted.
Trouble symptom:
Unable to control the rear vent temperature.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

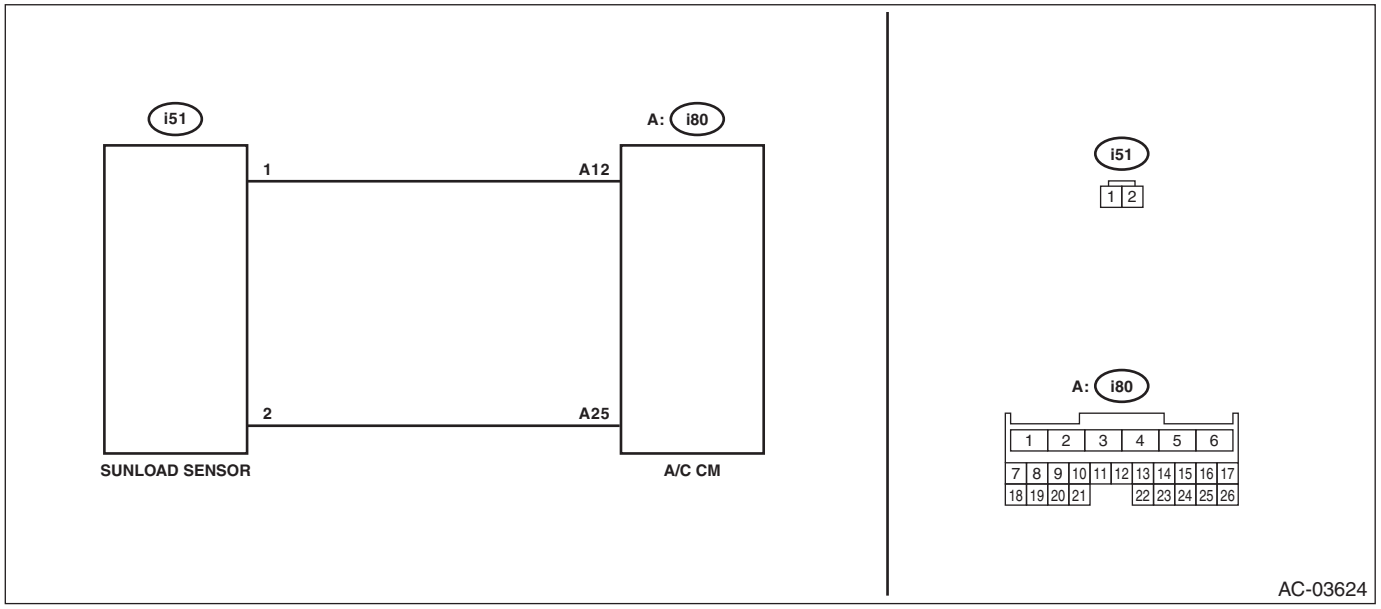
Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and rear vent actuator connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1449 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REAR VENT ACTUATOR.** 1) Disconnect the rear vent actuator. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1448 displayed?	Replace the rear vent actuator. <Ref. to AC-98, REMOVAL, Rear Vent Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i177) No. 5 — (i177) No. 1:*** ***(i177) No. 5 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

R: DTC B144A REAR VENT DOOR ACTUATOR CIRCUIT STUCK

DTC detecting condition:
Rear vent actuator is locked.
Trouble symptom:
Unable to control the rear vent temperature.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and rear vent actuator connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B144A displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** Using the Subaru Select Monitor, change the setting of «Rear Vent Dr Act Trgt Open Angle» from the A/C diagnosis and perform the system operation check. <Ref. to AC(diag)-47, System Operation Check Mode.>	Did the rear vent actuator move to the specified target opening angle?	Rear vent actuator circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, check the voltage between terminals. ***Connector & terminal*** ***(i177) No. 3 (+) — (i80) No. 12 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i177) No. 5 — (i80) No. 15:*** ***(i177) No. 3 — (i80) No. 12:*** ***(i177) No. 1 — (i181) No. 18:*** ***(i177) No. 7 — (i181) No. 23:*** ***(i177) No. 6 — (i181) No. 24:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK REAR VENT ACTUATOR.** Check the rear vent actuator parts. <Ref. to AC-99, INSPECTION, Rear Vent Door Actuator.>	Is the check result OK?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Replace the rear vent actuator. <Ref. to AC-98, REMOVAL, Rear Vent Door Actuator.>



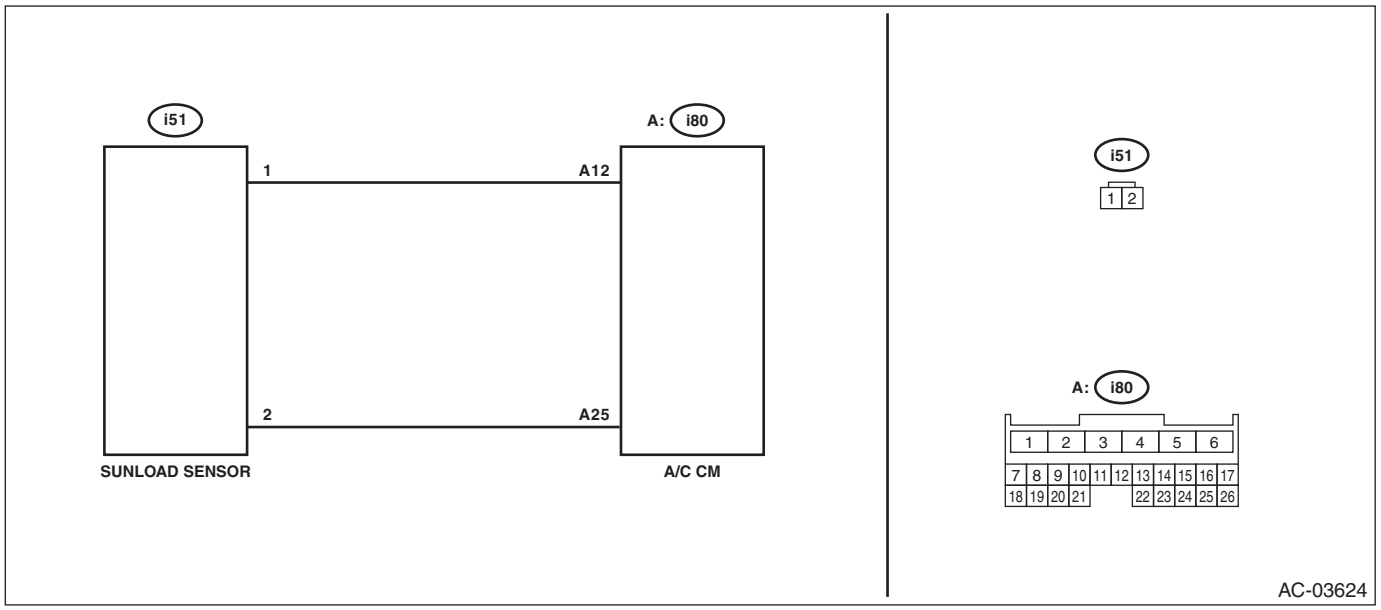
S: DTC B14A1 SUNLOAD SENSOR CIRCUIT LOW/OPEN

DTC detecting condition:
Open circuit in the sunload sensor is detected for 3 seconds or more. (Displayed for current malfunction)

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

Trouble symptom:
Operation is performed as no sunload.

Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

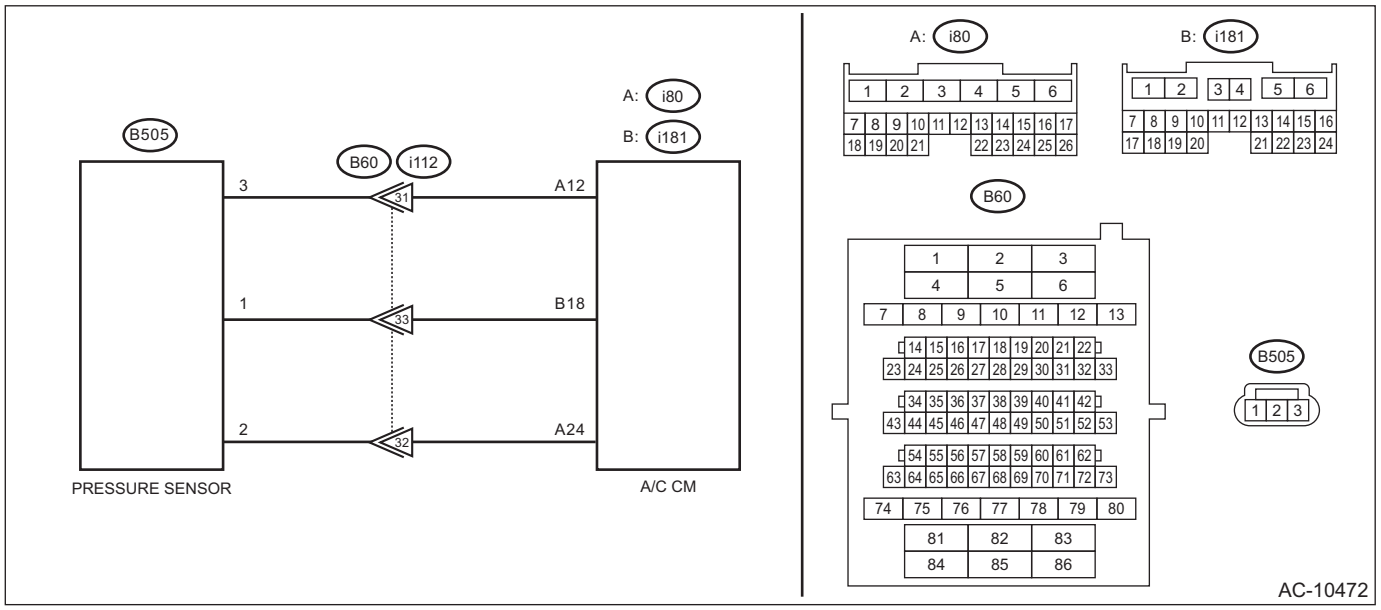


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and sunload sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A1 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SUNLOAD SENSOR.** 1) Disconnect the sunload sensor. 2) Short the connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A2 displayed?	Replace the sunload sensor. <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i51) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i51) No. 1 — (i80) No. 12:*** ***(i51) No. 2 — (i80) No. 25:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

T: DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Short circuit in the sunload sensor is detected for 3 seconds or more.
Trouble symptom:
Operation is performed as no sunload.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and sunload sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A2 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SUNLOAD SENSOR.** 1) Disconnect the sunload sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A1 displayed?	Replace the sunload sensor. <Ref. to AC-81, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i51) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Check the connection of the sunload sensor circuit.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal (i51) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

U: DTC B14A3 REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN

DTC detecting condition:
Refrigerant pressure sensor circuit is open.
Trouble symptom:
Compressor does not operate. (Variable compressor)
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant pressure sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A3 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK PRESSURE SENSOR.** 1) Disconnect the refrigerant pressure sensor. 2) Short No. 1 and No. 2 of B505 connector. 3) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A4 displayed?	Replace the refrigerant pressure sensor. <Ref. to AC-69, REMOVAL, Hose and Pipe.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B505) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B505) No. 1 — (i181) No. 18:*** ***(B505) No. 2 — (i80) No. 24:*** ***(B505) No. 3 — (i80) No. 12:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

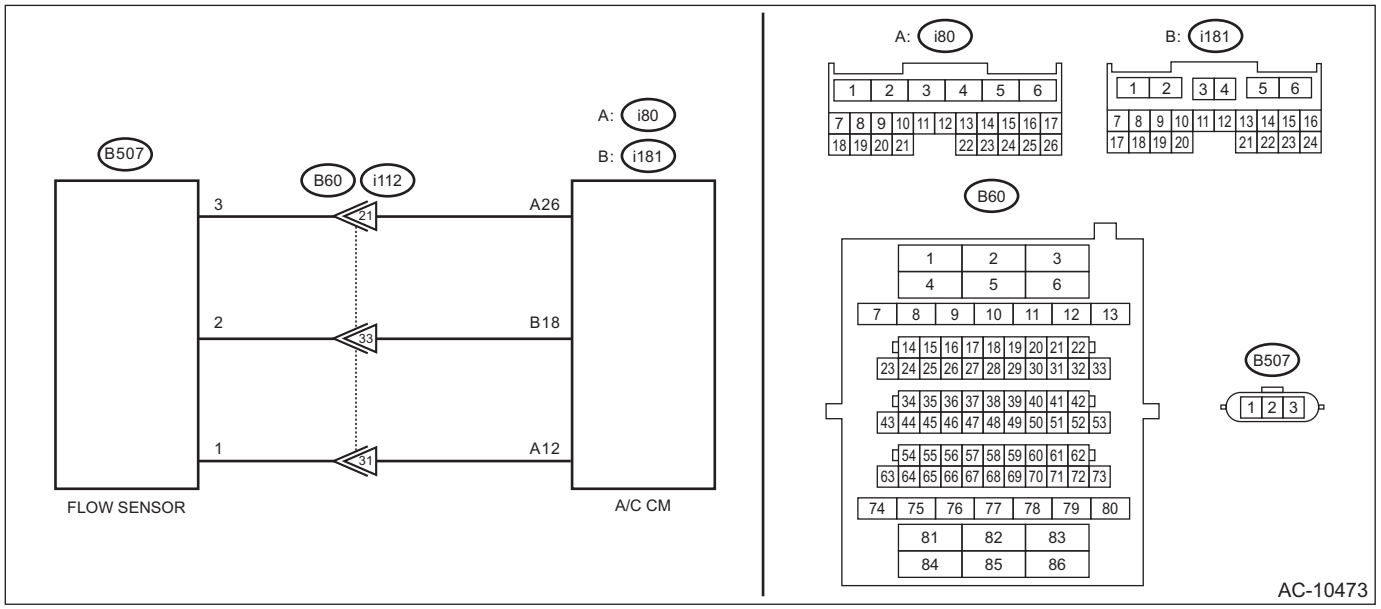
V: DTC B14A4 REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Refrigerant pressure sensor circuit is shorted.
Trouble symptom:
Compressor does not operate. (Variable compressor)
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant pressure sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A4 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REFRIGERANT PRESSURE SENSOR.** 1) Disconnect the refrigerant pressure sensor. 2) Read the DTC of the A/C CM using the Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A3 displayed?	Replace the refrigerant pressure sensor. <Ref. to AC-69, REMOVAL, Hose and Pipe.>	Go to step **3**.
3	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B505) No. 1 — No. 2:*** ***(B505) No. 2 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

W: DTC B14A5 REFRIGERANT FLOW SENSOR CIRCUIT OPEN

DTC detecting condition:



- The voltage of the refrigerant flow sensor signal line increased to 4.7 V or more.
- Open circuit in refrigerant flow sensor

Trouble symptom:

A/C does not function because refrigerant flow amount cannot be measured.

Wiring diagram:

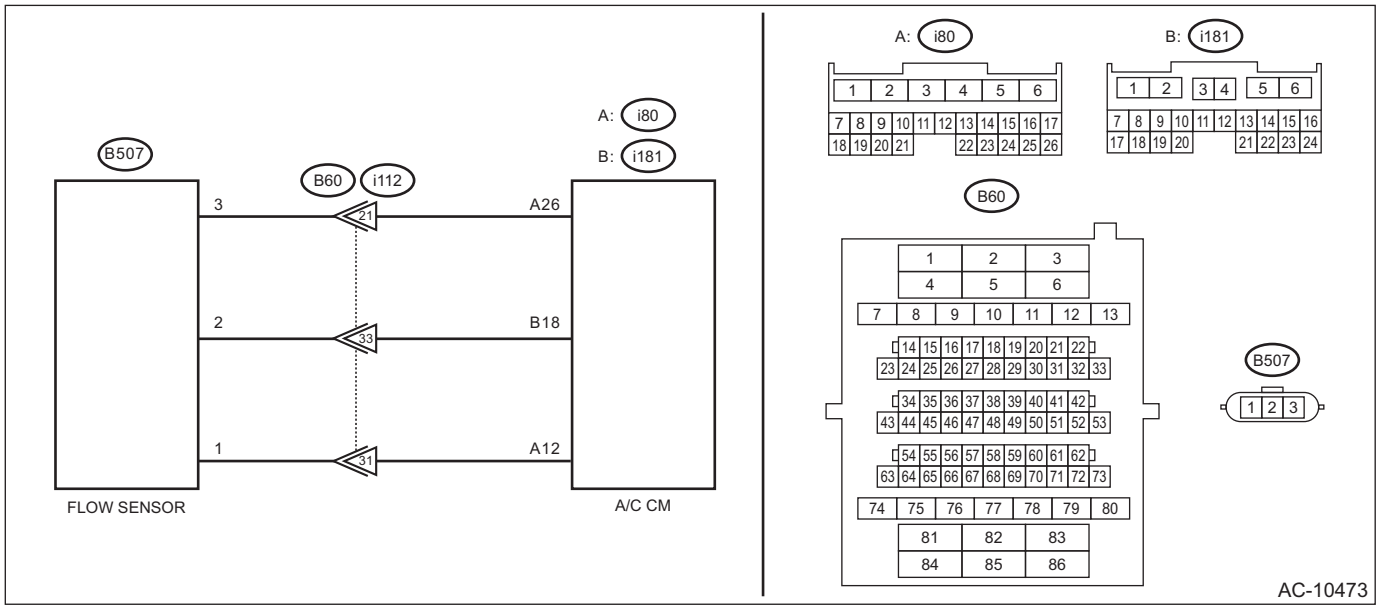
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant flow sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A5 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REFRIGERANT FLOW SENSOR.** 1) Disconnect the refrigerant flow sensor connector. 2) Short No. 2 and No. 3 of the refrigerant flow sensor connector (B507). 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A6 displayed?	Replace the compressor. <Ref. to AC-49, REMOVAL, Compressor.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B507) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B507) No. 3 — (i80) No. 26:*** ***(B507) No. 2 — (i181) No. 18:*** ***(B507) No. 1 — (i80) No. 12:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

X: DTC B14A6 REFRIGERANT FLOW SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



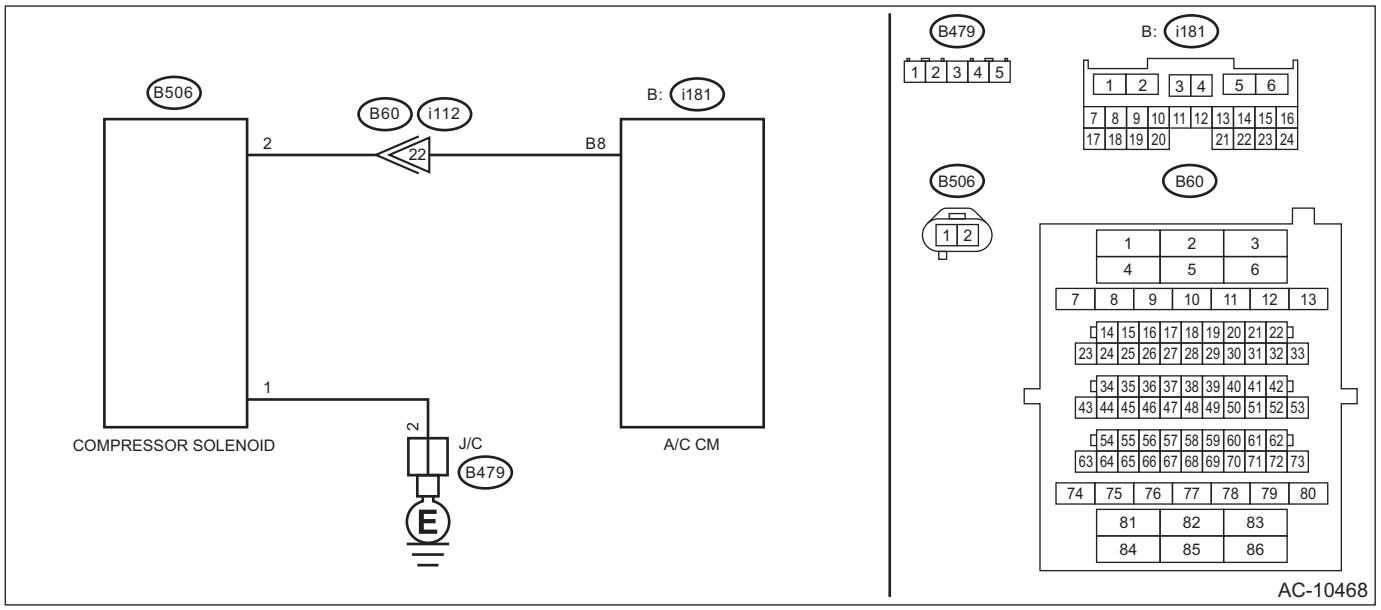
- The voltage of the refrigerant flow sensor signal line decreased to 0.3 V or less.
- Short-circuit in refrigerant flow sensor

Trouble symptom:

A/C does not function because refrigerant flow amount cannot be measured.

Wiring diagram:

Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant flow sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A6 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REFRIGERANT FLOW SENSOR.** 1) Disconnect the refrigerant flow sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A5 displayed?	Replace the compressor. <Ref. to AC-49, REMOVAL, Compressor.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B507) No. 2 — (B507) No. 3:*** ***(B507) No. 3 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

Y: DTC B14A7 VARIABLE SOLENOID VALVE CIRCUIT

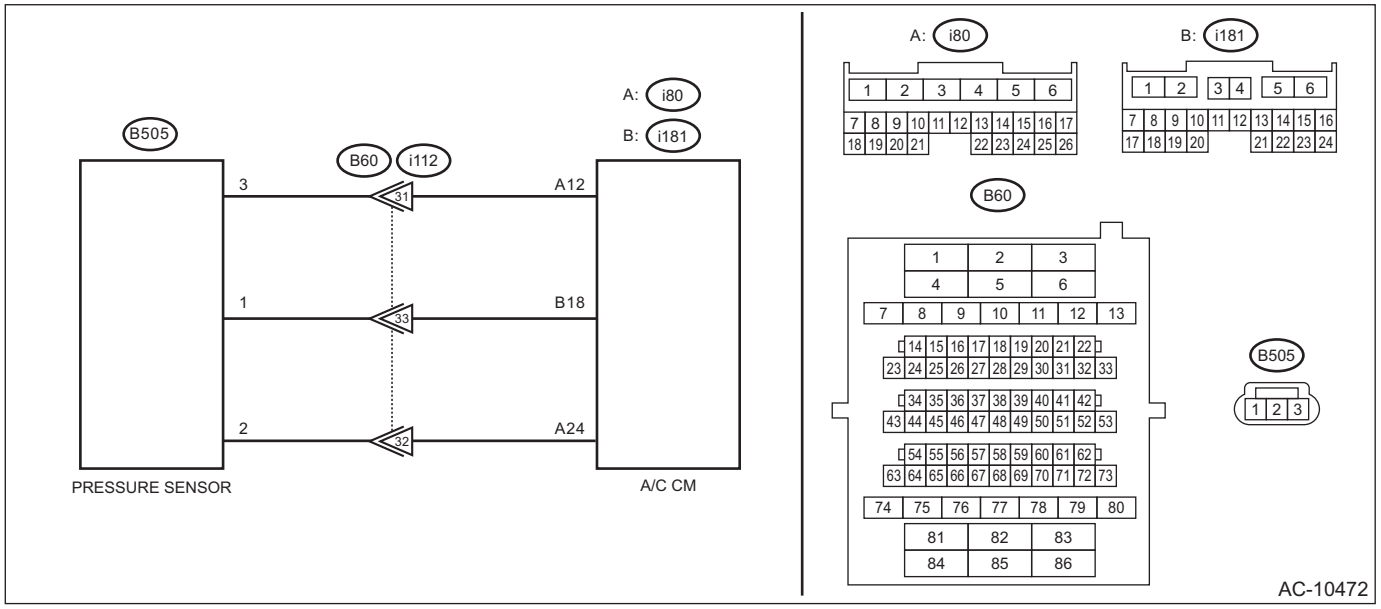
DTC detecting condition:
Variable flow change solenoid valve circuit is open or shorted
Trouble symptom:
Refrigerant pressure cannot be changed.
Wiring diagram:
Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and variable flow change solenoid connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A7 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SYSTEM OPERATION.** 1) Attach the manifold gauge. 2) Using the Subaru Select Monitor, change the setting of «Variable Flow Change Sol Duty Setting» from the A/C diagnosis and perform the system operation check. <Ref. to AC(diag)-47, System Operation Check Mode.>	Did the variable flow change solenoid operate to the specified target, and the pressure change?	Variable flow change solenoid circuit is normal.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VARIABLE FLOW CHANGE SOLENOID.** 1) Disconnect the variable flow change solenoid connector. 2) Using a tester, measure the resistance between terminals of the solenoid. ***Terminals*** ***(Compressor solenoid side) No. 1 — No. 2:***	Is the resistance 10 — 12 Ω?	Go to step **4**.	Replace the compressor. <Ref. to AC-49, REMOVAL, Compressor.>
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the A/C CM connector. 2) Using a tester, check for continuity between the harness terminals. ***Connector & terminal*** ***(B506) No. 2 — (i181) No. 8:*** ***(B506) No. 1 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** Using a tester, check for continuity between the harness terminals. ***Connector & terminal*** ***(B506) No. 2 — Chassis ground:*** ***(B506) No. 1 — (B506) No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

Z: DTC B14A8 COMPRESSOR BREAK-IN MALFUNCTION LOW REFRIGERANT

DTC detecting condition:

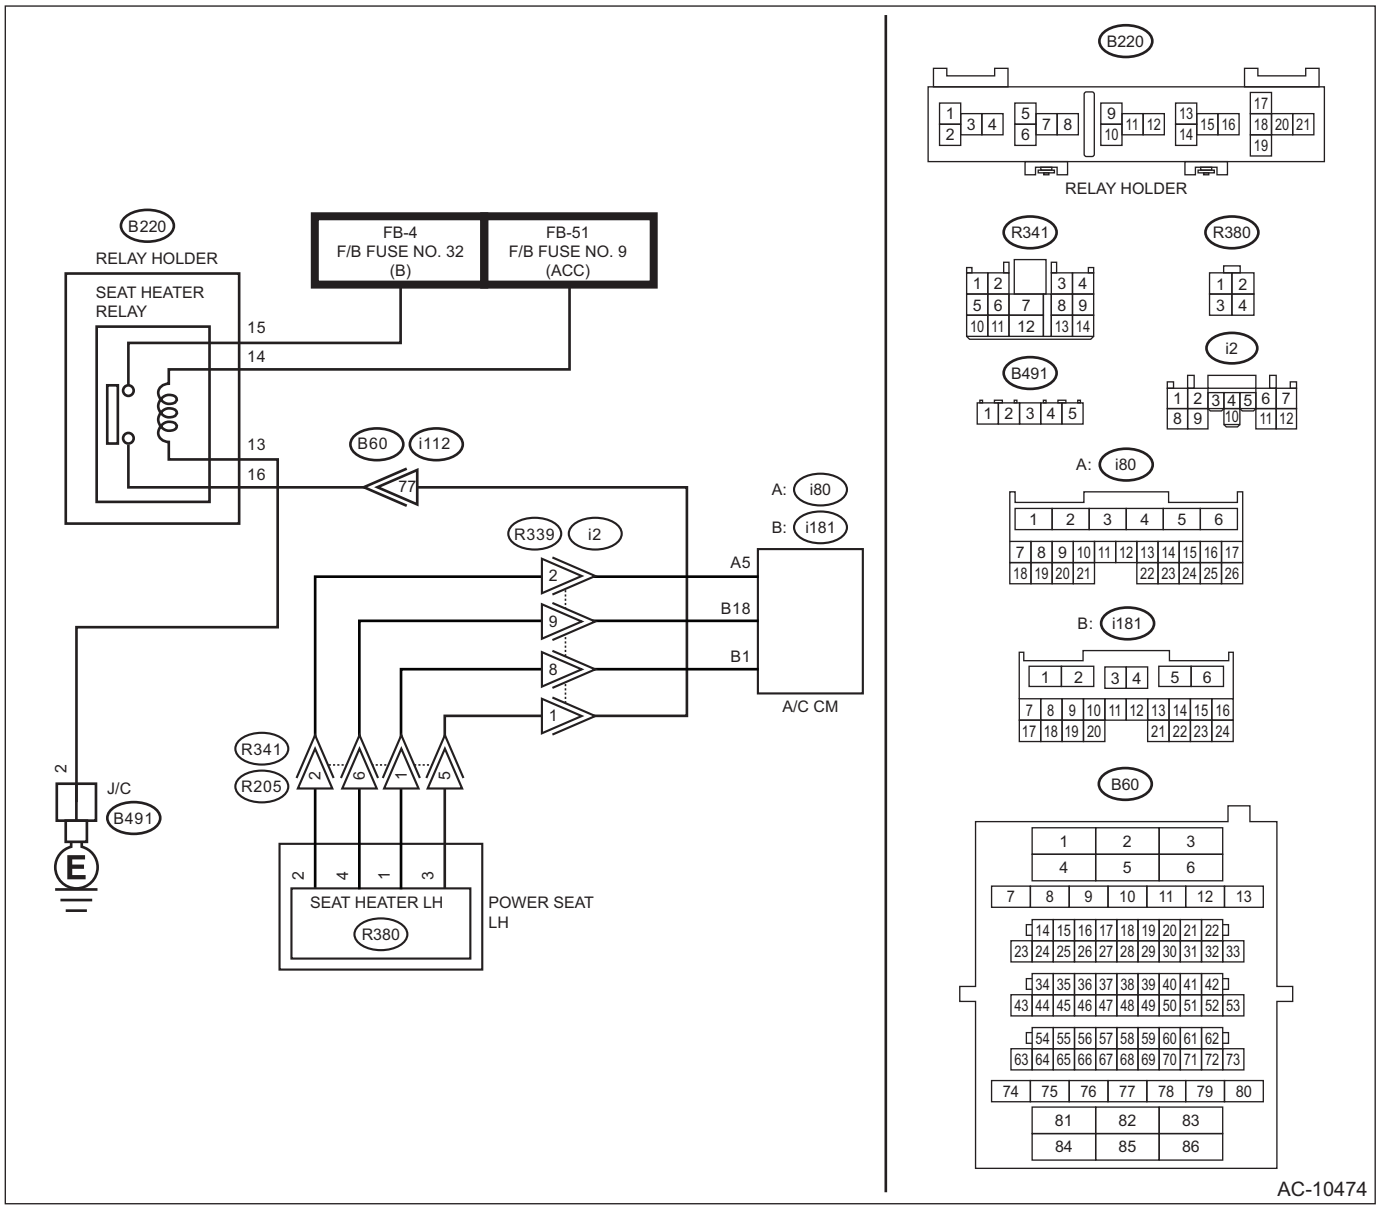


- Compressor was operated while refrigerant was low.
- Compressor was operated while refrigerant pressure was extremely low.
- Judgment is made only when the delivery mode fuse is installed.

Trouble symptom:

A/C does not operate.

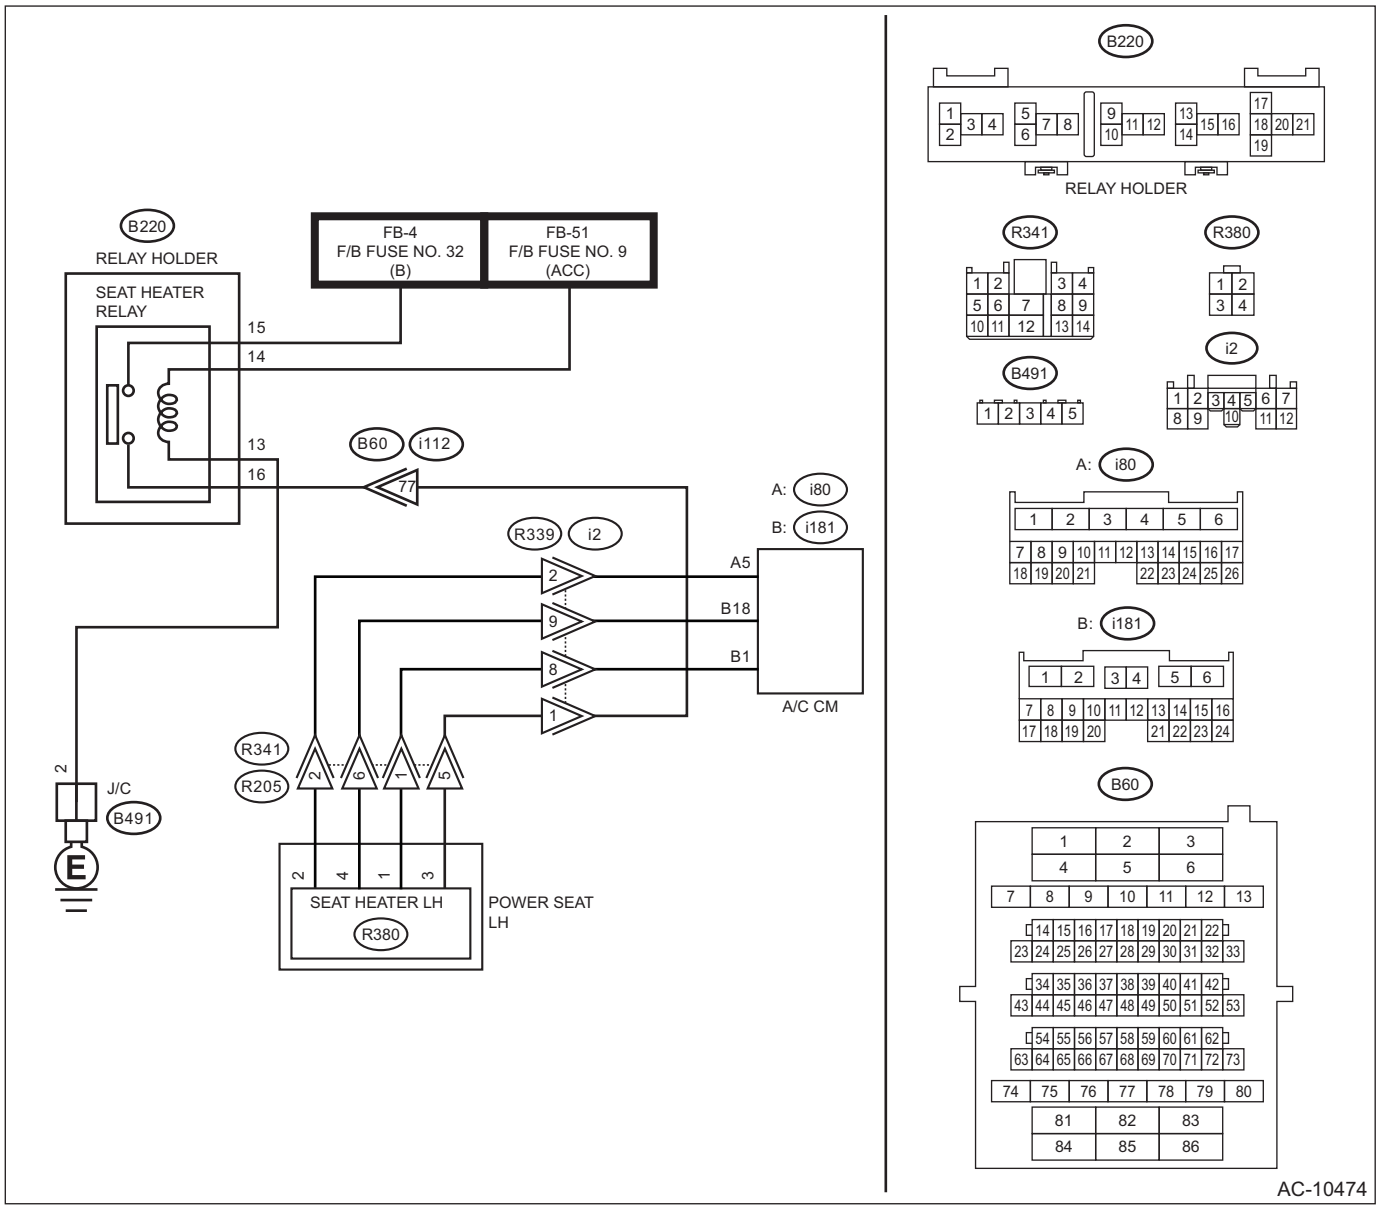
Wiring diagram:



Air conditioning system <Ref. to WI-98, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK AMOUNT OF REFRIGERANT.** Check the refrigerant pressure and filling amount. <Ref. to AC-23, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the filling amount a standard value?	Check that DTC B14A3 (open circuit malfunction) or B14A4 (short circuit malfunction) is recorded, and perform the diagnosis for the recorded DTC. If nothing is recorded, replace the compressor. <Ref. to AC-49, Compressor.>	Replace the compressor. <Ref. to AC-49, Compressor.>

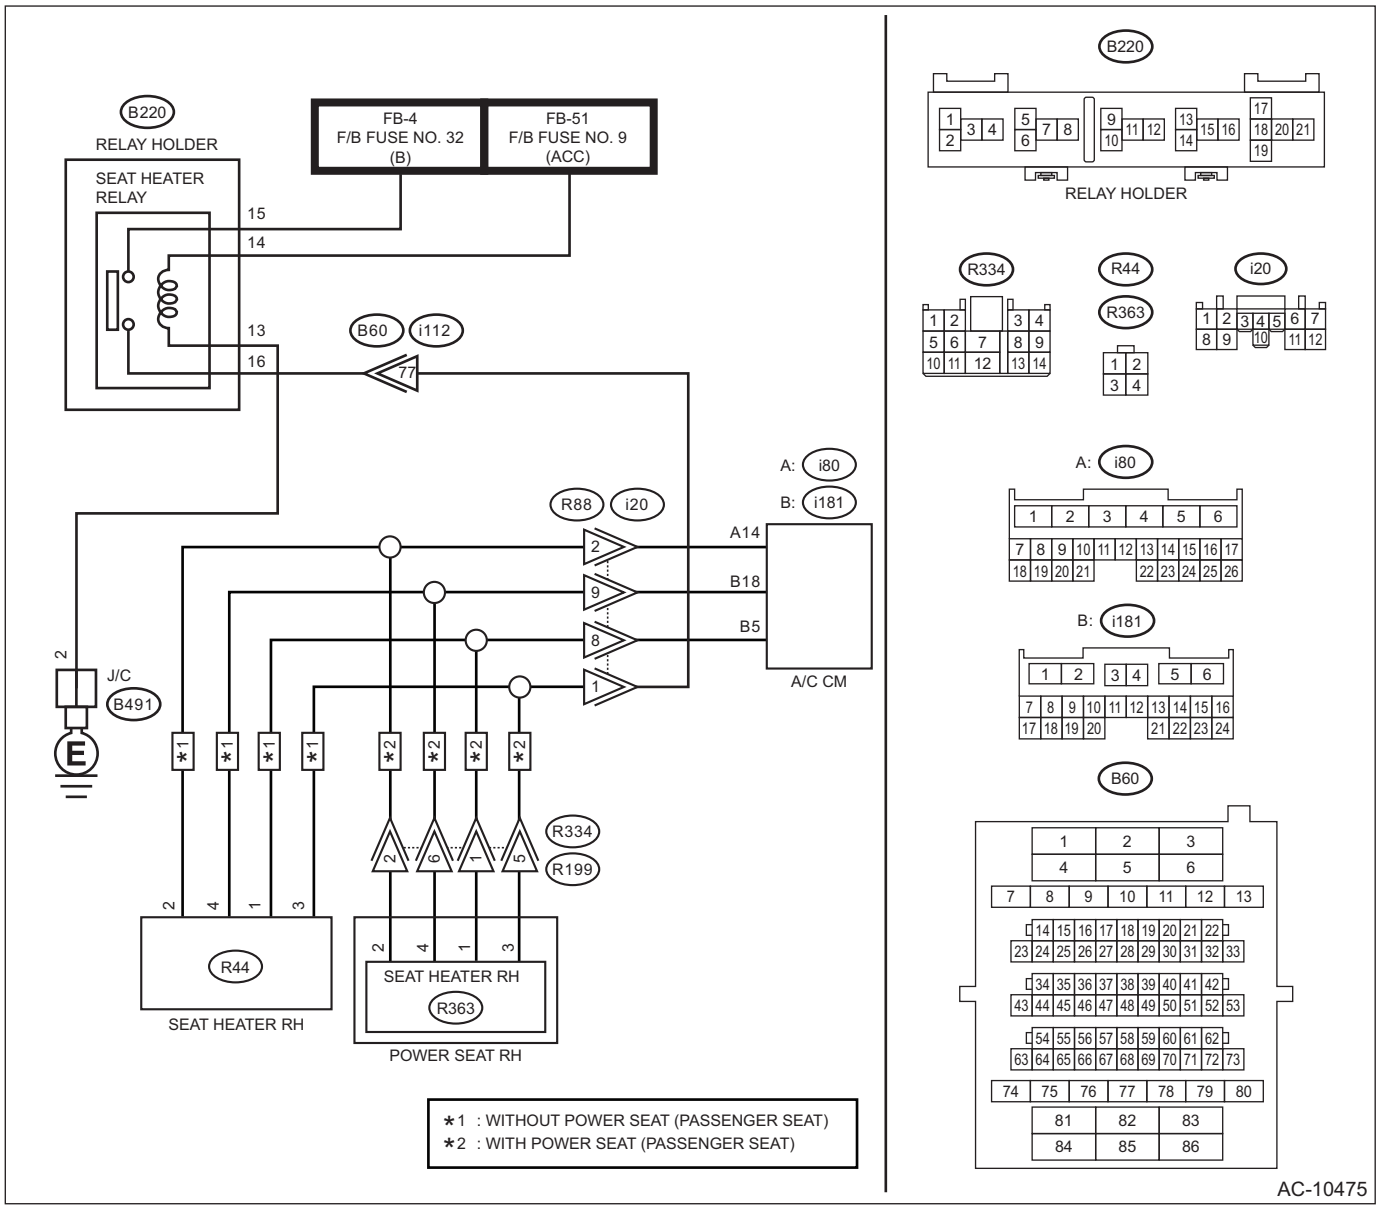
AA:DTC B14B1 SEAT HEATER THERMISTOR CIRCUIT OPEN (DRIVER)



DTC detecting condition:
Open circuit in seat heater thermistor.
Trouble symptom:
Seat heater LH does not function.
Wiring diagram:
Seat Heater System <Ref. to WI-349, WIRING DIAGRAM, Seat Heater System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B1 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SEAT HEATER LH.** 1) Disconnect the seat connector (R341). 2) Short No. 2 and No. 6 of seat connector (R341). 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B2 displayed?	Replace the seat heater module. <Ref. to SE-75, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Turn the seat heater switch LH to ON. 4) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R341) No. 2 (+) — (R341) No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(R341) No. 2 — (i80) No. 5:*** ***(R341) No. 6 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

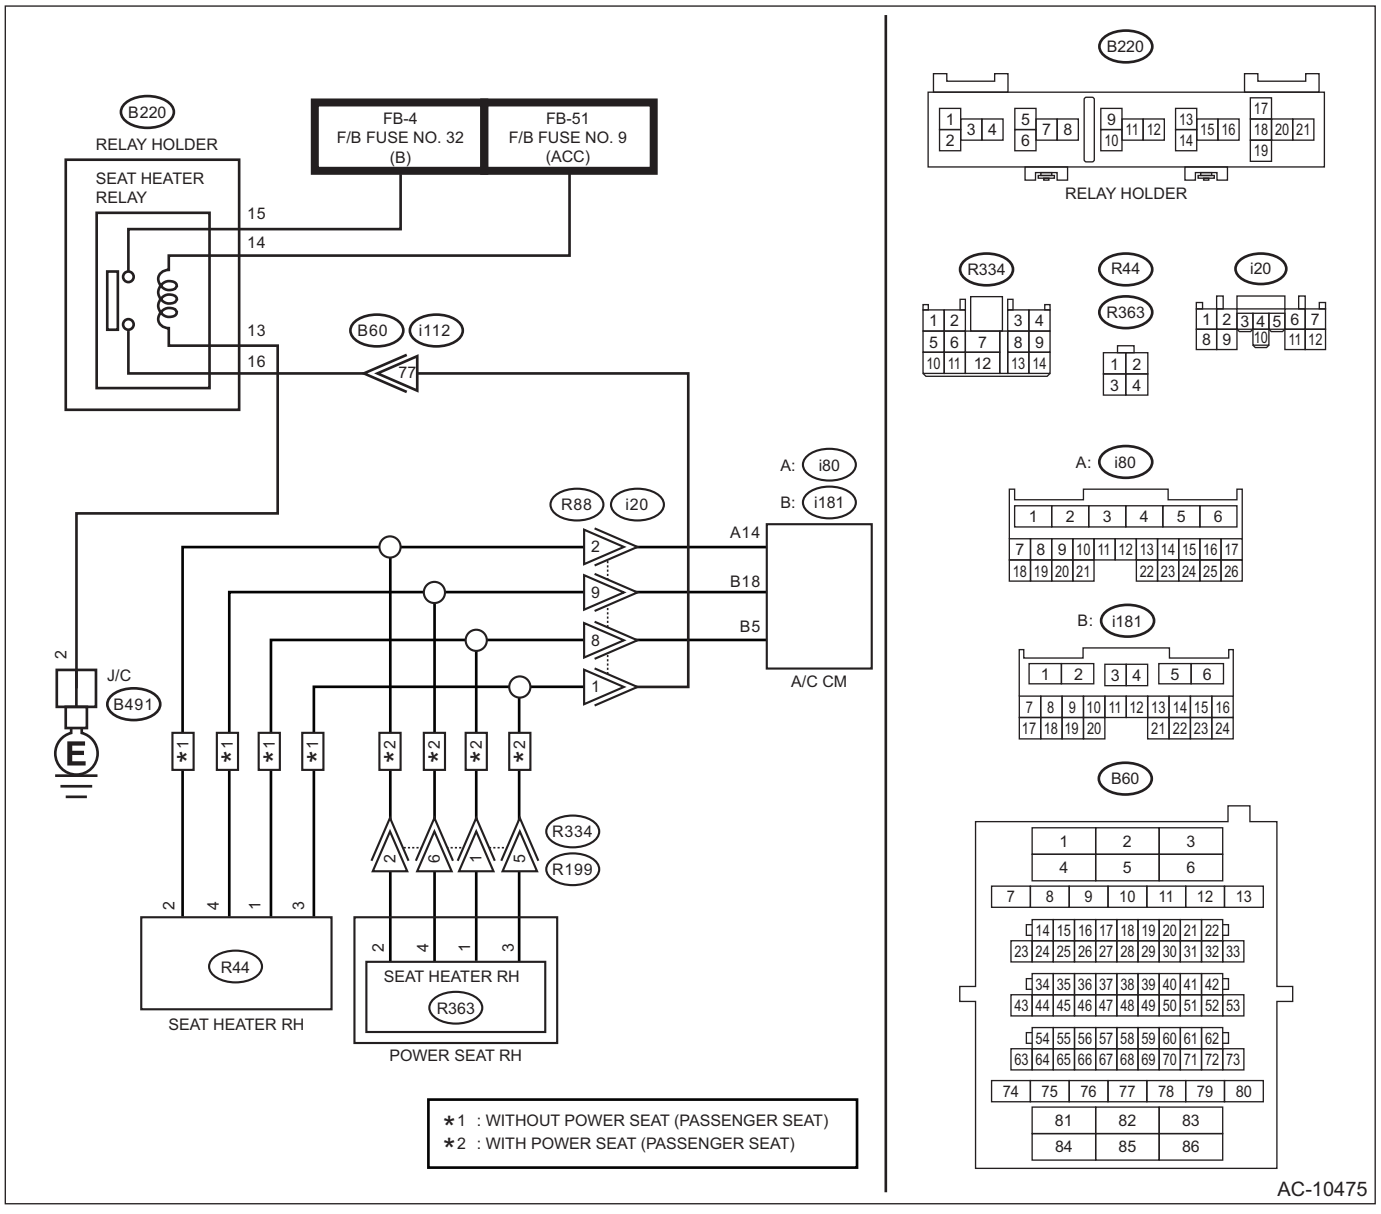
AB:DTC B14B2 SEAT HEATER THERMISTOR CIRCUIT SHORT-CIRCUIT (DRIVER)



DTC detecting condition:
Short-circuit in seat heater thermistor.
Trouble symptom:
Seat heater LH does not function.
Wiring diagram:
Seat Heater System <Ref. to WI-349, WIRING DIAGRAM, Seat Heater System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B2 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SEAT HEATER LH.** 1) Disconnect the seat connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B1 displayed?	Replace the seat heater module. <Ref. to SE-75, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Turn the seat heater switch LH to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R341) No. 2 (+) — (R341) No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(R341) No. 2 — (R341) No. 6:*** ***(R341) No. 2 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

AC:DTC B14B3 SEAT HEATER THERMISTOR CIRCUIT OPEN (PASSENGER)



DTC detecting condition:
Open circuit in seat heater thermistor.
Trouble symptom:
Seat heater RH does not function.
Wiring diagram:
Seat Heater System <Ref. to WI-349, WIRING DIAGRAM, Seat Heater System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B3 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SEAT HEATER RH.** 1) Disconnect the seat connector (R334) or (R44). 2) For vehicle with power seat, short No. 2 and No. 6 of seat connector (R334). For vehicle without power seat, short No. 2 and No. 4 of seat connector (R44). 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B4 displayed?	Replace the seat heater module and wire set - front seat cushion. <Ref. to SE-75, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Turn the seat heater switch RH to ON. 4) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 (+) — (R334) No. 6 (–):*** ***Without power seat*** ***(R44) No. 2 (+) — (R44) No. 4 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 — (i80) No. 14:*** ***(R334) No. 6 — (i181) No. 18:*** ***Without power seat*** ***(R44) No. 2 — (i80) No. 14:*** ***(R44) No. 4 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

AD:DTC B14B4 SEAT HEATER THERMISTOR CIRCUIT SHORT-CIRCUIT (PASSENGER)

DTC detecting condition:
Short-circuit in seat heater thermistor.
Trouble symptom:
Seat heater RH does not function.
Wiring diagram:
Seat Heater System <Ref. to WI-349, WIRING DIAGRAM, Seat Heater System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B4 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SEAT HEATER RH.** 1) Disconnect the seat connector (R334) or (R44). 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14B3 displayed?	Replace the seat heater module and wire set - front seat cushion. <Ref. to SE-75, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Turn the seat heater switch RH to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 (+) — (R334) No. 6 (–):*** ***Without power seat*** ***(R44) No. 2 (+) — (R44) No. 4 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 — (R334) No. 6:*** ***Without power seat*** ***(R44) No. 2 — (R44) No. 4:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>

AE:DTC U0002 CAN COMMUNICATION ERROR

DTC detecting condition:

- Data to be received via CAN communication do not arrive.
- A/C cooperation control does not operate.

Trouble symptom:

A/C does not operate fully automatically.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Check LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the diagnosis according to the inspection for LAN system.
2	**CHECK A/C CM.** 1) Replace with a normally operating A/C CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC U0002 displayed?	Go to step **3**.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check the CAN communication circuit. <Ref. to LAN(diag)-50, LIST, CAN Communication Circuit Check.>	Is the check result OK?	It is possible that temporary poor communication occurs. Clear the memory. <Ref. to AC(diag)-42, Clear Memory Mode.>	Repair or replace the CAN communication circuit.

AF:DTC U0028 HEATER CONTROL PANEL COMMUNICATION ERROR

DTC detecting condition:
UART communication failure

Trouble symptom:
- Unable to operate A/C.
- DTC “U0028” HEATER CONTROL PANEL COMMUNICATION ERROR was detected.

Wiring diagram:
Air conditioning system <Ref. to WI-102, AUTO A/C, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check poor contact of the power supply circuit connectors, A/C control panel connector and A/C CM connector.	Is the check result OK?	Go to step **2**.	Repair the connector.
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuses No. 19 and 26 from the main fuse box or fuse & relay box. 3) Check the condition of fuse. <Ref. to AC-35, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the A/C control panel — fuse.
3	**CHECK A/C CONTROL PANEL POWER CIRCUIT.** 1) Remove the A/C control panel. 2) Disconnect the A/C control panel connector. 3) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i88) No. 10 (+) — Chassis ground (–):*** ***(i88) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check for open or short circuit in the harness between A/C control panel and fuse.
4	**CHECK A/C CONTROL PANEL GROUND CIRCUIT.** Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. ***Connector & terminal*** ***(i88) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness for ground line.

	Step	Check	Yes	No
5	**CHECK COMMUNICATION CIRCUIT HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from A/C control panel and A/C CM. 2) Using a tester, check for continuity between the harness terminals. ***Connector & terminal*** ***(i181) No. 11 — (i88) No. 7:*** ***(i181) No. 12 — (i88) No. 15:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i181) No. 11 — No. 12:*** ***(i181) No. 11 — Chassis ground:*** ***(i181) No. 12 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-46, REMOVAL, Control Panel.>

AG:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

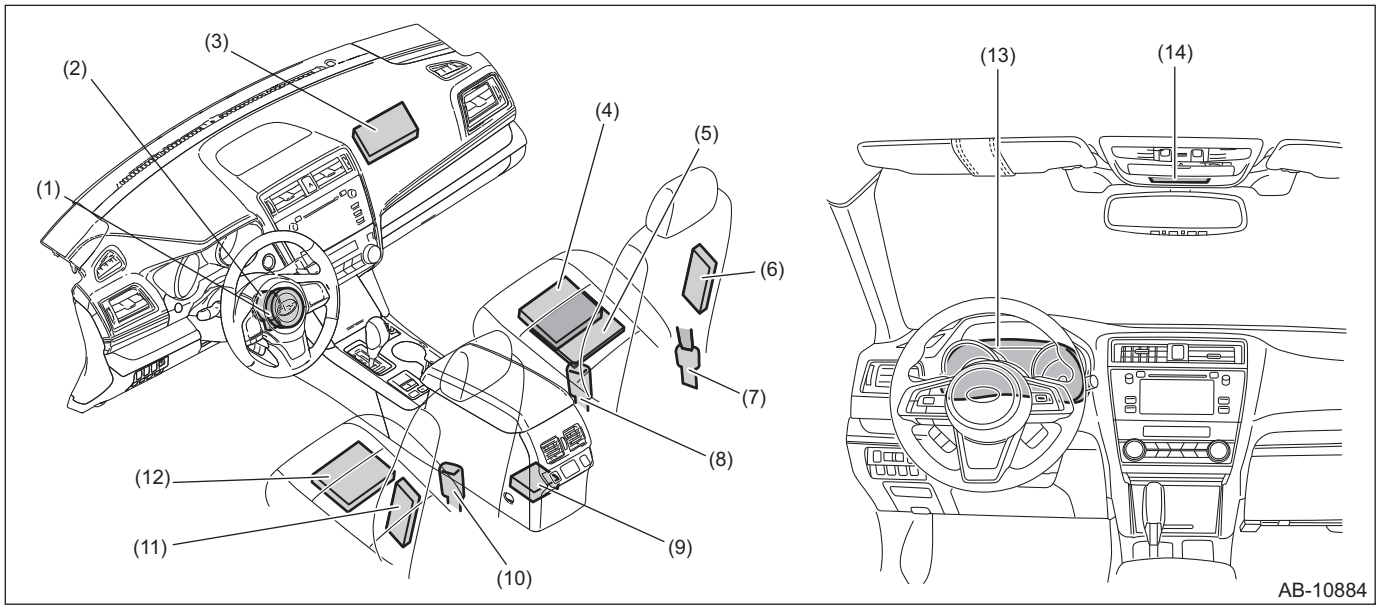
DTC detecting condition:

- Data to be received via CAN communication do not arrive.
- A/C cooperation control does not operate.

Trouble symptom:

A/C does not operate fully automatically.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Check LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the diagnosis according to the inspection for LAN system.
2	**CHECK A/C CM.** 1) Replace with a normally operating A/C CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC U0073 displayed?	Go to step **3**.	Replace the A/C CM. <Ref. to AC-48, REMOVAL, Control Unit.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check the CAN communication circuit. <Ref. to LAN(diag)-50, LIST, CAN Communication Circuit Check.>	Is the check result OK?	It is possible that temporary poor communication occurs. Clear the memory. <Ref. to AC(diag)-42, Clear Memory Mode.>	Repair or replace the CAN communication circuit.



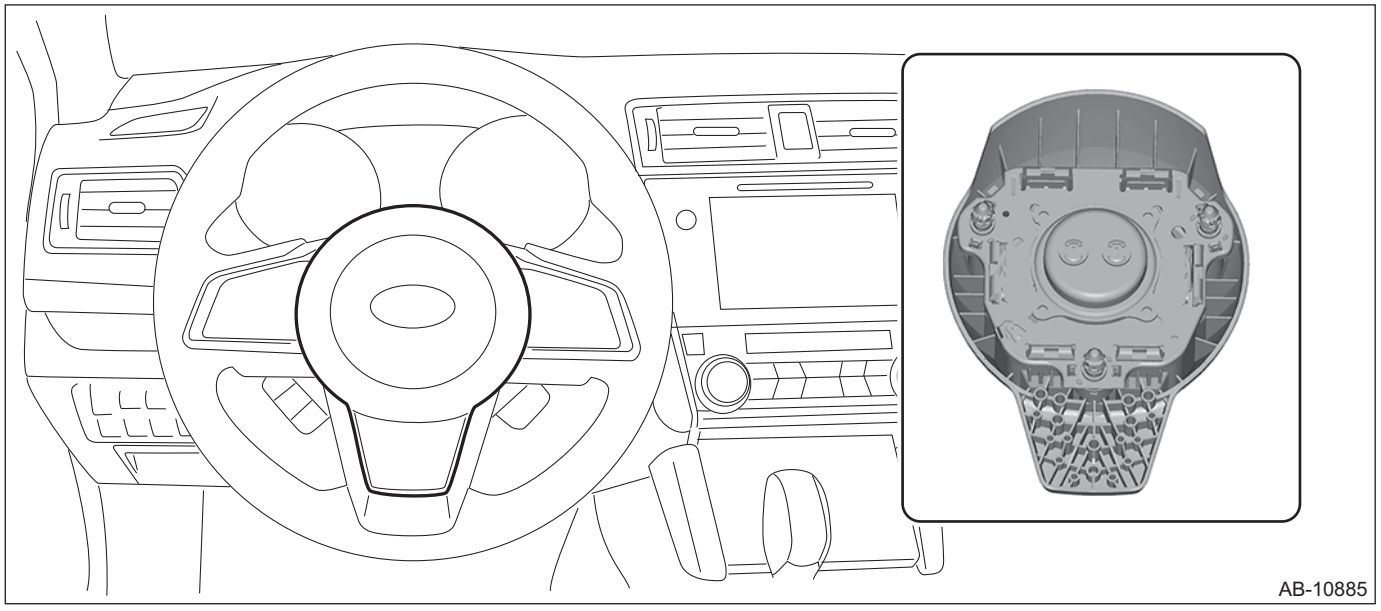
AIRBAG SYSTEM

AB

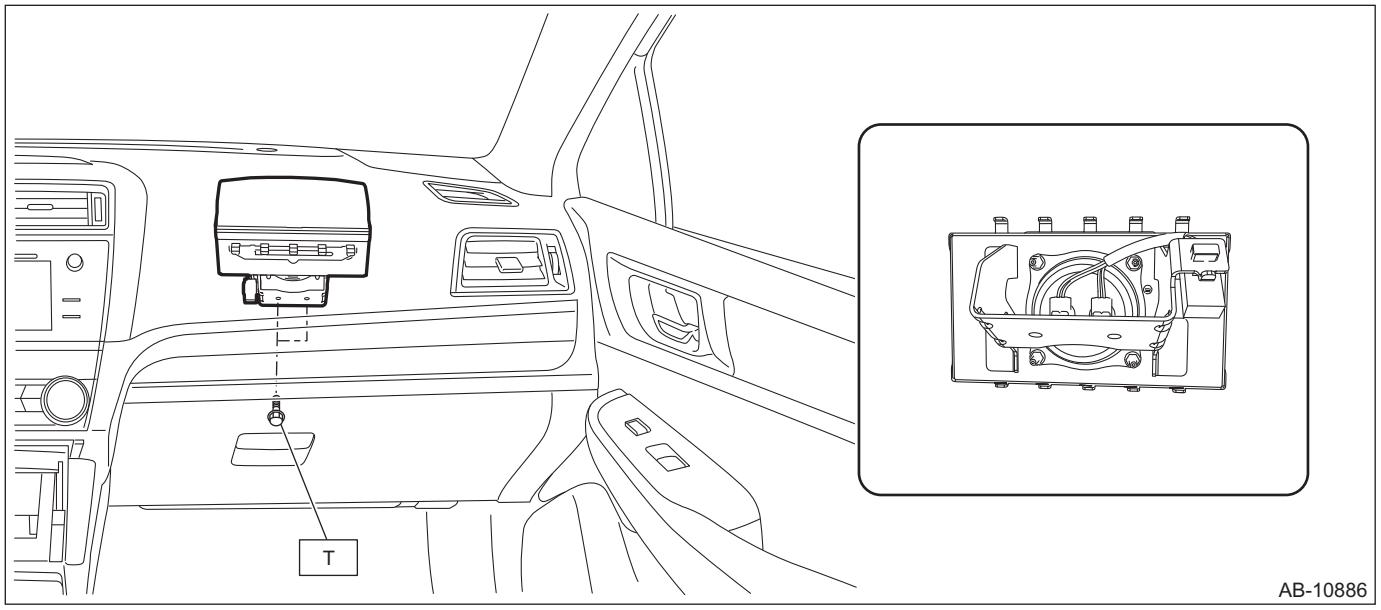
		Page
1.	General Description	2
2.	Airbag Connector	18
3.	Inspection Locations after a Collision	24
4.	Driver's Airbag Module	31
5.	Passenger's Airbag Module	33
6.	Seat Cushion Airbag Module	36
7.	Side Airbag Module	39
8.	Curtain Airbag Module	42
9.	Airbag Control Module	49
10.	Front Sub Sensor	51
11.	Front Door Impact Sensor	53
12.	Side Airbag Sensor	55
13.	Curtain Airbag Sensor	57
14.	Roll Connector	59
15.	Airbag Module Disposal (Deployment Processing on Vehicle)	65

1. General Description

A: COMPONENT

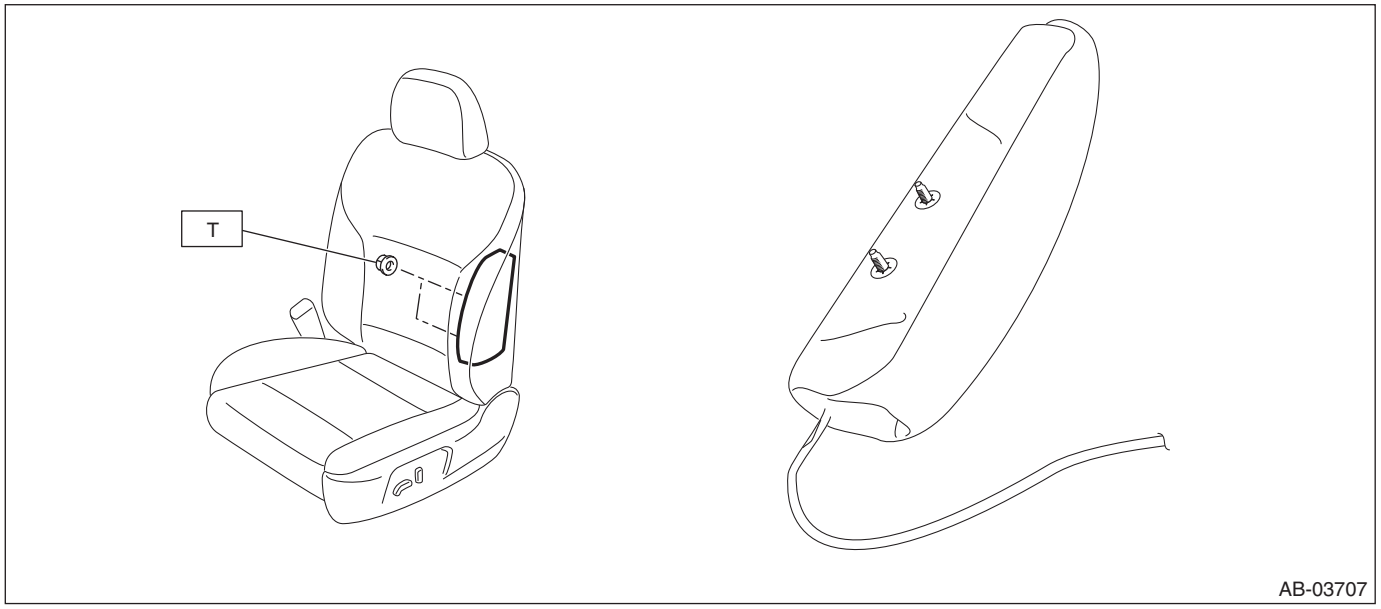


(1) Driver's airbag module
(2) Steering roll connector
(3) Passenger's airbag module
(4) Seat cushion airbag module RH
(5) Occupant detection control module and sensor
(6) Side airbag module RH
(7) Belt tension sensor
(8) Buckle switch RH
(9) Airbag control module
(10) Buckle switch LH
(11) Side airbag module LH
(12) Seat cushion airbag module LH
(13) Airbag warning light (in combination meter)
(14) Airbag ON/OFF indicator light (in warning box)

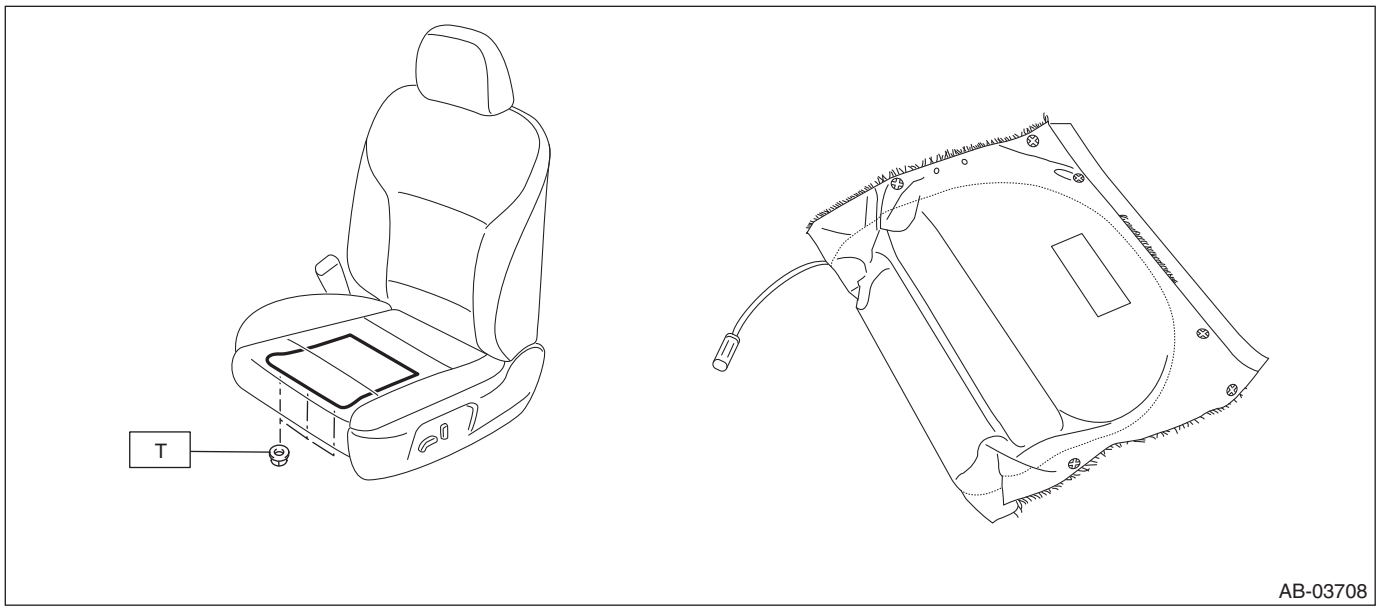


(1) Curtain airbag module LH
(2) Front door impact sensor LH
(3) Curtain airbag module RH
(4) Front sub sensor LH
(5) Front sub sensor RH
(6) Front door impact sensor RH
(7) Seat belt pretensioner RH
(8) Side airbag sensor RH
(9) Curtain airbag sensor RH
(10) Seat belt pretensioner LH
(11) Side airbag sensor LH
(12) Curtain airbag sensor LH

1. DRIVER'S AIRBAG MODULE

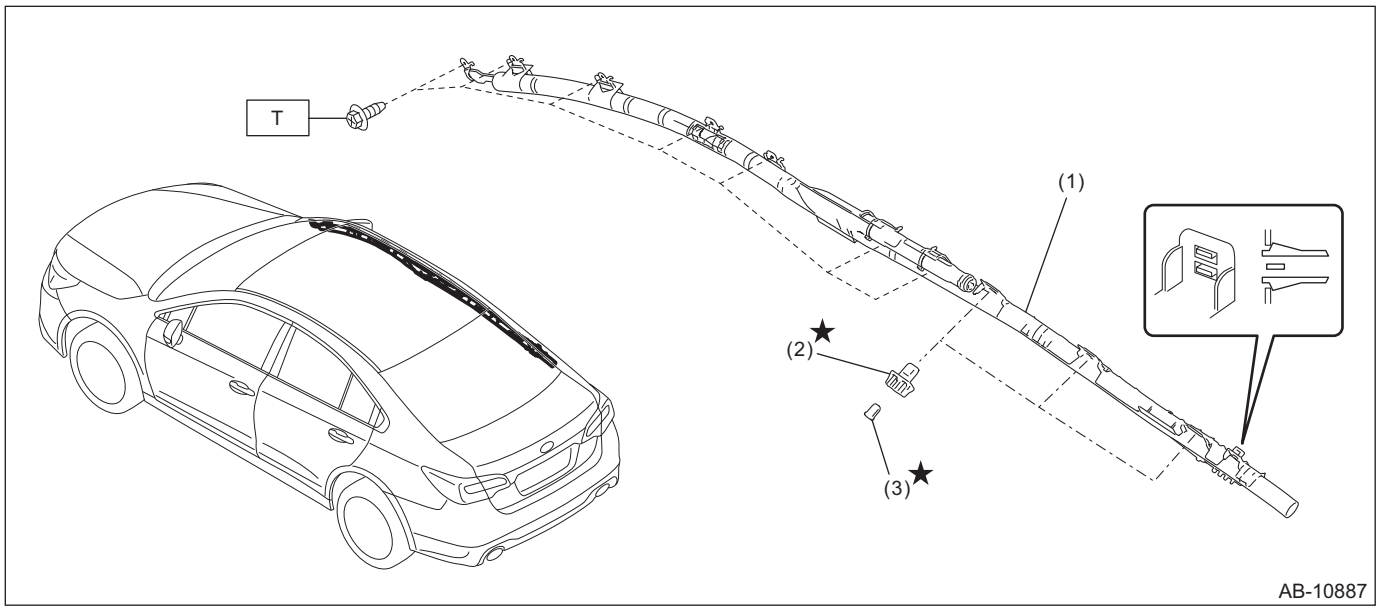


2. PASSENGER'S AIRBAG MODULE

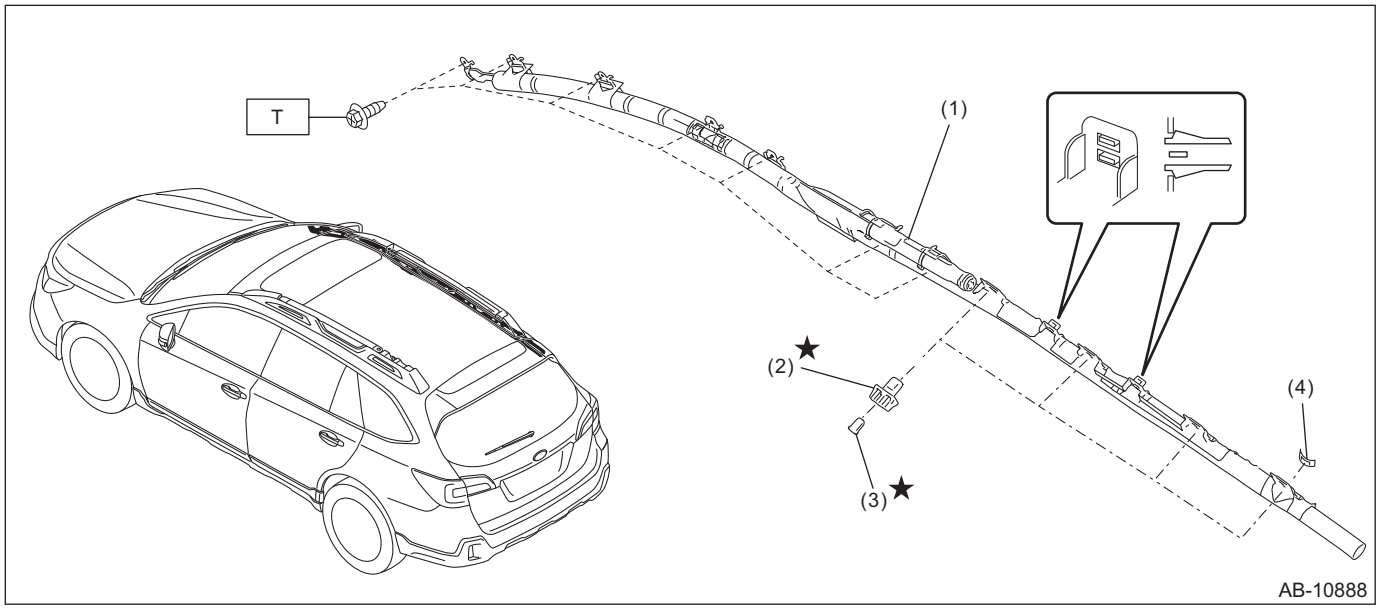


Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

3. SIDE AIRBAG MODULE



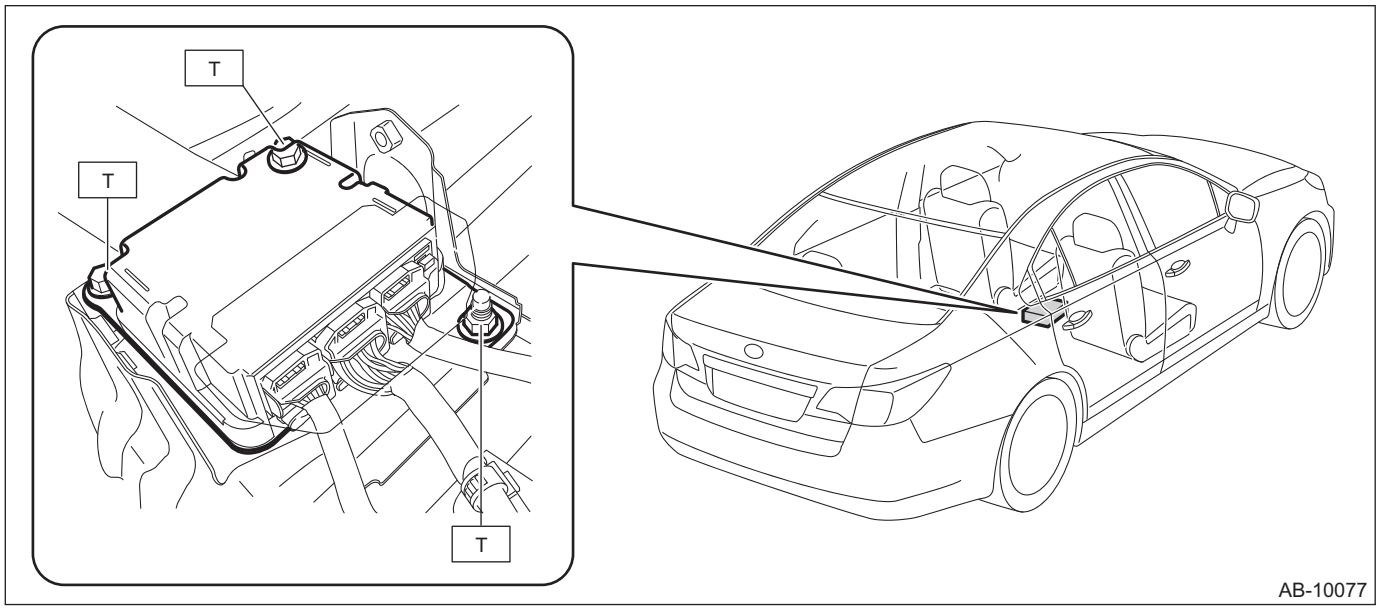
Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)



4. SEAT CUSHION AIRBAG MODULE

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

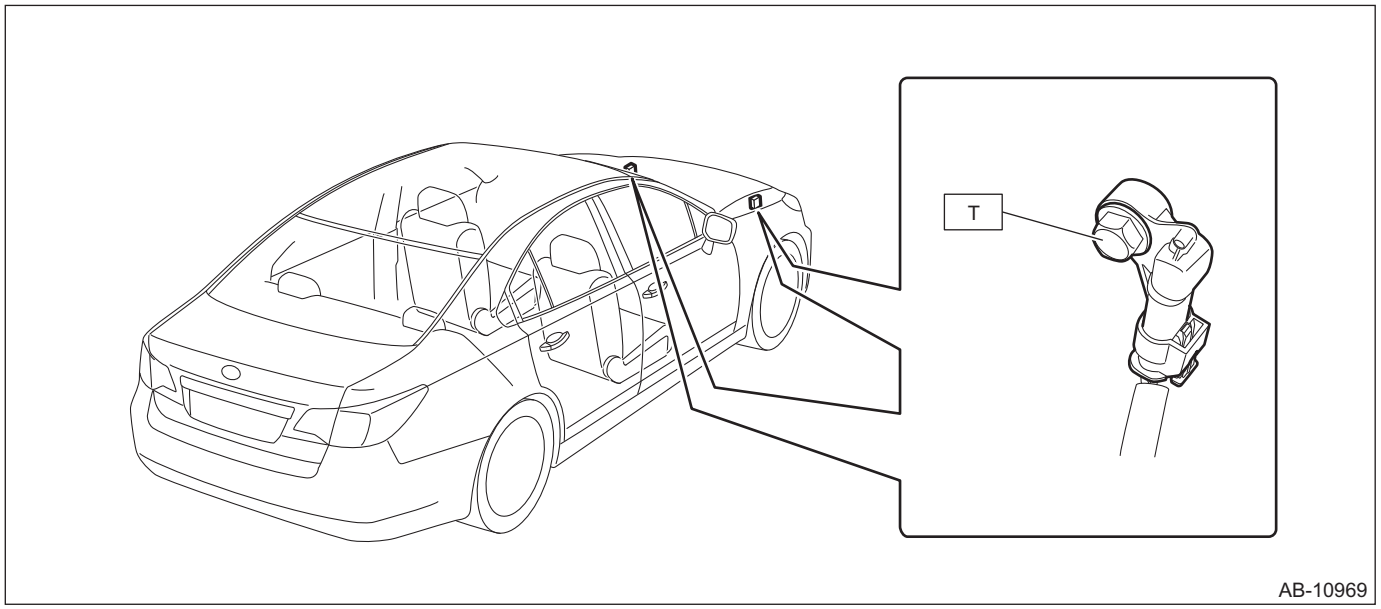
5. CURTAIN AIRBAG MODULE



(1) Curtain airbag module
(2) Clip - bushing
(3) Clip - pin
(4) Plastic spacer

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

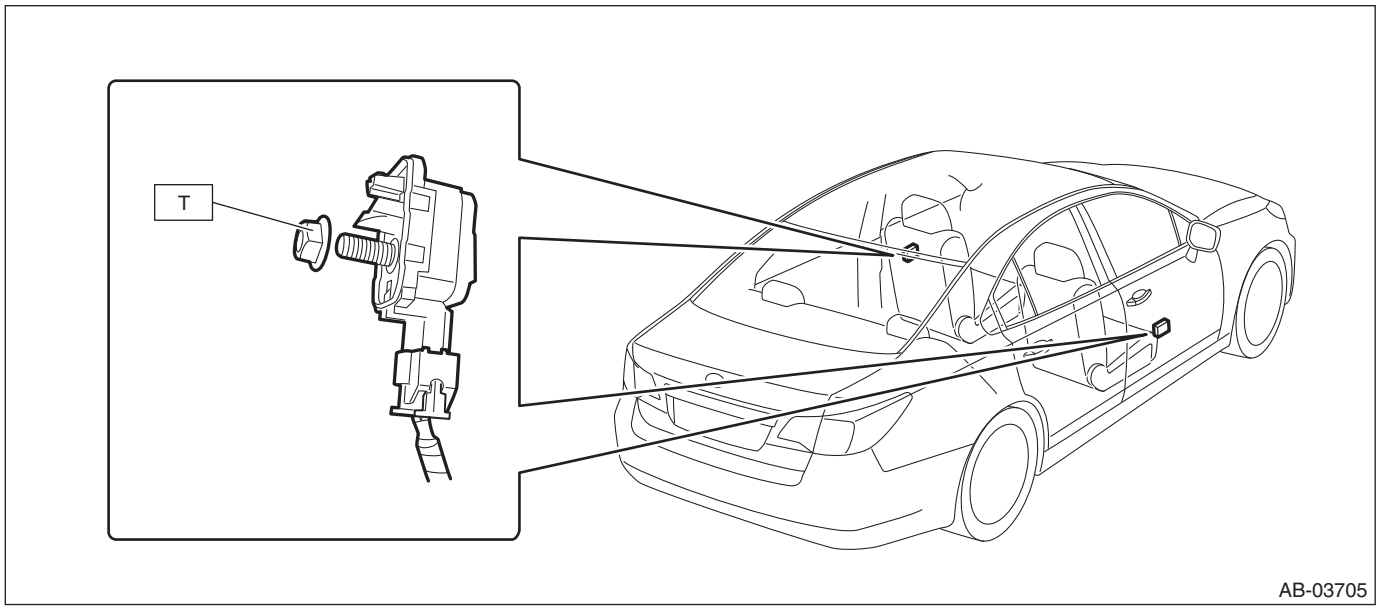
6. AIRBAG CONTROL MODULE



CAUTION:
Do not reuse mounting bolts and nuts.

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

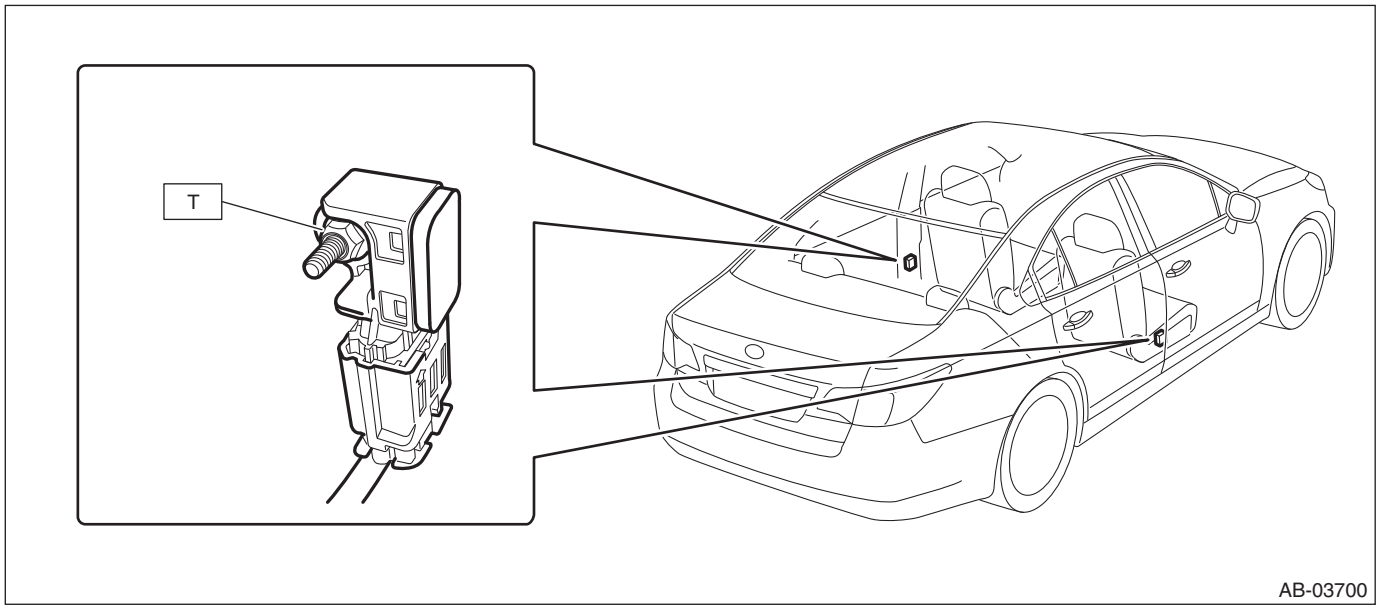
7. FRONT SUB SENSOR



CAUTION:
Do not reuse mounting bolts and nuts.

Tightening torque: N·m (kgf-m, ft-lb)
T: 13 (1.3, 9.6)

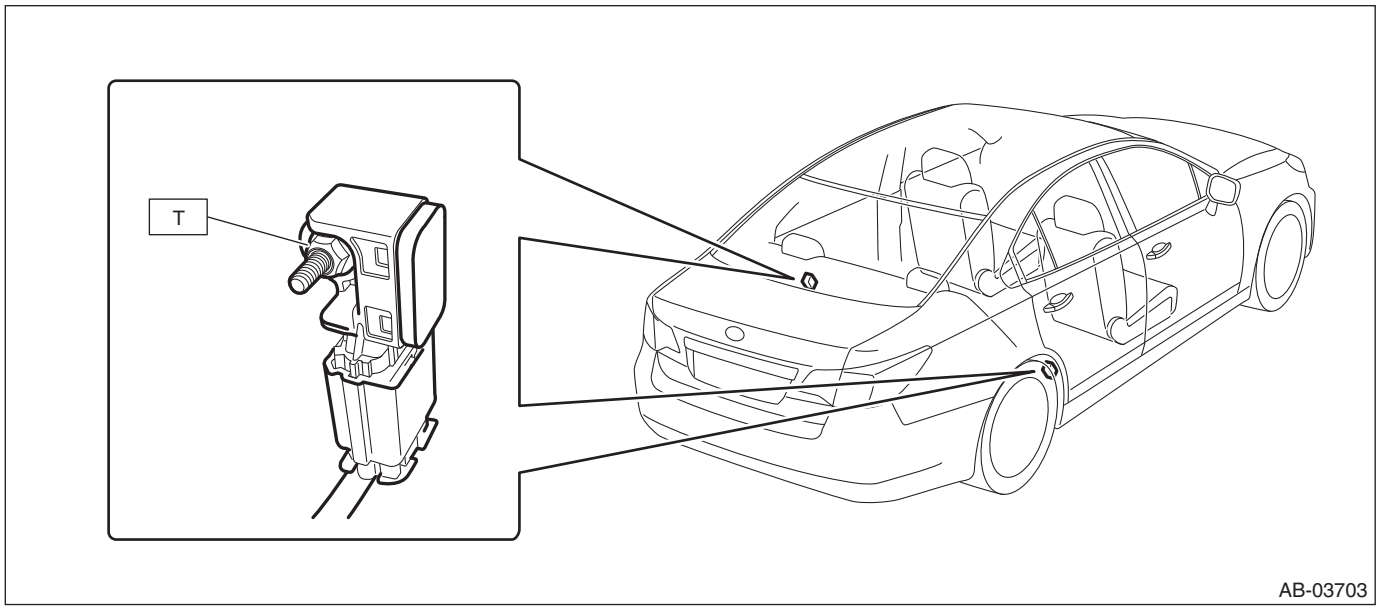
8. FRONT DOOR IMPACT SENSOR



CAUTION:
Do not reuse mounting bolts and nuts.

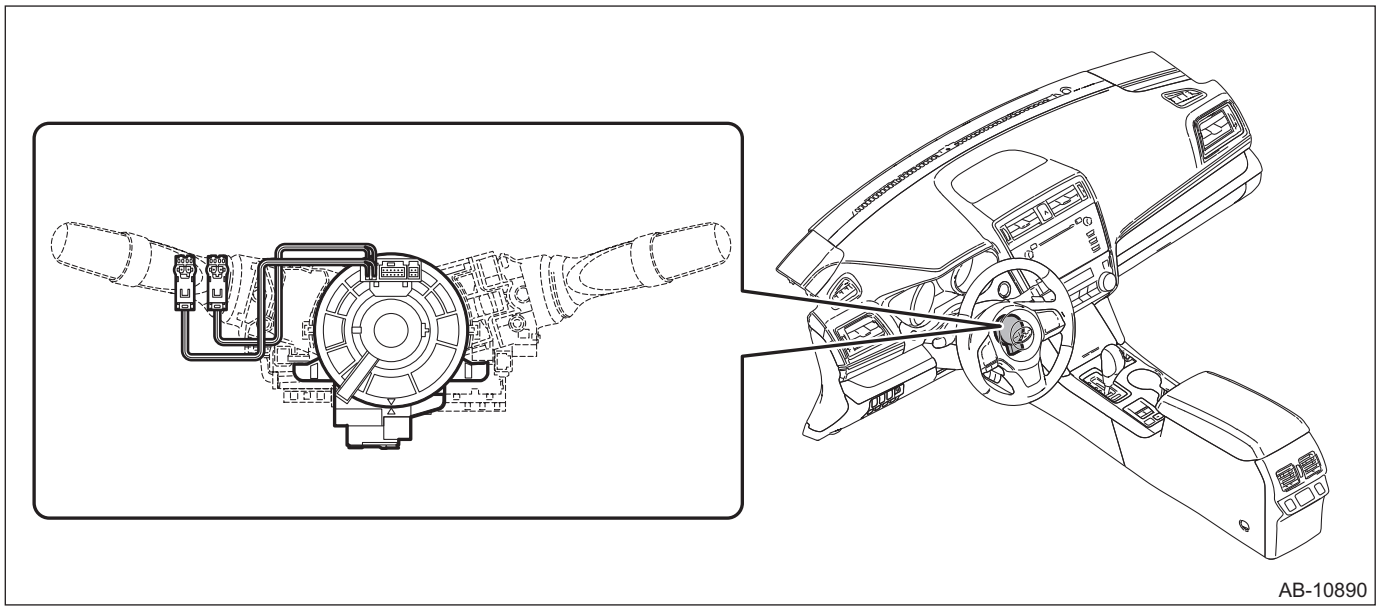
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

9. SIDE AIRBAG SENSOR



CAUTION:
Do not reuse mounting bolts and nuts.

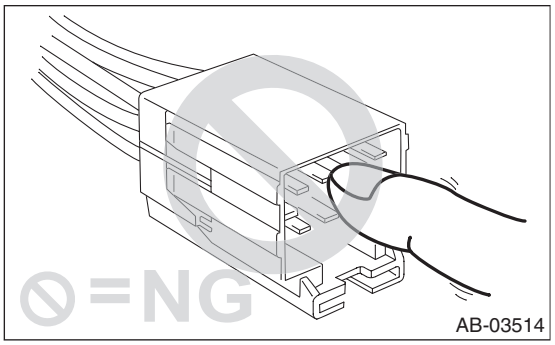
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



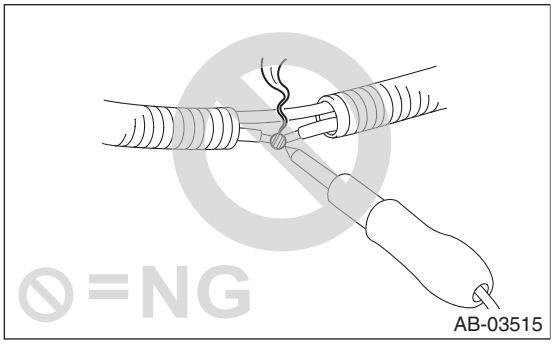
10.CURTAIN AIRBAG SENSOR

CAUTION:
Do not reuse mounting bolts and nuts.

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

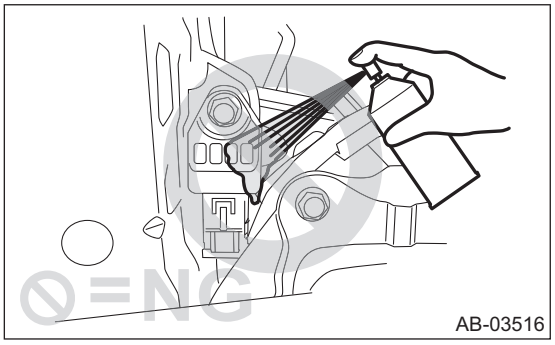


11.STEERING ROLL CONNECTOR



B: CAUTION

1. BEFORE STARTING ALL WORKS



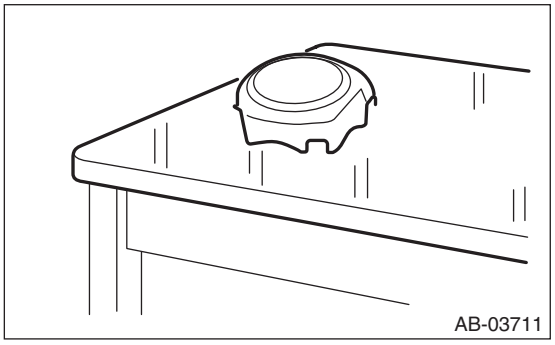
• Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
  – For model with battery sensor, disconnect the ground terminal from battery sensor.
• The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
• When performing an operation with the airbag system parts including pretensioners exposed, do not apply any impact to airbag modules and sensors.
• If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
• Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

• If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.

• When painting or performing sheet metal work on the vehicle, remove the following parts. Performing the work without removing the parts may cause secondary malfunction.

  – Front part of the vehicle including the front wheel apron, front fender and radiator panel side
    • Front sub sensor of airbag system
    • Wiring harness
  – Side or its vicinity of the vehicle including the side sill, center pillar and front and rear doors

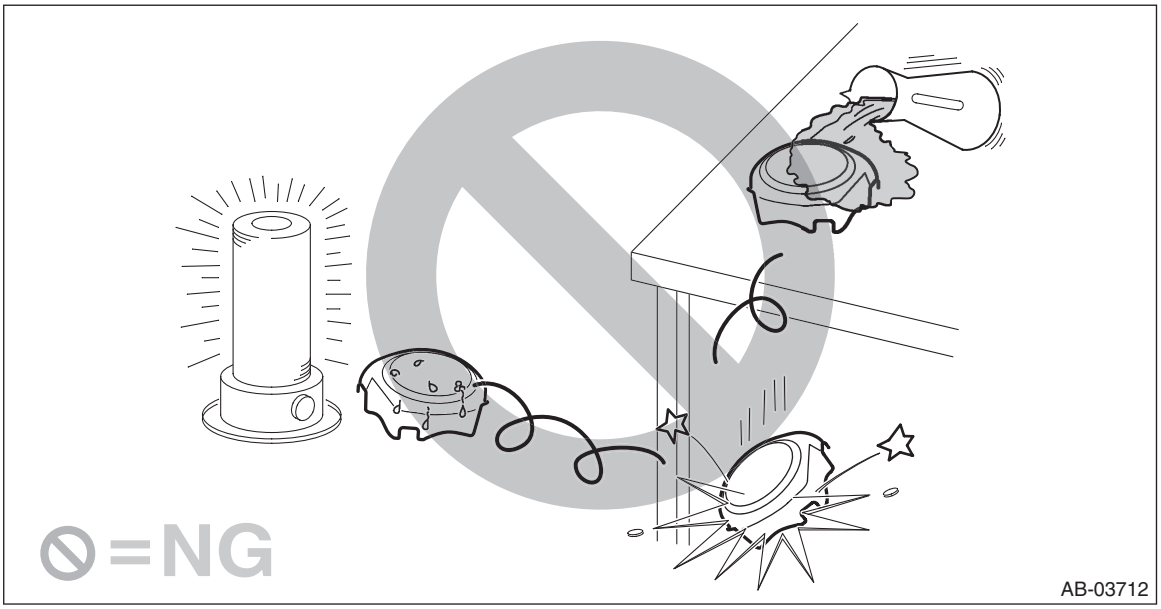
- Side airbag sensor
- Curtain airbag sensor
- Satellite safing sensor
- Wiring harness



• When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

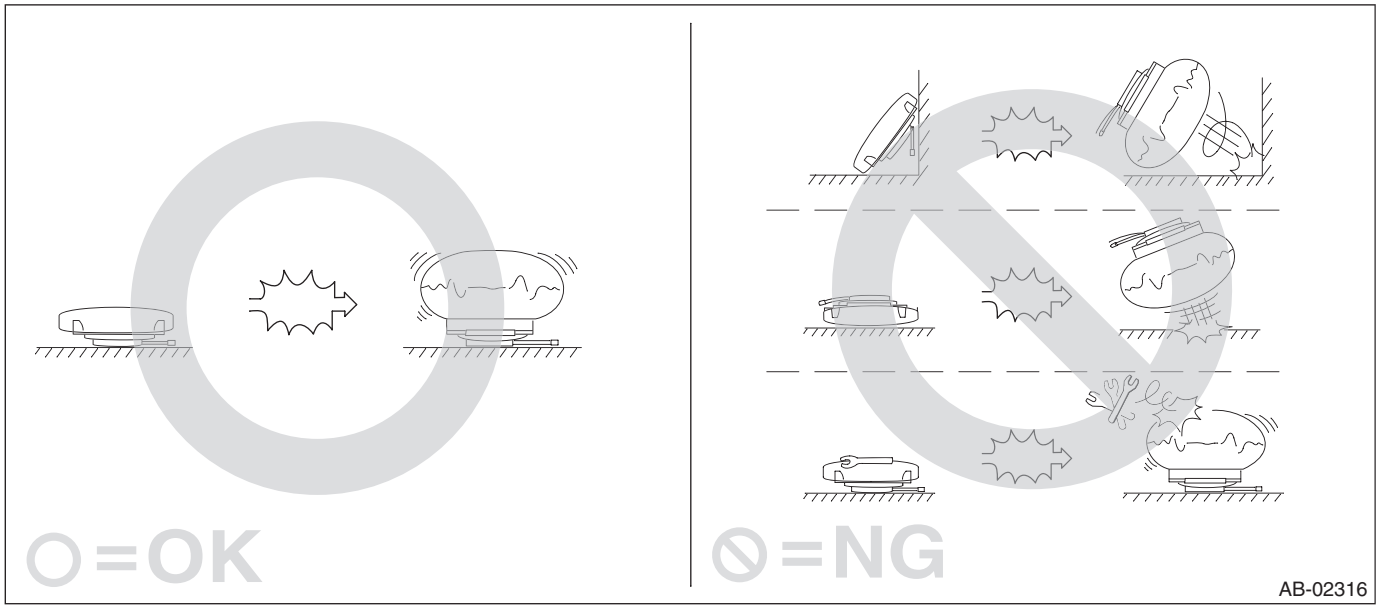
2. BEFORE STARTING PARTS REPLACEMENT

• If the following parts are deformed or damaged, replace with new parts.
  – Airbag sensors and brackets
  – Airbag modules and brackets
  – Airbag control modules and brackets
  – Pretensioners and brackets
  – Harnesses
  – Cover - satellite safing
• Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.



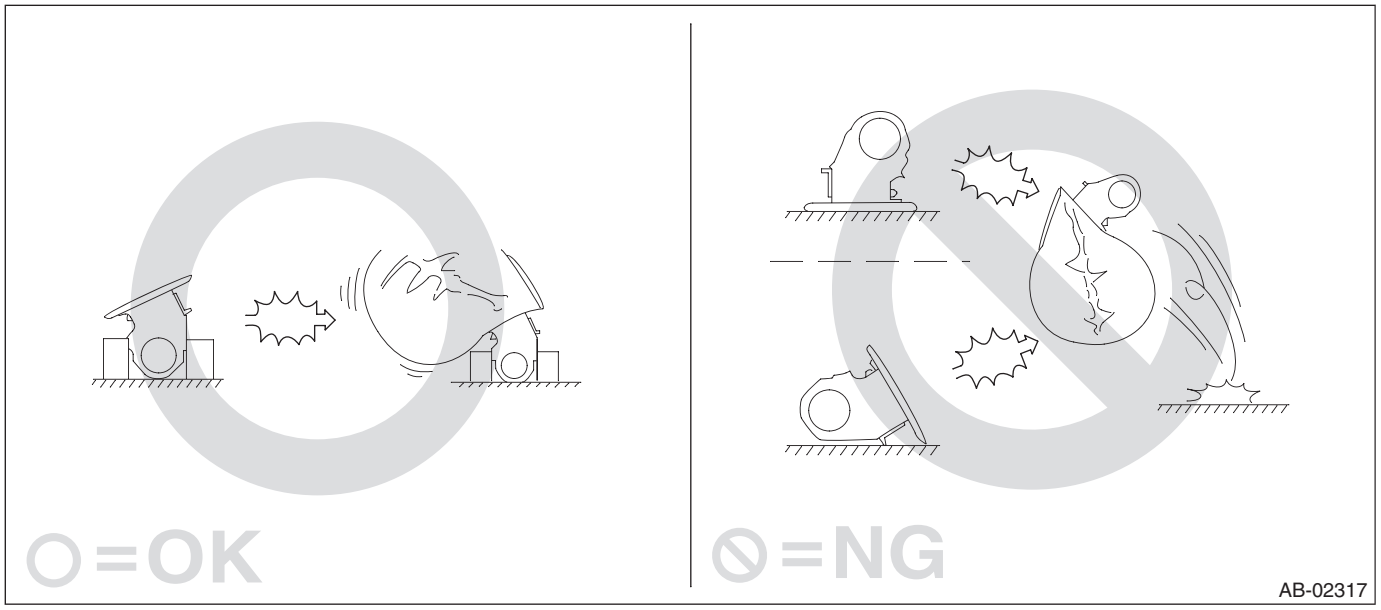
AB-00125

• Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
• Never reuse any activated airbag module and pretensioner.
• Do not discard undeployed airbag or pretensioner.
• Do not reuse the bolts and nuts when the following parts are removed. Always replace with the specified new bolts and nuts.
  – Airbag control module
  – Front door impact sensor
  – Front sub sensor
  – Side airbag sensor
  – Curtain airbag sensor
• When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.
• After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

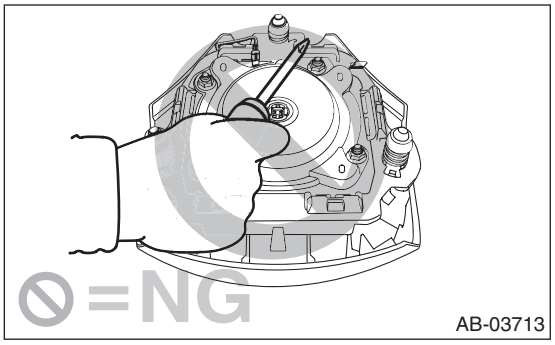


AB-03711

• Observe the following; the airbag system component or the internal parts of seat belt pretensioner may be damaged or the reliability may be greatly lowered.
  – Do not drop or otherwise apply impact.

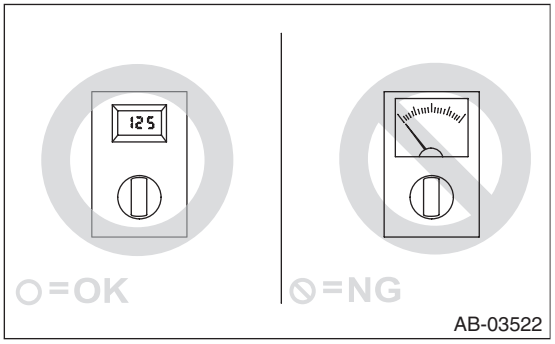


– Do not store it under high temperature environment at 85°C (185°F) or more, or do not near it to open flames.
– Do not allow water, oil or grease to come in contact.

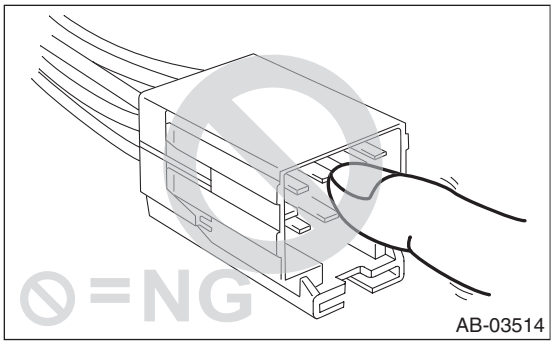


• When storing a removed airbag module, observe the following items. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.
– Do not place the airbag module with the pad side facing downward.
– Do not place any objects on the airbag module.
– Do not pile up the airbag module.
• Driver's airbag module

- Passenger's airbag module, side airbag module and seat cushion airbag module

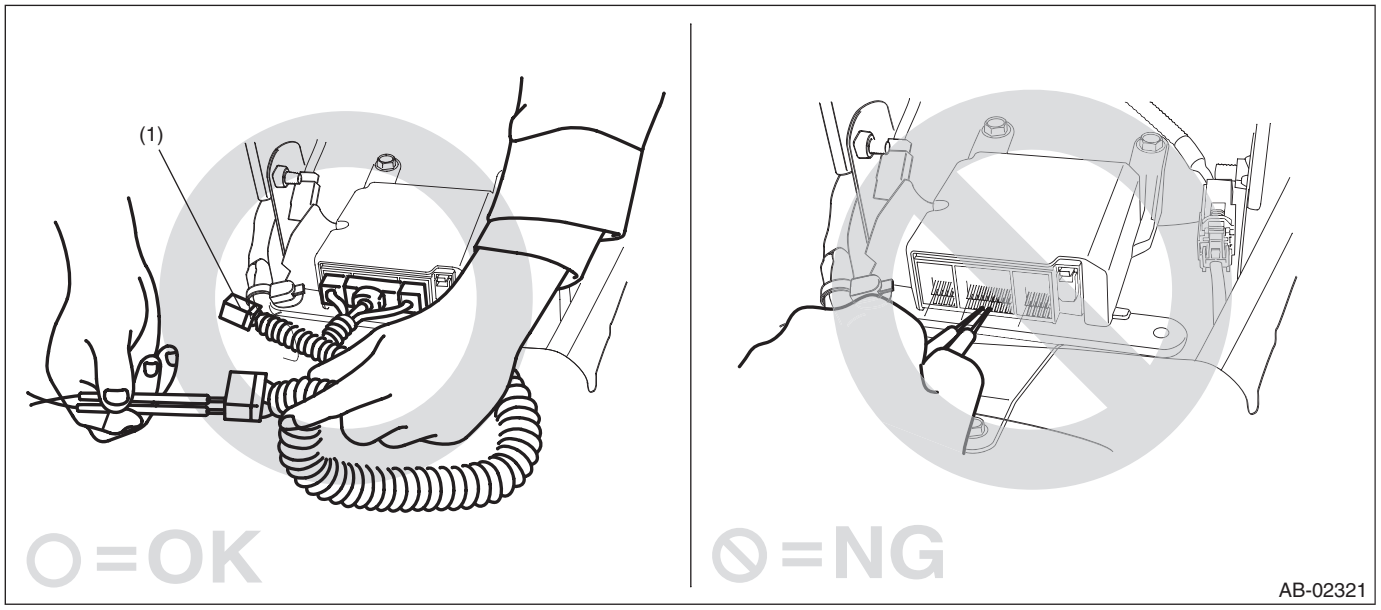


- Do not disassemble the airbag modules and pretensioners.

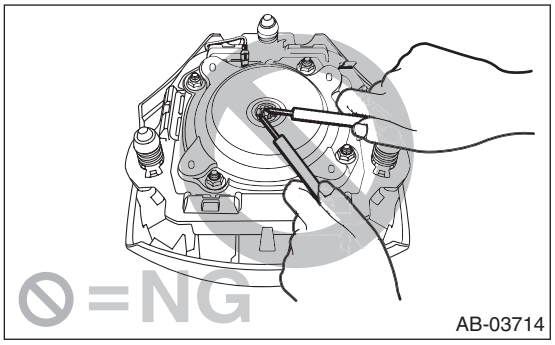


- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

3. BEFORE STARTING TROUBLESHOOTING

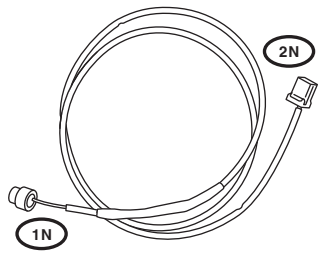


- Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

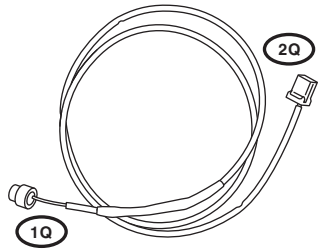


• Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

• When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

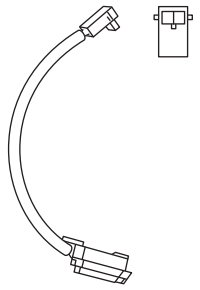


• Do not check the continuity of airbag modules and pretensioners.



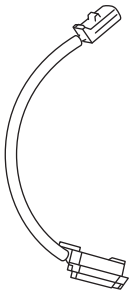
C: PREPARATION TOOL

1. SPECIAL TOOL



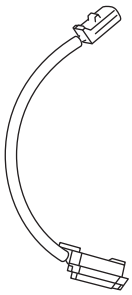
• TEST HARNESS N

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA000	98299SA000	TEST HARNESS N	Used for unit inspection of steering roll connector.



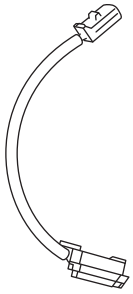
• TEST HARNESS Q

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA040	98299SA040	TEST HARNESS Q	Used for unit inspection of steering roll connector.



• TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of curtain airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)



- TEST HARNESS ADAPTER AM

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FJ000	98299FJ000	TEST HARNESS ADAPTER AM	• Used for operation process of passenger's airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER AU

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AL000	98299AL000	TEST HARNESS ADAPTER AU	• Used for operation process of seat cushion airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER AR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299CA000	98299CA000	TEST HARNESS ADAPTER AR	• Used for operation process of side airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

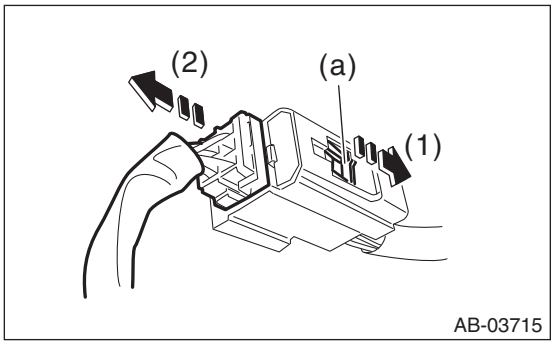
- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of airbag module. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing and installing the steering wheel.
TORX® T40	Used for removing and installing the beam COMPL - steering.
Circuit tester	Used for measuring resistance, voltage and current.

2. Airbag Connector



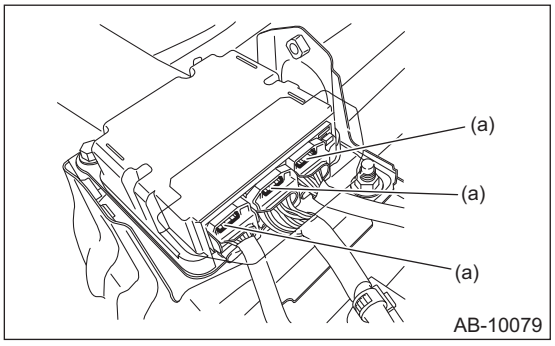
A: PROCEDURE

1. POWER SUPPLY

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

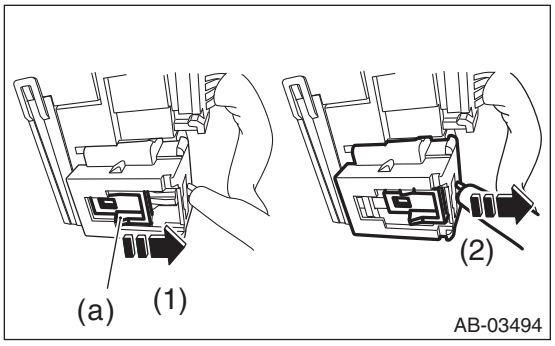
2. AIRBAG CONTROL MODULE

1) How to disconnect:

(1) Push the lock lever plate (a).
(2) While holding down the lock lever plate (a), disconnect the connector.

2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.



3. DRIVER'S AIRBAG MODULE (ROLL CONNECTOR)

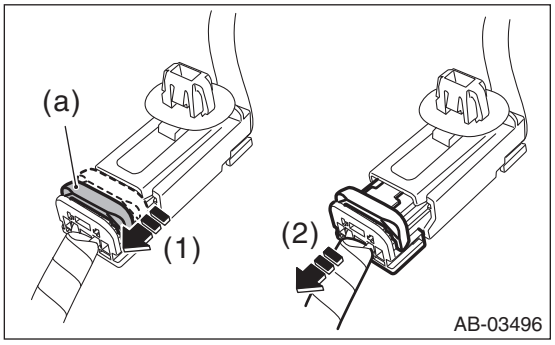
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.

(2) With the slide lock pulled, disconnect the connector.

2) How to connect:



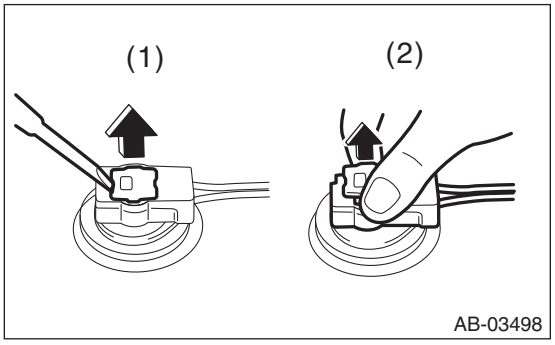
CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

4. PASSENGER'S AIRBAG MODULE

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
